If the steering wheel is held to an end for a long time, or the steering wheel turning to right and left at slow speed is repeated during parking, the assist limitation (overheat protection control) may operate to prevent failures by overheat.
In this case, by stopping the engine for approx. 30 minutes for cooling, the assist will start operating. While assist limitation (overheat protection control) is in active, «Assist limitation» is displayed in the «EPS operating condition» in the Subaru Select Monitor “Current Data Display & Save”.
- History can be confirmed on «Overheating protection intervention history» or «IGN count from overheating protection» of “Current Data Display & Save”.
- The overheat protection control system is normal operation, therefore, the STEERING warning light will not come on and there will be no DTC displayed.
- If the power steering system connector is disconnected while cooling under the overheat protection control, different DTC may be recorded. If there is no DTC and assist limitation is in active, stop the engine for approx. 30 minutes for cooling.

B: STEERING WARNING LIGHT DOES NOT GO OFF

DETECTING CONDITION:

- Defective combination meter
- Open circuit of harness

TROUBLE SYMPTOM:

When starting the engine, the STEERING warning light continues to illuminate.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of the power steering control module using the Subaru Select Monitor. <Ref. to PS(diag)-15, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to PS(diag)-21, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication system detected?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-79, List of Diagnostic Trouble Code (DTC).>	Check the combination meter. <Ref. to IDI-10, INSPECTION, Combination Meter System.>

11.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Note
None	Without DTC	Normal	<Ref. to PS(diag)-14, WITHOUT DTC, INSPECTION, Subaru Select Monitor.>
	“Assist limitation” is displayed in the current data «EPS operating condition».	Assist limitation is performed due to overheat protection control.	<Ref. to PS(diag)-18, POWER STEERING ASSIST DISABLED, STEERING WARNING LIGHT DOES NOT COME ON, STEERING Warning Light.>
	“Overheating protection intervention history” in current data display shows 1 or more.	There are previous records of intervention to overheat protection control.	<Ref. to PS(diag)-18, POWER STEERING ASSIST DISABLED, STEERING WARNING LIGHT DOES NOT COME ON, STEERING Warning Light.>
C2511	Torque Sensor Failure 1 (Main)	• Poor connector contact • Forgot to connect connector • Faulty torque sensor section circuit • Faulty torque sensor coil	<Ref. to PS(diag)-23, DTC C2511 TORQUE SENSOR FAILURE 1 (MAIN), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2512	Torque Sensor Failure 2 (Sub)		<Ref. to PS(diag)-24, DTC C2512 TORQUE SENSOR FAILURE 2 (SUB), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

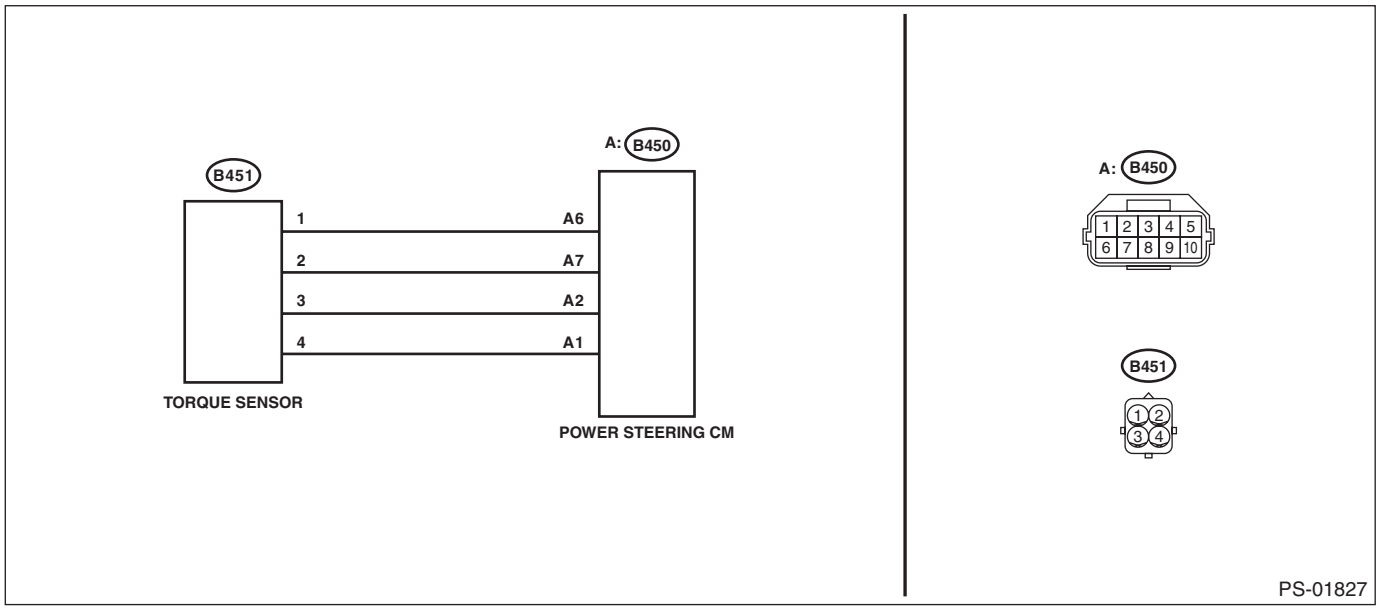
C2514	Torque Sensor Power Supply Failure		<Ref. to PS(diag)-24, DTC C2514 TORQUE SENSOR POWER SUPPLY FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2521	Motor Failure 1 (Motor)	• Poor connector contact • Forgot to connect connector • Harness open/short circuit • Motor open circuit • Power transistor shorted/open • Terminal power supply or ground short	<Ref. to PS(diag)-24, DTC C2521 MOTOR FAILURE 1 (MOTOR), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2522	Motor Malfunction 2 (Resolver)		<Ref. to PS(diag)-24, DTC C2522 MOTOR MALFUNCTION 2 (RESOLVER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2531	ECU Failure 1 (CPU Failure)	Faulty main unit of power steering control module	<Ref. to PS(diag)-25, DTC C2531 ECU FAILURE 1 (CPU FAILURE), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2532	ECU Failure 2 (Peripheral Circuit Failure)	Faulty main unit of power steering control module	<Ref. to PS(diag)-25, DTC C2532 ECU FAILURE 2 (PERIPHERAL CIRCUIT FAILURE), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2533	ECM Failure 3 (Board Temperature Sensor Failure)	Faulty main unit of power steering control module	<Ref. to PS(diag)-25, DTC C2533 ECM FAILURE 3 (BOARD TEMPERATURE SENSOR FAILURE), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2541	Vehicle Speed Failure(Sensor Failure)	• Poor connector contact • Forgot to connect connector • Harness open/short circuit • VDC system failure	<Ref. to PS(diag)-26, DTC C2541 VEHICLE SPEED FAILURE(SENSOR FAILURE), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2543	Error Passive Status	Defective CAN communication	<Ref. to PS(diag)-27, DTC C2543 ERROR PASSIVE STATUS, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Note
C2545	EyeSight System Abnormal	EyeSight system failure	<Ref. to PS(diag)-28, DTC C2545 EyeSight SYSTEM ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2546	EyeSight Value Abnormal	EyeSight system failure	<Ref. to PS(diag)-28, DTC C2546 EyeSight VALUE ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2547	EyeSight Check Sum Abnormal	• EyeSight system failure • Defective CAN communication	<Ref. to PS(diag)-29, DTC C2547 EyeSight CHECK SUM ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2548	Vehicle Dynamics Control Module Abnormal	VDC system failure	<Ref. to PS(diag)-29, DTC C2548 VEHICLE DYNAMICS CONTROL MODULE ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2551	Power Supply Relay Failure	• Power supply voltage malfunction • Faulty relay contact	<Ref. to PS(diag)-30, DTC C2551 POWER SUPPLY RELAY FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0073	Control Module Communication Bus Off	Defective CAN communication	<Ref. to PS(diag)-32, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0100	Lost Communication With ECM/PCM “A”	Defective CAN communication	<Ref. to PS(diag)-32, DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0122	Lost Communication With Vehicle Dynamics Control Module	Defective CAN communication	<Ref. to PS(diag)-32, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0126	Lost Communication With Steering Angle Sensor Module	Defective CAN communication	<Ref. to PS(diag)-32, DTC U0126 LOST COMMUNICATION WITH STEERING ANGLE SENSOR MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0155	Lost Communication With Instrument Panel Cluster (IPC) Control Module	Defective CAN communication	<Ref. to PS(diag)-32, DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0401	Invalid Data Received From ECM/PCM “A”	Defective CAN communication	<Ref. to PS(diag)-32, DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0416	Invalid Data Received From Vehicle Dynamics Control Module	Defective CAN communication	<Ref. to PS(diag)-32, DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1235	Lost Communication With EyeSight	Defective CAN communication	<Ref. to PS(diag)-32, DTC U1235 LOST COMMUNICATION WITH EyeSight, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1433	Invalid Data Received From EyeSight	Defective CAN communication	<Ref. to PS(diag)-32, DTC U1433 INVALID DATA RECEIVED FROM EyeSight, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

12.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC C2511 TORQUE SENSOR FAILURE 1 (MAIN)

DTC DETECTING CONDITION:



When torque sensor main output voltage failure is detected after the ignition switch is ON.

TROUBLE SYMPTOM:

- The steering wheel operation feels heavy.
- STEERING warning light illuminates.

WIRING DIAGRAM:

Electric power steering system <Ref. to WI-199, Electric Power Steering System.>

	Step	Check	Yes	No
1	**CHECK TORQUE SENSOR SIGNAL.** 1) Display the current data of the power steering control module using the Subaru Select Monitor. 2) Check the voltage of «Torque sensor main output», «Torque sensor sub output» and «Torque sensor power supply voltage».	Are the voltage of «Torque sensor main output» and «Torque sensor sub output» 2.5±0.3 V? Is the voltage of «Torque sensor power supply voltage» 5±0.3 V?	Check for poor contact of the connector, and check the conditions again. If the condition recur, go to the next step. Go to step **2**. If it does not recur, complete the inspection.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Remove the cradle. <Ref. to FS-21, Cradle.> 3) Disconnect the connectors (B450, B451). 4) Using a tester and special tool harness, check the resistance between harness terminals. ***Connector & terminal*** ***(B451) No. 1 — (B450) No. 6:*** ***(B451) No. 2 — (B450) No. 7:*** ***(B451) No. 3 — (B450) No. 2:*** ***(B451) No. 4 — (B450) No. 1:***	Is the resistance less than 10 Ω?	Replace the steering gearbox. <Ref. to PS-24, Electric Power Steering Gearbox.>	Repair or replace the harness.

B: DTC C2512 TORQUE SENSOR FAILURE 2 (SUB)

DTC DETECTING CONDITION:
When torque sensor sub output voltage failure is detected after the ignition switch is ON.

NOTE:
For the diagnostic procedures, refer to “DTC 2511 TORQUE SENSOR FAILURE 1 (MAIN)”. <Ref. to PS(diag)-23, DTC C2511 TORQUE SENSOR FAILURE 1 (MAIN), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

C: DTC C2513 TORQUE SENSOR FAILURE 3 (MUCH TOLERANCE)

DTC DETECTING CONDITION:
When torque sensor main/sub output voltage failure is detected after the ignition switch is ON.

NOTE:
For the diagnostic procedures, refer to “DTC 2511 TORQUE SENSOR FAILURE 1 (MAIN)”. <Ref. to PS(diag)-23, DTC C2511 TORQUE SENSOR FAILURE 1 (MAIN), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

D: DTC C2514 TORQUE SENSOR POWER SUPPLY FAILURE

DTC DETECTING CONDITION:
When torque sensor power supply voltage failure is detected after the ignition switch is ON.

NOTE:
For the diagnostic procedures, refer to “DTC 2511 TORQUE SENSOR FAILURE 1 (MAIN)”. <Ref. to PS(diag)-23, DTC C2511 TORQUE SENSOR FAILURE 1 (MAIN), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

E: DTC C2521 MOTOR FAILURE 1 (MOTOR)

DTC DETECTING CONDITION:
- When motor driving element malfunction is detected after assist starts with 500 rpm engine speed reception.
- When motor current failure is detected after assist starts with 500 rpm engine speed reception.
- When motor voltage failure is detected after assist starts with 500 rpm engine speed reception.

TROUBLE SYMPTOM:
- The steering wheel operation feels heavy.
- STEERING warning light illuminates.

NOTE:
When this code is displayed, replace the steering gearbox with a new part. <Ref. to PS-24, Electric Power Steering Gearbox.>

F: DTC C2522 MOTOR MALFUNCTION 2 (RESOLVER)

DTC DETECTING CONDITION:
When resolver signal output voltage failure is detected after assist starts with 500 rpm engine speed reception.

TROUBLE SYMPTOM:
- The steering wheel operation feels heavy.
- STEERING warning light illuminates.

NOTE:
When this code is displayed, replace the steering gearbox with a new part. <Ref. to PS-24, Electric Power Steering Gearbox.>

G: DTC C2531 ECU FAILURE 1 (CPU FAILURE)

DTC DETECTING CONDITION:
When microcomputer malfunction is detected after the ignition switch is ON.
TROUBLE SYMPTOM:
- The steering wheel operation feels heavy.
- STEERING warning light illuminates.

NOTE:
When this code is displayed, replace the steering gearbox with a new part. <Ref. to PS-24, Electric Power Steering Gearbox.>

H: DTC C2532 ECU FAILURE 2 (PERIPHERAL CIRCUIT FAILURE)

DTC DETECTING CONDITION:
- When torque sensor peripheral circuit malfunction inside the power steering control module is detected after assist starts with 500 rpm engine speed reception.
- When storage medium IC malfunction inside the power steering control module is detected at initial check.
- When motor drive circuit malfunction is detected after assist starts with 500 rpm engine speed reception.
- When motor driving element driver malfunction is detected after the ignition switch is ON.
- When intercommunication error of the power steering control module is detected after the ignition switch is ON.

TROUBLE SYMPTOM:
- The steering wheel operation feels heavy.
- STEERING warning light illuminates.

NOTE:
When this code is displayed, replace the steering gearbox with a new part. <Ref. to PS-24, Electric Power Steering Gearbox.>

I: DTC C2533 ECM FAILURE 3 (BOARD TEMPERATURE SENSOR FAILURE)

DTC DETECTING CONDITION:
When thermistor malfunction is detected after the ignition switch is ON.
TROUBLE SYMPTOM:
The steering wheel operation feels heavy.

NOTE:
When this code is displayed, replace the steering gearbox with a new part. <Ref. to PS-24, Electric Power Steering Gearbox.>

J: DTC C2541 VEHICLE SPEED FAILURE(SENSOR FAILURE)

DTC DETECTING CONDITION:
When VDCCM reception failure (related to vehicle speed sensor) is detected after the ignition switch is ON.
TROUBLE SYMPTOM:
The steering wheel operation feels heavy.

	Step	Check	Yes	No
1	**CHECK DTC.** Using the Subaru Select Monitor, read all DTCs.	Is a DTC related to VDC system or vehicle speed signal system detected?	Perform the diagnosis according to the DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication detected?	Perform the diagnosis according to the DTC. <Ref. to LAN(diag)-79, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK VEHICLE SPEED SIGNAL.** 1) Display the current data «Vehicle Speed» of the power steering control module using the Subaru Select Monitor. 2) Lift up the vehicle (so that the wheels turn freely), start the engine, and raise engine speed in gear. **CAUTION:** **Be careful that no one is near the spinning tires and nothing gets caught in them.** 3) Check for whether the data changes according to vehicle speed.	Is the data in sync with the vehicle speed?	It is possible that temporary poor communication occurs. Perform memory clear.	Replace the steering gearbox. <Ref. to PS-24, Electric Power Steering Gearbox.>

K: DTC C2543 ERROR PASSIVE STATUS

DTC DETECTING CONDITION:
When send/receive failure of CAN communication is detected after the ignition switch is ON.
TROUBLE SYMPTOM:
The steering wheel operation feels heavy.

	Step	Check	Yes	No
1	**CHECK PERIPHERALS.** Check the data link connector.	Is any other electrical part connected to the data link connector or harness?	Disconnect the connection of electrical parts and perform inspection again.	Go to step **2**.
2	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication detected?	Perform the diagnosis according to the DTC. <Ref. to LAN(diag)-79, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK DTC.** Read the DTC of the power steering control module using the Subaru Select Monitor. <Ref. to PS(diag)-15, Read Diagnostic Trouble Code (DTC).>	Is DTC C2543 a current malfunction?	Go to step **4**.	System is normal. Temporary interference from noise is a possible cause.
4	**CHECK CONNECTOR.** Check the connecting condition of connector.	Is the connector firmly installed?	Go to step **5**.	Install the connector, and check again.
5	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector (B204).	Is there crimped or spread portion in connector terminal on vehicle harness side and power steering control module side?	Repair or replace faulty parts.	Go to step **6**.
6	**CHECK HARNESS.** Check the harness related to CAN communication system.	Is there any fault in the harness?	Repair or replace the harness.	Replace the steering gearbox. <Ref. to PS-24, Electric Power Steering Gearbox.>

L: DTC C2545 EyeSight SYSTEM ABNORMAL

DTC DETECTING CONDITION:
When the EyeSight system fail flag from stereo camera is received after the ignition switch is ON.
TROUBLE SYMPTOM:
EyeSight steering support function does not operate.

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact of the stereo camera connector?	Repair the poor contact of connector.	Go to step **2**.
2	**CHECK DTC.** Read all DTCs using the Subaru Select Monitor.	Is DTC of EyeSight system detected?	Perform the diagnosis according to the DTC.	Go to step **3**.
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication detected?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-79, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK POWER STEERING CONTROL MODULE.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to PS(diag)-17, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to PS(diag)-16, Inspection Mode.> 4) Read the DTC.	Is DTC C2545 detected?	Replace the steering gearbox. <Ref. to PS-24, Electric Power Steering Gearbox.>	It results from a temporary noise interference.

M: DTC C2546 EyeSight VALUE ABNORMAL

DTC DETECTING CONDITION:
When the steering support indication value from stereo camera is out of range after the ignition switch is ON.
TROUBLE SYMPTOM:
EyeSight steering support function does not operate.

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact of the stereo camera connector?	Repair the poor contact of connector.	Go to step **2**.
2	**CHECK DTC.** Read all DTCs using the Subaru Select Monitor.	Is DTC of EyeSight system detected?	Perform the diagnosis according to the DTC.	Go to step **3**.
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication detected?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-79, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK POWER STEERING CONTROL MODULE.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to PS(diag)-17, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to PS(diag)-16, Inspection Mode.> 4) Read the DTC.	Is DTC C2546 detected?	Replace the steering gearbox. <Ref. to PS-24, Electric Power Steering Gearbox.>	It results from a temporary noise interference.

N: DTC C2547 EyeSight CHECK SUM ABNORMAL

DTC DETECTING CONDITION:
When check sum error of EyeSight transmission data is detected after the ignition switch is ON.
TROUBLE SYMPTOM:
EyeSight steering support function does not operate.

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact of the stereo camera connector?	Repair the poor contact of connector.	Go to step **2**.
2	**CHECK DTC.** Read all DTCs using the Subaru Select Monitor.	Is DTC of EyeSight system detected?	Perform the diagnosis according to the DTC.	Go to step **3**.
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication detected?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-79, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK POWER STEERING CONTROL MODULE.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to PS(diag)-17, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to PS(diag)-16, Inspection Mode.> 4) Read the DTC.	Is DTC C2547 detected?	Replace the steering gearbox. <Ref. to PS-24, Electric Power Steering Gearbox.>	It results from a temporary noise interference.

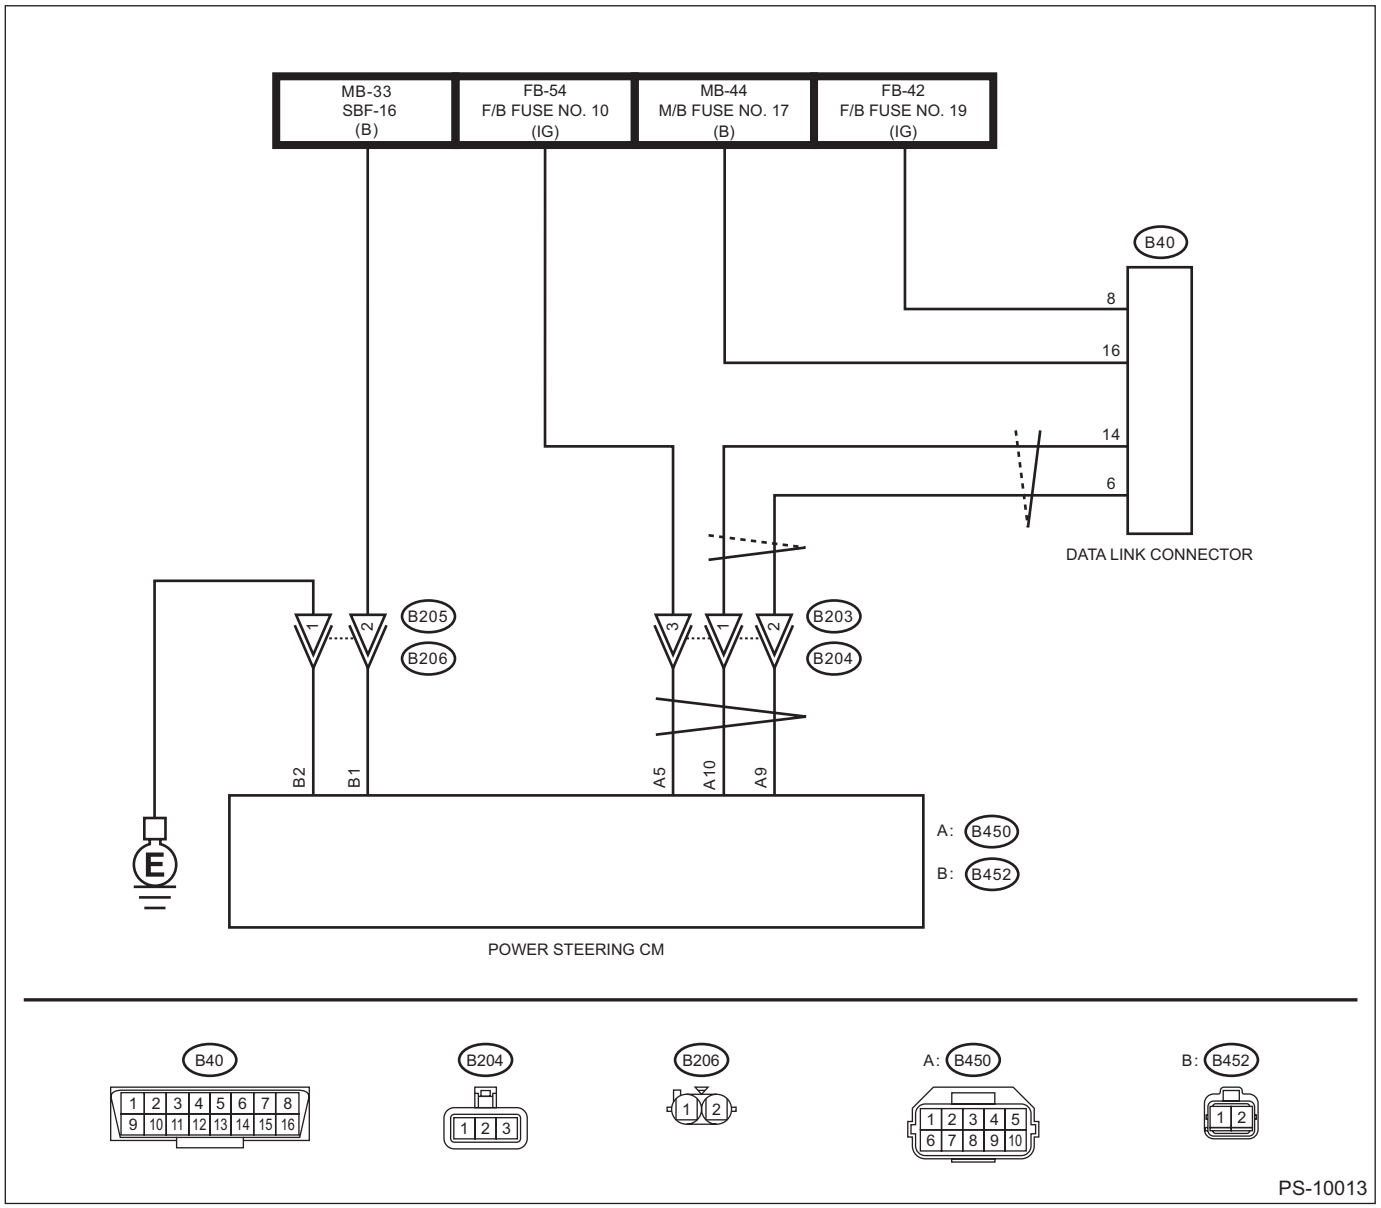
O: DTC C2548 VEHICLE DYNAMICS CONTROL MODULE ABNORMAL

DTC DETECTING CONDITION:
When error flag from VDCCM is detected for 2 seconds after the ignition switch is ON.

	Step	Check	Yes	No
1	**CHECK DTC.** Using the Subaru Select Monitor, read all DTCs.	Is a DTC related to VDC system (sensors) detected?	Perform the diagnosis according to the DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication detected?	Perform the diagnosis according to the DTC. <Ref. to LAN(diag)-79, List of Diagnostic Trouble Code (DTC).>	Replace the steering gearbox. <Ref. to PS-24, Electric Power Steering Gearbox.>

P: DTC C2551 POWER SUPPLY RELAY FAILURE

DTC DETECTING CONDITION:



- When contact deposit malfunction of power supply relay is detected at initial check.
- When power supply voltage failure is detected after the ignition switch is ON.
- When power supply voltage drop is detected with 500 rpm engine speed reception.

TROUBLE SYMPTOM:

- The steering wheel operation feels heavy.
- STEERING warning light illuminates.

NOTE:
If power supply voltage failure exists at the vehicle side, the warning light goes off if the normal voltage returns.

WIRING DIAGRAM:
Electric power steering system <Ref. to WI-199, Electric Power Steering System.>

	Step	Check	Yes	No
1	**CHECK BATTERY.** Check the battery and fuse.	Is the voltage 12 V or more? Is the specific gravity 1.260 or more? Is the battery terminal installed properly? Is the fuse OK?	Go to step **2**.	Repair or replace faulty parts.
2	**CHECK WIRING HARNESS.** 1) Disconnect the connector. (B205, B206) 2) Turn the ignition switch to ON. 3) Using a tester and special tool harness, check the voltage between terminals. ***Connector & terminal*** ***(B205) No. 2 (+) — Chassis ground (–):***	Is the voltage 12 V or more?	Go to step **3**.	Repair the open circuit of harness or the poor contact of connector between the power steering control module and the battery.
3	**CHECK GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Using a tester and special tool harness, check the resistance between terminals. ***Connector & terminal*** ***(B205) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit or poor contact of the harness between the power steering control module and chassis ground.
4	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the power steering control module connector (B452). 3) Using a tester and special tool harness, check the resistance between harness terminals. ***Connector & terminal*** ***(B206) No. 1 — (B452) No. 2:*** ***(B206) No. 2 — (B452) No. 1:***	Is the resistance less than 10 Ω?	Replace the steering gearbox. <Ref. to PS-24, Electric Power Steering Gearbox.>	Repair or replace the harness.

Q: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

R: DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

S: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

Y: DTC U1433 INVALID DATA RECEIVED FROM EyeSight

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

BODY SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

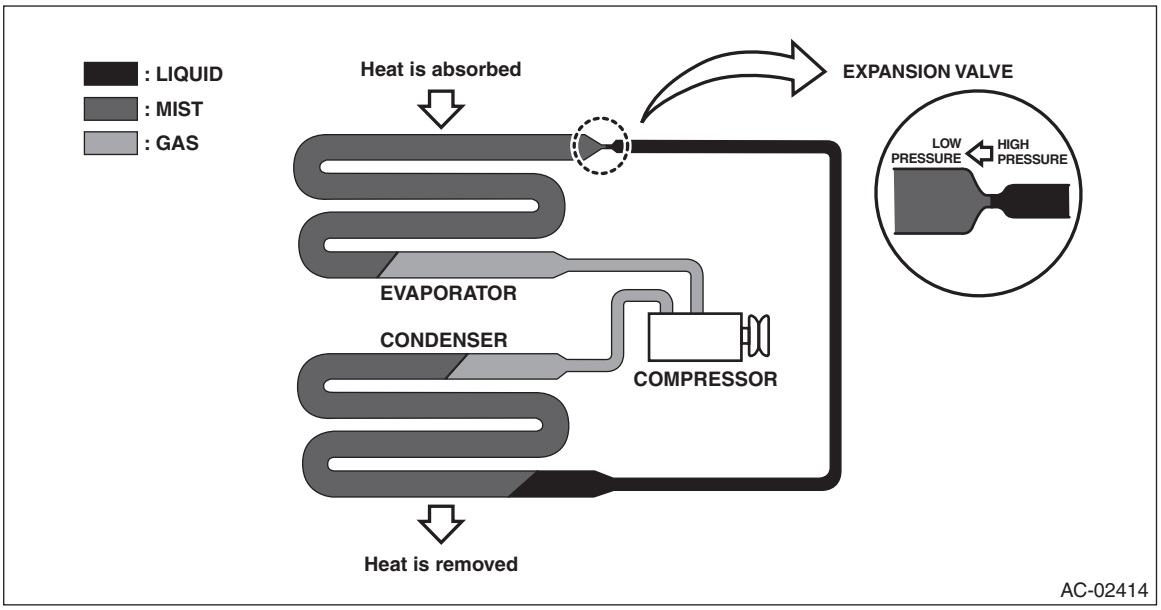
1. General Description

A: SPECIFICATION

1. HEATER SYSTEM



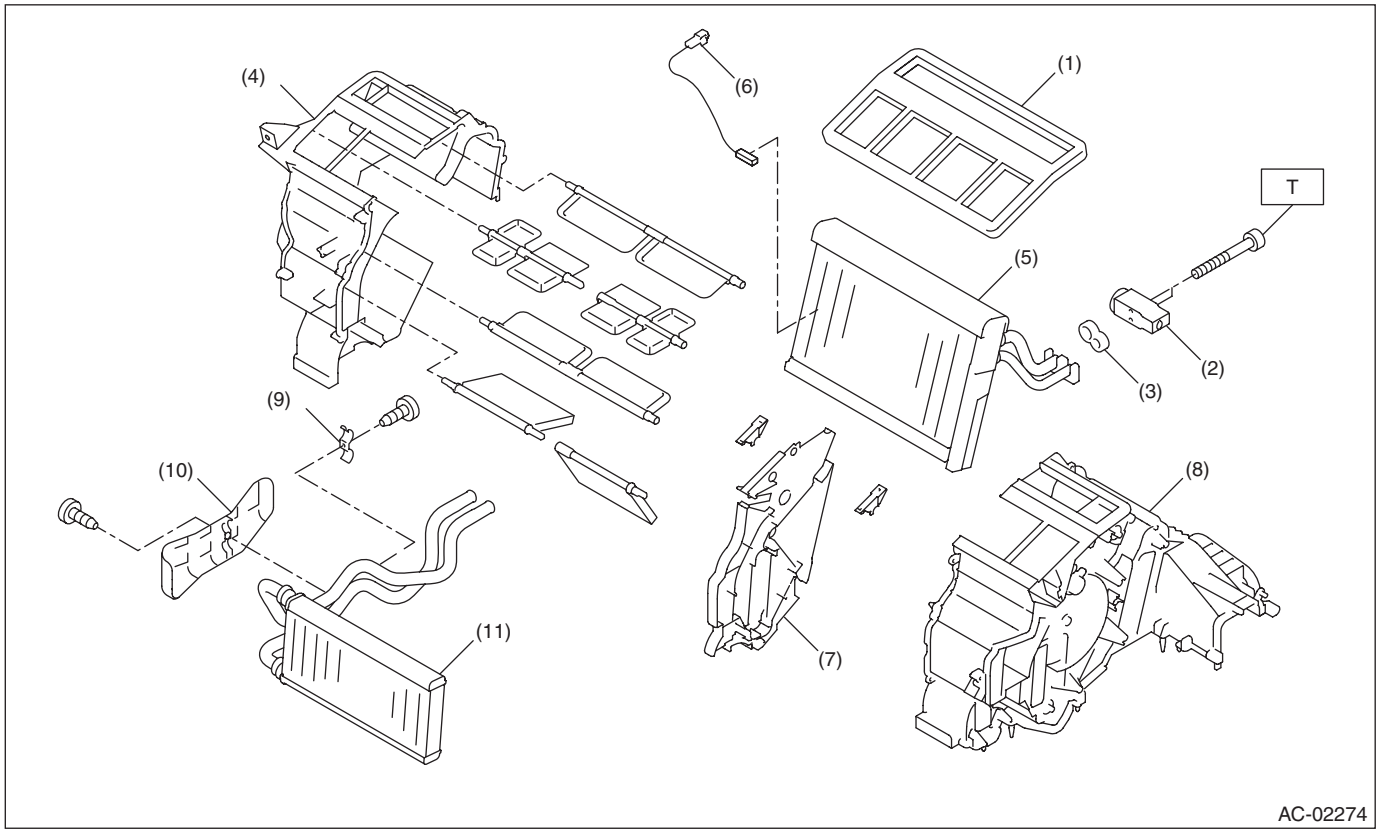
Item		Specifications	Condition
Heating capacity		4.8 kW (4,127 kcal/h, 16,377 BTU/h) or more	• Air flow control switch: FOOT • Temperature control dial: HI (MAX HOT) • Temperature difference between hot water and inlet air: 65°C (149°F) • Hot water flow rate: 360 L (95.1 US gal, 79.2 Imp gal)/h
Air flow rate		300 m^3 (10,596 cu ft)/h	FOOT mode (FRESH), MAX HOT at 12.5 V
Max air flow rate		495 m^3 (17,483 cu ft)/h	• Temperature control dial: LO (MAX COOL) • Fan switch or dial: HI (MAX) – Auto A/C model: 7th position – Manual A/C model: 4th position • FRESH/RECIRC switch: RECIRC
Heater core size (height × length × width)		264 × 100 × 27 mm (10.4 × 3.94 × 1.06 in)	—
Blower motor	Type	Magnet motor 260 W or less	12 V
	Fan type and size (diameter × width)	Sirocco fan type 150 × 75 mm (5.91 × 2.95 in)	—

2. A/C SYSTEM

Item			Specifications
Type of air conditioner			Reheat air-mix type
Cooling capacity			4.18 kW [at 500 m^3 (17,660 cu ft)/h] (3,594 kcal/h, 14,262 BTU/h)
Refrigerant			HFC-134a (CH_2FCF_3) [0.375±0.025 kg (0.83±0.06 lb)]
Compressor		Type	H4 model: Swash plate, variable volume (TSE14F) H6 model: Swash plate, variable volume (TSE14C)
		Discharge	140.6 cc (8.58 cu in)/rev
		Max. permissible speed	6,000 r/min
Pulley		Type of belt	V-belt 6 PK
		Pulley dia. (effective dia.)	110 mm (4.33 in)
		Pulley ratio	1.3
Condenser		Type	Corrugated fin (sub cool type)
		Core face area	0.186 m^2 (2.002 sq ft)
		Core thickness	11.5 mm (0.45 in)
		Radiation area	3.516 m^2 (37.85 sq ft)
Receiver drier		Effective inner capacity	190 cm^3 (11.6 cu in)
Expansion valve		Type	Internally equalizing
Evaporator		Type	Double tank
		Dimensions (W × H × T)	293.1 × 171 × 38 mm (11.54 × 6.73 × 1.50 in)
Blower fan		Fan type	Sirocco fan
		Outer diameter × Width	150 × 75 mm (5.91 × 2.95 in)
		Power consumption	260 W
Condenser fan (sub fan)		Motor type	Magnet
		Power consumption	H4 model: 120 W H6 model: 240 W
		Fan outer diameter	320 mm (12.6 in)
Radiator fan (main fan)		Motor type	Magnet
		Power consumption	H4 model: 120 W H6 model: 240 W
		Fan outer diameter	320 mm (12.6 in)
Idle speed	MPFI model	No load	H4 MT model: 650±100 r/min H4 CVT model: 675±100 r/min H6 model: 700±100 r/min
		A/C ON	H4 MT model: 800 — 850±100 r/min H4 CVT model: 700±100 r/min H6 model: 700 — 910±100 r/min

3. BASIC OPERATION

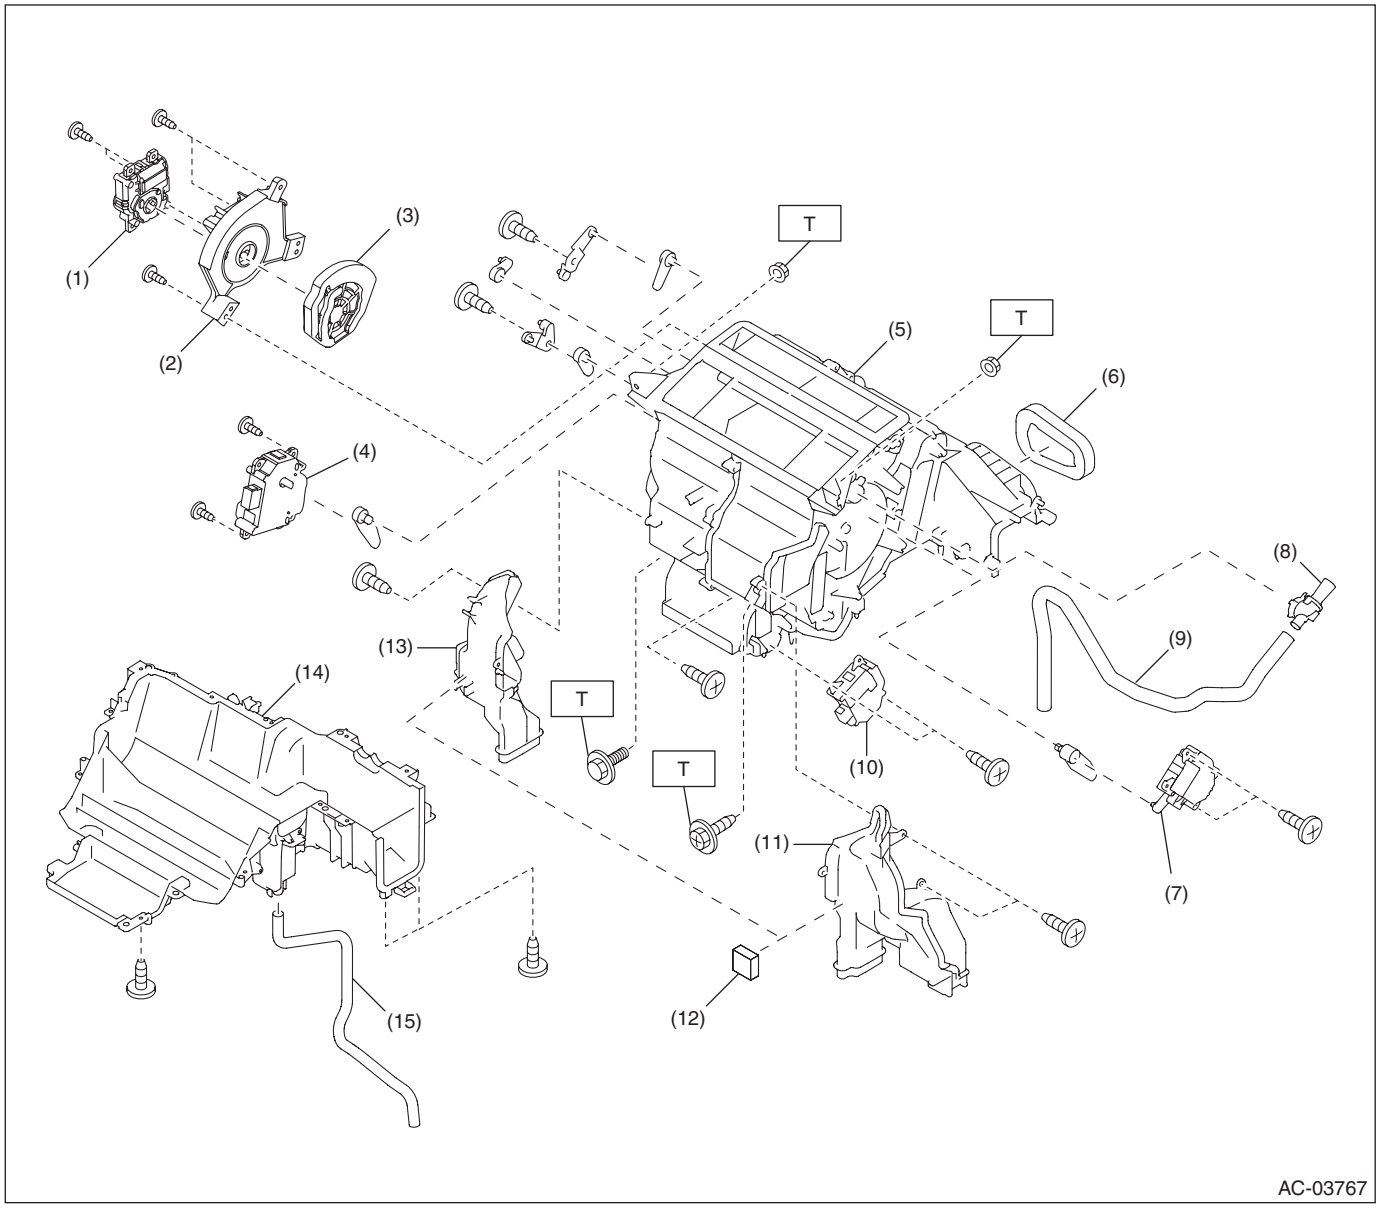
The cooling system cools down the compartment by using the pipes connecting parts and cycling the evaporable liquid (refrigerant) within the sealed system in a repeated process of “vaporization — liquefaction — re-vaporization”.



Item	Operation
Compressor	Sucks and pressurizes the low temperature, low pressure refrigerant gas that was vaporized at the evaporator by absorbing heat from the compartment, and sends the high temperature, high pressure refrigerant gas to the condenser.
Condenser	Cools the high temperature, high pressure refrigerant gas sent from the compressor for condense and liquefaction.
Expansion valve	• Sprays the high temperature, high pressure liquid refrigerant from the small hole in order to let the refrigerant expand rapidly to turn it into low temperature, low pressure mist. • The refrigerant amount is adjusted according to the refrigerant vaporization condition in the evaporator.
Evaporator	The evaporator turns into a low temperature condition when the mist refrigerant that was turned into a low temperature, low pressure condition at the expansion valve is vaporized in large quantity in the evaporator. Passing air flow through the low temperature evaporator emits cold air.

B: LOCATION

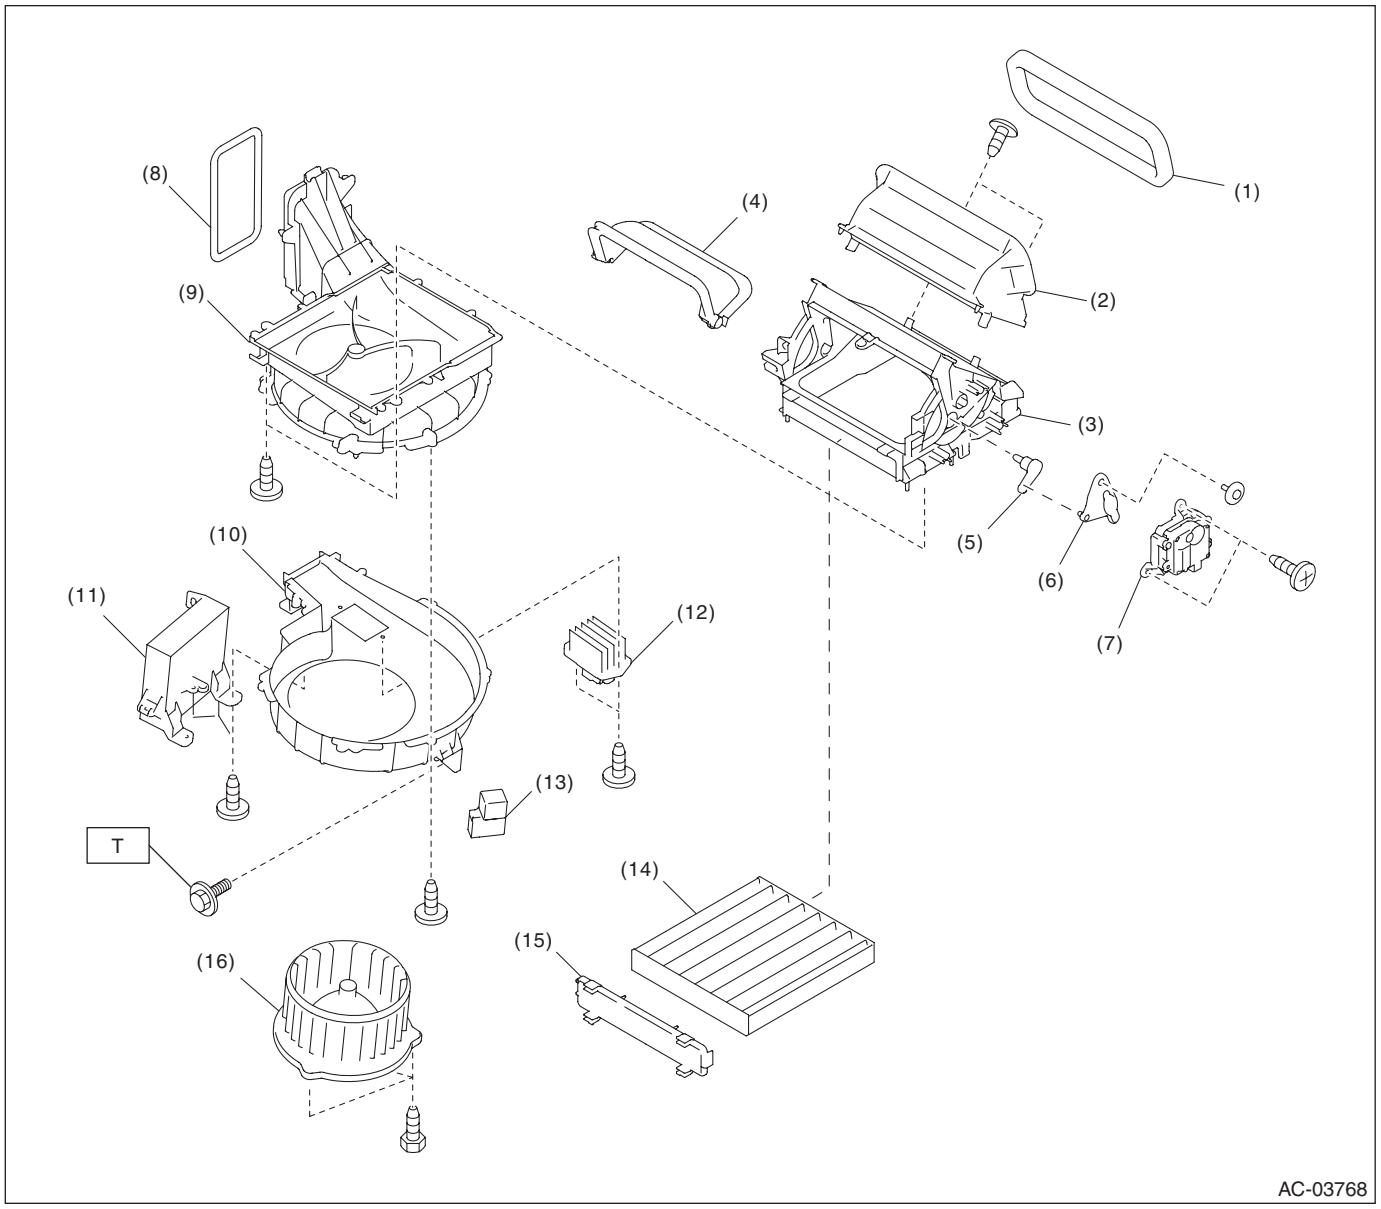
Refer to “Electrical Component Location” for “HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)” section. <Ref. to AC(diag)-4, Electrical Component Location.>



C: COMPONENT

1. HEATER COOLING UNIT

(1) Packing - heater unit
(2) Expansion valve - cooling
(3) Packing
(4) Case - heater unit LH
(5) Evaporator ASSY - cooling
(6) Thermostat - cooling
(7) Plate
(8) Case - heater unit RH
(9) Clamp
(10) Cover
(11) Heater core

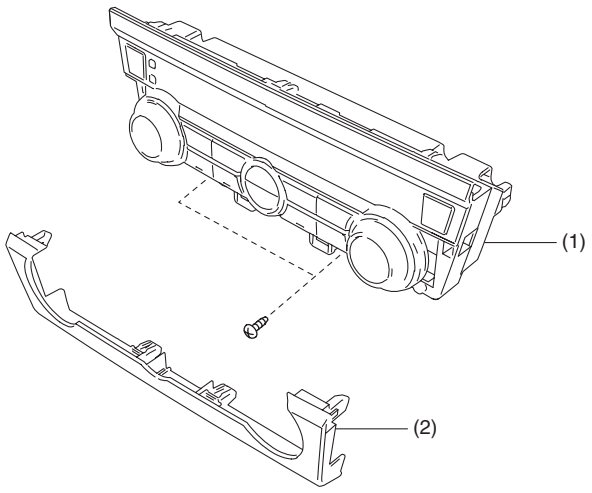


Tightening torque: N·m (kgf-m, ft-lb)
T: 3.5 (0.4, 2.6)

(1) Motor - actuator mode
(2) Cover - actuator
(3) Link plate
(4) Motor - actuator mix LH
(5) Heater cooling unit
(6) Packing
(7) Motor - actuator mix RH
(8) Aspirator
(9) Aspirator hose
(10) Motor ASSY - rear heater
(11) Duct - foot assist
(12) Packing
(13) Duct - foot driver
(14) Case - heater lower
(15) Hose - heater drain

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

2. BLOWER MOTOR UNIT

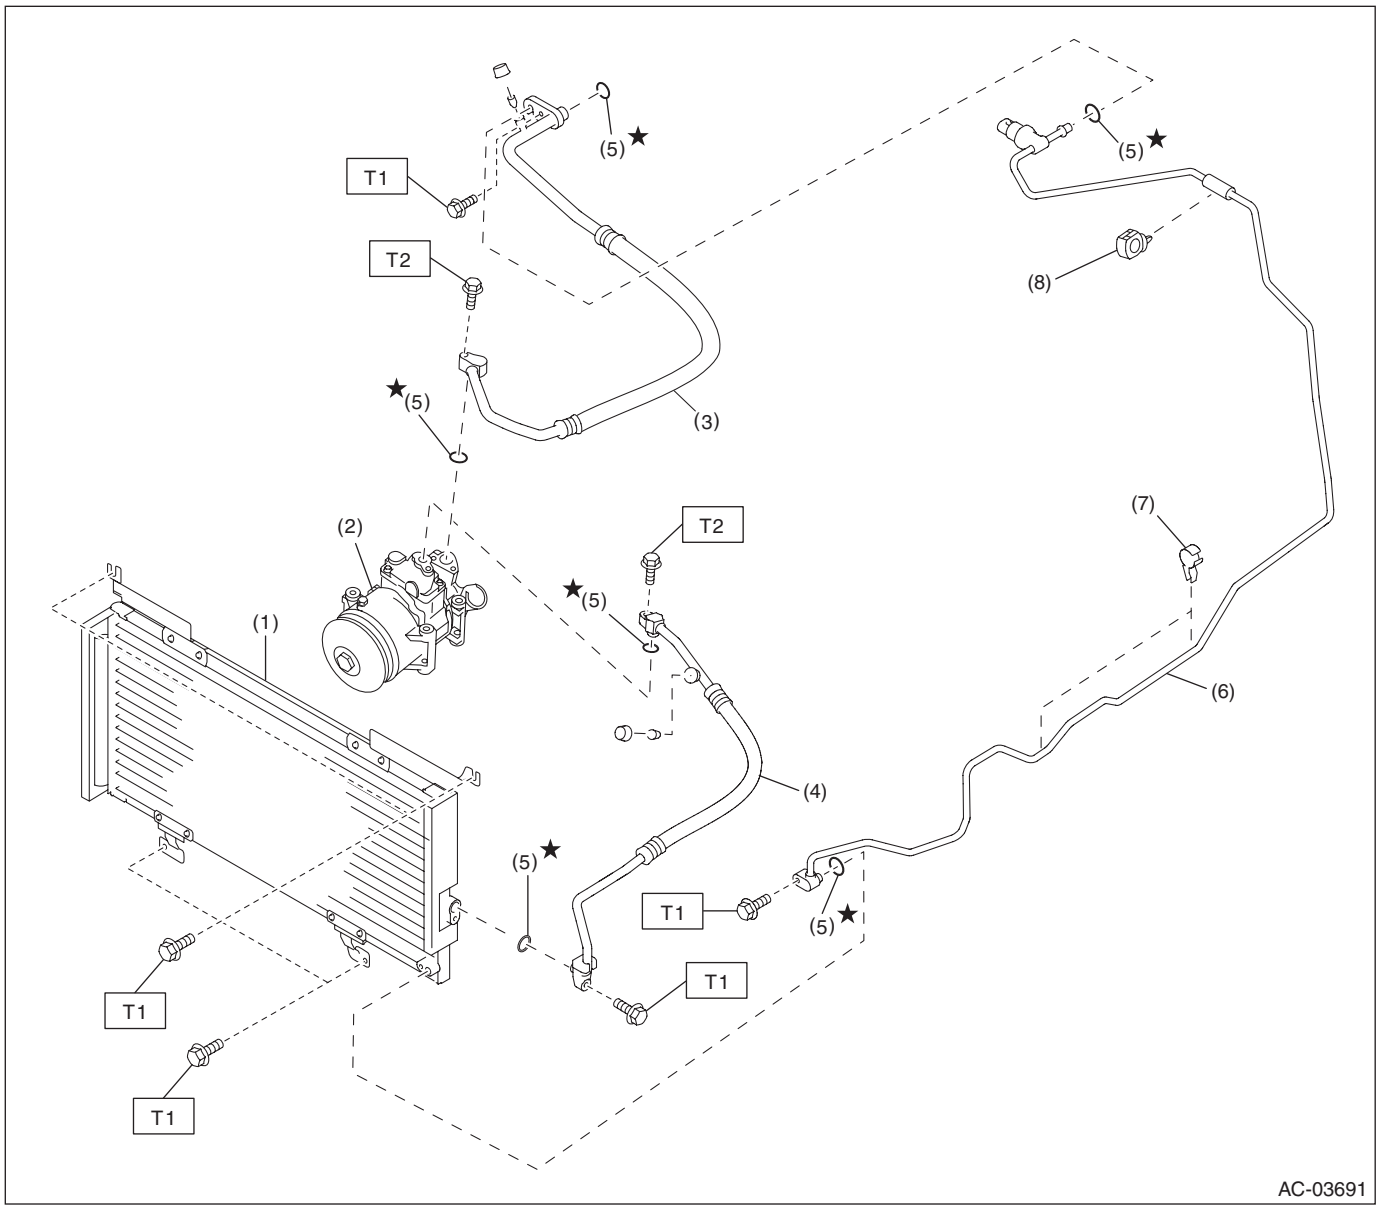


(1) Packing
(2) Air duct cover UPR
(3) Air duct cover LWR
(4) Shutter - heater
(5) Lever
(6) Link plate
(7) Intake door actuator
(8) Packing - blower
(9) Case upper - blower
(10) Case lower - blower
(11) Control module
(12) Power transistor (auto A/C model) or resistor (manual A/C model)
(13) Blower motor relay
(14) Filter
(15) Filter cover
(16) Blower motor ASSY

Tightening torque: N·m (kgf-m, ft-lb)

T: 7.5 (0.8, 5.5)

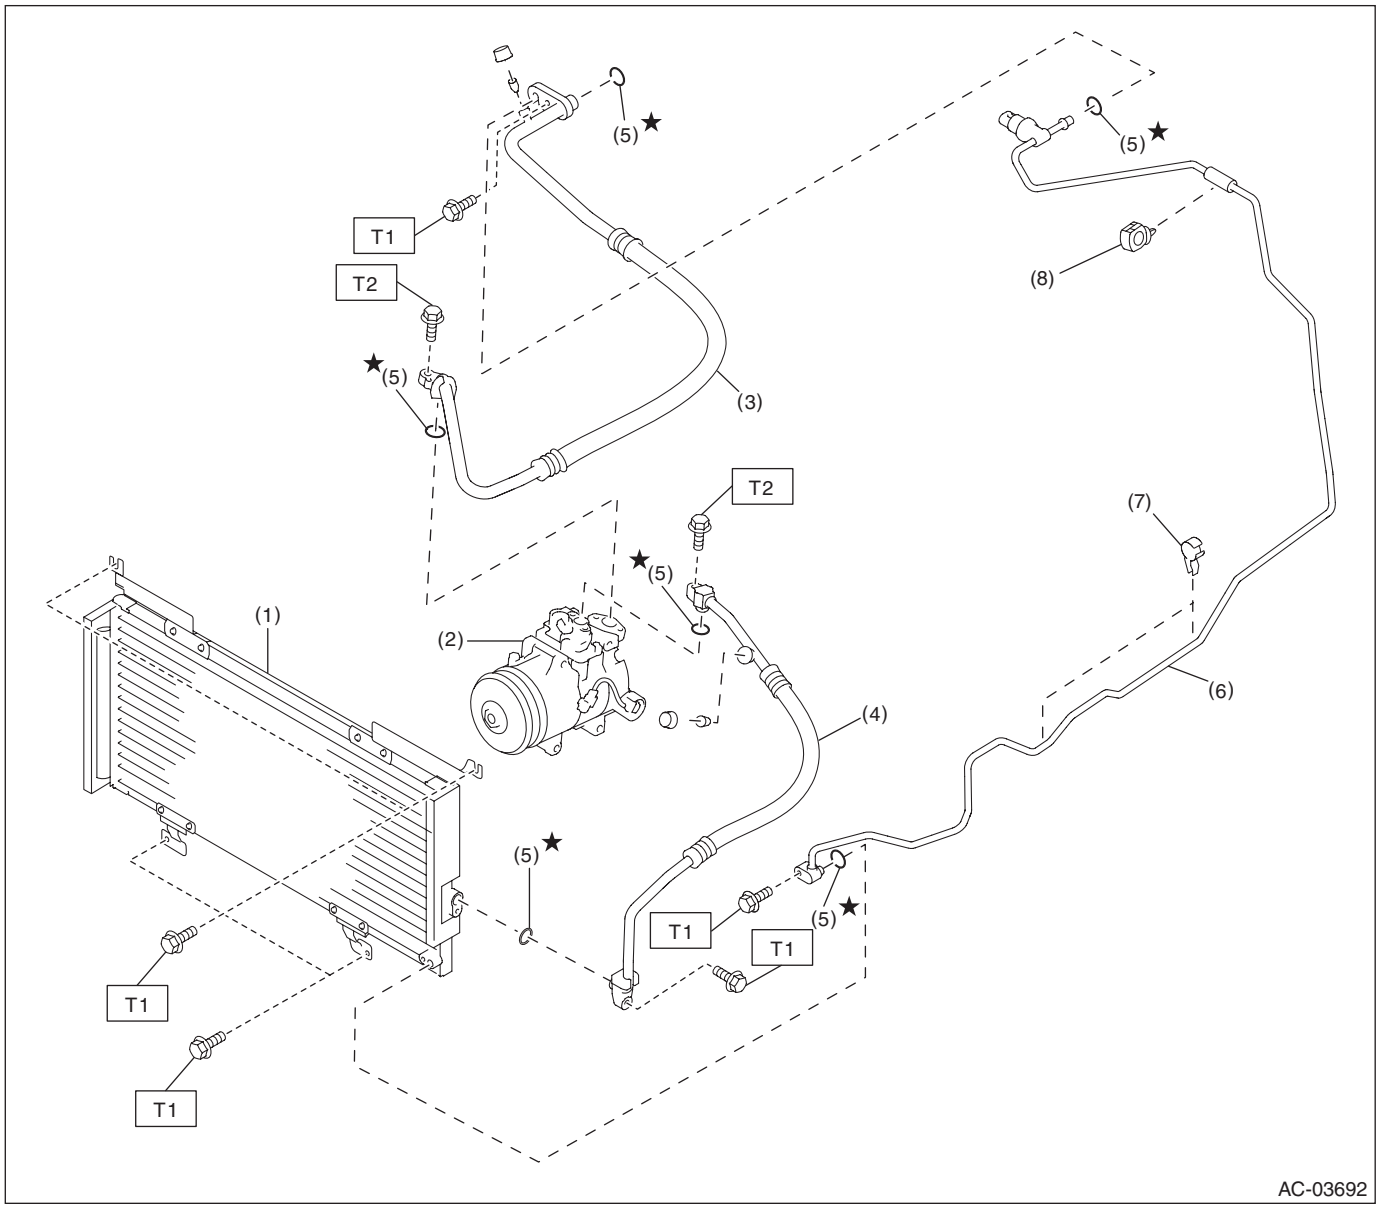
3. CONTROL PANEL



AC-03658

(1) Heater control ASSY
(2) Control module cover

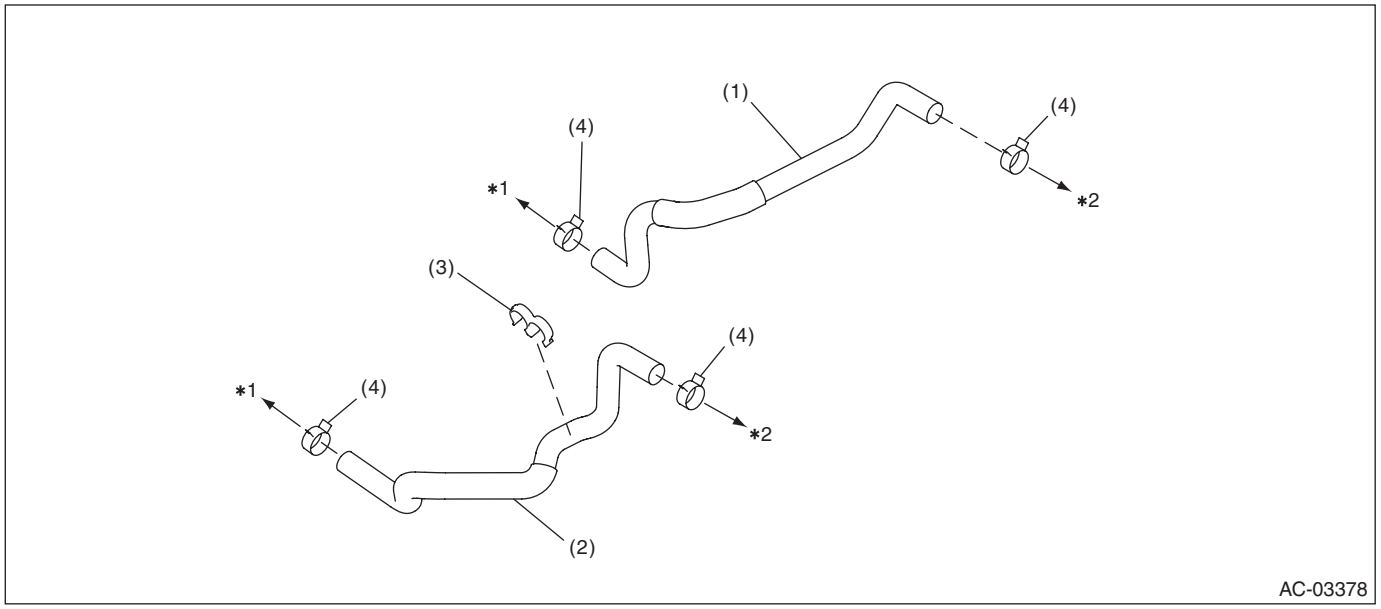
4. AIR CONDITIONING UNIT



- H4 model

(1)	Condenser ASSY - air conditioner	(5)	Seal O-ring
(2)	Compressor ASSY	(6)	Pipe - evaporator cooling
(3)	Hose - pressure discharge	(7)	Clip - pipe
(4)	Hose - pressure suction	(8)	Clip

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 10 (1.0, 7.4)

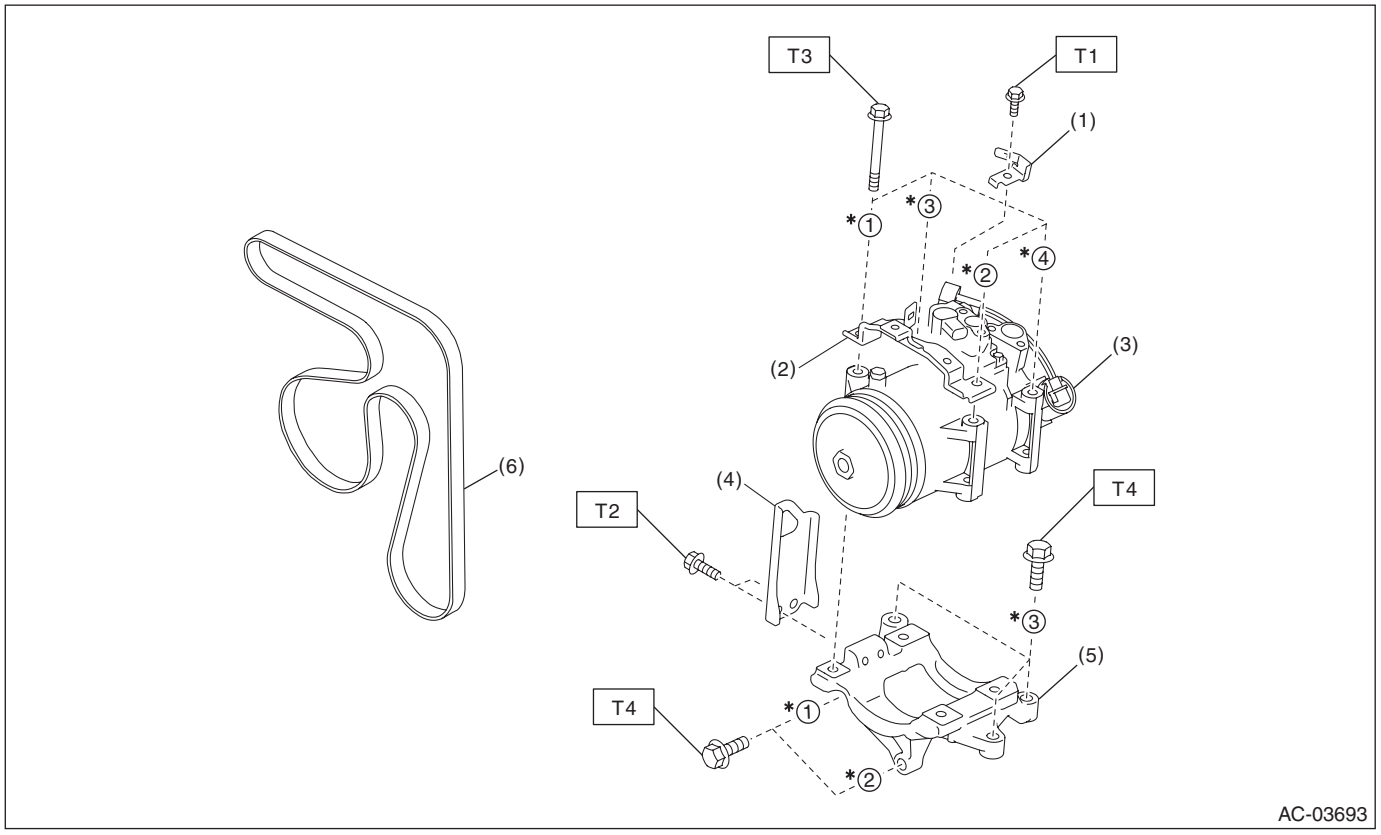


- H6 model

(1)	Condenser ASSY - air conditioner	(5)	Seal O-ring
(2)	Compressor ASSY	(6)	Pipe - evaporator cooling
(3)	Hose - pressure discharge	(7)	Clip - pipe
(4)	Hose - pressure suction	(8)	Clip

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 10 (1.0, 7.4)

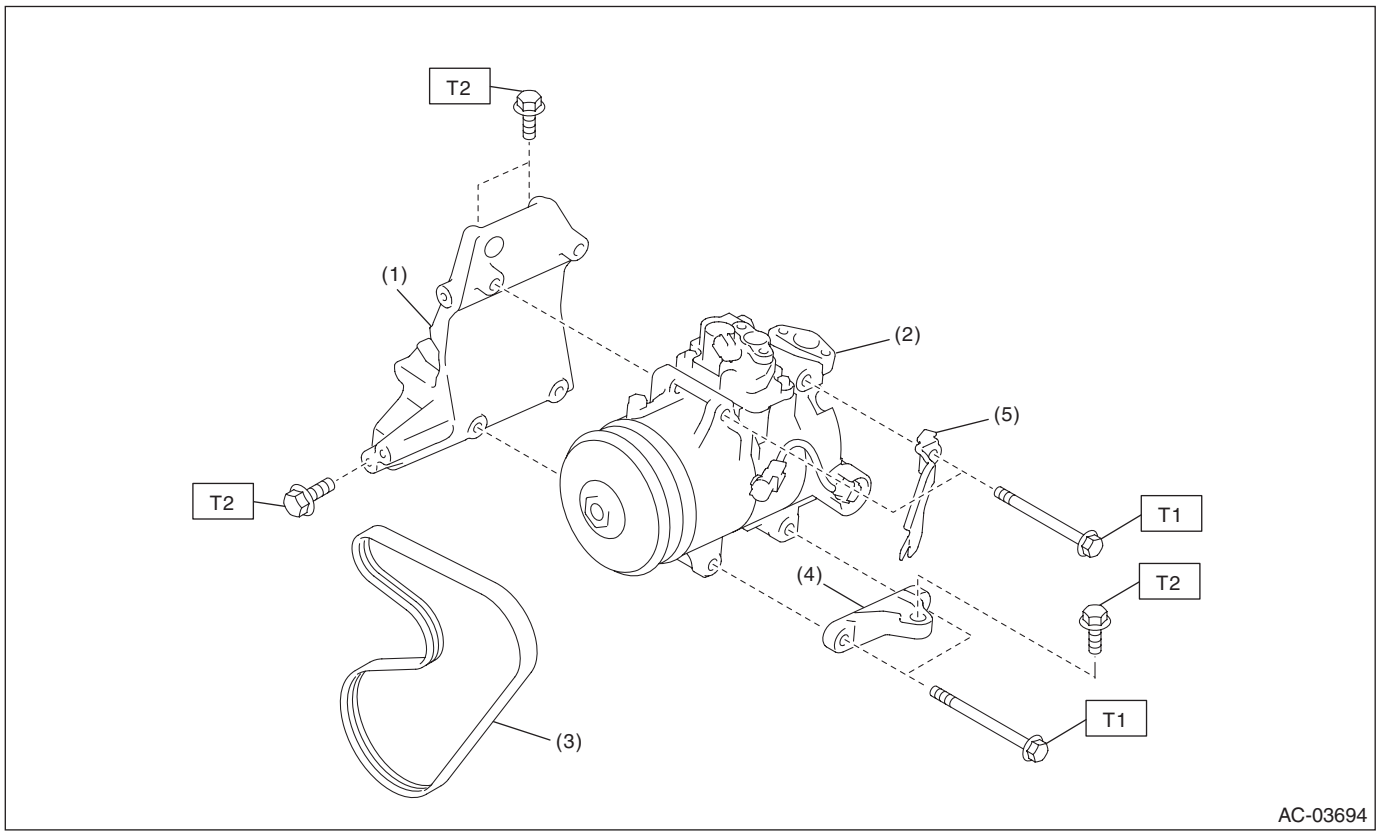
5. HEATER HOSE



(1) Hose - heater outlet
(2) Hose - heater inlet
(3) Clip
(4) Clamp

*1: Engine side
*2: Heater core side

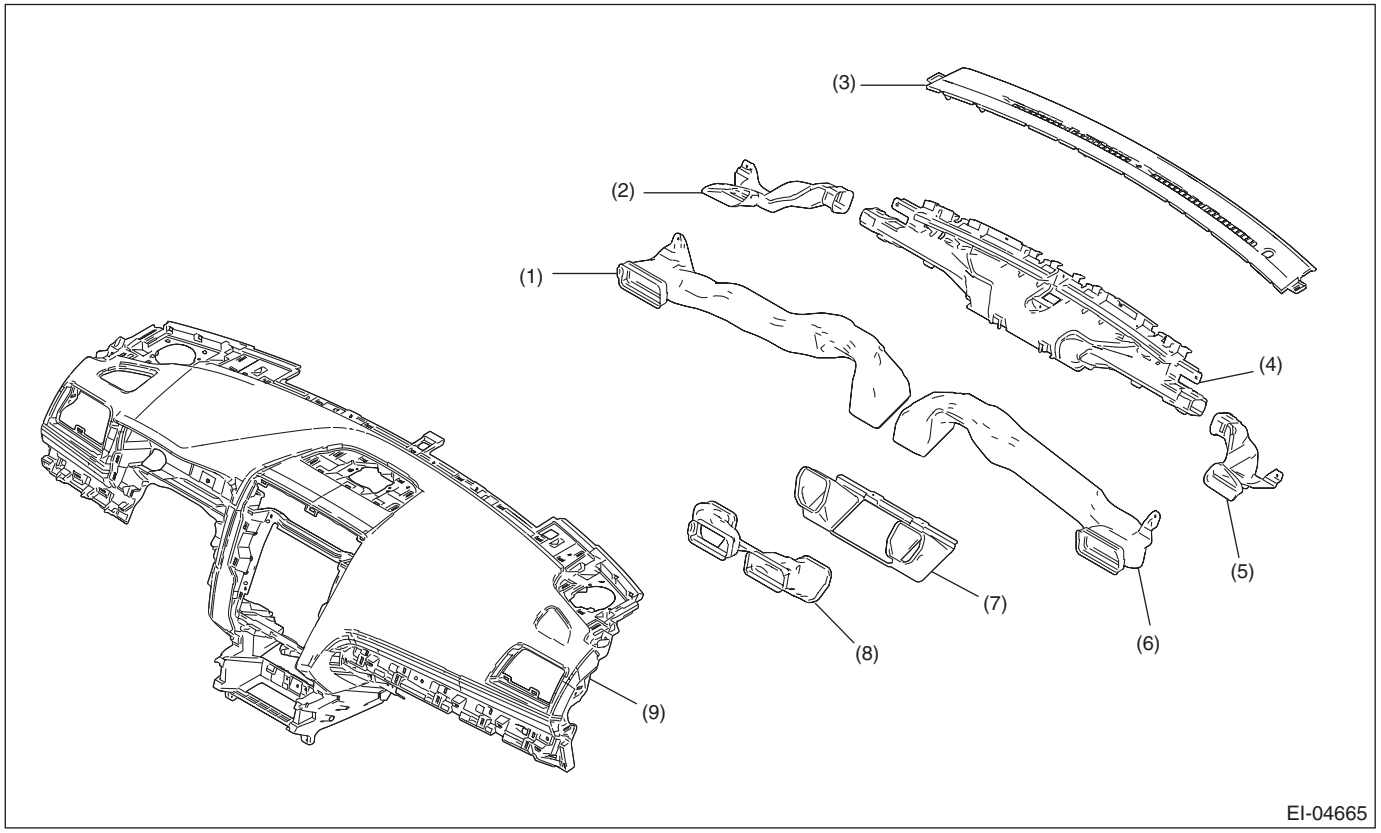
6. COMPRESSOR



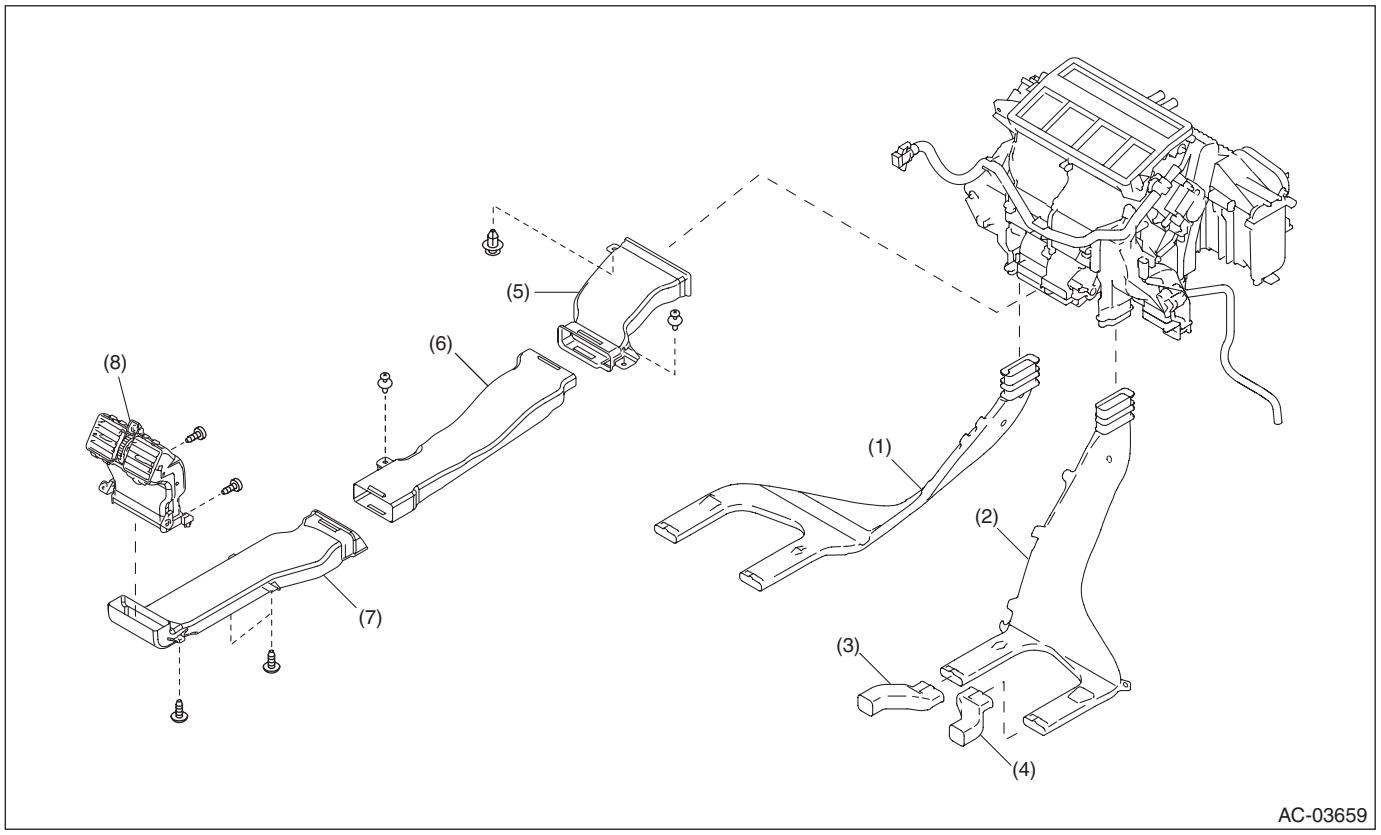
- H4 model

(1)	Bracket - connector	(4)	Hanger - engine front	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Bracket - V-belt cover	(5)	Bracket - air conditioner	***T1: 6.4 (0.7, 4.7)***
(3)	Compressor ASSY	(6)	V-belt (6 PK)	***T2: 20 (2.0, 14.8)***
				T3: 25 (2.5, 18.4)
				T4: 36 (3.7, 26.6)

* Tighten the compressor assembly and the bracket - air conditioner in the numerical order as shown in the figure.



- H6 model



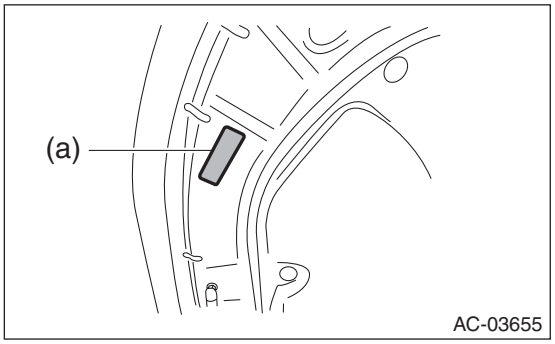
(1) Bracket ASSY - compressor
(2) Compressor ASSY
(3) V-belt (6 PK)
(4) Bracket - air conditioner
(5) Bracket - connector

Tightening torque: N·m (kgf-m, ft-lb)
T1: 26.5 (2.7, 19.5)
T2: 36 (3.7, 26.6)

7. HEATER DUCT

(1) Duct - side ventilation LH
(2) Duct - side defroster LH
(3) Duct - front defroster
(4) Grille - front defroster
(5) Duct - side defroster RH
(6) Duct - side ventilation RH
(7) Duct - center vent
(8) Duct - center vent front
(9) Panel COMPL - instrument

(1) Duct - rear heater LH
(2) Duct - rear heater RH
(3) Duct - extension LH
(4) Duct - extension RH
(5) Duct - console front
(6) Duct - console rear
(7) Center console duct
(8) Grille ASSY - rear heater



D: CAUTION

Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.

1. HFC-134A A/C SYSTEM

- The cooling system components for the HFC-134a system using such as the refrigerant and compressor oil are different from the conventional CFC-12 system components and they are incompatible with each other.
- Vehicles with the HFC-134a system can be identified by the label (a) attached to the vehicle.

Before maintenance, check A/C system which is installed to the vehicle.

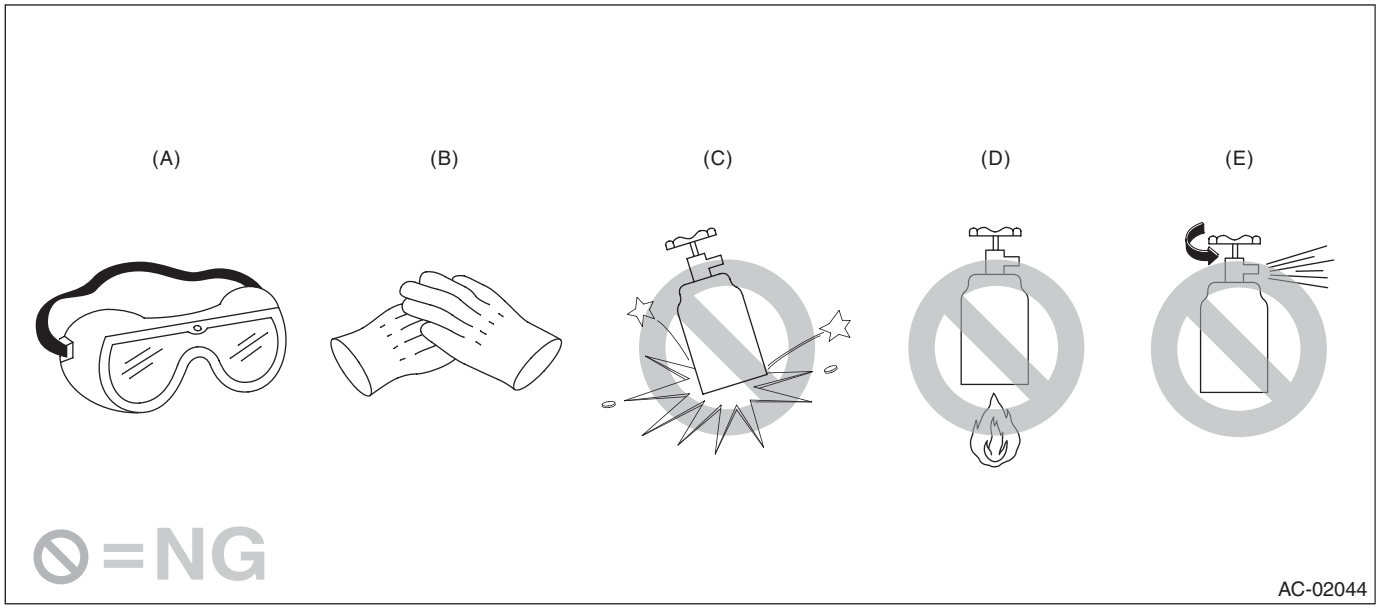
2. COMPRESSOR OIL

- HFC-134a compressor oil has no compatibility with that of CFC-12 system.
- Use only the manufacturer-authorized compressor oil, ND-OIL8, for the HFC-134a system.
- Do not mix multiple compressor oils.

If CFC-12 compressor oil is used in the HFC-134a A/C system, the compressor may become stuck due to poor lubrication, or the refrigerant may leak due to swelling of rubber parts.
On the other hand, if HFC-134a compressor oil is used in a CFC-12 A/C system, the durability of the A/C system will be lowered.

- HFC-134a compressor oil is very hygroscopic. When replacing or installing/removing A/C parts, immediately isolate the oil from atmosphere using a plug or tape. In order to avoid moisture, store the oil in a container with its cap tightly closed.

3. REFRIGERANT

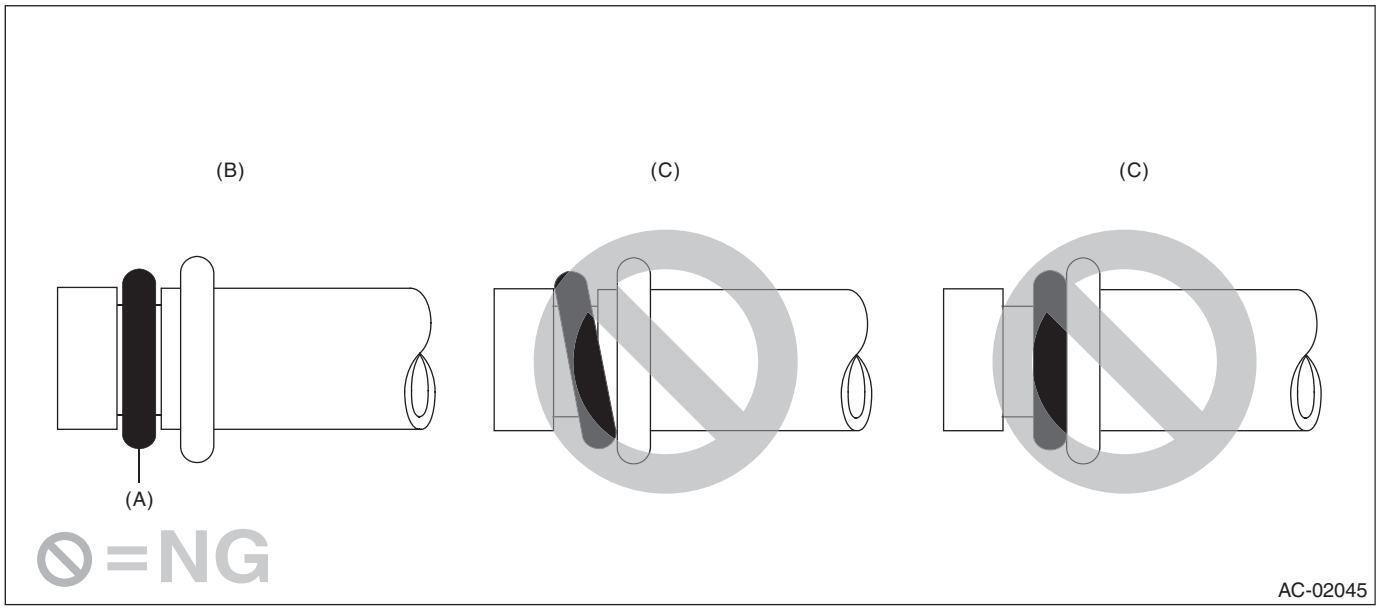


- CFC-12 refrigerant cannot be used in a HFC-134a A/C system. HFC-134a refrigerant, also cannot be used in a CFC-12 A/C system.
- If an incorrect or no refrigerant is used, it will result in poor lubrication and the compressor may be damaged.

4. HANDLING OF REFRIGERANT

- The refrigerant boils at approx. –30°C (–22°F). When handling it, be sure to wear protective goggles and protective gloves. Direct contact of the refrigerant with skin may cause frostbite.

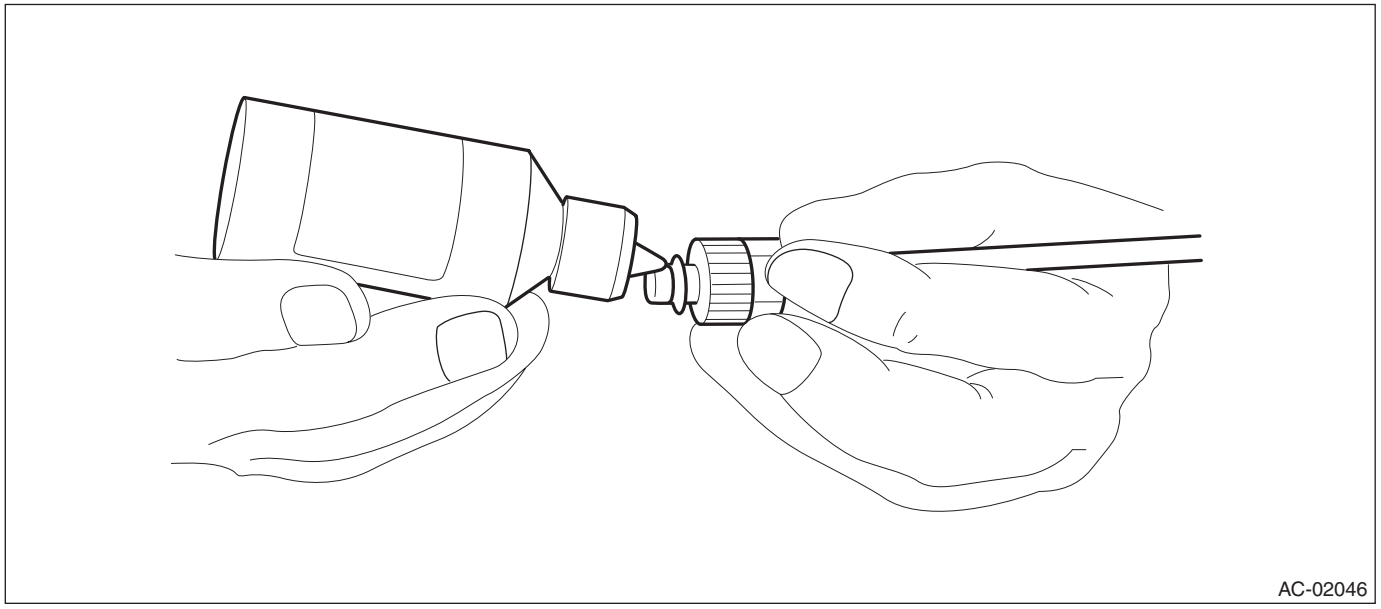
If the refrigerant gets into your eye, avoid rubbing your eyes with your hands. Wash your eyes with plenty of water, and receive medical treatment from an eye doctor.



- Do not heat a service can. If a service can is directly heated, or put into boiling water, the inside pressure will become extremely high. This may cause the can to explode. If a service can must be warmed up, use warm water of 40°C (104°F) or less.
- Do not drop or impact a service can. (Observe the precautions and operation procedure described on the refrigerant container.)
- When the engine is running, do not open the high-pressure valve of manifold gauge. The high-pressure gas will back-flow resulting in an explosion of the can.
- Provide good ventilation and do not work in a closed area.
- In order to prevent global warming, avoid releasing HFC-134a into the atmosphere. Using a refrigerant recovery system, discharge and recycle the gas.

(A) Goggles
(B) Gloves
(C) Do not apply impact.
(D) No direct heat on container
(E) Do not discharge

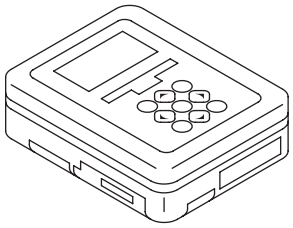
5. O-RING CONNECTIONS



- Always use a new O-ring.
- In order to keep the O-rings free of lint which will cause a refrigerant gas leak, perform work without using gloves or waste cloths.
- Apply compressor oil to O-rings to avoid sticking, before installation.
- Use a torque wrench to tighten the O-ring fittings. Over-tightening will result in damage of the O-ring and deformation of the pipe end.
- If the work is interrupted before completing pipe connections, recap the pipes, components and fittings with a plug or tape to prevent foreign matter from entering.
- Visually check the surfaces and mating surfaces of O-rings, threads and connecting points. If a failure is found, replace the applicable parts.
- Install the O-rings straight against the pipe groove.

(A) O-ring (B) OK (C) NG

- Use compressor oil specified in the service manual to lubricate the O-rings.



Apply oil to the top and sides of O-rings before installation.
Apply compressor oil to the pipe grooves.

• After tightening, use a clean cloth to remove excess compressor oil from the connections and any oil which may have run on the vehicle body or other parts.
• If any leakage is suspected after tightening, do not tighten the connections further, but disconnect the connections, remove the O-rings, and check the O-rings, threads, and connections.

E: PREPARATION TOOL

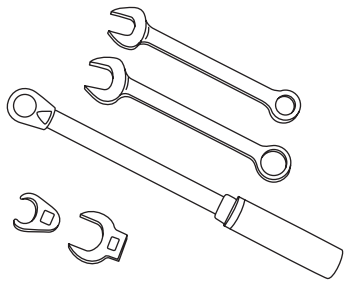
1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system. NOTE: For detailed operation procedures of SUBARU SELECT MONITOR III KIT, refer to “PC application help for Subaru Select Monitor”.

2. GENERAL TOOL

CAUTION:
When working on vehicles with a HFC-134a system, only use HFC-134a specified tools and parts. Do not mix CFC-12 tools and parts. If HFC-134a and CFC-12 refrigerant or compressor oil is mixed, it will result in poor lubrication and the compressor may be damaged.
In order to prevent the mixture of HFC-134a and CFC-12 parts and liquid, the type of tool and screw, and the replacement valves used are different. The gas leak detectors for the HFC-134a and CFC-12 systems must also not be interchanged.

	HFC-134a	CFC-12
Tool and screw type	Millimeter size	Inch size
Valve type	Quick joint type	Screw-in type



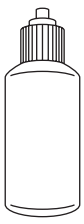


Illustration	Tools and Equipment
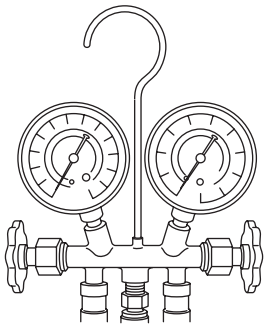
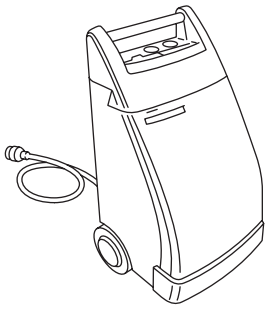
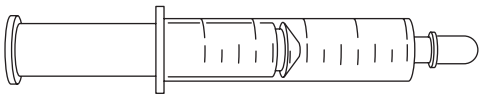
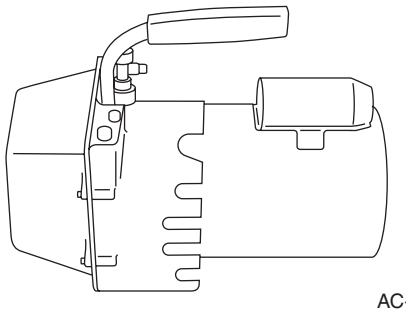
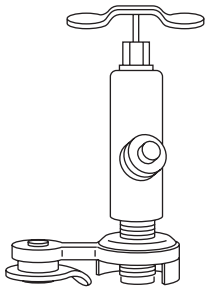
 AC-00213	Wrench Various **WRENCHES** will be required to service any A/C system. 7 — 40 N·m (0.7 to 4.1 kgf-m, 5 to 30 ft-lb) torque wrench and various crowfoot wrenches will be needed. Open end or flare nut wrenches will be needed to affix the pipe and hose fittings.
 AC-00012	Applicator bottle A small **APPLICATOR BOTTLE** is recommended to apply compressor oil to the various parts. It can be available at a hardware store.

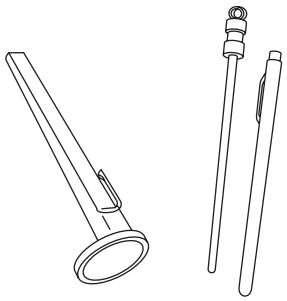


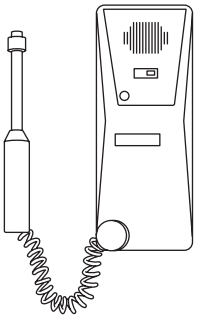












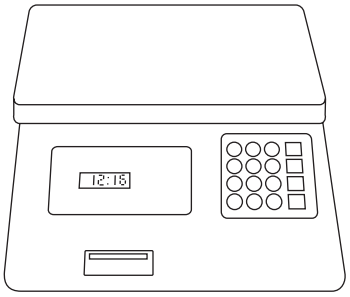


Illustration	Tools and Equipment
 AC-00013	Manifold gauge set A **MANIFOLD GAUGE SET** (with hoses) is available at either a refrigerant supplier or an automotive equipment supplier.
 AC-00014	Refrigerant recovery system A **REFRIGERANT RECOVERY SYSTEM** is used for the recovery and recycling of A/C system refrigerant after contaminants and moisture have been removed from the refrigerant.
 AC-00015	Syringe A graduated plastic **SYRINGE** will be needed to add oil into the system again. A syringe can be available at a pharmacy or drug store.
 AC-00016	Vacuum pump A **VACUUM PUMP** is necessary (for a good working condition), and may be available at either a refrigerant supplier or an automotive equipment supplier.
 AC-00017	Can tap A **CAN TAP** for the 397 g (14 oz) can is available at an automotive equipment supplier.

Illustration	Tools and Equipment
 AC-00018	Thermometer A Pocket **THERMOMETER** is available at either a industrial hardware store or a refrigerant supplier.
 AC-00019	Electronic leak detector An **ELECTRONIC LEAK DETECTOR** can be available at either a specialty tool supplier or an A/C equipment supplier.
 AC-00020	Weight scale A **WEIGHT SCALE** such as an electronic charging scale or a bathroom scale with digital display will be needed, if a 13.6 kg (30 lb) refrigerant container is used.

3. Refrigerant Pressure with Manifold Gauge Set

A: PROCEDURE

1. CHECK REFRIGERANT GAS PRESSURE

1) Prepare the vehicle.

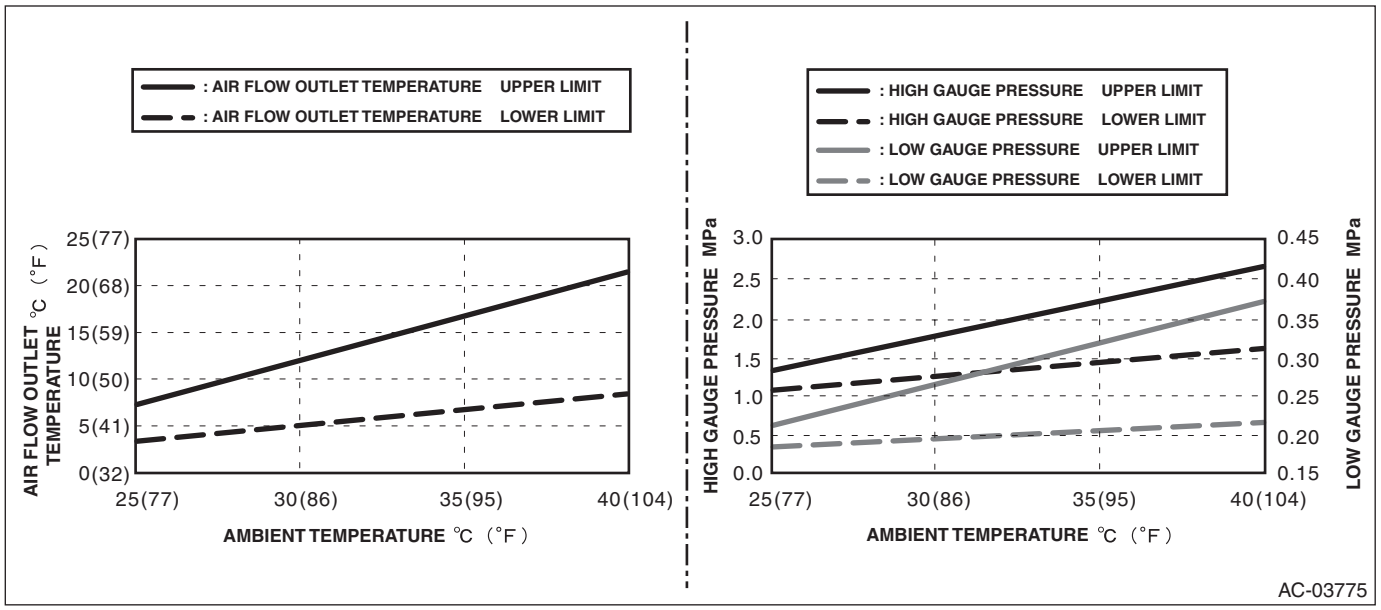
NOTE:
Check that the ambient temperature is 25 — 40°C (77 — 104°F) and that the humidity is 30% — 80%.
- Place the vehicle in the shade and windless condition, and open the front hood.
- Open the front windows and close all doors.

2) Check the refrigerant pressure.

Preparation tool:
Manifold gauge set

(1) Connect the manifold gauge set, and start the engine.
(2) Set the vehicle to the following conditions.

Item	Condition
Engine	Warmed up (Engine coolant temperature indicator light: OFF)
Air vent grille	Shutter is fully open.
AC switch	ON
Temperature adjustment dial	LO (MAX COOL)
FRESH/RECIRC switch	RECIRC
Air flow control switch	VENT
Fan switch (auto A/C model)	5/7 level
Fan dial (manual A/C model)	3/4 level



(3) In the condition of step (2), idle the engine for 30 minutes.
(4) Read the gauge values on both high pressure side and low pressure side for manifold gauge.

3) Measure the air vent grille outlet opening temperature, ambient temperature and humidity.

Preparation tool:
Thermometer and hygrometer

NOTE:
For outlet opening temperature, measure the average temperature of center grille assembly and side grille assembly.

4) Check that the high and low pressures and outlet opening temperature for ambient temperature and humidity is within the standard value described in the chart below.

5) Refer to “DIAGNOSIS WITH SYMPTOM” if the inspection result is not within the standard value. <Ref. to AC-23, INSPECTION WITH PRESSURE SYMPTOM, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>

B: INSPECTION

1. INSPECTION WITH PRESSURE SYMPTOM

Symptoms	Reference
Both high and low pressure sides are low	<Ref. to AC-24, BOTH HIGH AND LOW PRESSURE SIDES ARE LOW, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>
Both high and low pressure sides are high	<Ref. to AC-24, BOTH HIGH AND LOW PRESSURE SIDES ARE HIGH, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>
High and low pressure sides are equal, high-pressure side is low	<Ref. to AC-24, HIGH AND LOW PRESSURE SIDES ARE EQUAL, OR HIGH-PRESSURE SIDE IS LOW, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>
High-pressure side is high	<Ref. to AC-25, HIGH-PRESSURE SIDE IS HIGH, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>
Low-pressure side is low	<Ref. to AC-25, LOW-PRESSURE SIDE IS LOW, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>
Low-pressure side is high	<Ref. to AC-26, LOW-PRESSURE SIDE IS HIGH, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>

2. BOTH HIGH AND LOW PRESSURE SIDES ARE LOW

	Step	Check	Yes	No
1	**CHECK REFRIGERANT LEAKS.** Check the refrigerant for leaks. <Ref. to AC-31, INSPECTION, Refrigerant Leak Check.> NOTE: When high-pressure side is less than 0.69Mpa: Go to step 2.	Are there refrigerant leaks?	Repair the refrigerant leaking points.	Go to step **2**.
2	**FILL PROPER AMOUNT OF REFRIGERANT.** Drain all refrigerant, and refill proper amount of refrigerant. • Recovery: <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.> • Fill: <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>	Is refrigerant pressure within the standard value?	Refrigerant pressure is normal.	Perform corresponding "INSPECTION WITH PRESSURE SYMPTOM".

