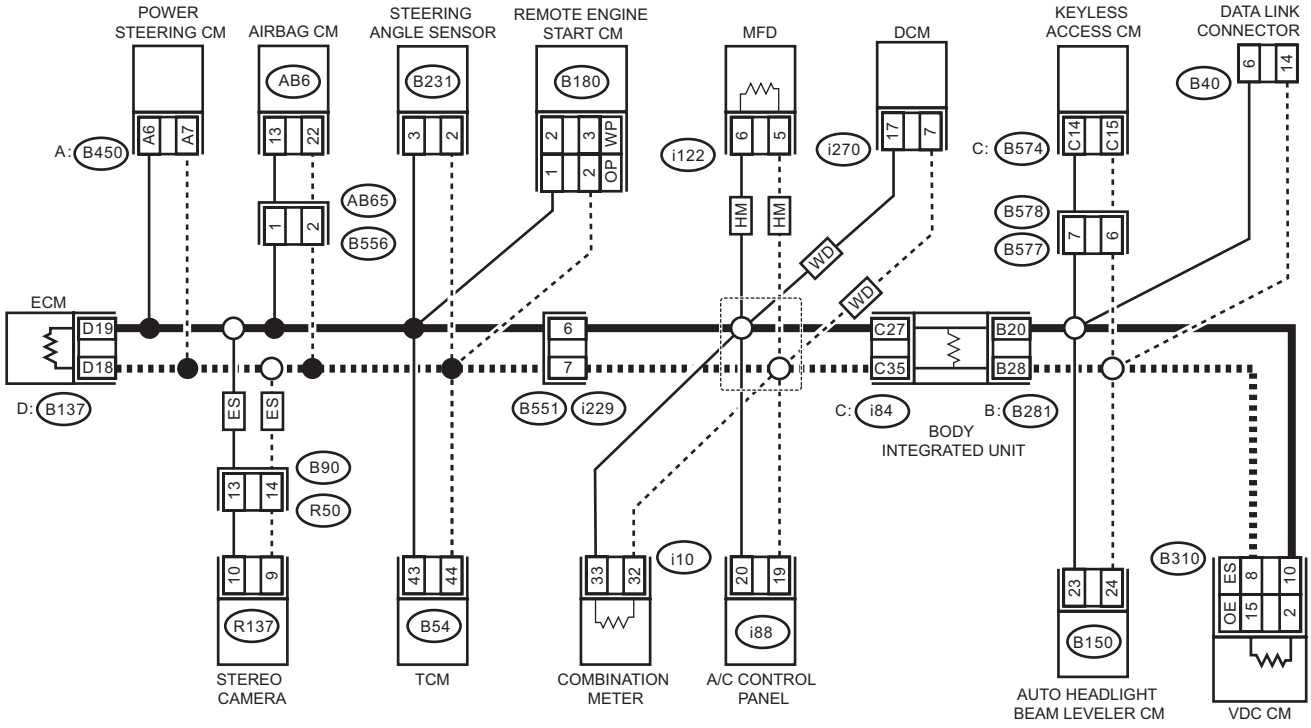
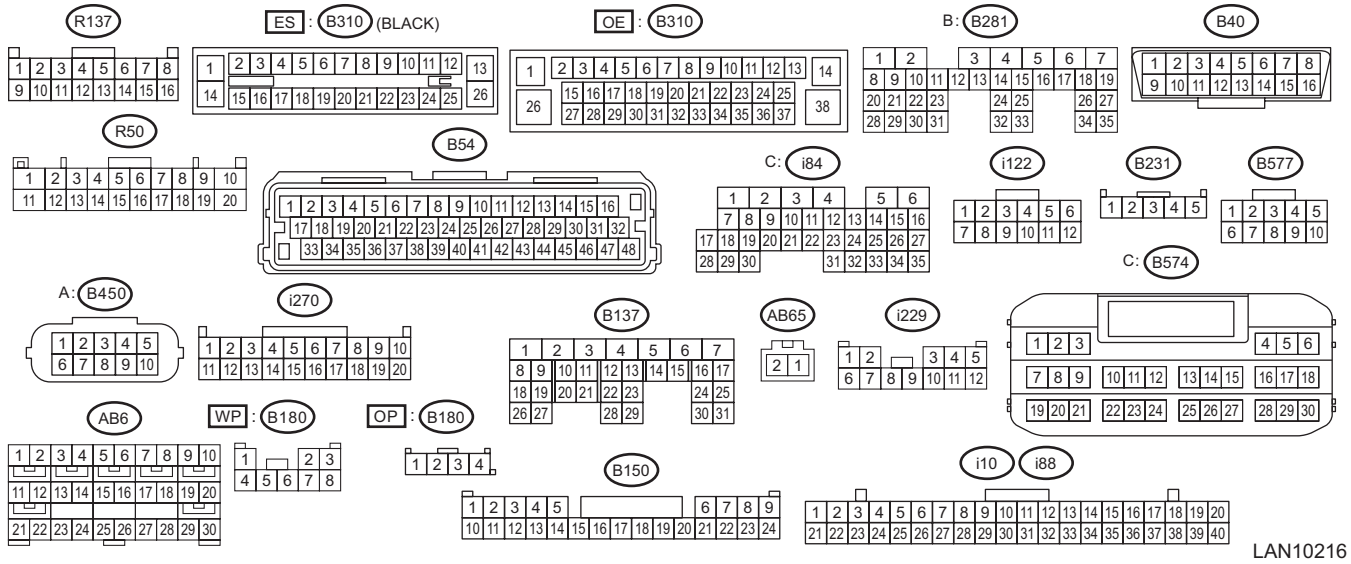
Related lines 53 — 61 Ω (stereo camera)	<Ref. to LAN(w/o HEV)(diag)-80, RELATED LINES 53 — 61 Ω (STEREO CAMERA), INSPECTION, CAN Communication Circuit Check.>	No stereo camera data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (telematics)	<Ref. to LAN(w/o HEV)(diag)-89, RELATED LINES 53 — 61 Ω (TELEMATICS), INSPECTION, CAN Communication Circuit Check.>	No telematics data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (radar sensor)	<Ref. to LAN(w/o HEV)(diag)-92, RELATED LINES 53 — 61 Ω (RADAR SENSOR), INSPECTION, CAN Communication Circuit Check.>	No radar sensor data is received. Perform inspection when faulty is detected.

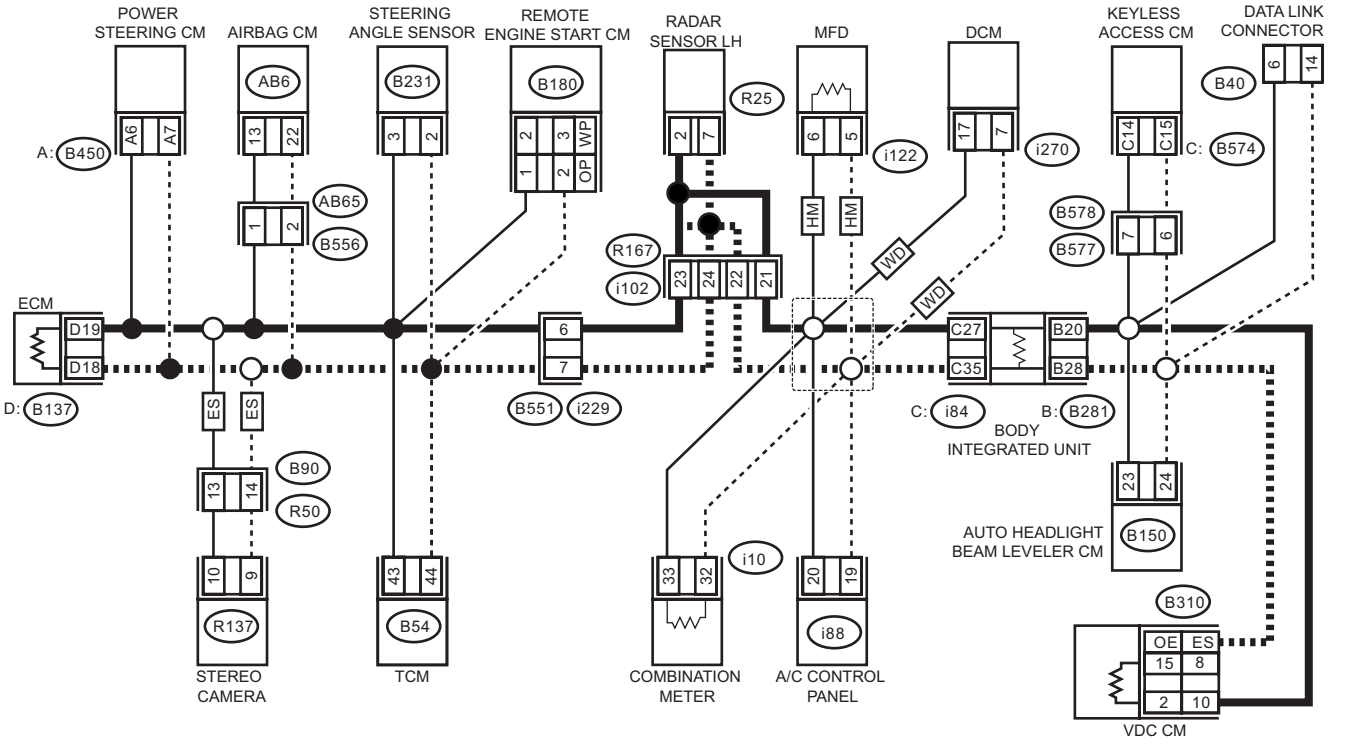


C: INSPECTION

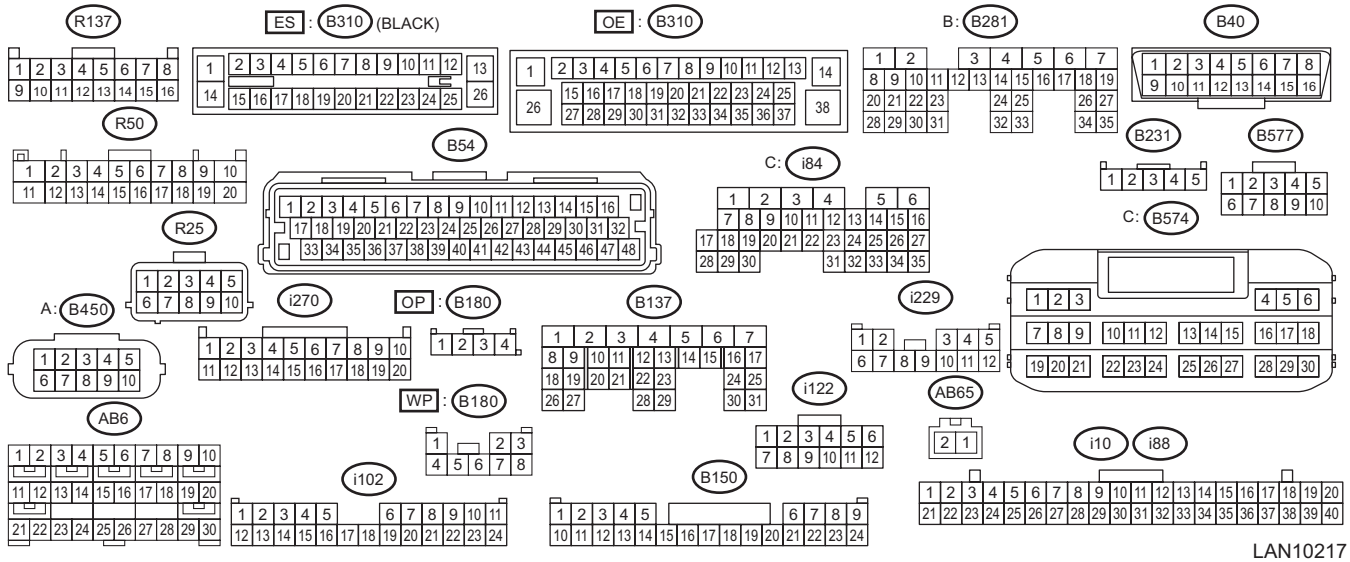


1. GROUND SHORT INSPECTION

WIRING DIAGRAM:



CAN communication system <Ref. to WI(w/o HEV)-69, WIRING DIAGRAM, CAN Communication System.>



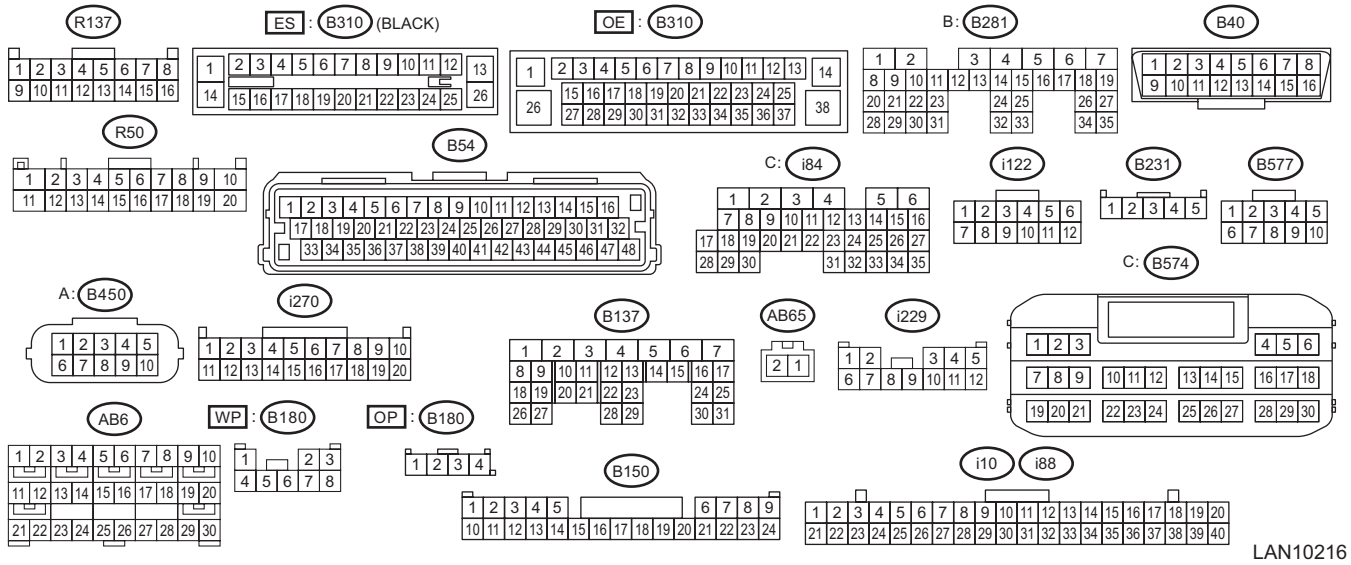
- Without BSD/RCTA

- With BSD/RCTA

CAN Communication Circuit Check

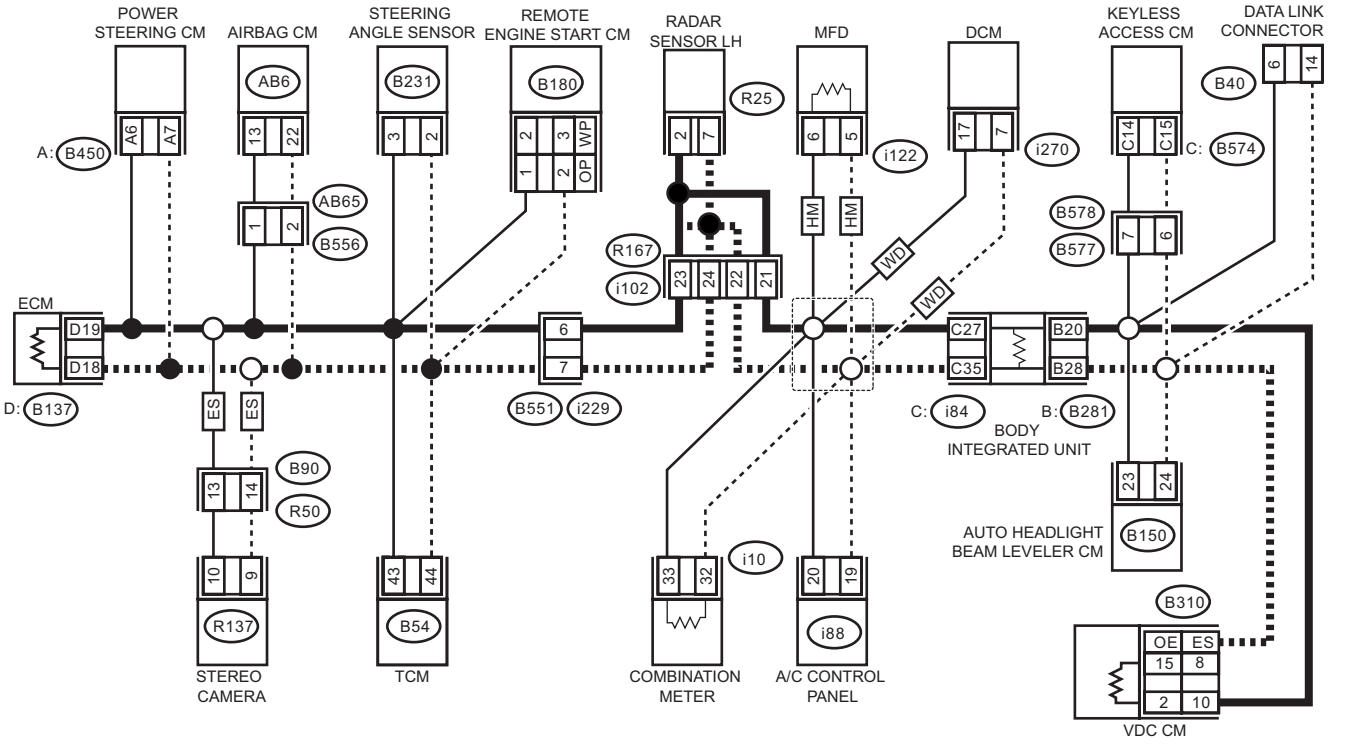
NOTE:
Main wiring harness or related lines may be shorted to ground, or shorted to ground in one of the control modules.

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Is the resistance 10 Ω or less?	Go to step **2**.	Currently, it is normal.
2	**CHECK CONTROL MODULE.** With the tester connected, disconnect control module. NOTE: Disconnect the body integrated unit at the end. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Did the resistance change to 10 Ω or more?	Replace the control module whose resistance has changed. When the value changed at disconnecting the body integrated unit, Go to step **3**.	Repair or replace the short circuit of the main wiring harness and related lines between body integrated unit and VDC CM.
3	**CHECK BETWEEN MAIN WIRING HARNESSES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i84) No. 27 — Chassis ground:*** ***(i84) No. 35 — Chassis ground:***	Is the resistance 10 Ω or less?	Repair or replace the short circuit of the main wiring harness and related lines between ECM and body integrated unit.	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>

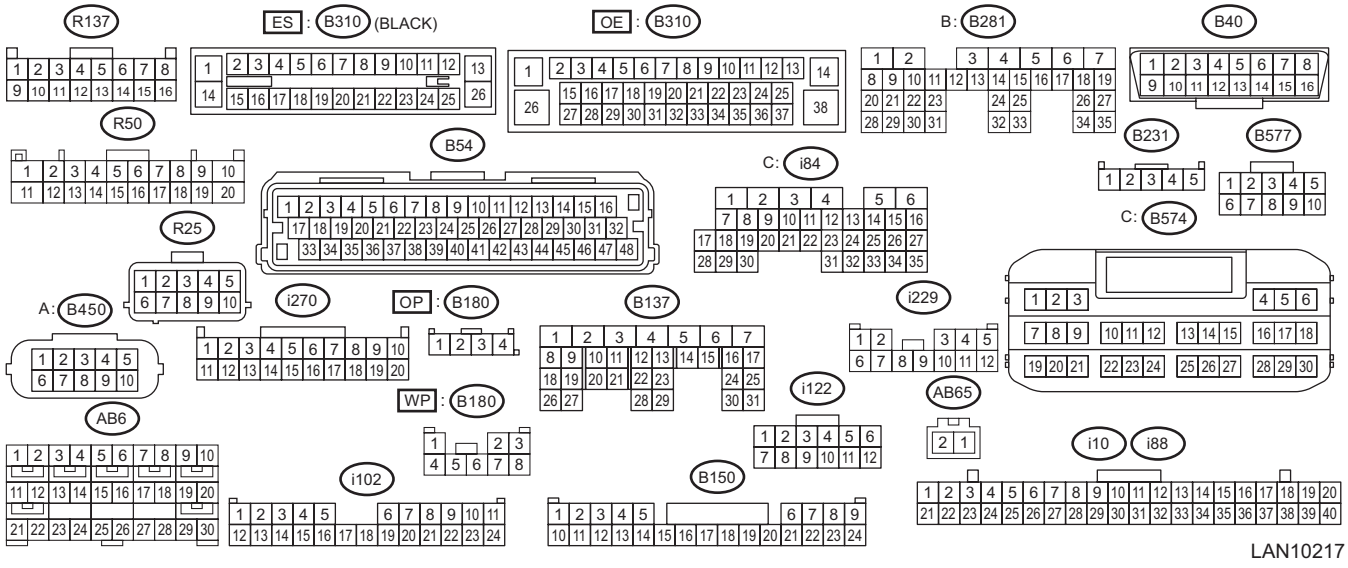


2. BATTERY SHORT INSPECTION

WIRING DIAGRAM:



CAN communication system <Ref. to WI(w/o HEV)-69, WIRING DIAGRAM, CAN Communication System.>

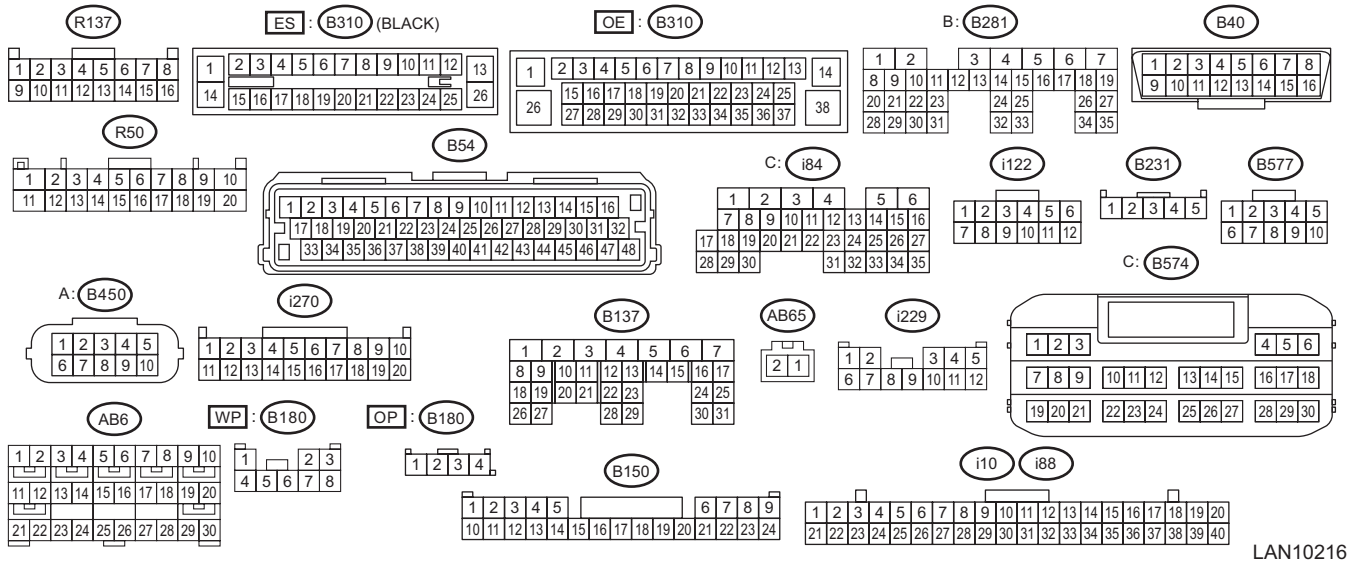


- Without BSD/RCTA

- With BSD/RCTA

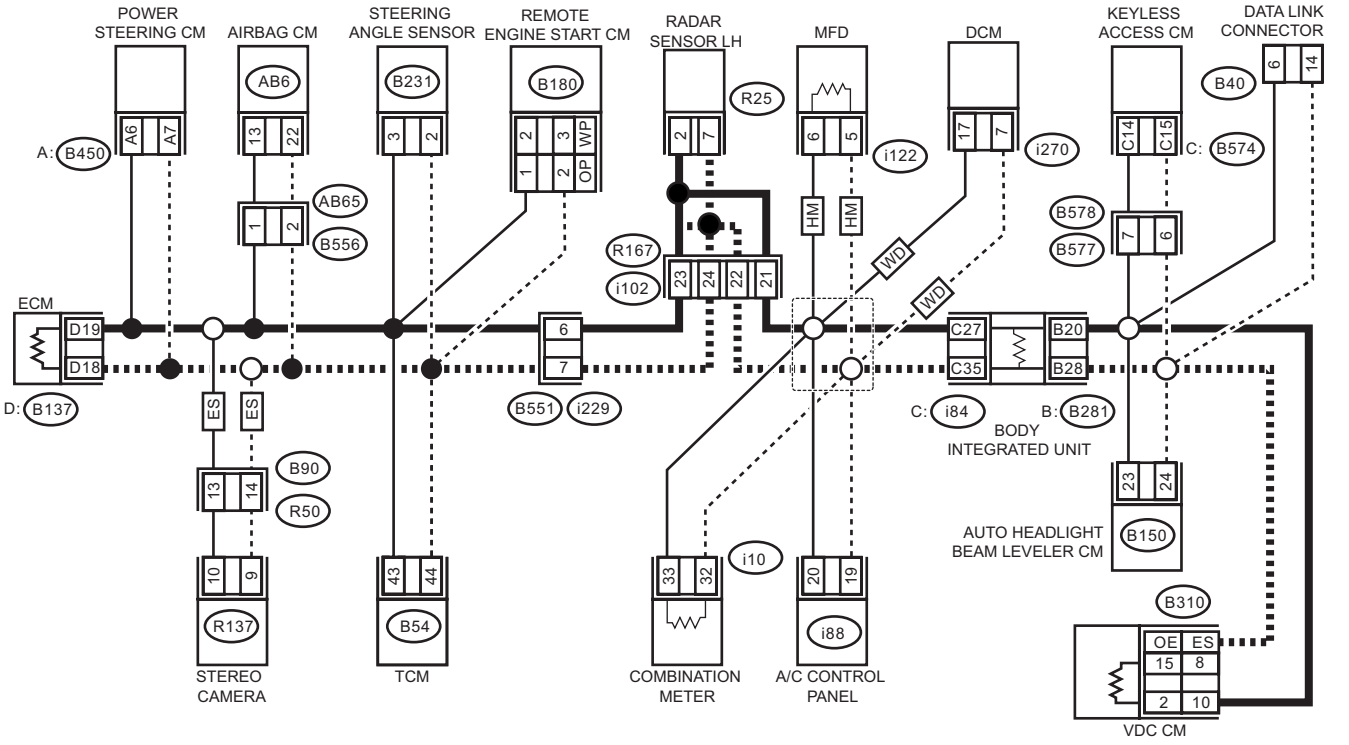
NOTE:
Main wiring harness or related lines may be shorted to battery circuit, or shorted to battery circuit in one of the control modules.

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Is the voltage 5 V or less?	Currently, it is normal.	Go to step **2**.
2	**CHECK CONTROL MODULE.** With the tester connected, disconnect control module. NOTE: Disconnect the body integrated unit at the end. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Did the voltage change to 5 V or less?	Replace the control module whose voltage has changed. When the value changed at disconnecting the body integrated unit, Go to step **3**.	Repair or replace the short circuit of the harness between body integrated unit and VDC CM.
3	**CHECK BETWEEN MAIN WIRING HARNESSES.** Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i84) No. 27 — Chassis ground:*** ***(i84) No. 35 — Chassis ground:***	Is the voltage 5 V or less?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Repair or replace the short circuit of the harness between ECM and body integrated unit.

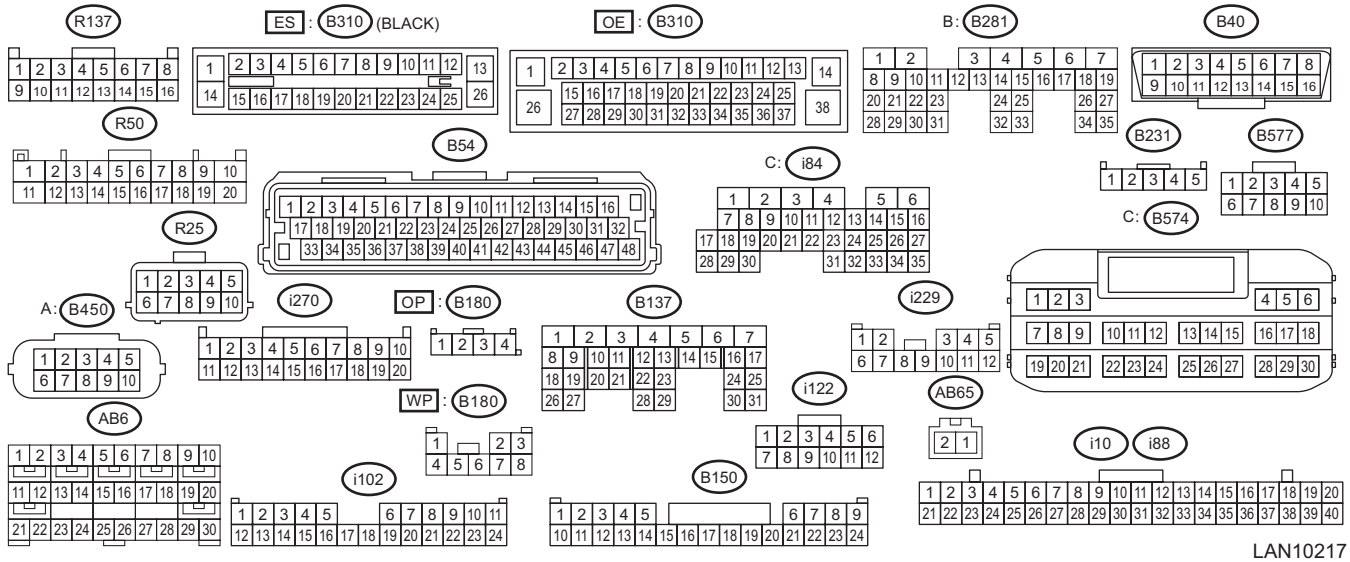


3. 53 — 61 Ω

WIRING DIAGRAM:



CAN communication system <Ref. to WI(w/o HEV)-69, WIRING DIAGRAM, CAN Communication System.>

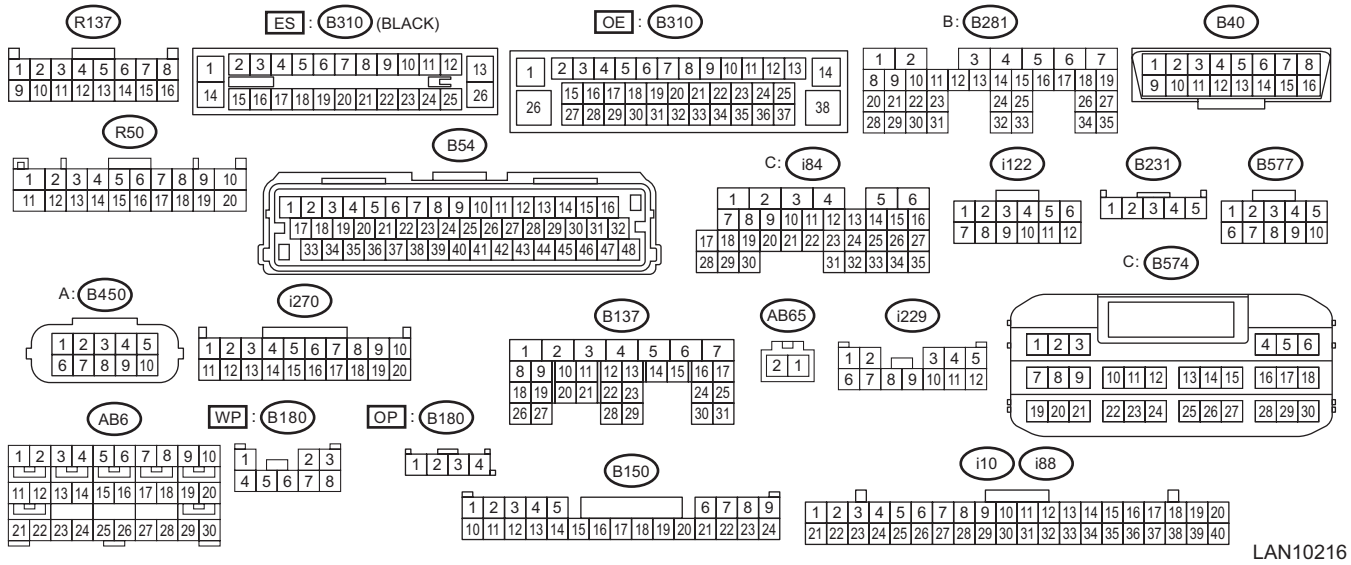


- Without BSD/RCTA

- With BSD/RCTA

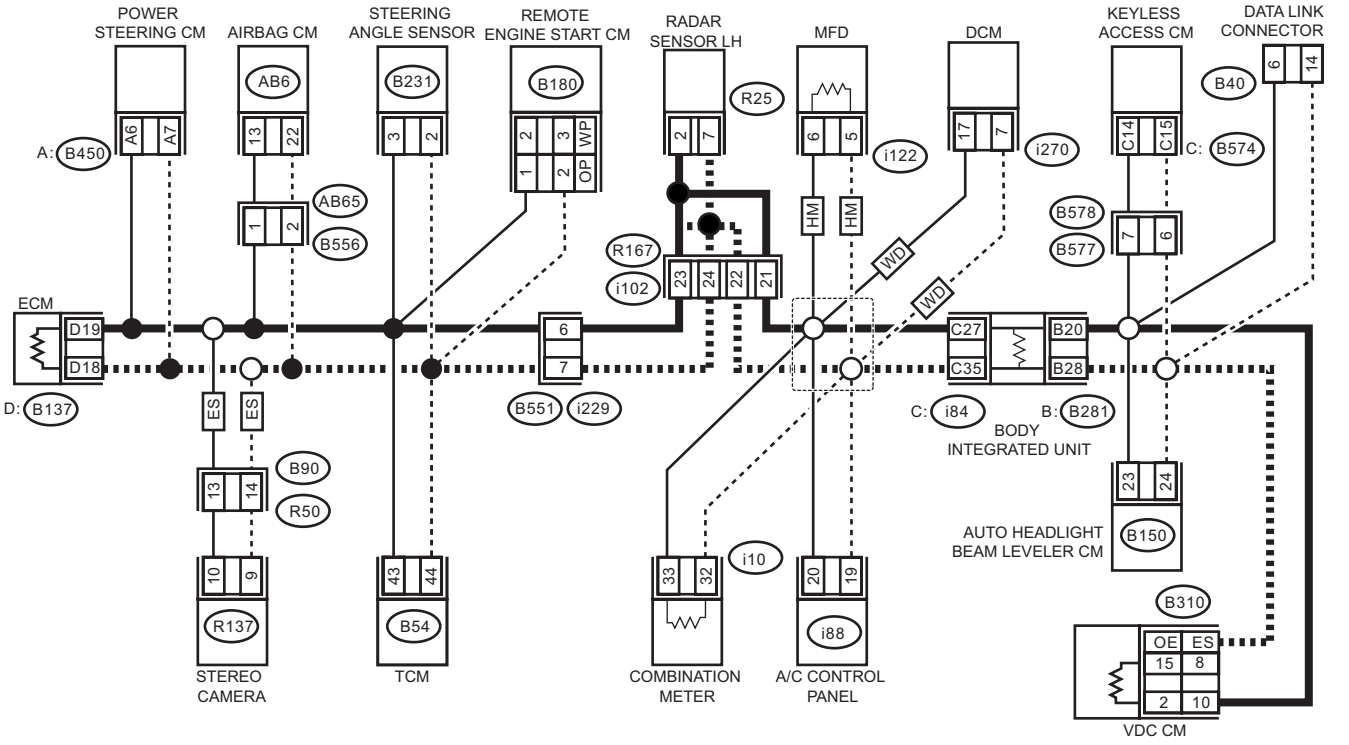
NOTE:
When the measured resistance value is 53 — 61 Ω, main wiring harness or related lines may be shorted to ground, or shorted to power supply line, or related line may be open.

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Is the resistance 10 Ω or less?	Go to step **2**.	Go to step **4**.
2	**CHECK CONTROL MODULE.** With the tester connected, disconnect control module. NOTE: Disconnect the body integrated unit at the end. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Did the resistance change to 10 Ω or more?	Replace the control module whose resistance has changed. When the value changed at disconnecting the body integrated unit, Go to step **3**.	Repair or replace the short circuit of the harness between body integrated unit and VDC CM.
3	**CHECK MAIN WIRING HARNESS AND RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i84) No. 27 — Chassis ground:*** ***(i84) No. 35 — Chassis ground:***	Is the resistance 10 Ω or less?	Repair or replace the short circuit of the harness between ECM and body integrated unit.	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>
4	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Is the voltage 5 V or less?	CAN communication circuit is normal.	Go to step **5**.
5	**CHECK CONTROL MODULE.** With the tester connected, disconnect control module. NOTE: Disconnect the body integrated unit at the end. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Did the voltage change to 5 V or less?	Replace the control module whose voltage has changed. When the value changed at disconnecting the body integrated unit, Go to step **6**.	Repair or replace the short circuit of the harness between body integrated unit and VDC CM.
6	**CHECK HARNESS.** Using a tester, measure the voltage between terminals and chassis ground. ***Connector & terminal*** ***(i84) No. 27 — Chassis ground:*** ***(i84) No. 35 — Chassis ground:***	Is the voltage 5 V or less?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Repair or replace the short circuit of the harness between ECM and body integrated unit.

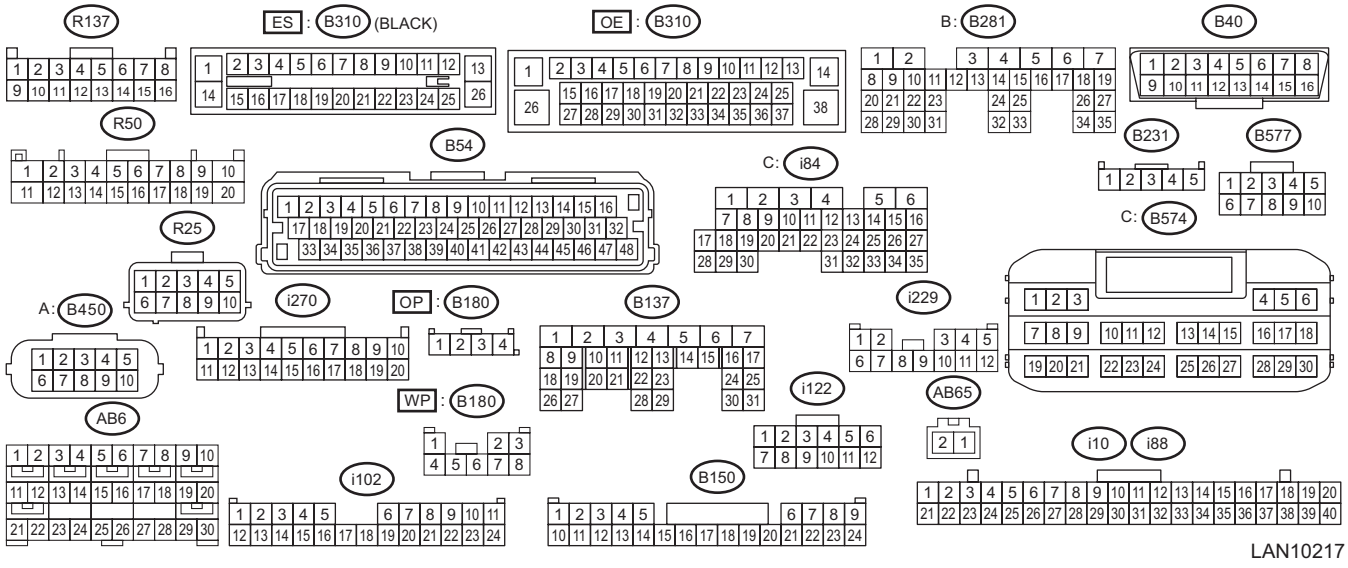


4. 52 Ω OR LESS

WIRING DIAGRAM:



CAN communication system <Ref. to WI(w/o HEV)-69, WIRING DIAGRAM, CAN Communication System.>



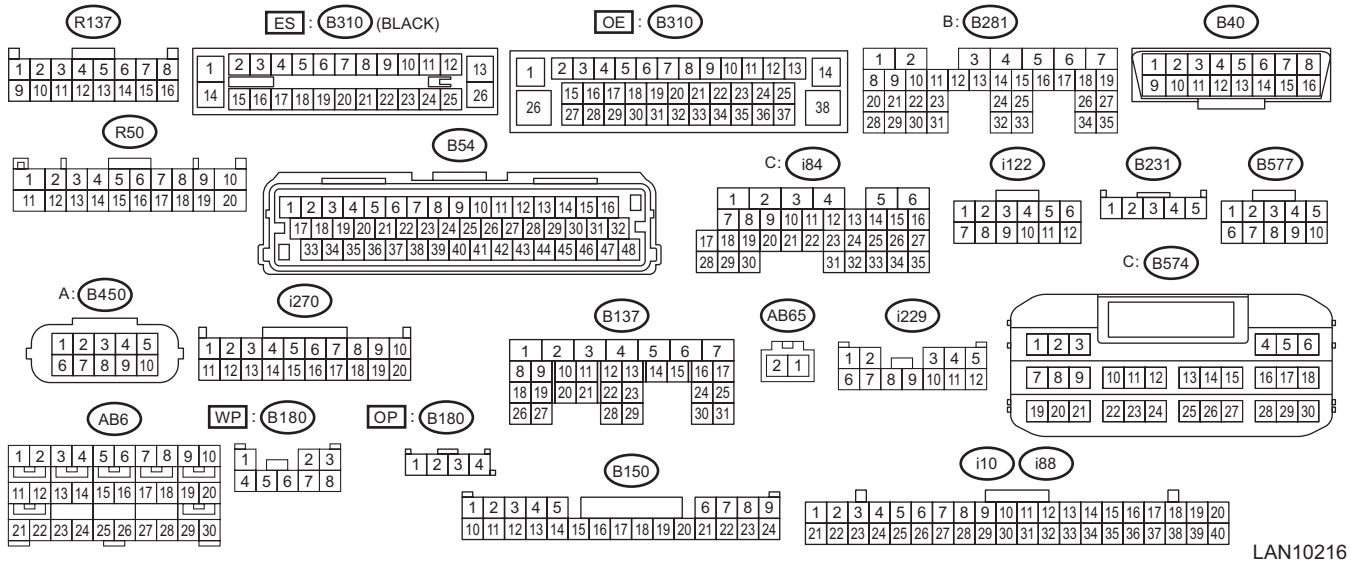
- Without BSD/RCTA

- With BSD/RCTA

NOTE:
When the bus line is measured, combined resistance of end resistance (120 Ω) in ECM and end resistance (120 Ω) in VDC CM can be measured. The combined resistance is approximately 53 — 61 Ω with the stabilizing circuit included. When the measured resistance value is 52 Ω or less, main wiring harness or related lines may be shorted, or combined resistance may have changed because resistance other than end resistance is created on the circuit.

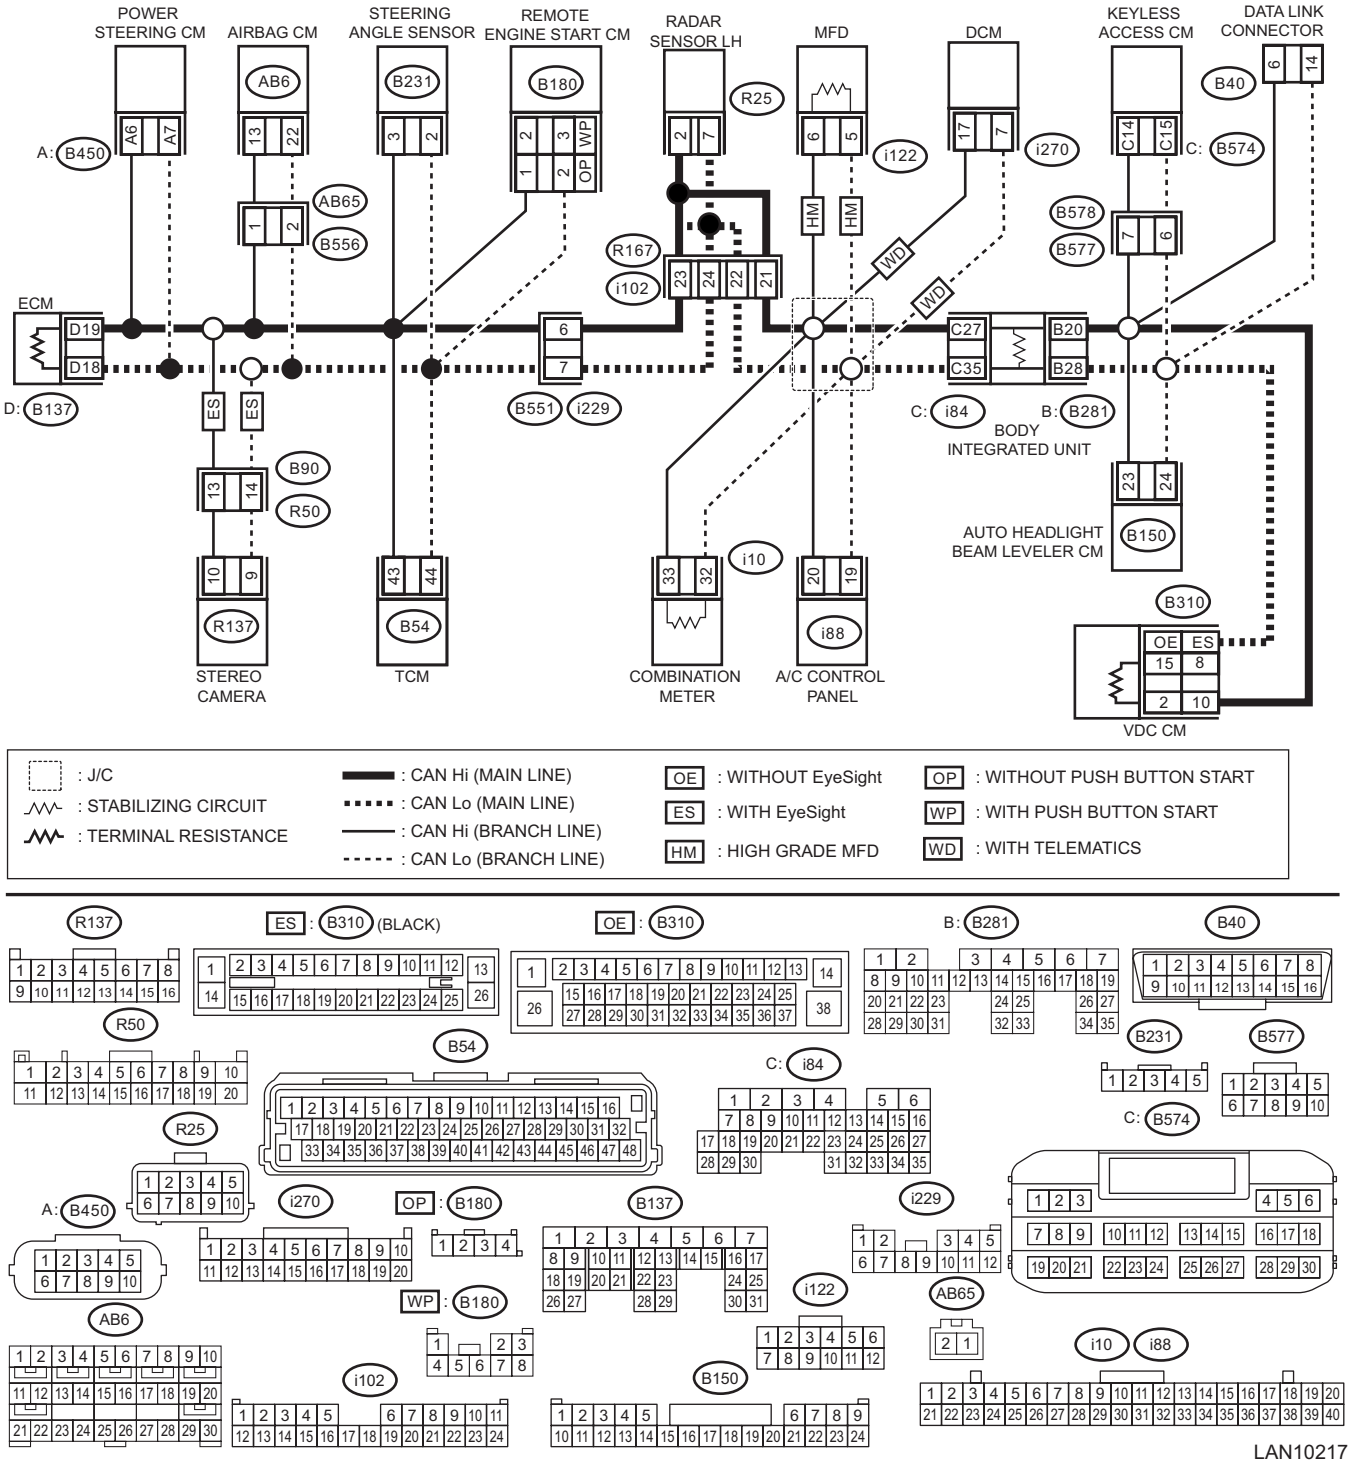
	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B40) No. 6 — No. 14:***	Is the resistance 10 Ω or less?	Go to step **2**.	Go to step **4**.
2	**CHECK MAIN WIRING HARNESS AND RELATED LINES.** With a tester connected, disconnect control module connectors in order. NOTE: Disconnect the body integrated unit at the end. ***Connector & terminal*** ***(B40) No. 6 — No. 14:***	Is there any control module whose condition has changed from short state?	Replace the control module whose resistance has changed. When the value changed at disconnecting the body integrated unit, Go to step **3**.	Repair or replace the short circuit of the harness between body integrated unit and VDC CM.
3	**CHECK BETWEEN MAIN WIRING HARNESSES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i84) No. 27 — No. 35:***	Is the resistance 10 Ω or less?	Repair or replace the short circuit of the harness between ECM and body integrated unit.	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>
4	**CHECK CONTROL MODULE.** 1) Disconnect ECM and VDC CM connectors. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(B137) No. 18 — No. 19:*** ***(B310) No. 2 — No. 15 (without EyeSight):*** ***(B310) No. 10 — No. 8 (with EyeSight):***	Is the resistance 114 — 126 Ω?	Go to step **5**.	Replace the control module whose end resistance value is out of the specified range.
5	**CHECK CONTROL MODULE.** 1) Disconnect the connector of body integrated unit. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(B281) No. 28 — (i84) No. 27:*** ***(B281) No. 20 — (i84) No. 35:***	Is the resistance 2850 — 3150 Ω?	Go to step **6**.	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>
6	**CHECK CONTROL MODULE.** Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(B281) No. 28 — (i84) No. 35:*** ***(B281) No. 20 — (i84) No. 27:***	Is the resistance less than 1 Ω?	Go to step **7**.	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>
7	**CHECK CONTROL MODULE.** 1) Disconnect the combination meter connector. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(i10) No. 32 — No. 33:***	Is the resistance 2850 — 3150 Ω?	Go to step **8**.	Replace the combination meter. <Ref. to IDI-19, Combination Meter.>

	Step	Check	Yes	No
8	**CHECK CONTROL MODULE (ONLY FOR MODELS WITH HIGH GRADE MFD).** 1) Disconnect the MFD connector. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(i122) No. 5 — No. 6:***	Is the resistance 2850 — 3150 Ω?	Go to step **9**.	Replace the MFD. <Ref. to IDI-26, Multi-function Display (MFD).>
9	**CHECK HARNESS.** Using the tester, check the short circuit of each harness. ***Connector & terminal*** ***(B281) No. 28 — No. 20:***	Is the resistance 1 MΩ or more?	Go to step **11**.	Go to step **10**.
10	**CHECK CONTROL MODULE.** With a tester connected, disconnect control modules in order. ***Connector & terminal*** ***(B281) No. 28 — No. 20:***	Are there any control modules whose resistance changed to 1 MΩ or more?	Replace the control module that has changed.	Repair or replace the harness part which has resistance component.
11	**CHECK CONTROL MODULE.** With a tester connected, disconnect control modules in order. ***Connector & terminal*** ***(i84) No. 27 — No. 35:***	Is there any control module whose resistance has changed to 1 MΩ or more?	Replace the control module that has changed.	Repair or replace the harness part which has resistance component.



5. 62 Ω OR MORE

WIRING DIAGRAM:



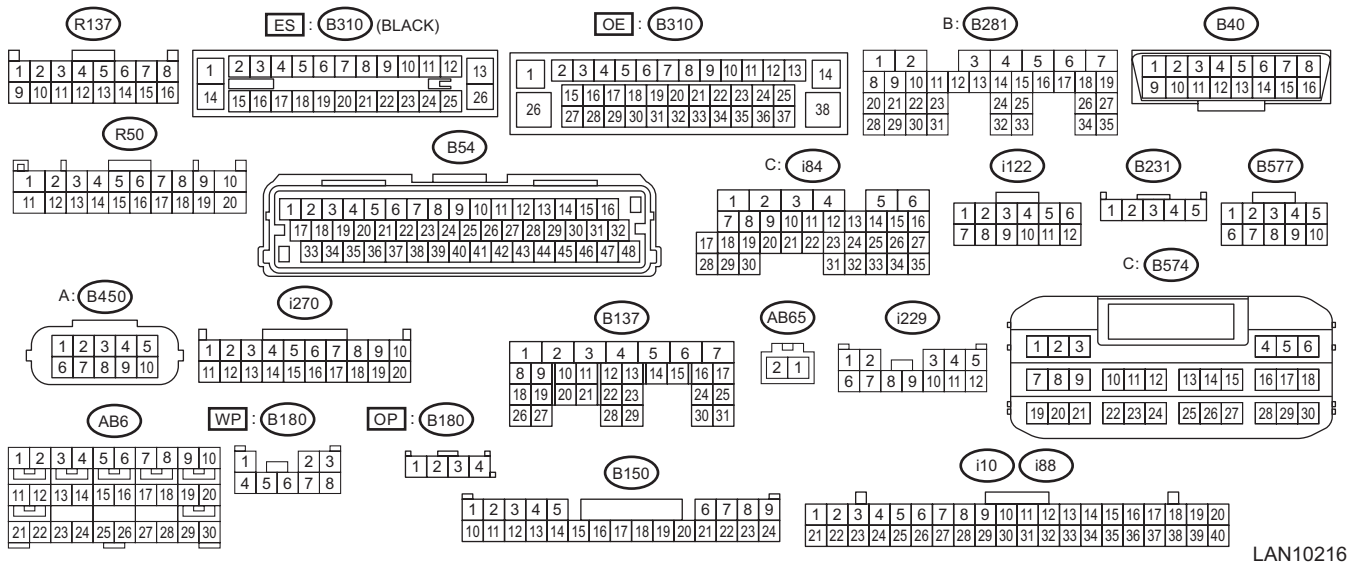
CAN communication system <Ref. to WI(w/o HEV)-69, WIRING DIAGRAM, CAN Communication System.>

- Without BSD/RCTA

- With BSD/RCTA

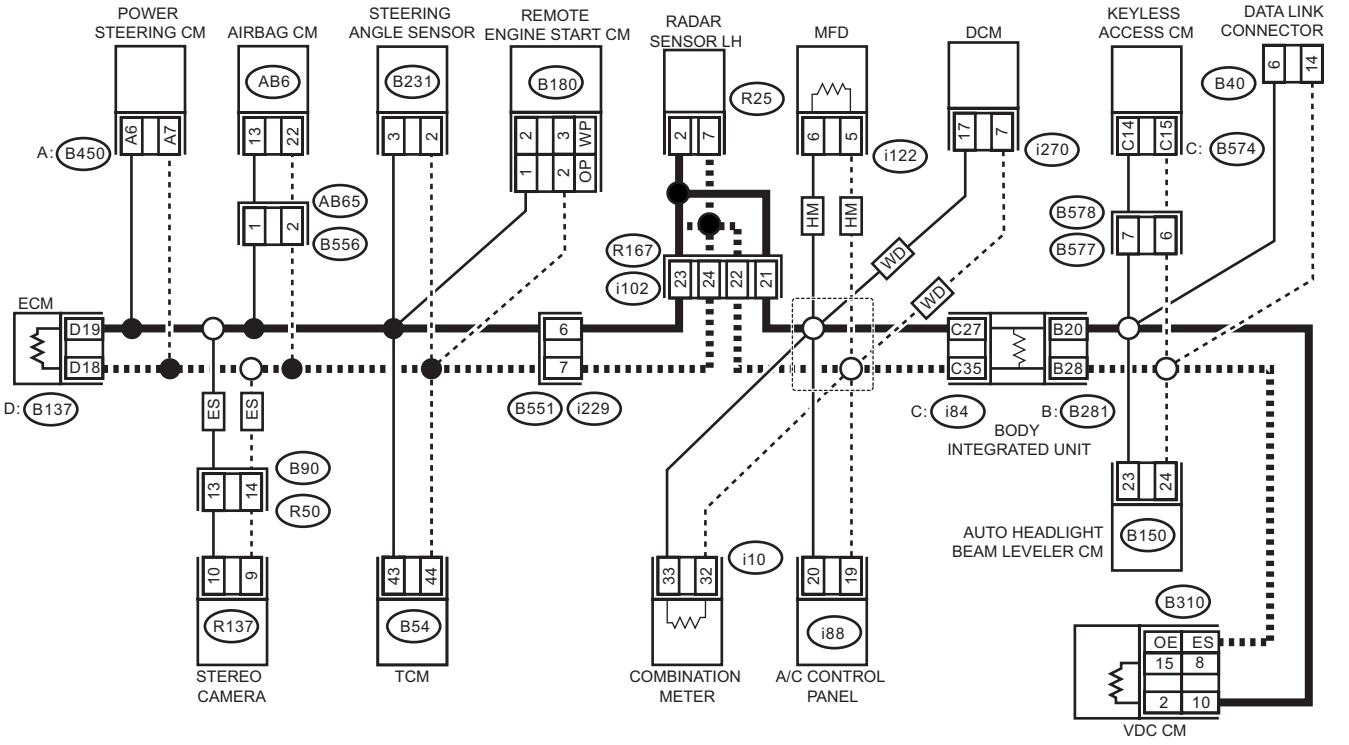
NOTE:
When CAN communication circuit is measured, combined resistance of end resistance (120 Ω) in ECM and end resistance (120 Ω) in VDC CM can be measured. The combined resistance is approximately 53 — 61 Ω with the stabilizing circuit included. When the measured resistance value is 62 Ω or more, either one of the end resistances, or stabilizing circuit, or main wiring harness may have malfunction such as open circuit.

	Step	Check	Yes	No
1	**CHECK CONTROL MODULE.** 1) Disconnect ECM and VDC CM connectors. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(B137) No. 18 — No. 19:*** ***(B310) No. 2 — No. 15 (without EyeSight):*** ***(B310) No. 10 — No. 8 (with EyeSight):***	Is the resistance 114 — 126 Ω?	Go to step **2**.	Replace the control module whose value is out of the specification.
2	**CHECK CONTROL MODULE.** 1) Disconnect the connector of body control module. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(B281) No. 28 — (i84) No. 27:*** ***(B281) No. 20 — (i84) No. 35:***	Is the resistance 2850 — 3150 Ω?	Go to step **3**.	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>
3	**CHECK CONTROL MODULE.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B281) No. 28 — (i84) No. 35:*** ***(B281) No. 20 — (i84) No. 27:***	Is the resistance less than 1 Ω?	Go to step **4**.	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>
4	**CHECK CONTROL MODULE.** 1) Disconnect the combination meter connector. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(i10) No. 32 — No. 33:***	Is the resistance 2850 — 3150 Ω?	Go to step **5**.	Replace the combination meter. <Ref. to IDI-19, REMOVAL, Combination Meter.>
5	**CHECK CONTROL MODULE (ONLY FOR MODELS WITH HIGH GRADE MFD).** 1) Disconnect the MFD connector. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(i122) No. 5 — No. 6:***	Is the resistance 2850 — 3150 Ω?	Go to step **6**.	Replace the MFD. <Ref. to IDI-26, REMOVAL, Multi-function Display (MFD).>
6	**CHECK HARNESS.** Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B40) No. 6 — (B310) No. 2 (without EyeSight):*** ***(B40) No. 14 — (B310) No. 15 (without EyeSight):*** ***(B40) No. 6 — (B310) No. 10 (with EyeSight):*** ***(B40) No. 14 — (B310) No. 8 (with EyeSight):*** ***(B40) No. 6 — (B281) No. 20:*** ***(B40) No. 14 — (B281) No. 28:***	Is there continuity?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK HARNESS.** 1) Disconnect the ECM connector. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i84) No. 27 — (B137) No. 19:*** ***(i84) No. 35 — (B137) No. 18:***	Is there continuity?	It is possible that temporary poor communication occurs.	Repair or replace the open circuit of harness.

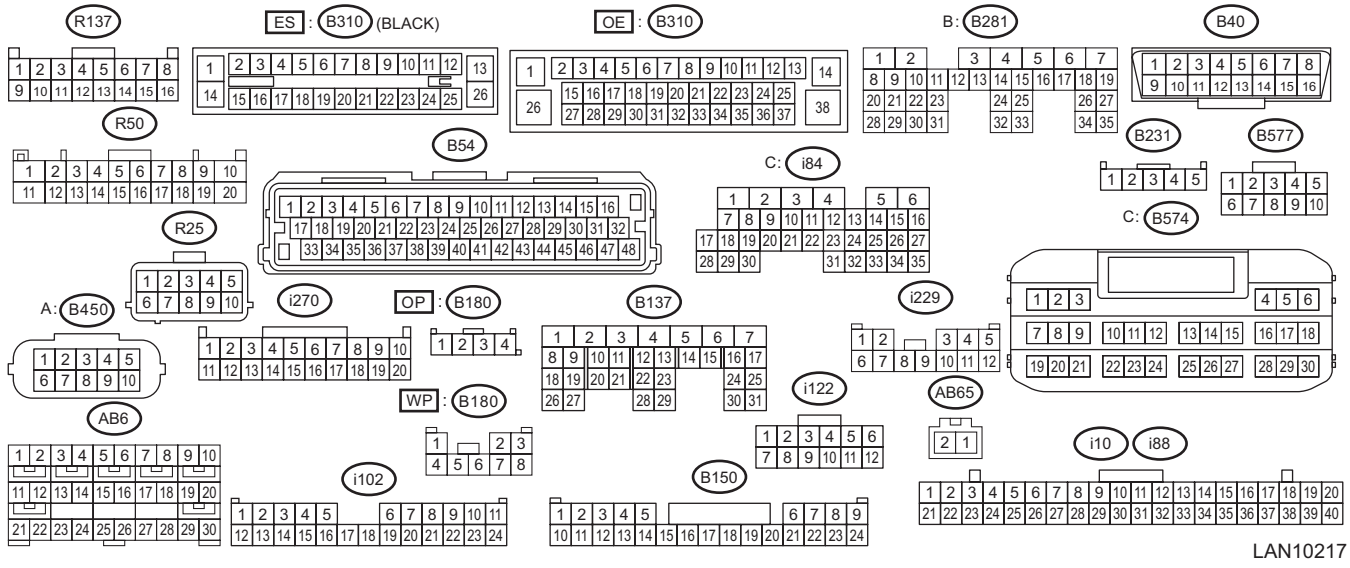


6. RELATED LINES 53 — 61 Ω (TCM)

WIRING DIAGRAM:



CAN communication system <Ref. to WI(w/o HEV)-69, WIRING DIAGRAM, CAN Communication System.>



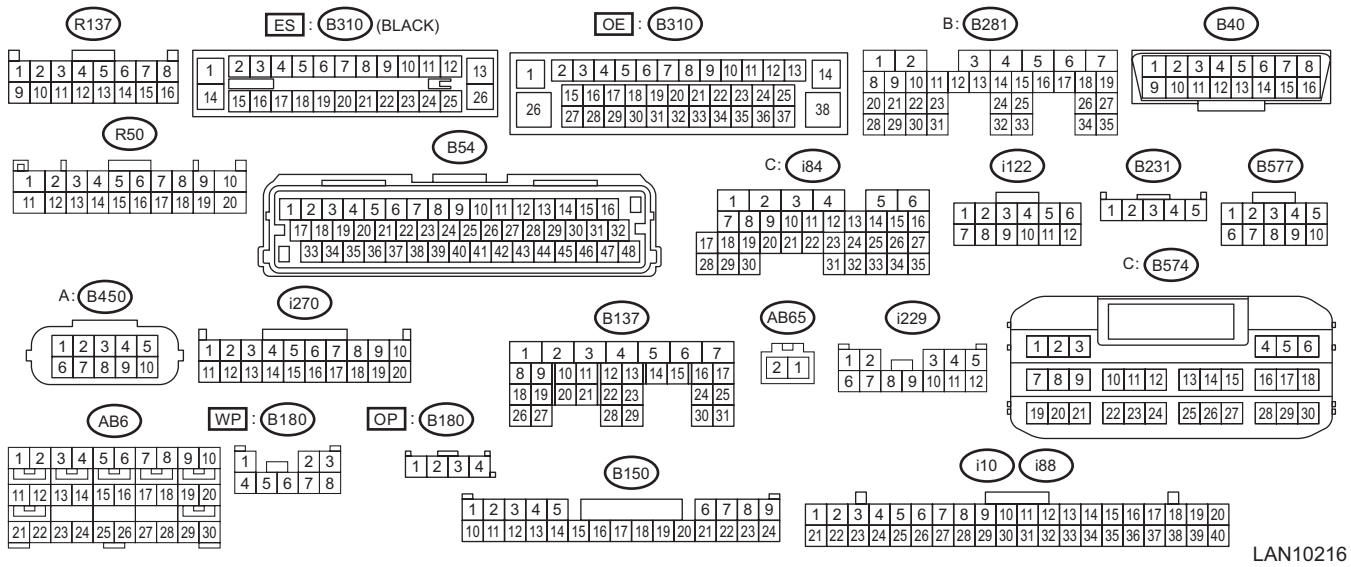
- Without BSD/RCTA

- With BSD/RCTA

CAN Communication Circuit Check

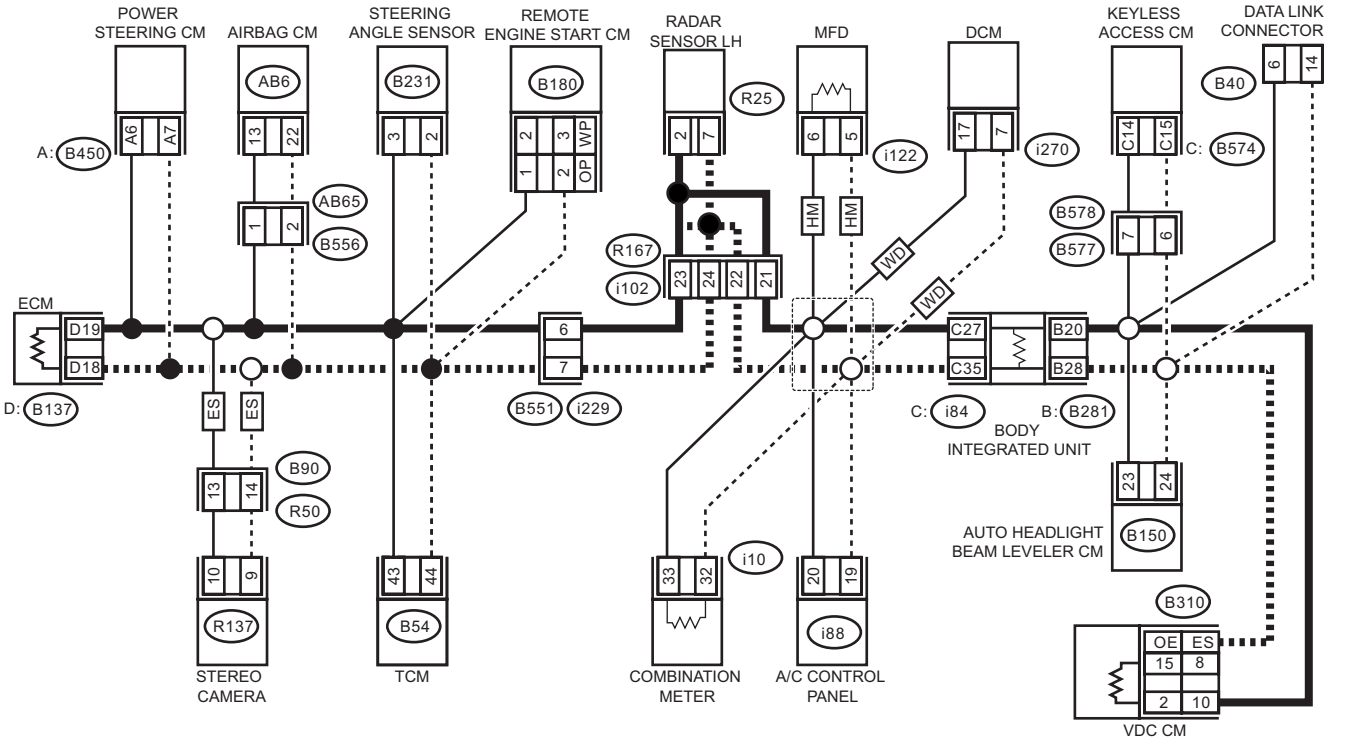
NOTE:
Perform inspection when no data is received, or faulty is detected. This is different from power supply shorted or ground shorted.

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the TCM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B54) No. 43 — No. 44:***	Is the resistance 400 Ω or more?	Related lines between TCM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B54) No. 44 — (B40) No. 14:*** ***(B54) No. 43 — (B40) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of TCM related lines.	Check DTC of TCM. <Ref. to CVT(w/o HEV)(diag)-18, OPERATION, Read Diagnostic Trouble Code (DTC).>

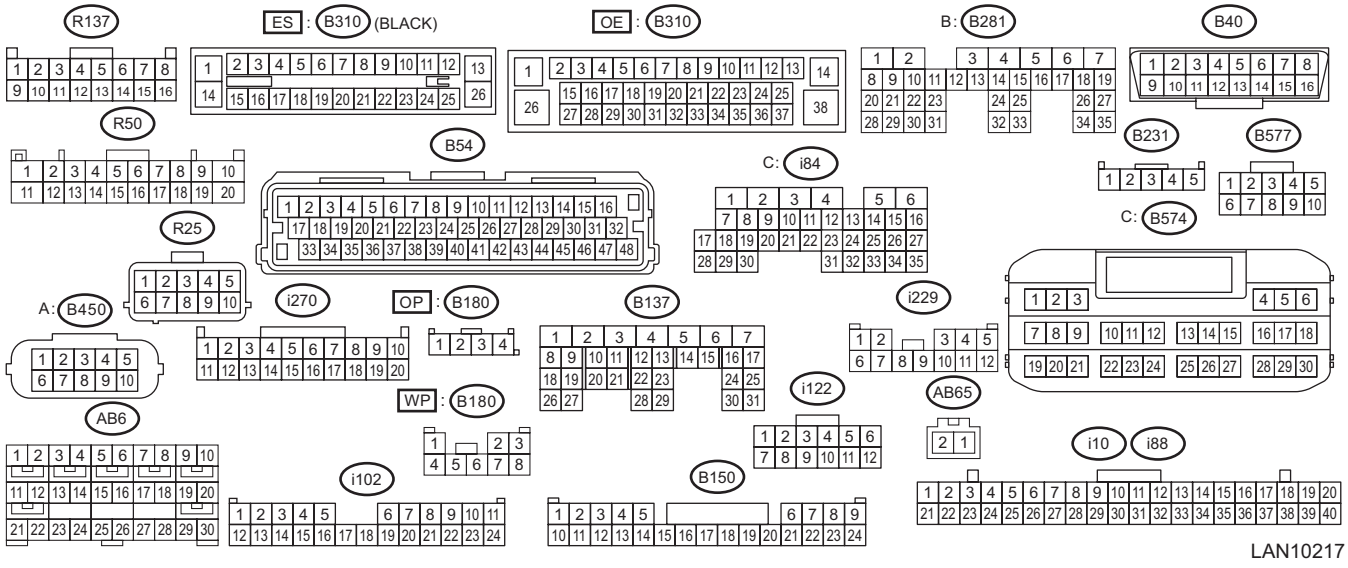


7. RELATED LINES 53 — 61 Ω (STEERING ANGLE SENSOR)

WIRING DIAGRAM:



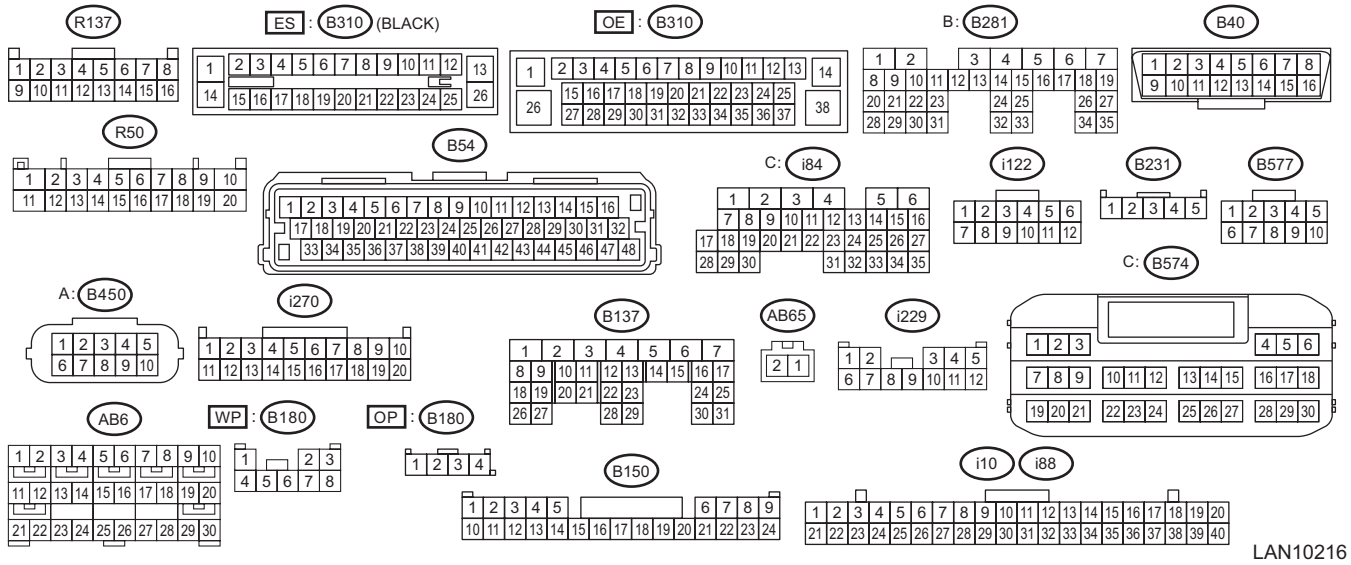
CAN communication system <Ref. to WI(w/o HEV)-69, WIRING DIAGRAM, CAN Communication System.>



- Without BSD/RCTA

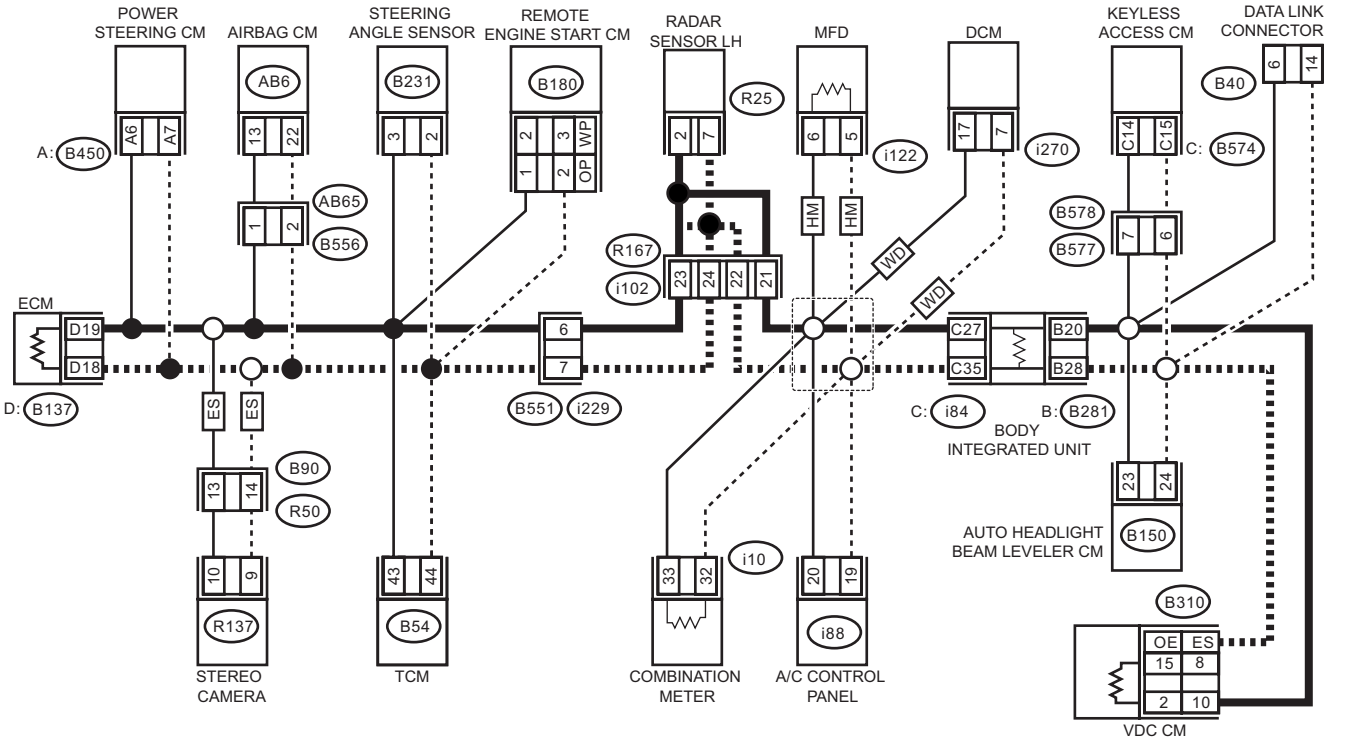
- With BSD/RCTA

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the steering angle sensor connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B231) No. 2 — No. 3:***	Is the resistance 400 Ω or more?	Related lines between steering angle sensor and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B231) No. 2 — (B40) No. 14:*** ***(B231) No. 3 — (B40) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of steering angle sensor related lines.	Check DTC of VDC CM. <Ref. to VDC(diag)-24, OPERATION, Read Diagnostic Trouble Code (DTC).>

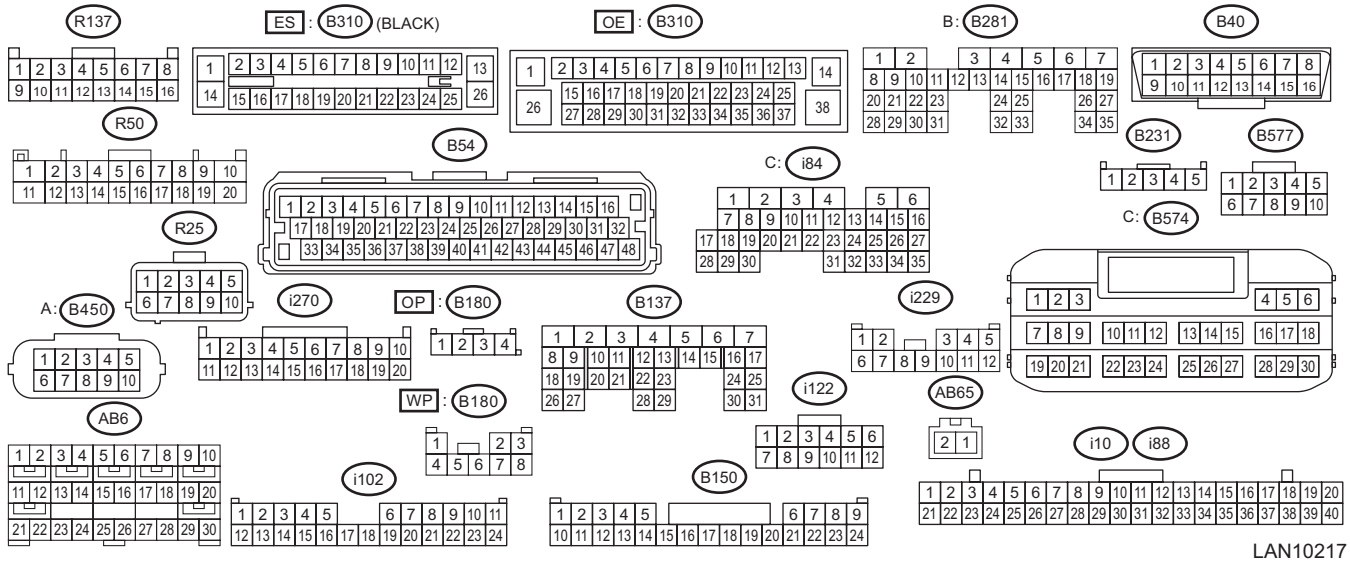


8. RELATED LINE 53 — 61 Ω (A/C CONTROL PANEL)

WIRING DIAGRAM:



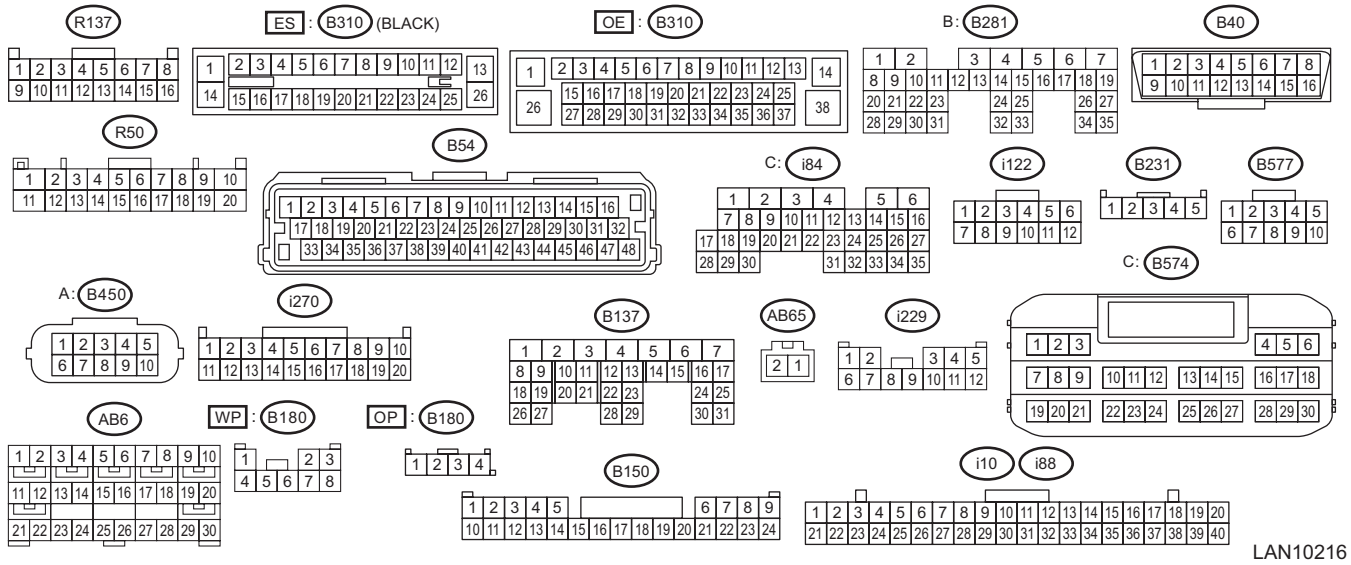
CAN communication system <Ref. to WI(w/o HEV)-69, WIRING DIAGRAM, CAN Communication System.>



- Without BSD/RCTA

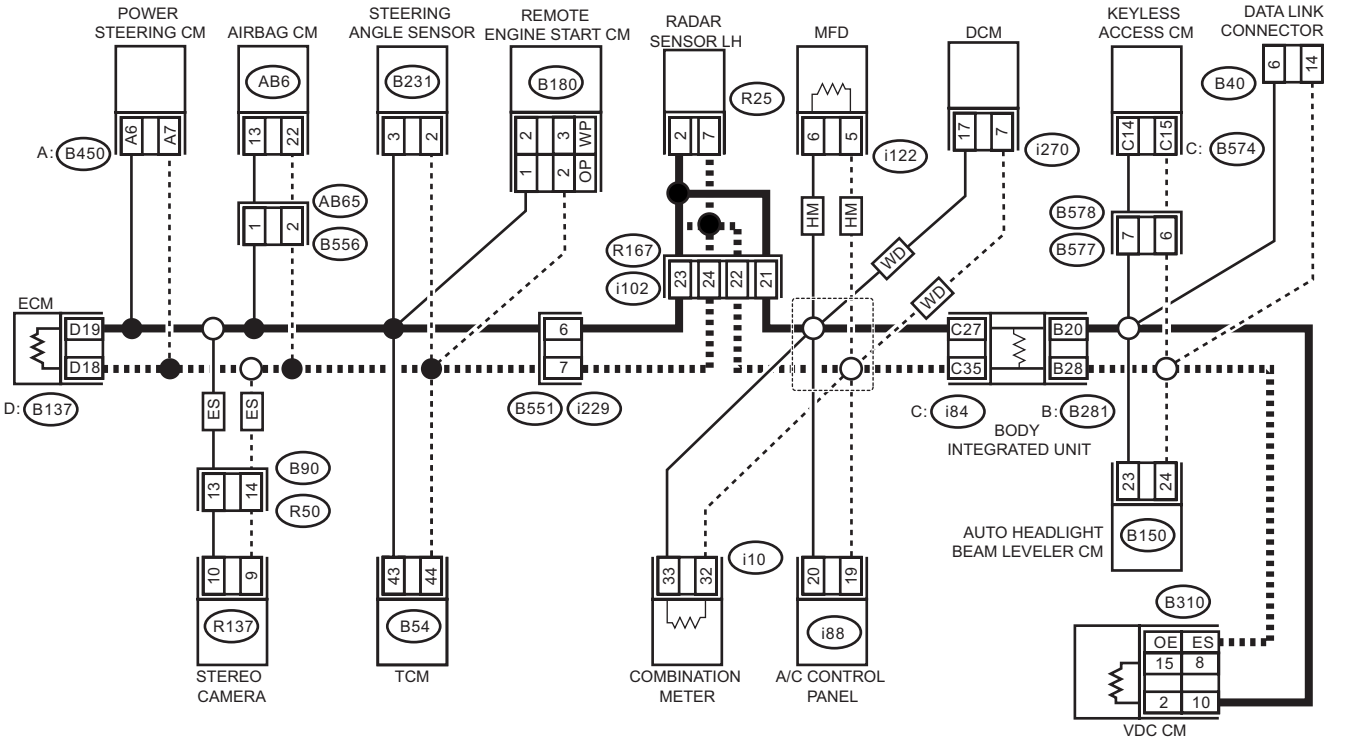
- With BSD/RCTA

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the A/C control panel connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i88) No. 19 — No. 20:***	Is the resistance 400 Ω or more?	Related lines between A/C control panel and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i88) No. 19 — (B40) No. 14:*** ***(i88) No. 20 — (B40) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of A/C control panel related lines.	Check the DTC of A/C control panel. <Ref. to AC(diag)-34, Read Diagnostic Trouble Code (DTC).>

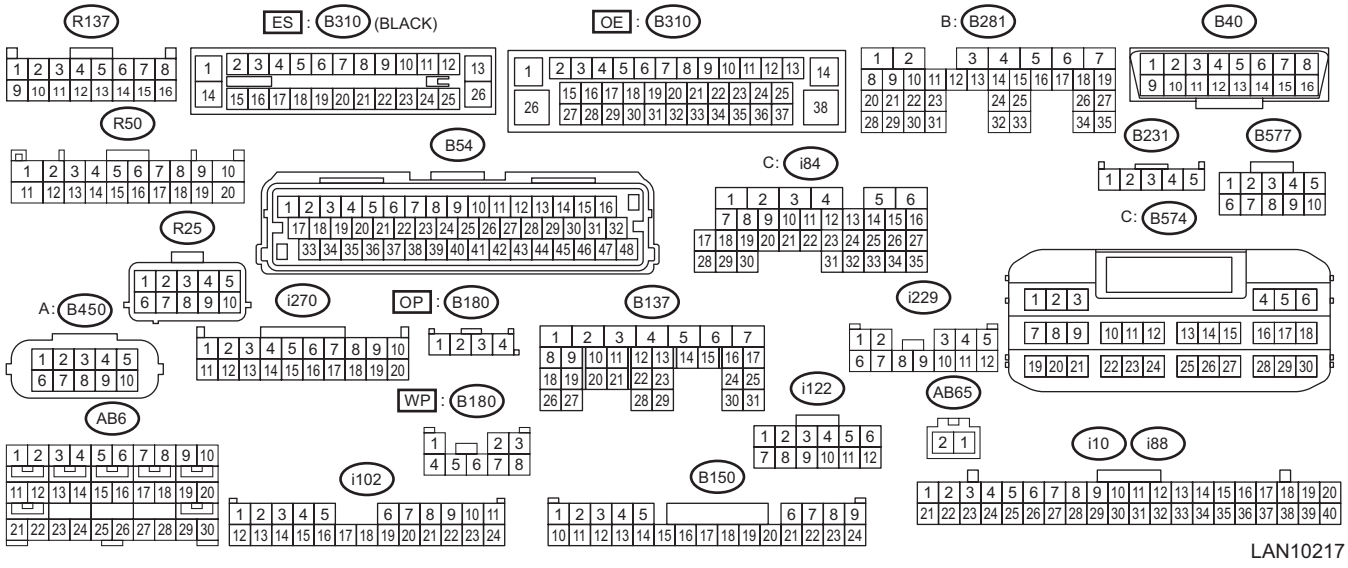


9. RELATED LINES 53 — 61 Ω (POWER STEERING)

WIRING DIAGRAM:



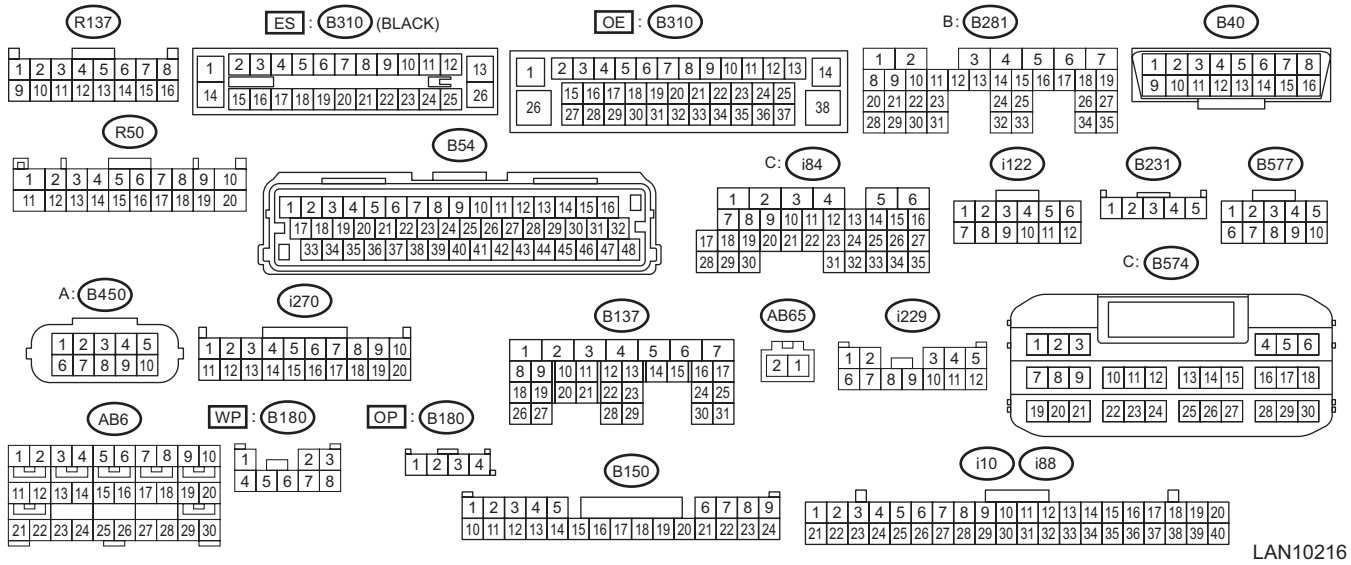
CAN communication system <Ref. to WI(w/o HEV)-69, WIRING DIAGRAM, CAN Communication System.>



- Without BSD/RCTA

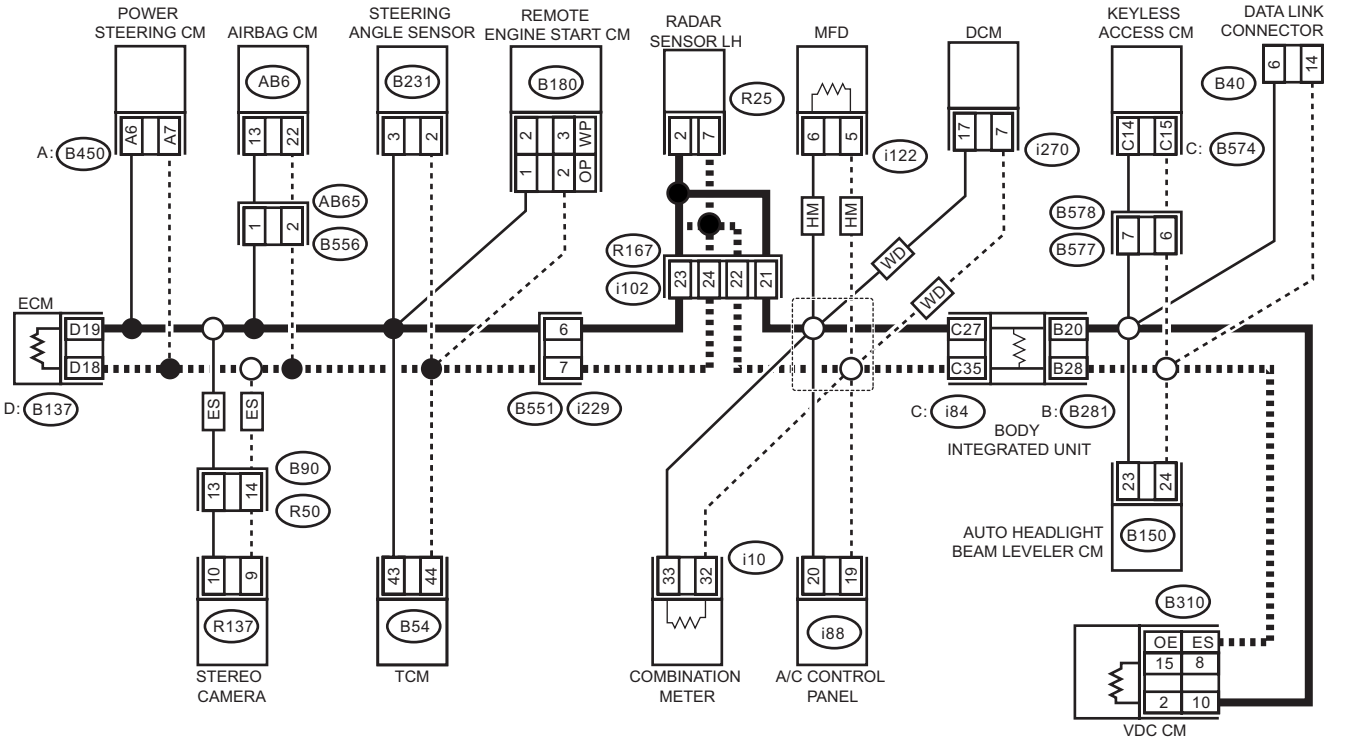
- With BSD/RCTA

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the power steering CM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B450) No. 6 — No. 7:***	Is the resistance 400 Ω or more?	Related lines or main wiring harness between power steering CM and main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B450) No. 6 — (B40) No. 6:*** ***(B450) No. 7 — (B40) No. 14:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit portion of power steering CM related lines.	Check DTC of power steering CM. <Ref. to PS(diag)-19, OPERATION, Read Diagnostic Trouble Code (DTC).>

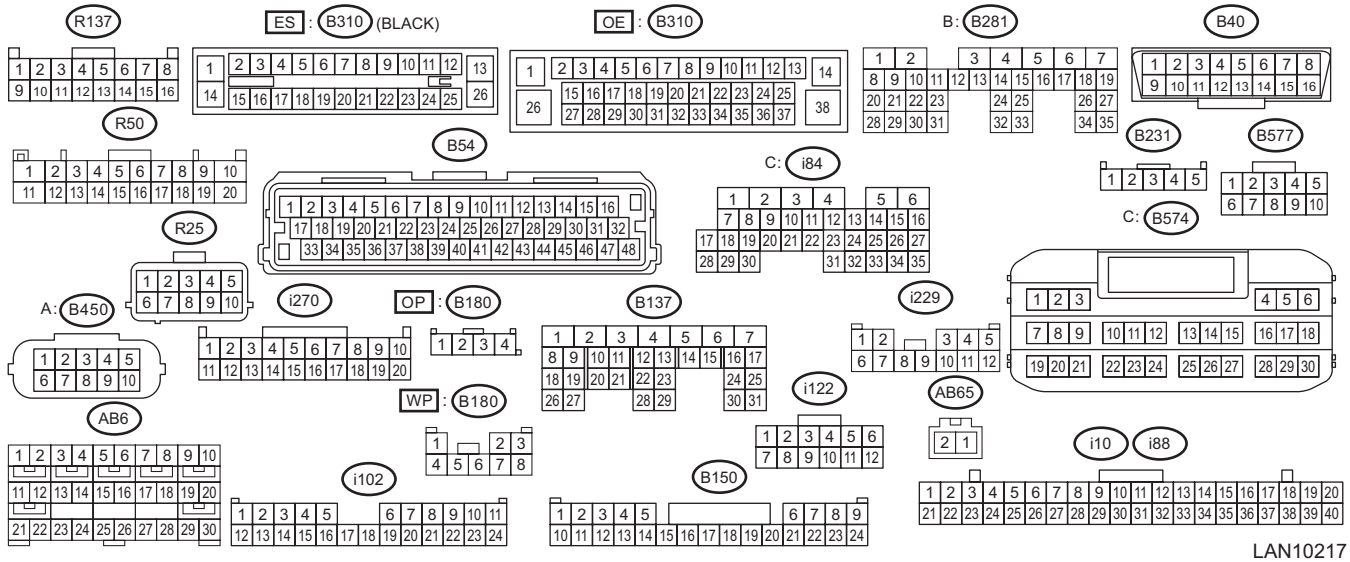


10.RELATED LINES 53 — 61 Ω (COMBINATION METER)

WIRING DIAGRAM:



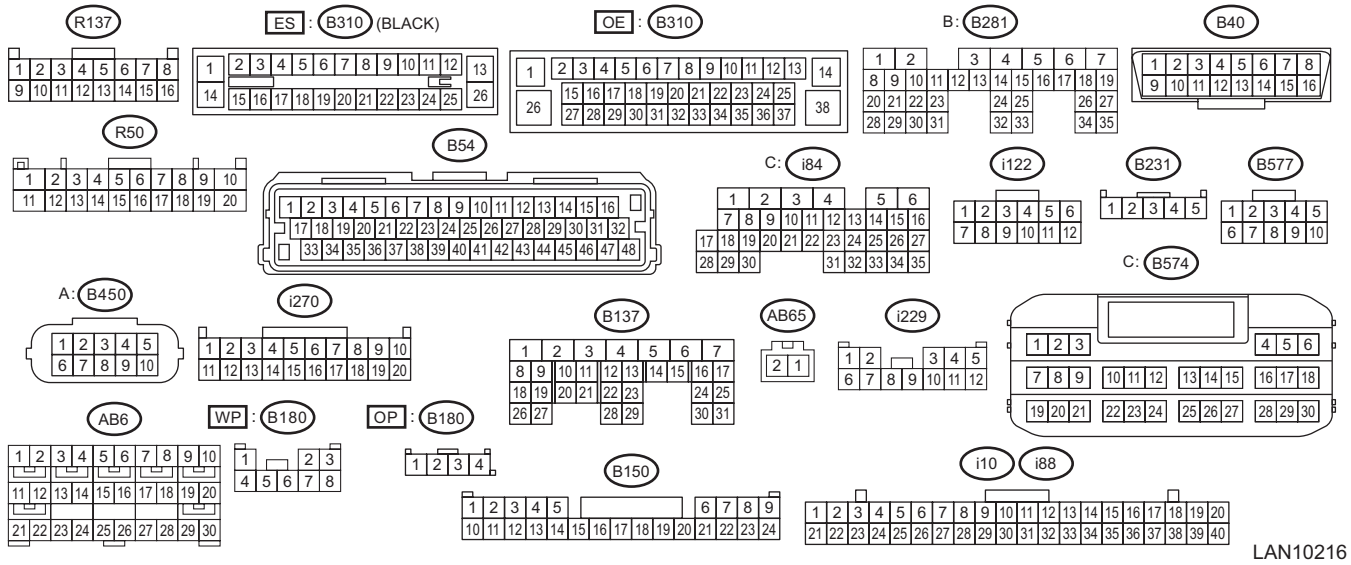
CAN communication system <Ref. to WI(w/o HEV)-69, WIRING DIAGRAM, CAN Communication System.>



- Without BSD/RCTA

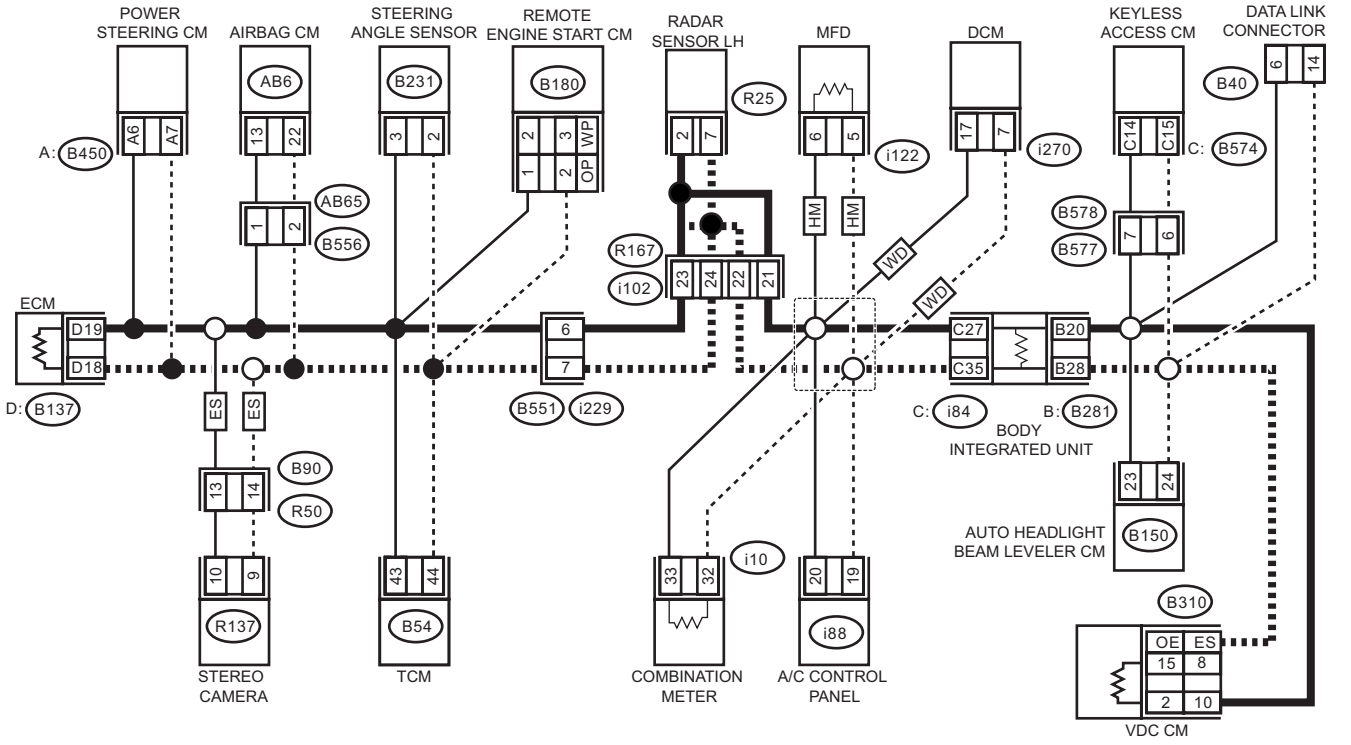
- With BSD/RCTA

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the combination meter connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i10) No. 32 — No. 33:***	Is the resistance 400 Ω or more?	Related lines between combination meter and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i10) No. 32 — (B40) No. 14:*** ***(i10) No. 33 — (B40) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of combination meter related lines.	Check DTC of combination meter. <Ref. to IDI(diag)-14, OPERATION, Read Diagnostic Trouble Code (DTC).>

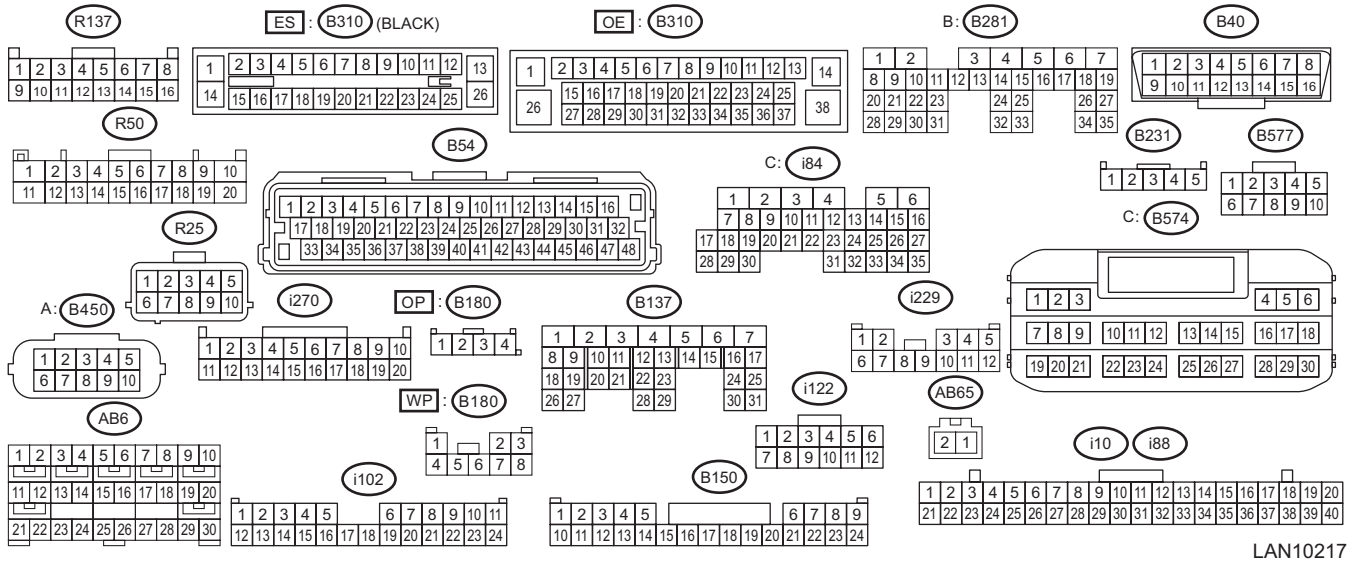


11.RELATED LINES 53 — 61 Ω (MFD)

WIRING DIAGRAM:



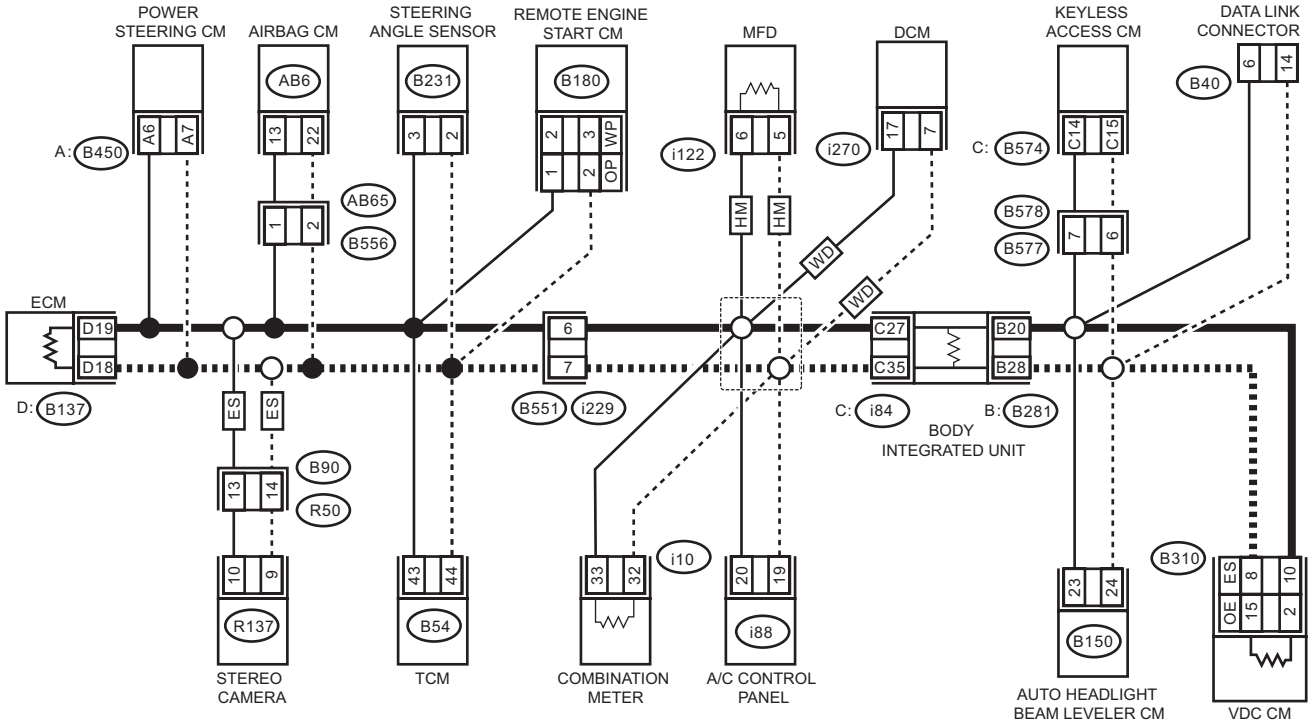
CAN communication system <Ref. to WI(w/o HEV)-69, WIRING DIAGRAM, CAN Communication System.>



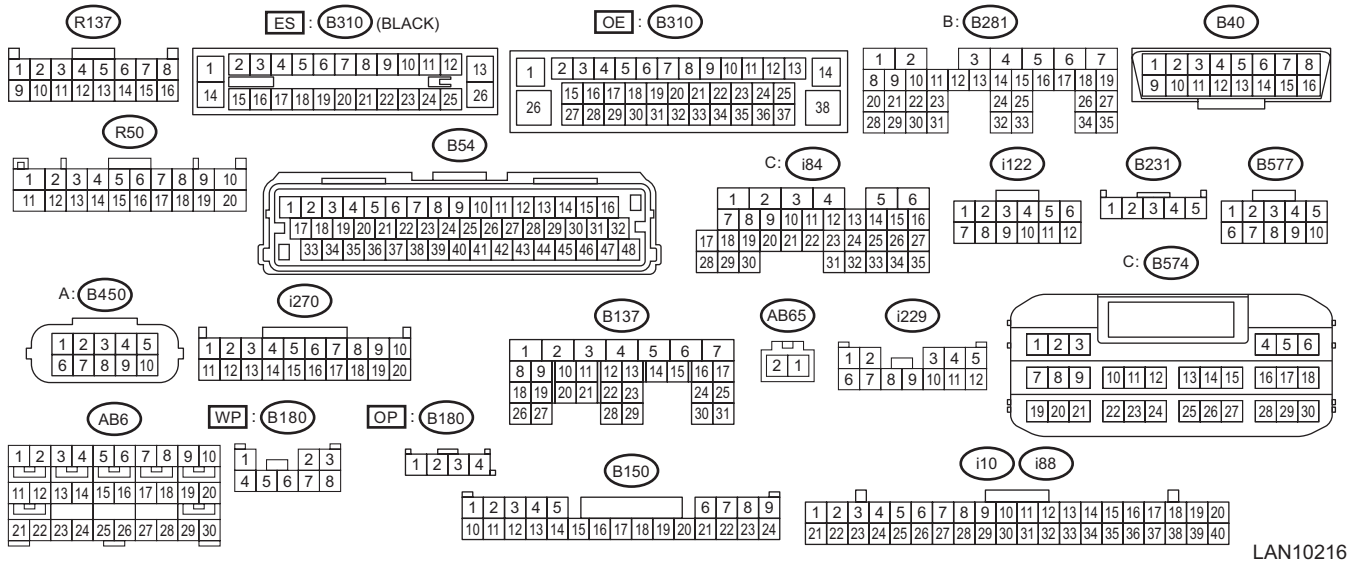
- Without BSD/RCTA

- With BSD/RCTA

Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the MFD connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal (i122) No. 5 — No. 6:***	Is the resistance 400 Ω or more?	Related lines between MFD and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.

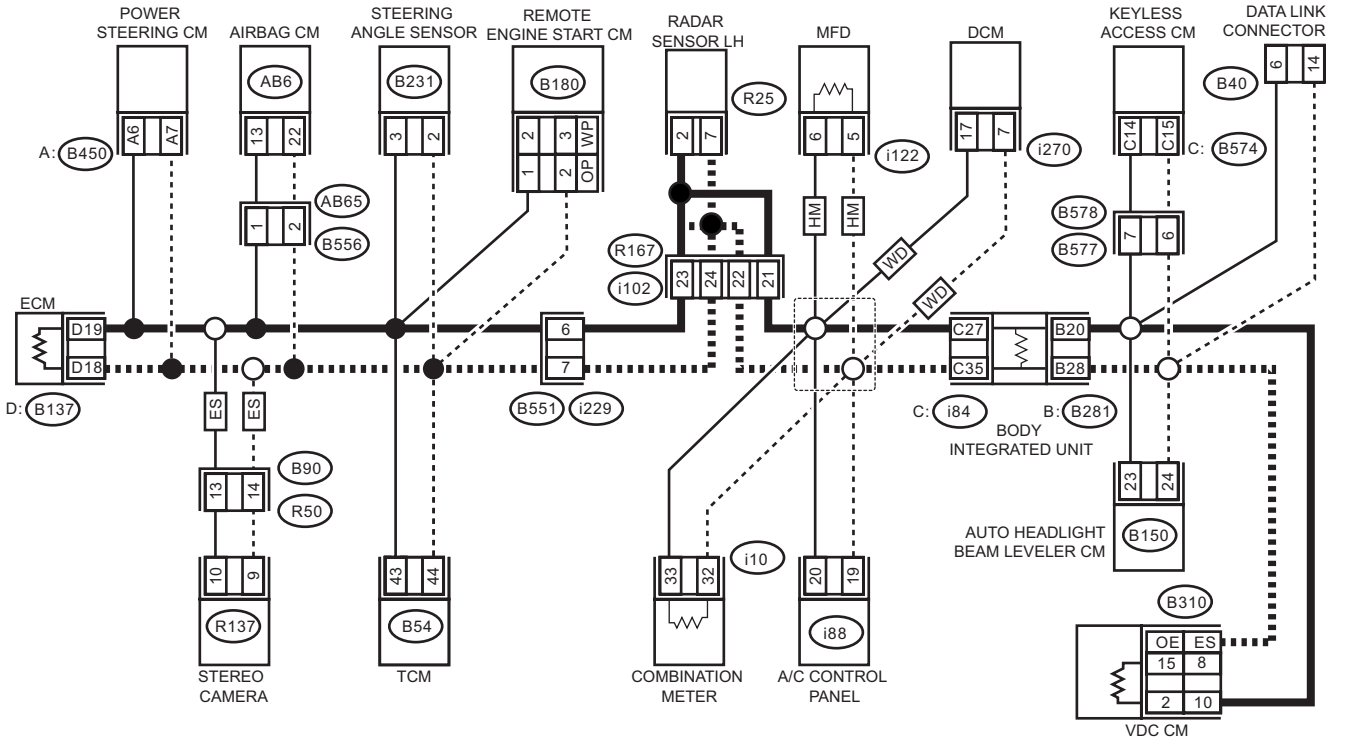


Step		Check	Yes	No
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i122) No. 5 — (B40) No. 14:*** ***(i122) No. 6 — (B40) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of MFD related lines.	Check DTC of MFD. <Ref. to IDI(diag)-14, OPERATION, Read Diagnostic Trouble Code (DTC).>

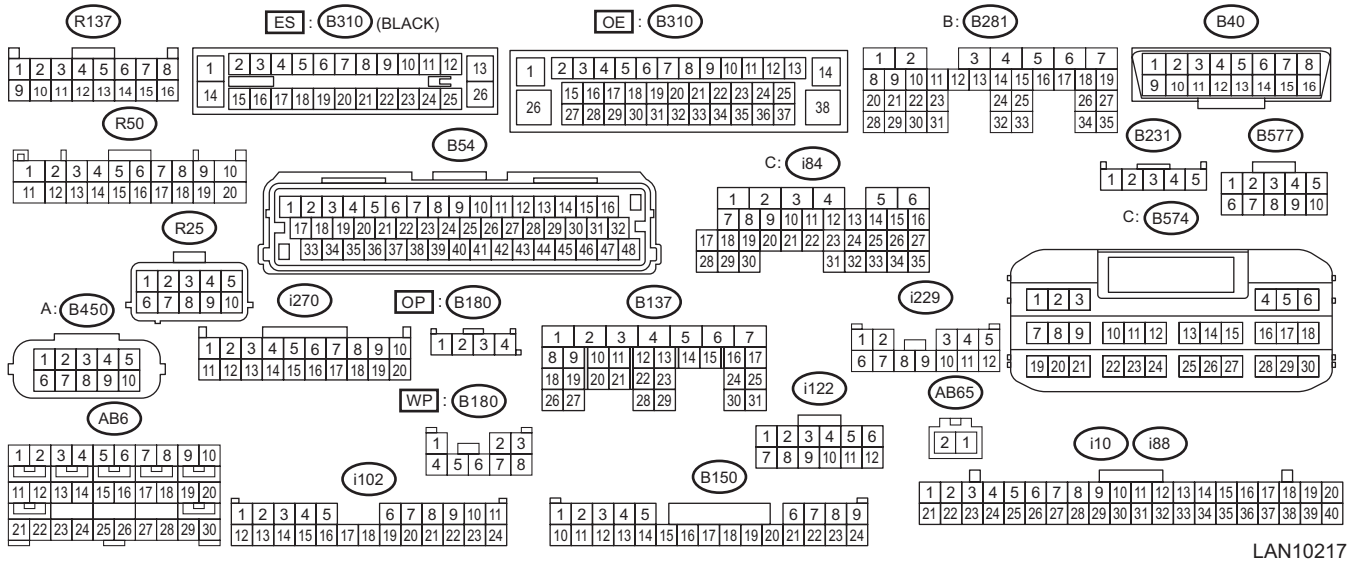


12.RELATED LINES 53 — 61 Ω (AIRBAG CM SYSTEM)

WIRING DIAGRAM:



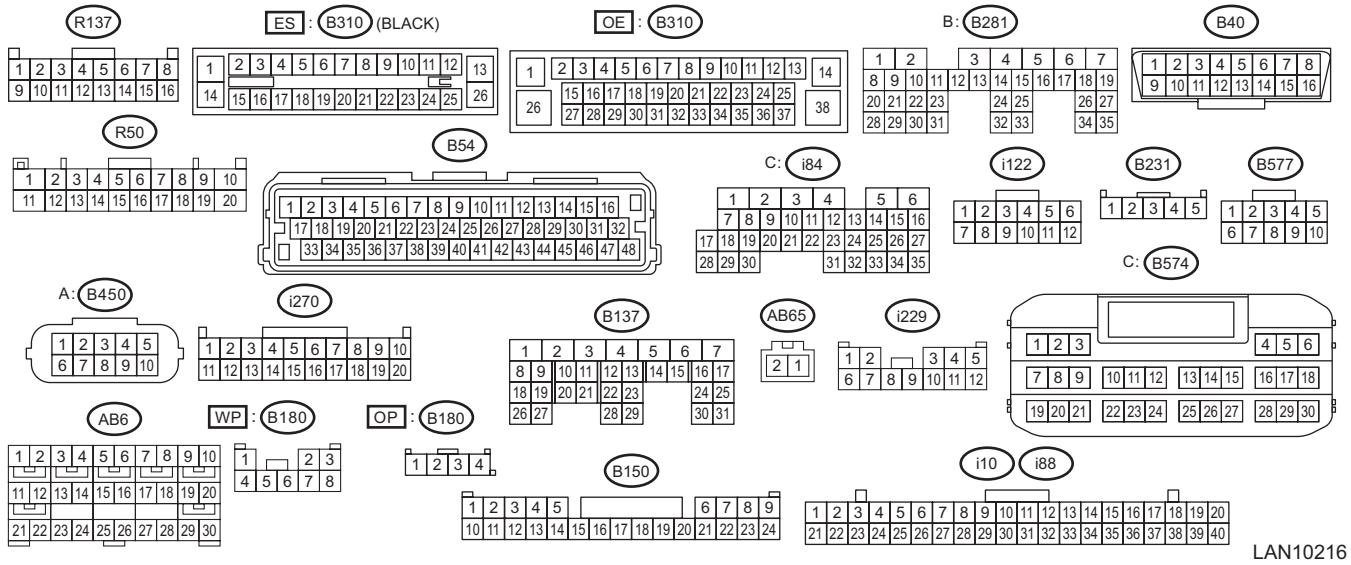
CAN communication system <Ref. to WI(w/o HEV)-69, WIRING DIAGRAM, CAN Communication System.>



- Without BSD/RCTA

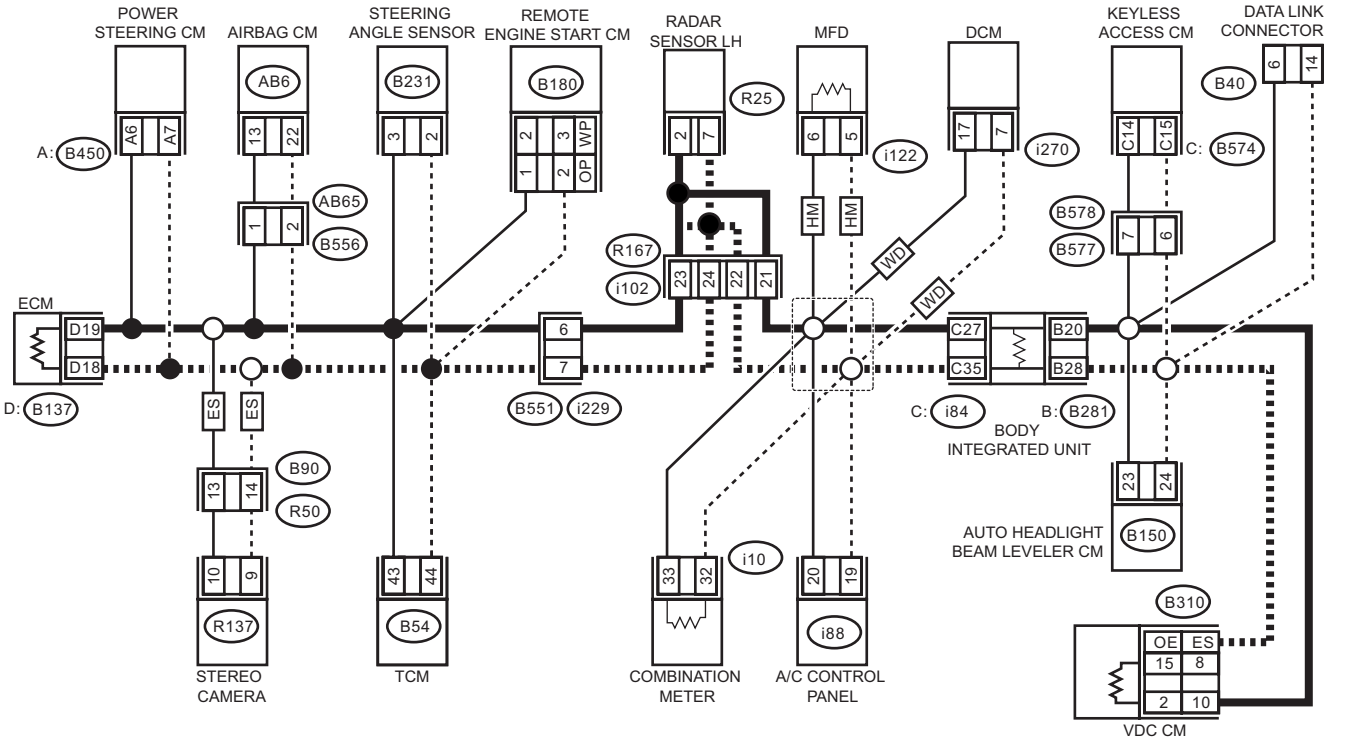
- With BSD/RCTA

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the airbag CM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(AB6) No. 13 — No. 22:***	Is the resistance 400 Ω or more?	Related lines between airbag CM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(AB6) No. 22 — (B40) No. 14:*** ***(AB6) No. 13 — (B40) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit portion of airbag CM related lines.	Check DTC of airbag CM. <Ref. to AB(diag)-27, OPERATION, Read Diagnostic Trouble Code (DTC).>

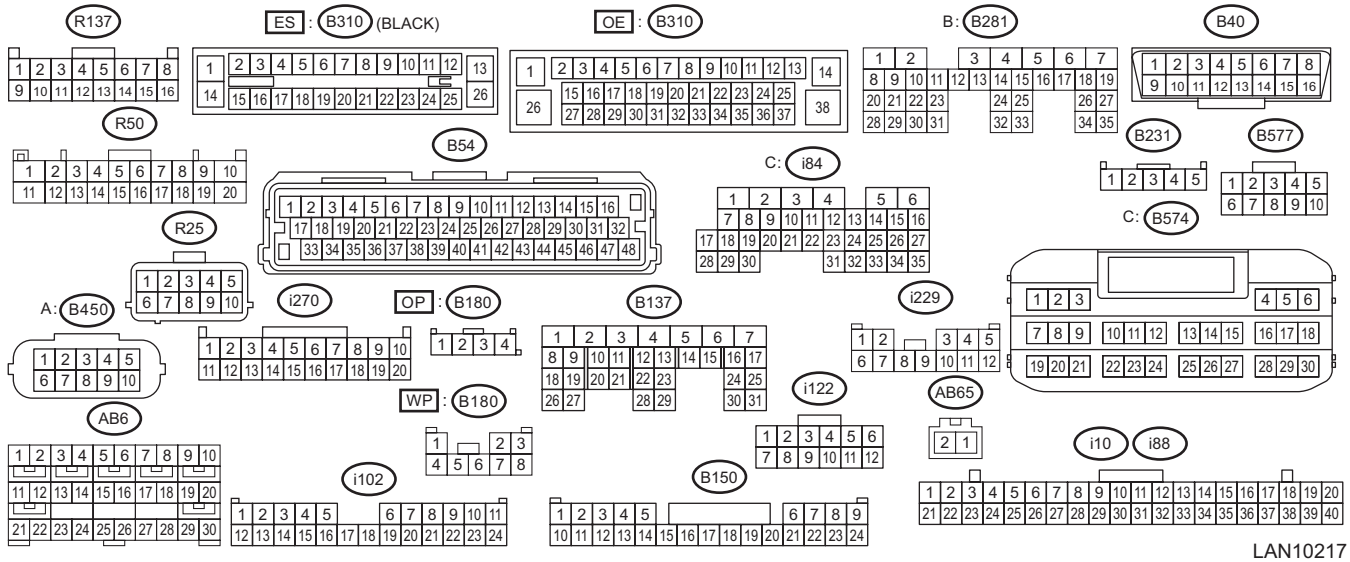


13.RELATED LINES 53 — 61 Ω (KEYLESS ACCESS SYSTEM)

WIRING DIAGRAM:



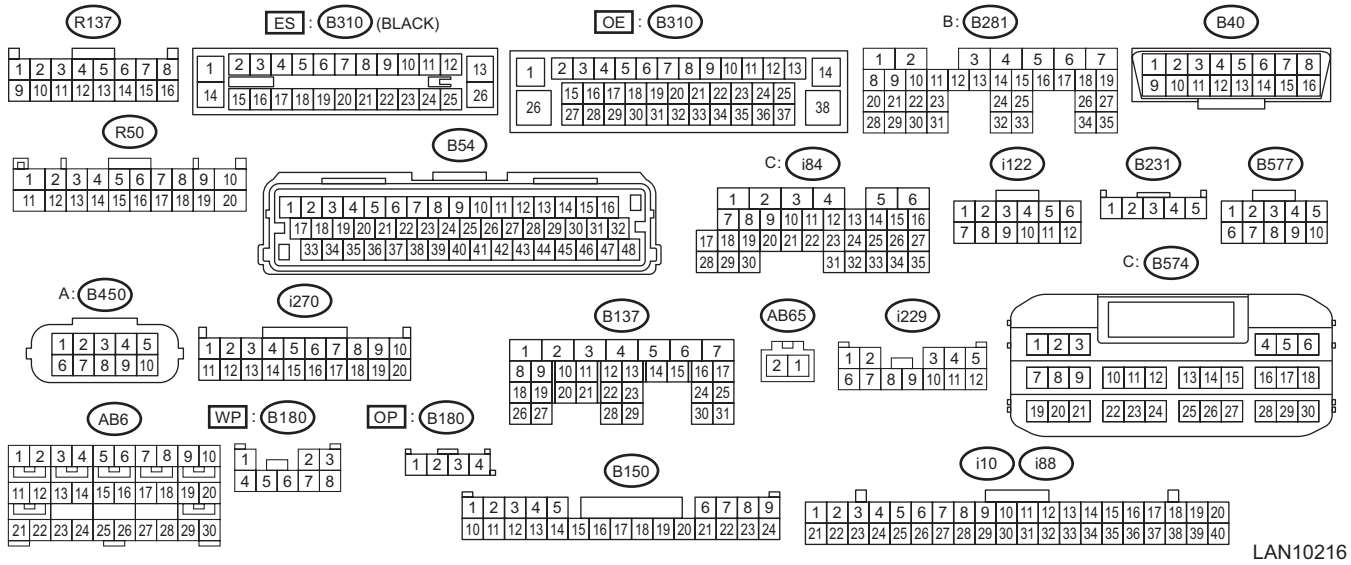
CAN communication system <Ref. to WI(w/o HEV)-69, WIRING DIAGRAM, CAN Communication System.>



- Without BSD/RCTA

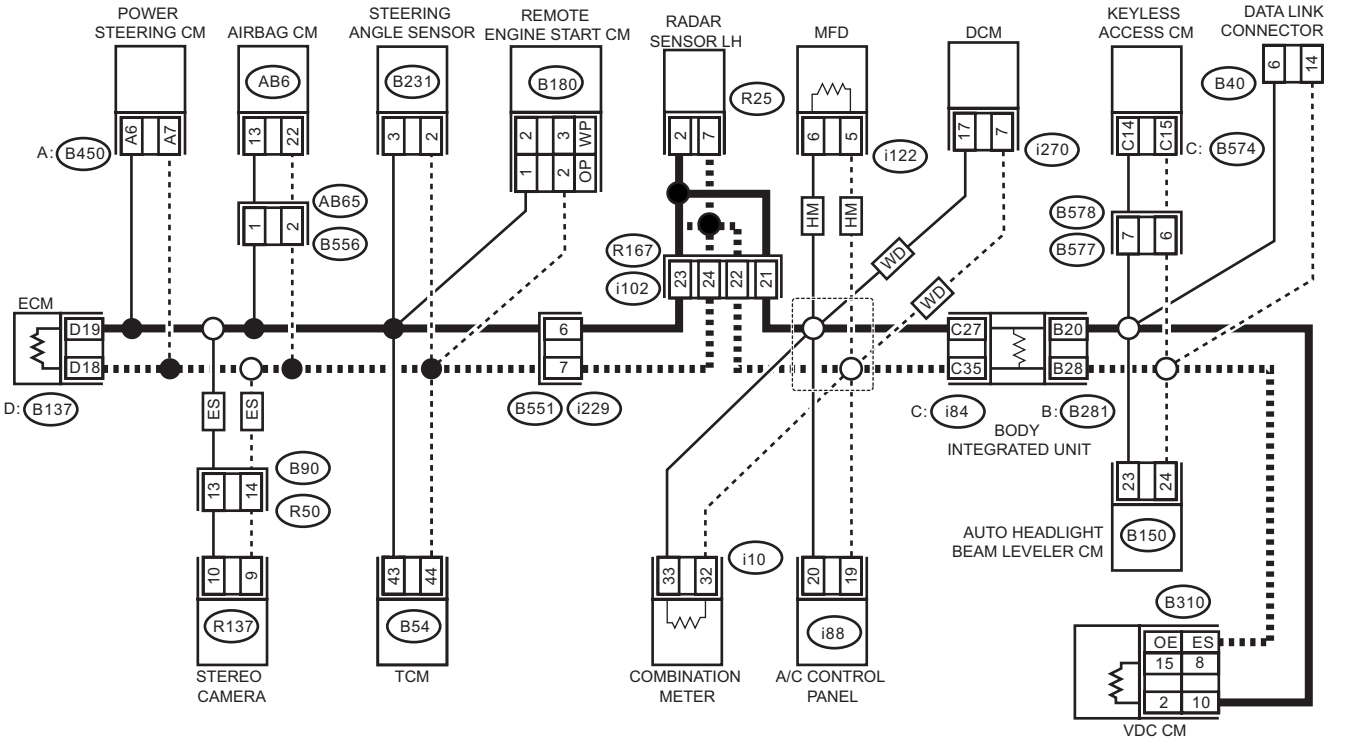
- With BSD/RCTA

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B574) No. 14 — No. 15:***	Is the resistance 400 Ω or more?	Related lines between keyless access CM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B574) No. 15 — (B40) No. 14:*** ***(B574) No. 14 — (B40) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of keyless access CM related lines.	Check DTC of keyless access CM. <Ref. to KPS(diag)-28, OPERATION, Read Diagnostic Trouble Code (DTC).>

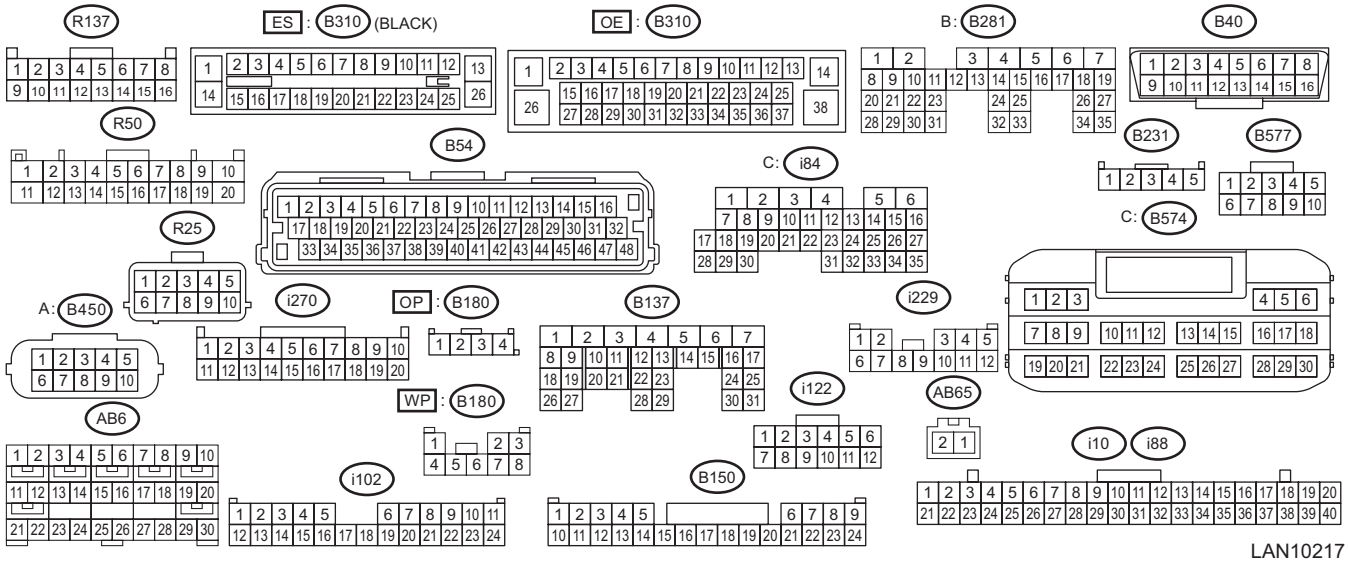


14.RELATED LINES 53 — 61 Ω (STEREO CAMERA)

WIRING DIAGRAM:



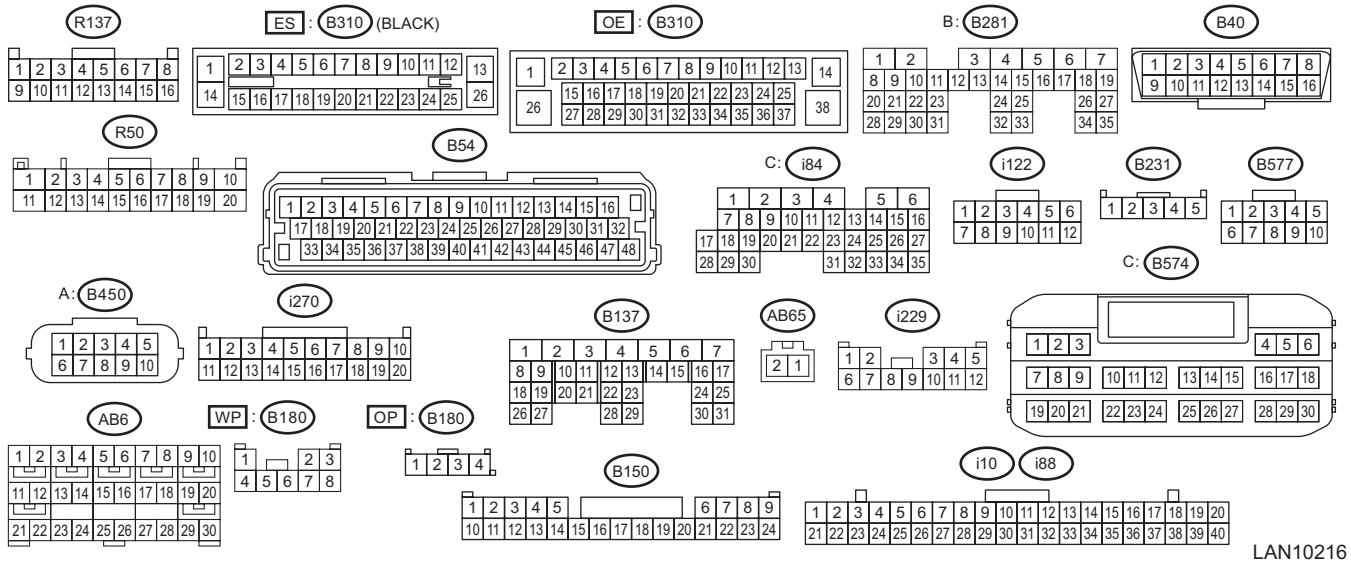
CAN communication system <Ref. to WI(w/o HEV)-69, WIRING DIAGRAM, CAN Communication System.>



- Without BSD/RCTA

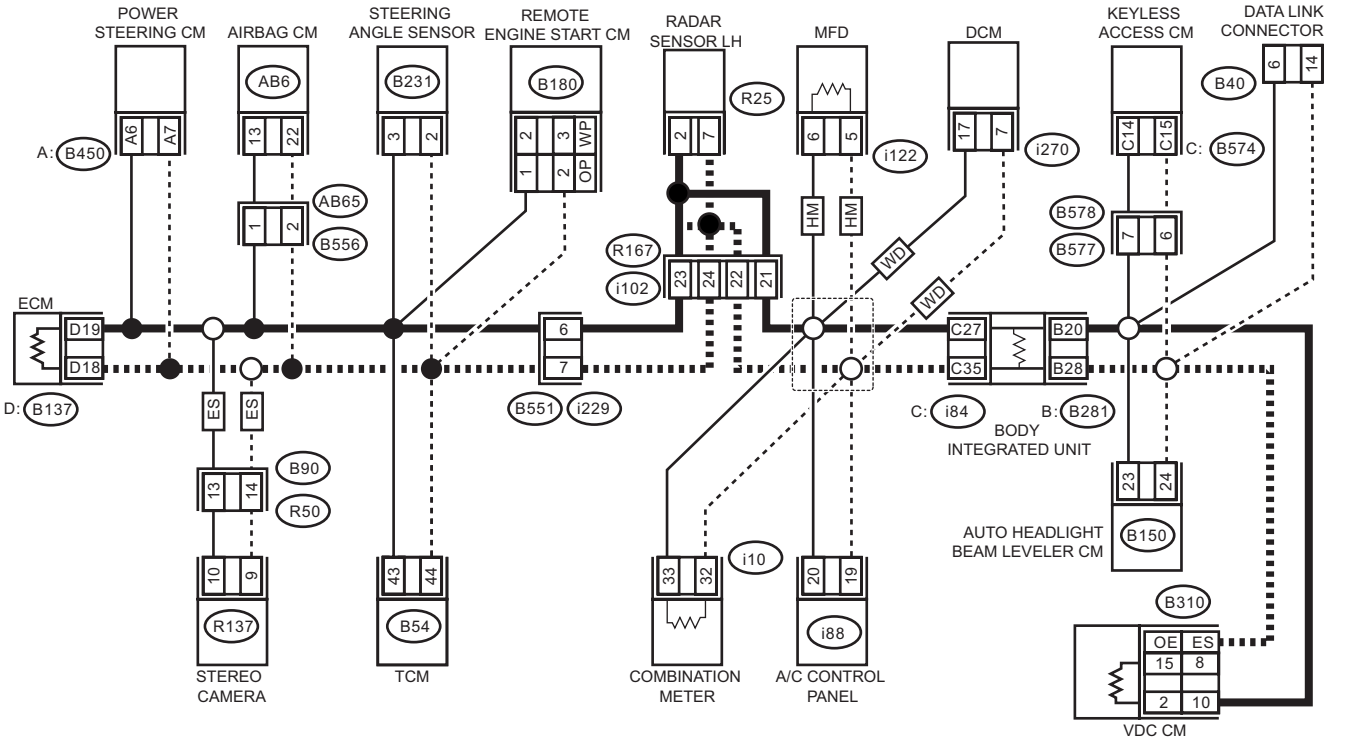
- With BSD/RCTA

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the stereo camera connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(R137) No. 10 — No. 9:***	Is the resistance 400 Ω or more?	Related lines between stereo camera and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(R137) No. 9 — (B40) No. 14:*** ***(R137) No. 10 — (B40) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of stereo camera related lines.	Check DTC of stereo camera. <Ref. to ES(diag)-40, Diagnostic Code(s) Display.>

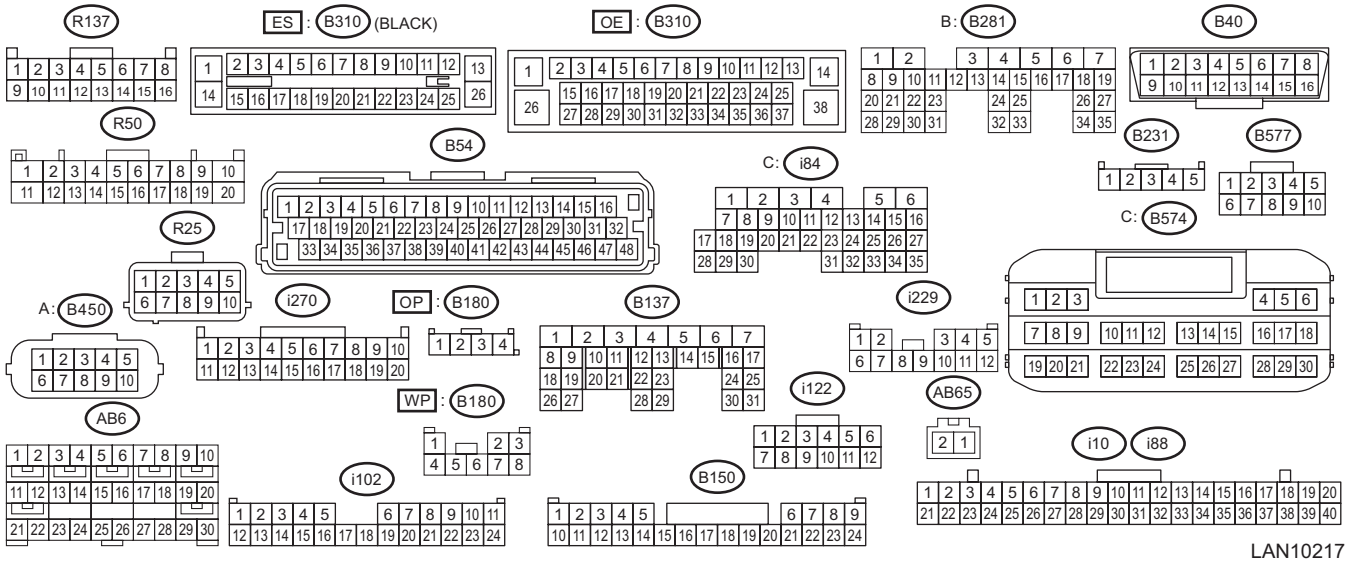


15.RELATED LINES 53 — 61 Ω (HEADLIGHT BEAM LEVELER)

WIRING DIAGRAM:



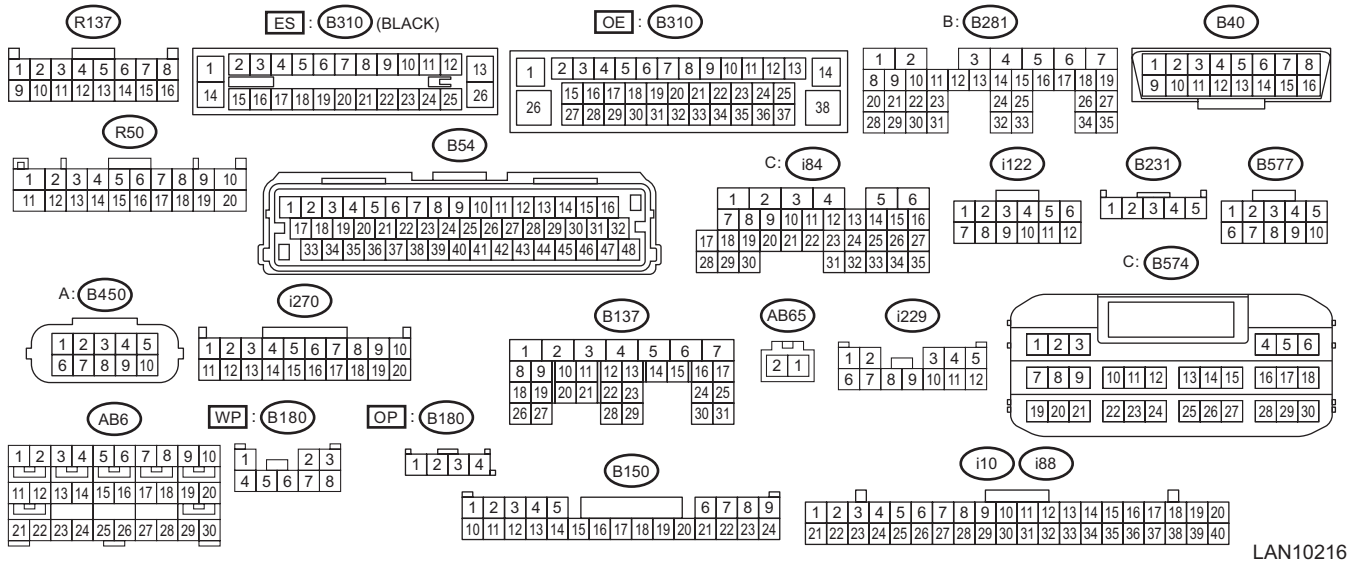
CAN communication system <Ref. to WI(w/o HEV)-69, WIRING DIAGRAM, CAN Communication System.>



- Without BSD/RCTA

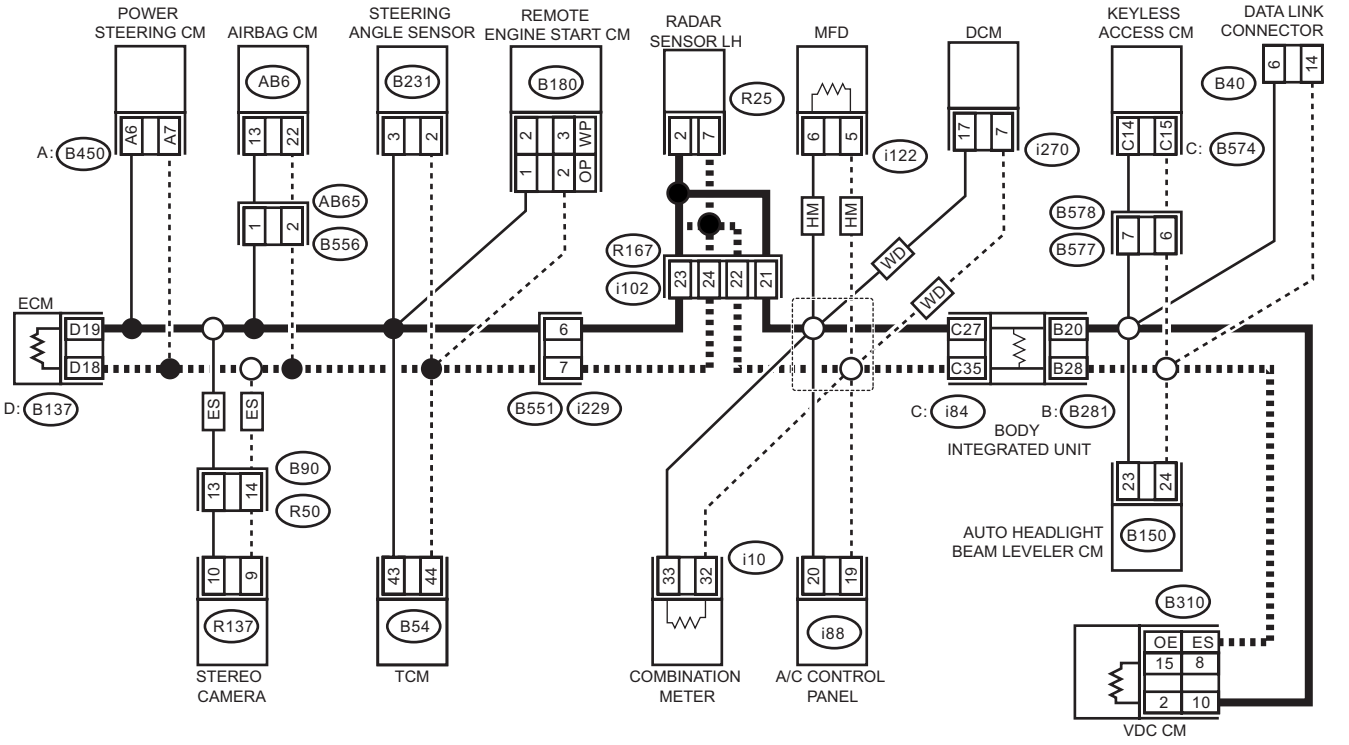
- With BSD/RCTA

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the headlight beam leveler CM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B150) No. 23 — No. 24:***	Is the resistance 400 Ω or more?	Related lines between headlight beam leveler CM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B150) No. 24 — (B40) No. 14:*** ***(B150) No. 23 — (B40) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit portion of headlight beam leveler CM related lines.	Check DTC of headlight beam leveler system.

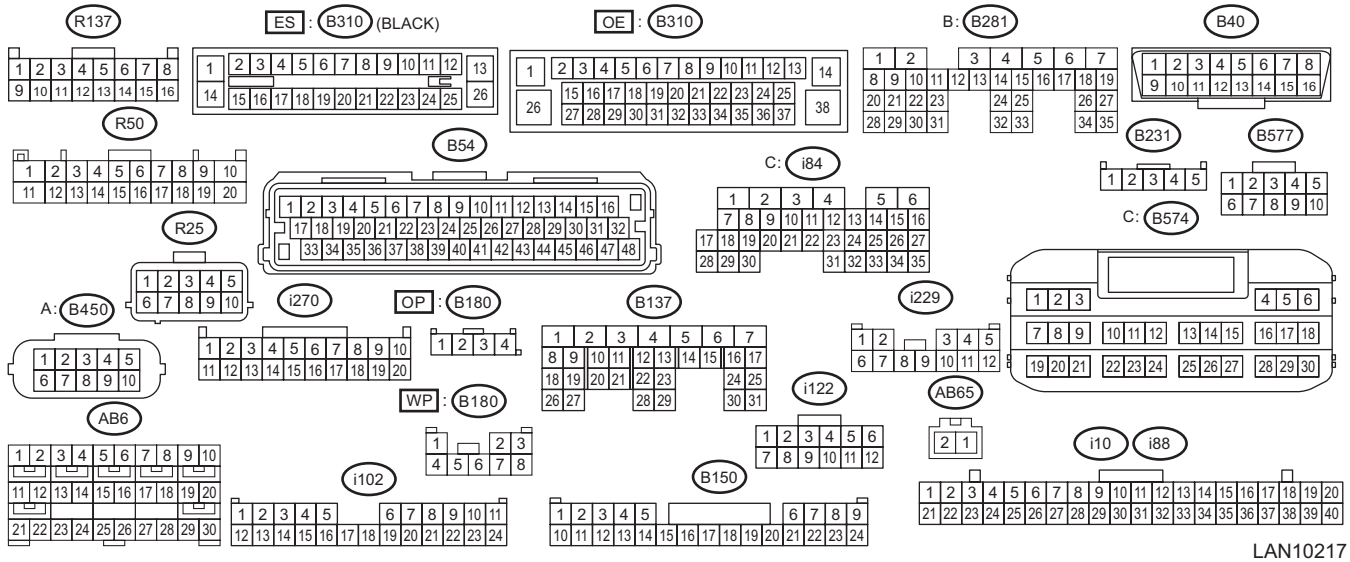


16.RELATED LINES 53 — 61 Ω (REMOTE ENGINE STARTER)

WIRING DIAGRAM:



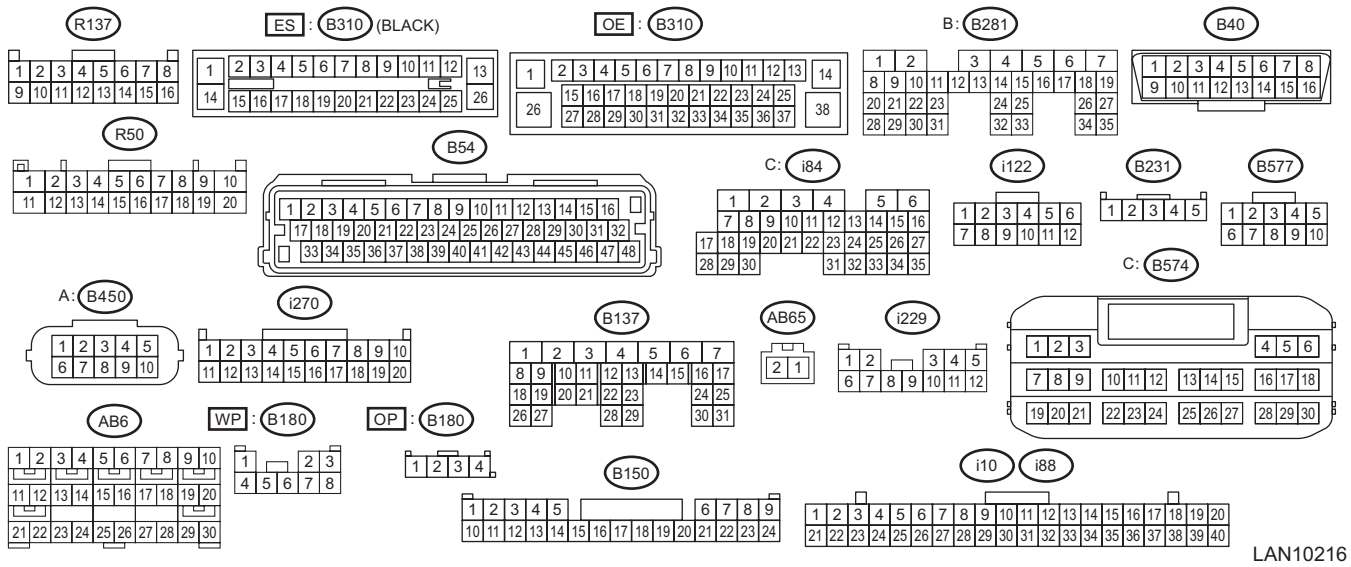
CAN communication system <Ref. to WI(w/o HEV)-69, WIRING DIAGRAM, CAN Communication System.>



- Without BSD/RCTA

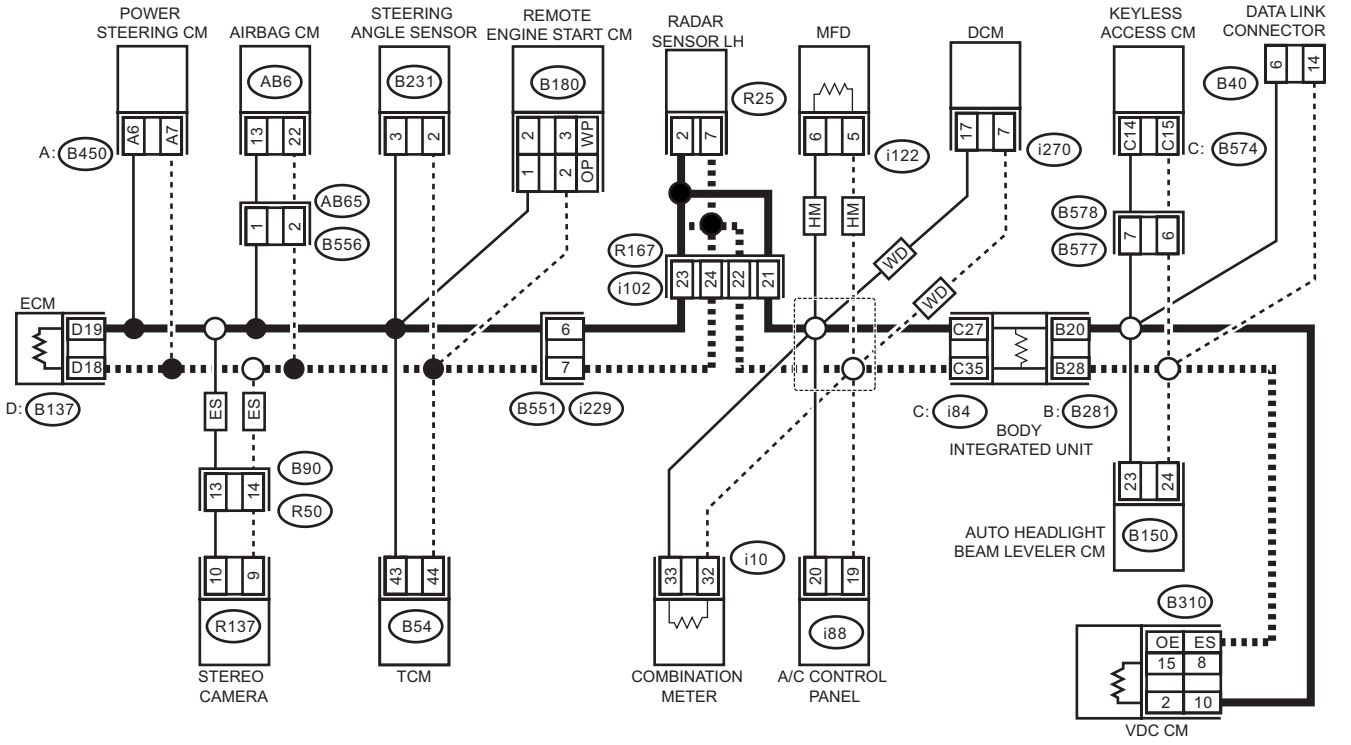
- With BSD/RCTA

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the remote engine start CM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***Without push button start*** ***(B180) No. 1 — No. 2:*** ***With push button start*** ***(B180) No. 2 — No. 3:***	Is the resistance 400 Ω or more?	Related lines between remote engine start CM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***Without push button start*** ***(B180) No. 1 — (B40) No. 6:*** ***(B180) No. 2 — (B40) No. 14:*** ***With push button start*** ***(B180) No. 2 — (B40) No. 6:*** ***(B180) No. 3 — (B40) No. 14:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of remote engine start CM related lines.	The communication harness is normal. Check the remote engine starter CM or the mobile key.

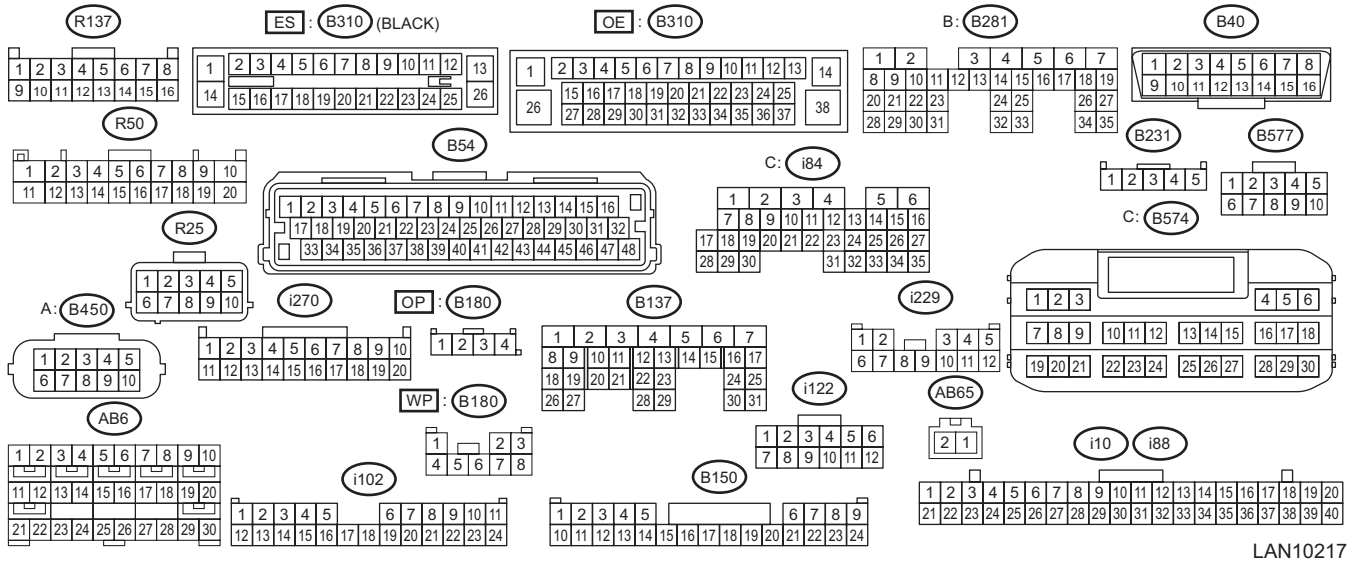


17.RELATED LINES 53 — 61 Ω (TELEMATICS)

WIRING DIAGRAM:

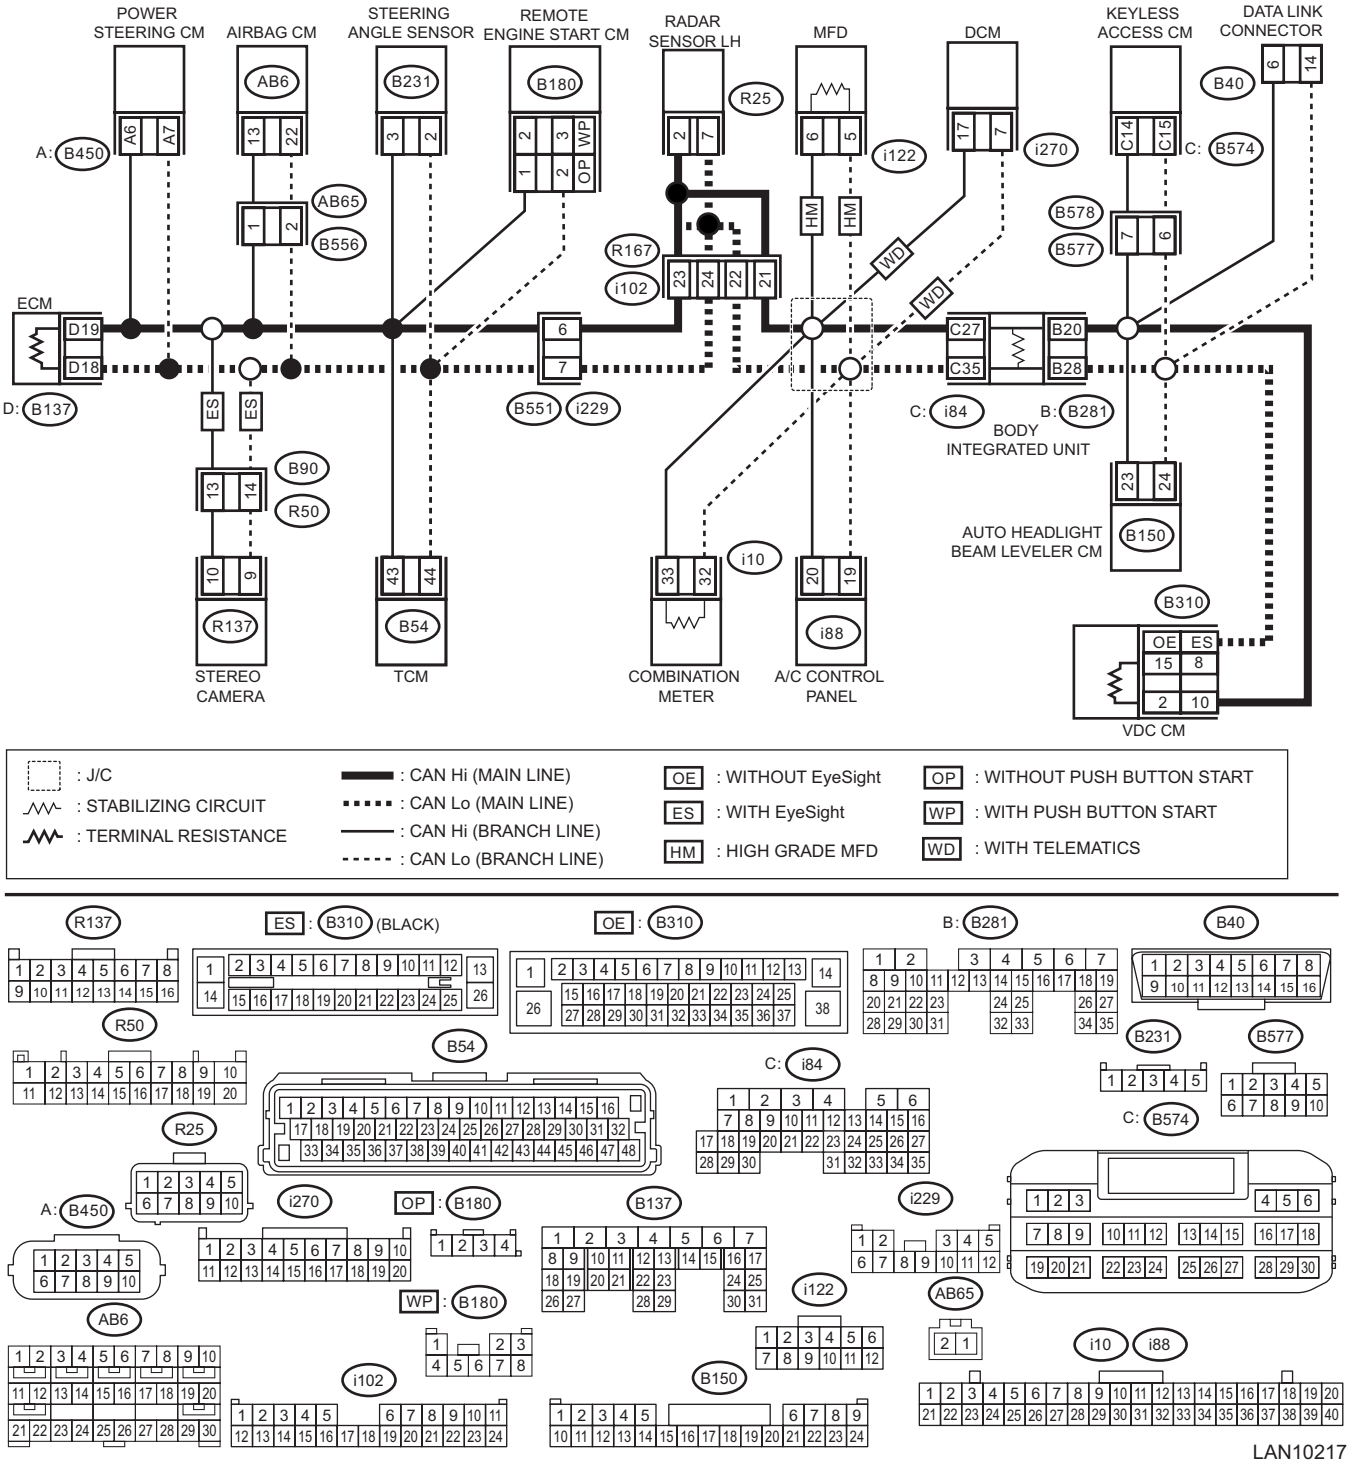


CAN communication system <Ref. to WI(w/o HEV)-69, WIRING DIAGRAM, CAN Communication System.>



- Without BSD/RCTA

- With BSD/RCTA



Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the DCM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal (i270) No. 7 — No. 17:***	Is the resistance 400 Ω or more?	Related lines between DCM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.

Step		Check	Yes	No
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i270) No. 17 — (B40) No. 6:*** ***(i270) No. 7 — (B40) No. 14:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of telematics system related lines.	The communication harness is normal. Check DTC of the telematics. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>

18.RELATED LINES 53 — 61 Ω (RADAR SENSOR)

WIRING DIAGRAM:

CAN communication system <Ref. to WI(w/o HEV)-69, WIRING DIAGRAM, CAN Communication System.>

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the radar sensor LH connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(R25) No. 2 — No. 7:***	Is the resistance 400 Ω or more?	Related lines between radar sensor LH and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B25) No. 2 — (B40) No. 6:*** ***(R25) No. 7 — (B40) No. 14:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of the Subaru Rear Vehicle Detection related lines.	The communication harness is normal. Check DTC of radar sensor. <Ref. to RVD(diag)-13, OPERATION, Read Diagnostic Trouble Code (DTC).>

10.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Note
U1201	CAN-HS COUNTER ABNORMAL	High speed CAN communication error	<Ref. to LAN(w/o HEV)(diag)-100, DTC U1201 CAN-HS COUNTER ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0073	CONTROL MODULE COMMUNICATION BUS OFF	Communication of some module is shut down.	<Ref. to LAN(w/o HEV)(diag)-101, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0401	INVALID DATA RECEIVED FROM ECM/PCM “A”	Error data is received from ECM.	<Ref. to LAN(w/o HEV)(diag)-102, DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0402	INVALID DATA RECEIVED FROM TCM	Error data is received from TCM.	<Ref. to LAN(w/o HEV)(diag)-103, DTC U0402 INVALID DATA RECEIVED FROM TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0416	INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE	Error data is received from VDC module.	<Ref. to LAN(w/o HEV)(diag)-104, DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0420	INVALID DATA RECEIVED FROM POWER STEERING CONTROL MODULE	Error data is received from EPS module.	<Ref. to LAN(w/o HEV)(diag)-106, DTC U0420 INVALID DATA RECEIVED FROM POWER STEERING CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE	Error data is received from body integrated unit.	<Ref. to LAN(w/o HEV)(diag)-107, DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0423	INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE	Error data is received from combination meter.	<Ref. to LAN(w/o HEV)(diag)-108, DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0424	INVALID DATA RECEIVED FROM HVAC CONTROL MODULE	Error data is received from A/C control panel.	<Ref. to LAN(w/o HEV)(diag)-110, DTC U0424 INVALID DATA RECEIVED FROM HVAC CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0427	INVALID DATA RECEIVED FROM VEHICLE SECURITY CONTROL MODULE	Error data is received from keyless access CM.	<Ref. to LAN(w/o HEV)(diag)-111, DTC U0427 INVALID DATA RECEIVED FROM VEHICLE SECURITY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0428	INVALID DATA RECEIVED FROM STEERING ANGLE SENSOR MODULE	Error data is received from steering angle sensor.	<Ref. to LAN(w/o HEV)(diag)-113, DTC U0428 INVALID DATA RECEIVED FROM STEERING ANGLE SENSOR MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0452	INVALID DATA RECEIVED FROM RESTRAINTS CONTROL MODULE	Error data is received from airbag module	<Ref. to LAN(w/o HEV)(diag)-114, DTC U0452 INVALID DATA RECEIVED FROM RESTRAINTS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0100	LOST COMMUNICATION WITH ECM/PCM “A”	Data does not arrive from ECM.	<Ref. to LAN(w/o HEV)(diag)-116, DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Note
U0101	LOST COMMUNICATION WITH TCM	Data does not arrive from TCM.	<Ref. to LAN(w/o HEV)(diag)-117, DTC U0101 LOST COMMUNICATION WITH TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0122	LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE	Data does not arrive from VDC module.	<Ref. to LAN(w/o HEV)(diag)-118, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0126	LOST COMMUNICATION WITH STEERING ANGLE SENSOR MODULE	Data does not arrive from steering angle sensor.	<Ref. to LAN(w/o HEV)(diag)-119, DTC U0126 LOST COMMUNICATION WITH STEERING ANGLE SENSOR MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0131	LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE	Data does not arrive from EPS module.	<Ref. to LAN(w/o HEV)(diag)-120, DTC U0131 LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0140	LOST COMMUNICATION WITH BODY CONTROL MODULE	Data does not arrive from body integrated unit.	<Ref. to LAN(w/o HEV)(diag)-121, DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0151	LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE	Data does not arrive from airbag module.	<Ref. to LAN(w/o HEV)(diag)-122, DTC U0151 LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	Data does not arrive from combination meter.	<Ref. to LAN(w/o HEV)(diag)-123, DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0156	LOST COMMUNICATION WITH INFORMATION CENTER "A"	Data does not arrive from MFD.	<Ref. to LAN(w/o HEV)(diag)-124, DTC U0156 LOST COMMUNICATION WITH INFORMATION CENTER "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0164	LOST COMMUNICATION WITH HVAC CONTROL MODULE	Data does not arrive from A/C control panel.	<Ref. to LAN(w/o HEV)(diag)-125, DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0327	SOFTWARE INCOMPATIBILITY WITH VEHICLE SECURITY CONTROL MODULE	Data does not arrive from keyless access CM.	<Ref. to LAN(w/o HEV)(diag)-126, DTC U0327 SOFTWARE INCOMPATIBILITY WITH VEHICLE SECURITY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1120	LOST COMMUNICATION WITH AUTOSTART STOP CONTROL MODULE	Data does not arrive from combination meter.	<Ref. to LAN(w/o HEV)(diag)-127, DTC U1120 LOST COMMUNICATION WITH AUTOSTART STOP CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1232	LOST COMMUNICATION WITH REAR/SIDE RADAR CONTROL MODULE	Data does not arrive from radar sensor.	<Ref. to LAN(w/o HEV)(diag)-128, DTC U1232 LOST COMMUNICATION WITH REAR/SIDE RADAR CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1235	LOST COMMUNICATION WITH EyeSight	Data does not arrive from stereo camera.	<Ref. to LAN(w/o HEV)(diag)-129, DTC U1235 LOST COMMUNICATION WITH EyeSight, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1433	INVALID DATA RECEIVED FROM EyeSight	Error data is received from stereo camera.	<Ref. to LAN(w/o HEV)(diag)-115, DTC U1433 INVALID DATA RECEIVED FROM EyeSight, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

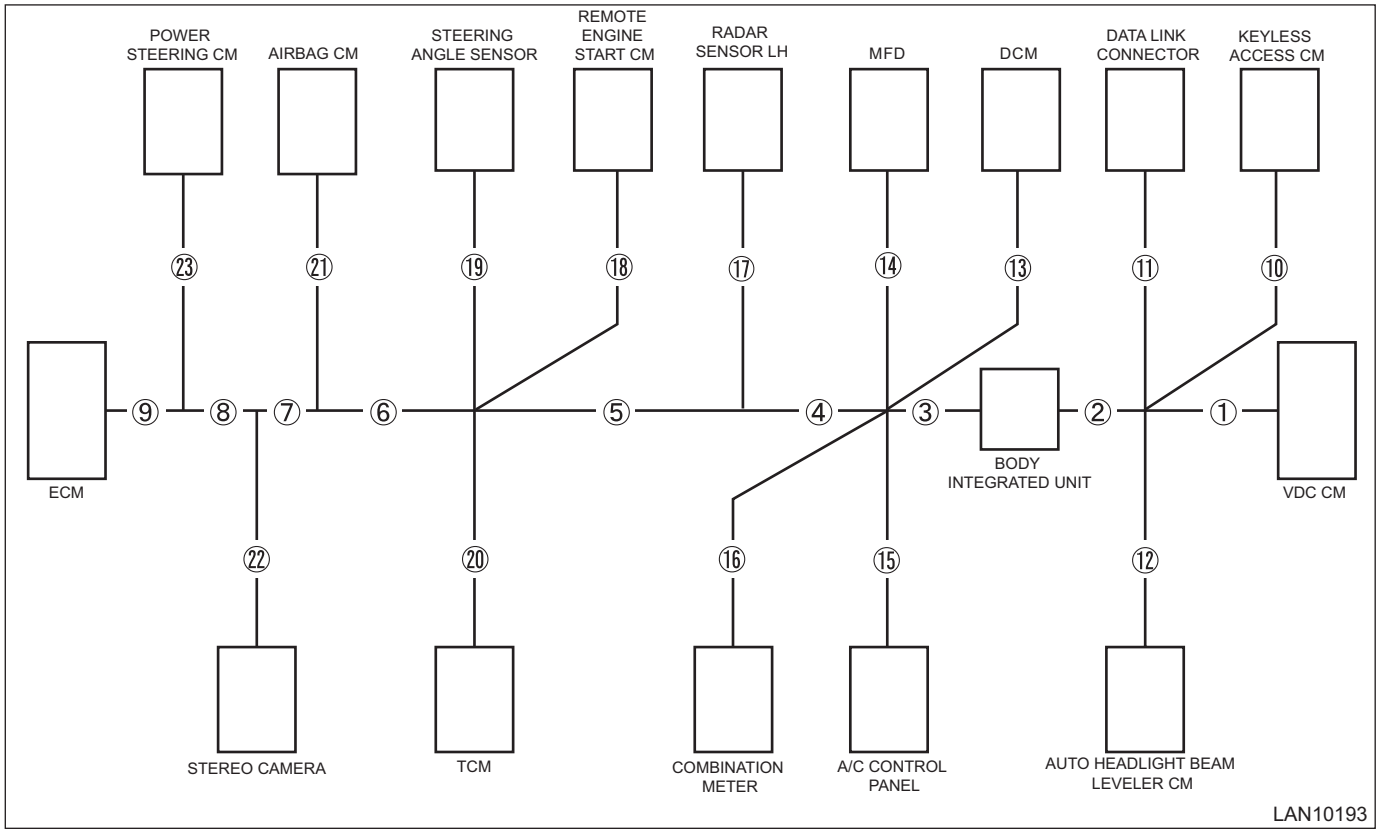
LAN10218

(A) Installation check
(B) Bus off detection
(C) Data no-receive detection
(D) Data abnormal detection

VDC: VDC CM
KPS: Keyless access CM
AHL: Auto headlight beam leveler CM
BIU: Body integrated unit
MFD: High grade MFD
A/C: A/C control panel
MET: Combination meter
DCM: Data communication module

STA: Steering angle sensor
TCM: Transmission CM
EYE: Stereo camera
A/B: Airbag CM
EPS: Power steering CM
ECM: Engine CM
RDR: Radar sensor

1) Module installation check
   (1) Write "-" marks in the field for installation check if the vehicle to be inspected does not have relevant module.
   (2) Write "-" marks in all blank fields on the same row that the "-" mark has filled in.
2) Bus off detection / data not received



NOTE:
It becomes impossible for CAN diagnostic module to read DTC, if there is a current malfunction of open harness (data not received). If this occurs, perform the "Check using the check sheet of communication for initializing" <Ref. to LAN(w/o HEV)(diag)-13, CHECK USING THE CHECK SHEET OF COMMUNICATION FOR INITIALIZING, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>, and use this sheet to confirm that the corresponding part becomes the past malfunction.
   (1) Mark "X" in the field corresponding to the DTCs that has been detected by each module in the check sheet.
   (2) Identify and repair the faulty part by referring to the example of DTC data not received. <Ref. to LAN(w/o HEV)(diag)-97, EXAMPLE OF DTC DATA NOT RECEIVED, LIST, List of Diagnostic Trouble Code (DTC).>

3) Data abnormal detection

NOTE:
If any “BUS OFF” or “NO-RECEIVE DATA” condition is detected, perform the diagnosis for these problems first.

(1) If several modules detect the DTC for the same module, replace the detected module.
(2) If one module detects the DTC, replace the module of the detected side.
(3) If it does not return to the normal operation, re-install the module which has been replaced, and replace the module of the detected side.
(4) If it does not return to the normal operation, replace both modules.

2. EXAMPLE OF DTC DATA NOT RECEIVED

When ⑱ (remote engine start CM vicinity) is open

NOTE:
No DTC remains, and the remote engine starter does not function.

LAN10220

11.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC U1201 CAN-HS COUNTER ABNORMAL

DTC DETECTING CONDITION:
Communication is unstable because of high speed CAN communication error.
TROUBLE SYMPTOM:
- Display of combination meter indicates faulty.
- Control faulty may occur due to CAN communication error.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** 1) Start the engine. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0073 a current malfunction?	Perform the diagnosis of U0073. <Ref. to LAN(w/o HEV)(diag)-101, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is U1201 a current malfunction?	Go to step **4**.	It is possible that temporary poor communication occurs. Perform the clear memory. <Ref. to LAN(w/o HEV)(diag)-33, Clear Memory Mode.>
4	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U1201 a current malfunction?	Go to step **5**.	It is possible that temporary poor communication occurs. Perform the clear memory. <Ref. to LAN(w/o HEV)(diag)-33, Clear Memory Mode.>
5	**CHECK CONTROL MODULE.** 1) Turn the ignition switch to OFF. 2) Disconnect the control modules other than body integrated unit in order. NOTE: When disconnecting ECM or VDC CM, connect resistance of 120 Ω between CAN Hi and CAN Lo as an alternative of end resistance. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is there any control module that U1201 is not detected as current malfunction?	Replace the control module.	Repeat 1) to 4) in step 5 until U1201 is not detected.

B: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

DTC DETECTING CONDITION:
Integrated unit communication is shut down because of high speed CAN error.
TROUBLE SYMPTOM:
CAN communication is not normal.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** 1) Start the engine. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0073 a current malfunction?	Go to step **3**.	It may be a temporary poor contact. Perform the clear memory. <Ref. to LAN(w/o HEV)(diag)-33, Clear Memory Mode.>
3	**CHECK CAN COMMUNICATION CIRCUIT.** Check CAN communication circuit. <Ref. to LAN(w/o HEV)(diag)-34, PROCEDURE, CAN Communication Circuit Check.>	Is CAN communication circuit faulty?	Repair the faulty portion, following the diagnosis procedure.	Go to step **4**.
4	**CHECK DTC.** 1) Perform the inspection using the DTC check sheet. <Ref. to LAN(w/o HEV)(diag)-96, CHECK USING THE DTC CHECK SHEET, LIST, List of Diagnostic Trouble Code (DTC).> 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0073 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK CONTROL MODULE.** 1) Turn the ignition switch to OFF. 2) Disconnect the control modules other than body integrated unit in order. NOTE: When disconnecting ECM or VDC CM, connect resistance of 120 Ω between CAN Hi and CAN Lo as an alternative of end resistance. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is there any control module that U0073 is not detected as current malfunction?	Replace the control module.	Repeat 1) to 4) in step 3 until U0073 is not detected.

C: DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A"

DTC DETECTING CONDITION:
Defective data from ECM.
TROUBLE SYMPTOM:
Defective data on CAN communication occurs.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U0401 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0401 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is the engine data abnormal detected in several modules?	Replace the ECM. <Ref. to FU(H4DO(w/o HEV))-100, Engine Control Module (ECM).>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the ECM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0401 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Reinstall the ECM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0401 a current malfunction?	Replace the ECM. <Ref. to FU(H4DO(w/o HEV))-100, Engine Control Module (ECM).>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0401 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

D: DTC U0402 INVALID DATA RECEIVED FROM TCM

DTC DETECTING CONDITION:
Received error data from TCM.
TROUBLE SYMPTOM:
Sport indicator light blinks.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U0402 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0402 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is the transmission data abnormal detected in several modules?	Replace the TCM. <Ref. to CVT(TH58A)-158, Transmission Control Module (TCM).>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the TCM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0402 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Reinstall the TCM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0402 a current malfunction?	Replace the TCM. <Ref. to CVT(TH58A)-158, Transmission Control Module (TCM).>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0402 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

E: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

DTC DETECTING CONDITION:
Data from VDCCM is faulty.
TROUBLE SYMPTOM:
ABS warning light and VDC warning light illuminate.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U0416 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the VDC CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0416 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is the VDC data abnormal detected in several modules?	Replace the VDC CM. <Ref. to VDC-10, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the VDC CM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0416 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Reinstall the VDC CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0416 a current malfunction?	Replace the VDC CM. <Ref. to VDC-10, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0416 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.

Step		Check	Yes	No
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

F: DTC U0420 INVALID DATA RECEIVED FROM POWER STEERING CONTROL MODULE

DTC DETECTING CONDITION:
Defective data was transmitted from EPS CM.
TROUBLE SYMPTOM:
Cooperation control with EPS CM does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U0420 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the power steering CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0420 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is the electric power steering data abnormal detected in several modules?	Replace the power steering CM. <Ref. to PS-40, Power Steering Control Module.>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the power steering CM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0420 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Reinstall the power steering CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0420 a current malfunction?	Replace the power steering CM. <Ref. to PS-40, Power Steering Control Module.>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0420 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

G: DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

DTC DETECTING CONDITION:
Defective data was transmitted from body integrated unit.
TROUBLE SYMPTOM:
Cooperation control with body integrated unit does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U0422 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0422 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is the body integrated data abnormal detected in several modules?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the body integrated unit. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0422 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Reinstall the body integrated unit. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0422 a current malfunction?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0422 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

H: DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

DTC DETECTING CONDITION:
Defective data was transmitted from combination meter.
TROUBLE SYMPTOM:
Display of combination meter does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U0423 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the combination meter connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0423 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is the meter data abnormal detected in several modules?	Replace the combination meter. <Ref. to IDI-19, Combination Meter.>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the combination meter. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0423 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Replace the current combination meter with the original combination meter. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0423 a current malfunction?	Replace the combination meter. <Ref. to IDI-19, Combination Meter.>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0423 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.

Step		Check	Yes	No
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

I: DTC U0424 INVALID DATA RECEIVED FROM HVAC CONTROL MODULE

DTC DETECTING CONDITION:
Defective data was transmitted from A/C control panel.
TROUBLE SYMPTOM:
Cooperation control of air conditioner does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U0424 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the A/C control panel connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0424 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is the air conditioner data abnormal detected in several modules?	Replace the A/C control panel. <Ref. to AC-47, Control Panel.>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the A/C control panel. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0424 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Restore the A/C control panel. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0424 a current malfunction?	Replace the A/C control panel. <Ref. to AC-47, Control Panel.>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0424 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

J: DTC U0427 INVALID DATA RECEIVED FROM VEHICLE SECURITY CONTROL MODULE

DTC DETECTING CONDITION:
Defective data was transmitted from keyless access CM.
TROUBLE SYMPTOM:
Cooperation control of keyless access does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U0427 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the keyless access CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0427 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is the smart data abnormal detected in several modules?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the keyless access CM. NOTE: Do not register the keyless access CM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0427 a current malfunction?	Go to step **8**.	System is normal. NOTE: Be sure to perform keyless access CM registration.
8	**CHECK MODULE.** 1) Reinstall the keyless access CM. 2) Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.> 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0427 a current malfunction?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0427 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.

Step		Check	Yes	No
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

K: DTC U0428 INVALID DATA RECEIVED FROM STEERING ANGLE SENSOR MODULE

DTC DETECTING CONDITION:
Defective data was transmitted from steering angle sensor.
TROUBLE SYMPTOM:
VDC CM does not operate normally.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U0428 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the steering angle sensor connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0428 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is the steering angle sensor data abnormal detected in several modules?	Replace the steering angle sensor. <Ref. to VDC-34, Steering Angle Sensor.>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the steering angle sensor. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0428 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Reinstall the steering angle sensor. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0428 a current malfunction?	Replace the steering angle sensor. <Ref. to VDC-34, Steering Angle Sensor.>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0428 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

L: DTC U0452 INVALID DATA RECEIVED FROM RESTRAINTS CONTROL MODULE

DTC DETECTING CONDITION:
Invalid data was transmitted from airbag CM.
TROUBLE SYMPTOM:
Cooperation control with airbag does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U0452 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the airbag CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0452 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is the airbag data abnormal detected in several modules?	Replace the airbag CM. <Ref. to AB-55, Airbag Control Module.>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the airbag CM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0452 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Reinstall the airbag CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0452 a current malfunction?	Replace the airbag CM. <Ref. to AB-55, Airbag Control Module.>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0452 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

M: DTC U1433 INVALID DATA RECEIVED FROM EyeSight

DTC DETECTING CONDITION:
Defective data was transmitted from stereo camera.
TROUBLE SYMPTOM:
Cooperation control of EyeSight does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U1433 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the stereo camera connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U1433 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is the EyeSight data abnormal detected in several modules?	Replace the stereo camera. <Ref. to ES-7, Stereo Camera.>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the stereo camera. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U1433 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Reinstall the stereo camera. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U1433 a current malfunction?	Replace the stereo camera. <Ref. to ES-7, Stereo Camera.>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U1433 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

N: DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A"

DTC DETECTING CONDITION:
No data is received from ECM.
TROUBLE SYMPTOM:
Cooperation control of transmission may not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is U0100 a current malfunction?	Go to step **4**.	Go to step **8**.
4	**CHECK DTC.** 1) Check CAN communication circuit. <Ref. to LAN(w/o HEV)(diag)-34, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0100 a current malfunction?	Go to step **5**.	Go to step **8**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is the engine data no-receive detected in several modules?	Replace the ECM. <Ref. to FU(H4DO(w/o HEV))-100, Engine Control Module (ECM).>	Go to step **6**.
6	**REPLACE MODULE.** 1) Replace the ECM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0100 a current malfunction?	Go to step **7**.	System is normal.
7	**CHECK MODULE.** 1) Reinstall the ECM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0100 a current malfunction?	Replace the ECM. <Ref. to FU(H4DO(w/o HEV))-100, Engine Control Module (ECM).>	System is normal.
8	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0100 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **9**.
9	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

O: DTC U0101 LOST COMMUNICATION WITH TCM

DTC DETECTING CONDITION:
No data is received from TCM.
TROUBLE SYMPTOM:
Cooperation control with transmission is not performed.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is U0101 a current malfunction?	Go to step **4**.	Go to step **8**.
4	**CHECK DTC.** 1) Check CAN communication circuit. <Ref. to LAN(w/o HEV)(diag)-34, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0101 a current malfunction?	Go to step **5**.	Go to step **8**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is the transmission data no-receive detected in several modules?	Replace the TCM. <Ref. to CVT(TH58A)-158, Transmission Control Module (TCM).>	Go to step **6**.
6	**REPLACE MODULE.** 1) Replace the TCM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0101 a current malfunction?	Go to step **7**.	System is normal.
7	**CHECK MODULE.** 1) Reinstall the TCM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0101 a current malfunction?	Replace the TCM. <Ref. to CVT(TH58A)-158, Transmission Control Module (TCM).>	System is normal.
8	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0101 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **9**.
9	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

P: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

DTC DETECTING CONDITION:
No data from VDCCM is received.
TROUBLE SYMPTOM:
ABS warning light and VDC warning light illuminate.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is U0122 a current malfunction?	Go to step **4**.	Go to step **8**.
4	**CHECK DTC.** 1) Check CAN communication circuit. <Ref. to LAN(w/o HEV)(diag)-34, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0122 a current malfunction?	Go to step **5**.	Go to step **8**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is the VDC data no-receive detected in several modules?	Replace the VDC CM. <Ref. to VDC-10, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.
6	**REPLACE MODULE.** 1) Replace the VDC CM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0122 a current malfunction?	Go to step **7**.	System is normal.
7	**CHECK MODULE.** 1) Reinstall the VDC CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0122 a current malfunction?	Replace the VDC CM. <Ref. to VDC-10, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	System is normal.
8	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0122 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **9**.
9	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

Q: DTC U0126 LOST COMMUNICATION WITH STEERING ANGLE SENSOR MODULE

DTC DETECTING CONDITION:
No data is received from steering angle sensor.
TROUBLE SYMPTOM:
VDC CM does not operate normally.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is U0126 a current malfunction?	Go to step **4**.	Go to step **8**.
4	**CHECK DTC.** 1) Check CAN communication circuit. <Ref. to LAN(w/o HEV)(diag)-34, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0126 a current malfunction?	Go to step **5**.	Go to step **8**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is the steering angle sensor data no-receive detected in several modules?	Replace the steering angle sensor. <Ref. to VDC-34, Steering Angle Sensor.>	Go to step **6**.
6	**REPLACE MODULE.** 1) Replace the steering angle sensor. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0126 a current malfunction?	Go to step **7**.	System is normal.
7	**CHECK MODULE.** 1) Reinstall the steering angle sensor. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0126 a current malfunction?	Replace the steering angle sensor. <Ref. to VDC-34, Steering Angle Sensor.>	System is normal.
8	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0126 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **9**.
9	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

R: DTC U0131 LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE

DTC DETECTING CONDITION:
No data is received from power steering CM.
TROUBLE SYMPTOM:
Cooperation control with power steering CM does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is U0131 a current malfunction?	Go to step **4**.	Go to step **8**.
4	**CHECK DTC.** 1) Check CAN communication circuit. <Ref. to LAN(w/o HEV)(diag)-34, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0131 a current malfunction?	Go to step **5**.	Go to step **8**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is the electric power steering data no-receive detected in several modules?	Replace the power steering CM. <Ref. to PS-40, Power Steering Control Module.>	Go to step **6**.
6	**REPLACE MODULE.** 1) Replace the power steering CM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0131 a current malfunction?	Go to step **7**.	System is normal.
7	**CHECK MODULE.** 1) Reinstall the power steering CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0131 a current malfunction?	Replace the power steering CM. <Ref. to PS-40, Power Steering Control Module.>	System is normal.
8	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0131 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **9**.
9	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

S: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

DTC DETECTING CONDITION:
No data is received from body integrated unit.
TROUBLE SYMPTOM:
Cooperation control with body integrated unit does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is U0140 a current malfunction?	Go to step **4**.	Go to step **8**.
4	**CHECK DTC.** 1) Check CAN communication circuit. <Ref. to LAN(w/o HEV)(diag)-34, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0140 a current malfunction?	Go to step **5**.	Go to step **8**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is the body integrated data no-receive detected in several modules?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Go to step **6**.
6	**REPLACE MODULE.** 1) Replace the body integrated unit. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0140 a current malfunction?	Go to step **7**.	System is normal.
7	**CHECK MODULE.** 1) Reinstall the body integrated unit. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0140 a current malfunction?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	System is normal.
8	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0140 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **9**.
9	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

T: DTC U0151 LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE

DTC DETECTING CONDITION:
No data is received from airbag CM.
TROUBLE SYMPTOM:
Cooperation control with airbag CM does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is U0151 a current malfunction?	Go to step **4**.	Go to step **8**.
4	**CHECK DTC.** 1) Check CAN communication circuit. <Ref. to LAN(w/o HEV)(diag)-34, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0151 a current malfunction?	Go to step **5**.	Go to step **8**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is the airbag data no-receive detected in several modules?	Replace the airbag CM. <Ref. to AB-55, Airbag Control Module.>	Go to step **6**.
6	**REPLACE MODULE.** 1) Replace the airbag CM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0151 a current malfunction?	Go to step **7**.	System is normal.
7	**CHECK MODULE.** 1) Reinstall the airbag CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0151 a current malfunction?	Replace the airbag CM. <Ref. to AB-55, Airbag Control Module.>	System is normal.
8	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0151 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **9**.
9	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

U: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

DTC DETECTING CONDITION:
No data is received from combination meter.
TROUBLE SYMPTOM:
Display of combination meter does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is U0155 a current malfunction?	Go to step **4**.	Go to step **8**.
4	**CHECK DTC.** 1) Check CAN communication circuit. <Ref. to LAN(w/o HEV)(diag)-34, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0155 a current malfunction?	Go to step **5**.	Go to step **8**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is the meter data no-receive detected in several modules?	Replace the meter. <Ref. to IDI-19, Combination Meter.>	Go to step **6**.
6	**REPLACE MODULE.** 1) Replace the combination meter. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0155 a current malfunction?	Go to step **7**.	System is normal.
7	**CHECK MODULE.** 1) Replace the current combination meter with the original combination meter. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0155 a current malfunction?	Replace the combination meter. <Ref. to IDI-19, Combination Meter.>	System is normal.
8	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0155 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **9**.
9	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

V: DTC U0156 LOST COMMUNICATION WITH INFORMATION CENTER "A"

DTC DETECTING CONDITION:
No data is received from MFD.
TROUBLE SYMPTOM:
Display of MFD does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is U0156 a current malfunction?	Go to step **4**.	Go to step **8**.
4	**CHECK DTC.** 1) Check CAN communication circuit. <Ref. to LAN(w/o HEV)(diag)-34, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0156 a current malfunction?	Go to step **5**.	Go to step **8**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is the data no-receive detected in several modules?	Replace the MFD. <Ref. to IDI-26, Multi-function Display (MFD).>	Go to step **6**.
6	**REPLACE MODULE.** 1) Replace the MFD. <Ref. to IDI-26, Multi-function Display (MFD).> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0156 a current malfunction?	Go to step **7**.	System is normal.
7	**CHECK MODULE.** 1) Reinstall the MFD. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0156 a current malfunction?	Replace the MFD. <Ref. to IDI-26, Multi-function Display (MFD).>	System is normal.
8	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0156 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **9**.
9	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

W: DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE

DTC DETECTING CONDITION:
No data is received from A/C control panel.
TROUBLE SYMPTOM:
Cooperation control of air conditioner does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is U0164 a current malfunction?	Go to step **4**.	Go to step **8**.
4	**CHECK DTC.** 1) Check CAN communication circuit. <Ref. to LAN(w/o HEV)(diag)-34, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0164 a current malfunction?	Go to step **5**.	Go to step **8**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is the air conditioner data no-receive detected in several modules?	Replace the A/C control panel. <Ref. to AC-47, Control Panel.>	Go to step **6**.
6	**REPLACE MODULE.** 1) Replace the A/C control panel. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0164 a current malfunction?	Go to step **7**.	System is normal.
7	**CHECK MODULE.** 1) Restore the A/C control panel. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0164 a current malfunction?	Replace the A/C control panel. <Ref. to AC-47, Control Panel.>	System is normal.
8	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0164 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **9**.
9	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

X: DTC U0327 SOFTWARE INCOMPATIBILITY WITH VEHICLE SECURITY CONTROL MODULE

DTC DETECTING CONDITION:
No data is received from keyless access CM.
TROUBLE SYMPTOM:
Cooperation control of keyless access does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is U0327 a current malfunction?	Go to step **4**.	Go to step **8**.
4	**CHECK DTC.** 1) Check CAN communication circuit. <Ref. to LAN(w/o HEV)(diag)-34, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0327 a current malfunction?	Go to step **5**.	Go to step **8**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is the smart data no-receive detected in several modules?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Go to step **6**.
6	**REPLACE MODULE.** 1) Replace the keyless access CM. NOTE: Do not register the keyless access CM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0327 a current malfunction?	Go to step **7**.	System is normal. NOTE: Be sure to perform keyless access CM registration.
7	**CHECK MODULE.** 1) Reinstall the keyless access CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0327 a current malfunction?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	System is normal.
8	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U0327 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **9**.
9	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

Y: DTC U1120 LOST COMMUNICATION WITH AUTOSTART STOP CONTROL MODULE

NOTE:
The electric power steering CM identifies whether the Auto Start Stop function is provided or not using information from the combination meter. Therefore, this DTC may be detected if lost communication with the combination meter occurs.
For the diagnostic procedure, refer to DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE. <Ref. to LAN(w/o HEV)(diag)-123, DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Z: DTC U1232 LOST COMMUNICATION WITH REAR/SIDE RADAR CONTROL MODULE

DTC DETECTING CONDITION:
No data is received from radar sensor.
TROUBLE SYMPTOM:
Radar sensor does not operate normally.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 8?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is U1232 a current malfunction?	Go to step **4**.	Go to step **8**.
4	**CHECK DTC.** 1) Check CAN communication circuit. <Ref. to LAN(w/o HEV)(diag)-34, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U1232 a current malfunction?	Go to step **5**.	Go to step **8**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is the radar data no-receive detected in several modules?	Replace the radar sensor LH. <Ref. to RVD-6, Radar Sensor.>	Go to step **6**.
6	**REPLACE MODULE.** 1) Replace the radar sensor LH. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U1232 a current malfunction?	Go to step **7**.	System is normal.
7	**CHECK MODULE.** 1) Reinstall the radar sensor LH. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U1232 a current malfunction?	Replace the radar sensor LH. <Ref. to RVD-6, Radar Sensor.>	System is normal.
8	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U1232 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **9**.
9	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(w/o HEV)(diag)-33, Clear Memory Mode.>

AA:DTC U1235 LOST COMMUNICATION WITH EyeSight

DTC DETECTING CONDITION:
No data from stereo camera is received.
TROUBLE SYMPTOM:
Cooperation control of EyeSight does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is U1235 a current malfunction?	Go to step **4**.	Go to step **8**.
4	**CHECK DTC.** 1) Check CAN communication circuit. <Ref. to LAN(w/o HEV)(diag)-34, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U1235 a current malfunction?	Go to step **5**.	Go to step **8**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is the EyeSight data no-receive detected in several modules?	Replace the stereo camera. <Ref. to ES-7, Stereo Camera.>	Go to step **6**.
6	**REPLACE MODULE.** 1) Replace the stereo camera. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U1235 a current malfunction?	Go to step **7**.	System is normal.
7	**CHECK MODULE.** 1) Reinstall the stereo camera. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U1235 a current malfunction?	Replace the stereo camera. <Ref. to ES-7, Stereo Camera.>	System is normal.
8	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(w/o HEV)(diag)-32, Read Diagnostic Trouble Code (DTC).>	Is U1235 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **9**.
9	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

12.General Diagnostic Table

A: INSPECTION

Item	Operation	Specifications		Note
		YES	NO	
Diagnostic code	DTC is displayed when inspecting all DTCs.	Perform the diagnosis according to DTC.	System is normal.	—
Speedometer	Faster vehicle speed than the actual speed is displayed.	VDC CM data may not be received.	System is normal.	Also, check vehicle speed pulse circuit.
Fuel gauge	Fuel is present, but displayed less than actual amount.	Communication error may be present.	System is normal.	Also, check the fuel gauge.
Fuel level warning light	Fuel is present, but the light illuminates.	Communication error may be present.	System is normal.	Also, check the fuel gauge.
Engine coolant temperature light	Engine coolant temperature light blinks in red and blue alternately.	Communication error may be present.	System is normal.	Check the engine coolant light related items.
[S], [I] or [S#] indicator	Blinking.	Communication error may be present.	System is normal.	Check the intelligent switch.
VDC indicator	Illuminating.	Communication error may be present.	System is normal.	Check that VDC is not operating.
VDC OFF indicator	Illuminating.	Communication error may be present.	System is normal.	Check that VDC is not OFF.
Brake warning, etc.	Illuminating.	Brake fluid may be low in amount, or communication error may be present.	System is normal.	Check brake related items.
Shift position	Not displayed.	Communication error may be present.	System is normal.	Also, check AT system.
AT temperature light	Blinking.	Communication error may be present.	System is normal.	Also, check AT system.
Door indicator	Not displayed.	Communication error may be present.	System is normal.	Check the door switch.
Clearance indicator	Not illuminating.	Communication error may be present.	System is normal.	Check the combination switch.
Hi beam indicator	Not illuminating.	Communication error may be present.	System is normal.	Check the combination switch.
Front fog indicator	Not illuminating.	Communication error may be present.	System is normal.	Check the combination switch.
Illumination	Illuminating at the maximum brightness.	Communication error may be present.	System is normal.	Also, check the illumination switch.
Cruise control indicator	Not illuminating.	Communication error may be present.	System is normal.	Check the cruise control system.
AWD indicator	Not illuminating.	Communication error may be present.	System is normal.	Check TCM.
Hill hold indicator	Not illuminating.	Communication error may be present.	System is normal.	Also, check VDC CM.

8.	Clear Memory Mode	32
9.	CAN Communication Circuit Check	33
10.	List of Diagnostic Trouble Code (DTC)	113
11.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	121
12.	General Diagnostic Table	180

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
• Subaru Select Monitor is required for reading DTC, performing diagnosis, reading current data, customizing and active test (compulsory drive).
• Remove foreign matter (dust, water, oil, etc.) from each control module connector during removal and installation.
• Registration of immobilizer may be needed after the replacement of control modules, etc. For detailed procedure, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

NOTE:
• To check harness for open or short circuits, shake the suspected trouble spot or connector.
• Check List for Interview <Ref. to LAN(HEV)(diag)-4, Check List for Interview.>

	Step	Check	Yes	No
1	**CHECK PRE-INSPECTION.** Ask the customer when and how the trouble occurred using the interview check list. <Ref. to LAN(HEV)(diag)-4, Check List for Interview.>	Did you interview the customer?	Go to step **2**.	Interview the customer.
2	**BASIC INSPECTION (CAN DIAGNOSTIC IS NOT USED).** Check components which might affect CAN communication problem. <Ref. to LAN(HEV)(diag)-7, INSPECTION WITHOUT USING CAN DIAGNOSTIC, INSPECTION, General Description.>	Is the component that might affect CAN communication problem normal?	Go to step **3**.	Repair or replace each component.
3	**CHECK COMMUNICATION FOR INITIALIZING.** Communicate with the all systems by connecting the Subaru Select Monitor.	Is the communication for initializing finished for all modules?	Go to step **4**.	Check the error of communication for initializing. <Ref. to LAN(HEV)(diag)-12, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>
4	**BASIC INSPECTION (CAN DIAGNOSTIC IS USED).** Check components which might affect CAN communication problem. <Ref. to LAN(HEV)(diag)-7, INSPECTION USING CAN DIAGNOSTIC, INSPECTION, General Description.>	Is the component that might affect CAN communication problem normal?	Go to step **5**.	Repair or replace each component.
5	**CHECK DTC.** 1) Start the engine and read all DTCs. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).> NOTE: • When the engine does not start, perform the diagnosis for the engine start malfunction. <Ref. to EN(H4DO HEV)(diag)-72, Diagnostics for Engine Starting Failure.> 2) Record all DTCs, time stamp and freeze frame data. NOTE: For time stamp, <Ref. to LAN(HEV)(diag)-6, TIME STAMP, CAUTION, General Description.>	Is DTC U**** displayed on Subaru Select Monitor?	Go to step **6**.	Go to step **7**.

	Step	Check	Yes	No
6	**CHECK DTC.** 1) Perform the inspection using the DTC check sheet. <Ref. to LAN(HEV)(diag)-116, CHECK USING THE DTC CHECK SHEET, LIST, List of Diagnostic Trouble Code (DTC).> 2) Using the Subaru Select Monitor, read all DTCs. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed on Subaru Select Monitor?	Go to step **8**.	Go to step **7**.
7	**PERFORM GENERAL DIAGNOSTICS.** Inspect using the “General Diagnostic Table”. <Ref. to LAN(HEV)(diag)-180, General Diagnostic Table.>	Is result of inspection OK?	LAN system is normal.	Go to step **8**.
8	**PERFORM DIAGNOSIS.** 1) Correct the cause of trouble. 2) Perform the Clear Memory Mode. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.> 3) Read the DTC. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed on Subaru Select Monitor?	Repeat step 8 until DTC is not shown.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Inspect the following items regarding the vehicle's state.

1. DISPLAY STATUS IN THE COMBINATION METER

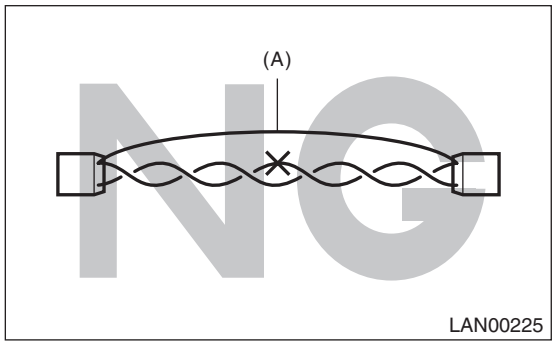
Display status in the combination meter	Engine coolant temperature gauge display	❑ OK / ❑ NG
	Fuel gauge display	❑ OK / ❑ NG
	Tachometer display	❑ OK / ❑ NG (0 rpm at idling etc.)
Display of other indicators	Malfunction indicator light	❑ ON / ❑ Blink / ❑ OFF
	Sport indicator light (AT warning light)	❑ ON / ❑ Blink / ❑ OFF
	ABS warning light	❑ ON / ❑ Blink / ❑ OFF
	VDC warning light	❑ ON / ❑ Blink / ❑ OFF
	Immobilizer indicator light	❑ ON / ❑ Blink / ❑ OFF
	AT OIL TEMP warning light	❑ ON / ❑ Blink / ❑ OFF
	Engine coolant temperature warning light	❑ Blue light ON / ❑ Red light ON / ❑ Red light blinks / ❑ Blue and red lights blink
	CRUISE indicator	❑ ON / ❑ Blink / ❑ OFF
	Shift indicator	❑ OK / ❑ NG
	Fuel level warning light	❑ ON / ❑ Blink / ❑ OFF
	Airbag warning light	❑ ON / ❑ OFF
	VDC OFF indicator	❑ ON / ❑ OFF
	Brake warning light	❑ ON / ❑ OFF
	Headlight beam leveler indicator	❑ ON / ❑ OFF
	Hybrid READY indicator light	❑ ON / ❑ OFF
	Hybrid fail lamp	❑ ON / ❑ OFF

2. CONDITIONS UNDER WHICH TROUBLE OCCURS

Driving condition	❑ At standstill (while idling) ❑ When the vehicle is running Vehicle speed km/h (MPH) ❑ While accelerating Acceleration km/h (MPH) to km/h (MPH) ❑ Decelerating (with braking) Deceleration km/h (MPH) to km/h (MPH) ❑ Decelerating (without braking) Deceleration km/h (MPH) to km/h (MPH)
	❑ Flat road ❑ Uphill ❑ Downhill ❑ Gravel road ❑ Bumpy road ❑ Snowy road
	Does it occur when operating any part? Operated part: **TROUBLE SYMPTOM:**
	Are there any other troubles occurred? From where: **TROUBLE SYMPTOM:**

3. General Description

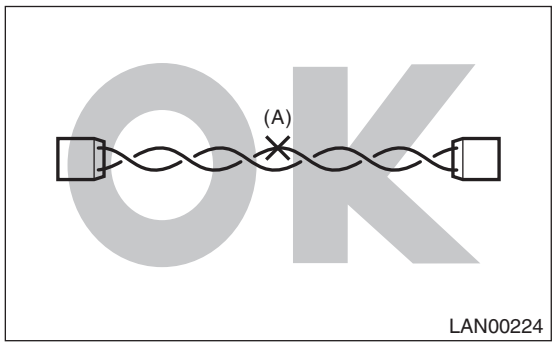
A: CAUTION



1. SRS AIRBAG SYSTEM

Airbag system wiring harness is routed near the body integrated unit and twisted pair line.

CAUTION:
- **Do not use the electrical test equipment on all airbag system wiring harnesses and connectors.**
- **Be careful not to damage the airbag system wiring harness when servicing the body integrated unit and LAN system.**



2. LAN SYSTEM

- Bus line of LAN system is twisted pair line. Be careful not to by-pass or partly unbind the twisted pair line.
- Do not make clearance between bus lines (CAN High, CAN Low).
- Difference of bus line length should be within 10 cm (3.94 in).
- Fray near the connector should be within 8 cm (3.14 in).

(A) Bypass wire connection

- If the characteristics of the twisted pair line are changed, it may extremely weaken against noise.
- When repairing the harness, connect the wires using soldering and protect it with insulating tape etc.

(A) Soldering and protection with insulating tape

3. TIME STAMP

There are three types of record data for the information of time stamp, and they are stored together with diagnostic codes.

NOTE:
Depending on DTCs, time stamp may not be stored.

a. **«Trip Count»**

This indicates the number of times that the ignition has been turned to ON since the vehicle was manufactured. The ignition ON count of when the diagnostic code is stored is displayed on the diagnostic code check screen.

NOTE:
Subaru Select Monitor 4 screen (A/C system diagnostic code and time stamp)

Code	Description & trouble position	Trouble occurrence record	**«Trip Count»**	«Time Count»	«Category»
B14E1	Air mix door actuator stepping motor circuit wire break (driver's seat)	Detected on the first time	**983**	18000	Common
B14E7	Heater core rear sensor circuit wire break	Detected on the 2nd time	**984**	117800	Common

The current Trip Count can be checked at "Current Data Display & Save" in "Integ. unit mode".
By comparing the current Trip Count and the Trip Count of when the diagnostic code was stored, it is possible to determine that it is how many ignition-ON operations ago that DTC was stored.

b. **«Time Count»**

The elapsed time from when the ignition is turned to ON to when the diagnostic code is stored is displayed on the diagnostic code check screen. It is possible to determine the length of time that passed between when the user started driving and when the diagnostic code was stored. Therefore, if Trip Count until the vehicle-received-date is determined by interviewing the user, it is possible to estimate where the user was driving when the diagnostic code was stored, using the information such as Trip Count and Time Count. This estimate is useful information to perform diagnosis including checking of repeatability.

NOTE:
Subaru Select Monitor 4 screen (A/C system diagnostic code and time stamp)

Code	Description & trouble position	Trouble occurrence record	«Trip Count»	**«Time Count»**	«Category»
B14E1	Air mix door actuator stepping motor circuit wire break (driver's seat)	Detected on the first time	983	**18000**	Common
B14E7	Heater core rear sensor circuit wire break	Detected on the 2nd time	984	**117800**	Common

When multiple diagnostic codes are recorded for one trouble, it is extremely important to determine the diagnostic code that was stored first. (It is important to perform the diagnosis for the first recorded diagnostic code.) In this case, it is also possible to immediately determine which diagnostic code was recorded first, using the information such as Trip Count and Time Count.

c. **«Category»**
Each unit individually counts the elapsed time since the ignition is turned to ON. However, these time counts may have some errors, and therefore, the control modules need to be adjusted to the time carried by the master-time unit (the body integrated unit). When the count is set as common, it means that each control module is already adjusted to the master time, and the display for the master integrated unit is always indicated as “Common”. When the count is indicated as “Originally”, it means that the time is not synchronized with the master time. In this case, check the communication between the corresponding control module and integrated unit. When all controls other than the body integrated unit is indicated as “Originally”, perform the basic inspection for the body integrated unit. <Ref. to BC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

NOTE:
Subaru Select Monitor 4 screen (A/C system diagnostic code and time stamp)

Code	Description & trouble position	Trouble occurrence record	«Trip Count»	«Time Count»	**«Category»**
B14E1	Air mix door actuator stepping motor circuit wire break (driver’s seat)	Detected on the first time	983	18000	**Common**
B14E7	Heater core rear sensor circuit wire break	Detected on the 2nd time	984	117800	**Common**

Even when multiple diagnostic codes are stored in multiple control modules, it is possible to determine the code stored first through the categorizing feature.

NOTE:
Troubleshooting for CAN system U-code occurrence
When the first stored diagnostic code is a U-code for CAN system, perform the troubleshooting as a U code combination, instead of a U code alone. In addition, when CAN open circuit occurs, communication of the diagnostic device itself becomes impossible beyond the particular areas. However, trouble positions can also be determined by the combination of initial communication success/failure. Thus, by performing the basic diagnostic procedure in LAN system, trouble positions can be determined efficiently on the principle above. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: INSPECTION

1. INSPECTION WITHOUT USING CAN DIAGNOSTIC

Before performing diagnosis, check the following items that might affect troubles of each module.
1) Check the 12 volt auxiliary battery. <Ref. to SC(H4DO(HEV))-40, Battery.>
2) Check the fuse condition.
Make sure that ampere of the fuse is setting value, and it is not blown out.
3) Check the connecting condition of harness and harness connector.

2. INSPECTION USING CAN DIAGNOSTIC

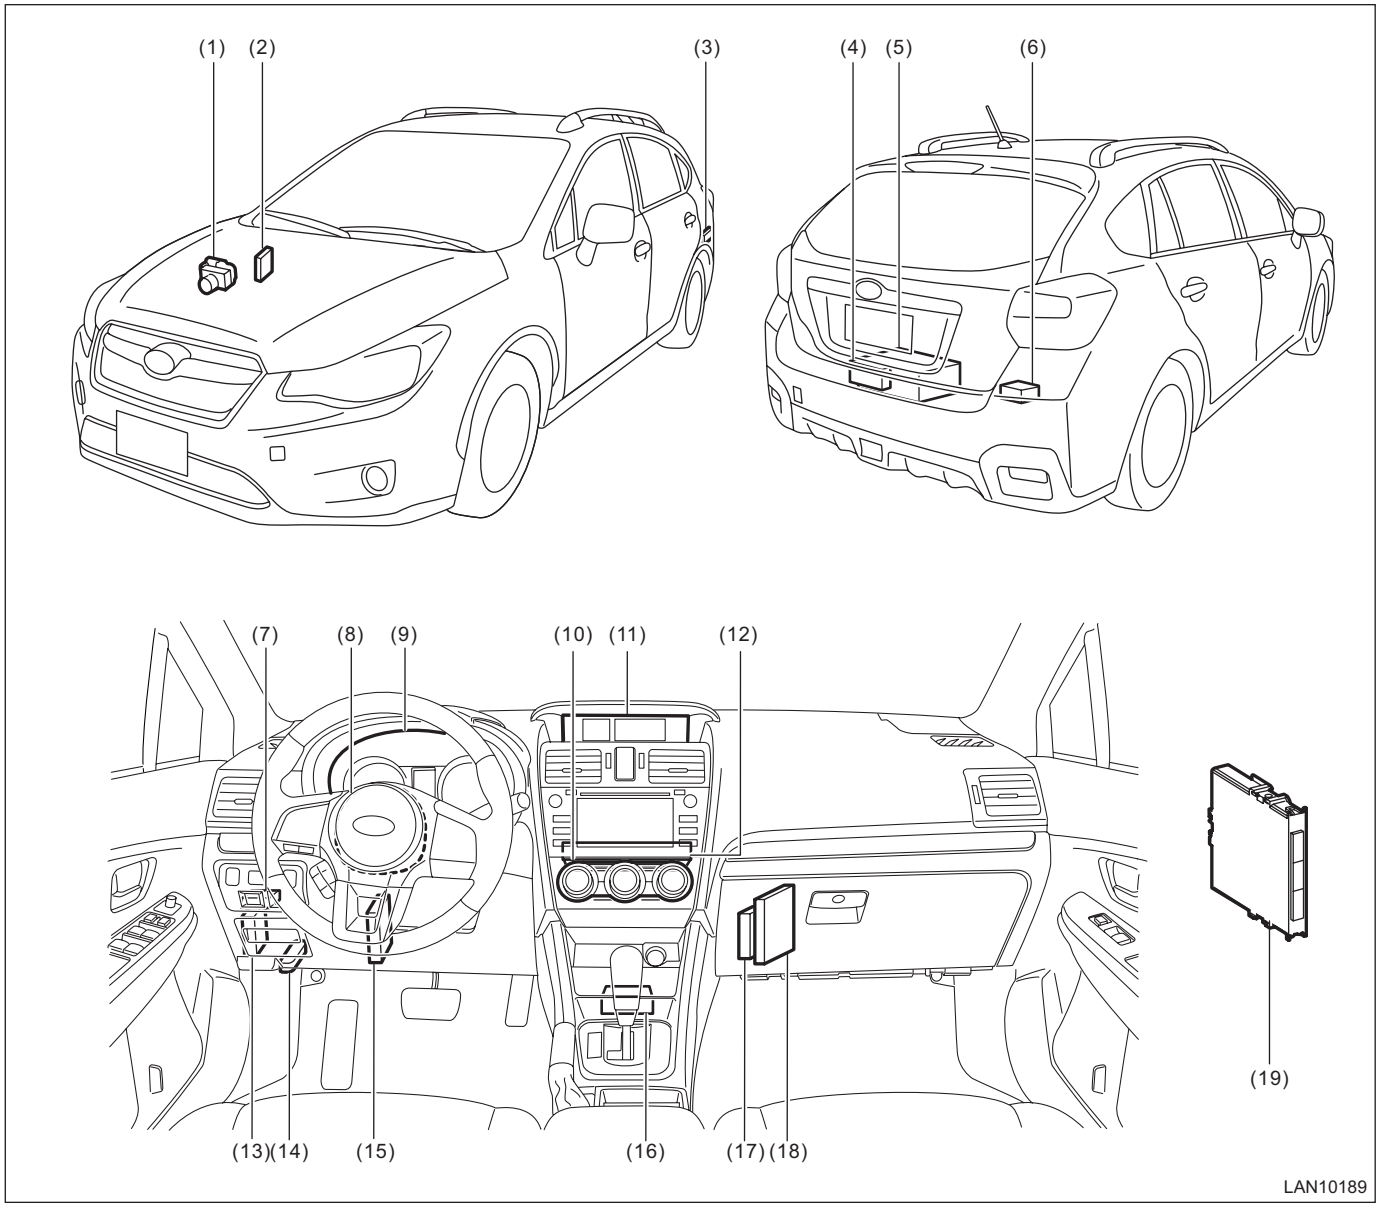
Before performing diagnostics, check the following item which might affect body integrated unit malfunctions.
1) Confirm settings of body integrated unit are corresponded to vehicle equipment. <Ref. to BC(diag)-20, OPERATION, Registration Body Integrated Unit.>
2) Make sure that the User Customizing of the body integrated unit matches the vehicle equipment. <Ref. to BC(diag)-17, OPERATION, User Customizing.>
3) Confirm “Factory initial setting” of body integrated unit registrations is set to “Market”.

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	— (Newly adopted tool)	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL



TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

3. PREPARATION ITEMS

ITEM NAME	REMARKS
120 Ω resistance element (1/4 W or more)	Used as an alternative to end resistance.

4. Electrical Component Location

A: LOCATION

(1) VDC CM
(2) Power steering CM
(3) Radar sensor LH
(4) Drive motor CM
(5) High voltage battery (battery energy CM)
(6) Electric oil pump inverter
(7) Auto headlight beam leveler CM
(8) Steering angle sensor
(9) Combination meter
(10) A/C control panel
(11) MFD
(12) Data communication module (DCM)
(13) Body integrated unit
(14) Data link connector
(15) Transmission CM
(16) Airbag CM
(17) Hybrid powertrain CM
(18) Engine CM
(19) Keyless access CM

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

- Body integrated unit

For I/O signals of the body integrated unit, refer to BODY CONTROL SYSTEM (DIAGNOSTICS). <Ref. to BC(diag)-6, Control Module I/O Signal.>

- Engine CM

For I/O signals of ECM, refer to ENGINE (DIAGNOSTICS). <Ref. to EN(H4DO HEV)(diag)-21, ENGINE CONTROL MODULE (ECM), ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

- Transmission CM

For I/O signals of TCM, refer to AUTOMATIC TRANSMISSION (DIAGNOSTICS). <Ref. to CVT(HEV)(diag)-11, Transmission Control Module (TCM) I/O Signal.>

- VDC CM, steering angle sensor, yaw rate & G sensor

For the module I/O signals of VDC CM, steering angle sensor, and yaw rate & G sensor, refer to VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS). <Ref. to VDC(diag)-12, Control Module I/O Signal.>

- Power steering CM

For unit I/O signals of power steering CM, refer to POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS). <Ref. to PS(diag)-10, Control Module I/O Signal.>

- A/C control panel

For unit I/O signals of A/C control panel, refer to HVAC SYSTEM (DIAGNOSTICS). <Ref. to AC(diag)-6, Auto A/C Control Module I/O Signal.>

- Combination meter

For I/O signals of combination meter, refer to INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS). <Ref. to IDI(diag)-7, Control Module I/O Signal.>

- Airbag CM

For I/O signals of the airbag CM, refer to AIRBAG SYSTEM (DIAGNOSTICS). <Ref. to AB(diag)-21, Airbag Control Module I/O Signal.>

- High grade MFD

For I/O signals of high grade MFD, refer to INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS). <Ref. to IDI(diag)-7, Control Module I/O Signal.>

- Keyless access CM

For I/O signals of keyless access CM, refer to KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS). <Ref. to KPS(diag)-15, Control Module I/O Signal.>

- Auto headlight beam leveler CM

For I/O signals of auto headlight beam leveler CM, refer to AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS). <Ref. to AL(diag)-6, AUTO HEADLIGHT BEAM LEVELER CM, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

- Hybrid powertrain control module (HPCM)

For I/O signals of HPCM, refer to HEV (DIAGNOSTICS). <Ref. to HEV(diag)-10, HYBRID POWERTRAIN CONTROL MODULE (HPCM), ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

- Drive motor control module (DMCM)

For I/O signals of DMCM, refer to HEV (DIAGNOSTICS). <Ref. to HEV(diag)-12, DRIVE MOTOR CONTROL MODULE (DMCM), ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

- High voltage battery (battery energy control module (BECM))

For I/O signals of BECM, refer to HEV (DIAGNOSTICS). <Ref. to HEV(diag)-13, HIGH VOLTAGE BATTERY, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

- Radar sensor

For I/O signals of the radar sensor, refer to BSD/RCTA (DIAGNOSTICS). <Ref. to RVD(diag)-8, Control Module I/O Signal.>

- Data communication module

For I/O signals of data communication module, refer to TELEMATICS (DIAGNOSTICS). <Ref. to TEL(diag)-8, Control Module I/O Signal.>

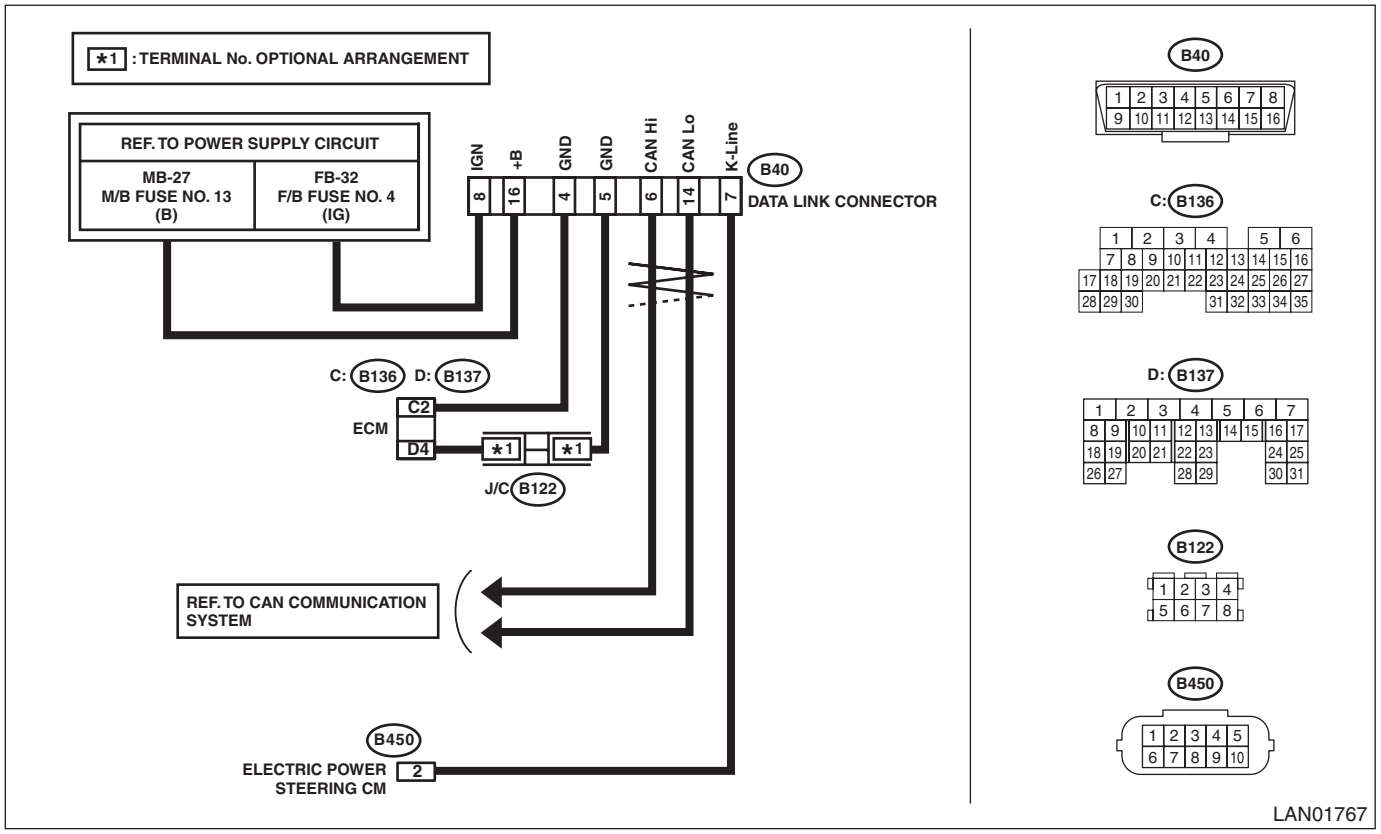
- Data link connector

For I/O signals of data link connector, refer to ENGINE (DIAGNOSTICS). <Ref. to EN(H4DO HEV)(diag)-31, Data Link Connector.>

* CAN sleep state:
Hold on for approx. one minute with ignition OFF and the doors, trunk, rear gate all closed.

B: WIRING DIAGRAM

Refer to “CAN Communication System” in the wiring diagram. <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>



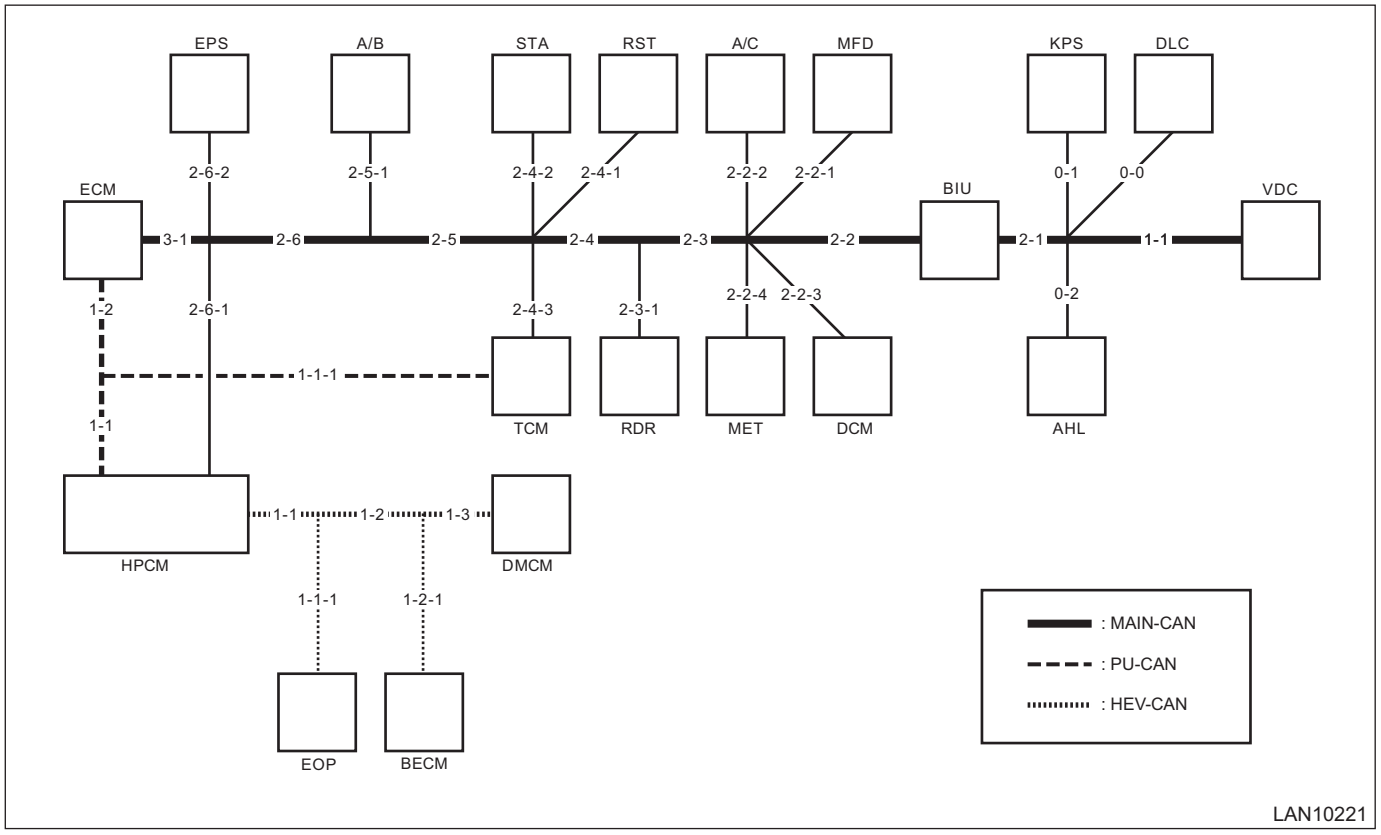
6. Subaru Select Monitor

A: OPERATION

For detailed operation procedures, refer to “Application help”.

B: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

DIAGNOSIS:
Subaru Select Monitor communication line is open or shorted.
TROUBLE SYMPTOM:
Not communicable with Subaru Select Monitor.
WIRING DIAGRAM:
CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>



Step		Check	Yes	No
1	**CHECK SUBARU SELECT MONITOR.** 1) Connect the Subaru Select Monitor to another vehicle. 2) Check communication condition between Subaru Select Monitor and vehicle.	Is communication performed normally?	Go to step **2**.	Subaru Select Monitor unit or diagnosis cable is faulty. Or check the fuse on the vehicle side.

	Step	Check	Yes	No
2	**CHECK COMMUNICATION FOR INITIALIZING ERROR.** Perform the communication for initializing with each module by connecting the Subaru Select Monitor. (For systems whose module can communicate with diagnostic devices)	Is the communication possible with all modules?	Go to step **3**.	Perform the inspection using the check sheet of communication for initializing. <Ref. to LAN(HEV)(diag)-14, CHECK USING THE CHECK SHEET OF COMMUNICATION FOR INITIALIZING, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>
3	**CHECK K-LINE.** 1) Establish the communication between Select Monitor and K-Line communication module. 2) Using a tester, check continuity between the modules that did not communicate with Select Monitor. ***Connector & terminal*** ***(B40) No. 7 — (B450) No. 2 (electric power steering):***	Is there continuity?	Go to step **4**.	Repair or replace the open circuit.
4	**CHECK K-LINE.** Using a tester, check continuity between K-line and chassis ground. ***Connector & terminal*** ***(B40) No. 7 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit.	Go to step **5**.
5	**CHECK K-LINE.** Using a tester, check voltage between K-line and chassis ground. ***Connector & terminal*** ***(B40) No. 7 (+) — Chassis ground (–):***	Is the voltage 5 V or more with IG ON?	Repair or replace the short circuit.	Go to step **6**.
6	**CHECK K-LINE.** Use a tester to check for continuity in the ground circuit. ***Connector & terminal*** ***(B40) No. 4 — Chassis ground:*** ***(B40) No. 5 — Chassis ground:***	Is there continuity?	Go to step **8**.	Go to step **7**.
7	**CHECK K-LINE.** 1) Disconnect the ECM connector. 2) Use a tester to check for continuity in the ground circuit. ***Connector & terminal*** ***(B40) No. 4 — (B136) No. 2:*** ***(B40) No. 5 — (B137) No. 4:***	Is there continuity?	Check ECM ground.	Repair or replace the open circuit.
8	**CHECK K-LINE.** 1) Turn the ignition switch to ON. 2) Using a tester, check the power supply of data link connector. ***Connector & terminal*** ***(B40) No. 8 (+) — Chassis ground (–):*** ***(B40) No. 16 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	K-Line is normal. Check the power supply circuit of each module.	Check the power supply circuits to the data link connector.

1. CHECK USING THE CHECK SHEET OF COMMUNICATION FOR INITIALIZING

LAN10222

(A) Installation check

(B) Communication initialization

(C) Wiring location

VDC: VDC CM

BIU: Body integrated unit

MFD: High grade MFD

A/C: A/C control panel

MET: Combination meter

RST: Remote engine starter CM

STA: Steering angle sensor

TCM: Transmission CM

A/B: Airbag CM

DCM: Data communication module

HPCM: Hybrid powertrain CM

EPS: Power steering CM

ECM: Engine CM

KPS: Keyless access CM

AHL: Auto headlight beam leveler CM

EOP: Electric oil pump

BECM: Battery energy CM (high voltage battery)

DMCM: Drive motor CM

DLC: Data link connector

RDR: Radar sensor

1) Module installation check
(1) Write "-" marks in the field for installation check if the vehicle to be inspected does not have relevant module.
(2) Write "-" marks in all blank fields on the same row that the "-" mark has filled in.

NOTE:
Example of writing <Ref. to LAN(HEV)(diag)-17, EXAMPLE OF WRITING FOR THE CHECK SHEET OF COMMUNICATION FOR INITIALIZING, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>

2) Subaru Select Monitor communication initialization check
(1) Write "○" marks in the field for communication initialization if the module succeeded in the communication for initializing with Select Monitor.
If the communication with all modules is not possible, go to 3).
(2) Write "○" marks in all blank fields on the same row that the "○" mark has filled in.
(3) When at least one field in a column of wiring location is filled with the "○" mark, then the wiring for that location is normal. Write "○" marks in all blank fields on the same column that the "○" mark has filled in under the circled number.
(4) Check the open circuit of the modules which have no "○" mark in their columns of the wiring location in ascending order (closest to the data link connector first). (only for installed modules)
(5) If the communication is not possible after checking all harnesses, check the module power supply line.
(6) Perform the basic diagnostic procedure of the system if the power supply line is normal.
(7) Replace the module if the communication is not possible even after performing the basic diagnostic procedure.

NOTE:
• Example of writing <Ref. to LAN(HEV)(diag)-17, EXAMPLE OF WRITING FOR THE CHECK SHEET OF COMMUNICATION FOR INITIALIZING, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>
• Inspection using the communication for initializing of Subaru Select Monitor cannot be used to diagnose the wiring location marked with "-". Example of DTC data not received <Ref. to LAN(HEV)(diag)-118, EXAMPLE OF DTC DATA NOT RECEIVED, LIST, List of Diagnostic Trouble Code (DTC).> should be used to identify the faulty portion.

3) Subaru Select Monitor communication initialization check (impossible to communicate with all modules)

NOTE:
Perform inspection regarding the trouble mode indicating that all CAN modules do not communicate. If at least one module becomes possible to communicate, return to 2).
(1) Check for the short circuit to ground. <Ref. to LAN(HEV)(diag)-44, GROUND SHORT INSPECTION (MAIN-CAN), INSPECTION, CAN Communication Circuit Check.> If it is normal, go to the next.
(2) Check for the short circuit to battery. <Ref. to LAN(HEV)(diag)-47, BATTERY SHORT INSPECTION (MAIN-CAN), INSPECTION, CAN Communication Circuit Check.> If it is normal, go to the next.
(3) Perform the inspection for the resistance of 52 Ω or less (short between wires). <Ref. to LAN(HEV)(diag)-53, 52 Ω OR LESS, INSPECTION, CAN Communication Circuit Check.> If it is normal, go to the next.
(4) Check for the open circuit of data link connector (No. 0 — 0) in network diagram.

2. EXAMPLE OF WRITING FOR THE CHECK SHEET OF COMMUNICATION FOR INITIALIZING

- When MAIN-CAN 0-0 is open

NOTE:
Perform inspection by referring to the SSM communication initialization check (impossible to communicate with all modules).

LAN10247

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «All diagnosis code».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to List of Diagnostic Trouble Code (DTC). <Ref. to LAN(HEV)(diag)-113, List of Diagnostic Trouble Code (DTC).>

8. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «All diagnosis code».
On «All diagnosis code» display, select «Clear Memory».

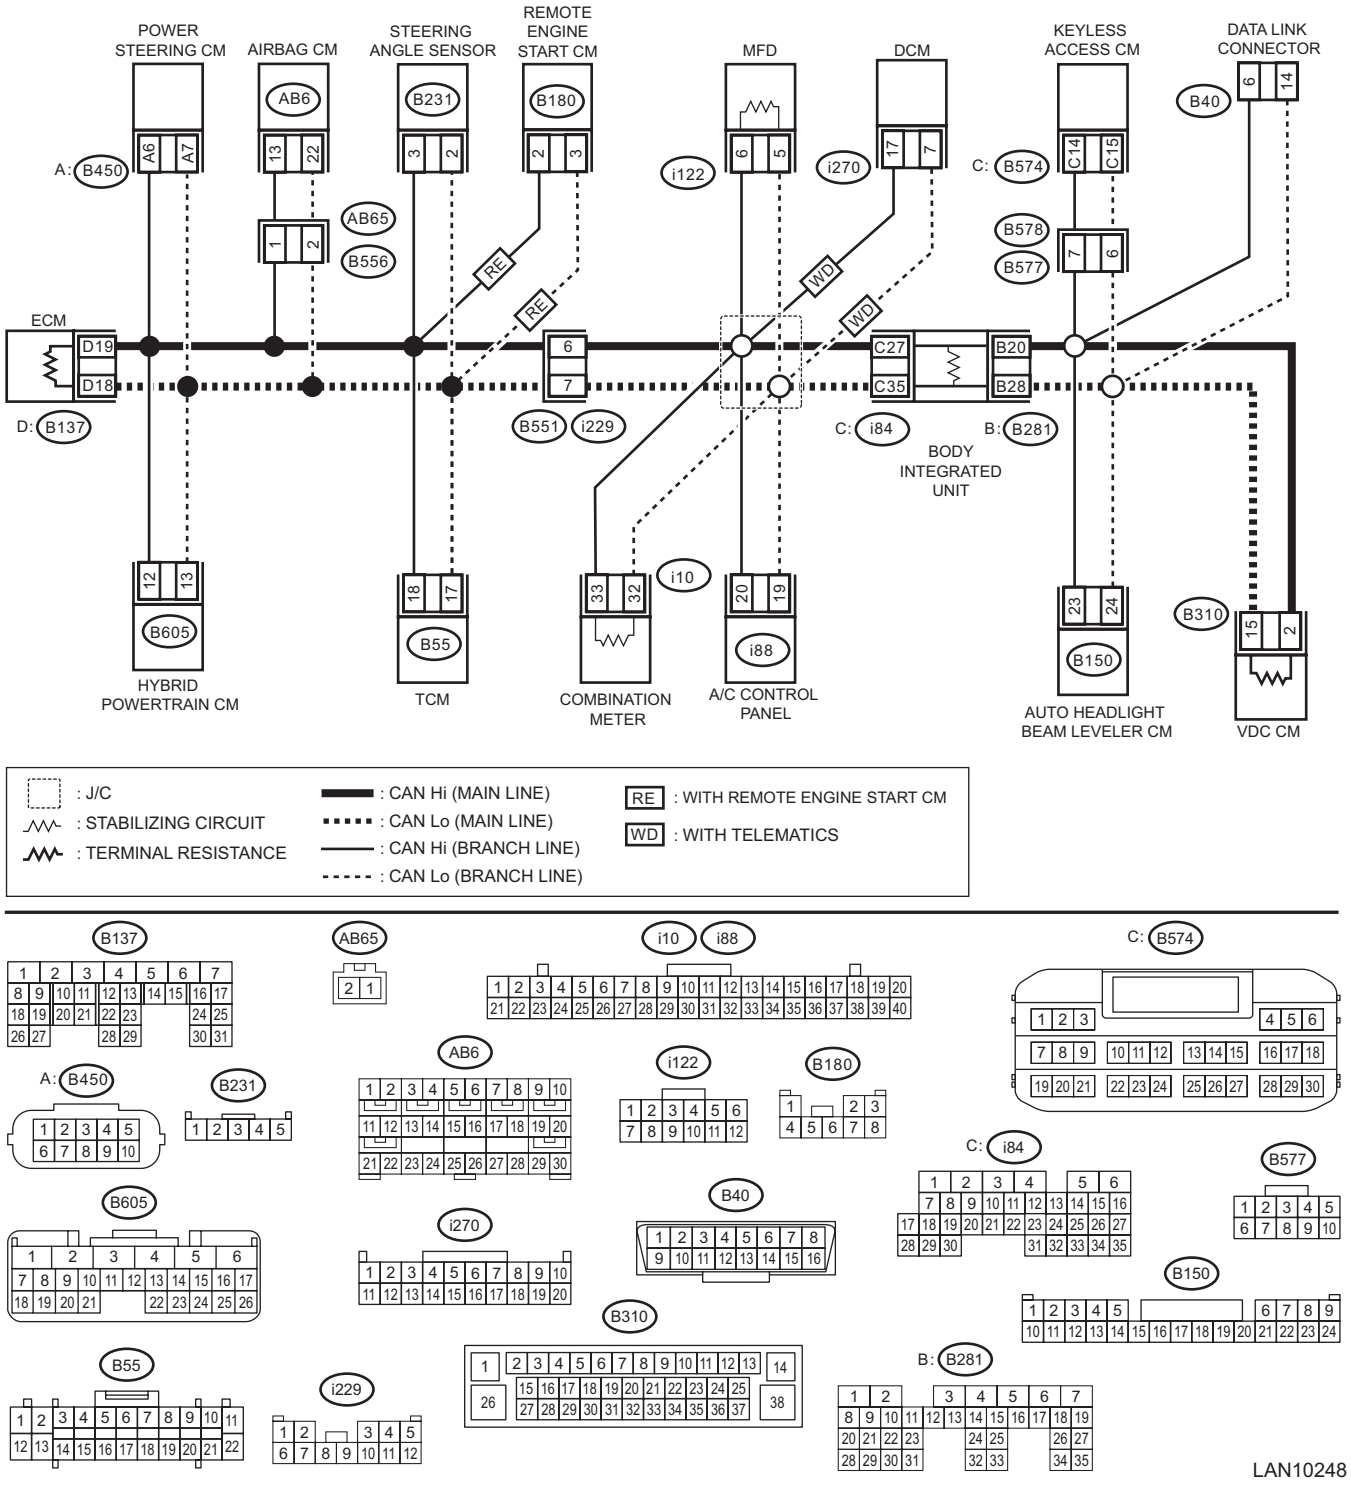
NOTE:
For detailed operation procedures, refer to “Application help”.

9. CAN Communication Circuit Check

A: PROCEDURE

1. MAIN-CAN

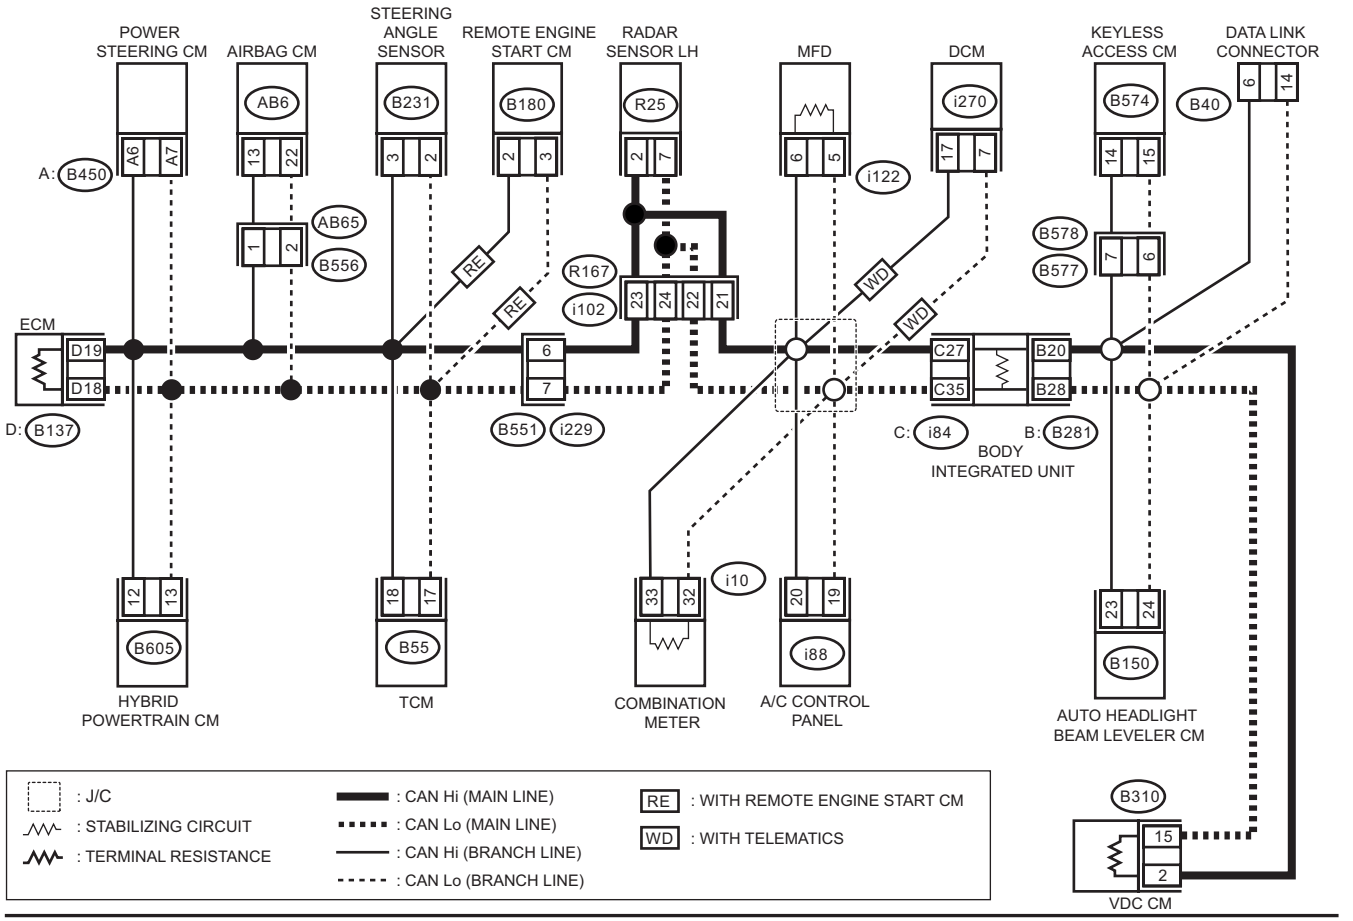
NOTE:
- When measuring the resistance of CAN communication circuit, measure it in sleep status.



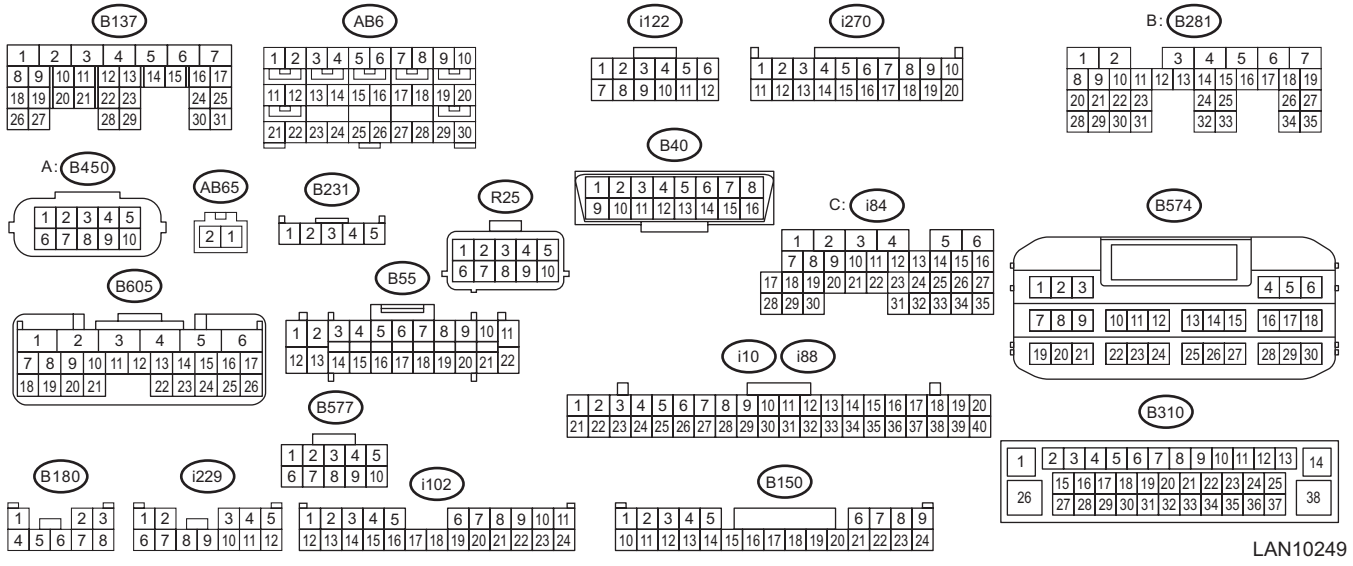
To enter sleep status
  – With ignition switch OFF and key or switch operation stopped, keep the doors, trunk, and rear gate all closed for one minute or more.
  – On models with keyless access function, keep the access key 2 m or more away from the vehicle.
- When the bus line is measured, combined resistance of the end resistance (120 Ω) in ECM and the end resistance (120 Ω) in VDC CM can be measured. The combined resistance is supposed to be approximately 53 — 61 Ω with the stabilizing circuit included. If the measured resistance value becomes 52 Ω or less, main wiring harness or related lines may be shorted. Or, the combined resistance may have changed because of a resistance other than the end resistance created on the circuit. If the measured value is 62 Ω or more, there may be a malfunction such as open circuit in one of the end resistances, in the stabilizing circuit, or in the main wiring harness.

Also, even when the resistance value falls within approx. 53 — 61 Ω, related lines may be open if an error of communication for initializing or a CAN system U-code has occurred. (The resistance cannot be between approx. 53 — 61 Ω if the main wiring harness is open.)

WIRING DIAGRAM:



CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>



- Without BSD/RCTA

LAN10248

- With BSD/RCTA

	Step	Check	Yes	No
1	**CHECK BASIC DIAGNOSTIC PROCEDURE.** Check that the basic diagnosis has been performed up to STEP 3. NOTE: Possible defective parts can be narrowed easily by inspection using Subaru Select Monitor before performing "CHECK CAN COMMUNICATION CIRCUIT" using a tester.	Was the basic diagnostic procedure performed?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
2	**CHECK FROM DATA LINK CONNECTOR.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Is the resistance 10 Ω or less?	Check for ground short. <Ref. to LAN(HEV)(diag)-44, GROUND SHORT INSPECTION (MAIN-CAN), INSPECTION, CAN Communication Circuit Check.>	Go to step **3**.
3	**CHECK FROM DATA LINK CONNECTOR.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Is the voltage 5 V or less?	Go to step **4**.	Check for battery short. <Ref. to LAN(HEV)(diag)-47, BATTERY SHORT INSPECTION (MAIN-CAN), INSPECTION, CAN Communication Circuit Check.>
4	**CHECK FROM DATA LINK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B40) No. 6 — No. 14:***	Is the resistance 52 Ω or less?	Perform the inspection for resistance of 52 Ω or less. <Ref. to LAN(HEV)(diag)-53, 52 Ω OR LESS, INSPECTION, CAN Communication Circuit Check.>	Go to step **5**.
5	**CHECK FROM DATA LINK CONNECTOR.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B40) No. 6 — No. 14:***	Is the resistance 62 Ω or more?	Perform the inspection for resistance of 62 Ω or more. <Ref. to LAN(HEV)(diag)-57, 62 Ω OR MORE, INSPECTION, CAN Communication Circuit Check.>	If the display of CAN system U-code disappears from the current malfunction, the CAN network is currently normal. If the U-code has detected as current malfunction, related lines may be open. Perform the inspection for the related line corresponding to the detected DTC. <Ref. to LAN(HEV)(diag)-41, MAIN-CAN, LIST, CAN Communication Circuit Check.>

2. PU-CAN

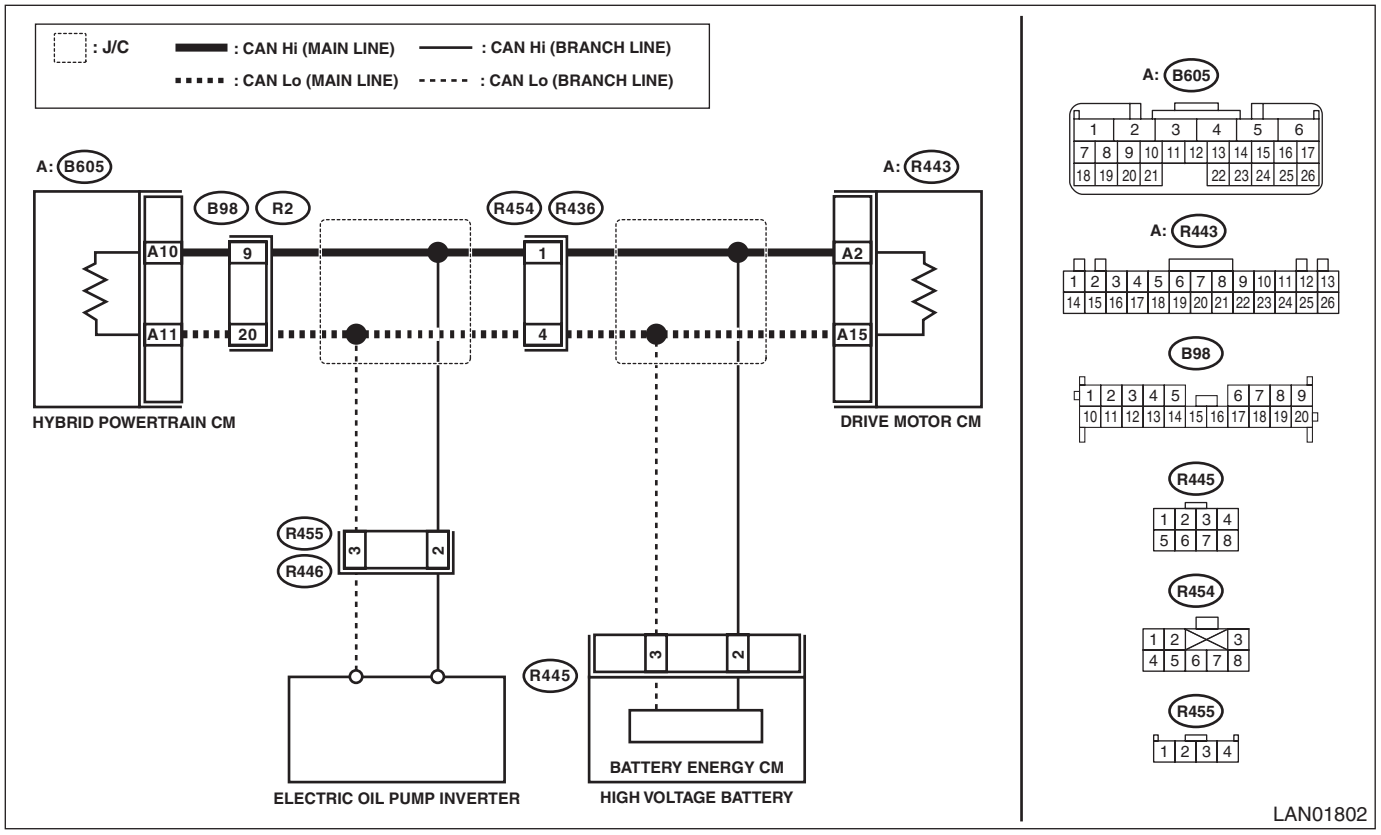
NOTE:
• When measuring the resistance of CAN communication circuit, measure it in sleep status.
To enter sleep status
– With ignition switch OFF and key or switch operation stopped, keep the doors, trunk, and rear gate all closed for one minute or more.
– On models with keyless access function, keep the access key 2 m or more away from the vehicle.
• When the bus line is measured, combined resistance of the end resistance (120 Ω) in ECM and the end resistance (120 Ω) in HPCM can be measured. The combined resistance is approximately 57 — 63 Ω. If the measured resistance value becomes 56 Ω or less, main wiring harness or related lines may be shorted. Or, the combined resistance may have changed because of a resistance other than the end resistance created on the circuit. If the measured value is 64 Ω or more, there may be a malfunction such as open circuit in one of the end resistances, in the stabilizing circuit, or in the main wiring harness.
Also, even when the resistance value falls within approx. 57 — 63 Ω, related lines may be open if an error of communication for initializing or a CAN system U-code has occurred. (The resistance won't be between approx. 57 — 63 Ω if the main wiring harness is open.)

WIRING DIAGRAM:
CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>

	Step	Check	Yes	No
1	**CHECK BASIC DIAGNOSTIC PROCEDURE.** Confirm that the basic diagnostic procedure was performed up to STEP 3. NOTE: Inspection using Subaru Select Monitor helps to find faulty portion easily before “CAN Communication Circuit Check” using the tester.	Was the basic diagnostic procedure performed?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
2	**CHECK FROM ECM CONNECTOR.** 1) Disconnect the ECM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B137) No. 21 — Chassis ground:*** ***(B137) No. 10 — Chassis ground:***	Is the resistance 10 Ω or less?	Check for ground short. <Ref. to LAN(HEV)(diag)-98, GROUND SHORT INSPECTION (PU-CAN), INSPECTION, CAN Communication Circuit Check.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK FROM ECM CONNECTOR.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B137) No. 21 (+) — Chassis ground (–):*** ***(B137) No. 10 (+) — Chassis ground (–):***	Is the voltage 5 V or less?	Go to step **4**.	Check for battery short. <Ref. to LAN(HEV)(diag)-99, BATTERY SHORT INSPECTION (PU-CAN), INSPECTION, CAN Communication Circuit Check.>
4	**CHECK FROM ECM CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B137) No. 21 — No. 10:***	Is the resistance 56 Ω or less?	Perform the inspection for the resistance of 56 Ω or less. <Ref. to LAN(HEV)(diag)-101, 56 Ω OR LESS (PU-CAN), INSPECTION, CAN Communication Circuit Check.>	Go to step **5**.
5	**CHECK FROM ECM CONNECTOR.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B137) No. 21 — No. 10:***	Is the resistance 64 Ω or more?	Perform the inspection for the resistance of 64 Ω or more. <Ref. to LAN(HEV)(diag)-102, 64 Ω OR MORE (PU-CAN), INSPECTION, CAN Communication Circuit Check.>	If the display of CAN system U-code disappears from the current malfunction, the CAN network is currently normal. If the U-code has detected as current malfunction, related lines may be open. Perform the inspection for the related line corresponding to the detected DTC. <Ref. to LAN(HEV)(diag)-42, PU-CAN, LIST, CAN Communication Circuit Check.>

3. HEV-CAN



NOTE:
- When measuring the resistance of CAN communication circuit, measure it in sleep status.

To enter sleep status
  – With ignition switch OFF and key or switch operation stopped, keep the doors, trunk, and rear gate all closed for one minute or more.
  – On models with keyless access function, keep the access key 2 m or more away from the vehicle.
- When the bus line is measured, combined resistance of the end resistance (120 Ω) in HPCM and the end resistance (120 Ω) in DMCM can be measured. The combined resistance is approximately 57 — 63 Ω. If the measured resistance value becomes 56 Ω or less, main wiring harness or related lines may be shorted. Or, the combined resistance may have changed because of a resistance other than the end resistance created on the circuit. If the measured value is 64 Ω or more, there may be a malfunction such as open circuit in one of the end resistances, in the stabilizing circuit, or in the main wiring harness.

Also, even when the resistance value falls within approx. 57 — 63 Ω, related lines may be open if an error of communication for initializing or a CAN system U-code has occurred. (The resistance won't be between approx. 57 — 63 Ω if the main wiring harness is open.)

WIRING DIAGRAM:

CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>

Step		Check	Yes	No
1	**CHECK BASIC DIAGNOSTIC PROCEDURE.** Confirm that the basic diagnostic procedure was performed up to STEP 3. NOTE: Inspection using Subaru Select Monitor helps to find faulty portion easily before “CAN Communication Circuit Check” using the tester.	Was the basic diagnostic procedure performed?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

	Step	Check	Yes	No
2	**CHECK FROM HPCM CONNECTOR.** 1) Disconnect the HPCM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B605) No. 10 — Chassis ground:*** ***(B605) No. 11 — Chassis ground:***	Is the resistance 10 Ω or less?	Check for ground short. <Ref. to LAN(HEV)(diag)-104, GROUND SHORT INSPECTION (HEV-CAN), INSPECTION, CAN Communication Circuit Check.>	Go to step **3**.
3	**CHECK FROM HPCM CONNECTOR.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B605) No. 10 (+) — Chassis ground (–):*** ***(B605) No. 11 (+) — Chassis ground (–):***	Is the voltage 5 V or less?	Go to step **4**.	Check for battery short. <Ref. to LAN(HEV)(diag)-105, BATTERY SHORT INSPECTION (HEV-CAN), INSPECTION, CAN Communication Circuit Check.>
4	**CHECK FROM HPCM CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B605) No. 10 — No. 11:***	Is the resistance 56 Ω or less?	Perform the inspection for the resistance of 56 Ω or less. <Ref. to LAN(HEV)(diag)-108, 56 Ω OR LESS (HEV-CAN), INSPECTION, CAN Communication Circuit Check.>	Go to step **5**.
5	**CHECK FROM HPCM CONNECTOR.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B605) No. 10 — No. 11:***	Is the resistance 64 Ω or more?	Perform the inspection for the resistance of 64 Ω or more. <Ref. to LAN(HEV)(diag)-110, 64 Ω OR MORE (HEV-CAN), INSPECTION, CAN Communication Circuit Check.>	If the display of CAN system U-code disappears from the current malfunction, the CAN network is currently normal. If the U-code has detected as current malfunction, related lines may be open. Perform the inspection for the related line corresponding to the detected DTC. <Ref. to LAN(HEV)(diag)-43, HEV-CAN, LIST, CAN Communication Circuit Check.>

B: LIST

1. MAIN-CAN

Resistance value between CAN Hi and Lo	Contents of inspection	Remarks
Ground short inspection	<Ref. to LAN(HEV)(diag)-44, GROUND SHORT INSPECTION (MAIN-CAN), INSPECTION, CAN Communication Circuit Check.>	Shorted to ground in the communication circuit or control module.
Battery short inspection	<Ref. to LAN(HEV)(diag)-47, BATTERY SHORT INSPECTION (MAIN-CAN), INSPECTION, CAN Communication Circuit Check.>	Shorted to battery power supply in the communication circuit or control module.
53 — 61 Ω	<Ref. to LAN(HEV)(diag)-50, 53 — 61 Ω, INSPECTION, CAN Communication Circuit Check.>	Combined resistance of end resistance does not have malfunction; short to ground or +B short of the CAN communication circuit is possible, however.
52 Ω or less	<Ref. to LAN(HEV)(diag)-53, 52 Ω OR LESS, INSPECTION, CAN Communication Circuit Check.>	Resistance is lower than combined resistance of end resistance. Short to CAN Hi and CAN Lo on the CAN communication circuit is possible.
62 Ω or more	<Ref. to LAN(HEV)(diag)-57, 62 Ω OR MORE, INSPECTION, CAN Communication Circuit Check.>	Resistance is higher than combined resistance of end resistance. Open circuit of CAN communication circuit is possible.
Related lines 53 — 61 Ω (TCM)	<Ref. to LAN(HEV)(diag)-60, RELATED LINES 53 — 61 Ω (TCM), INSPECTION, CAN Communication Circuit Check.>	No TCM data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (steering angle sensor)	<Ref. to LAN(HEV)(diag)-63, RELATED LINES 53 — 61 Ω (STEERING ANGLE SENSOR), INSPECTION, CAN Communication Circuit Check.>	No steering angle sensor data is received. Perform inspection when faulty is detected.
Related line 53 — 61 Ω (A/C control panel)	<Ref. to LAN(HEV)(diag)-66, RELATED LINE 53 — 61 Ω (A/C CONTROL PANEL), INSPECTION, CAN Communication Circuit Check.>	No A/C data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (power steering CM)	<Ref. to LAN(HEV)(diag)-69, RELATED LINES 53 — 61 Ω (POWER STEERING CM), INSPECTION, CAN Communication Circuit Check.>	No electric power steering data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (combination meter)	<Ref. to LAN(HEV)(diag)-72, RELATED LINES 53 — 61 Ω (COMBINATION METER), INSPECTION, CAN Communication Circuit Check.>	No meter data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (MFD)	<Ref. to LAN(HEV)(diag)-75, RELATED LINES 53 — 61 Ω (MFD), INSPECTION, CAN Communication Circuit Check.>	No MFD data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (airbag CM system)	<Ref. to LAN(HEV)(diag)-78, RELATED LINES 53 — 61 Ω (AIRBAG CM SYSTEM), INSPECTION, CAN Communication Circuit Check.>	No airbag data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (keyless access system)	<Ref. to LAN(HEV)(diag)-81, RELATED LINES 53 — 61 Ω (KEYLESS ACCESS SYSTEM), INSPECTION, CAN Communication Circuit Check.>	No keyless access CM data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (remote engine starter)	<Ref. to LAN(HEV)(diag)-84, RELATED LINES 53 — 61 Ω (REMOTE ENGINE STARTER), INSPECTION, CAN Communication Circuit Check.>	Perform inspection when the remote engine starter does not operate, while the mobile key side operates normally.
Related line 53 — 61 Ω (headlight beam leveler)	<Ref. to LAN(HEV)(diag)-87, RELATED LINES 53 — 61 Ω (HEADLIGHT BEAM LEVELER), INSPECTION, CAN Communication Circuit Check.>	No headlight beam leveler data is received. Perform inspection when faulty is detected.

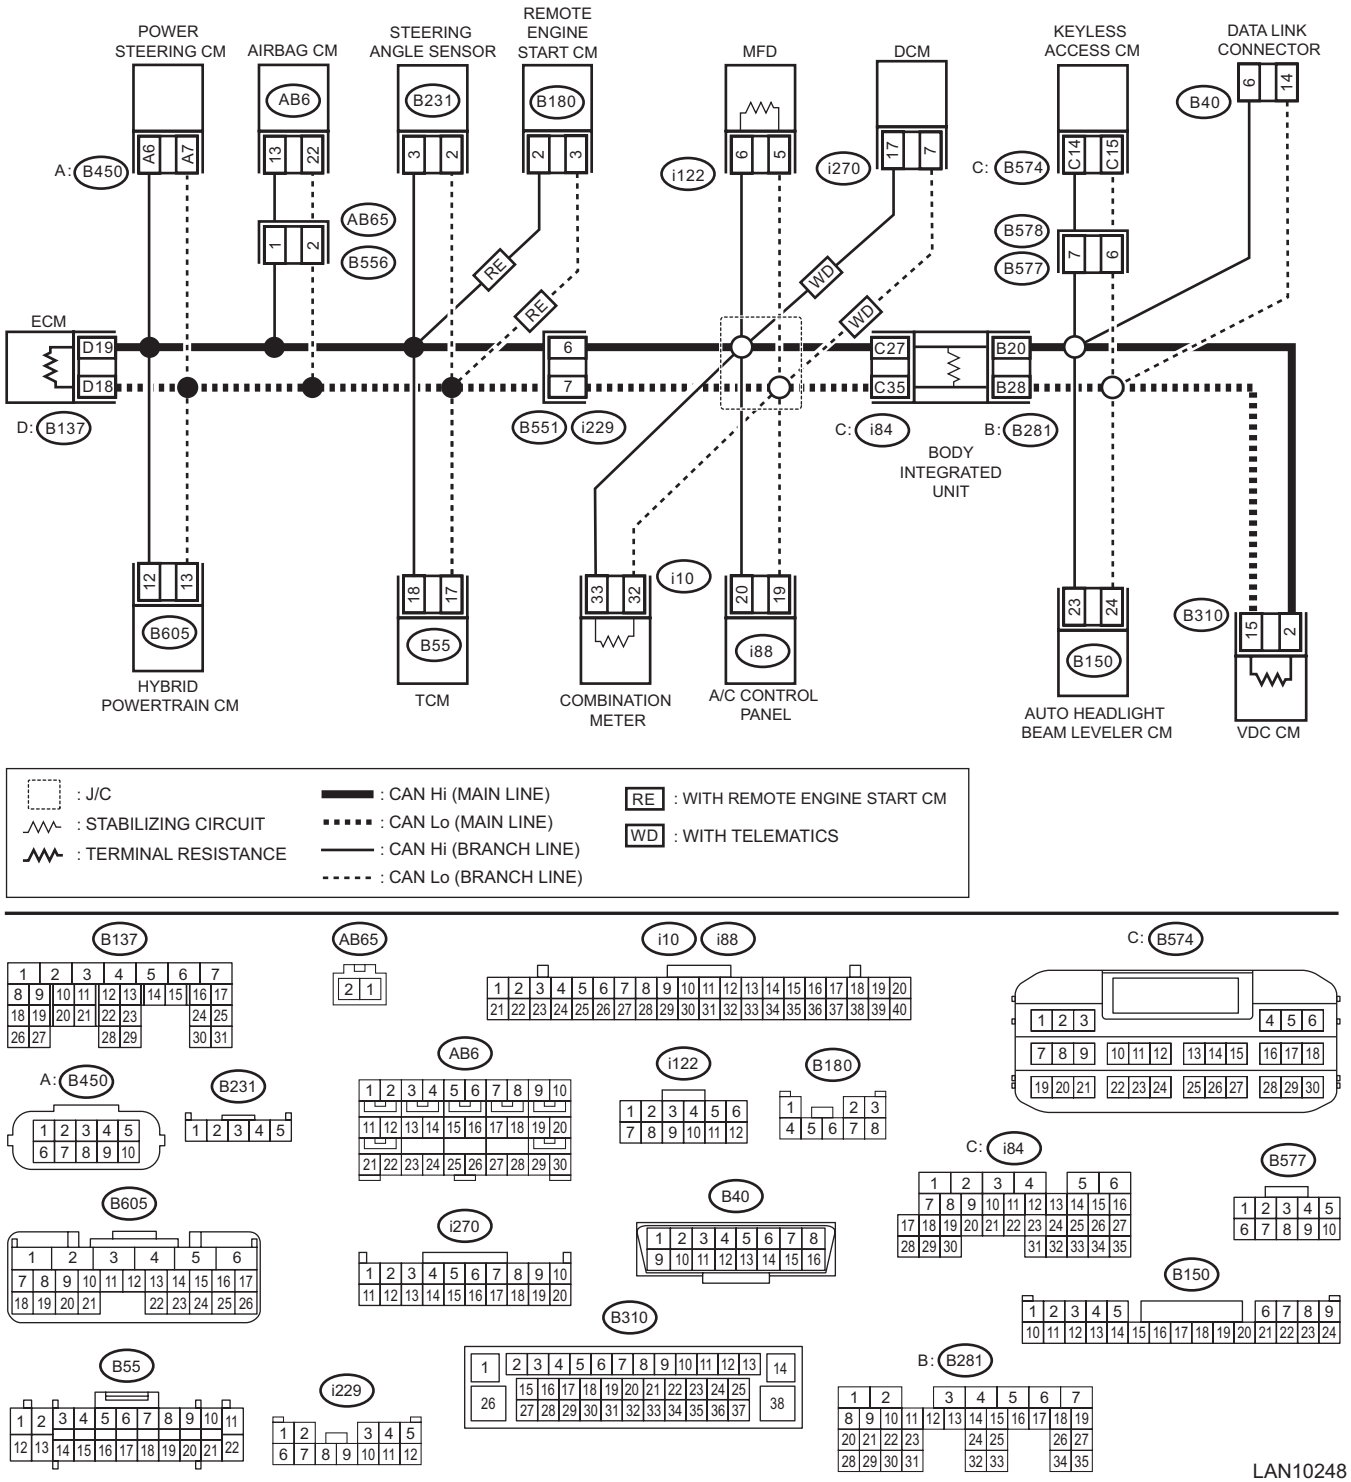
Resistance value between CAN Hi and Lo	Contents of inspection	Remarks
Related lines 53 — 61 Ω (HPCM)	<Ref. to LAN(HEV)(diag)-90, RELATED LINES 53 — 61 Ω (HPCM), INSPECTION, CAN Communication Circuit Check.>	No hybrid data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (telematics)	<Ref. to LAN(HEV)(diag)-93, RELATED LINES 53 — 61 Ω (TELEMATICS), INSPECTION, CAN Communication Circuit Check.>	No telematics data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (radar sensor)	<Ref. to LAN(HEV)(diag)-96, RELATED LINES 53 — 61 Ω (RADAR SENSOR), INSPECTION, CAN Communication Circuit Check.>	No radar sensor data is received. Perform inspection when faulty is detected.

2. PU-CAN

Resistance value between CAN Hi and Lo	Contents of inspection	Remarks
Ground short inspection	<Ref. to LAN(HEV)(diag)-98, GROUND SHORT INSPECTION (PU-CAN), INSPECTION, CAN Communication Circuit Check.>	Shorted to ground in the communication circuit or control module.
Battery short inspection	<Ref. to LAN(HEV)(diag)-99, BATTERY SHORT INSPECTION (PU-CAN), INSPECTION, CAN Communication Circuit Check.>	Shorted to battery power supply in the communication circuit or control module.
57 — 63 Ω	<Ref. to LAN(HEV)(diag)-100, 57 — 63 Ω (PU-CAN), INSPECTION, CAN Communication Circuit Check.>	Combined resistance of end resistance does not have malfunction; short to ground or +B short of the CAN communication circuit is possible, however.
56 Ω or less	<Ref. to LAN(HEV)(diag)-101, 56 Ω OR LESS (PU-CAN), INSPECTION, CAN Communication Circuit Check.>	Resistance is lower than combined resistance of end resistance. Short to CAN Hi and CAN Lo on the CAN communication circuit is possible.
64 Ω or more	<Ref. to LAN(HEV)(diag)-102, 64 Ω OR MORE (PU-CAN), INSPECTION, CAN Communication Circuit Check.>	Resistance is higher than combined resistance of end resistance. Open circuit of CAN communication circuit is possible.
Related lines 57 — 63 Ω (TCM)	<Ref. to LAN(HEV)(diag)-103, 57 — 63 Ω (PU-CAN_TCM), INSPECTION, CAN Communication Circuit Check.>	No TCM data is received. Perform inspection when faulty is detected.

