

Damper Installation

1. Lower the rear suspension and set the damper assembly.

CAUTION: Be sure that the two cut-outs in the damper spring lower seat are toward the front of the car as shown below.

2. Loosely install the damper mounting bolt.
3. Install the damper upper base mounting nuts and tighten them.

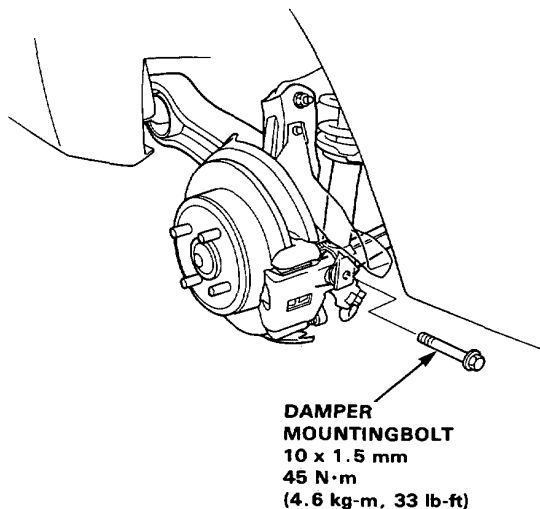

4. Install the damper cap.

5. Raise the rear suspension with a floor jack until the weight of the car is on the damper.

NOTE: The damper mounting bolts and lower arms' mounting bolt should be tightened with the damper under vehicle load.

6. Tighten the damper mounting bolt.

7. Install the lower arm mounting bolt.
8. Tighten the lower arm mounting bolt.