3. BOTH HIGH AND LOW PRESSURE SIDES ARE HIGH

	Step	Check	Yes	No
1	**FILL PROPER AMOUNT OF REFRIGERANT.** Drain all refrigerant, and refill proper amount of refrigerant. • Recovery: <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.> • Fill: <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>	Is refrigerant pressure within the standard value?	Refrigerant pressure is normal.	Perform corresponding "INSPECTION WITH PRESSURE SYMPTOM".

4. HIGH AND LOW PRESSURE SIDES ARE EQUAL, OR HIGH-PRESSURE SIDE IS LOW

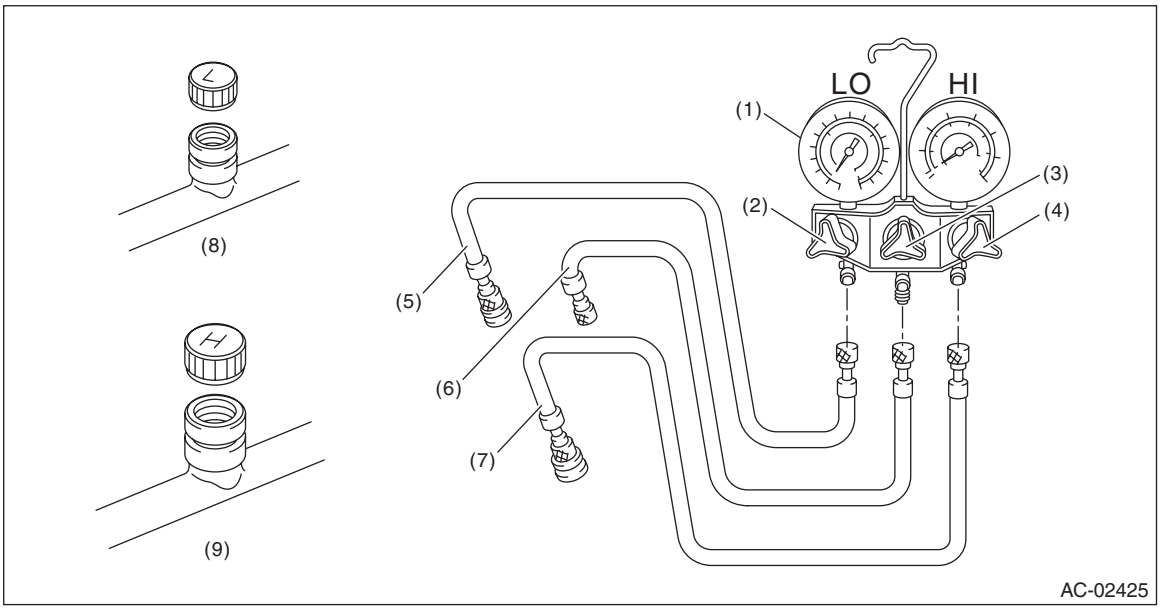
	Step	Check	Yes	No
1	**CHECK REFRIGERANT LEAKS.** Check the refrigerant for leaks. <Ref. to AC-31, INSPECTION, Refrigerant Leak Check.> NOTE: When high-pressure side is less than 0.69Mpa: Go to step 2.	Are there refrigerant leaks?	Repair the refrigerant leaking points.	Go to step **2**.
2	**FILL PROPER AMOUNT OF REFRIGERANT.** Drain all refrigerant, and refill proper amount of refrigerant. • Recovery: <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.> • Fill: <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>	Is refrigerant pressure within the standard value?	Refrigerant pressure is normal.	Inspect the compressor. <Ref. to AC(diag)-40, COLD AIR DOES NOT COME OUT EVEN WHEN THE A/C SWITCH IS PRESSED. THE GLASS CANNOT BE DEFOGGED. (COMPRESSOR DOES NOT OPERATE. (VARIABLE)), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

5. HIGH-PRESSURE SIDE IS HIGH

	Step	Check	Yes	No
1	**CHECK CONDENSER.** Check the condenser. <Ref. to AC-53, INSPECTION, Condenser.>	Is condenser OK?	Go to step **2**.	Clean or replace the condenser.
2	**CHECK RADIATOR FAN.** Check the radiator fan system. • H4 model: <Ref. to CO(H4DO)-8, Radiator Fan System.> • H6 model: <Ref. to CO(H6DO)-8, Radiator Fan System.>	Is radiator fan system normal?	Go to step **3**.	Repair the radiator fan system or replace the faulty parts.
3	**FILL PROPER AMOUNT OF REFRIGERANT.** Drain all refrigerant, and refill proper amount of refrigerant. • Recovery: <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.> • Fill: <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>	Is refrigerant pressure within the standard value?	Refrigerant pressure is normal.	Check the high-pressure hose and condenser for kinks or clogging, and replace if defective.

6. LOW-PRESSURE SIDE IS LOW

	Step	Check	Yes	No
1	**CHECK REFRIGERANT LEAKS.** Check the refrigerant for leaks. <Ref. to AC-31, INSPECTION, Refrigerant Leak Check.> NOTE: When high-pressure side is less than 0.69Mpa: Go to step 2.	Are there refrigerant leaks?	Repair the refrigerant leaking points.	Go to step **2**.
2	**FILL PROPER AMOUNT OF REFRIGERANT.** Drain all refrigerant, and refill proper amount of refrigerant. • Recovery: <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.> • Fill: <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>	Is refrigerant pressure within the standard value?	Refrigerant pressure is normal.	Go to step **3**.
3	**REPLACE EXPANSION VALVE.** Replace the expansion valve. <Ref. to AC-60, REMOVAL, Expansion Valve.>	Is refrigerant pressure within the standard value?	Refrigerant pressure is normal.	Inspect the compressor. <Ref. to AC(diag)-40, COLD AIR DOES NOT COME OUT EVEN WHEN THE A/C SWITCH IS PRESSED. THE GLASS CANNOT BE DEFOGGED. (COMPRESSOR DOES NOT OPERATE. (VARIABLE)), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>



7. LOW-PRESSURE SIDE IS HIGH

	Step	Check	Yes	No
1	**FILL PROPER AMOUNT OF REFRIGERANT.** Drain all refrigerant, and refill proper amount of refrigerant. • Recovery: <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.> • Fill: <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>	Is refrigerant pressure within the standard value?	Refrigerant pressure is normal.	Go to step **2**.
2	**REPLACE EXPANSION VALVE.** Replace the expansion valve. <Ref. to AC-60, REMOVAL, Expansion Valve.>	Is refrigerant pressure within the standard value?	Refrigerant pressure is normal.	Replace the evaporator. <Ref. to AC-57, REMOVAL, Evaporator.>

4. Refrigerant Recovery Procedure

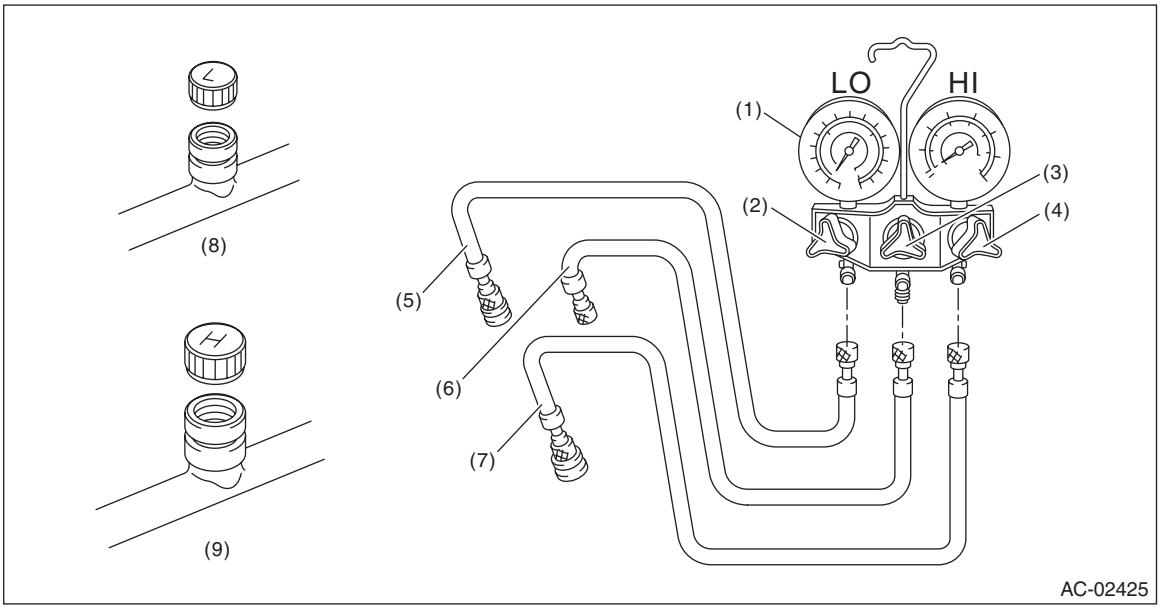
A: PROCEDURE

CAUTION:
• During operation, be sure to wear protective goggles and protective gloves.
• Connect the refrigerant recovery system with the manifold gauge set to discharge the refrigerant from the A/C system and recycle the gas.
• When recycling the discharged refrigerant, keep service cans on hand. Because the recovery rate with the recovery system is approx. 90%, service cans are necessary to charge the refrigerant.
• Follow the detailed operation procedure described in the operation manual attached to the refrigerant recovery system.

(1)	Manifold gauge	(4)	High pressure valve	(7)	High-pressure hose
(2)	Low pressure valve	(5)	Low-pressure hose	(8)	Low-pressure side service port
(3)	Center valve	(6)	Center manifold hose (vacuum pump and charge)	(9)	High-pressure side service port

1) Perform compressor oil return operation. <Ref. to AC-34, PROCEDURE, Compressor Oil.>
2) Stop the engine.
3) Attach the manifold gauge set.

Preparation tool:
Manifold gauge set
(1) Check that all valves are fully closed.
(2) Install the low/high pressure hoses to the service ports on the low/high pressure sides of the vehicle respectively.



CAUTION:
Confirm that the connections are secure.
(3) Connect the center hose to the refrigerant recovery system.

Preparation tool:
Refrigerant recovery system
4) Follow the operation manual attached to the refrigerant recovery system to collect the refrigerant.

5. Refrigerant Charging Procedure

A: PROCEDURE

CAUTION:
- **While working, be sure to wear protective goggles and protective gloves.**
- **Air in the cycle can cause insufficient air conditioning, and water in the cycle can cause clogging in the cycle (icing) and rust. To remove this air and water content, use a vacuum pump to perform evacuation before filling with refrigerant. By making the inside of the cycle a vacuum, the water content will evaporate even at normal temperatures, and can be removed.**

(1)	Manifold gauge	(4)	High pressure valve	(7)	High-pressure hose
(2)	Low pressure valve	(5)	Low-pressure hose	(8)	Low-pressure side service port
(3)	Center valve	(6)	Center manifold hose (vacuum pump and charge)	(9)	High-pressure side service port

1) Attach the manifold gauge set.

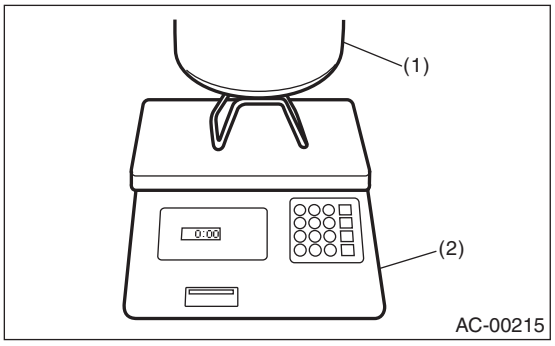
Preparation tool:
Manifold gauge set
(1) Check that all valves are fully closed.
(2) Install the low/high pressure hoses to the service ports on the low/high pressure sides of the vehicle respectively.

CAUTION:
Confirm that the connections are secure.
(3) Connect the center manifold hose of the manifold gauge to the vacuum pump.

Preparation tool:
Vacuum pump
2) Perform evacuation.

CAUTION:
Make sure to perform evacuation using a vacuum pump.
(1) Open the low-pressure valve, high-pressure valve and center valve.
(2) Operate the vacuum pump.
(3) Perform evacuation for 5 minutes or more, and when the low pressure gauge needle reaches –0.1 MPa (–1.0 kgf/cm^2, –14 psi), close the center manifold hose valve, and stop the vacuum pump.

(4) Leave alone for 5 to 10 minutes after closing the low pressure side and high pressure side valves, and check whether there is any change in the low pressure gauge needle indication.
If the needle position changes, this indicates a leak. Check the pipe and hose connections, and repair the location with the problem.
After repair, retry charging the refrigerant from the step 1).
(5) If there is no leakage, continue evacuation for additional 20 — 30 minutes, close all valves and then stop the vacuum pump.



3) Charge refrigerant.
(1) Follow the can tap operation manual to attach it to the refrigerant can.

Preparation tool:
Can tap

(2) Disconnect the center manifold hose from the vacuum pump, and connect the hose to the tap valve.

Preparation tool:
Weight scale

NOTE:
When 13.6 kg (30 lb) refrigerant container (1) is used, measure the amount of refrigerant with a refrigerant charging scale (2), and connect with the center manifold hose.

(3) Open the tap valve of HFC-134a supply container (refrigerant can or refrigerant container).
(4) Loosen the center manifold hose connection on the manifold gauge for a few seconds (if there is a purge valve on the manifold gauge, push this instead) to allow the air in the center manifold hose to be bled by the refrigerant pressure.
(5) Open the low-pressure side and high-pressure side valves of the manifold gauge to fill with refrigerant.

NOTE:
If the HFC-134a supply container is empty, close all manifold gauge valves and the tap valve of HFC-134a supply container, and replace the empty supply container with a new one. After replacing with a new HFC-134a supply container, perform air purge, and resume the filling operation.

(6) If the low pressure gauge indicates approximately 0.2 MPa (2.0 kgf/cm^2, 29 psi) or refrigerant filling efficiency drops, close the low-pressure side valve and high-pressure side valve.
(7) Check that the low-pressure side valve and high-pressure side valve are closed, turn off the A/C switch and start the engine.

CAUTION:
When filling with the engine running, do not open the high pressure side valve. Always fill from the low pressure side.

(8) To prevent damage to the compressor, push the A/C switch ON-OFF quickly a few times.

(9) Set the vehicle to the following conditions.

Item	Condition
Engine speed	1,500 r/min
A/C switch	ON
Temperature adjustment dial	LO (MAX COOL)
Fan switch or dial	HI (MAX)
FRESH/RECIRC switch	RECIRC
Air flow control switch	VENT
Window	OPEN

(10) Open the low-pressure side valve, check the refrigerant pressure with a manifold gauge and fill with refrigerant up to the specified amount. <Ref. to AC-23, INSPECTION WITH PRESSURE SYMPTOM, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>

4) Using an electronic leak detector (leak tester), check for refrigerant leaks in the system. <Ref. to AC-31, INSPECTION, Refrigerant Leak Check.>

5) After filling with refrigerant, close all valves and remove the manifold gauge set.

6) Attach cap to the service port of the low-pressure side and high-pressure side.

6. Refrigerant Leak Check

A: INSPECTION

1) Attach the manifold gauge set.

Preparation tool:

Manifold gauge set

(1) Check that all valves are fully closed.

(2) Install the low/high pressure hoses to the service ports on the low/high pressure sides of the vehicle respectively.

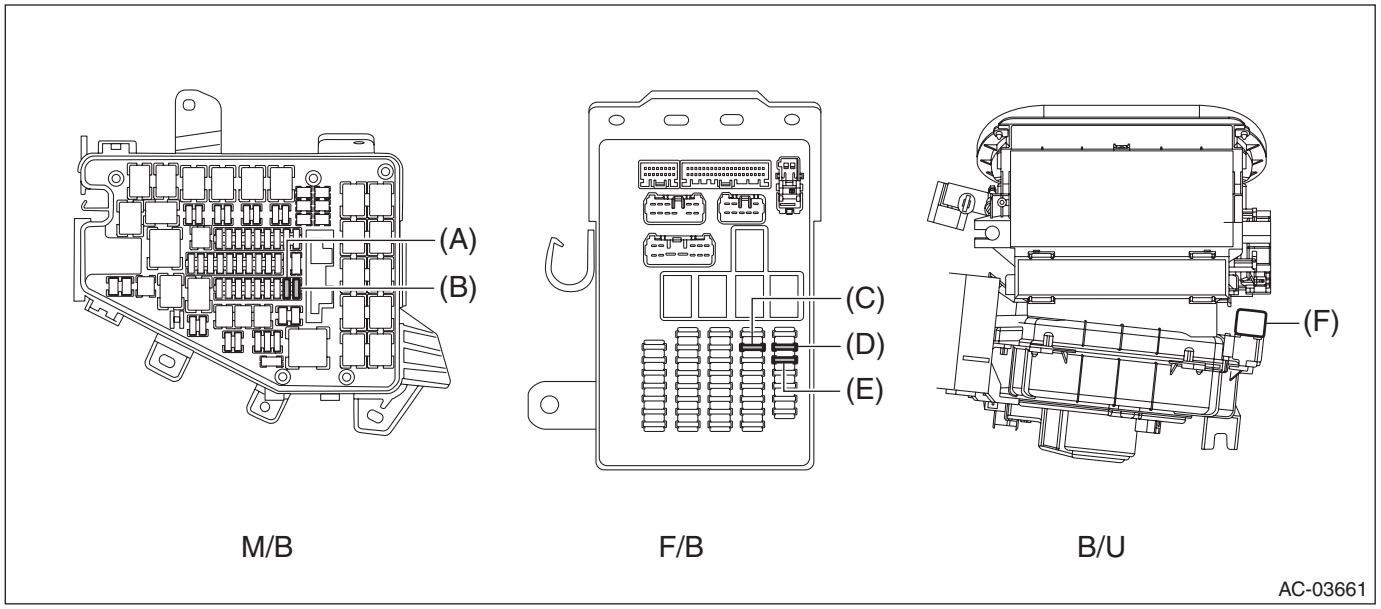
CAUTION:

Confirm that the connections are secure.

(3) Start the engine, operate the A/C system for approx. 10 minutes, and check that the high-pressure side indicates 0.69 MPa (7.0 kgf/cm^2, 100 psi) or more.

2) Stop the engine to start the leak test.

Preparation tool:



Electronic leak detector (leak tester)

Items	Condition	Corrective action
Pipe	Check the connections of pipe and expansion valve.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
	Check the connection between pressure switch or pressure sensor and high-pressure pipe.	Replace the pressure switch or pressure sensor.
	Check the connection between pipe and condenser.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
Condenser	Check the welded part of condenser and core.	Replace the condenser.
Hose (high-pressure)	Check the connection between hose (high-pressure) and compressor.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
	Check the connection between hose (high-pressure) and condenser.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
	Check the rubber part of the flexible hose and pipe seam. **CAUTION:** **Carefully check the external surface of flexible hoses and pipes at approx. 25 mm (0.98 in) per second.**	Replace the hose (high pressure).
	Check the valve and cap in the service port.	Check the rubber seal of the valve and cap. If necessary, replace valve or cap.
Compressor	Check the compressor pulley and vicinity of shaft seal. **CAUTION:** **Some shaft seals will show a slight amount of leakage, about 3 g (0.1 oz) per year. This is not a problem.**	Replace the compressor.

Items	Condition	Corrective action
Hose (low-pressure)	Check the connection between hose (low pressure) and expansion valve.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
	Check the connection between hose (low pressure) and compressor.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
	Check the rubber part of the flexible hose and pipe seam. **CAUTION:** **Carefully check the external surface of flexible hoses and pipes at approx. 25 mm (0.98 in) per second.**	Replace the hose (low pressure).
	Check the valve and cap in the service port.	Check the rubber seal of the valve and cap. If necessary, replace valve or cap.
Evaporator	Remove the drain hose from the heater case, and check the end part for 10 seconds or more.	Replace the evaporator.
	Check the air vent grille. NOTE: Turn the ignition switch to ON, and run the blower at high speed for approx. 1 minute. Stop the blower to check the air vent grille on the instrument panel. While moving the tester closer to the grille, run the blower for 1 or 2 seconds, then stop it. Check the grille at that position for at least 10 seconds.	Replace the evaporator.

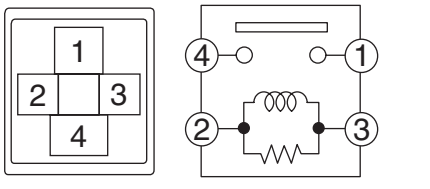
7. Relay and Fuse

A: LOCATION

Main fuse box (M/B)	Fuse 15 A (blower motor relay)	(A)
	Fuse 15 A (blower motor relay)	(B)
Fuse & relay box (F/B)	Fuse 15 A (blower motor relay, intake door actuator, A/C control module)	(C)
	Fuse 7.5 A (A/C control module, A/C control panel)	(D)
	Fuse 7.5 A (A/C control panel)	(E)
Blower motor unit (B/U)	Blower motor relay	(F)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-23, Power Supply Circuit.>

B: INSPECTION



1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

2. CHECK RELAY

1) Measure the resistance between blower motor relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 4	Always	1 MΩ or more	
1 — 4	Apply battery voltage between terminals 2 and 3.	Less than 1 Ω	

2) Replace the blower motor relay if the inspection result is not within the standard value.

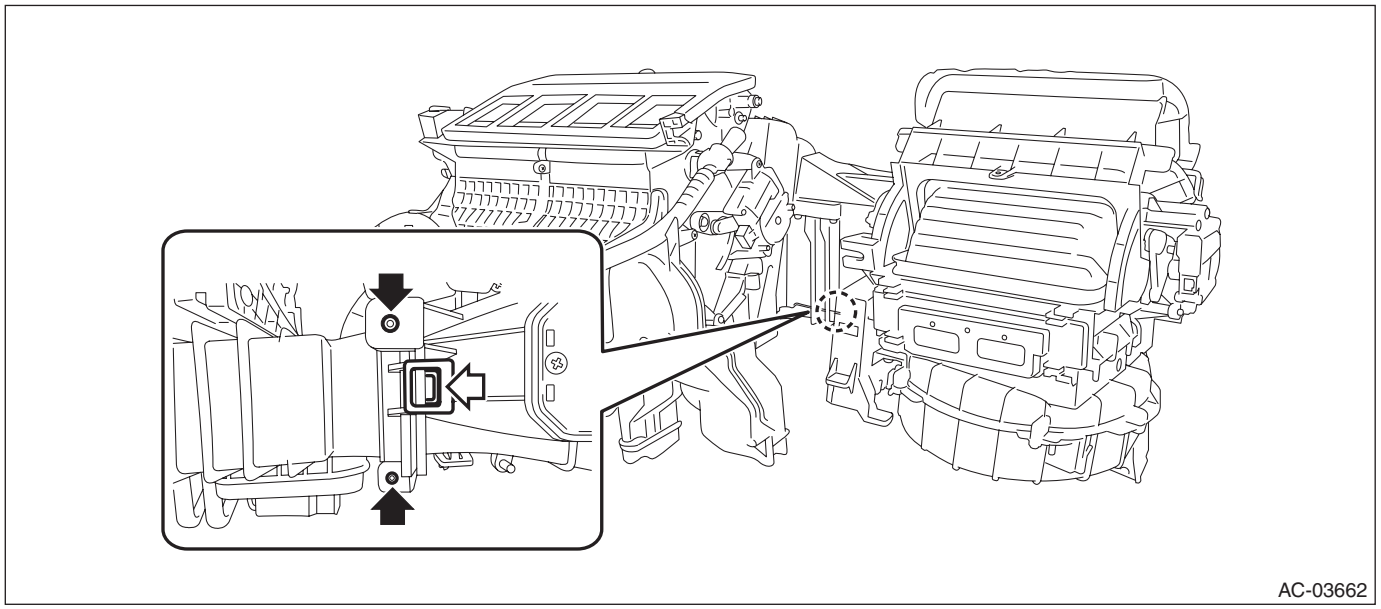
8. Compressor Oil

A: PROCEDURE

NOTE:
Before making repairs, perform the oil return operation to return the compressor oil in circulation with the refrigerant to the compressor.
1) Increase the engine speed to 1,500 r/min.
2) Turn the A/C switch to ON.
3) Turn the temperature control dial to LO (MAX COOL).
4) Turn the FRESH/RECIRC switch to RECIRC position.
5) Turn the fan switch or dial to HI (MAX).
6) Leave in this condition for 10 minutes.

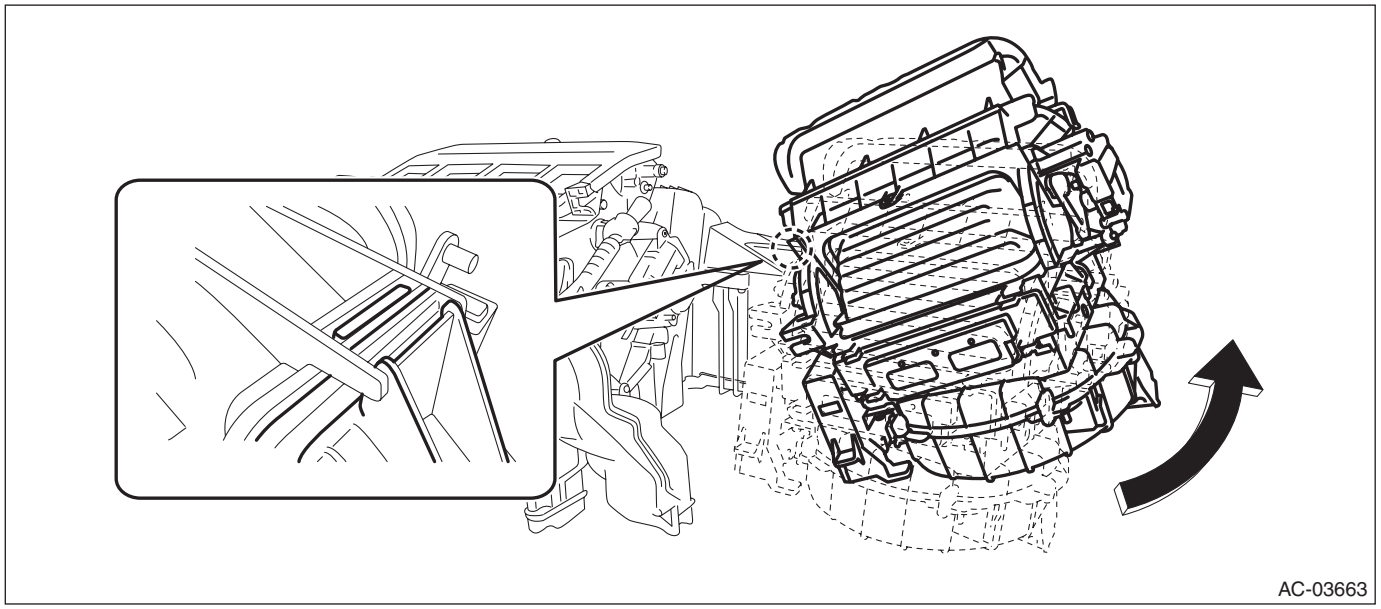
B: ADJUSTMENT

- If a component has been replaced, add an appropriate amount of compressor oil (same as the amount of remaining oil in removed component).
- When replacing the compressor, the new compressor will already have the specified amount of oil in it. Adjust the oil amount (so that the amount remains the same as that of the removed compressor) and install the new compressor.



NOTE:
Since the hygroscopicity of compressor oil is high, perform this series of works quickly.

9. Blower Motor Unit Assembly



A: REMOVAL

CAUTION:
• Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• Do not detach the immobilizer control module except when replacing the blower motor unit assembly.
• Replace the air duct cover LWR with a new part when the immobilizer control module is removed. If the air duct cover LWR is reused, screw tightening force is reduced and the immobilizer control module may be detached due to vibration while driving.

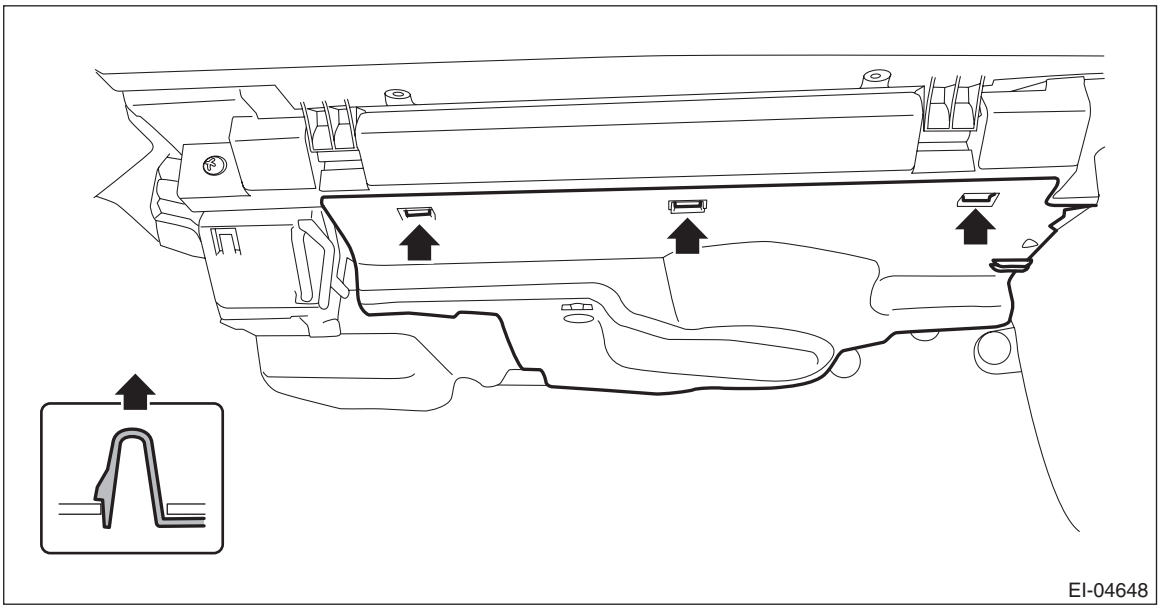
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the heater and cooling unit. <Ref. to AC-54, REMOVAL, Heater and Cooling Unit.>
3) Remove the blower motor unit assembly.
   (1) Release the claws and remove the screws.

AC-03662

(2) Remove the blower motor unit assembly as shown in the figure.

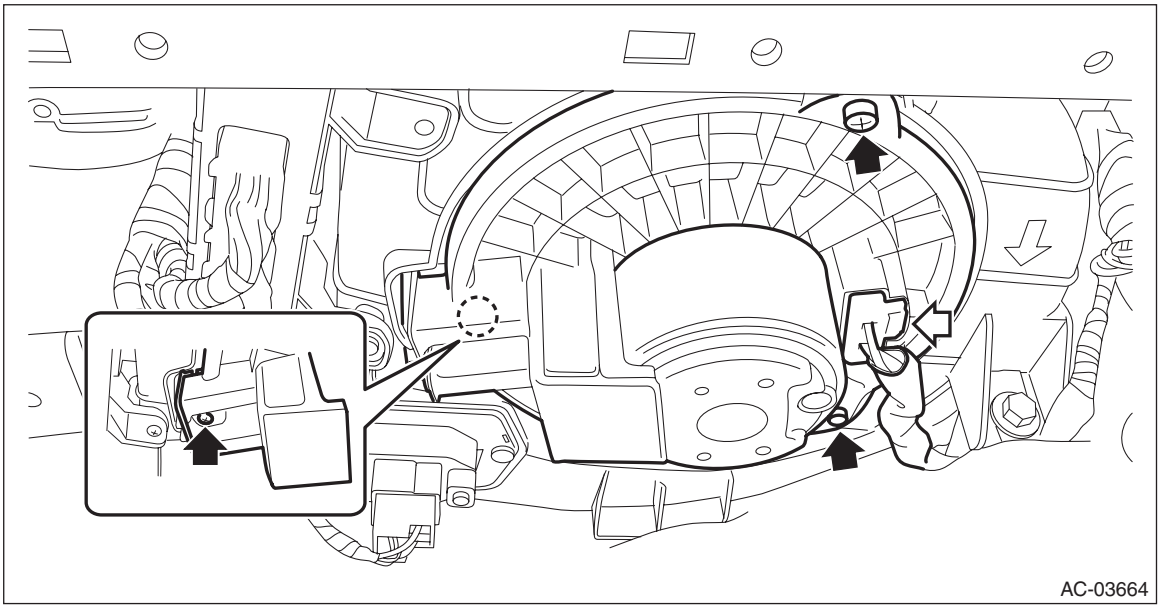
AC-03663

B: INSTALLATION



CAUTION:
- **Do not start the engine before charging refrigerant.**
- **If the engine is started with no refrigerant charge, replace the compressor assembly.**
- **Replace O-rings and pipe clamps with new parts and install securely.**
- **Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>**

1) Install the blower motor unit assembly.
2) Install the heater and cooling unit. <Ref. to AC-56, INSTALLATION, Heater and Cooling Unit.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

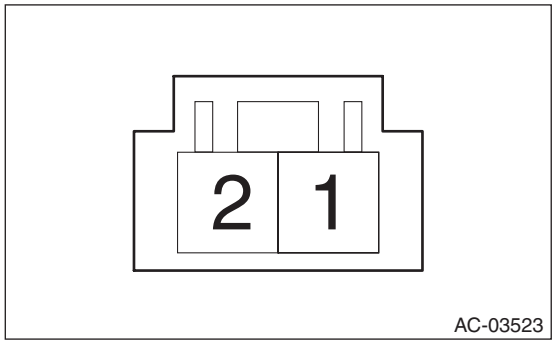


10.Blower Motor

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Release the hook, and remove the under cover assembly - passenger.

3) Remove the blower motor.
   (1) Disconnect the connector.
   (2) Remove the screws and detach the blower motor.

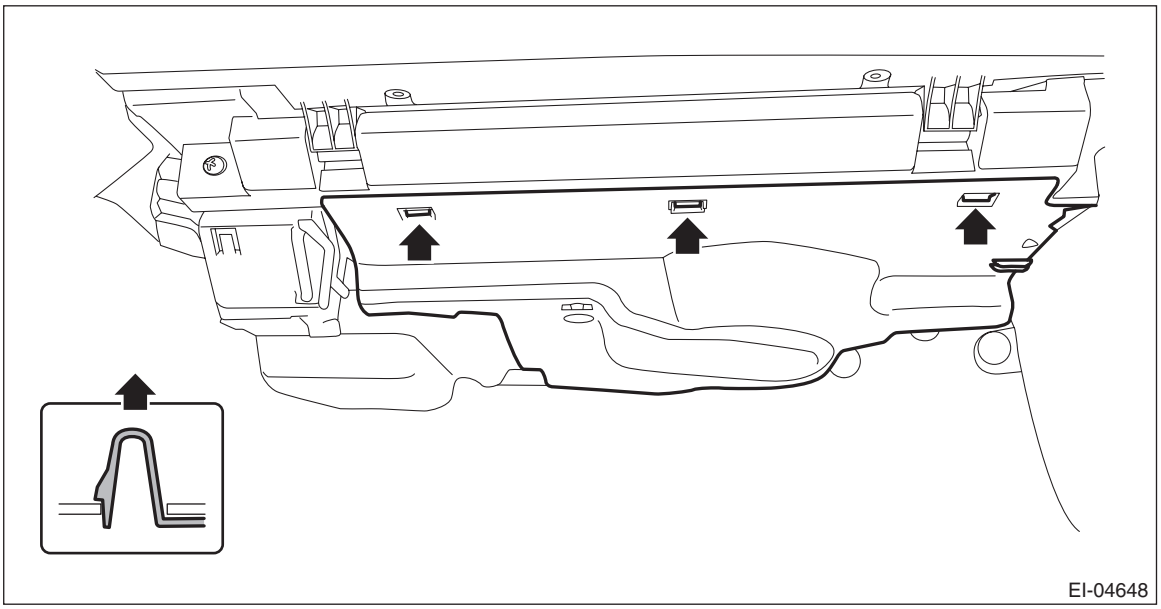


B: INSTALLATION

1) Install the blower motor.
2) Install the under cover assembly - passenger.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

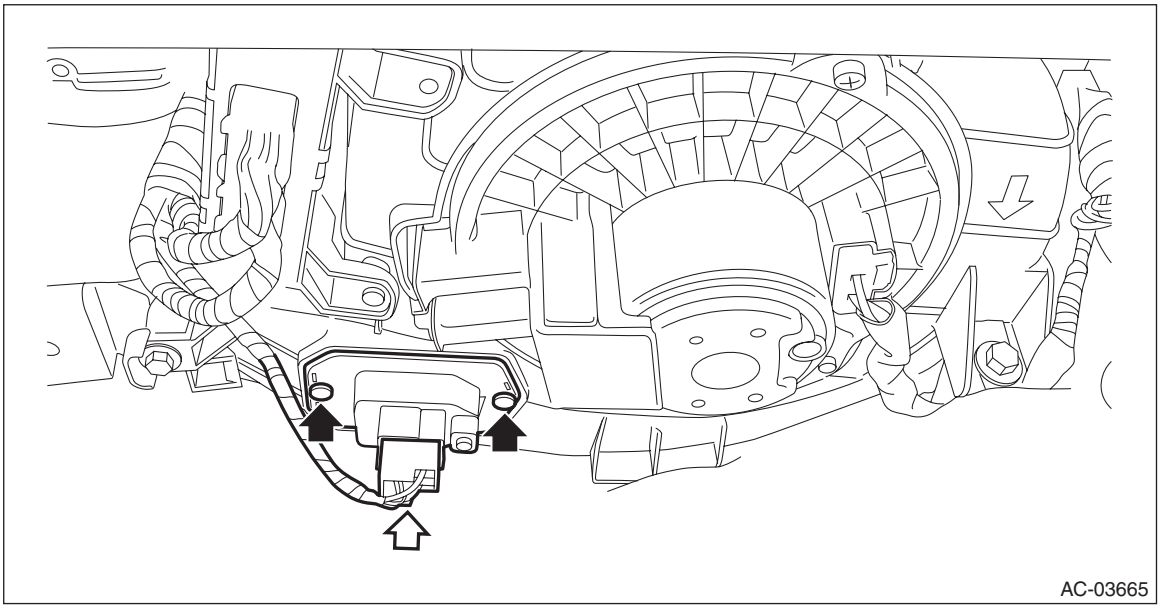
C: INSPECTION

1) Check the motor operation when battery voltage is applied between the connector terminals.



Terminal No.	Inspection conditions	Specification
2 (+) — 1 (–)	Apply battery voltage.	Rotation

2) If the blower motor does not operate normally, replace the blower motor.

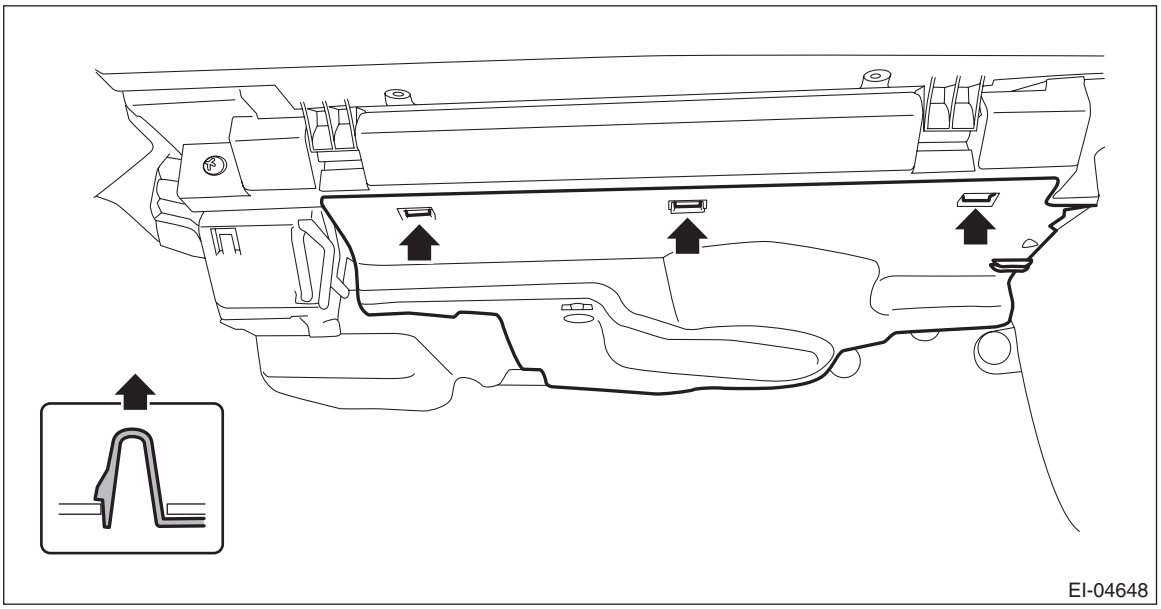


11.Power Transistor (Auto A/C Model)

A: REMOVAL

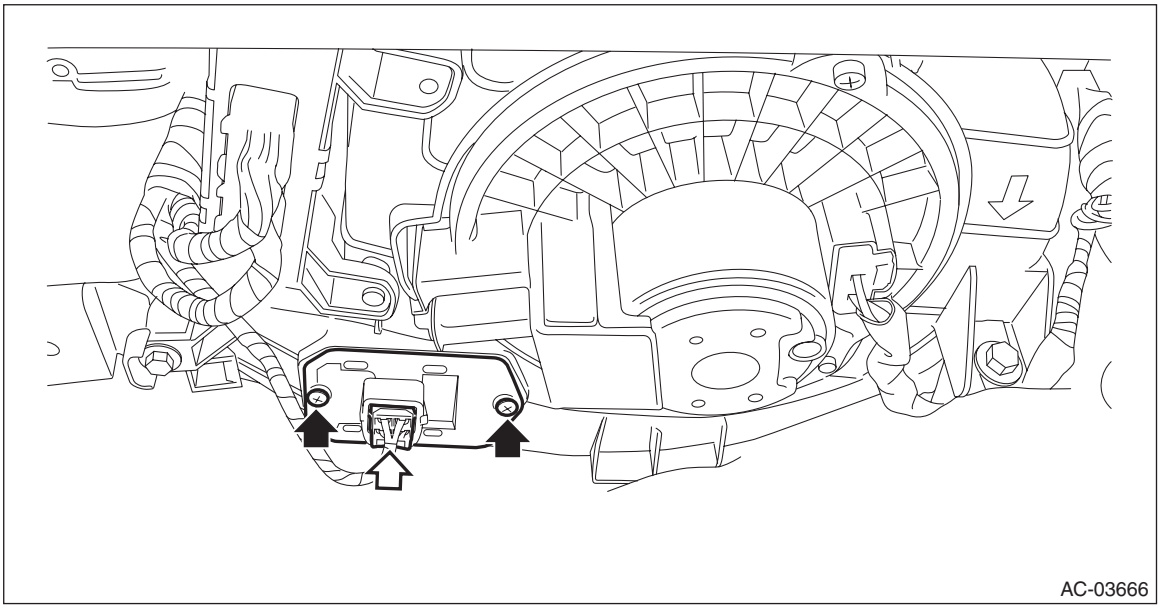
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Release the hook, and remove the under cover assembly - passenger.

3) Remove the power transistor.
   (1) Disconnect the connector.
   (2) Remove the screws and remove the power transistor.



B: INSTALLATION

1) Install the power transistor.
2) Install the under cover assembly - passenger.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

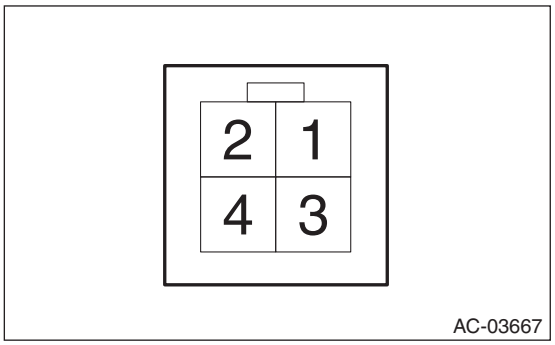


12.Blower Resistor (Manual A/C Model)

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Release the hook, and remove the under cover assembly - passenger.

3) Remove the blower resistor.
   (1) Disconnect the connector.
   (2) Remove the screw and remove the blower resistor.



B: INSTALLATION

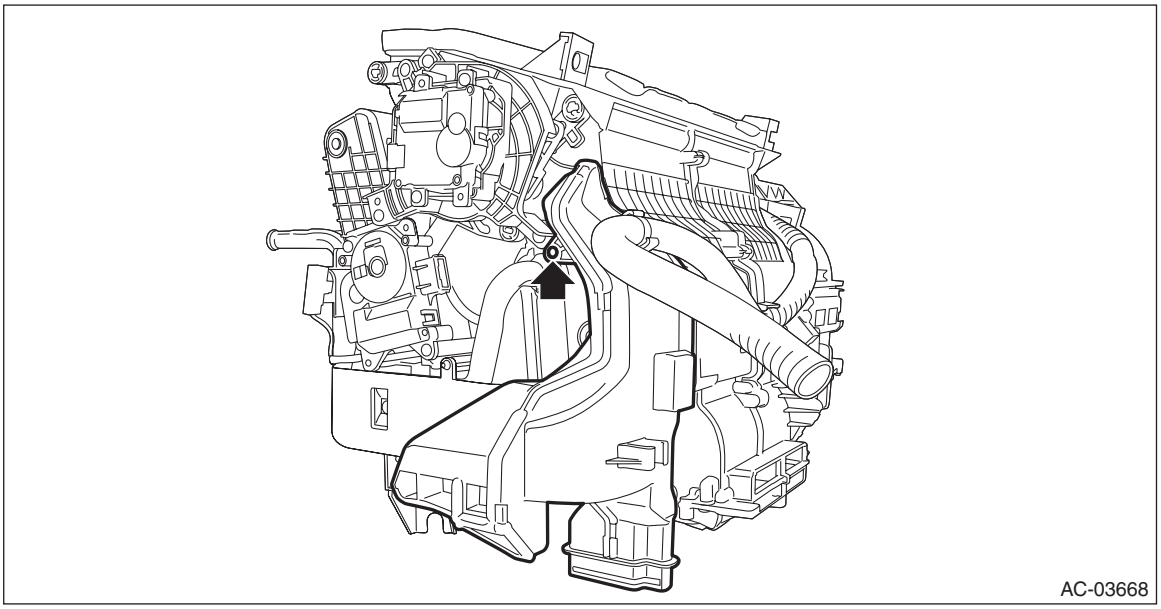
1) Install the blower resistor.
2) Install the under cover assembly - passenger.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Measure the resistance between connector terminals.

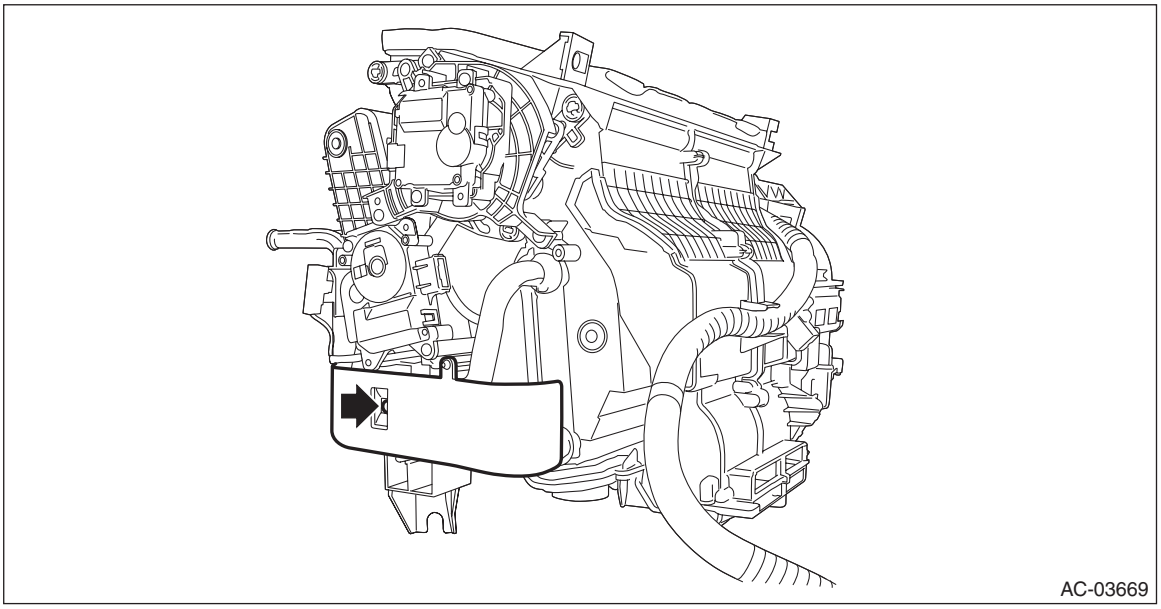
Preparation tool: Circuit tester

Terminal No.	Inspection conditions	Standard
4 — 2	Always	Approx. 0.44 Ω
4 — 3		Approx. 1.12 Ω
4 — 1		Approx. 2.92 Ω



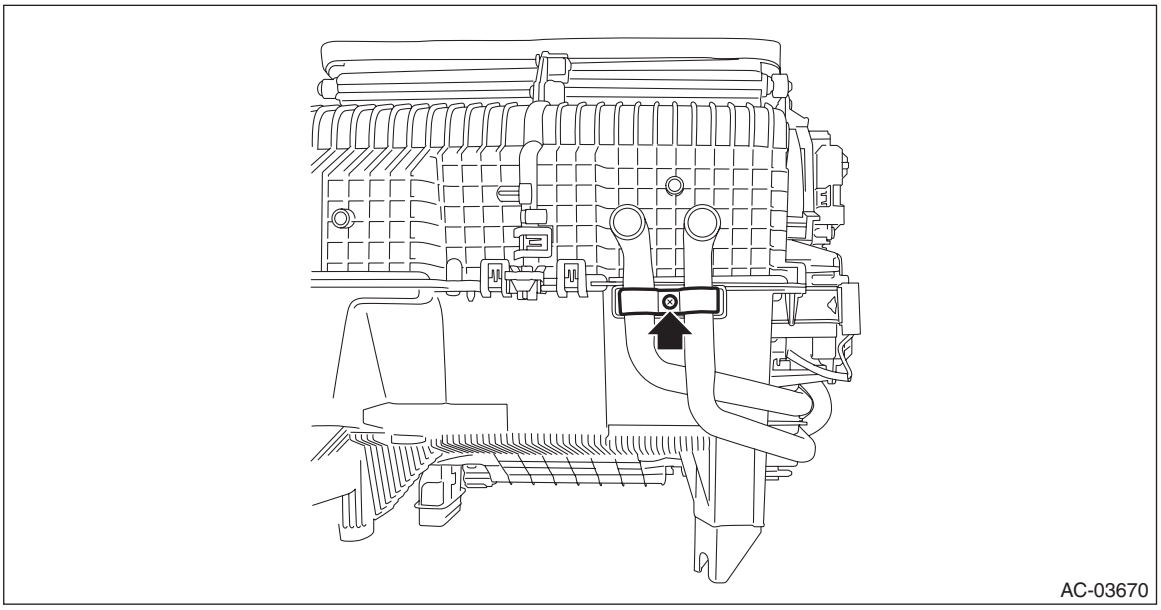
2) Replace the blower resistor if the inspection result is not within the standard value.

13.Heater Core



A: REMOVAL

CAUTION:
Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the heater and cooling unit. <Ref. to AC-54, REMOVAL, Heater and Cooling Unit.>
3) Remove the heater core.
   (1) Remove the screws and remove the foot duct (LH).

AC-03668

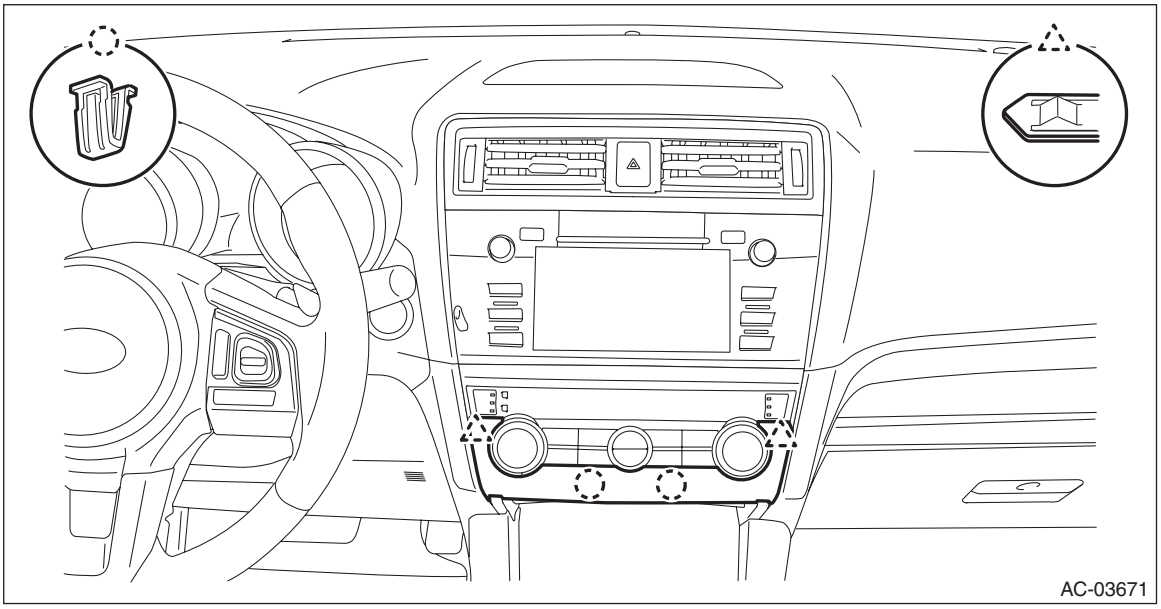
   (2) Remove the screw and detach the heater pipe cover.

AC-03669

(3) Remove the screw and remove the heater pipe clamp.

(4) Remove the heater core.

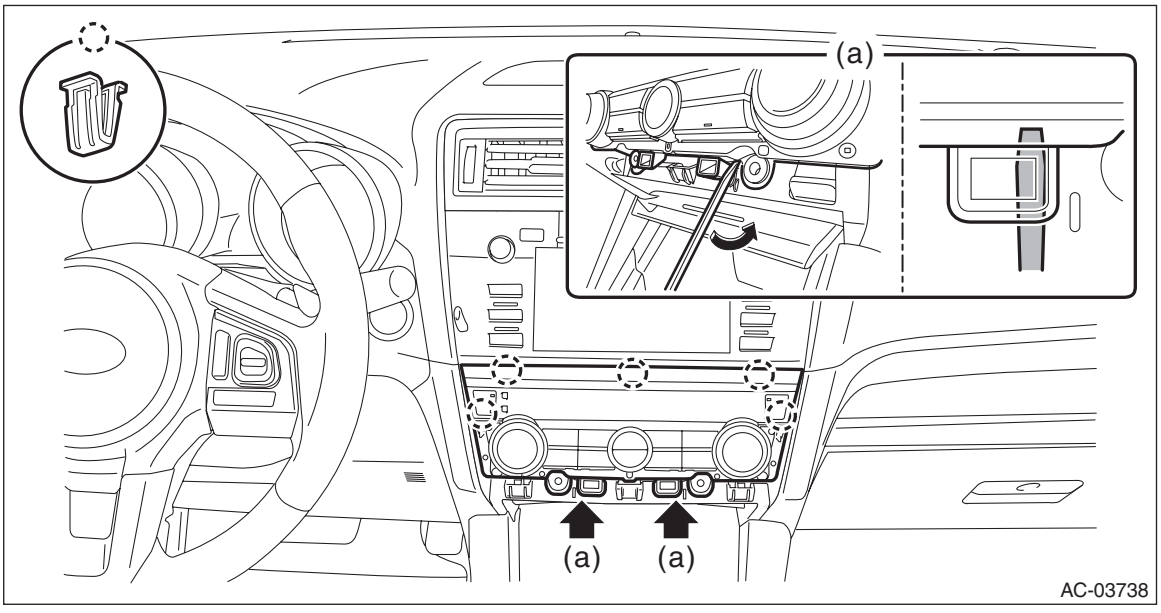
B: INSTALLATION



CAUTION:
- **Do not start the engine before charging refrigerant.**
- **If the engine is started with no refrigerant charge, replace the compressor assembly.**
- **Replace O-rings and pipe clamps with new parts and install securely.**
- **Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>**

1) Attach the heater core.
   (1) Install the heater pipe clamp.
   (2) Install the heater pipe cover.
   (3) Install the foot duct (LH).
2) Install the heater and cooling unit. <Ref. to AC-56, INSTALLATION, Heater and Cooling Unit.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

14.Control Panel

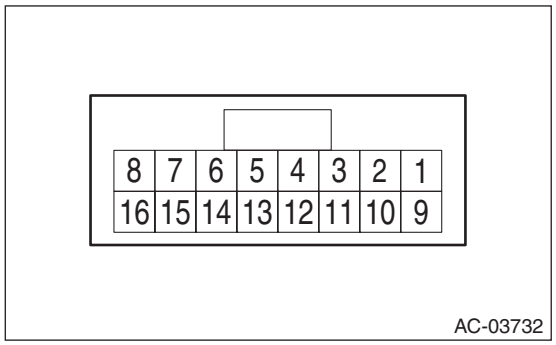


A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the heater control assembly.
   (1) Release the clips and claws, then detach the control module cover.

   (2) Remove the screws to remove the heater control assembly.

CAUTION:
• Insert a flat tip screwdriver wrapped with a protection tape into the position (a) shown in the figure, and move it in the arrow direction to remove the clip. When both clips are removed, pull out the heater control assembly by hand inserted through the space.
• Be careful not to damage the clips and the control panel.

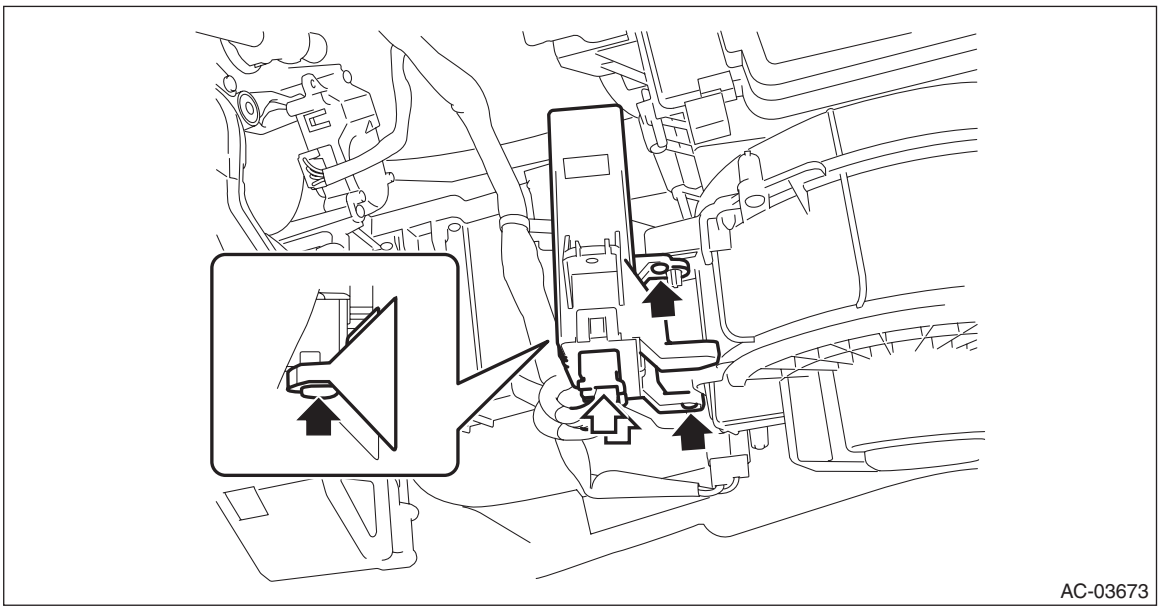


B: INSTALLATION

1) Install the heater control assembly.
2) Install the control module cover.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Check the illumination operation when battery voltage is applied between the connector terminals.



Terminal No.	Inspection conditions	Specification
2 (+) — 6 (–)	Apply battery voltage.	Light ON

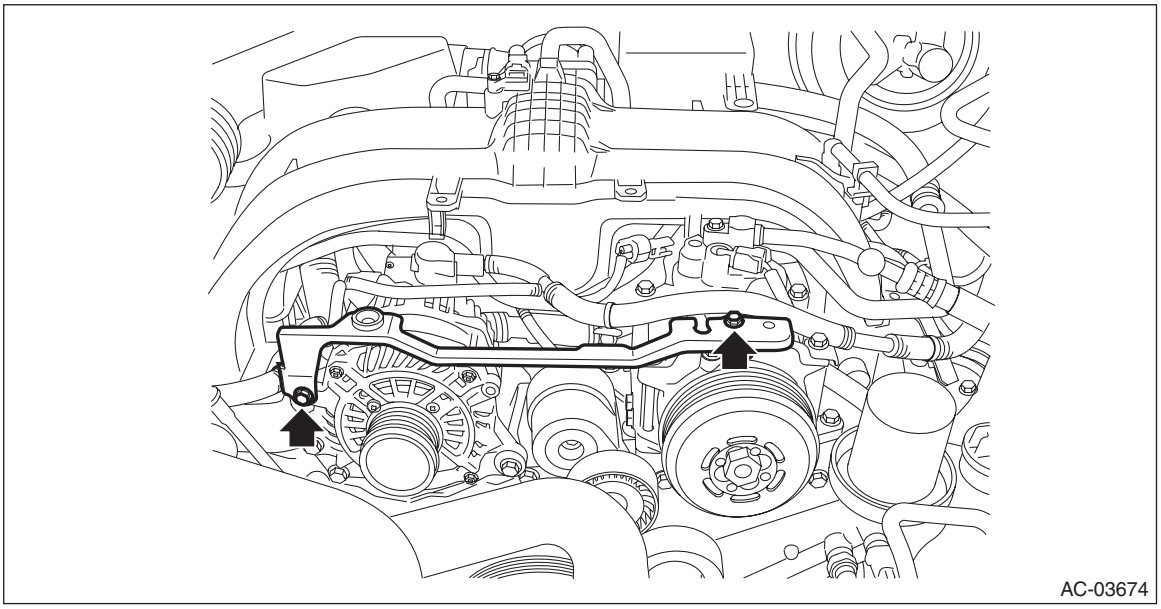
2) If it does not operate normally, replace the heater control assembly.

15.Control Unit

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the glove box. <Ref. to EI-76, REMOVAL, Glove Box.>
3) Remove the control module.
   (1) Disconnect the connector.
   (2) Remove the screws, and remove the control module.

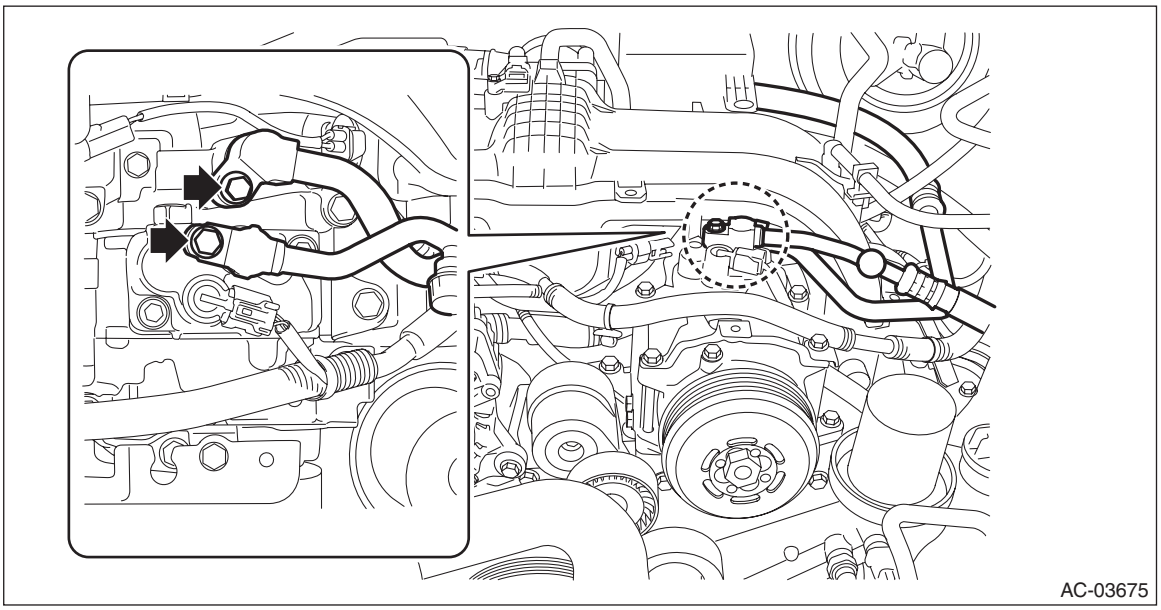
B: INSTALLATION



1) Install the control module.
2) Install the glove box.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

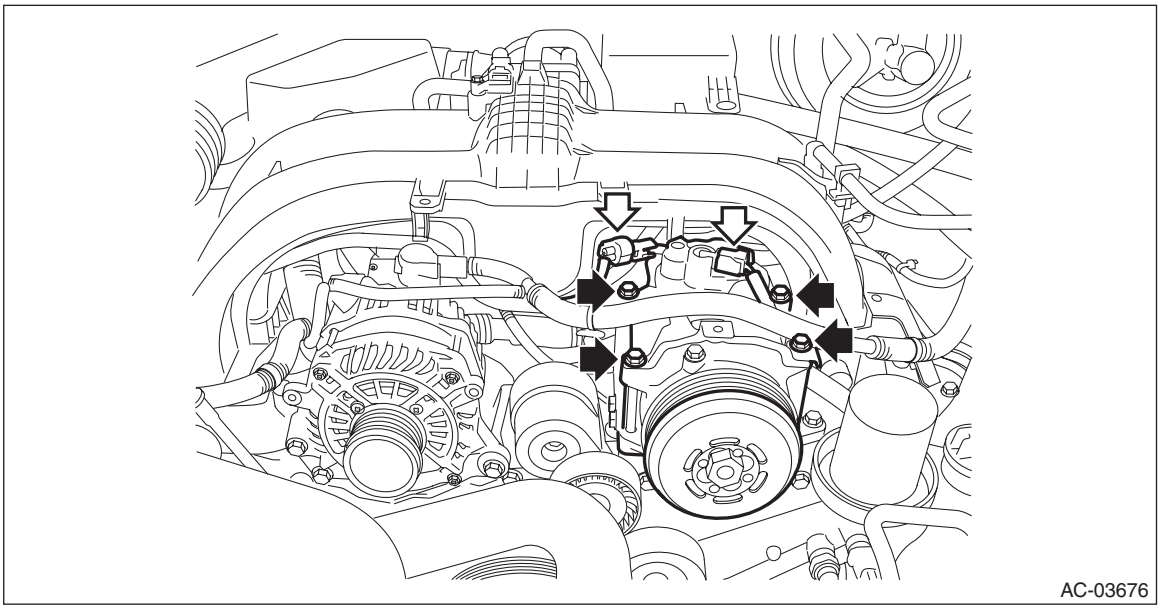
16.Compressor

A: REMOVAL



1. H4 MODEL

1) Perform compressor oil return operation. <Ref. to AC-34, PROCEDURE, Compressor Oil.>
2) Turn the A/C switch to OFF and stop the engine.
3) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.>
4) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Remove the V-belts. <Ref. to ME(H4DO)-70, REMOVAL, V-belt.>
6) Remove the bolts and remove the V-belt cover bracket.

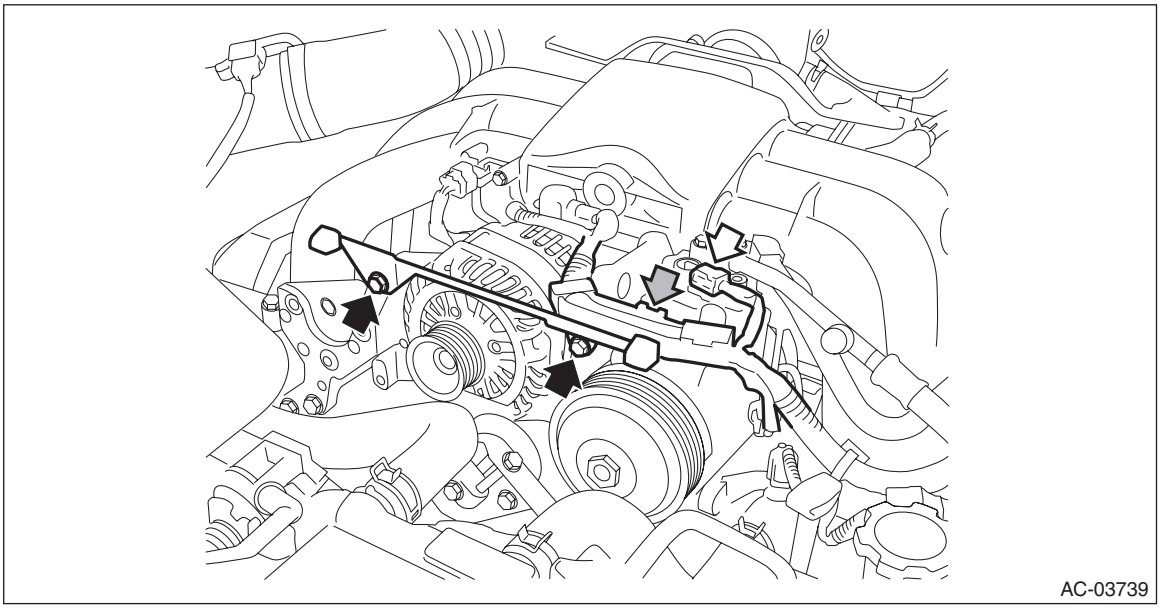


AC-03674

7) Remove the bolt, and detach the hose - pressure suction and the hose - pressure discharge.

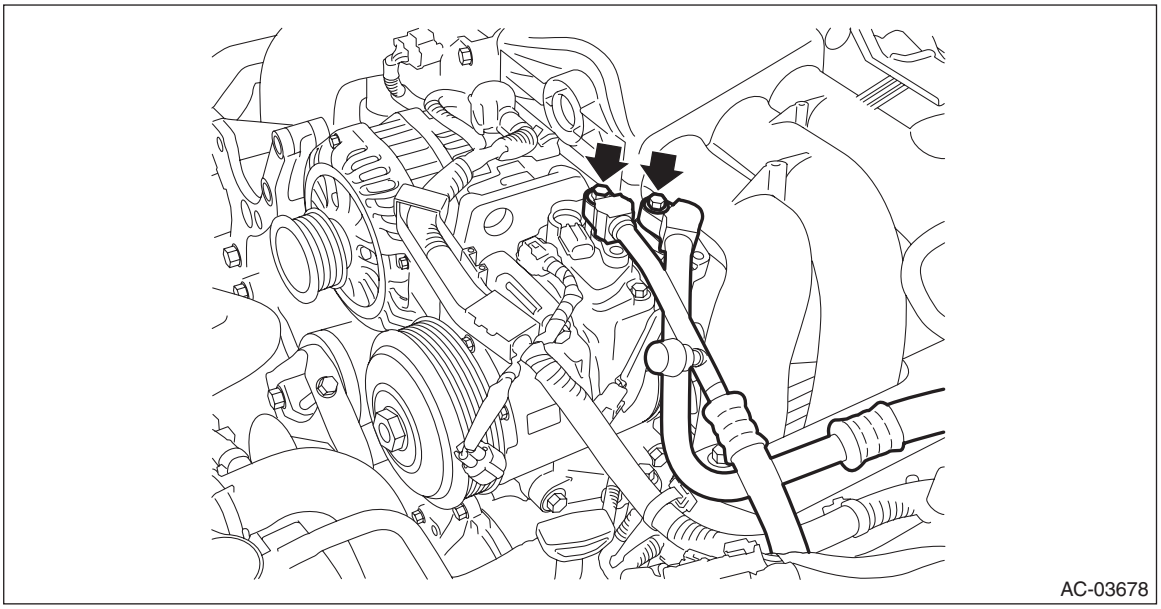
CAUTION:
Seal the disconnected hose and engaging part of compressor with a plug or vinyl tape to prevent foreign matter from entering.

AC-03675



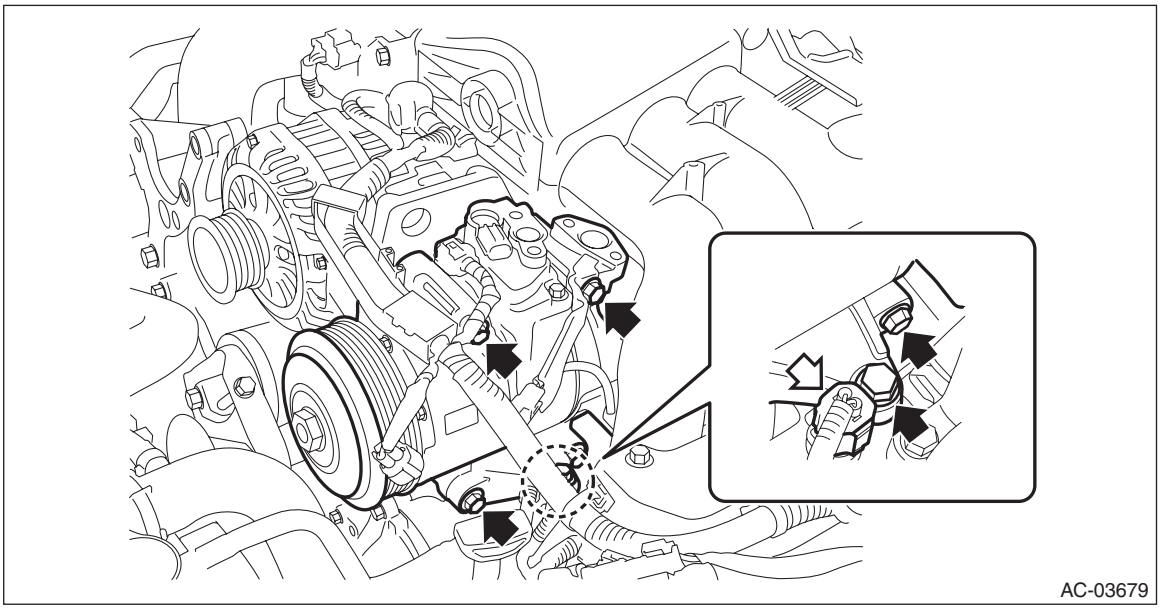
8) Remove the bolts and connector, and remove the compressor assembly.

NOTE:
Leave the bracket on the harness side.



2. H6 MODEL

1) Perform compressor oil return operation. <Ref. to AC-34, PROCEDURE, Compressor Oil.>
2) Turn the A/C switch to OFF and stop the engine.
3) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.>
4) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Remove the V-belts. <Ref. to ME(H6DO)-75, REMOVAL, V-belt.>
6) Remove the collector cover bracket.
   (1) Disconnect the connector, and detach the harness clamp.
   (2) Remove the bolts and then remove the collector cover bracket.



7) Remove the bolt, and detach the hose - pressure suction and the hose - pressure discharge.

CAUTION:
Seal the disconnected hose and engaging part of compressor assembly with a plug or vinyl tape to prevent foreign matter from entering.

8) Remove the compressor assembly.
(1) Disconnect the connector.
(2) Remove the bolts and remove the compressor assembly.

NOTE:
• Since the compressor cannot be removed by itself, remove it with the loosened bolts inserted in the bracket.
• Be careful not to damage the pulley and sensor.

B: INSTALLATION

CAUTION:
• Replace the O-rings on the hose - pressure suction and the hose - pressure discharge with new parts, and apply compressor oil.
• If the compressor assembly is replaced, adjust the amount of the compressor oil. <Ref. to AC-34, ADJUSTMENT, Compressor Oil.>
• After installing the compressor, do not start the engine until the A/C system is charged with refrigerant.
• If the engine is started with no refrigerant charge, replace the compressor assembly.

1) Install the compressor assembly.

NOTE:
Tighten the compressor assembly for H4 model in the numerical order as shown in the figure. <Ref. to AC-12, COMPRESSOR, COMPONENT, General Description.>

Tightening torque:
36 N·m (3.7 kgf-m, 26.6 ft-lb)

2) Install the hose - pressure suction and the hose - pressure discharge.

Tightening torque:
10 N·m (1.0 kgf-m, 7.4 ft-lb)

3) Install the V-belt cover bracket.

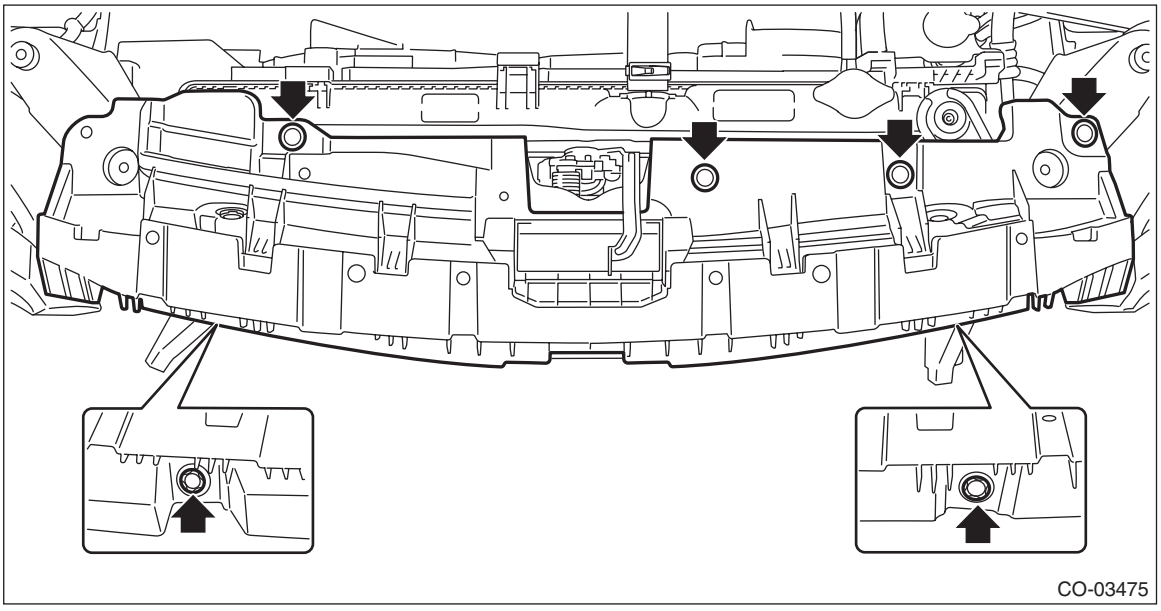
Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

4) Install the V-belts.
- H4 model: <Ref. to ME(H4DO)-72, INSTALLATION, V-belt.>
- H6 model: <Ref. to ME(H6DO)-76, INSTALLATION, V-belt.>

5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
6) Charge refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>
7) After installing the compressor assembly, perform a break-in operation according to the following steps.

NOTE:
Do not increase the engine speed to and above 4,000 r/min unless the break-in operation finishes.

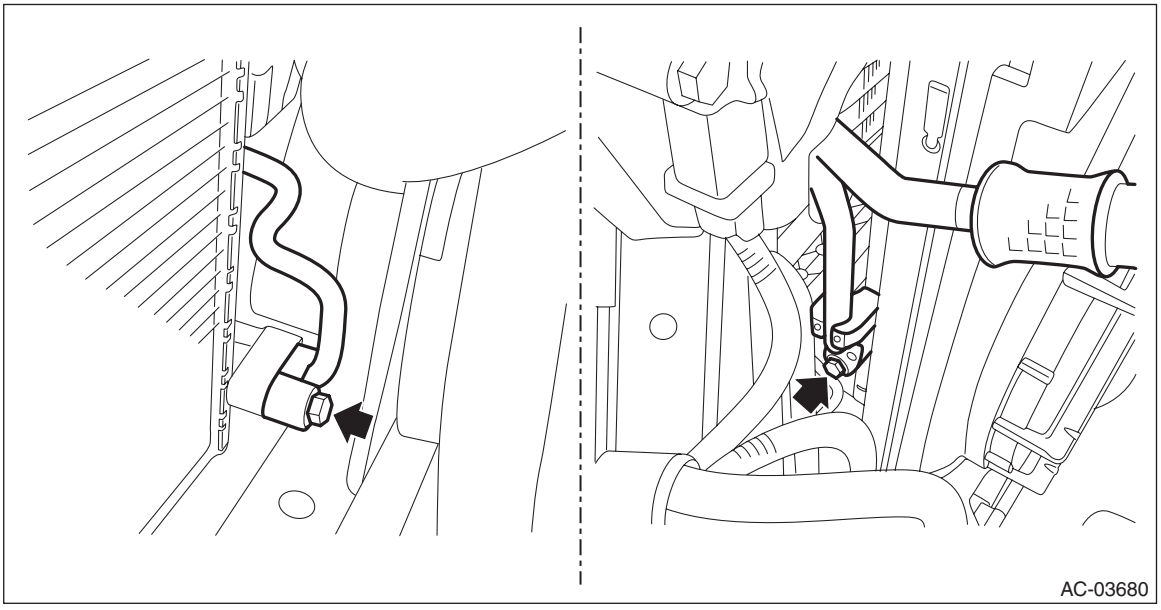
(1) Check that all connectors are locked securely.
(2) Reset the control module. (Disconnect and then connect the connector)
(3) Attach a delivery (test) mode fuse to the main fuse box.
(4) Set the fan dial to MAX (4th position). (manual A/C model)
(5) Connect the Subaru Select Monitor, select «Variable compressor break-in drive» mode and display the current data «Variable compressor break-in drive finish status» by following the procedure.
(6) Start and idle the engine at or below 1,800 r/min. (The compressor operation is automatically changed to the break-in drive mode.)
(7) When «Variable compressor break-in drive finish status» changes from «incomplete» → «Finished», stop the engine.



CAUTION:
If the engine may have been started with no refrigerant charge, check for any diagnosis code (DTC) using Subaru Select Monitor. If the code B14A8 (Refrigerant not sealed drive error) is output, replace the compressor assembly.

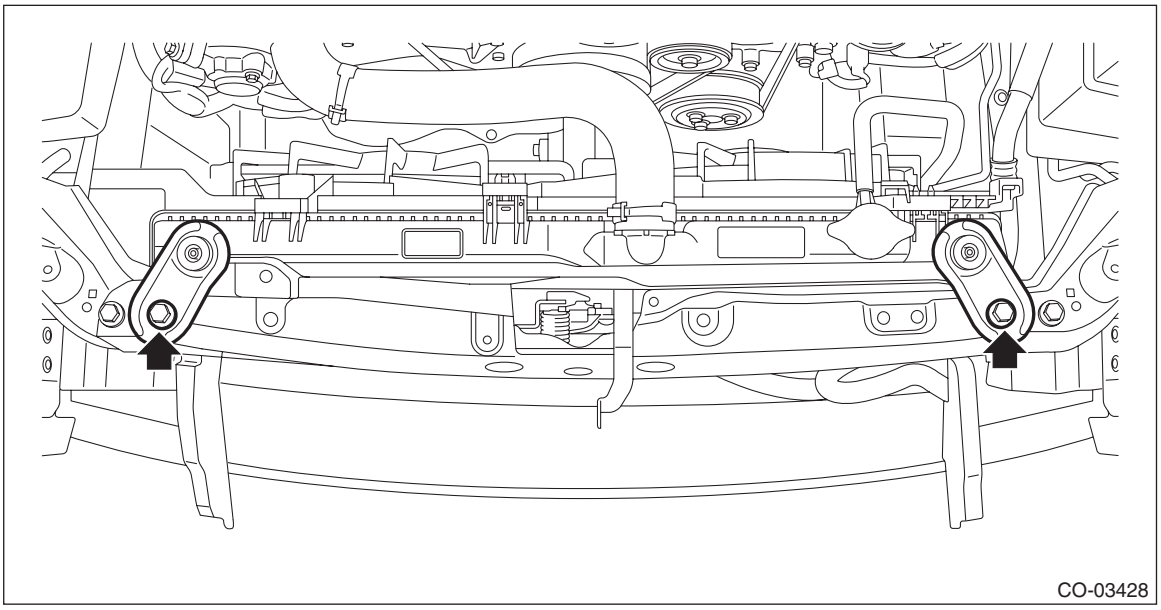
(8) Remove the delivery (test) mode fuse from the main fuse box.
(9) The break-in operation finishes.

17.Condenser



A: REMOVAL

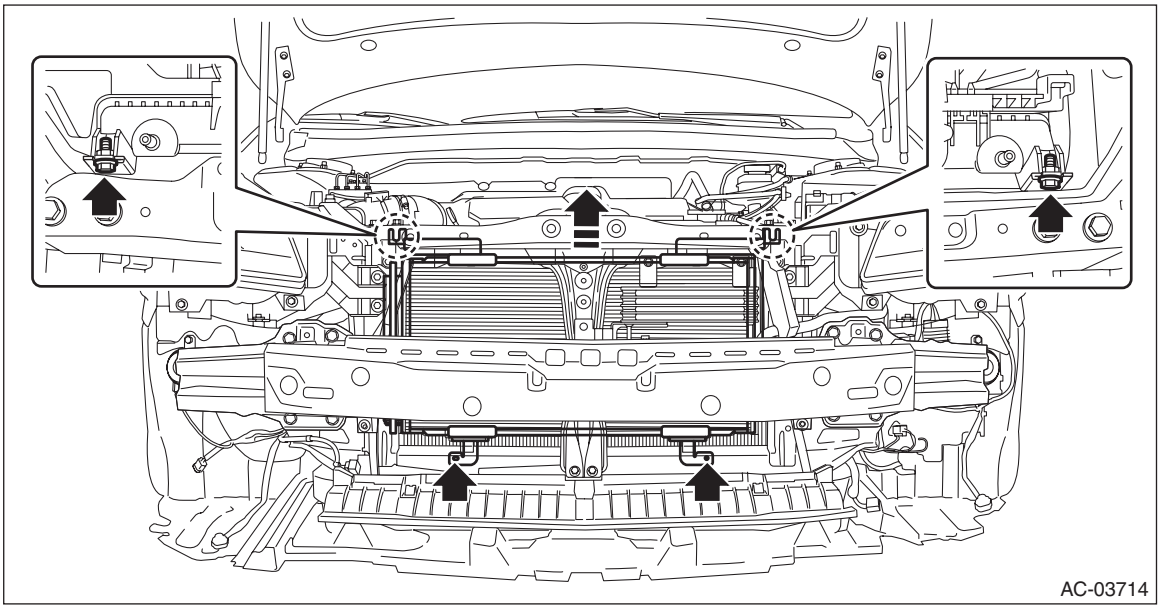
1) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.>
2) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the air intake duct. <Ref. to IN(H4DO)-12, REMOVAL, Air Intake Duct.>
4) Remove the reservoir tank. <Ref. to CO(H4DO)-60, REMOVAL, Reservoir Tank.>
5) Remove the front bumper face. <Ref. to EI-34, REMOVAL, Front Bumper.>
6) Remove the active grille shutter. (H4 model) <Ref. to CO(H4DO)-62, REMOVAL, Active Grille Shutter.>
7) Remove the clips and remove the grille bracket.



CO-03475

8) Remove the bolt, and detach the hose - pressure discharge and the pipe - evaporator cooling.

CAUTION:
Seal the disconnected hose, pipe and engaging part of condenser assembly with a plug or vinyl tape to prevent foreign matter from entering.



AC-03680

9) Remove the bolts and remove the radiator upper bracket.

10) Remove the bolts, and remove the condenser assembly - air conditioner.

CAUTION:
• Push the radiator to the engine side, and pull it out through the space between the radiator and the radiator panel.
• Be careful not to damage the condenser and radiator fin. If a damaged fin is found, repair it using a thin screwdriver.

B: INSTALLATION

CAUTION:
- **Do not start the engine before charging refrigerant.**
- **If the engine is started with no refrigerant charge, replace the compressor assembly.**
- **If the condenser has been replaced, add an appropriate amount of compressor oil to the compressor. <Ref. to AC-34, ADJUSTMENT, Compressor Oil.>**
- **Replace the O-rings with new parts, and then apply compressor oil.**

1) Install the condenser assembly - air conditioner.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the radiator upper brackets.

Tightening torque:
12 N·m (1.2 kgf-m, 8.9 ft-lb)

3) Install the hose - pressure discharge and the pipe - evaporator cooling.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

4) Attach the grille bracket.
5) Install the active grille shutter. (H4 model)

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

6) Install the front bumper. <Ref. to EI-38, INSTALLATION, Front Bumper.>
7) Install the reservoir tank.
8) Install the air intake duct.
9) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
10) Charge refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>

C: INSPECTION

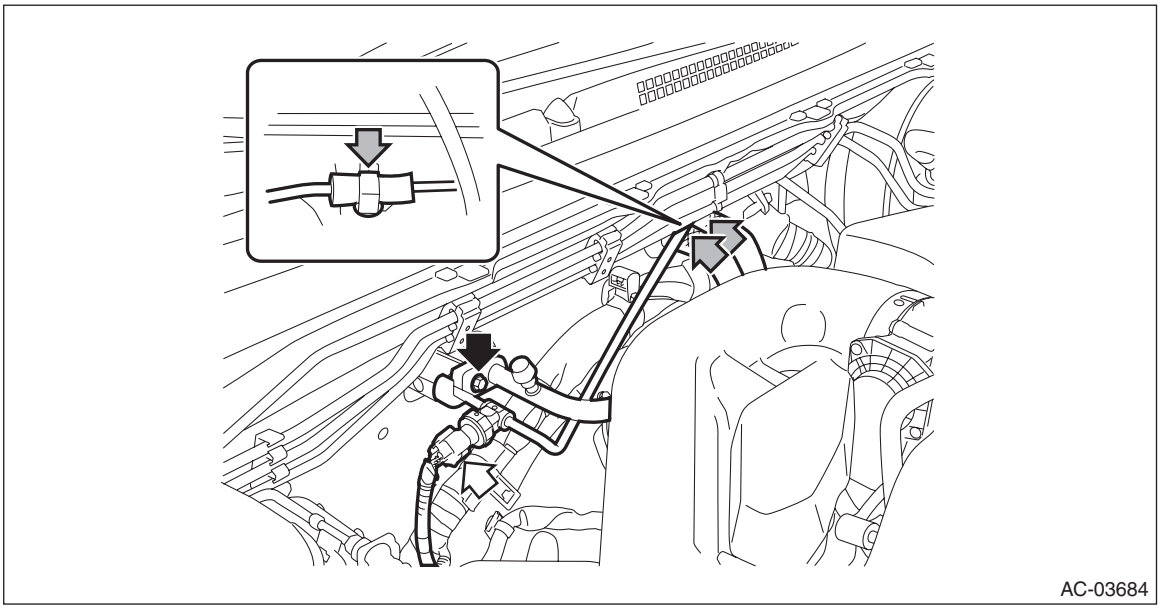
1) Check to see that the condenser fins are not clogged with debris or insects. Blow with compressed air or flush fins with water as needed.
2) If any oil leak is found from the condenser, replace the condenser.

18.Heater and Cooling Unit

A: REMOVAL

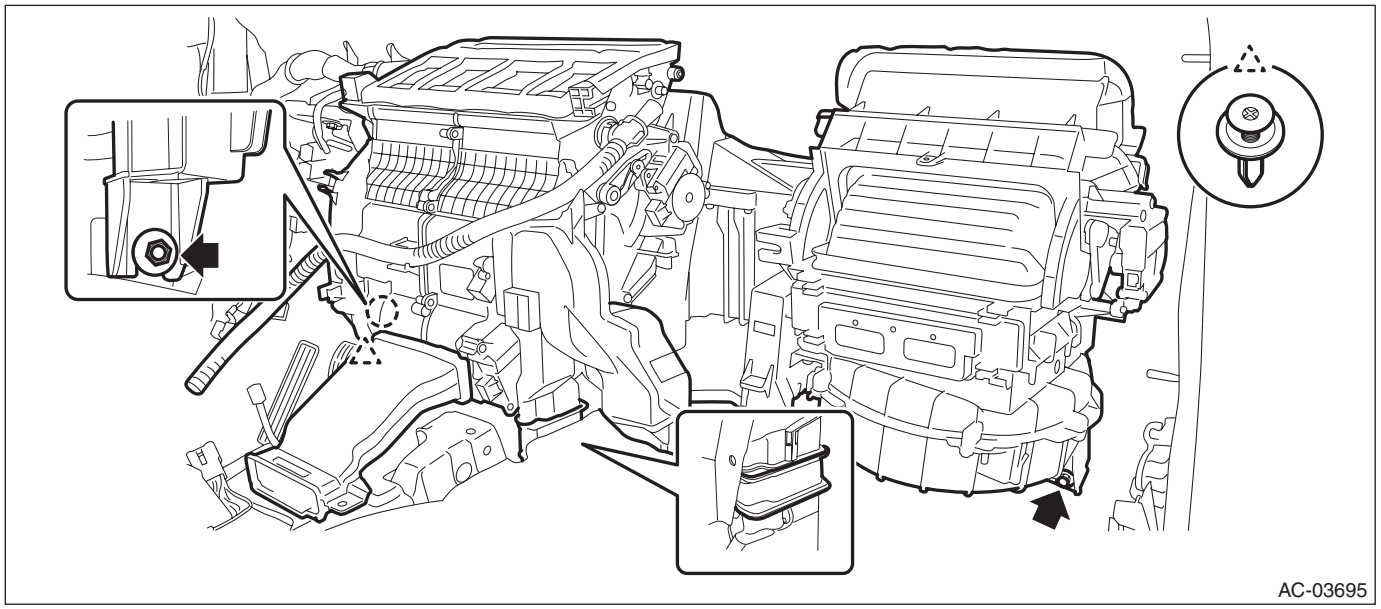
CAUTION:
Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.>
3) Drain the coolant from the radiator.
- H4 model: <Ref. to CO(H4DO)-15, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- H6 model: <Ref. to CO(H6DO)-13, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>



4) Disconnect the hose - pressure suction and the pipe - evaporator cooling.

CAUTION:
Seal the disconnected hose, pipe and engaging part of expansion valve with a plug or vinyl tape to prevent foreign matter from entering.



(1) Disconnect the connector.
(2) Detach the clips and bolts, and detach the hose - pressure suction and the pipe - evaporator cooling.

5) Loosen the heater hose clamps and detach the hoses.

NOTE:
Put alignment marks to hoses, clamps, etc.

6) Remove the instrument panel assembly and the beam COMPL - steering. <Ref. to EI-83, REMOVAL, Instrument Panel Assembly.>
7) Remove the heater and cooling unit.
(1) Remove the clips, and remove the duct - console front.
(2) Turn over the floor carpet and remove the slide lock of the duct - rear heater
(3) Remove the bolt and remove the heater and cooling unit.

8) Remove the blower motor unit assembly. <Ref. to AC-35, REMOVAL, Blower Motor Unit Assembly.>

CAUTION:
• Do not detach the immobilizer control module except when replacing the blower motor unit assembly.
• Replace the air duct cover LWR with a new part when the immobilizer control module is removed. If the air duct cover LWR is reused, screw tightening force is reduced and the immobilizer control module may be detached due to vibration while driving.

B: INSTALLATION

CAUTION:
- **Do not start the engine before charging refrigerant.**
- **If the engine is started with no refrigerant charge, replace the compressor assembly.**
- **Replace O-rings and pipe clamps with new parts and install securely.**
- **Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>**

1) Install the blower motor unit assembly.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

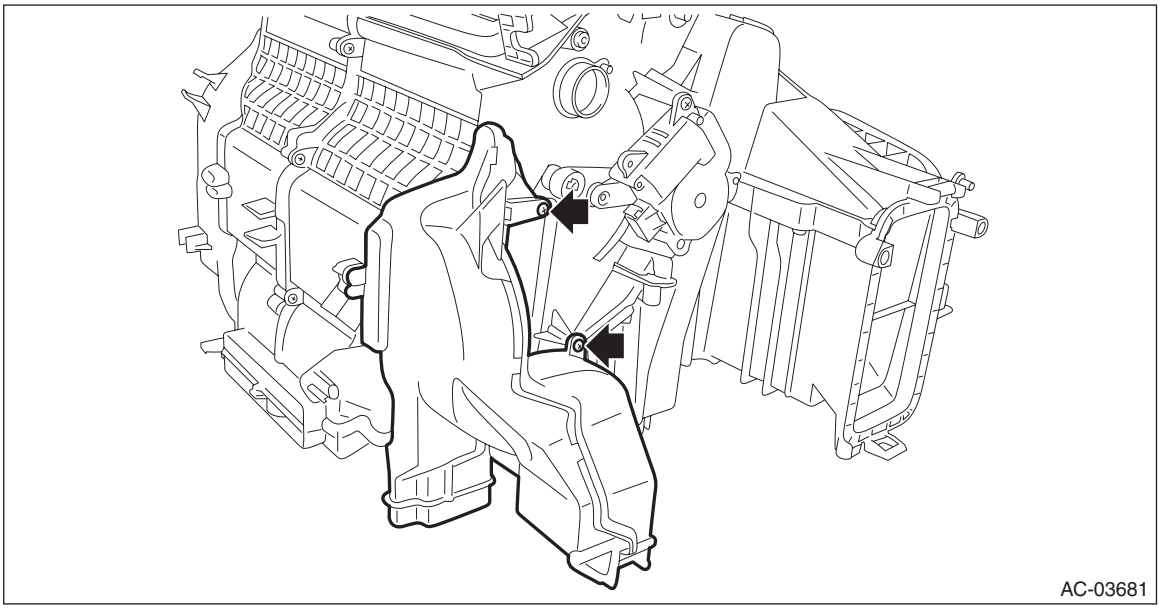
2) Install the heater and cooling unit assembly.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the instrument panel assembly and the beam COMPL - steering. <Ref. to EI-88, INSTALLATION, Instrument Panel Assembly.>
4) Attach the heater hose.
5) Install the hose - pressure suction and the pipe - evaporator cooling.

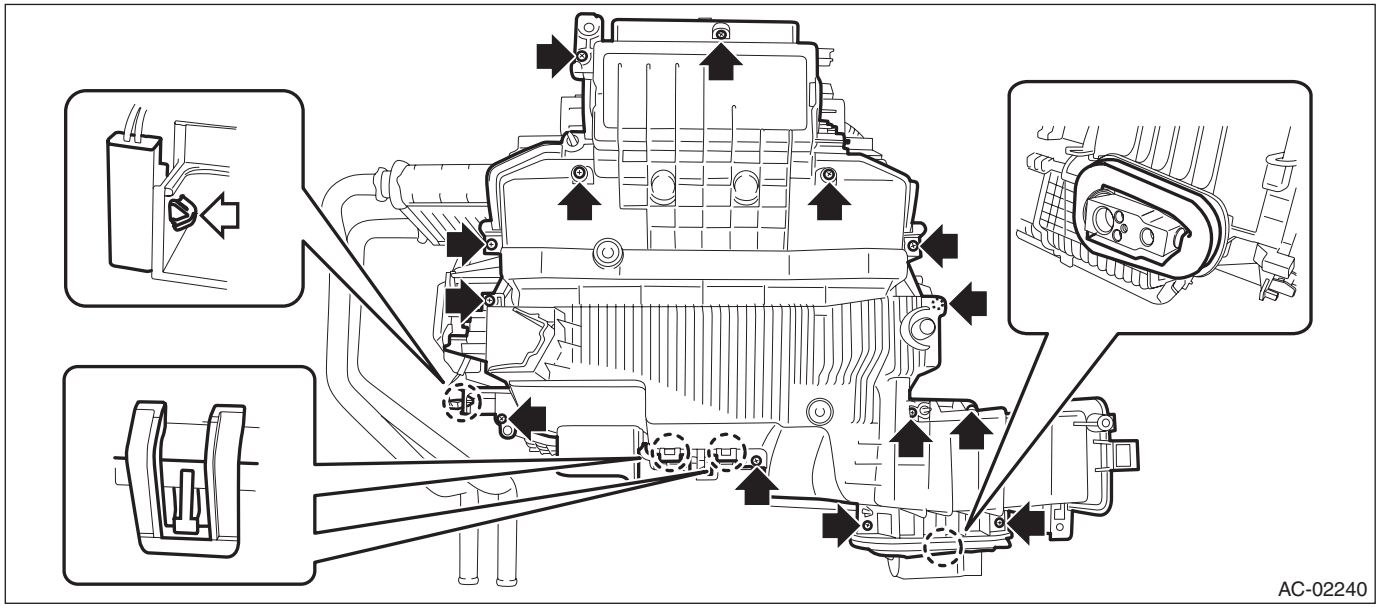
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
7) Fill engine coolant.
- H4 model: <Ref. to CO(H4DO)-15, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- H6 model: <Ref. to CO(H6DO)-13, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>



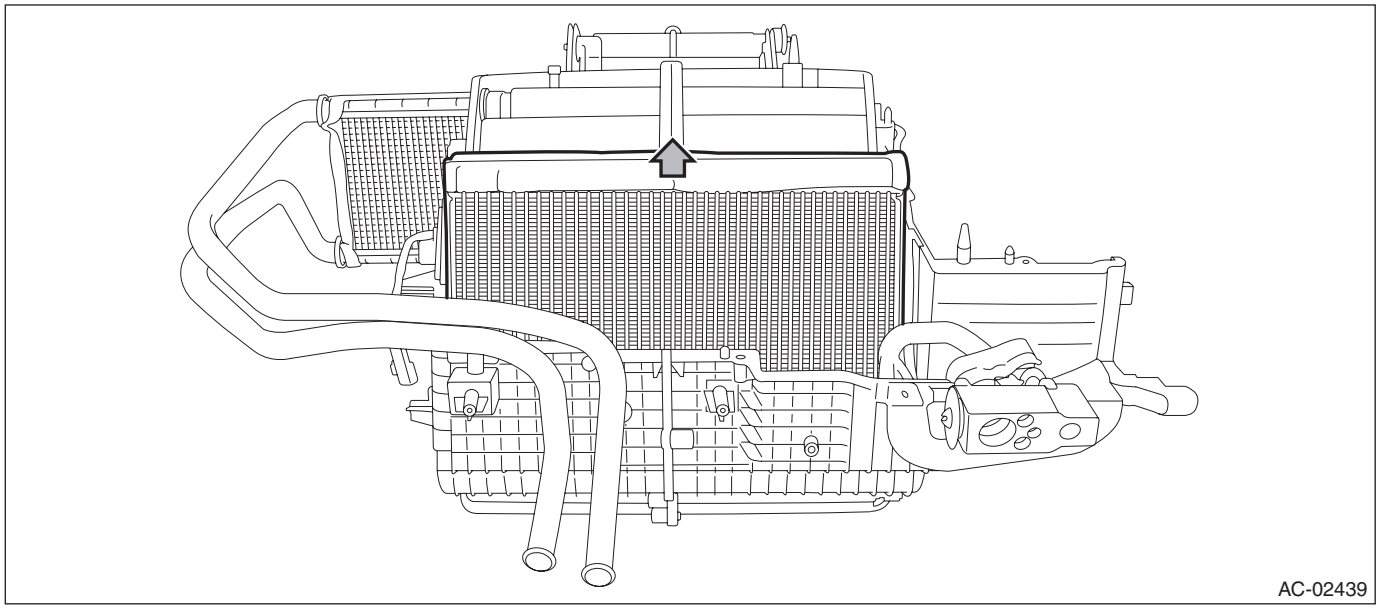
8) Charge refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>

19.Evaporator

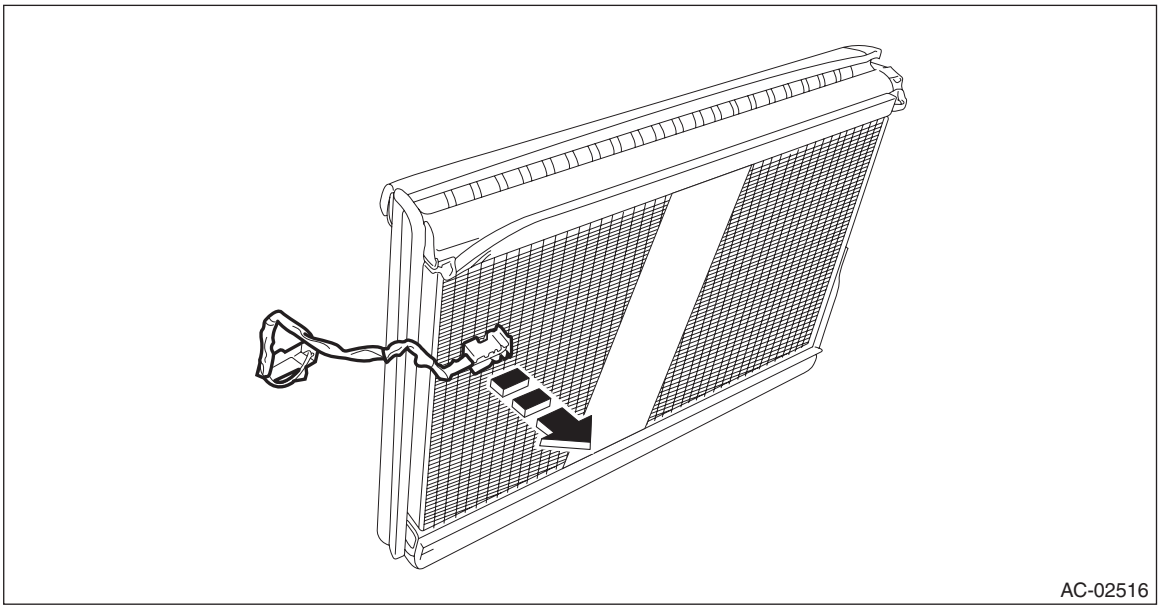


A: REMOVAL

CAUTION:
Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the heater and cooling unit. <Ref. to AC-54, REMOVAL, Heater and Cooling Unit.>
3) Pull out the heater core. <Ref. to AC-42, REMOVAL, Heater Core.>
4) Remove the screw, and then remove the foot duct (RH).