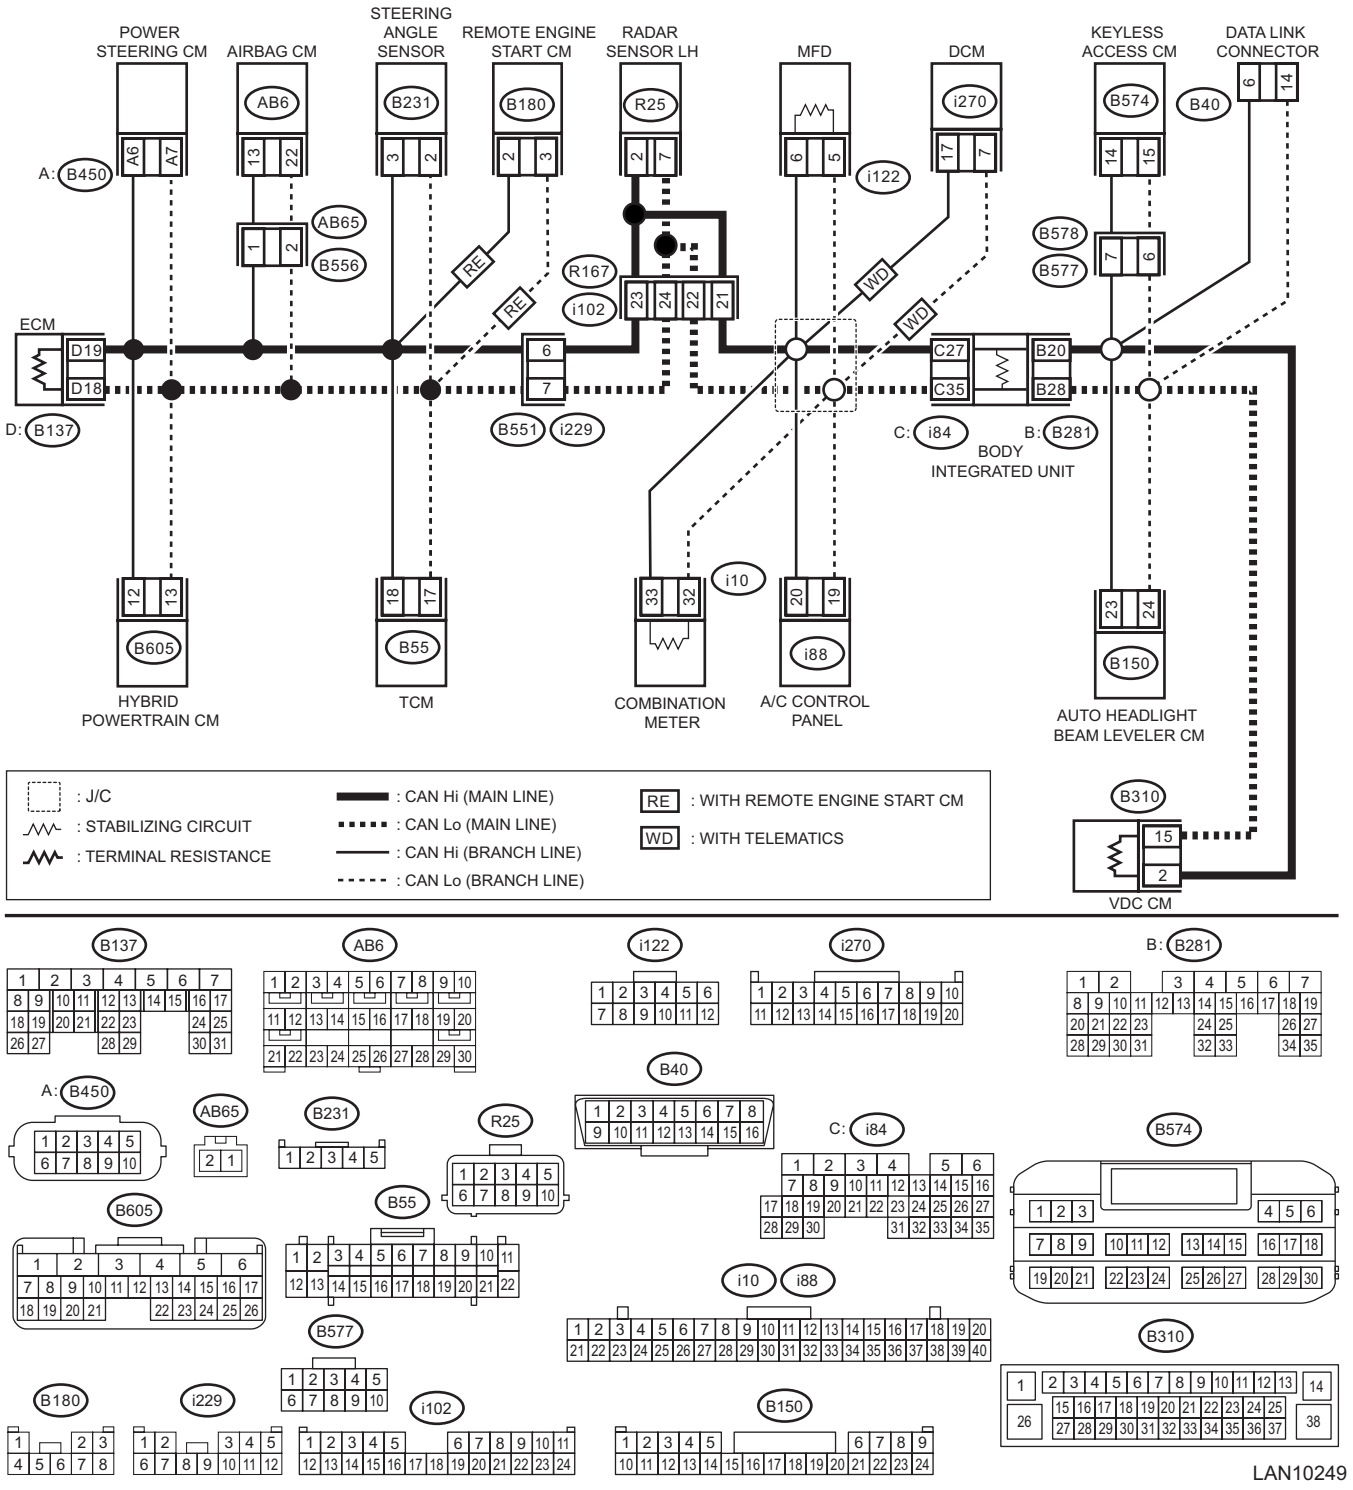
3. HEV-CAN

Resistance value between CAN Hi and Lo	Contents of inspection	Remarks
Ground short inspection	<Ref. to LAN(HEV)(diag)-104, GROUND SHORT INSPECTION (HEV-CAN), INSPECTION, CAN Communication Circuit Check.>	Shorted to ground in the communication circuit or control module.
Battery short inspection	<Ref. to LAN(HEV)(diag)-105, BATTERY SHORT INSPECTION (HEV-CAN), INSPECTION, CAN Communication Circuit Check.>	Shorted to battery power supply in the communication circuit or control module.
57 — 63 Ω	<Ref. to LAN(HEV)(diag)-106, 57 — 63 Ω (HEV-CAN), INSPECTION, CAN Communication Circuit Check.>	Combined resistance of end resistance does not have malfunction; short to ground or +B short of the CAN communication circuit is possible, however.
56 Ω or less	<Ref. to LAN(HEV)(diag)-108, 56 Ω OR LESS (HEV-CAN), INSPECTION, CAN Communication Circuit Check.>	Resistance is lower than combined resistance of end resistance. Short to CAN Hi and CAN Lo on the CAN communication circuit is possible.
64 Ω or more	<Ref. to LAN(HEV)(diag)-110, 64 Ω OR MORE (HEV-CAN), INSPECTION, CAN Communication Circuit Check.>	Resistance is higher than combined resistance of end resistance. Open circuit of CAN communication circuit is possible.
Related lines 57 — 63 Ω (BECM)	<Ref. to LAN(HEV)(diag)-111, 57 — 63 Ω (HEV-CAN_BECM), INSPECTION, CAN Communication Circuit Check.>	No BECM data is received. Perform inspection when faulty is detected.
Related lines 57 — 63 Ω (electric oil pump)	<Ref. to LAN(HEV)(diag)-112, 57 — 63 Ω (HEV-CAN_ELECTRIC OIL PUMP), INSPECTION, CAN Communication Circuit Check.>	No electric oil pump data is received. Perform inspection when faulty is detected.



C: INSPECTION

1. GROUND SHORT INSPECTION (MAIN-CAN)



WIRING DIAGRAM:

CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>

- Without BSD/RCTA

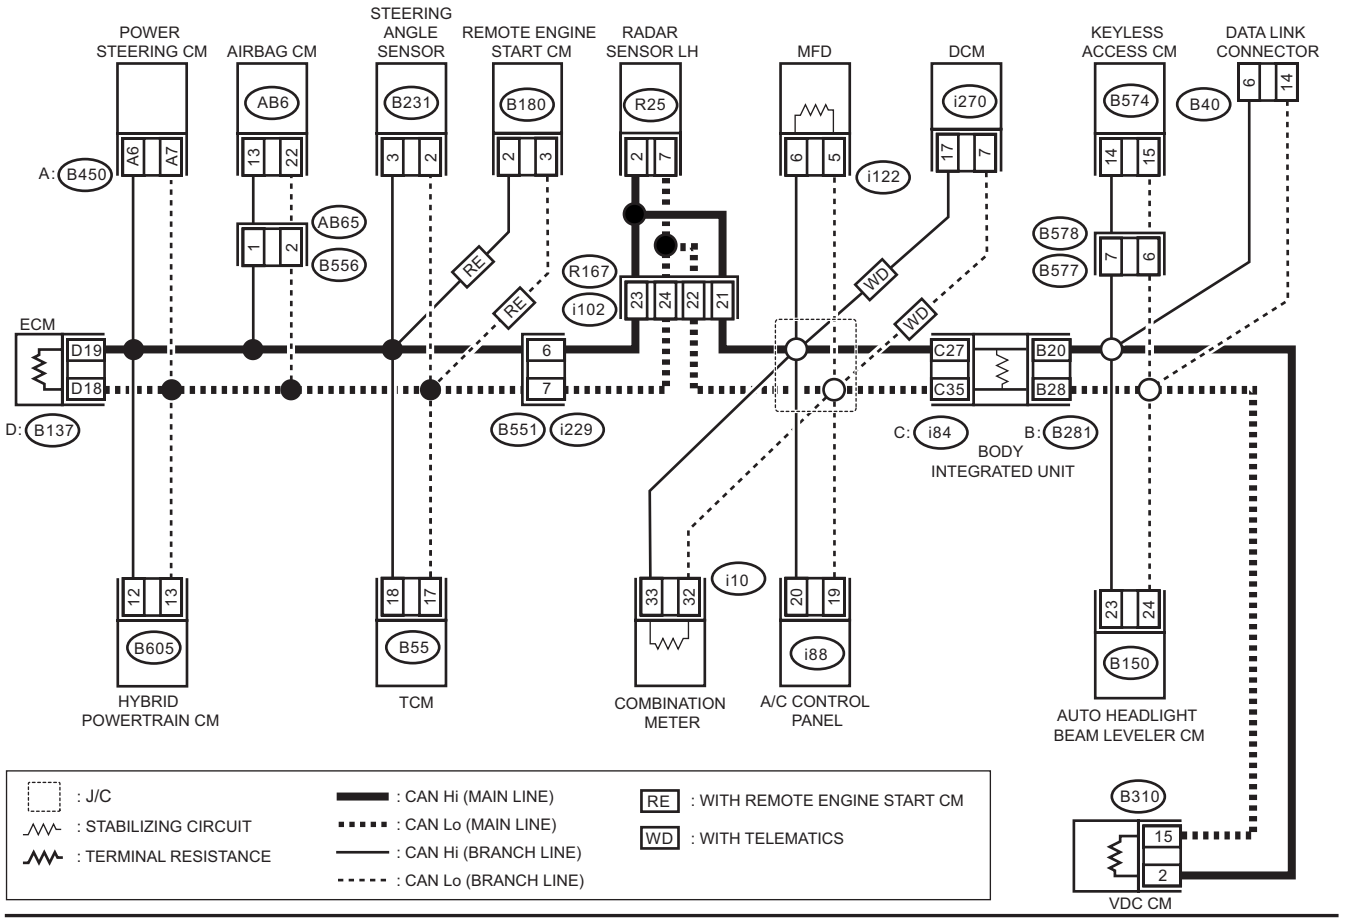
- With BSD/RCTA

LAN10249

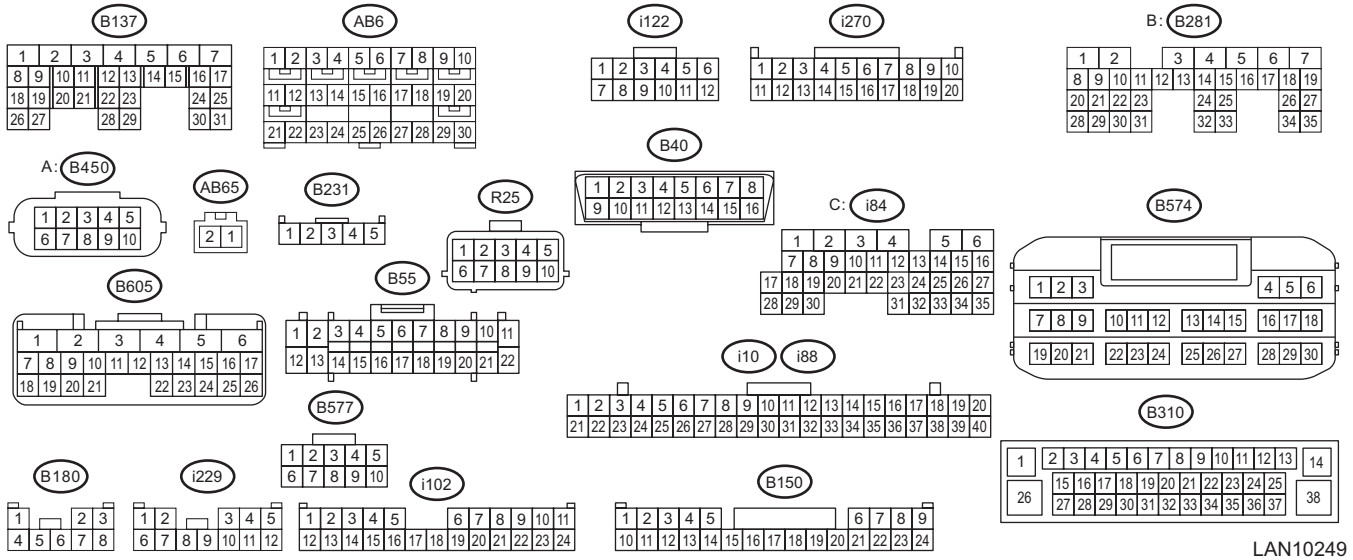
NOTE:
Main wiring harness or related lines may be shorted to ground, or shorted to ground in one of the control modules.

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Is the resistance 10 Ω or less?	Go to step **2**.	Currently, it is normal.
2	**CHECK CONTROL MODULE.** With the tester connected, disconnect control module. NOTE: Disconnect the body integrated unit at the end. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Did the resistance change to 10 Ω or more?	Replace the control module whose resistance has changed. When the value changed at disconnecting the body integrated unit, Go to step **3**.	Repair or replace the short circuit of the main wiring harness and related lines between body integrated unit and VDC CM.
3	**CHECK BETWEEN MAIN WIRING HARNESSES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i84) No. 27 — Chassis ground:*** ***(i84) No. 35 — Chassis ground:***	Is the resistance 10 Ω or less?	Repair or replace the short circuit of the main wiring harness and related lines between ECM and body integrated unit.	Replace the body integrated unit. <Ref. to SL-80, REMOVAL, Body Integrated Unit.>

2. BATTERY SHORT INSPECTION (MAIN-CAN)



WIRING DIAGRAM:



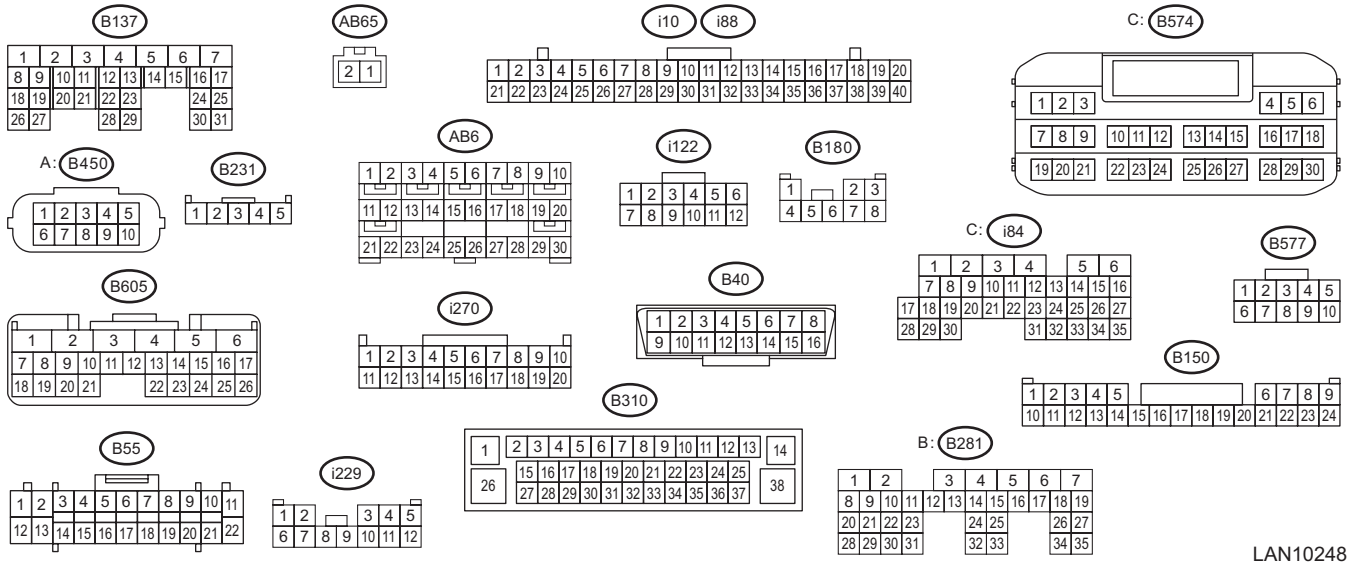
CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>

- Without BSD/RCTA

- With BSD/RCTA

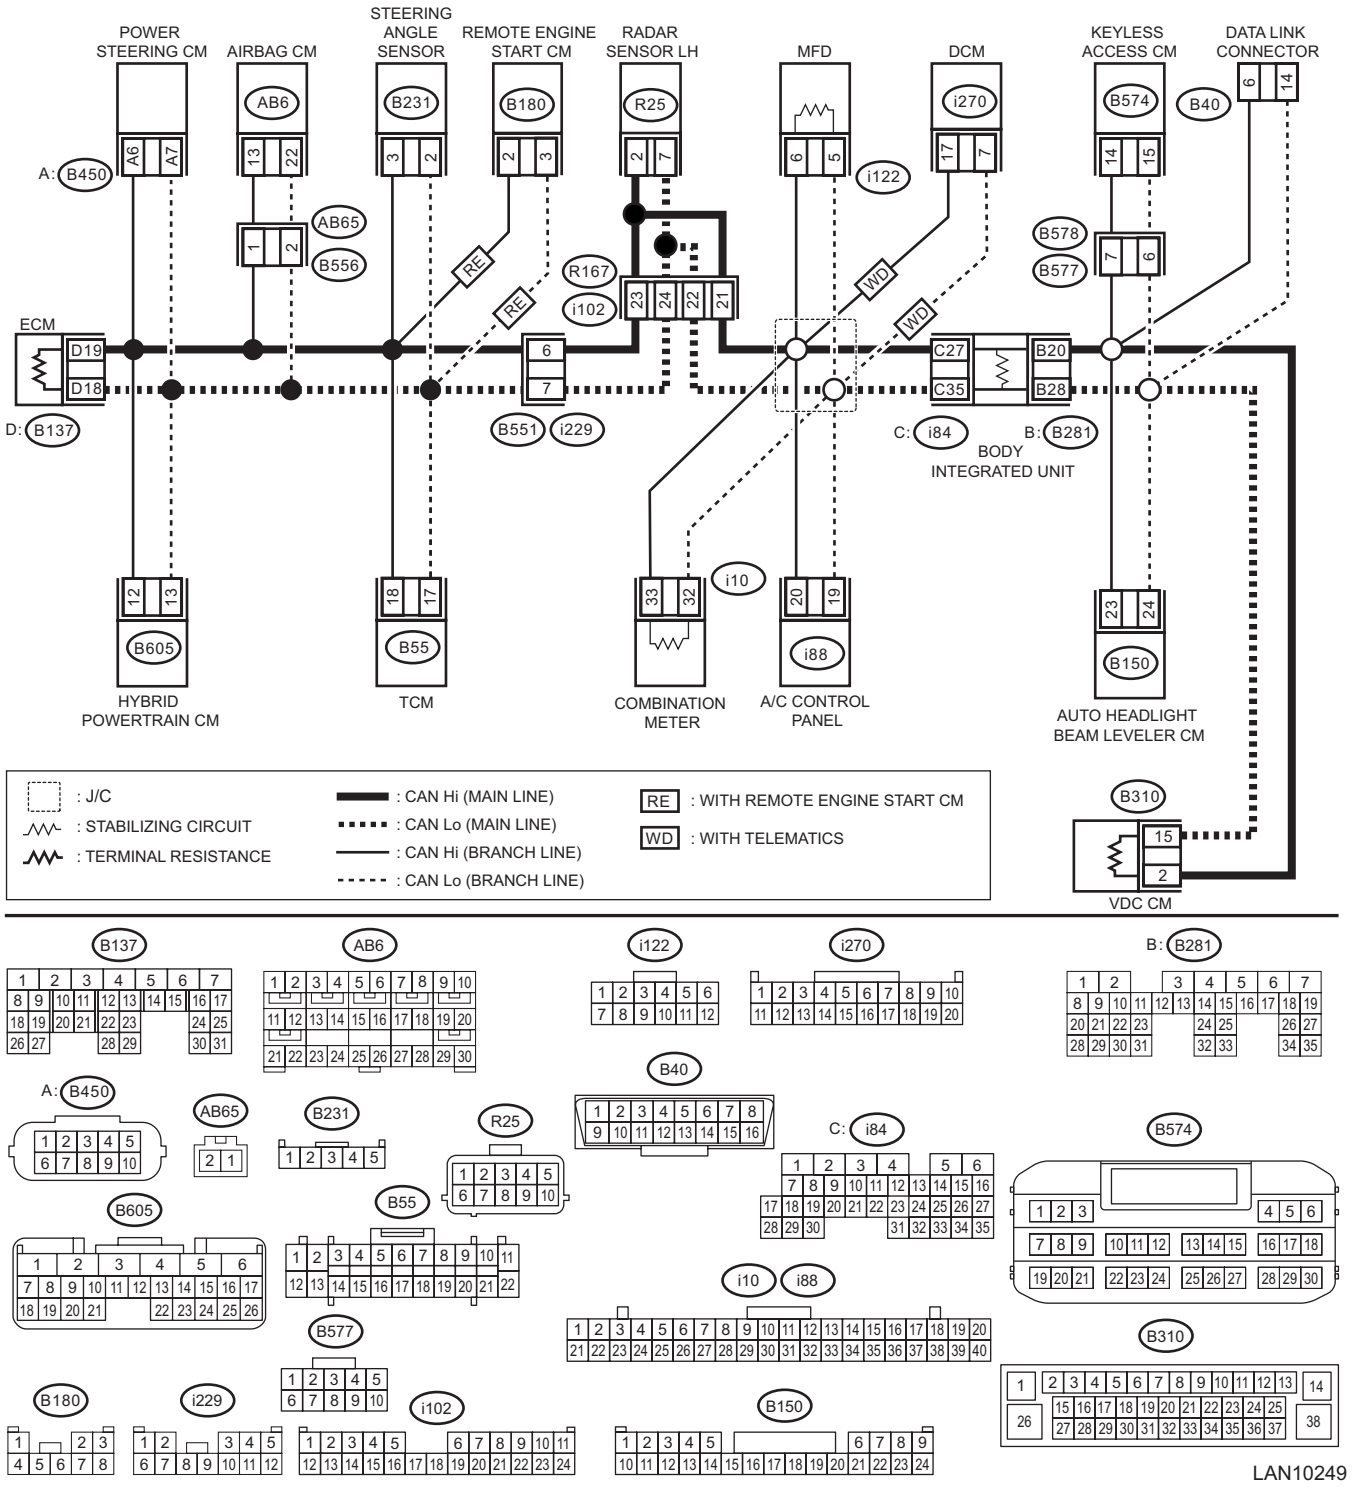
NOTE:
Main wiring harness or related lines may be shorted to battery circuit, or shorted to battery circuit in one of the control modules.

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Is the voltage 5 V or less?	Currently, it is normal.	Go to step **2**.
2	**CHECK CONTROL MODULE.** With the tester connected, disconnect control module. NOTE: Disconnect the body integrated unit at the end. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Did the voltage change to 5 V or less?	Replace the control module whose voltage has changed. When the value changed at disconnecting the body integrated unit, Go to step **3**.	Repair or replace the short circuit of the harness between body integrated unit and VDC CM.
3	**CHECK BETWEEN MAIN WIRING HARNESSES.** Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i84) No. 27 — Chassis ground:*** ***(i84) No. 35 — Chassis ground:***	Is the voltage 5 V or less?	Replace the body integrated unit. <Ref. to SL-80, REMOVAL, Body Integrated Unit.>	Repair or replace the short circuit of the harness between ECM and body integrated unit.



3. 53 — 61 Ω

WIRING DIAGRAM:



CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>

- Without BSD/RCTA

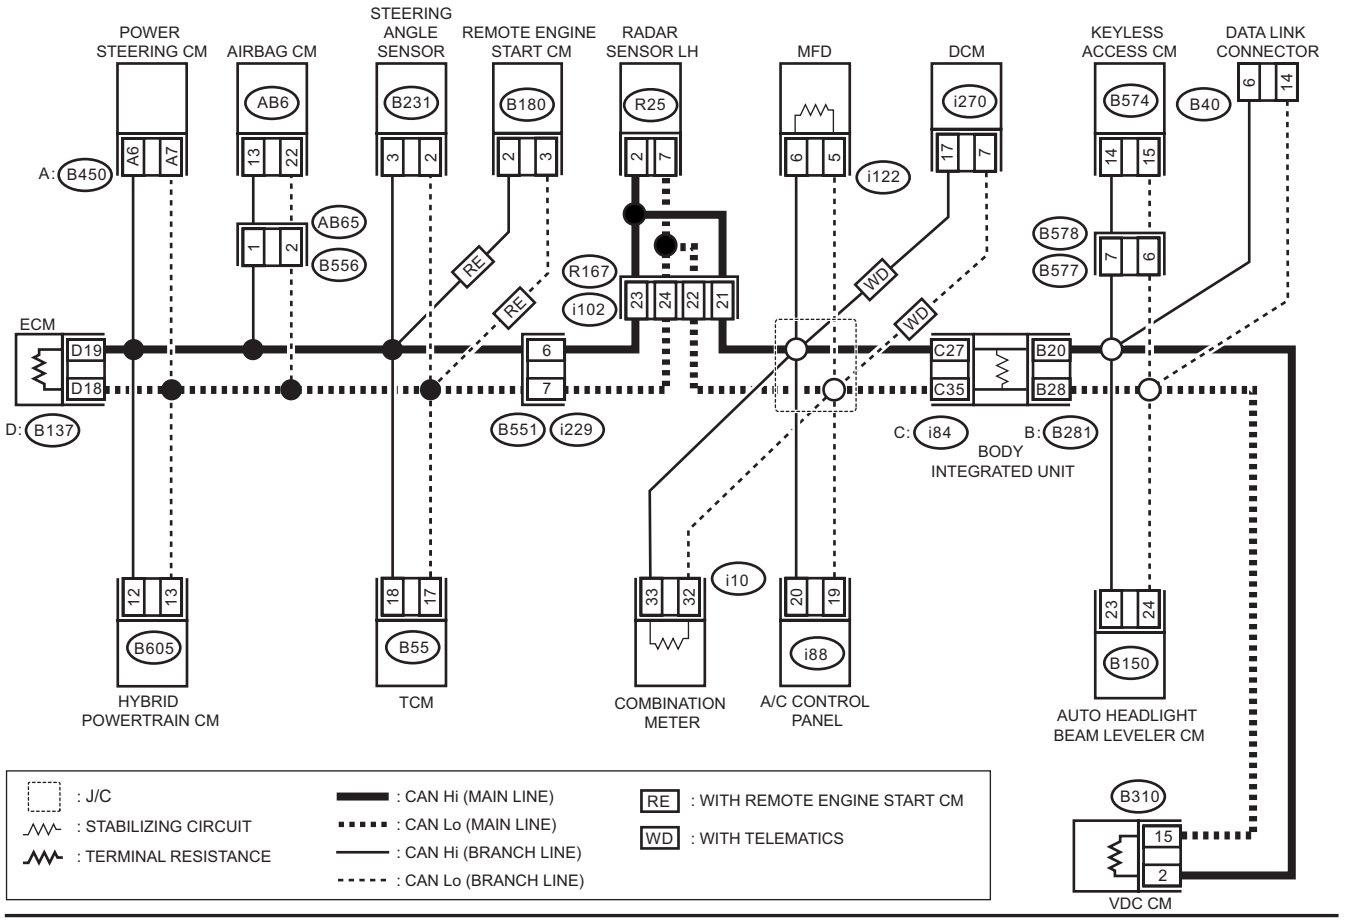
- With BSD/RCTA

LAN10249

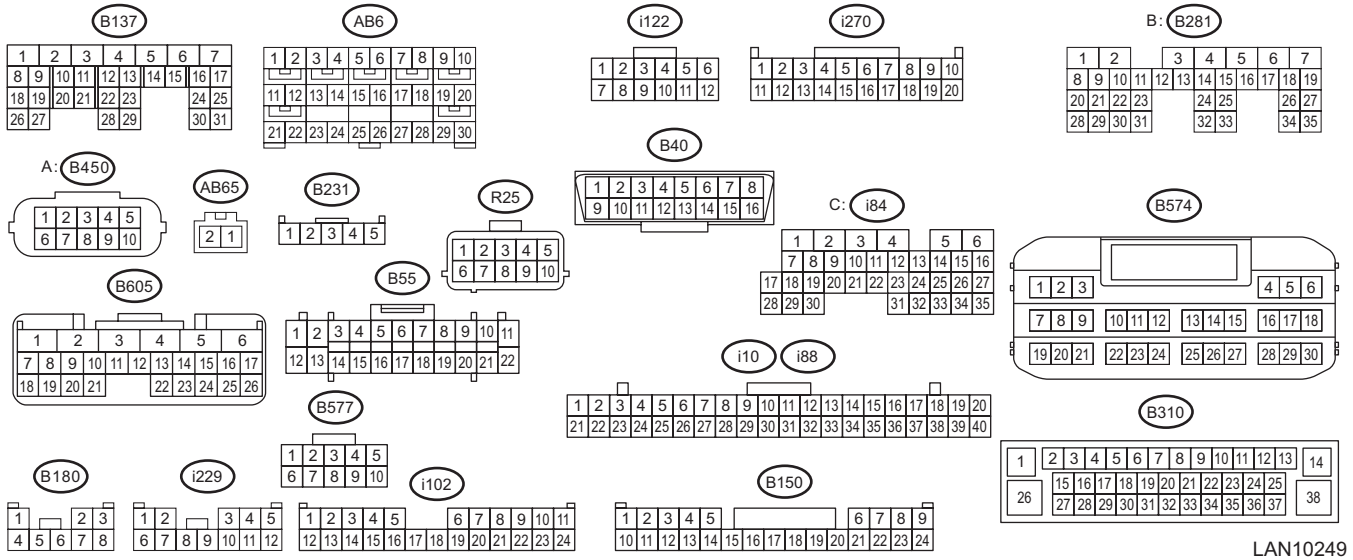
NOTE:
When the measured resistance value is 53 — 61 Ω, main wiring harness or related lines may be shorted to ground, or shorted to power supply line, or related line may be open.

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Is the resistance 10 Ω or less?	Go to step **2**.	Go to step **4**.
2	**CHECK CONTROL MODULE.** With the tester connected, disconnect control module. NOTE: Disconnect the body integrated unit at the end. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Did the resistance change to 10 Ω or more?	Replace the control module whose resistance has changed. When the value changed at disconnecting the body integrated unit, Go to step **3**.	Repair or replace the short circuit of the harness between body integrated unit and VDC CM.
3	**CHECK MAIN WIRING HARNESS AND RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i84) No. 27 — Chassis ground:*** ***(i84) No. 35 — Chassis ground:***	Is the resistance 10 Ω or less?	Repair or replace the short circuit of the harness between ECM and body integrated unit.	Replace the body integrated unit. <Ref. to SL-80, REMOVAL, Body Integrated Unit.>
4	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Is the voltage 5 V or less?	CAN communication circuit is normal.	Go to step **5**.
5	**CHECK CONTROL MODULE.** With the tester connected, disconnect control module. NOTE: Disconnect the body integrated unit at the end. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Did the voltage change to 5 V or less?	Replace the control module whose voltage has changed. When the value changed at disconnecting the body integrated unit, Go to step **6**.	Repair or replace the short circuit of the harness between body integrated unit and VDC CM.
6	**CHECK HARNESS.** Using a tester, measure the voltage between terminals and chassis ground. ***Connector & terminal*** ***(i84) No. 27 — Chassis ground:*** ***(i84) No. 35 — Chassis ground:***	Is the voltage 5 V or less?	Replace the body integrated unit. <Ref. to SL-80, REMOVAL, Body Integrated Unit.>	Repair or replace the short circuit of the harness between ECM and body integrated unit.

4. 52 Ω OR LESS



WIRING DIAGRAM:



CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>

- Without BSD/RCTA

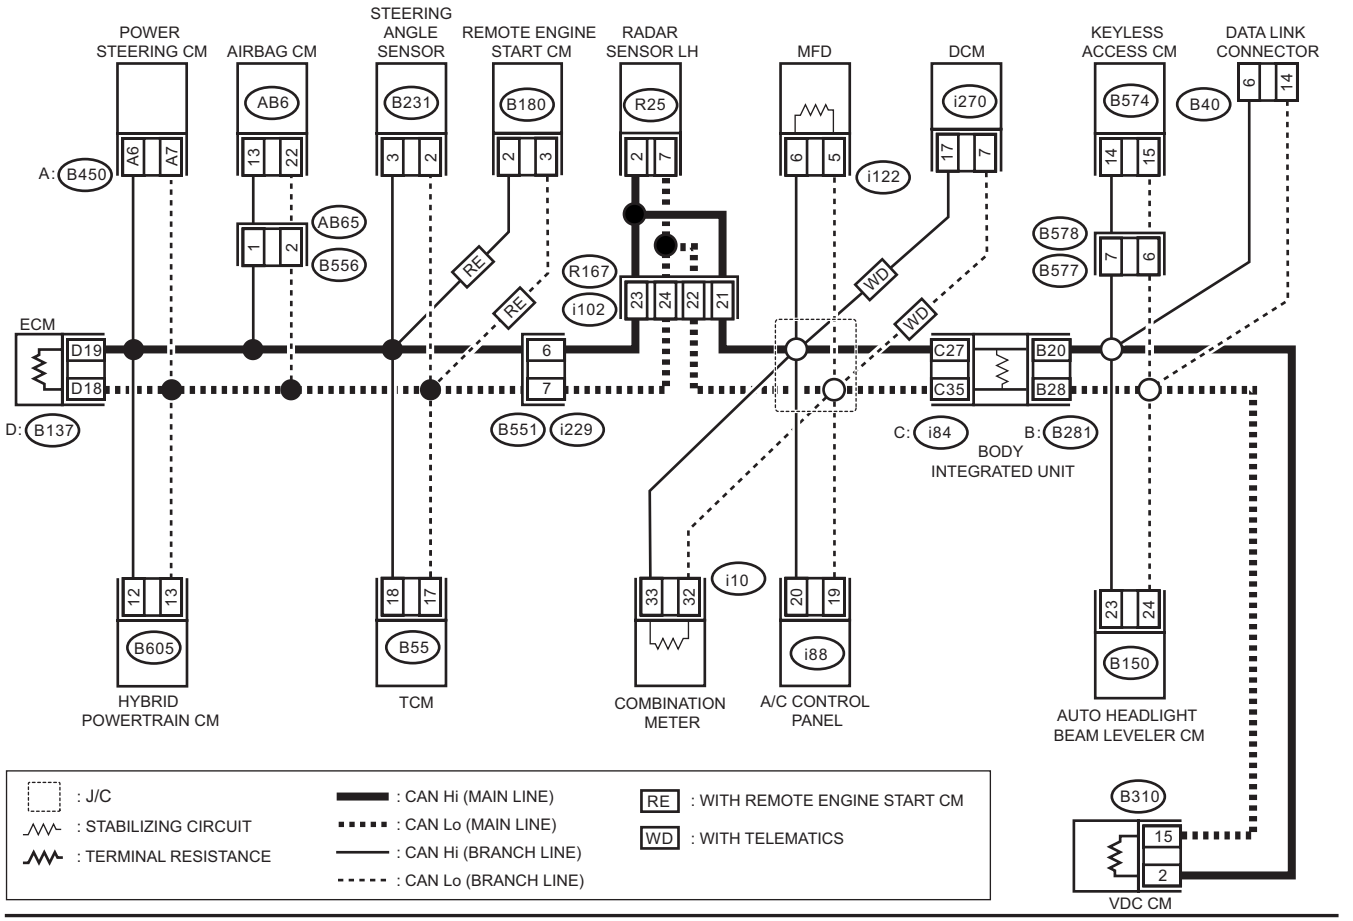
- With BSD/RCTA

NOTE:
When the bus line is measured, combined resistance of end resistance (120 Ω) in ECM and end resistance (120 Ω) in VDC CM can be measured. The combined resistance is approximately 53 — 61 Ω with the stabilizing circuit included. When the measured resistance value is 52 Ω or less, main wiring harness or related lines may be shorted, or combined resistance may have changed because resistance other than end resistance is created on the circuit.

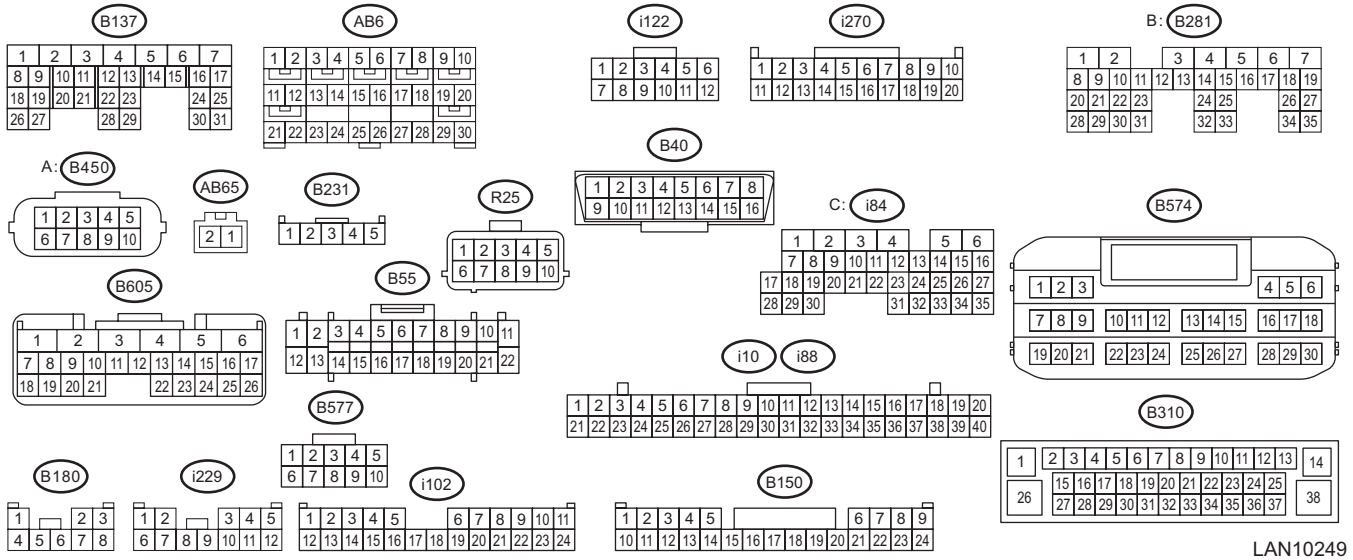
	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B40) No. 6 — No. 14:***	Is the resistance 10 Ω or less?	Go to step **2**.	Go to step **4**.
2	**CHECK MAIN WIRING HARNESS AND RELATED LINES.** With a tester connected, disconnect control module connectors in order. NOTE: Disconnect the body integrated unit at the end. ***Connector & terminal*** ***(B40) No. 6 — No. 14:***	Is there any control module whose condition has changed from short state?	Replace the control module whose resistance has changed. When the value changed at disconnecting the body integrated unit, Go to step **3**.	Repair or replace the short circuit of the harness between body integrated unit and VDC CM.
3	**CHECK BETWEEN MAIN WIRING HARNESSES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i84) No. 27 — No. 35:***	Is the resistance 10 Ω or less?	Repair or replace the short circuit of the harness between ECM and body integrated unit.	Replace the body integrated unit. <Ref. to SL-80, REMOVAL, Body Integrated Unit.>
4	**CHECK CONTROL MODULE.** 1) Disconnect ECM and VDC CM connectors. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(B137) No. 19 — No. 18:*** ***(B310) No. 2 — No. 15:***	Is the resistance 114 — 126 Ω?	Go to step **5**.	Replace the control module whose end resistance value is out of the specified range.
5	**CHECK CONTROL MODULE.** 1) Disconnect the connector of body integrated unit. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(B281) No. 28 — (i84) No. 27:*** ***(B281) No. 20 — (i84) No. 35:***	Is the resistance 2850 — 3150 Ω?	Go to step **6**.	Replace the body integrated unit. <Ref. to SL-80, REMOVAL, Body Integrated Unit.>
6	**CHECK CONTROL MODULE.** Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(B281) No. 28 — (i84) No. 35:*** ***(B281) No. 20 — (i84) No. 27:***	Is the resistance less than 1 Ω?	Go to step **7**.	Replace the body integrated unit. <Ref. to SL-80, REMOVAL, Body Integrated Unit.>
7	**CHECK CONTROL MODULE.** 1) Disconnect the combination meter connector. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(i10) No. 32 — No. 33:***	Is the resistance 2850 — 3150 Ω?	Go to step **8**.	Replace the combination meter. <Ref. to IDI-19, REMOVAL, Combination Meter.>

	Step	Check	Yes	No
8	**CHECK CONTROL MODULE.** 1) Disconnect the MFD connector. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(i122) No. 5 — No. 6:***	Is the resistance 2850 — 3150 Ω?	Go to step **9**.	Replace the MFD. <Ref. to IDI-26, REMOVAL, Multi-function Display (MFD).>
9	**CHECK HARNESS.** Using the tester, check the short circuit of each harness. ***Connector & terminal*** ***(B281) No. 28 — No. 20:***	Is the resistance 1 MΩ or more?	Go to step **11**.	Go to step **10**.
10	**CHECK CONTROL MODULE.** With a tester connected, disconnect control modules in order. ***Connector & terminal*** ***(B281) No. 28 — No. 20:***	Is there any control module whose resistance has changed to 1 MΩ or more?	Replace the control module that has changed.	Repair or replace the harness part which has resistance component.
11	**CHECK CONTROL MODULE.** With a tester connected, disconnect control modules in order. ***Connector & terminal*** ***(i84) No. 27 — No. 35:***	Is there any control module whose resistance has changed to 1 MΩ or more?	Replace the control module that has changed.	Repair or replace the harness part which has resistance component.

5. 62 Ω OR MORE



WIRING DIAGRAM:



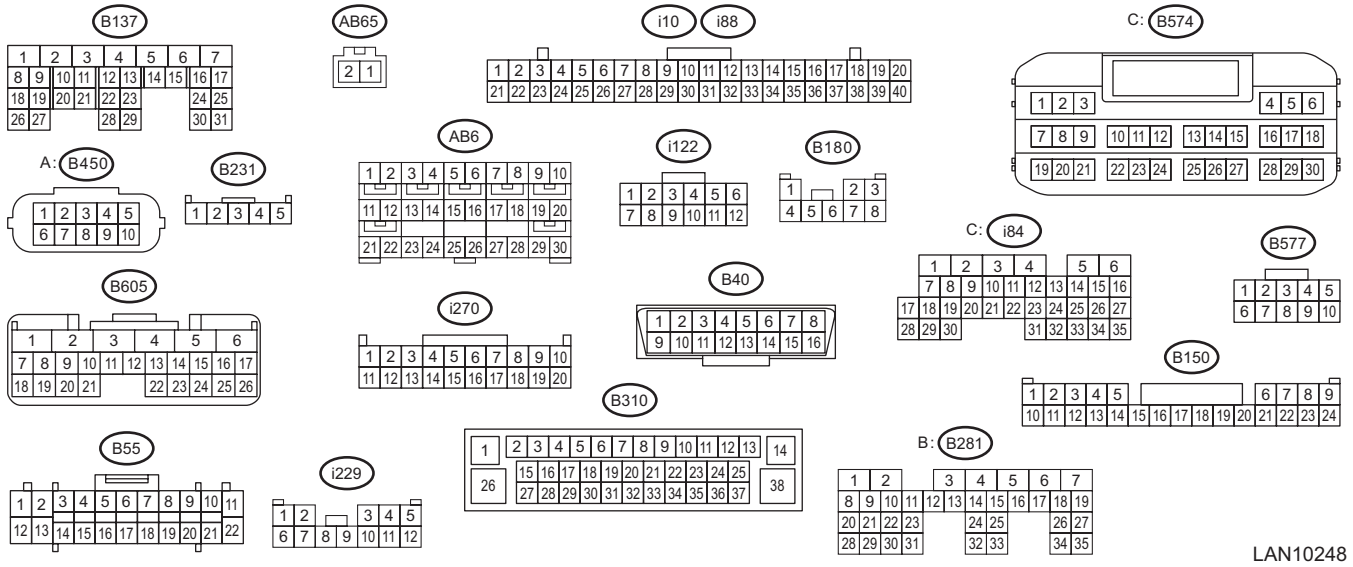
CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>

- Without BSD/RCTA

- With BSD/RCTA

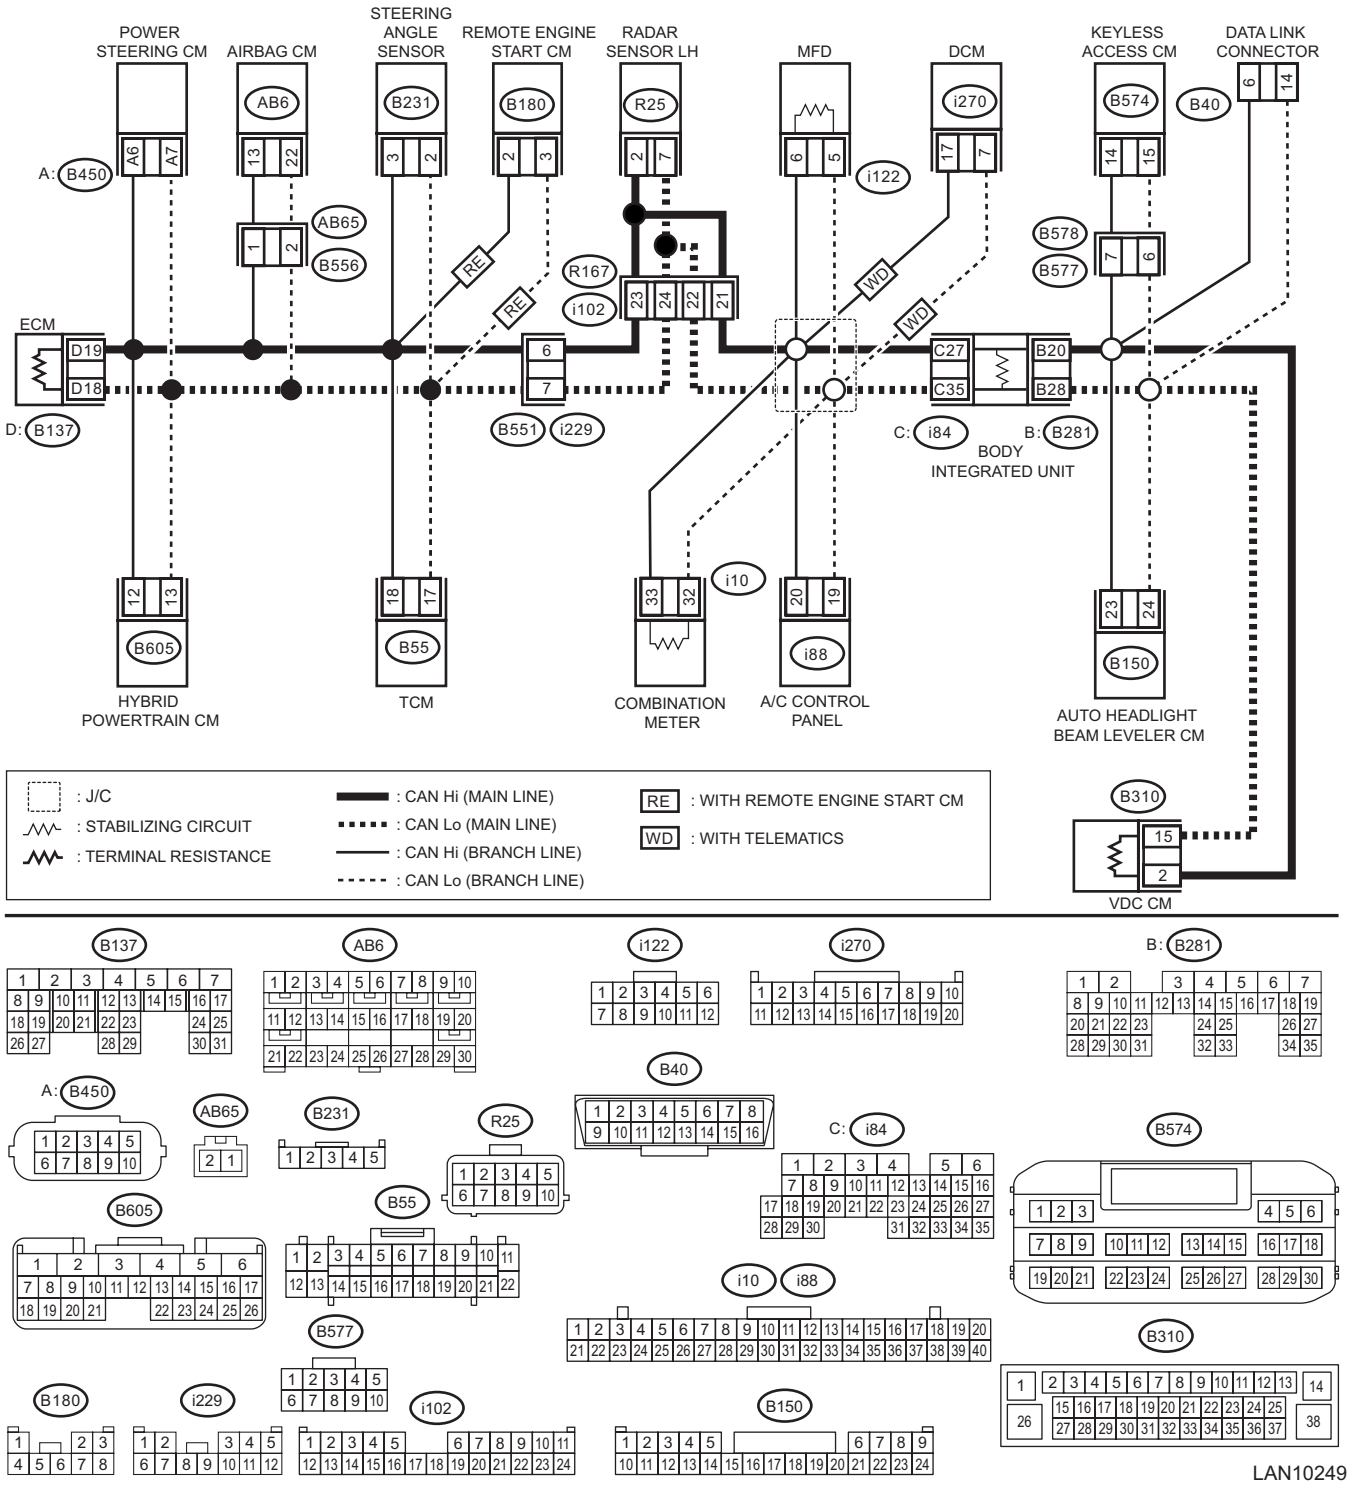
NOTE:
When CAN communication circuit is measured, combined resistance of end resistance (120 Ω) in ECM and end resistance (120 Ω) in VDC CM can be measured. The combined resistance is approximately 53 — 61 Ω with the stabilizing circuit included. When the measured resistance value is 62 Ω or more, either one of the end resistances, or stabilizing circuit, or main wiring harness may have malfunction such as open circuit.

	Step	Check	Yes	No
1	**CHECK CONTROL MODULE.** 1) Disconnect ECM and VDC CM connectors. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(B137) No. 19 — No. 18:*** ***(B310) No. 2 — No. 15:***	Is the resistance 114 — 126 Ω?	Go to step **2**.	Replace the control module whose value is out of the specification.
2	**CHECK CONTROL MODULE.** 1) Disconnect the connector of body control module. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(B281) No. 28 — (i84) No. 27:*** ***(B281) No. 20 — (i84) No. 35:***	Is the resistance 2850 — 3150 Ω?	Go to step **3**.	Replace the body integrated unit. <Ref. to SL-80, REMOVAL, Body Integrated Unit.>
3	**CHECK CONTROL MODULE.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B281) No. 28 — (i84) No. 35:*** ***(B281) No. 20 — (i84) No. 27:***	Is the resistance less than 1 Ω?	Go to step **4**.	Replace the body integrated unit. <Ref. to SL-80, REMOVAL, Body Integrated Unit.>
4	**CHECK CONTROL MODULE.** 1) Disconnect the combination meter connector. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(i10) No. 32 — No. 33:***	Is the resistance 2850 — 3150 Ω?	Go to step **5**.	Replace the combination meter. <Ref. to IDI-19, REMOVAL, Combination Meter.>
5	**CHECK CONTROL MODULE.** 1) Disconnect the MFD connector. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(i122) No. 5 — No. 6:***	Is the resistance 2850 — 3150 Ω?	Go to step **6**.	Replace the MFD. <Ref. to IDI-26, REMOVAL, Multi-function Display (MFD).>
6	**CHECK HARNESS.** Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B40) No. 6 — (B137) No. 19:*** ***(B40) No. 14 — (B137) No. 18:*** ***(B40) No. 6 — (i84) No. 27:*** ***(B40) No. 14 — (i84) No. 35:***	Is there continuity?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK HARNESS.** Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B281) No. 20 — (B310) No. 2:*** ***(B281) No. 28 — (B310) No. 15:***	Is there continuity?	It is possible that temporary poor communication occurs.	Repair or replace the open circuit of harness.



6. RELATED LINES 53 — 61 Ω (TCM)

WIRING DIAGRAM:



CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>

- Without BSD/RCTA

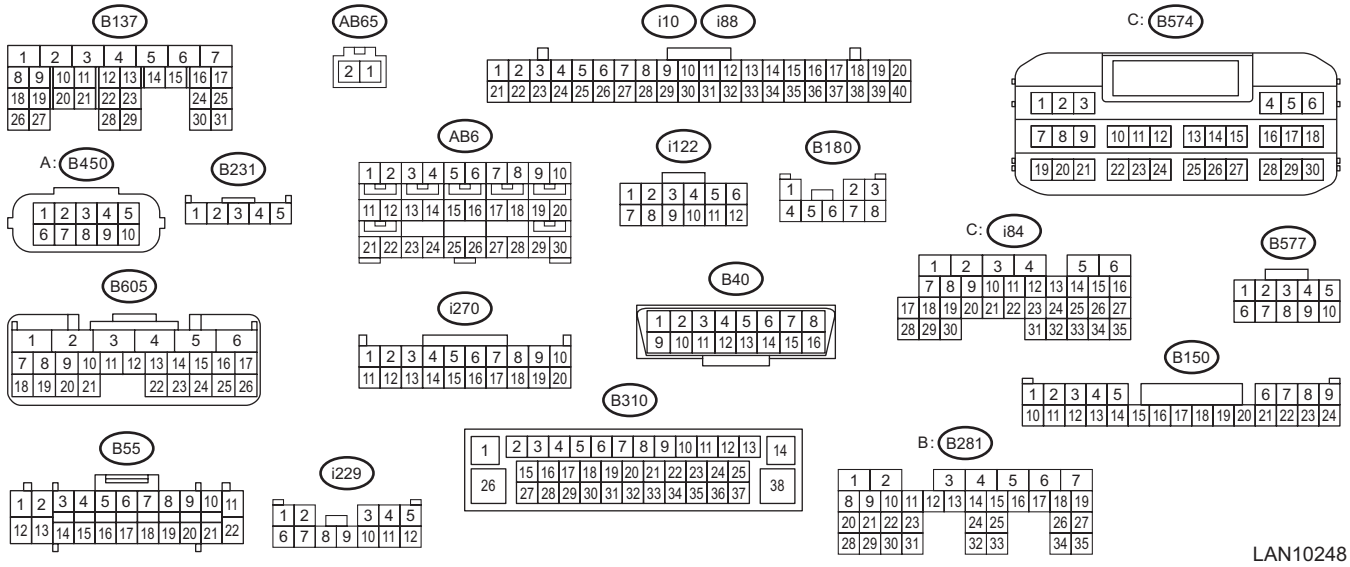
- With BSD/RCTA

LAN10249

CAN Communication Circuit Check

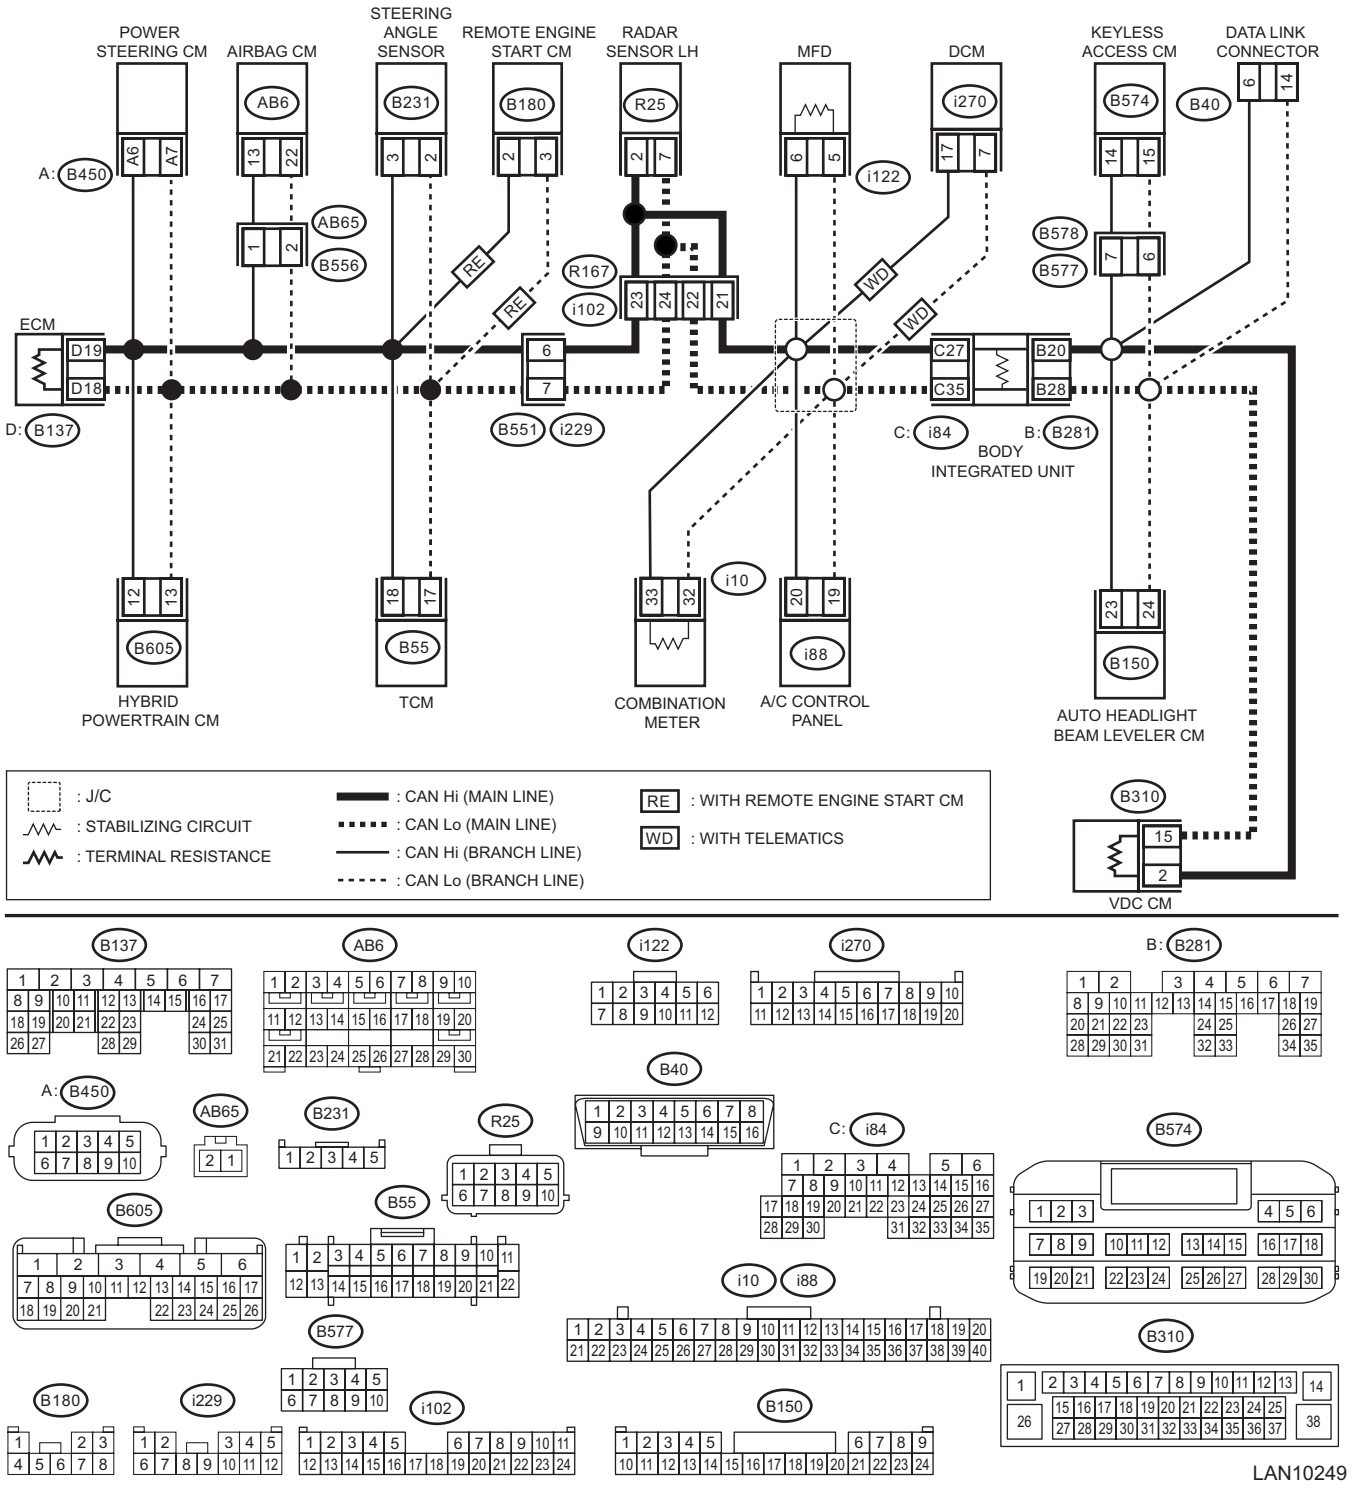
NOTE:
Perform inspection when no data is received, or faulty is detected. This is different from power supply shorted or ground shorted.

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the TCM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B55) No. 17 — No. 18:***	Is the resistance 400 Ω or more?	Related lines between TCM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B55) No. 17 — (B40) No. 14:*** ***(B55) No. 18 — (B40) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of TCM related lines.	Check DTC of TCM. <Ref. to CVT(HEV)(diag)-19, OPERATION, Read Diagnostic Trouble Code (DTC).>



7. RELATED LINES 53 — 61 Ω (STEERING ANGLE SENSOR)

WIRING DIAGRAM:

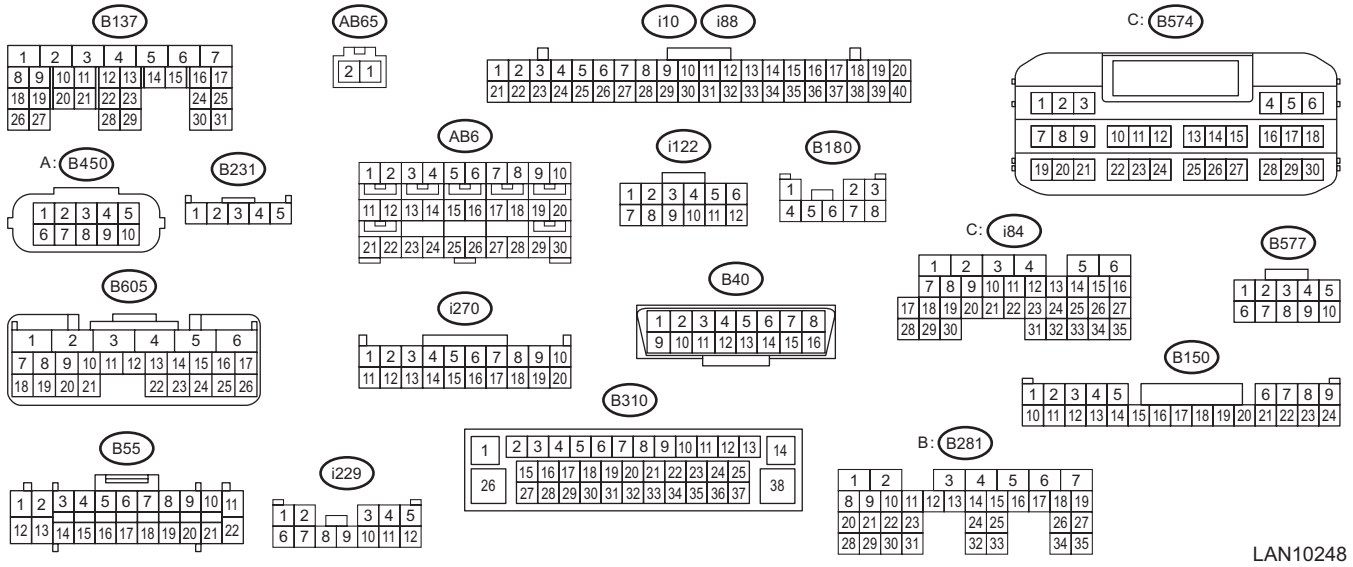


CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>

- Without BSD/RCTA

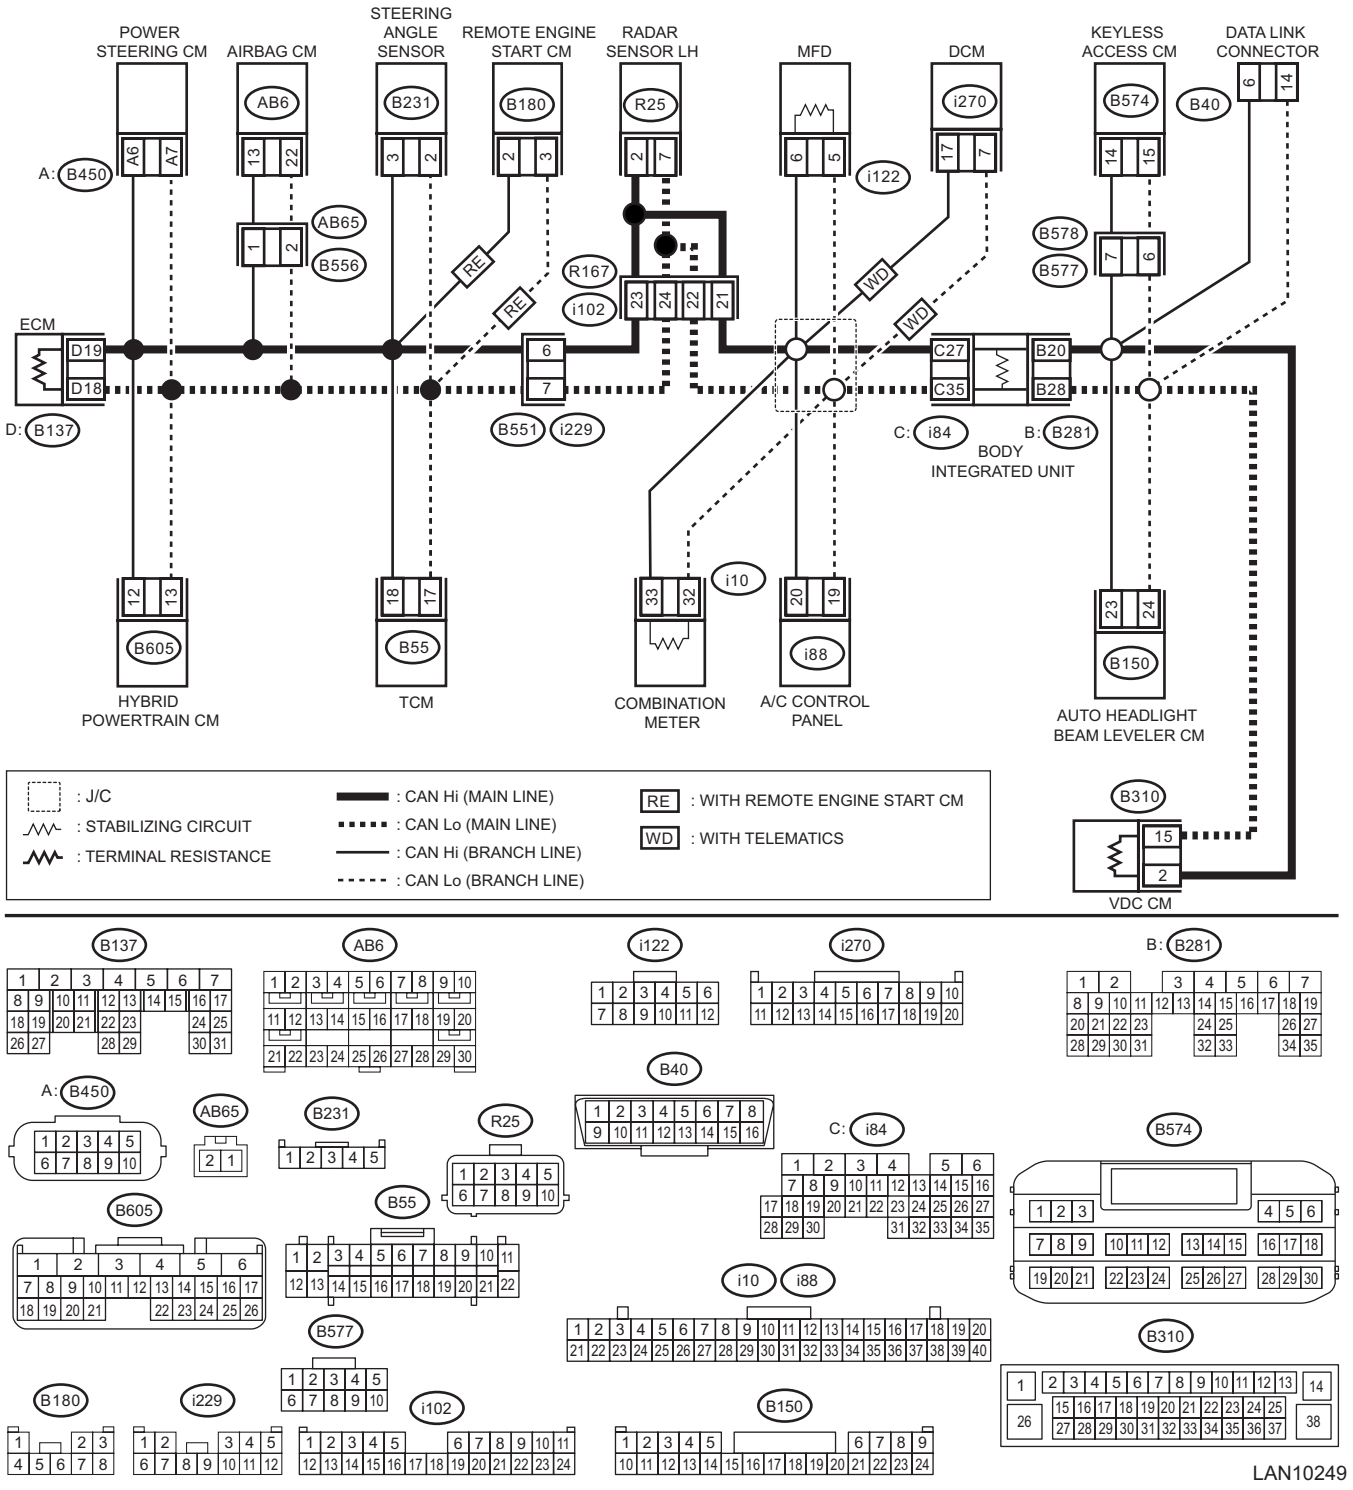
- With BSD/RCTA

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the steering angle sensor connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B231) No. 2 — No. 3:***	Is the resistance 400 Ω or more?	Related lines between steering angle sensor and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B231) No. 2 — (B40) No. 14:*** ***(B231) No. 3 — (B40) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of steering angle sensor related lines.	Check DTC of VDC CM. <Ref. to VDC(diag)-24, OPERATION, Read Diagnostic Trouble Code (DTC).>



8. RELATED LINE 53 — 61 Ω (A/C CONTROL PANEL)

WIRING DIAGRAM:



CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>

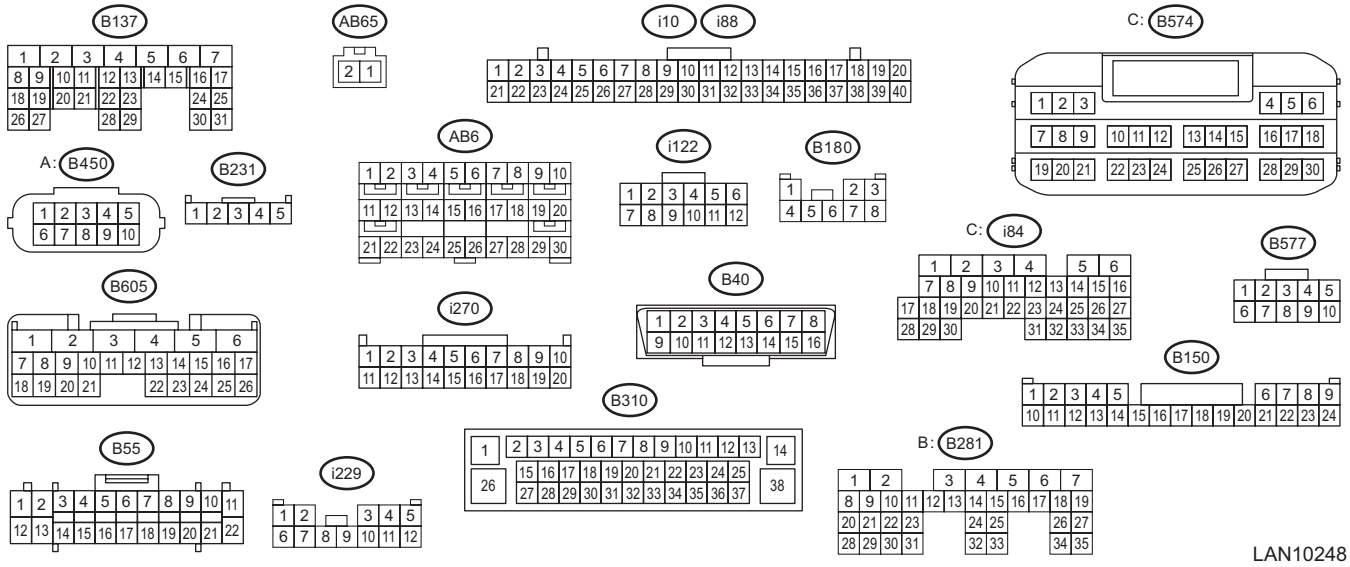
- Without BSD/RCTA

- With BSD/RCTA

LAN10249

CAN Communication Circuit Check

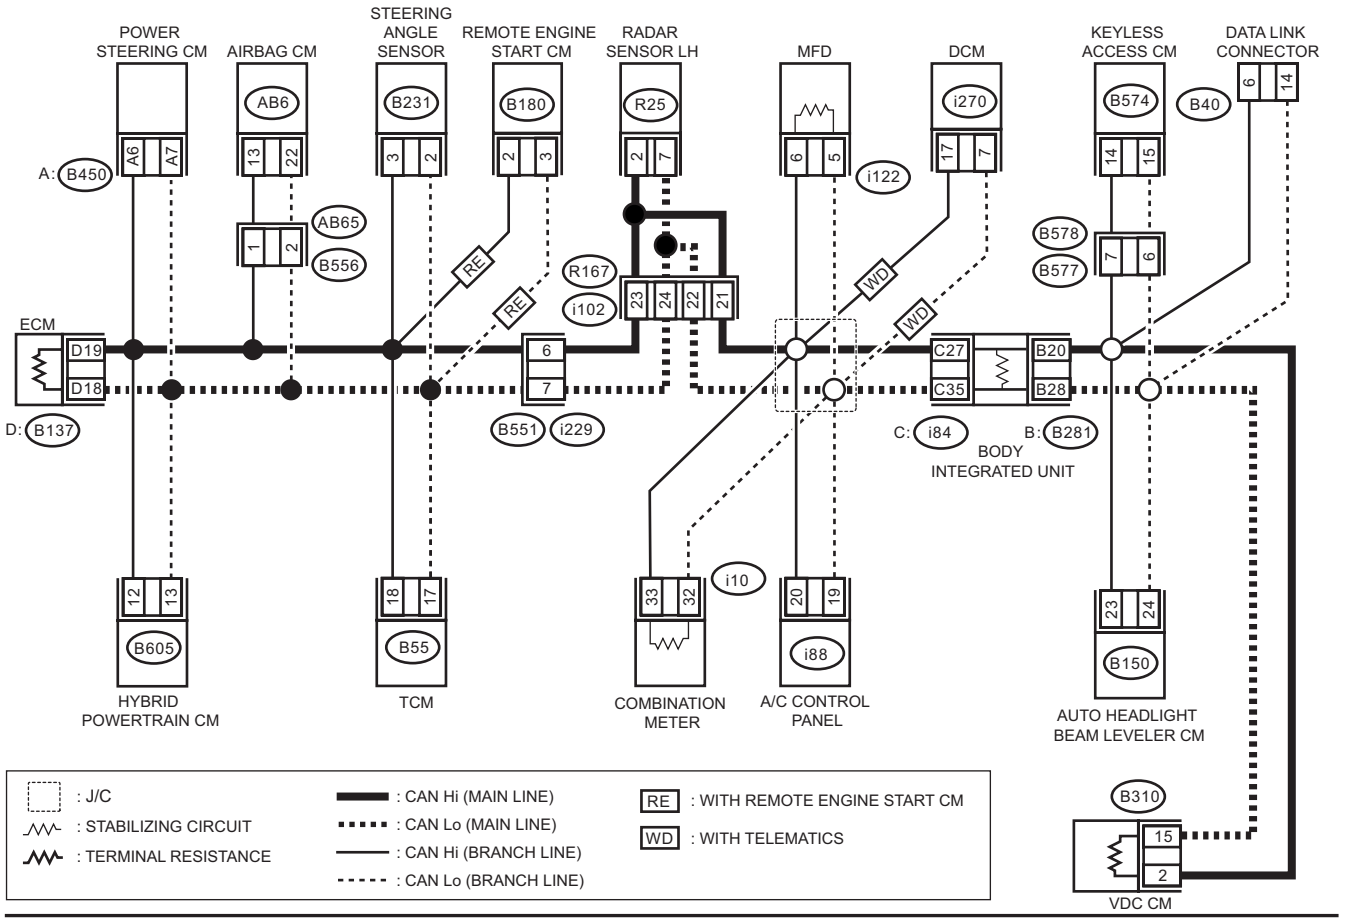
	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the A/C control panel connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i88) No. 19 — No. 20:***	Is the resistance 400 Ω or more?	Related lines between A/C control panel and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i88) No. 19 — (B40) No. 14:*** ***(i88) No. 20 — (B40) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of A/C control panel related lines.	Check the DTC of A/C control panel. <Ref. to AC(diag)-34, Read Diagnostic Trouble Code (DTC).>



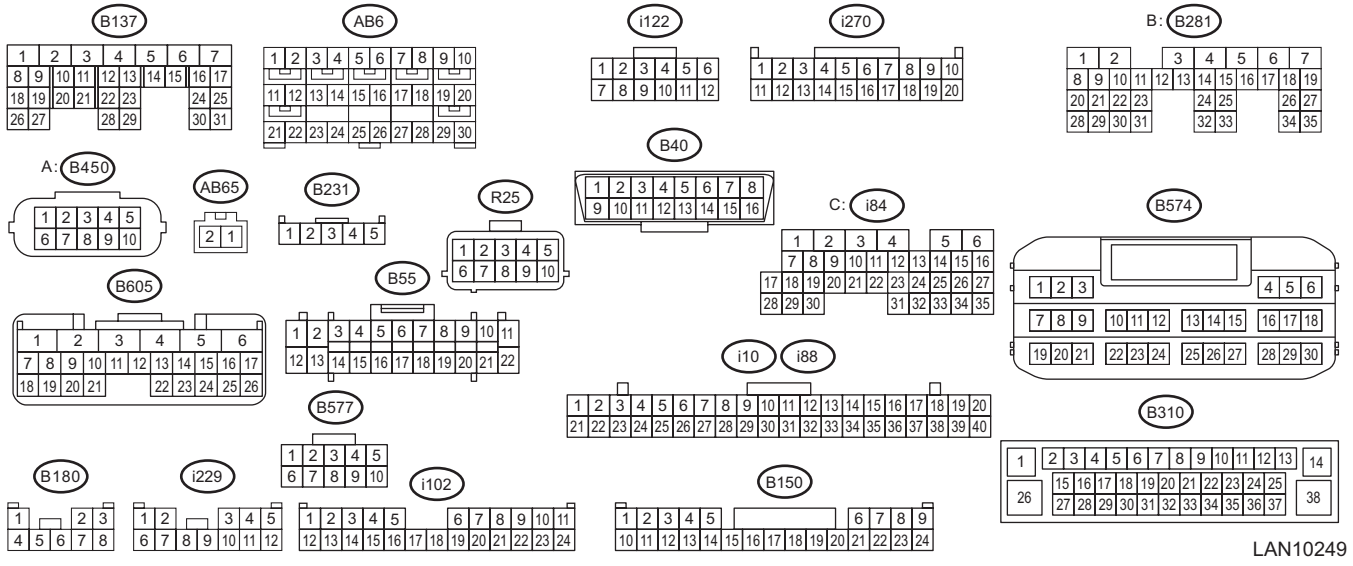
9. RELATED LINES 53 — 61 Ω (POWER STEERING CM)

WIRING DIAGRAM:

CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>



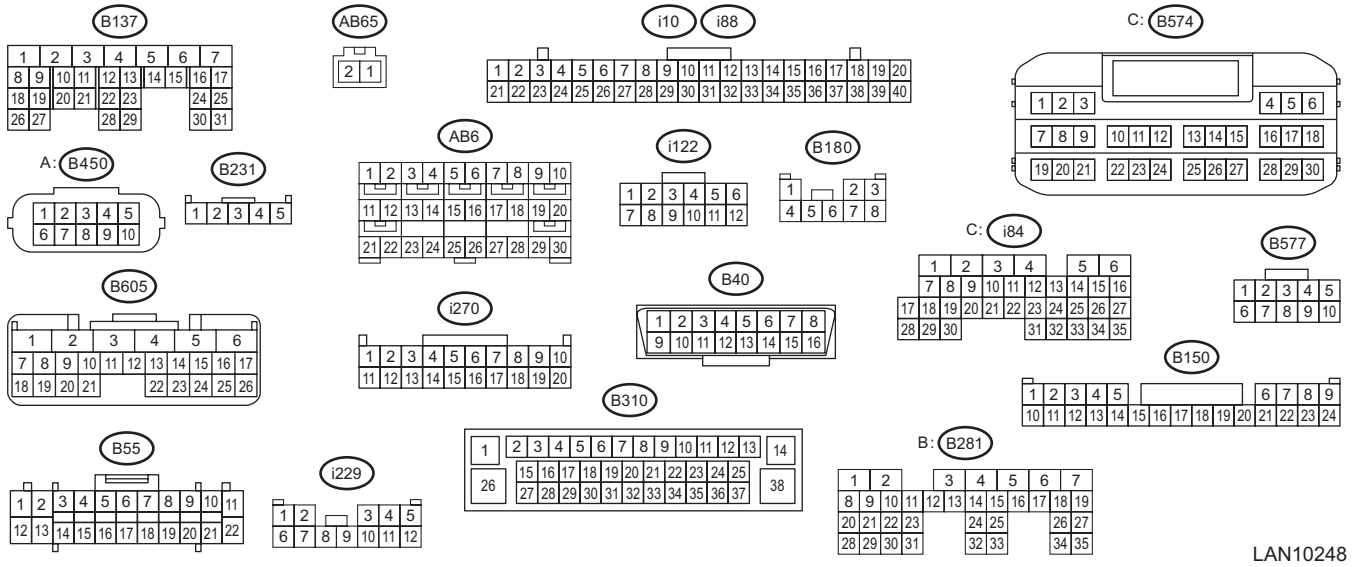
- Without BSD/RCTA



LAN10248

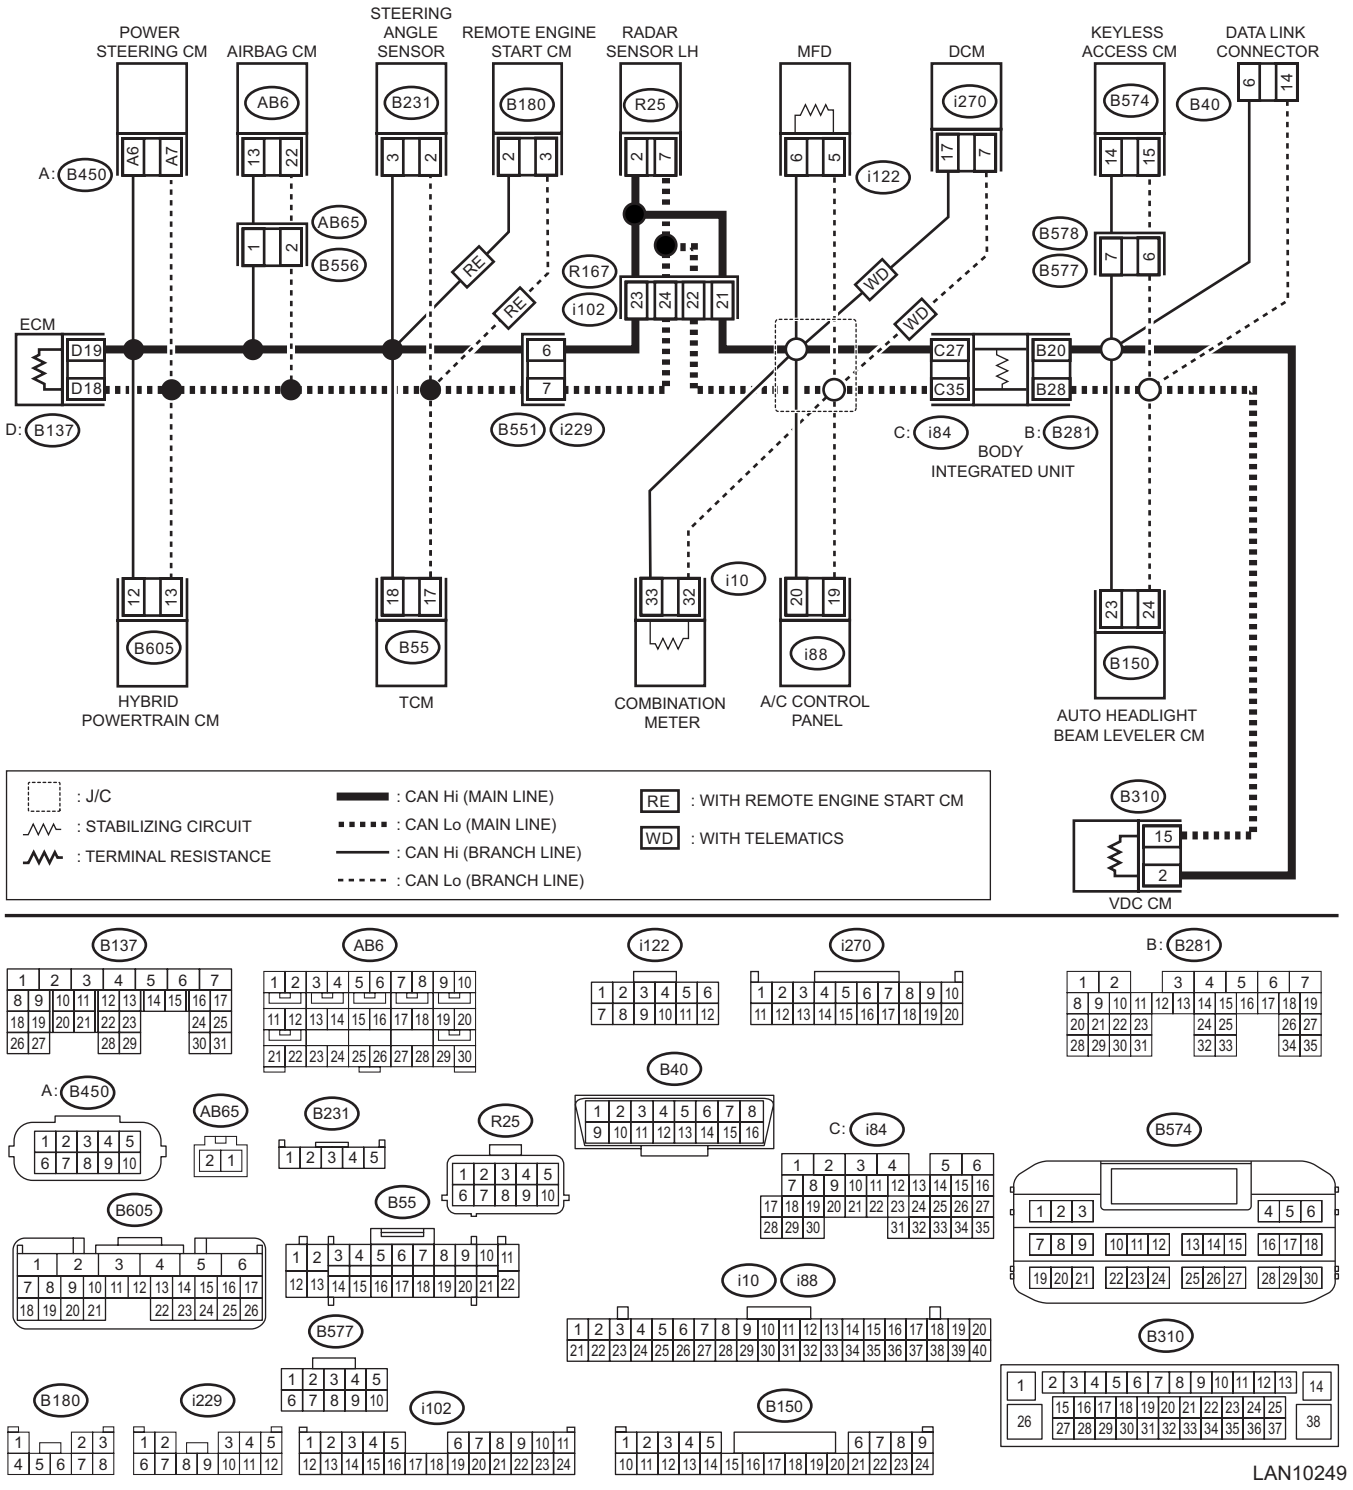
- With BSD/RCTA

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the power steering CM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B450) No. 6 — No. 7:***	Is the resistance 400 Ω or more?	Related lines or main wiring harness between power steering CM and main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B450) No. 6 — (B40) No. 6:*** ***(B450) No. 7 — (B40) No. 14:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit portion of power steering CM related lines.	Check DTC of power steering CM. <Ref. to PS(diag)-19, OPERATION, Read Diagnostic Trouble Code (DTC).>



10.RELATED LINES 53 — 61 Ω (COMBINATION METER)

WIRING DIAGRAM:



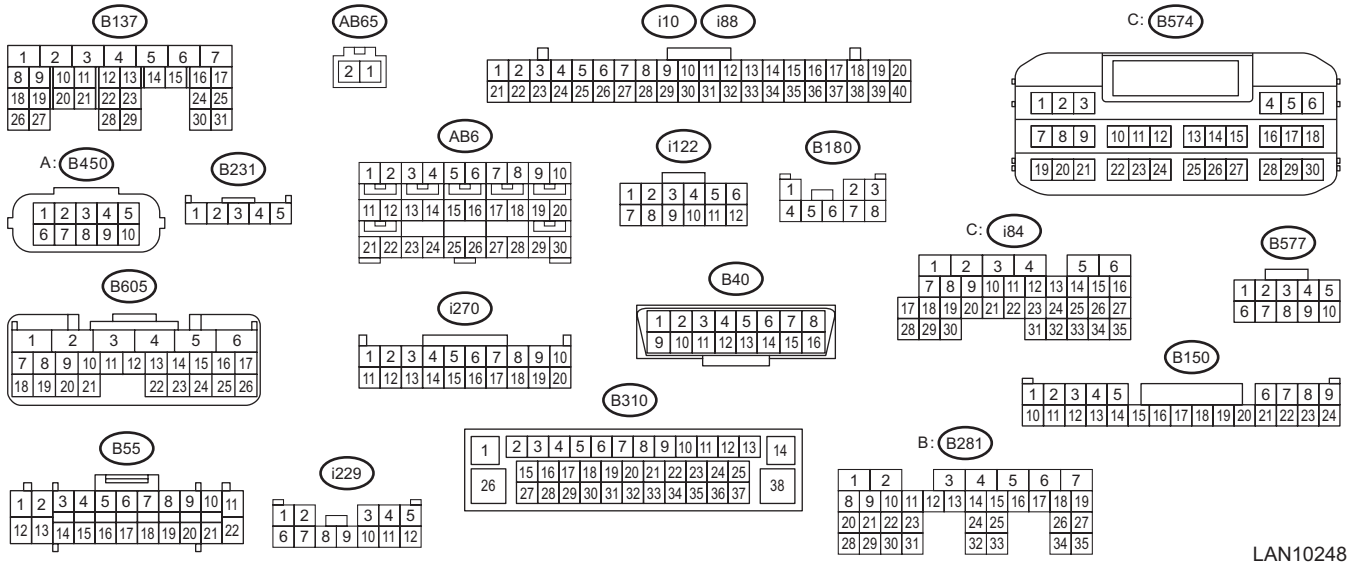
CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>

- Without BSD/RCTA

- With BSD/RCTA

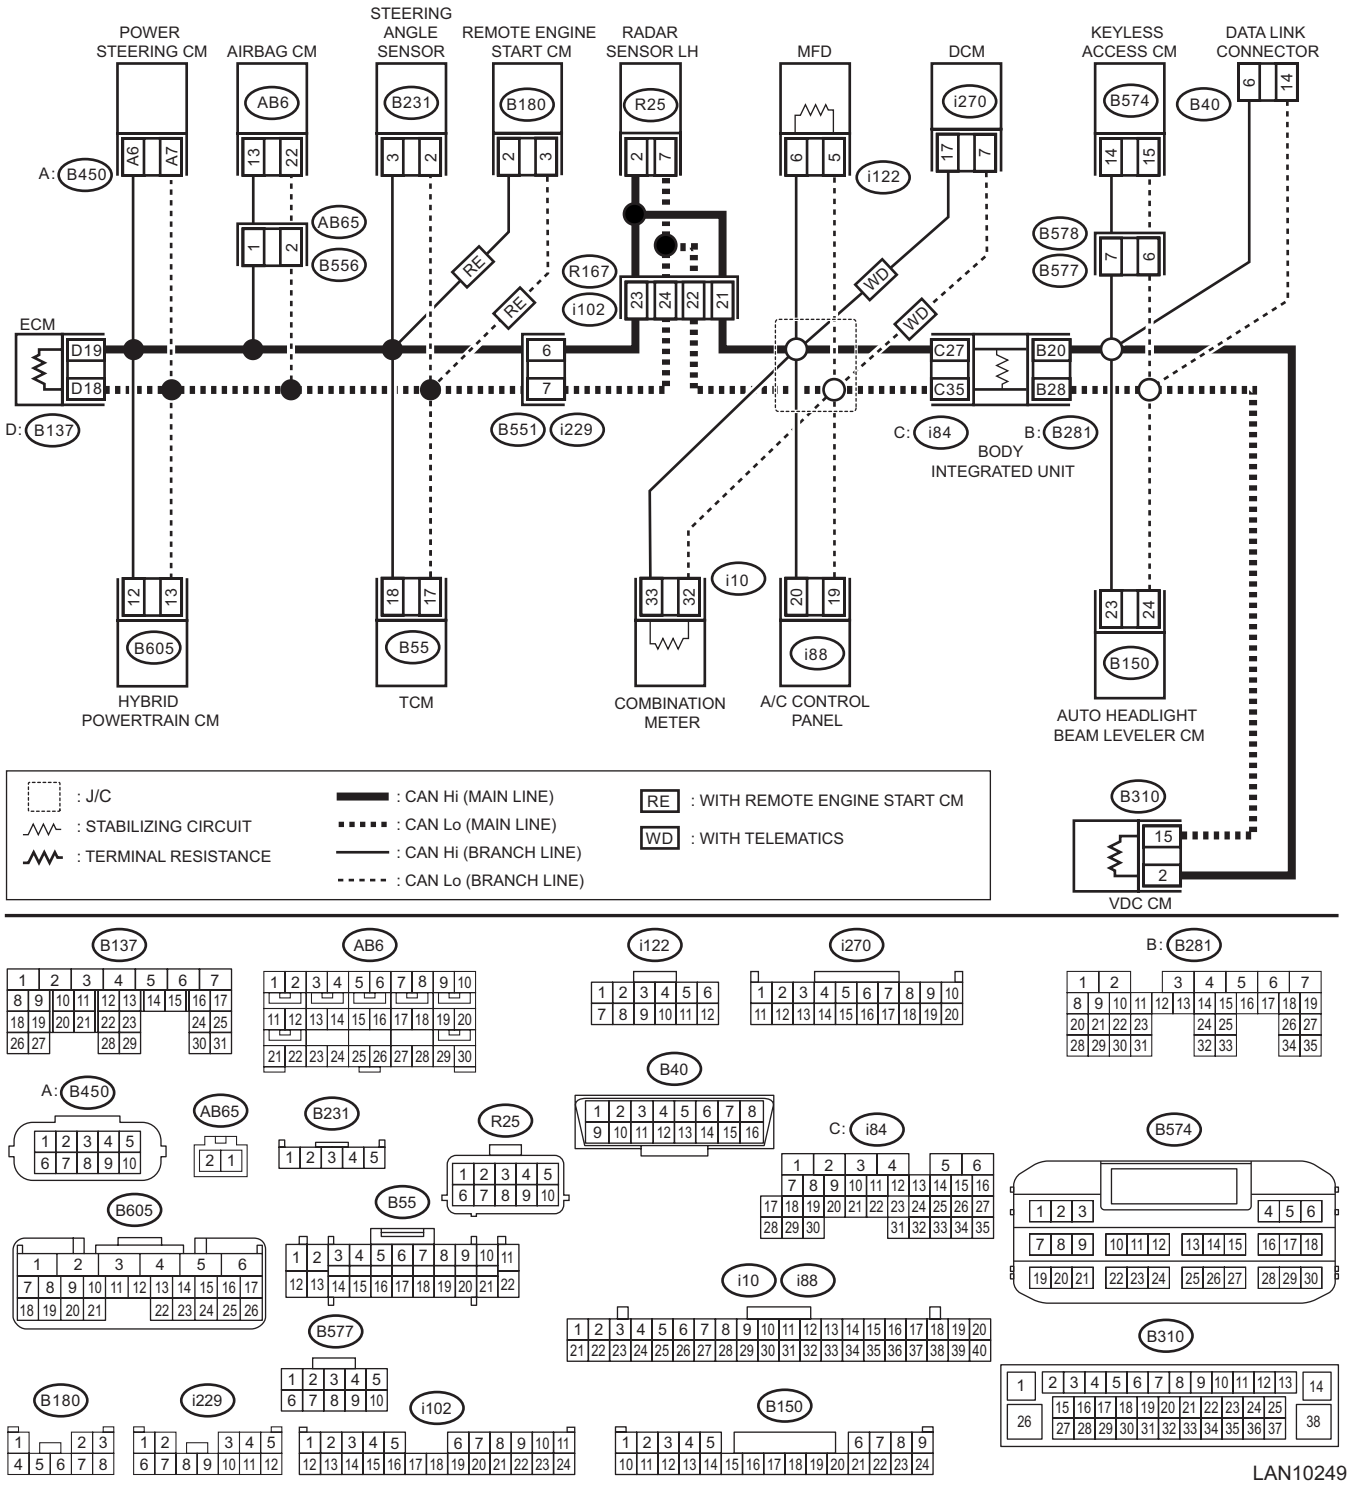
LAN10249

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the combination meter connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i10) No. 32 — No. 33:***	Is the resistance 400 Ω or more?	Related lines between combination meter and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i10) No. 32 — (B40) No. 14:*** ***(i10) No. 33 — (B40) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of combination meter related lines.	Check DTC of combination meter. <Ref. to IDI(diag)-14, OPERATION, Read Diagnostic Trouble Code (DTC).>



11.RELATED LINES 53 — 61 Ω (MFD)

WIRING DIAGRAM:



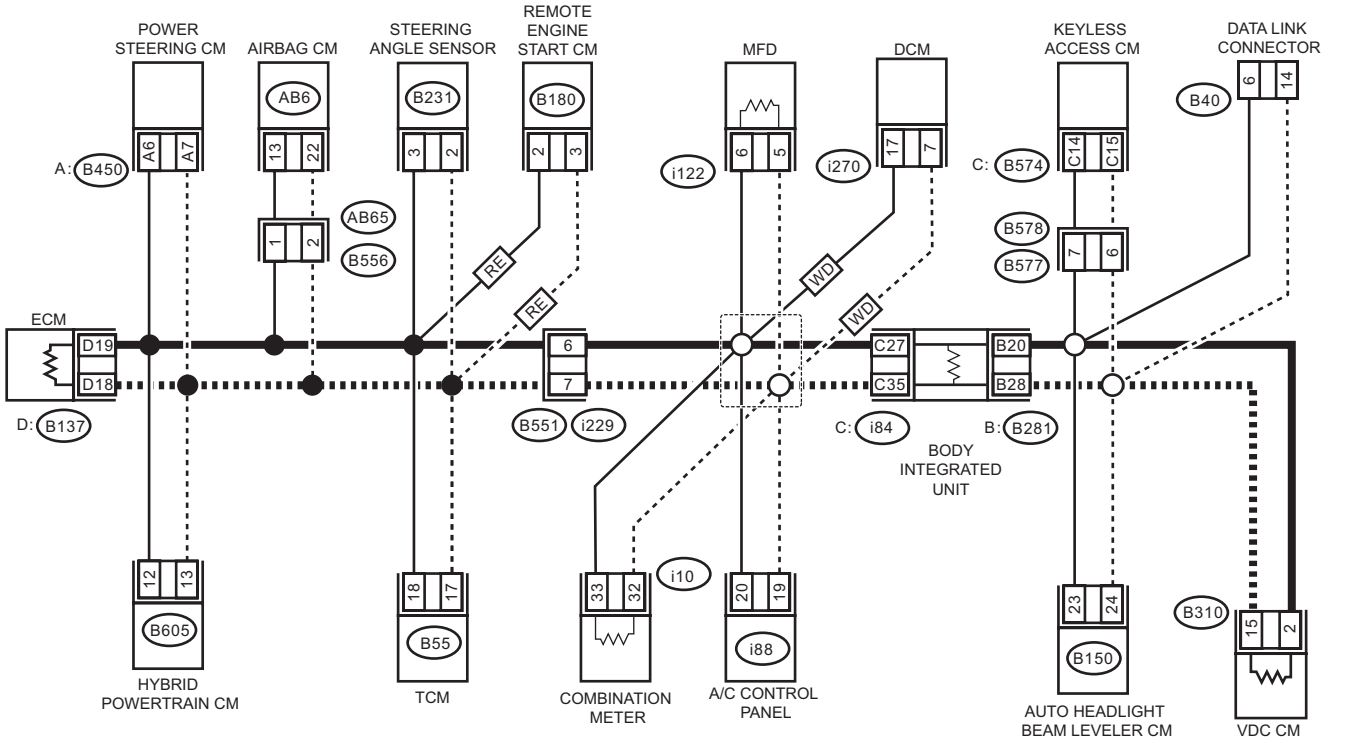
CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>

- Without BSD/RCTA

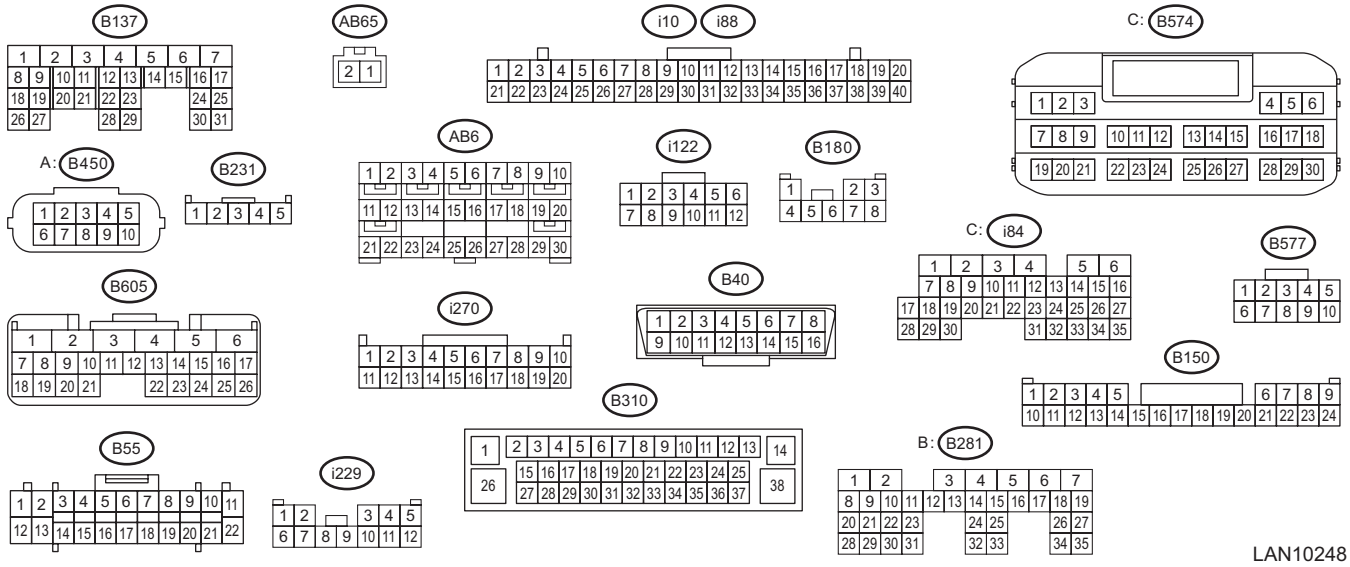
- With BSD/RCTA

LAN10249

Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the MFD connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal (i122) No. 5 — No. 6:***	Is the resistance 400 Ω or more?	Related lines between MFD and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.

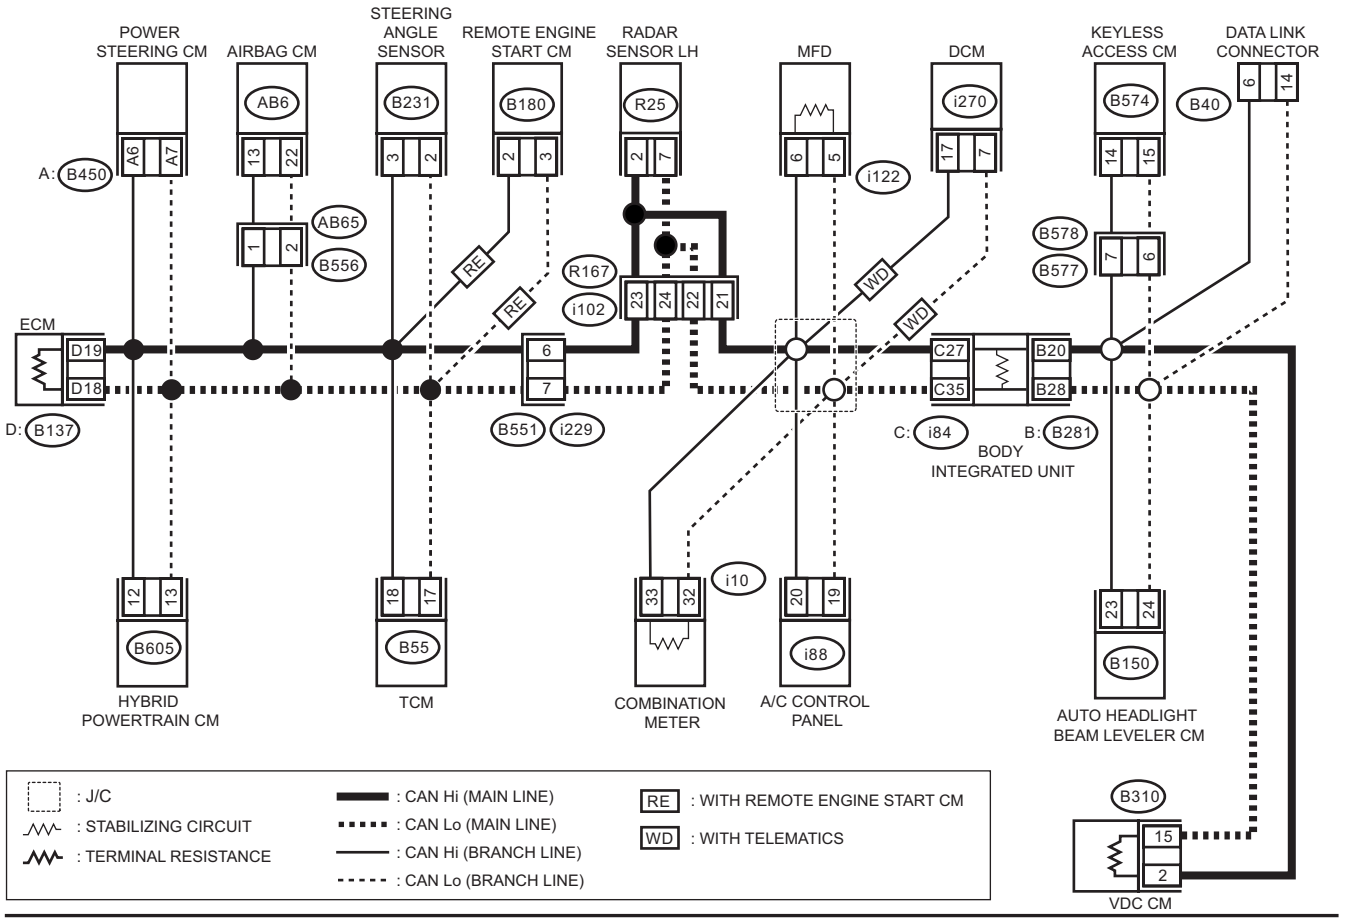


Step		Check	Yes	No
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i122) No. 5 — (B40) No. 14:*** ***(i122) No. 6 — (B40) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of MFD related lines.	Check DTC of MFD. <Ref. to IDI(diag)-14, OPERATION, Read Diagnostic Trouble Code (DTC).>

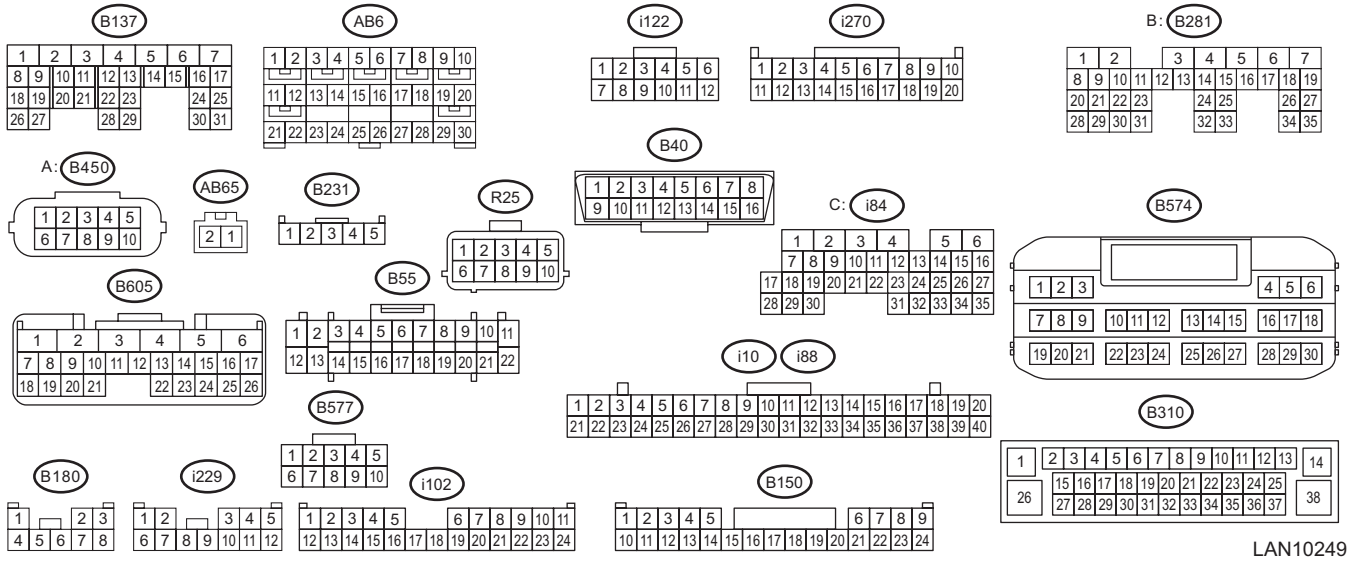


12.RELATED LINES 53 — 61 Ω (AIRBAG CM SYSTEM)

WIRING DIAGRAM:



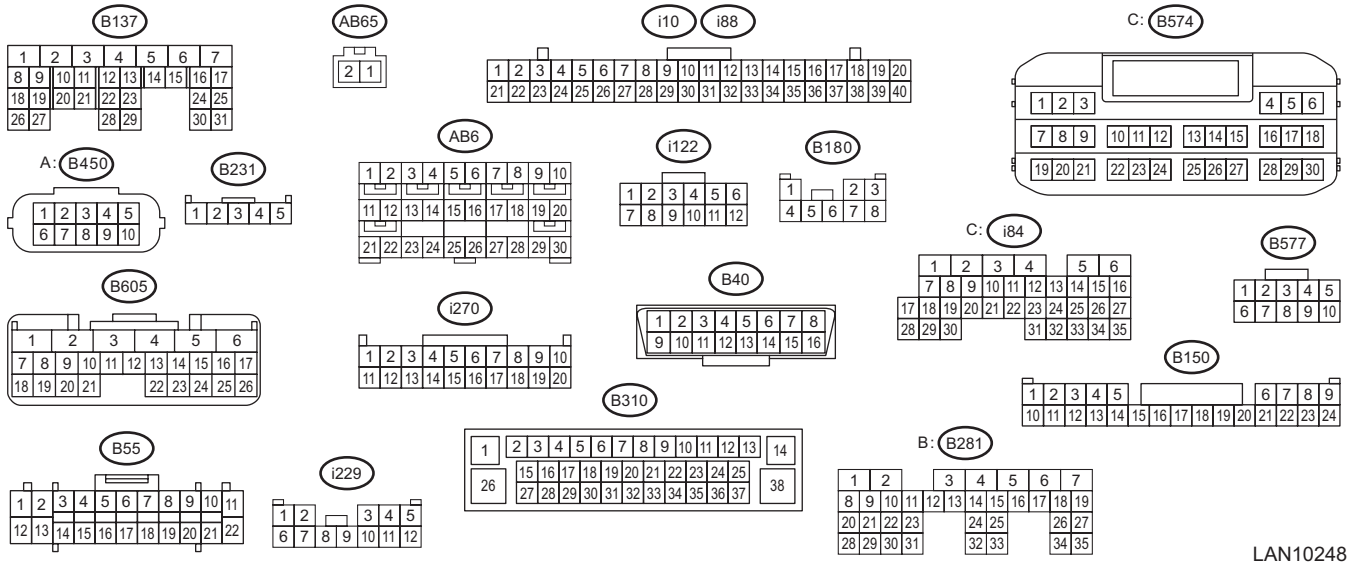
CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>



- Without BSD/RCTA

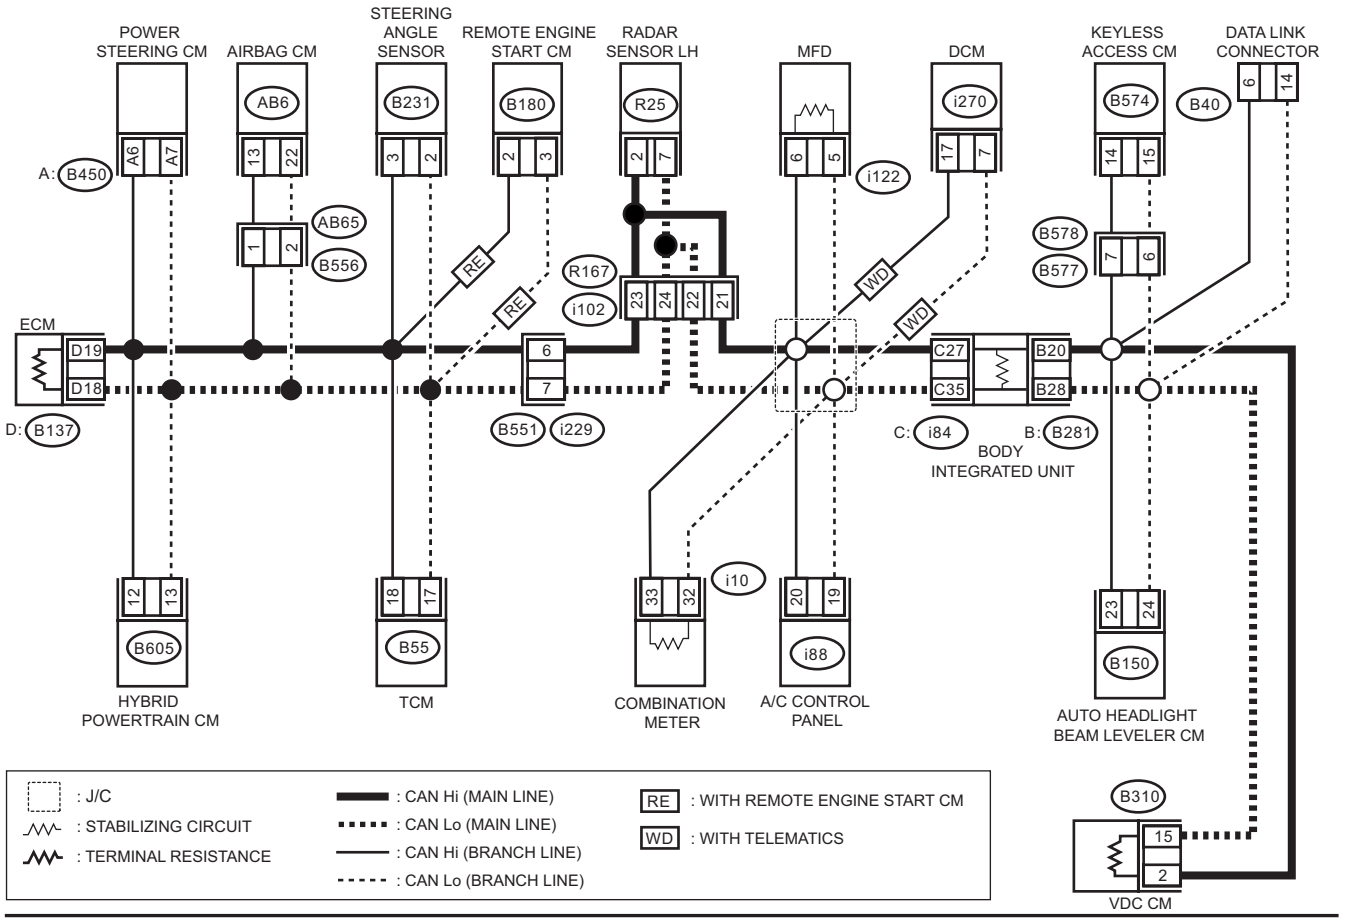
- With BSD/RCTA

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** NOTE: For test harness, refer to AIRBAG SYSTEM (DIAGNOSTICS). <Ref. to AB(diag)-5, PREPARATION TOOL, General Description.> 1) Turn the ignition switch to OFF. Disconnect the ground cable from the 12 volt auxiliary battery and disconnect the ground cable from the 12V engine restart battery sensor of the 12 volt engine restart battery, and then wait for 60 seconds or more. <Ref. to NT-6, BATTERY, NOTE, Note.> 2) Remove the instrument panel lower cover and column cover, and disconnect the connectors (AB7) and (AB2). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AH) in the test harness AH to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AH) in the test harness AH and the connector (1AG) in the test harness AG. 7) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(2AG) No. 2 — (4AG) No. 2:***	Is the resistance 400 Ω or more?	Related lines between airbag CM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(2AG) No. 2 — (B40) No. 14:*** ***(4AG) No. 2 — (B40) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit portion of airbag CM related lines.	Check DTC of airbag CM. <Ref. to AB(diag)-27, OPERATION, Read Diagnostic Trouble Code (DTC).>

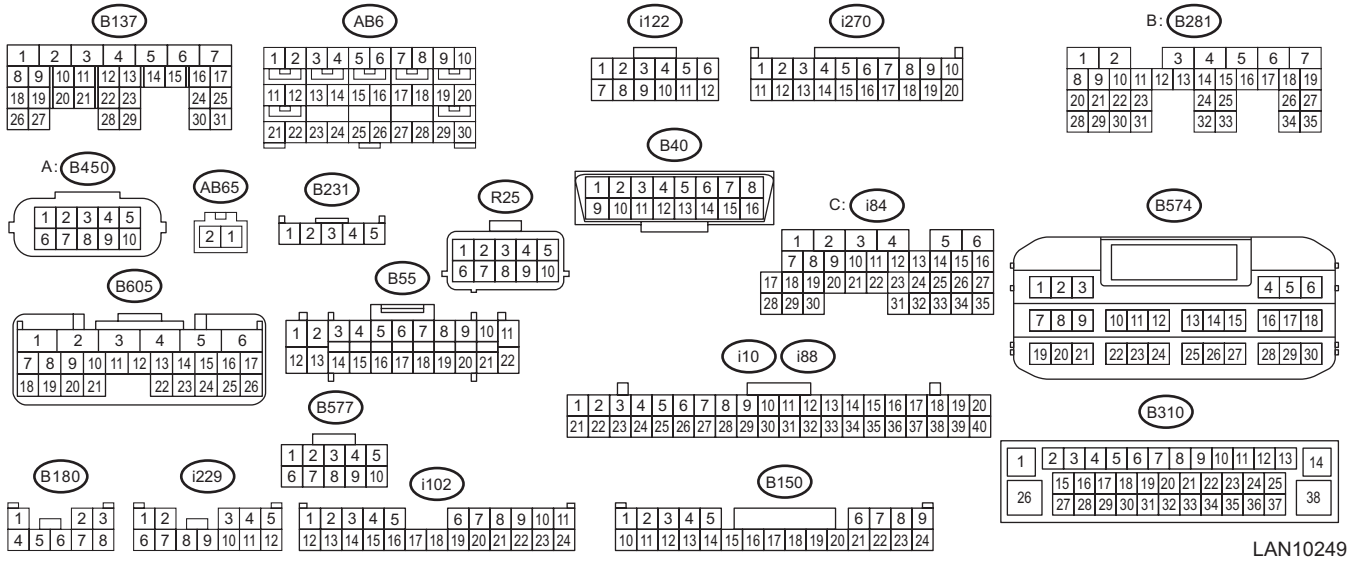


13.RELATED LINES 53 — 61 Ω (KEYLESS ACCESS SYSTEM)

WIRING DIAGRAM:



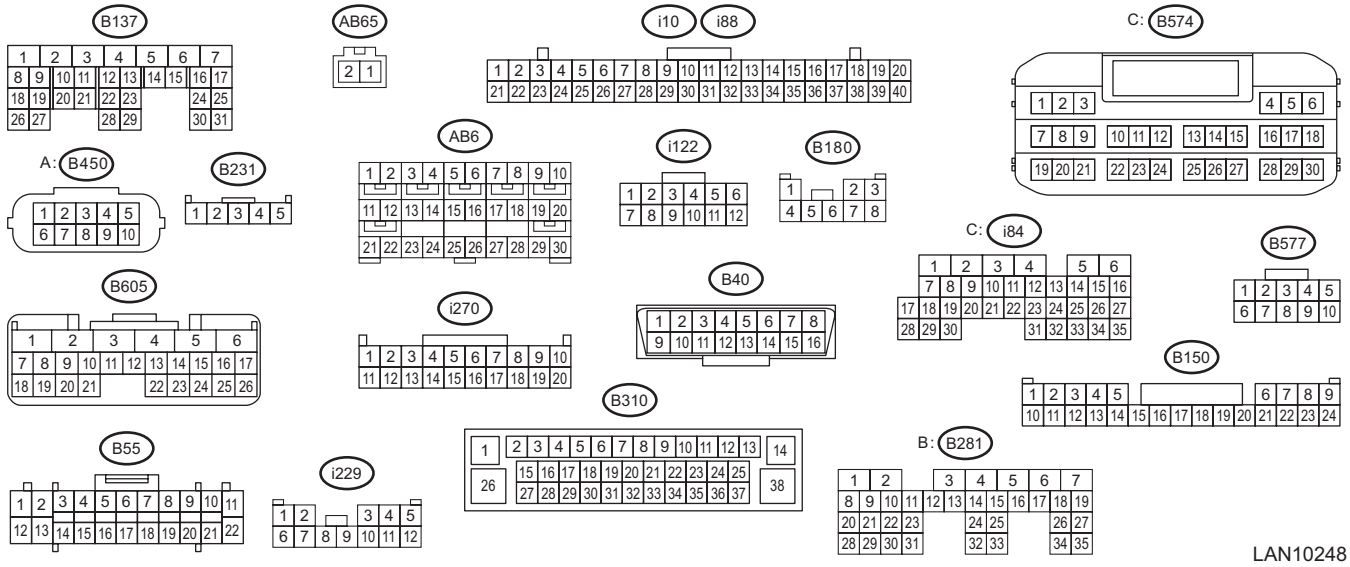
CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>



- Without BSD/RCTA

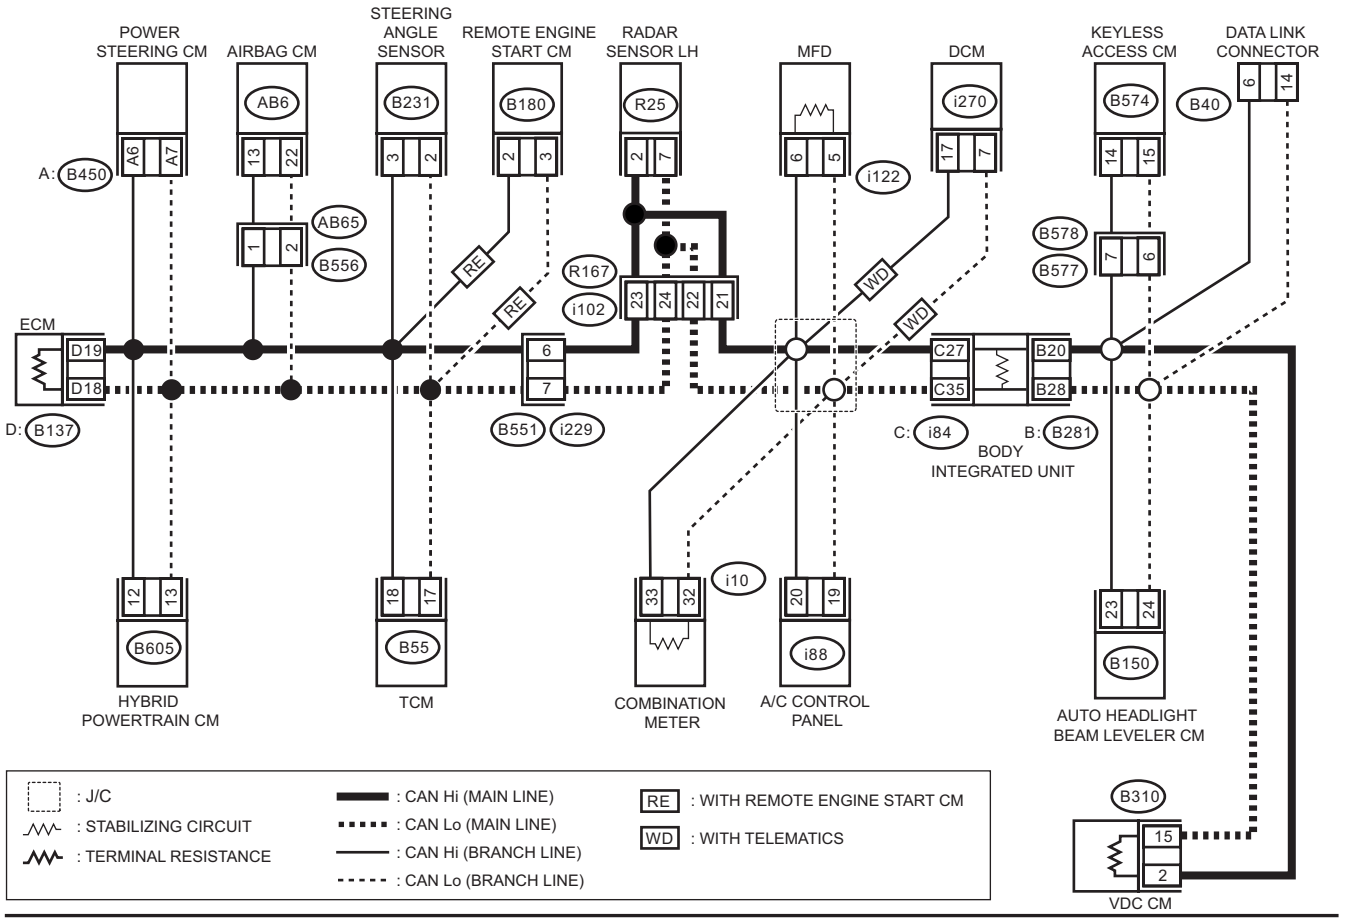
- With BSD/RCTA

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B574) No. 14 — No. 15:***	Is the resistance 400 Ω or more?	Related lines between keyless access CM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B574) No. 15 — (B40) No. 14:*** ***(B574) No. 14 — (B40) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of keyless access CM related lines.	Check DTC of keyless access CM. <Ref. to KPS(diag)-28, OPERATION, Read Diagnostic Trouble Code (DTC).>

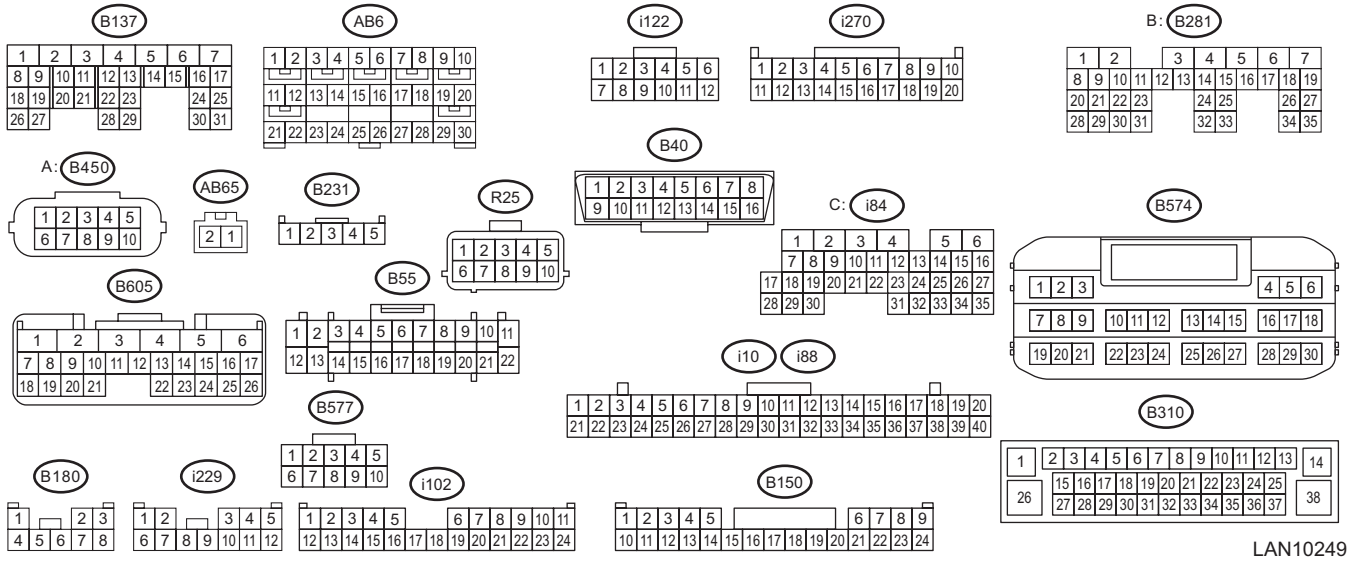


14.RELATED LINES 53 — 61 Ω (REMOTE ENGINE STARTER)

WIRING DIAGRAM:



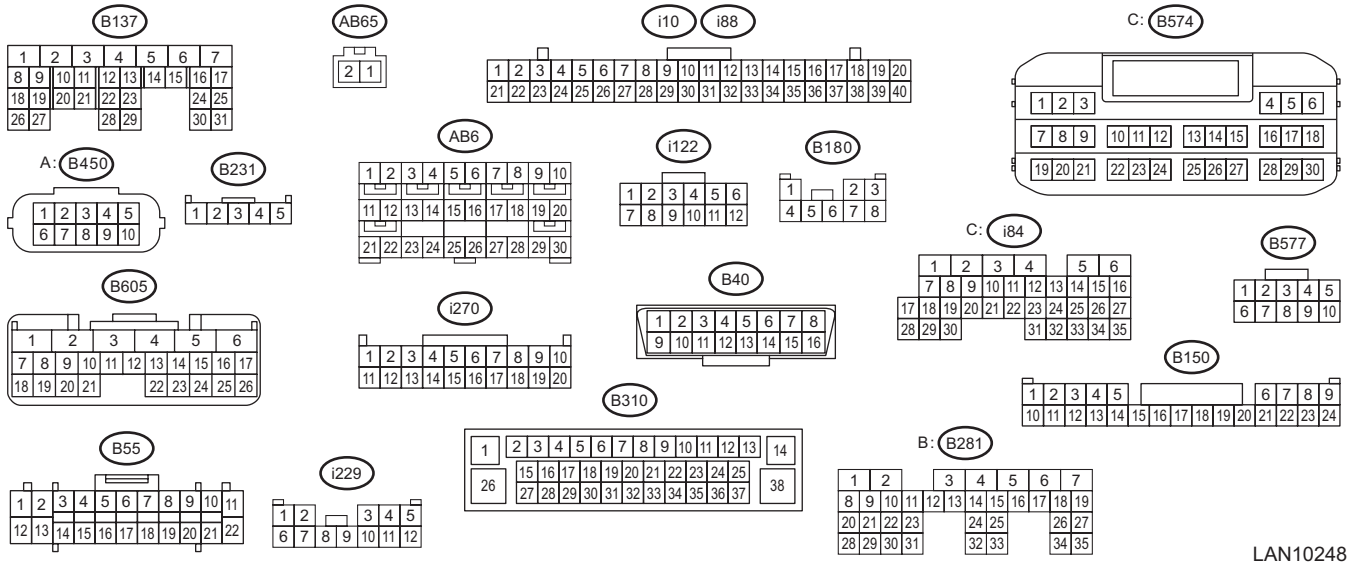
CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>



- Without BSD/RCTA

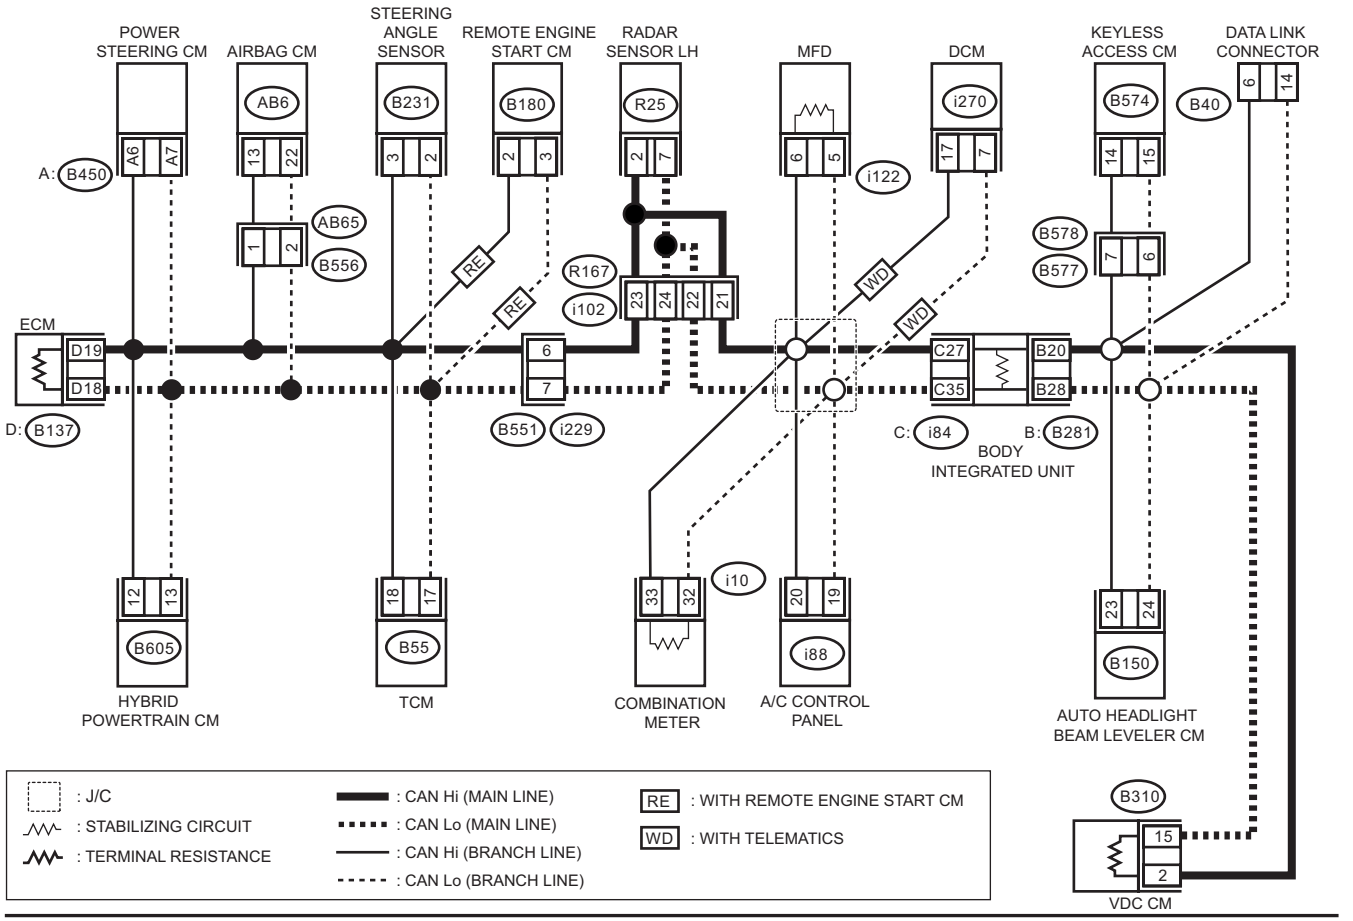
- With BSD/RCTA

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the remote engine start CM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B180) No. 2 — (B180) No. 3:***	Is the resistance 400 Ω or more?	Related lines between remote engine start CM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B180) No. 2 — (B40) No. 6:*** ***(B180) No. 3 — (B40) No. 14:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of remote engine start CM related lines.	The communication harness is normal. Check the remote engine starter CM or the mobile key.

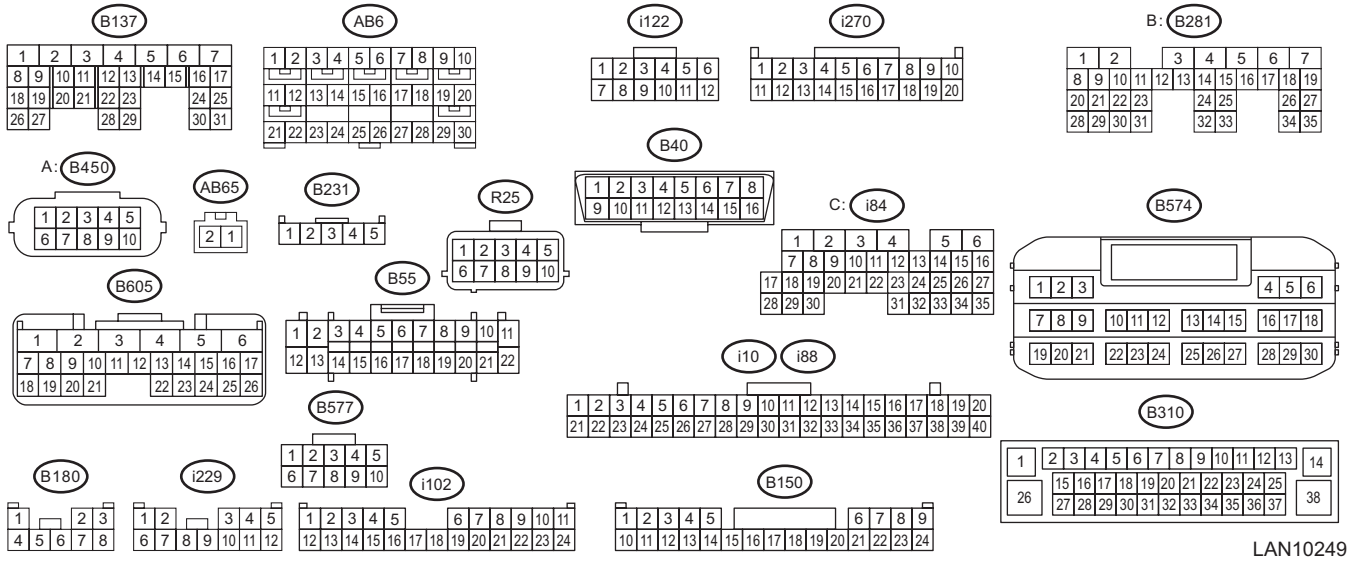


15.RELATED LINES 53 — 61 Ω (HEADLIGHT BEAM LEVELER)

WIRING DIAGRAM:



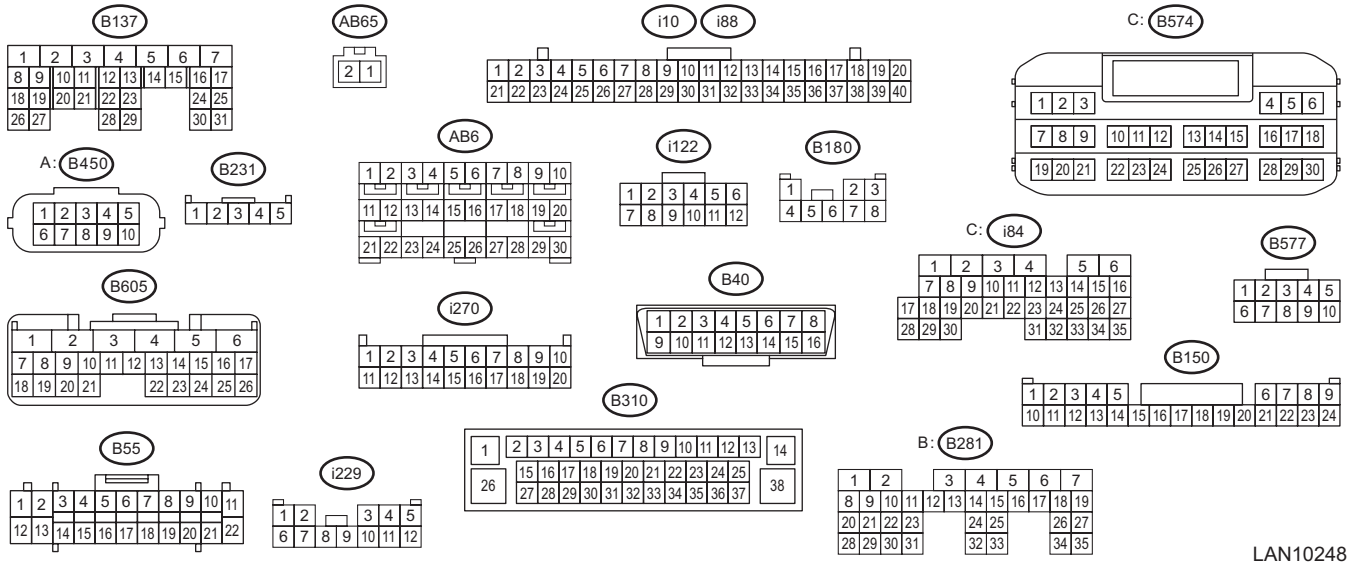
CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>



- Without BSD/RCTA

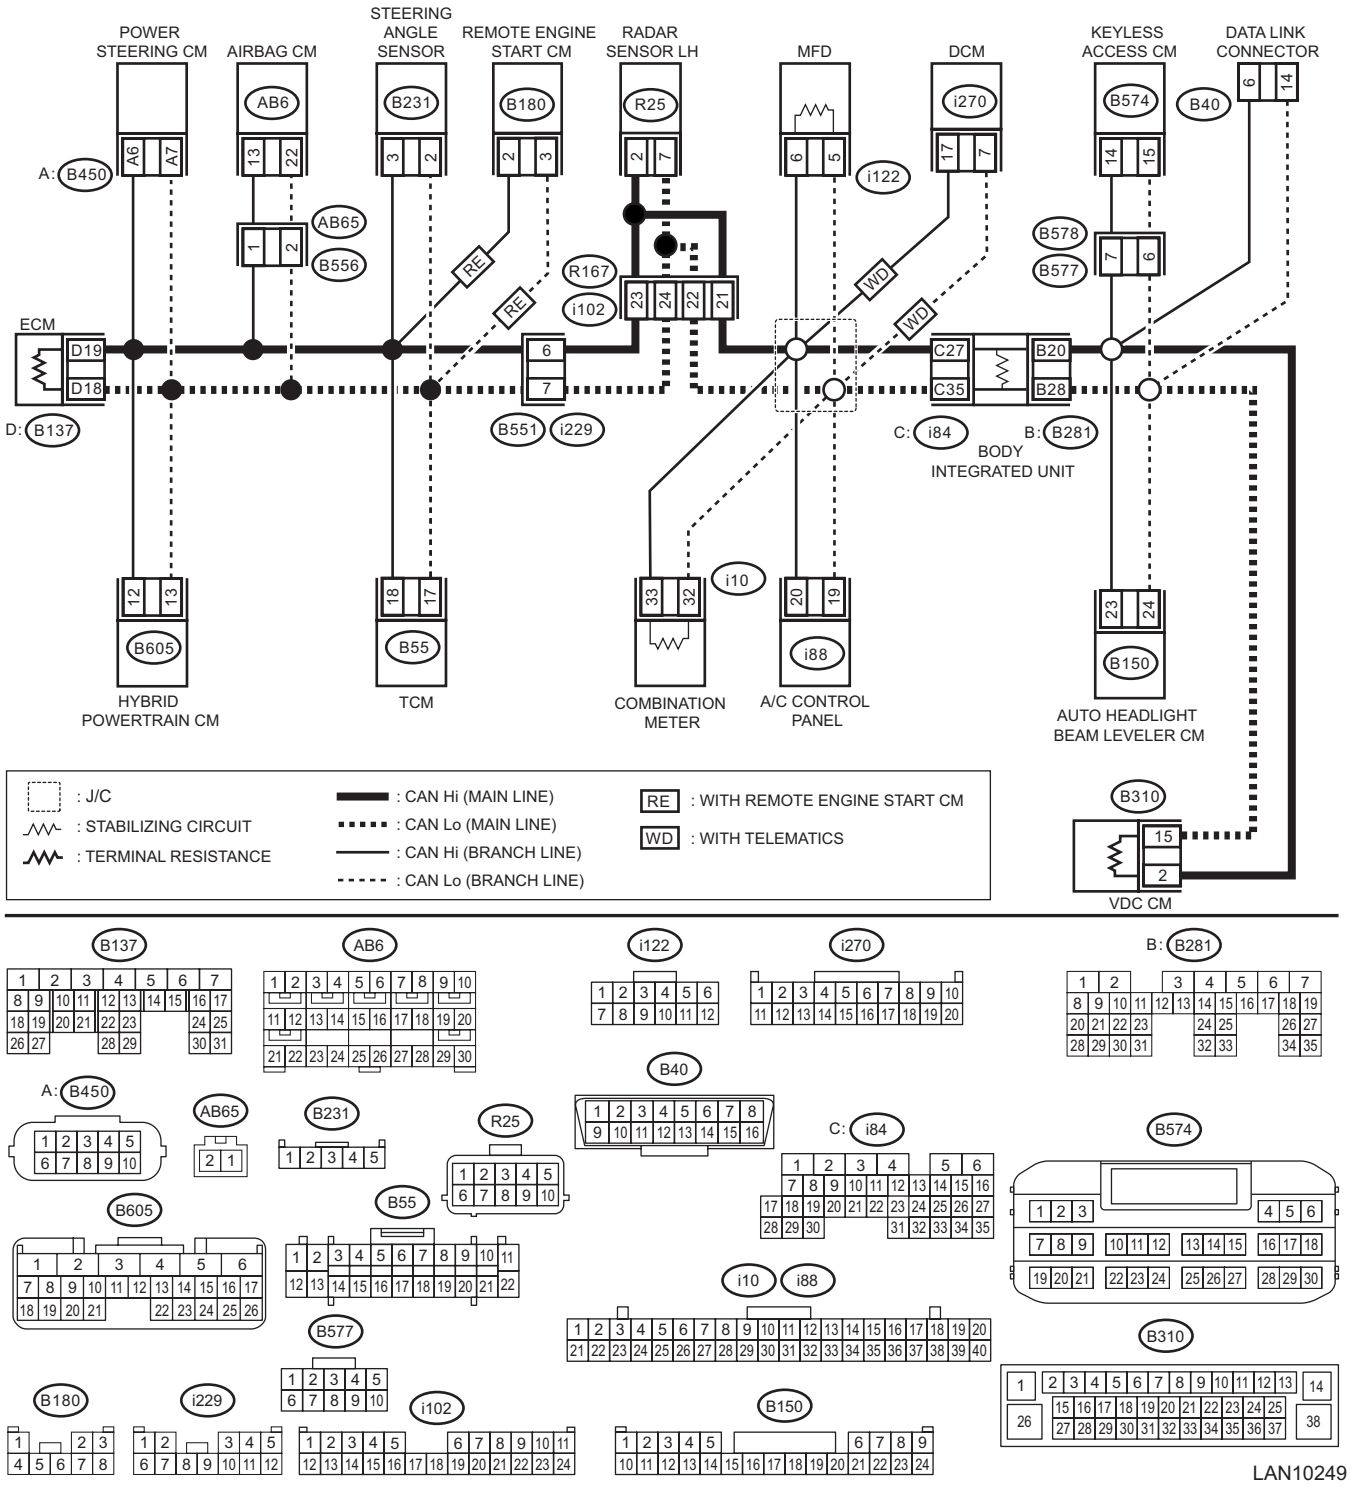
- With BSD/RCTA

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the headlight beam leveler CM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B150) No. 23 — No. 24:***	Is the resistance 400 Ω or more?	Related lines between headlight beam leveler CM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B150) No. 24 — (B40) No. 14:*** ***(B150) No. 23 — (B40) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit portion of headlight beam leveler CM related lines.	Check DTC of headlight beam leveler system. <Ref. to AL(diag)-10, OPERATION, Read Diagnostic Trouble Code (DTC).>



16.RELATED LINES 53 — 61 Ω (HPCM)

WIRING DIAGRAM:



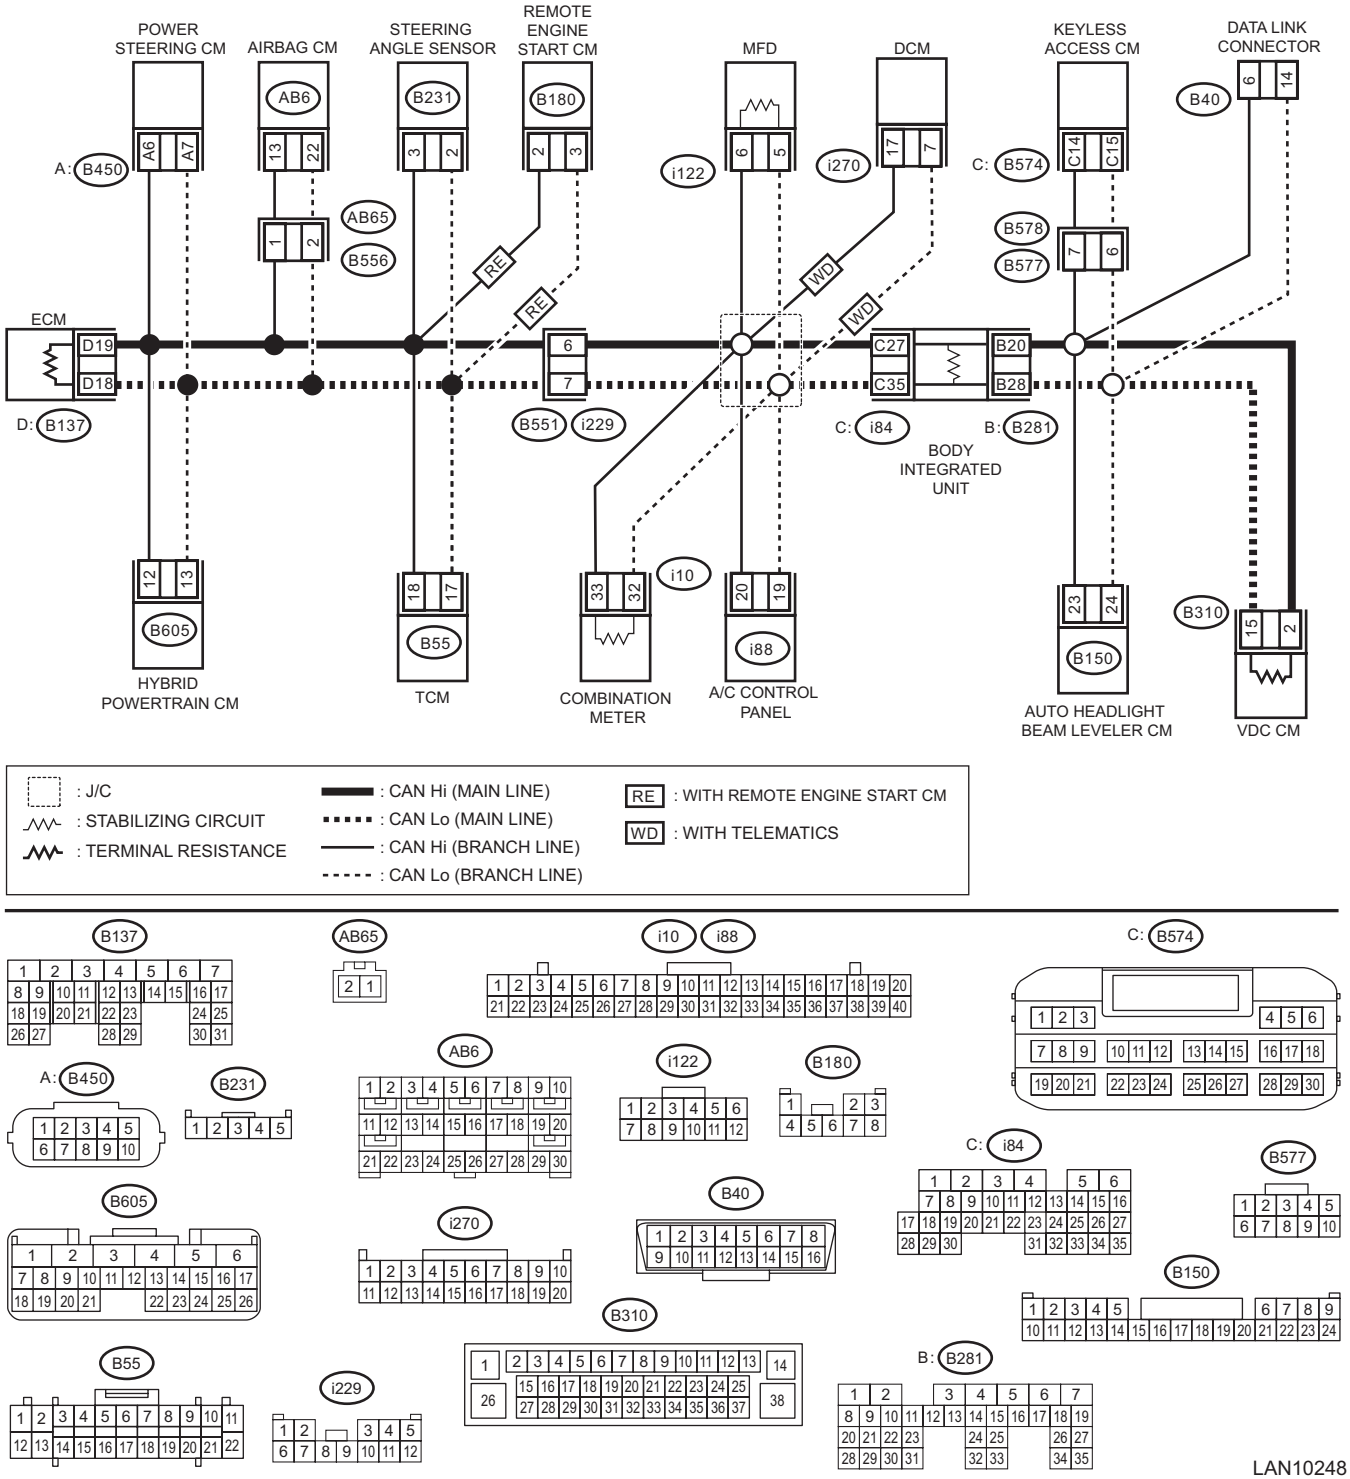
CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>

- Without BSD/RCTA

- With BSD/RCTA

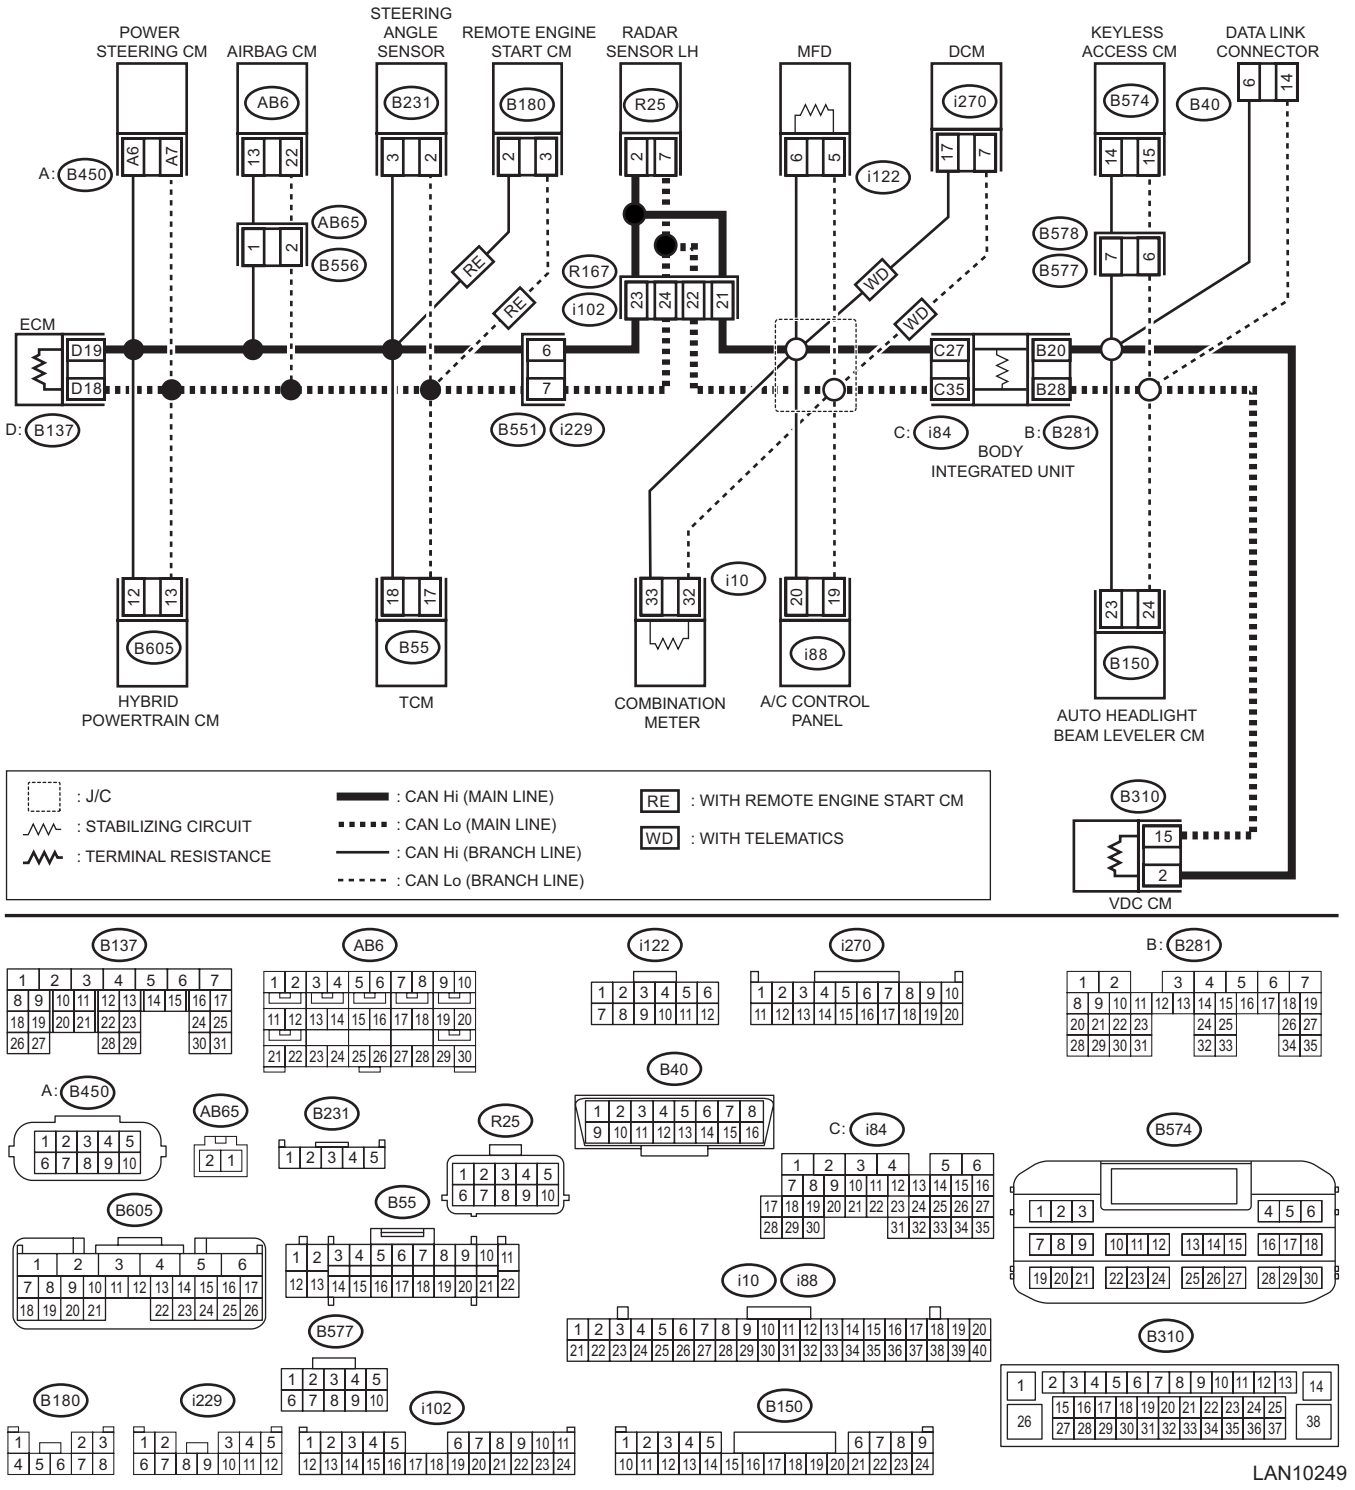
LAN10249

Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the HPCM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal (B605) No. 12 — No. 13:***	Is the resistance 400 Ω or more?	Related lines between HPCM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.



Step		Check	Yes	No
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B605) No. 13 — (B40) No. 14:*** ***(B605) No. 12 — (B40) No. 6:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of HPCM related lines.	The communication harness is normal. Check the impact sensor.

17.RELATED LINES 53 — 61 Ω (TELEMATICS)



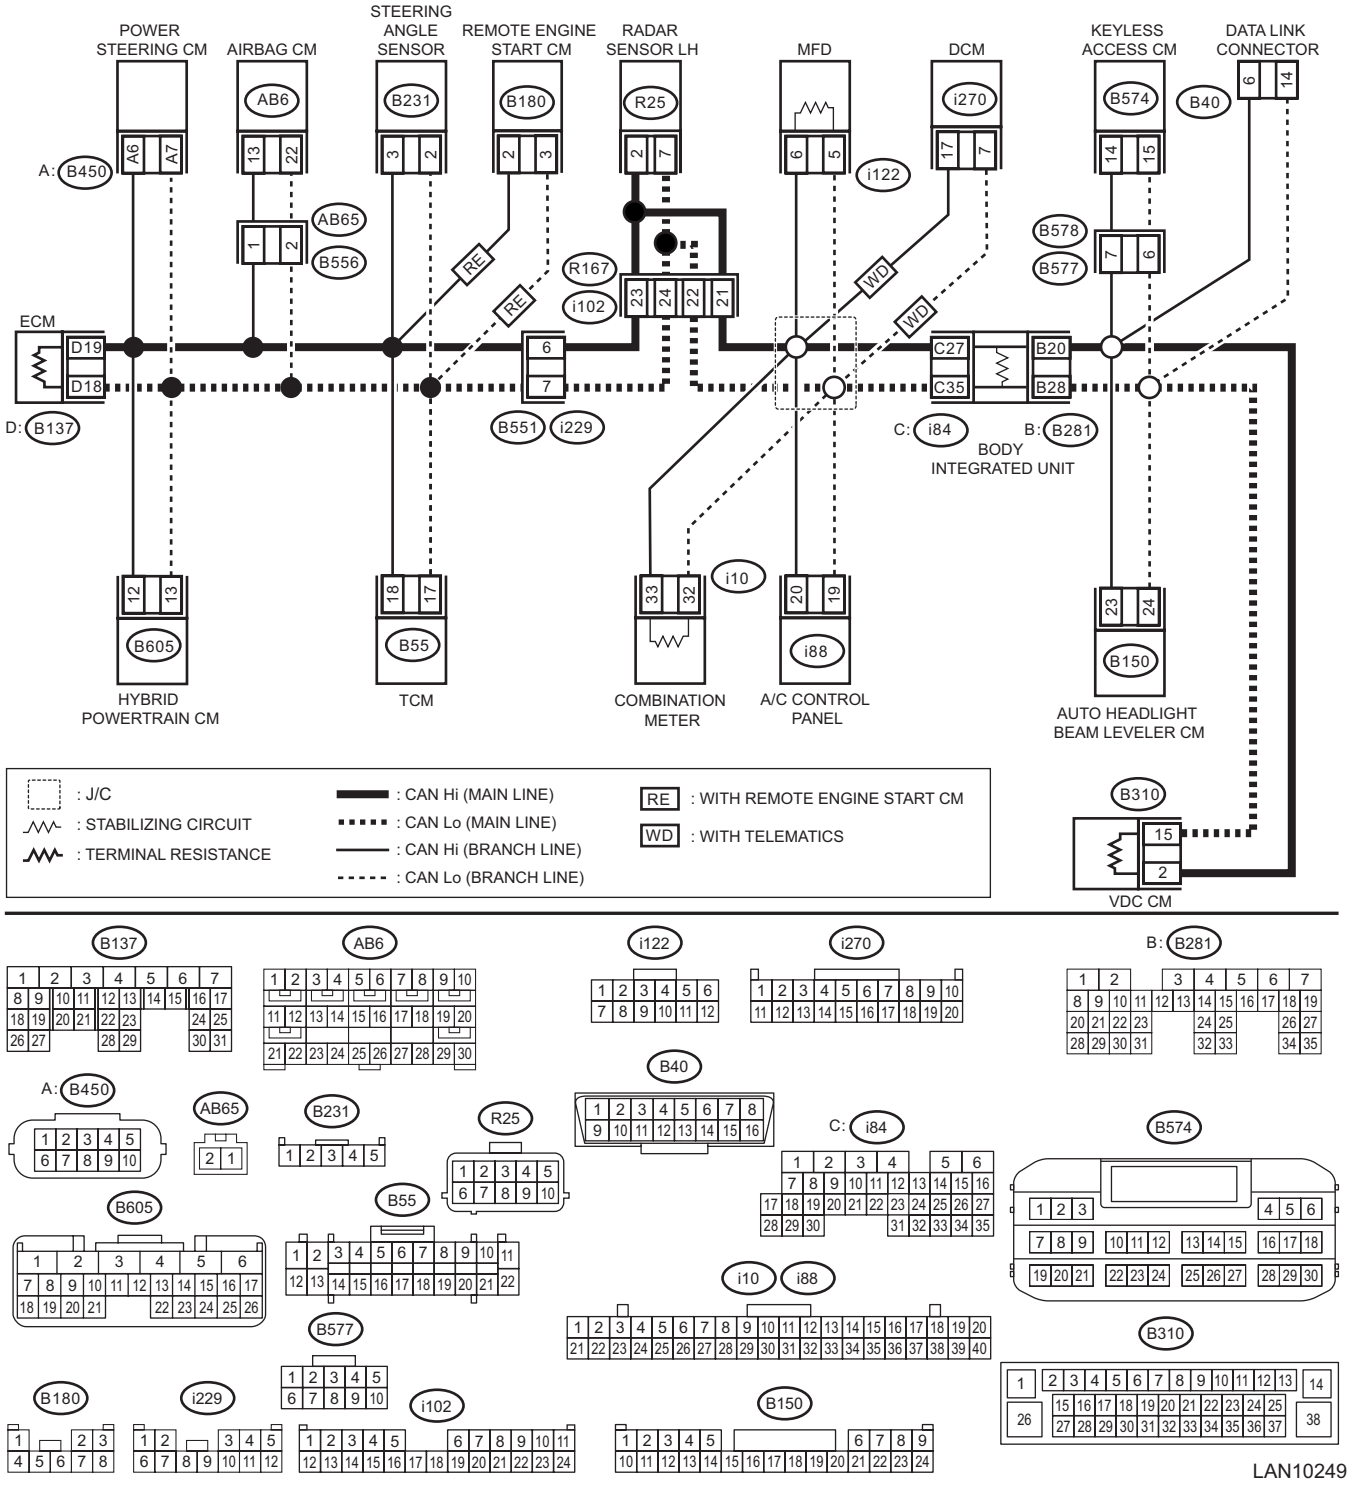
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
CAN communication system <Ref. to WI(w/o HEV)-69, WIRING DIAGRAM, CAN Communication System.>

- Without BSD/RCTA

- With BSD/RCTA

LAN10249



Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the DCM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal (i270) No. 7 — No. 17:***	Is the resistance 400 Ω or more?	Related lines between DCM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.

Step		Check	Yes	No
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i270) No. 17 — (B40) No. 6:*** ***(i270) No. 7 — (B40) No. 14:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of telematics system related lines.	The communication harness is normal. Check DTC of the telematics. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>

18.RELATED LINES 53 — 61 Ω (RADAR SENSOR)

WIRING DIAGRAM:

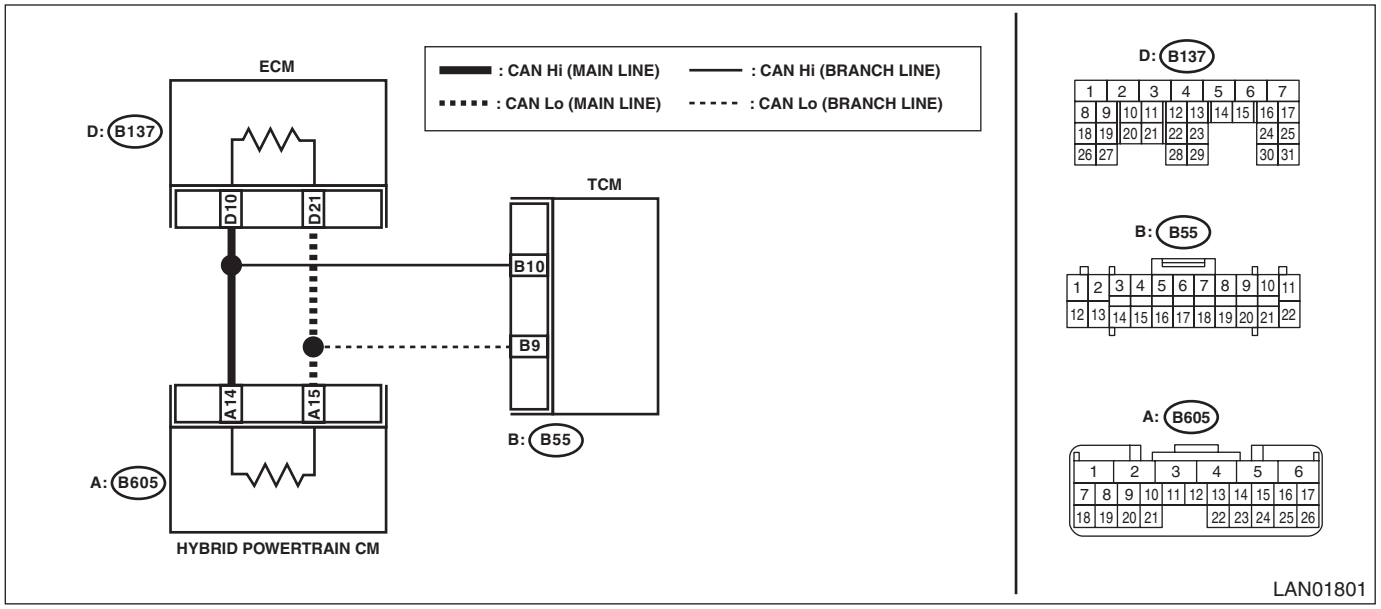
NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
CAN communication system <Ref. to WI(w/o HEV)-69, WIRING DIAGRAM, CAN Communication System.>

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the radar sensor LH connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(R25) No. 2 — No. 7:***	Is the resistance 400 Ω or more?	Related lines between radar sensor LH and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B25) No. 2 — (B40) No. 6:*** ***(R25) No. 7 — (B40) No. 14:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of the Subaru Rear Vehicle Detection related lines.	The communication harness is normal. Check DTC of radar sensor. <Ref. to RVD(diag)-13, OPERATION, Read Diagnostic Trouble Code (DTC).>

19.GROUND SHORT INSPECTION (PU-CAN)

WIRING DIAGRAM:

CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>



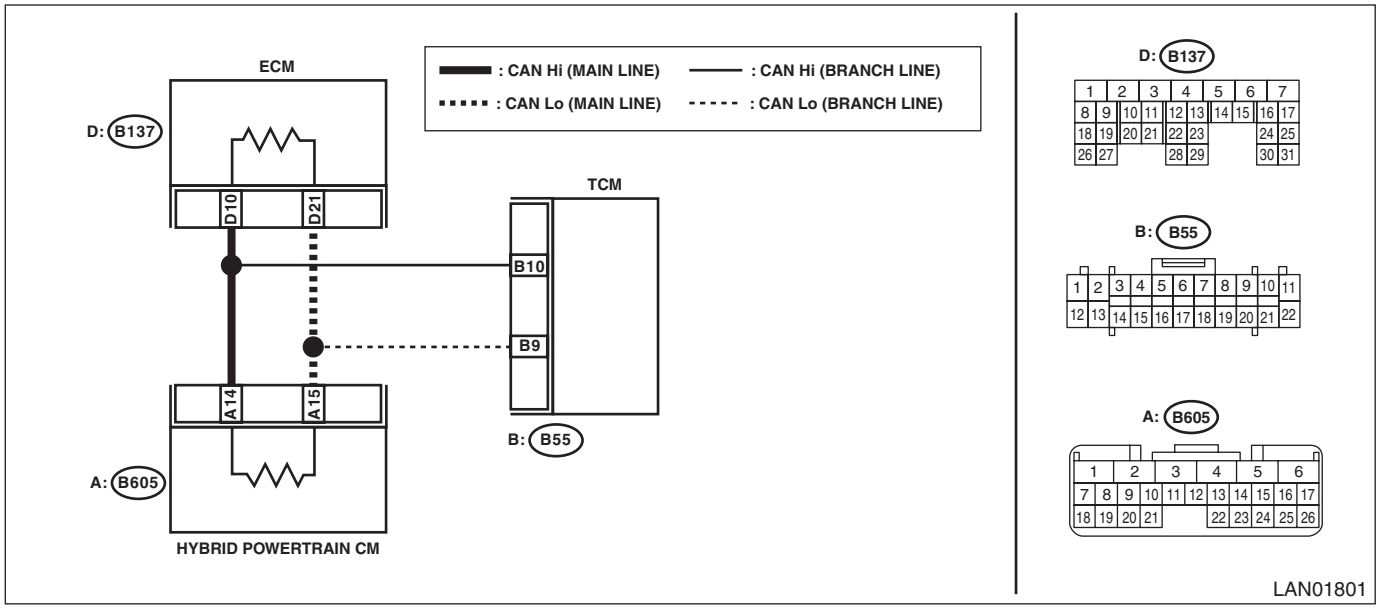
NOTE:
Main wiring harness or related lines may be shorted to ground, or shorted to ground in one of the control modules.

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the ECM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B137) No. 21 — Chassis ground:*** ***(B137) No. 10 — Chassis ground:***	Is the resistance 10 Ω or less?	Go to step **2**.	Currently, it is normal.
2	**CHECK CONTROL MODULE.** 1) With the tester connected, disconnect control module. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B137) No. 21 — Chassis ground:*** ***(B137) No. 10 — Chassis ground:***	Did the resistance change to 10 Ω or more?	Replace the control module whose resistance has changed.	Repair or replace the short circuit of the main wiring harness and related lines between ECM and HPCM.

20.BATTERY SHORT INSPECTION (PU-CAN)

WIRING DIAGRAM:

CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>



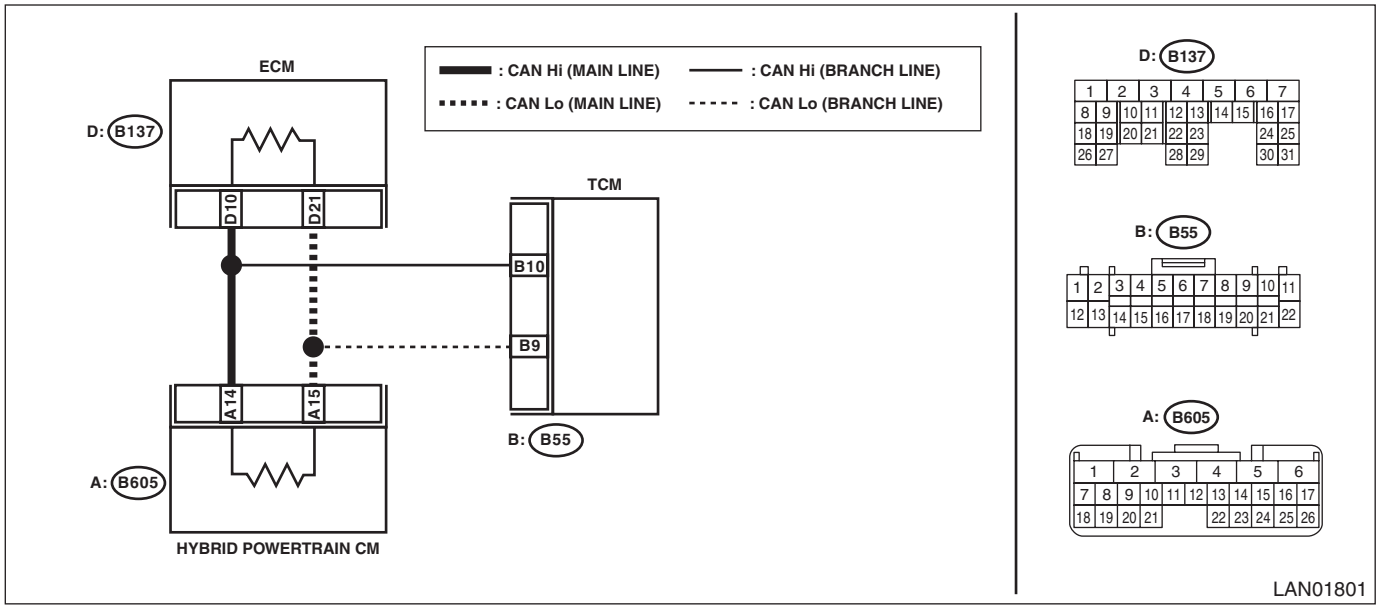
NOTE:
Main wiring harness or related lines may be shorted to battery circuit, or shorted to battery circuit in one of the control modules.

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B137) No. 21 (+) — Chassis ground (–):*** ***(B137) No. 10 (+) — Chassis ground (–):***	Is the voltage 5 V or less?	Currently, it is normal.	Go to step **2**.
2	**CHECK CONTROL MODULE.** 1) With the tester connected, disconnect control module. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B137) No. 21 (+) — Chassis ground (–):*** ***(B137) No. 10 (+) — Chassis ground (–):***	Did the voltage change to 5 V or less?	Replace the control module whose voltage has changed.	Repair or replace the short circuit of the main wiring harness and related lines between ECM and HPCM.

21.57 — 63 Ω (PU-CAN)

WIRING DIAGRAM:

CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>



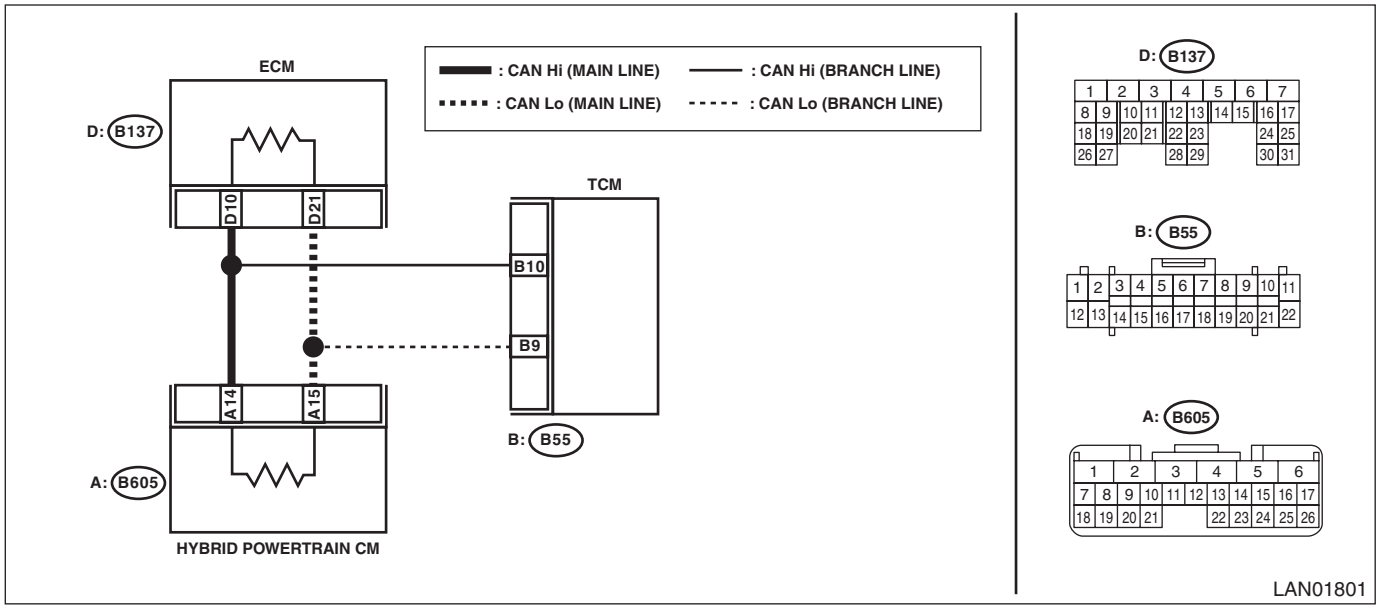
NOTE:
When the measured resistance value is 57 — 63 Ω, main wiring harness or related lines may be shorted to ground, or shorted to power supply line, or related line may be open.

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B137) No. 21 — Chassis ground:*** ***(B137) No. 10 — Chassis ground:***	Is the resistance 10 Ω or less?	Go to step **2**.	Go to step **4**.
2	**CHECK CONTROL MODULE.** With the tester connected, disconnect control module. ***Connector & terminal*** ***(B137) No. 21 — Chassis ground:*** ***(B137) No. 10 — Chassis ground:***	Did the resistance change to 10 Ω or more?	Replace the control module whose resistance has changed.	Repair or replace the short circuit of the main wiring harness and related lines between ECM and HPCM.
3	**CHECK MAIN WIRING HARNESS AND RELATED LINES.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B137) No. 21 (+) — Chassis ground (–):*** ***(B137) No. 10 (+) — Chassis ground (–):***	Is the voltage 5 V or less?	Currently, it is normal.	Go to step **4**.
4	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) With the tester connected, disconnect control module. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B137) No. 21 (+) — Chassis ground (–):*** ***(B137) No. 10 (+) — Chassis ground (–):***	Did the voltage change to 5 V or less?	Replace the control module whose voltage has changed.	Repair or replace the short circuit of the main wiring harness and related lines between ECM and HPCM.

22.56 Ω OR LESS (PU-CAN)

WIRING DIAGRAM:

CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>



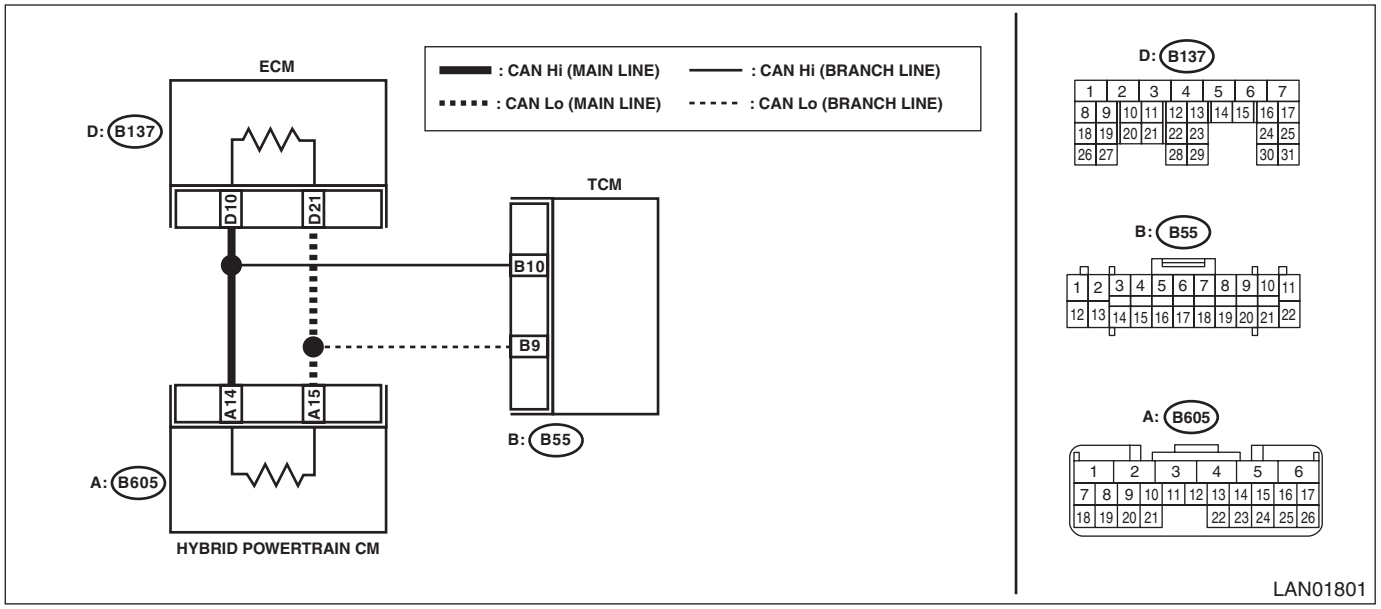
NOTE:
When the bus line is measured, combined resistance of the end resistance (120 Ω) in ECM and the end resistance (120 Ω) in HPCM can be measured. The combined resistance is approximately 57 — 63 Ω. When the measured resistance value is 56 Ω or less, main wiring harness or related lines may be shorted, or combined resistance may have changed because resistance other than end resistance is created on the circuit.

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the ECM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B137) No. 21 — (B137) No. 10:***	Is the resistance 10 Ω or less?	Go to step **2**.	Go to step **3**.
2	**CHECK MAIN WIRING HARNESS AND RELATED LINES.** With a tester connected, disconnect control module connectors in order. ***Connector & terminal*** ***(B137) No. 21 — (B137) No. 10:***	Is there any control module whose condition has changed from short state?	Replace the control module whose resistance has changed.	Repair or replace the short circuit of the main wiring harness and related lines between ECM and HPCM.
3	**CHECK CONTROL MODULE.** 1) Disconnect the ECM and HPCM connectors. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(B137) No. 21 — (B137) No. 10:*** ***(B605) No. 15 — (B605) No. 14:***	Is the resistance 114 — 126 Ω?	Go to step **4**.	Replace the control module whose end resistance value is out of the specified range.
4	**CHECK CONTROL MODULE.** With the tester connected, disconnect TCM. ***Connector & terminal*** ***(B137) No. 21 — (B137) No. 10:***	Is there any control module whose resistance has changed to 1 MΩ or more?	Replace the TCM. <Ref. to CVT(TH58A)-158, Transmission Control Module (TCM).>	Repair or replace the harness due to resistance component.

23.64 Ω OR MORE (PU-CAN)

WIRING DIAGRAM:

CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>



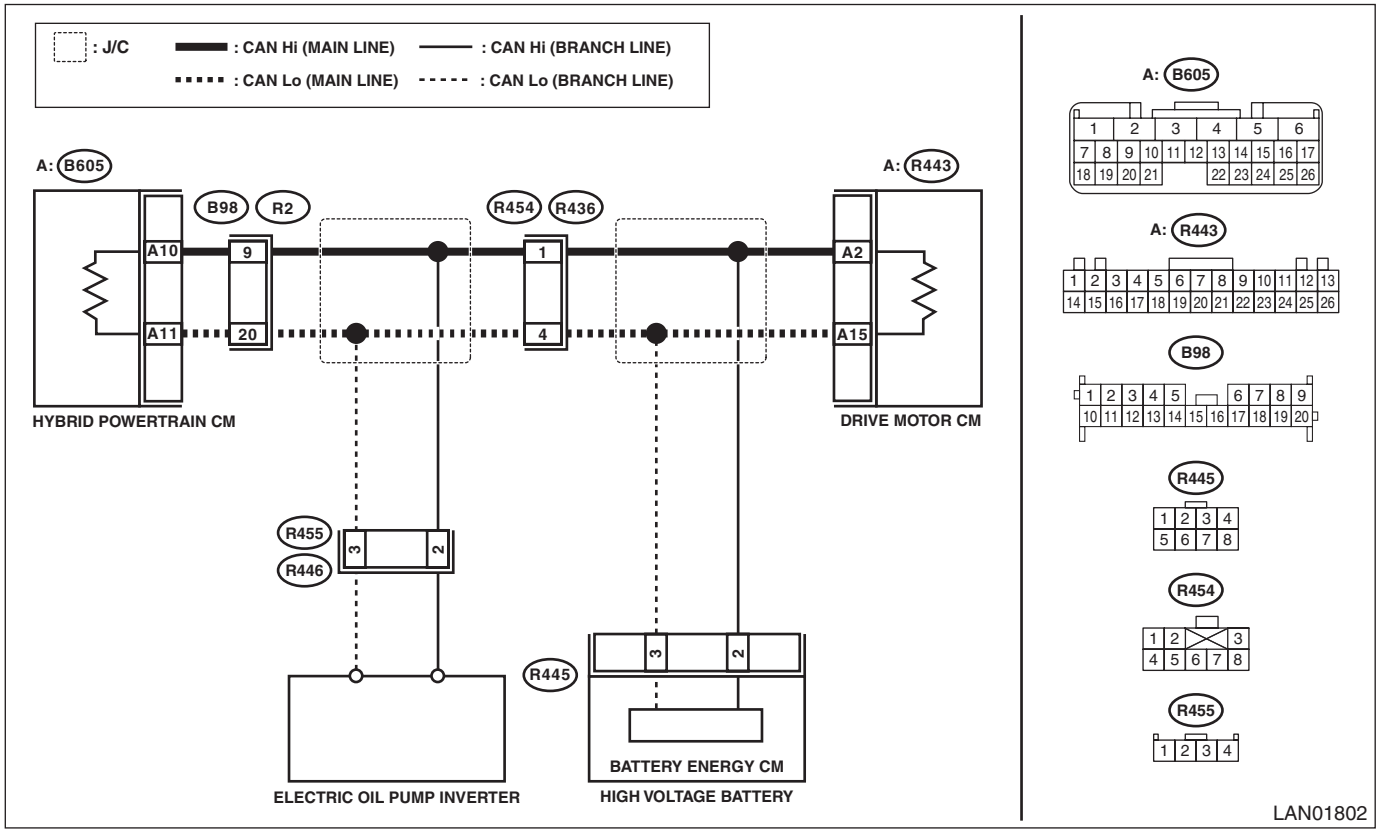
NOTE:
When the bus line is measured, combined resistance of the end resistance (120 Ω) in ECM and the end resistance (120 Ω) in HPCM can be measured. The combined resistance is approximately 57 — 63 Ω. When the measured resistance value is 64 Ω or more, either of end resistance or main wiring harness may have malfunction such as open circuit.

	Step	Check	Yes	No
1	**CHECK CONTROL MODULE.** 1) Disconnect the ECM and HPCM connectors. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(B137) No. 21 — (B137) No. 10:*** ***(B605) No. 15 — (B605) No. 14:***	Is the resistance 114 — 126 Ω?	Go to step **2**.	Replace the control module whose value is out of the specification.
2	**CHECK HARNESS.** Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B137) No. 21 — (B605) No. 15:*** ***(B137) No. 10 — (B605) No. 14:***	Is there continuity?	It is possible that temporary poor communication occurs.	Repair or replace the open circuit of harness.

24.57 — 63 Ω (PU-CAN_TCM)

WIRING DIAGRAM:

CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>



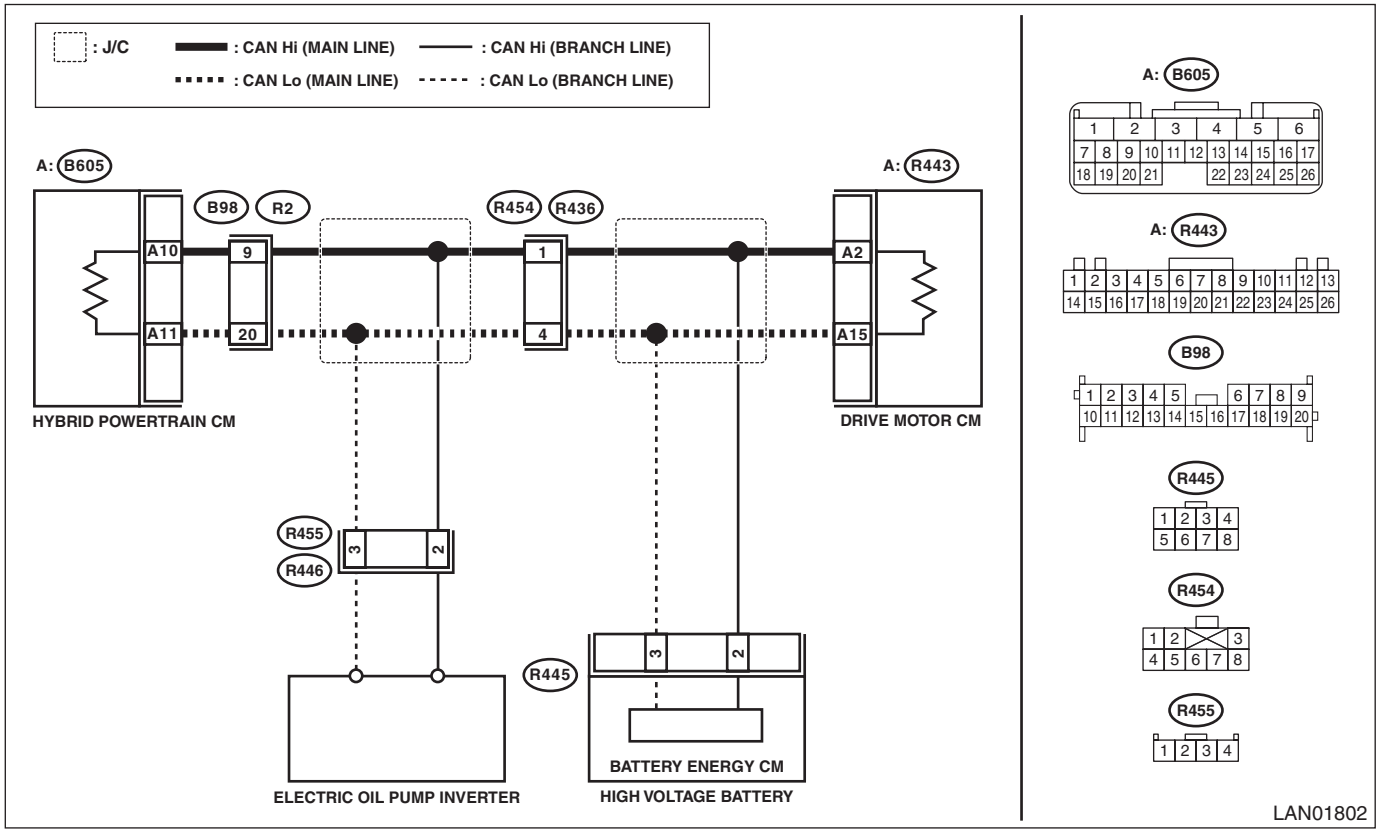
NOTE:
When the measured resistance value is 57 — 63 Ω, main wiring harness or related lines may be shorted to ground, or shorted to power supply line, or related line may be open.

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the TCM connector. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(B55) No. 9 — No. 10:***	Is the resistance 400 Ω or more?	Related lines between TCM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** 1) Disconnect the ECM connector. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B55) No. 9 — (B137) No. 21:*** ***(B55) No. 10 — (B137) No. 10:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit portion of TCM related lines.	Check the TCM. <Ref. to CVT(HEV)(diag)-19, OPERATION, Read Diagnostic Trouble Code (DTC).>

25.GROUND SHORT INSPECTION (HEV-CAN)

WIRING DIAGRAM:

CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>



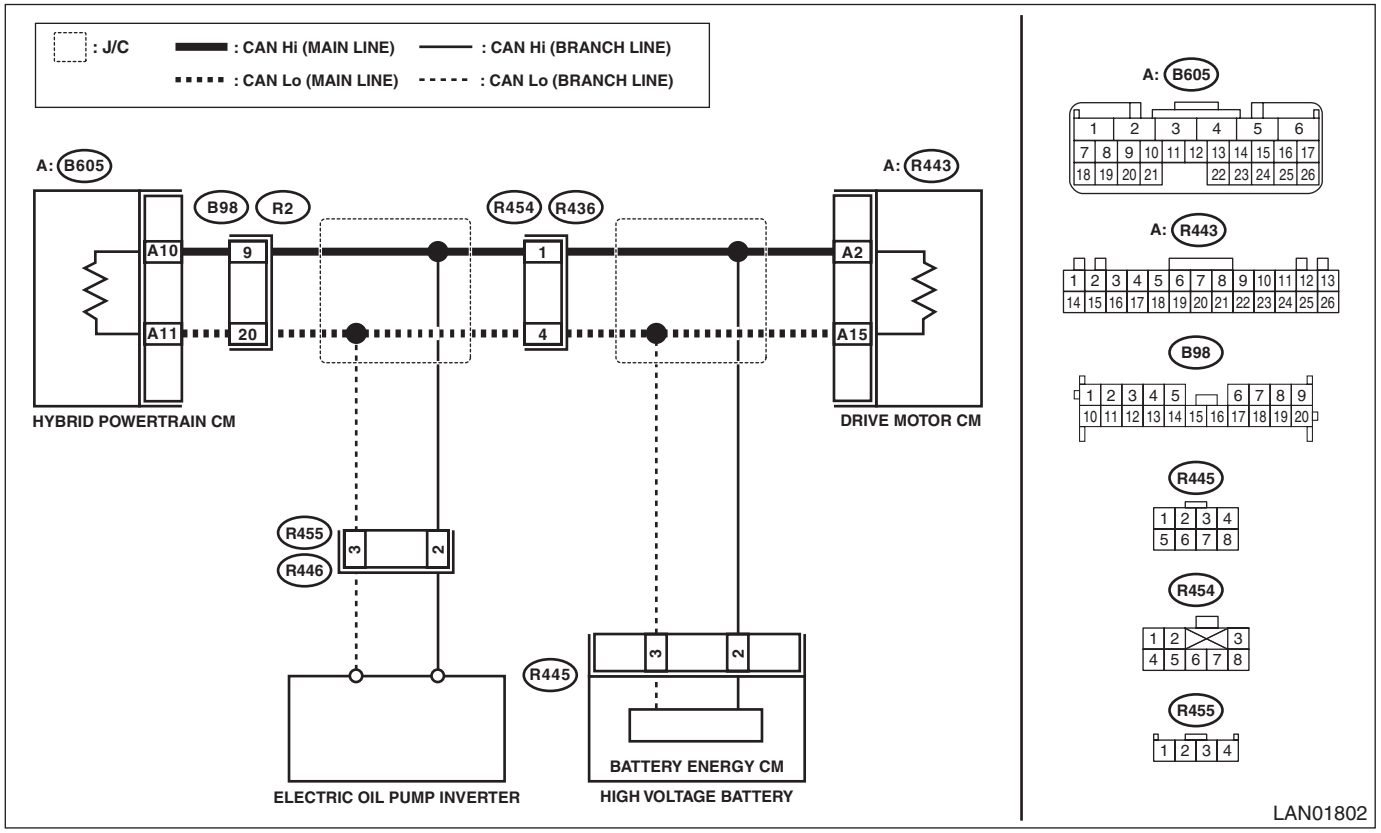
NOTE:
Main wiring harness or related lines may be shorted to ground, or shorted to ground in one of the control modules.

Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the HPCM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B605) No. 10 — Chassis ground:*** ***(B605) No. 11 — Chassis ground:***	Is the resistance 10 Ω or less?	Go to step **2**.	Currently, it is normal.
2	**CHECK CONTROL MODULE.** 1) With the tester connected, disconnect control module. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B605) No. 10 — Chassis ground:*** ***(B605) No. 11 — Chassis ground:***	Did the resistance change to 10 Ω or more?	Replace the control module whose resistance has changed.	Repair or replace the short circuit of the main wiring harness and related lines between HPCM and DMCM.

26.BATTERY SHORT INSPECTION (HEV-CAN)

WIRING DIAGRAM:

CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>



NOTE:
Main wiring harness or related lines may be shorted to battery circuit, or shorted to battery circuit in one of the control modules.

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B605) No. 10 (+) — Chassis ground (–):*** ***(B605) No. 11 (+) — Chassis ground (–):***	Is the voltage 5 V or less?	Currently, it is normal.	Go to step **2**.
2	**CHECK CONTROL MODULE.** 1) With the tester connected, disconnect control module. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B605) No. 10 (+) — Chassis ground (–):*** ***(B605) No. 11 (+) — Chassis ground (–):***	Did the voltage change to 5 V or less?	Replace the control module whose voltage has changed.	Repair or replace the short circuit of the main wiring harness and related lines between HPCM and DMCM.

27.57 — 63 Ω (HEV-CAN)

WIRING DIAGRAM:

CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>

NOTE:
When the measured resistance value is 57 — 63 Ω, main wiring harness or related lines may be shorted to ground, or shorted to power supply line, or related line may be open.

	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B605) No. 10 — Chassis ground:*** ***(B605) No. 11 — Chassis ground:***	Is the resistance 10 Ω or less?	Go to step **2**.	Go to step **4**.
2	**CHECK CONTROL MODULE.** 1) With the tester connected, disconnect control module. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B605) No. 10 — Chassis ground:*** ***(B605) No. 11 — Chassis ground:***	Did the resistance change to 10 Ω or more?	Replace the control module whose resistance has changed.	Repair or replace the short circuit of the main wiring harness and related lines between HPCM and DMCM.
3	**CHECK MAIN WIRING HARNESS AND RELATED LINES.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B605) No. 10 (+) — Chassis ground (–):*** ***(B605) No. 11 (+) — Chassis ground (–):***	Is the voltage 5 V or less?	Currently, it is normal.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) With the tester connected, disconnect control module. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B605) No. 10 (+) — Chassis ground (–):*** ***(B605) No. 11 (+) — Chassis ground (–):***	Did the voltage change to 5 V or less?	Replace the control module whose voltage has changed.	Repair or replace the short circuit of the main wiring harness and related lines between HPCM and DMCM.

28.56 Ω OR LESS (HEV-CAN)

WIRING DIAGRAM:

CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>

NOTE:
When the bus line is measured, combined resistance of the end resistance (120 Ω) in HPCM and the end resistance (120 Ω) in DMCM can be measured. The combined resistance is approximately 57 — 63 Ω. When the measured resistance value is 56 Ω or less, main wiring harness or related lines may be shorted, or combined resistance may have changed because resistance other than end resistance is created on the circuit.

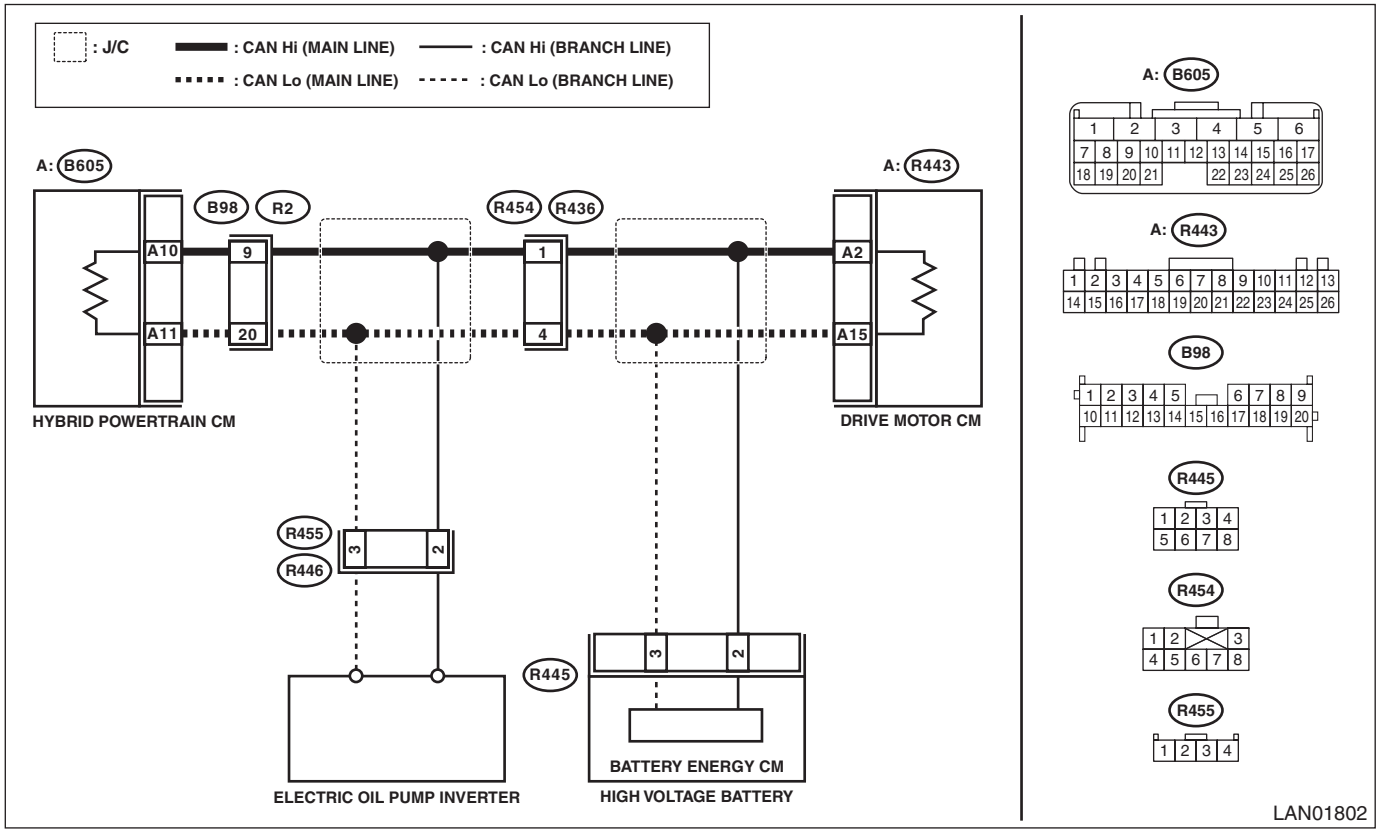
	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the HPCM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B605) No. 10 — (B605) No. 11:***	Is the resistance 10 Ω or less?	Go to step **2**.	Go to step **3**.
2	**CHECK MAIN WIRING HARNESS AND RELATED LINES.** With a tester connected, disconnect control module connectors in order. ***Connector & terminal*** ***(B605) No. 10 — (B605) No. 11:***	Is there any control module whose condition has changed from short state?	Replace the control module whose resistance has changed.	Repair or replace the short circuit of the main wiring harness and related lines between HPCM and DMCM.
3	**CHECK CONTROL MODULE.** 1) Disconnect the ECM and DMCM connectors. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(B605) No. 10 — (B605) No. 11:*** ***(R443) No. 2 — (R443) No. 15:***	Is the resistance 114 — 126 Ω?	Go to step **4**.	Replace the control module whose end resistance value is out of the specified range.

Step		Check	Yes	No
4	**CHECK CONTROL MODULE.** With a tester connected, disconnect control modules in order. ***Connector & terminal*** ***(B605) No. 10 — (B605) No. 11:***	Are there any control modules whose resistance changed to 1 MΩ or more?	Replace the control module that has changed.	Repair or replace the harness due to resistance component.

29.64 Ω OR MORE (HEV-CAN)

WIRING DIAGRAM:

CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>



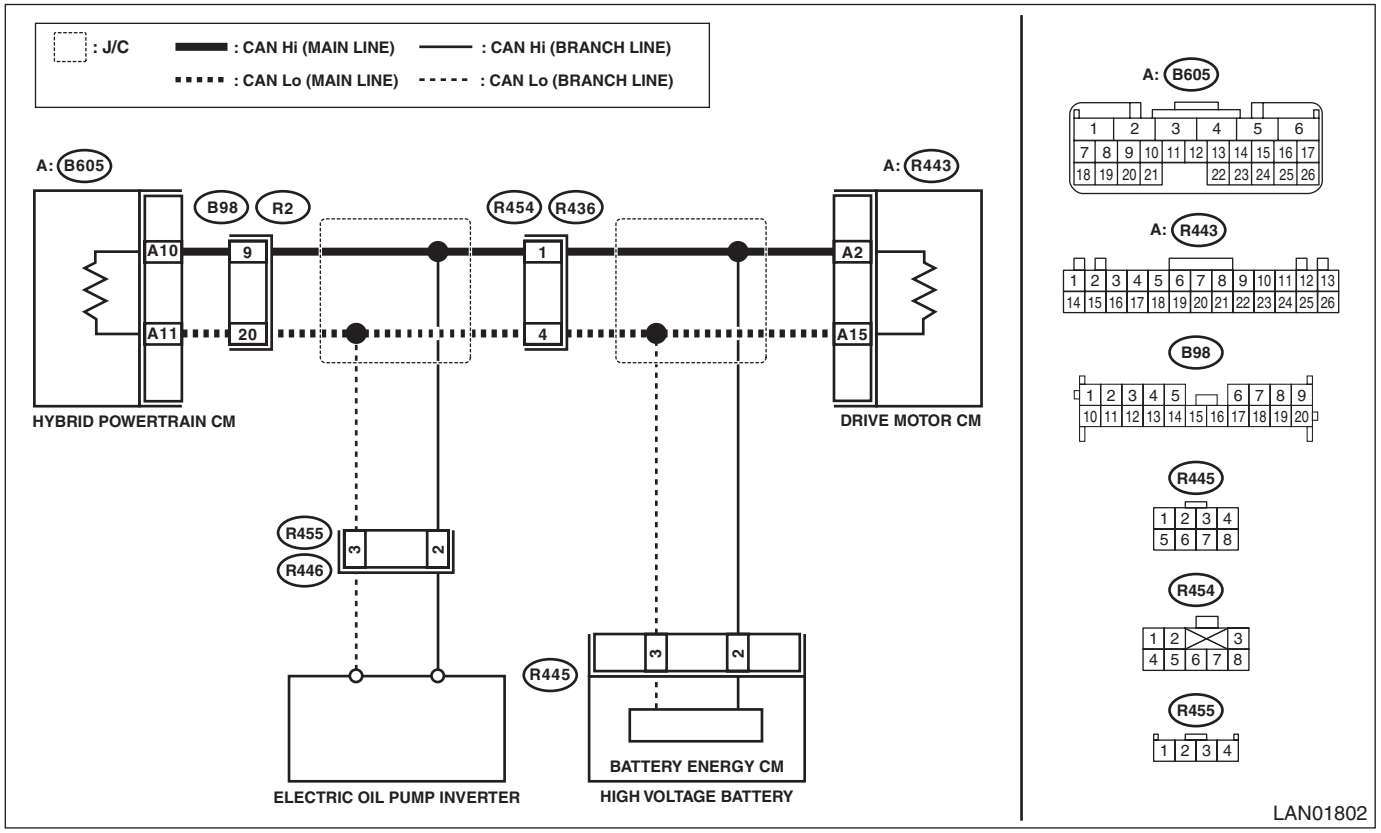
NOTE:
When the bus line is measured, combined resistance of the end resistance (120 Ω) in HPCM and the end resistance (120 Ω) in DMCM can be measured. The combined resistance is approximately 57 — 63 Ω. When the measured resistance value is 64 Ω or more, either of end resistance or main wiring harness may have malfunction such as open circuit.

	Step	Check	Yes	No
1	**CHECK CONTROL MODULE.** 1) Disconnect the DMCM and HPCM connectors. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(B605) No. 10 — (B605) No. 11:*** ***(R443) No. 2 — (R443) No. 15:***	Is the resistance 114 — 126 Ω?	Go to step **2**.	Replace the control module whose value is out of the specification.
2	**CHECK HARNESS.** Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B605) No. 10 — (R443) No. 2:*** ***(B605) No. 11 — (R443) No. 15:***	Is there continuity?	It is possible that temporary poor communication occurs.	Repair or replace the open circuit of harness.

30.57 — 63 Ω (HEV-CAN_BECM)

WIRING DIAGRAM:

CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>



NOTE:
When the measured resistance value is 57 — 63 Ω, main wiring harness or related lines may be shorted to ground, or shorted to power supply line, or related line may be open.

Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the high voltage battery connector. 2) Using the tester, measure the resistance between high voltage battery terminals. ***Connector & terminal*** ***(R445) No. 2 — No. 3:***	Is the resistance 400 Ω or more?	Related lines between high voltage battery and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** 1) Disconnect the HPCM connector. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(R445) No. 2 — (B605) No. 10:*** ***(R445) No. 3 — (B605) No. 11:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit portion of high voltage battery related lines.	Check the BECM (high voltage battery). <Ref. to HEV(diag)-23, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>

31.57 — 63 Ω (HEV-CAN_ELECTRIC OIL PUMP)

WIRING DIAGRAM:

CAN communication system <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>

NOTE:
When the measured resistance value is 57 — 63 Ω, main wiring harness or related lines may be shorted to ground, or shorted to power supply line, or related line may be open.

Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the electric oil pump inverter connector. 2) Using the tester, measure the resistance between electric oil pump inverter terminals. ***Connector & terminal*** ***(R455) No. 2 — No. 3:***	Is the resistance 400 Ω or more?	Related lines between electric oil pump inverter and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** 1) Disconnect the HPCM connector. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(R455) No. 2 — (B605) No. 10:*** ***(R455) No. 3 — (B605) No. 11:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of electric oil pump inverter related lines.	Check the HPCM. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>

10.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Note
U0073	CONTROL MODULE COMMUNICATION BUS OFF	Communication of some module is shut down.	<Ref. to LAN(HEV)(diag)-122, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0075	CONTROL MODULE COMMUNICATION BUS "PU-CAN" OFF	Communication of some module is shut down.	<Ref. to LAN(HEV)(diag)-123, DTC U0075 CONTROL MODULE COMMUNICATION BUS "PU-CAN" OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0076	CONTROL MODULE COMMUNICATION BUS "HEV-CAN" OFF	Communication of some module is shut down.	<Ref. to LAN(HEV)(diag)-124, DTC U0076 CONTROL MODULE COMMUNICATION BUS "HEV-CAN" OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0100	LOST COMMUNICATION WITH ECM/PCM “A”	Data does not arrive from ECM.	<Ref. to LAN(HEV)(diag)-159, DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0101	LOST COMMUNICATION WITH TCM	Data does not arrive from TCM.	<Ref. to LAN(HEV)(diag)-160, DTC U0101 LOST COMMUNICATION WITH TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0110	LOST COMMUNICATION WITH DRIVE MOTOR CONTROL MODULE "A"	Data does not arrive from DMCM.	<Ref. to LAN(HEV)(diag)-161, DTC U0110 LOST COMMUNICATION WITH DRIVE MOTOR CONTROL MODULE "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0111	LOST COMMUNICATION WITH BATTERY ENERGY CONTROL MODULE	Data does not arrive from BECM (high voltage battery).	<Ref. to LAN(HEV)(diag)-162, DTC U0111 LOST COMMUNICATION WITH BATTERY ENERGY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0122	LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE	Data does not arrive from VDC module.	<Ref. to LAN(HEV)(diag)-163, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0126	LOST COMMUNICATION WITH STEERING ANGLE SENSOR MODULE	Data does not arrive from steering angle sensor.	<Ref. to LAN(HEV)(diag)-164, DTC U0126 LOST COMMUNICATION WITH STEERING ANGLE SENSOR MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0131	LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE	Data does not arrive from EPS module.	<Ref. to LAN(HEV)(diag)-165, DTC U0131 LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0140	LOST COMMUNICATION WITH BODY CONTROL MODULE	Data does not arrive from body integrated unit.	<Ref. to LAN(HEV)(diag)-166, DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0151	LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE	Data does not arrive from airbag module.	<Ref. to LAN(HEV)(diag)-167, DTC U0151 LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	Data does not arrive from meter.	<Ref. to LAN(HEV)(diag)-168, DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0156	LOST COMMUNICATION WITH INFORMATION CENTER "A"	Data does not arrive from MFD.	<Ref. to LAN(HEV)(diag)-169, DTC U0156 LOST COMMUNICATION WITH INFORMATION CENTER "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

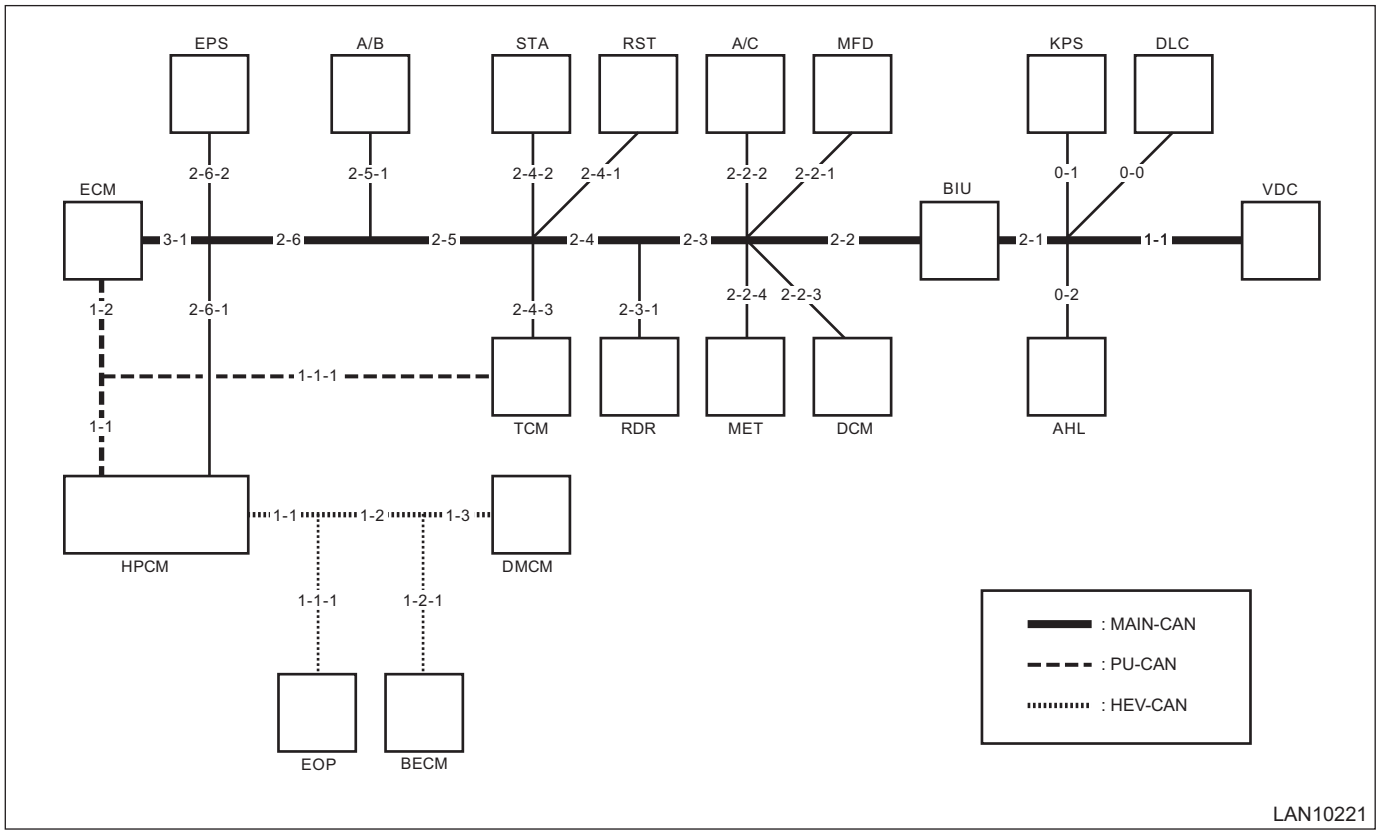
(A) Installation check
(B) Bus off detection
(C) Data no-receive detection
(D) Data abnormal detection

VDC: VDC CM
BIU: Body integrated unit
MFD: High grade MFD
A/C: A/C control panel
MET: Combination meter
RST: Remote engine starter CM
STA: Steering angle sensor
TCM: Transmission CM
A/B: Airbag CM
DCM: Data communication module

HPCM: Hybrid powertrain CM
EPS: Power steering CM
ECM: Engine CM
KPS: Keyless access CM
AHL: Auto headlight beam leveler CM
EOP: Electric oil pump
BECM: Battery energy CM (high voltage battery)
DMCM: Drive motor CM
RDR: Radar sensor

1) Module installation check
   (1) Write "-" marks in the field for installation check if the vehicle to be inspected does not have relevant module.
   (2) Write "-" marks in all blank fields on the same row that the "-" mark has filled in.
2) Bus off detection / data not received

NOTE:
It becomes impossible for CAN diagnostic module to read DTC, if there is a current malfunction of open harness (data not received). If this occurs, perform the "Check using the check sheet of communication for initializing" <Ref. to LAN(HEV)(diag)-14, CHECK USING THE CHECK SHEET OF COMMUNICATION FOR INITIALIZING, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>, and use this sheet to confirm that the corresponding part becomes the past malfunction.
   (1) Mark "X" in the field corresponding to the DTCs that has been detected by each module in the check sheet.
   (2) Identify and repair the faulty part by referring to the example of DTC data not received. <Ref. to LAN(HEV)(diag)-118, EXAMPLE OF DTC DATA NOT RECEIVED, LIST, List of Diagnostic Trouble Code (DTC).>



3) Data abnormal detection

NOTE:
If any DTC code that starts with P, B or C is detected after restarting the engine, perform the diagnosis for that code first. If any “BUS OFF” or “NO-RECEIVE DATA” condition is detected, perform the diagnosis for these problems first.

(1) If several modules detect the DTC for the same module, replace the detected module.
(2) If one module detects the DTC, replace the module of the detected side.
(3) If it does not return to the normal operation, re-install the module which has been replaced, and replace the module of the detected side.
(4) If it does not return to the normal operation, replace both modules.

2. EXAMPLE OF DTC DATA NOT RECEIVED

NOTE:
Only the sheet for bus off, data no-receive entry is shown.
(This is because, when data error occurs at the bus off, data no-receive condition, the diagnosis for these problems is performed first.)

When 2-4-1 (remote engine start CM vicinity) is open

NOTE:
The remote engine starter does not operate while no DTC is detected.

11.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC U1201 CAN-HS COUNTER ABNORMAL

DTC DETECTING CONDITION:
Communication is unstable because of high speed CAN communication error.
TROUBLE SYMPTOM:
- Display of combination meter indicates faulty.
- Control faulty may occur due to CAN communication error.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** 1) Start the engine. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0073 a current malfunction?	Perform the diagnosis of U0073. <Ref. to LAN(HEV)(diag)-122, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is U1201 a current malfunction?	Go to step **4**.	It is possible that temporary poor communication occurs. Perform the clear memory. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>
4	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1201 a current malfunction?	Go to step **5**.	It is possible that temporary poor communication occurs. Perform the clear memory. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>
5	**CHECK CONTROL MODULE.** 1) Turn the ignition switch to OFF. 2) Disconnect the control modules other than body integrated unit in order. NOTE: When disconnecting ECM or VDC CM, connect resistance of 120 Ω between CAN Hi and CAN Lo as an alternative of end resistance. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is there any control module that U1201 is not detected as current malfunction?	Replace the control module.	Repeat 1) to 4) in step 5 until U1201 is not detected.

B: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

DTC DETECTING CONDITION:
Integrated unit communication is shut down because of high speed CAN error.
TROUBLE SYMPTOM:
CAN communication is not normal.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** 1) Start the engine. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0073 a current malfunction?	Go to step **3**.	It may be a temporary poor contact. Perform the clear memory. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>
3	**CHECK CAN COMMUNICATION CIRCUIT.** Check CAN communication circuit. <Ref. to LAN(HEV)(diag)-33, PROCEDURE, CAN Communication Circuit Check.>	Is CAN communication circuit faulty?	Repair the faulty portion, following the diagnosis procedure.	Go to step **4**.
4	**CHECK DTC.** 1) Perform the inspection using the DTC check sheet. <Ref. to LAN(HEV)(diag)-116, CHECK USING THE DTC CHECK SHEET, LIST, List of Diagnostic Trouble Code (DTC).> 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0073 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK CONTROL MODULE.** 1) Turn the ignition switch to OFF. 2) Disconnect the control modules other than body integrated unit in order. NOTE: When disconnecting ECM or VDC CM, connect resistance of 120 Ω between CAN Hi and CAN Lo as an alternative of end resistance. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is there any control module that U0073 is not detected as current malfunction?	Replace the control module.	Repeat 1) to 4) in step 5 until U0073 is not detected.

C: DTC U0075 CONTROL MODULE COMMUNICATION BUS "PU-CAN" OFF

DTC DETECTING CONDITION:
PU-CAN communication is shut down.
TROUBLE SYMPTOM:
PU-CAN communication is not normal.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** 1) Start the engine. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0075 a current malfunction?	Go to step **3**.	It may be a temporary poor contact. Perform the clear memory. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>
3	**CHECK CAN COMMUNICATION CIRCUIT.** Check CAN communication circuit. <Ref. to LAN(HEV)(diag)-33, PROCEDURE, CAN Communication Circuit Check.>	Is CAN communication circuit faulty?	Repair the faulty portion, following the diagnosis procedure.	Go to step **4**.
4	**CHECK DTC.** 1) Perform the inspection using the DTC check sheet. <Ref. to LAN(HEV)(diag)-116, CHECK USING THE DTC CHECK SHEET, LIST, List of Diagnostic Trouble Code (DTC).> 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0075 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK CONTROL MODULE.** 1) Turn the ignition switch to OFF. 2) Disconnect HPCM, TCM, ECM in order. NOTE: When disconnecting ECM or HPCM, connect resistance of 120 Ω between CAN Hi and CAN Lo as an alternative of end resistance. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is there any control module that U0075 is not detected as current malfunction?	Replace the control module.	Repeat 1) to 4) in step 5 until U0075 is not detected.

D: DTC U0076 CONTROL MODULE COMMUNICATION BUS "HEV-CAN" OFF

DTC DETECTING CONDITION:
HEV-CAN communication is shut down.
TROUBLE SYMPTOM:
HEV-CAN communication is not normal.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** 1) Start the engine. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0076 a current malfunction?	Go to step **3**.	It may be a temporary poor contact. Perform the clear memory. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>
3	**CHECK CAN COMMUNICATION CIRCUIT.** Check CAN communication circuit. <Ref. to LAN(HEV)(diag)-33, PROCEDURE, CAN Communication Circuit Check.>	Is CAN communication circuit faulty?	Repair the faulty portion, following the diagnosis procedure.	Go to step **4**.
4	**CHECK DTC.** 1) Perform the inspection using the DTC check sheet. <Ref. to LAN(HEV)(diag)-116, CHECK USING THE DTC CHECK SHEET, LIST, List of Diagnostic Trouble Code (DTC).> 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0076 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK CONTROL MODULE.** 1) Turn the ignition switch to OFF. 2) Disconnect HPCM, DMCM, electric oil pump, BECM (high voltage battery) in order. NOTE: When disconnecting HPCM or DMCM, connect resistance of 120 Ω between CAN Hi and CAN Lo as an alternative of end resistance. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is there any control module that U0076 is not detected as current malfunction?	Replace the control module.	Repeat 1) to 4) in step 5 until U0076 is not detected.

E: DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A"

DTC DETECTING CONDITION:
Defective data from ECM.
TROUBLE SYMPTOM:
Defective data on CAN communication occurs.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U0401 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0401 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the engine data abnormal detected in several modules?	Replace the ECM. <Ref. to FU(H4DO(HEV))-86, Engine Control Module (ECM).>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the ECM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0401 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Reinstall the ECM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0401 a current malfunction?	Replace the ECM. <Ref. to FU(H4DO(HEV))-86, Engine Control Module (ECM).>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0401 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

F: DTC U0402 INVALID DATA RECEIVED FROM TCM

DTC DETECTING CONDITION:
Received error data from TCM.
TROUBLE SYMPTOM:
Sport indicator light blinks.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U0402 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0402 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the transmission data abnormal detected in several modules?	Replace the TCM. <Ref. to CVT(TH58A)-158, Transmission Control Module (TCM).>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the TCM. <Ref. to CVT(TH58A)-158, Transmission Control Module (TCM).> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0402 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Reinstall the TCM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0402 a current malfunction?	Replace the TCM. <Ref. to CVT(TH58A)-158, Transmission Control Module (TCM).>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0402 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.

	Step	Check	Yes	No
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

G: DTC U0411 INVALID DATA RECEIVED FROM DRIVE MOTOR CONTROL MODULE "A"

DTC DETECTING CONDITION:
Received error data from drive motor control module.
TROUBLE SYMPTOM:
Hybrid fail lamp illuminates.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U0411 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the drive motor control module connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0411 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the motor control module data abnormal detected in several modules?	Replace the drive motor control module. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the drive motor control module. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0411 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Reinstall the drive motor control module. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0411 a current malfunction?	Replace the drive motor control module. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0411 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.

Step		Check	Yes	No
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

H: DTC U0412 INVALID DATA RECEIVED FROM BATTERY ENERGY CONTROL MODULE

DTC DETECTING CONDITION:
Received error data from battery energy control module.
TROUBLE SYMPTOM:
Hybrid fail lamp illuminates.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U0412 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the high voltage battery connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0412 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the battery energy control module data abnormal detected in several modules?	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0412 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Reinstall the high voltage battery. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0412 a current malfunction?	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0412 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.

Step		Check	Yes	No
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

I: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

DTC DETECTING CONDITION:
Data from VDCCM is faulty.
TROUBLE SYMPTOM:
ABS warning light and VDC warning light illuminate.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U0416 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the VDC CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0416 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the VDC data abnormal detected in several modules?	Replace the VDC CM. <Ref. to VDC-10, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the VDC CM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0416 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Reinstall the VDC CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0416 a current malfunction?	Replace the VDC CM. <Ref. to VDC-10, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0416 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.

	Step	Check	Yes	No
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

J: DTC U0420 INVALID DATA RECEIVED FROM POWER STEERING CONTROL MODULE

DTC DETECTING CONDITION:
Defective data was transmitted from EPS CM.
TROUBLE SYMPTOM:
Cooperation control with EPS CM does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U0420 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the power steering CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0420 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the electric power steering data abnormal detected in several modules?	Replace the power steering CM. <Ref. to PS-40, Power Steering Control Module.>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the power steering CM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0420 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Reinstall the power steering CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0420 a current malfunction?	Replace the power steering CM. <Ref. to PS-40, Power Steering Control Module.>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0420 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.

Step		Check	Yes	No
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

K: DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

DTC DETECTING CONDITION:
Defective data was transmitted from body integrated unit.
TROUBLE SYMPTOM:
Cooperation control with body integrated unit does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U0422 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0422 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the body integrated data abnormal detected in several modules?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the body integrated unit. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0422 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Reinstall the body integrated unit. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0422 a current malfunction?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0422 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

L: DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

DTC DETECTING CONDITION:
Defective data was transmitted from combination meter.
TROUBLE SYMPTOM:
Display of combination meter does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U0423 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the combination meter connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0423 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the meter data abnormal detected in several modules?	Replace the combination meter. <Ref. to IDI-19, Combination Meter.>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the combination meter. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0423 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Replace the current combination meter with the original combination meter. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0423 a current malfunction?	Replace the combination meter. <Ref. to IDI-19, Combination Meter.>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0423 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.

	Step	Check	Yes	No
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

M: DTC U0424 INVALID DATA RECEIVED FROM HVAC CONTROL MODULE

DTC DETECTING CONDITION:
Defective data was transmitted from A/C control panel.
TROUBLE SYMPTOM:
Cooperation control of air conditioner does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U0424 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the A/C control panel connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0424 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the air conditioner data abnormal detected in several modules?	Replace the A/C control panel. <Ref. to AC-47, Control Panel.>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the A/C control panel. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0424 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Restore the A/C control panel. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0424 a current malfunction?	Replace the A/C control panel. <Ref. to AC-47, Control Panel.>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0424 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

N: DTC U0427 INVALID DATA RECEIVED FROM VEHICLE SECURITY CONTROL MODULE

DTC DETECTING CONDITION:
Defective data was transmitted from keyless access CM.
TROUBLE SYMPTOM:
Cooperation control of keyless access does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U0427 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the keyless access CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0427 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the smart data abnormal detected in several modules?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the keyless access CM. NOTE: Do not register the keyless access CM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0427 a current malfunction?	Go to step **8**.	System is normal. NOTE: Be sure to perform keyless access CM registration.
8	**CHECK MODULE.** 1) Reinstall the keyless access CM. 2) Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.> 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0427 a current malfunction?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0427 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.

Step		Check	Yes	No
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

O: DTC U0428 INVALID DATA RECEIVED FROM STEERING ANGLE SENSOR MODULE

DTC DETECTING CONDITION:
Defective data was transmitted from steering angle sensor.
TROUBLE SYMPTOM:
VDC CM does not operate normally.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U0428 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the steering angle sensor connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0428 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the steering angle sensor data abnormal detected in several modules?	Replace the steering angle sensor. <Ref. to VDC-34, Steering Angle Sensor.>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the steering angle sensor. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0428 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Reinstall the steering angle sensor. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0428 a current malfunction?	Replace the steering angle sensor. <Ref. to VDC-34, Steering Angle Sensor.>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0428 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.

	Step	Check	Yes	No
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

P: DTC U0452 INVALID DATA RECEIVED FROM RESTRAINTS CONTROL MODULE

DTC DETECTING CONDITION:
Invalid data was transmitted from airbag CM.
TROUBLE SYMPTOM:
Cooperation control with airbag does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U0452 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the airbag CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0452 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the airbag data abnormal detected in several modules?	Replace the airbag CM. <Ref. to AB-55, Airbag Control Module.>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the airbag CM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0452 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Reinstall the airbag CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0452 a current malfunction?	Replace the airbag CM. <Ref. to AB-55, Airbag Control Module.>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0452 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

Q: DTC U0588 INVALID DATA RECEIVED FROM TRANSMISSION FLUID PUMP MODULE

DTC DETECTING CONDITION:
Received error data from electric oil pump inverter.
TROUBLE SYMPTOM:
Hybrid fail lamp illuminates.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U0588 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the electric oil pump inverter connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0588 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the electric oil pump data abnormal detected in several modules?	Replace the electric oil pump inverter. <Ref. to HEV-42, Inverter.>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the electric oil pump inverter. <Ref. to HEV-42, Inverter.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0588 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Reinstall the electric oil pump inverter. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0588 a current malfunction?	Replace the electric oil pump inverter. <Ref. to HEV-42, Inverter.>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0588 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.

Step		Check	Yes	No
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

R: DTC U0594 INVALID DATA RECEIVED FROM HYBRID POWERTRAIN CONTROL MODULE

DTC DETECTING CONDITION:
Received error data from hybrid powertrain CM.
TROUBLE SYMPTOM:
Hybrid fail lamp illuminates.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U0594 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the hybrid powertrain CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0594 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the hybrid data abnormal or Auto Start Stop data abnormal detected in several modules?	Replace the hybrid powertrain CM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the hybrid powertrain CM. <Ref. to HEV-37, Hybrid Powertrain Control Module.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0594 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Reinstall the hybrid powertrain CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0594 a current malfunction?	Replace the hybrid powertrain CM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0594 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.

Step		Check	Yes	No
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

S: DTC U1401 INVALID DATA RECEIVED FROM ECM/PCM PU-CAN

DTC DETECTING CONDITION:
Received error data from ECM.
TROUBLE SYMPTOM:
Hybrid fail lamp illuminates.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U1401 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1401 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the engine PU-CAN data abnormal detected in several modules?	Replace the ECM. <Ref. to FU(H4DO(HEV))-86, Engine Control Module (ECM).>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the ECM. <Ref. to FU(H4DO(HEV))-86, Engine Control Module (ECM).> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1401 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Reinstall the ECM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1401 a current malfunction?	Replace the ECM. <Ref. to FU(H4DO(HEV))-86, Engine Control Module (ECM).>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1401 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.

	Step	Check	Yes	No
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

T: DTC U1402 INVALID DATA RECEIVED FROM TCM PU-CAN

DTC DETECTING CONDITION:
Received error data from TCM.
TROUBLE SYMPTOM:
Hybrid fail lamp illuminates.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U1402 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1402 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the transmission PU-CAN data abnormal detected in several modules?	Replace the TCM. <Ref. to CVT(TH58A)-158, Transmission Control Module (TCM).>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the TCM. <Ref. to CVT(TH58A)-158, Transmission Control Module (TCM).> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1402 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Reinstall the TCM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1402 a current malfunction?	Replace the TCM. <Ref. to CVT(TH58A)-158, Transmission Control Module (TCM).>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1402 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.

	Step	Check	Yes	No
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

U: DTC U1469 INVALID DATA RECEIVED FROM AUTOSTART STOP CONTROL MODULE

DTC DETECTING CONDITION:
Received error data from hybrid powertrain CM.
TROUBLE SYMPTOM:
Hybrid fail lamp illuminates.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U1469 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the hybrid powertrain CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1469 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the hybrid data abnormal or Auto Start Stop data abnormal detected in several modules?	Replace the hybrid powertrain CM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the hybrid powertrain CM. <Ref. to HEV-37, Hybrid Powertrain Control Module.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1469 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Reinstall the hybrid powertrain CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1469 a current malfunction?	Replace the hybrid powertrain CM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1469 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.

Step		Check	Yes	No
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

V: DTC U1591 INVALID DATA RECEIVED FROM HYBRID POWERTRAIN CONTROL MODULE HEV-CAN

DTC DETECTING CONDITION:
Received error data from hybrid powertrain CM.
TROUBLE SYMPTOM:
Hybrid fail lamp illuminates.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U1591 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the hybrid powertrain CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1591 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the hybrid powertrain control module HEV-CAN data abnormal detected in several modules?	Replace the hybrid powertrain CM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the hybrid powertrain CM. <Ref. to HEV-37, Hybrid Powertrain Control Module.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1591 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Reinstall the hybrid powertrain CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1591 a current malfunction?	Replace the hybrid powertrain CM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1591 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.

Step		Check	Yes	No
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

W: DTC U1594 INVALID DATA RECEIVED FROM HYBRID POWERTRAIN CONTROL MODULE PU-CAN

DTC DETECTING CONDITION:
Received error data from hybrid powertrain CM.
TROUBLE SYMPTOM:
Hybrid fail lamp illuminates.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DTC.** Check the displayed DTC.	Is U1594 a current malfunction?	Go to step **5**.	Go to step **9**.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the hybrid powertrain CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1594 a current malfunction?	Go to step **6**.	Go to step **9**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the hybrid powertrain control module PU-CAN data abnormal detected in several modules?	Replace the hybrid powertrain CM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Go to step **7**.
7	**REPLACE MODULE.** 1) Replace the hybrid powertrain CM. <Ref. to HEV-37, Hybrid Powertrain Control Module.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1594 a current malfunction?	Go to step **8**.	System is normal.
8	**CHECK MODULE.** 1) Reinstall the hybrid powertrain CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1594 a current malfunction?	Replace the hybrid powertrain CM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	System is normal.
9	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1594 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **10**.

	Step	Check	Yes	No
10	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

X: DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A"

DTC DETECTING CONDITION:
No data is received from ECM.
TROUBLE SYMPTOM:
Cooperation control of transmission may not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Is U0100 a current malfunction?	Go to step **3**.	Go to step **6**.
3	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the engine data no-receive detected in several modules?	Replace the ECM. <Ref. to FU(H4DO(HEV))-86, Engine Control Module (ECM).>	Go to step **4**.
4	**REPLACE MODULE.** 1) Replace the ECM. <Ref. to FU(H4DO(HEV))-86, Engine Control Module (ECM).> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0100 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK MODULE.** 1) Reinstall the ECM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0100 a current malfunction?	Replace the ECM. <Ref. to FU(H4DO(HEV))-86, Engine Control Module (ECM).>	System is normal.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0100 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

Y: DTC U0101 LOST COMMUNICATION WITH TCM

DTC DETECTING CONDITION:
No data is received from TCM.
TROUBLE SYMPTOM:
Cooperation control with transmission is not performed.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Is U0101 a current malfunction?	Go to step **3**.	Go to step **6**.
3	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the transmission data no-receive detected in several modules?	Replace the TCM. <Ref. to CVT(TH58A)-158, Transmission Control Module (TCM).>	Go to step **4**.
4	**REPLACE MODULE.** 1) Replace the TCM. <Ref. to CVT(TH58A)-158, Transmission Control Module (TCM).> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0101 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK MODULE.** 1) Reinstall the TCM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0101 a current malfunction?	Replace the TCM. <Ref. to CVT(TH58A)-158, Transmission Control Module (TCM).>	System is normal.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0101 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

Z: DTC U0110 LOST COMMUNICATION WITH DRIVE MOTOR CONTROL MODULE "A"

DTC DETECTING CONDITION:
Not received data from drive motor CM.
TROUBLE SYMPTOM:
Cooperation control with hybrid system is not performed.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Is U0110 a current malfunction?	Go to step **3**.	Go to step **6**.
3	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the motor control module data no-receive detected in several modules?	Replace the drive motor CM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Go to step **4**.
4	**REPLACE MODULE.** 1) Replace the drive motor CM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0110 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK MODULE.** 1) Reinstall the drive motor CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0110 a current malfunction?	Replace the drive motor CM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	System is normal.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0110 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

AA:DTC U0111 LOST COMMUNICATION WITH BATTERY ENERGY CONTROL MODULE

DTC DETECTING CONDITION:
Not received data from battery energy CM (high voltage battery).
TROUBLE SYMPTOM:
Cooperation control with hybrid system is not performed.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Is U0111 a current malfunction?	Go to step **3**.	Go to step **6**.
3	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the battery energy control module data no-receive detected in several modules?	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Go to step **4**.
4	**REPLACE MODULE.** 1) Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0111 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK MODULE.** 1) Reinstall the high voltage battery. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0111 a current malfunction?	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	System is normal.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0111 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

AB:DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

DTC DETECTING CONDITION:
No data from VDCCM is received.
TROUBLE SYMPTOM:
ABS warning light and VDC warning light illuminate.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Is U0122 a current malfunction?	Go to step **3**.	Go to step **6**.
3	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the VDC data no-receive detected in several modules?	Replace the VDC CM. <Ref. to VDC-10, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **4**.
4	**REPLACE MODULE.** 1) Replace the VDC CM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0122 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK MODULE.** 1) Reinstall the VDC CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0122 a current malfunction?	Replace the VDC CM. <Ref. to VDC-10, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	System is normal.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0122 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

AC:DTC U0126 LOST COMMUNICATION WITH STEERING ANGLE SENSOR MODULE

DTC DETECTING CONDITION:
No data is received from steering angle sensor.
TROUBLE SYMPTOM:
VDC CM does not operate normally.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Is U0126 a current malfunction?	Go to step **3**.	Go to step **6**.
3	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the steering angle sensor data no-receive detected in several modules?	Replace the steering angle sensor. <Ref. to VDC-34, Steering Angle Sensor.>	Go to step **4**.
4	**REPLACE MODULE.** 1) Replace the steering angle sensor. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0126 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK MODULE.** 1) Reinstall the steering angle sensor. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0126 a current malfunction?	Replace the steering angle sensor. <Ref. to VDC-34, Steering Angle Sensor.>	System is normal.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0126 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

AD:DTC U0131 LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE

DTC DETECTING CONDITION:
No data is received from power steering CM.
TROUBLE SYMPTOM:
Cooperation control with power steering CM does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Is U0131 a current malfunction?	Go to step **3**.	Go to step **6**.
3	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the electric power steering data no-receive detected in several modules?	Replace the power steering CM. <Ref. to PS-40, Power Steering Control Module.>	Go to step **4**.
4	**REPLACE MODULE.** 1) Replace the power steering CM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0131 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK MODULE.** 1) Reinstall the power steering CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0131 a current malfunction?	Replace the power steering CM. <Ref. to PS-40, Power Steering Control Module.>	System is normal.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0131 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

AE:DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

DTC DETECTING CONDITION:
No data is received from body integrated unit.
TROUBLE SYMPTOM:
Cooperation control with body integrated unit does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Is U0140 a current malfunction?	Go to step **3**.	Go to step **6**.
3	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the body integrated data no-receive detected in several modules?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Go to step **4**.
4	**REPLACE MODULE.** 1) Replace the body integrated unit. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0140 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK MODULE.** 1) Reinstall the body integrated unit. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0140 a current malfunction?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	System is normal.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0140 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

AF:DTC U0151 LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE

DTC DETECTING CONDITION:
No data is received from airbag CM.
TROUBLE SYMPTOM:
Cooperation control with airbag CM does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Is U0151 a current malfunction?	Go to step **3**.	Go to step **6**.
3	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the airbag data no-receive detected in several modules?	Replace the airbag CM. <Ref. to AB-55, Airbag Control Module.>	Go to step **4**.
4	**REPLACE MODULE.** 1) Replace the airbag CM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0151 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK MODULE.** 1) Reinstall the airbag CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0151 a current malfunction?	Replace the airbag CM. <Ref. to AB-55, Airbag Control Module.>	System is normal.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0151 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

AG:DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

DTC DETECTING CONDITION:
No data is received from combination meter.
TROUBLE SYMPTOM:
Display of combination meter does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Is U0155 a current malfunction?	Go to step **3**.	Go to step **6**.
3	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the meter data no-receive detected in several modules?	Replace the meter. <Ref. to IDI-19, Combination Meter.>	Go to step **4**.
4	**REPLACE MODULE.** 1) Replace the combination meter. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0155 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK MODULE.** 1) Replace the current combination meter with the original combination meter. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0155 a current malfunction?	Replace the combination meter. <Ref. to IDI-19, Combination Meter.>	System is normal.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0155 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

AH:DTC U0156 LOST COMMUNICATION WITH INFORMATION CENTER "A"

DTC DETECTING CONDITION:
No data is received from MFD.
TROUBLE SYMPTOM:
Display of MFD does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 8?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is U0156 a current malfunction?	Go to step **4**.	Go to step **8**.
4	**CHECK DTC.** 1) Check CAN communication circuit. <Ref. to LAN(HEV)(diag)-33, PROCEDURE, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor.	Is U0156 a current malfunction?	Go to step **5**.	Go to step **8**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems.	Is the MFD data no-receive detected in several modules?	Replace the MFD. <Ref. to IDI-19, Combination Meter.>	Go to step **6**.
6	**REPLACE MODULE.** 1) Replace the MFD. <Ref. to IDI-13, Multi-function Display (MFD) System.> 2) Read the DTC using Subaru Select Monitor.	Is U0156 a current malfunction?	Go to step **7**.	System is normal.
7	**CHECK MODULE.** 1) Reinstall the MFD. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor.	Is U0156 a current malfunction?	Replace the MFD. <Ref. to IDI-13, Multi-function Display (MFD) System.>	System is normal.
8	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor.	Is U0156 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **9**.
9	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AI: DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE

DTC DETECTING CONDITION:
No data is received from A/C control panel.
TROUBLE SYMPTOM:
Cooperation control of air conditioner does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Is U0164 a current malfunction?	Go to step **3**.	Go to step **6**.
3	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the air conditioner data no-receive detected in several modules?	Replace the A/C control panel. <Ref. to AC-47, Control Panel.>	Go to step **4**.
4	**REPLACE MODULE.** 1) Replace the A/C control panel. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0164 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK MODULE.** 1) Restore the A/C control panel. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0164 a current malfunction?	Replace the A/C control panel. <Ref. to AC-47, Control Panel.>	System is normal.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0164 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

AJ:DTC U0287 LOST COMMUNICATION WITH TRANSMISSION FLUID PUMP MODULE

DTC DETECTING CONDITION:
No data is received from electric oil pump inverter.
TROUBLE SYMPTOM:
Electric oil pump does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Is U0287 a current malfunction?	Go to step **3**.	Go to step **6**.
3	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the electric oil pump data no-receive detected in several modules?	Replace the electric oil pump inverter. <Ref. to HEV-42, Inverter.>	Go to step **4**.
4	**REPLACE MODULE.** 1) Replace the electric oil pump inverter. <Ref. to HEV-42, Inverter.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0287 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK MODULE.** 1) Reinstall the electric oil pump inverter. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0287 a current malfunction?	Replace the electric oil pump inverter. <Ref. to HEV-42, Inverter.>	System is normal.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0287 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

AK:DTC U0293 LOST COMMUNICATION WITH HYBRID POWERTRAIN CONTROL MODULE

DTC DETECTING CONDITION:
No data is received from hybrid powertrain CM.
TROUBLE SYMPTOM:
Cooperation control of hybrid system does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Is U0293 a current malfunction?	Go to step **3**.	Go to step **6**.
3	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the hybrid data no-receive or Auto Start Stop data no-receive detected in several modules?	Replace the hybrid powertrain CM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Go to step **4**.
4	**REPLACE MODULE.** 1) Replace the hybrid powertrain CM. <Ref. to HEV-37, Hybrid Powertrain Control Module.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0293 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK MODULE.** 1) Reinstall the hybrid powertrain CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0293 a current malfunction?	Replace the hybrid powertrain CM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	System is normal.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0293 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

AL:DTC U0327 SOFTWARE INCOMPATIBILITY WITH VEHICLE SECURITY CONTROL MODULE

DTC DETECTING CONDITION:
No data is received from keyless access CM.
TROUBLE SYMPTOM:
Cooperation control of keyless access does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Is U0327 a current malfunction?	Go to step **3**.	Go to step **6**.
3	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the smart data no-receive detected in several modules?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Go to step **4**.
4	**REPLACE MODULE.** 1) Replace the keyless access CM. NOTE: Do not register the keyless access CM. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0327 a current malfunction?	Go to step **5**.	System is normal. NOTE: Be sure to perform keyless access CM registration.
5	**CHECK MODULE.** 1) Reinstall the keyless access CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0327 a current malfunction?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	System is normal.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U0327 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

AM:DTC U1100 LOST COMMUNICATION WITH ECM/PCM PU-CAN

DTC DETECTING CONDITION:
Not received data from ECM.
TROUBLE SYMPTOM:
Cooperation control of hybrid system does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Is U1100 a current malfunction?	Go to step **3**.	Go to step **6**.
3	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the engine PU-CAN data no-receive detected in several modules?	Replace the ECM. <Ref. to FU(H4DO(HEV))-86, Engine Control Module (ECM).>	Go to step **4**.
4	**REPLACE MODULE.** 1) Replace the ECM. <Ref. to FU(H4DO(HEV))-86, Engine Control Module (ECM).> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1100 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK MODULE.** 1) Reinstall the ECM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1100 a current malfunction?	Replace the ECM. <Ref. to FU(H4DO(HEV))-86, Engine Control Module (ECM).>	System is normal.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1100 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

AN:DTC U1101 LOST COMMUNICATION WITH TCM PU-CAN

DTC DETECTING CONDITION:
Not received data from TCM.
TROUBLE SYMPTOM:
Cooperation control of hybrid system does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Is U1101 a current malfunction?	Go to step **3**.	Go to step **6**.
3	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the transmission PU-CAN data no-receive detected in several modules?	Replace the TCM. <Ref. to CVT(TH58A)-158, Transmission Control Module (TCM).>	Go to step **4**.
4	**REPLACE MODULE.** 1) Replace the TCM. <Ref. to CVT(TH58A)-158, Transmission Control Module (TCM).> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1101 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK MODULE.** 1) Reinstall the TCM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1101 a current malfunction?	Replace the TCM. <Ref. to CVT(TH58A)-158, Transmission Control Module (TCM).>	System is normal.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1101 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

AO:DTC U1120 LOST COMMUNICATION WITH AUTOSTART STOP CONTROL MODULE

DTC DETECTING CONDITION:
No data is received from hybrid powertrain CM.
TROUBLE SYMPTOM:
Cooperation control of hybrid system does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Is U1120 a current malfunction?	Go to step **3**.	Go to step **6**.
3	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the hybrid data no-receive or Auto Start Stop data no-receive detected in several modules?	Replace the hybrid powertrain CM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Go to step **4**.
4	**REPLACE MODULE.** 1) Replace the hybrid powertrain CM. <Ref. to HEV-37, Hybrid Powertrain Control Module.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1120 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK MODULE.** 1) Reinstall the hybrid powertrain CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1120 a current malfunction?	Replace the hybrid powertrain CM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	System is normal.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1120 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

AP:DTC U1232 LOST COMMUNICATION WITH REAR/SIDE RADAR CONTROL MODULE

DTC DETECTING CONDITION:
No data is received from radar sensor.
TROUBLE SYMPTOM:
Radar sensor does not operate normally.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 8?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Check the displayed DTC.	Is U1232 a current malfunction?	Go to step **4**.	Go to step **8**.
4	**CHECK DTC.** 1) Check CAN communication circuit. <Ref. to LAN(HEV)(diag)-33, PROCEDURE, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1232 a current malfunction?	Go to step **5**.	Go to step **8**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the radar data no-receive detected in several modules?	Replace the radar sensor LH. <Ref. to RVD-6, Radar Sensor.>	Go to step **6**.
6	**REPLACE MODULE.** 1) Replace the radar sensor LH. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1232 a current malfunction?	Go to step **7**.	System is normal.
7	**CHECK MODULE.** 1) Reinstall the radar sensor LH. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1232 a current malfunction?	Replace the radar sensor LH. <Ref. to RVD-6, Radar Sensor.>	System is normal.
8	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1232 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **9**.
9	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

AQ:DTC U1290 LOST COMMUNICATION WITH HYBRID POWERTRAIN CONTROL MODULE HEV-CAN

DTC DETECTING CONDITION:
No data is received from hybrid powertrain CM.
TROUBLE SYMPTOM:
Cooperation control of hybrid system does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Is U1290 a current malfunction?	Go to step **3**.	Go to step **6**.
3	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the hybrid powertrain control module HEV-CAN data no-receive detected in several modules?	Replace the hybrid powertrain CM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Go to step **4**.
4	**REPLACE MODULE.** 1) Replace the hybrid powertrain CM. <Ref. to HEV-37, Hybrid Powertrain Control Module.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1290 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK MODULE.** 1) Reinstall the hybrid powertrain CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1290 a current malfunction?	Replace the hybrid powertrain CM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	System is normal.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1290 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

AR:DTC U1293 LOST COMMUNICATION WITH HYBRID POWERTRAIN CONTROL MODULE PU-CAN

DTC DETECTING CONDITION:
No data is received from hybrid powertrain CM.
TROUBLE SYMPTOM:
Cooperation control of hybrid system does not operate properly.

	Step	Check	Yes	No
1	**CHECK PERFORMING OF BASIC DIAGNOSTIC PROCEDURE.**	Was the basic diagnostic procedure performed up to STEP 3?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(HEV)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC.** Check the displayed DTC.	Is U1293 a current malfunction?	Go to step **3**.	Go to step **6**.
3	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is the hybrid powertrain control module PU-CAN data no-receive detected in several modules?	Replace the hybrid powertrain CM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Go to step **4**.
4	**REPLACE MODULE.** 1) Replace the hybrid powertrain CM. <Ref. to HEV-37, Hybrid Powertrain Control Module.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1293 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK MODULE.** 1) Reinstall the hybrid powertrain CM. 2) Replace the module that the DTC has been detected. 3) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1293 a current malfunction?	Replace the hybrid powertrain CM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	System is normal.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is U1293 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to LAN(HEV)(diag)-32, Clear Memory Mode.>

12.General Diagnostic Table

A: INSPECTION

Item	Operation	Specifications		Note
		YES	NO	
Diagnostic code	DTC is displayed when inspecting all DTCs.	Perform the diagnosis according to DTC.	System is normal.	—
Speedometer	Faster vehicle speed than the actual speed is displayed.	VDC CM data may not be received.	System is normal.	Also, check vehicle speed pulse circuit.
Fuel gauge	Fuel is present, but displayed less than actual amount.	Communication error may be present.	System is normal.	Also, check the fuel gauge.
Fuel level warning light	Fuel is present, but the light illuminates.	Communication error may be present.	System is normal.	Also, check the fuel gauge.
Engine coolant temperature light	Engine coolant temperature light blinks in red and blue alternately.	Communication error may be present.	System is normal.	Check the engine coolant light related items.
[S], [I] or [S#] indicator	Blinking.	Communication error may be present.	System is normal.	Check the intelligent switch.
VDC indicator	Illuminating.	Communication error may be present.	System is normal.	Check that VDC is not operating.
VDC OFF indicator	Illuminating.	Communication error may be present.	System is normal.	Check that VDC is not OFF.
Brake warning, etc.	Illuminating.	Brake fluid may be low in amount, or communication error may be present.	System is normal.	Check brake related items.
Shift position	Not displayed.	Communication error may be present.	System is normal.	Also, check AT system.
AT temperature light	Blinking.	Communication error may be present.	System is normal.	Also, check AT system.
Door indicator	Not displayed when the door is opened. Otherwise, not turn off when the door is closed.	Communication error may be present.	System is normal.	Check the door switch.
Clearance indicator	Not illuminating.	Communication error may be present.	System is normal.	Check the combination switch.
Hi beam indicator	Not illuminating.	Communication error may be present.	System is normal.	Check the combination switch.
Front fog indicator	Not illuminating.	Communication error may be present.	System is normal.	Check the combination switch.
Illumination	Illuminating at the maximum brightness.	Communication error may be present.	System is normal.	Also, check the illumination switch.
Cruise control indicator	Not illuminating.	Communication error may be present.	System is normal.	Check the cruise control system.
AWD indicator	Not illuminating.	Communication error may be present.	System is normal.	Check TCM.
Hill hold indicator	Not illuminating.	Communication error may be present.	System is normal.	Also, check VDC CM.