5) Remove the heater case lower.
   (1) Remove the clip, and remove the connector.
   (2) Remove the gasket.
   (3) Remove the screw and lock, then remove the heater case lower.

6) Remove the evaporator.

7) Remove the expansion valve. <Ref. to AC-60, REMOVAL, Expansion Valve.>
8) Remove the evaporator sensor. <Ref. to AC-75, REMOVAL, Evaporator Sensor.>

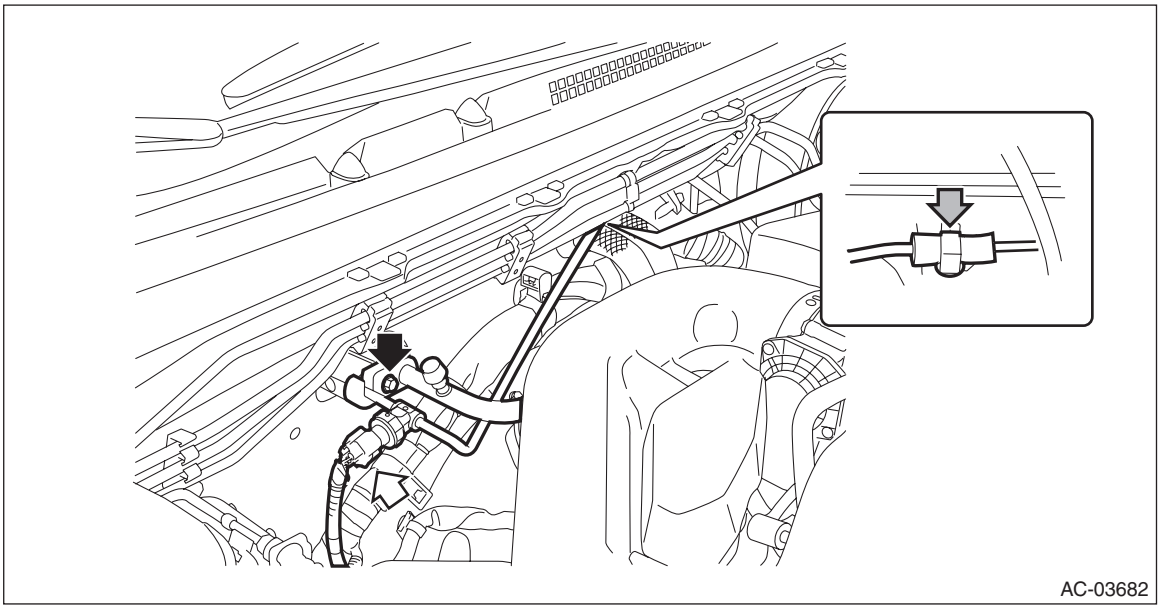
B: INSTALLATION

CAUTION:
- **Do not start the engine before charging refrigerant.**
- **If the engine is started with no refrigerant charge, replace the compressor assembly.**
- **If the evaporator has been replaced, add an appropriate amount of compressor oil to the compressor. <Ref. to AC-34, ADJUSTMENT, Compressor Oil.>**
- **When the evaporator has been replaced, always replace the packing for expansion valve with a new one and apply the compressor oil on it.**
- **Make sure that the water seal packing on the cover attachment area is securely attached.**
- **Replace the O-rings with new parts, and then apply compressor oil.**
- **Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>**

1) Install the evaporator sensor to the specified location. <Ref. to AC-75, INSTALLATION, Evaporator Sensor.>
2) Install the expansion valve.
3) Install the evaporator.
4) Attach the heater case lower.
5) Install the foot duct (RH).
6) Attach the heater core.
7) Install the heater and cooling unit. <Ref. to AC-56, INSTALLATION, Heater and Cooling Unit.>

C: INSPECTION

1) Check the evaporator fin for dust. Blow with compressed air or flush fins with water as needed.
2) If any oil leak is found from the evaporator, replace the evaporator.

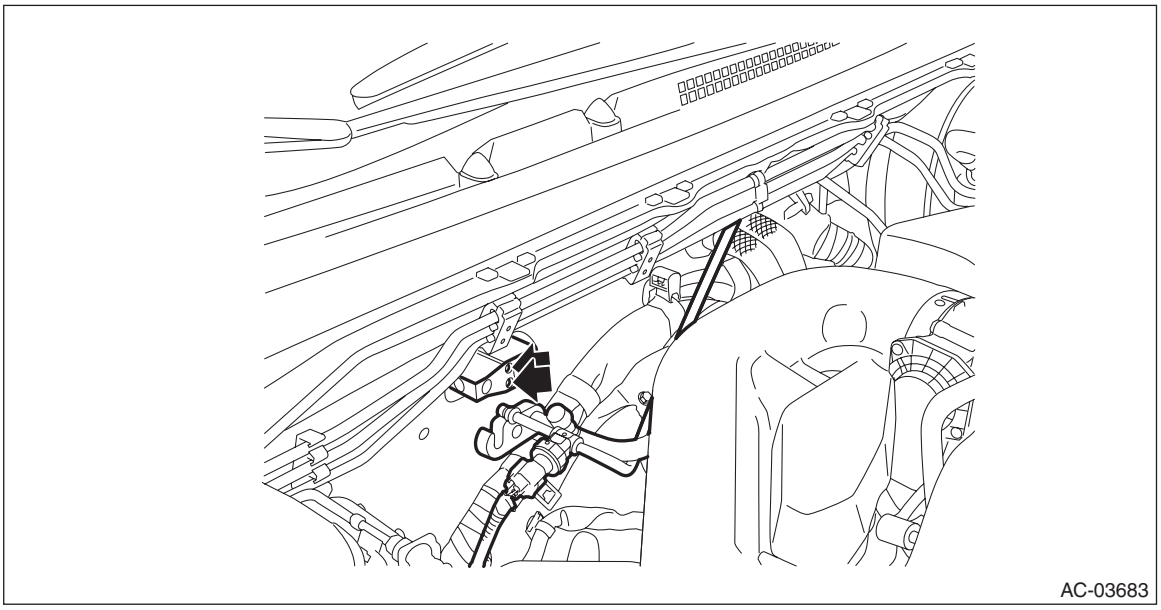


20.Expansion Valve

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.>
3) Disconnect the hose - pressure suction and the pipe - evaporator cooling.

CAUTION:
Seal the disconnected hose, pipe and engaging part of expansion valve with a plug or vinyl tape to prevent foreign matter from entering.



(1) Disconnect the connector.
(2) Detach the clips and bolts, and detach the hose - pressure suction and the pipe - evaporator cooling.

4) Remove the bolt, and remove the expansion valve - cooling.

CAUTION:
Seal the pipe and engaging part of expansion valve with a plug or vinyl tape to prevent foreign matter from entering.

Preparation tool:
Hexagon wrench: 4 mm (0.16 in)

B: INSTALLATION

CAUTION:
- **Do not start the engine before charging refrigerant.**
- **If the engine is started with no refrigerant charge, replace the compressor assembly.**
- **Replace the gasket and O-rings with new parts, and then apply compressor oil.**

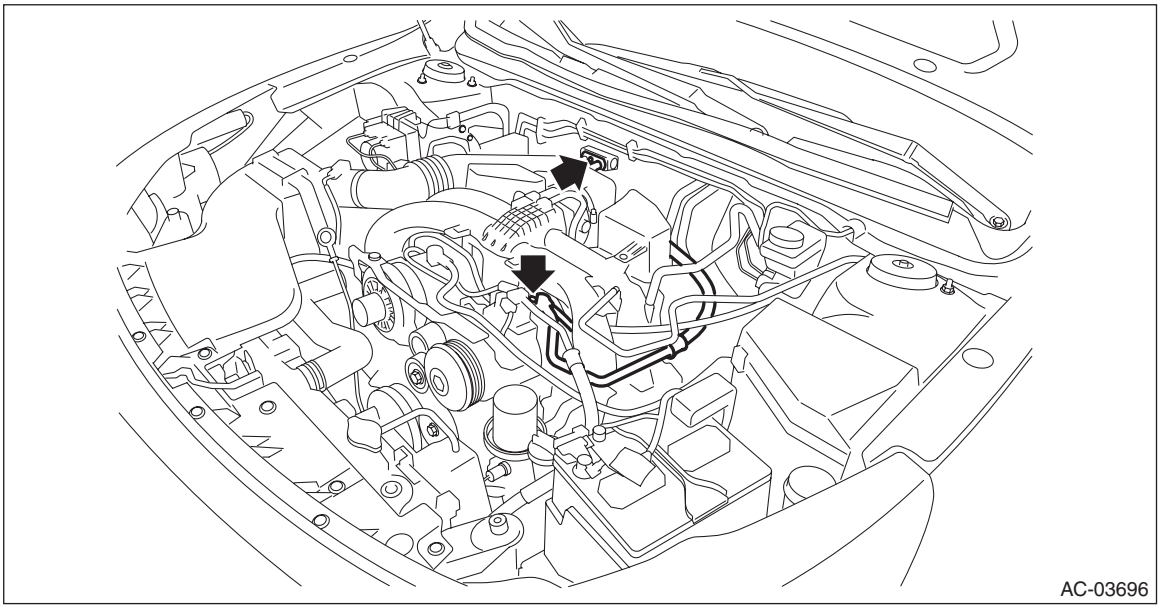
1) Install the expansion valve.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)

2) Install the hose - pressure suction and the pipe - evaporator cooling.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Charge refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>



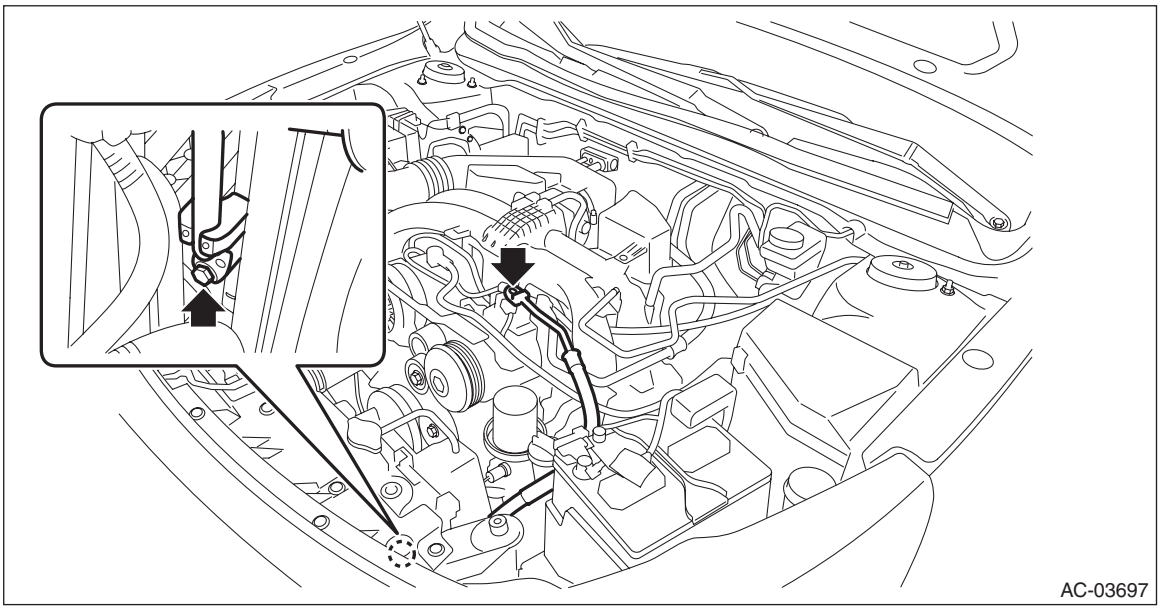
21.Hose and Pipe

A: REMOVAL

1. LOW-PRESSURE HOSE

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.>
3) Remove the bolts and remove the hose - pressure suction.

CAUTION:
- **Do not apply excessive force to the hose.**
- **Seal the disconnected hose, compressor assembly and engaging part of expansion valve with a plug or vinyl tape to prevent foreign matter from entering.**



2. HIGH-PRESSURE HOSE

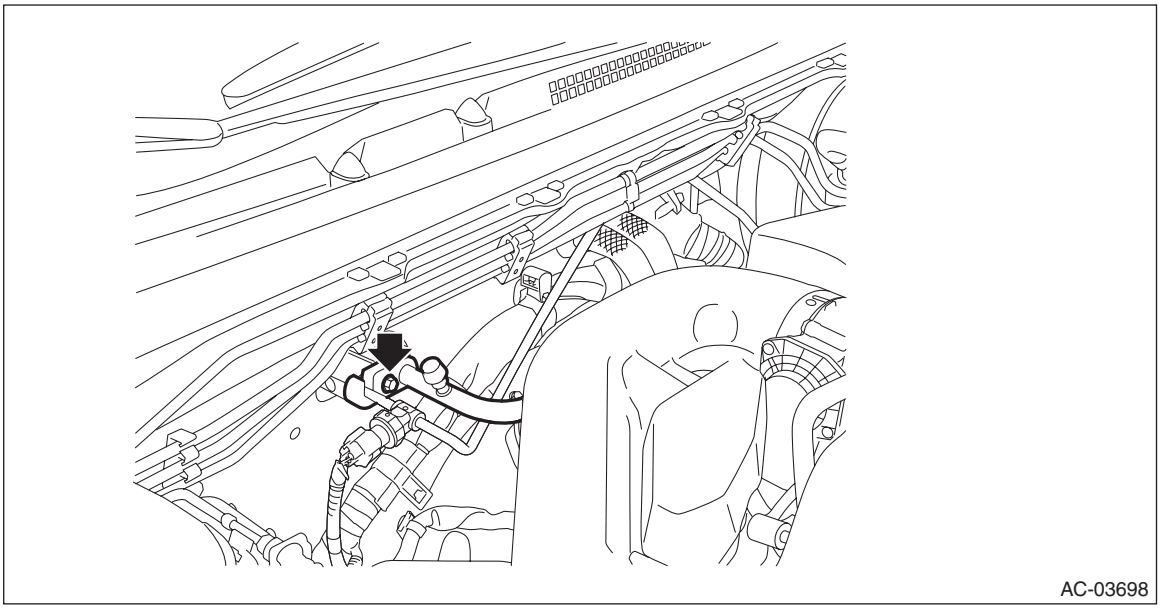
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.>
3) Remove the reservoir tank.
- H4 model: <Ref. to CO(H4DO)-60, REMOVAL, Reservoir Tank.>
- H6 model: <Ref. to CO(H6DO)-45, REMOVAL, Reservoir Tank.>

4) Remove the bolts and remove the hose - pressure discharge.

CAUTION:
- **Do not apply excessive force to the hose.**
- **Seal the disconnected hose, compressor assembly and engaging part of compressor with a plug or vinyl tape to prevent foreign matter from entering.**

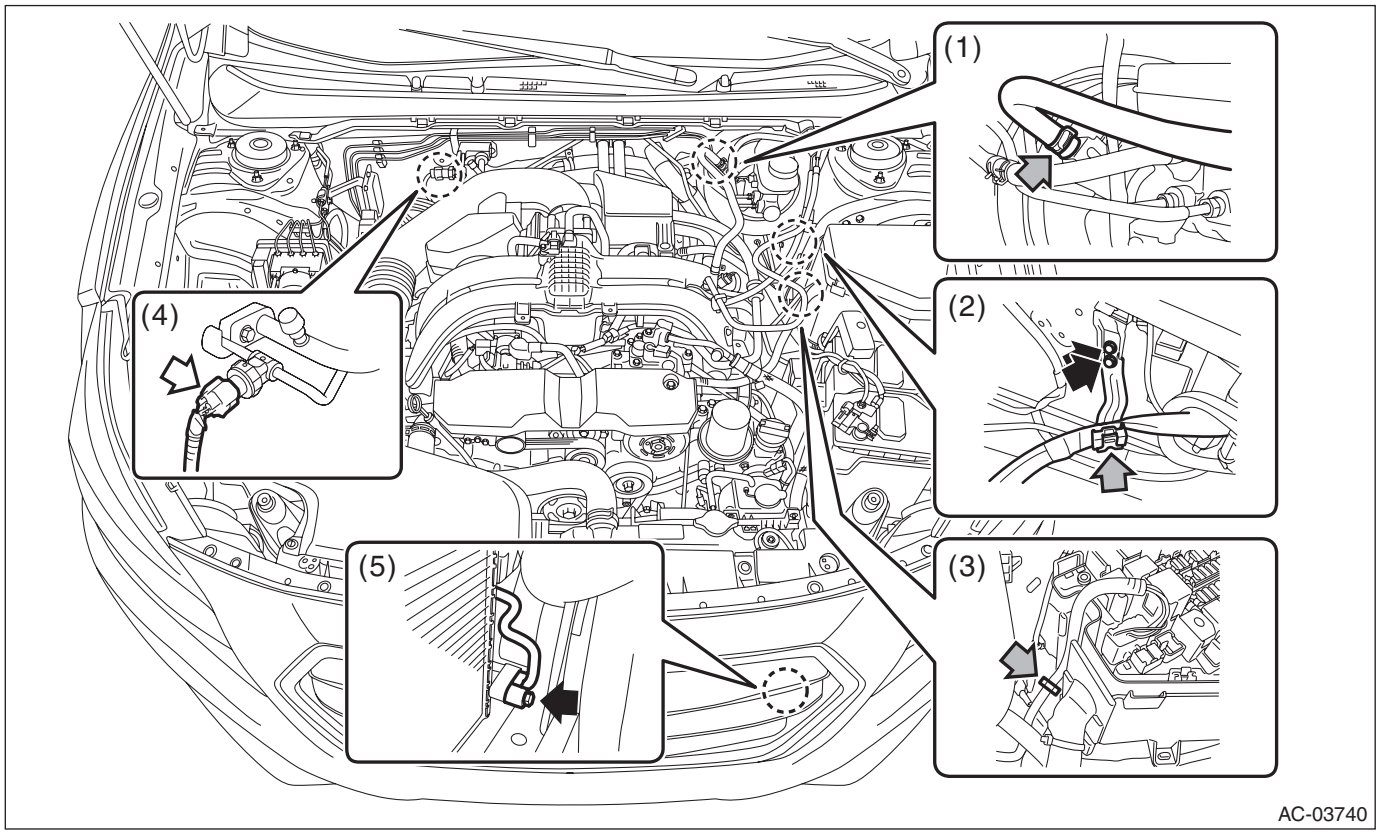
3. A/C PIPE

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.>
3) Remove the battery and battery box.
- H4 model: <Ref. to SC(H4DO)-58, REMOVAL, Battery.>
- H6 model: <Ref. to SC(H6DO)-51, REMOVAL, Battery.>



4) Remove the air intake boot.
- H4 model: <Ref. to IN(H4DO)-10, REMOVAL, Air Intake Boot.>
- H6 model: <Ref. to IN(H6DO)-10, REMOVAL, Air Intake Boot.>

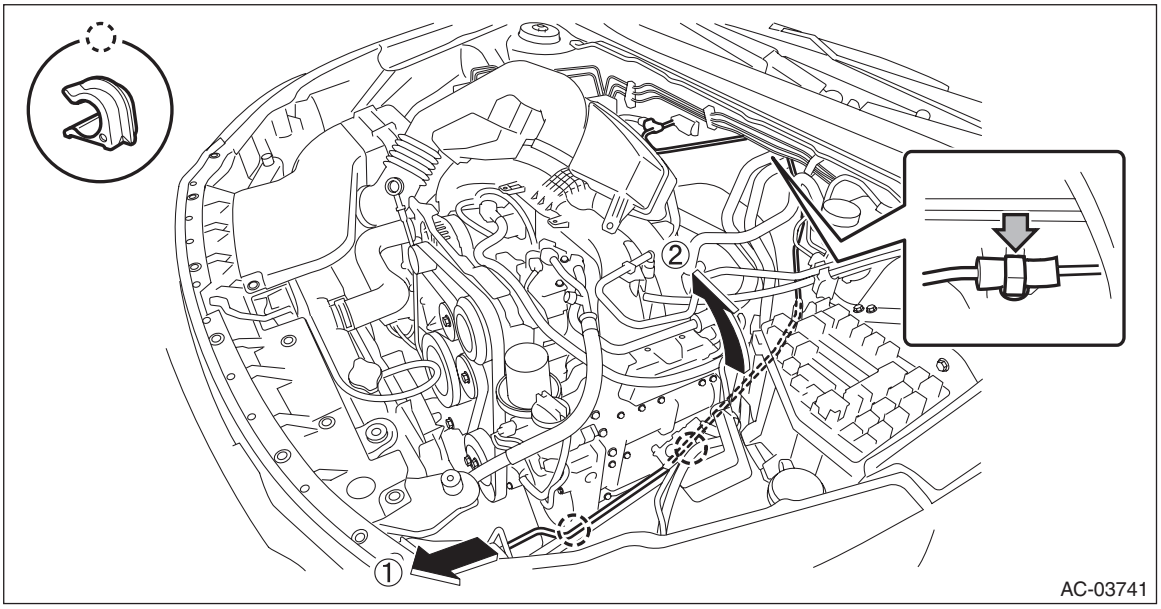
5) Remove the reservoir tank.
- H4 model: <Ref. to CO(H4DO)-60, REMOVAL, Reservoir Tank.>
- H6 model: <Ref. to CO(H6DO)-45, REMOVAL, Reservoir Tank.>



6) Remove the bumper face - front. <Ref. to EI-34, REMOVAL, Front Bumper.>
7) Remove the active grille shutter. (H4 model) <Ref. to CO(H4DO)-62, REMOVAL, Active Grille Shutter.>

8) Remove the bolts and detach the hose - pressure suction.

CAUTION:
Seal the disconnected hose and engaging part of expansion valve with a plug or vinyl tape to prevent foreign matter from entering.



9) Remove the pipe - evaporator cooling.
(1) Remove the clamp and remove the vacuum hose.
(2) Remove the cable clamps and bolts, and remove the battery cable bracket.
(3) Remove the engine harness clips.
(4) Disconnect the pressure switch connector.
(5) Remove the bolt, and detach the pipe - evaporator cooling.

(6) Remove the clip - pipe and the clip, and remove the pipe - evaporator cooling in numerical order as shown in the figure.

CAUTION:
• Do not apply excessive force to the pipe.
• Seal the disconnected pipe, expansion valve and engaging part of condenser with a plug or vinyl tape to prevent foreign matter from entering.
• Do not pull the harness and cable forcibly.

B: INSTALLATION

1. LOW-PRESSURE HOSE

CAUTION:
• If the hose and pipe has been replaced, add an appropriate amount of compressor oil to the compressor. <Ref. to AC-34, ADJUSTMENT, Compressor Oil.>
• Do not start the engine before charging refrigerant.
• If the engine is started with no refrigerant charge, replace the compressor assembly.
• Replace the O-rings with new parts, and then apply compressor oil.
• When connecting hoses, do not apply an excessive force to them. After installing, check that no torsion or excessive tension applied to the hoses.

1) Install the hose - pressure suction.

Tightening torque:
Air conditioning unit: <Ref. to AC-9, AIR CONDITIONING UNIT, COMPONENT, General Description.>

2) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Charge refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>

2. HIGH-PRESSURE HOSE

CAUTION:
• If the hose and pipe has been replaced, add an appropriate amount of compressor oil to the compressor. <Ref. to AC-34, ADJUSTMENT, Compressor Oil.>
• Do not start the engine before charging refrigerant.
• If the engine is started with no refrigerant charge, replace the compressor assembly.
• Replace the O-rings with new parts, and then apply compressor oil.
• When connecting hoses, do not apply an excessive force to them. After installing, check that no torsion or excessive tension applied to the hoses.
1) Install the hose - pressure suction discharge.

Tightening torque:
Air conditioning unit: <Ref. to AC-9, AIR CONDITIONING UNIT, COMPONENT, General Description.>
2) Install the reservoir tank.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Charge refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>

3. A/C PIPE

CAUTION:
• If the hose and pipe has been replaced, add an appropriate amount of compressor oil to the compressor. <Ref. to AC-34, ADJUSTMENT, Compressor Oil.>
• Do not start the engine before charging refrigerant.
• If the engine is started with no refrigerant charge, replace the compressor assembly.
• Replace the O-rings with new parts, and then apply compressor oil.
• When connecting hoses, do not apply an excessive force to them. After installing, check that no torsion or excessive tension applied to the hoses.
1) Install the pipe - evaporator cooling.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the hose - pressure suction.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Install the active grille shutter. (H4 model) <Ref. to CO(H4DO)-63, INSTALLATION, Active Grille Shutter.>
4) Install the bumper face - front. <Ref. to EI-34, REMOVAL, Front Bumper.>
5) Install the reservoir tank.
6) Install the air intake boot.

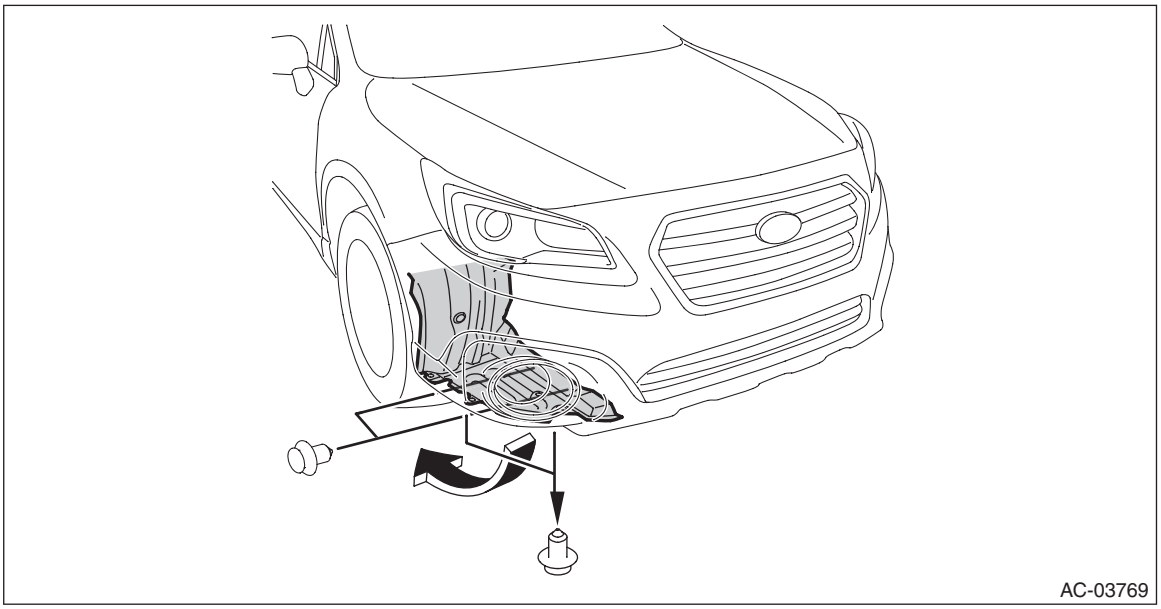
Tightening torque:
3 N·m (0.3 kgf-m, 2.2 ft-lb)
7) Install the battery and battery box.
- H4 model: <Ref. to SC(H4DO)-59, INSTALLATION, Battery.>
- H6 model: <Ref. to SC(H6DO)-52, INSTALLATION, Battery.>

8) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
9) Charge refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>

C: INSPECTION

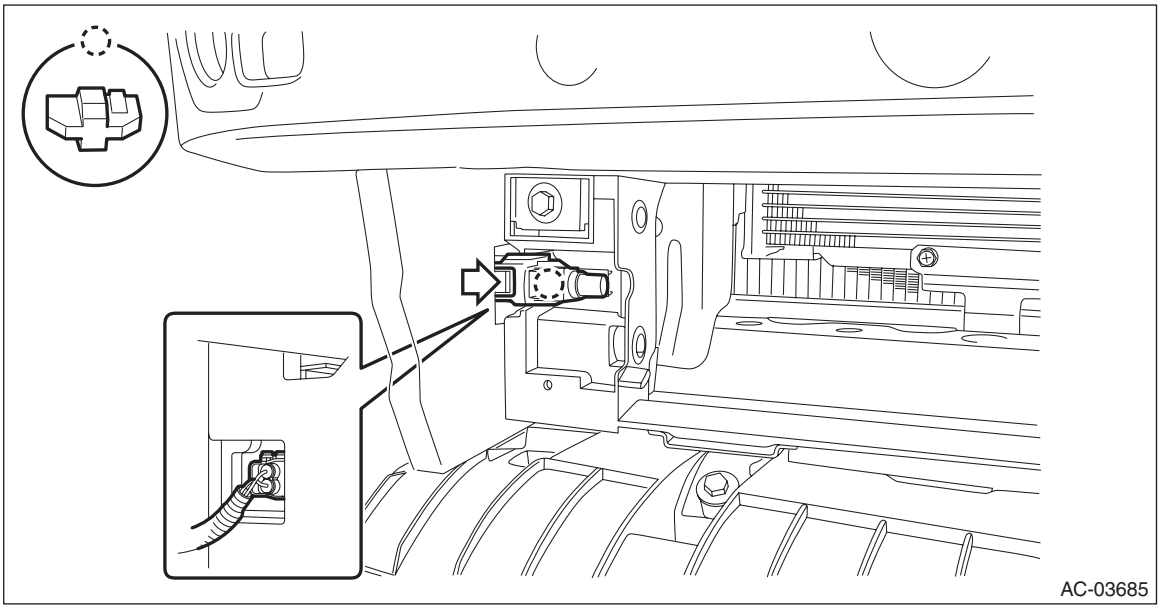
1) Check the hoses for cracks, damage and expansion. Replace the hose if faulty.
2) Check the pipes for crack or damage. Replace the pipe if faulty.

22.Pressure Sensor



A: INSPECTION

1) Perform a diagnosis code (DTC) check by connecting the Subaru Select Monitor.
2) If any diagnosis code (DTC) is displayed, refer to “List of Diagnostic Trouble Code (DTC)” in “HVAC SYSTEM (DIAGNOSTICS)” section. <Ref. to AC(diag)-56, LIST, List of Diagnostic Trouble Code (DTC).>



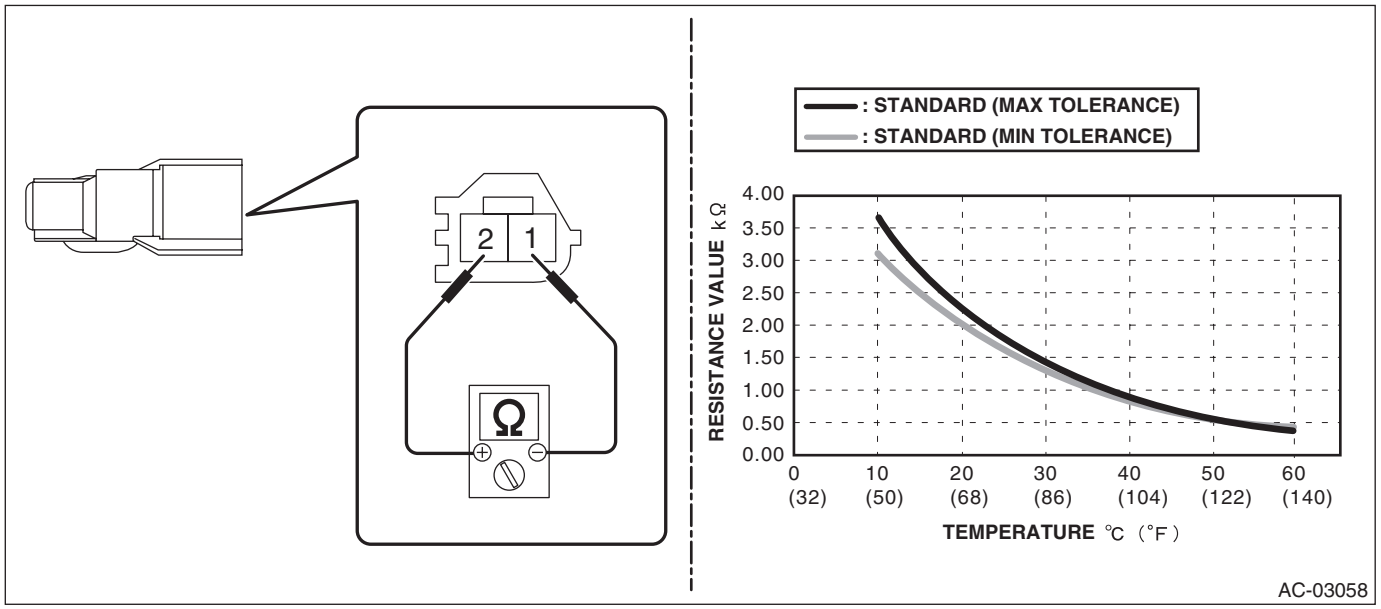
23.Ambient Sensor

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the clips, and turn over the mud guard - front.

3) Disconnect the connector and remove the ambient sensor.

B: INSTALLATION



1) Install the ambient sensor.
2) Install the mud guard - front.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

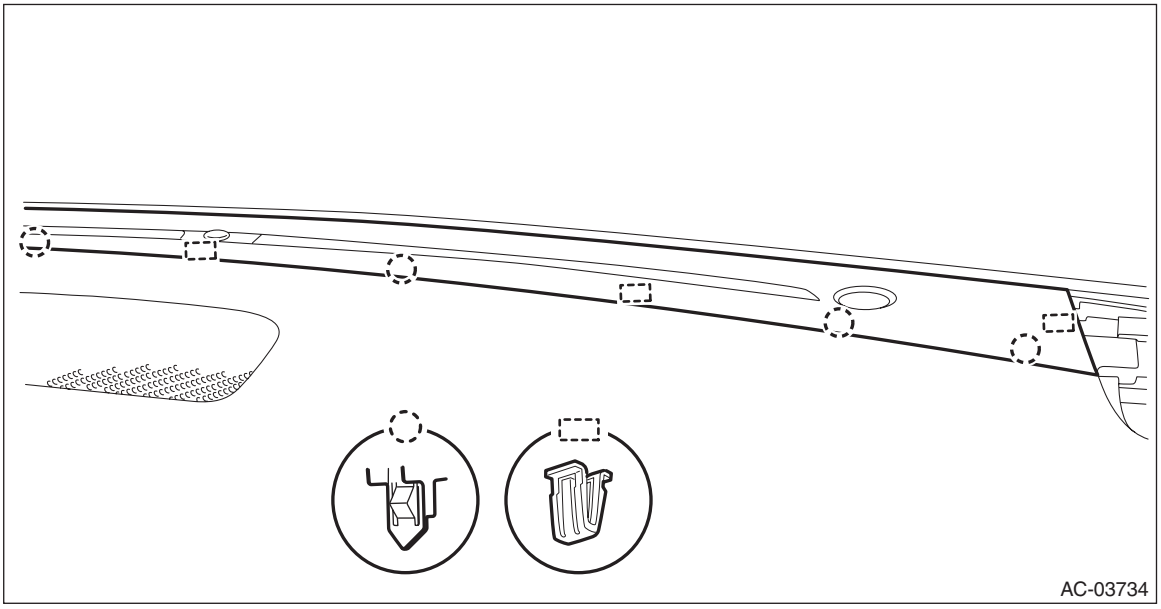
C: INSPECTION

1) Visually check the ambient sensor for dirt or damage, and clean or replace as necessary.
2) Check the resistance between ambient sensor terminals.

CAUTION:
During inspection, be careful not to touch the sensor end in order to avoid misjudgment due to body temperature.

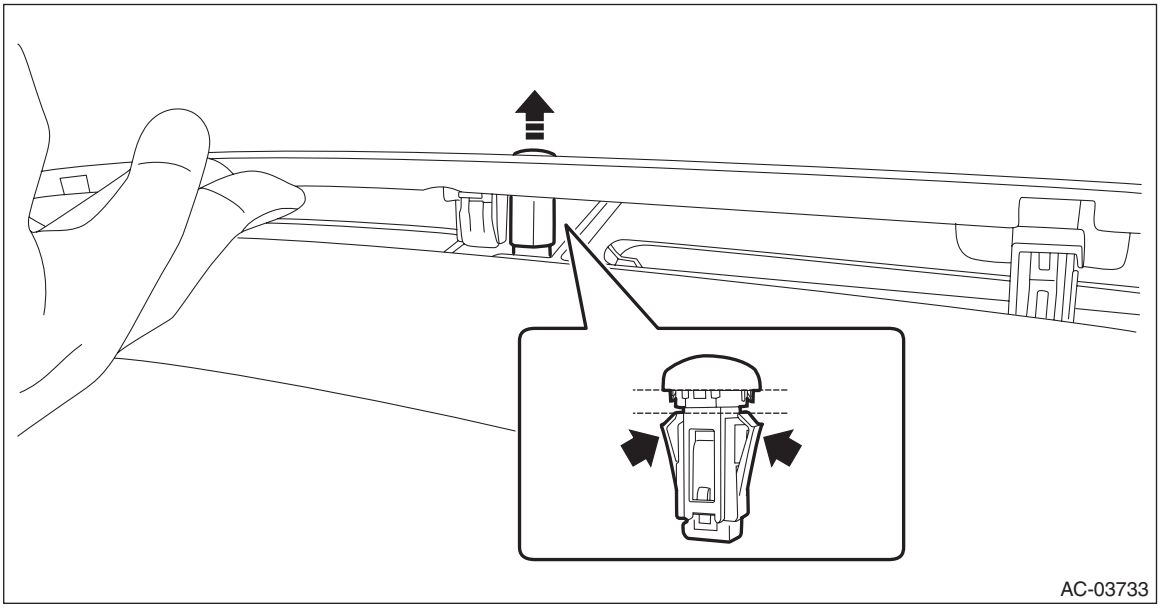
Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 2	10°C	3.12 — 3.70 kΩ
	15°C	2.49 — 2.88 kΩ
	20°C	2.00 — 2.26 kΩ
	25°C	1.62 — 1.79 kΩ
	30°C	1.32 — 1.42 kΩ
	35°C	1.08 — 1.14 kΩ
	40°C	0.89 — 0.92 kΩ
	45°C	0.74 — 0.75 kΩ
	50°C	0.62 — 0.62 kΩ
	55°C	0.52 — 0.51 kΩ
	60°C	0.44 — 0.42 kΩ



3) Replace the ambient sensor if the inspection result is not within the standard value.

24.Sunload Sensor (Auto A/C Model)



A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front pillar UPR. <Ref. to EI-96, REMOVAL, Upper Inner Trim.>
3) Release the clips and claws, then detach the grille speaker side. <Ref. to ET-13, TWEETER, REMOVAL, Front Speaker.>
4) Remove the sensor - sunload.
   (1) Release the claws of the panel COMPL - instrument UPR.

CAUTION:
• Secure minimum space for performing the operation. Do not remove the panel COMPL - instrument UPR. If the panel COMPL - instrument UPR is removed, it cannot be reinstalled unless the instrument panel is removed.
• Be careful not to damage the sensor and interior trim.

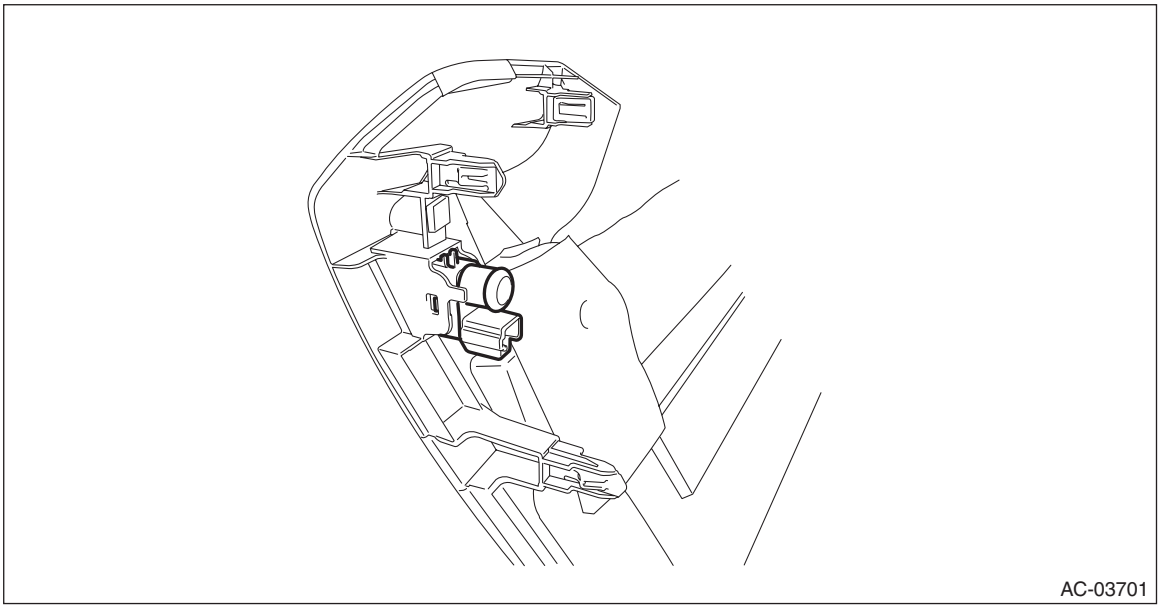
   (2) Release the claws, and pull out the sensor - sunload from the panel COMPL - instrument UPR.
   (3) Disconnect the connector and remove the sensor - sunload.

B: INSTALLATION

1) Install the sensor - sunload.
2) Install the panel COMPL - instrument UPR.
3) Install the grille speaker side.
4) Install the trim panel - front pillar UPR. <Ref. to EI-97, INSTALLATION, Upper Inner Trim.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Check if there is anything that affects sensing, around the sensor - sunload.
   (1) Is the sensor - sunload free from any other object on it that disturbs sensing?
   (2) Is the windshield glass free from any object such as sticker or film that disturbs sensing?
   - **Yes** → Go to step 2).
   - **No** → Remove everything that affects sensing.
2) Check the sensor - sunload using the Subaru Select Monitor.



Preparation tool:
Subaru Select Monitor III kit
   (1) Prepare the Subaru Select Monitor kit.
   (2) Run the “PC application for Subaru Select Monitor”.
   (3) On «Main Menu» display, select «Each System Check».
   (4) On «System Selection Menu» display, select «Air Condition System».
   (5) On «Air Conditioning Diagnosis» display, select «Current Data Display & Save».
   (6) Select «Quantity of Sunload» with UP/DOWN key and set with the «OK» key.
   (7) Cover the sensor - sunload with cloth and the like to avoid direct light. Does «Quantity of Sunload» indicate «0 W/m^2»?
   - **Yes** → Go to step 3).
   - **No** → Replace the sensor - sunload.
3) From the condition in step 2), expose the sensor - sunload to light.
   (1) Place intense light such as incandescent light at 30 cm or less from the sunload sensor.
   (2) Does «Quantity of Sunload» indicate «2,000 W/m^2» or less?

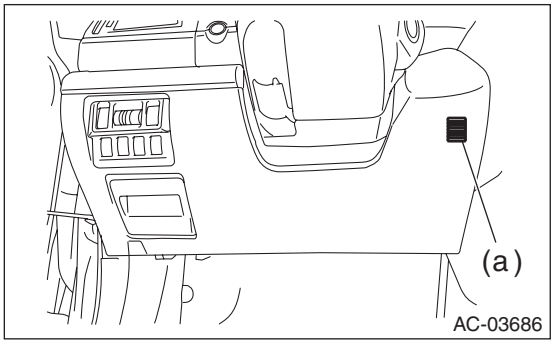
CAUTION:
The value changes depending on the angle of light.
   - **Yes** → The sensor - sunload is normal.
   - **No** → Replace the sensor - sunload.

25.In-Vehicle Sensor (Auto A/C Model)

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-74, REMOVAL, Instrument Panel Lower Cover.>
3) Release the claws and remove the in-vehicle sensor.

B: INSTALLATION



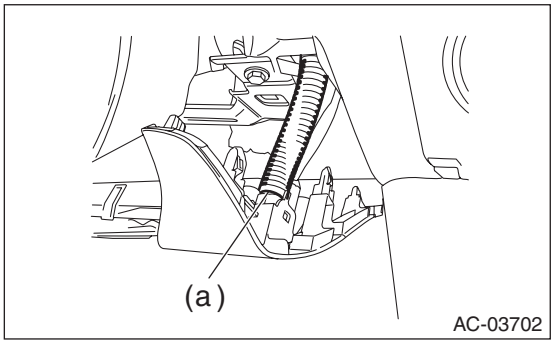
1) Install the in-vehicle sensor.
2) Install the cover assembly - instrument panel LWR driver.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Set the vehicle to the following conditions.

Item	Condition
Ignition switch	ON
AC switch	ON
Temperature adjustment dial	HI (MAX HOT)
Air flow control switch	DEF
Fan switch	HI (MAX)

2) Check the suction port (a) for in-vehicle sensor of the cover assembly - instrument panel LWR driver.



(1) Put a strip of paper close to the front side of the suction port (a).
(2) Can you see the paper moving towards the port and the air being sucked into the port?

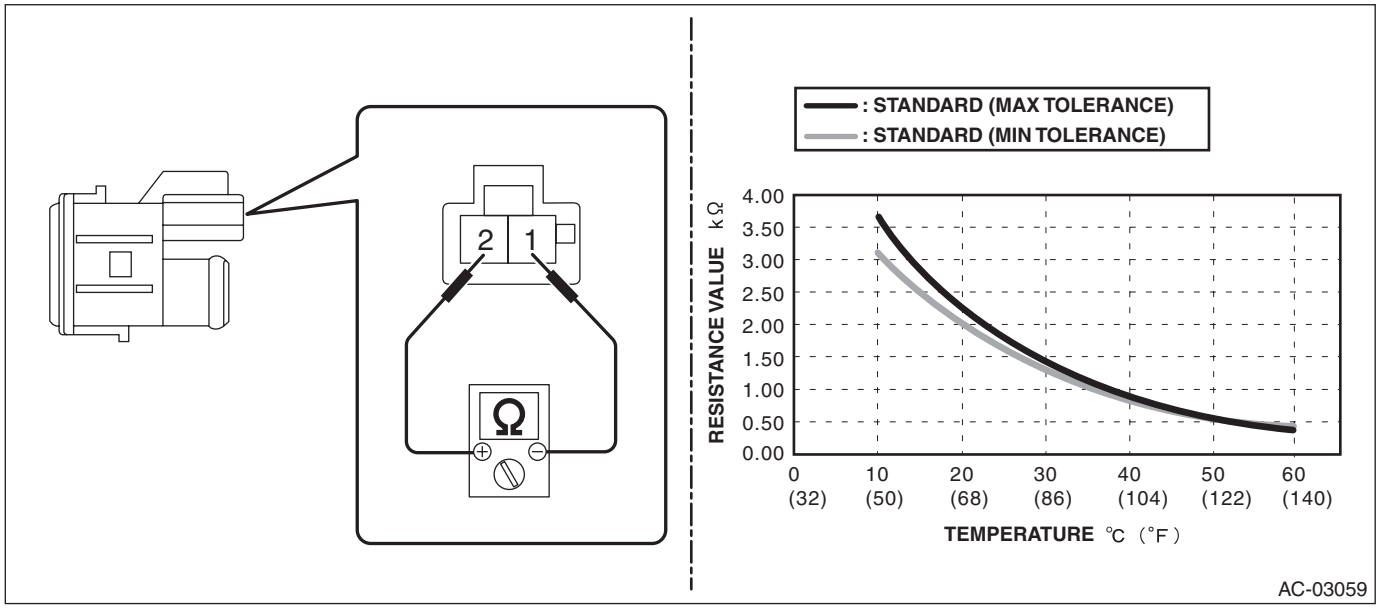
CAUTION:
Be careful not to let the paper get sucked into the port.

- **Yes** → Go to step 5).
- **No** → Go to step 3).

3) Remove the cover assembly - instrument panel LWR driver, and check the aspirator hose (a).

(1) Are the aspirator hoses on both sides of the case and sensor connected securely?
(2) Is the aspirator hose free from any kinks or cracks?

- **Yes** → Go to step 4).
- **No** → Repair or replace the aspirator hose if necessary.



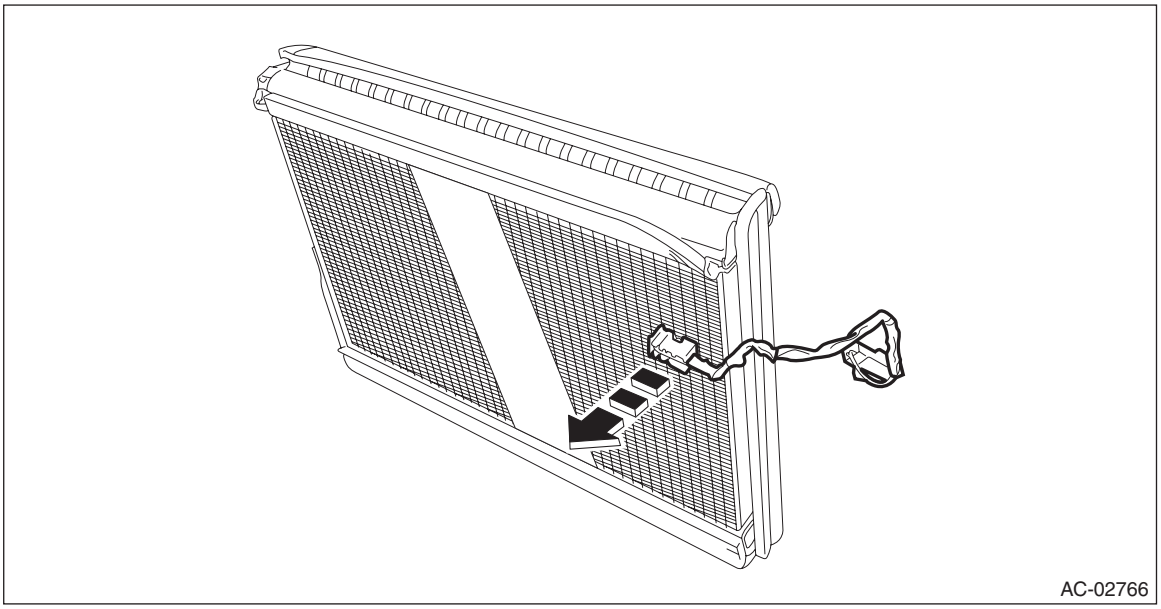
4) Check if there is anything that affects sensing, around the in-vehicle sensor.
(1) Is the in-vehicle sensor hole free from clogging?
(2) Is the peripheral area of in-vehicle sensor free from any heat-producing parts (such as audio, navigation system etc.)?

- **Yes** → Go to step 5).
- **No** → Remove everything that affects sensing.

5) Check in-vehicle sensor.
(1) Disconnect the connector.
(2) Is the resistance between connector terminals within standard value?

Preparation tool:
Circuit tester

CAUTION:
During inspection, be careful not to touch the sensor end in order to avoid misjudgment due to body temperature.

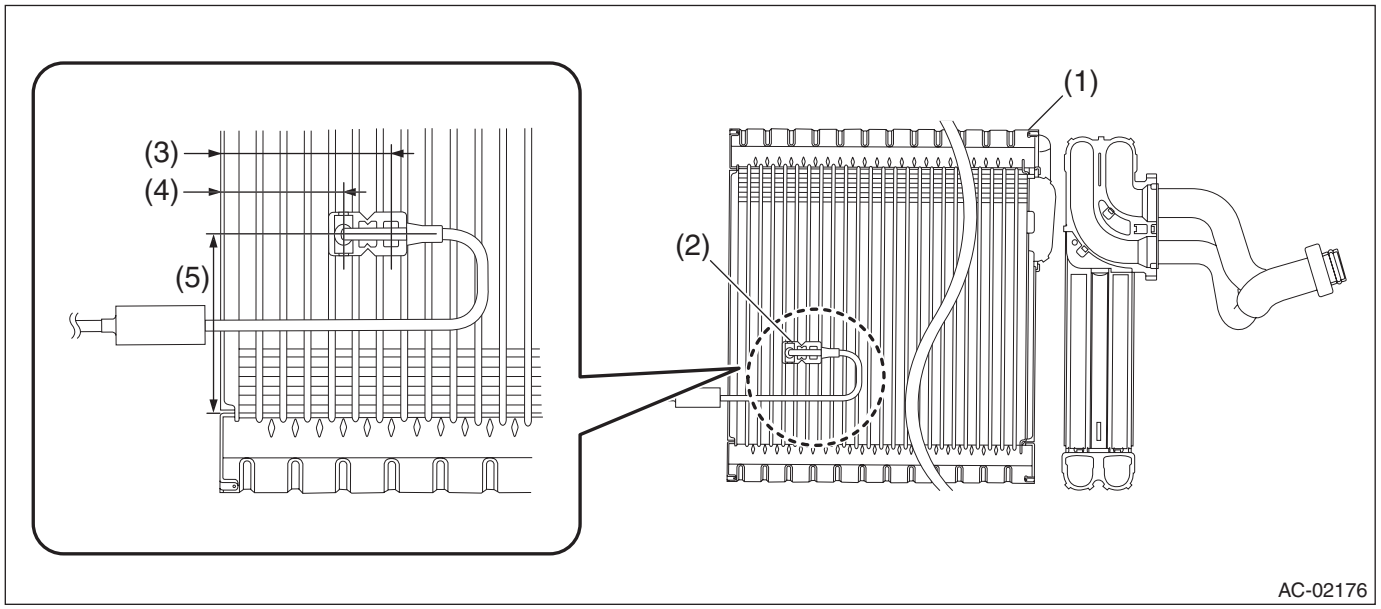


Terminal No.	Inspection conditions	Standard
1 — 2	10°C	3.12 — 3.70 kΩ
	15°C	2.49 — 2.88 kΩ
	20°C	2.00 — 2.26 kΩ
	25°C	1.62 — 1.79 kΩ
	30°C	1.32 — 1.42 kΩ
	35°C	1.08 — 1.14 kΩ
	40°C	0.89 — 0.92 kΩ
	45°C	0.74 — 0.75 kΩ
	50°C	0.62 — 0.62 kΩ
	55°C	0.52 — 0.51 kΩ
	60°C	0.44 — 0.42 kΩ

- **Yes** → The in-vehicle sensor is normal.
- **No** → Replace the in-vehicle sensor.

26.Evaporator Sensor

A: REMOVAL



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Recovery Procedure.>
3) Remove the evaporator assembly - cooling. <Ref. to AC-57, REMOVAL, Evaporator.>
4) Remove the thermostat - cooling.

B: INSTALLATION

CAUTION:
- **Do not start the engine before charging refrigerant.**
- **If the engine is started with no refrigerant charge, replace the compressor assembly.**
- **Make sure that the water seal packing on the cover attachment area is securely attached.**
- **Replace the O-rings with new parts, and then apply compressor oil.**

1) Install the evaporator sensor at the position shown in the figure below.

(1) Evaporator
(2) Evaporator sensor
(3) 47.7 mm (1.88 in)
(4) 34.3 mm (1.35 in)
(5) 50 mm (1.97 in)

2) Install the evaporator assembly - cooling. <Ref. to AC-59, INSTALLATION, Evaporator.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Charge refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>

C: INSPECTION

1) Prepare the vehicle.

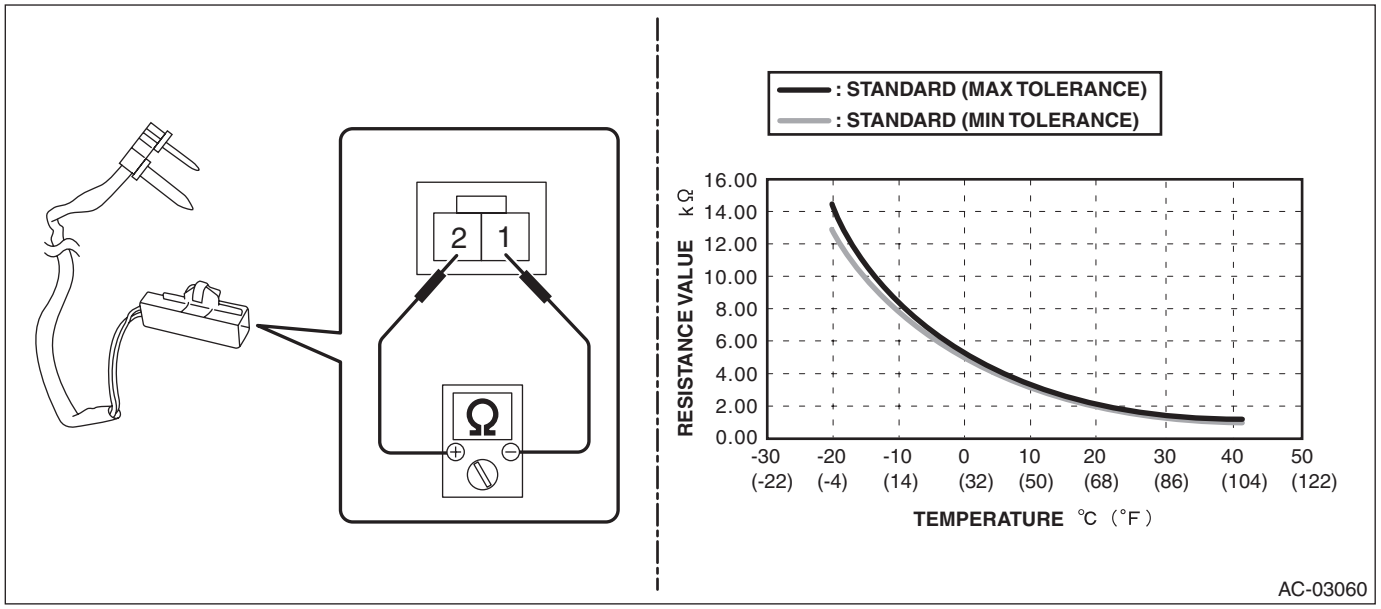
NOTE:
Check that the ambient temperature is 25 — 40°C (77 — 104°F) and that the humidity is 30% — 80%.
- Place the vehicle in the workshop or in the shade and windless condition.
- Open all windows.

2) Set the vehicle to the following conditions.

Item	Condition
Engine	Idling
Air vent grille	Shutter is fully open.
AC switch	OFF
Temperature adjustment dial	LO (MAX COOL)
FRESH/RECIRC switch	CIRC
Air flow control switch	VENT
Fan switch (auto A/C model)	5/7 level
Fan dial (manual A/C model)	3/4 level

3) Using the Subaru Select Monitor, check the evaporator sensor.

Preparation tool:
Subaru Select Monitor III kit



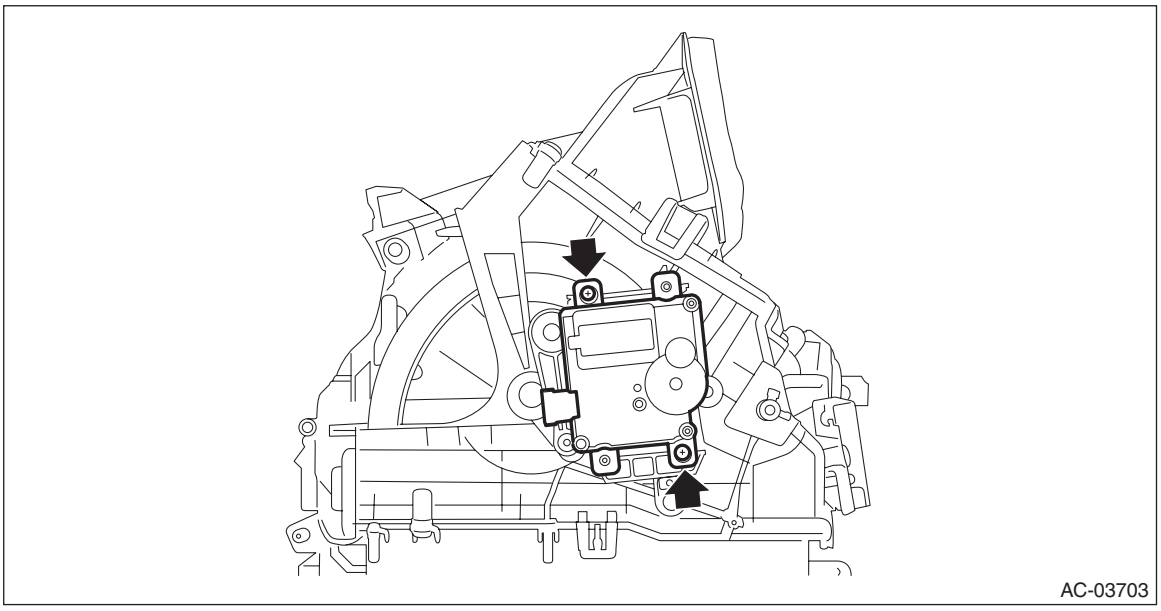
NOTE:
For detailed procedures, refer to “PC application help for Subaru Select Monitor”.
(1) Prepare the Subaru Select Monitor kit.
(2) Run the “PC application for Subaru Select Monitor”.
(3) On «Main Menu» display, select «Each System Check».
(4) On «System Selection Menu» display, select «Air Condition System».
(5) On «Air Conditioning Diagnosis» display, select «Current Data Display & Save».
(6) Select «Evaporator Temperature» with UP/DOWN key and set with the «OK» key.
(7) Idle the engine for 15 minutes, and then compare the air flow outlet temperature with «Evaporator Temperature Target».

Preparation tool:
Thermometer and hygrometer

NOTE:
For outlet opening temperature, measure the average temperature of center grille assembly and side grille assembly.
(8) Do the air flow outlet temperature and «Evaporator Temperature Target» differ by 3°C (5.4°F) or more?
- **Yes** → Go to step 4).
- **No** → Evaporator sensor is normal.

4) Check the evaporator sensor.
   (1) Disconnect the connector.
   (2) Measure the resistance between connector terminals.

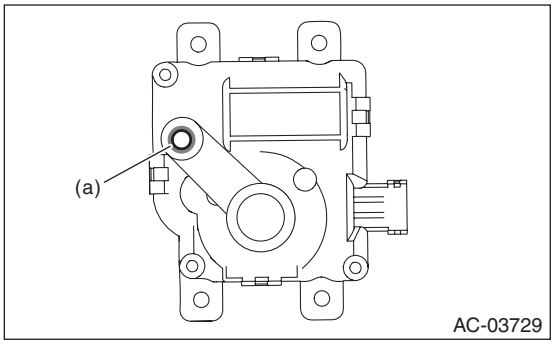
Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
1 — 2	-20°C	13.584 — 14.541 kΩ
	-15°C	10.34 — 10.946 kΩ
	-10°C	7.938 — 8.313 kΩ
	-5°C	6.143 — 6.366 kΩ
	0°C	4.79 — 4.914 kΩ
	5°C	3.718 — 3.829 kΩ
	10°C	2.889 — 3.031 kΩ
	15°C	2.247 — 2.435 kΩ
	20°C	1.785 — 1.952 kΩ
	25°C	1.427 — 1.574 kΩ
	30°C	1.149 — 1.278 kΩ
	35°C	0.931 — 1.044 kΩ
	40°C	0.759 — 0.858 kΩ

- **Yes** → Evaporator sensor is normal.
- **No** → Replace the evaporator sensor.

27.FRESH/RECIRC Door Actuator



A: REMOVAL

CAUTION:
Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the instrument panel assembly and the beam COMPL - steering. <Ref. to EI-83, REMOVAL, Instrument Panel Assembly.>
3) Remove the screw, and remove the intake door actuator.

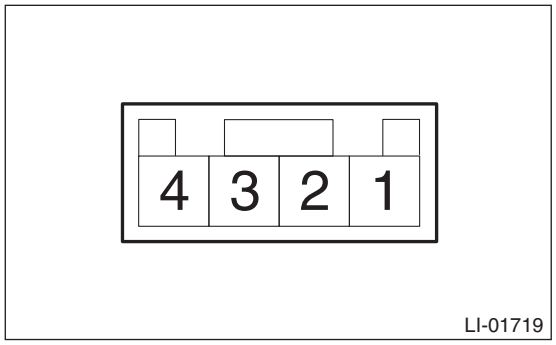
B: INSTALLATION

CAUTION:
Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) When replacing the actuator with a new part, apply a thin coat of grease evenly to the side face (a) of lever pin by using approx. 5 mm (0.2 in) width and approx. 0.1 g (0.004 oz) of grease squeezed out from a tube.

NOTE:
After installing the actuator, perform 3 — 5 times of adaptation for the grease to fit in.

Grease:
SUBARU genuine grease (Part No. 72129AJ000)
2) Install the intake door actuator.
3) Install the instrument panel assembly and the beam COMPL - steering. <Ref. to EI-88, INSTALLATION, Instrument Panel Assembly.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION



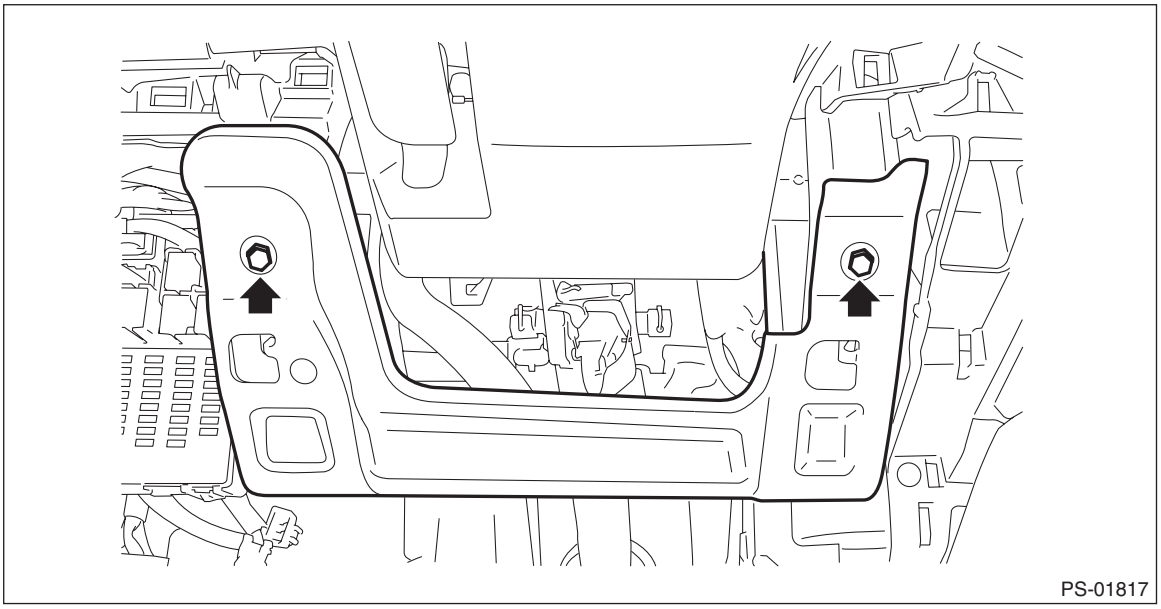
1. ACTUATOR LINK

1) Visually check the operating range of the link, and remove the foreign matter if any.
2) Operate the FRESH/RECIRC switch, and check that the link operates normally.
3) If the actuator does not operate normally, check the intake door actuator unit.

2. CHECK ACTUATOR

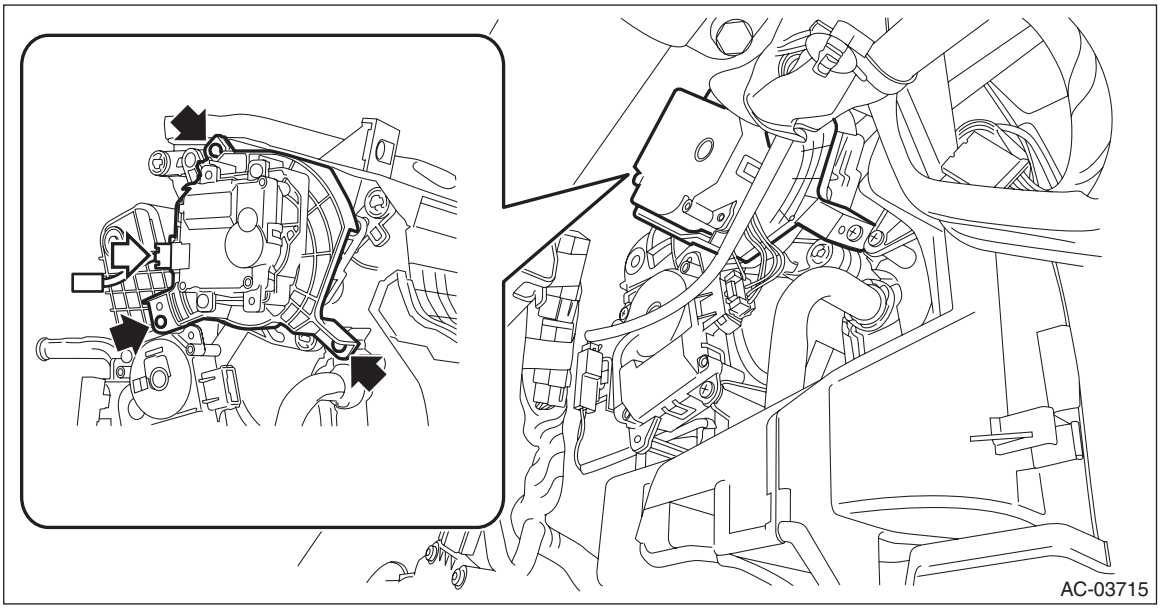
1) Check the actuator operation when battery voltage is applied between the connector terminals.

CAUTION:
Disconnect the battery immediately after the actuator stops operation. Otherwise, the motor may be damaged.



Terminal No.	Inspection conditions	Operating position
4 (+) — 2 (–)	Apply battery voltage.	FRESH
4 (+) — 1 (–)		RECIRC

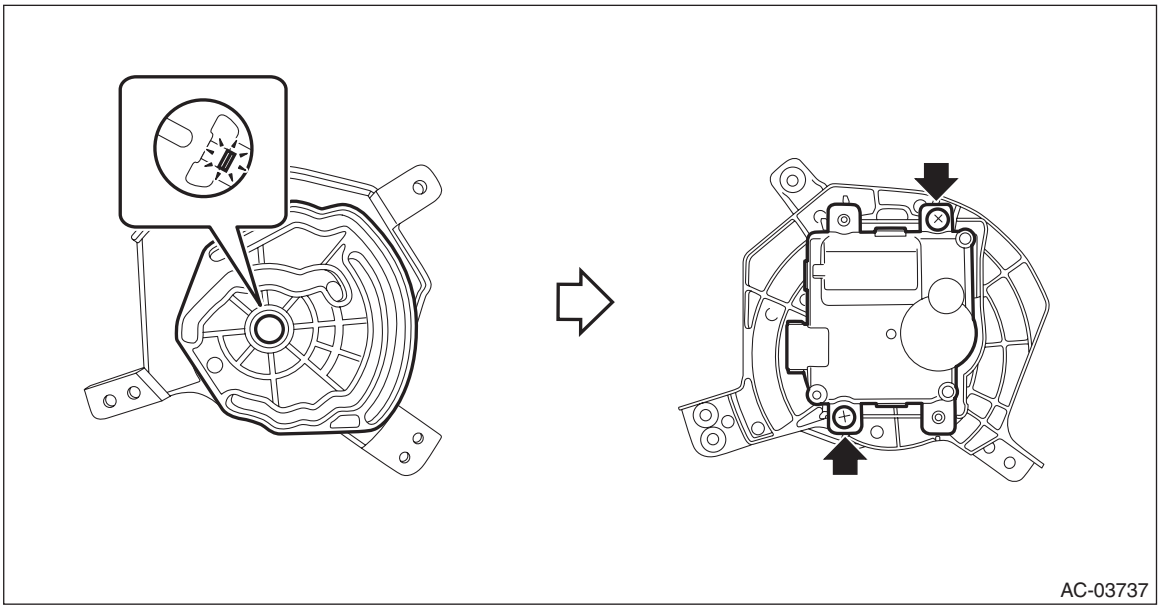
2) If it does not operate normally as the result of inspection, replace the motor - actuator blower.



28.Mode Door Actuator

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-74, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the bolts, and then remove the panel - knee guard.



PS-01817

4) Remove the mode door actuator.
   (1) Disconnect the connector.
   (2) Remove the screws, and remove the mode door actuator assembly.

AC-03715

   (3) Release the lock and remove the link plate.

(4) Remove the screws to remove the mode door actuator from the cover - actuator.

B: INSTALLATION

1) When replacing the actuator with a new part, apply a thin coat of grease evenly to the contact area (a) inside the rail of link plate by using approx. 5 mm (0.2 in) width and approx. 0.1 g (0.004 oz) of grease squeezed out from a tube. Also apply a thin coat of grease evenly to the contact areas (b) through (f), by using the same amount of grease to each area.

NOTE:
After installing the actuator, perform 3 — 5 times of adaptation for the grease to fit in.

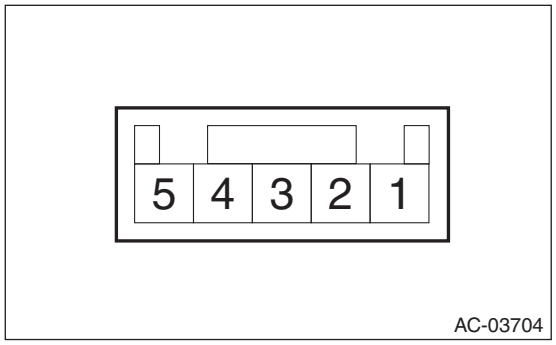
Grease:
SUBARU genuine grease (Part No. 72129AJ000)

2) Install the mode door actuator.
3) Install the panel - knee guard.

Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)

4) Install the cover assembly - instrument panel LWR driver.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION



1. ACTUATOR LINK

1) Visually check the operating range of the link, and remove the foreign matter if any.
2) Operate the mode change switch, and check that the link operates normally.
3) If the actuator does not operate normally, check the mode door actuator unit.

2. CHECK ACTUATOR OPERATION

1) Check the actuator operation when battery voltage is applied between the connector terminals.

CAUTION:
Disconnect the battery immediately after the actuator stops operation. Otherwise, the motor may be damaged.

Terminal No.	Inspection conditions	Operating position
4 (+) — 5 (–)	Apply battery voltage.	DEF
5 (+) — 4 (–)		FACE

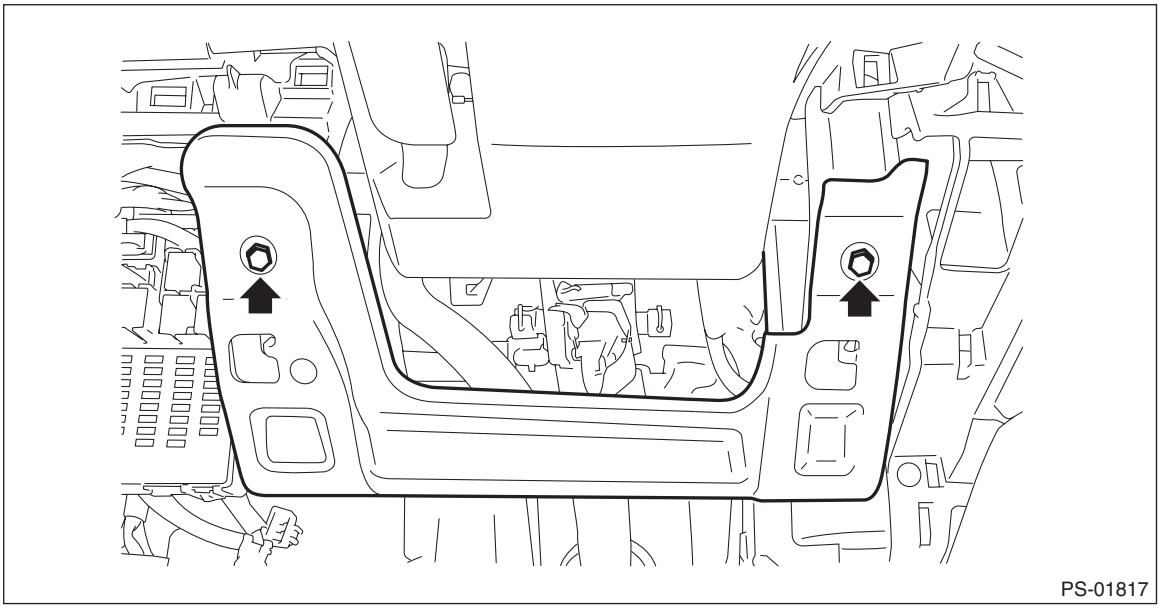
2) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Operating position
1 — 3	Always	4.2 — 7.8 Ω

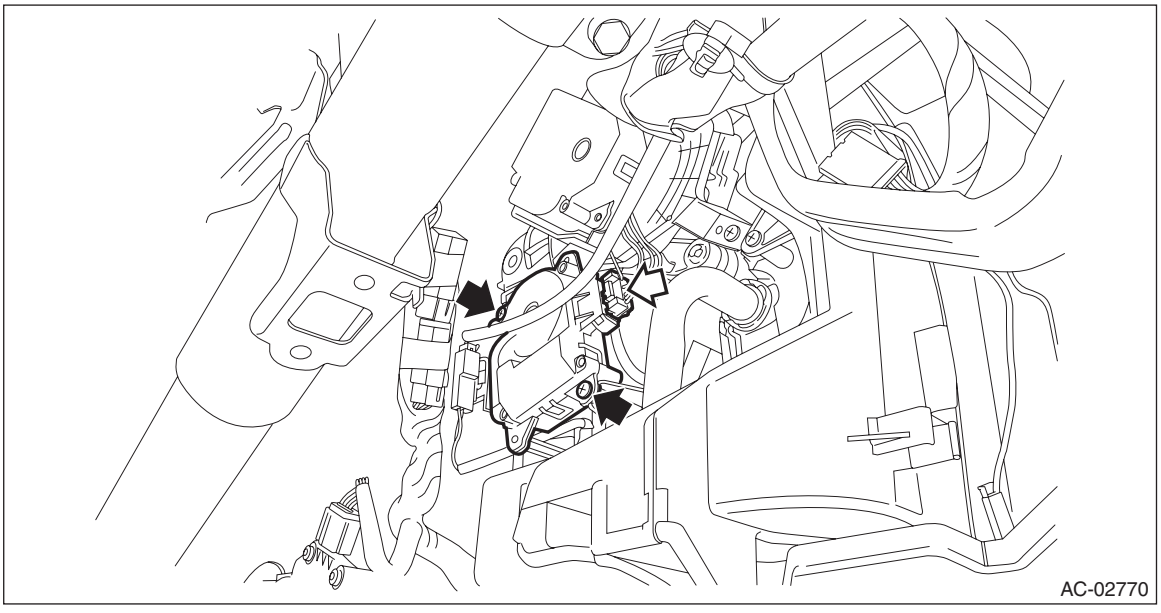
3) Connect the connector, turn the ignition switch to ON, and check the voltage between actuator terminals.

Terminal No.	Inspection conditions	Operating position
2 (+) — 1 (–)	FACE	Approx. 4.0 V
	DEF	Approx. 1.0 V



4) Replace the mode door actuator if it is found defective.

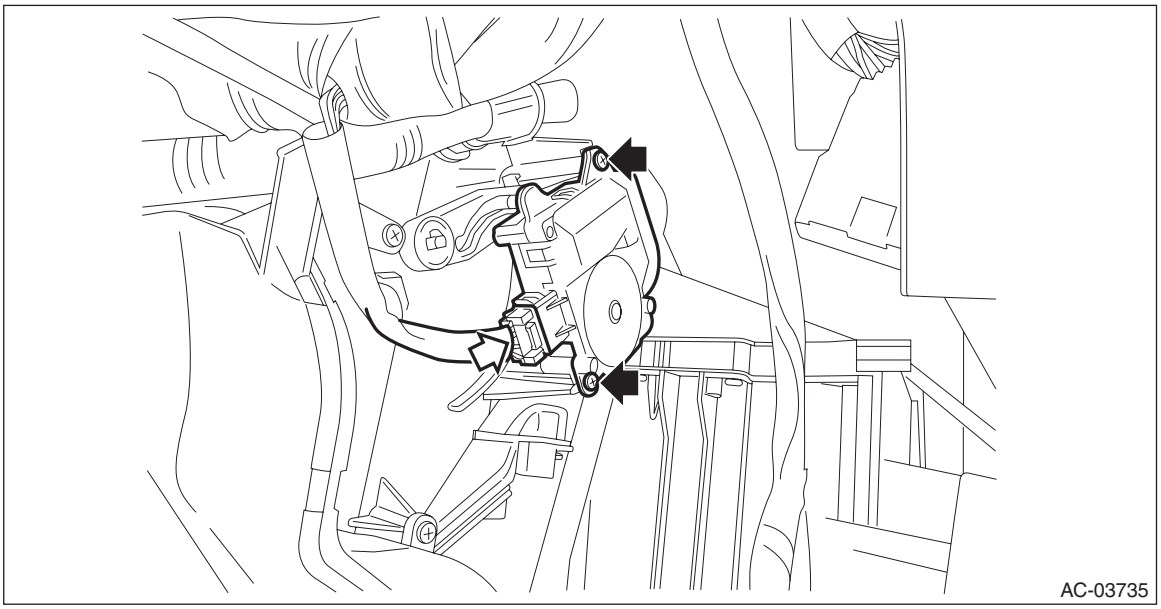
29.Air Mix Door Actuator



A: REMOVAL

1. DRIVER'S SIDE

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-74, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the bolts, and then remove the panel - knee guard.

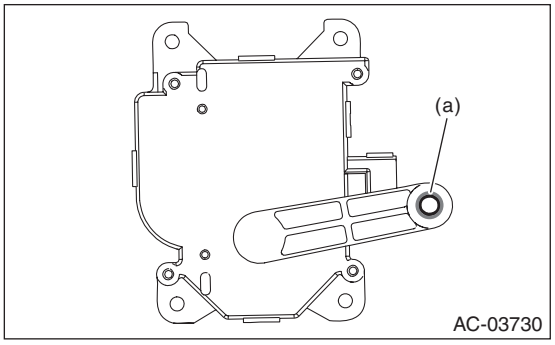


PS-01817

4) Remove the air mix door actuator.
   (1) Disconnect the connector.
   (2) Remove the screw, and remove the air mix door actuator.

AC-02770

2. PASSENGER'S SIDE



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the glove box. <Ref. to EI-76, REMOVAL, Glove Box.>
3) Remove the air mix door actuator.
   (1) Disconnect the connector.
   (2) Remove the screw, and remove the air mix door actuator.

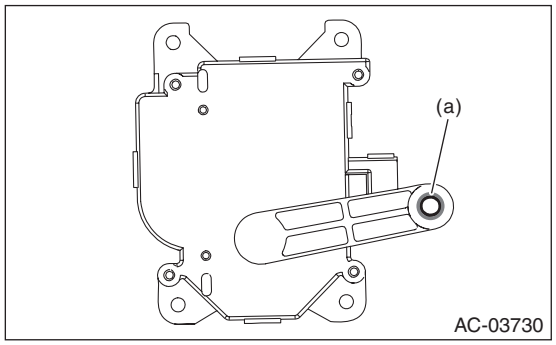
B: INSTALLATION

1. DRIVER'S SIDE

1) When replacing the actuator with a new part, apply a thin coat of grease evenly to the side face (a) of lever pin by using approx. 5 mm (0.2 in) width and approx. 0.1 g (0.004 oz) of grease squeezed out from a tube.

NOTE:
After installing the actuator, perform 3 — 5 times of adaptation for the grease to fit in.

Grease:
SUBARU genuine grease (Part No. 72129AJ000)



2) Install the motor - actuator mix.
3) Install the panel - knee guard.

Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)

4) Install the cover assembly - instrument panel LWR driver.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. PASSENGER'S SIDE

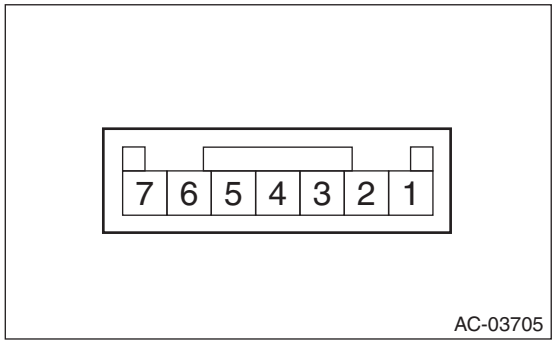
1) When replacing the actuator with a new part, apply a thin coat of grease evenly to the side face (a) of lever pin by using approx. 5 mm (0.2 in) width and approx. 0.1 g (0.004 oz) of grease squeezed out from a tube.

NOTE:
After installing the actuator, perform 3 — 5 times of adaptation for the grease to fit in.

Grease:
SUBARU genuine grease (Part No. 72129AJ000)

2) Install the glove box.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION



1. ACTUATOR LINK

1) Visually check the operating range of the link, and remove the foreign matter if any.
2) Operate the temperature control switch, and check that the link operates normally.
3) If the actuator does not operate normally, check the air mix door actuator unit.

2. CHECK ACTUATOR OPERATION

1) Check the actuator operation when battery voltage is applied between the connector terminals.

CAUTION:
Disconnect the battery immediately after the actuator stops operation. Otherwise, the motor may be damaged.

Terminal No.	Inspection conditions	Operating position
6 (+) — 7 (–)	Connect battery to the terminals	•Driver's seat: COOL •Passenger's seat: HOT
7 (+) — 6 (–)		•Driver's seat: HOT •Passenger's seat: COOL

2) Measure the resistance between connector terminals.

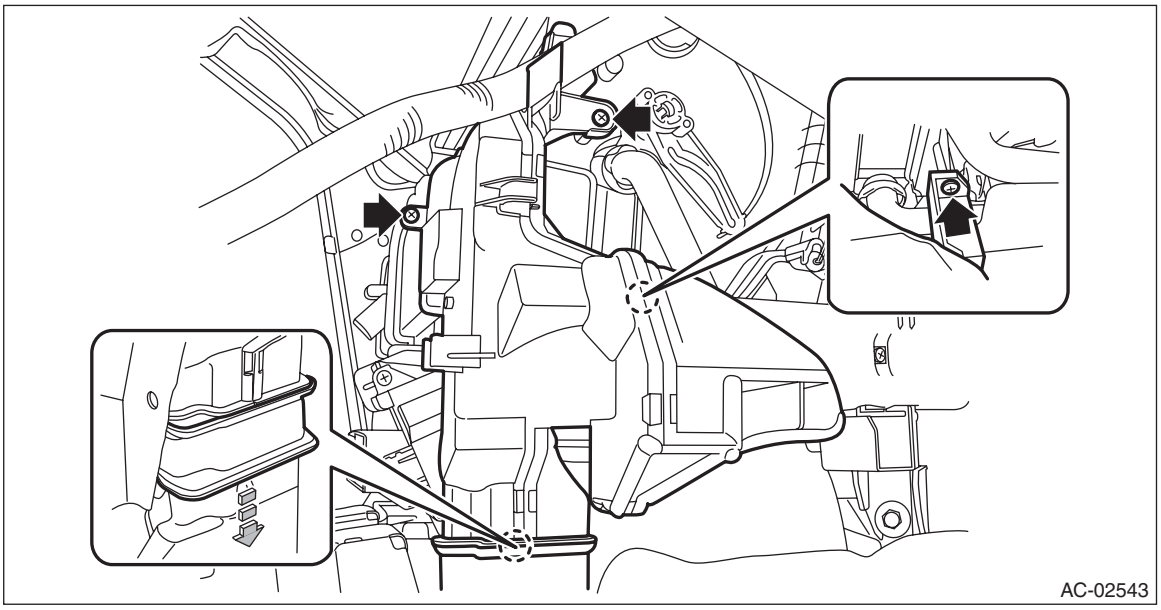
Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Operating position
1 — 3	Always	4.2 — 7.8 Ω

3) Connect the connector, turn the ignition switch to ON, and check the voltage between actuator terminals.
- Driver's seat

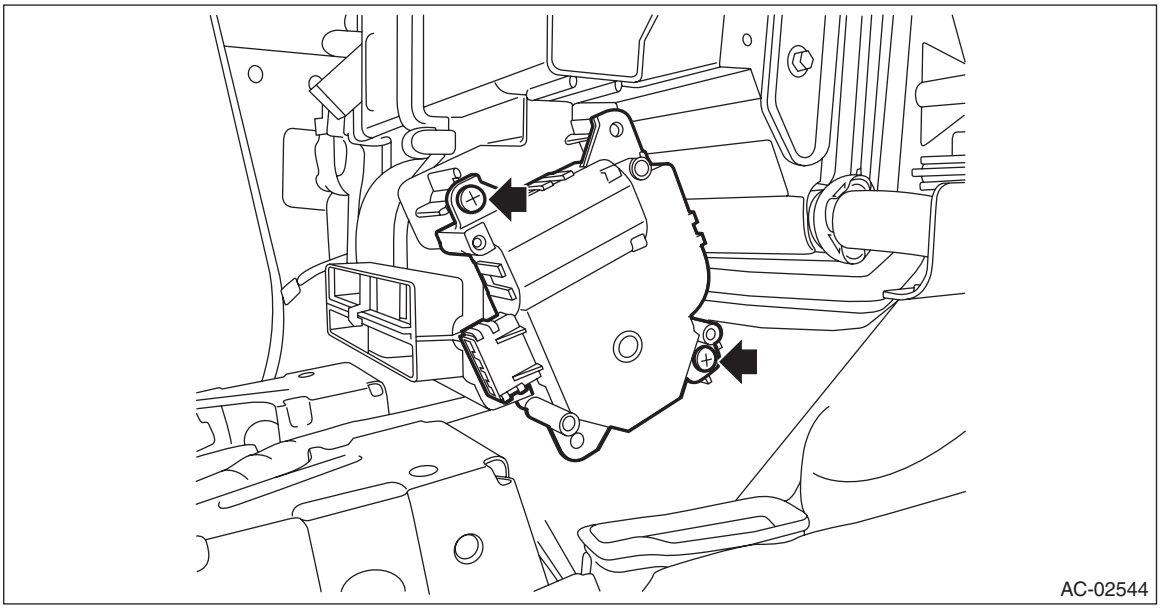
Terminal No.	Inspection conditions	Operating position
5 (+) — 3 (–)	HOT	Approx. 1.0 V
	COOL	Approx. 4.0 V

- Passenger's seat



Terminal No.	Inspection conditions	Operating position
5 (+) — 1 (–)	HOT	Approx. 1.0 V
	COOL	Approx. 4.0 V

4) Replace the air mix door actuator if it is found defective.



30.Rear Vent Door Actuator

A: REMOVAL

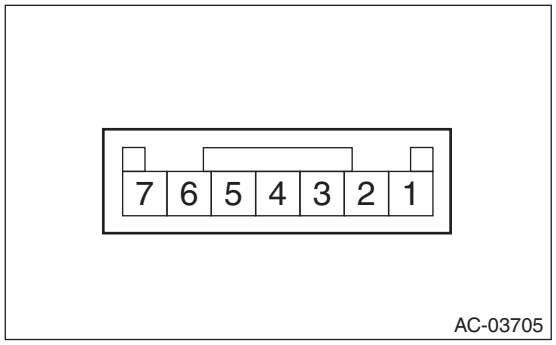
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the instrument panel assembly and the beam COMPL - steering. <Ref. to EI-83, REMOVAL, Instrument Panel Assembly.>
3) Remove the foot duct RH.
   (1) Turn over the floor carpet and remove the slide lock of the duct - rear heater
   (2) Remove the screws and remove the foot duct RH.

4) Remove the screws, and remove the rear vent actuator.

B: INSTALLATION

1) Install the rear vent actuator.
2) Install the foot duct RH.
3) Install the instrument panel assembly and the beam COMPL - steering. <Ref. to EI-88, INSTALLATION, Instrument Panel Assembly.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION



1. ACTUATOR LINK

1) Visually check the operating range of the link, and remove the foreign matter if any.
2) Operate the temperature control switch, and check that the link operates normally.
3) If it does not operate normally, check the rear vent actuator unit.

2. CHECK ACTUATOR OPERATION

1) Check the actuator operation when battery voltage is applied between the connector terminals.

CAUTION:
Disconnect the battery immediately after the actuator stops operation. Otherwise, the motor may be damaged.

Terminal No.	Inspection conditions	Operating position
6 (+) — 7 (–)	Connect battery to the terminals	COOL
7 (+) — 6 (–)		HOT

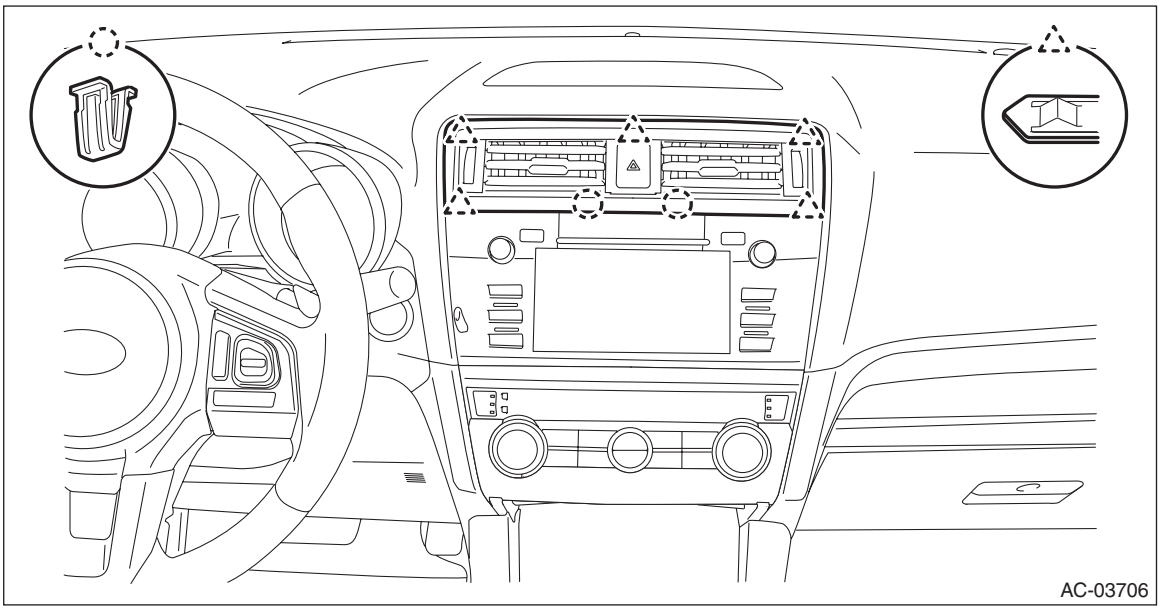
2) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Operating position
1 — 3	Always	4.2 — 7.8 Ω

3) Connect the connector, turn the ignition switch to ON, and check the voltage between actuator terminals.

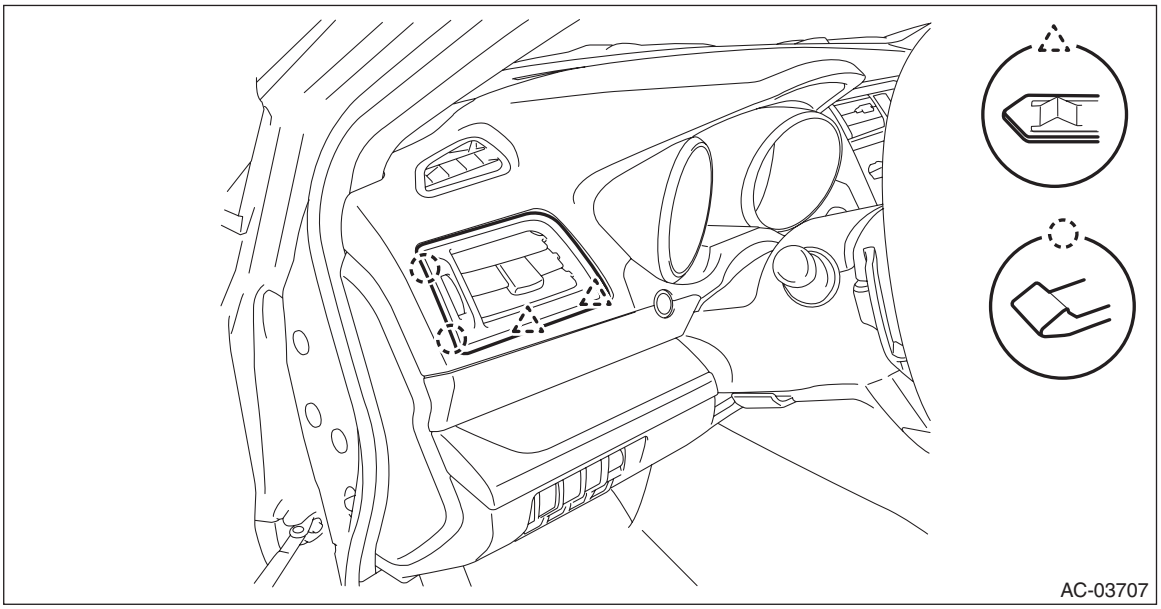
Terminal No.	Inspection conditions	Operating position
5 (+) — 3 (–)	HOT	Approx. 1.0 V
	COOL	Approx. 4.0 V



4) Replace the rear vent actuator if it is found defective.

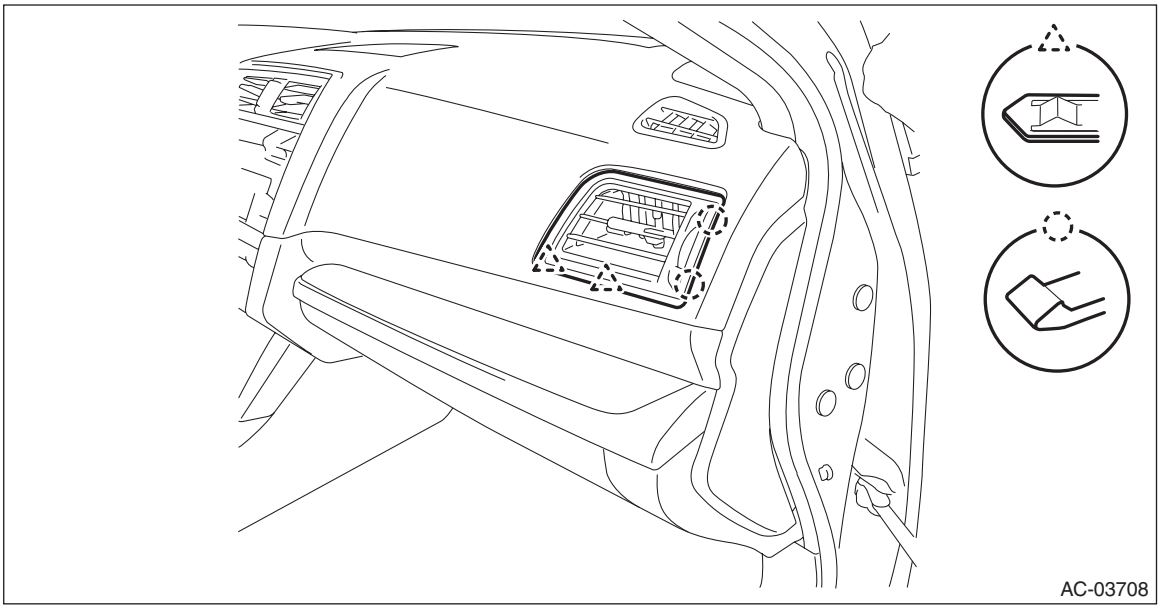
31.Air Vent Grille

A: REMOVAL



1. CENTER GRILLE ASSEMBLY

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the panel - center grille assembly.
   (1) Release the clips and claws.
   (2) Detach the connectors, and remove the panel - center grille assembly.



2. SIDE GRILLE ASSEMBLY LH

Release the claws and clips, then detach the grille assembly - ventilation LH.

3. SIDE GRILLE ASSEMBLY RH

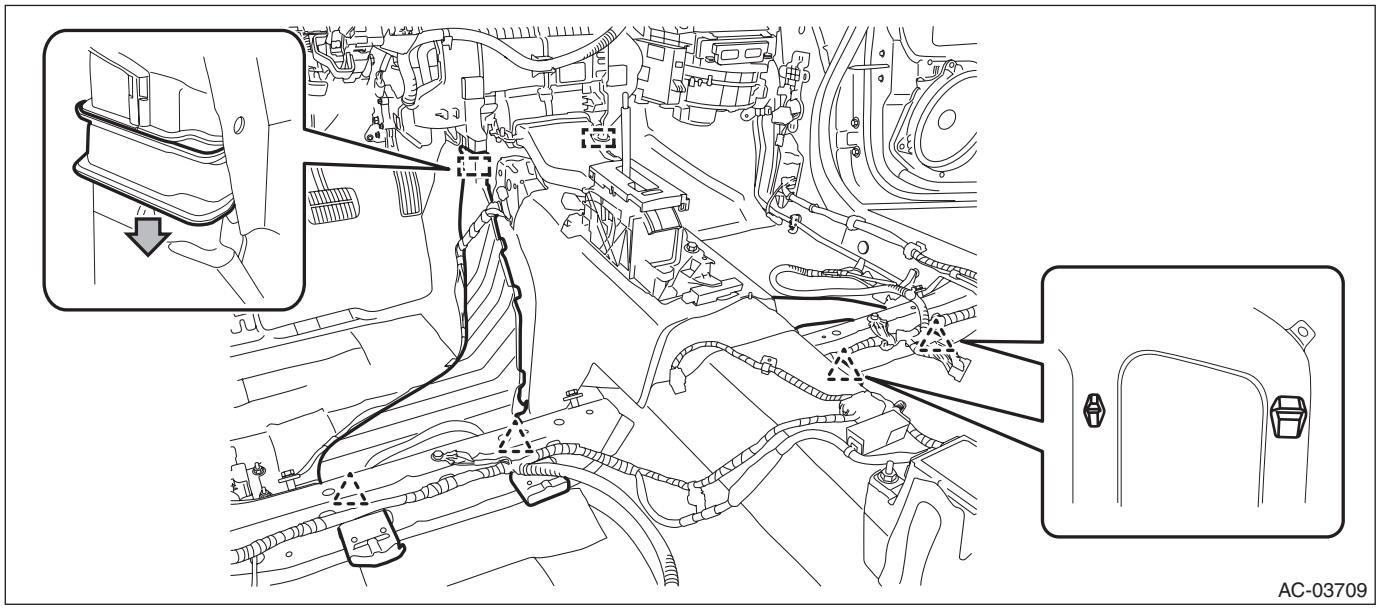
Release the claws and clips, then detach the grille assembly - ventilation RH.

B: INSTALLATION

CAUTION:
Make sure that the grille assembly is inserted into the air vent duct correctly.

1) Install the grille assembly.
2) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION



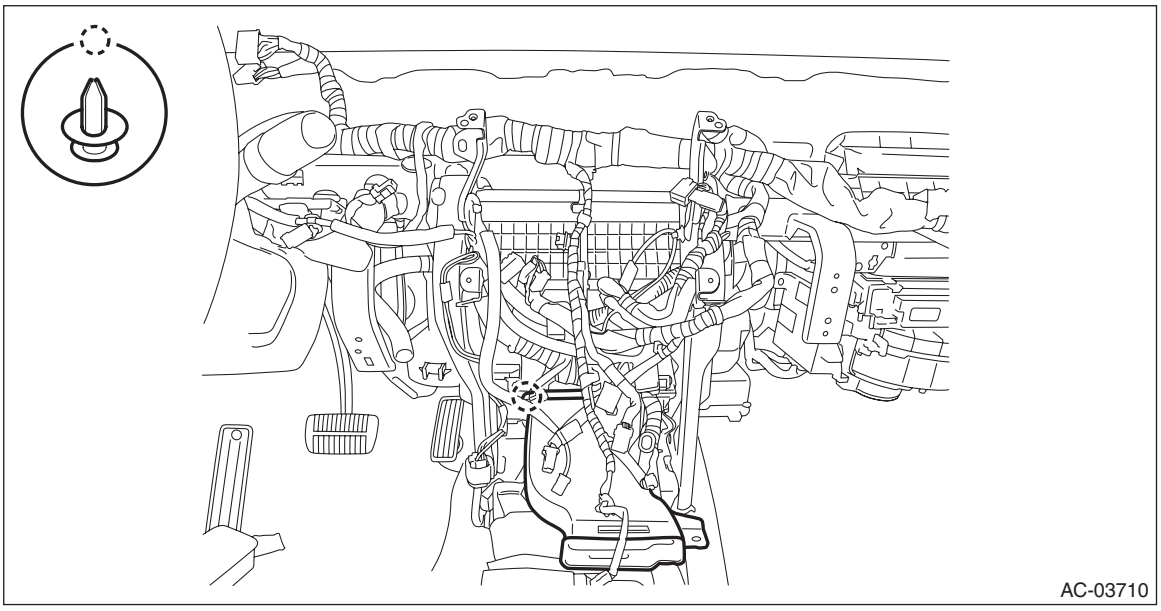
1) Check that the direction and amount of air can be adjusted smoothly. Replace the air vent grille if faulty.
2) Check that the adjustment can be maintained in each position. Replace the air vent grille if faulty.

32.Heater Duct

A: REMOVAL

1. REAR HEATER DUCT

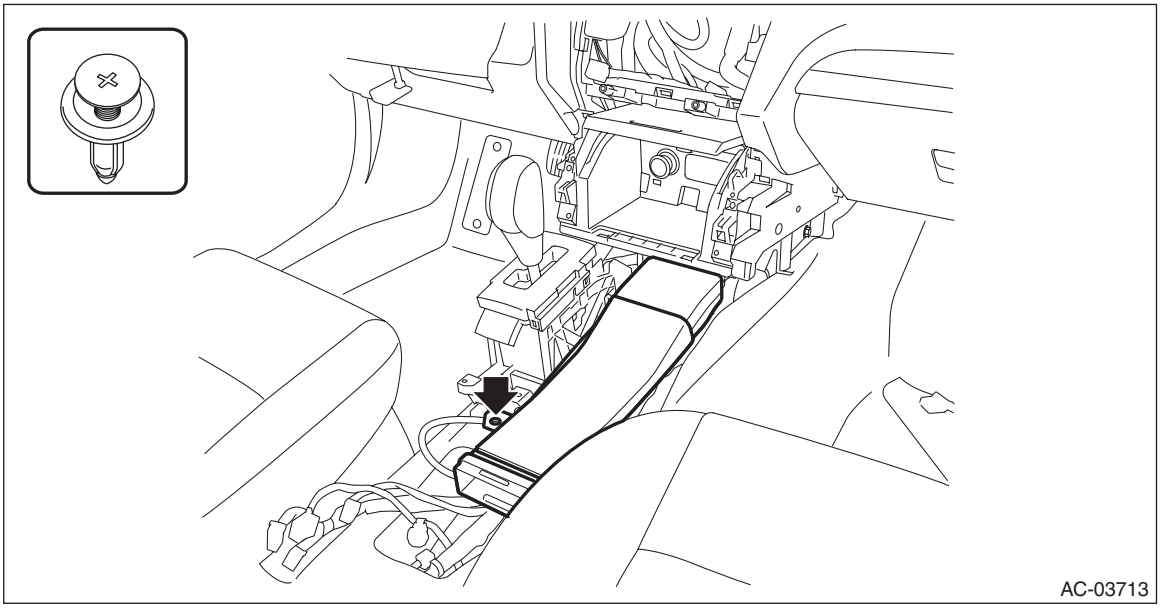
CAUTION:
Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the front seats. <Ref. to SE-11, REMOVAL, Front Seat.>
3) Remove the instrument panel assembly. <Ref. to EI-83, REMOVAL, Instrument Panel Assembly.>
4) Remove the rear heater duct.
   (1) Turn over the floor carpet and remove the slide lock of the duct - rear heater
   (2) Release the claws, and then remove the duct - rear heater LH and RH.



AC-03709

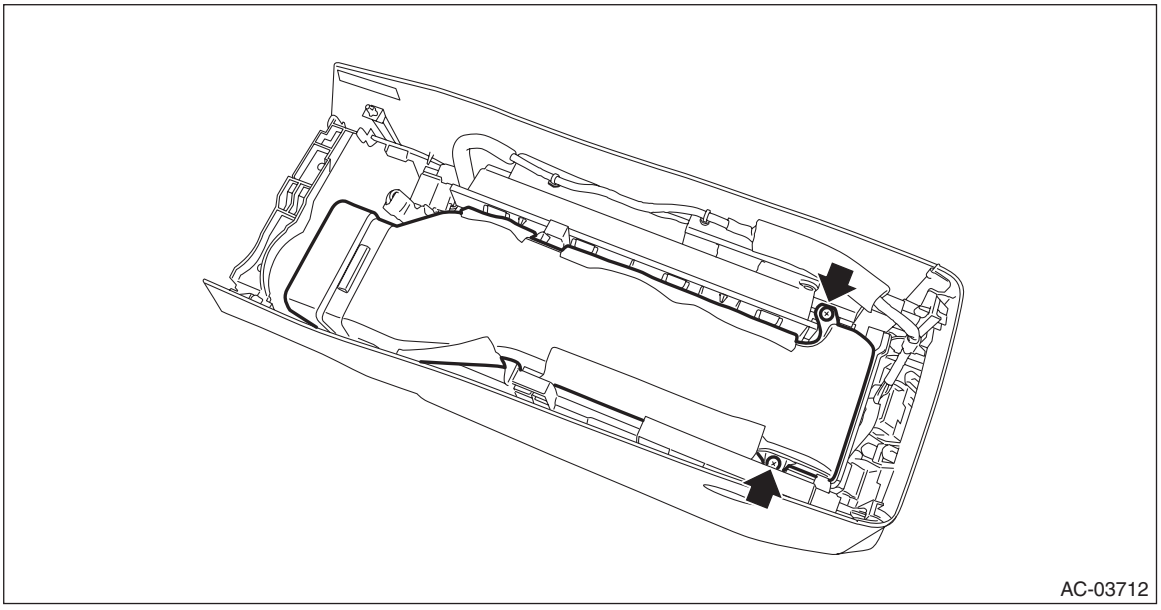
NOTE:
For models with amplifier, remove the extension duct.

2. CONSOLE DUCT



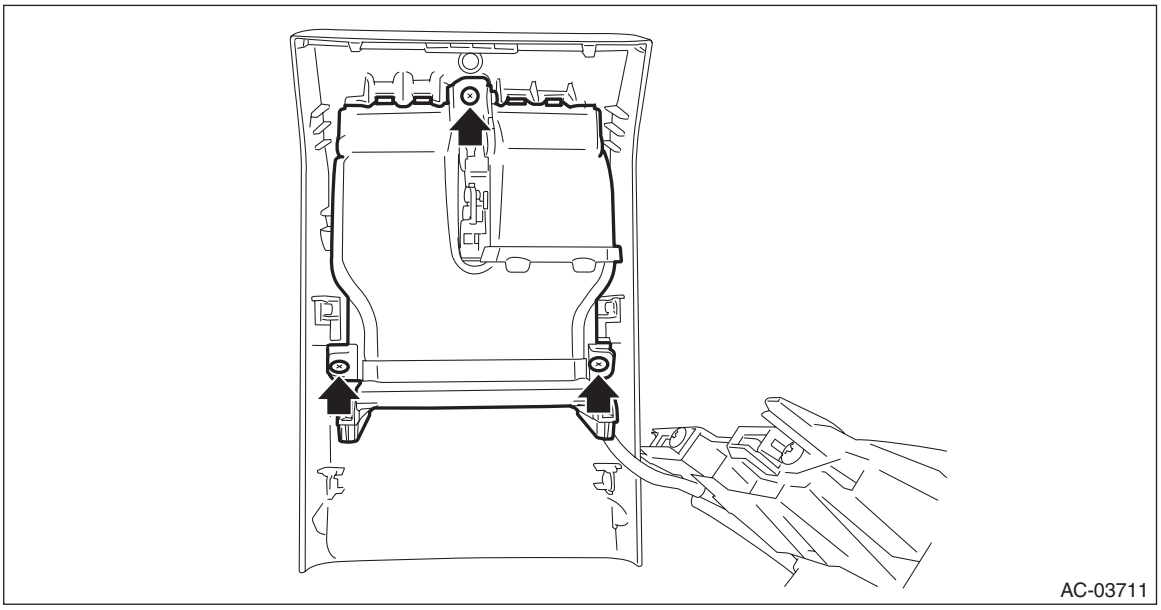
Front

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the instrument panel assembly. <Ref. to EI-83, REMOVAL, Instrument Panel Assembly.>
3) Remove the clips, and remove the duct - console rear.
4) Remove the clips, and remove the duct - console front.



Rear

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the console box. <Ref. to EI-80, REMOVAL, Console Box.>
3) Remove the clips, and remove the duct - console rear.



3. CENTER CONSOLE DUCT

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the console box. <Ref. to EI-80, REMOVAL, Console Box.>
3) Remove the screws, and remove the center console duct.

4) Remove the screws and remove the grille assembly - rear heater.

B: INSTALLATION

1. REAR HEATER DUCT

CAUTION:
Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>

1) Install the duct - rear heater.
2) Install the instrument panel assembly. <Ref. to EI-88, INSTALLATION, Instrument Panel Assembly.>
3) Remove the console box. <Ref. to EI-82, INSTALLATION, Console Box.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

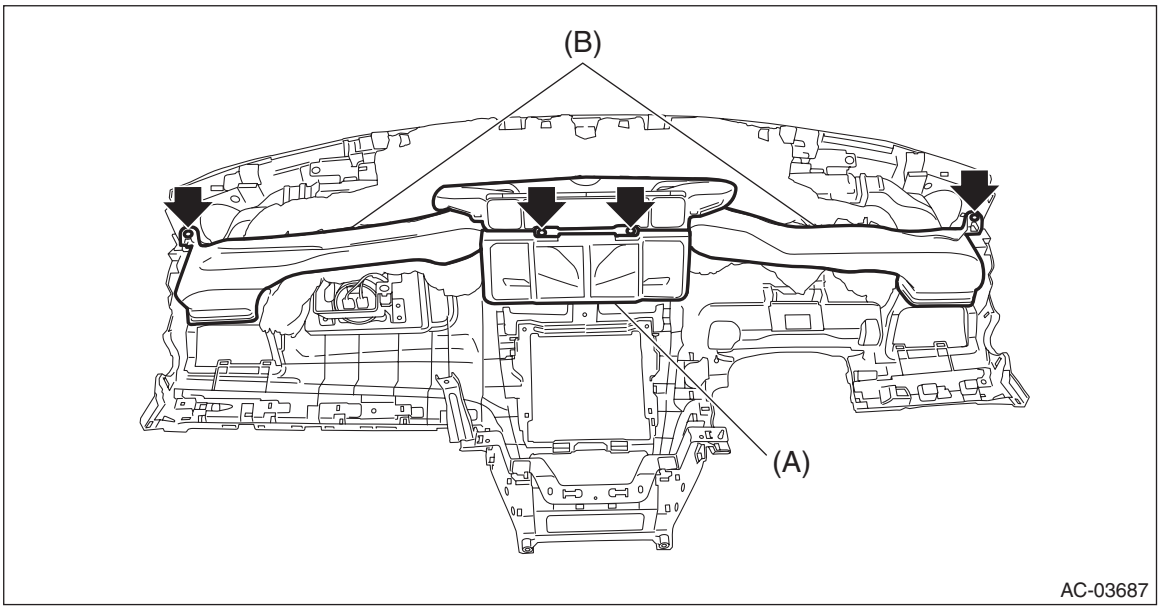
2. CONSOLE DUCT

1) Install the duct - console front or rear.
2) Install the instrument panel assembly. (Front) <Ref. to EI-88, INSTALLATION, Instrument Panel Assembly.>
3) Remove the console box. (rear) <Ref. to EI-82, INSTALLATION, Console Box.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

3. CENTER CONSOLE DUCT

1) Install the grille assembly - rear heater or center console duct.
2) Remove the console box. <Ref. to EI-82, INSTALLATION, Console Box.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION



1) Check installation condition of duct. Connect the duct properly if defective.
2) Check that no foreign matter is mixed in the duct. Remove the foreign matter if any.

33.Heater Vent Duct

A: REMOVAL

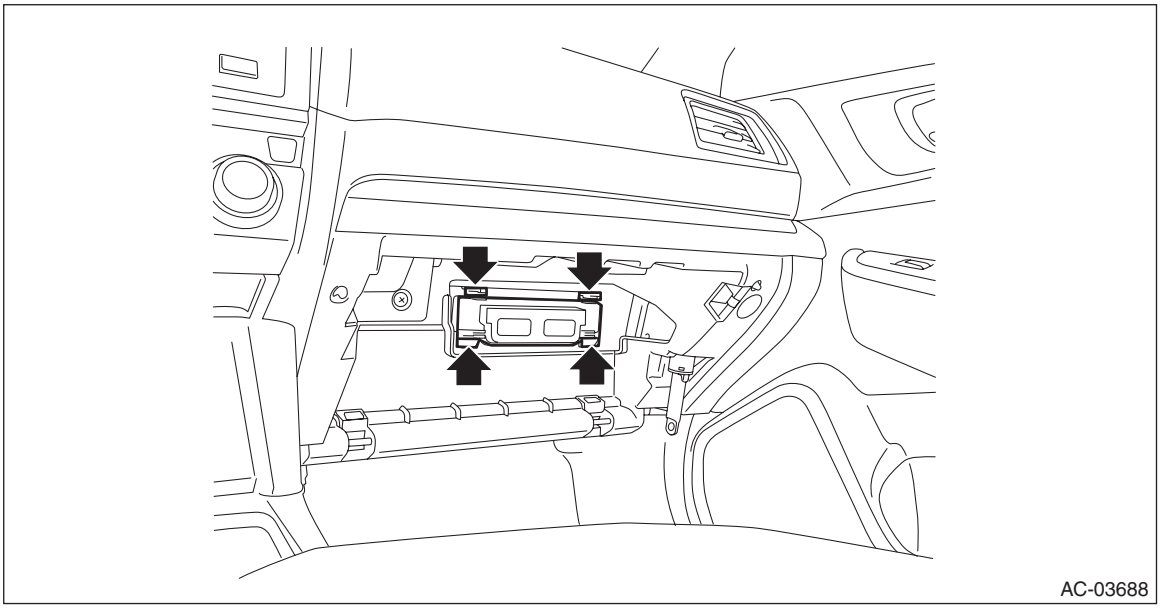
CAUTION:
Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the instrument panel assembly. <Ref. to EI-83, REMOVAL, Instrument Panel Assembly.>
3) Remove the screws and remove the duct - center vent (A) and the duct - side ventilation (B) on LH and RH sides.

B: INSTALLATION

CAUTION:
Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>

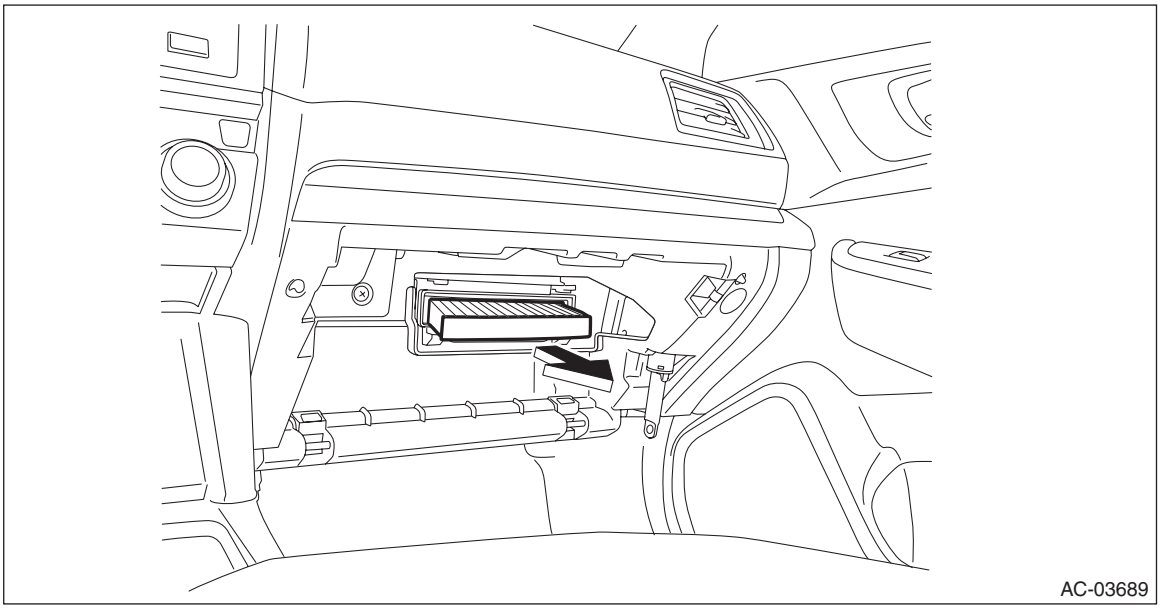
1) Install the duct - center vent and the duct - side ventilation.
2) Install the instrument panel assembly. <Ref. to EI-88, INSTALLATION, Instrument Panel Assembly.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



C: INSPECTION

1) Check installation condition of duct. Connect the duct properly if defective.
2) Check that no foreign matter is mixed in the duct. Remove the foreign matter if any.

34.A/C Filter



A: REPLACEMENT

1) Remove the pocket assembly. <Ref. to EI-76, REMOVAL, Glove Box.>
2) Remove the A/C filter.
   (1) Release the lock and remove the A/C filter cover.

   (2) Remove the A/C filter.

NOTE:
Pull out while tilting the front side of the filter downward to prevent dirt or dust from falling inside the case.

3) Install a new A/C filter.
4) Install the pocket assembly.

B: INSPECTION

Check the A/C filter for dust or dirt, and clean or replace as necessary.

35.Diagnostics with Phenomenon

A: INSPECTION

Refer to “Diagnostics with Phenomenon” of “HVAC SYSTEM (DIAGNOSTICS)” section. <Ref. to AC(diag)-14, Diagnostics with Phenomenon.>

HVAC SYSTEM (DIAGNOSTICS)

AC(diag)

13. Diagnostic Procedure for Subaru Select Monitor Communication 54
14. List of Diagnostic Trouble Code (DTC) 56
15. Diagnostic Procedure with Diagnostic Trouble Code (DTC) 58

1. Basic Diagnostic Procedure

A: PROCEDURE

NOTE:
When the sunload sensor check is performed indoors or in the shade, it could be diagnosed as sensor having an open circuit. Always perform the inspection in direct sunlight.

	Step	Check	Yes	No
1	**START INSPECTIONS.** 1) Prepare the tools. <Ref. to AC-18, PREPARATION TOOL, General Description.> 2) Perform the pre-inspection. <Ref. to AC(diag)-3, INSPECTION, General Description.>	Is any malfunction found in pre-inspection?	Fix the malfunction found in pre-inspection, and go to the next inspection step. Go to step **2**.	Go to step **2**.
2	**PREPARE SUBARU SELECT MONITOR.** Prepare the Subaru Select Monitor.	Is the Subaru Select Monitor ready?	Go to step **3**.	Go to step **4**.
3	**CHECK DTC.** 1) Under the failure condition, leave the vehicle for one minute or more. 2) Read the DTC using Subaru Select Monitor. NOTE: • If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to AC(diag)-54, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Diagnostic Procedure for Subaru Select Monitor Communication.> • Record the freeze frame data recorded together with the DTC.	Is DTC displayed?	Perform diagnosis according to the DTC. <Ref. to AC(diag)-56, LIST, List of Diagnostic Trouble Code (DTC).> After diagnosis, Go to step **5**.	Refer to Diagnostics with Phenomenon. <Ref. to AC(diag)-14, INSPECTION, Diagnostics with Phenomenon.>
4	**A/C CONTROL PANEL SELF-DIAGNOSIS.** 1) Under the failure condition, leave the vehicle for one minute or more. 2) Perform the self-diagnosis of A/C control panel. <Ref. to AC(diag)-9, OPERATION, Diagnostic Chart for Self-Diagnosis.>	Are other codes except “20” displayed?	<Ref. to AC(diag)-11, SENSOR CHECK TABLE, OPERATION, Diagnostic Chart for Self-Diagnosis.>	Refer to Diagnostics with Phenomenon. <Ref. to AC(diag)-14, INSPECTION, Diagnostics with Phenomenon.>
5	**PERFORM DIAGNOSIS.** 1) Perform the Clear Memory Mode. 2) Perform the Inspection Mode. <Ref. to AC(diag)-49, Inspection Mode.>	Is DTC displayed on Subaru Select Monitor?	Perform diagnosis according to the DTC.	Finish the diagnosis.

2. General Description

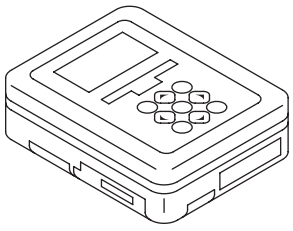
A: CAUTION

1) Never connect the battery in reverse polarity.
• Doing so may immediately damage the A/C CM.
2) Do not disconnect the battery terminals while the engine is running.
• A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as A/C CM etc.
3) Before disconnecting the connectors of sensors and the A/C CM, be sure to turn off the ignition switch.
• A/C CM may be damaged.
4) Every A/C-related part is a precision part. Do not drop them.
5) Airbag system wiring harness is routed near the A/C control panel and junction box.

CAUTION:
• Do not use electrical test equipment on the airbag system wiring harness and connector.
• Be careful not to damage the airbag system wiring harness when servicing the A/C control panel and junction box.

B: INSPECTION

Before performing the diagnosis, check the following items which may cause problems in the A/C system.



1. BATTERY

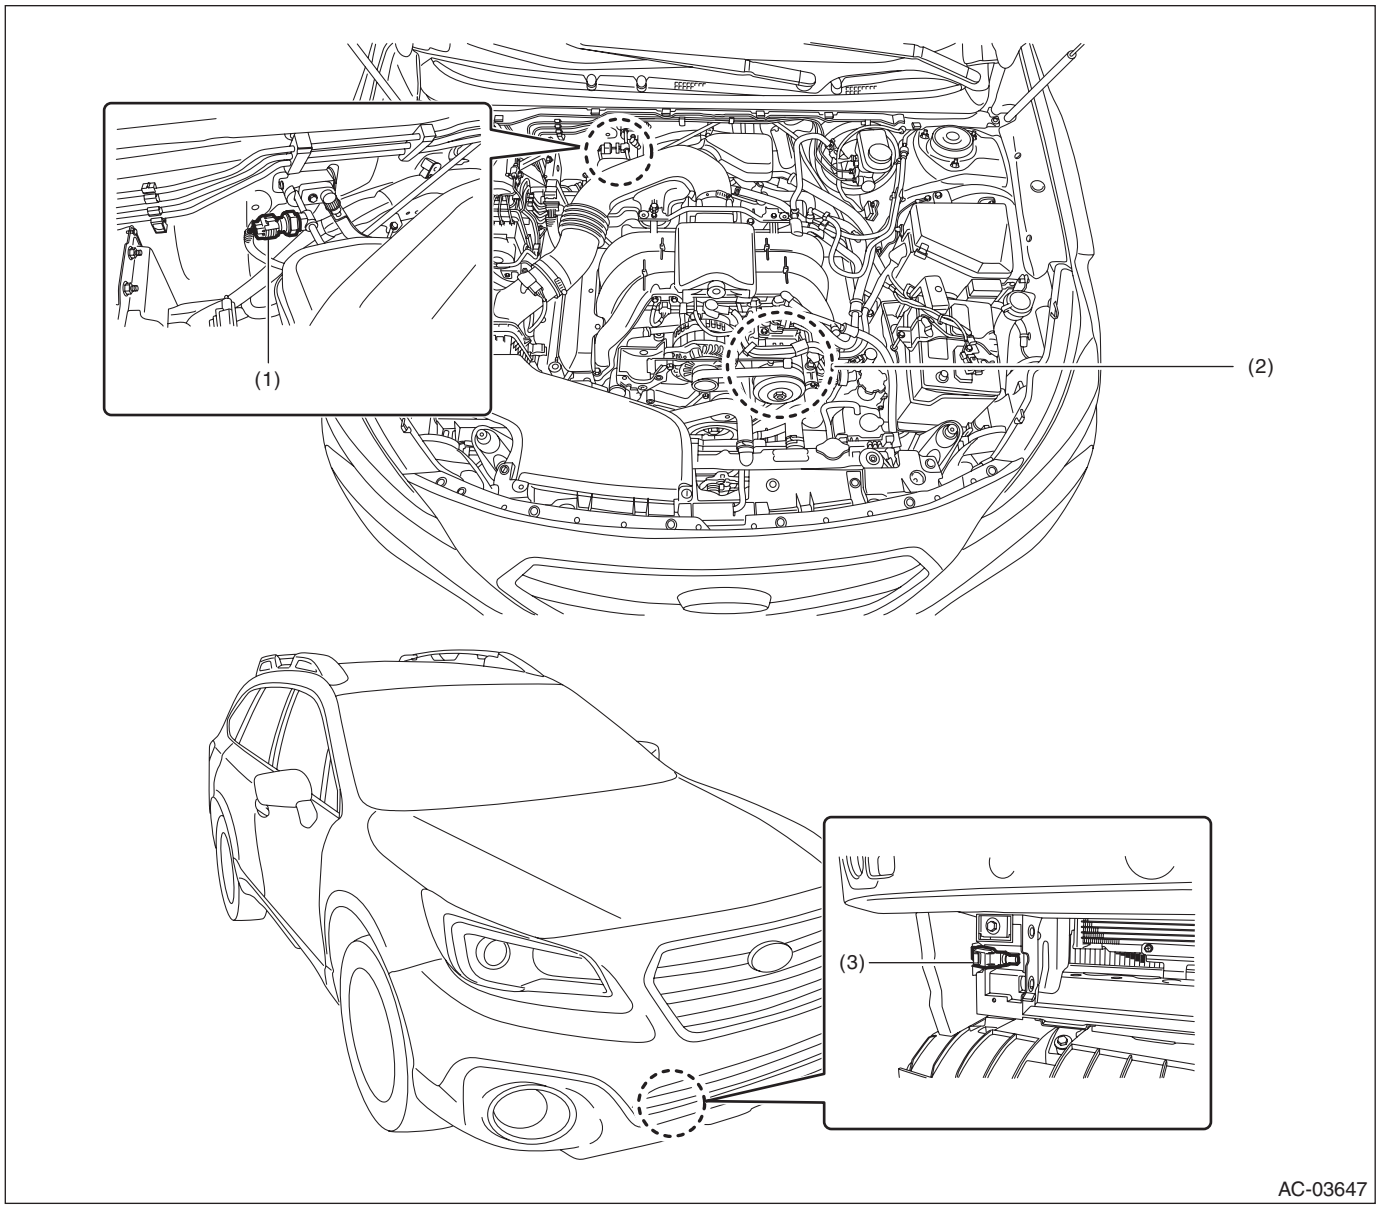
Check the battery. <Ref. to SC(H4DO)-60, INSPECTION, Battery.> <Ref. to SC(H6DO)-53, INSPECTION, Battery.>

NOTE:
If the battery voltage does not reach the specified value, recharge or replace the battery.

C: PREPARATION TOOL

1. SPECIAL TOOL

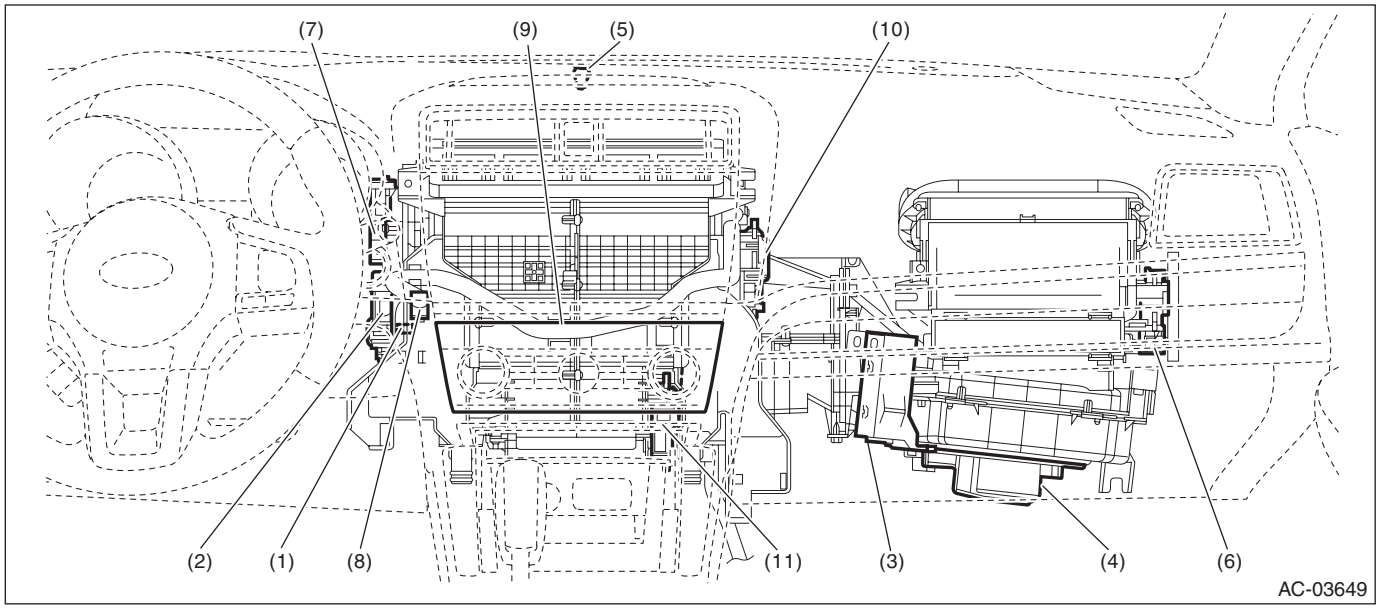
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.



2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

3. Electrical Component Location

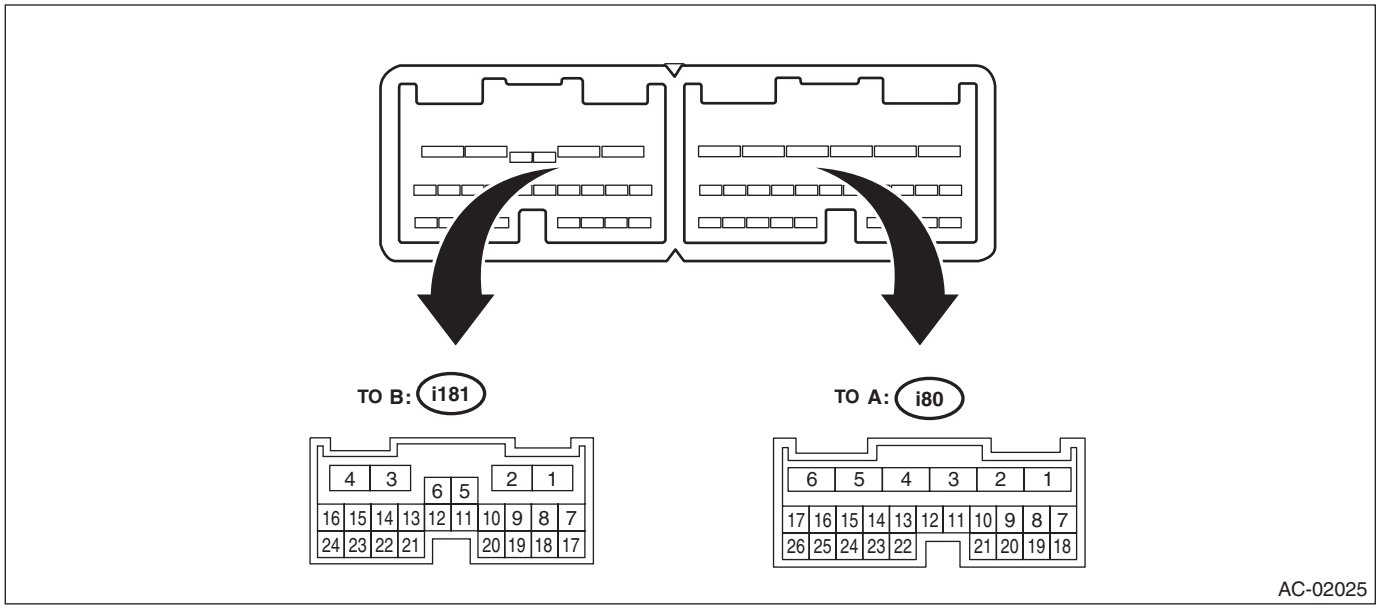


A: LOCATION

1. ENGINE COMPARTMENT

(1) Pressure sensor
(2) A/C compressor (Refrigerant flow sensor, variable flow change solenoid)
(3) Ambient sensor

2. PASSENGER COMPARTMENT



(1) Evaporator sensor
(2) Air mix door actuator*1 or air mix door actuator LH*2
(3) A/C CM
(4) Blower motor
(5) Sunload sensor
(6) Intake door actuator
(7) Mode door actuator
(8) In-vehicle sensor
(9) A/C control panel
(10) Air mix door actuator RH*2
(11) Rear vent actuator*3

*1: Manual A/C
*2: Auto A/C
*3: With rear seat A/C

4. Control Module I/O Signal

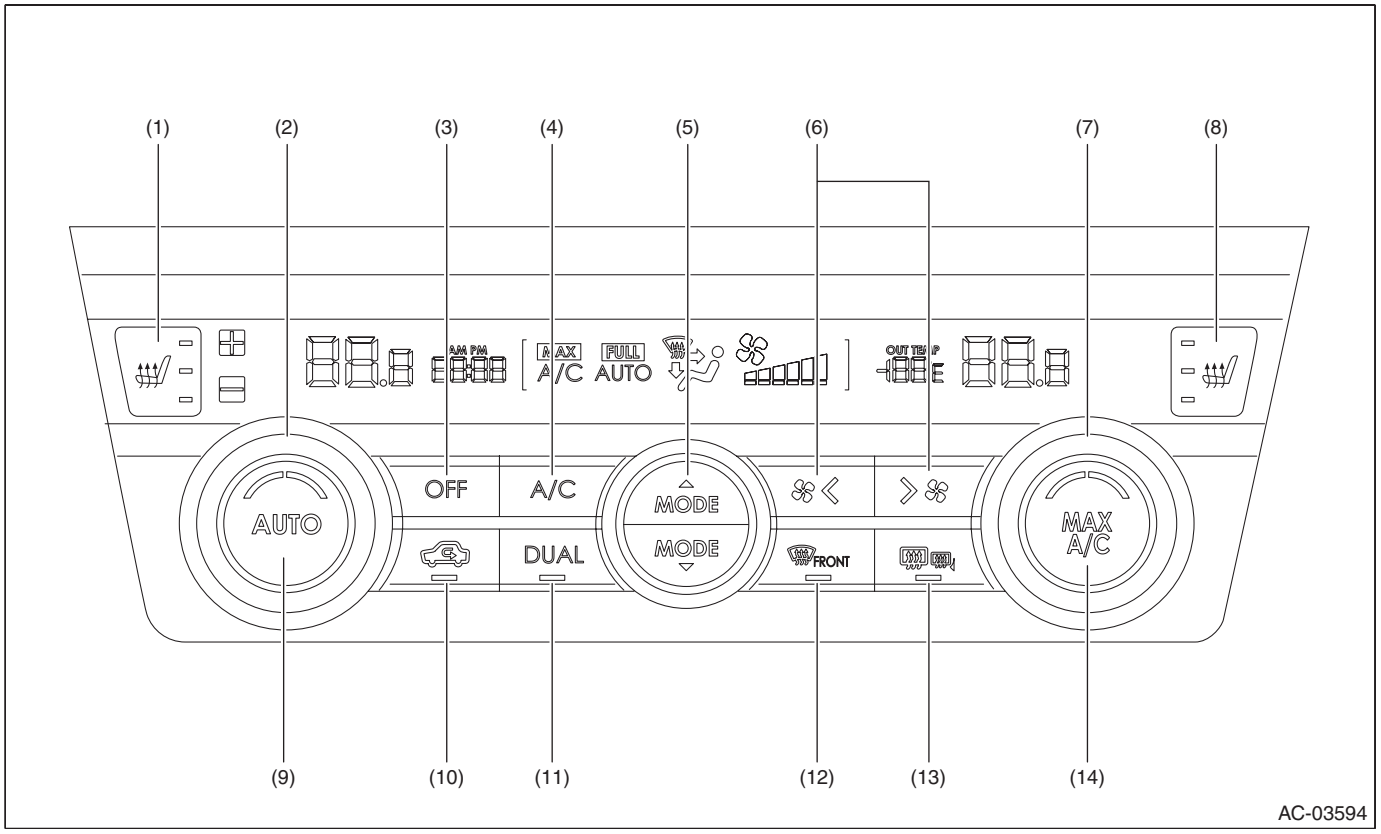
A: ELECTRICAL SPECIFICATION

Terminal No.	Description	Measuring condition	Standard
A1 ←→ Chassis ground	Ignition power supply	Ignition switch: ON	Battery voltage
A2	CAN-H (CAN communication line)	Measurement load (digital signal)	—
A3	CAN-L (CAN communication line)	Measurement load (digital signal)	—
A4 ←→ Chassis ground	Ground	Always	0 V
A5 ←→ Chassis ground	Driver's side seat heater temperature sensor	Ignition switch: ON Varies depending on temperature at seat heater	0 — 5 V
A6 ←→ Chassis ground	Mode door actuator position signal	Ignition switch: ON Mode door FACE position	4 V
		Ignition switch: ON Mode door DEF position	1 V
A7 ←→ Chassis ground	Mode servo drive signal (FACE)	When turning towards FACE side: A7 is 12 V, B18 is GND	While operating: 12 V While not operating: 0 V
A8 ←→ Chassis ground	Battery power supply	Always	Battery voltage
A9	—	—	—
A10	—	—	—
A11 ←→ Chassis ground	Air mix door actuator drive signal (HOT)*1 or air mix door actuator (driver's seat) drive signal (HOT)*2	Turning towards HOT side: A11 is 12 V, A21 is GND	While operating: 12 V While not operating: 0 V
A12 ←→ Chassis ground	Each potentiometer and sensor power supply	Ignition switch: ON	5 V
A13	—	—	—
A14 ←→ Chassis ground	Passenger's side seat heater temperature sensor	Ignition switch: ON Varies depending on temperature at seat heater	0 — 5 V
A15 ←→ Chassis ground	Rear vent actuator position signal*3	Ignition switch: ON Air mix door: Maximum cool position	1.8 V
		Ignition switch: ON Air mix door: Maximum hot position	4.1 V

Terminal No.	Description	Measuring condition	Standard
A16 ←→ Chassis ground	Air mix door actuator (passenger's side) position signal*2	Ignition switch: ON Air mix door: Maximum cool position	4 V
		Ignition switch: ON Air mix door: Maximum hot position	1 V
A17 ←→ Chassis ground	Air mix door position signal*1 or air mix door (driver's side) position signal*2	Ignition switch: ON Air mix door: Maximum cool position	4 V
		Ignition switch: ON Air mix door: Maximum hot position	1 V
A18 ←→ Chassis ground	Mode servo drive signal (DEF)	When turning towards DEF side: A18 is 12 V, A7 is GND	While operating: 12 V While not operating: 0 V
A19	—	—	—
A20 ←→ Chassis ground	ACC power supply	Ignition switch: ACC	Battery voltage
A21 ←→ Chassis ground	Air mix door actuator drive signal (COOL)*1 or air mix door actuator (driver's side) drive signal (COOL)*2	Turning towards COOL side: A21 is 12 V, A11 is GND	While operating: 12 V While not operating: 0 V
A22 ←→ Chassis ground	After-evaporator sensor signal	Ignition switch: ON Varies depending on temperature after the evaporator	1 — 4.5 V
A23 ←→ Chassis ground	In-vehicle sensor signal	Ignition switch: ON	25°C (77°F): Approx. 1.5 V 40°C (104°F): Approx. 1.0 V
A24 ←→ Chassis ground	Pressure sensor signal	Ignition switch: ON	0.5 — 4.9 V
A25 ←→ Chassis ground	Sunload sensor signal	Ignition switch: ON (0 V: No sunload)	0 — 4.9 V
A26 ←→ Chassis ground	Flow sensor signal	Ignition switch: ON	0.3 — 4.7 V
B1 ←→ Chassis ground	Driver's side seat heater GND	Ignition switch: ON Seat heater switch: ON	0 V or battery voltage
B2 ←→ Chassis ground	Seat heater (driver's side) GND	Always	Less than 0.5 V
B3 ←→ Chassis ground	Passenger's side seat heater GND	Ignition switch: ON Seat heater switch: ON	0 V or battery voltage
B4 ←→ Chassis ground	Seat heater (passenger's side) GND	Always	Less than 0.5 V
B5 ←→ Chassis ground	Blower motor voltage feedback*2	Ignition switch: ON Blower switch: ON	0.45 — 10 V
B6 ←→ Chassis ground	Blower motor control signal*2	Ignition switch: ON Blower switch: ON	9.05 V
B7 ←→ Chassis ground	Intake door actuator drive signal (RECIRC)	Intake door actuator operating on the RECIRC side	0.7 V or less
B8 ←→ Chassis ground	Variable compressor solenoid valve	Ignition switch: ON Blower switch: ON A/C switch: ON	2 — 12 V
B9	—	—	—
B10	—	—	—
B11	A/C control panel communication	Measurement load (digital signal)	—
B12	A/C control panel communication	Measurement load (digital signal)	—
B13 ←→ Chassis ground	Heater main relay drive signal*2	Ignition switch: ON Blower switch: ON	0.7 V or less
B14	—	—	—
B15 ←→ Chassis ground	Air mix door actuator (passenger's side) drive signal (HOT)*2	Turning towards HOT side: B14 is 12 V, B15 is GND	While operating: 12 V While not operating: 0 V

Terminal No.	Description	Measuring condition	Standard
B16 ←→ Chassis ground	Air mix door actuator (passenger's side) drive signal (COOL)*2	Turning towards COOL side: B15 is 12 V, B14 is GND	While operating: 12 V While not operating: 0 V
B17 ←→ Chassis ground	Intake door actuator drive signal (FRESH)	Intake door actuator operating on the FRESH side	0.7 V or less
B18 ←→ Chassis ground	Sensor GND	Always	Less than 0.5 V
B19	—	—	—
B20	—	—	—
B21	—	—	—
B22	—	—	—
B23 ←→ Chassis ground	Rear vent actuator drive signal (HOT)*3	Turning towards HOT side: B22 is 12 V, B23 is GND	While operating: 12 V While not operating: 0 V
B24 ←→ Chassis ground	Rear vent actuator drive signal (COOL)*3	Turning towards COOL side: B23 is 12 V, B22 is GND	While operating: 12 V While not operating: 0 V

*1: Manual A/C
*2: Auto A/C
*3: With rear seat A/C



B: WIRING DIAGRAM

Refer to "Air Conditioning System" in the wiring diagram. <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>

5. Diagnostic Chart for Self-Diagnosis

A: OPERATION

NOTE:
Applicable to automatic air conditioner only.

(1) Seat heater switch LH
(2) Temperature adjustment dial LH
(3) OFF switch
(4) A/C switch
(5) Air flow control switch
(6) Fan switch
(7) Temperature adjustment dial RH
(8) Seat heater switch RH
(9) AUTO switch
(10) FRESH/RECIRC switch
(11) DUAL switch
(12) Defroster switch
(13) Rear window defogger switch
(14) MAX A/C switch

1. A/C CONTROL SYSTEM SELF-DIAGNOSIS

	Step	Check	Yes	No
1	**SET SELF-DIAGNOSIS MODE BY OPERATING A/C CONTROL PANEL.** 1) Turn the ignition switch to OFF. 2) Start the engine while holding down the AUTO switch and FRESH/RECIRC switch. NOTE: Self-diagnosis can also be performed with ignition switch ON, but start the engine because observing the compressor operation is difficult. 3) All the indicators blink four times.	Does the self-diagnosis function operate and do all the indicators flash four times?	Go to step **2**.	<Ref. to AC(diag)-13, DIAGNOSTIC PROCEDURE WHEN SELF DIAGNOSIS USING A/C CONTROL PANEL DOES NOT OPERATE, OPERATION, Diagnostic Chart for Self-Diagnosis.>
2	**CHECK EACH SENSOR AND POTENTIOMETER.** 1) After the indicators stop blinking, automatically change to the Inspection Mode of sensor and potentiometer. NOTE: Display items can be changed each time the A/C switch is pressed. (Step Operation) 2) Read the code appeared on the display. When no open circuit or short-circuit is found in each sensor and potentiometer, code “20” is displayed on the screen. When open circuit or short-circuit is found in each sensor and potentiometer, codes except “20” are displayed on the screen. NOTE: It takes one minute or more to complete all diagnostic steps after the engine has started.	Are other codes except “20” displayed?	Repair the defective circuit. <Ref. to AC(diag)-11, SENSOR CHECK TABLE, OPERATION, Diagnostic Chart for Self-Diagnosis.>	Go to step **3**.
3	**CHECK EACH ACTUATOR, BLOWER FAN AND COMPRESSOR.** 1) After completing each sensor and potentiometer inspection, change to the Inspection Mode of actuator, blower fan and compressor by pressing the defroster switch. 2) Each mode will change and operate automatically every four seconds. NOTE: Operation mode items can be changed each time the A/C switch is pressed. (Step Operation) 3) Check the operation of actuator, blower fan and compressor in each mode according to the operating mode table. <Ref. to AC(diag)-13, OPERATING MODE TABLE, OPERATION, Diagnostic Chart for Self-Diagnosis.>	Do the actuator, blower fan and compressor operate as described in the operating mode table?	A/C control system is normal. Press the OFF switch and complete the self-diagnosis function.	Repair each defective part.

2. SENSOR CHECK TABLE

NOTE:
• When the sunload sensor check is performed indoors or in the shade, it could be diagnosed as having an open circuit. Always check the sunload sensor with the sun shining on it.
• When currently malfunctioning, AUTO flashes on display.
• Past malfunction can be cleared by disconnecting the battery ground cable.

Display screen	Sensor	Trouble contents	Note
21	Open circuit in in-vehicle sensor	In-vehicle air temperature sensor circuit is open.	<Ref. to AC(diag)-58, DTC B1430 ROOM TEMPERATURE SENSOR CIRCUIT WIRE BREAK, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

35	M1	FOOT	FRESH	ON	50%	-5.5%
36	M3	FOOT	FRESH	ON	Maximum hot	-5.5%
37	M3	F/D	FRESH	ON	Maximum hot	-5.5%
38	HI	DEF	FRESH	ON	Maximum hot	-5.5%

4. DIAGNOSTIC PROCEDURE WHEN SELF DIAGNOSIS USING A/C CONTROL PANEL DOES NOT OPERATE

NOTE:
For the diagnostic procedures, refer to Diagnostics with Phenomenon “Nothing is displayed on the screen or indicators do not illuminate.”. <Ref. to AC(diag)-15, NOTHING IS DISPLAYED ON THE SCREEN OR INDICATORS DO NOT ILLUMINATE, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

6. Diagnostics with Phenomenon

A: INSPECTION

1. Perform diagnosis according to the diagnosis procedure for the corresponding symptom listed in the symptom table.
2. If there are multiple symptoms, perform the diagnosis in the order of symptom number (1 → 2 → ... → 13).

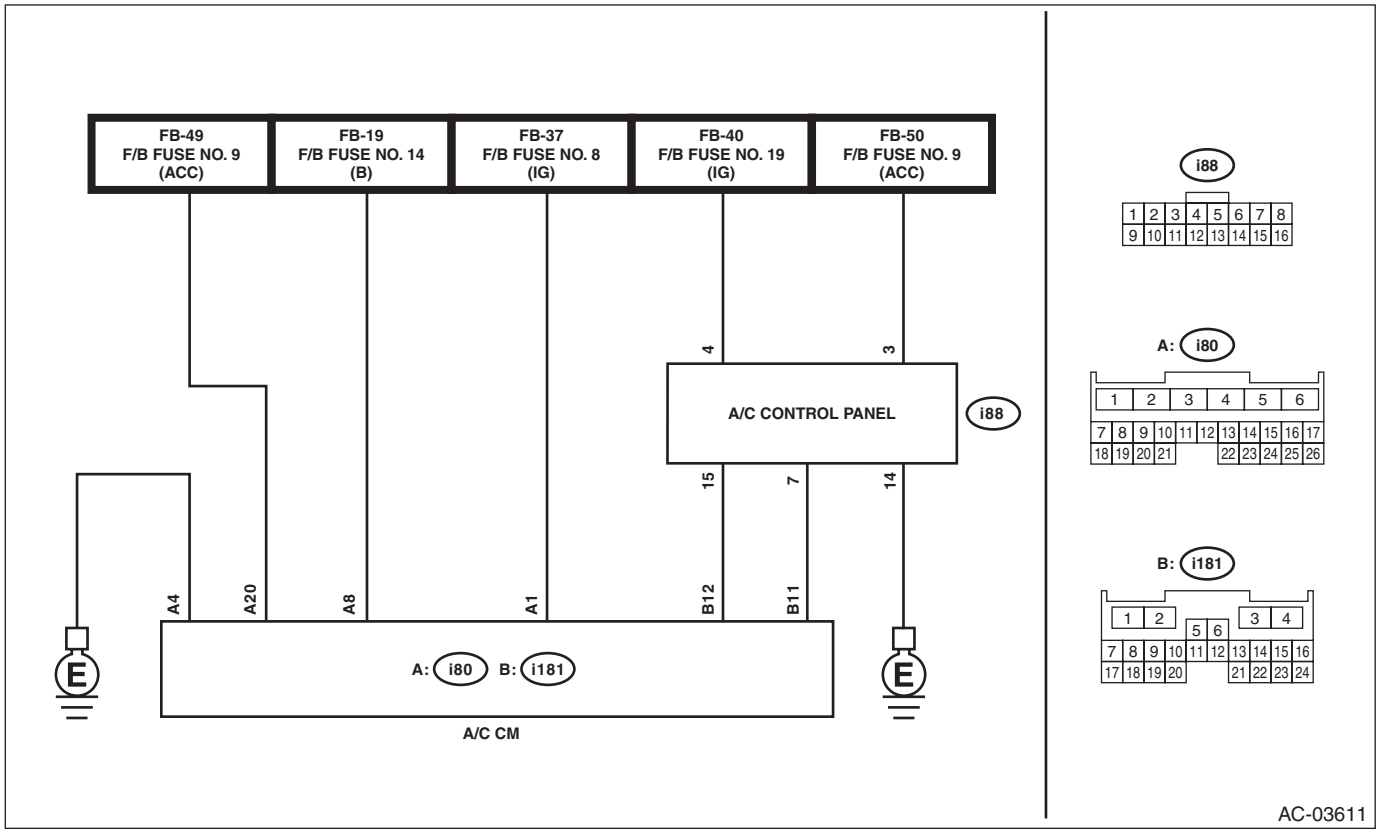
1. SYMPTOM TABLE

Symptoms		Diagnosis procedure
1	Nothing is displayed on the screen or indicators do not illuminate.	<Ref. to AC(diag)-15, NOTHING IS DISPLAYED ON THE SCREEN OR INDICATORS DO NOT ILLUMINATE, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
2	Air conditioner does not stop even when the OFF switch is pressed. (vehicles with fully automatic air conditioner)	<Ref. to AC(diag)-17, AIR CONDITIONER DOES NOT STOP EVEN WHEN THE OFF SWITCH IS PRESSED. (VEHICLES WITH FULLY AUTOMATIC AIR CONDITIONER), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
3	The windshield glass is not cleared even when the DEF switch is pressed. (vehicles with fully automatic air conditioner)	<Ref. to AC(diag)-18, THE WINDSHIELD GLASS IS NOT CLEARED EVEN WHEN THE DEF SWITCH IS PRESSED. (VEHICLES WITH FULLY AUTOMATIC AIR CONDITIONER), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
4	Cold air not emitted.	<Ref. to AC(diag)-20, COLD AIR NOT EMITTED, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
5	Warm air not emitted.	<Ref. to AC(diag)-22, WARM AIR NOT EMITTED, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
6	Compartment temperature is excessively lower than setting temperature.	<Ref. to AC(diag)-25, COMPARTMENT TEMPERATURE IS EXCESSIVELY LOWER THAN SETTING TEMPERATURE, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
7	Compartment temperature is excessively higher than setting temperature.	<Ref. to AC(diag)-27, COMPARTMENT TEMPERATURE IS EXCESSIVELY HIGHER THAN SETTING TEMPERATURE, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
8	Air does not come out, or airflow capacity is insufficient. (Blower motor does not rotate.)	<Ref. to AC(diag)-30, AIR DOES NOT COME OUT, OR AIRFLOW CAPACITY IS INSUFFICIENT, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
9	Air goes out of control. (Blower motor rotates at high speed.)	<Ref. to AC(diag)-37, AIR GOES OUT OF CONTROL, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
10	Cold air does not come out even when the A/C switch is pressed. The glass cannot be defogged. (Compressor does not operate. (variable))	<Ref. to AC(diag)-40, COLD AIR DOES NOT COME OUT EVEN WHEN THE A/C SWITCH IS PRESSED. THE GLASS CANNOT BE DEFOGGED. (COMPRESSOR DOES NOT OPERATE. (VARIABLE)), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
11	Unable to switch suction vents.	<Ref. to AC(diag)-42, UNABLE TO SWITCH SUCTION VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
12	Unable to switch blow vents.	<Ref. to AC(diag)-44, UNABLE TO SWITCH VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
13	Illumination does not come on, or cannot dim.	<Ref. to AC(diag)-45, ILLUMINATION DOES NOT COME ON OR CANNOT DIM, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

B: DIAGNOSTIC PROCEDURE WITH PHENOMENON

1. NOTHING IS DISPLAYED ON THE SCREEN OR INDICATORS DO NOT ILLUMINATE

TROUBLE SYMPTOM:



- When the AUTO button is pressed with IGN ON, nothing is displayed on the screen or indicators do not illuminate.
- Self diagnosis using A/C control panel does not operate.

Trouble causes:

- Control module power supply circuit failure
- A/C control panel power supply failure
- UART communication failure

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Remove the fuses No. 8, 14, 22 and 26 from fuse & relay box. 3) Check the condition of fuse.	Is the fuse blown out?	Replace the fuse.	Go to step **2**.
2	**CHECK CONNECTOR.** Check poor contact of A/C control panel connector, A/C CM connector and coupling connector.	Is there poor contact of connector?	Repair the connector.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK A/C CONTROL PANEL POWER CIRCUIT.** 1) Remove the A/C control panel. 2) Disconnect the A/C control panel connector. 3) Measure the voltage between A/C control panel connector terminal and chassis ground after turning the ignition switch to ON. ***Connector & terminal*** ***(i88) No. 3 (+) — Chassis ground (–):*** ***(i88) No. 4 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Check for open or short circuit in the harness between A/C control panel and fuse.
4	**CHECK A/C CONTROL PANEL GROUND CIRCUIT.** Measure the resistance of harness between A/C control panel and chassis ground after turning the ignition switch to OFF. ***Connector & terminal*** ***(i88) No. 14 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair the harness for ground line.
5	**CHECK A/C CM POWER SUPPLY CIRCUIT.** 1) Install the A/C control panel. 2) Disconnect the A/C CM connector. 3) Measure the voltage between A/C CM connector terminal and chassis ground after turning the ignition switch to ON. ***Connector & terminal*** ***(i80) No. 1 (+) — Chassis ground (–):*** ***(i80) No. 8 (+) — Chassis ground (–):*** ***(i80) No. 20 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **6**.	Check for open or short circuit in the harness between A/C CM and fuse.
6	**CHECK A/C CM GROUND CIRCUIT.** Measure the resistance of harness between A/C CM and chassis ground. ***Connector & terminal*** ***(i80) No. 4 — Chassis ground:***	Is the resistance less than 5 Ω?	Go to step **7**.	Repair the harness for ground line.
7	**CHECK COMMUNICATION CIRCUIT (OPEN CIRCUIT).** Measure the resistance of harness between A/C control panel and air conditioner control module. ***Connector & terminal*** ***(i88) No. 7 — (i181) No. 11:*** ***(i88) No. 15 — (i181) No. 12:***	Is there continuity?	Go to step **8**.	Repair the harness.
8	**CHECK COMMUNICATION CIRCUIT HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between communication circuit harness and chassis ground. ***Connector & terminal*** ***(i181) No. 11 — Chassis ground:*** ***(i181) No. 12 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Go to step **9**.
9	**CHECK HARNESS (SHORTED BETWEEN LINES).** Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i181) No. 11 — (i181) No. 12:***	Is there continuity?	Repair or replace the short circuit of the harness.	Go to step **10**.

	Step	Check	Yes	No
10	**CHECK A/C CONTROL PANEL.** 1) Turn the ignition switch to OFF. 2) Replace the A/C control panel with a properly functioning part.	Does the A/C control panel operate normally?	Since the A/C control panel has an internal error, replace A/C control panel with a new one. <Ref. to AC-44, REMOVAL, Control Panel.>	Since the A/C CM has an internal error, replace A/C CM with a new one. <Ref. to AC-46, REMOVAL, Control Unit.>

2. AIR CONDITIONER DOES NOT STOP EVEN WHEN THE OFF SWITCH IS PRESSED. (VEHICLES WITH FULLY AUTOMATIC AIR CONDITIONER)

TROUBLE SYMPTOM:

Even when the OFF switch is pressed, the blower fan does not turn off, the inlet opening remains in FRESH mode, and the compressor does not turn off.

Trouble causes:

- UART communication failure
- A/C control panel failure
- Blower motor failure
- Intake door actuator failure
- Compressor failure

	Step	Check	Yes	No
1	**CHECK A/C CONTROL PANEL.** 1) Turn the ignition switch to ON. 2) Press the OFF switch of the A/C control panel. 3) Using Subaru Select Monitor, check the following data in “Read Current Data”. • «Blower fan level» • «Variable Flow Change Solenoid Duty» (vehicles with variable air conditioner) • «Fresh/Recircle Air Door Actuator Position Target»	Does «Blower Fan Level» indicate 0, «Variable Flow Change Solenoid Duty» indicate 0%, and «Fresh/Recircle Air Door Actuator Position Target» indicate 100% respectively?	Go to step **2**.	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>
2	**CHECK BLOWER MOTOR.** With the OFF switch pressed, check the blower motor operation.	Is the blower motor stopped?	Go to step **3**.	<Ref. to AC(diag)-37, AIR GOES OUT OF CONTROL, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
3	**CHECK INTAKE DOOR ACTUATOR.** With the OFF switch pressed, check the FRESH/RECIRC door operation.	Does the FRESH/RECIRC door set to FRESH?	Go to step **4**.	<Ref. to AC(diag)-42, UNABLE TO SWITCH SUCTION VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

	Step	Check	Yes	No
4	**CHECK COMPRESSOR.** With the OFF switch pressed, check the compressor operation.	Is the compressor stopped?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	<Ref. to AC(diag)-40, COLD AIR DOES NOT COME OUT EVEN WHEN THE A/C SWITCH IS PRESSED. THE GLASS CANNOT BE DEFOGGED. (COMPRESSOR DOES NOT OPERATE. (VARIABLE)), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

3. THE WINDSHIELD GLASS IS NOT CLEARED EVEN WHEN THE DEF SWITCH IS PRESSED. (VEHICLES WITH FULLY AUTOMATIC AIR CONDITIONER)

TROUBLE SYMPTOM:

Even when the DEF switch is pressed, the defroster indicator does not illuminate, the outlet opening is not set to DEF, the compressor does not turn on and the outlet opening is not set to FRESH.

Trouble causes:

- UART communication failure
- A/C control panel failure
- Mode door actuator failure
- Compressor failure
- Intake door actuator failure

	Step	Check	Yes	No
1	**CHECK A/C CONTROL PANEL.** 1) Turn the ignition switch to ON. 2) Press the DEF switch of the A/C control panel. 3) Using Subaru Select Monitor, check the following data in “Read Current Data”. • «Mode Door Actuator Position Target» • «Variable Flow Change Solenoid Duty» (vehicles with variable air conditioner) • «Fresh/Recircle Air Door Actuator Position Target»	Does «Mode Door Actuator Position Target» indicate 100%, «Variable Flow Change Solenoid Duty» indicate 0% or more, and «Fresh/Recircle Air Door Actuator Position Target» indicate 100% respectively?	Go to step **2**.	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>
2	**CHECK MODE DOOR ACTUATOR.** With the DEF switch ON, check the mode door operation.	Does the air come out from the DEF outlet opening?	Go to step **3**.	<Ref. to AC(diag)-44, UNABLE TO SWITCH VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

	Step	Check	Yes	No
3	**CHECK INTAKE DOOR ACTUATOR.** With the DEF switch ON, check the FRESH/RECIRC door operation.	Does the FRESH/RECIRC door operate normally?	Go to step **4**.	<Ref. to AC(diag)-42, UNABLE TO SWITCH SUCTION VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
4	**CHECK COMPRESSOR.** With the DEF switch ON, check the compressor operation.	Does the compressor operate?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	<Ref. to AC(diag)-40, COLD AIR DOES NOT COME OUT EVEN WHEN THE A/C SWITCH IS PRESSED. THE GLASS CANNOT BE DEFOGGED. (COMPRESSOR DOES NOT OPERATE. (VARIABLE)), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

4. COLD AIR NOT EMITTED

TROUBLE SYMPTOM:
Cold air not emitted.
Trouble causes:
- Airflow capacity failure
- Refrigerant pressure failure
- Air mix actuator (driver's) failure
- Air mix actuator (passenger's) failure (with left/right independent air conditioner only)
- Rear vent actuator failure (with rear seat air conditioning only)
- Intake door actuator failure
- Evaporator sensor failure (vehicles with automatic air conditioner only)
- In-vehicle sensor failure (vehicles with automatic air conditioner only)
- Ambient sensor failure (vehicles with automatic air conditioner only)
- Sunload sensor failure (vehicles with automatic air conditioner only)

	Step	Check	Yes	No
1	**CHECK MAX COOL.** Set the A/C control panel switch as described below. Temperature control switch: MAX COOL FRESH/RECIRC switch: RECIRC Mode switch: VENT A/C switch: ON	Does it fail to blow the cold air?	Go to step **2**.	Go to step **4**.
2	**CHECK AIRFLOW CAPACITY.** Check the airflow capacity. <Ref. to AC(diag)-30, AIR DOES NOT COME OUT, OR AIRFLOW CAPACITY IS INSUFFICIENT, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>	Is the airflow capacity normal?	Go to step **3**.	Perform repair according to inspection procedure.
3	**CHECK AMOUNT OF REFRIGERANT PRESSURE.** Check the refrigerant pressure. <Ref. to AC-22, CHECK REFRIGERANT GAS PRESSURE, PROCEDURE, Refrigerant Pressure with Manifold Gauge Set.>	Is the refrigerant pressure normal?	For vehicles with automatic air conditioner Go to step **4**. For vehicles with manual air conditioner Go to step **6**.	Perform repair according to refrigerant pressure inspection.
4	**CHECK A/C CONTROL PANEL (VEHICLES WITH AUTOMATIC AIR CONDITIONER).** 1) Turn both temperature control dials to the lowest setting. 2) Using Subaru Select Monitor, display the following data in "Read Current Data". • «Heater Control Panel Setting Value (driver's)» • «Heater Control Panel Setting Value (passenger's)» • «Rear Vent Actuator Position Target» (with rear seat air conditioning only)	Do «Heater Control Panel Setting Value (Driver's)» and «Heater Control Panel Setting Value (Passenger's)» indicate 60? Also, does «Rear Vent Actuator Position Target» (with rear seat air conditioning only) indicate 74.5?	Go to step **5**.	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>
5	**CHECK A/C CONTROL PANEL (VEHICLES WITH AUTOMATIC AIR CONDITIONER).** 1) Turn the temperature control dial (driver's side) to the highest setting. 2) Using Subaru Select Monitor, display the following data in "Read Current Data". • «Heater Control Panel Setting Value (driver's)» • «Heater Control Panel Setting Value (passenger's)» • «Rear Vent Actuator Position Target» (with rear seat air conditioning only)	Do «Heater Control Panel Setting Value (Driver's)» and «Heater Control Panel Setting Value (Passenger's)» indicate 90? Also, does «Rear Vent Actuator Position Target» (with rear seat air conditioning only) indicate –5.5?	Go to step **8**.	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>

	Step	Check	Yes	No
6	**CHECK A/C CONTROL PANEL (VEHICLES WITH MANUAL AIR CONDITIONER).** 1) Turn the temperature control dial to the lowest setting. 2) Using Subaru Select Monitor, display the following data in “Read Current Data”. • «Target air mix door actuator position (driver’s side)»	Does the display indicate 0%?	Go to step **7**.	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>
7	**CHECK A/C CONTROL PANEL (VEHICLES WITH MANUAL AIR CONDITIONER).** 1) Turn the temperature control dial to the highest setting. 2) Using Subaru Select Monitor, display the following data in “Read Current Data”. • «Target air mix door actuator position (driver’s side)»	Does the display indicate 100%?	Go to step **8**.	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>
8	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Turn the temperature control dial to the lowest setting, and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor.	Are B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 and B144A displayed?	Perform the diagnosis according to DTC.	Go to step **9**.
9	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Turn the temperature control dial to the highest setting, and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor.	Are B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 and B144A displayed?	Perform the diagnosis according to DTC.	Go to step **10**.
10	**CHECK INTAKE DOOR ACTUATOR.** Visually check the intake door actuator operation.	Is the intake door actuator normal?	Go to step **11**.	Check the intake door actuator. <Ref. to AC(diag)-42, UNABLE TO SWITCH SUCTION VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
11	**CHECK EVAPORATOR SENSOR UNIT (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Perform the inspection of evaporator sensor unit. <Ref. to AC-76, INSPECTION, Evaporator Sensor.>	Is the evaporator sensor normal?	Go to step **12**.	Replace the evaporator sensor. <Ref. to AC-75, REMOVAL, Evaporator Sensor.>
12	**CHECK IN-VEHICLE SENSOR UNIT (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Check in-vehicle sensor. <Ref. to AC-73, INSPECTION, In-Vehicle Sensor (Auto A/C Model).>	Is the in-vehicle sensor normal?	Go to step **13**.	Replace the in-vehicle sensor. <Ref. to AC-72, REMOVAL, In-Vehicle Sensor (Auto A/C Model).>
13	**CHECK AMBIENT SENSOR (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Check the ambient sensor. <Ref. to AC-69, INSPECTION, Ambient Sensor.>	Is the ambient sensor normal?	Go to step **14**.	Replace the ambient sensor. <Ref. to AC-68, REMOVAL, Ambient Sensor.>

	Step	Check	Yes	No
14	**CHECK SUNLOAD SENSOR UNIT (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Check the sunload sensor unit. <Ref. to AC-71, INSPECTION, Sunload Sensor (Auto A/C Model).>	Is the sunload sensor normal?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the sunload sensor. <Ref. to AC-70, REMOVAL, Sunload Sensor (Auto A/C Model).>

5. WARM AIR NOT EMITTED

TROUBLE SYMPTOM:
Warm air not emitted.
Trouble causes:
- Airflow capacity failure
- Coolant failure
- UART communication failure
- A/C control panel failure
- Air mix actuator (driver's) failure
- Air mix actuator (passenger's) failure (with left/right independent air conditioner only)
- Rear vent actuator failure (with rear seat air conditioning only)
- Intake door actuator failure
- Evaporator sensor failure (vehicles with automatic air conditioner only)
- In-vehicle sensor failure (vehicles with automatic air conditioner only)
- Ambient sensor failure (vehicles with automatic air conditioner only)
- Sunload sensor failure (vehicles with automatic air conditioner only)

	Step	Check	Yes	No
1	**CHECK MAX HOT.** Set the A/C control panel switch as described below. Temperature control dial: MAX HOT FRESH/RECIRC switch: FRESH Mode switch: HEAT A/C switch: OFF	Does it fail to blow the hot air?	Go to step **2**.	Go to step **4**.
2	**CHECK AIRFLOW CAPACITY.** Check the airflow capacity. <Ref. to AC(diag)-30, AIR DOES NOT COME OUT, OR AIRFLOW CAPACITY IS INSUFFICIENT, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>	Is the airflow capacity normal?	Go to step **3**.	Perform repair according to inspection procedure.

	Step	Check	Yes	No
3	**CHECK ENGINE COOLANT.** Check engine coolant amount.	Is the engine coolant amount normal?	For vehicles with automatic air conditioner Go to step **4**. For vehicles with manual air conditioner Go to step **6**.	Fill engine coolant. If there is coolant leakage, repair the leaks according to Engine Cooling System Trouble in General. <Ref. to CO(H4DO)-64, Engine Cooling System Trouble in General.> <Ref. to CO(H6DO)-50, Engine Cooling System Trouble in General.>
4	**CHECK A/C CONTROL PANEL (VEHICLES WITH AUTOMATIC AIR CONDITIONER).** 1) Turn both temperature control dials to the lowest setting. 2) Using Subaru Select Monitor, display the following data in “Read Current Data”. • «Heater Control Panel Setting Value (driver’s)» • «Heater Control Panel Setting Value (passenger’s)» • «Rear Vent Actuator Position Target» (with rear seat air conditioning only)	Do «Heater Control Panel Setting Value (Driver’s)» and «Heater Control Panel Setting Value (Passenger’s)» indicate 60? Also, does «Rear Vent Actuator Position Target» (with rear seat air conditioning only) indicate 74.5?	Go to step **5**.	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>
5	**CHECK A/C CONTROL PANEL (VEHICLES WITH AUTOMATIC AIR CONDITIONER).** 1) Turn the temperature control dial (driver’s side) to the highest setting. 2) Using Subaru Select Monitor, display the following data in “Read Current Data”. • «Heater Control Panel Setting Value (driver’s)» • «Heater Control Panel Setting Value (passenger’s)» • «Rear Vent Actuator Position Target» (with rear seat air conditioning only)	Do «Heater Control Panel Setting Value (Driver’s)» and «Heater Control Panel Setting Value (Passenger’s)» indicate 90? Also, does «Rear Vent Actuator Position Target» (with rear seat air conditioning only) indicate –5.5?	Go to step **8**.	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>
6	**CHECK A/C CONTROL PANEL (VEHICLES WITH MANUAL AIR CONDITIONER).** 1) Turn the temperature control dial to the lowest setting. 2) Using Subaru Select Monitor, display the following data in “Read Current Data”. • «Target air mix door actuator position (driver’s side)»	Does the display indicate 0%?	Go to step **7**.	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>
7	**CHECK A/C CONTROL PANEL (VEHICLES WITH MANUAL AIR CONDITIONER).** 1) Turn the temperature control dial to the highest setting. 2) Using Subaru Select Monitor, display the following data in “Read Current Data”. • «Target air mix door actuator position (driver’s side)»	Does the display indicate 100%?	Go to step **8**.	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>

	Step	Check	Yes	No
8	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Turn the temperature control dial to the lowest setting, and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor.	Are B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 and B144A displayed?	Perform the diagnosis according to DTC.	Go to step **9**.
9	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Turn the temperature control dial to the highest setting, and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor.	Are B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 and B144A displayed?	Perform the diagnosis according to DTC.	Go to step **10**.
10	**CHECK INTAKE DOOR ACTUATOR.** Visually check the intake door actuator operation.	Is the intake door actuator normal?	Go to step **11**.	Check the intake door actuator. <Ref. to AC(diag)-42, UNABLE TO SWITCH SUCTION VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
11	**CHECK EVAPORATOR SENSOR UNIT (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Perform the inspection of evaporator sensor unit. <Ref. to AC-76, INSPECTION, Evaporator Sensor.>	Is the evaporator sensor normal?	Go to step **12**.	Replace the evaporator sensor. <Ref. to AC-75, REMOVAL, Evaporator Sensor.>
12	**CHECK IN-VEHICLE SENSOR UNIT (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Check in-vehicle sensor circuit. <Ref. to AC-73, INSPECTION, In-Vehicle Sensor (Auto A/C Model).>	Is the in-vehicle sensor circuit normal?	Go to step **13**.	Replace the in-vehicle sensor. <Ref. to AC-72, REMOVAL, In-Vehicle Sensor (Auto A/C Model).>
13	**CHECK AMBIENT SENSOR (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Check the ambient sensor. <Ref. to AC-69, INSPECTION, Ambient Sensor.>	Is the ambient sensor normal?	Go to step **14**.	Replace the ambient sensor. <Ref. to AC-68, REMOVAL, Ambient Sensor.>
14	**CHECK SUNLOAD SENSOR UNIT (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Check the sunload sensor unit. <Ref. to AC-71, INSPECTION, Sunload Sensor (Auto A/C Model).>	Is the sunload sensor normal?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the sunload sensor. <Ref. to AC-70, REMOVAL, Sunload Sensor (Auto A/C Model).>

6. COMPARTMENT TEMPERATURE IS EXCESSIVELY LOWER THAN SETTING TEMPERATURE

TROUBLE SYMPTOM:
Compartment temperature is excessively lower than setting temperature.
Trouble causes:
- Large airflow capacity
- Refrigerant pressure failure
- UART communication failure
- A/C control panel failure
- Air mix actuator (driver's) failure
- Air mix actuator (passenger's) failure (with left/right independent air conditioner only)
- Rear vent actuator failure (with rear seat air conditioning only)
- Evaporator sensor failure (vehicles with automatic air conditioner only)
- In-vehicle sensor failure (vehicles with automatic air conditioner only)
- Ambient sensor failure (vehicles with automatic air conditioner only)
- Sunload sensor failure (vehicles with automatic air conditioner only)

	Step	Check	Yes	No
1	**CHECK AIRFLOW CAPACITY.** Check the airflow capacity. <Ref. to AC(diag)-37, AIR GOES OUT OF CONTROL, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>	Is the airflow capacity normal?	Go to step **2**.	Perform repair according to inspection procedure.
2	**CHECK AMOUNT OF REFRIGERANT PRESSURE.** Check the refrigerant pressure. <Ref. to AC-22, CHECK REFRIGERANT GAS PRESSURE, PROCEDURE, Refrigerant Pressure with Manifold Gauge Set.>	Is the refrigerant pressure normal?	For vehicles with automatic air conditioner Go to step **3**. For vehicles with manual air conditioner Go to step **5**.	Perform repair according to refrigerant pressure inspection.
3	**CHECK A/C CONTROL PANEL (VEHICLES WITH AUTOMATIC AIR CONDITIONER).** 1) Turn both temperature control dials to the lowest setting. 2) Using Subaru Select Monitor, display the following data in "Read Current Data". • «Heater Control Panel Setting Value (driver's)» • «Heater Control Panel Setting Value (passenger's)» • «Rear Vent Actuator Position Target» (with rear seat air conditioning only)	Do «Heater Control Panel Setting Value (Driver's)» and «Heater Control Panel Setting Value (Passenger's)» indicate 60? Also, does «Rear Vent Actuator Position Target» (with rear seat air conditioning only) indicate 74.5?	Go to step **4**.	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>
4	**CHECK A/C CONTROL PANEL (VEHICLES WITH AUTOMATIC AIR CONDITIONER).** 1) Turn both temperature control dials to the highest setting. 2) Using Subaru Select Monitor, display the following data in "Read Current Data". • «Heater Control Panel Setting Value (driver's)» • «Heater Control Panel Setting Value (passenger's)» • «Rear Vent Actuator Position Target» (with rear seat air conditioning only)	Do «Heater Control Panel Setting Value (Driver's)» and «Heater Control Panel Setting Value (Passenger's)» indicate 90? Also, does «Rear Vent Actuator Position Target» (with rear seat air conditioning only) indicate –5.5?	Go to step **5**.	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>

	Step	Check	Yes	No
5	**CHECK A/C CONTROL PANEL (VEHICLES WITH MANUAL AIR CONDITIONER).** 1) Turn the temperature control dial to the lowest setting. 2) Using Subaru Select Monitor, display the following data in “Read Current Data”. • «Target air mix door actuator position (driver’s side)»	Does the display indicate 0%?	Go to step **6**.	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>
6	**CHECK A/C CONTROL PANEL (VEHICLES WITH MANUAL AIR CONDITIONER).** 1) Turn both temperature control dials to the highest setting. 2) Using Subaru Select Monitor, display the following data in “Read Current Data”. • «Target air mix door actuator position (driver’s side)»	Does the display indicate 100%?	Go to step **7**.	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>
7	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Turn the temperature control dial to the lowest setting, and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor.	Are B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 and B144A displayed?	Perform the diagnosis according to DTC.	Go to step **8**.
8	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Turn the temperature control dial to the highest setting, and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor.	Are B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 and B144A displayed?	Perform the diagnosis according to DTC.	Go to step **9**.
9	**CHECK EVAPORATOR SENSOR UNIT (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Perform the inspection of evaporator sensor unit. <Ref. to AC-76, INSPECTION, Evaporator Sensor.>	Is the evaporator sensor normal?	Go to step **10**.	Replace the evaporator sensor. <Ref. to AC-75, REMOVAL, Evaporator Sensor.>
10	**CHECK IN-VEHICLE SENSOR UNIT (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Check in-vehicle sensor circuit. <Ref. to AC-73, INSPECTION, In-Vehicle Sensor (Auto A/C Model).>	Is the in-vehicle sensor circuit normal?	Go to step **11**.	Replace the in-vehicle sensor. <Ref. to AC-72, REMOVAL, In-Vehicle Sensor (Auto A/C Model).>
11	**CHECK AMBIENT SENSOR (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Check ambient sensor circuit. <Ref. to AC-69, INSPECTION, Ambient Sensor.>	Is the ambient sensor circuit normal?	Go to step **12**.	Replace the ambient sensor. <Ref. to AC-68, REMOVAL, Ambient Sensor.>

	Step	Check	Yes	No
12	**CHECK SUNLOAD SENSOR UNIT (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Check the sunload sensor unit. <Ref. to AC-71, INSPECTION, Sunload Sensor (Auto A/C Model).>	Is the sunload sensor normal?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the sunload sensor. <Ref. to AC-70, REMOVAL, Sunload Sensor (Auto A/C Model).>

7. COMPARTMENT TEMPERATURE IS EXCESSIVELY HIGHER THAN SETTING TEMPERATURE

TROUBLE SYMPTOM:

Compartment temperature is excessively higher than setting temperature.

Trouble causes:

- Large airflow capacity
- UART communication failure
- A/C control panel failure
- Air mix actuator (driver's) failure
- Air mix actuator (passenger's) failure (with left/right independent air conditioner only)
- Rear vent actuator failure (with rear seat air conditioning only)
- Intake door actuator failure
- Evaporator sensor failure (vehicles with automatic air conditioner only)
- In-vehicle sensor failure (vehicles with automatic air conditioner only)
- Ambient sensor failure (vehicles with automatic air conditioner only)
- Sunload sensor failure (vehicles with automatic air conditioner only)

	Step	Check	Yes	No
1	**CHECK AIRFLOW CAPACITY.** Check the airflow capacity. <Ref. to AC(diag)-37, AIR GOES OUT OF CONTROL, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>	Is the airflow capacity normal?	For vehicles with automatic air conditioner Go to step **2**. For vehicles with manual air conditioner Go to step **4**.	Perform repair according to inspection procedure.
2	**CHECK A/C CONTROL PANEL (VEHICLES WITH AUTOMATIC AIR CONDITIONER).** 1) Turn both temperature control dials to the lowest setting. 2) Using Subaru Select Monitor, display the following data in "Read Current Data". • «Heater Control Panel Setting Value (driver's)» • «Heater Control Panel Setting Value (passenger's)» • «Rear Vent Actuator Position Target» (with rear seat air conditioning only)	Do «Heater Control Panel Setting Value (Driver's)» and «Heater Control Panel Setting Value (Passenger's)» indicate 60? Also, does «Rear Vent Actuator Position Target» (with rear seat air conditioning only) indicate 74.5?	Go to step **3**.	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>

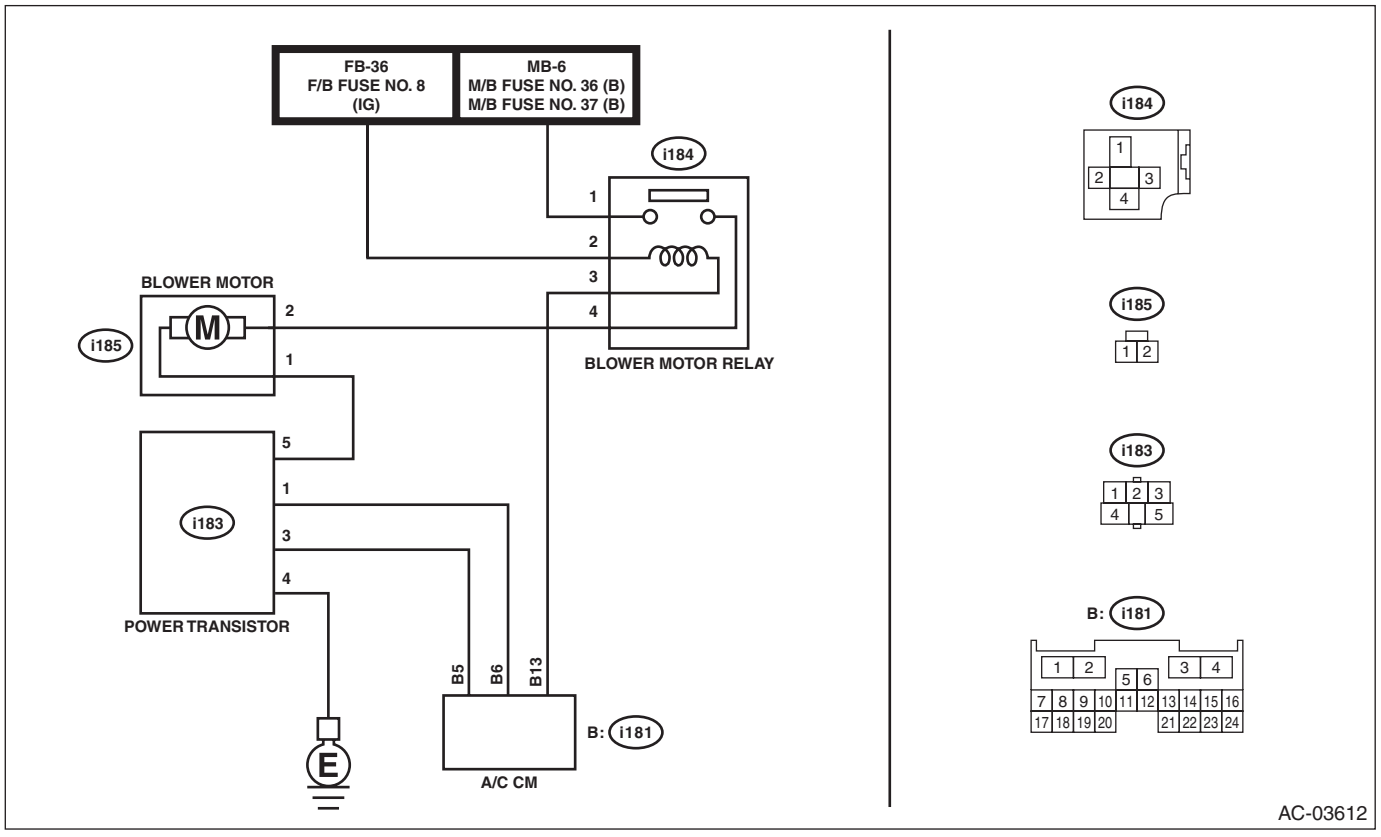
	Step	Check	Yes	No
3	**CHECK A/C CONTROL PANEL (VEHICLES WITH AUTOMATIC AIR CONDITIONER).** 1) Turn the temperature control dial (driver's side) to the highest setting. 2) Using Subaru Select Monitor, display the following data in "Read Current Data". • «Heater Control Panel Setting Value (driver's)» • «Heater Control Panel Setting Value (passenger's)» • «Rear Vent Actuator Position Target» (with rear seat air conditioning only)	Do «Heater Control Panel Setting Value (Driver's)» and «Heater Control Panel Setting Value (Passenger's)» indicate 90? Also, does «Rear Vent Actuator Position Target» (with rear seat air conditioning only) indicate –5.5?	Go to step **4**.	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>
4	**CHECK A/C CONTROL PANEL (VEHICLES WITH MANUAL AIR CONDITIONER).** 1) Turn the temperature control dial to the lowest setting. 2) Using Subaru Select Monitor, display the following data in "Read Current Data". • «Target air mix door actuator position (driver's side)»	Does the display indicate 0%?	Go to step **5**.	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>
5	**CHECK A/C CONTROL PANEL (VEHICLES WITH MANUAL AIR CONDITIONER).** 1) Turn the temperature control dial to the highest setting. 2) Using Subaru Select Monitor, display the following data in "Read Current Data". • «Target air mix door actuator position (driver's side)»	Does the display indicate 100%?	Go to step **6**.	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>
6	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Turn the temperature control dial to the lowest setting, and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor.	Are B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 and B144A displayed?	Perform the diagnosis according to DTC.	Go to step **7**.
7	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Turn the temperature control dial to the highest setting, and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor.	Are B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 and B144A displayed?	Perform the diagnosis according to DTC.	Go to step **8**.
8	**CHECK INTAKE DOOR ACTUATOR.** Visually check the intake door actuator operation.	Is the intake door actuator normal?	Go to step **9**.	Check the intake door actuator. <Ref. to AC(diag)-42, UNABLE TO SWITCH SUCTION VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
9	**CHECK EVAPORATOR SENSOR UNIT (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Perform the inspection of evaporator sensor unit. <Ref. to AC-76, INSPECTION, Evaporator Sensor.>	Is the evaporator sensor normal?	Go to step **10**.	Replace the evaporator sensor. <Ref. to AC-75, REMOVAL, Evaporator Sensor.>

	Step	Check	Yes	No
10	**CHECK IN-VEHICLE SENSOR UNIT (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Check in-vehicle sensor circuit. <Ref. to AC-73, INSPECTION, In-Vehicle Sensor (Auto A/C Model).>	Is the in-vehicle sensor circuit normal?	Go to step **11**.	Replace the in-vehicle sensor. <Ref. to AC-72, REMOVAL, In-Vehicle Sensor (Auto A/C Model).>
11	**CHECK AMBIENT SENSOR (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Check ambient sensor circuit. <Ref. to AC-69, INSPECTION, Ambient Sensor.>	Is the ambient sensor circuit normal?	Go to step **12**.	Replace the ambient sensor. <Ref. to AC-68, REMOVAL, Ambient Sensor.>
12	**CHECK SUNLOAD SENSOR UNIT (VEHICLES WITH AUTOMATIC AIR CONDITIONER ONLY).** Check the sunload sensor unit. <Ref. to AC-71, INSPECTION, Sunload Sensor (Auto A/C Model).>	Is the sunload sensor normal?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the sunload sensor. <Ref. to AC-70, REMOVAL, Sunload Sensor (Auto A/C Model).>

8. AIR DOES NOT COME OUT, OR AIRFLOW CAPACITY IS INSUFFICIENT

TROUBLE SYMPTOM:

- Airflow capacity is insufficient.
- No air comes out even when the fan switch or fan dial is operated.
- There is a fan speed at which no air comes out.



Trouble causes:

- Airflow capacity failure
- UART communication failure
- A/C control panel failure
- Blower motor failure

Auto A/C

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Air conditioning system <Ref. to WI-111, AUTO A/C, WIRING DIAGRAM, Air Conditioning System.>

	Step	Check	Yes	No
1	**CHECK BLOWER OPERATION.** 1) Using Subaru Select Monitor, display the following data in “Read Current Data”. • «Air mix door actuator position (driver’s side)» • «Air mix door actuator position (passenger’s side)» (with left/right independent air conditioner) • «Blower fan level» 2) Turn the temperature control dial to the lowest setting, and increase or decrease the A/C control panel fan switch. (For vehicles with left/right independent air conditioner, perform setting on both sides.)	Do «Air mix door actuator position (driver’s side)» and «Air mix door actuator position (passenger’s side)» (with left/right independent air conditioner) indicate 0%? Also, does «Blower Fan Level» increase or decrease in accordance with the fan switch operation?	Go to step **2**.	Go to step **5**.
2	**CHECK AIRFLOW CAPACITY.** Turn the temperature control dial to the lowest setting (both dials for the models equipped with left/right independent air conditioning function), and set A/C control panel fan switch to MAX and FRESH/RECIRC switch to RECIRC.	Is the airflow capacity insufficient for the same model?	Go to step **3**.	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK A/C FILTER.** Check the A/C filter. <Ref. to AC-96, INSPECTION, A/C Filter.>	Is the A/C filter normal?	Go to step **4**.	Clean or replace the A/C filter.
4	**CHECK EACH DUCT.** Check each duct joint for disconnection or clogging. <Ref. to AC-90, INSPECTION, Air Vent Grille.> <Ref. to AC-94, INSPECTION, Heater Duct.> <Ref. to AC-95, INSPECTION, Heater Vent Duct.>	Is each duct normal?	Go to step **5**.	Repair the faulty duct.
5	**CHECK A/C CONTROL PANEL.** 1) Turn the ignition switch to ON. 2) Set the fan switch to maximum position. 3) Using the Subaru Select Monitor, check «Blower Fan Level» of the current data from the A/C diagnosis.	Does the display indicate 31?	Go to step **6**.	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>
6	**CHECK A/C CONTROL PANEL.** 1) Set the fan switch to minimum position. 2) Using the Subaru Select Monitor, check «Blower Fan Level» of the current data from the A/C diagnosis.	Does the display indicate 1?	Go to step **7**.	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>
7	**CHECK CONNECTOR.** Check poor contact of the blower motor connector, blower motor relay connector, power transistor connector, A/C CM connector and coupling connector.	Is there poor contact of connector?	Repair the connector.	Go to step **8**.

	Step	Check	Yes	No
8	**CHECK FUSE.** 1) Remove the fuse No. 8 of the fuse & relay box and the fuses No. 36 and No. 37 of the main fuse box. 2) Check the condition of fuse.	Is the fuse blown out?	Replace the fuse.	Go to step **9**.
9	**CHECK BLOWER MOTOR RELAY ON SIGNAL.** 1) Stop the engine. 2) Turn the fan switch to OFF. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between the A/C CM connector and chassis ground. ***Connector & terminal*** ***(i181) No. 13 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **10**.	• Check for an open or short circuit in the harness between the F/B fuse No. 8 and ECM. • Check the blower relay connector and relay unit. <Ref. to AC-33, CHECK RELAY, INSPECTION, Relay and Fuse.>
10	**CHECK BLOWER MOTOR RELAY ON SIGNAL.** 1) Start the engine. 2) Turn the fan switch to ON. 3) Using a tester, measure the voltage between the A/C CM connector and chassis ground. ***Connector & terminal*** ***(i181) No. 13 (+) — Chassis ground (–):***	Is the voltage 0 V?	Go to step **11**.	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>
11	**CHECK BLOWER MOTOR POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. 2) Turn the fan switch to ON. 3) Use a tester to measure the voltage between the blower motor connector and chassis ground. ***Connector & terminal*** ***(i185) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **12**.	• Check the harness of blower motor power supply line for open circuit and the coupling connector. • Check the blower relay connector and relay unit. <Ref. to AC-33, CHECK RELAY, INSPECTION, Relay and Fuse.>
12	**CHECK BLOWER MOTOR UNIT.** Check the blower motor. <Ref. to AC-38, INSPECTION, Blower Motor.>	Is the blower motor OK?	Go to step **13**.	Replace the blower motor. <Ref. to AC-37, REMOVAL, Blower Motor.>
13	**CHECK HARNESS.** 1) Disconnect the power transistor and A/C CM connector. 2) Using a tester, measure the resistance between harness terminals. ***Connector & terminal*** ***(i185) No. 1 — (i183) No. 5:*** ***(i183) No. 3 — (i181) No. 5:*** ***(i183) No. 1 — (i181) No. 6:*** ***(i183) No. 4 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **14**.	Repair or replace the open circuit of harness.

Step		Check	Yes	No
14	**CHECK HARNESS.** Use a tester to measure the harness resistance between the power transistor connector and chassis ground. ***Connector & terminal*** ***(i183) No. 1 — Chassis ground:*** ***(i183) No. 3 — Chassis ground:***	Is the resistance less than 1 Ω?	Repair or replace the short circuit of the harness.	Go to step **15**.
15	**CHECK POWER TRANSISTOR.** Replace the power transistor with a properly functioning part.	Does the blower motor rotate?	Replace the power transistor. <Ref. to AC-39, REMOVAL, Power Transistor (Auto A/C Model).>	Replace the A/C CM <Ref. to AC-46, REMOVAL, Control Unit.>

Manual A/C

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Air conditioning system <Ref. to WI-106, MANUAL A/C, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK BLOWER OPERATION.** Turn the temperature control dial to the lowest setting, and increase or decrease the fan dial.	Does the airflow capacity increase or decrease in accordance with the dial operation?	Go to step **2**.	Go to step **5**.
2	**CHECK AIRFLOW CAPACITY.** Turn the temperature control dial to the highest setting, and set the fan switch to MAX and FRESH/RECIRC switch to RECIRC.	Is the airflow capacity insufficient for the same model?	Go to step **3**.	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK A/C FILTER.** Check the A/C filter. <Ref. to AC-96, INSPECTION, A/C Filter.>	Is the A/C filter normal?	Go to step **4**.	Clean or replace the A/C filter.

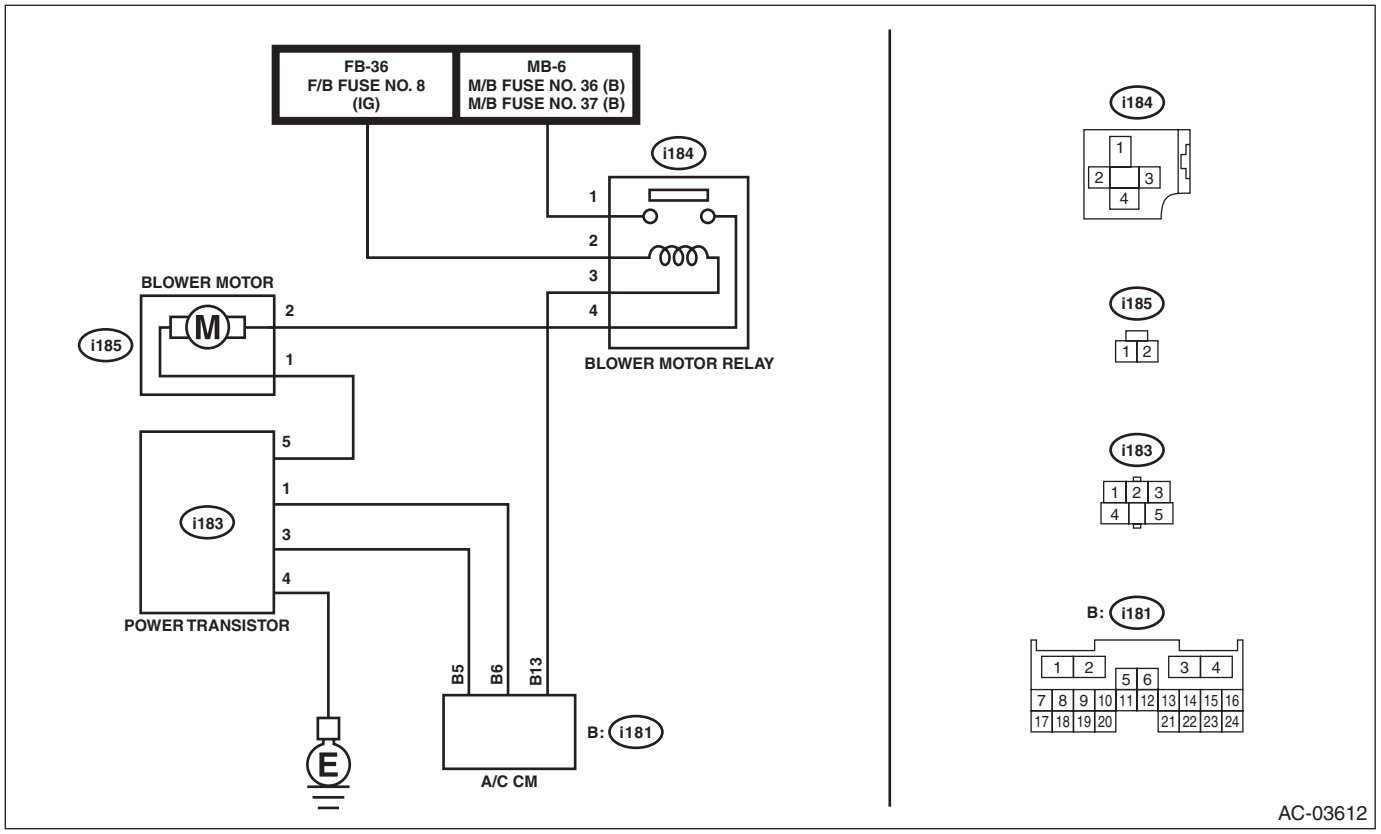
	Step	Check	Yes	No
4	**CHECK EACH DUCT.** Check each duct joint for disconnection or clogging. <Ref. to AC-90, INSPECTION, Air Vent Grille.> <Ref. to AC-94, INSPECTION, Heater Duct.> <Ref. to AC-95, INSPECTION, Heater Vent Duct.>	Is each duct normal?	Go to step **5**.	Repair the faulty duct.
5	**CHECK CONNECTOR.** Check poor contact of the blower motor relay connector, blower motor connector, blower resistor connector, blower fan switch connector and coupling connector.	Is there poor contact of connector?	Repair the connector.	Go to step **6**.
6	**CHECK FUSE.** 1) Remove the fuse No. 8 of the fuse & relay box and the fuses No. 36 and No. 37 of the main fuse box. 2) Check the condition of fuse.	Is the fuse blown out?	Replace the fuse.	Go to step **7**.
7	**CHECK BLOWER MOTOR RELAY ON SIGNAL.** 1) Stop the engine. 2) Turn the fan switch to OFF. 3) Turn the ignition switch to ON. 4) Use a tester to measure the voltage between the blower fan switch and chassis ground. ***Connector & terminal*** ***(i15) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **8**.	• Check for an open or short circuit between the F/B fuse No. 8 and blower fan switch. • Check the blower relay connector and relay unit.
8	**CHECK BLOWER MOTOR RELAY ON SIGNAL.** 1) Start the engine. 2) Turn the fan switch to OFF. 3) Turn the ignition switch to ON. 4) Use a tester to measure the voltage between the blower fan switch and chassis ground. ***Connector & terminal*** ***(i15) No. 1 (+) — Chassis ground (–):***	Is the voltage 0 V?	Go to step **9**.	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>
9	**CHECK BLOWER MOTOR POWER SUPPLY.** 1) Turn the ignition switch to ON. 2) Turn the blower switch to ON. 3) Use a tester to measure the voltage between the blower motor connector and chassis ground. ***Connector & terminal*** ***(i185) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **10**.	• Check the harness of blower motor power supply line for open circuit and the coupling connector. • Check the blower relay connector and relay unit.
10	**CHECK BLOWER MOTOR.** Check the blower motor. <Ref. to AC-38, INSPECTION, Blower Motor.>	Is the blower motor OK?	Go to step **11**.	Replace the blower motor. <Ref. to AC-37, REMOVAL, Blower Motor.>

	Step	Check	Yes	No
11	**CHECK HARNESS.** 1) Disconnect the connector from blower motor, blower resistor and blower fan switch. 2) Use a tester to measure the resistance of the harness between terminals. ***Connector & terminal*** ***(i185) No. 1 — (i182) No. 4:*** ***(i185) No. 1 — (i15) No. 3:*** ***(i182) No. 1 — (i15) No. 6:*** ***(i182) No. 2 — (i15) No. 4:*** ***(i182) No. 3 — (i15) No. 5:***	Is the resistance less than 1 Ω?	Go to step **12**.	Repair or replace the open circuit of harness.
12	**CHECK BLOWER RESISTOR.** Check the blower resistor. <Ref. to AC-41, INSPECTION, Blower Resistor (Manual A/C Model).>	Is the blower resistor OK?	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>	Replace the blower resistor. <Ref. to AC-40, REMOVAL, Blower Resistor (Manual A/C Model).>

9. AIR GOES OUT OF CONTROL

TROUBLE SYMPTOM:

- The blower rotates even though the blower switch is not turned on.
- The blower motor continues to rotate at high speed. (Not adjustable.)