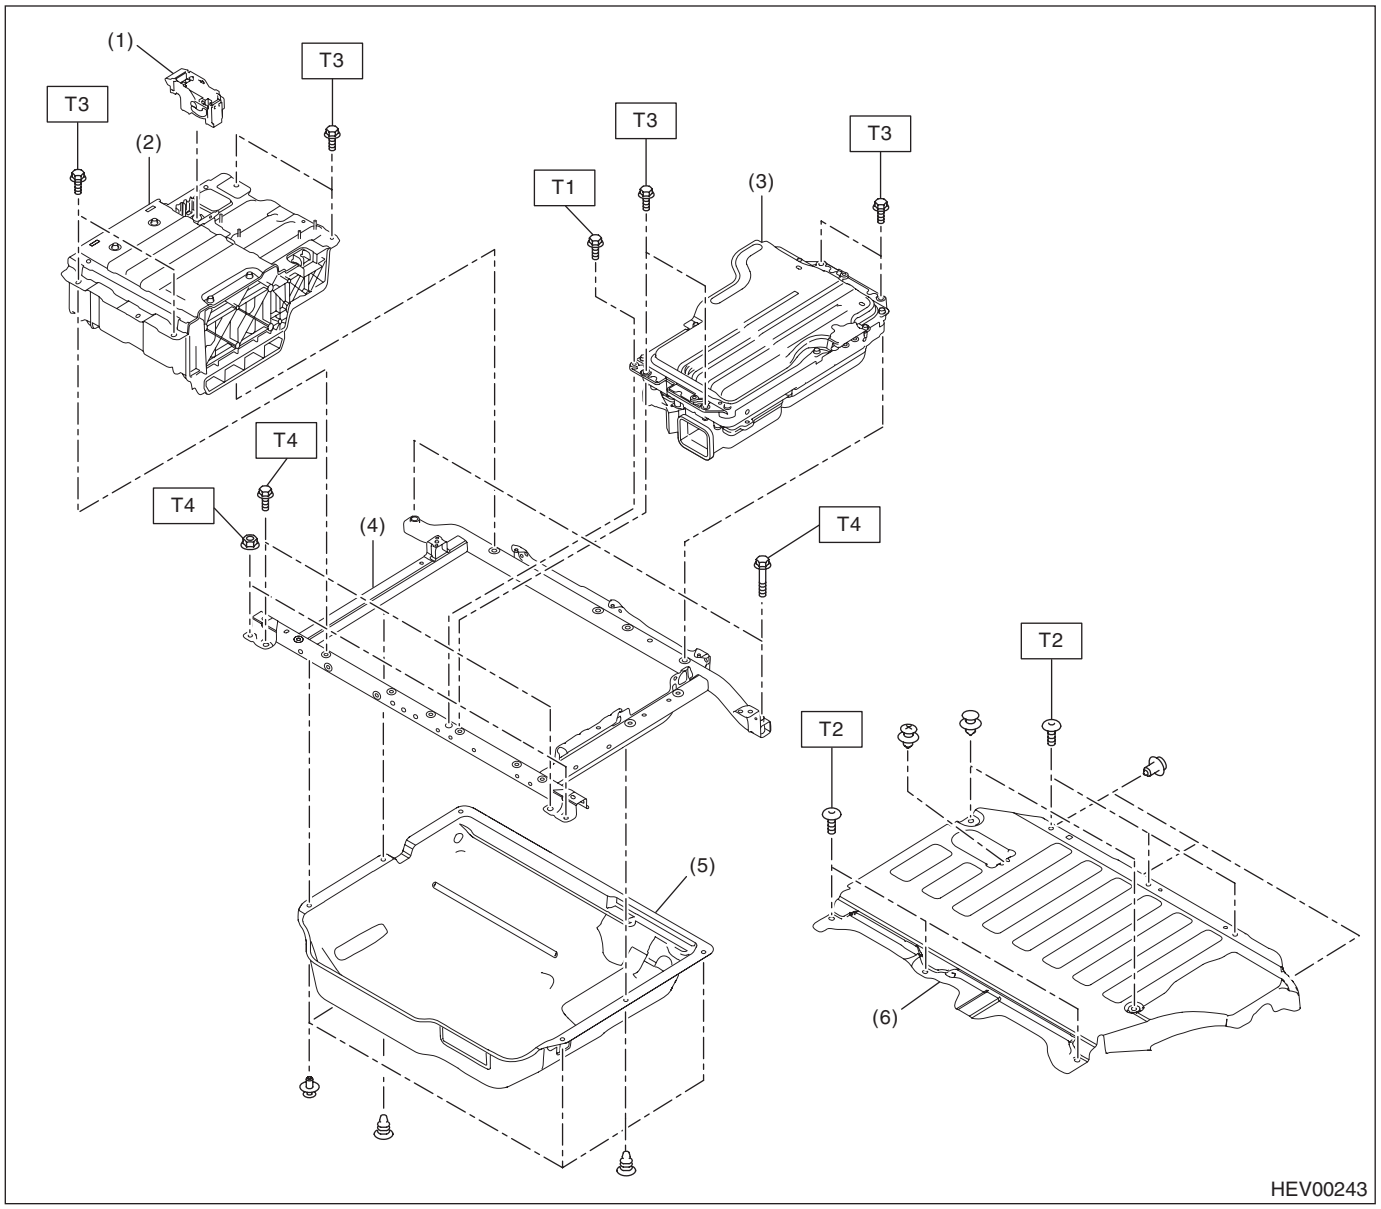
1. General Description

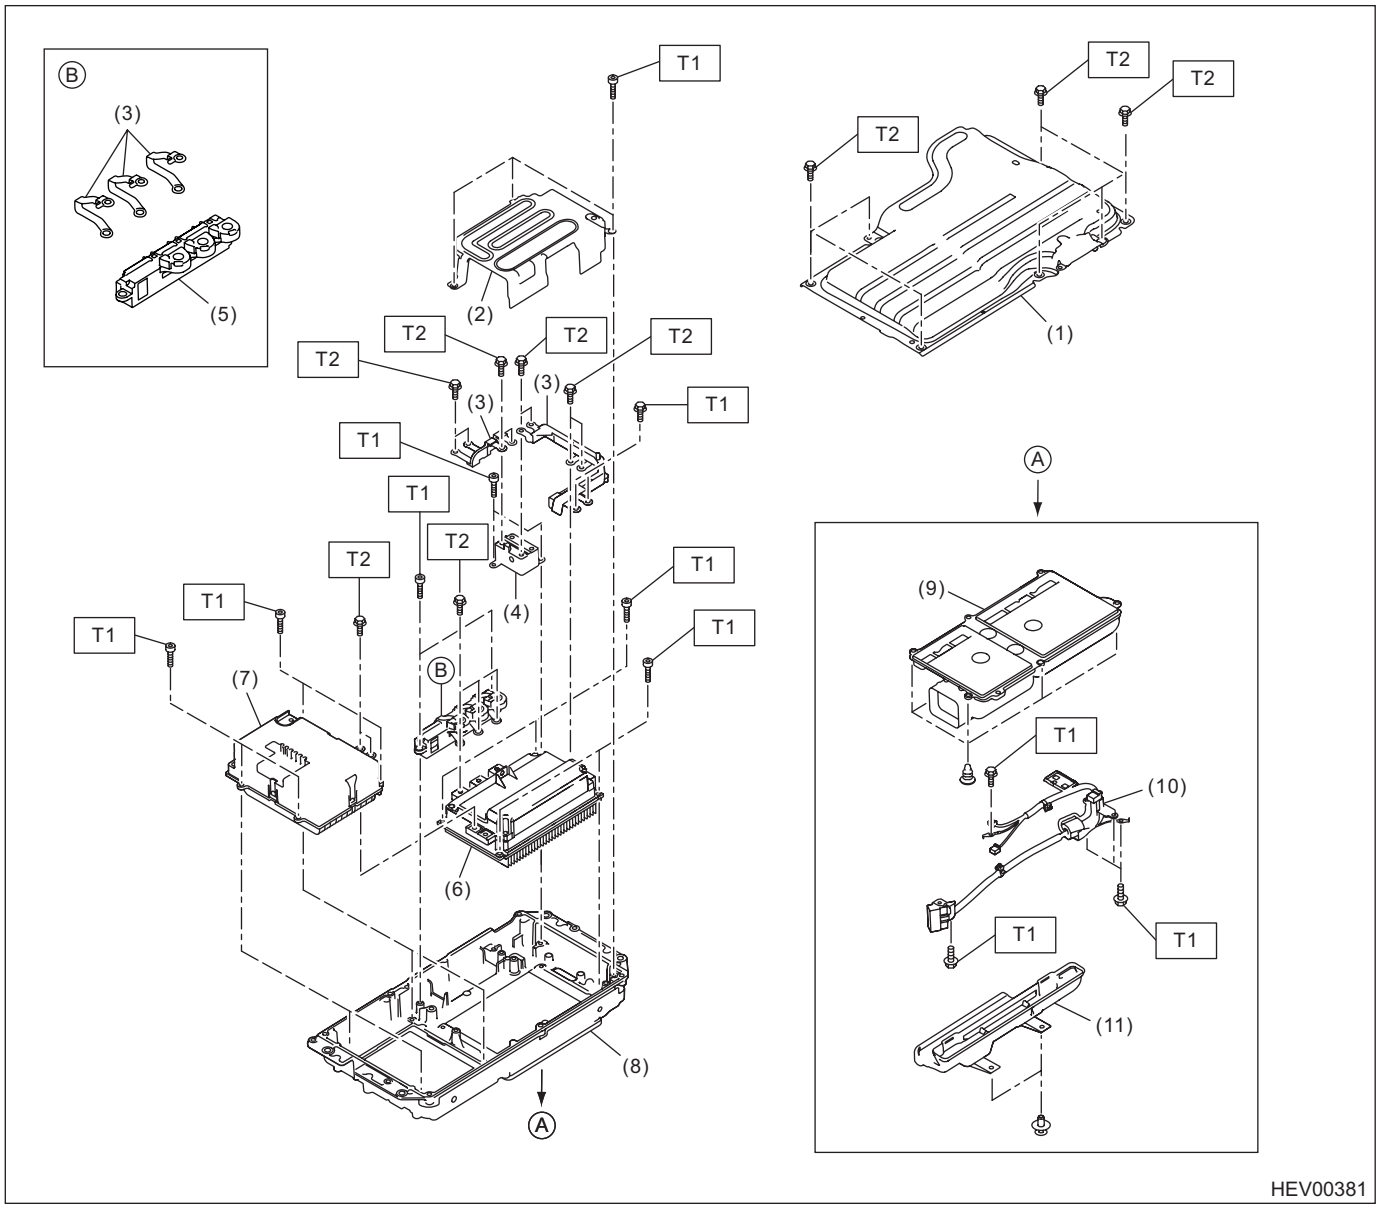
A: SPECIFICATION



High voltage battery	Type	Ni - MH (nickel metal hydride) battery
	Total voltage	100.8 V
	Rated capacity	5.5 Ah
	Maximum output	13.5 kW
Drive motor inverter	Type	Pulse width modulation
	Maximum output	15 kW
DC/DC converter	Type	Pulse width modulation
	Rated output	12 V - 130 A
Cooling fan assembly	Type	Plastic flange integrated brushless motor
	Rated voltage	12 V
	Maximum output	72 W
	Fan diameter (diameter × width)	130 × 43.7 mm (5.12 × 1.72 in)

B: LOCATION

Refer to “LOCATION” of “HYBRID ELECTRIC VEHICLE (DIAGNOSTICS)” section. <Ref. to HEV(diag)-9, LOCATION, Electrical Component Location.>

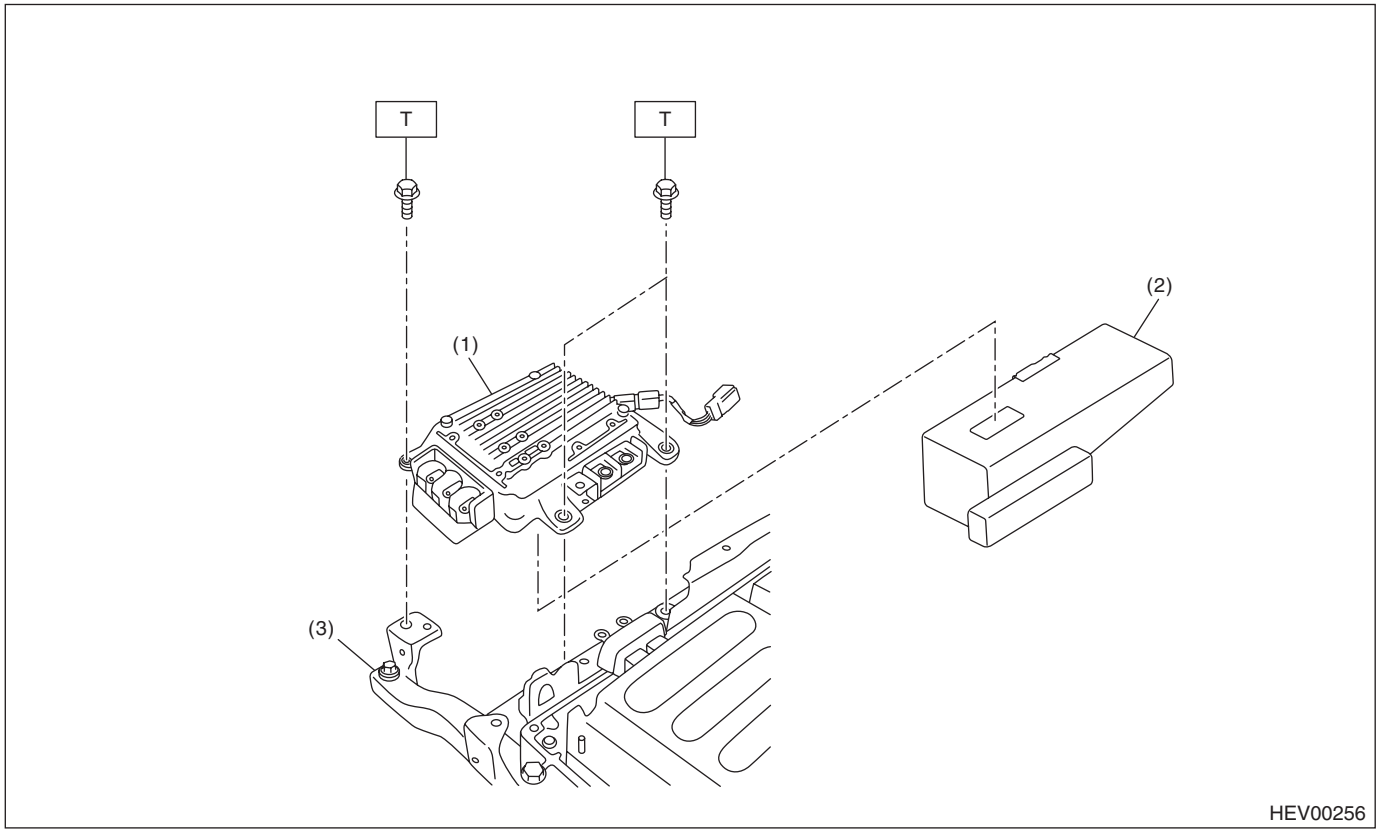


C: COMPONENT

1. HIGH VOLTAGE BATTERY

(1)	Service disconnect plug	(4)	High voltage battery frame ASSY	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	High voltage battery (including battery energy control module (BECM))	(5)	Cover - battery LWR	***T1: 6.5 (0.7, 4.8)***
(3)	Inverter ASSY	(6)	Battery cover	***T2: 7.5 (0.8, 5.5)***
				T3: 22 (2.2, 16.2)
				T4: 24.5 (2.5, 18.1)

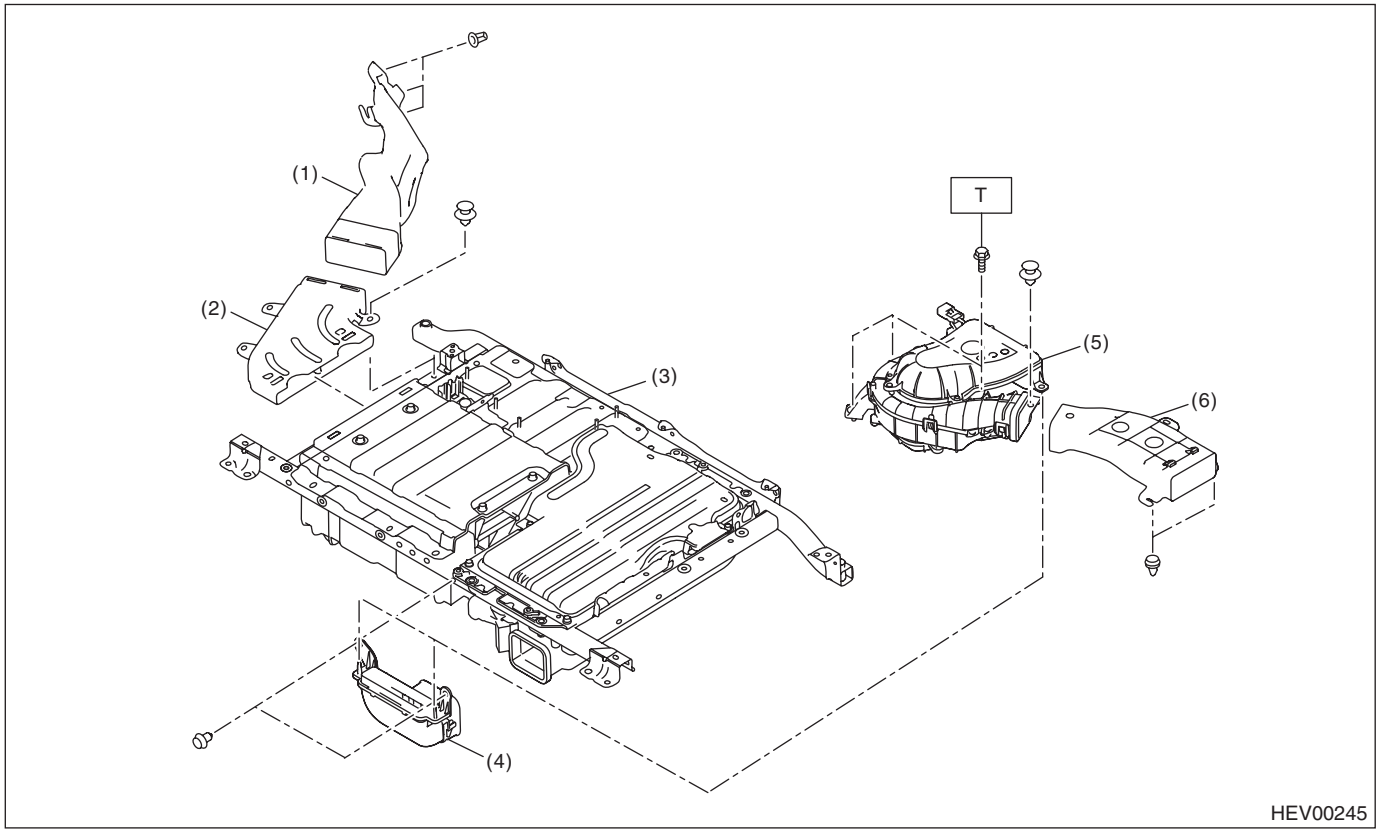
2. INVERTER ASSEMBLY



HEV00381

(1) Inverter cover
(2) Inverter shield
(3) Bus bar
(4) Electric noise filter
(5) Drive motor inverter amperage sensor
(6) Drive motor inverter
(7) DC/DC converter
(8) Inverter frame ASSY
(9) Duct inverter OUT
(10) Inverter harness
(11) Duct inverter IN

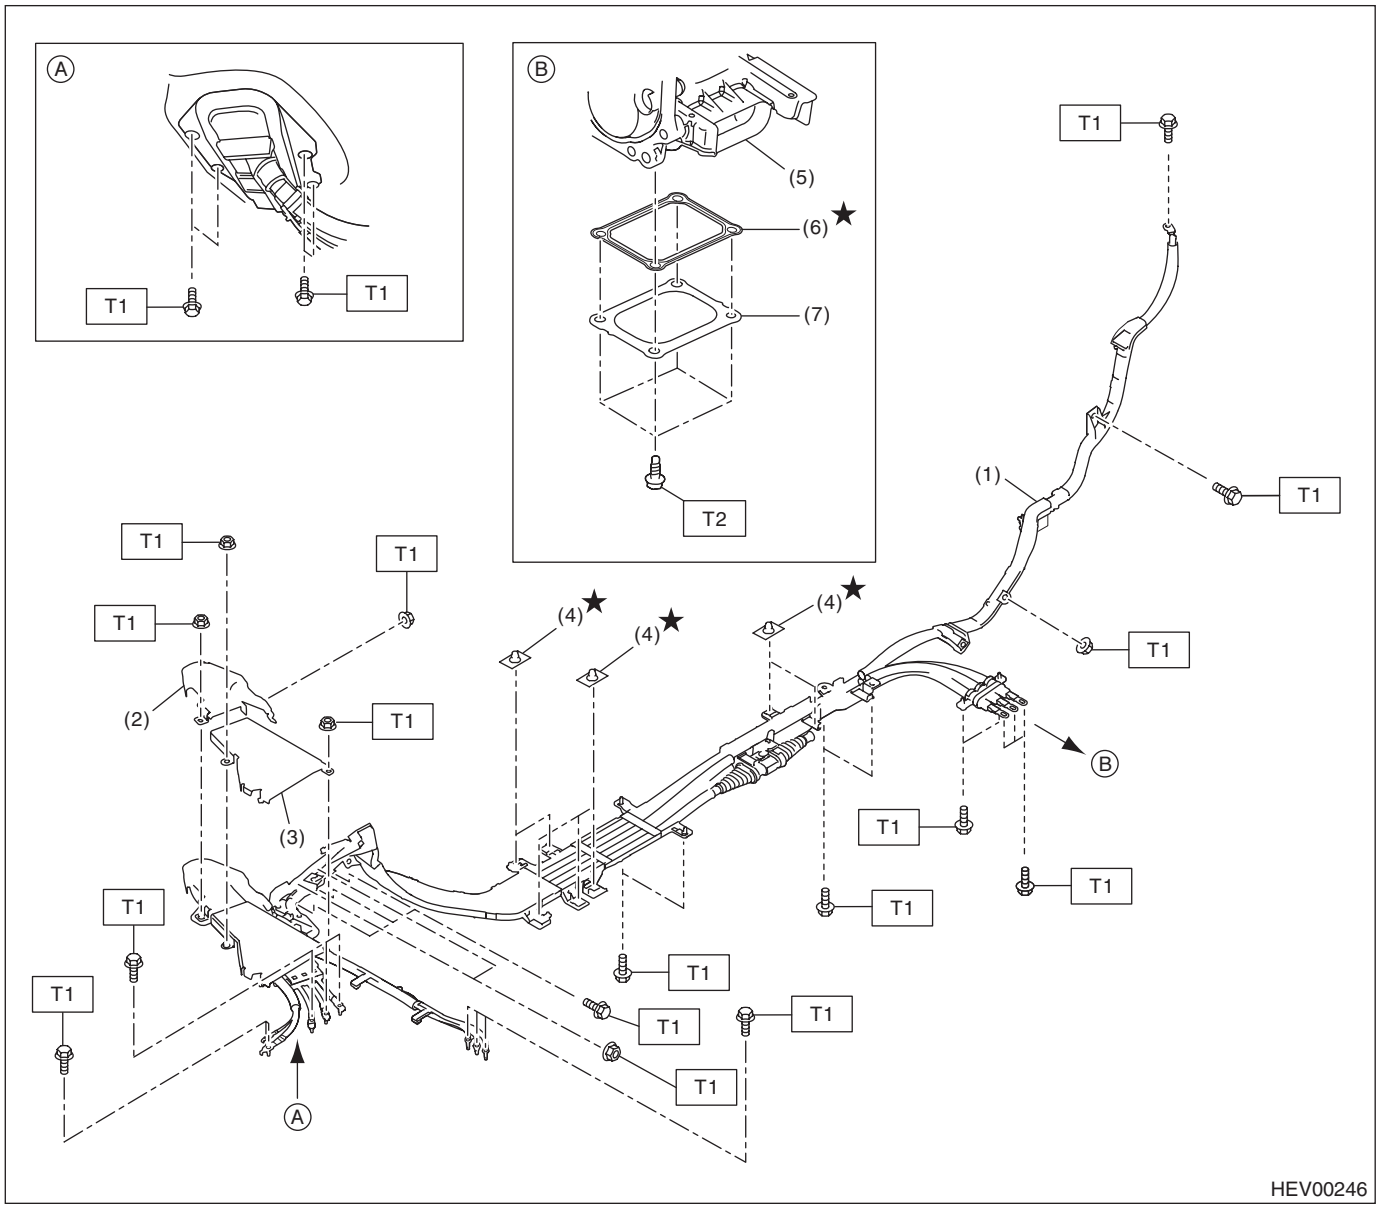
Tightening torque: N·m (kgf-m, ft-lb)
T1: 6.5 (0.7, 4.8)
T2: 7.5 (0.8, 5.5)



3. ELECTRIC OIL PUMP INVERTER

(1) Electric oil pump inverter
(2) Inverter spacer
(3) High voltage battery frame ASSY

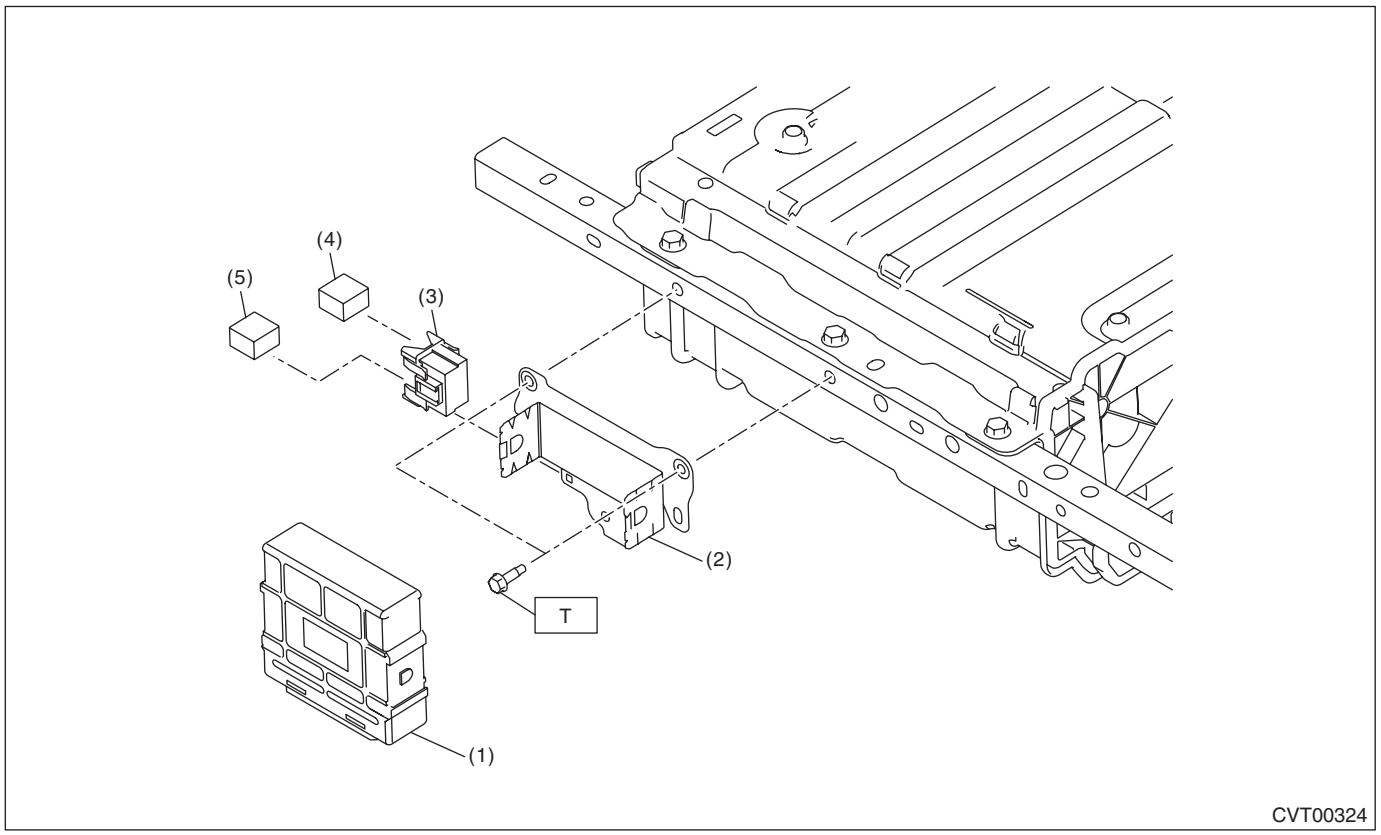
Tightening torque: N·m (kgf-m, ft-lb)
T: 22 (2.2, 16.2)



4. HIGH VOLTAGE BATTERY COOLING SYSTEM

(1) Cooling duct front (front)
(2) Cooling duct front (rear)
(3) Hybrid system SUB-ASSY
(4) Cooling fan duct
(5) Cooling fan ASSY
(6) Cooling duct rear

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

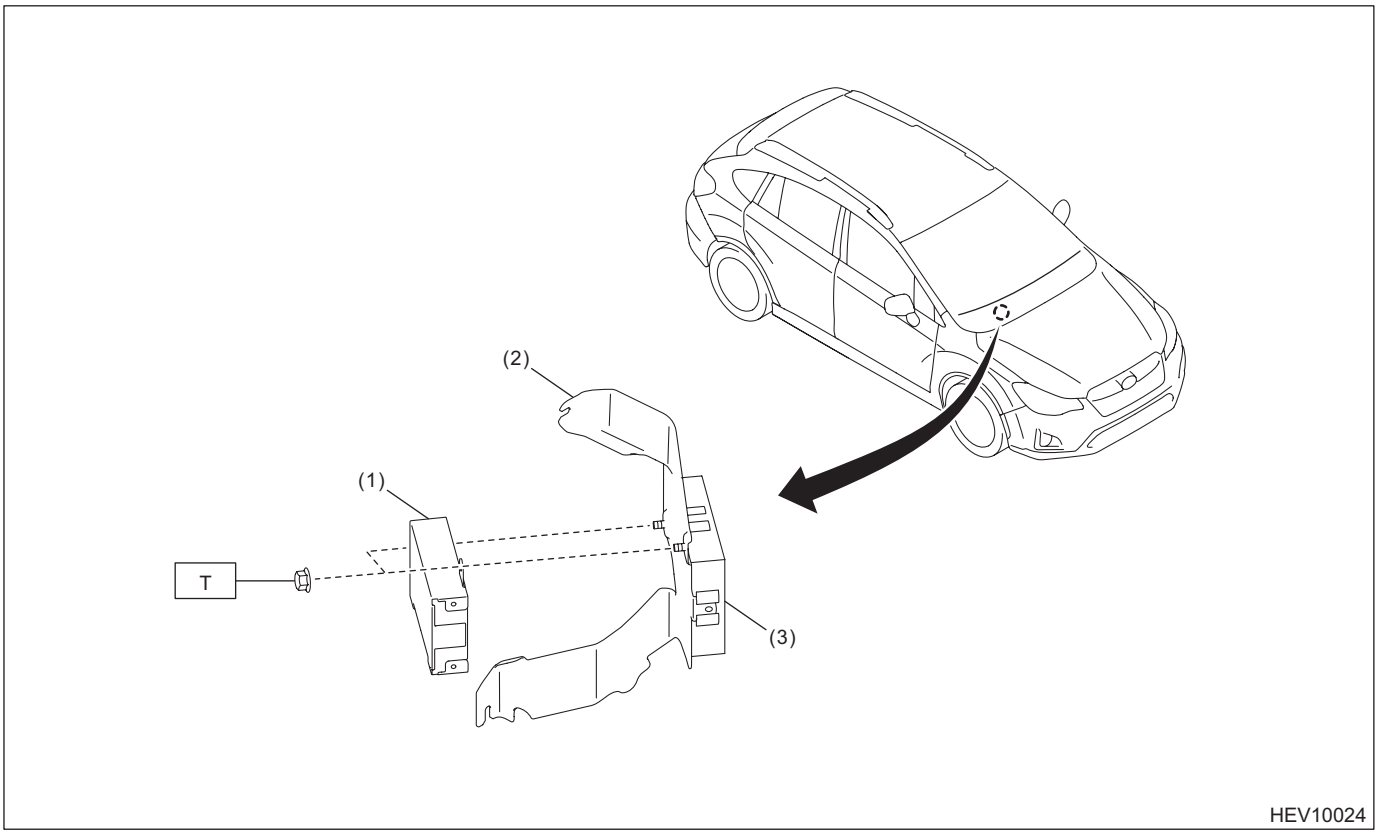


5. POWER CABLE

(1) Power cable
(2) Cover - shield seat
(3) Cover - shield battery
(4) Clip
(5) Drive motor case ASSY
(6) Gasket
(7) Power connect cover

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 25 (2.5, 18.4)

6. DRIVE MOTOR CONTROL MODULE & RELAY

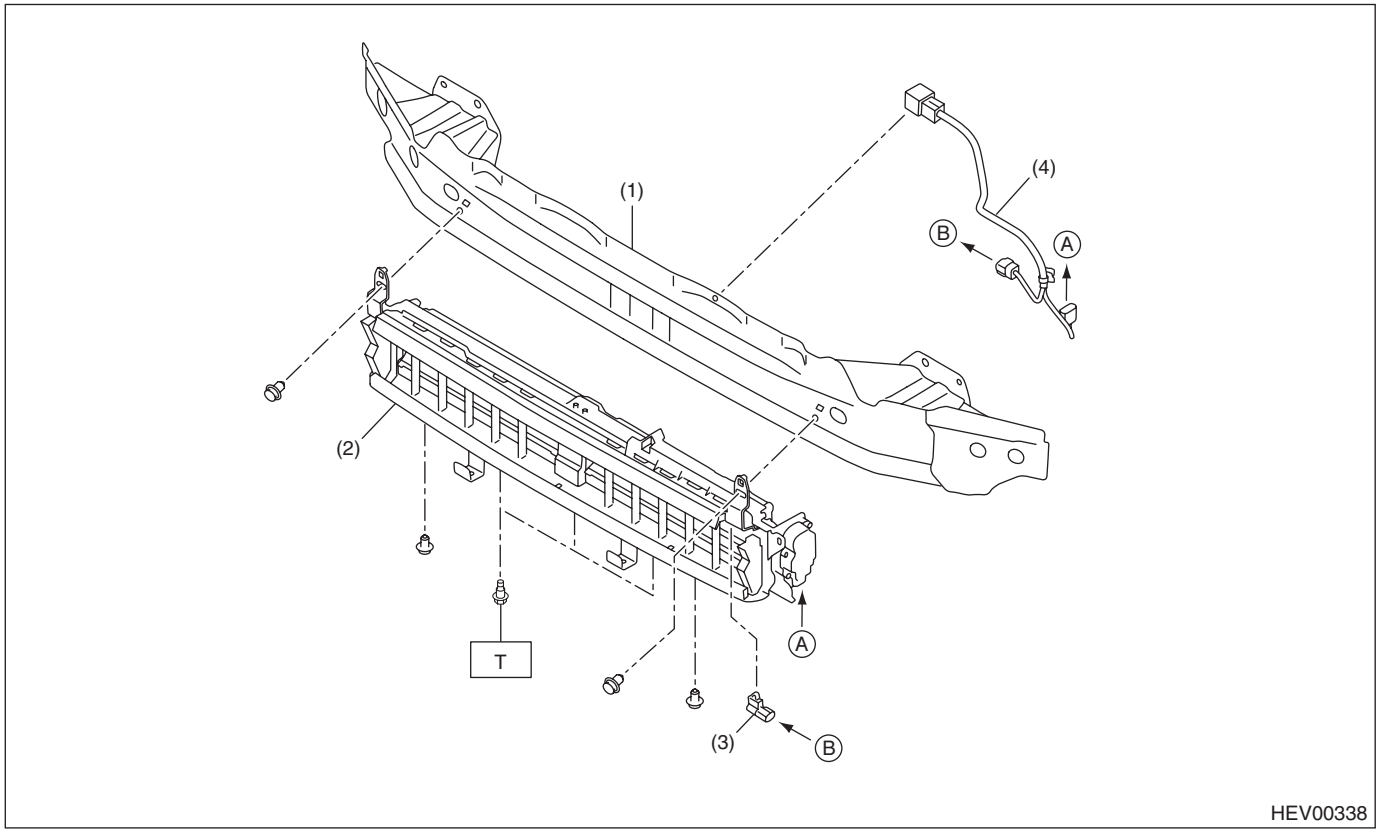


(1) Drive motor control module (DMCM)
(2) DMCM bracket
(3) Relay holder
(4) DMCM power relay
(5) Cooling fan / drive motor inverter power supply relay

Tightening torque: N·m (kgf-m, ft-lb)

T: 6.5 (0.7, 4.8)

7. HYBRID POWERTRAIN CONTROL MODULE



(1) Hybrid powertrain control module (HPCM)
(2) Bracket
(3) Engine control module (ECM)

Tightening torque: N·m (kgf-m, ft-lb)

T: 7.5 (0.8, 5.5)

8. ACTIVE GRILLE SHUTTER

(1)	Bumper beam COMPL - front	(3)	Ambient sensor	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Active grille shutter (ACTGS)	(4)	Harness - ACTGS	***T: 7.5 (0.8, 5.5)***

D: CAUTION

• The hybrid system includes a high voltage circuit. Mishandling could cause accidents such as electric shock or leak. Always check "CAUTION (HYBRID SYSTEM)" and perform the proper operation. <Ref. to PC-7, CAUTION (HYBRID SYSTEM), Precaution.>

• When replacing the parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory is cleared.
• Reassemble the parts in the reverse order of disassembly procedure unless otherwise indicated.
• Connect the connectors securely during reassembly.
• After reassembly, make sure that the functional parts operate normally.

E: PREPARATION TOOL

1. SPECIAL TOOL

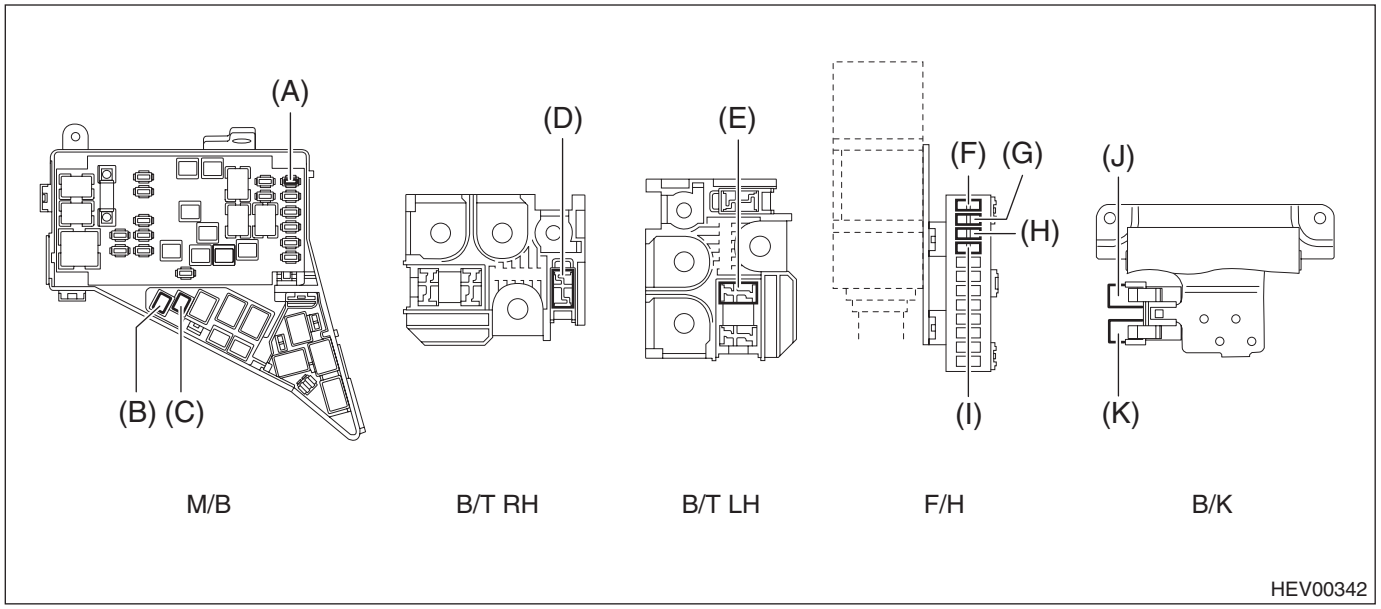


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	— (Newly adopted tool)	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".

2. GENERAL TOOL

TOOL NAME	REMARKS
Personal Protective Equipment (PPE)	Used for removing and installing high voltage components.
Insulation multimeter	Used for measuring resistance and voltage of high voltage components.
Insulating tape	Used for power cable terminals and high voltage battery terminals.
TORX® bit T30	Used to remove and install the battery cover.
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

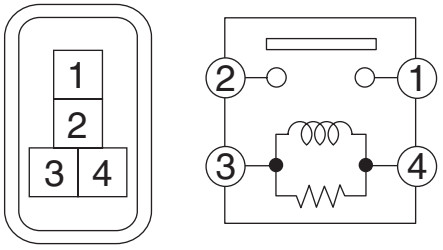
2. Relay and Fuse

A: LOCATION

Main fuse box	Fuse 7.5 A (HPCM)	(A)
	SBF fuse 30 A (cooling fan ASSY / drive motor inverter power supply relay)	(B)
	SBF fuse 30 A (BECM / DMCM power supply relay / HPCM)	(C)
Battery terminal RH	SBF fuse 60 A (12V engine restart battery sensor)	(D)
Battery terminal LH	SBF fuse 200 A (DC/DC converter)	(E)
Fuse holder	Fuse 15 A (cooling fan ASSY / drive motor inverter power supply relay)	(F)
	Fuse 7.5 A (HPCM)	(G)
	Fuse 7.5 A (BECM)	(H)
	Fuse 15 A (DMCM)	(I)
DMCM bracket	DMCM power relay	(J)
	Cooling fan ASSY / drive motor inverter power supply relay	(K)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

B: INSPECTION



1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

2. CHECK RELAY

1) Check the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 LI-01273
1 — 2	Apply 12 volt engine restart battery between terminals 4 and 3.	Less than 1 Ω	

2) Replace the relay if the inspection result is not within the standard value.

3. Hybrid Electric Vehicle System

A: WIRING DIAGRAM

Refer to “Hybrid Electric Vehicle System” in WI section. <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

B: INSPECTION

Refer to “Basic Diagnostic Procedure” of “HYBRID ELECTRIC VEHICLE (DIAGNOSTICS)” section. <Ref. to HEV(diag)-2, Basic Diagnostic Procedure.>

C: NOTE

For procedure of each component in the hybrid system, refer to the respective sections.

- Service disconnect plug: <Ref. to HEV-15, Service Plug.>
- High voltage battery: <Ref. to HEV-17, High Voltage Battery.>
- Battery energy control module: <Ref. to HEV-26, Battery Energy Control Module.>
- Drive motor inverter amperage sensor: <Ref. to HEV-27, Drive Motor Inverter Current Sensor.>
- Electric noise filter: <Ref. to HEV-31, Noise Filter.>
- Hybrid powertrain control module: <Ref. to HEV-37, Hybrid Powertrain Control Module.>
- DC/DC converter: <Ref. to HEV-38, DC/DC Converter.>
- Inverter: <Ref. to HEV-42, Inverter.>
- Power cable: <Ref. to HEV-51, Power Cable.>
- High voltage battery cooling system: <Ref. to HEV-59, High Voltage Battery Cooling System.>
- Drive motor control module: <Ref. to HEV-74, Drive Motor Control Module.>
- Drive motor assembly: <Ref. to HEV-76, Drive Motor Assembly.>

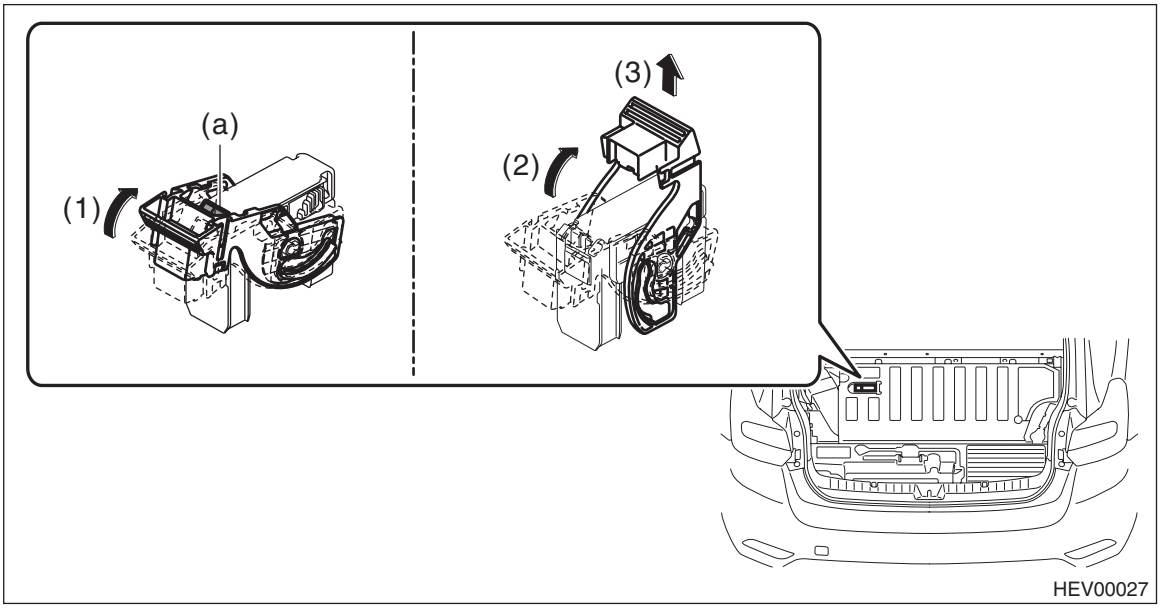
4. Service Plug

A: REMOVAL

WARNING:
The hybrid system includes a high voltage circuit. Mishandling could cause accidents such as electric shock or leak. Always check "CAUTION (HYBRID SYSTEM)" and perform the proper operation. <Ref. to PC-7, CAUTION (HYBRID SYSTEM), Precaution.>

CAUTION:
Take the ignition key or access key out of the vehicle to avoid malfunctions of hybrid system.
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For the 12 volt engine restart battery, disconnect the ground terminal from 12V engine restart battery sensor.
2) Remove the mat - rear floor CTR.
3) Remove the service disconnect plug.



WARNING:
• Carry the removed service disconnect plug in your pocket in order to prevent other engineers from accidentally installing the plug during work.
• After removal of the service disconnect plug, the condenser inside the inverter still have been charged to a high voltage. Wait for at least 10 minutes before handling the high voltage components, wiring, terminals or connectors.

(1) Pull up the lever until it touches the stopper.
(2) Move the lever upwards while pressing the claw (a).

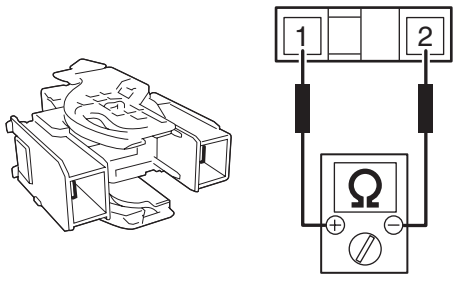
NOTE:
The lever locks in the vertical position.

(3) Pull out the service disconnect plug from high voltage battery.

CAUTION:
After removing the service disconnect plug, cover the connection with a tape to protect from intrusion of foreign matter such as water or dusts.

B: INSTALLATION

WARNING:
The hybrid system includes a high voltage circuit. Mishandling could cause accidents such as electric shock or leak. Always check "CAUTION (HYBRID SYSTEM)" and perform the proper operation. <Ref. to PC-7, CAUTION (HYBRID SYSTEM), Precaution.>



CAUTION:
• Before attaching the service disconnect plug, make sure there are no tools left inside and also double check that the high voltage terminal is tight and the connectors are properly connected.
• Always replace faulty service disconnect plug with a new part.
• Always use the original service disconnect plug to install. Never use a service disconnect plug removed from another vehicle.
Install each part in the reverse order of removal.

NOTE:
Move the lever to the horizontal position and push it until a click is heard and securely locked.

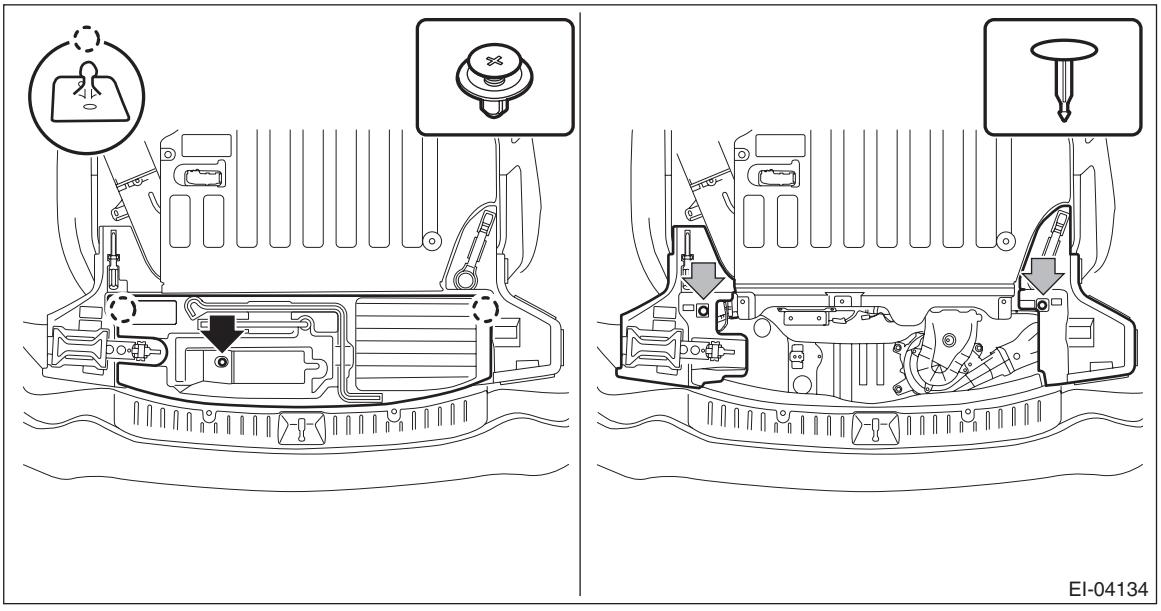
C: INSPECTION

1) Measure the resistance between service disconnect plug terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard	Connection diagram
1 — 2	Always	Less than 1 Ω	 HEV00028

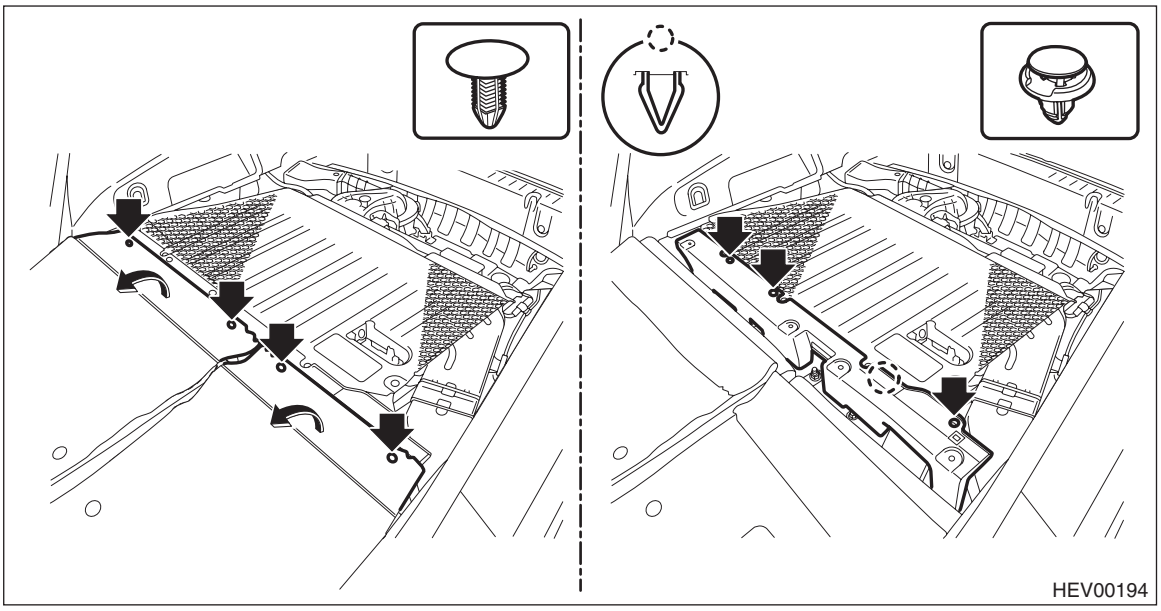
2) If the service result is different from the standard value, replace the service disconnect plug.



5. High Voltage Battery

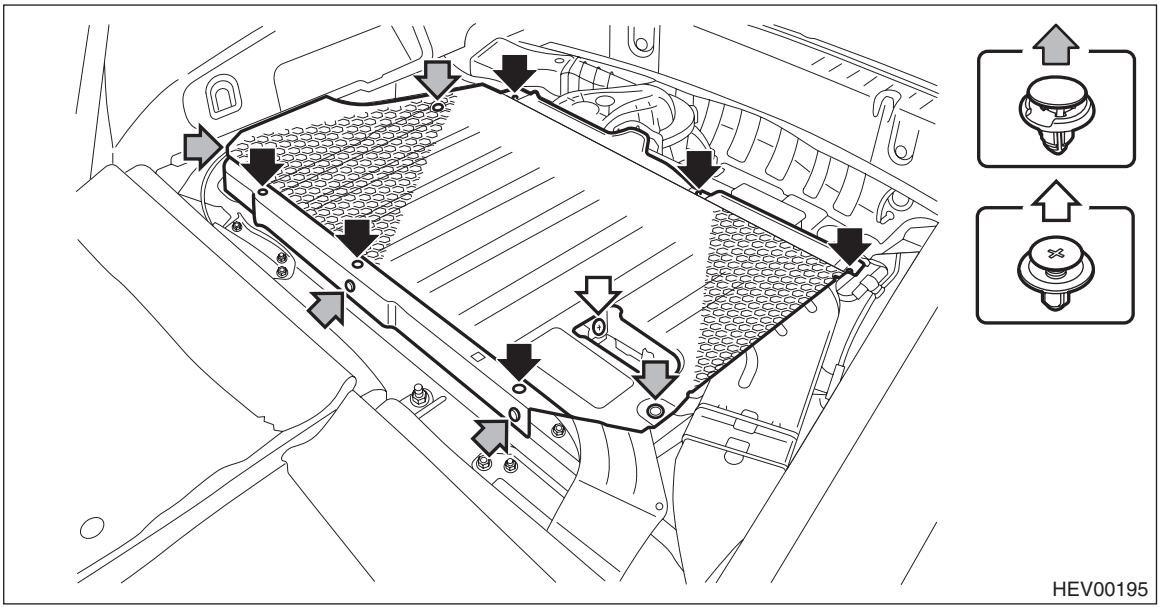
A: REMOVAL

WARNING:
The hybrid system includes a high voltage circuit. Mishandling could cause accidents such as electric shock or leak. Always check "CAUTION (HYBRID SYSTEM)" and perform the proper operation. <Ref. to PC-7, CAUTION (HYBRID SYSTEM), Precaution.>



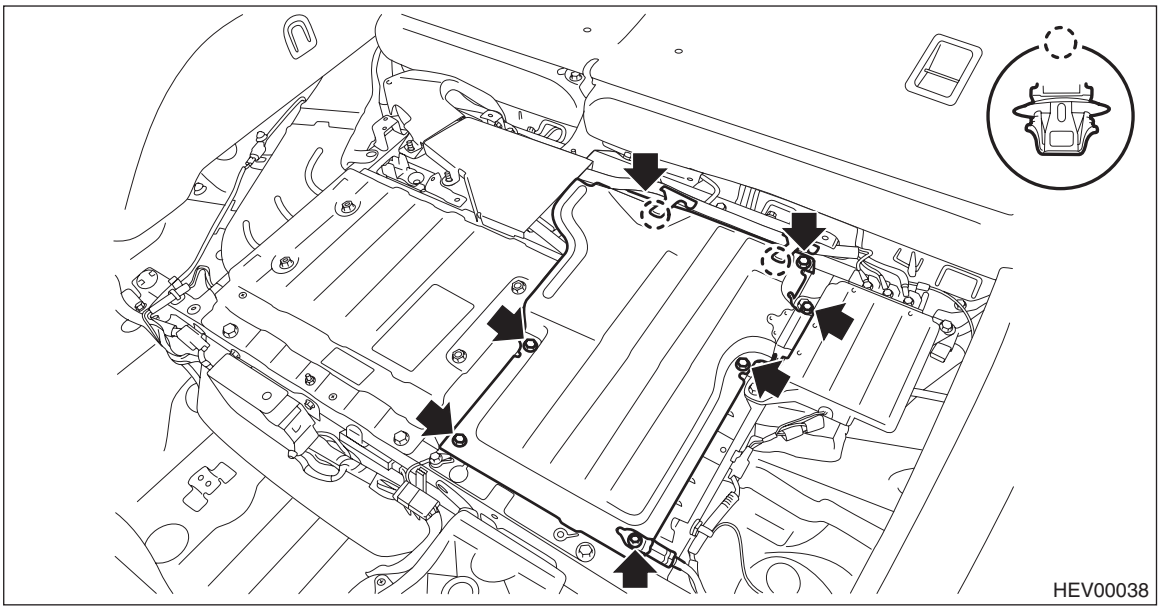
CAUTION:
• Return the replaced high voltage battery to a qualified collection service for safety reasons. If you use manufacturer's designated channel, the battery will be handled properly and safely by a qualified collection service.
• If high voltage battery is not properly processed and disposed of or left unprocessed, it could cause electrical shock accidents. Always have the high voltage battery collected by the manufacturer.
• Do not leave the removed high voltage batteries in a place where water may splash. It could cause fire accidents.

1) Remove the service disconnect plug. <Ref. to HEV-15, REMOVAL, Service Plug.>
2) Release the clips and claws, then detach the sub-trunk assembly and the spacer - rear floor side.



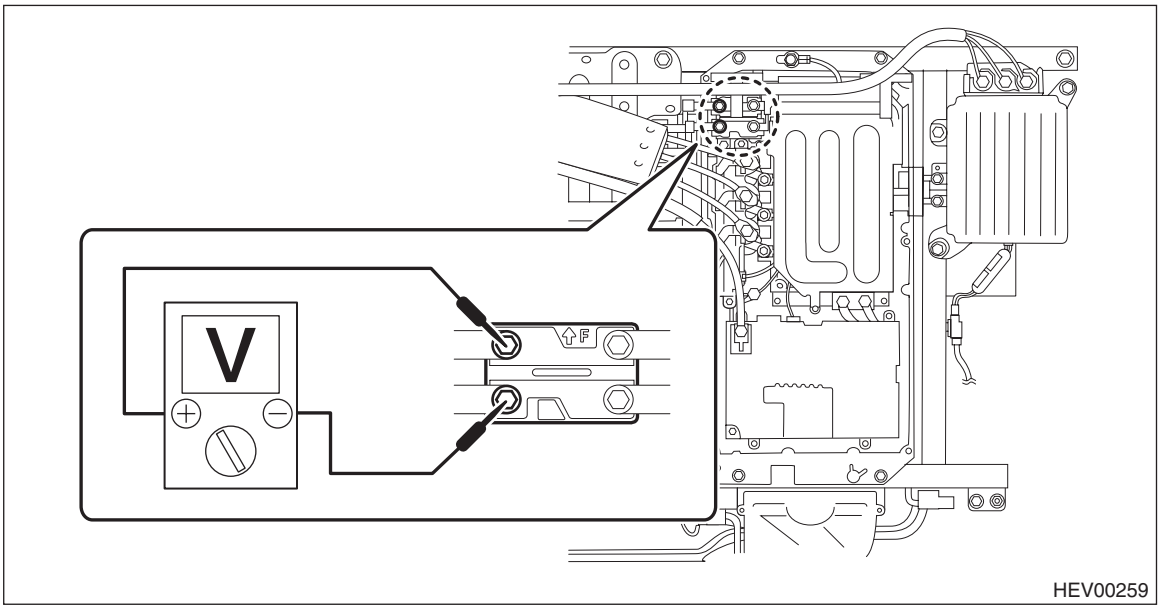
3) Remove the rear seat cushion and fold the backrest assemblies LH and RH. <Ref. to SE-24, REMOVAL, Rear Seat.>

4) Remove the spacer - rear floor front.
(1) Release the clips, and fold back the bottom of the cover COMPL - rear backrest LH and RH of the rear seat back.
(2) Release the clips and claws, then detach the spacer - rear floor front.

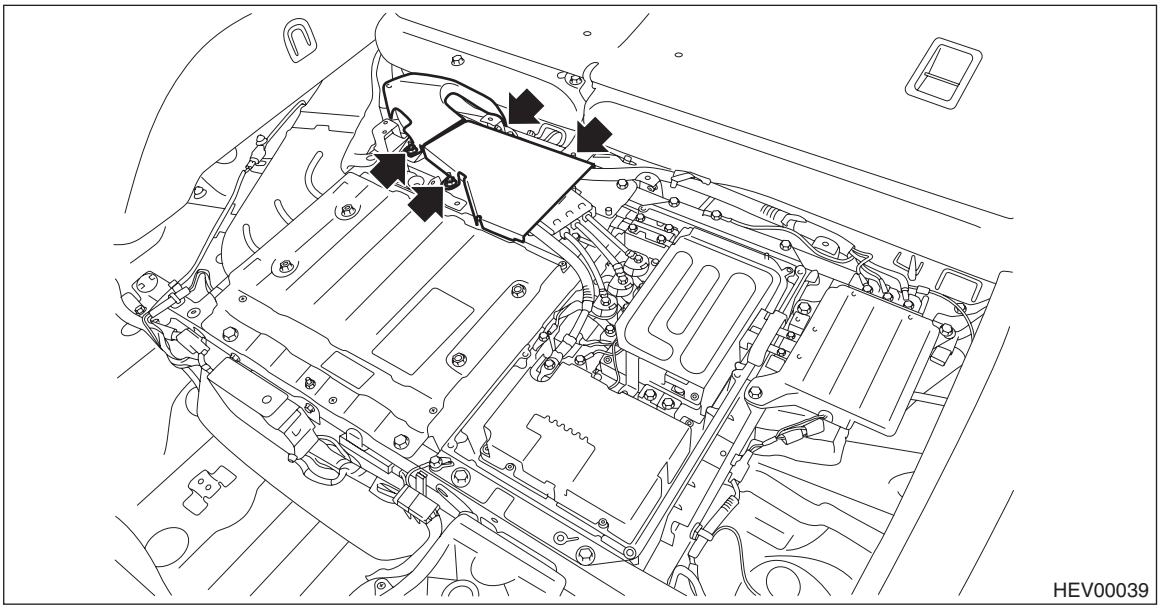


5) Remove the TORX®bolts, release the clips, and then remove the battery cover.

Preparation tool:
TORX® T30



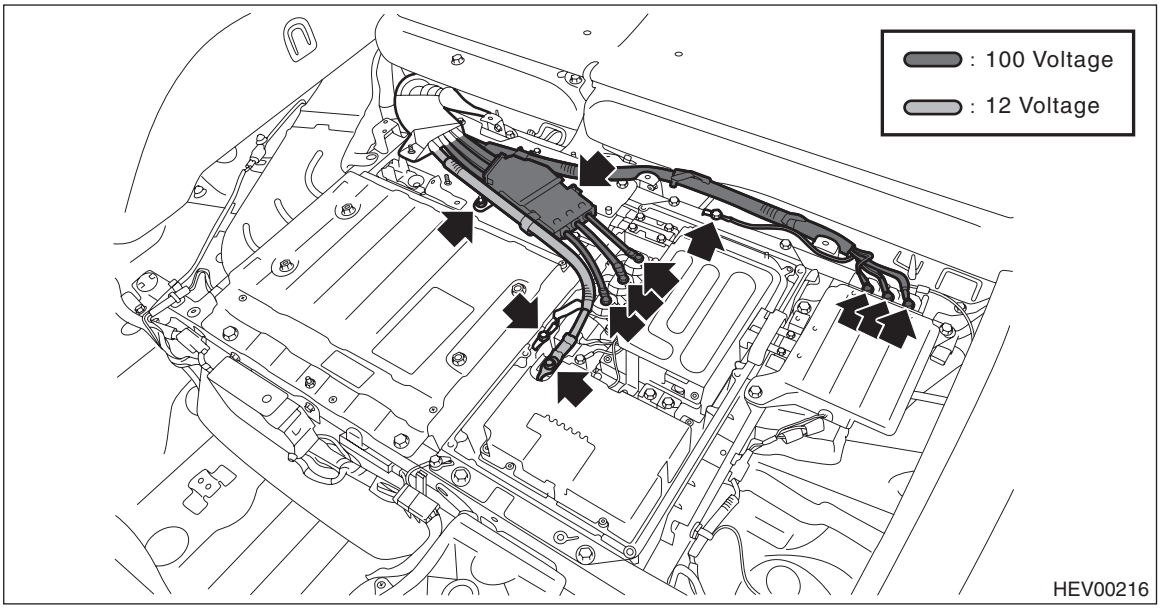
6) Remove the inverter cover.
   (1) Remove the bolts and ground terminal.
   (2) Release the cable clips, and remove the inverter cover.



7) Perform zero-voltage test.
   (1) Measure the voltage of the high voltage DC line at the high voltage battery side of the electric noise filter.

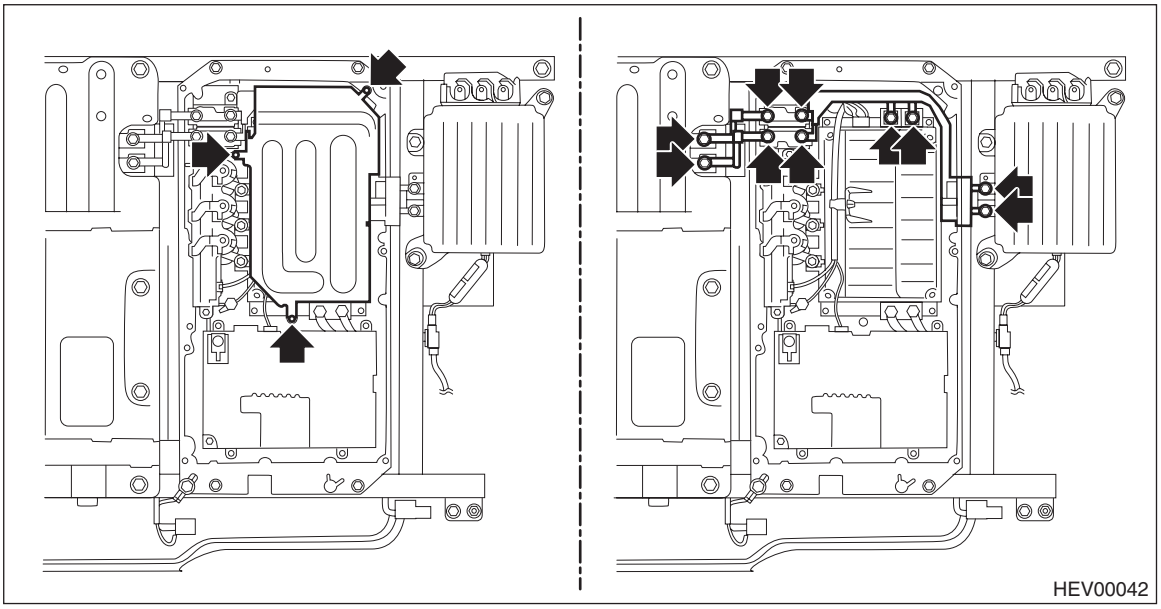
Preparation tool:
Insulation multimeter

Standard: 0 V



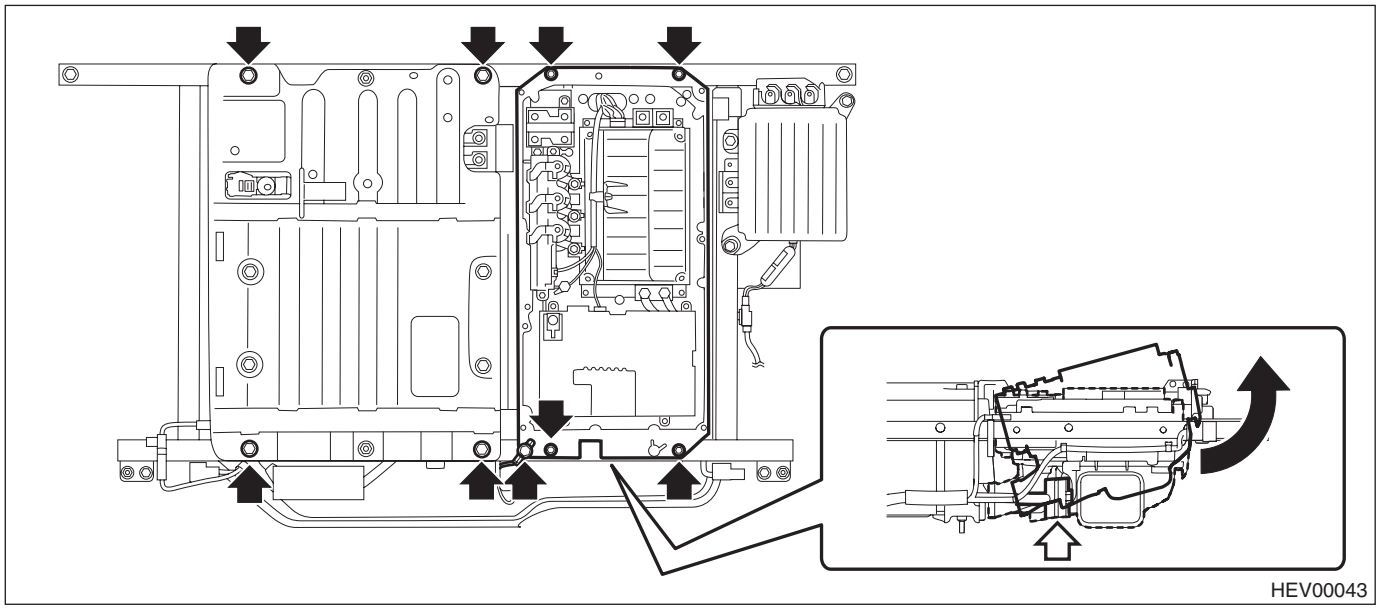
8) Remove the nut and remove the cover - shield battery and the cover - shield seat.

9) Remove the bolts and nuts and disconnect the ground terminal and the power cable.



CAUTION:
- **Be careful not to use excessive force when disconnecting the power cable to avoid any damage.**
- **Always wrap the disconnected power cable terminals with insulating tape.**

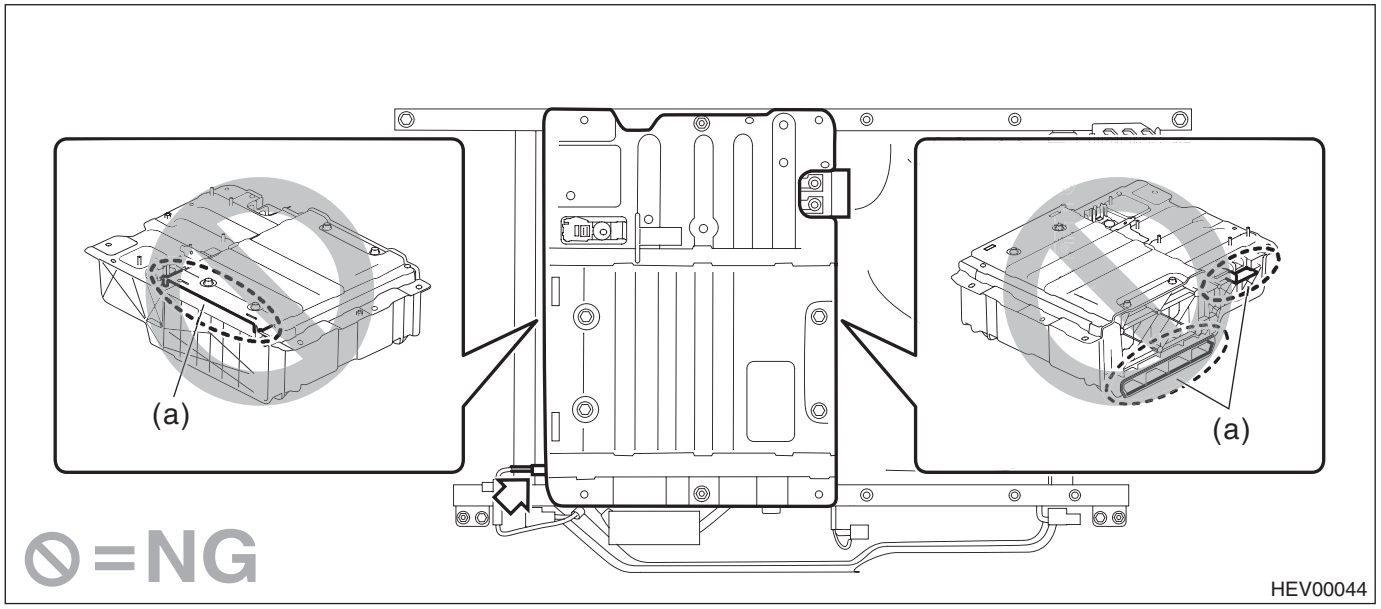
10) Remove the cooling duct front (rear). <Ref. to HEV-62, COOLING DUCT FRONT (REAR), REMOVAL, High Voltage Battery Cooling System.>
11) Remove the cooling fan assembly. <Ref. to HEV-70, COOLING FAN ASSEMBLY, REMOVAL, High Voltage Battery Cooling System.>



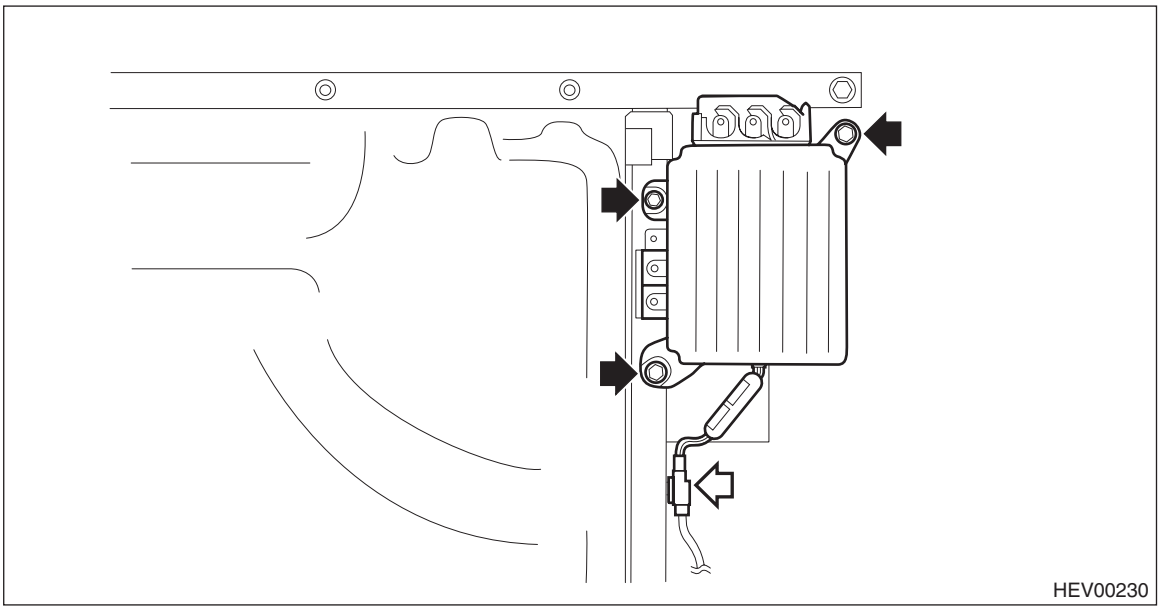
12) Remove the inverter assembly.
(1) Remove the bolts to remove the inverter shield.
(2) Remove the bolts and disconnect the bus bars between the high voltage battery and electric noise filter and between the electric noise filter and electric oil pump inverter respectively.

CAUTION:
Always wrap the high voltage battery terminal with insulating tape.

(3) Disconnect the connector.
(4) Remove all the mounting bolts of the high voltage battery to make the battery free.
(5) Remove the bolts, and then detach the ground terminal and the inverter assembly.



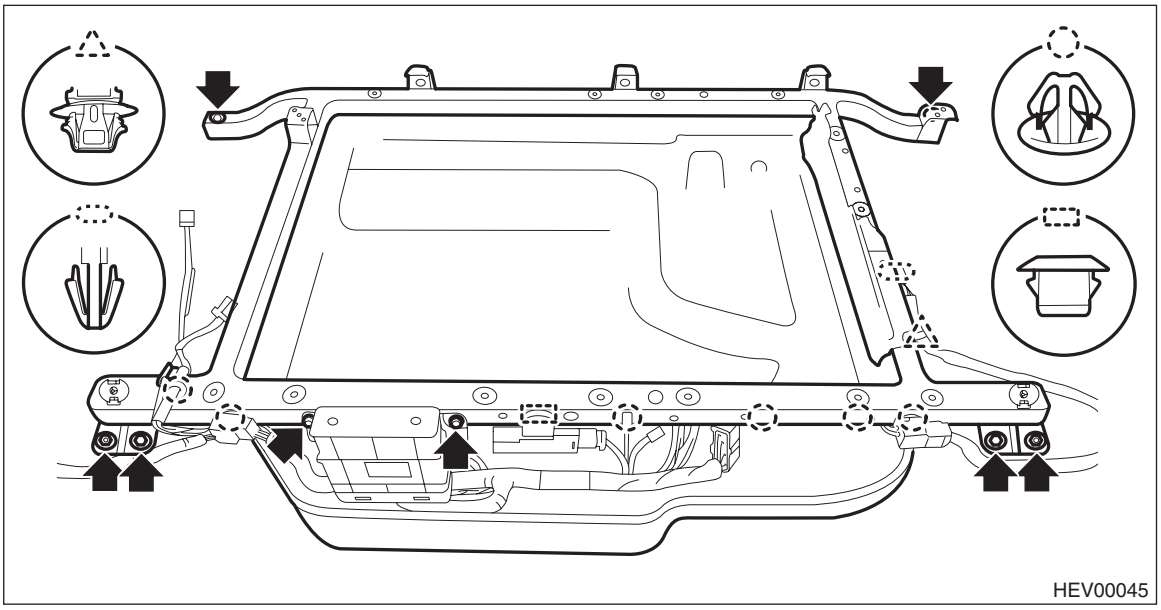
CAUTION:
Be careful not to damage the duct seal located underneath the high voltage battery.



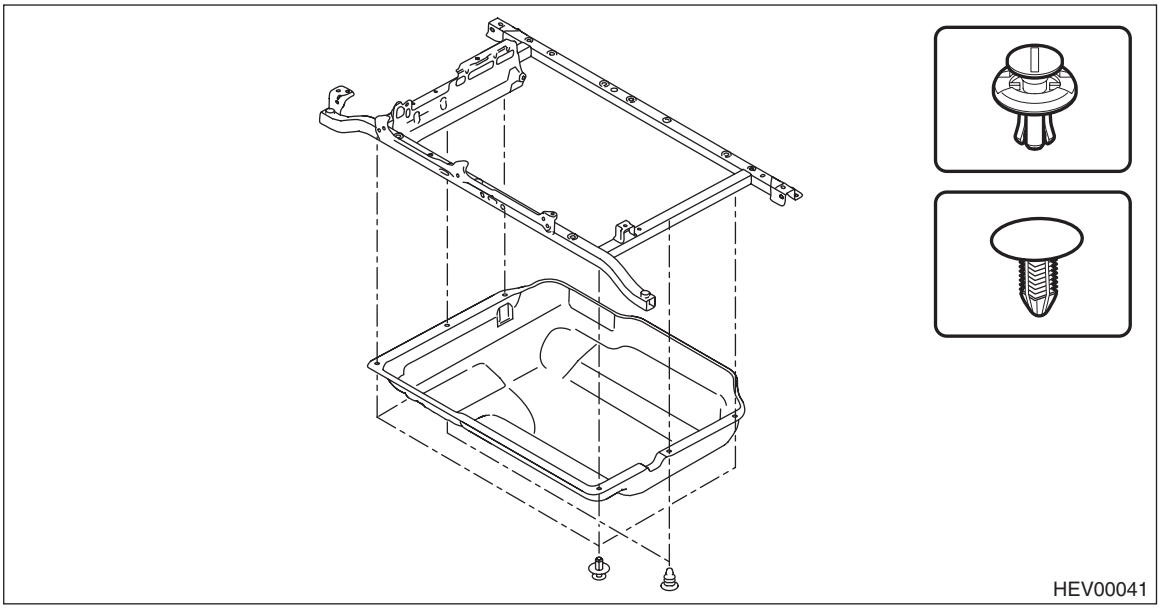
13) Remove the high voltage battery.

CAUTION:
• Since the high voltage battery weighs a lot, do not hold it by the area (a). Otherwise it may break or deform. Also, two persons must work together when removing the high voltage battery.
• The high voltage battery is a non-disassembly part. Do not try to remove the cover or other parts for disassembly.

(1) Disconnect the connector.
(2) Remove the high voltage battery from the high voltage battery frame assembly.



14) Remove the high voltage battery frame assembly.
(1) Remove the connectors and bolts, and remove the electric oil pump inverter.



(2) Remove the connector clip and release the harness clip.

(3) Remove the bolts and nuts to remove the high voltage battery frame assembly from the vehicle.

(4) Release the clips, and remove the cover - battery LWR from the high voltage battery frame assembly.

B: INSTALLATION

WARNING:
The hybrid system includes a high voltage circuit. Mishandling could cause accidents such as electric shock or leak. Always check "CAUTION (HYBRID SYSTEM)" and perform the proper operation. <Ref. to PC-7, CAUTION (HYBRID SYSTEM), Precaution.>

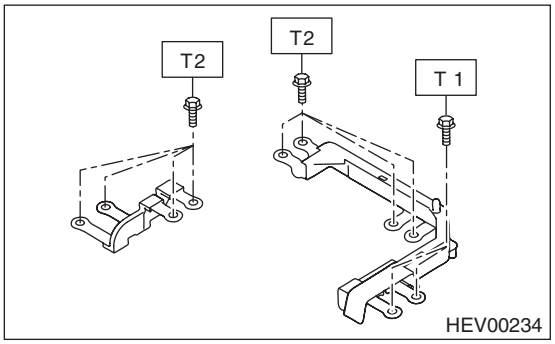
CAUTION:
When replacing the high voltage battery with a new part, be sure to use the service disconnect plug bundled with the new battery. Also, never use the service disconnect plug from the old high voltage battery for another vehicle.

1) Install the cover - battery LWR.
2) Install the high voltage battery frame assembly.

Tightening torque:
24.5 N·m (2.5 kgf-m, 18.1 ft-lb)

3) Install the electric oil pump inverter.

Tightening torque:
22 N·m (2.2 kgf-m, 16.2 ft-lb)



4) Mount the high voltage battery on the high voltage battery frame assembly, then install the inverter assembly.

CAUTION:
- **If the duct seal is damaged, replace it with a new part.**
- **Be sure that the high voltage battery is securely attached to the cooling duct inverter duct.**

Tightening torque:
High voltage battery and inverter assembly: 22 N·m (2.2 kgf-m, 16.2 ft-lb)
Ground terminal: 6.5 N·m (0.7 kgf-m, 4.8 ft-lb)

5) Connect the bus bar.

Tightening torque:
T1: 6.5 N·m (0.7 kgf-m, 4.8 ft-lb)
T2: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

6) Install the inverter shield.

Tightening torque:
6.5 N·m (0.7 kgf-m, 4.8 ft-lb)

7) Install the cooling fan assembly. <Ref. to HEV-73, COOLING FAN ASSEMBLY, INSTALLATION, High Voltage Battery Cooling System.>
8) Install the cooling duct front (rear). <Ref. to HEV-71, COOLING DUCT FRONT (REAR), INSTALLATION, High Voltage Battery Cooling System.>

9) Connect the ground terminal and the power cable.

CAUTION:
• When connecting the power cable, pay attention to the letters (U, V, and W) imprinted on the drive motor inverter amperage sensor body as well as on the protector of the power cable.
• Connect the power cable properly referring to the letters (U, V, and W) imprinted on the electric oil pump inverter body. The power cable with the identification tape is connected to (U) and the power cable with a claw is connected to (V).
• Do not apply excessive force to the terminals and watch to make sure the cable is not damaged or pinched.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
10) Install the cover - shield battery and the cover - shield seat.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
11) Install the ground terminal and inverter cover.

CAUTION:
Check that the sound proofing material on the inverter cover is not detached or damaged.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
12) Install the battery cover.

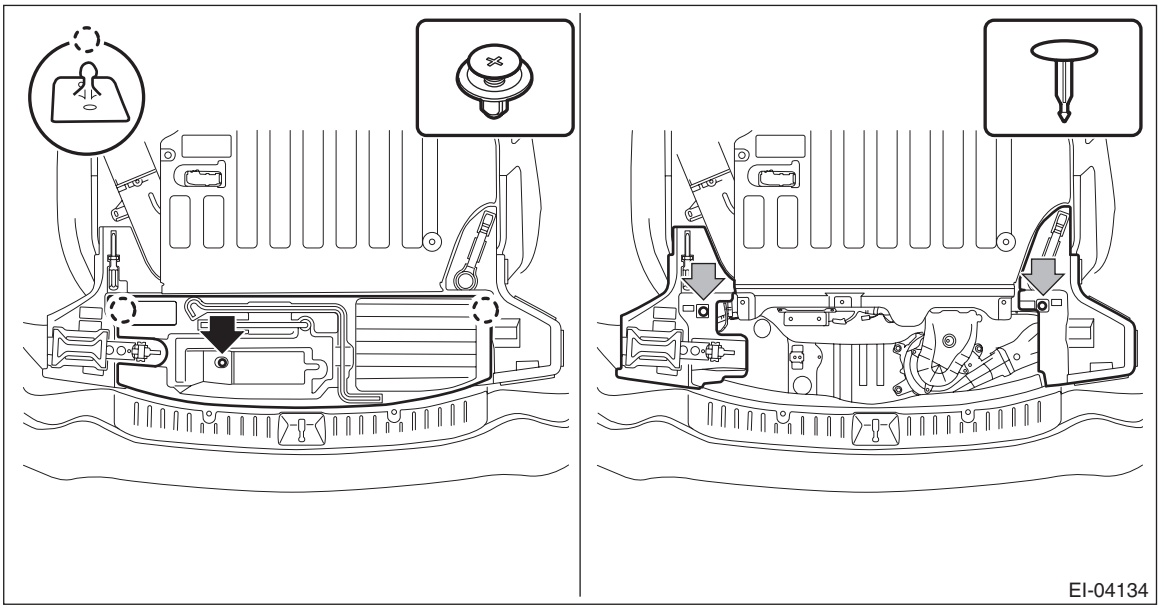
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
13) Install the spacer - rear floor front.
14) Install the rear seat cushion. <Ref. to SE-27, INSTALLATION, Rear Seat.>
15) Install the sub-trunk assembly and the spacer - rear floor side.
16) Install the service disconnect plug. <Ref. to HEV-16, INSTALLATION, Service Plug.>

C: INSPECTION

1) Check that the high voltage battery has no deformation, cracks or other damages. <Ref. to PC-14, PRECAUTION FOR HIGH VOLTAGE BATTERY, CAUTION (HYBRID SYSTEM), Precaution.>
2) Connect the Subaru Select Monitor, and read the Diagnostic Trouble Code (DTC). If any diagnosis code (DTC) is displayed, refer to “List of Diagnostic Trouble Code (DTC)” in “HYBRID ELECTRIC VEHICLE (DIAGNOSTICS)” section. <Ref. to HEV(diag)-72, List of Diagnostic Trouble Code (DTC).>

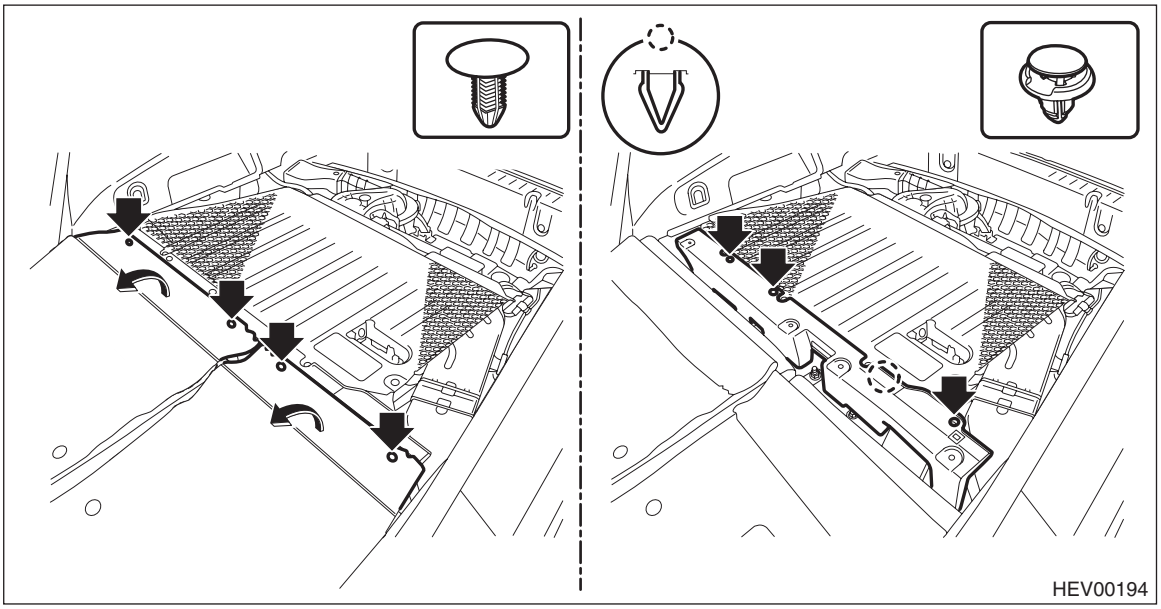
6. Battery Energy Control Module

A: NOTE



The battery energy control module is integral part of the high voltage battery. Refer to “High Voltage Battery” section for the work procedures. <Ref. to HEV-17, High Voltage Battery.>

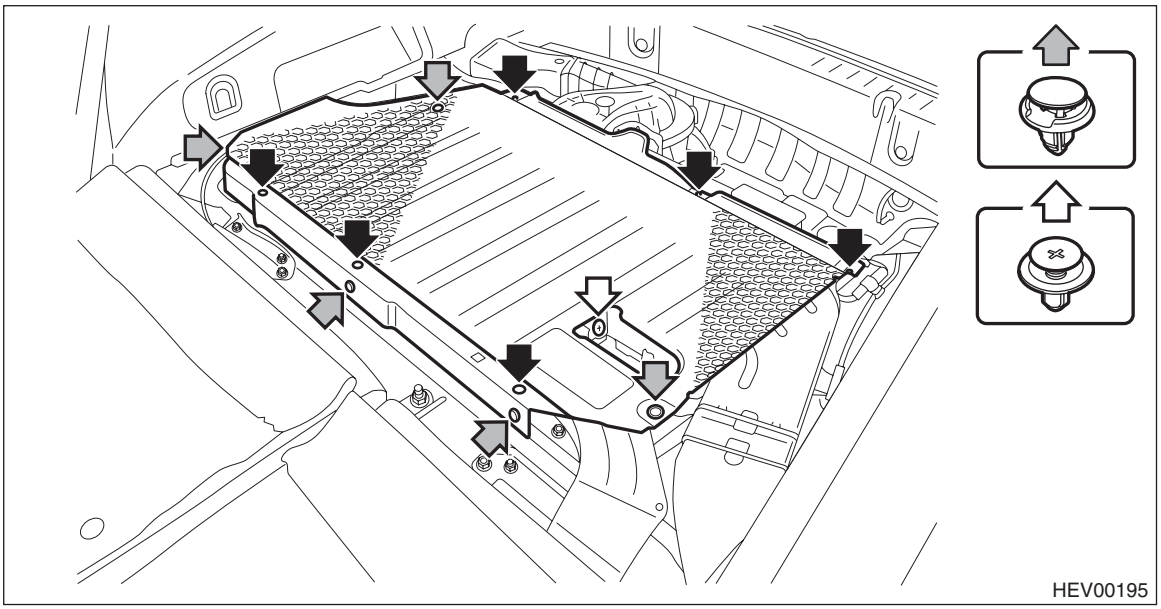
7. Drive Motor Inverter Current Sensor



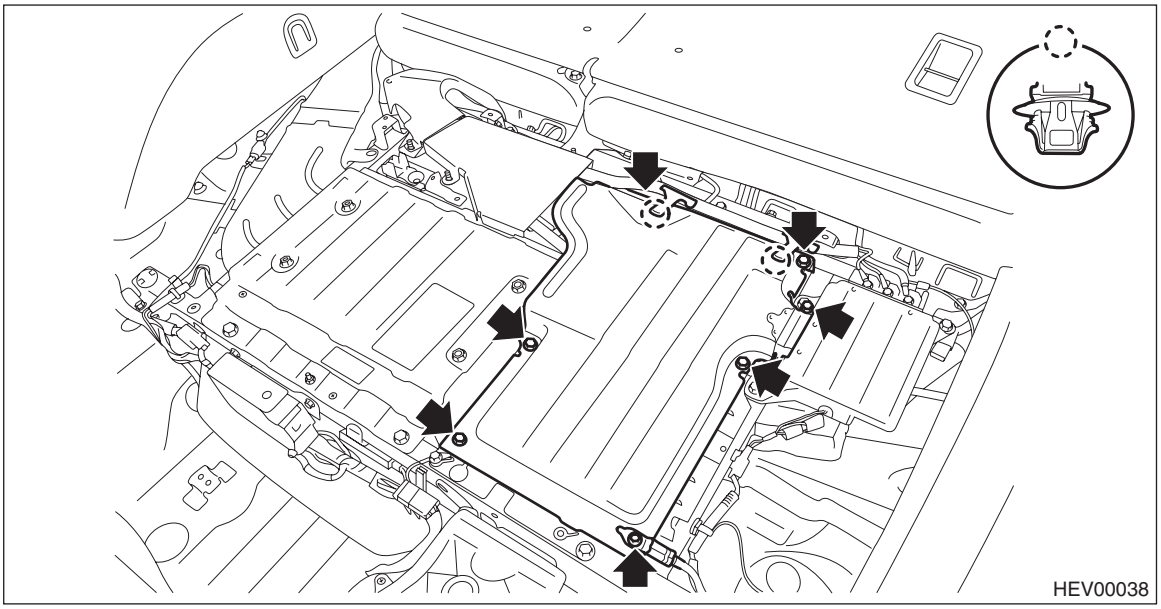
A: REMOVAL

WARNING:
The hybrid system includes a high voltage circuit. Mishandling could cause accidents such as electric shock or leak. Always check "CAUTION (HYBRID SYSTEM)" and perform the proper operation. <Ref. to PC-7, CAUTION (HYBRID SYSTEM), Precaution.>

1) Remove the service disconnect plug. <Ref. to HEV-15, REMOVAL, Service Plug.>
2) Release the clips and claws, then detach the sub-trunk assembly and the spacer - rear floor side.

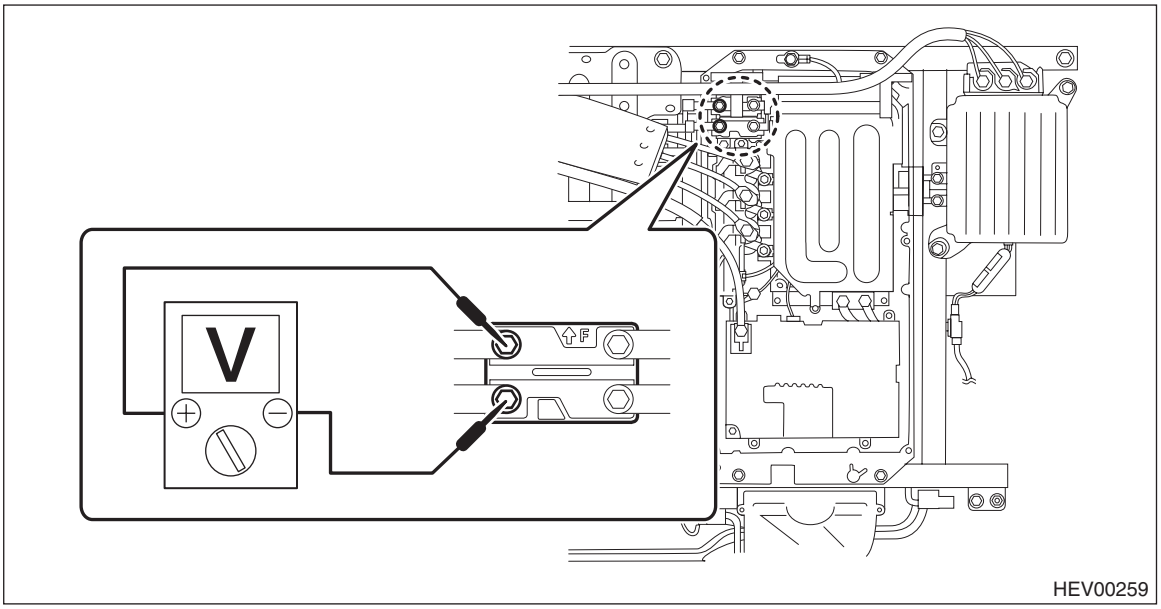


3) Remove the rear seat cushion and fold the backrest assemblies LH and RH. <Ref. to SE-24, REMOVAL, Rear Seat.>
4) Remove the spacer - rear floor front.
   (1) Release the clips, and fold back the bottom of the cover COMPL - rear backrest LH and RH of the rear seat back.
   (2) Release the clips and claws, then detach the spacer - rear floor front.



5) Remove the TORX®bolts, release the clips, and then remove the battery cover.

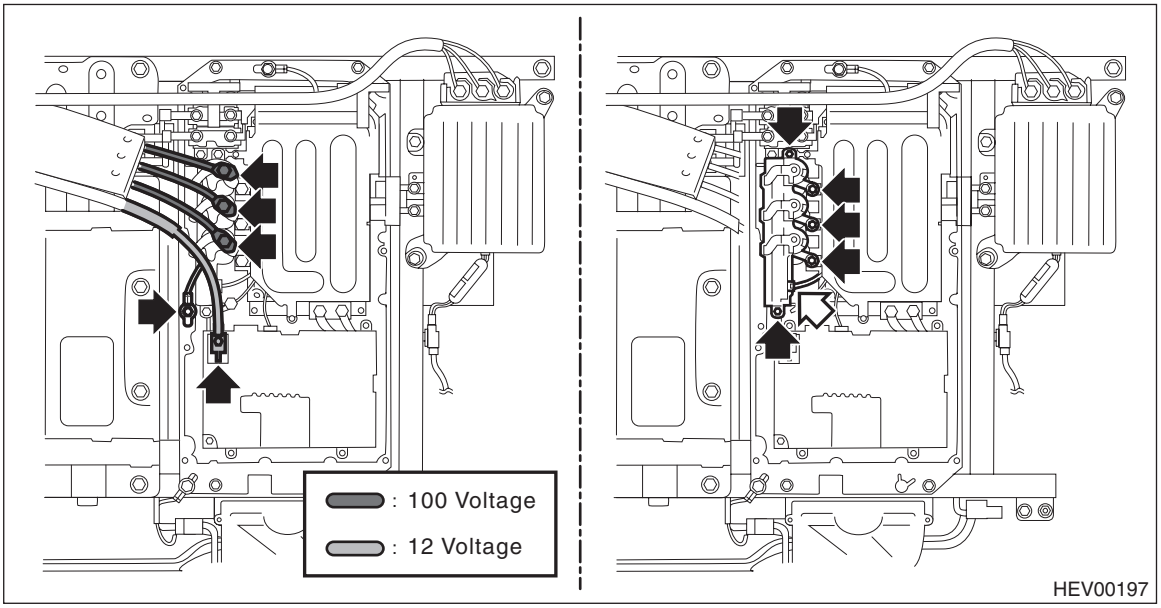
Preparation tool:
TORX® T30



6) Remove the inverter cover.
(1) Remove the bolts and ground terminal.
(2) Release the cable clips, and remove the inverter cover.

7) Perform zero-voltage test.
(1) Measure the voltage of the high voltage DC line at the high voltage battery side of the electric noise filter.

Preparation tool:
Insulation multimeter



Standard: 0 V

8) Remove the drive motor inverter amperage sensor.

CAUTION:
- **Be careful not to use excessive force when disconnecting the power cable to avoid any damage.**
- **Always wrap the disconnected power cable terminals with insulating tape.**

(1) Remove the bolts and disconnect the ground terminal and the power cable.
(2) Remove the connectors and bolts, and remove the drive motor inverter amperage sensor.

(3) Remove the bus bar from the drive motor inverter amperage sensor.

B: INSTALLATION

WARNING:
The hybrid system includes a high voltage circuit. Mishandling could cause accidents such as electric shock or leak. Always check "CAUTION (HYBRID SYSTEM)" and perform the proper operation. <Ref. to PC-7, CAUTION (HYBRID SYSTEM), Precaution.>

1) Install the drive motor inverter amperage sensor.

Tightening torque:
6.5 N·m (0.7 kgf-m, 4.8 ft-lb)

2) Connect the ground terminal and the power cable.

CAUTION:
• When connecting the power cable, pay attention to the letters (U, V, and W) imprinted on the drive motor inverter amperage sensor body as well as on the protector of the power cable.
• Do not apply excessive force to the terminals and watch to make sure the cable is not damaged or pinched.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

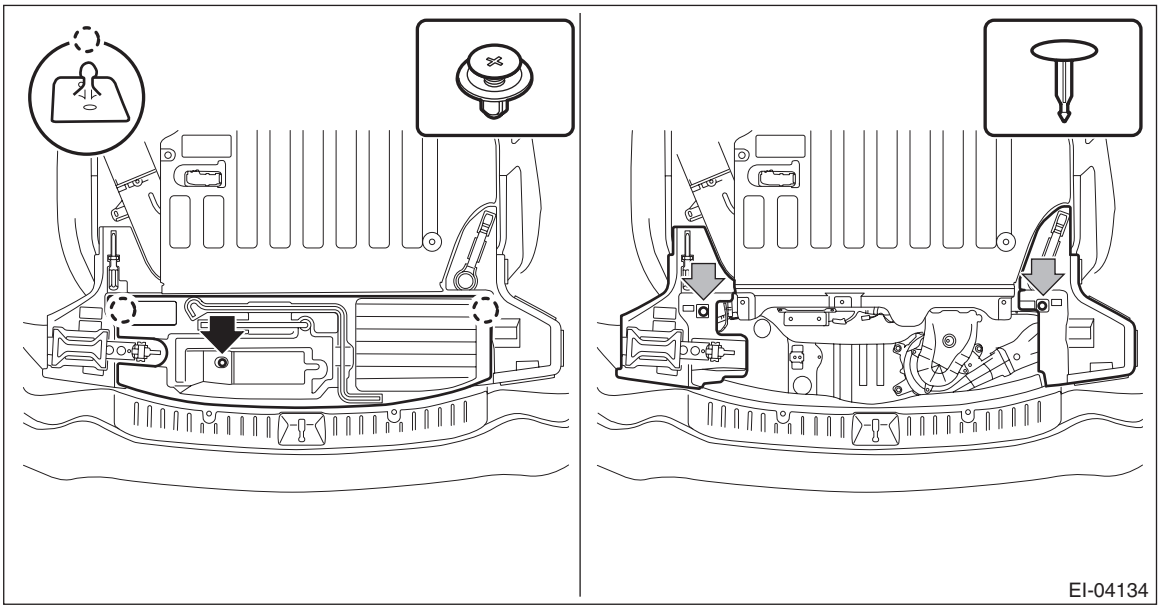
3) Install the ground terminal and inverter cover.

CAUTION:
Check that the sound proofing material on the inverter cover is not detached or damaged.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

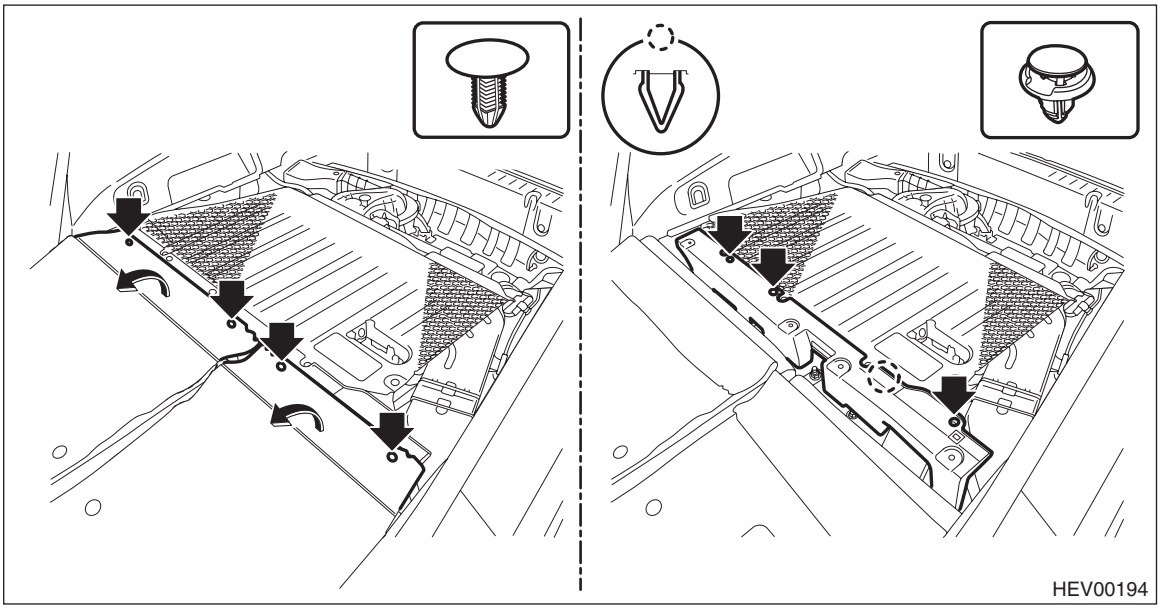
4) Install the battery cover.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



5) Install the spacer - rear floor front.
6) Install the rear seat cushion. <Ref. to SE-27, INSTALLATION, Rear Seat.>
7) Install the sub-trunk assembly and the spacer - rear floor side.
8) Install the service disconnect plug. <Ref. to HEV-16, INSTALLATION, Service Plug.>

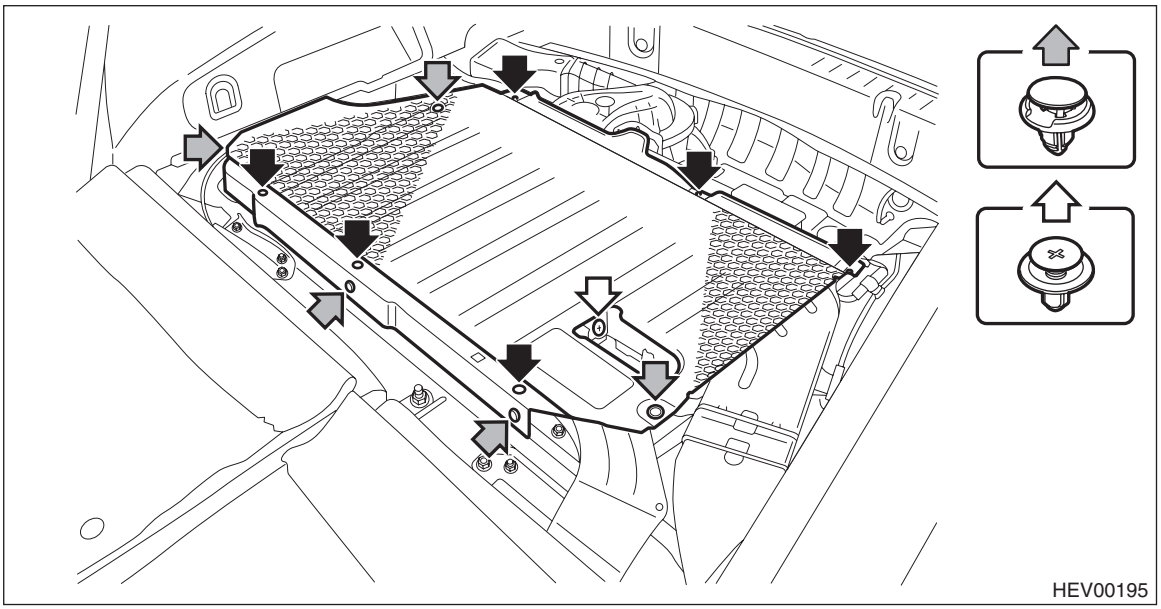
8. Noise Filter



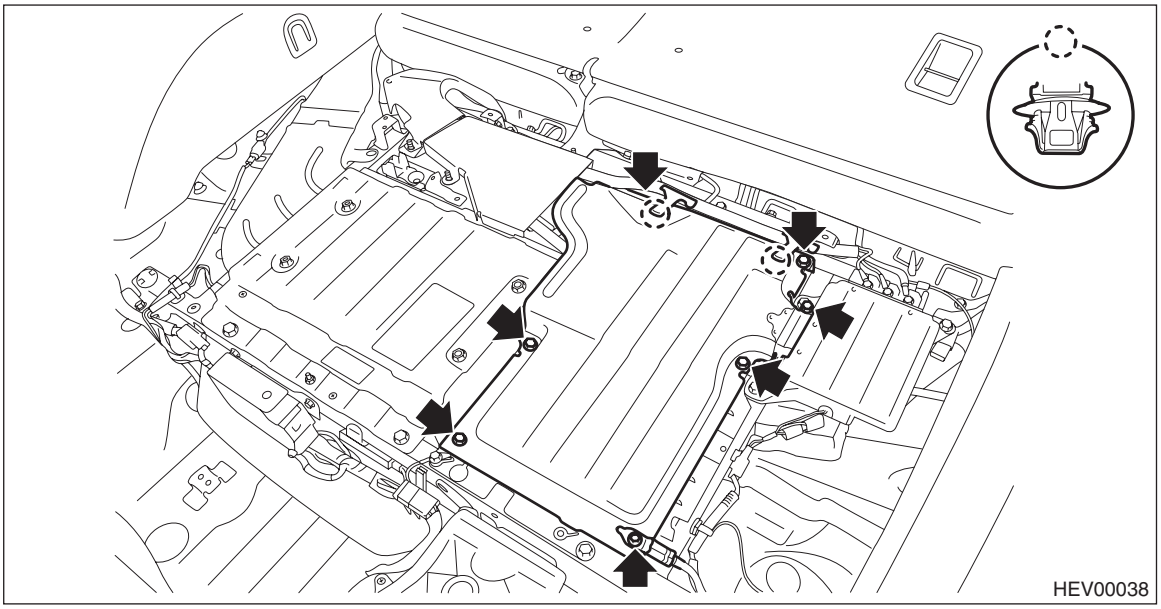
A: REMOVAL

WARNING:
The hybrid system includes a high voltage circuit. Mishandling could cause accidents such as electric shock or leak. Always check "CAUTION (HYBRID SYSTEM)" and perform the proper operation. <Ref. to PC-7, CAUTION (HYBRID SYSTEM), Precaution.>

1) Remove the service disconnect plug. <Ref. to HEV-15, REMOVAL, Service Plug.>
2) Release the clips and claws, then detach the sub-trunk assembly and the spacer - rear floor side.

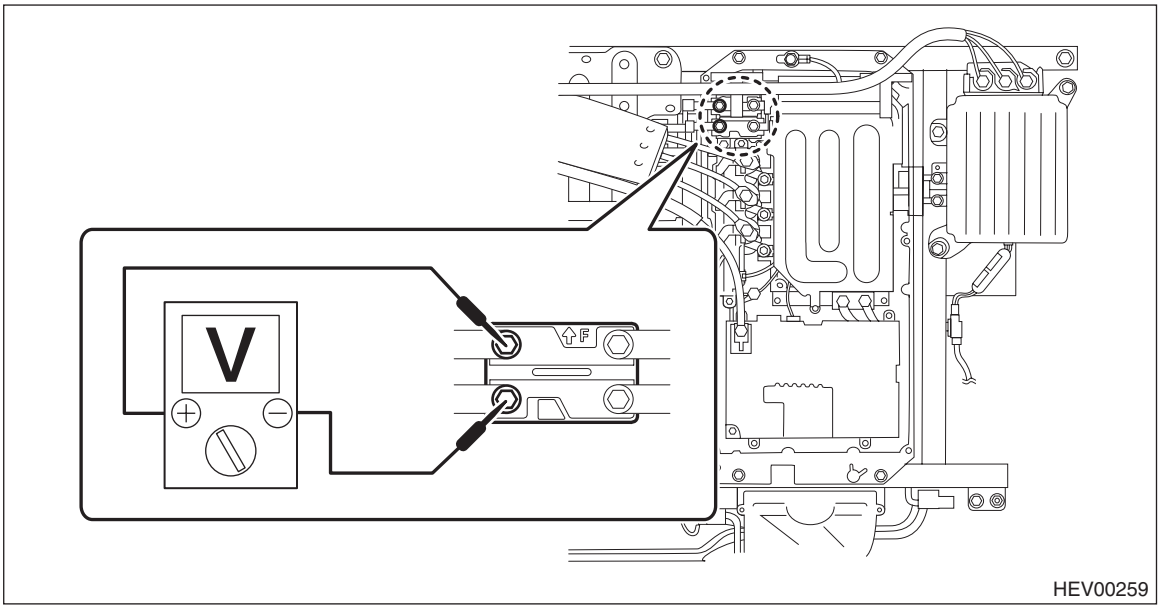


3) Remove the rear seat cushion and fold the backrest assemblies LH and RH. <Ref. to SE-24, REMOVAL, Rear Seat.>
4) Remove the spacer - rear floor front.
   (1) Release the clips, and fold back the bottom of the cover COMPL - rear backrest LH and RH of the rear seat back.
   (2) Release the clips and claws, then detach the spacer - rear floor front.

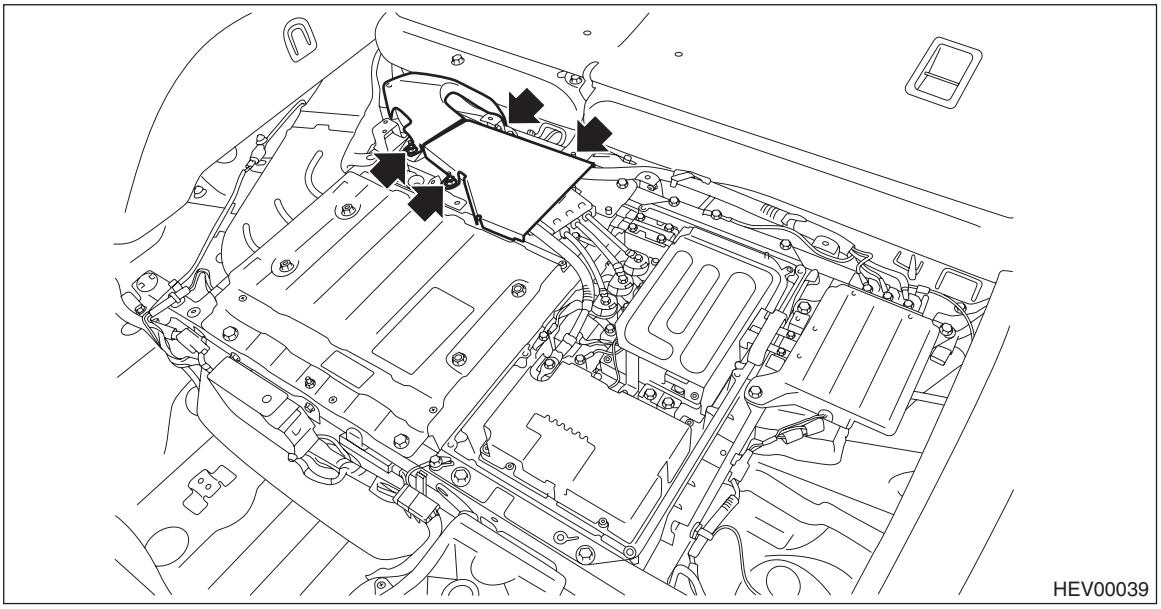


5) Remove the TORX®bolts, release the clips, and then remove the battery cover.

Preparation tool:
TORX® T30



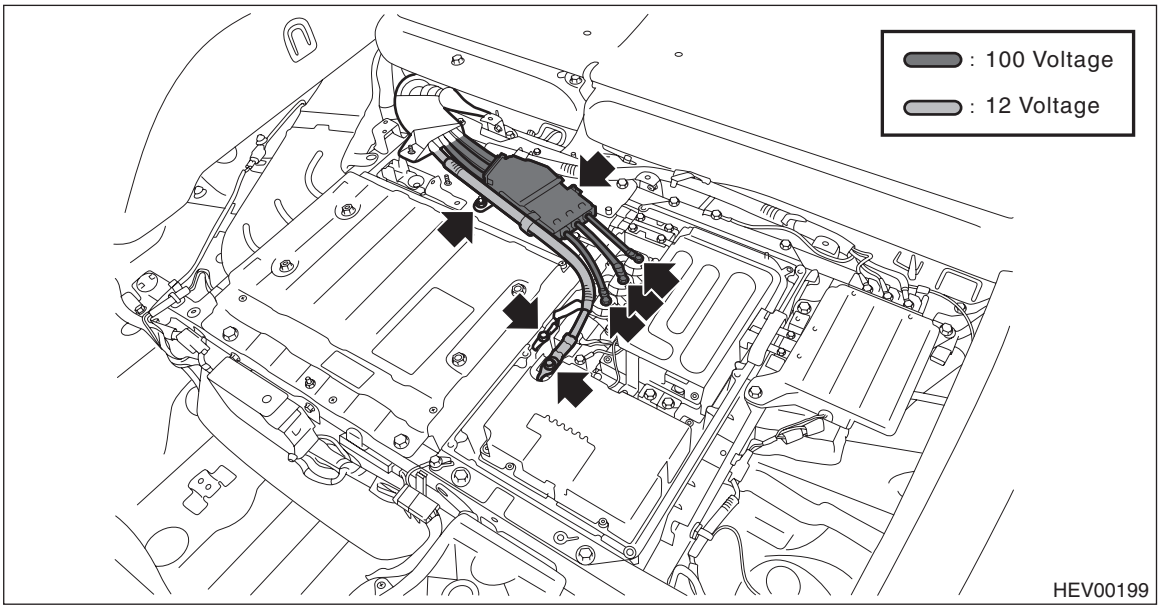
6) Remove the inverter cover.
(1) Remove the bolts and ground terminal.
(2) Release the cable clips, and remove the inverter cover.



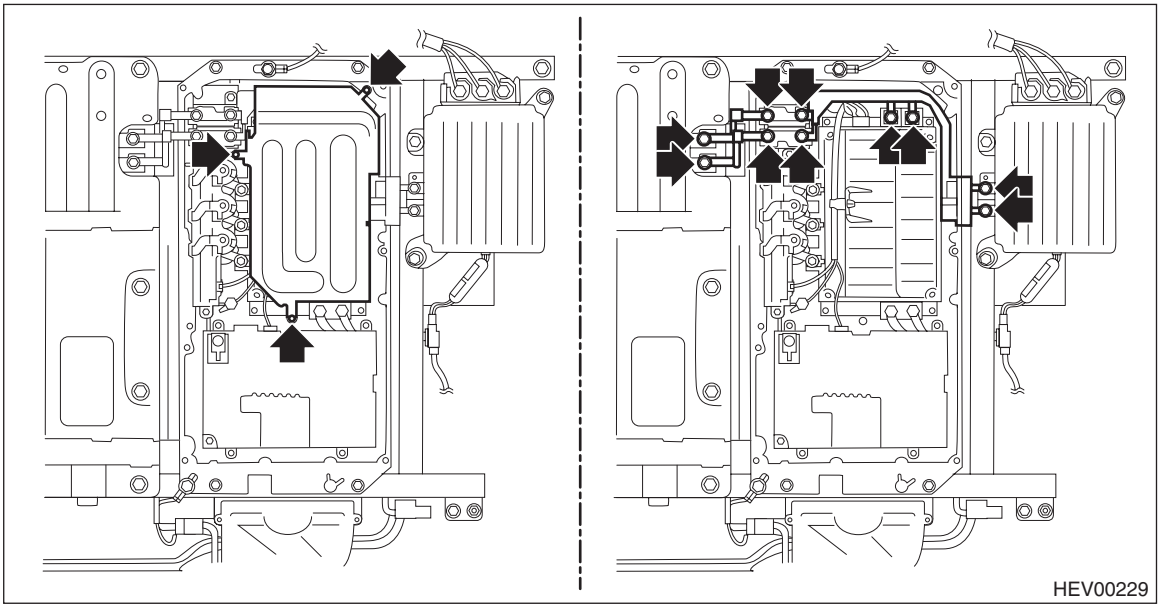
7) Perform zero-voltage test.
(1) Measure the voltage of the high voltage DC line at the high voltage battery side of the electric noise filter.

Preparation tool:
Insulation multimeter

Standard: 0 V

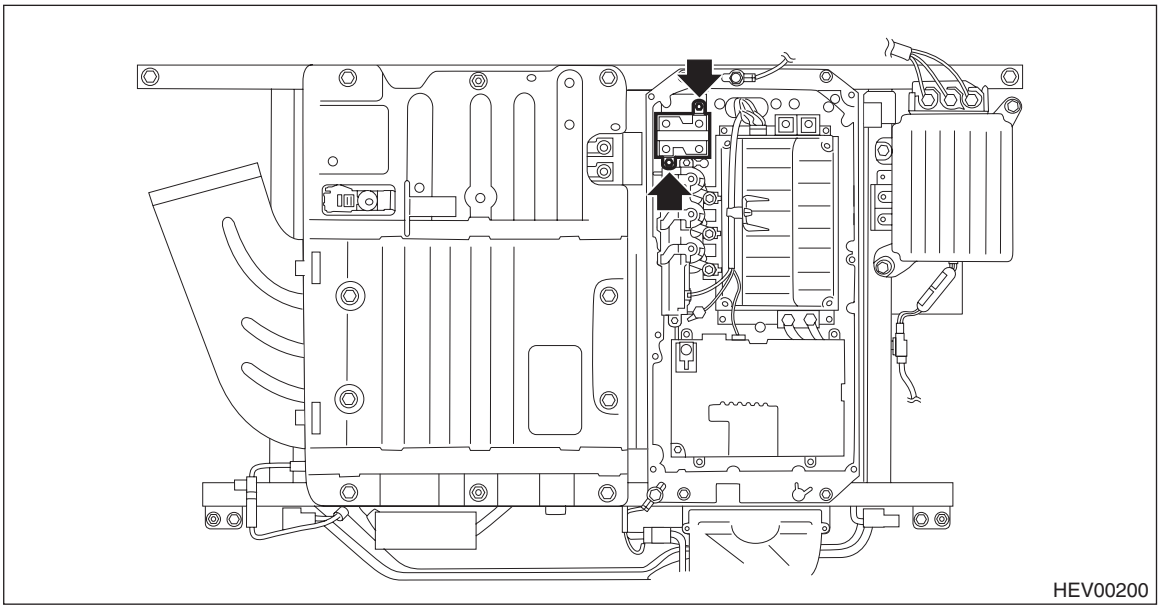


8) Remove the nut and remove the cover - shield battery and the cover - shield seat.



9) Remove the bolts and nuts and disconnect the ground terminal and the power cable.

CAUTION:
- **Be careful not to use excessive force when disconnecting the power cable to avoid any damage.**
- **Always wrap the disconnected power cable terminals with insulating tape.**



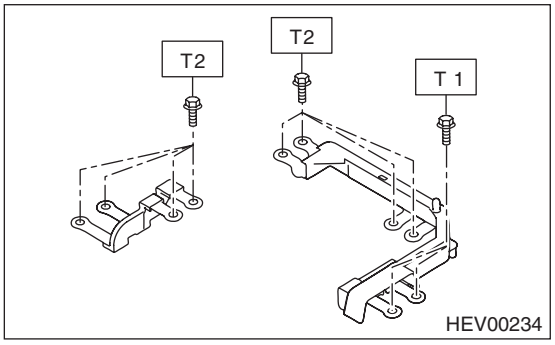
10) Remove the electric noise filter.
(1) Remove the bolts to remove the inverter shield.
(2) Remove the bolts and disconnect the bus bars between the high voltage battery and electric noise filter and between the electric noise filter and electric oil pump inverter respectively.

CAUTION:
Always wrap the high voltage battery terminal with insulating tape.

(3) Remove the bolts, and then remove the electric noise filter.

B: INSTALLATION

WARNING:
The hybrid system includes a high voltage circuit. Mishandling could cause accidents such as electric shock or leak. Always check "CAUTION (HYBRID SYSTEM)" and perform the proper operation. <Ref. to PC-7, CAUTION (HYBRID SYSTEM), Precaution.>



1) Install the electric noise filter.

NOTE:
The "F" mark of the electric noise filter should face toward the front of the vehicle when installed.

Tightening torque:
6.5 N·m (0.7 kgf-m, 4.8 ft-lb)

2) Connect the bus bar.

Tightening torque:
T1: 6.5 N·m (0.7 kgf-m, 4.8 ft-lb)
T2: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the inverter shield.

Tightening torque:
6.5 N·m (0.7 kgf-m, 4.8 ft-lb)

4) Connect the ground terminal and the power cable.

CAUTION:
• When connecting the power cable, pay attention to the letters (U, V, and W) imprinted on the drive motor inverter amperage sensor body as well as on the protector of the power cable.
• Do not apply excessive force to the terminals and watch to make sure the cable is not damaged or pinched.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
5) Install the cover - shield battery and the cover - shield seat.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
6) Install the ground terminal and inverter cover.

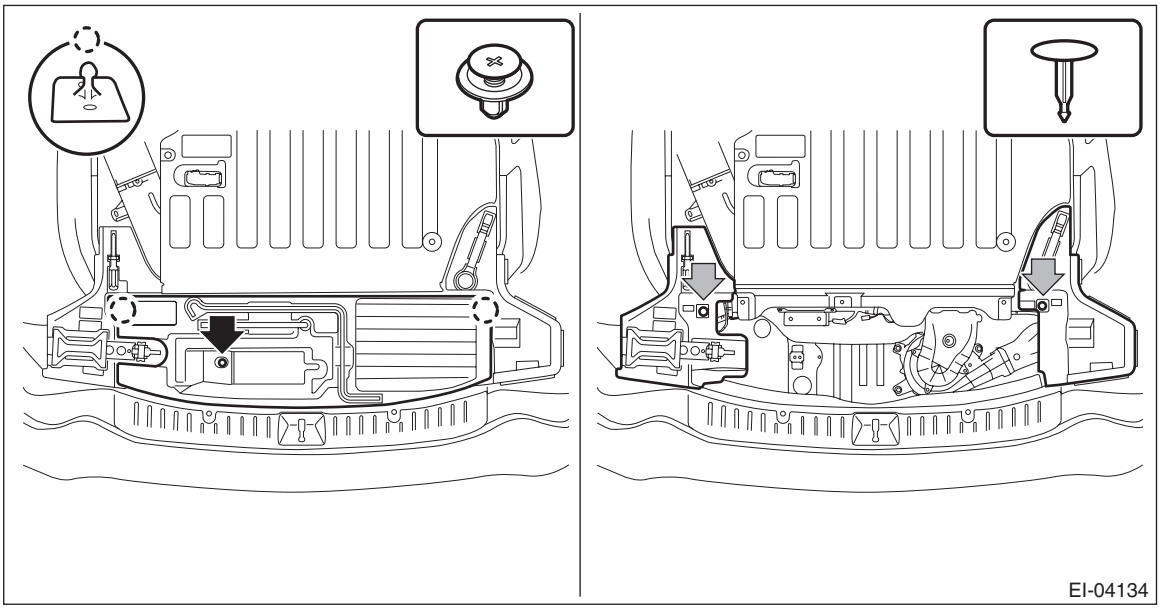
CAUTION:
Check that the sound proofing material on the inverter cover is not detached or damaged.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
7) Install the battery cover.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
8) Install the spacer - rear floor front.
9) Install the rear seat cushion. <Ref. to SE-27, INSTALLATION, Rear Seat.>
10) Install the sub-trunk assembly and the spacer - rear floor side.
11) Install the service disconnect plug. <Ref. to HEV-16, INSTALLATION, Service Plug.>

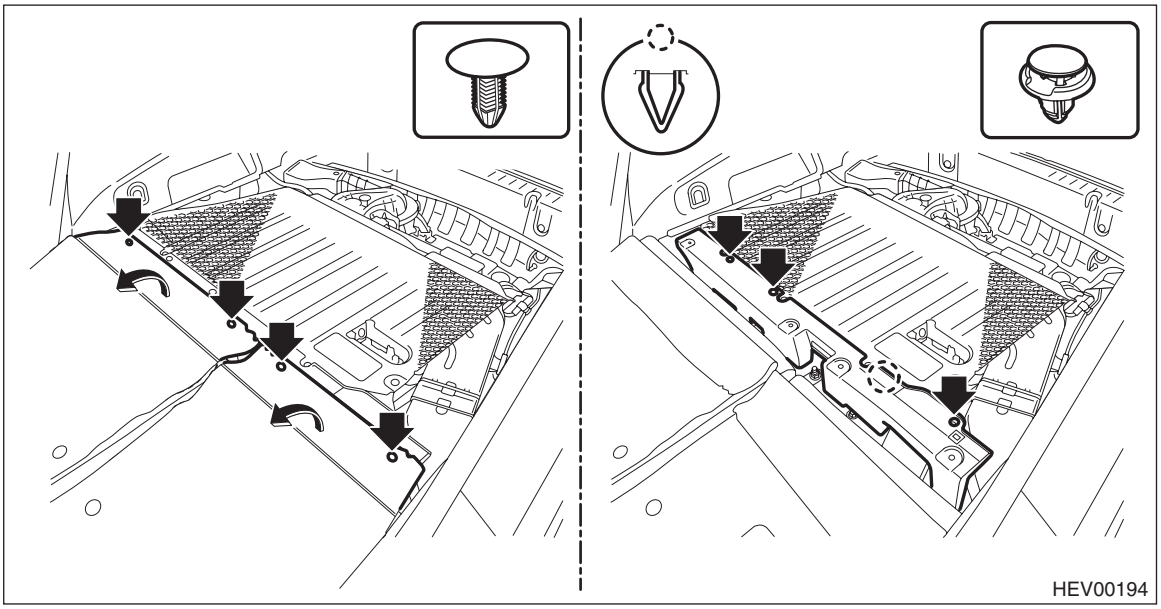
9. Hybrid Powertrain Control Module

A: NOTE



The hybrid powertrain control module is fixed to the engine control module (ECM) bracket. For operation procedures, refer to “FUEL INJECTION (FUEL SYSTEMS)” section. <Ref. to FU(H4DO(HEV))-86, Engine Control Module (ECM).>

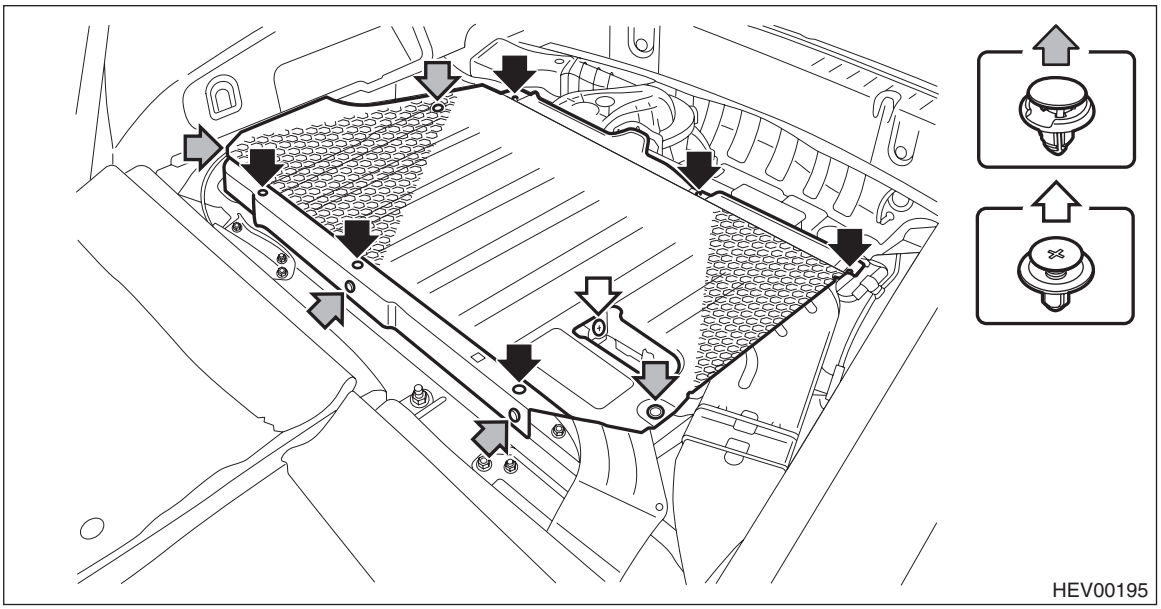
10.DC/DC Converter



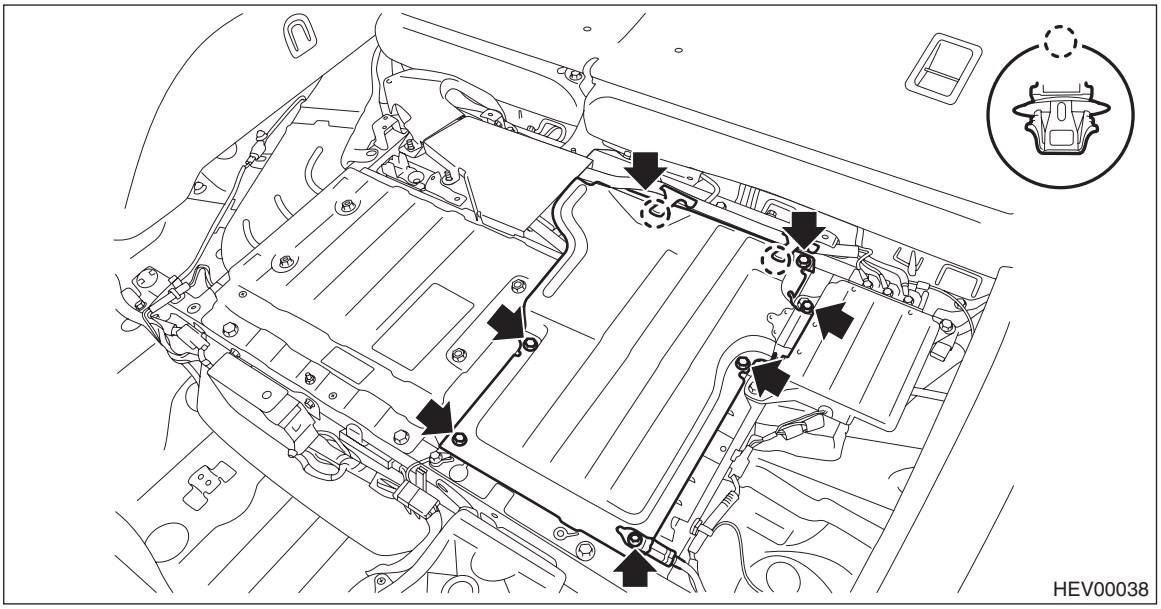
A: REMOVAL

WARNING:
The hybrid system includes a high voltage circuit. Mishandling could cause accidents such as electric shock or leak. Always check "CAUTION (HYBRID SYSTEM)" and perform the proper operation. <Ref. to PC-7, CAUTION (HYBRID SYSTEM), Precaution.>

1) Remove the service disconnect plug. <Ref. to HEV-15, REMOVAL, Service Plug.>
2) Release the clips and claws, then detach the sub-trunk assembly and the spacer - rear floor side.

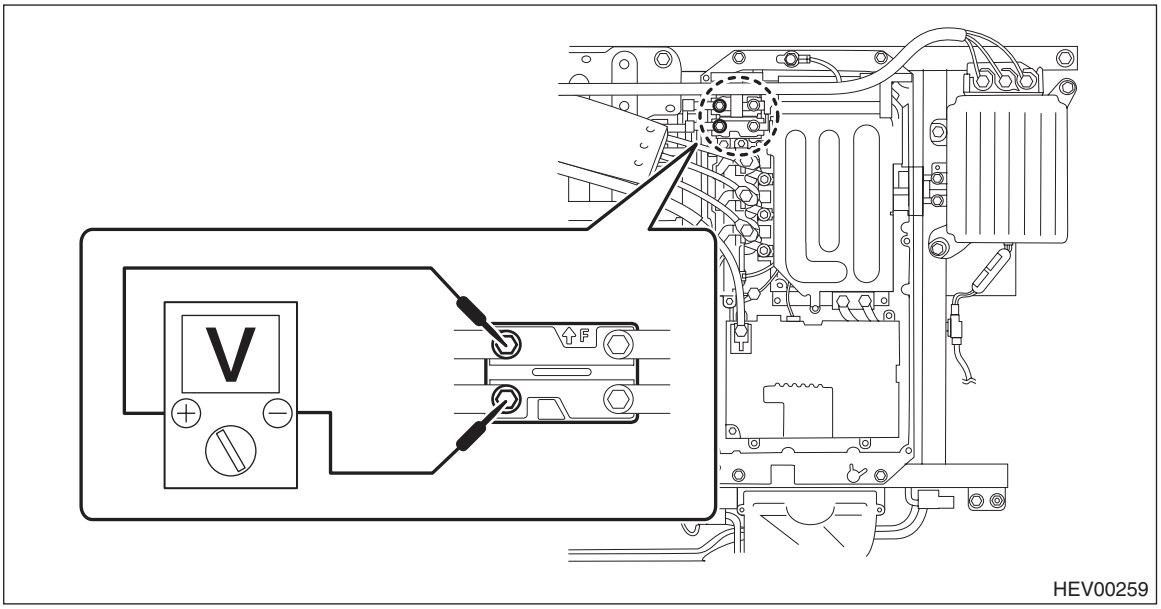


3) Remove the rear seat cushion and fold the backrest assemblies LH and RH. <Ref. to SE-24, REMOVAL, Rear Seat.>
4) Remove the spacer - rear floor front.
   (1) Release the clips, and fold back the bottom of the cover COMPL - rear backrest LH and RH of the rear seat back.
   (2) Release the clips and claws, then detach the spacer - rear floor front.



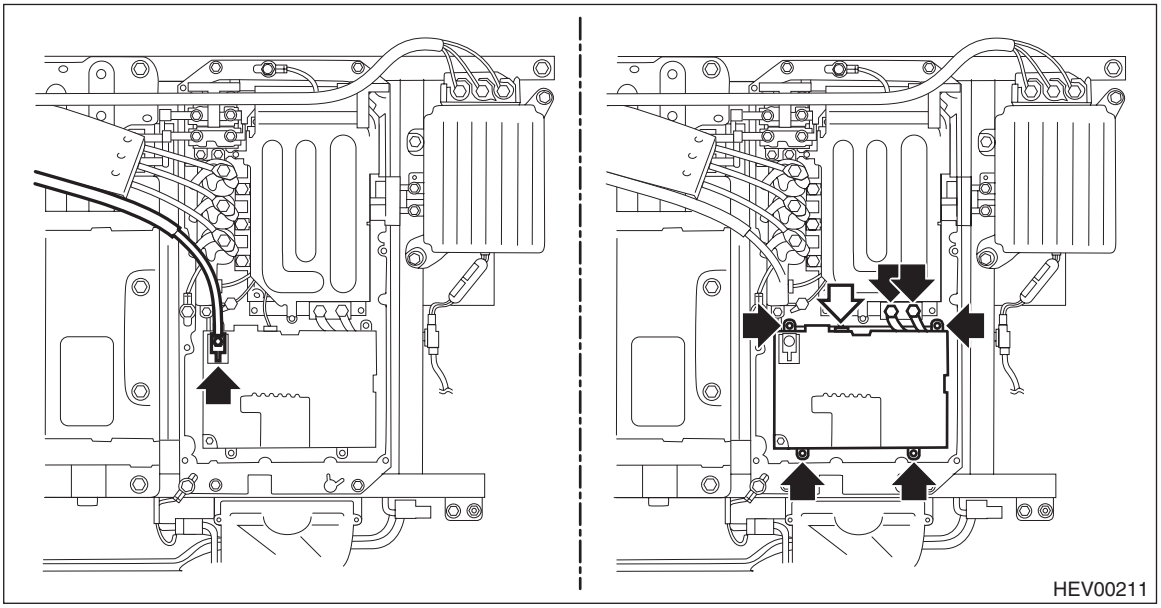
5) Remove the TORX®bolts, release the clips, and then remove the battery cover.

Preparation tool:
TORX® T30



6) Remove the inverter cover.
(1) Remove the bolts and ground terminal.
(2) Release the cable clips, and remove the inverter cover.

7) Perform zero-voltage test.
(1) Measure the voltage of the high voltage DC line at the high voltage battery side of the electric noise filter.



Preparation tool:
Insulation multimeter

Standard: 0 V

8) Remove the DC/DC converter.
(1) Remove the bolt and disconnect the power cable (12 V).

CAUTION:
Be careful not to use excessive force when disconnecting the power cable to avoid any damage.
(2) Remove the bolts, then disconnect the bus bar.
(3) Remove the connectors and bolts, and remove the DC/DC converter.

B: INSTALLATION

WARNING:
The hybrid system includes a high voltage circuit. Mishandling could cause accidents such as electric shock or leak. Always check "CAUTION (HYBRID SYSTEM)" and perform the proper operation. <Ref. to PC-7, CAUTION (HYBRID SYSTEM), Precaution.>

1) Install the DC/DC converter.

Tightening torque:
6.5 N·m (0.7 kgf-m, 4.8 ft-lb)

2) Connect the bus bar.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Connect the power cable (12 V).

CAUTION:
Do not apply excessive force to the terminals and watch to make sure the cable is not damaged or pinched.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

4) Install the ground terminal and inverter cover.

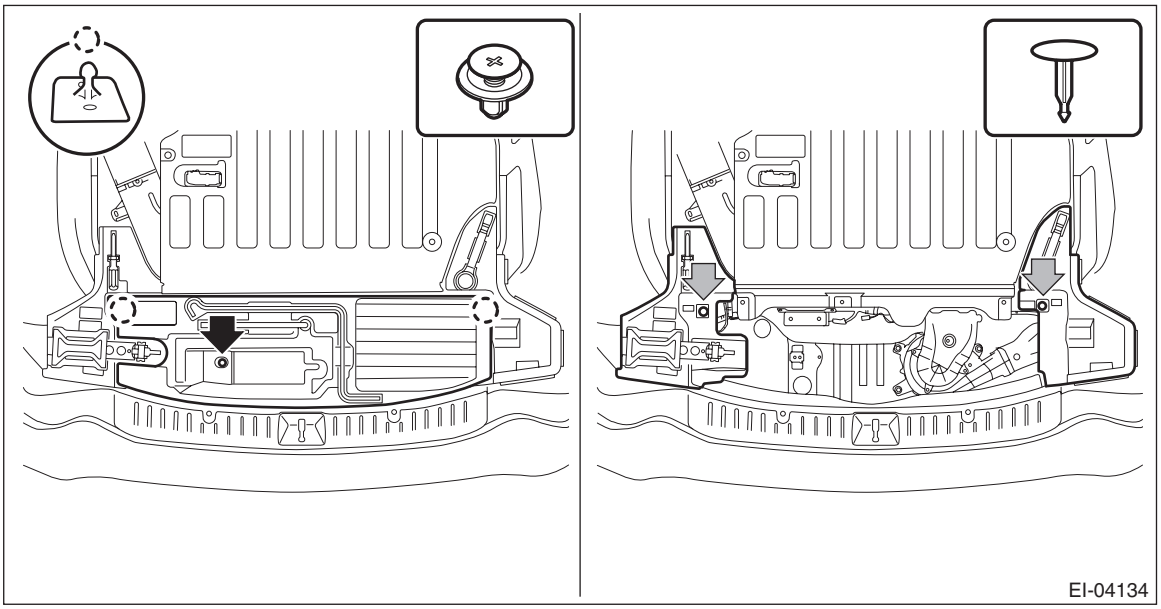
CAUTION:
Check that the sound proofing material on the inverter cover is not detached or damaged.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

5) Install the battery cover.

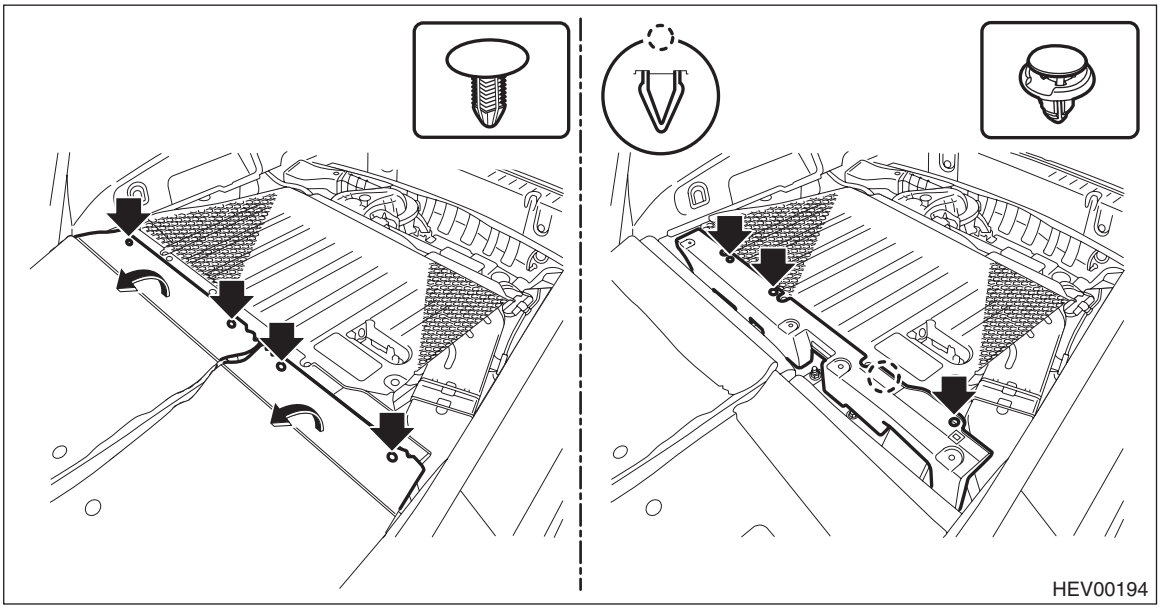
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

6) Install the spacer - rear floor front.
7) Install the rear seat cushion. <Ref. to SE-27, INSTALLATION, Rear Seat.>
8) Install the sub-trunk assembly and the spacer - rear floor side.
9) Install the service disconnect plug. <Ref. to HEV-16, INSTALLATION, Service Plug.>



11.Inverter

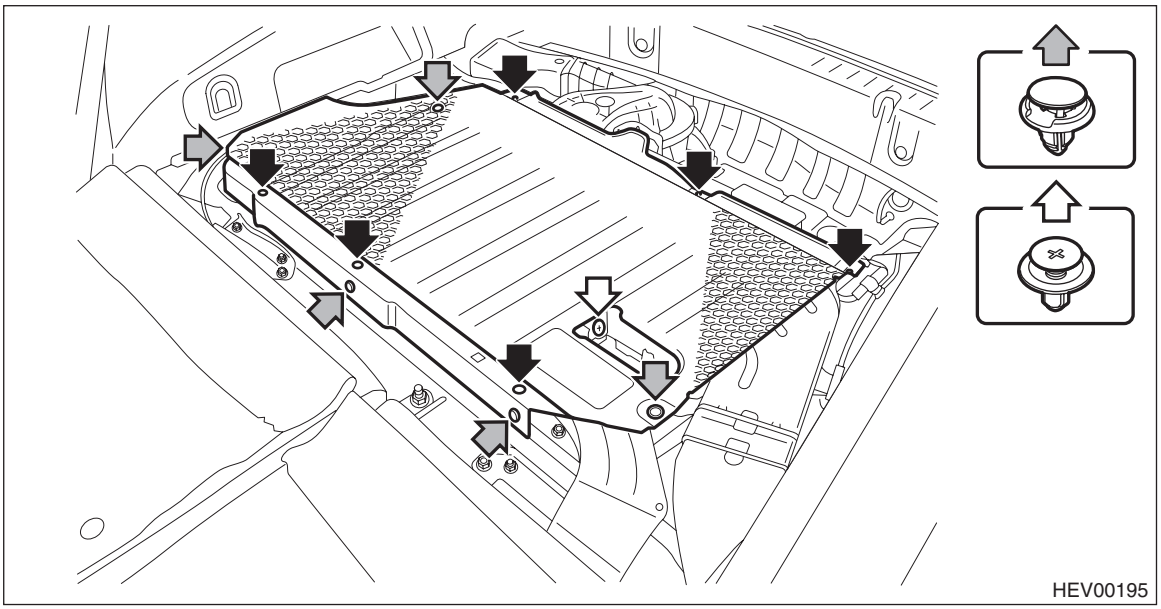
A: REMOVAL



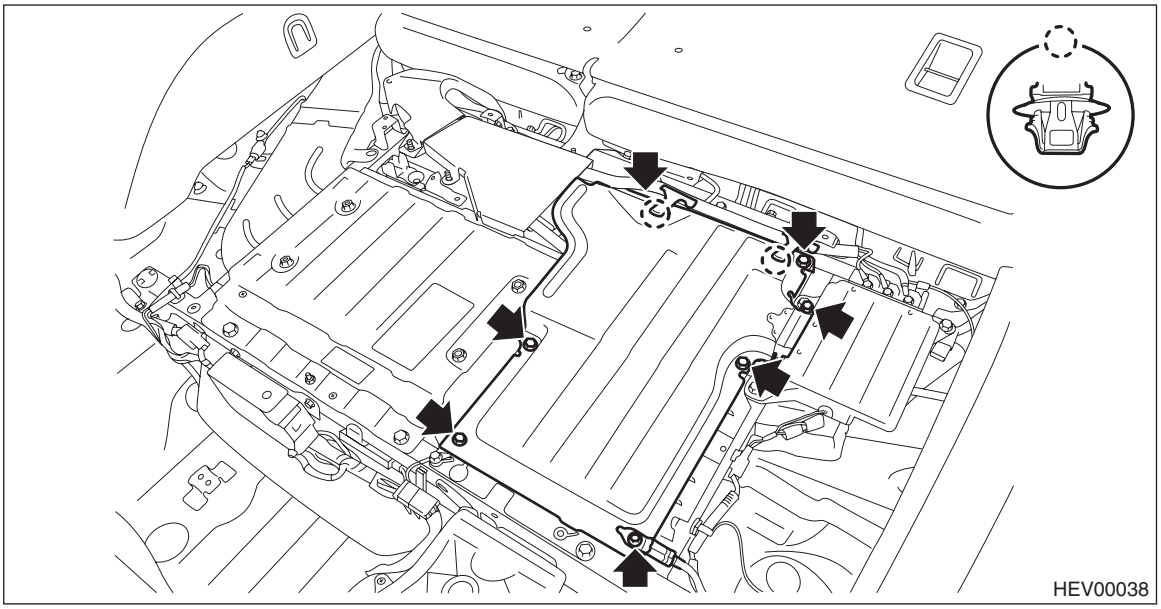
1. DRIVE MOTOR INVERTER

WARNING:
The hybrid system includes a high voltage circuit. Mishandling could cause accidents such as electric shock or leak. Always check "CAUTION (HYBRID SYSTEM)" and perform the proper operation. <Ref. to PC-7, CAUTION (HYBRID SYSTEM), Precaution.>

1) Remove the service disconnect plug. <Ref. to HEV-15, REMOVAL, Service Plug.>
2) Release the clips and claws, then detach the sub-trunk assembly and the spacer - rear floor side.

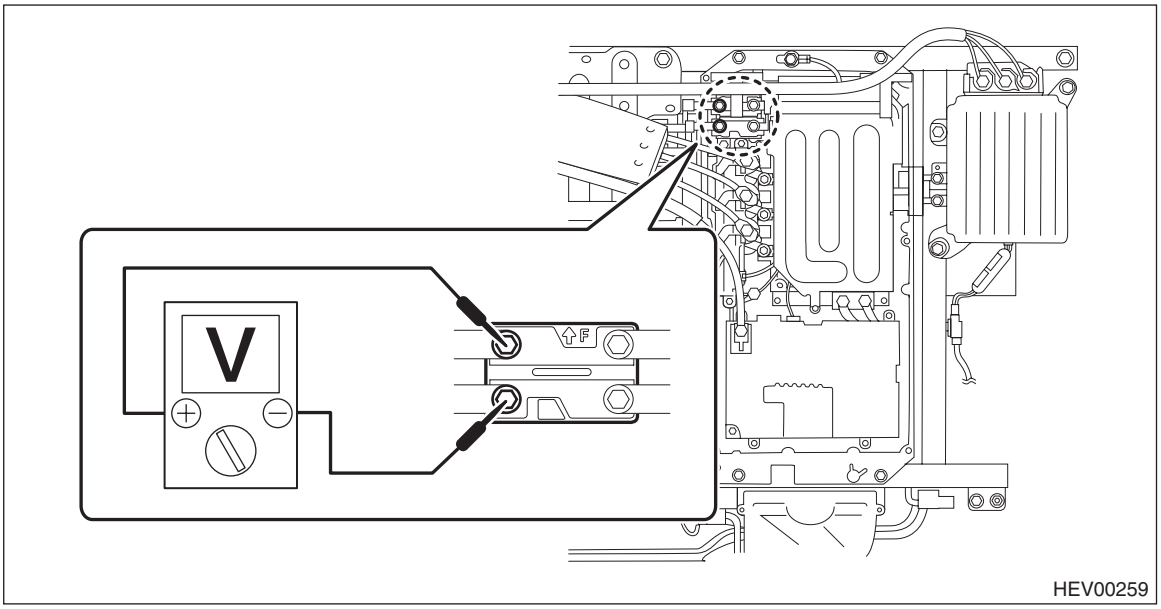


3) Remove the rear seat cushion and fold the backrest assemblies LH and RH. <Ref. to SE-24, REMOVAL, Rear Seat.>
4) Remove the spacer - rear floor front.
   (1) Release the clips, and fold back the bottom of the cover COMPL - rear backrest LH and RH of the rear seat back.
   (2) Release the clips and claws, then detach the spacer - rear floor front.

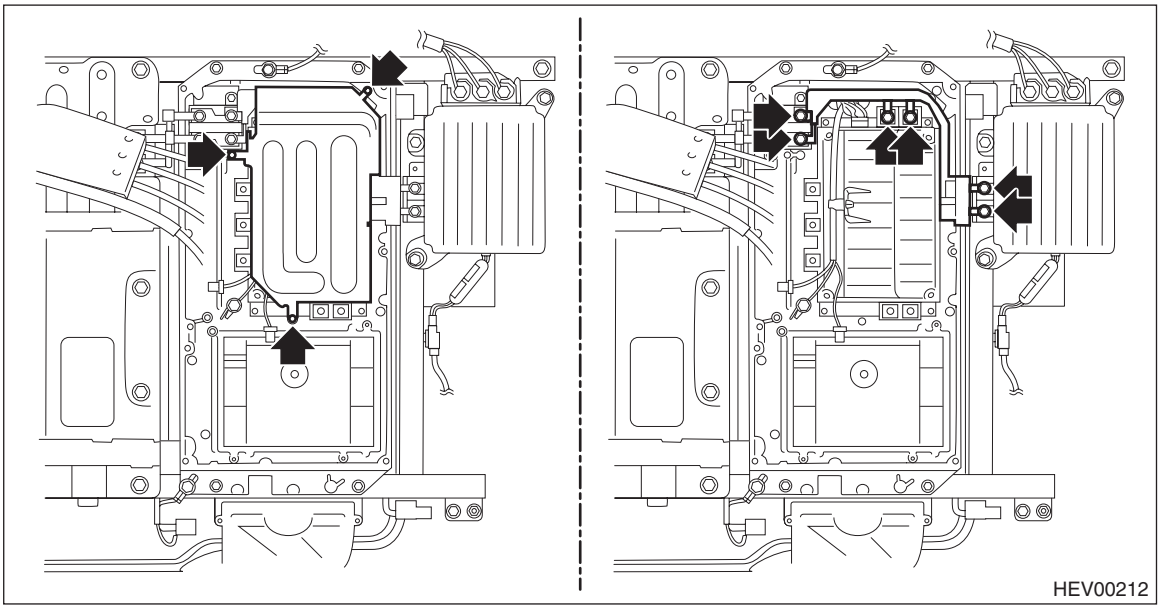


5) Remove the TORX®bolts, release the clips, and then remove the battery cover.

Preparation tool:
TORX® T30



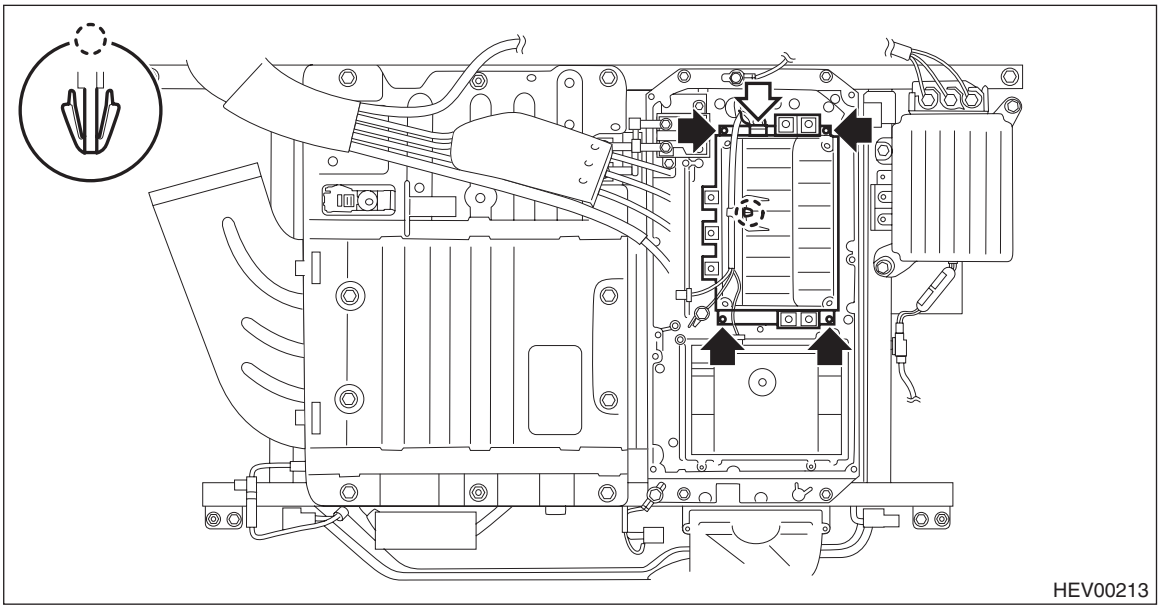
6) Remove the inverter cover.
(1) Remove the bolts and ground terminal.
(2) Release the cable clips, and remove the inverter cover.



7) Perform zero-voltage test.
(1) Measure the voltage of the high voltage DC line at the high voltage battery side of the electric noise filter.

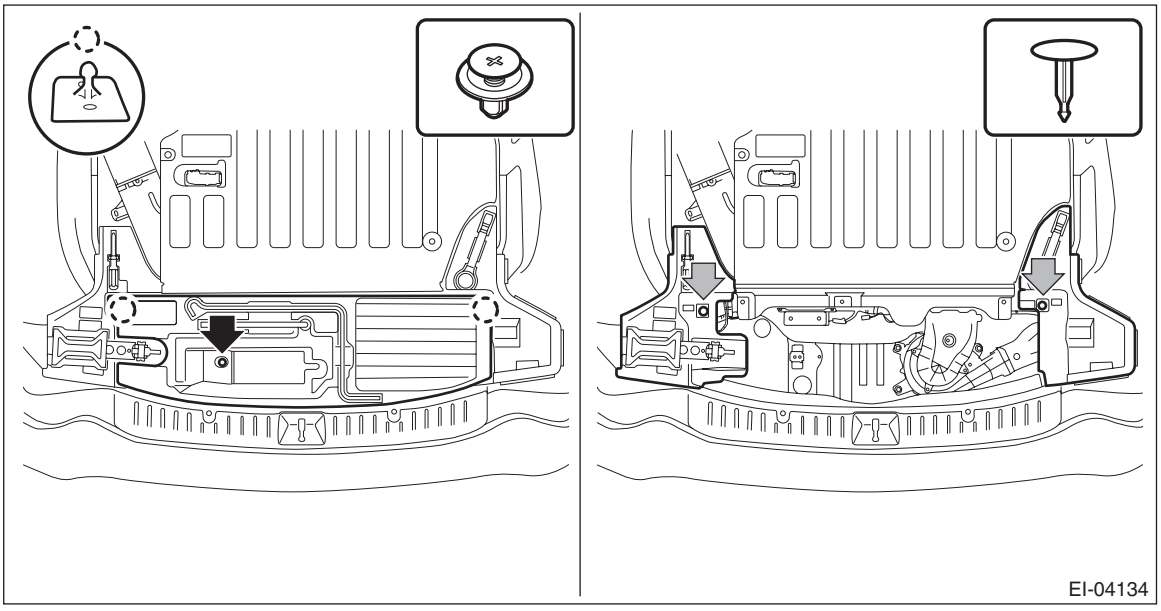
Preparation tool:
Insulation multimeter

Standard: 0 V



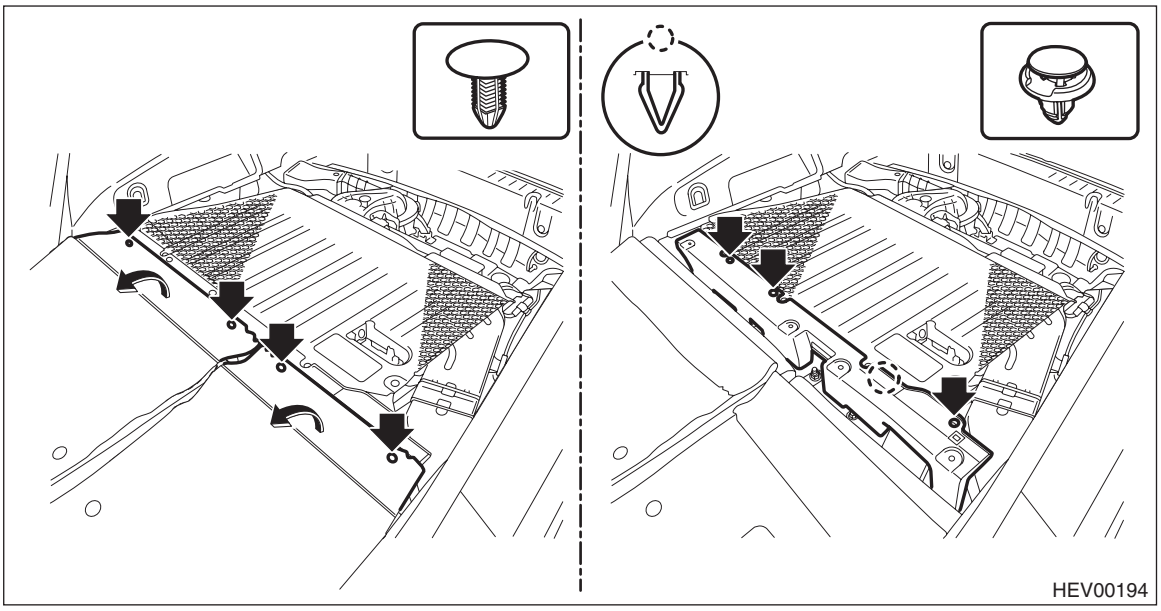
8) Remove the DC/DC converter. <Ref. to HEV-38, REMOVAL, DC/DC Converter.>
9) Remove the drive motor inverter amperage sensor. <Ref. to HEV-27, REMOVAL, Drive Motor Inverter Current Sensor.>
10) Remove the drive motor inverter.
(1) Remove the bolts to remove the inverter shield.
(2) Remove the bolts, then disconnect the bus bar between the electric noise filter and the electric oil pump inverter.

(3) Release the connector and the harness clip.



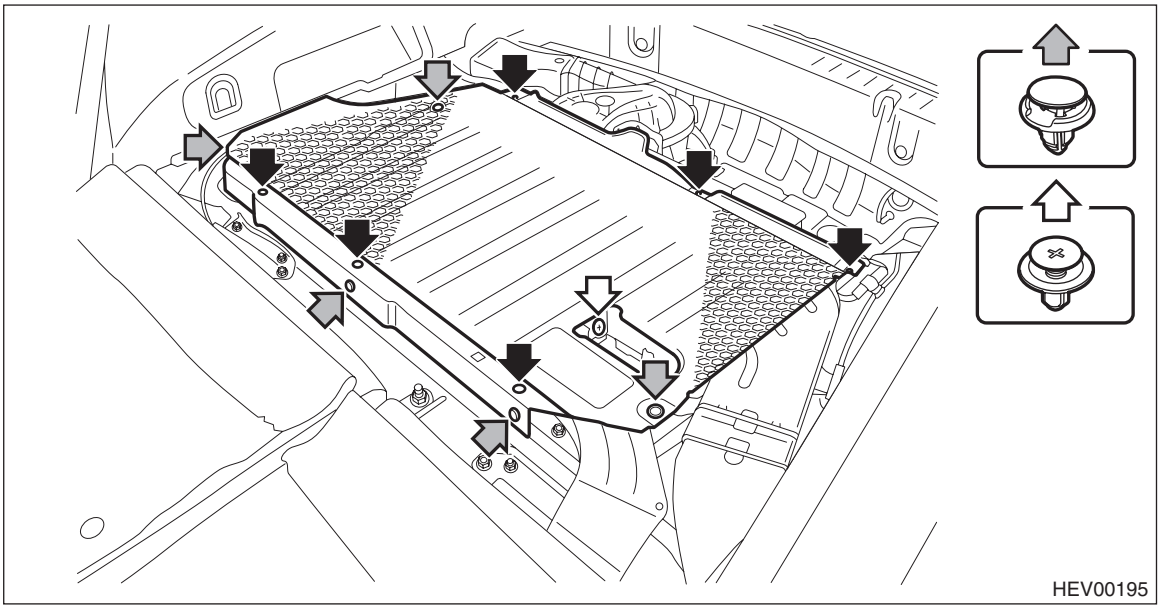
(4) Remove the bolts, and then remove the drive motor inverter.

2. ELECTRIC OIL PUMP INVERTER



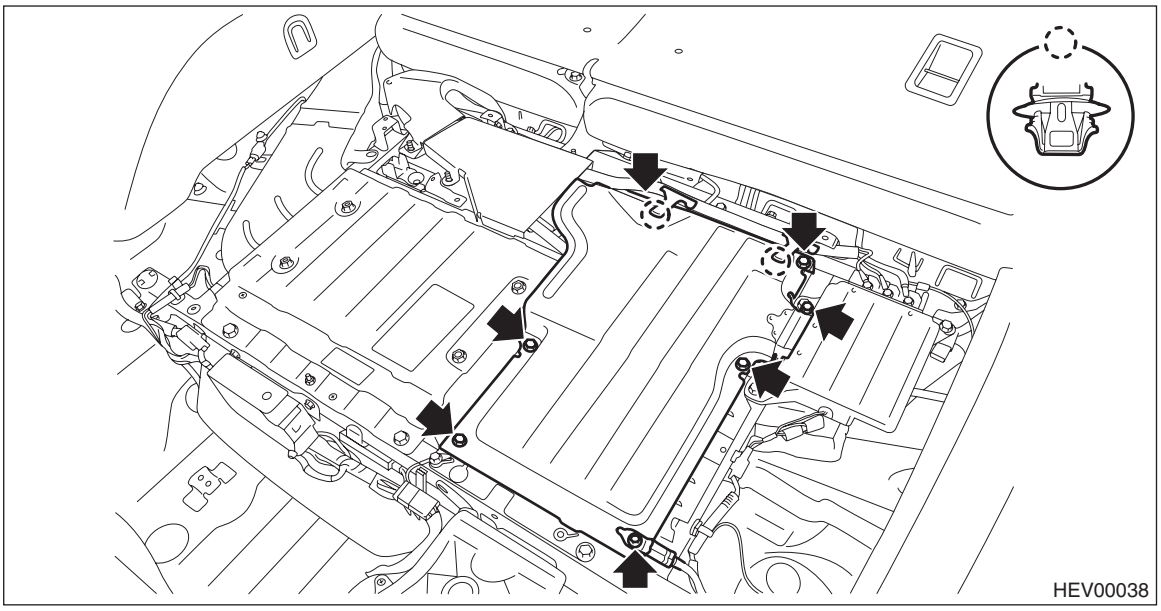
WARNING:
The hybrid system includes a high voltage circuit. Mishandling could cause accidents such as electric shock or leak. Always check "CAUTION (HYBRID SYSTEM)" and perform the proper operation. <Ref. to PC-7, CAUTION (HYBRID SYSTEM), Precaution.>

1) Remove the service disconnect plug. <Ref. to HEV-15, REMOVAL, Service Plug.>
2) Release the clips and claws, then detach the sub-trunk assembly and the spacer - rear floor side.



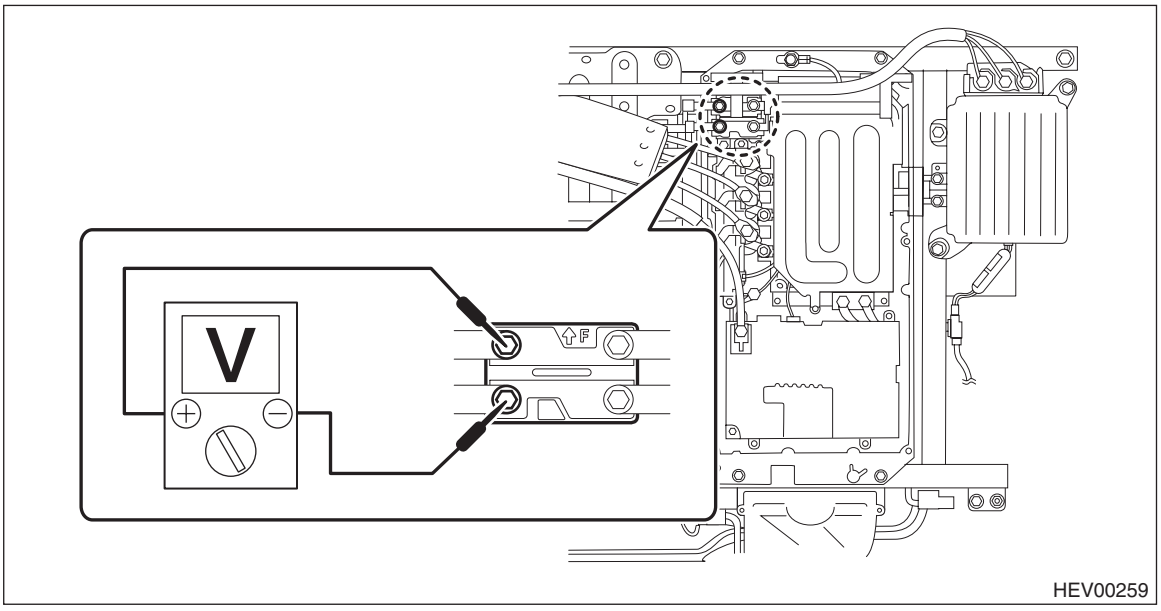
3) Remove the rear seat cushion and fold the backrest assemblies LH and RH. <Ref. to SE-24, REMOVAL, Rear Seat.>

4) Remove the spacer - rear floor front.
(1) Release the clips, and fold back the bottom of the cover COMPL - rear backrest LH and RH of the rear seat back.
(2) Release the clips and claws, then detach the spacer - rear floor front.



5) Remove the TORX®bolts, release the clips, and then remove the battery cover.

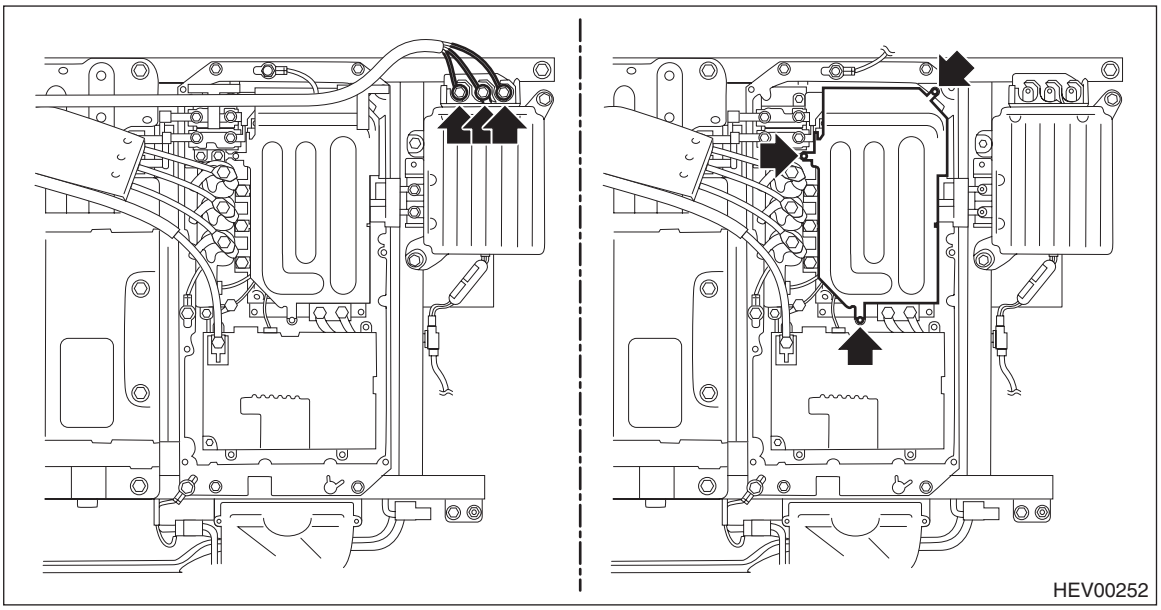
Preparation tool:
TORX® T30



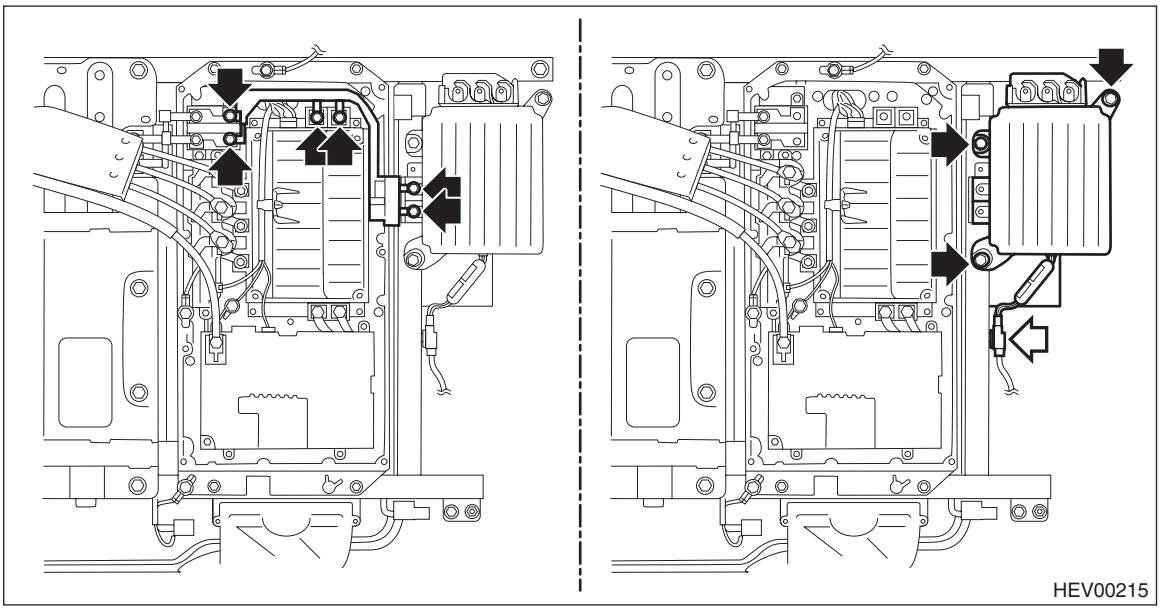
6) Remove the inverter cover.
   (1) Remove the bolts and ground terminal.
   (2) Release the cable clips, and remove the inverter cover.

7) Perform zero-voltage test.
   (1) Measure the voltage of the high voltage DC line at the high voltage battery side of the electric noise filter.

Preparation tool:
Insulation multimeter



Standard: 0 V



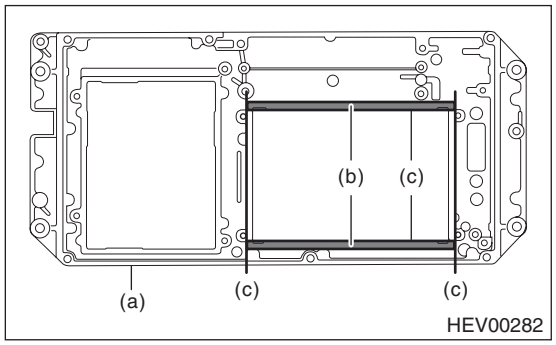
8) Remove the electric oil pump inverter.
(1) Remove the bolt and disconnect the power cable (100 V).

CAUTION:
- **Be careful not to use excessive force when disconnecting the power cable to avoid any damage.**
- **Always wrap the disconnected power cable terminals with insulating tape.**

(2) Remove the bolts to remove the inverter shield.

(3) Remove the bolts, then disconnect the bus bar between the electric noise filter and the electric oil pump inverter.
(4) Remove the connectors and bolts, and remove the electric oil pump inverter.

(5) Remove the inverter spacer from the electric oil pump inverter as necessary.



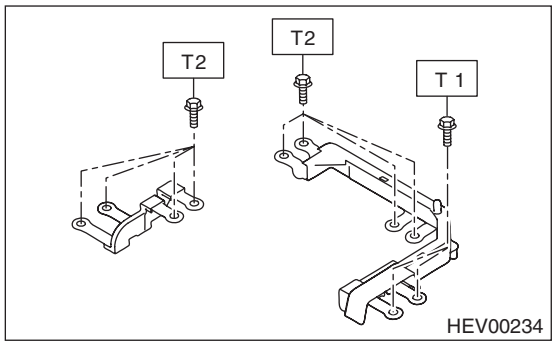
B: INSTALLATION

1. DRIVE MOTOR INVERTER

WARNING:
The hybrid system includes a high voltage circuit. Mishandling could cause accidents such as electric shock or leak. Always check "CAUTION (HYBRID SYSTEM)" and perform the proper operation. <Ref. to PC-7, CAUTION (HYBRID SYSTEM), Precaution.>

1) Install the drive motor inverter.

CAUTION:
Replace the EPT sealer attached to the inverter frame assembly with a new part.



(a) Inverter frame ASSY
(b) EPT sealer
(c) Reference line for attachment

Tightening torque:
6.5 N·m (0.7 kgf-m, 4.8 ft-lb)

2) Connect the bus bar.

Tightening torque:
T1: 6.5 N·m (0.7 kgf-m, 4.8 ft-lb)
T2: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the inverter shield.

Tightening torque:
6.5 N·m (0.7 kgf-m, 4.8 ft-lb)

4) Install the drive motor inverter amperage sensor. <Ref. to HEV-30, INSTALLATION, Drive Motor Inverter Current Sensor.>
5) Install the DC/DC converter. <Ref. to HEV-41, INSTALLATION, DC/DC Converter.>
6) Install the ground terminal and inverter cover.

CAUTION:
Check that the sound proofing material on the inverter cover is not detached or damaged before installing the inverter cover.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

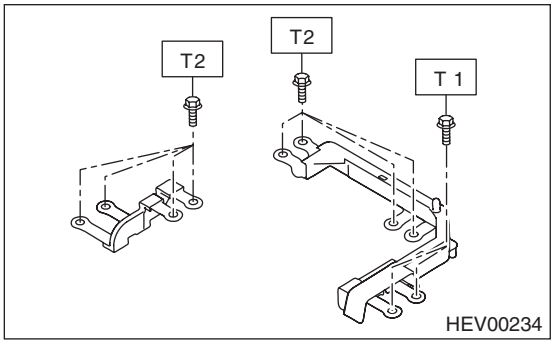
7) Install the battery cover.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

8) Install the spacer - rear floor front.
9) Install the rear seat cushion. <Ref. to SE-27, INSTALLATION, Rear Seat.>
10) Install the sub-trunk assembly and the spacer - rear floor side.
11) Install the service disconnect plug. <Ref. to HEV-16, INSTALLATION, Service Plug.>

2. ELECTRIC OIL PUMP INVERTER

WARNING:
The hybrid system includes a high voltage circuit. Mishandling could cause accidents such as electric shock or leak. Always check "CAUTION (HYBRID SYSTEM)" and perform the proper operation. <Ref. to PC-7, CAUTION (HYBRID SYSTEM), Precaution.>



1) Install the electric oil pump inverter.

NOTE:
If the inverter spacer has been removed, install it to the electric oil pump inverter.

Tightening torque:
22 N·m (2.2 kgf-m, 16.2 ft-lb)

2) Connect the bus bar.

Tightening torque:
T1: 6.5 N·m (0.7 kgf-m, 4.8 ft-lb)
T2: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the inverter shield.

Tightening torque:
6.5 N·m (0.7 kgf-m, 4.8 ft-lb)

4) Connect the power cable (100 V).

CAUTION:
• Connect the power cable properly referring to the letters (U, V, and W) imprinted on the electric oil pump inverter body. The power cable with the identification tape is connected to (U) and the power cable with a claw is connected to (V).
• Do not apply excessive force to the terminals and watch to make sure the cable is not damaged or pinched.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

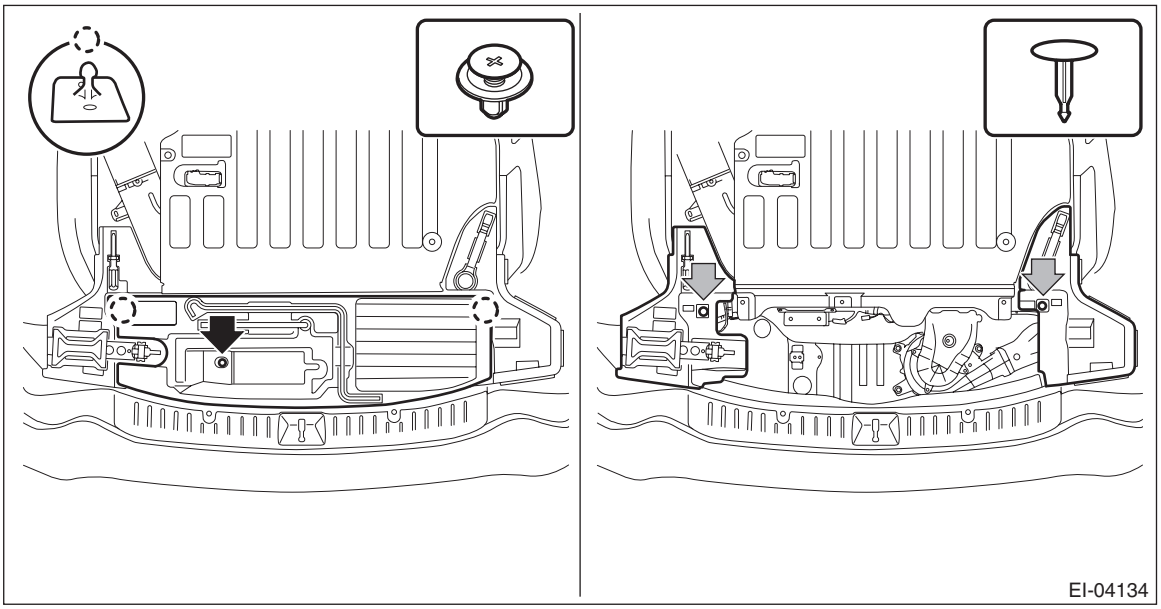
5) Install the ground terminal and inverter cover.

CAUTION:
Check that the sound proofing material on the inverter cover is not detached or damaged.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

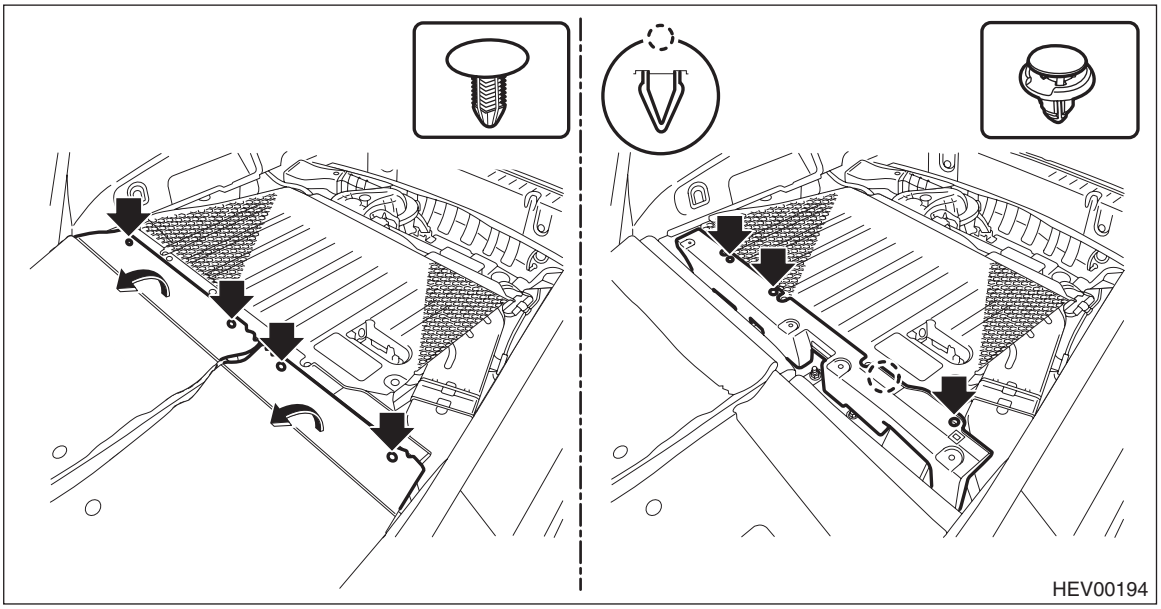
6) Install the battery cover.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



7) Install the spacer - rear floor front.
8) Install the rear seat cushion. <Ref. to SE-27, INSTALLATION, Rear Seat.>
9) Install the sub-trunk assembly and the spacer - rear floor side.
10) Install the service disconnect plug. <Ref. to HEV-16, INSTALLATION, Service Plug.>

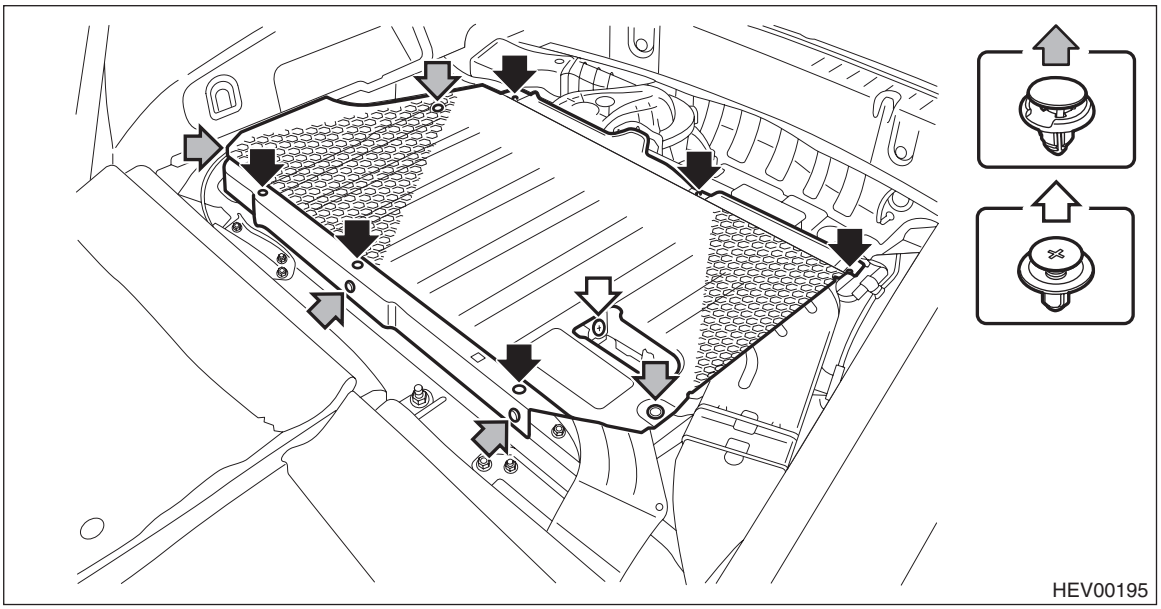
12.Power Cable



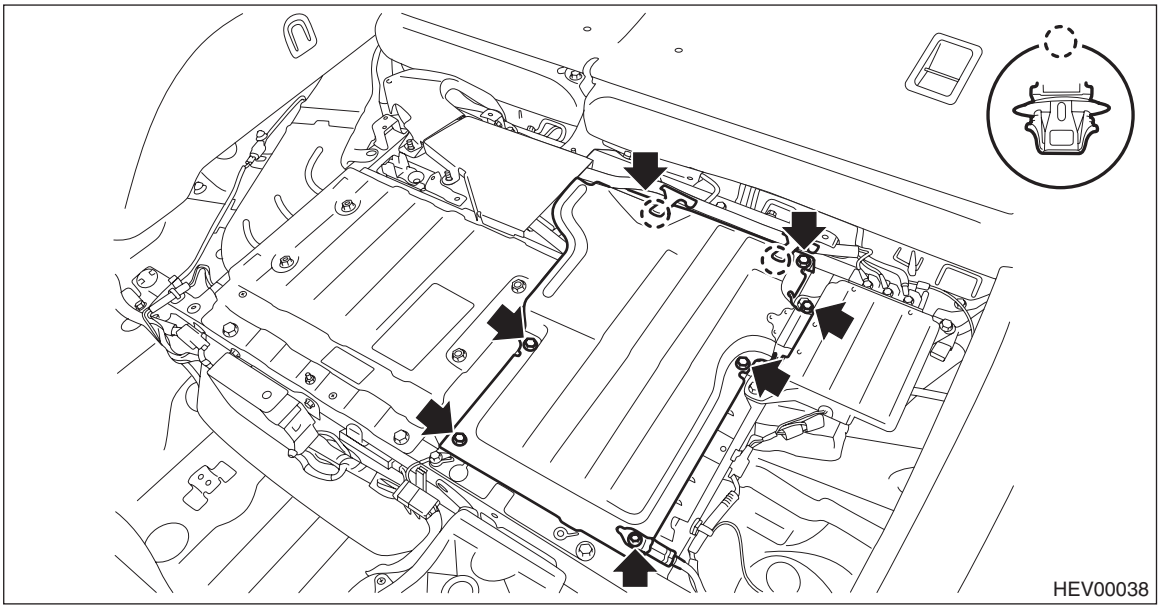
A: REMOVAL

WARNING:
The hybrid system includes a high voltage circuit. Mishandling could cause accidents such as electric shock or leak. Always check "CAUTION (HYBRID SYSTEM)" and perform the proper operation. <Ref. to PC-7, CAUTION (HYBRID SYSTEM), Precaution.>

1) Remove the service disconnect plug. <Ref. to HEV-15, REMOVAL, Service Plug.>
2) Release the clips and claws, then detach the sub-trunk assembly and the spacer - rear floor side.

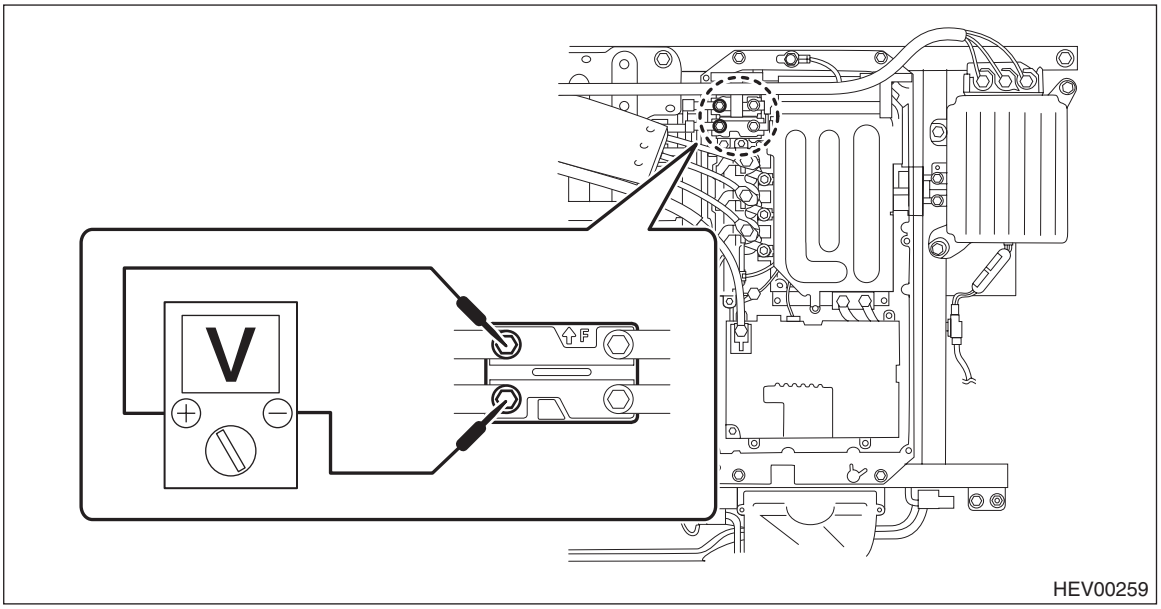


3) Remove the rear seat cushion and fold the backrest assemblies LH and RH. <Ref. to SE-24, REMOVAL, Rear Seat.>
4) Remove the spacer - rear floor front.
   (1) Release the clips, and fold back the bottom of the cover COMPL - rear backrest LH and RH of the rear seat back.
   (2) Release the clips and claws, then detach the spacer - rear floor front.

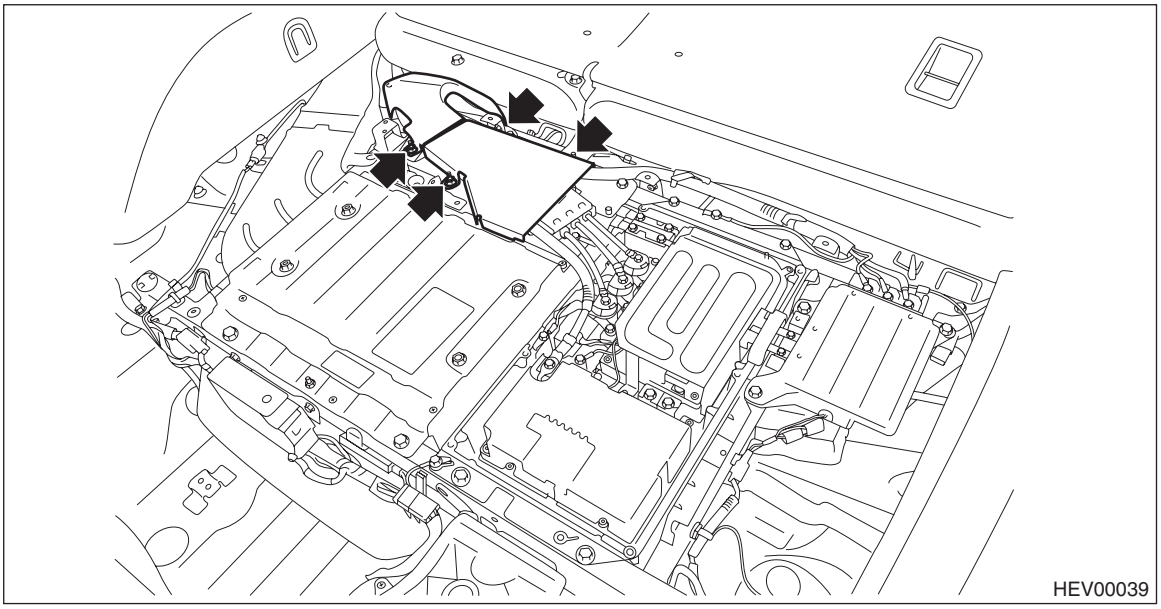


5) Remove the TORX®bolts, release the clips, and then remove the battery cover.

Preparation tool:
TORX® T30



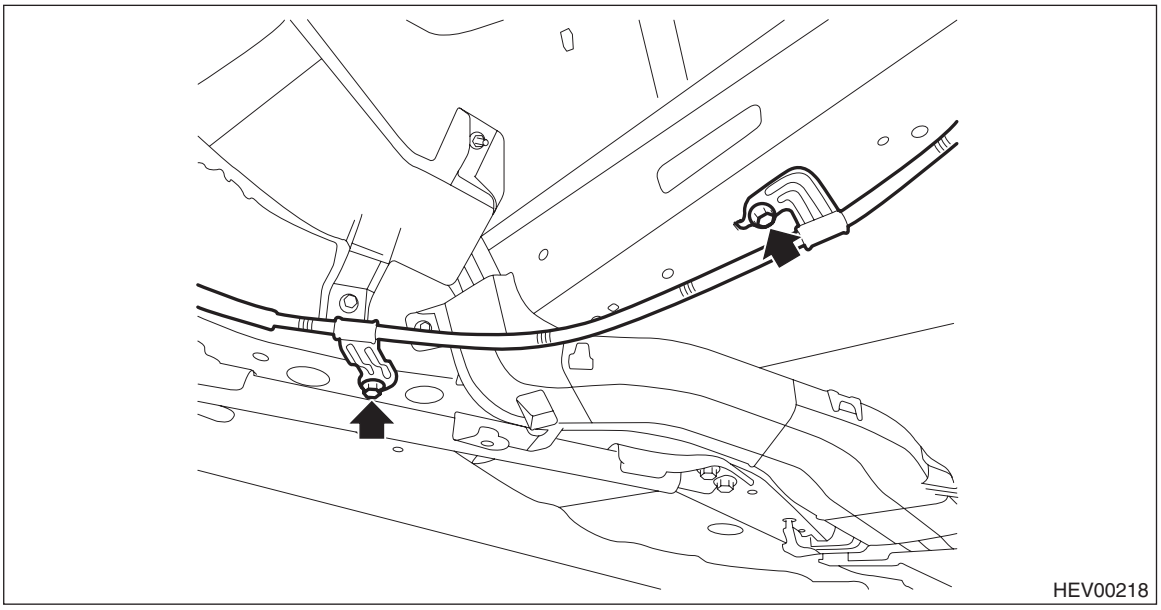
6) Remove the inverter cover.
(1) Remove the bolts and ground terminal.
(2) Release the cable clips, and remove the inverter cover.



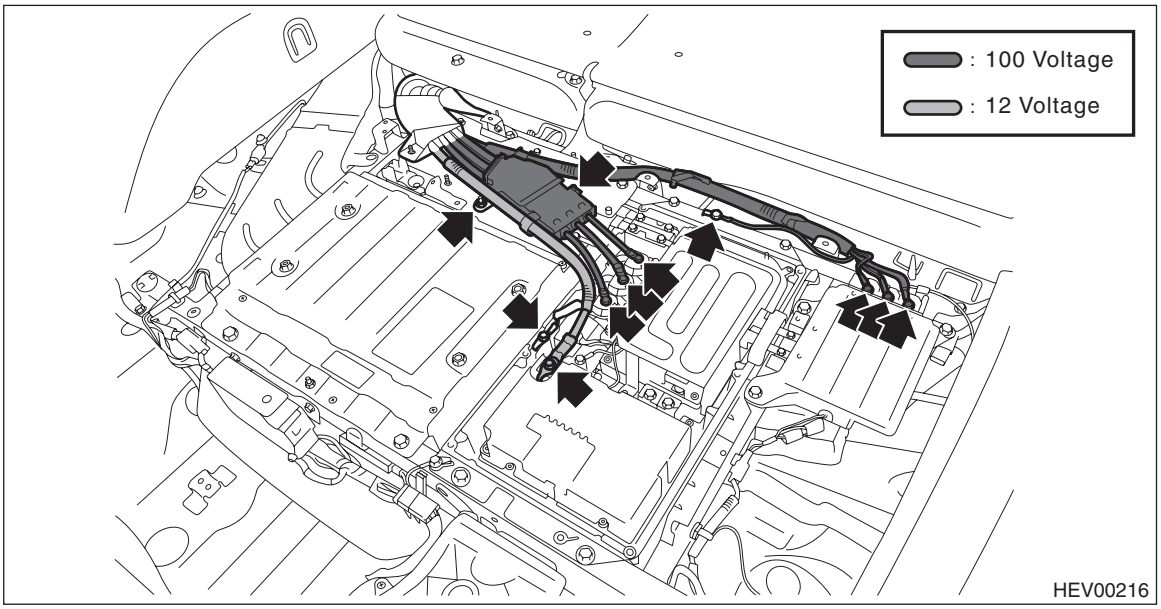
7) Perform zero-voltage test.
(1) Measure the voltage of the high voltage DC line at the high voltage battery side of the electric noise filter.

Preparation tool:
Insulation multimeter

Standard: 0 V

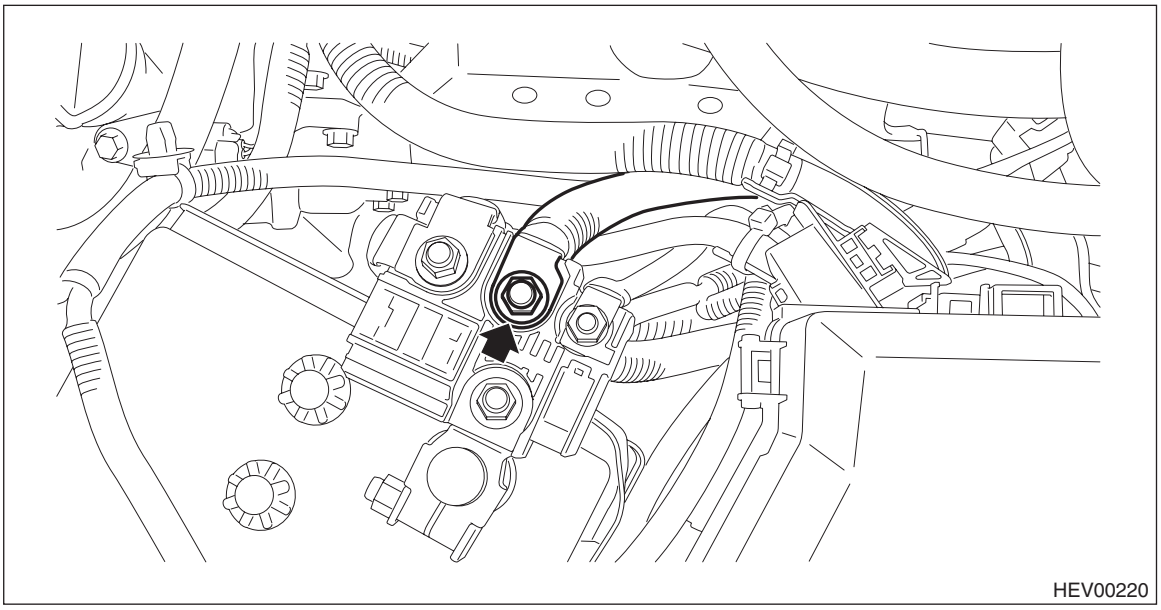


8) Remove the nut and remove the cover - shield battery and the cover - shield seat.

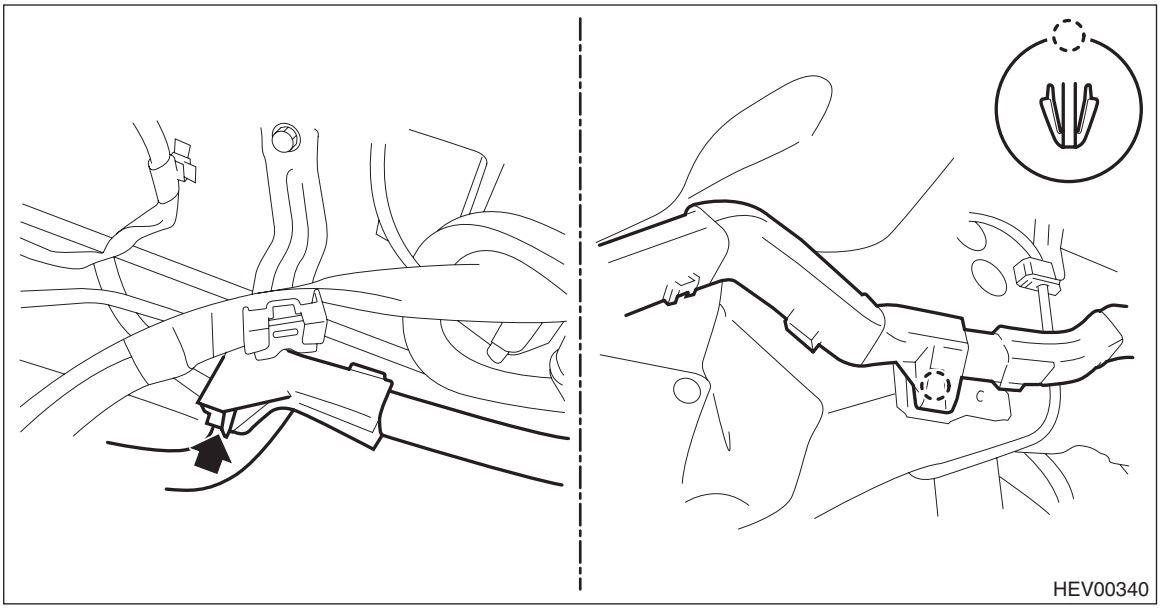


9) Remove the front under cover. <Ref. to EI-31, REMOVAL, Front Under Cover.>
10) Remove the floor under protector. <Ref. to EI-33, REMOVAL, Floor Under Protector.>
11) Remove the fuel tank. <Ref. to FU(H4DO(HEV))-106, REMOVAL, Fuel Tank.>

12) Remove the bolt securing the cable assembly - parking brake.

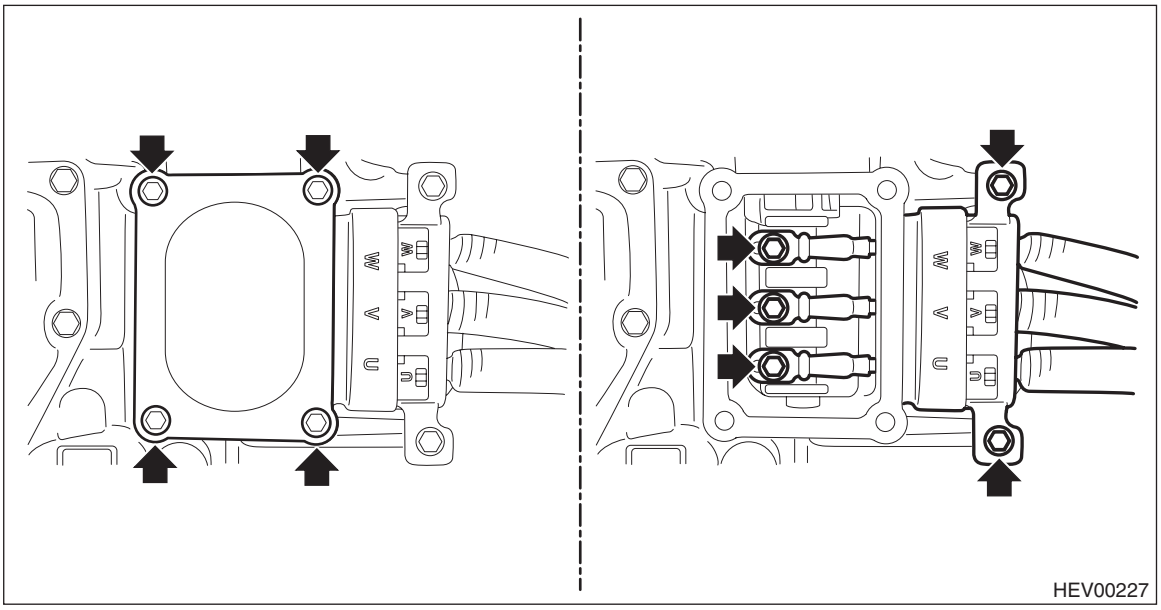


13) Remove the power cable.
(1) Remove the bolts and nuts and disconnect the ground terminal and the power cable.



CAUTION:
- **Be careful not to use excessive force when disconnecting the power cable to avoid any damage.**
- **Always wrap the disconnected power cable terminals with insulating tape.**

(2) Remove the nut and disconnect the power cable positive terminal from the 12 volt auxiliary battery.

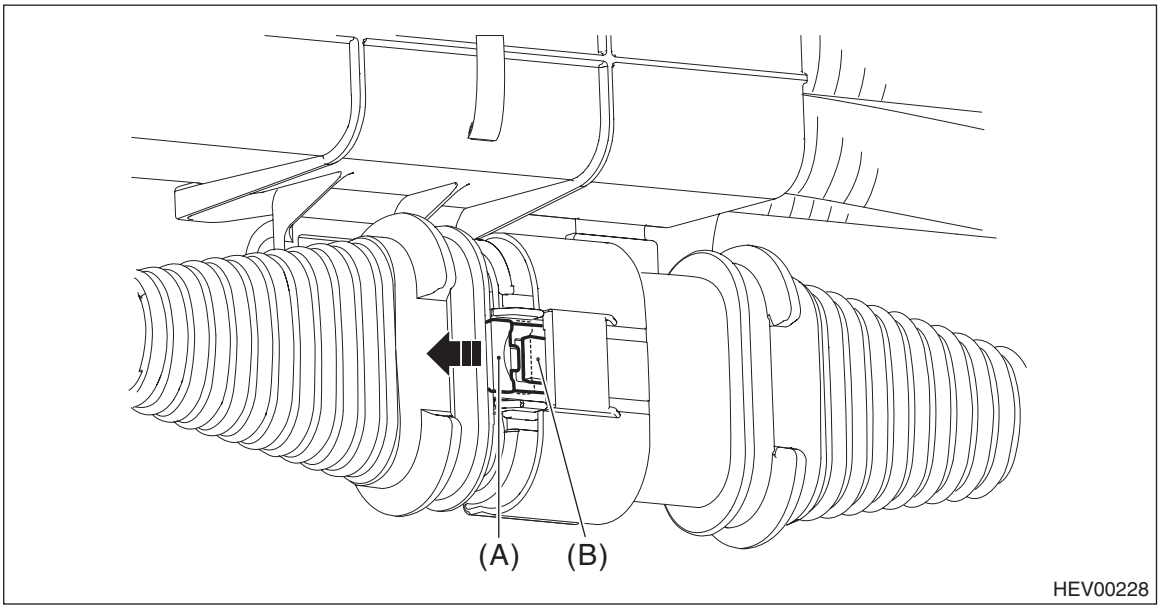


(3) Release the power cable clamp and the power cable clip.

(4) Remove the bolt, then remove the power connect cover and the gasket.

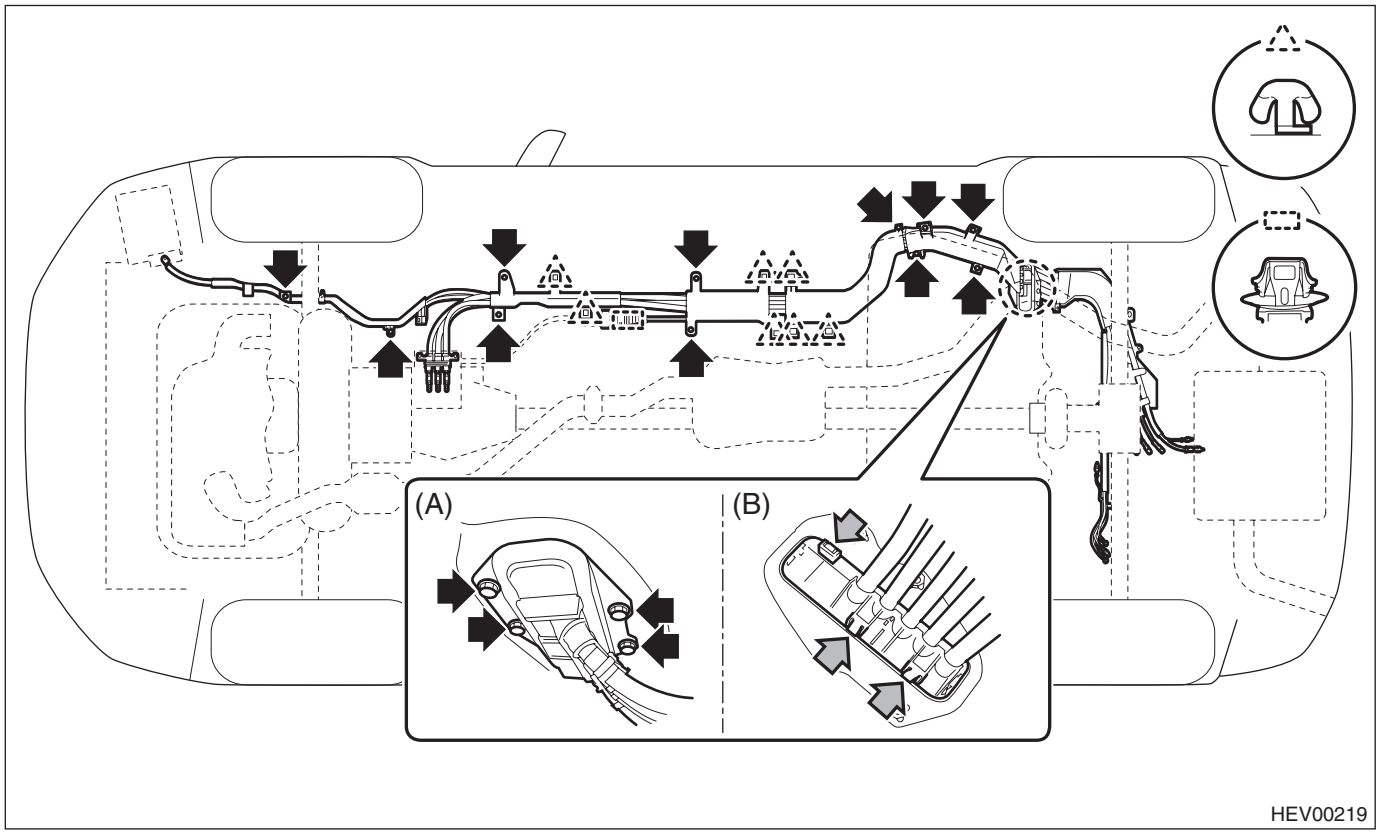
(5) Remove the bolts and nuts to pull out the terminal box assembly.

CAUTION:
- **Be sure to insulate the power cable terminal by wrapping it with insulating tape.**
- **Be careful not to use excessive force or damage the power cable during removal.**



HEV00227

NOTE:
To prevent intrusion of foreign matter such as oil, water and dirt after removal, install the power connect cover and cover the terminal box assembly with tape.



(6) Push the claw (B) while pulling the slide lock (A) in the direction of the arrow, and then disconnect the electric oil pump harness connector.

CAUTION:
- **After disconnecting the connectors, cover the female side connector with a clean cloth or plastic bag to protect from intrusion of foreign matter such as oil, water, or dusts. Also, cover the male side connector using insulating tape.**
- **If any foreign matter is found, remove them carefully so that the electrodes in the connector are not damaged. If there is any moisture, make it dry completely.**
- **Be careful not to use excessive force when removing the electric oil pump harness connector to avoid any damage.**

HEV00228

(7) Remove the bolts and nuts, release the clips and claws, and disconnect the power cable from the vehicle.

(A) Outside passenger room (B) Passenger room side

B: INSTALLATION

WARNING:
The hybrid system includes a high voltage circuit. Mishandling could cause accidents such as electric shock or leak. Always check "CAUTION (HYBRID SYSTEM)" and perform the proper operation. <Ref. to PC-7, CAUTION (HYBRID SYSTEM), Precaution.>

1) Install the power cable.

CAUTION:
• When connecting the power cable, pay attention to the letters (U, V, and W) imprinted on the drive motor inverter amperage sensor body as well as on the protector of the power cable.
• Connect the power cable properly referring to the letters (U, V, and W) imprinted on the electric oil pump inverter body. The power cable with the identification tape is connected to (U) and the power cable with a claw is connected to (V).
• Match the letters (U, V, and W) imprinted on both the power cable and the transmission body, then insert the cable to the transmission and fix securely.
• Insert the electric oil pump connector into the mating connector until a click is heard and lock it securely.
• Be careful not to allow foreign matter from entering the drive motor case assembly. If any foreign matter is found, remove them carefully so that the electrodes are not damaged.
• If there is any moisture in the drive motor case assembly, dry it completely before continuing work.
• Do not apply excessive force to the terminals and watch to make sure the cable is not damaged or pinched.
• Replace the power cable clip with a new part.
• Replace power connect cover gasket with a new part.

Tightening torque:
Power cable: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
Power connect cover: 25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) Install the cable assembly - parking brake bolt.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

3) Install the fuel tank. <Ref. to FU(H4DO(HEV))-112, INSTALLATION, Fuel Tank.>
4) Install the front under protector. <Ref. to EI-33, INSTALLATION, Floor Under Protector.>
5) Install the front under cover. <Ref. to EI-31, INSTALLATION, Front Under Cover.>
6) Install the cover - shield battery and the cover - shield seat.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

7) Install the ground terminal and inverter cover.

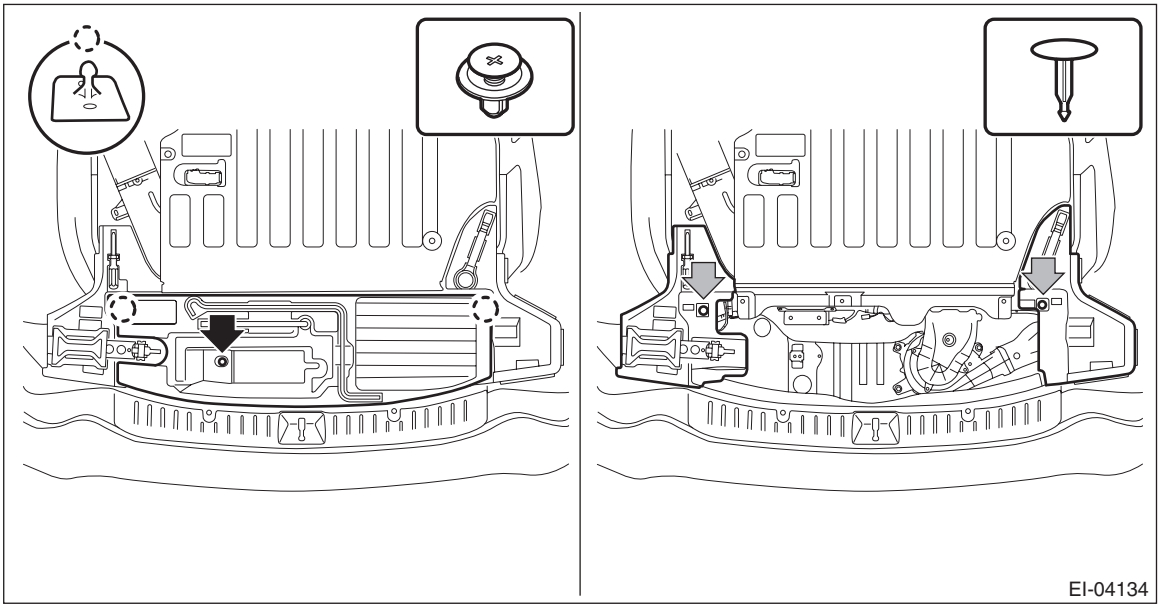
CAUTION:
Check that the sound proofing material on the inverter cover is not detached or damaged.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

8) Install the battery cover.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

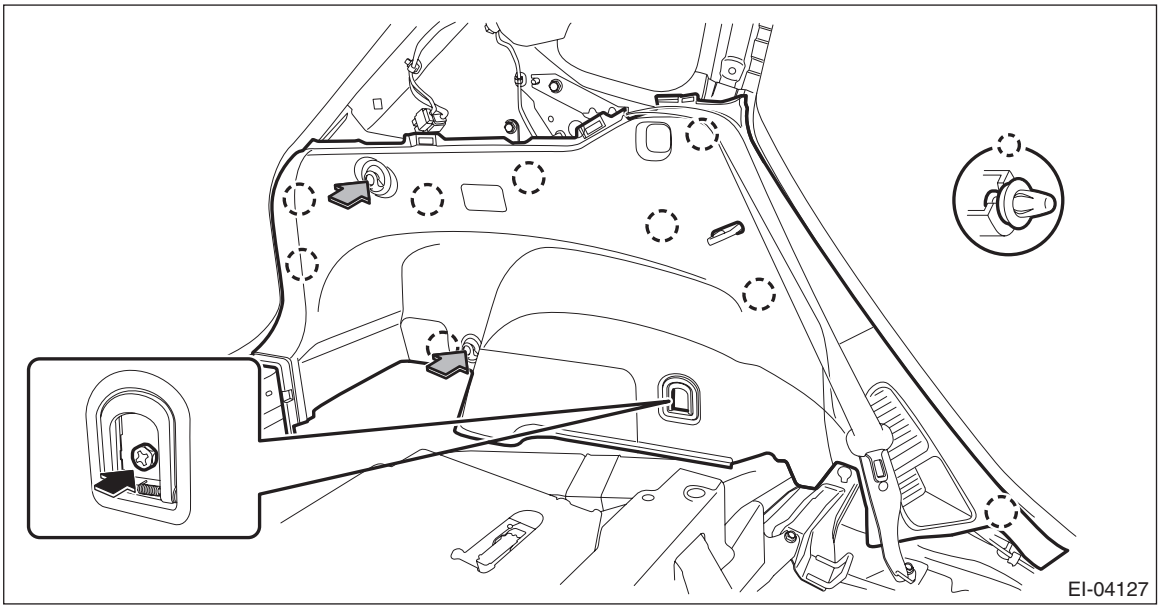
9) Install the spacer - rear floor front.
10) Install the rear seat cushion. <Ref. to SE-27, INSTALLATION, Rear Seat.>
11) Install the sub-trunk assembly and the spacer - rear floor side.
12) Install the service disconnect plug. <Ref. to HEV-16, INSTALLATION, Service Plug.>



13.High Voltage Battery Cooling System

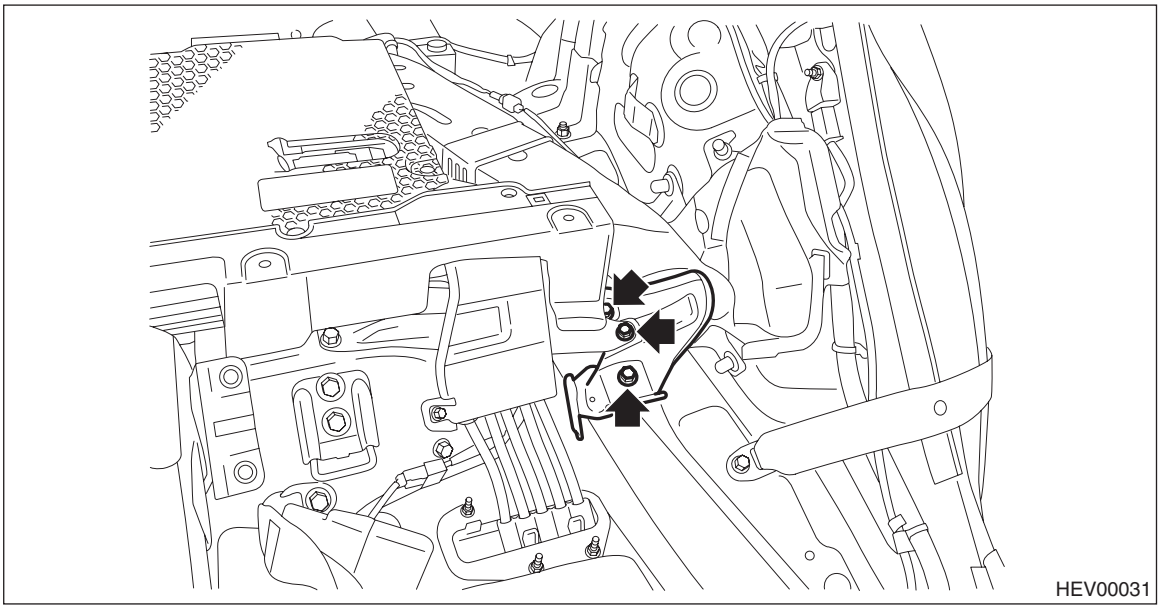
A: REMOVAL

1. COOLING DUCT FRONT (FRONT)



1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

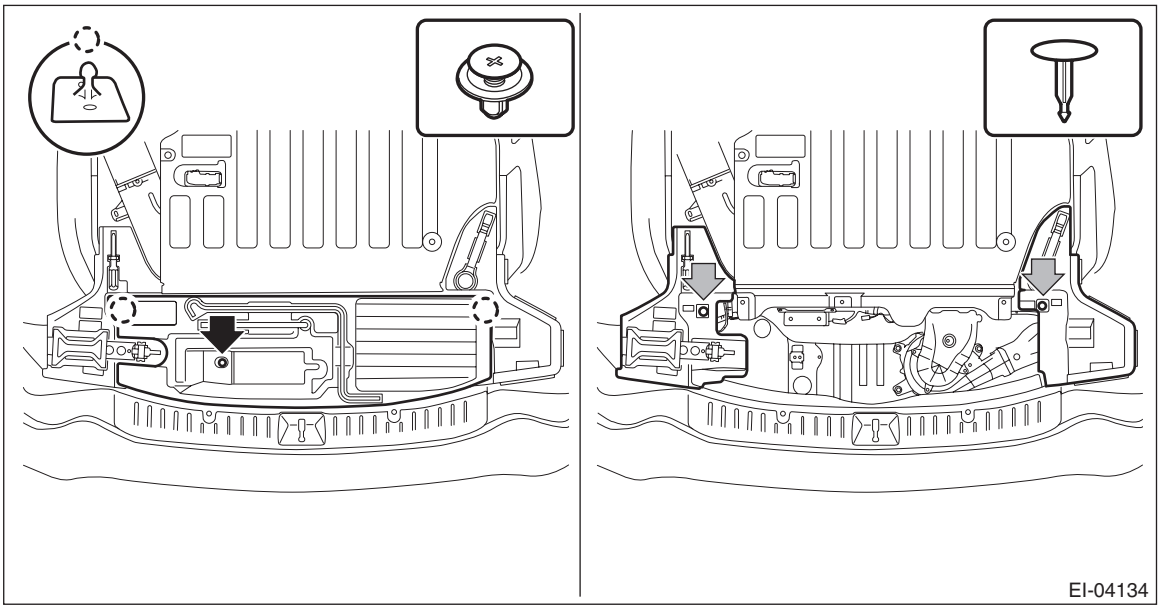
NOTE:
For the 12 volt engine restart battery, disconnect the ground terminal from 12V engine restart battery sensor.
2) Remove the mat - rear floor CTR.
3) Release the clips and claws, then detach the sub-trunk assembly and the spacer - rear floor side LH.



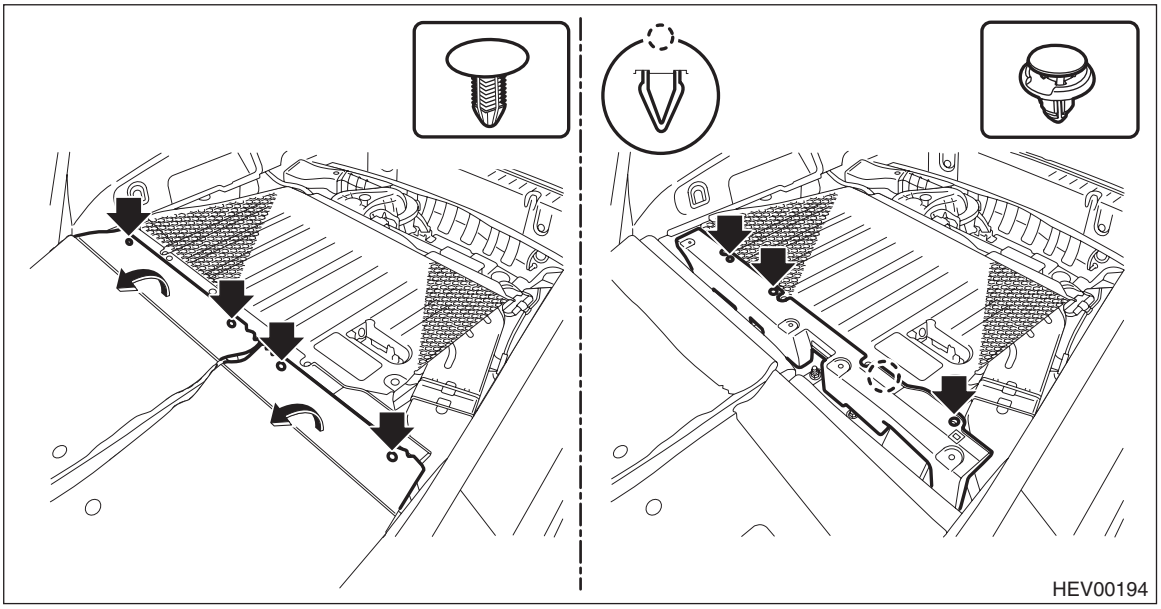
4) Remove the rear seat cushion assembly. <Ref. to SE-24, REMOVAL, Rear Seat.>
5) Remove the trim panel - rear apron LH.
   (1) Remove the following parts. Refer to “Rear Quarter Trim” of “EXTERIOR/INTERIOR TRIM” section for the work procedures. <Ref. to EI-97, REMOVAL, Rear Quarter Trim.>
   - Trim panel - rear quarter pillar UPR LH
   - Cover side sill - rear INN LH
   - Trim panel - rear skirt

   (2) Remove the caps, and remove the bolts.
   (3) Remove the screws, and release the clips.
   (4) Disconnect the connectors and remove the trim panel - rear apron LH.

6) Remove the backrest assembly LH. <Ref. to SE-24, REMOVAL, Rear Seat.>
7) Remove the bolts, and remove the hinge assembly - rear backrest.



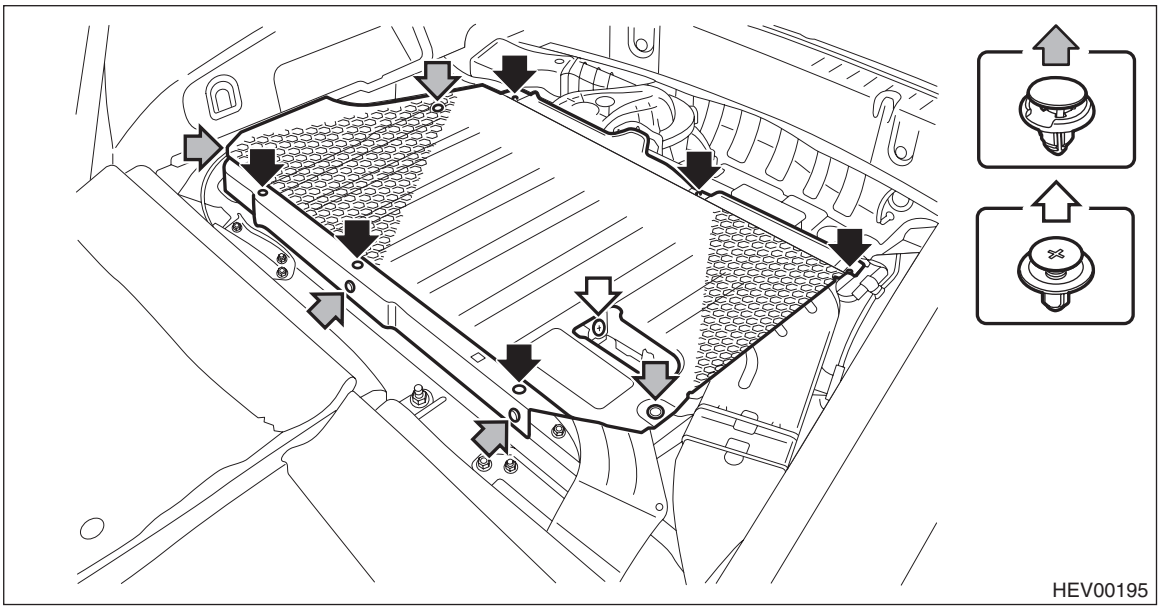
8) Remove the cooling duct front (front).
   (1) Release the clip of the spacer - rear floor front.
   (2) Release the plastic nut and slide lock, and remove the cooling duct front (front).



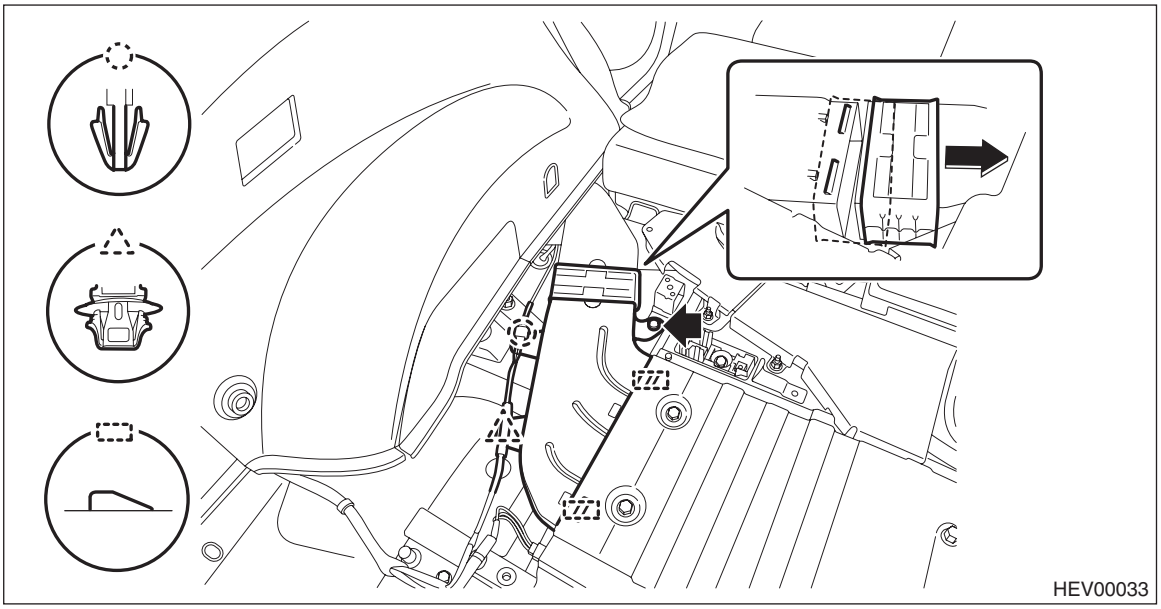
2. COOLING DUCT FRONT (REAR)

WARNING:
The hybrid system includes a high voltage circuit. Mishandling could cause accidents such as electric shock or leak. Always check "CAUTION (HYBRID SYSTEM)" and perform the proper operation. <Ref. to PC-7, CAUTION (HYBRID SYSTEM), Precaution.>

1) Remove the service disconnect plug. <Ref. to HEV-15, REMOVAL, Service Plug.>
2) Release the clips and claws, then detach the sub-trunk assembly and the spacer - rear floor side.

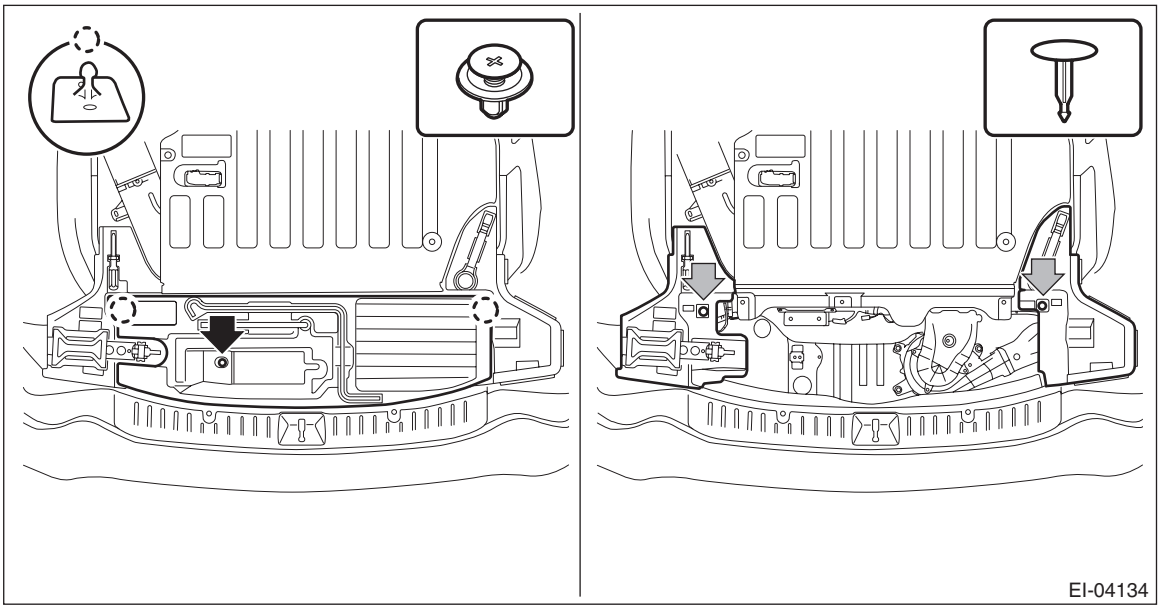


3) Remove the spacer - rear floor front.
   (1) Release the clips, and fold back the bottom of the cover COMPL - rear backrest LH and RH of the rear seat back.
   (2) Release the clips and claws, then detach the spacer - rear floor front.

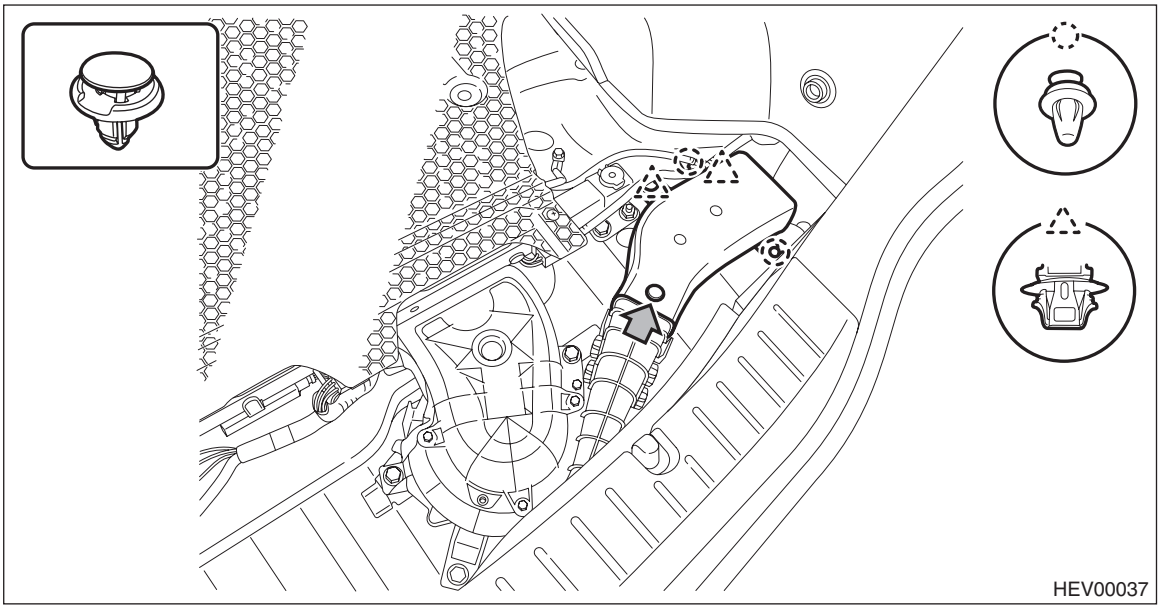


4) Remove the TORX® bolts, release the clips, and then remove the battery cover.

Preparation tool:
TORX® T30

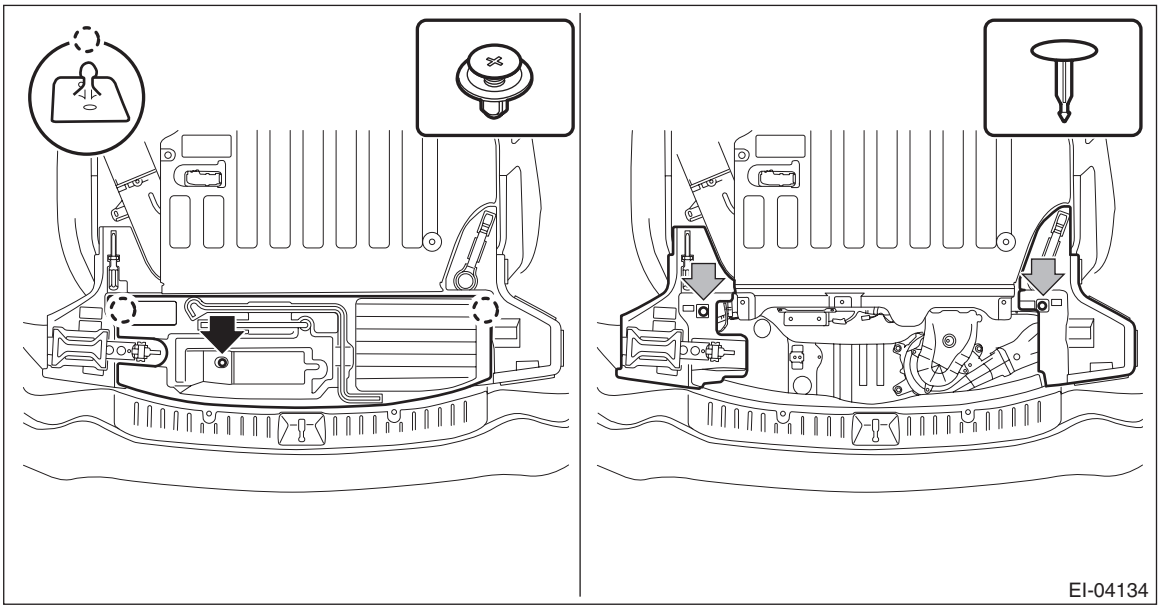


5) Remove the cooling duct front (rear).
(1) Release the slide lock, clip, and harness clip.
(2) Release the claws, and remove the cooling duct front (rear).

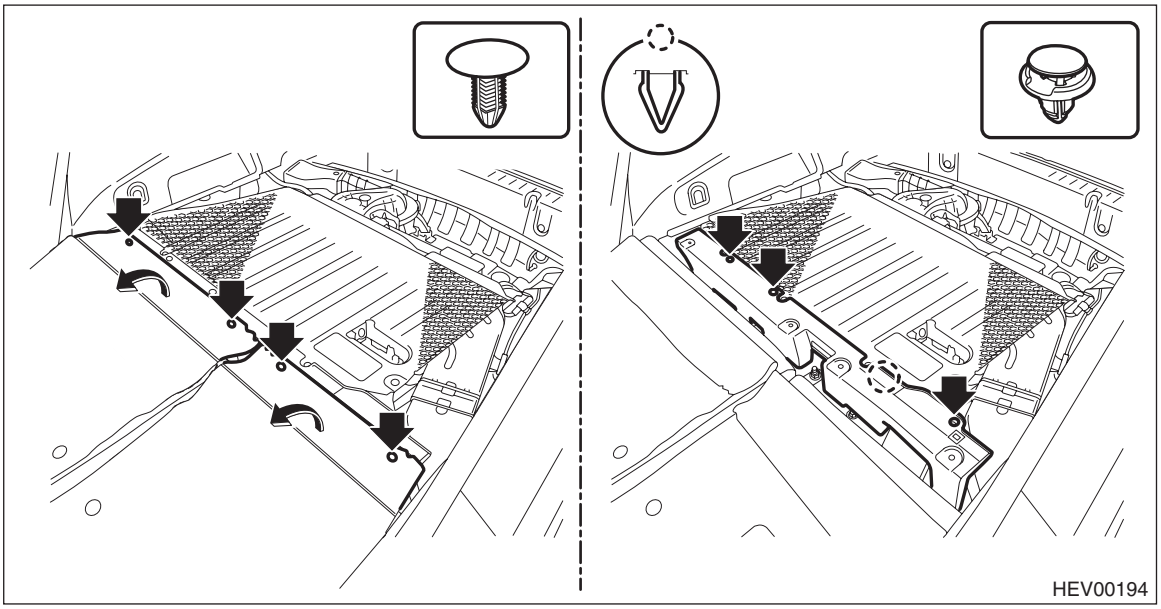


3. COOLING DUCT REAR

1) Remove the mat - rear floor CTR.
2) Release the clips and claws, then detach the sub-trunk assembly and the spacer - rear floor side RH.



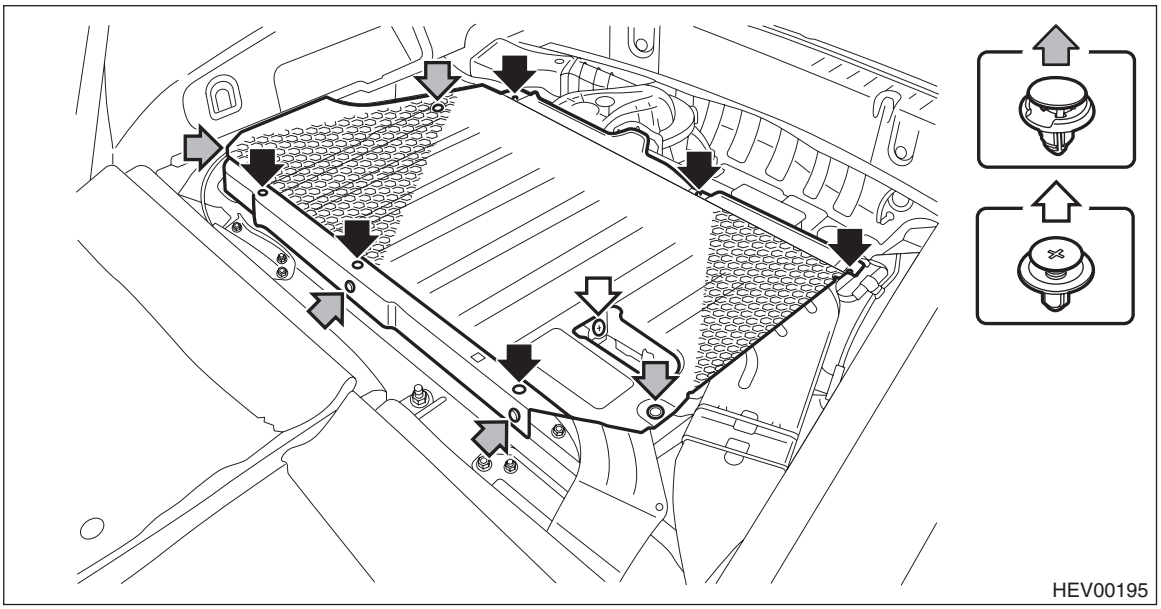
3) Release the clips and harness clips, then detach the cooling duct rear.



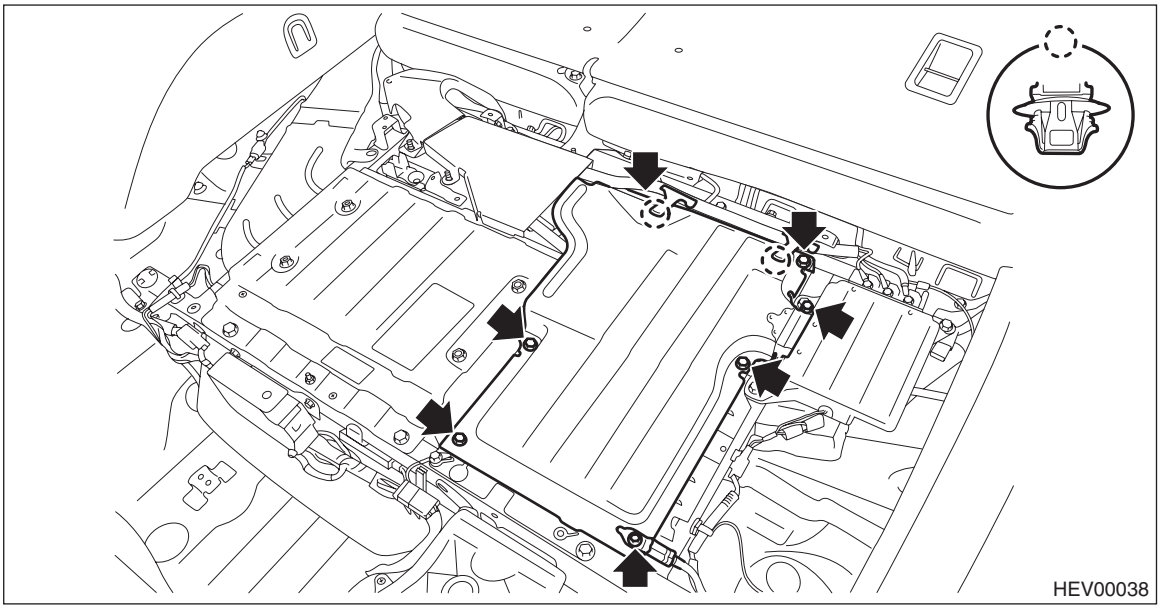
4. COOLING DUCT INVERTER ASSEMBLY

WARNING:
The hybrid system includes a high voltage circuit. Mishandling could cause accidents such as electric shock or leak. Always check "CAUTION (HYBRID SYSTEM)" and perform the proper operation. <Ref. to PC-7, CAUTION (HYBRID SYSTEM), Precaution.>

1) Remove the service disconnect plug. <Ref. to HEV-15, REMOVAL, Service Plug.>
2) Release the clips and claws, then detach the sub-trunk assembly and the spacer - rear floor side.

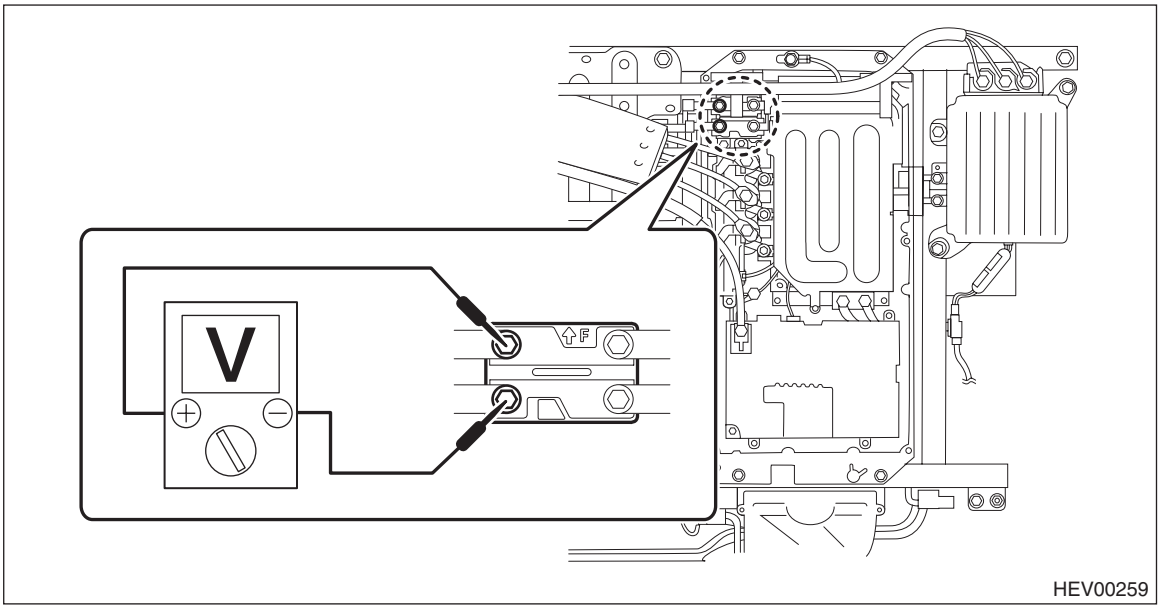


3) Remove the rear seat cushion and fold the backrest assemblies LH and RH. <Ref. to SE-24, REMOVAL, Rear Seat.>
4) Remove the spacer - rear floor front.
   (1) Release the clips, and fold back the bottom of the cover COMPL - rear backrest LH and RH of the rear seat back.
   (2) Release the clips and claws, then detach the spacer - rear floor front.

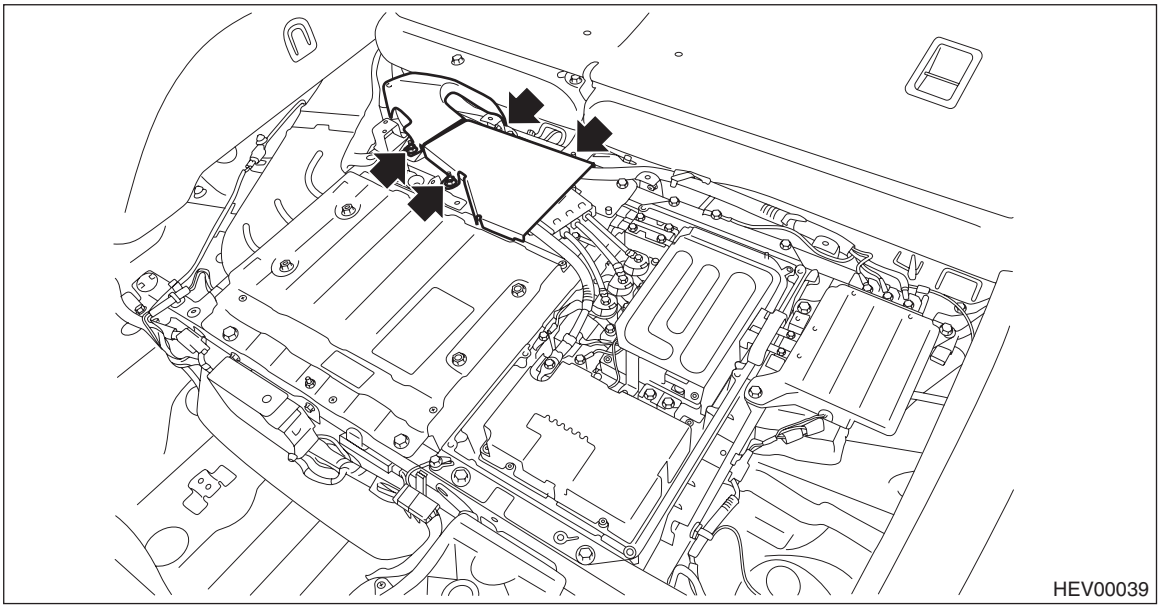


5) Remove the TORX®bolts, release the clips, and then remove the battery cover.

Preparation tool:
TORX® T30



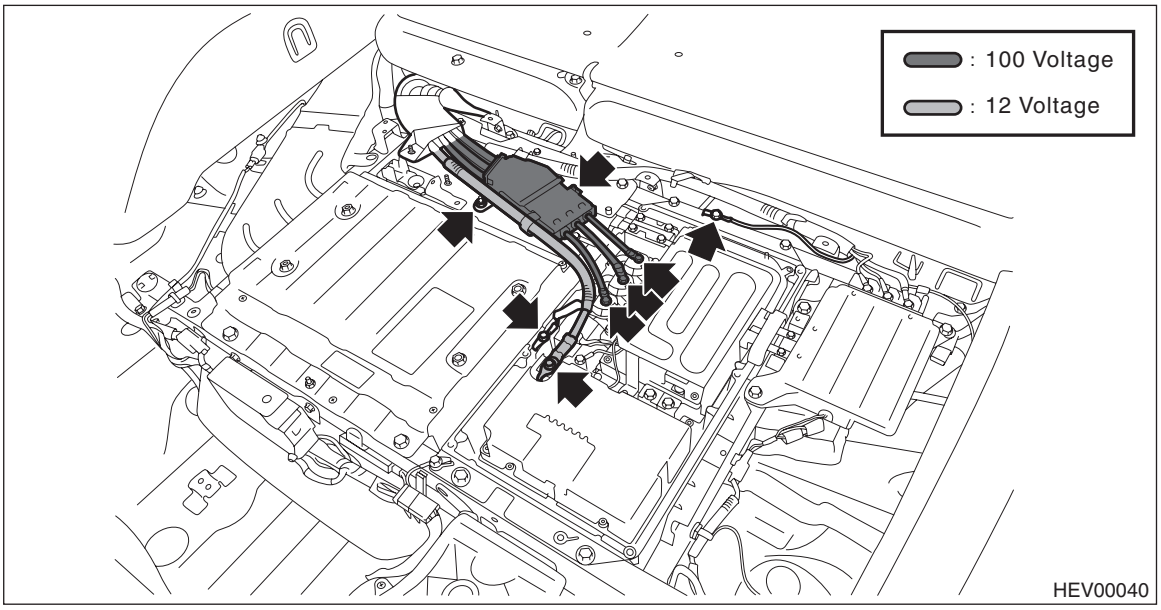
6) Remove the inverter cover.
(1) Remove the bolts and ground terminal.
(2) Release the cable clips, and remove the inverter cover.



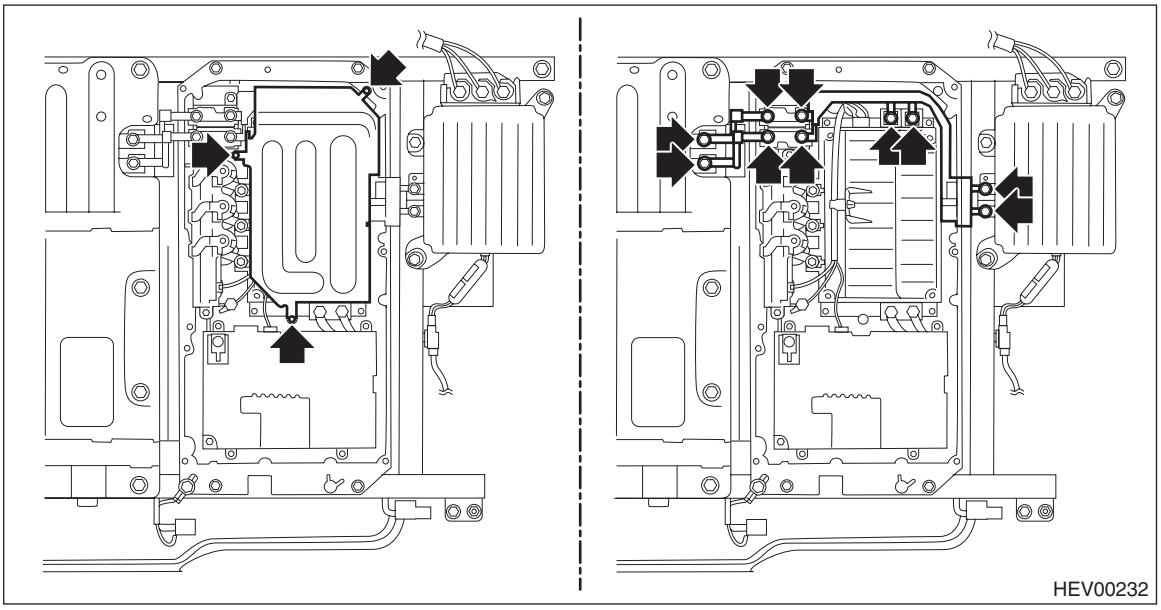
7) Perform zero-voltage test.
(1) Measure the voltage of the high voltage DC line at the high voltage battery side of the electric noise filter.

Preparation tool:
Insulation multimeter

Standard: 0 V

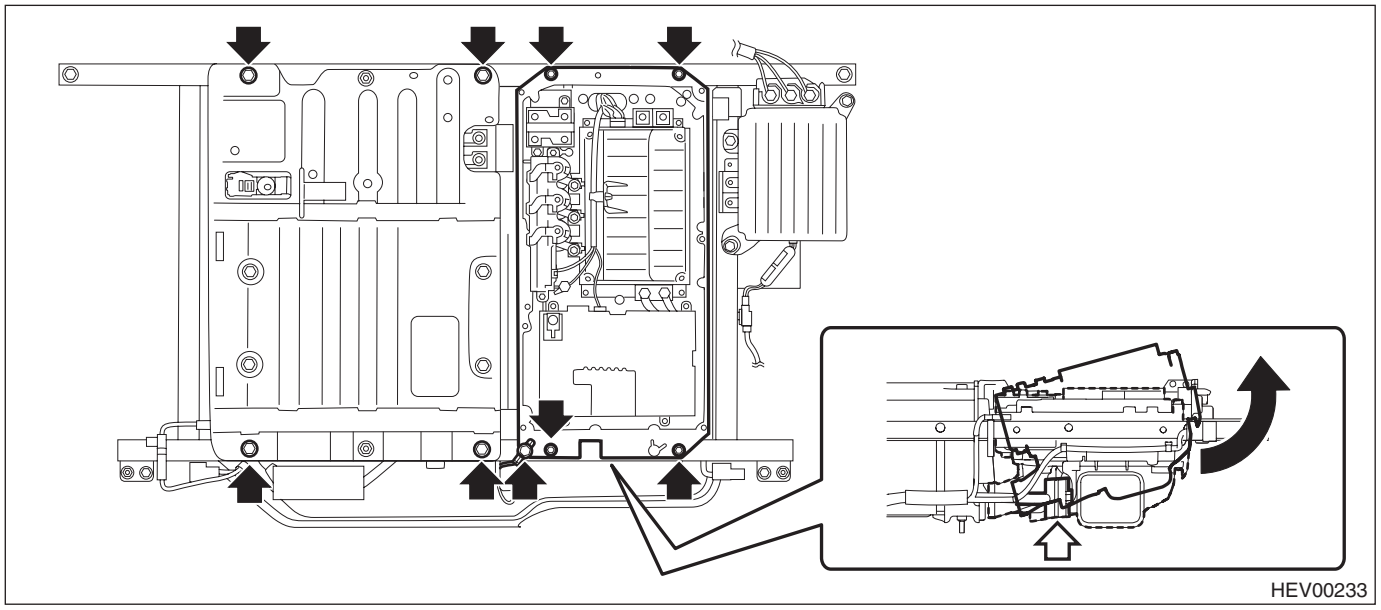


8) Remove the nut and remove the cover - shield battery and the cover - shield seat.



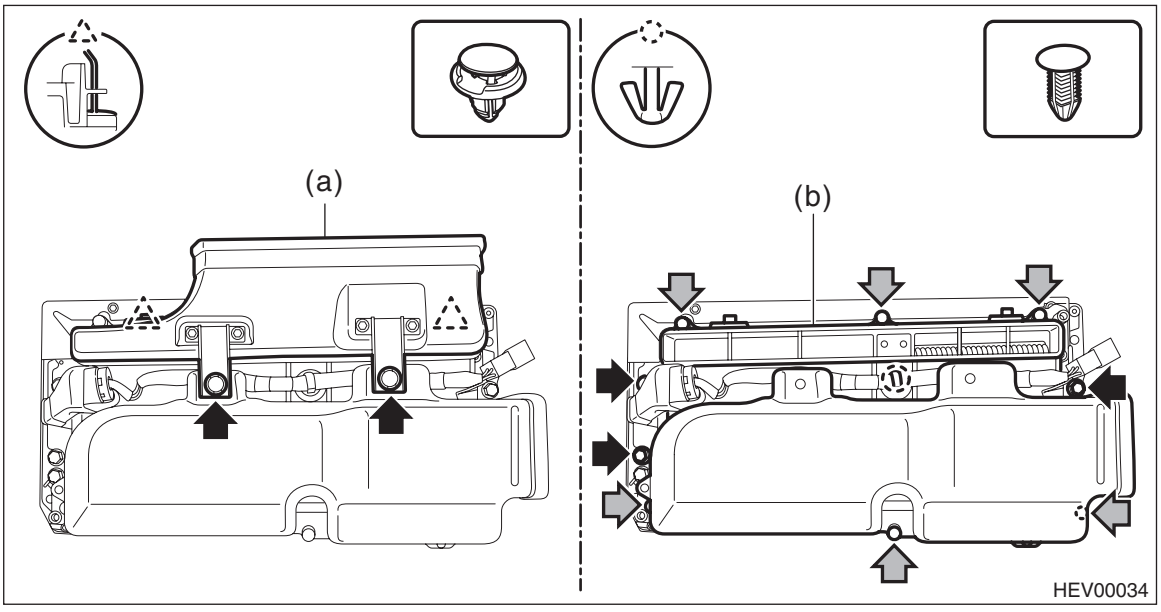
9) Remove the bolts and nuts and disconnect the ground terminal and the power cable.

CAUTION:
- **Be careful not to use excessive force when disconnecting the power cable to avoid any damage.**
- **Always wrap the disconnected power cable terminals with insulating tape.**



10) Remove the cooling duct front (rear). <Ref. to HEV-62, COOLING DUCT FRONT (REAR), REMOVAL, High Voltage Battery Cooling System.>
11) Remove the cooling fan assembly. <Ref. to HEV-70, COOLING FAN ASSEMBLY, REMOVAL, High Voltage Battery Cooling System.>
12) Remove the inverter assembly.
(1) Remove the bolts to remove the inverter shield.
(2) Remove the bolts and disconnect the bus bars between the high voltage battery and electric noise filter and between the electric noise filter and electric oil pump inverter respectively.

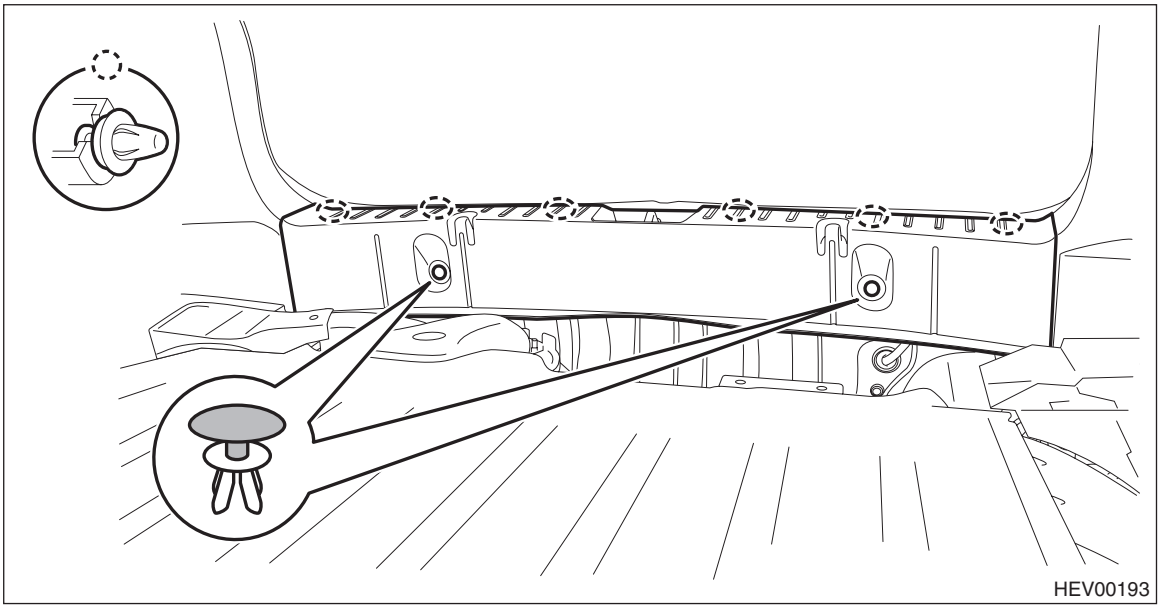
CAUTION:
Always wrap the high voltage battery terminal with insulating tape.



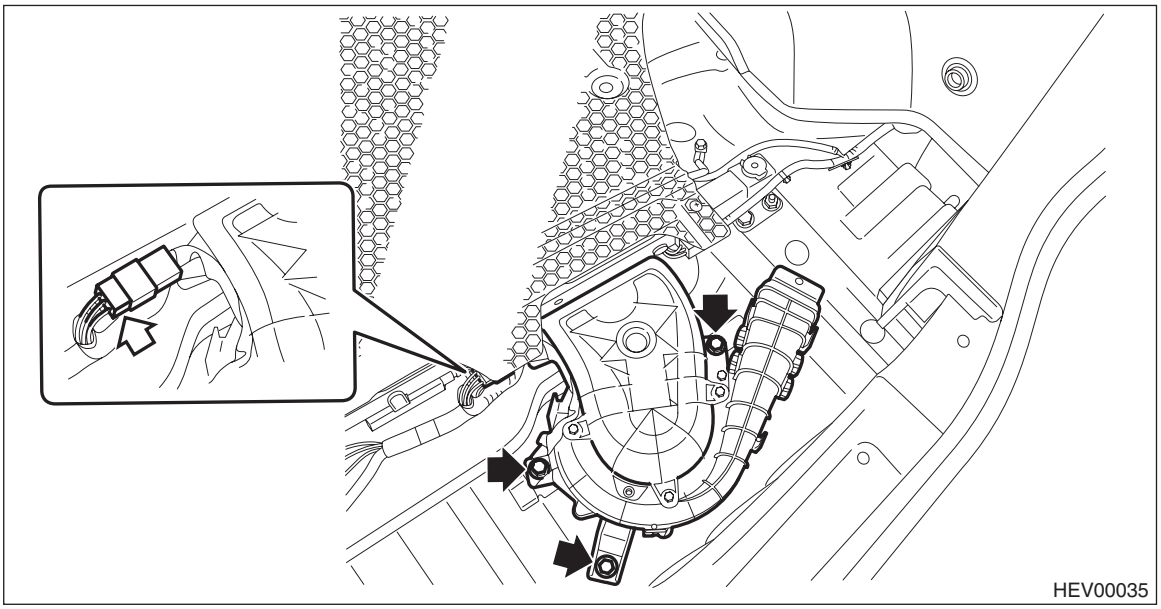
(3) Disconnect the connector.
(4) Remove all the mounting bolts of the high voltage battery to make the battery free.
(5) Remove the bolts, and then detach the ground terminal and the inverter assembly.

CAUTION:
Be careful not to damage the duct seal located underneath the high voltage battery.

13) Remove the cooling duct inverter assembly.
(1) Release the clips and hooks, then remove the duct inverter IN (a).
(2) Remove the bolt.
(3) Release the clips and harness clips, then remove the duct inverter OUT (b).

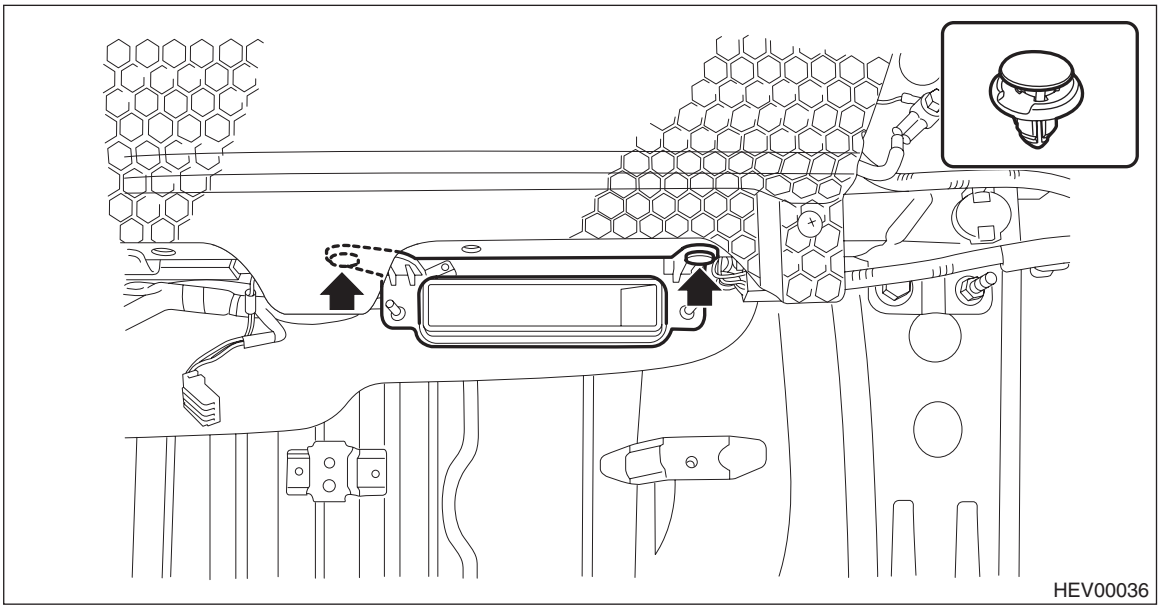


NOTE:
Leave the harness on the inverter frame assembly side.



5. COOLING FAN ASSEMBLY

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>



NOTE:
For the 12 volt engine restart battery, disconnect the ground terminal from 12V engine restart battery sensor.
2) Remove the mat - rear floor CTR.
3) Release the clips and claws, then detach the sub-trunk assembly and the spacer - rear floor side RH.
4) Release the clips, then remove the trim panel - rear skirt.

5) Remove the cooling duct rear. <Ref. to HEV-64, COOLING DUCT REAR, REMOVAL, High Voltage Battery Cooling System.>
6) Remove the cooling fan assembly.
   (1) Release the connector and the clip.
   (2) Remove the bolts, then remove the cooling fan assembly.

7) Release the clips, and remove the cooling fan duct from the cooling duct inverter assembly.

B: INSTALLATION

1. COOLING DUCT FRONT (FRONT)

Install each part in the reverse order of removal.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

2. COOLING DUCT FRONT (REAR)

WARNING:
The hybrid system includes a high voltage circuit. Mishandling could cause accidents such as electric shock or leak. Always check "CAUTION (HYBRID SYSTEM)" and perform the proper operation. <Ref. to PC-7, CAUTION (HYBRID SYSTEM), Precaution.>

1) Install the cooling duct front (rear).
2) Install the battery cover.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the spacer - rear floor front.
4) Install the rear seat cushion. <Ref. to SE-27, INSTALLATION, Rear Seat.>
5) Install the sub-trunk assembly and the spacer - rear floor side LH.
6) Install the service disconnect plug. <Ref. to HEV-16, INSTALLATION, Service Plug.>

3. COOLING DUCT REAR

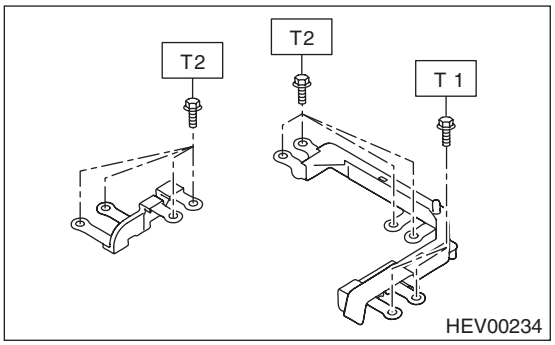
Install each part in the reverse order of removal.

4. COOLING DUCT INVERTER ASSEMBLY

WARNING:
The hybrid system includes a high voltage circuit. Mishandling could cause accidents such as electric shock or leak. Always check "CAUTION (HYBRID SYSTEM)" and perform the proper operation. <Ref. to PC-7, CAUTION (HYBRID SYSTEM), Precaution.>

1) Install the cooling duct inverter assembly.

Tightening torque:
6.5 N·m (0.7 kgf-m, 4.8 ft-lb)



2) Mount the high voltage battery on the high voltage battery frame assembly, then install the inverter assembly.

CAUTION:
- **If the duct seal is damaged, replace it with a new part.**
- **Be sure that the high voltage battery is securely attached to the cooling duct inverter duct.**

Tightening torque:
High voltage battery and inverter assembly: 22 N·m (2.2 kgf-m, 16.2 ft-lb)
Ground terminal: 6.5 N·m (0.7 kgf-m, 4.8 ft-lb)

3) Connect the bus bar.

Tightening torque:
T1: 6.5 N·m (0.7 kgf-m, 4.8 ft-lb)
T2: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

4) Install the inverter shield.

Tightening torque:
6.5 N·m (0.7 kgf-m, 4.8 ft-lb)

5) Install the cooling fan assembly. <Ref. to HEV-73, COOLING FAN ASSEMBLY, INSTALLATION, High Voltage Battery Cooling System.>
6) Install the cooling duct front (rear). <Ref. to HEV-71, COOLING DUCT FRONT (REAR), INSTALLATION, High Voltage Battery Cooling System.>
7) Connect the ground terminal and the power cable.

CAUTION:
- **When connecting the power cable, pay attention to the letters (U, V, and W) imprinted on the drive motor inverter amperage sensor body as well as on the protector of the power cable.**
- **Do not apply excessive force to the terminals and watch to make sure the cable is not damaged or pinched.**

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

8) Install the cover - shield battery and the cover - shield seat.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

9) Install the ground terminal and inverter cover.

CAUTION:
Check that the sound proofing material on the inverter cover is not detached or damaged.

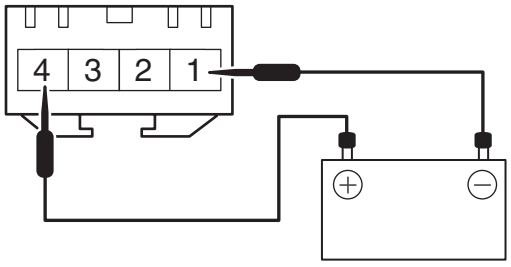
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
10) Install the battery cover.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
11) Install the spacer - rear floor front.
12) Install the rear seat cushion. <Ref. to SE-27, INSTALLATION, Rear Seat.>
13) Install the sub-trunk assembly and the spacer - rear floor side.
14) Install the service disconnect plug. <Ref. to HEV-16, INSTALLATION, Service Plug.>

5. COOLING FAN ASSEMBLY

Install each part in the reverse order of removal.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



C: INSPECTION

1. DUCT

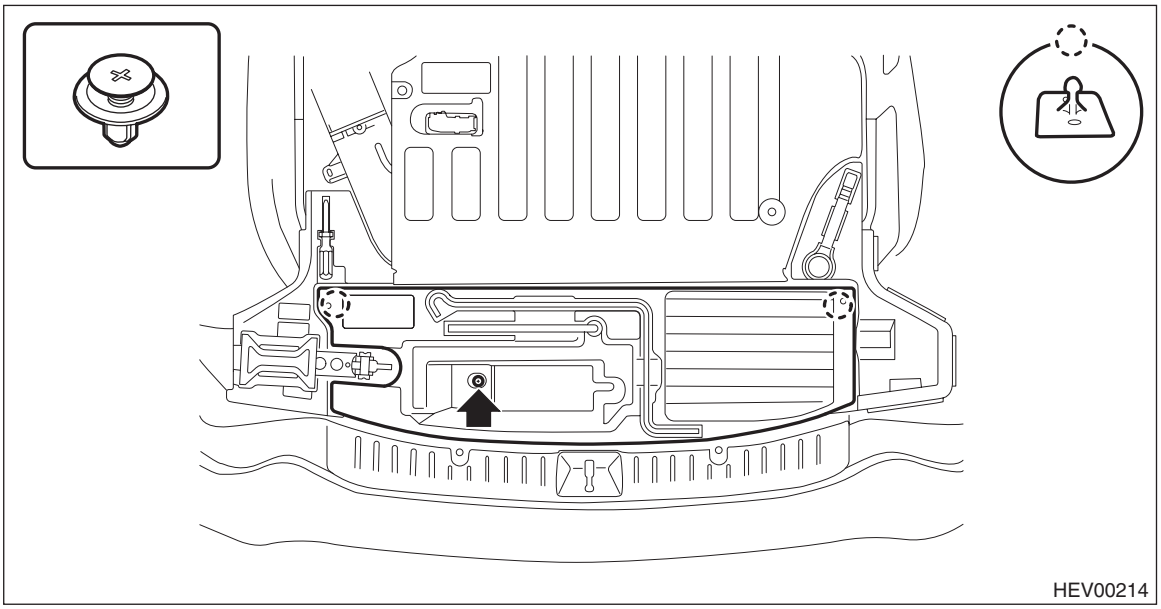
Check the duct for clogging, crack, or deformation. If defective, replace the duct.

2. FAN MOTOR

1) Check the motor operation when battery voltage is applied between the terminals of motor.

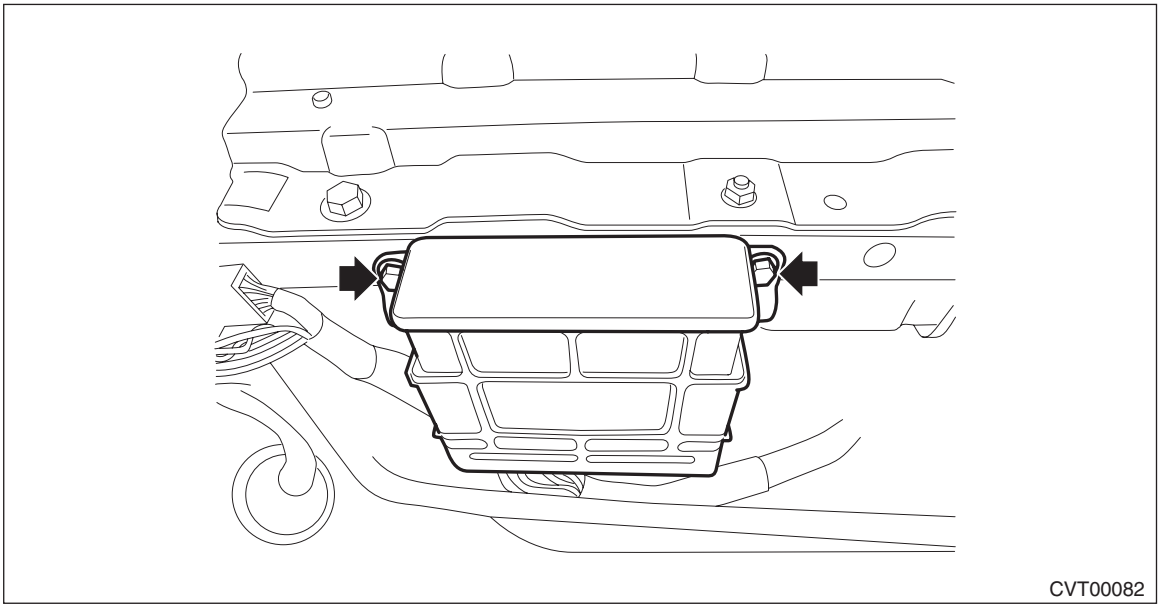
Terminal No.	Inspection conditions	Specification	Connection diagram
4 (+) — 1 (–)	Connect battery to the terminals	Rotation	 HEV00192

2) If it does not operate normally, replace the cooling fan assembly.



14.Drive Motor Control Module

A: REMOVAL



1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For the 12 volt engine restart battery, disconnect the ground terminal from 12V engine restart battery sensor.

2) Remove the mat - rear floor CTR.
3) Release the clips and claws, then remove the sub-trunk box.

4) Remove the drive motor control module.
   (1) Remove the drive motor control module mounting bolts.

   (2) Disconnect the connector from the drive motor control module.
   (3) Release the relay holder, ground terminal, and harness clip.

NOTE:
Replace the drive motor control module and the bracket as a set.

B: INSTALLATION

CAUTION:
- **If replaced with a new one, install the drive motor control module on the bracket.**
- **To avoid the damage to bracket and the drive motor control module, do not remove module once installed on the bracket. If installed by mistake, the part must be replaced with a new part.**

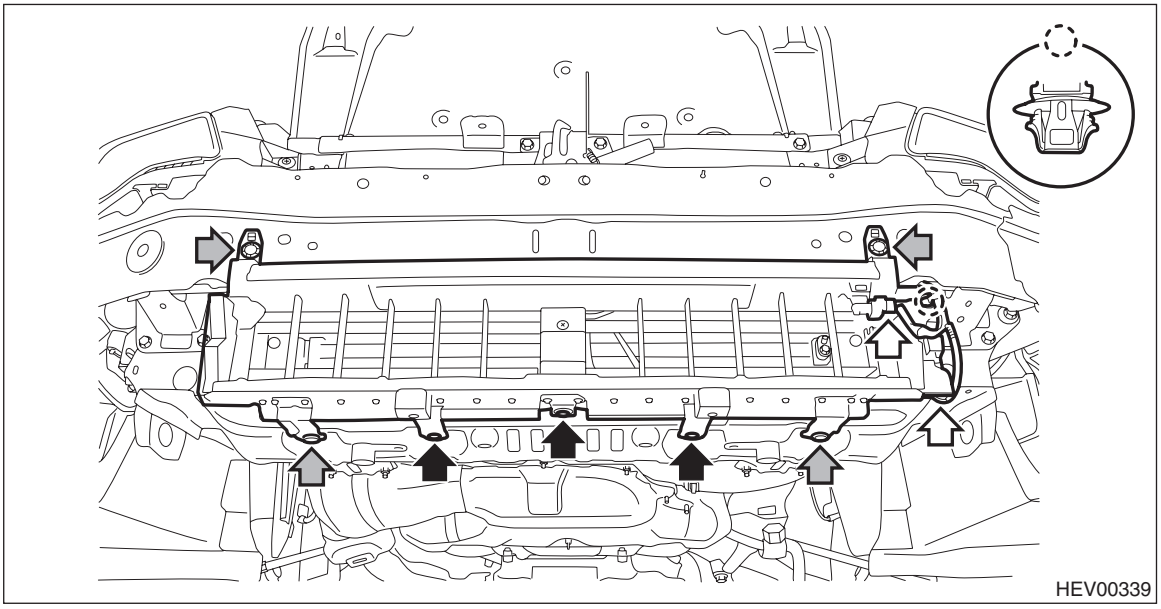
Install each part in the reverse order of removal.

Tightening torque:
6.5 N·m (0.7 kgf-m, 4.8 ft-lb)

15.Drive Motor Assembly

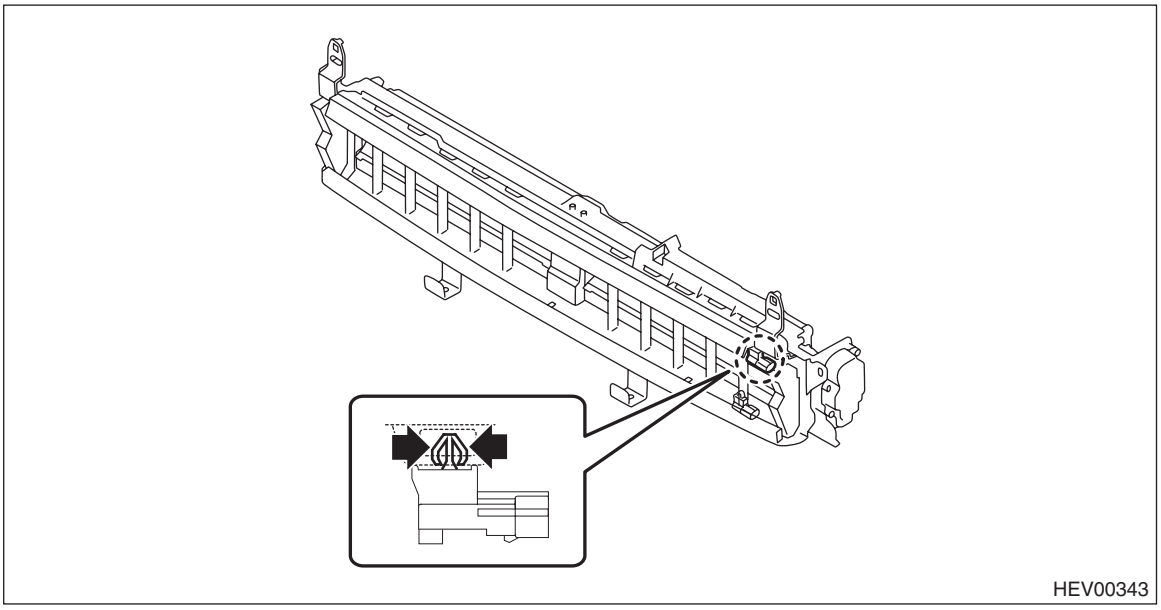
A: NOTE

For the operation procedures for drive motor assembly, refer to “CONTINUOUSLY VARIABLE TRANSMISSION” section. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>



16.Active Grille Shutter

A: REMOVAL



1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For the 12 volt engine restart battery side, disconnect the ground terminal from the 12V engine restart battery sensor.

2) Remove the front under cover. <Ref. to EI-31, REMOVAL, Front Under Cover.>
3) Remove the bumper face - front. <Ref. to EI-37, REMOVAL, Front Bumper.>
4) Remove the active grille shutter.
   (1) Disconnect each connector and release the harness clip.
   (2) Remove the bolts, release the clips, and then remove the active grille shutter.

HEV00339

(3) Release the claws and then remove the ambient sensor.

HEV00343

B: INSTALLATION

1) Install each part in the reverse order of removal.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) When the active grille shutter has been replaced, perform the calibration (active test for ACTGS control). <Ref. to EN(H4DO HEV)(diag)-69, OPERATION, Active Test.>

17.Diagnostics with Phenomenon

A: INSPECTION

Refer to “Diagnostics with Phenomenon” in the “HYBRID ELECTRIC VEHICLE (DIAGNOSTICS)” section. <Ref. to HEV(diag)-488, Diagnostics with Phenomenon.>

HYBRID ELECTRIC VEHICLE (DIAGNOSTICS)

20.	Diagnostics with Phenomenon	488

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**CHECK PRE-INSPECTION.** Ask the customer when and how the trouble occurred using the interview check list. <Ref. to HEV(diag)-5, Check List for Interview.>	Was the customer interview performed?	Go to step **2**.	Perform the interview.
2	**CHECK HYBRID FAIL LAMP.** Check the hybrid fail lamp.	Does the hybrid fail lamp illuminate after starting the engine?	Go to step **3**.	Perform appropriate inspection using Diagnostics with Phenomenon. <Ref. to HEV(diag)-488, Diagnostics with Phenomenon.>
3	**CHECK COMBINATION METER.** Using the Subaru Select Monitor, read DTC of combination meter.	Is either DTC U0073, U0293, or U0594 detected? (current malfunction)	Perform the inspection according to the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Go to step **4**.
4	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of the hybrid powertrain control module. NOTE: • Refer to “Read Diagnostic Trouble Code (DTC)” for detailed operation procedure. <Ref. to HEV(diag)-23, OPERATION, Read Diagnostic Trouble Code (DTC).> • If the communication function of the Subaru Select Monitor does not operate properly, check the communication circuit. <Ref. to HEV(diag)-17, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>	Is DTC detected? (current malfunction)	Record DTC, time stamp, and freeze frame data, then perform inspection using “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to HEV(diag)-72, List of Diagnostic Trouble Code (DTC).> After the repair, Go to step **10**. NOTE: • For the time stamp, refer to LAN section. <Ref. to LAN(HEV)(diag)-6, TIME STAMP, CAUTION, General Description.> • Depending on DTCs, time stamp may not be stored.	Go to step **5**.
5	**CHECK CURRENT DATA.** Confirm the current data of hybrid powertrain control system, the value of «Hybrid Fail Lamp Signal (DMCM)» using the Subaru Select Monitor. <Ref. to HEV(diag)-39, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Does the value show «ON»?	Go to step **6**.	Go to step **7**.

	Step	Check	Yes	No
6	**CHECK DTC.** Read the DTC of the drive motor control system using the Subaru Select Monitor. <Ref. to HEV(diag)-23, Read Diagnostic Trouble Code (DTC).> NOTE: • Refer to “Read Diagnostic Trouble Code (DTC)” for detailed operation procedure. <Ref. to HEV(diag)-23, OPERATION, Read Diagnostic Trouble Code (DTC).> • If the communication function of the Subaru Select Monitor does not operate properly, check the communication circuit. <Ref. to HEV(diag)-17, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>	Is DTC detected? (current malfunction)	Record DTC, time stamp, and freeze frame data, then perform inspection using “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to HEV(diag)-72, List of Diagnostic Trouble Code (DTC).> After the repair, Go to step **10**. NOTE: • For the time stamp, refer to LAN section. <Ref. to LAN(HEV)(diag)-6, TIME STAMP, CAUTION, General Description.> • Depending on DTCs, time stamp may not be stored.	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>
7	**CHECK CURRENT DATA.** Confirm the current data of hybrid powertrain control system, the value of «Hybrid Fail Lamp Signal (BECM)» using the Subaru Select Monitor. <Ref. to HEV(diag)-39, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Does the value show «ON»?	Go to step **8**.	Go to step **9**.
8	**CHECK DTC.** Read DTC of the battery energy control system using the Subaru Select Monitor. <Ref. to HEV(diag)-23, Read Diagnostic Trouble Code (DTC).> NOTE: • Refer to “Read Diagnostic Trouble Code (DTC)” for detailed operation procedure. <Ref. to HEV(diag)-23, OPERATION, Read Diagnostic Trouble Code (DTC).> • If the communication function of the Subaru Select Monitor does not operate properly, check the communication circuit. <Ref. to HEV(diag)-17, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>	Is DTC detected? (current malfunction)	Record DTC, time stamp, and freeze frame data, then perform inspection using “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to HEV(diag)-72, List of Diagnostic Trouble Code (DTC).> After the repair, Go to step **10**. NOTE: • For the time stamp, refer to LAN section. <Ref. to LAN(HEV)(diag)-6, TIME STAMP, CAUTION, General Description.> • Depending on DTCs, time stamp may not be stored.	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

	Step	Check	Yes	No
9	**CHECK HYBRID FAIL LAMP.** 1) Turn the ignition switch to OFF. 2) Wait for at least 30 seconds. 3) Turn the ignition switch to ON.	Does the hybrid fail lamp illuminate?	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	It is possible that temporary poor communication occurs.
10	**PERFORM DIAGNOSIS.** 1) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, Clear Memory Mode.> 2) Perform the Inspection Mode or Drive Cycle. <Ref. to HEV(diag)-26, Inspection Mode.> <Ref. to HEV(diag)-32, Drive Cycle.>	Is DTC displayed on Subaru Select Monitor?	Inspect using “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to HEV(diag)-72, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

2. Check List for Interview

A: CHECK

1. CHECK LIST NO. 1

When a problem occurs, perform the following customer interview.