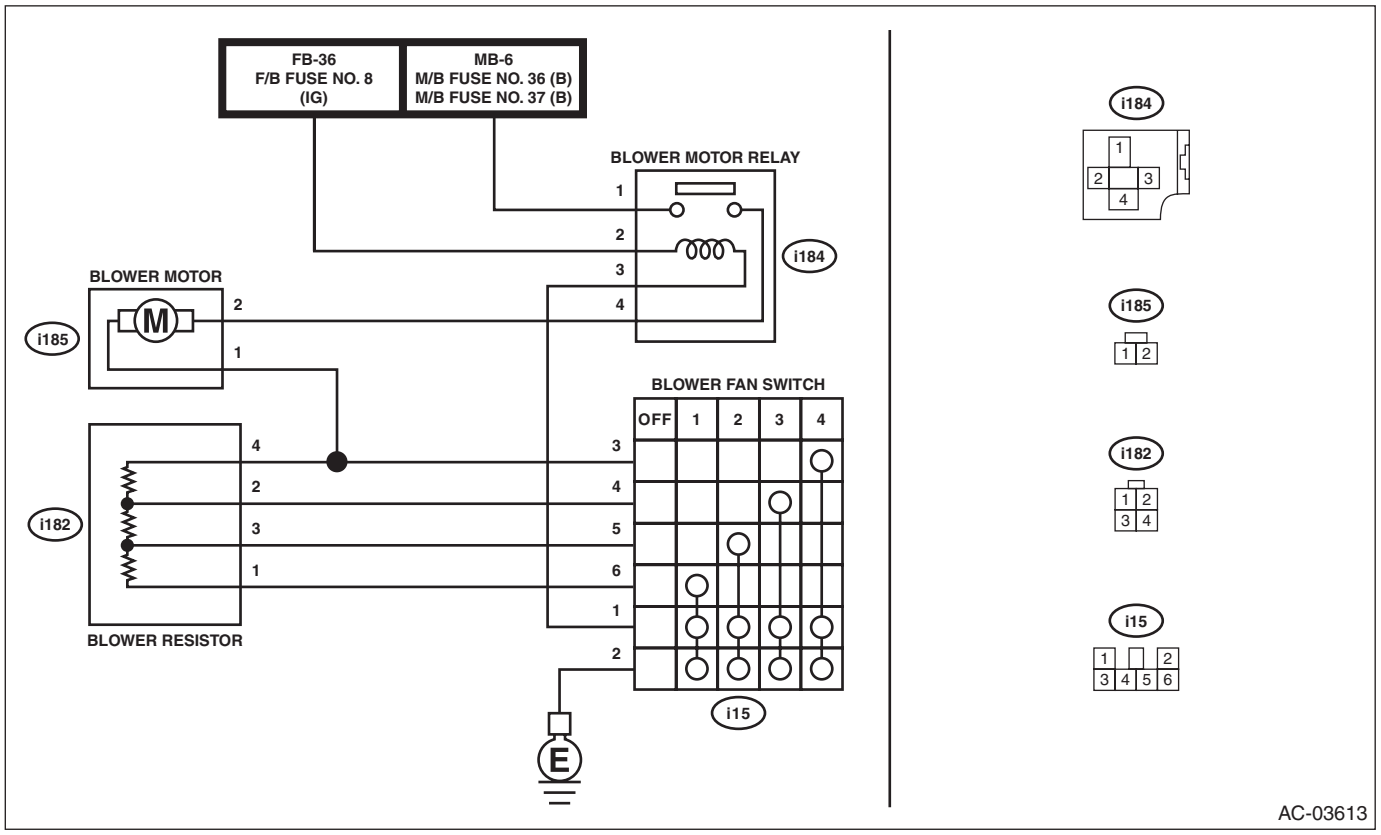
Trouble causes:

- Airflow capacity failure
- UART communication failure
- A/C control panel failure
- Blower motor failure

Auto A/C

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Air conditioning system <Ref. to WI-111, AUTO A/C, WIRING DIAGRAM, Air Conditioning System.>



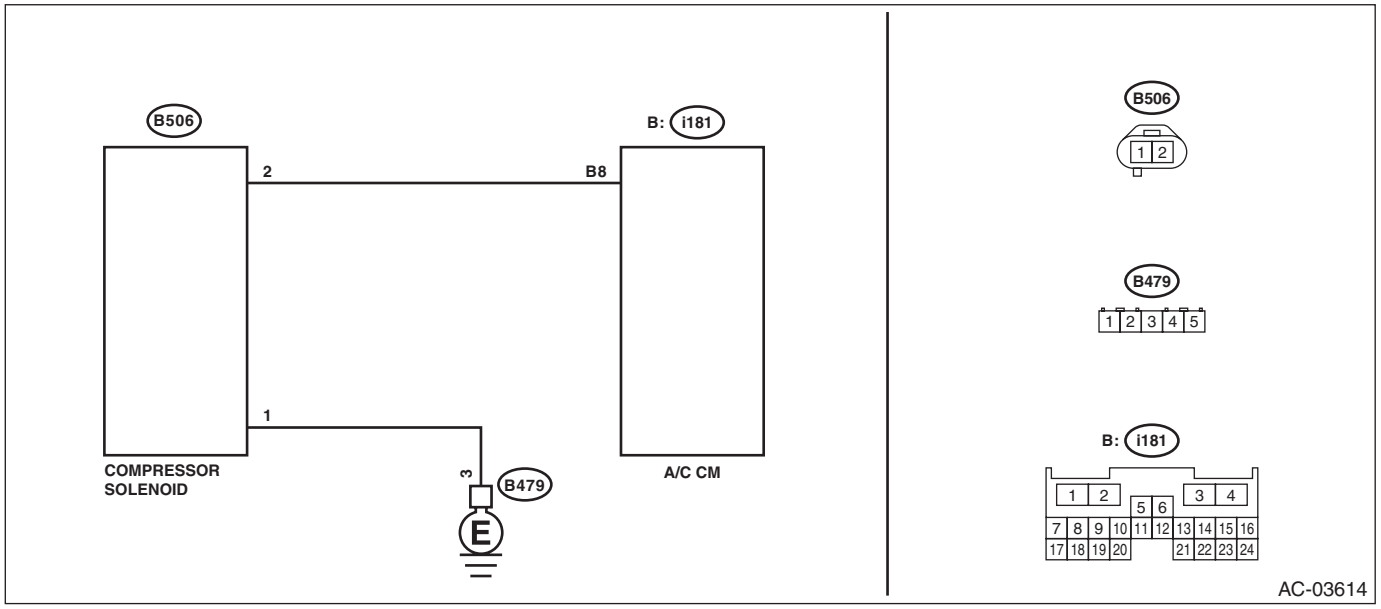
Step		Check	Yes	No
1	**CHECK A/C CONTROL PANEL.** 1) Turn the ignition switch to ON. 2) Set the fan switch to maximum position. 3) Using the Subaru Select Monitor, check «Blower Fan Level» of the current data from the A/C diagnosis.	Does the display indicate 31?	Go to step **2**.	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>
2	**CHECK A/C CONTROL PANEL.** 1) Set the fan switch to minimum position. 2) Using the Subaru Select Monitor, check «Blower Fan Level» of the current data from the A/C diagnosis.	Does the display indicate 1?	Go to step **3**.	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the power transistor connector. 3) Use a tester to measure the resistance between the power transistor connector and chassis ground. ***Connector & terminal*** ***(i183) No. 5 — Chassis ground:***	Is the resistance less than 1 Ω?	Repair or replace the short circuit of the harness between blower motor and power transistor.	Go to step **4**.
4	**CHECK HARNESS.** 1) Remove the A/C CM. 2) Turn the ignition switch to ON. 3) Use a tester to measure the resistance between the power transistor connector and chassis ground. ***Connector & terminal*** ***(i183) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Repair or replace the short circuit of the harness between A/C CM and power transistor.	Go to step **5**.
5	**CHECK HARNESS.** 1) Connect the disconnected connectors. 2) Turn the ignition switch to ON. 3) Use a tester to measure the voltage between the power transistor connector and chassis ground. ***Connector & terminal*** ***(i183) No. 1 (+) — Chassis ground (–):***	Is the voltage approx. 10 V when the fan switch is set to 1st, and approx. 1 V when set to 6th?	Replace the power transistor. <Ref. to AC-39, REMOVAL, Power Transistor (Auto A/C Model).>	Go to step **6**.
6	**CHECK A/C CM.** 1) Turn the fan switch to OFF. 2) Disconnect the power transistor connector. 3) Use a tester to measure the resistance between the power transistor connector and chassis ground. ***Connector & terminal*** ***(i183) No. 1 — Chassis ground:***	When the fan switch is OFF and other than OFF, does the resistance change?	Replace the power transistor. <Ref. to AC-39, REMOVAL, Power Transistor (Auto A/C Model).>	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>

Manual A/C

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Air conditioning system <Ref. to WI-106, MANUAL A/C, WIRING DIAGRAM, Air Conditioning System.>



Step		Check	Yes	No
1	**CHECK BLOWER MOTOR CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the blower fan switch connector and blower resistor connector. 3) Use a tester to measure the resistance between each terminal and chassis ground. ***Connector & terminal*** ***(i182) No. 4 — Chassis ground:*** ***(i15) No. 3 — Chassis ground:*** ***(i15) No. 4 — Chassis ground:*** ***(i15) No. 5 — Chassis ground:*** ***(i15) No. 6 — Chassis ground:***	Is the resistance less than 1 Ω?	Repair or replace the short circuit of the harness.	Go to step **2**.
2	**CHECK BLOWER RESISTOR.** Check the blower resistor. <Ref. to AC-41, INSPECTION, Blower Resistor (Manual A/C Model).>	Is the blower resistor OK?	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>	Replace the blower resistor. <Ref. to AC-40, REMOVAL, Blower Resistor (Manual A/C Model).>

10.COLD AIR DOES NOT COME OUT EVEN WHEN THE A/C SWITCH IS PRESSED. THE GLASS CANNOT BE DEFOGGED. (COMPRESSOR DOES NOT OPERATE. (VARIABLE))

TROUBLE SYMPTOM:
Compressor does not operate even when the A/C switch is turned on and the fan switch is set to LO — HI.
Trouble causes:
Compressor failure
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK A/C CONTROL PANEL.** 1) Leave the vehicle under the condition at ambient temperature of 15°C (59°F) or more. 2) Turn the ignition switch to ON. 3) Set the fan switch to maximum position. 4) Press the A/C switch.	Is A/C indicator displayed on the A/C control panel?	Go to step **2**.	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>
2	**CHECK VARIABLE FLOW CHANGE SOLENOID DUTY VALUE.** Using the Subaru Select Monitor, check «Variable Flow Change Solenoid Duty» of the current data from the A/C diagnosis.	Does the display indicate the value greater than zero?	Go to step **7**.	Go to step **3**.
3	**CHECK EVAPORATOR SENSOR.** Using the Subaru Select Monitor, check «Evaporator Temp.» of the current data from the A/C diagnosis.	Does the display indicate –0.5 degree or more?	Go to step **5**.	Go to step **4**.
4	**CHECK EVAPORATOR SENSOR.** Check the evaporator sensor. <Ref. to AC-76, INSPECTION, Evaporator Sensor.>	Is the sensor normal?	Go to step **5**.	Replace the evaporator sensor.
5	**CHECK REFRIGERANT PRESSURE SENSOR.** Using the Subaru Select Monitor, check «Refrigerant Pressure» of the current data from the A/C diagnosis.	Does the display indicate 0.21 Mpa — 3.03 Mpa?	Go to step **7**.	Go to step **6**.

	Step	Check	Yes	No
6	**CHECK AMOUNT OF REFRIGERANT PRESSURE.** Check the refrigerant pressure. <Ref. to AC-22, CHECK REFRIGERANT GAS PRESSURE, PROCEDURE, Refrigerant Pressure with Manifold Gauge Set.>	Is the refrigerant pressure normal?	Go to step **7**.	Perform repair according to refrigerant pressure inspection.
7	**CHECK FLOW SENSOR CIRCUIT.** 1) Turn the ignition switch to ON. 2) Wait at least 1 second. 3) Read the DTC using Subaru Select Monitor.	Are DTCs B14A5 and B14A6 displayed?	Perform the diagnosis according to DTC.	Go to step **8**.
8	**CHECK VARIABLE SOLENOID CIRCUIT.** 1) Start the engine. 2) Turn the A/C switch to ON. 3) Set the fan switch to maximum position. 4) Set the temperature control switch to LO, and wait for 30 seconds or more. 5) Read the DTC using Subaru Select Monitor.	Is B14A7 displayed?	Perform the diagnosis according to DTC.	Replace the compressor. <Ref. to AC-47, REMOVAL, Compressor.>

11.UNABLE TO SWITCH SUCTION VENTS

TROUBLE SYMPTOM:
Even when the FRESH/RECIRC switch is pressed, the inlet opening does not switch to RECIRC → FRESH or FRESH → RECIRC.

Trouble causes:
Intake door actuator failure

WIRING DIAGRAM:
Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**VISUALLY CHECK FRESH/RECIRC DOOR OPERATION.** 1) Remove the glove box. <Ref. to EI-76, REMOVAL, Glove Box.> 2) Operate the FRESH/RECIRC switch, and visually check the intake door operation.	Does the intake door operate normally? Is the position between the intake door and intake door case sealed completely?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK A/C CONTROL PANEL.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check «Fresh/Recircle Air Door Actuator Position Target» of the current data from the A/C diagnosis. 3) Operate the FRESH/RECIRC switch.	Does the display indicate 0 ←→ 100?	Go to step **3**.	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>
3	**CHECK CONNECTOR.** Check connecting condition of the intake door actuator connector, A/C CM connector and coupling connector.	Is there poor contact?	Repair the connector.	Go to step **4**.
4	**CHECK FUSE.** 1) Remove the fuse No. 8 from fuse & relay box. 2) Check the fuse.	Is the fuse OK?	Go to step **5**.	Replace the fuse.

	Step	Check	Yes	No
5	**CHECK POWER SUPPLY FOR INTAKE DOOR ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the intake door actuator connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between intake door actuator connector and chassis ground. ***Connector & terminal*** ***(i186) No. 4 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **6**.	Check for open or short circuit in the harness between intake door actuator and fuse.
6	**CHECK HARNESS BETWEEN A/C CM AND INTAKE DOOR ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the A/C CM connector. 3) Measure the resistance between intake door actuator connector and A/C CM connector. ***Connector & terminal*** ***(i186) No. 1 — (i181) No. 7:*** ***(i186) No. 2 — (i181) No. 17:***	Is the resistance less than 10 Ω?	Go to step **7**.	Repair the open circuit of harness between A/C CM and intake door actuator.
7	**CHECK OPERATION OF INTAKE DOOR ACTUATOR.** 1) Connect the intake door actuator connector. 2) Ground the A/C CM connector with a suitable wire. 3) Turn the ignition switch to ON, and check the operation of intake door actuator. ***Connector & terminal*** ***(i181) No. 7 — Chassis ground:***	Does the intake door actuator move to the FRESH side?	Go to step **8**.	Replace the intake door actuator. <Ref. to AC-78, REMOVAL, FRESH/RECIRC Door Actuator.>
8	**CHECK OPERATION OF INTAKE DOOR ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Ground the A/C CM connector with a suitable wire. 3) Turn the ignition switch to ON, and check the operation of intake door actuator. ***Connector & terminal:*** ***(i181) No. 17 — Chassis ground:***	Does the intake door actuator move to the RECIRC side?	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>	Replace the intake door actuator. <Ref. to AC-78, REMOVAL, FRESH/RECIRC Door Actuator.>

12.UNABLE TO SWITCH VENTS

TROUBLE SYMPTOM:

- Unable to switch blow vents.
- Selected mode does not work even when mode switch is operated.

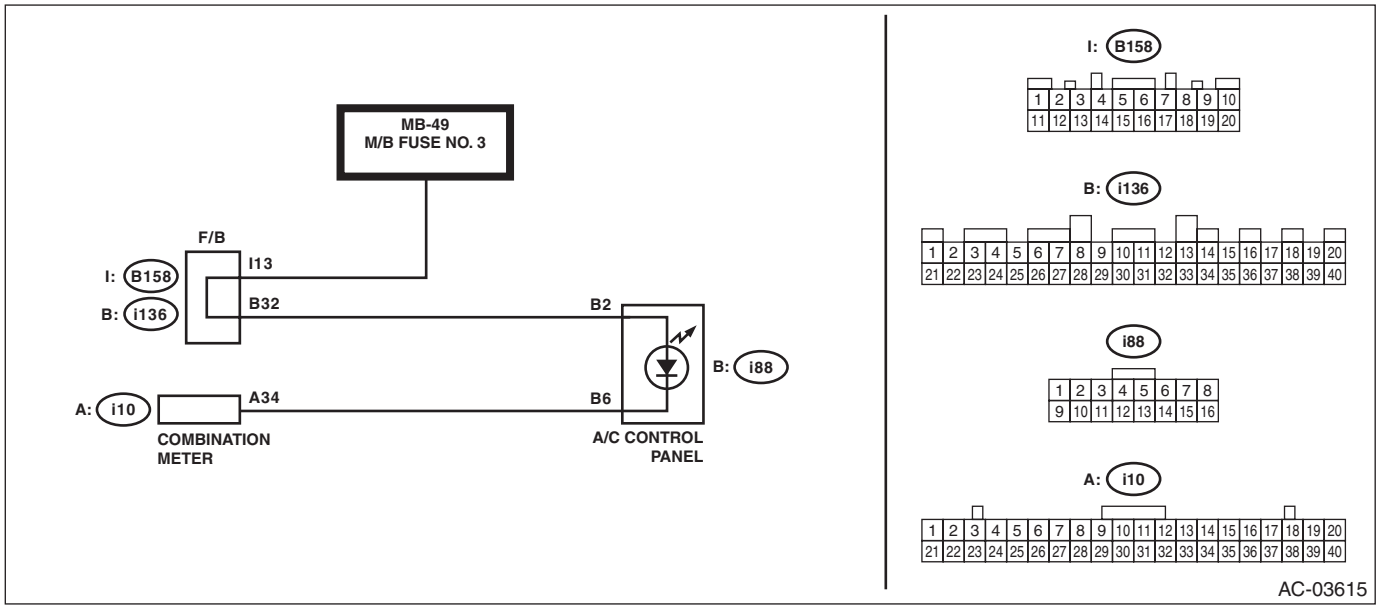
Trouble causes:

Mode door actuator failure

	Step	Check	Yes	No
1	**CHECK A/C CONTROL PANEL.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check «Mode Door Actuator Position Target» of the current data from the A/C diagnosis. 3) Operate the mode change switch.	Does the value for «Mode Door Actuator Position Target» change?	Go to step **2**.	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>
2	**CHECK DTC.** 1) Set the mode change switch to DEF, and wait for 16 seconds or more. 2) Read the DTC using Subaru Select Monitor.	Are B1438, B1439 and B1443 displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** 1) Set the mode change switch to VENT, and wait for 16 seconds or more. 2) Using the Subaru Select Monitor, read DTC of A/C CM.	Are B1438, B1439 and B1443 displayed?	Perform the diagnosis according to DTC.	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

13.ILLUMINATION DOES NOT COME ON OR CANNOT DIM

TROUBLE SYMPTOM:



Even when the lighting switch is operated, the illumination does not come on. Even when the illumination control is operated, the illumination does not dim.

TROUBLE SYMPTOM:

Open circuit in illumination circuit

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Clearance Light and Illumination Light System <Ref. to WI-158, WIRING DIAGRAM, Clearance Light and Illumination Light System.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** Check poor contact of F/B connector, A/C control panel connector, combination meter connector and coupling connector.	Is there poor contact?	Repair the connector.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between the A/C control panel connector and chassis ground. ***Connector & terminal*** ***(i88) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between A/C control panel connector and combination meter connector. ***Connector & terminal*** ***(i88) No. 6 — (i10) No. 34:***	Is the resistance less than 10 Ω?	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>	Repair or replace the open circuit of harness.

7. Subaru Select Monitor

A: OPERATION

For details of basic operations, refer to “PC application help for Subaru Select Monitor”.

NOTE:
When initialization communication using Select Monitor is impossible, perform diagnosis according to “Diagnostic Procedure Used When Abnormal Communication with Subaru Select Monitor Occurs”. <Ref. to AC(diag)-54, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Diagnostic Procedure for Subaru Select Monitor Communication.>

8. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Air Condition System».
3) On «Air Condition System» display, select «Diagnostic Code(s) Display».

NOTE:
- For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to AC(diag)-56, List of Diagnostic Trouble Code (DTC).>

9. Clear Memory Mode

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Air Condition System».
3) On «Air Condition System» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

10.Inspection Mode

A: PROCEDURE

It is possible to diagnose the DTC by performing the indicated inspection mode. After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. INSPECTION MODE 1

DTC	Item	Note
B1430	Room Temperature Sensor Circuit Wire Break	—
B1431	Room Temperature Sensor Circuit Short-Circuit	—
B1432	Outside Air Sensor Circuit Wire Break (Air-Conditioning)	—
B1433	Outside Air Sensor Circuit Short-Circuit (Air-Conditioning)	—
B1434	Ambient Temperature Sensor Circuit Wire Break	—
B1435	Evaporator Sensor Circuit Short-Circuit	—
B1436	Air Mix Door Actuator Potentiometer Circuit Wire Break (Passenger's Seat)	—
B1437	Air Mix Door Actuator Potentiometer Circuit Short-Circuit (Passenger's Seat)	—
B1438	Mode Door Actuator Potentiometer Circuit Open	—
B1439	Mode Door Actuator Potentiometer Circuit Short	—
B1440	Air Mix Door Actuator Potentiometer Circuit Wire Break (Driver's Seat)	—
B1441	Air Mix Damper Control Servomotor Circuit (Passenger Side)	—
B1442	Air Inlet Damper Control Servomotor	—
B1443	Air Outlet Damper Control Servomotor Circuit	—
B1446	Air Mix Damper Control Servomotor Circuit (Driver Side)	—
B1448	Rear Vent Door Actuator Potentiometer Circuit Open	—
B1449	Rear Vent Door Actuator Potentiometer Circuit Short	—
B144A	Rear Vent Door Actuator Potentiometer Lock	—
B14A3	Refrigerant Pressure Sensor Circuit Open	—
B14A4	Refrigerant Pressure Sensor Circuit Short	—
B14A5	Refrigerant Flow Sensor Circuit Open	—
B14A6	Refrigerant Flow Sensor Circuit Short	—
B14A7	Variable Duty Solenoid Valve Circuit Failure	—
B14B1	Seat Heater Thermistor Circuit Open (Driver's)	—
B14B2	Seat Heater Thermistor Circuit Short (Driver's)	—
B14B3	Seat Heater Thermistor Circuit Open (Passenger's)	—
B14B4	Seat Heater Thermistor Circuit Short (Passenger's)	—
U0001	CAN Communication Bus Off	—
U0002	CAN Communication Error	—
U0028	Heater Control Panel Communication Error	—
U0073	Control Module Communication Bus Off	—

Diagnostic procedure:
1) Perform the Clear Memory Mode.
2) Read the DTC and check that the DTC is not displayed.

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. After solving the DTC, repeat from step 1).
3) Turn the ignition switch to ON and then leave it for 1 second or more.
4) Read the DTC and check that the DTC is not displayed.

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC.

2. INSPECTION MODE 2

DTC	Item	Note
B14A1	Sunload Sensor Circuit Open	—
B14A2	Sunload Sensor Circuit Short	—

Diagnostic procedure:
1) Perform the Clear Memory Mode.
2) Read the DTC and check that the DTC is not displayed.

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. After solving the DTC, repeat from step 1).
3) Park the vehicle in the place subjected to direct sunlight.
4) Turn the ignition switch to ON and then leave it for 1 second or more.
5) Read the DTC and check that the DTC is not displayed.

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC.

11.Read Current Data

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Air Condition System».
3) On «Air Condition System» display, select «Current Data Display & Save».

NOTE:
For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

B: LIST

Item	Description	Unit	Note
In-vehicle Sensor Temperature	A/C CM input value	°C	Auto A/C

13.Diagnostic Procedure for Subaru Select Monitor Communication

A: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

DIAGNOSIS:
Defective CAN communication circuit
TROUBLE SYMPTOM:
- LAN system is abnormal.
- Communication failure between Subaru Select Monitor and A/C CM

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
- Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>
- CAN communication system <Ref. to WI-151, WIRING DIAGRAM, CAN Communication System.>

Step		Check	Yes	No
1	**CHECK POWER SUPPLY CIRCUIT.** Connect SDI or DST-i to data link connector.	Does SDI or DST-i turn ON?	Go to step **4**.	Go to step **2**.
2	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. 2) Measure the voltage between data link connector and chassis ground. ***Connector & terminal*** ***(B40) No. 8 (+) — Chassis ground (–):*** ***(B40) No. 16 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair the power supply circuit. NOTE: In this case, repair the following item: • Open or ground short circuit of harness between battery and data link connector • Blown out of fuse (M/B No. 17, 19)

	Step	Check	Yes	No
3	**CHECK HARNESS BETWEEN DATA LINK CONNECTOR AND CHASSIS GROUND.** 1) Turn the ignition switch to OFF. 2) Measure the resistance of harness between data link connector and chassis ground. ***Connector & terminal*** ***(B40) No. 4 — Chassis ground:*** ***(B40) No. 5 — Chassis ground:***	Is the resistance less than 5 Ω?	Repair the poor contact of data link connector.	Repair the harness and connector.
4	**CHECK SUBARU SELECT MONITOR.** 1) Connect the Subaru Select Monitor to a normal vehicle. 2) Start the engine and perform communication between the Subaru Select Monitor and vehicle.	Is communication possible?	Go to step **5**.	Use another Subaru Select Monitor because the CAN communication circuit of the Subaru Select Monitor is faulty.
5	**CHECK CAN COMMUNICATION CIRCUIT.** Check the CAN communication circuit. <Ref. to LAN(diag)-32, CAN Communication Circuit Check.>	Is the CAN communication circuit normal?	Go to step **6**.	Repair the CAN communication circuit.
6	**CHECK CONNECTOR.** Check poor contact of A/C CM connector, data link connector and coupling connector.	Is there poor contact of connector?	Repair the connector.	Go to step **7**.
7	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Remove the fuses No. 8, 9, 14 from main fuse box. 3) Check the fuse.	Is the fuse blown out?	Replace the fuse.	Go to step **8**.
8	**CHECK A/C CM POWER SUPPLY CIRCUIT.** 1) Install the A/C control panel. 2) Disconnect the A/C CM connector. 3) Measure the voltage between A/C CM connector terminal and chassis ground after turning the ignition switch to ON. ***Connector & terminal*** ***(i80) No. 1 (+) — Chassis ground (–):*** ***(i80) No. 8 (+) — Chassis ground (–):*** ***(i80) No. 20 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **9**.	Check for open or short circuit in the harness between A/C CM and fuse.
9	**CHECK A/C CM GROUND CIRCUIT.** Measure the resistance of harness between A/C CM and chassis ground. ***Connector & terminal*** ***(i80) No. 4 — Chassis ground:***	Is the resistance less than 5 Ω?	Check the connection between the data link connector and Subaru Select Monitor.	Repair the harness for ground line.

14.List of Diagnostic Trouble Code (DTC)

A: LIST

NOTE:
When the sunload sensor check is performed indoors or in the shade, it could be diagnosed as having an open circuit. Always check the sunload sensor in direct sunlight.

DTC	Item	Note
B1430	In-Vehicle Sensor Open	<Ref. to AC(diag)-58, DTC B1430 ROOM TEMPERATURE SENSOR CIRCUIT WIRE BREAK, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1431	Room Temperature Sensor Circuit Short-Circuit	<Ref. to AC(diag)-60, DTC B1431 ROOM TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1432	Outside Air Sensor Circuit Wire Break (Air-Conditioning)	<Ref. to AC(diag)-62, DTC B1432 OUTSIDE AIR SENSOR CIRCUIT WIRE BREAK (AIR-CONDITIONING), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

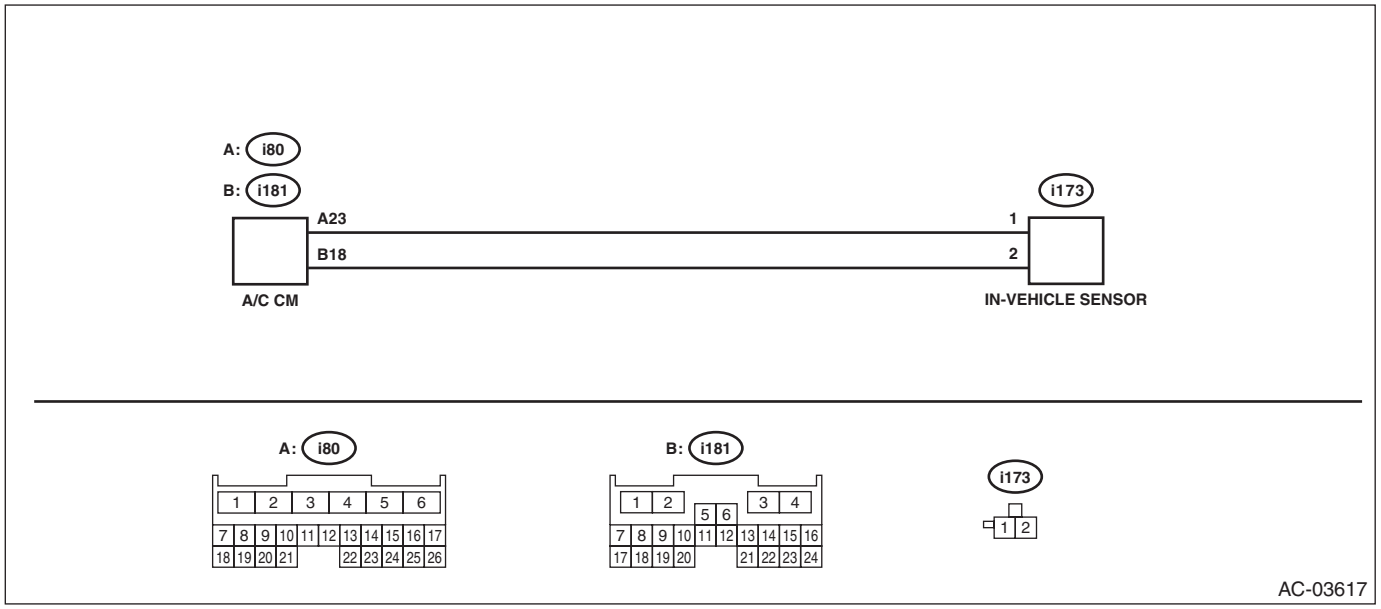
15.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B1430 ROOM TEMPERATURE SENSOR CIRCUIT WIRE BREAK

DTC DETECTING CONDITION:
In-vehicle sensor circuit is open.
TROUBLE SYMPTOM:
- In-vehicle air temperature is falsely recognized as 25°C (77°F), and the compartment temperature is adjusted.
- DTC “21” Open circuit in in-vehicle sensor was detected.

WIRING DIAGRAM:
Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>



Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and in-vehicle sensor connector. 2) Read the DTC using Subaru Select Monitor.	Is B1430 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK IN-VEHICLE SENSOR.** 1) Disconnect the in-vehicle sensor. 2) Short the connector i173. 3) Read the DTC of the A/C CM using the Subaru Select Monitor.	Is B1431 displayed?	Replace the in-vehicle sensor. <Ref. to AC-72, REMOVAL, In-Vehicle Sensor (Auto A/C Model).>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i173) No. 1 (+) — No. 2 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS.** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i173) No. 1 — (i80) No. 23:*** ***(i173) No. 2 — (i181) No. 18:***	Is there continuity?	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>	Repair or replace the open circuit of harness.

B: DTC B1431 ROOM TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT

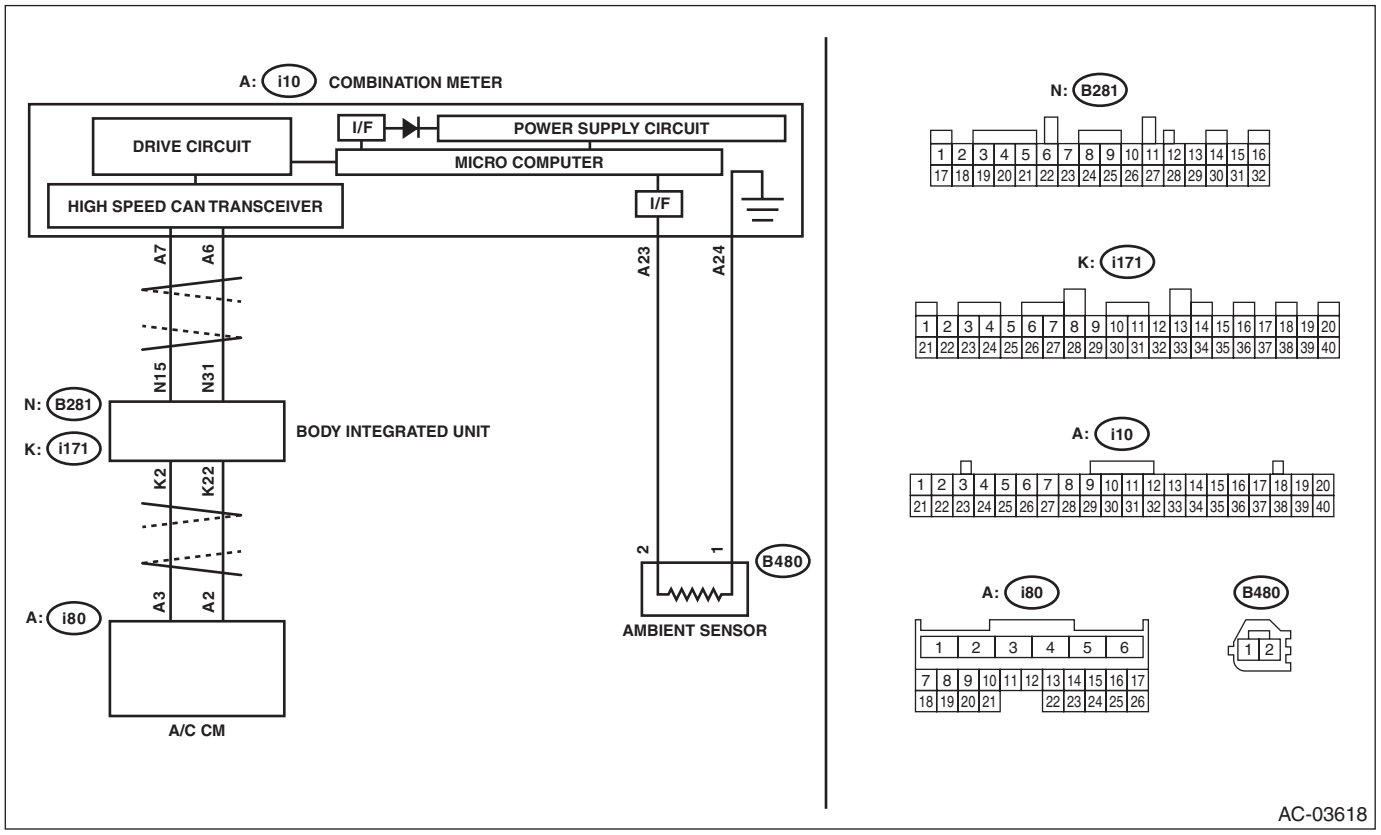
DTC DETECTING CONDITION:
In-vehicle sensor circuit is shorted.
TROUBLE SYMPTOM:
• In-vehicle air temperature is falsely recognized as 25°C (77°F), and the compartment temperature is adjusted.
• DTC "–21" Short circuit in in-vehicle sensor was detected.
WIRING DIAGRAM:
Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and in-vehicle sensor connector. 2) Read the DTC using Subaru Select Monitor.	Is B1431 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK IN-VEHICLE SENSOR.** 1) Disconnect the in-vehicle sensor. <Ref. to AC-72, REMOVAL, In-Vehicle Sensor (Auto A/C Model).> 2) Read the DTC of the A/C CM using the Subaru Select Monitor.	Is B1430 displayed?	Replace the in-vehicle sensor. <Ref. to AC-72, REMOVAL, In-Vehicle Sensor (Auto A/C Model).>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i173) No. 1 (+) — No. 2 (–):***	Is the voltage 4.5 — 5.0 V?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK HARNESS.** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i173) No. 1 — No. 2:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>

C: DTC B1432 OUTSIDE AIR SENSOR CIRCUIT WIRE BREAK (AIR-CONDITIONING)

DTC DETECTING CONDITION:



- Ambient sensor to combination meter circuit is open.
- Data to be received from the combination meter via CAN communication do not arrive.

TROUBLE SYMPTOM:

- Ambient temperature is falsely recognized as 15.2°C, and the compartment temperature is adjusted.
- DTC “22” Faulty ambient sensor, or communication failure was detected.

WIRING DIAGRAM:

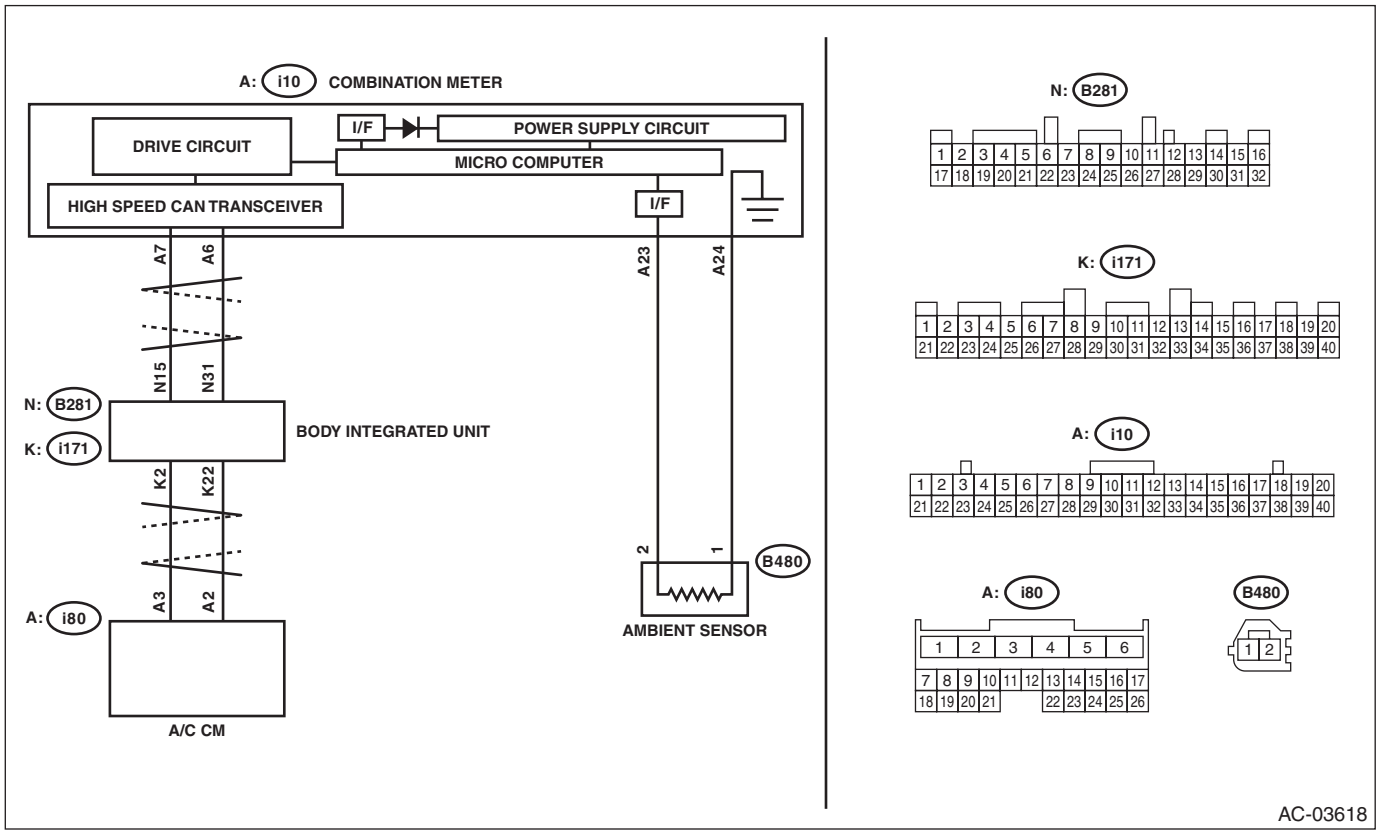
NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK AMBIENT SENSOR.** Perform the inspection of ambient sensor unit. <Ref. to AC-69, INSPECTION, Ambient Sensor.>	Is the sensor normal?	Go to step **2**.	Replace the ambient sensor. <Ref. to AC-68, REMOVAL, Ambient Sensor.>
2	**CHECK HARNESS.** 1) Disconnect the ambient sensor connector (B480). 2) Turn the ignition switch to ON. 3) Using the tester, measure the voltage between terminals. ***Connector & terminal (B480) No. 2 (+) — No. 1 (–):***	Is the voltage 4.5 — 5.0 V?	Replace the combination meter. <Ref. to IDI-11, REMOVAL, Combination Meter.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK COMBINATION METER OUTPUT SIGNAL.** 1) Turn the ignition switch to OFF. 2) Disconnect the ambient sensor connector (B480). 3) Turn the ignition switch to ON. 4) Measure the voltage between connector terminals of ambient sensor. ***Connector & terminal*** ***(B480) No. 2 (+) — (B480) No. 1 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Replace the combination meter. <Ref. to IDI-11, REMOVAL, Combination Meter.>
4	**CHECK HARNESS.** 1) Disconnect the connector from the A/C control panel. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B480) No. 1 — (i10) No. 24:*** ***(B480) No. 2 — (i10) No. 23:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK FOR POOR CONTACT.** Check for poor contact of combination meter connector.	Is there poor contact of connector?	Repair the connector.	Replace the combination meter. <Ref. to IDI-11, REMOVAL, Combination Meter.>

D: DTC B1433 OUTSIDE AIR SENSOR CIRCUIT SHORT-CIRCUIT (AIR-CONDITIONING)

DTC DETECTING CONDITION:



- Ambient sensor to combination meter circuit is shorted.
- Data to be received from the combination meter via CAN communication do not arrive.

TROUBLE SYMPTOM:

- Ambient temperature is falsely recognized as 15.2°C, and the compartment temperature is adjusted.
- DTC “22” Faulty ambient sensor, or communication failure was detected.

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK AMBIENT SENSOR.** Perform the inspection of ambient sensor unit. <Ref. to AC-69, INSPECTION, Ambient Sensor.>	Is the sensor normal?	Go to step **2**.	Replace the ambient sensor. <Ref. to AC-68, REMOVAL, Ambient Sensor.>
2	**CHECK HARNESS.** 1) Disconnect the ambient sensor connector (B480). 2) Turn the ignition switch to ON. 3) Using the tester, measure the voltage between terminals. ***Connector & terminal (B480) No. 2 (+) — No. 1 (–):***	Is the voltage 4.5 — 5.0 V?	Replace the combination meter. <Ref. to IDI-11, REMOVAL, Combination Meter.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK COMBINATION METER OUTPUT SIGNAL.** 1) Turn the ignition switch to OFF. 2) Disconnect the ambient sensor connector (B480). 3) Turn the ignition switch to ON. 4) Measure the voltage between connector terminals of ambient sensor. ***Connector & terminal (B480) No. 2 (+) — (B480) No. 1 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Replace the combination meter. <Ref. to IDI-11, REMOVAL, Combination Meter.>
4	**CHECK HARNESS.** 1) Disconnect the connector from the A/C control panel. 2) Using a tester, check continuity between terminals. ***Connector & terminal (B480) No. 1 — (B480) No. 2:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the combination meter. <Ref. to IDI-11, REMOVAL, Combination Meter.>

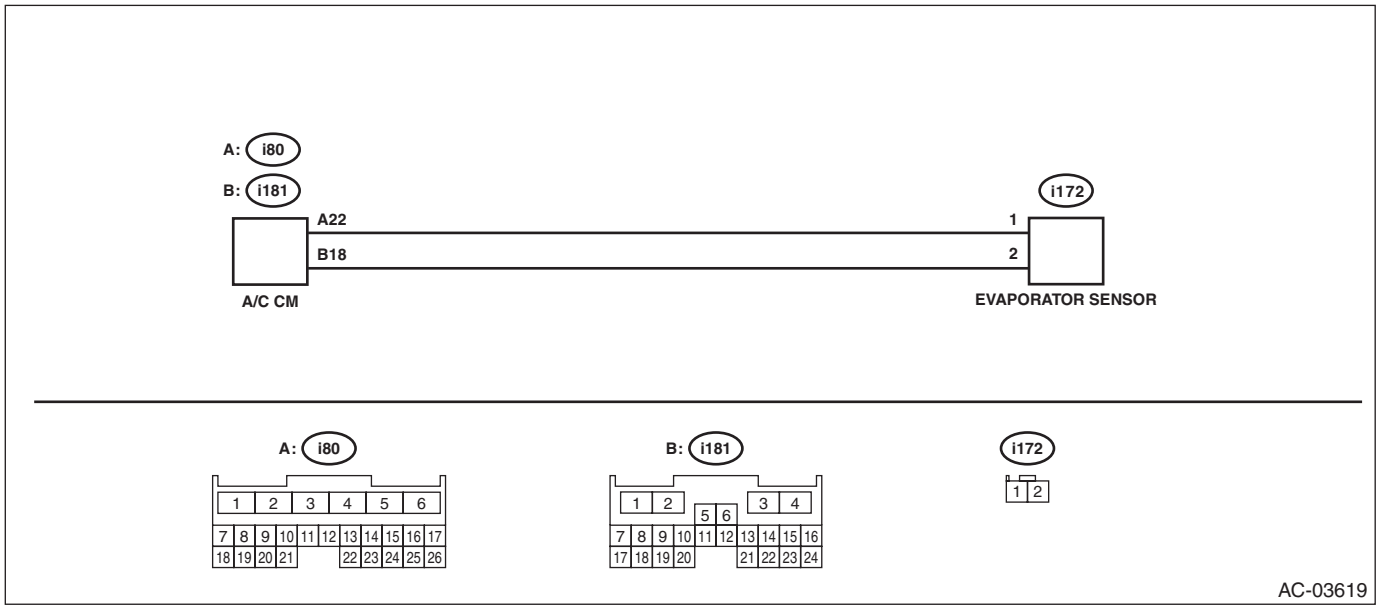
E: DTC B1434 AMBIENT TEMPERATURE SENSOR CIRCUIT WIRE BREAK

DTC DETECTING CONDITION:
Evaporator sensor circuit is open.

TROUBLE SYMPTOM:
- Compressor does not operate.
- Evaporator temperature is falsely recognized as low, and the compartment temperature is adjusted.
- DTC “23” Open circuit in evaporator sensor was detected.

WIRING DIAGRAM:
Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and evaporator sensor connector. 2) Read the DTC using Subaru Select Monitor.	Is B1434 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK EVAPORATOR SENSOR.** 1) Disconnect the evaporator sensor. 2) Short the i172 connector. 3) Read the DTC of the A/C CM using the Subaru Select Monitor.	Is B1435 displayed?	Replace the evaporator sensor. <Ref. to AC-57, REMOVAL, Evaporator.>	Go to step **3**.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i172) No. 1 (+) — No. 2 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.



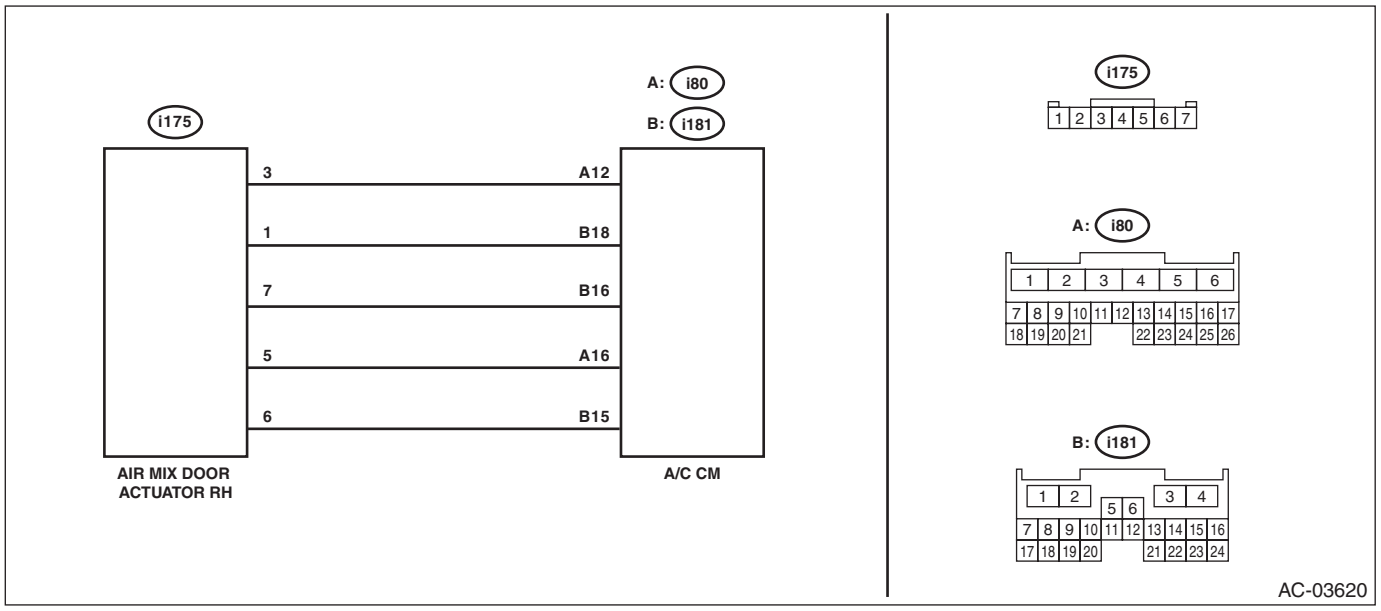
Step		Check	Yes	No
4	**CHECK HARNESS.** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i172) No. 1 — (i80) No. 22:*** ***(i172) No. 2 — (i181) No. 18:***	Is there continuity?	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>	Repair or replace the open circuit of harness.

F: DTC B1435 EVAPORATOR SENSOR CIRCUIT SHORT-CIRCUIT

DTC DETECTING CONDITION:
Evaporator sensor circuit is shorted.

TROUBLE SYMPTOM:
- Compressor does not operate. (Variable compressor)
- Evaporator temperature is falsely recognized as high, and the compartment temperature is adjusted.
- DTC "–23" Short circuit in evaporator sensor was detected.

WIRING DIAGRAM:
Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>



Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and evaporator sensor connector. 2) Read the DTC using Subaru Select Monitor.	Is B1435 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK EVAPORATOR SENSOR.** 1) Disconnect the evaporator sensor. 2) Read the DTC of the A/C CM using the Subaru Select Monitor.	Is B1434 displayed?	Replace the evaporator sensor. <Ref. to AC-57, REMOVAL, Evaporator.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i172) No. 1 (+) — No. 2 (–):***	Is the voltage 4.5 — 5.0 V?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK HARNESS.** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i172) No. 1 — No. 2:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>

G: DTC B1436 AIR MIX DOOR ACTUATOR POTENTIOMETER CIRCUIT WIRE BREAK (PASSENGER'S SEAT)

DTC DETECTING CONDITION:
Air mix door actuator potentiometer circuit is open.
TROUBLE SYMPTOM:
• Temperature of the passenger's side cannot be adjusted for model with left/right independent air conditioner.
• DTC "–26" Open circuit in air mix door actuator — potentiometer (passenger's) was detected.
WIRING DIAGRAM:
Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and air mix door actuator RH connector. 2) Read the DTC using Subaru Select Monitor.	Is B1436 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK ACTUATOR.** 1) Disconnect the air mix door actuator RH. 2) Short No. 1 and No. 5 of connector i175. 3) Read the DTC using Subaru Select Monitor.	Is B1437 displayed?	Replace the air mix door actuator RH. <Ref. to AC-83, REMOVAL, Air Mix Door Actuator.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i175) No. 3 (+) — No. 1 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS.** 1) Disconnect the connector from A/C CM. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i175) No. 1 — (i181) No. 18:*** ***(i175) No. 3 — (i80) No. 12:*** ***(i175) No. 5 — (i80) No. 16:***	Is there continuity?	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>	Repair or replace the open circuit of harness.

H: DTC B1437 AIR MIX DOOR ACTUATOR POTENTIOMETER CIRCUIT SHORT-CIRCUIT (PASSENGER'S SEAT)

DTC DETECTING CONDITION:
Air mix door actuator potentiometer circuit is shorted.

TROUBLE SYMPTOM:
- Temperature of the passenger's side cannot be adjusted for model with left/right independent air conditioner.
- DTC "–27" Short circuit in air mix door actuator — potentiometer (passenger's) was detected.

WIRING DIAGRAM:
Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and air mix door actuator RH connector. 2) Read the DTC using Subaru Select Monitor.	Is B1437 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK ACTUATOR.** 1) Disconnect the air mix door actuator RH. 2) Read the DTC of the A/C CM using the Subaru Select Monitor.	Is B1436 displayed?	Replace the air mix door actuator RH. <Ref. to AC-83, REMOVAL, Air Mix Door Actuator.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i175) No. 3 (+) — No. 1 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS.** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i175) No. 1 — No. 5:*** ***(i175) No. 5 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>

I: DTC B1438 MODE DOOR ACTUATOR POTENTIOMETER CIRCUIT OPEN

DTC DETECTING CONDITION:
Mode door actuator potentiometer circuit is open.

TROUBLE SYMPTOM:
- Vent does not change.
- DTC "28" Open circuit in mode door actuator potentiometer was detected.

WIRING DIAGRAM:
Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and mode door actuator connector. 2) Read the DTC using Subaru Select Monitor.	Is B1438 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK ACTUATOR.** 1) Disconnect the mode door actuator. 2) Short No. 2 and No. 3 of (i176) connector. 3) Read the DTC using Subaru Select Monitor.	Is B1439 displayed?	Replace the mode door actuator. <Ref. to AC-80, REMOVAL, Mode Door Actuator.>	Go to step **3**.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i176) No. 1 (+) — No. 2 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK HARNESS.** Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i176) No. 1 — (i181) No. 18:*** ***(i176) No. 2 — (i80) No. 6:*** ***(i176) No. 3 — (i80) No. 12:***	Is there continuity?	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>	Repair or replace the open circuit of harness.

J: DTC B1439 MODE DOOR ACTUATOR POTENTIOMETER CIRCUIT SHORT

DTC DETECTING CONDITION:
Mode door actuator potentiometer circuit is shorted.

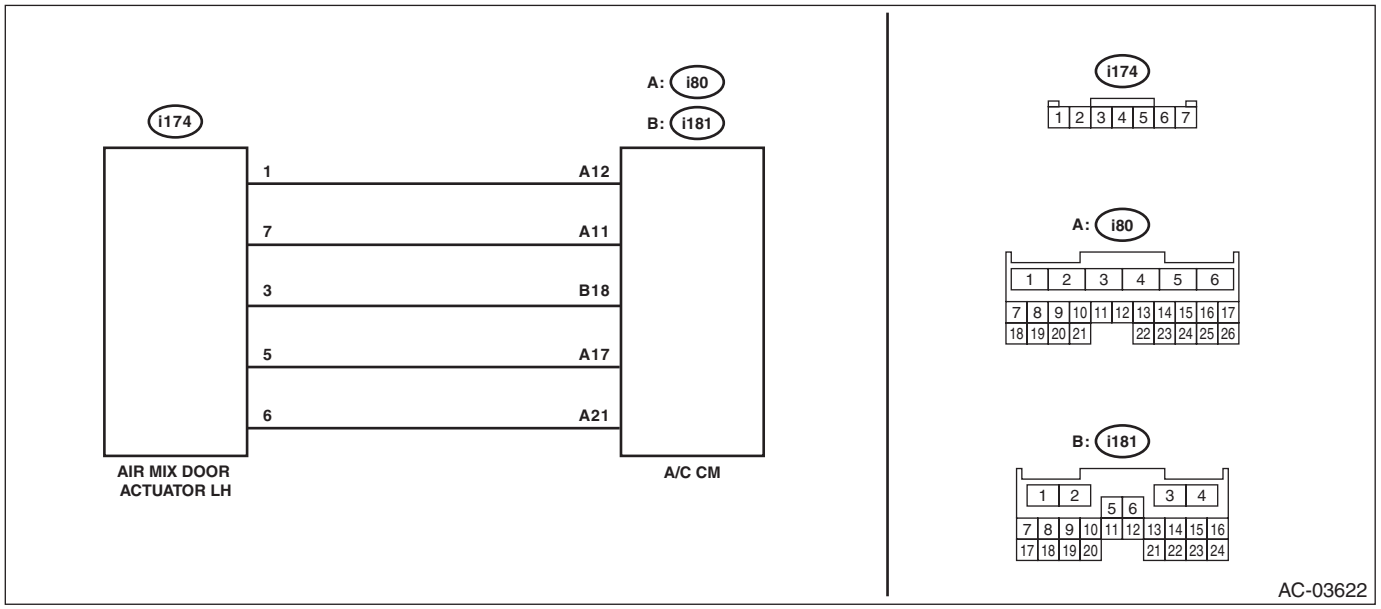
TROUBLE SYMPTOM:
- Vent does not change.
- DTC “29” Short circuit in mode door actuator potentiometer was detected.

WIRING DIAGRAM:
Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and mode door actuator connector. 2) Read the DTC using Subaru Select Monitor.	Is B1439 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK ACTUATOR.** 1) Disconnect the mode door actuator. 2) Read the DTC using Subaru Select Monitor.	Is B1438 displayed?	Replace the mode door actuator. <Ref. to AC-80, REMOVAL, Mode Door Actuator.>	Go to step **3**.
3	**CHECK HARNESS.** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i176) No. 2 — No. 3:*** ***(i176) No. 3 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>

K: DTC B1440 AIR MIX DOOR ACTUATOR POTENTIOMETER CIRCUIT WIRE BREAK (DRIVER'S SEAT)

DTC DETECTING CONDITION:



Air mix door actuator potentiometer circuit is open.

TROUBLE SYMPTOM:

- Temperature cannot be adjusted.
- Temperature of the driver's side cannot be adjusted for model with left/right independent air conditioner.
- DTC "26" Open circuit in air mix door actuator — potentiometer (driver's) was detected.

WIRING DIAGRAM:

Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and air mix door actuator LH connector. 2) Read the DTC using Subaru Select Monitor.	Is B1440 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK ACTUATOR.** 1) Disconnect the air mix door actuator LH. 2) Short No. 3 and No. 5 of i174 connector. 3) Read the DTC using Subaru Select Monitor.	Is B1442 displayed?	Replace the air mix door actuator LH. <Ref. to AC-83, REMOVAL, Air Mix Door Actuator.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i174) No. 1 (+) — No. 3 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS.** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i174) No. 1 — (i80) No. 12:*** ***(i174) No. 3 — (i181) No. 18:*** ***(i174) No. 5 — (i80) No. 17:***	Is there continuity?	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>	Repair or replace the open circuit of harness.

L: DTC B1441 AIR MIX DAMPER CONTROL SERVOMOTOR CIRCUIT (PASSENGER SIDE)

DTC DETECTING CONDITION:
Air mix door actuator RH is locked.

TROUBLE SYMPTOM:
- Temperature of the passenger's side cannot be adjusted for model with left/right independent air conditioner.
- DTC "48" Air mix door actuator — lock (passenger's) was detected.

WIRING DIAGRAM:
Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and air mix door actuator RH connector. 2) Read the DTC using Subaru Select Monitor.	Is B1441 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, change the setting of «Air mix door actuator target open (passenger's side)» from the A/C diagnosis and perform the system operation check.	Did the actuator move to the specified target opening angle?	Air mix door actuator circuit is normal.	Go to step **3**.

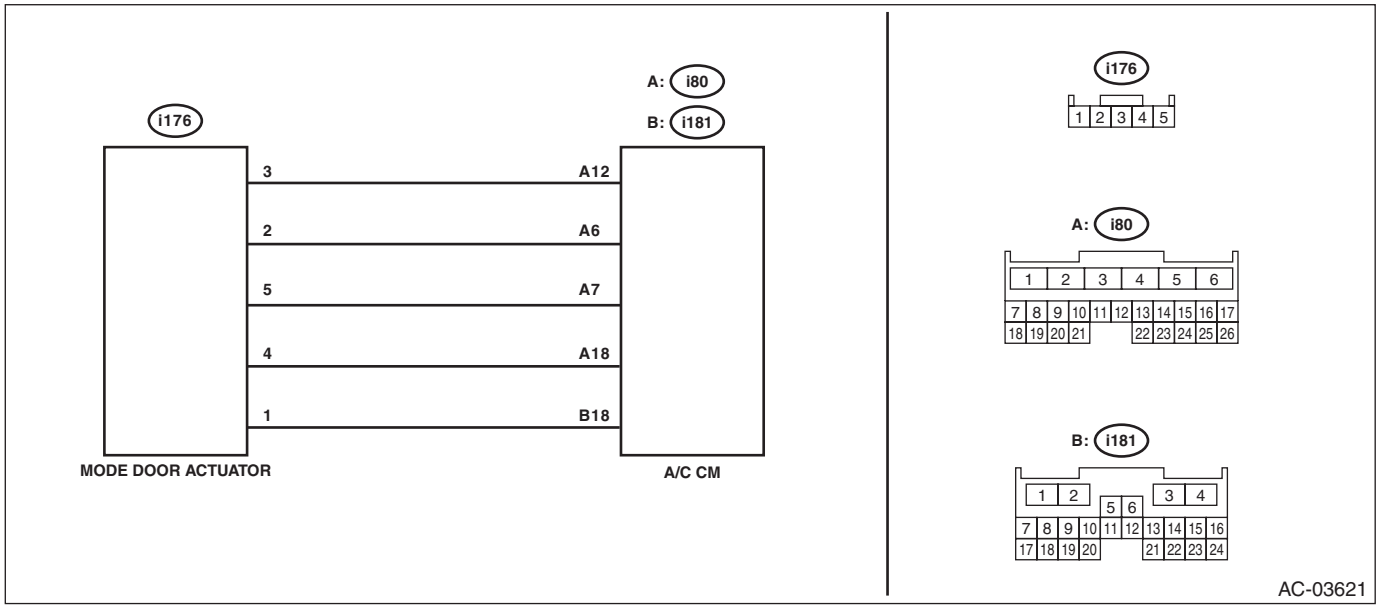
	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Disconnect the air mix door actuator RH connector (i175). 2) Turn the ignition switch to ON. 3) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i175) No. 3 (+) — No. 1 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open, short circuit of the harness.
4	**CHECK HARNESS.** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i175) No. 5 — (i80) No. 16:*** ***(i175) No. 3 — (i80) No. 12:*** ***(i175) No. 1 — (i181) No. 18:*** ***(i175) No. 7 — (i181) No. 16:*** ***(i175) No. 6 — (i181) No. 15:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK AIR MIX DOOR ACTUATOR RH.** Check the air mix door actuator RH parts. <Ref. to AC-85, INSPECTION, Air Mix Door Actuator.>	Is the air mix door actuator RH normal?	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>	Replace the air mix door actuator RH. <Ref. to AC-83, REMOVAL, Air Mix Door Actuator.>

M: DTC B1442 AIR INLET DAMPER CONTROL SERVOMOTOR

DTC DETECTING CONDITION:
Air mix door actuator potentiometer circuit is shorted.

TROUBLE SYMPTOM:
- Temperature cannot be adjusted.
- Temperature of the driver's side cannot be adjusted for model with left/right independent air conditioner.
- "27" Short circuit in air mix door actuator — potentiometer (driver's) was detected.

WIRING DIAGRAM:
Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>



Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and air mix door actuator LH connector. 2) Read the DTC using Subaru Select Monitor.	Is B1442 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK AIR MIX DOOR ACTUATOR LH.** 1) Disconnect the air mix door actuator LH. 2) Read the DTC using Subaru Select Monitor.	Is B1440 displayed?	Replace the air mix door actuator LH. <Ref. to AC-83, REMOVAL, Air Mix Door Actuator.>	Go to step **3**.

Step		Check	Yes	No
3	**CHECK HARNESS.** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i174) No. 3 — (i174) No. 5:*** ***(i174) No. 5 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>

N: DTC B1443 AIR OUTLET DAMPER CONTROL SERVOMOTOR CIRCUIT

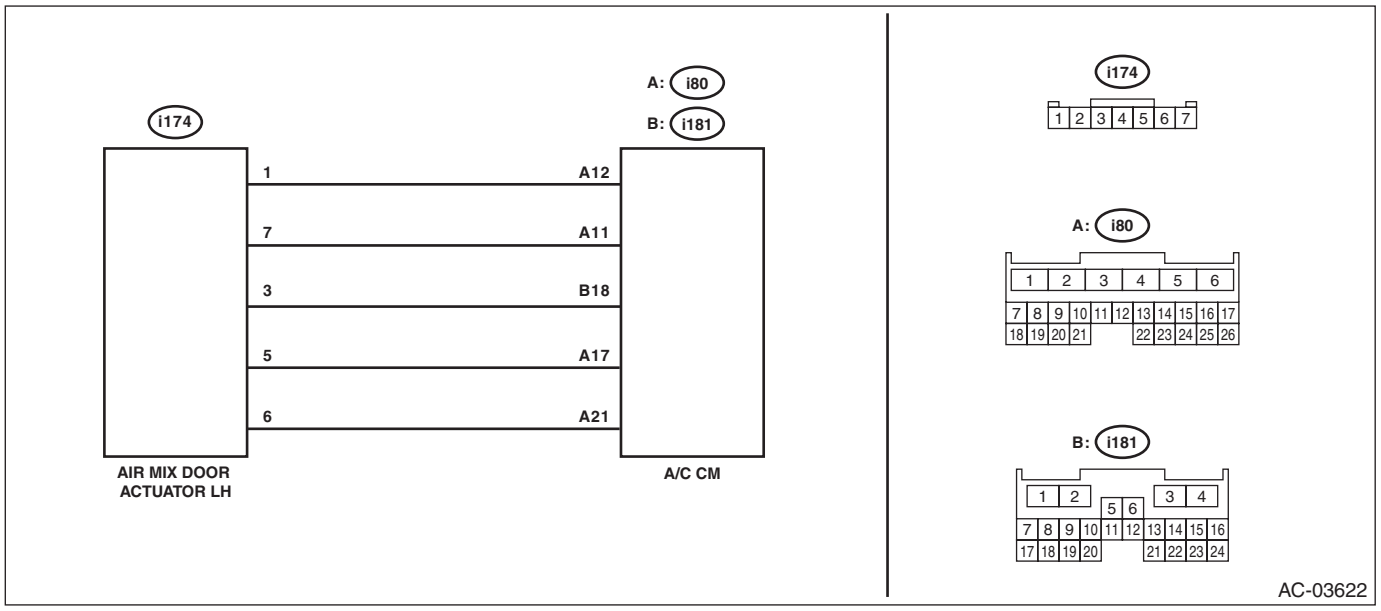
DTC DETECTING CONDITION:
Mode door actuator is locked.
TROUBLE SYMPTOM:
DTC “49” Mode door actuator lock was detected.
WIRING DIAGRAM:
Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and mode door actuator connector. 2) Read the DTC using Subaru Select Monitor.	Is B1443 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, change the setting of «Mode Door Actuator Position Target» from the A/C diagnosis and perform the system operation check.	Did the mode door actuator move to the specified target opening angle?	Mode door actuator circuit is normal.	Go to step **3**.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i176) No. 2 (+) — No. 1 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open, short circuit of the harness.

	Step	Check	Yes	No
4	**CHECK HARNESS.** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i176) No. 3 — (i80) No. 12:*** ***(i176) No. 1 — (i181) No. 18:*** ***(i176) No. 2 — (i80) No. 6:*** ***(i176) No. 4 — (i80) No. 18:*** ***(i176) No. 5 — (i80) No. 7:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK MODE DOOR ACTUATOR.** Check the mode door actuator parts. <Ref. to AC-82, INSPECTION, Mode Door Actuator.>	Is the mode door actuator OK?	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>	Replace the mode door actuator. <Ref. to AC-80, REMOVAL, Mode Door Actuator.>

O: DTC B1446 AIR MIX DAMPER CONTROL SERVOMOTOR CIRCUIT (DRIVER SIDE)

DTC DETECTING CONDITION:



- Air mix door actuator LH is locked.
- The potentiometer value of the actuator does not change.

TROUBLE SYMPTOM:

Temperature of the driver's side cannot be adjusted for model with left/right independent air conditioner.

WIRING DIAGRAM:

Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>

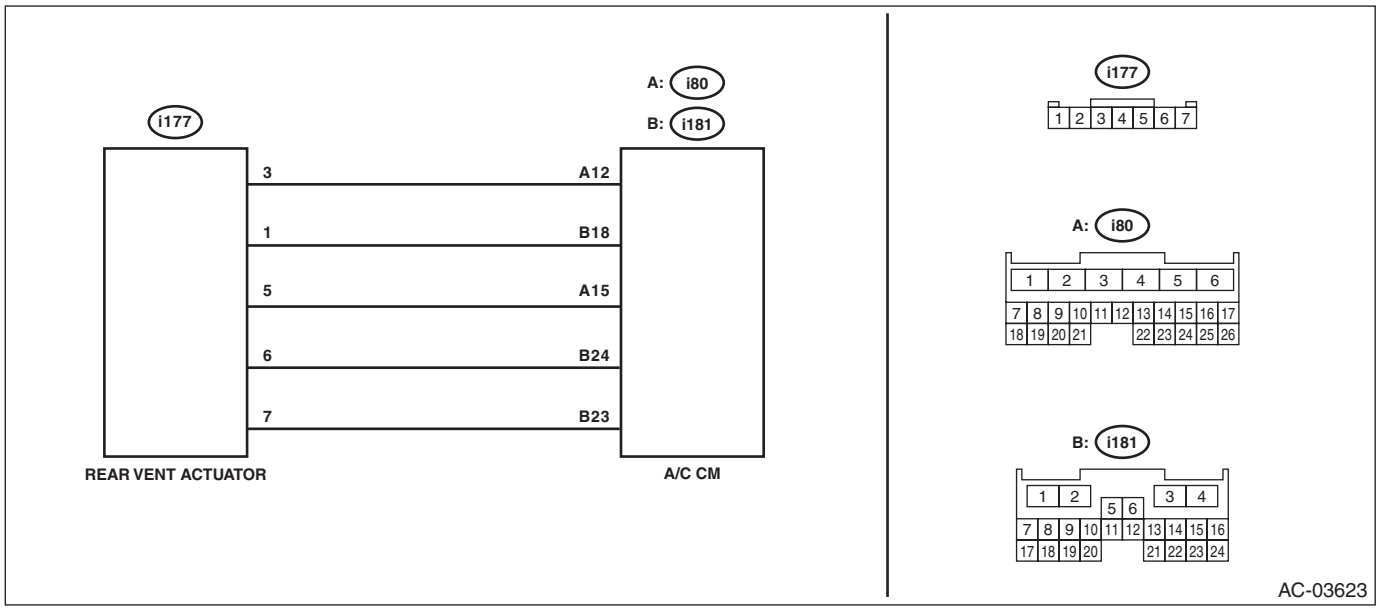
	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and air mix door actuator LH connector. 2) Read the DTC using Subaru Select Monitor.	Is B1446 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, change the setting of «Air mix door actuator target open (driver's side)» from the A/C diagnosis and perform the system operation check.	Did the air mix door actuator LH move to the specified target opening angle?	Air mix door actuator LH circuit is normal.	Go to step **3**.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i174) No. 1 (+) — No. 3 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open, short circuit of the harness.

	Step	Check	Yes	No
4	**CHECK HARNESS.** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i174) No. 5 — (i80) No. 17:*** ***(i174) No. 1 — (i80) No. 12:*** ***(i174) No. 3 — (i181) No. 18:*** ***(i174) No. 6 — (i181) No. 21:*** ***(i174) No. 7 — (i181) No. 11:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK AIR MIX DOOR ACTUATOR LH.** Check the air mix door actuator LH parts. <Ref. to AC-85, INSPECTION, Air Mix Door Actuator.>	Is the air mix door actuator LH normal?	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>	Replace the air mix door actuator LH. <Ref. to AC-83, REMOVAL, Air Mix Door Actuator.>

P: DTC B1448 REAR VENT DOOR ACTUATOR POTENTIOMETER CIRCUIT OPEN

DTC DETECTING CONDITION:
Rear vent actuator potentiometer circuit is open.
TROUBLE SYMPTOM:
- Unable to control the rear vent temperature.
- DTC “41” Open circuit in rear vent door actuator potentiometer was detected.

WIRING DIAGRAM:
Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>



Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and rear vent actuator connector. 2) Read the DTC using Subaru Select Monitor.	Is B1448 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK REAR VENT ACTUATOR.** 1) Disconnect the rear vent actuator. 2) Short No. 1 and No. 5 of (i177) connector. 3) Read the DTC using Subaru Select Monitor.	Is B1449 displayed?	Replace the rear vent actuator. <Ref. to AC-87, REMOVAL, Rear Vent Door Actuator.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i177) No. 3 (+) — No. 1 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS.** Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i177) No. 3 — (i80) No. 12:*** ***(i177) No. 1 — (i181) No. 18:*** ***(i177) No. 5 — (i80) No. 15:***	Is there continuity?	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>	Repair or replace the open circuit of harness.

Q: DTC B1449 REAR VENT DOOR ACTUATOR POTENTIOMETER CIRCUIT SHORT

DTC DETECTING CONDITION:
Rear vent actuator potentiometer circuit is shorted.
TROUBLE SYMPTOM:
- Unable to control the rear vent temperature.
- DTC "–41" Short circuit in rear vent door actuator potentiometer was detected.

WIRING DIAGRAM:
Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and rear vent actuator connector. 2) Read the DTC using Subaru Select Monitor.	Is B1449 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK REAR VENT ACTUATOR.** 1) Disconnect the rear vent actuator. 2) Read the DTC using Subaru Select Monitor.	Is B1448 displayed?	Replace the rear vent actuator. <Ref. to AC-87, REMOVAL, Rear Vent Door Actuator.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i177) No. 5 — (i177) No. 1:*** ***(i177) No. 5 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>

R: DTC B144A REAR VENT DOOR ACTUATOR POTENTIOMETER LOCK

DTC DETECTING CONDITION:
Rear vent actuator is locked.

TROUBLE SYMPTOM:
- Unable to control the rear vent temperature.
- DTC “52” Rear vent door actuator lock was detected.

WIRING DIAGRAM:
Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>

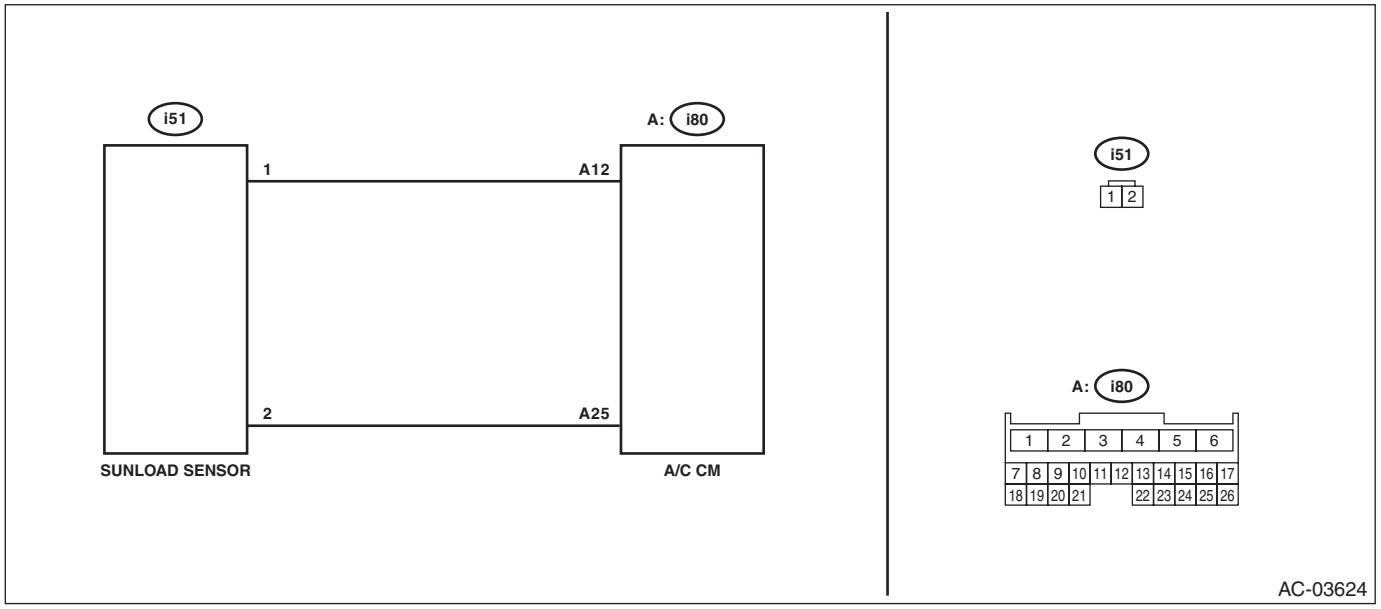
	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and rear vent actuator connector. 2) Read the DTC using Subaru Select Monitor.	Is B144A displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, change the setting of «Rear Vent Actuator Position Target» from the A/C diagnosis and perform the system operation check.	Did the rear vent actuator move to the specified target opening angle?	Rear vent actuator circuit is normal.	Go to step **3**.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using a tester, check the voltage between terminals. ***Connector & terminal*** ***(i177) No. 3 (+) — (i80) No. 12 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open, short circuit of the harness.

	Step	Check	Yes	No
4	**CHECK HARNESS.** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i177) No. 5 — (i80) No. 15:*** ***(i177) No. 3 — (i80) No. 12:*** ***(i177) No. 1 — (i181) No. 18:*** ***(i177) No. 7 — (i181) No. 23:*** ***(i177) No. 6 — (i181) No. 24:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK REAR VENT ACTUATOR.** Check the rear vent actuator parts. <Ref. to AC-88, INSPECTION, Rear Vent Door Actuator.>	Is the rear vent actuator normal?	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>	Replace the rear vent actuator. <Ref. to AC-87, REMOVAL, Rear Vent Door Actuator.>

S: DTC B14A1 SUNLOAD SENSOR CIRCUIT OPEN

DTC DETECTING CONDITION:

Open circuit in the sunload sensor is detected for 3 seconds or more. (Displayed for current malfunction)



NOTE:
When the sunload sensor check is performed indoors or in the shade, it could be diagnosed as having an open circuit. Always check the sunload sensor in direct sunlight.

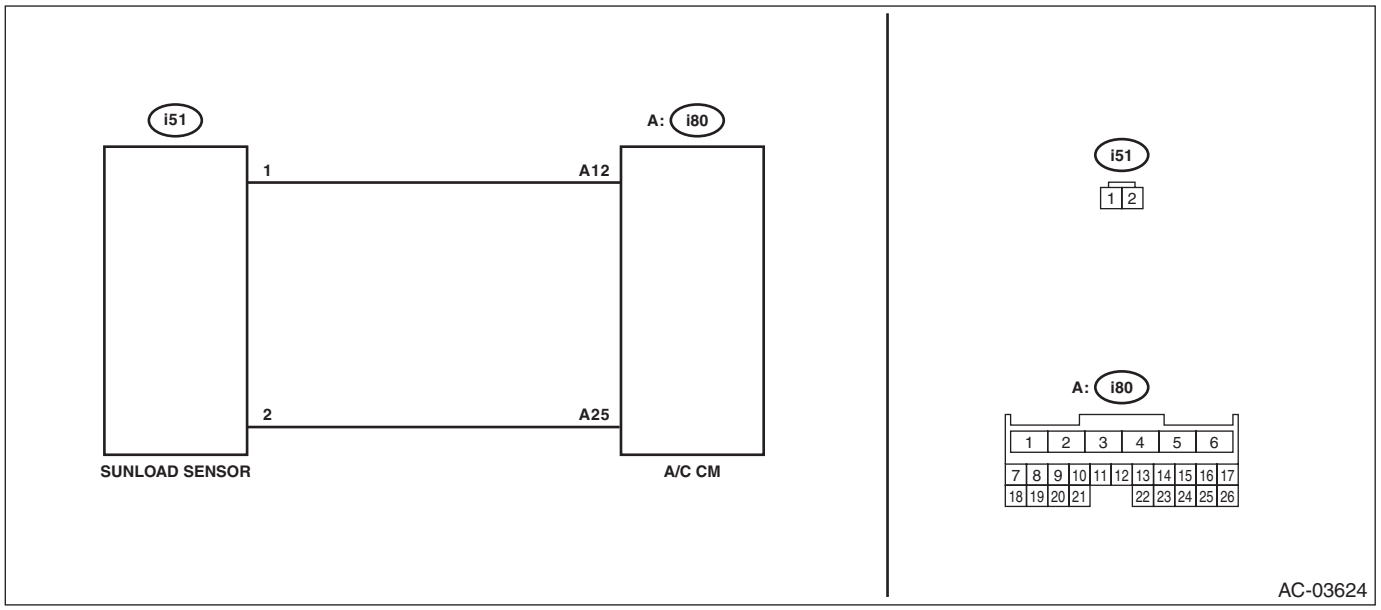
TROUBLE SYMPTOM:

- Operation is performed as no sunload.
- DTC “25” Open circuit in sunload sensor was detected.

WIRING DIAGRAM:

Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and sunload sensor connector. 2) Read the DTC using Subaru Select Monitor.	Is B14A1 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK SUNLOAD SENSOR.** 1) Disconnect the sunload sensor. 2) Short the connector. 3) Read the DTC using Subaru Select Monitor.	Is B14A2 displayed?	Replace the sunload sensor. <Ref. to AC-70, REMOVAL, Sunload Sensor (Auto A/C Model).>	Go to step **3**.



Step		Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i51) No. 2 (+) — No. 1 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of the harness.
4	**CHECK HARNESS.** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i51) No. 1 — (i80) No. 12:*** ***(i51) No. 2 — (i80) No. 25:***	Is there continuity?	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>	Repair or replace the open circuit of harness.

T: DTC B14A2 SUNLOAD SENSOR CIRCUIT SHORT

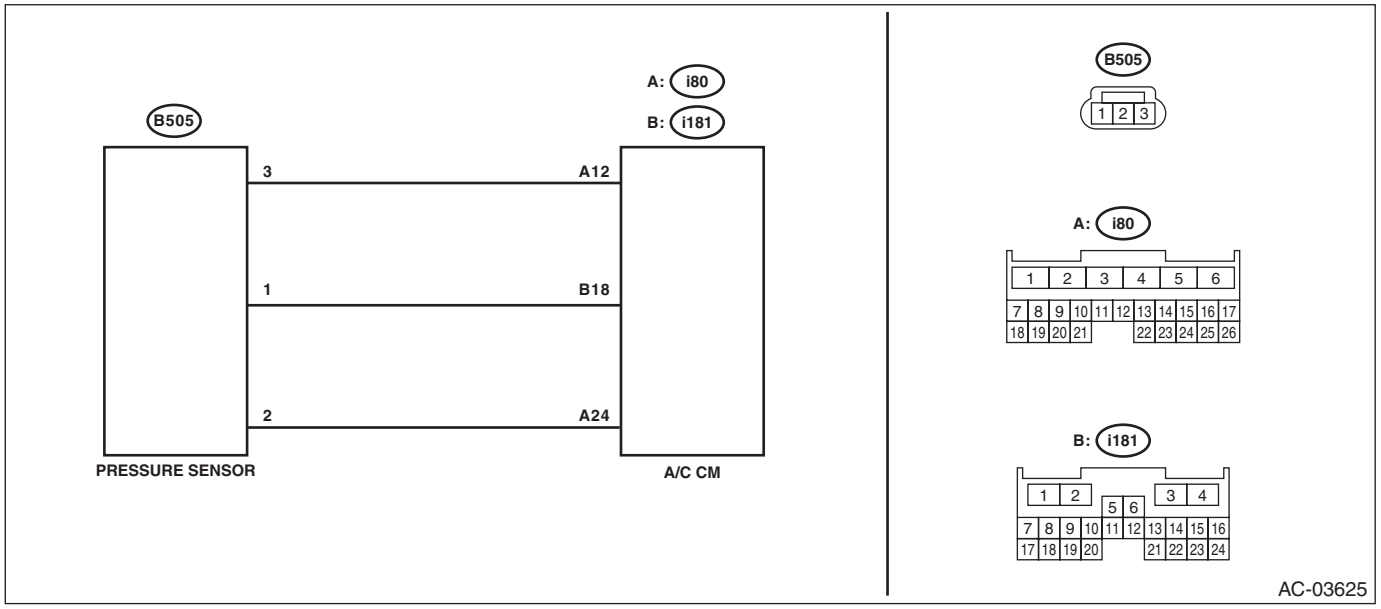
DTC DETECTING CONDITION:
Short circuit in the sunload sensor is detected for 3 seconds or more.

TROUBLE SYMPTOM:
- Operation is performed as no sunload.
- DTC "–25" Short circuit in sunload sensor was detected.

WIRING DIAGRAM:
Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and sunload sensor connector. 2) Read the DTC using Subaru Select Monitor.	Is B14A2 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK SUNLOAD SENSOR.** 1) Disconnect the sunload sensor. 2) Read the DTC using Subaru Select Monitor.	Is B14A1 displayed?	Replace the sunload sensor. <Ref. to AC-70, REMOVAL, Sunload Sensor (Auto A/C Model).>	Go to step **3**.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i51) No. 2 (+) — No. 1 (–):***	Is the voltage 4.5 — 5.0 V?	Check the connection of the sunload sensor circuit.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS.** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i51) No. 1 — No. 2:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>



U: DTC B14A3 REFRIGERANT PRESSURE SENSOR CIRCUIT OPEN

DTC DETECTING CONDITION:
Refrigerant pressure sensor circuit is open.

TROUBLE SYMPTOM:
- Compressor does not operate. (Variable compressor)
- DTC “42” Open circuit in refrigerant pressure sensor was detected.

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector, refrigerant pressure sensor connector and coupling connector. 2) Read the DTC using Subaru Select Monitor.	Is B14A3 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK PRESSURE SENSOR.** 1) Disconnect the refrigerant pressure sensor. 2) Short No. 1 and No. 2 of B505 connector. 3) Read the DTC of the A/C CM using the Subaru Select Monitor.	Is B14A4 displayed?	Replace the refrigerant pressure sensor. <Ref. to AC-62, REMOVAL, Hose and Pipe.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B505) No. 3 (+) — No. 1 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS.** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B505) No. 1 — (i181) No. 18:*** ***(B505) No. 2 — (i80) No. 24:*** ***(B505) No. 3 — (i80) No. 12:***	Is there continuity?	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>	Repair or replace the open circuit of harness.

V: DTC B14A4 REFRIGERANT PRESSURE SENSOR CIRCUIT SHORT

DTC DETECTING CONDITION:
Refrigerant pressure sensor circuit is shorted.
TROUBLE SYMPTOM:
- Compressor does not operate. (Variable compressor)
- DTC "–42" Short circuit in refrigerant pressure sensor was detected.

WIRING DIAGRAM:

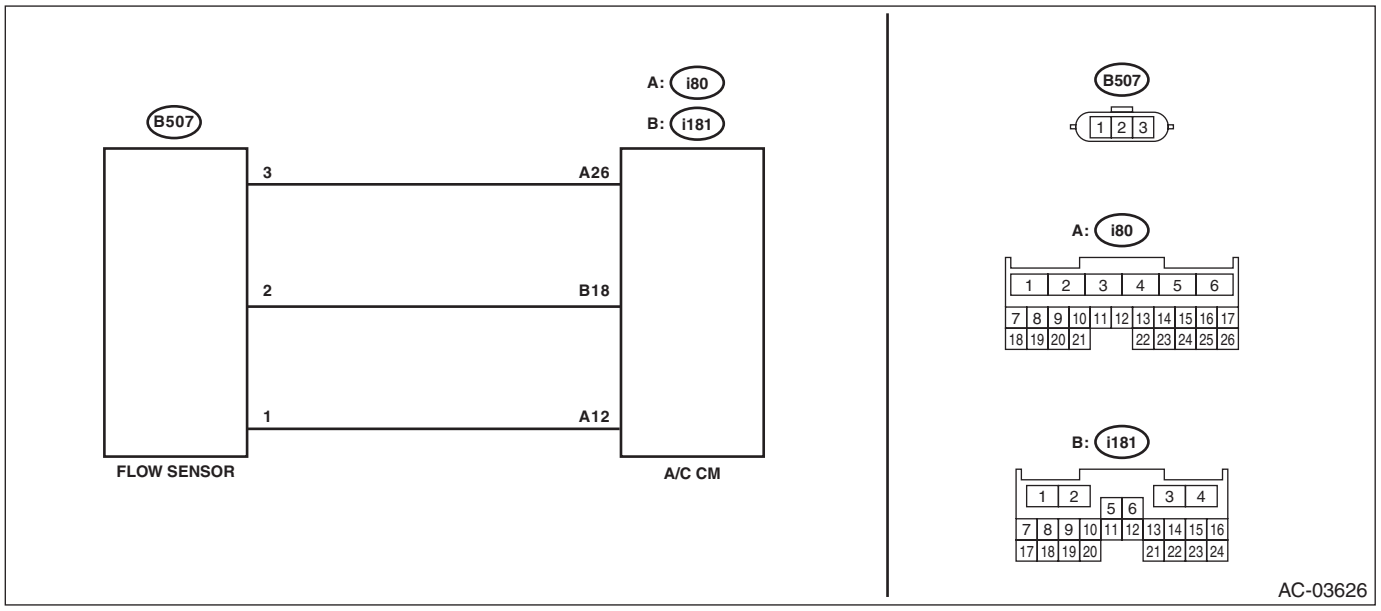
NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector, refrigerant pressure sensor connector and coupling connector. 2) Read the DTC using Subaru Select Monitor.	Is B14A4 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK REFRIGERANT PRESSURE SENSOR.** 1) Disconnect the refrigerant pressure sensor. 2) Read the DTC of the A/C CM using the Subaru Select Monitor.	Is B14A3 displayed?	Replace the refrigerant pressure sensor. <Ref. to AC-62, REMOVAL, Hose and Pipe.>	Go to step **3**.

Step		Check	Yes	No
3	**CHECK HARNESS.** 1) Disconnect the connector from A/C CM. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B505) No. 1 — No. 2:*** ***(B505) No. 2 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>

W: DTC B14A5 REFRIGERANT FLOW SENSOR CIRCUIT OPEN

DTC DETECTING CONDITION:



- The voltage of the refrigerant flow sensor signal line increased to 4.7 V or more.
- Short-circuit in refrigerant flow sensor

TROUBLE SYMPTOM:

- A/C does not function because refrigerant flow amount cannot be measured.
- DTC “43” Open circuit in refrigerant flow sensor was detected.

WIRING DIAGRAM:

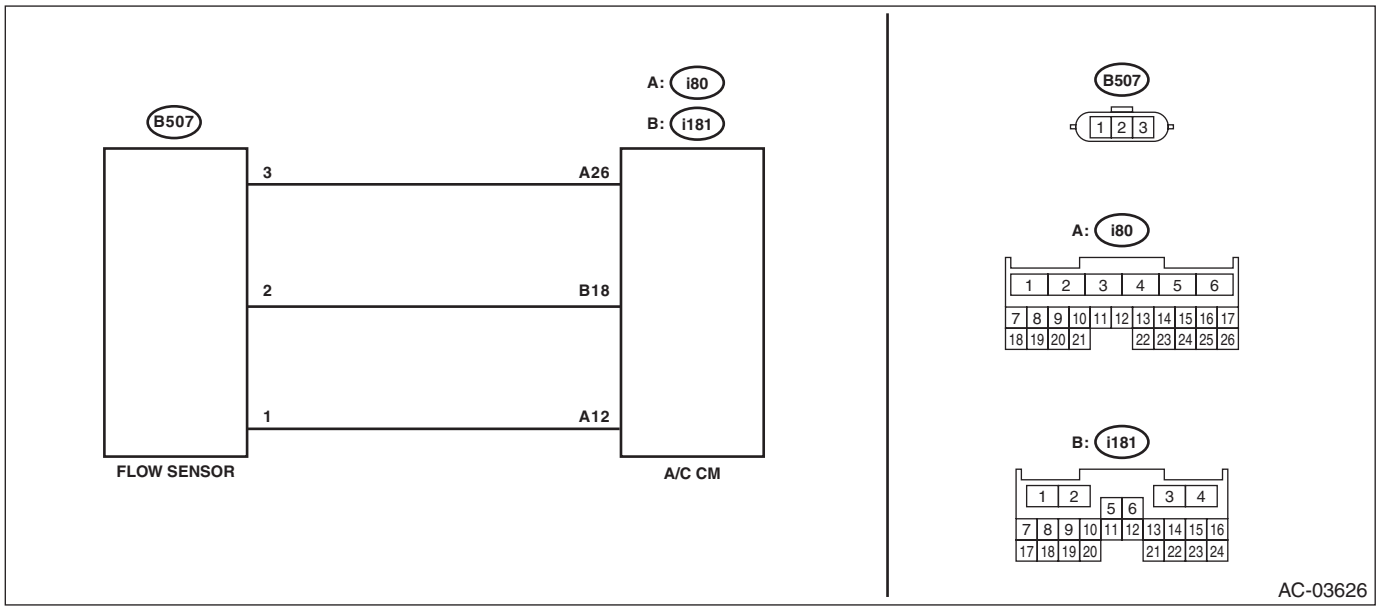
NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector, refrigerant flow sensor connector and coupling connector. 2) Read the DTC using Subaru Select Monitor.	Is B14A5 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK REFRIGERANT FLOW SENSOR.** 1) Disconnect the refrigerant flow sensor connector. 2) Short No. 2 and No. 3 of the refrigerant flow sensor connector (B507). 3) Read the DTC using Subaru Select Monitor.	Is B14A6 displayed?	Replace the compressor. <Ref. to AC-47, REMOVAL, Compressor.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B507) No. 1 (+) — No. 2 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS.** 1) Disconnect the A/C CM connector. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B507) No. 3 — (i80) No. 26:*** ***(B507) No. 2 — (i181) No. 18:*** ***(B507) No. 1 — (i80) No. 12:***	Is there continuity?	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>	Repair or replace the open circuit of harness.

X: DTC B14A6 REFRIGERANT FLOW SENSOR CIRCUIT SHORT

DTC DETECTING CONDITION:



- The voltage of the refrigerant flow sensor signal line decreased to 0.3 V or less.
- Short-circuit in refrigerant flow sensor

TROUBLE SYMPTOM:

- A/C does not function because refrigerant flow amount cannot be measured.
- DTC "–43" Short circuit in refrigerant flow sensor was detected.

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector, refrigerant flow sensor connector and coupling connector. 2) Read the DTC using Subaru Select Monitor.	Is B14A6 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK REFRIGERANT FLOW SENSOR.** 1) Disconnect the refrigerant flow sensor connector. 2) Read the DTC using Subaru Select Monitor.	Is B14A5 displayed?	Replace the compressor. <Ref. to AC-47, REMOVAL, Compressor.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Disconnect the A/C CM connector. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B507) No. 2 — (B507) No. 3:*** ***(B507) No. 3 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>

Y: DTC B14A7 VARIABLE DUTY SOLENOID VALVE CIRCUIT FAILURE

DTC DETECTING CONDITION:
Variable flow change solenoid valve circuit is open or shorted

TROUBLE SYMPTOM:
- Refrigerant pressure cannot be changed.
- DTC “46” Variable flow change solenoid duty circuit failure was detected.

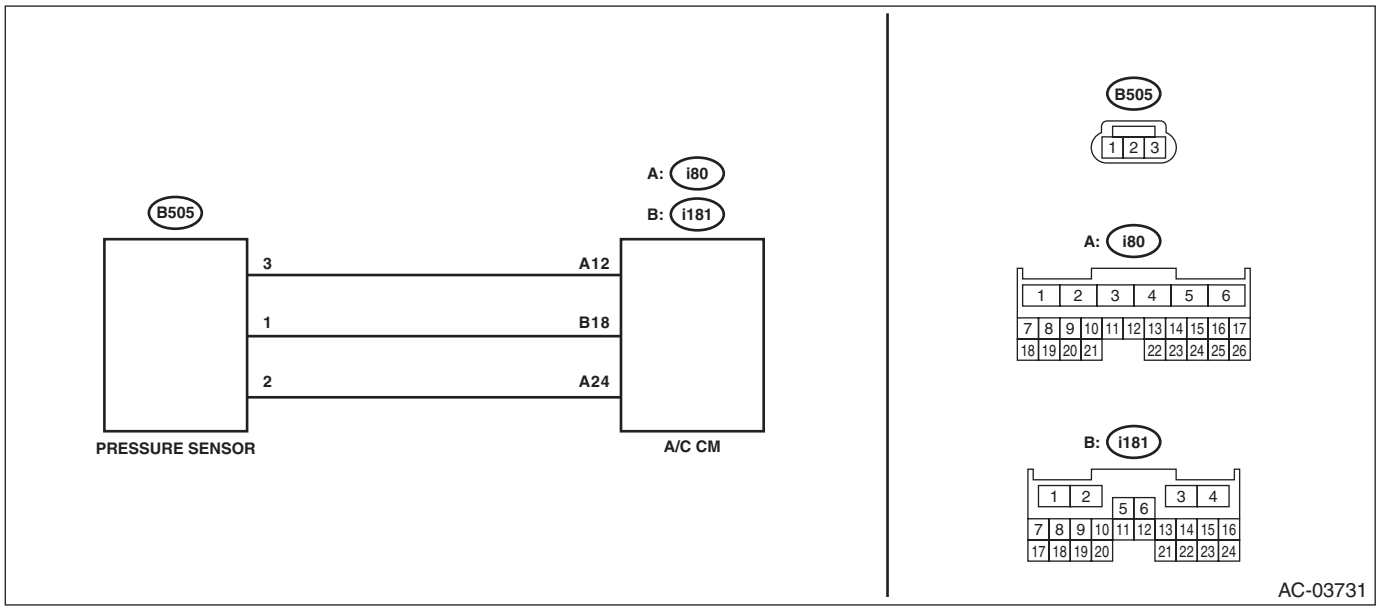
WIRING DIAGRAM:
Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector and variable flow change solenoid connector. 2) Read the DTC using Subaru Select Monitor.	Is B14A7 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK SYSTEM OPERATION.** 1) Attach the manifold gauge. 2) Using the Subaru Select Monitor, change the setting of «Variable Flow Change Sol Duty Setting» from the A/C diagnosis and perform the system operation check.	Did the variable flow change solenoid operate to the specified target, and the pressure change?	Variable flow change solenoid circuit is normal.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK VARIABLE FLOW CHANGE SOLENOID.** 1) Disconnect the variable flow change solenoid connector. 2) Using a tester, measure the resistance between terminals of the solenoid. ***Connector & terminal*** ***(Compressor solenoid side) No. 1 — No. 2:***	Is the resistance 10 — 12 Ω?	Go to step **4**.	Replace the compressor. <Ref. to AC-47, REMOVAL, Compressor.>
4	**CHECK HARNESS.** 1) Disconnect the A/C CM connector. 2) Using a tester, check for continuity between the harness terminals. ***Connector & terminal*** ***(B506) No. 2 — (i181) No. 8:*** ***(B506) No. 1 — Chassis ground:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** Using a tester, check for continuity between the harness terminals. ***Connector & terminal*** ***(B506) No. 2 — Chassis ground:*** ***(B506) No. 1 — (B506) No. 2:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>

Z: DTC B14A8 REFRIGERANT NOT SEALED DRIVE ERROR

DTC DETECTING CONDITION:



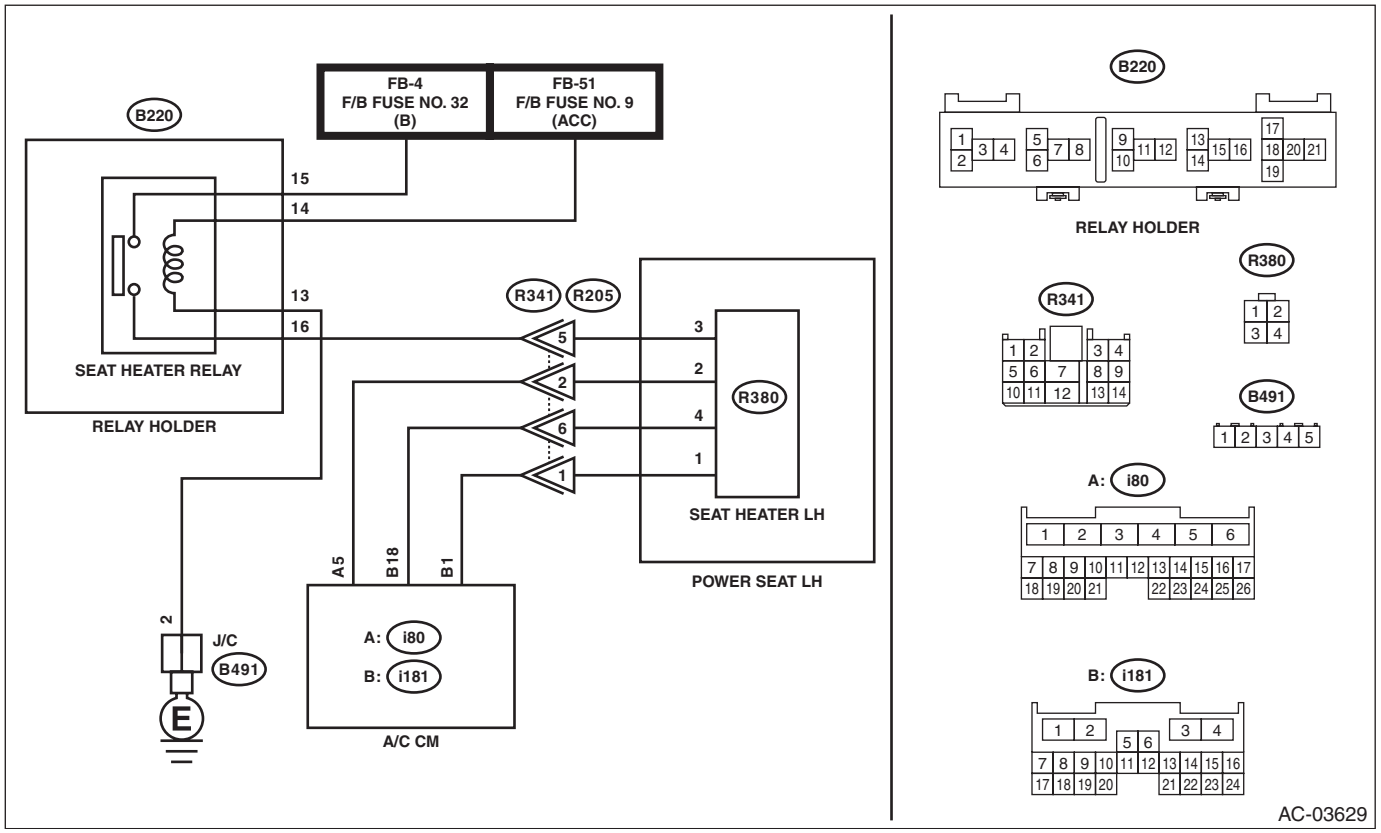
- Compressor was operated while refrigerant was low.
- Compressor was operated while refrigerant pressure was extremely low.
- Judgment is made only when the delivery mode fuse is installed.

TROUBLE SYMPTOM:

A/C does not operate.

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>



Step		Check	Yes	No
1	**CHECK AMOUNT OF REFRIGERANT.** Check the refrigerant pressure and filling amount. <Ref. to AC-22, PROCEDURE, Refrigerant Pressure with Manifold Gauge Set.>	Is the filling amount a standard value?	Check that DTC B14A3 (open circuit malfunction) or B14A4 (short circuit malfunction) is recorded, and if either one of these DTCs is recorded, perform the diagnosis according to the DTC. If nothing is recorded, replace the compressor.	Replace the compressor. <Ref. to AC-47, REMOVAL, Compressor.>

AA:DTC B14B1 SEAT HEATER THERMISTOR CIRCUIT OPEN (DRIVER'S)

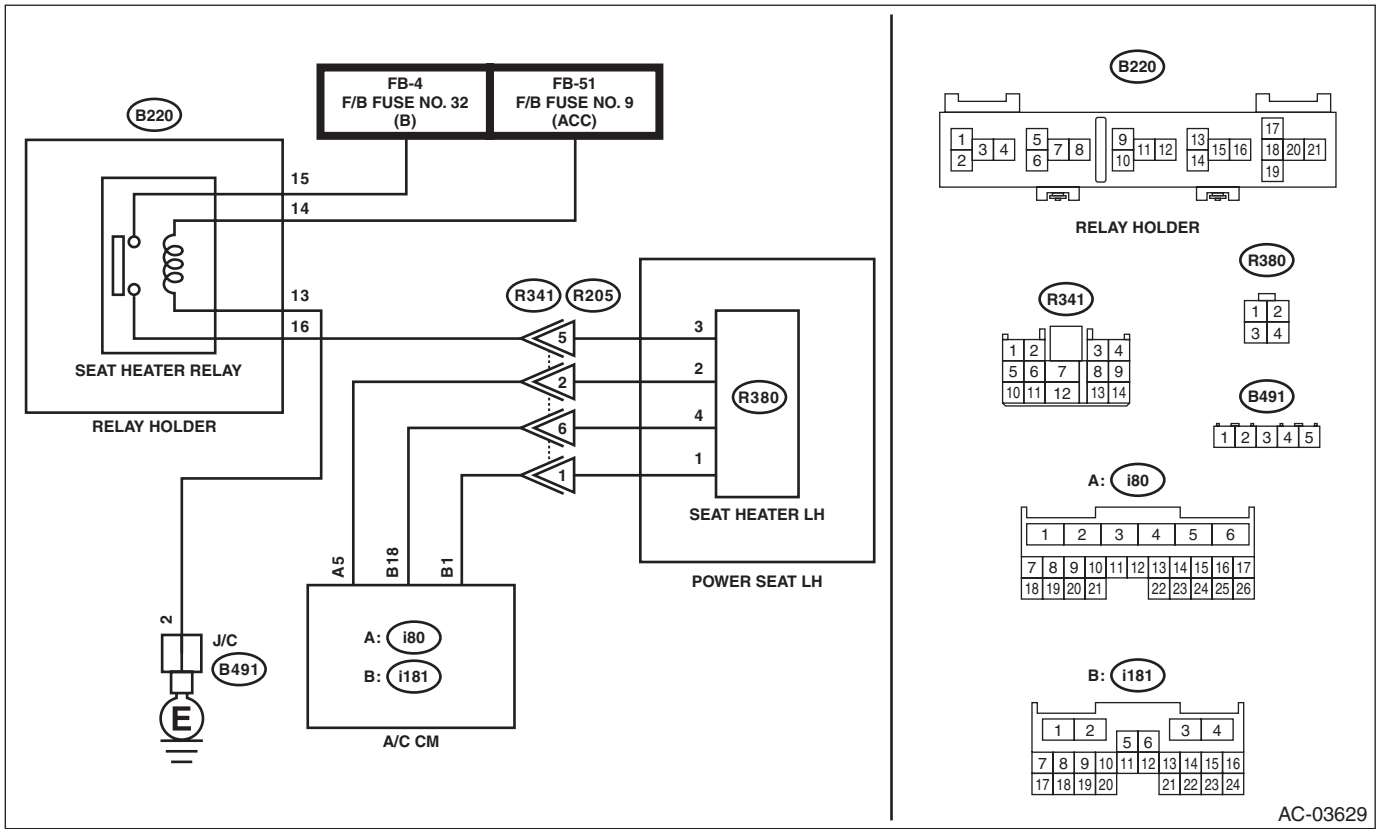
DTC DETECTING CONDITION:
Open circuit in seat heater thermistor.
TROUBLE SYMPTOM:
- Seat heater LH does not function.
- DTC “57” Open circuit in seat heater thermistor (driver’s) was detected.

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Seat Heater System <Ref. to WI-413, WIRING DIAGRAM, Seat Heater System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector, seat heater relay connector, seat connector and coupling connector. 2) Read the DTC using Subaru Select Monitor.	Is B14B1 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK SEAT HEATER LH.** 1) Disconnect the seat connector (R341). 2) Short No. 2 and No. 6 of seat connector (R341). 3) Read the DTC using Subaru Select Monitor.	Is B14B2 displayed?	Replace the seat heater module. <Ref. to SE-76, SEAT HEATER MODULE - FRONT, REMOVAL, Seat Heater System.>	Go to step **3**.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Turn the seat heater switch LH to ON. 3) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(R341) No. 2 (+) — (R341) No. 6 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS.** 1) Disconnect the A/C CM connector. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(R341) No. 2 — (i80) No. 5:*** ***(R341) No. 6 — (i181) No. 18:***	Is there continuity?	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>	Repair or replace the open circuit of harness.



AB:DTC B14B2 SEAT HEATER THERMISTOR CIRCUIT SHORT (DRIVER'S)

DTC DETECTING CONDITION:
Short-circuit in seat heater thermistor.

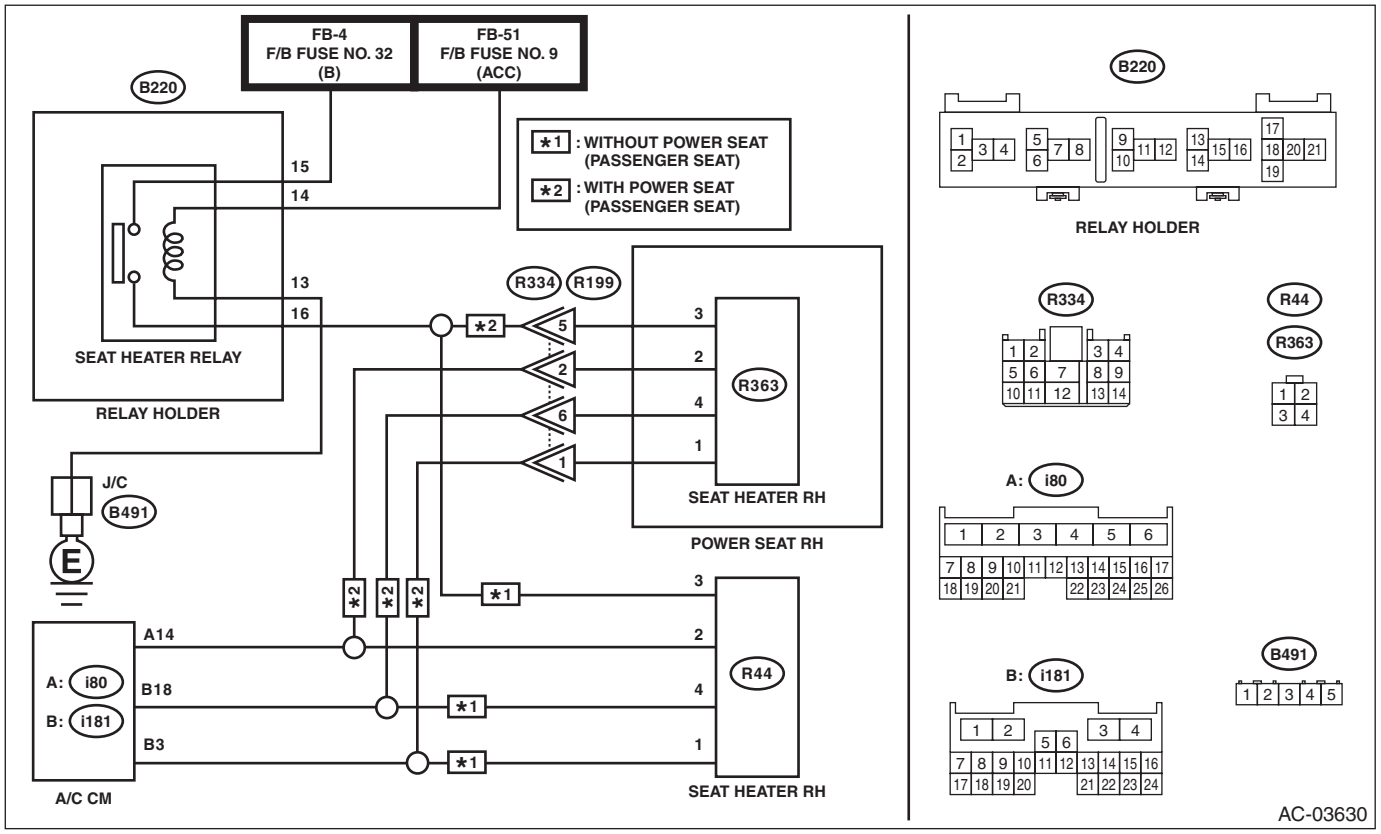
TROUBLE SYMPTOM:
- Seat heater LH does not function.
- DTC "–57" Short circuit in seat heater thermistor (driver's) was detected.

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Seat Heater System <Ref. to WI-413, WIRING DIAGRAM, Seat Heater System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector, seat heater relay connector, seat connector and coupling connector. 2) Read the DTC using Subaru Select Monitor.	Is B14B2 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK SEAT HEATER LH.** 1) Disconnect the seat connector. 2) Read the DTC using Subaru Select Monitor.	Is B14B1 displayed?	Replace the seat heater module. <Ref. to SE-76, SEAT HEATER MODULE - FRONT, REMOVAL, Seat Heater System.>	Go to step **3**.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Turn the seat heater switch LH to ON. 3) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(R341) No. 2 (+) — (R341) No. 6 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS.** 1) Disconnect the A/C CM connector. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(R341) No. 2 — (R341) No. 6:*** ***(R341) No. 2 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>



AC:DTC B14B3 SEAT HEATER THERMISTOR CIRCUIT OPEN (PASSENGER'S)

DTC DETECTING CONDITION:
Open circuit in seat heater thermistor.

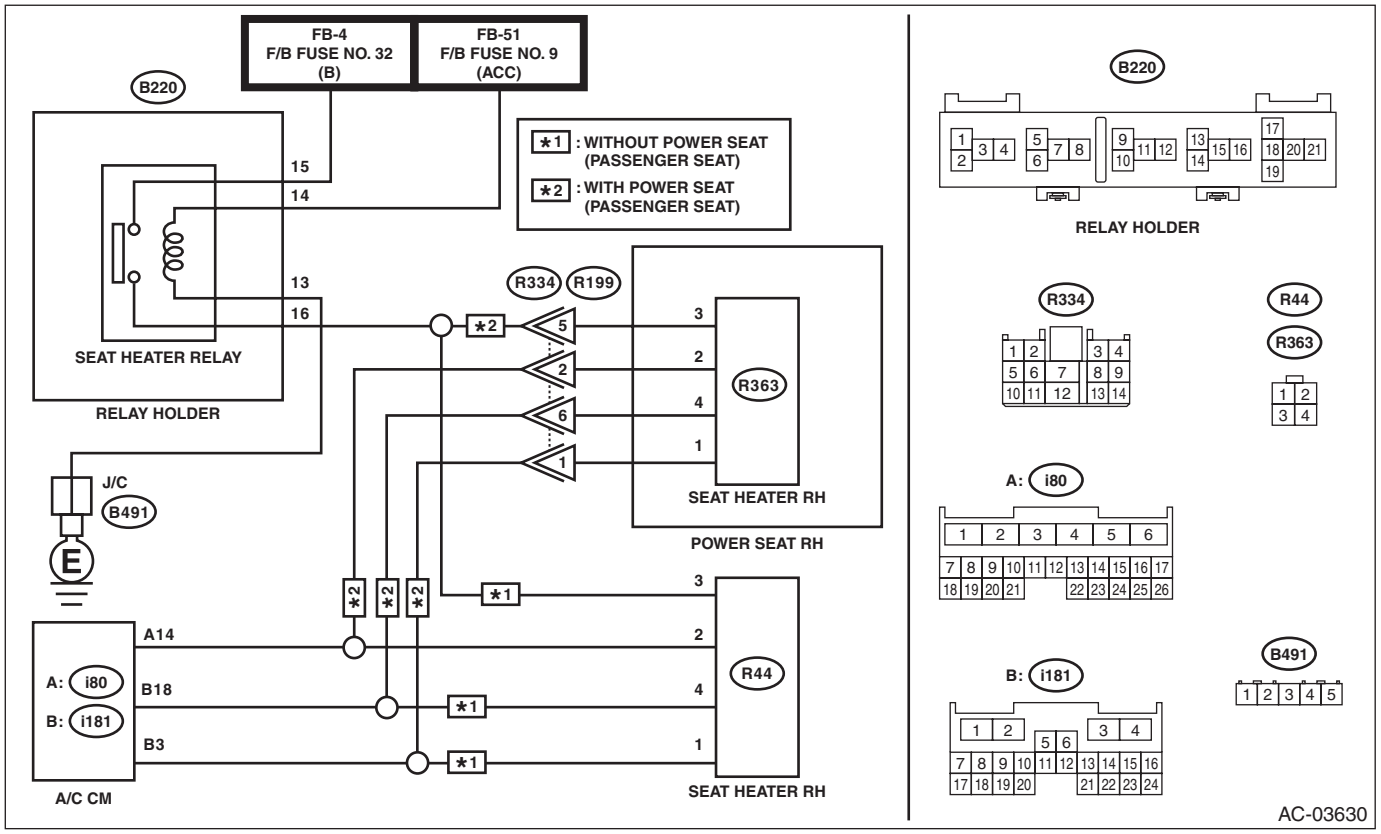
TROUBLE SYMPTOM:
- Seat heater RH does not function.
- DTC “58” Open circuit in seat heater thermistor (passenger’s) was detected.

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Seat Heater System <Ref. to WI-413, WIRING DIAGRAM, Seat Heater System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector, seat heater relay connector, seat connector and coupling connector. 2) Read the DTC using Subaru Select Monitor.	Is B14B3 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK SEAT HEATER RH.** 1) Disconnect the seat connector (R334) or (R44). 2) For vehicle with power seat, short No. 2 and No. 6 of seat connector (R334). For vehicle without power seat, short No. 2 and No. 4 of seat connector (R44). 3) Read the DTC using Subaru Select Monitor.	Is B14B4 displayed?	Replace the seat heater module and wire set - front seat cushion. <Ref. to SE-76, SEAT HEATER MODULE - FRONT, REMOVAL, Seat Heater System.>	Go to step **3**.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Turn the seat heater switch RH to ON. 3) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***With power seat*** ***(R334) No. 2 (+) — (R334) No. 6 (–):*** ***Without power seat*** ***(R44) No. 2 (+) — (R44) No. 4 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS.** 1) Disconnect the A/C CM connector. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***With power seat*** ***(R334) No. 2 — (i80) No. 14:*** ***(R334) No. 6 — (i181) No. 18:*** ***Without power seat*** ***(R44) No. 2 — (i80) No. 14:*** ***(R44) No. 4 — (i181) No. 18:***	Is there continuity?	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>	Repair or replace the open circuit of harness.



AD:DTC B14B4 SEAT HEATER THERMISTOR CIRCUIT SHORT (PASSENGER'S)

DTC DETECTING CONDITION:
Short-circuit in seat heater thermistor.

TROUBLE SYMPTOM:
- Seat heater RH does not function.
- DTC "–58" Short circuit in seat heater thermistor (passenger's) was detected.

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Seat Heater System <Ref. to WI-413, WIRING DIAGRAM, Seat Heater System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check connecting condition of the A/C CM connector, seat heater relay connector, seat connector and coupling connector. 2) Read the DTC using Subaru Select Monitor.	Is B14B4 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK SEAT HEATER RH.** 1) Disconnect the seat connector (R334) or (R44). 2) Read the DTC using Subaru Select Monitor.	Is B14B3 displayed?	Replace the seat heater module and wire set - front seat cushion. <Ref. to SE-76, SEAT HEATER MODULE - FRONT, REMOVAL, Seat Heater System.>	Go to step **3**.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Turn the seat heater switch RH to ON. 3) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***With power seat*** ***(R334) No. 2 (+) — (R334) No. 6 (–):*** ***Without power seat*** ***(R44) No. 2 (+) — (R44) No. 4 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS.** 1) Disconnect the A/C CM connector. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***With power seat*** ***(R334) No. 2 — (R334) No. 6:*** ***Without power seat*** ***(R44) No. 2 — (R44) No. 4:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>

AE:DTC U0001 CAN COMMUNICATION BUS OFF

DTC DETECTING CONDITION:

- Data to be received via CAN communication do not arrive.
- A/C cooperation control does not operate.

TROUBLE SYMPTOM:

A/C does not operate fully automatically.

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Check LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault?	Perform the diagnosis according to the inspection for LAN system.	Go to step **2**.
2	**CHECK A/C CM.** 1) Replace with a normally operating A/C CM. 2) Read the DTC using Subaru Select Monitor.	Is U0001 detected?	Go to step **3**.	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>
3	**CHECK CAN COMMUNICATION CIRCUIT.** Check the CAN communication circuit. <Ref. to LAN(diag)-37, LIST, CAN Communication Circuit Check.>	Is the CAN communication circuit normal?	It is possible that temporary poor communication occurs. Clear the memory.	Repair or replace the CAN communication circuit.

AF:DTC U0002 CAN COMMUNICATION ERROR

DTC DETECTING CONDITION:

- Data to be received via CAN communication do not arrive.
- A/C cooperation control does not operate.

TROUBLE SYMPTOM:

A/C does not operate fully automatically.

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Check LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault?	Perform the diagnosis according to the inspection for LAN system.	Go to step **2**.
2	**CHECK A/C CM.** 1) Replace with a normally operating A/C CM. 2) Read the DTC using Subaru Select Monitor.	Is U0002 detected?	Go to step **3**.	Replace the A/C CM. <Ref. to AC-46, REMOVAL, Control Unit.>
3	**CHECK CAN COMMUNICATION CIRCUIT.** Check the CAN communication circuit. <Ref. to LAN(diag)-37, LIST, CAN Communication Circuit Check.>	Is the CAN communication circuit normal?	It is possible that temporary poor communication occurs. Clear the memory.	Repair or replace the CAN communication circuit.

AG:DTC U0028 HEATER CONTROL PANEL COMMUNICATION ERROR

DTC DETECTING CONDITION:
UART communication failure

TROUBLE SYMPTOM:
- Unable to operate A/C.
- DTC “U0028” HEATER CONTROL PANEL COMMUNICATION ERROR was detected.
- DTC “53” Heater control panel communication error was detected.

WIRING DIAGRAM:
Air conditioning system <Ref. to WI-111, AUTO A/C, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** Check poor contact of the power supply circuit connectors, A/C control panel connector and A/C CM connector.	Is there poor contact?	Repair the connector.	Go to step **2**.
2	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Remove the fuses No. 19 and 26 from the main fuse box or fuse & relay box. 3) Check the condition of fuse. <Ref. to AC-33, Relay and Fuse.>	Is the fuse blown out?	Replace the fuse.	Go to step **3**.
3	**CHECK A/C CONTROL PANEL POWER CIRCUIT.** 1) Remove the A/C control panel. 2) Disconnect the A/C control panel connector. 3) Measure the voltage between A/C control panel connector terminal and chassis ground after turning the ignition switch to ON. ***Connector & terminal*** ***(i88) No. 10 (+) — Chassis ground (–):*** ***(i88) No. 4 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Check for open or short circuit in the harness between A/C control panel and fuse.
4	**CHECK A/C CONTROL PANEL GROUND CIRCUIT.** Measure the resistance of harness between A/C control panel and chassis ground after turning the ignition switch to OFF. ***Connector & terminal*** ***(i88) No. 14 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair the harness for ground line.

	Step	Check	Yes	No
5	**CHECK COMMUNICATION CIRCUIT HARNESS.** 1) Disconnect the connector from A/C control panel and A/C CM. 2) Using a tester, check for continuity between the harness terminals. ***Connector & terminal*** ***(i181) No. 11 — (i88) No. 7:*** ***(i181) No. 12 — (i88) No. 15:***	Is there continuity?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK HARNESS.** Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i181) No. 11 — No. 12:*** ***(i181) No. 11 — Chassis ground:*** ***(i181) No. 12 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C control panel. <Ref. to AC-44, REMOVAL, Control Panel.>

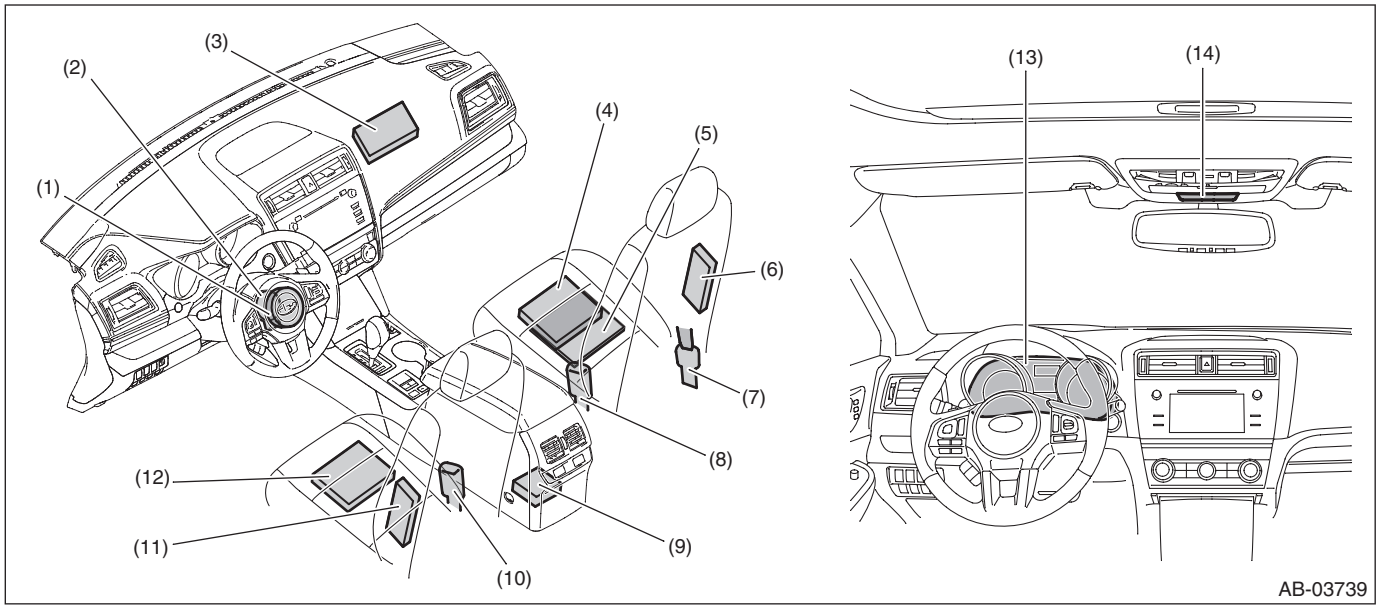
AH:DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

DTC DETECTING CONDITION:

Detected when malfunction occurs in CAN line.

NOTE:

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>



AIRBAG SYSTEM

AB

		Page
1.	General Description	2
2.	Airbag Connector	18
3.	Inspection Locations after a Collision	23

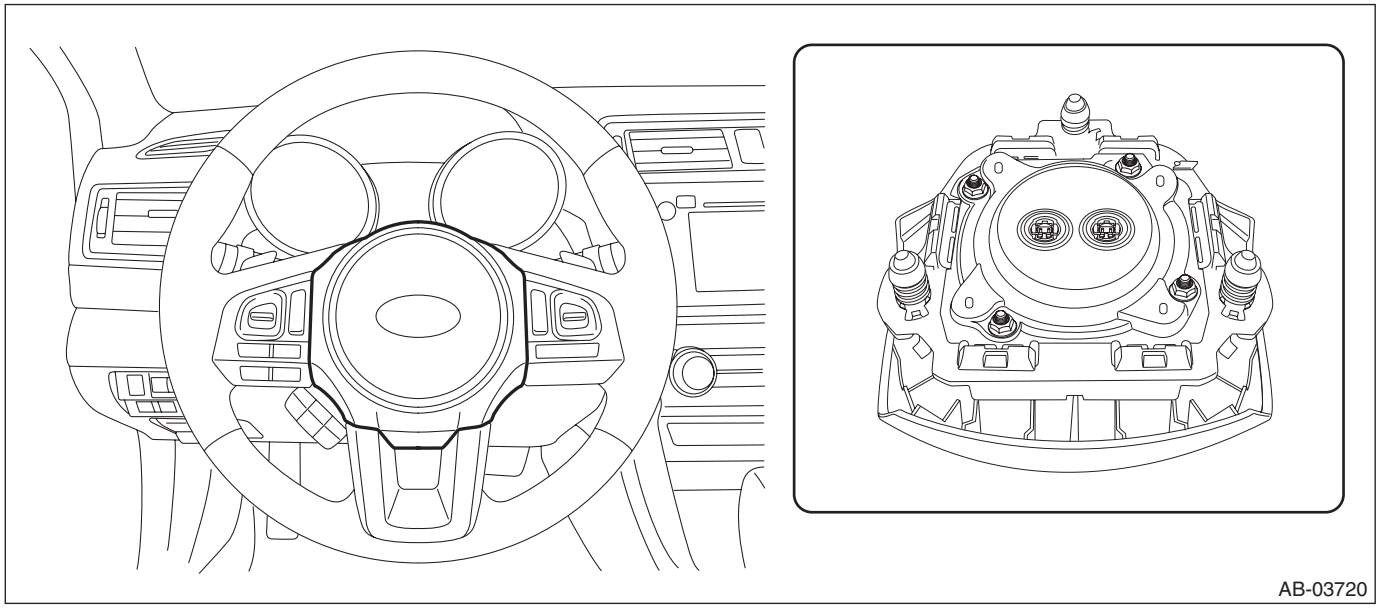
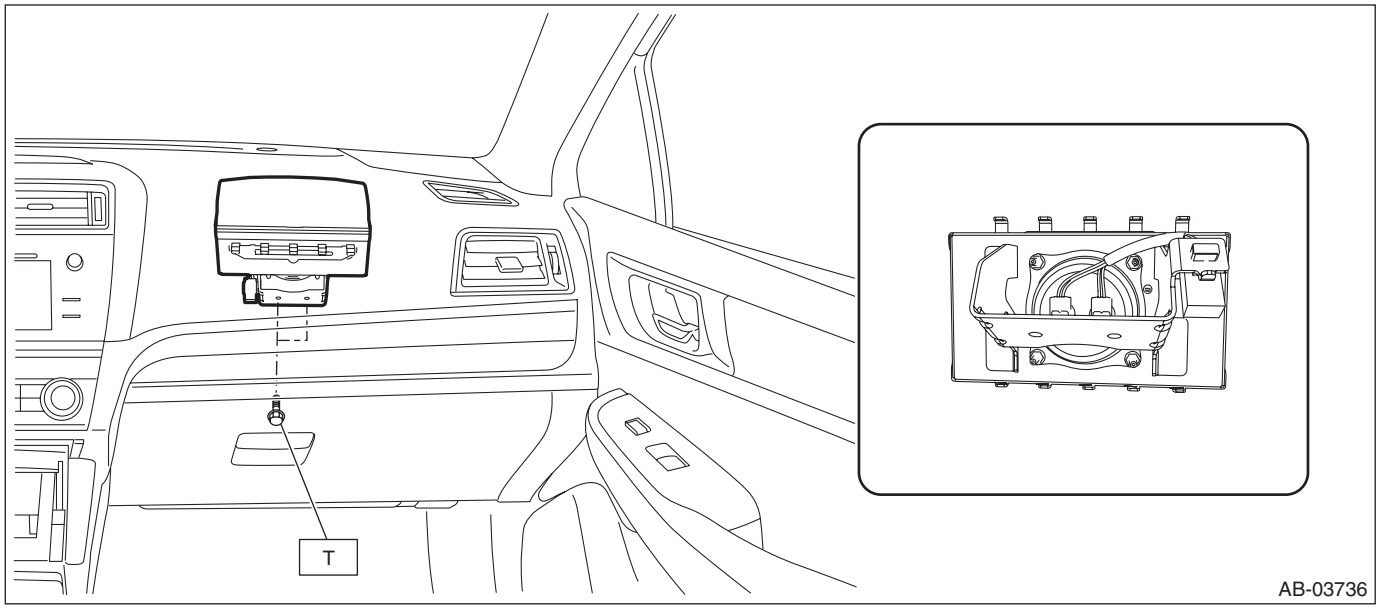
14.	Roll Connector	57
15.	Airbag Module Disposal (Deployment Processing on Vehicle)	61

1. General Description

A: COMPONENT

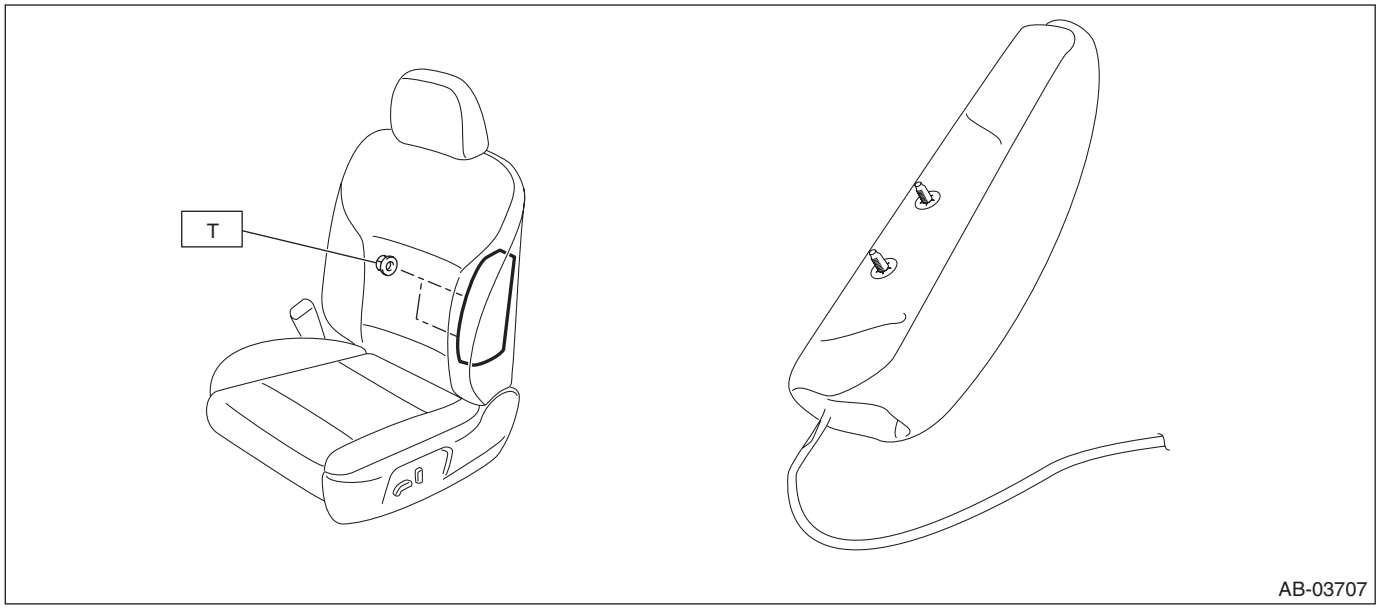


(1) Driver's airbag module
(2) Steering roll connector
(3) Passenger's airbag module
(4) Seat cushion airbag module RH
(5) Occupant detection control module and sensor
(6) Side airbag module RH
(7) Belt tension sensor
(8) Buckle switch RH
(9) Airbag control module
(10) Buckle switch LH
(11) Side airbag module LH
(12) Seat cushion airbag module LH
(13) Airbag warning light (in combination meter)
(14) Airbag ON/OFF indicator light (in warning box)

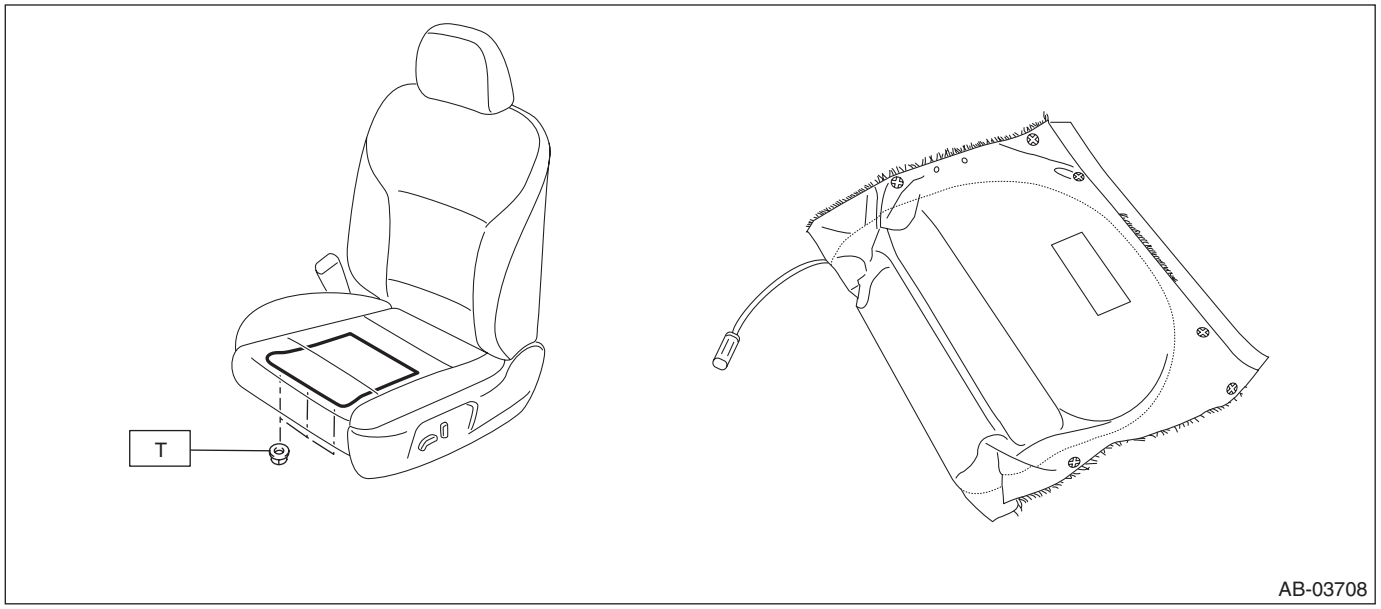


(1) Curtain airbag module LH
(2) Front door impact sensor LH
(3) Curtain airbag module RH
(4) Front sub sensor LH
(5) Front sub sensor RH
(6) Front door impact sensor RH
(7) Seat belt pretensioner RH
(8) Side airbag sensor RH
(9) Curtain airbag sensor RH
(10) Seat belt pretensioner LH
(11) Side airbag sensor LH
(12) Curtain airbag sensor LH

1. DRIVER'S AIRBAG MODULE

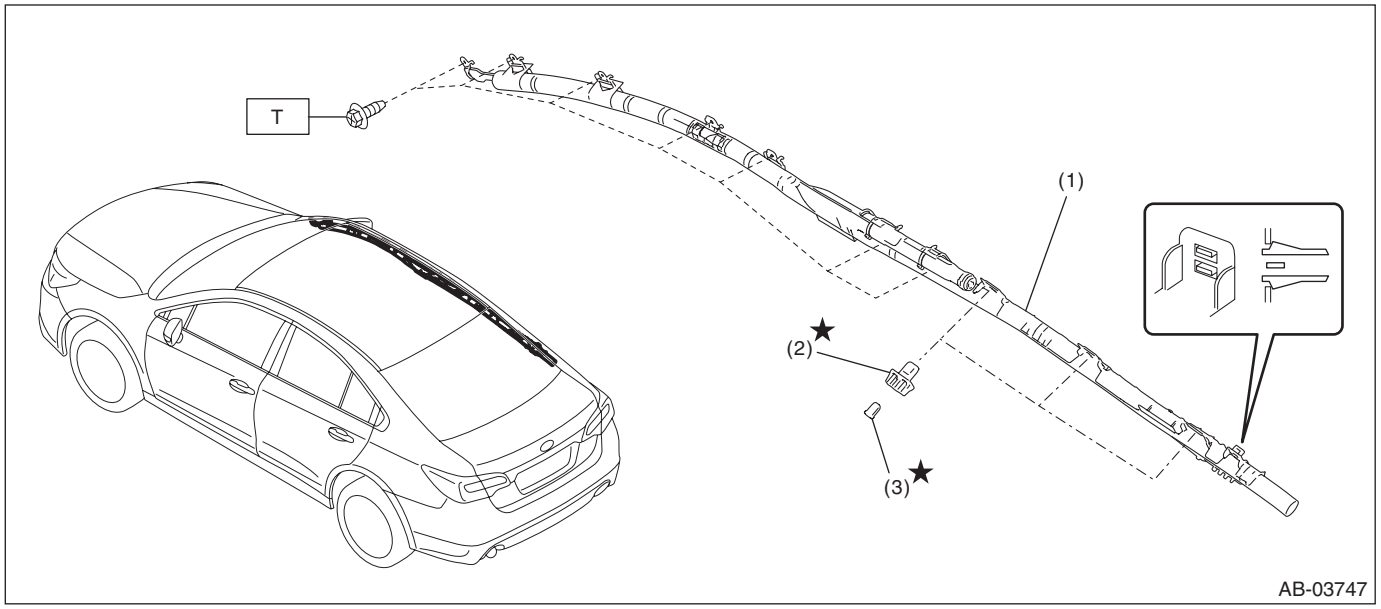


2. PASSENGER'S AIRBAG MODULE

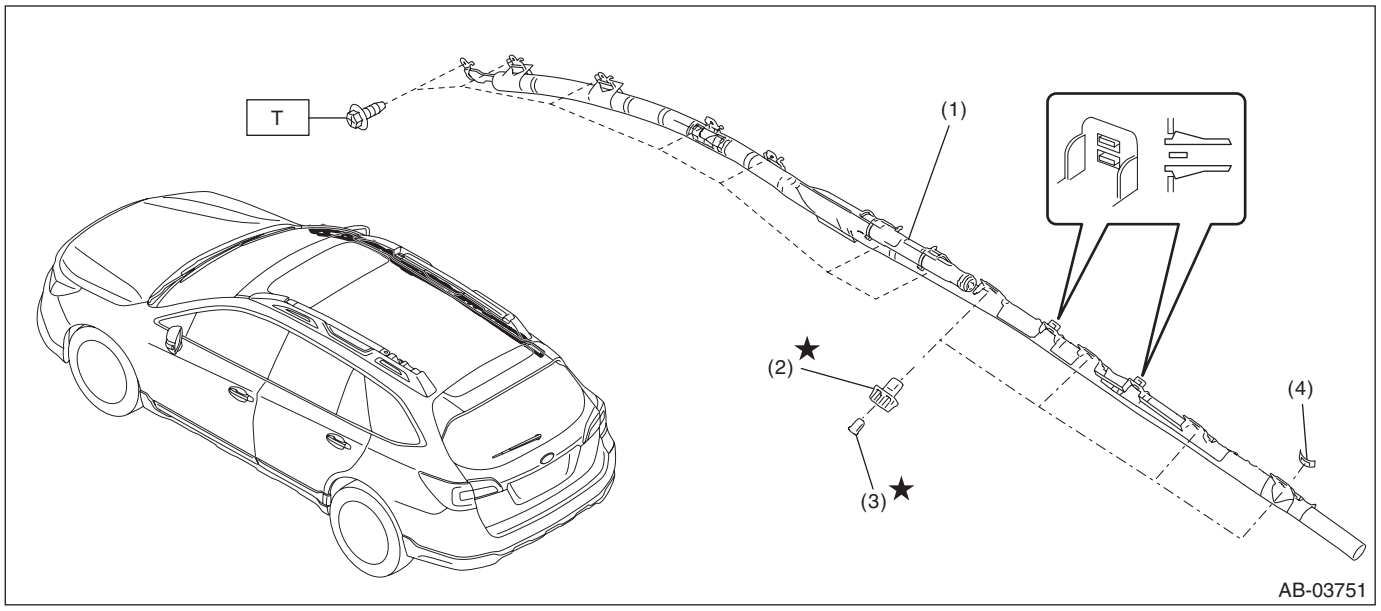


Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3. SIDE AIRBAG MODULE



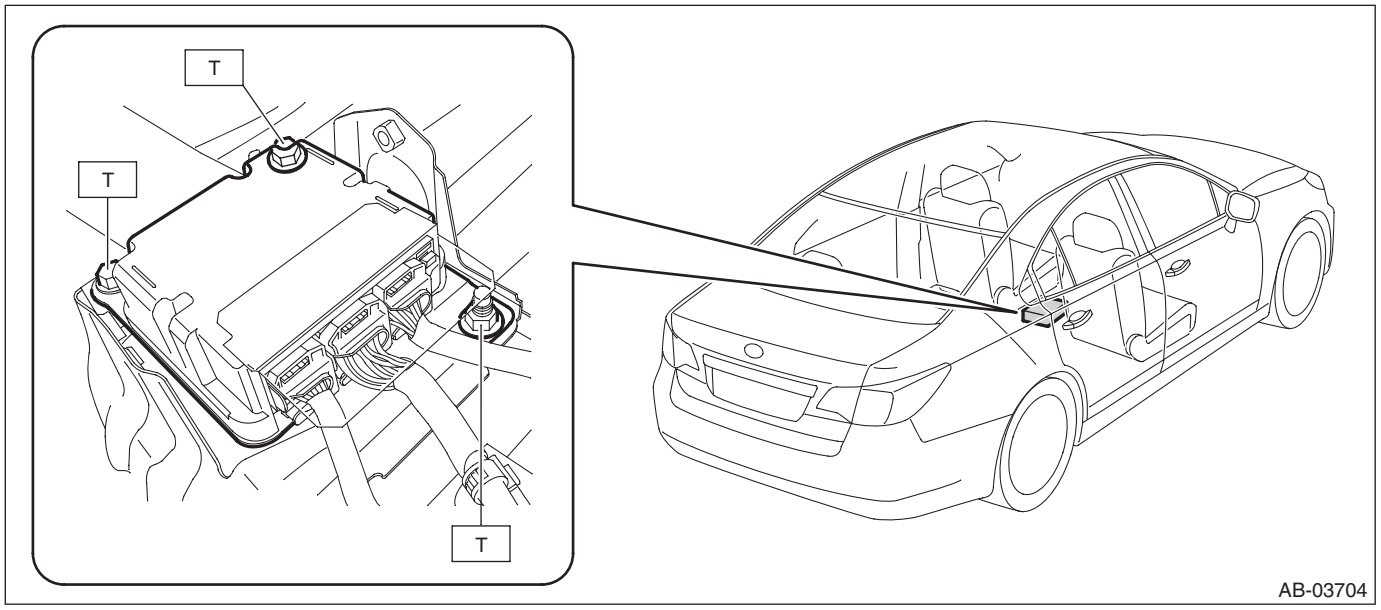
Tightening torque:
6 N·m (0.6 kgf-m, 4.4 ft-lb)



4. SEAT CUSHION AIRBAG MODULE

Tightening torque:
6 N·m (0.6 kgf-m, 4.4 ft-lb)

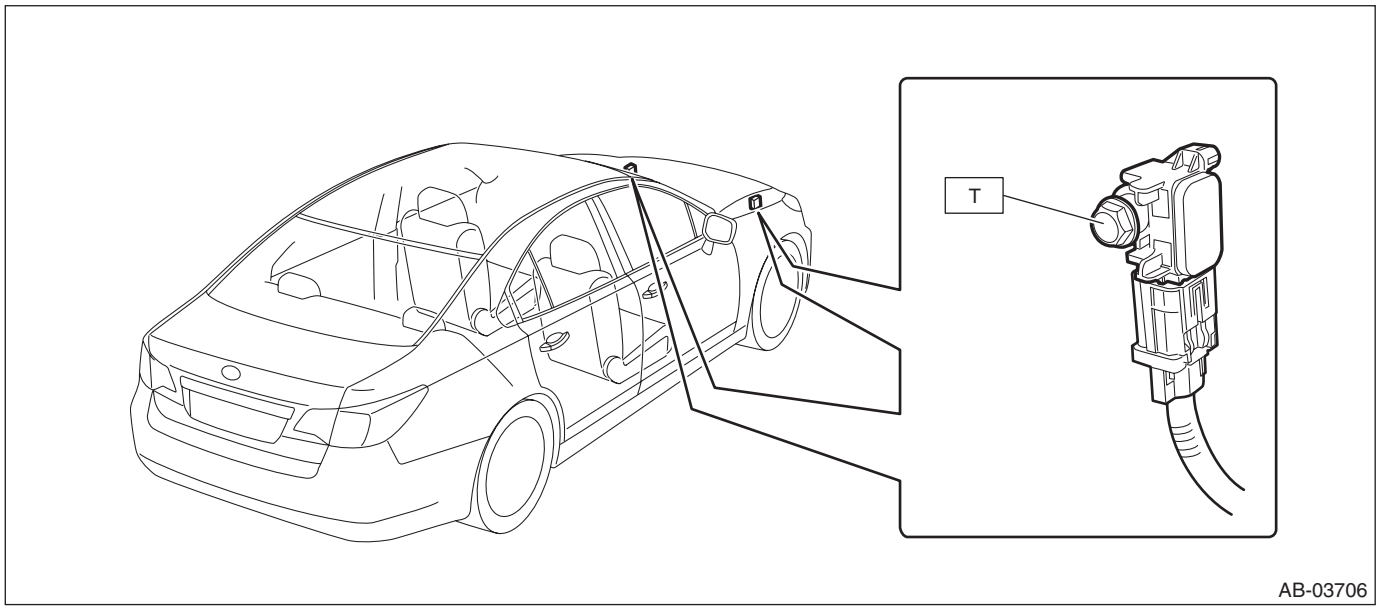
5. CURTAIN AIRBAG MODULE



(1) Curtain airbag module
(2) Clip - bushing
(3) Clip - pin
(4) Plastic spacer

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

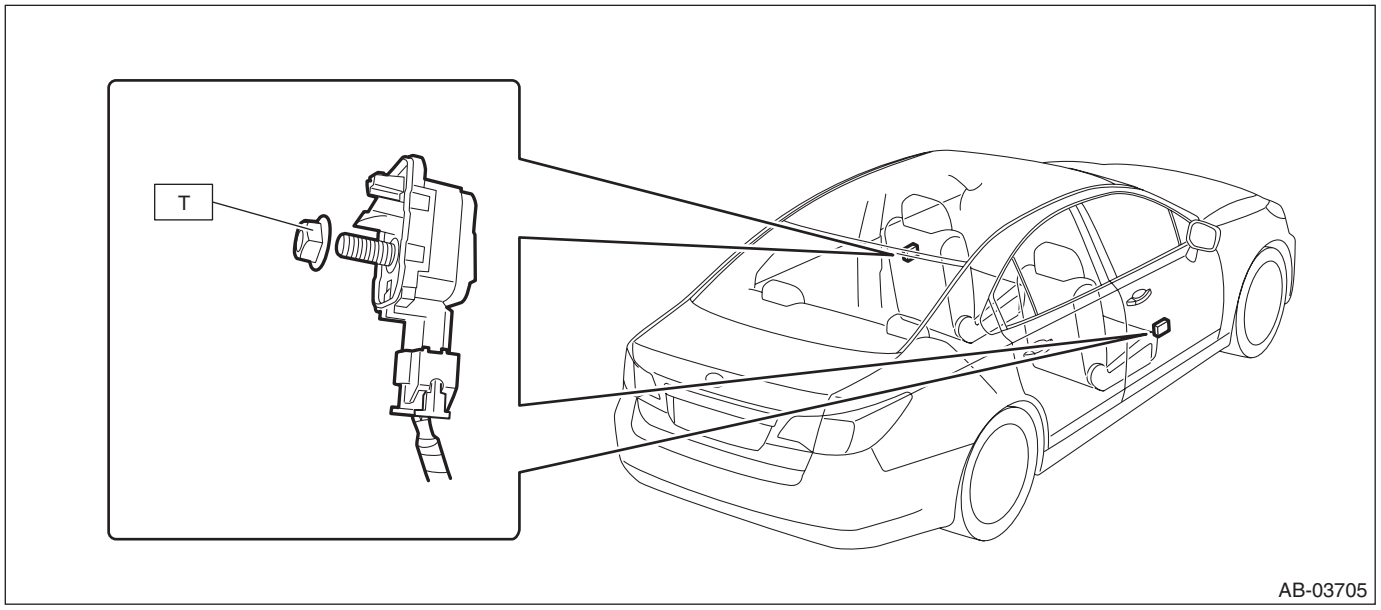
6. AIRBAG CONTROL MODULE



CAUTION:
Do not reuse mounting bolts and nuts.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

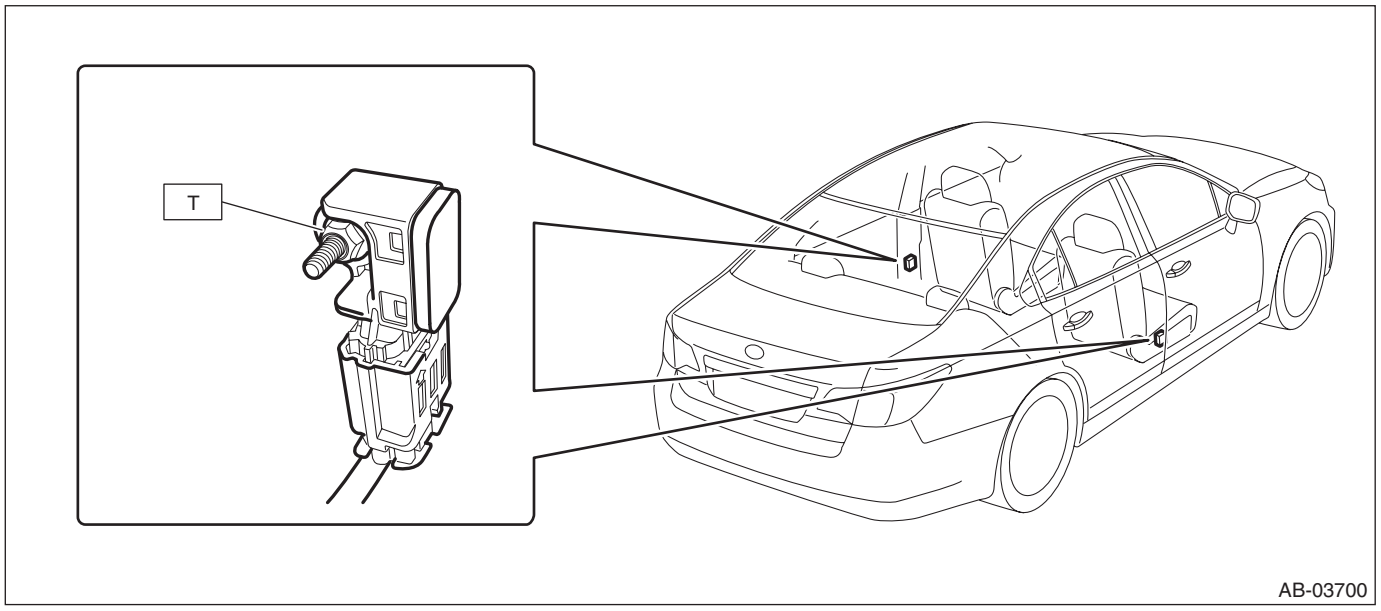
7. FRONT SUB SENSOR



CAUTION:
Do not reuse mounting bolts and nuts.

Tightening torque:
13 N·m (1.3 kgf-m, 9.6 ft-lb)

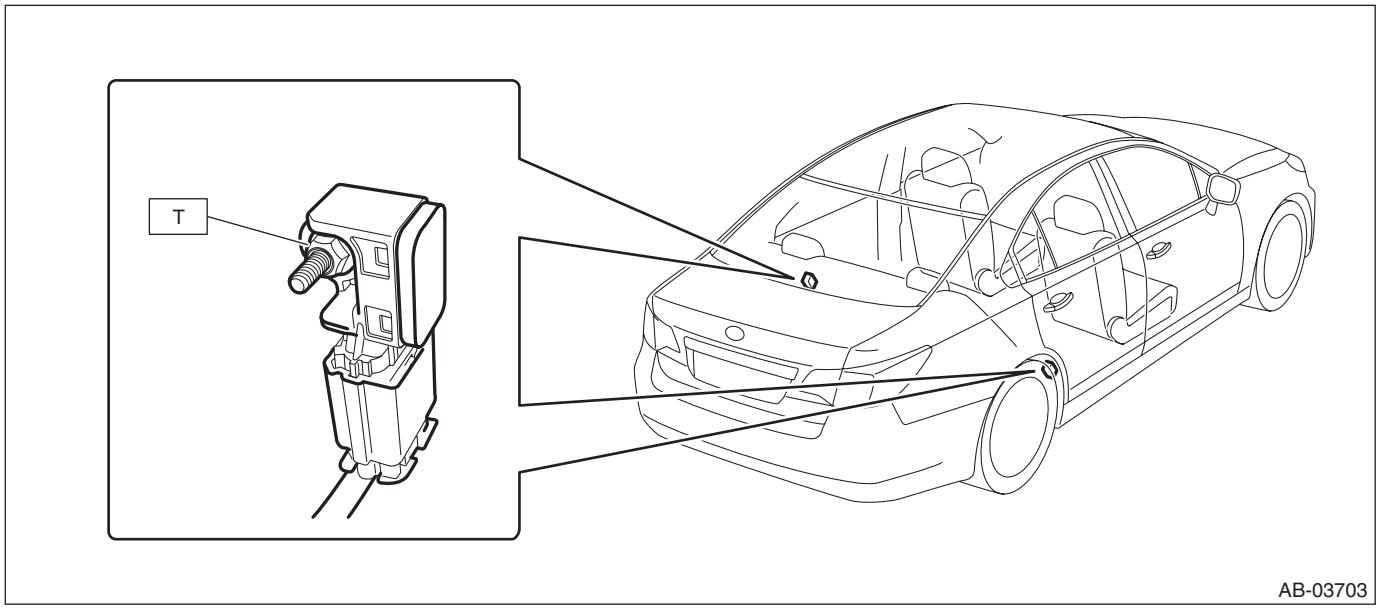
8. FRONT DOOR IMPACT SENSOR



CAUTION:
Do not reuse mounting bolts and nuts.

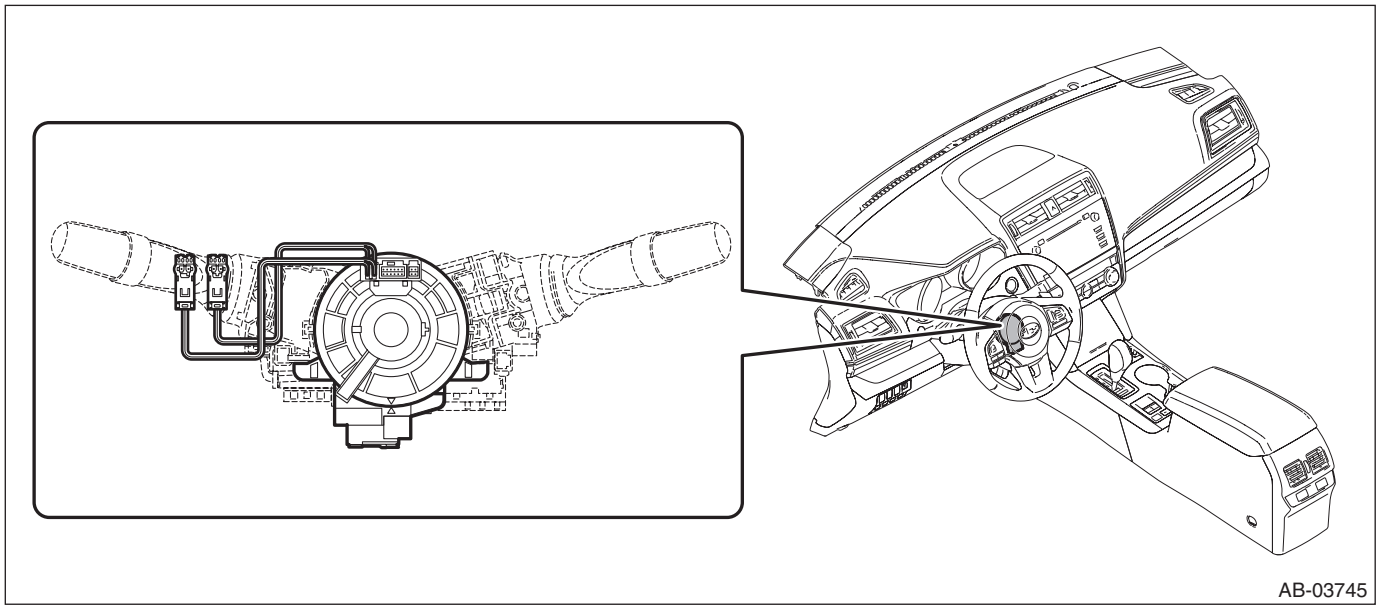
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

9. SIDE AIRBAG SENSOR



CAUTION:
Do not reuse mounting bolts and nuts.

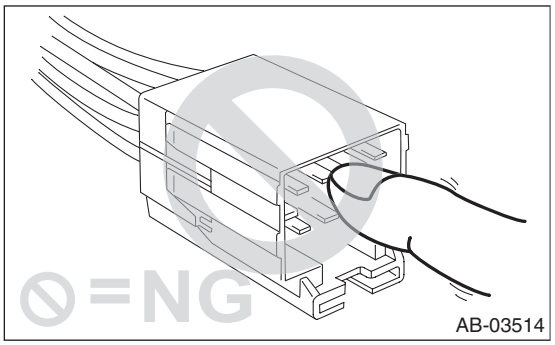
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



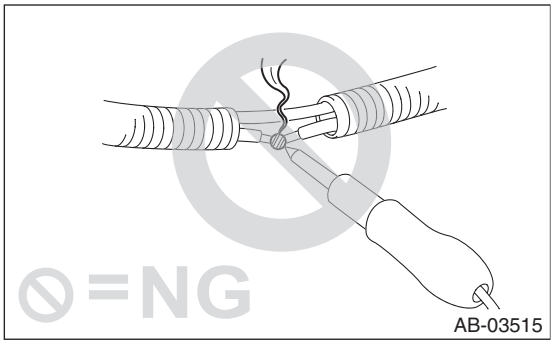
10.CURTAIN AIRBAG SENSOR

CAUTION:
Do not reuse mounting bolts and nuts.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

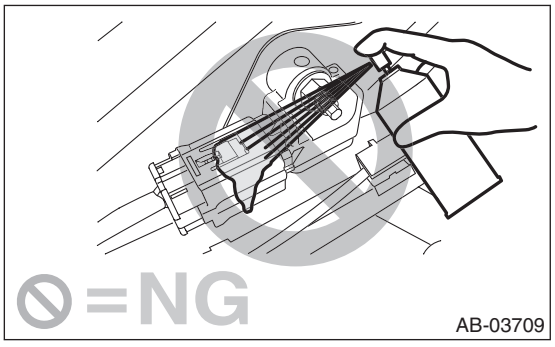


11.STEERING ROLL CONNECTOR



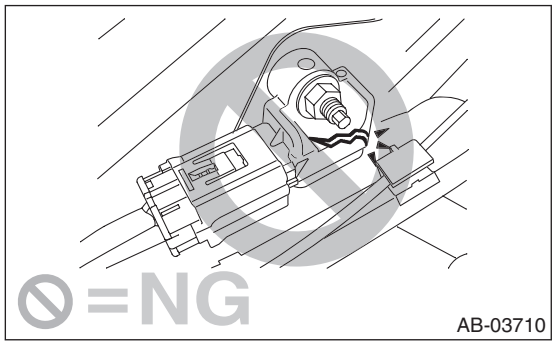
B: CAUTION

1. BEFORE STARTING ALL WORKS

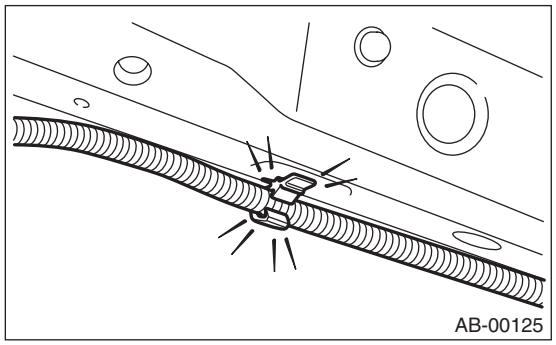


• The airbag system is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds or more before starting the service of airbag system.
• When servicing a vehicle, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 60 seconds or more before starting work.
• If the airbag warning light illuminates, check or repair the vehicle immediately to prevent it from airbag system malfunction.
• Do not allow water or oil to come in contact with the connector terminals. Also, do not touch the connector terminals directly.

• If damage, open circuit or rust is found on airbag system wiring harness, do not repair the harness. Always replace the faulty harness with a new genuine part.

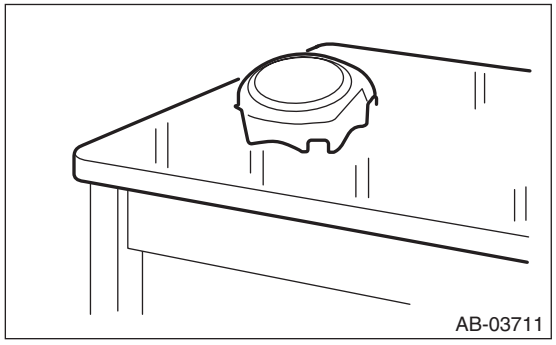


• When painting or performing sheet metal work on the front part of the vehicle, including the front wheel apron, front fender and radiator panel side, remove the front sub sensors and wiring harness of airbag system.
• When painting or performing sheet metal work on the side of the vehicle, including the side sill, center pillar and front and rear doors, remove the front door impact sensor, side airbag sensors, curtain airbag sensor and wiring harness of the airbag system.

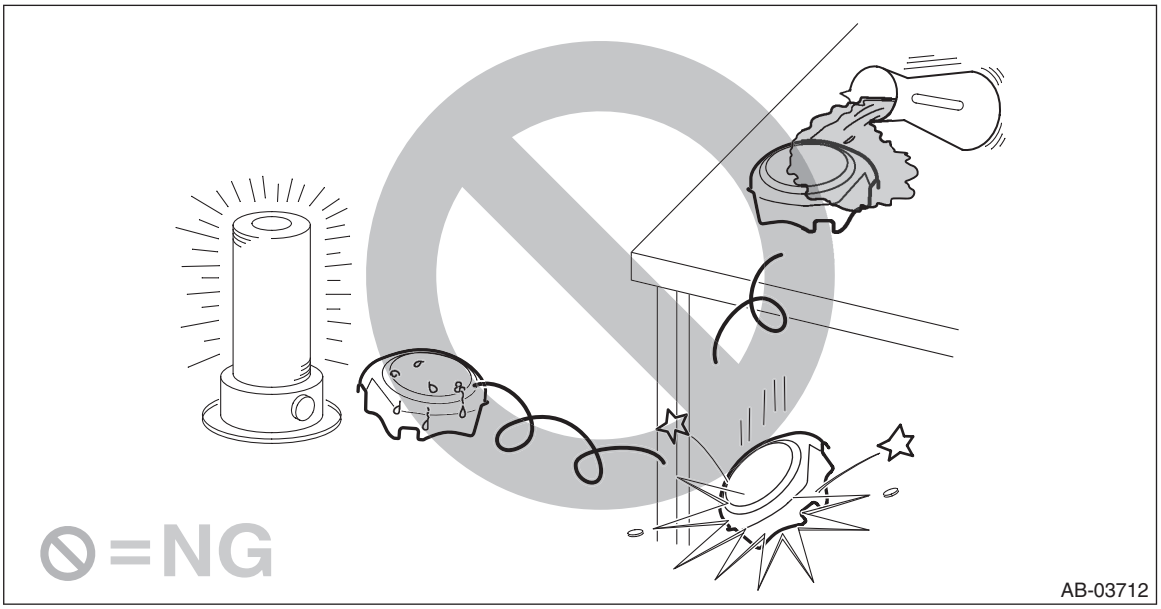


• When attaching the steering wheel and steering roll connector, be sure to adjust the steering roll connector.

2. BEFORE STARTING PARTS REPLACEMENT

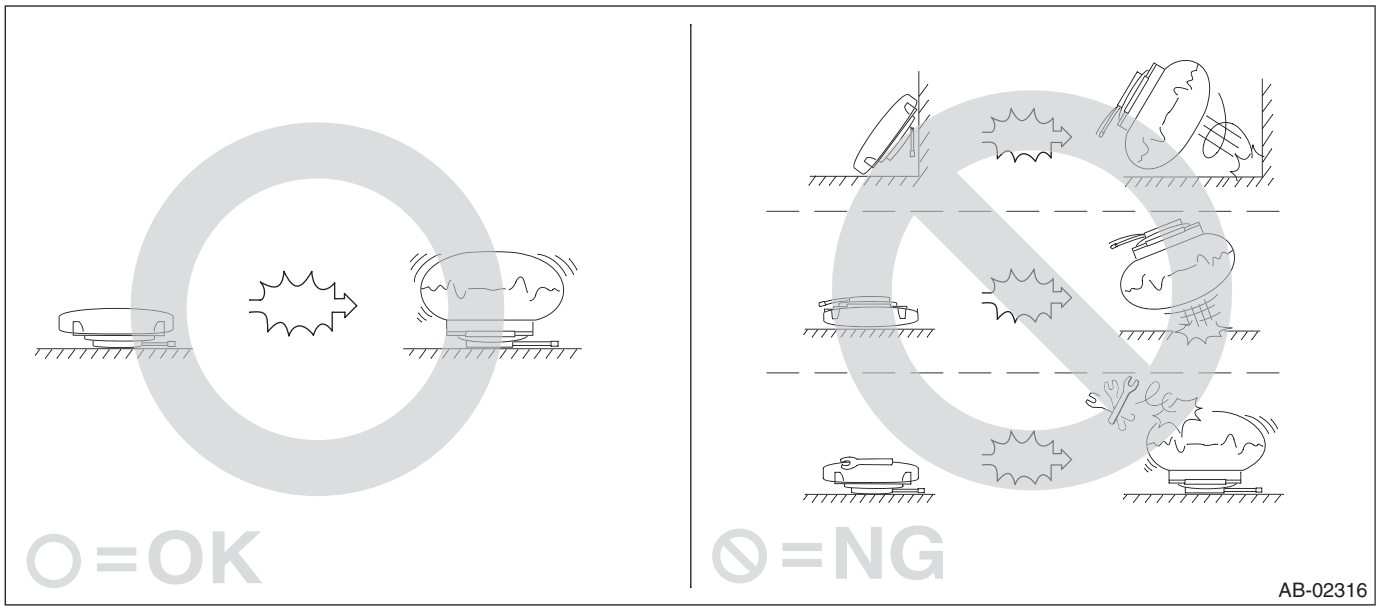


• If airbag sensors, airbag module, airbag control module, pretensioners and harnesses are deformed or damaged, replace with new parts.

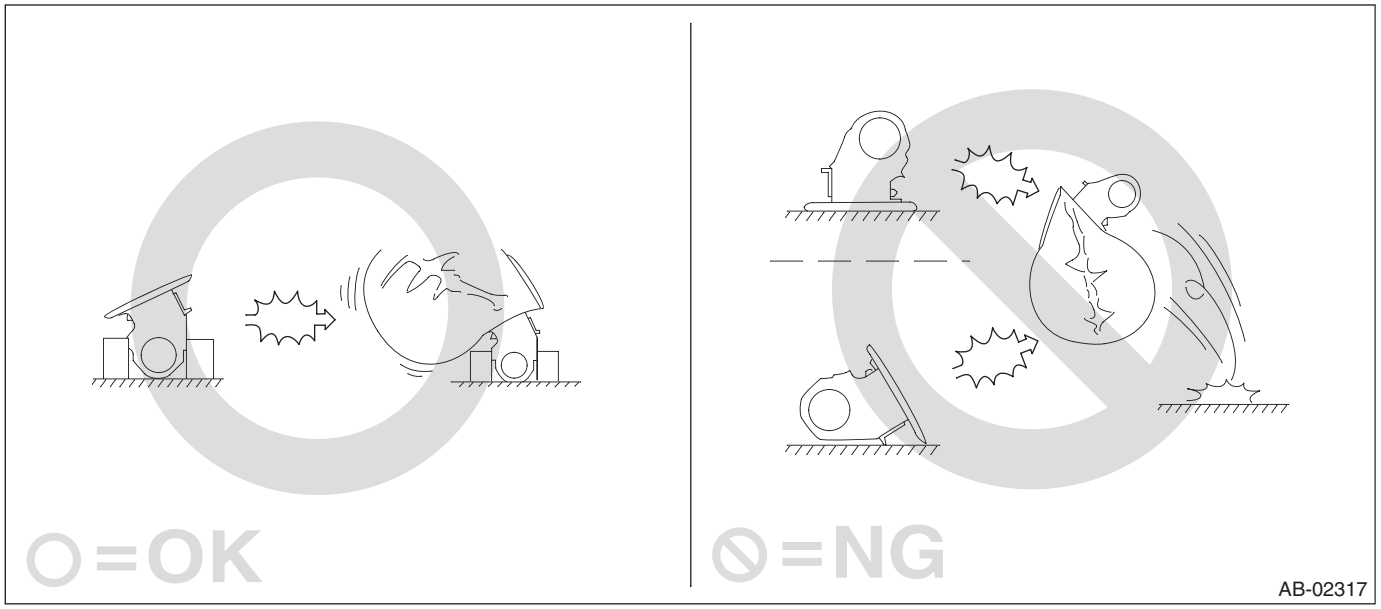


• Install the wiring harness securely with the specified clips to avoid interference or tangled with other parts.

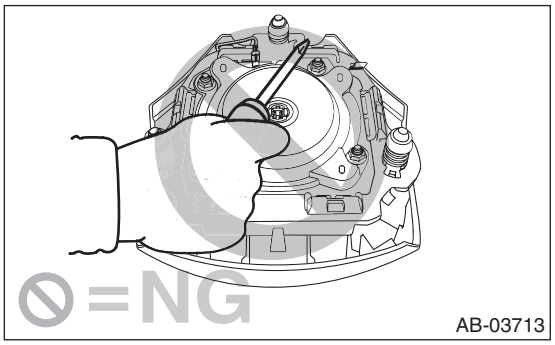
• Do not use the airbag or pretensioner parts from other vehicles. Always replace the defective parts with new parts.
• Never reuse any activated airbag module and pretensioner.
• Do not discard undeployed airbag or pretensioner.
• When airbag control module, front sub sensor, front door impact sensor, side airbag sensors and curtain airbag sensor are removed, do not reuse those bolts and nuts. Always replace with the specified new bolts and nuts.
• When attaching the steering wheel and steering roll connector, be sure to adjust the steering roll connector.
• After removing each parts of the airbag system, keep them with the pad side facing upward on a dry, clean and flat surface away from heat, light sources, moisture and dust.



• Do not drop any airbag component, store them under high temperature of 85°C (185°F) or more, or let water, oil or grease get on them; the internal parts may be damaged or the reliability may be greatly lowered.

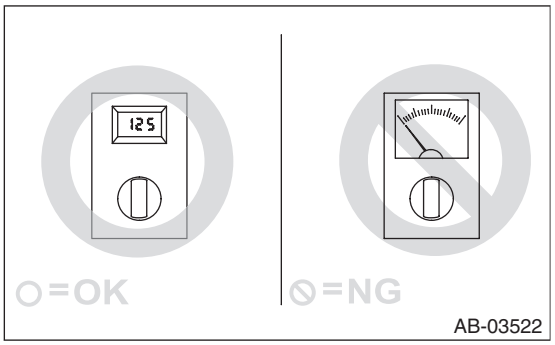


• When storing a removed airbag module, do not place it with the pad side facing downward. Do not place any objects on the airbag module. Do not pile up the airbag module. If the pad of the airbag module is in contact with other objects, it may cause a serious accident if the airbag accidentally operates.

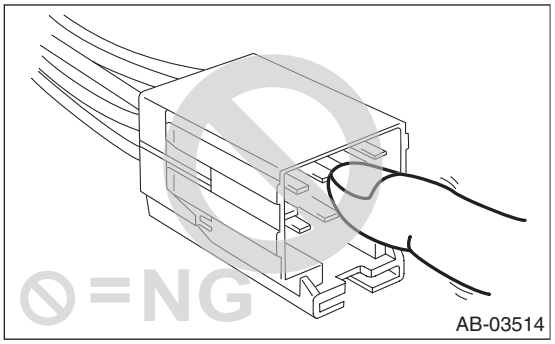


• Driver's airbag module

- Passenger's airbag module, side airbag module and seat cushion airbag module

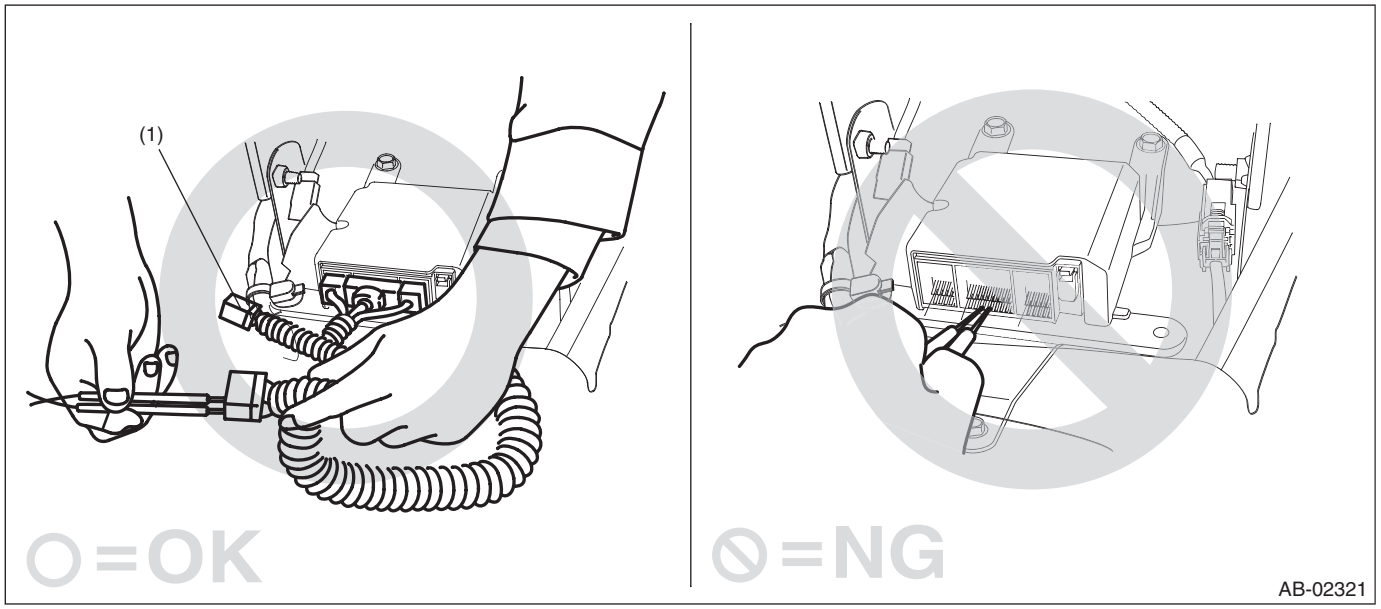


- Do not disassemble driver's airbag module, seat cushion airbag module, passenger's airbag module, side airbag modules, curtain airbag module or pretensioner.

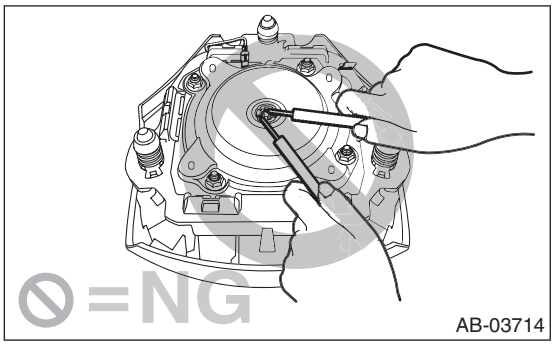


- The removed front seat with airbag module must be kept at least 200 mm (8 in) away from walls and other objects.

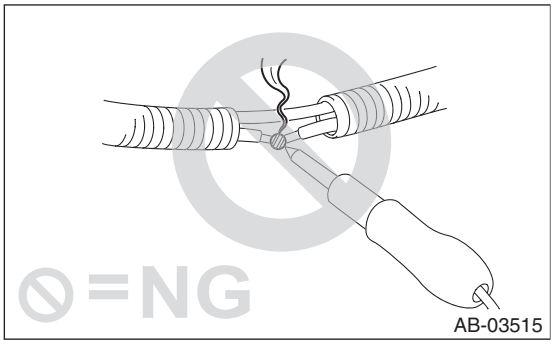
3. BEFORE STARTING TROUBLESHOOTING



• Even if any part must be replaced as the result of troubleshooting, do not use an airbag part or pretensioner part from other vehicles. Always replace the defective parts with new parts.
• When checking the airbag system, be sure to use a digital circuit tester. Use of an analog circuit tester may cause the airbag to activate erroneously due to a minimal current inside tester.

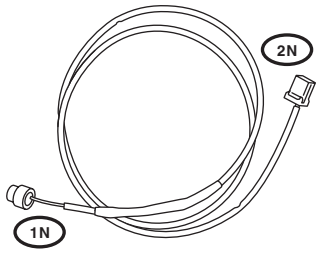


• Do not allow water or oil to come in contact with the connector terminals. Also, do not touch the connector terminals directly.

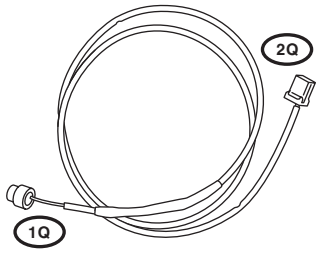


• When checking, use a test harness (1). Damage to connector terminal causes malfunction. Do not directly put the tester probe on airbag connector terminal.

• Do not check continuity of the driver's airbag module, seat cushion airbag module, passenger's airbag module, side airbag module, curtain airbag module or pretensioner.

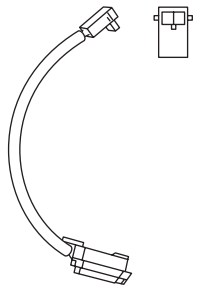


• If damage, open circuit or rust is found on airbag system wiring harness, do not repair the harness. Always replace the faulty harness with a new genuine part.



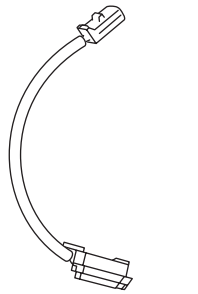
C: PREPARATION TOOL

1. SPECIAL TOOL



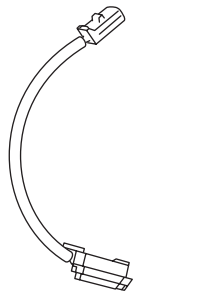
• TEST HARNESS N

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299SA000	98299SA000	TEST HARNESS N	Used for unit inspection of steering roll connector.



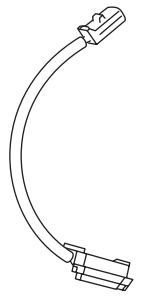
• TEST HARNESS Q

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299SA040	98299SA040	TEST HARNESS Q	Used for unit inspection of steering roll connector.



- TEST HARNESS ADAPTER D

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299SA010	98299SA010	TEST HARNESS ADAPTER D	• Used for operation process of curtain airbag module. • Used together with AIRBAG DEPLOYMENT TOOL. (98299PA030)



- TEST HARNESS ADAPTER AM

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299FJ000	98299FJ000	TEST HARNESS ADAPTER AM	• Used for operation process of passenger's airbag module. • Used together with AIRBAG DEPLOYMENT TOOL. (98299PA030)

- TEST HARNESS ADAPTER AU

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299AL000	98299AL000 (Newly adopted tool)	TEST HARNESS ADAPTER AU	• Used for operation process of seat cushion airbag module. • Used together with AIRBAG DEPLOYMENT TOOL. (98299PA030)

- TEST HARNESS ADAPTER AR

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299CA000	98299CA000	TEST HARNESS ADAPTER AR	• Used for operation process of side airbag module. • Used together with AIRBAG DEPLOYMENT TOOL. (98299PA030)

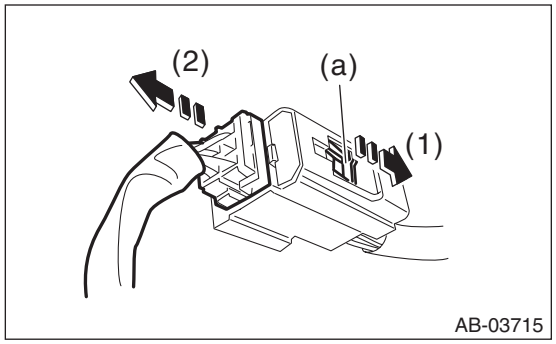
- AIRBAG DEPLOYMENT TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299PA030	98299PA030	AIRBAG DEPLOYMENT TOOL	• Used for operation process of airbag module. • Used together with each test harness adapter.

2. GENERAL TOOL

TOOL NAME	REMARKS
Steering wheel puller	Used for removing and installing the steering wheel.
TORX® T40	Used for removing and installing the beam COMPL - steering.
Circuit tester	Used for measuring resistance and voltage.

2. Airbag Connector



A: PROCEDURE

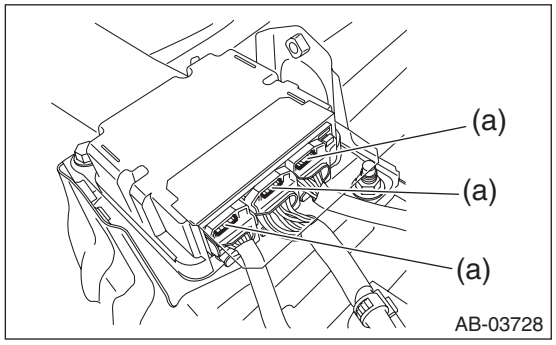
1. POWER SUPPLY

1) How to disconnect:

CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Pull the slide lock (a) in the direction of arrow.
(2) With the slide lock pulled, disconnect the connector.

2) How to connect:



CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

Holding the connector, push it in securely until a clicking sound is heard.

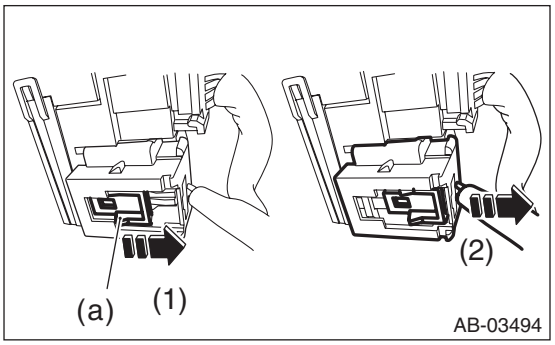
2. AIRBAG CONTROL MODULE

1) How to disconnect:

(1) Push the lock lever plate (a).
(2) While holding down the lock lever plate (a), disconnect the connector.

2) How to connect:

CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.



Holding the connector, push it in securely until a clicking sound is heard.

3. DRIVER'S AIRBAG MODULE (ROLL CONNECTOR)

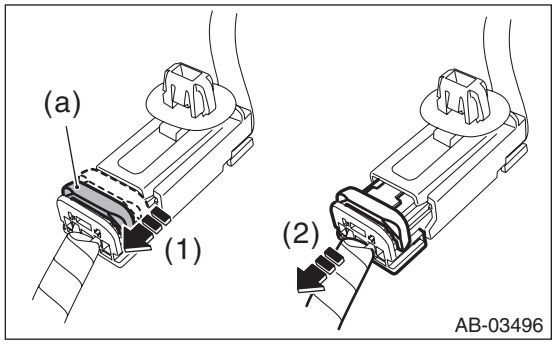
1) How to disconnect:

CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Pull the slide lock (a) in the direction of arrow.
(2) With the slide lock pulled, disconnect the connector.

2) How to connect:

CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.



Holding the connector, push it in securely until a clicking sound is heard.

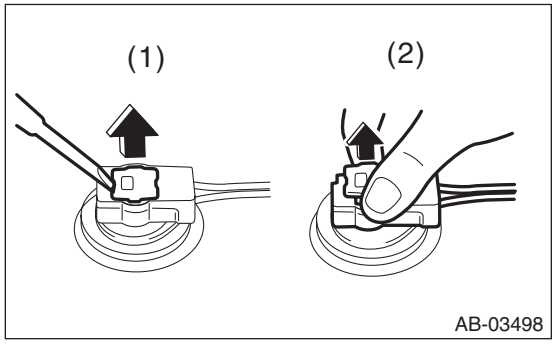
4. PASSENGER'S AIRBAG MODULE

1) How to disconnect:

CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Pull the slide lock (a) in the direction of arrow.
(2) With the slide lock pulled, disconnect the connector.

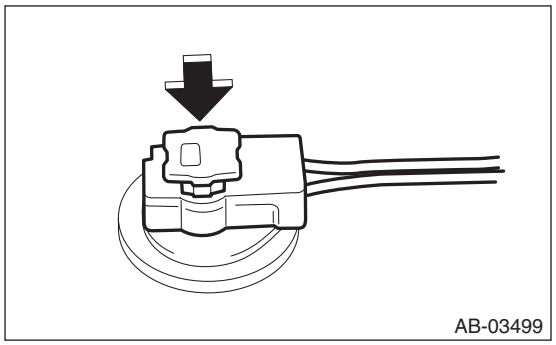
2) How to connect:



CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

Holding the connector, push it in securely until a clicking sound is heard.

5. DRIVER'S AIRBAG MODULE, CURTAIN AIRBAG MODULE AND PRETENSIONER

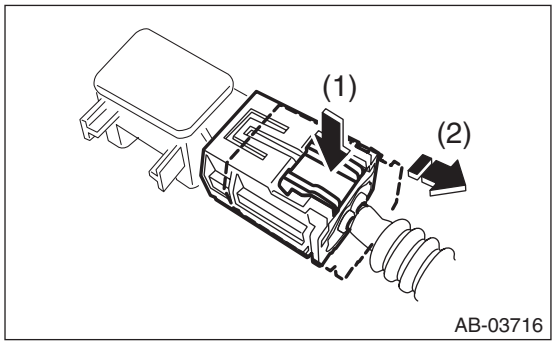


1) How to disconnect:

(1) Using a flat tip screwdriver, pry the push lock upward to unlock.
(2) Pull the connector to disconnect from the airbag module assembly or the retractor assembly.

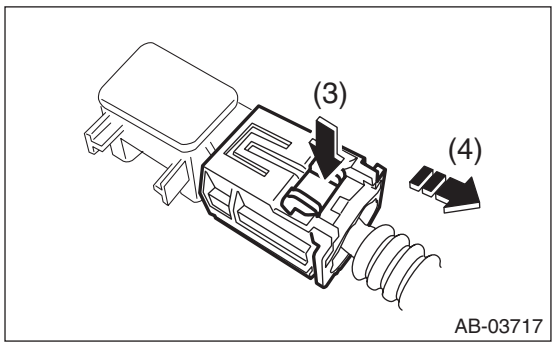
2) How to connect:

CAUTION:
• Be sure to insert the connector in until it is locked.
• Press in the push lock securely. Then pull it gently to make sure that it is locked.



Connect the connector in the reverse order of disconnecting. At this time, be sure to insert until a clicking sound is heard.

6. FRONT SUB SENSOR



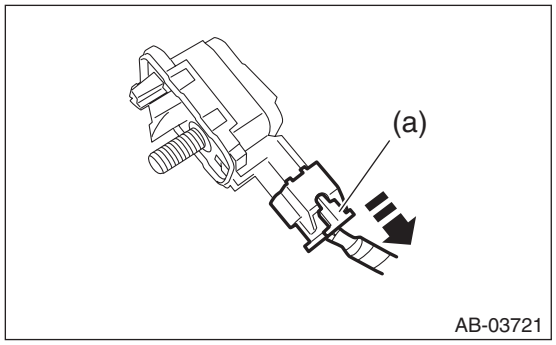
1) How to disconnect:

CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Push the lock arm.
(2) Holding outer part, pull it one step in the direction of arrow.

(3) Push the lock arm again.
(4) Holding outer part, pull it in the direction of arrow to disconnect the connector.

2) How to connect:



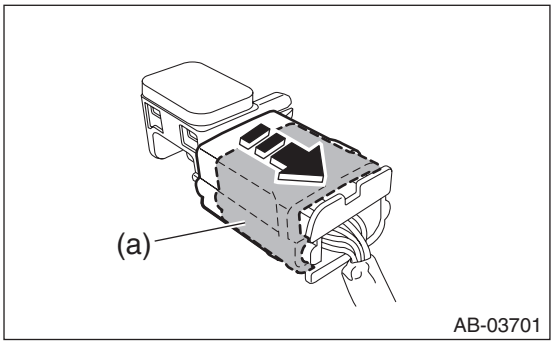
CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
Holding the connector, push it in securely until a clicking sound is heard.

7. FRONT DOOR IMPACT SENSOR

1) How to disconnect:

CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

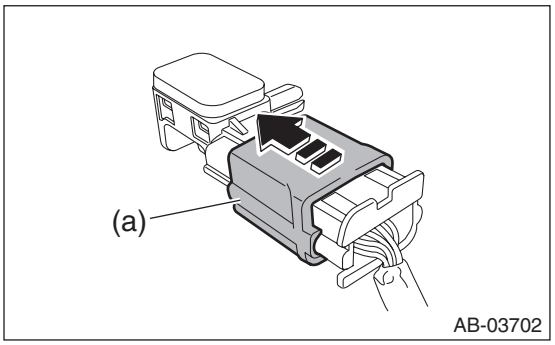
(1) Pull the lock arm (a).
(2) Hold the outer part of connector, and disconnect the connector.



2) How to connect:

CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
Insert the connector, and push the lock arm securely until a clicking sound is heard.

8. SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR

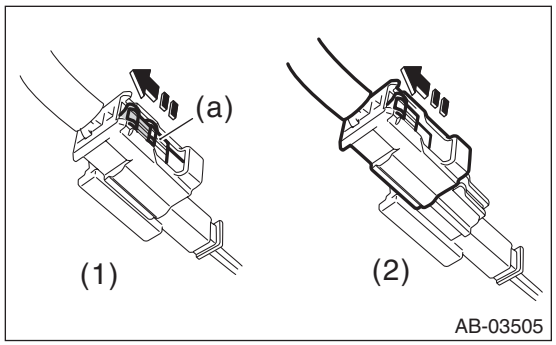


1) How to disconnect:

CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.
Holding outer part (a), pull it in the direction of arrow.

2) How to connect:

CAUTION:
• The outer part (a) returns to the original position. Therefore do not touch the outer part.
• Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
Holding the connector, push it in securely until a clicking sound is heard.



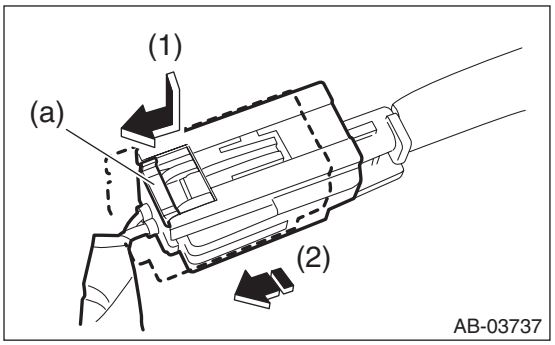
9. FRONT DOOR IMPACT SENSOR (BETWEEN AIRBAG REAR HARNESS AND FRONT DOOR HARNESS)

1) How to disconnect:

CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

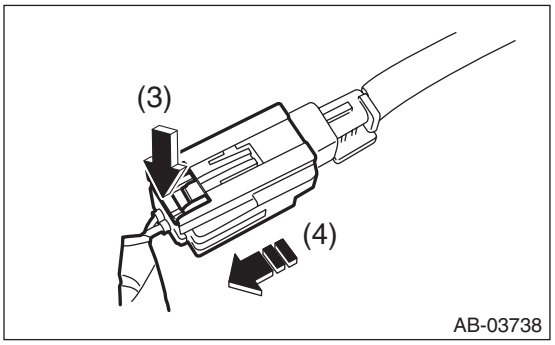
(1) Pull the slide lock (a) in the direction of arrow.
(2) With the slide lock pulled, disconnect the connector.

2) How to connect:



CAUTION:
• The outer part (a) returns to the original position. Therefore do not touch the outer part.
• Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
Holding the connector, push it in securely until a clicking sound is heard.

10.SIDE AIRBAG MODULE



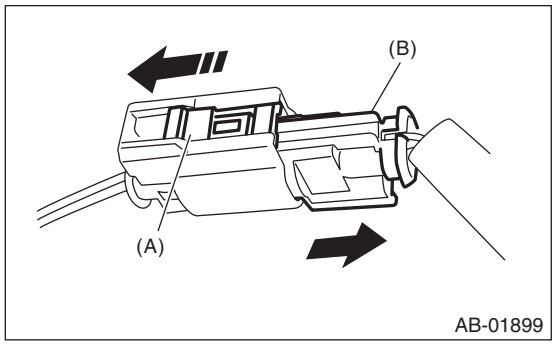
1) How to disconnect:

CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Pull the lock arm (a) one step while pushing.
(2) Holding outer part, pull it one step in the direction of arrow.

(3) Push the lock arm again.
(4) Holding outer part, pull it in the direction of arrow to disconnect the connector.

2) How to connect:



CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
Holding the connector, push it in securely until a clicking sound is heard.

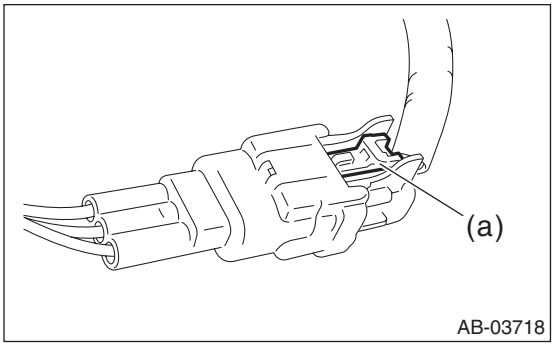
11.SEAT CUSHION AIRBAG MODULE AND BUCKLE SWITCH RH

1) How to disconnect:

CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Move the slide lock (A) in the direction of arrow and hold it.
(2) While holding the slide lock (A), pull the connector (B) in the direction of arrow.

2) How to connect:



CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

Holding the connector, push it in securely until a clicking sound is heard.

12.BELT TENSION SENSOR

1) How to disconnect:
Press the lock arm (a) and disconnect the connector.

CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

2) How to connect:
Holding the connector, push it in securely until a clicking sound is heard.

CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

13.OCCUPANT DETECTION SYSTEM (BETWEEN AIRBAG REAR HARNESS AND SEAT HARNESS)

Refer to “OCCUPANT DETECTION SYSTEM” section. <Ref. to OD(diag)-15, OCCUPANT DETECTION SYSTEM (BETWEEN AIRBAG REAR HARNESS AND SEAT HARNESS), PROCEDURE, Airbag Connector.>

3. Inspection Locations after a Collision

A: INSPECTION

If the vehicle is involved in a collision, even if it is a slight collision, be sure to check the following systems.

1. DRIVER'S AIRBAG MODULE ASSEMBLY

1) Frontal collision (driver's airbag module assembly activated)

1. Replace the following parts with new ones.
   - Airbag control module
   - Driver's airbag module
   - Passenger's airbag module (if deployed)
   - Driver's seat cushion airbag
   - Passenger's seat cushion airbag (if deployed)
   - Curtain airbag module (right and left / if deployed)
   - Seat belt pretensioner (right and left)
   - Front sub sensor (right and left)
   - Instrument panel assembly (because it is integrated with passenger's airbag module) (if passenger's airbag module is deployed)
   - Column ASSY - steering
   - Roll connector
   - Trim panel - roof assembly (if the curtain airbag is deployed)
   - Trim panel of each pillar (if the curtain airbag is deployed)
2. Visually inspect the following items and replace any damaged part with a new one.
   - Steering wheel
   - Beam COMPL - steering
   - Instrument panel harness and connector on body side

2) Frontal collision (driver's airbag module not activated)

Visually inspect the following items and replace any damaged or cracked part with a new one.
Specially inspect the damage of airbag module body, mounting bracket and harness connector.

- Driver's airbag module
- Passenger's airbag module
- Seat cushion airbag module
- Seat belt pretensioner (right and left)
- Front sub sensor (right and left)
- Instrument panel assembly (because it is integrated with passenger's airbag module)

3) No frontal collision

Visually inspect the airbag modules for damage or contamination and replace any faulty part with a new one.

2. PASSENGER'S AIRBAG MODULE

1) Frontal collision (passenger's airbag module activated)

1. Replace the following parts with new ones.
   - Airbag control module
   - Driver's airbag module
   - Seat cushion airbag module (right and left)
   - Passenger's airbag module
   - Curtain airbag module (right and left / if deployed)
   - Seat belt pretensioner (right and left)
   - Front sub sensor (right and left)
   - Instrument panel assembly (because it is integrated with passenger's airbag module)
   - Trim panel - roof assembly (if the curtain airbag is deployed)
   - Trim panel of each pillar (if the curtain airbag is deployed)
2. Visually inspect the following items and replace any damaged part with a new one.
   - Beam COMPL - steering
   - Instrument panel harness and connector on body side

2) Frontal collision (passenger's airbag module not activated)

Visually inspect the following items and replace any damaged or cracked part with a new one.
Specially inspect the damage of airbag module body, mounting bracket and harness connector.

- Driver's airbag module
- Driver's seat cushion airbag
- Passenger's seat cushion airbag (if deployed)
- Passenger's airbag module
- Seat belt pretensioner (right and left)
- Front sub sensor (right and left)
- Instrument panel assembly (because it is integrated with passenger's airbag module)

3) No frontal collision

Visually inspect the airbag modules for damage or contamination and replace any faulty part with a new one.

3. SEAT CUSHION AIRBAG MODULE

1) Frontal collision (seat cushion airbag module activated)

1. Replace the following parts with new ones.
   - Frame assembly - front seat cushion (driver's seat side only)
   - Panel - front seat (driver's seat side only)
   - Seat cushion pad and frame assembly (passenger's seat side only) (When the passenger's seat cushion airbag is deployed)
   - Airbag control module
   - Driver's airbag module
   - Driver's seat cushion airbag
   - Passenger's seat cushion airbag (if deployed)
   - Passenger's airbag module
   - Curtain airbag module (right and left / if deployed)
   - Seat belt pretensioner (right and left)
   - Front sub sensor (right and left)
   - Column assembly - steering
   - Trim panel - roof assembly (if the curtain airbag is deployed)
   - Trim panel of each pillar (if the curtain airbag is deployed)
2. Visually inspect the following items and replace any damaged part with a new one.
   - Side airbag module
   - Seat belt inner - front
   - Harness ASSY - power seat
   - Pad ASSY - front seat cushion
   - Cover COMPL - front seat cushion
   - Seat heater module - front seat cushion
   - Headrest assembly
   - Bushing - lock headrest
   - Slide rail assembly - OUT
   - Slide rail assembly - INN
   - Seat cushion airbag harness and connector on body side

2) Frontal collision (seat cushion airbag module not activated)

Visually inspect the following items and replace any damaged or cracked part with a new one.
Specially inspect the damage of airbag module body, mounting bracket and harness connector.

- Driver's airbag module
- Seat cushion airbag module
- Passenger's airbag module
- Seat belt pretensioner (right and left)
- Front sub sensor (right and left)
- Instrument panel assembly (because it is integrated with passenger's airbag module)

3) No frontal collision

Visually inspect the airbag modules for damage or contamination and replace any faulty part with a new one.

4. SIDE AIRBAG MODULE

1) Side impact (side airbag module activated)

1. Replace the following parts with new ones.
   - Airbag control module
   - Seat cushion airbag module (collision side)
   - Front door impact sensor (collision side)
   - Seat belt pretensioner (collision side / if deployed)
   - Side airbag module (collision side)
   - Side airbag sensor (collision side)
   - Curtain airbag module (collision side)
   - Curtain airbag sensor (collision side)
   - Pad assembly - front seat backrest (collision side)
   - Frame assembly - front seat cushion (collision side)
   - Frame assembly - front seat backrest (collision side)
   - Cover COMPL - front seat backrest (collision side)
   - Trim panel - roof assembly (collision side)
   - Trim panel for each pillar (collision side)
2. Visually inspect the following items and replace any damaged part (collision side) with a new one.
   - Headrest assembly
   - Bushing - lock headrest
   - Slide rail assembly - OUT
   - Slide rail assembly - INN
   - Cover - hinge front seat
   - Knob - lifter
   - Lever - reclining
   - Side airbag harness and connector on body side

2) Side impact (side airbag module not activated)

Visually inspect the following items and replace any damaged or cracked part (collision side) with a new one.
Specially inspect the damage of airbag module body, mounting bracket and harness connector.

- Pad assembly - front seat backrest
- Frame assembly - front backrest
- Cover COMPL - front backrest
- Front door impact sensor
- Side airbag module
- Side airbag sensor
- Curtain airbag module
- Curtain airbag sensor

3) No side impact

Visually inspect the airbag modules for contamination and replace any faulty part with a new one.

5. CURTAIN AIRBAG MODULE

1) Side impact or roll over (curtain airbag module activated)

1. Replace the following parts with new ones.
   - Airbag control module
   - Seat cushion airbag module (collision side)
   - Curtain airbag module (operating side)
   - Seat belt pretensioner (if deployed)
   - Front door impact sensor (operating side)
   - Side airbag sensor (operating side)
   - Curtain airbag sensor (operating side)
   - Pad assembly - front seat backrest (collision side)
   - Frame assembly - front seat cushion (collision side)
   - Frame assembly - front seat backrest (collision side)
   - Cover COMPL - front seat backrest (collision side)
   - Trim panel - roof assembly (operating side)
   - Trim panel for each pillar (operating side)
2. Visually inspect the following items and replace any damaged part (collision side) with a new one.
   - Assist rail - front and rear
   - Bracket - assist rail front and rear
   - Curtain airbag harness and connector on body side

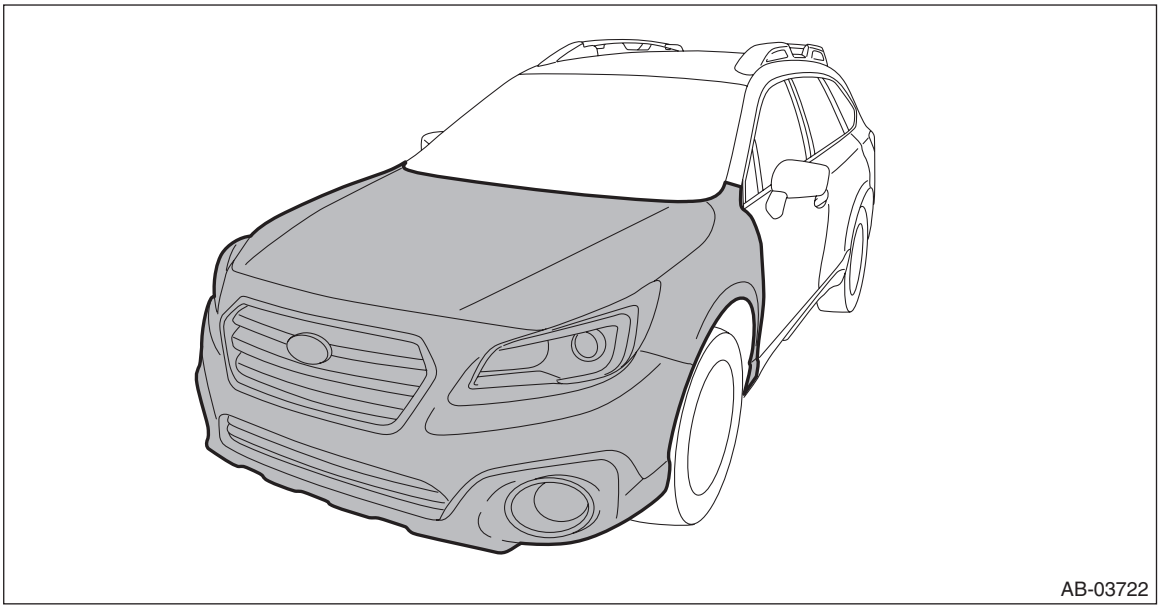
2) Side impact (curtain airbag module not activated)

Visually inspect the following items and replace any damaged or cracked part (collision side) with a new one.
Specially inspect the damage of airbag module body, mounting bracket and harness connector.

- Trim panel - roof assembly
- Trim panel for each pillar
- Curtain airbag module
- Front door impact sensor
- Side airbag sensor
- Curtain airbag sensor

3) No side impact

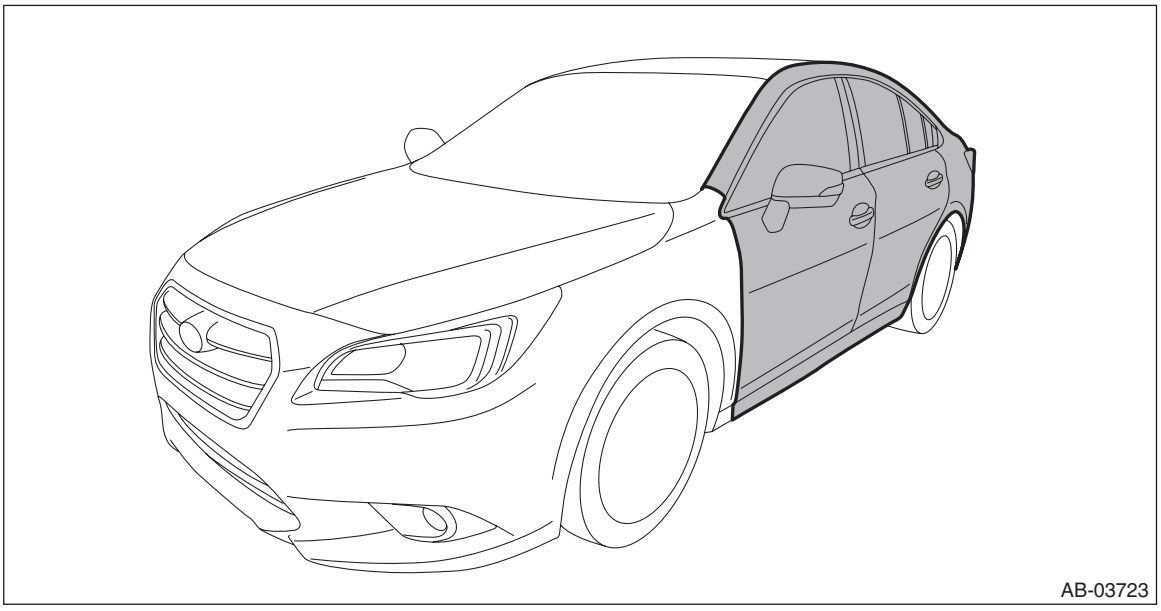
Visually inspect the airbag covers for damage or contamination and replace any faulty part with a new one.