Customer's name	
Date of purchase	
Date of repair	
V.I.N.	
Engine No.	
Fuel type	
Transmission model	
Odometer reading	km (miles)
Weather	❑ Fine ❑ Cloudy ❑ Rainy ❑ Snowy
	❑ Others:
Ambient air temperature	°C (°F)
	❑ Hot ❑ Warm ❑ Cool ❑ Cold
Place	❑ Highway ❑ Suburbs ❑ Inner city ❑ Uphill ❑ Downhill ❑ Rough road
	❑ Others:
Engine temperature	❑ Cold ❑ During warming-up ❑ After warming-up ❑ Temp. of either of them
	❑ Others:
Engine speed	rpm
Vehicle speed	km/h (MPH)
Driving conditions	❑ No effect ❑ Start-up ❑ Restart ❑ Idling ❑ Racing ❑ Accelerating ❑ Cruising ❑ Decelerating ❑ Cornering (right/left turn) ❑ Cruise control ❑ Other
Vehicle conditions	❑ EV traveling ❑ Auto Start Stop active
Select lever position	❑ P ❑ R ❑ N ❑ D ❑ Manual mode
Hybrid READY indicator light	❑ ON❑ OFF
EV mode lamp	❑ ON❑ OFF
Remaining high voltage battery level of MFD	
Manual mode	❑ ON ❑ OFF
Headlight	❑ ON ❑ OFF
Rear defogger	❑ ON ❑ OFF
Blower	❑ ON ❑ OFF
Audio	❑ ON ❑ OFF
A/C compressor	❑ ON ❑ OFF
Rear entertainment system	❑ ON ❑ OFF
Radiator fan	❑ ON ❑ OFF
Car phone	❑ ON ❑ OFF
Front wiper	❑ ON ❑ OFF
Rear wiper	❑ ON ❑ OFF
Wireless device	❑ ON ❑ OFF

2. CHECK LIST NO. 2

If any indicator lights illuminate, perform the following additional customer interview.

a) Warning lights or indicators illuminate.	❑ Yes ❑ No
❑ ABS warning light ❑ Steering control warning light ❑ AT oil temperature warning light ❑ AWD warning light ❑ VDC warning light/VDC indicator light ❑ Fuel level warning light ❑ Malfunction Indicator Light ❑ SRS airbag warning light ❑ Water temperature warning light (red) ❑ Oil pressure warning light ❑ Charge warning Light ❑ Security indicator light ❑ Brake warning light ❑ Vacuum pump fail lamp ❑ Hybrid fail lamp ❑ Others:	
b) 12 volt auxiliary battery	
Manufacturer's genuine battery is equipped	❑ Yes ❑ No
Battery voltage	V
Battery replacement	❑ Yes ❑ No
Travel distance at replacement	km (miles)
c) 12 volt engine restart battery	
Manufacturer's genuine battery is equipped	❑ Yes ❑ No
Battery voltage	V
Battery replacement	❑ Yes ❑ No
Travel distance at replacement	km (miles)
d) Starter	
Start count (refer to current data)	
Starter has ever been replaced	❑ Yes ❑ No
e) Fuel level	
Lack of fuel	❑ Yes ❑ No
Indicator position of fuel gauge	❑ FULL ❑ 3/4 ❑ 1/2 ❑ 1/4 ❑ Other
Experienced running out of fuel	❑ Yes ❑ No
f) Intentional connecting or disconnecting of vehicle harness connectors	❑ Yes ❑ No
Name of parts or points of disconnection	
g) Intentional connecting or disconnecting of vehicle hoses	❑ Yes ❑ No
Name of parts or points of disconnection	
h) Installing parts other than genuine parts	❑ Yes ❑ No
Parts	
Where	
i) Occurrence of noise	❑ Yes ❑ No
From where	
What kind	
j) Occurrence of smell	❑ Yes ❑ No
From where	
What kind	
k) Ingress of water into engine compartment	❑ Yes ❑ No
l) Ingress of water into luggage room	❑ Yes ❑ No
m) Ingress of water into passenger compartment	❑ Yes ❑ No

n) Troubles occurred

❑Engine speed drops ❑Engine speed does not drop ❑Rough idling ❑Slow acceleration
❑Back fire ❑After fire ❑Shifting is wrong (specifically:) ❑ Excessive shift shock
❑Shock or judder during driving ❑Engine speed increases abruptly during driving ❑Shock or judder during standing start
❑Unable to switch to EV traveling ❑READY ON does not occur ❑Batteries (12 volt auxiliary battery and high voltage battery) are not charged
❑Auto Start Stop does not operate ❑Engine does not restart after Auto Start Stop/EV traveling
❑ Buzzer sounds (intermittently or continuously) during Auto Start Stop
❑When restarting, the audio/navigation system is reset (initialized).
❑When restarting, the combination meter and MFD blink.
❑ Electrical equipment such as automatic air conditioner, audio, navigation system, or combination meter does not operate.
❑ Others:

3. General Description

A: CAUTION

1. AIRBAG SYSTEM

Refer to “CAUTION” in “General Description” in AIRBAG SYSTEM. <Ref. to AB-11, CAUTION, General Description.>

2. HYBRID SYSTEM

Refer to “CAUTION (HYBRID SYSTEM)”. <Ref. to PC-7, CAUTION (HYBRID SYSTEM), Precaution.>

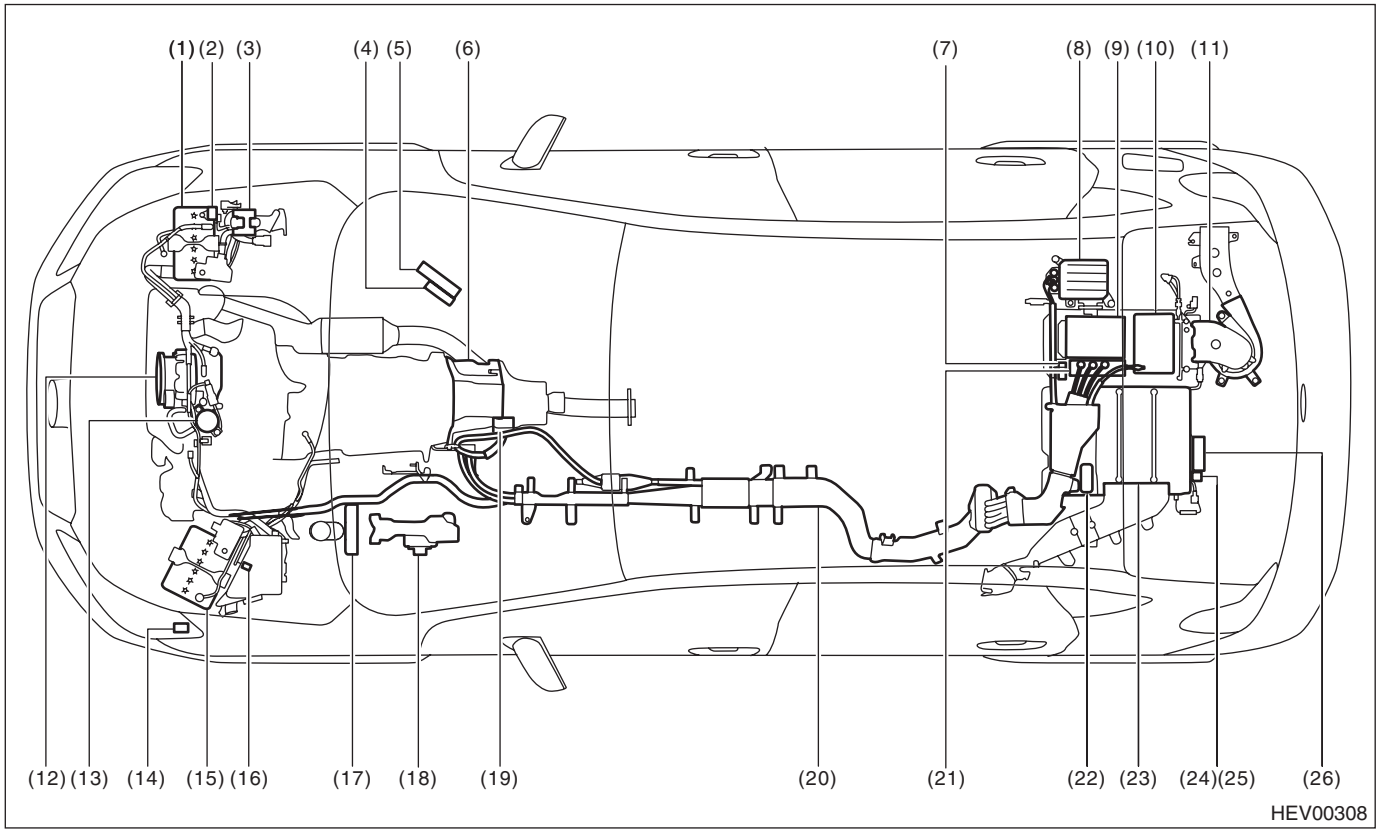
B: INSPECTION

Before performing diagnostics, check the following item which might affect hybrid system problems.
1) Check 12 volt auxiliary battery and 12 volt engine restart battery. <Ref. to SC(H4DO(HEV))-40, Battery.>
2) Check the condition of the main and other fuses, and harnesses and connectors. Also check for proper grounding. <Ref. to HEV-12, Relay and Fuse.>

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	— (Newly adopted tool)	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.



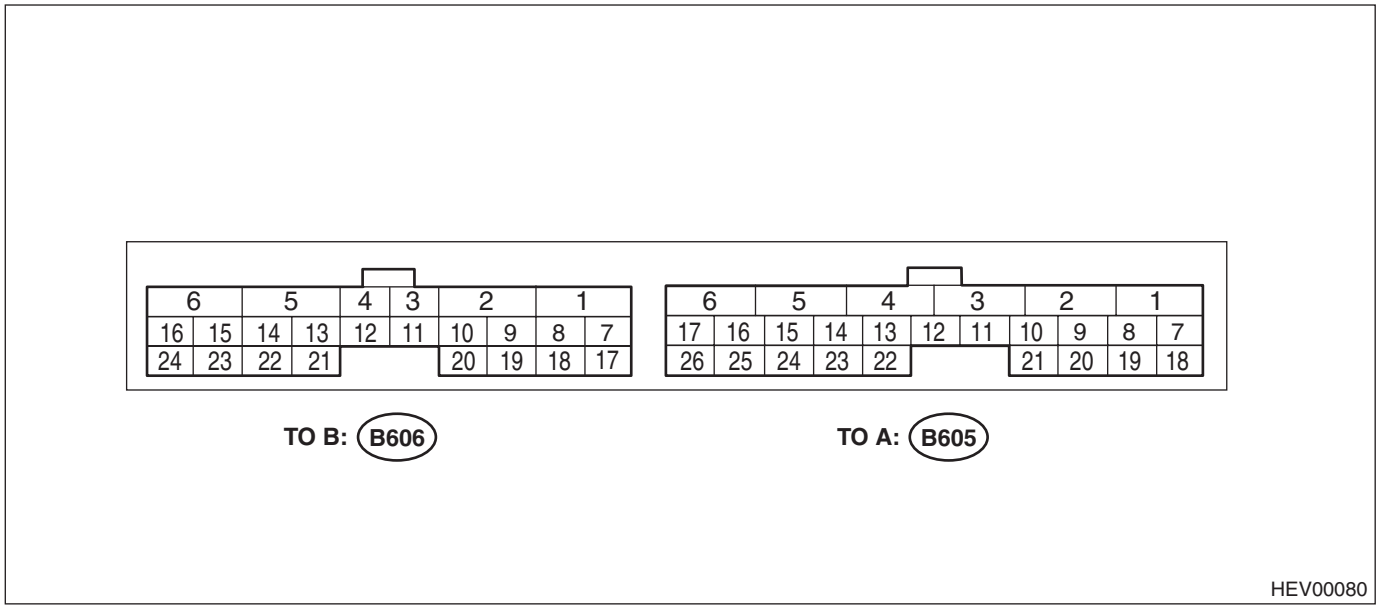
2. GENERAL TOOL

TOOL NAME	REMARKS
Personal Protective Equipment (PPE)	Used for removing and installing high voltage components.
Insulation multimeter	Used for measuring resistance and voltage of high voltage components.
Insulating tape	Used for power cable terminals and high voltage battery terminals.
TORX® bit T30	Used to remove and install the battery cover.
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

4. Electrical Component Location

A: LOCATION

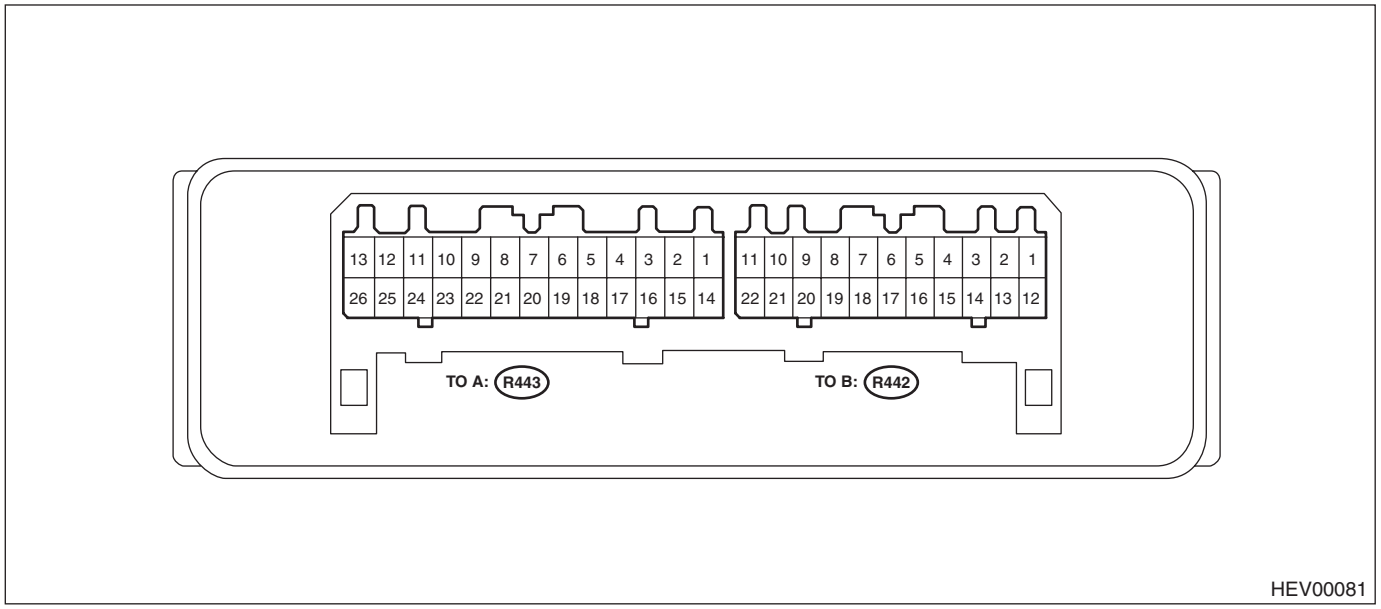
1. HYBRID SYSTEM



(1)	12 volt engine restart battery	(10)	DC/DC converter	(19)	Electric oil pump
(2)	12V engine restart battery sensor	(11)	High voltage battery cooling fan	(20)	Power cable
(3)	12V battery relay	(12)	Integrated starter generator (ISG)	(21)	Drive motor inverter amperage sensor
(4)	Hybrid powertrain control module (HPCM)	(13)	Brake vacuum pump	(22)	Service disconnect plug
(5)	Engine control module (ECM)	(14)	Battery temperature sensor	(23)	High voltage battery (including battery energy control module (BECM))
(6)	Drive motor ASSY	(15)	12 volt auxiliary battery	(24)	DMCM power relay
(7)	Electric noise filter	(16)	Brake vacuum pump relay	(25)	High voltage battery cooling fan/ drive motor inverter power supply relay
(8)	Electric oil pump inverter	(17)	Brake booster (including brake booster pressure sensor)	(26)	Drive motor control module (DMCM)
(9)	Drive motor inverter	(18)	Brake pedal ASSY (including brake stroke sensor)		

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION



1. HYBRID POWERTRAIN CONTROL MODULE (HPCM)

Terminal No. (terminal symbol)	Item	Measuring condition	Measurement value	Note
(B605) No. 1	Linear solenoid output	—	Cannot be measured	—
(B605) No. 2	Main power supply 1	Always	11 — 15 V	—
(B605) No. 3	Main power supply 2	Always	11 — 15 V	—
(B605) No. 4	LIN communication	—	Cannot be measured	LIN communication line
(B605) No. 5	GND1	Always	0 V	—
(B605) No. 6	GND2	Always	0 V	—
(B605) No. 7	(Not used)	—	—	—
(B605) No. 8	(Not used)	—	—	—
(B605) No. 9	(Not used)	—	—	—
(B605) No. 10	HEV CAN H	—	Cannot be measured	CAN communication line
(B605) No. 11	HEV CAN L	—	Cannot be measured	CAN communication line
(B605) No. 12	MAIN CAN H	—	Cannot be measured	CAN communication line
(B605) No. 13	MAIN CAN L	—	Cannot be measured	CAN communication line
(B605) No. 14	PU CAN H	—	Cannot be measured	CAN communication line
(B605) No. 15	PU CAN L	—	Cannot be measured	CAN communication line
(B605) No. 16	(Not used)	—	—	—
(B605) No. 17	(Not used)	—	—	—
(B605) No. 18	Oil pressure SW input	Engine running	11 — 15 V	—
		When ignition switch is ON	0 V	—
(B605) No. 19	(Not used)	—	—	—
(B605) No. 20	(Not used)	—	—	—
(B605) No. 21	IG SW input	Ignition switch ON	11 — 15 V	—
(B605) No. 22	Starter drive request signal	Model without push button start at cranking	8 — 14 V	—
		Model with push button start at cranking	Waveform	—
(B605) No. 23	P range SW input	P range	Less than 1 V	—
		Except for P range	8 V or more	—

Terminal No. (terminal symbol)	Item	Measuring condition	Measurement value	Note
(B605) No. 24	R range SW input	R range	Less than 1 V	—
		Except for R range	8 V or more	—
(B605) No. 25	N range SW input	N range	Less than 1 V	—
		Except for N range	8 V or more	—
(B605) No. 26	D range SW input	D range	Less than 1 V	—
		Except for D range	8 V or more	—
(B606) No. 1	GND1 for sensors	Always	0 V	—
(B606) No. 2	GND2 for sensors	Always	0 V	—
(B606) No. 3	Brake booster pressure sensor input 1	Always	0.5 — 4.5 V	—
(B606) No. 4	Brake booster pressure sensor input 2	Always	0.5 — 4.5 V	—

6. General Scan Tool

A: OPERATION

1. HOW TO USE GENERAL SCAN TOOL

1) Prepare a scan tool (general scan tool) required by SAE J1978.
2) Connect the general scan tool to data link connector located in the lower portion of the instrument panel (on the driver's side).

3) Using the general scan tool, call up each data. General scan tool functions consist of:
   (1) MODE $01: Current diagnostic data
   (2) MODE $02: Freeze frame data
   (3) MODE $03: Emission-related DTC
   (4) MODE $04: Clear/Reset emission-related diagnostic information
   (5) MODE $07: Request on-board monitoring test results for continuously monitored systems
   (6) MODE $09: Request vehicle information
   (7) MODE $0A: Emission-related DTC (with Permanent Status)
4) Read out the data according to repair procedures. (For detailed operation procedure, refer to the general scan tool operation manual.)

NOTE:
For details concerning DTC, refer to "List of Diagnostic Trouble Code (DTC)". <Ref. to HEV(diag)-72, List of Diagnostic Trouble Code (DTC).>

2. MODE $01: (CURRENT DIAGNOSTIC DATA)

Refer to data denoting the current operating condition of analog input/output, digital input/output or the powertrain system.
A list of the support data and PID (Parameter Identification) codes are shown in the following table.

- Hybrid powertrain control system

PID	Data	Unit of measure
$01	Number of emission-related DTC, and malfunction indicator light status and diagnosis support information	—
$51	Fuel used at present	—

- Drive motor control system

PID	Data	Unit of measure
$01	Number of emission-related DTC, and malfunction indicator light status and diagnosis support information	—

- Battery energy control system

PID	Data	Unit of measure
$01	Number of emission-related DTC, and malfunction indicator light status and diagnosis support information	—
$5B	Hybrid/EV battery pack level	%

NOTE:
Refer to general scan tool manufacturer's operation manual to access current diagnostic data (MODE $01).

3. MODE $02 (FREEZE FRAME DATA)

Refer to data denoting the operating condition when trouble is detected by on-board diagnosis system.
A list of the support data and PID (Parameter Identification) codes are shown in the following table.

- Hybrid powertrain control system

PID	Data	Unit of measure
$02	DTC that caused freeze frame data to be stored	—
$51	Fuel used at present	—

- Battery energy control system

PID	Data	Unit of measure
$02	DTC that caused freeze frame data to be stored	—
$5B	Hybrid/EV battery pack level	%

NOTE:
Refer to general scan tool manufacturer's instruction manual to access current freeze frame data (MODE $02).

4. MODE $03 (EMISSION-RELATED DTC)

Refer to “List of Diagnostic Trouble Code (DTC)” for information about data denoting emission-related DTC. <Ref. to HEV(diag)-72, List of Diagnostic Trouble Code (DTC).>

5. MODE $04 (CLEAR/RESET EMISSION-RELATED DIAGNOSTIC INFORMATION)

Refer to the mode used to clear or reset emission-related diagnostic information.

NOTE:
Refer to general scan tool manufacturer’s instruction manual to clear the emission-related diagnostic information (MODE $04).

6. MODE $07 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR CONTINUOUSLY MONITORED SYSTEMS)

Refer to the data of DTC (pending code) for troubleshooting result about emission in the first time.

7. MODE $09 (REQUEST VEHICLE INFORMATION)

Refer to the data of the vehicle specification.

8. MODE $0A (EMISSION-RELATED DTC (WITH PERMANENT STATUS))

Refer to “List of Diagnostic Trouble Code (DTC)” for information about data denoting emission-related DTC. <Ref. to HEV(diag)-72, List of Diagnostic Trouble Code (DTC).>

7. Subaru Select Monitor

A: OPERATION

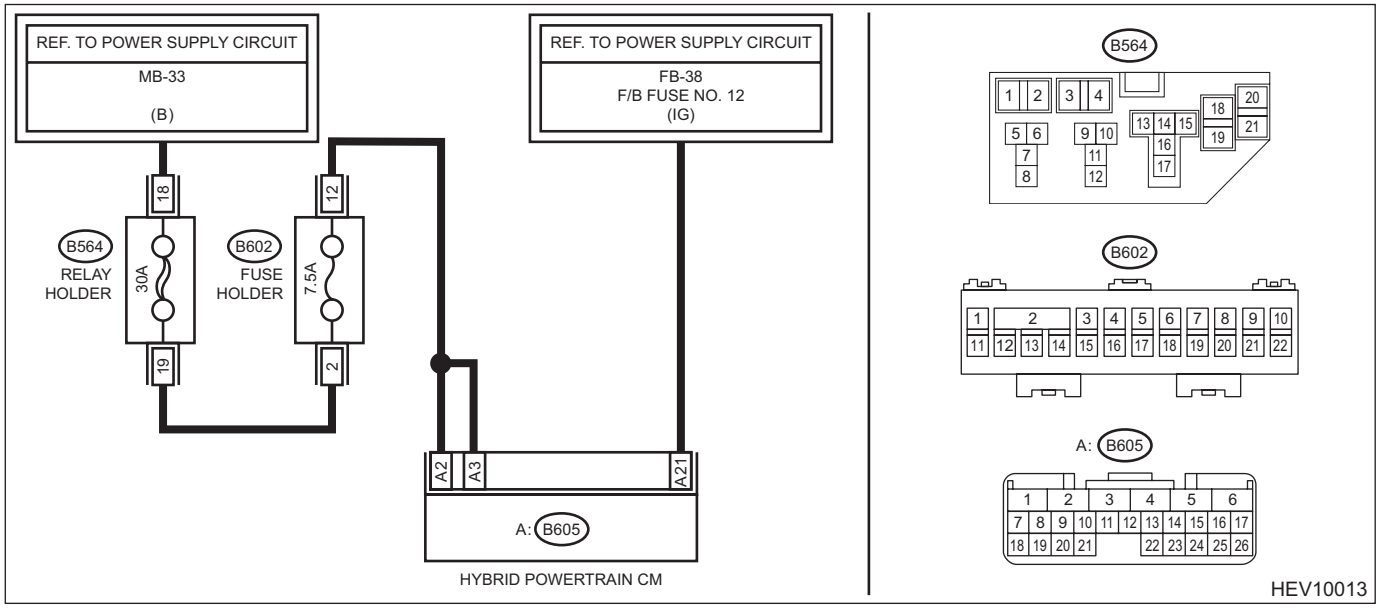
- For detailed operation procedures, refer to “Application help”.
- When communication with Subaru Select Monitor is not possible, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE”. <Ref. to HEV(diag)-17, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>

B: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Subaru Select Monitor communication line is open or shorted.

1. HYBRID POWERTRAIN CONTROL SYSTEM

DIAGNOSIS:



- Defective harness
- Power supply circuit malfunction
- Defective HPCM
- Defective CAN communication circuit
- Defective Subaru Select Monitor

TROUBLE SYMPTOM:

Not communicable with Subaru Select Monitor.

WIRING DIAGRAM:

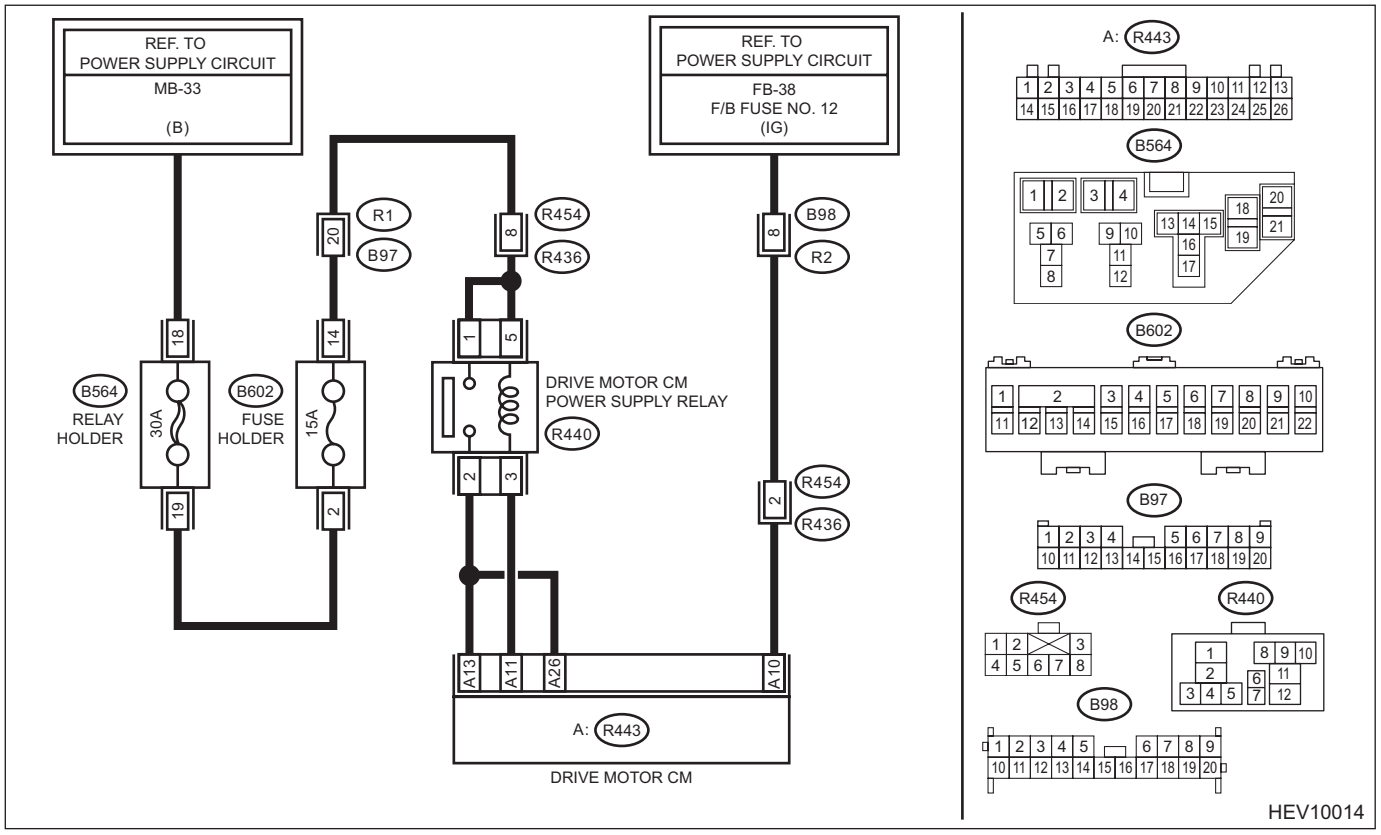
Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK FUSE.** Check HPCM fuse. <Ref. to HEV-12, Relay and Fuse.>	Is it normal?	Go to step **2**.	Replace the fuse. When the replaced fuse is blown immediately, repair ground short circuit of harness between 12 volt auxiliary battery and HPCM.

	Step	Check	Yes	No
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the HPCM connector. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between the HPCM connector and chassis ground. ***Connector & terminal*** ***(B605) No. 2 (+) — Chassis ground (–):*** ***(B605) No. 3 (+) — Chassis ground (–):*** ***(B605) No. 21 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **3**.	Repair the open circuit of the harness between the HPCM connector and the fuse.
3	**CHECK OTHER COMMUNICATION.** Communicate with the system other than the hybrid powertrain control module using the Subaru Select Monitor.	Is the communication to other control module possible?	Go to step **4**.	Perform the "Communication for Initializing Impossible" of LAN system. <Ref. to LAN(HEV)(diag)-12, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>
4	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Perform the inspection according to the diagnosis for LAN system.	Go to step **5**.
5	**CHECK HPCM.** 1) Turn the ignition switch to OFF. 2) Connect the HPCM connector. 3) Communicate with the hybrid powertrain control system using the Subaru Select Monitor.	Is communication possible?	It is possible that temporary poor communication occurs.	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>

2. DRIVE MOTOR CONTROL SYSTEM

DIAGNOSIS:



- Defective harness
- Power supply circuit malfunction
- Defective DMCM
- Defective CAN communication circuit
- Defective Subaru Select Monitor

TROUBLE SYMPTOM:

Not communicable with Subaru Select Monitor.

WIRING DIAGRAM:

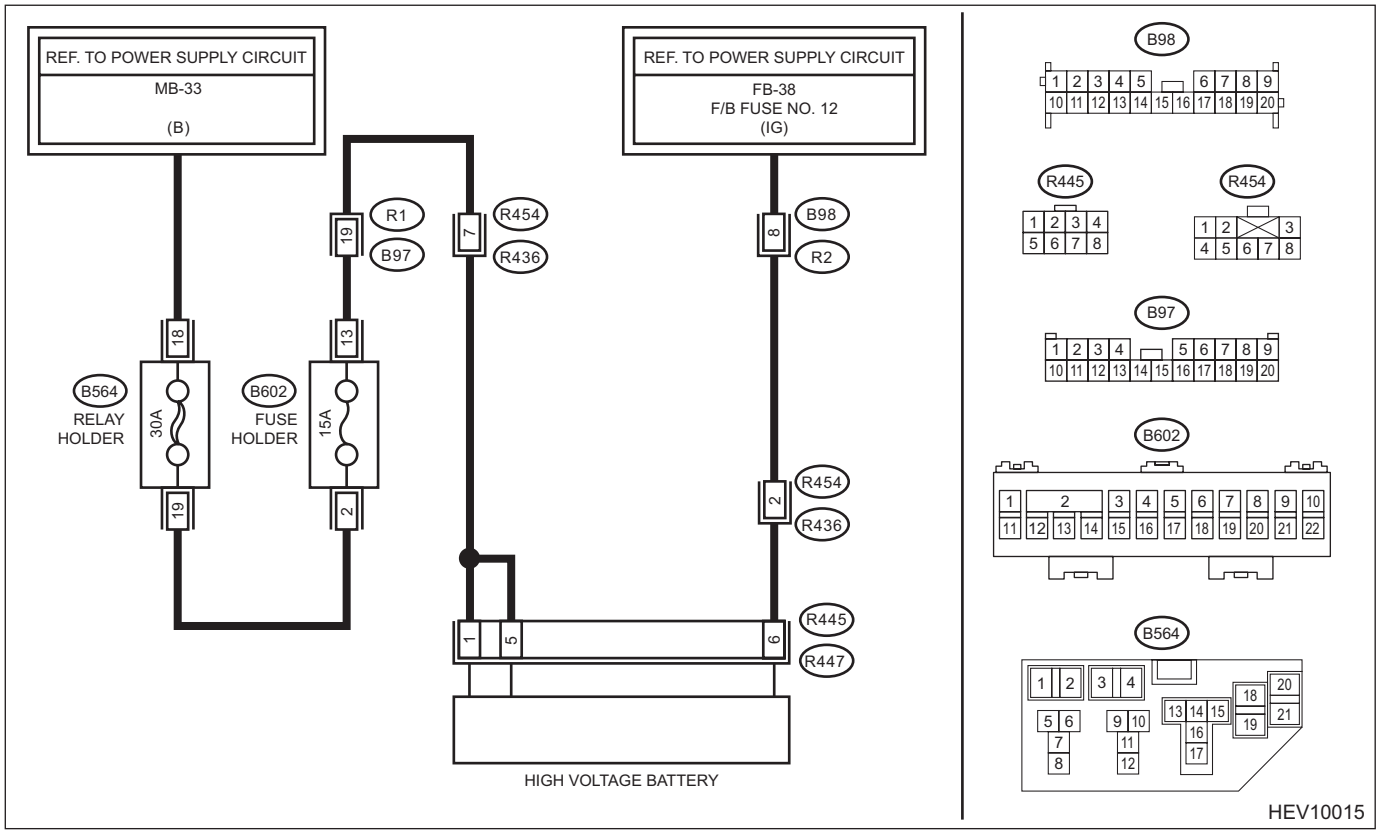
Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK FUSE.** Check DMCM fuse. <Ref. to HEV-12, Relay and Fuse.>	Is it normal?	Go to step **2**.	Replace the fuse. When the replaced fuse is blown immediately, repair ground short circuit of harness between 12 volt auxiliary battery and HPCM.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the DMCM connector. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between the DMCM connector and chassis ground. ***Connector & terminal*** ***(B443) No. 11 (+) — Chassis ground (–):*** ***(B443) No. 10 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **3**.	Repair the open circuit of the harness between the DMCM connector and the fuse.

	Step	Check	Yes	No
3	**CHECK OTHER COMMUNICATION.** Communicate with the system other than the drive motor control system using the Subaru Select Monitor.	Is the communication to other control module possible?	Go to step **4**.	Perform the "Communication for Initializing Impossible" of LAN system. <Ref. to LAN(HEV)(diag)-12, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>
4	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Perform the inspection according to the diagnosis for LAN system.	Go to step **5**.
5	**CHECK DMCM.** 1) Turn the ignition switch to OFF. 2) Connect the DMCM connector. 3) Communicate with the drive motor control system using the Subaru Select Monitor.	Is communication possible?	It is possible that temporary poor communication occurs.	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>

3. BATTERY ENERGY CONTROL SYSTEM

DIAGNOSIS:



- Defective harness
- Power supply circuit malfunction
- Defective high voltage battery
- Defective CAN communication circuit
- Defective Subaru Select Monitor

TROUBLE SYMPTOM:

Not communicable with Subaru Select Monitor.

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK FUSE.** Check High voltage battery fuse. <Ref. to HEV-12, Relay and Fuse.>	Is it normal?	Go to step **2**.	Replace the fuse. When the replaced fuse is blown immediately, repair ground short circuit of harness between 12 volt auxiliary battery and the high voltage battery.

	Step	Check	Yes	No
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the high voltage battery connector. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between the BECM connector and chassis ground. ***Connector & terminal*** ***(B445) No. 6 (+) — Chassis ground (–):*** ***(B445) No. 1 (+) — Chassis ground (–):*** ***(B445) No. 5 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **3**.	Repair the open circuit of the harness between the high voltage battery connector and the fuse.
3	**CHECK OTHER COMMUNICATION.** Communicate with the system other than the battery energy control system using the Subaru Select Monitor.	Is the communication to other control module possible?	Go to step **4**.	Perform the “Communication for Initializing Impossible” of LAN system.
4	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Perform the inspection according to the diagnosis for LAN system.	Go to step **5**.
5	**CHECK HIGH VOLTAGE BATTERY.** 1) Turn the ignition switch to OFF. 2) Disconnect the high voltage battery connector. 3) Connect the disconnected connectors. 4) Communicate with the battery energy control system using the Subaru Select Monitor.	Is communication possible?	It is possible that temporary poor communication occurs.	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

8. Read Diagnostic Trouble Code (DTC)

A: OPERATION

- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to HEV(diag)-72, List of Diagnostic Trouble Code (DTC).>

1. HYBRID POWERTRAIN CONTROL SYSTEM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Hybrid Powertrain Control» and then select «Enter».
5) On «Select Function» display, select «DTC».

2. DRIVE MOTOR CONTROL SYSTEM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Drive Motor» and then select «Enter».
5) On «Select Function» display, select «DTC».

3. BATTERY ENERGY CONTROL SYSTEM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «High Voltage Battery» and then select «Enter».
5) On «Select Function» display, select «DTC».

9. Clear Memory Mode

A: OPERATION

For detailed operation procedures, refer to “Application help”.

1. HYBRID POWERTRAIN CONTROL SYSTEM

NOTE:
After memory is cleared, turn the ignition switch to OFF, and wait for 30 seconds or more before turning the ignition switch to ON.
1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Hybrid Powertrain Control» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

2. DRIVE MOTOR CONTROL SYSTEM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Drive Motor» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

3. BATTERY ENERGY CONTROL SYSTEM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «High Voltage Battery» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

10.All Readiness Diagnostic Code(s)

A: OPERATION

NOTE:
• “Readiness code” denotes a self-diagnosis state in relation to DTC in each control module.
The DTCs displayed here are either not yet self-diagnosed or self-diagnosed but not completed. They will disappear once are diagnosed as normal or abnormal.
• When a diagnostic trouble code is set and the problem is addressed, the readiness code is used to check whether the repair has been properly completed.
When Clear Memory Mode is run after the repair, either Inspection Mode <Ref. to HEV(diag)-26, Inspection Mode.> or the drive cycle <Ref. to HEV(diag)-32, Drive Cycle.> is run against the concerned diagnostic trouble code (DTC), then the readiness code is checked. If the DTC is not displayed, the self-diagnosis for the DTC is considered complete.
Following this, the DTC is read. If the concerned DTC is not set as a current malfunction, the repair is considered complete.
• For detailed operation procedures, refer to “Application help”.
• Sometimes after the self-diagnosis is complete and the readiness code disappears, cycling the ignition switch OFF then ON may cause the readiness code reappear. This happens because the self-diagnosis for each DTC is run every time the ignition switch is turned ON.

1. HYBRID POWERTRAIN CONTROL SYSTEM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Hybrid Powertrain Control» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «All Readiness Diagnostic Code(s)».

2. DRIVE MOTOR CONTROL SYSTEM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Drive Motor» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «All Readiness Diagnostic Code(s)».

3. BATTERY ENERGY CONTROL SYSTEM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «High Voltage Battery» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «All Readiness Diagnostic Code(s)».

11.Inspection Mode

A: PROCEDURE

Perform the diagnosis shown in the following DTC table.
When performing the diagnosis not listed in “List of Diagnostic Trouble Code (DTC)”, refer to the item on the drive cycle. <Ref. to HEV(diag)-32, Drive Cycle.>

- Hybrid powertrain control system

DTC	Item	Condition
P0516	BATTERY TEMPERATURE SENSOR CIRCUIT LOW	—
P0517	BATTERY TEMPERATURE SENSOR CIRCUIT HIGH	—
P0556	BRAKE BOOSTER PRESSURE SENSOR CIRCUIT RANGE/PERFORMANCE	After idling, operate the brake pedal as ON ←→ OFF.
P0572	BRAKE SWITCH "A" CIRCUIT LOW	After idling, operate the brake pedal as ON ←→ OFF.
P0573	BRAKE SWITCH "A" CIRCUIT HIGH	After idling, operate the brake pedal as ON ←→ OFF.
P057B	BRAKE PEDAL POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE	After idling, operate the brake pedal as ON ←→ OFF.
P057C	BRAKE PEDAL POSITION SENSOR "A" CIRCUIT LOW	—
P057D	BRAKE PEDAL POSITION SENSOR "A" CIRCUIT HIGH	—
P058D	BATTERY MONITOR MODULE VOLTAGE MONITORING PERFORMANCE	—
P05DD	BRAKE PEDAL POSITION SENSOR "B" CIRCUIT LOW	—
P05DE	BRAKE PEDAL POSITION SENSOR "B" CIRCUIT HIGH	—
P0604	INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR	—
P0605	INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR	—
P0719	BRAKE SWITCH "B" CIRCUIT LOW	After idling, operate the brake pedal as ON ←→ OFF.
P0724	BRAKE SWITCH "B" CIRCUIT HIGH	After idling, operate the brake pedal as ON ←→ OFF.
P0A1D	HYBRID/EV POWERTRAIN CONTROL MODULE "A"	—
P1C00	BATTERY MONITOR MODULE "A" PERFORMANCE	—
P1C04	OUTPUT CLUTCH LINEAR SOLENOID HPCM CONTROL CIRCUIT LOW	After idling, turn the ignition switch to OFF and read the readiness code. (Because diagnosis is performed when the ignition switch is OFF.)
P1C05	OUTPUT CLUTCH LINEAR SOLENOID HPCM CONTROL CIRCUIT HIGH	After idling, turn the ignition switch to OFF and read the readiness code. (Because diagnosis is performed when the ignition switch is OFF.)
P1C11	VACUUM PUMP POWER SUPPLY CIRCUIT LOW	—
P1C12	VACUUM PUMP POWER SUPPLY CIRCUIT HIGH	—
P1C14	ISG PERFORMANCE	—
P1C1E	AUTODISCONNECT HISTORY	Inspection is impossible. (Inspection using the drive cycle is also impossible.)
U0073	CONTROL MODULE COMMUNICATION BUS OFF	—
U0075	CONTROL MODULE COMMUNICATION BUS "PU-CAN" OFF	—
U0076	CONTROL MODULE COMMUNICATION BUS "HEV-CAN" OFF	—

PROCEDURE
1) Check that the 12 volt auxiliary battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, Clear Memory Mode.>
3) Read the DTC and check that the DTC is not displayed. <Ref. to HEV(diag)-23, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. <Ref. to HEV(diag)-72, List of Diagnostic Trouble Code (DTC).> After solving the DTC, repeat from step 2).
4) Start the engine, and run the engine at idle for 10 seconds or more.
5) Read the readiness code and check that the concerned DTC is not displayed. <Ref. to HEV(diag)-25, All Readiness Diagnostic Code(s).>

NOTE:
If the concerned DTC is displayed, the self-diagnosis of the DTC is not complete. Repeat from step 4).
6) Read the DTC and check that the DTC is not displayed. <Ref. to HEV(diag)-23, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. <Ref. to HEV(diag)-72, List of Diagnostic Trouble Code (DTC).> After solving the DTC, repeat from step 2).

12.Drive Cycle

A: PROCEDURE

It is necessary to perform the drive cycle listed below if DTC is not found in the Inspection Mode. It is possible to complete diagnosis of the DTC by performing the indicated drive cycle. After the repair for the DTC, perform a necessary drive cycle and make sure the function recovers and the DTC is recorded.

1. PREPARATION FOR DRIVE CYCLE

1) Check that the 12 volt auxiliary battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, Clear Memory Mode.>
3) Read the DTC and check that the DTC is not displayed. <Ref. to HEV(diag)-23, Read Diagnostic Trouble Code (DTC).>

NOTE:
• If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. <Ref. to HEV(diag)-72, List of Diagnostic Trouble Code (DTC).> After solving the DTC, repeat from step 2).
• Perform the drive cycle after warming up the engine except when any conditions such as oil temperature at starting are specified.

2. DRIVE CYCLE A

• Hybrid powertrain control system

DTC	Item	Condition
P1C10	VACUUM SYSTEM PERFORMANCE	Perform the drive cycle A during EV traveling to activate the vacuum pump. If the vacuum pump is not activated while the vacuum pressure is sufficient, perform the work support «Brake Vacuum Pump System Check» for the hybrid powertrain control system with ignition switch ON. <Ref. to HEV(diag)-71, OPERATION, Work Support.>
P2158	VEHICLE SPEED SENSOR "B" CIRCUIT	—

• Drive motor control system

DTC	Item	Condition
P0A2A	DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT	When the ignition switch is ON and when the values of «Drive Motor Inverter Temperature A», «Drive Motor Inverter Temperature B», «Drive Motor Inverter Temperature C» and «High Voltage Battery Temperature (MIN)» in current data of drive motor control system are 30°C (86°F) or more, idle the engine for 1 minute and then start the drive cycle A. <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>
P0A3F	DRIVE MOTOR "A" POSITION SENSOR CIRCUIT	—
P0A5D	DRIVE MOTOR "A" PHASE U CURRENT	—
P0A60	DRIVE MOTOR "A" PHASE V CURRENT	—
P0A63	DRIVE MOTOR "A" PHASE W CURRENT	—
P0A78	DRIVE MOTOR "A" INVERTER PERFORMANCE	—
P0C05	DRIVE MOTOR "A" PHASE U-V-W CIRCUIT/OPEN	—
P1C24	DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT "B"	When the ignition switch is ON and when the values of «Drive Motor Inverter Temperature A», «Drive Motor Inverter Temperature B», «Drive Motor Inverter Temperature C» and «High Voltage Battery Temperature (MIN)» in current data of drive motor control system are 30°C (86°F) or more, idle the engine for 1 minute and then start the drive cycle A. <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>
P1C2A	DRIVE MOTOR "A" INVERTER CIRCUIT	—

- Battery energy control system

DTC	Item	Condition
U1591	INVALID DATA RECEIVED FROM HYBRID POWERTRAIN CONTROL MODULE HEV-CAN	—

Diagnostic procedure:
1) Prepare for drive cycle. <Ref. to HEV(diag)-32, PREPARATION FOR DRIVE CYCLE, PROCEDURE, Drive Cycle.>
2) Drive at 10 km/h (6.2 MPH) or more.
3) Read the readiness code and check that the concerned DTC is not displayed. <Ref. to HEV(diag)-25, All Readiness Diagnostic Code(s).>

NOTE:
If the concerned DTC is displayed, the self-diagnosis of the DTC is not complete. Repeat from step 1).
4) Read the DTC and check that the DTC is not displayed. <Ref. to HEV(diag)-23, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. <Ref. to HEV(diag)-72, List of Diagnostic Trouble Code (DTC).> After repairing the cause of setting DTC, repeat from preparation for drive cycle. <Ref. to HEV(diag)-32, PREPARATION FOR DRIVE CYCLE, PROCEDURE, Drive Cycle.>

3. DRIVE CYCLE B

- Drive motor control system

DTC	Item	Condition
P0A90	DRIVE MOTOR "A" PERFORMANCE	—
P0AEE	DRIVE MOTOR INVERTER TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE	When the ignition switch is ON and when the values of «Drive Motor Inverter Temperature A», «Drive Motor Inverter Temperature B» and °Drive Motor Inverter Temperature C» in current data of drive motor control system are 30 — 50°C (86 — 122°F), idle the engine for 5 minutes and then start the drive cycle B. <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>
P0AF3	DRIVE MOTOR INVERTER TEMPERATURE SENSOR "B" CIRCUIT RANGE/PERFORMANCE	When the ignition switch is ON and when the values of «Drive Motor Inverter Temperature A», «Drive Motor Inverter Temperature B» and °Drive Motor Inverter Temperature C» in current data of drive motor control system are 30 — 50°C (86 — 122°F), idle the engine for 5 minutes and then start the drive cycle B. <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>
P0BD2	DRIVE MOTOR INVERTER TEMPERATURE SENSOR "C" CIRCUIT RANGE/PERFORMANCE	When the ignition switch is ON and when the values of «Drive Motor Inverter Temperature A», «Drive Motor Inverter Temperature B» and °Drive Motor Inverter Temperature C» in current data of drive motor control system are 30 — 50°C (86 — 122°F), idle the engine for 5 minutes and then start the drive cycle B. <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>
P1C27	DRIVE MOTOR "A" TEMPERATURE SENSOR CORRELATION	When the ignition switch is ON and when the values of «Drive Motor Temperature A» and «Drive Motor Temperature B° in current data of drive motor control system are 30 — 50°C (86 — 122°F), idle the engine for 5 minutes and then start the drive cycle B. <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>

- Battery energy control system

DTC	Item	Condition
P0A7F	HYBRID/EV BATTERY PACK DETERIORATION	Before starting the drive cycle, make sure that the values of «High Voltage Battery Temperature 1», «High Voltage Battery Temperature 2» and «High Voltage Battery Temperature 3» in current data of battery energy control system are 25°C (77°F) or more. <Ref. to HEV(diag)-56, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Current Data.>
P0AA6	HYBRID/EV BATTERY VOLTAGE SYSTEM ISOLATION FAULT	—
P0ABF	HYBRID/EV BATTERY PACK CURRENT SENSOR "A" CIRCUIT	Before starting the drive cycle, make sure that the values of «High Voltage Battery Temperature 1», «High Voltage Battery Temperature 2» and «High Voltage Battery Temperature 3» in current data of battery energy control system are 25°C (77°F) or more. <Ref. to HEV(diag)-56, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Current Data.>

Diagnostic procedure:
1) Prepare for drive cycle. <Ref. to HEV(diag)-32, PREPARATION FOR DRIVE CYCLE, PROCEDURE, Drive Cycle.>
2) Drive for 10 minutes or more at a speed of 30 km/h (18.6 MPH) or more.
3) Read the readiness code and check that the concerned DTC is not displayed. <Ref. to HEV(diag)-25, All Readiness Diagnostic Code(s).>

NOTE:
If the concerned DTC is displayed, the self-diagnosis of the DTC is not complete. Repeat from step 1).

4) Read the DTC and check that the DTC is not displayed. <Ref. to HEV(diag)-23, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. <Ref. to HEV(diag)-72, List of Diagnostic Trouble Code (DTC).> After repairing the cause of setting DTC, repeat from preparation for drive cycle. <Ref. to HEV(diag)-32, PREPARATION FOR DRIVE CYCLE, PROCEDURE, Drive Cycle.>

4. DRIVE CYCLE C

- Hybrid powertrain control system

DTC	Item	Condition
P065A	GENERATOR/ALTERNATOR SYSTEM PERFORMANCE	—
P1C18	GENERATOR SYSTEM "B" PERFORMANCE	—

Diagnostic procedure:
1) Prepare for drive cycle. <Ref. to HEV(diag)-32, PREPARATION FOR DRIVE CYCLE, PROCEDURE, Drive Cycle.>
2) Set the shift lever to “P” range.
3) Check that «Open» is displayed for the current data «12V Battery Relay Mode Target» of the hybrid powertrain control system. <Ref. to HEV(diag)-39, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>
4) Race the engine at 2000 rpm for 3 minutes.
5) Read the readiness code and check that the concerned DTC is not displayed. <Ref. to HEV(diag)-25, All Readiness Diagnostic Code(s).>

NOTE:
If the concerned DTC is displayed, the self-diagnosis of the DTC is not complete. Repeat from step 1).
6) Read the DTC and check that the DTC is not displayed. <Ref. to HEV(diag)-23, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. <Ref. to HEV(diag)-72, List of Diagnostic Trouble Code (DTC).> After repairing the cause of setting DTC, repeat from preparation for drive cycle. <Ref. to HEV(diag)-32, PREPARATION FOR DRIVE CYCLE, PROCEDURE, Drive Cycle.>

5. DRIVE CYCLE D

- Hybrid powertrain control system

DTC	Item	Condition
P0620	GENERATOR/ALTERNATOR CONTROL CIRCUIT	—
P06EF	ENGINE RESTART PERFORMANCE	—

Diagnostic procedure:
1) Prepare for drive cycle. <Ref. to HEV(diag)-32, PREPARATION FOR DRIVE CYCLE, PROCEDURE, Drive Cycle.>
2) Set the shift lever to “D” range.
3) At standing still (vehicle speed is at 0 km/h (0 MPH)), depress the brake pedal several times ON ←→ OFF from Auto Start Stop, then start the engine.
4) Read the readiness code and check that the concerned DTC is not displayed. <Ref. to HEV(diag)-25, All Readiness Diagnostic Code(s).>

NOTE:
If the concerned DTC is displayed, the self-diagnosis of the DTC is not complete. Repeat from step 1).
5) Read the DTC and check that the DTC is not displayed. <Ref. to HEV(diag)-23, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. <Ref. to HEV(diag)-72, List of Diagnostic Trouble Code (DTC).> After repairing the cause of setting DTC, repeat from preparation for drive cycle. <Ref. to HEV(diag)-32, PREPARATION FOR DRIVE CYCLE, PROCEDURE, Drive Cycle.>

6. DRIVE CYCLE E

- Hybrid powertrain control system

DTC	Item	Condition
P1C06	12V BATTERY RELAY CLOSE CIRCUIT PERFORMANCE	—
P1C07	12V BATTERY RELAY OPEN CIRCUIT PERFORMANCE	—
P1C08	12V BATTERY RELAY STUCK OPEN	—
P1C09	12V BATTERY RELAY STUCK CLOSED	—

Diagnostic procedure:
1) Prepare for drive cycle. <Ref. to HEV(diag)-32, PREPARATION FOR DRIVE CYCLE, PROCEDURE, Drive Cycle.>
2) Set the shift lever to “P” range.
3) Increase electrical load of auxiliary devices, wait until the value of current data «High Voltage Battery SOC» of the hybrid powertrain control system drops below 37% and the display for «12V Battery Relay Mode Target» turns to «Close». <Ref. to HEV(diag)-39, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>
4) Drive for 10 minutes or more at a speed of 30 km/h (18.6 MPH) or more.
5) Check that the value of current data «High Voltage Battery SOC» of the hybrid powertrain control system increases to 42% or more and the display for «12V Battery Relay Mode Target» turns to «Open». <Ref. to HEV(diag)-39, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>
6) Read the readiness code and check that the concerned DTC is not displayed. <Ref. to HEV(diag)-25, All Readiness Diagnostic Code(s).>

NOTE:
If the concerned DTC is displayed, the self-diagnosis of the DTC is not complete. Repeat from step 1).
7) Read the DTC and check that the DTC is not displayed. <Ref. to HEV(diag)-23, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. <Ref. to HEV(diag)-72, List of Diagnostic Trouble Code (DTC).> After repairing the cause of setting DTC, repeat from preparation for drive cycle. <Ref. to HEV(diag)-32, PREPARATION FOR DRIVE CYCLE, PROCEDURE, Drive Cycle.>

7. DRIVE CYCLE F

- Battery energy control system

DTC	Item	Condition
P0C30	HYBRID/EV BATTERY PACK STATE OF CHARGE HIGH	—

Diagnostic procedure:
1) Prepare for drive cycle. <Ref. to HEV(diag)-32, PREPARATION FOR DRIVE CYCLE, PROCEDURE, Drive Cycle.>
2) Start the engine, and run the engine at idle for 60 seconds or more.
3) Read the readiness code and check that the concerned DTC is not displayed. <Ref. to HEV(diag)-25, All Readiness Diagnostic Code(s).>

NOTE:
If the concerned DTC is displayed, the self-diagnosis of the DTC is not complete. Repeat from step 1).
4) Read the DTC and check that the DTC is not displayed. <Ref. to HEV(diag)-23, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. <Ref. to HEV(diag)-72, List of Diagnostic Trouble Code (DTC).> After repairing the cause of setting DTC, repeat from preparation for drive cycle. <Ref. to HEV(diag)-32, PREPARATION FOR DRIVE CYCLE, PROCEDURE, Drive Cycle.>

8. DRIVE CYCLE G

- Battery energy control system

DTC	Item	Condition
P0AAD	HYBRID/EV BATTERY PACK AIR TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE	—

Diagnostic procedure:
1) Prepare for drive cycle. <Ref. to HEV(diag)-32, PREPARATION FOR DRIVE CYCLE, PROCEDURE, Drive Cycle.>
2) After leaving the vehicle unattended for 6 hours or longer, start the engine and run at idling speed for 20 seconds.
3) Read the readiness code and check that the concerned DTC is not displayed. <Ref. to HEV(diag)-25, All Readiness Diagnostic Code(s).>

NOTE:
If the concerned DTC is displayed, the self-diagnosis of the DTC is not complete. Repeat from step 1).
4) Read the DTC and check that the DTC is not displayed. <Ref. to HEV(diag)-23, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. <Ref. to HEV(diag)-72, List of Diagnostic Trouble Code (DTC).> After repairing the cause of setting DTC, repeat from preparation for drive cycle. <Ref. to HEV(diag)-32, PREPARATION FOR DRIVE CYCLE, PROCEDURE, Drive Cycle.>

9. DRIVE CYCLE H

- Drive motor control system

DTC	Item	Condition
P0A82	HYBRID/EV BATTERY PACK COOLING FAN 1 PERFORMANCE/STUCK OFF	—
P0A83	HYBRID/EV BATTERY PACK COOLING FAN 1 STUCK ON	—

Diagnostic procedure:
1) Prepare for drive cycle. <Ref. to HEV(diag)-32, PREPARATION FOR DRIVE CYCLE, PROCEDURE, Drive Cycle.>
2) Select the System Operation Check Mode «High Voltage Battery Cooling Fan» of the drive motor control system. <Ref. to HEV(diag)-70, DRIVE MOTOR CONTROL SYSTEM, OPERATION, System Operation Check Mode.>
3) On «High Voltage Battery Cooling Fan» display, select {Step1}.
4) On «High Voltage Battery Cooling Fan» display, select {Stop}.
5) Read the readiness code and check that the concerned DTC is not displayed. <Ref. to HEV(diag)-25, All Readiness Diagnostic Code(s).>

NOTE:
If the concerned DTC is displayed, the self-diagnosis of the DTC is not complete. Repeat from step 1).
6) Read the DTC and check that the DTC is not displayed. <Ref. to HEV(diag)-23, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. <Ref. to HEV(diag)-72, List of Diagnostic Trouble Code (DTC).> After repairing the cause of setting DTC, repeat from preparation for drive cycle. <Ref. to HEV(diag)-32, PREPARATION FOR DRIVE CYCLE, PROCEDURE, Drive Cycle.>

10.DRIVE CYCLE I

- Hybrid powertrain control system

DTC	Item	Condition
P0506	IDLE CONTROL SYSTEM RPM - LOWER THAN EXPECTED	—
P0507	IDLE CONTROL SYSTEM RPM - HIGHER THAN EXPECTED	—
P1C16	HPCM IDLE CONTROL SYSTEM RPM - LOWER THAN EXPECTED	—
P1C17	HPCM IDLE CONTROL SYSTEM RPM - HIGHER THAN EXPECTED	—

Diagnostic procedure:
1) Prepare for drive cycle. <Ref. to HEV(diag)-32, PREPARATION FOR DRIVE CYCLE, PROCEDURE, Drive Cycle.>
2) Drive at 10 km/h (6.2 MPH) or more.
3) Increase electrical load of auxiliary devices, wait until the value of current data «High Voltage Battery SOC» of the hybrid powertrain control system falls between 37% and below 40%.
4) Depress the brake pedal, set the shift lever to “D” range, and wait for 30 seconds. (Perform the power generation at stand still.)
5) Read the readiness code and check that the concerned DTC is not displayed. <Ref. to HEV(diag)-25, All Readiness Diagnostic Code(s).>

NOTE:
If the concerned DTC is displayed, the self-diagnosis of the DTC is not complete. Repeat from step 1).
6) Read the DTC and check that the DTC is not displayed. <Ref. to HEV(diag)-23, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. <Ref. to HEV(diag)-72, List of Diagnostic Trouble Code (DTC).> After repairing the cause of setting DTC, repeat from preparation for drive cycle. <Ref. to HEV(diag)-32, PREPARATION FOR DRIVE CYCLE, PROCEDURE, Drive Cycle.>

13.Read Current Data

A: OPERATION

NOTE:
For detailed operation procedures, refer to “Application help”.

1. HYBRID POWERTRAIN CONTROL SYSTEM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Hybrid Powertrain Control» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

Display	Contents	Note (when normal)	Unit of measure
Vehicle Speed	Vehicle speed calculated by VDC CM (CAN communication data)	0 — 210	km/h
Vehicle Speed (Control)	Vehicle speed for control	0 — 255	km/h
Ambient Temperature	Ambient temperature calculated by combination meter (CAN communication data)	–40 — 80	°C
Target Power	Target drive power	–2100 — 9650	N
Target Acceleration (Cruise Control)	Target acceleration during the cruise control	–5.5 — 5.5	m/s^2
Acceleration by Driver Request	Target acceleration calculated from an accelerator opening angle and a vehicle speed for control	–5.5 — 5.5	m/s^2
Engine Torque	Engine axle torque calculated by ECM (CAN communication data)	–1000 — 2276.7	Nm
Engine Torque Target	Target engine axle torque	–70 — 191	Nm
Engine Torque Upper (ECM)	Upper limit of target engine torque calculated by ECM (CAN communication data)	0 — 408	Nm
Engine Speed	Engine speed calculated by ECM (CAN communication data)	0 — 6400	rpm
Engine Coolant Temperature	Engine coolant temperature calculated by ECM (CAN communication data)	–40 — 214	°C
Conventional Starter ON Permit Signal	Status of permission from HPCM for starting engine by starter	OFF ON	—
CVT Input Torque Upper (TCM)	Upper limit of input torque to transmission calculated by TCM (CAN communication data)	0 — 510	Nm
Gear Ratio Target	Target gear ratio	0 — 3.99	—
Gear Ratio	Gear ratio calculated by TCM (CAN communication data)	0 — 3.99	—
Input Clutch Target	Target status of input clutch	No Request Req.Engaged Req.Disengage	—
Input Clutch Actual	Input clutch status judged by TCM (CAN communication data)	Engaging2 Engaged Disengaged Engaging1 Disengaging	—
Output Clutch Target	Target status of output clutch	No Request Req.Engaged Req.Disengage	—
Output Clutch Actual	Output clutch status judged by TCM (CAN communication data)	Engaging Engaged Disengaged Disengaging	—
Transmission Turbine Speed	Transmission turbine speed calculated by TCM (CAN communication data)	0 — 6600	rpm

Display	Contents	Note (when normal)	Unit of measure
Output Shaft Speed	Transmission output axle speed calculated by TCM (CAN communication data)	0 — 12300	rpm
ATF Temperature	ATF temperature calculated by TCM (CAN communication data)	–50 — 205	°C
Trip Count [count]	Number of IG ON judged by the body integrated unit (CAN communication data)	—	times
Count	Number of IG ON, synchronous/asynchronous identification information of the elapsed time after IG ON	Common Originally	—
Time Count [msec]	Detailed time elapsed after IG ON calculated by body integrated unit (CAN communication data)	—	ms
Ignition switch	Ignition switch status	OFF ON	—
Starter Switch	Starter switch status	OFF ON	—
P Range	Parking range status judged by TCM (CAN communication data)	OFF ON	—
R Range	Reverse range status judged by TCM (CAN communication data)	OFF ON	—
N Range	Neutral range status judged by TCM (CAN communication data)	OFF ON	—
D Range	Drive range status judged by TCM (CAN communication data)	OFF ON	—
Accel opening angle	Accelerator opening angle ratio calculated by ECM (CAN communication data)	0 — 100	%
Master Cylinder Pressure	Brake fluid pressure calculated by VDC CM (CAN communication data)	0 — 29.3	MPa
ECU ACC	Voltage supplied to HPCM	10 — 15	V
Main Brake Pedal Stroke	Brake stroke calculated from main brake stroke sensor voltage	0 — 100	%
Main Brake Pedal Position Sensor Voltage	Voltage detected by main brake stroke sensor	0 — 5.16	V
Sub Brake Pedal Stroke	Brake stroke calculated from sub brake stroke sensor voltage	0 — 100	%
Sub Brake Pedal Position Sensor Voltage	Voltage detected by sub brake stroke sensor	0 — 5.16	V
Brake Booster Pressure 1	Vacuum pressure calculated from brake vacuum sensor voltage 1	13.3 — 106.7	kPa
Brake Booster Pressure Sensor Voltage 1	Voltage detected by brake vacuum sensor 1	0 — 5.16	V
Brake Booster Pressure 2	Vacuum pressure calculated from brake vacuum sensor voltage 2	13.3 — 106.7	kPa
Brake Booster Pressure Sensor Voltage 2	Voltage detected by brake vacuum sensor 2	0 — 5.16	V
Atmosphere Pressure	Atmospheric pressure calculated by ECM (CAN communication data)	13 — 115	kPa
12V Battery Relay Target Mode	12V battery relay commanded status	Close Open	—
12V Battery Relay Close Signal	12V battery relay close operation request status	OFF ON (regularly ON for 100 ms every 10 seconds while Close)	—
12V Battery Relay Open Signal	12V battery relay open operation request status	OFF ON (regularly ON for 100 ms every 10 seconds while Open)	—
Vacuum Pump Relay ON Signal	Brake vacuum pump relay operation request status	OFF ON	—

Display	Contents	Note (when normal)	Unit of measure
Vacuum Pump Relay Actual	Voltage applied to brake vacuum pump relay	0 — 20	V
Clutch Solenoid Control Signal	Output clutch solenoid operation request status	OFF ON	—
Power Sensor Voltage 1	Voltage supplied to main brake stroke sensor	5	V
Power Sensor Voltage 2	Voltage supplied to sub brake stroke sensor	5	V
Power Sensor Voltage 3	Voltage supplied to brake vacuum sensors 1 and 2	5	V
HPCM Target Control Mode	Target control mode of HPCM	00 01 02 03 04 06 09	—
HPCM Current Control Mode	Current control mode of HPCM	00 01 02 03 04 06 09	—
Auto Start Stop Function Permit Signal	Permission status of Auto Start Stop	OFF ON	—
Auto Start Stop or EV Status	Auto Start Stop/EV traveling status	OFF Auto Start Stop or EV Status	—
Ready Status	HEV-READY status	OFF Ready Status	—
Drive Motor Inverter Operation Signal	Drive motor inverter operation request status	OFF ON	—
Drive Motor Inverter Input Voltage	Drive motor inverter input voltage calculated by DMCM (CAN communication data)	9 — 155	V
Drive Motor Inverter Temperature (MAX)	The highest temperature among values of drive motor inverter temperature detected through multiple sensors by DMCM (CAN communication data)	–50 — 150	°C
Drive Motor Output Torque Actual	Drive motor output torque calculated by DMCM (CAN communication data)	–65 — 65	Nm
Drive Motor Torque Target	Target torque of drive motor	–65 — 65	Nm
Drive Motor Torque Upper Limit (DMCM)	Upper limit of drive motor torque calculated by DMCM (CAN communication data)	0 — 65	Nm
Drive Motor Torque Lower Limit (DMCM)	Lower limit of drive motor torque calculated by DMCM (CAN communication data)	–65 — 0	Nm
Drive Motor Speed	Drive motor speed calculated by DMCM (CAN communication data)	–7000 — 7000	rpm
Drive Motor Speed Target	Target speed of drive motor	—	rpm
Drive Motor Inverter Control Mode Target	Target control mode of drive motor inverter	—	—
Drive Motor Temperature A	Drive motor temperature A calculated by DMCM (CAN communication data)	–55 — 140	°C
Drive Motor Temperature B	Drive motor temperature B calculated by DMCM (CAN communication data)	–55 — 140	°C
ISG Cranking Signal	Integrated starter generator cranking request status	OFF ON	—
ISG Inhibiting Signal	Integrated starter generator drive prohibition request status	OFF ON	—

Display	Contents	Note (when normal)	Unit of measure
ISG Terminal Voltage	Terminal voltage calculated by integrated starter generator (LIN communication data)	10.6 — 16.975	V
ISG cranking Status	Cranking demand acceptance status judged by integrated starter generator (LIN communication data)	W/O Request Request	—
ISG Control Mode Actual	Current control mode judged by integrated starter generator (LIN communication data)	Neutral GeneratePower Restart First Start Assist Stop	—
ISG Control Mode Target	Target control mode of integrated starter generator	Neutral GeneratePower Start Start Ant. PreExcitation Assist Stop	—
ISG Cranking Permit Signal	Cranking permission status judged by integrated starter generator (LIN communication data)	OFF ON	—
ISG Excitation Current Actual	Excitation current calculated by integrated starter generator (LIN communication data)	0 — 25.5	A
ISG Excitation Current Upper Target	Excitation current upper limit of integrated starter generator	0 — 16	A
ISG Rotor Speed	Rotor speed calculated by integrated starter generator (LIN communication data)	0 — 19125	rpm
ISG Temperature	Temperature calculated by integrated starter generator (LIN communication data)	–42 — 210	°C
ISG Voltage Target	Target generated voltage of integrated starter generator	10.6 — 16	V
DCDC Converter Status	Operating condition of DC/DC converter judged by DMCM (CAN communication data)	Inactive Active	—
DCDC Converter Output Permit Signal	Output permission status of DC/DC converter	OFF ON	—
DCDC Converter Output Voltage Actual	DC/DC converter output voltage calculated by DMCM (CAN communication data)	10 — 15.5	V
DCDC Converter Output Voltage Target	DC/DC converter target output indicate voltage	0 — 25.5	V
DCDC Converter Output Amperage	DC/DC converter output current calculated by DMCM (CAN communication data)	0 — 130	A
DCDC Converter Temperature	DC/DC converter temperature calculated by DMCM (CAN communication data)	–50 — 160	°C
Electric Oil Pump Output Current	Output current calculated by electric oil pump (CAN communication data)	0 — 15.9375	A
Electric Oil Pump Motor Speed	Motor speed calculated by electric oil pump (CAN communication data)	0 — 4095	rpm
Service Plug Status	Service disconnect plug lock status judged by BECM (CAN communication data)	OFF ON	—
High Voltage Battery SOC	High voltage battery residual quantity calculated by BECM (CAN communication data)	5 — 95	%
High Voltage Battery SOH	Battery status auxiliary parameter of high voltage battery calculated by BECM (CAN communication data)	25 — 100	%
High Voltage Battery Total Voltage	High voltage battery voltage calculated by BECM (CAN communication data)	70 — 140	V
High Voltage Battery Amperage	High voltage battery current calculated by BECM (CAN communication data)	–110 — 180	A
High Voltage Battery Discharge Power Limit 1	High voltage battery discharge power limit calculated by BECM (CAN communication data)	0 — 14.0	kW

Display	Contents	Note (when normal)	Unit of measure
High Voltage Battery Charge Power Limit 1	High voltage battery charge power limit calculated by BECM (CAN communication data)	0 — 14.0	kW
High Voltage Battery SOC Subservience Parameter (MIN)	SOC auxiliary parameter of high voltage battery calculated by BECM (CAN communication data)	0 — 100	%
High Voltage Battery Temperature (MAX)	The highest temperature among values of high voltage battery temperature detected through multiple sensors by BECM (CAN communication data)	–40 — 63	°C
High Voltage Battery Temperature (MIN)	The lowest temperature among values of high voltage battery temperature detected through multiple sensors by BECM (CAN communication data)	–40 — 63	°C
High Voltage Battery Intake Air Temperature	High voltage battery intake air temperature calculated by BECM (CAN communication data)	–40 — 86.5	°C
High Voltage Battery Cooling Fan Speed	High voltage battery cooling fan speed calculated by DMCM (CAN communication data)	0 — 6000	rpm
High Voltage Battery Cooling Fan Duty Target	High voltage battery cooling fan target duty request	0 — 100 (20 — 70%: normal, 100%: failure, 0 — 20%: dead zone)	%
Blower Fan Level	Blower fan level judged by auto A/C CM (CAN communication data)	OFF LO M1 M2 M3 M4 M5 Hi	—
BECM Control Status	BECM control mode judged by BECM (CAN communication data)	Init. Normal ErrLimitPerf. Open Request Forced Open NG OFF Signal	—
Contactor Close Status	Contactor close status judged by BECM (CAN communication data)	Non Close	—
Contactor Open Status	Contactor open status judged by BECM (CAN communication data)	Non Open	—
Contactor Signal	Contactor operation request status	OFF ON Abnormal OFF	—
12V Engine Restart Battery Voltage	12 volt engine restart battery voltage calculated by 12 volt engine restart battery sensor (LIN communication data)	0 — 50	V
12V Engine Restart Battery Amperage	12 volt engine restart battery current calculated by 12 volt engine restart battery sensor (LIN communication data)	–200 — 200	A
12V Engine Restart Battery SOC	12 volt engine restart battery capacity calculated by 12 volt engine restart battery sensor (LIN communication data)	0 — 100	%
12V Engine Restart Battery SOC Control	12 volt engine restart battery control capacity	0 — 100	%
12V Engine Restart Battery SOC Validity	Validity of 12 volt engine restart battery capacity judged by 12 volt engine restart battery sensor (LIN communication data)	Invalid Valid	—
12V Engine Restart Battery Temperature	12 volt engine restart battery temperature calculated by 12 volt engine restart battery sensor (LIN communication data)	–40 — 125	°C
12V Auxiliary Battery Voltage	12 volt auxiliary battery voltage	0 — 25.5	V
12V Auxiliary Battery Temperature	12 volt auxiliary battery temperature	–40 — 100	°C

Display	Contents	Note (when normal)	Unit of measure
12V Auxiliary Battery Temperature Sensor Voltage	Voltage detected by 12 volt auxiliary battery temperature sensor, calculated by ECM (CAN communication data)	0 — 5	V

2. HYBRID POWERTRAIN CONTROL SYSTEM (Auto Start Stop AND EV TRAVELING CONDITIONS)

NOTE:
For Auto Start Stop and EV traveling conditions of hybrid powertrain control system, refer to the table below.

Display	Auto Start Stop		EV traveling		Note
	Condition for permission	Condition for cancel	Condition for permission	Condition for cancel	
Brake Booster Pressure 1	< 63.83 kPa	> 69.83 kPa	< 63.83 kPa	> 69.83 kPa	Those values change depending on vehicle speed or atmospheric pressure. As a reference, values shown in upper row expects that atmospheric pressure is 1 bar and vehicle speed is 0 km/h (0 MPH). Values shown in lower row expects that atmospheric pressure is 1 bar and vehicle speed is 50 km/h (31.1 MPH).
Brake Booster Pressure 2	< 51.33 kPa	> 55.33 kPa	< 51.33 kPa	> 55.33 kPa	
12V Engine Restart Battery SOC Control	≥ 70.0%	< 60.0%	≥ 70.0%	< 60.0%	When the level decreases below 60%, the operation is not permitted until the level increases to at 70%. Also, when the level is recovered to 70%, the operation is permitted until the level decreases to 60%.
12V Engine Restart Battery Voltage	≥ 12.6 V	≤ 11.4 V	≥ 12.6 V	≤ 11.4 V	—
12V Engine Restart Battery Temperature	≥ –10°C (14°F) and ≤ 78°C (172.4°F)	< –12°C (10.4°F) or ≥ 80°C (176°F)	≥ –10°C (14°F) and ≤ 78°C (172.4°F)	< –12°C (10.4°F) or ≥ 80°C (176°F)	—
HPCM Check 40	< 10 mΩ	≥ 15 mΩ	< 10 mΩ	≥ 15 mΩ	—
HPCM Check 41	< 10 mΩ	≥ 15 mΩ	< 10 mΩ	≥ 15 mΩ	—
Engine Coolant Temperature	≥ 60°C (140.0°F)	≤ 57°C (134.6°F)	≥ 60°C (140.0°F)	≤ 57°C (134.6°F)	—
D Range	ON	OFF	ON	OFF	• Although the initial shift range for Auto Start Stop is “D range” only, the control operation continues even if the shifter moves to one of the following ranges. Shifting positions: P range, R range, N range • Although the initial shift range for EV traveling is “D range” only, operation continues in R range as well. Also, EV traveling may continue when shifter is transitionally moving through N range or P range.

Display	Auto Start Stop		EV traveling		Note
	Condition for permission	Condition for cancel	Condition for permission	Condition for cancel	
High Voltage Battery SOC	≥ 35.0%	≤ 33.5%	≥ 38.0% and < 73.0%	≤ 35.0% or > 76.0%	—
ISG Temperature	< 100°C (212°F)	≥ 140°C (284°F)	< 100°C (212°F)	≥ 140°C (284°F)	Canceled when the temperature increases above 140°C (284°F), and the operation is not permitted until the temperature decreases to 100°C (212°F). Also, when the temperature decreases to 100°C (212°F), the operation is permitted until the temperature increases to 140°C (284°F).
Vehicle Speed (Control)	≤ 0.1 km/h (0.1 MPH)	> 8 km/h (5 MPH)	—	—	Vehicle speed range suitable for EV traveling is 20 — 60 km/h (12 — 37 MPH).
HPCM Check 76	≤ | 0 — ±8 | %	> | ±8 | %	< 5 — 20%	≥ 15 — 100%	—
Accel opening angle	≤ 0.5%	≥ 0.7%	—	> 19.9%	—
Main Brake Pedal Stroke	≥ 10.6%	≤ 9.0%	< 11.8 — 23.5%	≥ 11.8 — 23.5%	Brake stroke for permitting/canceling the EV traveling depends on vehicle speed. However, threshold values for both permission and prohibition are the same.
DCDC Converter Status	Active	Inactive	Active	Inactive	—

3. DRIVE MOTOR CONTROL SYSTEM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Drive Motor» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

Display	Contents	Note (when normal)	Unit of measure
ECU ACC	Voltage supplied to DMCM	10 — 15	V
Ignition switch	Ignition switch status	OFF ON	—
Ignition Switch Signal (CAN receive)	Ignition switch status detected by HPCM (CAN communication data)	OFF ON	—
Accel opening angle	Accelerator opening angle ratio detected by ECM (CAN communication data)	0 — 100	%
Judgment of Idling	Idle switch status detected by ECM (CAN communication data)	OFF ON	—
Main Brake Pedal Stroke	Main brake stroke sensor status calculated by HPCM (CAN communication data)	0 — 100	%
Engine Speed	Engine speed detected by ECM (CAN communication data)	0 — 6400	rpm
Vehicle Speed	Vehicle speed calculated by VDC CM (CAN communication data)	0 — 210	km/h
Engine Coolant Temperature	Engine coolant temperature calculated by ECM (CAN communication data)	–40 — 214	°C
ATF Temperature	ATF temperature calculated by TCM (CAN communication data)	–50 — 205	°C

A: OPERATION

NOTE:
For detailed operation procedures, refer to “Application help”.

1. HYBRID POWERTRAIN CONTROL SYSTEM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Hybrid Powertrain Control» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «FFD».

Display	Contents	Unit of measure
Vehicle Speed	Vehicle speed calculated by VDC CM (CAN communication data)	km/h
Ambient Temperature	Ambient temperature calculated by combination meter (CAN communication data)	°C
Engine Speed	Engine speed calculated by ECM (CAN communication data)	rpm
Engine Coolant Temperature	Engine coolant temperature calculated by ECM (CAN communication data)	°C
Gear Ratio	Gear ratio calculated by TCM (CAN communication data)	—
ATF Temperature	ATF temperature calculated by TCM (CAN communication data)	°C
Trip Count [count]	Number of IG ON judged by the body integrated unit (CAN communication data)	times
Count	Number of IG ON, synchronous/asynchronous identification information of the elapsed time after IG ON	—
Time Count [msec]	Detailed time elapsed after IG ON calculated by body integrated unit (CAN communication data)	ms
Ignition switch	Ignition switch status	—
Starter Switch	Starter switch status	—
P Range	Parking range status judged by TCM (CAN communication data)	—
R Range	Reverse range status judged by TCM (CAN communication data)	—
N Range	Neutral range status judged by TCM (CAN communication data)	—
D Range	Drive range status judged by TCM (CAN communication data)	—
Accel opening angle	Accelerator opening angle ratio calculated by ECM (CAN communication data)	%
Main Brake Pedal Stroke	Brake stroke calculated from main brake stroke sensor voltage	%
Sub Brake Pedal Stroke	Brake stroke calculated from sub brake stroke sensor voltage	%
Brake Booster Pressure 1	Vacuum pressure calculated from brake vacuum sensor voltage 1	kPa
Brake Booster Pressure 2	Vacuum pressure calculated from brake vacuum sensor voltage 2	kPa
Atmosphere Pressure	Atmospheric pressure calculated by ECM (CAN communication data)	kPa
12V Battery Relay Target Mode	12V battery relay commanded status	—
Vacuum Pump Relay Actual	Voltage applied to brake vacuum pump relay	V
HPCM Target Control Mode	Target control mode of HPCM	—
HPCM Current Control Mode	Current control mode of HPCM	—
Drive Motor Inverter Input Voltage	Drive motor inverter input voltage calculated by DMCM (CAN communication data)	V
Drive Motor Output Torque Actual	Drive motor output torque calculated by DMCM (CAN communication data)	Nm
Drive Motor Speed	Drive motor speed calculated by DMCM (CAN communication data)	rpm
ISG Terminal Voltage	Terminal voltage calculated by integrated starter generator (LIN communication data)	V
ISG cranking Status	Cranking demand acceptance status judged by integrated starter generator (LIN communication data)	—
ISG Control Mode Actual	Current control mode judged by integrated starter generator (LIN communication data)	—
DCDC Converter Output Voltage Actual	DC/DC converter output voltage calculated by DMCM (CAN communication data)	V

Display	Contents	Unit of measure
Electric Oil Pump Motor Speed	Motor speed calculated by electric oil pump (CAN communication data)	rpm
High Voltage Battery SOC	High voltage battery residual quantity calculated by BECM (CAN communication data)	%
High Voltage Battery Total Voltage	High voltage battery voltage calculated by BECM (CAN communication data)	V
High Voltage Battery Discharge Power Limit 1	High voltage battery discharge power limit calculated by BECM (CAN communication data)	kW
High Voltage Battery Charge Power Limit 1	High voltage battery charge power limit calculated by BECM (CAN communication data)	kW
High Voltage Battery Cooling Fan Speed	High voltage battery cooling fan speed calculated by DMCM (CAN communication data)	rpm
BECM Control Status	BECM control mode judged by BECM (CAN communication data)	—
Contactor Close Status	Contactor close status judged by BECM (CAN communication data)	—
12V Engine Restart Battery Voltage	12 volt engine restart battery voltage calculated by 12 volt engine restart battery sensor (LIN communication data)	V
12V Engine Restart Battery SOC	12 volt engine restart battery capacity calculated by 12 volt engine restart battery sensor (LIN communication data)	%
12V Auxiliary Battery Voltage	12 volt auxiliary battery voltage	V
OBD Test Status	Diagnosis status of emission-related diagnosis	—
ECM Fail Safe Request Check	Fail safe request detailed information from ECM	—
TCM Fail Safe Request Check	Fail safe request detailed information from TCM	—
DMCM Fail Safe Request Check	Fail safe request detailed information from DMCM	—
BECM Fail Safe Request Check	Fail safe request detailed information from BECM	—
AUTO/MANUAL Mode Switch	Manual mode switch status judged by TCM (CAN communication data)	—
Brake Pedal Position Learning Status	Brake stroke sensor learning status	—
HPCM Check 9	Detailed information of control	—
HPCM Check 20	Detailed information of control	—
HPCM Check 21	Detailed information of control	—

HPCM Check 171	Detailed information of control	—

2. DRIVE MOTOR CONTROL SYSTEM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Drive Motor» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «FFD».

Display	Contents	Unit of measure
ECU ACC	Voltage supplied to DMCM	V
Ignition switch	Ignition switch status	—
Ignition Switch Signal (CAN receive)	Ignition switch status detected by HPCM (CAN communication data)	—
Accel opening angle	Accelerator opening angle ratio detected by ECM (CAN communication data)	%
Judgment of Idling	Idle switch status detected by ECM (CAN communication data)	—
Main Brake Pedal Stroke	Main brake stroke sensor status calculated by HPCM (CAN communication data)	%
Engine Speed	Engine speed detected by ECM (CAN communication data)	rpm
Vehicle Speed	Vehicle speed calculated by VDC CM (CAN communication data)	km/h
Engine Coolant Temperature	Engine coolant temperature calculated by ECM (CAN communication data)	°C
ATF Temperature	ATF temperature calculated by TCM (CAN communication data)	°C
D Range	Drive range status judged by TCM (CAN communication data)	—
N Range	Neutral range status judged by TCM (CAN communication data)	—
R Range	Reverse range status judged by TCM (CAN communication data)	—
P Range	Parking range status judged by TCM (CAN communication data)	—
Trip Count [count]	Number of IG ON judged by the body integrated unit (CAN communication data)	times
Time Count [msec]	Detailed time elapsed after IG ON calculated by body integrated unit (CAN communication data)	ms
Detailed Time Counter	Calculated detailed time elapsed after IG ON	ms
DMCM Check Detailed Code	—	—
Count	Number of IG ON, synchronous/asynchronous identification information of the elapsed time after IG ON	—
Drive Motor Torque Target (HPCM)	Drive motor target torque calculated by HPCM (CAN communication data)	Nm
Drive Motor Output Torque Actual	Drive motor torque	Nm
Drive Motor Torque Upper Limit	DMCM set value	Nm
Drive Motor Torque Lower Limit	DMCM set value	Nm
Drive Motor Speed Target (HPCM)	Target drive motor speed calculated by HPCM (CAN communication data)	rpm
Drive Motor Speed	Drive motor speed	rpm
Drive Motor Inverter Input High Voltage Sensor (Serial)	Drive motor inverter input high voltage (serial reception value)	V
High Voltage Battery Total Voltage	High voltage battery voltage calculated by BECM (CAN communication data)	V
High Voltage Battery Amperage	High voltage battery current calculated by BECM (CAN communication data)	A
Phase U Voltage Target	DMCM output value	%
Phase V Voltage Target	DMCM output value	%
Phase W Voltage Target	DMCM output value	%
Phase U Amperage	Drive motor current	A

Display	Contents	Unit of measure
Phase U Amperage Sensor Voltage	Current sensor voltage	V
Phase V Amperage	Drive motor current	A
Phase V Amperage Sensor Voltage	Current sensor voltage	V
Phase W Amperage	Drive motor current	A
Phase W Amperage Sensor Voltage	Current sensor voltage	V
Drive Motor Amperage Sensor Power Supply Voltage	Current sensor power supply voltage	V
Drive Motor Output Power Actual	Drive motor output	W
High Voltage Battery Temperature (MIN)	The lowest temperature among values of high voltage battery temperature detected through multiple sensors by BECM (CAN communication data)	°C
Drive Motor Inverter Temperature A	Drive motor inverter temperature (serial reception value)	°C
Drive Motor Inverter Temperature B	Drive motor inverter temperature (serial reception value)	°C
Drive Motor Inverter Temperature C	Drive motor inverter temperature (serial reception value)	°C
Drive Motor Temperature A	Drive motor temperature	°C
Drive Motor Temperature A Sensor Voltage	Drive motor temperature sensor voltage	V
Drive Motor Temperature B	Drive motor temperature	°C
Drive Motor Temperature B Sensor Voltage	Drive motor temperature sensor voltage	V
Drive Motor Inverter Operation Signal(HPCM)	Drive motor inverter operation request of HPCM (CAN communication data)	—
Drive Motor Inverter Operation Status	Drive motor inverter drive status	—
Drive Motor Inverter Power Supply Relay Output Signal	Drive motor inverter power supply relay operation signal	—
Drive Motor Inverter Power Supply Relay Output Actual	Monitor signal for drive motor inverter power supply relay operation signal	—
Contactor Signal(HPCM)	Contactor operation request status of HPCM (CAN communication data)	—
Contactor Weld Diagnosis Status	Contactor stuck closed status judged by BECM (CAN communication data)	—
Contactor Close Status	Contactor close status judged by BECM (CAN communication data)	—
Contactor Close Sequence Status	Contactor status judged by BECM (CAN communication data)	—
Contactor Open Status	Contactor status judged by BECM (CAN communication data)	—
High Voltage Battery Cooling Fan Duty Target (HPCM)	High voltage battery cooling fan duty request calculated by HPCM (CAN communication data)	%
High Voltage Battery Cooling Fan Duty Output	High voltage battery cooling fan duty	%
High Voltage Battery Cooling Fan Speed	High voltage battery cooling fan speed	rpm
DCDC Converter Output Permit Signal (HPCM)	DC/DC converter output permission status calculated by HPCM (CAN communication data)	—
DCDC Converter Output Voltage Target (HPCM)	DC/DC converter output indicate voltage calculated by HPCM (CAN communication data)	V
DCDC Converter Output Voltage Actual	Voltage output at DC/DC converter	V

Display	Contents	Unit of measure
DCDC Converter Output Amperage	Current output at DC/DC converter	A
DCDC Converter Output Limit Amperage	DC/DC converter set value	A
DCDC Converter Input Voltage	Input high voltage detected at DC/DC converter	V
DCDC Converter Temperature	Temperature calculated at DC/DC converter	°C
DCDC Converter Status Check	DC/DC converter control value	—
DCDC Converter Check 1	DC/DC converter control value	—
DCDC Converter Check 2	DC/DC converter control value	—
DCDC Converter Operation Update Signal Count (Serial)	DC/DC converter operation counter	Count
DCDC Converter Output Permit Signal (Serial)	DC/DC converter output permission Serial transmission data (DMCM)	—
DCDC Converter Output Voltage Target (Serial)	DC/DC converter output indicate voltage Serial transmission data (DMCM)	V
DCDC Converter Initialize Completion	DC/DC converter initialize completion status	—
DCDC Converter Serial Check	DC/DC converter serial communication failure	—
Drive Motor Inverter Control Mode Target(HPCM)	Target control mode of drive motor inverter calculated by HPCM	—
Sequence Status Check	DMCM set value	—
Drive Motor Inverter Check	DMCM input value	—
Drive Motor Torque Limit Check	DMCM output value	—
Drive Motor Torque Limit Status	DMCM output value	—
Drive Motor Mechanical Angle Pulse	Drive motor mechanical angle	Pulse
DMCU Check A	DMCM detailed information A	—
DMCU Check B	DMCM detailed information B	—
DMCU Check C	DMCM detailed information C	—
DMCU Check D	DMCM detailed information D	—
System Check 1	Detailed information 1	—
System Check 2	Detailed information 2	—
Drive Motor Control Mode Check 1	DMCM control information 1	—

3. BATTERY ENERGY CONTROL SYSTEM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «High Voltage Battery» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «FFD».

Display	Contents	Unit of measure
High Voltage Battery Control Status	BECM control mode	—
High Voltage Battery SOC	High voltage battery residual quantity	%
High Voltage Battery SOH	Battery status auxiliary parameter of high voltage battery	%
High Voltage Battery Total Voltage	High voltage battery voltage	V
High Voltage Battery Amperage	High voltage battery current	A
High Voltage Battery Charge Power Limit 1	High voltage battery charge control power value	kw
High Voltage Battery Discharge Power Limit 1	High voltage battery discharge control power value	kw
High Voltage Battery Temperature 1	High voltage battery temperature 1	Deg.c
High Voltage Battery Temperature 2	High voltage battery temperature 2	Deg.c
High Voltage Battery Temperature 3	High voltage battery temperature 3	Deg.c
Intake Air Temperature	High voltage battery intake temperature	Deg.c
High Voltage Battery Internal Resistance	High voltage battery internal resistance	ohm
HEV System Leakage Resistance (+)	Entire hybrid system leakage resistance on + side	kohm
High Voltage Battery Pack Leakage Resistance (+)	High voltage battery internal leakage resistance on + side	kohm
HEV System Leakage Resistance (-)	Entire hybrid system leakage resistance on – side	kohm
High Voltage Battery Pack Leakage Resistance (-)	High voltage battery internal leakage resistance on – side	kohm
Trip Count [count]	Number of IG ON judged by the body integrated unit (CAN communication data)	times
Time Count [msec]	Detailed time elapsed after IG ON calculated by body integrated unit (CAN communication data)	ms
Count	Number of IG ON, synchronous/asynchronous identification information of the elapsed time after IG ON	—
Ignition switch	Ignition switch condition	—
Positive Contactor Status	+ side contactor open/close status	—
Negative Contactor Status	– side contactor open/close status	—
Pre-Charge Contactor Status	Precharge contactor open/close status	—
High Voltage Battery Block 1 SOC	High voltage battery block SOC	%
High Voltage Battery Block 2 SOC	High voltage battery block SOC	%
High Voltage Battery Block 3 SOC	High voltage battery block SOC	%
High Voltage Battery Block 4 SOC	High voltage battery block SOC	%

Display	Contents	Unit of measure
High Voltage Battery Block 5 SOC	High voltage battery block SOC	%
High Voltage Battery Block 6 SOC	High voltage battery block SOC	%
High Voltage Battery Block 7 SOC	High voltage battery block SOC	%
High Voltage Battery Block 8 SOC	High voltage battery block SOC	%
High Voltage Battery Block 9 SOC	High voltage battery block SOC	%
High Voltage Battery Block 10 SOC	High voltage battery block SOC	%
High Voltage Battery Block 11 SOC	High voltage battery block SOC	%
High Voltage Battery Block Voltage 1	High voltage battery block voltage	V
High Voltage Battery Block Voltage 2	High voltage battery block voltage	V
High Voltage Battery Block Voltage 3	High voltage battery block voltage	V
High Voltage Battery Block Voltage 4	High voltage battery block voltage	V
High Voltage Battery Block Voltage 5	High voltage battery block voltage	V
High Voltage Battery Block Voltage 6	High voltage battery block voltage	V
High Voltage Battery Block Voltage 7	High voltage battery block voltage	V
High Voltage Battery Block Voltage 8	High voltage battery block voltage	V
High Voltage Battery Block Voltage 9	High voltage battery block voltage	V
High Voltage Battery Block Voltage 10	High voltage battery block voltage	V
High Voltage Battery Block Voltage 11	High voltage battery block voltage	V
High Voltage Battery Voltage 0	High voltage battery block voltage (voltage sensor value)	V
High Voltage Battery Voltage 1	High voltage battery block voltage (voltage sensor value)	V
High Voltage Battery Voltage 2	High voltage battery block voltage (voltage sensor value)	V
High Voltage Battery Voltage 3	High voltage battery block voltage (voltage sensor value)	V
High Voltage Battery Voltage 4	High voltage battery block voltage (voltage sensor value)	V
High Voltage Battery Voltage 5	High voltage battery block voltage (voltage sensor value)	V
High Voltage Battery Voltage 6	High voltage battery block voltage (voltage sensor value)	V
BECM Control Check 24	Detailed information of control	V
BECM Control Check 25	Detailed information of control	V
High Voltage Battery Amperage Sensor Output	High voltage battery current sensor value	A
ECU ACC	Voltage supplied to BECM	V
Drive Motor Inverter Input Voltage	Drive motor inverter input voltage calculated by DMCM (CAN communication data)	V
Contactor Signal (HPCM)	Contactor operation request status judged by HPCM (CAN communication data)	—
Engine Speed	Engine speed calculated by ECM (CAN communication data)	rpm
P Range	Parking range status judged by TCM (CAN communication data)	—

Freeze Frame Data Display

Display	Contents	Unit of measure
Vehicle Speed	Vehicle speed calculated by VDC (CAN communication data)	km/h
Drive Motor Inverter Operation Status	Drive motor inverter operation status calculated by DMCM (CAN communication data)	—
Drive Motor Torque Target (HPCM)	Target drive motor torque calculated by HPCM (CAN communication data)	Nm
Drive Motor Output Torque Actual	Drive motor output torque calculated by DMCM (CAN communication data)	Nm
Drive Motor Speed Target (HPCM)	Target drive motor speed calculated by HPCM (CAN communication data)	rpm
Drive Motor Speed	Drive motor speed calculated by DMCM (CAN communication data)	rpm
High Voltage Battery Cooling Fan Duty Target (HPCM)	High voltage battery cooling fan duty request calculated by HPCM (CAN communication data)	%
High Voltage Battery Cooling Fan Speed	High voltage battery cooling fan speed calculated by DMCM (CAN communication data)	rpm
High Voltage Battery Charge Power Limit 2	High voltage battery charge control power value (assist)	—
High Voltage Battery Discharge Power Limit 2	High voltage battery discharge control power value (assist)	—

15.System Operation Check Mode

A: OPERATION

CAUTION:
After executing the system operation check mode, execute the Clear Memory Mode.

NOTE:
For detailed operation procedures, refer to “Application help”.

1. HYBRID POWERTRAIN CONTROL SYSTEM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Hybrid Powertrain Control» and then select «Enter».
5) On «Select Function» display, select «Active Test».

NOTE:
A communication error will be displayed if any other modes are performed while performing «Active Test».

System operation check mode item	Display	Note
ISG Cranking Operation	—	Perform engine cranking with integrated starter generator (ISG). Example of use: Used to check engine start with integrated starter generator (ISG).
ISG Voltage Control	Mid High ExtraHigh	Perform generated voltage control with the integrated starter generator (ISG). Example of use: Used to check electrical charge with integrated starter generator (ISG).
12V Battery Relay Operation	—	Switch the 12V battery relay on/off. Example of use: Used to check operation of the 12V battery relay.
DCDC Converter Output Voltage Control	Mid High	Perform DC/DC converter output voltage control. Example of use: Used to check DC/DC converter as a single unit.
Engine only Drive Mode*	—	Drive vehicle without motor operation. Example of use: Used to check influence by motor for diagnosing noise or vibration problem.
Auto Start Stop Cancel Drive Mode (Engine only or Engine + Motor)*	—	Drive vehicle without operating Auto Start Stop or motor. (Transition of mode is possible in the operation described in Notes in the margin.) Example of use: Used to check influence by engine and motor for diagnosing noise or vibration problem. It is also used to drive vehicle or perform inspection with Auto Start Stop deactivated.

*: During this mode, the hybrid fail lamp blinks and the message “Hybrid system service mode is active” is displayed in MFD. The maintenance mode will end after 30 seconds or more have passed since the ignition switch is OFF.

NOTE:
In «Auto Start Stop Cancel Drive Mode (Engine only or Engine + Motor)», transition of mode is enabled by performing the following operation.
1. Turn the ignition switch to ON and perform the following procedures while depressing the brake pedal before starting the engine.
2. Set the shift lever to “N” and depress the accelerator pedal twice. (Fully closed → Fully open → Fully closed → Fully open)
3. Set the shift lever to “P” and depress the accelerator pedal twice. (Fully closed → Fully open → Fully closed → Fully open)
4. Set the shift lever to “N” and depress the accelerator pedal twice. (Fully closed → Fully open → Fully closed → Fully open)
5. Shift into P range.
(The hybrid fail lamp in the combination meter blinks, indicating that the service mode is active in MFD.)
6. Start the engine.
7. The maintenance mode will end after 30 seconds or more have passed since the ignition switch is OFF.
   *: This operation must be performed within 60 seconds after the ignition is turned ON.
   *: If the accelerator pedal is operated too fast, the operation may not be accepted.
   *: If any procedures are performed improperly, they are not accepted until the ignition switch is turned OFF.
   *: If any abnormal conditions are detected, cancel the procedure.

2. DRIVE MOTOR CONTROL SYSTEM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Drive Motor» and then select «Enter».
5) On «Select Function» display, select «Active Test».

System operation check mode item	Display		Note
High voltage battery cooling fan	Target Output Mode	Stop Step1 Step2 Step3	Perform high voltage battery cooling fan compulsory drive. Example of use: Used to check high voltage battery cooling fan circuits.
	High Voltage Battery Cooling Fan Speed	0 — 6000 rpm	
Drive motor inverter power supply relay	Target Output Mode	OFF ON	Perform high voltage battery cooling fan/drive motor inverter power supply relay compulsory drive. Example of use: Used to check operation of high voltage battery cooling fan/drive motor inverter power supply relay.
	Drive Motor Inverter Operation Update Signal Count (Serial)	0 — 255 Count	

NOTE:
The conditions listed below must be met to perform the mode.

Display of current data	Value
Ignition switch	ON
ECU ACC	11.0 V or more
Drive Motor Inverter Operation Signal(HPCM)	OFF
Contactor Open Status	Open
High Voltage Battery Cooling Fan Duty Target (HPCM)	0%

16.Work Support

A: OPERATION

CAUTION:
After executing the work support, execute the Clear Memory Mode.

NOTE:
For detailed operation procedures, refer to “Application help”.

1. HYBRID POWERTRAIN CONTROL SYSTEM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Hybrid Powertrain Control» and then select «Enter».
5) On «Select Function» display, select «Work Support».

NOTE:
A communication error will be displayed if any other modes are performed while performing «Work Support».

Work support item	Display	Note
Brake Vacuum Pump System Check	—	Brake vacuum pump operates. Example of use: Used to check brake vacuum pump as a single unit.

17.List of Diagnostic Trouble Code (DTC)

A: LIST

1. HYBRID POWERTRAIN CONTROL SYSTEM

DTC	Item	Note
P0506	IDLE CONTROL SYSTEM RPM - LOWER THAN EXPECTED	<Ref. to HEV(diag)-91, DTC P0506 IDLE CONTROL SYSTEM RPM - LOWER THAN EXPECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0507	IDLE CONTROL SYSTEM RPM - HIGHER THAN EXPECTED	<Ref. to HEV(diag)-93, DTC P0507 IDLE CONTROL SYSTEM RPM - HIGHER THAN EXPECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0516	BATTERY TEMPERATURE SENSOR CIRCUIT LOW	<Ref. to HEV(diag)-95, DTC P0516 BATTERY TEMPERATURE SENSOR CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0517	BATTERY TEMPERATURE SENSOR CIRCUIT HIGH	<Ref. to HEV(diag)-97, DTC P0517 BATTERY TEMPERATURE SENSOR CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0556	BRAKE BOOSTER PRESSURE SENSOR CIRCUIT RANGE/PERFORMANCE	<Ref. to HEV(diag)-99, DTC P0556 BRAKE BOOSTER PRESSURE SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0572	BRAKE SWITCH "A" CIRCUIT LOW	<Ref. to HEV(diag)-102, DTC P0572 BRAKE SWITCH "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0573	BRAKE SWITCH "A" CIRCUIT HIGH	<Ref. to HEV(diag)-104, DTC P0573 BRAKE SWITCH "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P057B	BRAKE PEDAL POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE	<Ref. to HEV(diag)-106, DTC P057B BRAKE PEDAL POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P057C	BRAKE PEDAL POSITION SENSOR "A" CIRCUIT LOW	<Ref. to HEV(diag)-109, DTC P057C BRAKE PEDAL POSITION SENSOR "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P057D	BRAKE PEDAL POSITION SENSOR "A" CIRCUIT HIGH	<Ref. to HEV(diag)-112, DTC P057D BRAKE PEDAL POSITION SENSOR "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P058D	BATTERY MONITOR MODULE VOLTAGE MONITORING PERFORMANCE	<Ref. to HEV(diag)-114, DTC P058D BATTERY MONITOR MODULE VOLTAGE MONITORING PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P05DD	BRAKE PEDAL POSITION SENSOR "B" CIRCUIT LOW	<Ref. to HEV(diag)-116, DTC P05DD BRAKE PEDAL POSITION SENSOR "B" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

U0412	INVALID DATA RECEIVED FROM BATTERY ENERGY CONTROL MODULE	<Ref. to HEV(diag)-468, DTC U0412 INVALID DATA RECEIVED FROM BATTERY ENERGY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0416	INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE	<Ref. to HEV(diag)-470, DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0420	INVALID DATA RECEIVED FROM POWER STEERING CONTROL MODULE	<Ref. to HEV(diag)-471, DTC U0420 INVALID DATA RECEIVED FROM POWER STEERING CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Note
U0422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE	<Ref. to HEV(diag)-471, DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0423	INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE	<Ref. to HEV(diag)-471, DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0424	INVALID DATA RECEIVED FROM HVAC CONTROL MODULE	<Ref. to HEV(diag)-471, DTC U0424 INVALID DATA RECEIVED FROM HVAC CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0452	INVALID DATA RECEIVED FROM RESTRAINTS CONTROL MODULE	<Ref. to HEV(diag)-471, DTC U0452 INVALID DATA RECEIVED FROM RESTRAINTS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0588	INVALID DATA RECEIVED FROM TRANSMISSION FLUID PUMP MODULE	<Ref. to HEV(diag)-472, DTC U0588 INVALID DATA RECEIVED FROM TRANSMISSION FLUID PUMP MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1100	LOST COMMUNICATION WITH ECM/PCM PU-CAN	<Ref. to HEV(diag)-473, DTC U1100 LOST COMMUNICATION WITH ECM/PCM PU-CAN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1101	LOST COMMUNICATION WITH TCM PU-CAN	<Ref. to HEV(diag)-474, DTC U1101 LOST COMMUNICATION WITH TCM PU-CAN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1401	INVALID DATA RECEIVED FROM ECM/PCM PU-CAN	<Ref. to HEV(diag)-477, DTC U1401 INVALID DATA RECEIVED FROM ECM/PCM PU-CAN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1402	INVALID DATA RECEIVED FROM TCM PU-CAN	<Ref. to HEV(diag)-478, DTC U1402 INVALID DATA RECEIVED FROM TCM PU-CAN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1676	LIN COMMUNICATION BUS ERROR HYBRID POWERTRAIN CONTROL MODULE	<Ref. to HEV(diag)-482, DTC U1676 LIN COMMUNICATION BUS ERROR HYBRID POWERTRAIN CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1711	LOST COMMUNICATION WITH BATTERY "2" MONITOR MODULE	<Ref. to HEV(diag)-484, DTC U1711 LOST COMMUNICATION WITH BATTERY "2" MONITOR MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1720	LOST COMMUNICATION WITH INTEGRATED STARTER GENERATOR	<Ref. to HEV(diag)-486, DTC U1720 LOST COMMUNICATION WITH INTEGRATED STARTER GENERATOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

2. DRIVE MOTOR CONTROL SYSTEM

DTC	Item	Note
P0A2A	DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT	<Ref. to HEV(diag)-165, DTC P0A2A DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A2C	DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT LOW	<Ref. to HEV(diag)-170, DTC P0A2C DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A2D	DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT HIGH	<Ref. to HEV(diag)-175, DTC P0A2D DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A3C	DRIVE MOTOR "A" INVERTER OVER TEMPERATURE	<Ref. to HEV(diag)-178, DTC P0A3C DRIVE MOTOR "A" INVERTER OVER TEMPERATURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A3F	DRIVE MOTOR "A" POSITION SENSOR CIRCUIT	<Ref. to HEV(diag)-180, DTC P0A3F DRIVE MOTOR "A" POSITION SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A40	DRIVE MOTOR "A" POSITION SENSOR CIRCUIT RANGE/PERFORMANCE	<Ref. to HEV(diag)-185, DTC P0A40 DRIVE MOTOR "A" POSITION SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A43	DRIVE MOTOR "A" POSITION SENSOR CIRCUIT INTERMITTENT	<Ref. to HEV(diag)-186, DTC P0A43 DRIVE MOTOR "A" POSITION SENSOR CIRCUIT INTERMITTENT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A44	DRIVE MOTOR "A" POSITION SENSOR CIRCUIT OVERSPEED	<Ref. to HEV(diag)-190, DTC P0A44 DRIVE MOTOR "A" POSITION SENSOR CIRCUIT OVERSPEED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0C52	DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "A" LOW	<Ref. to HEV(diag)-194, DTC P0C52 DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "A" LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0C5C	DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "B" LOW	<Ref. to HEV(diag)-195, DTC P0C5C DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "B" LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0CDC	DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "C" LOW	<Ref. to HEV(diag)-196, DTC P0CDC DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "C" LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0CDD	DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "C" HIGH	<Ref. to HEV(diag)-197, DTC P0CDD DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "C" HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A5D	DRIVE MOTOR "A" PHASE U CURRENT	<Ref. to HEV(diag)-198, DTC P0A5D DRIVE MOTOR "A" PHASE U CURRENT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A60	DRIVE MOTOR "A" PHASE V CURRENT	<Ref. to HEV(diag)-208, DTC P0A60 DRIVE MOTOR "A" PHASE V CURRENT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A63	DRIVE MOTOR "A" PHASE W CURRENT	<Ref. to HEV(diag)-218, DTC P0A63 DRIVE MOTOR "A" PHASE W CURRENT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A78	DRIVE MOTOR "A" INVERTER PERFORMANCE	<Ref. to HEV(diag)-228, DTC P0A78 DRIVE MOTOR "A" INVERTER PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A82	HYBRID/EV BATTERY PACK COOLING FAN 1 PERFORMANCE/STUCK OFF	<Ref. to HEV(diag)-240, DTC P0A82 HYBRID/EV BATTERY PACK COOLING FAN 1 PERFORMANCE/STUCK OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A83	HYBRID/EV BATTERY PACK COOLING FAN 1 STUCK ON	<Ref. to HEV(diag)-243, DTC P0A83 HYBRID/EV BATTERY PACK COOLING FAN 1 STUCK ON, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Note
P0A90	DRIVE MOTOR "A" PERFORMANCE	<Ref. to HEV(diag)-246, DTC P0A90 DRIVE MOTOR "A" PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A94	DC/DC CONVERTER PERFORMANCE	<Ref. to HEV(diag)-253, DTC P0A94 DC/DC CONVERTER PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AED	DRIVE MOTOR INVERTER TEMPERATURE SENSOR "A" CIRCUIT	<Ref. to HEV(diag)-255, DTC P0AED DRIVE MOTOR INVERTER TEMPERATURE SENSOR "A" CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AEE	DRIVE MOTOR INVERTER TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE	<Ref. to HEV(diag)-257, DTC P0AEE DRIVE MOTOR INVERTER TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AF2	DRIVE MOTOR INVERTER TEMPERATURE SENSOR "B" CIRCUIT	<Ref. to HEV(diag)-260, DTC P0AF2 DRIVE MOTOR INVERTER TEMPERATURE SENSOR "B" CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AF3	DRIVE MOTOR INVERTER TEMPERATURE SENSOR "B" CIRCUIT RANGE/PERFORMANCE	<Ref. to HEV(diag)-262, DTC P0AF3 DRIVE MOTOR INVERTER TEMPERATURE SENSOR "B" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0BD1	DRIVE MOTOR INVERTER TEMPERATURE SENSOR "C" CIRCUIT	<Ref. to HEV(diag)-264, DTC P0BD1 DRIVE MOTOR INVERTER TEMPERATURE SENSOR "C" CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0BD2	DRIVE MOTOR INVERTER TEMPERATURE SENSOR "C" CIRCUIT RANGE/PERFORMANCE	<Ref. to HEV(diag)-266, DTC P0BD2 DRIVE MOTOR INVERTER TEMPERATURE SENSOR "C" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0BE6	DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE	<Ref. to HEV(diag)-268, DTC P0BE6 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0BE7	DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT LOW	<Ref. to HEV(diag)-272, DTC P0BE7 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0BE8	DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT HIGH	<Ref. to HEV(diag)-276, DTC P0BE8 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0BEA	DRIVE MOTOR "A" PHASE V CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE	<Ref. to HEV(diag)-279, DTC P0BEA DRIVE MOTOR "A" PHASE V CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0BEB	DRIVE MOTOR "A" PHASE V CURRENT SENSOR CIRCUIT LOW	<Ref. to HEV(diag)-280, DTC P0BEB DRIVE MOTOR "A" PHASE V CURRENT SENSOR CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0BEC	DRIVE MOTOR "A" PHASE V CURRENT SENSOR CIRCUIT HIGH	<Ref. to HEV(diag)-281, DTC P0BEC DRIVE MOTOR "A" PHASE V CURRENT SENSOR CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0BEE	DRIVE MOTOR "A" PHASE W CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE	<Ref. to HEV(diag)-282, DTC P0BEE DRIVE MOTOR "A" PHASE W CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0BEF	DRIVE MOTOR "A" PHASE W CURRENT SENSOR CIRCUIT LOW	<Ref. to HEV(diag)-283, DTC P0BEF DRIVE MOTOR "A" PHASE W CURRENT SENSOR CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0BF0	DRIVE MOTOR "A" PHASE W CURRENT SENSOR CIRCUIT HIGH	<Ref. to HEV(diag)-284, DTC P0BF0 DRIVE MOTOR "A" PHASE W CURRENT SENSOR CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0BFD	DRIVE MOTOR "A" PHASE U-V-W CURRENT SENSOR CORRELATION	<Ref. to HEV(diag)-285, DTC P0BFD DRIVE MOTOR "A" PHASE U-V-W CURRENT SENSOR CORRELATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0C05	DRIVE MOTOR "A" PHASE U-V-W CIRCUIT/OPEN	<Ref. to HEV(diag)-289, DTC P0C05 DRIVE MOTOR "A" PHASE U-V-W CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Note
P0C0C	DRIVE MOTOR "A" INVERTER POWER SUPPLY CIRCUIT LOW	<Ref. to HEV(diag)-293, DTC P0C0C DRIVE MOTOR "A" INVERTER POWER SUPPLY CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0C0D	DRIVE MOTOR "A" INVERTER POWER SUPPLY CIRCUIT HIGH	<Ref. to HEV(diag)-296, DTC P0C0D DRIVE MOTOR "A" INVERTER POWER SUPPLY CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0C79	DRIVE MOTOR "A" INVERTER VOLTAGE TOO HIGH	<Ref. to HEV(diag)-299, DTC P0C79 DRIVE MOTOR "A" INVERTER VOLTAGE TOO HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0DA8	HYBRID/EV BATTERY VOLTAGE/DRIVE MOTOR "A" INVERTER VOLTAGE CORRELATION	<Ref. to HEV(diag)-301, DTC P0DA8 HYBRID/EV BATTERY VOLTAGE/DRIVE MOTOR "A" INVERTER VOLTAGE CORRELATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C20	DRIVE MOTOR "A" INVERTER VOLTAGE TOO LOW	<Ref. to HEV(diag)-304, DTC P1C20 DRIVE MOTOR "A" INVERTER VOLTAGE TOO LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C22	12V AUXILIARY BATTERY VOLTAGE TOO LOW	<Ref. to HEV(diag)-307, DTC P1C22 12V AUXILIARY BATTERY VOLTAGE TOO LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C24	DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT "B"	<Ref. to HEV(diag)-309, DTC P1C24 DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT "B", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C25	DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT "B" LOW	<Ref. to HEV(diag)-311, DTC P1C25 DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT "B" LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C26	DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT "B" HIGH	<Ref. to HEV(diag)-312, DTC P1C26 DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT "B" HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C27	DRIVE MOTOR "A" TEMPERATURE SENSOR CORRELATION	<Ref. to HEV(diag)-313, DTC P1C27 DRIVE MOTOR "A" TEMPERATURE SENSOR CORRELATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C2A	DRIVE MOTOR "A" INVERTER CIRCUIT	<Ref. to HEV(diag)-317, DTC P1C2A DRIVE MOTOR "A" INVERTER CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C30	LOST COMMUNICATION WITH DRIVE MOTOR "A" INVERTER	<Ref. to HEV(diag)-318, DTC P1C30 LOST COMMUNICATION WITH DRIVE MOTOR "A" INVERTER, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C31	INVALID DATA RECEIVED FROM DRIVE MOTOR "A" INVERTER	<Ref. to HEV(diag)-321, DTC P1C31 INVALID DATA RECEIVED FROM DRIVE MOTOR "A" INVERTER, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C34	LOST COMMUNICATION WITH DC/DC CONVERTER	<Ref. to HEV(diag)-324, DTC P1C34 LOST COMMUNICATION WITH DC/DC CONVERTER, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C35	INVALID DATA RECEIVED FROM DC/DC CONVERTER	<Ref. to HEV(diag)-326, DTC P1C35 INVALID DATA RECEIVED FROM DC/DC CONVERTER, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0604	INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR	<Ref. to HEV(diag)-122, DRIVE MOTOR CONTROL SYSTEM, DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0605	INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR	<Ref. to HEV(diag)-126, DRIVE MOTOR CONTROL SYSTEM, DTC P0605 INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A1B	DRIVE MOTOR "A" CONTROL MODULE	<Ref. to HEV(diag)-328, DTC P0A1B DRIVE MOTOR "A" CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Note
P06B1	SENSOR POWER SUPPLY "A" CIRCUIT LOW	<Ref. to HEV(diag)-329, DTC P06B1 SENSOR POWER SUPPLY "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P06B2	SENSOR POWER SUPPLY "A" CIRCUIT HIGH	<Ref. to HEV(diag)-332, DTC P06B2 SENSOR POWER SUPPLY "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0076	CONTROL MODULE COMMUNICATION BUS "HEV-CAN" OFF	<Ref. to HEV(diag)-454, DTC U0076 CONTROL MODULE COMMUNICATION BUS "HEV-CAN" OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0111	LOST COMMUNICATION WITH BATTERY ENERGY CONTROL MODULE	<Ref. to HEV(diag)-460, DTC U0111 LOST COMMUNICATION WITH BATTERY ENERGY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0412	INVALID DATA RECEIVED FROM BATTERY ENERGY CONTROL MODULE	<Ref. to HEV(diag)-468, DTC U0412 INVALID DATA RECEIVED FROM BATTERY ENERGY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1290	LOST COMMUNICATION WITH HYBRID POWERTRAIN CONTROL MODULE HEV-CAN	<Ref. to HEV(diag)-475, DTC U1290 LOST COMMUNICATION WITH HYBRID POWERTRAIN CONTROL MODULE HEV-CAN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1591	INVALID DATA RECEIVED FROM HYBRID POWERTRAIN CONTROL MODULE HEV-CAN	<Ref. to HEV(diag)-479, DTC U1591 INVALID DATA RECEIVED FROM HYBRID POWERTRAIN CONTROL MODULE HEV-CAN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

3. BATTERY ENERGY CONTROL SYSTEM

DTC	Item	Note
P0604	INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR	<Ref. to HEV(diag)-123, BATTERY ENERGY CONTROL SYSTEM, DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0605	INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR	<Ref. to HEV(diag)-127, BATTERY ENERGY CONTROL SYSTEM, DTC P0605 INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P062F	INTERNAL CONTROL MODULE EEPROM ERROR	<Ref. to HEV(diag)-335, DTC P062F INTERNAL CONTROL MODULE EEPROM ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A1F	BATTERY ENERGY CONTROL MODULE	<Ref. to HEV(diag)-337, DTC P0A1F BATTERY ENERGY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A7D	HYBRID/EV BATTERY PACK STATE OF CHARGE LOW	<Ref. to HEV(diag)-339, DTC P0A7D HYBRID/EV BATTERY PACK STATE OF CHARGE LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A7E	HYBRID/EV BATTERY PACK OVER TEMPERATURE	<Ref. to HEV(diag)-341, DTC P0A7E HYBRID/EV BATTERY PACK OVER TEMPERATURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A7F	HYBRID/EV BATTERY PACK DETERIORATION	<Ref. to HEV(diag)-344, DTC P0A7F HYBRID/EV BATTERY PACK DETERIORATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A95	HIGH VOLTAGE FUSE "A"	<Ref. to HEV(diag)-347, DTC P0A95 HIGH VOLTAGE FUSE "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A9C	HYBRID/EV BATTERY TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE	<Ref. to HEV(diag)-349, DTC P0A9C HYBRID/EV BATTERY TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A9D	HYBRID/EV BATTERY TEMPERATURE SENSOR "A" CIRCUIT LOW	<Ref. to HEV(diag)-350, DTC P0A9D HYBRID/EV BATTERY TEMPERATURE SENSOR "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A9E	HYBRID/EV BATTERY TEMPERATURE SENSOR "A" CIRCUIT HIGH	<Ref. to HEV(diag)-351, DTC P0A9E HYBRID/EV BATTERY TEMPERATURE SENSOR "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AA4	HYBRID/EV BATTERY NEGATIVE CONTACTOR CIRCUIT STUCK CLOSED	<Ref. to HEV(diag)-352, DTC P0AA4 HYBRID/EV BATTERY NEGATIVE CONTACTOR CIRCUIT STUCK CLOSED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AA6	HYBRID/EV BATTERY VOLTAGE SYSTEM ISOLATION FAULT	<Ref. to HEV(diag)-353, DTC P0AA6 HYBRID/EV BATTERY VOLTAGE SYSTEM ISOLATION FAULT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AA7	HYBRID/EV BATTERY VOLTAGE ISOLATION SENSOR CIRCUIT	<Ref. to HEV(diag)-357, DTC P0AA7 HYBRID/EV BATTERY VOLTAGE ISOLATION SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AAD	HYBRID/EV BATTERY PACK AIR TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE	<Ref. to HEV(diag)-358, DTC P0AAD HYBRID/EV BATTERY PACK AIR TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AAE	HYBRID/EV BATTERY PACK AIR TEMPERATURE SENSOR "A" CIRCUIT LOW	<Ref. to HEV(diag)-359, DTC P0AAE HYBRID/EV BATTERY PACK AIR TEMPERATURE SENSOR "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AAF	HYBRID/EV BATTERY PACK AIR TEMPERATURE SENSOR "A" CIRCUIT HIGH	<Ref. to HEV(diag)-360, DTC P0AAF HYBRID/EV BATTERY PACK AIR TEMPERATURE SENSOR "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0ABF	HYBRID/EV BATTERY PACK CURRENT SENSOR "A" CIRCUIT	<Ref. to HEV(diag)-361, DTC P0ABF HYBRID/EV BATTERY PACK CURRENT SENSOR "A" CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Note
P0AC0	HYBRID/EV BATTERY PACK CURRENT SENSOR "A" CIRCUIT RANGE/PERFORMANCE	<Ref. to HEV(diag)-362, DTC P0AC0 HYBRID/EV BATTERY PACK CURRENT SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AC1	HYBRID/EV BATTERY PACK CURRENT SENSOR "A" CIRCUIT LOW	<Ref. to HEV(diag)-363, DTC P0AC1 HYBRID/EV BATTERY PACK CURRENT SENSOR "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AC2	HYBRID/EV BATTERY PACK CURRENT SENSOR "A" CIRCUIT HIGH	<Ref. to HEV(diag)-364, DTC P0AC2 HYBRID/EV BATTERY PACK CURRENT SENSOR "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AC3	HYBRID/EV BATTERY PACK CURRENT SENSOR "A" CIRCUIT INTERMITTENT/ERRATIC	<Ref. to HEV(diag)-365, DTC P0AC3 HYBRID/EV BATTERY PACK CURRENT SENSOR "A" CIRCUIT INTERMITTENT/ERRATIC, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AC6	HYBRID/EV BATTERY TEMPERATURE SENSOR "B" CIRCUIT RANGE/PERFORMANCE	<Ref. to HEV(diag)-367, DTC P0AC6 HYBRID/EV BATTERY TEMPERATURE SENSOR "B" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AC7	HYBRID/EV BATTERY TEMPERATURE SENSOR "B" CIRCUIT LOW	<Ref. to HEV(diag)-368, DTC P0AC7 HYBRID/EV BATTERY TEMPERATURE SENSOR "B" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AC8	HYBRID/EV BATTERY TEMPERATURE SENSOR "B" CIRCUIT HIGH	<Ref. to HEV(diag)-369, DTC P0AC8 HYBRID/EV BATTERY TEMPERATURE SENSOR "B" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0ACB	HYBRID/EV BATTERY TEMPERATURE SENSOR "C" CIRCUIT RANGE/PERFORMANCE	<Ref. to HEV(diag)-370, DTC P0ACB HYBRID/EV BATTERY TEMPERATURE SENSOR "C" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0ACC	HYBRID/EV BATTERY TEMPERATURE SENSOR "C" CIRCUIT LOW	<Ref. to HEV(diag)-371, DTC P0ACC HYBRID/EV BATTERY TEMPERATURE SENSOR "C" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0ACD	HYBRID/EV BATTERY TEMPERATURE SENSOR "C" CIRCUIT HIGH	<Ref. to HEV(diag)-372, DTC P0ACD HYBRID/EV BATTERY TEMPERATURE SENSOR "C" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AD9	HYBRID/EV BATTERY POSITIVE CONTACTOR CONTROL CIRCUIT/OPEN	<Ref. to HEV(diag)-373, DTC P0AD9 HYBRID/EV BATTERY POSITIVE CONTACTOR CONTROL CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0ADB	HYBRID/EV BATTERY POSITIVE CONTACTOR CONTROL CIRCUIT LOW	<Ref. to HEV(diag)-374, DTC P0ADB HYBRID/EV BATTERY POSITIVE CONTACTOR CONTROL CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0ADD	HYBRID/EV BATTERY NEGATIVE CONTACTOR CONTROL CIRCUIT/OPEN	<Ref. to HEV(diag)-376, DTC P0ADD HYBRID/EV BATTERY NEGATIVE CONTACTOR CONTROL CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0ADF	HYBRID/EV BATTERY NEGATIVE CONTACTOR CONTROL CIRCUIT LOW	<Ref. to HEV(diag)-377, DTC P0ADF HYBRID/EV BATTERY NEGATIVE CONTACTOR CONTROL CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AE4	HYBRID/EV BATTERY PRECHARGE CONTACTOR CONTROL CIRCUIT/OPEN	<Ref. to HEV(diag)-378, DTC P0AE4 HYBRID/EV BATTERY PRECHARGE CONTACTOR CONTROL CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AE6	HYBRID/EV BATTERY PRECHARGE CONTACTOR CONTROL CIRCUIT LOW	<Ref. to HEV(diag)-379, DTC P0AE6 HYBRID/EV BATTERY PRECHARGE CONTACTOR CONTROL CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B25	HYBRID/EV BATTERY "A" VOLTAGE LOW	<Ref. to HEV(diag)-380, DTC P0B25 HYBRID/EV BATTERY "A" VOLTAGE LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B26	HYBRID/EV BATTERY "A" VOLTAGE HIGH	<Ref. to HEV(diag)-383, DTC P0B26 HYBRID/EV BATTERY "A" VOLTAGE HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B37	HIGH VOLTAGE SERVICE DISCONNECT OPEN	<Ref. to HEV(diag)-386, DTC P0B37 HIGH VOLTAGE SERVICE DISCONNECT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Note
P0B3C	HYBRID/EV BATTERY VOLTAGE SENSE "A" CIRCUIT RANGE/PERFORMANCE	<Ref. to HEV(diag)-388, DTC P0B3C HYBRID/EV BATTERY VOLTAGE SENSE "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B3D	HYBRID/EV BATTERY VOLTAGE SENSE "A" CIRCUIT LOW	<Ref. to HEV(diag)-390, DTC P0B3D HYBRID/EV BATTERY VOLTAGE SENSE "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B3E	HYBRID/EV BATTERY VOLTAGE SENSE "A" CIRCUIT HIGH	<Ref. to HEV(diag)-391, DTC P0B3E HYBRID/EV BATTERY VOLTAGE SENSE "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B41	HYBRID/EV BATTERY VOLTAGE SENSE "B" CIRCUIT RANGE/PERFORMANCE	<Ref. to HEV(diag)-392, DTC P0B41 HYBRID/EV BATTERY VOLTAGE SENSE "B" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B42	HYBRID/EV BATTERY VOLTAGE SENSE "B" CIRCUIT LOW	<Ref. to HEV(diag)-394, DTC P0B42 HYBRID/EV BATTERY VOLTAGE SENSE "B" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B43	HYBRID/EV BATTERY VOLTAGE SENSE "B" CIRCUIT HIGH	<Ref. to HEV(diag)-395, DTC P0B43 HYBRID/EV BATTERY VOLTAGE SENSE "B" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B46	HYBRID/EV BATTERY VOLTAGE SENSE "C" CIRCUIT RANGE/PERFORMANCE	<Ref. to HEV(diag)-396, DTC P0B46 HYBRID/EV BATTERY VOLTAGE SENSE "C" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B47	HYBRID/EV BATTERY VOLTAGE SENSE "C" CIRCUIT LOW	<Ref. to HEV(diag)-398, DTC P0B47 HYBRID/EV BATTERY VOLTAGE SENSE "C" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B48	HYBRID/EV BATTERY VOLTAGE SENSE "C" CIRCUIT HIGH	<Ref. to HEV(diag)-399, DTC P0B48 HYBRID/EV BATTERY VOLTAGE SENSE "C" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B4A	HYBRID/EV BATTERY VOLTAGE SENSE "D" CIRCUIT	<Ref. to HEV(diag)-400, DTC P0B4A HYBRID/EV BATTERY VOLTAGE SENSE "D" CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B4B	HYBRID/EV BATTERY VOLTAGE SENSE "D" CIRCUIT RANGE/PERFORMANCE	<Ref. to HEV(diag)-401, DTC P0B4B HYBRID/EV BATTERY VOLTAGE SENSE "D" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B4C	HYBRID/EV BATTERY VOLTAGE SENSE "D" CIRCUIT LOW	<Ref. to HEV(diag)-403, DTC P0B4C HYBRID/EV BATTERY VOLTAGE SENSE "D" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B4D	HYBRID/EV BATTERY VOLTAGE SENSE "D" CIRCUIT HIGH	<Ref. to HEV(diag)-404, DTC P0B4D HYBRID/EV BATTERY VOLTAGE SENSE "D" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B50	HYBRID/EV BATTERY VOLTAGE SENSE "E" CIRCUIT RANGE/PERFORMANCE	<Ref. to HEV(diag)-405, DTC P0B50 HYBRID/EV BATTERY VOLTAGE SENSE "E" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B51	HYBRID/EV BATTERY VOLTAGE SENSE "E" CIRCUIT LOW	<Ref. to HEV(diag)-407, DTC P0B51 HYBRID/EV BATTERY VOLTAGE SENSE "E" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B52	HYBRID/EV BATTERY VOLTAGE SENSE "E" CIRCUIT HIGH	<Ref. to HEV(diag)-408, DTC P0B52 HYBRID/EV BATTERY VOLTAGE SENSE "E" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

19.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC P0506 IDLE CONTROL SYSTEM RPM - LOWER THAN EXPECTED

DIAGNOSIS:

• Detected when two consecutive driving cycles with fault occur. (Single engine startup is counted as one drive cycle.)

• GENERAL DESCRIPTION <Ref. to HEV(diag)-94, OUTLINE OF DIAGNOSIS, DTC P0507 IDLE CONTROL SYSTEM RPM - HIGHER THAN EXPECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

Normal control

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read DTCs of the following system. • Engine <Ref. to EN(H4DO HEV)(diag)-51, Read Diagnostic Trouble Code (DTC).> • Hybrid powertrain control system <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	First perform the diagnosis according to other DTCs.	Go to step **2**.
2	**CHECK AIR CLEANER ELEMENT.** 1) Turn the ignition switch to OFF. 2) Check the air cleaner element.	Is there excessive clogging on air cleaner element?	Replace the air cleaner element. <Ref. to IN(H4DO(w/o HEV))-4, Air Cleaner Element.>	Go to step **3**.
3	**CHECK ELECTRONIC THROTTLE CONTROL.** 1) Remove the electronic throttle control. <Ref. to FU(H4DO(w/o HEV))-15, REMOVAL, Throttle Body.> 2) Check the electronic throttle control.	Are foreign matter found inside electronic throttle control?	Remove foreign matter from electronic throttle control.	Perform the diagnosis of DTC P2101 of engine. <Ref. to EN(H4DO HEV)(diag)-456, DTC P2101 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of ISC.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10.9 V
Measured lambda	≥ 0.85 and < 1.151
Vehicle speed	= 0 MPH
Engine Auto Stop command by HPCM	False
SOC of hybrid battery	≤ 44%
CVT secondary pulley shaft speed	≥ 100 rpm
Accelerator pedal position	= 0%

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
(Actual engine speed) – (Target engine speed)	< – 100 rpm

Time Needed for Diagnosis: 15 seconds
Malfunction Indicator Light Illumination: detects when malfunction occurs in 2 continuous driving cycles. (Single engine startup is counted as one drive cycle.)

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
(Actual engine speed) – (Target engine speed)	≥ – 100 rpm

Time Needed for Diagnosis: 15 seconds

B: DTC P0507 IDLE CONTROL SYSTEM RPM - HIGHER THAN EXPECTED

DIAGNOSIS:

• Detected when two consecutive driving cycles with fault occur. (Single engine startup is counted as one drive cycle.)

• GENERAL DESCRIPTION <Ref. to HEV(diag)-94, OUTLINE OF DIAGNOSIS, DTC P0507 IDLE CONTROL SYSTEM RPM - HIGHER THAN EXPECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

Normal control

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read DTCs of the following system. • Engine <Ref. to EN(H4DO HEV)(diag)-51, Read Diagnostic Trouble Code (DTC).> • Hybrid powertrain control system <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	First perform the diagnosis according to other DTCs.	Go to step **2**.
2	**CHECK AIR INTAKE SYSTEM.** 1) Start and idle the engine. 2) Check the following items. • Loose installation of intake manifold and throttle body • Cracks of intake manifold gasket and throttle body gasket • Disconnection of vacuum hoses	Is there any fault in air intake system?	Repair air suction and leaks.	Go to step **3**.
3	**CHECK ELECTRONIC THROTTLE CONTROL.** 1) Turn the ignition switch to OFF. 2) Remove the electronic throttle control. <Ref. to FU(H4DO(w/o HEV))-15, REMOVAL, Throttle Body.> 3) Check the electronic throttle control.	Are foreign matter found inside electronic throttle control?	Remove foreign matter from electronic throttle control.	Perform the diagnosis of DTC P2101 of engine. <Ref. to EN(H4DO HEV)(diag)-456, DTC P2101 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of ISC.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
12 V battery system voltage	≥ 10.9 V
Measured lambda	≥ 0.85 and < 1.151
Vehicle speed	= 0 MPH
Engine Auto Stop command by HPCM	False
SOC of hybrid battery	≤ 44%
CVT secondary pulley shaft speed	≥ 100 rpm
Accelerator pedal position	= 0%

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
(Actual engine speed) – (Target engine speed)	> 200 rpm

Time Needed for Diagnosis: 15 seconds
Malfunction Indicator Light Illumination: detects when malfunction occurs in 2 continuous driving cycles. (Single engine startup is counted as one drive cycle.)

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
(Actual engine speed) – (Target engine speed)	≤ 200 rpm

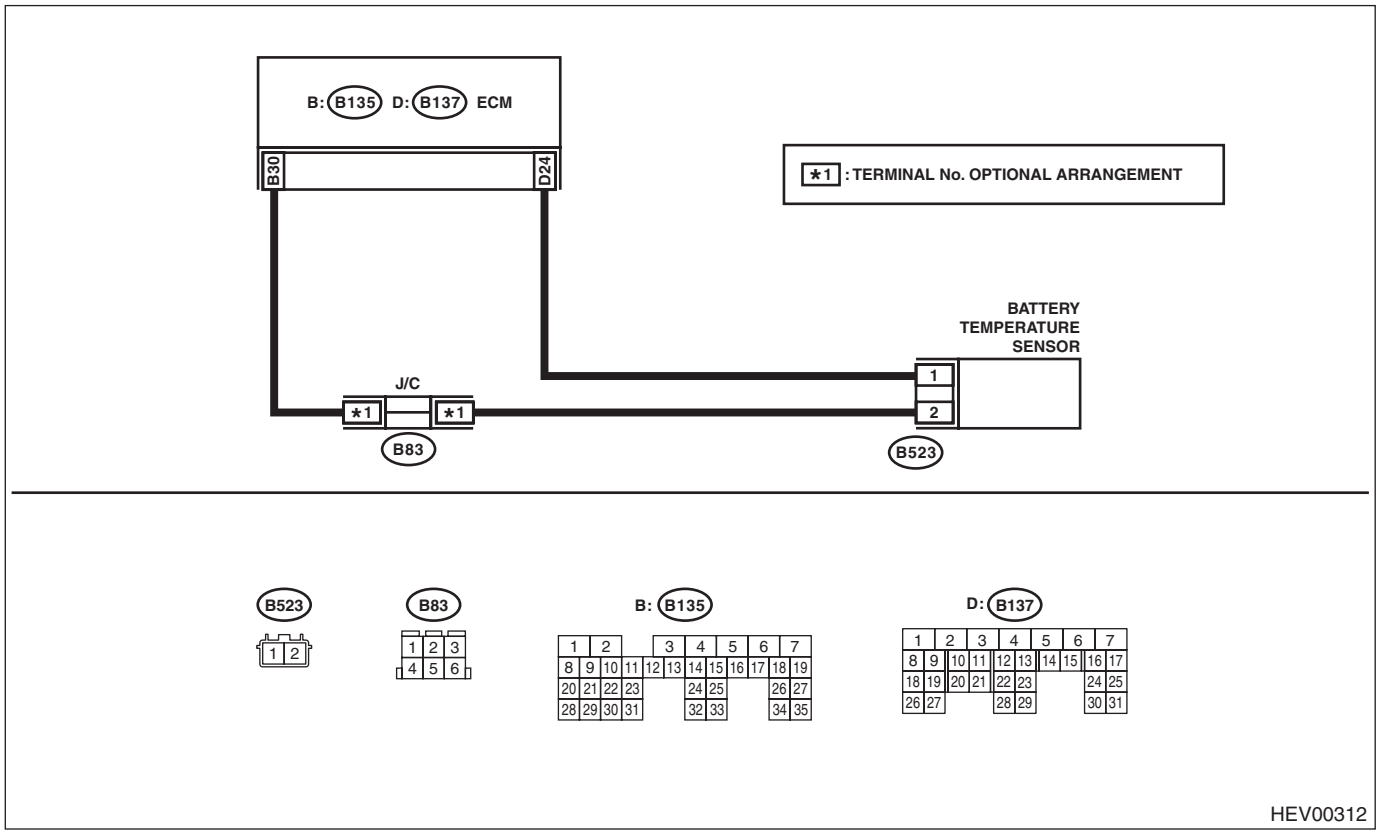
Time Needed for Diagnosis: 15 seconds

C: DTC P0516 BATTERY TEMPERATURE SENSOR CIRCUIT LOW

DIAGNOSIS:

- Detects short circuit to ground of 12 volt auxiliary battery temperature sensor harness.
- Judge as NG when the detection result is out of specification.
- Immediately at fault recognition

TROUBLE SYMPTOM:



Normal control

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Engine electrical system <Ref. to WI(HEV)-96, WIRING DIAGRAM, Engine Electrical System.>

Step		Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «12V Auxiliary Battery Temperature». <Ref. to HEV(diag)-39, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 100°C (212°F) or more?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

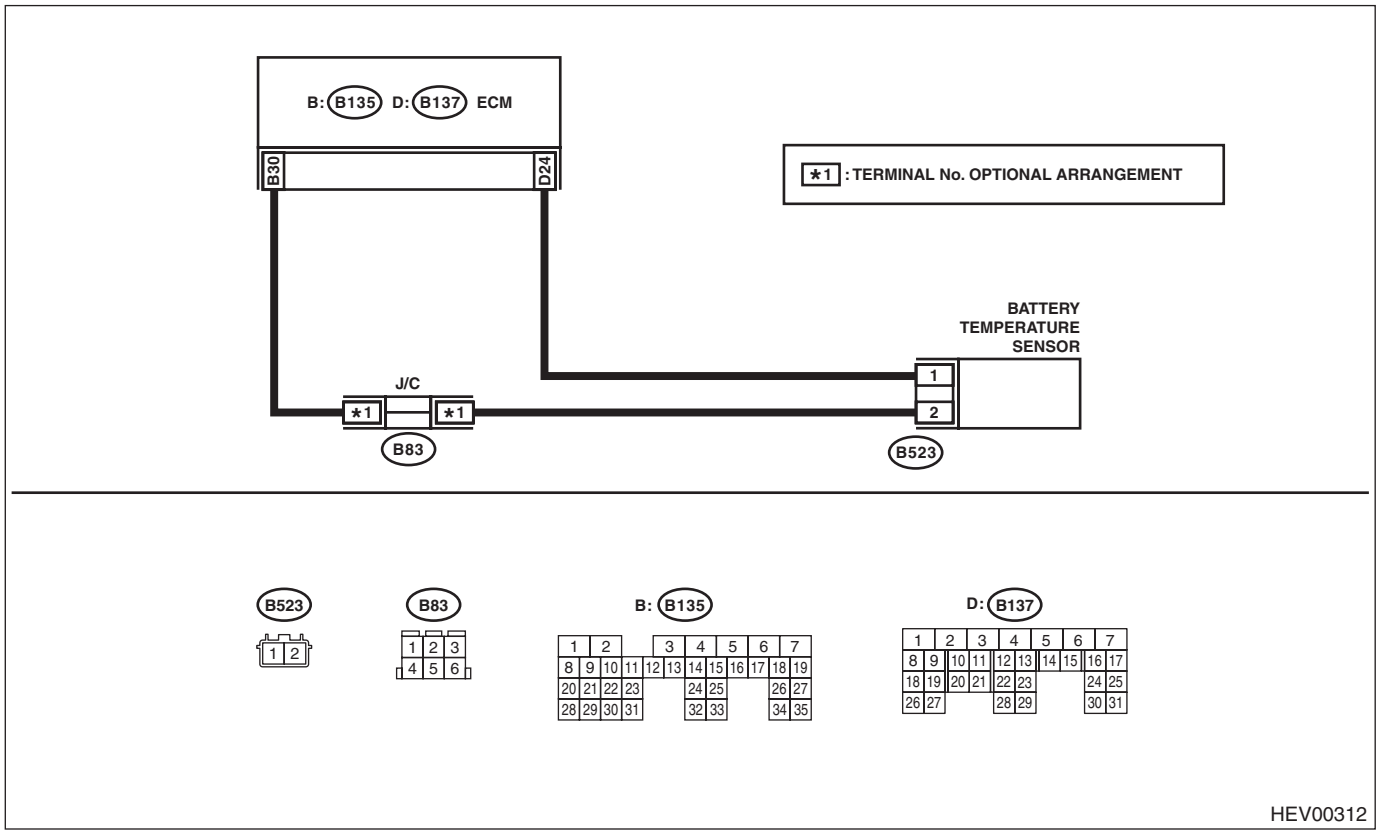
Step		Check	Yes	No
2	**CHECK HARNESS (GROUND SHORT CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector and battery temperature sensor connector. 3) Using a tester, measure the resistance between the ECM connector and chassis ground. ***Connector & terminal*** ***(B137) No. 24 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the battery temperature sensor. <Ref. to SC(H4DO(HEV))-63, Battery Temperature Sensor.>	Repair the short circuit to ground in the harness between the ECM connector and battery temperature sensor connector.

D: DTC P0517 BATTERY TEMPERATURE SENSOR CIRCUIT HIGH

DIAGNOSIS:

- Detects open circuit and short circuit of 12 volt auxiliary battery temperature sensor harness.
- Judge as NG when the detection result is out of specification.
- Immediately at fault recognition

TROUBLE SYMPTOM:



Normal control

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Engine electrical system <Ref. to WI(HEV)-96, WIRING DIAGRAM, Engine Electrical System.>

Step		Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «12V Auxiliary Battery Temperature». <Ref. to HEV(diag)-39, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value –40°C (–40°F) or less?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

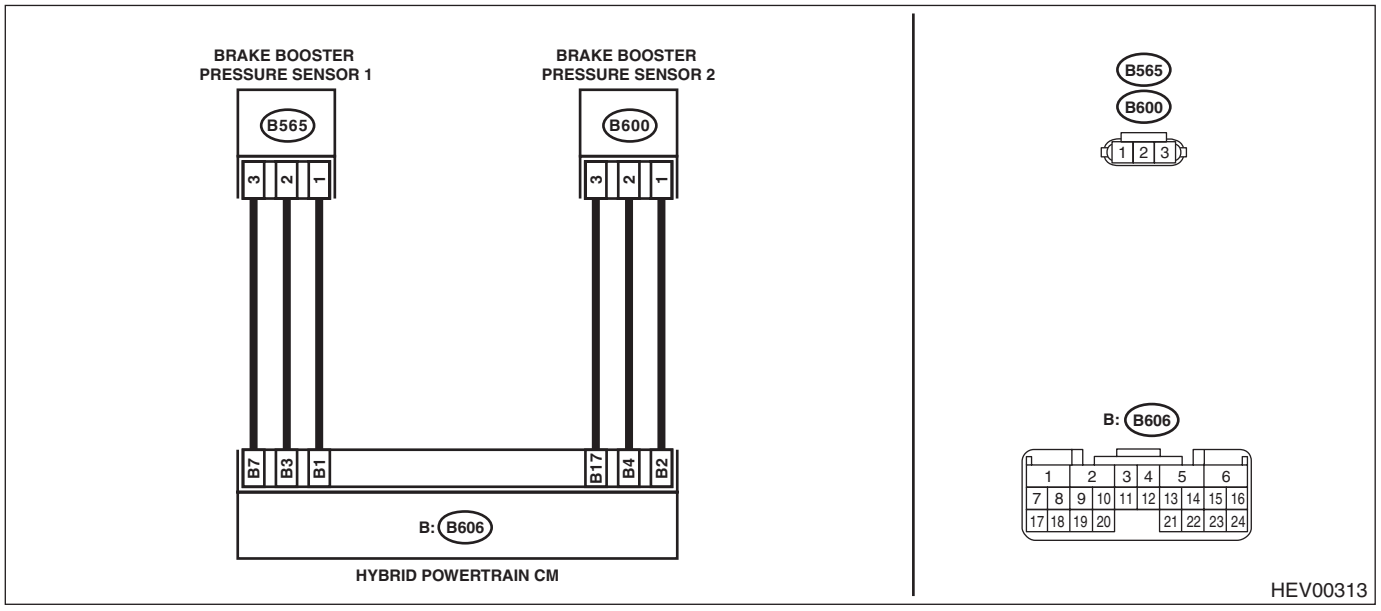
	Step	Check	Yes	No
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from the ECM and battery temperature sensor. 3) Using a tester, measure the resistance of harness between ECM connector and battery temperature sensor connector. ***Connector & terminal*** ***(B137) No. 24 — (B523) No. 1:*** ***(B135) No. 30 — (B523) No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit in the harness between the ECM connector and battery temperature sensor connector.
3	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Connect all connectors. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B137) No. 24 (+) — Chassis ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power in harness between ECM connector and battery temperature sensor connector.	Replace the battery temperature sensor. <Ref. to SC(H4DO(HEV))-63, Battery Temperature Sensor.>

E: DTC P0556 BRAKE BOOSTER PRESSURE SENSOR CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:

- Detects abnormal conditions of brake booster pressure sensor range/performance.
- Judge as NG when the detection result is out of specification.
- Immediately at fault recognition

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Vacuum pump fail lamp illuminates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs (brake booster pressure sensor related) detected? (current malfunction)	First diagnose other DTCs.	Go to step **2**.
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Power Sensor Voltage 1» «Power Sensor Voltage 2». <Ref. to HEV(diag)-39, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value approx. 5 V?	Go to step **3**.	Go to step **9**.

	Step	Check	Yes	No
3	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Depress the brake pedal 10 times. 3) Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Brake Booster Pressure 1» «Brake Booster Pressure 2» «Atmosphere Pressure». <Ref. to HEV(diag)-39, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Do «Brake Booster Pressure 1» «Brake Booster Pressure 2» «Atmosphere Pressure» match?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK SENSORS.** 1) Interchange brake booster pressure sensor 1 and brake booster pressure sensor 2. 2) Turn the ignition switch to ON. 3) Depress the brake pedal 10 times. 4) Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Brake Booster Pressure 1» «Brake Booster Pressure 2». <Ref. to HEV(diag)-39, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Did those two values interchange each other?	Replace the brake booster. <Ref. to BR-51, Brake Booster.>	Go to step **5**.
5	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Brake Booster Pressure Sensor Voltage 1» «Brake Booster Pressure Sensor Voltage 2». <Ref. to HEV(diag)-39, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value between 0.3 — 4.7 V?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	If 0.3 V or less Go to step **6**. If 4.7 V or more Go to step **7**.
6	**CHECK HARNESS (GROUND SHORT CIRCUIT).** 1) Disconnect the connectors of brake booster pressure sensor 1 and brake booster pressure sensor 2 and the HPCM connector. 2) Using a tester, measure the resistance between brake booster pressure sensor 1 and brake booster pressure sensor 2 connectors and chassis ground. ***Connector & terminal*** ***(B565) No. 2 — Chassis ground:*** ***(B600) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Repair the ground short circuit of harness between HPCM connector and brake booster pressure sensor connector.

	Step	Check	Yes	No
7	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the connectors of brake booster pressure sensor 1 and brake booster pressure sensor 2. 2) Using a tester, measure the resistance between brake booster pressure sensor 1 and brake booster pressure sensor 2 connectors and the HPCM connector. ***Connector & terminal*** ***(B565) No. 2 — (B606) No. 3:*** ***(B600) No. 2 — (B606) No. 4:***	Is the resistance 1 Ω or less?	Go to step **8**.	Repair the open circuit of harness between HPCM connector and brake booster pressure sensor connector.
8	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between brake booster pressure sensor 1 and brake booster pressure sensor 2 connectors and chassis ground. ***Connector & terminal*** ***(B565) No. 2 (+) — Chassis ground (–):*** ***(B600) No. 2 (+) — Chassis ground (–):***	Is the voltage 5 V or less?	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Repair short circuit to power in harness between HPCM connector and brake booster pressure sensor connector.
9	**CHECK CURRENT DATA.** 1) Disconnect the HPCM connector (B606). 2) Turn the ignition switch to ON. 3) Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Power Sensor Voltage 1» «Power Sensor Voltage 2».	Is the value approx. 5 V?	Go to step **10**.	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>
10	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the connectors of brake booster pressure sensor 1 and brake booster pressure sensor 2. 2) Using a tester, measure the resistance between brake booster pressure sensor 1 and brake booster pressure sensor 2 connectors and the HPCM connector. ***Connector & terminal*** ***(B565) No. 3 — (B606) No. 7:*** ***(B600) No. 3 — (B606) No. 17:***	Is the resistance 1 Ω or less?	Go to step **11**.	Repair the open circuit of harness between HPCM connector and brake booster pressure sensor connector.
11	**CHECK HARNESS (GROUND SHORT CIRCUIT).** 1) Disconnect the connectors of brake booster pressure sensor 1 and brake booster pressure sensor 2. 2) Using a tester, measure the resistance between brake booster pressure sensor 1 and brake booster pressure sensor 2 connectors and chassis ground. ***Connector & terminal*** ***(B565) No. 3 — Chassis ground:*** ***(B600) No. 3 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Repair the ground short circuit of harness between HPCM connector and brake booster pressure sensor connector.

F: DTC P0572 BRAKE SWITCH "A" CIRCUIT LOW

DIAGNOSIS:
GENERAL DESCRIPTION <Ref. to HEV(diag)-103, OUTLINE OF DIAGNOSIS, DTC P0572 BRAKE SWITCH "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>
WIRING DIAGRAM:
Stop light system <Ref. to WI(HEV)-191, WIRING DIAGRAM, Stop Light System.>

Step		Check	Yes	No
1	**CHECK STOP LIGHT & BRAKE SWITCH.** Check the stop light & brake switch. <Ref. to CC-10, Stop Light & Brake Switch.>	Is the stop light & brake switch and installation position OK?	Go to step **2**.	Replace the stop light & brake switch. Or adjust the installation position.
2	**CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the stop lamp & brake switch connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between the stop lamp & brake switch connector and chassis ground. ***Connector & terminal*** ***(B65) No. 3 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	• Check fuse No. 8 (in fuse & relay box). • Check for open or short in the harness between stop light & brake switch and fuse & relay box.
3	**CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector. 3) Measure the resistance between the ECM connector and stop light & brake switch connector. ***Connector & terminal*** ***(B137) No. 7 — (B65) No. 4:***	Is the resistance less than 10 Ω?	Replace the ECM. <Ref. to FU(H4DO(HEV))-86, Engine Control Module (ECM).>	Repair the open circuit of harness between ECM connector and stop light & brake switch connector.

1. OUTLINE OF DIAGNOSIS

Detect brake pedal SW-A ON/OFF stuck.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 0.2 s
Brake switch B signal from ECM	OFF
(Brake pedal)	(Not Pressed)
(Current BPP sensor 1 angle) – (BPP sensor 1 angle that was stored when the brake switch B status has been changed from ON to OFF)	≤ –0.69 deg
(Brake pedal)	(Not Pressed)

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Brake switch A signal from ECM	OFF
(Brake pedal)	Pressed
NOTE: For a normal system, when applying the brakes switch B will go from ON to OFF immediately, and from switch B OFF, switch A will go OFF to ON after 0.69 degrees of travel in the direction of decreasing the value of the brake pedal angle.	

Time Needed for Diagnosis: 1 s x 5 times
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as OK.
Do not clear NG during hybrid system activated.

Judgment Value

Malfunction Criteria	Threshold Value
Brake switch A signal from ECM	ON
(Brake pedal)	Not Pressed
NOTE: For a normal system, when applying the brakes switch B will go from ON to OFF immediately, and from switch B OFF, switch A will go OFF to ON after 0.69 degrees of travel in the direction of decreasing the value of the brake pedal angle.	

Time Needed for Diagnosis: 1 second

G: DTC P0573 BRAKE SWITCH "A" CIRCUIT HIGH

DIAGNOSIS:

GENERAL DESCRIPTION <Ref. to HEV(diag)-104, OUTLINE OF DIAGNOSIS, DTC P0573 BRAKE SWITCH "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

NOTE:

For the diagnostic procedure, refer to DTC P0572. <Ref. to HEV(diag)-102, DTC P0572 BRAKE SWITCH "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect brake pedal SW-A ON/OFF stuck.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 0.2 s
Brake switch B signal from ECM	ON
(Brake pedal)	(Pressed)
(Current BPP sensor 1 angle) – (BPP sensor 1 angle that was stored when the brake switch B status has been changed from OFF to ON)	≥ +0.69 deg
(Brake pedal)	(Pressed)
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 0.2 s
(Current BPP sensor 1 angle) – (Minimum BPP sensor 1 angle that has experienced from ignition switch: ON)	≥ +3.5 deg
(Brake pedal)	(Pressed)

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Brake switch A signal from ECM (Brake pedal) NOTE: For a normal system, when applying the brakes switch B will go from OFF to ON immediately, and from switch B ON, switch A will go ON to OFF after 0.69 degrees of travel in the direction of increasing the value of the brake pedal angle. NOTE: For a normal system, switch A will go ON to OFF within 3.5 degrees of travel in the direction of increasing the value of the brake pedal angle from initial brake pedal position.	ON Not pressed

Time Needed for Diagnosis: 1 s x 5 times
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as OK. Do not clear NG during hybrid system activated.

Judgment Value

Malfunction Criteria	Threshold Value
Brake switch A signal from ECM (Brake pedal) NOTE: For a normal system, when applying the brakes switch B will go from OFF to ON immediately, and from switch B ON, switch A will go ON to OFF after 0.69 degrees of travel in the direction of increasing the value of the brake pedal angle. NOTE: For a normal system, switch A will go ON to OFF within 3.5 degrees of travel in the direction of increasing the value of the brake pedal angle from initial brake pedal position.	OFF Pressed

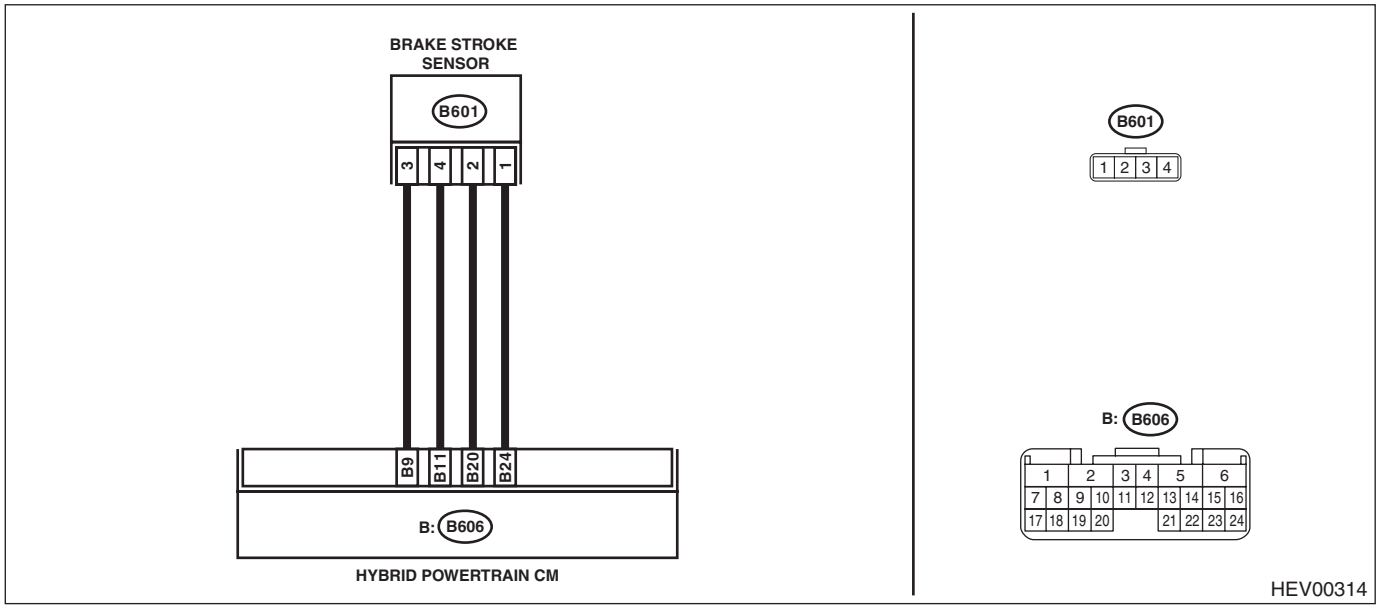
Time Needed for Diagnosis: 1 second

H: DTC P057B BRAKE PEDAL POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-107, OUTLINE OF DIAGNOSIS, DTC P057B BRAKE PEDAL POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



EV traveling/Auto Start Stop does not operate.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Main Brake Pedal Position Sensor Voltage» «Sub Brake Pedal Position Sensor Voltage». <Ref. to HEV(diag)-39, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Does the value «Main Brake Pedal Position Sensor Voltage» become approx. 1 V, and the value «Sub Brake Pedal Position Sensor Voltage» approx. 4 V when the pedal is not depressed? Also, do the values «Main Brake Pedal Position Sensor Voltage» and «Sub Brake Pedal Position Sensor Voltage» change when the pedal is depressed?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK CURRENT DATA.** 1) Turn the ignition switch to OFF. 2) Disconnect the HPCM connector (B606). 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Power Sensor Voltage 3». <Ref. to HEV(diag)-39, HYBRID POWER-TRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value approx. 5 V?	Go to step **3**.	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the brake stroke sensor connector. 3) Using a tester, measure the resistance between the HPCM connector and brake stroke sensor connector. ***Connector & terminal*** ***(B601) No. 2 — (B606) No. 20:*** ***(B601) No. 4 — (B606) No. 11:*** ***(B601) No. 1 — (B606) No. 24:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of the harness between the HPCM connector and the brake stroke sensor connector.
4	**CHECK HARNESS (GROUND SHORT CIR-CUIT).** Using a tester, measure the resistance between brake stroke sensor connector and chassis ground. ***Connector & terminal*** ***(B601) No. 2 — Chassis ground:*** ***(B601) No. 4 — Chassis ground:*** ***(B601) No. 1 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair ground short circuit of harness between the HPCM connector and the brake stroke sensor connector.
5	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Disconnect the brake stroke sensor connector. 2) Turn the ignition switch to ON. 3) Using a tester, measure the voltage between brake stroke sensor connector and chassis ground. ***Connector & terminal*** ***(B601) No. 2 (+) — Chassis ground (–):*** ***(B601) No. 4 (+) — Chassis ground (–):*** ***(B601) No. 1 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Replace the brake pedal assembly. <Ref. to BR-71, Brake Pedal.>	Repair the short circuit to power in harness between the HPCM connector and the brake stroke sensor connector.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of brake stroke sensor 1 and 2.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Diagnosis 1	
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 0.2 s
Diagnosis 2	
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 0.2 s
Current BPP sensor 1 angle – Min (BPP sensor 1 angle)	≥ 1 deg or
Current BPP sensor 2 angle – Min (BPP sensor 2 angle)	≥ 1 deg

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Max (BPP sensor 1 angle) – Current BPP sensor 1 angle	< 0.5 deg and
Max (BPP sensor 2 angle) – Current BPP sensor 2 angle	≥ 2 deg or
Max (BPP sensor 1 angle) – Current BPP sensor 1angle	≥ 2 deg and
Max (BPP sensor 2 angle) – Current BPP sensor 2 angle	< 0.5 deg
Diagnosis 2	
BPP sensor 1 voltage + BPP sensor 2 voltage	≤ 3.5 V
NOTE: The sum should be 5 V for typical sensors	or ≥ 6.5 V

Time Needed for Diagnosis: 0.1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear NG when continuous time when the following conditions are met is predetermined time or more (diagnosis 1 and diagnosis 2).

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Max (BPP sensor 1 angle) – Current BPP sensor 1 angle	≥ 0.5 deg
Max (BPP sensor 2 angle) – Current BPP sensor 2 angle	≥ 2 deg
Max (BPP sensor 1 angle) – Current BPP sensor 1angle	≥ 2 deg
Max (BPP sensor 2 angle) – Current BPP sensor 2 angle	≥ 0.5 deg
Diagnosis 2	
BPP sensor 1 voltage + BPP sensor 2 voltage	> 3.5 V
NOTE: The sum should be 5 V for typical sensors	or < 6.5 V

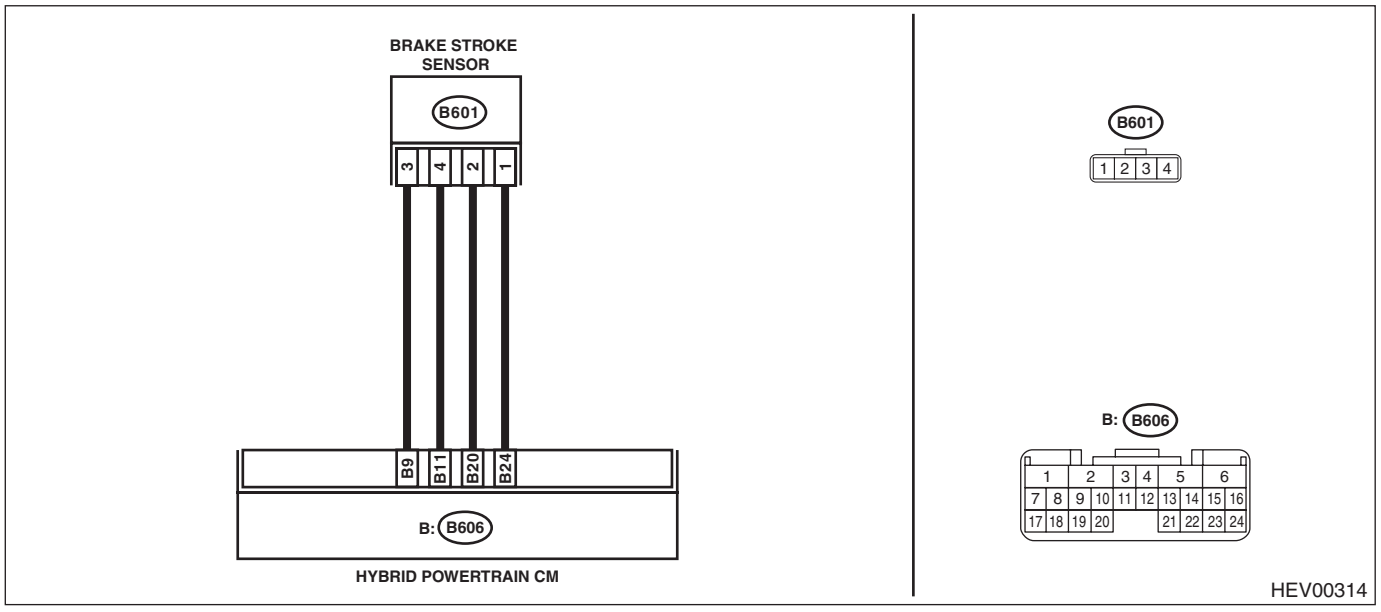
Time Needed for Diagnosis: 0.2 seconds

I: DTC P057C BRAKE PEDAL POSITION SENSOR "A" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-111, OUTLINE OF DIAGNOSIS, DTC P057C BRAKE PEDAL POSITION SENSOR "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



EV traveling/Auto Start Stop does not operate.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P05DD detected? (current malfunction)	Go to step **6**.	Go to step **2**.
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Main Brake Pedal Position Sensor Voltage» «Sub Brake Pedal Position Sensor Voltage». <Ref. to HEV(diag)-39, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Does the value «Main Brake Pedal Position Sensor Voltage» become approx. 1 V, and the value «Sub Brake Pedal Position Sensor Voltage» approx. 4 V when the pedal is not depressed? Also, do the values «Main Brake Pedal Position Sensor Voltage» and «Sub Brake Pedal Position Sensor Voltage» change when the pedal is depressed?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK CURRENT DATA.** 1) Turn the ignition switch to OFF. 2) Disconnect the HPCM connector (B606). 3) Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Power Sensor Voltage 3». <Ref. to HEV(diag)-39, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value approx. 5 V?	Go to step **4**.	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the brake stroke sensor connector. 3) Using a tester, measure the resistance between the brake stroke sensor connector and the HPCM connector. ***Connector & terminal*** ***(B601) No. 2 — (B606) No. 20:*** ***(B601) No. 1 — (B606) No. 24:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of the harness between the HPCM connector and the brake stroke sensor connector.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between brake stroke sensor connector and chassis ground. ***Connector & terminal*** ***(B601) No. 2 — Chassis ground:*** ***(B601) No. 1 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the brake pedal assembly. <Ref. to BR-71, Brake Pedal.>	Repair ground short circuit of harness between the HPCM connector and the brake stroke sensor connector.
6	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the brake stroke sensor connector and the HPCM connector. 3) Using a tester, measure the resistance between the brake stroke sensor connector and the HPCM connector. ***Connector & terminal*** ***(B601) No. 3 — (B606) No. 9:***	Is the resistance less than 1 Ω?	Go to step **7**.	Repair the open circuit of the harness between the HPCM connector and the brake stroke sensor connector.
7	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between brake stroke sensor connector and chassis ground. ***Connector & terminal*** ***(B601) No. 3 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the brake pedal assembly. <Ref. to BR-71, Brake Pedal.>	Repair ground short circuit of harness between the HPCM connector and the brake stroke sensor connector.

1. OUTLINE OF DIAGNOSIS

Detect the open circuit of brake stroke sensor 1 and ground short.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 0.2 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Brake Pedal Position Sensor 1 (Mechanical pedal angle)	≤ 0.25 V (≤ –11.25 deg)

Time Needed for Diagnosis: 0.1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Brake Pedal Position Sensor 1 (Mechanical pedal angle)	> 0.25 V (> –11.25 deg)

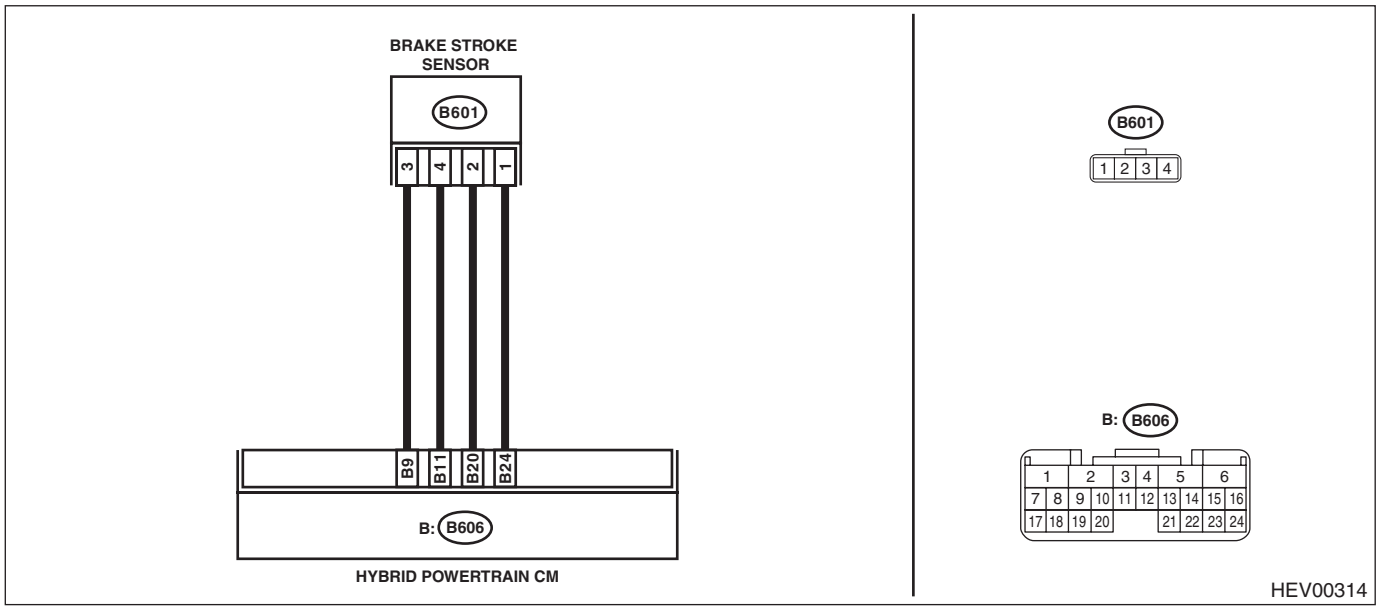
Time Needed for Diagnosis: 0.2 seconds

J: DTC P057D BRAKE PEDAL POSITION SENSOR "A" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-113, OUTLINE OF DIAGNOSIS, DTC P057D BRAKE PEDAL POSITION SENSOR "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



EV traveling/Auto Start Stop does not operate.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Main Brake Pedal Position Sensor Voltage» «Sub Brake Pedal Position Sensor Voltage». <Ref. to HEV(diag)-39, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value of «Main Brake Pedal Position Sensor Voltage» approximately 1 V, and the value of «Sub Brake Pedal Position Sensor Voltage» approximately 4 V when the pedal is not depressed? Also, do values of «Main Brake Pedal Position Sensor Voltage» and «Sub Brake Pedal Position Sensor Voltage» change when the pedal is depressed?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.

Step		Check	Yes	No
2	**CHECK CURRENT DATA.** 1) Turn the ignition switch to OFF. 2) Disconnect the HPCM connector (B606). 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Power Sensor Voltage 3». <Ref. to HEV(diag)-39, HYBRID POWER-TRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value approx. 5 V?	Go to step **3**.	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>
3	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between brake stroke sensor connector and chassis ground. ***Connector & terminal*** ***(B601) No. 2 (+) — Chassis ground (–):*** ***(B601) No. 1 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Replace the brake pedal assembly. <Ref. to BR-71, Brake Pedal.>	Repair the short circuit to power in harness between the HPCM connector and the brake stroke sensor connector.

1. OUTLINE OF DIAGNOSIS

Detect the power supply short of brake stroke sensor 1.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 0.2 s

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Brake Pedal Position Sensor 1 (Mechanical pedal angle)	≥ 3.4 V (≥ 36 deg)

Time Needed for Diagnosis: 0.1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

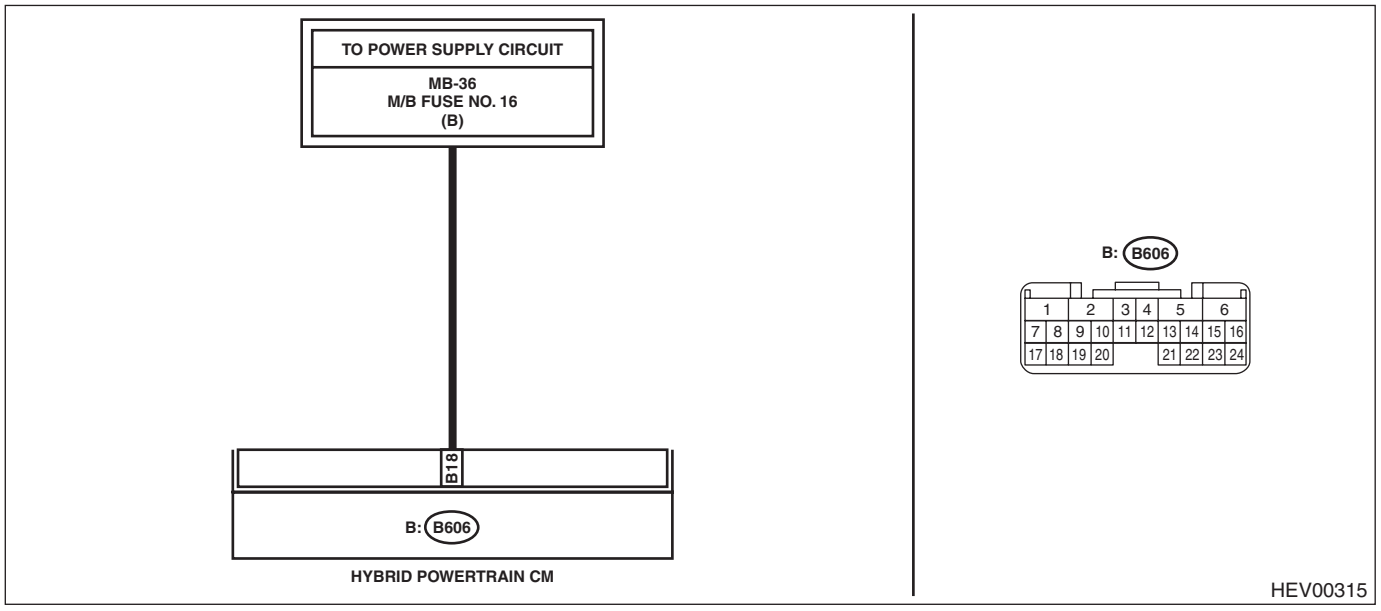
• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Brake Pedal Position Sensor 1 (Mechanical pedal angle)	< 3.4 V (< 36 deg)

Time Needed for Diagnosis: 0.2 seconds



K: DTC P058D BATTERY MONITOR MODULE VOLTAGE MONITORING PERFORMANCE

DIAGNOSIS:
- Detects open circuit and short circuit to ground of 12 volt auxiliary battery sensor.
- Judge as NG when the detection result is out of specification.
- Immediately at fault recognition

TROUBLE SYMPTOM:
- Normal control
- System operation check mode is prohibited. <Ref. to HEV(diag)-85, Fail-Safe Chart.>

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:
Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK FUSE.** Check the fuse. <Ref. to HEV-12, Relay and Fuse.>	Is it normal?	Go to step **2**.	Replace the fuse. When the replaced fuse is blown immediately, repair ground short circuit of harness between HPCM connector and the battery.

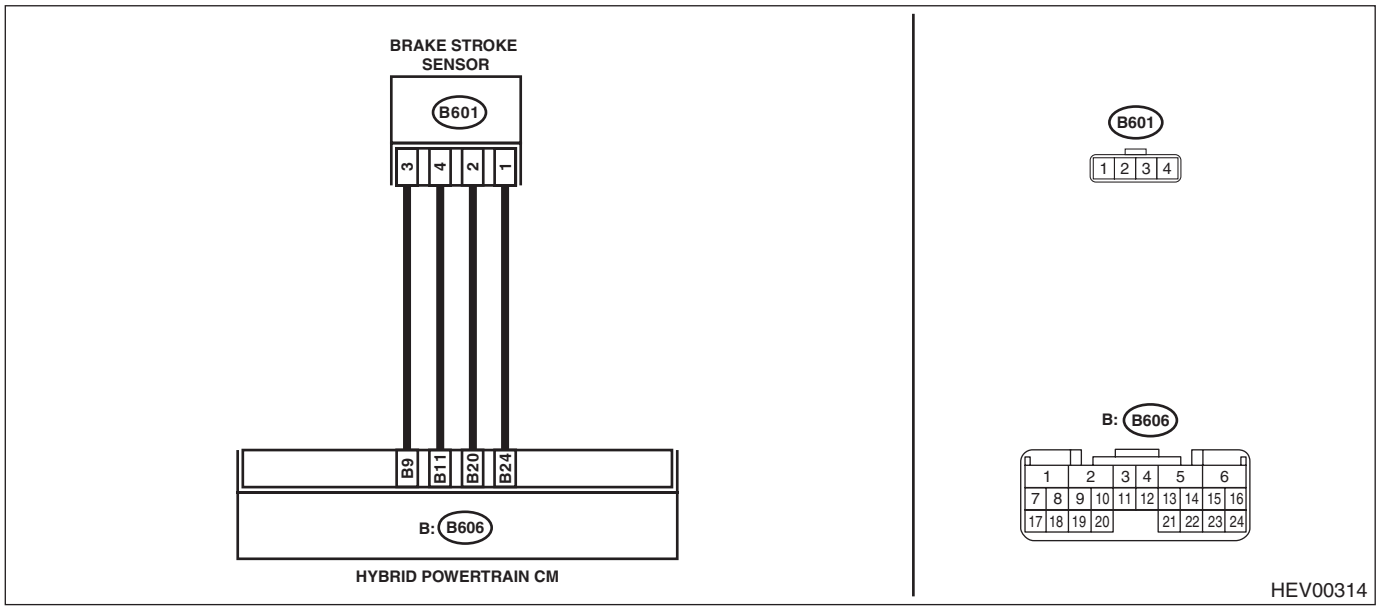
	Step	Check	Yes	No
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «12V Auxiliary Battery Voltage». <Ref. to HEV(diag)-39, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 6 V or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **3**.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the HPCM connector. 3) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 4) Disconnect the positive cable from the 12 volt auxiliary battery. 5) Using a tester, measure the resistance between the positive terminal of the 12 volt auxiliary battery and HPCM connector. ***Connector & terminal*** ***M/B fuse No. 16 — (B606) No. 18:***	Is the resistance 1 Ω or less?	Go to step **4**.	Repair the open circuit of the harness between the HPCM connector and the positive terminal of the 12 volt auxiliary battery.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the positive terminal of the 12 volt auxiliary battery and chassis ground. ***Connector & terminal*** ***M/B fuse No. 16 — chassis ground:***	Is the resistance 1 MΩ or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Repair short circuit to ground in harness between the HPCM connector and the positive terminal of the 12 volt auxiliary battery.

L: DTC P05DD BRAKE PEDAL POSITION SENSOR "B" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-118, OUTLINE OF DIAGNOSIS, DTC P05DD BRAKE PEDAL POSITION SENSOR "B" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



EV traveling/Auto Start Stop does not operate.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P057C detected? (current malfunction)	Go to step **6**.	Go to step **2**.
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Main Brake Pedal Position Sensor Voltage» «Sub Brake Pedal Position Sensor Voltage». <Ref. to HEV(diag)-39, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value of «Main Brake Pedal Position Sensor Voltage» approximately 1 V, and the value of «Sub Brake Pedal Position Sensor Voltage» approximately 4 V when the pedal is not depressed? Also, do values of «Main Brake Pedal Position Sensor Voltage» and «Sub Brake Pedal Position Sensor Voltage» change when the pedal is depressed?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK CURRENT DATA.** 1) Turn the ignition switch to OFF. 2) Disconnect the HPCM connector (B606). 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Power Sensor Voltage 3». <Ref. to HEV(diag)-39, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value approx. 5 V?	Go to step **4**.	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the brake stroke sensor connector. 3) Using a tester, measure the resistance between the brake stroke sensor connector and the HPCM connector. ***Connector & terminal*** ***(B601) No. 4 — (B606) No. 11:*** ***(B601) No. 1 — (B606) No. 24:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of the harness between the HPCM connector and the brake stroke sensor connector.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between brake stroke sensor connector and chassis ground. ***Connector & terminal*** ***(B601) No. 4 — Chassis ground:*** ***(B601) No. 1 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the brake pedal assembly. <Ref. to BR-71, Brake Pedal.>	Repair ground short circuit of harness between the HPCM connector and the brake stroke sensor connector.
6	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the brake stroke sensor connector. 3) Using a tester, measure the resistance between the brake stroke sensor connector and the HPCM connector. ***Connector & terminal*** ***(B601) No. 3 — (B606) No. 9:***	Is the resistance less than 1 Ω?	Go to step **7**.	Repair the open circuit of the harness between the HPCM connector and the brake stroke sensor connector.
7	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between brake stroke sensor connector and chassis ground. ***Connector & terminal*** ***(B601) No. 3 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the brake pedal assembly. <Ref. to BR-71, Brake Pedal.>	Repair ground short circuit of harness between the HPCM connector and the brake stroke sensor connector.

1. OUTLINE OF DIAGNOSIS

Detect the open circuit of brake stroke sensor 2 and ground short.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 0.2 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Brake Pedal Position Sensor 2 (Mechanical pedal angle)	≤ 1.5 V (≥ 37.5 deg)

Time Needed for Diagnosis: 0.1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Brake Pedal Position Sensor 1 (Mechanical pedal angle)	> 1.5 V (< 37.5 deg)

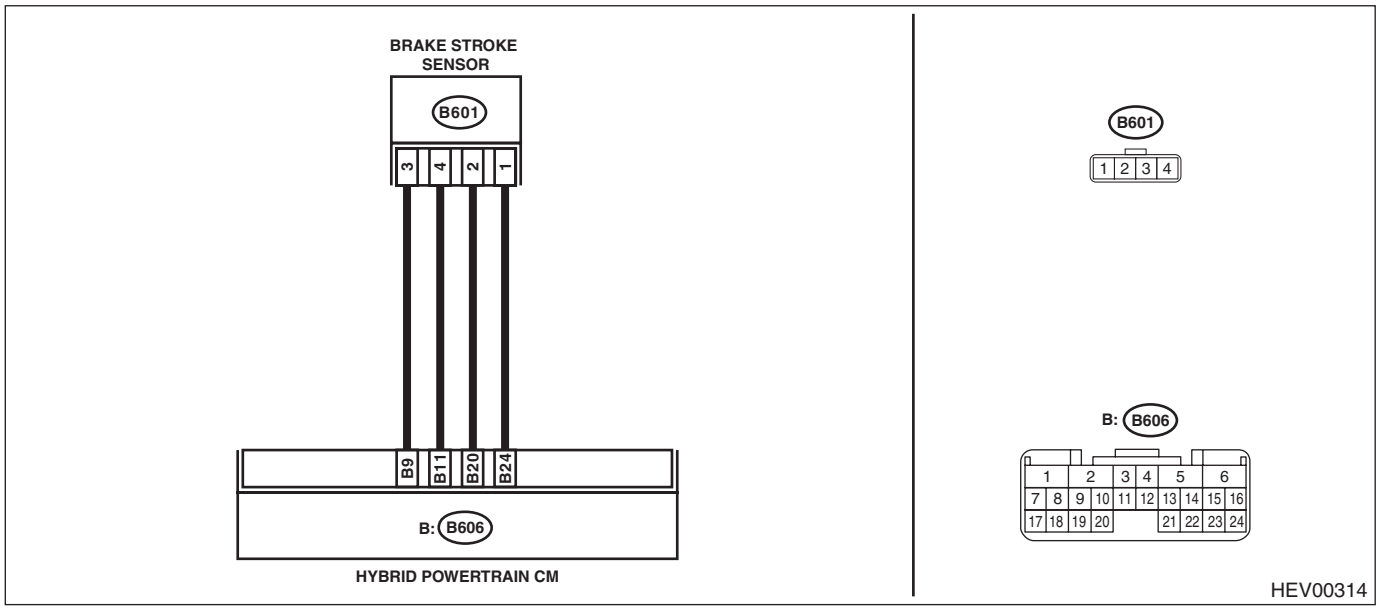
Time Needed for Diagnosis: 0.2 seconds

M: DTC P05DE BRAKE PEDAL POSITION SENSOR "B" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-120, OUTLINE OF DIAGNOSIS, DTC P05DE BRAKE PEDAL POSITION SENSOR "B" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



EV traveling/Auto Start Stop does not operate.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Main Brake Pedal Position Sensor Voltage» «Sub Brake Pedal Position Sensor Voltage». <Ref. to HEV(diag)-39, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value of «Main Brake Pedal Position Sensor Voltage» approximately 1 V, and the value of «Sub Brake Pedal Position Sensor Voltage» approximately 4 V when the pedal is not depressed? Also, do values of «Main Brake Pedal Position Sensor Voltage» and «Sub Brake Pedal Position Sensor Voltage» change when the pedal is depressed?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK CURRENT DATA.** 1) Turn the ignition switch to OFF. 2) Disconnect the HPCM connector (B606). 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Power Sensor Voltage 3». <Ref. to HEV(diag)-39, HYBRID POWER-TRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value approx. 5 V?	Go to step **3**.	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>
3	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between brake stroke sensor connector and chassis ground. ***Connector & terminal*** ***(B601) No. 4 — Chassis ground:*** ***(B601) No. 1 — Chassis ground:***	Is the voltage less than 1 V?	Replace the brake pedal assembly. <Ref. to BR-71, Brake Pedal.>	Repair the short circuit to power in harness between the HPCM connector and the brake stroke sensor connector.

1. OUTLINE OF DIAGNOSIS

Detect the power supply short of brake stroke sensor 2.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 0.2 s

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Brake Pedal Position Sensor 2 (Mechanical pedal angle)	≥ 4.7 V (≤ –10.5 deg)

Time Needed for Diagnosis: 0.1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Brake Pedal Position Sensor 1 (Mechanical pedal angle)	< 4.7 V (> –10.5 deg)

Time Needed for Diagnosis: 0.2 seconds

N: DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR

1. HYBRID POWERTRAIN CONTROL SYSTEM

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-121, OUTLINE OF DIAGNOSIS, DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

Step		Check	Yes	No
1	**CHECK HPCM.** 1) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 2) Turn the ignition switch to OFF → ON. 3) Read the DTC again. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P0604 detected? (current malfunction)	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

2. OUTLINE OF DIAGNOSIS

Detect the malfunction of microcomputer RAM.
Judge as NG when the detection result is out of specification.

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank

4. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
The written data in the whole area of RAM	≠ The read data

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
The written data in the whole area of RAM	The read data

Time Needed for Diagnosis: Immediately

5. DRIVE MOTOR CONTROL SYSTEM

DIAGNOSIS:
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-123, OUTLINE OF DIAGNOSIS, DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DMCM.** 1) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 2) Read the DTC again. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P0604 detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

6. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor control module.
Judge as NG when the malfunction is detected at the peripheral function of drive motor control module microcomputer.

7. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	OFF to ON (ON = Run or crank) (OFF ≠ Run or crank)

8. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Written data in RAM	≠ The read data

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Written data in RAM	Read data

Time Needed for Diagnosis: Immediately

9. BATTERY ENERGY CONTROL SYSTEM

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-124, OUTLINE OF DIAGNOSIS, DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

Step		Check	Yes	No
1	**CHECK BECM.** 1) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 2) Turn the ignition switch to OFF → ON. 3) Read the DTC again. <Ref. to HEV(diag)-23, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is the same DTC detected? (current malfunction)	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

10.OUTLINE OF DIAGNOSIS

Detect the malfunction of microcomputer RAM.

11.EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V
BECM precharge contactor command	Open
BECM positive contactor command	Open
BECM negative contactor command	Open

12.DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Inconsistency between the write and read to RAM within the BECM Main CPU	Detected

Time Needed for Diagnosis: Less than 0.01 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Inconsistency between the write and read to RAM within the BECM Main CPU	Not Detected

Time Needed for Diagnosis: Less than 0.01 second

O: DTC P0605 INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR

1. HYBRID POWERTRAIN CONTROL SYSTEM

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-125, OUTLINE OF DIAGNOSIS, DTC P0605 INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

Step		Check	Yes	No
1	**CHECK HPCM.** 1) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 2) Turn the ignition switch to OFF → ON. 3) Read the DTC again. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P0605 detected? (current malfunction)	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

2. OUTLINE OF DIAGNOSIS

Detect the malfunction of microcomputer ROM.
Judge as NG when the detection result is out of specification.

3. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank

4. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Checksum (ROM)	Error

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Checksum (ROM)	≠ Error

Time Needed for Diagnosis: Immediately

5. DRIVE MOTOR CONTROL SYSTEM

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-126, OUTLINE OF DIAGNOSIS, DTC P0605 INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DMCM.** 1) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 2) Read the DTC again. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P0605 detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

6. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor control module.
Judge as NG when the malfunction is detected at the peripheral function of drive motor control module microcomputer.

7. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	OFF to ON (ON = Run or crank)

8. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Checksum (ROM)	Error

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Checksum (ROM)	≠ Error

Time Needed for Diagnosis: Less than 1 second

9. BATTERY ENERGY CONTROL SYSTEM

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-128, OUTLINE OF DIAGNOSIS, DTC P0605 INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

Step		Check	Yes	No
1	**CHECK BECM.** 1) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Wait for 30 seconds. 4) Turn the ignition switch to ON. 5) Read the DTC again. <Ref. to HEV(diag)-23, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is the same DTC detected? (current malfunction)	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

10.OUTLINE OF DIAGNOSIS

Detect the malfunction of microcomputer FlashROM.

11.EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V
BECM precharge contactor command	Closed
BECM positive contactor command	Closed
BECM negative contactor command	Closed

12.DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Checksum error of Flash EEPROM within the BECM Main CPU (Program area)	Detected

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Checksum error of Flash EEPROM within the BECM Main CPU (Program area)	Not Detected

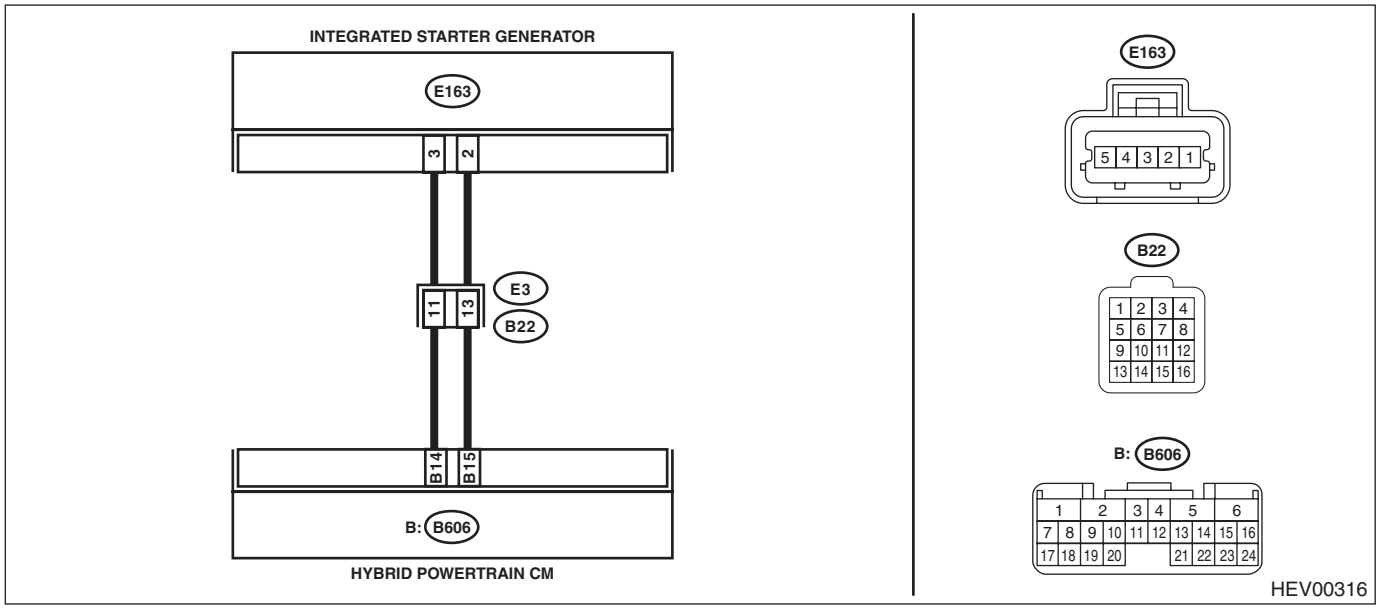
Time Needed for Diagnosis: Less than 2 seconds

P: DTC P0620 GENERATOR/ALTERNATOR CONTROL CIRCUIT

DIAGNOSIS:

- Detects open circuit, short circuit to ground, and short circuit to power in ISG INHCRK line.
- Immediately at fault recognition

TROUBLE SYMPTOM:



EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the HPCM connector. 2) Disconnect the integrated starter generator connector. 3) Disconnect the 12V engine restart battery sensor connector. 4) Using a tester, measure the resistance between the HPCM connector and integrated starter generator connector. ***Connector & terminal*** ***(B606) No. 14 — (E163) No. 3:*** ***(B606) No. 15 — (E163) No. 2:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of the harness between the HPCM connector and integrated starter generator connector, or repair the intermediate connector.
2	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between HPCM connector and chassis ground. ***Connector & terminal*** ***(B606) No. 14 — Chassis ground:*** ***(B606) No. 15 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit to ground in the harness between the HPCM connector and integrated starter generator connector, or repair the intermediate connector.

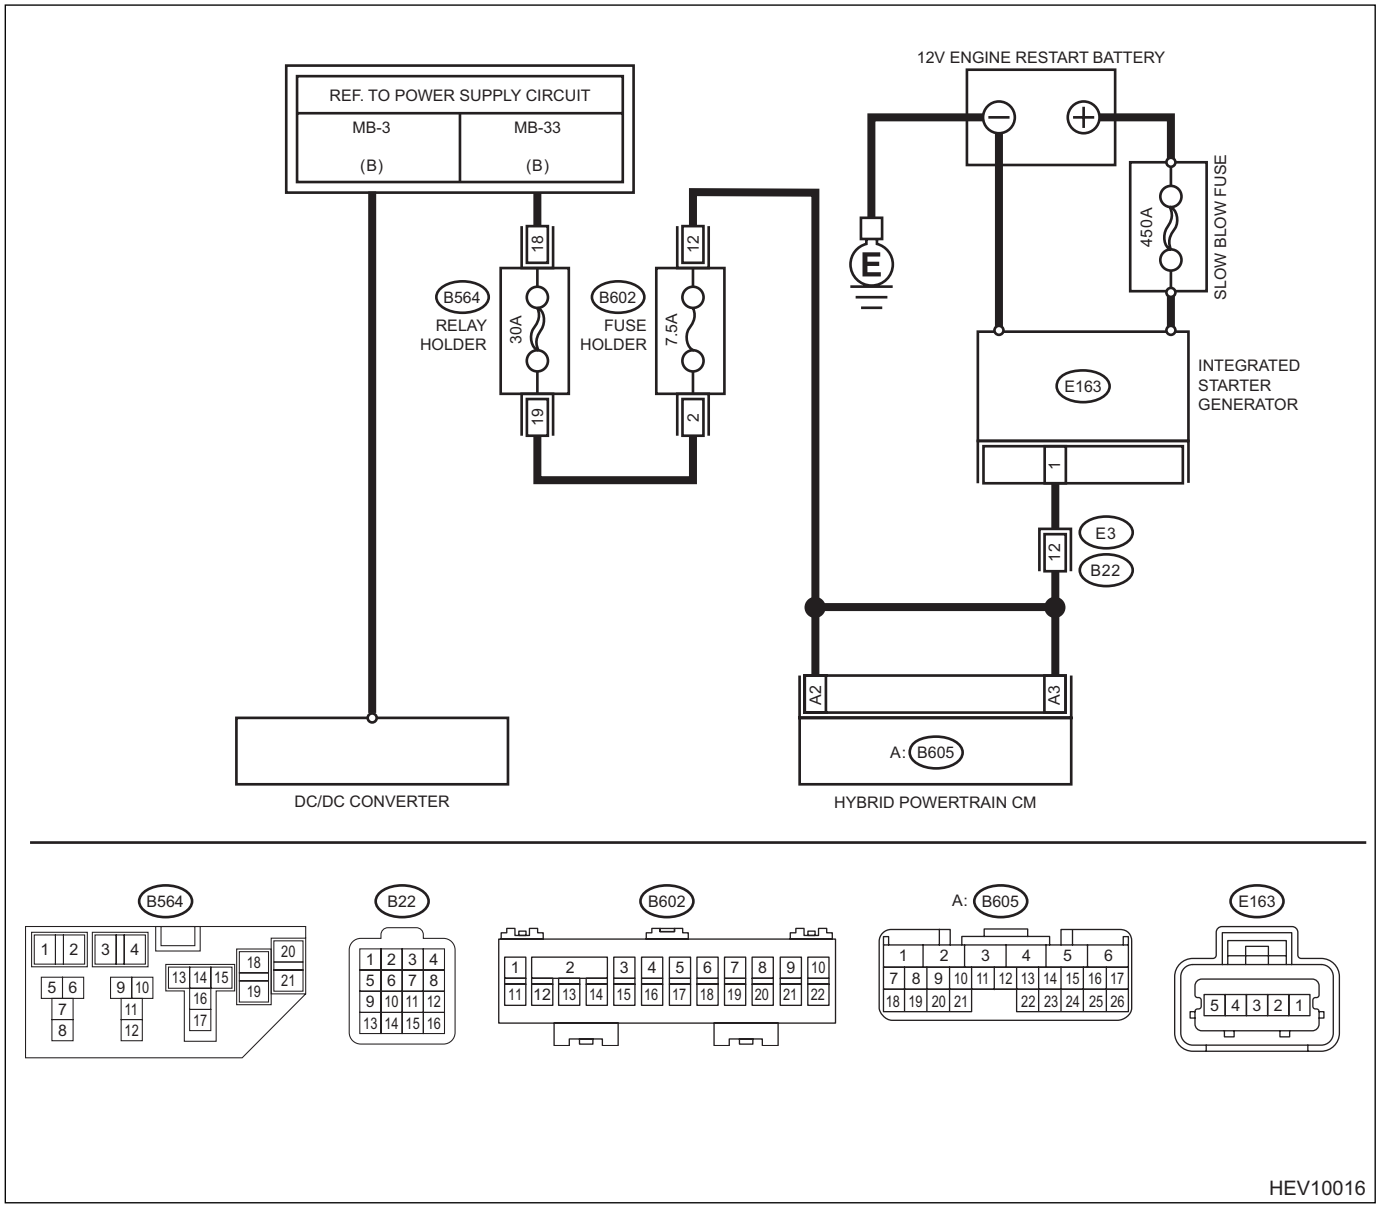
Step		Check	Yes	No
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between the HPCM connector and chassis ground. ***Connector & terminal*** ***(B606) No. 14 (+) — Chassis ground (–):*** ***(B606) No. 15 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Replace the integrated starter generator. <Ref. to SC(H4DO(HEV))-33, Integrated Starter Generator (ISG).>	Repair the short circuit to power in the harness between the HPCM connector and integrated starter generator connector, or repair the intermediate connector.

Q: DTC P065A GENERATOR/ALTERNATOR SYSTEM PERFORMANCE

DIAGNOSIS:

- Detects abnormal conditions in battery charging functions.
- Immediately at fault recognition

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Charge warning light illuminates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>
Power supply circuit <Ref. to WI(HEV)-21, WIRING DIAGRAM, Power Supply Circuit.>

	Step	Check	Yes	No
1	**CHECK FUSE.** Check the slow blow fuse of the 12 volt auxiliary battery.	Is it normal?	Go to step **2**.	Replace the fuse. When the replaced fuse blows out easily, repair short circuit to ground in harness between DC/DC converter and the battery.
2	**CHECK DC/DC CONVERTER FASTENING AREA.** 1) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 2) Disconnect the positive cable from the 12 volt auxiliary battery. 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Check the fastening areas of the DC/DC converter 12 volt cable.	Is the condition normal? (Check for loose bolts, insecure connection, foreign matter caught, trace of arc (burnt terminals) etc.)	Go to step **3**.	Retighten the bolts.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the 12 volt cable of the DC/DC converter. 2) Using a tester, measure the resistance between the positive terminal of the 12 volt auxiliary battery and the fastening area of the DC/DC converter power cable. ***Connector & terminal*** ***12 volt auxiliary battery — DC/DC converter:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of the power cable between the DC/DC converter and the positive terminal of the 12 volt auxiliary battery.
4	**CHECK BATTERY.** Check the 12 volt auxiliary battery. <Ref. to SC(H4DO(HEV))-40, Battery.> NOTE: Check for conditions such as loose terminals.	Is it normal?	Go to step **5**.	Charge or replace the battery.
5	**CHECK DCDC.** Using the Subaru Select Monitor, perform «DCDC Converter Output Voltage Control» of System Operation Check Mode for the hybrid powertrain control system. <Ref. to HEV(diag)-69, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, System Operation Check Mode.>	Is it normal?	Go to step **6**.	Perform the diagnosis of DTC P0A94. <Ref. to HEV(diag)-253, DTC P0A94 DC/DC CONVERTER PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
6	**CHECK FUSE.** Check the fuse. <Ref. to HEV-12, Relay and Fuse.>	Is it normal?	Go to step **7**.	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.
7	**CHECK BELTS.** Check the belt. <Ref. to ME(H4DO(w/o HEV))-124, V-belt.>	Is it normal?	Go to step **8**.	Adjust or replace the belt.

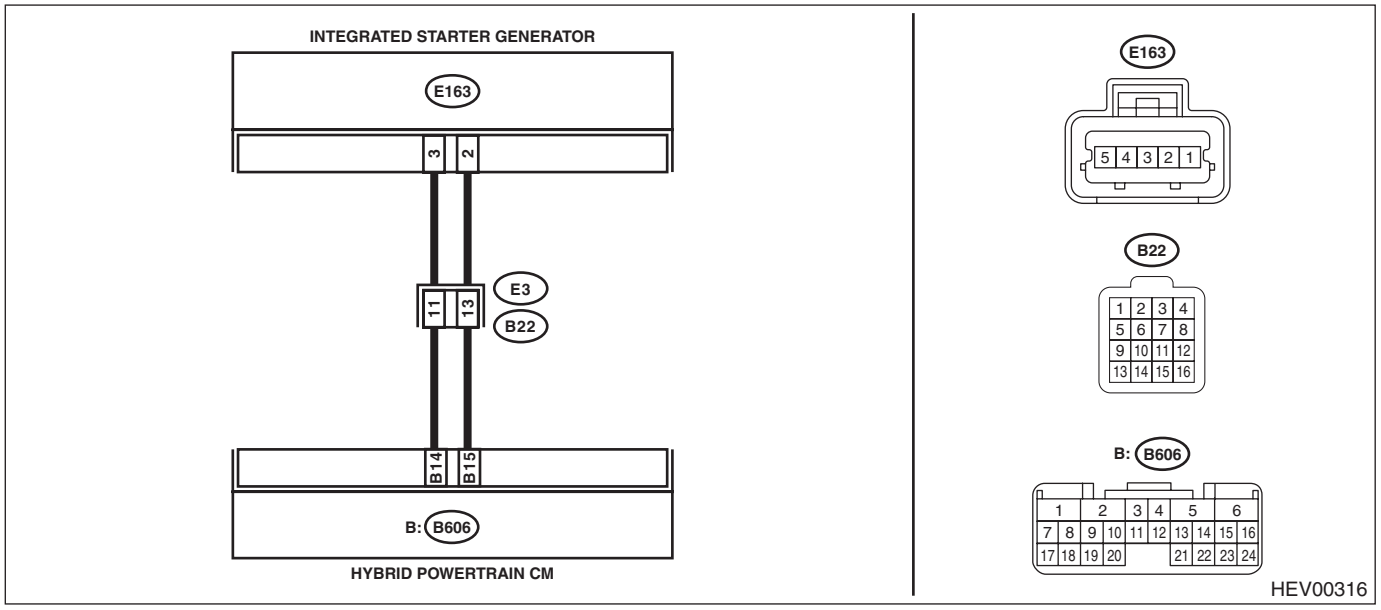
	Step	Check	Yes	No
8	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «ISG Control Mode Actual» «12V Engine Restart Battery Voltage» «ISG Terminal Voltage». <Ref. to HEV(diag)-39, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is «12V Engine Restart Battery Voltage» «ISG Terminal Voltage» 12 — 15 V when the engine speed is at 2000 rpm or more and «ISG Control Mode Actual» is generating power?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **9**.
9	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «HPCM Check 40». <Ref. to HEV(diag)-39, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 30 m Ω or more?	Check for poor contact of 12 volt engine restart battery terminals. <Ref. to NT-6, BATTERY, NOTE, Note.>	Go to step **10**.
10	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the HPCM connector. 3) Disconnect the integrated starter generator connector. 4) Using a tester, measure the resistance between the HPCM connector and integrated starter generator connector. ***Connector & terminal*** ***(B605) No. 2 — (E163) No. 1:*** ***(B605) No. 3 — (E163) No. 1:***	Is the resistance less than 1 Ω?	Go to step **11**.	Repair the open circuit of the harness between the HPCM connector and the integrated starter generator terminal.
11	**CHECK BATTERY.** Check the 12 volt engine restart battery. <Ref. to SC(H4DO(HEV))-40, Battery.>	Is it normal?	Replace the integrated starter generator. <Ref. to SC(H4DO(HEV))-33, Integrated Starter Generator (ISG).>	Charge or replace the 12 volt engine restart battery.

R: DTC P06EF ENGINE RESTART PERFORMANCE

DIAGNOSIS:

- Detects communication error, open harness, engine restart system error due to trouble in starting devices.
- Immediately at fault recognition

TROUBLE SYMPTOM:



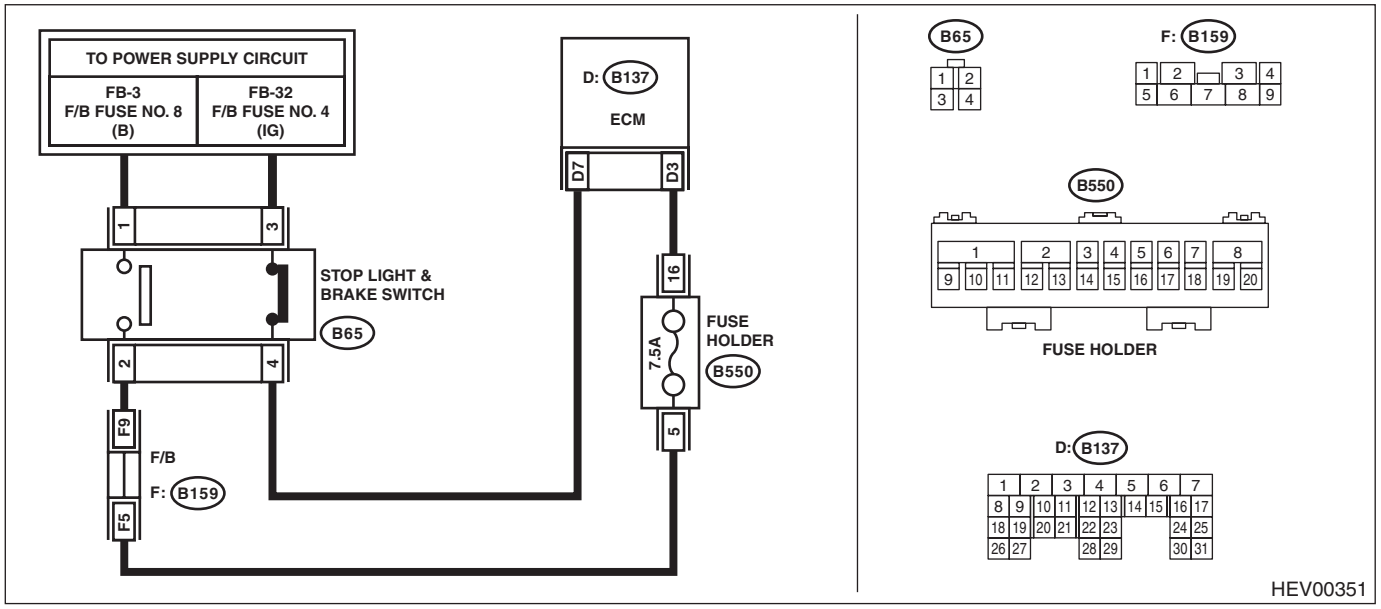
EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-72, HYBRID POWERTRAIN CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK INTEGRATED STARTER GENERATOR (SHORT TO GROUND).** 1) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 2) Check the installation condition of integrated starter generator. <Ref. to SC(H4DO(HEV))-33, Integrated Starter Generator (ISG).>	Is it normal?	Go to step **3**.	Attach the integrated starter generator securely.

	Step	Check	Yes	No
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the HPCM connector. 2) Disconnect the integrated starter generator connector. 3) Disconnect the 12V engine restart battery sensor connector. 4) Using a tester, measure the resistance between the HPCM connector and integrated starter generator connector. ***Connector & terminal*** ***(B606) No. 15 — (E162) No. 2:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of the harness between the HPCM connector and the integrated starter generator connector.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between HPCM connector and chassis ground. ***Connector & terminal*** ***(B606) No. 15 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair ground short circuit of harness between the HPCM connector and the integrated starter generator connector.
5	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Connect the disconnected battery. 2) Turn the ignition switch to ON. 3) Using a tester, measure the voltage between the HPCM connector and chassis ground. ***Connector & terminal*** ***(B606) No. 15 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **6**.	Repair the short circuit to power in harness between the HPCM connector and the integrated starter generator connector.
6	**INSPECTION OF INTEGRATED STARTER GENERATOR UNIT.** Check the integrated starter generator as a single part. <Ref. to SC(H4DO(HEV))-33, Integrated Starter Generator (ISG).>	Is it normal?	Go to step **7**.	Replace the integrated starter generator.
7	**CHECK BATTERY.** Check the 12 volt engine restart battery. <Ref. to SC(H4DO(HEV))-40, Battery.>	Is it normal?	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Charge or replace the battery.

S: DTC P0719 BRAKE SWITCH "B" CIRCUIT LOW

DIAGNOSIS:
GENERAL DESCRIPTION <Ref. to HEV(diag)-137, OUTLINE OF DIAGNOSIS, DTC P0719 BRAKE SWITCH "B" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>
WIRING DIAGRAM:
Stop light system <Ref. to WI(HEV)-191, WIRING DIAGRAM, Stop Light System.>

Step		Check	Yes	No
1	**CHECK STOP LIGHT & BRAKE SWITCH.** Check the stop light & brake switch. <Ref. to CC-10, Stop Light & Brake Switch.>	Is the stop light & brake switch and installation position OK?	Go to step **2**.	Replace the stop light & brake switch. Or adjust the installation position.
2	**CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the stop lamp & brake switch connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between the stop lamp & brake switch connector and chassis ground. ***Connector & terminal*** ***(B65) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	• Check fuse No. 8 (in fuse & relay box). • Check for open or short in the harness between stop light & brake switch and fuse & relay box.
3	**CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector. 3) Measure the resistance between the ECM connector and stop light & brake switch connector. ***Connector & terminal*** ***(B137) No. 3 — (B65) No. 2:***	Is the resistance less than 10 Ω?	Replace the ECM. <Ref. to FU(H4DO(HEV))-86, Engine Control Module (ECM).>	Repair the open circuit of harness between ECM connector and stop light & brake switch connector.

1. OUTLINE OF DIAGNOSIS

Detect brake pedal SW-B ON/OFF stuck.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 0.2 s
Brake switch B signal from ECM	OFF
(Brake pedal)	(Pressed)
(Current BPP sensor 1 angle) – (BPP sensor 1 angle that was stored when the brake switch A status has been changed from ON to OFF)	≥ +0.69 deg
(Brake pedal)	(Pressed)
(Current BPP sensor 1 angle) – (Minimum BPP sensor 1 value that has experienced from ignition switch: ON)	≥ +3.5 deg
(Brake pedal)	(Pressed)

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Brake switch B signal from ECM	OFF
(Brake pedal)	Not pressed
NOTE: For a normal system, when applying the brakes switch A will go from ON to OFF immediately, and from switch A OFF, switch B will go OFF to ON after 0.69 degrees of travel in the direction of increasing the value of the brake pedal angle.	
NOTE: For a normal system, switch B will go OFF to ON within 3.5 degrees of travel in the direction of increasing the value of the brake pedal angle from initial brake pedal position.	

Time Needed for Diagnosis: 1 s x 5 times
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as OK. Do not clear NG during hybrid system activated.

Judgment Value

Malfunction Criteria	Threshold Value
Brake switch B signal from ECM	ON
(Brake pedal)	Pressed
NOTE: For a normal system, when applying the brakes switch A will go from ON to OFF immediately, and from switch A OFF, switch B will go OFF to ON after 0.69 degrees of travel in the direction of increasing the value of the brake pedal angle.	
NOTE: For a normal system, switch B will go OFF to ON within 3.5 degrees of travel in the direction of increasing the value of the brake pedal angle from initial brake pedal position.	

Time Needed for Diagnosis: 1 second

T: DTC P0724 BRAKE SWITCH "B" CIRCUIT HIGH

DIAGNOSIS:
GENERAL DESCRIPTION <Ref. to HEV(diag)-138, OUTLINE OF DIAGNOSIS, DTC P0724 BRAKE SWITCH "B" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

NOTE:
For the diagnostic procedure, refer to DTC P0719. <Ref. to HEV(diag)-136, DTC P0719 BRAKE SWITCH "B" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect brake pedal SW-B ON/OFF stuck.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 0.2 s
Brake switch B signal from ECM	ON
(Brake pedal)	(Not pressed)
(Current BPP sensor 1 angle) – (BPP sensor 1 angle that was stored when the brake switch A status has been changed from OFF to ON)	≤ –0.69 deg
(Brake pedal)	(Not pressed)

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Brake switch B signal from ECM	ON
(Brake pedal)	Pressed
NOTE: For a normal system, when applying the brakes switch A will go from OFF to ON immediately, and from switch A ON, switch B will go ON to OFF after 0.69 degrees of travel in the direction of decreasing the value of the brake pedal angle.	

Time Needed for Diagnosis: 1 s x 5 times
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as OK.
Do not clear NG during hybrid system activated.

Judgment Value

Malfunction Criteria	Threshold Value
Brake switch B signal from ECM	OFF
(Brake pedal)	Pressed
NOTE: For a normal system, when applying the brakes switch A will go from OFF to ON immediately, and from switch A ON, switch B will go ON to OFF after 0.69 degrees of travel in the direction of decreasing the value of the brake pedal angle.	

Time Needed for Diagnosis: 1 second

U: DTC P0A1D HYBRID/EV POWERTRAIN CONTROL MODULE "A"

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-140, OUTLINE OF DIAGNOSIS, DTC P0A1D HYBRID/EV POWERTRAIN CONTROL MODULE "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

Step		Check	Yes	No
1	**CHECK HPCM.** 1) Turn the ignition switch to OFF. 2) Wait for 30 seconds. 3) Turn the ignition switch to ON. 4) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 5) Read the DTC again. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P0A1D detected? (current malfunction)	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of hybrid powertrain control module.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Internal Hardware module error Exception interrupt by the HPCM CPU	Detected or Detected

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Internal Hardware module error Exception interrupt by the HPCM CPU	≠ Detected and ≠ Detected

Time Needed for Diagnosis: Immediately

V: DTC P1C00 BATTERY MONITOR MODULE "A" PERFORMANCE

DIAGNOSIS:
- Detects functional errors of the 12 volt engine restart battery sensor.
- Immediately at fault recognition

TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.
- System operation check mode is prohibited. <Ref. to HEV(diag)-85, Fail-Safe Chart.>
- Charge warning light illuminates.

CAUTION:
Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

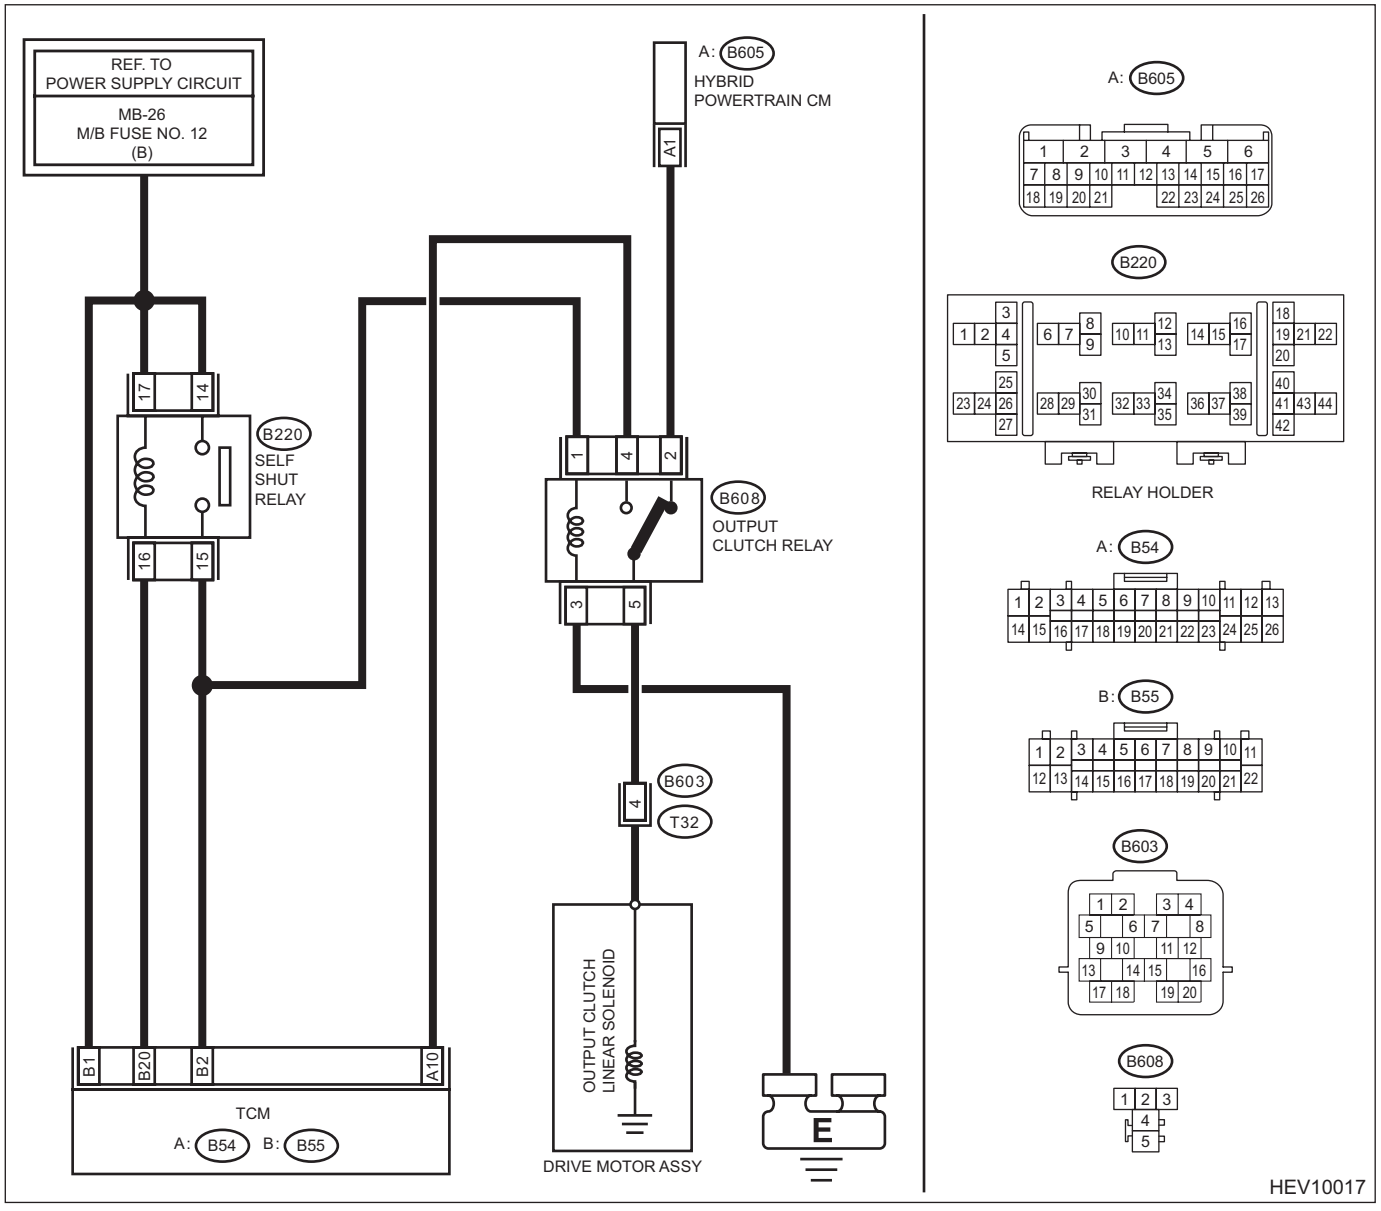
Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P1C00 detected? (current malfunction)	Replace the 12V engine restart battery sensor. <Ref. to SC(H4DO(HEV))-61, Battery Sensor.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

W: DTC P1C04 OUTPUT CLUTCH LINEAR SOLENOID HPCM CONTROL CIRCUIT LOW

DIAGNOSIS:

- Detects short circuit to ground of output clutch linear solenoid HPCM side circuit (LOW).
- Judge as NG when the detection result is out of specification.
- Immediately at fault recognition

TROUBLE SYMPTOM:



Normal control

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

CVT control system <Ref. to WI(HEV)-82, WIRING DIAGRAM, CVT Control System.>

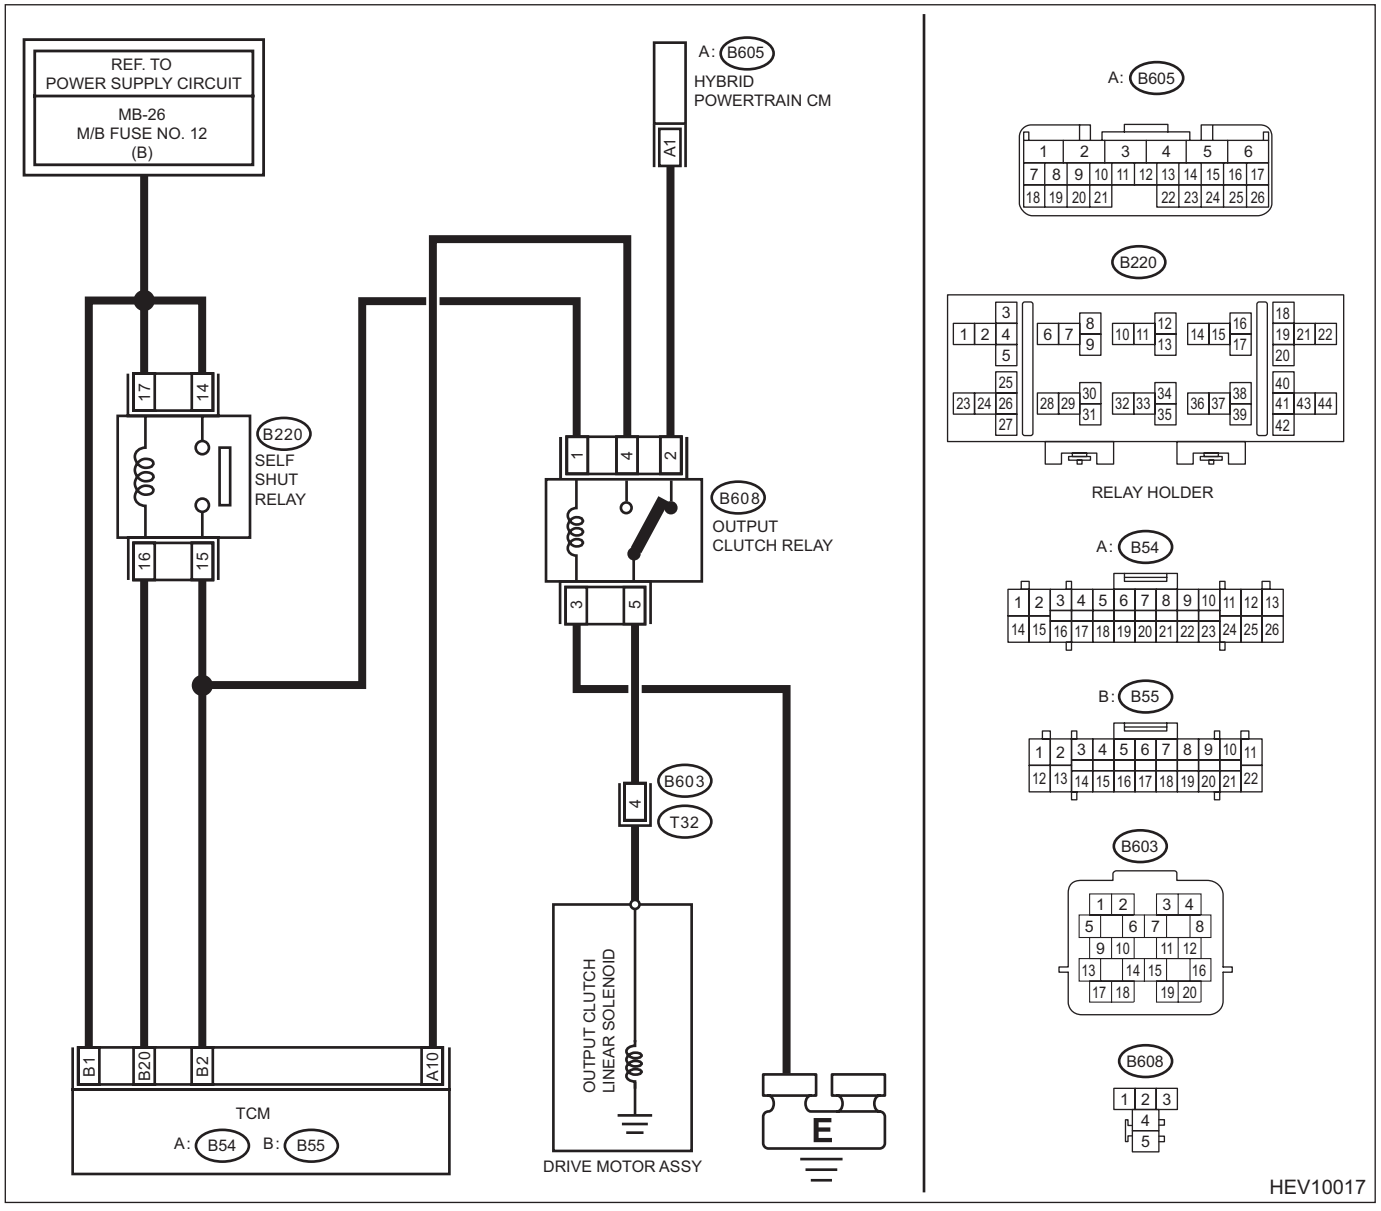
	Step	Check	Yes	No
1	**CHECK DTC.** Read DTCs of the following system. • Transmission <Ref. to CVT(HEV)(diag)-19, Read Diagnostic Trouble Code (DTC).>	Is either DTC P2719, P2720, or P2721 detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to CVT(HEV)(diag)-35, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the HPCM connector. 2) Remove the output clutch relay. 3) Using a tester, measure the resistance between the HPCM connector and output clutch relay connector. ***Connector & terminal*** ***(B605) No. 1 — (B608) No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of the harness between the HPCM connector and the output clutch relay connector.
3	**CHECK RELAY.** Check the output clutch relay. <Ref. to CVT(TH58A)-160, Relay and Fuse.>	Is the output clutch relay OK?	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Replace the output clutch relay.

X: DTC P1C05 OUTPUT CLUTCH LINEAR SOLENOID HPCM CONTROL CIRCUIT HIGH

DIAGNOSIS:

- Detects open circuit and short circuit to power in output clutch linear solenoid HPCM side circuit (LOW).
- Judge as NG when the detection result is out of specification.
- Immediately at fault recognition

TROUBLE SYMPTOM:



Normal control

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

CVT control system <Ref. to WI(HEV)-82, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read DTCs of the following system. • Transmission <Ref. to CVT(HEV)(diag)-19, Read Diagnostic Trouble Code (DTC).>	Is either DTC P2719, P2720, or P2721 detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to CVT(HEV)(diag)-35, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK HARNESS (GROUND SHORT CIRCUIT).** 1) Disconnect the HPCM connector. 2) Remove the output clutch relay. 3) Using a tester, measure the resistance between the output clutch connector and chassis ground. ***Connector & terminal*** ***(B608) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit to ground in harness between output clutch relay connector and chassis ground.
3	**CHECK RELAY.** Check the output clutch relay. <Ref. to CVT(TH58A)-160, Relay and Fuse.>	Is the output clutch relay OK?	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Replace the output clutch relay.

Y: DTC P1C06 12V BATTERY RELAY CLOSE CIRCUIT PERFORMANCE

DIAGNOSIS:

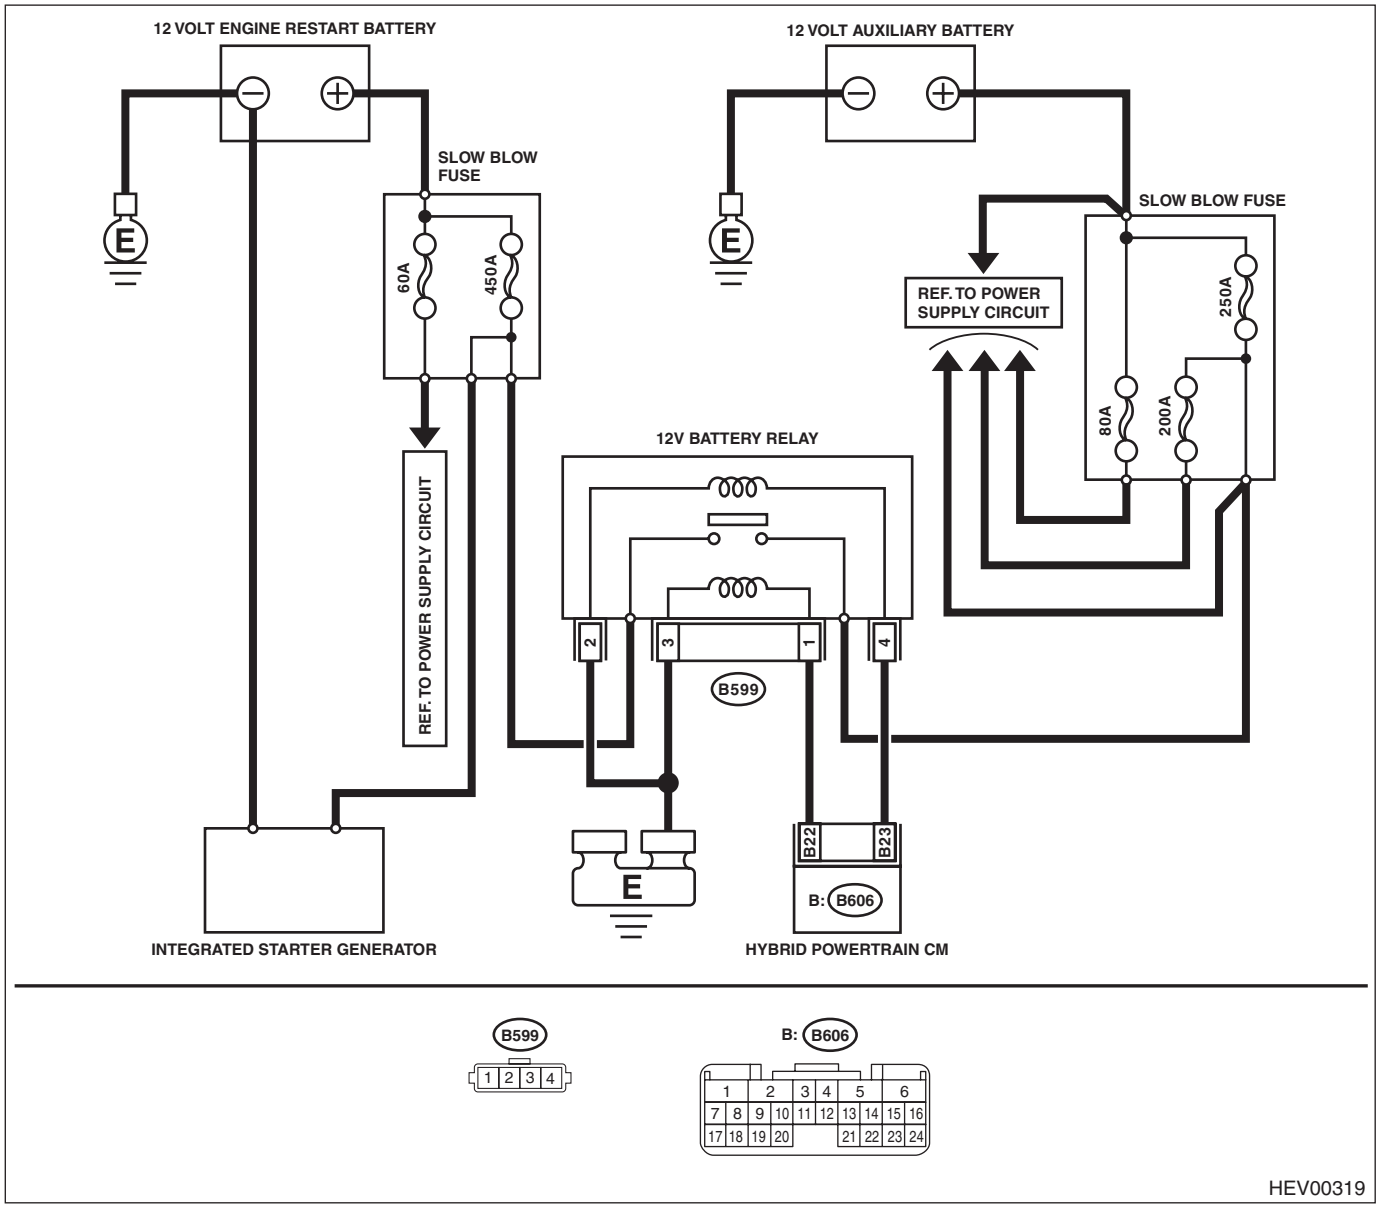
- Detects open circuit, short circuit to ground, and short circuit to power in the harness of 12V battery relay close circuit.
- Judge as NG when the detection result is out of specification.
- Immediately at fault recognition

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.

(Engine does not restart under EV traveling/Auto Start Stop condition.)

- Charge warning light illuminates.



CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

NOTE:
If those trouble occurs, the 12 volt auxiliary battery may run out.

WIRING DIAGRAM:

Power supply circuit <Ref. to WI(HEV)-21, WIRING DIAGRAM, Power Supply Circuit.>

	Step	Check	Yes	No
1	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the battery relay connector. 2) Disconnect the HPCM connector. 3) Using a tester, measure the resistance between the 12V battery relay connector and the HPCM connector and the resistance between 12V battery relay connector and chassis ground. ***Connector & terminal*** ***(B599) No. 1 — (B606) No. 22:*** ***(B606) No. 3 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair open circuit in harness between the 12V battery relay connector and the HPCM connector and the harness between 12V battery relay connector and chassis ground.
2	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between 12V battery relay connector and chassis ground. ***Connector & terminal*** ***(B606) No. 22 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit to ground in the harness between the 12V battery relay connector and the HPCM connector.
3	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between 12V battery relay connector and chassis ground. ***Connector & terminal*** ***(B599) No. 1 — Chassis ground:*** ***(B606) No. 22 — Chassis ground:***	Is the voltage less than 1 V?	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Repair the short circuit to power in the harness between the 12V battery relay connector and the HPCM connector.

Z: DTC P1C07 12V BATTERY RELAY OPEN CIRCUIT PERFORMANCE

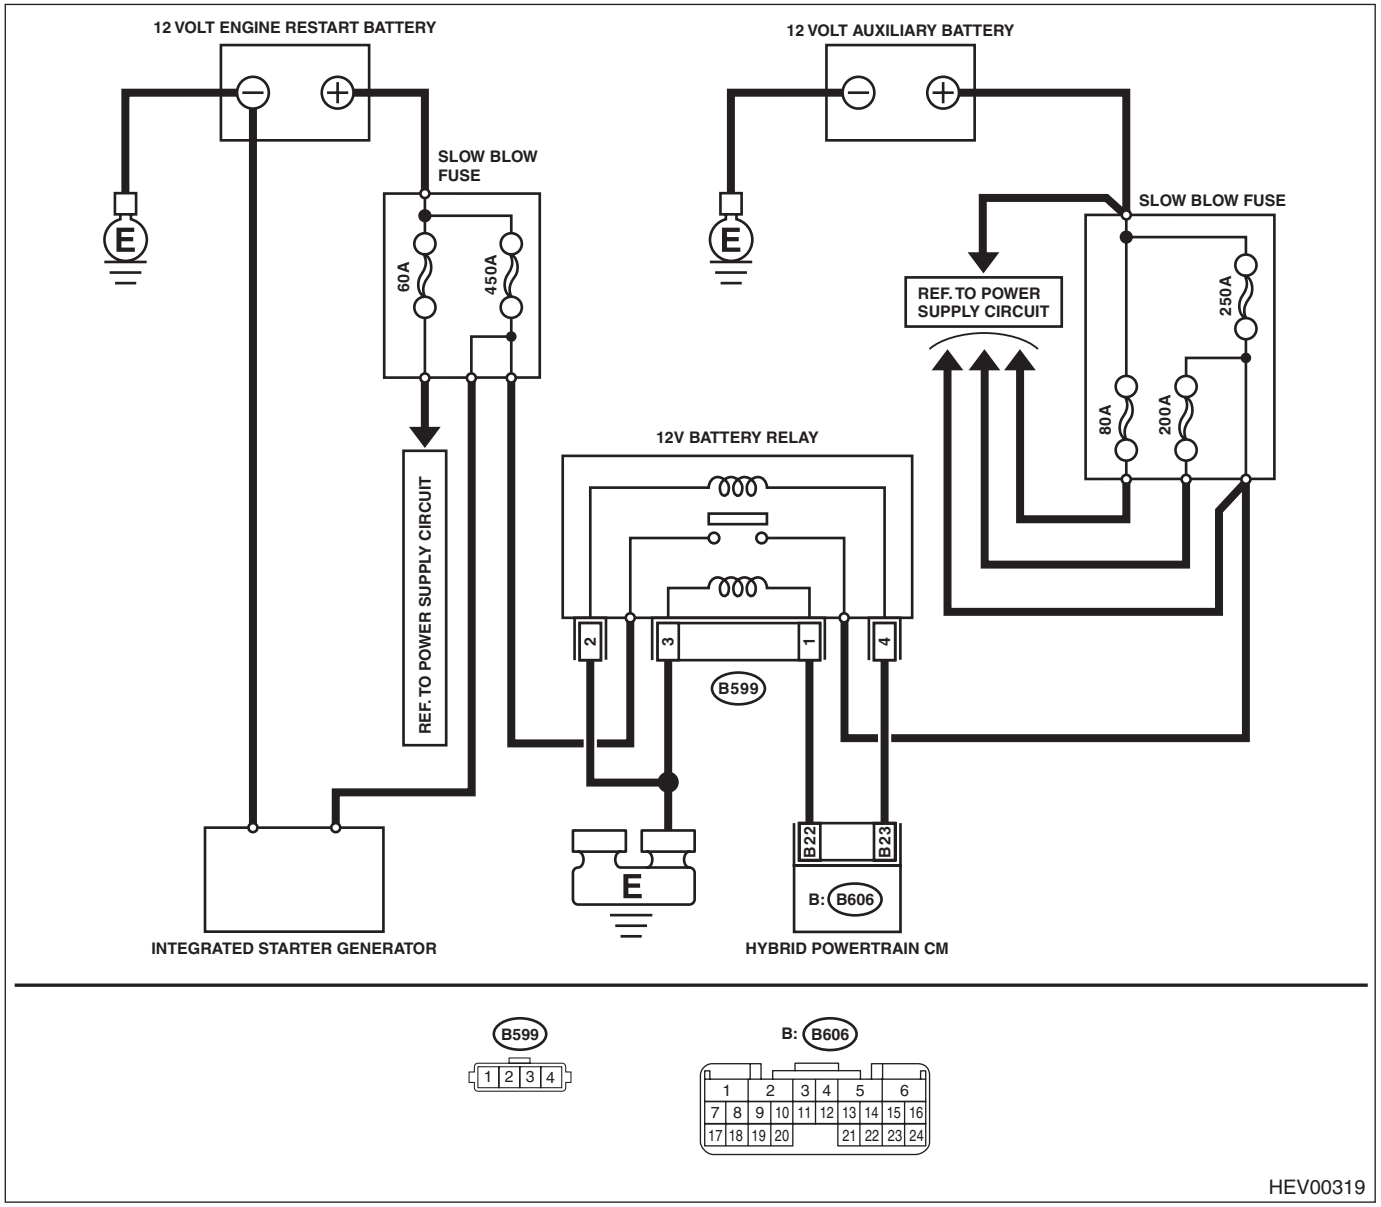
DIAGNOSIS:

- Detects open circuit, short circuit to ground, and short circuit to power in the harness of 12V battery relay open circuit.
- Judge as NG when the detection result is out of specification.
- Immediately at fault recognition

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.

(Engine does not restart under EV traveling/Auto Start Stop condition.)



- Charge warning light illuminates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Power supply circuit <Ref. to WI(HEV)-21, WIRING DIAGRAM, Power Supply Circuit.>

	Step	Check	Yes	No
1	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the 12V battery relay connector. 2) Disconnect the HPCM connector. 3) Using a tester, measure the resistance between the 12V battery relay connector and the HPCM connector and the resistance between 12V battery relay connector and chassis ground. ***Connector & terminal*** ***(B599) No. 4 — (B606) No. 23:*** ***(B599) No. 3 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair open circuit in harness between the 12V battery relay connector and the HPCM connector and the harness between 12V battery relay connector and chassis ground.
2	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between 12V battery relay connector and chassis ground. ***Connector & terminal*** ***(B599) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit to ground in the harness between the 12V battery relay connector and the HPCM connector.
3	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between 12V battery relay connector and chassis ground. ***Connector & terminal*** ***(B599) No. 4 — Chassis ground:*** ***(B599) No. 3 — Chassis ground:***	Is the voltage less than 1 V?	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Repair the short circuit to power in the harness between the 12V battery relay connector and the HPCM connector.

AA:DTC P1C08 12V BATTERY RELAY STUCK OPEN

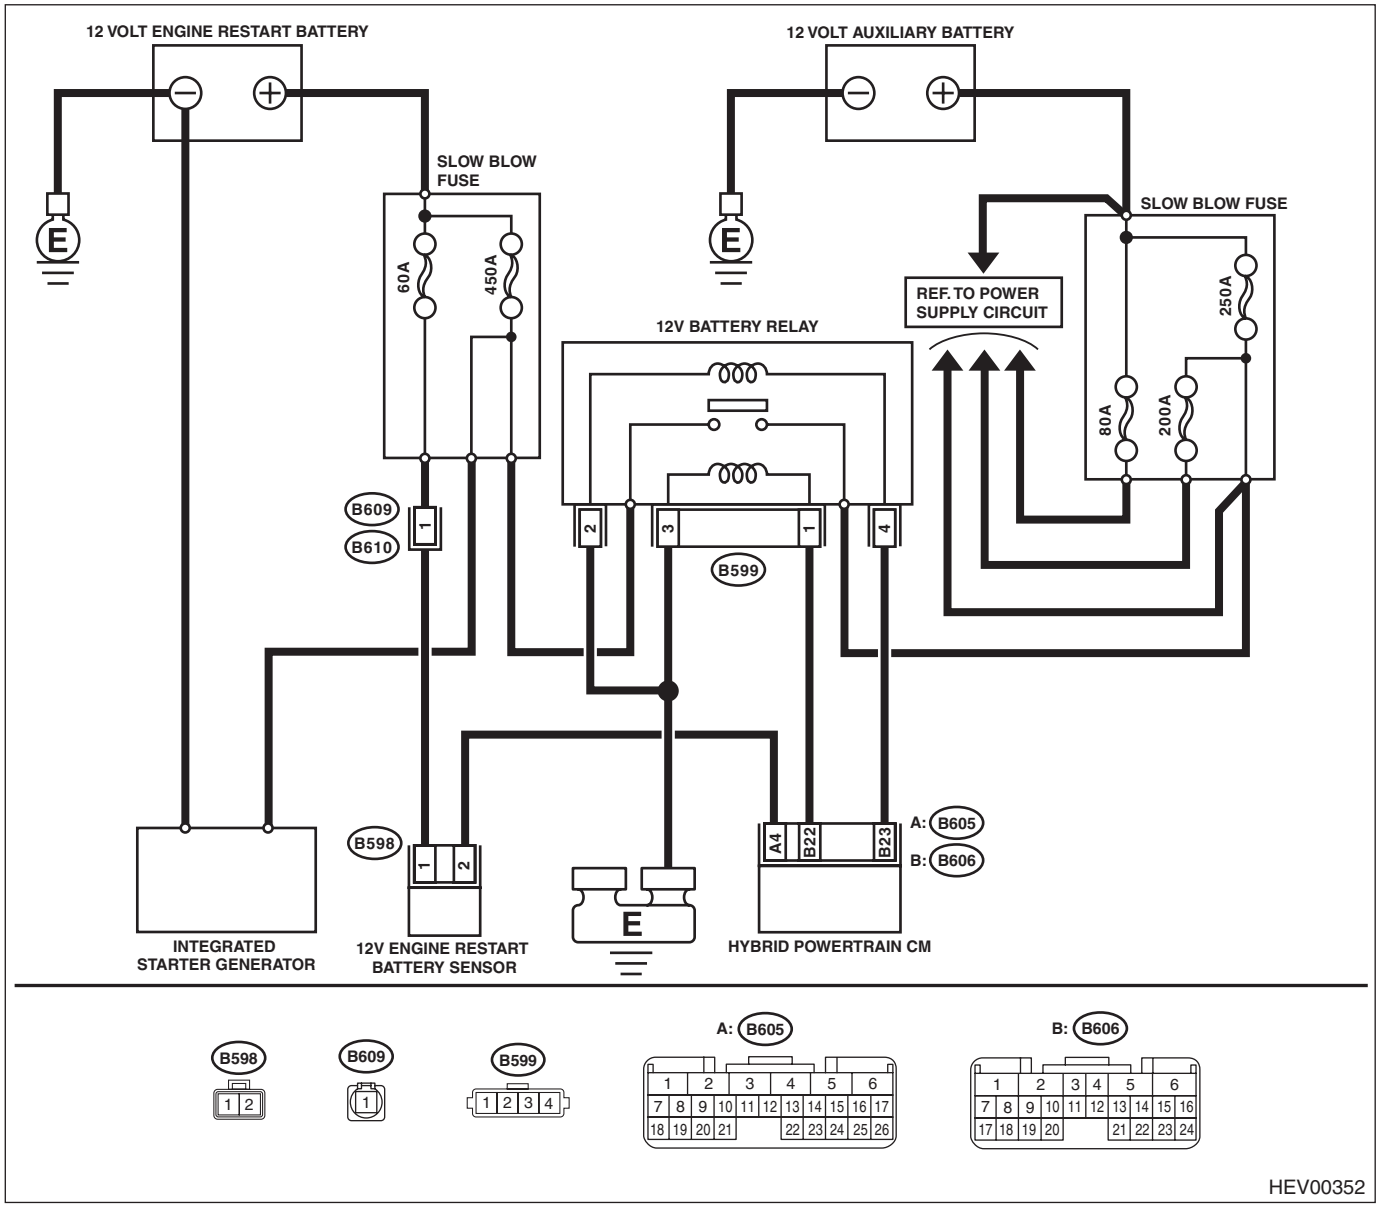
DIAGNOSIS:

- Detects a stuck condition in 12V battery relay open circuit.
- Judge as NG when the detection result is out of specification.
- Immediately at fault recognition

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Charge warning light illuminates.

CAUTION:



Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

NOTE:

If those trouble occurs, the 12 volt auxiliary battery may run out.

WIRING DIAGRAM:

Power supply circuit <Ref. to WI(HEV)-21, WIRING DIAGRAM, Power Supply Circuit.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** Check the connector (B598) of 12V engine restart battery sensor.	Is there looseness or poor contact of connector?	Repair the connector.	Go to step **2**.
2	**CHECK FUSE.** Check the slow blow fuse of the 12 volt auxiliary battery and 12 volt engine restart battery.	Is it normal?	Go to step **3**.	Replace the fuse. When the replaced fuse is blown immediately, repair ground short circuit of harness between 12 volt engine restart battery and the 12 volt battery relay and the harness between 12 volt auxiliary battery and the 12V battery relay.
3	**CHECK RELAY.** Using the Subaru Select Monitor, perform «12V Battery Relay Operation» of System Operation Check Mode for the hybrid powertrain control system. <Ref. to HEV(diag)-69, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, System Operation Check Mode.>	Does the relay operate?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK RELAY.** Check the 12V battery relay. <Ref. to SC(H4DO(HEV))-65, 12V Battery Relay.>	Is the condition normal?	Go to step **5**.	Replace the 12V battery relay.
5	**CHECK TERMINALS.** Check the 12V battery relay for loose bolts or corrosion.	Is the condition normal?	Go to step **6**.	Repair the terminals.
6	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between 12V battery relay connector and each battery. ***Connector & terminal*** ***Positive terminal of 12 volt engine restart battery — 12V battery relay terminal (12 volt engine restart battery side):*** ***Positive terminal of 12 volt auxiliary battery — 12V battery relay terminal (12 volt auxiliary battery side):***	Is the resistance 1 Ω or less?	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Repair the open circuit in harness between the 12V battery relay connector and each battery.

AB:DTC P1C09 12V BATTERY RELAY STUCK CLOSED

DIAGNOSIS:

- Detects a stuck condition in 12V battery relay close circuit.
- Judge as NG when the detection result is out of specification.
- Immediately at fault recognition

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
For the diagnostic procedure, refer to DTC P1C08 12V BATTERY RELAY STUCK OPEN. <Ref. to HEV(diag)-150, DTC P1C08 12V BATTERY RELAY STUCK OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AC:DTC P1C10 VACUUM SYSTEM PERFORMANCE

DIAGNOSIS:

- Detects abnormal conditions in vacuum pump system functions.
- Judge as NG when the detection result is out of specification.
- The DTC is set when the condition occurs three times in total.

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Vacuum pump fail lamp illuminates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

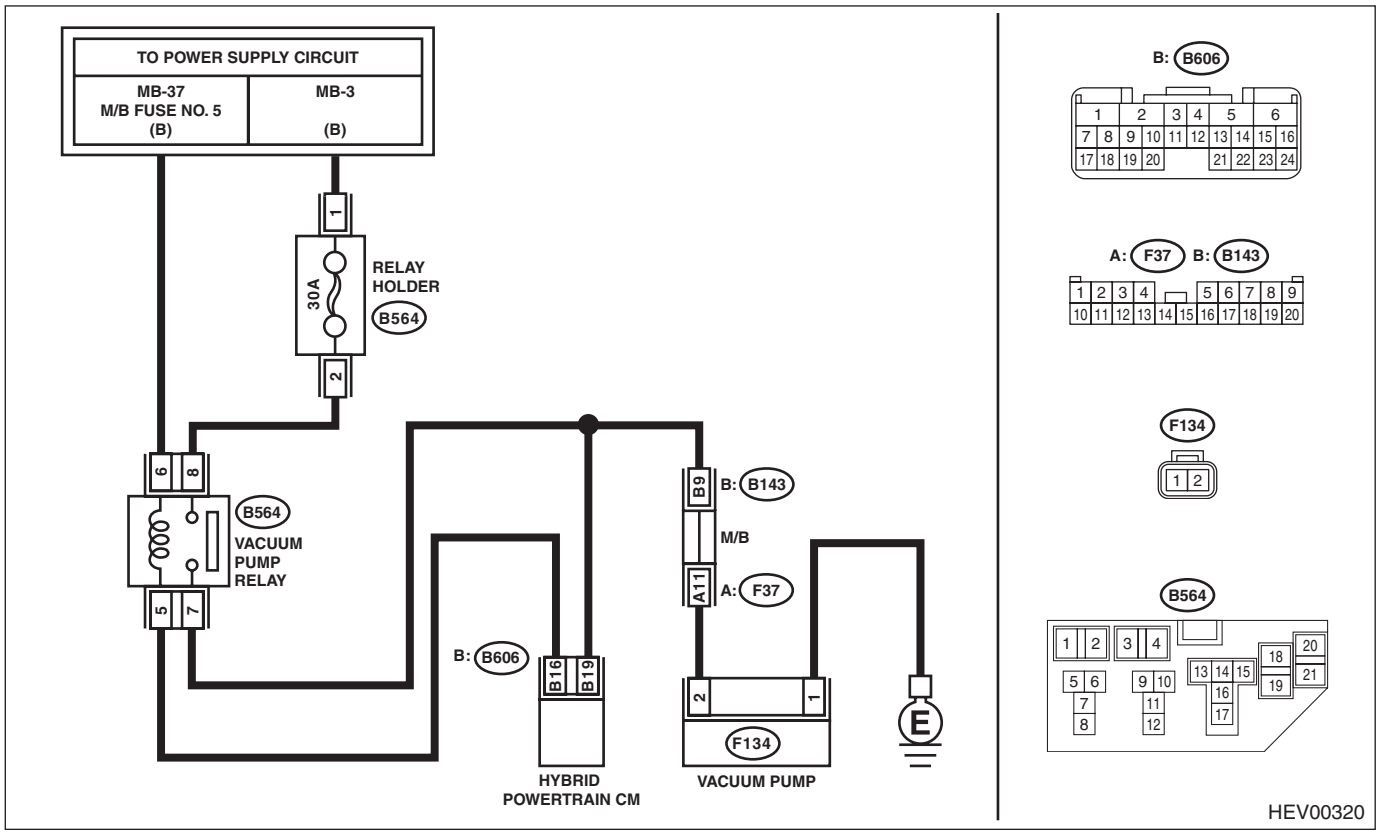
	Step	Check	Yes	No
1	**CHECK VACUUM PRESSURE.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform the work support «Brake Vacuum Pump System Check» for the hybrid powertrain control system. <Ref. to HEV(diag)-71, OPERATION, Work Support.>	Is the result of operation check mode OK?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK BRAKE VACUUM HOSE.** Check the brake vacuum hose. (Check the hose for any external damage and also check that air only flows in one direction, when air is blown into or sucked from the hose.)	Is the condition normal?	Replace the brake vacuum pump. <Ref. to BR-82, Brake Vacuum Pump.>	Replace the brake vacuum hose. <Ref. to BR-82, Brake Vacuum Pump.>

AD:DTC P1C11 VACUUM PUMP POWER SUPPLY CIRCUIT LOW

DIAGNOSIS:

- Detects a stuck condition in the vacuum pump supply voltage circuit (LOW).
- Judge as NG when the detection result is out of specification.
- Immediately at fault recognition

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Vacuum pump fail lamp illuminates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK FUSE.** Check the fuse. <Ref. to BR-16, Relay and Fuse.>	Is it normal?	Go to step **2**.	Replace the fuse. When the replaced fuse blows out easily, repair short circuit to power in harness between 12 volt auxiliary battery and the brake vacuum pump relay.
2	**CHECK BRAKE VACUUM PUMP RELAY.** Check the relay. <Ref. to BR-16, Relay and Fuse.>	Is it normal?	Go to step **3**.	Replace the relay. <Ref. to BR-16, Relay and Fuse.>

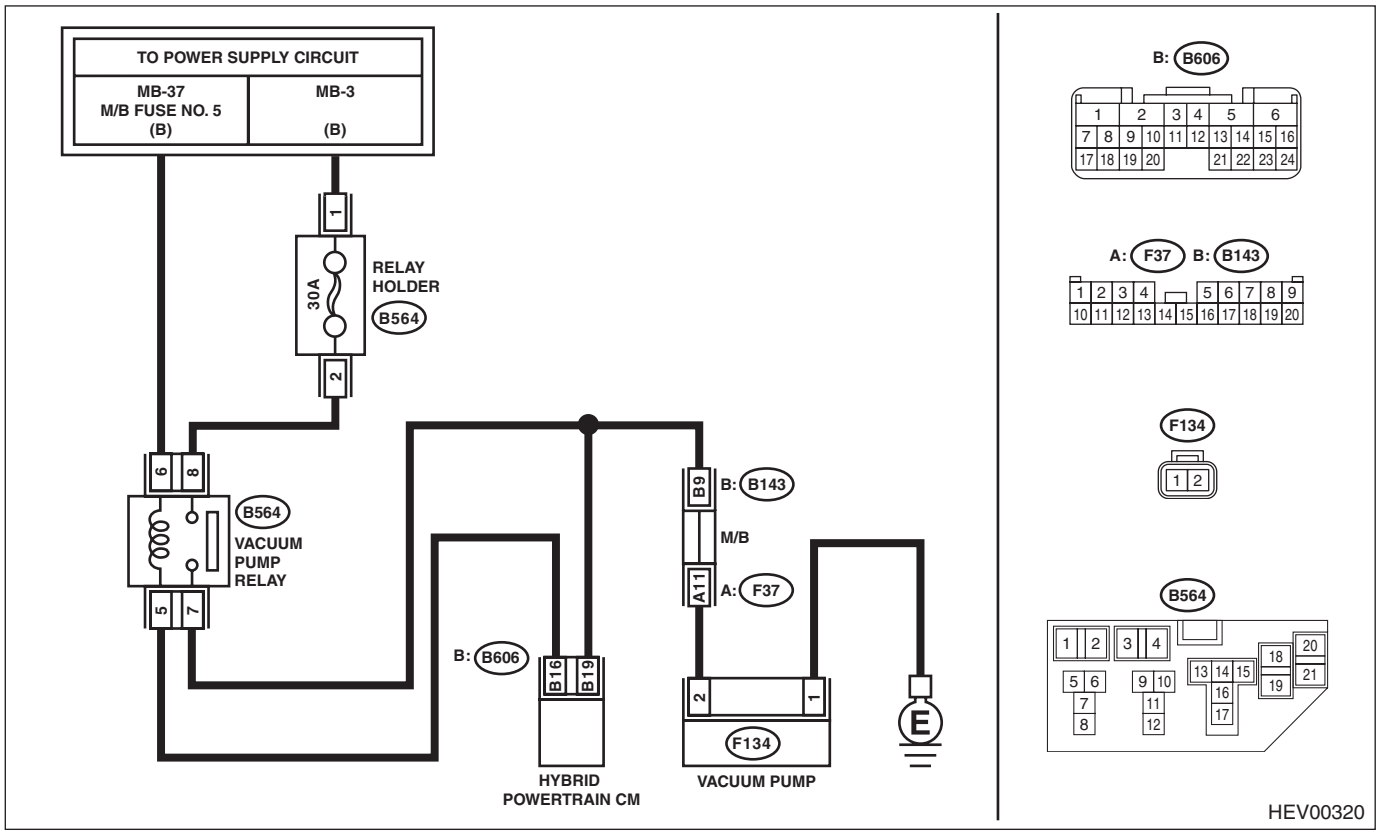
	Step	Check	Yes	No
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the HPCM connector. 3) Remove the brake vacuum pump relay. 4) Using a tester, measure the resistance between HPCM connector and the brake vacuum pump relay connector. ***Connector & terminal (open)*** ***(B564) No. 5 — (B606) No. 16:*** ***(B564) No. 7 — (F134) No. 2:*** ***(F134) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of the harness between the HPCM connector and the brake vacuum pump relay connector.
4	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between the brake vacuum pump relay connector and chassis ground. ***Connector & terminal (open)*** ***(B564) No. 5 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Repair the short circuit to power in harness between the HP connector and the brake vacuum pump relay connector.

AE:DTC P1C12 VACUUM PUMP POWER SUPPLY CIRCUIT HIGH

DIAGNOSIS:

- Detects a stuck condition in the vacuum pump supply voltage circuit (HIGH).
- Judge as NG when the detection result is out of specification.
- Immediately at fault recognition

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Vacuum pump fail lamp illuminates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

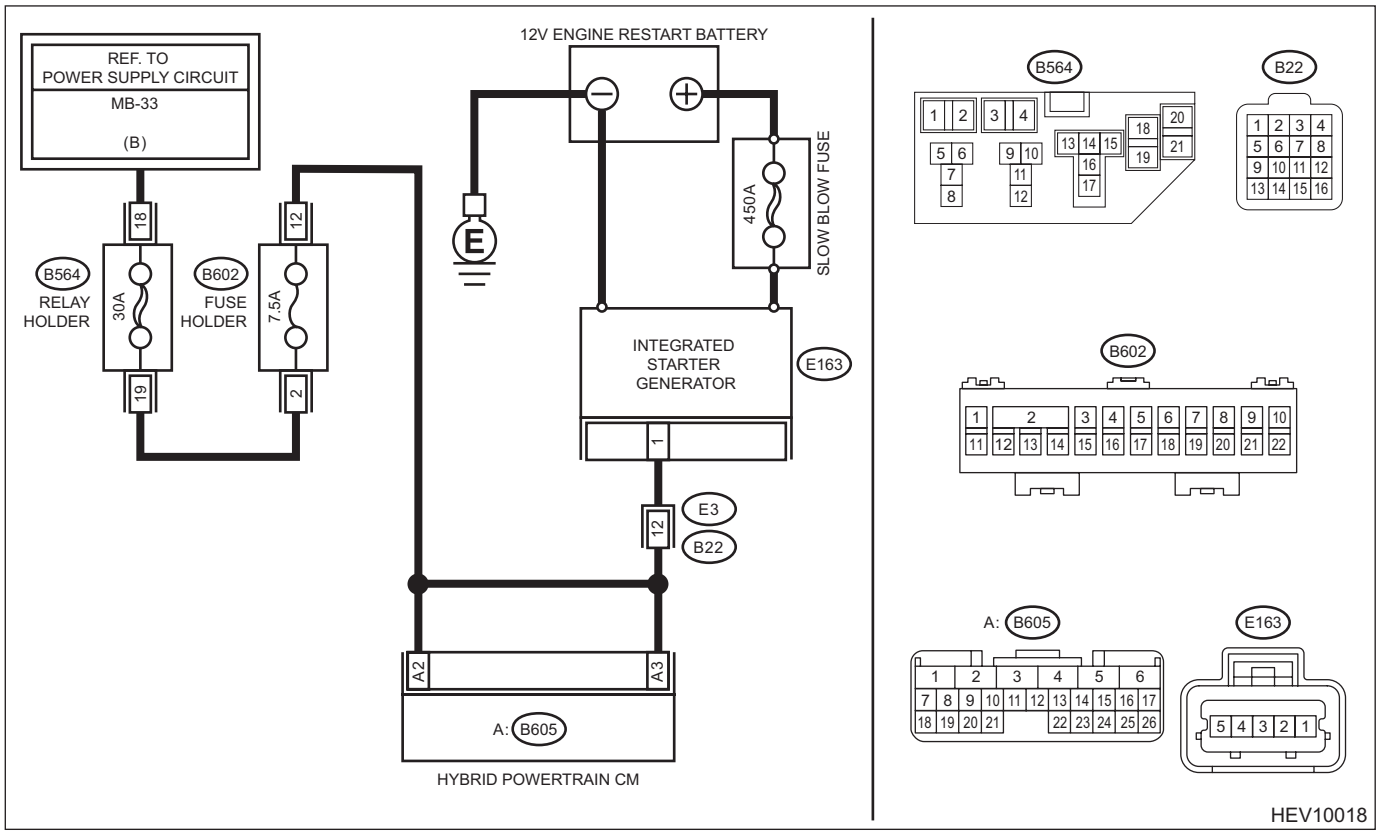
WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK BRAKE VACUUM PUMP RELAY.** Check the relay. <Ref. to BR-16, Relay and Fuse.>	Is it normal?	Go to step **2**.	Replace the relay.
2	**CHECK HARNESS (SHORT TO GROUND).** 1) Turn the ignition switch to OFF. 2) Disconnect the HPCM connector. 3) Remove the brake vacuum pump relay. 4) Using a tester, measure the resistance between HPCM connector and chassis ground. ***Connector & terminal*** ***(B606) No. 16 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair short circuit to ground in harness between the HPCM connector and the brake vacuum pump relay connector.

Step		Check	Yes	No
3	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between the brake vacuum pump relay connector and chassis ground. ***Connector & terminal*** ***(B564) No. 7 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Repair the short circuit to power in harness between the HP connector and the brake vacuum pump relay connector.

AF:DTC P1C14 ISG PERFORMANCE



DIAGNOSIS:
- Detects functional errors of the integrated starter generator.
- Immediately at fault recognition

TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.

(Engine does not restart under EV traveling/Auto Start Stop condition.)
- Charge warning light illuminates.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:
Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs (relating to ISG) detected? (current malfunction)	First diagnose other DTCs.	Go to step **2**.
2	**CHECK FUSE.** Check the fuse. <Ref. to HEV-12, Relay and Fuse.>	Is there any fault?	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.	Go to step **3**.
3	**CHECK BATTERY CABLE ASSEMBLY.** Check the battery cable assembly. <Ref. to SC(H4DO(HEV))-51, Battery Cable Assembly.>	Is there any fault?	Repair the battery cable assembly.	Go to step **4**.
4	**CHECK BATTERY.** Check the 12 volt engine restart battery. <Ref. to SC(H4DO(HEV))-40, Battery.>	Is there any fault?	Charge or replace the 12 volt engine restart battery.	Go to step **5**.

Step		Check	Yes	No
5	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P1C14 detected? (current malfunction)	Replace the integrated starter generator. <Ref. to SC(H4DO(HEV))-33, Integrated Starter Generator (ISG).>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

AG:DTC P1C16 HPCM IDLE CONTROL SYSTEM RPM - LOWER THAN EXPECTED

DIAGNOSIS:

- Detected when two consecutive driving cycles with fault occur. (Single engine startup is counted as one drive cycle.)
- GENERAL DESCRIPTION <Ref. to HEV(diag)-160, OUTLINE OF DIAGNOSIS, DTC P1C16 HPCM IDLE CONTROL SYSTEM RPM - LOWER THAN EXPECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

Normal control.

NOTE:

For the diagnostic procedure, refer to DTC P0506 IDLE CONTROL SYSTEM RPM - LOWER THAN EXPECTED. <Ref. to HEV(diag)-91, DTC P0506 IDLE CONTROL SYSTEM RPM - LOWER THAN EXPECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:

For the detection standard, refer to DTC P0506. <Ref. to HEV(diag)-91, DTC P0506 IDLE CONTROL SYSTEM RPM - LOWER THAN EXPECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AH:DTC P1C17 HPCM IDLE CONTROL SYSTEM RPM - HIGHER THAN EXPECTED

DIAGNOSIS:

- Detected when two consecutive driving cycles with fault occur. (Single engine startup is counted as one drive cycle.)
- GENERAL DESCRIPTION <Ref. to HEV(diag)-160, OUTLINE OF DIAGNOSIS, DTC P1C17 HPCM IDLE CONTROL SYSTEM RPM - HIGHER THAN EXPECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

Normal control.

NOTE:

For the diagnostic procedure, refer to DTC P0507 IDLE CONTROL SYSTEM RPM - HIGHER THAN EXPECTED. <Ref. to HEV(diag)-93, DTC P0507 IDLE CONTROL SYSTEM RPM - HIGHER THAN EXPECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:

For the detection standard, refer to DTC P0507. <Ref. to HEV(diag)-93, DTC P0507 IDLE CONTROL SYSTEM RPM - HIGHER THAN EXPECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AI: DTC P1C18 GENERATOR SYSTEM "B" PERFORMANCE

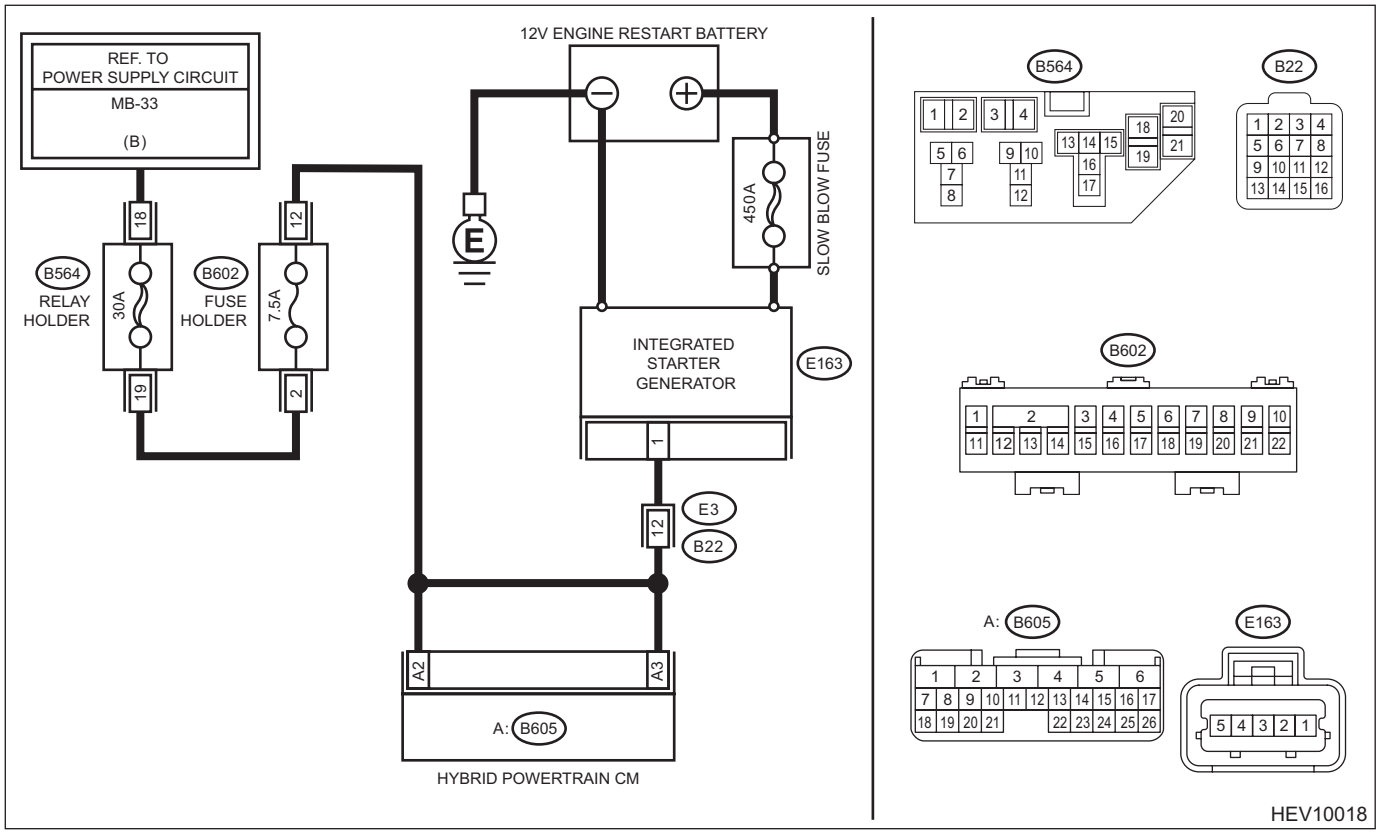
DIAGNOSIS:

- Detects malfunctions due to open harness or trouble in the charging device.
- Detects abnormal conditions in the charging system for the 12 volt engine restart battery due to the integrated starter generator.
- Immediately at fault recognition

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.

(Engine does not restart under EV traveling/Auto Start Stop condition.)



- Charge warning light illuminates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK FUSE.** Check the fuse. <Ref. to HEV-12, Relay and Fuse.>	Is it normal?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.
2	**CHECK BELTS.** Check the belt. <Ref. to ME(H4DO(w/o HEV))-124, V-belt.>	Is it normal?	Go to step **3**.	Adjust or replace the belt.

	Step	Check	Yes	No
3	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «ISG Control Mode Actual» «12V Engine Restart Battery Voltage» «ISG Terminal Voltage». <Ref. to HEV(diag)-39, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is «12V Engine Restart Battery Voltage» «ISG Terminal Voltage» 12 — 15 V when the engine speed is at 2000 rpm or more and «ISG Control Mode Actual» is generating power?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «HPCM Check 40». <Ref. to HEV(diag)-39, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 30 m Ω or more?	Check for poor contact of 12 volt engine restart battery terminals. <Ref. to NT-6, BATTERY, NOTE, Note.>	Go to step **5**.
5	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the HPCM connector. 3) Disconnect the integrated starter generator connector. 4) Using a tester, measure the resistance between the HPCM connector and integrated starter generator connector. ***Connector & terminal*** ***(B605) No. 2 — (E163) No. 1:*** ***(B605) No. 3 — (E163) No. 1:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the open circuit of the harness between the HPCM connector and the integrated starter generator terminal.
6	**CHECK BATTERY.** Check the 12 volt engine restart battery. <Ref. to SC(H4DO(HEV))-40, Battery.>	Is it normal?	Replace the integrated starter generator. <Ref. to SC(H4DO(HEV))-33, Integrated Starter Generator (ISG).>	Charge or replace the 12 volt engine restart battery.

AJ:DTC P1C1E AUTODISCONNECT HISTORY

DIAGNOSIS:
Detects collision history of the vehicle.
TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Vehicle speed is limited to 20 km/h (12.4 MPH) or below.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

NOTE:
- At normal condition, this cannot be deleted from the readiness code.
- The high voltage battery must not be reconnected until the repair is complete.

	Step	Check	Yes	No
1	**CHECK VEHICLE.** Check the vehicle conditions.	Are the vehicle conditions normal? (Check for evidence of collision, etc.)	Go to step **2**.	Repair the problem.
2	**CHECK HPCM.** 1) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Wait for 30 seconds. 4) Turn the ignition switch to ON. 5) Read the DTC again. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P1C1E detected? (current malfunction)	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

AK:DTC P2158 VEHICLE SPEED SENSOR "B" CIRCUIT

DIAGNOSIS FOR DTC:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-164, OUTLINE OF DIAGNOSIS, DTC P2158 VEHICLE SPEED SENSOR "B" CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.

NOTE:
For the diagnostic procedure, refer to the Vehicle Dynamics Control System (VDC) (DIAGNOSTICS). <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the wheel speed of rear wheels.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 0.2 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Vehicle speed (Rear) from Vehicle Dynamics NOTE: The VDC controller detects malfunction if one of the speed sensors does not output a signal and the other vehicle speed sensor output signal is above 7.46 MPH.	≥ 186.4 MPH

Time Needed for Diagnosis: 2.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Wheel speed of rear wheel (either left or right) and Wheel speed of rear wheel (both left and right)	< 186 MPH > 0 MPH

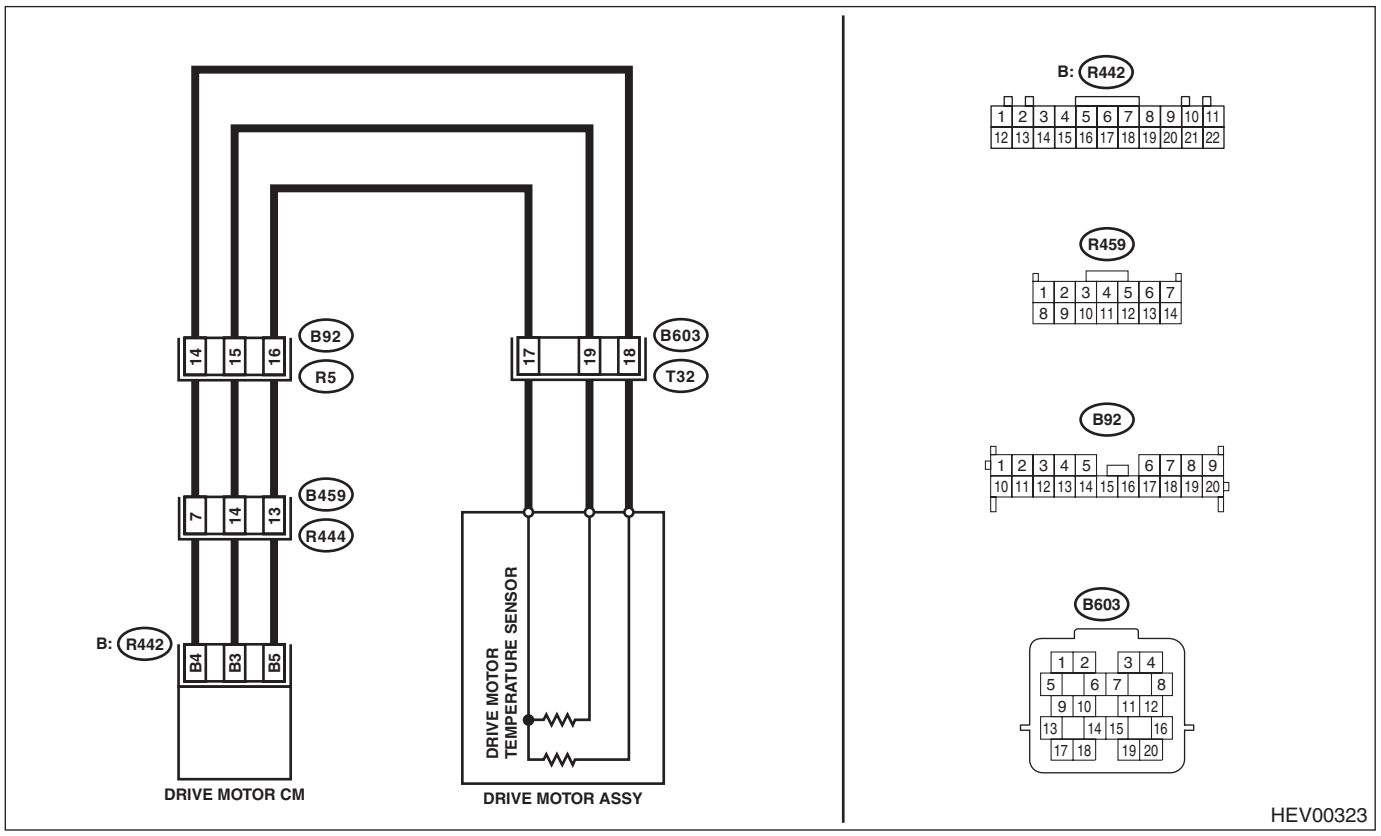
Time Needed for Diagnosis: 2.5 seconds

AL:DTC P0A2A DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-169, OUTLINE OF DIAGNOSIS, DTC P0A2A DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

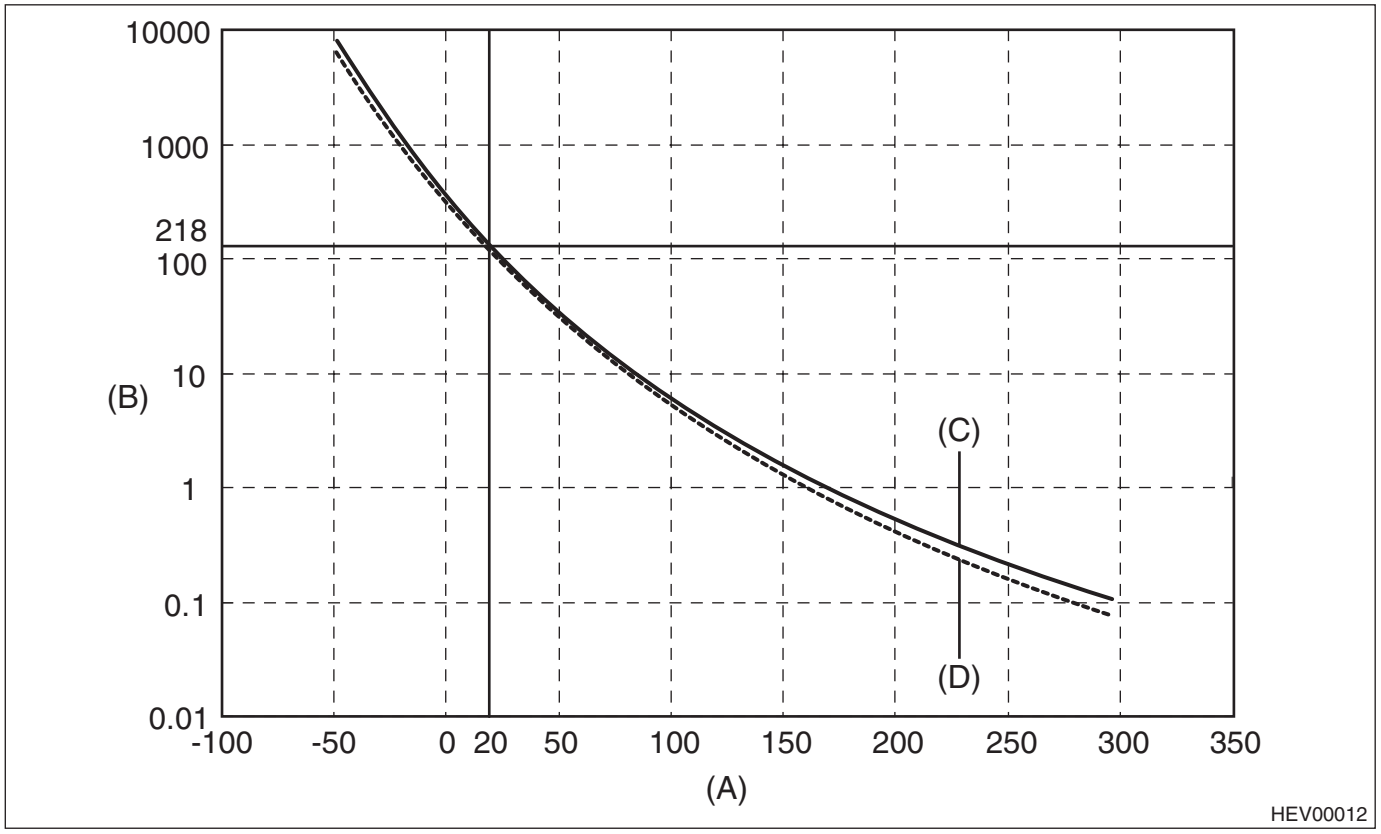
TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>



WIRING DIAGRAM:

CVT control system <Ref. to WI(HEV)-82, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Warm up the engine. 2) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «A/T Oil Temperature» «Drive Motor Temperature A Sensor Voltage». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value of «Drive Motor Temperature A Sensor Voltage» 4.5 V or more when «A/T Oil Temperature» is 40°C (104°F) or more?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS AND DRIVE MOTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the DMCM connector (R442). 3) Using a tester, measure the resistance between terminals in the DMCM connector. ***Connector & terminal*** ***(R442) No. 4 — (R442) No. 5:*** ***(R442) No. 3 — (R442) No. 5:***	Does the resistance between either two points show 218 kΩ or more?	Go to step **3**.	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>
3	**CHECK DRIVE MOTOR.** 1) Disconnect the drive motor assembly connector (R603). 2) Using a tester, measure the resistance between terminals in the drive motor assembly connector. ***Connector & terminal*** ***(T32) No. 18 — (T32) No. 17:*** ***(T32) No. 19 — (T32) No. 17:***	Does the resistance between either two points show 218 kΩ or more?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Repair the open circuit of harness between DMCM connector and drive motor assembly connector, or repair the intermediate connector.