6. AIRBAG CONTROL MODULE

Check for the following, and replace the damaged parts with new parts.

- Control module is cracked or deformed.
- Mounting bracket is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Driver’s airbag module has been activated.
- Passenger’s airbag module has been activated.
- Seat cushion airbag module has been activated.
- Side airbag module has been activated.
- Curtain airbag module has been activated.
- Seat belt pretensioner has been activated.



7. FRONT SUB SENSOR

If the section of vehicle as shown in the figure is damaged, check the following items and replace the damaged parts with new parts.

- Front sub sensor is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Driver's airbag module, passenger's airbag module or seat cushion airbag module has been activated.

8. FRONT DOOR IMPACT SENSOR, SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR

- Front door impact sensor, side airbag sensor and curtain airbag sensor are cracked or deformed.
- Connector is scratched, cracked or deformed.
- Side airbag module or curtain airbag module has been activated. (Operating side)
- Front door is dented or deformed. (Operating side)

9. ROLL CONNECTOR

Check for the following, and replace the damaged parts such as cracks, deformation, etc. with new parts.
- Combination switch
- Steering roll connector

10.COLUMN ASSEMBLY - STEERING & STEERING WHEEL

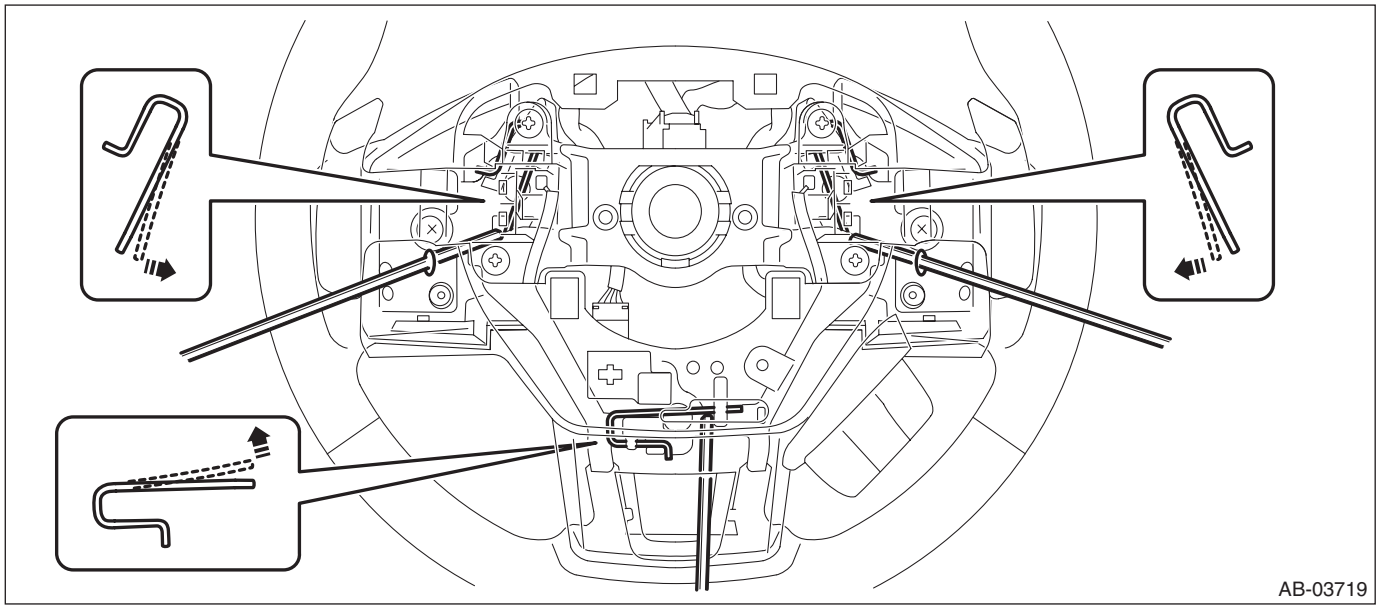
Check the following items, and if there is anything out of standard value, it is considered to be damaged. If so, replace it with a new part. <Ref. to PS-22, INSPECTION, Steering Column.>

11.PASSENGER'S SEAT

Check for the following, and replace the damaged parts with new parts.
- Body or bracket of the seat belt inner - front is scratched, cracked or deformed.
- Frame assembly - front backrest is cracked or deformed.
- Headrest assembly for deformation or play
- If the cover - front cushion and the cover COMPL - front backrest is damaged or frayed, replace the cover with a new part.
- If the cover - front cushion and the seat heater are replaced, replace the cover hang wire with a new part.

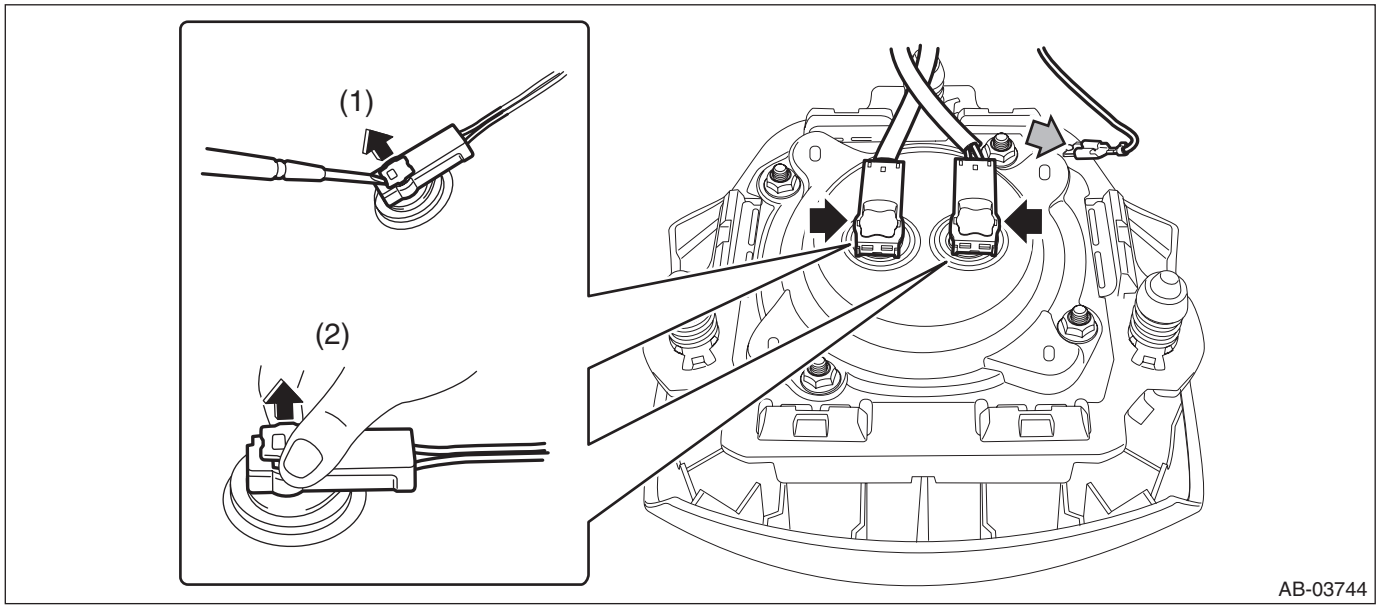
CAUTION:
If any of the following applies, replace the pad assembly - front seat cushion & frame assembly - front cushion as a unit. Do not disassemble.
- **The frame assembly - front cushion or the pad assembly - front seat cushion is cracked or deformed.**
- **Scratches, cracks, or deformation found on the occupant detection system sensor mat or occupant detection control module, or attachment brackets of the control module.**
- **Harness and/or connector is cracked, deformed or open. Harness wire is exposed.**

12.INSPECTION OF OTHER PARTS



Check for the following parts, and replace the damaged parts with new parts.
1) Steering wheel and column assembly - steering
Check the column assembly - steering for mounting conditions and deflection of front and rear, upward and downward directions, and deflection of front and rear direction with tilt lever released. (After a collision, absorbing part of the column assembly - steering may have been operated.)
2) Check the direct type connector of driver's airbag module, curtain airbag module, pretensioner, etc. for damage, and also check each harness for pinch and connector damage. Replace the main harness as a unit if damage is found.
3) Check the seat cushion, backrest, slide rail and headrest for installation condition and looseness.
4) If any break or fray is found in the cover COMPL - front backrest of the driver's seat or passenger's seat, the side airbag system may not operate normally. In this case, replace the cover COMPL - front backrest with a new part.
5) For the passenger's seat, replace the frame assembly - front cushion with a new part if the frame assembly - front cushion is deformed or cracked.
6) If there are tears or loosening in the seat cover COMPL - front seat on the passenger's side, it may interfere with the proper operation of the occupant detection system. Replace the cover - front cushion with a new part.
7) When the passenger's seat cover COMPL - front seat has been removed or replaced, make sure that the occupant detection system operates normally.
8) Use the Subaru Select Monitor to check whether the passenger's seat belt buckle switch is operating normally.
9) If the securing clip mounting area of curtain airbag module or the bracket - assist rail is deformed or cracked, replace the defective part.

4. Driver's Airbag Module



A: REMOVAL

CAUTION:
Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-10, CAUTION, General Description.>

1) Position the front wheels straight ahead.
2) Turn the ignition switch to OFF.
3) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Remove the driver's airbag module.
   (1) Using a hexagon wrench etc. wrapped by protective tape, insert the snap pins and release the locks (three locations).

   (2) Disconnect the horn harness and airbag connector, and remove the driver's airbag module. <Ref. to AB-19, DRIVER'S AIRBAG MODULE, CURTAIN AIRBAG MODULE AND PRETENSIONER, PROCEDURE, Airbag Connector.>

B: INSTALLATION

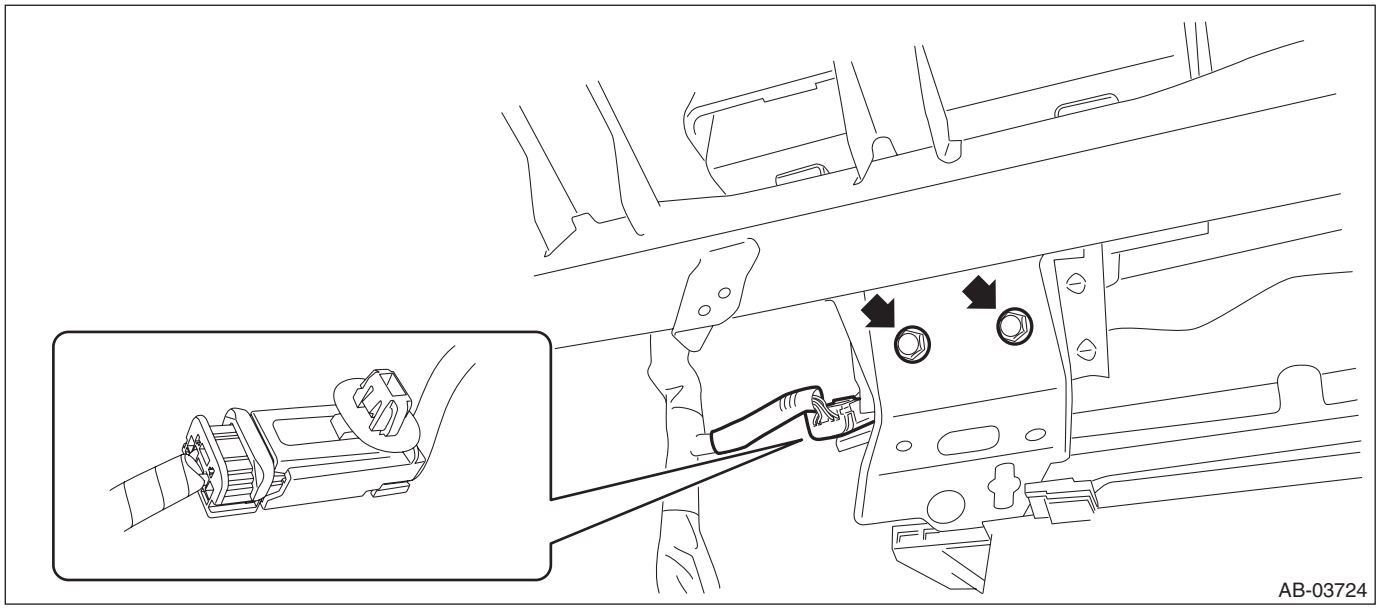
CAUTION:
• Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-10, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
1) Before installation, inspect the following items and replace any faulty part with a new one.
- Airbag module is cracked or deformed.
- Harness and/or connector is cracked, deformed or open.
- Harness wire is exposed.
- The steering wheel is in the way, making it difficult to install the airbag module.
- The clearance between the driver's airbag module and steering wheel is not constant.

2) Install the driver's airbag module.
(1) Connect the airbag connector to the airbag module securely.

CAUTION:
- **Be sure to insert the connector in until it is locked.**
- **Press in the push lock securely. Then pull it gently to make sure that it is locked.**

(2) Connect the horn harness.
(3) Press in the locks (three positions) to install the airbag module.

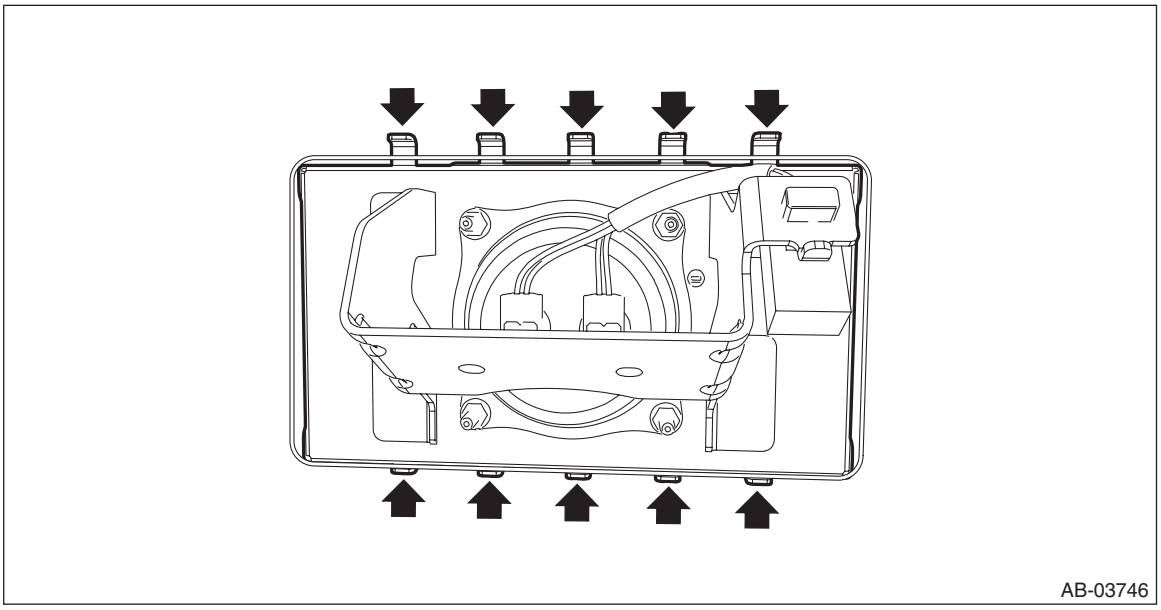
CAUTION:
Make sure that the airbag module locks (three positions) are securely locked.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



5. Passenger's Airbag Module

A: REMOVAL

CAUTION:
Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-10, CAUTION, General Description.>
1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



NOTE:
- On CVT models, shift the select lever into "N" before disconnecting the battery ground cable.
- For models with power seat, remove the slide rail installing bolt before disconnecting the ground terminal from the battery sensor.

3) Remove the front seats. <Ref. to SE-11, REMOVAL, Front Seat.>
4) Remove the ornament panel - console, cover assembly - front, console box assembly and the panel center LWR. <Ref. to EI-80, REMOVAL, Console Box.>
5) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-74, REMOVAL, Instrument Panel Lower Cover.>
6) Remove the left and right grille speaker side and the trim panel - front pillar UPR. <Ref. to EI-96, REMOVAL, Upper Inner Trim.>
7) Remove the glove box assembly. <Ref. to EI-76, REMOVAL, Glove Box.>
8) Remove the center grille assembly. <Ref. to AC-89, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
9) Remove the heater control assembly. <Ref. to AC-44, REMOVAL, Control Panel.>
10) Remove the audio assembly or navigation assembly. <Ref. to ET-12, REMOVAL, Audio.>
11) Remove the pocket assembly - CTR. <Ref. to ET-44, REMOVAL, External Connection Terminal.>
12) Remove the panel - switch and combination meter assembly. <Ref. to IDI-11, REMOVAL, Combination Meter.>
13) Remove the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>
14) Disconnect the bolts and connectors of passenger's airbag module. <Ref. to AB-19, PASSENGER'S AIRBAG MODULE, PROCEDURE, Airbag Connector.>

15) Remove the column assembly - steering. <Ref. to PS-19, REMOVAL, Steering Column.>
16) Remove the cover side sill - front on the LH and RH sides. <Ref. to EI-92, REMOVAL, Lower Inner Trim.>
17) Remove the body side weather strip - flange front.
18) Remove the panel COMPL - instrument. <Ref. to EI-83, REMOVAL, Instrument Panel Assembly.>

19) Remove the claws, and remove the passenger's airbag module.

20) For handling of the removed airbag module, refer to "CAUTION". <Ref. to AB-10, CAUTION, General Description.>

B: INSTALLATION

CAUTION:
• Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-10, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
• When reusing the tether clip on the upper part of the trim panel - front pillar UPR, check that there is no damage to the tether clip. If the clip is damaged, its holding force is reduced and the trim panel - front pillar UPR may come off. Be sure to replace it with a new clip.

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Passenger's airbag lid (instrument panel surface) is cracked or deformed.
- Airbag module is cracked or deformed.
- Harness and/or connector is cracked, deformed or open.
- Harness wire is exposed.
- Mounting bracket is cracked or deformed.

2) Install the instrument panel assembly. <Ref. to EI-88, INSTALLATION, Instrument Panel Assembly.>
3) Install the cover side sill - front on the RH and LH sides.
4) Install the cover side sill - front INN on the RH and LH sides.
5) Install the column assembly - steering. <Ref. to PS-21, INSTALLATION, Steering Column.>
6) Install the keyless access CM.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

7) Install the combination meter assembly.
8) Install the pocket assembly - CTR.
9) Install the audio assembly or navigation assembly.
10) Install the heater control assembly.
11) Install the center grille assembly.
12) Install the panel center assembly.
13) Install the glove box assembly.
14) Install the trim panel - front pillar UPR on the RH and LH sides. <Ref. to EI-97, INSTALLATION, Upper Inner Trim.>
15) Install the grille speaker side on the RH and LH sides.

16) Install the panel - knee guard.

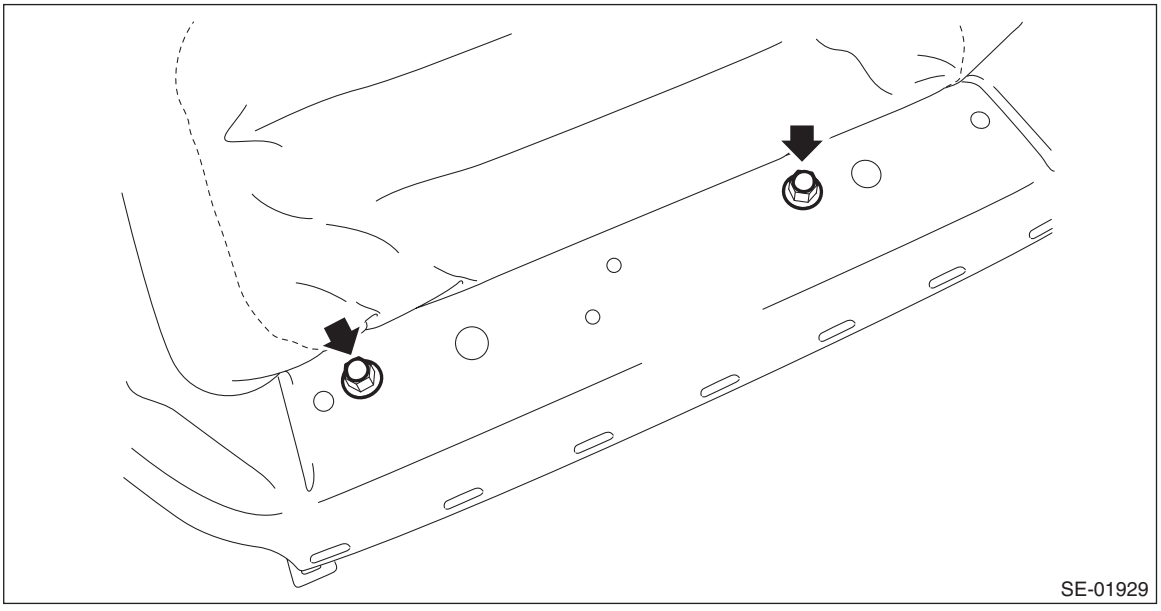
Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)
17) Install the panel - switch.
18) Install the cover assembly - instrument panel LWR driver.
19) Install the panel center LWR on the RH and LH sides.
20) Install the cover - shift lever and the console box assembly.

Tightening torque:
Console box assembly: 6.5 N·m (0.7 kgf-m, 4.8 ft-lb)
21) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

6. Seat Cushion Airbag Module

A: REMOVAL

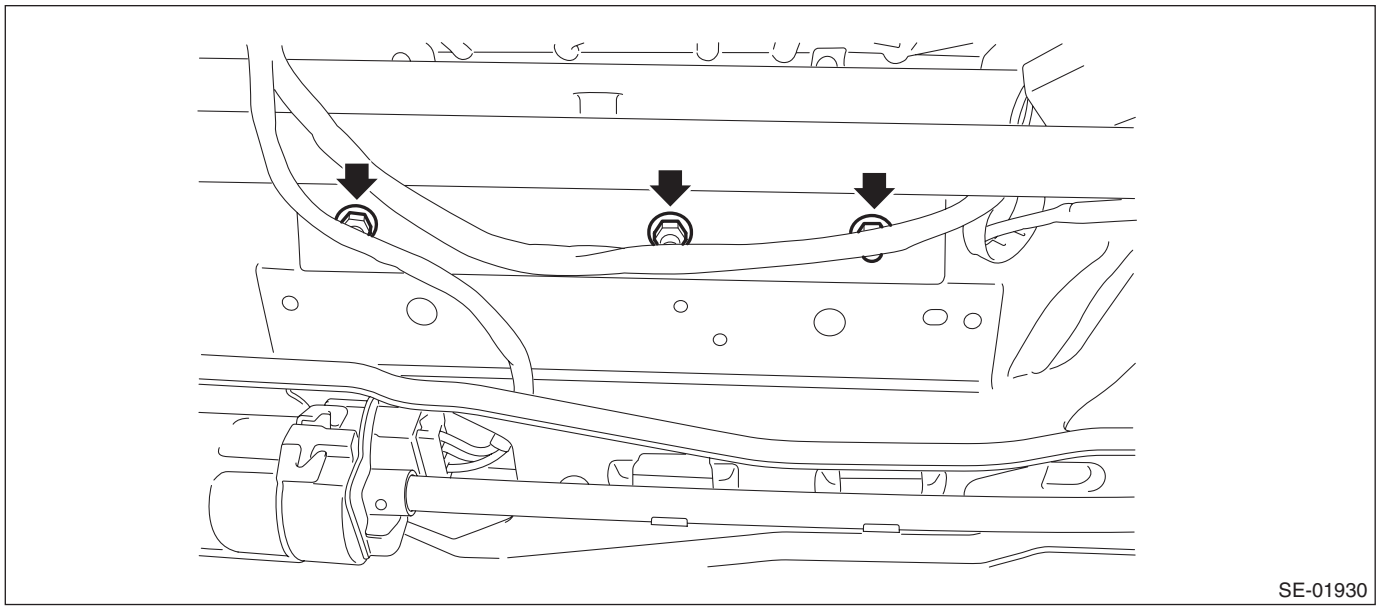
CAUTION:
Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-10, CAUTION, General Description.>
1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



NOTE:
For models with power seat, remove the slide rail installing bolt before disconnecting the ground terminal from the battery sensor.
3) Remove the front seats. <Ref. to SE-11, REMOVAL, Front Seat.>
4) Separate the backrest assembly and the seat cushion assembly. <Ref. to SE-12, DISASSEMBLY, Front Seat.>
5) Remove the seat cushion airbag module.

CAUTION:
• Passenger's seat cushion airbag module is integrated in the seat cushion pad & frame assembly. Do not remove it unless when discarding the seat cushion airbag module.
• If the protection felt for the seat cushion airbag module is broken or damaged, replace the seat cushion airbag module with a new part.

(1) Remove the hook, and remove the pad assembly - front seat cushion and the cover - front cushion.



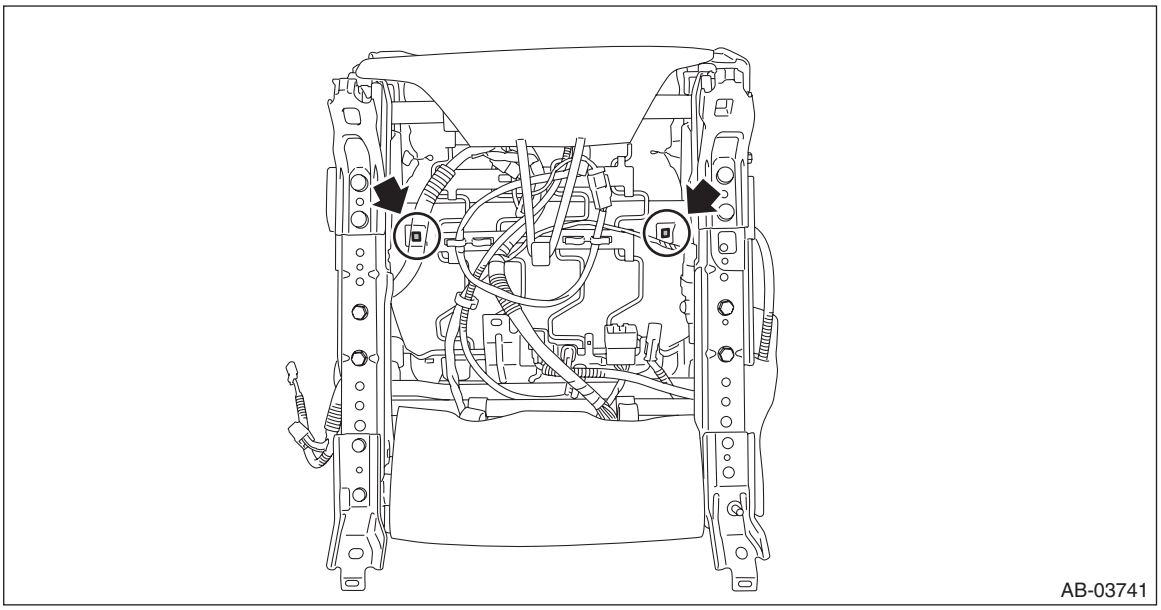
NOTE:
Turn over the rear side of the seat, and remove the hook on the front side of the seat cushion frame.

(2) Remove the hexagon cap nuts, and remove the power seat control module. (Model with power seats with memory function)

(3) Remove the nuts and then remove the seat cushion airbag module.

CAUTION:
Check that the seat cushion airbag connector clamp is removed.

B: INSTALLATION



CAUTION:
• Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-10, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
1) Before installation, inspect the following items and replace any faulty part with a new one.
• Airbag module is cracked or deformed.
• Frame assembly - front seat cushion is cracked or deformed.
• Harness and/or connector is cracked, deformed or open.
• Harness wire is exposed.
• Installation of seat cushion airbag module is difficult due to the condition of the frame assembly - front seat cushion.
2) Install the seat cushion airbag module.

CAUTION:
• Be careful that the end of airbag module is not turned over.
• Be sure to insert the connector in until it is locked.
• Press in the connector securely. Then pull it gently to make sure that it is locked.

Tightening torque:
6 N·m (0.6 kgf-m, 4.4 ft-lb)

3) Assemble the front seat. <Ref. to SE-25, ASSEMBLY, Front Seat.>

CAUTION:
• After assembling the seat cushion, make sure that the two-dimensional codes (two positions) attached on the seat cushion airbag module can be seen. If it is not assembled correctly, the seat cushion airbag may not operate properly.

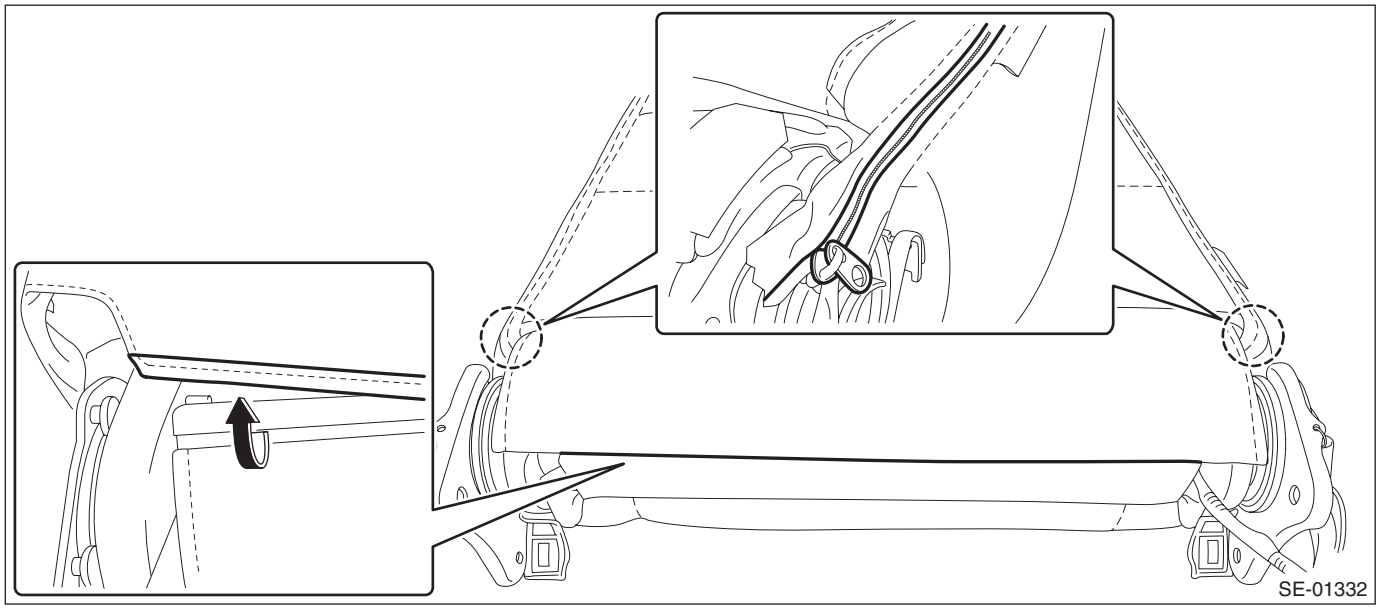
• After assembling the seat, operate the reclining and sliding mechanisms to check that the airbag harness is not caught.

4) Install the front seat assembly to the body. <Ref. to SE-12, INSTALLATION, Front Seat.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

7. Side Airbag Module

A: REMOVAL

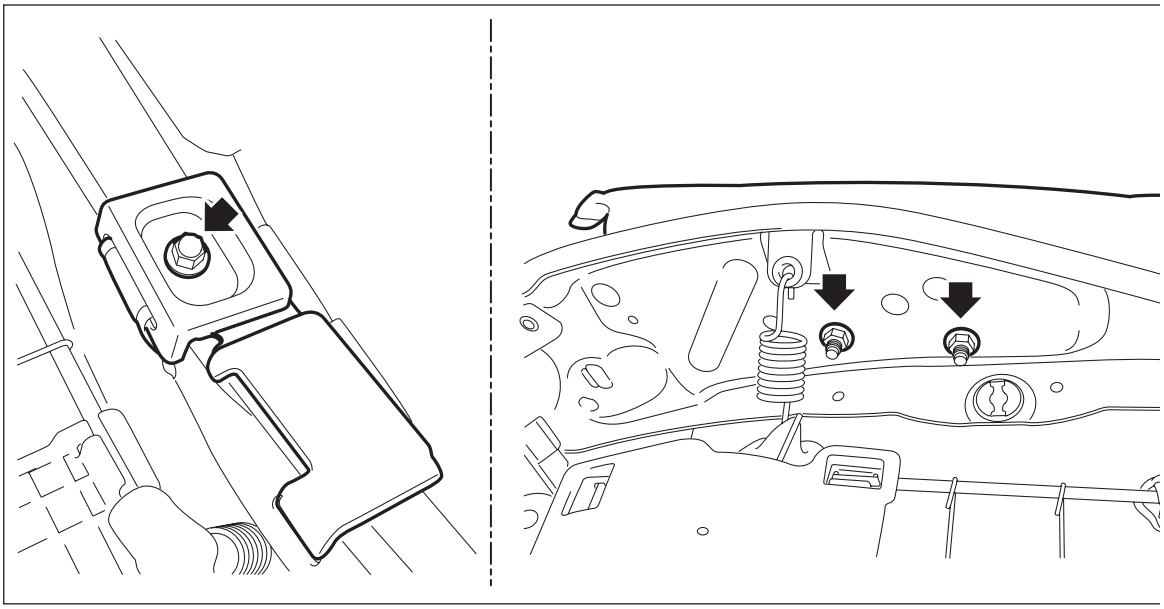
CAUTION:
Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-10, CAUTION, General Description.>



1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

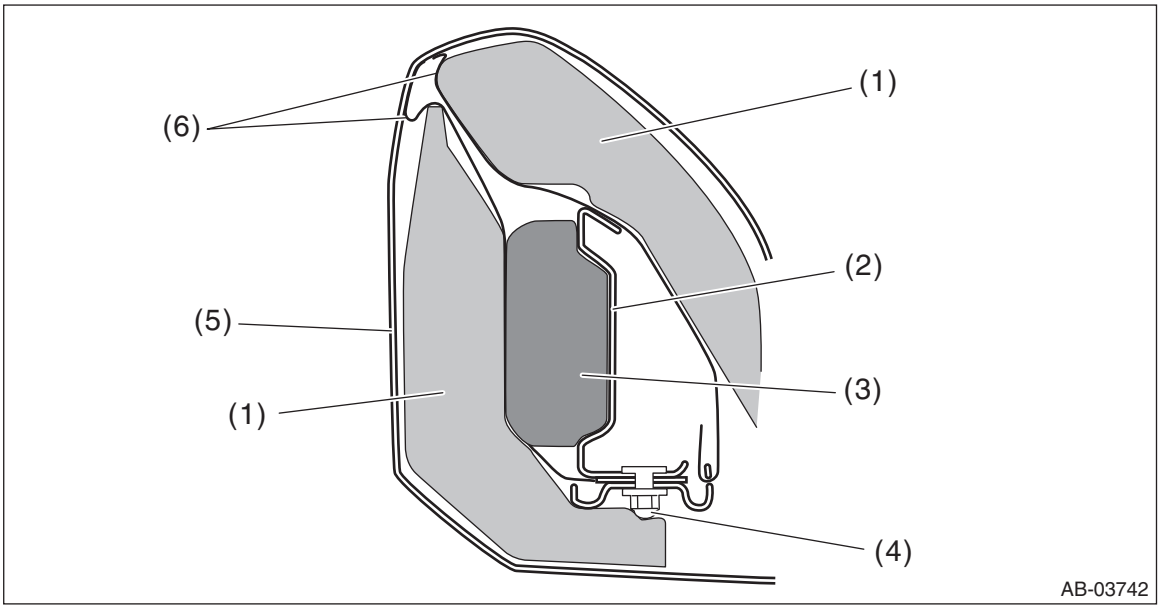
NOTE:
For models with power seat, remove the slide rail installing bolt before disconnecting the ground terminal from the battery sensor.

3) Remove the front seats. <Ref. to SE-11, REMOVAL, Front Seat.>
4) Separate the backrest assembly and the seat cushion assembly. <Ref. to SE-12, DISASSEMBLY, Front Seat.>
5) Remove the side airbag module.



CAUTION:
Do not open the protective cover of the side airbag module. If any damage is present in the protective cover or the cloth of side airbag module comes out from the protective cover slit, replace the side airbag module with a new part.

(1) Remove the plastic fastener at the back side (bottom) of backrest assembly.
(2) Open the fastener at the rear side of backrest assembly.



(3) Remove the hexagon cap nut and nuts.

(4) While taking care not to damage the airbag protective cover, remove the side airbag module.

B: INSTALLATION

CAUTION:
• Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-10, CAUTION, General Description.>
• Make sure that the side airbag module is installed as shown in the figure.

(1)	Pad ASSY - front seat backrest	(3)	Side airbag module	(5)	Cover COMPL - front backrest
(2)	Frame ASSY - front backrest	(4)	Hexagon cap nut	(6)	Side airbag guide cloth

• Be careful not to stain or damage the cover COMPL - front backrest during assembly.
• Do not reuse hog rings.
• Secure the hog ring using hog ring pliers.
• Install the hog rings to the specified points securely and make sure that there is no wrinkle or twisting on the cover COMPL - front backrest.

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Make sure that there is no foreign matter on side airbag module.
- Front seat, airbag module and mounting bracket are damaged or deformed.
- Harness and/or connector is cracked, deformed or open.
- Harness wire is exposed.

2) Install the side airbag module to the frame assembly - front backrest.

Tightening torque:
6 N·m (0.6 kgf-m, 4.4 ft-lb)

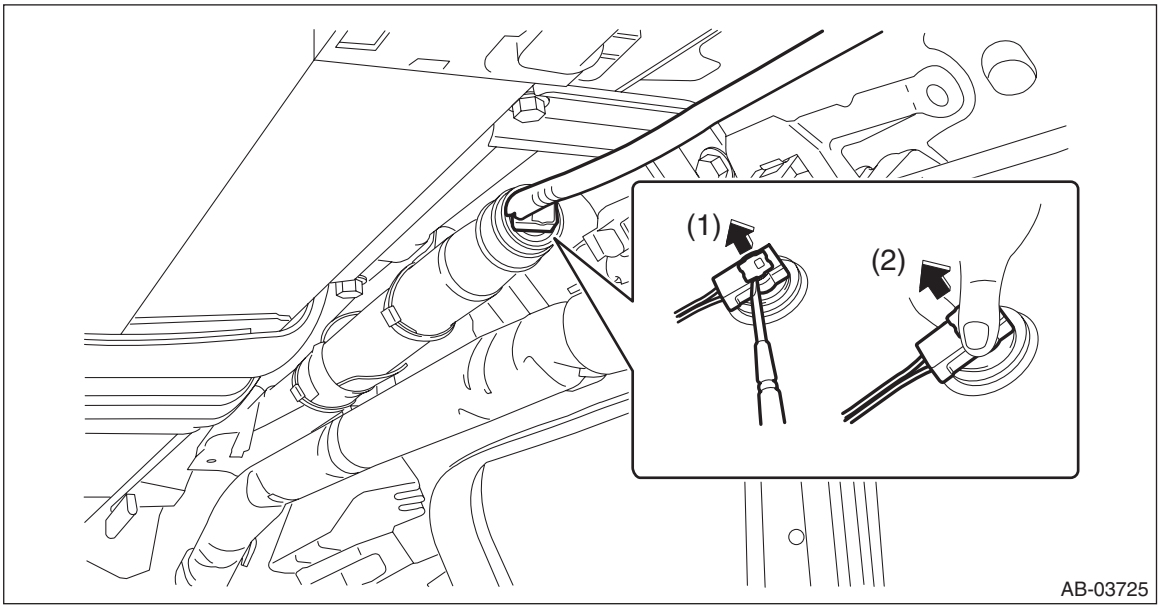
3) Assemble the front seat. <Ref. to SE-25, ASSEMBLY, Front Seat.>

CAUTION:
After restoring the seat, operate the reclining and sliding mechanisms to check that the airbag harness is not caught.

4) Install the front seat assembly to the body. <Ref. to SE-12, INSTALLATION, Front Seat.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

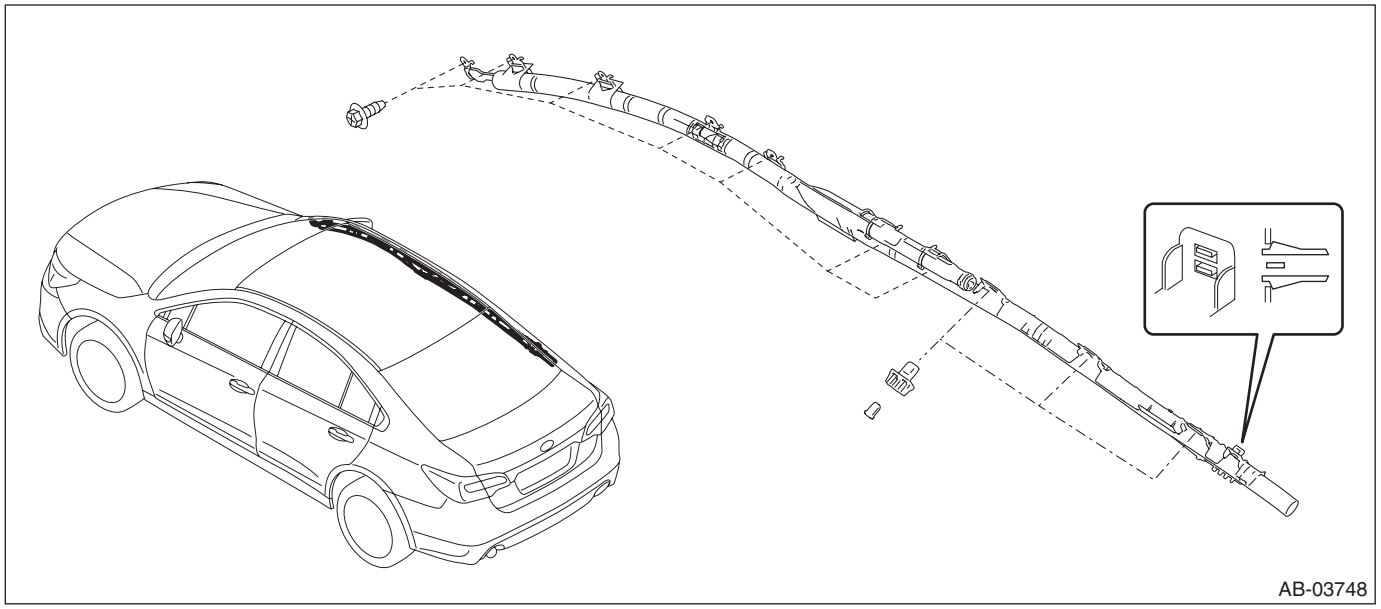
8. Curtain Airbag Module

A: REMOVAL



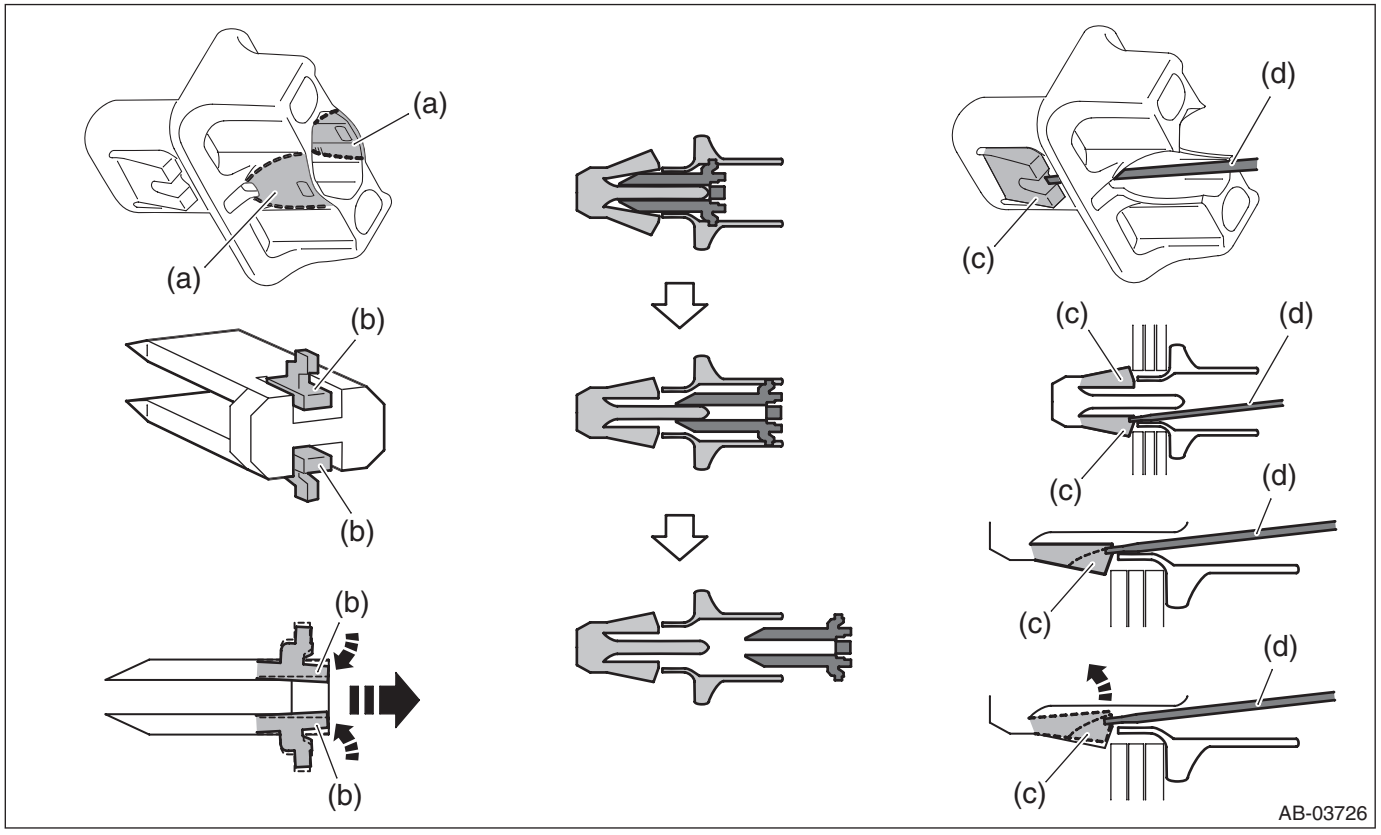
1. SEDAN MODEL

CAUTION:
Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-10, CAUTION, General Description.>
1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



NOTE:
On CVT models, shift the select lever into "N" before disconnecting the battery ground cable.
3) Remove the trim panel - roof assembly. <Ref. to EI-114, REMOVAL, Roof Trim.>
4) Remove the curtain airbag module.

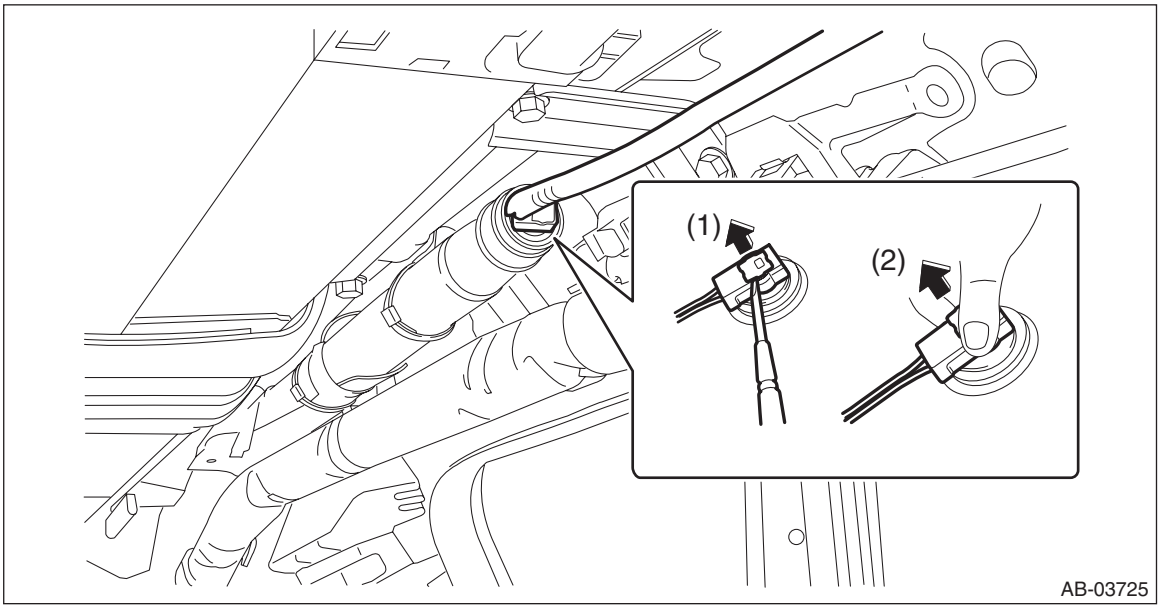
CAUTION:
- **Be careful not to damage the curtain airbag module during removal.**
- **Never open the curtain airbag module before activation. Never reuse the deployed curtain airbag module.**
- **Do not reuse the clip securing the curtain airbag module.**
- **Remove the modules in order starting from the vehicle front.**



(1) Disconnect the curtain airbag module connector. <Ref. to AB-19, DRIVER'S AIRBAG MODULE, CURTAIN AIRBAG MODULE AND PRETENSIONER, PROCEDURE, Airbag Connector.>

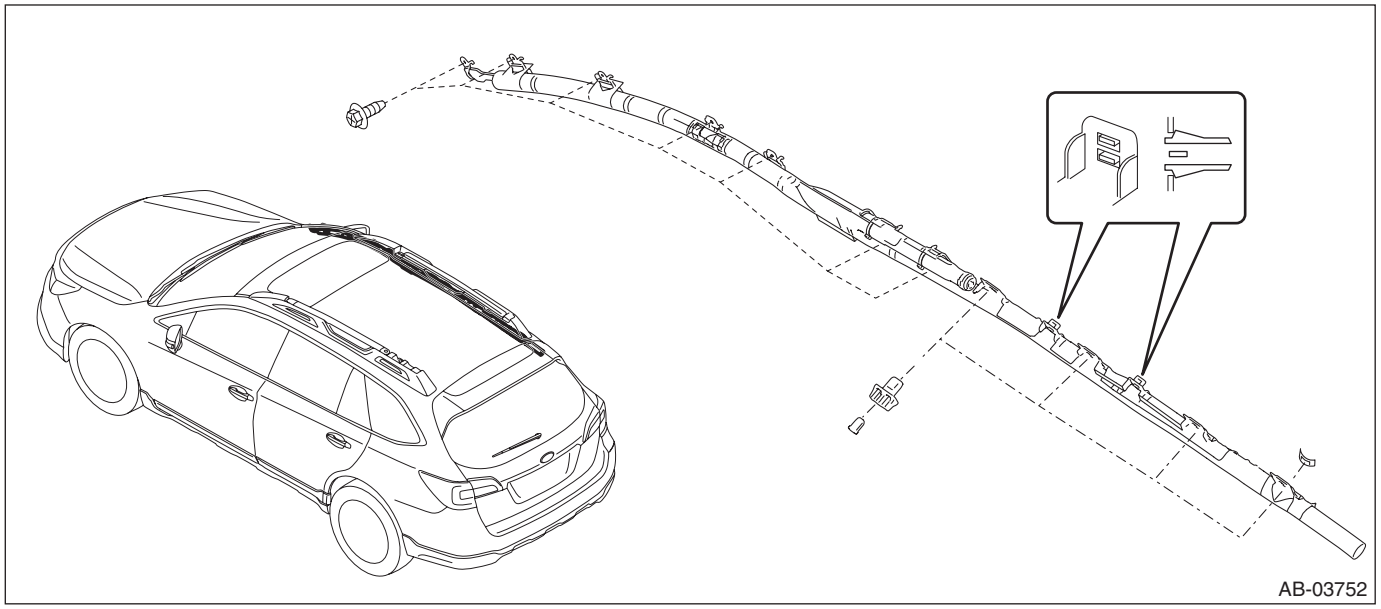
(2) Remove all the bolts and clips, and remove the curtain airbag module.

NOTE:
Remove the securing clip of curtain airbag module in the following procedures.
1. Using a pair of nippers, cut off the clip base (a).
2. Remove the clip - pin while holding the lock (b) with needle nose pliers.
3. Release the locks (c) of the clips - bushing at two locations at the top and bottom completely using thin flat head screwdriver (d), and remove the clip - bushing.



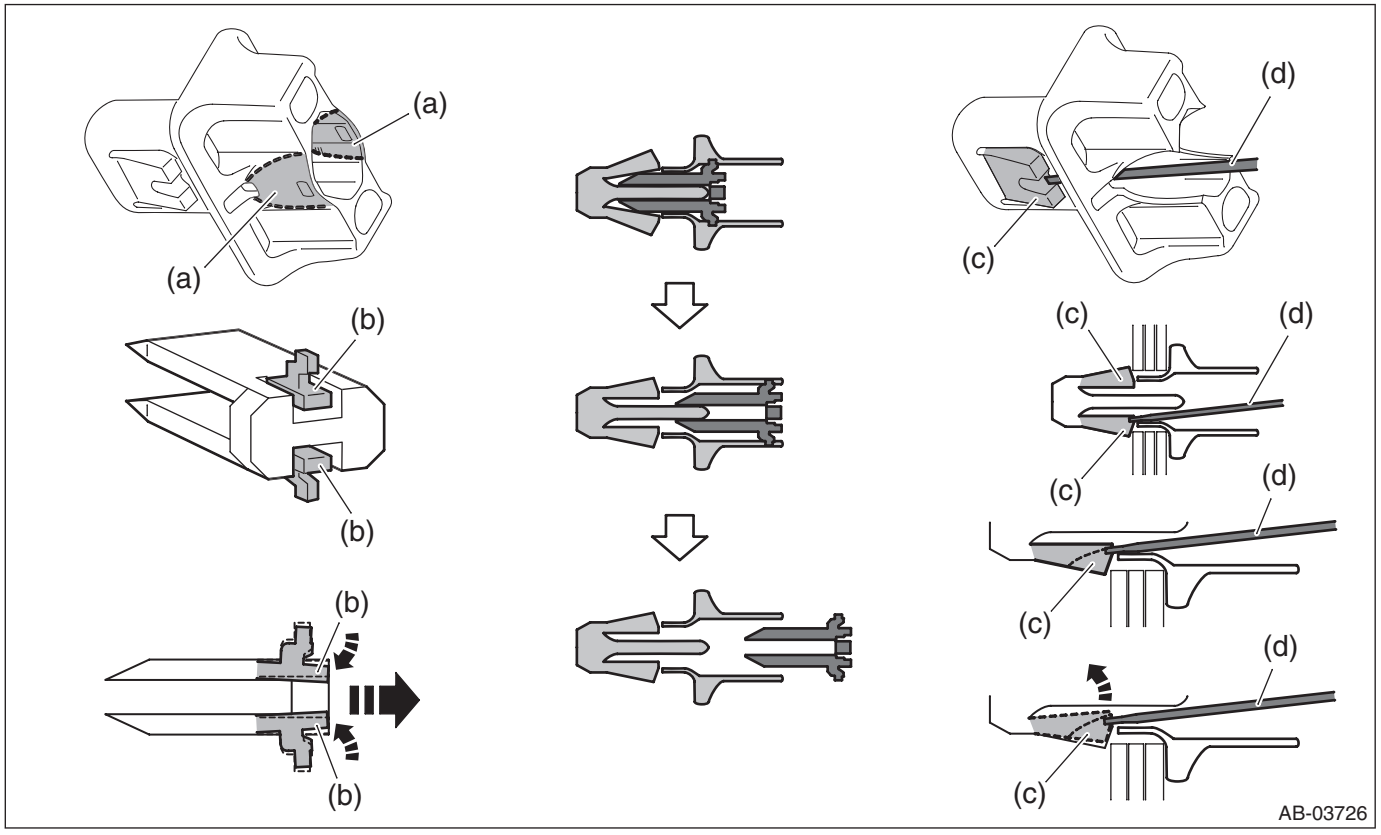
2. OUTBACK MODEL

CAUTION:
Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-10, CAUTION, General Description.>
1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



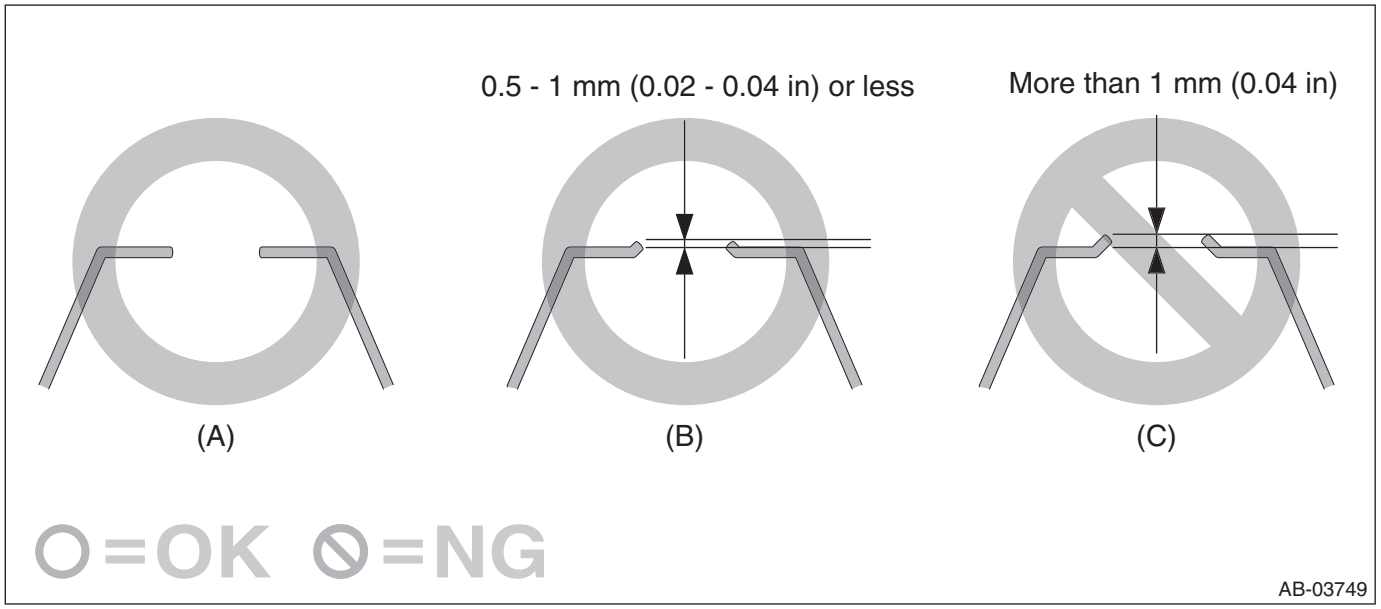
NOTE:
On CVT models, shift the select lever into "N" before disconnecting the battery ground cable.
3) Remove the trim panel - roof assembly. <Ref. to EI-114, REMOVAL, Roof Trim.>
4) Remove the curtain airbag module.

CAUTION:
- **Be careful not to damage the curtain airbag module during removal.**
- **Never open the curtain airbag module before activation. Never reuse the deployed curtain airbag module.**
- **Do not reuse the clip securing the curtain airbag module.**
- **Remove the modules in order starting from the vehicle front.**



(1) Disconnect the curtain airbag module connector. <Ref. to AB-19, DRIVER'S AIRBAG MODULE, CURTAIN AIRBAG MODULE AND PRETENSIONER, PROCEDURE, Airbag Connector.>

(2) Remove all the bolts and clips, and remove the curtain airbag module.

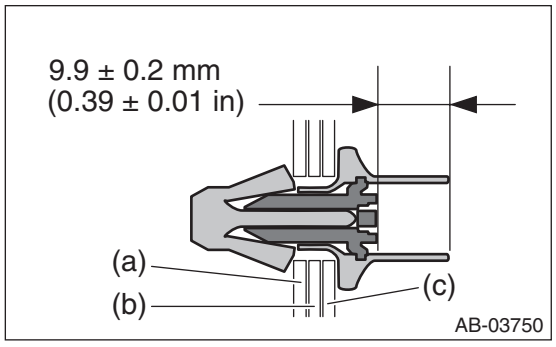


NOTE:
Remove the securing clip of curtain airbag module in the following procedures.
1. Using a pair of nippers, cut off the clip base (a).
2. Remove the clip - pin while holding the lock (b) with needle nose pliers.
3. Release the locks (c) of the clips - bushing at two locations at the top and bottom completely using thin flat head screwdriver (d), and remove the clip - bushing.

B: INSTALLATION

CAUTION:
• Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-10, CAUTION, General Description.>
• When installing the curtain airbag module, install a specified part at specified place.
• Be careful not to damage the curtain airbag module during installation.
• Never open the curtain airbag module before activation. Never reuse the deployed curtain airbag module.
• Make sure that there are no foreign matter on airbag module.
• Do not reuse the clip securing the curtain airbag module.
• If deformation or crack is found in the bracket - assist rail by visual check, replace the defective part.
• If deformation is found in the clip mounting holes of the side rail and rear quarter metal sections, repair or replace the defective part.

(A) If no deformation is found, install the curtain airbag module with a new securing clip.
(B) If deformation is 0.5 — 1 mm (0.02 — 0.04 in), correct the deformed section to be flat and install the curtain airbag module with a new securing clip.
(C) If deformation is 1 mm (0.04 in) or more, replace the deformed part together with the panel. Refer to the repair manual for body panel replacement.



• When reusing the tether clip on the upper part of the trim panel - front pillar UPR, check that there is no damage to the tether clip. If the clip is damaged, its holding force is reduced and the trim panel - front pillar UPR may come off. Be sure to replace it with a new clip.

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Airbag cover is scratched or torn.
- Harness and/or connector is cracked, deformed or open.
- Harness wire is exposed.
- Mounting bracket and securing clip are cracked or deformed.

2) Install the curtain airbag module.

CAUTION:
- **Be sure to insert the connector in until it is locked.**
- **Press in the push lock securely. Then pull it gently to make sure that it is locked.**
- **Do not reuse the clip securing the curtain airbag module.**
- **Install a new clip - bushing securely, and press the clip - pin securely into the clip - bushing.**

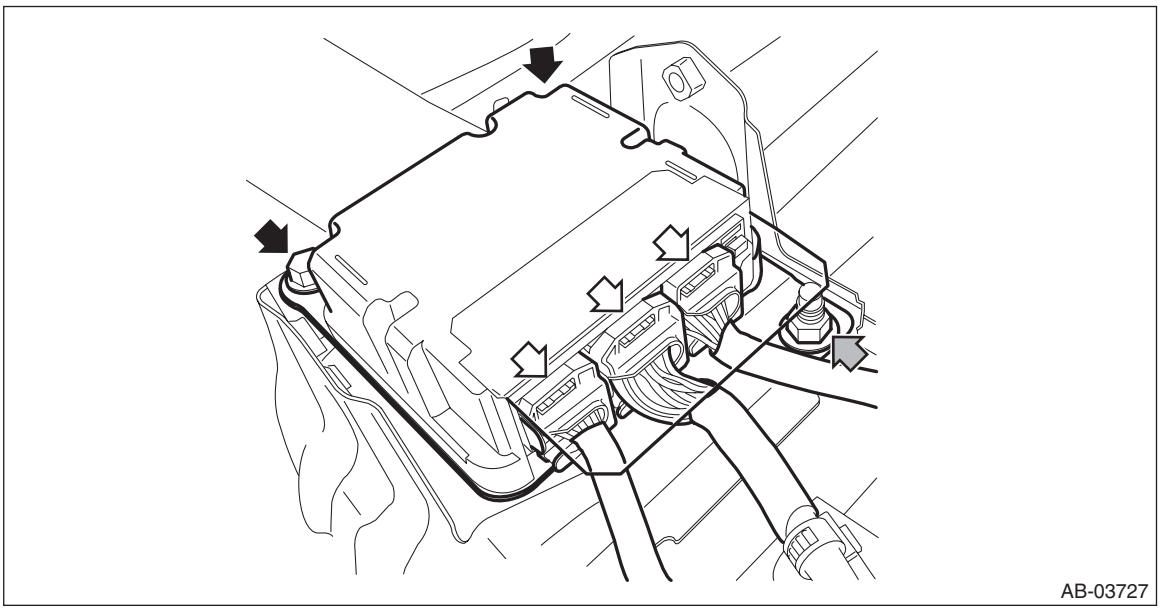
After pressing the clip - pin securely, make sure that the heights of clip - bushing top surface and the clip - pin top surface are 9.9±0.2 mm (0.39±0.01 in).

(a) Body panel
(b) Plastic cover or plastic spacer
(c) Airbag module tab portion

The plastic spacer is installed only to the rearmost position of OUTBACK model.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the trim panel - roof assembly. <Ref. to EI-119, INSTALLATION, Roof Trim.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



9. Airbag Control Module

A: REMOVAL

CAUTION:
- **Do not disassemble the airbag control module.**
- **If the airbag control module is deformed or if there is any trace of water on the module, replace the airbag control module with a new one.**
- **Do not drop the airbag control module.**
- **After removal, keep the airbag control module on a dry, clean surface away from moisture, heat and dust.**

1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

NOTE:
On CVT models, shift the select lever into “N” before disconnecting the battery ground cable.
3) Remove the cover - shift lever and the console box assembly. <Ref. to EI-80, REMOVAL, Console Box.>
4) Remove the airbag control module.
   (1) Disconnect the connector from airbag control module. <Ref. to AB-18, AIRBAG CONTROL MODULE, PROCEDURE, Airbag Connector.>
   (2) Remove the bolt and nuts and remove the airbag control module.

AB-03727

B: INSTALLATION

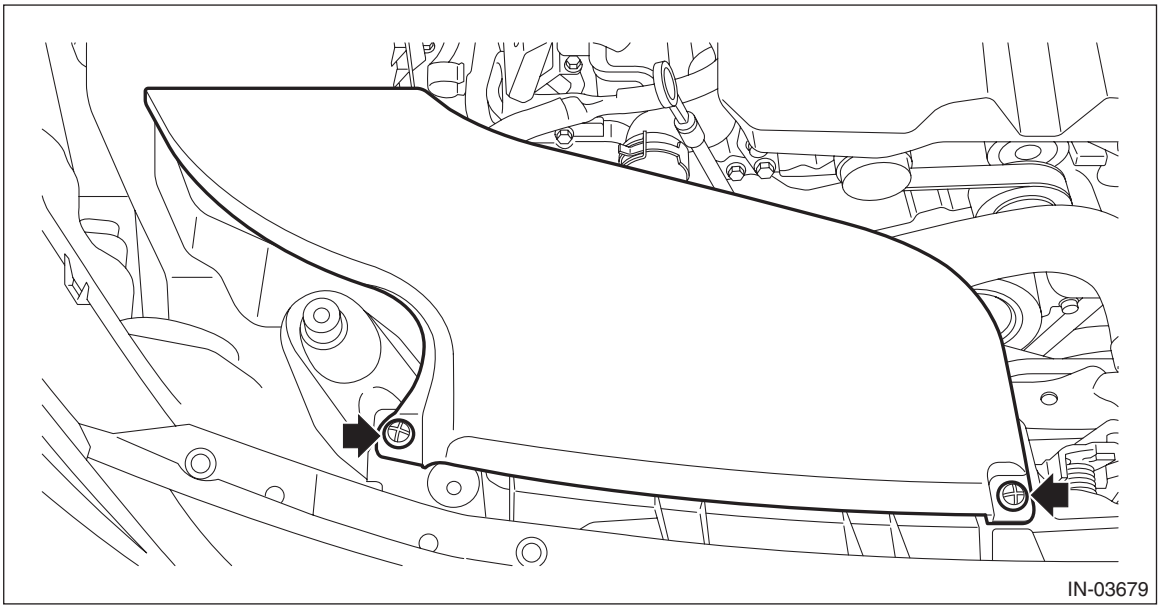
1) Before installation, inspect the following items and replace any faulty part with a new part.
- Control module is deformed.
- Control module connector is damaged.
- Control module mounting bracket is damaged.

2) Install the airbag control module.

CAUTION:
Do not reuse the bolt and nut.
Always replace with the specified new bolts and nuts.

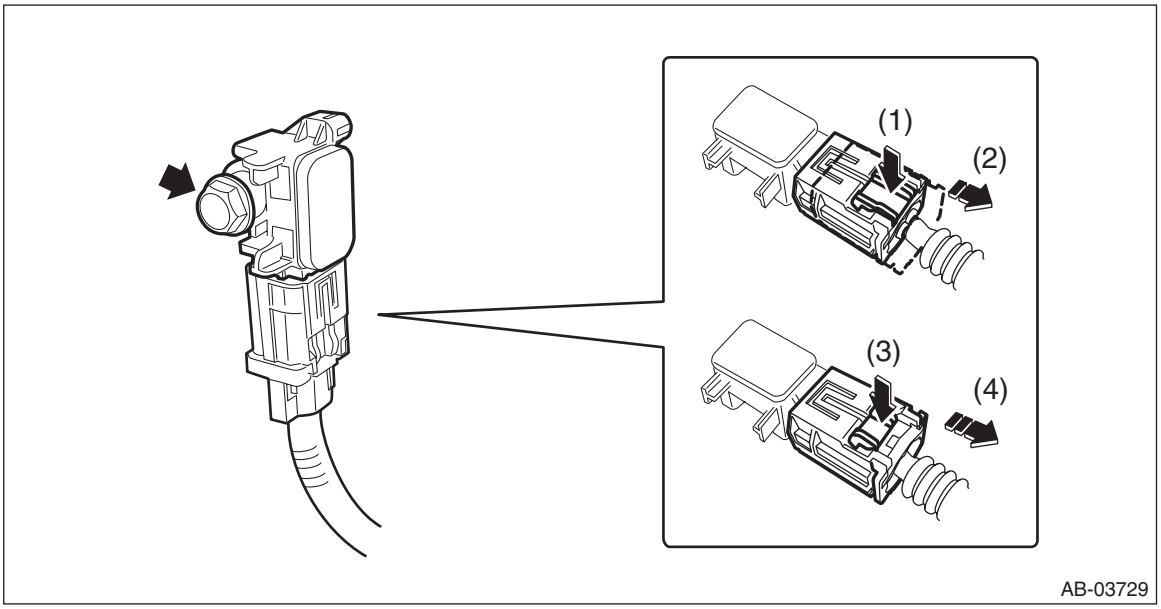
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

3) Install the cover - shift lever and the console box assembly.



Tightening torque:
6.5 N·m (0.7 kgf-m, 4.8 ft-lb)

4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

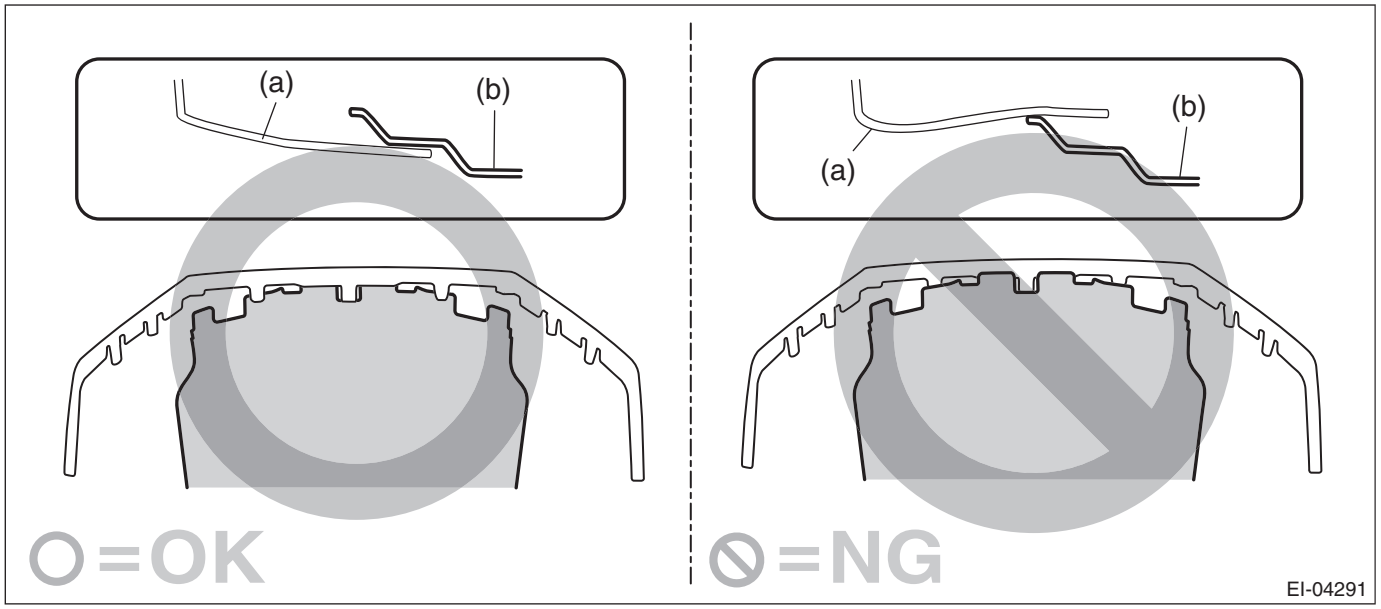


10.Front Sub Sensor

A: REMOVAL

1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the front sub sensor.
(1) Remove the clips and remove the air intake duct. (When removing the sensor RH)

IN-03679



(2) Remove the bolt, and then detach the front sub sensor.
(3) Disconnect the connector of front sub sensor. <Ref. to AB-19, FRONT SUB SENSOR, PROCEDURE, Airbag Connector.>

AB-03729

B: INSTALLATION

CAUTION:
- **If the airbag has been activated, replace the front sub sensor with a new part.**
- **Install the bumper face - front so that the front end of the under cover (b) comes inside the bumper face - front (a).**

- **Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.**

1) Before installation, inspect the following items and replace any faulty part with a new part.
- Front sub sensor or connector is damaged.

2) Install the front sub sensor.

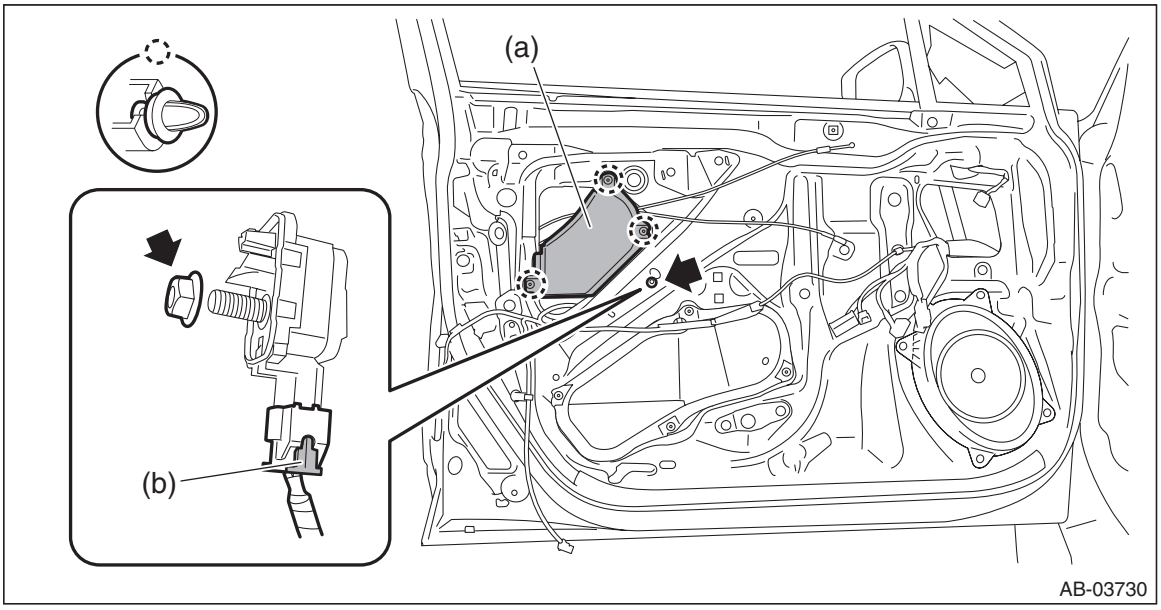
CAUTION:
- **Do not reuse the bolt and nut.**

Always replace with the specified new bolts and nuts.
- **When installing the sensor, insert the set pin on the backside of the sensor into the hole on the body side securely.**

Tightening torque:
13 N·m (1.3 kgf-m, 9.6 ft-lb)

3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

11.Front Door Impact Sensor



A: REMOVAL

CAUTION:
• The airbag system is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds before starting the service of airbag system.
• When the front door impact sensor is removed, always replace it with a new front door impact sensor. If it is reused, sealing capability on the contacting surface of door panel may be insufficient and impact pressure may not be detected correctly.

1) Operate the power window switch to close the front door glass.
2) Turn the ignition switch to OFF.
3) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Remove the trim panel - front door. <Ref. to EI-70, FRONT DOOR, REMOVAL, Door Trim.>
5) Remove the sealing cover. <Ref. to EB-30, REMOVAL, Front Sealing Cover.>
6) Remove the front door impact sensor.

CAUTION:
If it is removed with an excessive force, the panel assembly - front door may be deformed. Also, if the clip is damaged, replace it with a new clip.

(1) Remove the plate - door (a).
(2) Remove the nuts and then remove the front door impact sensor.
(3) Pull the lock arm (b) and disconnect the airbag connector to remove the front door impact sensor. <Ref. to AB-20, FRONT DOOR IMPACT SENSOR, PROCEDURE, Airbag Connector.>

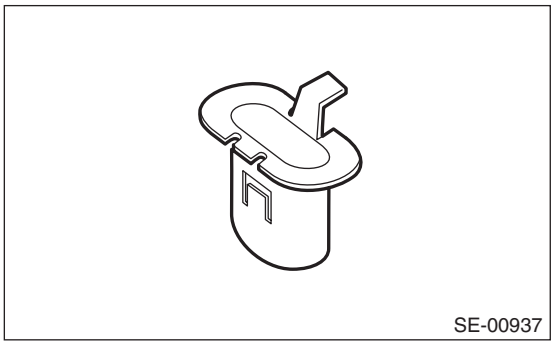
B: INSTALLATION

1) Before installation, inspect the following items and replace any faulty part with a new part.
- The front door impact sensor or connector is damaged.
- Inner panel area of the panel assembly - front door is deformed.
- Plate - door is deformed.
- Side airbag module has been activated.

2) Install the front door impact sensor.

CAUTION:
- **Do not reuse the bolt and nut.**

Always replace with the specified new bolts and nuts.
- **Thoroughly clean the sensor mounting area before installing the front door impact sensor.**
- **When installing the sensor, insert the set pin on the backside of the sensor into the hole on the body side securely.**

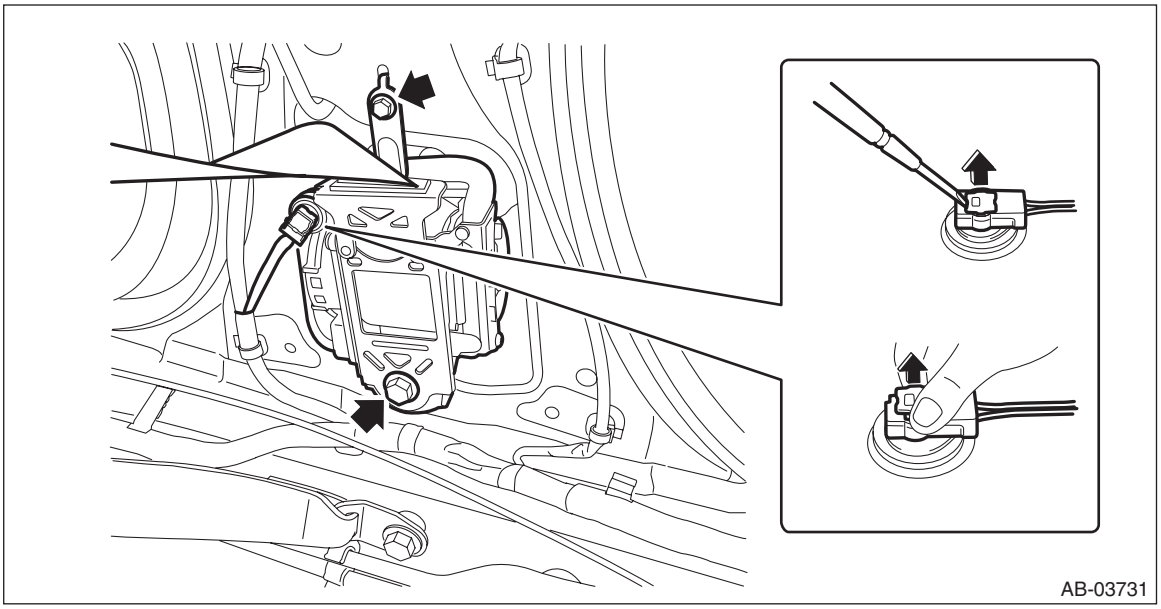


Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the sealing cover.
4) Install the trim panel - front door.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

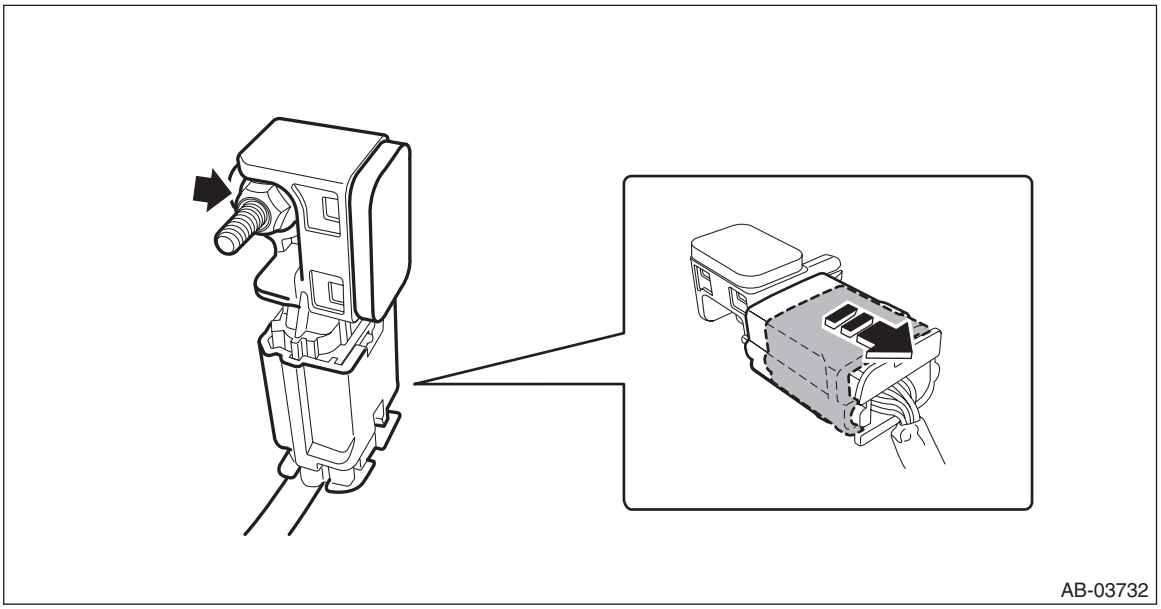
12.Side Airbag Sensor

A: REMOVAL



CAUTION:
• The airbag system is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds before starting the service of airbag system.
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

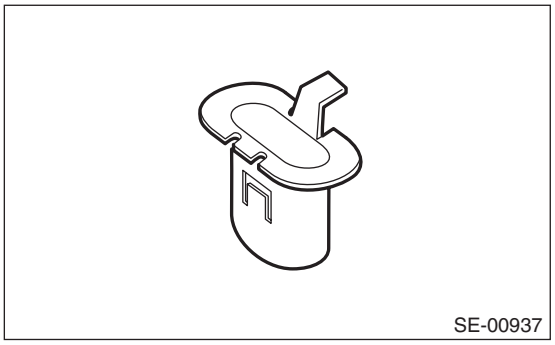
SE-00937



1) Move the seat all the way forward, from which the side airbag sensor is to be removed.

NOTE:
This is to remove the seat belt retractor assembly.
2) Turn the ignition switch to OFF.
3) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

NOTE:
For model with the power seat, move the seat to the front-most position before removing the battery ground terminal.
4) Remove the rear seat cushion assembly. <Ref. to SE-33, REMOVAL, Rear Seat.>
5) Remove the cover side sill - front, cover side sill - rear, and the trim panel - center pillar LWR. <Ref. to EI-92, REMOVAL, Lower Inner Trim.>
6) Remove the seat belt retractor. (On the side where the side airbag sensor is removed)
(1) Disconnect connector of the pretensioner. <Ref. to AB-19, DRIVER'S AIRBAG MODULE, CURTAIN AIRBAG MODULE AND PRETENSIONER, PROCEDURE, Airbag Connector.>
(2) Remove the bolt to remove the seat belt retractor.



AB-03731

7) Remove the nuts and then remove the side airbag sensor. <Ref. to AB-20, SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR, PROCEDURE, Airbag Connector.>

B: INSTALLATION

CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

1) Before installation, inspect the following items and replace any faulty part with a new part.
- The side airbag sensor or connector are damaged.
- Side airbag module has been activated.

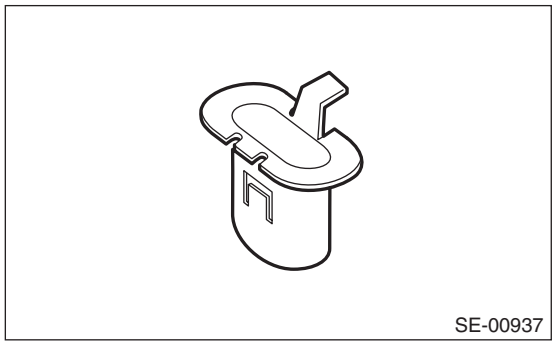
2) Install the side airbag sensor.

CAUTION:
- **Do not reuse the bolt and nut.**

Always replace with the specified new bolts and nuts.
- **When installing the sensor, insert the set pin on the backside of the sensor into the hole on the body side securely.**

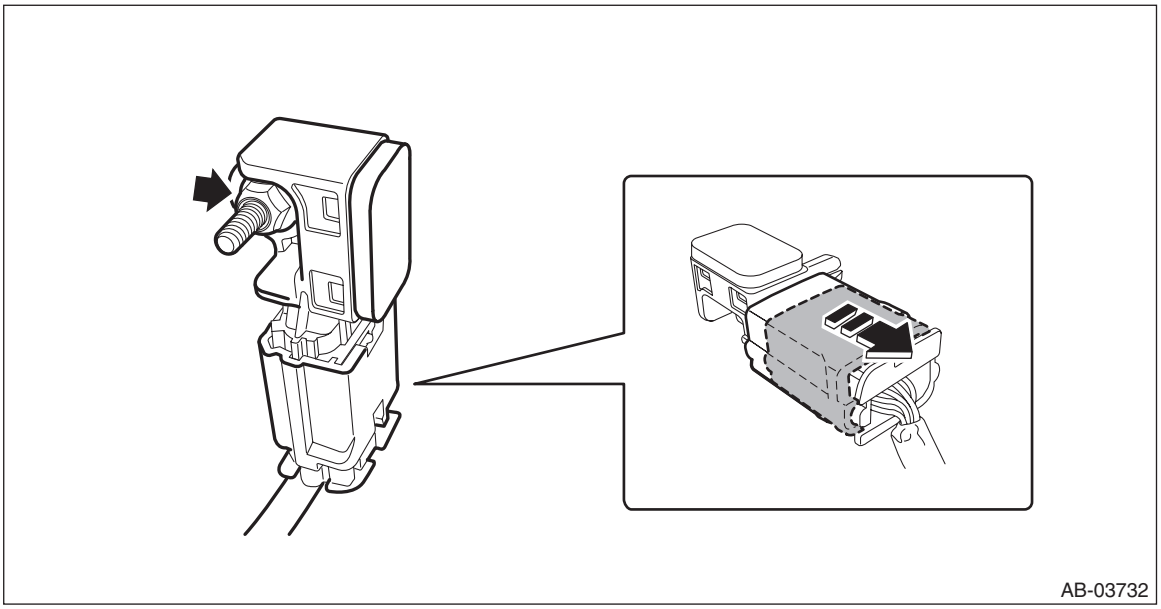
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the seat belt retractor.



Tightening torque:
Front seat belt: <Ref. to SB-2, FRONT SEAT BELT, COMPONENT, General Description.>

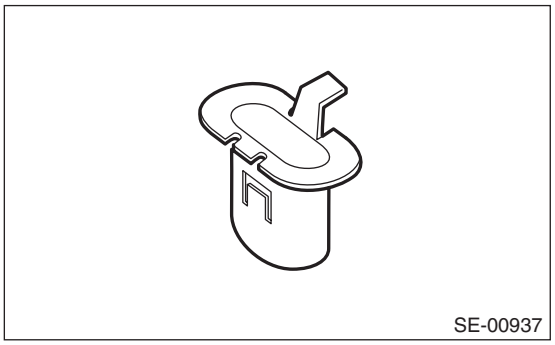
4) Install the cover side sill - front, cover side sill - rear, and the trim panel - center pillar LWR.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



13.Curtain Airbag Sensor

A: REMOVAL

CAUTION:
• The airbag system is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds before starting the service of airbag system.
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.



SE-00937

1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the rear seat cushion assembly and backrest side pad. <Ref. to SE-33, REMOVAL, Rear Seat.>
• Sedan model: <Ref. to SE-33, SEDAN MODEL, REMOVAL, Rear Seat.>
• OUTBACK model: <Ref. to SE-35, OUTBACK MODEL, REMOVAL, Rear Seat.>
4) Remove the cover side sill - rear. <Ref. to EI-92, REMOVAL, Lower Inner Trim.>
5) Remove the nuts and then remove the curtain airbag sensor. <Ref. to AB-20, SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR, PROCEDURE, Airbag Connector.>

AB-03732

B: INSTALLATION

CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Curtain airbag sensor or connector is damaged.
- Curtain airbag module has been activated.

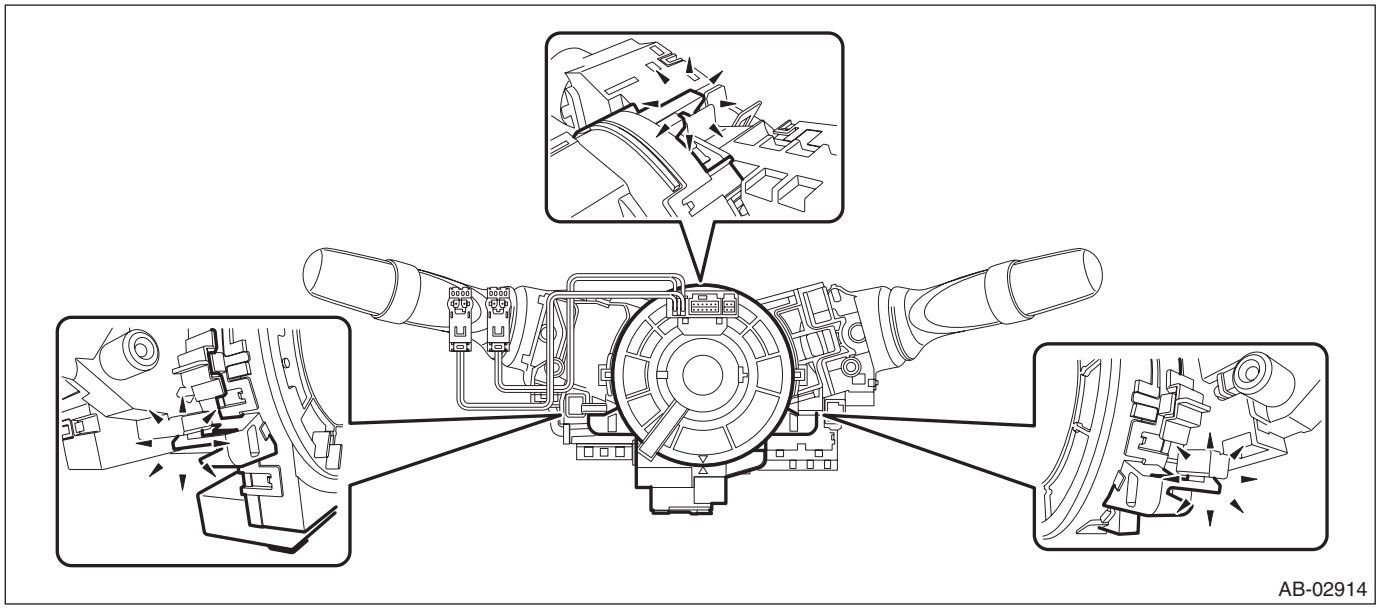
2) Install the curtain airbag sensor.

CAUTION:
- **Do not reuse the bolt and nut.**

Always replace with the specified new bolts and nuts.
- **When installing the sensor, insert the set pin on the backside of the sensor into the hole on the body side securely.**

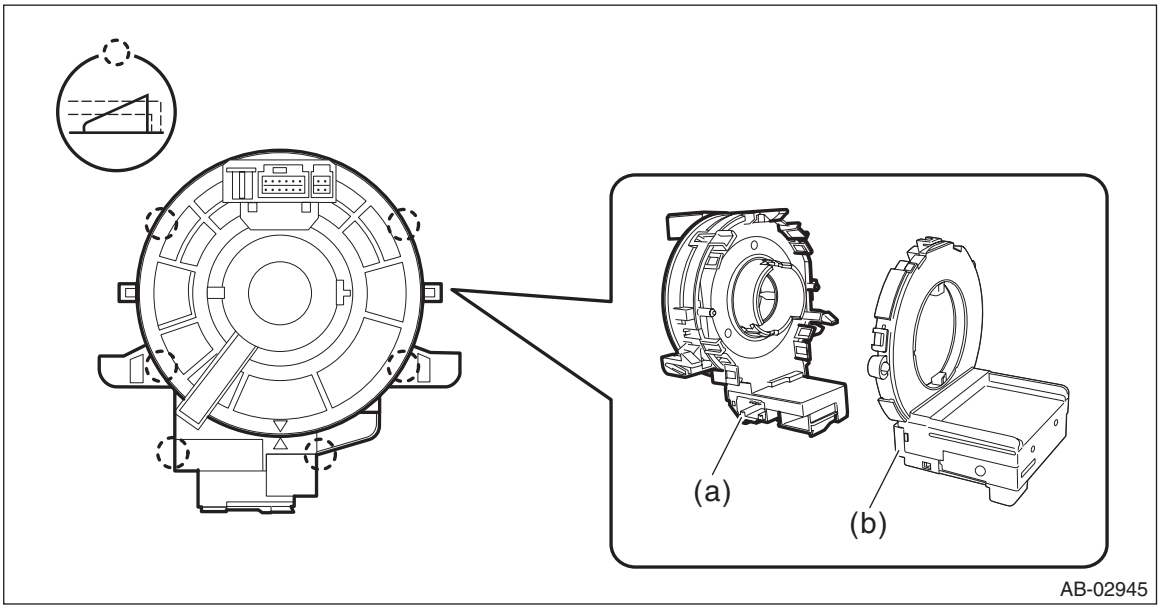
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the cover side sill - rear and the trim panel - rear pillar LWR.
4) Install the rear seat cushion assembly.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



14.Roll Connector

A: REMOVAL



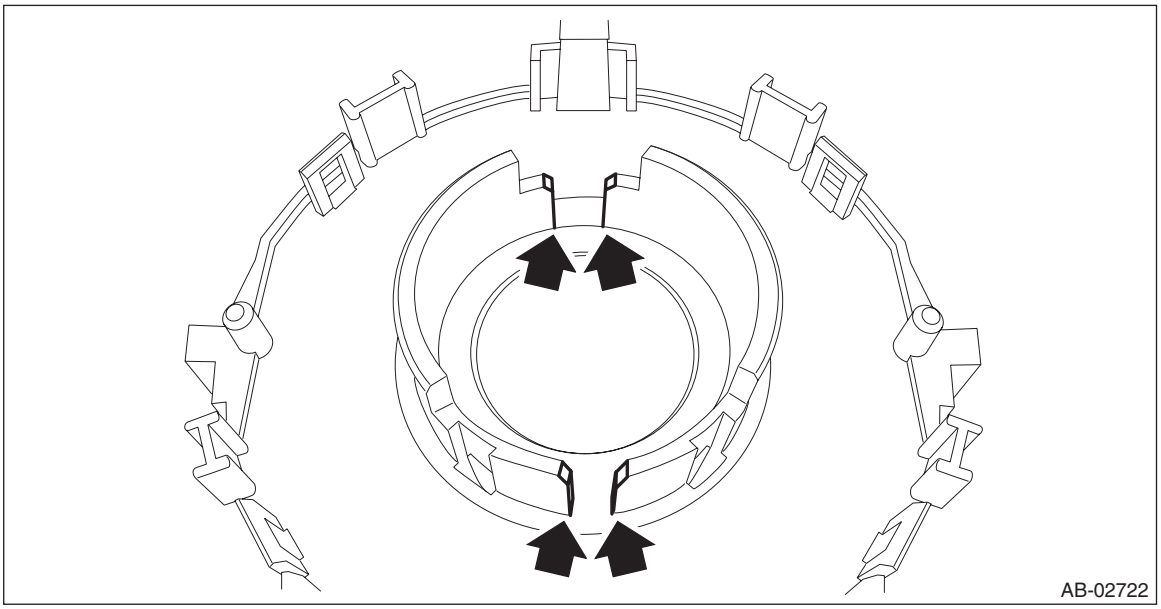
1) Position the front wheels straight ahead.
2) Turn the ignition switch to OFF.
3) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Remove the driver's airbag module. <Ref. to AB-30, REMOVAL, Driver's Airbag Module.>
5) Remove the steering wheel. <Ref. to PS-9, REMOVAL, Steering Wheel.>
6) Remove the cover assembly - column. <Ref. to PS-19, REMOVAL, Steering Column.>
7) Remove the roll connector.

CAUTION:
Make sure that the roll connector is not turned from the original position.

(1) Disconnect the connector under the roll connector.
(2) Release the claws and remove the roll connector.

AB-02914

(3) Release the claws and separate the roll connector (a) and steering angle sensor (b).



AB-02945

B: INSTALLATION

CAUTION:
If the steering wheel and steering angle sensor are removed, perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

1) Before attaching a new roll connector, apply a thin coat of grease contained in the connector onto the areas shown by the arrows.

2) Install the cover assembly - column.
3) Install the roll connector.
4) Align the center position of the steering roll connector. <Ref. to AB-60, ADJUSTMENT, Roll Connector.>
5) Install the steering wheel.

Tightening torque:
Steering wheel: 39 N·m (4.0 kgf-m, 28.8 ft-lb)

Clearance:
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)

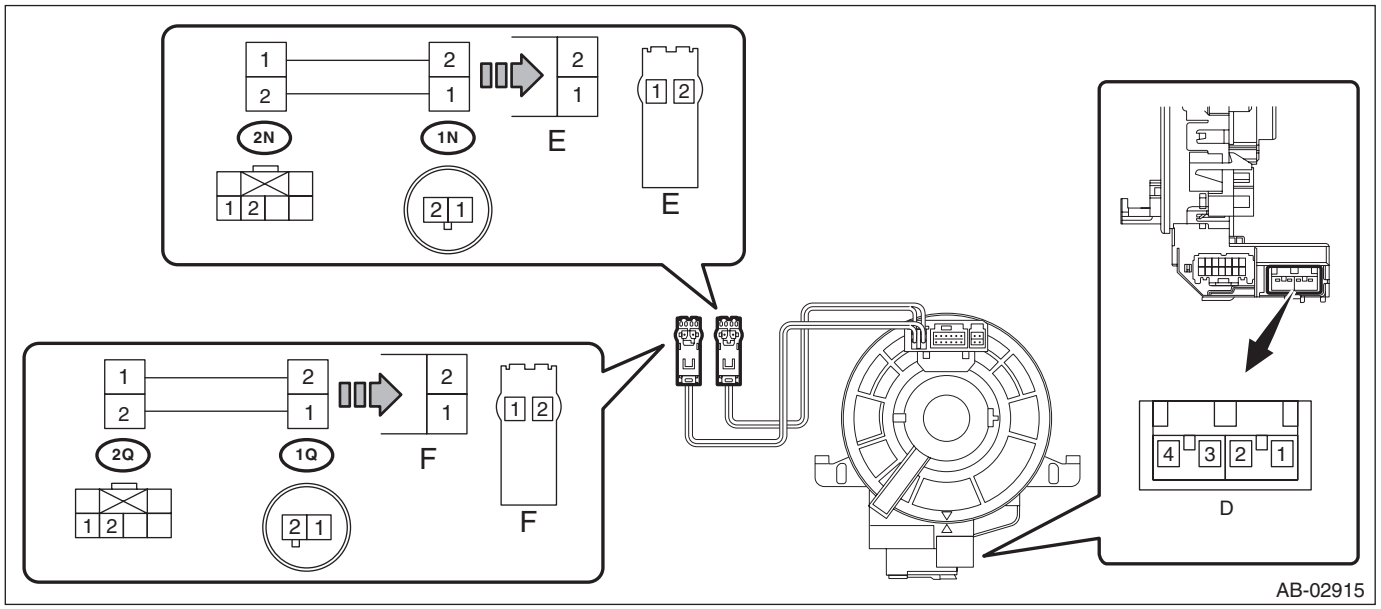
6) Install the driver's airbag module. <Ref. to AB-31, INSTALLATION, Driver's Airbag Module.>
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
8) Perform the neutral position setting of the steering angle sensor. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: INSPECTION

1. VISUAL INSPECTION

Check for the following, and replace the damaged parts with new parts.
- Combination switch is cracked or deformed.
- Roll connector is cracked or deformed.

2. UNIT INSPECTION OF ROLL CONNECTOR



CAUTION:
• Do not rotate the roll connector to more than the specified number of turns. Otherwise, the roll connector internal wire may be broken.
• When determining the end stop, rotate the connector slowly without applying excessive force. Applying excessive force at the end stop may break the internal wire.

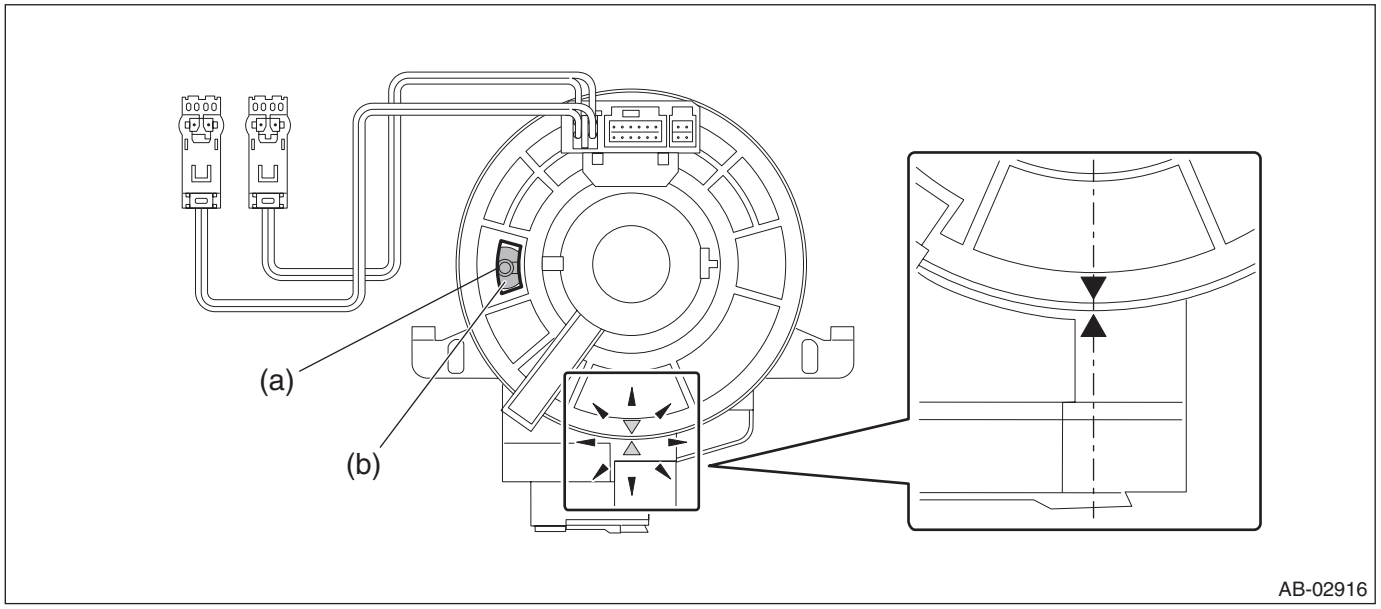
1) Adjust the roll connector. <Ref. to AB-60, ADJUSTMENT, Roll Connector.>
2) Set the roll connector to the central position.
3) Connect the test harness to the connector E and connector F.