NOTE:
Characteristic curve of temperature sensor

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor temperature sensor.
Judge as NG when the value of drive motor temperature sensor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
PWM output to the drive motor inverter	ON
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 10 V
Continuous time of a and b	≥ 15 s
Generated energy of drive motor	≥ Map1
Assist energy of drive motor	≥ Map2

Map 1

Hybrid battery temperature and Drive motor inverter temperature either lower temperature (°C (°F))	–30 (–22)	–10 (14)	0 (32)	10 (50)	30 (86)	40 (104)
Generated energy of drive motor (Wh)	630	320	200	130	0	0

Map 2

Hybrid battery temperature and Drive motor inverter temperature either lower temperature (°C (°F))	–30 (–22)	–10 (14)	0 (32)	10 (50)	30 (86)	40 (104)
Assist energy of drive motor (Wh)	270	130	75	50	0	0

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage	> 4.5 V
(Temperature equivalent)	< –3.4°C (25.9°F)

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage	≤ 4.5 V
(Temperature equivalent)	≥ -3.4°C (25.9°F)

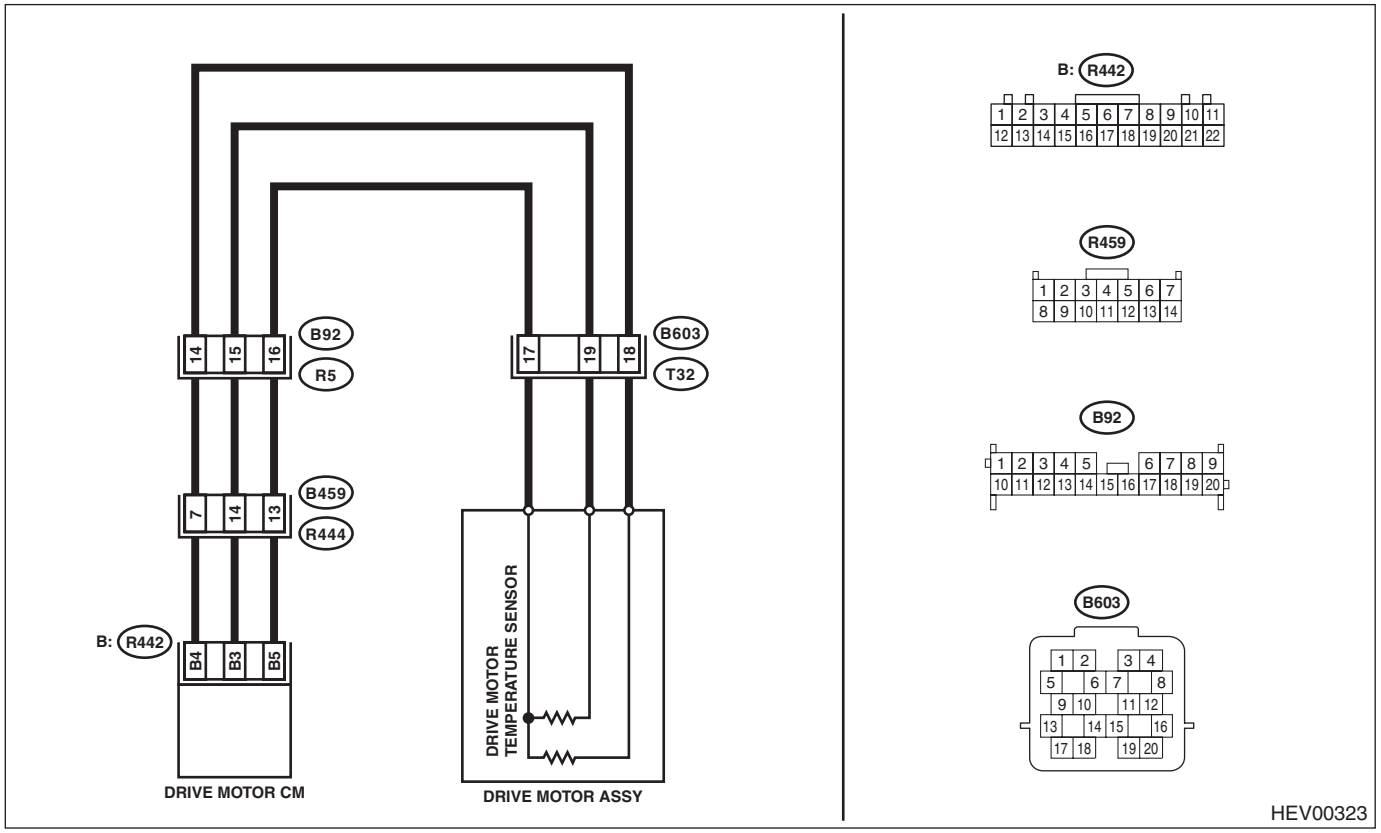
Time Needed for Diagnosis: 4 seconds

AM:DTC P0A2C DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-174, OUTLINE OF DIAGNOSIS, DTC P0A2C DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

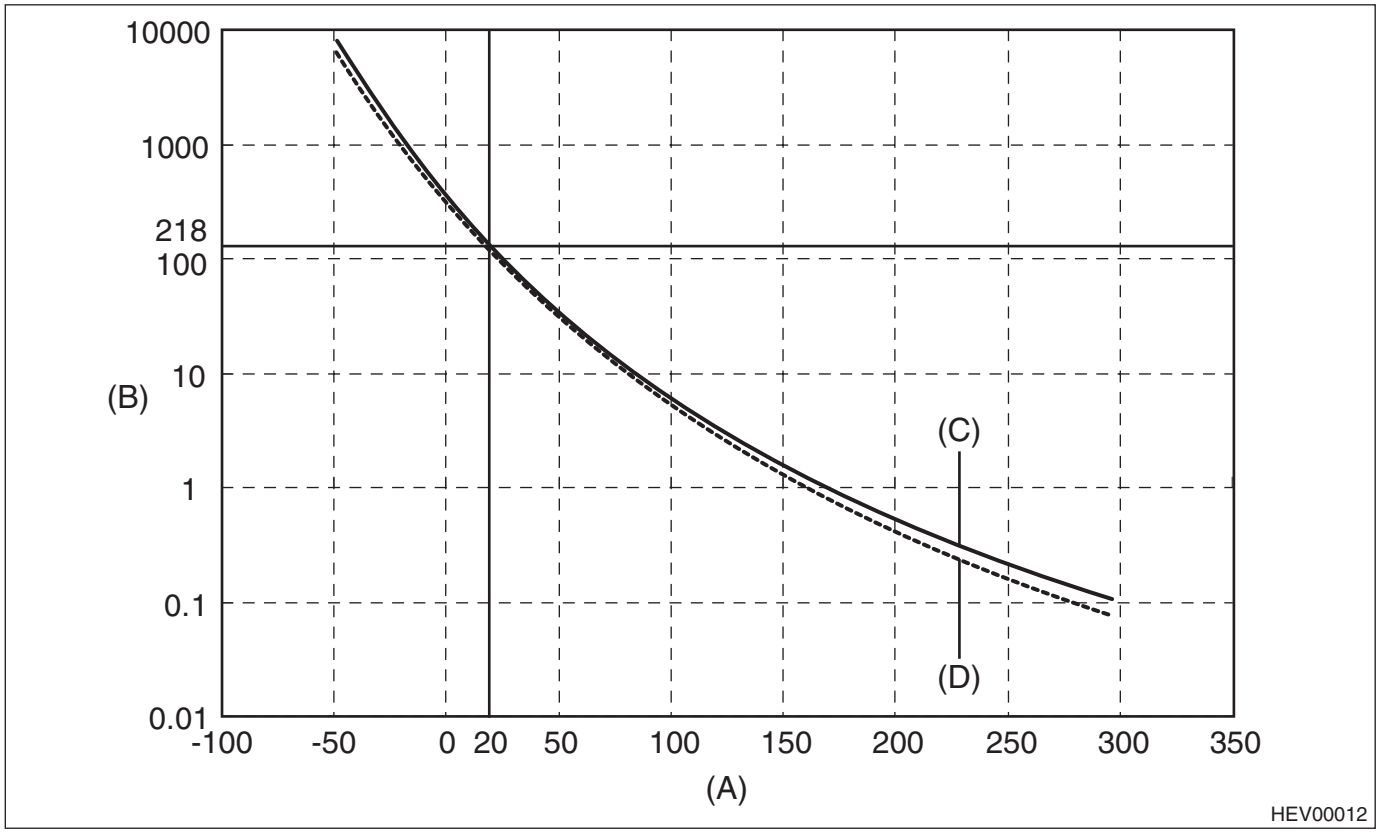
TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>



WIRING DIAGRAM:

CVT control system <Ref. to WI(HEV)-82, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Drive Motor Temperature A Sensor Voltage». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value less than 0.23 V?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS AND DRIVE MOTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the DMCM connector (R442). 3) Using a tester, measure the resistance between DMCM connector and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R442) No. 4 — Ground bolt of inverter frame body:*** ***(R442) No. 3 — Ground bolt of inverter frame body:***	Does the resistance between either two points show 256.4 Ω or less?	Go to step **3**.	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>
3	**CHECK DRIVE MOTOR.** 1) Disconnect the drive motor assembly connector (B603). 2) Using a tester, measure the resistance between the drive motor assembly connector and chassis ground. ***Connector & terminal*** ***(T32) No. 18 — Chassis ground:*** ***(T32) No. 19 — Chassis ground:***	Does the resistance between either two points show 256.4 Ω or less?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Repair the short circuit to ground in harness between DMCM connector and drive motor assembly connector.

NOTE:
Characteristic curve of temperature sensor

(A) Temperature
(B) Resistance
(C) Standard at Max.
(D) Standard at Min.

Temp. (°C)	Temp. (°F)	Standard at Max. (kΩ)	Standard at Min. (kΩ)

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor temperature sensor.
Judge as NG when the value of drive motor temperature sensor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage	< 0.23 V
(Temperature equivalent)	> 234°C (453.2°F)

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage	≥ 0.23 V
(Temperature equivalent)	≤ 234°C (453.2°F)

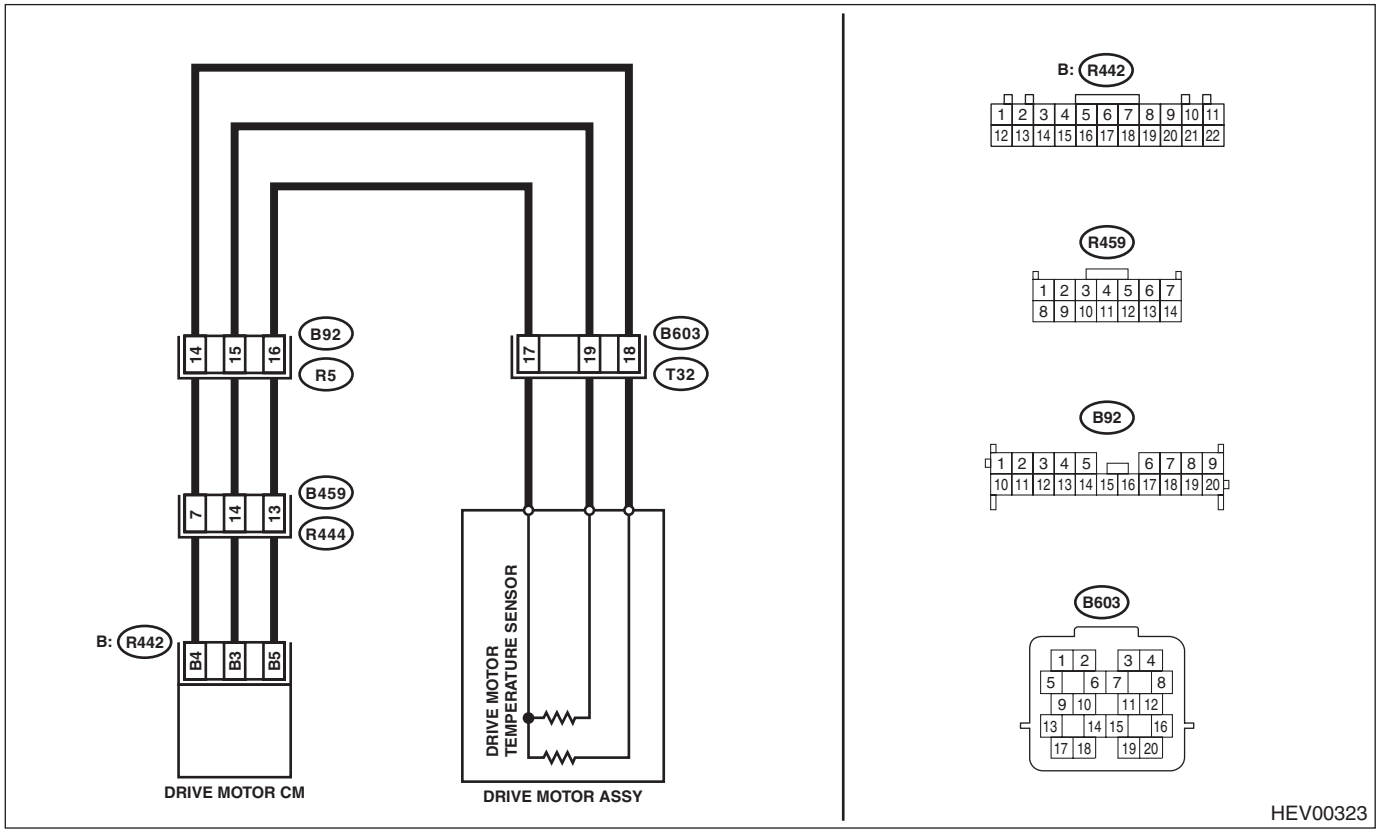
Time Needed for Diagnosis: 2 seconds

AN:DTC P0A2D DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-177, OUTLINE OF DIAGNOSIS, DTC P0A2D DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

CVT control system <Ref. to WI(HEV)-82, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Drive Motor Temperature A Sensor Voltage». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 4.6 V or more?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (SHORT).** 1) Turn the ignition switch to OFF. 2) Disconnect the DMCM connector (R442, R443). 3) Disconnect the drive motor assembly connector (B603). 4) Using a tester, measure the resistance between terminals in the DMCM connector and between the terminals in the drive motor assembly connector. ***Connector & terminal*** ***DMCM side*** ***(R442) No. 3 — (R442) No. 1 — 22 (except No. 5):*** ***(R442) No. 3 — (R443) No. 1 — 26:*** ***(R442) No. 4 — (R442) No. 1 — 22 (except No. 5):*** ***(R442) No. 4 — (R443) No. 1 — 26:*** ***Drive motor side*** ***(B603) No. 18 — (B603) No. 1 — 19 (except No. 17):*** ***(B603) No. 19 — (B603) No. 1 — 19 (except No. 17):***	Does the resistance between either two points show 1 MΩ or more?	Go to step **3**.	Repair the short circuit to power in harness between DMCM connector and drive motor assembly connector, or repair the intermediate connector.
3	**CHECK DRIVE MOTOR.** Using a tester, measure the resistance between terminals in the drive motor assembly connector. ***Connector & terminal*** ***(T32) No. 18 — (T32) No. 1 — 19 (except No. 17):*** ***(T32) No. 19 — (T32) No. 1 — 19 (except No. 17):***	Does the resistance between either two points show 1 MΩ or more?	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor temperature sensor.
Judge as NG when the value of drive motor temperature sensor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage (Temperature equivalent)	> 4.6 V (< –55°C (–67°F))

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage (Temperature equivalent)	≤ 4.6 V (≥ -55°C (–67°F))

Time Needed for Diagnosis: 2 seconds

AO:DTC P0A3C DRIVE MOTOR "A" INVERTER OVER TEMPERATURE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-179, OUTLINE OF DIAGNOSIS, DTC P0A3C DRIVE MOTOR "A" INVERTER OVER TEMPERATURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are DTC P0A5D, P0A60, and P0A63 detected? (current malfunction)	Perform a check according to the DTC. <Ref. to HEV(diag)-76, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK HIGH VOLTAGE BATTERY COOLING FAN.** Using the Subaru Select Monitor, perform «High Voltage Battery Cooling Fan» of System Operation Check Mode for the drive motor control system. <Ref. to HEV(diag)-70, DRIVE MOTOR CONTROL SYSTEM, OPERATION, System Operation Check Mode.>	Does the high voltage battery cooling fan operate?	Go to step **3**.	Check the high voltage battery cooling fan as a single part. <Ref. to HEV-59, High Voltage Battery Cooling System.>
3	**CHECK DUCT.** Check the high voltage battery cooling fan ducts. <Ref. to HEV-59, High Voltage Battery Cooling System.>	Are the conditions of ducts normal? (Check for clogging, dislodging of connections, etc.)	Go to step **4**.	Repair the ducts.
4	**CHECK DTC.** 1) Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> 2) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 3) Check the freeze frame data and drive the vehicle to reproduce the same conditions. <Ref. to HEV(diag)-63, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.> 4) Read the DTC again. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Problem is present in drive motor inverter.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter temperature.
Judge as NG when the value of drive motor inverter temperature is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 8 V
Continuous time of a and b	≥ 1 s
First SCI data from drive motor inverter	Received

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Malfunction signal (over temperature) from IC in the drive motor inverter	ON

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Malfunction signal (over temperature) from IC in the drive motor inverter	OFF

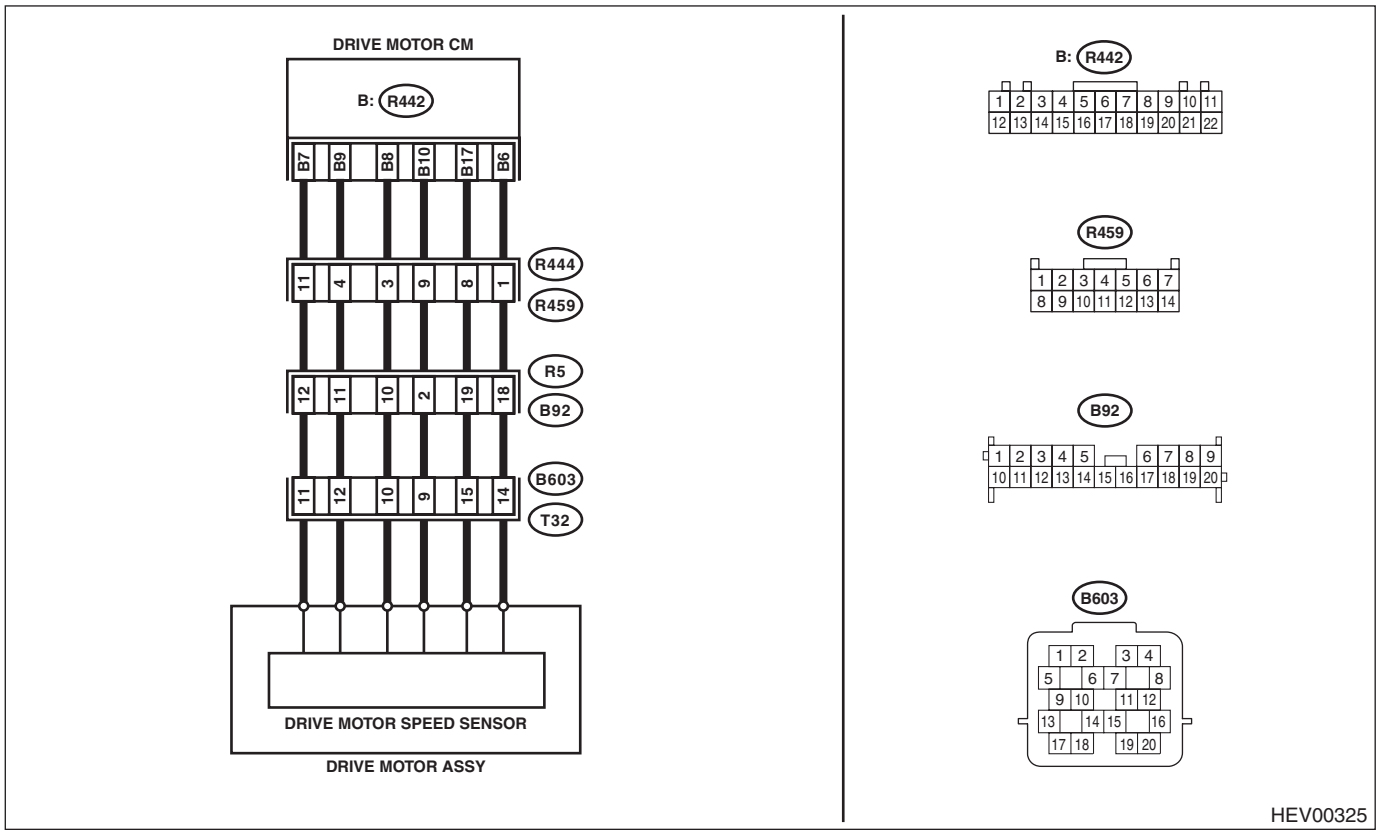
Time Needed for Diagnosis: 0.2 seconds

AP:DTC P0A3F DRIVE MOTOR "A" POSITION SENSOR CIRCUIT

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-184, OUTLINE OF DIAGNOSIS, DTC P0A3F DRIVE MOTOR "A" POSITION SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

CVT control system <Ref. to WI(HEV)-82, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK HARNESS AND DRIVE MOTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the DMCM connector (R442). 3) Using a tester, measure the resistance between terminals in DMCM connector. ***Connector & terminal*** ***R1-R2*** ***(R442) No. 6 — (R442) No. 17:*** ***S1-S3*** ***(R442) No. 10 — (R442) No. 8:*** ***S2-S4*** ***(R442) No. 9 — (R442) No. 7:***	Is each resistance value as shown in below? R1-R2: Is the value out of 7 — 23 Ω range? or S1-S3: Is the value out of 10 — 39 Ω range? or S2-S4: Is the value out of 11 — 40 Ω range?	Go to step **2**.	Go to step **3**.

	Step	Check	Yes	No
2	**CHECK DRIVE MOTOR.** 1) Disconnect the drive motor assembly connector. 2) Using a tester, measure the resistance between terminals in the drive motor assembly connector. ***Connector & terminal*** ***R1-R2*** ***(T32) No. 14 — (T32) No. 15:*** ***S1-S3*** ***(T32) No. 9 — (T32) No. 10:*** ***S2-S4*** ***(T32) No. 12 — (T32) No. 11:***	Is each resistance value as shown in below? R1-R2: Is the value out of 7 — 23 Ω range? or S1-S3: Is the value out of 10 — 39 Ω range? or S2-S4: Is the value out of 11 — 40 Ω range?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Repair the open circuit and short circuit to ground in harness between DMCM connector and drive motor assembly connector.
3	**CHECK HARNESS AND DRIVE MOTOR.** Using a tester, check the resistance between DMCM connector terminals and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R442) No. 6 — Ground bolt of inverter frame body:*** ***(R442) No. 10 — Ground bolt of inverter frame body:*** ***(R442) No. 9 — Ground bolt of inverter frame body:***	Does the resistance between either two points show 1 MΩ or less?	Go to step **4**.	Go to step **5**.
4	**CHECK DRIVE MOTOR.** 1) Disconnect the drive motor assembly connector. 2) Using a tester, measure the resistance between the drive motor assembly connector and chassis ground. ***Connector & terminal*** ***(T32) No. 14 — Chassis ground:*** ***(T32) No. 9 — Chassis ground:*** ***(T32) No. 12 — Chassis ground:***	Does the resistance between either two points show 1 MΩ or less?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Repair the short circuit to ground in harness between DMCM connector and drive motor assembly connector.

	Step	Check	Yes	No
5	**CHECK HARNESS.** 1) Disconnect the DMCM connector (R443). 2) Disconnect the intermediate connector (R436). 3) Using a tester, measure the resistance between terminals in the DMCM connector and between the terminals in the intermediate connector (R436). ***Connector & terminal*** ***(R442) No. 10 — (R442) No. 1 — 22 (except No. 8):*** ***(R442) No. 10 — (R443) No. 1 — 26:*** ***(R442) No. 10 — (R436) No. 1 — 8:*** ***(R442) No. 8 — (R442) No. 1 — 22 (except No. 10):*** ***(R442) No. 8 — (R443) No. 1 — 26:*** ***(R442) No. 8 — (R436) No. 1 — 8:*** ***(R442) No. 9 — (R442) No. 1 — 22 (except No. 7):*** ***(R442) No. 9 — (R443) No. 1 — 26:*** ***(R442) No. 9 — (R436) No. 1 — 8:*** ***(R442) No. 7 — (R442) No. 1 — 22 (except No. 9):*** ***(R442) No. 7 — (R443) No. 1 — 26:*** ***(R442) No. 7 — (R436) No. 1 — 8:*** ***(R442) No. 6 — (R442) No. 1 — 22 (except No. 17):*** ***(R442) No. 6 — (R443) No. 1 — 26:*** ***(R442) No. 6 — (R436) No. 1 — 8:*** ***(R442) No. 17 — (R442) No. 1 — 22 (except No. 6):*** ***(R442) No. 17 — (R443) No. 1 — 26:*** ***(R442) No. 17 — (R436) No. 1 — 8:***	Does the resistance between either two points show 1 MΩ or more?	Go to step **6**.	Repair the short circuit of harness between DMCM connector and drive motor assembly connector, or repair the intermediate connector.
6	**CHECK HARNESS.** 1) Disconnect the drive motor assembly connector. 2) Using a tester, measure the resistance between terminals in the drive motor assembly connector. ***Connector & terminal*** ***(B603) No. 9 — (B603) No. 1 — 20 (except No. 10):*** ***(B603) No. 10 — (B603) No. 1 — 20 (except No. 9):*** ***(B603) No. 12 — (B603) No. 1 — 20 (except No. 11):*** ***(B603) No. 11 — (B603) No. 1 — 20 (except No. 12):*** ***(B603) No. 14 — (B603) No. 1 — 20 (except No. 15):*** ***(B603) No. 15 — (B603) No. 1 — 20 (except No. 14):***	Does the resistance between either two points show 1 MΩ or more?	Go to step **7**.	Repair the short circuit of harness between DMCM connector and drive motor assembly connector, or repair the intermediate connector.

Step		Check	Yes	No
7	**CHECK DRIVE MOTOR.** Using a tester, measure the resistance between terminals in the drive motor assembly connector. ***Connector & terminal*** ***(T32) No. 9 — (T32) No. 1 — 20 (except No. 10):*** ***(T32) No. 10 — (T32) No. 1 — 20 (except No. 9):*** ***(T32) No. 12 — (T32) No. 1 — 20 (except No. 11):*** ***(T32) No. 11 — (T32) No. 1 — 20 (except No. 12):*** ***(T32) No. 14 — (T32) No. 1 — 20 (except No. 15):*** ***(T32) No. 15 — (T32) No. 1 — 20 (except No. 14):***	Does the resistance between either two points show 1 MΩ or more?	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the drive motor rotation angle sensor.
Judge as NG when the malfunction of drive motor rotation angle sensor is detected.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Diagnosis 1	
Ignition state	OFF to ON (ON = Run or crank) (OFF ≠ Run or crank)
Diagnosis 2	
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 9 V
Continuous time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
SCI data from the resolver to digital (R/D) converter	Parity error
Diagnosis 2	
R/D converter error output (Internal tracking error)	Detected

Time Needed for Diagnosis:
- **Diagnosis 1:** 0.0002 s
- **Diagnosis 2:** 0.5 s

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
SCI data from the resolver to digital (R/D) converter	≠ Parity error
Diagnosis 2	
R/D converter error output (Internal tracking error)	Not detected

Time Needed for Diagnosis:
- **Diagnosis 1:** Immediately
- **Diagnosis 2:** 0.02 s

AQ:DTC P0A40 DRIVE MOTOR "A" POSITION SENSOR CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-185, OUTLINE OF DIAGNOSIS, DTC P0A40 DRIVE MOTOR "A" POSITION SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

NOTE:
For the diagnostic procedure, refer to DTC P0A3F DRIVE MOTOR “A” POSITION SENSOR CIRCUIT. <Ref. to HEV(diag)-180, DTC P0A3F DRIVE MOTOR "A" POSITION SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the drive motor rotation angle sensor.
Judge as NG when the detected angle of drive motor rotation angle sensor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
Resolver initialization	Completed
NOTE: It is defined that "Resolver initialization=Completed", if all of the following conditions are satisfied: 1. The communication between the R/D converter and DMCM is established. 2. The R/D converter succeed to recognize the first motor position (angle) after power-up.	

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Measured drive motor angle	> 180.5 deg
Diagnosis 2	
Measured drive motor angle (When the reference pulse occurs)	< 179.5 deg
NOTE: Diagnosis will be performed only when the reference pulse is generated	and > 0.5 deg

Time Needed for Diagnosis: 0.0003 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Measured drive motor angle	≤ 180.5 deg
Diagnosis 2	
Measured drive motor angle (When the reference pulse occurs)	≥ 179.5 deg and ≤ 0.5 deg

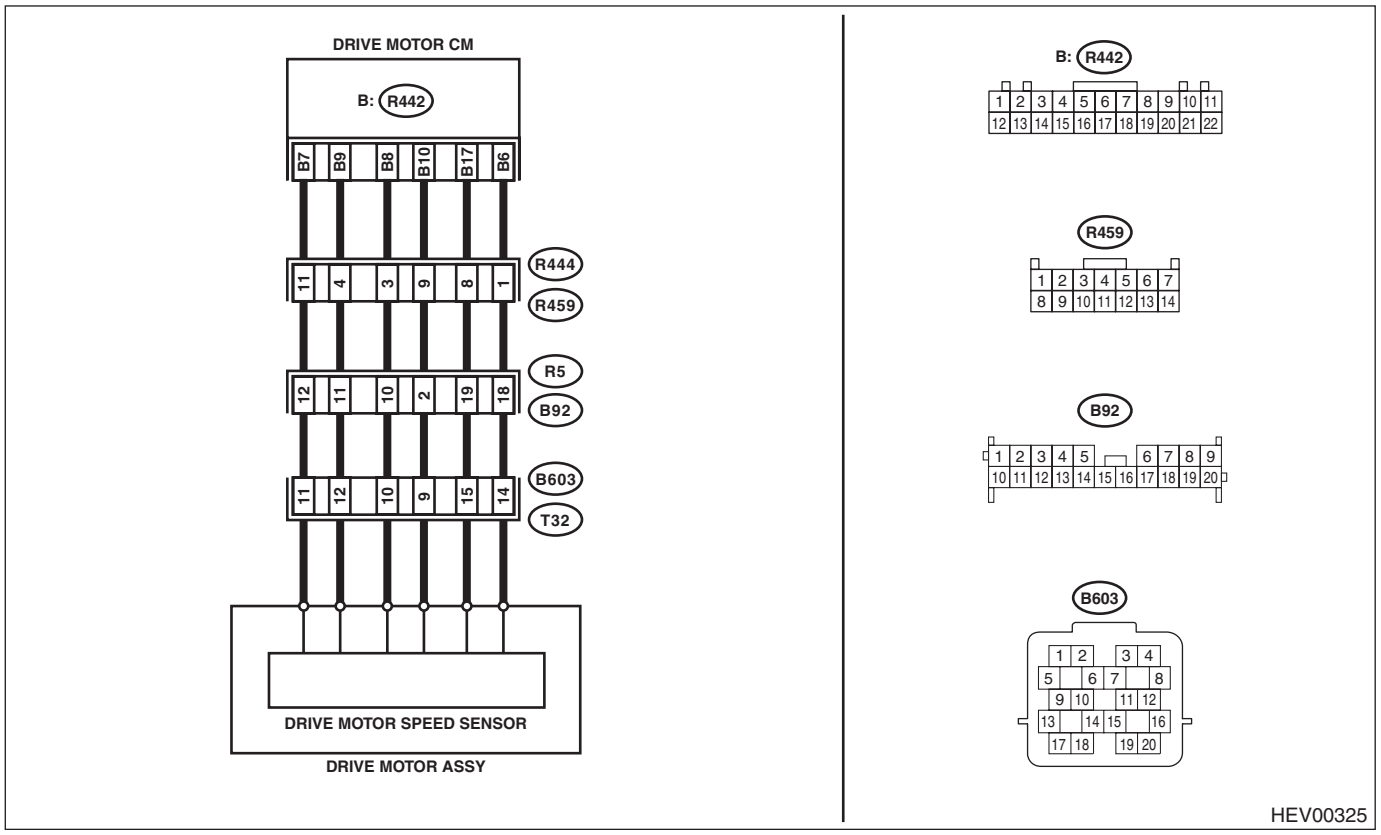
Time Needed for Diagnosis: 0.02 seconds

AR:DTC P0A43 DRIVE MOTOR "A" POSITION SENSOR CIRCUIT INTERMITTENT

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-189, OUTLINE OF DIAGNOSIS, DTC P0A43 DRIVE MOTOR "A" POSITION SENSOR CIRCUIT INTERMITTENT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

CVT control system <Ref. to WI(HEV)-82, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P0A3F detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-76, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.

Step		Check	Yes	No
2	**CHECK HARNESS AND DRIVE MOTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the DMCM connector (R442). 3) Using a tester, measure the resistance between terminals in DMCM connector. ***Connector & terminal*** ***R1-R2*** ***(R442) No. 6 — (R442) No. 17:*** ***S1-S3*** ***(R442) No. 10 — (R442) No. 8:*** ***S2-S4*** ***(R442) No. 9 — (R442) No. 7:***	Is each resistance value as shown in below? R1-R2: Is the value out of 7 — 23 Ω range? or S1-S3: Is the value out of 10 — 39 Ω range? or S2-S4: Is the value out of 11 — 40 Ω range?	Go to step **3**.	Go to step **4**.
3	**CHECK DRIVE MOTOR.** 1) Disconnect the drive motor assembly connector. 2) Using a tester, measure the resistance between terminals in the drive motor assembly connector. ***Connector & terminal*** ***R1-R2*** ***(T32) No. 14 — (T32) No. 15:*** ***S1-S3*** ***(T32) No. 9 — (T32) No. 10:*** ***S2-S4*** ***(T32) No. 12 — (T32) No. 11:***	Is each resistance value as shown in below? R1-R2: Is the value out of 7 — 23 Ω range? or S1-S3: Is the value out of 10 — 39 Ω range? or S2-S4: Is the value out of 11 — 40 Ω range?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Repair the open circuit and short circuit to ground in harness between DMCM connector and drive motor assembly connector.
4	**CHECK HARNESS AND DRIVE MOTOR.** Using a tester, measure the resistance between DMCM connector terminals and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R442) No. 6 — Ground bolt of inverter frame body:*** ***(R442) No. 10 — Ground bolt of inverter frame body:*** ***(R442) No. 9 — Ground bolt of inverter frame body:***	Does the resistance between either two points show 1 MΩ or less?	Go to step **5**.	Go to step **6**.
5	**CHECK DRIVE MOTOR.** 1) Disconnect the drive motor assembly connector. 2) Using a tester, measure the resistance between the drive motor assembly connector and chassis ground. ***Connector & terminal*** ***(T32) No. 14 — Chassis ground:*** ***(T32) No. 9 — Chassis ground:*** ***(T32) No. 12 — Chassis ground:***	Does the resistance between either two points show 1 MΩ or less?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Repair the short circuit to ground in harness between DMCM connector and drive motor assembly connector.

Step		Check	Yes	No
6	**CHECK HARNESS.** 1) Disconnect the drive motor assembly connector. 2) Using a tester, measure the resistance between terminals in the DMCM connector (R442, R443), between the terminals in the intermediate connector (R436), and between terminals in the drive motor assembly connector. ***Connector & terminal*** ***(R442) No. 10 — (R442) No. 1 — 22 (except No. 8):*** ***(R442) No. 10 — (R443) No. 1 — 26:*** ***(R442) No. 10 — (R436) No. 1 — 8:*** ***(R442) No. 8 — (R442) No. 1 — 22 (except No. 10):*** ***(R442) No. 8 — (R443) No. 1 — 26:*** ***(R442) No. 8 — (R436) No. 1 — 8:*** ***(R442) No. 9 — (R442) No. 1 — 22 (except No. 7):*** ***(R442) No. 9 — (R443) No. 1 — 26:*** ***(R442) No. 9 — (R436) No. 1 — 8:*** ***(R442) No. 7 — (R442) No. 1 — 22 (except No. 9):*** ***(R442) No. 7 — (R443) No. 1 — 26:*** ***(R442) No. 7 — (R436) No. 1 — 8:*** ***(R442) No. 6 — (R442) No. 1 — 22 (except No. 17):*** ***(R442) No. 6 — (R443) No. 1 — 26:*** ***(R442) No. 6 — (R436) No. 1 — 8:*** ***(R442) No. 17 — (R442) No. 1 — 22 (except No. 6):*** ***(R442) No. 17 — (R443) No. 1 — 26:*** ***(R442) No. 17 — (R436) No. 1 — 8:***	Does the resistance between either two points show 1 MΩ or more?	Go to step **7**.	Repair the short circuit of harness between DMCM connector and drive motor assembly connector, or repair the intermediate connector.
7	**CHECK HARNESS.** 1) Disconnect the drive motor assembly connector. 2) Using a tester, measure the resistance between terminals in the drive motor assembly connector. ***Connector & terminal*** ***(B603) No. 9 — (B603) No. 1 — 20 (except No. 10):*** ***(B603) No. 10 — (B603) No. 1 — 20 (except No. 9):*** ***(B603) No. 12 — (B603) No. 1 — 20 (except No. 11):*** ***(B603) No. 11 — (B603) No. 1 — 20 (except No. 12):*** ***(B603) No. 14 — (B603) No. 1 — 20 (except No. 15):*** ***(B603) No. 15 — (B603) No. 1 — 20 (except No. 14):***	Does the resistance between either two points show 1 MΩ or more?	Go to step **8**.	Repair the short circuit of harness between DMCM connector and drive motor assembly connector, or repair the intermediate connector.

Step		Check	Yes	No
8	**CHECK DRIVE MOTOR.** Using a tester, measure the resistance between terminals in the drive motor assembly connector. ***Connector & terminal*** ***(T32) No. 9 — (T32) No. 1 — 20 (except No. 10):*** ***(T32) No. 12 — (T32) No. 1 — 20 (except No. 11):*** ***(T32) No. 14 — (T32) No. 1 — 20 (except No. 15):***	Does the resistance between either two points show 1 MΩ or more?	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the drive motor rotation angle sensor.
Judge as NG when the angle detected by drive motor rotation angle sensor is not continuous.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Resolver initialization	Completed
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 9 V
Continuous time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Difference between the current and previous values of Measured drive motor angle) NOTE: • ABS: Absolute value • Sampling time = 0.001 s	> 11.25 deg

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Difference between the current and previous values of Measured drive motor angle)	≤ 11.25 deg

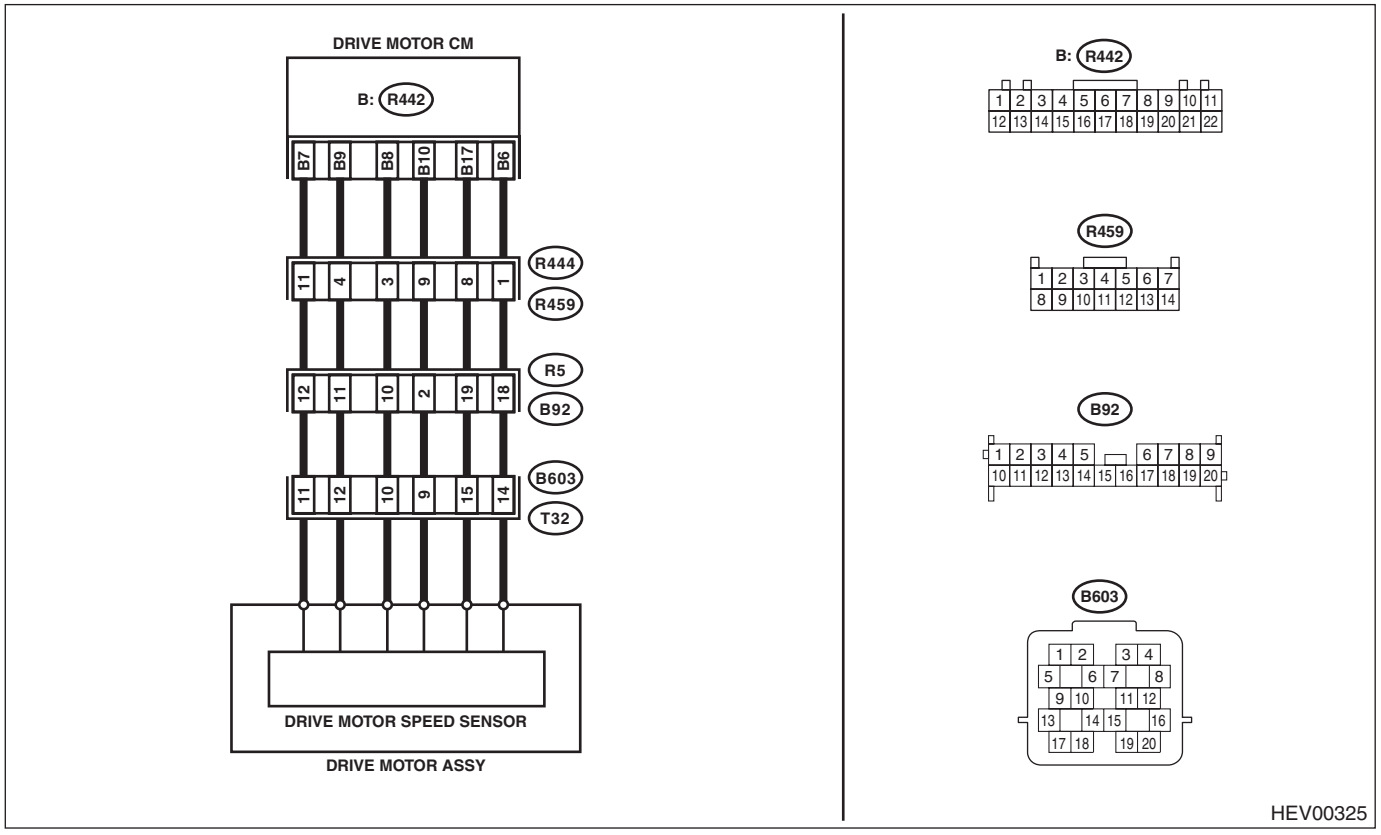
Time Needed for Diagnosis: 0.02 seconds

AS:DTC P0A44 DRIVE MOTOR "A" POSITION SENSOR CIRCUIT OVERSPEED

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-193, OUTLINE OF DIAGNOSIS, DTC P0A44 DRIVE MOTOR "A" POSITION SENSOR CIRCUIT OVERSPEED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

CVT control system <Ref. to WI(HEV)-82, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read DTCs of the following system. • Transmission <Ref. to CVT(HEV)(diag)-19, Read Diagnostic Trouble Code (DTC).>	Is DTC detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to CVT(HEV)(diag)-35, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is either DTC P0A3F or P0A43 detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-76, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK HARNESS AND DRIVE MOTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the DMCM connector (R442). 3) Using a tester, measure the resistance between terminals in DMCM connector. ***Connector & terminal*** ***R1-R2*** ***(R442) No. 6 — (R442) No. 17:*** ***S1-S3*** ***(R442) No. 10 — (R442) No. 8:*** ***S2-S4*** ***(R442) No. 9 — (R442) No. 7:***	Is each resistance value as shown in below? R1-R2: Is the value out of 7 — 23 Ω range? or S1-S3: Is the value out of 10 — 39 Ω range? or S2-S4: Is the value out of 11 — 40 Ω range?	Go to step **4**.	Go to step **5**.
4	**CHECK DRIVE MOTOR.** 1) Disconnect the drive motor assembly connector. 2) Using a tester, measure the resistance between terminals in the drive motor assembly connector. ***Connector & terminal*** ***R1-R2*** ***(T32) No. 14 — (T32) No. 15:*** ***S1-S3*** ***(T32) No. 9 — (T32) No. 10:*** ***S2-S4*** ***(T32) No. 12 — (T32) No. 11:***	Is each resistance value as shown in below? R1-R2: Is the value out of 7 — 23 Ω range? or S1-S3: Is the value out of 10 — 39 Ω range? or S2-S4: Is the value out of 11 — 40 Ω range?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Repair the open circuit and short circuit to ground in harness between DMCM connector and drive motor assembly connector.
5	**CHECK HARNESS AND DRIVE MOTOR.** Using a tester, measure the resistance between DMCM connector terminals and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R442) No. 6 — Ground bolt of inverter frame body:*** ***(R442) No. 10 — Ground bolt of inverter frame body:*** ***(R442) No. 9 — Ground bolt of inverter frame body:***	Does the resistance between either two points show 1 MΩ or less?	Go to step **6**.	Go to step **7**.
6	**CHECK DRIVE MOTOR.** 1) Disconnect the drive motor assembly connector. 2) Using a tester, measure the resistance between the drive motor assembly connector and chassis ground. ***Connector & terminal*** ***(T32) No. 14 — Chassis ground:*** ***(T32) No. 9 — Chassis ground:*** ***(T32) No. 12 — Chassis ground:***	Does the resistance between either two points show 1 MΩ or less?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Repair the short circuit to ground in harness between DMCM connector and drive motor assembly connector.

	Step	Check	Yes	No
7	**CHECK HARNESS.** 1) Disconnect the drive motor assembly connector. 2) Using a tester, measure the resistance between terminals in the DMCM connector (R442, R443), between the terminals in the intermediate connector (R436), and between terminals in the drive motor assembly connector. ***Connector & terminal*** ***(R442) No. 10 — (R442) No. 1 — 22 (except No. 8):*** ***(R442) No. 10 — (R443) No. 1 — 26:*** ***(R442) No. 10 — (R436) No. 1 — 8:*** ***(R442) No. 8 — (R442) No. 1 — 22 (except No. 10):*** ***(R442) No. 8 — (R443) No. 1 — 26:*** ***(R442) No. 8 — (R436) No. 1 — 8:*** ***(R442) No. 9 — (R442) No. 1 — 22 (except No. 7):*** ***(R442) No. 9 — (R443) No. 1 — 26:*** ***(R442) No. 9 — (R436) No. 1 — 8:*** ***(R442) No. 7 — (R442) No. 1 — 22 (except No. 9):*** ***(R442) No. 7 — (R443) No. 1 — 26:*** ***(R442) No. 7 — (R436) No. 1 — 8:*** ***(R442) No. 6 — (R442) No. 1 — 22 (except No. 17):*** ***(R442) No. 6 — (R443) No. 1 — 26:*** ***(R442) No. 6 — (R436) No. 1 — 8:*** ***(R442) No. 17 — (R442) No. 1 — 22 (except No. 6):*** ***(R442) No. 17 — (R443) No. 1 — 26:*** ***(R442) No. 17 — (R436) No. 1 — 8:***	Does the resistance between either two points show 1 MΩ or more?	Go to step **8**.	Repair the short circuit of harness between DMCM connector and drive motor assembly connector, or repair the intermediate connector.
8	**CHECK HARNESS.** 1) Disconnect the drive motor assembly connector. 2) Using a tester, measure the resistance between terminals in the drive motor assembly connector. ***Connector & terminal*** ***(B603) No. 9 — (B603) No. 1 — 20 (except No. 10):*** ***(B603) No. 10 — (B603) No. 1 — 20 (except No. 9):*** ***(B603) No. 12 — (B603) No. 1 — 20 (except No. 11):*** ***(B603) No. 11 — (B603) No. 1 — 20 (except No. 12):*** ***(B603) No. 14 — (B603) No. 1 — 20 (except No. 15):*** ***(B603) No. 15 — (B603) No. 1 — 20 (except No. 14):***	Does the resistance between either two points show 1 MΩ or more?	Go to step **9**.	Repair the short circuit of harness between DMCM connector and drive motor assembly connector, or repair the intermediate connector.

Step		Check	Yes	No
9	**CHECK DRIVE MOTOR.** Using a tester, measure the resistance between terminals in the drive motor assembly connector. ***Connector & terminal*** ***(T32) No. 9 — (T32) No. 1 — 20 (except No. 10):*** ***(T32) No. 12 — (T32) No. 1 — 20 (except No. 11):*** ***(T32) No. 14 — (T32) No. 1 — 20 (except No. 15):***	Does the resistance between either two points show 1 MΩ or more?	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor rotation count.
Judge as NG when the rotation count of drive motor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Resolver initialization	Completed
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 9 V
Continuous time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Motor speed) NOTE: ABS: Absolute value	> 7000 rpm

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Motor speed) NOTE: ABS: Absolute value	≤ 7000 rpm

Time Needed for Diagnosis: 2 seconds

AT:DTC P0C52 DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "A" LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-194, OUTLINE OF DIAGNOSIS, DTC P0C52 DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "A" LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

NOTE:
For the diagnostic procedure, refer to DTC P0A3F DRIVE MOTOR “A” POSITION SENSOR CIRCUIT. <Ref. to HEV(diag)-180, DTC P0A3F DRIVE MOTOR "A" POSITION SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor rotation angle sensor.
Judge as NG when the voltage of drive motor rotation angle sensor terminal (S1) is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 9 V
Continuous time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Resolver S13 circuit error	Detected

Time Needed for Diagnosis: 0.01 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Resolver S13 circuit error	Not Detected

Time Needed for Diagnosis: 0.01 second

AU:DTC P0C5C DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "B" LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-195, OUTLINE OF DIAGNOSIS, DTC P0C5C DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "B" LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

NOTE:
For the diagnostic procedure, refer to DTC P0A3F DRIVE MOTOR “A” POSITION SENSOR CIRCUIT. <Ref. to HEV(diag)-180, DTC P0A3F DRIVE MOTOR "A" POSITION SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor rotation angle sensor.
Judge as NG when the voltage of drive motor rotation angle sensor terminal (S2) is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 9 V
Continuous time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Resolver S24 circuit error	Detected

Time Needed for Diagnosis: 0.01 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Resolver S24 circuit error	Not Detected

Time Needed for Diagnosis: 0.01 second

AV:DTC P0CDC DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "C" LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-196, OUTLINE OF DIAGNOSIS, DTC P0CDC DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "C" LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

NOTE:
For the diagnostic procedure, refer to DTC P0A3F DRIVE MOTOR “A” POSITION SENSOR CIRCUIT. <Ref. to HEV(diag)-180, DTC P0A3F DRIVE MOTOR "A" POSITION SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor rotation angle sensor.
Judge as NG when the voltage of drive motor rotation angle sensor terminal (R1, R2) is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 9 V
Continuous time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Resolver R12 circuit error	Detected

Time Needed for Diagnosis: 0.01 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Resolver R12 circuit error	Not Detected

Time Needed for Diagnosis: 0.01 second

AW:DTC P0CDD DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "C" HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-197, OUTLINE OF DIAGNOSIS, DTC P0CDD DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "C" HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

NOTE:
For the diagnostic procedure, refer to DTC P0A3F DRIVE MOTOR “A” POSITION SENSOR CIRCUIT. <Ref. to HEV(diag)-180, DTC P0A3F DRIVE MOTOR "A" POSITION SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor rotation angle sensor.
Judge as NG when the voltage of drive motor rotation angle sensor terminal (R1, R2) is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 9 V
Continuous time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Resolver R12 circuit error	Detected

Time Needed for Diagnosis: 0.05 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Resolver R12 circuit error	Not Detected

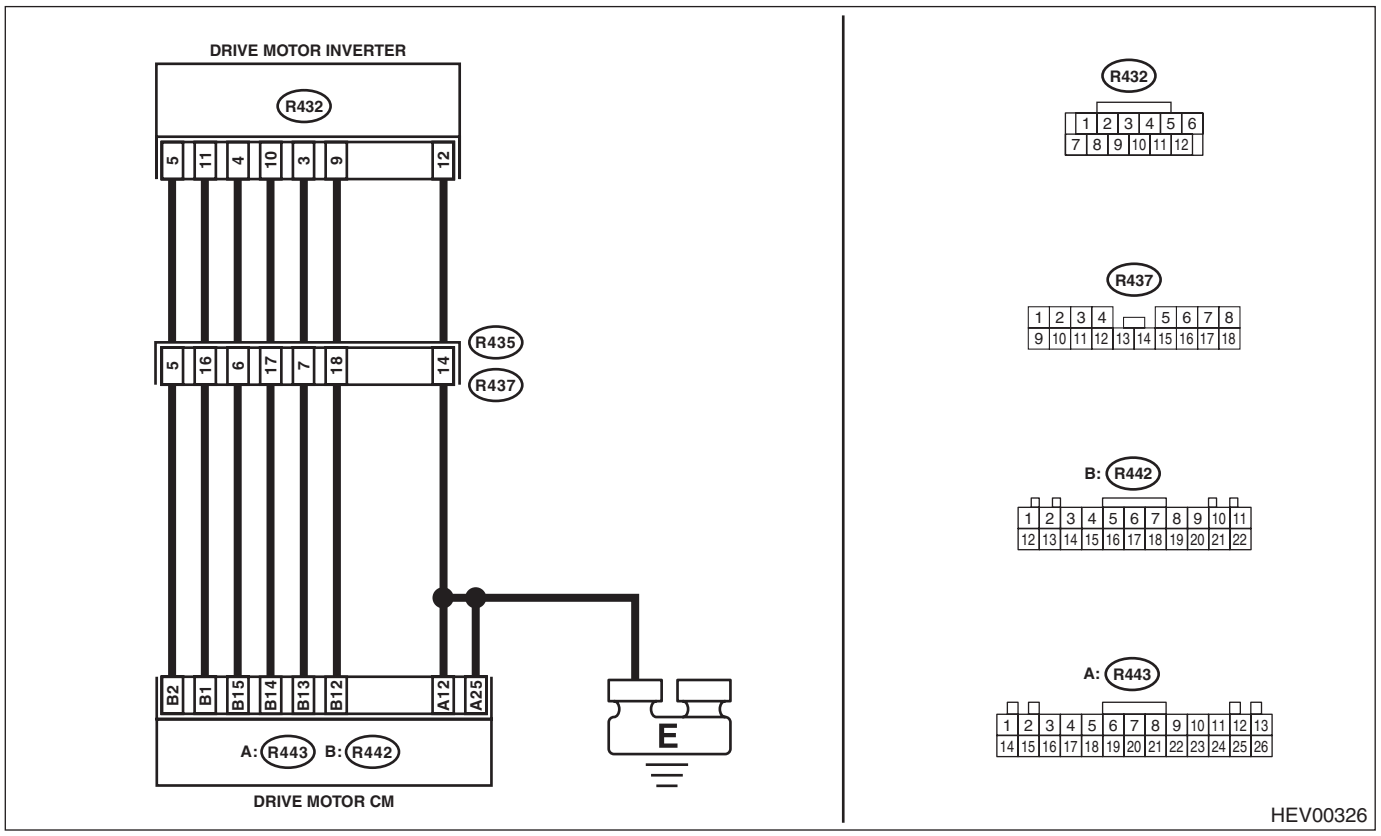
Time Needed for Diagnosis: 0.05 seconds

AX:DTC P0A5D DRIVE MOTOR "A" PHASE U CURRENT

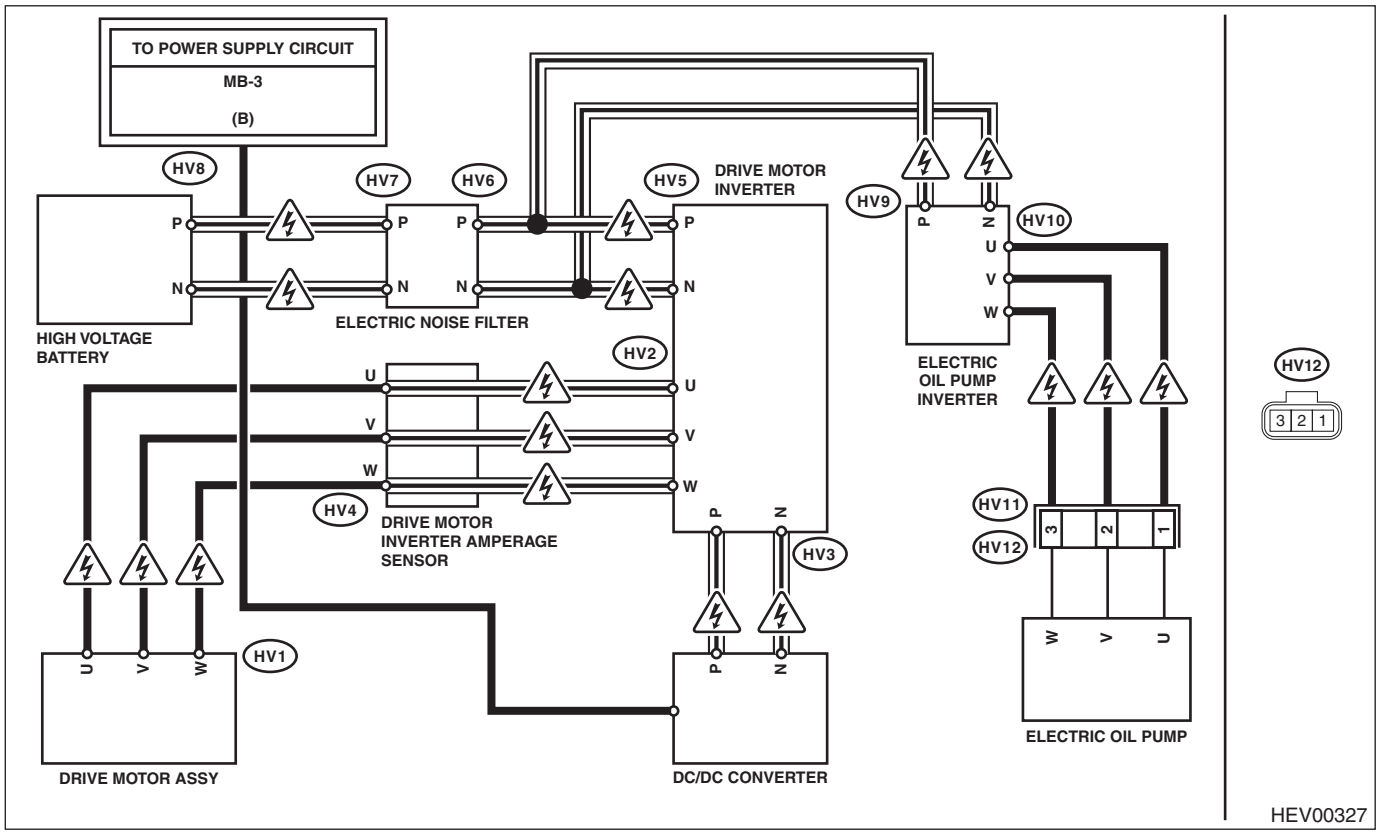
DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-207, OUTLINE OF DIAGNOSIS, DTC P0A5D DRIVE MOTOR "A" PHASE U CURRENT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.



CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-76, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Phase U Amperage Sensor Voltage». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 2.5 V ±0.1 V with IG ON?	Go to step **3**.	Perform the diagnosis according to DTC P0BE6 and P06B1. <Ref. to HEV(diag)-76, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>

Step		Check	Yes	No
3	**CHECK HARNESS (GATE SIGNAL SHORT TO POWER AND SHORT IN OTHER SIGNAL LINES).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the DMCM connector (R442, R443). 6) Disconnect the intermediate connector (R436). 7) Disconnect the drive motor inverter connector. 8) Using a tester, measure the resistance between terminals in DMCM connectors (R442, R443) and between each terminal in inverter connector. ***Connector & terminal*** ***(R442) No. 2 — (R442) No. 1 — 22:*** ***(R442) No. 2 — (R443) No. 1 — 26:*** ***(R442) No. 2 — (R436) No. 1 — 8:*** ***(R442) No. 2 — (R432) No. 7:*** ***(R442) No. 1 — (R442) No. 1 — 22:*** ***(R442) No. 1 — (R443) No. 1 — 26:*** ***(R442) No. 1 — (R436) No. 1 — 8:*** ***(R442) No. 1 — (R432) No. 7:*** ***(R442) No. 15 — (R442) No. 1 — 22:*** ***(R442) No. 15 — (R443) No. 1 — 26:*** ***(R442) No. 15 — (R436) No. 1 — 8:*** ***(R442) No. 15 — (R432) No. 7:*** ***(R442) No. 14 — (R442) No. 1 — 22:*** ***(R442) No. 14 — (R443) No. 1 — 26:*** ***(R442) No. 14 — (R436) No. 1 — 8:*** ***(R442) No. 14 — (R432) No. 7:*** ***(R442) No. 13 — (R442) No. 1 — 22:*** ***(R442) No. 13 — (R443) No. 1 — 26:*** ***(R442) No. 13 — (R436) No. 1 — 8:*** ***(R442) No. 13 — (R432) No. 7:*** ***(R442) No. 12 — (R442) No. 1 — 22:*** ***(R442) No. 12 — (R443) No. 1 — 26:*** ***(R442) No. 12 — (R436) No. 1 — 8:*** ***(R442) No. 12 — (R432) No. 7:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair short circuit in harness between DMCM connector and drive motor inverter, or repair the intermediate connector.

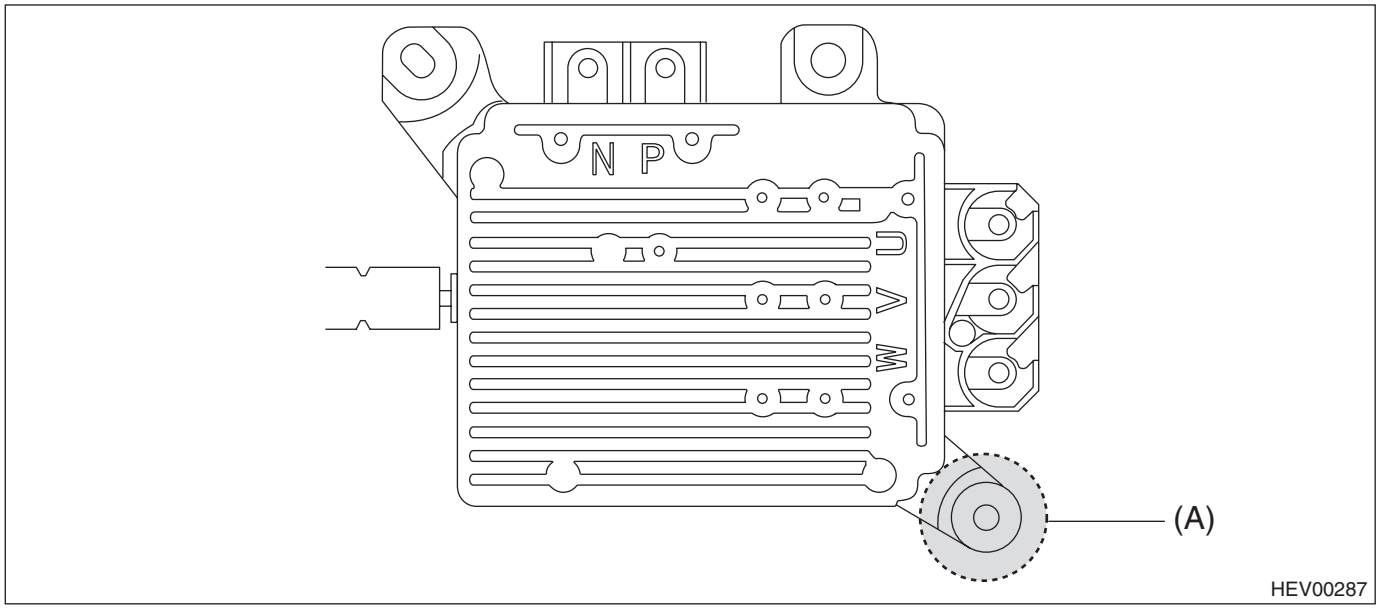
	Step	Check	Yes	No
4	**CHECK DRIVE MOTOR INVERTER (INTERNAL SHORT).** 1) Disconnects power cable terminals (HV2, HV3) of the drive motor inverter and bus bar (HV5). NOTE: Be sure to use insulating tape. 2) Using a tester, check for continuity between drive motor inverter terminals. NOTE: When checking continuity, always follow the combinations as follows with correct polarities. If polarities are reversed when checking, the trouble may not be accurately diagnosed. ***Connector & terminal*** ***(HV5) P (+) — (HV2) U (–):*** ***(HV2) U (+) — (HV5) N (–):*** ***(HV5) P (+) — (HV2) V (–):*** ***(HV2) V (+) — (HV5) N (–):*** ***(HV5) P (+) — (HV2) W (–):*** ***(HV2) W (+) — (HV5) N (–):*** ***(HV5) P (+) — (HV5) N (–):*** ***(HV2) U (+) — (HV2) V (–):*** ***(HV2) U (+) — (HV2) W (–):*** ***(HV2) V (+) — (HV2) W (–):*** ***(HV5) P (+) — Chassis ground (–):*** ***(HV5) N (+) — Chassis ground (–):*** ***(HV2) U (+) — Chassis ground (–):*** ***(HV2) V (+) — Chassis ground (–):*** ***(HV2) W (+) — Chassis ground (–):***	Is there continuity?	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> Go to step **13**.	Go to step **5**.
5	**CHECK DRIVE MOTOR INVERTER (RELEASED).** Using diode voltage measuring mode on a insulation multimeter, measure the voltage between the terminals of the drive motor inverter. NOTE: When checking voltage values, always follow the combinations as follows with correct polarities. If polarities are reversed when checking, the trouble may not be accurately diagnosed. ***Connector & terminal*** ***(HV2) U (+) — (HV5) P (–):*** ***(HV5) N (+) — (HV2) U (–):*** ***(HV2) V (+) — (HV5) P (–):*** ***(HV5) N (+) — (HV2) V (–):*** ***(HV2) W (+) — (HV5) P (–):*** ***(HV5) N (+) — (HV2) W (–):***	Is “O.L” indicated?	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> Go to step **13**.	Go to step **6**.

	Step	Check	Yes	No
6	**CHECK HIGH VOLTAGE UNIT (SHORT).** 1) Remove electric noise filter, DC/DC converter, and electric oil pump inverter. 2) Check continuity between each terminal of the unit. NOTE: • When checking continuity, always follow the combinations as follows with correct polarities. If polarities are reversed when checking, the trouble may not be accurately diagnosed. • For ground measuring points of electric noise filter, DC/DC converter, and electric oil pump inverter, refer to Notes in the margin. ***Connector & terminal*** ***(HV6) P (+) — (HV7) N (–):*** ***(HV6) P (+) — Electric noise filter ground (–):*** ***(HV6) N (+) — Electric noise filter ground (–):*** ***(HV3) P (+) — (HV3) N (–):*** ***(HV3) P (+) — DC/DC converter ground (–) :*** ***(HV3) N (+) — DC/DC converter ground (–):*** ***(HV9) P (+) — (HV9) N (–):*** ***(HV9) P (+) — (HV10) U (–):*** ***(HV9) P (+) — (HV10) V (–):*** ***(HV9) P (+) — (HV10) W (–):*** ***(HV10) U (+) — (HV9) N (–):*** ***(HV10) V (+) — (HV9) N (–):*** ***(HV10) W (+) — (HV9) N (–):*** ***(HV10) U (+) — (HV10) V (–):*** ***(HV10) U (+) — (HV10) W (–):*** ***(HV10) V (+) — (HV10) W (–):*** ***(HV9) P (+) — Electric oil pump inverter ground (–):*** ***(HV9) N (+) — Electric oil pump inverter ground (–):*** ***(HV10) U (+) — Electric oil pump inverter ground (–):*** ***(HV10) V (+) — Electric oil pump inverter ground (–) :*** ***(HV10) W (+) — Electric oil pump inverter ground (–):*** ***(HV8) P (+) — (HV8) N (–):*** ***(HV8) P (+) — Chassis ground (–):*** ***(HV8) N (+) — Chassis ground (–):***	Is there continuity?	Replace the unit that has continuity. Go to step **13**.	Go to step **7**.
7	**CHECK POWER CABLE AND DRIVE MOTOR (SHORT TO GROUND).** Using an insulation multimeter (250 V range), measure the resistance between power cable terminal (HV2) of the drive motor inverter and the ground bolt of inverter frame body. ***Connector & terminal*** ***(HV2) U — Ground bolt of inverter frame body:*** ***(HV2) V — Ground bolt of inverter frame body:*** ***(HV2) W — Ground bolt of inverter frame body:***	Is the resistance 2 MΩ or more?	If you have a milliohm tester at hand, Go to step **8**. If a milliohm tester is not at hand, Go to step **11**.	Go to step **9**.

	Step	Check	Yes	No
8	**CHECK POWER CABLE AND DRIVE MOTOR (SHORT).** Using a milliohm tester, measure the resistance between terminals of drive motor inverter power cable. ***Connector & terminal*** ***(HV2) U — (HV2) V:*** ***(HV2) U — (HV2) W:*** ***(HV2) V — (HV2) W:***	Is resistance between either lines less than 25 mΩ?	Go to step **10**.	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>
9	**CHECK DRIVE MOTOR (SHORT TO GROUND).** 1) Leave the vehicle under temperature of 40°C (104°F) or less for 10 minutes. 2) Disconnect the drive motor power cable (HV1). NOTE: The gasket is not reusable. 3) Using a insulation multimeter (250 V range), measure the resistance between each terminal and chassis ground. ***Connector & terminal*** ***(HV1) U — Chassis ground:*** ***(HV1) V — Chassis ground:*** ***(HV1) W — Chassis ground:***	Does the resistance between any points show less than 2 MΩ?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Repair or replace the short circuit of the power cable. Go to step **13**.
10	**CHECK DRIVE MOTOR (SHORT).** 1) Leave the vehicle under temperature of 40°C (104°F) or less for 10 minutes. 2) Disconnect the drive motor power cable (HV1). NOTE: The gasket is not reusable. 3) Using a milliohm tester, measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV1) U — (HV1) V:*** ***(HV1) U — (HV1) W:*** ***(HV1) V — (HV1) W:***	Is resistance between either lines less than 20 mΩ?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Repair or replace the short circuit of the power cable. Go to step **13**.
11	**CHECK DRIVE MOTOR (SHORT).** 1) Restore the vehicle to its original state. 2) With the 12 V battery connected, remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> **CAUTION:** **Watch for an electrical short at each harness because the 12 V battery is connected.** 3) Lift up the vehicle. 4) Start the engine, and set the shift lever to "D" range. 5) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «A/T Oil Temperature» «Drive Motor Speed» «Drive Motor Inverter Input High Voltage Sensor (Serial)». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Are any of the following statements relevant? • «Drive Motor Inverter Input High Voltage Sensor (Serial)» is out of the standard specified in Note when «ATF Temperature» is 20 — 60°C (68 — 140°F) and «Drive Motor Speed» is 600 — 1400 rpm. • Abnormal noise and changes in rotation speed occur near 600 rpm.	Go to step **12**.	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>

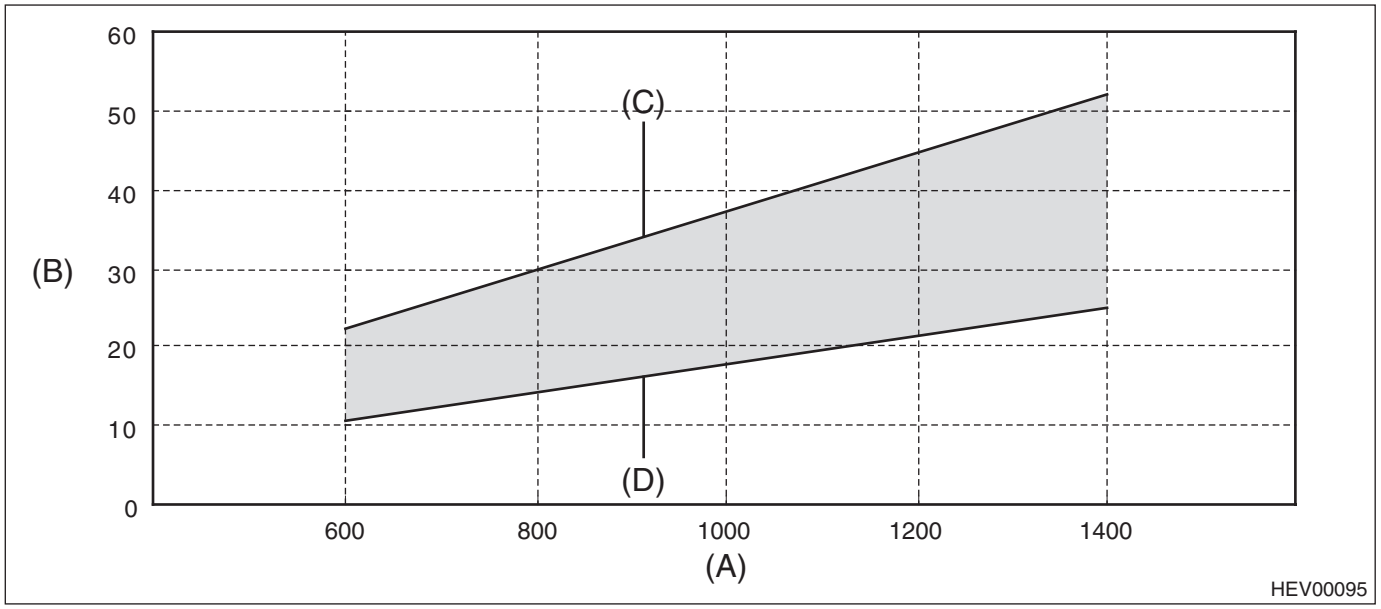
	Step	Check	Yes	No
12	**CHECK POWER CABLE (SHORT).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the drive motor power cable (HV1). NOTE: The gasket is not reusable. 6) Disconnect the power cable (HV2) of drive motor inverter. 7) Using a insulation multimeter (250 V range), measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV2) U — (HV2) V:*** ***(HV2) U — (HV2) W:*** ***(HV2) V — (HV2) W:***	Does the resistance between any points show 2 MΩ or more?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Repair or replace the short circuit of the power cable. Go to step **13**.
13	**CHECK OF DRIVE MOTOR (DEMAGNETIZATION).** 1) Restore the vehicle to its original state. 2) With the 12 V battery connected, remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> **CAUTION:** **Watch for an electrical short at each harness because the 12 V battery is connected.** 3) Lift up the vehicle. 4) Start the engine, and set the shift lever to "D" range. 5) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «A/T Oil Temperature» «Drive Motor Speed» «Drive Motor Inverter Input High Voltage Sensor (Serial)». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	«Drive Motor Inverter Input High Voltage Sensor (Serial)» is within the standard specified in Note when «ATF Temperature» is 20 — 60°C (68 — 140°F) and «Drive Motor Speed» is 600 — 1400 rpm.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>

NOTE:
Ground measuring points
- Electric noise filter



(A) Ground measuring points

- DC/DC converter



(A) Ground measuring points

- Electric oil pump inverter

(A) Ground measuring points

NOTE:
Value of «Drive Motor Inverter Input High Voltage Sensor (Serial)» is proportional to «Drive Motor Speed».
- 1000 rpm: 18 V — 37 V
- 1400 rpm: 25 V — 52 V

(A) Drive motor speed
(B) Drive Motor Inverter Input High Voltage Sensor (Serial)
(C) Standard at Max.
(D) Standard at Min.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the current flowing in drive motor.
Judge as NG when the current flowing in drive motor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
PWM output to the drive motor inverter	ON

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Iu) NOTE: • ABS: Absolute value • Iu: U phase current	> 350 A

Time Needed for Diagnosis: 0.0003 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Iu)	≤ 350 A

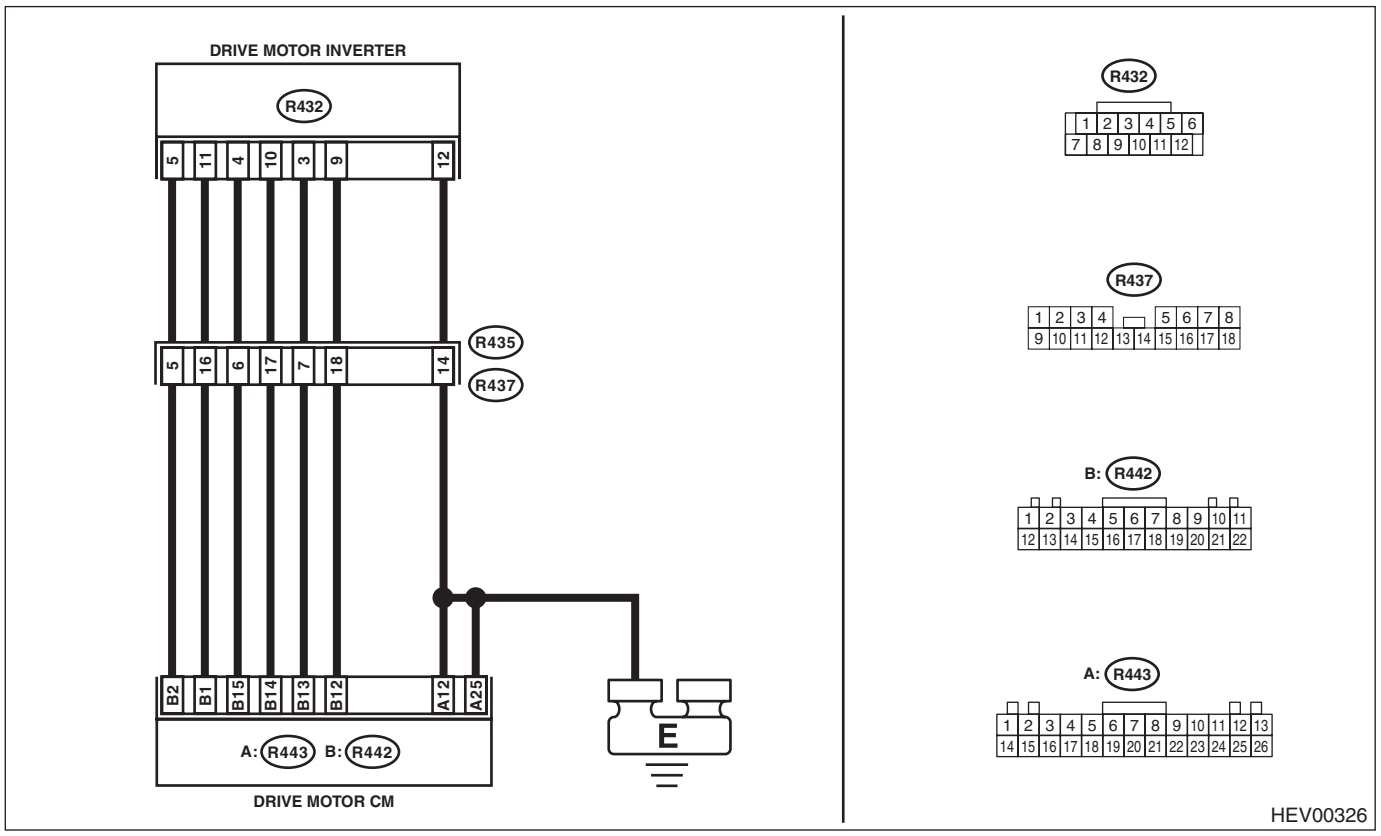
Time Needed for Diagnosis: 0.0006 seconds

AY:DTC P0A60 DRIVE MOTOR "A" PHASE V CURRENT

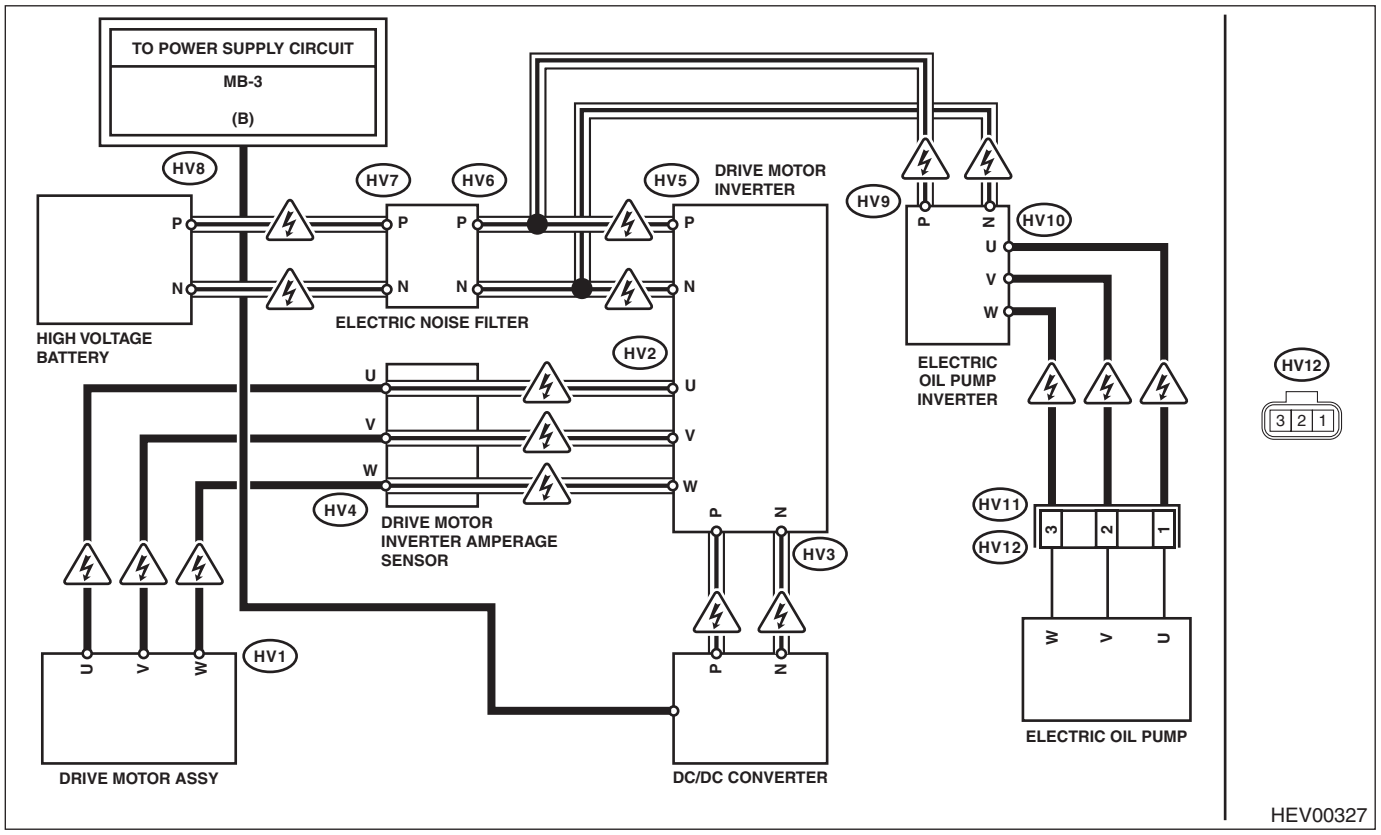
DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-217, OUTLINE OF DIAGNOSIS, DTC P0A60 DRIVE MOTOR "A" PHASE V CURRENT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.



CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P0A78 detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-76, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Phase V Amperage Sensor Voltage». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 2.5 V ±0.1 V with IG ON?	Go to step **3**.	Perform the diagnosis according to DTC P0BE6 and P06B1. <Ref. to HEV(diag)-76, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>

	Step	Check	Yes	No
3	**CHECK HARNESS (GATE SIGNAL SHORT TO POWER AND SHORT IN OTHER SIGNAL LINES).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the DMCM connector (R442, R443). 6) Disconnect the intermediate connector (R436). 7) Disconnect the drive motor inverter connector. 8) Using a tester, measure the resistance between terminals in DMCM connectors (R442, R443) and between each terminal in inverter connector. ***Connector & terminal*** ***(R442) No. 2 — (R442) No. 1 — 22:*** ***(R442) No. 2 — (R443) No. 1 — 26:*** ***(R442) No. 2 — (R436) No. 1 — 8:*** ***(R442) No. 2 — (R432) No. 7:*** ***(R442) No. 1 — (R442) No. 1 — 22:*** ***(R442) No. 1 — (R443) No. 1 — 26:*** ***(R442) No. 1 — (R436) No. 1 — 8:*** ***(R442) No. 1 — (R432) No. 7:*** ***(R442) No. 15 — (R442) No. 1 — 22:*** ***(R442) No. 15 — (R443) No. 1 — 26:*** ***(R442) No. 15 — (R436) No. 1 — 8:*** ***(R442) No. 15 — (R432) No. 7:*** ***(R442) No. 14 — (R442) No. 1 — 22:*** ***(R442) No. 14 — (R443) No. 1 — 26:*** ***(R442) No. 14 — (R436) No. 1 — 8:*** ***(R442) No. 14 — (R432) No. 7:*** ***(R442) No. 13 — (R442) No. 1 — 22:*** ***(R442) No. 13 — (R443) No. 1 — 26:*** ***(R442) No. 13 — (R436) No. 1 — 8:*** ***(R442) No. 13 — (R432) No. 7:*** ***(R442) No. 12 — (R442) No. 1 — 22:*** ***(R442) No. 12 — (R443) No. 1 — 26:*** ***(R442) No. 12 — (R436) No. 1 — 8:*** ***(R442) No. 12 — (R432) No. 7:***	Does the resistance between either two points show 1 MΩ or more?	Go to step **4**.	Repair short circuit in harness between DMCM connector and drive motor inverter, or repair the intermediate connector.

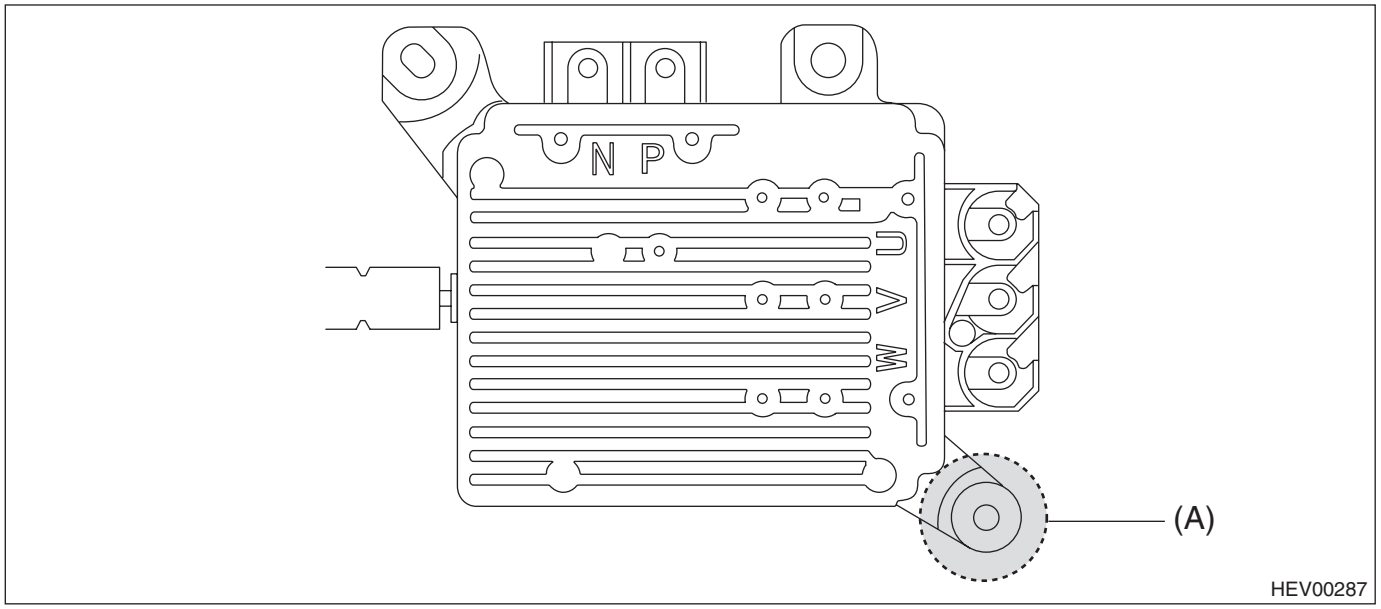
	Step	Check	Yes	No
4	**CHECK DRIVE MOTOR INVERTER (INTERNAL SHORT).** 1) Disconnects power cable terminals (HV2, HV3) of the drive motor inverter and bus bar (HV5). NOTE: Be sure to use insulating tape. 2) Using a tester, check for continuity between drive motor inverter terminals. NOTE: When checking continuity, always follow the combinations as follows with correct polarities. If polarities are reversed when checking, the trouble may not be accurately diagnosed. ***Connector & terminal*** ***(HV5) P (+) — (HV2) U (–):*** ***(HV2) U (+) — (HV5) N (–):*** ***(HV5) P (+) — (HV2) V (–):*** ***(HV2) V (+) — (HV5) N (–):*** ***(HV5) P (+) — (HV2) W (–):*** ***(HV2) W (+) — (HV5) N (–):*** ***(HV5) P (+) — (HV5) N (–):*** ***(HV2) U (+) — (HV2) V (–):*** ***(HV2) U (+) — (HV2) W (–):*** ***(HV2) V (+) — (HV2) W (–):*** ***(HV5) P (+) — Chassis ground (–):*** ***(HV5) N (+) — Chassis ground (–):*** ***(HV2) U (+) — Chassis ground (–):*** ***(HV2) V (+) — Chassis ground (–):*** ***(HV2) W (+) — Chassis ground (–):***	Is there continuity?	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> Go to step **13**.	Go to step **5**.
5	**CHECK DRIVE MOTOR INVERTER (RELEASED).** Using diode voltage measuring mode on a insulation multimeter, measure the voltage between the terminals of the drive motor inverter. NOTE: When checking voltage values, always follow the combinations as follows with correct polarities. If polarities are reversed when checking, the trouble may not be accurately diagnosed. ***Connector & terminal*** ***(HV2) U (+) — (HV5) P (–):*** ***(HV5) N (+) — (HV2) U (–):*** ***(HV2) V (+) — (HV5) P (–):*** ***(HV5) N (+) — (HV2) V (–):*** ***(HV2) W (+) — (HV5) P (–):*** ***(HV5) N (+) — (HV2) W (–):***	Is “O.L” indicated?	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> Go to step **13**.	Go to step **6**.

	Step	Check	Yes	No
6	**CHECK HIGH VOLTAGE UNIT (SHORT).** 1) Remove electric noise filter, DC/DC converter, and electric oil pump inverter. 2) Check continuity between each terminal of the unit. NOTE: • When checking continuity, always follow the combinations as follows with correct polarities. If polarities are reversed when checking, the trouble may not be accurately diagnosed. • For ground measuring points of electric noise filter, DC/DC converter, and electric oil pump inverter, refer to Notes in the margin. ***Connector & terminal*** ***(HV6) P (+) — (HV7) N (–):*** ***(HV6) P (+) — Electric noise filter ground (–):*** ***(HV6) N (+) — Electric noise filter ground (–):*** ***(HV3) P (+) — (HV3) N (–):*** ***(HV3) P (+) — DC/DC converter ground (–) :*** ***(HV3) N (+) — DC/DC converter ground (–):*** ***(HV9) P (+) — (HV9) N (–):*** ***(HV9) P (+) — (HV10) U (–):*** ***(HV9) P (+) — (HV10) V (–):*** ***(HV9) P (+) — (HV10) W (–):*** ***(HV10) U (+) — (HV9) N (–):*** ***(HV10) V (+) — (HV9) N (–):*** ***(HV10) W (+) — (HV9) N (–):*** ***(HV10) U (+) — (HV10) V (–):*** ***(HV10) U (+) — (HV10) W (–):*** ***(HV10) V (+) — (HV10) W (–):*** ***(HV9) P (+) — Electric oil pump inverter ground (–):*** ***(HV9) N (+) — Electric oil pump inverter ground (–):*** ***(HV10) U (+) — Electric oil pump inverter ground (–):*** ***(HV10) V (+) — Electric oil pump inverter ground (–) :*** ***(HV10) W (+) — Electric oil pump inverter ground (–):*** ***(HV8) P (+) — (HV8) N (–):*** ***(HV8) P (+) — Chassis ground (–):*** ***(HV8) N (+) — Chassis ground (–):***	Is there continuity?	Replace the unit that has continuity. Go to step **13**.	Go to step **7**.
7	**CHECK POWER CABLE AND DRIVE MOTOR (SHORT TO GROUND).** Using an insulation multimeter (250 V range), measure the resistance between power cable terminal (HV2) of the drive motor inverter and the ground bolt of inverter frame body. ***Connector & terminal*** ***(HV2) U — Ground bolt of inverter frame body:*** ***(HV2) V — Ground bolt of inverter frame body:*** ***(HV2) W — Ground bolt of inverter frame body:***	Is the resistance 2 MΩ or more?	If you have a milliohm tester at hand, Go to step **8**. If a milliohm tester is not at hand, Go to step **11**.	Go to step **9**.

	Step	Check	Yes	No
8	**CHECK POWER CABLE AND DRIVE MOTOR (SHORT).** Using a milliohm tester, measure the resistance between terminals of drive motor inverter power cable. ***Connector & terminal*** ***(HV2) U — (HV2) V:*** ***(HV2) U — (HV2) W:*** ***(HV2) V — (HV2) W:***	Is resistance between either lines less than 25 mΩ?	Go to step **10**.	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>
9	**CHECK DRIVE MOTOR (SHORT TO GROUND).** 1) Leave the vehicle under temperature of 40°C (104°F) or less for 10 minutes. 2) Disconnect the drive motor power cable (HV1). NOTE: The gasket is not reusable. 3) Using a insulation multimeter (250 V range), measure the resistance between each terminal and chassis ground. ***Connector & terminal*** ***(HV1) U — Chassis ground:*** ***(HV1) V — Chassis ground:*** ***(HV1) W — Chassis ground:***	Does the resistance between any points show less than 2 MΩ?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Repair or replace the short circuit of the power cable. Go to step **13**.
10	**CHECK DRIVE MOTOR (SHORT).** 1) Leave the vehicle under temperature of 40°C (104°F) or less for 10 minutes. 2) Disconnect the drive motor power cable (HV1). NOTE: The gasket is not reusable. 3) Using a milliohm tester, measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV1) U — (HV1) V:*** ***(HV1) U — (HV1) W:*** ***(HV1) V — (HV1) W:***	Is resistance between either lines less than 20 mΩ?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Repair or replace the short circuit of the power cable. Go to step **13**.
11	**CHECK DRIVE MOTOR (SHORT).** 1) Restore the vehicle to its original state. 2) With the 12 V battery connected, remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> **CAUTION:** **Watch for an electrical short at each harness because the 12 V battery is connected.** 3) Lift up the vehicle. 4) Start the engine, and set the shift lever to "D" range. 5) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «A/T Oil Temperature» «Drive Motor Speed» «Drive Motor Inverter Input High Voltage Sensor (Serial)». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Are any of the following statements relevant? • «Drive Motor Inverter Input High Voltage Sensor (Serial)» is out of the standard specified in Note when «ATF Temperature» is 20 — 60°C (68 — 140°F) and «Drive Motor Speed» is 600 — 1400 rpm. • Abnormal noise and changes in rotation speed occur near 600 rpm.	Go to step **12**.	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>

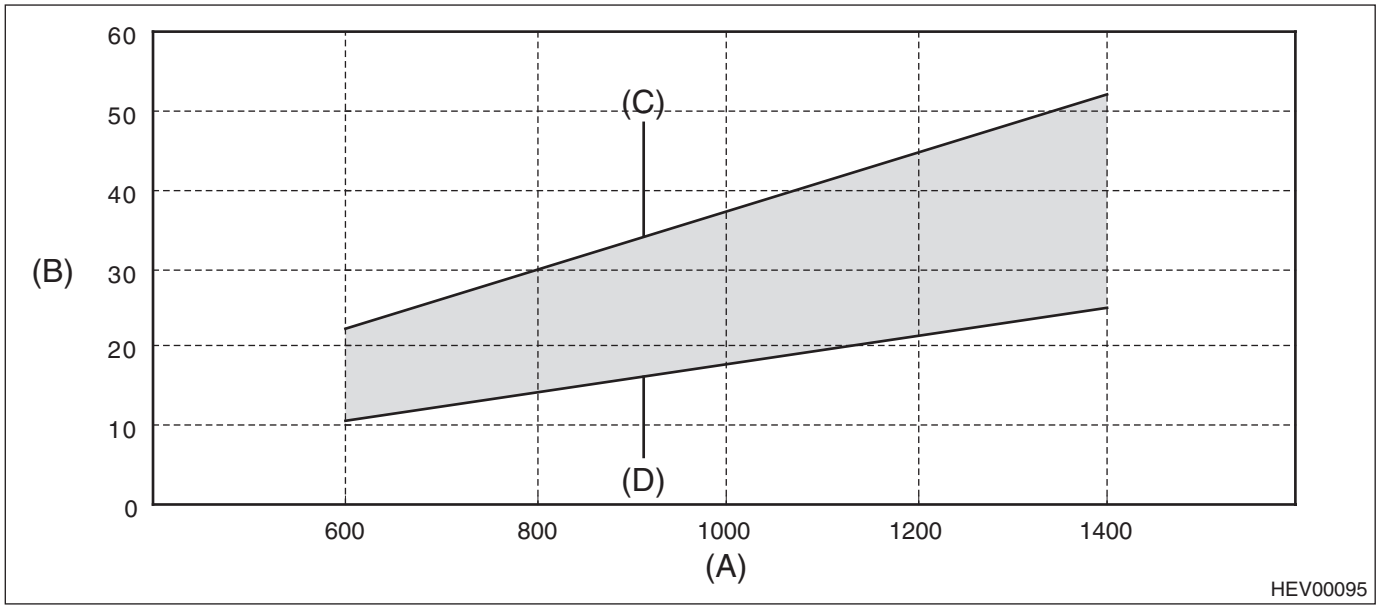
	Step	Check	Yes	No
12	**CHECK POWER CABLE (SHORT).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the drive motor power cable (HV1). NOTE: The gasket is not reusable. 6) Disconnect the power cable (HV2) of drive motor inverter. 7) Using a insulation multimeter (250 V range), measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV2) U — (HV2) V:*** ***(HV2) U — (HV2) W:*** ***(HV2) V — (HV2) W:***	Does the resistance between any points show 2 MΩ or more?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Repair or replace the short circuit of the power cable. Go to step **13**.
13	**CHECK OF DRIVE MOTOR (DEMAGNETIZATION).** 1) Restore the vehicle to its original state. 2) With the 12 V battery connected, remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> **CAUTION:** **Watch for an electrical short at each harness because the 12 V battery is connected.** 3) Lift up the vehicle. 4) Start the engine, and set the shift lever to "D" range. 5) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «A/T Oil Temperature» «Drive Motor Speed» «Drive Motor Inverter Input High Voltage Sensor (Serial)». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	«Drive Motor Inverter Input High Voltage Sensor (Serial)» is within the standard specified in Note when «ATF Temperature» is 20 — 60°C (68 — 140°F) and «Drive Motor Speed» is 600 — 1400 rpm.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>

NOTE:
Ground measuring points
- Electric noise filter



(A) Ground measuring points

- DC/DC converter



(A) Ground measuring points

- Electric oil pump inverter

(A) Ground measuring points

NOTE:
Value of «Drive Motor Inverter Input High Voltage Sensor (Serial)» is proportional to «Drive Motor Speed».
- 1000 rpm: 18 V — 37 V
- 1400 rpm: 25 V — 52 V

(A) Drive motor speed
(B) Drive Motor Inverter Input High Voltage Sensor (Serial)
(C) Standard at Max.
(D) Standard at Min.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the current flowing in drive motor.
Judge as NG when the current flowing in drive motor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
PWM output to the drive motor inverter	ON

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Iv) NOTE: • ABS: Absolute value • Iv: V phase current	> 350 A

Time Needed for Diagnosis: 0.0003 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Iv)	≤ 350 A

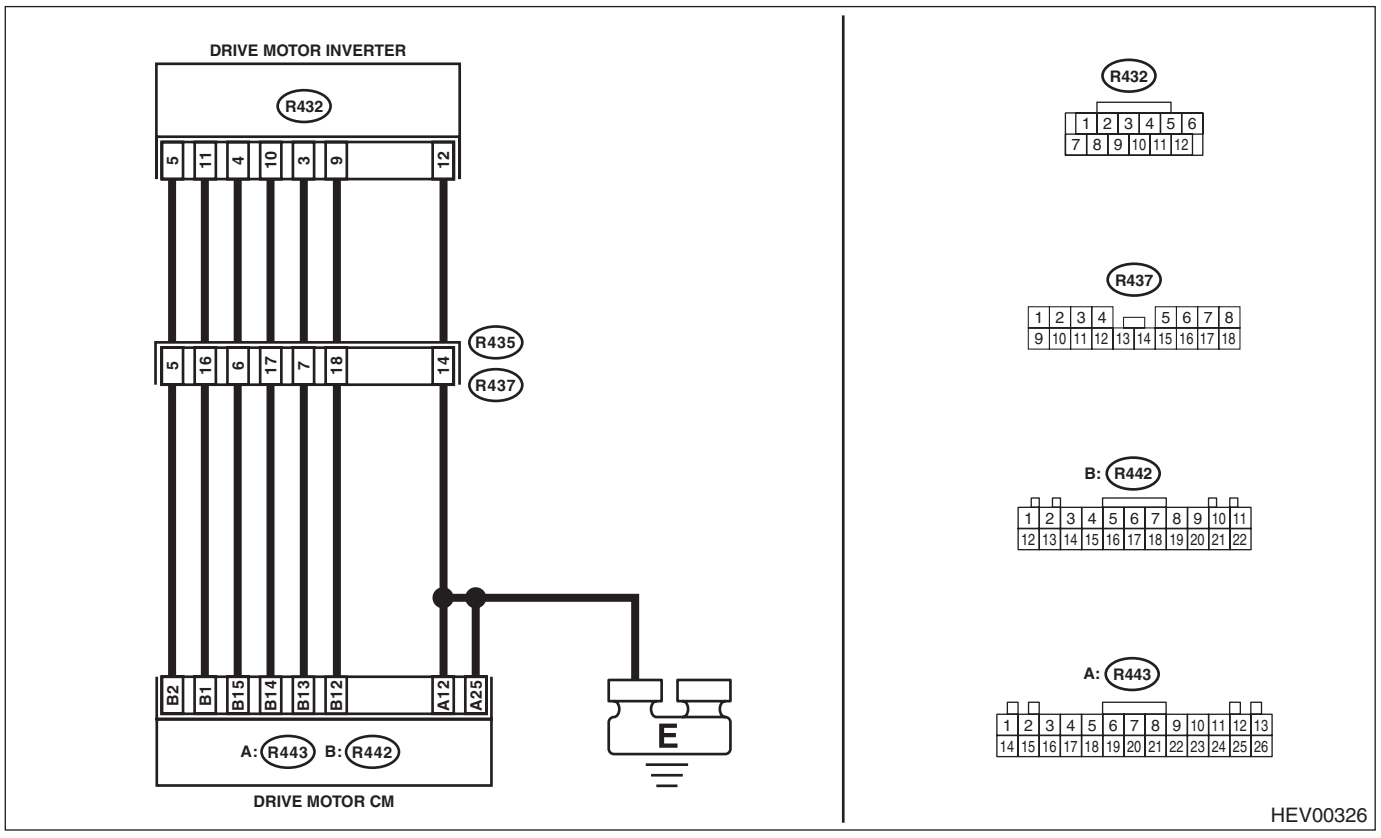
Time Needed for Diagnosis: 0.0006 seconds

AZ:DTC P0A63 DRIVE MOTOR "A" PHASE W CURRENT

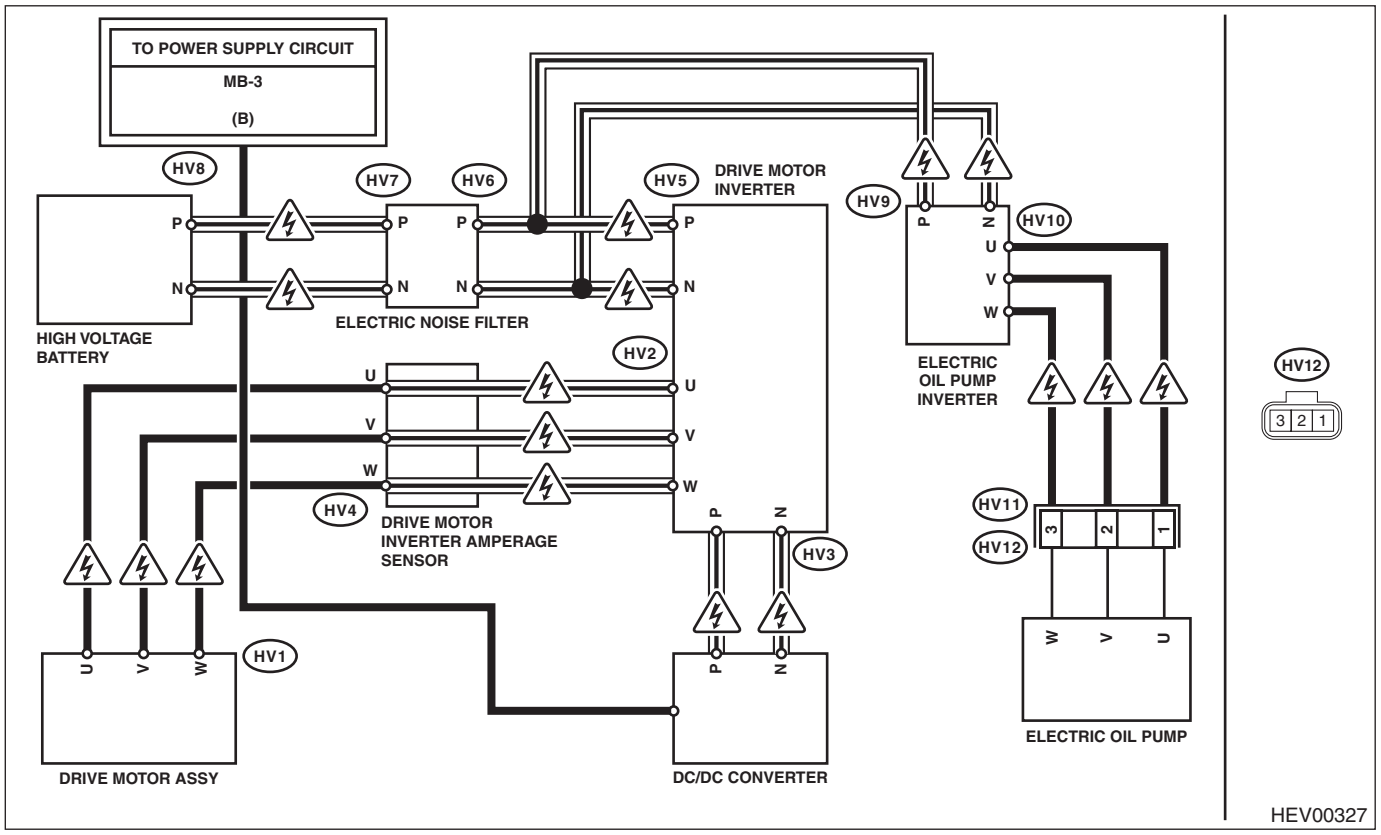
DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-227, OUTLINE OF DIAGNOSIS, DTC P0A63 DRIVE MOTOR "A" PHASE W CURRENT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.



CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P0A78 detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-76, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Phase W Amperage Sensor Voltage». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 2.5 V ±0.1 V with IG ON?	Go to step **3**.	Perform the diagnosis according to DTC P0BE6 and P06B1. <Ref. to HEV(diag)-76, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>

	Step	Check	Yes	No
3	**CHECK HARNESS (GATE SIGNAL SHORT TO POWER AND SHORT IN OTHER SIGNAL LINES).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the DMCM connector (R442, R443). 6) Disconnect the intermediate connector (R436). 7) Disconnect the drive motor inverter connector. 8) Using a tester, measure the resistance between terminals in DMCM connectors (R442, R443) and between each terminal in inverter connector. ***Connector & terminal*** ***(R442) No. 2 — (R442) No. 1 — 22:*** ***(R442) No. 2 — (R443) No. 1 — 26:*** ***(R442) No. 2 — (R436) No. 1 — 8:*** ***(R442) No. 2 — (R432) No. 7:*** ***(R442) No. 1 — (R442) No. 1 — 22:*** ***(R442) No. 1 — (R443) No. 1 — 26:*** ***(R442) No. 1 — (R436) No. 1 — 8:*** ***(R442) No. 1 — (R432) No. 7:*** ***(R442) No. 15 — (R442) No. 1 — 22:*** ***(R442) No. 15 — (R443) No. 1 — 26:*** ***(R442) No. 15 — (R436) No. 1 — 8:*** ***(R442) No. 15 — (R432) No. 7:*** ***(R442) No. 14 — (R442) No. 1 — 22:*** ***(R442) No. 14 — (R443) No. 1 — 26:*** ***(R442) No. 14 — (R436) No. 1 — 8:*** ***(R442) No. 14 — (R432) No. 7:*** ***(R442) No. 13 — (R442) No. 1 — 22:*** ***(R442) No. 13 — (R443) No. 1 — 26:*** ***(R442) No. 13 — (R436) No. 1 — 8:*** ***(R442) No. 13 — (R432) No. 7:*** ***(R442) No. 12 — (R442) No. 1 — 22:*** ***(R442) No. 12 — (R443) No. 1 — 26:*** ***(R442) No. 12 — (R436) No. 1 — 8:*** ***(R442) No. 12 — (R432) No. 7:***	Does the resistance between either two points show 1 MΩ or more?	Go to step **4**.	Repair short circuit in harness between DMCM connector and drive motor inverter, or repair the intermediate connector.

	Step	Check	Yes	No
4	**CHECK DRIVE MOTOR INVERTER (INTERNAL SHORT).** 1) Disconnects power cable terminals (HV2, HV3) of the drive motor inverter and bus bar (HV5). NOTE: Be sure to use insulating tape. 2) Using a tester, check for continuity between drive motor inverter terminals. NOTE: When checking continuity, always follow the combinations as follows with correct polarities. If polarities are reversed when checking, the trouble may not be accurately diagnosed. ***Connector & terminal*** ***(HV5) P (+) — (HV2) U (–):*** ***(HV2) U (+) — (HV5) N (–):*** ***(HV5) P (+) — (HV2) V (–):*** ***(HV2) V (+) — (HV5) N (–):*** ***(HV5) P (+) — (HV2) W (–):*** ***(HV2) W (+) — (HV5) N (–):*** ***(HV5) P (+) — (HV5) N (–):*** ***(HV2) U (+) — (HV2) V (–):*** ***(HV2) U (+) — (HV2) W (–):*** ***(HV2) V (+) — (HV2) W (–):*** ***(HV5) P (+) — Chassis ground (–):*** ***(HV5) N (+) — Chassis ground (–):*** ***(HV2) U (+) — Chassis ground (–):*** ***(HV2) V (+) — Chassis ground (–):*** ***(HV2) W (+) — Chassis ground (–):***	Is there continuity?	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> Go to step **13**.	Go to step **5**.
5	**CHECK DRIVE MOTOR INVERTER (RELEASED).** Using diode voltage measuring mode on a insulation multimeter, measure the voltage between the terminals of the drive motor inverter. NOTE: When checking voltage values, always follow the combinations as follows with correct polarities. If polarities are reversed when checking, the trouble may not be accurately diagnosed. ***Connector & terminal*** ***(HV2) U (+) — (HV5) P (–):*** ***(HV5) N (+) — (HV2) U (–):*** ***(HV2) V (+) — (HV5) P (–):*** ***(HV5) N (+) — (HV2) V (–):*** ***(HV2) W (+) — (HV5) P (–):*** ***(HV5) N (+) — (HV2) W (–):***	Is “O.L” indicated?	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> Go to step **13**.	Go to step **6**.

	Step	Check	Yes	No
6	**CHECK HIGH VOLTAGE UNIT (SHORT).** 1) Remove electric noise filter, DC/DC converter, and electric oil pump inverter. 2) Check continuity between each terminal of the unit. NOTE: • When checking continuity, always follow the combinations as follows with correct polarities. If polarities are reversed when checking, the trouble may not be accurately diagnosed. • For ground measuring points of electric noise filter, DC/DC converter, and electric oil pump inverter, refer to Notes in the margin. ***Connector & terminal*** ***(HV6) P (+) — (HV7) N (–):*** ***(HV6) P (+) — Electric noise filter ground (–):*** ***(HV6) N (+) — Electric noise filter ground (–):*** ***(HV3) P (+) — (HV3) N (–):*** ***(HV3) P (+) — DC/DC converter ground (–) :*** ***(HV3) N (+) — DC/DC converter ground (–):*** ***(HV9) P (+) — (HV9) N (–):*** ***(HV9) P (+) — (HV10) U (–):*** ***(HV9) P (+) — (HV10) V (–):*** ***(HV9) P (+) — (HV10) W (–):*** ***(HV10) U (+) — (HV9) N (–):*** ***(HV10) V (+) — (HV9) N (–):*** ***(HV10) W (+) — (HV9) N (–):*** ***(HV10) U (+) — (HV10) V (–):*** ***(HV10) U (+) — (HV10) W (–):*** ***(HV10) V (+) — (HV10) W (–):*** ***(HV9) P (+) — Electric oil pump inverter ground (–):*** ***(HV9) N (+) — Electric oil pump inverter ground (–):*** ***(HV10) U (+) — Electric oil pump inverter ground (–):*** ***(HV10) V (+) — Electric oil pump inverter ground (–) :*** ***(HV10) W (+) — Electric oil pump inverter ground (–):*** ***(HV8) P (+) — (HV8) N (–):*** ***(HV8) P (+) — Chassis ground (–):*** ***(HV8) N (+) — Chassis ground (–):***	Is there continuity?	Replace the unit that has continuity. Go to step **13**.	Go to step **7**.
7	**CHECK POWER CABLE AND DRIVE MOTOR (SHORT TO GROUND).** Using an insulation multimeter (250 V range), measure the resistance between power cable terminal (HV2) of the drive motor inverter and the ground bolt of inverter frame body. ***Connector & terminal*** ***(HV2) U — Ground bolt of inverter frame body:*** ***(HV2) V — Ground bolt of inverter frame body:*** ***(HV2) W — Ground bolt of inverter frame body:***	Is the resistance 2 MΩ or more?	If you have a milliohm tester at hand, Go to step **8**. If a milliohm tester is not at hand, Go to step **11**.	Go to step **9**.

	Step	Check	Yes	No
8	**CHECK POWER CABLE AND DRIVE MOTOR (SHORT).** Using a milliohm tester, measure the resistance between terminals of drive motor inverter power cable. ***Connector & terminal*** ***(HV2) U — (HV2) V:*** ***(HV2) U — (HV2) W:*** ***(HV2) V — (HV2) W:***	Is resistance between either lines less than 25 mΩ?	Go to step **10**.	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>
9	**CHECK DRIVE MOTOR (SHORT TO GROUND).** 1) Leave the vehicle under temperature of 40°C (104°F) or less for 10 minutes. 2) Disconnect the drive motor power cable (HV1). NOTE: The gasket is not reusable. 3) Using a insulation multimeter (250 V range), measure the resistance between each terminal and chassis ground. ***Connector & terminal*** ***(HV1) U — Chassis ground:*** ***(HV1) V — Chassis ground:*** ***(HV1) W — Chassis ground:***	Does the resistance between any points show less than 2 MΩ?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Repair or replace the short circuit of the power cable. Go to step **13**.
10	**CHECK DRIVE MOTOR (SHORT).** 1) Leave the vehicle under temperature of 40°C (104°F) or less for 10 minutes. 2) Disconnect the drive motor power cable (HV1). NOTE: The gasket is not reusable. 3) Using a milliohm tester, measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV1) U — (HV1) V:*** ***(HV1) U — (HV1) W:*** ***(HV1) V — (HV1) W:***	Is resistance between either lines less than 20 mΩ?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Repair or replace the short circuit of the power cable. Go to step **13**.
11	**CHECK DRIVE MOTOR (SHORT).** 1) Restore the vehicle to its original state. 2) With the 12 V battery connected, remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> **CAUTION:** **Watch for an electrical short at each harness because the 12 V battery is connected.** 3) Lift up the vehicle. 4) Start the engine, and set the shift lever to "D" range. 5) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «A/T Oil Temperature» «Drive Motor Speed» «Drive Motor Inverter Input High Voltage Sensor (Serial)». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Are any of the following statements relevant? • «Drive Motor Inverter Input High Voltage Sensor (Serial)» is out of the standard specified in Note when «ATF Temperature» is 20 — 60°C (68 — 140°F) and «Drive Motor Speed» is 600 — 1400 rpm. • Abnormal noise and changes in rotation speed occur near 600 rpm.	Go to step **12**.	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>

	Step	Check	Yes	No
12	**CHECK POWER CABLE (SHORT).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. 4) Wait for 10 minutes. 5) Disconnect the drive motor power cable (HV1). NOTE: The gasket is not reusable. 6) Disconnect the power cable (HV2) of drive motor inverter. 7) Using a insulation multimeter (250 V range), measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV2) U — (HV2) V:*** ***(HV2) U — (HV2) W:*** ***(HV2) V — (HV2) W:***	Does the resistance between any points show 2 MΩ or more?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Repair or replace the short circuit of the power cable. Go to step **13**.
13	**CHECK OF DRIVE MOTOR (DEMAGNETIZATION).** 1) Restore the vehicle to its original state. 2) With the 12 V battery connected, remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> **CAUTION:** **Watch for an electrical short at each harness because the 12 V battery is connected.** 3) Lift up the vehicle. 4) Start the engine, and set the shift lever to "D" range. 5) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «A/T Oil Temperature» «Drive Motor Speed» «Drive Motor Inverter Input High Voltage Sensor (Serial)». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	«Drive Motor Inverter Input High Voltage Sensor (Serial)» is within the standard specified in Note when «ATF Temperature» is 20 — 60°C (68 — 140°F) and «Drive Motor Speed» is 600 — 1400 rpm.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>

(C) Standard at Max.
(D) Standard at Min.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the current flowing in drive motor.
Judge as NG when the current flowing in drive motor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
PWM output to the drive motor inverter	ON

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Iw) NOTE: • ABS: Absolute value • Iw: W phase current	> 350 A

Time Needed for Diagnosis: 0.0003 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Iw)	≤ 350 A

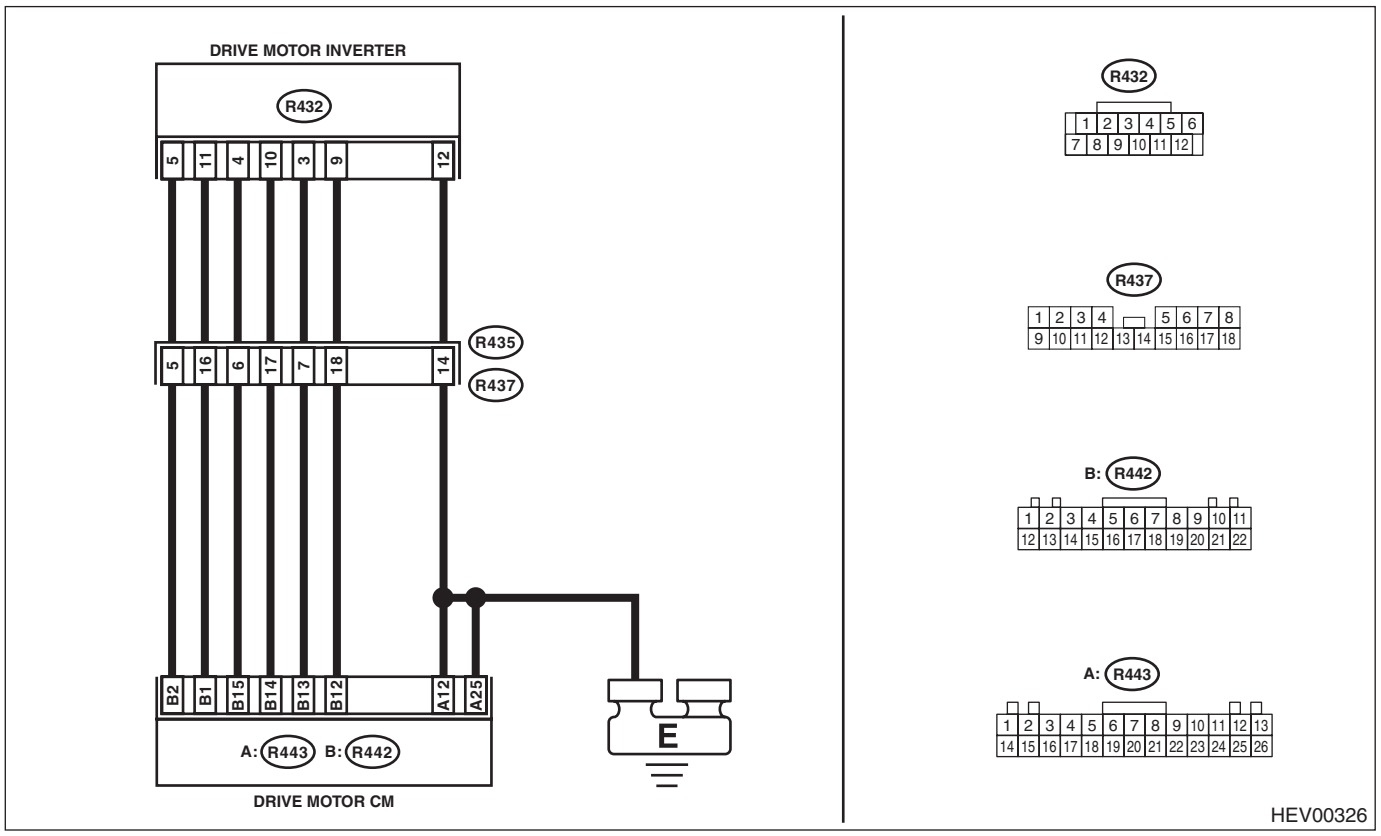
Time Needed for Diagnosis: 0.0006 seconds

BA:DTC P0A78 DRIVE MOTOR "A" INVERTER PERFORMANCE

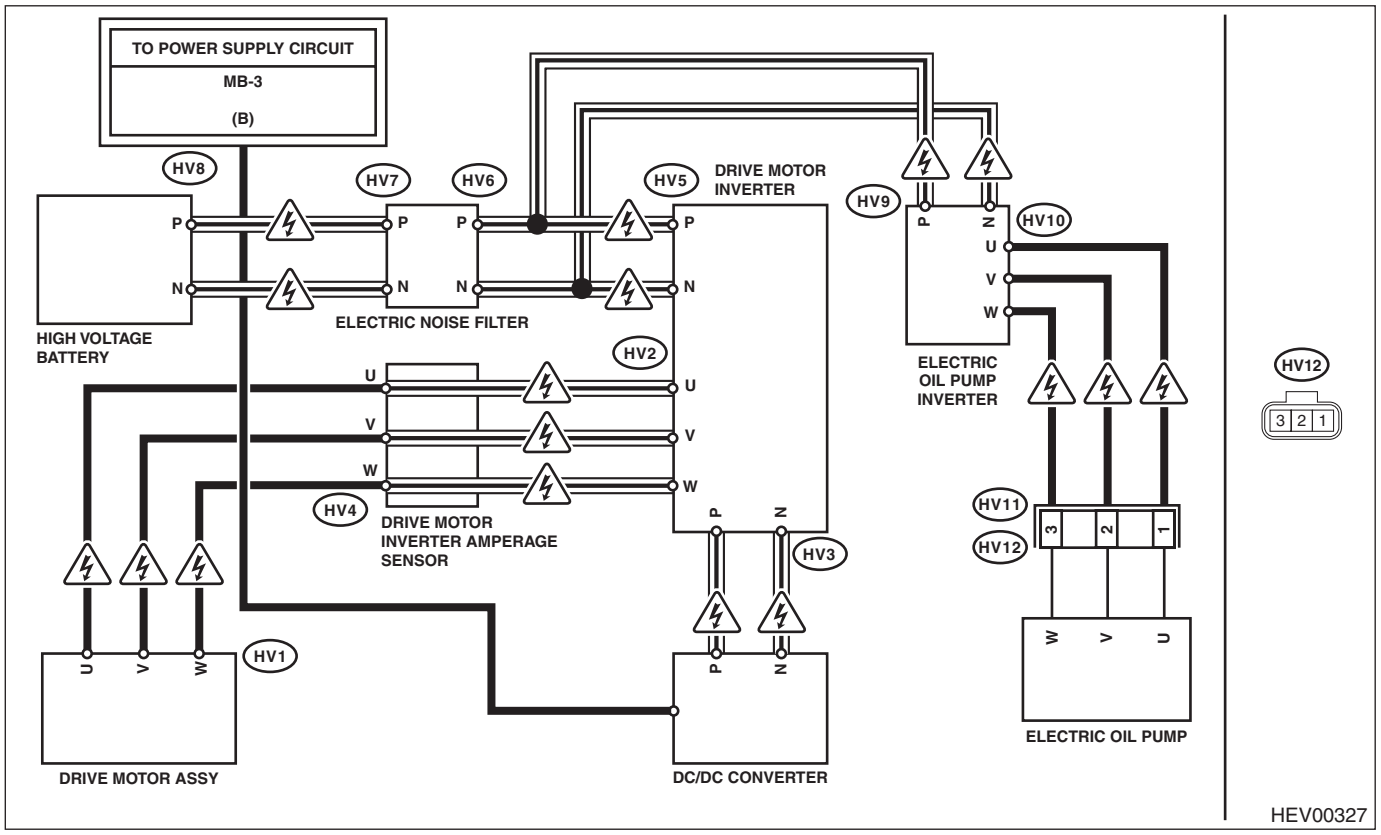
DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-239, OUTLINE OF DIAGNOSIS, DTC P0A78 DRIVE MOTOR "A" INVERTER PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.



CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

	Step	Check	Yes	No
1	**CHECK DETAIL CODE.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Detail Code». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is «Detail Code» displayed?	If 500 is displayed, Go to step **2**. If 501, 502 are displayed, Go to step **17**. If 503 — 508 is displayed, Go to step **19**. NOTE: Check all the counting codes.	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Drive Motor Inverter Serial Check». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Does the value show «Abnormal»?	Perform the diagnosis according to DTC P1C30. <Ref. to HEV(diag)-318, DTC P1C30 LOST COMMUNICATION WITH DRIVE MOTOR "A" INVERTER, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-76, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «Phase U Amperage Sensor Voltage» «Phase V Amperage Sensor Voltage» «Phase W Amperage Sensor Voltage». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 2.5 V±0.1 V?	Go to step **5**.	Perform the diagnosis according to DTC P0BE6 and P06B1. <Ref. to HEV(diag)-76, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>
5	**CHECK HARNESS (GATE SIGNAL SHORT TO POWER AND SHORT IN OTHER SIGNAL LINES).** 1) Turn the ignition switch to OFF. 2) Disconnect the DMCM connector. 3) Disconnect the drive motor inverter connector. 4) Disconnect the intermediate connector (R436). 5) Using a tester, measure the resistance between DMCM connector and individual connectors. ***Connector & terminal*** ***(R442) No. 2 — (R442) No. 1 — 22:*** ***(R442) No. 2 — (R443) No. 1 — 26:*** ***(R442) No. 2 — (R436) No. 1 — 8:*** ***(R442) No. 2 — (R432) No. 7:*** ***(R442) No. 1 — (R442) No. 1 — 22:*** ***(R442) No. 1 — (R443) No. 1 — 26:*** ***(R442) No. 1 — (R436) No. 1 — 8:*** ***(R442) No. 1 — (R432) No. 7:*** ***(R442) No. 15 — (R442) No. 1 — 22:*** ***(R442) No. 15 — (R443) No. 1 — 26:*** ***(R442) No. 15 — (R436) No. 1 — 8:*** ***(R442) No. 15 — (R432) No. 7:*** ***(R442) No. 14 — (R442) No. 1 — 22:*** ***(R442) No. 14 — (R443) No. 1 — 26:*** ***(R442) No. 14 — (R436) No. 1 — 8:*** ***(R442) No. 14 — (R432) No. 7:*** ***(R442) No. 13 — (R442) No. 1 — 22:*** ***(R442) No. 13 — (R443) No. 1 — 26:*** ***(R442) No. 13 — (R436) No. 1 — 8:*** ***(R442) No. 13 — (R432) No. 7:*** ***(R442) No. 12 — (R442) No. 1 — 22:*** ***(R442) No. 12 — (R443) No. 1 — 26:*** ***(R442) No. 12 — (R436) No. 1 — 8:*** ***(R442) No. 12 — (R432) No. 7:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair short circuit in harness between DMCM connector and drive motor inverter connector, or repair the intermediate connector.

	Step	Check	Yes	No
6	**CHECK DRIVE MOTOR INVERTER (SHORT).** 1) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 2) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 3) Wait for 10 minutes. 4) Disconnects power cable (HV2, HV3) and bus bar (HV5) from the drive motor inverter. NOTE: Be sure to use insulating tape. 5) Using a tester, check continuity between drive motor inverter terminals. NOTE: When checking continuity, always follow the combinations as follows with correct polarities. If polarities are reversed when checking, the trouble may not be accurately diagnosed. ***Connector & terminal*** ***(HV5) P (+) — (HV2) U (–):*** ***(HV5) P (+) — (HV2) V (–):*** ***(HV5) P (+) — (HV2) W (–):*** ***(HV2) U (+) — (HV5) N (–):*** ***(HV2) V (+) — (HV5) N (–):*** ***(HV2) W (+) — (HV5) N (–):*** ***(HV5) P (+) — (HV5) N (–):*** ***(HV2) U (+) — (HV2) V (–):*** ***(HV2) U (+) — (HV2) W (–):*** ***(HV2) V (+) — (HV2) W (–):*** ***(HV5) P (+) — Chassis ground (–):*** ***(HV5) N (+) — Chassis ground (–):*** ***(HV2) U (+) — Chassis ground (–):*** ***(HV2) V (+) — Chassis ground (–):*** ***(HV2) W (+) — Chassis ground (–):***	Is there continuity?	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> Go to step **15**.	Go to step **7**.
7	**CHECK DRIVE MOTOR INVERTER (RELEASED).** Using diode voltage measuring mode on a insulation multimeter, measure the voltage between the terminals of the drive motor inverter. NOTE: When checking voltage values, always follow the combinations as follows with correct polarities. If polarities are reversed when checking, the trouble may not be accurately diagnosed. ***Connector & terminal*** ***(HV2) U (+) — (HV5) P (–):*** ***(HV5) N (+) — (HV2) U (–):*** ***(HV2) V (+) — (HV5) P (–):*** ***(HV5) N (+) — (HV2) V (–):*** ***(HV2) W (+) — (HV5) P (–):*** ***(HV5) N (+) — (HV2) W (–):***	Is “O.L” indicated?	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> Go to step **15**.	Go to step **8**.

	Step	Check	Yes	No
8	**CHECK HIGH VOLTAGE UNIT (SHORT).** 1) Remove electric noise filter, DC/DC converter, and electric oil pump inverter. 2) Using a tester, check for continuity between terminals of each unit. NOTE: • When checking continuity, always follow the combinations as follows with correct polarities. If polarities are reversed when checking, the trouble may not be accurately diagnosed. • For ground measuring points of electric noise filter, DC/DC converter, and electric oil pump inverter, refer to Notes in the margin. ***Connector & terminal*** ***(HV6) P (+) — (HV7) N (–):*** ***(HV6) P (+) — Electric noise filter ground (–):*** ***(HV6) N (+) — Electric noise filter ground (–):*** ***(HV3) P (+) — (HV3) N (–):*** ***(HV3) P (+) — DC/DC converter ground (–) :*** ***(HV3) N (+) — DC/DC converter ground (–):*** ***(HV9) P (+) — (HV9) N (–):*** ***(HV9) P (+) — (HV10) U (–):*** ***(HV9) P (+) — (HV10) V (–):*** ***(HV9) P (+) — (HV10) W (–):*** ***(HV10) U (+) — (HV9) N (–):*** ***(HV10) V (+) — (HV9) N (–):*** ***(HV10) W (+) — (HV9) N (–):*** ***(HV10) U (+) — (HV10) V (–):*** ***(HV10) U (+) — (HV10) W (–):*** ***(HV10) V (+) — (HV10) W (–):*** ***(HV9) P (+) — Electric oil pump inverter ground (–):*** ***(HV9) N (+) — Electric oil pump inverter ground (–):*** ***(HV10) U (+) — Electric oil pump inverter ground (–):*** ***(HV10) V (+) — Electric oil pump inverter ground (–) :*** ***(HV10) W (+) — Electric oil pump inverter ground (–):*** ***(HV8) P (+) — (HV8) N (–):*** ***(HV8) P (+) — Chassis ground (–):*** ***(HV8) N (+) — Chassis ground (–):***	Is there continuity?	Replace the unit that has continuity. Go to step **14**.	Go to step **9**.
9	**CHECK POWER CABLE AND DRIVE MOTOR (SHORT TO GROUND).** Using an insulation multimeter (250 V range), measure the resistance between power cable terminals and chassis ground. ***Connector & terminal*** ***(HV2) U — Chassis ground:*** ***(HV2) V — Chassis ground:*** ***(HV2) W — Chassis ground:***	Is the resistance 2 MΩ or more?	If you have a milliohm tester at hand, Go to step **10**. If a milliohm tester is not at hand, Go to step **13**.	Go to step **11**.

	Step	Check	Yes	No
10	**CHECK POWER CABLE AND DRIVE MOTOR (SHORT).** Using a milliohm tester, measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV2) U — (HV2) V:*** ***(HV2) U — (HV2) W:*** ***(HV2) V — (HV2) W:***	Is either resistance value less than 25 mΩ?	Go to step **12**.	Go to step **16**.
11	**CHECK POWER CABLE AND DRIVE MOTOR (SHORT TO GROUND).** 1) Leave the vehicle under temperature of 40°C (104°F) or less for 10 minutes. 2) Disconnect the drive motor power cable (HV1). NOTE: The gasket is not reusable. 3) Using an insulation multimeter (250 V range), measure the resistance between power cable terminals and chassis ground. ***Connector & terminal*** ***(HV1) U — Chassis ground:*** ***(HV1) V — Chassis ground:*** ***(HV1) W — Chassis ground:***	Does the resistance between any points show less than 2 MΩ?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Repair or replace the short circuit of the power cable. Go to step **15**.
12	**CHECK POWER CABLE AND DRIVE MOTOR (SHORT).** 1) Leave the vehicle under temperature of 40°C (104°F) or less for 10 minutes. 2) Disconnect the drive motor power cable (HV1). NOTE: The gasket is not reusable. 3) Using a milliohm tester, measure the resistance between power cable terminals and chassis ground. ***Connector & terminal*** ***(HV1) U — Chassis ground:*** ***(HV1) V — Chassis ground:*** ***(HV1) W — Chassis ground:***	Is resistance between either lines less than 20 mΩ?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Repair or replace the short circuit of the power cable. Go to step **15**.
13	**CHECK DRIVE MOTOR (SHORT).** 1) Restore the vehicle to its original state. 2) With the 12 V battery connected, remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> **CAUTION:** **Watch for an electrical short at each harness because the 12 V battery is connected.** 3) Lift up the vehicle. 4) Start the engine, and set the shift lever to “D” range. 5) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «A/T Oil Temperature» «Drive Motor Speed» «Drive Motor Inverter Input High Voltage Sensor (Serial)». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Are any of the following statements relevant? • «Drive Motor Inverter Input High Voltage Sensor (Serial)» is out of the standard specified in Note when «ATF Temperature» is 20 — 60°C (68 — 140°F) and «Drive Motor Speed» is 600 — 1400 rpm. • Abnormal noise and changes in rotation speed occur near 600 rpm.	Go to step **14**.	Go to step **16**.

	Step	Check	Yes	No
14	**CHECK DRIVE MOTOR AND POWER CABLE.** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Disconnect the power cable (HV2) of drive motor inverter. 4) Disconnect the drive motor power cable (HV1). NOTE: The gasket is not reusable. 5) Using a insulation multimeter (250 V range), measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV2) U — (HV2) V:*** ***(HV2) U — (HV2) W:*** ***(HV2) V — (HV2) W:***	Does the resistance between any points show 2 MΩ or more?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Repair or replace the short circuit of the power cable. Go to step **15**.
15	**CHECK OF DRIVE MOTOR (DEMAGNETIZATION).** 1) Restore the vehicle to its original state. 2) With the 12 V battery connected, remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> **CAUTION:** **Watch for an electrical short at each harness because the 12 V battery is connected.** 3) Lift up the vehicle. 4) Start the engine, and set the shift lever to "D" range. 5) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «A/T Oil Temperature» «Drive Motor Speed» «Drive Motor Inverter Input High Voltage Sensor (Serial)». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	«Drive Motor Inverter Input High Voltage Sensor (Serial)» is within the standard specified in Note when «ATF Temperature» is 20 — 60°C (68 — 140°F) and «Drive Motor Speed» is 600 — 1400 rpm.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>
16	**CHECK DRIVE MOTOR INVERTER.** 1) Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> 2) Perform drive cycle A. <Ref. to HEV(diag)-32, DRIVE CYCLE A, PROCEDURE, Drive Cycle.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Problem is present in drive motor inverter.
17	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Drive Motor Inverter Serial Check». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Does the value show «Abnormal»?	Perform the diagnosis according to DTC P1C30. <Ref. to HEV(diag)-318, DTC P1C30 LOST COMMUNICATION WITH DRIVE MOTOR "A" INVERTER, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **18**.

	Step	Check	Yes	No
18	**CHECK DRIVE MOTOR INVERTER.** 1) Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> 2) Perform drive cycle A. <Ref. to HEV(diag)-32, DRIVE CYCLE A, PROCEDURE, Drive Cycle.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Problem is present in drive motor inverter.
19	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-76, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **20**.
20	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «Phase U Amperage Sensor Voltage» «Phase V Amperage Sensor Voltage» «Phase W Amperage Sensor Voltage». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 2.5 V±0.1 V?	Go to step **21**.	Perform the diagnosis according to DTC P0BE6 and P06B1. <Ref. to HEV(diag)-76, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>
21	**CHECK DRIVE MOTOR INVERTER (INTERNAL SHORT).** 1) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 2) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 3) Wait for 10 minutes. 4) Disconnect the DMCM connector. 5) Disconnect the drive motor inverter connector. 6) Using a tester, measure the resistance between DMCM connector and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R442) No. 2 — Ground bolt of inverter frame body:*** ***(R442) No. 1 — Ground bolt of inverter frame body:*** ***(R442) No. 15 — Ground bolt of inverter frame body:*** ***(R442) No. 14 — Ground bolt of inverter frame body:*** ***(R442) No. 13 — Ground bolt of inverter frame body:*** ***(R442) No. 12 — Ground bolt of inverter frame body:***	Is the resistance 1 MΩ or more?	Go to step **22**.	Repair short to ground circuit in harness between DMCM connector and drive motor inverter connector, or repair the intermediate connector.

	Step	Check	Yes	No
22	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the drive motor inverter connector and DMCM connector. ***Connector & terminal*** ***(R442) No. 2 — (R432) No. 5:*** ***(R442) No. 1 — (R432) No. 11:*** ***(R442) No. 15 — (R432) No. 4:*** ***(R442) No. 14 — (R432) No. 10:*** ***(R442) No. 13 — (R432) No. 3:*** ***(R442) No. 12 — (R432) No. 9:***	Is the resistance less than 1 Ω?	Go to step **23**.	Repair open circuit in harness between DMCM connector and drive motor inverter connector, or repair the intermediate connector.
23	**CHECK POWER CABLE AND DRIVE MOTOR (OPEN CIRCUIT).** 1) Leave the vehicle for ten minutes under temperature of 40°C (104°F) or less. 2) Disconnect the power cable (HV2) from drive motor inverter. 3) Using a tester, measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV2) U — (HV2) V:*** ***(HV2) U — (HV2) W:*** ***(HV2) V — (HV2) W:***	Is resistance between either lines 1 Ω or more?	Go to step **24**.	Go to step **25**.
24	**CHECK DRIVE MOTOR (OPEN CIRCUIT).** 1) Leave the vehicle under temperature of 40°C (104°F) or less for 10 minutes. 2) Disconnect the drive motor power cable (HV1). NOTE: The gasket is not reusable. 3) Using the tester, measure the resistance between drive motor terminals. ***Connector & terminal*** ***(HV1) U — (HV1) V:*** ***(HV1) U — (HV1) W:*** ***(HV1) V — (HV1) W:***	Is resistance between either lines 1 Ω or more?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Repair or replace the open circuit of the power cable.
25	**CHECK DRIVE MOTOR INVERTER.** 1) Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> 2) Perform drive cycle A. <Ref. to HEV(diag)-32, DRIVE CYCLE A, PROCEDURE, Drive Cycle.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Problem is present in drive motor inverter.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter.
Judge as NG when the malfunction is detected in the internal circuit of drive motor inverter.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 8 V
Continuous time of a and b	≥ 1 s
First SCI data from drive motor inverter	Received

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Malfunction signal (internal data) from IC in the drive motor inverter	ON

Time Needed for Diagnosis: 0.03 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Malfunction signal (internal data) from IC in the drive motor inverter	OFF

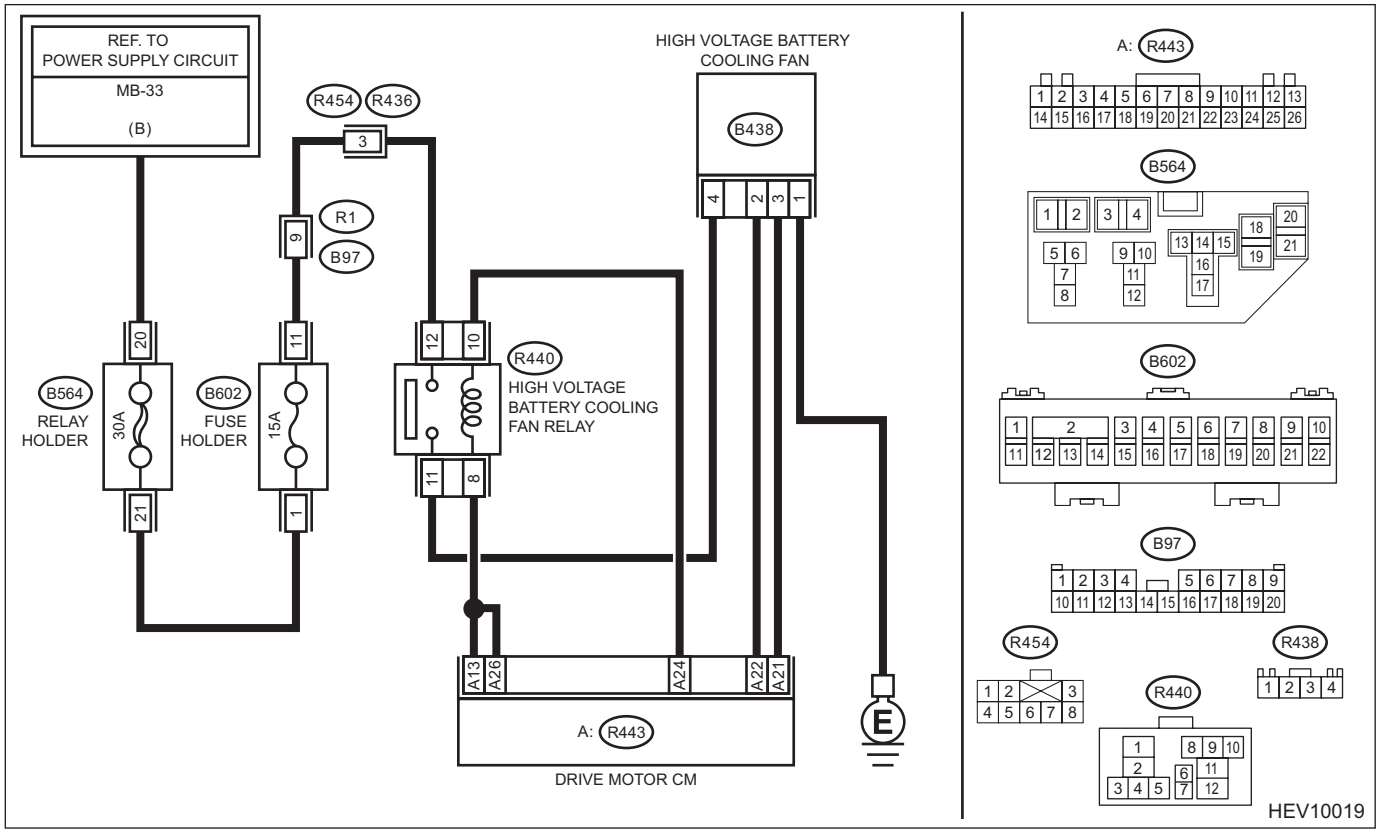
Time Needed for Diagnosis: 0.02 seconds

BB:DTC P0A82 HYBRID/EV BATTERY PACK COOLING FAN 1 PERFORMANCE/ STUCK OFF

DIAGNOSIS:

- Detected when two consecutive driving cycles with fault occur. (Single engine startup is counted as one drive cycle.)
- GENERAL DESCRIPTION <Ref. to HEV(diag)-242, OUTLINE OF DIAGNOSIS, DTC P0A82 HYBRID/EV BATTERY PACK COOLING FAN 1 PERFORMANCE/STUCK OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

	Step	Check	Yes	No
1	**CHECK HIGH VOLTAGE BATTERY COOLING FAN.** Using the Subaru Select Monitor, perform «High Voltage Battery Cooling Fan» of System Operation Check Mode for the drive motor control system. <Ref. to HEV(diag)-70, DRIVE MOTOR CONTROL SYSTEM, OPERATION, System Operation Check Mode.>	Does the cooling fan speed change when the speed is switched across 4 steps (Stop, Steps 1 — 3)?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the DMCM connector. 3) Disconnect the high voltage battery cooling fan connector. 4) Using a tester, measure the resistance between the high voltage battery cooling fan connector and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R443) No. 21 — (R438) No. 3:*** ***(R443) No. 22 — (R438) No. 2:*** ***(R438) No. 1 — Ground bolt of inverter frame body:*** ***(R438) No. 4 — (R440) No. 11:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair open circuit in harness between DMCM connector and high voltage battery cooling fan connector, or repair the intermediate connector.
3	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** Using a tester, measure the resistance between the high voltage battery cooling fan connector and other signal lines. ***Connector & terminal*** ***(R443) No. 21 — (R438) No. 4:*** ***(R443) No. 21 — (R443) No. 1 — 26:*** ***(R443) No. 21 — (R442) No. 1 — 22:*** ***(R443) No. 21 — (R436) No. 1 — 8:*** ***(R443) No. 22 — (R438) No. 4:*** ***(R443) No. 22 — (R443) No. 1 — 26:*** ***(R443) No. 22 — (R442) No. 1 — 22:*** ***(R443) No. 22 — (R436) No. 1 — 8:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair short circuit to power in harness between DMCM connector and high voltage battery cooling fan connector, or repair the intermediate connector.
4	**CHECK DTC.** 1) Replace the high voltage battery cooling fan. <Ref. to HEV-59, High Voltage Battery Cooling System.> 2) Perform drive cycle H. <Ref. to HEV(diag)-38, DRIVE CYCLE H, PROCEDURE, Drive Cycle.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	There is an abnormal condition in the high voltage battery cooling fan.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery cooling fan.
Judge as NG when the performance of high voltage battery cooling fan is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Commanded cooling fan duty	≥ 20%
12 V battery system voltage	> 9.3 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured cooling fan speed	< Map

Map

Commanded cooling fan duty (%)	20	40	60	80	100
Measured inverter cooling fan motor speed (rpm)	300	700	1050	1200	1200

Time Needed for Diagnosis: 20 seconds
Malfunction Indicator Light Illumination: detects when malfunction occurs in 2 continuous driving cycles. (Single engine startup is counted as one drive cycle.)

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Measured cooling fan speed	≥ Map

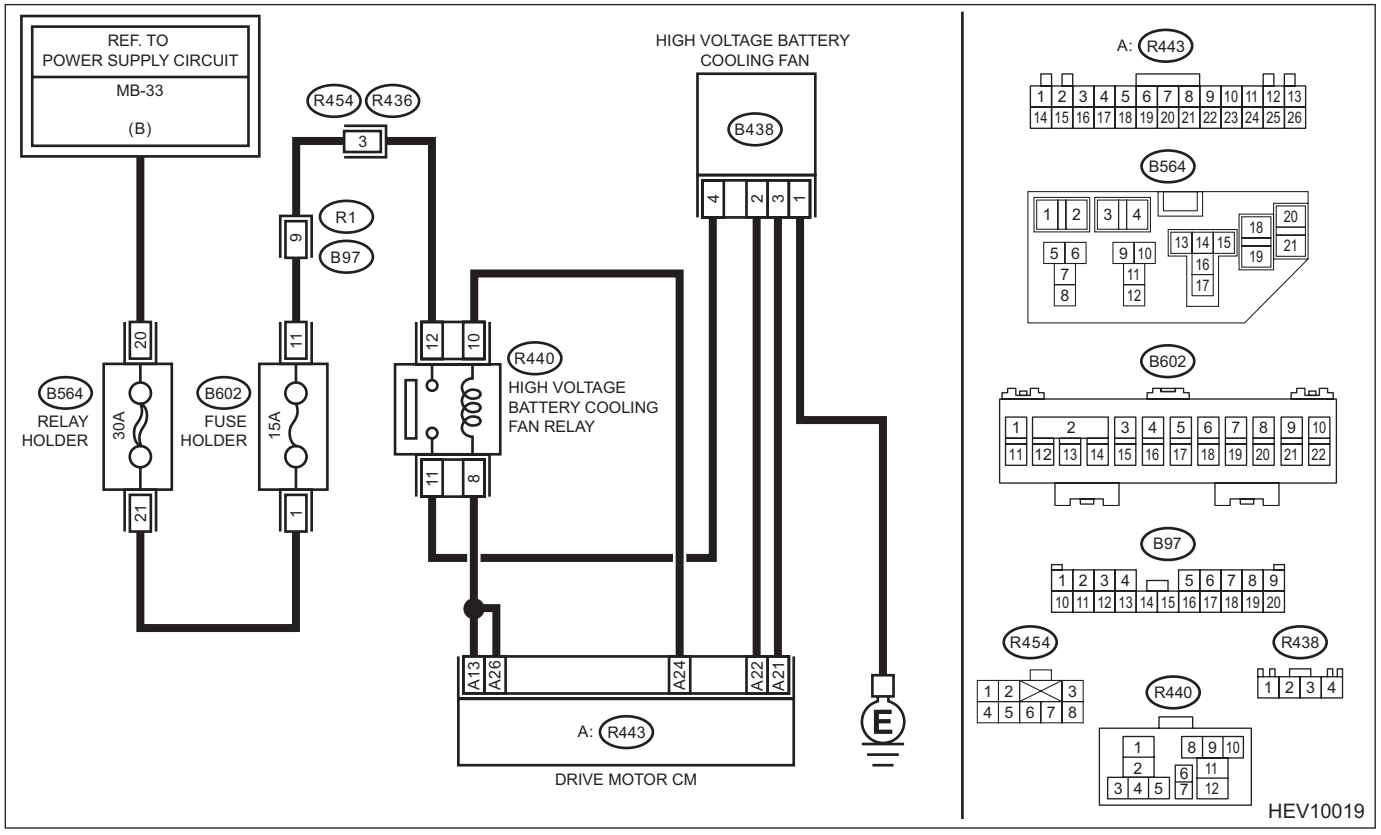
Time Needed for Diagnosis: 1 second

BC:DTC P0A83 HYBRID/EV BATTERY PACK COOLING FAN 1 STUCK ON

DIAGNOSIS:

- Detected when two consecutive driving cycles with fault occur. (Single engine startup is counted as one drive cycle.)
- GENERAL DESCRIPTION <Ref. to HEV(diag)-245, OUTLINE OF DIAGNOSIS, DTC P0A83 HYBRID/EV BATTERY PACK COOLING FAN 1 STUCK ON, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

	Step	Check	Yes	No
1	**CHECK HIGH VOLTAGE BATTERY COOLING FAN.** Using the Subaru Select Monitor, perform «High Voltage Battery Cooling Fan» of System Operation Check Mode for the drive motor control system. <Ref. to HEV(diag)-70, DRIVE MOTOR CONTROL SYSTEM, OPERATION, System Operation Check Mode.>	Does the cooling fan speed change when the speed is switched across 4 steps (Stop, Steps 1 — 3)?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK HARNESS (GROUND SHORT CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the DMCM connector. 3) Disconnect the high voltage battery cooling fan connector. 4) Using a tester, measure the resistance between the high voltage battery cooling fan connector and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R438) No. 2 — Ground bolt of inverter frame body:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair short to ground circuit in harness between DMCM connector and high voltage battery cooling fan connector, or repair the intermediate connector.
3	**CHECK DTC.** 1) Replace the high voltage battery cooling fan. <Ref. to HEV-59, High Voltage Battery Cooling System.> 2) Perform drive cycle H. <Ref. to HEV(diag)-38, DRIVE CYCLE H, PROCEDURE, Drive Cycle.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	There is an abnormal condition in the high voltage battery cooling fan.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery cooling fan.
Judge as NG when the performance of high voltage battery cooling fan is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Commanded cooling fan duty	= 0%
12 V battery system voltage	> 9.3 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured cooling fan speed	> 300 rpm

Time Needed for Diagnosis: 20 seconds
Malfunction Indicator Light Illumination: detects when malfunction occurs in 2 continuous driving cycles. (Single engine startup is counted as one drive cycle.)

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Measured cooling fan speed	≤ 300 rpm

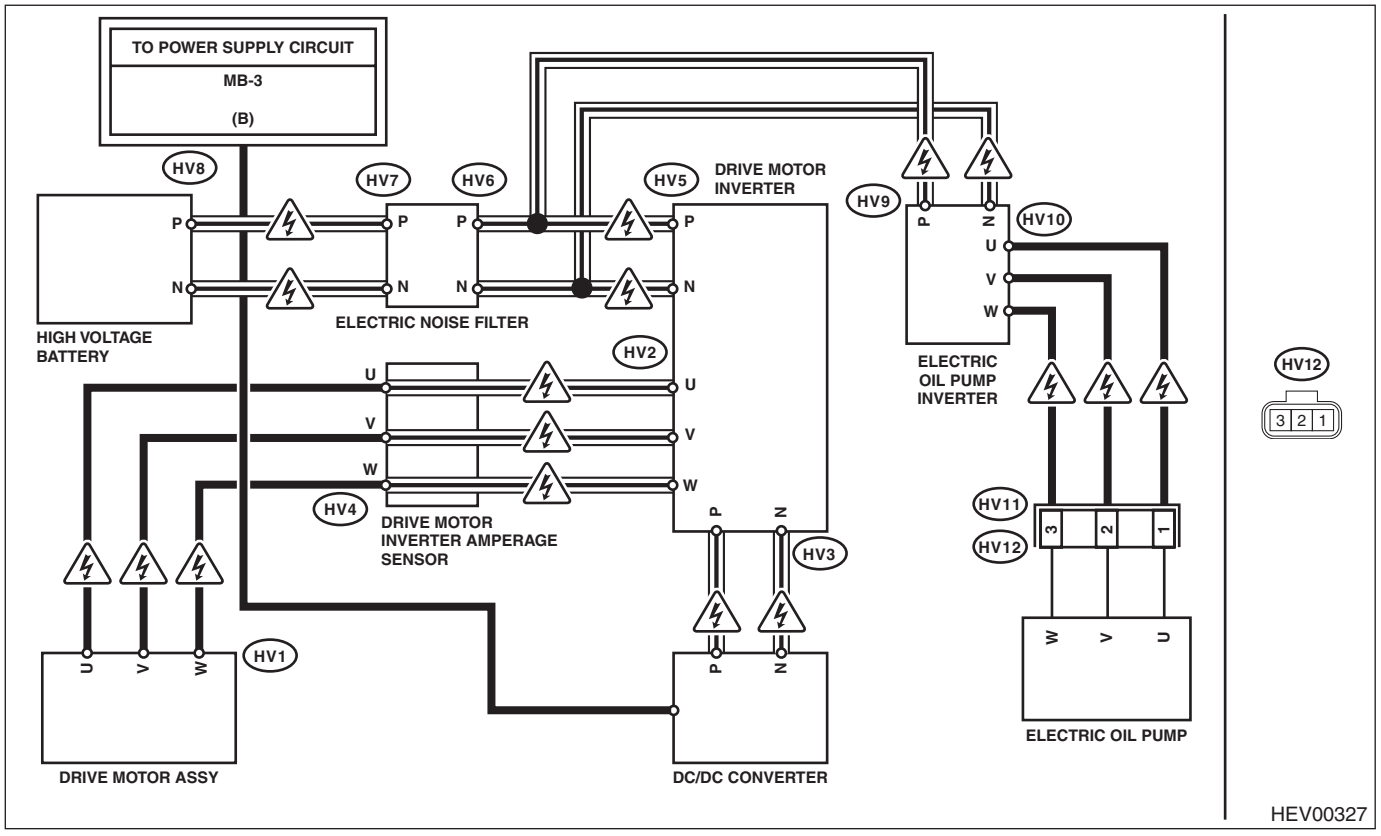
Time Needed for Diagnosis: 20 seconds

BD:DTC P0A90 DRIVE MOTOR "A" PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-252, OUTLINE OF DIAGNOSIS, DTC P0A90 DRIVE MOTOR "A" PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



Normal control

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are DTCs (relating to current sensors, speed sensors) detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-76, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «Phase U Amperage Sensor Voltage» «Phase V Amperage Sensor Voltage» «Phase W Amperage Sensor Voltage». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 2.5 V±0.1 V?	Go to step **3**.	Perform the diagnosis according to DTC P0BE6. <Ref. to HEV(diag)-268, DTC P0BE6 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
3	**CHECK DRIVE MOTOR AND POWER CABLE (DEMAGNETIZATION, SHORT).** 1) With the 12 V battery connected, remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> **CAUTION:** **Watch for an electrical short at each harness because the 12 V battery is connected.** 2) Lift up the vehicle. 3) Start the engine, and set the shift lever to "D" range. 4) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «A/T Oil Temperature» «Drive Motor Speed» «Drive Motor Inverter Input High Voltage Sensor (Serial)». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Are any of the following statements relevant? • «Drive Motor Inverter Input High Voltage Sensor (Serial)» is out of the standard specified in Note when «ATF Temperature» is 20 — 60°C (68 — 140°F) and «Drive Motor Speed» is 600 — 1400 rpm. • Abnormal noise and changes in rotation speed occur near 600 rpm.	If you have a milliohm tester at hand, Go to step **6**. If a milliohm tester is not at hand, Go to step **11**.	If you have a milliohm tester at hand, Go to step **4**. If a milliohm tester is not at hand, Go to step **10**.
4	**CHECK DRIVE MOTOR AND POWER CABLE (SHORT).** 1) Leave the vehicle under temperature of 40°C (104°F) or less for 10 minutes. 2) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «Drive Motor Temperature A» «Drive Motor Temperature B» are 40°C (104°F) or less. <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.> 3) Turn the ignition switch to OFF. 4) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 5) Disconnect the power cable (HV2) of drive motor inverter. 6) Using a milliohm tester, measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV2) U — (HV2) V:*** ***(HV2) U — (HV2) W:*** ***(HV2) V — (HV2) W:***	Is either resistance value 25 mΩ or less?	Go to step **5**.	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>

	Step	Check	Yes	No
5	**CHECK DRIVE MOTOR (SHORT).** 1) Disconnect the drive motor power cable (HV1). NOTE: The gasket is not reusable. 2) Using a milliohm tester, measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV1) U — (HV1) V:*** ***(HV1) U — (HV1) W:*** ***(HV1) V — (HV1) W:***	Is either resistance value 20 mΩ or less?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Replace the power cable. <Ref. to HEV-51, Power Cable.> Go to step **16**.
6	**CHECK BUS BAR.** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Check the bus bar.	Is it normal? (Check for loose bolts, insecure connection, foreign matter caught, trace of arc (burnt terminals) etc.)	Go to step **7**.	Retighten the bolts. Or replace the bus bar.
7	**CHECK DRIVE MOTOR AND POWER CABLE.** 1) Leave the vehicle under temperature of 40°C (104°F) or less for 10 minutes. 2) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «Drive Motor Temperature A» «Drive Motor Temperature B» are 40°C (104°F) or less. <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.> 3) Turn the ignition switch to OFF. 4) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 5) Disconnect the power cable (HV2) of drive motor inverter. 6) Using a milliohm tester, measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV2) U — (HV2) V:*** ***(HV2) U — (HV2) W:*** ***(HV2) V — (HV2) W:***	Is either resistance value out of 25 — 80 mΩ range?	Go to step **8**.	Go to step **9**.
8	**CHECK DRIVE MOTOR.** 1) Disconnect the drive motor power cable (HV1). NOTE: The gasket is not reusable. 2) Using a milliohm tester, measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV1) U — (HV1) V:*** ***(HV1) U — (HV1) W:*** ***(HV1) V — (HV1) W:***	Is either resistance value out of 20 — 70 mΩ range?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Replace the power cable. <Ref. to HEV-51, Power Cable.> Go to step **16**.

	Step	Check	Yes	No
9	**CHECK DRIVE MOTOR INVERTER.** 1) Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> 2) Restore the vehicle to its original state. 3) Perform drive cycle B. <Ref. to HEV(diag)-34, DRIVE CYCLE B, PROCEDURE, Drive Cycle.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Problem is present in drive motor inverter.
10	**CHECK POWER CABLE (SHORT).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Disconnect the power cable (HV2) of drive motor inverter. 4) Using a insulation multimeter (250 V range), measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV2) U — (HV2) V:*** ***(HV2) U — (HV2) W:*** ***(HV2) V — (HV2) W:***	Does the resistance between any points show 2 MΩ or more?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Replace the power cable. <Ref. to HEV-51, Power Cable.> Go to step **16**.
11	**CHECK BUS BAR.** Check the bus bar.	Is it normal? (Check for loose bolts, insecure connection, foreign matter caught, trace of arc (burnt terminals) etc.)	Go to step **12**.	Retighten the bolts. Or replace the bus bar.
12	**CHECK DRIVE MOTOR AND POWER CABLE.** 1) Leave the vehicle under temperature of 40°C (104°F) or less for 10 minutes. 2) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «Drive Motor Temperature A» «Drive Motor Temperature B» are 40°C (104°F) or less. <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.> 3) Turn the ignition switch to OFF. 4) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 5) Disconnect the power cable (HV2) of drive motor inverter. 6) Using an insulation multimeter, measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV2) U — (HV2) V:*** ***(HV2) U — (HV2) W:*** ***(HV2) V — (HV2) W:***	Is either resistance value 0.3 Ω or more?	Go to step **13**.	Go to step **14**.

	Step	Check	Yes	No
13	**CHECK DRIVE MOTOR.** 1) Disconnect the drive motor power cable (HV1). NOTE: The gasket is not reusable. 2) Using an insulation multimeter, measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV1) U — (HV1) V:*** ***(HV1) U — (HV1) W:*** ***(HV1) V — (HV1) W:***	Is either resistance value 0.3 Ω or more?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Replace the power cable. <Ref. to HEV-51, Power Cable.>
14	**CHECK DRIVE MOTOR AND POWER CABLE.** 1) Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.> 2) Replace the power cable. <Ref. to HEV-51, Power Cable.> 3) Restore the vehicle to its original state. 4) Perform drive cycle B. <Ref. to HEV(diag)-34, DRIVE CYCLE B, PROCEDURE, Drive Cycle.>	Is the same DTC detected? (current malfunction)	Go to step **15**.	Problem is present in drive motor assembly or power cable.
15	**CHECK DRIVE MOTOR INVERTER.** 1) Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> 2) Perform drive cycle B. <Ref. to HEV(diag)-34, DRIVE CYCLE B, PROCEDURE, Drive Cycle.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Problem is present in drive motor inverter.
16	**CHECK OF DRIVE MOTOR (DEMAGNETIZATION).** 1) Restore the vehicle to its original state. 2) With the 12 V battery connected, remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> **CAUTION:** **Watch for an electrical short at each harness because the 12 V battery is connected.** 3) Lift up the vehicle. 4) Start the engine, and set the shift lever to “D” range. 5) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «A/T Oil Temperature» «Drive Motor Speed» «Drive Motor Inverter Input High Voltage Sensor (Serial)». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	«Drive Motor Inverter Input High Voltage Sensor (Serial)» is within the standard specified in Note when «ATF Temperature» is 20 — 60°C (68 — 140°F) and «Drive Motor Speed» is 600 — 1400 rpm.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>

NOTE:
Value of «Drive Motor Inverter Input High Voltage Sensor (Serial)» is proportional to «Drive Motor Speed».
- 1000 rpm: 18 V — 37 V
- 1400 rpm: 25 V — 52 V

(A) Drive motor speed
(B) Drive Motor Inverter Input High Voltage Sensor (Serial)
(C) Standard at Max.
(D) Standard at Min.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor.
Judge as NG when the performance of drive motor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: PWM output to the drive motor inverter	ON
b: ABS (Commanded motor output power) NOTE: ABS: Absolute value	> 5 kW
c: Motor speed	> 1000 rpm and < 3500 rpm
Continuous time of a, b and c	> 0.5 s

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
(Estimated motor output power / Commanded motor output power) × 100 NOTE: • Estimated motor output power = (V × I) • Commanded motor output power = (N × T × 2 × π) / 60 • V: Commanded motor voltage • I: Measured motor current • N: Motor speed • T: Commanded motor torque	< 40%

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
(Estimated motor output power / Commanded motor output power) × 100	≥ 40%

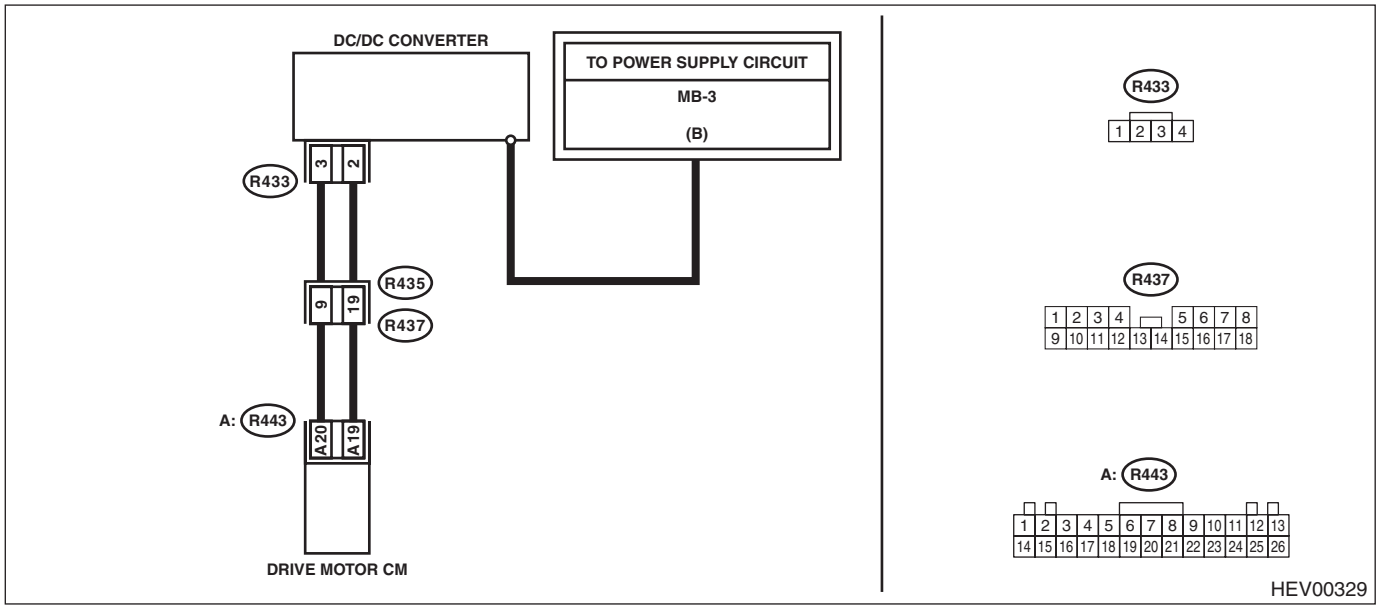
Time Needed for Diagnosis: 2 seconds

BE:DTC P0A94 DC/DC CONVERTER PERFORMANCE

DIAGNOSIS:

- Detects abnormal conditions in DC/DC converter.
- If the DC/DC converter detects serial communication errors with the drive motor control module, or internal errors are detected in the DC/DC converter, it is judged as NG.
- Immediately at fault recognition

TROUBLE SYMPTOM:



EV traveling/Auto Start Stop does not operate.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-76, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK DETAIL CODE.** Using the Subaru Select Monitor, confirm «Detail Code» in the freeze frame data of the drive motor control system. <Ref. to HEV(diag)-63, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Is «Detail Code» displayed?	If 0800 is displayed, Go to step **3**. If 0801 — 0806 is displayed, replace the DC/DC converter. <Ref. to HEV-38, DC/DC Converter.>	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>

	Step	Check	Yes	No
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** 1) Disconnect the DC/DC converter connector. 2) Disconnect the DMCM connector. 3) Using a tester, measure the resistance between DC/DC converter connector and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R433) No. 2 — Ground bolt of inverter frame body:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair short to ground circuit in harness between DC/DC converter connector and DMCM connector, or repair the intermediate connector.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between DC/DC converter connector and DMCM connector. ***Connector & terminal*** ***(R433) No. 2 — (R443) No. 19:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair open circuit in harness between DC/DC converter connector and DMCM connector, or repair the intermediate connector.
5	**CHECK HARNESS (SHORT TO OTHER SIGNAL).** Using the tester, measure the resistance in the DMCM connector. ***Connector & terminal*** ***(R443) No. 19 — (R442) No. 1 — 22:*** ***(R443) No. 19 — (R443) No. 1 — 26:*** ***(R443) No. 19 — (R436) No. 1 — 8:*** ***(R443) No. 19 — (R432) No. 7:*** ***(R443) No. 19 — DC/DC converter 12 V output line:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair short circuit in harness between DC/DC converter connector and DMCM connector, or repair the intermediate connector.
6	**CHECK DTC.** 1) Replace the DC/DC converter. <Ref. to HEV-38, DC/DC Converter.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Problem is present in DC/DC converter.

BF:DTC P0AED DRIVE MOTOR INVERTER TEMPERATURE SENSOR "A" CIRCUIT

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-256, OUTLINE OF DIAGNOSIS, DTC P0AED DRIVE MOTOR INVERTER TEMPERATURE SENSOR "A" CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Drive Motor Inverter Temperature A». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 204°C (399°F)?	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor inverter temperature sensor.
Judge as NG when the value of drive motor inverter temperature sensor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 8 V
Continuous time of a and b	≥ 1 s
First SCI data from drive motor inverter	Received

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Fault data (temperature sensor) from IC in the drive motor inverter	Received

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Fault data (temperature sensor) from IC in the drive motor inverter	Not received

Time Needed for Diagnosis: 0.02 seconds

BG:DTC P0AEE DRIVE MOTOR INVERTER TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:

• Detected when two consecutive driving cycles with fault occur. (Single engine startup is counted as one drive cycle.)

• GENERAL DESCRIPTION <Ref. to HEV(diag)-258, OUTLINE OF DIAGNOSIS, DTC P0AEE DRIVE MOTOR INVERTER TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Turn the ignition switch to OFF and leave the vehicle 10 minutes unattended. 2) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Drive Motor Inverter Operation Update Counter». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Has the value changed (when the ignition is turned to ON)?	Go to step **2**.	Perform the diagnosis according to DTC P0C0C and P1C30. <Ref. to HEV(diag)-76, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «Drive Motor Inverter Temperature A» «Drive Motor Inverter Temperature B» «Drive Motor Inverter Temperature C». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is either value at 204°C (399°F)?	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.>	Go to step **3**.
3	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «Drive Motor Inverter Temperature A» «Drive Motor Inverter Temperature B» «Drive Motor Inverter Temperature C». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the difference between each temperature 30°C (54°F) or less?	Go to step **4**.	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.>
4	**CHECK CURRENT DATA.** 1) With the Subaru Select Monitor connected, drive the vehicle for 10 minutes or more. 2) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «Drive Motor Inverter Temperature A» «Drive Motor Inverter Temperature B» «Drive Motor Inverter Temperature C». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Have any of those values changed 10°C (18°F) or more from the temperature before driving the vehicle?	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter temperature sensor.
Judge as NG when the characteristic of drive motor inverter temperature sensor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Diagnosis 1	
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 10 V
Continuous time of a and b	≥ 240 s
c: ABS (Drive motor speed)	> 125 rpm
NOTE: ABS: Absolute value	
or	
d: ABS (Commanded motor torque)	< 15 N·m (1.5 kgf-m, 11.1 ft-lb)
Continuous time of c or d	≥ 240 s
Inverter temperature median	> 30°C (86°F)
NOTE: Inverter temperature median: The median value of the Inverter temperature sensor A, B and C	
First SCI data from drive motor inverter	Received
Diagnosis 2	
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 10 V
Continuous time of a and b	≥ 240 s
c: ABS (Drive motor speed)	> 125 rpm
NOTE: ABS: Absolute value	
or	
d: ABS (Commanded motor torque)	< 15 N·m (1.5 kgf-m, 11.1 ft-lb)
Continuous time of c or d	≥ 240 s
Inverter temperature median	> 30°C (86°F)
NOTE: Inverter temperature median: The median value of the Inverter temperature sensor A, B and C	
First SCI data from drive motor inverter	Received
ABS (Variation of inverter temperature median)	> 20°C (68°F)

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 ABS (Inverter temperature A – Inverter temperature median)	> 30°C (54°F)
Diagnosis 2 ABS ((Variation of Inverter temperature A) – (Variation of Inverter temperature median)) NOTE: • Variation of Inverter temperature A = Max (Inverter temperature A) – Min (Inverter temperature A) • Variation of Inverter temperature median = Max (Inverter temperature median) – Min (Inverter temperature median) • Max: The maximum value of the experience in the current driving cycle • Min: The minimum value of the experience in the current driving cycle	> 10°C (18°F)

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: detects when malfunction occurs in 2 continuous driving cycles. (Single engine startup is counted as one drive cycle.)

• Normality Judgment

Judge as OK and clear NG when continuous time when the following conditions are met is predetermined time or more (diagnosis 1 and diagnosis 2).

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 ABS (Inverter temperature A – Inverter temperature median)	≤ 30°C (54°F)
Diagnosis 2 ABS ((Variation of Inverter temperature A) – (Variation of Inverter temperature median))	≤ 10°C (18°F)

Time Needed for Diagnosis: 20 seconds

BH:DTC P0AF2 DRIVE MOTOR INVERTER TEMPERATURE SENSOR "B" CIRCUIT

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-261, OUTLINE OF DIAGNOSIS, DTC P0AF2 DRIVE MOTOR INVERTER TEMPERATURE SENSOR "B" CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Drive Motor Inverter Temperature B». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 204°C (399°F)?	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor inverter temperature sensor.
Judge as NG when the value of drive motor inverter temperature sensor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 8 V
Continuous time of a and b	≥ 1 s
First SCI data from drive motor inverter	Received

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Fault data (temperature sensor) from IC in the drive motor inverter	Received

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Fault data (temperature sensor) from IC in the drive motor inverter	Not received

Time Needed for Diagnosis: 2 seconds

BI: DTC P0AF3 DRIVE MOTOR INVERTER TEMPERATURE SENSOR "B" CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:

- Detected when two consecutive driving cycles with fault occur. (Single engine startup is counted as one drive cycle.)
- GENERAL DESCRIPTION <Ref. to HEV(diag)-262, OUTLINE OF DIAGNOSIS, DTC P0AF3 DRIVE MOTOR INVERTER TEMPERATURE SENSOR "B" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

NOTE:
For the diagnostic procedure, refer to DTC P0AEE DRIVE MOTOR INVERTER TEMPERATURE SENSOR “A” CIRCUIT RANGE/PERFORMANCE. <Ref. to HEV(diag)-257, DTC P0AEE DRIVE MOTOR INVERTER TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter temperature sensor.
Judge as NG when the characteristic of drive motor inverter temperature sensor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Diagnosis 1	
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 10 V
Continuous time of a and b	≥ 240 s
c: ABS (Drive motor speed)	> 125 rpm
NOTE: ABS: Absolute value	
or	
d: ABS (Commanded motor torque)	< 15 N·m (1.5 kgf-m, 11.1 ft-lb)
Continuous time of c or d	≥ 240 s
Inverter temperature median	> 30°C (86°F)
NOTE: Inverter temperature median: The median value of the Inverter temperature sensor A, B and C	
First SCI data from drive motor inverter	Received
Diagnosis 2	
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 10 V
Continuous time of a and b	≥ 240 s
c: ABS (Drive motor speed)	> 125 rpm
NOTE: ABS: Absolute value	
or	
d: ABS (Commanded motor torque)	< 15 N·m (1.5 kgf-m, 11.1 ft-lb)
Continuous time of c or d	≥ 240 s
Inverter temperature median	> 30°C (86°F)
NOTE: Inverter temperature median: The median value of the Inverter temperature sensor A, B and C	
First SCI data from drive motor inverter	Received
ABS (Variation of inverter temperature median)	> 20°C (68°F)

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 ABS (Inverter temperature B – Inverter temperature median)	> 30°C (54°F)
Diagnosis 2 ABS ((Variation of Inverter temperature B) – (Variation of Inverter temperature median)) NOTE: • Variation of Inverter temperature B = Max (Inverter temperature B) – Min (Inverter temperature B) • Variation of Inverter temperature median = Max (Inverter temperature median) – Min (Inverter temperature median) • Max: The maximum value of the experience in the current driving cycle • Min: The minimum value of the experience in the current driving cycle	> 10°C (18°F)

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: detects when malfunction occurs in 2 continuous driving cycles. (Single engine startup is counted as one drive cycle.)

• Normality Judgment

Judge as OK and clear NG when continuous time when the following conditions are met is predetermined time or more (diagnosis 1 and diagnosis 2).

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 ABS (Inverter temperature B – Inverter temperature median)	≤ 30°C (54°F)
Diagnosis 2 ABS ((Variation of Inverter temperature B) – (Variation of Inverter temperature median))	≤ 10°C (18°F)

Time Needed for Diagnosis: 20 seconds

BJ:DTC P0BD1 DRIVE MOTOR INVERTER TEMPERATURE SENSOR "C" CIRCUIT

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-265, OUTLINE OF DIAGNOSIS, DTC P0BD1 DRIVE MOTOR INVERTER TEMPERATURE SENSOR "C" CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Drive Motor Inverter Temperature C». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 204°C (399°F)?	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor inverter temperature sensor.
Judge as NG when the value of drive motor inverter temperature sensor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 8 V
Continuous time of a and b	≥ 1 s
First SCI data from drive motor inverter	Received

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Fault data (temperature sensor) from IC in the drive motor inverter	Received

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Fault data (temperature sensor) from IC in the drive motor inverter	Not received

Time Needed for Diagnosis: 2 seconds

BK:DTC P0BD2 DRIVE MOTOR INVERTER TEMPERATURE SENSOR "C" CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:

- Detected when two consecutive driving cycles with fault occur. (Single engine startup is counted as one drive cycle.)
- GENERAL DESCRIPTION <Ref. to HEV(diag)-266, OUTLINE OF DIAGNOSIS, DTC P0BD2 DRIVE MOTOR INVERTER TEMPERATURE SENSOR "C" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

NOTE:
For the diagnostic procedure, refer to DTC P0AEE DRIVE MOTOR INVERTER TEMPERATURE SENSOR “A” CIRCUIT RANGE/PERFORMANCE. <Ref. to HEV(diag)-257, DTC P0AEE DRIVE MOTOR INVERTER TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter temperature sensor.
Judge as NG when the characteristic of drive motor inverter temperature sensor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Diagnosis 1	
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 10 V
Continuous time of a and b	≥ 240 s
c: ABS (Drive motor speed)	> 125 rpm
NOTE: ABS: Absolute value	
or	
d: ABS (Commanded motor torque)	< 15 N·m (1.5 kgf-m, 11.1 ft-lb)
Continuous time of c or d	≥ 240 s
Inverter temperature median	> 30°C (86°F)
NOTE: Inverter temperature median: The median value of the Inverter temperature sensor A, B and C	
First SCI data from drive motor inverter	Received
Diagnosis 2	
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 10 V
Continuous time of a and b	≥ 240 s
c: ABS (Drive motor speed)	> 125 rpm
NOTE: ABS: Absolute value	
or	
d: ABS (Commanded motor torque)	< 15 N·m (1.5 kgf-m, 11.1 ft-lb)
Continuous time of c or d	≥ 240 s
Inverter temperature median	> 30°C (86°F)
NOTE: Inverter temperature median: The median value of the Inverter temperature sensor A, B and C	
First SCI data from drive motor inverter	Received
ABS (Variation of inverter temperature median)	> 20°C (68°F)

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 ABS (Inverter temperature C – Inverter temperature median)	> 30°C (54°F)
Diagnosis 2 ABS ((Variation of Inverter temperature C) – (Variation of Inverter temperature median)) NOTE: • Variation of Inverter temperature C = Max (Inverter temperature C) – Min (Inverter temperature C) • Variation of Inverter temperature median = Max (Inverter temperature median) – Min (Inverter temperature median) • Max: The maximum value of the experience in the current driving cycle • Min: The minimum value of the experience in the current driving cycle	> 10°C (18°F)

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: detects when malfunction occurs in 2 continuous driving cycles. (Single engine startup is counted as one drive cycle.)

• Normality Judgment

Judge as OK and clear NG when continuous time when the following conditions are met is predetermined time or more (diagnosis 1 and diagnosis 2).

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 ABS (Inverter temperature C – Inverter temperature median)	≤ 30°C (54°F)
Diagnosis 2 ABS ((Variation of Inverter temperature C) – (Variation of Inverter temperature median))	≤ 10°C (18°F)

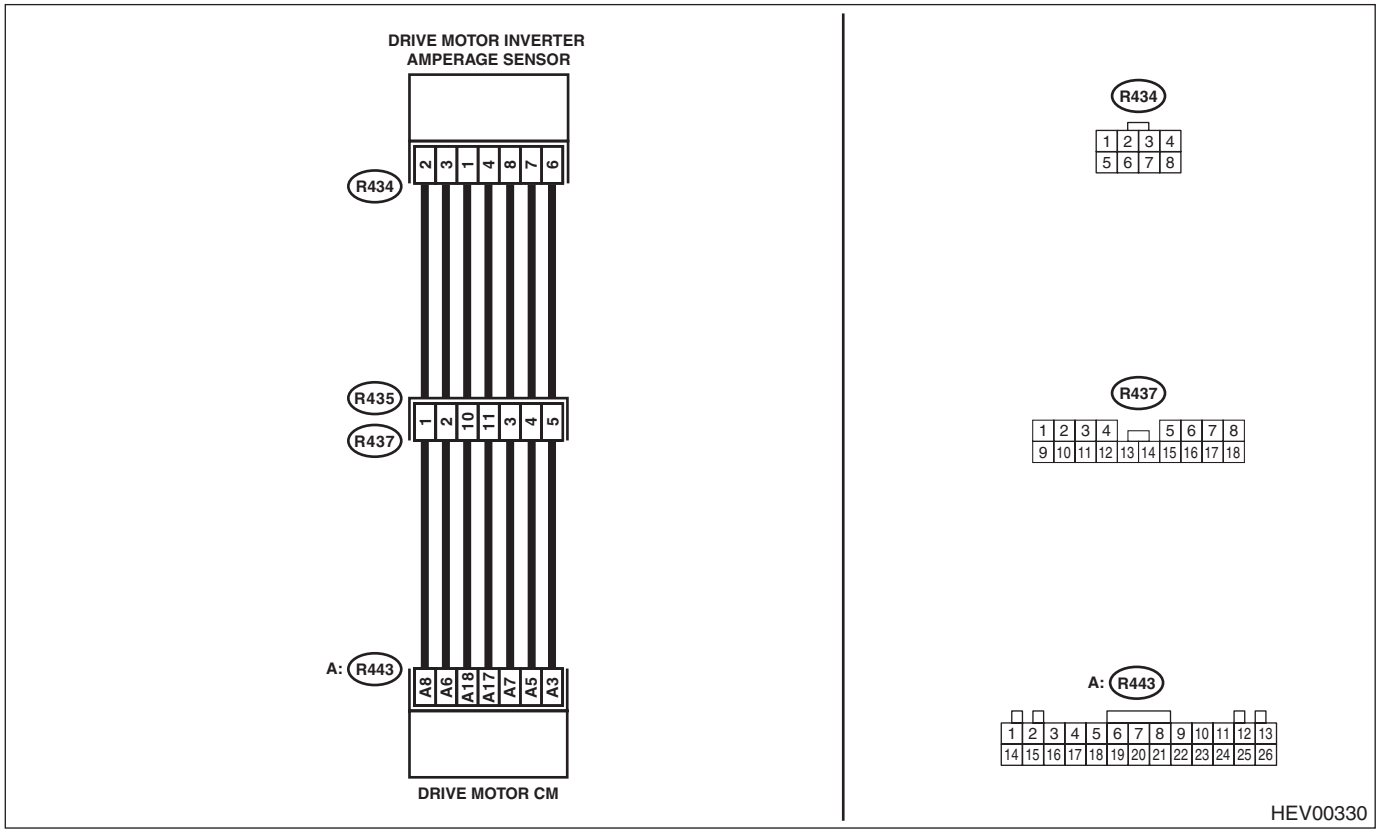
Time Needed for Diagnosis: 20 seconds

BL:DTC P0BE6 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-271, OUTLINE OF DIAGNOSIS, DTC P0BE6 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Phase U Amperage Sensor Voltage». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 2.5 V±0.1 V?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK HARNESS (GROUND SHORT CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the DMCM connector. 6) Disconnect the drive motor inverter amperage sensor connector. 7) Using a tester, measure the resistance between DMCM connector and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R443) No. 7 — Ground bolt of inverter frame body:*** ***(R443) No. 5 — Ground bolt of inverter frame body:*** ***(R443) No. 3 — Ground bolt of inverter frame body:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair short to ground circuit in harness between DMCM connector and drive motor inverter amperage sensor connector, or repair the intermediate connector.
3	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between DMCM connector and the drive motor inverter amperage sensor connector. ***Connector & terminal:*** ***(R443) No. 7 — (R434) No. 8:*** ***(R443) No. 5 — (R434) No. 7:*** ***(R443) No. 3 — (R434) No. 6:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair open circuit in harness between DMCM connector and drive motor inverter amperage sensor connector, or repair the intermediate connector.

	Step	Check	Yes	No
4	**CHECK HARNESS (SHORT TO POWER AND SHORT TO OTHER SIGNAL LINES).** 1) Disconnect the drive motor inverter connector. 2) Disconnect the intermediate connector (R436). 3) Using a tester, measure the resistance within the DMCM connector and between the DMCM connector and the drive motor inverter connector. ***Connector & terminal:*** ***(R443) No. 7 — (R442) No. 1 — 22:*** ***(R443) No. 7 — (R443) No. 1 — 26:*** ***(R443) No. 7 — (R436) No. 1 — 8:*** ***(R443) No. 7 — (R432) No. 7:*** ***(R443) No. 5 — (R442) No. 1 — 22:*** ***(R443) No. 5 — (R443) No. 1 — 26:*** ***(R443) No. 5 — (R436) No. 1 — 8:*** ***(R443) No. 5 — (R432) No. 7:*** ***(R443) No. 3 — (R442) No. 1 — 22:*** ***(R443) No. 3 — (R443) No. 1 — 26:*** ***(R443) No. 3 — (R436) No. 1 — 8:*** ***(R443) No. 3 — (R432) No. 7:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair short circuit to power in harness between DMCM connector and drive motor inverter amperage sensor connector, or repair the intermediate connector.
5	**CHECK DRIVE MOTOR INVERTER AMPERAGE SENSOR.** 1) Replace the drive motor inverter amperage sensor. <Ref. to HEV-27, Drive Motor Inverter Current Sensor.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Problem is present in drive motor inverter amperage sensor.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter amperage sensor circuit.
Judge as NG when the value of drive motor inverter amperage sensor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
PWM output to the drive motor inverter	OFF

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (U phase average offset current) NOTE: ABS: Absolute value	> 31 A

Time Needed for Diagnosis: 0.01 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (U phase average offset current)	≤ 31 A

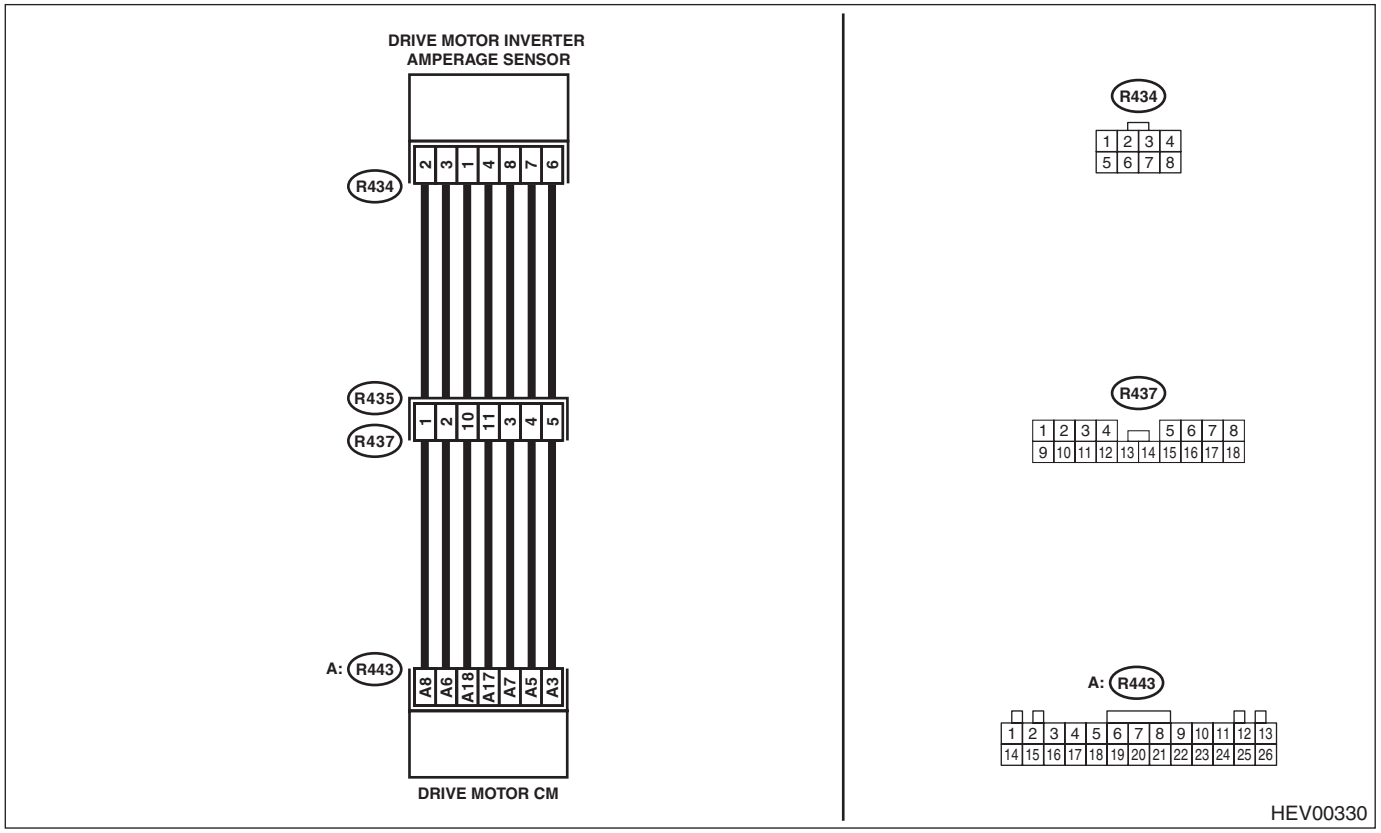
Time Needed for Diagnosis: 0.01 second

BM:DTC P0BE7 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-275, OUTLINE OF DIAGNOSIS, DTC P0BE7 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Phase U Amperage Sensor Voltage». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 0.5 V or less?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (GROUND SHORT CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the DMCM connector. 6) Disconnect the drive motor inverter amperage sensor connector. 7) Using a tester, measure the resistance between DMCM connector and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R443) No. 7 — Ground bolt of inverter frame body:*** ***(R443) No. 5 — Ground bolt of inverter frame body:*** ***(R443) No. 3 — Ground bolt of inverter frame body:*** ***(R443) No. 8 — Ground bolt of inverter frame body:*** ***(R443) No. 6 — Ground bolt of inverter frame body:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair short to ground circuit in harness between DMCM connector and drive motor inverter amperage sensor connector, or repair the intermediate connector.
3	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between DMCM connector and the drive motor inverter amperage sensor connector. ***Connector & terminal:*** ***(R443) No. 7 — (R434) No. 8:*** ***(R443) No. 5 — (R434) No. 7:*** ***(R443) No. 3 — (R434) No. 6:*** ***(R443) No. 8 — (R434) No. 2:*** ***(R443) No. 6 — (R434) No. 3:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair open circuit in harness between DMCM connector and drive motor inverter amperage sensor connector, or repair the intermediate connector.

	Step	Check	Yes	No
4	**CHECK HARNESS (SHORT TO POWER AND SHORT TO OTHER SIGNAL LINES).** 1) Disconnect the drive motor inverter connector. 2) Disconnect the intermediate connector (R436). 3) Using a tester, measure the resistance within the DMCM connector and between the DMCM connector and the drive motor inverter connector. ***Connector & terminal:*** ***(R443) No. 7 — (R442) No. 1 — 22:*** ***(R443) No. 7 — (R443) No. 1 — 26:*** ***(R443) No. 7 — (R436) No. 1 — 8:*** ***(R443) No. 7 — (R432) No. 7:*** ***(R443) No. 5 — (R442) No. 1 — 22:*** ***(R443) No. 5 — (R443) No. 1 — 26:*** ***(R443) No. 5 — (R436) No. 1 — 8:*** ***(R443) No. 5 — (R432) No. 7:*** ***(R443) No. 3 — (R442) No. 1 — 22:*** ***(R443) No. 3 — (R443) No. 1 — 26:*** ***(R443) No. 3 — (R436) No. 1 — 8:*** ***(R443) No. 3 — (R432) No. 7:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair short circuit to power in harness between DMCM connector and drive motor inverter amperage sensor connector, or repair the intermediate connector.
5	**CHECK DRIVE MOTOR INVERTER AMPERAGE SENSOR.** 1) Replace the drive motor inverter amperage sensor. <Ref. to HEV-27, Drive Motor Inverter Current Sensor.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Problem is present in drive motor inverter amperage sensor.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor inverter amperage sensor.
Judge as NG when the value of drive motor inverter amperage sensor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
U phase current sensor output voltage	≤ 0.5 V
(Current equivalent)	≤ –400 A

Time Needed for Diagnosis: 0.03 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
U phase current sensor output voltage	> 0.5 V
(Current equivalent)	> –400 A

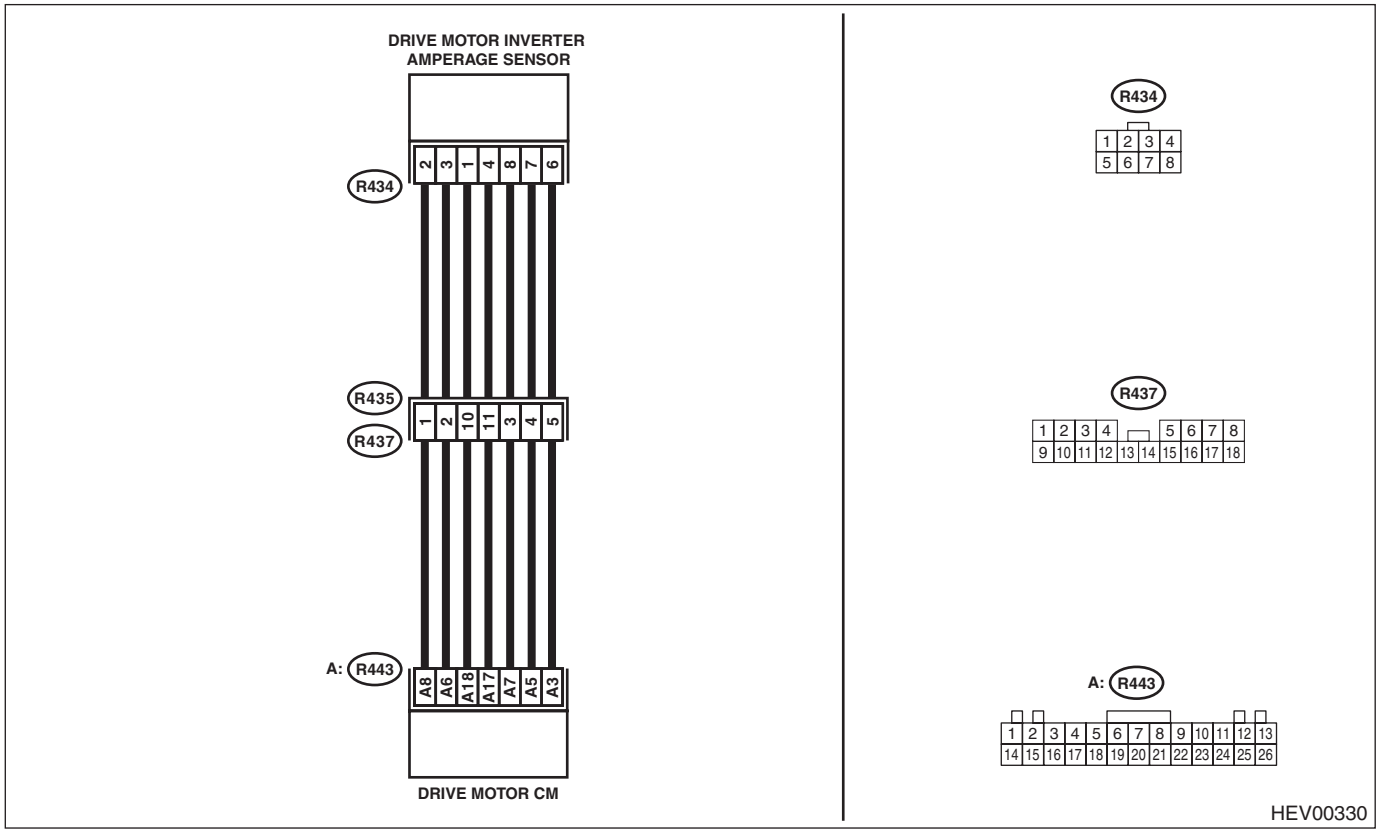
Time Needed for Diagnosis: 0.06 seconds

BN:DTC P0BE8 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-278, OUTLINE OF DIAGNOSIS, DTC P0BE8 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Phase U Amperage Sensor Voltage». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 4.5 V or more?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (GROUND SHORT CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the DMCM connector. 6) Disconnect the drive motor inverter amperage sensor connector. 7) Using a tester, measure the resistance between DMCM connector and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R443) No. 18 — (R434) No. 1:*** ***(R443) No. 17 — (R434) No. 4:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair short to ground circuit in harness between DMCM connector and drive motor inverter amperage sensor connector, or repair the intermediate connector.
3	**CHECK HARNESS (SHORT TO POWER AND SHORT TO OTHER SIGNAL LINES).** 1) Disconnect the drive motor inverter connector. 2) Disconnect the intermediate connector (R436). 3) Using a tester, measure the resistance within the DMCM connector and between the DMCM connector and the drive motor inverter connector. ***Connector & terminal:*** ***(R443) No. 7 — (R442) No. 1 — 22:*** ***(R443) No. 7 — (R443) No. 1 — 26:*** ***(R443) No. 7 — (R436) No. 1 — 8:*** ***(R443) No. 7 — (R432) No. 7:*** ***(R443) No. 5 — (R442) No. 1 — 22:*** ***(R443) No. 5 — (R443) No. 1 — 26:*** ***(R443) No. 5 — (R436) No. 1 — 8:*** ***(R443) No. 5 — (R432) No. 7:*** ***(R443) No. 3 — (R442) No. 1 — 22:*** ***(R443) No. 3 — (R443) No. 1 — 26:*** ***(R443) No. 3 — (R436) No. 1 — 8:*** ***(R443) No. 3 — (R432) No. 7:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair short circuit to power in harness between DMCM connector and drive motor inverter amperage sensor connector, or repair the intermediate connector.

Step		Check	Yes	No
4	**CHECK DRIVE MOTOR INVERTER AMPERAGE SENSOR.** 1) Replace the drive motor inverter amperage sensor. <Ref. to HEV-27, Drive Motor Inverter Current Sensor.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected?	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Problem is present in drive motor inverter amperage sensor.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor inverter amperage sensor.
Judge as NG when the value of drive motor inverter amperage sensor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
U phase current sensor output voltage (Current equivalent)	≥ 4.5 V ≥ 400 A

Time Needed for Diagnosis: 0.03 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
U phase current sensor output voltage (Current equivalent)	< 4.5 V < 400 A

Time Needed for Diagnosis: 0.06 seconds

BO:DTC P0BEA DRIVE MOTOR "A" PHASE V CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-279, OUTLINE OF DIAGNOSIS, DTC P0BEA DRIVE MOTOR "A" PHASE V CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

NOTE:
Refer to DTC P0BE6 DRIVE MOTOR “A” PHASE U CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE. <Ref. to HEV(diag)-268, DTC P0BE6 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter amperage sensor circuit.
Judge as NG when the value of drive motor inverter amperage sensor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
PWM output to the drive motor inverter	OFF

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (V phase average offset current) NOTE: ABS: Absolute value	> 31 A

Time Needed for Diagnosis: 0.01 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (V phase average offset current)	≤ 31 A

Time Needed for Diagnosis: 0.01 second

BP:DTC P0BEB DRIVE MOTOR "A" PHASE V CURRENT SENSOR CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-280, OUTLINE OF DIAGNOSIS, DTC P0BEB DRIVE MOTOR "A" PHASE V CURRENT SENSOR CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

NOTE:
Refer to DTC P0BE7 DRIVE MOTOR “A” PHASE U CURRENT SENSOR CIRCUIT LOW. <Ref. to HEV(diag)-272, DTC P0BE7 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor inverter amperage sensor.
Judge as NG when the value of drive motor inverter amperage sensor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
V phase current sensor output voltage	≤ 0.5 V
(Current equivalent)	≤ –400 A

Time Needed for Diagnosis: 0.03 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
V phase current sensor output voltage	> 0.5 V
(Current equivalent)	> –400 A

Time Needed for Diagnosis: 0.06 seconds

BQ:DTC P0BEC DRIVE MOTOR "A" PHASE V CURRENT SENSOR CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-281, OUTLINE OF DIAGNOSIS, DTC P0BEC DRIVE MOTOR "A" PHASE V CURRENT SENSOR CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

NOTE:
Refer to DTC P0BE8 DRIVE MOTOR “A” PHASE U CURRENT SENSOR CIRCUIT HIGH. <Ref. to HEV(diag)-276, DTC P0BE8 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor inverter amperage sensor.
Judge as NG when the value of drive motor inverter amperage sensor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
V phase current sensor output voltage	≥ 4.5 V
(Current equivalent)	≥ 400 A

Time Needed for Diagnosis: 0.03 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
V phase current sensor output voltage	< 4.5 V
(Current equivalent)	< 400 A

Time Needed for Diagnosis: 0.06 seconds

BR:DTC P0BEE DRIVE MOTOR "A" PHASE W CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-282, OUTLINE OF DIAGNOSIS, DTC P0BEE DRIVE MOTOR "A" PHASE W CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

NOTE:
Refer to DTC P0BE6 DRIVE MOTOR “A” PHASE U CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE. <Ref. to HEV(diag)-268, DTC P0BE6 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter amperage sensor circuit.
Judge as NG when the value of drive motor inverter amperage sensor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
PWM output to the drive motor inverter	OFF

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (W phase average offset current) NOTE: ABS: Absolute value	> 31 A

Time Needed for Diagnosis: 0.01 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (W phase average offset current)	≤ 31 A

Time Needed for Diagnosis: 0.01 second

BS:DTC P0BEF DRIVE MOTOR "A" PHASE W CURRENT SENSOR CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-283, OUTLINE OF DIAGNOSIS, DTC P0BEF DRIVE MOTOR "A" PHASE W CURRENT SENSOR CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

NOTE:
Refer to DTC P0BE7 DRIVE MOTOR “A” PHASE U CURRENT SENSOR CIRCUIT LOW. <Ref. to HEV(diag)-272, DTC P0BE7 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor inverter amperage sensor.
Judge as NG when the value of drive motor inverter amperage sensor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
W phase current sensor output voltage	≤ 0.5 V
(Current equivalent)	≤ –400 A

Time Needed for Diagnosis: 0.03 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
W phase current sensor output voltage	> 0.5 V
(Current equivalent)	> –400 A

Time Needed for Diagnosis: 0.06 seconds

BT:DTC P0BF0 DRIVE MOTOR "A" PHASE W CURRENT SENSOR CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-284, OUTLINE OF DIAGNOSIS, DTC P0BF0 DRIVE MOTOR "A" PHASE W CURRENT SENSOR CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

NOTE:
Refer to DTC P0BE8 DRIVE MOTOR “A” PHASE U CURRENT SENSOR CIRCUIT HIGH. <Ref. to HEV(diag)-276, DTC P0BE8 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor inverter amperage sensor.
Judge as NG when the value of drive motor inverter amperage sensor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
W phase current sensor output voltage	≥ 4.5 V
(Current equivalent)	≥ 400 A

Time Needed for Diagnosis: 0.03 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
W phase current sensor output voltage	< 4.5 V
(Current equivalent)	< 400 A

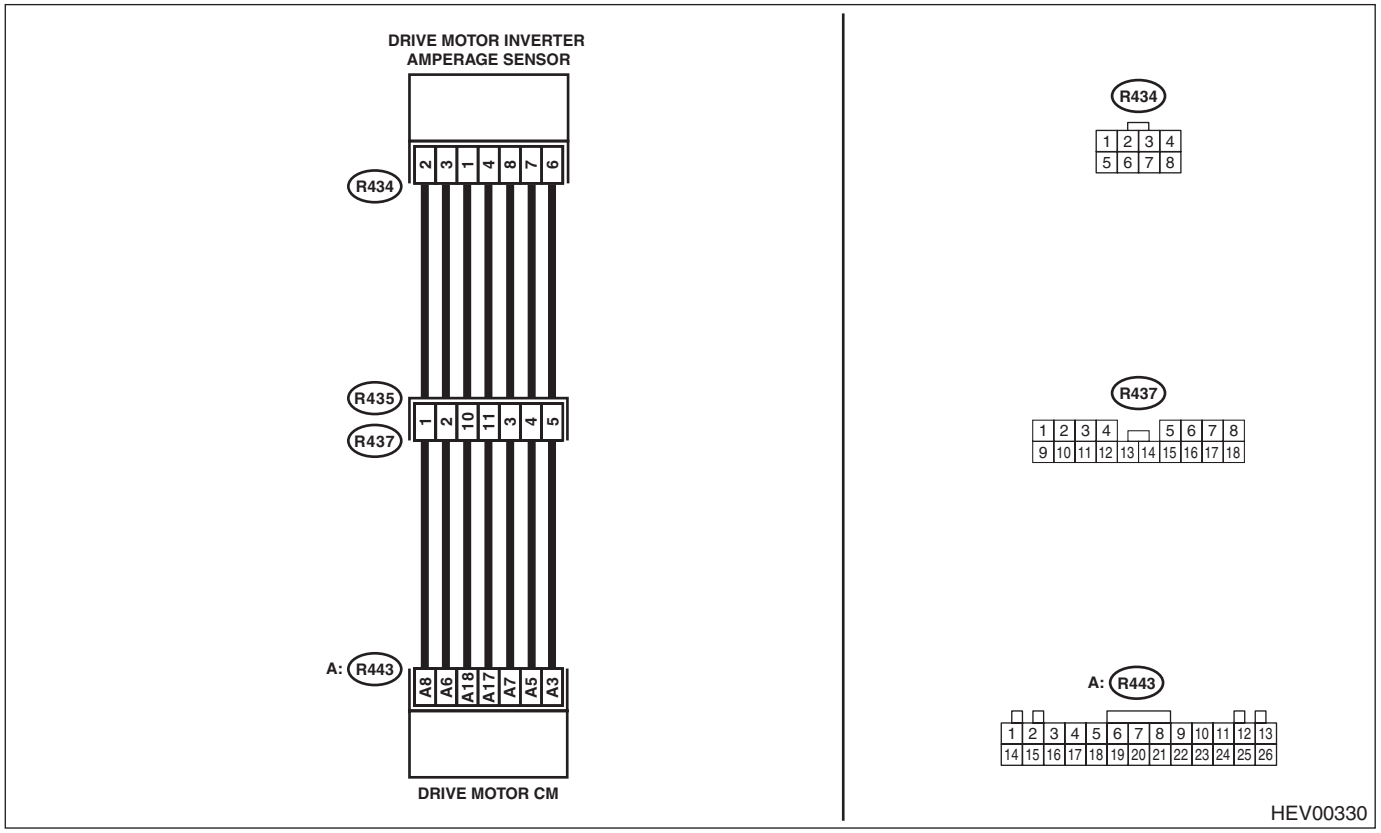
Time Needed for Diagnosis: 0.06 seconds

BU:DTC P0BFD DRIVE MOTOR "A" PHASE U-V-W CURRENT SENSOR CORRELATION

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-288, OUTLINE OF DIAGNOSIS, DTC P0BFD DRIVE MOTOR "A" PHASE U-V-W CURRENT SENSOR CORRELATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «Phase U Amperage» «Phase V Amperage» «Phase W Amperage». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the sum of those three values 45 A or more?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the DMCM connector. 6) Disconnect the drive motor inverter amperage sensor connector. 7) Using a tester, measure the resistance between DMCM connector and the current sensor connector. Connector & terminal ***Connector & terminal:*** ***(R443) No. 7 — (R434) No. 8:*** ***(R443) No. 5 — (R434) No. 7:*** ***(R443) No. 3 — (R434) No. 6:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair open circuit in harness between DMCM connector and drive motor inverter amperage sensor connector, or repair the intermediate connector.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between DMCM connector and the ground bolt of inverter frame body. ***Connector & terminal:*** ***(R443) No. 7 — Ground bolt of inverter frame body:*** ***(R443) No. 5 — Ground bolt of inverter frame body:*** ***(R443) No. 3 — Ground bolt of inverter frame body:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair short to ground circuit in harness between DMCM connector and drive motor inverter amperage sensor connector, or repair the intermediate connector.

	Step	Check	Yes	No
4	**CHECK HARNESS (BATTERY SHORT AND SHORT IN OTHER SIGNAL LINES).** 1) Disconnect the drive motor inverter connector. 2) Disconnect the intermediate connector (R436). 3) Using a tester, measure the resistance between the DMCM connector, each signal pin of DMCM, and the inverter connector. ***Connector & terminal:*** ***(R443) No. 7 — (R442) No. 1 — 22:*** ***(R443) No. 7 — (R443) No. 1 — 26:*** ***(R443) No. 7 — (R436) No. 1 — 8:*** ***(R443) No. 7 — (R432) No. 7:*** ***(R443) No. 5 — (R442) No. 1 — 22:*** ***(R443) No. 5 — (R443) No. 1 — 26:*** ***(R443) No. 5 — (R436) No. 1 — 8:*** ***(R443) No. 5 — (R432) No. 7:*** ***(R443) No. 3 — (R442) No. 1 — 22:*** ***(R443) No. 3 — (R443) No. 1 — 26:*** ***(R443) No. 3 — (R436) No. 1 — 8:*** ***(R443) No. 3 — (R432) No. 7:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair short circuit to power in harness between DMCM connector and drive motor inverter amperage sensor connector, or repair the intermediate connector.
5	**CHECK DRIVE MOTOR INVERTER AMPERAGE SENSOR.** 1) Replace the drive motor inverter amperage sensor. <Ref. to HEV-27, Drive Motor Inverter Current Sensor.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Problem is present in drive motor inverter amperage sensor.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter amperage sensor circuit.
Judge as NG when the value of drive motor inverter amperage sensor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Iu + Iv + Iw) NOTE: • ABS: Absolute value • Iu: U phase current • Iv: V phase current • Iw: W phase current	> 45 A

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Iu + Iv + Iw)	≤ 45 A

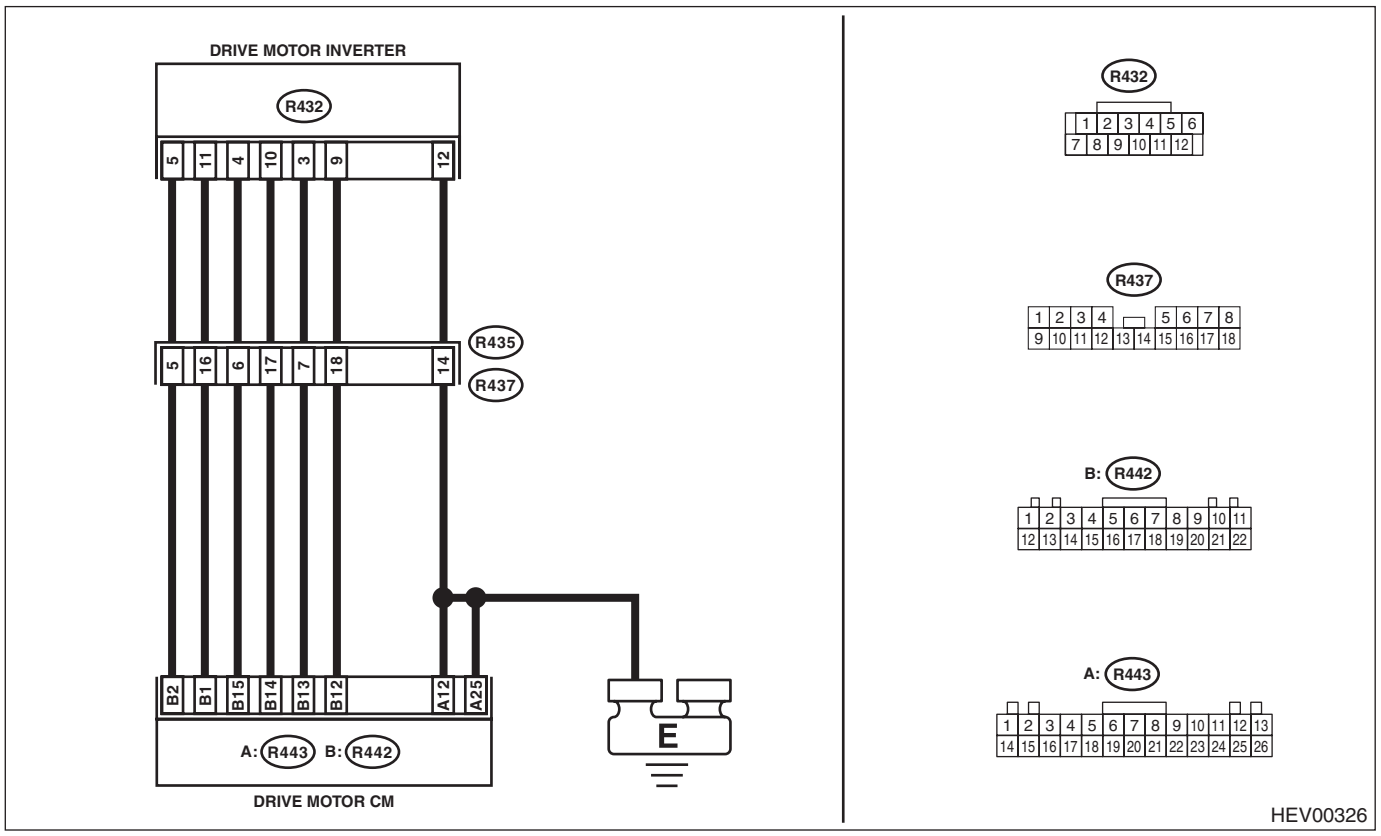
Time Needed for Diagnosis: 2 seconds

BV:DTC P0C05 DRIVE MOTOR "A" PHASE U-V-W CIRCUIT/OPEN

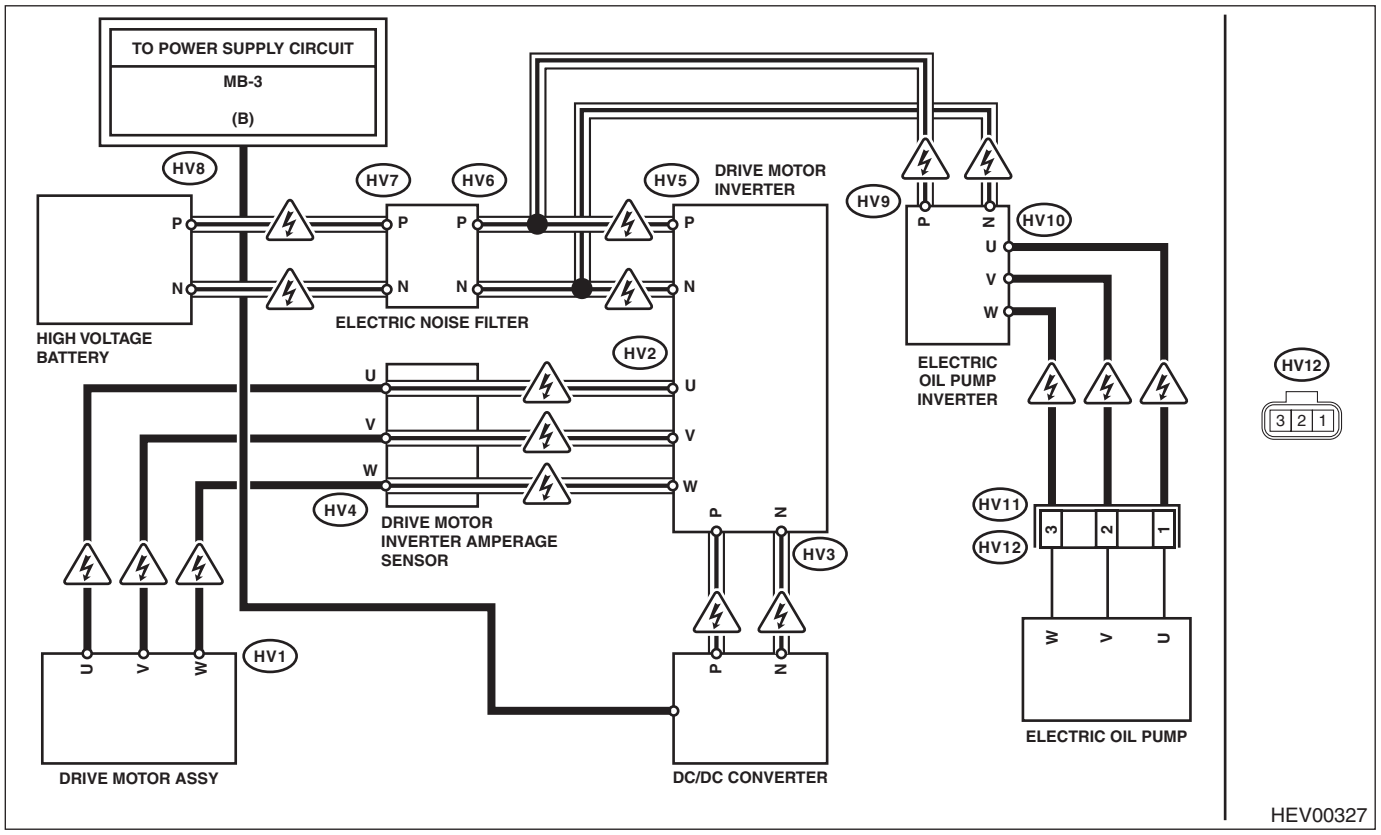
DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-292, OUTLINE OF DIAGNOSIS, DTC P0C05 DRIVE MOTOR "A" PHASE U-V-W CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.



CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-76, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK HARNESS (OPEN CIRCUIT IN INVERTER CONTROL GND).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the DMCM connector. 6) Disconnect the drive motor inverter connector. 7) Using a tester, measure the resistance between the drive motor inverter connector and the ground bolt of inverter frame body. ***Connector & terminal:*** ***(R432) No. 12 — Ground bolt of inverter frame body:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair open circuit in harness between drive motor inverter connector and chassis ground, or repair the intermediate connector.

	Step	Check	Yes	No
3	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the drive motor inverter connector and DMCM connector. ***Connector & terminal:*** ***(R442) No. 2 — (R432) No. 5:*** ***(R442) No. 1 — (R432) No. 11:*** ***(R442) No. 15 — (R432) No. 4:*** ***(R442) No. 14 — (R432) No. 10:*** ***(R442) No. 13 — (R432) No. 3:*** ***(R442) No. 12 — (R432) No. 9:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair open circuit in harness between drive motor inverter connector and DMCM connector, or repair the intermediate connector.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between drive motor inverter connector and chassis ground. ***Connector & terminal:*** ***(R432) No. 5 — Ground bolt of inverter frame body:*** ***(R432) No. 11 — Ground bolt of inverter frame body:*** ***(R432) No. 4 — Ground bolt of inverter frame body:*** ***(R432) No. 10 — Ground bolt of inverter frame body:*** ***(R432) No. 3 — Ground bolt of inverter frame body:*** ***(R432) No. 9 — Ground bolt of inverter frame body:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the circuit in harness and the intermediate connector.
5	**CHECK DRIVE MOTOR AND POWER CABLE (OPEN CIRCUIT).** 1) Leave the vehicle under temperature of 40°C (104°F) or less for 10 minutes. 2) Disconnect the power cable (HV2) of drive motor inverter. 3) Measure the resistance between each terminal of the power cable. ***(HV2) U — (HV2) V:*** ***(HV2) W — (HV2) U:*** ***(HV2) V — (HV2) W:***	Is resistance between either lines 1 Ω or more?	Go to step **6**.	Go to step **7**.
6	**CHECK DRIVE MOTOR (OPEN CIRCUIT).** 1) Disconnect the drive motor power cable (HV1). NOTE: Supply the gasket because it must be replaced. 2) Measure the resistance between each terminal of the power cable. ***Connector & terminal:*** ***(HV1) U — (HV1) V:*** ***(HV1) W — (HV1) U:*** ***(HV1) V — (HV1) W:***	Is resistance between either lines 1 Ω or more?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Replace the power cable. <Ref. to HEV-51, Power Cable.>
7	**CHECK DRIVE MOTOR INVERTER.** 1) Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> 2) Perform drive cycle A. <Ref. to HEV(diag)-32, DRIVE CYCLE A, PROCEDURE, Drive Cycle.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Problem is present in drive motor inverter.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the current flowing in drive motor.
Judge as NG when the current flowing in drive motor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
PWM output to the drive motor inverter	ON
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 10 V
Continuous time of a and b	≥ 1 s
c: ABS (Motor speed)	≥ 125 rpm
NOTE: ABS: Absolute value	and ≤ 1500 rpm
Continuous time of c	≥ 0.12 s
d: ABS (Commanded motor torque)	≥ 7 N·m (0.7 kgf-m, 5.2 ft-lb)
Continuous time of d	≥ 0.13 s

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Tu1 – Tu2 or Tv1 – Tv2 or Tw1 – Tw2 NOTE: • Tu1: Integrated time that ABS (Iu) is less than or equal to 13.5 A • Tu2: Integrated time that ABS (Iu) is greater than 13.5 A • Tv1, Tw1: Similar to Tu1 • Tv2, Tw2: Similar to Tu2 • Iu: U phase current • Iv: V phase current • Iw: W phase current	≥ 0.3 s

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Tu1 – Tu2 and Tv1 – Tv2 and Tw1 – Tw2	< 0.3 s

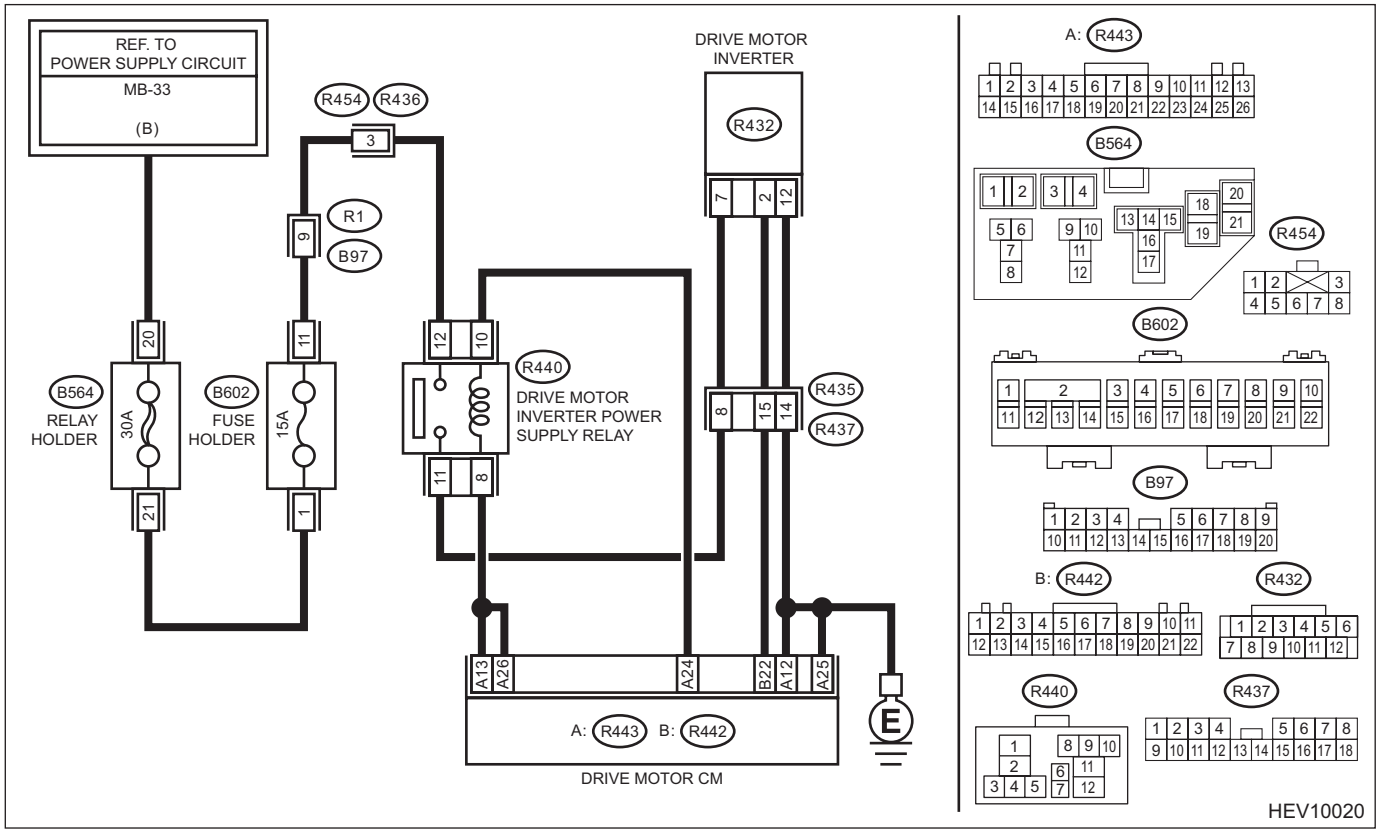
Time Needed for Diagnosis: 0.6 seconds

BW:DTC P0C0C DRIVE MOTOR "A" INVERTER POWER SUPPLY CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-295, OUTLINE OF DIAGNOSIS, DTC P0C0C DRIVE MOTOR "A" INVERTER POWER SUPPLY CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK RELAY.** Using the Subaru Select Monitor, perform «Drive Motor Inverter power supply relay» of System Operation Check Mode for the drive motor control system. <Ref. to HEV(diag)-70, DRIVE MOTOR CONTROL SYSTEM, OPERATION, System Operation Check Mode.>	Does the relay operate?	Go to step **2**.	Go to step **3**.

	Step	Check	Yes	No
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Drive Motor Inverter Operation Update Counter». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Does the value change?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Perform the diagnosis according to DTC P1C30. <Ref. to HEV(diag)-318, DTC P1C30 LOST COMMUNICATION WITH DRIVE MOTOR "A" INVERTER, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
3	**CHECK RELAY.** Check the inverter power supply relay as a single unit. <Ref. to HEV-12, Relay and Fuse.>	Is the condition normal? (Check for continuity between terminals, damage, etc.)	Go to step **4**.	Replace the relay.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the DMCM connector. 6) Remove the inverter power supply relay. 7) Using a tester, measure the resistance between the inverter power supply relay and DMCM connector. ***Connector & terminal*** ***(R440) No. 10 — (R443) No. 24:*** ***(R440) No. 8 — (R443) No. 13:*** ***(R440) No. 8 — (R443) No. 26:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair open circuit in harness between DMCM connector and inverter power supply relay connector, or repair the intermediate connector.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** 1) Using a tester, measure the resistance between the inverter power supply relay and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R440) No. 10 — Ground bolt of inverter frame body:*** ***(R440) No. 8 — Ground bolt of inverter frame body:***	Is the resistance 1 MΩ or more?	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Repair short circuit to ground in harness between DMCM connector and inverter power supply relay connector or between inverter power supply relay and inverter connector, or repair the intermediate connector.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of high voltage battery cooling fan and drive motor inverter power supply relay.
Judge as NG when the drive signal of high voltage battery cooling fan and drive motor inverter power supply relay circuit is abnormal.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Diagnosis 1	
a: Ignition state	Run or crank
Continuous time of a	≥ 0.142 s
DMCM commanded inverter power supply relay	Open
b: DMCM measured inverter power supply relay	Closed
Continuous time of b	≥ 0.051 s
Diagnosis 2	
c: 12 V battery system voltage	≥ 8 V
Continuous time of c	≥ 1 s
DMCM commanded inverter power supply relay	Closed

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
SCI data from drive motor Inverter	Not received
Diagnosis 2	
DMCM measured inverter power supply relay	Open

Time Needed for Diagnosis:
- **Diagnosis 1:** 0.0104 s
- **Diagnosis 2:** 0.04 s

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
SCI data from drive motor Inverter	Received
Diagnosis 2	
DMCM measured inverter power supply relay	Closed

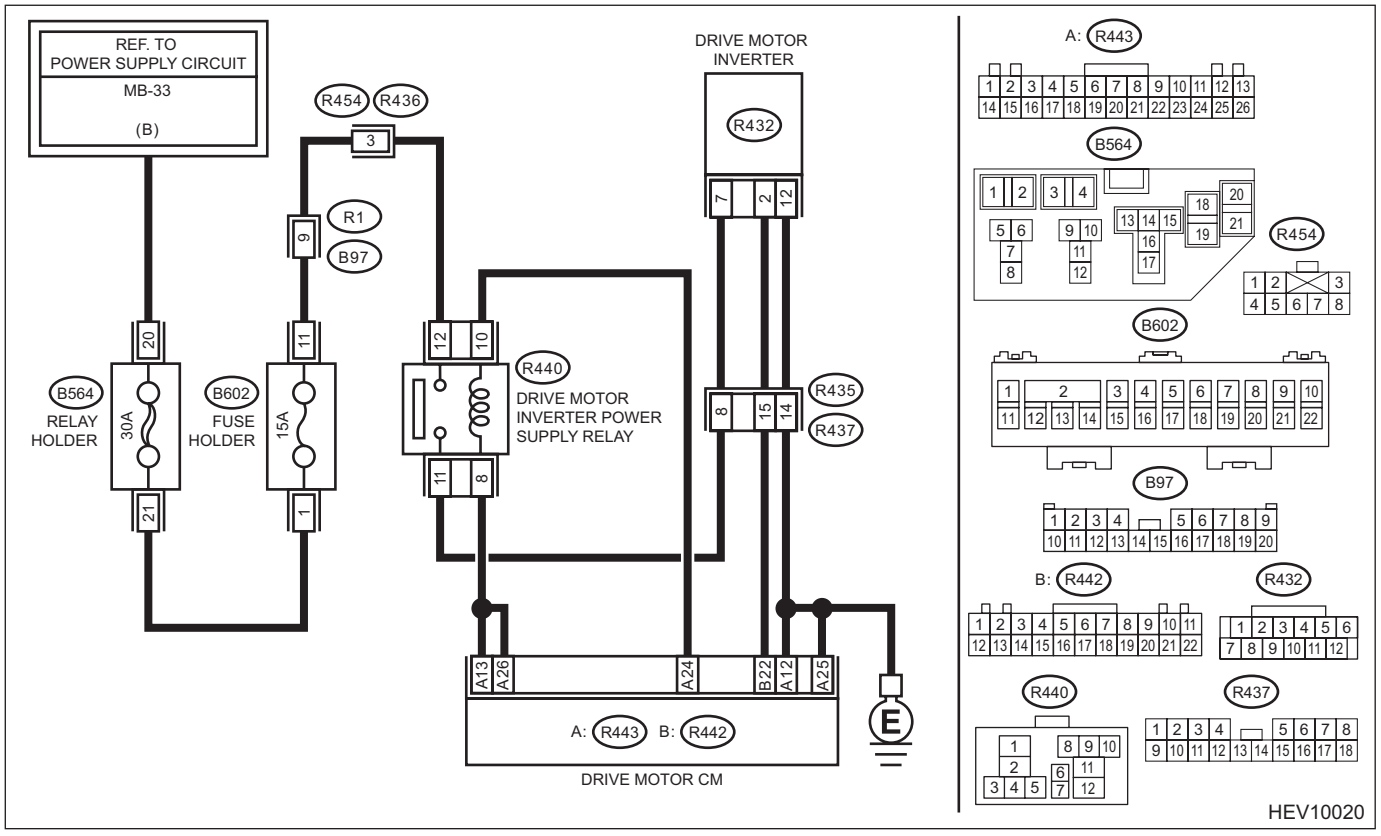
Time Needed for Diagnosis:
- **Diagnosis 1:** 0.0104 s
- **Diagnosis 2:** 0.08 s

BX:DTC P0C0D DRIVE MOTOR "A" INVERTER POWER SUPPLY CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-298, OUTLINE OF DIAGNOSIS, DTC P0C0D DRIVE MOTOR "A" INVERTER POWER SUPPLY CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



Normal control

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Using the Subaru Select Monitor, perform «Drive Motor Inverter power supply relay» of System Operation Check Mode for the drive motor control system. <Ref. to HEV(diag)-70, DRIVE MOTOR CONTROL SYSTEM, OPERATION, System Operation Check Mode.> 2) Confirm the current data of in System Operation Check Mode, the value of «Drive Motor Inverter Operation Update Counter».	Does «Drive Motor Inverter Operation Update Counter» stop when «Drive Motor Inverter power supply relay» is OFF?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK RELAY.** Check the inverter power supply relay as a single unit. <Ref. to HEV-12, Relay and Fuse.>	Is the condition normal? (Check for continuity between terminals, damage, etc.)	Go to step **3**.	Replace the relay.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** 1) Disconnect the DMCM connector. 2) Using a tester, measure the resistance between DMCM connector and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R443) No. 24 — Ground bolt of inverter frame body:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair short circuit to ground in harness between DMCM connector and inverter power supply relay connector, or repair the intermediate connector.
4	**CHECK HARNESS (SHORT TO POWER AND SHORT TO OTHER SIGNAL LINES).** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the drive motor inverter connector. 6) Disconnect the intermediate connector (R436). 7) Remove the inverter power supply relay. 8) Using a tester, measure the resistance between inverter power supply relay connector and all DMCM signal pins. ***Connector & terminal*** ***(R440) No. 12 — (R442) No. 1 — 22:*** ***(R440) No. 12 — (R443) No. 1 — 26:*** ***(R440) No. 12 — (R436) No. 1 — 8 (except No. 3):*** ***(R440) No. 10 — (R442) No. 1 — 22:*** ***(R440) No. 10 — (R443) No. 1 — 26 (except No. 24):*** ***(R440) No. 10 — (R436) No. 1 — 8:*** ***(R440) No. 10 — (R432) No. 7:***	Is the resistance 1 MΩ or more?	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Repair short circuit in harness between the inverter power supply relay and DMCM, harness between inverter power supply relay and drive motor inverter, or repair the intermediate connector.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of high voltage battery cooling fan and drive motor inverter power supply relay.
Judge as NG when the drive signal of high voltage battery cooling fan and drive motor inverter power supply relay circuit is abnormal.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Diagnosis 1	
a: Ignition state	Run or crank
Continuous time of a	≥ 0.142 s
DMCM commanded inverter power supply relay	Open
b: DMCM measured inverter power supply relay	Open
Continuous time of b	≥ 0.051 s
Diagnosis 2	
a: Ignition state	Run or crank
Continuous time of a	≥ 0.142 s
DMCM commanded inverter power supply relay	Open
b: DMCM measured inverter power supply relay	Closed
Continuous time of b	≥ 0.051 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
SCI message from the drive motor Inverter	Received

Time Needed for Diagnosis: 0.0104 seconds
Malfunction Indicator Light Illumination: detects when malfunction occurs in 2 continuous driving cycles. (Single engine startup is counted as one drive cycle.)

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
SCI message from the drive motor Inverter	Not received

Time Needed for Diagnosis: 0.0104 seconds

BY:DTC P0C79 DRIVE MOTOR "A" INVERTER VOLTAGE TOO HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-300, OUTLINE OF DIAGNOSIS, DTC P0C79 DRIVE MOTOR "A" INVERTER VOLTAGE TOO HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the value of «Contactor Signal(HPCM)» in the freeze frame data of the drive motor control system. <Ref. to HEV(diag)-63, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Is either «OFF» or «Abnormal OFF» displayed?	Go to step **2**.	Go to step **3**.
2	**CHECK DTC.** Check DTCs in the following systems; • Hybrid powertrain control system <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).> • Battery energy control system <Ref. to HEV(diag)-23, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).> • Drive motor control system <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).> • Engine <Ref. to EN(H4DO HEV)(diag)-51, Read Diagnostic Trouble Code (DTC).> • Transmission <Ref. to CVT(HEV)(diag)-19, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-72, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK BUS BAR.** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Check the bus bar.	Is the condition normal? (Check for loose bolts, insecure connection, foreign matter caught, trace of arc (burnt terminals) etc.)	Go to step **4**.	Retighten the bolts. Or replace the bus bar.
4	**CHECK DRIVE MOTOR INVERTER.** 1) Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Problem is present in drive motor inverter.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter input voltage.
Judge as NG when the input voltage value of drive motor inverter is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 8 V
Continuous time of a and b	≥ 1 s
First SCI data from drive motor inverter	Received

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Inverter voltage	≥ 155 V

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

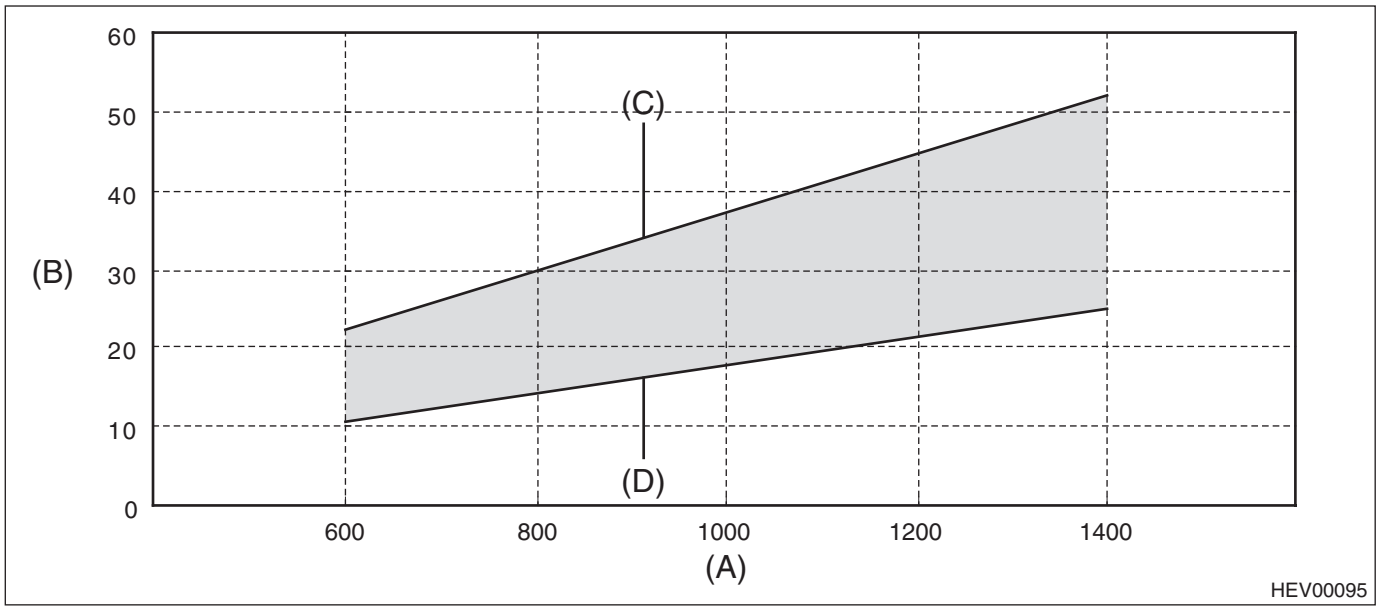
Malfunction Criteria	Threshold Value
Inverter voltage	< 155 V

Time Needed for Diagnosis: 0.02 seconds

BZ:DTC P0DA8 HYBRID/EV BATTERY VOLTAGE/DRIVE MOTOR "A" INVERTER VOLTAGE CORRELATION

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-302, OUTLINE OF DIAGNOSIS, DTC P0DA8 HYBRID/EV BATTERY VOLTAGE/DRIVE MOTOR "A" INVERTER VOLTAGE CORRELATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>



TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-76, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK DRIVE MOTOR INVERTER.** 1) With the 12 V battery connected, remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> **CAUTION:** **Watch for an electrical short at each harness because the 12 V battery is connected.** 2) Lift up the vehicle. 3) Start the engine, and set the shift lever to "D" range. 4) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «A/T Oil Temperature» «Drive Motor Speed» «Drive Motor Inverter Input High Voltage Sensor (Serial)». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	«Drive Motor Inverter Input High Voltage Sensor (Serial)» is within the standard specified in Note when «ATF Temperature» is 20 — 60°C (68 — 140°F) and «Drive Motor Speed» is 600 — 1400 rpm.	Go to step **3**.	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.>
3	**CHECK BUS BAR.** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Check the bus bar.	Is the condition normal? (Check for loose bolts, insecure connection, foreign matter caught, trace of arc (burnt terminals) etc.)	Go to step **4**.	Retighten the bolts. Or replace the bus bar.
4	**CHECK DMCM.** 1) Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected? (current malfunction)	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Problem is present in DMCM.

NOTE:
Value of «Drive Motor Inverter Input High Voltage Sensor (Serial)» is proportional to «Drive Motor Speed».
- 1000 rpm: 18 V — 37 V
- 1400 rpm: 25 V — 52 V

(A) Drive motor speed
(B) Drive Motor Inverter Input High Voltage Sensor (Serial)
(C) Standard at Max.
(D) Standard at Min.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter input voltage.
Judge as NG when the difference between the input voltage value of drive motor inverter and the total voltage of high voltage battery is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 10 V
Continuous time of a and b	≥ 1 s
HPCM contactor request	Closed
BECM pre-charge contactor command	Open
BECM positive contactor command	Closed
BECM negative contactor command	Closed
First SCI data from drive motor inverter	Received

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Inverter voltage – Battery pack voltage) NOTE: ABS: Absolute value	> 20 V

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Inverter voltage – Battery pack voltage)	≤ 20 V

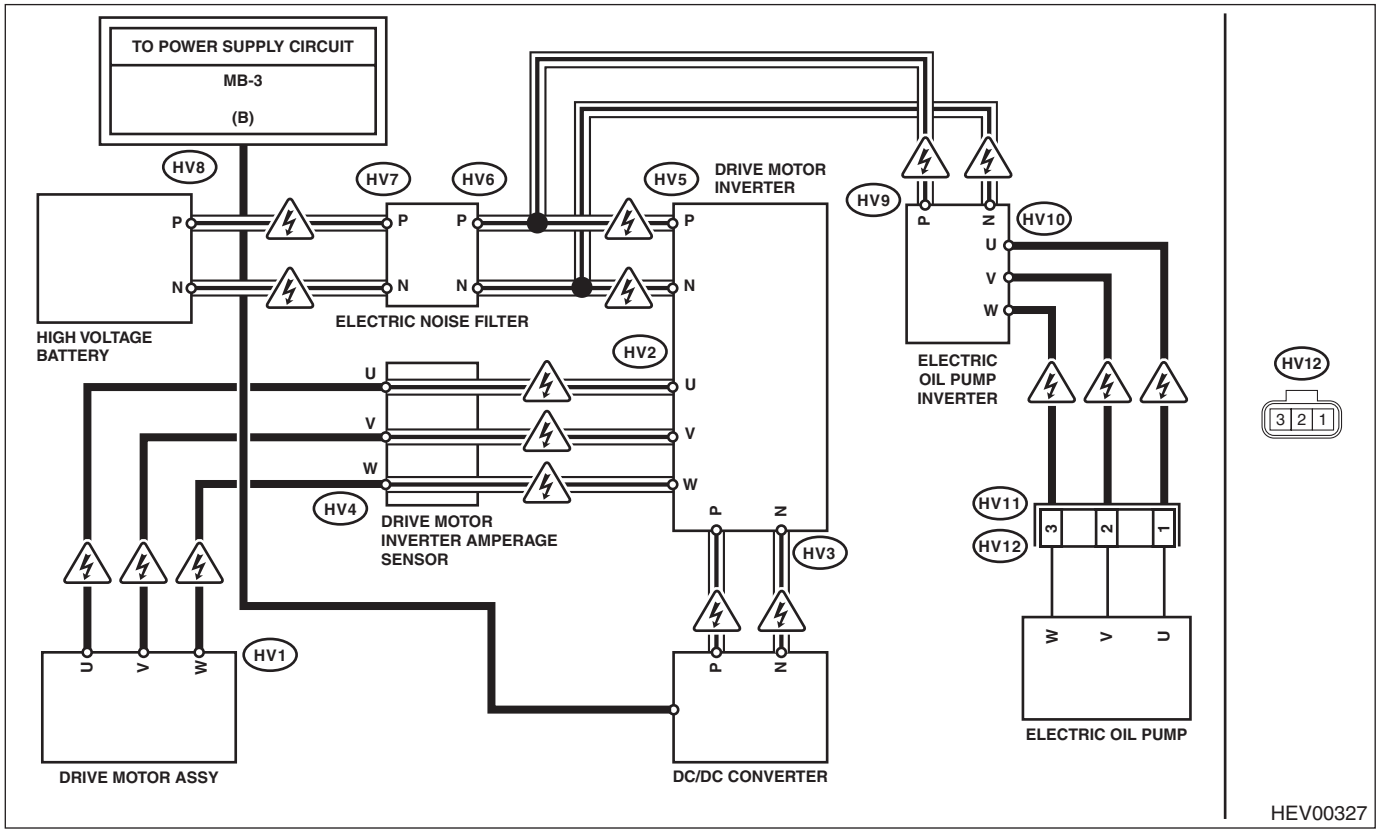
Time Needed for Diagnosis: 4 seconds

CA:DTC P1C20 DRIVE MOTOR "A" INVERTER VOLTAGE TOO LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-306, OUTLINE OF DIAGNOSIS, DTC P1C20 DRIVE MOTOR "A" INVERTER VOLTAGE TOO LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read DTCs of the following system. • Battery energy control system <Ref. to HEV(diag)-23, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-80, BATTERY ENERGY CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK READY.** Start the engine.	Does READY come on?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **3**.
3	**CHECK DTC.** With engine running, read DTCs of the following system. • Hybrid powertrain control system <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).> • Battery energy control system <Ref. to HEV(diag)-23, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).> • Drive motor control system <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).> • Engine <Ref. to EN(H4DO HEV)(diag)-51, Read Diagnostic Trouble Code (DTC).> • Transmission <Ref. to CVT(HEV)(diag)-19, Read Diagnostic Trouble Code (DTC).>	Are any DTCs other than DTC P1C20 detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-72, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK BUS BAR.** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Check the bus bar.	Is the condition normal? (Check for loose bolts, insecure connection, foreign matter caught, trace of arc (burnt terminals) etc.)	Go to step **5**.	Retighten the bolts. Or replace the bus bar.
5	**CHECK ELECTRIC NOISE FILTER (INTERNAL SHORT).** 1) Remove the electric noise filter. 2) Measure the resistance between each terminal of electric noise filter. ***Connector & terminal*** ***(HV6) P — (HV6) N:*** ***(HV6) P — Electric noise filter ground:*** ***(HV6) N — Electric noise filter ground:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Replace the electric noise filter. <Ref. to HEV-31, Noise Filter.>

Step		Check	Yes	No
6	**CHECK DRIVE MOTOR INVERTER.** 1) Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Problem is present in drive motor inverter.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter input voltage.
Judge as NG when the input voltage value of drive motor inverter is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 8 V
Continuous time of a and b	≥ 1 s
First SCI data from drive motor inverter	Received
HPCM contactor request	Closed
BECM pre-charge contactor command	Open
BECM positive contactor command	Closed
BECM negative contactor command	Closed

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Inverter voltage	≤ 70 V

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Inverter voltage	> 70 V

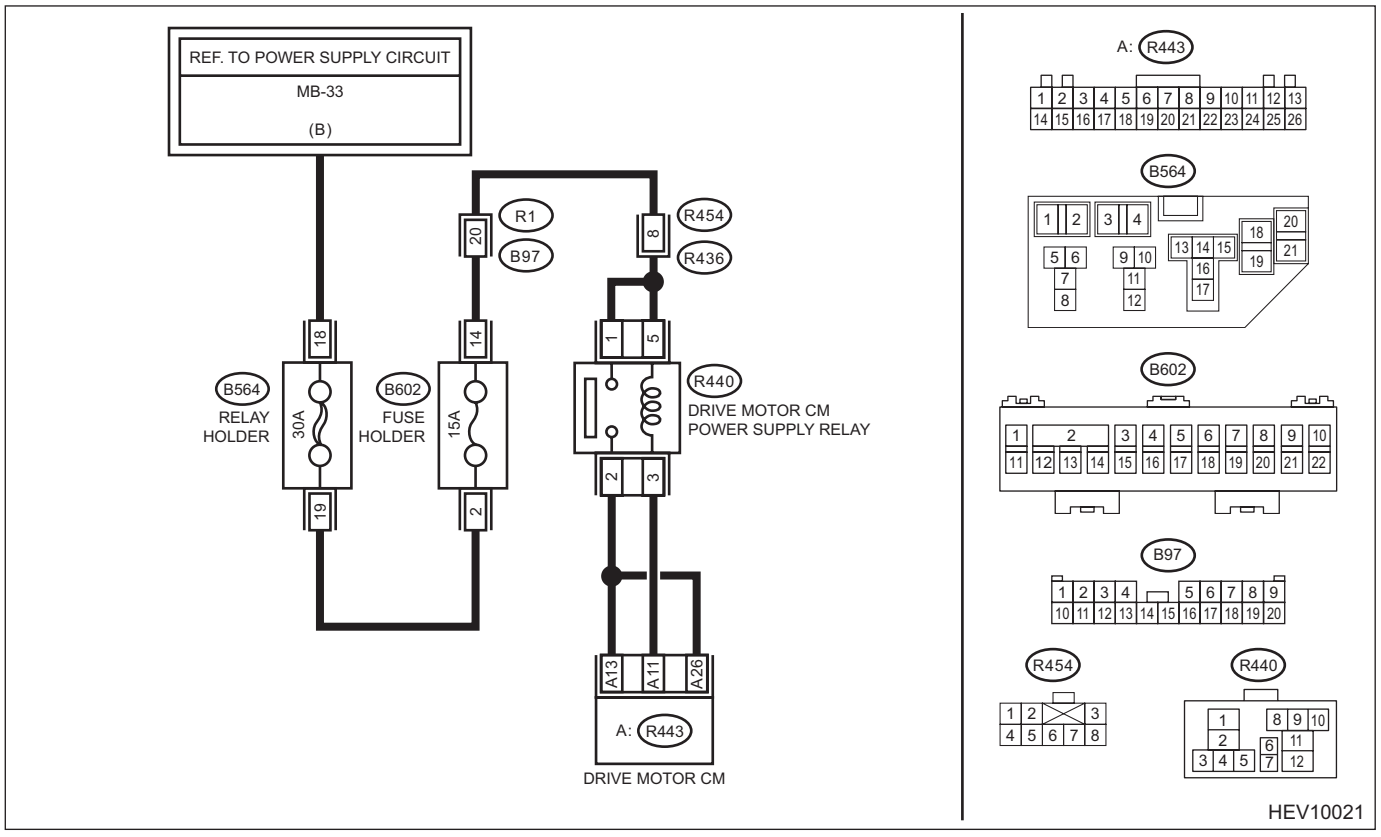
Time Needed for Diagnosis: 0.02 seconds

CB:DTC P1C22 12V AUXILIARY BATTERY VOLTAGE TOO LOW

DIAGNOSIS:

- Detects drive motor control module voltage malfunction.
- If the drive motor control module detects that power supply voltage is out of the standard, it is judged as NG.
- Detected when two consecutive driving cycles with fault occur. (Single engine startup is counted as one drive cycle.)

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Control Module Voltage». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 9 V or less?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Disconnect battery terminals. 3) Check the 12 volt auxiliary battery as a single part. <Ref. to SC(H4DO(HEV))-40, Battery.>	Is it normal?	Go to step **3**.	Charge or replace the battery.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Connect the 12 volt auxiliary battery. 2) Using a tester, measure the voltage between the DMCM power relay and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R440) No. 2 (+) — Ground bolt of inverter frame body (–):***	Is the voltage 9 V or less?	Repair open circuit in harness between DMCM power supply relay connector and 12 volt auxiliary battery, or repair the intermediate connector.	Go to step **4**.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** 1) Disconnect the DMCM connector. 2) Remove the DMCM power relay. <Ref. to CVT(TH58A)-160, Relay and Fuse.> 3) Using a tester, measure the resistance between DMCM connector terminals and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R443) No. 13 — Ground bolt of inverter frame body:*** ***(R443) No. 26 — Ground bolt of inverter frame body:***	Is the resistance 1 MΩ or more?	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Repair short to ground circuit in harness between DMCM power supply relay connector and 12 volt auxiliary battery, or repair the intermediate connector.

CC:DTC P1C24 DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT "B"

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-309, OUTLINE OF DIAGNOSIS, DTC P1C24 DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT "B", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

NOTE:
For the diagnostic procedure, refer to DTC P0A2A DRIVE MOTOR “A” TEMPERATURE SENSOR CIRCUIT. <Ref. to HEV(diag)-165, DTC P0A2A DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor temperature sensor.
Judge as NG when the value of drive motor temperature sensor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
PWM output to the drive motor inverter	ON
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 10 V
Continuous time of a and b	≥ 15 s
Generated energy of drive motor	> Map1
Assist energy of drive motor	> Map2
First SCI data from drive motor inverter	Received

Map 1

Hybrid battery temperature and Drive motor inverter temperature either lower temperature (°C (°F))	–30 (–22)	–10 (14)	0 (32)	10 (50)	30 (86)	40 (104)
Generated energy of drive motor (Wh)	630	320	200	130	0	0

Map 2

Hybrid battery temperature and Drive motor inverter temperature either lower temperature (°C (°F))	–30 (–22)	–10 (14)	0 (32)	10 (50)	30 (86)	40 (104)
Assist energy of drive motor (Wh)	270	130	75	50	0	0

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage (Temperature equivalent)	> 4.5 V < –3.4°C (25.9°F)

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage (Temperature equivalent)	≤ 4.5 V ≥ –3.4°C (25.9°F)

Time Needed for Diagnosis: 4 seconds

CD:DTC P1C25 DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT "B" LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-311, OUTLINE OF DIAGNOSIS, DTC P1C25 DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT "B" LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

NOTE:
For the diagnostic procedure, refer to DTC P0A2C DRIVE MOTOR “A” TEMPERATURE SENSOR CIRCUIT LOW. <Ref. to HEV(diag)-170, DTC P0A2C DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor temperature sensor.
Judge as NG when the value of drive motor temperature sensor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage	< 0.23 V
(Temperature equivalent)	> 234°C (453.2°F)

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage	≥ 0.23 V
(Temperature equivalent)	≤ 234°C (453.2°F)

Time Needed for Diagnosis: 2 seconds

CE:DTC P1C26 DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT "B" HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-312, OUTLINE OF DIAGNOSIS, DTC P1C26 DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT "B" HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

NOTE:
For the diagnostic procedure, refer to DTC P0A2D DRIVE MOTOR “A” TEMPERATURE SENSOR CIRCUIT HIGH. <Ref. to HEV(diag)-175, DTC P0A2D DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor temperature sensor.
Judge as NG when the value of drive motor temperature sensor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage (Temperature equivalent)	> 4.6 V < –55°C (–67°F)

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage (Temperature equivalent)	≤ 4.6 V ≥ –55°C (–67°F)

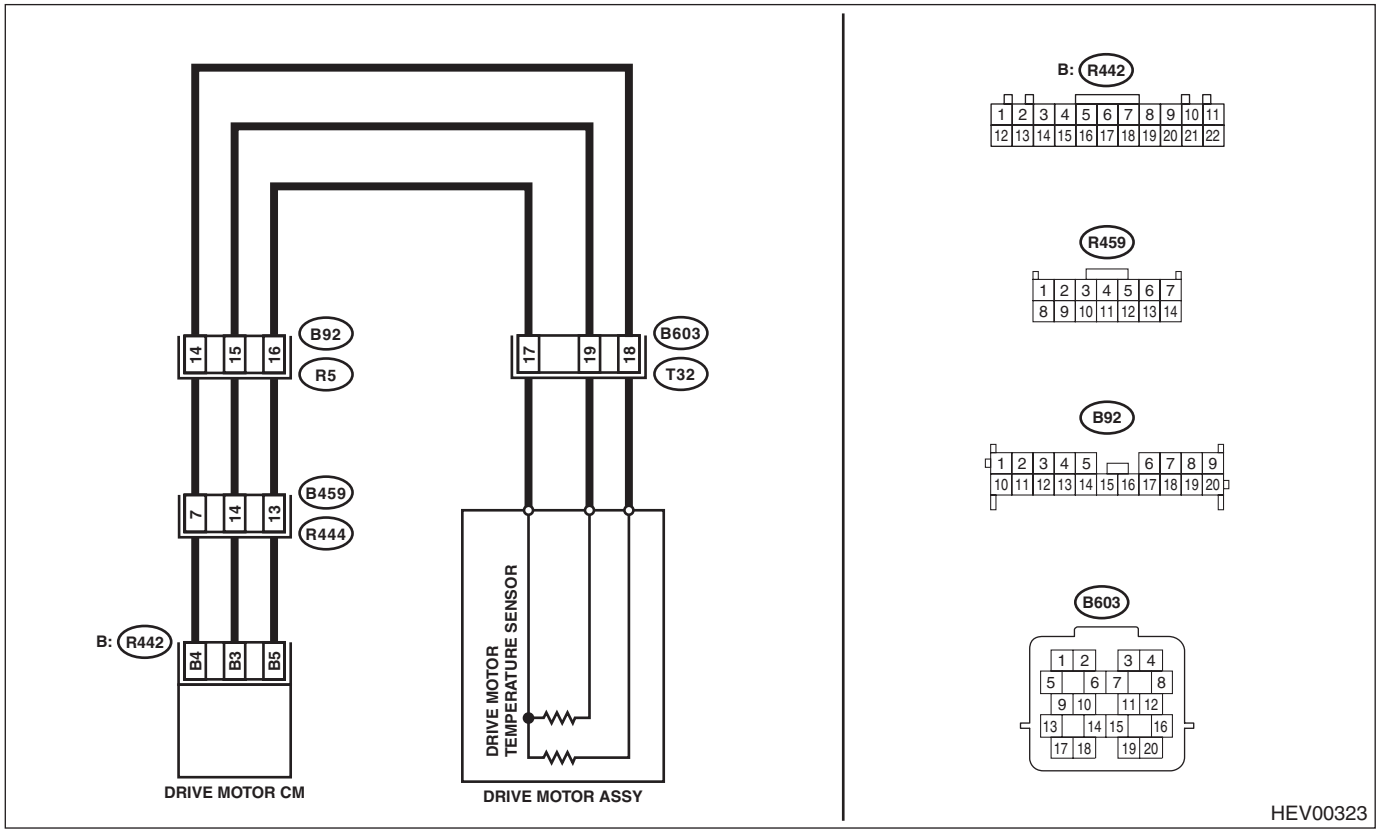
Time Needed for Diagnosis: 2 seconds

CF:DTC P1C27 DRIVE MOTOR "A" TEMPERATURE SENSOR CORRELATION

DIAGNOSIS:

- Detected when two consecutive driving cycles with fault occur. (Single engine startup is counted as one drive cycle.)
- GENERAL DESCRIPTION <Ref. to HEV(diag)-315, OUTLINE OF DIAGNOSIS, DTC P1C27 DRIVE MOTOR "A" TEMPERATURE SENSOR CORRELATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

CVT control system <Ref. to WI(HEV)-82, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC (current malfunction) using Subaru Select Monitor. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is any one of the following DTCs detected? P0A2A, P0A2C, P0A2D, P1C24, P1C25, P1C26, P0A3F, P0C52, P0C5C, P0CDD, P0CDC, P0CDD, P0CDC, U0076, U0111, U0140, U1290, P0604, P0A1B	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-76, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK CURRENT DATA.** 1) Warm up the engine. 2) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «Drive Motor Temperature A» and «Drive Motor Temperature B». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	When the temperature of «Drive Motor Temperature A» or «Drive Motor Temperature B» is in the range of 30 — 140°C (86 — 284°F), is the difference in temperature between «Drive Motor Temperature A» and «Drive Motor Temperature B» 20°C (36°F) or more?	Go to step **3**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK HARNESS AND DMCM.** 1) Disconnect the DMCM connector (R442). 2) Using a tester, measure the resistance between terminals in the DMCM connector. ***Connector & terminal*** ***TMPA*** ***(R442) No. 4 — (R442) No. 5:*** ***TMPB*** ***(R442) No. 3 — (R442) No. 5:***	Is the difference in resistance between TMPA and TMPB 136 kΩ or more?	Go to step **4**.	Go to step **5**.
4	**CHECK DRIVE MOTOR.** 1) Disconnect the drive motor assembly connector (B603). 2) Using a tester, measure the resistance between terminals in the drive motor assembly connector. ***Connector & terminal*** ***TMPA*** ***(T32) No. 18 — (T32) No. 17:*** ***TMPB*** ***(T32) No. 10 — (T32) No. 17:***	Is the difference in resistance between TMPA and TMPB 136 kΩ or more?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Repair the harness between DMCM connector and drive motor assembly connector.
5	**CHECK DMCM AND DRIVE MOTOR.** 1) Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.> 2) Perform driving cycle B. <Ref. to HEV(diag)-34, DRIVE CYCLE B, PROCEDURE, Drive Cycle.> 3) Read the DTC (current malfunction) using Subaru Select Monitor. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P1C27 detected?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>	Problem is present in DMCM.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor temperature sensor.
Judge as NG when the characteristic of drive motor temperature sensor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Diagnosis 1	
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 10 V
Continuous time of a and b	≥ 240 s
c: ABS (Drive motor speed)	> 125 rpm
NOTE: ABS: Absolute value	
or	
d: ABS (Commanded motor torque)	< 15 N·m (1.5 kgf-m, 11.1 ft-lb)
Continuous time of c or d	≥ 240 s
Drive motor temperature A	> 30°C (86°F) and < 140°C (284°F)
or	
Drive motor temperature B	> 30°C (86°F) and < 140°C (284°F)
Diagnosis 2	
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 10 V
Continuous time of a and b	≥ 240 s
c: ABS (Drive motor speed)	> 125 rpm
NOTE: ABS: Absolute value	
or	
d: ABS (Commanded motor torque)	< 15 N·m (1.5 kgf-m, 11.1 ft-lb)
Continuous time of c or d	≥ 240 s
Drive motor temperature A	> 30°C (86°F) and < 140°C (284°F)
or	
Drive motor temperature B	> 30°C (86°F) and < 140°C (284°F)
Variation of motor temperature A or Variation of motor temperature B	> 25°C (77°F)

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 ABS (Motor temperature A – Motor temperature B) NOTE: ABS: Absolute value	> 20°C (36°F)
Diagnosis 2 ABS (Variation of motor temperature A – Variation of motor temperature B) NOTE: • Variation of motor temperature A = Max (Motor temperature A) – Min (Motor temperature A) • Variation of motor temperature B = Max (Motor temperature B) – Min (Motor temperature B) • Max: The maximum value of the experience in the current driving cycle • Min: The minimum value of the experience in the current driving cycle	> 20°C (36°F)

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: detects when malfunction occurs in 2 continuous driving cycles. (Single engine startup is counted as one drive cycle.)

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 ABS (Motor temperature A – Motor temperature B)	≤ 20°C (36°F)
Diagnosis 2 ABS (Variation of motor temperature A – Variation of motor temperature B)	≤ 20°C (36°F)

Time Needed for Diagnosis: 20 seconds

CG:DTC P1C2A DRIVE MOTOR "A" INVERTER CIRCUIT

DIAGNOSIS:

- Detect the malfunction of drive motor inverter.
- If malfunction is detected in the internal circuit of drive motor inverter, it is judged as NG.
- Immediately at fault recognition

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

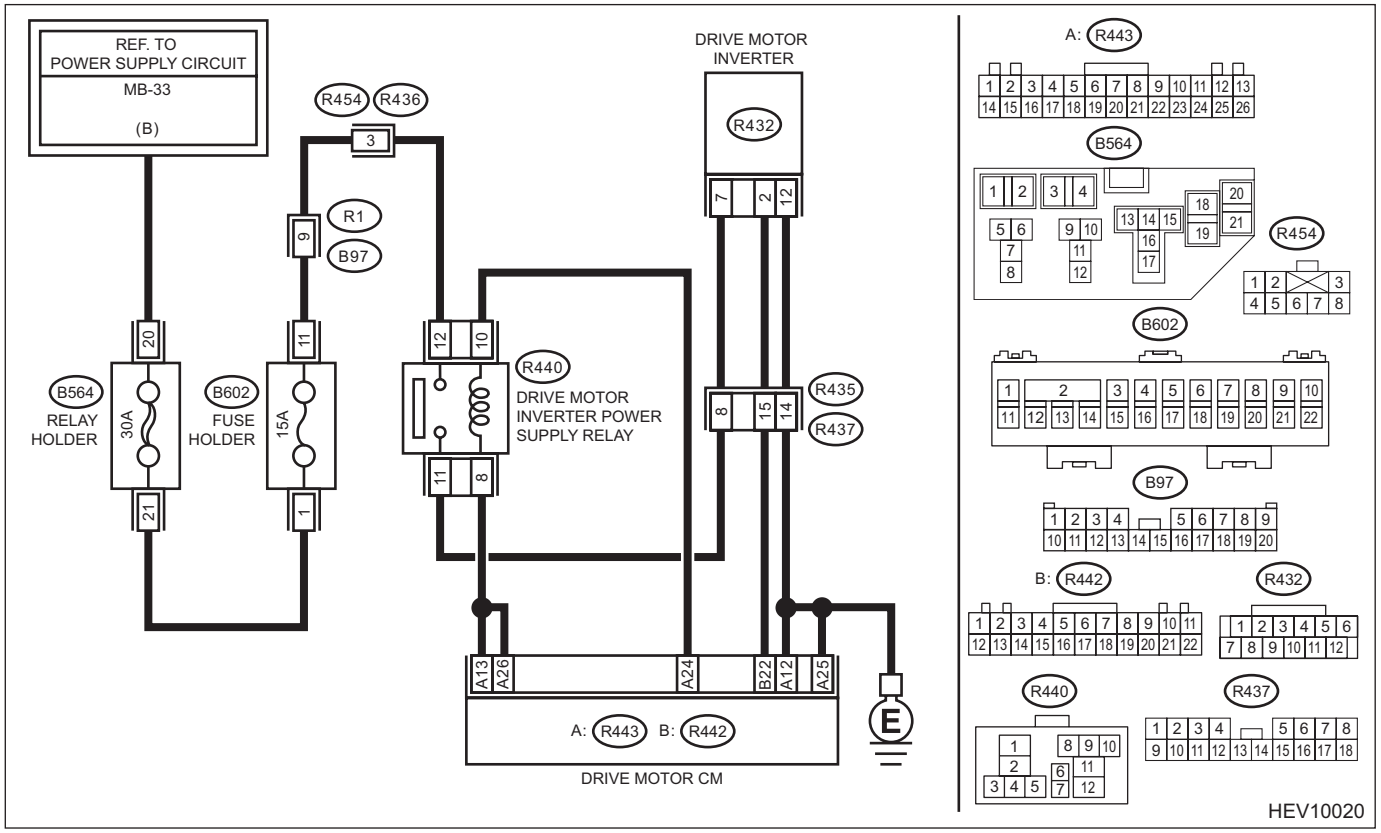
Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P0A78 detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-228, DTC P0A78 DRIVE MOTOR "A" INVERTER PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> Replace the power cable after completing the diagnosis. <Ref. to HEV-51, Power Cable.>	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>

CH:DTC P1C30 LOST COMMUNICATION WITH DRIVE MOTOR "A" INVERTER

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-320, OUTLINE OF DIAGNOSIS, DTC P1C30 LOST COMMUNICATION WITH DRIVE MOTOR "A" INVERTER, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Using the Subaru Select Monitor, perform «Drive Motor Inverter power supply relay» of System Operation Check Mode for the drive motor control system. <Ref. to HEV(diag)-70, DRIVE MOTOR CONTROL SYSTEM, OPERATION, System Operation Check Mode.> 2) Confirm the current data of in System Operation Check Mode, the value of «Drive Motor Inverter Operation Update Counter».	Does «Drive Motor Inverter Operation Update Counter» stop when «Drive Motor Inverter power supply relay» is OFF?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK RELAY.** Check the inverter power supply relay as a single unit. <Ref. to HEV-12, Relay and Fuse.>	Is the condition normal? (Check for continuity between terminals, damage, etc.)	Go to step **3**.	Replace the relay.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the drive motor inverter connector. 6) Disconnect the DMCM connector. 7) Using a tester, measure the resistance between the drive motor inverter connector and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R432) No. 2 — Ground bolt of inverter frame body:*** ***(R432) No. 7 — Ground bolt of inverter frame body:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair short circuit to ground in harness between drive motor inverter connector and DMCM connector, or repair the intermediate connector.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between drive motor inverter connector and DMCM connector and between the ground bolt of inverter frame body and inverter power supply relay. ***Connector & terminal:*** ***(R442) No. 22 — (R432) No. 2:*** ***(R440) No. 11 — (R432) No. 7:*** ***(R432) No. 12 — Ground bolt of inverter frame body:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair open circuit in harness between drive motor inverter connector and DMCM connector or between drive motor inverter connector and inverter power supply relay, or repair the intermediate connector.

	Step	Check	Yes	No
5	**CHECK HARNESS (SHORT TO POWER AND SHORT TO OTHER SIGNAL LINES).** 1) Disconnect the intermediate connector (R436). 2) Using a tester, measure the resistance within DMCM connector, between DMCM connector and intermediate connector (R436), and within drive motor inverter connector. ***Connector & terminal:*** ***(R442) No. 22 — (R442) No. 1 — 22:*** ***(R442) No. 22 — (R443) No. 1 — 26:*** ***(R442) No. 22 — (R436) No. 1 — 8:*** ***(R442) No. 22 — (R432) No. 7:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair short circuit in harness between drive motor inverter connector and DMCM connector or repair the intermediate connector.
6	**CHECK DRIVE MOTOR INVERTER.** 1) Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Problem is present in drive motor inverter or relay.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of serial communication with drive motor inverter.
Judge as NG when the serial data from drive motor inverter is not received.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 8 V
Continuous time of a and b	≥ 1 s
Inverter power supply relay control signal	ON

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
SCI data from drive motor inverter	Lost

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
SCI data from drive motor inverter	Received

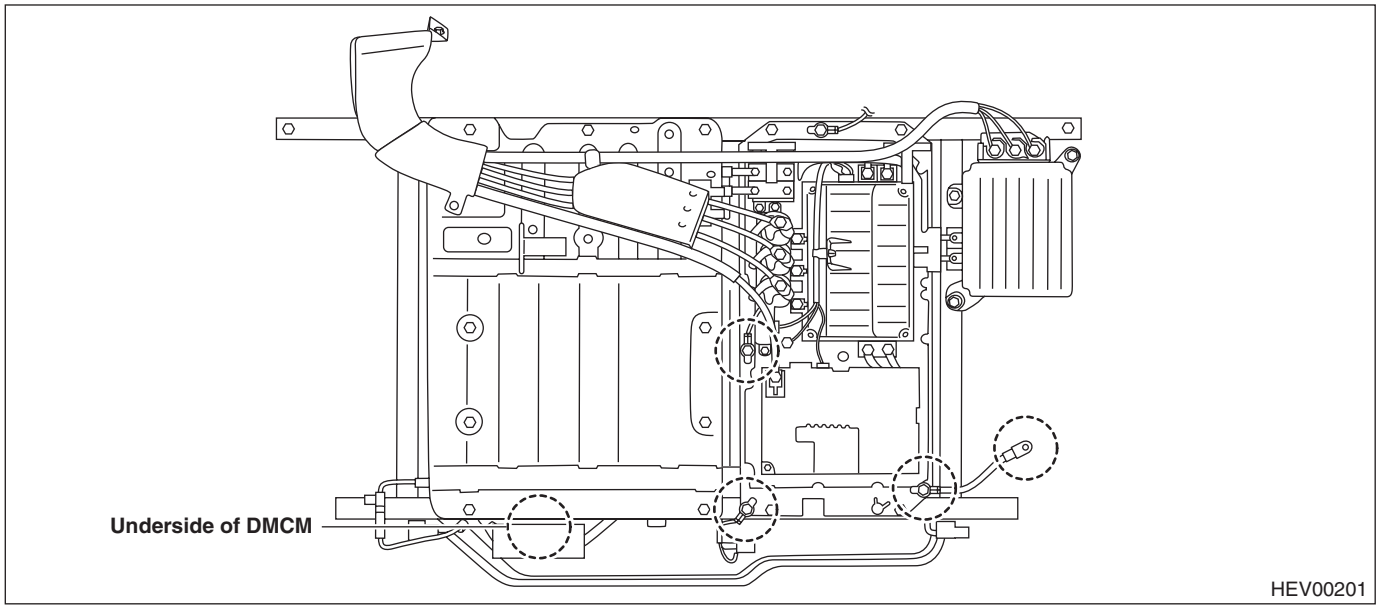
Time Needed for Diagnosis: 1 second

CI: DTC P1C31 INVALID DATA RECEIVED FROM DRIVE MOTOR "A" INVERTER

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-322, OUTLINE OF DIAGNOSIS, DTC P1C31 INVALID DATA RECEIVED FROM DRIVE MOTOR "A" INVERTER, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P1C31 detected? (current malfunction)	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK GROUND WIRE.** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Check the fastening area shown in the margin.	Is the condition normal? (Check for loose bolts, insecure connection, foreign matter caught, etc.)	Go to step **3**.	Retighten the bolts. Or replace the harness.
3	**CHECK DRIVE MOTOR INVERTER.** 1) Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Problem is present in drive motor inverter.

NOTE:

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of serial communication with drive motor inverter.
Judged as NG when incorrect serial data is received from drive motor inverter.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Diagnosis 1 and 2	
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 8 V
Continuous time of a and b	≥ 1 s
SCI data from drive motor inverter	Received
Diagnosis 3	
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 8 V
Continuous time of a and b	≥ 1 s
SCI data from drive motor inverter	Received
SCI data from drive motor inverter	≠ Parity error
SCI data from drive motor inverter	≠ Framing error

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 SCI data from drive motor inverter	Parity error
Diagnosis 2 SCI data from drive motor inverter	Framing error
Diagnosis 3 SCI data from drive motor inverter	Checksum error

Time Needed for Diagnosis: 0.015 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 SCI data from drive motor inverter	≠ Parity error
Diagnosis 2 SCI data from drive motor inverter	≠ Framing error
Diagnosis 3 SCI data from drive motor inverter	≠ Checksum error

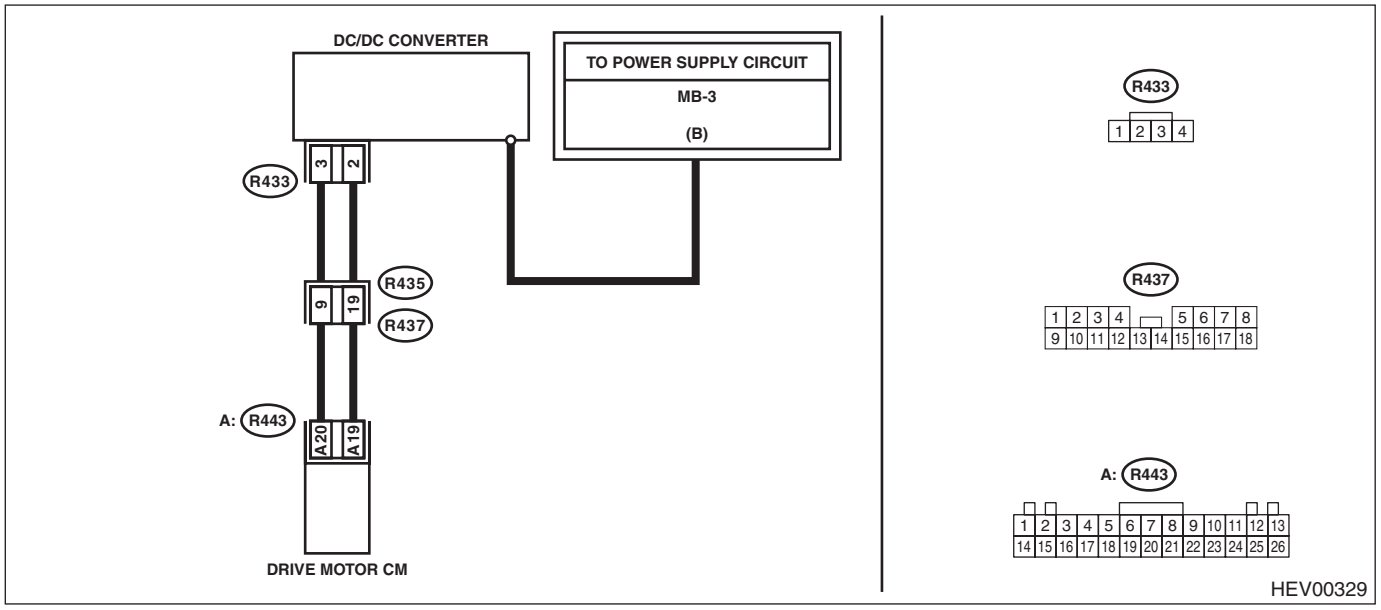
Time Needed for Diagnosis: 0.03 seconds

CJ:DTC P1C34 LOST COMMUNICATION WITH DC/DC CONVERTER

DIAGNOSIS:

- Detects serial communication error with DC/DC converter.
- If serial data from the DC/DC converter is not received, it is judged as NG.
- Immediately at fault recognition

TROUBLE SYMPTOM:



EV traveling/Auto Start Stop does not operate.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DTC.** 1) Start the engine. 2) Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P1C34 detected? (current malfunction)	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

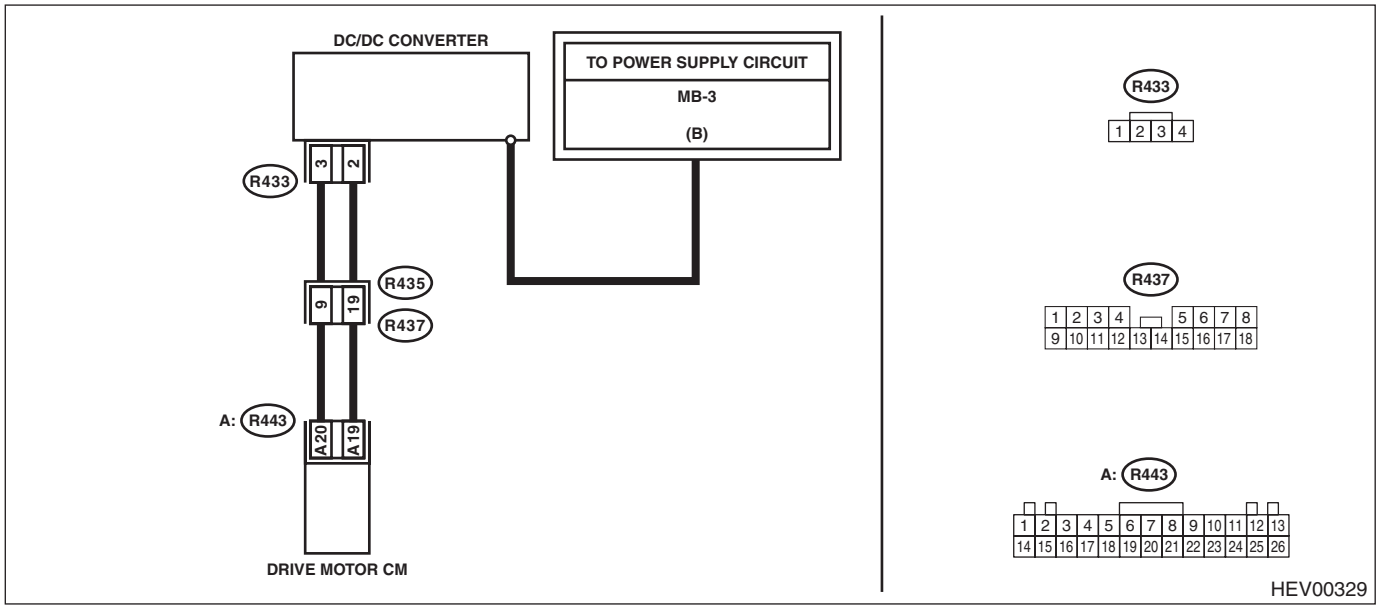
	Step	Check	Yes	No
2	**CHECK CONNECTOR.** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Visually check each connector and fastening areas of the DC/DC converter.	Is the condition normal? (Check for loose bolts, insecure connection, foreign matter caught, etc.)	Go to step **3**.	Repair or replace faulty parts.
3	**CHECK HARNESS.** 1) Disconnect the DC/DC converter connector. 2) Disconnect the DMCM connector. 3) Using a tester, measure the resistance between DMCM connector and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R443) No. 20 — Ground bolt of inverter frame body:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair short to ground circuit in harness between DMCM connector and DC/DC converter connector, or repair the intermediate connector.
4	**CHECK HARNESS.** Using a tester, measure the resistance between DC/DC converter connector and DMCM connector. ***Connector & terminal*** ***(R443) No. 20 — (R433) No. 3:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair open circuit in harness between DMCM connector and DC/DC converter connector, or repair the intermediate connector.
5	**CHECK HARNESS (SHORT TO OTHER SIGNAL).** 1) Disconnect the drive motor inverter connector. 2) Disconnect the intermediate connector (R436). 3) Using a tester, measure the resistance between DMCM connector and individual connectors of drive motor inverter. ***Connector & terminal:*** ***(R443) No. 20 — (R442) No. 1 — 22:*** ***(R443) No. 20 — (R443) No. 1 — 26:*** ***(R443) No. 20 — (R436) No. 1 — 8:*** ***(R443) No. 20 — (R432) No. 7:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair short circuit in harness between DMCM connector and DC/DC converter connector, or repair the intermediate connector.
6	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** Using a tester, measure the resistance between DC/DC converter connector and DC/DC converter 12 V output line. ***Connector & terminal*** ***(R433) No. 3 — DC/DC converter 12 V output line:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair short circuit in harness between DMCM connector and DC/DC converter 12 V output line or repair the intermediate connector.
7	**CHECK DC/DC CONVERTER.** 1) Replace the DC/DC converter. <Ref. to HEV-38, DC/DC Converter.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Problem is present in DC/DC converter.

CK:DTC P1C35 INVALID DATA RECEIVED FROM DC/DC CONVERTER

DIAGNOSIS:

- Detects serial communication error with DC/DC converter.
- If an incorrect serial data is received from DC/DC converter, it is judged as NG.
- Immediately at fault recognition

TROUBLE SYMPTOM:

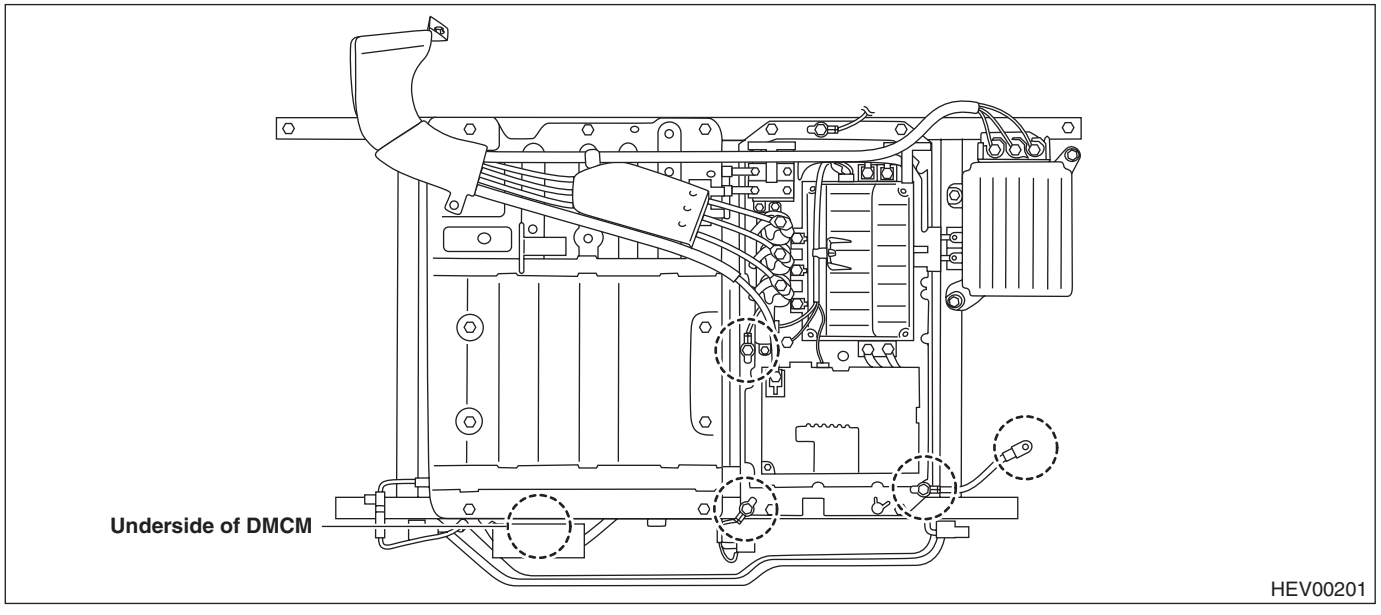


EV traveling/Auto Start Stop does not operate.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM



Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DTC.** 1) Start the engine. 2) Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P1C35 detected? (current malfunction)	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK GROUND WIRE.** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Check the fastening area shown in the margin.	Is the condition normal? (Check for loose bolts, insecure connection, foreign matter caught, etc.)	Go to step **3**.	Retighten the bolts. Or replace the harness.
3	**CHECK HARNESS (SHORT TO OTHER SIGNAL).** 1) Disconnect the drive motor inverter connector. 2) Disconnect the intermediate connector (R436). 3) Using a tester, measure the resistance between DMCM connector and individual connectors of drive motor inverter. ***Connector & terminal:*** ***(R443) No. 20 — (R442) No. 1 — 22:*** ***(R443) No. 20 — (R443) No. 1 — 26:*** ***(R443) No. 20 — (R436) No. 1 — 8:*** ***(R443) No. 20 — (R432) No. 7:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair short circuit in harness between DMCM connector and DC/DC converter connector, or repair the intermediate connector.
4	**CHECK DC/DC CONVERTER.** 1) Replace the DC/DC converter. <Ref. to HEV-38, DC/DC Converter.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Problem is present in DC/DC converter.

NOTE:

CL:DTC P0A1B DRIVE MOTOR "A" CONTROL MODULE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-328, OUTLINE OF DIAGNOSIS, DTC P0A1B DRIVE MOTOR "A" CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

NOTE:
For the diagnostic procedure, refer to DTC P0604. <Ref. to HEV(diag)-122, DRIVE MOTOR CONTROL SYSTEM, DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor control module.
Judge as NG when the malfunction is detected at the peripheral function of drive motor control module microcomputer.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 Internal Hardware module error	Detected
Diagnosis 2 Exception interrupt by the DMCM CPU	Detected

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 Internal Hardware module error	Not detected
Diagnosis 2 Exception interrupt by the DMCM CPU	Not detected

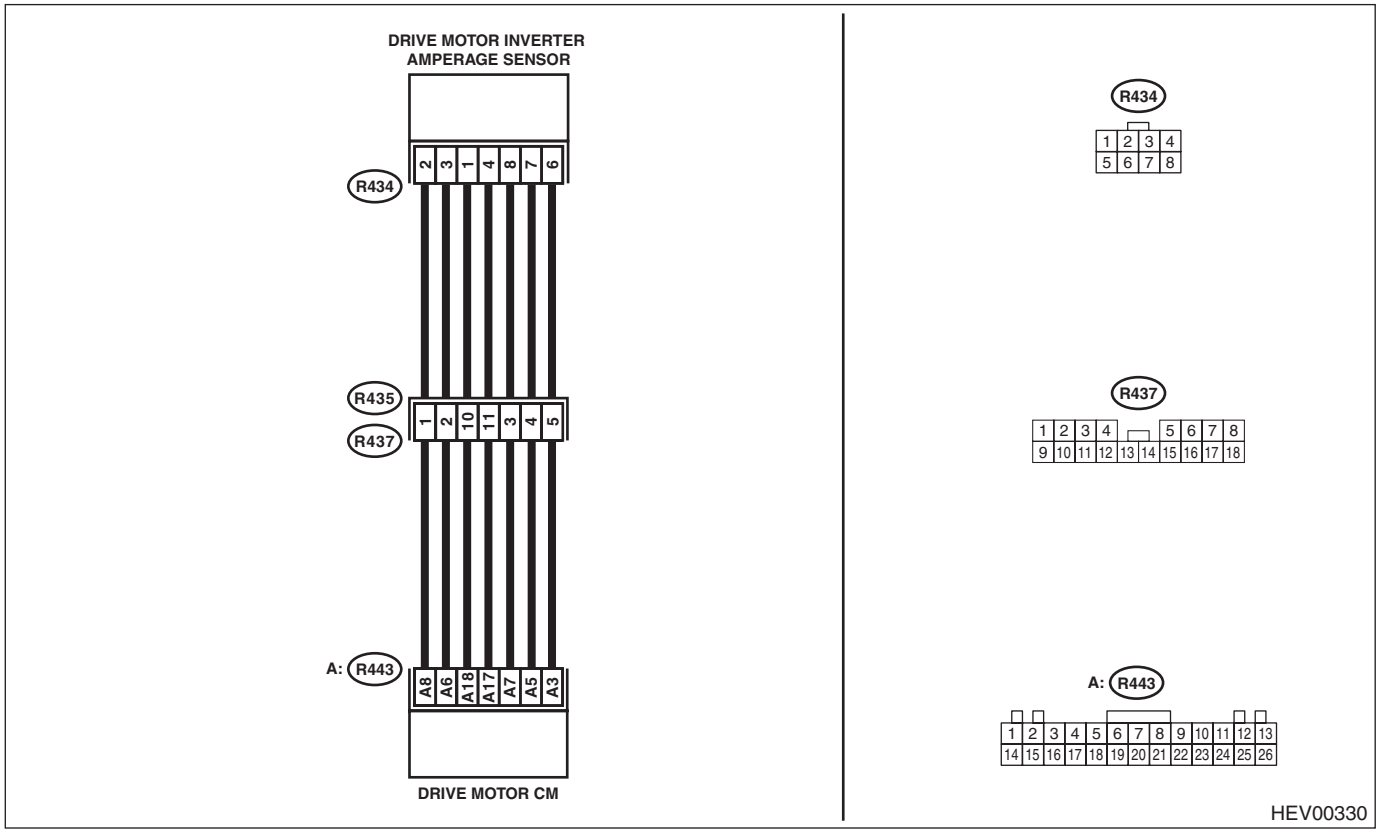
Time Needed for Diagnosis: Immediately

CM:DTC P06B1 SENSOR POWER SUPPLY "A" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-331, OUTLINE OF DIAGNOSIS, DTC P06B1 SENSOR POWER SUPPLY "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Drive Motor Amperage Sensor Power Supply Voltage». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value less than 4.536 V?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (GROUND SHORT CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the DMCM connector. 6) Disconnect the drive motor inverter amperage sensor connector. 7) Using a tester, measure the resistance between DMCM connector and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R443) No. 8 — Ground bolt of inverter frame body:*** ***(R443) No. 6 — Ground bolt of inverter frame body:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair short circuit in harness between drive motor inverter amperage sensor connector and DMCM connector or repair the intermediate connector.
3	**CHECK DRIVE MOTOR INVERTER AMPERAGE SENSOR.** 1) Replace the drive motor inverter amperage sensor. <Ref. to HEV-27, Drive Motor Inverter Current Sensor.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Problem is present in drive motor inverter amperage sensor.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter amperage sensor power supply circuit.
Judge as NG when the power supply voltage of drive motor inverter amperage sensor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured sensor power supply output voltage at DMCM	≤ 4.536 V

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Measured sensor power supply output voltage at DMCM	> 4.536 V

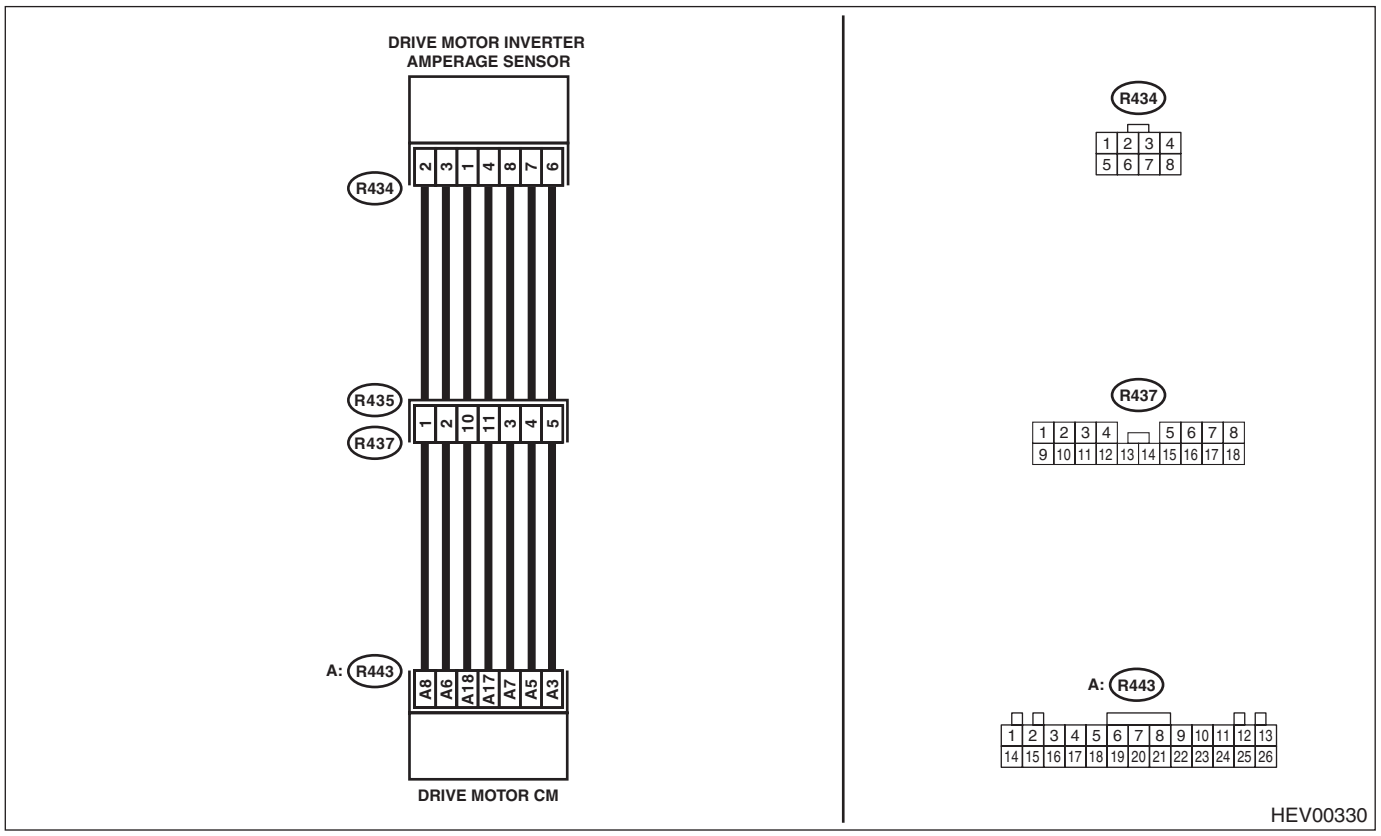
Time Needed for Diagnosis: 2 seconds

CN:DTC P06B2 SENSOR POWER SUPPLY "A" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-334, OUTLINE OF DIAGNOSIS, DTC P06B2 SENSOR POWER SUPPLY "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Drive Motor Amperage Sensor Power Supply Voltage». <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value more than 5.418 V?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (SHORT TO POWER AND SHORT TO OTHER SIGNAL LINES).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the drive motor inverter amperage sensor connector. 6) Disconnect the DMCM connector. 7) Disconnect the drive motor inverter connector. 8) Disconnect the intermediate connector (R436). 9) Using a tester, measure the resistance between DMCM connector and other signal lines and within inverter connector. ***Connector & terminal*** ***(R443) No. 8 — (R442) No. 1 — 22 (except No. 6):*** ***(R443) No. 8 — (R443) No. 1 — 26:*** ***(R443) No. 8 — (R436) No. 1 — 8:*** ***(R443) No. 8 — (R432) No. 7:*** ***(R443) No. 6 — (R442) No. 1 — 22 (except No. 8):*** ***(R443) No. 6 — (R443) No. 1 — 26:*** ***(R443) No. 6 — (R436) No. 1 — 8:*** ***(R443) No. 6 — (R432) No. 7:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair short circuit in harness between drive motor inverter amperage sensor connector and DMCM connector or repair the intermediate connector.
3	**CHECK DRIVE MOTOR INVERTER AMPERAGE SENSOR.** 1) Replace the drive motor inverter amperage sensor. <Ref. to HEV-27, Drive Motor Inverter Current Sensor.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>	Problem is present in drive motor inverter amperage sensor.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter amperage sensor power supply circuit.
Judge as NG when the power supply voltage of drive motor inverter amperage sensor is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured sensor power supply output voltage at DMCM	> 5.418 V

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Measured sensor power supply output voltage at DMCM	≤ 5.418 V

Time Needed for Diagnosis: 2 seconds

CO:DTC P062F INTERNAL CONTROL MODULE EEPROM ERROR

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-336, OUTLINE OF DIAGNOSIS, DTC P062F INTERNAL CONTROL MODULE EEPROM ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK BECM.** 1) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Wait for 30 seconds. 4) Turn the ignition switch to ON. 5) Read the DTC again. <Ref. to HEV(diag)-23, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is the same DTC detected? (current malfunction)	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of microcomputer DataFlashEEPROM.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V
BECM precharge contactor command	Open
BECM positive contactor command	Open
BECM negative contactor command	Open

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Checksum error of Flash EEPROM within the BECM Main CPU (Data area)	Detected

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Checksum error of Flash EEPROM within the BECM Main CPU (Data area)	Not Detected

Time Needed for Diagnosis: Less than 0.01 second

CP:DTC P0A1F BATTERY ENERGY CONTROL MODULE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-338, OUTLINE OF DIAGNOSIS, DTC P0A1F BATTERY ENERGY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK BECM.** 1) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Wait for 30 seconds. 4) Turn the ignition switch to ON. 5) Read the DTC again. <Ref. to HEV(diag)-23, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is the same DTC detected? (current malfunction)	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of microcomputer AD converter.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Diagnosis 1	
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V
Diagnosis 2 and 3	
Ignition state	OFF to ON (Run or crank)
12 V battery system voltage	≥ 6.5 V and ≤ 17 V
BECM precharge contactor command	Open
BECM positive contactor command	Open
BECM negative contactor command	Open

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Power sustain circuit monitor signal	High (Power ON)
Diagnosis 2	
Power sustain circuit monitor signal	Low (Power OFF)
Diagnosis 3	
Elapsed time of A / D conversion	≤ 0.0002 s

Time Needed for Diagnosis: Less than 0.05 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Power sustain circuit monitor signal	≠ High (Power ON)
Diagnosis 2	
Power sustain circuit monitor signal	≠ Low (Power OFF)
Diagnosis 3	
Elapsed time of A / D conversion	> 0.0002 s

Time Needed for Diagnosis: Less than 0.05 seconds

CQ:DTC P0A7D HYBRID/EV BATTERY PACK STATE OF CHARGE LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-340, OUTLINE OF DIAGNOSIS, DTC P0A7D HYBRID/EV BATTERY PACK STATE OF CHARGE LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the value of «High Voltage Battery Amperage» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-66, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Is the value 1A (discharge) or more?	Go to step **2**.	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>
2	**CHECK DTC.** Using the Subaru Select Monitor, read DTCs of the following system. • Hybrid powertrain control system <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).> • Drive motor control system <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).> • CVT System <Ref. to CVT(HEV)(diag)-19, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-72, LIST, List of Diagnostic Trouble Code (DTC).> <Ref. to CVT(HEV)(diag)-35, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK CURRENT DATA.** 1) Turn the ignition to OFF. 2) Start the engine. 3) Check illumination of "DRIVING POSSIBLE (READY) INDICATOR" in the meter.	Does it Illuminate?	Go to step **4**.	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>
4	**CHECK CURRENT DATA.** 1) Drive approximately 2 km (1.2 miles) at a speed of 30 km/h (18.6 MPH) or more. 2) Using the Subaru Select Monitor, confirm the current data of battery energy control system, the value of «High Voltage Battery SOC». <Ref. to HEV(diag)-56, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 6% or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect high voltage battery SOC low.
Judge as NG when the high voltage battery SOC is at the specified value or less.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
SOC NOTE: SOC: State Of Charge	≤ 5%

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
SOC	> 5%

Time Needed for Diagnosis: 10 seconds

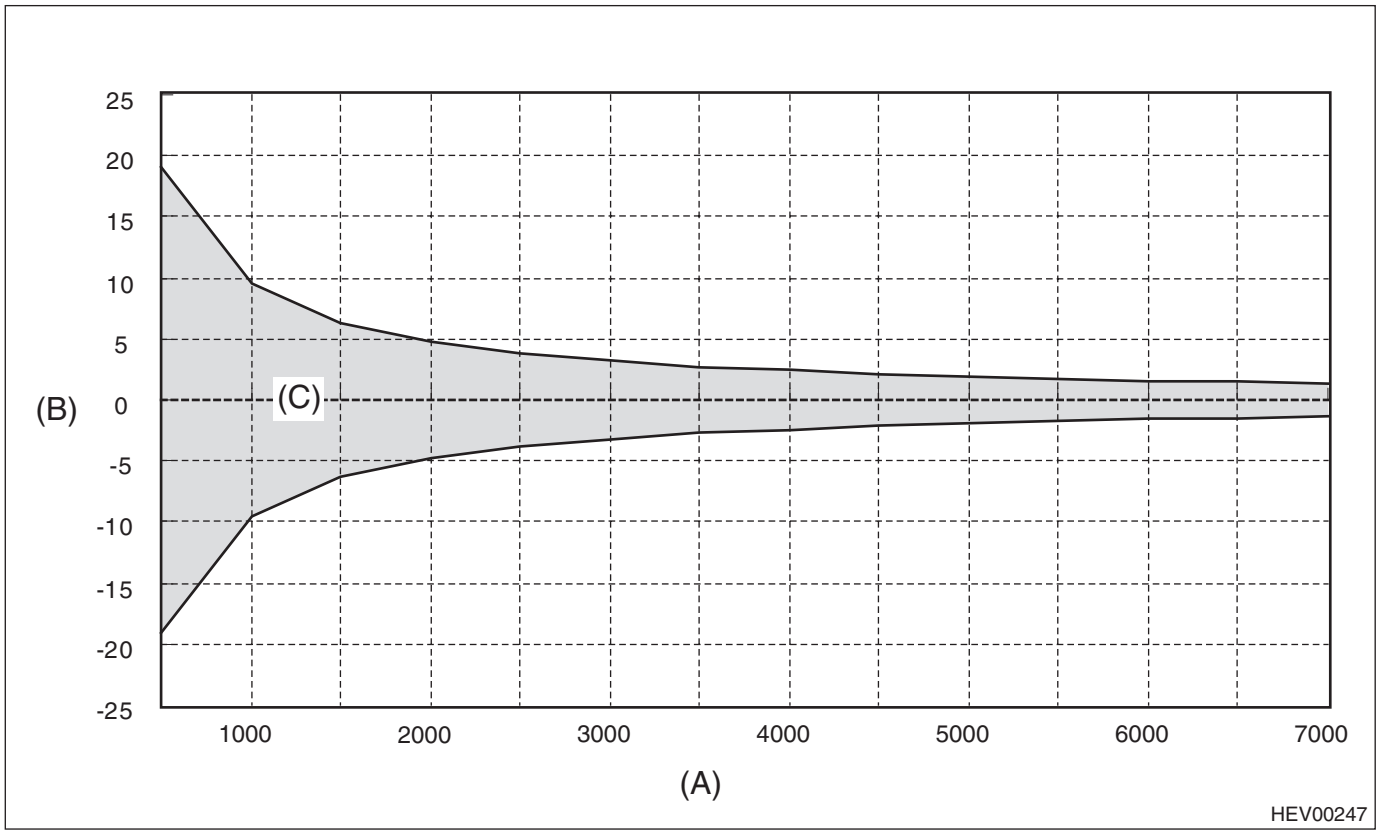
CR:DTC P0A7E HYBRID/EV BATTERY PACK OVER TEMPERATURE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-343, OUTLINE OF DIAGNOSIS, DTC P0A7E HYBRID/EV BATTERY PACK OVER TEMPERATURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.



CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Using the Subaru Select Monitor, read DTCs of the following system. • Drive motor control system <Ref. to HEV(diag)-23, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is either DTC P0A83 or P0A82 detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-76, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the value of «High Voltage Battery Cooling Fan Duty Target (HPCM)» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-13, HIGH VOLTAGE BATTERY, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>	Is the value 20% or more?	Go to step **3**.	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>
3	**CHECK HIGH VOLTAGE BATTERY COOLING FAN.** Using the Subaru Select Monitor, perform «High Voltage Battery Cooling Fan» of System Operation Check Mode for the drive motor control system. <Ref. to HEV(diag)-70, DRIVE MOTOR CONTROL SYSTEM, OPERATION, System Operation Check Mode.>	Does the high voltage battery cooling fan operate?	Go to step **4**.	Check the high voltage battery cooling fan as a single part. <Ref. to HEV-59, High Voltage Battery Cooling System.>
4	**CHECK DUCT.** Check the high voltage battery cooling fan ducts. <Ref. to HEV-59, High Voltage Battery Cooling System.>	Are the conditions of ducts normal? (Check for clogging, dislodging, etc.)	Go to step **5**.	Repair the ducts.
5	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the value of «High Voltage Battery Discharge Power Limit 1» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-66, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Is the value 0.5 kw or less?	Go to step **6**.	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>
6	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the value of «High Voltage Battery Charge Power 1» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-66, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Is the value 0.5 kw or less?	Go to step **7**.	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

	Step	Check	Yes	No
7	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the values of «Drive Motor Torque Target (HPCM)» «Drive Motor Speed Target(HPCM)» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-66, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Are the values of «Drive Motor Torque Target (HPCM)» and «Drive Motor Speed Target(HPCM)» within the standard in the margin?	Go to step **8**.	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>
8	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the values of «Drive Motor Output Torque Actual» «Drive Motor Speed» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-66, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Are the values of «Drive Motor Output Torque Actual» and «Drive Motor Speed» within the standard in the margin?	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>

NOTE:

(A) Drive Motor Speed Target (HPCM) or Drive Motor Speed
(B) Drive Motor Torque Target (HPCM) or Drive Motor Output Torque Actual
(C) Standard

1. OUTLINE OF DIAGNOSIS

Detect high temperature abnormality of high voltage battery.
Judge as NG when the high voltage battery temperature is above the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Maximum temperature of hybrid battery	> 63°C (145.4°F)

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Maximum temperature of hybrid battery	≤ 63°C (145.4°F)

Time Needed for Diagnosis: 1 second

CS:DTC P0A7F HYBRID/EV BATTERY PACK DETERIORATION

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-344, OUTLINE OF DIAGNOSIS, DTC P0A7F HYBRID/EV BATTERY PACK DETERIORATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

Normal control

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the low output (longevity) of high voltage battery.
Judge as NG when the internal resistance value of high voltage battery is at the specified value or more.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Condition #1	
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V
| Hybrid battery current x Hybrid battery voltage | NOTE: Hybrid battery current < 0: Discharge	≥ Map1 ×0.1 kw < Map1 kw
or	
| Hybrid battery current x Hybrid battery voltage | NOTE: Hybrid battery current ≥ 0: Discharge	≥ Map2 ×0.1 kw < Map2 kw
HPCM contactor request	Closed
Condition #2	
NOTE: During a 60 second block the following conditions must be satisfied:	
Number of the Hybrid battery current and the Hybrid battery voltage data that satisfies Condition #1	≥ 50 counts
Number of the Hybrid battery current and Hybrid battery voltage data that satisfies the following:	≥ 1 count
| Hybrid battery current x Hybrid battery voltage |	≥ Map1 ×0.5 kw
Number of the Hybrid battery current and Hybrid battery voltage data that satisfies the following:	≥ 1 count
| Hybrid battery current x Hybrid battery voltage |	≥ Map2 ×0.5 kw
The highest value among the Hybrid battery temperature A, B and C	≥ – 5.0°C (23°F) and ≤ 45°C (113°F)
|Change of the highest value among the Hybrid battery temperature A, B and C|	≤ 2.0°C (35.6°F)/60 s

Map 1

Maximum discharge Power (kW)		SOH (%)		
		100	62.5	25
Battery Temperature (°C (°F))	–10 (14)	4.7	3.3	1.9
	0 (32)	7.0	4.7	2.7
	10 (50)	10.4	6.3	3.6
	15 (59)	11.7	7.2	4.1
	25 (77)	13.5	9.9	5.5
	30 (86)	14.0	9.9	5.5
	45 (113)	14.0	9.9	5.5

Map 2

Maximum charge power (kW)		SOH (%)		
		100	62.5	25
Battery Temperature (°C (°F))	–10 (14)	4.6	3.5	2.2
	0 (32)	7.1	5.0	3.0
	10 (50)	10.1	6.7	4.0
	15 (59)	11.6	7.5	4.4
	25 (77)	13.4	10.5	6.0
	45 (113)	13.4	10.5	6.0

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic Value (DV) (Hybrid battery internal resistance)	> Map 3 Ω

Map 3

Minimum hybrid battery temperature (°C (°F))	–5 (23)	0 (32)	5 (41)	20 (68)	25 (77)	45 (113)
Hybrid battery internal resistance (Ω)	1.21	0.97	0.79	0.46	0.43	0.36

Time Needed for Diagnosis: 60 s x 10 times

NOTE:
Failure count can increment over multiple driving cycles until cleared by passing result
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic Value (DV) (Hybrid battery internal resistance)	≤ Map 3 Ω

Time Needed for Diagnosis: depends on driving (charge/discharge amount)

CT:DTC P0A95 HIGH VOLTAGE FUSE "A"

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-348, OUTLINE OF DIAGNOSIS, DTC P0A95 HIGH VOLTAGE FUSE "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK SERVICE DISCONNECT PLUG.** Check installation condition of service disconnect plug. <Ref. to HEV-15, Service Plug.>	Is the service disconnect plug securely installed? Is it locked?	Go to step **2**.	Securely install the service disconnect plug.
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of battery energy control system, the value of «High Voltage Battery Fuse Condition». <Ref. to HEV(diag)-56, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Current Data.>	Does the value show «Blow-out»?	Go to step **3**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK SERVICE DISCONNECT PLUG.** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Measure the resistance between service disconnect plug terminals.	Is the resistance less than 1 Ω?	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Replace the service disconnect plug.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the fuse.
Judge as NG when the fuse is open.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Any two of following conditions are satisfied	
Hybrid battery voltage “C”	< –25 mV
Hybrid battery voltage “D”	< –25 mV

Time Needed for Diagnosis: 0.1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Any two of following conditions are satisfied	
Hybrid battery voltage “C”	≥ –25 mV
Hybrid battery voltage “D”	≥ –25 mV

Time Needed for Diagnosis: 0.1 second

CU:DTC P0A9C HYBRID/EV BATTERY TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-349, OUTLINE OF DIAGNOSIS, DTC P0A9C HYBRID/EV BATTERY TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of high voltage battery temperature 1.
Judge as NG when the deviation of high voltage battery temperature is large.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery temperature A – Hybrid battery temperature B	> 20°C (68°F)
Hybrid battery temperature A – Hybrid battery temperature C	> 20°C (68°F)
Diagnosis 2	
Hybrid battery temperature B – Hybrid battery temperature A	> 20°C (68°F)
Hybrid battery temperature C – Hybrid battery temperature A	> 20°C (68°F)

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery temperature A – Hybrid battery temperature B	≤ 20°C (68°F)
Hybrid battery temperature A – Hybrid battery temperature C	≤ 20°C (68°F)
Diagnosis 2	
Hybrid battery temperature B – Hybrid battery temperature A	≤ 20°C (68°F)
Hybrid battery temperature C – Hybrid battery temperature A	≤ 20°C (68°F)

Time Needed for Diagnosis: 10 seconds

CV:DTC P0A9D HYBRID/EV BATTERY TEMPERATURE SENSOR "A" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-350, OUTLINE OF DIAGNOSIS, DTC P0A9D HYBRID/EV BATTERY TEMPERATURE SENSOR "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of high voltage battery temperature 1.
Judge as NG when the high voltage battery temperature 1 is below the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery temperature A sensor output voltage (temperature equivalent)	< 0.49 V (> 95°C (203°F))

Time Needed for Diagnosis: 8 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery temperature A sensor output voltage (temperature equivalent)	≥ 0.49 V (≤ 95°C (203°F)

Time Needed for Diagnosis: 8 seconds

CW:DTC P0A9E HYBRID/EV BATTERY TEMPERATURE SENSOR "A" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-351, OUTLINE OF DIAGNOSIS, DTC P0A9E HYBRID/EV BATTERY TEMPERATURE SENSOR "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of high voltage battery temperature 1.
Judge as NG when the high voltage battery temperature 1 is above the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery temperature A sensor output voltage (temperature equivalent)	> 4.82 V (< –45°C (–49°F))

Time Needed for Diagnosis: 8 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery temperature A sensor output voltage (temperature equivalent)	≤ 4.82 V (≥ –45°C (–49°F))

Time Needed for Diagnosis: 8 seconds

CX:DTC P0AA4 HYBRID/EV BATTERY NEGATIVE CONTACTOR CIRCUIT STUCK CLOSED

DIAGNOSIS:

- Immediately at fault recognition
- Detects welding in – side contactor and precharge contactor.
- If the difference between the total voltage of the high voltage battery and the inverter voltage is greater than or equal to the standard when the contactor is open, it is judged as NG.

TROUBLE SYMPTOM:

Normal control

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

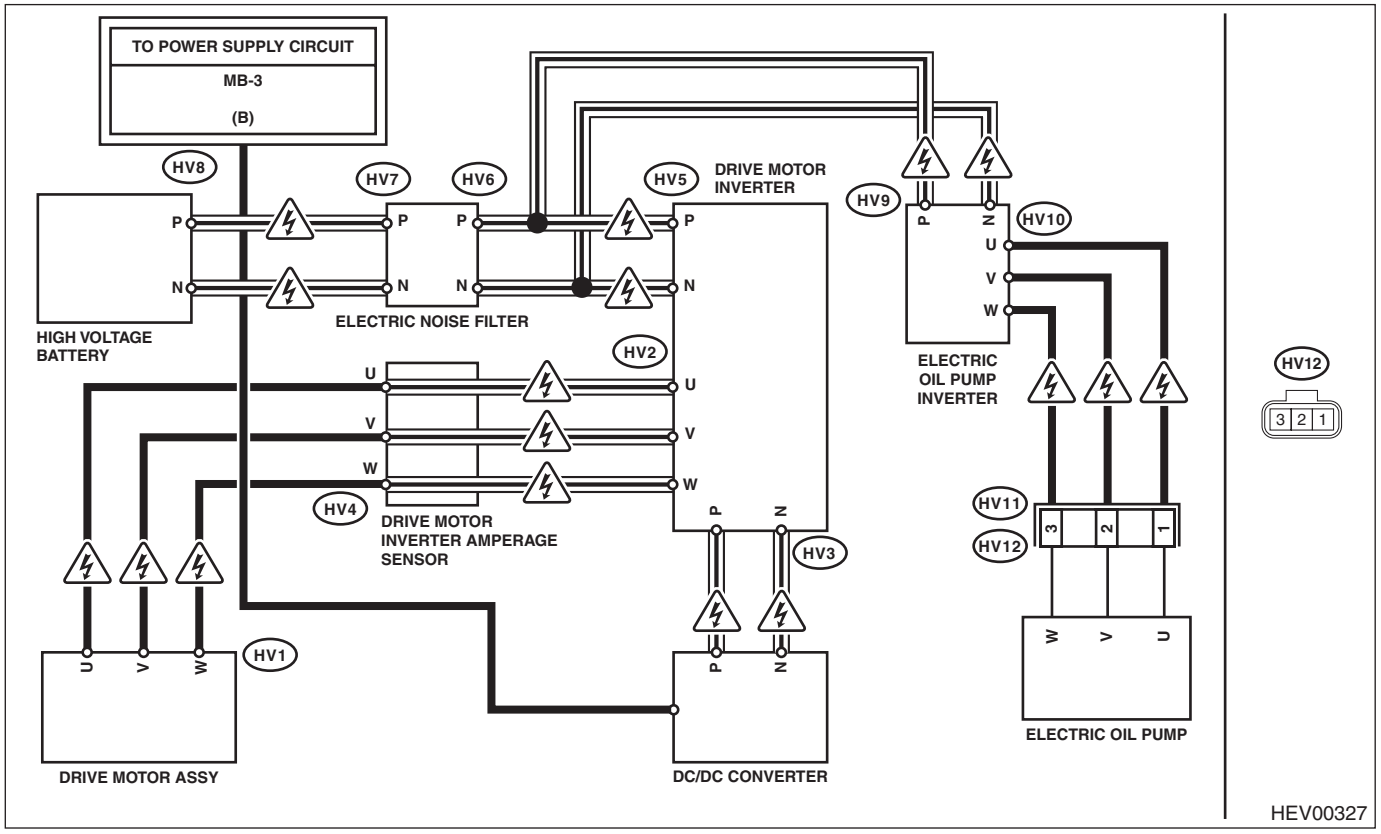
	Step	Check	Yes	No
1	**CHECK BECM.** 1) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 2) Start the engine. 3) Turn the ignition switch to OFF. 4) Wait for 30 seconds. 5) Turn the ignition switch to ON. 6) Read the DTC again. <Ref. to HEV(diag)-23, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P0AA4 detected? (current malfunction)	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

CY:DTC P0AA6 HYBRID/EV BATTERY VOLTAGE SYSTEM ISOLATION FAULT

DIAGNOSIS:

- Detects leakage in high voltage system circuit.
- If hybrid system leakage resistance, leakage resistance in high voltage battery are smaller than the standard, it is judged as NG.
- Immediately at fault recognition

TROUBLE SYMPTOM:



Normal control

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Turn the ignition switch to OFF → ON. 2) Leave the vehicle 1 minute unattended. 3) Using the Subaru Select Monitor, confirm the current data of battery energy control system, the values of «High Voltage Battery Pack Leakage Resistance (+)» «High Voltage Battery Pack Leakage Resistance (–)». <Ref. to HEV(diag)-56, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value of «High Voltage Battery Pack Leakage Resistance (+)» or «High Voltage Battery Pack Leakage Resistance (–)» 290 kΩ or less?	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK CURRENT DATA.** 1) Stop the engine. 2) Start the engine. 3) Using the Subaru Select Monitor, display the current data of battery energy control system, the values of «HEV System Leakage Resistance (+)» «HEV System Leakage Resistance (–)». <Ref. to HEV(diag)-56, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Current Data.> 4) With the current data displayed, drive the vehicle at 10 km/h (6.2 MPH) or faster at least 1 minute. 5) Using the Subaru Select Monitor, confirm the current data of battery energy control system, the recorded values of «HEV System Leakage Resistance (+)» «HEV System Leakage Resistance (–)». <Ref. to HEV(diag)-56, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the minimum value of «HEV System Leakage Resistance (+)» or «HEV System Leakage Resistance (–)» 290 kΩ or less?	Go to step **3**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK POWER CABLE AND BUS BAR.** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the power cable (HV4) from drive motor inverter amperage sensor. 6) Using an insulation multimeter (250 V range), measure the resistance between high voltage battery side terminal and chassis ground of electric noise filter. ***Connector & terminal*** ***(HV7) P — Chassis ground:*** ***(HV7) N — Chassis ground:***	Is the resistance 2 MΩ or more?	Go to step **13**.	Go to step **4**.
4	**CHECK POWER CABLE AND BUS BAR.** 1) Disconnect the power cable (HV10) from electric oil pump. 2) Using an insulation multimeter (250 V range), measure the resistance between high voltage battery side terminal and chassis ground of electric noise filter. ***Connector & terminal*** ***(HV7) P — Chassis ground:*** ***(HV7) N — Chassis ground:***	Is the resistance 2 MΩ or more?	Go to step **14**.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK BUS BAR.** 1) Check the bus bar between the high voltage battery (HV8) and the electric noise filter (HV7) and the surrounding area for metallic foreign bodies, and if there are any, remove them. 2) Using an insulation multimeter (250 V range), measure the resistance between high voltage battery side terminal and chassis ground of electric noise filter. ***Connector & terminal*** ***(HV7) P — Chassis ground:*** ***(HV7) N — Chassis ground:***	Is the resistance 2 MΩ or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.	Go to step **6**.
6	**CHECK POWER CABLE AND BUS BAR.** 1) Remove the bus bar between high voltage battery (HV8) and the electric noise filter (HV7). 2) Using an insulation multimeter (250 V range), measure the resistance between High Voltage battery terminals and chassis ground. ***Connector & terminal*** ***(HV8) P — Chassis ground:*** ***(HV8) N — Chassis ground:***	Is the resistance 2 MΩ or more?	Go to step **7**.	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>
7	**CHECK POWER CABLE AND BUS BAR.** 1) Check bus bars between the electric noise filter (HV6), the drive motor inverter (HV5), and electric oil pump inverter (HV9) and the surrounding area for metallic foreign bodies, and if there are any, remove them. 2) Using an insulation multimeter (250 V range), measure the resistance between high voltage battery side terminal and chassis ground of electric noise filter. ***Connector & terminal*** ***(HV7) P — Chassis ground:*** ***(HV7) N — Chassis ground:***	Is the resistance 2 MΩ or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.	Go to step **8**.
8	**CHECK POWER CABLE AND BUS BAR.** 1) Remove the DC/DC converter (HV3). 2) Using an insulation multimeter (250 V range), measure the resistance between high voltage battery side terminal and chassis ground of electric noise filter. ***Connector & terminal*** ***(HV7) P — Chassis ground:*** ***(HV7) N — Chassis ground:***	Is the resistance 2 MΩ or more?	Replace the DC/DC converter. <Ref. to HEV-38, DC/DC Converter.>	Go to step **9**.
9	**CHECK POWER CABLE AND BUS BAR.** 1) Remove the electric oil pump inverter (HV9). 2) Using an insulation multimeter (250 V range), measure the resistance between high voltage battery side terminal and chassis ground of electric noise filter. ***Connector & terminal*** ***(HV7) P — Chassis ground:*** ***(HV7) N — Chassis ground:***	Is the resistance 2 MΩ or more?	Replace the electric oil pump inverter. <Ref. to HEV-42, Inverter.>	Go to step **10**.

Step		Check	Yes	No
10	**CHECK POWER CABLE AND BUS BAR.** 1) Remove the drive motor inverter amperage sensor (HV2) from the drive motor inverter. 2) Check the bus bar of the drive motor inverter amperage sensor (HV2) and the surrounding area for metallic foreign bodies, and remove them if there any, then reinstall the sensor. 3) Using an insulation multimeter (250 V range), measure the resistance between high voltage battery side terminal and chassis ground of electric noise filter. ***Connector & terminal*** ***(HV7) P — Chassis ground:*** ***(HV7) N — Chassis ground:***	Is the resistance 2 MΩ or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.	Go to step **11**.
11	**CHECK POWER CABLE AND BUS BAR.** 1) Remove the drive motor inverter amperage sensor (HV2) from the drive motor inverter. 2) Using an insulation multimeter (250 V range), measure the resistance between high voltage battery side terminal and chassis ground of electric noise filter. ***Connector & terminal*** ***(HV7) P — Chassis ground:*** ***(HV7) N — Chassis ground:***	Is the resistance 2 MΩ or more?	Replace the drive motor inverter amperage sensor. <Ref. to HEV-27, Drive Motor Inverter Current Sensor.>	Go to step **12**.
12	**CHECK POWER CABLE AND BUS BAR.** 1) Remove the bus bar between the electric noise filter (HV6) and the drive motor inverter (HV5). 2) Using an insulation multimeter (250 V range), measure the resistance between high voltage battery side terminal and chassis ground of electric noise filter. ***Connector & terminal*** ***(HV7) P — Chassis ground:*** ***(HV7) N — Chassis ground:***	Is the resistance 2 MΩ or more?	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.>	Replace the electric noise filter. <Ref. to HEV-31, Noise Filter.>
13	**CHECK POWER CABLE AND DRIVE MOTOR ASSEMBLY.** 1) Disconnect the power cable (HV1) from the drive motor assembly. NOTE: The gasket is not reusable. 2) Using an insulation multimeter (250 V range), measure the resistance between drive motor assembly and chassis ground. ***Connector & terminal*** ***(HV1) U — Chassis ground:*** ***(HV1) V — Chassis ground:*** ***(HV1) W — Chassis ground:***	Is the resistance 2 MΩ or more?	Replace the power cable. <Ref. to HEV-51, Power Cable.>	Replace the drive motor assembly. <Ref. to CVT(TH58A)-219, Drive Motor Assembly.>
14	**CHECK POWER CABLE AND ELECTRIC OIL PUMP.** 1) Disconnect the power cable (HV12) from electric oil pump. 2) Using an insulation multimeter (250 V range), measure the resistance between electric oil pump and chassis ground. ***Connector & terminal*** ***(HV12) U — Chassis ground:*** ***(HV12) V — Chassis ground:*** ***(HV12) W — Chassis ground:***	Is the resistance 2 MΩ or more?	Replace the power cable. <Ref. to HEV-51, Power Cable.>	Replace the electric oil pump. <Ref. to CVT(TH58A)-134, Electric Fluid Pump.>

CZ:DTC P0AA7 HYBRID/EV BATTERY VOLTAGE ISOLATION SENSOR CIRCUIT

DIAGNOSIS:

- Detects a fault in leakage detection circuit.
- Detects open, short conditions in switches within the leakage detection circuit.
- Immediately at fault recognition

TROUBLE SYMPTOM:

Normal control

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

DA:DTC P0AAD HYBRID/EV BATTERY PACK AIR TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:

- Detected when two consecutive driving cycles with fault occur. (Single engine startup is counted as one drive cycle.)
- GENERAL DESCRIPTION <Ref. to HEV(diag)-358, OUTLINE OF DIAGNOSIS, DTC P0AAD HYBRID/EV BATTERY PACK AIR TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

Normal control

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the intake air temperature sensor.
Judge as NG when the deviation of high voltage battery temperature is large.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V
Soak time from ECM	≥ 6.0 h

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic Value (DV) NOTE: The smallest value among follows |Hybrid Battery Pack Air Temperature – Hybrid battery temperature A| |Hybrid Battery Pack Air Temperature – Hybrid battery temperature B| |Hybrid Battery Pack Air Temperature – Hybrid battery temperature C|	> 16°C (60.8°F)

Time Needed for Diagnosis: 15 seconds
Malfunction Indicator Light Illumination: detects when malfunction occurs in 2 continuous driving cycles. (Single engine startup is counted as one drive cycle.)

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic Value (DV) NOTE: The smallest value among follows |Hybrid Battery Pack Air Temperature – Hybrid battery temperature A| |Hybrid Battery Pack Air Temperature – Hybrid battery temperature B| |Hybrid Battery Pack Air Temperature – Hybrid battery temperature C|	≤ 16°C (60.8°F)

Time Needed for Diagnosis: 15 seconds

DB:DTC P0AAE HYBRID/EV BATTERY PACK AIR TEMPERATURE SENSOR "A" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-359, OUTLINE OF DIAGNOSIS, DTC P0AAE HYBRID/EV BATTERY PACK AIR TEMPERATURE SENSOR "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

Normal control

NOTE:

If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the intake air temperature sensor.
Judge as NG when the intake air temperature is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack air temperature sensor output voltage (temperature equivalent)	< 0.49 V (> 95°C (203°F))

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack air temperature sensor output voltage (temperature equivalent)	≥ 0.49 V (≤ 95°C (203°F)

Time Needed for Diagnosis: 10 seconds

DC:DTC P0AAF HYBRID/EV BATTERY PACK AIR TEMPERATURE SENSOR "A" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-360, OUTLINE OF DIAGNOSIS, DTC P0AAF HYBRID/EV BATTERY PACK AIR TEMPERATURE SENSOR "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

Normal control

NOTE:

If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the intake air temperature sensor.
Judge as NG when the intake air temperature is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack air temperature sensor output voltage (temperature equivalent)	> 4.82 V (< –45°C (–49°F))

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack air temperature sensor output voltage (temperature equivalent)	≤ 4.82 V (≥ –45°C (–49°F))

Time Needed for Diagnosis: 10 seconds

DD:DTC P0ABF HYBRID/EV BATTERY PACK CURRENT SENSOR "A" CIRCUIT

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-361, OUTLINE OF DIAGNOSIS, DTC P0ABF HYBRID/EV BATTERY PACK CURRENT SENSOR "A" CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the current sensor circuit.
Judge as NG when the high voltage battery current value is below the specified value under the condition that the motor operates at overload.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V
(Commanded Drive Motor Torque	> 15 Nm
Measured Drive Motor Speed)	> 125 rpm
or	
(Commanded Drive Motor Torque	< –40 Nm
Measured Drive Motor Speed)	> 1700 rpm

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Absolute value of hybrid battery pack current	< 1 A

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Absolute value of hybrid battery pack current	≥ 1 A

Time Needed for Diagnosis: 1 second

DE:DTC P0AC0 HYBRID/EV BATTERY PACK CURRENT SENSOR "A" CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-362, OUTLINE OF DIAGNOSIS, DTC P0AC0 HYBRID/EV BATTERY PACK CURRENT SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the offset malfunction of high voltage battery current sensor.
Judge as NG when the high voltage battery current offset is above the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
Continuous time of a	≤ 0.2 s
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Absolute value of hybrid battery pack current	> 1 A

Time Needed for Diagnosis: 0.01 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Absolute value of hybrid battery pack current	≤ 1 A

Time Needed for Diagnosis: 0.01 second

DF:DTC P0AC1 HYBRID/EV BATTERY PACK CURRENT SENSOR "A" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-363, OUTLINE OF DIAGNOSIS, DTC P0AC1 HYBRID/EV BATTERY PACK CURRENT SENSOR "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery current sensor.
Judge as NG when the high voltage battery current value is below the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Closed
BECM positive contactor command	Closed
BECM negative contactor command	Closed

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack current sensor output voltage (current equivalent)	< –1.91 V (< –240 A)

Time Needed for Diagnosis: 0.4 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack current sensor output voltage (current equivalent)	≥ –1.91 V (≥ –240 A)

Time Needed for Diagnosis: 0.4 seconds

DG:DTC P0AC2 HYBRID/EV BATTERY PACK CURRENT SENSOR "A" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-364, OUTLINE OF DIAGNOSIS, DTC P0AC2 HYBRID/EV BATTERY PACK CURRENT SENSOR "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery current sensor.
Judge as NG when the high voltage battery current value is above the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Closed
BECM positive contactor command	Closed
BECM negative contactor command	Closed

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack current sensor output voltage (current equivalent)	> 1.91 V (> 240 A)

Time Needed for Diagnosis: 0.4 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack current sensor output voltage (current equivalent)	≤ 1.91 V (≤ 240 A)

Time Needed for Diagnosis: 0.4 seconds

DH:DTC P0AC3 HYBRID/EV BATTERY PACK CURRENT SENSOR "A" CIRCUIT INTERMITTENT/ERRATIC

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-365, OUTLINE OF DIAGNOSIS, DTC P0AC3 HYBRID/EV BATTERY PACK CURRENT SENSOR "A" CIRCUIT INTERMITTENT/ERRATIC, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Using the Subaru Select Monitor, read DTCs of the following system. • Drive motor control system <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-76, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK CURRENT DATA.** 1) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 2) Start the engine. 3) Using the Subaru Select Monitor, confirm the current data of battery energy control system, the value of «High Voltage Battery Amperage Sensor Output». <Ref. to HEV(diag)-56, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the output of value 1 A or more (when the ignition is turned to ON)?	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery current sensor.
Judge as NG when the stuck of high voltage battery current sensor value is detected.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Diagnosis 1	
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V
Hybrid battery voltage D (Actual state: discharge)	< –120 mV
HPCM contactor request	Closed
BECM positive contactor command	Closed
BECM negative contactor command	Closed
Diagnosis 2	
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V
Hybrid battery voltage D (Actual state: discharge)	> 120 mV
HPCM contactor request	Closed
BECM positive contactor command	Closed
BECM negative contactor command	Closed

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery pack current (Detected state: charge) NOTE: (The system should be discharging, but a charge condition is detected.)	≥ 10 A ≤ 110 A
Diagnosis 2	
Hybrid battery pack current (Detected state: discharge) NOTE: (The system should be charging, but a discharge condition is detected.)	≤ –10 A ≥ –190 A

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery pack current (Detected state: discharge)	≤ –10 A ≥ –190 A
Diagnosis 2	
Hybrid battery pack current (Detected state: charge)	≥ 10 A ≤ 110 A

Time Needed for Diagnosis: 1 second

DI: DTC P0AC6 HYBRID/EV BATTERY TEMPERATURE SENSOR "B" CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-367, OUTLINE OF DIAGNOSIS, DTC P0AC6 HYBRID/EV BATTERY TEMPERATURE SENSOR "B" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of high voltage battery temperature 2.
Judge as NG when the deviation of high voltage battery temperature is large.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery temperature B – Hybrid battery temperature A	> 20°C (68°F)
Hybrid battery temperature B – Hybrid battery temperature C	> 20°C (68°F)
Diagnosis 2	
Hybrid battery temperature A – Hybrid battery temperature B	> 20°C (68°F)
Hybrid battery temperature C – Hybrid battery temperature B	> 20°C (68°F)

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery temperature B – Hybrid battery temperature A	≤ 20°C (68°F)
Hybrid battery temperature B – Hybrid battery temperature C	≤ 20°C (68°F)
Diagnosis 2	
Hybrid battery temperature A – Hybrid battery temperature B	≤ 20°C (68°F)
Hybrid battery temperature C – Hybrid battery temperature B	≤ 20°C (68°F)

Time Needed for Diagnosis: 10 seconds

DJ:DTC P0AC7 HYBRID/EV BATTERY TEMPERATURE SENSOR "B" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-368, OUTLINE OF DIAGNOSIS, DTC P0AC7 HYBRID/EV BATTERY TEMPERATURE SENSOR "B" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of high voltage battery temperature 2.
Judge as NG when the high voltage battery temperature 2 is below the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery temperature B sensor output voltage (temperature equivalent)	< 0.49 V (> 95°C (203°F))

Time Needed for Diagnosis: 8 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery temperature B sensor output voltage (temperature equivalent)	≥ 0.49 V (≤ 95°C (203°F)

Time Needed for Diagnosis: 8 seconds

DK:DTC P0AC8 HYBRID/EV BATTERY TEMPERATURE SENSOR "B" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-369, OUTLINE OF DIAGNOSIS, DTC P0AC8 HYBRID/EV BATTERY TEMPERATURE SENSOR "B" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of high voltage battery temperature 2.
Judge as NG when the high voltage battery temperature 2 is above the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery temperature B sensor output voltage (temperature equivalent)	> 4.82 V (< –45°C (–49°F))

Time Needed for Diagnosis: 8 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery temperature B sensor output voltage (temperature equivalent)	≤ 4.82 V (≥ –45°C (–49°F))

Time Needed for Diagnosis: 8 seconds

DL:DTC P0ACB HYBRID/EV BATTERY TEMPERATURE SENSOR "C" CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-370, OUTLINE OF DIAGNOSIS, DTC P0ACB HYBRID/EV BATTERY TEMPERATURE SENSOR "C" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of high voltage battery temperature 3.
Judge as NG when the deviation of high voltage battery temperature is large.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery temperature C – Hybrid battery temperature B	> 20°C (68°F)
Hybrid battery temperature C – Hybrid battery temperature A	> 20°C (68°F)
Diagnosis 2	
Hybrid battery temperature A – Hybrid battery temperature C	> 20°C (68°F)
Hybrid battery temperature B – Hybrid battery temperature C	> 20°C (68°F)

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery temperature C – Hybrid battery temperature B	≤ 20°C (68°F)
Hybrid battery temperature C – Hybrid battery temperature A	≤ 20°C (68°F)
Diagnosis 2	
Hybrid battery temperature A – Hybrid battery temperature C	≤ 20°C (68°F)
Hybrid battery temperature B – Hybrid battery temperature C	≤ 20°C (68°F)

Time Needed for Diagnosis: 10 seconds

DM:DTC P0ACC HYBRID/EV BATTERY TEMPERATURE SENSOR "C" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-371, DTC P0ACC HYBRID/EV BATTERY TEMPERATURE SENSOR "C" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of high voltage battery temperature 3.
Judge as NG when the high voltage battery temperature 3 is below the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery temperature C sensor output voltage (temperature equivalent)	< 0.49 V (> 95°C (203°F))

Time Needed for Diagnosis: 8 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery temperature C sensor output voltage (temperature equivalent)	≥ 0.49 V (≤ 95°C (203°F)

Time Needed for Diagnosis: 8 seconds

DN:DTC P0ACD HYBRID/EV BATTERY TEMPERATURE SENSOR "C" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-372, OUTLINE OF DIAGNOSIS, DTC P0ACD HYBRID/EV BATTERY TEMPERATURE SENSOR "C" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of high voltage battery temperature 3.
Judge as NG when the high voltage battery temperature 3 is above the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery temperature C sensor output voltage (temperature equivalent)	> 4.82 V (< –45°C (–49°F))

Time Needed for Diagnosis: 8 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery temperature C sensor output voltage (temperature equivalent)	≤ 4.82 V (≥ –45°C (–49°F))

Time Needed for Diagnosis: 8 seconds

DO:DTC P0AD9 HYBRID/EV BATTERY POSITIVE CONTACTOR CONTROL CIRCUIT/OPEN

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-373, OUTLINE OF DIAGNOSIS, DTC P0AD9 HYBRID/EV BATTERY POSITIVE CONTACTOR CONTROL CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the open circuit of +side contactor drive signal line.
Judge as NG when the open circuit of +side contactor drive signal line is detected.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Closed
BECM positive contactor command	Closed
Measured Positive contactor control signal (BECM main CPU output)	Closed

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured Positive contactor control signal (BECM output)	Open

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Measured Positive contactor control signal (BECM output)	Closed

Time Needed for Diagnosis: 0.5 seconds

DP:DTC P0ADB HYBRID/EV BATTERY POSITIVE CONTACTOR CONTROL CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-374, OUTLINE OF DIAGNOSIS, DTC P0ADB HYBRID/EV BATTERY POSITIVE CONTACTOR CONTROL CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the short circuit of +side contactor drive signal line.
Judge as NG when the short circuit of +side contactor drive signal line is detected.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Diagnosis 1	
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Open
BECM positive contactor command	Open
Measured Positive contactor control signal (BECM main CPU output)	Open
Diagnosis 2	
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Open
BECM positive contactor command	Open

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 Measured Positive contactor control signal (BECM output)	Closed
Diagnosis 2 Measured Positive contactor control signal	Closed

Time Needed for Diagnosis: 0.1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 Measured Positive contactor control signal (BECM output)	Open
Diagnosis 2 Measured Positive contactor control signal	Open

Time Needed for Diagnosis: 0.1 second

DQ:DTC P0ADD HYBRID/EV BATTERY NEGATIVE CONTACTOR CONTROL CIRCUIT/OPEN

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-376, OUTLINE OF DIAGNOSIS, DTC P0ADD HYBRID/EV BATTERY NEGATIVE CONTACTOR CONTROL CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the open circuit of –side contactor drive signal line.
Judge as NG when the open circuit of –side contactor drive signal line is detected.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Closed
BECM negative contactor command	Closed
Measured negative contactor control signal (BECM main CPU output)	Closed

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured Negative contactor control signal (BECM output)	Open

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Measured Negative contactor control signal (BECM output)	Closed

Time Needed for Diagnosis: 0.5 seconds

DR:DTC P0ADF HYBRID/EV BATTERY NEGATIVE CONTACTOR CONTROL CIRCUIT LOW

DIAGNOSIS:

- Detects short conditions in – side contactor control signal line.
- If short conditions are detected in – side contactor control signal line, it is judged as NG.
- Immediately at fault recognition

TROUBLE SYMPTOM:

Normal control

NOTE:

If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

DS:DTC P0AE4 HYBRID/EV BATTERY PRECHARGE CONTACTOR CONTROL CIRCUIT/OPEN

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-378, OUTLINE OF DIAGNOSIS, DTC P0AE4 HYBRID/EV BATTERY PRECHARGE CONTACTOR CONTROL CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the open circuit of precharge contactor drive signal line.
Judge as NG when the open circuit of precharge contactor drive signal line is detected.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V
Request contractors from HPCM	Closed
Precharge contactor command	Closed
Precharge contactor control circuit monitor signal (Drive control circuit output)	High (Closed)

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Precharge contactor control signal (BECM main CPU output)	High (Open)

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Precharge contactor control signal (BECM main CPU output)	Low (Close)

Time Needed for Diagnosis: 0.5 seconds

DT:DTC P0AE6 HYBRID/EV BATTERY PRECHARGE CONTACTOR CONTROL CIRCUIT LOW

DIAGNOSIS:

- Detects short conditions in precharge contactor control signal line.
- If short conditions are detected in precharge contactor control signal line, it is judged as NG.
- Immediately at fault recognition

TROUBLE SYMPTOM:

Normal control

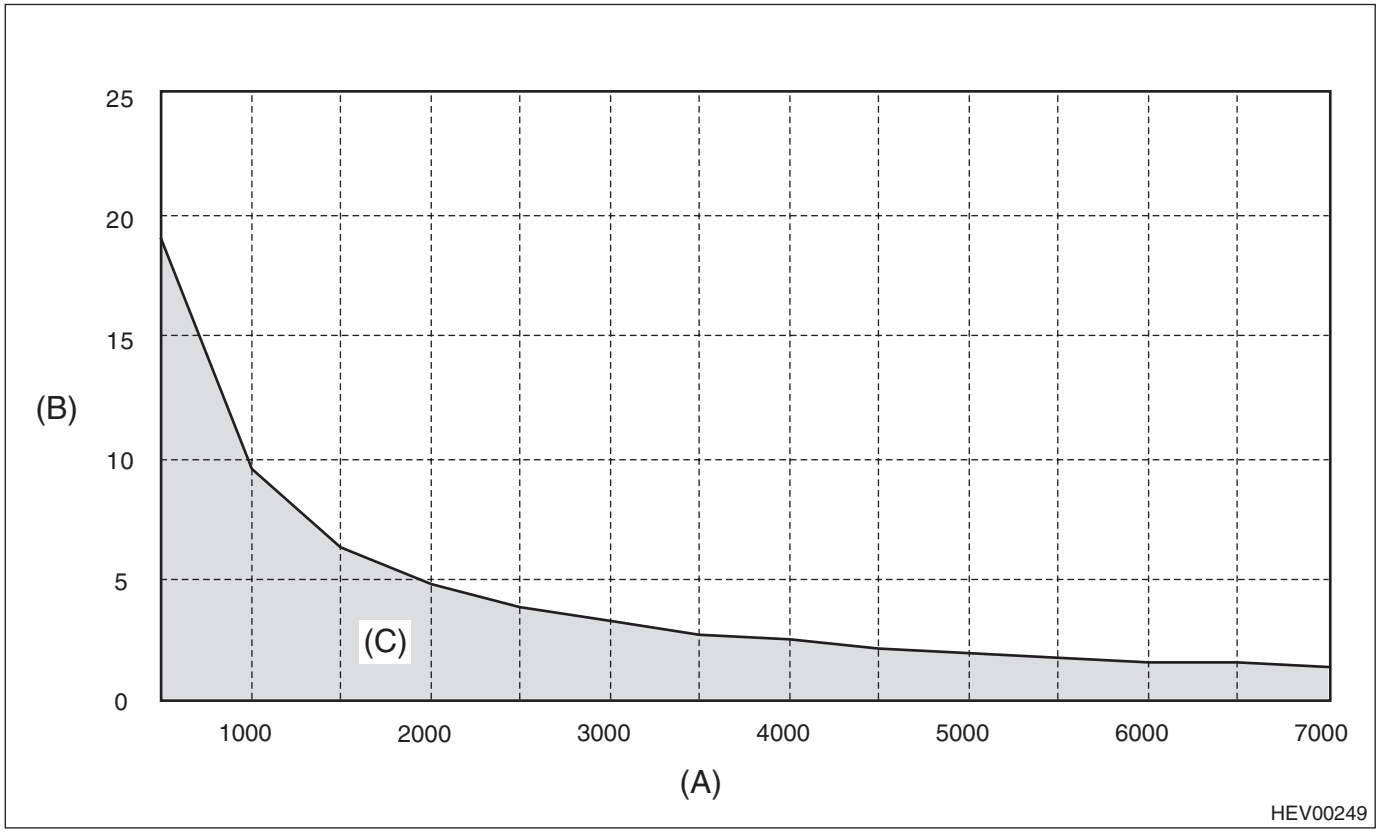
NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

DU:DTC P0B25 HYBRID/EV BATTERY "A" VOLTAGE LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-382, OUTLINE OF DIAGNOSIS, DTC P0B25 HYBRID/EV BATTERY "A" VOLTAGE LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the value of «High Voltage Battery Discharge Power Limit 1» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-66, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Does the value show 0 kw?	Go to step **2**.	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>
2	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the values of «Drive Motor Torque Target (HPCM)» «Drive Motor Speed Target(HPCM)» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-66, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Are the values of «Drive Motor Torque Target (HPCM)» and «Drive Motor Speed Target(HPCM)» within the standard in the margin?	Go to step **3**.	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>
3	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the values of «Drive Motor Output Torque Actual» «Drive Motor Speed» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-66, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Are the values of «Drive Motor Output Torque Actual» and «Drive Motor Speed» within the standard in the margin?	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>

NOTE:

(A) Drive Motor Speed Target (HPCM) or Drive Motor Speed
(B) Drive Motor Torque Target (HPCM) or Drive Motor Output Torque Actual
(C) Standard

1. OUTLINE OF DIAGNOSIS

Detect that the high voltage battery voltage is below the lowest voltage.
Judge as NG when the high voltage battery voltage value is below the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack voltage	< 73.6 V

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack voltage	≥ 73.6 V

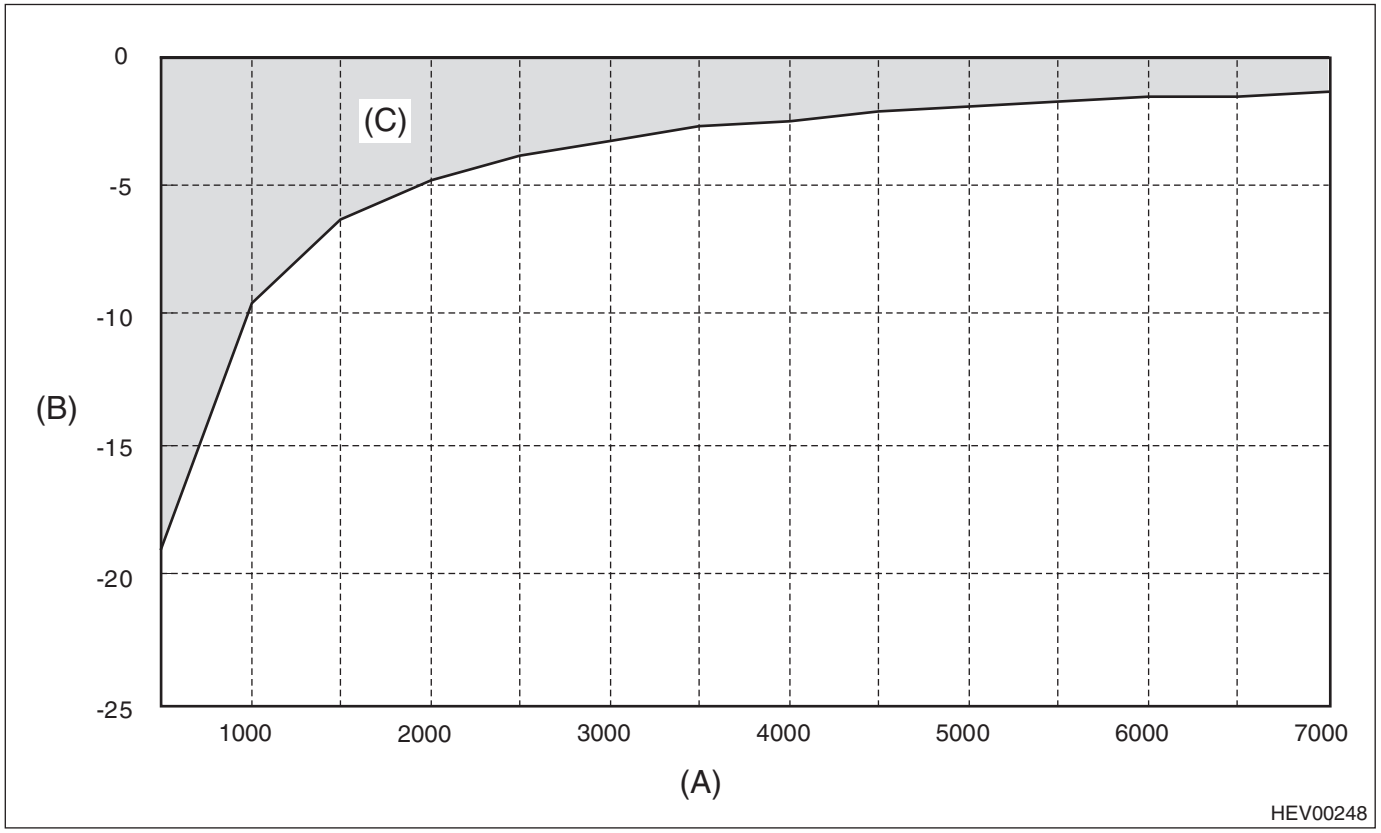
Time Needed for Diagnosis: 5 seconds

DV:DTC P0B26 HYBRID/EV BATTERY "A" VOLTAGE HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-385, OUTLINE OF DIAGNOSIS, DTC P0B26 HYBRID/EV BATTERY "A" VOLTAGE HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the value of «High Voltage Battery Charge Power 1» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-66, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Does the value show 0 kw?	Go to step **2**.	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>
2	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the values of «Drive Motor Torque Target (HPCM)» «Drive Motor Speed Target(HPCM)» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-66, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Are the values of «Drive Motor Torque Target (HPCM)» and «Drive Motor Speed Target(HPCM)» within the standard in the margin?	Go to step **3**.	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>
3	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the values of «Drive Motor Output Torque Actual» «Drive Motor Speed» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-66, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Are the values of «Drive Motor Output Torque Actual» and «Drive Motor Speed» within the standard in the margin?	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>

NOTE:

(A) Drive Motor Speed Target (HPCM) or Drive Motor Speed
(B) Drive Motor Torque Target (HPCM) or Drive Motor Output Torque Actual
(C) Standard

1. OUTLINE OF DIAGNOSIS

Detect that the high voltage battery voltage exceeds the highest voltage.
Judge as NG when the voltage value of high voltage battery is above the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack voltage	> 136.4 V

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack voltage	≤ 136.4 V

Time Needed for Diagnosis: 5 seconds

DW:DTC P0B37 HIGH VOLTAGE SERVICE DISCONNECT OPEN

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-387, OUTLINE OF DIAGNOSIS, DTC P0B37 HIGH VOLTAGE SERVICE DISCONNECT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK SERVICE DISCONNECT PLUG.** Check installation condition of service disconnect plug. <Ref. to HEV-15, Service Plug.>	Is the service disconnect plug securely installed? Is it locked?	Go to step **2**.	Securely install the service disconnect plug.
2	**CHECK SERVICE DISCONNECT PLUG.** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.>	Is the condition of service disconnect plug normal? (Check for defective lock, rust or contamination in terminals, etc.)	Go to step **3**.	Replace the service disconnect plug.
3	**CHECK CURRENT DATA.** 1) Install the service disconnect plug. 2) Turn the ignition switch to ON. 3) Using the Subaru Select Monitor, confirm the current data of battery energy control system, the value of «Service Plug Status». <Ref. to HEV(diag)-56, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Current Data.>	Does the value show «OFF»?	Go to step **4**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Step		Check	Yes	No
4	**CHECK CURRENT DATA.** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Install the service disconnect plug. 5) Turn the ignition switch to OFF. 6) Wait for 30 seconds. 7) Turn the ignition switch to ON. 8) Using the Subaru Select Monitor, confirm the current data of battery energy control system, the value of «Service Plug Status». <Ref. to HEV(diag)-56, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Current Data.>	Does the value show «OFF»?	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of service disconnect plug.
Judge as NG when service disconnect plug unplugs or service disconnect plug SW is open.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Interlock switch signal	Open

Time Needed for Diagnosis: 0.05 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Interlock switch signal	Closed

Time Needed for Diagnosis: 0.05 seconds

DX:DTC P0B3C HYBRID/EV BATTERY VOLTAGE SENSE "A" CIRCUIT RANGE/ PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-388, OUTLINE OF DIAGNOSIS, DTC P0B3C HYBRID/EV BATTERY VOLTAGE SENSE "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 0.
Judge as NG when the stuck of high voltage battery voltage 0 is detected.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery voltage A	> 96.0 V ≤ 98.54 V (High side)
Diagnosis 2	
Hybrid battery voltage A	≥ –98.54 V < 9.60 V (Low side)

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery voltage A	≤ 96.0 V > 98.54 V (High side)
Diagnosis 2	
Hybrid battery voltage A	< –98.54 V ≥ 9.60 V (Low side)

Time Needed for Diagnosis: 1 second

DY:DTC P0B3D HYBRID/EV BATTERY VOLTAGE SENSE "A" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-390, OUTLINE OF DIAGNOSIS, DTC P0B3D HYBRID/EV BATTERY VOLTAGE SENSE "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 0.
Judge as NG when the high voltage battery voltage 0 is below the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage A	< –98.54 V

Time Needed for Diagnosis: 0.1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage A	≥ –98.54 V

Time Needed for Diagnosis: 0.1 second

DZ:DTC P0B3E HYBRID/EV BATTERY VOLTAGE SENSE "A" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-391, OUTLINE OF DIAGNOSIS, DTC P0B3E HYBRID/EV BATTERY VOLTAGE SENSE "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 0.
Judge as NG when the high voltage battery voltage 0 is above the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage A	> 98.54 V

Time Needed for Diagnosis: 0.1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage A	≤ 98.54 V

Time Needed for Diagnosis: 0.1 second

EA:DTC P0B41 HYBRID/EV BATTERY VOLTAGE SENSE "B" CIRCUIT RANGE/ PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-392, OUTLINE OF DIAGNOSIS, DTC P0B41 HYBRID/EV BATTERY VOLTAGE SENSE "B" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 1.
Judge as NG when the stuck of high voltage battery voltage 1 is detected.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery voltage B	> 64.0 V ≤ 66.27 V (High side)
Diagnosis 2	
Hybrid battery voltage B	≥ –66.27 V < 6.40 V (Low side)

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery voltage B	≤ 64.0 V > 66.27 V (High side)
Diagnosis 2	
Hybrid battery voltage B	< –66.27 V ≥ 6.40 V (Low side)

Time Needed for Diagnosis: 1 second

EB:DTC P0B42 HYBRID/EV BATTERY VOLTAGE SENSE "B" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-394, OUTLINE OF DIAGNOSIS, DTC P0B42 HYBRID/EV BATTERY VOLTAGE SENSE "B" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 1.
Judge as NG when the high voltage battery voltage 1 is below the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage B	< –66.27 V

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage B	≥ –66.27 V

Time Needed for Diagnosis: 1 second

EC:DTC P0B43 HYBRID/EV BATTERY VOLTAGE SENSE "B" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-395, OUTLINE OF DIAGNOSIS, DTC P0B43 HYBRID/EV BATTERY VOLTAGE SENSE "B" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 1.
Judge as NG when the high voltage battery voltage 1 is above the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage B	> 66.27 V

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage B	≤ 66.27 V

Time Needed for Diagnosis: 1 second

ED:DTC P0B46 HYBRID/EV BATTERY VOLTAGE SENSE "C" CIRCUIT RANGE/ PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-396, OUTLINE OF DIAGNOSIS, DTC P0B46 HYBRID/EV BATTERY VOLTAGE SENSE "C" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 2.
Judge as NG when the stuck of high voltage battery voltage 2 is detected.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery voltage C	> 32.0 V ≤ 56.34 V (High side)
Diagnosis 2	
Hybrid battery voltage C	≥ –56.34 V < 3.20 V (Low side)

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery voltage C	≤ 32.0 V > 56.34 V (High side)
Diagnosis 2	
Hybrid battery voltage C	< –56.34 V ≥ 3.20 V (Low side)

Time Needed for Diagnosis: 1 second

EE:DTC P0B47 HYBRID/EV BATTERY VOLTAGE SENSE "C" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-398, OUTLINE OF DIAGNOSIS, DTC P0B47 HYBRID/EV BATTERY VOLTAGE SENSE "C" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 2.
Judge as NG when the high voltage battery voltage 2 is below the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage C	< –56.34 V

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage C	≥ –56.34 V

Time Needed for Diagnosis: 1 second

EF:DTC P0B48 HYBRID/EV BATTERY VOLTAGE SENSE "C" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-399, OUTLINE OF DIAGNOSIS, DTC P0B48 HYBRID/EV BATTERY VOLTAGE SENSE "C" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 2.
Judge as NG when the high voltage battery voltage 2 is above the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage C	> 56.34 V

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage C	≤ 56.34 V

Time Needed for Diagnosis: 1 second

EG:DTC P0B4A HYBRID/EV BATTERY VOLTAGE SENSE "D" CIRCUIT

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-400, OUTLINE OF DIAGNOSIS, DTC P0B4A HYBRID/EV BATTERY VOLTAGE SENSE "D" CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

Normal control

NOTE:

If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 3.
Judge as NG when the open circuit of high voltage battery voltage sensor 3 is detected.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
Elapsed time of a	≤ 0.2 s
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Status fault flag for 'Voltage Sense "D" Circuit' as determined by the BECM Sub CPU	Open

Time Needed for Diagnosis: 0.01 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Status fault flag for 'Voltage Sense "D" Circuit' as determined by the BECM Sub CPU	Close

Time Needed for Diagnosis: 0.01 second

EH:DTC P0B4B HYBRID/EV BATTERY VOLTAGE SENSE "D" CIRCUIT RANGE/ PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-401, OUTLINE OF DIAGNOSIS, DTC P0B4B HYBRID/EV BATTERY VOLTAGE SENSE "D" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 3.
Judge as NG when the stuck of high voltage battery voltage 3 is detected.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery voltage D	> 2.10 V ≤ 76.2 V (High side)
Diagnosis 2	
Hybrid battery voltage C	≥ –76.2 V < –2.10 V (Low side)

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery voltage C	≤ 2.10 V > 76.2 V (High side)
Diagnosis 2	
Hybrid battery voltage C	< –76.2 V ≥ –2.10 V (Low side)

Time Needed for Diagnosis: 10 seconds

EI: DTC P0B4C HYBRID/EV BATTERY VOLTAGE SENSE "D" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-403, OUTLINE OF DIAGNOSIS, DTC P0B4C HYBRID/EV BATTERY VOLTAGE SENSE "D" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 3.
Judge as NG when the high voltage battery voltage 3 is below the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage D	< –76.20 V

Time Needed for Diagnosis: 0.1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage D	> –76.20 V

Time Needed for Diagnosis: 0.1 second

EJ: DTC P0B4D HYBRID/EV BATTERY VOLTAGE SENSE "D" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-404, OUTLINE OF DIAGNOSIS, DTC P0B4D HYBRID/EV BATTERY VOLTAGE SENSE "D" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 3.
Judge as NG when the high voltage battery voltage 3 is above the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage D	> 76.20 V

Time Needed for Diagnosis: 0.1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage D	≤ 76.20 V

Time Needed for Diagnosis: 0.1 second

EK:DTC P0B50 HYBRID/EV BATTERY VOLTAGE SENSE "E" CIRCUIT RANGE/ PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-405, OUTLINE OF DIAGNOSIS, DTC P0B50 HYBRID/EV BATTERY VOLTAGE SENSE "E" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 4.
Judge as NG when the stuck of high voltage battery voltage 4 is detected.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery voltage E	> –1.60 V ≤ 23.03 V (High side)
Diagnosis 2	
Hybrid battery voltage E	≥ –23.03 V < –16.00 V (Low side)

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery voltage E	≤ –1.60 V > 23.03 V (High side)
Diagnosis 2	
Hybrid battery voltage E	< –23.03 V ≥ –16.00 V (Low side)

Time Needed for Diagnosis: 1 second

EL:DTC P0B51 HYBRID/EV BATTERY VOLTAGE SENSE "E" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-407, OUTLINE OF DIAGNOSIS, DTC P0B51 HYBRID/EV BATTERY VOLTAGE SENSE "E" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 4.
Judge as NG when the high voltage battery voltage 4 is below the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage E	< –23.03 V

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage E	≥ –23.03 V

Time Needed for Diagnosis: 1 second

EM:DTC P0B52 HYBRID/EV BATTERY VOLTAGE SENSE "E" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-408, OUTLINE OF DIAGNOSIS, DTC P0B52 HYBRID/EV BATTERY VOLTAGE SENSE "E" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 4.
Judge as NG when the high voltage battery voltage 4 is above the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage E	> 23.03 V

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage E	≤ 23.03 V

Time Needed for Diagnosis: 1 second

EN:DTC P0B55 HYBRID/EV BATTERY VOLTAGE SENSE "F" CIRCUIT RANGE/ PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-409, OUTLINE OF DIAGNOSIS, DTC P0B55 HYBRID/EV BATTERY VOLTAGE SENSE "F" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 5.
Judge as NG when the stuck of high voltage battery voltage 5 is detected.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery voltage F	> –4.80 V ≤ 98.54 V (High side)
Diagnosis 2	
Hybrid battery voltage F	≥ –98.54 V < –48.00 V (Low side)

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery voltage F	≤ –4.80 V > 98.54 V (High side)
Diagnosis 2	
Hybrid battery voltage F	< –98.54 V ≥ –48.00 V (Low side)

Time Needed for Diagnosis: 1 second

EO:DTC P0B56 HYBRID/EV BATTERY VOLTAGE SENSE "F" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-411, OUTLINE OF DIAGNOSIS, DTC P0B56 HYBRID/EV BATTERY VOLTAGE SENSE "F" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 5.
Judge as NG when the high voltage battery voltage 5 is below the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage F	< –98.54 V

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage F	≥ –98.54 V

Time Needed for Diagnosis: 1 second

EP:DTC P0B57 HYBRID/EV BATTERY VOLTAGE SENSE "F" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-412, OUTLINE OF DIAGNOSIS, DTC P0B57 HYBRID/EV BATTERY VOLTAGE SENSE "F" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 5.
Judge as NG when the high voltage battery voltage 5 is above the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage F	> 98.54 V

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage F	≤ 98.54 V

Time Needed for Diagnosis: 1 second

EQ:DTC P0B5A HYBRID/EV BATTERY VOLTAGE SENSE "G" CIRCUIT RANGE/ PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-413, OUTLINE OF DIAGNOSIS, DTC P0B5A HYBRID/EV BATTERY VOLTAGE SENSE "G" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 6.
Judge as NG when the stuck of high voltage battery voltage 6 is detected.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery voltage G	> –7.20 V ≤ 98.54 V (High side)
Diagnosis 2	
Hybrid battery voltage G	≥ –98.54 V < –72.00 V (Low side)

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery voltage G	≤ –7.20 V > 98.54 V (High side)
Diagnosis 2	
Hybrid battery voltage G	< –98.54 V ≥ –72.00 V (Low side)

Time Needed for Diagnosis: 1 second

ER:DTC P0B5B HYBRID/EV BATTERY VOLTAGE SENSE "G" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-415, OUTLINE OF DIAGNOSIS, DTC P0B5B HYBRID/EV BATTERY VOLTAGE SENSE "G" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 6.
Judge as NG when the high voltage battery voltage 6 is below the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage G	< –98.54 V

Time Needed for Diagnosis: 0.1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage G	≥ –98.54 V

Time Needed for Diagnosis: 0.1 second

ES:DTC P0B5C HYBRID/EV BATTERY VOLTAGE SENSE "G" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-416, OUTLINE OF DIAGNOSIS, DTC P0B5C HYBRID/EV BATTERY VOLTAGE SENSE "G" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 6.
Judge as NG when the high voltage battery voltage 6 is above the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage G	> 98.54 V

Time Needed for Diagnosis: 0.1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage G	≤ 98.54 V

Time Needed for Diagnosis: 0.1 second

ET:DTC P0BB8 HYBRID/EV BATTERY VOLTAGE SENSE "Z" CIRCUIT

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-417, OUTLINE OF DIAGNOSIS, DTC P0BB8 HYBRID/EV BATTERY VOLTAGE SENSE "Z" CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of high voltage battery GND.
Judge as NG when the high voltage battery GND is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Status fault flag for 'Voltage Sense "Z" Circuit' as determined by the BECM Sub CPU	Open

Time Needed for Diagnosis: 0.1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Status fault flag for 'Voltage Sense "Z" Circuit' as determined by the BECM Sub CPU	Close

Time Needed for Diagnosis: 0.1 second

EU:DTC P0C30 HYBRID/EV BATTERY PACK STATE OF CHARGE HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-419, OUTLINE OF DIAGNOSIS, DTC P0C30 HYBRID/EV BATTERY PACK STATE OF CHARGE HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the value of «High Voltage Battery Amperage» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-66, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Is the value –1A or less?	Go to step **2**.	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>
2	**CHECK INDICATOR.** 1) Turn the ignition switch to OFF. 2) Start the engine. 3) Check illumination of "DRIVING POSSIBLE (READY) INDICATOR" in the meter.	Does it Illuminate?	Go to step **3**.	Replace HPCM and the high voltage battery. <Ref. to HEV-37, Hybrid Powertrain Control Module.> <Ref. to HEV-17, High Voltage Battery.>
3	**CHECK CURRENT DATA.** 1) Drive approximately 2 km (1.2 miles) at a speed of 30 km/h (18.6 MPH) or more. 2) Using the Subaru Select Monitor, confirm the current data of battery energy control system, the value of «High Voltage Battery SOC». <Ref. to HEV(diag)-56, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 94% or less?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect high voltage battery SOC high.
Judge as NG when the high voltage battery SOC is at the specified value or more.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
SOC NOTE: SOC: State Of Charge	≥ 95%

Time Needed for Diagnosis: 60 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
SOC	< 95%

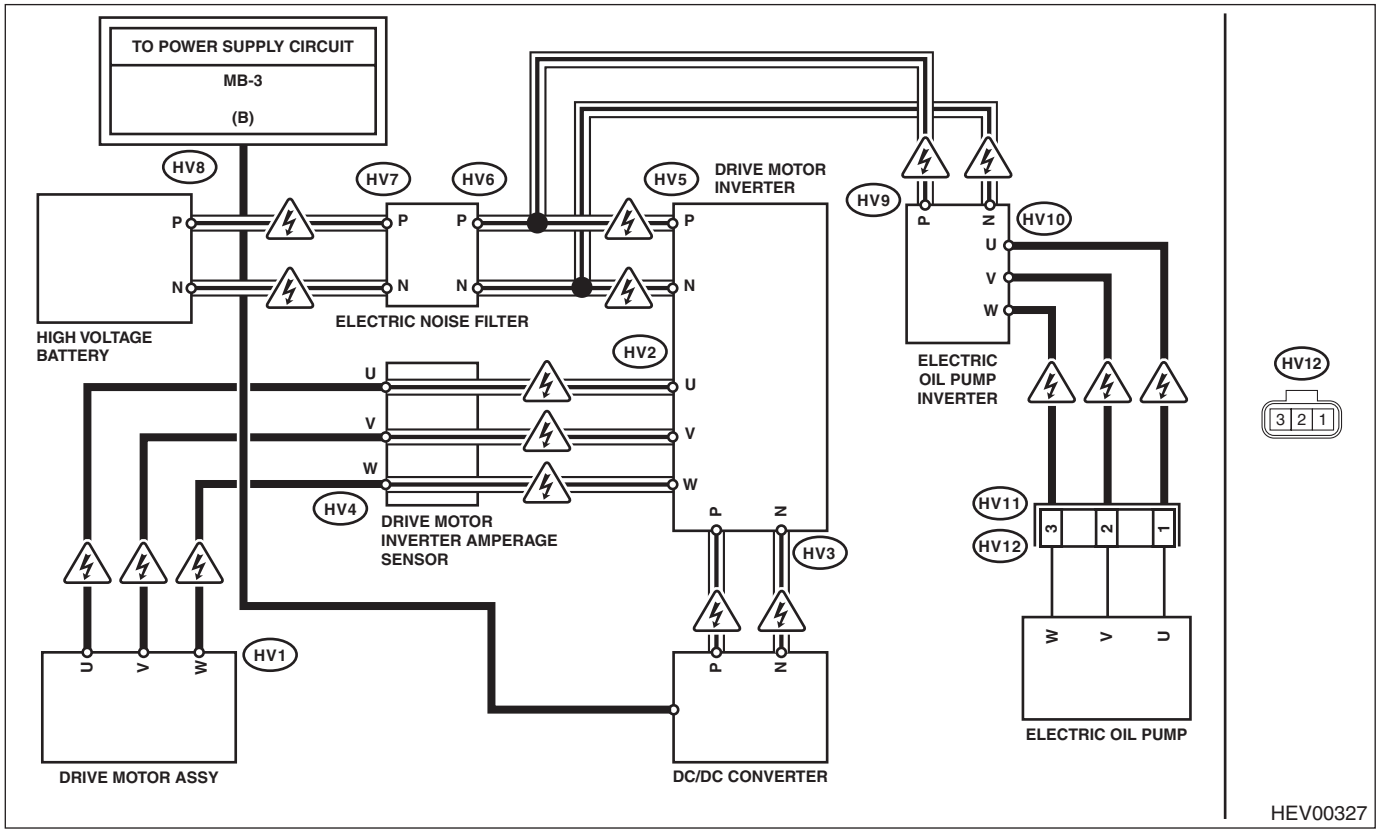
Time Needed for Diagnosis: 60 seconds

EV:DTC P0C78 HYBRID/EV BATTERY SYSTEM PRECHARGE TIME TOO LONG

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-423, OUTLINE OF DIAGNOSIS, DTC P0C78 HYBRID/EV BATTERY SYSTEM PRECHARGE TIME TOO LONG, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

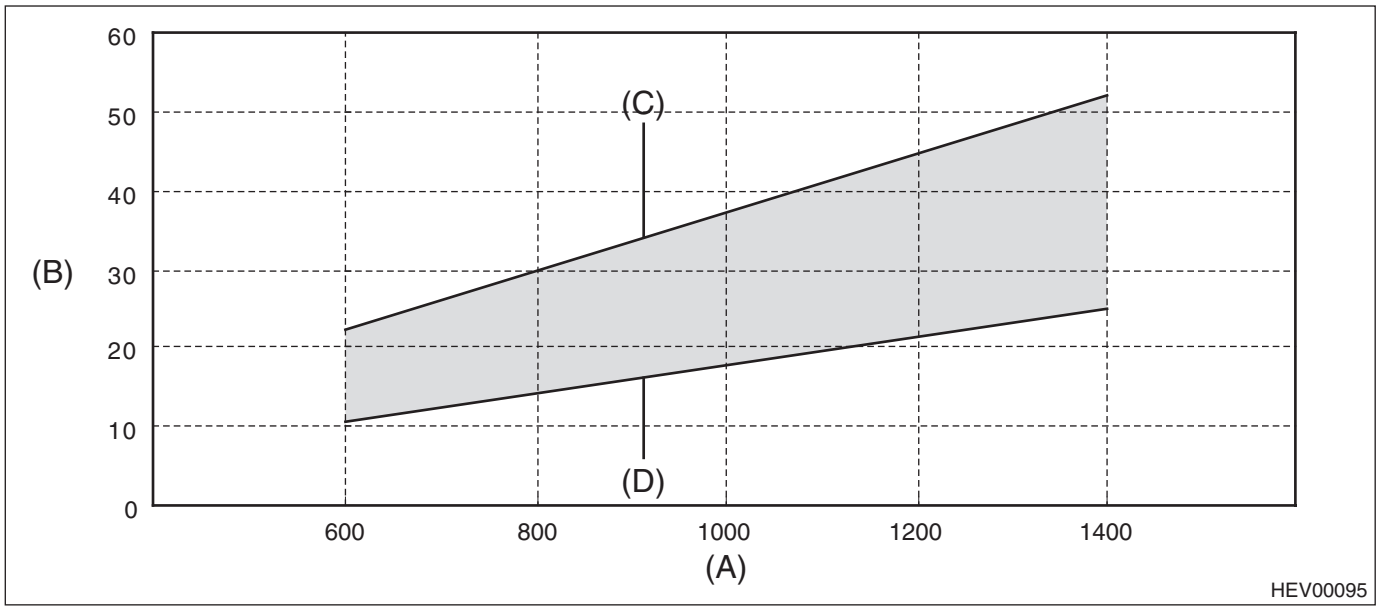


- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:



Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DTC.** Using the Subaru Select Monitor, read DTCs of the following system. • Drive motor control system <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-76, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of battery energy control system, the value of «High voltage Battery Total Voltage». <Ref. to HEV(diag)-56, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 75 V or more?	Go to step **3**.	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>
3	**CHECK DRIVE MOTOR.** 1) With the 12 V battery connected, remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> **CAUTION:** **Watch for an electrical short at each harness because the 12 V battery is connected.** 2) Lift up the vehicle. 3) Start the engine, and set the shift lever to "D" range. 4) Using the Subaru Select Monitor, confirm the current data of battery energy control system, the values of «Drive Motor Speed» «Drive Motor Inverter Input Voltage». <Ref. to HEV(diag)-56, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Current Data.> NOTE: When current data of the drive motor control system, «ATF Temperature» is 20 — 60°C (68 — 140°F). <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is «Drive Motor Inverter Input Voltage» within the standard in the margin when «Drive Motor Speed» is 600 — 1400 rpm?	Go to step **4**.	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.>
4	**CHECK BUS BAR.** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. 4) Wait for 10 minutes. 5) Check the bus bar.	Is the condition normal? (Check for loose bolts, insecure connection, foreign matter caught, trace of arc (burnt terminals) etc.)	Go to step **5**.	Retighten the bolts. Or replace the bus bar.
5	**CHECK BUS BAR.** 1) Remove the bus bar. 2) Using the tester, measure the resistance between bus bar terminals. ***Connector & terminal*** ***(HV5) P — (HV6) P:*** ***(HV5) N — (HV6) N:*** ***(HV5) P — (HV9) P:*** ***(HV5) N — (HV9) N:*** ***(HV7) P — (HV8) P:*** ***(HV7) N — (HV8) N:***	Is the resistance less than 1 Ω?	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Replace the bus bar.

NOTE:
Value of «Drive Motor Inverter Input Voltage» is proportional to «Drive Motor Speed».
- 1000 rpm: 18 V — 37 V
- 1400 rpm: 25 V — 52 V

(A) Drive motor speed
(B) Drive Motor Inverter Input Voltage
(C) Standard at Max.
(D) Standard at Min.

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of high voltage circuit open and precharge resistance.
Judge as NG when the difference between the total voltage value of high voltage battery when contactor is close and the inverter voltage is above the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Closed
BECM precharge contactor command	Closed
BECM positive contactor command	Open
BECM negative contactor command	Closed

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Hybrid battery pack voltage – Inverter voltage) NOTE: ABS: Absolute value	> 20 V

Time Needed for Diagnosis: 0.6 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Hybrid battery pack voltage – Inverter voltage) NOTE: ABS: Absolute value	≤ 20 V

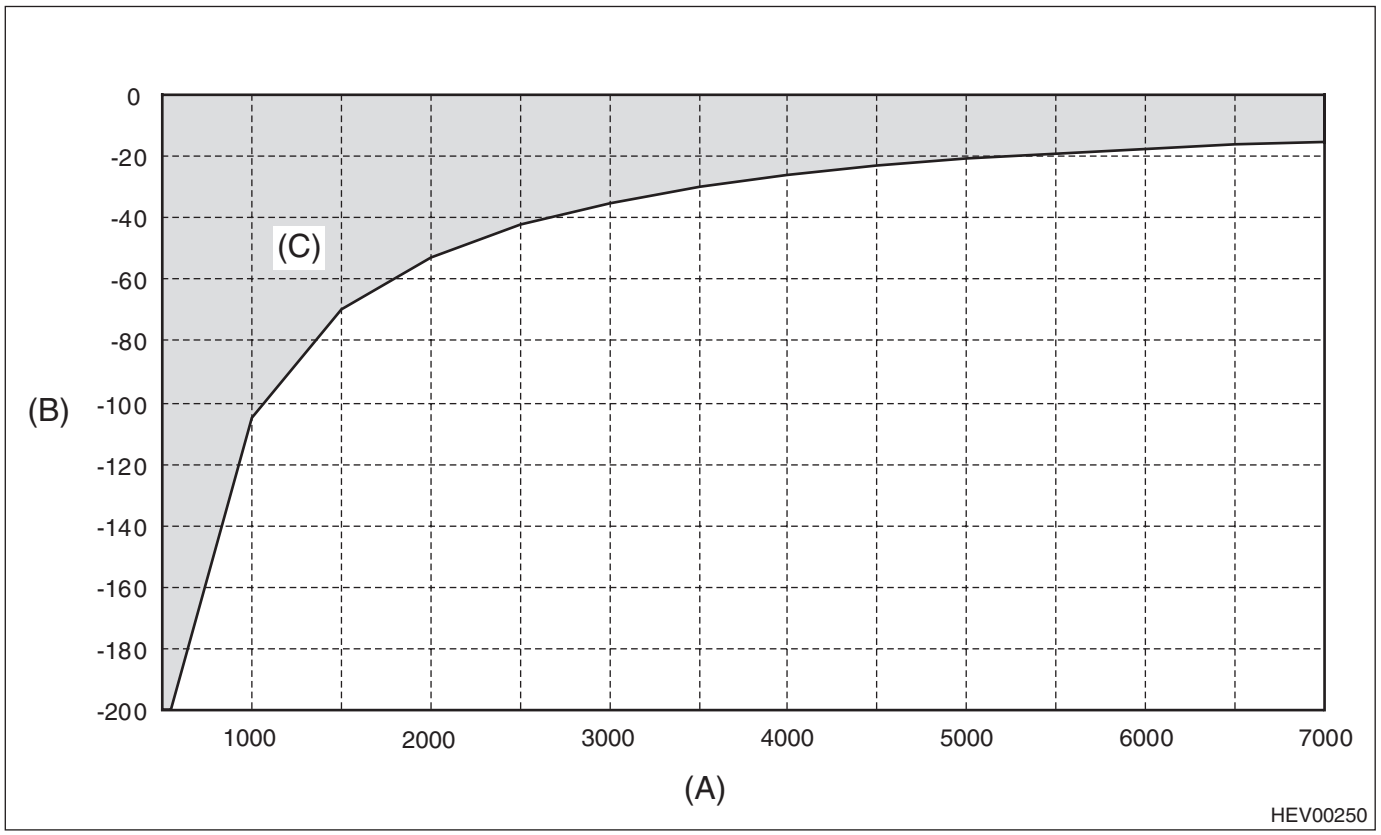
Time Needed for Diagnosis: 0.6 seconds

EW:DTC P0CA6 HYBRID/EV BATTERY CHARGING CURRENT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-426, OUTLINE OF DIAGNOSIS, DTC P0CA6 HYBRID/EV BATTERY CHARGING CURRENT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read DTCs of the following system. • Drive motor control system <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-76, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the value of «Drive Motor Torque Target (HPCM)» in the freeze frame data of the battery energy control system. <Ref. to HEV(diag)-66, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Does the value show 0 N or less?	Go to step **3**.	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>
3	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the values of «Drive Motor Torque Target (HPCM)» «Drive Motor Speed Target(HPCM)» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-66, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Are the values of «Drive Motor Torque Target (HPCM)» and «Drive Motor Speed Target(HPCM)» within the standard in the margin?	Go to step **4**.	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>
4	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the values of «Drive Motor Output Torque Actual» «Drive Motor Speed» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-66, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Are the values of «Drive Motor Output Torque Actual» and «Drive Motor Speed» within the standard in the margin?	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>

NOTE:

(A) Drive Motor Speed Target (HPCM) or Drive Motor Speed
(B) Drive Motor Torque Target (HPCM) or Drive Motor Output Torque Actual
(C) Standard

1. OUTLINE OF DIAGNOSIS

Detect that the high voltage battery current exceeds the rated charging current.
Judge as NG when the current value (charging) is above the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Closed
BECM positive contactor command	Closed
BECM negative contactor command	Closed

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack current (Detected state: charge) NOTE: (Detected state: charge)	> 110 A

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack current (Detected state: charge) NOTE: (Detected state: charge)	≤ 110 A

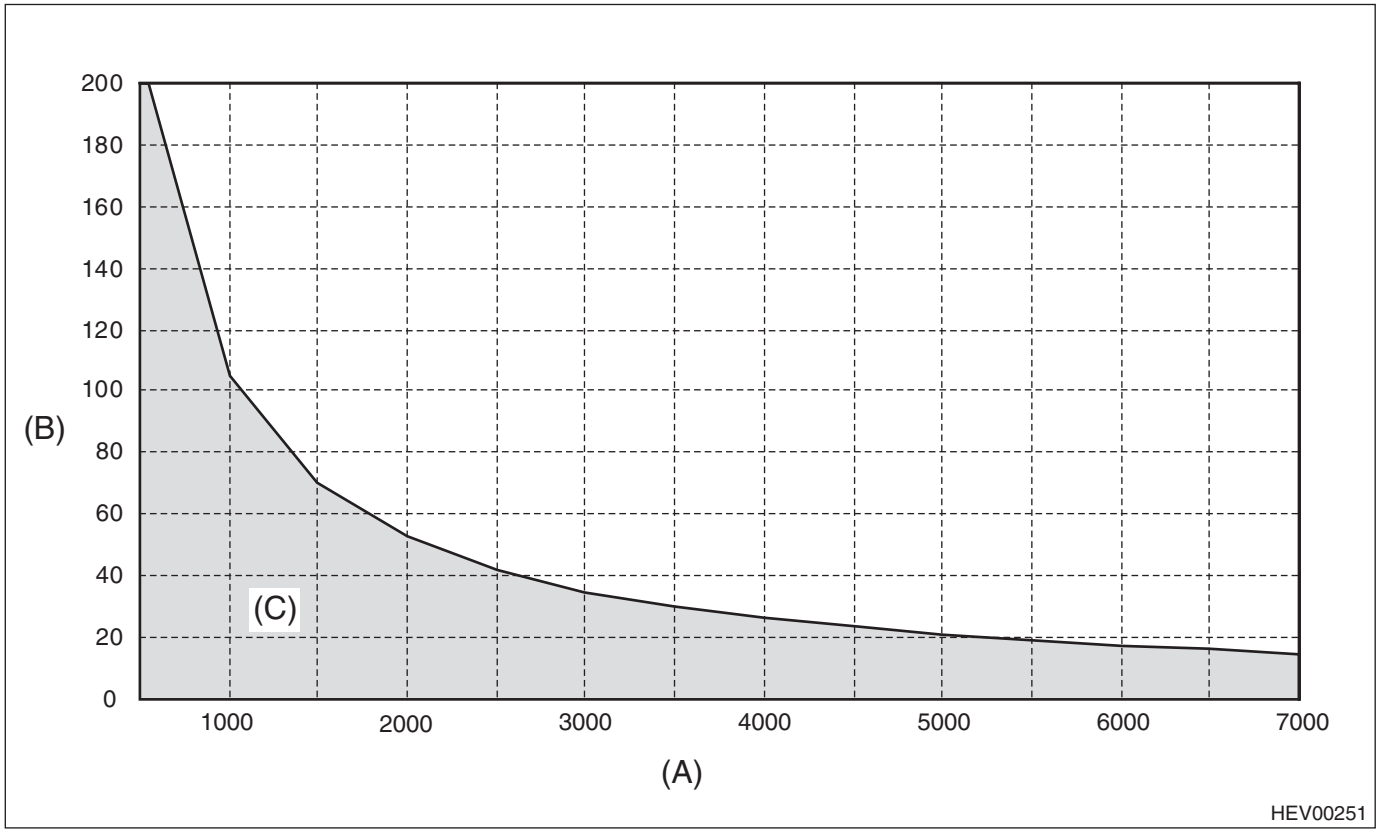
Time Needed for Diagnosis: 2 seconds

EX:DTC P0CA7 HYBRID/EV BATTERY DISCHARGING CURRENT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-429, OUTLINE OF DIAGNOSIS, DTC P0CA7 HYBRID/EV BATTERY DISCHARGING CURRENT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read DTCs of the following system. • Drive motor control system <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-76, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the value of «Drive Motor Output Torque Actual» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-66, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Does the value show 0 N or more?	Go to step **3**.	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>
3	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the values of «Drive Motor Torque Target (HPCM)» «Drive Motor Speed Target(HPCM)» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-66, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Are the values of «Drive Motor Torque Target (HPCM)» and «Drive Motor Speed Target(HPCM)» within the standard in the margin?	Go to step **4**.	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>
4	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the values of «Drive Motor Output Torque Actual» and «Drive Motor Speed» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-66, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Are the values of «Drive Motor Output Torque Actual» and «Drive Motor Speed» within the standard in the margin?	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Replace DMCM. <Ref. to CVT(TH58A)-157, Drive Motor Control Module.>

NOTE:

(A) Drive Motor Speed Target (HPCM) or Drive Motor Speed
(B) Drive Motor Torque Target (HPCM) or Drive Motor Output Torque Actual
(C) Standard

1. OUTLINE OF DIAGNOSIS

Detect that the high voltage battery current exceeds the rated charging current.
Judge as NG when the current value (discharging) is above the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Closed
BECM positive contactor command	Closed
BECM negative contactor command	Closed

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack current (Detected state: discharge)	< –190 A

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack current (Detected state: discharge)	≥ –190 A

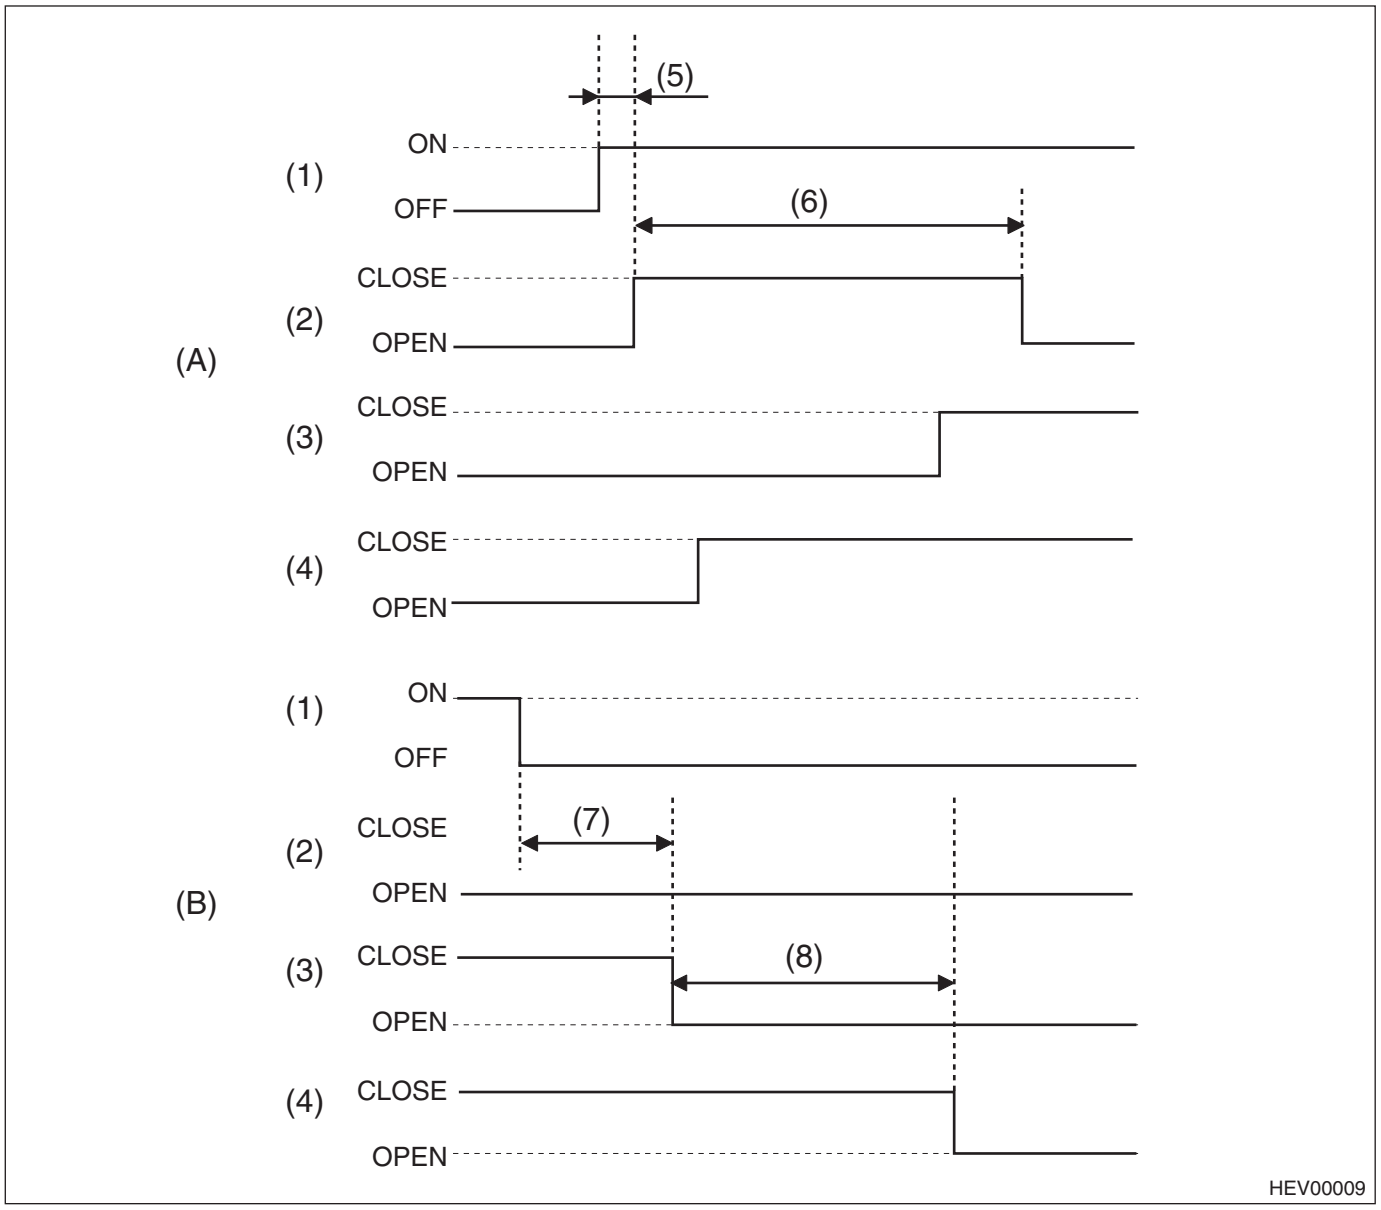
Time Needed for Diagnosis: 2 seconds

EY:DTC P1C40 HYBRID/EV BATTERY POSITIVE CONTACTOR OR PRE-CHARGE CONTACTOR CIRCUIT STUCK CLOSED

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-432, OUTLINE OF DIAGNOSIS, DTC P1C40 HYBRID/EV BATTERY POSITIVE CONTACTOR OR PRE-CHARGE CONTACTOR CIRCUIT STUCK CLOSED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Check DTCs in the following systems; • Engine <Ref. to EN(H4DO HEV)(diag)-51, Read Diagnostic Trouble Code (DTC).> • Transmission <Ref. to CVT(HEV)(diag)-19, OPERATION, Read Diagnostic Trouble Code (DTC).> • Hybrid powertrain control system <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).> • Drive motor control system <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).> • Airbag system <Ref. to AB(diag)-27, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	First perform the diagnosis according to other DTCs.	Go to step **2**.
2	**CHECK BECM.** 1) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 2) Start the engine. 3) Turn the ignition switch to OFF. 4) Wait for 30 seconds. 5) Turn the ignition switch to ON. 6) Read the DTC again. <Ref. to HEV(diag)-23, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is the same DTC detected? (current malfunction)	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

NOTE:
Operation of contactor relay under the normal condition.

(A) Contactor relay closing sequence
(B) Contactor relay opening sequence

(1) Contactor command
(2) Precharge contactor status
(3) Positive contactor status
(4) Negative contactor status
(5) 10 seconds
(6) 0.8 seconds maximum
(7) 2.0 seconds maximum
(8) 1.3 seconds maximum

1. OUTLINE OF DIAGNOSIS

Detect the adhesion of +side contactor and precharge contactor.
If the difference between the total voltage of the high voltage battery and the inverter voltage is greater than or equal to the standard when the contactor is open, it is judged as NG.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Open
BECM precharge contactor command	Open
BECM positive contactor command	Open
BECM negative contactor command	Closed

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Inverter voltage / Hybrid battery pack voltage	≥ 0.8 V

Time Needed for Diagnosis: 1.3 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Inverter voltage / Hybrid battery pack voltage	< 0.8 V

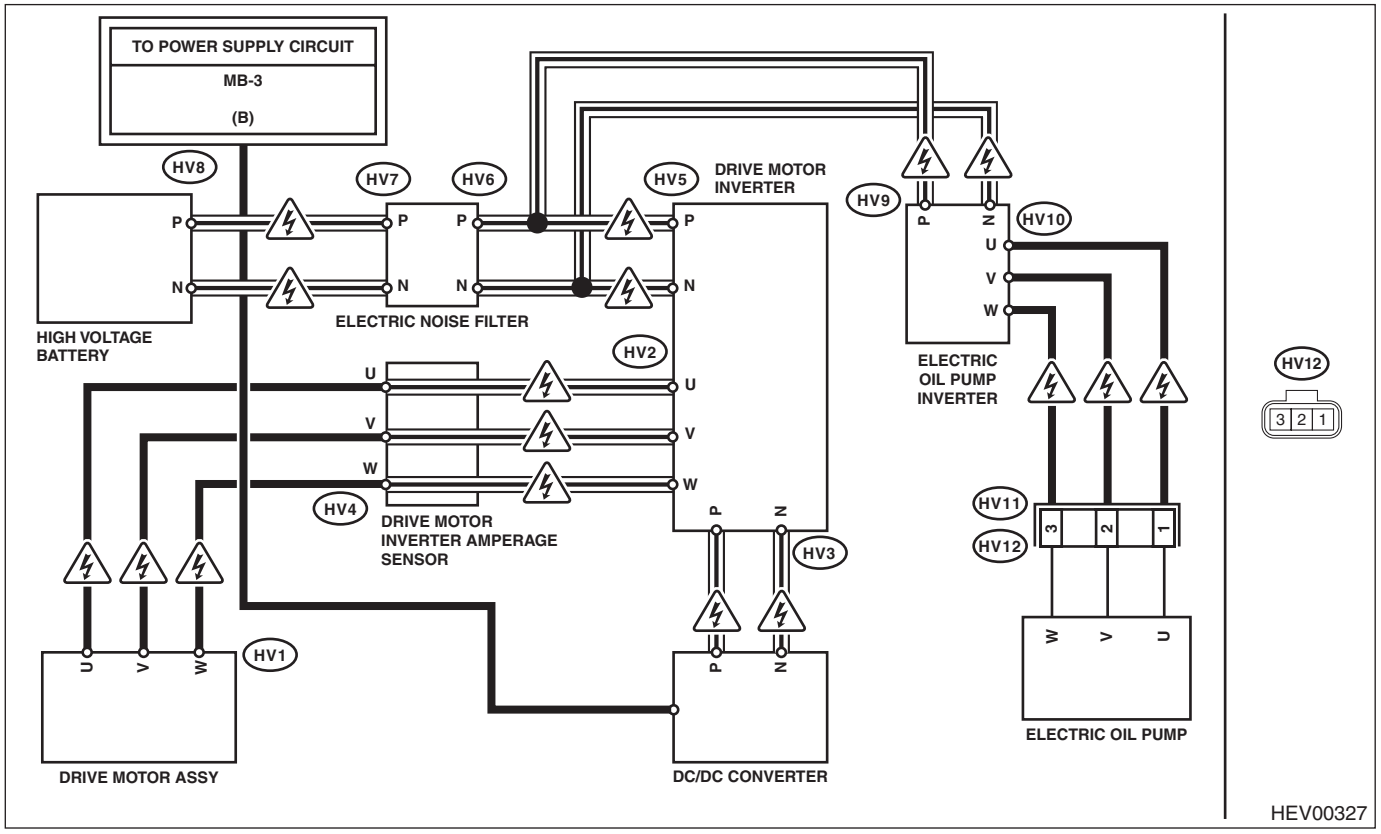
Time Needed for Diagnosis: 1.3 seconds

EZ:DTC P1C41 HIGH VOLTAGE CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-436, OUTLINE OF DIAGNOSIS, DTC P1C41 HIGH VOLTAGE CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC.	Are any other DTCs detected? (current malfunction)	First perform the diagnosis according to other DTCs.	Go to step **2**.
2	**CHECK BUS BAR.** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Visually check the bus bar.	Is the condition normal? (Check for loose bolts, insecure connection, foreign matter caught, trace of arc (burnt terminals) etc.)	Go to step **3**.	Retighten the bolts. Or replace the bus bar.

	Step	Check	Yes	No
3	**CHECK POWER CABLE.** Visually check the power cable.	Is the condition normal? (Check for loose bolts, insecure connection, foreign matter caught, trace of arc (burnt terminals) etc.)	Go to step **4**.	Retighten the bolts. Or replace the power cable. <Ref. to HEV-51, Power Cable.>
4	**CHECK EACH MODULE.** Using a tester, measure the resistance between electric noise filter terminals on the high voltage battery side. ***Connector & terminal*** ***(HV7) P — (HV7) N:***	Is the resistance 1 Ω or more?	Go to step **7**.	Go to step **5**.
5	**CHECK DC/DC CONVERTER.** 1) Remove the DC/DC converter. 2) Using a tester, measure the resistance between electric noise filter terminals on the high voltage battery side. ***Connector & terminal*** ***(HV7) P — (HV7) N:***	Is the resistance 1 Ω or more?	Replace the DC/DC converter. <Ref. to HEV-38, DC/DC Converter.>	Go to step **6**.
6	**CHECK EACH MODULE.** 1) Disconnect the power cable (HV4) from drive motor inverter amperage sensor. 2) Remove the drive motor inverter amperage sensor (HV2). 3) Remove bus bars (HV5, HV6, HV7, HV8, HV9). 4) Using a tester, measure the resistance between terminals of each module. ***Connector & terminal*** ***Drive motor inverter*** ***(HV5) P — (HV5) N:*** ***Electric noise filter*** ***(HV7) P — (HV7) N:*** ***High voltage battery*** ***(HV8) P — (HV8) N:*** ***Electric oil pump inverter*** ***(HV9) P — (HV9) N:***	Is the resistance 1 Ω or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.	Replace the unit that has short circuits.
7	**CHECK EACH MODULE.** Using a tester, measure the resistance between drive motor inverter amperage sensor terminals on the power cable side. ***Connector & terminal*** ***(HV4) W — (HV4) V:*** ***(HV4) W — (HV4) U:*** ***(HV4) V — (HV4) U:***	Is the resistance 1 Ω or more?	Go to step **9**.	Go to step **8**.

	Step	Check	Yes	No
8	**CHECK EACH MODULE.** 1) Disconnect the power cable (HV4) from drive motor inverter amperage sensor. 2) Remove the drive motor inverter amperage sensor (HV2). 3) Disconnect the power cable (HV1) from the drive motor assembly. NOTE: The gasket is not reusable. 4) Using a tester, measure the resistance between each module and power cable terminals. ***Connector & terminal*** ***Drive motor assembly*** ***(HV1) W — (HV1) V:*** ***(HV1) W — (HV1) U:*** ***(HV1) V — (HV1) U:*** ***Drive motor inverter*** ***(HV2) W — (HV2) V:*** ***(HV2) W — (HV2) U:*** ***(HV2) V — (HV2) U:*** ***Drive motor inverter amperage sensor*** ***(HV4) W — (HV4) V:*** ***(HV4) W — (HV4) U:*** ***(HV4) V — (HV4) U:*** ***Power cable*** ***(HV4) W — (HV4) V:*** ***(HV4) W — (HV4) U:*** ***(HV4) V — (HV4) U:***	Is the resistance 1 Ω or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.	Replace the unit that has short circuits.
9	**CHECK EACH MODULE.** 1) Disconnect the power cable (HV10) from electric oil pump inverter. 2) Disconnect the power cable (HV12) from electric oil pump. 3) Using a tester, measure the resistance between each module and power cable terminals. ***Connector & terminal*** ***Electric oil pump inverter*** ***(HV10) W — (HV10) V:*** ***(HV10) W — (HV10) U:*** ***(HV10) V — (HV10) U:*** ***Electric oil pump*** ***(HV12) W — (HV12) V:*** ***(HV12) W — (HV12) U:*** ***(HV12) V — (HV12) U:*** ***Power cable*** ***(HV10) W — (HV10) V:*** ***(HV10) W — (HV10) U:*** ***(HV10) V — (HV10) U:***	Is the resistance 1 Ω or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.	Replace the unit that has short circuits.

1. OUTLINE OF DIAGNOSIS

Detect the short circuit of high voltage line + and –.
Judge as NG when the current at contactor close is at the specified value or more.
Judge as NG when the high voltage battery voltage value at close is below the specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Diagnosis 1	
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Closed
BECM precharge contactor command	Closed
BECM positive contactor command	Open
BECM negative contactor command	Closed
Diagnosis 2	
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Closed
BECM precharge contactor command	Open
BECM positive contactor command	Closed
BECM negative contactor command	Closed

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery pack discharge current	> 1.75 A
Diagnosis 2	
Hybrid battery pack voltage	< 48 V

Time Needed for Diagnosis:
- **Diagnosis 1:** less than 0.6 s
- **Diagnosis 2:** 0.1 s

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery pack discharge current	≤ 1.75 A
Diagnosis 2	
Hybrid battery pack voltage	≥ 48 V

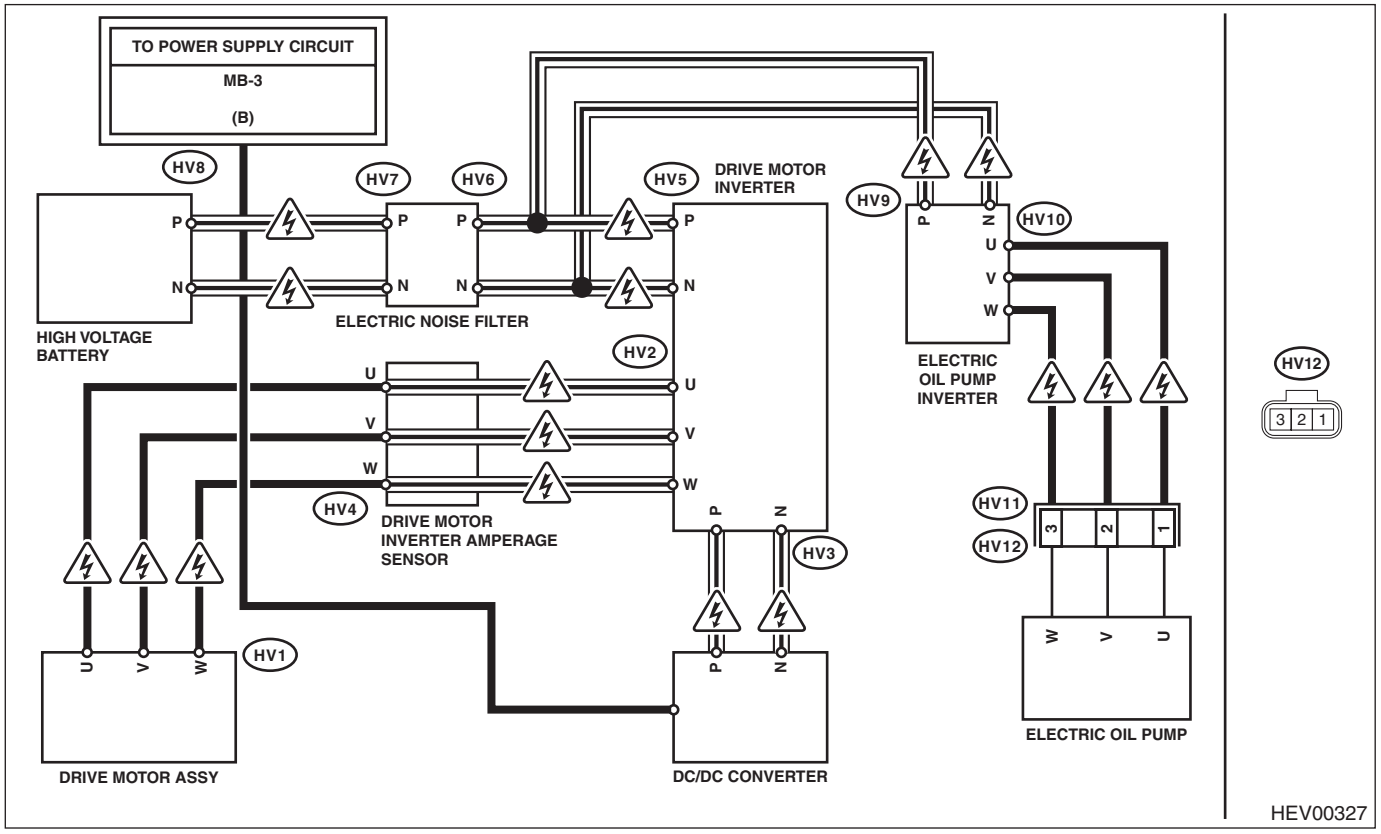
Time Needed for Diagnosis: 0.6 s after engine start

FA:DTC P1C42 HIGH VOLTAGE CIRCUIT/OPEN

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-440, OUTLINE OF DIAGNOSIS, DTC P1C42 HIGH VOLTAGE CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

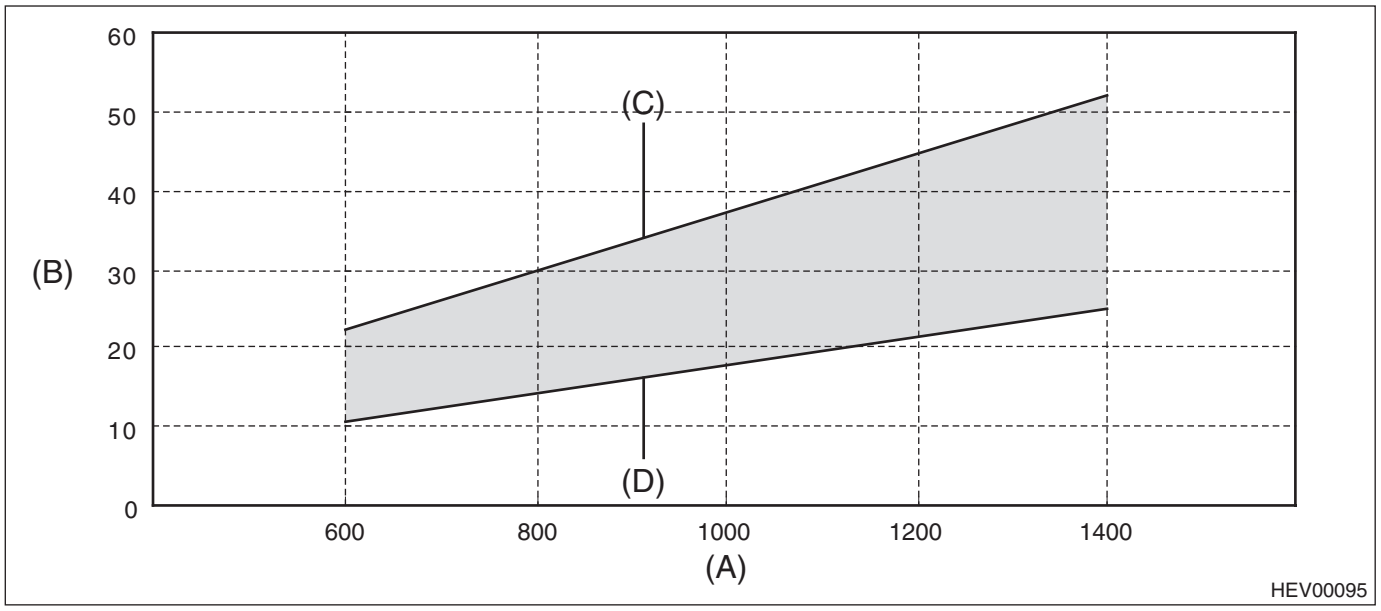


- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:



Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK BUS BAR.** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Visually check the bus bar.	Is the condition normal? (Check for loose bolts, etc.)	Go to step **2**.	Retighten the bolts. Or replace the bus bar.

	Step	Check	Yes	No
2	**CHECK BUS BAR.** 1) Remove the bus bar. 2) Using the tester, measure the resistance between bus bar terminals. ***Connector & terminal*** ***(HV5) P — (HV6) P:*** ***(HV5) N — (HV6) N:***	Is the resistance less than 1 Ω?	Go to step **3**.	Replace the bus bar. (Between electric noise filter and drive motor inverter.)
3	**CHECK ELECTRIC NOISE FILTER.** Using a tester, measure the resistance between electric noise filter terminals. ***Connector & terminal*** ***(HV6) P — (HV7) P:*** ***(HV6) N — (HV7) N:***	Is the resistance less than 1 Ω?	Go to step **4**.	Replace the electric noise filter. <Ref. to HEV-31, Noise Filter.>
4	**CHECK BUS BAR.** Using the tester, measure the resistance between bus bar terminals. ***Connector & terminal*** ***(HV7) P — (HV8) P:*** ***(HV7) N — (HV8) N:***	Is the resistance less than 1 Ω?	Go to step **5**.	Replace the bus bar. (Between high voltage battery and electric noise filter.)
5	**CHECK DRIVE MOTOR.** 1) Restore the vehicle to its original state. 2) With the 12 V battery connected, remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> **CAUTION:** **Watch for an electrical short at each harness because the 12 V battery is connected.** 3) Lift up the vehicle. 4) Start the engine, and set the shift lever to “D” range. 5) Using the Subaru Select Monitor, confirm the current data of battery energy control system, the values of «Drive Motor Speed» «Drive Motor Inverter Input Voltage». <Ref. to HEV(diag)-56, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Current Data.> NOTE: When current data of the drive motor control system, «ATF Temperature» is 20 — 60°C (68 — 140°F). <Ref. to HEV(diag)-50, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is «Drive Motor Inverter Input Voltage» within the standard in the margin when «Drive Motor Speed» is 600 — 1400 rpm?	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.>

NOTE:
Value of «Drive Motor Inverter Input Voltage» is proportional to «Drive Motor Speed».
- 1000 rpm: 18 V — 37 V
- 1400 rpm: 25 V — 52 V

(A) Drive motor speed
(B) Drive Motor Inverter Input Voltage
(C) Standard at Max.
(D) Standard at Min.

1. OUTLINE OF DIAGNOSIS

Detect the high voltage circuit open at driving.
Judge as NG both when the difference between the high voltage battery voltage value and the inverter voltage value is at the specified value or more, and when the high voltage battery current value is within specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Closed
Measured Positive contactor control signal (BECM main CPU output)	Closed
Measured Positive contactor control signal (BECM output)	Closed
Measured Negative contactor control signal (BECM main CPU output)	Closed
Measured Negative contactor control signal (BECM output)	Closed
Measured contactor power supply control signal	ON
Measured contactor power supply voltage	≥ 4 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Absolute value of hybrid battery pack current	≤ 1 A
Inverter voltage / Hybrid battery voltage	≤ 0.8

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Absolute value of hybrid battery pack current	> 1 A
Inverter voltage / Hybrid battery voltage	> 0.8

Time Needed for Diagnosis: 1 second

FB:DTC P1C43 HYBRID/EV BATTERY CONTACTOR POWER SUPPLY CIRCUIT

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-441, OUTLINE OF DIAGNOSIS, DTC P1C43 HYBRID/EV BATTERY CONTACTOR POWER SUPPLY CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of power supply instantaneous interruption detection circuit and power supply circuit of contactor.
Judge as NG when the open circuit of power supply instantaneous interruption detection circuit and power supply circuit of contactor is detected.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Diagnosis 1	
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V
BECM positive contactor command	Closed or
BECM negative contactor command	Closed or
BECM precharge contactor command	Closed
Diagnosis 2	
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V
Measured Contactor power supply monitoring signal	Power on

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 Measured Contactor power supply monitoring signal	Power off
Diagnosis 2 Measured contactor power supply voltage dropped signal	ON

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 Measured contactor power supply monitoring signal	Power on
Diagnosis 2 Measured contactor power supply voltage dropped signal	Off

Time Needed for Diagnosis: 0.5 seconds

FC:DTC P1C44 SUB CPU IN BECM

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-443, OUTLINE OF DIAGNOSIS, DTC P1C44 SUB CPU IN BECM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the communication failure of MAINCPU and SubCPU.
Judge as NG when data is not received from SubCPU.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 Serial communication between BECM Main CPU and BECM Sub CPU is lost (no message received)	Detected
Diagnosis 2 Hybrid Battery voltage input circuit error for BECM Sub CPU	Detected
Diagnosis 3 A/D Converter failure for BECM Sub CPU	Detected
Diagnosis 4 Multiplex connection error for BECM Sub CPU	Detected

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 Serial communication between BECM Main CPU and BECM Sub CPU is lost (no message received)	Not detected
Diagnosis 2 Hybrid Battery voltage input circuit error for BECM Sub CPU	Not detected
Diagnosis 3 A/D Converter failure for BECM Sub CPU	Not detected
Diagnosis 4 Multiplex connection error for BECM Sub CPU	Not detected

Time Needed for Diagnosis: 10 seconds

FD:DTC P1C45 HYBRID/EV BATTERY BLOCK 1 BALANCING PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-445, OUTLINE OF DIAGNOSIS, DTC P1C45 HYBRID/EV BATTERY BLOCK 1 BALANCING PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the cell malfunction of high voltage battery block 1.
Judge as NG when the deviation of high voltage battery block voltage is large.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic value = (Adjusted average module voltage – Min. module voltage) x N N=4 NOTE: This DTC will be stored only if the “Min. module voltage” equal to the average module voltage of Block 1.	> 1.2 V

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic value = (Adjusted average module voltage – Min. module voltage) x N N=4 NOTE: This DTC will be stored only if the “Min. module voltage” equal to the average module voltage of Block 1.	≤ 1.2 V

Time Needed for Diagnosis: 10 seconds

FE:DTC P1C46 HYBRID/EV BATTERY BLOCK 2 BALANCING PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-446, OUTLINE OF DIAGNOSIS, DTC P1C46 HYBRID/EV BATTERY BLOCK 2 BALANCING PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the cell malfunction of high voltage battery block 2.
Judge as NG when the deviation of high voltage battery block voltage is large.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic value = (Adjusted average module voltage – Min. module voltage) x N N=4 NOTE: This DTC will be stored only if the “Min. module voltage” equal to the average module voltage of Block 2.	> 1.2 V

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic value = (Adjusted average module voltage – Min. module voltage) x N N=4 NOTE: This DTC will be stored only if the “Min. module voltage” equal to the average module voltage of Block 2.	≤ 1.2 V

Time Needed for Diagnosis: 10 seconds

FF: DTC P1C47 HYBRID/EV BATTERY BLOCK 3 BALANCING PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-447, OUTLINE OF DIAGNOSIS, DTC P1C47 HYBRID/EV BATTERY BLOCK 3 BALANCING PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of voltage deviation between high voltage battery cells.
Judge as NG when the deviation of high voltage battery block voltage is large.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic value = (Adjusted average module voltage – Min. module voltage) x N N=4 NOTE: This DTC will be stored only if the “Min. module voltage” equal to the average module voltage of Block 3.	> 1.2 V

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic value = (Adjusted average module voltage – Min. module voltage) x N N=4 NOTE: This DTC will be stored only if the “Min. module voltage” equal to the average module voltage of Block 3.	≤ 1.2 V

Time Needed for Diagnosis: 10 seconds

FG:DTC P1C48 HYBRID/EV BATTERY BLOCK 4 BALANCING PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-448, OUTLINE OF DIAGNOSIS, DTC P1C48 HYBRID/EV BATTERY BLOCK 4 BALANCING PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of voltage deviation between high voltage battery cells.
Judge as NG when the deviation of high voltage battery block voltage is large.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic value = (Adjusted average module voltage – Min. module voltage) x N N=2 NOTE: This DTC will be stored only if the “Min. module voltage” equal to the average module voltage of Block 4.	> 1.2 V

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic value = (Adjusted average module voltage – Min. module voltage) x N N=2 NOTE: This DTC will be stored only if the “Min. module voltage” equal to the average module voltage of Block 4.	≤ 1.2 V

Time Needed for Diagnosis: 10 seconds

FH:DTC P1C49 HYBRID/EV BATTERY BLOCK 5 BALANCING PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-449, OUTLINE OF DIAGNOSIS, DTC P1C49 HYBRID/EV BATTERY BLOCK 5 BALANCING PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of voltage deviation between high voltage battery cells.
Judge as NG when the deviation of high voltage battery block voltage is large.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic value = (Adjusted average module voltage – Min. module voltage) x N N=4 NOTE: This DTC will be stored only if the “Min. module voltage” equal to the average module voltage of Block 5.	> 1.2 V

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic value = (Adjusted average module voltage – Min. module voltage) x N N=4 NOTE: This DTC will be stored only if the “Min. module voltage” equal to the average module voltage of Block 5.	≤ 1.2 V

Time Needed for Diagnosis: 10 seconds

FI: DTC P1C4A HYBRID/EV BATTERY BLOCK 6 BALANCING PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-450, OUTLINE OF DIAGNOSIS, DTC P1C4A HYBRID/EV BATTERY BLOCK 6 BALANCING PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of voltage deviation between high voltage battery cells.
Judge as NG when the deviation of high voltage battery block voltage is large.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic value = (Adjusted average module voltage – Min. module voltage) x N N=3 NOTE: This DTC will be stored only if the “Min. module voltage” equal to the average module voltage of Block 6.	> 1.2 V

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic value = (Adjusted average module voltage – Min. module voltage) x N N=3 NOTE: This DTC will be stored only if the “Min. module voltage” equal to the average module voltage of Block 6.	≤ 1.2 V

Time Needed for Diagnosis: 10 seconds

FJ: DTC P1C5E HYBRID/EV BATTERY OPEN CIRCUIT VOLTAGE TOO LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-451, OUTLINE OF DIAGNOSIS, DTC P1C5E HYBRID/EV BATTERY OPEN CIRCUIT VOLTAGE TOO LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

1. OUTLINE OF DIAGNOSIS

Detect high voltage battery block voltage low.
Judge as NG when the high voltage battery block voltage is less than specified value.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
Ignition state	Run or crank
12 V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Open
BECM precharge contactor command	Open
BECM positive contactor command	Open
BECM negative contactor command	Open

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Minimum average module voltage of block	< Map4

Map 4

Minimum Hybrid battery temperature (°C (°F))	–40 (–40)	–20 (–4)	–10 (14)	0 (32)	10 (50)	25 (77)	35 (95)	45 (113)	50 (122)
Minimum average module voltage of block (V)	4.485	4.365	4.340	4.320	4.290	4.230	4.195	4.170	4.170

Time Needed for Diagnosis: 0.1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Minimum average module voltage of block	≥ Map4

Time Needed for Diagnosis: 0.1 second

FK:DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-452, OUTLINE OF DIAGNOSIS, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

Detect the bus error of CAN channel 1.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9 V
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	Bus off

Time Needed for Diagnosis: 0.48 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	≠ Bus off

Time Needed for Diagnosis: 0 seconds

FL: DTC U0075 CONTROL MODULE COMMUNICATION BUS "PU-CAN" OFF

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-453, OUTLINE OF DIAGNOSIS, DTC U0075 CONTROL MODULE COMMUNICATION BUS "PU-CAN" OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

Detect the bus error of CAN channel 2.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	Bus off

Time Needed for Diagnosis: 0.48 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	≠ Bus off

Time Needed for Diagnosis: 0 seconds

FM:DTC U0076 CONTROL MODULE COMMUNICATION BUS "HEV-CAN" OFF

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION (Hybrid powertrain control system) <Ref. to HEV(diag)-454, OUTLINE OF DIAGNOSIS (HYBRID POWERTRAIN CONTROL SYSTEM), DTC U0076 CONTROL MODULE COMMUNICATION BUS "HEV-CAN" OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
- GENERAL DESCRIPTION (Drive motor control system) <Ref. to HEV(diag)-454, OUTLINE OF DIAGNOSIS (DRIVE MOTOR CONTROL SYSTEM), DTC U0076 CONTROL MODULE COMMUNICATION BUS "HEV-CAN" OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
- GENERAL DESCRIPTION (Battery energy control system) <Ref. to HEV(diag)-455, OUTLINE OF DIAGNOSIS (BATTERY ENERGY CONTROL SYSTEM), DTC U0076 CONTROL MODULE COMMUNICATION BUS "HEV-CAN" OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS (HYBRID POWERTRAIN CONTROL SYSTEM)

Detect the CAN failure and bus error of HEV-CAN.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION (HYBRID POWERTRAIN CONTROL SYSTEM)

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD (HYBRID POWERTRAIN CONTROL SYSTEM)

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	Bus off

Time Needed for Diagnosis: Less than 0.48 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	≠ Bus off

Time Needed for Diagnosis: 0 seconds

4. OUTLINE OF DIAGNOSIS (DRIVE MOTOR CONTROL SYSTEM)

Detect the serial communication failure with inverter.
Judge as NG when the data from inverter is not received correctly.

5. EXECUTION CONDITION (DRIVE MOTOR CONTROL SYSTEM)

Secondary Parameters	Execution condition
a: 12 V battery system voltage	≥ 10 V
Continuous time of a	≥ 1 s

6. DIAGNOSTIC METHOD (DRIVE MOTOR CONTROL SYSTEM)

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	Bus off

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	≠ Bus off

Time Needed for Diagnosis: Immediately

7. OUTLINE OF DIAGNOSIS (BATTERY ENERGY CONTROL SYSTEM)

Detect CAN bus off error.

8. EXECUTION CONDITION (BATTERY ENERGY CONTROL SYSTEM)

Secondary Parameters	Execution condition
a: (Ignition state	Run or crank
12 V battery system voltage)	≥ 9 V and ≤ 17 V
Continuous time of a	≥ 1 s

9. DIAGNOSTIC METHOD (BATTERY ENERGY CONTROL SYSTEM)

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	Bus off

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	≠ Bus off

Time Needed for Diagnosis: 0.2 seconds

FN:DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-456, OUTLINE OF DIAGNOSIS, DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

Detect the engine data not received.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from ECM	Lost

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from ECM	≠ Lost

Time Needed for Diagnosis: 0 seconds

FO:DTC U0101 LOST COMMUNICATION WITH TCM

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-457, OUTLINE OF DIAGNOSIS, DTC U0101 LOST COMMUNICATION WITH TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

Detect the transmission data not received.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from TCM	Lost

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from ECM	≠ Lost

Time Needed for Diagnosis: 0 seconds

FP:DTC U0110 LOST COMMUNICATION WITH DRIVE MOTOR CONTROL MODULE "A"

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION (Hybrid powertrain control system) <Ref. to HEV(diag)-458, OUTLINE OF DIAGNOSIS (HYBRID POWERTRAIN CONTROL SYSTEM), DTC U0110 LOST COMMUNICATION WITH DRIVE MOTOR CONTROL MODULE "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
- GENERAL DESCRIPTION (Battery energy control system) <Ref. to HEV(diag)-458, OUTLINE OF DIAGNOSIS (BATTERY ENERGY CONTROL SYSTEM), DTC U0110 LOST COMMUNICATION WITH DRIVE MOTOR CONTROL MODULE "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS (HYBRID POWERTRAIN CONTROL SYSTEM)

Detect the motor control module data not received.

2. EXECUTION CONDITION (HYBRID POWERTRAIN CONTROL SYSTEM)

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD (HYBRID POWERTRAIN CONTROL SYSTEM)

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from DMCM	Lost

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	≠ Lost

Time Needed for Diagnosis: 0 seconds

4. OUTLINE OF DIAGNOSIS (BATTERY ENERGY CONTROL SYSTEM)

Detect the malfunction of CAN data not received from drive motor control module.

5. EXECUTION CONDITION (BATTERY ENERGY CONTROL SYSTEM)

Secondary Parameters	Execution condition
a: (Ignition state 12 V battery system voltage) Continuous time of a	Run or crank ≥ 9 V and ≤ 17 V ≥ 1 s

6. DIAGNOSTIC METHOD (BATTERY ENERGY CONTROL SYSTEM)

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from DMCM	Lost

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	Received

Time Needed for Diagnosis: 1 second

FQ:DTC U0111 LOST COMMUNICATION WITH BATTERY ENERGY CONTROL MODULE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION (Hybrid powertrain control system) <Ref. to HEV(diag)-460, OUTLINE OF DIAGNOSIS (HYBRID POWERTRAIN CONTROL SYSTEM), DTC U0111 LOST COMMUNICATION WITH BATTERY ENERGY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
- GENERAL DESCRIPTION (Drive motor control system) <Ref. to HEV(diag)-460, OUTLINE OF DIAGNOSIS (DRIVE MOTOR CONTROL SYSTEM), DTC U0111 LOST COMMUNICATION WITH BATTERY ENERGY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS (HYBRID POWERTRAIN CONTROL SYSTEM)

Detect the battery energy control module data not received.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION (HYBRID POWERTRAIN CONTROL SYSTEM)

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD (HYBRID POWERTRAIN CONTROL SYSTEM)

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from BECM	Lost

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from BECM	≠ Lost

Time Needed for Diagnosis: 0 seconds

4. OUTLINE OF DIAGNOSIS (DRIVE MOTOR CONTROL SYSTEM)

Detect the serial communication failure with inverter.
Judge as NG when the data from inverter is not received correctly.

5. EXECUTION CONDITION (DRIVE MOTOR CONTROL SYSTEM)

Secondary Parameters	Execution condition
a: 12 V battery system voltage	≥ 10 V
Continuous time of a	≥ 1 s

6. DIAGNOSTIC METHOD (DRIVE MOTOR CONTROL SYSTEM)

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from BECM	Lost

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from BECM	Received

Time Needed for Diagnosis: 8 seconds

FR:DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

DIAGNOSIS:
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-462, OUTLINE OF DIAGNOSIS, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:
EV traveling/Auto Start Stop does not operate.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

Detect the VDC data not received.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from Vehicle Dynamics Control Module	Lost

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from ECM	≠ Lost

Time Needed for Diagnosis: 0 seconds

FS:DTC U0131 LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE

DIAGNOSIS:
- Detects CAN communication error with electric power steering system.
- Immediately at fault recognition

TROUBLE SYMPTOM:
Normal control

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

FT:DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

DIAGNOSIS:
- Detects CAN communication error with body integrated unit.
- Immediately at fault recognition

TROUBLE SYMPTOM:
Normal control

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

FU:DTC U0151 LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE

DIAGNOSIS:
- Detects CAN communication error with airbag system.
- Immediately at fault recognition

TROUBLE SYMPTOM:
Normal control

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

FV:DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

DIAGNOSIS:
- Detects CAN communication error with combination meter.
- Immediately at fault recognition

TROUBLE SYMPTOM:
Normal control

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

FW:DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE

DIAGNOSIS:
- Detects CAN communication error with air conditioner.
- Immediately at fault recognition

TROUBLE SYMPTOM:
EV traveling/Auto Start Stop does not operate.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

FX:DTC U0287 LOST COMMUNICATION WITH TRANSMISSION FLUID PUMP MODULE

DIAGNOSIS:
- Detects CAN communication error with electric oil pump.
- Immediately at fault recognition

TROUBLE SYMPTOM:
Normal control

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

FY:DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-464, OUTLINE OF DIAGNOSIS, DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

Detect the engine data error.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from ECM	Parity error
Diagnosis 2	
CAN data from ECM	Did not change

Time Needed for Diagnosis:

- **Diagnosis 1:** 0.15 s
- **Diagnosis 2:** 2.5 s

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from ECM	≠ Parity error
Diagnosis 2	
CAN data from ECM	≠ Did not change

Time Needed for Diagnosis: 0 seconds

FZ: DTC U0402 INVALID DATA RECEIVED FROM TCM

DIAGNOSIS:
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-465, OUTLINE OF DIAGNOSIS, DTC U0402 INVALID DATA RECEIVED FROM TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

Detect the transmission data error.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from TCM	Parity error
Diagnosis 2	
CAN data from TCM	Did not change

Time Needed for Diagnosis:
- **Diagnosis 1:** 0.15 s
- **Diagnosis 2:** 0.5 s

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from TCM	≠ Parity error
Diagnosis 2	
CAN data from TCM	≠ Did not change

Time Needed for Diagnosis: 0 seconds

GA:DTC U0411 INVALID DATA RECEIVED FROM DRIVE MOTOR CONTROL MODULE "A"

DIAGNOSIS:
- Immediately at fault recognition
- GENERAL DESCRIPTION (Hybrid powertrain control system) <Ref. to HEV(diag)-466, OUTLINE OF DIAGNOSIS (HYBRID POWERTRAIN CONTROL SYSTEM), DTC U0411 INVALID DATA RECEIVED FROM DRIVE MOTOR CONTROL MODULE "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
- GENERAL DESCRIPTION (Battery energy control system) <Ref. to HEV(diag)-467, OUTLINE OF DIAGNOSIS (BATTERY ENERGY CONTROL SYSTEM), DTC U0411 INVALID DATA RECEIVED FROM DRIVE MOTOR CONTROL MODULE "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS (HYBRID POWERTRAIN CONTROL SYSTEM)

Detect the data error of drive motor control module.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 CAN data from DMCM	Checksum error
Diagnosis 2 CAN data from DMCM	Did not change

Time Needed for Diagnosis:
- **Diagnosis 1:** 0.3 s
- **Diagnosis 2:** 0.5 s

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 CAN data from DMCM	≠ Checksum error
Diagnosis 2 CAN data from DMCM	≠ Did not change

Time Needed for Diagnosis: 0 seconds

4. OUTLINE OF DIAGNOSIS (BATTERY ENERGY CONTROL SYSTEM)

Detect the CAN data stuck failure from drive motor control module.

5. EXECUTION CONDITION

Secondary Parameters	Execution condition
Diagnosis 1	
a: (Ignition state	Run or crank
12 V battery system voltage)	≥ 9 V and ≤ 17 V
Continuous time of a	≥ 1 s
Diagnosis 2	
a: (Ignition state	Run or crank
12 V battery system voltage)	≥ 9 V and ≤ 17 V
Continuous time of a	≥ 1 s
CAN data from DMCM	Changed

6. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from DMCM	Did not change
Diagnosis 2	
CAN data from DMCM	Checksum error

Time Needed for Diagnosis:

- **Diagnosis 1:** 0.5 s
- **Diagnosis 2:** 3 times

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from DMCM	change
Diagnosis 2	
CAN data from DMCM	≠ Checksum error

Time Needed for Diagnosis: 0.5 seconds

GB:DTC U0412 INVALID DATA RECEIVED FROM BATTERY ENERGY CONTROL MODULE

DIAGNOSIS:
- Immediately at fault recognition
- GENERAL DESCRIPTION (Hybrid powertrain control system) <Ref. to HEV(diag)-468, OUTLINE OF DIAGNOSIS (HYBRID POWERTRAIN CONTROL SYSTEM), DTC U0412 INVALID DATA RECEIVED FROM BATTERY ENERGY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
- GENERAL DESCRIPTION (Drive motor control system) <Ref. to HEV(diag)-469, OUTLINE OF DIAGNOSIS (DRIVE MOTOR CONTROL SYSTEM), DTC U0412 INVALID DATA RECEIVED FROM BATTERY ENERGY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS (HYBRID POWERTRAIN CONTROL SYSTEM)

Detect the data error of battery energy control module.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION (HYBRID POWERTRAIN CONTROL SYSTEM)

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD (HYBRID POWERTRAIN CONTROL SYSTEM)

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 CAN data from BECM	Checksum error
Diagnosis 2 CAN data from BECM	Did not change

Time Needed for Diagnosis:
- **Diagnosis 1:** 0.3 s
- **Diagnosis 2:** 20 s

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 CAN data from BECM	≠ Checksum error
Diagnosis 2 CAN data from BECM	Changed

Time Needed for Diagnosis: 0 seconds

4. OUTLINE OF DIAGNOSIS (DRIVE MOTOR CONTROL SYSTEM)

Detect the communication error with battery energy control module.
Judge as NG when the data from battery energy control module is not received correctly.

5. EXECUTION CONDITION (DRIVE MOTOR CONTROL SYSTEM)

Secondary Parameters	Execution condition
Diagnosis 1	
CAN data from BECM	Received
CAN data from BECM	≠ Checksum error
a: 12 V battery system voltage	≥ 10 V
Continuous time of a	≥ 1 s
Diagnosis 2	
CAN data from BECM	Received
a: 12 V battery system voltage	≥ 10 V
Continuous time of a	≥ 1 s

6. DIAGNOSTIC METHOD (DRIVE MOTOR CONTROL SYSTEM)

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from BECM	Did not change
Diagnosis 2	
CAN data from BECM	Checksum error

Time Needed for Diagnosis:
- **Diagnosis 1:** 0.6 s
- **Diagnosis 2:** 0.03 s

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from BECM	Changed
Diagnosis 2	
CAN data from BECM	≠ Checksum error

Time Needed for Diagnosis:
- **Diagnosis 1:** 2.2 s
- **Diagnosis 2:** 0.6 s

GC:DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

DIAGNOSIS:
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-470, OUTLINE OF DIAGNOSIS, DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:
EV traveling/Auto Start Stop does not operate.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

Detect the VDC data error.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 CAN data from Vehicle Dynamics Control Module	Parity error
Diagnosis 2 CAN data from Vehicle Dynamics Control Module	Did not change

Time Needed for Diagnosis:
- **Diagnosis 1:** 0.06 s
- **Diagnosis 2:** 0.5 s

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 CAN data from Vehicle Dynamics Control Module	≠ Parity error
Diagnosis 2 CAN data from Vehicle Dynamics Control Module	≠ Did not change

Time Needed for Diagnosis: 0 seconds

GD:DTC U0420 INVALID DATA RECEIVED FROM POWER STEERING CONTROL MODULE

DIAGNOSIS:
- Detects CAN communication error with electric power steering system.
- Immediately at fault recognition

TROUBLE SYMPTOM:
Normal control

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

GE:DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

DIAGNOSIS:
- Detects CAN communication error with body integrated unit.
- Immediately at fault recognition

TROUBLE SYMPTOM:
Normal control

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

GF:DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

DIAGNOSIS:
- Detects CAN communication error with combination meter.
- Immediately at fault recognition

TROUBLE SYMPTOM:
Normal control

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

GG:DTC U0424 INVALID DATA RECEIVED FROM HVAC CONTROL MODULE

DIAGNOSIS:
- Detects CAN communication error with air conditioner.
- Immediately at fault recognition

TROUBLE SYMPTOM:
EV traveling/Auto Start Stop does not operate.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

GH:DTC U0452 INVALID DATA RECEIVED FROM RESTRAINTS CONTROL MODULE

DIAGNOSIS:
- Detects CAN communication error with airbag system.
- Immediately at fault recognition

TROUBLE SYMPTOM:
Normal control

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

GI: DTC U0588 INVALID DATA RECEIVED FROM TRANSMISSION FLUID PUMP MODULE

DIAGNOSIS:

- Detects CAN communication error with electric oil pump.
- Immediately at fault recognition

TROUBLE SYMPTOM:

Normal control

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

GJ:DTC U1100 LOST COMMUNICATION WITH ECM/PCM PU-CAN

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-473, OUTLINE OF DIAGNOSIS, DTC U1100 LOST COMMUNICATION WITH ECM/PCM PU-CAN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

Detect the engine PU-CAN data not received.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from ECM	Lost

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from ECM	≠ Lost

Time Needed for Diagnosis: 0 seconds

GK:DTC U1101 LOST COMMUNICATION WITH TCM PU-CAN

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-474, OUTLINE OF DIAGNOSIS, DTC U1101 LOST COMMUNICATION WITH TCM PU-CAN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

Detect the transmission PU-CAN data not received.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from TCM	Lost

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from TCM	≠ Lost

Time Needed for Diagnosis: 0 seconds

GL:DTC U1290 LOST COMMUNICATION WITH HYBRID POWERTRAIN CONTROL MODULE HEV-CAN

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION (Drive motor control system) <Ref. to HEV(diag)-475, OUTLINE OF DIAGNOSIS (DRIVE MOTOR CONTROL SYSTEM), DTC U1290 LOST COMMUNICATION WITH HYBRID POWERTRAIN CONTROL MODULE HEV-CAN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
- GENERAL DESCRIPTION (Battery energy control system) <Ref. to HEV(diag)-475, OUTLINE OF DIAGNOSIS (BATTERY ENERGY CONTROL SYSTEM), DTC U1290 LOST COMMUNICATION WITH HYBRID POWERTRAIN CONTROL MODULE HEV-CAN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS (DRIVE MOTOR CONTROL SYSTEM)

Detect the communication error with hybrid powertrain control module.
Judge as NG when the data from hybrid powertrain control module is not received correctly.

2. EXECUTION CONDITION (DRIVE MOTOR CONTROL SYSTEM)

Secondary Parameters	Execution condition
a: 12 V battery system voltage	≥ 10 V
Continuous time of a	≥ 1 s

3. DIAGNOSTIC METHOD (DRIVE MOTOR CONTROL SYSTEM)

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from HPCM	Lost

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from HPCM	Received

Time Needed for Diagnosis: 2 seconds

4. OUTLINE OF DIAGNOSIS (BATTERY ENERGY CONTROL SYSTEM)

Detect the malfunction of CAN data not received from hybrid powertrain control module.

5. EXECUTION CONDITION (BATTERY ENERGY CONTROL SYSTEM)

Secondary Parameters	Execution condition
a: (Ignition state	Run or crank
12 V battery system voltage)	≥ 9 V and ≤ 17 V
Continuous time of a	≥ 1 s

6. DIAGNOSTIC METHOD (BATTERY ENERGY CONTROL SYSTEM)

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from HPCM	Lost

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from HPCM	Received

Time Needed for Diagnosis: 0.5 seconds

GM:DTC U1401 INVALID DATA RECEIVED FROM ECM/PCM PU-CAN

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-477, OUTLINE OF DIAGNOSIS, DTC U1401 INVALID DATA RECEIVED FROM ECM/PCM PU-CAN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

Detect the engine PU-CAN data error.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from ECM	Checksum error
Diagnosis 2	
CAN data from ECM	Did not change

Time Needed for Diagnosis:

- **Diagnosis 1:** 0.03 s
- **Diagnosis 2:** 0.5 s

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from ECM	≠ Checksum error
Diagnosis 2	
CAN data from ECM	≠ Did not change

Time Needed for Diagnosis: 0 seconds

GN:DTC U1402 INVALID DATA RECEIVED FROM TCM PU-CAN

DIAGNOSIS:
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to HEV(diag)-478, OUTLINE OF DIAGNOSIS, DTC U1402 INVALID DATA RECEIVED FROM TCM PU-CAN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

Detect the transmission PU-CAN data error.
Judge as NG when the detection result is out of specification.

2. EXECUTION CONDITION

Secondary Parameters	Execution condition
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from TCM	Checksum error
Diagnosis 2	
CAN data from TCM	Did not change

Time Needed for Diagnosis:
- **Diagnosis 1:** 0.03 s
- **Diagnosis 2:** 0.5 s

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from TCM	≠ Checksum error
Diagnosis 2	
CAN data from TCM	≠ Did not change

Time Needed for Diagnosis: 0 seconds

GO:DTC U1591 INVALID DATA RECEIVED FROM HYBRID POWERTRAIN CONTROL MODULE HEV-CAN

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION (Drive motor control module) <Ref. to HEV(diag)-479, OUTLINE OF DIAGNOSIS (DRIVE MOTOR CONTROL MODULE), DTC U1591 INVALID DATA RECEIVED FROM HYBRID POWERTRAIN CONTROL MODULE HEV-CAN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
- GENERAL DESCRIPTION (Battery energy control module) <Ref. to HEV(diag)-480, OUTLINE OF DIAGNOSIS (BATTERY ENERGY CONTROL MODULE), DTC U1591 INVALID DATA RECEIVED FROM HYBRID POWERTRAIN CONTROL MODULE HEV-CAN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS (DRIVE MOTOR CONTROL MODULE)

Detect the CAN communication error with hybrid powertrain control module.
Judge as NG when the data from hybrid powertrain control module is not received correctly.

2. EXECUTION CONDITION (DRIVE MOTOR CONTROL MODULE)

Secondary Parameters	Execution condition
Diagnosis 1	
CAN data from HPCM	Received
CAN data from HPCM	≠ Checksum error
a: 12 V battery system voltage	≥ 10 V
Continuous time of a	≥ 1 s
Diagnosis 2	
CAN data from HPCM	Received
a: 12 V battery system voltage	≥ 10 V
Continuous time of a	≥ 1 s

3. DIAGNOSTIC METHOD (DRIVE MOTOR CONTROL MODULE)

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from HPCM	Did not change
Diagnosis 2	
CAN data from HPCM	Checksum error

Time Needed for Diagnosis:
- **Diagnosis 1:** 0.6 s
- **Diagnosis 2:** 0.03 s

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from HPCM	Changed
Diagnosis 2	
CAN data from HPCM	≠ Checksum error

Time Needed for Diagnosis:
- **Diagnosis 1:** 2.2 s
- **Diagnosis 2:** 0.3 s

4. OUTLINE OF DIAGNOSIS (BATTERY ENERGY CONTROL MODULE)

Detect the CAN data stuck failure from hybrid powertrain control module.

5. EXECUTION CONDITION (BATTERY ENERGY CONTROL MODULE)

Secondary Parameters	Execution condition
Diagnosis 1	
a: (Ignition state	Run or crank
12 V battery system voltage)	≥ 9 V
	and
	≤ 17 V
Continuous time of a	≥ 1 s
Diagnosis 2	
a: (Ignition state	Run or crank
12 V battery system voltage)	≥ 9 V
	and
	≤ 17 V
Continuous time of a	≥ 1 s
CAN data from HPCM	Changed

6. DIAGNOSTIC METHOD (BATTERY ENERGY CONTROL MODULE)

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 CAN data from HPCM	Did not change
Diagnosis 2 CAN data from HPCM	Checksum error

Time Needed for Diagnosis:
- **Diagnosis 1:** 0.5 s
- **Diagnosis 2:** 3 times

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

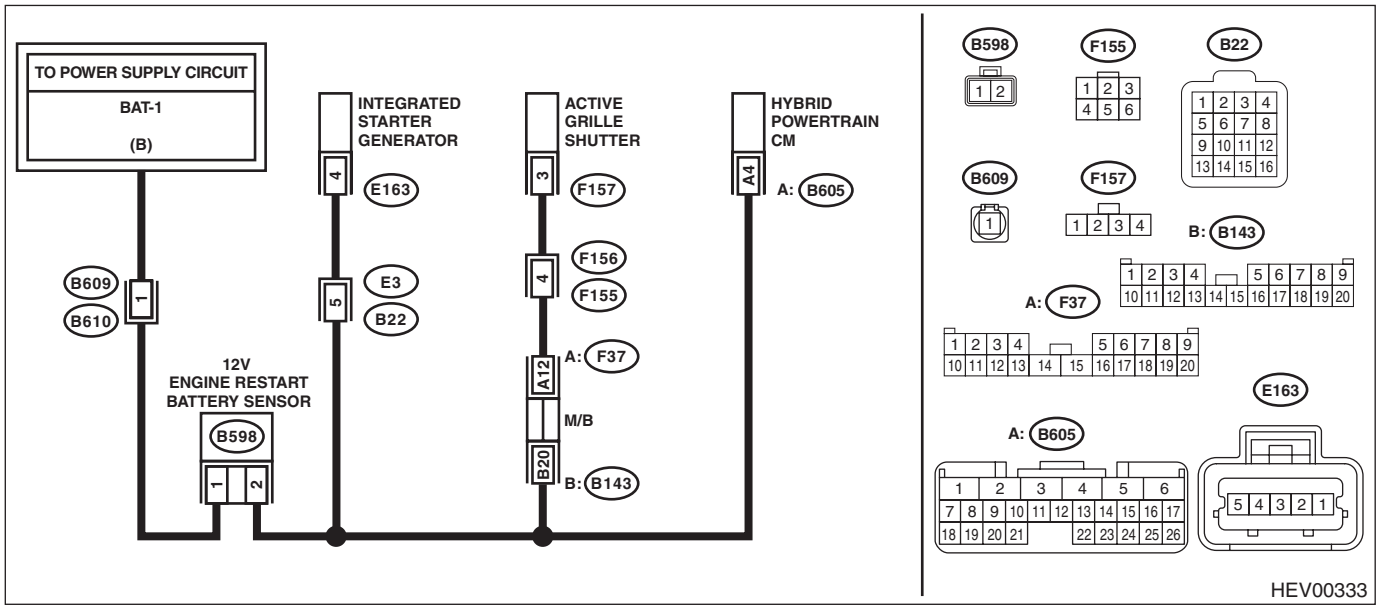
Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 CAN data from HPCM	Changed
Diagnosis 2 CAN data from HPCM	≠ Checksum error

Time Needed for Diagnosis:
- **Diagnosis 1:** 0.5 s
- **Diagnosis 2:** 0.5 s

GP:DTC U1676 LIN COMMUNICATION BUS ERROR HYBRID POWERTRAIN CONTROL MODULE



DIAGNOSIS:
- Detects LIN communication error.
- Immediately at fault recognition

TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.

(Engine does not restart under EV traveling/Auto Start Stop condition.)
- Charge warning light illuminates.

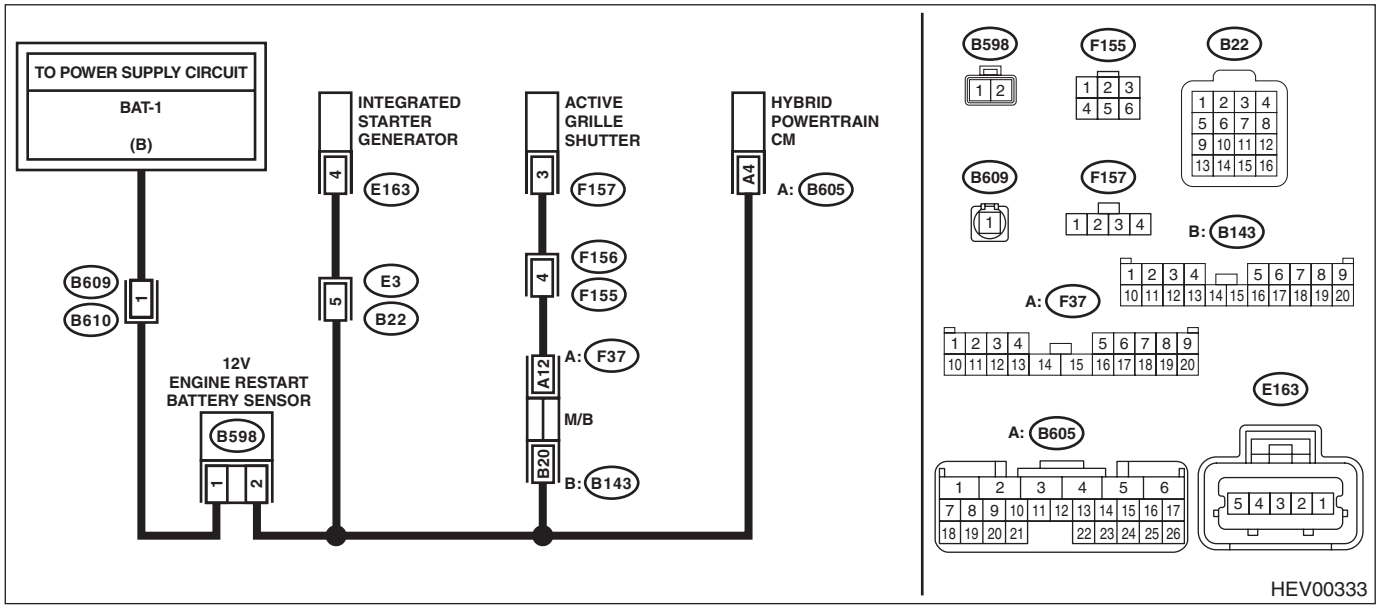
CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM
Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK BATTERY.** Check the 12 volt engine restart battery.	Is the condition normal?	Go to step **2**.	Charge or replace the 12 volt engine restart battery.
2	**CHECK MODULES.** 1) Disconnect the integrated starter generator connector. 2) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 3) Read the DTC again. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC U1676 detected? (current malfunction)	Go to step **3**.	Replace the integrated starter generator. <Ref. to SC(H4DO(HEV))-33, Integrated Starter Generator (ISG).>

	Step	Check	Yes	No
3	**CHECK MODULES.** 1) Turn the ignition switch to OFF. 2) Disconnect the 12V engine restart battery sensor connector. 3) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 4) Read the DTC again. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC U1676 detected? (current malfunction)	Go to step **4**.	Replace the 12V engine restart battery sensor. <Ref. to SC(H4DO(HEV))-61, Battery Sensor.>
4	**CHECK MODULES.** 1) Turn the ignition switch to OFF. 2) Disconnect the active grille shutter connector. 3) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 4) Read the DTC again. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC U1676 detected? (current malfunction)	Go to step **5**.	Replace the active grille shutter.
5	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the HPCM connector. 3) Using a tester, measure the resistance between the HPCM connector and connector of each unit. ***Connector & terminal*** ***(B605) No. 4 — (F157) No. 3:*** ***(B605) No. 4 — (B598) No. 2:*** ***(B605) No. 4 — (E163) No. 4:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair open circuit of the harness between HPCM connector and connector of each unit.
6	**CHECK HARNESS (SHORT TO GROUND).** Using a tester, measure the resistance between HPCM connector and chassis ground. ***Connector & terminal*** ***(B605) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair ground short circuit of harness between the HPCM connector and the integrated starter generator connector.
7	**CHECK HARNESS (SHORT TO POWER).** Using a tester, measure the voltage between the HPCM connector and chassis ground. ***Connector & terminal*** ***(B605) No. 4 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Repair the short circuit to power in harness between the HPCM connector and the integrated starter generator connector.

GQ:DTC U1711 LOST COMMUNICATION WITH BATTERY "2" MONITOR MODULE



DIAGNOSIS:
- Detects LIN communication error with 12V engine restart battery sensor.
- Immediately at fault recognition

TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.
- Charge warning light illuminates.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

NOTE:
This DTC may be set when terminals of the 12 volt engine restart battery are disconnected.

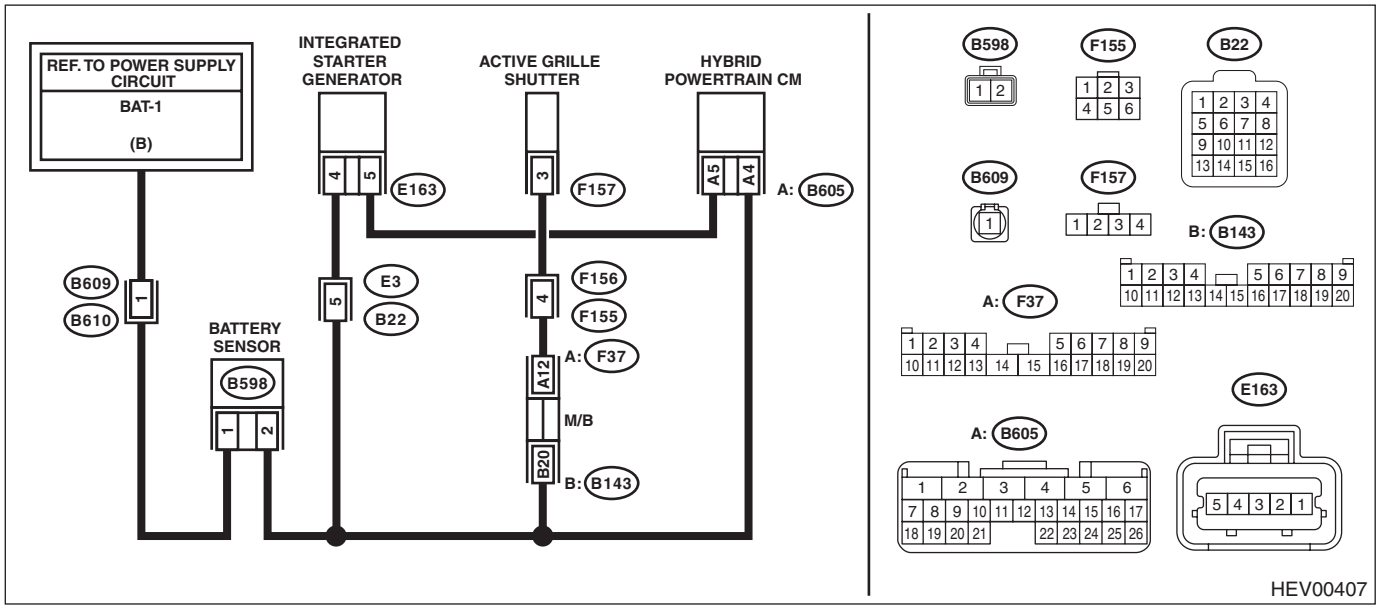
WIRING DIAGRAM
Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** Check the connector (B598) of 12V engine restart battery sensor.	Is there looseness or poor contact of connector?	Repair the connector.	Go to step **2**.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the HPCM connector. 2) Disconnect the 12V engine restart battery sensor connector. 3) Using a tester, measure the resistance between the HPCM connector and 12V engine restart battery sensor connector. ***Connector & terminal*** ***(B605) No. 4 — (B598) No. 2:*** ***(B598) No. 1 — 12 volt engine restart battery positive terminal:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of the harness between the HPCM connector and the 12 volt engine restart battery and the 12V engine restart battery sensor connector or replace fuses.

	Step	Check	Yes	No
3	**CHECK HARNESS (SHORT TO GROUND).** 1) Disconnect the integrated starter generator connector. 2) Using a tester, measure the resistance between HPCM connector and chassis ground. ***Connector & terminal*** ***(B605) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair ground short circuit of harness between the HPCM connector and the 12V engine restart battery sensor connector.
4	**CHECK HARNESS (SHORT TO POWER).** Using a tester, measure the voltage between the HPCM connector and chassis ground. ***Connector & terminal*** ***(B605) No. 4 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair the short circuit to power in harness between the HPCM connector and the 12V engine restart battery sensor connector.
5	**CHECK BATTERY.** Check the 12 volt engine restart battery. <Ref. to SC(H4DO(HEV))-40, Battery.>	Is the condition normal?	Replace the 12V engine restart battery sensor. <Ref. to SC(H4DO(HEV))-61, Battery Sensor.>	Replace or charge the battery.

GR:DTC U1720 LOST COMMUNICATION WITH INTEGRATED STARTER GENERATOR

DIAGNOSIS:
- Detects LIN communication error with integrated starter generator.
- Immediately at fault recognition



TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.

(Engine does not restart under EV traveling/Auto Start Stop condition.)
- Charge warning light illuminates.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

NOTE:
This DTC may be set when terminals of the 12 volt engine restart battery are disconnected.

WIRING DIAGRAM
Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK BATTERY.** Check the 12 volt engine restart battery.	Is the condition normal?	Go to step **2**.	Replace or charge the battery.
2	**CHECK CONNECTOR.** Check the integrated starter generator connector (E163).	Is there looseness or poor contact of connector?	Repair the connector.	Go to step **3**.
3	**CHECK HARNESS (SHORT TO GROUND).** 1) Turn the ignition switch to OFF. 2) Disconnect the HPCM connector. 3) Disconnect the integrated starter generator connector. 4) Disconnect the 12V engine restart battery sensor connector. 5) Using a tester, measure the resistance between HPCM connector and chassis ground. ***Connector & terminal*** ***(B605) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair ground short circuit of harness between the HPCM connector and the integrated starter generator connector.

	Step	Check	Yes	No
4	**CHECK HARNESS (SHORT TO POWER).** Using a tester, measure the voltage between the HPCM connector and chassis ground. ***Connector & terminal*** ***(B605) No. 4 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair the short circuit to power in harness between the HPCM connector and the integrated starter generator connector.
5	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the HPCM connector and integrated starter generator connector. ***Connector & terminal*** ***(B605) No. 4 — (E163) No. 4:*** ***(B605) No. 5 — (E163) No. 5:***	Is the resistance less than 1 Ω?	Replace the integrated starter generator. <Ref. to SC(H4DO(HEV))-33, Integrated Starter Generator (ISG).>	Repair the open circuit of the harness between the HPCM connector and the integrated starter generator connector.

20.Diagnostics with Phenomenon

A: INSPECTION

1. SYMPTOM TABLE

Symptoms	Maintenance parts	Note
Hybrid fail lamp does not illuminate.	CAN communication	Perform the basic inspection for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Combination meter assembly	Perform the basic inspection for meter system. <Ref. to IDI(diag)-2, COMBINATION METER, PROCEDURE, Basic Diagnostic Procedure.>
Hybrid fail lamp remains ON. (If DTCs are detected, perform inspection according to those DTC diagnostic procedures.)	CAN communication	Perform the basic inspection for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Combination meter assembly	Perform the basic inspection for meter system. <Ref. to IDI(diag)-2, COMBINATION METER, PROCEDURE, Basic Diagnostic Procedure.>
Charge warning light illuminates.	Integrated starter generator	Check the charge warning light. <Ref. to SC(H4DO(HEV))-39, CHECK CHARGE WARNING LIGHT, INSPECTION, Integrated Starter Generator (ISG).>
Unable to switch to EV traveling.	CAN communication	Perform the basic inspection for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Combination meter assembly	Perform the basic inspection for meter system. <Ref. to IDI(diag)-2, COMBINATION METER, PROCEDURE, Basic Diagnostic Procedure.>
	Check EV traveling conditions. <Ref. to HEV(diag)-48, HYBRID POWERTRAIN CONTROL SYSTEM (Auto Start Stop AND EV TRAVELING CONDITIONS), OPERATION, Read Current Data.>	The brake vacuum pressure must be sufficient. (The vacuum pressure may decrease at high altitude or repetitive brake operation.)
		The 12 volt engine restart battery must not have abnormality.
		Engine coolant temperature must not be too low. (60°C (140°F) or more)
		The shift lever must be in “D” range.
		Battery pack must not have abnormality.
		Integrated starter generator must not have abnormality.
		ABS must not be operating.
		There must not be a steep incline in uphill.
		Accelerator pedal must not be depressed.
		Brake pedal must not be depressed.
		Warning lights are not illuminating.
		DC/DC converter must be operating normally.
		Drive motor must not have abnormality.
		System Operation Check Mode must not be active.

Symptoms	Maintenance parts	Note
EV MODE indicator light does not illuminate.	CAN communication	Perform the basic inspection for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Combination meter assembly	Perform the basic inspection for meter system. <Ref. to IDI(diag)-2, COMBINATION METER, PROCEDURE, Basic Diagnostic Procedure.>
EV MODE indicator light remains on.	CAN communication	Perform the basic inspection for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Combination meter assembly	Perform the basic inspection for meter system. <Ref. to IDI(diag)-2, COMBINATION METER, PROCEDURE, Basic Diagnostic Procedure.>
Poor acceleration	Hybrid system	Perform the basic inspection for hybrid system. <Ref. to HEV(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Engine system	Perform the basic inspection for engine system. <Ref. to EN(H4DO HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	CVT System	Perform the basic inspection for CVT system. <Ref. to CVT(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
READY ON does not occur. (Models without keyless access system)	Ignition switch assembly	Perform unit check for the ignition switch.
	IG relay	Perform unit check for the ignition relay.
	ECM power supply system	Perform the basic inspection for engine system. <Ref. to EN(H4DO HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Check READY mode conditions	The current data «Contactor Close Status» must be «close». (The ignition switch is OFF, battery runout prevention control is active, no fault conditions.)
		Current data «Engine Speed» must have input.
		Drive motor must not have abnormality.
	Combination meter assembly	Perform the basic inspection for meter system. <Ref. to IDI(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Hybrid system	Perform the basic inspection for hybrid system. <Ref. to HEV(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Engine system	Perform the basic inspection for engine system. <Ref. to EN(H4DO HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

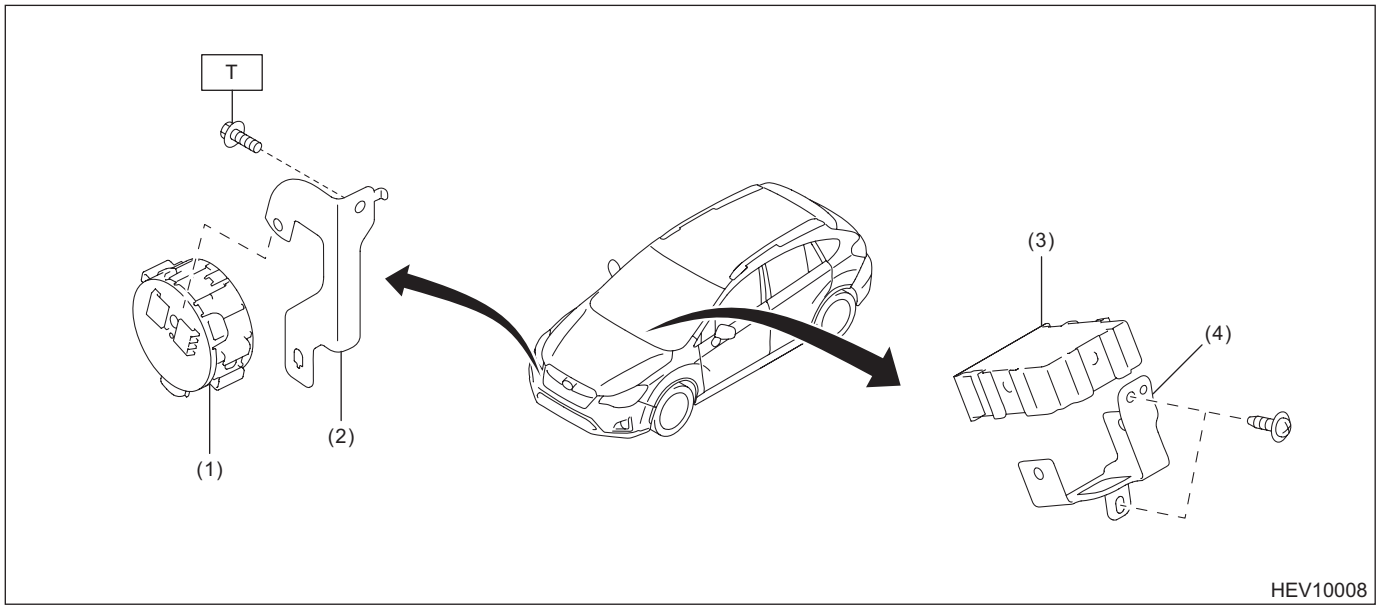
Symptoms	Maintenance parts	Note
READY ON does not occur. (Models with keyless access system)	Keyless access system	Perform the basic inspection for keyless access system. <Ref. to KPS(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	ECM power supply system	Perform the basic inspection for engine system. <Ref. to EN(H4DO HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Check READY mode conditions	The current data «Contactor Close Status» must be «close». (The ignition switch is OFF, battery runout prevention control is active, no fault conditions.)
		Current data «Engine Speed» must have input.
		Drive motor must not have abnormality.
	Combination meter assembly	Perform the basic inspection for meter system. <Ref. to IDI(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Hybrid system	Perform the basic inspection for hybrid system. <Ref. to HEV(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Engine system	Perform the basic inspection for engine system. <Ref. to EN(H4DO HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
Defective operation of Auto Start Stop	Check Auto Start Stop mode conditions. <Ref. to HEV(diag)-48, HYBRID POWERTRAIN CONTROL SYSTEM (Auto Start Stop AND EV TRAVELING CONDITIONS), OPERATION, Read Current Data.>	The brake vacuum pressure must be sufficient. (The vacuum pressure may decrease at high altitude or repetitive brake operation.)
		The 12 volt engine restart battery must not have abnormality.
		Engine coolant temperature must not be too low. (60°C (140°F) or more)
		The shift lever must be in “D” range.
		Battery pack must not have abnormality.
		Drive motor must not have abnormality.
		Integrated starter generator must not have abnormality.
		The vehicle must not be moving. (0.1 km/h (0.1 MPH) or less)
		ABS must not be operating.
		There must not be a steep incline in uphill.
		Accelerator pedal must not be depressed.
		Defroster must not be on.
		Warning lights are not illuminating.
		DC/DC converter must be operating normally.
		System Operation Check Mode must not be active.

Symptoms	Maintenance parts	Note
The braking force is weak.	VDC system	Perform the basic inspection for VDC system. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Hybrid system (brake vacuum pump)	Perform the basic inspection for hybrid system. <Ref. to HEV(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
Engine does not restart under Auto Start Stop or EV traveling.	Engine system	Perform the basic inspection for engine system. <Ref. to EN(H4DO HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Hybrid system	Perform the basic inspection for hybrid system. <Ref. to HEV(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> NOTE: Restarting the engine may be temporarily prohibited due to certain voltage or temperature condition. In such case, the engine may be restarted when normal voltage or temperature condition is restored.

PEDESTRIAN ALERT SYSTEM

PA

Page



1. General Description 2
2. Relay and Fuse 4
3. Pedestrian Alert System 5
4. Pedestrian Alert Control Unit 6
5. Pedestrian Alert Speaker 7
6. Combination Meter 9
7. Stop Light & Brake Switch 10
8. Diagnostics with Phenomenon 11

1. General Description

A: LOCATION

Refer to “LOCATION” of “PEDESTRIAN ALERT SYSTEM (DIAGNOSTICS)” section. <Ref. to PA(diag)-5, LOCATION, Electrical Component Location.>

B: COMPONENT

(1)	Pedestrian alert speaker	(3)	Pedestrian alert control unit
(2)	Pedestrian alert speaker bracket	(4)	Pedestrian alert control unit bracket

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.76, 5.5)

C: CAUTION

• Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When replacing the audio, control module and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory is cleared.
• Reassemble the parts in the reverse order of disassembly procedure unless otherwise indicated.
• Connect the connectors securely during reassembly.
• After reassembly, make sure that the each component operates normally.
• Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. Use great care to protect the connector or wiring harness from being damaged. Otherwise, malfunction may occur in the airbag system.
• The report sound may not be heard well in loud ambient sound, or to people behind the vehicle.
• When the front of speaker is covered with foreign matter such as mud and snow, it may change the tone of report sound.

D: PREPARATION TOOL

1. SPECIAL TOOL

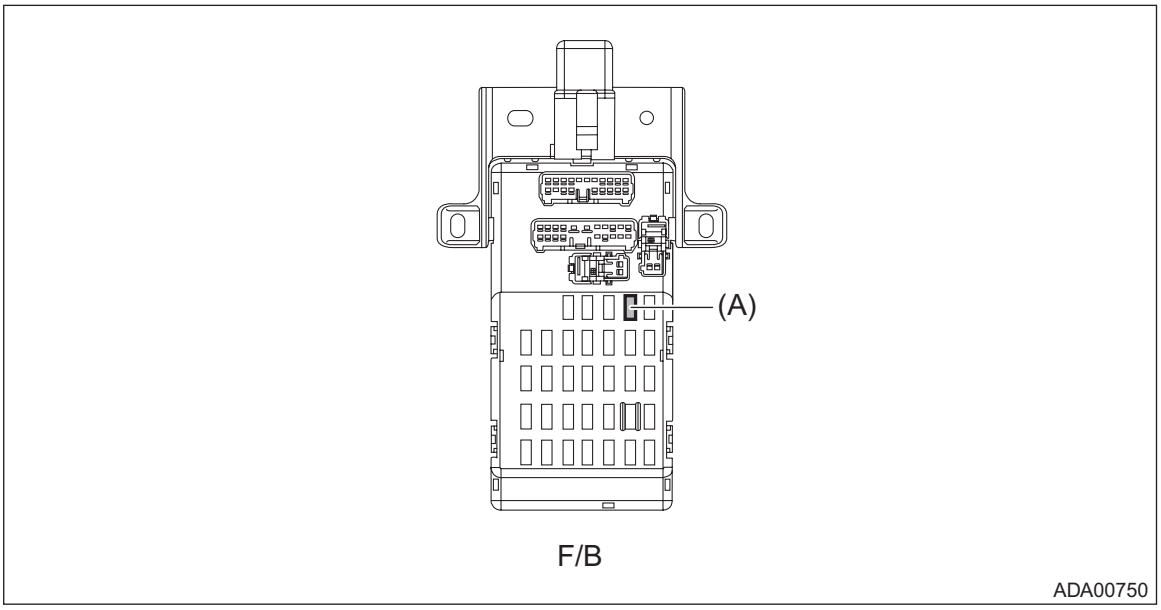


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	— (Newly adopted tool)	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

2. Relay and Fuse

A: LOCATION

Relay & fuse box	Fuse 10 A (pedestrian alert control unit)	(A)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI(HEV)-21, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

3. Pedestrian Alert System

A: WIRING DIAGRAM

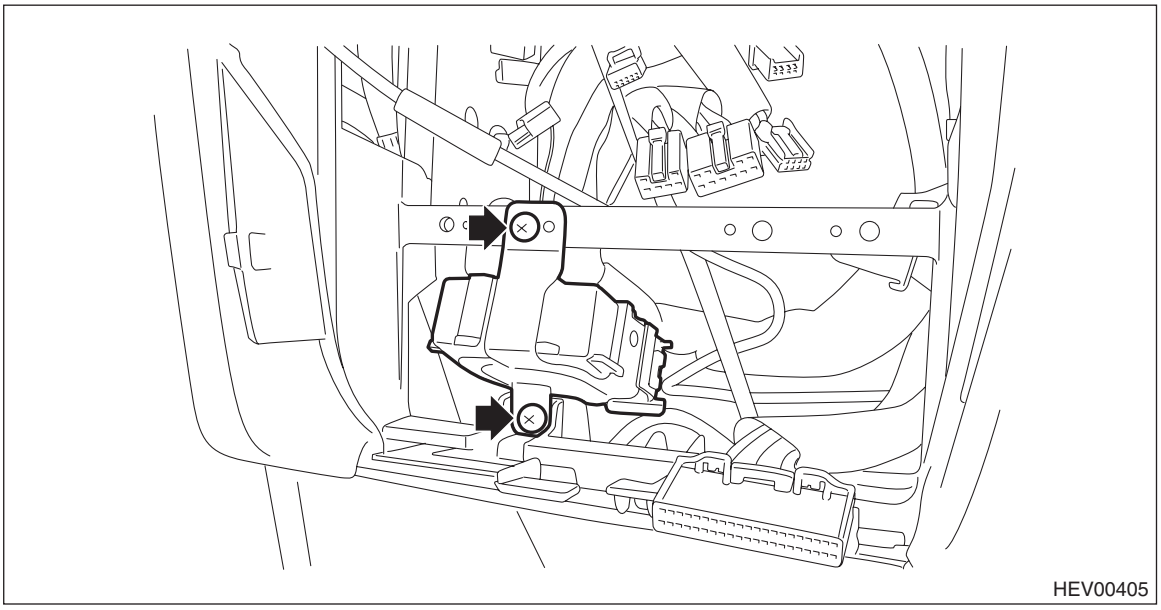
Refer to “Pedestrian Alert System” in the wiring diagram. <Ref. to WI(HEV)-201, WIRING DIAGRAM, Pedestrian Alert System.>

B: INSPECTION

Refer to “Basic Diagnostic Procedure” of “PEDESTRIAN ALERT SYSTEM (DIAGNOSTICS)” section. <Ref. to PA(diag)-2, Basic Diagnostic Procedure.>

C: NOTE

For procedure of each component in the pedestrian alert system, refer to the respective section.



- Pedestrian alert control unit: <Ref. to PA-6, Pedestrian Alert Control Unit.>
- Pedestrian alert speaker: <Ref. to PA-7, Pedestrian Alert Speaker.>

4. Pedestrian Alert Control Unit

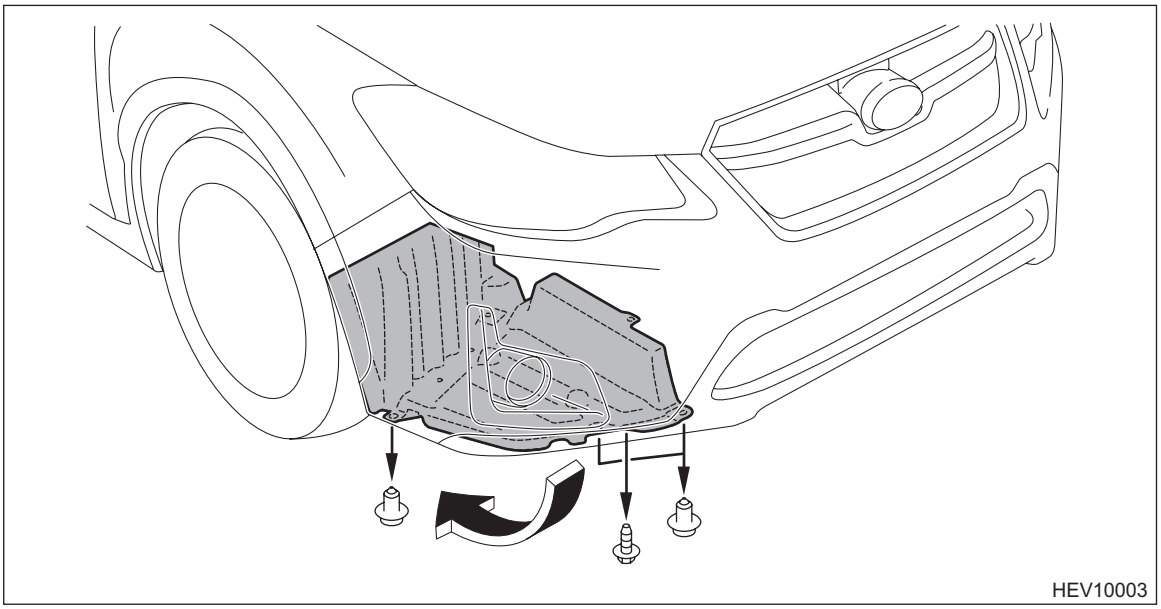
A: REMOVAL

CAUTION:
Before handling the airbag system components, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM".
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For the 12 volt engine restart battery, disconnect the ground terminal from 12V engine restart battery sensor.
2) Remove the cover assembly - instrument panel LWR driver and the knee airbag module. <Ref. to AB-41, REMOVAL, Knee Airbag Module.>
3) Remove the glove box. <Ref. to EI-74, REMOVAL, Glove Box.>
4) Remove the center grille assembly. <Ref. to AC-100, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
5) Remove the audio assembly or navigation assembly. <Ref. to ET-29, REMOVAL, Audio.>
6) Remove the pedestrian alert control unit.
   (1) Remove the screws.
   (2) Pull out the pedestrian alert control unit toward you, and disconnect the connector.

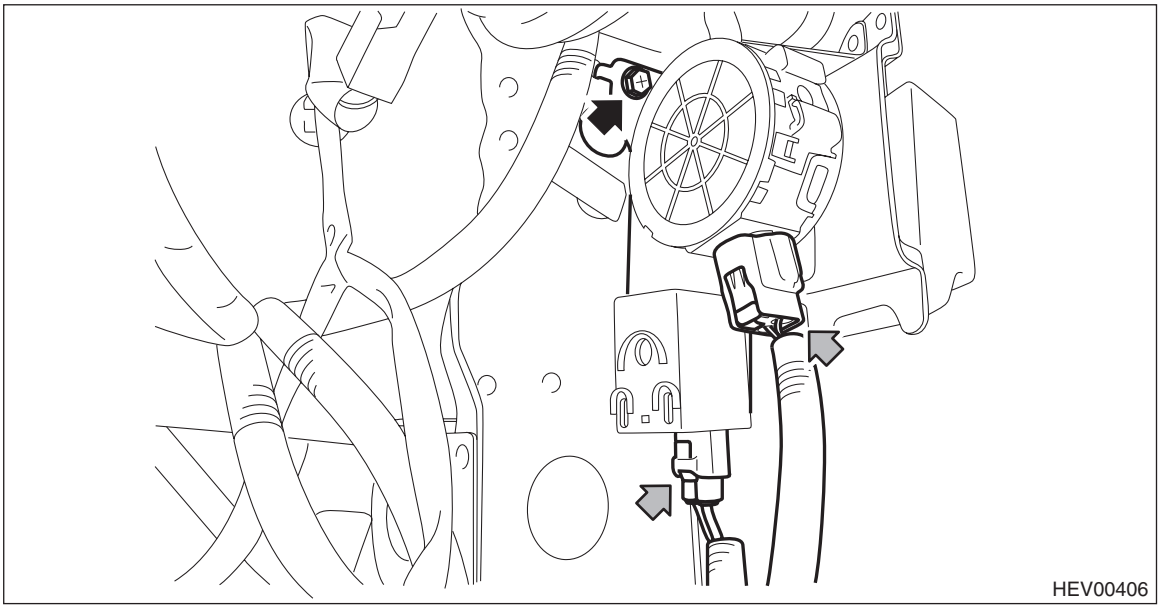
HEV00405

B: INSTALLATION



CAUTION:
• After installing the center grille assembly, check that the air vent grille of the center grille assembly is inserted correctly into the air vent duct.
• Before handling the airbag system components, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM".
Install each part in the reverse order of removal.

5. Pedestrian Alert Speaker



A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For the 12 volt engine restart battery, disconnect the ground terminal from 12V engine restart battery sensor.
2) Lift up the vehicle.
3) Remove the screw and clips, and turn over the front side of the mud guard - front.

4) Remove the pedestrian alert speaker.
   (1) Disconnect connectors.
   (2) Remove the bolt, and remove the pedestrian alert speaker and the keyless buzzer together with the bracket.

   (3) Release the lock, and remove the pedestrian alert speaker from the bracket.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:
Pedestrian alert speaker: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

C: INSPECTION

Using the Subaru Select Monitor, perform the compulsory sound generation of the speaker. <Ref. to PA(diag)-12, System Operation Check Mode.>
When a malfunction is detected for the speaker, refer to “Diagnostics with Phenomenon” of “PEDESTRIAN ALERT SYSTEM (DIAGNOSTICS)” section. <Ref. to PA(diag)-16, Diagnostics with Phenomenon.>

6. Combination Meter

A: NOTE

For the operation procedures for combination meter, refer to “INSTRUMENTATION/DRIVER INFO” section. <Ref. to IDI-19, Combination Meter.>

7. Stop Light & Brake Switch

A: NOTE

For the operation procedures for stop light and brake switch, refer to “BRAKE” section. <Ref. to BR-77, INSPECTION, Stop Light Switch.>

8. Diagnostics with Phenomenon

A: INSPECTION

Refer to “Diagnostics with Phenomenon” of “PEDESTRIAN ALERT SYSTEM (DIAGNOSTICS)” section. <Ref. to PA(diag)-16, Diagnostics with Phenomenon.>

PEDESTRIAN ALERT SYSTEM (DIAGNOSTICS)

PA(diag)

		Page
1.	Basic Diagnostic Procedure	2
2.	Check List for Interview	3
3.	General Description	4
4.	Electrical Component Location	5
5.	Control Module I/O Signal	6
6.	Subaru Select Monitor	7
7.	Read Diagnostic Trouble Code (DTC)	9
8.	Clear Memory Mode	10
9.	Read Current Data	11
10.	System Operation Check Mode	12
11.	List of Diagnostic Trouble Code (DTC)	13
12.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	14
13.	Diagnostics with Phenomenon	16

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**PERFORM CUSTOMER INTERVIEW.** Using the Check List for Interview, ask the customer the condition of how trouble occurs.	Did you interview the customer?	Go to step **2**.	Interview the customer. <Ref. to PA(diag)-3, CHECK, Check List for Interview.>
2	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** Using Subaru Select Monitor, check that it can normally communicate with the pedestrian alert system. NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to PA(diag)-7, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>	Is communication possible?	Go to step **3**.	Check the communication circuit. <Ref. to PA(diag)-7, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>
3	**CHECK PEDESTRIAN ALERT SYSTEM.** Read the DTC of the pedestrian alert system using the Subaru Select Monitor. <Ref. to PA(diag)-9, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC detected?	Perform the diagnosis according to DTC. <Ref. to PA(diag)-13, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**PERFORM DIAGNOSTICS WITH PHENOMENON.** Check the list for diagnostics with phenomenon. <Ref. to PA(diag)-16, INSPECTION, Diagnostics with Phenomenon.>	Does the symptom apply?	Perform diagnosis according to the procedures in the diagnostics with phenomenon.	Go to step **5**.
5	**CHECK TROUBLE PHENOMENON.** 1) Perform the basic inspection. <Ref. to PA(diag)-4, General Description.> 2) Check the pedestrian alert CM. <Ref. to PA(diag)-6, Control Module I/O Signal.> 3) Perform check of current data. <Ref. to PA(diag)-11, Read Current Data.> 4) Perform a unit check.	Was the trouble cause found?	Correct or repair the cause of trouble, and then clear the memory. <Ref. to PA(diag)-10, OPERATION, Clear Memory Mode.>	System is normal.

2. Check List for Interview

A: CHECK

- Inspect the following items regarding the vehicle's state.
- Print out this page for interviewing customers.

<table>
<tr><td colspan="2">Pedestrian alert system check list for interview</td><td colspan="2">Date of Vehicle Bring-in Year Month Date</td></tr>
<tr><td colspan="2" rowspan="2">Customer's name</td><td>Registration No.</td><td>Initial year of registration

</table>

3. General Description

A: CAUTION

1. PEDESTRIAN ALERT SYSTEM

a. The sound pressure or tone of the pedestrian alert system may change in the following cases:
• When the vehicle is parked under the scorching sun or in snow-covered areas for a prolonged time. (Over time, the symptom is recovered.)
• When pedestrian alert speaker is directly subject to high-pressure water sprayer from under the vehicle.
• When front of pedestrian alert speaker is covered with foreign matters such as mud, snow, or ice.
• When whole of pedestrian alert speaker is frozen.
b. Warning sound may be difficult to be heard in the following cases:
• When the ambient noise is too loud. (In the very crowded crossing or when emergency vehicle is approaching.)
• When there is a person at the rear of the vehicle, he or she cannot hear the warning sound.

B: INSPECTION

1. BASIC INSPECTION

Before performing diagnosis, check the following items which might affect pedestrian alert system related problems.
1) Check 12 volt auxiliary battery. <Ref. to SC(H4DO(HEV))-44, INSPECTION, Battery.>
2) Check the relay and fuse condition. <Ref. to PA-4, Relay and Fuse.>
3) Check the connecting condition of harness and harness connector.

C: PREPARATION TOOL

1. SPECIAL TOOL

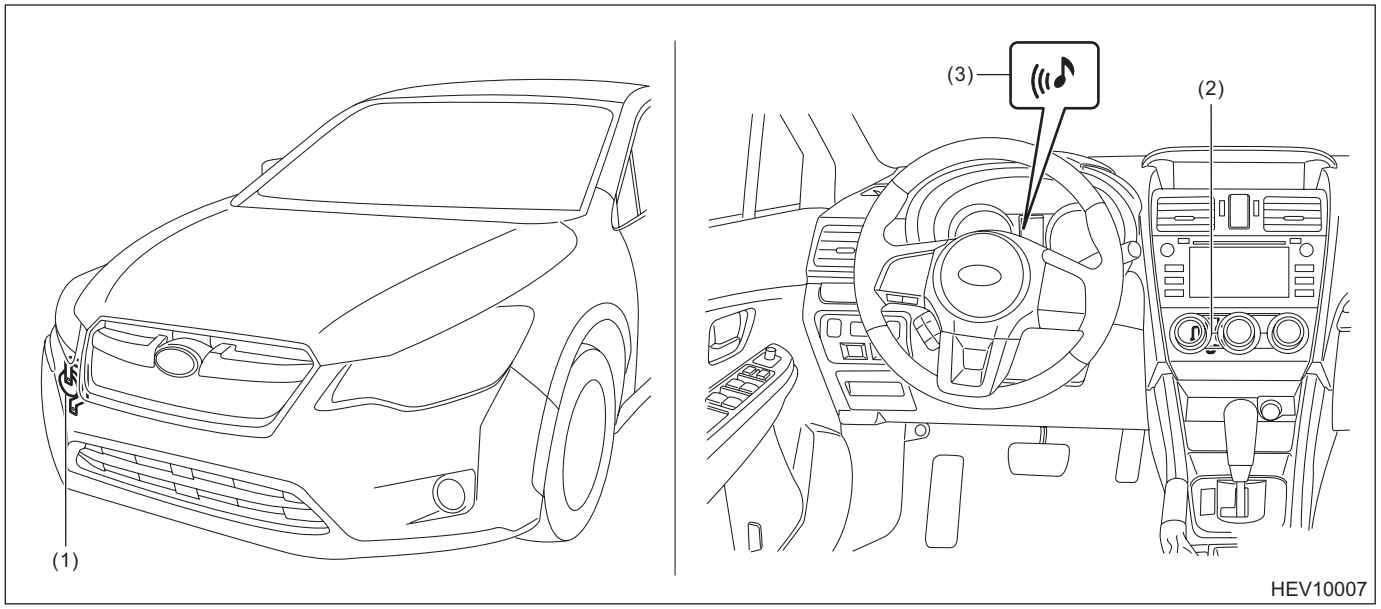

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
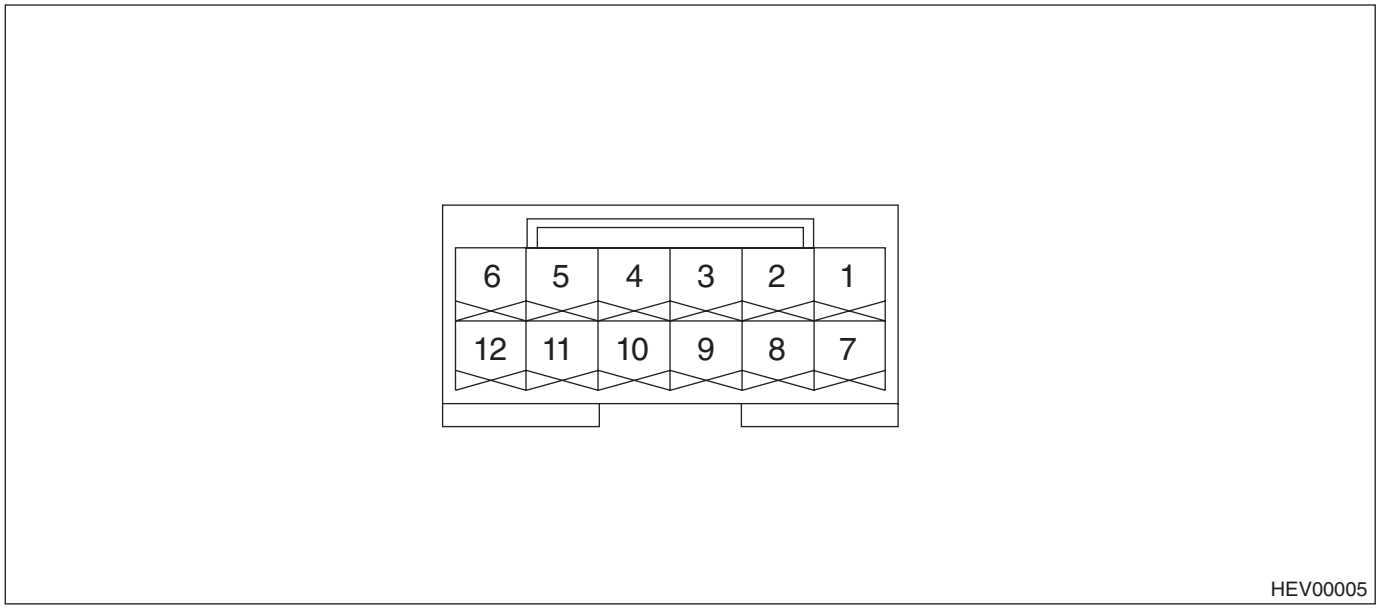
 STSSM4	— (Newly adopted tool)	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

4. Electrical Component Location

A: LOCATION



(1) Pedestrian alert speaker
(2) Pedestrian alert control unit
(3) Pedestrian alert warning light

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

1. PEDESTRIAN ALERT CONTROL UNIT

Item	Terminal No. (terminal symbol)	Measuring condition	Measurement value	Note
Operational power supply	1 (IG)	IG ON	10 V or more	—
STOP light signal	2 (STP)	Brake pedal ON → OFF	8 V or more → less than 1 V	—
Pedestrian alert speaker output (+)	3 (SP+)	—	—	Pulse output
Vehicle speed signal	6 (SPD)	—	—	Pulse output
GND	7 (GND)	Always	0 V	—
Pedestrian alert speaker output (–)	8 (SP–)	—	—	Pulse output
K-line	9 (PRST)	—	—	Communication line
IND output	10 (IND)	OFF	8 V or more	—
Shift position signal	11 (SFTP)	Except for P range	8 V or more	—
Oil pressure signal	12 (OPSW)	Engine running	8 V or more	—

B: WIRING DIAGRAM

Refer to “Pedestrian Alert System” in the wiring diagram. <Ref. to WI(HEV)-201, WIRING DIAGRAM, Pedestrian Alert System.>

6. Subaru Select Monitor

A: OPERATION

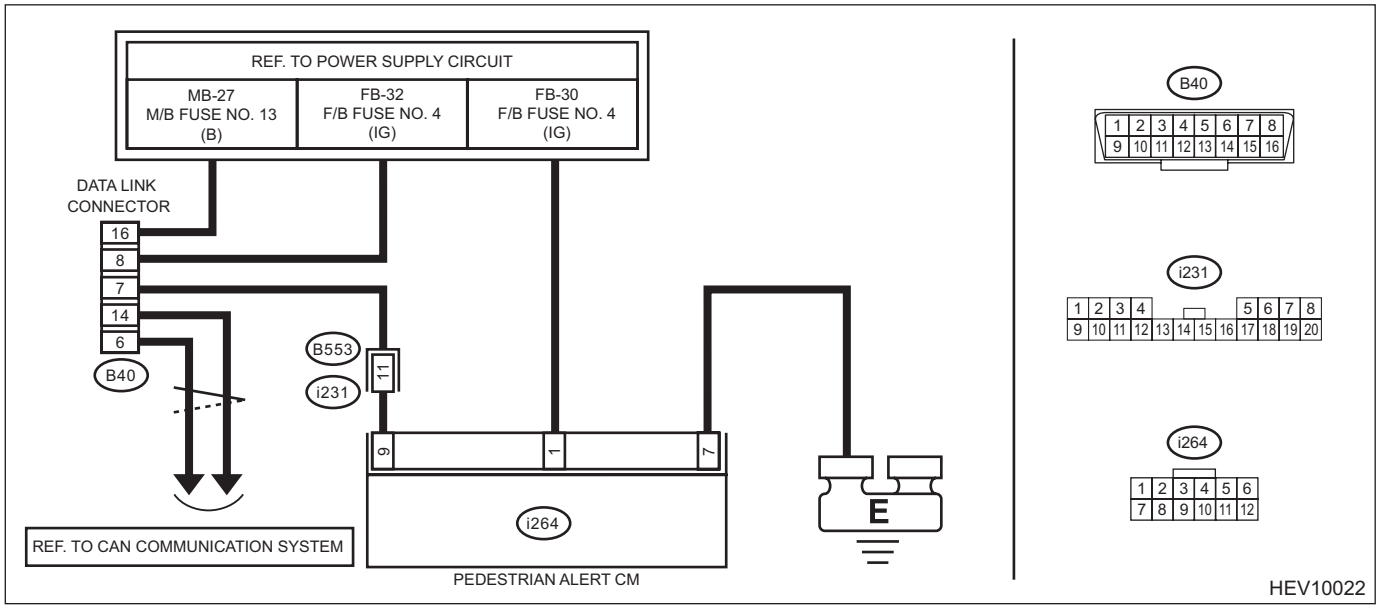
- For detailed operation procedures, refer to “Application help”.
- When the pedestrian alert system cannot communicate with Subaru Select Monitor, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE”.

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Communication error with pedestrian alert CM

DETECTING CONDITION:



- Defective harness connector
- Power supply circuit malfunction
- Defective pedestrian alert CM
- Defective K-line communication circuit
- Defective Subaru Select Monitor

TROUBLE SYMPTOM:

Communication is impossible between the pedestrian alert control unit and Subaru Select Monitor.

WIRING DIAGRAM:

Pedestrian alert system <Ref. to WI(HEV)-201, WIRING DIAGRAM, Pedestrian Alert System.>

Step		Check	Yes	No
1	**CHECK IGNITION SWITCH.**	Is the ignition switch ON?	Go to step **2**.	Turn the ignition switch to ON, and select the pedestrian alert system using the Subaru Select Monitor.
2	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Measure the voltage for 12 volt auxiliary battery.	Is the voltage 11 V or more?	Go to step **3**.	Charge or replace the battery.
3	**CHECK BATTERY TERMINAL.** Check the terminal for 12 volt auxiliary battery.	Is there poor contact at battery terminal?	Repair or tighten the battery terminal.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK COMMUNICATION OF SUBARU SELECT MONITOR.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check whether communication to other systems can be executed normally.	Is the system name displayed?	Go to step **8**.	Go to step **5**.
5	**CHECK DATA LINK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Using the tester, measure the resistance between data link connector and chassis ground. ***Connector & terminal*** ***(B40) No. 7 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK DATA LINK CONNECTOR.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between data link connector and chassis ground. ***Connector & terminal*** ***(B40) No. 7 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **7**.	Repair or replace the short circuit of the harness.
7	**CHECK DATA LINK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the pedestrian alert CM connector. 3) Using the tester, measure the resistance between data link connector and pedestrian alert CM (harness side). ***Connector & terminal*** ***(B40) No. 7 — (i264) No. 9:***	Is the resistance less than 1 Ω?	Go to step **8**.	Repair or replace the open circuit of harness.
8	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between pedestrian alert CM (harness side) and chassis ground. ***Connector & terminal*** ***(i264) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **9**.	Repair or replace the open circuit of harness.
9	**CHECK GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Using the tester, measure the resistance between pedestrian alert CM (harness side) and chassis ground. ***Connector & terminal*** ***(i264) No. 7 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **10**.	Repair or replace the open circuit of harness.
10	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact of pedestrian alert CM connector and data link connector?	Repair the poor contact of connector.	Replace the pedestrian alert CM. <Ref. to PA-6, Pedestrian Alert Control Unit.>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Pedestrian Alert» and then select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to List of Diagnostic Trouble Code (DTC). <Ref. to PA(diag)-13, List of Diagnostic Trouble Code (DTC).>

8. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Pedestrian Alert» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

9. Read Current Data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Pedestrian Alert» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Display	Description	Note (when normal)	Unit of measure
P-Range SW	Gear shift position	P range: when in P range Other than P range: when in other than P range	—
OIL Pressure SW	Status of oil pressure switch	Engine RUN: during engine start	—
Foot Brakes SW	Status of stop light switch	ON: when brake pedal is ON	—
Vehicle speed	Vehicle speed	Show vehicle speed	MPH
Voltage of IGN	Value of IGN power supply voltage	0 — 20.4 V	V
Speaker Terminal voltage	Value of vehicle approach information speaker voltage	0 — 4.998 V	V
P-Range SW voltage	Value of shift switch voltage	0 — 4.998 V	V
OIL Pressure SW voltage	Value of oil pressure switch voltage	0 — 4.998 V	V

10.System Operation Check Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Pedestrian Alert» and then select «Enter».
5) On «Select Function» display, select «Active Test».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Data	Customize setting	Note
Speaker Check	320 Hz	Make a single sound at a frequency of 320 Hz.
	1 kHz	Make a single sound at a frequency of 1 kHz.
	3.2 kHz	Make a single sound at a frequency of 3.2 kHz.

11.List of Diagnostic Trouble Code (DTC)

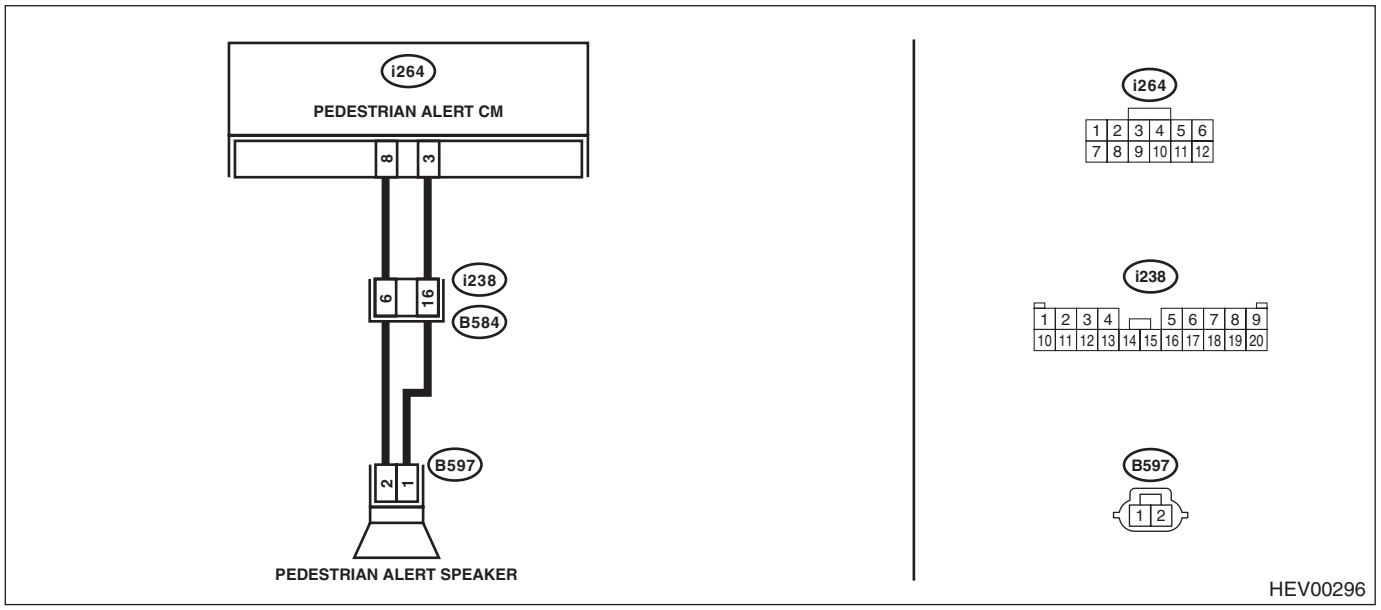
A: LIST

DTC	Item	Content of diagnosis	Note
B1700	Approach Information Speaker Abnormal	Vehicle approach information speaker harness is open or shorted.	<Ref. to PA(diag)-14, DTC B1700 APPROACH INFORMATION SPEAKER ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

12.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B1700 APPROACH INFORMATION SPEAKER ABNORMAL

DTC DETECTING CONDITION:



Detected when harness between pedestrian alert CM and pedestrian alert speaker is open or shorted, or when internal voice coil of pedestrian alert speaker is open or shorted.

TROUBLE SYMPTOM:

- No sound comes out from the pedestrian alert speaker during EV mode driving.
- After turning to IGN-ON, the light illuminates → blinks → illuminates.

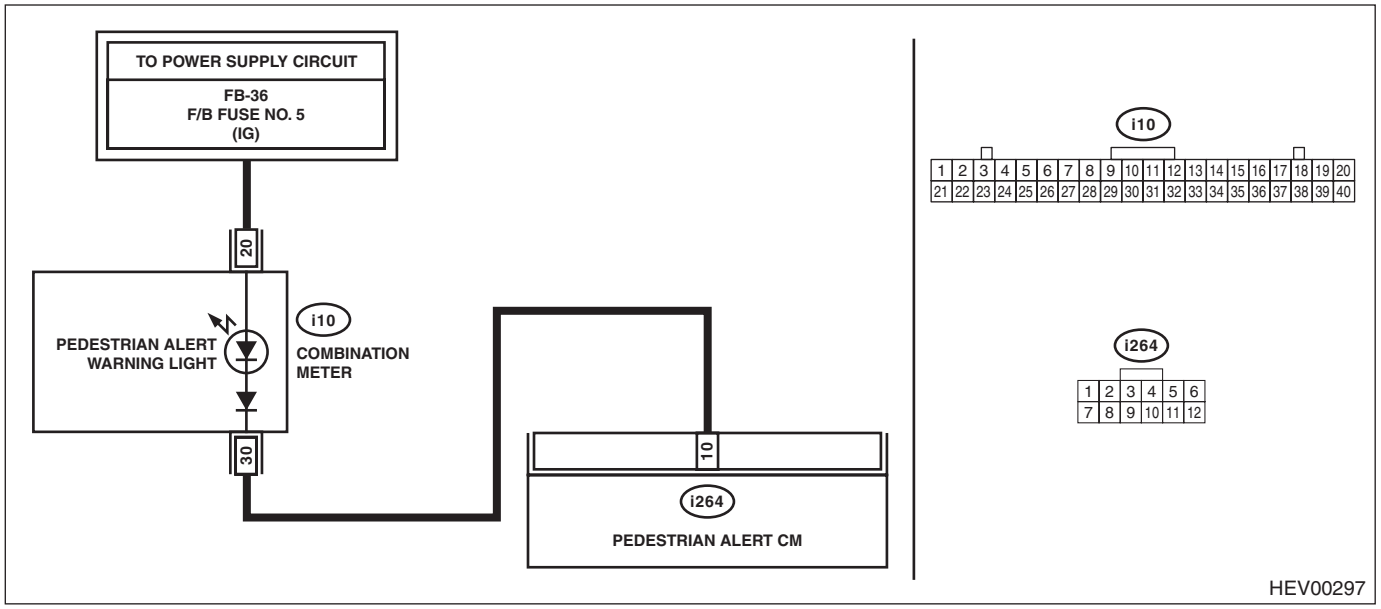
WIRING DIAGRAM:

Pedestrian alert system <Ref. to WI(HEV)-201, WIRING DIAGRAM, Pedestrian Alert System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read DTCs of the pedestrian alert CM using the Subaru Select Monitor. <Ref. to PA(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is B1700 displayed?	Go to step **2**.	Go to step **4**.
2	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the pedestrian alert CM connector. 3) Check the pedestrian alert CM connector.	Is the connector OK?	Go to step **3**.	Repair or replace the connector.
3	**CHECK HARNESS (SHORT).** Using the tester, measure the resistance between pedestrian alert CM connector (harness side). ***Connector & terminal*** ***(i264) No. 3 — (i264) No. 8:***	Is the resistance less than 2 Ω?	Repair the pedestrian alert speaker or the short circuit of the harness. Go to step **5**.	Go to step **4**.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using the tester, measure the resistance between pedestrian alert CM connector (harness side). ***Connector & terminal*** ***(i264) No. 3 — (i264) No. 8:***	Is the resistance 20 Ω or more?	Repair the pedestrian alert speaker or the open circuit of the harness. Go to step **5**.	Replace the pedestrian alert CM. <Ref. to PA-6, Pedestrian Alert Control Unit.>

	Step	Check	Yes	No
5	**CHECK PEDESTRIAN ALERT SYSTEM.** 1) Connect the disconnected connectors. 2) Using the Subaru Select Monitor, perform «Speaker Check» of the system operation check mode. <Ref. to PA(diag)-12, System Operation Check Mode.>	Does any sound come out from the pedestrian alert speaker?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the pedestrian alert CM. <Ref. to PA-6, Pedestrian Alert Control Unit.>

13.Diagnostics with Phenomenon



A: INSPECTION

Symptoms	Reference
When the ignition switch is turned on, the pedestrian alert warning light on the combination meter does not illuminate.	<Ref. to PA(diag)-17, PEDESTRIAN ALERT WARNING LIGHT DOES NOT ILLUMINATE, INSPECTION, Diagnostics with Phenomenon.>
No sound comes out immediately after the brake pedal is released when the vehicle stops.	<Ref. to PA(diag)-20, CHECK STOP LIGHT SWITCH CIRCUIT, INSPECTION, Diagnostics with Phenomenon.>
No sound comes out during EV mode driving (at 24 km/h (15 MPH) or less). Or speaker sound is very small. (Perform steps listed on the right column in numerical order.)	1. <Ref. to PA(diag)-18, CHECK POWER SUPPLY CIRCUIT, INSPECTION, Diagnostics with Phenomenon.>
	2. <Ref. to PA(diag)-21, CHECK P RANGE SWITCH CIRCUIT, INSPECTION, Diagnostics with Phenomenon.>
	3. <Ref. to PA(diag)-22, CHECK OIL PRESSURE SWITCH CIRCUIT, INSPECTION, Diagnostics with Phenomenon.>
	4. <Ref. to PA(diag)-23, CHECK VEHICLE SPEED SIGNAL CIRCUIT, INSPECTION, Diagnostics with Phenomenon.>
	5. Replace the pedestrian alert CM. <Ref. to PA-6, Pedestrian Alert Control Unit.>

1. PEDESTRIAN ALERT WARNING LIGHT DOES NOT ILLUMINATE

WIRING DIAGRAM:

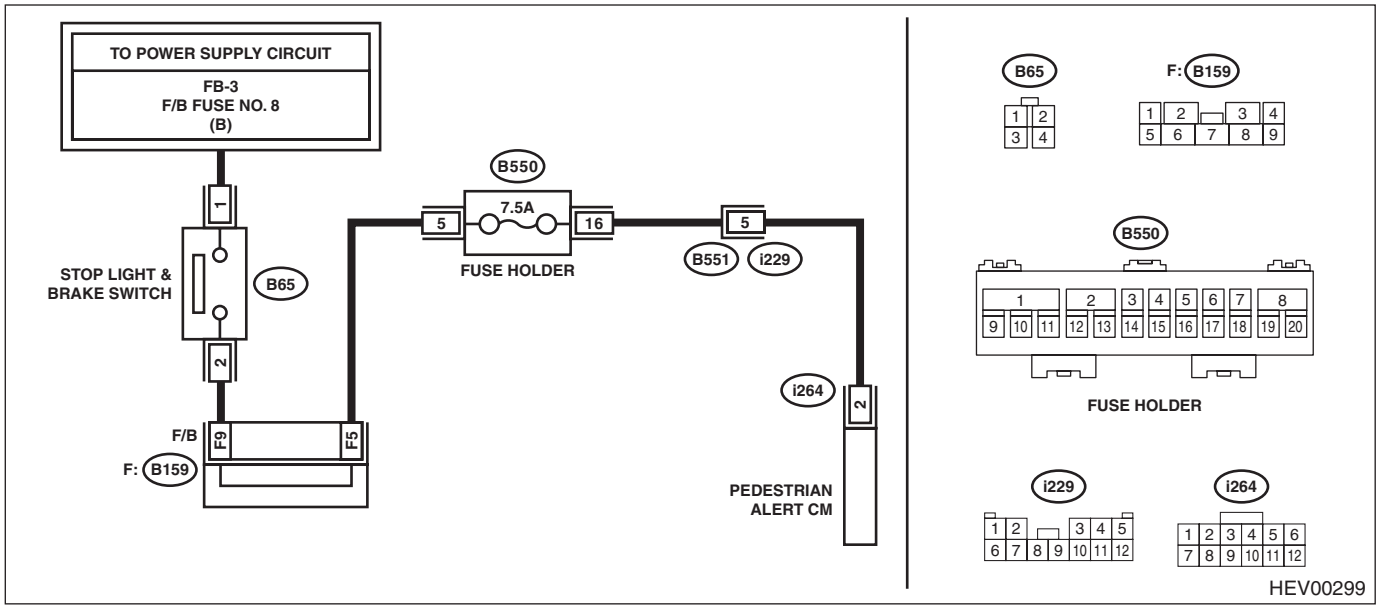
Pedestrian alert system <Ref. to WI(HEV)-201, WIRING DIAGRAM, Pedestrian Alert System.>

	Step	Check	Yes	No
1	**CHECK FUSE.** Check the fuse for the combination meter. <Ref. to IDI-7, Relay and Fuse.>	Is the fuse OK?	Go to step **2**.	Replace the fuse. When the replaced fuse is blown immediately, repair or replace the short-circuited portion of the harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the pedestrian alert CM connector. 3) Turn the ignition switch to ON. 4) Using the tester, measure the voltage between pedestrian alert CM connector (harness side) and chassis ground. ***Connector & terminal*** ***(i264) No. 10 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Replace the pedestrian alert CM. <Ref. to PA-6, Pedestrian Alert Control Unit.>	Repair or replace the open circuit of harness. Or, repair it according to combination meter inspection.

2. CHECK POWER SUPPLY CIRCUIT

WIRING DIAGRAM:

Pedestrian alert system <Ref. to WI(HEV)-201, WIRING DIAGRAM, Pedestrian Alert System.>



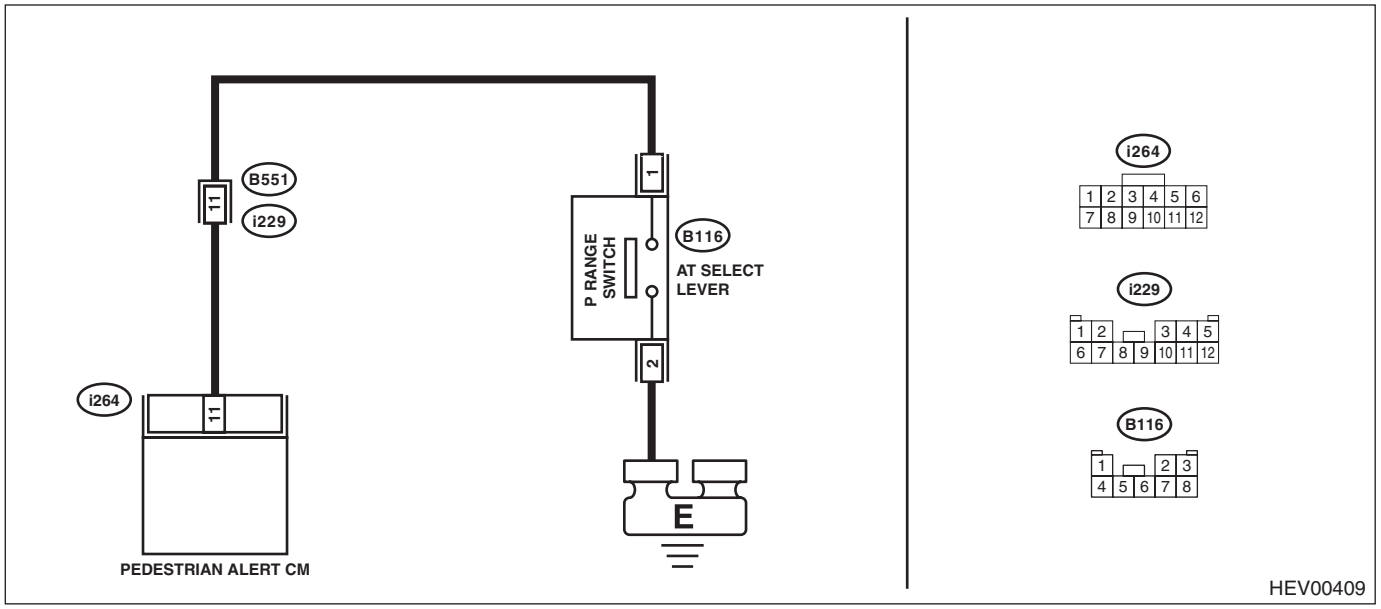
Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse. <Ref. to PA-4, Relay and Fuse.>	Is the fuse OK?	Go to step **2**.	Replace the defective fuse. When the fuse is blown immediately, repair the short circuit.
2	**CHECK HARNESS.** 1) Disconnect the pedestrian alert CM connector. 2) Using the tester, measure the voltage between pedestrian alert CM connector (harness side) and chassis ground. ***Connector & terminal*** ***(i264) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS.** Using the tester, measure the resistance between pedestrian alert CM connector (harness side) and chassis ground. ***Connector & terminal*** ***(i264) No. 7 — Chassis ground:***	Is the resistance 1 Ω or less?	Go to step **4**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK CURRENT DATA.** Check «Voltage of IGN» using the Subaru Select Monitor. <Ref. to PA(diag)-11, Read Current Data.>	Is the voltage 10 V or more when the ignition switch is ON?	Even if abnormality is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the pedestrian alert CM. <Ref. to PA-6, Pedestrian Alert Control Unit.>

3. CHECK STOP LIGHT SWITCH CIRCUIT

WIRING DIAGRAM:

Stop light system <Ref. to WI(HEV)-191, WIRING DIAGRAM, Stop Light System.>

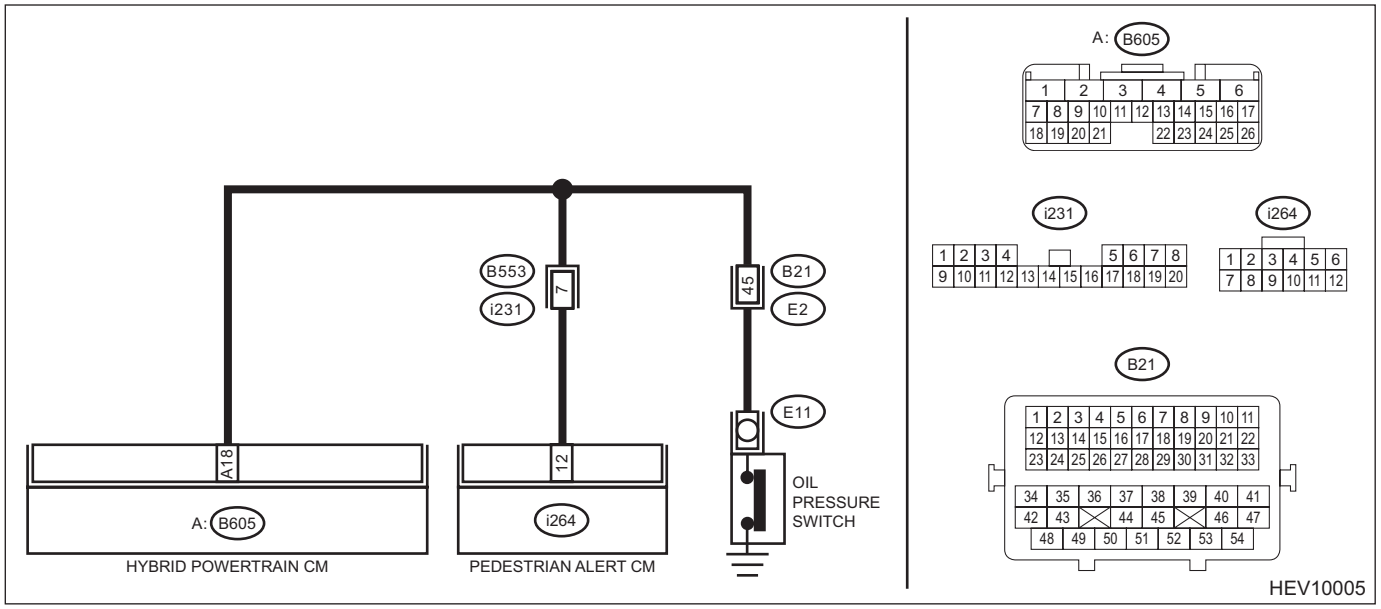


Step		Check	Yes	No
1	**CHECK STOP LIGHT.** Check the illumination status of the stop light.	Do all stop lights illuminate?	Go to step **2**.	Repair the stop lights. Go to step **2**.
2	**CHECK HARNESS.** 1) Disconnect the pedestrian alert CM connector. 2) Using the tester, measure the voltage between pedestrian alert CM connector (harness side) and chassis ground. ***Connector & terminal*** ***(i264) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more when the brake pedal is depressed and less than 1 V when not depressed?	Replace the pedestrian alert CM. <Ref. to PA-6, Pedestrian Alert Control Unit.>	Repair the stop light circuit. Go to step **3**.
3	**CHECK HARNESS.** 1) Connect the disconnected connectors. 2) Apply parking brake. 3) Turn the ignition switch to ON. 4) Set the select lever from P to N while depressing the brake pedal. 5) Check that sound comes out from the pedestrian alert speaker immediately after the brake pedal is released. (For 3 seconds)	Does any sound come out?	Even if abnormality is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the pedestrian alert CM. <Ref. to PA-6, Pedestrian Alert Control Unit.>

4. CHECK P RANGE SWITCH CIRCUIT

WIRING DIAGRAM:

Pedestrian alert system <Ref. to WI(HEV)-201, WIRING DIAGRAM, Pedestrian Alert System.>

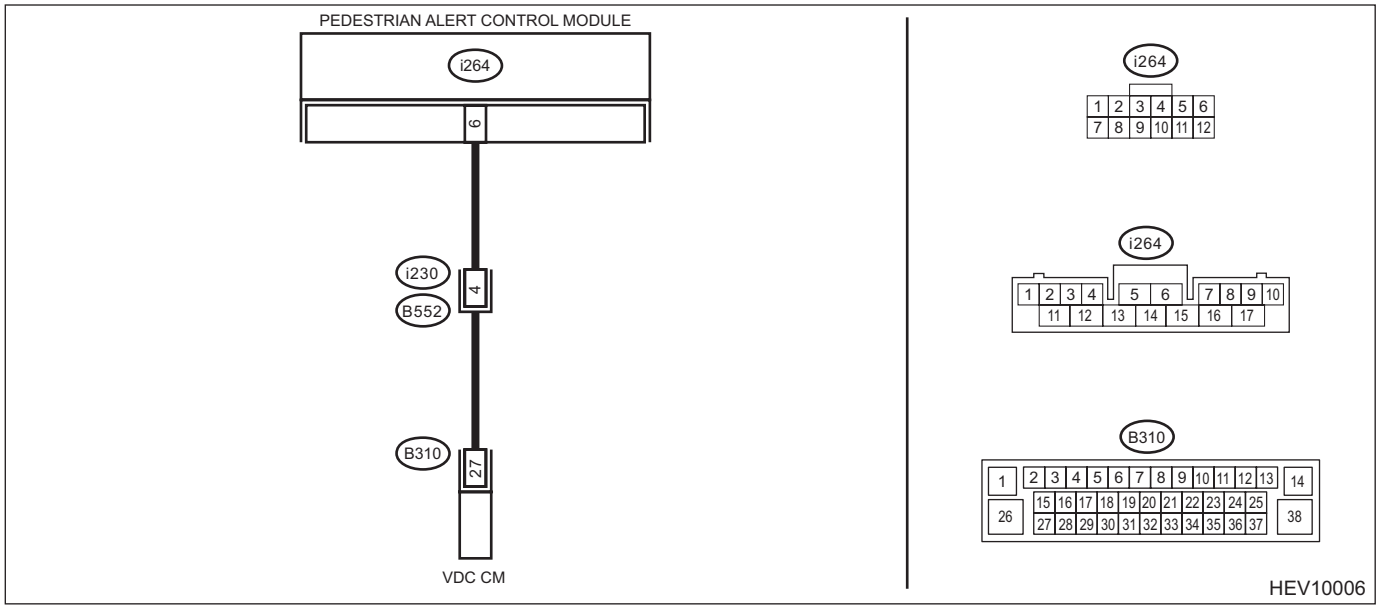


Step		Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Check «P-Range SW» using the Subaru Select Monitor. <Ref. to PA(diag)-11, Read Current Data.> 3) Move the select lever to P range ←→ other than P range.	Is the display normal?	Even if abnormality is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK P RANGE SWITCH.** 1) Disconnect the ground terminal from the 12 volt auxiliary battery. 2) Disconnect the pedestrian alert CM connector. 3) Using the tester, measure the resistance between pedestrian alert CM connector (harness side) and chassis ground. ***Connector & terminal*** ***(i264) No. 11 — Chassis ground:***	Is the resistance 1 Ω or less when the shift lever is in P range and 1 kΩ or more when the shift lever is in other than P range?	Replace the pedestrian alert CM. <Ref. to PA-6, Pedestrian Alert Control Unit.>	Repair or replace the P range switch circuit.

5. CHECK OIL PRESSURE SWITCH CIRCUIT

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-122, WIRING DIAGRAM, Hybrid Electric Vehicle System.>



Step		Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Using the Subaru Select Monitor, check «OIL Pressure SW». <Ref. to PA(diag)-11, Read Current Data.> 2) Apply the parking brake. 3) Move the select lever in P range. 4) Start the engine.	Is the display normal?	Even if abnormality is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the pedestrian alert CM connector. 3) Using the tester, measure the voltage between pedestrian alert CM connector (harness side) and chassis ground. ***Connector & terminal*** ***(i264) No. 12 (+) — Chassis ground (–):***	Is the voltage less than 1 V when the ignition switch is turned to ON and 8 V or more while the engine is starting?	Replace the pedestrian alert CM. <Ref. to PA-6, Pedestrian Alert Control Unit.>	Repair the oil pressure switch or the short circuit portion of the harness.

6. CHECK VEHICLE SPEED SIGNAL CIRCUIT

WIRING DIAGRAM:

Pedestrian alert system <Ref. to WI(HEV)-201, WIRING DIAGRAM, Pedestrian Alert System.>

Step		Check	Yes	No
1	**CHECK CURRENT DATA.** Check «Vehicle Speed» using Subaru Select Monitor. <Ref. to PA(diag)-11, Read Current Data.>	Is the display normal?	Even if abnormality is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK VDC.** Check the VDC system. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>	Is the VDC system normal?	Go to step **3**.	Perform the diagnosis according to inspection for the VDC system.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the pedestrian alert CM connector. 3) Disconnect the VDC CM connector. 4) Using the tester, measure the resistance between pedestrian alert CM connector (harness side) and VDC CM connector (harness side). ***Connector & terminal*** ***(i264) No. 6 — (B310) No. 27:***	Is the resistance 1 Ω or less?	Even if abnormality is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Repair or replace the open circuit of harness.

KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)

KPS(diag)

14.	General Diagnostic Table	107
15.	Diagnostics with Phenomenon	109

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
• Subaru Select Monitor kit is required for reading DTC, performing diagnosis and reading current data.
• Before removal or installation, be sure to remove any foreign matter (dust, moisture, oil, etc.).
• Registration of immobilizer may be needed after the replacement of control modules, etc. For detailed procedure, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

NOTE:
• Using the Function Setting (Customize), check that the keyless access system is not in a cancelled state. <Ref. to SL-121, OPERATION, Function Setting (Customize).>
• Check List for Interview <Ref. to KPS(diag)-4, Check List for Interview.>

	Step	Check	Yes	No
1	**CHECK BATTERY.** Using a tester, measure the voltage of the 12 volt auxiliary battery.	Is the voltage 11 V or more?	Go to step **2**.	Charge or replace the battery and perform check pre-inspection. Go to step **2**.
2	**CHECK PRE-INSPECTION.** Use the interview check list to interview the user. <Ref. to KPS(diag)-4, Check List for Interview.>	Was the symptoms of the trouble recorded in the interview?	Go to step **3**.	Interview the user again.
3	**BASIC INSPECTION.** Perform the inspection for LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **4**.	Check it according to DTC of LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
4	**CHECK TROUBLE SYMPTOM.** 1) Read DTC for «Keyless Access with Push Button Start». <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to KPS(diag)-25, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.> 2) Record all DTCs, time stamp and freeze frame data. NOTE: For time stamp, refer to "LAN SYSTEM". <Ref. to LAN(HEV)(diag)-6, TIME STAMP, CAUTION, General Description.>	Does the Subaru Select Monitor display DTC?	Perform diagnosis according to the DTC.	Go to step **5**.
5	**CHECK PHENOMENON LIST.** Check the "Phenomenon List". <Ref. to KPS(diag)-107, General Diagnostic Table.>	Is there a symptom that corresponds in the phenomenon list?	Perform diagnosis according to the procedures in the phenomenon list.	Go to step **6**.

Step		Check	Yes	No
6	**CHECK TROUBLE PHENOMENON.** 1) Perform check of current data. <Ref. to KPS(diag)-29, Read Current Data.> 2) Perform a function check. <Ref. to KPS(diag)-5, KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM, CAUTION, General Description.> 3) Perform a unit check.	Was the trouble cause found?	Repair the cause of trouble.	Repeat a basic check again.

2. Check List for Interview

A: CHECK

Inspect the following items regarding the vehicle's state.

<table>
<tr><td colspan="2">Keyless Access with Push Button Start System Trouble Check List for Interview Received Year Month Date</td><td colspan="2"></td></tr>
<tr><td colspan="2" rowspan="2">Customer's name</td><td>Registration No.</td><td>Initial year of registration
Year Month Date</td></tr>
<tr><td>Vehicle model</td><td>Frame number</td></tr>
<tr><td>Interviewer</td><td>Inspector</td><td>Engine type</td><td>Odometer reading</td></tr>
<tr><td colspan="4">Customer specified content</td></tr>
<tr><td>Date and time when the trouble occurred</td><td></td><td>Frequency of trouble occurrence</td><td></td></tr>
<tr><td>Condition of trouble occurrence</td><td></td><td>Weather</td><td></td></tr>
<tr><td>Road conditions</td><td></td><td>Occurrence location</td><td></td></tr>
<tr><td>Accessory installation condition</td><td colspan="3"></td></tr>
<tr><td colspan="4">Trouble condition</td></tr>
<tr><td colspan="2">❑ Diagnostic code</td><td colspan="2">❑( )</td></tr>
<tr><td rowspan="2">❑ Immobilizer system</td><td colspan="2">Engine does not start</td><td>❑ Starter does not operate
❑ Starter operates but engine does not start
❑ Engine starts but stops immediately</td></tr>
<tr><td colspan="3">Does not start with remote engine starter</td></tr>

<tr><td colspan="3">The steering lock does not lock</td></tr>
<tr><td rowspan="7">❑ Keyless access system</td><td colspan="3">Can not lock/unlock using the touch sensor (lock), touch sensor (unlock), trunk opener button or rear gate opener button and rear lock button</td></tr>
<tr><td colspan="2">Cannot lock with the touch sensor (lock)
Cannot unlock with the touch sensor (unlock)
Cannot lock nor unlock with the touch sensor (lock), touch sensor (unlock)
Trunk does not open with the trunk opener button.
Rear gate can not be locked with the rear lock button</td><td>❑ Driver's side door
❑ Passenger's side door
❑ Rear gate door</td></tr>
<tr><td colspan="3">Cannot unlock with the rear gate opener button</td></tr>
<tr><td colspan="2">The access key lockout prevention feature does not function</td><td>❑ Passenger room
❑ Luggage room</td></tr>
<tr><td colspan="3">The LED does not illuminate when the access key button is pressed</td></tr>
<tr><td colspan="3">The external buzzer does not beep</td></tr>
<tr><td colspan="3">The passenger room buzzer does not sound</td></tr>
<tr><td>❑ Other</td><td colspan="3">The room light or map light does not illuminate
( )</td></tr>
</table>

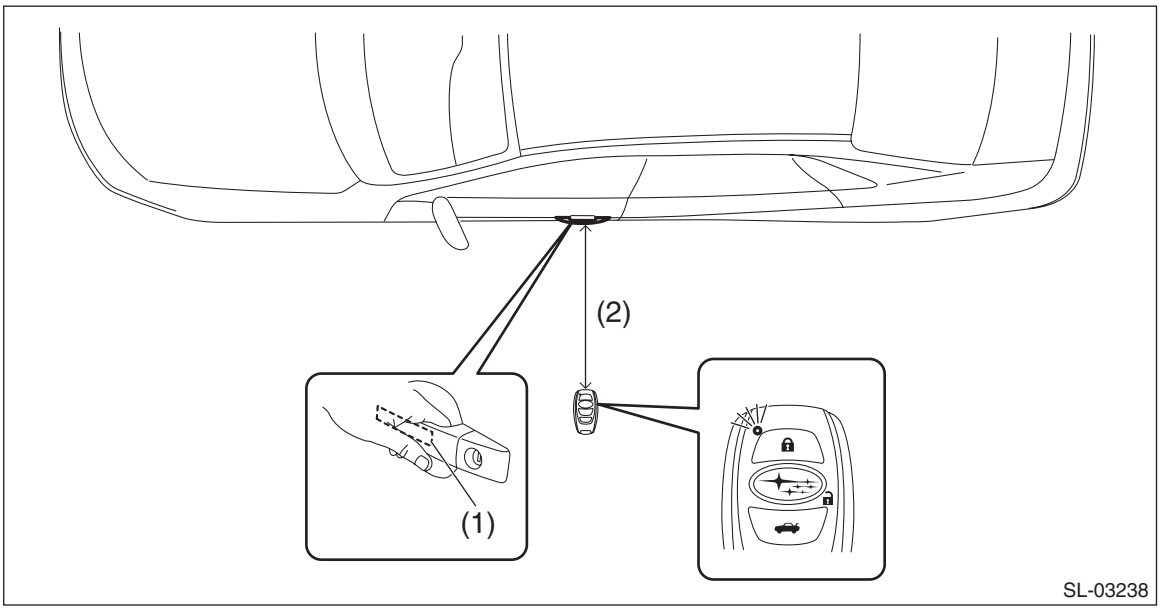
NOTE:
- Perform the diagnostics according to the basic diagnostic procedure.
- If the room light or map light does not illuminate and the keyless access does not function at the same time, the back-up fuse may be loose or blown.

3. General Description

A: CAUTION

1. SRS AIRBAG SYSTEM

The airbag system wiring harness is routed near the keyless access with push button start system.



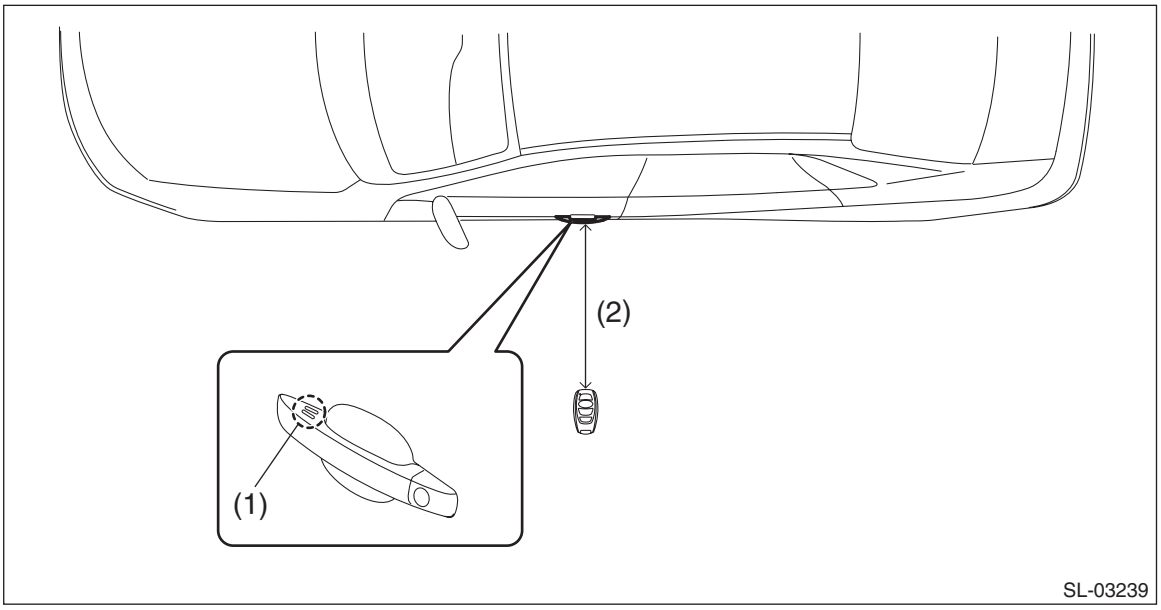
CAUTION:
- **Do not use electrical test equipment on any wiring harnesses and connectors in the airbag system.**
- **Be careful not to damage the wiring harness of the airbag system when servicing the keyless access with push button start system.**

2. KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

NOTE:
- Using the function setting (ECM customizing), check that the keyless access system is not OFF. <Ref. to SL-121, OPERATION, Function Setting (Customize).>
- The dark current is approx. 400 mA if there is communication between the vehicle and access key.
- The dark current is approx. 40 mA if there is no communication between the vehicle and access key.*

* No communication with the vehicle means that the keyless access function has been cancelled or that the access key has not been near the vehicle for 15 minutes or more after door locking.

1) Keyless access door unlock function check



(1) Touch sensor (unlock) (2) 40 — 80 cm

(1) When carrying the access key with all doors locked by keyless lock operation, check that when the touch sensor (unlock) built in to the back side surface of door outer handle of front door is touched, the driver's door will unlock (when touched on the driver's side) or all doors will unlock (when touched on the passenger's side) and the answer-back function operates (hazard light blinks twice, access buzzer sounds twice).

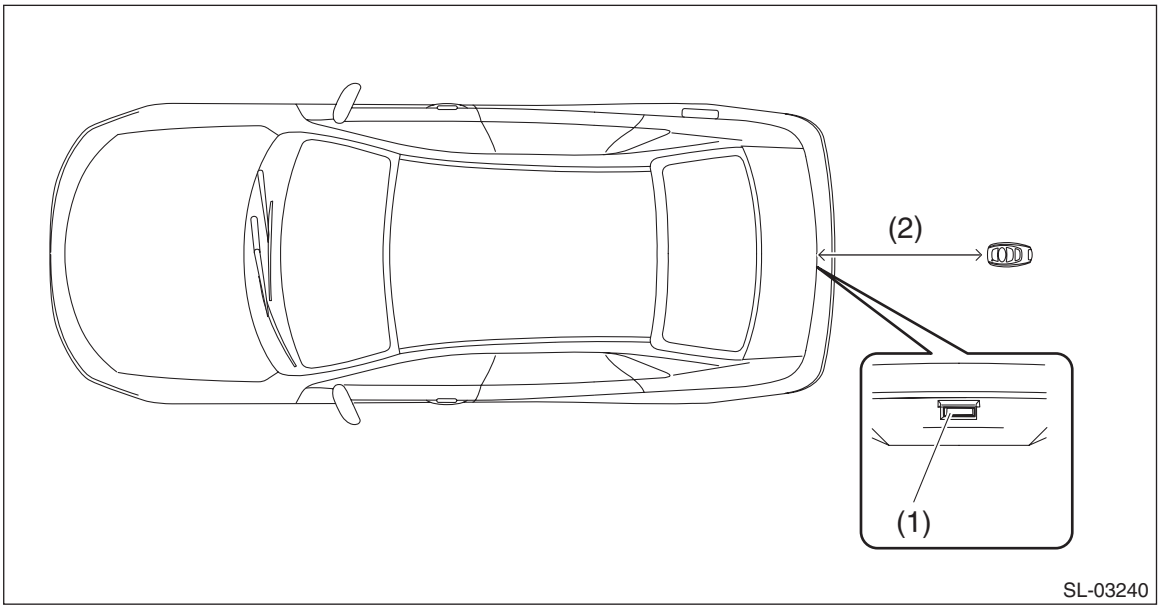
(2) In the keyless access door unlock detection area, hold the access key at the same height as the outer handle (approx. 80 cm from the ground) and in the direction shown in the figure, and check that the vehicle becomes unlock mode [access key LED (red) blinks] at 40 to 80 cm from the vehicle.

NOTE:
Check the access key battery if the LED (red) does not illuminates when the access key button is pressed. <Ref. to SL-86, INSPECTION, Access Key.>

2) Keyless access door lock function check

(1) Touch sensor (lock) (2) Approx. 30 cm

(1) When carrying the access key outside of the vehicle with all doors closed and unlocked, check that when the touch sensor (lock) on the surface of door outer handle of front door is touched, all doors will lock and the answer-back function operates (hazard light blinks once, access buzzer sounds once).

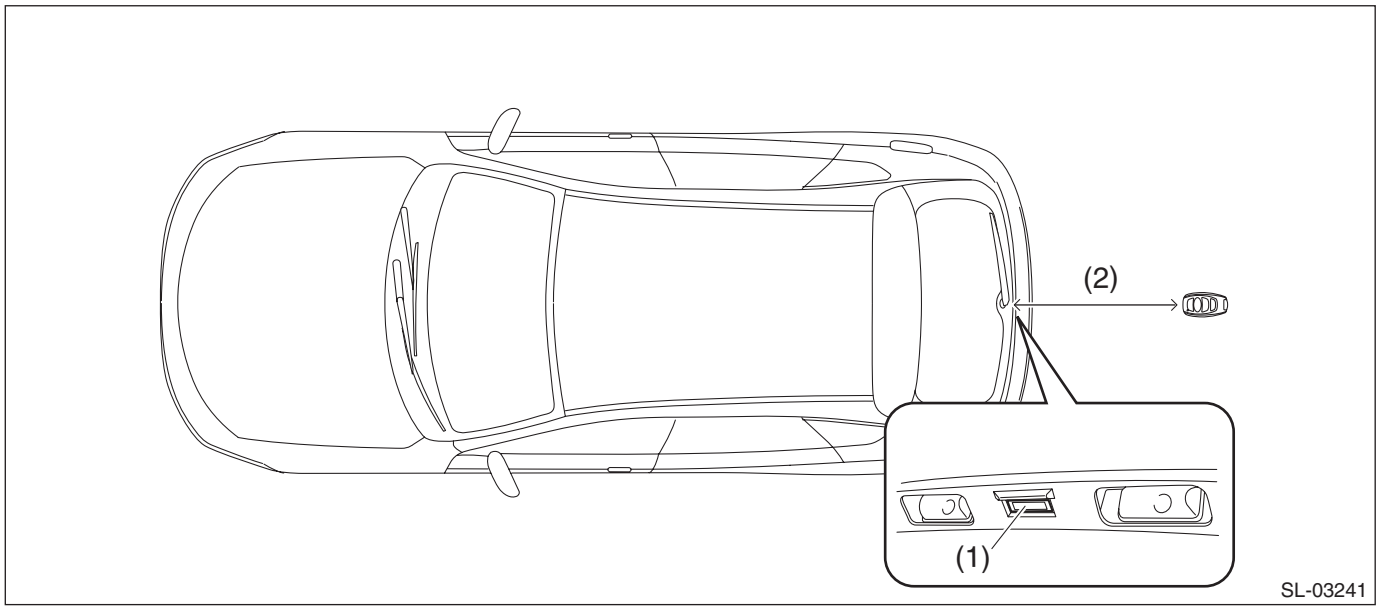


CAUTION:
If the access key is within the vehicle but not within the detection area (in the instrument panel, on the rear tray, in the glove box, on the floor, or in the door trim pocket), then lockout protection will not function when the doors are locked and the access key will be locked into the vehicle.

(2) To check the keyless access door lock operation range, hold the access key at a height of 10 cm under the bottom edge of the door glass (approx. 80 cm from the ground), point it in the direction shown in the figure at a distance of approx. 30 cm from the vehicle, and check that all doors lock and the answer-back function operates (hazard light blinks once, access buzzer sounds once) when you touch the touch sensor (lock).

(3) Check the passenger's side door in the same manner.

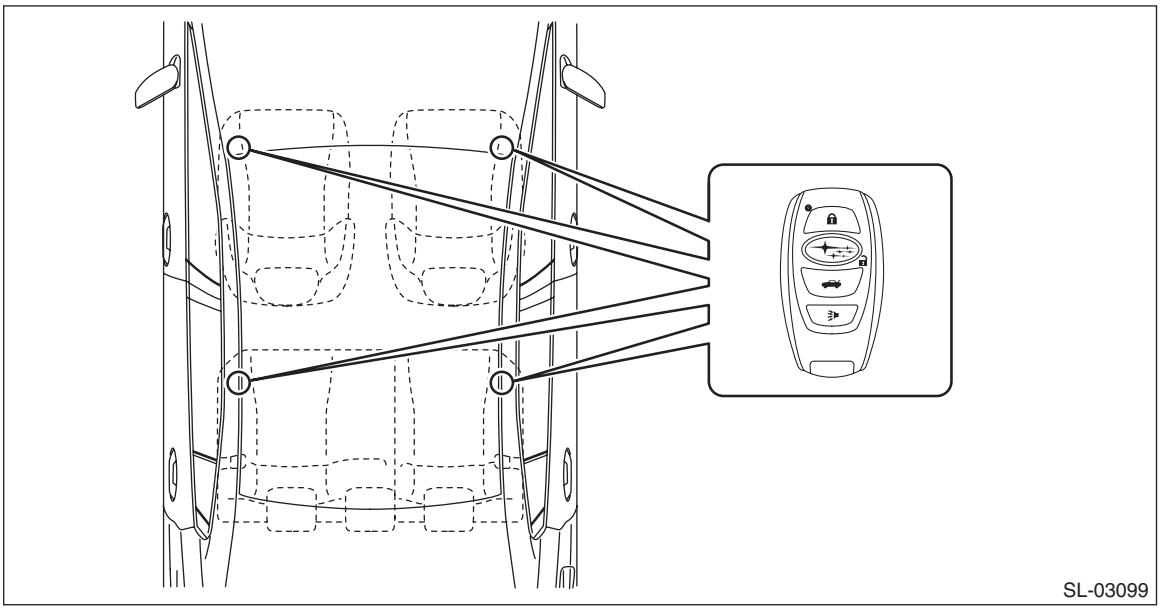
NOTE:
- When the door cannot lock if the touch sensor (lock) is touched, touch the touch sensor (lock) with palm.
- Since communication is not possible within close range (20 cm or less) of the door outer handle, the access key may not operate if you touch the touch sensor (lock) with the same hand you are holding the access key.
- If the lockout prevention buzzer sounds, it is possible that the interior transmitter has radio wave leakage.



3) Check of the keyless access trunk open function

(1) Trunk opener button (2) 40 — 80 cm

(1) With the trunk closed, check that the trunk opens and the answer-back function operates (hazard light blinks twice, access buzzer sounds twice) when you press the trunk opener button while carrying the access key.
(2) To check the keyless access trunk open operation range, hold the access key behind and in the center of the vehicle at the same height as the trunk opener button (90 cm from the ground), point it in the direction shown in the figure at a distance of 40 to 80 cm from the vehicle, and check that the trunk opens and the answer-back function operates (hazard light blinks twice, access buzzer sounds twice) when the trunk opener button is pressed.



4) Check of the keyless access rear gate function

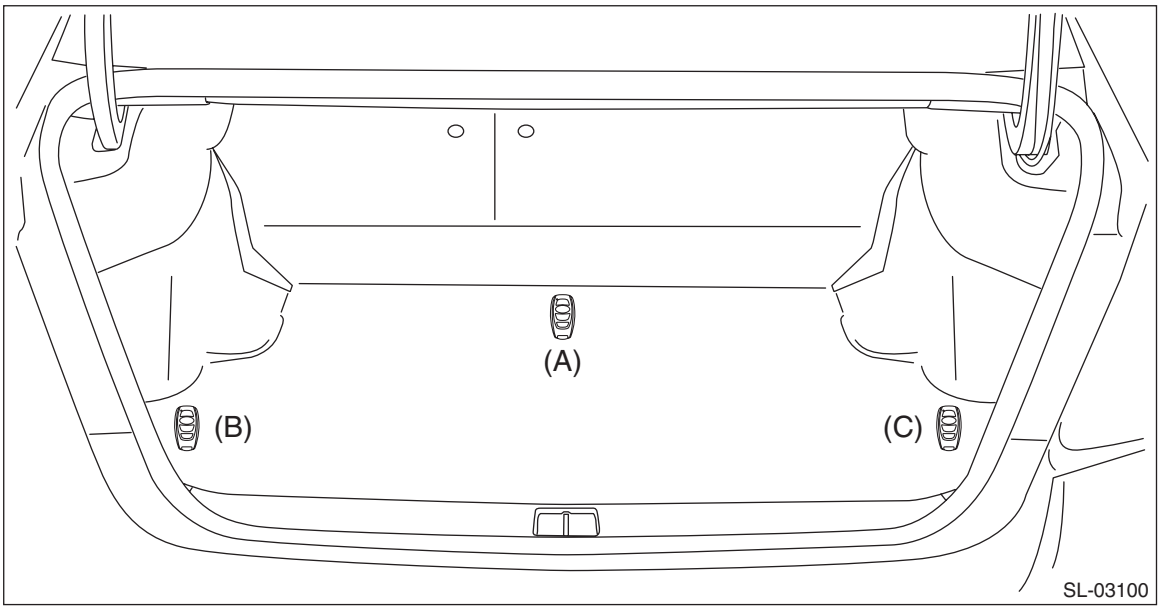
(1) Rear gate opener button (2) 40 — 80 cm

(1) With the rear gate locked, the all doors unlocks and the rear gate opens simultaneously and the answer-back function operates (hazard light blinks twice, external buzzer sounds twice) when you press the rear gate opener button while carrying the access key.
(2) To check the range for keyless access rear gate open operation, hold the access key behind and in the center of the vehicle at the same height as the rear gate opener button (90 cm from the ground), point it in the direction shown in the figure at a distance of 40 to 80 cm from the vehicle, and check that the all doors unlocks and the rear gate opens simultaneously and the answer-back function operates (hazard light blinks twice, external buzzer sounds twice) when the rear gate opener button is pressed.
(3) With the rear gate unlock, check that the all doors lock and the answer-back function operates (hazard light blinks once, external buzzer sounds once) when rear lock button is pressed while carrying the access key.

5) Keyless access ignition switching function check
(1) With the ignition OFF, enter the vehicle while carrying the access key. With the shift lever in the P range, check that the push button ignition switch indicator illuminates in green when you depress the brake pedal, then check that the engine starts when you press the push button ignition switch while the indicator green light is on.
(2) While carrying the access key, check that the status changes as follows each time you press the push button ignition switch without depressing the brake pedal: 'Ignition OFF' → 'ACC ON' → 'Ignition ON' → 'Ignition OFF'. However, if the shift lever is a range other than the P range and the push button ignition switch is pressed from ignition ON, then the status does not change to ignition OFF and instead will change to ACC ON.
(3) After the vehicle has stopped, press the push button ignition switch and ignition is turned OFF (engine stopped · all power supplies OFF). However, if the shift lever is in any range except for the P range and the push button ignition switch is pressed with the vehicle stopped, then the ignition is not turned OFF and instead the power supplies changes to ACC ON. Check that the steering lock operates if you open the door in the ignition OFF state (the shift lever must be in P range).
(4) To check the range of the keyless access ignition operation, check that the engine can start when you set the access key at the check position on the seat in the direction indicated in the figure.

SL-03099

CAUTION:
The access key may not be correctly detected even though it is within the detection area within the passenger room, if it is on the instrument panel, on the rear tray, in the glove box, on the floor, or in the door trim pocket.



NOTE:
Perform the check multiple times, once each with the access key positioned on the driver's seat, on the passenger's seat, and on the rear seat in 2 locations.

6) Lockout protection function check with the access key in the trunk

CAUTION:
Open one of the windows before performing this check in order to prevent the key from being locked inside the vehicle.

(1) With all doors closed and locked, and with the access key in the trunk room and the trunk closed, check that the access buzzer sounds (approx. 2 seconds). Also check that the trunk opens when you press the trunk opener button.

(2) To check the detection range of the lockout protection function with the access key in the trunk, position the access key in the direction shown in the figure, and check that the lockout protection function operates normally when you check the lockout protection function for the access key locked in the trunk.

CAUTION:
The lockout protection function will not operate if the access key is any of the locations described below.

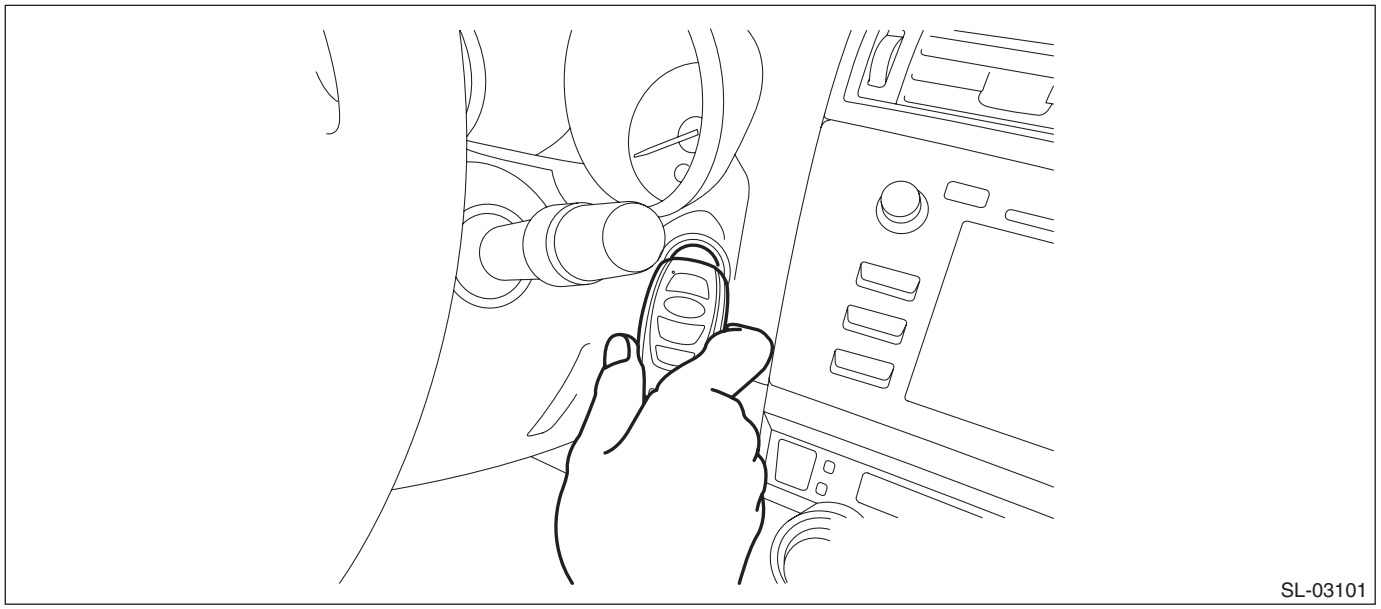
- Near the spare tire or on the edge of the trunk room.
- Inside a bag made of metallic material or near metal objects.

NOTE:
Check the trunk in two locations or more.

7) Lockout protection function check (in the passenger room)

CAUTION:
Open one of the windows before performing this check in order to prevent the key from being locked inside the vehicle.

(1) Position the access key on the driver's or passenger's seat.



(2) Close all doors. (with all doors unlocked)

(3) Check that the doors do not lock and the lockout protection buzzer (exterior) sounds for 2 seconds when you touch the touch sensor (lock) of either the driver's or passenger's door.

8) Keyless access cancel function check

(1) After setting the keyless access cancel function, check that all keyless access and start system (keyless access) functions are inoperable. (For cancel setting, refer to <Ref. to SL-121, OPERATION, Function Setting (Customize).>)

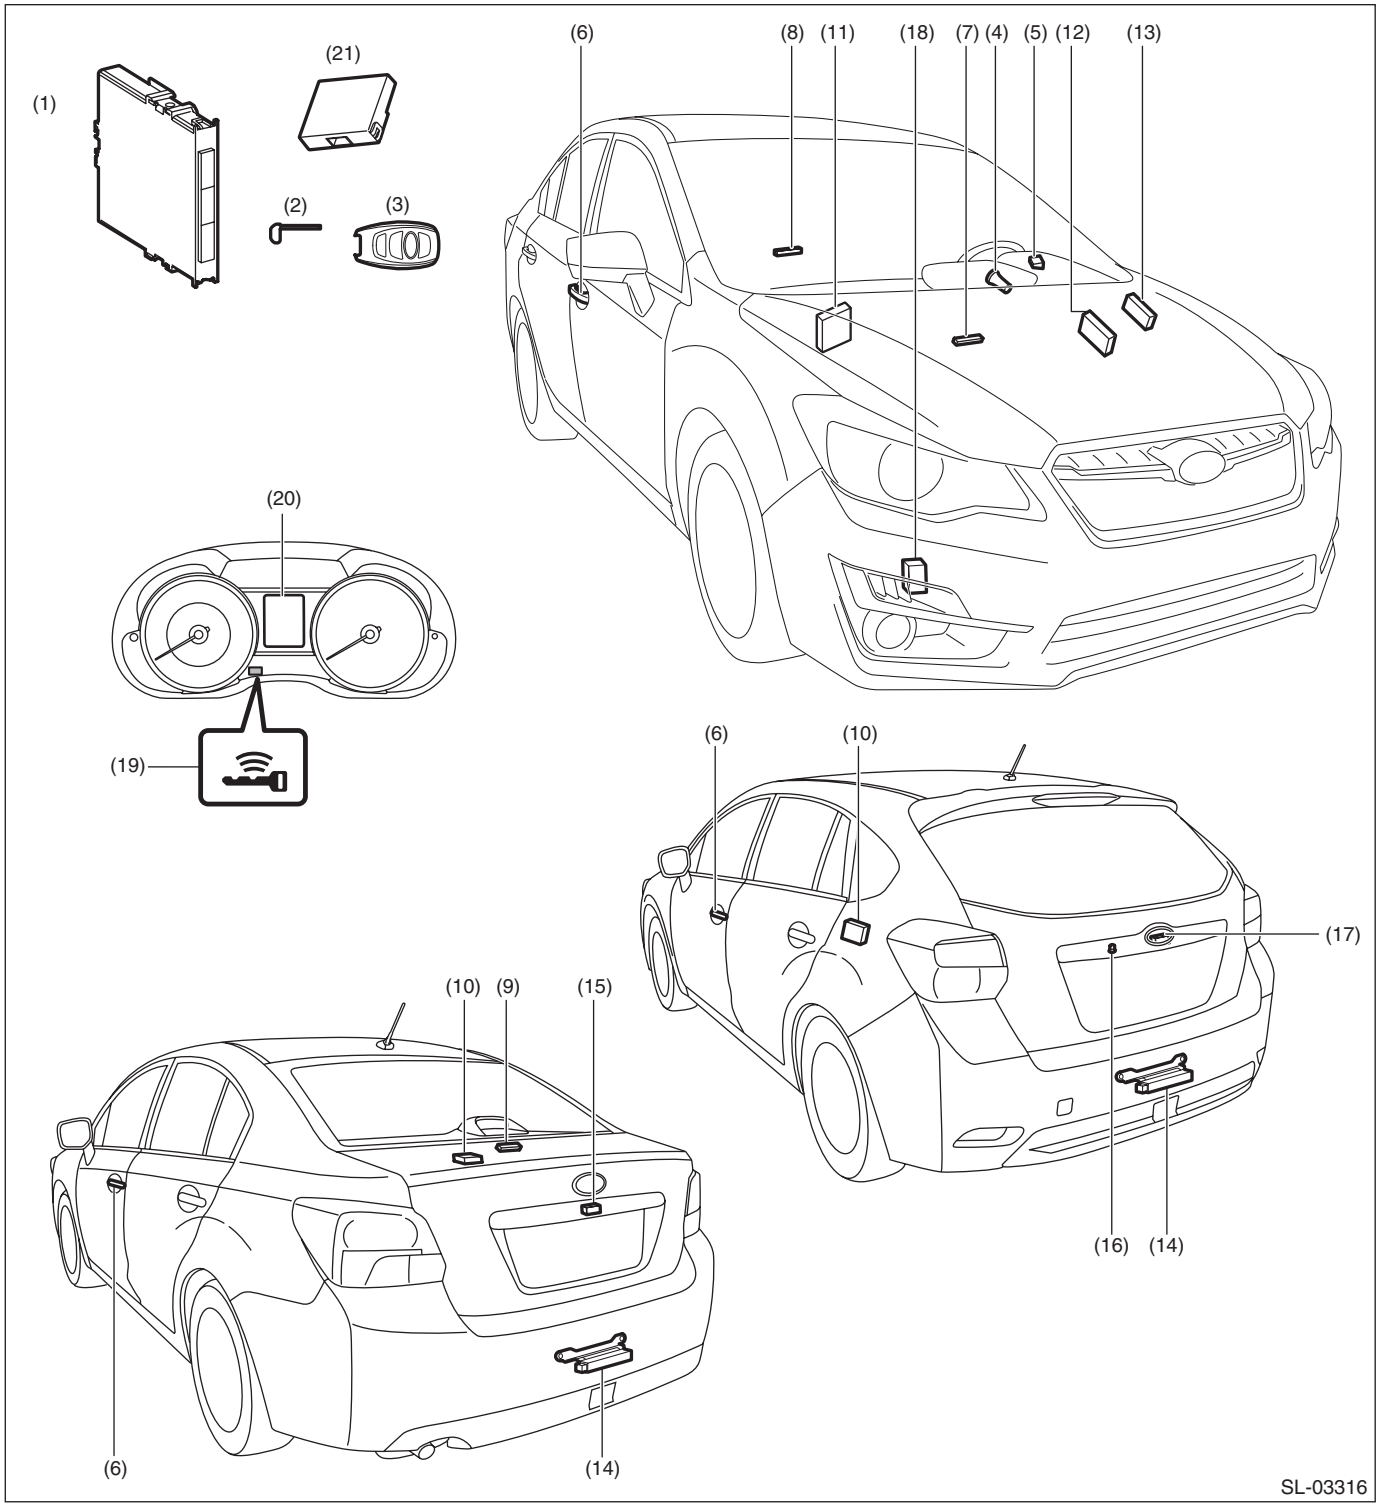
NOTE:
When keyless access is cancelled, door lock and unlock can be operated by access key button operation and the starter system can be operated by passing the access key over the push button ignition switch with the access key button toward you.

9) Access key diagnostic mode
(1) Connect to the Subaru Select Monitor, and select «Diagnosis» on the «Start» display.
(2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
(3) On «Main Menu» display, select «Each System».
(4) On «Select System» display, select «Keyless Access with Push Button Start» and then select «Enter».
(5) On «Select Function» display, select «Work Support».
(6) From «Work Support», select «Keyless access system check».
(7) Select the transmitter to check from the items.
(8) Check that the door lock buzzer sounds (short blips, a continuous beeping sound for the center room antenna) when the access key is near the selected transmitter or antenna.

B: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	— (Newly adopted tool)	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.



2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

(B574) No. 30	SSW2	Start switch input 2

Disconnect the control module connector (B572) before checking the following items.

NOTE:
If the measured value is out of standard, it is possible that the vehicle has a fault.

Terminal No.	Item	Measuring condition	Standard
(B572) No. 2 (+B) ←→ (B572) No. 11 (GND)	Voltage	Always	9.5 — 16 V
(B572) No. 11 (GND) ←→ Chassis ground	Resistance	Always	Less than 1 Ω

NOTE:
If the measured value is out of standard, it is possible that the vehicle has a fault.

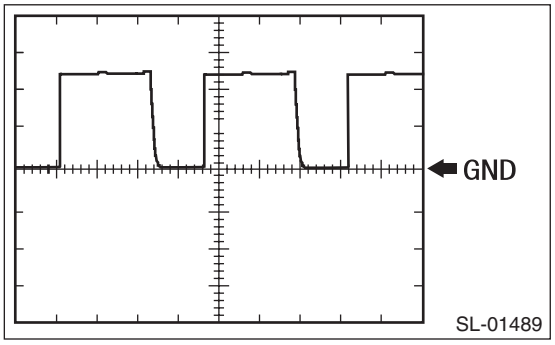
Terminal No.	Item	Measuring condition	Standard
(B573) No. 15 (IDW) ←→ Chassis ground (For EK, ER, EN models only)	Continuity	Always	Continuity exists

Disconnect the control module connectors (B574) and (B572) before checking the following items.

NOTE:
If the measured value is out of standard, it is possible that the vehicle has a fault.

Terminal No.	Item	Measuring condition	Standard
(B574) No. 4 (ACCD) ←→ Chassis ground	Resistance	Always (20°C)	152.61 — 216.5 Ω
(B572) No. 9 (IG2D) ←→ Chassis ground	Resistance	Always (20°C)	74.15 — 460.88 Ω
(B574) No. 6 (IG1D) ←→ Chassis ground	Resistance	Always (20°C)	50.87 — 72.17 Ω
(B572) No. 18 (STP1) ←→ Chassis ground (AT model only)	Voltage	Brake pedal depressed → released	11 — 14 V → 1 V or less
(B574) No. 25 (P) ←→ Chassis ground (AT model only)	Resistance	Except for shift positions P → Shift position P	40 kΩ or more → 200 Ω or less
(B574) No. 27 (SPD) ←→ Chassis ground	Resistance	Always	30 kΩ or more
(B574) No. 28 (SSW1) ←→ Chassis ground	Resistance	Push button ignition switch pressed → released	Less than 1 Ω → 10 kΩ or more
(B574) No. 29 (SLR+) ←→ Chassis ground	Resistance	Always	10 kΩ or more
(B574) No. 30 (SSW2) ←→ Chassis ground	Resistance	Push button ignition switch pressed → released	Less than 1 Ω → 10 kΩ or more
(B574) No. 17 (LIN) ←→ Chassis ground	Continuity	Always	Continuity does not exist
(B574) No. 14 (CANH) ←→ Chassis ground	Pulse	ACC ON or IGN ON	Pulse generation
(B574) No. 15 (CANL) ←→ Chassis ground	Pulse	ACC ON or IGN ON	Pulse generation

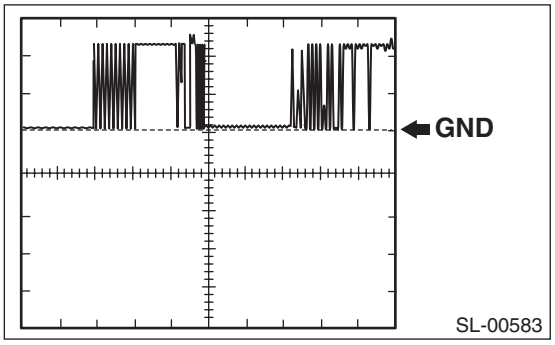
Connect the control module connector before checking the following items.



NOTE:
If the measured value is out of standard, it is possible that the keyless access CM has a fault.

Terminal No.	Item	Measuring condition	Standard
(B574) No. 1 (VC5) ←→ (B574) No. 24 (AGND)	Voltage	30 seconds or more have passed after the door was opened or closed with IG OFF and the brake pedal released.	1 V or less
	Waveform	Within 30 seconds after the push button ignition switch is pressed with IG OFF and access key not in the passenger room	Waveform 1
(B574) No. 2 (CG5B) ←→ (B572) No. 11 (GND)	Pulse	All doors closed, ACC and IG OFF, access key not in passenger room, touch sensor (lock) OFF → ON	No pulse output → Pulse output detected
(B574) No. 3 (CLG5) ←→ (B572) No. 11 (GND)	Pulse	All doors closed, ACC and IG OFF, access key not in passenger room, touch sensor (lock) OFF → ON	No pulse output → Pulse output detected
(B574) No. 4 (ACCD) ←→ (B572) No. 11 (GND)	Voltage	IG OFF → ACC ON	1 V or less → 9 — 14 V
(B574) No. 6 (IG1D) ←→ (B572) No. 11 (GND)	Voltage	ACC ON → IG ON	1 V or less → 9 — 14 V
(B574) No. 7 (CODE) ←→ (B574) No. 24 (AGND)	Voltage	30 seconds or more have passed after the door was opened or closed with IG OFF and the brake pedal released.	1 V or less
	Waveform	Turn the ignition switch to OFF and with the access key near the push button ignition switch, press the push button ignition switch*1	Waveform 2
(B574) No. 9 (TXCT) ←→ (B574) No. 24 (AGND)	Voltage	30 seconds or more have passed after the door was opened or closed with IG OFF and the brake pedal released.	1 V or less
	Waveform	Turn the ignition switch to OFF and with the access key near the push button ignition switch, press the push button ignition switch*1	Waveform 3
(B574) No. 10 (CG2B) ←→ (B572) No. 11 (GND)	Pulse	ACC and IG OFF, all doors closed, all doors locked by lock operation with wireless remote control, access key not in passenger room	No pulse output → Pulse output detected
(B574) No. 11 (CLG2) ←→ (B572) No. 11 (GND)	Pulse	ACC and IG OFF, all doors closed, all doors locked by lock operation with wireless remote control, access key not in passenger room	No pulse output → Pulse output detected
(B574) No. 12 (CLG1) ←→ (B572) No. 11 (GND)	Pulse	ACC and IG OFF, all doors closed, all doors locked by lock operation with wireless remote control, access key not in passenger room	No pulse output → Pulse output detected
(B574) No. 13 (CG1B) ←→ (B572) No. 11 (GND)	Pulse	ACC and IG OFF, all doors closed, all doors locked by lock operation with wireless remote control, access key not in passenger room	No pulse output → Pulse output detected
(B574) No. 19 (POS1) ←→ (B572) No. 11 (GND)	Voltage	ACC and IG OFF → ACC or IG ON	9 — 14 V → less than 2 V
(B574) No. 21 (POS2) ←→ (B572) No. 11 (GND)	Voltage	ACC and IG OFF → ACC or IG ON	9 — 14 V → less than 2 V
(B574) No. 24 (AGND) ←→ Chassis ground	Resistance	Always	Less than 1 Ω
(B574) No. 25 (P) ←→ (B572) No. 11 (GND) (AT model only)	Voltage	Except for shift positions P → Shift position P	9 — 14 V or more → 1.5 V or less
(B574) No. 26 (SLP) ←→ (B572) No. 11 (GND)	Voltage	With ignition switch OFF and shift position P, Steering lock → Steering unlock	11 — 14 V → 1.2 V or less

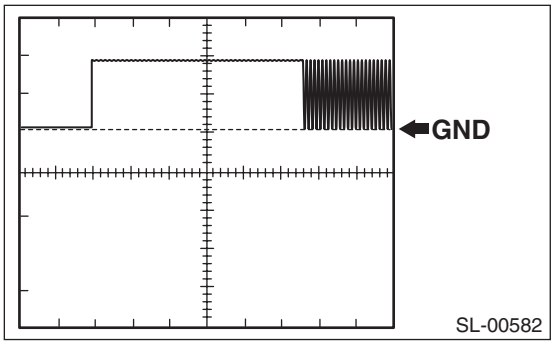
Terminal No.	Item	Measuring condition	Standard
(B574) No. 27 (SPD) ←→ Chassis ground	Pulse	Driving at approx. 5 km/h	Pulse generation according to vehicle speed (approx. 5 km/h: 3.54 Hz)
(B574) No. 28 (SSW1) ←→ (B572) No. 11 (GND)	Voltage	Push button ignition switch released → pressed	11 — 14 V → 1 V or less
(B574) No. 29 (SLR+) ←→ (B572) No. 11 (GND)	Voltage	When the following conditions are met, the doors are closed → opened, and steering lock motor is driven • Steering lock is unlocked • IG OFF • Shift position P	11 — 14 V (Steering lock motor is stopped) → 1 V or less (Steering lock motor is driven)
(B574) No. 30 (SSW2) ←→ (B572) No. 11 (GND)	Voltage	Push button ignition switch released → pressed	11 — 14 V → 1 V or less
(B573) No. 1 (CG8B) ←→ (B572) No. 11 (GND)	Pulse	ACC and IG OFF, all doors closed, all doors locked, trunk opener button or rear gate opener button OFF → ON	No pulse output → Pulse output detected
(B573) No. 2 (CLG8) ←→ (B572) No. 11 (GND)	Pulse	ACC and IG OFF, all doors closed, all doors locked, trunk opener button or rear gate opener button OFF → ON	No pulse output → Pulse output detected
(B573) No. 5 (RCO) ←→ (B572) No. 11 (GND)	Voltage	ACC and IG OFF, access key is locked or unlock switch OFF → ON	1 V or less → 4.5 — 5.5 V
(B573) No. 8 (CG7B) ←→ (B572) No. 11 (GND) (5 door model)	Pulse	All doors closed, ACC and IG OFF, access key not in passenger room, touch sensor (lock) OFF → ON	No pulse output → Pulse output detected
(B573) No. 8 (CG7B) ←→ (B572) No. 11 (GND) (4 door model)	Pulse	All doors closed, all doors locked, trunk opened → closed	No pulse output → Pulse output detected
(B573) No. 9 (CLG7) ←→ (B572) No. 11 (GND) (5 door model)	Pulse	All doors closed, ACC and IG OFF, access key not in passenger room, touch sensor (lock) OFF → ON	No pulse output → Pulse output detected
(B573) No. 9 (CLG7) ←→ (B572) No. 11 (GND) (4 door model)	Pulse	All doors closed, all doors locked, trunk opened → closed	No pulse output → Pulse output detected
(B573) No. 19 (RSSI) ←→ (B572) No. 11 (GND)	Voltage	All doors closed, all doors locked, access key is locked or unlock switch OFF → ON	11 — 14 V → 2 V or less
(B573) No. 27 (TSW5) ←→ (B572) No. 11 (GND)	Pulse/voltage	ACC and IG OFF, all doors locked, trunk opener button or rear gate lock button OFF → ON	9 V or more → less than 2 V
(B572) No. 9 (IG2D) ←→ (B572) No. 11 (GND)	Voltage	ACC ON → IG ON	1 V or less → 9 — 14 V
(B572) No. 13 (EGIO) ←→ (B574) No. 24 (AGND)	Voltage/pulse	Within 3 seconds after engine has been initially ignited or within 3 seconds after initial IG ON following battery removal and installation	11 — 14 V → pulse generation (waveform 4)
(B574) No. 8 (TSW2) ←→ (B572) No. 11 (GND)	Voltage	ACC and IG OFF, all doors closed, all doors locked, access key carried, passenger's seat touch sensor (lock) OFF → ON	9 V or more → less than 2 V (→ 9 V or more)
(B574) No. 20 (TSW1) ←→ (B572) No. 11 (GND)	Voltage	ACC and IG OFF, all doors closed, all doors locked, access key carried, driver's seat touch sensor (lock) OFF → ON	9 V or more → less than 2 V (→ 9 V or more)
(B574) No. 23 (SEN2) ←→ (B572) No. 11 (GND)	Voltage	ACC and IG OFF, all doors closed, all doors locked, access key carried, passenger's seat touch sensor (unlock) OFF → ON	9 V or more → less than 2 V (→ 9 V or more)
(B574) No. 22 (SEN1) ←→ (B572) No. 11 (GND)	Voltage	ACC and IG OFF, all doors closed, all doors locked, access key carried, driver's seat touch sensor (unlock) OFF → ON	9 V or more → less than 2 V (→ 9 V or more)
(B574) No. 16 (SWIL) ←→ (B572) No. 11 (GND)	Voltage	When illumination of start switch goes off, headlight goes OFF → ON	Less than 2 V → 9 V or more



Terminal No.	Item	Measuring condition	Standard
(B572) No. 17 (TACH) ←→ Chassis ground	Waveform	While engine idling	Pulse generation (waveform 5)
(B573) No. 28 (ACCR) ←→ (B572) No. 11 (GND)	Voltage	Brake pedal depressed, push button ignition switch pressed (while cranking) → Except when cranking	Less than 2 V → 9 V or more
(B572) No. 5 (N-SW) ←→ (B572) No. 11 (GND)	Voltage	ACC ON → IG ON	Less than 2 V → 9 V or more
(B573) No. 10 (CG6B) ←→ (B572) No. 11 (GND) (4 door models only)	Pulse	All doors closed, ACC and IG OFF, access key not in passenger room, touch sensor (lock) OFF → ON	No pulse output → Pulse output detected
(B573) No. 11 (CG6G) ←→ (B572) No. 11 (GND) (4 door models only)	Pulse	All doors closed, ACC and IG OFF, access key not in passenger room, touch sensor (lock) OFF → ON	No pulse output → Pulse output detected
(B573) No. 17 (RDA) ←→ (B572) No. 11 (GND)	Pulse	All doors closed, ACC and IG OFF, access key not in passenger room, touch sensor (lock) OFF → ON	2 V or less → 11 — 14 V → 2 V or less
(B572) No. 7 (STSW) ←→ (B572) No. 11 (GND)	Voltage	Shift lever is in position P or position N and access key is in passenger room. While depressing the brake pedal, press the push button ignition switch. (Engine start)	Less than 2 V → 9 V or more
(B572) No. 3 (INDS) ←→ (B572) No. 11 (GND)	Voltage	Depress the brake pedal.	9 V or more
(B574) No. 18 (INDW) ←→ (B572) No. 11 (GND)	Voltage	With ACC ON or IG ON, brake pedal not depressed.	9 V or more

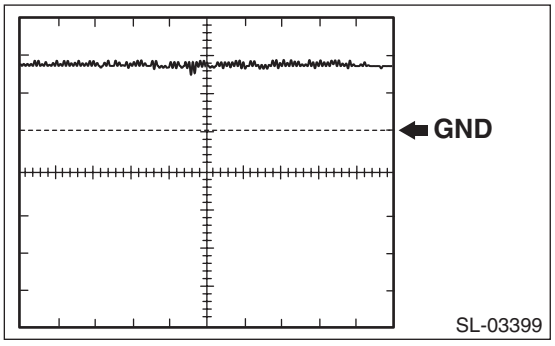
NOTE:
*1: Remove the access key battery before checking.
1. Waveform 1

Item	Contents
Measured terminal	(B574) No. 1 (VC5) ←→ (B574) No. 24 (AGND)
Equipment setting	2 V/DIV, 200 ms/DIV
Measuring condition	Within 30 seconds after the push button ignition switch is pressed with IG OFF and access key not in the passenger room



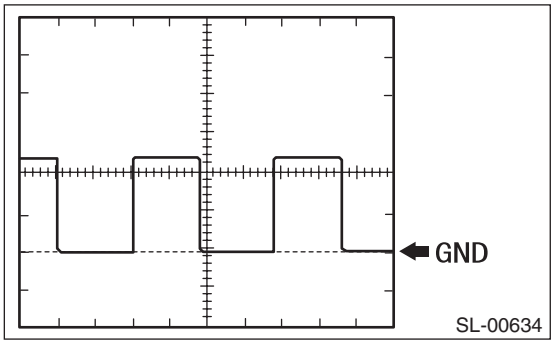
2. Waveform 2

Item	Contents
Measured terminal	(B574) No. 7 (CODE) ←→ (B574) No. 24 (AGND)
Equipment setting	2 V/DIV, 20 ms/DIV
Measuring condition	Turn the ignition switch to OFF and with the access key near the push button ignition switch, press the push button ignition switch. *1



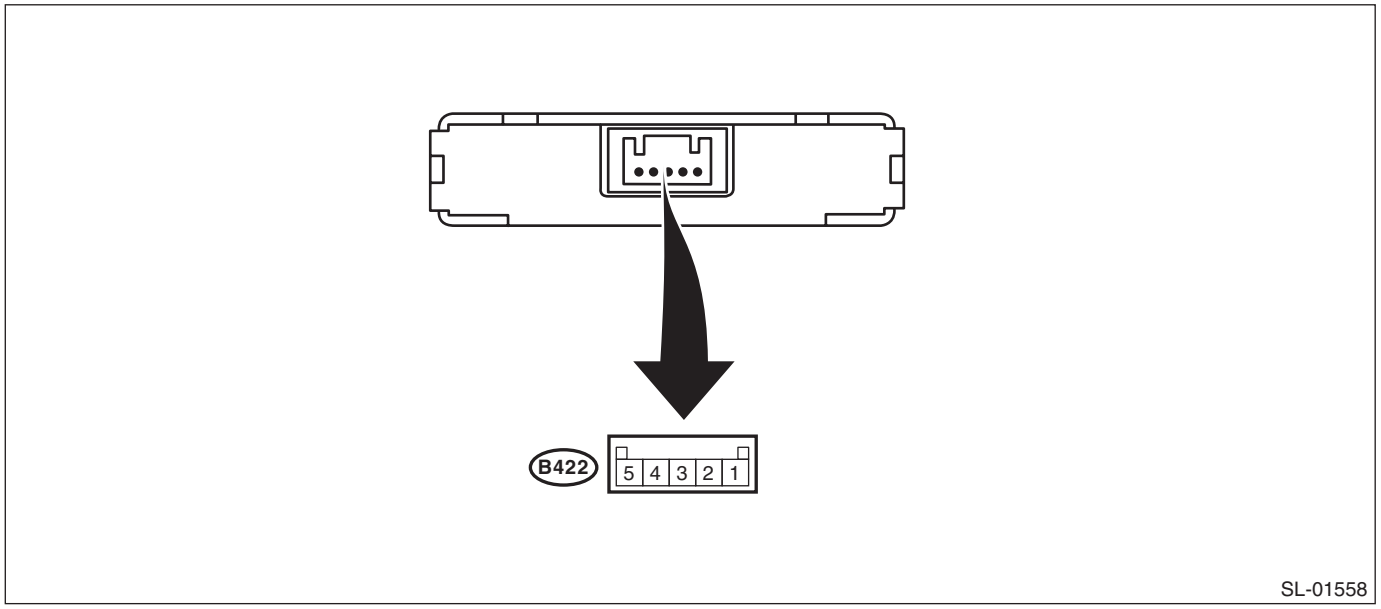
NOTE:
*1: Remove the access key battery before checking.

3. Waveform 3



Item	Contents
Measured terminal	(B574) No. 9 (TXCT) ←→ (B574) No. 24 (AGND)
Equipment setting	2 V/DIV, 20 ms/DIV
Measuring condition	Within 30 seconds after the push button ignition switch is pressed with IG OFF and access key not in the passenger room

4. Waveform 4



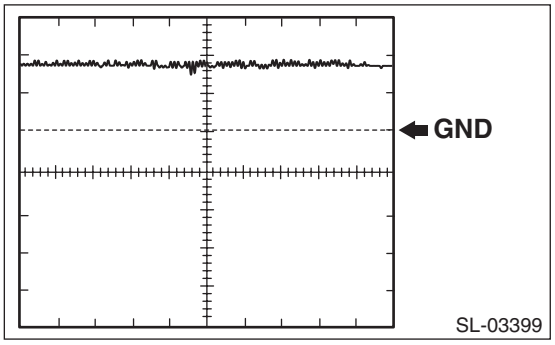
Item	Contents
Measured terminal	(B572) No. 13 (EGIO) ←→ (B572) No. 11 (GND)
Equipment setting	5 V/DIV, 100 ms/DIV
Measuring condition	Within 3 seconds after engine has been initially ignited or within 3 seconds after initial IG ON following battery removal and installation

5. Waveform 5

Item	Contents
Equipment setting	5 V/DIV, 100 ms/DIV

2. ID CODE BOX

Terminal No.	Terminal symbol	Contents
(B422) No. 1	+B	+B
(B422) No. 2	LIN	LIN communication
(B422) No. 4	IMO1	Immobilizer communication 1
(B422) No. 5	GND	GND



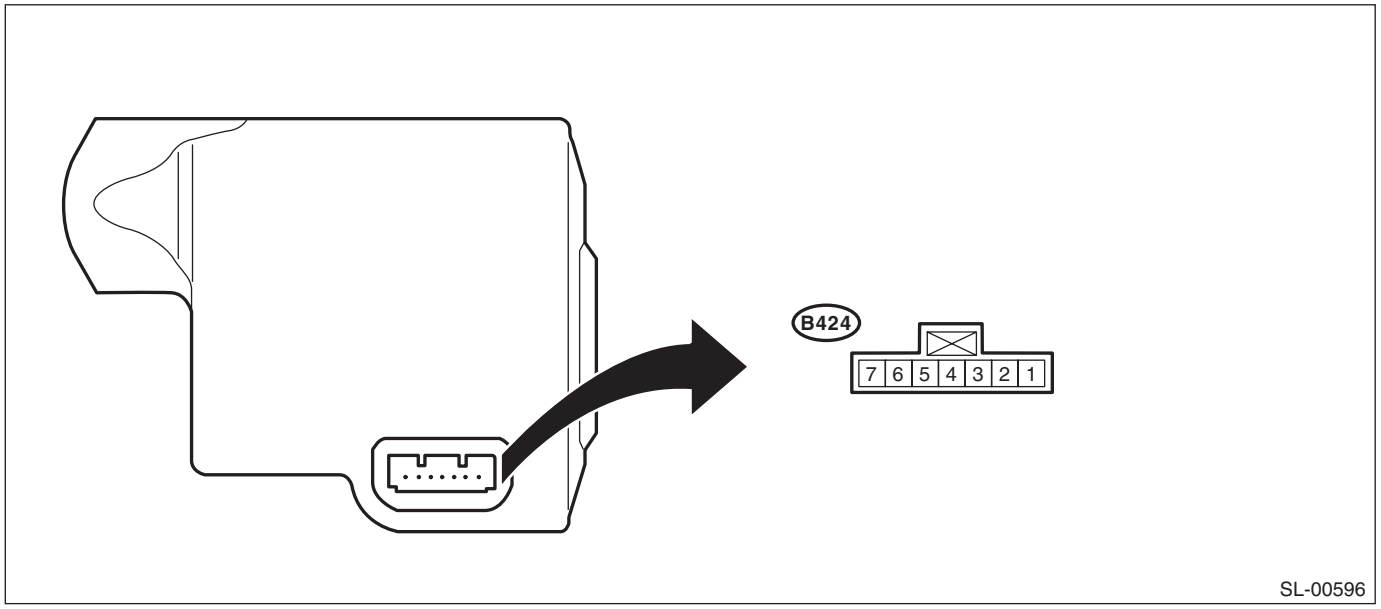
NOTE:
Disconnect the control module connector before checking the following items.

Terminal No.	Standard	Measuring condition	Item
1 (+B) ←→ 5 (GND)	10 — 14 V	Always	Voltage
4 (IMO1) ←→ 5 (GND)	0 V	Ignition OFF	Voltage
5 (GND) ←→ Chassis ground	Continuity exists	Always	Continuity

NOTE:
Connect the control module connector before checking the following items.

Terminal No.	Standard	Measuring condition	Item
4 (IMO1) ←→ 5 (GND)	0 V	Ignition OFF	Voltage
4 (IMO1) ←→ 5 (GND)	Waveform 1	Ignition ON	Voltage

Waveform 1



Item	Contents
Measured terminal	4 (IMO1) ←→ 5 (GND)
Equipment setting	5 V/DIV, 100 ms/DIV
Measuring condition	Ignition ON

3. BODY INTEGRATED UNIT

Refer to the BODY CONTROL SYSTEM (DIAGNOSTICS) for the I/O Signal of the body integrated unit. <Ref. to BC(diag)-6, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

4. STEERING LOCK CM

Terminal No.	Terminal symbol	Contents
(B424) No. 1	GND	GND
(B424) No. 3	SLR+	Steering lock motor drive power supply
(B424) No. 4	SLP	Unlock position output
(B424) No. 5	LIN	LIN communication
(B424) No. 6	IG2	IGN power supply
(B424) No. 7	B	+B

NOTE:
Perform the following check from the back side of the connector, with the connector of the control module connected.
If the measured value is out of standard, it is possible that the vehicle has a fault.

Terminal No.	Standard	Measuring condition	Item
1 (GND) ←→ Chassis ground	Continuity exists	Always	Continuity
—	—	—	—
3 (SLR+) ←→ Chassis ground	10 — 14 V → 1 V or less	Motor not operating → Motor operating	Voltage
4 (SLP) ←→ Chassis ground	10 — 14 V → 1 V or less	Lock → Unlock	Voltage
5 (LIN)	Input/output signal	—	—
6 (IG2) ←→ Chassis ground	10 — 14 V	Ignition ON	Voltage
7 (B) ←→ Chassis ground	10 — 14 V	Always	Voltage

B: WIRING DIAGRAM

- Refer to “Keyless Access System” in the wiring diagram. <Ref. to WI(w/o HEV)-157, WIRING DIAGRAM, Keyless Access System.> <Ref. to WI(HEV)-139, WIRING DIAGRAM, Keyless Access System.>
- Refer to “Push Button Start System” in WI section. <Ref. to WI(w/o HEV)-186, WIRING DIAGRAM, Push Button Start System.> <Ref. to WI(HEV)-165, WIRING DIAGRAM, Push Button Start System.>

6. Subaru Select Monitor

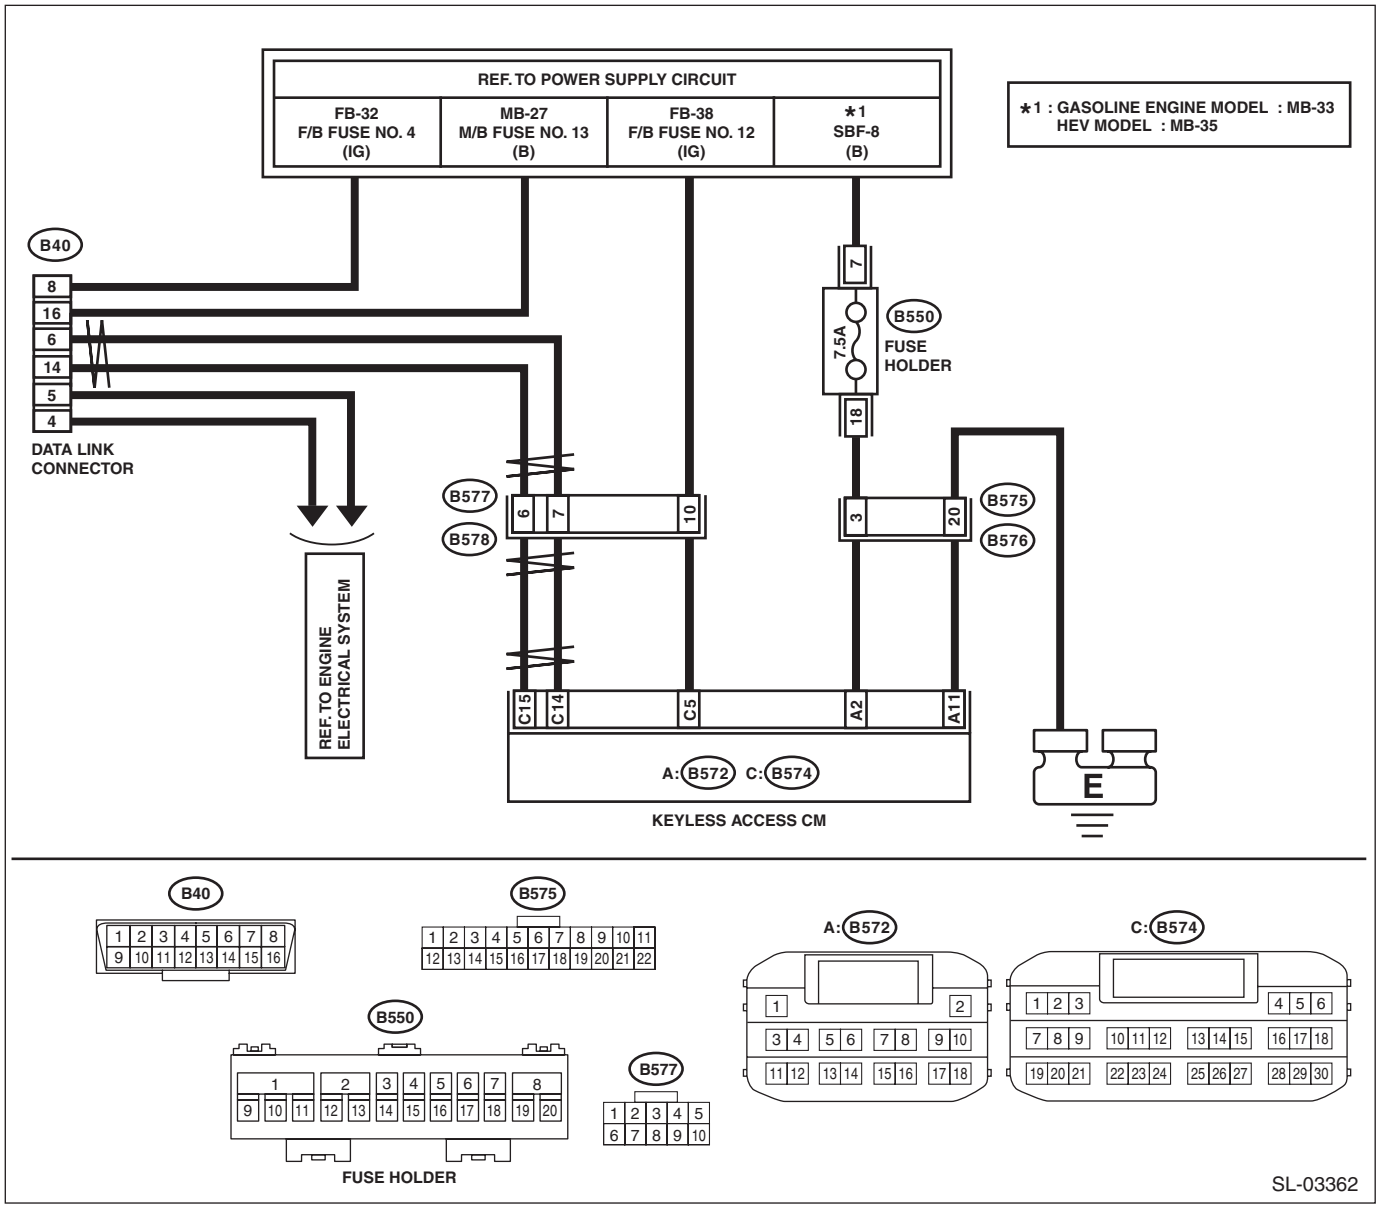
A: OPERATION

For detailed operation procedures, refer to “Application help”.

B: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

NOTE:
Confirm that the LAN system is working properly before the diagnosis.
Subaru Select Monitor communication line is open or shorted.

DETECTING CONDITION:



- Defective harness
- Power supply circuit malfunction
- Defective keyless access CM
- Defective CAN communication circuit
- Defective Subaru Select Monitor

TROUBLE SYMPTOM:

Not communicable with Subaru Select Monitor.

WIRING DIAGRAM:

- Push button start system <Ref. to WI(w/o HEV)-186, WIRING DIAGRAM, Push Button Start System.> <Ref. to WI(HEV)-165, WIRING DIAGRAM, Push Button Start System.>
- CAN communication system <Ref. to WI(w/o HEV)-69, WIRING DIAGRAM, CAN Communication System.> <Ref. to WI(HEV)-60, WIRING DIAGRAM, CAN Communication System.>

Step		Check	Yes	No
1	**CHECK OTHER COMMUNICATION.** Communicate with the system other than the keyless access system using the Subaru Select Monitor.	Is the communication to other control module possible?	Go to step **2**.	Perform the "Communication for Initializing Impossible" of LAN system. <Ref. to LAN(HEV)(diag)-12, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>

Step		Check	Yes	No
2	**CHECK DTC.** Read the DTC of the LAN system using the Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-31, Read Diagnostic Trouble Code (DTC).>	Is DTC detected?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK KEYLESS ACCESS CM.** 1) Turn the ignition switch to OFF. 2) Disconnect the keyless access CM connector. 3) Connect the disconnected connectors. 4) Perform communication with the keyless access system using the Subaru Select Monitor.	Is communication possible?	It is possible that temporary poor communication occurs.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Keyless Access with Push Button Start» and then select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to KPS(diag)-38, List of Diagnostic Trouble Code (DTC).>

8. Read Current Data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Keyless Access with Push Button Start» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

1. Keyless access system

Items to be displayed	Unit of measure	Contents	Note
Driver’s unlock touch sensor switch	ON/OFF	Keyless access CM input value	ON when the touch sensor (unlock) built on the back surface of the driver’s door outer handle is touched
Passenger’s unlock touch sensor switch	ON/OFF	Keyless access CM input value	ON when the touch sensor (unlock) built on the back surface of the passenger’s door outer handle is touched
Driver's lock touch sensor SW	ON/OFF	Keyless access CM input value	ON when the touch sensor (lock) built on the surface of the driver’s door outer handle is touched
Passenger's lock touch sensor SW	ON/OFF	Keyless access CM input value	ON when the touch sensor (lock) built on the surface of the passenger’s door outer handle is touched
Rear Gate Request SW	ON/OFF	Keyless access CM input value	ON when rear lock button is pressed (5 door models only)
Trunk Request SW	ON/OFF	Keyless access CM input value	ON when the trunk opener button is pressed (4 door models only)
Secret code Keyless registration	Unregistered/Registered	Keyless access CM input value	Registered when secret code keyless registration
IGN SW	ON/OFF	Keyless access CM input value	ON when ignition is ON
B/up fuse	Connecting/Not connected	Keyless access CM internal value	When backup fuse is connected/connecting
ACC SW	ON/OFF	Keyless access CM input value	ON when accessory or ignition is ON
Incorrect vehicle ID	Yes/No	Keyless access CM internal value	Yes when the access key is different when keyless access is performed
No response	Yes/No	Keyless access CM internal value	Yes when there is no response from the access key when keyless access is performed
Incorrect response code, format	Yes/No	Keyless access CM internal value	Yes if the response from the access key differs when keyless access is performed
Battery consumption	Yes/No	Keyless access CM internal value	Yes if the access key battery is depleted
Incorrect response code, ID code	Yes/No	Keyless access CM internal value	Yes if the response from the access key differs when keyless access is performed
Incorrect response code, collation result	Yes/No	Keyless access CM internal value	Yes if the response from the access key differs when keyless access is performed
Incorrect ID code	Yes/No	Keyless access CM internal value	Yes if the response from the access key differs when keyless access is performed
Incorrect rolling code	Yes/No	Keyless access CM internal value	Yes if the response from the access key differs when keyless access is performed

Items to be displayed	Unit of measure	Contents	Note
Smart Cancel	Cancel/Normal	Keyless access CM internal value	Cancel in the keyless access function stopped condition
Simple Smart system cancel	Cancel/Normal	Keyless access CM internal value	Cancel in the simple cancel function set condition
ID Code Box W/H Connection State	Connecting/Not connected	Keyless access CM internal value	Connecting status of the terminal (B573) No. 15
ID Code Box Existence Judging	ON/OFF/Existence Judging	Keyless access CM internal value	Normal «Existence Judging»
Immobilizer	Set/Unset	Keyless access CM internal value	Set when the immobilizer is set
Remote engine starter communication ID confirmation	Collation NG/Collation OK	Keyless access CM internal value	Collation OK when using a registered remote control engine starter
Remote engine starter code registration confirmation	Unregistered/Registered	Keyless access CM internal value	Registered when the code is registered
STLC sleep possible status	Possible/Impossible	Steering lock CM internal value	Possible when sleep is possible
STLC wake-up transmission status	Transmission/No transmission	Steering lock CM internal value	Transmission when the wake-up signal is transmitted
Lock side sensor status	ON/OFF	Steering lock CM internal value	OFF in an unlocked status
Unlock side sensor status	ON/OFF	Steering lock CM internal value	OFF in an unlocked status
Lock confirmation	Confirmed/Unconfirmed	Steering lock CM internal value	Confirmed when steering lock is locked
Unlock confirmation	Confirmed/Unconfirmed	Steering lock CM internal value	Confirmed when steering lock is unlocked
Sensor initialization	complete/incomplete	Steering lock CM internal value	Completed when sensor initial operation is completed
Motor protection control status	Rejected range/Permitted range	Steering lock CM internal value	Rejected range when motor protection control is not activated
Motor operation prohibition voltage evaluation	ON/OFF	Steering lock CM internal value	Prohibition when motor operation is prohibited
Diagnosis response	Normal/response	Steering lock CM internal value	Response when diagnostic communication is in progress
Sensor abnormal	Normal/Abnormal	Steering lock CM internal value	Abnormal when a trouble occurs in steering lock CM
Motor power supply short-circuit abnormal	Normal/Abnormal	Steering lock CM internal value	Abnormal when a trouble occurs in steering lock CM
Motor driver short-circuit abnormal	Normal/Abnormal	Steering lock CM internal value	Abnormal when a trouble occurs in steering lock CM
Lock bar engagement abnormal	Normal/Abnormal	Steering lock CM internal value	ON when the steering lock bar has experienced interference
Push start abnormal	Normal/Abnormal	Steering lock CM internal value	Abnormal when a trouble occurs in steering lock CM
Lock side relay operation	Stopped/Operating	Steering lock CM internal value	Operating in an unlock → lock status
Unlock side relay operation	Stopped/Operating	Steering lock CM internal value	Operating in an lock → unlock status
Motor drive FET drive	Stopped/Operating	Steering lock CM internal value	Operating when motor drive FET is operating
Motor reversal protection control	Stopped/Operating	Steering lock CM internal value	Operating when motor drive FET is operating
Engine start	Engine start permission/Engine start prohibition	Steering lock CM internal value	Permission when ignition ON

Items to be displayed	Unit of measure	Contents	Note
Sensor abnormal (past)	Normal/Abnormal	Steering lock CM internal value	Abnormal when a trouble occurs in steering lock CM
Motor power supply short-circuit abnormal (past)	Normal/Abnormal	Steering lock CM internal value	Abnormal when a trouble occurs in steering lock CM
Motor driver short-circuit abnormal (past)	Normal/Abnormal	Steering lock CM internal value	Abnormal when a trouble occurs in steering lock CM
Steering lock lock/unlock command reception history	ON (keep 10 sec)/OFF	Steering lock CM internal value	ON when steering lock is locked → unlocked, unlocked → locked
Lock bar engagement abnormal (past)	ON/OFF	Steering lock CM internal value	ON when the steering lock bar has experienced interference in the past
Push start abnormal (past)	Normal/Abnormal	Steering lock CM internal value	Abnormal when a trouble occurs in steering lock CM
STLC Abnormal EEPROM access	Normal/Abnormal	Steering lock CM internal value	Abnormal when a trouble occurs in steering lock CM
ID code BOX sleep possible status	Impossible/Possible	Keyless access CM internal value (models without ID code box) or ID code box internal value (models with ID code box)	Possible when sleep is possible
ID code BOX wake-up transmission status	No transmission/Transmission	Keyless access CM internal value (models without ID code box) or ID code box internal value (models with ID code box)	Transmission when the wake-up signal is transmitted
ID code BOX Abnormal EEPROM access (now)	Normal/Abnormal	Keyless access CM internal value (models without ID code box) or ID code box internal value (models with ID code box)	Abnormal when the ID code box is malfunctioning
EGI code reception status	Receive/Not yet received	Keyless access CM internal value (models without ID code box) or ID code box internal value (models with ID code box)	Reception at engine start operation
Engine start permission request reception status	Receive/Not yet received	Keyless access CM internal value (models without ID code box) or ID code box internal value (models with ID code box)	Reception at ignition ON
Provisional injection request reception status	Receive/Not yet received	Keyless access CM internal value (models without ID code box) or ID code box internal value (models with ID code box)	Reception at ignition ON
Code collation result between smart ECM and ID code box	Normal/Abnormal	Keyless access CM internal value (models without ID code box) or ID code box internal value (models with ID code box)	Normal when engine start is allowed
Code collation result between steering locked ECM and ID code box	Normal/Abnormal	Keyless access CM internal value (models without ID code box) or ID code box internal value (models with ID code box)	Normal when steering lock operation allowed

Items to be displayed	Unit of measure	Contents	Note
Steering lock unlock request reception status	Reception (keep 10 sec)/Not yet received	Keyless access CM internal value (models without ID code box) or ID code box internal value (models with ID code box)	Reception when steering lock is performing unlock
Steering lock lock request reception status	Reception (keep 10 sec)/Not yet received	Keyless access CM internal value (models without ID code box) or ID code box internal value (models with ID code box)	Reception when steering lock is performing lock
Driver's external transmitter output circuit abnormal	Normal/Abnormal	Keyless access CM internal value	Abnormal when a trouble occurs in transmitter output circuit
Passenger's external transmitter output circuit abnormal	Normal/Abnormal	Keyless access CM internal value	Abnormal when a trouble occurs in transmitter output circuit
Driver's external transmitter output circuit abnormal (past)	Normal/Abnormal	Keyless access CM internal value	Abnormal when a trouble occurs in transmitter output circuit in the past
Passenger's external transmitter output circuit abnormal (past)	Normal/Abnormal	Keyless access CM internal value	Abnormal when a trouble occurs in transmitter output circuit in the past
ID code registration mode status	Normal/Register/Deletion	—	For immobilizer registration
Smart related ECM code registration mode status	On mode/Normal		
ID code collation completion confirmation	complete/Normal		
ID code registration completion confirmation	complete/Normal		
Smart related ECM code registration completion confirmation	complete/Normal		
Registered smart key confirmation status	Confirming/Normal		
Smart related ECM code confirmation status	Confirming/Normal		
ID code registration status	Registering/Normal		
ID code collation status	Normal/Collating the immobilizer/Collating the smart		
All registered keys confirmation status	Confirming/Normal		
Confirmed number of all registered keys	0 — 7		
Number of required registrations (smart)	0 — 7		
Number of collation completed (smart)	0 — 7		
Number of registration completed (smart)	0 — 7	Keyless access CM internal value	Number of recognized keyless access CM
ID Code Box	Connecting/Not connected	Keyless access CM internal value	Connecting with ID code box normal connection
Steering Lock ECM	Connecting/Not connected	Keyless access CM internal value	Connecting with steering lock CM normal connection

Items to be displayed	Unit of measure	Contents	Note
Driver's lock request SW/touch sensor switch ON edge record	ON/OFF	Keyless access CM internal value	The display is continued when the collation is once established by the combination indicated on the left. NOTE: When confirming the data on the left, confirm after performing Keyless access system check. <Ref. to KPS(diag)-36, Keyless Access System Check.>
Passenger's unlock request SW/touch sensor switch ON edge record	ON/OFF	Keyless access CM internal value	
Rear gate lock request SW ON edge history	ON/OFF	Keyless access CM internal value	
Driver's unlock touch sensor switch ON edge record	ON/OFF	Keyless access CM internal value	
Passenger's unlock touch sensor switch ON edge record	ON/OFF	Keyless access CM internal value	
Trunk unlock request SW ON edge history	ON/OFF	Keyless access CM internal value	
Collation OK result history (driver's external transmitter + interior tuner)	ON/OFF	Keyless access CM internal value	
Collation OK result history (passenger's external transmitter + interior tuner)	ON/OFF	Keyless access CM internal value	
Collation OK result history (front interior transmitter + interior tuner)	ON/OFF	Keyless access CM internal value	
Collation OK result history (rear interior transmitter + interior tuner)	ON/OFF	Keyless access CM internal value	
Collation OK result history (trunk internal transmitter + interior tuner)	ON/OFF	Keyless access CM internal value	
Collation OK result history (trunk external transmitter + interior tuner)	ON/OFF	Keyless access CM internal value	
Collation OK result history (rear gate internal transmitter + interior tuner)	ON/OFF	Keyless access CM internal value	
Collation OK result history (rear gate external transmitter + interior tuner)	ON/OFF	Keyless access CM internal value	
Collation OK result history (immobilizer amplifier + immobilizer amplifier)	ON/OFF	Keyless access CM internal value	
Push start SW 1	ON/OFF	Keyless access CM input value	ON when push button start is pressed
Push start SW 2	ON/OFF	Keyless access CM input value	ON when push button start is pressed
Stop Light Switch	ON/OFF	Keyless access CM input value	ON when brake pedal is depressed
Steering unlock SW	ON/OFF	Keyless access CM input value	OFF when steering locked
Shift P signal(AT only)	ON/OFF	Keyless access CM input value	ON when the shift position is "P"
Neutral SW/Clutch SW	ON/OFF	Keyless access CM output value	ON when the shift position is at "P" or "N"
Shift N signal(AT only)	ON/OFF	Keyless access CM input value	ON when the shift position is "N"
Delivery mode signal(AT only)	ON/OFF	Keyless access CM input value	OFF when in other than the delivery mode

Items to be displayed	Unit of measure	Contents	Note
IGN2 relay monitor (drive output)	ON/OFF	Keyless access CM output value	ON during IG relay 2 (push button start) drive output
IGN1 relay monitor (drive output)	ON/OFF	Keyless access CM output value	ON during IG relay 1 (push button start) drive output
ACC relay monitor	ON/OFF	Keyless access CM output value	ON during accessory relay (push button start) drive output
IGN2 relay monitor (coil voltage)	ON/OFF	Keyless access CM output value	ON during IG relay 2 (push button start) drive output
IGN1 relay monitor (coil voltage)	ON/OFF	Keyless access CM output value	ON during IG relay 1 (push button start) drive output
IGN latch monitor	ON/OFF	Keyless access CM output value	ON during IG relay 2 (push button start) drive output
STSW signal monitor	ON/OFF	Keyless access CM output value	ON when brake pedal is depressed and push button ignition switch is pressed
ACCR signal	ON/OFF	Keyless access CM input value	ON during starter relay drive output
Vehicle Speed Signal	Drive status/Stop status	Keyless access CM input value	Driving status when vehicle speed is input
Engine Speed	Rotating/Stopped	Keyless access CM input value	Rotating while the engine is running
Power Supply Condition	All OFF status	Keyless access CM output value	Displayed when IG relay 1 (push button start), IG relay 2 (push button start), and accessory relay (push button start) are all OFF
	ACC relay ON status	Keyless access CM output value	Displayed when accessory ON
	IGN1 relay ON status	Keyless access CM output value	Displayed when ignition ON
	IGN2 relay ON status	Keyless access CM output value	Displayed when ignition ON
	STSW Condition	Keyless access CM output value	Displayed when brake pedal is depressed, and push button ignition switch is pressed
Vehicle identification	GAS MT/GAS AT/HEV AT/Auto Start Stop MT/Auto Start Stop AT	Keyless access CM output value	Equipped vehicle is displayed.
IGN1 external circuit abnormal	Not Detect/Detect	Keyless access CM output value	Detect when IGN1 external circuit is faulty
IGN2 external circuit abnormal	Not Detect/Detect	Keyless access CM output value	Detect when IGN2 external circuit is faulty
Start SW trouble	Not Detect/Detect	Keyless access CM output value	Detect when start SW is faulty
P signal mismatch	Not Detect/Detect	Keyless access CM output value	Detect when shift P signal is abnormal
Steering lock unlock waiting time out	Not Detect/Detect	Keyless access CM output value	Detect when the steering lock release time out occurred
Key collation waiting time out	Not Detect/Detect	Keyless access CM output value	Detect when the key collation time out occurred

2. Body integrated unit

Refer to the BODY CONTROL SYSTEM (DIAGNOSTICS) for the current data of the body integrated unit. <Ref. to BC(diag)-12, LIST, Read Current Data.>

9. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Keyless Access with Push Button Start» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- Initial diagnosis of electronic throttle control is performed after memory clearance. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.

10.Keyless Access System Check

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Keyless Access with Push Button Start» and then select «Enter».
5) On «Select Function» display, select «Work Support».
6) On «Work Support» display, select «Keyless access system check».
7) Select a transmitter to be checked.

Data	Customize setting	Remarks
Keyless access system check	Driver side external transmitter - internal tuner	When the setting content on the left is selected, the access key is neared to the selected transmitter (access antenna) and collation matches, the buzzer will sound.
	Passenger side external transmitter - internal tuner	
	Fr internal transmitter - internal tuner	
	Rr internal transmitter - internal tuner	
	Trunk-internal transmitter - trunk-internal tuner	
	Trunk-external transmitter - trunk-internal tuner	
	R gate internal transmitter - internal tuner	
	R gate external transmitter - internal tuner	
	Immobilizer amplifier transmission	
Collation result history Clear	Operate	
	—	

NOTE:
For detailed operation procedures, refer to “Application help”.

11.System Operation Check Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Keyless Access with Push Button Start» and then select «Enter».
5) On «Select Function» display, select «Active Test».
6) Select a location to be inspected.

NOTE:
Each output check continues to run for five seconds before stopping automatically.

Data	Keyless access CM output check	Remarks
Tuner power supply ON (indoor tuner)	Output	Perform the power supply check for the receiver.
	Stop	
Driver's external transmitter	Output	Perform the output check for the driver's side door outside antenna.
	Stop	
Passenger's external transmitter	Output	Perform the output check for the passenger's side door outside antenna.
	Stop	
STSW	Output	Turn on the STSW. *2
	Stop	
IGN2	Output	Turn on the IGN2.
	Stop	
IGN1	Output	Turn on the IGN1.
	Stop	
ACC	Output	Turn on the ACC.
	Stop	
Start SW character illumination lighted	Output	Perform ON output of the push button ignition switch back-up light. *1
	Stop	
Start SW indicator lighted (green)	Output	Perform ON output of the push button ignition switch back-up light. *1
	Stop	
Start SW indicator lighted (orange)	Output	Perform ON output of the push button ignition switch back-up light. *1
	Stop	
Steering lock power supply	Output	Output power supply signal from power supply CM to steering lock CM.
	Stop	

*1: When lit by a condition other than for a system operation check mode, it will not become unlit even when set to OFF or no output.
*2: When performed with ignition switch ON, engine will start. Therefore, great care must be exercised.

NOTE:
For detailed operation procedures, refer to “Application help”.

12.List of Diagnostic Trouble Code (DTC)

A: LIST

1. Keyless access system

DTC	Item	Content of diagnosis	Note
U0073	CONTROL MODULE COMMUNICATION BUS OFF	Detected when CAN line abnormality is detected.	<Ref. to KPS(diag)-43, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0100	LOST COMMUNICATION WITH ECM/PCM “A”	Detected when CAN data from the engine control module (ECM) does not arrive.	<Ref. to KPS(diag)-43, DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0101	LOST COMMUNICATION WITH TCM	Detected when CAN data from TCM does not arrive.	<Ref. to KPS(diag)-43, DTC U0101 LOST COMMUNICATION WITH TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0122	LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE	Detected when CAN data from VDC does not arrive.	<Ref. to KPS(diag)-43, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0140	LOST COMMUNICATION WITH BODY CONTROL MODULE	Detected when CAN data from BIU does not arrive.	<Ref. to KPS(diag)-43, DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	Detected when CAN data from meter does not arrive.	<Ref. to KPS(diag)-43, DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0401	INVALID DATA RECEIVED FROM ECM/PCM “A”	Detected when there is malfunction in CAN data from the engine control module (ECM).	<Ref. to KPS(diag)-43, DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE	Detected when CAN data from BIU is abnormal.	<Ref. to KPS(diag)-43, DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1120	LOST COMMUNICATION WITH AUTOSTART STOP CONTROL MODULE	Detected when CAN data from hybrid system or from Auto Start Stop system does not arrive.	<Ref. to KPS(diag)-44, DTC U1120 LOST COMMUNICATION WITH AUTOSTART STOP CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1242	WIRELESS TUNER	When short circuit occurs in harness between keyless access CM and receiver.	<Ref. to KPS(diag)-45, DTC B1242 WIRELESS TUNER, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2271	IGN RELAY CONTROL CIRCUIT	• When malfunction is detected in IG1 and IG2 drive circuits in the keyless access CM. • When malfunction is detected in IG hold circuit in the keyless access CM.	<Ref. to KPS(diag)-47, DTC B2271 IGN RELAY CONTROL CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2274	ACC RELAY CONTROL CIRCUIT	When malfunction is detected in ACC relay drive circuit in the keyless access CM or external circuit.	<Ref. to KPS(diag)-49, DTC B2274 ACC RELAY CONTROL CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Note
B2275	ENGINE START REQUEST CONTROL CIRCUIT	• When malfunction is detected in engine start permission signal output circuit in the keyless access CM. • When malfunction is detected in external engine start permission signal circuit.	<Ref. to KPS(diag)-51, DTC B2275 ENGINE START REQUEST CONTROL CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2276	ACC RELAY OFF SIGNAL	When input error occurs in accessory relay cut input signal of keyless access CM.	<Ref. to KPS(diag)-53, DTC B2276 ACC RELAY OFF SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2277	SUBMERGING CIRCUIT	When the water-submersion detection circuit integrated into the keyless access CM detects the water submersion.	<Ref. to KPS(diag)-55, DTC B2277 SUBMERGING CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2282	VEHICLE SPEED SIGNAL CORRELATION	When the vehicle speed signal transmitted from VDC via solid line and the vehicle speed signal transmitted via CAN communication line do not match.)	<Ref. to KPS(diag)-56, DTC B2282 VEHICLE SPEED SIGNAL CORRELATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2283	VEHICLE SPEED SENSOR	Either of the following malfunctions is detected. (Vehicle speed sensor failure is detected.) • Vehicle speed signal failure detection 1: Excessive deceleration detection • Vehicle speed signal failure detection 2: Engine speed interlock detection	<Ref. to KPS(diag)-58, DTC B2283 VEHICLE SPEED SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2284	BRAKE SIGNAL CORRELATION	When the brake signal transmitted via solid line and the brake signal transmitted via CAN communication line do not match.	<Ref. to KPS(diag)-60, DTC B2284 BRAKE SIGNAL CORRELATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2285	STEERING LOCK POSITION SIGNAL CORRELATION	When the steering lock position signal transmitted from the steering lock CM via solid line and the steering lock position signal transmitted via LIN communication system do not match.	<Ref. to KPS(diag)-63, DTC B2285 STEERING LOCK POSITION SIGNAL CORRELATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2286	ENGINE SPEED SIGNAL(WITHOUT Auto Start Stop)	When the engine speed signal transmitted from the ECM via solid line and the engine speed signal transmitted via CAN communication line do not match.	<Ref. to KPS(diag)-66, DTC B2286 ENGINE SPEED SIGNAL(WITHOUT Auto Start Stop), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Note
B228A	ENGINE SPEED SIGNAL(WITH Auto Start Stop)	When the engine speed signal transmitted from the ECM via solid line and the engine speed signal transmitted via CAN communication line do not match.	<Ref. to KPS(diag)-68, DTC B228A ENGINE SPEED SIGNAL(WITH Auto Start Stop), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2779	REMOTE CONTROL ENGINE STARTER COLLATION	When the keyless access CM does not respond to engine start even when the remote control engine starter is ON, or when there is a code mismatch.	<Ref. to KPS(diag)-70, DTC B2779 REMOTE CONTROL ENGINE STARTER COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2781	STEERING LOCK CM CONTROL CIRCUIT	• When malfunction is detected in lock/unlock position detection sensor. • When the open or short circuit in the steering lock motor drive circuit is detected.	<Ref. to KPS(diag)-70, DTC B2781 STEERING LOCK CM CONTROL CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2782	STEERING LOCK DRIVE REQUEST SIGNAL CORRELATION	When the open or short circuit in the steering lock motor power supply circuit is detected.	<Ref. to KPS(diag)-71, DTC B2782 STEERING LOCK DRIVE REQUEST SIGNAL CORRELATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2784	ANTENNA CIRCUIT (PUSH ENGINE SWITCH)	When open or short circuit occurs in the antenna coil.	<Ref. to KPS(diag)-73, DTC B2784 ANTENNA CIRCUIT (PUSH ENGINE SWITCH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2785	LIN COMMUNICATION	When the keyless access CM detects the collation system LIN bus communication error three times in a row.	<Ref. to KPS(diag)-75, DTC B2785 LIN COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2786	STEERING LOCK CM COMMUNICATION	When communication between keyless access CM and steering lock CM is interrupted for a set amount of time.	<Ref. to KPS(diag)-77, DTC B2786 STEERING LOCK CM COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2788	IGN SIGNAL CORRELATION (STEERING LOCK CM)	When mismatch occurs in the IG1 input of the steering lock CM between LIN communication line input and solid line input.	<Ref. to KPS(diag)-79, DTC B2788 IGN SIGNAL CORRELATION (STEERING LOCK CM), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2789	ID CODE BOX COMMUNICATION	• When communication between keyless access CM and ID code box is interrupted for a set amount of time. • Open or short circuit in the wiring harness between keyless access CM and ID code box.	<Ref. to KPS(diag)-81, DTC B2789 ID CODE BOX COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B278A	PUSH ENGINE SWITCH POWER SUPPLY CIRCUIT	When the power supply circuit of the push button ignition switch is shorted to ground.	<Ref. to KPS(diag)-83, DTC B278A PUSH ENGINE SWITCH POWER SUPPLY CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Note
B278D	ID CODE BOX JUDGMENT CIRCUIT	• When ID code box ON input is detected while the ID code box setting is set to OFF. • When ID code box LIN signal is received while the ID code box setting is set to OFF.	<Ref. to KPS(diag)-85, DTC B278D ID CODE BOX JUDGMENT CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2790	ID CODE BOX CIRCUIT	An error has occurred inside the ID code box.	<Ref. to KPS(diag)-86, DTC B2790 ID CODE BOX CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B27A1	DRIVER SIDE EXTERNAL ANTENNA OPEN	When open circuit occurs in the harness between keyless access CM and driver's side front door outer handle.	<Ref. to KPS(diag)-87, DTC B27A1 DRIVER SIDE EXTERNAL ANTENNA OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B27A2	PASSENGER SIDE EXTERNAL ANTENNA OPEN	When open circuit occurs in the harness between keyless access CM and passenger's side front door outer handle.	<Ref. to KPS(diag)-89, DTC B27A2 PASSENGER SIDE EXTERNAL ANTENNA OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B27A5	FRONT INTERNAL ANTENNA OPEN	When open circuit occurs in the harness between keyless access CM and front interior antenna.	<Ref. to KPS(diag)-91, DTC B27A5 FRONT INTERNAL ANTENNA OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B27A6	REAR INTERNAL ANTENNA OPEN	When open circuit occurs in the harness between keyless access CM and rear interior antenna.	<Ref. to KPS(diag)-93, DTC B27A6 REAR INTERNAL ANTENNA OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B27A7	TRUNK/REAR GATE INTERNAL ANTENNA OPEN	When open circuit occurs in the harness between keyless access CM and rear interior antenna.	<Ref. to KPS(diag)-95, DTC B27A7 TRUNK/REAR GATE INTERNAL ANTENNA OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B27A8	TRUNK/REAR GATE EXTERNAL ANTENNA OPEN	When open circuit occurs in the harness between keyless access CM and rear exterior antenna.	<Ref. to KPS(diag)-98, DTC B27A8 TRUNK/REAR GATE EXTERNAL ANTENNA OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

2. Immobilizer (ECM)

DTC	Item	Content of diagnosis	Note
B1571	REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM)	Reference code mismatch occurs between keyless access CM (model without ID code box) or ID code box (model with ID code box) and ECM.	<Ref. to KPS(diag)-100, DTC B1571 REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1572	IMM CIRCUIT EXCEPT ANTENNA CIRCUIT	Communication error occurs between keyless access CM (model without ID code box) or ID code box (model with ID code box) and ECM.	<Ref. to KPS(diag)-101, DTC B1572 IMM CIRCUIT EXCEPT ANTENNA CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1576	EGI CONTROL MODULE EEPROM	ECM malfunctioning	<Ref. to KPS(diag)-105, DTC B1576 EGI CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1577	IMM CONTROL MODULE EEPROM	Malfunction occurs between keyless access CM (model without ID code box) or ID code box (model with ID code box) and ECM.	<Ref. to KPS(diag)-106, DTC B1577 IMM CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

13.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when CAN line abnormality is detected.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”

Detected when CAN data from the engine control module (ECM) does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

C: DTC U0101 LOST COMMUNICATION WITH TCM

Detected when CAN data from TCM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

D: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

E: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Detected when CAN data from BIU does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

F: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

Detected when CAN data from meter does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

G: DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”

Detected when there is malfunction in CAN data from the engine control module (ECM).

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

H: DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

Detected when CAN data from BIU is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

I: DTC U1120 LOST COMMUNICATION WITH AUTOSTART STOP CONTROL MODULE

Detected when CAN data from hybrid system or from Auto Start Stop system is abnormal.

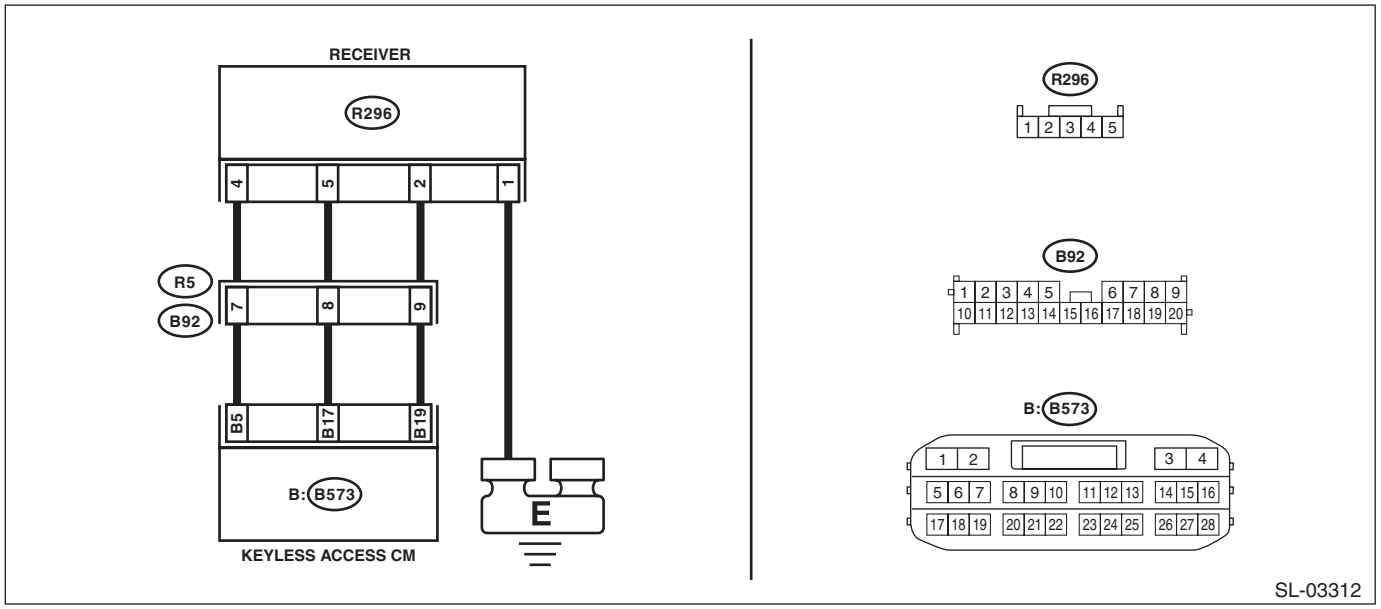
NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

J: DTC B1242 WIRELESS TUNER

DTC DETECTING CONDITION:

When short circuit occurs in harness between keyless access CM and receiver.

TROUBLE SYMPTOM:



- The keyless access with push button start function (except for emergency function) does not operate properly.
- Operation by the access key button does not function.

CAUTION:

- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **When the harness comes close to the receiver, the performance of keyless access system operation and wireless operation may reduce. So, when replacing or inspecting the receiver and harness, do not change the route and length of the surrounding harnesses.**

WIRING DIAGRAM:

Push button start system <Ref. to WI(w/o HEV)-186, WIRING DIAGRAM, Push Button Start System.> <Ref. to WI(HEV)-165, WIRING DIAGRAM, Push Button Start System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Disconnect the receiver connector. 3) Using the tester, measure the resistance between terminals of keyless access CM connector and receiver connector, and keyless access CM and chassis ground. ***Connector & terminal*** ***(B573) No. 19 — (R296) No. 2:*** ***(B573) No. 17 — (R296) No. 5:*** ***(B573) No. 5 — (R296) No. 4:*** ***(R296) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.

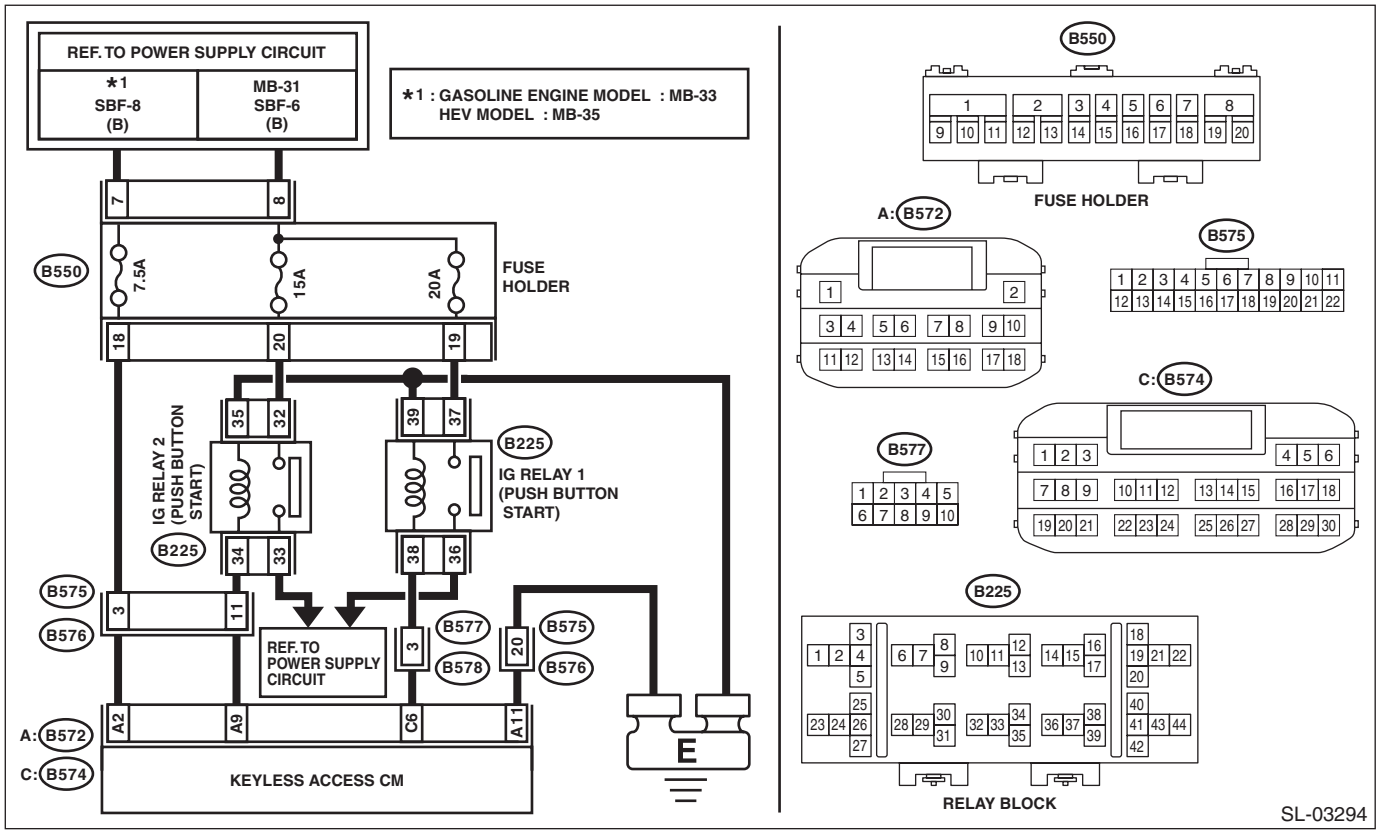
	Step	Check	Yes	No
3	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 19 — Chassis ground:*** ***(B573) No. 17 — Chassis ground:*** ***(B573) No. 5 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK RECEIVER.** 1) Replace the receiver, and then connect it. <Ref. to SL-100, Receiver.> 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-35, Clear Memory Mode.> 3) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B1242 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Receiver has a malfunction.

K: DTC B2271 IGN RELAY CONTROL CIRCUIT

DTC DETECTING CONDITION:

- When malfunction is detected in IG1 and IG2 drive circuits in the keyless access CM.
- When malfunction is detected in IG hold circuit in the keyless access CM.

TROUBLE SYMPTOM:



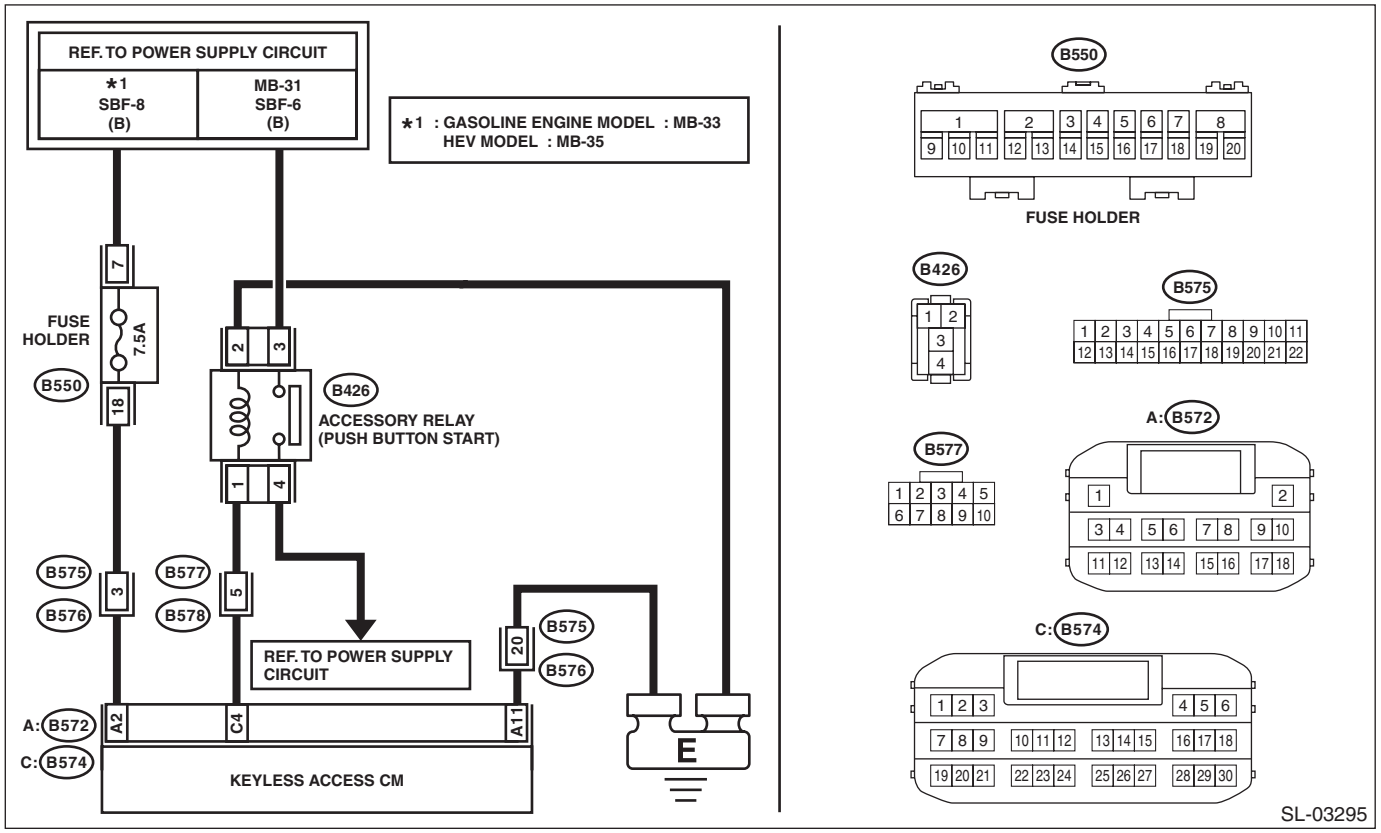
Not all functions operate at IGN ON.

CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

WIRING DIAGRAM:

Push button start system <Ref. to WI(w/o HEV)-186, WIRING DIAGRAM, Push Button Start System.> <Ref. to WI(HEV)-165, WIRING DIAGRAM, Push Button Start System.>



Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK FUSE.** Check the fuse. <Ref. to SL-10, Relay and Fuse.>	Is the fuse OK?	Go to step **3**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 2 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **4**.	Check the power supply circuit.
4	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 9 — Chassis ground:***	Is resistance 74.15 — 460.88 Ω? (20°C)	Go to step **6**.	Check IG relay 2. Go to step **7**.
6	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 6 — Chassis ground:***	Is resistance 50.87 — 72.17 Ω? (20°C)	Go to step **8**.	Check IG relay 1. Go to step **7**.
7	**CHECK RELAY.** Perform unit inspection of IG relay 1 and IG relay 2. <Ref. to SL-11, CHECK RELAY, INSPECTION, Relay and Fuse.>	Is the relay OK?	Go to step **8**.	Replace the relay. <Ref. to SL-111, REMOVAL, IG Relay1 (Push Button Start).> <Ref. to SL-113, REMOVAL, IG Relay2 (Push Button Start).>
8	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Using a tester, measure the voltage between the terminals of keyless access CM connector. ***Connector & terminal*** ***(B574) No. 6 (+) — Chassis ground (–):*** ***(B572) No. 9 (+) — Chassis ground (–):***	Is the voltage 1 V or less → 9.5 — 16 V when ACC → IGN ON?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>

L: DTC B2274 ACC RELAY CONTROL CIRCUIT

DTC DETECTING CONDITION:
When malfunction is detected in ACC relay drive circuit in the keyless access CM or external circuit.
TROUBLE SYMPTOM:
Each function does not operate at the ACC position.

CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
WIRING DIAGRAM:
Push button start system <Ref. to WI(w/o HEV)-186, WIRING DIAGRAM, Push Button Start System.> <Ref. to WI(HEV)-165, WIRING DIAGRAM, Push Button Start System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK FUSE.** Check the fuse. <Ref. to SL-10, Relay and Fuse.>	Is the fuse OK?	Go to step **3**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.

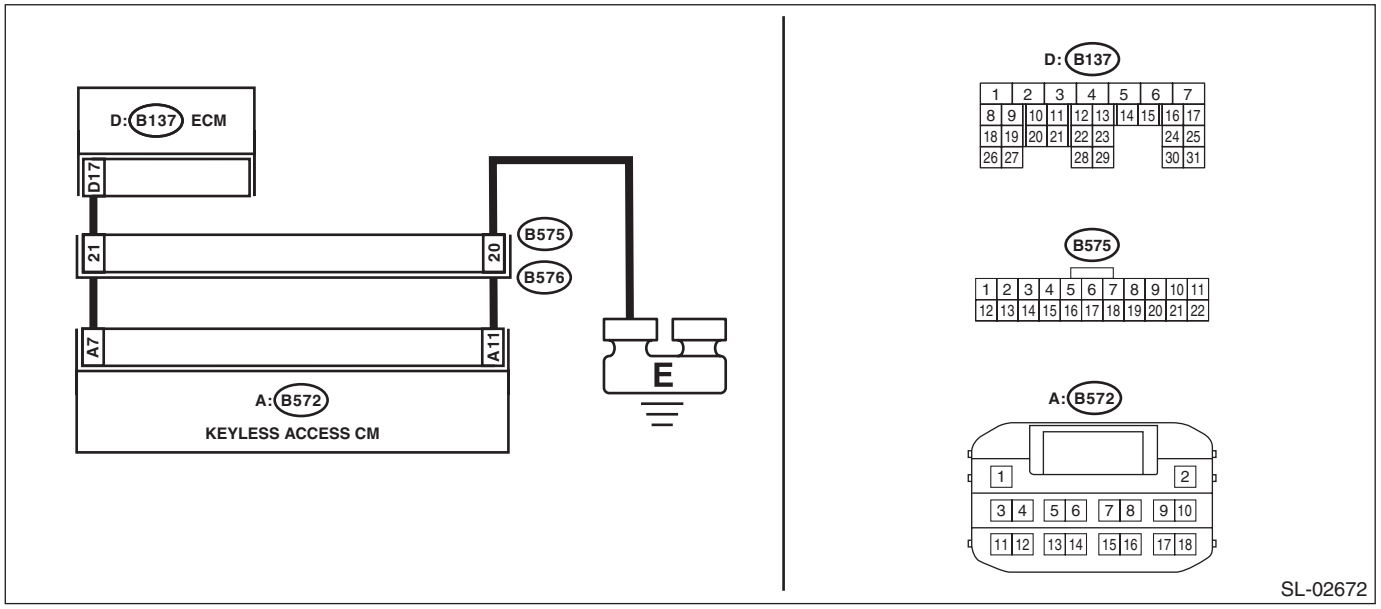
	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 2 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **4**.	Check the power supply circuit.
4	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 4 — Chassis ground:***	Is resistance 152.61 — 216.5 Ω? (20°C)	Go to step **7**.	Go to step **6**.
6	**CHECK RELAY.** Perform inspection of ACC relay unit. <Ref. to SL-115, Accessory Relay (Push Button Start).>	Is the relay OK?	Go to step **7**.	Replace the relay.
7	**CHECK HARNESS.** Using a tester, measure the resistance between keyless access CM connectors. ***Connector & terminal*** ***(B574) No. 4 — (B426) No. 2:*** ***(B426) No. 3 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **8**.	Repair or replace the open circuit of harness.
8	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Using a tester, measure the voltage between keyless access CM connectors. ***Connector & terminal*** ***(B574) No. 4 (+) — Chassis ground (–):***	Is the voltage 1 V or less → 9.5 — 16 V when OFF → ACC ON?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

M: DTC B2275 ENGINE START REQUEST CONTROL CIRCUIT

DTC DETECTING CONDITION:

- When malfunction is detected in engine start permission signal output circuit in the keyless access CM.
- When malfunction is detected in external engine start permission signal circuit.

TROUBLE SYMPTOM:



Engine will not start.

CAUTION:

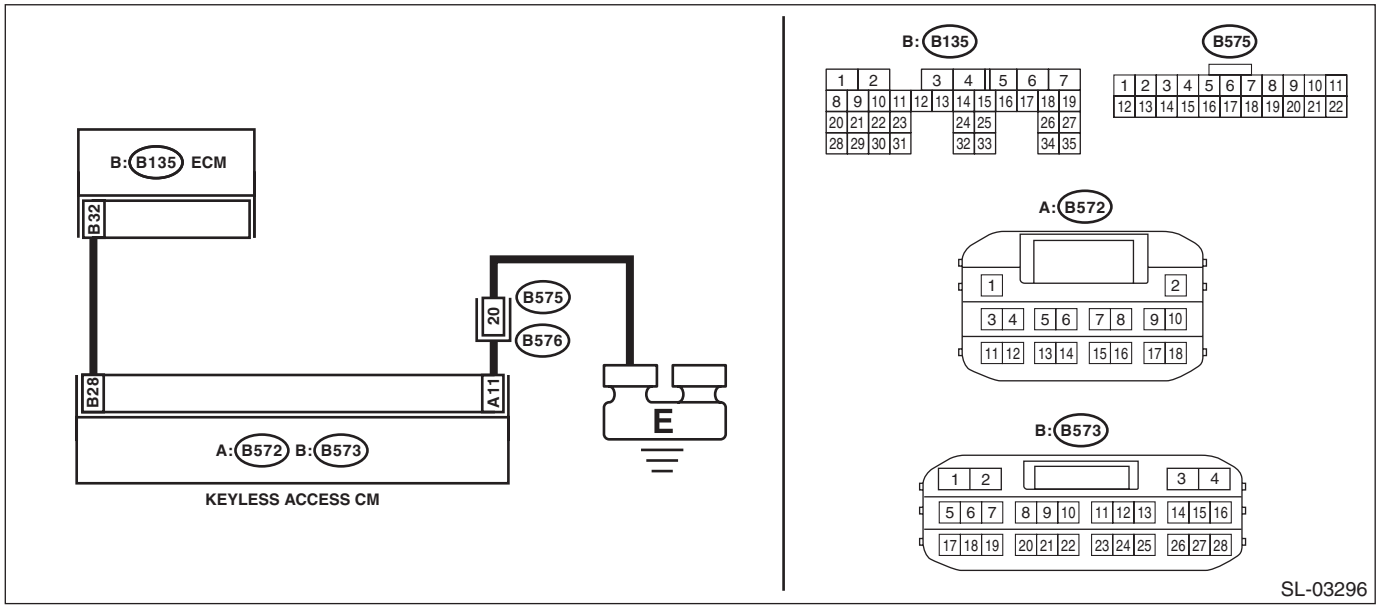
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

WIRING DIAGRAM:

Push button start system <Ref. to WI(w/o HEV)-186, WIRING DIAGRAM, Push Button Start System.> <Ref. to WI(HEV)-165, WIRING DIAGRAM, Push Button Start System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK FUSE.** Check the fuse. <Ref. to SL-10, Relay and Fuse.>	Is the fuse OK?	Go to step **3**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.
3	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector and ECM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and ECM. ***Connector & terminal*** ***(B572) No. 7 — (B137) No. 17:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 7 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector and ECM connector. 2) Using a tester, measure the voltage between the terminals of keyless access CM connector. ***Connector & terminal*** ***(B572) No. 7 (+) — (B572) No. 11 (–):***	Is the voltage 2 V or less → 9 V or more when the push button ignition switch is turned on while depressing the brake pedal with the shift position in P or N?	Perform inspection according to the diagnosis of engine. <Ref. to EN(H4DO w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to EN(H4DO HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>



N: DTC B2276 ACC RELAY OFF SIGNAL

DTC DETECTING CONDITION:
When input error occurs in accessory relay cut input signal of keyless access CM.

TROUBLE SYMPTOM:
- The accessory power supply is not cut during engine start.
- Starter rotation is slow.

CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

WIRING DIAGRAM:
Push button start system <Ref. to WI(w/o HEV)-186, WIRING DIAGRAM, Push Button Start System.> <Ref. to WI(HEV)-165, WIRING DIAGRAM, Push Button Start System.>

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector and ECM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and ECM. ***Connector & terminal*** ***(B573) No. 28 — (B135) No. 32:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 28 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
5	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector and ECM connector. 2) Using a tester, measure the voltage between terminals of the keyless access CM connector when the push button ignition switch is pressed, while depressing the brake pedal with the shift lever in the “P” range. ***Connector & terminal*** ***(B573) No. 28 (+) — (B572) No. 11 (–):***	Is the voltage 9.5 — 16 V → 1 V or less?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Replace the ECM. <Ref. to FU(H4DO(w/o HEV))-100, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H4DO(HEV))-86, REMOVAL, Engine Control Module (ECM).>

O: DTC B2277 SUBMERGING CIRCUIT

DTC DETECTING CONDITION:

When the water-submersion detection circuit integrated into the keyless access CM detects the water submersion.

TROUBLE SYMPTOM:

- The ignition can be turned ON, but cannot be turned OFF.
- Engine will not start.

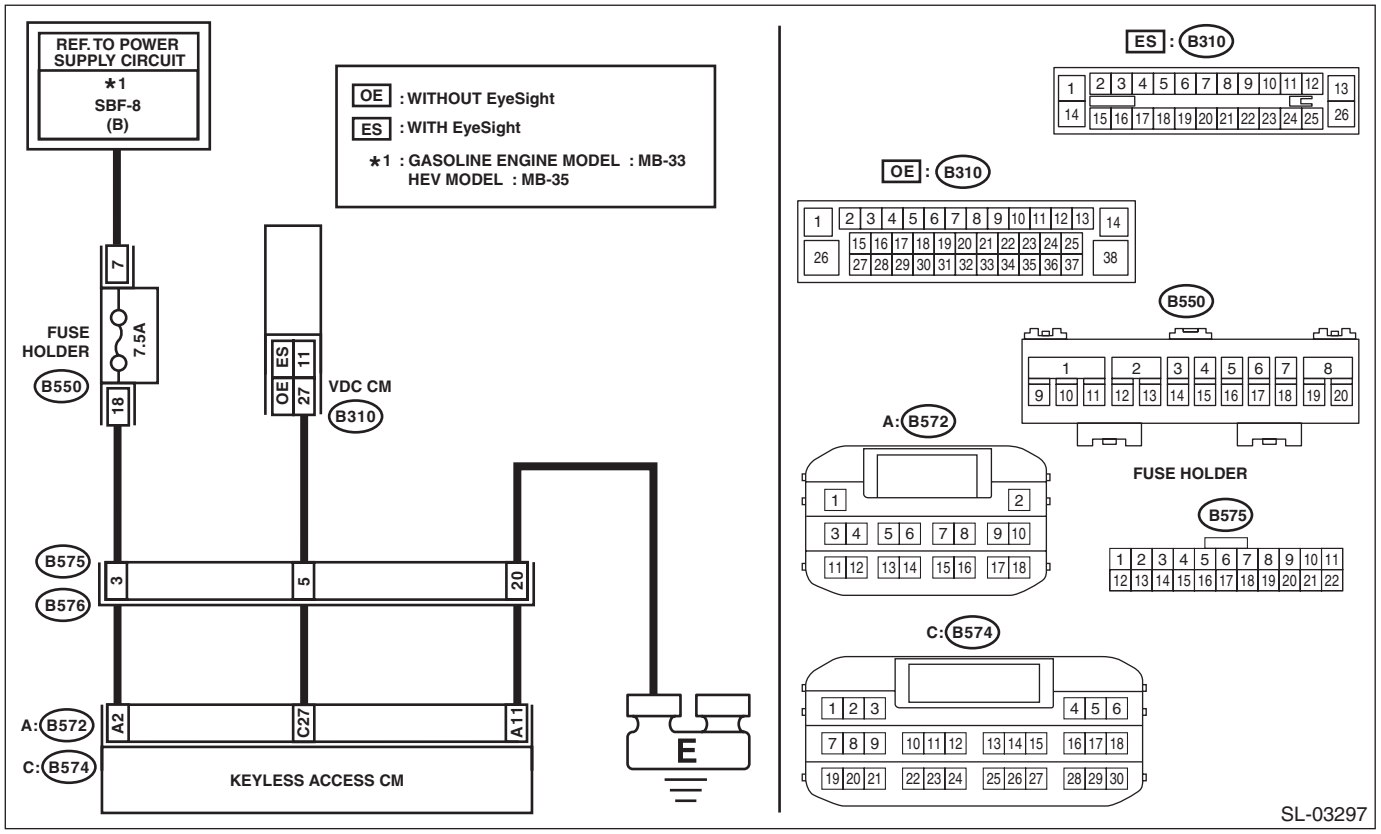
CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK SUBMERSION CONDITION.** Check the keyless access CM and environment of equipment, and check the harness for any trace of water submersion.	Is there any trace of water submersion?	Take necessary measures against water submersion and replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

P: DTC B2282 VEHICLE SPEED SIGNAL CORRELATION

DTC DETECTING CONDITION:



When the vehicle speed signal transmitted from VDC via solid line and the vehicle speed signal transmitted via CAN communication line do not match.

CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

WIRING DIAGRAM:

Push button start system <Ref. to WI(w/o HEV)-186, WIRING DIAGRAM, Push Button Start System.> <Ref. to WI(HEV)-165, WIRING DIAGRAM, Push Button Start System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK COMBINATION METER.** Check that the speedometer is displayed normally.	Is the meter display normal?	Go to step **3**.	Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

	Step	Check	Yes	No
3	**CHECK CURRENT DATA.** Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-29, Read Current Data.> • «Vehicle speed signal»	Is the display normal according to the parked state or driving state?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the combination meter connector. 3) Using a tester, measure the resistance between the keyless access CM connector and VDC CM connector. ***Connector & terminal*** ***Without EyeSight*** ***(B574) No. 27 — (B310) No. 27:*** ***With EyeSight*** ***(B574) No. 27 — (B310) No. 11:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 27 — Chassis ground:***	Is the resistance 30 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK KEYLESS ACCESS CM.** 1) Connect each connector. 2) Using the Subaru Select Monitor, measure the waveform between the terminals of keyless access CM. ***Connector & terminal*** ***(B574) No. 27 — Chassis ground:***	Is 3.54 Hz displayed when the vehicle is driven at approx. 5 km/h? Or does the value change from 3.54 Hz when the vehicle stops?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

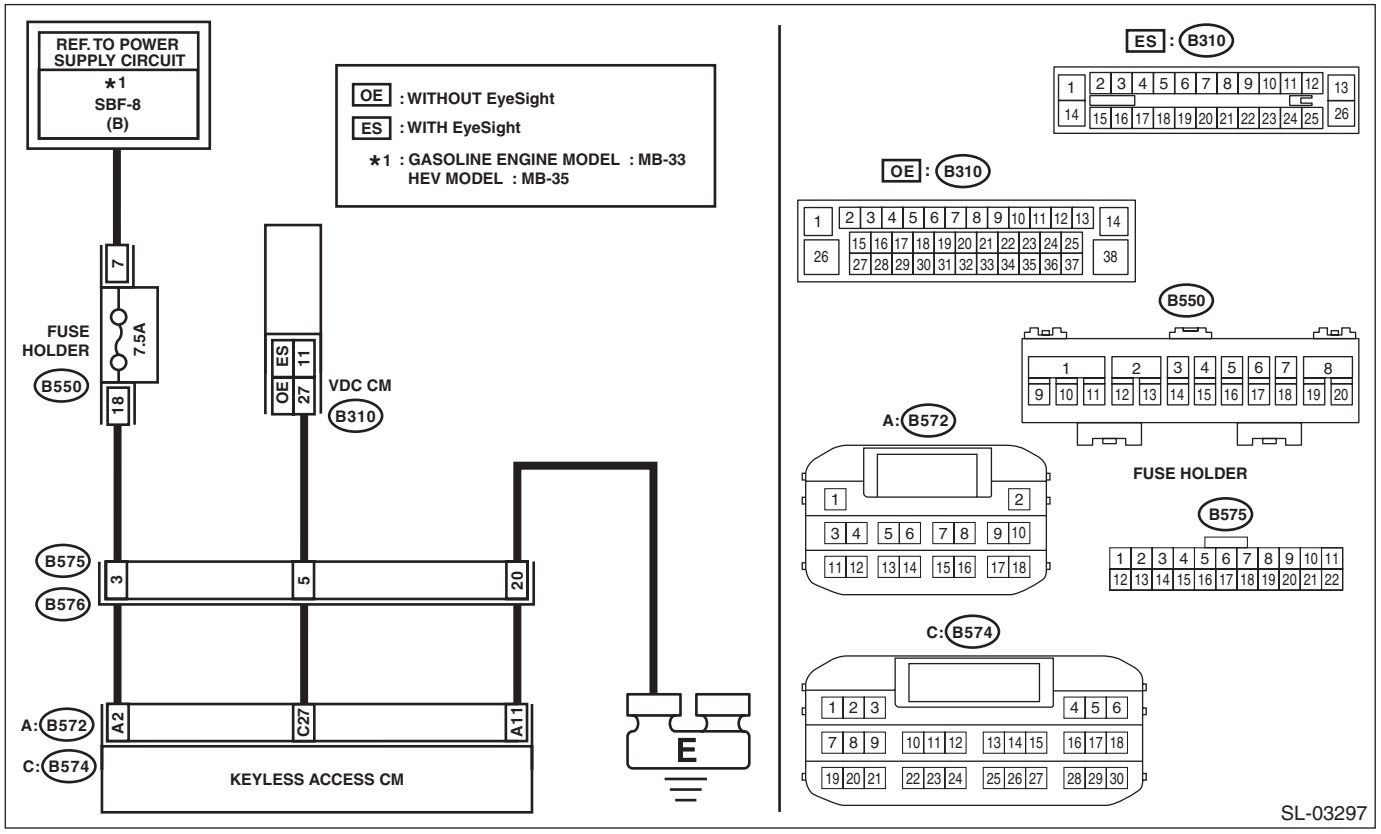
Q: DTC B2283 VEHICLE SPEED SENSOR

DTC DETECTING CONDITION:

Either of the following malfunctions is detected. (Vehicle speed sensor failure is detected.)

- Vehicle speed signal failure detection 1: Excessive deceleration detection
- Vehicle speed signal failure detection 2: Engine speed interlock detection

TROUBLE SYMPTOM:



The steering lock cannot be released.

CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

WIRING DIAGRAM:

Push button start system <Ref. to WI(w/o HEV)-186, WIRING DIAGRAM, Push Button Start System.> <Ref. to WI(HEV)-165, WIRING DIAGRAM, Push Button Start System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK COMBINATION METER.** Check that the speedometer is displayed normally.	Is the meter display normal?	Go to step **3**.	Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

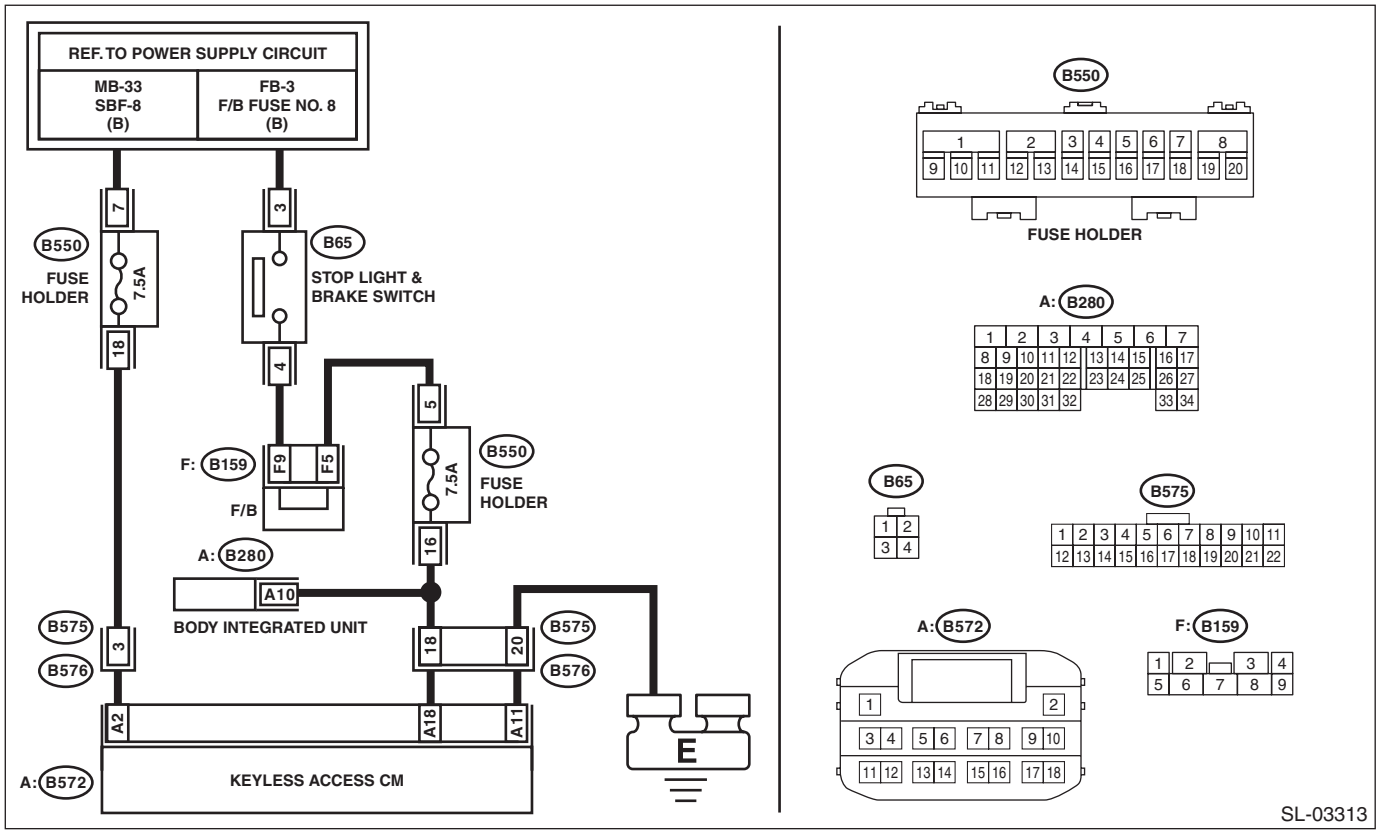
	Step	Check	Yes	No
3	**CHECK CURRENT DATA.** Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-29, Read Current Data.> • «Vehicle speed signal»	Is the display normal according to the parked state or driving state?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the combination meter connector. 3) Using a tester, measure the resistance between the keyless access CM connector and VDC CM connector. ***Connector & terminal*** ***Without EyeSight*** ***(B574) No. 27 — (B310) No. 27:*** ***With EyeSight*** ***(B574) No. 27 — (B310) No. 11:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 27 — Chassis ground:***	Is the resistance 30 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK KEYLESS ACCESS CM.** 1) Connect each connector. 2) Using the Subaru Select Monitor, measure the waveform between the terminals of keyless access CM. ***Connector & terminal*** ***(B574) No. 27 — Chassis ground:***	Is 3.54 Hz displayed when the vehicle is driven at approx. 5 km/h? Or does the value change from 3.54 Hz when the vehicle stops?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

R: DTC B2284 BRAKE SIGNAL CORRELATION

DTC DETECTING CONDITION:

When the brake signal transmitted via the hard wire and the brake signal transmitted from body integrated unit via CAN communication line do not match.

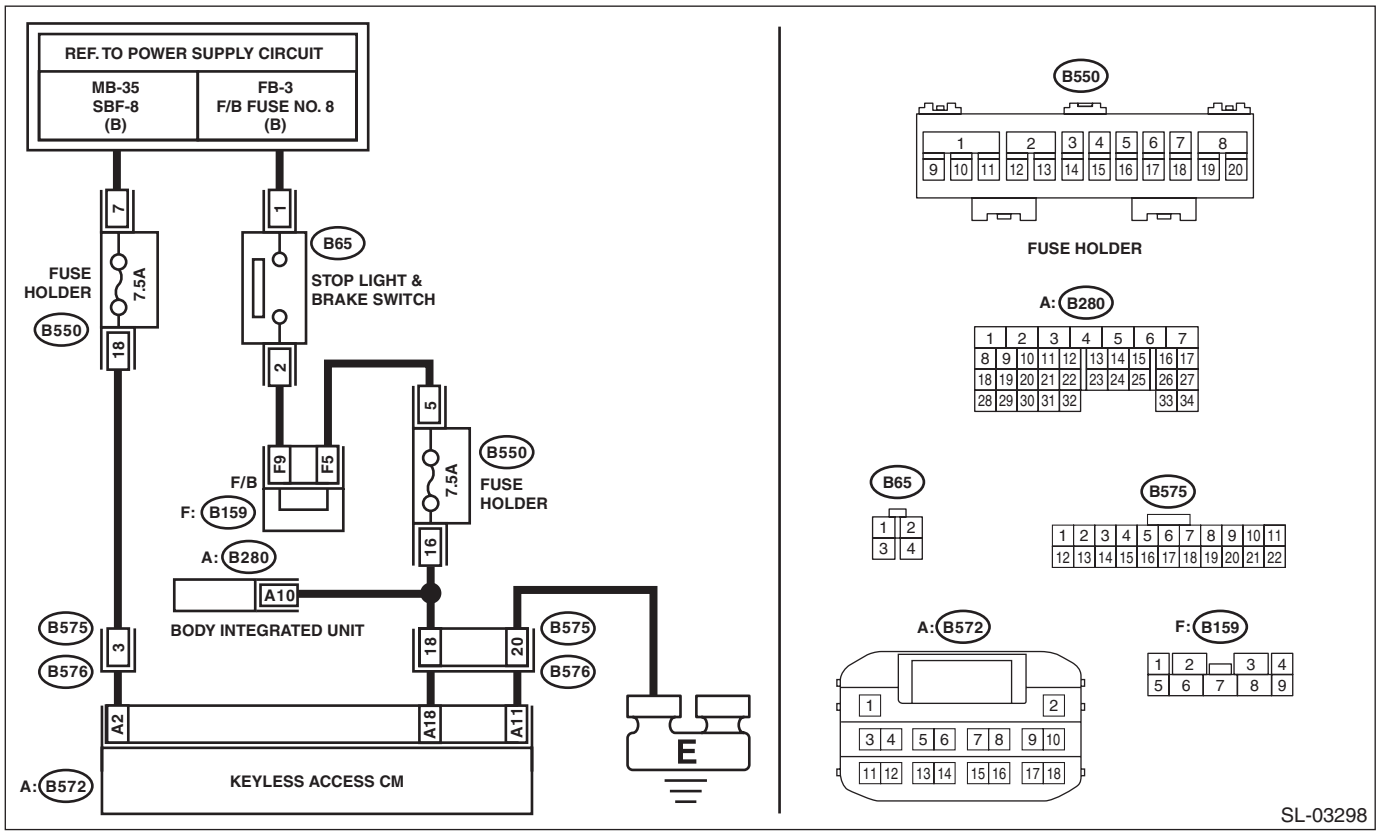
TROUBLE SYMPTOM:



CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

WIRING DIAGRAM:



- Gasoline engine model

Stop light system <Ref. to WI(w/o HEV)-219, WIRING DIAGRAM, Stop Light System.>
Push button start system <Ref. to WI(w/o HEV)-186, WIRING DIAGRAM, Push Button Start System.>

- HEV model

Stop light system <Ref. to WI(HEV)-191, WIRING DIAGRAM, Stop Light System.>
Push button start system <Ref. to WI(HEV)-165, WIRING DIAGRAM, Push Button Start System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CURRENT DATA.** Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-29, Read Current Data.> • «Stop light SW»	Is DTC displayed normally according to the brake pedal operation?	Go to step **3**.	Check the stop light system.
3	**CHECK CURRENT DATA.** Confirm the current data display of «Body Control» using Subaru Select Monitor. <Ref. to BC(diag)-12, Read Current Data.> • «Stop light SW»	Is DTC displayed normally according to the brake pedal operation?	Go to step **4**.	Check body integrated unit <Ref. to BC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> and the stop light switch circuit.
4	**CHECK FUSE.** Check the fuse. <Ref. to SL-10, Relay and Fuse.>	Is the fuse OK?	Go to step **5**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.

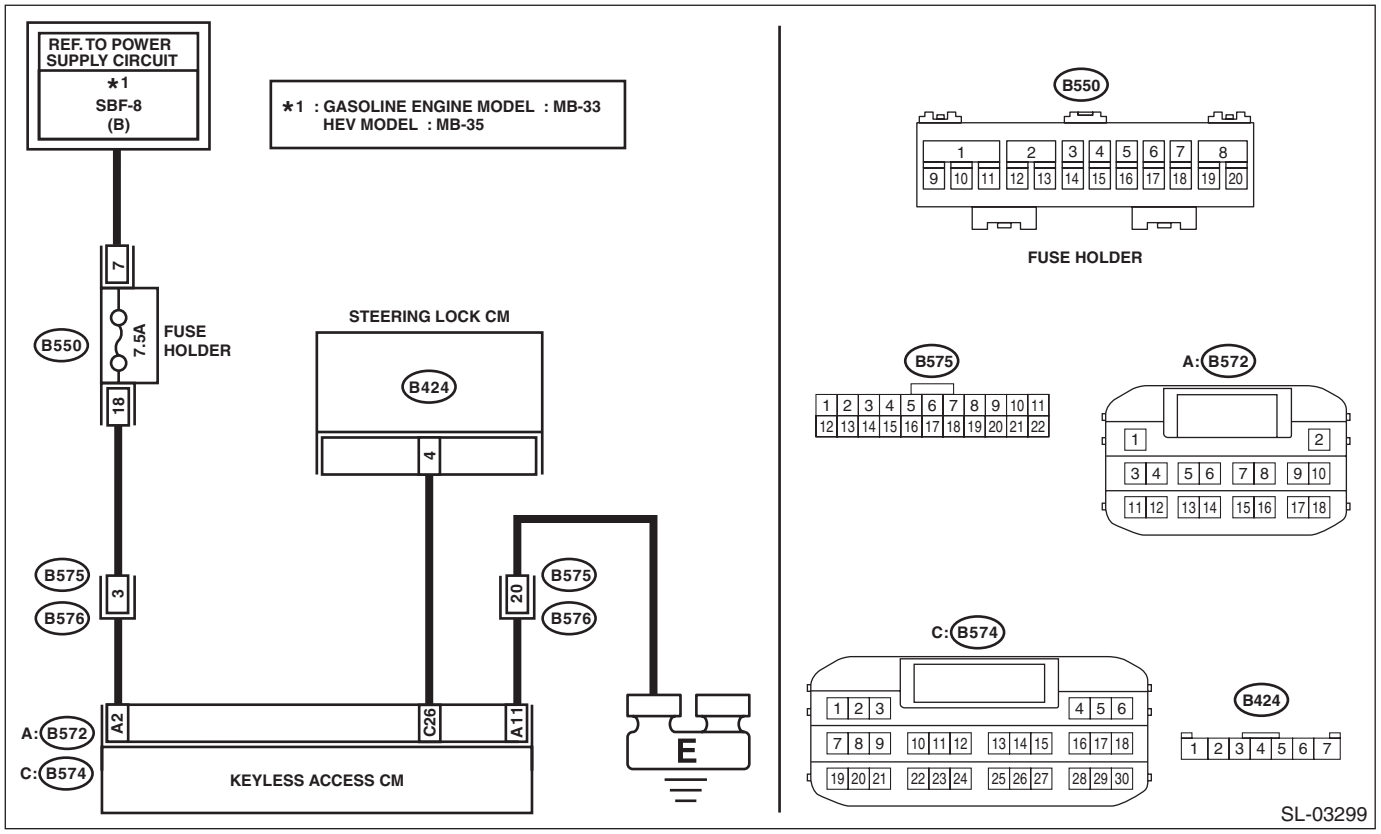
	Step	Check	Yes	No
5	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between keyless access CM connectors. ***Connector & terminal*** ***(B572) No. 2 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **6**.	Check the power supply circuit.
6	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK HARNESS.** 1) Disconnect the stop light switch connector. 2) Using a tester, measure the resistance between the keyless access CM connector and stop light switch connector. ***Connector & terminal*** ***Gasoline engine model*** ***(B572) No. 18 — (B65) No. 4:*** ***HEV model*** ***(B572) No. 18 — (B65) No. 2:***	Is the resistance less than 1 Ω?	Go to step **8**.	Repair or replace the open circuit of harness.
8	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 18 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **9**.	Repair or replace the short circuit of the harness.
9	**CHECK HARNESS.** Using a tester, measure the voltage between the keyless access CM connector and chassis ground when the brake pedal is depressed. ***Connector & terminal*** ***(B572) No. 18 (+) — Chassis ground (–):***	Does the voltage change as follows? Brake pedal not depressed: 1 V or less → Brake pedal depressed: 11 — 14 V	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>	Check the power supply circuit of stop light switch.

S: DTC B2285 STEERING LOCK POSITION SIGNAL CORRELATION

DTC DETECTING CONDITION:

When the steering lock position signal transmitted from the steering lock CM via solid line and the steering lock position signal transmitted via LIN communication system do not match.

TROUBLE SYMPTOM:



- There are conditions when the steering lock is not released.
- Engine will not start.

CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

WIRING DIAGRAM:

Push button start system <Ref. to WI(w/o HEV)-186, WIRING DIAGRAM, Push Button Start System.> <Ref. to WI(HEV)-165, WIRING DIAGRAM, Push Button Start System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK DTC.** Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B2785 displayed?	Perform the inspection according to DTC B2785. <Ref. to KPS(diag)-75, DTC B2785 LIN COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK CURRENT DATA.** Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-29, Read Current Data.> When locked: • Lock side sensor status: ON • Unlock side sensor status: OFF • Lock confirmation: Confirmed • Unlock confirmation: Not confirmed When unlocked: • Lock side sensor status: OFF • Unlock side sensor status: ON • Lock confirmation: Not confirmed • Unlock confirmation: Confirmed NOTE: To lock the steering lock, turn off the power, and open → close, or close → open the driver's door. To unlock the steering lock, turn the ignition switch to ACC ON or IGN ON.	Are the readings as shown on the left according to the steering lock status?	Go to step **4**.	Replace the steering lock CM. <Ref. to SL-105, REMOVAL, Steering Lock CM.>
4	**CHECK CURRENT DATA.** Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-29, Read Current Data.> When locked: • Steering unlock switch: OFF When unlocked: • Steering unlock switch: ON NOTE: To lock the steering lock, turn off the power, and open → close, or close → open the driver's door. To unlock the steering lock, turn the ignition switch to ACC ON or IGN ON.	Are the readings as shown on the left according to the steering lock status?	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>	Go to step **5**.
5	**CHECK FUSE.** Check the fuse. <Ref. to SL-10, Relay and Fuse.>	Is the fuse OK?	Go to step **6**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.
6	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between keyless access CM connectors. ***Connector & terminal*** ***(B572) No. 2 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **7**.	Check the power supply circuit.
7	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **8**.	Repair or replace the open circuit of harness.
8	**CHECK HARNESS.** Using a tester, measure the resistance between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(B424) No. 4 — Chassis ground:***	Does the following occur? Steering lock: 10 kΩ or more → Steering unlock: less than 1 Ω	Go to step **9**.	Replace the steering lock CM. <Ref. to SL-105, REMOVAL, Steering Lock CM.>

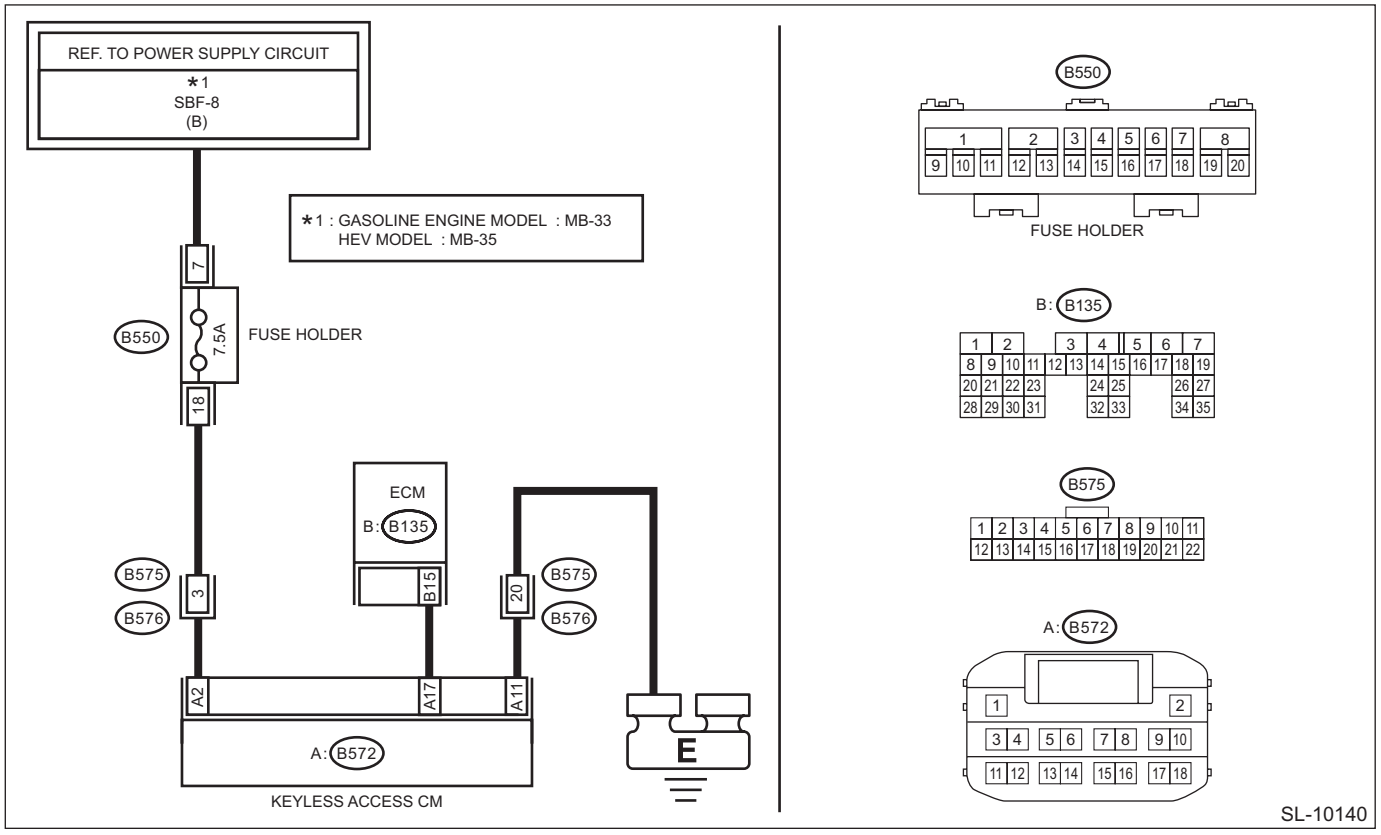
	Step	Check	Yes	No
9	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the steering lock CM connector. 3) Using a tester, measure the resistance between the keyless access CM connector and steering lock CM. ***Connector & terminal*** ***(B574) No. 26 — (B424) No. 4:***	Is the resistance less than 1 Ω?	Go to step **10**.	Repair or replace the open circuit of harness.
10	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 26 — Chassis ground:***	Is the resistance 10 kΩ or more?	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>	Repair or replace the short circuit of the harness.

T: DTC B2286 ENGINE SPEED SIGNAL(WITHOUT Auto Start Stop)

DTC DETECTING CONDITION:

When the engine speed signal transmitted from the ECM via solid line and the engine speed signal transmitted from the ECM via CAN communication line do not match.

TROUBLE SYMPTOM:



Cannot start the engine, or the engine stops after starting.

CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

WIRING DIAGRAM:

Push button start system <Ref. to WI(w/o HEV)-186, WIRING DIAGRAM, Push Button Start System.> <Ref. to WI(HEV)-165, WIRING DIAGRAM, Push Button Start System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.

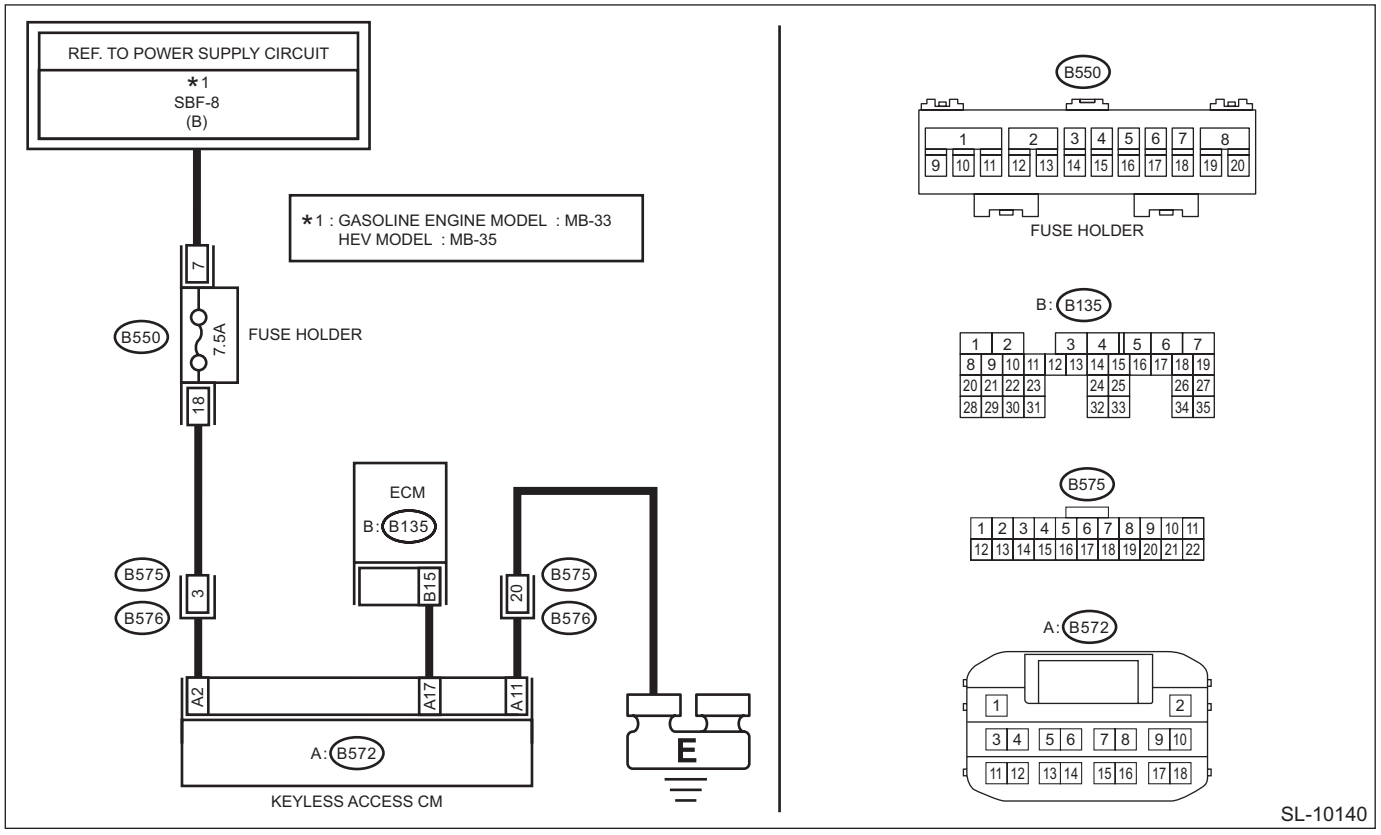
	Step	Check	Yes	No
2	**CHECK COMBINATION METER.** Confirm that the speedometer is displayed normally.	Is the meter display normal?	Go to step **3**.	Perform the diagnosis for the engine. <Ref. to EN(H4DO w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to EN(H4DO HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
3	**CHECK CURRENT DATA.** Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-29, Read Current Data.> • «Engine speed»	Can the data be read normally?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the ECM connector. 3) Using a tester, measure the resistance between the keyless access CM connector and ECM connector. ***Connector & terminal*** ***(B572) No. 17 — (B135) No. 15:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 17 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK HARNESS.** 1) Connect the keyless access CM connector and ECM connector. 2) Using the Subaru Select Monitor, measure the waveform between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 17 — Chassis ground:***	Does the pulse stop when the engine is stopped, and does the pulse generate when the engine is started?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Perform the diagnosis for the engine. <Ref. to EN(H4DO w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to EN(H4DO HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

U: DTC B228A ENGINE SPEED SIGNAL(WITH Auto Start Stop)

DTC DETECTING CONDITION:

When the engine speed signal transmitted from the ECM via solid line and the engine speed signal transmitted from the ECM via CAN communication line do not match.

TROUBLE SYMPTOM:



Cannot start the engine, or the engine stops after starting.

CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

WIRING DIAGRAM:

Push button start system <Ref. to WI(w/o HEV)-186, WIRING DIAGRAM, Push Button Start System.> <Ref. to WI(HEV)-165, WIRING DIAGRAM, Push Button Start System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.

	Step	Check	Yes	No
2	**CHECK COMBINATION METER.** Confirm that the speedometer is displayed normally.	Is the meter display normal?	Go to step **3**.	Perform the diagnosis for the engine. <Ref. to EN(H4DO w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to EN(H4DO HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
3	**CHECK CURRENT DATA.** Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-29, Read Current Data.> • «Engine speed»	Can the data be read normally?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the ECM connector. 3) Using a tester, measure the resistance between the keyless access CM connector and ECM connector. ***Connector & terminal*** ***(B572) No. 17 — (B135) No. 15:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 17 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK HARNESS.** 1) Connect the keyless access CM connector and ECM connector. 2) Using the Subaru Select Monitor, measure the waveform between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 17 — Chassis ground:***	Does the pulse stop when the engine is stopped, and does the pulse generate when the engine is started?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Perform the diagnosis for the engine. <Ref. to EN(H4DO w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to EN(H4DO HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

V: DTC B2779 REMOTE CONTROL ENGINE STARTER COLLATION

DTC DETECTING CONDITION:
When the keyless access CM does not respond to engine start even when the remote control engine starter is ON, or when there is a code mismatch.
TROUBLE SYMPTOM:
Remote engine starter does not function.

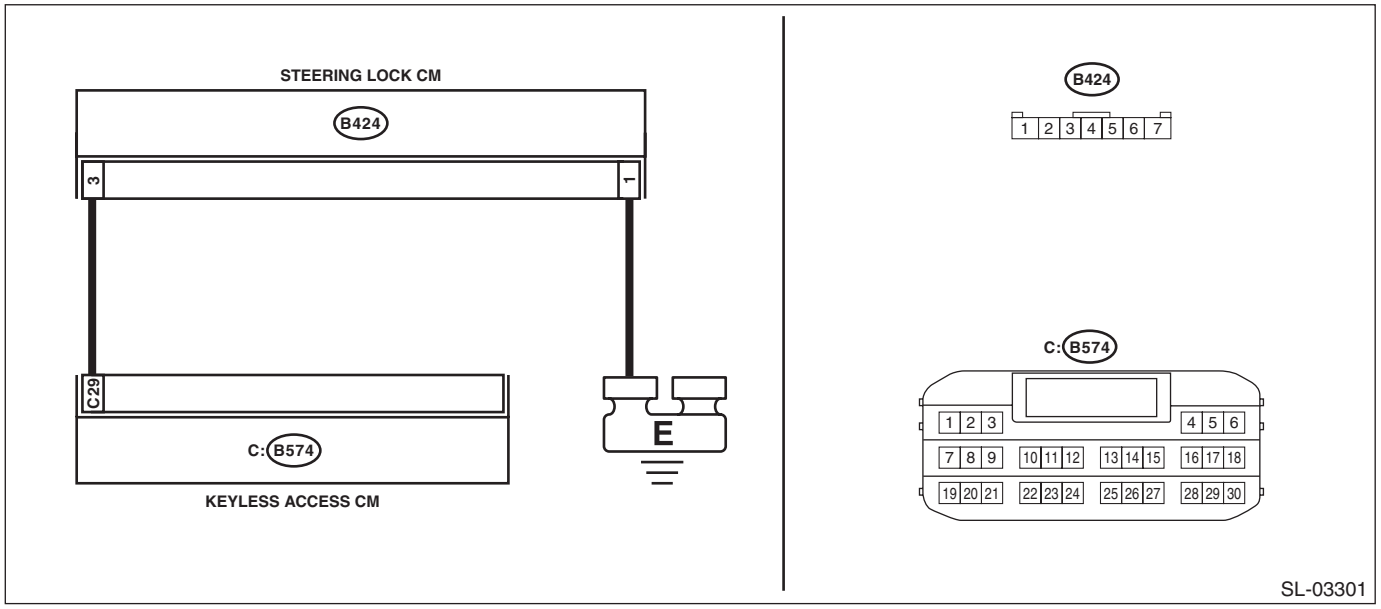
Step		Check	Yes	No
1	**REGISTER THE REMOTE ENGINE STARTER.** 1) Clear the DTC. <Ref. to KPS(diag)-35, Clear Memory Mode.> 2) Register the remote engine starter using the Subaru Select Monitor. (Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.) NOTE: When the registration failed, refer to "Correspondence table when registration is not possible" in the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. 3) Read the DTC again. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B2779 displayed?	Replace the remote engine starter.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

W: DTC B2781 STEERING LOCK CM CONTROL CIRCUIT

DTC DETECTING CONDITION:
- When malfunction is detected in lock/unlock position detection sensor.
- When the open or short circuit in the steering lock motor drive circuit is detected.

TROUBLE SYMPTOM:
- The steering lock cannot be released.
- Engine will not start.

CAUTION:
For replacement procedure of steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.



NOTE:
When all ECMs connected to collation system LIN bus cannot communicate with the keyless access CM, DTC B2785 is output.

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B2785 displayed?	Perform the diagnosis according to DTC. <Ref. to KPS(diag)-75, DTC B2785 LIN COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Replace the steering lock CM. <Ref. to SL-105, Steering Lock CM.>

X: DTC B2782 STEERING LOCK DRIVE REQUEST SIGNAL CORRELATION

DTC DETECTING CONDITION:
When the open or short circuit in the steering lock motor power supply circuit is detected.
TROUBLE SYMPTOM:
- The steering lock cannot be released.
- Engine will not start.

CAUTION:
For replacement procedure of keyless access CM and steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
WIRING DIAGRAM:
Push button start system <Ref. to WI(w/o HEV)-186, WIRING DIAGRAM, Push Button Start System.> <Ref. to WI(HEV)-165, WIRING DIAGRAM, Push Button Start System.>

	Step	Check	Yes	No
1	**CHECK STEERING LOCK CM.** 1) Disconnect the steering lock CM connector. 2) Using a tester, measure the resistance between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(B424) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair or replace the open circuit of harness.
2	**CHECK STEERING LOCK CM.** 1) Connect the steering lock CM connector. 2) Set to ACC OFF, IGN OFF, and shift position P. 3) Using a tester, open the door, and measure the voltage between terminals of steering CM connector when the steering lock motor is driven. ***Connector & terminal*** ***(B424) No. 3 (+) — (B424) No. 1 (–):***	Does the voltage change as follows? Steering lock motor in operation: 1 V or less → Steering lock motor is stopped: 11 — 14 V	Go to step **3**.	Go to step **4**.

	Step	Check	Yes	No
3	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-35, Clear Memory Mode.> 3) Turn the ignition switch to OFF. 4) Disconnect the battery ground cable and reconnect it, and then clear the abnormal information displayed on the data monitor. 5) Turn the ignition switch to ON. 6) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B2782 displayed?	Replace the steering lock CM. <Ref. to SL-105, Steering Lock CM.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
4	**CHECK CONNECTOR.** 1) Disconnect the steering lock CM connector. 2) Disconnect the keyless access CM connector.	Are connectors normal?	Go to step **5**.	Repair or replace the connector.
5	**CHECK HARNESS.** Using a tester, measure the resistance between steering lock CM connector and keyless access CM connector. ***Connector & terminal*** ***(B574) No. 29 — (B424) No. 3:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK HARNESS.** Using a tester, measure the resistance between steering lock CM connector and chassis ground, and between keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B424) No. 3 — Chassis ground:*** ***(B574) No. 29 — Chassis ground:***	Is the resistance 10 kΩ or more?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Repair or replace the short circuit of the harness.

Y: DTC B2784 ANTENNA CIRCUIT (PUSH ENGINE SWITCH)

DTC DETECTING CONDITION:
When open or short circuit occurs in the antenna coil.
TROUBLE SYMPTOM:
The keyless access function may not be operable.

CAUTION:
For replacement procedure of keyless access CM and steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
WIRING DIAGRAM:
Immobilizer system <Ref. to WI(w/o HEV)-147, WIRING DIAGRAM, Immobilizer System.> <Ref. to WI(HEV)-133, WIRING DIAGRAM, Immobilizer System.>

	Step	Check	Yes	No
1	**CHECK STEERING LOCK CM.** 1) Disconnect the push button ignition switch connector. 2) Disconnect the keyless access CM connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i150) No. 14 — (B574) No. 1:*** ***(i150) No. 9 — (B574) No. 9:*** ***(i150) No. 10 — (B574) No. 7:*** ***(i150) No. 8 — (B574) No. 24:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair or replace the open circuit of harness.
2	**CHECK HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i150) No. 14 — Chassis ground:*** ***(i150) No. 9 — Chassis ground:*** ***(i150) No. 10 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **3**.	Repair or replace the short circuit of the harness.

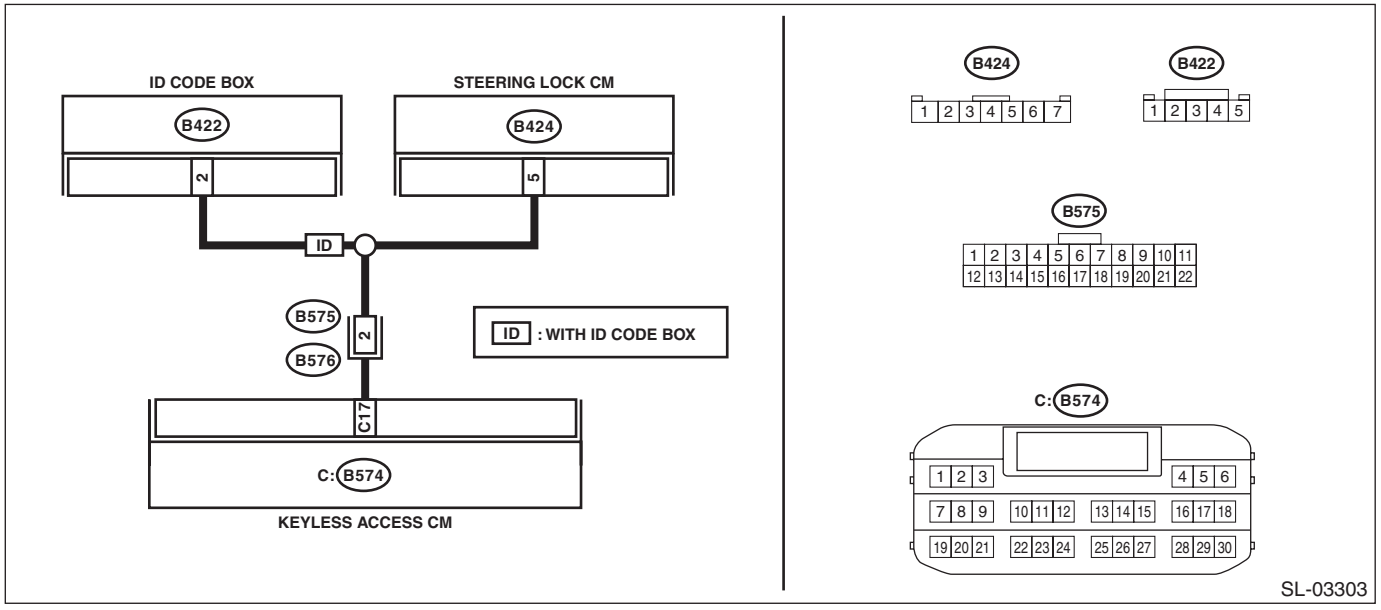
	Step	Check	Yes	No
3	**CHECK PUSH BUTTON IGNITION SWITCH.** 1) Replace the push button ignition switch. <Ref. to SL-107, Push Button Ignition Switch.> 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-35, Clear Memory Mode.> 3) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B2784 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Malfunction occurred in the push button ignition switch.

Z: DTC B2785 LIN COMMUNICATION

DTC DETECTING CONDITION:

When the keyless access CM detected the collation system LIN bus communication error three times in a row.

TROUBLE SYMPTOM:



The keyless access function may not be operable.

CAUTION:

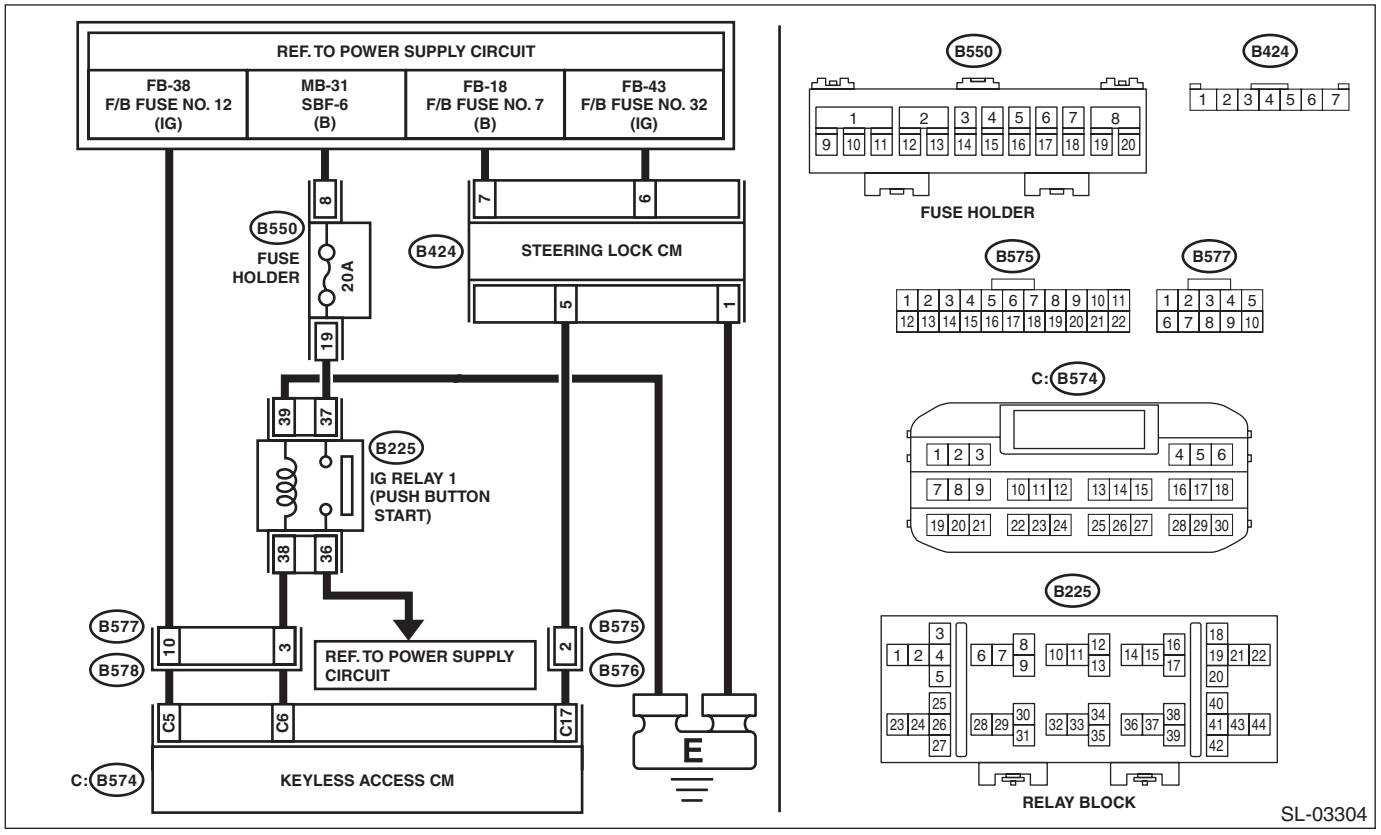
For replacement procedure of keyless access CM and steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

WIRING DIAGRAM:

Push button start system <Ref. to WI(w/o HEV)-186, WIRING DIAGRAM, Push Button Start System.> <Ref. to WI(HEV)-165, WIRING DIAGRAM, Push Button Start System.>

Step		Check	Yes	No
1	**CHECK DTC.** 1) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-35, Clear Memory Mode.> 2) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B2785 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the steering lock CM connector. 3) Disconnect the ID code box connector. (With ID code box) 4) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B574) No. 17 — (B424) No. 5:*** ***(B574) No. 17 — (B422) No. 2: (with ID code box)***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B424) No. 5 — Chassis ground:*** ***(B574) No. 17 — Chassis ground:*** ***(B422) No. 5 — Chassis ground: (with ID code box)***	Is the resistance 10 kΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK HARNESS.** 1) Connect the keyless access CM connector only. 2) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B2785 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Go to step **5**.
5	**CHECK ID CODE BOX.** NOTE: For model without ID code box, go to the next step. 1) Connect the ID code box. 2) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B2785 displayed?	Replace the ID code box. <Ref. to SL-104, ID Code Box.>	Go to step **6**.
6	**CHECK STEERING LOCK CM.** 1) Connect the steering lock CM. <Ref. to SL-105, Steering Lock CM.> 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-35, Clear Memory Mode.> 3) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B2785 displayed?	Replace the steering lock CM. <Ref. to SL-105, Steering Lock CM.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.



AA:DTC B2786 STEERING LOCK CM COMMUNICATION

DTC DETECTING CONDITION:
When communication between keyless access CM and steering lock CM is interrupted for a set amount of time.

TROUBLE SYMPTOM:
The steering lock cannot be released.

CAUTION:
For replacement procedure of keyless access CM and steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

WIRING DIAGRAM:
Push button start system <Ref. to WI(w/o HEV)-186, WIRING DIAGRAM, Push Button Start System.> <Ref. to WI(HEV)-165, WIRING DIAGRAM, Push Button Start System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is a DTC other than DTC B2786 displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the steering lock CM connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B574) No. 17 — (B424) No. 5:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.

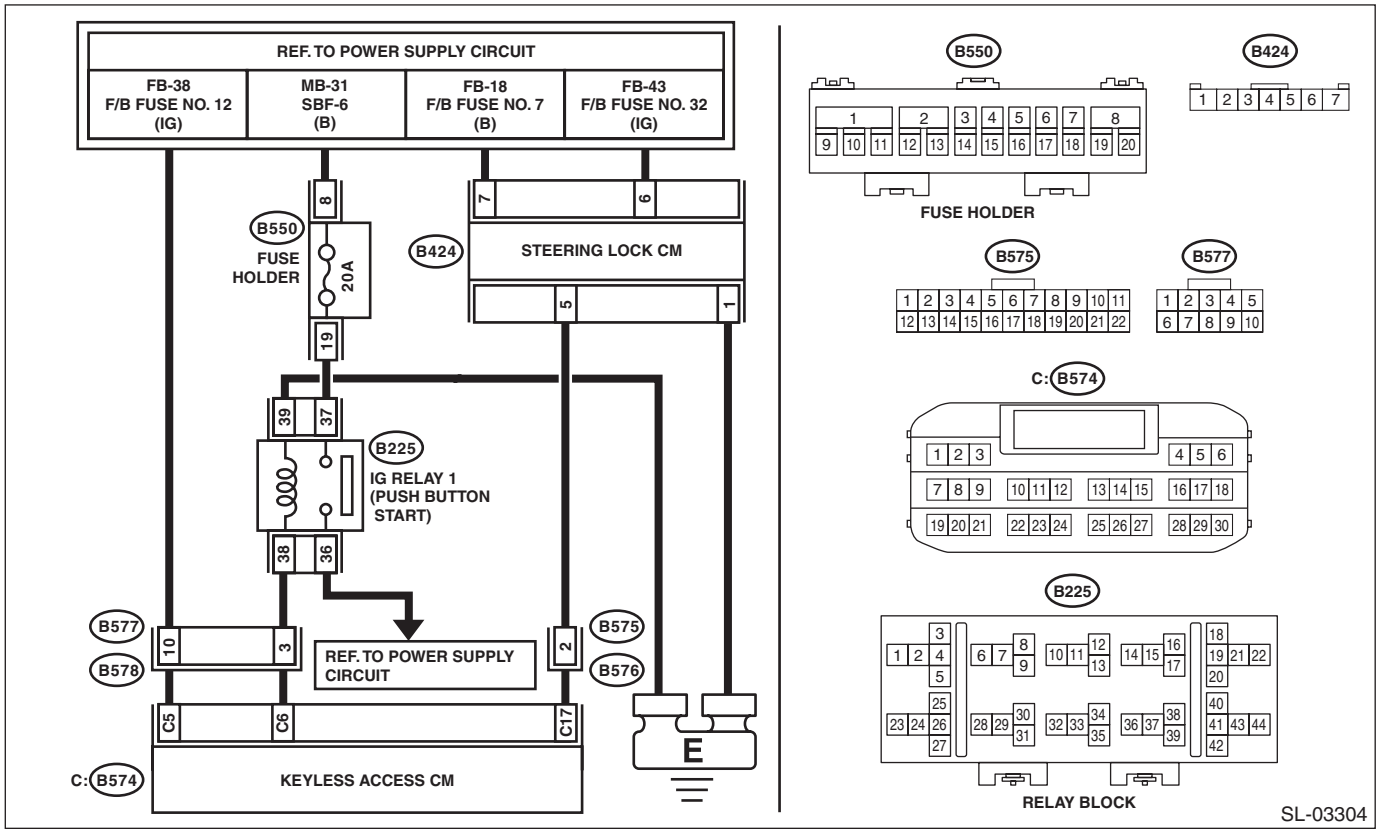
	Step	Check	Yes	No
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B574) No. 17 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(B424) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(B424) No. 6 (+) — Chassis ground (–):*** ***(B424) No. 7 (+) — Chassis ground (–):***	Is the voltage 11 — 14 V?	Go to step **6**.	Repair or replace the faulty portion of the power supply circuit.
6	**CHECK STEERING LOCK CM.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-35, Clear Memory Mode.> 3) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B2785 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Go to step **7**.
7	**CHECK STEERING LOCK CM.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-35, Clear Memory Mode.> 3) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B2786 displayed?	Replace the steering lock CM. <Ref. to SL-105, Steering Lock CM.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

AB:DTC B2788 IGN SIGNAL CORRELATION (STEERING LOCK CM)

DTC DETECTING CONDITION:

When mismatch occurs in the IG1 input of the steering lock CM for both LIN communication line input (IG1 input value of keyless access CM) and solid line input.

TROUBLE SYMPTOM:



The steering lock cannot be released.

CAUTION:

For replacement procedure of steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

WIRING DIAGRAM:

Push button start system <Ref. to WI(w/o HEV)-186, WIRING DIAGRAM, Push Button Start System.> <Ref. to WI(HEV)-165, WIRING DIAGRAM, Push Button Start System.>

Step		Check	Yes	No
1	**CHECK FUSE.** Check the fuse. <Ref. to SL-10, Relay and Fuse.>	Is the fuse OK?	Go to step **2**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.
2	**CHECK CURRENT DATA.** Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-29, Read Current Data.> • «IGN SW»	Is the display normal according to the ignition switch operation?	Go to step **3**.	Go to step **5**.

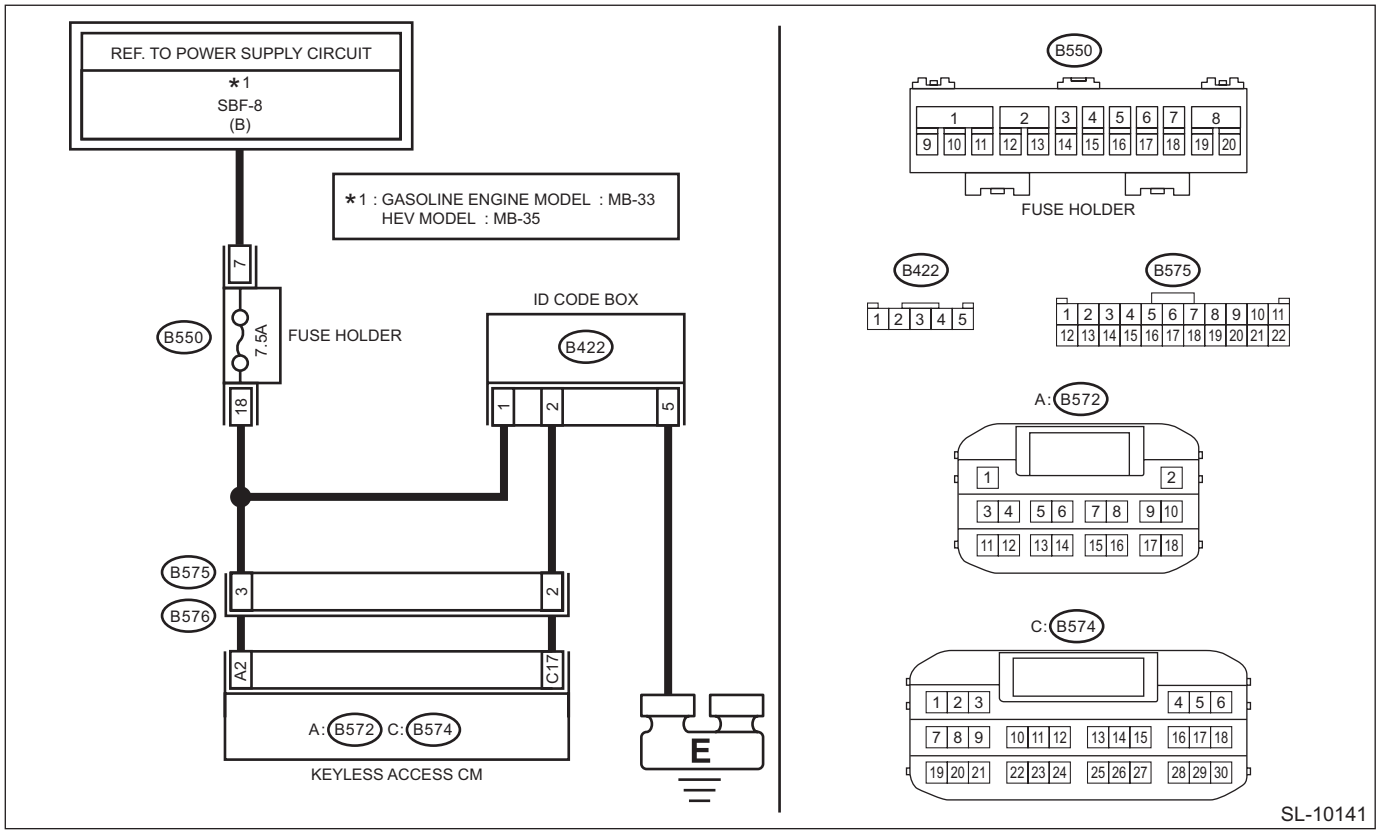
	Step	Check	Yes	No
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the steering lock CM connector. 2) Using a tester, measure the resistance between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(B424) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS.** 1) Connect the steering lock CM connector. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B424) No. 6 (+) — (B424) No. 1 (–):***	Is the voltage 11 — 14 V with IG ON? Is the voltage less than 1 V with IG OFF?	Replace the steering lock CM. <Ref. to SL-105, REMOVAL, Steering Lock CM.>	Check the DC power supply circuit.
5	**CHECK DTC.** Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B2271 displayed?	Perform the diagnosis according to DTC B2271. <Ref. to KPS(diag)-47, DTC B2271 IGN RELAY CONTROL CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>

AC:DTC B2789 ID CODE BOX COMMUNICATION

DTC DETECTING CONDITION:

- When communication between keyless access CM and ID code box is interrupted for a set amount of time.
- Open or short circuit in the wiring harness between keyless access CM and ID code box

TROUBLE SYMPTOM:



Engine will not start.

CAUTION:

For replacement procedure of keyless access CM and ID code box, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

WIRING DIAGRAM:

Push button start system <Ref. to WI(w/o HEV)-186, WIRING DIAGRAM, Push Button Start System.> <Ref. to WI(HEV)-165, WIRING DIAGRAM, Push Button Start System.>

Step		Check	Yes	No
1	**CHECK DTC.** 1) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-35, Clear Memory Mode.> 2) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B2789 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

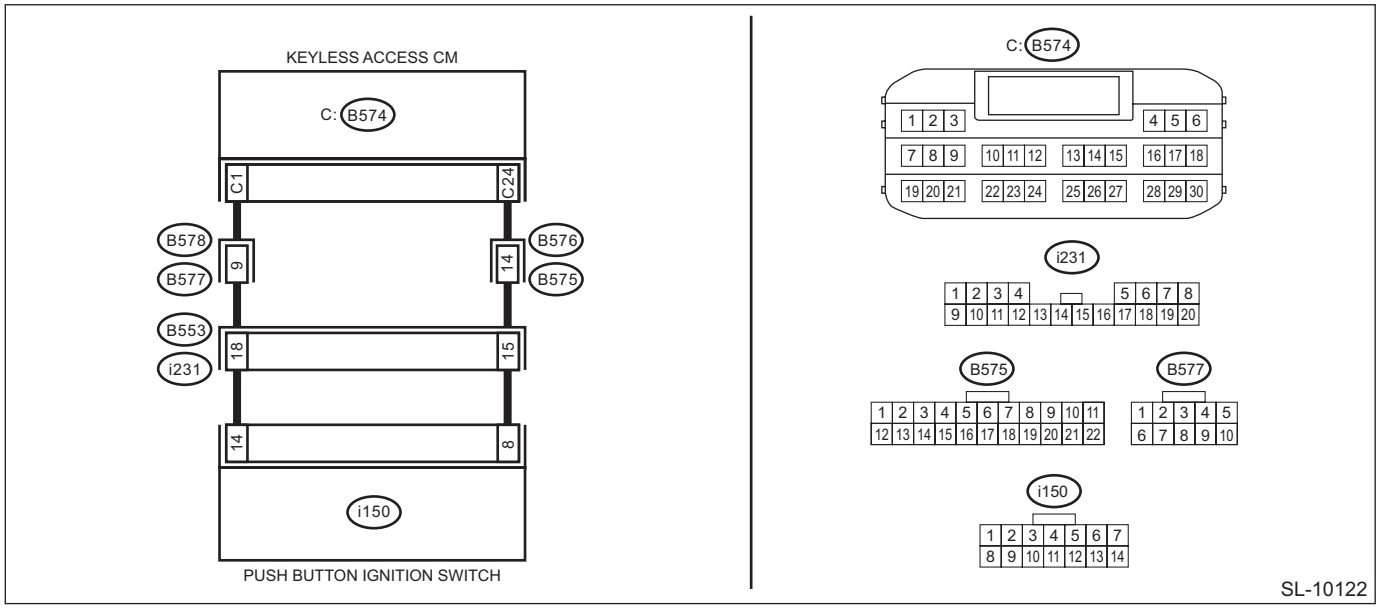
	Step	Check	Yes	No
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the ID code box connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B574) No. 17 — (B422) No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between ID code box connector and chassis ground. ***Connector & terminal*** ***(B574) No. 17 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between ID code box connector and chassis ground. ***Connector & terminal*** ***(B422) No. 5 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** Using a tester, measure the voltage between ID code box connector and chassis ground. ***Connector & terminal*** ***(B422) No. 1 (+) — Chassis ground (–):***	Is the voltage 11 — 14 V?	Go to step **6**.	Repair or replace the faulty portion of the power supply circuit.
6	**CHECK ID CODE BOX.** 1) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-35, Clear Memory Mode.> 2) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B2785 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Go to step **7**.
7	**CHECK STEERING LOCK CM.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-35, Clear Memory Mode.> 3) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B2789 displayed?	Replace the ID code box. <Ref. to SL-104, ID Code Box.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

AD:DTC B278A PUSH ENGINE SWITCH POWER SUPPLY CIRCUIT

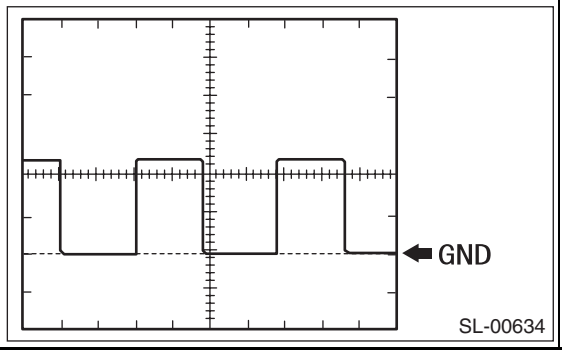
DTC DETECTING CONDITION:

When the power supply circuit of the push button ignition switch is shorted to ground.

TROUBLE SYMPTOM:



- Engine will not start.
- The keyless access system function does not operate.



CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

WIRING DIAGRAM:

Immobilizer system <Ref. to WI(w/o HEV)-147, WIRING DIAGRAM, Immobilizer System.> <Ref. to WI(HEV)-133, WIRING DIAGRAM, Immobilizer System.>

Step		Check	Yes	No
1	**CHECK KEYLESS ACCESS CM.** 1) Turn the ignition switch to OFF. 2) Take the access key out of the passenger room. 3) Push the push button ignition switch. Within 30 seconds, use oscilloscope to measure the waveform between connectors. ***Connector & terminal*** ***(i150) No. 14 — (i150) No. 8:*** 	Is the waveform shown in the left column displayed?	Replace the push button ignition switch. <Ref. to SL-107, Push Button Ignition Switch.>	Go to step **2**.

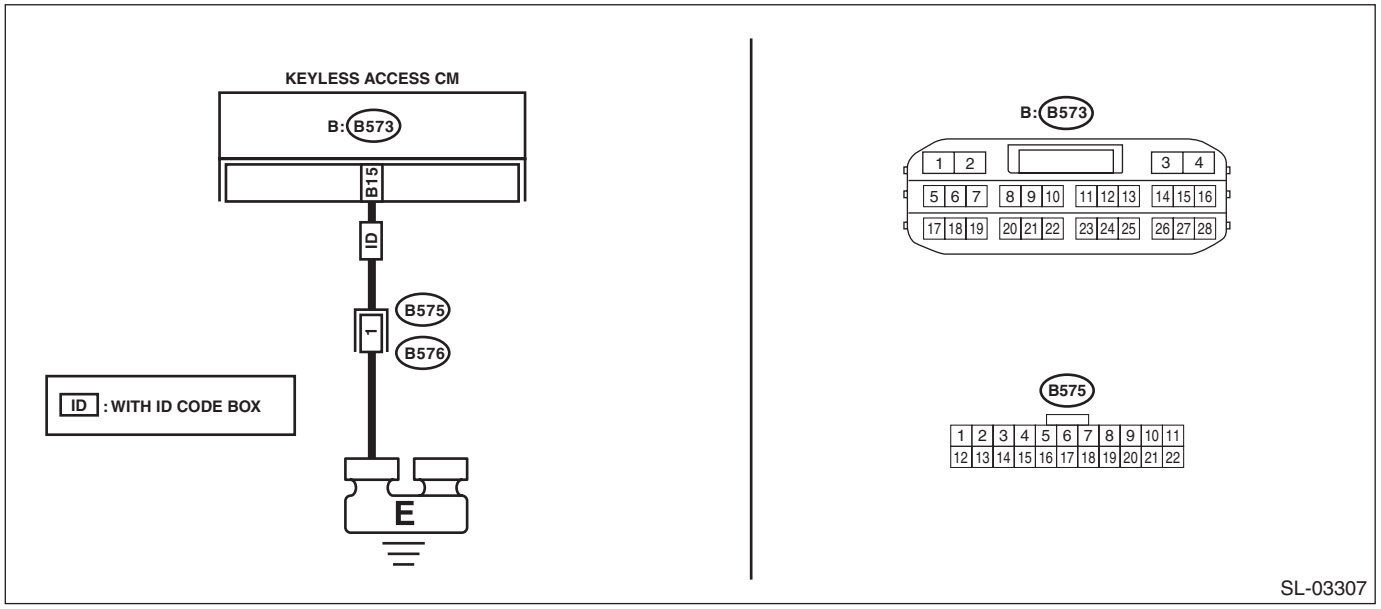
	Step	Check	Yes	No
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the push button ignition switch connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i150) No. 14 — (B574) No. 1:*** ***(i150) No. 8 — (B574) No. 24:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 1 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 24 — Chassis ground:***	Is the resistance 1 Ω or less?	Go to step **5**.	Repair or replace the harness.
5	**CHECK DTC.** 1) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-35, Clear Memory Mode.> 2) Read the DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B278A displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

AE:DTC B278D ID CODE BOX JUDGMENT CIRCUIT

DTC DETECTING CONDITION:

- When ID code box setting is set to OFF, ID code box ON input is detected.
- When ID code box setting is set to OFF, ID code box LIN signal is received.

TROUBLE SYMPTOM:



Engine will not start.

CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

WIRING DIAGRAM:

Push button start system <Ref. to WI(w/o HEV)-186, WIRING DIAGRAM, Push Button Start System.> <Ref. to WI(HEV)-165, WIRING DIAGRAM, Push Button Start System.>

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Using the Subaru Select Monitor, clear the memory of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-35, Clear Memory Mode.> 3) Turn the ignition switch to OFF → ON. 4) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B278D displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Measure the resistance between keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 15 — Chassis ground:***	Is the resistance 10 kΩ or more?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Repair or replace the short circuit of the harness.

AF:DTC B2790 ID CODE BOX CIRCUIT

DTC DETECTING CONDITION:
An error has occurred inside the ID code box.
TROUBLE SYMPTOM:
Engine will not start.

CAUTION:
For replacement procedure of ID code box, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

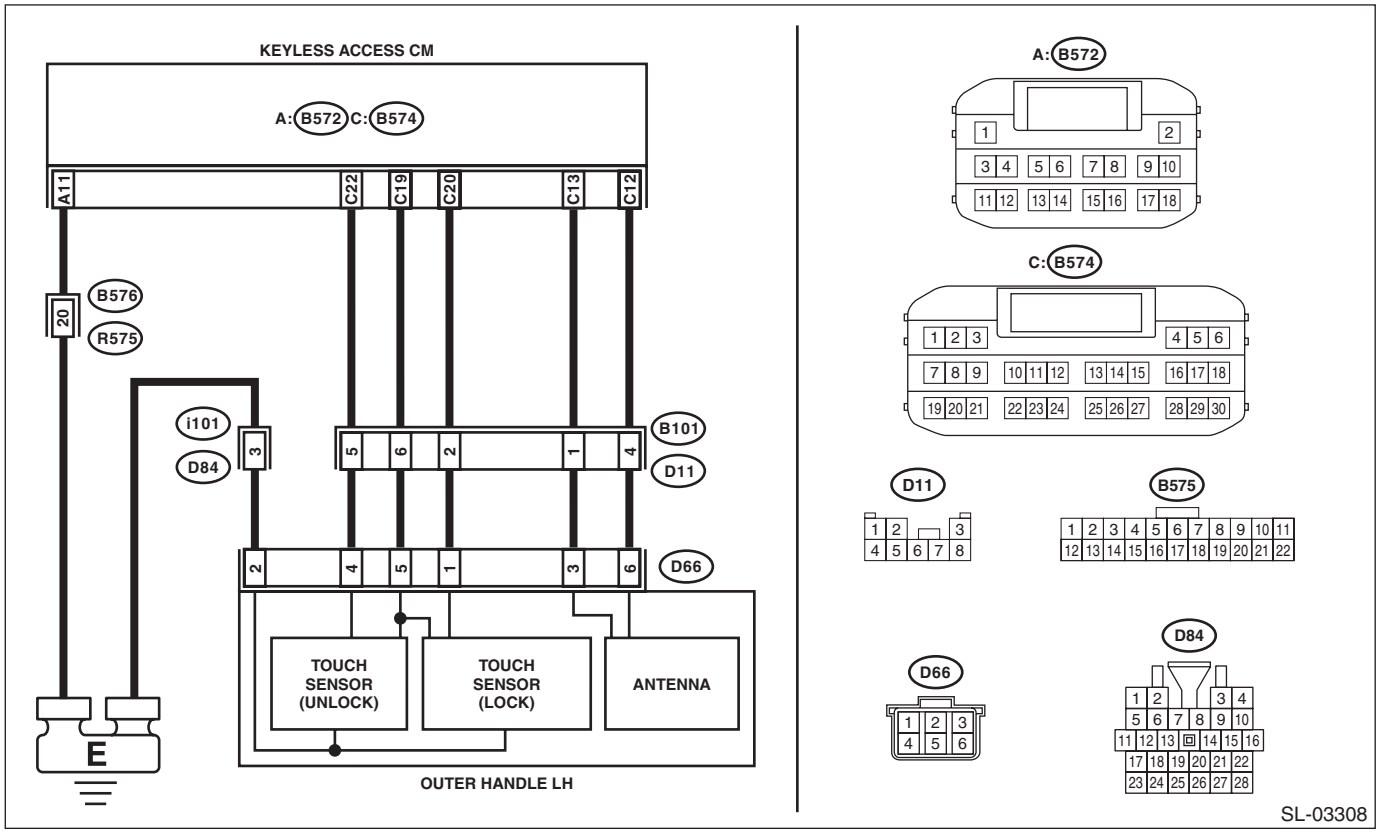
	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Using the Subaru Select Monitor, clear the memory of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-35, Clear Memory Mode.> 3) Turn the ignition switch to OFF → ON. 4) Register the ID code box. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. 5) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B2790 displayed?	Replace the ID code box. <Ref. to SL-104, ID Code Box.>	ID code box registration was not performed properly.

AG:DTC B27A1 DRIVER SIDE EXTERNAL ANTENNA OPEN

DTC DETECTING CONDITION:

When open circuit occurs in the harness between keyless access CM and driver's side front door outer handle.

TROUBLE SYMPTOM:



Keyless access system does not function.

CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

WIRING DIAGRAM:

Keyless access system <Ref. to WI(w/o HEV)-157, WIRING DIAGRAM, Keyless Access System.> <Ref. to WI(HEV)-139, WIRING DIAGRAM, Keyless Access System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CONNECTOR.** 1) Disconnect the keyless access CM connector. 2) Disconnect the front door outer handle connector.	Is the connector OK?	Go to step **3**.	Repair or replace the connector.

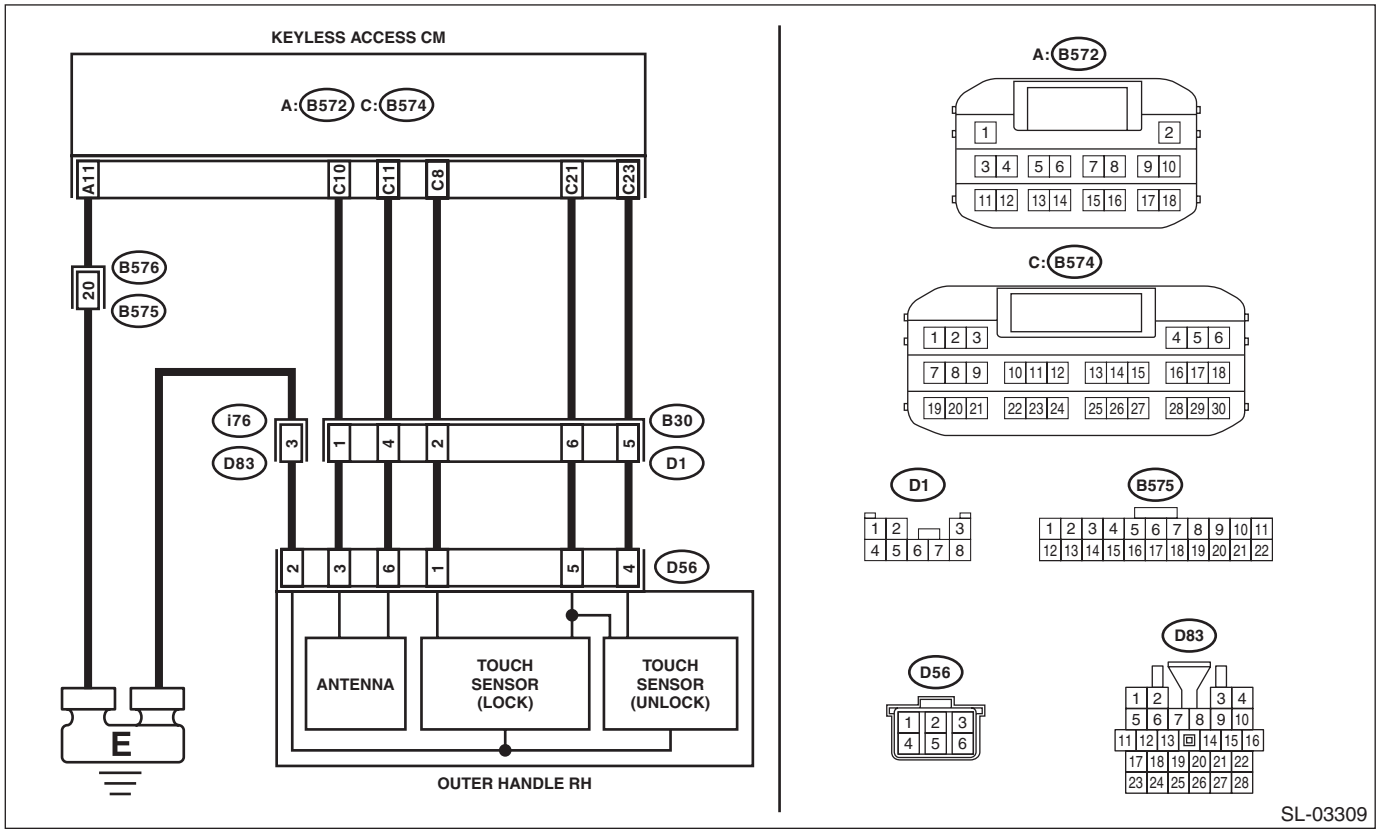
	Step	Check	Yes	No
3	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and front door outer handle connector, and between front door outer handle connector, keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 12 — (D66) No. 6:*** ***(B574) No. 13 — (D66) No. 3:*** ***(D66) No. 2 — Chassis ground:*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 12 — Chassis ground:*** ***(B574) No. 13 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK DTC.** 1) Connect the keyless access CM connector. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-35, Clear Memory Mode.> 3) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A1 displayed?	Go to step **6**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
6	**CHECK FRONT DOOR OUTER HANDLE.** 1) Replace the driver's front door outer handle with the passenger's front door outer handle. <Ref. to SL-35, Front Outer Handle.> 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-35, Clear Memory Mode.> 3) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A1 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Replace the driver's front door outer handle. <Ref. to SL-35, Front Outer Handle.>

AH:DTC B27A2 PASSENGER SIDE EXTERNAL ANTENNA OPEN

DTC DETECTING CONDITION:

When open circuit occurs in the harness between keyless access CM and passenger's side front door outer handle.

TROUBLE SYMPTOM:



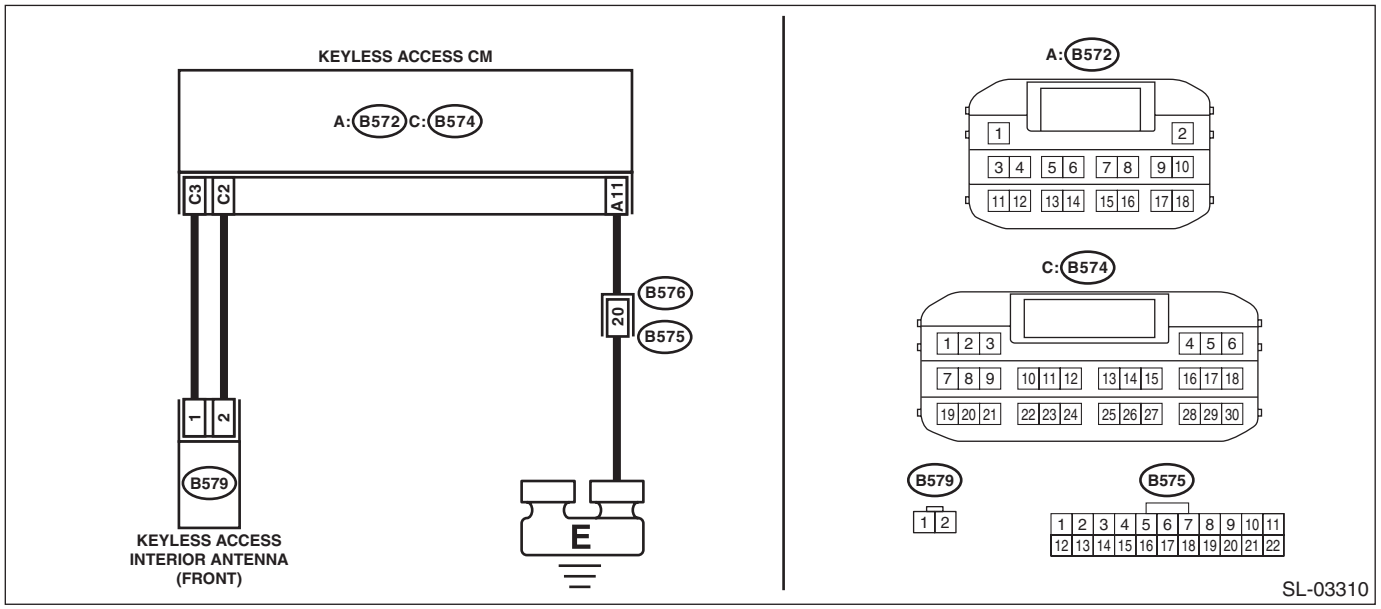
Keyless access system does not function.

CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

WIRING DIAGRAM:

Keyless access system <Ref. to WI(w/o HEV)-157, WIRING DIAGRAM, Keyless Access System.> <Ref. to WI(HEV)-139, WIRING DIAGRAM, Keyless Access System.>



Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CONNECTOR.** 1) Disconnect the keyless access CM connector. 2) Disconnect the front door outer handle connector.	Is the connector OK?	Go to step **3**.	Repair or replace the connector.

	Step	Check	Yes	No
3	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and front door outer handle connector, and between front door outer handle connector, keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 11 — (D56) No. 6:*** ***(B574) No. 10 — (D56) No. 3:*** ***(D56) No. 2 — Chassis ground:*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 11 — Chassis ground:*** ***(B574) No. 10 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK DTC.** 1) Connect the keyless access CM connector. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-35, Clear Memory Mode.> 3) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A2 displayed?	Go to step **6**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
6	**CHECK FRONT DOOR OUTER HANDLE.** 1) Replace the passenger's front door outer handle with the driver's front door outer handle. <Ref. to SL-35, Front Outer Handle.> 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-35, Clear Memory Mode.> 3) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A2 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Replace the passenger's front door outer handle. <Ref. to SL-35, Front Outer Handle.>

AI: DTC B27A5 FRONT INTERNAL ANTENNA OPEN

DTC DETECTING CONDITION:
When open circuit occurs in the harness between keyless access CM and front interior antenna.
TROUBLE SYMPTOM:
Keyless access system does not function. (When the access key is in the front area of the passenger room)

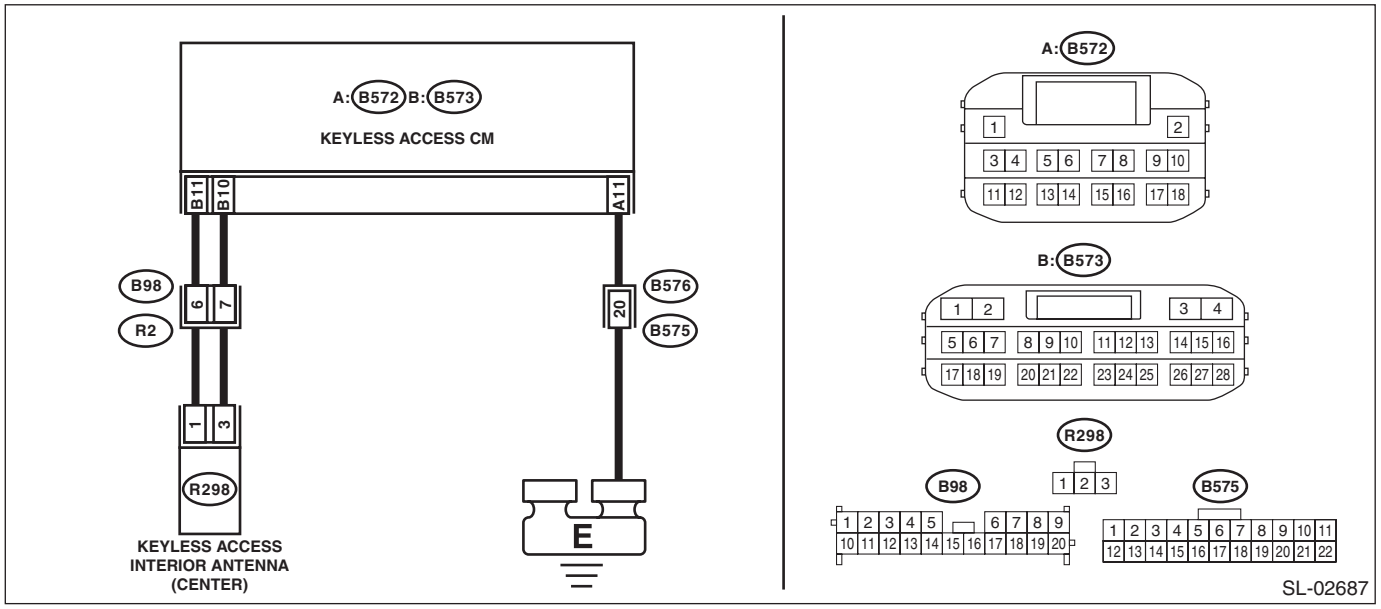
CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
WIRING DIAGRAM:
Keyless access system <Ref. to WI(w/o HEV)-157, WIRING DIAGRAM, Keyless Access System.> <Ref. to WI(HEV)-139, WIRING DIAGRAM, Keyless Access System.>

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CONNECTOR.** 1) Disconnect the keyless access CM connector. 2) Disconnect the front interior antenna connector.	Is the connector OK?	Go to step **3**.	Repair or replace the connector.
3	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and front interior antenna connector, and between front interior antenna connector, keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 3 — (B579) No. 1:*** ***(B574) No. 2 — (B579) No. 2:*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 3 — Chassis ground:*** ***(B574) No. 2 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK DTC.** 1) Connect the keyless access CM connector. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-35, Clear Memory Mode.> 3) Read DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A5 displayed?	Go to step **6**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
6	**CHECK FRONT INTERIOR ANTENNA.** 1) Replace the rear interior antenna with the front interior antenna. <Ref. to SL-91, Keyless Access Indoor Antenna.> 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-35, Clear Memory Mode.> 3) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A5 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Malfunction occurred in the front interior antenna.

AJ:DTC B27A6 REAR INTERNAL ANTENNA OPEN

DTC DETECTING CONDITION:
When open circuit occurs in the harness between keyless access CM and center interior antenna.
TROUBLE SYMPTOM:
Keyless access system does not function. (When the access key is in the rear area of the passenger room (near the seat))



CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
WIRING DIAGRAM:
- Gasoline engine model

Keyless access system <Ref. to WI(w/o HEV)-157, WIRING DIAGRAM, Keyless Access System.>

- HEV model

Keyless access system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Keyless Access System.>

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CONNECTOR.** 1) Disconnect the keyless access CM connector. 2) Disconnect the center interior antenna connector.	Is the connector OK?	Go to step **3**.	Repair or replace the connector.
3	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and center interior antenna connector, and between center interior antenna connector, keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 10 — (R298) No. 3:*** ***(B573) No. 11 — (R298) No. 1:*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 10 — Chassis ground:*** ***(B573) No. 11 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK DTC.** 1) Connect the keyless access CM connector. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-35, Clear Memory Mode.> 3) Read DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A6 displayed?	Go to step **6**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
6	**CHECK CENTER INTERIOR ANTENNA.** 1) Replace the center interior antenna with the front interior antenna. <Ref. to SL-91, Keyless Access Indoor Antenna.> 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-35, Clear Memory Mode.> 3) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A6 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Malfunction occurred in the center interior antenna.

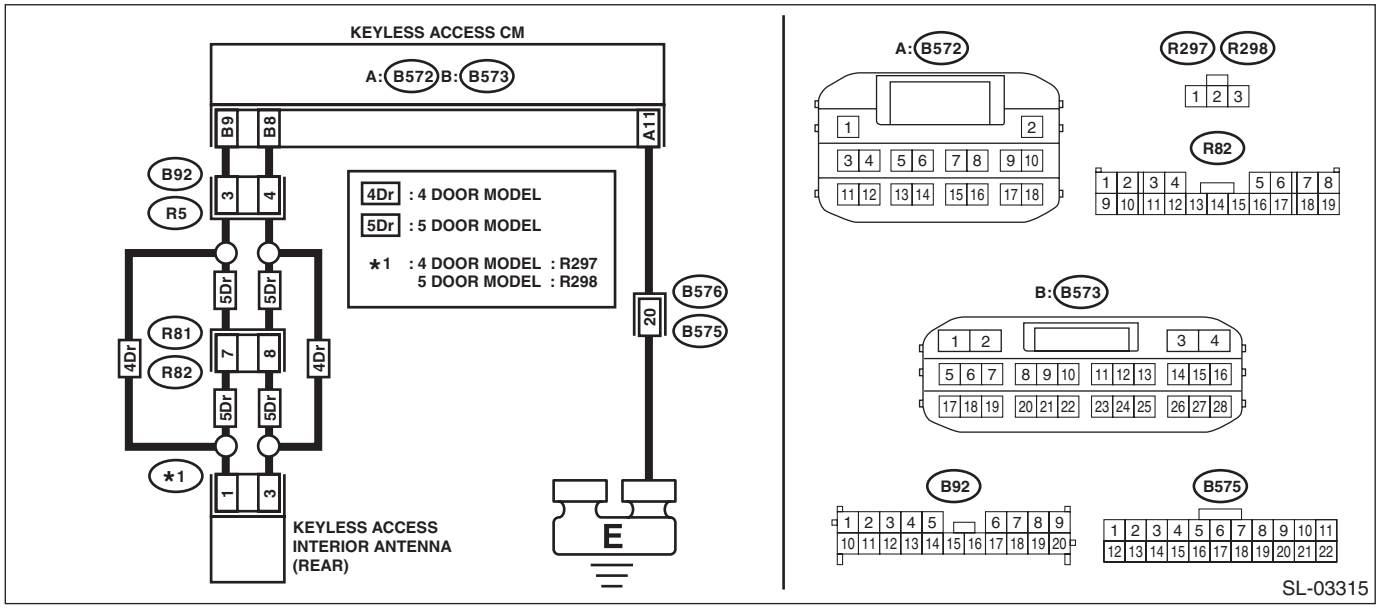
AK:DTC B27A7 TRUNK/REAR GATE INTERNAL ANTENNA OPEN

DTC DETECTING CONDITION:

When open circuit occurs in the harness between keyless access CM and rear interior antenna.

TROUBLE SYMPTOM:

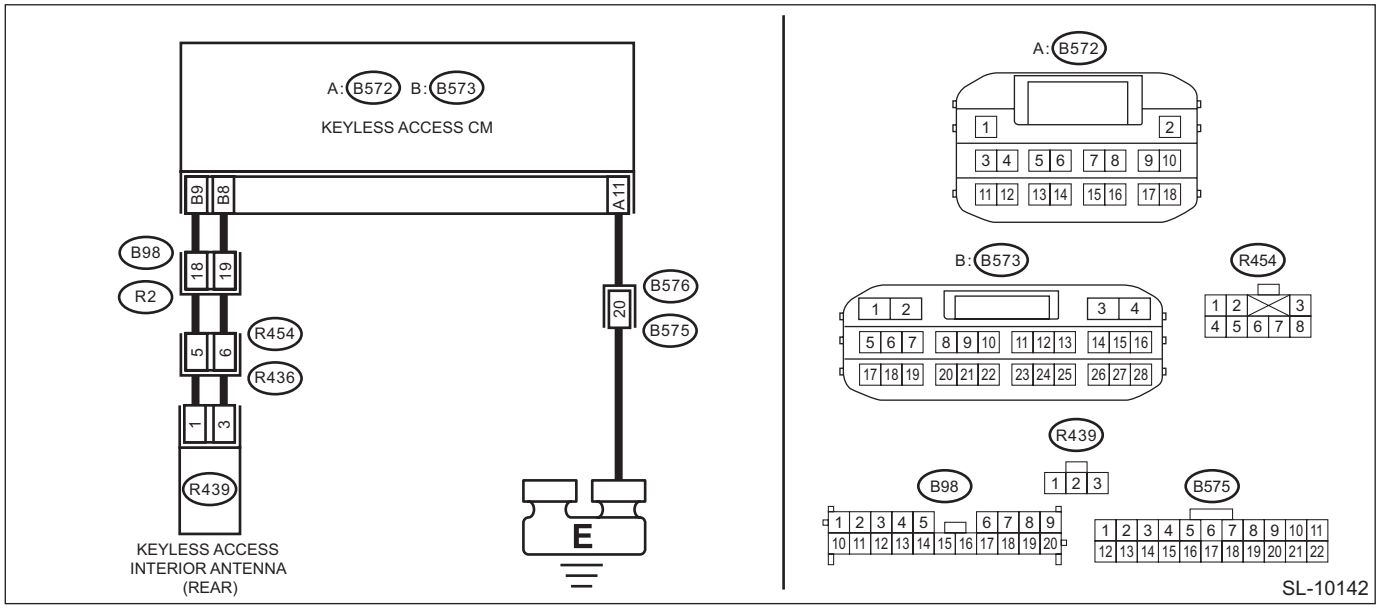
Keyless access system does not function. (When the access key is in the rear area of the passenger room (in the luggage room or trunk))



CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

WIRING DIAGRAM:



- Gasoline engine model

Keyless access system <Ref. to WI(w/o HEV)-157, WIRING DIAGRAM, Keyless Access System.>

- HEV model

Keyless access system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Keyless Access System.>

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CONNECTOR.** 1) Disconnect the keyless access CM connector. 2) Disconnect the rear interior antenna connector.	Is the connector OK?	Go to step **3**.	Repair or replace the connector.
3	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and rear interior antenna connector, and between rear interior antenna connector, keyless access CM connector and chassis ground. ***Connector & terminal*** ***Gasoline engine model (4 door model)*** ***(B573) No. 9 — (R297) No. 1:*** ***(B573) No. 8 — (R297) No. 3:*** ***(B572) No. 11 — Chassis ground:*** ***Gasoline engine model (5 door model)*** ***(B573) No. 9 — (R298) No. 1:*** ***(B573) No. 8 — (R298) No. 3:*** ***(B572) No. 11 — Chassis ground:*** ***HEV model*** ***(B573) No. 9 — (R439) No. 1:*** ***(B573) No. 8 — (R439) No. 3:*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 9 — Chassis ground:*** ***(B573) No. 8 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK DTC.** 1) Connect the keyless access CM connector. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-35, Clear Memory Mode.> 3) Read DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A7 displayed?	Go to step **6**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
6	**CHECK REAR INTERIOR ANTENNA.** 1) Replace the rear interior antenna with the front interior antenna. <Ref. to SL-91, Keyless Access Indoor Antenna.> 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-35, Clear Memory Mode.> 3) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A7 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Malfunction occurred in the rear interior antenna.

AL:DTC B27A8 TRUNK/REAR GATE EXTERNAL ANTENNA OPEN

DTC DETECTING CONDITION:
When open circuit occurs in the harness between keyless access CM and rear exterior antenna.
TROUBLE SYMPTOM:
Keyless access system does not function.
(Unable to unlock with the rear gate opener button, unable to lock with the rear lock button, or unable to open/close the trunk with the trunk opener button.)

CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
WIRING DIAGRAM:
Keyless access system <Ref. to WI(w/o HEV)-157, WIRING DIAGRAM, Keyless Access System.> <Ref. to WI(HEV)-139, WIRING DIAGRAM, Keyless Access System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CONNECTOR.** 1) Disconnect the keyless access CM connector. 2) Disconnect the rear exterior antenna connector.	Is the connector OK?	Go to step **3**.	Repair or replace the connector.
3	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and rear exterior antenna connector, and between rear exterior antenna connector and chassis ground. ***Connector & terminal*** ***(B573) No. 2 — (R299) No. 1:*** ***(B573) No. 1 — (R299) No. 2:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.

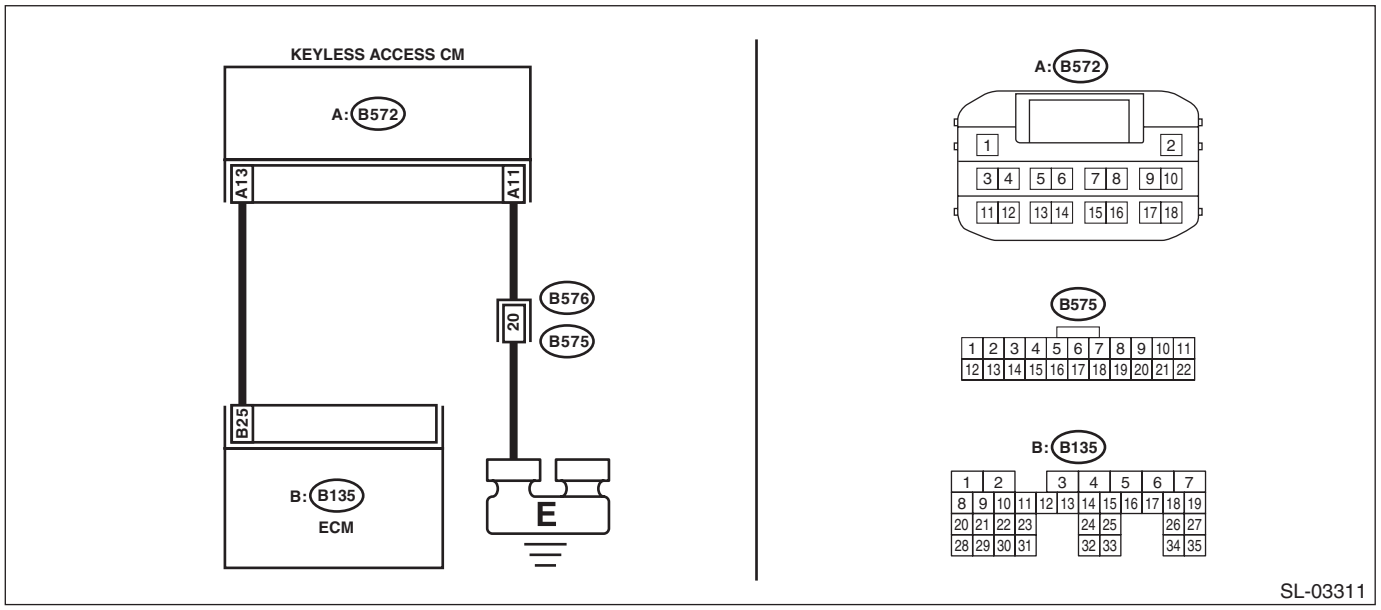
	Step	Check	Yes	No
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 2 — Chassis ground:*** ***(B573) No. 1 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK DTC.** 1) Connect the keyless access CM connector. 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-35, Clear Memory Mode.> 3) Read DTC using the Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A8 displayed?	Go to step **6**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
6	**CHECK KEYLESS ACCESS CM.** 1) Replace the rear exterior antenna with the rear interior antenna. <Ref. to SL-91, Keyless Access Indoor Antenna.> <Ref. to SL-95, Keyless Access Outdoor Antenna.> 2) Using the Subaru Select Monitor, clear the memory. <Ref. to KPS(diag)-35, Clear Memory Mode.> 3) Read the DTC using Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC B27A8 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Malfunction occurred in the rear external antenna.

AM:DTC B1571 REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM)

DTC DETECTING CONDITION:

Incompatibility of reference code between keyless access CM (model without ID code box) or ID code box (model with ID code box) and ECM occurs.

TROUBLE SYMPTOM:



Engine will not start.

	Step	Check	Yes	No
1	**CHECK ECM.** Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is ECM registration finished? And does the engine start?	ECM registration was not performed properly.	Go to step **2**.
2	**REPLACE ECM.** 1) Install the ECM from other normal operating vehicle (with push button start) which use same ECM to the vehicle to be diagnosed. 2) Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is ECM registration finished? And does the engine start?	Replace the ECM. <Ref. to FU(H4DO(w/o HEV))-100, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H4DO(HEV))-86, REMOVAL, Engine Control Module (ECM).> Install the ECM from other vehicle to the original vehicle.	Replace Keyless access CM (model without ID code box), <Ref. to SL-102, Keyless Access CM.> or replace ID code box (model with ID code box). <Ref. to SL-104, ID Code Box.>

AN:DTC B1572 IMM CIRCUIT EXCEPT ANTENNA CIRCUIT

1. EXCEPT FOR C0 AND C5 MODELS

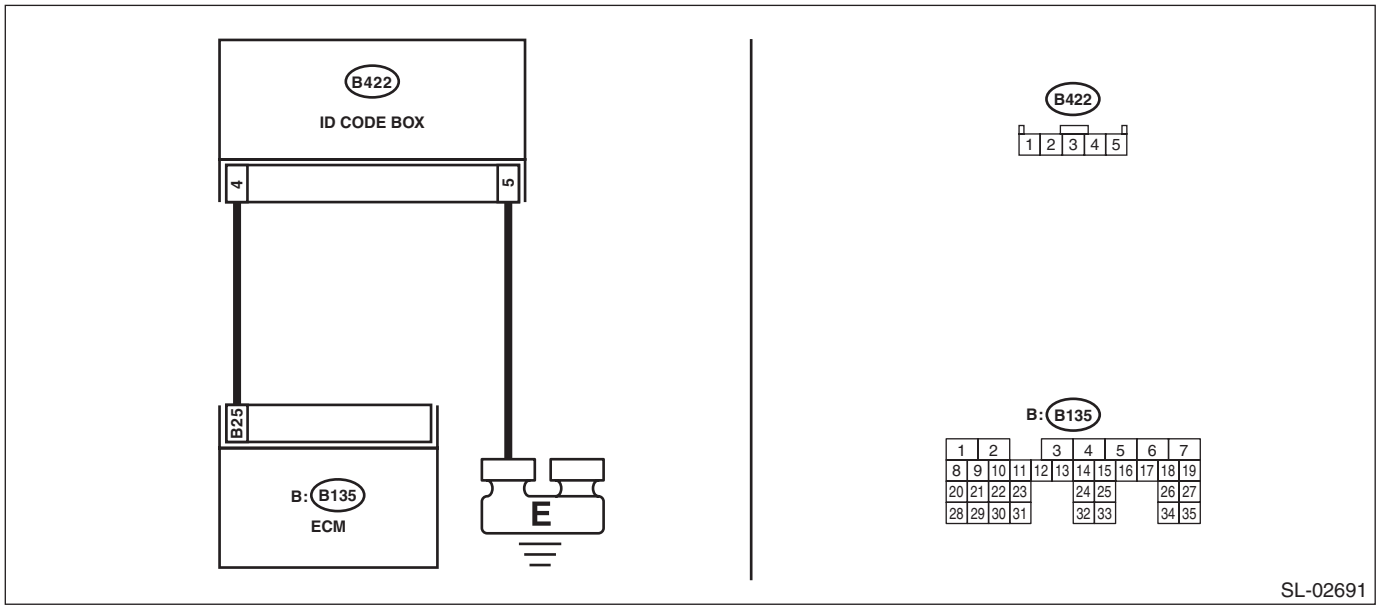
DTC DETECTING CONDITION:
Communication error between keyless access CM and ECM
TROUBLE SYMPTOM:
Engine will not start.
WIRING DIAGRAM:
Push button start system <Ref. to WI(w/o HEV)-186, WIRING DIAGRAM, Push Button Start System.> <Ref. to WI(HEV)-165, WIRING DIAGRAM, Push Button Start System.>

	Step	Check	Yes	No
1	**CHECK GROUNDING POINT.** Check the grounding point of the engine ground and chassis ground.	Are there any loose connections, any foreign objects caught in the ground lines or contact surface, or any fluid stains?	Remove the foreign matters, and tighten to the specified torque. Then start the engine, and check that the fault was removed. Check DTC <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>, and when DTC B1572 is still displayed, Go to step **2**.	Go to step **2**.
2	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-29, Read Current Data.> 3) Display the next data. “Immobilizer” “Engine start” “Unlock confirmation” ***Data*** ***Immobilizer = Unset:*** ***Engine start = Engine start permission:*** ***Unlock confirmation = Confirmed:***	Is the data displayed as described above?	Go to step **3**.	Perform diagnostics with phenomenon. <Ref. to KPS(diag)-141, ENGINE DOES NOT START, INSPECTION, Diagnostics with Phenomenon.>

	Step	Check	Yes	No
3	**CHECK CURRENT DATA.** Use the Subaru Select Monitor to check the current data of «Keyless Access with Push Button Start» when holding down the push button ignition switch while depressing on the brake pedal. <Ref. to KPS(diag)-29, Read Current Data.> ***Data*** ***EGI code reception status = Reception:*** NOTE: If “Reception” is displayed, the status changes to “Not yet received” in 10 seconds. When performing the check again, perform the check after turning the ignition to OFF.	Is the data displayed as described above?	Go to step **4**.	Repair or replace the harness between keyless access CM and ECM.
4	**CHECK WIRING HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the keyless access CM connector and ECM connector. 3) Using a tester, measure the resistance between the keyless access CM connector and ECM. ***Connector & terminal*** ***(B572) No. 13 — (B135) No. 25:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK WIRING HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK ECM.** 1) Install the ECM from other normal operating vehicle (with push button start) which use same ECM to the vehicle to be diagnosed. 2) Perform ECM registration. Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.	Is ECM registration finished? And does the engine start?	Replace the ECM. <Ref. to FU(H4DO(w/o HEV))-100, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H4DO(HEV))-86, REMOVAL, Engine Control Module (ECM).> Install the ECM from other vehicle to the original vehicle.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

2. FOR C0 AND C5 MODELS

DTC DETECTING CONDITION:



Communication error between ID code box and ECM

TROUBLE SYMPTOM:

Engine will not start.

WIRING DIAGRAM:

Push button start system <Ref. to WI(w/o HEV)-186, WIRING DIAGRAM, Push Button Start System.> <Ref. to WI(HEV)-165, WIRING DIAGRAM, Push Button Start System.>

	Step	Check	Yes	No
1	**CHECK GROUNDING POINT.** Check the grounding point of the engine ground and chassis ground.	Are there any loose connections, any foreign objects caught in the ground lines or contact surface, or any fluid stains?	Remove the foreign matters, and tighten to the specified torque. Then start the engine, and check that the fault was removed. Check DTC <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>, and when DTC B1572 is still displayed, Go to step **2**.	Go to step **2**.
2	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Check the current data display of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-29, Read Current Data.> 3) Display the next data. “Immobilizer” “Engine start” “Unlock confirmation” ***Data*** ***Immobilizer = Unset:*** ***Engine start = Engine start permission:*** ***Unlock confirmation = Confirmed:***	Is the data displayed as described above?	Go to step **3**.	Perform diagnostics with phenomenon. <Ref. to KPS(diag)-141, ENGINE DOES NOT START, INSPECTION, Diagnostics with Phenomenon.>

	Step	Check	Yes	No
3	**CHECK CURRENT DATA.** Use the Subaru Select Monitor to check the current data of «Keyless Access with Push Button Start» when holding down the push button ignition switch while depressing on the brake pedal. <Ref. to KPS(diag)-29, Read Current Data.> ***Data*** ***EGI code reception status = Reception:*** NOTE: If “Reception” is displayed, the status changes to “Not yet received” in 10 seconds. When performing the check again, perform the check after turning the ignition to OFF.	Is the data displayed as described above?	Go to step **4**.	Repair or replace the harness between ID code box and ECM.
4	**CHECK WIRING HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the ID code box connector and the ECM connector. 3) Using a tester, measure the resistance between ID code box connector and ECM. ***Connector & terminal*** ***(B422) No. 4 — (B135) No. 25:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK WIRING HARNESS.** Using a tester, measure the resistance between ID code box connector and chassis ground. ***Connector & terminal*** ***(B422) No. 5 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK ECM.** 1) Install the ECM from other normal operating vehicle (with push button start) which use same ECM to the vehicle to be diagnosed. 2) Perform ECM registration. Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.	Is ECM registration finished? And does the engine start?	Replace the ECM. <Ref. to FU(H4DO(w/o HEV))-100, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H4DO(HEV))-86, REMOVAL, Engine Control Module (ECM).> Install the ECM from other vehicle to the original vehicle.	Replace the ID code box. <Ref. to SL-104, ID Code Box.>

AO:DTC B1576 EGI CONTROL MODULE EEPROM

DTC DETECTING CONDITION:

- ECM malfunctioning
- When the ROM in ECM was inaccessible during registration.

Step		Check	Yes	No
1	**PERFORM ECM REGISTRATION.** Perform ECM registration. Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.	Is ECM registration complete?	Make sure that the engine can start. This completes the work.	Go to step **2**.
2	**PERFORM ECM REGISTRATION.** Perform ECM registration. Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.	Is ECM registration complete?	Make sure that the engine can start. This completes the work.	Go to step **3**.
3	**PERFORM ECM REGISTRATION.** Perform ECM registration. Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.	Is ECM registration complete?	Make sure that the engine can start. This completes the work.	Replace the ECM. <Ref. to FU(H4DO(w/o HEV))-100, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H4DO(HEV))-86, REMOVAL, Engine Control Module (ECM).>

AP:DTC B1577 IMM CONTROL MODULE EEPROM

1. EXCEPT FOR C0 AND C5 MODELS

DTC DETECTING CONDITION:

- Defective keyless access CM
- When inaccessible to ROM in keyless access CM.

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Perform the clear memory operation of ECM. <Ref. to EN(H4DO w/o HEV)(diag)-67, Clear Memory Mode.> <Ref. to EN(H4DO HEV)(diag)-68, Clear Memory Mode.> 3) Turn the ignition switch to OFF. 4) Remove and install the battery. 5) Turn the ignition switch to ON. 6) After 5 seconds or more, read DTC. <Ref. to EN(H4DO w/o HEV)(diag)-49, Read Diagnostic Trouble Code (DTC).> <Ref. to EN(H4DO HEV)(diag)-51, Read Diagnostic Trouble Code (DTC).>	Is DTC B1577 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

2. FOR C0 AND C5 MODELS

DTC DETECTING CONDITION:

- ID code box malfunction
- When inaccessible to ROM in ID code box.

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Perform the clear memory operation of ECM. <Ref. to EN(H4DO w/o HEV)(diag)-67, Clear Memory Mode.> <Ref. to EN(H4DO HEV)(diag)-68, Clear Memory Mode.> 3) Turn the ignition switch to OFF. 4) Register the ID code box. 5) Read the DTC again. <Ref. to EN(H4DO w/o HEV)(diag)-49, Read Diagnostic Trouble Code (DTC).> <Ref. to EN(H4DO HEV)(diag)-51, Read Diagnostic Trouble Code (DTC).>	Is DTC B1577 displayed?	Replace the ID code box. <Ref. to SL-104, ID Code Box.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

14.General Diagnostic Table

A: INSPECTION

1. IMMOBILIZER SYSTEM

Symptoms	Note
Engine does not start	<Ref. to KPS(diag)-141, ENGINE DOES NOT START, INSPECTION, Diagnostics with Phenomenon.>
	<Ref. to KPS(diag)-73, DTC B2784 ANTENNA CIRCUIT (PUSH ENGINE SWITCH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	<Ref. to KPS(diag)-83, DTC B278A PUSH ENGINE SWITCH POWER SUPPLY CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	<Ref. to KPS(diag)-75, DTC B2785 LIN COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	<Ref. to KPS(diag)-81, DTC B2789 ID CODE BOX COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	<Ref. to KPS(diag)-86, DTC B2790 ID CODE BOX CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	Check the brake switch. <Ref. to BR-77, INSPECTION, Stop Light Switch.>
	Check the parking switch signal. <Ref. to CS-61, INSPECTION, AT Shift Lock Solenoid and “P” Range Switch.>
	Check the DTC of the ECM.
Cannot register the immobilizer.	Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER”.
Engine does not start with the remote engine starter.	<Ref. to KPS(diag)-70, DTC B2779 REMOTE CONTROL ENGINE STARTER COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

2. KEYLESS ACCESS SYSTEM

Symptoms	Reference
All doors cannot be locked/unlocked with keyless access.	<Ref. to KPS(diag)-109, KEYLESS ACCESS LOCK/UNLOCK CANNOT BE PERFORMED FROM ANY OF THE DOORS, INSPECTION, Diagnostics with Phenomenon.>
Cannot lock with keyless access from the driver's door.	<Ref. to KPS(diag)-111, CANNOT LOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Cannot lock/unlock from the driver's door with keyless access.	<Ref. to KPS(diag)-112, CANNOT LOCK/UNLOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Cannot unlock from the driver's door with keyless access.	<Ref. to KPS(diag)-113, CANNOT UNLOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Cannot unlock from the passenger's door with keyless access.	<Ref. to KPS(diag)-116, CANNOT UNLOCK WITH KEYLESS ACCESS FROM THE PASSENGER'S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Cannot lock/unlock from the passenger's door with keyless access.	<Ref. to KPS(diag)-115, CANNOT LOCK/UNLOCK WITH KEYLESS ACCESS FROM THE PASSENGER'S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Cannot lock from the passenger's door with keyless access.	<Ref. to KPS(diag)-114, CANNOT LOCK WITH KEYLESS ACCESS FROM THE PASSENGER'S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Trunk does not open with the trunk opener button.	<Ref. to KPS(diag)-117, TRUNK WILL NOT OPEN WITH KEYLESS ACCESS, INSPECTION, Diagnostics with Phenomenon.>
Access key lockout protection function in the trunk does not operate.	<Ref. to KPS(diag)-119, ACCESS KEY LOCKOUT PROTECTION FUNCTION IN THE TRUNK DOES NOT OPERATE, INSPECTION, Diagnostics with Phenomenon.>
Keyless access passenger room buzzer does not sound.	<Ref. to KPS(diag)-120, THE KEYLESS ACCESS PASSENGER ROOM BUZZER DOES NOT SOUND, INSPECTION, Diagnostics with Phenomenon.>
Keyless access external buzzer does not beep.	<Ref. to KPS(diag)-121, THE KEYLESS ACCESS EXTERNAL BUZZER DOES NOT BEEP, INSPECTION, Diagnostics with Phenomenon.>
Interior collation does not function.	<Ref. to KPS(diag)-123, INTERNAL COLLATION DOES NOT FUNCTION, INSPECTION, Diagnostics with Phenomenon.>
Rear gate cannot be unlocked with the rear gate opener button.	<Ref. to KPS(diag)-126, CAN NOT UNLOCK WHEN USING THE REAR GATE OPENER BUTTON, INSPECTION, Diagnostics with Phenomenon.>
Rear gate can not be locked when using the rear lock button.	<Ref. to KPS(diag)-128, CAN NOT LOCK WHEN USING THE REAR LOCK BUTTON, INSPECTION, Diagnostics with Phenomenon.>

3. STEERING LOCK SYSTEM

Symptoms	Index
The steering lock cannot be released (cannot start the engine)	<Ref. to KPS(diag)-130, THE STEERING LOCK IS NOT RELEASED, INSPECTION, Diagnostics with Phenomenon.>
The steering lock does not operate	<Ref. to KPS(diag)-132, THE STEERING LOCK DOES NOT OPERATE, INSPECTION, Diagnostics with Phenomenon.>

4. POWER SUPPLY SWITCHING SYSTEM

Symptoms	Index
Power will not turn ON (both accessory and ignition)	<Ref. to KPS(diag)-134, POWER WILL NOT TURN ON (BOTH ACCESSORY AND IGNITION), INSPECTION, Diagnostics with Phenomenon.>
Power will not turn ON (accessory only)	<Ref. to KPS(diag)-137, POWER WILL NOT TURN ON (ACCESSORY DOES NOT TURN ON, BUT IGNITION TURNS ON), INSPECTION, Diagnostics with Phenomenon.>
Power will not turn ON (ignition only)	<Ref. to KPS(diag)-139, POWER WILL NOT TURN ON (ACCESSORY TURNS ON, BUT IGNITION DOES NOT TURN ON), INSPECTION, Diagnostics with Phenomenon.>

15.Diagnostics with Phenomenon

A: INSPECTION

1. KEYLESS ACCESS LOCK/UNLOCK CANNOT BE PERFORMED FROM ANY OF THE DOORS

CAUTION:
• Check that there are no other registered access keys inside the vehicle.
• Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
• Check that the keyless access function is not stopped.
• When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK OPERATION OF KEYLESS DOOR LOCK.** Using the keyless function of the access key, check the operation of the door lock.	Does it lock/unlock normally?	Check the exterior antenna, oscillator, touch sensor, lock/unlock buttons.	Go to step **2**.
2	**CHECK ACCESS KEY.** Check for whether lock and unlock is possible with the registered access key.	Is there any access key which can lock/unlock when the touch sensor is operated?	Check the access key that does not operate. Go to step **3**.	Go to step **4**.
3	**CHECK ACCESS KEY.** Measure the battery voltage of the access key that does not operate.	Is the voltage 2.5 — 3.2 V?	Replace the access key.	Replace the battery.
4	**CHECK DOOR LOCK.** Operate the driver's center door lock switch.	Does the door lock operate?	Go to step **5**.	Check the door lock control system. <Ref. to SL-12, INSPECTION, Door Lock Control System.>
5	**CHECK HARNESS.** 1) Disconnect the receiver connector (R296). 2) Using a tester, measure the resistance between receiver and chassis ground. ***Connector & terminal*** ***(R296) No. 1 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the resistance between receiver and keyless access CM. ***Connector & terminal*** ***(R296) No. 4 — (B573) No. 5:*** ***(R296) No. 5 — (B573) No. 17:*** ***(R296) No. 2 — (B573) No. 19:***	Is the resistance less than 10 Ω?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK RECEIVER.** Replace with a receiver that is operating normally. <Ref. to SL-100, REMOVAL, Receiver.>	When the front unlock sensor and the rear gate opener button are operated, does it lock/unlock?	Malfunction occurred in receiver.	Go to step **8**.
8	**CHECK HARNESS.** Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more when the ignition switch is turned to ON?	Go to step **9**.	Check the keyless access CM power supply circuit.

Step		Check	Yes	No
9	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 10 Ω?	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>	Repair or replace the open circuit of harness.

2. CANNOT LOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR

CAUTION:
• Check that there are no other registered access keys inside the vehicle.
• Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
• Check that the keyless access function is not stopped.
• When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-12, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2	**CHECK CURRENT DATA.** 1) Display the current data «Driver's seat lock status SW input» of «Body Control» using Subaru Select Monitor. <Ref. to KPS(diag)-29, Read Current Data.> 2) Read the data when locking/unlocking the driver's side lock actuator.	Does the data change from ON/OFF?	Go to step **3**.	Check the door lock switch circuit.
3	**CHECK CURRENT DATA.** 1) Display the current data «Driver's lock touch sensor SW» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-29, Read Current Data.> 2) Read the data when operating the touch sensor (lock) of the door outer handle.	Does the data change from ON/OFF according to the sensor operation?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Go to step **4**.
4	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector. ***Connector & terminal*** ***(B574) No. 20 — (D66) No. 1:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between front outer handle connector and chassis ground. ***Connector & terminal*** ***(B574) No. 20 — Chassis ground:*** ***(D66) No. 1 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**REPLACE FRONT DOOR OUTER HANDLE.** Replace the driver's side front outer handle with the passenger's side front outer handle. <Ref. to SL-35, REMOVAL, Front Outer Handle.>	Does it operate properly?	Replace the driver's front outer handle. <Ref. to SL-35, REMOVAL, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

3. CANNOT LOCK/UNLOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR

CAUTION:
- **Check that there are no other registered access keys inside the vehicle.**
- **Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.**
- **Check that the keyless access function is not stopped.**
- **When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-12, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2	**CHECK FUSE.** Check the fuse.	Is the fuse OK?	Go to step **3**.	Replace the fuse.
3	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector, and between front outer handle connector and chassis ground. ***Connector & terminal*** ***(B574) No. 12 — (D66) No. 6:*** ***(B574) No. 13 — (D66) No. 3:*** ***(B574) No. 19 — (D66) No. 5:*** ***(D66) No. 2 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between front outer handle connector and chassis ground. ***Connector & terminal*** ***(B574) No. 12 — Chassis ground:*** ***(D66) No. 6 — Chassis ground:*** ***(B574) No. 13 — Chassis ground:*** ***(D66) No. 3 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Turn the ignition switch to OFF, close all doors and take the access key out of passenger room. 3) Use the Subaru Select Monitor, measure the waveform between the keyless access CM connectors. ***Connector & terminal*** ***(D66) No. 6 — (D66) No. 3:***	Does pulse output change from pulse output OFF → pulse output ON by the lock operation using access key?	Go to step **6**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
6	**REPLACE FRONT DOOR OUTER HANDLE.** Replace the driver's side front outer handle with the passenger's side front outer handle. <Ref. to SL-35, REMOVAL, Front Outer Handle.>	Does it operate properly?	Replace the driver's front outer handle. <Ref. to SL-35, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

4. CANNOT UNLOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR

CAUTION:
• Check that there are no other registered access keys inside the vehicle.
• Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
• Check that the keyless access function is not stopped.
• When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-12, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2	**CHECK CURRENT DATA.** 1) Display the current data «Driver's seat lock status SW input» of «Body Control» using Subaru Select Monitor. <Ref. to KPS(diag)-29, Read Current Data.> 2) Read the data when locking/unlocking the driver's side lock actuator.	Does the data change from ON/OFF?	Go to step **3**.	Check the door lock switch circuit.
3	**CHECK CURRENT DATA.** 1) Display the current data «Driver's unlock touch sensor switch» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-29, Read Current Data.> 2) Read the data when operating the touch sensor (unlock) of the door outer handle.	Does the data change from ON/OFF according to the sensor operation?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Go to step **4**.
4	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector. ***Connector & terminal*** ***(B574) No. 22 — (D66) No. 4:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between front outer handle connector and chassis ground. ***Connector & terminal*** ***(B574) No. 22 — Chassis ground:*** ***(D66) No. 4 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**REPLACE FRONT DOOR OUTER HANDLE.** Replace the driver's side front outer handle with the passenger's side front outer handle. <Ref. to SL-35, REMOVAL, Front Outer Handle.>	Does it operate properly?	Replace the driver's front outer handle. <Ref. to SL-35, REMOVAL, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

5. CANNOT LOCK WITH KEYLESS ACCESS FROM THE PASSENGER'S DOOR

CAUTION:
• Check that there are no other registered access keys inside the vehicle.
• Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
• Check that the keyless access function is not stopped.
• When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-12, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2	**CHECK CURRENT DATA.** 1) Display the current data «Passenger's seat lock status SW input» of «Body Control» using Subaru Select Monitor. <Ref. to BC(diag)-12, Read Current Data.> 2) Read the data when locking/unlocking the passenger's side lock actuator.	Does the data change from ON/OFF?	Go to step **3**.	Check the door lock switch circuit.
3	**CHECK CURRENT DATA.** 1) Display the current data «Passenger's lock touch sensor SW» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-29, Read Current Data.> 2) Read the data when operating the touch sensor (lock) of the door outer handle.	Does the data change from ON/OFF according to the sensor operation?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Go to step **4**.
4	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector. ***Connector & terminal*** ***(B574) No. 8 — (D56) No. 1:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between front outer handle connector and chassis ground. ***Connector & terminal*** ***(B574) No. 8 — Chassis ground:*** ***(D56) No. 1 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**REPLACE FRONT DOOR OUTER HANDLE.** Replace the passenger's side front outer handle with the driver's side front outer handle. <Ref. to SL-35, REMOVAL, Front Outer Handle.>	Does it operate properly?	Replace the passenger's front outer handle. <Ref. to SL-35, REMOVAL, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

6. CANNOT LOCK/UNLOCK WITH KEYLESS ACCESS FROM THE PASSENGER'S DOOR

CAUTION:
- **Check that there are no other registered access keys inside the vehicle.**
- **Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.**
- **Check that the keyless access function is not stopped.**
- **When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-12, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2	**CHECK FUSE.** Check the fuse.	Is the fuse OK?	Go to step **3**.	Replace the fuse.
3	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector, and between front outer handle connector and chassis ground. ***Connector & terminal*** ***(B574) No. 11 — (D56) No. 6:*** ***(B574) No. 10 — (D56) No. 3:*** ***(B574) No. 21 — (D56) No. 5:*** ***(D56) No. 2 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between front outer handle connector and chassis ground. ***Connector & terminal*** ***(B574) No. 11 — Chassis ground:*** ***(D56) No. 6 — Chassis ground:*** ***(B574) No. 10 — Chassis ground:*** ***(D56) No. 3 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Turn the ignition switch to OFF, close all doors and take the access key out of passenger room. 3) Use the Subaru Select Monitor, measure the waveform between the keyless access CM connectors. ***Connector & terminal*** ***(D56) No. 6 — (D66) No. 3:***	Does pulse output change from pulse output OFF → pulse output ON by the lock operation using access key?	Go to step **6**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
6	**REPLACE FRONT DOOR OUTER HANDLE.** Replace the passenger's side front outer handle with the driver's side front outer handle. <Ref. to SL-35, REMOVAL, Front Outer Handle.>	Does it operate properly?	Replace the passenger's front outer handle. <Ref. to SL-35, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

7. CANNOT UNLOCK WITH KEYLESS ACCESS FROM THE PASSENGER'S DOOR

CAUTION:
• Check that there are no other registered access keys inside the vehicle.
• Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
• Check that the keyless access function is not stopped.
• When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-12, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2	**CHECK CURRENT DATA.** 1) Display the current data «Passenger's seat lock status SW input» of «Body Control» using Subaru Select Monitor. <Ref. to BC(diag)-12, Read Current Data.> 2) Read the data when locking/unlocking the passenger's side lock actuator.	Does the data change from ON/OFF?	Go to step **3**.	Check the door lock switch circuit.
3	**CHECK CURRENT DATA.** 1) Display the current data «Passenger's unlock touch sensor switch» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-29, Read Current Data.> 2) Read the data when operating the touch sensor (unlock) of the door outer handle.	Does the data change from ON/OFF according to the sensor operation?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Go to step **4**.
4	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector. ***Connector & terminal*** ***(B574) No. 23 — (D56) No. 4:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between front outer handle connector and chassis ground. ***Connector & terminal*** ***(B574) No. 23 — Chassis ground:*** ***(D56) No. 4 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**REPLACE FRONT DOOR OUTER HANDLE.** Replace the passenger's side front outer handle with the driver's side front outer handle. <Ref. to SL-35, REMOVAL, Front Outer Handle.>	Does it operate properly?	Replace the passenger's front outer handle. <Ref. to SL-35, REMOVAL, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

8. TRUNK WILL NOT OPEN WITH KEYLESS ACCESS

CAUTION:
• Check that there are no other registered access keys inside the trunk.
• Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
• Check that the keyless access function is not stopped.
• When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK TRUNK OPENER BUTTON.** Check that the trunk opens with the driver's seat trunk opener button.	Does it open normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-12, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2	**CHECK KEYLESS OPERATION.** Check that the trunk opens when the trunk opener button of the access key is operated.	Does it open normally?	Go to step **7**.	Go to step **3**.
3	**CHECK TRUNK UNLOCK OPERATION.** 1) Using the Subaru Select Monitor, select the function check «R gate/trunk UNLK output» of «Body Control». <Ref. to BC(diag)-24, Function Check.> 2) Check that the trunk opens when the R gate/trunk UNLK signal is output.	Does it open normally?	Go to step **7**.	Go to step **4**.
4	**CHECK WIRING HARNESS.** 1) Disconnect the body integrated unit connector and trunk lid lock actuator connector. 2) Check the continuity between body integrated unit connector and trunk lid lock actuator connector. ***Connector & terminal*** ***(i171) No. 7 — (R186) No. 1:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK WIRING HARNESS.** Check the continuity between the trunk lid lock actuator connector and chassis ground. ***Connector & terminal*** ***(R186) No. 2 — Chassis ground:***	Is there continuity?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK TRUNK LID LOCK ACTUATOR.** Check the trunk lid lock actuator. <Ref. to SL-53, Trunk Lid Latch and Actuator Assembly.>	Is trunk lid actuator normal?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Replace the trunk lid latch & actuator assembly. <Ref. to SL-53, Trunk Lid Latch and Actuator Assembly.>
7	**CHECK ACCESS KEY.** Check the access key LED when the trunk opener button of the access key is operated.	Does the access key LED illuminate?	Go to step **8**.	Replace the access key. <Ref. to SL-86, REPLACEMENT, Access Key.>
8	**CHECK ACCESS KEY.** 1) Prepare all access keys registered to the vehicle. 2) Check that the trunk opens with each access key.	Does it open normally?	Go to step **9**.	Replace the access key. <Ref. to SL-86, REPLACEMENT, Access Key.>

	Step	Check	Yes	No
9	**CHECK CURRENT DATA.** 1) Display the current data «Trunk Request SW» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-29, Read Current Data.> 2) Read the data when pressing the trunk opener button.	Does the data display ON?	Go to step **13**.	Go to step **10**.
10	**CHECK WIRING HARNESS.** 1) Disconnect the trunk opener button connector and the keyless access CM connector. 2) Using a tester, check continuity between the trunk opener button connector and keyless access CM connector. ***Connector & terminal*** ***(R294) No. 1 — (B573) No. 27:***	Is there continuity?	Go to step **11**.	Repair or replace the open circuit of harness.
11	**CHECK WIRING HARNESS.** 1) Using a tester, check the continuity between the trunk opener button connector and chassis ground. ***Connector & terminal*** ***(R294) No. 2 — Chassis ground:***	Is there continuity?	Go to step **12**.	Repair or replace the open circuit of harness.
12	**CHECK TRUNK OPENER BUTTON.** Using a tester, check the continuity between trunk opener button connector terminals. ***Connector & terminal*** ***(R294) No. 1 — No. 2:***	Is there continuity when pressing the switch?	Go to step **13**.	Replace the trunk opener button. <Ref. to SL-99, Trunk Opener Button.>
13	**CHECK WIRING HARNESS.** 1) Disconnect the exterior rear antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the exterior rear antenna connector and keyless access CM connector. ***Connector & terminal*** ***(R299) No. 1 — (B573) No. 2:*** ***(R299) No. 2 — (B573) No. 1:***	Is there continuity?	Go to step **14**.	Repair or replace the open circuit of harness.
14	**CHECK OUTSIDE REAR ANTENNA.** Replace the outside rear antenna with new or properly working parts.	Does it operate properly?	Replace the outside rear antenna. <Ref. to SL-95, REMOVAL, Keyless Access Outdoor Antenna.>	Go to step **15**.
15	**CHECK KEYLESS ACCESS SYSTEM CHECK.** 1) Using the Subaru Select Monitor, select System check of «Keyless Access with Push Button Start»: «Trunk external transmitter + interior tuner». <Ref. to KPS(diag)-36, Keyless Access System Check.> 2) Hold the access key 1 m or more away from the trunk, then come closer to within 0.8 m.	Does the outside buzzer sound?	System is normal.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

9. ACCESS KEY LOCKOUT PROTECTION FUNCTION IN THE TRUNK DOES NOT OPERATE

CAUTION:
• Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
• Check that the keyless access function is not stopped.
• When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK TRUNK OPENER BUTTON.** Check that the trunk opens with the driver's seat trunk opener button.	Does it open normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-12, INSPECTION, Door Lock Control System.>
2	**CHECK KEYLESS OPERATION.** Check that the trunk opens when the trunk opener button of the access key is operated.	Does it open normally?	Go to step **7**.	Go to step **3**.
3	**CHECK TRUNK UNLOCK OPERATION.** 1) Using the Subaru Select Monitor, select the function check «R gate/trunk UNLK output» of «Body Control». <Ref. to BC(diag)-24, Function Check.> 2) Check that the trunk opens when the R gate/trunk UNLK signal is output.	Does it open normally?	Go to step **7**.	Go to step **4**.
4	**CHECK WIRING HARNESS.** 1) Disconnect the body integrated unit connector and trunk lid lock actuator connector. 2) Check the continuity between body integrated unit connector and trunk lid lock actuator connector. ***Connector & terminal*** ***(i171) No. 7 — (R186) No. 1:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK WIRING HARNESS.** Check the continuity between the trunk lid lock actuator connector and chassis ground. ***Connector & terminal*** ***(R186) No. 2 — Chassis ground:***	Is there continuity?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK TRUNK LID LOCK ACTUATOR.** Check the trunk lid lock actuator. <Ref. to SL-53, Trunk Lid Latch and Actuator Assembly.>	Is trunk lid lock actuator normal?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Replace the trunk lid latch & actuator assembly. <Ref. to SL-53, Trunk Lid Latch and Actuator Assembly.>
7	**CHECK ACCESS KEY.** 1) Prepare all access keys registered to the vehicle. 2) Check that the trunk opens with each access key.	Does it open normally?	Go to step **8**.	Replace the access key. <Ref. to SL-86, REPLACEMENT, Access Key.>
8	**CHECK WIRING HARNESS.** 1) Disconnect the interior rear antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the interior rear antenna connector and keyless access CM connector. ***Connector & terminal*** ***(R297) No. 1 — (B573) No. 9:*** ***(R297) No. 3 — (B573) No. 8:***	Is there continuity?	Go to step **9**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
9	**CHECK PASSENGER ROOM REAR ANTENNA.** Replace the passenger room rear antenna with a new or properly functioning part.	Does it operate properly?	Replace the passenger room rear antenna. <Ref. to SL-91, REMOVAL, Keyless Access Indoor Antenna.>	Go to step **10**.
10	**CHECK RECEIVER.** Replace the receiver with a new or properly functioning part.	Does it operate properly?	Replace the receiver. <Ref. to SL-100, REMOVAL, Receiver.>	Go to step **11**.
11	**CHECK WIRING HARNESS.** 1) Disconnect the receiver connector and the keyless access CM connector. 2) Using a tester, check continuity between the receiver connector and keyless access CM connector. ***Connector & terminal*** ***(R296) No. 4 — (B573) No. 5:*** ***(R296) No. 5 — (B573) No. 17:*** ***(R296) No. 2 — (B573) No. 19:***	Is there continuity?	Go to step **12**.	Repair or replace the open circuit of harness.
12	**CHECK KEYLESS ACCESS SYSTEM CHECK.** 1) Using the Subaru Select Monitor, select System check of «Keyless Access with Push Button Start»: «Trunk internal transmitter + interior tuner». <Ref. to KPS(diag)-36, Keyless Access System Check.> 2) Hold the access key 1 m or more away from the center of inside the trunk, then come closer to within 0.8 m.	Does the outside buzzer sound?	System is normal.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

10.THE KEYLESS ACCESS PASSENGER ROOM BUZZER DOES NOT SOUND

CAUTION:
• Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
• Check that the keyless access function is not stopped.
• When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI(diag)-2, COMBINATION METER, PROCEDURE, Basic Diagnostic Procedure.>	Is combination meter OK?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Replace the combination meter. <Ref. to IDI-19, REMOVAL, Combination Meter.>

11.THE KEYLESS ACCESS EXTERNAL BUZZER DOES NOT BEEP

	Step	Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT SETTING.** Using the Subaru Select Monitor, check the data of «Answer-back Buzzer» of «Body Control». <Ref. to BC(diag)-12, Read Current Data.>	Is the setting "ON"?	Go to step **2**.	Change the setting to "ON".
2	**CHECK BUZZER OPERATION.** Use the Subaru Select Monitor to perform «Body Control» function check «Keyless Buzzer Output». <Ref. to BC(diag)-24, Function Check.>	Does the buzzer sound?	Go to step **3**.	Go to step **5**.
3	**CHECK KEYLESS ACCESS SYSTEM.** 1) Turn to IGN ON. 2) With all doors closed and the access key carried, touch the touch sensor (lock) on the driver's door handle.	Does the door lock?	Go to step **4**.	Refer to "CANNOT LOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR" and perform inspection. <Ref. to KPS(diag)-111, CANNOT LOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR, INSPECTION, Diagnostics with Phenomenon.>
4	**CHECK KEYLESS ACCESS SYSTEM.** 1) Open the door glass. 2) Place the access key on the driver's seat, and close the door. 3) Touch the touch sensor (lock) on the driver's door handle.	Does the buzzer sound? (Lock-out protection warning)	System is normal.	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>
5	**CHECK HARNESS.** 1) Turn to IGN OFF. 2) Disconnect the connectors of the body integrated unit and keyless buzzer. 3) Measure the resistance between body integrated unit connector and keyless buzzer connector. ***Connector & terminal*** ***(B280) No. 20 — (B164) No. 1:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK HARNESS.** Measure the resistance between keyless buzzer connector and chassis ground. ***Connector & terminal*** ***(B164) No. 1 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **7**.	Repair or replace the short circuit of the harness.
7	**CHECK HARNESS.** Measure the resistance between keyless buzzer connector and chassis ground. ***Connector & terminal*** ***(B164) No. 2 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **8**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
8	**CHECK BODY INTEGRATED UNIT.** 1) Connect the connector of body integrated unit. 2) Use the Subaru Select Monitor to perform «Body Control» function check «Keyless Buzzer Output». <Ref. to BC(diag)-24, Function Check.> 3) Measure the voltage between body integrated unit connector and chassis ground using an oscilloscope. ***Connector & terminal*** ***(B280) No. 20 (+) — Chassis ground (–):***	Is the frequency 2kHz, voltage 9 V or more?	Replace the keyless buzzer. <Ref. to SL-78, REMOVAL, Keyless Buzzer.>	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>

12.INTERNAL COLLATION DOES NOT FUNCTION

CAUTION:
When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK ACCESS KEY.** Check the access key. <Ref. to SL-86, INSPECTION, Access Key.>	Is the battery OK?	Go to step **2**.	Replace the battery.
2	**CHECK INTERIOR ANTENNA.** 1) Using the Subaru Select Monitor, select System check of «Keyless Access with Push Button Start»: «Front interior transmitter + interior tuner». <Ref. to KPS(diag)-36, Keyless Access System Check.> 2) Using a tester, check the output between keyless access CM connector terminals while performing the Keyless access system check. ***Connector & terminal*** ***(B574) No. 2 — No. 3:***	Is a pulse output?	Go to step **3**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
3	**CHECK INTERIOR ANTENNA.** NOTE: For gasoline engine model (5 door model), go to the next step. 1) Using the Subaru Select Monitor, select System check of «Keyless Access with Push Button Start»: «Rear interior transmitter + interior tuner». <Ref. to KPS(diag)-36, Keyless Access System Check.> 2) Using a tester, check the output between keyless access CM connector terminals while performing the Keyless access system check. ***Connector & terminal*** ***(B573) No. 10 — No. 11:***	Is a pulse output?	Go to step **4**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
4	**CHECK INTERIOR ANTENNA.** 1) Using the Subaru Select Monitor, select System check of «Keyless Access with Push Button Start»: «Trunk internal transmitter + interior tuner» or «Rear gate internal transmitter + interior tuner». <Ref. to KPS(diag)-36, Keyless Access System Check.> 2) Using a tester, check the output between keyless access CM connector terminals while performing the Keyless access system check. ***Connector & terminal*** ***(B573) No. 8 — No. 9:***	Is a pulse output?	Go to step **5**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
5	**CHECK WIRING HARNESS.** 1) Disconnect the front interior antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the front interior antenna connector and the keyless access CM connector. ***Connector & terminal*** ***(B579) No. 1 — (B574) No. 3:*** ***(B579) No. 2 — (B574) No. 2:***	Is there continuity?	Go to step **6**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
6	**CHECK WIRING HARNESS.** NOTE: For gasoline engine model (5 door model), go to the next step. 1) Disconnect the center interior antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the center interior antenna connector and the keyless access CM connector. ***Connector & terminal*** ***(R298) No. 1 — (B573) No. 11:*** ***(R298) No. 3 — (B573) No. 10:***	Is there continuity?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK WIRING HARNESS.** 1) Disconnect the rear interior antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the rear interior antenna connector and the keyless access CM connector. ***Connector & terminal*** ***Gasoline engine model (4 door model)*** ***(B573) No. 9 — (R297) No. 1:*** ***(B573) No. 8 — (R297) No. 3:*** ***Gasoline engine model (5 door model)*** ***(B573) No. 9 — (R298) No. 1:*** ***(B573) No. 8 — (R298) No. 3:*** ***HEV model*** ***(B573) No. 9 — (R439) No. 1:*** ***(B573) No. 8 — (R439) No. 3:***	Is there continuity?	Go to step **8**.	Repair or replace the open circuit of harness.
8	**CHECK ANTENNA.** Replace the front interior antenna with a new or properly functioning part.	Does it operate properly?	Replace the front interior antenna. <Ref. to SL-91, REMOVAL, Keyless Access Indoor Antenna.>	Go to step **9**.
9	**CHECK ANTENNA.** NOTE: For gasoline engine model (5 door model), go to the next step. Replace the center interior antenna with a new or properly functioning part.	Does it operate properly?	Replace the center interior antenna. <Ref. to SL-91, REMOVAL, Keyless Access Indoor Antenna.>	Go to step **10**.
10	**CHECK ANTENNA.** Replace the rear interior antenna with a new or properly functioning part.	Does it operate properly?	Replace the rear interior antenna. <Ref. to SL-91, REMOVAL, Keyless Access Indoor Antenna.>	Go to step **11**.
11	**CHECK WIRING HARNESS.** 1) Disconnect the receiver connector and the keyless access CM connector. 2) Using a tester, check continuity between the receiver connector and keyless access CM connector. ***Connector & terminal*** ***(R296) No. 4 — (B573) No. 5:*** ***(R296) No. 5 — (B573) No. 17:*** ***(R296) No. 2 — (B573) No. 19:***	Is there continuity?	Go to step **12**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
12	**CHECK RECEIVER.** Replace the receiver with a new or properly functioning part.	Does it operate properly?	Replace the receiver. <Ref. to SL-100, REMOVAL, Receiver.>	Go to step **13**.
13	**CHECK KEYLESS ACCESS SYSTEM CHECK.** 1) Using the Subaru Select Monitor, select System check of «Keyless Access with Push Button Start»: «Front interior transmitter + interior tuner». <Ref. to KPS(diag)-36, Keyless Access System Check.> 2) Hold the access key 1 m or more away from the audio panel, then come closer to within 0.8 m.	Does the buzzer sound?	Go to step **14**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
14	**CHECK KEYLESS ACCESS SYSTEM CHECK.** NOTE: For gasoline engine model (5 door model), go to the next step. 1) Using the Subaru Select Monitor, select System check of «Keyless Access with Push Button Start»: «Rear interior transmitter + interior tuner». <Ref. to KPS(diag)-36, Keyless Access System Check.> 2) Hold the access key 1 m or more away from the center of the second row seats, then come closer to within 0.8 m.	Does the buzzer sound?	Go to step **15**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
15	**CHECK KEYLESS ACCESS SYSTEM CHECK.** 1) Using the Subaru Select Monitor, select System check of «Keyless Access with Push Button Start»: «Trunk internal transmitter + interior tuner» or «Rear gate internal transmitter + interior tuner». <Ref. to KPS(diag)-36, Keyless Access System Check.> 2) Hold the access key 1 m or more away from the back of the rear seat, then come closer to within 0.8 m.	Does the buzzer sound?	System is normal.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

13.CAN NOT UNLOCK WHEN USING THE REAR GATE OPENER BUTTON

CAUTION:
- **Check that there are no other registered access keys inside the rear gate.**
- **Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.**
- **Check that the keyless access function is not stopped.**
- **When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**

	Step	Check	Yes	No
1	**CHECK KEYLESS OPERATION.** Check that the rear gate unlocks when the trunk open button of the access key is pressed.	Does it operate properly?	Go to step **6**.	Go to step **2**.
2	**CHECK REAR GATE UNLOCK OPERATION.** 1) Using the Subaru Select Monitor, select the function check «R gate/trunk UNLK output» of «Body Control». <Ref. to BC(diag)-24, Function Check.> 2) Check that the rear gate unlocks when the R gate/trunk UNLK signal is output.	Does it operate properly?	Go to step **6**.	Go to step **3**.
3	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector and rear gate lock actuator connector. 2) Check the continuity between body integrated unit connector and rear gate lock actuator connector. ***Connector & terminal*** ***(i171) No. 7 — (D46) No. 1:***	Is there continuity?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS.** 1) Check the continuity between the rear gate lock actuator connector and chassis ground. ***Connector & terminal*** ***(D47) No. 2 — Chassis ground:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK REAR GATE LOCK ACTUATOR.** 1) Check the rear gate lock actuator. <Ref. to SL-52, INSPECTION, Rear Gate Latch and Actuator Assembly.>	Is the rear gate lock actuator normal?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Replace the rear gate latch and actuator assembly. <Ref. to SL-51, Rear Gate Latch and Actuator Assembly.>
6	**CHECK ACCESS KEY.** 1) Prepare all access keys registered to the vehicle. 2) Check that the rear gate lock can be unlocked with each access key.	Does it operate properly?	Go to step **7**.	Replace the access key. <Ref. to SL-86, REPLACEMENT, Access Key.>
7	**CHECK CURRENT DATA.** 1) Display the current data «R Gate Release SW input» of «Body Control» using Subaru Select Monitor. <Ref. to BC(diag)-12, Read Current Data.> 2) Read the data when pressing the rear gate opener button.	Does the data display ON?	Go to step **14**.	Go to step **8**.

	Step	Check	Yes	No
8	**CHECK WIRING HARNESS.** 1) Disconnect the rear gate opener button connector and body integrated unit connector. 2) Using a tester, check the continuity between the rear gate opener button connector and body integrated unit connector. ***Connector & terminal*** ***(D77) No. 1 — (i84) No. 10:***	Is there continuity?	Go to step **9**.	Repair or replace the open circuit of harness.
9	**CHECK WIRING HARNESS.** 1) Using a tester, check the continuity between the rear gate opener button connector and chassis ground. ***Connector & terminal*** ***(D77) No. 2 — Chassis ground:***	Is there continuity?	Go to step **10**.	Repair or replace the open circuit of harness.
10	**CHECK REAR GATE OPENER BUTTON.** Using a tester, check the continuity between rear gate opener button switch terminals. ***Connector & terminal*** ***(D77) No. 1 — (D77) No. 2:***	Is there continuity when pressing the switch?	Go to step **11**.	Replace the rear gate opener button. <Ref. to SL-49, Rear Gate Opener Button.>
11	**CHECK WIRING HARNESS.** 1) Disconnect the exterior rear antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the exterior rear antenna connector and keyless access CM connector. ***Connector & terminal*** ***(R299) No. 1 — (B573) No. 2:*** ***(R299) No. 2 — (B573) No. 1:***	Is there continuity?	Go to step **12**.	Repair or replace the open circuit of harness.
12	**CHECK OUTSIDE REAR ANTENNA.** Replace the outside rear antenna with new or properly working parts.	Does it operate properly?	The outside rear antenna has a failure.	Go to step **13**.
13	**CHECK CURRENT DATA.** 1) Display the current data «R gate lock status SW input» of «Body Control» using Subaru Select Monitor. <Ref. to BC(diag)-12, Read Current Data.> 2) Read the data when locking/unlocking the rear gate lock actuator.	Does the data change from ON ←→ OFF?	Go to step **14**.	Check body integrated unit. <Ref. to SL-80, REMOVAL, Body Integrated Unit.>
14	**CHECK KEYLESS ACCESS SYSTEM CHECK.** 1) Using the Subaru Select Monitor, select System check of «Keyless Access with Push Button Start»: «Rear gate external transmitter + interior tuner». <Ref. to KPS(diag)-36, Keyless Access System Check.> 2) Hold the access key 1 m or more away from the trunk, then come closer to within 0.8 m.	Does the outside buzzer sound?	System is normal.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

14.CAN NOT LOCK WHEN USING THE REAR LOCK BUTTON

CAUTION:
- **Check that there are no other registered access keys inside the vehicle.**
- **Check that the keyless access function is not stopped.**
- **Inspect LAN system or keyless access system according to the basic diagnostic procedure, and make sure that DTC is not input.**
- **When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**

	Step	Check	Yes	No
1	**CHECK REAR GATE ACTUATOR.** While carrying the access key, operate the touch sensor (lock) and touch sensor (unlock).	When the switch is operated, does the rear gate lock/unlock?	Go to step **2**.	Go to step **10**.
2	**CHECK REAR LOCK BUTTON.** 1) Display the current data «Rear Gate Request SW» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-29, Read Current Data.> 2) Read the data when operating the rear lock button.	Does the data change between ON/OFF?	Go to step **8**.	Go to step **3**.
3	**CHECK HARNESS.** 1) Disconnect the rear lock button connector and the keyless access CM connector. 2) Using a tester, measure the resistance between harness. ***Connector & terminal*** ***(D77) No. 3 — (B573) No. 27:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair or replace the open circuit of the harness.
4	**CHECK HARNESS.** Using a tester, measure the resistance between harness and chassis ground. ***Connector & terminal*** ***(D77) No. 3 — Chassis ground:***	Is the resistance 10 MΩ or more?	Go to step **5**.	Repair or replace the short of harness.
5	**CHECK HARNESS.** Using a tester, measure the resistance between harness and chassis ground. ***Connector & terminal*** ***(D77) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of the harness.
6	**CHECK REAR LOCK BUTTON.** Measure the resistance when the rear lock button is operated using the tester. ***Connector & terminal*** ***(D77) No. 3 — No. 4:***	Did the resistance change from 1 MΩ or more to less than 10 Ω?	Go to step **7**.	Replace the rear lock button. <Ref. to SL-97, REMOVAL, Rear Lock Button.>
7	**CHECK REAR LOCK BUTTON.** 1) Display the current data «Rear Gate Request SW» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-29, Read Current Data.> 2) Read the data when operating the rear lock button.	Does the data change between ON/OFF?	Go to step **8**.	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>
8	**CHECK WIRING HARNESS.** 1) Disconnect the exterior rear antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the exterior rear antenna connector and keyless access CM connector. ***Connector & terminal*** ***(R299) No. 1 — (B573) No. 2:*** ***(R299) No. 2 — (B573) No. 1:***	Is there continuity?	Go to step **9**.	Repair or replace the open circuit of harness.

Step		Check	Yes	No
9	**CHECK OUTSIDE REAR ANTENNA.** Replace the outside rear antenna with new or properly working parts. <Ref. to SL-95, REMOVAL, Keyless Access Outdoor Antenna.>	Does it operate properly?	The outside rear antenna has a failure.	Go to step **10**.
10	**CHECK BODY INTEGRATED UNIT.** 1) Connect the disconnected connectors. 2) Use the Subaru Select Monitor to perform «Body Control» function check. <Ref. to BC(diag)-24, Function Check.> 3) Actuate the door lock actuator LOCK output.	Does the rear gate lock actuator lock?	It is possible that temporary poor communication occurs.	Go to step **11**.
11	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector and rear gate lock actuator connector. 2) Check the continuity between body integrated unit connector and rear gate lock actuator connector. ***Connector & terminal*** ***(i171) No. 7 — (D46) No. 1:***	Is there continuity?	Go to step **12**.	Repair or replace the open circuit of harness.
12	**CHECK HARNESS.** 1) Check the continuity between the rear gate lock actuator connector and chassis ground. ***Connector & terminal*** ***(D46) No. 2 — Chassis ground:***	Is there continuity?	Go to step **13**.	Repair or replace the open circuit of harness.
13	**CHECK REAR GATE LOCK ACTUATOR.** 1) Check the rear gate lock actuator. <Ref. to SL-52, INSPECTION, Rear Gate Latch and Actuator Assembly.>	Is the rear gate lock actuator normal?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Replace the rear gate latch and actuator assembly. <Ref. to SL-51, Rear Gate Latch and Actuator Assembly.>

15.THE STEERING LOCK IS NOT RELEASED

CAUTION:
When the steering lock CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK OPERATION.** 1) Depress the brake pedal. 2) While turning the steering wheel lightly to the left and right, press the push button ignition switch. 3) Confirm that the steering lock is released and the engine start.	Does the engine fail to start with the steering lock released?	Perform the diagnosis for engine system. <Ref. to EN(H4DO w/o HEV)(diag)-75, Diagnostics for Engine Starting Failure.> <Ref. to EN(H4DO HEV)(diag)-72, Diagnostics for Engine Starting Failure.>	Go to step **2**.
2	**CHECK DTC.** Read keyless access CM DTCs using the Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is a DTC displayed?	Perform the diagnosis according to the corresponding procedures of DTC.	Go to step **3**.
3	**CHECK CURRENT DATA.** 1) Using the Subaru Select Monitor, display the current data of «Keyless Access with Push Button Start»: «Steering lock unlock request reception status» and «Steering lock lock/unlock command reception history». <Ref. to KPS(diag)-29, Read Current Data.> 2) Read the data when the push button ignition switch is pressed while in possession of the access key. (Maintain for 10 seconds after switch operation)	Does the data change from «Not yet received» to «Reception», and from «OFF» to «ON»?	Go to step **4**.	Go to step **7**.
4	**CHECK STEERING LOCK CM.** 1) Disconnect the steering lock CM connector. 2) Using a tester, measure the voltage between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(B424) No. 7 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK STEERING LOCK CM.** Using a tester, check continuity between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(B424) No. 1 — Chassis ground:***	Is there continuity?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK STEERING LOCK CM.** 1) Connect the disconnected connectors. 2) Using a tester, measure the voltage between steering lock CM terminals right after the ignition switch is turned to ON. ***Connector & terminal*** ***(B424) No. 3 (+) — (B424) No. 1 (–):***	Is the voltage 1 V or less right after the ignition ON?	Replace the steering lock CM. <Ref. to SL-105, REMOVAL, Steering Lock CM.>	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
7	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display the current data of «Keyless Access with Push Button Start»: «Code collation result between smart ECM and ID code box». <Ref. to KPS(diag)-29, Read Current Data.>	Is data displayed as being normal?	Go to step **9**.	Go to step **8**.
8	**CHECK CURRENT DATA.** 1) Replace with a properly functioning or new ID code box. <Ref. to SL-104, ID Code Box.> 2) Using the Subaru Select Monitor, display the current data of «Keyless Access with Push Button Start»: «Code collation result between smart ECM and ID code box». <Ref. to KPS(diag)-29, Read Current Data.>	Is data displayed as being normal?	System is normal.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
9	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display the current data of «Keyless Access with Push Button Start»: «Code collation result between steering locked ECM and ID code box». <Ref. to KPS(diag)-29, Read Current Data.>	Is data displayed as being normal?	System is normal.	Go to step **10**.
10	**CHECK ID CODE BOX.** 1) Replace with a properly functioning or new ID code box. <Ref. to SL-104, ID Code Box.> 2) Using the Subaru Select Monitor, display the current data of «Keyless Access with Push Button Start»: «Code collation result between steering locked ECM and ID code box». <Ref. to KPS(diag)-29, Read Current Data.>	Is data displayed as being normal?	System is normal.	Go to step **11**.
11	**CHECK STEERING LOCK CM.** 1) Replace with a properly functioning or new steering lock CM. <Ref. to SL-105, REMOVAL, Steering Lock CM.> 2) After registering, the steering lock operates when the ignition is turned to OFF and the driver's door is opened and closed. 3) Turn the ignition to ON. 4) Operate the steering and check for whether the steering lock is released.	Is the steering lock released, and does the engine start?	Replace the steering lock CM. <Ref. to SL-105, REMOVAL, Steering Lock CM.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

16.THE STEERING LOCK DOES NOT OPERATE

CAUTION:
When the keyless access CM or steering lock CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK DTC.** Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is a DTC displayed?	Perform the diagnosis according to the corresponding DTC.	Go to step **2**.
2	**CHECK CURRENT DATA.** 1) Display the current data «Driver's door SW input» of «Body Control» using Subaru Select Monitor. <Ref. to BC(diag)-12, Read Current Data.> 2) Read the data when opening and closing the driver's door.	Does the data change from ON to OFF according to the opening and closing?	Go to step **3**.	Inspect door switch circuit.
3	**CHECK CURRENT DATA.** Display the current data «Shift P Signal» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-29, Read Current Data.>	Is the status displayed correctly when the shift lever is shifted from P to other than P?	Go to step **4**.	Check the P range switch and harness.
4	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display the current data of «Keyless Access with Push Button Start»: «Code collation result between smart ECM and ID code box». <Ref. to KPS(diag)-29, Read Current Data.>	Is the status normal?	Go to step **5**.	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>
5	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display the current data of «Keyless Access with Push Button Start»: «Code collation result between steering locked ECM and ID code box». <Ref. to KPS(diag)-29, Read Current Data.>	Is the status normal?	Go to step **6**.	Replace the steering lock CM. <Ref. to SL-105, REMOVAL, Steering Lock CM.>
6	**CHECK CURRENT DATA.** 1) Display the current data «Steering lock lock/unlock command reception history» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-29, Read Current Data.> 2) While in possession of the access key, perform engine start operations, and read data within 10 seconds after starting.	Is data displayed as ON?	Go to step **7**.	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>
7	**CHECK STEERING LOCK CM.** Using a tester, measure the waveform between steering lock CM terminals immediately after the following operations. Perform ignition ON, driver's side door close → shift lever "P" range, ignition OFF, and close → open the driver's side door. ***Connector & terminal*** ***(B424) No. 3 — (B424) No. 1:***	Is the waveform immediately after opening the driver's side door abnormal?	Replace the steering lock CM. <Ref. to SL-105, REMOVAL, Steering Lock CM.>	Go to step **8**.

	Step	Check	Yes	No
8	**CHECK WIRING HARNESS.** 1) Disconnect the keyless access CM connector and the steering lock CM connector. 2) Using a tester, check continuity between the keyless access CM connector and steering lock CM connector. ***Connector & terminal*** ***(B424) No. 3 — (B574) No. 29:***	Is there continuity?	Go to step **9**.	Repair or replace the open circuit of harness.
9	**CHECK WIRING HARNESS.** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is there continuity?	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>	Repair or replace the open circuit of harness.

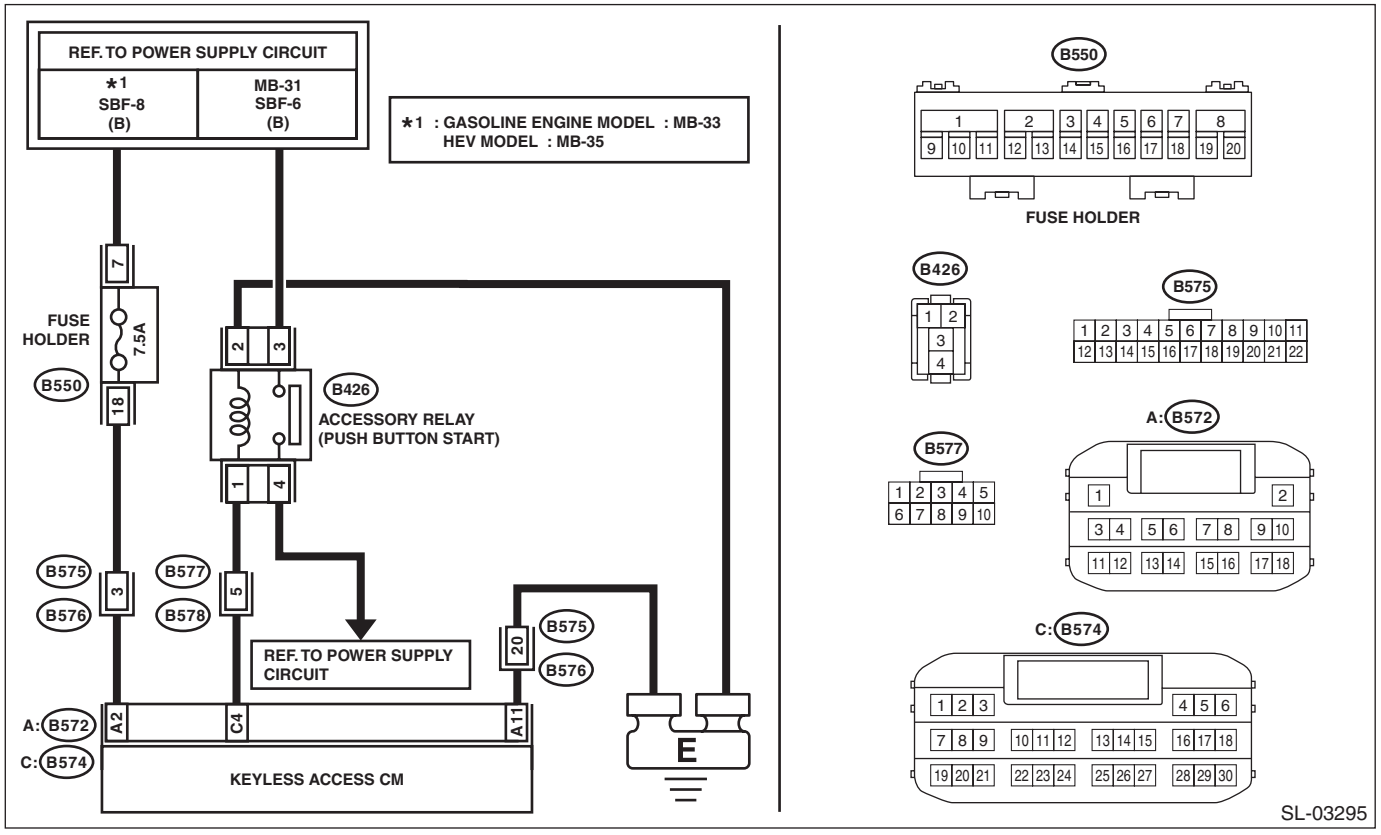
17.POWER WILL NOT TURN ON (BOTH ACCESSORY AND IGNITION)

CAUTION:
• When the keyless access CM is replaced with a new unit, and the battery ground terminal is connected, it will become ignition ON. Also, if the battery is disconnected, it will resume to a condition with the battery cut off.
• When the keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK FUSE.** Check the fuse.	Is the fuse OK?	Go to step **2**.	Replace the fuse.
2	**CHECK POWER SUPPLY.** 1) Remove IG relay 1 (push button start), IG relay 2 (push button start) and accessory relay (push button start). 2) Using a tester, measure the voltage between the relay block connector and chassis ground.	Is the voltage 10 V or more?	Go to step **3**.	Check the DC power supply circuit.
3	**CHECK CONNECTOR.** Check the engagement of each connector and for any deformation or looseness.	Are the connectors and terminals normal?	Go to step **4**.	Repair the connector, or replace harness.
4	**CHECK WIRING HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 2 (+) — Chassis ground (–):***	Is the voltage between 8 V and 16 V?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK WIRING HARNESS.** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is there continuity?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK DTC.** 1) Connect the keyless access CM connector. 2) While in possession of the access key, depress the brake pedal, and push the push button ignition switch. 3) Read keyless access CM DTCs using the Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is a DTC output?	Perform diagnosis according to the DTC.	Go to step **7**.
7	**CHECK CURRENT DATA.** 1) Display the current data «Push start SW 1» and «Push start SW 2» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-29, Read Current Data.> 2) Read the data when pressing the push button ignition switch.	Does it change from OFF to ON along with the operation?	Go to step **8**.	Go to step **15**.
8	**CHECK RELAY (PUSH BUTTON START).** Check IG relay 1 and 2 (push button start), and accessory relay (push button start). <Ref. to SL-112, INSPECTION, IG Relay1 (Push Button Start).>	Is each relay normal?	Go to step **9**.	Replace the faulty relay.

	Step	Check	Yes	No
9	**CHECK WIRING HARNESS.** 1) Disconnect the keyless access CM connector, IG relay 1 (push button start), IG relay 2 (push button start) and accessory relay (push button start). 2) Using a tester, check continuity between terminals of keyless access CM connector, IG relay 1 (push button start), IG relay 2 (push button start) and accessory relay (push button start). ***Connector & terminal*** ***(B574) No. 6 — (B225) No. 38:*** ***(B572) No. 9 — (B225) No. 34:*** ***(B574) No. 4 — (B426) No. 1:***	Is there continuity?	Go to step **10**.	Repair or replace the open circuit of harness.
10	**CHECK WIRING HARNESS.** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 9 — Chassis ground:*** ***(B574) No. 4 — Chassis ground:*** ***(B574) No. 6 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Go to step **11**.
11	**CHECK WIRING HARNESS.** Using a tester, check the continuity between the IG relay 2 (push button start) connector and chassis ground. ***Connector & terminal*** ***(B225) No. 39 — Chassis ground:***	Is there continuity?	Go to step **12**.	Repair or replace the open circuit of harness.
12	**CHECK WIRING HARNESS.** Using a tester, check the continuity between the IG relay 1 connector and chassis ground. ***Connector & terminal*** ***(B225) No. 35 — Chassis ground:***	Is there continuity?	Go to step **13**.	Repair or replace the open circuit of harness.
13	**CHECK WIRING HARNESS.** Using a tester, check the continuity between the accessory relay connector and chassis ground. ***Connector & terminal*** ***(B426) No. 2 — Chassis ground:***	Is there continuity?	Go to step **14**.	Repair or replace the open circuit of harness.
14	**CHECK KEYLESS ACCESS CM.** 1) Connect all the disconnected connectors. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground when the ignition is turned from OFF to ON. ***Connector & terminal*** ***(B572) No. 9 (+) — Chassis ground (–):*** ***(B574) No. 4 (+) — Chassis ground (–):*** ***(B574) No. 6 (+) — Chassis ground (–):***	Did the voltage change from 1 V or less to +B-2 V or more?	Go to step **15**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
15	**CHECK PUSH BUTTON IGNITION SWITCH.** 1) Disconnect the push button ignition switch. 2) Using a tester, check the continuity between terminals. ***Connector & terminal*** ***(i150) No. 7 — (i150) No. 5:*** ***(i150) No. 2 — (i150) No. 5:***	When the button was pressed, did it change to continuity exists? (No continuity when button is released)	Go to step **16**.	Replace the push button ignition switch. <Ref. to SL-107, REMOVAL, Push Button Ignition Switch.>

	Step	Check	Yes	No
16	**CHECK WIRING HARNESS.** Using a tester, check the continuity between the push button ignition switch connector and chassis ground. ***Connector & terminal*** ***(i150) No. 4 — Chassis ground:*** ***(i150) No. 5 — Chassis ground:***	Is there continuity?	Go to step **17**.	Repair or replace the open circuit of harness.
17	**CHECK WIRING HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, check continuity between the keyless access CM connector and push button ignition switch. ***Connector & terminal*** ***(i150) No. 7 — (B574) No. 28:*** ***(i150) No. 2 — (B574) No. 30:***	Is there continuity?	System is normal.	Repair or replace the open circuit of harness.



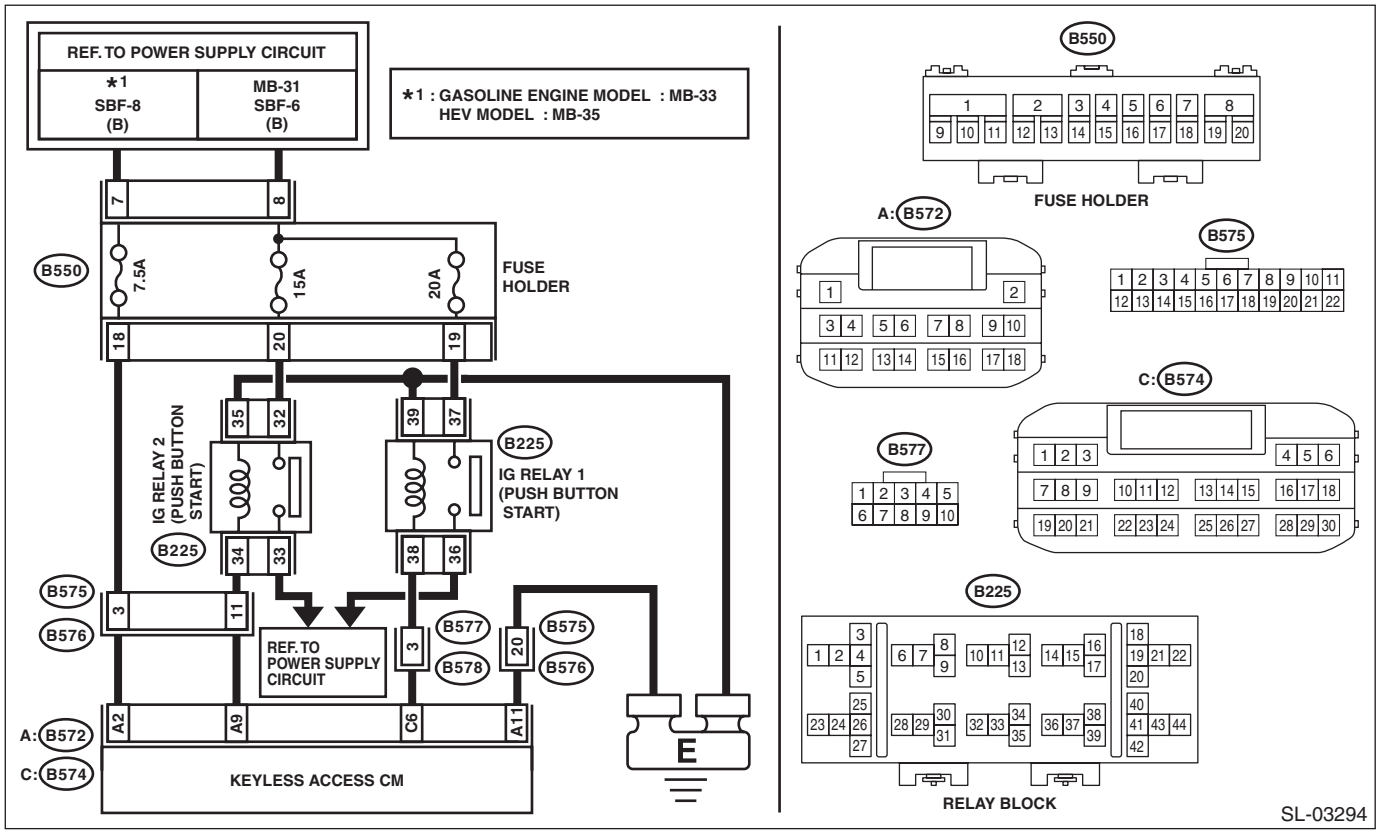
18.POWER WILL NOT TURN ON (ACCESSORY DOES NOT TURN ON, BUT IGNITION TURNS ON)

CAUTION:

- **When the keyless access CM is replaced with a new unit, and the battery ground terminal is connected, it will become ignition ON. Also, if the battery is disconnected, it will resume to a condition with the battery cut off.**
- **When the keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**

WIRING DIAGRAM:

Push button start system <Ref. to WI(w/o HEV)-186, WIRING DIAGRAM, Push Button Start System.> <Ref. to WI(HEV)-165, WIRING DIAGRAM, Push Button Start System.>



Step		Check	Yes	No
1	**CHECK FUSE.** Check the fuse.	Is the fuse OK?	Go to step **2**.	Replace the fuse.
2	**CHECK CONNECTOR.** Check the engagement of each connector and for any deformation or looseness.	Are the connectors and terminals normal?	Go to step **3**.	Repair the connector, or replace harness.
3	**CHECK WIRING HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 2 (+) — Chassis ground (–):***	Is the voltage between 8 V and 16 V?	Go to step **4**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK WIRING HARNESS.** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK ACCESSORY RELAY (PUSH BUTTON START).** Check the accessory relay (push button start). <Ref. to SL-116, INSPECTION, Accessory Relay (Push Button Start).>	Is the relay OK?	Go to step **6**.	Replace the relay.
6	**CHECK WIRING HARNESS.** 1) Disconnect the keyless access CM connector and the accessory relay (push button start). 2) Using a tester, check continuity between the keyless access CM connector and accessory relay (push button start). ***Connector & terminal*** ***(B574) No. 4 — (B426) No. 1:***	Is there continuity?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK WIRING HARNESS.** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 4 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Go to step **8**.
8	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground when the ignition is turned from OFF to ON. ***Connector & terminal*** ***(B574) No. 4 (+) — Chassis ground (–):***	Did the voltage change from 1 V or less → +B-2 V or more?	System is normal.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

19.POWER WILL NOT TURN ON (ACCESSORY TURNS ON, BUT IGNITION DOES NOT TURN ON)

CAUTION:
When the keyless access CM is replaced with a new unit, and the battery ground terminal is connected, it will become ignition ON. Also, if the battery is disconnected, it will resume to a condition with the battery cut off.

WIRING DIAGRAM:
Push button start system <Ref. to WI(w/o HEV)-186, WIRING DIAGRAM, Push Button Start System.> <Ref. to WI(HEV)-165, WIRING DIAGRAM, Push Button Start System.>

Step		Check	Yes	No
1	**CHECK FUSE.** Check the fuse.	Is the fuse OK?	Go to step **2**.	Replace the fuse.
2	**CHECK CONNECTOR.** Check the engagement of each connector and for any deformation or looseness.	Are the connectors and terminals normal?	Go to step **3**.	Repair the connector, or replace harness.
3	**CHECK WIRING HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 2 (+) — Chassis ground (–):***	Is the voltage between 8 V and 16 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK WIRING HARNESS.** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
5	**CHECK IG RELAY 1 AND 2 (PUSH BUTTON START).** Check IG relay 1 (push button start) and IG relay 2 (push button start). <Ref. to SL-112, INSPECTION, IG Relay1 (Push Button Start).>	Is the relay OK?	Go to step **6**.	Replace the relay.
6	**CHECK WIRING HARNESS.** 1) Disconnect the keyless access CM connector and the IG relay 1 and 2 (push button start). 2) Using a tester, check continuity between keyless access CM connector and IG relay 1 (push button start) or IG relay 2 (push button start). ***Connector & terminal*** ***(B572) No. 9 — (B225) No. 34:*** ***(B574) No. 6 — (B225) No. 38:***	Is there continuity?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK WIRING HARNESS.** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 9 — Chassis ground:*** ***(B574) No. 6 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Go to step **8**.
8	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground when the ignition is turned from OFF to ON. ***Connector & terminal*** ***(B572) No. 9 (+) — Chassis ground (–):*** ***(B574) No. 6 (+) — Chassis ground (–):***	Did the voltage change from 1 V or less → +B-2 V or more?	System is normal.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

20.ENGINE DOES NOT START

CAUTION:
• When the keyless access CM is replaced with a new unit, and the battery ground terminal is connected, it will become ignition ON. Also, if the battery is disconnected, it will resume to a condition with the battery cut off.
• When the keyless access CM or ID code box is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**INITIALIZE STEERING LOCK.** 1) Place the shift lever in the Parking range. 2) Operate the driver's door switch ON/OFF with the ignition switch OFF. 3) Wait for 10 seconds. 4) Place the access key on the driver's seat. 5) Press the push button ignition switch while depressing the brake pedal.	Can the engine start?	System is normal.	Go to step **2**.
2	**CHECK DTC.** Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to the DTC. <Ref. to KPS(diag)-38, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK POWER SUPPLY SWITCHING.** 1) Place the access key on the driver's seat. 2) Press the push button ignition switch without depressing the brake pedal.	When the switch is operated, does the <IG-OFF> → <ACC-ON> → <IG-ON> → <IG-OFF> change occur?	Go to step **4**.	Perform the diagnostics according to the symptom for power supply switching system in General Diagnostic Table. <Ref. to KPS(diag)-108, POWER SUPPLY SWITCHING SYSTEM, INSPECTION, General Diagnostic Table.>
4	**CHECK CURRENT DATA.** 1) Place the access key on the driver's seat. 2) Press the push button ignition switch while depressing the brake pedal. 3) Using the Subaru Select Monitor, confirm the current data «STSW signal monitor» of «Keyless Access with Push Button Start», when pressing the push button ignition switch. <Ref. to KPS(diag)-29, Read Current Data.> NOTE: If it is difficult to confirm, press the push button ignition switch for approximately five seconds longer.	Does the data change from OFF → ON?	Go to step **10**.	Go to step **5**.
5	**CHECK CURRENT DATA.** Check the current data «Shift P Signal» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-29, Read Current Data.>	Is ON displayed in parking position, and OFF displayed in other positions?	Go to step **6**.	Go to step **11**.

	Step	Check	Yes	No
6	**CHECK CURRENT DATA.** Display the current data «Stop Light Switch» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-29, Read Current Data.>	Is ON displayed when brake pedal depressed, and OFF displayed when brake pedal not depressed?	Go to step **7**.	Go to step **13**.
7	**CHECK CURRENT DATA.** Display the current data «Neutral SW/Clutch SW» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-29, Read Current Data.>	Is ON displayed in parking and neutral positions, and OFF displayed in other positions?	Go to step **8**.	Go to step **15**.
8	**CHECK STEERING LOCK.** Operate the push button ignition switch to perform the power supply switching and check steering lock condition during ACC-ON condition.	Is the steering lock in unlocked condition?	Go to step **9**.	Perform the diagnostics according to the symptom for steering lock system in General Diagnostic Table. <Ref. to KPS(diag)-108, STEERING LOCK SYSTEM, INSPECTION, General Diagnostic Table.>
9	**CHECK KEYLESS ACCESS CM.** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector. 3) Using a tester, measure the battery voltage in following procedures. 1. Press the push button ignition switch with the brake pedal depressed. (Measure within 10 seconds.) 2. Release the push button ignition switch from the condition of step 1. above. ***Connector & terminal*** ***(B572) No. 13 (+) — Chassis ground (–):***	Does the value change from 1 V or less to +B-2 V or more in the step 1, and return to 1 V or less in the step 2?	Perform the diagnosis for engine system. <Ref. to EN(H4DO w/o HEV)(diag)-75, Diagnostics for Engine Starting Failure.> <Ref. to EN(H4DO HEV)(diag)-72, Diagnostics for Engine Starting Failure.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
10	**CHECK CURRENT DATA.** 1) Connect the disconnected connectors. 2) Display the current data «Engine start permission request reception status» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-29, Read Current Data.>	Is “Reception” displayed with ignition switch ON, and “Not yet received” displayed in other positions?	Perform the diagnosis for engine system.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
11	**CHECK “P” RANGE SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the AT shift lever connector. 3) Using a tester, check the continuity of “P” range switch. ***Connector & terminal*** ***(B116) No. 1 — (B116) No. 2:***	Does it change from Continuity ←→ No continuity according to shift lever operation?	Go to step **12**.	Replace the “P” range switch. <Ref. to CS-59, REMOVAL, AT Shift Lock Solenoid and “P” Range Switch.>
12	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the keyless access CM connector. 3) Using a tester, check continuity between the keyless access CM and AT select lever. ***Connector & terminal*** ***(B116) No. 1 — (B574) No. 25:*** ***(B116) No. 2 — Chassis ground:***	Is there continuity?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Repair or replace the harness.

Step		Check	Yes	No
13	**CHECK STOP LIGHT SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the stop light switch connector. 3) Using a tester, check the continuity of the stop light switch. ***Connector & terminal*** ***Gasoline engine model*** ***(B65) No. 3 — No. 4:*** ***HEV model*** ***(B65) No. 1 — No. 2:***	Does it change from Continuity ←→ No continuity according to brake pedal operation?	Go to step **14**.	Replace the stop light switch. <Ref. to BR-75, REMOVAL, Stop Light Switch.>
14	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Using a tester, check continuity between the keyless access CM and stop light switch. ***Connector & terminal*** ***Gasoline engine model*** ***(B572) No. 18 — (B65) No. 4:*** ***(B65) No. 3 — F/B fuse No. 8:*** ***HEV model*** ***(B572) No. 18 — (B65) No. 2:*** ***(B65) No. 1 — F/B fuse No. 8:***	Is there continuity?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Repair or replace the harness.
15	**CHECK INHIBITOR SWITCH.** Check the inhibitor switch. <Ref. to CVT(TH58A)-97, INSPECTION, Inhibitor Switch.>	Is the inhibitor switch working normal?	Go to step **16**.	Replace the inhibitor switch. <Ref. to CVT(TH58A)-100, REMOVAL, Inhibitor Switch.>
16	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the inhibitor switch connector. 3) Using a tester, check continuity between the keyless access CM connector and inhibitor switch connector. ***Connector & terminal*** ***(B572) No. 5 — (B12) No. 16:*** ***(B12) No. 15 — Starter motor:***	Is there continuity?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Repair or replace the harness.

BODY CONTROL SYSTEM (DIAGNOSTICS)

12.	List of Diagnostic Trouble Code (DTC)	25
13.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	26
14.	General Diagnostic Table	45

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
• Subaru Select Monitor is required for reading DTC, performing diagnosis and reading current data.
• Remove foreign matter (dust, water, oil, etc.) from the body integrated unit connector during removal and installation.
• Registration of immobilizer may be needed after the replacement of control modules, etc. For detailed procedure, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

NOTE:
• To check harness for open or short circuits, shake the suspected trouble spot or connector.
• Check List for Interview <Ref. to BC(diag)-3, Check List for Interview.>

	Step	Check	Yes	No
1	**CHECK PRE-INSPECTION.** Ask the customer when and how the trouble occurred using the interview check list. <Ref. to BC(diag)-3, Check List for Interview.>	Did you interview the customer?	Go to step **2**.	Interview the customer.
2	**BASIC INSPECTION.** Check components which might affect body control. <Ref. to BC(diag)-4, INSPECTION, General Description.>	Is the component that might influence the body control problem normal?	Go to step **3**.	Repair or replace each component.
3	**CHECK DTC.** 1) Read the DTC. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to LAN(w/o HEV)(diag)-11, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.> <Ref. to LAN(HEV)(diag)-12, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.> 2) Record all DTCs, time stamp and freeze frame data. NOTE: For time stamp, refer to "LAN SYSTEM". <Ref. to LAN(w/o HEV)(diag)-6, TIME STAMP, CAUTION, General Description.> <Ref. to LAN(HEV)(diag)-6, TIME STAMP, CAUTION, General Description.>	Is DTC displayed on Subaru Select Monitor?	Go to step **5**.	Go to step **4**.
4	**PERFORM GENERAL DIAGNOSTICS.** Inspect using the "General Diagnostic Table". <Ref. to BC(diag)-45, General Diagnostic Table.>	Is result of inspection OK?	The body control system is normal.	Go to step **5**.
5	**PERFORM DIAGNOSIS.** 1) Correct the cause of trouble. 2) Perform the Clear Memory Mode. <Ref. to BC(diag)-11, Clear Memory Mode.> 3) Read the DTC. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed on Subaru Select Monitor?	Repeat step 5 until DTC is not shown.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Inspect the following items regarding the vehicle's state.

Body Control System Check List for Interview		Date of Vehicle Bring-in Year Month Day	
Customer's name		Registration No.	Initial year of registration Year Month Date
		Vehicle model	Frame number
Interviewer	Inspector	Engine type	Odometer reading
Customer specified content			
Date and time when the trouble occurred		Frequency of trouble occurrence	
Condition of trouble occurrence		Weather	
Road conditions		Occurrence location	
Accessory installation condition			
Trouble condition			
❑ Diagnostic code		❑ ( )	

3. General Description

A: CAUTION

1. SRS AIRBAG SYSTEM

Airbag system wiring harness is routed near the body integrated unit and body control circuits.

CAUTION:
- **Do not use the electrical test equipment on all airbag system wiring harnesses and connectors.**
- **Be careful not to damage the airbag system wiring harness, when servicing the body control system.**

B: INSPECTION

Before performing diagnosis, check the following items which might affect body control system problems.
1) Check the battery. <Ref. to SC(H4DO(w/o HEV))-52, Battery.>

NOTE:
For HEV model, check the 12 volt auxiliary battery. <Ref. to SC(H4DO(HEV))-40, Battery.>
2) Check the fuse condition.
Make sure that ampere of the fuse is setting value, and it is not blown out.
3) Check the connecting condition of harness and harness connector.
4) Confirm settings of body integrated unit are corresponded to vehicle equipment. <Ref. to BC(diag)-20, OPERATION, Registration Body Integrated Unit.>
5) Make sure that the User Customizing of the body integrated unit matches the vehicle equipment. <Ref. to BC(diag)-17, OPERATION, User Customizing.>
6) Confirm “Factory initial setting” of body integrated unit registrations is “Market”.

C: PREPARATION TOOL

1. SPECIAL TOOL

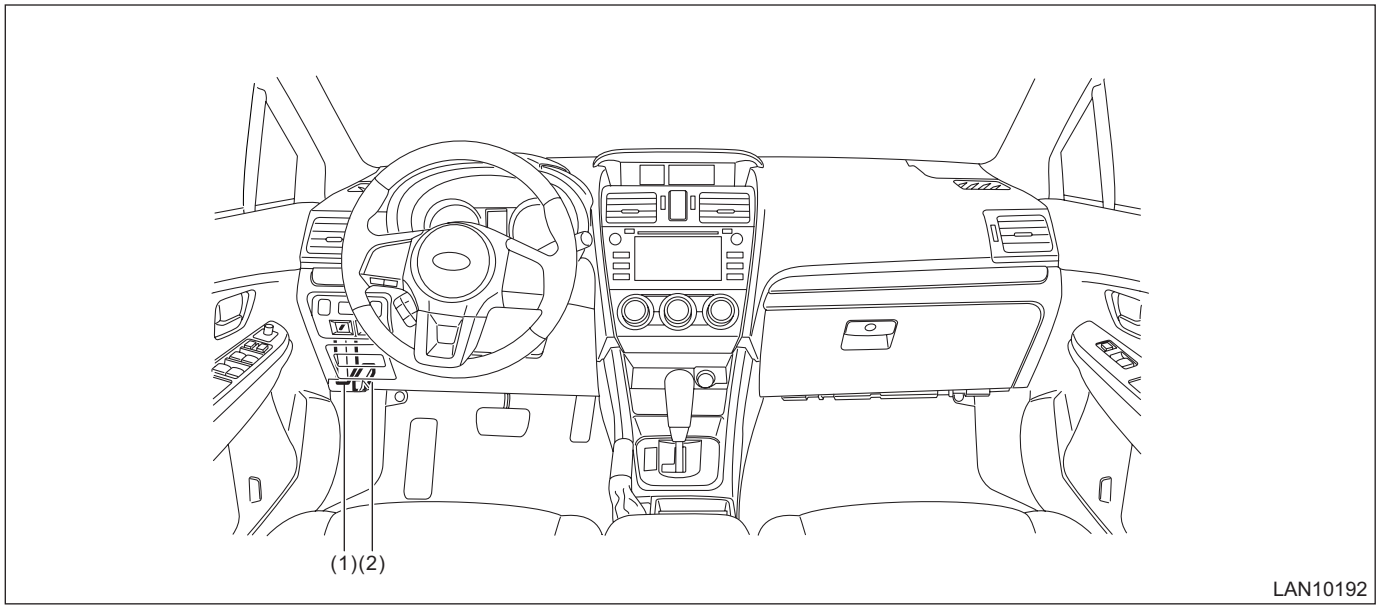

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
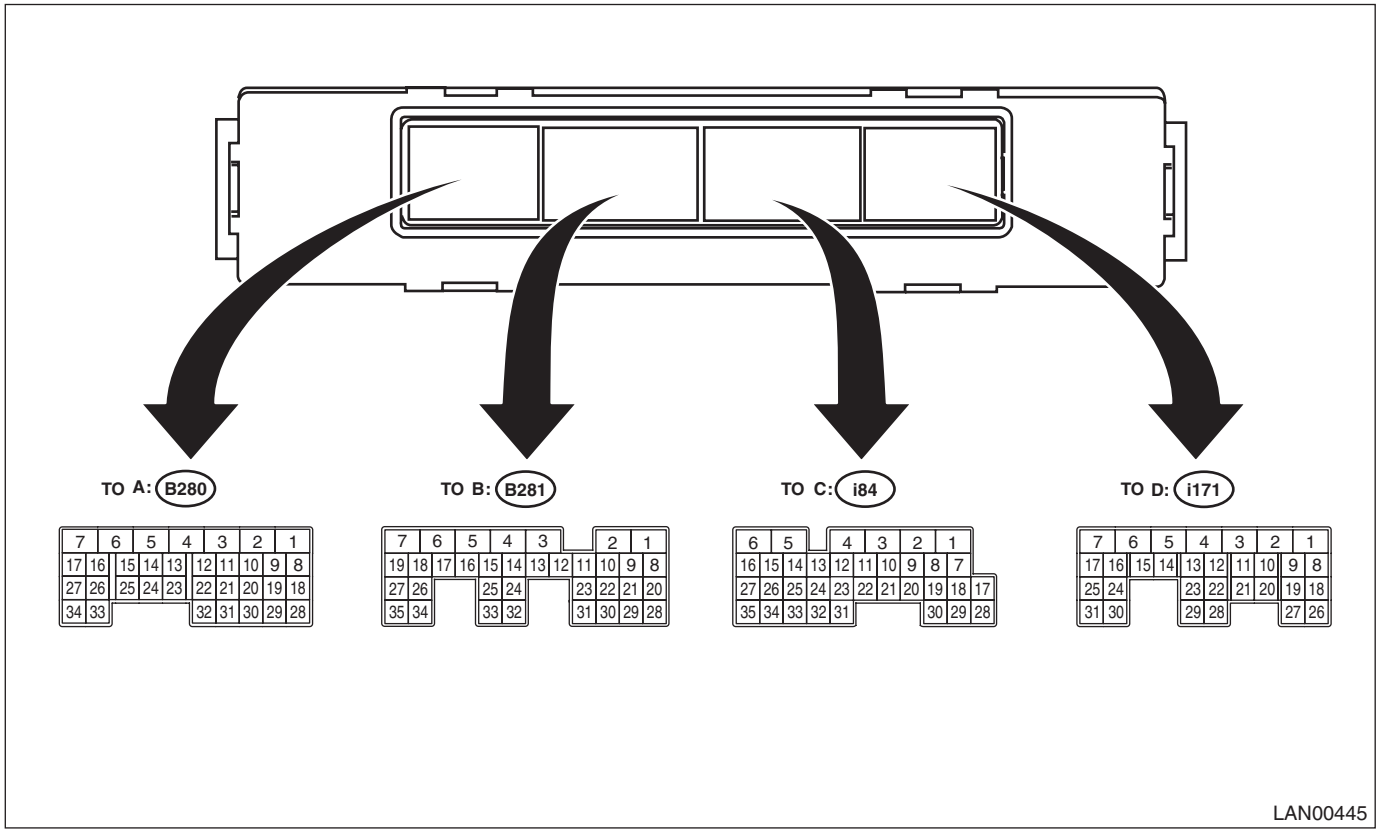
 STSSM4	— (Newly adopted tool)	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

4. Electrical Component Location



A: LOCATION

(1) Body integrated unit (2) Data link connector

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

Description	Terminal No.	Signal (V or Ω)	Note
		Ignition switch ON (Engine OFF)	
Ignition power supply (rear wiper)	A5 ←→ Chassis ground	Less than 1.5 V → 10 — 13 V	Ignition switch OFF → ON
Battery power supply (shift lock/key lock)	B6 ←→ Chassis ground	10 — 13 V	Always
Battery power supply (door lock)	D1 ←→ Chassis ground	10 — 13 V	Always
Battery power supply (control)	C6 ←→ Chassis ground	10 — 13 V	Always
Ground	A1 ←→ Chassis ground	Less than 1.5 V	Always
	C1 ←→ Chassis ground		
Battery power supply (back-up)	B7 ←→ Chassis ground	10 — 13 V	Always
Ignition power supply	B3 ←→ Chassis ground	Less than 1.5 V → 10 — 13 V	Ignition switch OFF → ON
ACC power supply	A32 ←→ Chassis ground	Less than 1.5 V → 10 — 13 V	Ignition switch OFF → Accessory ON
Key-in switch	A4 ←→ Chassis ground	Less than 1.5 V → 10 — 13 V	Key insertion (model without the keyless access with push button start system)
ACC input	A4 ←→ Chassis ground	Less than 1.5 V → 10 — 13 V	ACC ON (model with the keyless access with push button start system)
P range SW	B18 ←→ Chassis ground	Less than 1.5 V → 8 V or more	P range to other than P range
Stop light SW	A10 ←→ Chassis ground	Less than 1.5 V → 8 V or more	Stop light switch OFF → ON
Door SW (driver's)	C14 ←→ Chassis ground	8 V or more → less than 1.5 V	Front right door closed → open
Door SW (passenger's)	C13 ←→ Chassis ground	8 V or more → less than 1.5 V	Front left door closed → open

Description	Terminal No.	Signal (V or Ω)	Note
		Ignition switch ON (Engine OFF)	
Door SW (rear right)	C25 ←→ Chassis ground	8 V or more → less than 1.5 V	Rear right door closed → open
Door SW (rear left)	C24 ←→ Chassis ground	8 V or more → less than 1.5 V	Rear left door closed → open
Rear gate SW/trunk SW	C33 ←→ Chassis ground	8 V or more → less than 1.5 V	Rear gate/trunk closed → open
Opener SW (trunk/rear gate)	C10 ←→ Chassis ground	8 V or more → less than 1.5 V	Rear gate/trunk opener switch ON
Manual switch (LOCK)	C9 ←→ Chassis ground	8 V or more → less than 1.5 V	Door lock switch ON
Manual switch (UNLOCK)	C20 ←→ Chassis ground	8 V or more → less than 1.5 V	Door unlock switch ON
Lighting AUTO	B16 ←→ Chassis ground	8 V or more → less than 1.5 V	Switch at AUTO position
Lighting II	A34 ←→ Chassis ground	8 V or more → less than 1.5 V	Switch at II position
	B34 ←→ Chassis ground		
Lighting I	B17 ←→ Chassis ground	8 V or more → less than 1.5 V	Switch at I position
Dimmer passing	B25 ←→ Chassis ground	8 V or more → less than 1.5 V	Switch at passing position
Dimmer Hi beam	B15 ←→ Chassis ground	8 V or more → less than 1.5 V	Switch at Hi beam position
Front fog light SW	B26 ←→ Chassis ground	8 V or more → less than 1.5 V	Front fog light switch ON
Illumination sensor power supply	B1 ←→ A29	Less than 1.5 V → 4.5 V or more	Ignition switch OFF → ON
Illumination sensor signal	A19	0.2 — 4.5 V	Ignition switch OFF → ON
Ground (illumination sensor)	A29 ←→ Chassis ground	Less than 1.5 V	Always
Rear wiper SW ON	A12 ←→ Chassis ground	8 V or more → less than 1.5 V	Switch at ON position
Rear wiper SW INT	A22 ←→ Chassis ground	8 V or more → less than 1.5 V	Switch at INT position
Rear washer SW	A30 ←→ Chassis ground	8 V or more → less than 1.5 V	Switch at ON position
Illumination SW (Vi1)	D12 ←→ Chassis ground	Approx. 5 V	While clearance light illuminates
Illumination SW (Vi2)	D22 ←→ Chassis ground	0.5 — 4.8 V	
Illumination SW (Vi3)	D28 ←→ Chassis ground	Less than 1.5 V	Always
Bright SW	C21 ←→ Chassis ground	8 V or more → less than 1.5 V	Switch at ON position
Reverse SW (MT)	B12 ←→ Chassis ground	Less than 1.5 V → 8 V or more	Reverse SW ON
Impact sensor	A11 ←→ Chassis ground	8 V or more	Apply an impact
Hi-speed CAN communication circuit 1 (Hi)	B20	Serial communication	Except for sleep status*1
Hi-speed CAN communication circuit 1 (Lo)	B28		
Hi-speed CAN communication circuit 2 (Hi)	C27	Serial communication	Except for sleep status*1
Hi-speed CAN communication circuit 2 (Lo)	C35		
Immobilizer antenna (B)	B22	Serial communication	Communication with ignition key in progress (Without keyless access with push button start system)
Immobilizer antenna (A)	B10		
Immobilizer antenna amplifier GND	B30 ←→ Chassis ground	Less than 1.5 V	Always (Without keyless access with push button start system)
Immobilizer antenna amplifier power supply	B2 ←→ B30	4.5 — 5.5 V	Communication with ignition key in progress (Without keyless access with push button start system)
Security UART	A21	Serial communication	Always (Without keyless access with push button start system)

Description	Terminal No.	Signal (V or Ω)	Note
		Ignition switch ON (Engine OFF)	
Front wiper return	A2 ←→ Chassis ground	8 V	When front wiper is operated
Door UNLOCK (driver's seat) output	D4 ←→ Chassis ground	Less than 0.5 V → 8 V or more	When driver's side door unlock is output
Keyless entry / TPMS communication circuit	D11	Serial communication	When door lock/unlock is operated with the keyless transmitter, or when TPMS is operated
Rear defogger switch	C18 ←→ Chassis ground	Less than 1.5 V → 8 V or more	When the rear defogger switch is ON
Parking brake switch	C32 ←→ Chassis ground	8 V or more → less than 1.5 V	When parking brake is ON
Shift lock solenoid	B5 ←→ Chassis ground	Less than 1.5 V → 8 V or more	When shift lock is operating (AT models)
Key lock solenoid	B4 ←→ Chassis ground	Less than 1.5 V → 8 V or more	LOCK status is ON (AT model without the keyless access with push button start system)
Rear wiper ON output	A7 ←→ Chassis ground	Less than 0.5 V → 8 V or more	Rear wiper operation in progress
Rear wiper return	A6 ←→ Chassis ground	Less than 0.5 V → 8 V or more	Rear wiper operation in progress
Door LOCK output	D2 ←→ Chassis ground	Less than 0.5 V → 8 V or more	When LOCK signal is output
Door UNLOCK output	D3 ←→ Chassis ground	Less than 0.5 V → 8 V or more	When UNLOCK signal is output
Rear gate/trunk UNLOCK output	D7 ←→ Chassis ground	Less than 0.5 V → 8 V or more	When UNLOCK signal is output
Lighting relay power supply	A3 ←→ Chassis ground	10 — 13 V	ACC or key-in SW ON
	B19 ←→ Chassis ground	10 — 13 V	ACC or key-in SW ON
Lighting relay Hi output	A17 ←→ Chassis ground	8 V or more → less than 1.0 V	Dimmer SW at Hi position
Lighting relay Lo output	B35 ←→ Chassis ground	8 V or more → less than 1.0 V	Lighting II SW at ON position
Lighting Lo relay output 2	A27 ←→ Chassis ground	8 V or more → less than 1.0 V	Lighting II SW at ON position
Lighting relay I output	A16 ←→ Chassis ground	8 V or more → less than 1.0 V	Lighting I SW at ON position
Front fog light output	A15 ←→ Chassis ground	8 V or more → less than 1.0 V	Front fog light SW at ON position
DRL cancel output	D10 ←→ Chassis ground	8 V or more → less than 1.0 V	Headlight switch ON or Hi beam ON, passing switch ON
Illumination output	B8	Pulse output	Illumination ON
	C16	Pulse output	Illumination ON
Key ring illumination	A25	Pulse output	Illumination ON (Without keyless access with push button start system)
Room light output	C4	Pulse output	Room light ON (doors interlocked)
Map light output	D8	Pulse output	Map light ON (keyless answer-back, etc.)
Luggage/trunk light output	C3	Pulse output	Luggage/trunk at open state
Rear defogger relay output	A26 ←→ Chassis ground	8 V or more → less than 1.0 V	Rear defogger SW ON
Wiper deicer relay output	D9 ←→ Chassis ground	8 V or more → less than 1.0 V	Wiper deicer SW ON
Turn/hazard output	D18 ←→ Chassis ground	8 V or more → less than 1.0 V	When answer-back is output
Security horn output	A24 ←→ Chassis ground	8 V or more → less than 1.0 V	When security is operating
Security light	D26	Pulse control	When security light is illuminating
Answer-back buzzer output	A20 ←→ Chassis ground	8 V or more → less than 1.0 V	When answer-back operates

Description	Terminal No.	Signal (V or Ω)	Note
		Ignition switch ON (Engine OFF)	
Immobilizer communication	A31	Serial communication	(Models without the keyless access with push button start system)
Turn signal RH	B9 ←→ Chassis ground	8 V or more → less than 1.5 V	When turn signal switch RH is ON
Drive mode SW (economy/X mode)	B14 ←→ Chassis ground	8 V or more → less than 1.5 V	Mode SW OFF → ON
Turn signal LH	B21 ←→ Chassis ground	8 V or more → less than 1.5 V	When turn signal switch LH is ON
Accessory connector	B29 ←→ Chassis ground	8 V or more → less than 1.5 V	Rear gate/trunk closed → open
Door lock state SW driver's	C12 ←→ Chassis ground	8 V or more → less than 1.5 V	Driver's inner remote lock → unlock
Door lock state SW passenger's	C23 ←→ Chassis ground	8 V or more → less than 1.5 V	Passenger's inner remote lock → unlock
SRF OFF SW input	D14 ←→ Chassis ground	8 V or more → less than 1.5 V	When SRF OFF SW is pressed
LIN communication line	D16	Serial communication	Except for sleep status*1
SRF relay output (R)	D20 ←→ Chassis ground	Less than 1.5 V → 8 V or more	When SRF RH FOG is operating
SRF relay output (L)	D21 ←→ Chassis ground	Less than 1.5 V → 8 V or more	When SRF LH FOG is operating

*1: For CAN sleep state, hold on for approx. one minute with ignition OFF and the doors, trunk, and rear gate all closed.

6. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Body Control» and then select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to List of Diagnostic Trouble Code (DTC). <Ref. to BC(diag)-25, List of Diagnostic Trouble Code (DTC).>

7. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Body Control» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

8. Read Current Data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Body Control» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Items to be displayed	Unit of measure	Contents	Note
BATT voltage (control)	10 — 15 V	Body integrated unit input value	Always
BATT voltage (BACKUP)	10 — 15 V	Body integrated unit input value	Always
IGN voltage	10 — 15 V	Body integrated unit input value	Ignition switch ON
ACC voltage	10 — 15 V	Body integrated unit input value	Ignition switch ACC
Illumination VR Voltage	0 — 5 V	Body integrated unit input value	Input value from illumination volume
Illumination output d-ratio	0 — 100%	Body integrated unit output value	Small light ON Illumination volume is other than bright.
number of regist.	0 — 4	Number of keyless key registered	
Front Wheel Speed	km/h	CAN data input value	Reception from VDC module
Fuel consumption	cc/s	CAN data input value	Reception from ECM
Engine Coolant Temperature	–40 — 215°C	CAN data input value	Reception from ECM

9. User Customizing

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Body Control» and then select «Enter».
5) On «Select Function» display, select «Customize».

NOTE:
• If not equipped (depending on destination area or vehicle equipment condition), customizing is not possible.
• For detailed operation procedures, refer to “Application help”.
List of User Customizing item

Data	Initial setting value	Customize setting	Remarks
Off delay time	30 Sec	OFF	Room light off delay time can be selected.
		10 Sec	
		20 Sec	
		30 Sec	
Auto Light Sensitivity Adjustment	Normal	Dull	Slow response
		Normal	Standard
		Sensitive	Quick response
		Very sensitive	Fairly quick response
Power rear gate setting	— (*1)	ON	Fixed at OFF because this is not applicable.
		OFF	
Lane change signal setting	ON	ON	One-touch blinker control is performed.
		OFF	One-touch blinker control is not performed.
Rear wiper auto setting	—	ON	Existence of rear wiper linked with reverse operation can be set.
		OFF	
TPMS Setting	— (*1)	TPMS	Set to “ON” for model with TPMS.
		No TPMS	
Driver’s Door Unlock Setting	Selection	Selection	The door to be unlocked when you touch the driver’s door can be set.
		ALL	
Rear Gate Unlock Setting	Selection	Selection	The door to be unlocked when you touch the rear gate switch can be set.
		ALL	
One-touch Turn Signal System Setup	ON	ON	ON/OFF of the one-touch blinker can be set.
		OFF	
Auto Wiper System (Rear) Setup	OFF	ON	ON/OFF of the rear wiper linked with reverse operation can be set.
		OFF	
Steering Responsive Fog Lamp Setting	OFF	ON	SRF control is performed.
		OFF	SRF control is not performed.
Rear defogger operation mode	Normal	Normal	Automatically stops in 15 minutes after the switch is turned to ON.
		Continuous	Repeats activated for 15 minutes and deactivated for 2 minutes until the switch is turned to OFF.
Security Alarm Setup	ON	ON	Security alarm (hazard, horn or siren) becomes activated.
		OFF	Security alarm becomes deactivated.
Impact Sensor Setup	OFF	ON	Workable when the Impact Sensor Setup is set to “ON”. Impact sensor function becomes activated.
		OFF	Impact sensor function becomes deactivated. (Be sure to set to “OFF” for models without sensors.)

Data	Initial setting value	Customize setting	Remarks
Alarm delay setup	ON		After the keyless lock operation, the alarm monitor starts after the following delay time has passed.
		ON	Delay time is 30 seconds.
		OFF	Delay time is 0 second.
Lockout prevention	ON	ON	key lockout prevention function is activated. (The function does not operate if safety knob is locked by hand.)
		OFF	Key lockout prevention function is deactivated.
Impact sensor (OP)	OFF	ON	Vehicle is controlled in impact sensor equipped mode. (Make sure to set to “OFF” for models without the impact sensor. When “ON”, hazard, horn or siren become activated by keyless lock (alarm monitor start).)
		OFF	Vehicle is controlled in impact sensor non-equipped mode.
Buzzer sounding setting	ON	ON	Buzzer operates when lock/unlock is selected by keyless entry system operation.
		OFF	Buzzer does not operate when lock/unlock is selected by keyless entry system operation.
Abnormal warning lamp flashing setting	ON	ON	Hazard blinks when lock/unlock is selected by keyless entry system operation.
		OFF	Hazard is not interlocked when lock/unlock is selected by keyless entry system operation.
Passive Alarm	OFF	ON	
		OFF	
Door open warning	ON	ON	
		OFF	
Dome Light Alarm Setting	OFF	ON	Room light illuminates interlocking with alarm.
		OFF	Room light does not illuminate interlocking with alarm.
Auto A/C ECU Setting	— (*1)	ON	Diagnoses with auto A/C CM.
		OFF	Diagnoses without auto A/C CM.
Wiper Deicer setting	— (*1)	ON	Wiper deicer control is performed.
		OFF	Wiper deicer control is not performed.
Illumination Control On/Off	ON	ON	
		OFF	
Sedan/Wagon Setting	— (*1)	SEDAN	Body control is performed for Sedan.
		WAGON	Body control is performed for Wagon.
MT/AT Setting	— (*1)	MT	Body control is performed for MT.
		AT	Body control is performed for AT.
6MT Setting	— (*1)	6MT	Body control is performed for 6MT.
		Other than 6MT	Body control is performed for other than 6MT.
Illumination Sensor Setting	— (*1)	ON	Set to “ON” for model with auto light.
		OFF	
Factory initial setting	Market	Market	Customize setting is reset when mode is switched from Market to Factory.
		Factory	
Welcome Light (Exit)	30 Sec	OFF	Length of the lighting time can be set.
		30 Sec	
		60 Sec	
		90 Sec	
Welcome Light Off Delay Time(Approaching)	30 Sec	OFF	Length of the lighting time can be set.
		30 Sec	
		60 Sec	
		90 Sec	
Keyless Buzzer Volume	5	1 — 7	Buzzer volume can be set.

NOTE:
*1: Customization item according to the actual vehicle equipment
6) When the setting is complete, see «Data monitor» to make sure that the alterations are consistent with the actual equipment on the vehicle.

CAUTION:
- **the above settings must match the actual vehicle equipment.**
- **Do not change settings except for setting above while setting the functions.**
- **Be sure not to change Factory initial setting except when installing a new body integrated unit.**

10.Registration Body Integrated Unit

A: OPERATION

1. CONFIRM CURRENT SETTING

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Body Control» and then select «Enter».
5) On «Select Function» display, select «Customize».
6) Save the setting.

Required items for new registration. (Except for system not equipped)

Item	Item to confirm				Remarks
number of regist.	1	2	3	4	Number of registered ID
Off delay time	OFF	10 Sec	20 Sec	30 Sec	Setting for lighting off time
Auto Light Sensitivity Adjustment	Dull	Normal (Standard)	Sensitive	Very sensitive	1st (slow) — 4th (fairly quick)
Power rear gate setting	ON		OFF		N/A
Lane change signal setting	ON		OFF		—
Rear wiper auto setting	ON		OFF		—
TPMS Setting	TPMS		No TPMS		—
Driver's Door Unlock Setting	ALL		Selection		—
Rear Gate Unlock Setting	ALL		Selection		—
One-touch Turn Signal System Setup	ON		OFF		—
Auto Wiper System (Rear) Setup	ON		OFF		—
Steering Responsive Fog Lamp Setting	ON		OFF		—
Rear defogger operation mode	Normal		Continuous		—
Security Alarm Setup	ON		OFF		—
Impact Sensor Setup	ON		OFF		Option setting
Alarm delay setup	ON		OFF		—
Lockout prevention	ON		OFF		—
Impact sensor	ON		OFF		Option setting
Buzzer sounding setting	ON		OFF		—
Abnormal warning lamp flashing setting	ON		OFF		—
Passive Alarm	ON		OFF		—
Door open warning	ON		OFF		—
Dome Light Alarm Setting	ON		OFF		—
Auto A/C ECU Setting	ON		OFF		—
Wiper Deicer setting	ON		OFF		Option setting
Illumination Control On/Off	ON		OFF		—
Sedan/Wagon Setting	WAGON		SEDAN		—
MT/AT Setting	MT		AT		—
Illumination Sensor Setting	ON		OFF		—
Factory initial setting	Factory		Market		Do not change to factory mode.
Welcome Light (Exit)	OFF	30 Sec	60 Sec	90 Sec	—
Welcome Light Off Delay Time(Approaching)	OFF	30 Sec	60 Sec	90 Sec	—
Keyless Buzzer Volume	1 2 3 4 5 6 7				—

2. REGISTRATION BODY INTEGRATED UNIT (FUNCTION SETTING)

CAUTION:
For the body integrated unit, function selection is available to control the entire vehicle systems. It is possible to control the original functions of vehicle when registrations of body integrated unit and function setting are corresponded to vehicle equipment.
If registrations and function setting are different from vehicle equipment, vehicle system does not operate normally and diagnosis cannot be performed correctly. Pay attention to following item.
- **Be sure to correspond registrations, or User Customizing settings to vehicle equipment.**
- **Do not change the settings of vehicle improperly.**
- **Make sure that the key illumination does not blink with ignition switch ON, or that the body integrated unit registration item "Factory initial setting" is set to "Market". If "Factory initial setting" is set to "Factory", key illumination blinks when the ignition switch is turned ON, to notify that the settings are not confirmed. (Except for model with the keyless access with push button start system)**
- **Key illumination does not blink with ignition switch turned to ON and go off with door closed. (Except for model with the keyless access with push button start system)**
- **Be sure to register immobilizer if body integrated unit is replaced with a new part. (Except for model with the keyless access with push button start system)**
- **Make a registration of immobilizer when the parts related to immobilizer have been replaced. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. (Except for model with the keyless access with push button start system)**

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Body Control» and then select «Enter».
5) On «Select Function» display, select «Customize».

NOTE:
For the vehicle requiring the destination setting, if the destination setting is not finished, display can not be shifted into customizing screen. <Ref. to BC(diag)-22, DESTINATION SETTING, OPERATION, Registration Body Integrated Unit.>
6) Change the setting to the contents saved at confirmation of current setting.

CAUTION:
- **To perform normal operation of vehicle and diagnosis, the above settings must match the actual vehicle equipment.**
- **When the body integrated unit is new or in Factory mode, the key illumination blinks, and user customizing is incomplete. Check the user customizing settings. (For models with keyless access with push button start system, the room light illuminates.)**
- **Be sure not to change Factory initial setting except when installing a new body integrated unit.**

NOTE:
"Factory" mode:
- Body integrated unit has not been set yet. It can be recognized by key illumination blinking with ignition switch turned to ON. For model with keyless access with push button start system, it can be recognized by room light blinking with ignition switch turned to ON.
- All replacement body integrated units are set to "Factory" mode. When replacing a body integrated unit, be sure to perform the registration operation.

"Market" mode:
- Each settings have been set. It can be recognized by key ring illumination coming on in concocting with room light and going off with ignition switch turned to ON. For model with keyless access with push button start system, it can be recognized by room light not blinking with ignition switch turned to ON.

7) Perform the Factory initial setting. On the «Customize» display screen of Subaru Select Monitor, select the «Factory initial setting».
8) Change the mode from Factory to Market.
9) Turn the ignition switch to OFF to settle the setting.
10) Change the system selection to «Immobilizer» on Subaru Select Monitor, and perform registration of immobilizer. (Except for model with the keyless access with push button start system)

11) Follow the procedure of the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume. (Except for model with the keyless access with push button start system)
12) For vehicles with remote engine starter, refer to “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume and perform registration of the remote engine starter. (Except for model with the keyless access with push button start system)
13) Perform the User Customizing. <Ref. to BC(diag)-17, OPERATION, User Customizing.>

NOTE:
For detailed operation procedures, refer to “Application help”.

3. DESTINATION SETTING

NOTE:
For the vehicle requiring the destination setting, if the destination setting is not finished, display can not be shifted into customizing screen.

	Step	Check	Yes	No
1	**CONFIRM CURRENT SETTING.** Always perform confirmation of current setting before replacing the module. Record the contents of the “Destination Setting”. NOTE: Refer to the “Read Current Data” and “CONFIRMATION OF CURRENT SETTING” to confirm the current setting. <Ref. to BC(diag)-20, CONFIRM CURRENT SETTING, OPERATION, Registration Body Integrated Unit.> <Ref. to BC(diag)-12, OPERATION, Read Current Data.>	Is the current setting recorded?	Go to step **2**.	Confirm the current setting. Go to step **1**.
2	**CONFIRM DESTINATION SETTING.** 1) Connect the Subaru Select Monitor, and run the application. 2) On «Start» display, select «Diagnosis». 3) On «Vehicle selection» display, input the target vehicle information and select «Confirmed». 4) On «Main Menu» display, select «Each System». 5) On «Select System» display, select «Body Control» and then select «Enter». 6) On «Select Function» display, select «Customize». 7) The vehicle destination screen is displayed.	Is the vehicle destination setting screen displayed?	Go to step **3**.	Go to step **4**.
3	**CONFIRM DESTINATION SETTING.** Confirm the screen displayed on Subaru Select Monitor and the actual vehicle destination.	Is it necessary to change the destination setting?	Select [Yes], Go to step **4**.	Select [No], Go to step **5**.
4	**ENTER DESTINATION CODE.** Enter the appropriate code in the screen. JPN: JP00 KA, KC: KA00 KS: KS00 U4, U5, U6, C6 and C0, C5 (with the keyless access with push button start system): U400 C0, C5 (without the keyless access with push button start system): C000 EK, ER: EK00 Except above: EC00	Is the appropriate code entered?	Select [OK]. Go to step **5**.	Enter the destination code. Go to step **5**.

	Step	Check	Yes	No
5	**REGISTER VEHICLE EQUIPMENT.** Customizing screen is displayed. NOTE: Match the each item setting of body integrated unit registration item list with the vehicle equipment.	Do all setting contents match with the vehicle equipment specification?	Go to step **6**.	Change the items until each content setting match with the vehicle equipment specification. Go to step **6**.
6	**CONFIRM MARKET MODE.** 1) Customizing screen, select the {Factory initial setting} to change the setting from "Factory" mode to "Market" mode. 2) Turn the ignition switch to OFF. NOTE: When the setting is changed from "Factory" mode to "Market" mode, turning the ignition switch from ON → OFF confirms the setting. 3) Turn the ignition switch to ON, and check the contents of settings.	Is the mode changed to "Market" mode?	Go to step **7**.	Perform the destination setting from the first step. Go to step **1**.
7	**CONFIRM MARKET MODE.** Check the following. Make sure that the "Destination Setting" in the current data display is the same as the one you confirmed in step 1.	Is the display the same as indicated?	Registration of body integrated unit is finished.	It is possible that harness malfunction may occur. Perform the diagnosis.

11.Function Check

A: OPERATION

NOTE:
In order to check the body integrated unit function, inspect the body integrated unit and actuator using Subaru Select Monitor without operating switches.
1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Body Control» and then select «Enter».
5) On «Select Function» display, select «Active Test».

NOTE:
- If not equipped (depending on destination area or vehicle equipment condition), process will not go on.
- The operation is disabled for the models with keyless access with push button start system because the key lock solenoid is not installed.
- For detailed operation procedures, refer to “Application help”.

12.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Note
B1010	BODY CONTROL SYSTEM (BIU) MALFUNCTION	Body integrated unit internal error	<Ref. to BC(diag)-26, DTC B1010 BODY CONTROL SYSTEM (BIU) MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1011	BATTERY CONTROL POWER SUPPLY	Voltage malfunction caused by poor contact of battery power supply control circuits	<Ref. to BC(diag)-27, DTC B1011 BATTERY CONTROL POWER SUPPLY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1012	BATTERY BACKUP POWER SUPPLY	Voltage malfunction caused by poor contact of battery power supply backup circuits	<Ref. to BC(diag)-29, DTC B1012 BATTERY BACKUP POWER SUPPLY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1013	IGNITION POWER	Voltage malfunction caused by poor contact of IGN power supply circuits	<Ref. to BC(diag)-31, DTC B1013 IGNITION POWER, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1014	ACC POWER	Voltage malfunction caused by poor contact of ACC power supply circuits	<Ref. to BC(diag)-33, DTC B1014 ACC POWER, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1015	KEY INTERLOCK CIRCUIT	GND-output short of key interlock circuit	<Ref. to BC(diag)-35, DTC B1015 KEY INTERLOCK CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1016	SHIFT LOCK CIRCUIT	Voltage malfunction caused by poor contact of shift lock circuits	<Ref. to BC(diag)-38, DTC B1016 SHIFT LOCK CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1401	METER COLLATION	Malfunction related immobilizer	<Ref. to BC(diag)-40, DTC B1401 METER COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1402	IMMOBILIZER KEY COLLATION	Malfunction related immobilizer	<Ref. to BC(diag)-40, DTC B1402 IMMOBILIZER KEY COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1405	SCU COLLATION	Malfunction related immobilizer	<Ref. to BC(diag)-40, DTC B1405 SCU COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1406	SCU_EEPROM	Malfunction of security control module	<Ref. to BC(diag)-40, DTC B1406 SCU_EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1407	MET COMMUNICATION	Communication failure between body integrated unit and combination meter	<Ref. to BC(diag)-40, DTC B1407 MET COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1408	METER NON-VOLATILE MEMORY	Combination meter malfunction	<Ref. to BC(diag)-40, DTC B1408 METER NON-VOLATILE MEMORY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1409	SCU COMMUNICATION	Communication failure between body integrated unit and security control module	<Ref. to BC(diag)-40, DTC B1409 SCU COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1410	TRANSPONDER COMMUNICATION	Communication failure between key and body integrated unit	<Ref. to BC(diag)-40, DTC B1410 TRANSPONDER COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1411	IMMOBILIZER ANTENNA	Faulty antenna	<Ref. to BC(diag)-40, DTC B1411 IMMOBILIZER ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1500	KEYLESS UART COM. MALFUNCTION	Open or short circuit in keyless UART circuit	<Ref. to BC(diag)-41, DTC U1500 KEYLESS UART COM. MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

13.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B1010 BODY CONTROL SYSTEM (BIU) MALFUNCTION

DTC DETECTING CONDITION:
System error in body integrated unit
TROUBLE SYMPTOM:
LAN communication immobilizer function may not be executed normally.

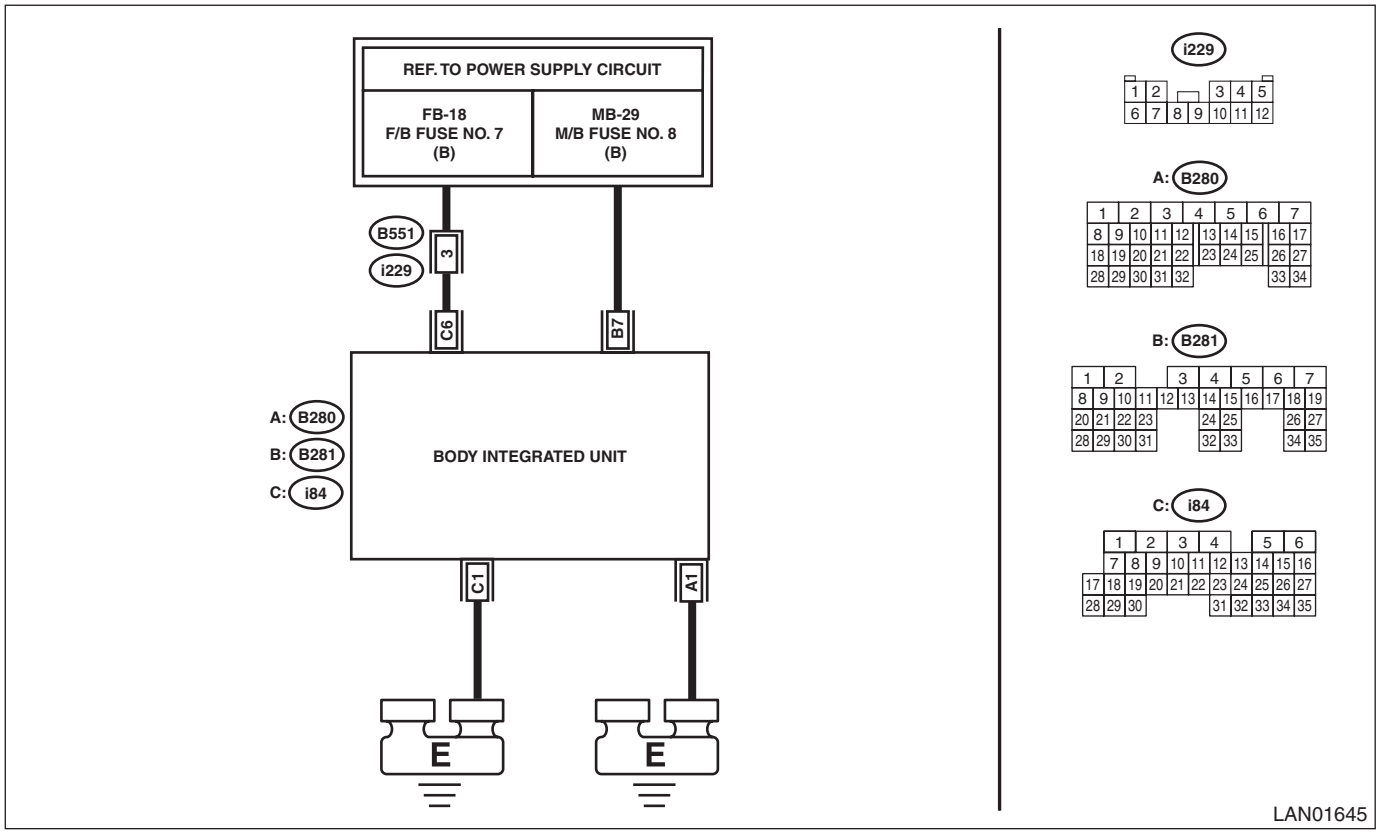
Step		Check	Yes	No
1	**CHECK DTC.** Check DTC indicated by body integrated unit. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1010 current malfunction?	Go to step **2**.	Temporary EEPROM access error occurred.
2	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Connect the disconnected connectors. 4) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1010 current malfunction?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Temporary EEPROM access error occurred.

B: DTC B1011 BATTERY CONTROL POWER SUPPLY

DTC DETECTING CONDITION:

- Voltage failure caused by poor contact of battery power supply control circuit
- Battery voltage of body integrated unit is not within the 8.5 — 16.5 V range.

TROUBLE SYMPTOM:



Functions of body integrated unit stop.

NOTE:

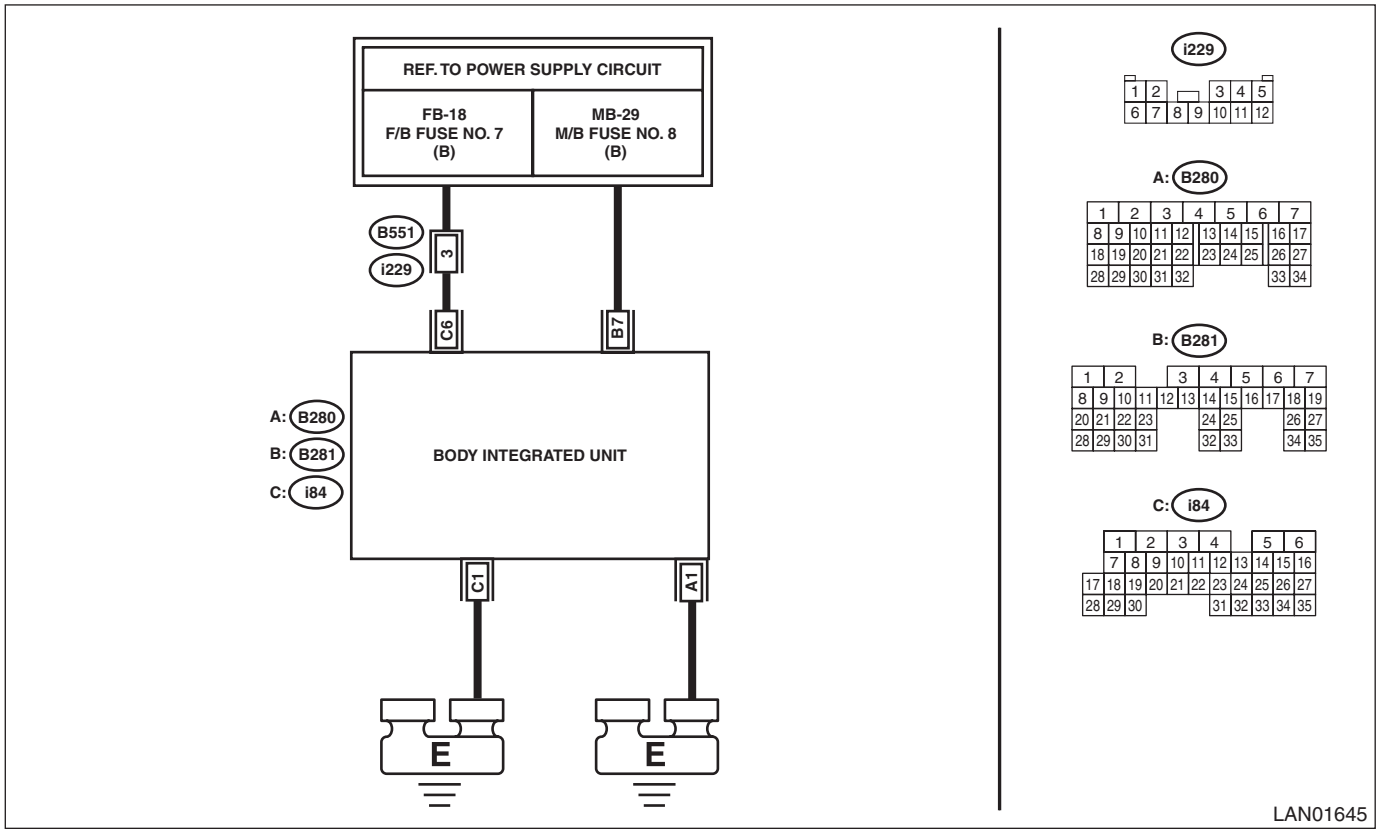
When DTC B1012 BATTERY BACKUP POWER SUPPLY is output at the same time, all the function of body integrated unit may not operate.

WIRING DIAGRAM:

Immobilizer system <Ref. to WI(w/o HEV)-147, WIRING DIAGRAM, Immobilizer System.> <Ref. to WI(HEV)-133, WIRING DIAGRAM, Immobilizer System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1011 current malfunction?	Go to step **2**.	Go to step **5**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect and then connect the body integrated unit connector. 3) Wait approx. 2 minutes. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1011 current malfunction?	Go to step **3**.	Go to step **5**.
3	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the fuse OK?	Go to step **4**.	Replace the defective fuse.

	Step	Check	Yes	No
4	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i84) No. 6 (+) — Chassis ground (–):***	Is the voltage 8.5 — 16.5 V?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Repair the harness between body integrated unit and fuse.
5	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.



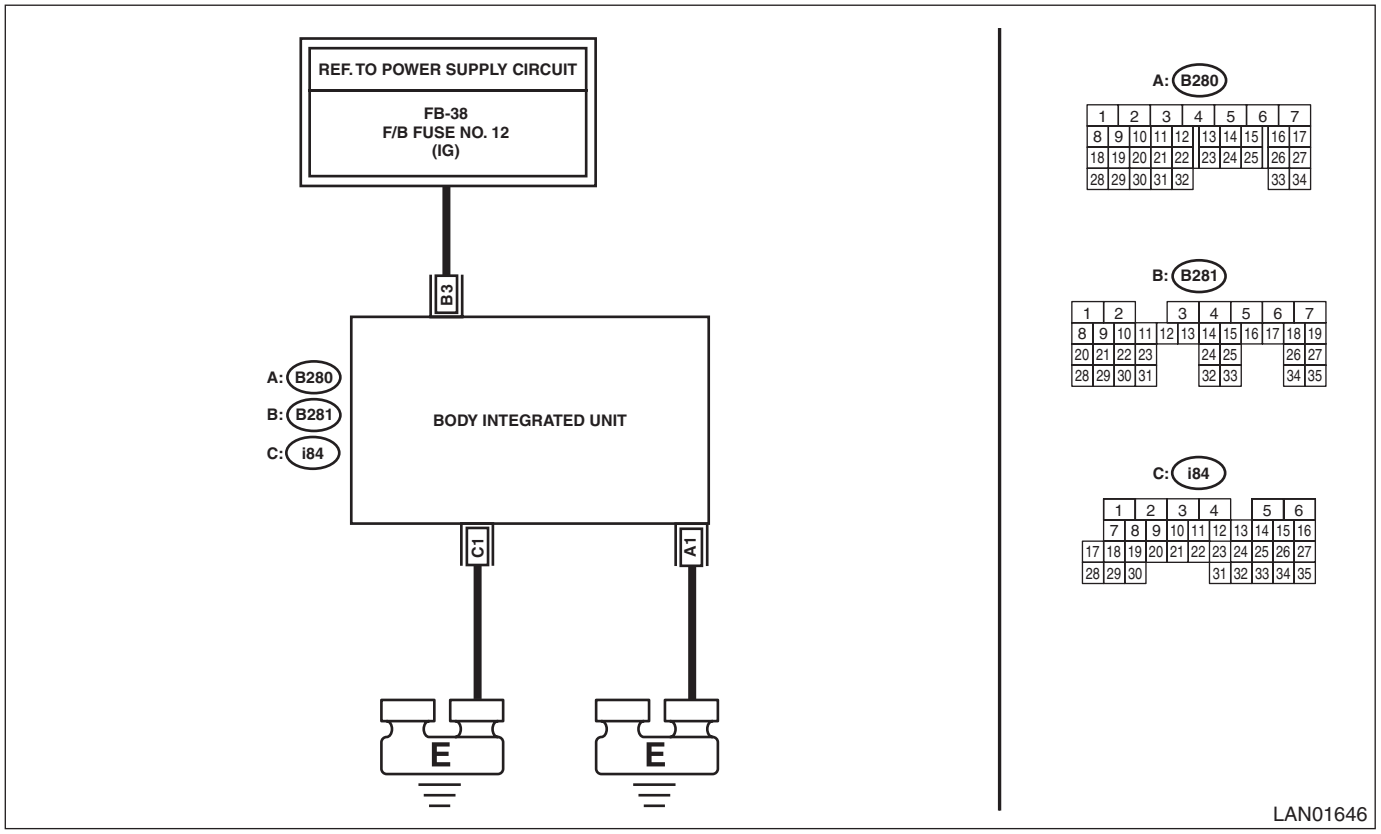
C: DTC B1012 BATTERY BACKUP POWER SUPPLY

DTC DETECTING CONDITION:
Voltage failure caused by poor contact of battery power supply backup circuits

TROUBLE SYMPTOM:
Illuminations for the keyless entry, map light, luggage light, trunk light, room light, and ignition switch do not turn on.

NOTE:
When B1011 BATTERY CONTROL POWER SUPPLY is output at the same time, all the function of body integrated unit may not operate.

WIRING DIAGRAM:
Immobilizer system <Ref. to WI(w/o HEV)-147, WIRING DIAGRAM, Immobilizer System.> <Ref. to WI(HEV)-133, WIRING DIAGRAM, Immobilizer System.>

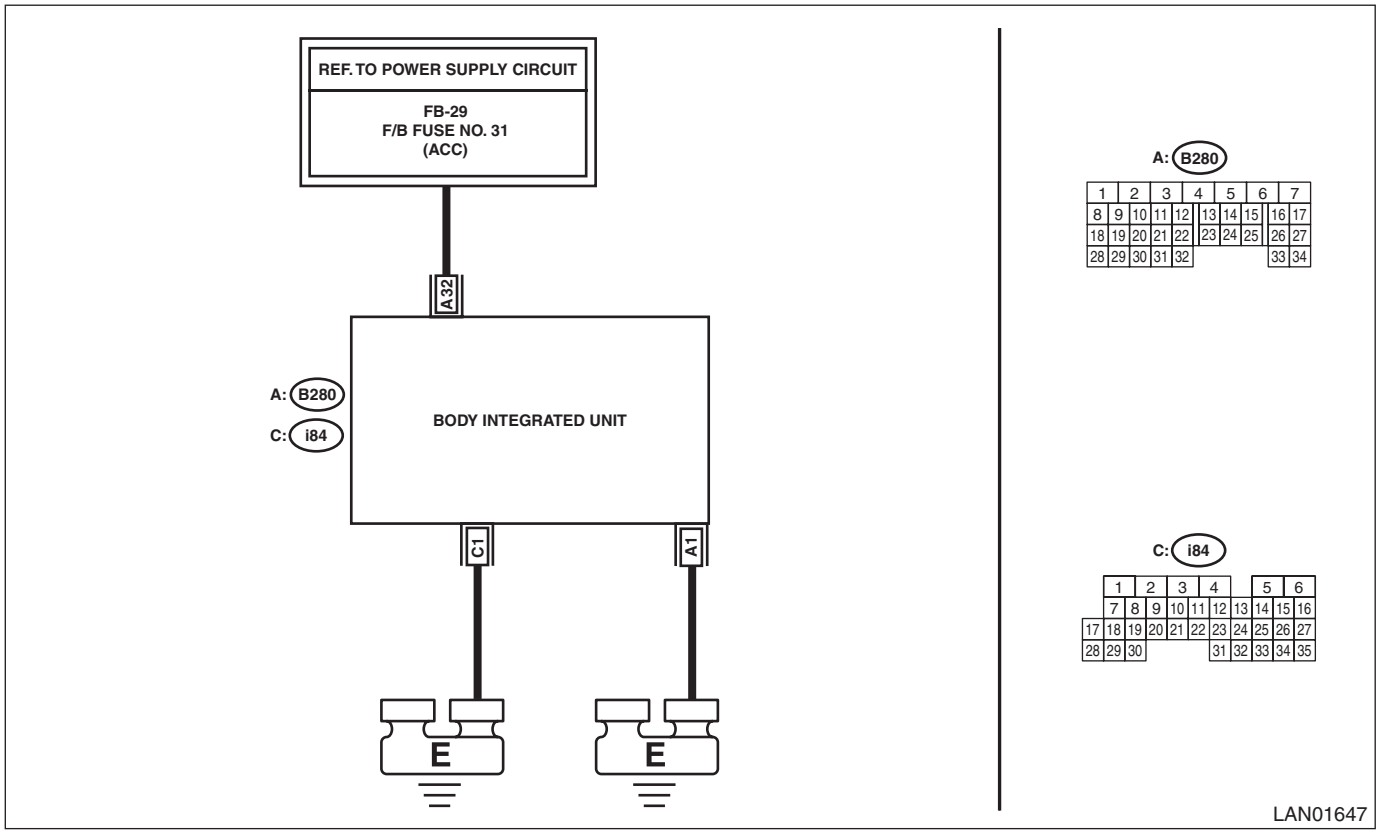


Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1012 current malfunction?	Go to step **2**.	Go to step **5**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect and then connect the body integrated unit connector. 3) Wait approx. 2 minutes. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1012 current malfunction?	Go to step **3**.	Go to step **5**.
3	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the fuse OK?	Go to step **4**.	Replace the defective fuse.

	Step	Check	Yes	No
4	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B281) No. 7 (+) — Chassis ground (–):***	Is the voltage 8.5 — 16.5 V?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Repair the harness between body integrated unit and fuse.
5	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

D: DTC B1013 IGNITION POWER

DTC DETECTING CONDITION:
Voltage failure caused by poor contact of IGN power supply circuits
TROUBLE SYMPTOM:
Symptoms such as shift lock or wiper not operating may occur.
WIRING DIAGRAM:
Shift lock control system <Ref. to WI(w/o HEV)-215, WIRING DIAGRAM, Shift Lock Control System.> <Ref. to WI(HEV)-188, WIRING DIAGRAM, Shift Lock Control System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1013 current malfunction?	Go to step **2**.	Go to step **5**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect and then connect the body integrated unit connector. 3) Wait approx. 2 minutes. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1013 current malfunction?	Go to step **3**.	Go to step **5**.
3	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the fuse OK?	Go to step **4**.	Replace the defective fuse.

	Step	Check	Yes	No
4	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B281) No. 3 (+) — Chassis ground (–):***	Is the voltage 8.5 — 16.5 V?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Repair the harness between body integrated unit and fuse.
5	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

E: DTC B1014 ACC POWER

DTC DETECTING CONDITION:
Voltage failure caused by poor contact of ACC power supply circuit
TROUBLE SYMPTOM:
DRL may not illuminate.
WIRING DIAGRAM:
Shift lock control system <Ref. to WI(w/o HEV)-215, WIRING DIAGRAM, Shift Lock Control System.> <Ref. to WI(HEV)-188, WIRING DIAGRAM, Shift Lock Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1014 current malfunction?	Go to step **2**.	Go to step **5**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect and then connect the body integrated unit connector. 3) Wait approx. 2 minutes. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1014 current malfunction?	Go to step **3**.	Go to step **5**.
3	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the fuse OK?	Go to step **4**.	Replace the defective fuse.

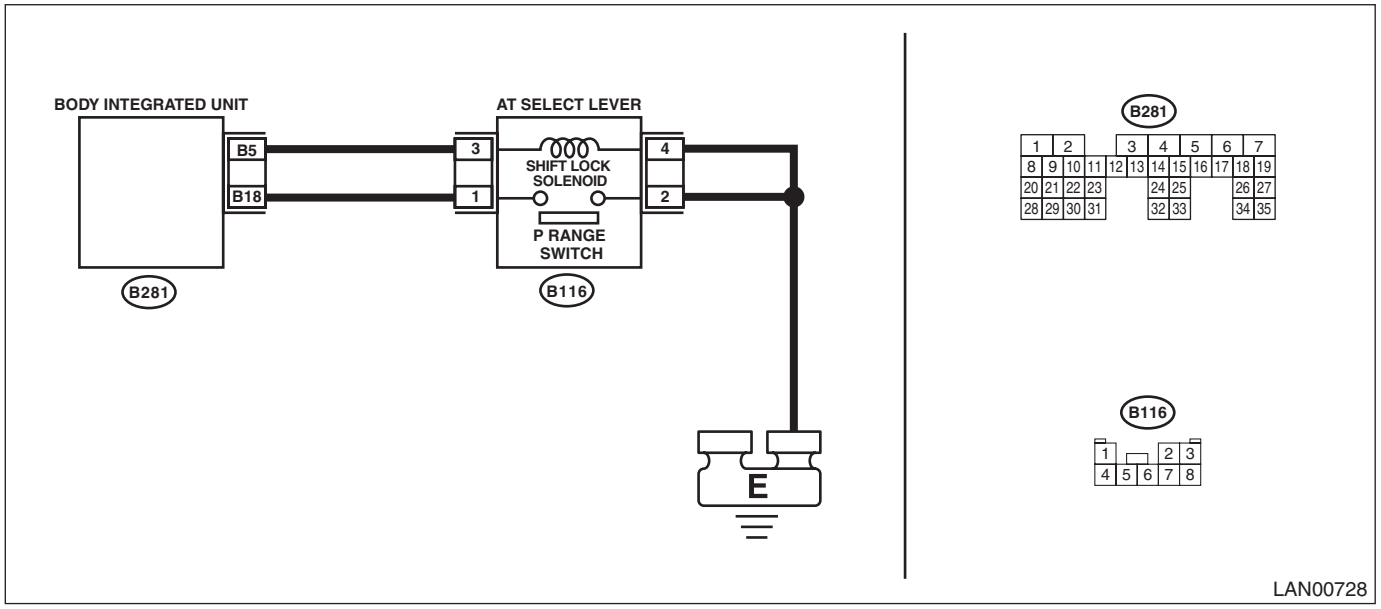
	Step	Check	Yes	No
4	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B280) No. 32 (+) — Chassis ground (–):***	Is the voltage 8.5 — 16.5 V?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Repair the harness between body integrated unit and fuse.
5	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

F: DTC B1015 KEY INTERLOCK CIRCUIT

DTC DETECTING CONDITION:
Ground short of key interlock circuit

TROUBLE SYMPTOM:
Key interlock does not keep lock condition.

WIRING DIAGRAM:
Shift lock control system <Ref. to WI(w/o HEV)-215, WIRING DIAGRAM, Shift Lock Control System.>



Step		Check	Yes	No
1	**CHECK DTC.** 1) Insert the ignition key. 2) Turn the ignition switch to ON. 3) Shift to the Neutral range. 4) Shift into P range. 5) Shift to the Neutral range. 6) Shift into P range. 7) Shift to the Neutral range. 8) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1015 current malfunction?	Go to step **2**.	Go to step **8**.

	Step	Check	Yes	No
2	**CHECK DTC.** 1) Shift the select lever to P range. 2) Remove the ignition key. 3) Disconnect the key actuator connector (B557) and body integrated unit connector (B281). 4) Connect the disconnected connectors. 5) Insert the ignition key. 6) Turn the ignition switch to ON and shift into Neutral. 7) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1015 current malfunction?	Go to step **3**.	Go to step **8**.
3	**CHECK KEY ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the key actuator connector (B557). 3) Measure the resistance between key actuator connectors. ***Connector & terminal*** ***(B557) No. 1 — No. 2:***	Is the resistance 103 — 115 Ω?	Go to step **4**.	Replace the key actuator. <Ref. to SL-67, Key Lock Cylinders.>
4	**CHECK KEY ACTUATOR.** Connect the battery terminals to the key actuator. ***Terminals*** ***(B557) No. 2 — positive terminal:*** ***(B557) No. 1 — ground terminal:***	Is the actuator activated and then key locked?	Go to step **5**.	Replace the key actuator. <Ref. to SL-67, Key Lock Cylinders.>
5	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector (B281). 2) Measure the resistance between body integrated unit and key actuator using tester. ***Connector & terminal*** ***(B557) No. 1 — (B281) No. 4:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK HARNESS.** Measure the resistance between body integrated unit and chassis ground using tester. ***Connector & terminal*** ***(B281) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair or replace the short circuit of the harness.
7	**CHECK HARNESS.** 1) Connect the body integrated unit. 2) Turn the ignition switch to ON. 3) Measure the voltage between body integrated unit and chassis ground using tester. ***Connector & terminal*** ***(B281) No. 4 (+) — Chassis ground (–):***	Is the voltage 6 V or more?	Go to step **8**.	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>

	Step	Check	Yes	No
8	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector (B281) and key actuator connector (B557).	Is there poor contact at disconnected connector terminal?	Repair the terminal where poor contact exists, or replace harness.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

G: DTC B1016 SHIFT LOCK CIRCUIT

DTC DETECTING CONDITION:
Open or power supply-output short, GND-output short in shift lock circuit.
TROUBLE SYMPTOM:
Shift lock does not be released or remain locked.
WIRING DIAGRAM:
Shift lock control system <Ref. to WI(w/o HEV)-215, WIRING DIAGRAM, Shift Lock Control System.> <Ref. to WI(HEV)-188, WIRING DIAGRAM, Shift Lock Control System.>

Step		Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Keep the Parking range for approx. 5 seconds. 3) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1016 current malfunction?	Go to step **6**.	Go to step **2**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the shift lock solenoid connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON, then keep the Parking range for approx. 5 seconds. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1016 current malfunction?	Go to step **3**.	Go to step **7**.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the shift lock solenoid connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B116) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK SHIFT LOCK SOLENOID.** Using a tester, measure the resistance between shift lock solenoid terminals. ***Connector & terminal*** ***(B116) No. 4 — No. 3:***	Is the resistance between 27 — 31 Ω?	Go to step **5**.	Replace the shift lock solenoid. <Ref. to CS-59, REMOVAL, AT Shift Lock Solenoid and "P" Range Switch.>
5	**CHECK SHIFT LOCK SOLENOID.** Connect the battery terminal to shift lock solenoid. ***Connector & terminal*** ***(B116) No. 3 — positive terminal:*** ***(B116) No. 4 — ground terminal:***	Does the shift lock solenoid operate and then release the lock?	Go to step **6**.	Replace the shift lock solenoid. <Ref. to CS-59, REMOVAL, AT Shift Lock Solenoid and "P" Range Switch.>
6	**CHECK HARNESS (OPEN CIRCUIT).** Use a tester to measure the resistance between harness terminals. ***Connector & terminal*** ***(B116) No. 3 — (B281) No. 5:*** NOTE: If body integrated unit and shift lock connector are not disconnected, disconnect them first and then perform measurement.	Is the resistance less than 10 Ω?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Repair or replace the open circuit of harness.
7	**CHECK DTC.** 1) Depress the brake pedal at the parking range. 2) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1016 current malfunction?	Go to step **8**.	Go to step **9**.
8	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector and shift lock connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Depress the brake pedal at the parking range. 6) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is B1016 current malfunction?	Go to step **4**.	Go to step **9**.
9	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector and shift lock connector.	Is there poor contact of connector terminal?	Repair or replace the poor contact of terminal.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

H: DTC B1401 METER COLLATION

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-25, DTC B1401 METER COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

I: DTC B1402 IMMOBILIZER KEY COLLATION

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-25, DTC B1402 IMMOBILIZER KEY COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

J: DTC B1405 SCU COLLATION

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-26, DTC B1405 SCU COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

K: DTC B1406 SCU_EEPROM

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-26, DTC B1406 SCU_EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

L: DTC B1407 MET COMMUNICATION

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-27, DTC B1407 MET COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

M: DTC B1408 METER NON-VOLATILE MEMORY

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-27, DTC B1408 METER NON-VOLATILE MEMORY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

N: DTC B1409 SCU COMMUNICATION

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-28, DTC B1409 SCU COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

O: DTC B1410 TRANSPONDER COMMUNICATION

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-30, DTC B1410 TRANSPONDER COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

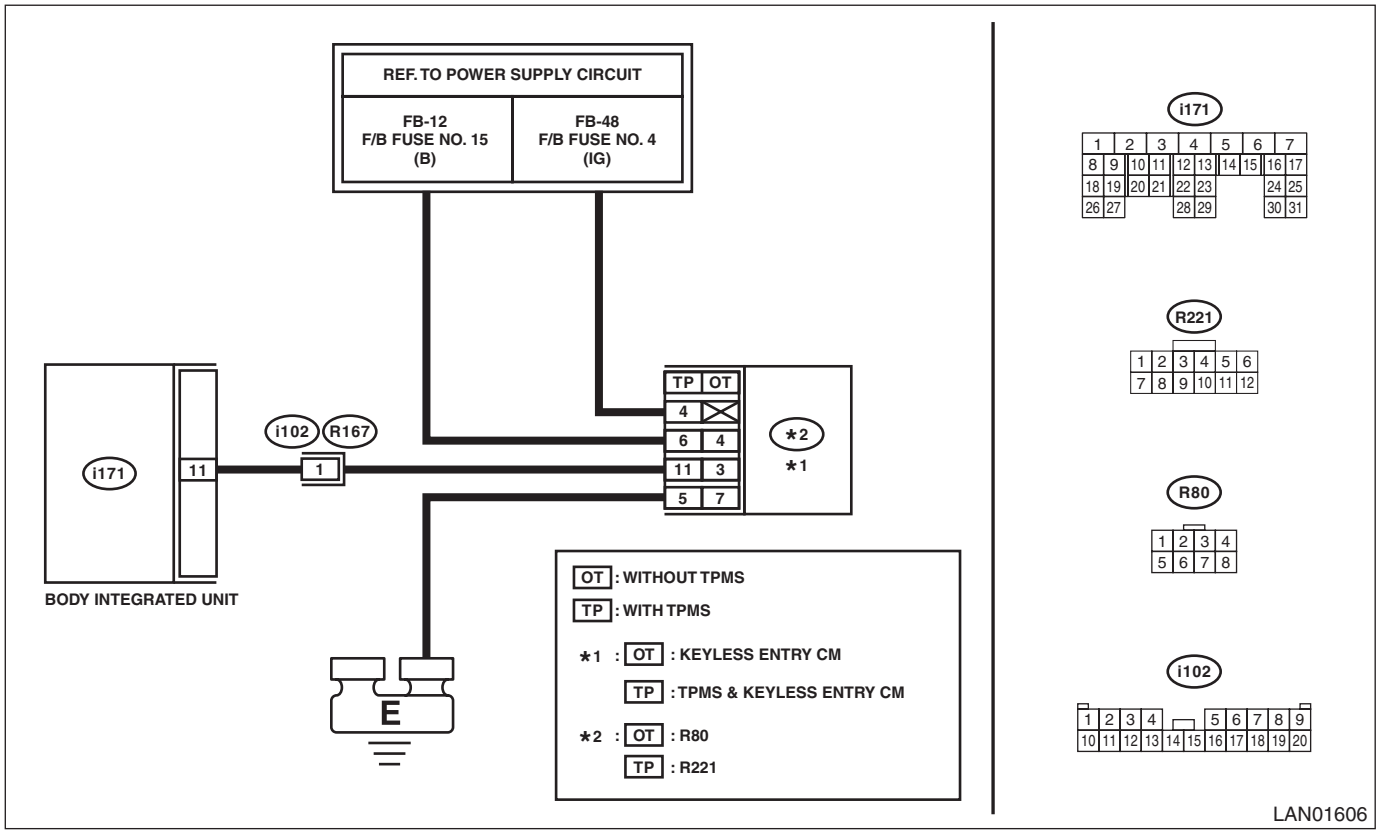
P: DTC B1411 IMMOBILIZER ANTENNA

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-30, DTC B1411 IMMOBILIZER ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Q: DTC U1500 KEYLESS UART COM. MALFUNCTION

1. MODEL WITHOUT KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

DTC DETECTING CONDITION:



UART between the TPMS & keyless control module or keyless entry CM and the body integrated unit is open or shorted, or has communication failure.

TROUBLE SYMPTOM:

Door lock does not operate with keyless.

WIRING DIAGRAM:

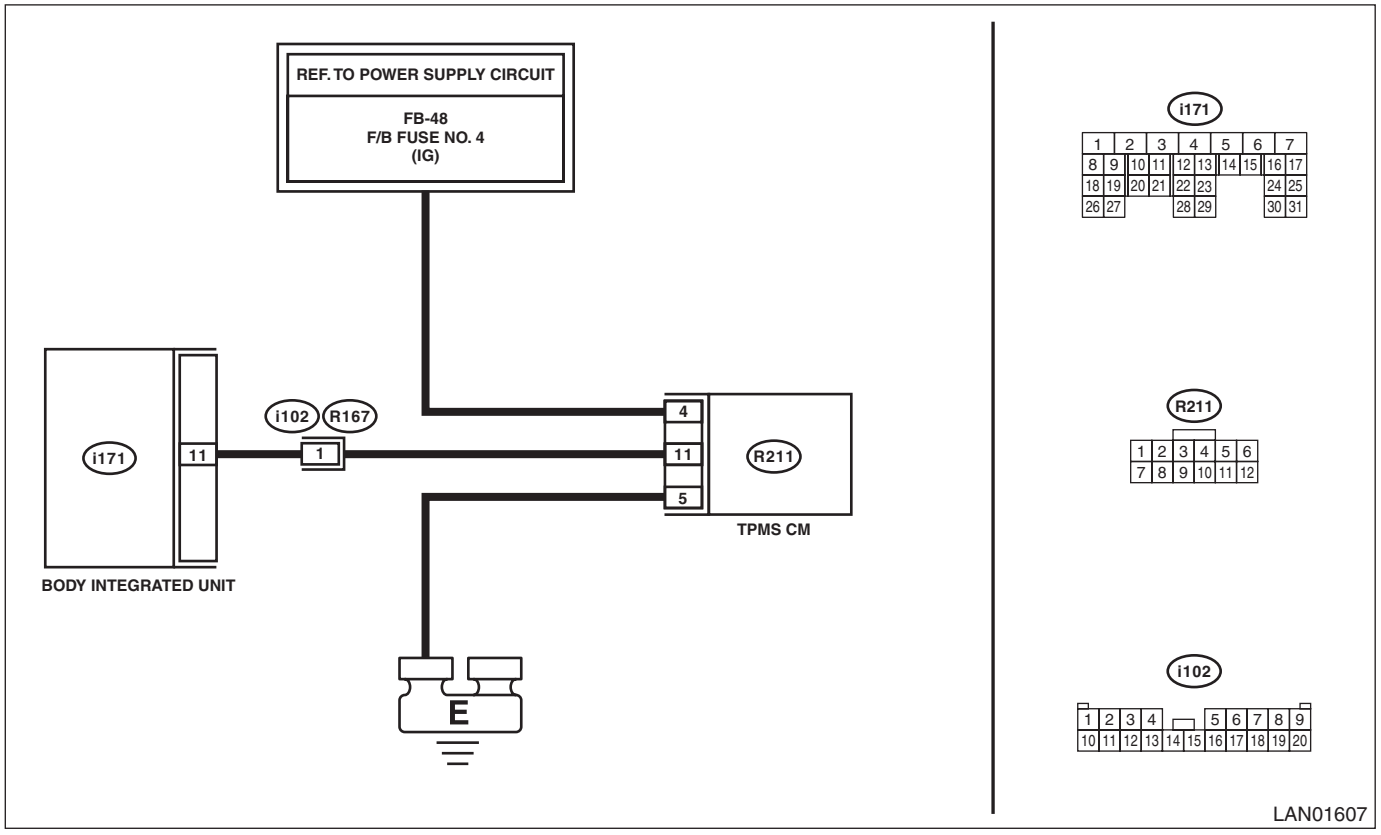
Keyless entry system <Ref. to WI(w/o HEV)-164, WIRING DIAGRAM, Keyless Entry System.>

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Insert the ignition key to the ignition key cylinder and remove. 2) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is U1500 a current malfunction?	Go to step **2**.	Go to step **7**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit and the TPMS & keyless control module or keyless entry CM connector. 3) Connect the disconnected connectors. 4) Insert the ignition key to the ignition key cylinder and remove. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is U1500 a current malfunction?	Go to step **3**.	Go to step **7**.

	Step	Check	Yes	No
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit and the TPMS & keyless control module or keyless entry CM connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***With TPMS*** ***(i171) No. 11 — (R221) No. 11:*** ***Without TPMS*** ***(i171) No. 11 — (R80) No. 3:***	Is the resistance 10 Ω or less?	Go to step **4**.	Repair the open circuit of harness or replace harness.
4	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. 2) Use a tester to measure the voltage between the terminals. ***Connector & terminal*** ***With TPMS*** ***(R221) No. 6 (+) — Chassis ground (–):*** ***(R221) No. 4 (+) — Chassis ground (–):*** ***Without TPMS*** ***(R80) No. 4 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Repair the power supply circuit.
5	**CHECK HARNESS (OPEN CIRCUIT).** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***With TPMS*** ***(R221) No. 5 — Chassis ground:*** ***Without TPMS*** ***(R80) No. 7 — Chassis ground:***	Is the resistance 10 Ω or less?	Go to step **6**.	Repair the ground circuit.
6	**CHECK DTC.** 1) Connect all the disconnected connectors. 2) Turn the ignition switch to ON. 3) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is any DTC other than U1500 displayed?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Replace the TPMS & keyless control module or keyless entry CM. <Ref. to SL-76, REMOVAL, Keyless Entry Control Module.> <Ref. to WT-10, REMOVAL, Tire Pressure Monitoring System.>
7	**CHECK CONNECTOR.** Check for a poor contact between the body integrated unit and the TPMS & keyless control module or keyless entry CM connector.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

2. MODEL WITH KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

DTC DETECTING CONDITION:



UART between the TPMS CM and the body integrated unit is open or shorted, or has communication failure.

TROUBLE SYMPTOM:

Cannot communicate with TPMS CM.

WIRING DIAGRAM:

Tire Pressure Monitoring System <Ref. to WI(w/o HEV)-229, WIRING DIAGRAM, Tire Pressure Monitoring System.>

Step		Check	Yes	No
1	**CHECK DTC.** 1) With the access key in the vehicle, press the push button ignition switch twice without depressing the brake to turn the ignition switch to ON. 2) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is U1500 a current malfunction?	Go to step **2**.	Go to step **7**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit and the TPMS CM connector. 3) Connect the disconnected connectors. 4) With the access key in the vehicle, press the push button ignition switch twice without depressing the brake to turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is U1500 a current malfunction?	Go to step **3**.	Go to step **7**.

	Step	Check	Yes	No
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit and the TPMS CM connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i171) No. 11 — (R211) No. 11:***	Is the resistance 10 Ω or less?	Go to step **4**.	Repair the open circuit of harness or replace harness.
4	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. 2) Use a tester to measure the voltage between the terminals. ***Connector & terminal*** ***(R211) No. 4 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Repair the power supply circuit.
5	**CHECK HARNESS (OPEN CIRCUIT).** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(R211) No. 5 — Chassis ground:***	Is the resistance 10 Ω or less?	Go to step **6**.	Repair the ground circuit.
6	**CHECK DTC.** 1) Connect all the disconnected connectors. 2) Turn the ignition switch to ON. 3) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is any DTC other than U1500 displayed?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Replace the TPMS CM. <Ref. to WT-10, REMOVAL, Tire Pressure Monitoring System.>
7	**CHECK CONNECTOR.** Check for a poor contact between the body integrated unit and the TPMS CM connector.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

14.General Diagnostic Table

A: INSPECTION

Read the DTC using Subaru Select Monitor. <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).> Or check the following data under the current data display screen. <Ref. to BC(diag)-12, Read Current Data.>

Item	Operation	Specifications		Note
		YES	NO	
Diagnostic code	DTC is not displayed when inspecting all DTCs.	DTC is not displayed.	Perform the diagnosis according to DTC.	—
Clearance light (Low beam) (High beam)	Clearance light and low/high beams illuminate normally when the switch is operated. Indicator in the meter illuminates at the same time.	System is normal.	Check the lighting system, combination meter system and LAN system.	—
Auto light	When the area around the light control sensor is darkened after the ignition switch and the lighting switch (AUTO) are turned to ON, the clearance light and the low beam illuminate after 5 seconds. Indicator in the combination meter illuminates at the same time.	System is normal.	Check the lighting system, combination meter system and LAN system.	—
	When the ignition switch and the lighting switch (AUTO) are turned to ON after the area around the light control sensor is darkened, the clearance light and the low beam illuminate immediately. Indicator in the combination meter illuminates at the same time.			—
Fog light	Front and rear fog lights illuminate when the switch is operated. Indicator in the meter illuminates at the same time.	System is normal.	Check the lighting system, combination meter system and LAN system.	Rear fog light operates when “Rear fog light setting” of the body integrated unit is set to on.
Rear defogger	Rear defogger operates when the switch is operated. The indicator illuminates at the same time.	System is normal.	Check the rear window defogger system and A/C system.	—
Wiper deicer	Wiper deicer operates by operating the switch. The indicator illuminates at the same time. When the ambient temperature is 5°C (41°F) or higher, press the switch 3 seconds or more to forcibly activate the system.	System is normal.	Check the wiper deicer system and A/C system.	Wiper deicer operates when “Wiper deicer setting” of the body integrated unit is set to on.
DRL	After starting the engine and releasing the parking brake, the DRL illuminates.	System is normal.	Check the lighting system and LAN system.	—
Rear wiper	Rear wiper operates when the switch is operated.	System is normal.	Check wiper or washer system.	Depending on user customizing “Sedan/Wagon Setting” of the body integrated unit, vehicle sensory time varies.
Key interlock	• Key cannot be removed in other than P range. • Key can be removed in other than P range.	System is normal.	Check the body control system.	—

General Diagnostic Table

Item	Operation	Specifications		Note
		YES	NO	
Shift lock	The select lever can be moved from the P range to other ranges only when the brake pedal is depressed with IG ON.	System is normal.	Check the body control system.	—
Key warning switch alarm	When the driver's door is open without the key removed, the buzzer sounds.	System is normal.	Check the combination meter and body control system.	—
Door lock	The doors lock/unlock when the door switch is operated. Rear gate/ trunk opens when the rear gate/ trunk release switch is operated.	System is normal.	Check the security & lock and body control system.	If user customizing "Sedan/Wagon Setting" is different, trunk and rear gate do not open.
Keyless entry	The lock locks/unlocks when the keyless transmitter is operated. Trunk/rear gate unlocks when trunk/ rear gate unlock button is operated.	System is normal.	Check the keyless entry and body control system.	—
Keyless access with push button start system	The lock locks/unlocks when the access key is operated. With the access key held, the touch sensor (lock) operation locks/touch sensor (unlock) operation unlocks. Rear gate unlocks by operating the rear gate unlock button.	System is normal.	Check the keyless access with push button start system and the body control system.	—
Answer back	Answer-back operates when the keyless entry / keyless access with push button start system locks/ unlocks.	System is normal.	Check the security & lock, keyless access with push button start system, and LAN system.	—
Room light	Turns ON/OFF according to the door open/close operation, the lock/ unlock operation with the keyless entry/keyless access with push button start system, and the ignition operation.	System is normal.	Check the room light system, security & lock, keyless access with push button start system, and LAN system.	For vehicle with the keyless access with push button start system, the room light blinks when "Factory mode" is selected. For vehicles with the keyless entry, the room light blinks when the keyless registration mode connector is connected.
Map light	Turns ON/OFF according to the door open/close operation, the lock/ unlock operation with the keyless entry/keyless access with push button start system, and the ignition operation. (Except for rear gate)	System is normal.	Check the spot map light, security & lock, keyless access with push button start system, and LAN system.	For vehicle with the keyless access with push button start system, the map light blinks when "Factory mode" is selected. For vehicles with the keyless entry, the map light blinks when the keyless registration mode connector is connected.

Item	Operation	Specifications		Note
		YES	NO	
Luggage/trunk light	The light illuminates/goes off according to the rear gate open/close. The light goes off when the doors are locked with the keyless entry/keyless access with push button start system and the ignition is turned ON while the luggage light is dimming after the rear gate is closed.	System is normal.	Check the luggage/trunk light, security & lock, keyless access with push button start system, and LAN system.	For vehicles with the keyless access with push button start system, the luggage/trunk light blinks when “Factory” mode is selected. For vehicles with the keyless entry, the luggage/trunk light blinks when the keyless registration mode connector is connected.
Key illumination	The light illuminates/goes off according to the driver’s door open/close. The light goes off, when the doors are locked with the keyless entry/keyless access with push button start system and the ignition is turned ON while illuminating.	System is normal.	Check the ignition switch illumination, security & lock, and LAN system.	For vehicles with keyless entry, the key illumination blinks when “Factory” mode is selected.
Illumination control	Illumination volume control is available.	System is normal.	Check the illumination control switch, combination meter, and body control system.	Illumination volume control is not available when user customizing “Illumination Control On/Off” of the body integrated unit is set to off.
Engine start	Engine starts.	System is normal.	Check the engine system, immobilizer, and LAN system.	—
Vehicle security	Security monitoring/security canceling can be performed by operating the keyless entry/keyless access with push button start system.	System is normal.	Check the security & lock, keyless access with push button start system, and LAN system.	Security monitoring starts and at the same time the warning buzzer sounds, when impact sensor is not connected and user customizing “Impact Sensor” of the body integrated unit is set to on.
Welcome lighting (enter)	When dimming out around the light control sensor after turning the lighting switch (AUTO) to ON, use keyless transmitter or access key to unlock. At this time, the clearance light and headlight low beam illuminates for the preset time. And, use keyless transmitter or access key to lock. At this time, the clearance light and headlight low beam go off.	System is normal.	Check the lighting system (auto light), security & lock (keyless entry) or keyless access with push button start system.	Operates when user customization item “Illumination Sensor Setting” in body integrated unit is set to ON and “Welcome Light Off Delay Time(Approaching)” is set to other than OFF.

Item	Operation	Specifications		Note
		YES	NO	
Welcome lighting (exit)	The clearance light and headlight low beam continues to illuminate, when the ignition switch is OFF (or when the key is removed for vehicles without keyless access with push button start system) while the auto light function is operating. Use keyless transmitter or access key to lock two consecutive times. At this time, the clearance light and headlight low beam go off.	System is normal.	Check the lighting system (auto light), security & lock (keyless entry) or keyless access with push button start system.	Operates when user customization item “Illumination Sensor Setting” in body integrated unit is set to ON and “Welcome Light Off Delay Time(Exiting)” is set to other than OFF.

TELEMATICS SYSTEM (DIAGNOSTICS)

10.	Inspection Mode	20
11.	System Operation Check Mode	22
12.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	23
13.	Diagnostics with Phenomenon	57

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**PERFORM CUSTOMER INTERVIEW.** Using the Check List for Interview, ask the customer the condition of how the trouble occurred. <Ref. to TEL(diag)-3, CHECK, Check List for Interview.>	Did you interview the customer?	Go to step **2**.	Interview the customer. <Ref. to TEL(diag)-3, CHECK, Check List for Interview.>
2	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** Using the Subaru Select Monitor, check whether communication to the telematics system can be executed. NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. (Refer to "Communication for initializing impossible".) <Ref. to TEL(diag)-10, INSPECTION, Subaru Select Monitor.>	Is communication possible?	Go to step **3**.	Check the communication circuit.
3	**CHECK TELEMATICS.** Using the Subaru Select Monitor, read DTC of the telematics system. <Ref. to TEL(diag)-17, OPERATION, Diagnostic Code(s) Display.> NOTE: If DTC is detected, only RED LED will illuminate. For details, refer to "LED operation status list". <Ref. to TEL(diag)-4, LED ILLUMINATION STATUS LIST, CHECK, Check List for Interview.>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to TEL(diag)-17, LIST, Diagnostic Code(s) Display.>	Go to step **4**.
4	**CHECK DIAGNOSTICS WITH PHENOMENON.** Check the list of Diagnostics with Phenomenon. <Ref. to TEL(diag)-57, Diagnostics with Phenomenon.>	Does the symptom apply?	Perform diagnosis according to the procedures in the diagnostics with phenomenon.	Go to step **5**.
5	**CHECK TROUBLE PHENOMENON.** 1) Perform the basic inspection and function check. <Ref. to TEL(diag)-5, INSPECTION, General Description.> 2) Check the data communication module. <Ref. to TEL(diag)-8, Control Module I/O Signal.> 3) Perform check of current data. <Ref. to TEL(diag)-13, Read Current Data.> 4) Perform a unit check.	Was the trouble cause found?	Perform the Clear Memory after repairing or replacing the cause of trouble. <Ref. to TEL(diag)-19, Clear Memory Mode.>	System is normal.

2. Check List for Interview

A: CHECK

1. CHECK LIST FOR INTERVIEW

- Inspect the following items regarding the vehicle's state.
- Print out this page for interviewing customers.

<table>
<tr><td colspan="2">Telematics Check List for Interview</td><td colspan="2">Received Year Month Date</td></tr>
<tr><td colspan="2" rowspan="2">Customer's name</td><td>Registration No.</td><td>Initial year of registration
Year Month Date</td></tr>
<tr><td>Vehicle model</td><td>Frame number</td></tr>
<tr><td>Interviewer
( )</td><td>Inspector
( )</td><td>Engine type
( )</td><td>Odometer reading
( )</td></tr>
<tr><td colspan="4">Customer specified content
•
•
•</td></tr>
<tr><td>Date when problem occurred</td><td>Year Month Date</td><td>Frequency of trouble occurrence</td><td>Always occurs
Sometimes occurs (times per day, times per month)</td></tr>
<tr><td rowspan="4">Conditions at event</td><td colspan="3">Weather ❑ Fine ❑ Cloudy ❑ Rainy ❑ Snowy ❑ Others ( )</td></tr>
<tr><td colspan="3">Temperature °C (°F)</td></tr>
<tr><td colspan="3">How often ❑ Always ❑ Once before
❑ Sometimes (times a day / times a week / times a month)</td></tr>
<tr><td colspan="3">When and how</td></tr>
<tr><td rowspan="2">Situations at event</td><td colspan="3">In what situations did it occur?
❑ Fast Driving ❑ Rough Roads ❑ Parked ❑ Unknown ❑ Other</td></tr>
<tr><td colspan="3">In what operations did it occur?
❑ ACC On ❑ Press i-button or SOS button
❑ Operating door lock function with mobile phone
❑ Operating door unlock function with mobile phone
❑ Operating horn and hazard function with mobile phone
❑ Operating own vehicle positioning function
❑ Unknown ❑ Other</td></tr>
<tr><td>Situations at restoration</td><td colspan="3">What helped the status return to normal?
❑ Recover on its own ❑ ACC Off and On ❑ Does not recover ❑ Other</td></tr>
<tr><td>Location at event</td><td colspan="3">❑ Unknown ❑ Any Place
❑ Driving around open areas like in the country
❑ Driving around hills or mountains
❑ Driving around cities with large buildings
❑ Driving around residential areas or no large buildings
❑ Driving around areas with power lines
❑ Driving around rough roads or railway tracks</td></tr>
<tr><td>Error message</td><td colspan="3">Error message displayed</td></tr>
<tr><td rowspan="3">Mobile phone</td><td colspan="3">Mobile phone carrier (example: Docomo)</td></tr>
<tr><td colspan="3">Mobile phone model (example: Apple iPhone 6)</td></tr>
<tr><td colspan="3">Mobile phone OS version (software version information)</td></tr>
</table>

Check List for Interview

Telematics subscription status	❑ Subscription (Year Month Date) ❑ Non-contract
LED illumination status <Ref. to TEL(diag)-4, LED ILLUMINATION STATUS LIST, CHECK, Check List for Interview.>	RED LED ❑ OFF ❑ ON ❑ Blink
	GREEN LED ❑ OFF ❑ ON ❑ Blink
Check result	Reproductivity ❑ Reproduced ❑ Always ❑ Sometimes ❑ Cannot be reproduced Condition ❑ Cold ❑ Warm ❑ At starting ❑ Immediately after starting ❑ During warm-up ❑ At idle ❑ When start driving ❑ While driving ❑ At acceleration ❑ At deceleration ❑ When applying brake
MSISDN No. of SIM	* Confirm on data monitor. <Ref. to TEL(diag)-13, Read Current Data.>
Diagnostic code	

2. LED ILLUMINATION STATUS LIST

LED	Light OFF	Blink	Light ON
RED	Communication with the server and DCM are operating normally (communication failure with the STARLINK server. DTCs are not found within the vehicle unit.)	It is possible that communication with the server/DCM are malfunctioning.	It is possible that communication with the server/DCM are malfunctioning.
GREEN	—	Connection to the server is being attempted and in progress.	Communication status with the server is READY.
RED and GREEN	Telematics function is not activated.	Collation with the server is in progress.	Collation with the server failed. It is possible that the server/DCM are malfunctioning.

3. General Description

A: CAUTION

1. AIRBAG SYSTEM

CAUTION:
- **Do not use the electrical test equipment on all airbag harnesses and connector circuits.**
- **Be careful not to damage the airbag harness.**

B: INSPECTION

1. BASIC INSPECTION

Before performing the diagnosis, check the following items which may affect the problems relating to the telematics system.
1) Check the battery. <Ref. to SC(H4DO(w/o HEV))-52, Battery.>

NOTE:
For HEV model, check the 12 volt auxiliary battery. <Ref. to SC(H4DO(HEV))-40, Battery.>
2) Check the relay and fuse condition. <Ref. to ET-9, Relay and Fuse.>
3) Check the connecting condition of harness and harness connector.

C: PREPARATION TOOL

1. SPECIAL TOOL

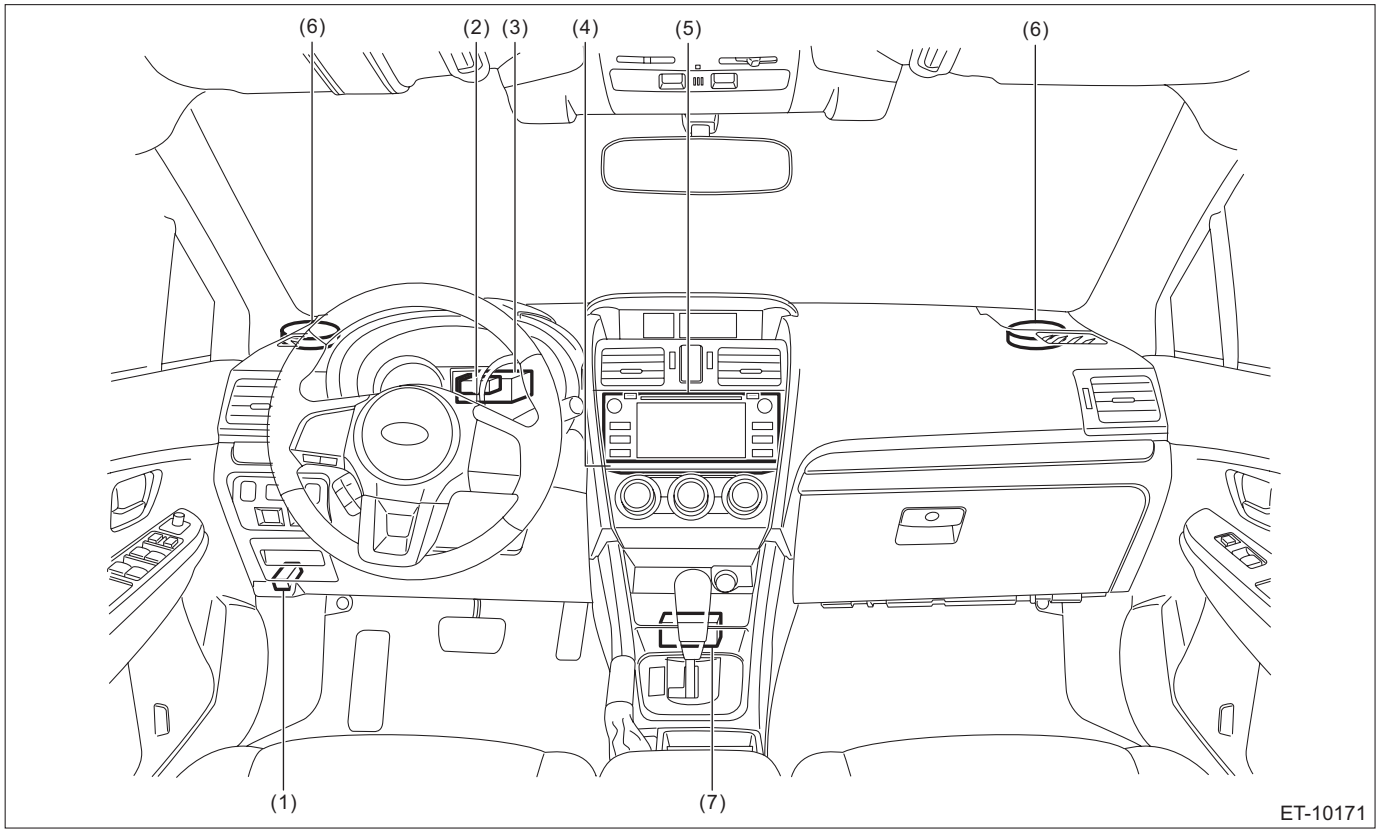

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
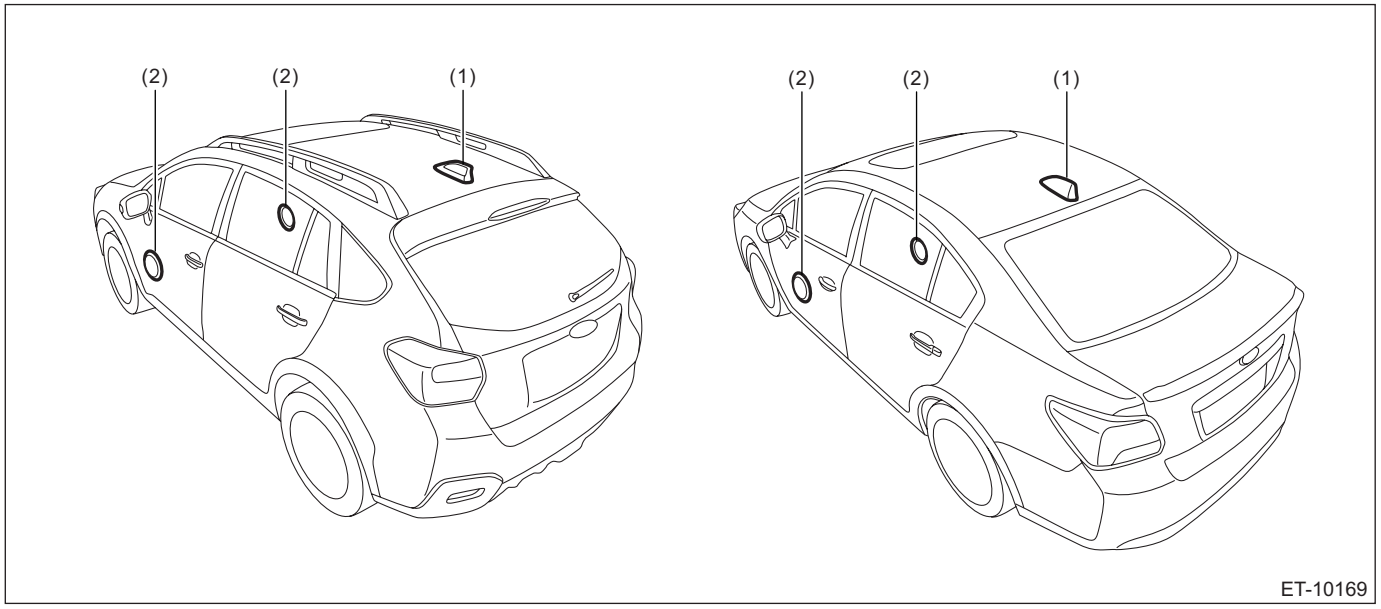
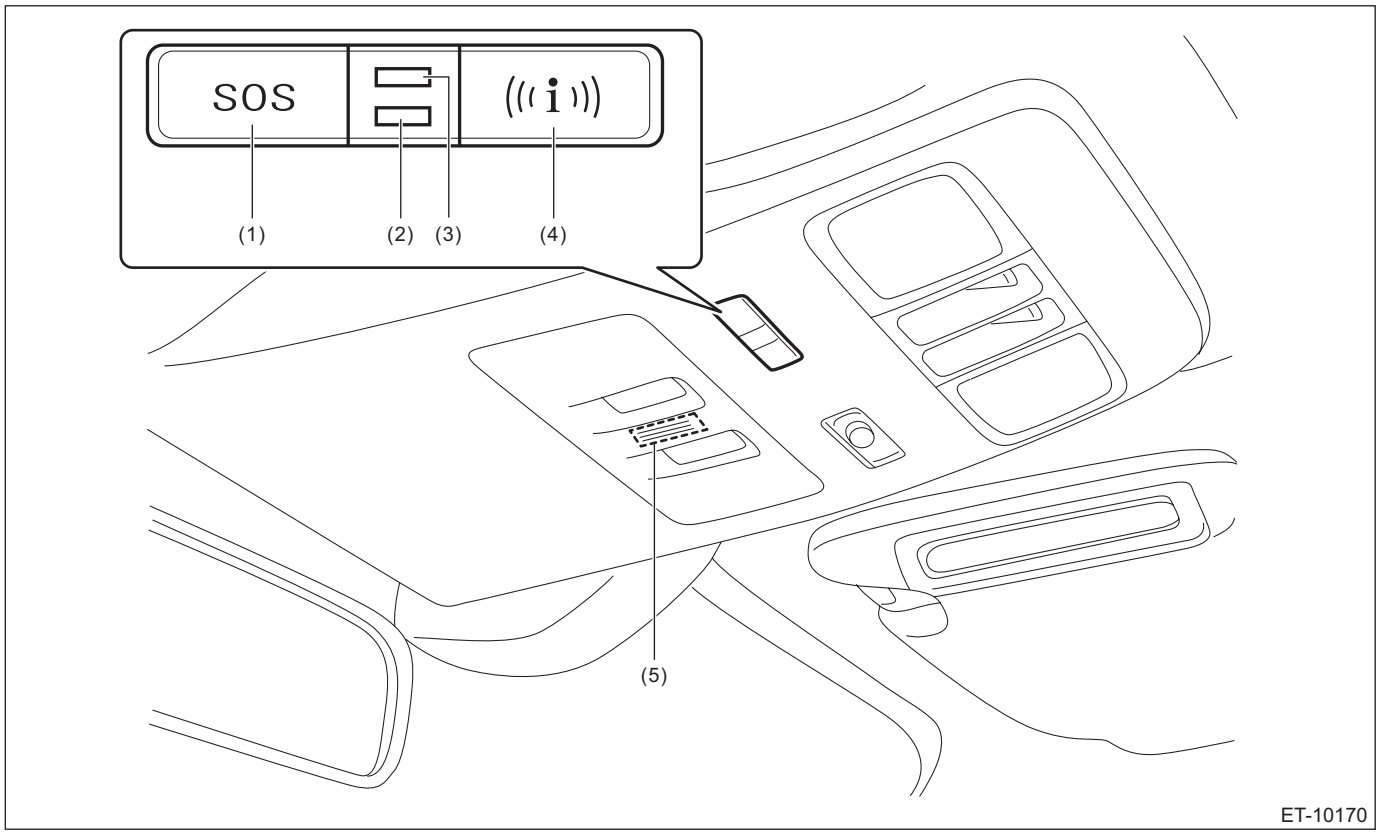
 STSSM4	— (Newly adopted tool)	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL



TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

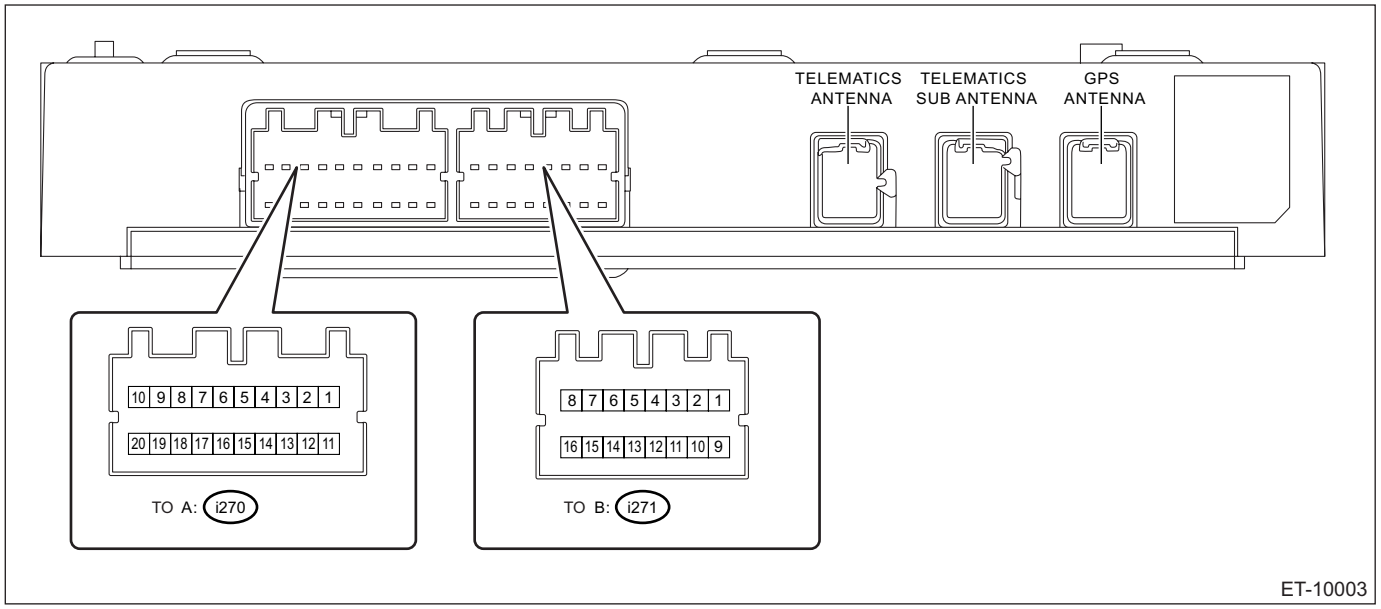
4. Electrical Component Location



A: LOCATION

(1) Data link connector
(2) GPS antenna
(3) Telematics sub antenna
(4) Data communication module (DCM)
(5) Audio or navigation
(6) Instrument panel speaker
(7) Airbag CM

(1) Telematics antenna
(2) Door speaker (standard specification)



(1) SOS button
(2) RED LED
(3) GREEN LED
(4) i-button
(5) Microphone

NOTE:
For the LED operation condition, refer to "LED operation condition" in "Check List for Interview". <Ref. to TEL(diag)-4, LED ILLUMINATION STATUS LIST, CHECK, Check List for Interview.>

5. Control Module I/O Signal

A: SPECIFICATION

B: WIRING DIAGRAM

Refer to “TELEMATICS SYSTEM” in the wiring diagram. <Ref. to WI(w/o HEV)-226, WIRING DIAGRAM, TELEMATICS SYSTEM.>

C: SYSTEM BLOCK DIAGRAM

Main signals used between DCM and relevant CM

6. Subaru Select Monitor

A: OPERATION

- For detailed operation procedures, refer to “Application help”.
- When DCM cannot establish communication with Subaru Select Monitor, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE”. <Ref. to TEL(diag)-10, INSPECTION, Subaru Select Monitor.>

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

When communication with DCM is impossible

DETECTING CONDITION:

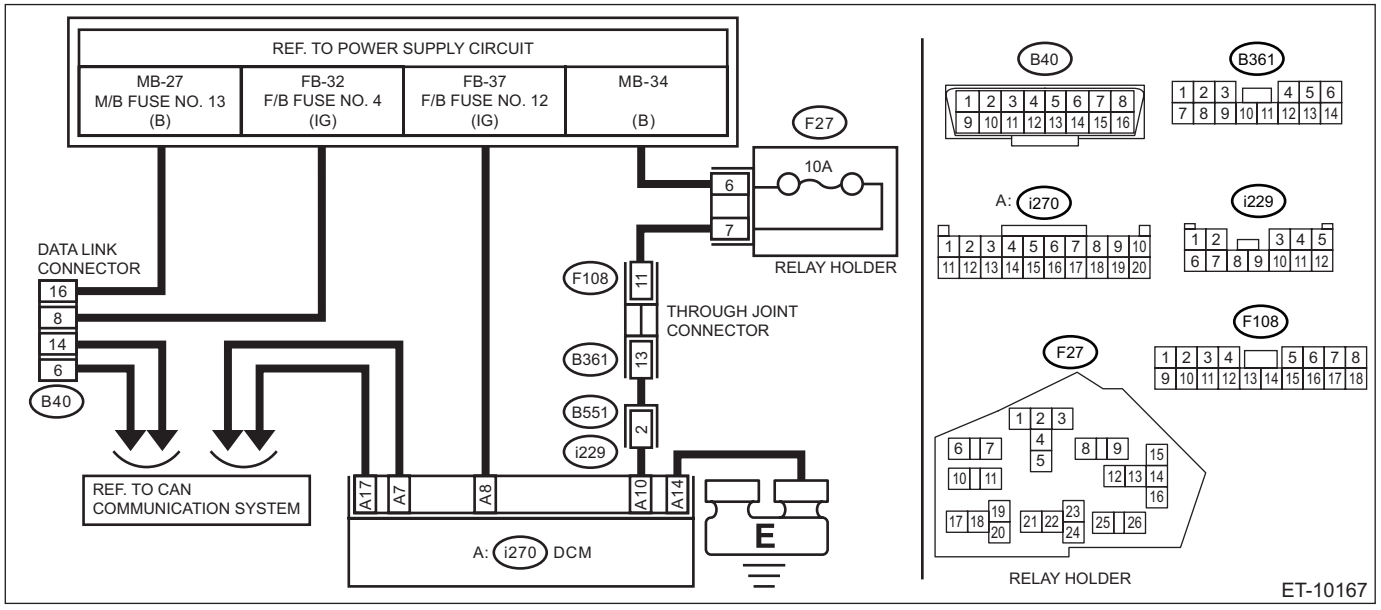
- Defective harness connector
- Power supply circuit malfunction
- Defective DCM
- Defective CAN communication circuit
- Defective Subaru Select Monitor

TROUBLE SYMPTOM:

Communication is impossible between DCM and Subaru Select Monitor.

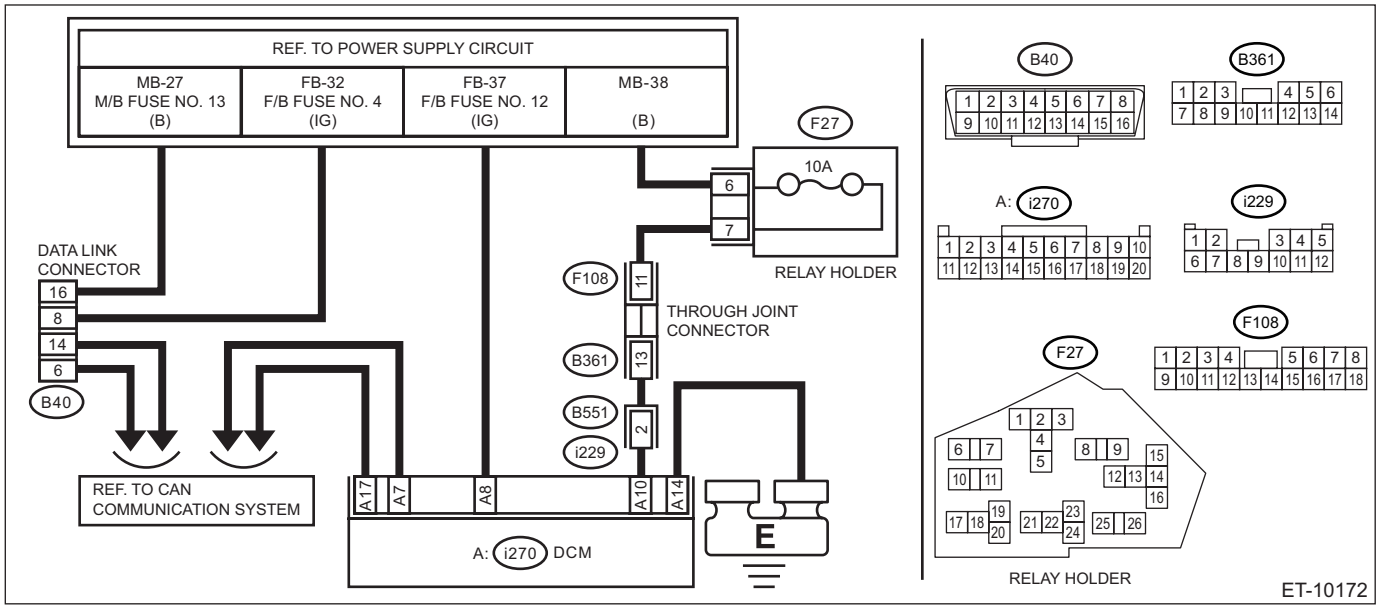
CAUTION:

CommCheck is required after replacing the DCM. <Ref. to ET-28, REGISTRATION (COMM CHECK), OPERATION, TELEMATICS SYSTEM.>



WIRING DIAGRAM:

NOTE:



For the coupling connector, refer to “WIRING SYSTEM”.

Telematics <Ref. to WI(w/o HEV)-226, WIRING DIAGRAM, TELEMATICS SYSTEM.>

- Except for HEV model

- HEV model

Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse of the DCM.	Is there any fault?	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in harness between the fuse — DCM connector.	Go to step **2**.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the DCM connector. 2) Turn the ignition switch to ON. 3) Using a tester, measure the voltage between DCM connector (harness side) and the chassis ground. ***Connector & terminal*** ***(i270) No. 8 (+) — Chassis ground (–):*** ***(i270) No. 10 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair the open circuit in the wiring harness between fuse and DCM connector.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Using a tester, measure the resistance between DCM connector (harness side) and the chassis ground. ***Connector & terminal*** ***(i270) No. 14 — Chassis ground:***	Is the resistance 1 Ω or less?	Go to step **4**.	Repair the open circuit in the wiring harness between fuse and DCM connector.
4	**CHECK LAN SYSTEM.** 1) Inspect LAN system.	Is there any fault?	Perform the inspection according to the diagnosis for LAN system.	Go to step **5**.

Step		Check	Yes	No
5	**CHECK TELEMATICS.** Using the Subaru Select Monitor, communicate with the telematics system.	Is communication possible?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.>

7. Read Current Data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Telematics» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

9. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Telematics» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

10.Inspection Mode

A: PROCEDURE

It is possible to diagnose the DTC by performing the indicated inspection mode.
After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. INSPECTION MODE 1

U0151	LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE	<Ref. to TEL(diag)-23, DTC U0151 LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	<Ref. to TEL(diag)-23, DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0401	INVALID DATA RECEIVED FROM ECM/PCM “A”	<Ref. to TEL(diag)-23, DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0416	INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE	<Ref. to TEL(diag)-24, DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0452	INVALID DATA RECEIVED FROM RESTRAINTS CONTROL MODULE	<Ref. to TEL(diag)-24, DTC U0452 INVALID DATA RECEIVED FROM RESTRAINTS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A00	VIN READING	<Ref. to TEL(diag)-25, DTC B2A00 VIN READING, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A01	TEL1 ANTENNA CIRCUIT	<Ref. to TEL(diag)-26, DTC B2A01 TEL1 ANTENNA CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A02	TEL2 ANTENNA CIRCUIT	<Ref. to TEL(diag)-28, DTC B2A02 TEL2 ANTENNA CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A03	GPS ANTENNA CIRCUIT	<Ref. to TEL(diag)-29, DTC B2A03 GPS ANTENNA CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A07	BACKUP BATTERY CHARGE SYSTEM PERFORMANCE	<Ref. to TEL(diag)-39, DTC B2A07 BACKUP BATTERY CHARGE SYSTEM PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A08	SOS BUTTON CIRCUIT	<Ref. to TEL(diag)-40, DTC B2A08 SOS BUTTON CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A09	I-CALL BUTTON CIRCUIT	<Ref. to TEL(diag)-42, DTC B2A09 I-CALL BUTTON CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A0C	DCM INTERNAL FAULT	<Ref. to TEL(diag)-50, DTC B2A0C DCM INTERNAL FAULT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Note
B2A0D	AIRBAG SIGNAL	<Ref. to TEL(diag)-51, DTC B2A0D AIRBAG SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A0E	MUTE LINE CIRCUIT	<Ref. to TEL(diag)-53, DTC B2A0E MUTE LINE CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A0F	BACKUP BATTERY DEGRADATION	<Ref. to TEL(diag)-55, DTC B2A0F BACKUP BATTERY DEGRADATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A10	BATTERY VOLTAGE HIGH	<Ref. to TEL(diag)-56, DTC B2A10 BATTERY VOLTAGE HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Inspection steps:
1) Perform the Clear Memory Mode. <Ref. to TEL(diag)-19, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. After solving the DTC, repeat from step 1).
3) Turn the ignition switch to OFF.
4) Turn the ignition switch to ON, and wait for 5 seconds or more.
5) Read the DTC and check that the DTC is not displayed.

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC.

2. INSPECTION MODE 2

DTC	Item	Note
B2A04	MIC CIRCUIT	<Ref. to TEL(diag)-30, DTC B2A04 MIC CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A05	LEFT SPEAKER/AUDIO CIRCUIT	<Ref. to TEL(diag)-33, DTC B2A05 LEFT SPEAKER/AUDIO CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A06	RIGHT SPEAKER/AUDIO CIRCUIT	<Ref. to TEL(diag)-36, DTC B2A06 RIGHT SPEAKER/AUDIO CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A0A	RED LED CIRCUIT	<Ref. to TEL(diag)-44, DTC B2A0A RED LED CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A0B	GREEN LED CIRCUIT	<Ref. to TEL(diag)-47, DTC B2A0B GREEN LED CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Inspection steps:
1) Perform the Clear Memory Mode. <Ref. to TEL(diag)-19, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. After solving the DTC, repeat from step 1).
3) Turn the ignition switch to OFF.
4) Close all doors. (The vehicle enters CAN sleep state.)
5) Wait for approx. 1 minute. After the indicator goes off, wait for another 1 minute. (DCM standby mode)
6) Turn the ignition switch to ON, and wait for 5 seconds or more.
7) Read the DTC and check that the DTC is not displayed.

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC.

11.System Operation Check Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Telematics» and then select «Enter».
5) On «Select Function» display, select «Active Test».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

System operation check mode	Note
GREEN LED Lighting	GREEN LED illuminates/flashes/goes off.
GREEN LED Flashing	
GREEN LED OFF	
RED LED Lighting	RED LED illuminates/flashes/goes off.
RED LED Flashing	
RED LED OFF	
Speaker ON	Outputs to speaker.

12.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when CAN line abnormality is detected.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF

Detected when CAN line abnormality is detected.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

C: DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”

Detected when CAN data from ECM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

D: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

E: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Detected when CAN data is not received from body integrated unit.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

F: DTC U0151 LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE

Detected when CAN data is not received from airbag CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

G: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

Detected when CAN data from combination meter does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

H: DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”

Detected when CAN data from ECM is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

I: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

This is detected when CAN data from VDC is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

J: DTC U0452 INVALID DATA RECEIVED FROM RESTRAINTS CONTROL MODULE

Detected when CAN data from airbag CM is abnormal.

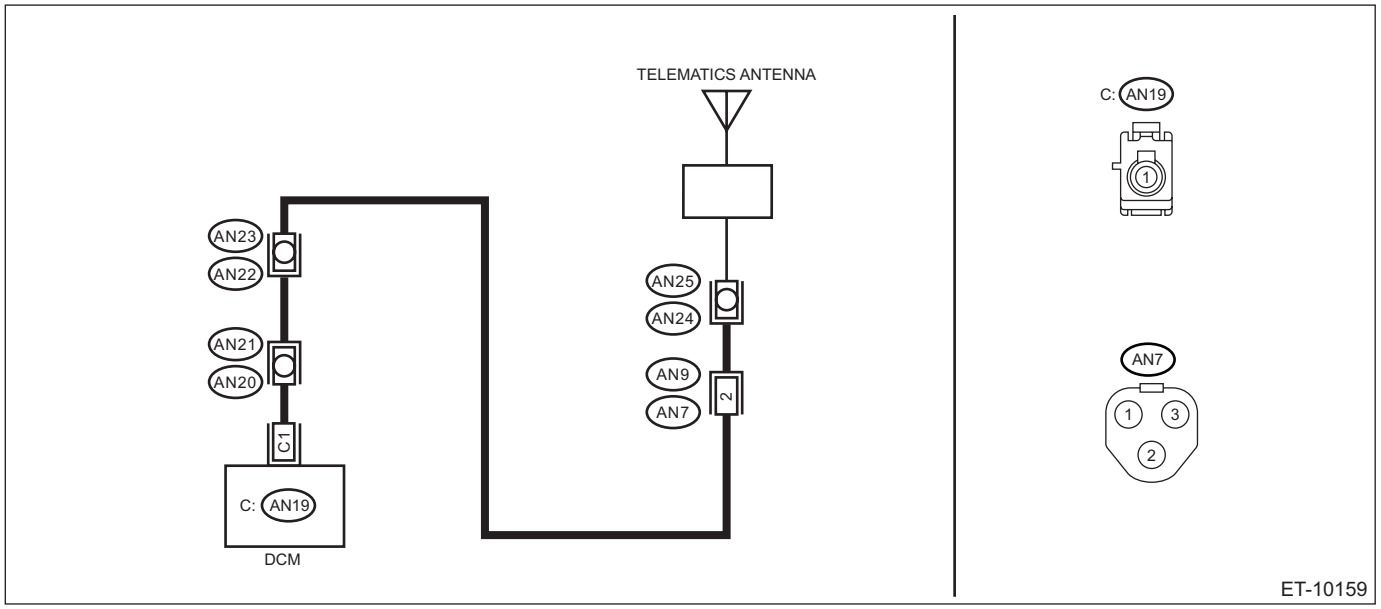
NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(w/o HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

K: DTC B2A00 VIN READING

DIAGNOSIS START CONDITION:
When ignition switch is ON.
TROUBLE SYMPTOM:
When ignition switch is ON, VIN information (CAN) sent from ECM cannot be read.
DTC DETECTING CONDITION:
- Telematics function cannot be used.
- RED LED illuminates.

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-28, REGISTRATION (COMM CHECK), OPERATION, TELEMATICS SYSTEM.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC B2A00 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK DTC.** Check DTCs in the following systems; • Telematics <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.> • Engine <Ref. to EN(H4DO w/o HEV)(diag)-49, Read Diagnostic Trouble Code (DTC).> <Ref. to EN(H4DO HEV)(diag)-51, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed? (Current malfunction)	Perform the diagnosis for LAN system. <Ref. to LAN(w/o HEV)(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK CURRENT DATA.** Confirm VIN information from the engine OBD mode. <Ref. to EN(H4DO w/o HEV)(diag)-36, MODE $09 (REQUEST VEHICLE INFORMATION), OPERATION, General Scan Tool.> <Ref. to EN(H4DO HEV)(diag)-36, MODE $08 (REQUEST CONTROL FOR ON-BOARD SYSTEM, TEST, AND COMPONENT), OPERATION, General Scan Tool.>	Is VIN information displayed?	Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.>	Replace the ECM. <Ref. to FU(H4DO(w/o HEV))-100, Engine Control Module (ECM).> <Ref. to FU(H4DO(HEV))-86, Engine Control Module (ECM).>



L: DTC B2A01 TEL1 ANTENNA CIRCUIT

DIAGNOSIS START CONDITION:
When ignition switch is ON.
DTC DETECTING CONDITION:
Any of the followings continues for 5 seconds or more.
- TEL1 impedance is more than 1 MΩ. (Detached antenna, etc.)
- TEL1 impedance is less than 1 kΩ. (Short-circuited antenna, etc.)

TROUBLE SYMPTOM:
- Telematics function cannot be used.
- RED LED illuminates.

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Telematics <Ref. to WI(w/o HEV)-226, WIRING DIAGRAM, TELEMATICS SYSTEM.>

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-28, REGISTRATION (COMM CHECK), OPERATION, TELEMATICS SYSTEM.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC B2A01 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the antenna connector. 3) Disconnect the DCM connector. 4) Disconnect the PRG DU connector. 5) Measure the resistance between antenna connector and DCM connector. ***Connector & terminal*** ***(AN19) No. 1 — (AN24) No. 1:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(AN19) No. 1 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***(AN19) No. 1 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK ANTENNA.** Check the telematics antenna. <Ref. to ET-35, Antenna.>	Is the telematics antenna OK?	Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.>	Replace the telematics antenna. <Ref. to ET-35, Antenna.>

M: DTC B2A02 TEL2 ANTENNA CIRCUIT

DIAGNOSIS START CONDITION:
When ignition switch is ON.
DTC DETECTING CONDITION:
Any of the followings continues for 5 seconds or more.
- TEL2 impedance is more than 1 MΩ. (Detached antenna, etc.)
- TEL2 impedance is less than 1 kΩ. (Short-circuited antenna, etc.)

TROUBLE SYMPTOM:
- Telematics function cannot be used.
- RED LED illuminates.

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-28, REGISTRATION (COMM CHECK), OPERATION, TELEMATICS SYSTEM.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC B2A01 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK ANTENNA.** Visually check the telematics sub antenna. <Ref. to ET-35, Antenna.>	Is the telematics sub antenna OK?	Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.>	Replace the telematics sub antenna. <Ref. to ET-35, Antenna.>

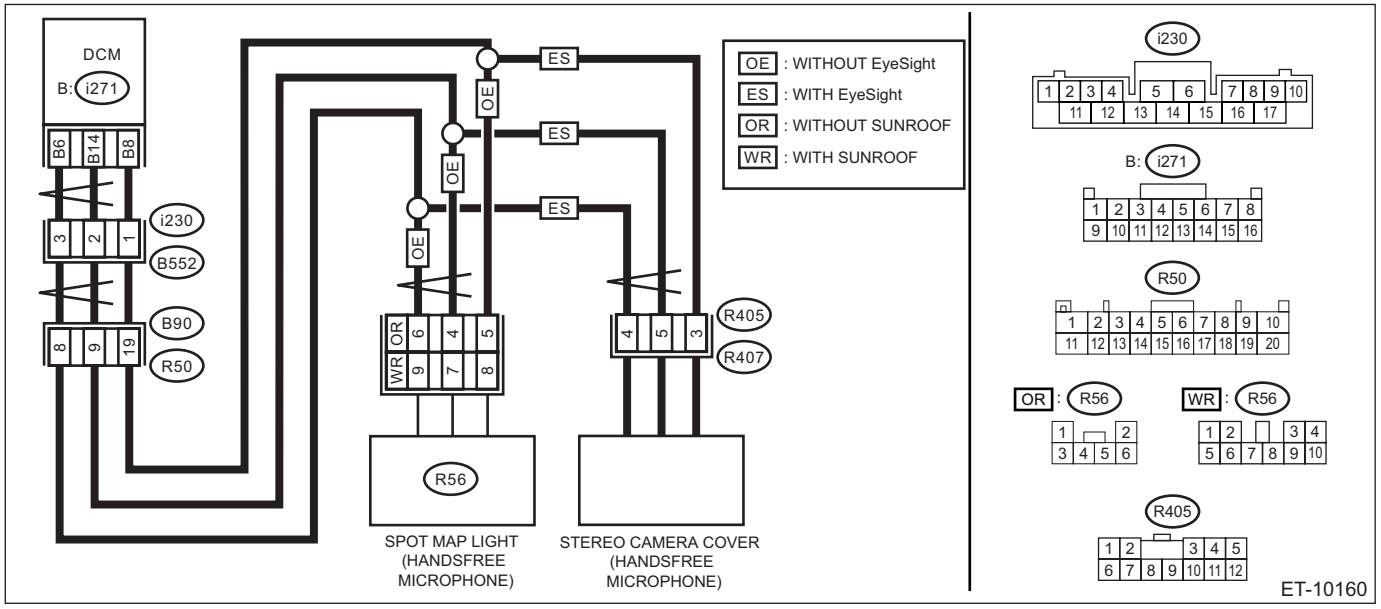
N: DTC B2A03 GPS ANTENNA CIRCUIT

DIAGNOSIS START CONDITION:
When ignition switch is ON.
DTC DETECTING CONDITION:
Any of the followings continues for 5 seconds or more.
- GPS antenna impedance is more than 1 MΩ. (Detached antenna, etc.)
- GPS antenna impedance is less than 1 kΩ. (Short-circuited antenna, etc.)

TROUBLE SYMPTOM:
- Telematics function cannot be used.
- RED LED illuminates.

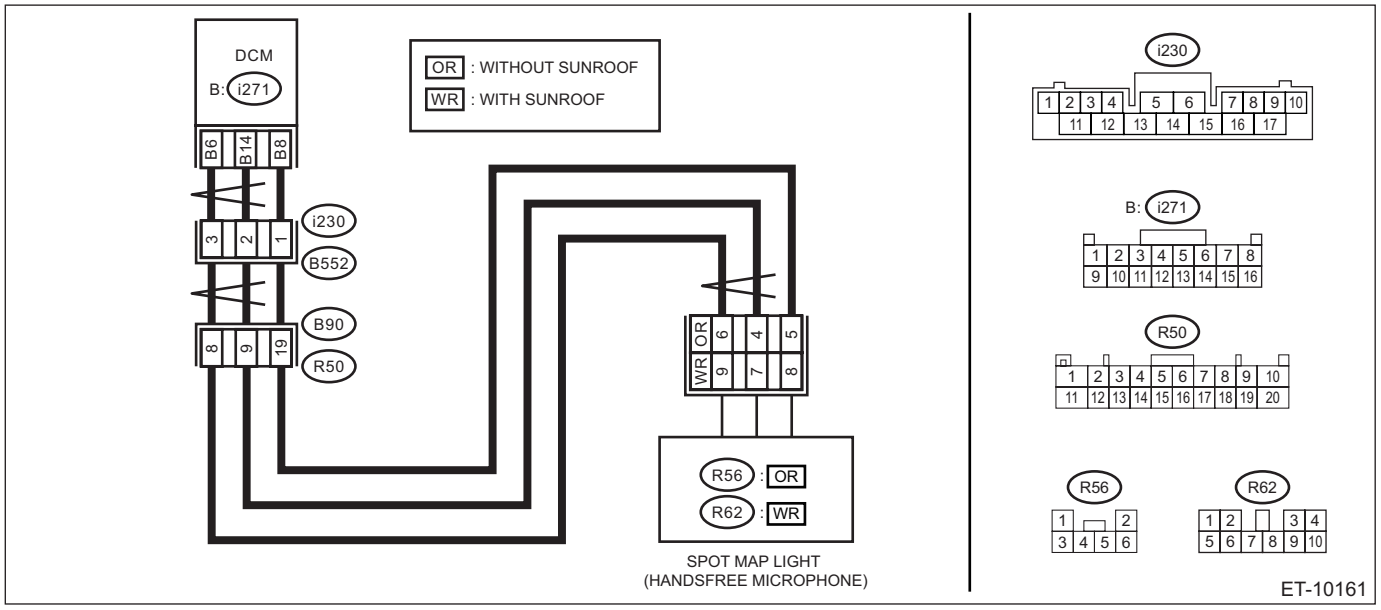
CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-28, REGISTRATION (COMM CHECK), OPERATION, TELEMATICS SYSTEM.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC B2A01 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK GPS ANTENNA.** Visually check the GPS antenna. <Ref. to ET-43, GPS Antenna.>	Is the GPS antenna OK?	Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.>	Replace the GPS antenna. <Ref. to ET-43, GPS Antenna.>



O: DTC B2A04 MIC CIRCUIT

DIAGNOSIS START CONDITION:
When ACC is ON.
DTC DETECTING CONDITION:
Any of the followings continues for 5 seconds or more.
- MIC impedance is more than 1 MΩ. (Detached MIC, etc.)
- MIC impedance is less than 1 kΩ. (Short-circuited MIC, etc.)



TROUBLE SYMPTOM:
- Call function cannot be used.
- RED LED illuminates.

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Telematics <Ref. to WI(w/o HEV)-226, WIRING DIAGRAM, TELEMATICS SYSTEM.>
- Except for HEV model

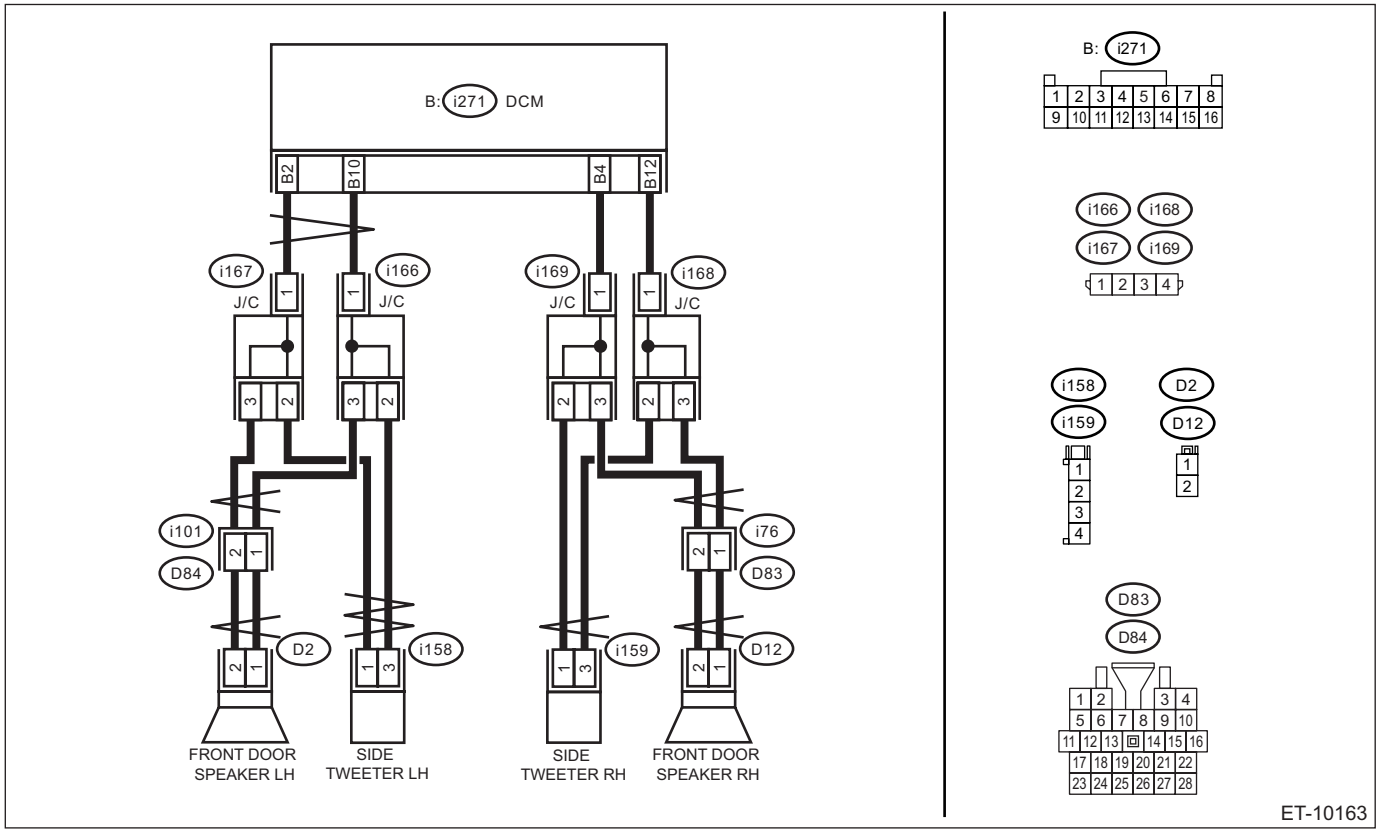
- HEV model

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-28, REGISTRATION (COMM CHECK), OPERATION, TELEMATICS SYSTEM.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC B2A04 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the microphone connector. 3) Disconnect the DCM connector. 4) Measure the resistance between microphone connector and DCM connector. ***Connector & terminal*** ***Except for HEV model (with sunroof and without EyeSight)*** ***(R56) No. 7 — (i271) No. 14:*** ***(R56) No. 8 — (i271) No. 8:*** ***(R56) No. 9 — (i271) No. 6:*** ***Except for HEV model (without sunroof and without EyeSight)*** ***(R56) No. 4 — (i271) No. 14:*** ***(R56) No. 5 — (i271) No. 8:*** ***(R56) No. 6 — (i271) No. 6:*** ***Except for HEV model (with EyeSight)*** ***(R405) No. 4 — (i271) No. 6:*** ***(R405) No. 3 — (i271) No. 8:*** ***(R405) No. 5 — (i271) No. 14:*** ***HEV model (with sunroof)*** ***(R56) No. 4 — (i271) No. 14:*** ***(R56) No. 5 — (i271) No. 8:*** ***(R56) No. 6 — (i271) No. 6:*** ***HEV model (without sunroof)*** ***(R62) No. 7 — (i271) No. 14:*** ***(R62) No. 8 — (i271) No. 8:*** ***(R62) No. 9 — (i271) No. 6:***	Is the resistance 1 Ω or less?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(i271) No. 8 — Chassis ground:*** ***(i271) No. 14 — Chassis ground:*** ***(i271) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.

	Step	Check	Yes	No
4	**CHECK CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***(i271) No. 8 (+) — Chassis ground (–):*** ***(i271) No. 14 (+) — Chassis ground (–):*** ***(i271) No. 6 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK MICROPHONE.** Confirm the microphone voice input.	Is the voice input OK?	Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.>	Replace the microphone. <Ref. to ET-41, Microphone.>

P: DTC B2A05 LEFT SPEAKER/AUDIO CIRCUIT



DIAGNOSIS START CONDITION:
When ACC is ON.
DTC DETECTING CONDITION:
Speaker impedance is more than 10 kΩ for 100 mS. (Detached speaker connection, etc.)
TROUBLE SYMPTOM:
- Call function cannot be used.
- RED LED illuminates.

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Telematics <Ref. to WI(w/o HEV)-226, WIRING DIAGRAM, TELEMATICS SYSTEM.>
- Except for HEV model

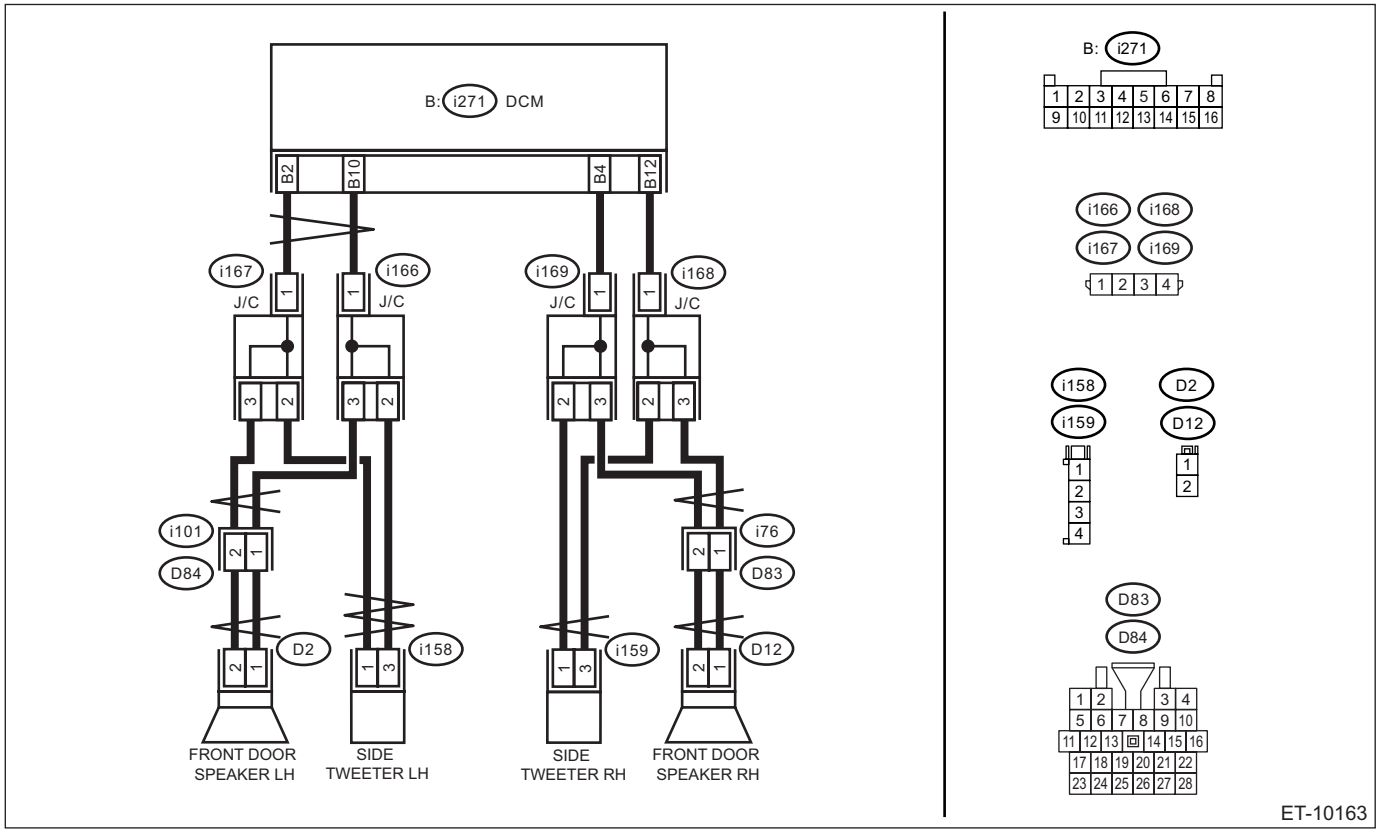
- HEV model

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-28, REGISTRATION (COMM CHECK), OPERATION, TELEMATICS SYSTEM.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC B2A05 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**PERFORM THE SYSTEM OPERATION CHECK.** Perform [Speaker ON] in the system operation check mode. <Ref. to TEL(diag)-22, System Operation Check Mode.>	Does it sound?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **3**.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the speaker connector and tweeter connector. 3) Disconnect the DCM connector. 4) Measure the resistance between speaker connector and tweeter connector and DCM connector. ***Connector & terminal*** ***(i271) No. 2 — (D2) No. 2:*** ***(i271) No. 2 — (i158) No. 1:*** ***(i271) No. 10 — (D2) No. 1:*** ***(i271) No. 10 — (i158) No. 3:***	Is the resistance 1 Ω or less?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(i271) No. 2 — Chassis ground:*** ***(i271) No. 10 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***(i271) No. 2 (+) — Chassis ground (–):*** ***(i271) No. 10 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK SPEAKER.** Perform the inspection of speaker unit and tweeter unit. <Ref. to ET-32, Front Speaker.>	Are the speaker and tweeter OK?	Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.>	Replace the speaker and tweeter. <Ref. to ET-32, Front Speaker.>

Q: DTC B2A06 RIGHT SPEAKER/AUDIO CIRCUIT



DIAGNOSIS START CONDITION:
When ACC is ON.
DTC DETECTING CONDITION:
Speaker impedance is more than 10 kΩ for 100 mS. (Detached speaker connection, etc.)
TROUBLE SYMPTOM:
- Call function cannot be used.
- RED LED illuminates.

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Telematics <Ref. to WI(w/o HEV)-226, WIRING DIAGRAM, TELEMATICS SYSTEM.>
- Except for HEV model

- HEV model

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-28, REGISTRATION (COMM CHECK), OPERATION, TELEMATICS SYSTEM.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC B2A06 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

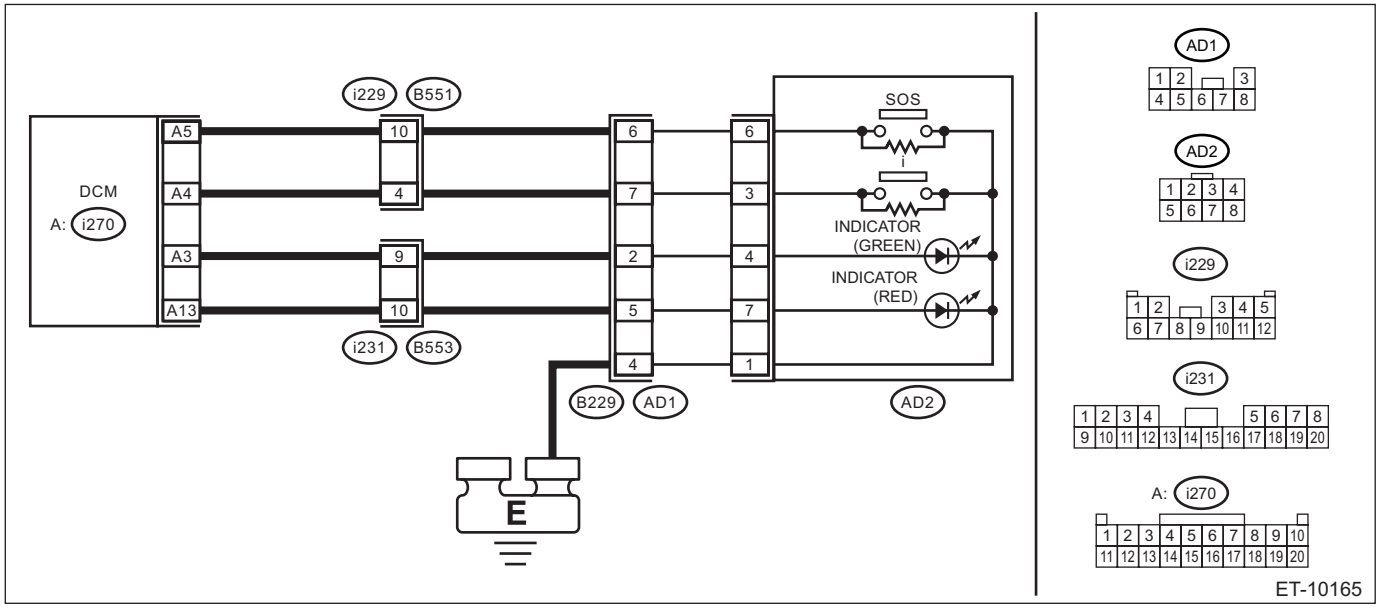
	Step	Check	Yes	No
2	**PERFORM THE SYSTEM OPERATION CHECK.** Perform [Speaker ON] in the system operation check mode. <Ref. to TEL(diag)-22, System Operation Check Mode.>	Does it sound?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **3**.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the speaker connector and tweeter connector. 3) Disconnect the DCM connector. 4) Measure the resistance between speaker connector and tweeter connector and DCM connector. ***Connector & terminal*** ***(i271) No. 4 — (D12) No. 2:*** ***(i271) No. 4 — (i159) No. 1:*** ***(i271) No. 12 — (D12) No. 1:*** ***(i271) No. 12 — (i159) No. 3:***	Is the resistance 1 Ω or less?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(i271) No. 4 — Chassis ground:*** ***(i271) No. 12 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***(i271) No. 4 (+) — Chassis ground (–):*** ***(i271) No. 12 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK SPEAKER.** Perform the inspection of speaker unit and tweeter unit. <Ref. to ET-32, Front Speaker.>	Are the speaker and tweeter OK?	Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.>	Replace the speaker and tweeter. <Ref. to ET-32, Front Speaker.>

R: DTC B2A07 BACKUP BATTERY CHARGE SYSTEM PERFORMANCE

DIAGNOSIS START CONDITION:
When ignition switch is ON.
DTC DETECTING CONDITION:
Backup battery is disconnected for at least 5 seconds when the ignition switch is turned ON. (Detached back-up battery connection, etc.)
TROUBLE SYMPTOM:
- ACN/SOS function cannot be used when the main battery is disconnected.
- RED LED illuminates.

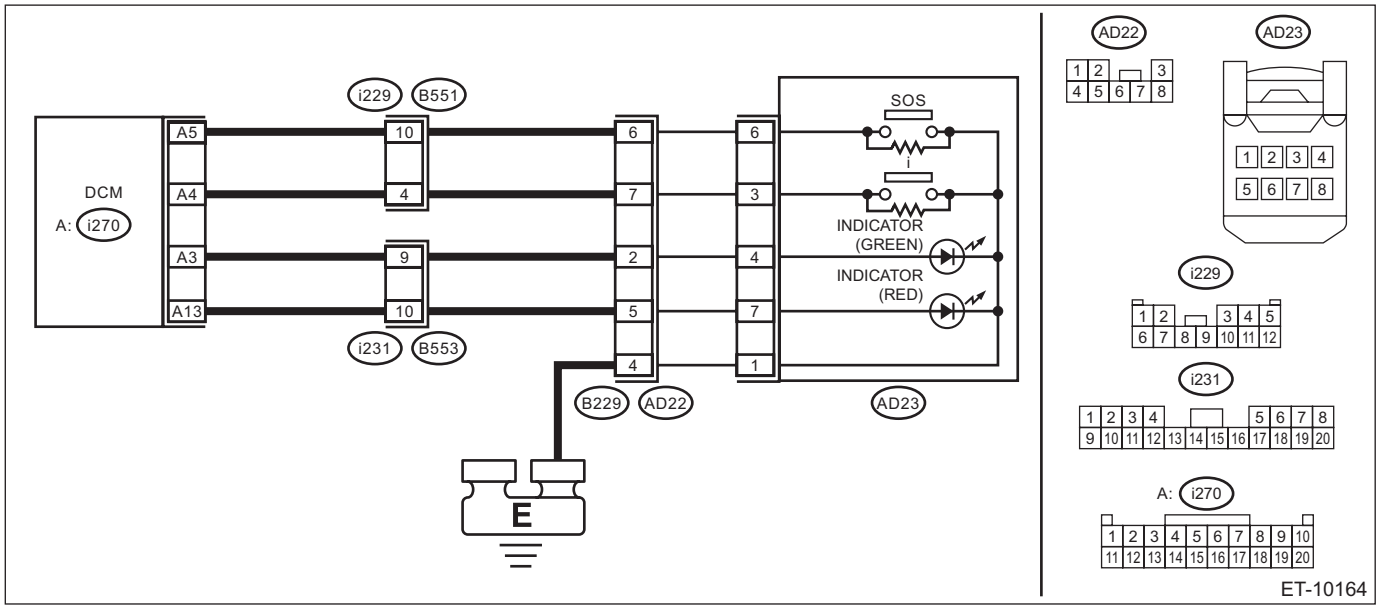
CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-28, REGISTRATION (COMM CHECK), OPERATION, TELEMATICS SYSTEM.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC B2A07 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK BACKUP BATTERY.** 1) Remove the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.> 2) Remove the backup battery cover. 3) Disconnect the backup battery connector. 4) Measure the backup battery voltage.	Is the voltage 2.0 V or more?	Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.>	Replace the backup battery. <Ref. to ET-45, DATA COMMUNICATION MODULE.>



S: DTC B2A08 SOS BUTTON CIRCUIT

DIAGNOSIS START CONDITION:
When ignition switch is ON.
DTC DETECTING CONDITION:
The following conditions occur for at least 50 ms.
- SOS button impedance is more than 10 kΩ.
- SOS button is stuck for at least 60 seconds.



TROUBLE SYMPTOM:
- SOS function cannot be used.
- RED LED illuminates.

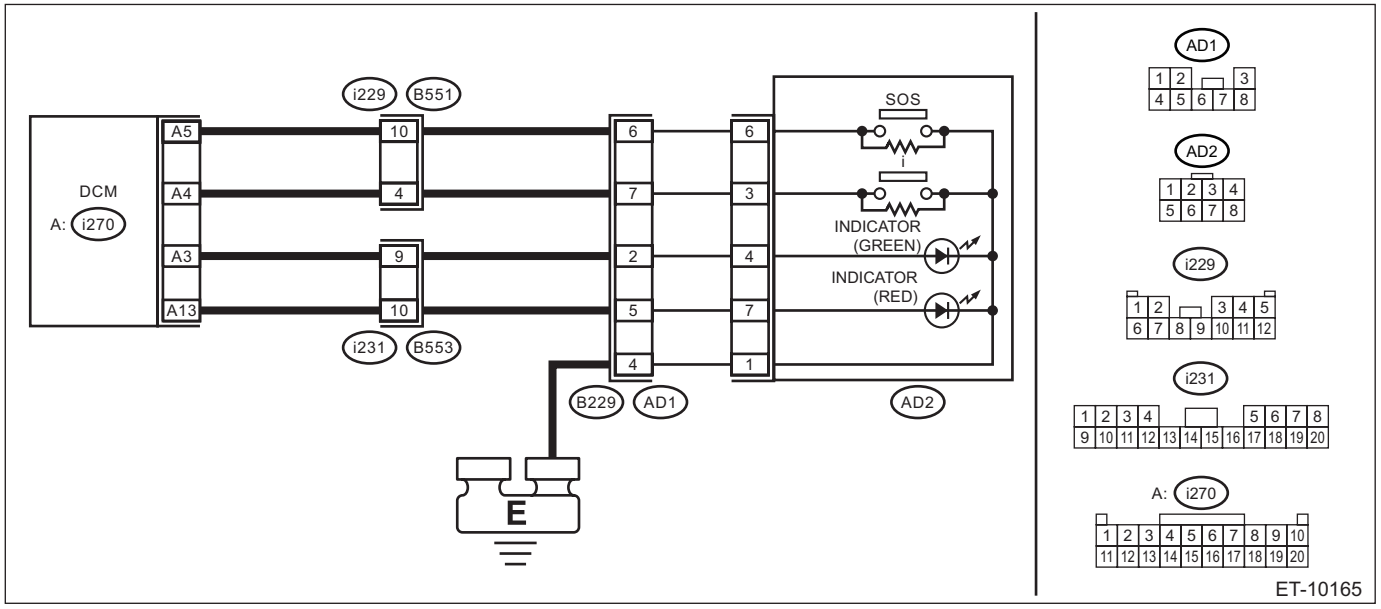
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Telematics <Ref. to WI(w/o HEV)-226, WIRING DIAGRAM, TELEMATICS SYSTEM.>
- Except for HEV model

- HEV model

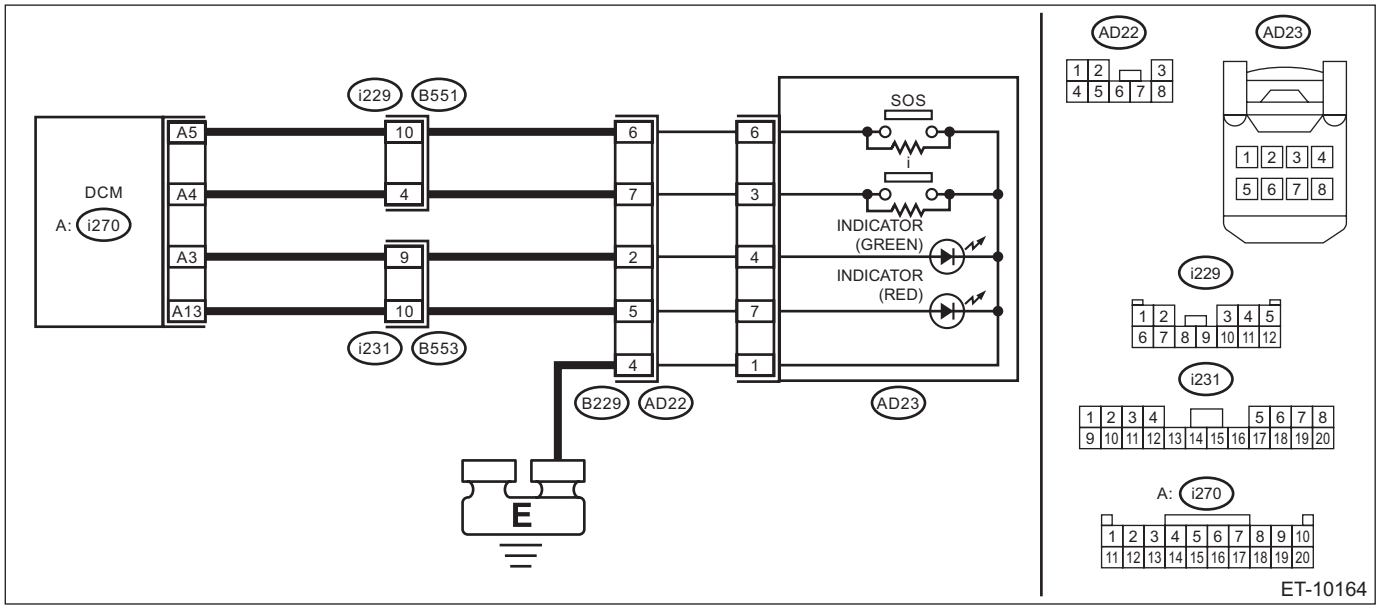
CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-28, REGISTRATION (COMM CHECK), OPERATION, TELEMATICS SYSTEM.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC B2A08 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the telematics button connector. 3) Disconnect the DCM connector. 4) Measure the resistance between telematics button connector and DCM connector. ***Connector & terminal*** ***Except for HEV model*** ***(i270) No. 5 — (AD2) No. 6:*** ***(AD2) No. 1 — Chassis ground:*** ***HEV model*** ***(i270) No. 5 — (AD23) No. 6:*** ***(AD23) No. 1 — Chassis ground:***	Is the resistance 1 Ω or less?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 5 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 5 (+) — Chassis ground (–):*** ***Except for HEV model*** ***(AD2) No. 1 (+) — Chassis ground (–):*** ***HEV model*** ***(AD23) No. 1 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK SOS BUTTON UNIT.** Measure the resistance of the SOS button unit. ***Connector & terminal*** ***Except for HEV model*** ***(AD2) No. 6 — (AD2) No. 1*** ***HEV model*** ***(AD23) No. 6 — (AD23) No. 1***	Is the resistance 1 Ω or less when SOS button is ON, and 1.6 (±5%) kΩ or more when SOS button is OFF?	Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.>	Replace the telematics button. <Ref. to ET-38, Switches and Harness.>



T: DTC B2A09 I-CALL BUTTON CIRCUIT

DIAGNOSIS START CONDITION:
When ignition switch is ON.
DTC DETECTING CONDITION:
The following conditions occur for at least 50 ms.
- i-button impedance is more than 10 kΩ.
- i-button is stuck for at least 60 seconds.



TROUBLE SYMPTOM:
- i-Call function cannot be used.
- RED LED illuminates.

WIRING DIAGRAM:

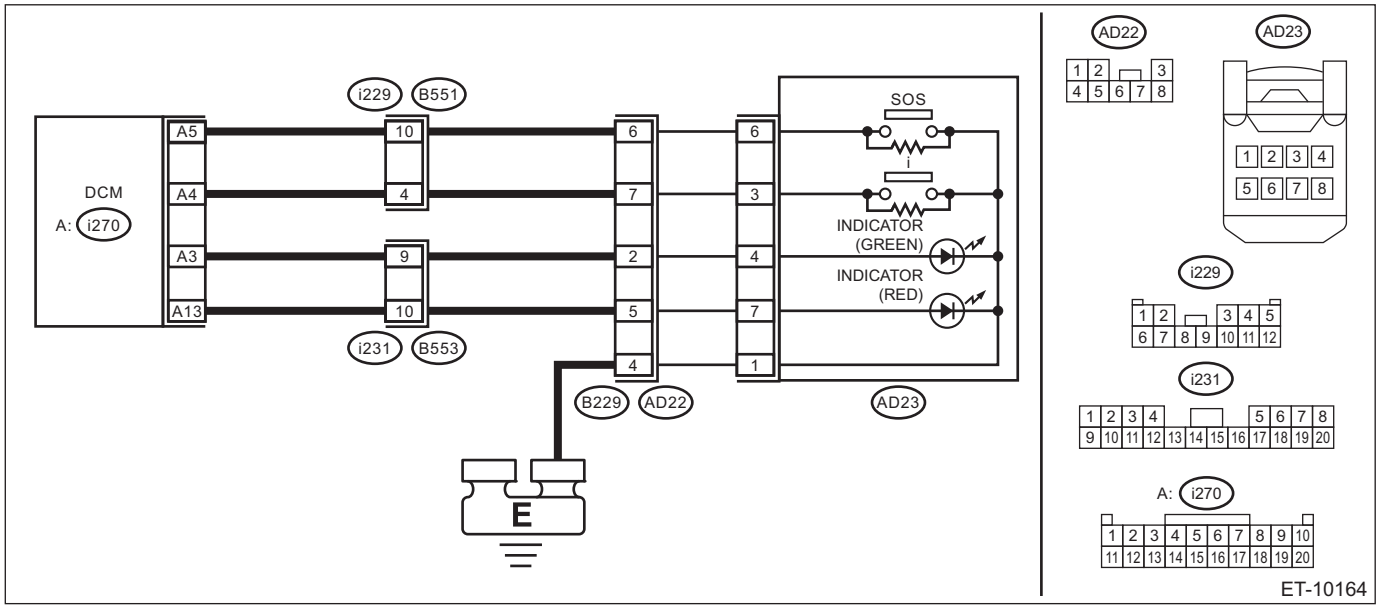
NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Telematics <Ref. to WI(w/o HEV)-226, WIRING DIAGRAM, TELEMATICS SYSTEM.>
- Except for HEV model

- HEV model

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-28, REGISTRATION (COMM CHECK), OPERATION, TELEMATICS SYSTEM.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC B2A09 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the telematics button connector. 3) Disconnect the DCM connector. 4) Measure the resistance between telematics button connector and DCM connector. ***Connector & terminal*** ***Except for HEV model*** ***(i270) No. 4 — (AD2) No. 3:*** ***(AD2) No. 1 — Chassis ground:*** ***HEV model*** ***(i270) No. 4 — (AD23) No. 3:*** ***(AD23) No. 1 — Chassis ground:***	Is the resistance 1 Ω or less?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***Except for HEV model*** ***(i270) No. 4 (+) — Chassis ground (–):*** ***(AD2) No. 1 (+) — Chassis ground (–):*** ***HEV model*** ***(i270) No. 4 (+) — Chassis ground (–):*** ***(AD23) No. 1 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK I-BUTTON.** Measure the resistance of the i-button unit. ***Connector & terminal*** ***Except for HEV model*** ***(AD2) No. 3 — (AD2) No. 1:*** ***HEV model*** ***(AD23) No. 3 — (AD23) No. 1:***	Is the resistance 1 Ω or less when i-button is ON, and 1.6 (±5%) kΩ or more when i-button is OFF?	Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.>	Replace the telematics button. <Ref. to ET-38, Switches and Harness.>

U: DTC B2A0A RED LED CIRCUIT



DIAGNOSIS START CONDITION:
When ACC is ON.
DTC DETECTING CONDITION:
The following conditions occur for at least 50 ms.
- Current in LED is less than 1 mA. (Improper LED connection, etc.)
- Current in LED is more than 200 mA. (Short-circuited LED, etc.)

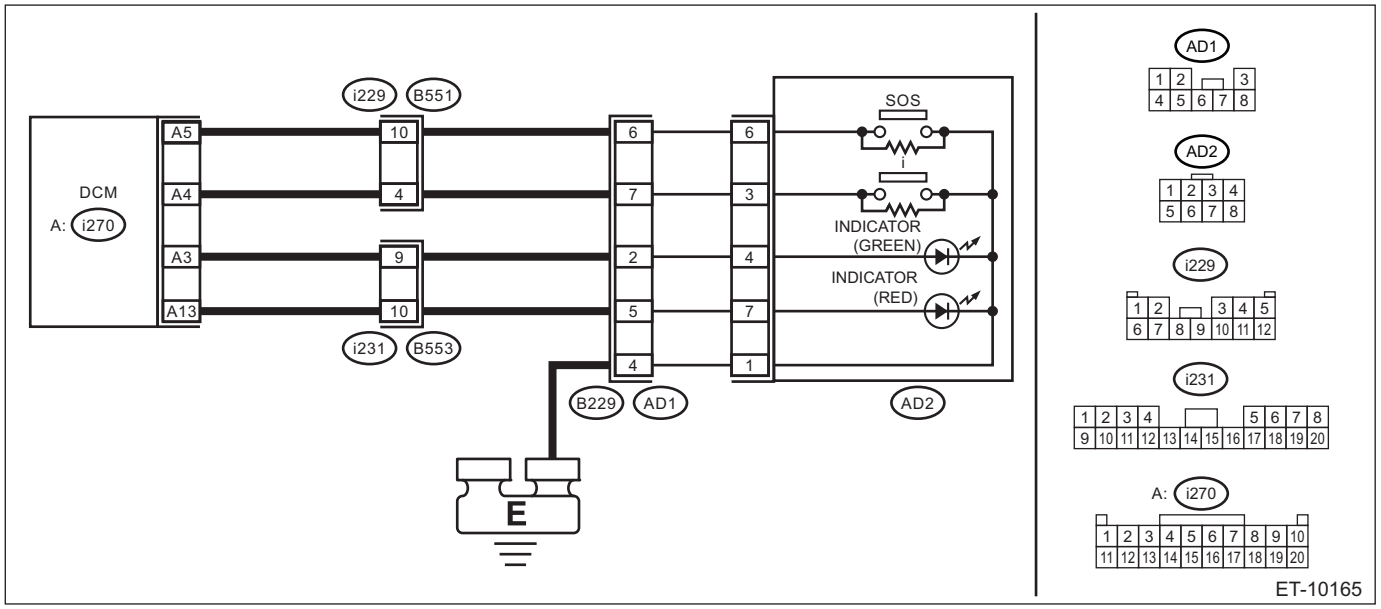
TROUBLE SYMPTOM:
LED does not illuminate.
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Telematics <Ref. to WI(w/o HEV)-226, WIRING DIAGRAM, TELEMATICS SYSTEM.>
- Except for HEV model

- HEV model

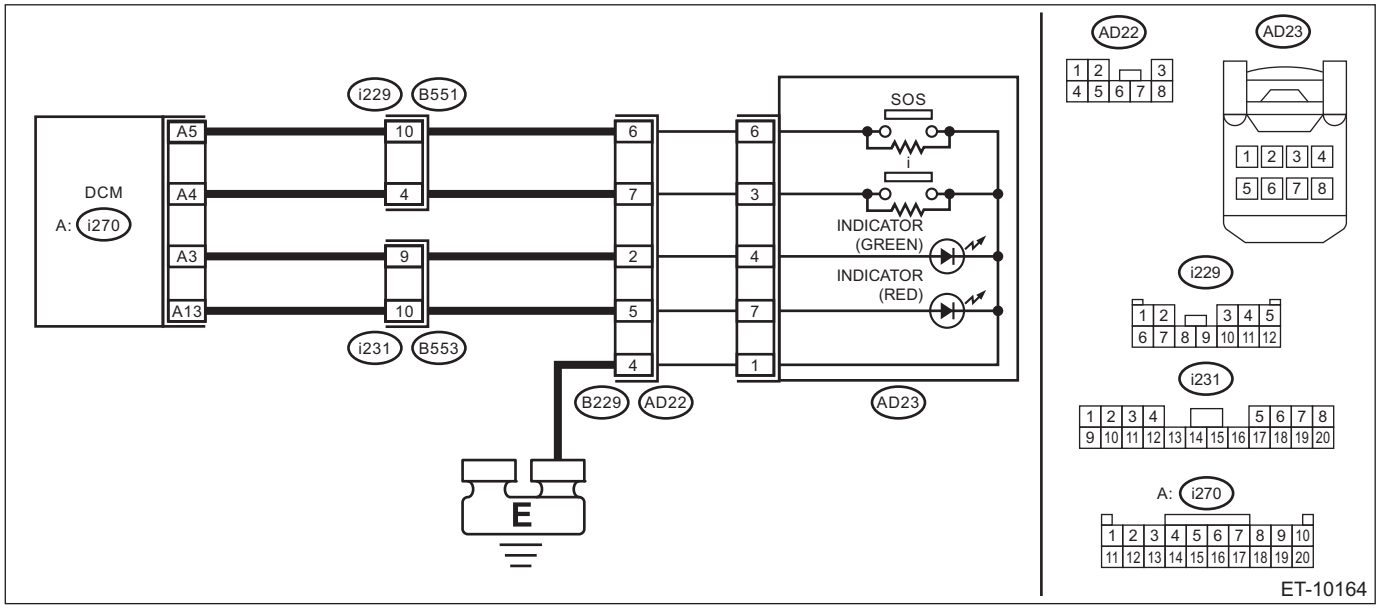
CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-28, REGISTRATION (COMM CHECK), OPERATION, TELEMATICS SYSTEM.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC B2A0A displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**PERFORM THE SYSTEM OPERATION CHECK.** Perform [RED LED Lighting] in the system operation check mode. <Ref. to TEL(diag)-22, System Operation Check Mode.>	Does the RED LED illuminate?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **3**.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the telematics button connector. 3) Disconnect the DCM connector. 4) Measure the resistance between telematics button connector and DCM connector. ***Connector & terminal*** ***Except for HEV model*** ***(i270) No. 13 — (AD2) No. 7:*** ***(AD2) No. 1 — Chassis ground:*** ***HEV model*** ***(i270) No. 13 — (AD23) No. 7:*** ***(AD23) No. 1 — Chassis ground:***	Is the resistance 1 Ω or less?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 13 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.



Step		Check	Yes	No
5	**CHECK CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***Except for HEV model*** ***(i270) No. 13 (+) — Chassis ground (–):*** ***(AD2) No. 1 (+) — Chassis ground (–):*** ***HEV model*** ***(i270) No. 13 (+) — Chassis ground (–):*** ***(AD23) No. 1 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK TELEMATICS BUTTON (LED) UNIT.** Measure the resistance of the telematics button (LED) unit. ***Connector & terminal*** ***Except for HEV model*** ***(AD2) No. 7 — (AD2) No. 1:*** ***HEV model*** ***(AD23) No. 7 — (AD23) No. 1:***	Is there continuity?	Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.>	Replace the telematics button. <Ref. to ET-38, Switches and Harness.>

V: DTC B2A0B GREEN LED CIRCUIT



DIAGNOSIS START CONDITION:
When ACC is ON.
DTC DETECTING CONDITION:
The following conditions occur for at least 50 ms.
- Current in LED is less than 1 mA. (Improper LED connection, etc.)
- Current in LED is more than 200 mA. (Short-circuited LED, etc.)

TROUBLE SYMPTOM:
RED LED illuminates.
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Telematics <Ref. to WI(w/o HEV)-226, WIRING DIAGRAM, TELEMATICS SYSTEM.>
- Except for HEV model

- HEV model

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-28, REGISTRATION (COMM CHECK), OPERATION, TELEMATICS SYSTEM.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC B2A0B displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**PERFORM THE SYSTEM OPERATION CHECK.** Perform [GREEN LED Lighting] in the system operation check mode. <Ref. to TEL(diag)-22, System Operation Check Mode.>	Does the GREEN LED illuminate?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **3**.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the telematics button connector. 3) Disconnect the DCM connector. 4) Measure the resistance between telematics button connector and DCM connector. ***Connector & terminal*** ***Except for HEV model*** ***(i270) No. 3 — (AD2) No. 4:*** ***(AD2) No. 1 — Chassis ground:*** ***HEV model*** ***(i270) No. 3 — (AD23) No. 4:*** ***(AD23) No. 1 — Chassis ground:***	Is the resistance 1 Ω or less?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 3 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.

	Step	Check	Yes	No
5	**CHECK CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***Except for HEV model*** ***(i270) No. 3 (+) — Chassis ground (–):*** ***(AD2) No. 1 (+) — Chassis ground (–):*** ***HEV model*** ***(i270) No. 3 (+) — Chassis ground (–):*** ***(AD23) No. 1 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK TELEMATICS BUTTON (LED) UNIT.** Measure the resistance of the telematics button (LED) unit. ***Connector & terminal*** ***Except for HEV model*** ***(AD2) No. 4 — (AD2) No. 1:*** ***HEV model*** ***(AD23) No. 4 — (AD23) No. 1:***	Is there continuity?	Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.>	Replace the telematics button. <Ref. to ET-38, Switches and Harness.>

W: DTC B2A0C DCM INTERNAL FAULT

DIAGNOSIS START CONDITION:
When ignition switch is ON.
DTC DETECTING CONDITION:
- Main microcomputer and communication circuit IC cannot communicate. (Defective IPC)
- SIM (communication chip) cannot be read. (Defective SIM)

TROUBLE SYMPTOM:
- Telematics function cannot be used.
- RED LED illuminates.

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-28, REGISTRATION (COMM CHECK), OPERATION, TELEMATICS SYSTEM.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC B2A0C displayed? (Current malfunction)	Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

X: DTC B2A0D AIRBAG SIGNAL

DIAGNOSIS START CONDITION:
When ignition switch is ON.
DTC DETECTING CONDITION:
Either the regular signal or collision signal cannot be detected from the airbag CM for at least 2 seconds.
TROUBLE SYMPTOM:
- ACN function does not operate.
- RED LED illuminates.

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Telematics <Ref. to WI(w/o HEV)-226, WIRING DIAGRAM, TELEMATICS SYSTEM.>

CAUTION:
• CommCheck is required after replacing the DCM. <Ref. to ET-28, REGISTRATION (COMM CHECK), OPERATION, TELEMATICS SYSTEM.>
• Before performing diagnosis, refer to “CAUTION” in “General Description” in AIRBAG SYSTEM. <Ref. to AB-11, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC B2A0D displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK DTC.** Read DTC of the airbag. <Ref. to AB(diag)-27, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed? (Current malfunction)	Perform the diagnosis according to DTC.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. NOTE: For HEV model, disconnect the negative terminal from 12 volt auxiliary battery, and disconnect the ground terminal from 12V engine restart battery sensor for 12 volt engine restart battery. <Ref. to NT-6, BATTERY, NOTE, Note.> 2) Disconnect the airbag CM connector. 3) Disconnect the DCM connector. 4) Measure the resistance between airbag CM connector and DCM connector. **CAUTION:** **To measure the voltage and resistance of airbag system component, be sure to use the specified test harness. <Ref. to AB(diag)-4, General Description.>** ***Connector & terminal*** ***(i270) No. 18 — (AB6) No. 24:***	Is the resistance 1 Ω or less?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 18 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 18 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.>	Repair or replace the short circuit of the harness.

Y: DTC B2A0E MUTE LINE CIRCUIT

DIAGNOSIS START CONDITION:
When ignition switch is ON.
DTC DETECTING CONDITION:
The following conditions occur continuously after the ignition switch is turned to ON when DCM does not mute the audio or navigation system.
- Current in the mute line is less than 1 mA. (Improper line connection, etc.)
- Current is more than 50 mA for at least 50 ms. (Short-circuited line, etc.)

TROUBLE SYMPTOM:
- The mute function of audio or navigation system does not operate.
- RED LED illuminates.

WIRING DIAGRAM:
Telematics <Ref. to WI(w/o HEV)-226, WIRING DIAGRAM, TELEMATICS SYSTEM.>

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-28, REGISTRATION (COMM CHECK), OPERATION, TELEMATICS SYSTEM.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC B2A0E displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the audio or navigation connector. 3) Disconnect the DCM connector. 4) Measure the resistance between audio or navigation connector and DCM connector. ***Connector & terminal*** ***(i270) No. 19 — (i272) No. 8:***	Is the resistance 1 Ω or less?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 19 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 19 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.>	Repair or replace the short circuit of the harness.

Z: DTC B2A0F BACKUP BATTERY DEGRADATION

DIAGNOSIS START CONDITION:
When ignition switch is ON.
DTC DETECTING CONDITION:
- Backup battery voltage of charger is low.
- Charging attempt of 2 V or more fails after the backup battery has been charged for 1 hour continuously.
- Full charging is not achieved after the backup battery is charged for 7 hours in total (not continuously).

TROUBLE SYMPTOM:
RED LED illuminates.

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-28, REGISTRATION (COMM CHECK), OPERATION, TELEMATICS SYSTEM.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC B2A0F displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK THE BACKUP BATTERY.** Check the backup battery unit. <Ref. to ET-45, DATA COMMUNICATION MODULE.>	Is the backup battery OK?	Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.>	Replace the backup battery. <Ref. to ET-45, DATA COMMUNICATION MODULE.>

AA:DTC B2A10 BATTERY VOLTAGE HIGH

DIAGNOSIS START CONDITION:
When ignition switch is ON.
DTC DETECTING CONDITION:
DCM battery power supply input of 16 V or more continues for 5 seconds.
TROUBLE SYMPTOM:
RED LED illuminates.

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-28, REGISTRATION (COMM CHECK), OPERATION, TELEMATICS SYSTEM.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC B2A10 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK CURRENT DATA.** Check «Battery Voltage» in «Data monitor». <Ref. to TEL(diag)-13, Read Current Data.>	Is «Battery Voltage» OK?	Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.>	Go to step **3**.
3	**CHECK BATTERY.** Check the battery unit. <Ref. to SC(H4DO(w/o HEV))-53, INSPECTION, Battery.> <Ref. to SC(H4DO(HEV))-2, SPECIFICATION, General Description.>	Is the battery OK?	Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.>	Replace the battery. <Ref. to SC(H4DO(w/o HEV))-52, Battery.> <Ref. to SC(H4DO(HEV))-2, General Description.>

13.Diagnostics with Phenomenon

A: LIST

No.	Symptoms	Reference
1	The system does not notify the Telematics Service Provider Center automatically after collision.	<Ref. to TEL(diag)-58, THE SYSTEM DOES NOT NOTIFY THE TELEMATICS SERVICE PROVIDER CENTER AUTOMATICALLY AFTER COLLISION, INSPECTION, Diagnostics with Phenomenon.>
2	The system does not notify the center even if the SOS button is pressed.	<Ref. to TEL(diag)-60, THE SYSTEM DOES NOT NOTIFY THE CENTER EVEN IF THE SOS BUTTON IS PRESSED, INSPECTION, Diagnostics with Phenomenon.>
3	The system places an SOS call unintentionally during driving.	<Ref. to TEL(diag)-61, THE SYSTEM PLACES AN SOS CALL UNINTENTIONALLY DURING DRIVING, INSPECTION, Diagnostics with Phenomenon.>
4	The system places an I-CALL unintentionally during driving.	<Ref. to TEL(diag)-61, THE SYSTEM PLACES AN I-CALL UNINTENTIONALLY DURING DRIVING, INSPECTION, Diagnostics with Phenomenon.>
5	The system does not notify the center even if the i-button is pressed upon vehicle malfunction.	<Ref. to TEL(diag)-61, THE SYSTEM DOES NOT NOTIFY THE CENTER EVEN IF THE I-BUTTON IS PRESSED UPON VEHICLE MALFUNCTION, INSPECTION, Diagnostics with Phenomenon.>
6	Remote Vehicle Locator cannot locate the vehicle.	<Ref. to TEL(diag)-63, REMOTE VEHICLE LOCATOR CANNOT LOCATE THE VEHICLE, INSPECTION, Diagnostics with Phenomenon.>
7	Remote Vehicle Locator indicates an incorrect location and therefore the vehicle cannot be located.	<Ref. to TEL(diag)-64, REMOTE VEHICLE LOCATOR INDICATES AN INCORRECT LOCATION FOR THE VEHICLE, INSPECTION, Diagnostics with Phenomenon.>
8	Remote Door Lock does not lock the doors of the vehicle.	<Ref. to TEL(diag)-64, REMOTE DOOR LOCK DOES NOT LOCK THE DOORS OF THE VEHICLE, INSPECTION, Diagnostics with Phenomenon.>
9	The doors lock unintentionally.	<Ref. to TEL(diag)-66, THE DOORS LOCK UNINTENTIONALLY, INSPECTION, Diagnostics with Phenomenon.>
10	The doors unlock unintentionally.	<Ref. to TEL(diag)-66, THE DOORS UNLOCK UNINTENTIONALLY, INSPECTION, Diagnostics with Phenomenon.>
11	Remote Horn & HAZARD Lights do not operate upon request.	<Ref. to TEL(diag)-67, REMOTE HORN & HAZARD LIGHTS DO NOT OPERATE UPON REQUEST, INSPECTION, Diagnostics with Phenomenon.>
12	When the Vehicle Security Alarm is activated, notification is not sent.	<Ref. to TEL(diag)-69, WHEN THE VEHICLE SECURITY ALARM IS ACTIVATED, NOTIFICATION IS NOT SENT, INSPECTION, Diagnostics with Phenomenon.>
13	When a Malfunction indicator light/warning light is lit, notification is not sent.	<Ref. to TEL(diag)-70, WHEN A MALFUNCTION INDICATOR LIGHT/WARNING LIGHT IS LIT, NOTIFICATION IS NOT SENT, INSPECTION, Diagnostics with Phenomenon.>
14	Maintenance Notifications are not sent.	<Ref. to TEL(diag)-71, MAINTENANCE NOTIFICATIONS ARE NOT SENT, INSPECTION, Diagnostics with Phenomenon.>
15	The LED does not display the status. (LED malfunction)	<Ref. to TEL(diag)-72, THE LED DOES NOT DISPLAY THE STATUS. (LED MALFUNCTION), INSPECTION, Diagnostics with Phenomenon.>
16	Phone conversation is not possible. (The microphone does not respond to a voice. No sound is heard from the speaker.)	<Ref. to TEL(diag)-74, PHONE CONVERSATION IS NOT POSSIBLE. (THE MICROPHONE DOES NOT RESPOND TO A VOICE. NO SOUND IS HEARD FROM THE SPEAKER.), INSPECTION, Diagnostics with Phenomenon.>

B: INSPECTION

1. THE SYSTEM DOES NOT NOTIFY THE TELEMATICS SERVICE PROVIDER CENTER AUTOMATICALLY AFTER COLLISION

NOTE:
Perform the diagnostics for "Phone conversation is not possible. (The microphone does not respond to a voice. No sound is heard from the speaker.)". <Ref. to TEL(diag)-74, PHONE CONVERSATION IS NOT POSSIBLE. (THE MICROPHONE DOES NOT RESPOND TO A VOICE. NO SOUND IS HEARD FROM THE SPEAKER.), INSPECTION, Diagnostics with Phenomenon.>

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-28, REGISTRATION (COMM CHECK), OPERATION, TELEMATICS SYSTEM.>

	Step	Check	Yes	No
1	**CHECK COLLISION TYPE.** Check the collision type of the vehicle.	Is it any of a head-on collision, rear-end collision, or rollover?	Go to step **2**.	If it is a rear-end collision, Go to step **4**.
2	**CHECK AIRBAG WARNING LIGHT.** Check the airbag warning light.	Does the airbag warning light always illuminate?	Go to step **3**.	The airbag system is normal. If it is a minor collision, the airbag CM does not transmit a collision detection signal. Therefore, it is normal that the automatic notification function does not operate.
3	**CHECK DTCS.** Read DTC of the airbag. <Ref. to AB(diag)-27, Read Diagnostic Trouble Code (DTC).>	Is DTC any of «Front Impact Deployment»«Side Impact Deployment»«Rollover Deployment History»?	The airbag system is normal. Go to step **7**.	Perform the diagnosis of the airbag system. <Ref. to AB(diag)-2, Basic Diagnostic Procedure.>
4	**CHECK RECEPTION STATUS OF COLLISION DETECTION SIGNAL.** Display the current data «TimeStamp at ACN Event» of the Telematics. <Ref. to TEL(diag)-13, Read Current Data.>	Are the time stamps recorded?	Go to step **7**. (A rear-end collision was detected.)	Go to step **5**.
5	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to TEL(diag)-17, LIST, Diagnostic Code(s) Display.>	Go to step **6**.
6	**CHECK AIRBAG WARNING LIGHT.** Check the airbag warning light.	Does the airbag warning light always illuminate?	Perform the diagnosis of the airbag system. <Ref. to AB(diag)-2, Basic Diagnostic Procedure.>	The airbag system is normal. If it is a minor collision, the airbag CM does not transmit a collision detection signal. Therefore, it is normal that the automatic notification function does not operate.

	Step	Check	Yes	No
7	**CHECK SUBSCRIPTION STATUS.** Display the current data «ACN Active» of the Telematics. <Ref. to TEL(diag)-13, Read Current Data.>	Is the data «TRUE»?	Go to step **8**.	The user does not have a service subscription; therefore, it is not a failure.
8	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to TEL(diag)-17, LIST, Diagnostic Code(s) Display.>	Go to step **9**.
9	**CHECK RECEIVED SIGNAL STRENGTH AT TIME OF ACCIDENT (CHECK CURRENT DATA).** Display the current data «RSSI at ACN Event» of the Telematics. <Ref. to TEL(diag)-13, Read Current Data.>	Is the data 26% or more?	Go to step **11**.	Go to step **10**.
10	**CHECK AT&T CELLULAR COVERAGE AREA.** 1) Check whether the collision occurred within the cellular coverage area. 2) Display the current data «GPS Data at ACN Event» of the Telematics. <Ref. to TEL(diag)-13, Read Current Data.>	Is the displayed location data indicated within the AT&T cellular coverage area? (For the AT&T cellular coverage area, refer to the AT&T website. The system operates only on 3G and 4G technology.)	Go to step **11**.	The collision occurred outside the cellular coverage area.
11	**CHECK COMMUNICATION STATUS AT TIME OF ACCIDENT (CHECK CURRENT DATA).** Display the current data «Call Status at ACN Event» of the Telematics. <Ref. to TEL(diag)-13, Read Current Data.>	If the data shows «Call Started» or «Call Connected»; Go to A. If the data shows «Call Not Started»; Go to B. If the data shows «No Network Service»; Go to C. If the data shows «Call Ended by SXM»; Go to D.	A: Go to step **12**. B: Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.> C: Replace the antenna. <Ref. to ET-35, Antenna.> D: The connection ended due to a server-side reason; therefore, there is no failure on the vehicle.	—
12	**CHECK TIME OF ACCIDENT (CHECK CURRENT DATA).** Display the current data «TimeStamp at ACN Event» of the Telematics. <Ref. to TEL(diag)-13, Read Current Data.> NOTE: The time stamp is displayed in the Coordinated Universal Time (UTC), which is different from actual time at each location. Therefore, time difference needs to be corrected for use. Example: [12/22 01:30 in UTC time] is corrected as [12/21 20:30 in New York time].	Does the time of the accident match with the data?	Replace the antenna. <Ref. to ET-35, Antenna.>	Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.>

2. THE SYSTEM DOES NOT NOTIFY THE CENTER EVEN IF THE SOS BUTTON IS PRESSED

NOTE:
Perform the diagnostics for "Phone conversation is not possible. (The microphone does not respond to a voice. No sound is heard from the speaker.)". <Ref. to TEL(diag)-74, PHONE CONVERSATION IS NOT POSSIBLE. (THE MICROPHONE DOES NOT RESPOND TO A VOICE. NO SOUND IS HEARD FROM THE SPEAKER.), INSPECTION, Diagnostics with Phenomenon.>

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-28, REGISTRATION (COMM CHECK), OPERATION, TELEMATICS SYSTEM.>

	Step	Check	Yes	No
1	**CHECK SUBSCRIPTION STATUS.** Display the current data «SOS Active» of the Telematics. <Ref. to TEL(diag)-13, Read Current Data.>	Is the data «TRUE»?	Go to step **2**.	The user does not have a service subscription; therefore, it is not a failure.
2	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK RECEIVED SIGNAL STRENGTH WHEN SOS BUTTON WAS PRESSED (CHECK CURRENT DATA).** Display the current data «RSSI at SOS/ICALL(1)» of the Telematics. <Ref. to TEL(diag)-13, Read Current Data.>	Is the data 26% or more?	Go to step **5**.	Go to step **4**.
4	**CHECK AT&T CELLULAR COVERAGE AREA.** 1) Check whether the SOS button was pressed within the cellular coverage area. 2) Display the current data «GPS Data at Time of Button Push(1)» of the Telematics. <Ref. to TEL(diag)-13, Read Current Data.>	Is the displayed location data indicated within the AT&T cellular coverage area? (For the AT&T cellular coverage area, refer to the AT&T website. The system operates only on 3G and 4G technology.)	Go to step **5**.	The SOS button was pressed outside the cellular coverage area.
5	**CHECK COMMUNICATION STATUS OF WHEN SOS BUTTON WAS PRESSED (CHECK CURRENT DATA).** Display the current data «Call status at SOS/ICALL Event(1)» of the Telematics. <Ref. to TEL(diag)-13, Read Current Data.>	If the data shows «Call Started» or «Call Connected»; Go to A. If the data shows «Call Not Started»; Go to B. If the data shows «No Network Service»; Go to C. If the data shows «Call Ended by SXM»; Go to D.	A: Go to step **6**. B: Go to step **7**. C: Replace the antenna. <Ref. to ET-35, Antenna.> D: The connection ended due to a server-side reason; therefore, there is no failure on the vehicle.	—
6	**CHECK TIME OF WHEN SOS BUTTON WAS PRESSED (CHECK CURRENT DATA).** Display the current data «Timestamp at Time of Button Push(1)» of the Telematics. <Ref. to TEL(diag)-13, Read Current Data.> NOTE: The time stamp is displayed in the Coordinated Universal Time (UTC), which is different from actual time at each location. Therefore, time difference needs to be corrected for use. Example: [12/22 01:30 in UTC time] is corrected as [12/21 20:30 in New York time].	Does the time of the SOS button operation match with the data?	Go to step **7**.	Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.>

	Step	Check	Yes	No
7	**CHECK SOS BUTTON.** Check the SOS button. <Ref. to TEL(diag)-40, DTC B2A08 SOS BUTTON CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Is there any fault?	Replace the SOS button. <Ref. to ET-38, Switches and Harness.>	Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.>

3. THE SYSTEM PLACES AN SOS CALL UNINTENTIONALLY DURING DRIVING

	Step	Check	Yes	No
1	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC displayed?	Perform the diagnosis according to DTC.	Check the SOS button. <Ref. to ET-38, Switches and Harness.>

4. THE SYSTEM PLACES AN I-CALL UNINTENTIONALLY DURING DRIVING

	Step	Check	Yes	No
1	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC displayed?	Perform the diagnosis according to DTC.	Check the i-button. <Ref. to ET-38, Switches and Harness.>

5. THE SYSTEM DOES NOT NOTIFY THE CENTER EVEN IF THE I-BUTTON IS PRESSED UPON VEHICLE MALFUNCTION

NOTE:
Perform the diagnostics for "Phone conversation is not possible. (The microphone does not respond to a voice. No sound is heard from the speaker.)".

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-28, REGISTRATION (COMM CHECK), OPERATION, TELEMATICS SYSTEM.>

	Step	Check	Yes	No
1	**CHECK SUBSCRIPTION STATUS.** Display the current data «ICALL Active» of the Telematics. <Ref. to TEL(diag)-13, Read Current Data.>	Is the data «TRUE»?	Go to step **2**.	The user does not have a service subscription; therefore, it is not a failure.
2	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK RECEIVED SIGNAL STRENGTH WHEN I-BUTTON WAS PRESSED (CHECK CURRENT DATA).** Display the current data «RSSI at SOS/ICALL(1)» of the Telematics. <Ref. to TEL(diag)-13, Read Current Data.>	Is the data 26% or more?	Go to step **5**.	Go to step **4**.
4	**CHECK AT&T CELLULAR COVERAGE AREA.** 1) Check whether the i-button was pressed within the cellular coverage area. 2) Display the current data «GPS Data at Time of Button Push(1)» of the Telematics. <Ref. to TEL(diag)-13, Read Current Data.>	Is the displayed location data indicated within the AT&T cellular coverage area? (For the AT&T cellular coverage area, refer to the AT&T website. The system operates only on 3G and 4G technology.)	Go to step **5**.	The i-button was pressed outside the cellular coverage area.

	Step	Check	Yes	No
5	**CHECK COMMUNICATION STATUS OF WHEN I-BUTTON WAS PRESSED (CHECK CURRENT DATA).** Display the current data «Call status at SOS/ICALL Event(1)» of the Telematics. <Ref. to TEL(diag)-13, Read Current Data.>	If the data shows «Call Started» or «Call Connected»; Go to A. If the data shows «Call Not Started»; Go to B. If the data shows «No Network Service»; Go to C. If the data shows «Call Ended by SXM»; Go to D.	A: Go to step **6**. B: Go to step **7**. C: Replace the antenna. <Ref. to ET-35, Antenna.> D: The connection ended due to a server-side reason; therefore, there is no failure on the vehicle.	—
6	**CHECK COMMUNICATION STATUS OF WHEN I-BUTTON WAS PRESSED (CHECK CURRENT DATA).** Display the current data «Timestamp at Time of Button Push(1)» of the Telematics. <Ref. to TEL(diag)-13, Read Current Data.> NOTE: The time stamp is displayed in the Coordinated Universal Time (UTC), which is different from actual time at each location. Therefore, time difference needs to be corrected for use. Example: [12/22 01:30 in UTC time] is corrected as [12/21 20:30 in New York time].	Does the time of the i-button operation match with the data?	Go to step **7**.	Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.>
7	**CHECK I-BUTTON.** Check the i-button. <Ref. to TEL(diag)-42, DTC B2A09 I-CALL BUTTON CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Is there any fault?	Replace the i-button. <Ref. to ET-38, Switches and Harness.>	Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.>

6. REMOTE VEHICLE LOCATOR CANNOT LOCATE THE VEHICLE

	Step	Check	Yes	No
1	**CHECK SUBSCRIPTION STATUS.** Display the current data «Account Status» of the Telematics. <Ref. to TEL(diag)-13, Read Current Data.>	Is the data «TRUE»?	Go to step **2**.	The user does not have a service subscription; therefore, it is not a failure.
2	**CHECK CURRENT COMMUNICATION ENVIRONMENT OF USER'S SMARTPHONE.** Check that the user's smartphone can be connected to the Internet.	Can it be connected to the Internet?	Go to step **3**.	The user's smartphone or the Internet environment has a problem.
3	**CHECK CURRENT COMMUNICATION ENVIRONMENT OF USER'S SMARTPHONE.** Check that the user's smartphone can display the current location.	Is the current location displayed?	Currently no failure is found. If the current location is not displayed, the user's Internet environment (radio waves, etc.) possibly had a problem.	Go to step **4**.
4	**CHECK CURRENT RECEIVED SIGNAL STRENGTH (CHECK CURRENT DATA).** Display the current data «Signal Strength» of the Telematics. <Ref. to TEL(diag)-13, Read Current Data.>	Is the data 26% or more?	Go to step **6**.	Go to step **5**.
5	**CHECK AT&T CELLULAR COVERAGE AREA.** Ask the user where he/she operated the remote control.	Is the location of the remote control operation within the AT&T cellular coverage area? (For the AT&T cellular coverage area, refer to the AT&T website. The system operates only on 3G and 4G technology.)	Go to step **6**.	The location of the remote control operation was outside the cellular coverage area.
6	**CHECK DTCS.** Check DTCs in the following systems; • Body control <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).> • Telematics <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to BC(diag)-25, LIST, List of Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-17, LIST, Diagnostic Code(s) Display.>	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.

7. REMOTE VEHICLE LOCATOR INDICATES AN INCORRECT LOCATION FOR THE VEHICLE

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-28, REGISTRATION (COMM CHECK), OPERATION, TELEMATICS SYSTEM.>

	Step	Check	Yes	No
1	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK CURRENT COMMUNICATION ENVIRONMENT OF USER'S SMARTPHONE.** Check that the user's smartphone can display the current location.	Is it displayed correctly? (Is there a deviation of 100 m (328 ft) or more?)	Currently no failure is found. When the user had a problem, there was a failure with the GPS antenna reception environment, etc.	Go to step **3**.
3	**CHECK CURRENT COMMUNICATION ENVIRONMENT OF USER'S SMARTPHONE.** Check again that the user's smartphone can display the current location in a place where the sky is open.	Is it displayed correctly? (Is there a deviation of 100 m (328 ft) or more?)	Currently no failure is found. When the user had a problem, there was a failure with the GPS antenna reception environment, etc.	Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.>

8. REMOTE DOOR LOCK DOES NOT LOCK THE DOORS OF THE VEHICLE

	Step	Check	Yes	No
1	**CHECK SUBSCRIPTION STATUS.** Display the current data «Account Status» of the Telematics. <Ref. to TEL(diag)-13, Read Current Data.>	Is the data «TRUE»?	Go to step **2**.	The user does not have a service subscription; therefore, it is not a failure.
2	**CHECK CURRENT COMMUNICATION ENVIRONMENT OF USER'S SMARTPHONE.** Check that the user's smartphone can be connected to the Internet.	Can it be connected to the Internet?	Go to step **3**.	The user's smartphone or the Internet environment has a problem.
3	**CHECK DOOR LOCK FUNCTION.** Check that the user' smartphone can lock the doors in the current situation.	Are the doors locked?	Currently no failure is found. When the user had a problem, there was a failure with the Internet connection environment, etc.	Go to step **4**.
4	**CHECK CURRENT RECEIVED SIGNAL STRENGTH (CHECK CURRENT DATA).** Display the current data «Signal Strength» of the Telematics. <Ref. to TEL(diag)-13, Read Current Data.>	Is the data 26% or more?	Go to step **6**.	Go to step **5**.
5	**CHECK AT&T CELLULAR COVERAGE AREA.** Ask the user where he/she operated the remote control.	Is the location of the remote control operation within the AT&T cellular coverage area? (For the AT&T cellular coverage area, refer to the AT&T website. The system operates only on 3G and 4G technology.)	Go to step **6**.	The location of the remote control operation was outside the cellular coverage area.

	Step	Check	Yes	No
6	**CHECK DOOR LOCK FUNCTION.** Check that the keyless transmitter can lock the doors of the vehicle.	Are the doors locked?	Go to step **7**.	Perform the diagnosis according to the inspection for the door lock control system. <Ref. to SL-12, INSPECTION, Door Lock Control System.>
7	**CHECK DTCS.** Check DTCs in the following systems; • Body control <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).> • Telematics <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to BC(diag)-25, LIST, List of Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-17, LIST, Diagnostic Code(s) Display.>	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.

9. THE DOORS LOCK UNINTENTIONALLY

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check the door lock switch. <Ref. to SL-12, INSPECTION, Door Lock Control System.>	Is the door lock switch OK?	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.	Perform the diagnosis according to the inspection for the door lock switch. <Ref. to SL-12, INSPECTION, Door Lock Control System.>

10.THE DOORS UNLOCK UNINTENTIONALLY

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check the door unlock switch. <Ref. to SL-12, INSPECTION, Door Lock Control System.>	Is the door lock switch OK?	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.	Perform the diagnosis according to the inspection for the door lock switch. <Ref. to SL-12, INSPECTION, Door Lock Control System.>

11.REMOTE HORN & HAZARD LIGHTS DO NOT OPERATE UPON REQUEST

	Step	Check	Yes	No
1	**CHECK SUBSCRIPTION STATUS.** Display the current data «Account Status» of the Telematics. <Ref. to TEL(diag)-13, Read Current Data.>	Does the data display «TRUE»?	Go to step **2**.	The user does not have a service subscription; therefore, it is not a failure.
2	**CHECK CURRENT COMMUNICATION ENVIRONMENT OF USER'S SMARTPHONE.** Check that the user's smartphone can be connected to the Internet.	Can it be connected to the Internet?	Go to step **3**.	The user's smartphone or the Internet environment has a problem.
3	**CHECK HORN AND HAZARD LIGHT FUNCTIONS.** Check that the horn and hazard light currently operate by the user's smartphone.	Do the horn and hazard light operate?	Currently no failure is found. When the user had a problem, there was a failure with the Internet connection environment, etc.	Go to step **4**.
4	**CHECK CURRENT RECEIVED SIGNAL STRENGTH (CHECK CURRENT DATA).** Display the current data «Signal Strength» of the Telematics. <Ref. to TEL(diag)-13, Read Current Data.>	Does the data indicate 26% or more?	Go to step **6**.	Go to step **5**.
5	**CHECK AT&T CELLULAR COVERAGE AREA.** Ask the user where he/she operated the remote control.	Is the location of the remote control operation within the AT&T cellular coverage area? (For the AT&T cellular coverage area, refer to the AT&T website. The system operates only on 3G and 4G technology.)	Go to step **6**.	The location of the remote control operation was outside the cellular coverage area.
6	**CHECK HORN AND HAZARD LIGHT FUNCTIONS.** Check that the horn and hazard light operate by the keyless transmitter. (Press the lock button three times.)	Do the horn and hazard light operate?	Go to step **8**.	Go to step **7**.
7	**CHECK HORN OPERATION.** Activate the function check «Horn Output» of the body integrated unit. <Ref. to BC(diag)-24, Function Check.>	Does the horn sound?	Check the keyless transmitter. <Ref. to SL-83, Keyless Transmitter.><Ref. to SL-85, Access Key.>	Check the horn circuit. <Ref. to WI(w/o HEV)-146, Horn System.>

Step		Check	Yes	No
8	**CHECK DTCS.** Check DTCs in the following systems; • Body control <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).> • Telematics <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to BC(diag)-25, LIST, List of Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-17, LIST, Diagnostic Code(s) Display.>	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.

12.WHEN THE VEHICLE SECURITY ALARM IS ACTIVATED, NOTIFICATION IS NOT SENT

	Step	Check	Yes	No
1	**CHECK SUBSCRIPTION STATUS.** Display the current data «Account Status» of the Telematics. <Ref. to TEL(diag)-13, Read Current Data.>	Does the data display «TRUE»?	Go to step **2**.	The user does not have a service subscription; therefore, it is not a failure.
2	**CHECK CURRENT COMMUNICATION ENVIRONMENT OF USER'S SMARTPHONE.** Check that the user's smartphone can be connected to the Internet.	Can it be connected to the Internet?	Go to step **3**.	The user's smartphone or the Internet environment has a problem.
3	**CHECK SECURITY ALERT SYSTEM.** Operate the security alert system.	Does it operate?	Go to step **4**.	Check the security alert system. <Ref. to SL-30, INSPECTION, Security System.>
4	**CHECK CURRENT COMMUNICATION ENVIRONMENT OF USER'S SMARTPHONE.** Check that a notification is sent to the user's smartphone after the security alert is activated.	Does the smartphone receive a notification?	Currently no failure is found.	Go to step **5**.
5	**CHECK CURRENT RECEIVED SIGNAL STRENGTH (CHECK CURRENT DATA).** Display the current data «Signal Strength» of the Telematics. <Ref. to TEL(diag)-13, Read Current Data.>	Does the data indicate 26% or more?	Go to step **7**.	Go to step **6**.
6	**CHECK AT&T CELLULAR COVERAGE AREA.** Ask the user where he/she operated the remote control.	Is the location of the remote control operation within the AT&T cellular coverage area? (For the AT&T cellular coverage area, refer to the AT&T website. The system operates only on 3G and 4G technology.)	Go to step **7**.	The location of the remote control operation was outside the cellular coverage area.
7	**CHECK DTCS.** Check DTCs in the following systems; • Body control <Ref. to BC(diag)-10, Read Diagnostic Trouble Code (DTC).> • Telematics <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to BC(diag)-25, LIST, List of Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-17, LIST, Diagnostic Code(s) Display.>	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.

13.WHEN A MALFUNCTION INDICATOR LIGHT/WARNING LIGHT IS LIT, NOTIFICATION IS NOT SENT

	Step	Check	Yes	No
1	**CHECK SUBSCRIPTION STATUS.** Display the current data «Diagnostic Alert Active» of the Telematics. <Ref. to TEL(diag)-13, Read Current Data.>	Does the data display «TRUE»?	Go to step **2**.	The user does not have a service subscription; therefore, it is not a failure.
2	**CHECK WARNING LIGHT.** Check if the warning light illuminates.	Does it Illuminate?	Go to step **3**.	Currently no failure is found. Since the warning light is not lit, notification is not sent.
3	**CHECK DTCS.** Check the DTC of telematics. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK AT&T CELLULAR COVERAGE AREA.** Ask the user where he/she turned the ignition switch to OFF after the warning light was lit.	Is the location, where the ignition switch was turned to OFF after the warning light was lit, within the AT&T cellular coverage area? (For the AT&T cellular coverage area, refer to the AT&T website. The system operates only on 3G and 4G technology.)	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.	The location where the ignition switch was turned to OFF (where warning light illumination information was sent) was outside the cellular coverage area.

14.MAINTENANCE NOTIFICATIONS ARE NOT SENT

	Step	Check	Yes	No
1	**CHECK SUBSCRIPTION STATUS.** Display the current data «Maintenance Alert Active» of the Telematics. <Ref. to TEL(diag)-13, Read Current Data.>	Does the data display «TRUE»?	Go to step **2**.	The user does not have a service subscription; therefore, it is not a failure.
2	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to TEL(diag)-17, LIST, Diagnostic Code(s) Display.>	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.

15.THE LED DOES NOT DISPLAY THE STATUS. (LED MALFUNCTION)

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ET-28, REGISTRATION (COMM CHECK), OPERATION, TELEMATICS SYSTEM.>

	Step	Check	Yes	No
1	**CHECK SUBSCRIPTION STATUS.** Display the current data «Account Status» of the Telematics. <Ref. to TEL(diag)-13, Read Current Data.>	Is the data «TRUE»?	Go to step **2**.	The user does not have a service subscription; therefore, it is not a failure. (Both LEDs are turned off.)
2	**CHECK LED.** 1) Turn the ignition switch to ON. 2) Check the LED condition.	Does the RED LED go off and the GREEN LED illuminate?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **3**.
3	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC B2A0A or B2A0B displayed?	Perform the diagnosis according to DTC. <Ref. to TEL(diag)-44, DTC B2A0A RED LED CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-47, DTC B2A0B GREEN LED CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK LED ILLUMINATION CONDITION.** Perform the telematics system operation check. <Ref. to TEL(diag)-22, System Operation Check Mode.>	Is the LED turned on or off?	Go to step **5**.	Go to step **6**.

	Step	Check	Yes	No
5	**CHECK LED.** 1) Turn the ignition switch to ON. 2) Check the LED condition.	Does the RED LED go off and the GREEN LED illuminate?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.>
6	**CHECK LED.** Measure the continuity of the telematics button (LED) unit. ***Connector & terminal*** ***(AD1) No. 7 — (AD1) No. 1:*** ***(AD1) No. 4 — (AD1) No. 1:***	Is there continuity?	Replace the DCM. <Ref. to ET-45, DATA COMMUNICATION MODULE.>	Replace the telematics button. <Ref. to ET-38, Switches and Harness.>

16.PHONE CONVERSATION IS NOT POSSIBLE. (THE MICROPHONE DOES NOT RESPOND TO A VOICE. NO SOUND IS HEARD FROM THE SPEAKER.)

Step		Check	Yes	No
1	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-17, Diagnostic Code(s) Display.>	Is DTC B2A04, B2A05 or B2A06 displayed?	Perform the diagnosis according to DTC. <Ref. to TEL(diag)-30, DTC B2A04 MIC CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-33, DTC B2A05 LEFT SPEAKER/AUDIO CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-36, DTC B2A06 RIGHT SPEAKER/AUDIO CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK SPEAKER OPERATION.** Perform [Speaker ON] in the telematics system operation check. <Ref. to TEL(diag)-22, System Operation Check Mode.>	Does it sound?	Go to step **3**.	Go to step **4**.
3	**CHECK MICROPHONE.** Perform the microphone voice input.	Is the voice recognized?	Go to step **4**.	Replace the microphone.
4	**CHECK SPEAKER.** Check the speaker.	Is there any fault?	Replace the speaker.	Go to step **5**.
5	**CHECK TELEPHONE CALL.** 1) Place the mobile phone in the vehicle. 2) Establish a Bluetooth connection between the mobile phone in the vehicle and the vehicle unit. 3) Make a call from outside to the mobile phone in the vehicle. 4) Check that a telephone call is available through the in-vehicle microphone with the hands-free function.	Is a telephone call successful?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Perform the diagnosis according to inspection for DTC B2A04 MIC CIRCUIT. <Ref. to TEL(diag)-30, DTC B2A04 MIC CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

WIRING SYSTEM SECTION

WIRING SYSTEM	WI(w/o HEV)
WIRING SYSTEM	WI(HEV)

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

1. Basic Diagnostic Procedure

A: BASIC PROCEDURES

1. GENERAL DESCRIPTION

The most important purpose of diagnostics is to quickly determine which part is malfunctioning, to save time and labor.

2. IDENTIFICATION OF TROUBLE SYMPTOM

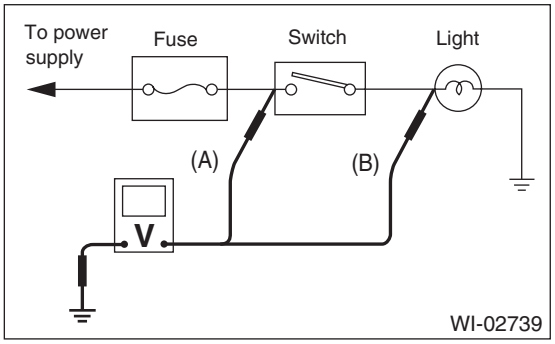
Determine what the problem is based on the symptom.

3. PROBABLE CAUSE OF TROUBLE

Look at the wiring diagram and check the system's circuit. Then check the switch, relay, fuse, ground, etc.

4. LOCATION AND REPAIR OF TROUBLE

1) Using the diagnostics, narrow down the causes.
2) If necessary, use a voltmeter, ohmmeter, etc.
3) Before replacing certain component parts (switch, relay, etc.), check the power supply, ground, for open wiring harness, poor connectors, etc. If no problem is encountered, check the component parts.

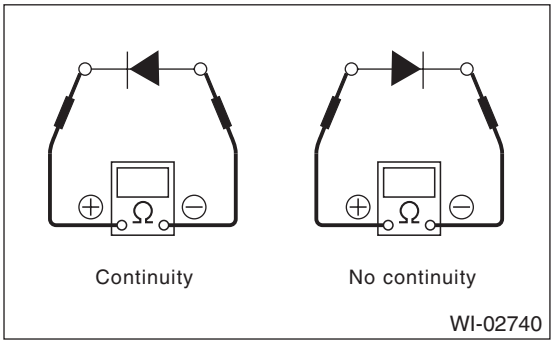


5. SYSTEM OPERATION CHECK

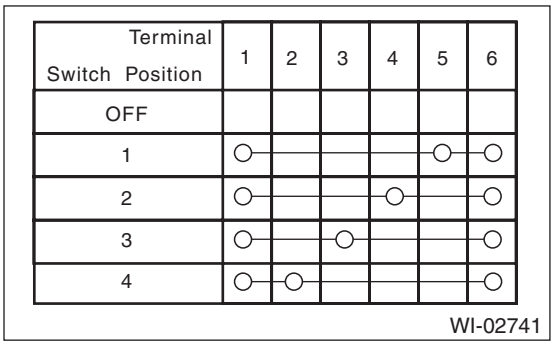
After repairing, ensure that the system operates properly.

B: BASIC INSPECTION

1. VOLTAGE MEASUREMENT



1) Using a voltmeter, connect the negative lead to a good ground point or negative battery terminal and the positive lead to the connector or component terminal.
2) Contact the positive lead of the voltmeter on connector (A). The voltmeter will indicate a voltage.
3) Touch connector (B) with the positive probe. The voltmeter will indicate no voltage.

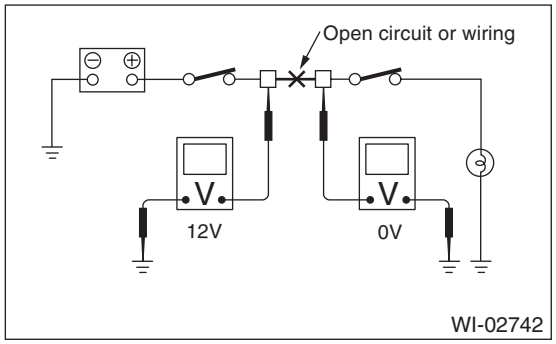


4) With the test set-up held as it is, turn the switch to ON. The voltmeter will indicate a voltage and, at the same time, the light will illuminate.
5) The circuit is in good order. If a problem such as a light failing to illuminate occurs, use the procedures outlined above to track down the malfunction.

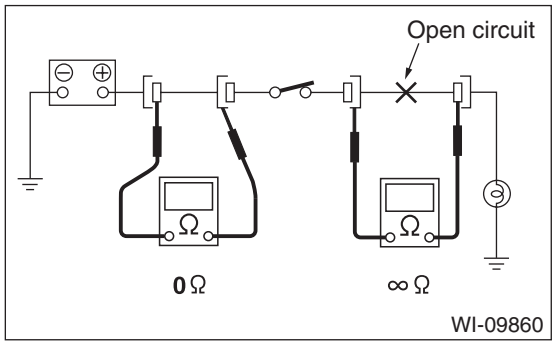
2. CIRCUIT CONTINUITY CHECKS

1) Disconnect the battery terminal or connector so there is no voltage between the check points.
Contact the two leads of an ohmmeter to each of the check points.
If the circuit has diodes, reverse the two leads and check again.
2) Use an ohmmeter to check for diode continuity.
When contacting the negative lead to the diode positive side and the positive lead to the negative side, there should be continuity.
When contacting the two leads in reverse, there should be no continuity.

3) The symbol "❍ — ❍" indicates that continuity exists between two points or terminals. For example, when a switch position is at "3", continuity exists among terminals 1, 3 and 6, as shown in the table below.



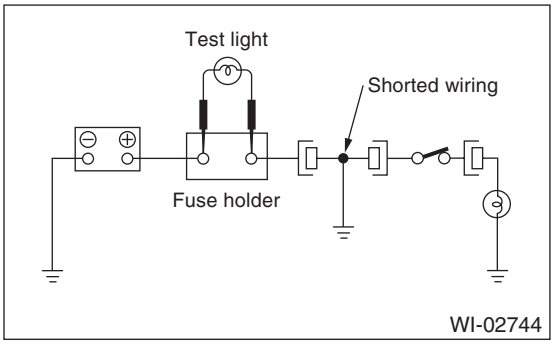
Terminal / Switch Position	1	2	3	4	5	6
OFF						
1	○				○	○
2	○			○		○
3	○		○			○
4	○	○				○



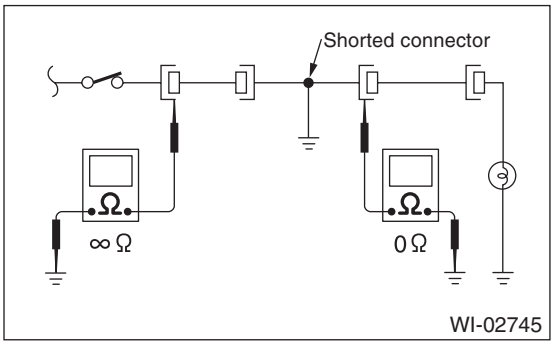
WI-02741

3. HOW TO DETERMINE AN OPEN CIRCUIT

1) WITH VOLTMETER:
An open circuit is determined by measuring the voltage between respective connectors and ground using a voltmeter, starting with the connector closest to the power supply. The power supply must be turned ON so that current flows in the circuit. If voltage is not present between a particular connector and ground, the circuit between that connector and the previous connector is open.



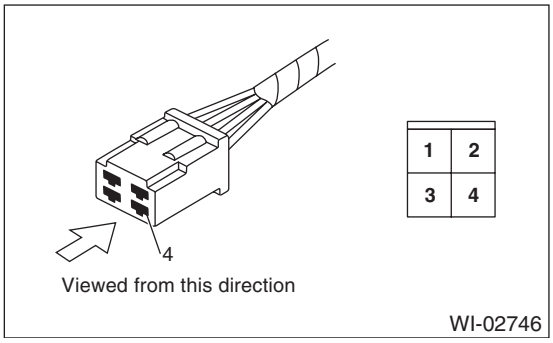
2) WITH OHMMETER:
Disconnect all connectors affected, and check continuity in the wiring between adjacent connectors. When the ohmmeter indicates “infinite”, the wiring is open.



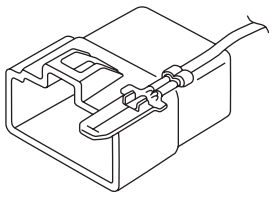
4. HOW TO DETERMINE A SHORT CIRCUIT

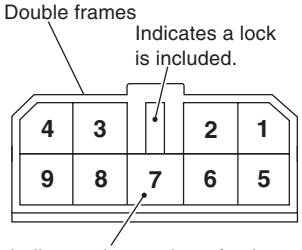
1) WITH TEST LIGHT:
Connect a test light (rated at approx. 3 watts) in place of the blown fuse and allow current to flow through the circuit. Disconnect one connector at a time from the circuit. Starting with the one located farthest from the power supply. If the test light goes out when a connector is disconnected, the wiring between that connector and the next connector (farther from the power supply) is shorted.

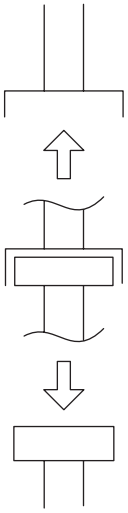
2) WITH OHMMETER:
Disconnect all affected connectors, and check continuity between each connector and ground. When the ohmmeter indicates continuity between a particular connector and a ground, that connector is shorted.

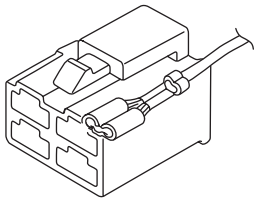


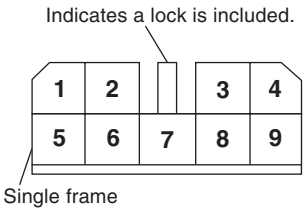
C: HOW TO READ WIRING DIAGRAMS







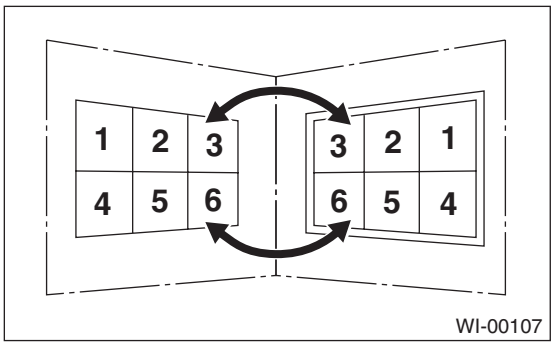




1. WIRING DIAGRAM

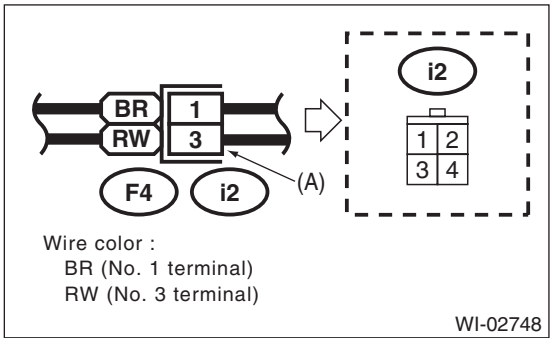
The wiring diagram of each system is illustrated so that you can understand the path through which the electric current flows from the battery.
Sketches and codes are used in the diagrams. They should read as follows:

- Each connector and its terminal position are indicated by a sketch of the connector in a disconnected state which is viewed from the front.



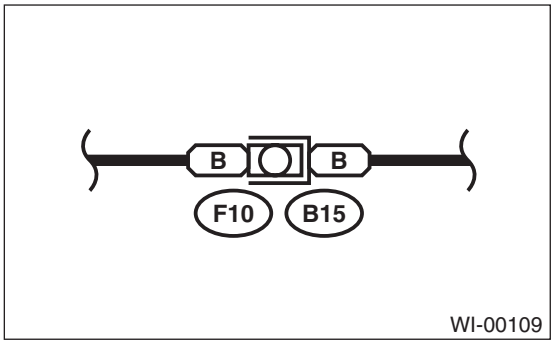
- The number of poles or pins, presence of a lock are indicated in the sketch of each connector. In the sketch, the highest pole number refers to the number of poles which the connector has. For example, the sketch of the connector shown in figure indicates the connector has 9 poles.

Connector used in vehicle	Connector shown in wiring diagram		
	Sketch	Symbol	Number of poles
			Numbered in order from upper right to lower left.
			Numbered in order from upper left to lower right.



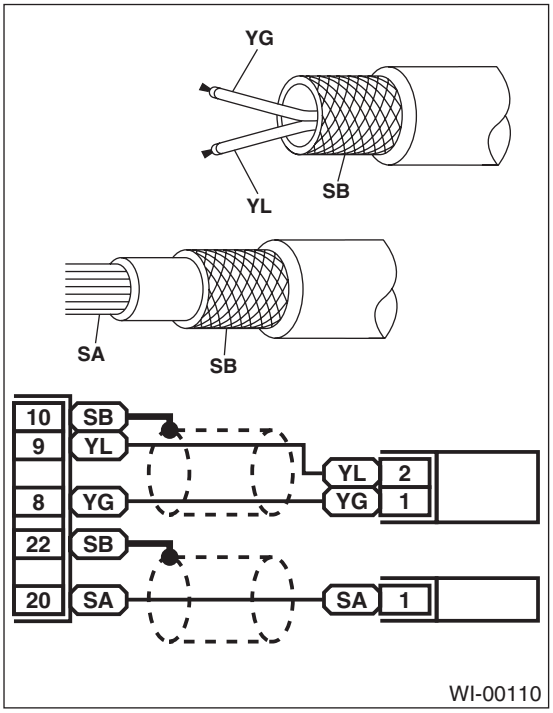
WI-02747

• When one set of connectors is viewed from the front side, the pole numbers of one connector are symmetrical to those of the other. When these two connectors are connected as a unit, the poles which have the same number are joined.

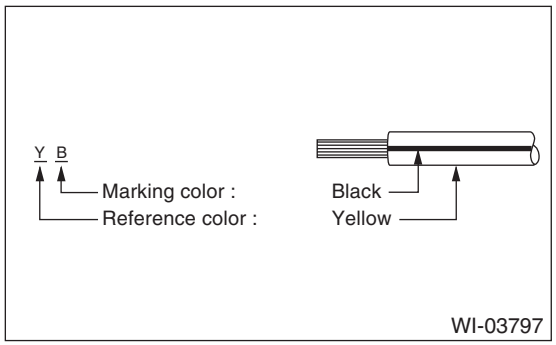


• WIRING DIAGRAM:
The connectors are numbered along with the number of poles, external colors, and mating connections in the accompanying list.
• The sketch of each connector in the wiring diagram usually shows the (A) side of the connector. The relationship between the wire color, terminal number and connector is described in the figure.

NOTE:
A wire which runs in one direction from a connector terminal sometimes may have a different color from that which runs in the other direction from that terminal.



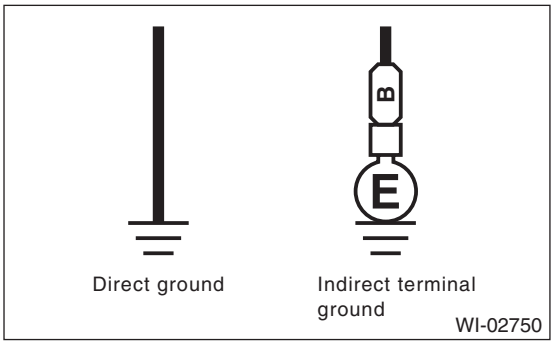
• In the wiring diagram, connectors which have no terminal number refer to one-pole types. Sketches of these connectors are omitted intentionally.



• The following color codes are used to indicate the colors of the wires.

Color code	Color
L	Blue
B	Black
Y	Yellow
G	Green
R	Red
W	White
Br	Brown
Lg	Light green
Gr	Gray
P	Pink
Or	Orange
Sb	Light blue
V	Violet
SA	Sealed (inner)
SB	Sealed (outer)

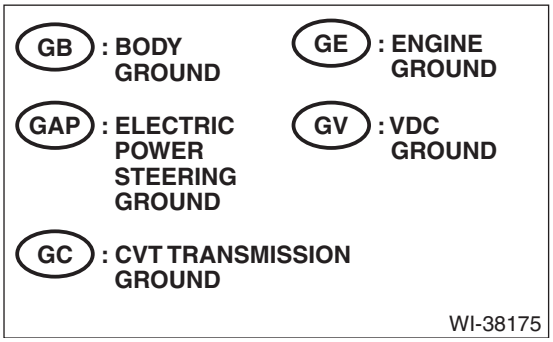
• The wire color code, which consists of two letters (or three letters including Br or Lg), indicates the standard color (base color of the wire covering) by its first letter and the stripe marking by its second letter.



• The table lists the nominal sectional areas and allowable currents of the wires.

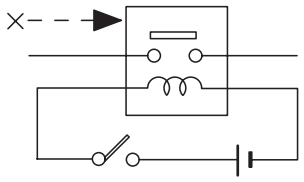
CAUTION:
When replacing or repairing a wire, be sure to use the same size and type of the wire which was originally used.

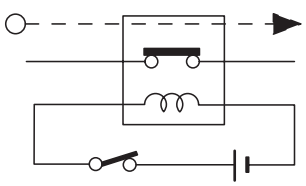
NOTE:
• The allowable current in the table indicates the tolerable amperage of each wire at an ambient temperature of 40°C (104°F).
• The allowable current changes with ambient temperature. Also, it changes if a bundle of more than two wires is used.

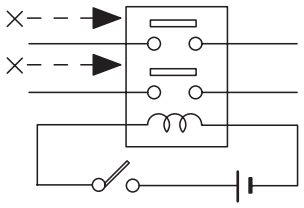


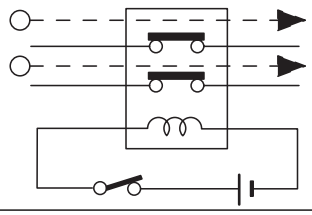
Nominal sectional area mm^2	No. of strands/ strand diameter	Outside diameter of wiring mm	Allowable current Amps/ 40°C (104°F)
0.3	7/0.26	1.8	7
0.5	7/0.32	2.2 (or 2.0)	12
0.75	30/0.18	2.6 (or 2.4)	16
0.85	11/0.32	2.4 (or 2.2)	16
1.25	16/0.32	2.7 (or 2.5)	21
2	26/0.32	3.1 (or 2.9)	28
3	41/0.32	3.8 (or 3.6)	38
5	65/0.32	4.6 (or 4.4)	51
8	50/0.45	5.5	67

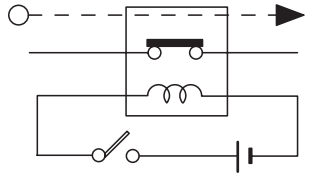
• Each unit is either directly grounded to the body or indirectly grounds through a harness ground terminal. Different symbols are used in the wiring diagram to identify the two grounding systems.

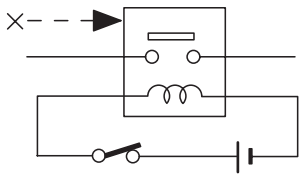


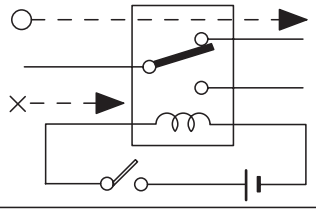


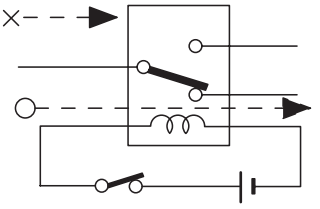












• The ground points shown in the wiring diagram refer to the following:

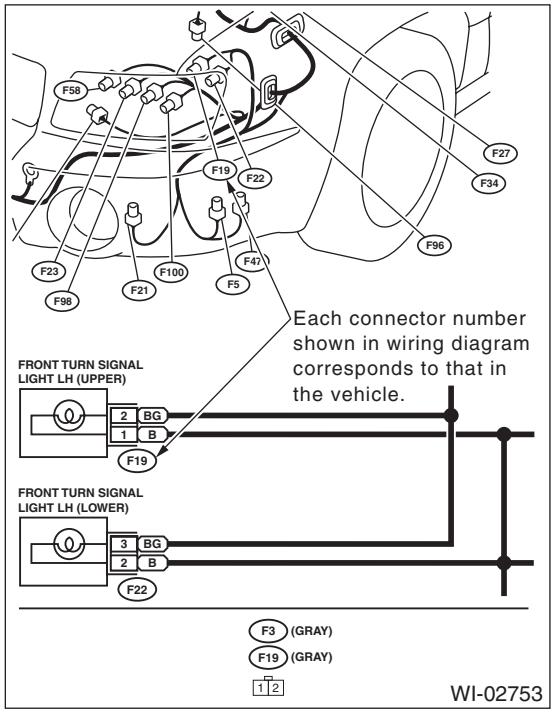
NOTE:
All wiring harnesses are provided with a ground point which must be securely connected.

- Relays are classified as normally-open or normally-closed.

The normally-closed relay has one or more contacts. The wiring diagram shows the relay mode when the energizing circuit is OFF.

Relay type		Energizing circuit OFF	Energizing circuit ON
Normally-open type	4-pole		
	6-pole		
Normally-closed type	4-pole		
Mixed type	6-pole		

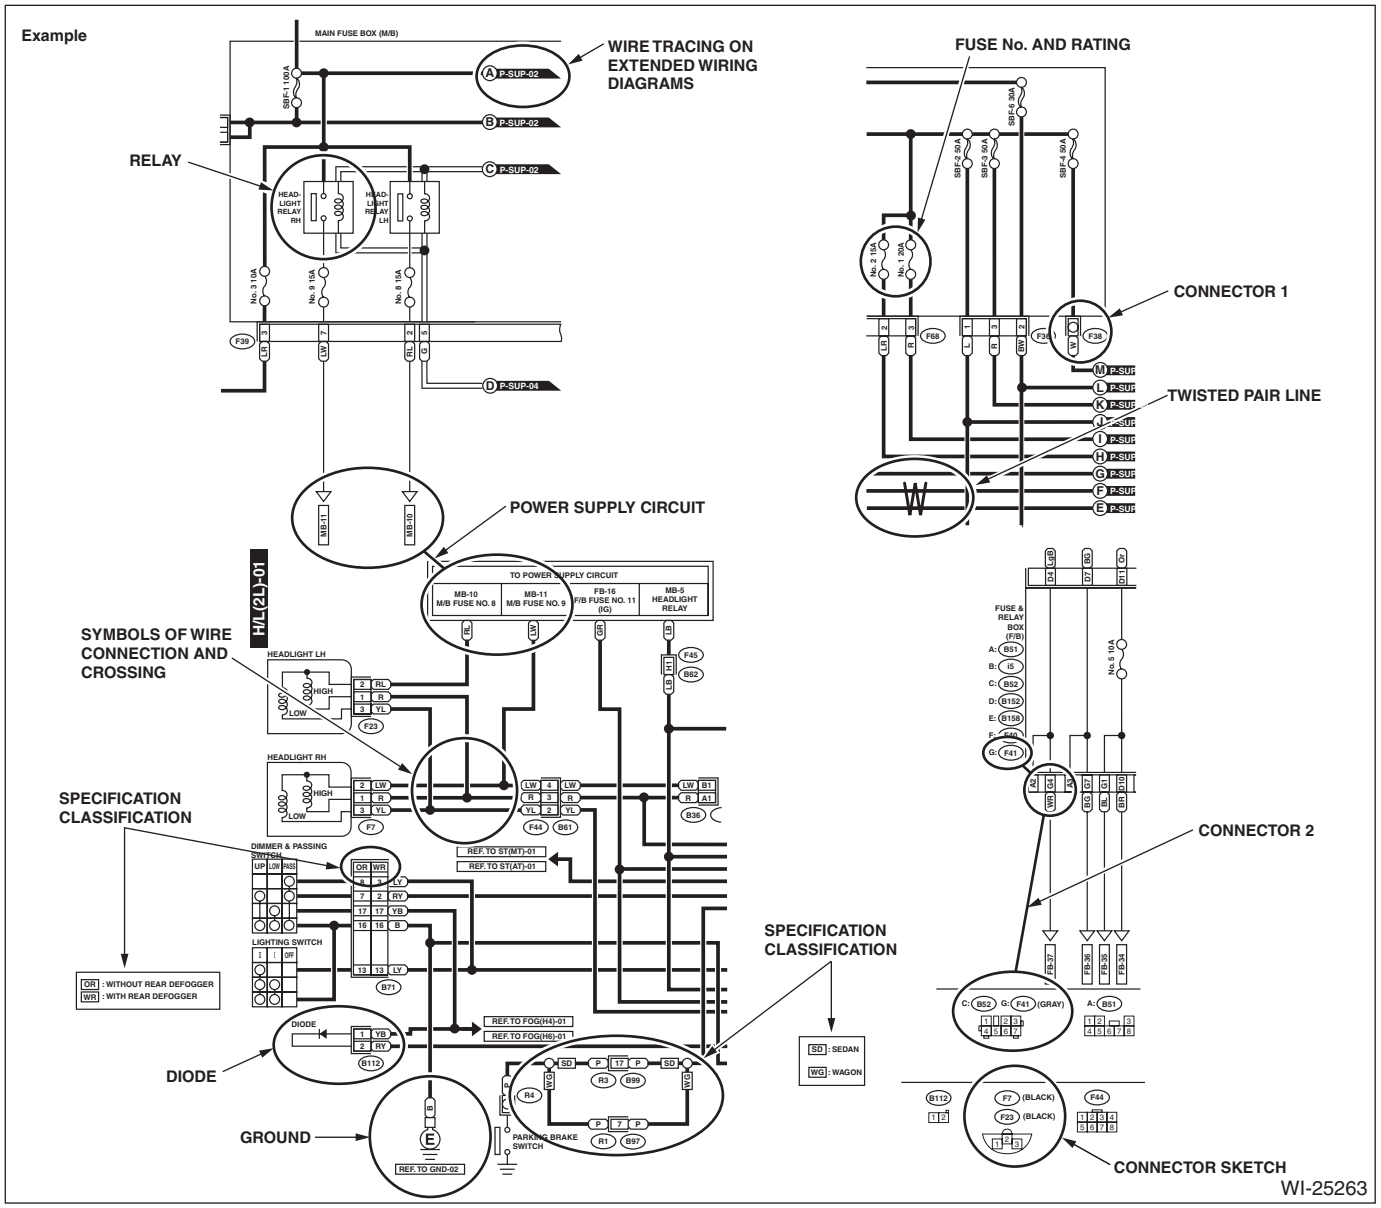
Key to symbols:



○ ⟶ : Current flows.

× ⟶ : Current does not flow.

WI-16724



• Each connector number shown in the wiring diagram corresponds to that in the wiring harness. The location of each connector in the actual vehicle is determined by reading the first character of the connector (for example, a “F” for F8, “i” for i16, etc.) and the type of wiring harness. The first character of each connector number corresponds to the area or system of the vehicle.

Symbol	Wiring harness and cord
F	Front wiring harness
B	Bulkhead wiring harness
E	Engine wiring harness
T	Transmission cord
D	Door cord LH & RH, Rear gate cord Rear door cord LH & RH, Rear defogger cord
i	Instrument panel wiring harness
R	Rear wiring harness, Fuel tank cord, Roof cord, Rear gate cord
AB	Airbag wiring harness

D: SYMBOLS IN WIRING DIAGRAMS

A number of symbols are used in each wiring diagram to easily identify parts or circuits.

1. RELAY

A symbol used to indicate a relay.

2. CONNECTOR 1

The sketch of the connector indicates the one-pole types.

3. WIRING CONNECTION

Some wiring diagrams are indicated in foldouts for convenience. Wiring destinations are indicated where necessary by corresponding symbols. (When two pages are needed for clear indication)

4. FUSE NO. & RATING

The “FUSE No. & RATING” corresponds with that used in the fuse box (main fuse box, fuse and joint box).

5. CONNECTOR 2

- Each connector is indicated by a symbol.
- Each terminal number is indicated in the corresponding wiring diagram in an abbreviated form.
- For example, terminal number “G4” refers to No. 4 terminal of connector (G: F41) shown in the connector sketch.

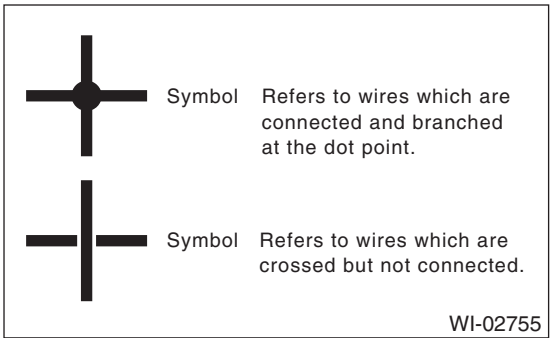
6. CONNECTOR SKETCH

- Each connector sketch clearly identifies the shape and color of a connector as well as terminal locations. Non-colored connectors are indicated in natural color.
- When more than two types of connector number are indicated in a connector sketch, it means that the same type connectors are used.

7. GROUND

Each grounding point can be located easily by referring to the corresponding wiring harness.

8. DIODE



A symbol is used to indicate a diode.

9. WIRE TRACING ON EXTENDED WIRING DIAGRAMS

For a wiring diagram extending over at least two pages, a symbol (consisting of the same characters with arrows), facilitates wire tracing from one page to the next.

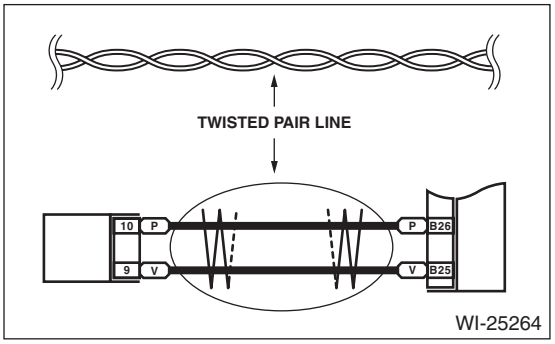
A ←→ A, B ←→ B

10.SYMBOLS OF WIRE CONNECTION AND CROSSING

11.POWER SUPPLY CIRCUIT

A symbol is used to indicate the power supply in each wiring diagram.

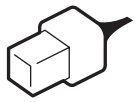
“MB – 5”, “MB – 6”, etc., which are used as power-supply symbols throughout the text, correspond with those shown in the “DC POWER SUPPLY CIRCUIT” in the wiring diagram.

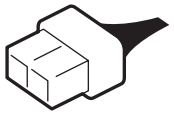


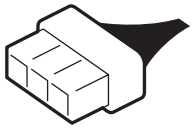
Accordingly, using the “DC POWER SUPPLY CIRCUIT” and wiring diagrams permits service personnel to understand the entire electrical arrangement of a system.

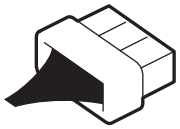
12.CLASSIFICATION BY SPECIFICATION

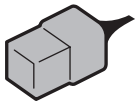
When the wiring diagram differ according to vehicle specifications, the specification difference is described by using abbreviations.

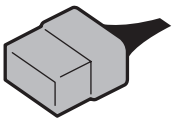


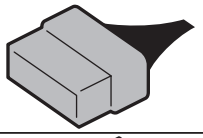


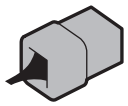


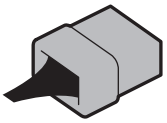


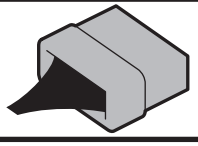




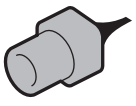


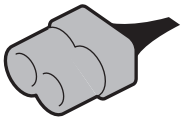


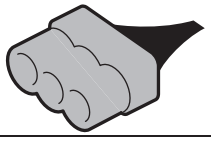


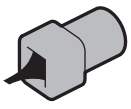


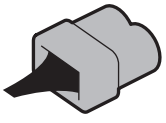
13.TWISTED PAIR LINE

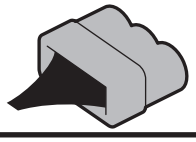












The twisted pair line is indicated by a symbol in the wiring diagrams.

E: CONNECTOR SYMBOL IN WIRING HARNESS

A number of connector symbols are used in each wiring diagram to easily identify the wiring harness connectors.

Standard type: Female		
Pole: From 1 to 8	Pole: From 9 to 20	Pole: More than 21
		
		
Standard type: Male		
		
		

Water proof type: Female		
Pole: From 1 to 8	Pole: From 9 to 20	Pole: More than 21
		
		
Water proof type: Male

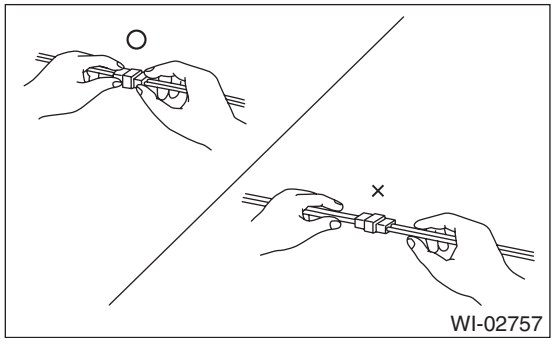
F: ABBREVIATION IN WIRING DIAGRAMS

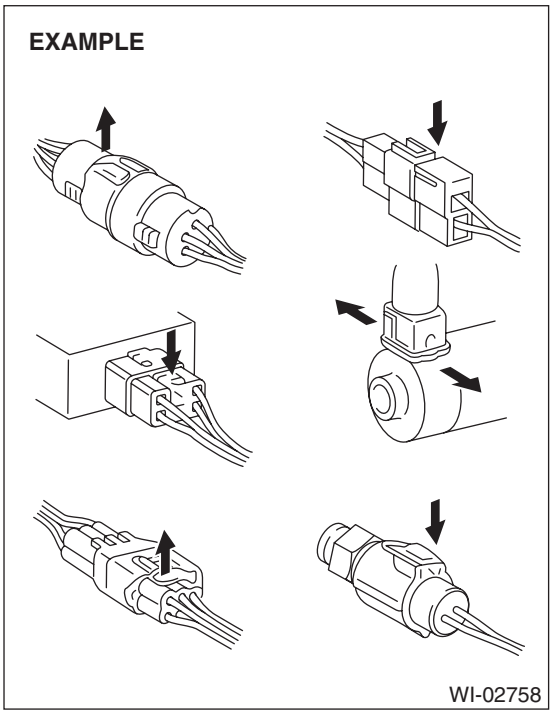
Abbr.	Full name
ABS	Anti-lock Brake System
ACC	Accessory
A/C	Air Conditioner
ASSY	Assembly
AT	Automatic Transmission
A/F	Air/Fuel (air fuel ratio sensor)
ATF	Automatic Transmission Fluid
AUX	Auxiliary Audio Input Terminal
AWD	All Wheel Drive
B, BAT	Battery
BSD/RCTA	Blind Spot Detection/Rear Cross Traffic Alert
CAN	Controller Area Network
CM	Control Module
CVT	Continuously Variable Transmission
D	Drive range or Down
DN	Down
E	Ground
ELCM	Evaporative Leak Check Module
ECO	Economy
ECM	Engine Control Module
EEPROM	Electrically Erasable Programmable Read-Only Memory
EGR	Exhaust Gas Recirculation
F/B	Fuse & Relay Box
FL	Front Left
FR	Front Right
G	Gravity (G sensor)
H/L	Headlight
HI	High
I/F	Interface
IG	Ignition
INT	Intermittent
ISO	International Organization for Standardization
J/C	Joint Connector
LCD	Liquid Crystal Display
LH	Left Hand
LO	Low
LWR	Lower
M	Motor
M/B	Main Fuse Box
MFD	Multi Function Display
MT	Manual Transmission
N	Neutral Range
NAVI	Navigation
OP	Open or Optional Parts
P	Parking or Parking range
PASS	Passing

Abbr.	Full name
PCV	Positive Crankcase Ventilation Valve
R	Reverse Range
RH	Right Hand
RL	Rear Left
RR	Rear Right
SBF	Slow Blow Fuse
SRF	Steering responsive fog light
ST	Starter
SW	Switch
TCM	Transmission Control Module
TEL	Telephone
TFT	Thin Film Transistor
TPMS	Tire Pressure Monitor System
UPR	Upper
VDC	Vehicle Dynamics Control
WASH	Washer



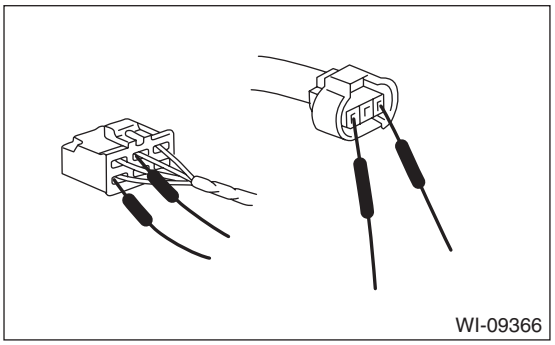
2. Working Precautions

A: PRECAUTIONS WHEN WORKING WITH THE PARTS MOUNTED ON THE VEHICLE



1) When working under a vehicle which is jacked-up, always be sure to use rigid rack.
2) The parking brake must always be applied during working. Also, in automatic transmission vehicles, keep the select lever set to the P (Parking) range.
3) Be sure the workshop is properly ventilated when running the engine. Further, be careful not to touch the belt or fan while the engine is operating.
4) Be careful not to touch hot metal parts, especially the radiator and exhaust system immediately after the engine has been turned off.

B: PRECAUTIONS IN TROUBLE DIAGNOSIS AND REPAIR OF ELECTRIC PARTS



1) The battery cable must be disconnected from the battery's (–) terminal, and the ignition switch must be set to the OFF position, unless otherwise required by the diagnostics.
2) Securely fasten the wiring harness with clamps and clips so that the harness does not interfere with the body end parts, edges, bolts or screws.
3) When installing parts, be careful not to catch them on the wiring harness.
4) When disconnecting a connector, do not pull the wires, but pull while holding the connector body.

5) Some connectors are provided with a lock. One type of such a connector is disconnected by pushing the lock, and the other, by moving the lock up. In either type the lock shape must be identified before attempting to disconnect the connector.
To connect, insert the connector until it snaps and confirm that it is connected securely.

6) When checking continuity between connector terminals, or measuring voltage across the terminal and ground, always touch tester probe(s) to terminals from the wiring connection side. If the probe is too thick to gain access to the terminal, use "mini" test leads.
To check water-proof connectors (which are not measurable from the wiring side), touch test probes on the terminal side and be careful not to bend or damage the terminals.

7) When measuring the voltage or resistance of individual sensor or all electrical control modules, use a tapered pin with a diameter of 0.6 mm (0.024 in) or less and touch it to the tip of terminal. Never insert the tapered pin into the terminal at this time. Doing so may cause internal deformation and a malfunction can occur.
8) Sensors, relays, electrical unit, etc., are sensitive to strong impacts.
Handle them with care so that they are not dropped or mishandled.

1. Basic Diagnostic Procedure

A: BASIC PROCEDURES

1. GENERAL DESCRIPTION

The most important purpose of diagnostics is to quickly determine which part is malfunctioning, to save time and labor.

2. IDENTIFICATION OF TROUBLE SYMPTOM

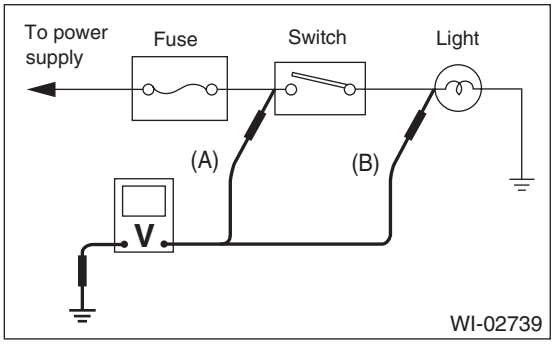
Determine what the problem is based on the symptom.

3. PROBABLE CAUSE OF TROUBLE

Look at the wiring diagram and check the system's circuit. Then check the switch, relay, fuse, ground, etc.

4. LOCATION AND REPAIR OF TROUBLE

1) Using the diagnostics, narrow down the causes.
2) If necessary, use a voltmeter, ohmmeter, etc.
3) Before replacing certain component parts (switch, relay, etc.), check the power supply, ground, for open wiring harness, poor connectors, etc. If no problem is encountered, check the component parts.

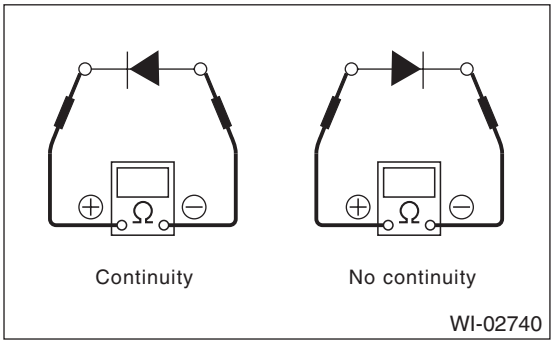


5. SYSTEM OPERATION CHECK

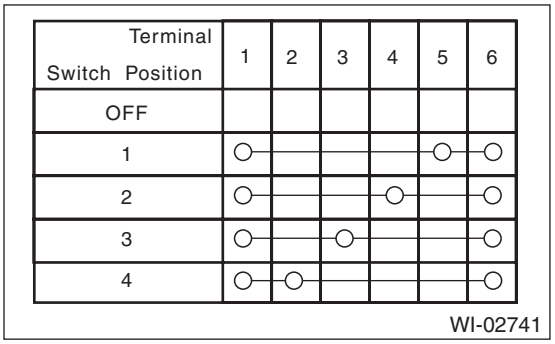
After repairing, ensure that the system operates properly.

B: BASIC INSPECTION

1. VOLTAGE MEASUREMENT



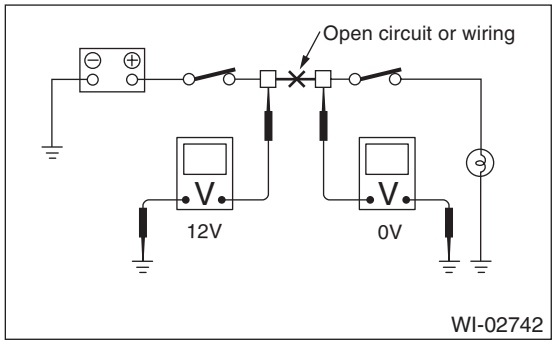
1) Using a voltmeter, connect the negative lead to a good ground point or negative battery terminal and the positive lead to the connector or component terminal.
2) Contact the positive lead of the voltmeter on connector (A). The voltmeter will indicate a voltage.
3) Touch connector (B) with the positive probe. The voltmeter will indicate no voltage.



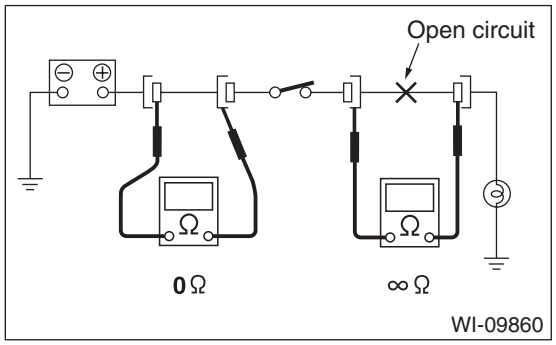
4) With the test set-up held as it is, turn the switch to ON. The voltmeter will indicate a voltage and, at the same time, the light will illuminate.
5) The circuit is in good order. If a problem such as a light failing to illuminate occurs, use the procedures outlined above to track down the malfunction.

2. CIRCUIT CONTINUITY CHECKS

1) Disconnect the battery terminal or connector so there is no voltage between the check points.
Contact the two leads of an ohmmeter to each of the check points.
If the circuit has diodes, reverse the two leads and check again.
2) Use an ohmmeter to check for diode continuity.
When contacting the negative lead to the diode positive side and the positive lead to the negative side, there should be continuity.
When contacting the two leads in reverse, there should be no continuity.



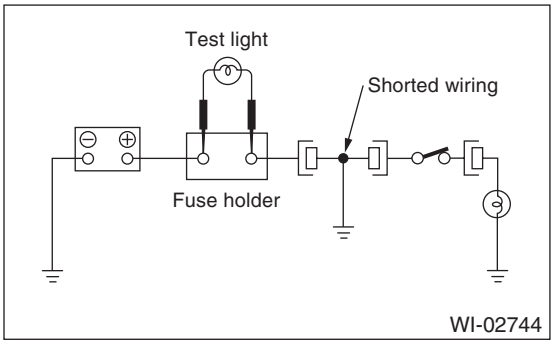
3) The symbol "❍ — ❍" indicates that continuity exists between two points or terminals. For example, when a switch position is at "3", continuity exists among terminals 1, 3 and 6, as shown in the table below.



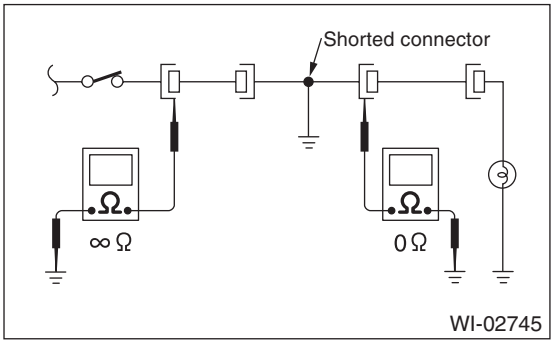
Terminal / Switch Position	1	2	3	4	5	6
OFF						
1	○				○	○
2	○			○		○
3	○		○			○
4	○	○				○

3. HOW TO DETERMINE AN OPEN CIRCUIT

1) With voltmeter:
An open circuit is determined by measuring the voltage between respective connectors and ground using a voltmeter, starting with the connector closest to the power supply. The power supply must be turned ON so that current flows in the circuit. If voltage is not present between a particular connector and ground, the circuit between that connector and the previous connector is open.



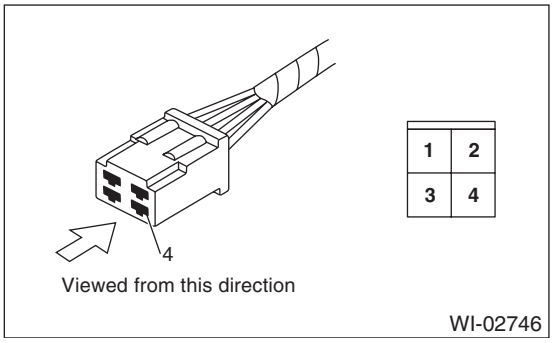
2) With ohmmeter:
Disconnect all connectors affected, and check continuity in the wiring between adjacent connectors. When the ohmmeter indicates “infinite”, the wiring is open.



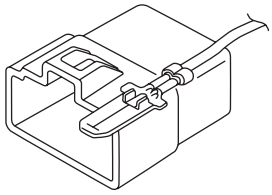
4. HOW TO DETERMINE A SHORT CIRCUIT

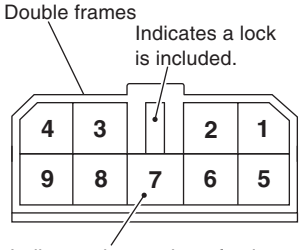
1) With test light:
Connect a test light (rated at approx. 3 watts) in place of the blown fuse and allow current to flow through the circuit. Disconnect one connector at a time from the circuit. Starting with the one located farthest from the power supply. If the test light goes out when a connector is disconnected, the wiring between that connector and the next connector (farther from the power supply) is shorted.

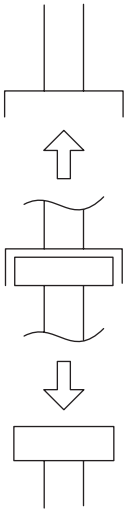
2) With ohmmeter:
Disconnect all affected connectors, and check continuity between each connector and ground. When the ohmmeter indicates continuity between a particular connector and a ground, that connector is shorted.

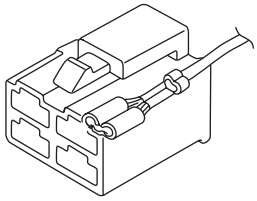


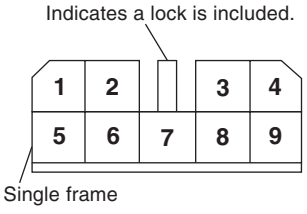
C: HOW TO READ WIRING DIAGRAMS







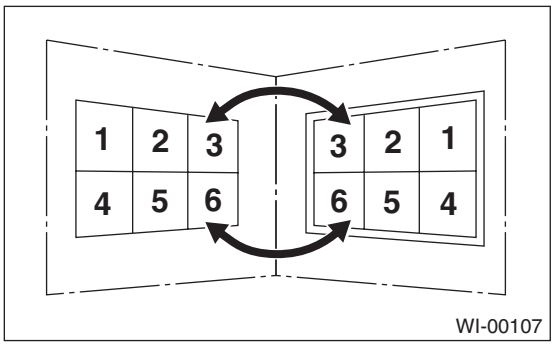




1. WIRING DIAGRAM

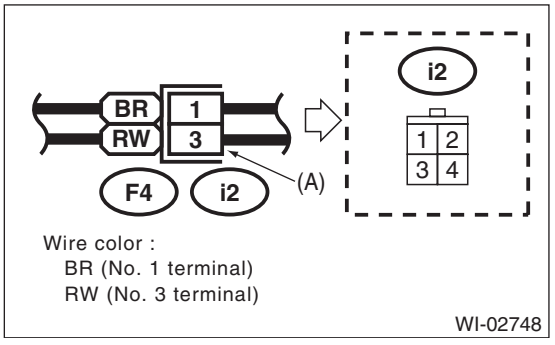
The wiring diagram of each system is illustrated so that you can understand the path through which the electric current flows from the battery.
Sketches and codes are used in the diagrams. They should read as follows:

- Each connector and its terminal position are indicated by a sketch of the connector in a disconnected state which is viewed from the front.



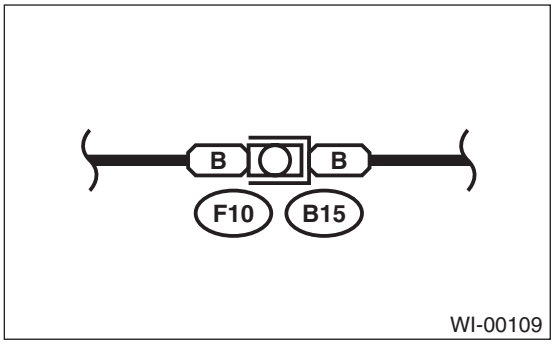
- The number of poles or pins, presence of a lock are indicated in the sketch of each connector. In the sketch, the highest pole number refers to the number of poles which the connector has. For example, the sketch of the connector shown in figure indicates the connector has 9 poles.

Connector used in vehicle	Connector shown in wiring diagram		
	Sketch	Symbol	Number of poles
			Numbered in order from upper right to lower left.
			Numbered in order from upper left to lower right.



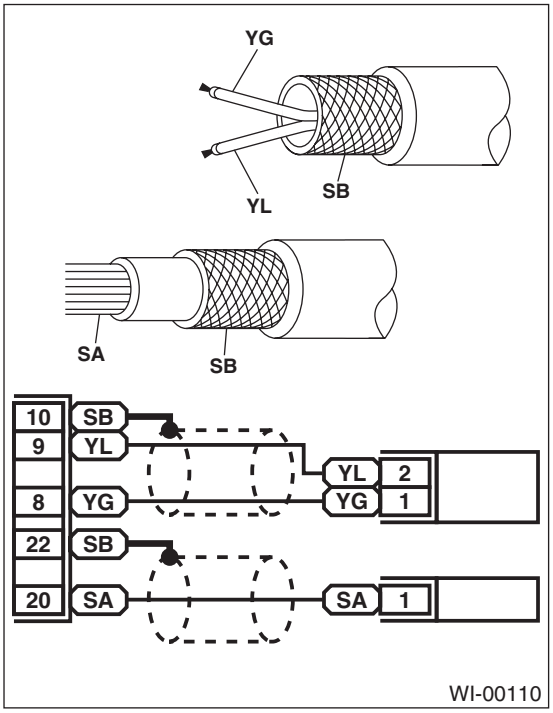
WI-02747

• When one set of connectors is viewed from the front side, the pole numbers of one connector are symmetrical to those of the other. When these two connectors are connected as a unit, the poles which have the same number are joined.

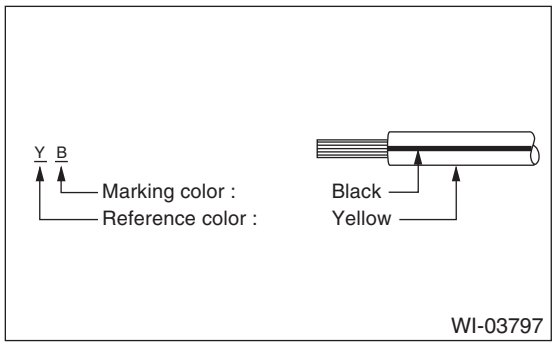


• WIRING DIAGRAM:
The connectors are numbered along with the number of poles, external colors, and mating connections in the accompanying list.
• The sketch of each connector in the wiring diagram usually shows the (A) side of the connector. The relationship between the wire color, terminal number and connector is described in the figure.

NOTE:
A wire which runs in one direction from a connector terminal sometimes may have a different color from that which runs in the other direction from that terminal.



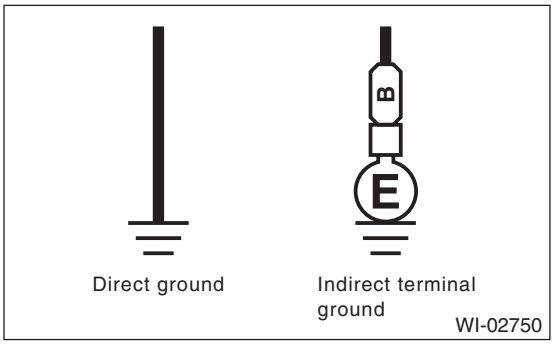
• In the wiring diagram, connectors which have no terminal number refer to one-pole types. Sketches of these connectors are omitted intentionally.



• The following color codes are used to indicate the colors of the wires.

Color code	Color
L	Blue
B	Black
Y	Yellow
G	Green
R	Red
W	White
Br	Brown
Lg	Light green
Gr	Gray
P	Pink
Or	Orange
Sb	Light blue
V	Violet
SA	Sealed (inner)
SB	Sealed (outer)

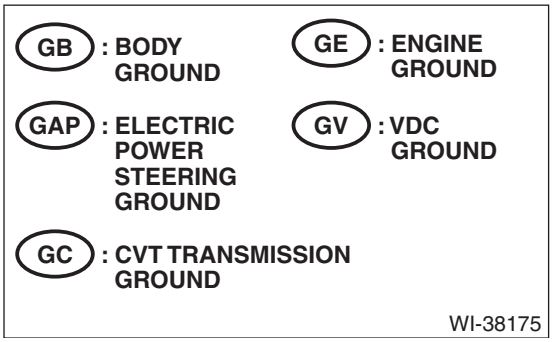
• The wire color code, which consists of two letters (or three letters including Br or Lg), indicates the standard color (base color of the wire covering) by its first letter and the stripe marking by its second letter.



• The table lists the nominal sectional areas and allowable currents of the wires.

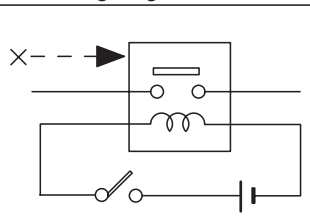
CAUTION:
When replacing or repairing a wire, be sure to use the same size and type of the wire which was originally used.

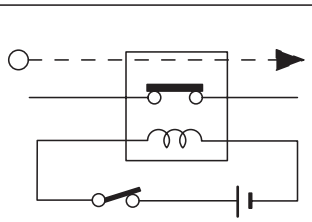
NOTE:
• The allowable current in the table indicates the tolerable amperage of each wire at an ambient temperature of 40°C (104°F).
• The allowable current changes with ambient temperature. Also, it changes if a bundle of more than two wires is used.

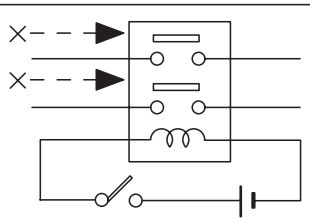


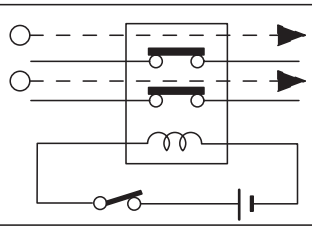
Nominal sectional area mm^2	No. of strands/ strand diameter	Outside diameter of wiring mm	Allowable current Amps/ 40°C (104°F)
0.3	7/0.26	1.8	7
0.5	7/0.32	2.2 (or 2.0)	12
0.75	30/0.18	2.6 (or 2.4)	16
0.85	11/0.32	2.4 (or 2.2)	16
1.25	16/0.32	2.7 (or 2.5)	21
2	26/0.32	3.1 (or 2.9)	28
3	41/0.32	3.8 (or 3.6)	38
5	65/0.32	4.6 (or 4.4)	51
8	50/0.45	5.5	67

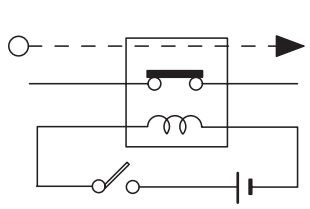
• Each unit is either directly grounded to the body or indirectly grounds through a harness ground terminal. Different symbols are used in the wiring diagram to identify the two grounding systems.

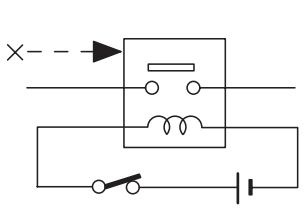


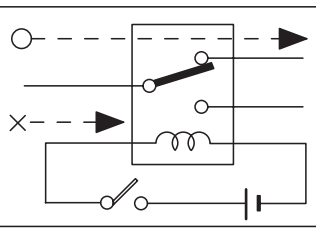


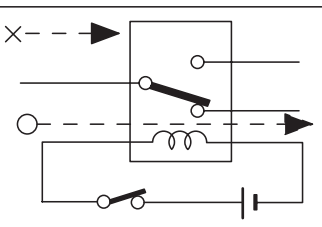












• The ground points shown in the wiring diagram refer to the following:

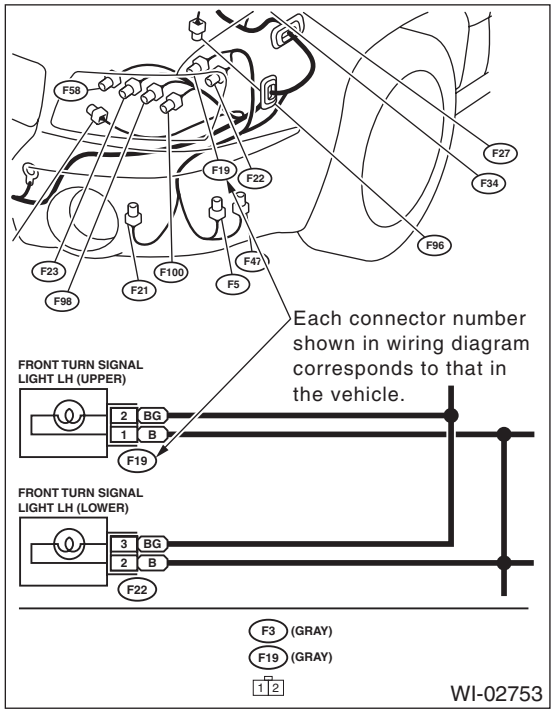
NOTE:
All wiring harnesses are provided with a ground point which must be securely connected.

- Relays are classified as normally-open or normally-closed.

The normally-closed relay has one or more contacts. The wiring diagram shows the relay mode when the energizing circuit is OFF.

Relay type		Energizing circuit OFF	Energizing circuit ON
Normally-open type	4-pole		
	6-pole		
Normally-closed type	4-pole		
Mixed type	6-pole		

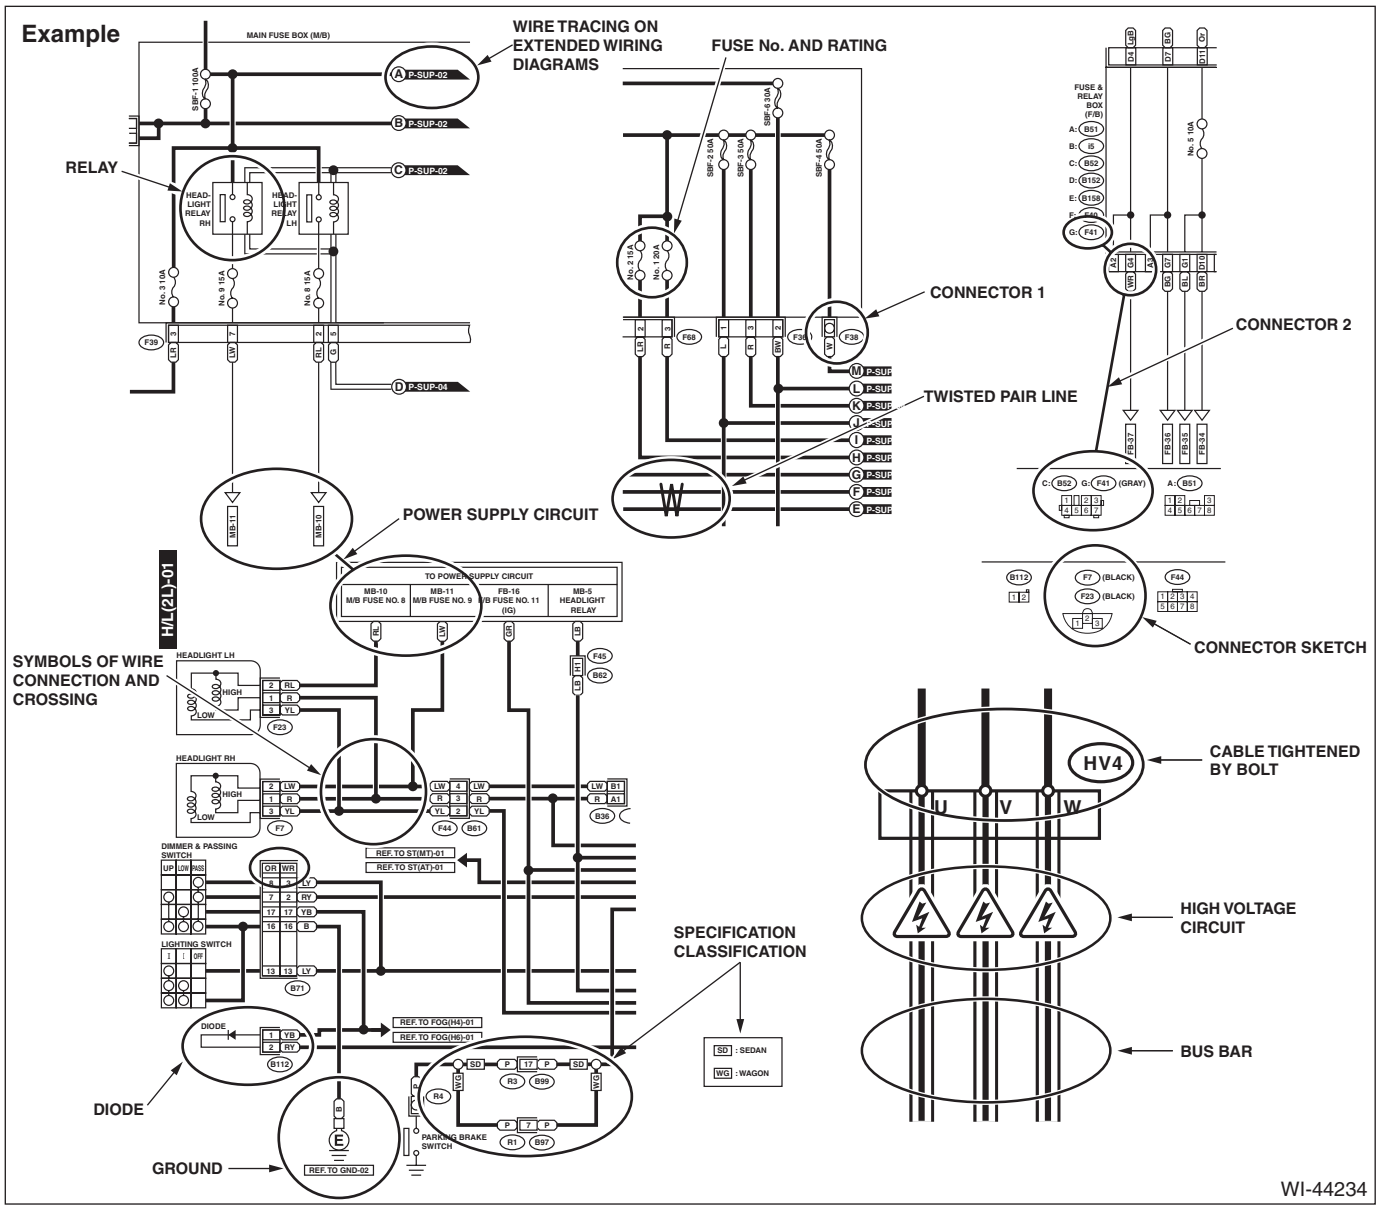
Key to symbols:



○ ⟶ : Current flows.

× ⟶ : Current does not flow.

WI-16724



• Each connector number shown in the wiring diagram corresponds to that in the wiring harness. The location of each connector in the actual vehicle is determined by reading the first character of the connector (for example, a “F” for F8, “i” for i16, etc.) and the type of wiring harness. The first character of each connector number corresponds to the area or system of the vehicle.

Symbol	Wiring harness and cord
F	Front wiring harness
B	Bulkhead wiring harness
E	Engine wiring harness
T	Transmission cord
D	Door cord LH & RH, Rear gate cord Rear door cord LH & RH, Rear defogger cord
i	Instrument panel wiring harness
R	Rear wiring harness, Fuel tank cord, Roof cord, Rear gate cord
AB	Airbag wiring harness

D: SYMBOLS IN WIRING DIAGRAMS

A number of symbols are used in each wiring diagram to easily identify parts or circuits.

1. RELAY

A symbol used to indicate a relay.

2. CONNECTOR 1

The sketch of the connector indicates the one-pole types.

3. WIRING CONNECTION

Some wiring diagrams are indicated in foldouts for convenience. Wiring destinations are indicated where necessary by corresponding symbols. (When two pages are needed for clear indication)

4. FUSE NO. & RATING

The “FUSE No. & RATING” corresponds with that used in the fuse box (main fuse box, fuse and joint box).

5. CONNECTOR 2

- Each connector is indicated by a symbol.
- Each terminal number is indicated in the corresponding wiring diagram in an abbreviated form.
- For example, terminal number “G4” refers to No. 4 terminal of connector (G: F41) shown in the connector sketch.

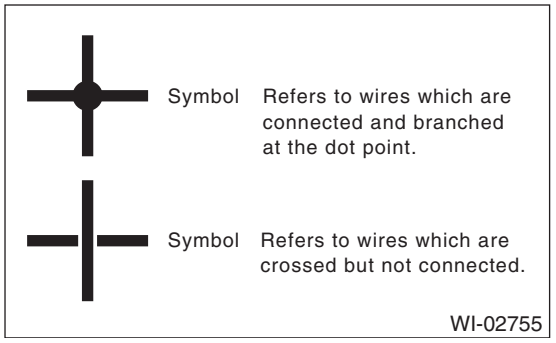
6. CONNECTOR SKETCH

- Each connector sketch clearly identifies the shape and color of a connector as well as terminal locations. Non-colored connectors are indicated in natural color.
- When more than two types of connector number are indicated in a connector sketch, it means that the same type connectors are used.

7. GROUND

Each grounding point can be located easily by referring to the corresponding wiring harness.

8. DIODE



A symbol is used to indicate a diode.

9. WIRE TRACING ON EXTENDED WIRING DIAGRAMS

For a wiring diagram extending over at least two pages, a symbol (consisting of the same characters with arrows), facilitates wire tracing from one page to the next.

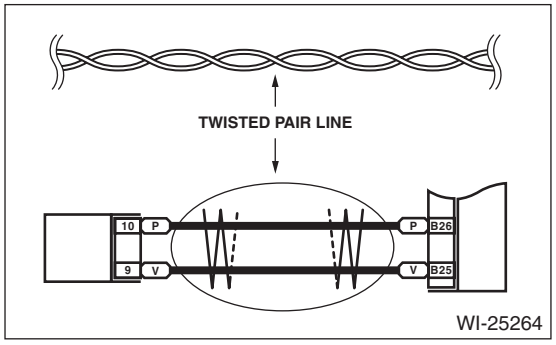
A ←→ A, B ←→ B

10.SYMBOLS OF WIRE CONNECTION AND CROSSING

11.POWER SUPPLY CIRCUIT

A symbol is used to indicate the power supply in each wiring diagram.

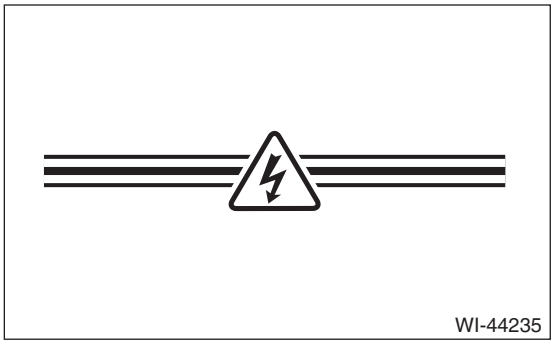
“MB – 5”, “MB – 6”, etc., which are used as power-supply symbols throughout the text, correspond with those shown in the “DC POWER SUPPLY CIRCUIT” in the wiring diagram.



Accordingly, using the “DC POWER SUPPLY CIRCUIT” and wiring diagrams permits service personnel to understand the entire electrical arrangement of a system.

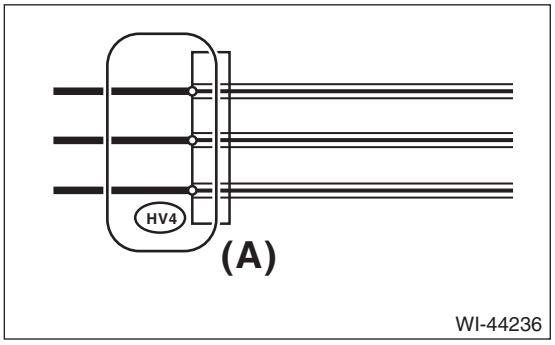
12.CLASSIFICATION BY SPECIFICATION

When the wiring diagram differ according to vehicle specifications, the specification difference is described by using abbreviations.



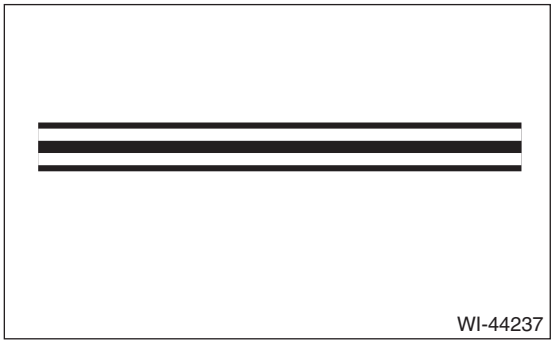
13.TWISTED PAIR LINE

The twisted pair line is indicated by a symbol in the wiring diagrams.



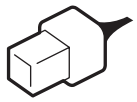
14.HIGH VOLTAGE CIRCUIT

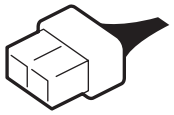
The following signs denote high voltage circuit.

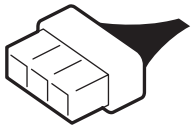


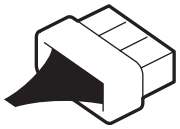
15.CABLE WITH BOLT CONNECTION

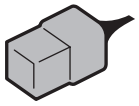
Cable connections with bolt (HV**) are denoted by (A) below. Signs for connection (HV**) are also used in location section.

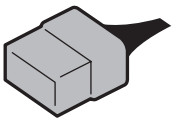


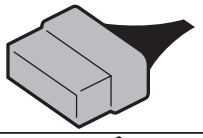


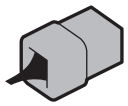


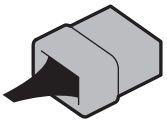


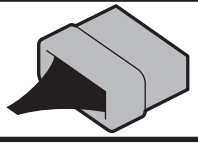




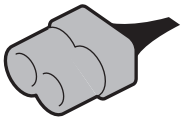


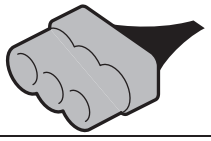


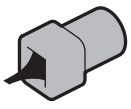


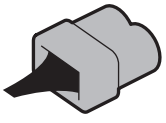


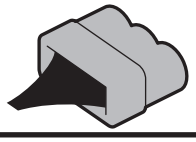
16.BUS BAR











The following signs denote bus bar.

E: CONNECTOR SYMBOL IN WIRING HARNESS

A number of connector symbols are used in each wiring diagram to easily identify the wiring harness connectors.

Standard type: Female		
Pole: From 1 to 8	Pole: From 9 to 20	Pole: More than 21
		
		
Standard type: Male		
		
		

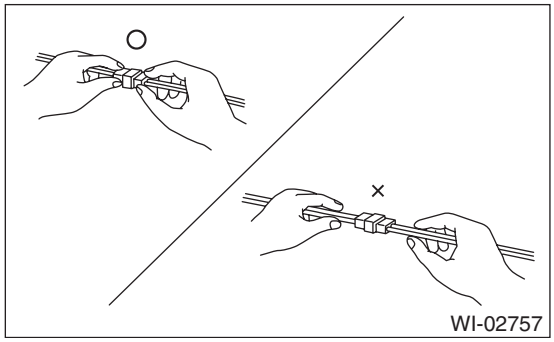
Water proof type: Female		
Pole: From 1 to 8	Pole: From 9 to 20	Pole: More than 21
		
		
Water proof type: Male		
		
		

WI-02756

F: ABBREVIATION IN WIRING DIAGRAMS

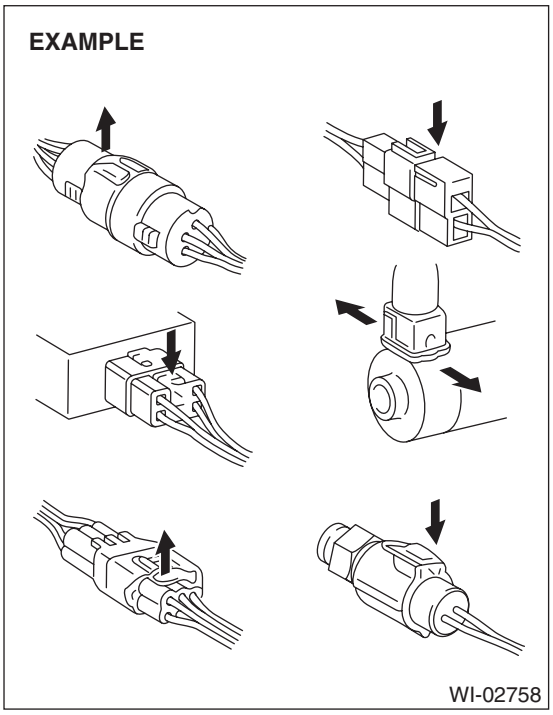
Abbr.	Full name
ABS	Anti-lock Brake System
ACC	Accessory
A/C	Air Conditioner
ASSY	Assembly
AT	Automatic Transmission
A/F	Air/Fuel (air fuel ratio sensor)
ATF	Automatic Transmission Fluid
AUX	Auxiliary Audio Input Terminal
AWD	All Wheel Drive
B	Battery
BECM	Battery Energy Control Module
BSD/RCTA	Subaru Rear Vehicle Detection system
CAN	Controller Area Network
CM	Control Module
CVT	Continuously Variable Transmission
D	Drive range or Down
DMCM	Drive Motor Control Module
DN	Down
E	Ground
ELCM	Evaporative Leak Check Module
ECO	Economy
ECM	Engine Control Module
EEPROM	Electrically Erasable Programmable Read-Only Memory
EGR	Exhaust Gas Recirculation
F/B	Fuse & Relay Box
FL	Front Left
FR	Front Right
G	Gravity (G sensor)
GPS	Global Positioning System
H/L	Headlight
HI	High
HPCM	Hybrid Powertrain Control Module
I/F	Interface
IG	Ignition
INT	Intermittent
ISG	Integrated Starter Generator
ISO	International Organization for Standardization
J/C	Joint Connector
LCD	Liquid Crystal Display
LH	Left Hand
LO	Low
LWR	Lower
M	Motor
M/B	Main Fuse Box
MFD	Multi Function Display
MT	Manual Transmission
N	Neutral Range

Abbr.	Full name
NAVI	Navigation
OP	Open or Optional Parts
P	Parking or Parking range
PASS	Passing
PCV	Positive Crankcase Ventilation Valve
R	Reverse Range
RH	Right Hand
RL	Rear Left
RR	Rear Right
SBF	Slow Blow Fuse
ST	Starter
SW	Switch
TCM	Transmission Control Module
TEL	Telephone
TFT	Thin Film Transistor
TPMS	Tire Pressure Monitor System
UPR	Upper
VDC	Vehicle Dynamics Control
WASH	Washer



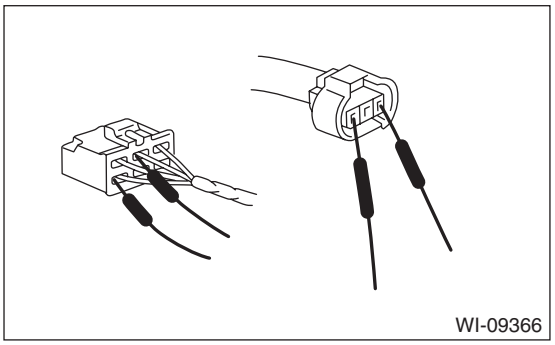
2. Working Precautions

A: PRECAUTIONS WHEN WORKING WITH THE PARTS MOUNTED ON THE VEHICLE



1) When working under a vehicle which is jacked-up, always be sure to use rigid rack.
2) The parking brake must always be applied during working. Also, in automatic transmission vehicles, keep the select lever set to the P (Parking) range.
3) Be sure the workshop is properly ventilated when running the engine. Further, be careful not to touch the belt or fan while the engine is operating.
4) Be careful not to touch hot metal parts, especially the radiator and exhaust system immediately after the engine has been turned off.

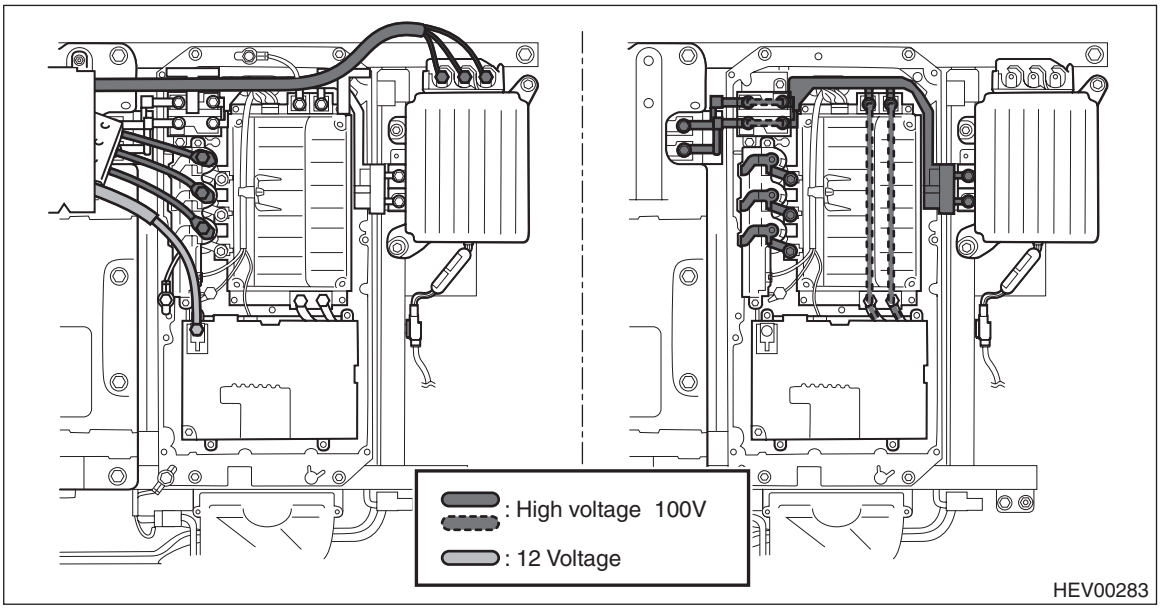
B: PRECAUTIONS IN TROUBLE DIAGNOSIS AND REPAIR OF ELECTRIC PARTS



1) The battery cable must be disconnected from the battery's (–) terminal, and the ignition switch must be set to the OFF position, unless otherwise required by the diagnostics.
2) Securely fasten the wiring harness with clamps and clips so that the harness does not interfere with the body end parts, edges, bolts or screws.
3) When installing parts, be careful not to catch them on the wiring harness.
4) When disconnecting a connector, do not pull the wires, but pull while holding the connector body.

5) Some connectors are provided with a lock. One type of such a connector is disconnected by pushing the lock, and the other, by moving the lock up. In either type the lock shape must be identified before attempting to disconnect the connector.
To connect, insert the connector until it snaps and confirm that it is connected securely.

6) When checking continuity between connector terminals, or measuring voltage across the terminal and ground, always touch tester probe(s) to terminals from the wiring connection side. If the probe is too thick to gain access to the terminal, use "mini" test leads.
To check water-proof connectors (which are not measurable from the wiring side), touch test probes on the terminal side and be careful not to bend or damage the terminals.



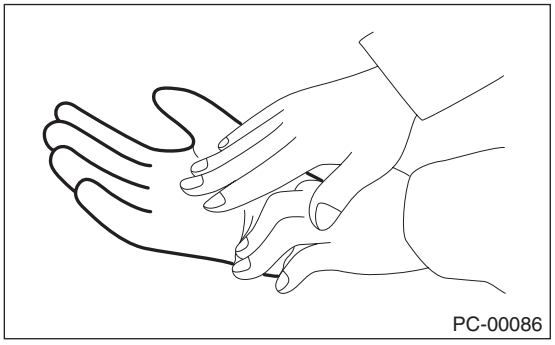
7) Sensors, relays, electrical unit, etc., are sensitive to strong impacts.
Handle them with care so that they are not dropped or mishandled.
8) For inspection of airbag system, always refer to “CAUTION” of “General Description” under AIR-BAG SYSTEM in the service manual for the same model to prevent malfunctioning.
9) When measuring the voltage or resistance of individual sensor or all electrical control modules, use a tapered pin with a diameter of 0.6 mm (0.024 in) or less and touch it to the tip of terminal. Never insert the tapered pin into the terminal at this time. Doing so may cause internal deformation and a malfunction can occur.

C: PRECAUTIONS REGARDING THE HYBRID SYSTEM

1. PRECAUTIONS FOR MAINTENANCE

The hybrid system includes a high voltage circuit. Mishandling may cause electric shocks and leakage. Therefore, perform proper operations by following procedures in this manual.

- Engineers are required to receive a special training in order to perform maintenance of high voltage system.
- All the harnesses and connectors for power cables are orange in color. In addition, caution labels indicating [High Voltage] are attached on the High voltage battery and its battery cover. Do not touch the wires and parts related to high voltage carelessly.
- Use great care when handling the high voltage system power supply circuits shown in the figure below.



- When performing maintenance of the high voltage system, make sure to take measures for preventing electrocution, by wearing insulated gloves, removing the service disconnect plug, etc. In addition, carry the removed service disconnect plug in your pocket in order to prevent other servicemen from accidentally installing during work.

NOTE:
Do not turn the ignition to ON with the service disconnect plug removed in order to prevent malfunctions.

- After removing the service disconnect plug, be sure to wait for ten minutes before touching the high voltage connectors and terminals.

NOTE:
This time allows the high voltage condenser in the inverter to discharge.

- When wearing insulated gloves for work, make sure there is no holes or damages on the gloves.
- During the work, do not carry any metallic products, such as mechanical pencils and scales, which may be dropped and may cause short.
- Parts with high voltage and strong magnetic force are used. Therefore, during the work, do not carry any metallic products that may cause short, or magnetic recording media (such as cash cards and prepaid cards) whose magnetic record may get destroyed.
- When touching the high voltage terminals without insulation covering, make sure, in advance, to wear insulated gloves and to confirm that the voltage is 0 V using an insulation multimeter.
- Insulate the high voltage connectors and terminals with insulating tape immediately after removing.
- Be sure to tighten the high voltage screw terminals firmly to the specified torque. Lack of, or excess torque causes failures.
- Be careful not to allow foreign matter to enter the battery.
- Make sure to insulate the power cable terminals by wrapping insulating tape around.
- To work on the high voltage wire connections, use insulated tools, or wrap tools with vinyl tape for insulation before use.
- When using tools wrapped with vinyl tape as alternatives to insulated tools, cover tools with the standardized product, pressure-sensitive polyvinyl chloride tapes for electrical purposes (JIS C2336), and confirm the insulated condition before working, using an insulation multimeter.
- When inspecting insulated gloves, make sure there is no cracks, breakage, other damages, or air leakage by rolling insulated gloves from the opening side up to the wrist area and pressing the inflated portion. Do not use wet insulated gloves.

PC-00086

- When performing work, wear or use insulated gloves, protective goggles, and rubber boots for electrical purposes, insulated protective shoes or insulating rubber sheet.
- Even after the service disconnect plug is removed, make sure to wear insulated gloves during maintenance of all the parts inside the cover including the battery cover, and of underfloor power cable. (Maintenance of the high voltage battery cooling fan and cooling duct parts outside the battery cover, and the drive motor control module parts does not require to wear insulated gloves even in the compartment, because the voltage is 12 V only.)
- For maintenance of engine compartment and of CVT unit except for the power cable, insulated gloves are not required.

• During the work for the high voltage system, make sure to alert other servicemen to take precautions, for instance by displaying [HIGH VOLTAGE WORK. DO NOT TOUCH] on the vehicle. (An example is shown. Make a photocopy for use.)

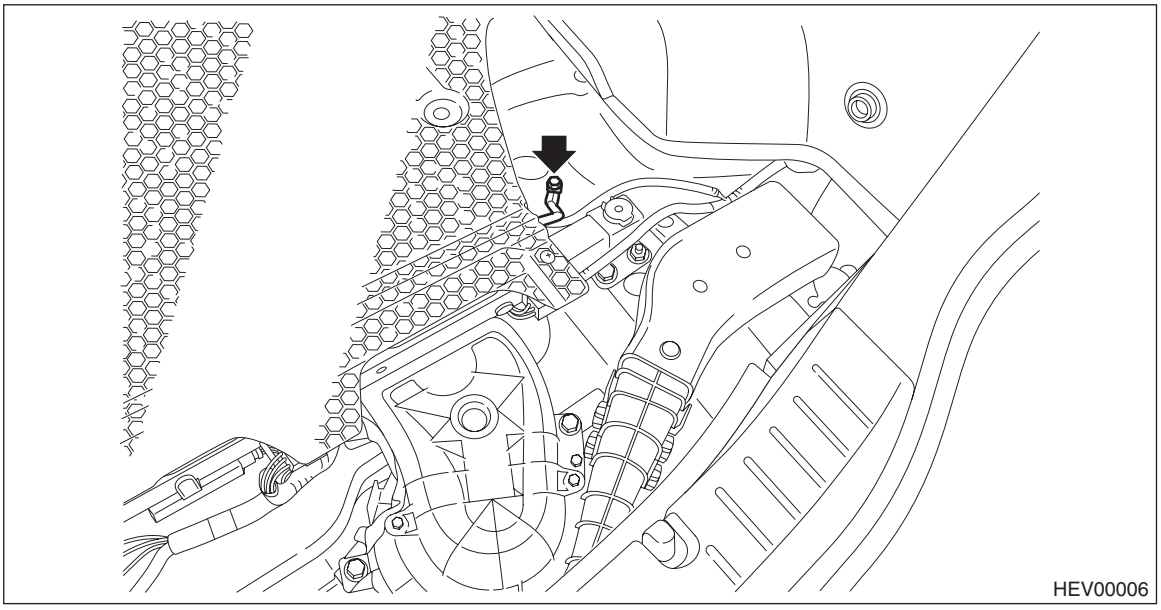
HIGH VOLTAGE CAUTION LABEL

Person in charge: _____

CAUTION:
HIGH VOLTAGE.
DO NOT TOUCH
DURING OPERATION

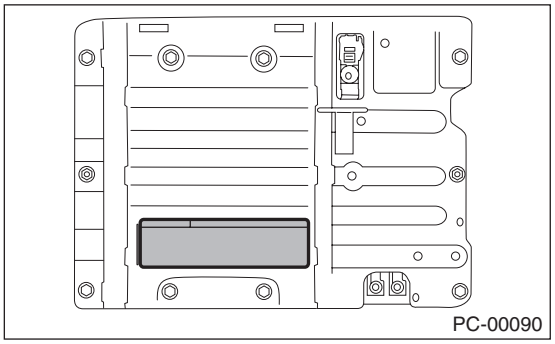
CAUTION:
HIGH VOLTAGE.
DO NOT TOUCH
DURING OPERATION

Person in charge: _____



Copy this page and put it after folding on the roof of the vehicle in service.

HEV00088



• After performing work for the high voltage system, make sure to check again for misplaced parts and tools, tightening conditions of high voltage terminals, and connector connections, before connecting the service disconnect plug.

CAUTION:
Make sure the connectors are connected completely without insecurity.

• Make sure to check the positive and negative terminal connections during the battery removal and installation procedures.
• Never connect the battery in reverse polarity. Otherwise, the control module will be broken instantly, and other parts will also be damaged.
• Do not disconnect the battery cables while the engine is running. A large counter electromotive force will be generated, and this voltage may damage electronic parts such as control modules.
• When disconnecting the connectors of the electrical components, always be sure to turn the ignition switch to OFF.
• When measuring the voltage or resistance of individual sensor or all electrical control modules, use a tapered pin with a diameter of 0.6 mm (0.024 in) or less and touch it to the tip of terminal. Never insert the tapered pin into the terminal at this time. Doing so may cause internal deformation and a malfunction can occur.
• Take care not to allow water to get into the connectors when servicing or washing the vehicle in rainy weather. Avoid exposure to water even if the connectors are waterproof.
• Use the engine ground terminal or engine assembly for the grounding point when measuring the voltage and resistance in engine compartment.
• All parts related to the hybrid system are precision parts. Do not drop or otherwise apply impact. Do not reuse the parts that are dropped accidentally.
• Use the body ground bolt on the inverter frame as the grounding point, when measuring voltage and resistance in rear of the vehicle.

• Take the ignition key or access key out of the vehicle, except when the key is needed inside.
• When the part is replaced or the label is detached, make sure to attach a new label in the original position and direction.

• This engine starts and stops automatically, when the Hybrid READY indicator light in the meter illuminates. Make sure to turn the ignition to OFF before performing maintenance.
• When the state of battery charge is in a good condition while the engine is warmed-up, the engine will be stopped automatically while the vehicle is stopped. Therefore, when continuous running of the engine is necessary during vehicle stoppage in the cases such as ignition timing inspection, set to «Auto Start Stop Cancel Drive Mode (Engine only or Engine + Motor)».