Preparation tool:
Test harness N (98299SA000)
Test harness Q (98299SA040)
- Connector E - Test harness N (1N)
- Connector F - Test harness Q (1Q)

4) With the following conditions, check the resistance between the test harness connector terminals.
- Perform the check with the roll connector centered (front wheels direct straightforward).
- Rotate the roll connector counterclockwise from the center (front wheels direct straightforward) to an end stop. Then, perform the check while rotating it clockwise to approximately 4.5 turns.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
(2N) No. 1 — (2N) No. 2	Always	Less than 1 Ω
(2Q) No. 1 — (2Q) No. 2	Always	Less than 1 Ω



NOTE:
The connector D is designed to short the terminals D1/D2 and D3/D4 when disconnected.

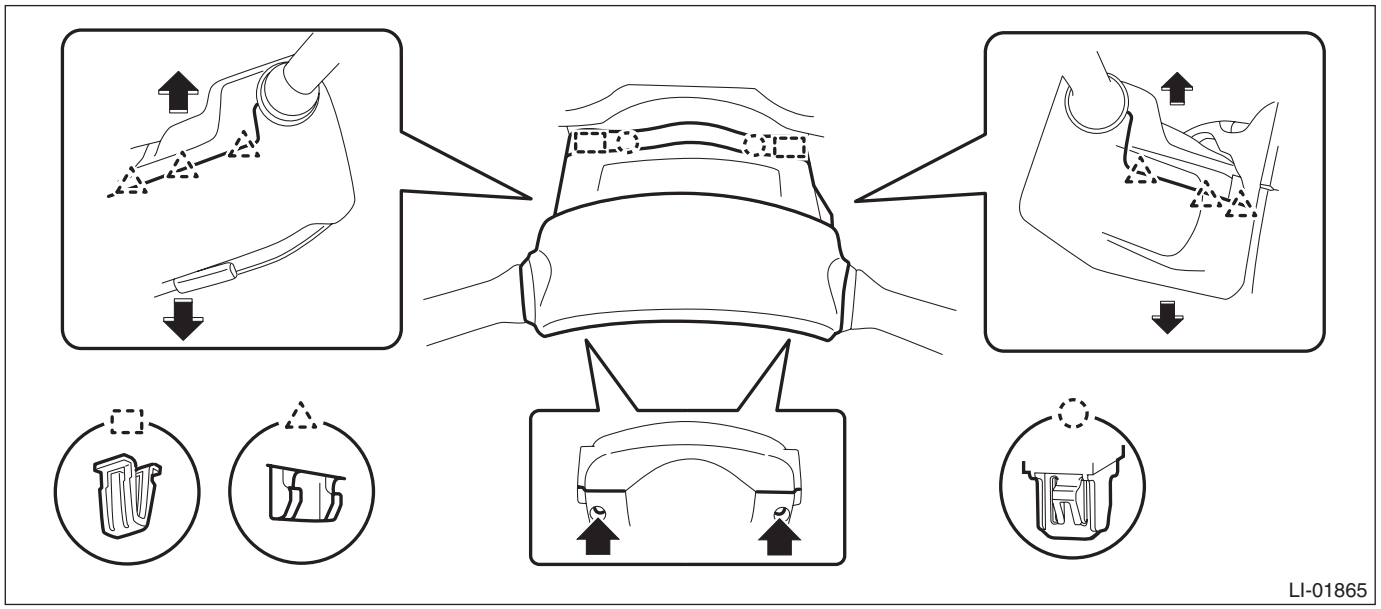
5) Replace the roll connector with a new part if the inspection result is not within the standard value.

D: ADJUSTMENT

CAUTION:
• Do not rotate the roll connector to more than the specified number of turns. Otherwise, the roll connector internal wire may be broken.
• When determining the end stop, rotate the connector slowly without applying excessive force. Applying excessive force at the end stop may break the internal wire.
1) Check that front wheels are positioned in straight ahead direction.
2) Rotate the roll connector counterclockwise until it stops.
3) Rotate the roll connector clockwise approx. 2.5 turns until "▲" marks are aligned.

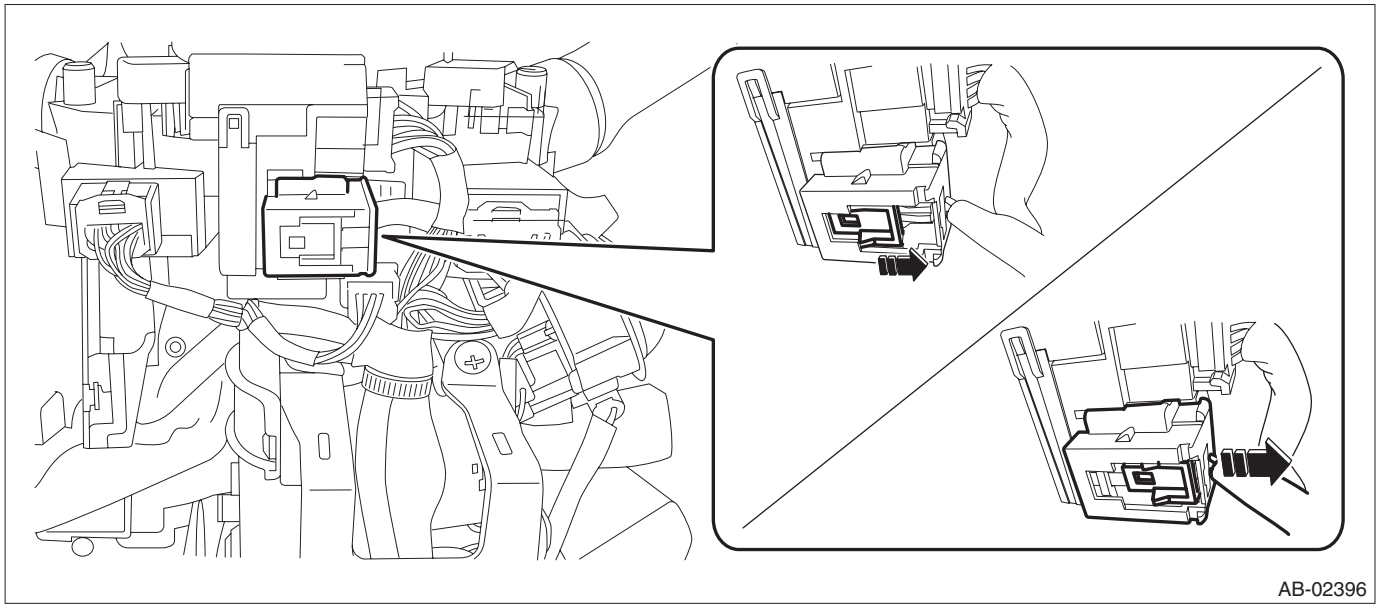
NOTE:
When the roll connector comes to the center position, the orange roller (b) can be seen from the sight glass (a).

15.Airbag Module Disposal (Deployment Processing on Vehicle)



A: PROCEDURE

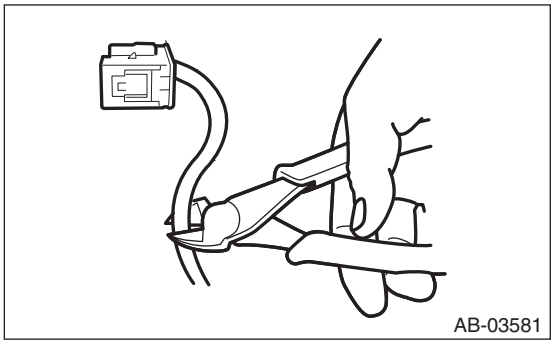
WARNING:
Make sure to follow the instructions below. Otherwise, personal injuries may occur.
• Before discarding an airbag module, always perform an operation process to prevent any false activation.
• Wear protective gloves, safety goggles and earplugs during this operation. Wash your hands afterwards.
• Do not touch the airbag module just after activation because it is very hot. Before handling it for disposal, wait for 40 minutes.



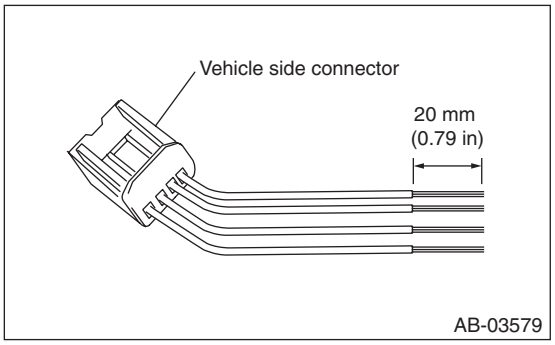
CAUTION:
• Airbag module operation process should be performed on a flat place in safety area. Do not perform the process outdoors when there is rain or strong wind.
• Activating an airbag module causes a high explosive noise, be sure to warn people in the area, and do not allow anyone within 5 m (16 ft) radius of the disposal site.
• After activating the airbag module, smoke may arise. Therefore, it must be activated in a well-ventilated place with no smoke detector nearby.
• Do not expose the activated airbag module to water.
• Wrap the activated airbag module in a sealed vinyl bag when discarding.
• If it is impossible to perform an airbag module operation process due to some situational reasons, consult SUBARU dealership or one of the authorized workshops.

1. DRIVER'S AIRBAG MODULE

1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the cover assembly - column.
   (1) Remove the clips, and remove the cover - column.
   (2) Remove the screws.
   (3) Release the claw, and remove the cover assembly - column UPR and the cover assembly - column LWR.

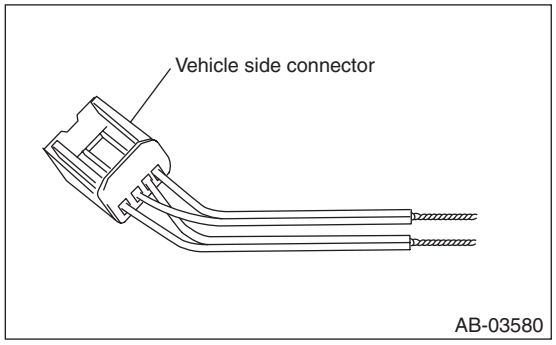


4) Disconnect the driver's airbag module connector.

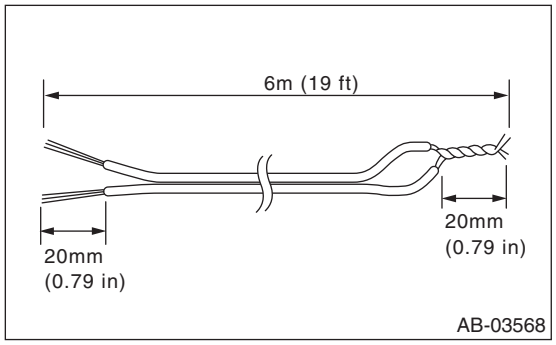


5) Cut off the harness on the body side of the removed connector approx. 70 mm (2.76 in) from the edge of the connector.

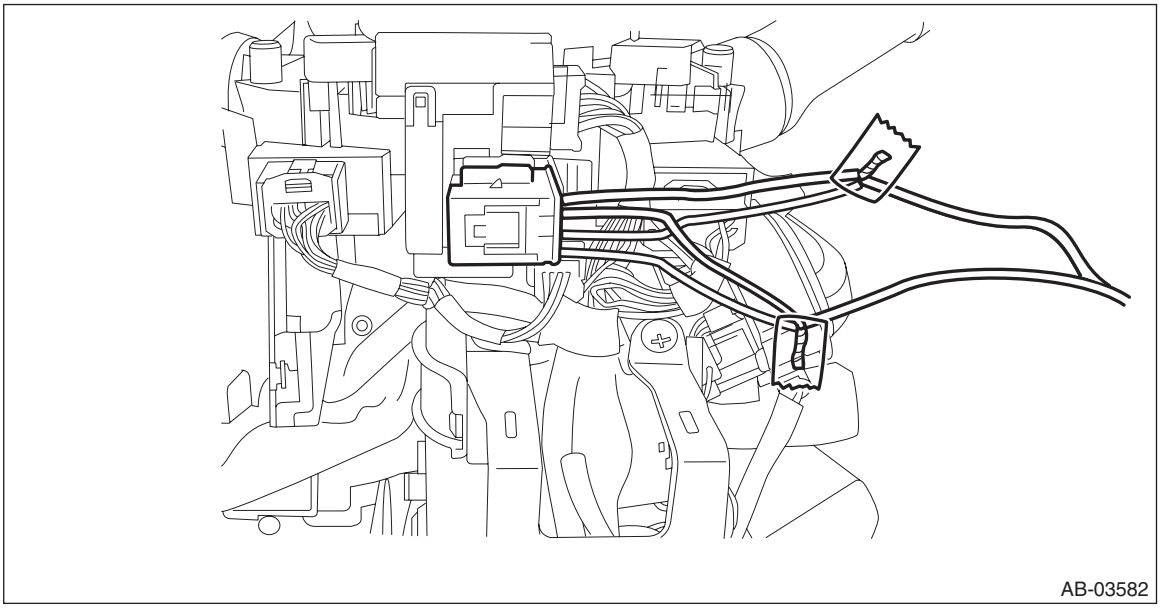
Preparation tool:
Nippers



6) Peel off the shield approx. 20 mm (0.79 in) from the two harnesses of the removed body side connector.

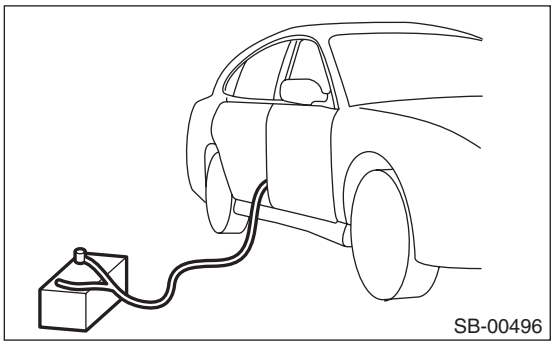


Preparation tool:
Wire stripper

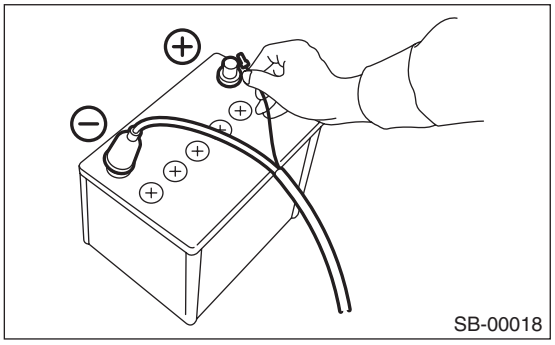


7) Twist the end of harness as shown in the figure.

8) Prepare a six-meter (19 ft) long vinyl-shielded parallel wire. Peel off the shield of both ends approx. 20 mm (0.79 in) and twist one end together into shorted condition.
9) The other end, not shorted, will be connected to harnesses of repaired body connector as shown in the figure, and insulated with vinyl tape.

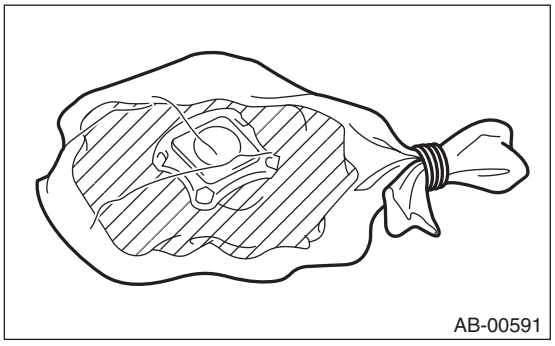


NOTE:
No concern about polarity.
10) After completing the connecting work, connect the body side connector to the connector of the airbag connector lower side again.



11) Bring the vinyl wire for operation out of the vehicle and make sure there is no person in the vehicle.

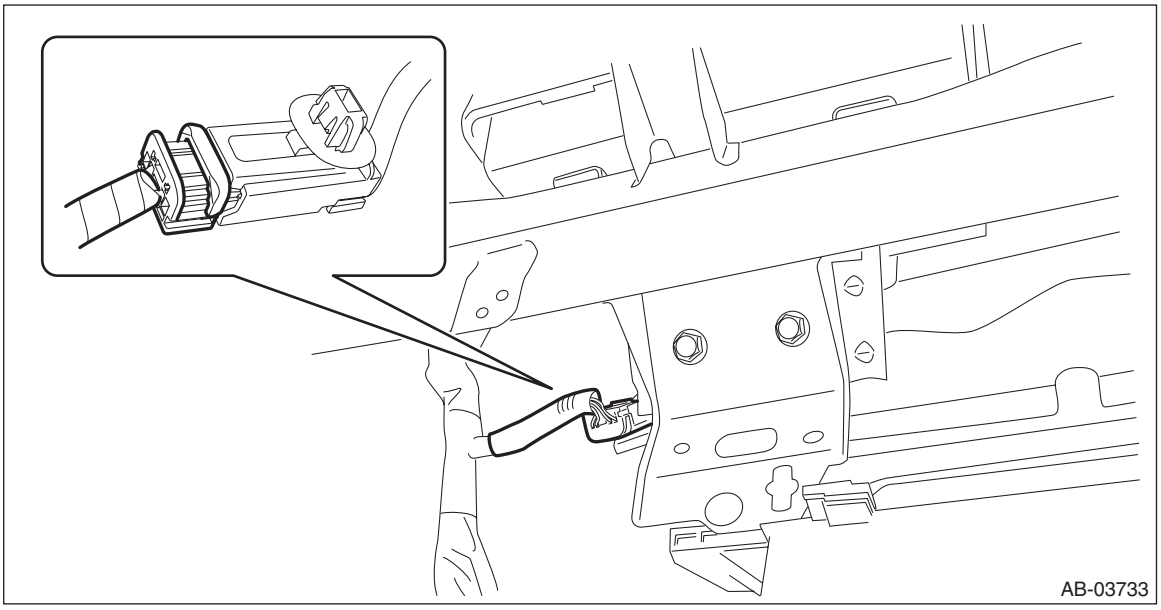
12) Extend the wiring of airbag deployment tool to the limit, and close all the windows and sunroof completely.



SB-00496

13) Move the battery at least 5 m (16 ft) from the vehicle, and confirm safety in the area.
14) Connect the airbag deployment tool alligator clip to the battery negative (–) terminal.
15) Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the airbag module.

CAUTION:
• After activation, the airbag module will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.
• Do not expose the activated airbag module to water.



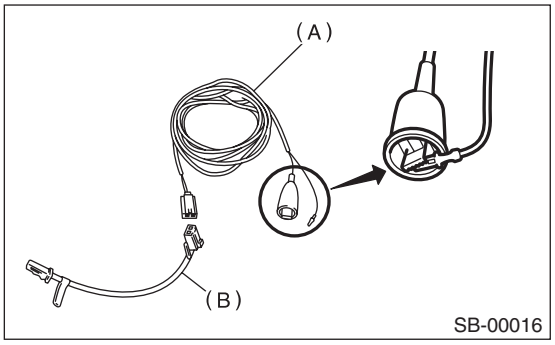
SB-00018

16) Remove the driver's airbag module. <Ref. to AB-30, REMOVAL, Driver's Airbag Module.>
17) Place the activated airbag module in a sealed vinyl bag, then discard.

AB-00591

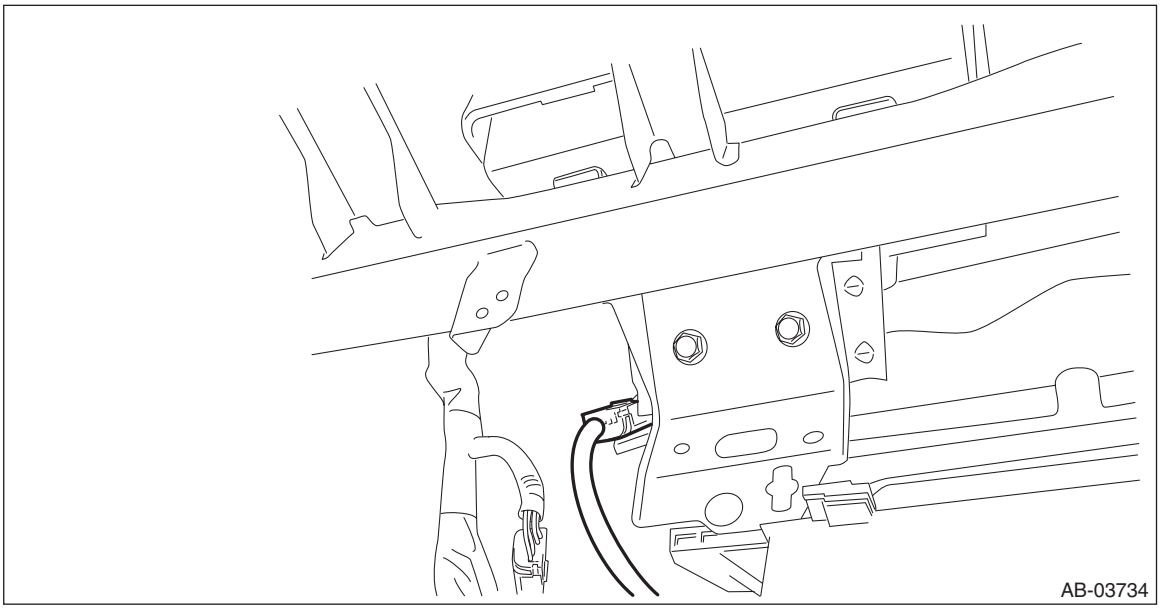
2. PASSENGER'S AIRBAG MODULE

1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the glove box assembly. <Ref. to EI-76, REMOVAL, Glove Box.>
4) Disconnect the passenger's airbag module connector.



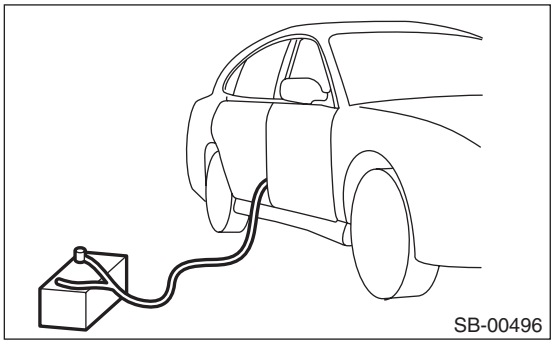
5) Short the terminal to the alligator clip furnished as airbag deployment tool.

CAUTION:
The airbag deployment tool should be kept shorted on the terminals until just before activation of airbag module.



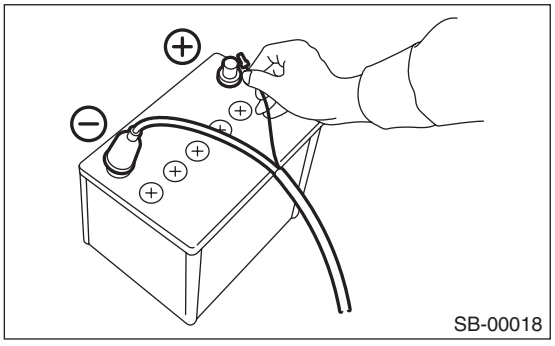
Preparation tool:
ST: AIRBAG DEPLOYMENT TOOL (98299PA030)

6) Connect airbag deployment tool (A) and test harness adapter AM (B).

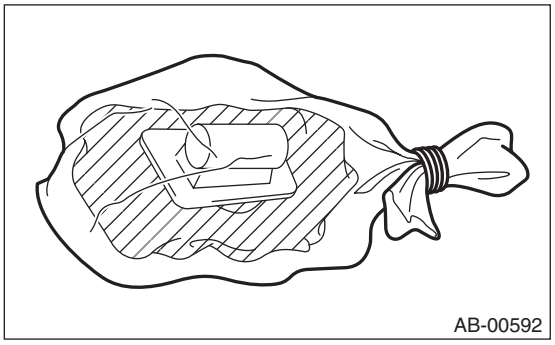


Preparation tool:
ST: TEST HARNESS ADAPTER AM (98299FJ000)

7) Connect test harness adapter AM to airbag connector.



8) Make sure there is no one inside the vehicle.
9) Extend the wiring of airbag deployment tool to the limit, and close all the windows and sunroof completely.



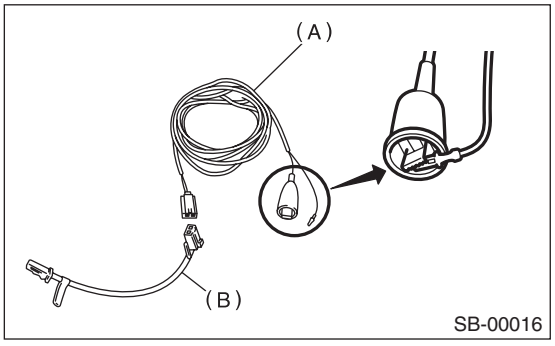
10) Move the battery at least 5 m (16 ft) from the vehicle, and confirm safety in the area.
11) Connect the airbag deployment tool alligator clip to the battery negative (–) terminal.
12) Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the airbag module.

CAUTION:
• After activation, the airbag module will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.
• Do not expose the activated airbag module to water.

13) Remove the passenger's airbag module. <Ref. to AB-32, REMOVAL, Passenger's Airbag Module.>

14) Place the activated airbag module in a sealed vinyl bag, then discard.

3. SEAT CUSHION AIRBAG MODULE



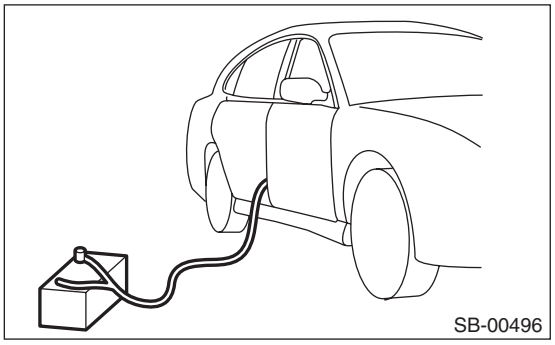
1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Disconnect the seat cushion airbag module connector under the front seat cushion. <Ref. to AB-22, SEAT CUSHION AIRBAG MODULE AND BUCKLE SWITCH RH, PROCEDURE, Airbag Connector.>
4) Adjust both the front seat and front seat backrest to the center positions.
5) Short the terminal to the alligator clip furnished as airbag deployment tool.

CAUTION:
The airbag deployment tool should be kept shorted on the terminals until just before activation of airbag module.

Preparation tool:
ST: AIRBAG DEPLOYMENT TOOL (98299PA030)

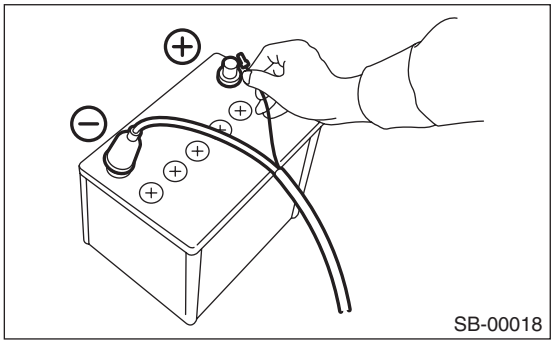
6) Connect airbag deployment tool (A) and test harness adapter AU (B).

Preparation tool:
ST: TEST HARNESS ADAPTER AU (98299AL000)



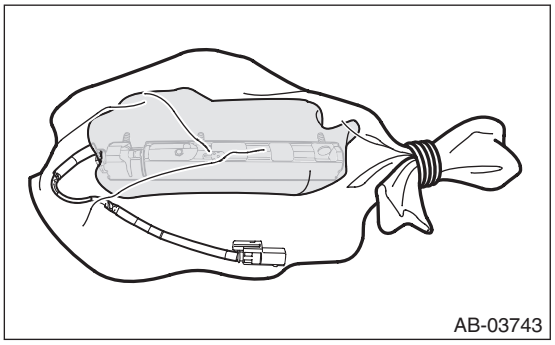
7) Connect the test harness adapter AU to the seat cushion airbag module connector (yellow).

CAUTION:
Do not place any object on front seat.



8) Make sure there is no one inside the vehicle.

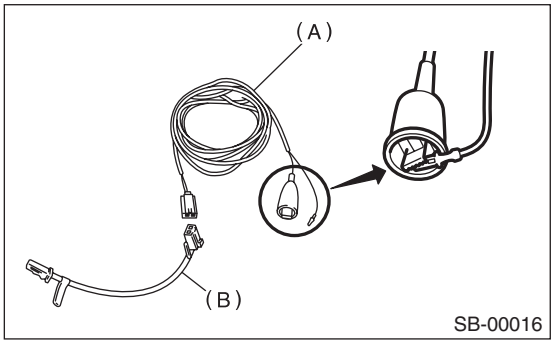
9) Extend the wiring of airbag deployment tool to the limit, and close all the windows and sunroof completely.



10) Move the battery at least 5 m (16 ft) from the vehicle, and confirm safety in the area.
11) Connect the airbag deployment tool alligator clip to the battery negative (–) terminal.
12) Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the airbag module.

CAUTION:
• After activation, the airbag module will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.
• Do not expose the activated airbag module to water.

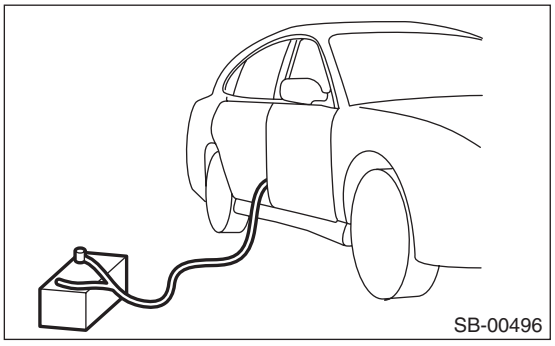
13) Remove the seat cushion airbag module. <Ref. to AB-35, REMOVAL, Seat Cushion Airbag Module.>
14) Place the activated airbag module in a sealed vinyl bag, then discard.



4. SIDE AIRBAG MODULE

1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Disconnect the side airbag module connector under the front seat cushion. <Ref. to AB-21, FRONT DOOR IMPACT SENSOR (BETWEEN AIRBAG REAR HARNESS AND FRONT DOOR HARNESS), PROCEDURE, Airbag Connector.>
4) Adjust both the front seat and front seat backrest to the center positions.
5) Short the terminal to the alligator clip furnished as airbag deployment tool.

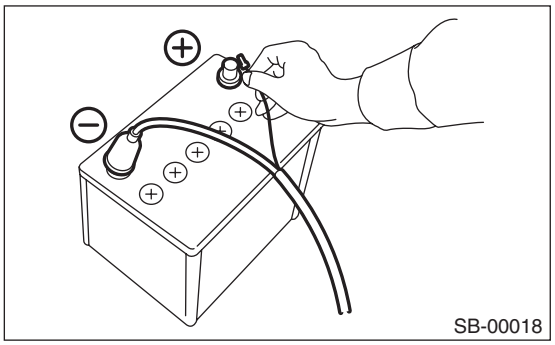
CAUTION:
The airbag deployment tool should be kept shorted on the terminals until just before activation of airbag module.



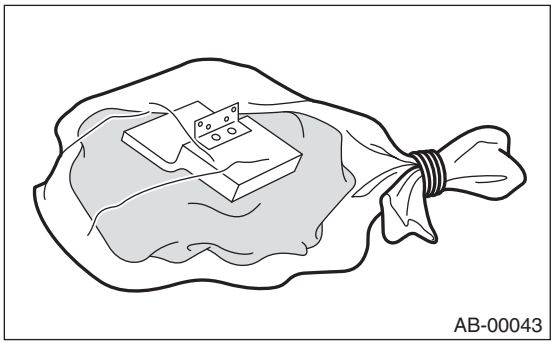
Preparation tool:
ST: AIRBAG DEPLOYMENT TOOL (98299PA030)
6) Connect airbag deployment tool (A) and test harness adapter AR (B).

Preparation tool:
ST: TEST HARNESS ADAPTER AR (98299CA000)

7) Connect the test harness adapter AR to the side airbag module connector (yellow).



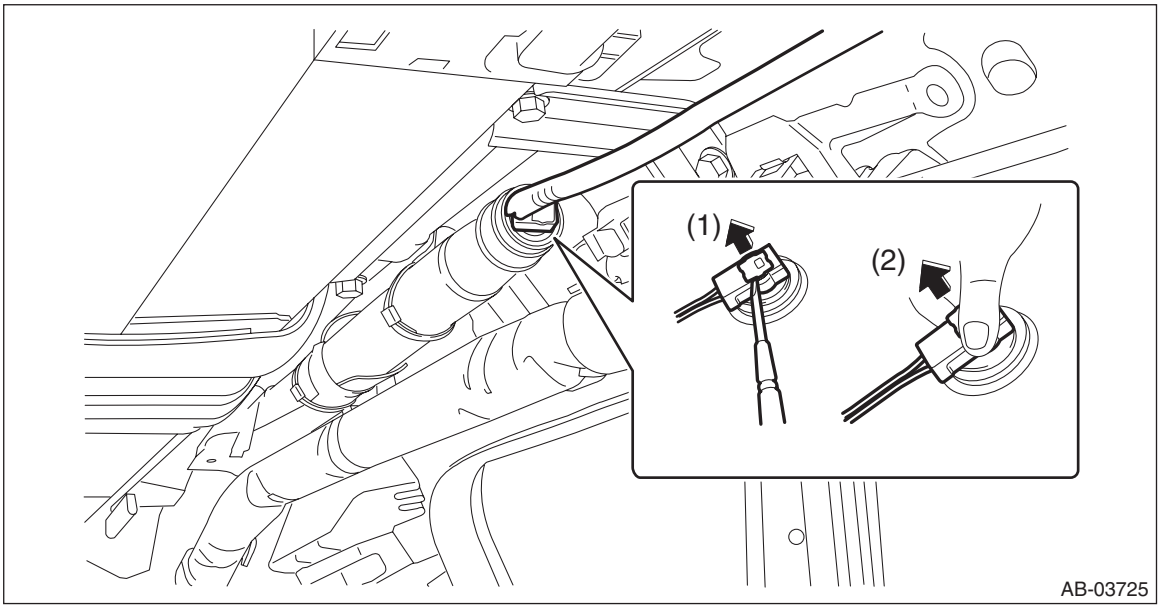
CAUTION:
Do not place any object on front seat.
8) Make sure there is no one inside the vehicle.
9) Extend the wiring of airbag deployment tool to the limit, and close all the windows and sunroof completely.



10) Move the battery at least 5 m (16 ft) from the vehicle, and confirm safety in the area.
11) Connect the airbag deployment tool alligator clip to the battery negative (–) terminal.

12) Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the airbag module.

CAUTION:
• After activation, the airbag module will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.
• Do not expose the activated airbag module to water.

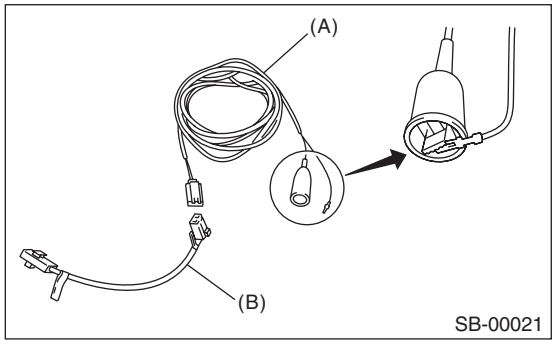


13) Remove the side airbag module. <Ref. to AB-38, REMOVAL, Side Airbag Module.>
14) Place the activated airbag module in a sealed vinyl bag, then discard.

5. CURTAIN AIRBAG MODULE

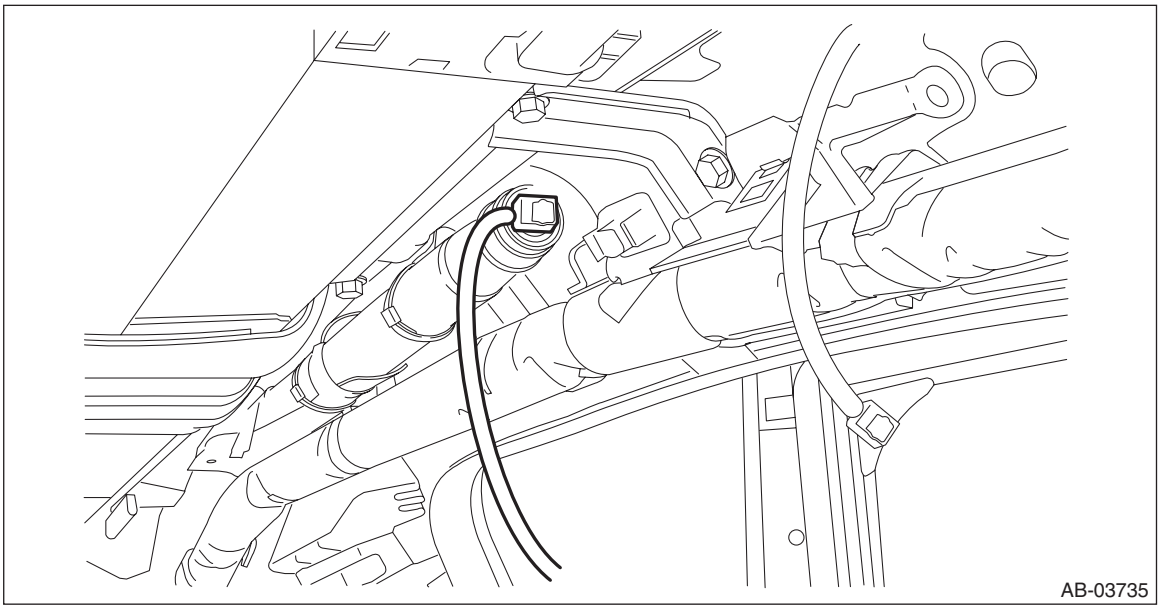
1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the roof trim.
- Sedan model: <Ref. to EI-114, SEDAN MODEL, REMOVAL, Roof Trim.>
- OUTBACK model: <Ref. to EI-117, OUTBACK MODEL, REMOVAL, Roof Trim.>

4) Disconnect the curtain airbag harness. <Ref. to AB-18, PROCEDURE, Airbag Connector.>



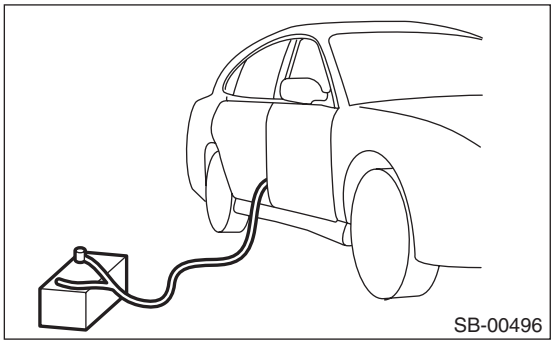
5) Short the terminal to the alligator clip furnished as airbag deployment tool.

CAUTION:
The airbag deployment tool should be kept shorted on the terminals until just before activation of airbag module.



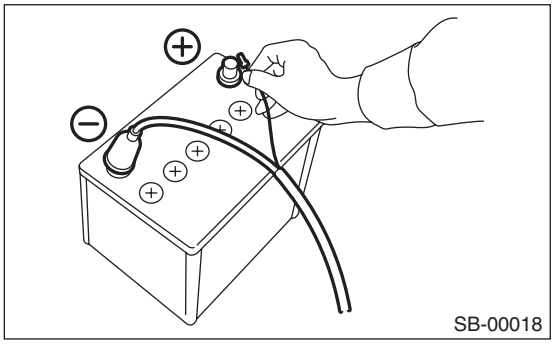
Preparation tool:
ST: AIRBAG DEPLOYMENT TOOL (98299PA030)

6) Connect the airbag deployment tool (A) and test harness adapter D (B).

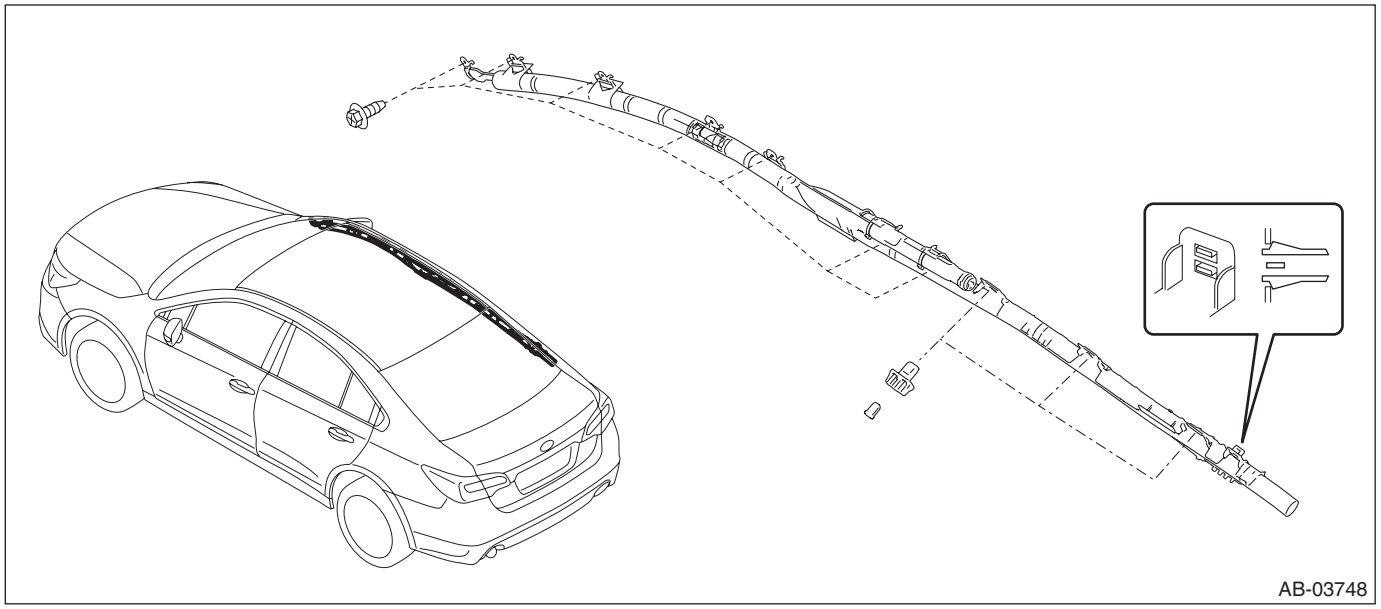


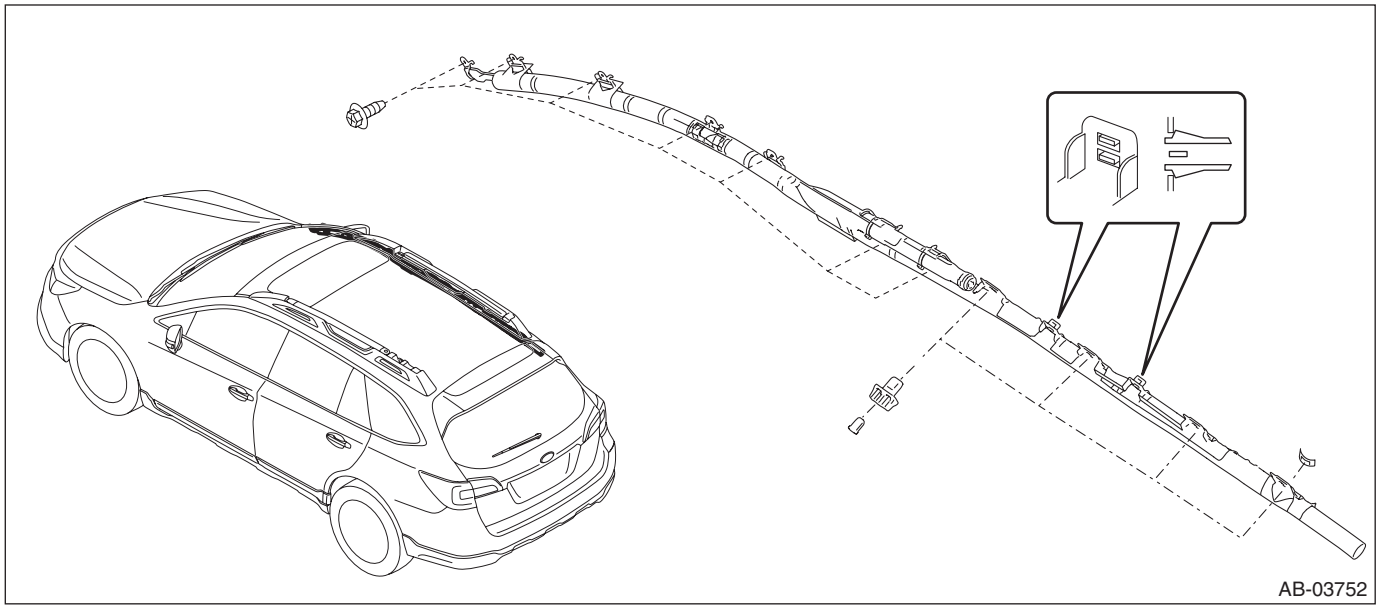
Preparation tool:
ST: TEST HARNESS ADAPTER D (98299SA010)

7) Connect the test harness adapter D to the curtain airbag module.



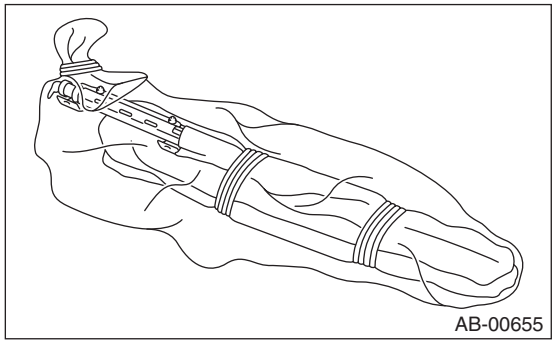
8) Make sure there is no one inside the vehicle.
9) Extend the wiring of airbag deployment tool to the limit, and close all the windows and sunroof completely.





10) Move the battery at least 5 m (16 ft) from the vehicle, and confirm safety in the area.
11) Connect the airbag deployment tool alligator clip to the battery negative (–) terminal.
12) Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the airbag module.

CAUTION:
• After activation, the airbag module will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.
• Do not expose the activated airbag module to water.



13) Remove the bolts and clips, and remove the curtain airbag module.

14) Place the activated airbag module in a sealed vinyl bag, then discard.

NOTE:
When necessary, fold the fabric part of airbag into three or four sections, rope and seal in a vinyl bag.

17.	Diagnostic Chart with Trouble Code	43

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**CHECK WARNING LIGHT.** Check whether the airbag warning light in the combination meter is lit.	Does the airbag warning light illuminate?	Go to step **2**.	Perform the diagnosis according to phenomenon of the problem.
2	**READ DTC.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-29, OPERATION, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to AB(diag)-26, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.> 5) Record all DTCs, time stamp and freeze frame data. NOTE: For time stamp, refer to “LAN SYSTEM”. <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.>	Is DTC displayed?	Go to step **3**.	Go to “Airbag Warning Light Failure” <Ref. to AB(diag)-36, Airbag Warning Light Failure.>.
3	**PERFORM DIAGNOSIS.** 1) Determine the possible cause from “List of Diagnostic Trouble Code (DTC)” <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>. 2) Inspect the DTC using “List of Diagnostic Trouble Code (DTC)”. 3) Repair the trouble cause. 4) Perform the Clear Memory Mode. <Ref. to AB(diag)-31, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-30, Inspection Mode.> 6) Read any other DTCs displayed.	Is DTC displayed?	Perform the procedure 1) to 5) in step 3.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Customer's Name		Inspector's Name	
Date Vehicle Brought in	/ /	Registration No.	
Odometer reading	km miles	V.I.N.	
Date Problem Occurred	/ /	Registration Year	/ /

	  ❑ Others:		

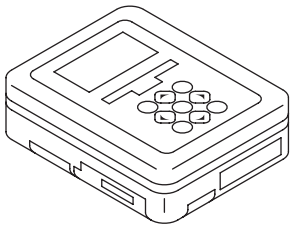
Details of Problem			
Airbag Warning Light Operation	❑ Normal (After turning the ignition switch to ON, lit for approximately 6 seconds and goes off.) ❑ Remains ON ❑ Remains OFF		
DTC output	❑ OK code ❑ DTC: (Code:)		

3. General Description

A: CAUTION

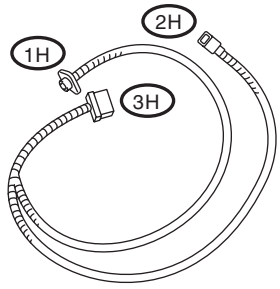
Refer to “CAUTION” in “General Description” in AIRBAG SYSTEM. <Ref. to AB-10, CAUTION, General Description.>

B: INSPECTION

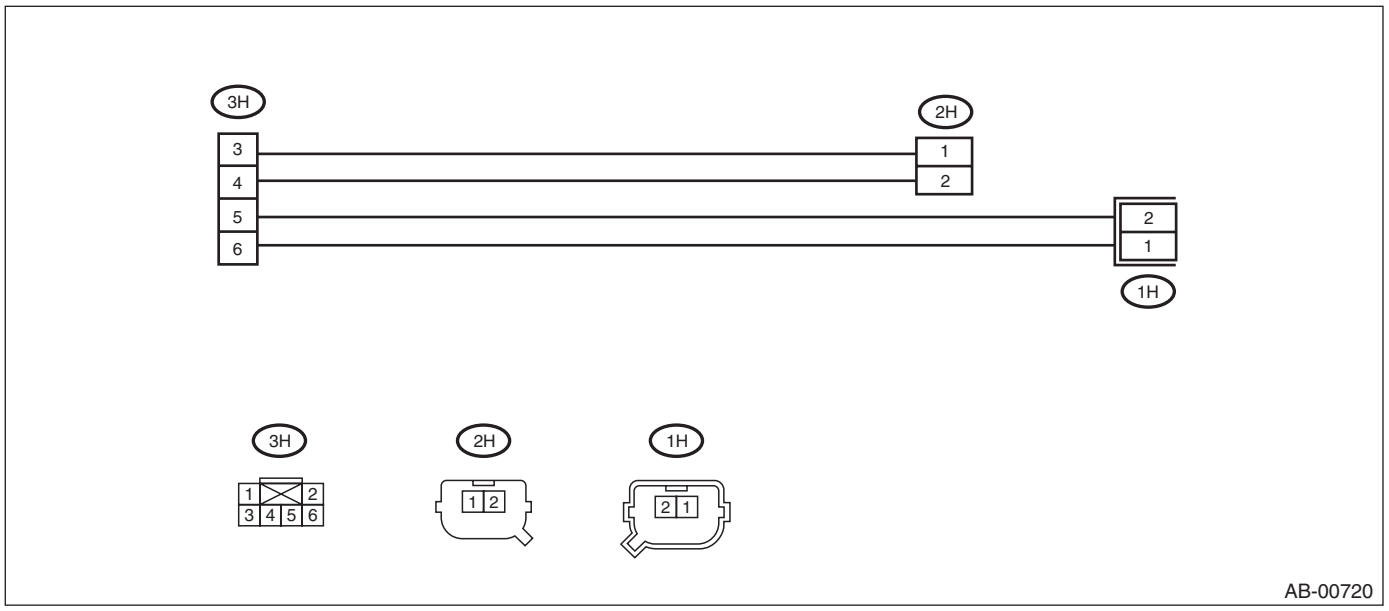


Check the battery. <Ref. to SC(H4DO)-60, INSPECTION, Battery.> <Ref. to SC(H6DO)-53, INSPECTION, Battery.>

C: PREPARATION TOOL



CAUTION:
To measure the voltage and resistance of airbag system component, be sure to use the specified test harness.



1. SPECIAL TOOL

- Subaru Select Monitor

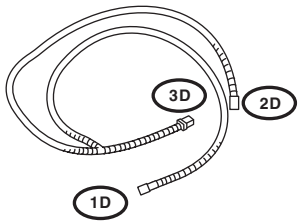


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
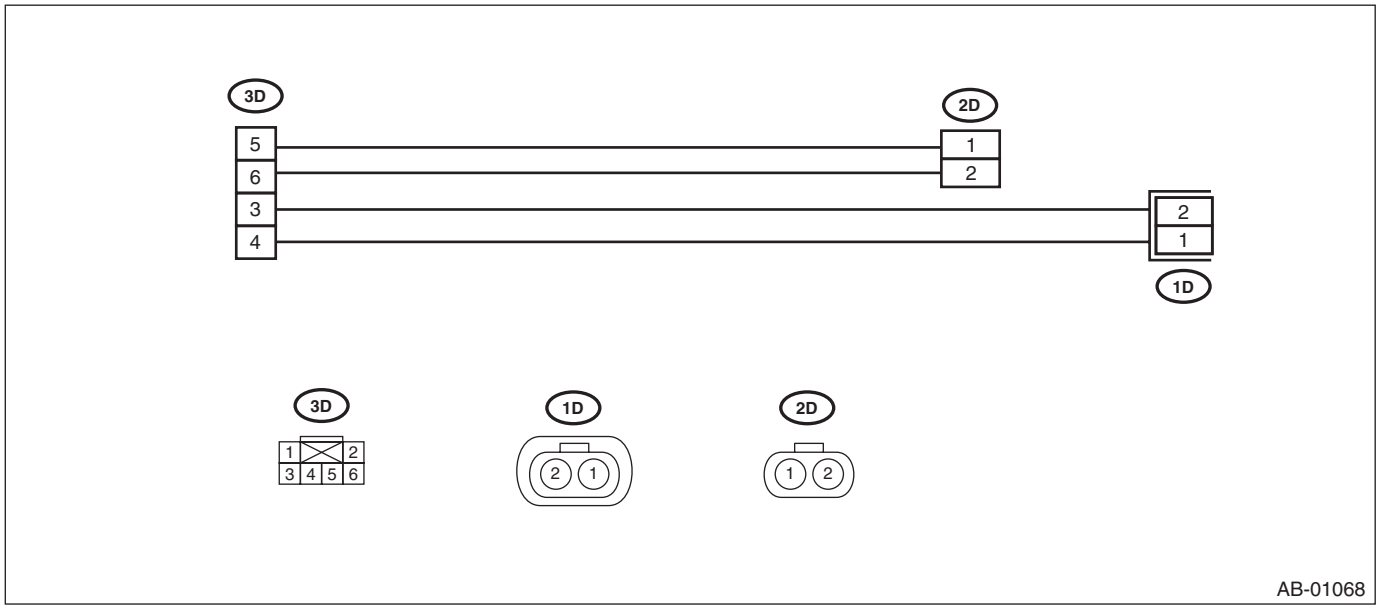
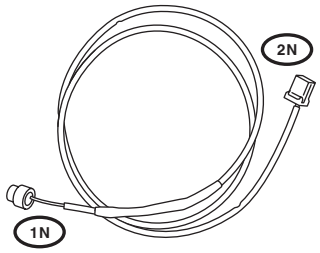
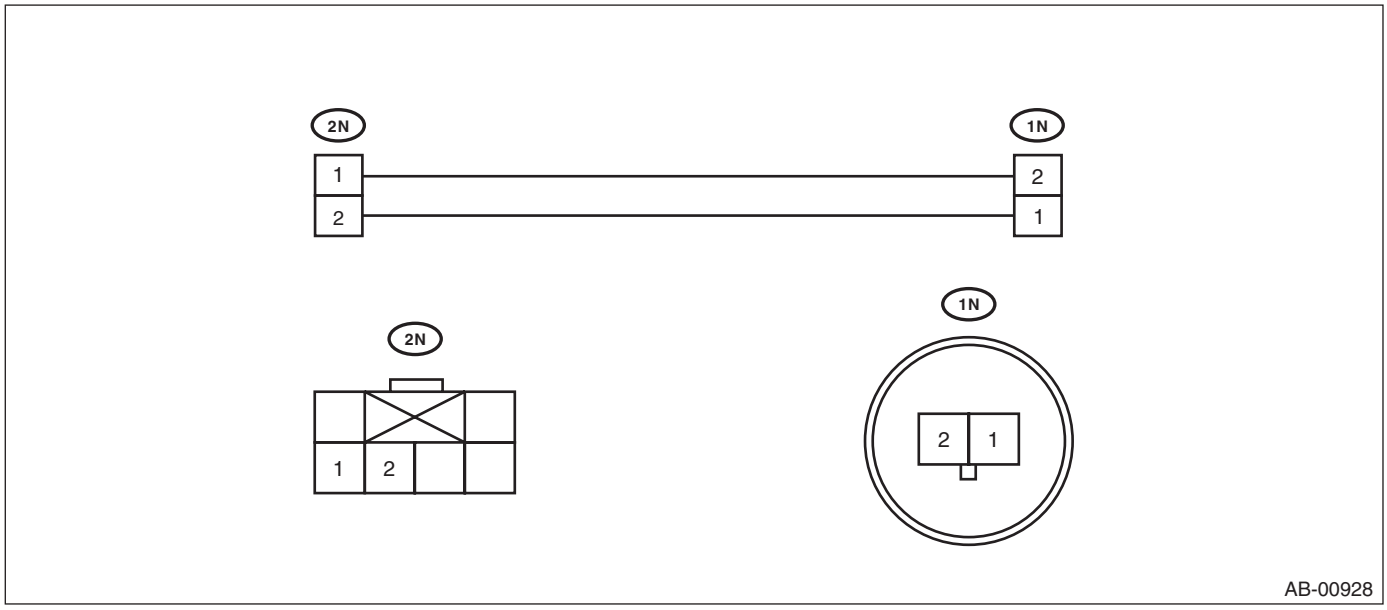
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.



- TEST HARNESS H

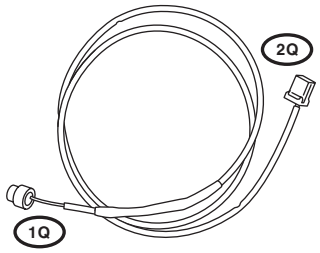
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299FA030	98299FA030	TEST HARNESS H	Used when measuring voltage and resistance of the front sub sensor.





- TEST HARNESS D

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299AG060	98299AG060	TEST HARNESS D	Used when measuring voltage and resistance of the seat cushion airbag.



- TEST HARNESS N

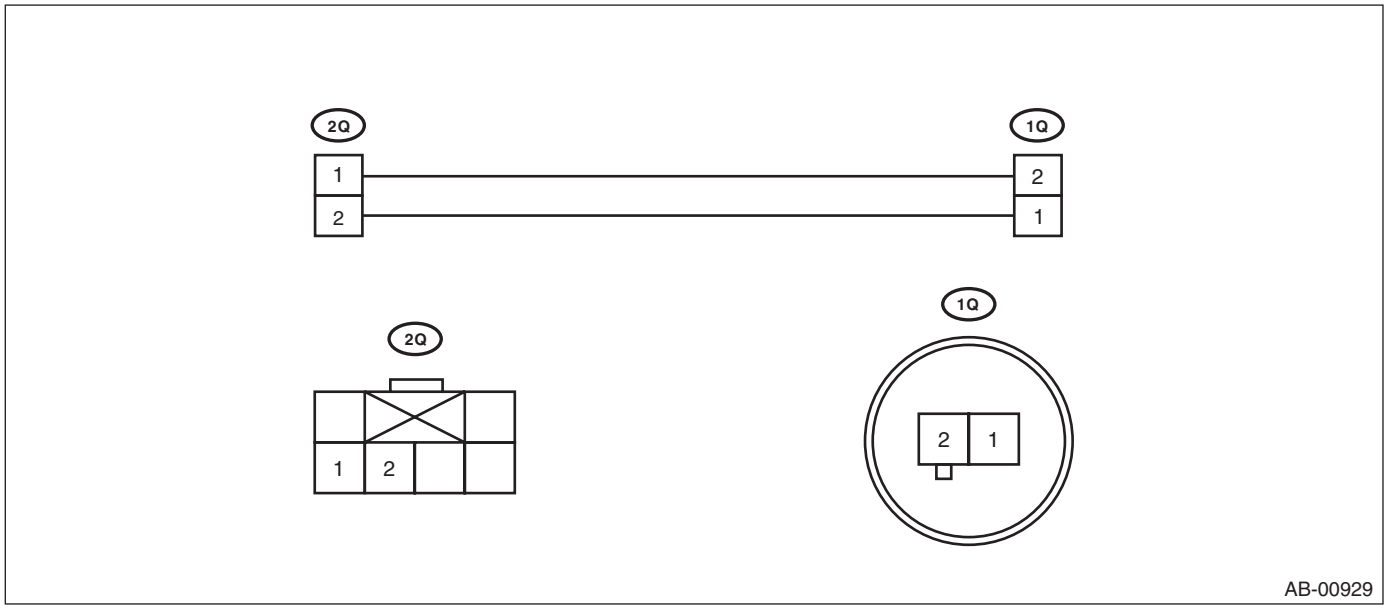


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
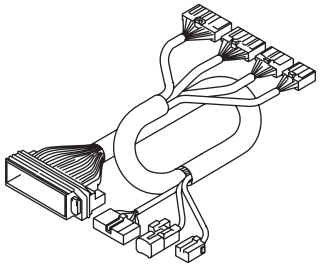
 ST98299SA000	98299SA000	TEST HARNESS N	Used when measuring voltage and resistance of driver's airbag module, seat belt pretensioner and curtain airbag module.

AB-00928



- TEST HARNESS Q

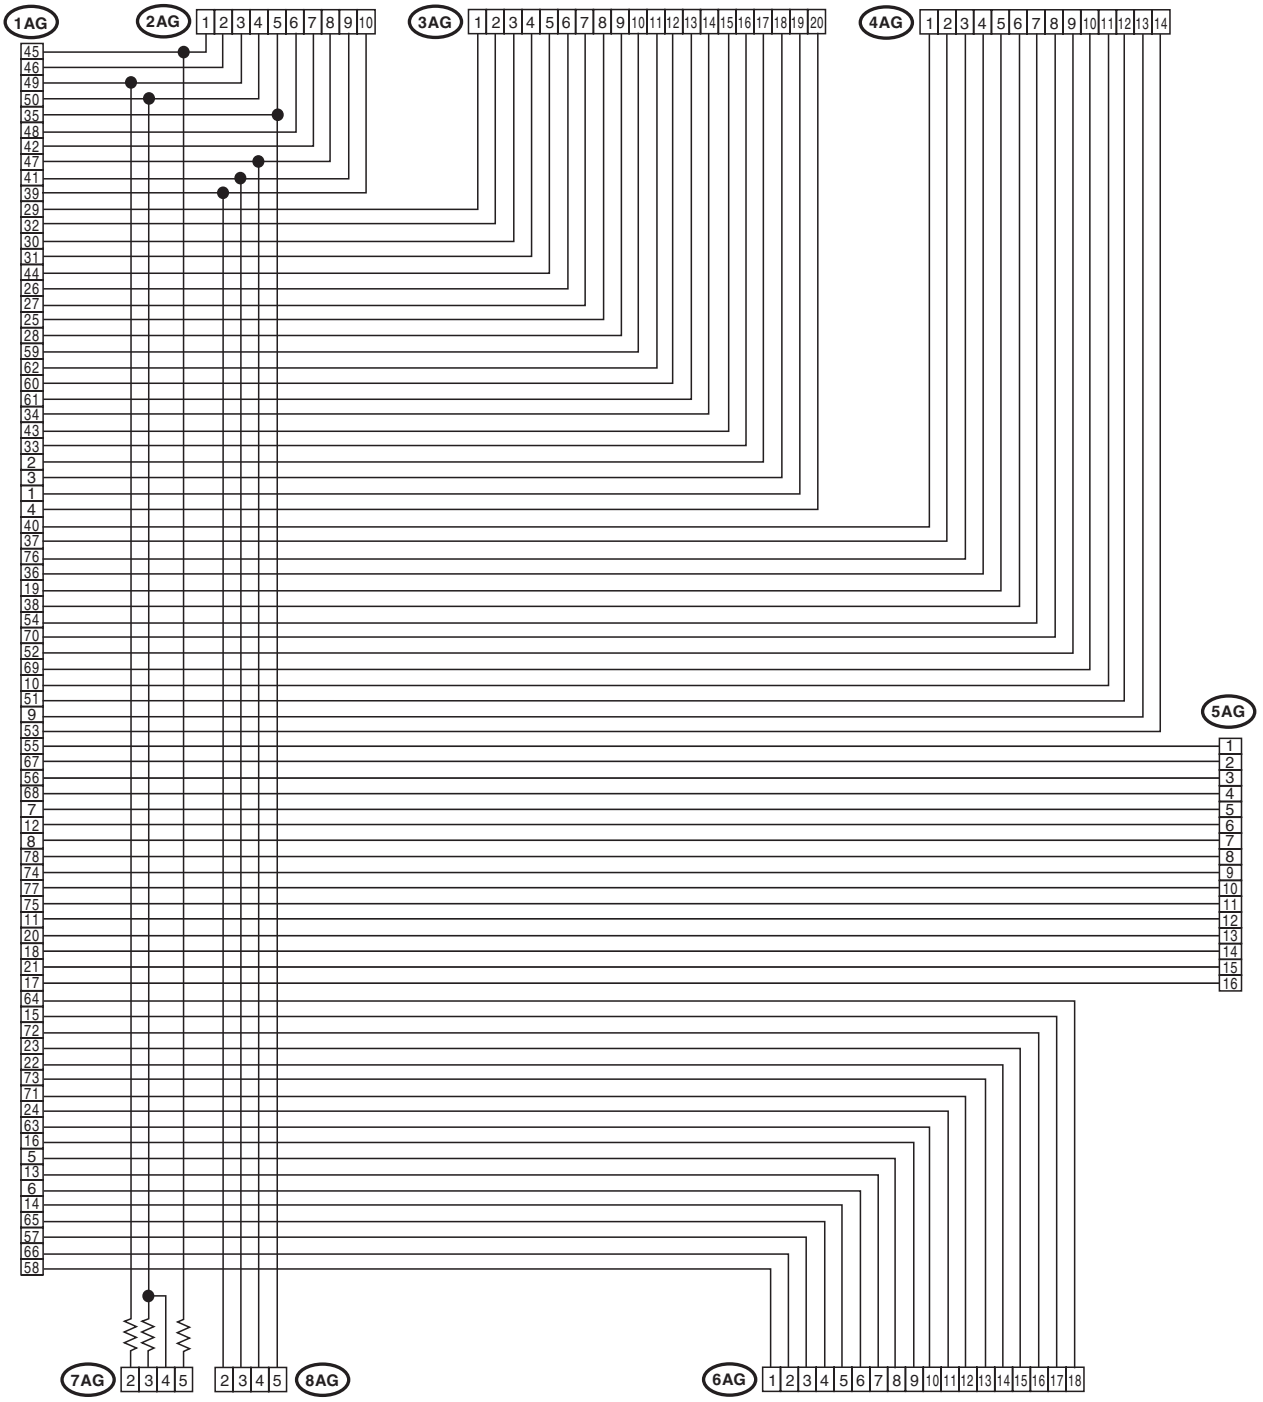


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
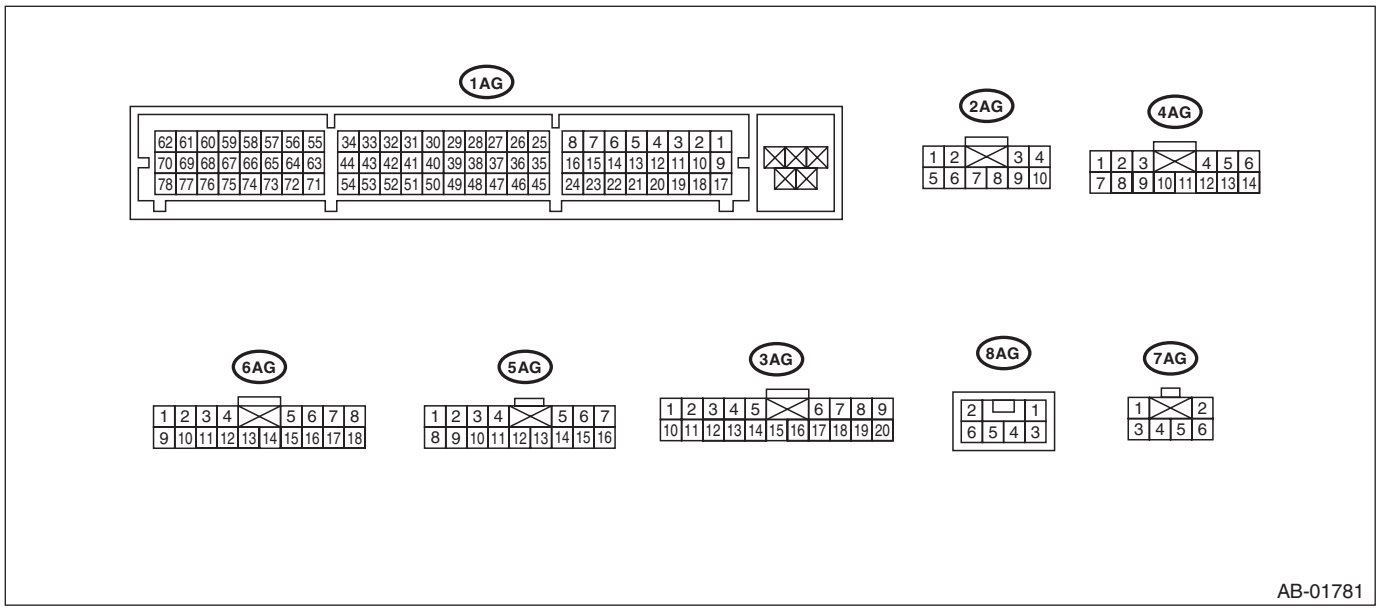
 ST98299SA040	98299SA040	TEST HARNESS Q	Used when measuring voltage and resistance of driver's airbag module.



AB-00929

- TEST HARNESS AG

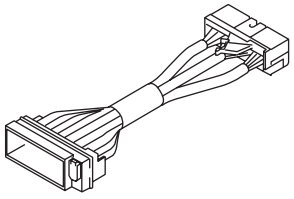


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
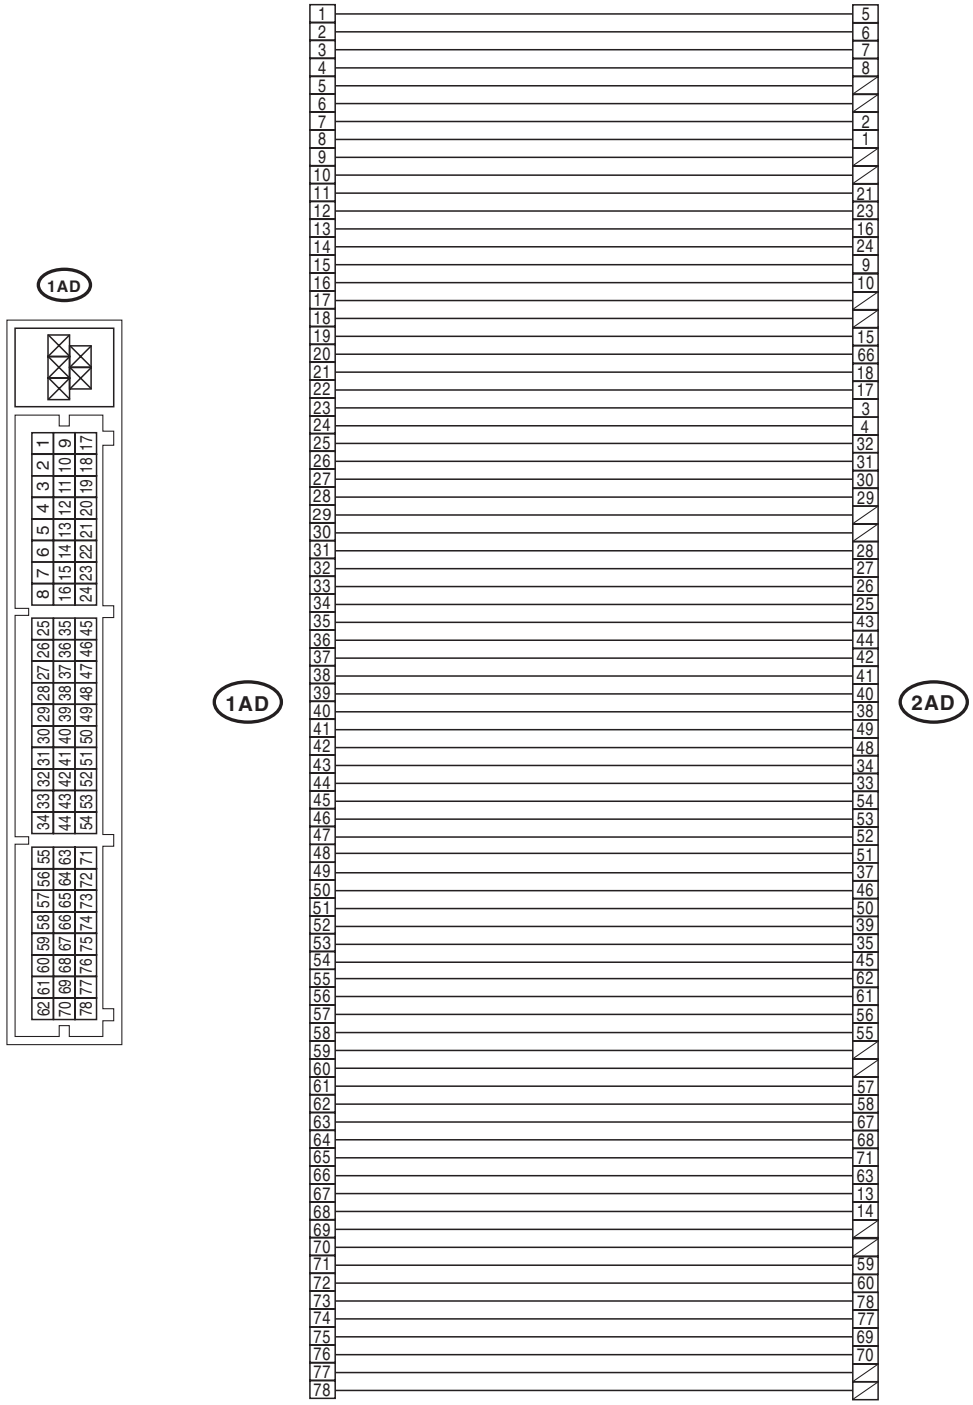
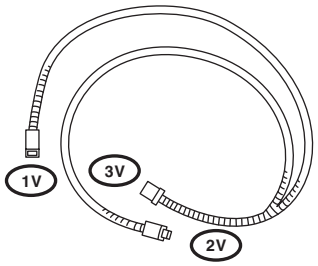
 ST98299AG070	98299AG070	TEST HARNESS AG	Used when measuring voltage and resistance of airbag control module.



AB-01902



- TEST HARNESS AD AV

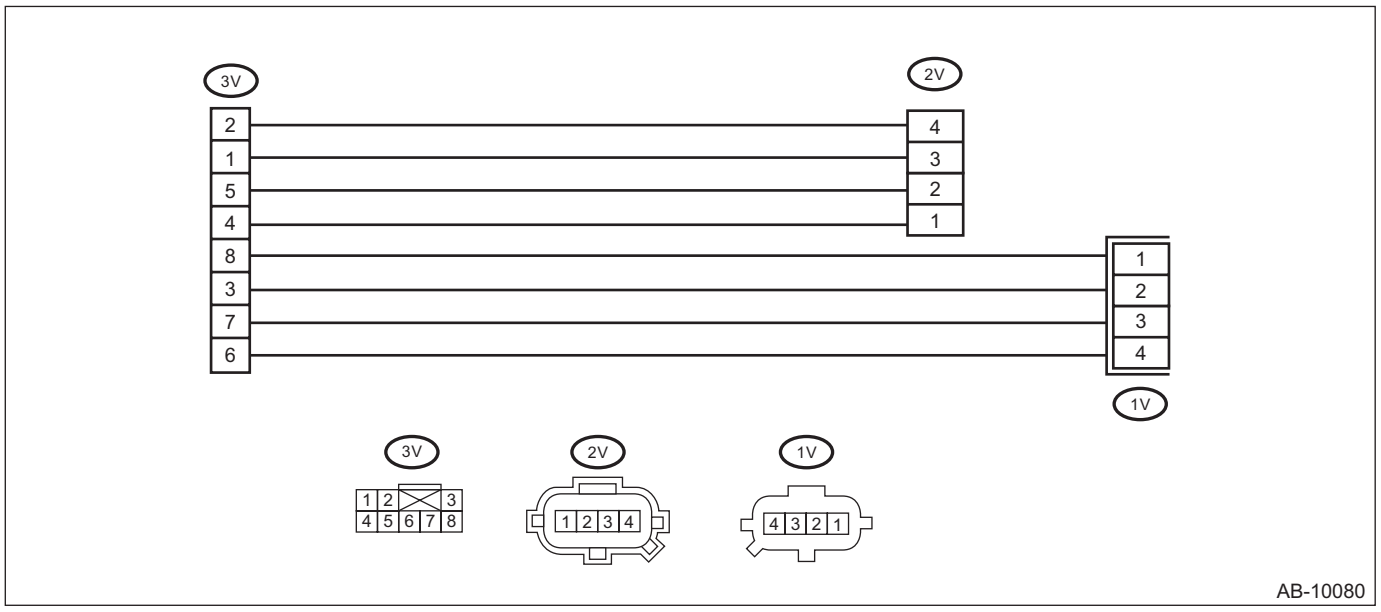


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
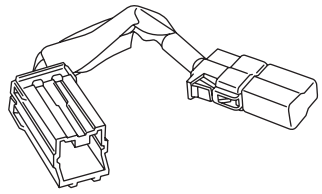
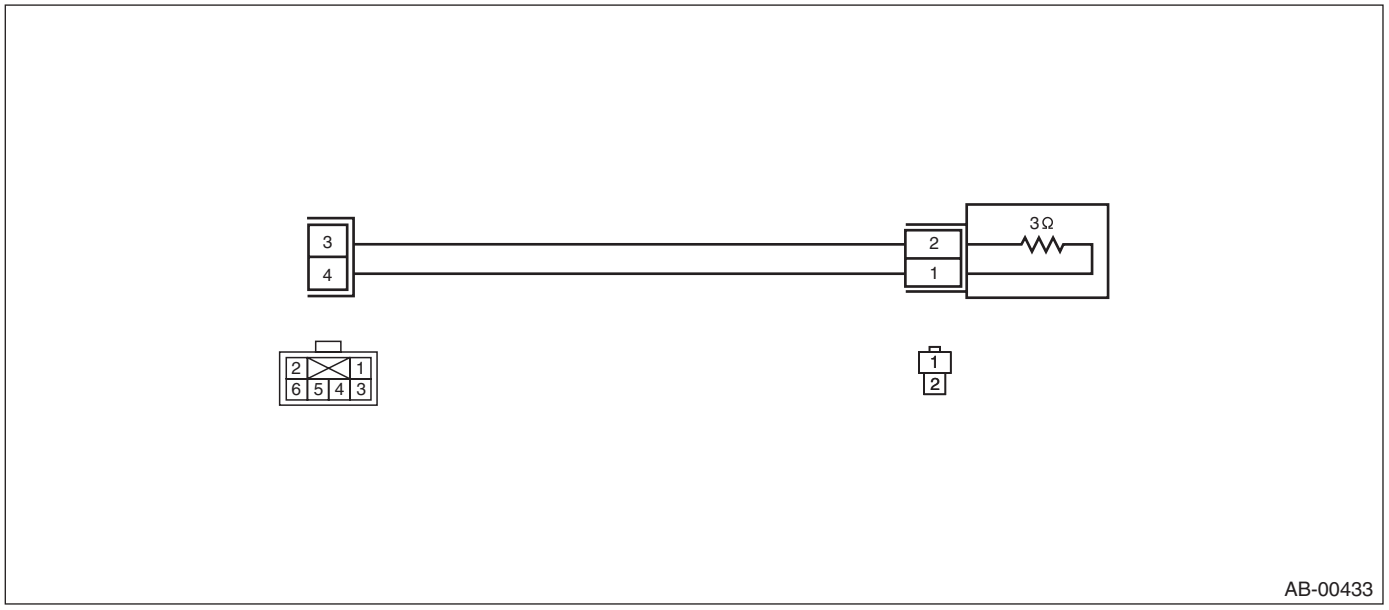
 ST98299AL010	98299AL010 (Newly adopted tool)	TEST HARNESS AD AV	Used together with test harness AG when measuring voltage and resistance of the airbag control module.

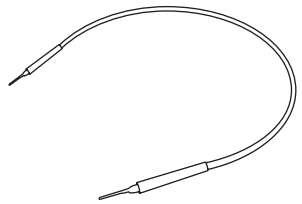


AB-03610



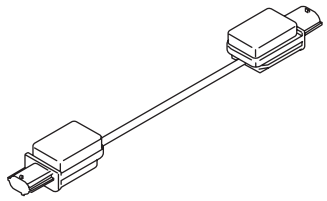
- TEST HARNESS V

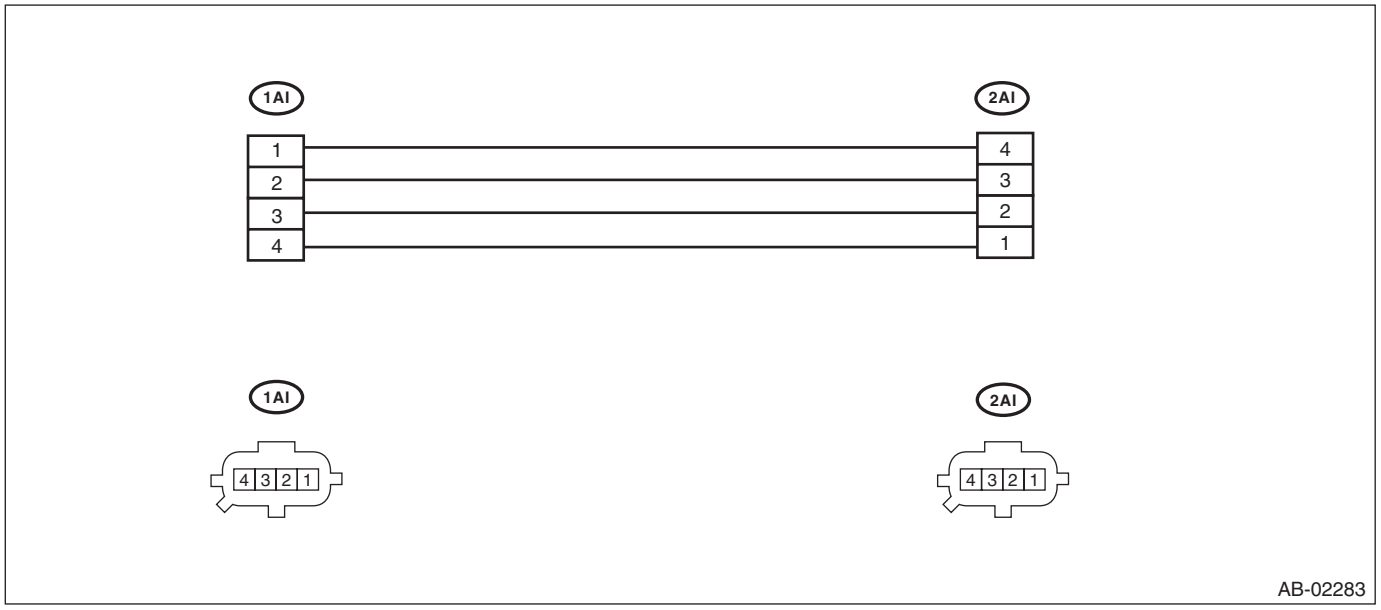
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299AG010	98299AG010	TEST HARNESS V	Used when measuring voltage and resistance of side airbag sensor and curtain airbag sensor.



- AIRBAG RESISTOR

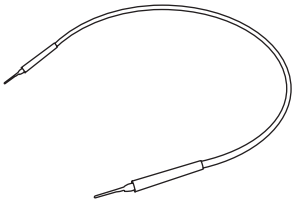
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299PA040	98299PA040	AIRBAG RESISTOR	Used in replacement of airbag module for which resistance value is same as airbag module. Two STs are required for diagnosis of two-stage inflator type airbag module.



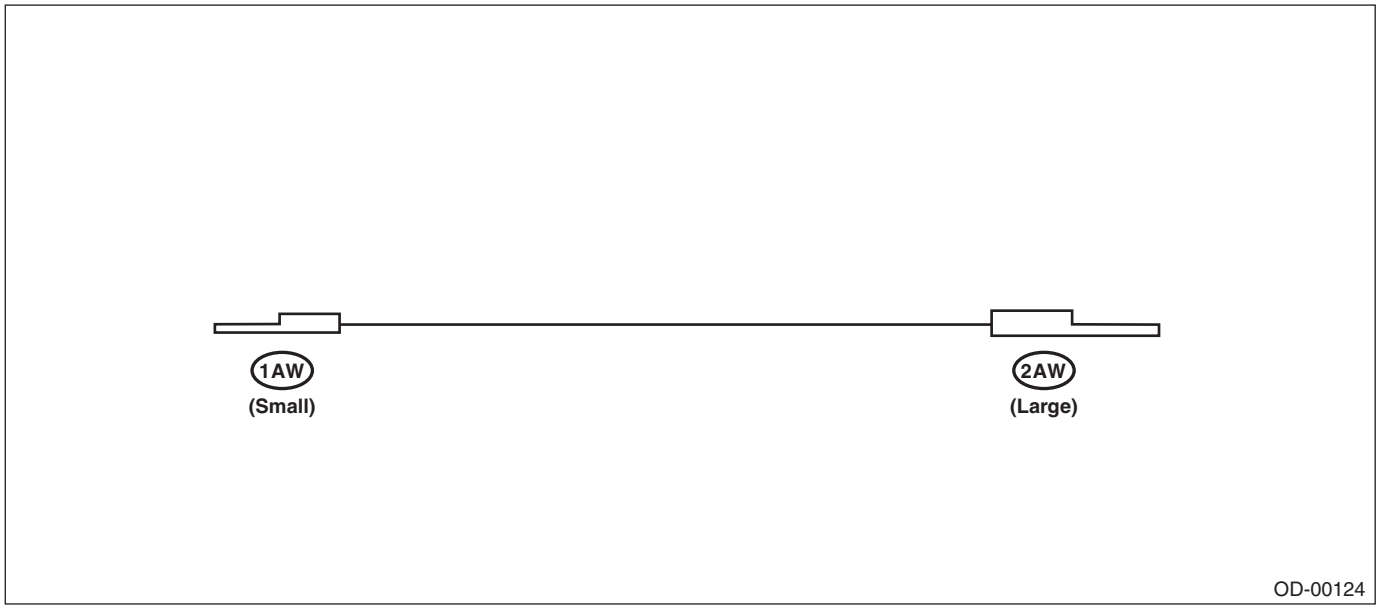


- TEST HARNESS AT

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299CA020	98299CA020	TEST HARNESS AT	Used when measuring power supply and resistance of side airbag harness. Two sets may be required.

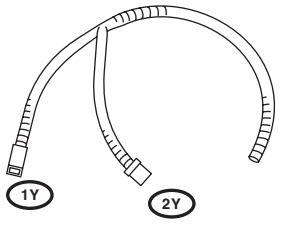


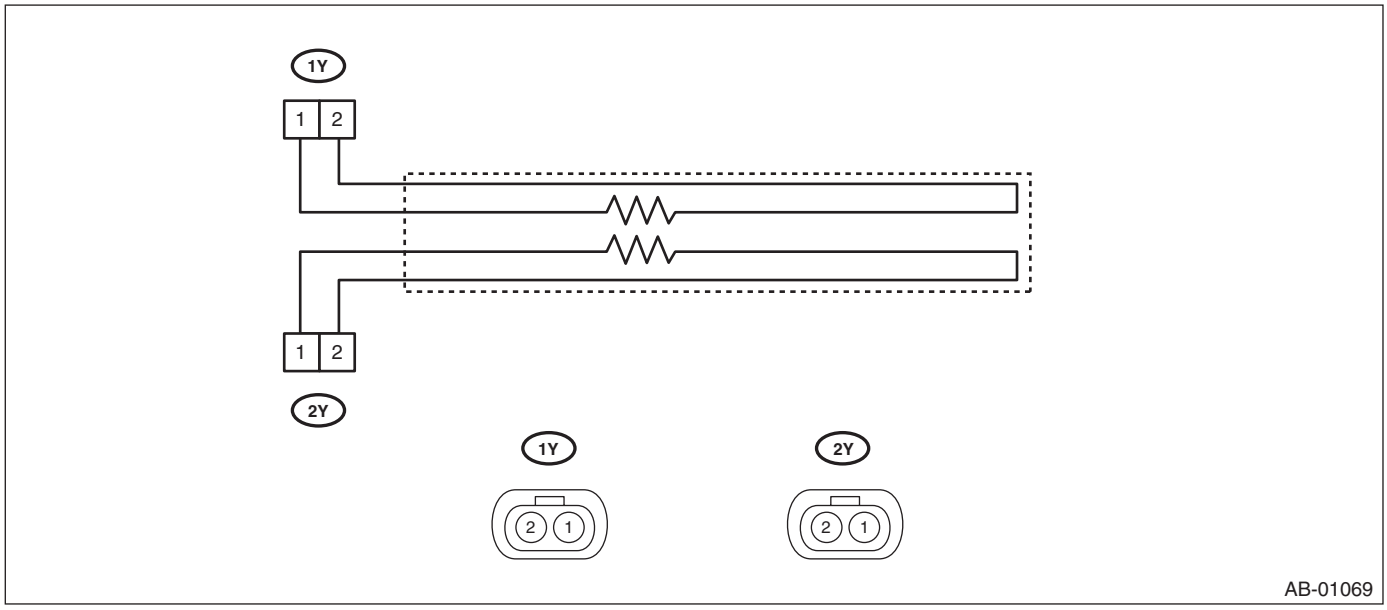
AB-03647



- TEST HARNESS AI

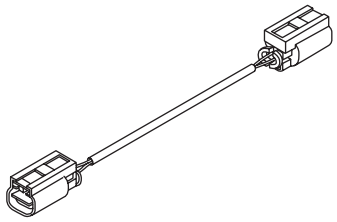
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299AG090	98299AG090	TEST HARNESS AI	• Used for diagnoses of side airbag sensor and curtain airbag sensor. • Used together with test harness V.





- TEST HARNESS AW

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299AL020	98299AL020 (Newly adopted tool)	TEST HARNESS AW	Used when diagnosing occupant detection system.



- TEST HARNESS Y

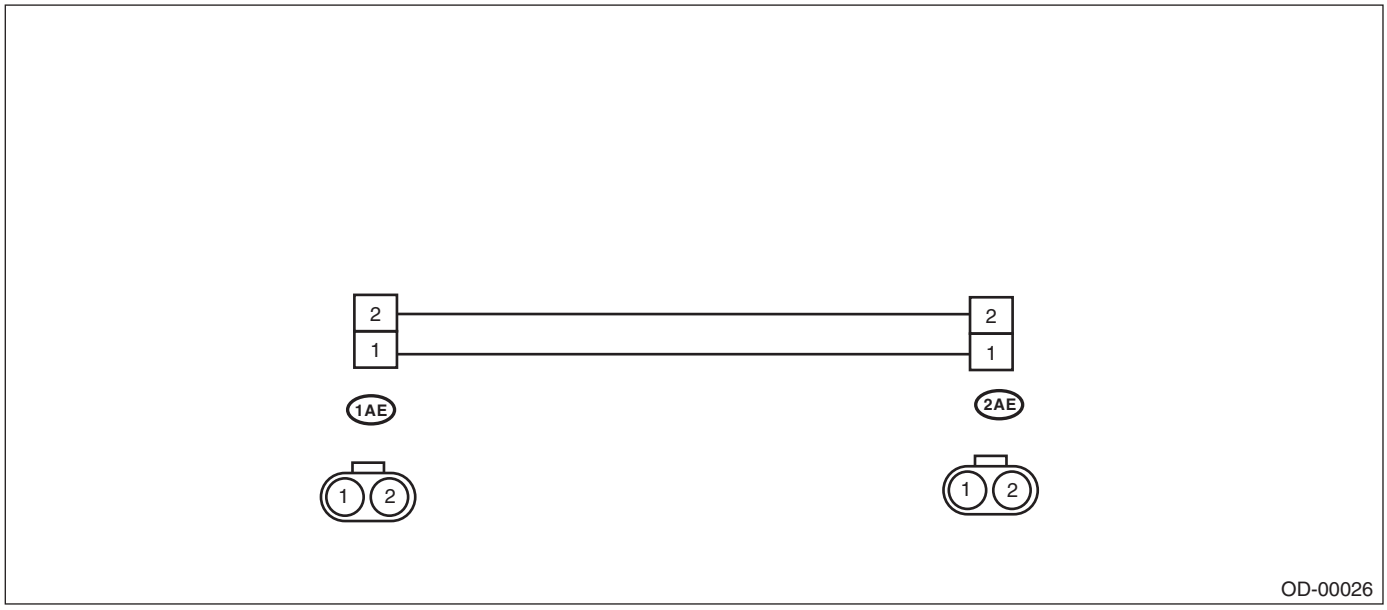


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
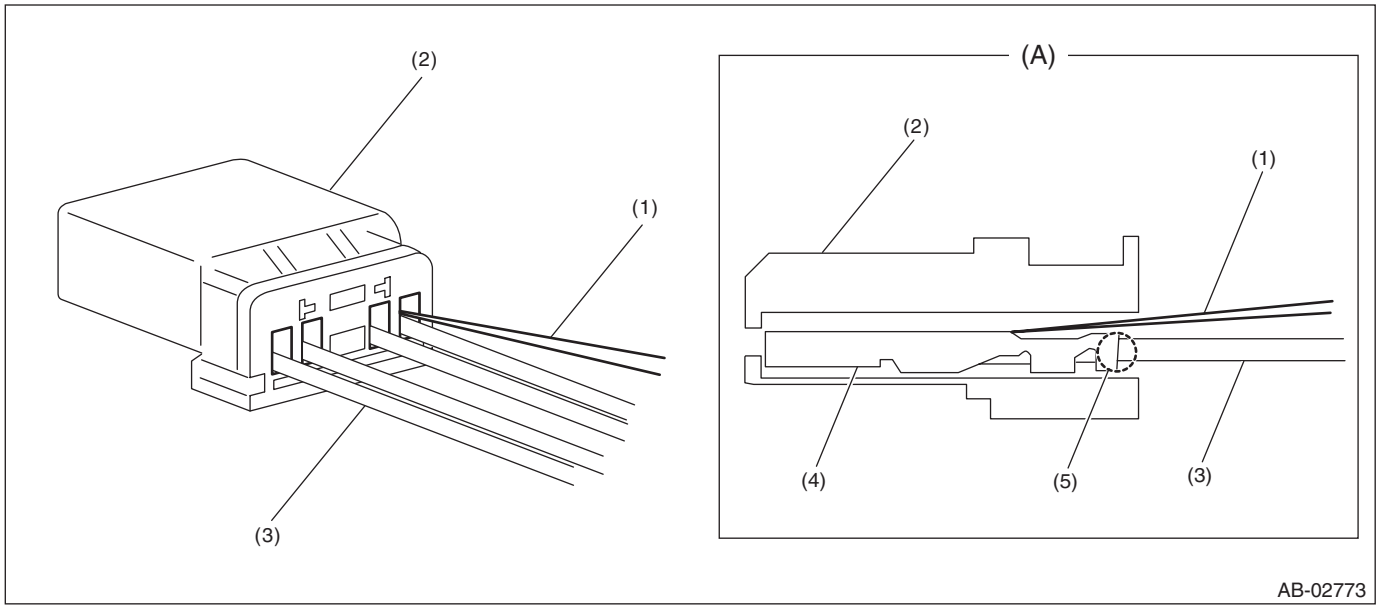
 ST98299AG040	98299AG040	TEST HARNESS Y	Used for troubleshooting seat belt buckle switch.

AB-01069

- TEST HARNESS AE

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299XA030	98299XA030	TEST HARNESS AE	TEST HARNESS Y adapter harness. Used for troubleshooting seat belt buckle switch.



2. GENERAL TOOL

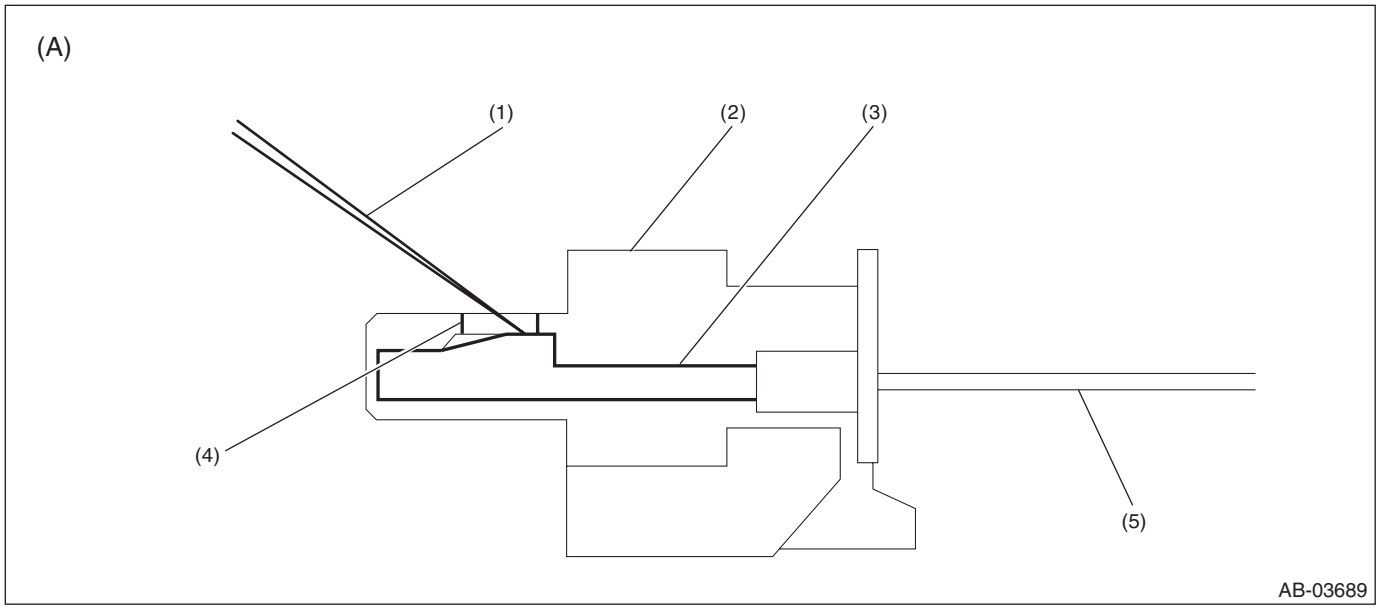
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for measuring the sensor.
Probe	Used when measuring voltage and resistance of passenger's airbag module and front door impact sensor.

3. HOW TO USE PROBE

- Passenger's airbag module

Insert the probe into the harness hole, and contact it with the terminal.

(A) Cross section



(1) Probe
(2) Connector (housing)
(3) Harness
(4) Terminal
(5) Connection

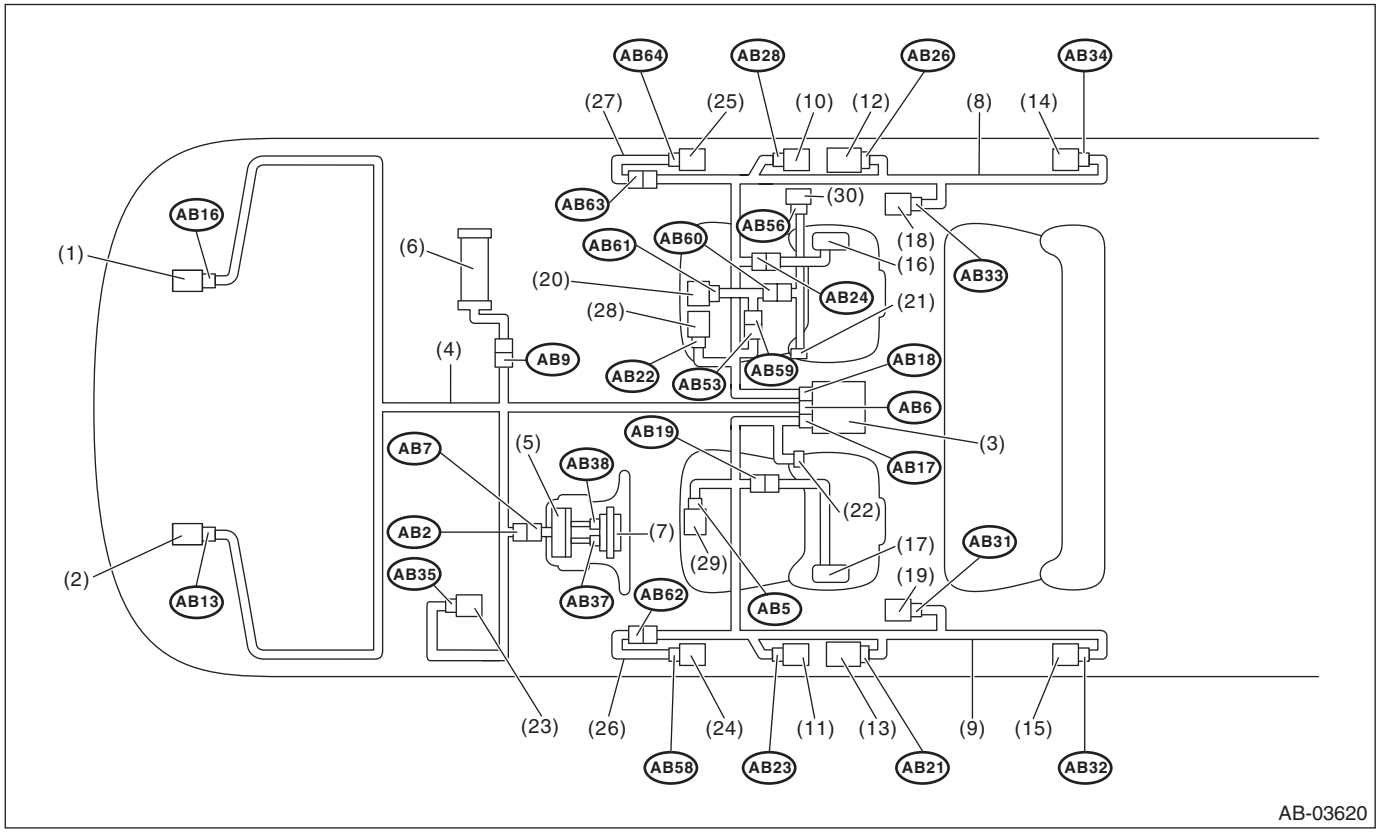
CAUTION:

- **Do not insert the probe forcibly.**
- **Be careful not to contact it to the connection (5) between the terminal and harness. (Harness will come off easily from connector if doing so.)**

- Front door impact sensor

Insert the probe into the inspection hole to contact with the terminal.

(A) Cross section



(1) Probe
(2) Connector (housing)
(3) Terminal
(4) Inspection hole
(5) Harness

CAUTION:

- **Do not push the probe with excessive force against the terminal. (Terminal will come off easily from housing if doing so.)**
- **Do not insert the probe anywhere other than inspection hole. (Waterproof property will be lost if doing so.)**

4. Electrical Component Location

A: LOCATION

(1)	Front sub sensor RH	(11)	Side airbag sensor LH	(21)	Buckle switch (RH)
(2)	Front sub sensor LH	(12)	Seat belt pretensioner RH	(22)	Buckle switch (LH)

B: WIRING DIAGRAM

Refer to “Airbag System” in WI section. <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

7. Subaru Select Monitor

A: OPERATION

For operation procedures, refer to the “PC application help for Subaru Select Monitor”.

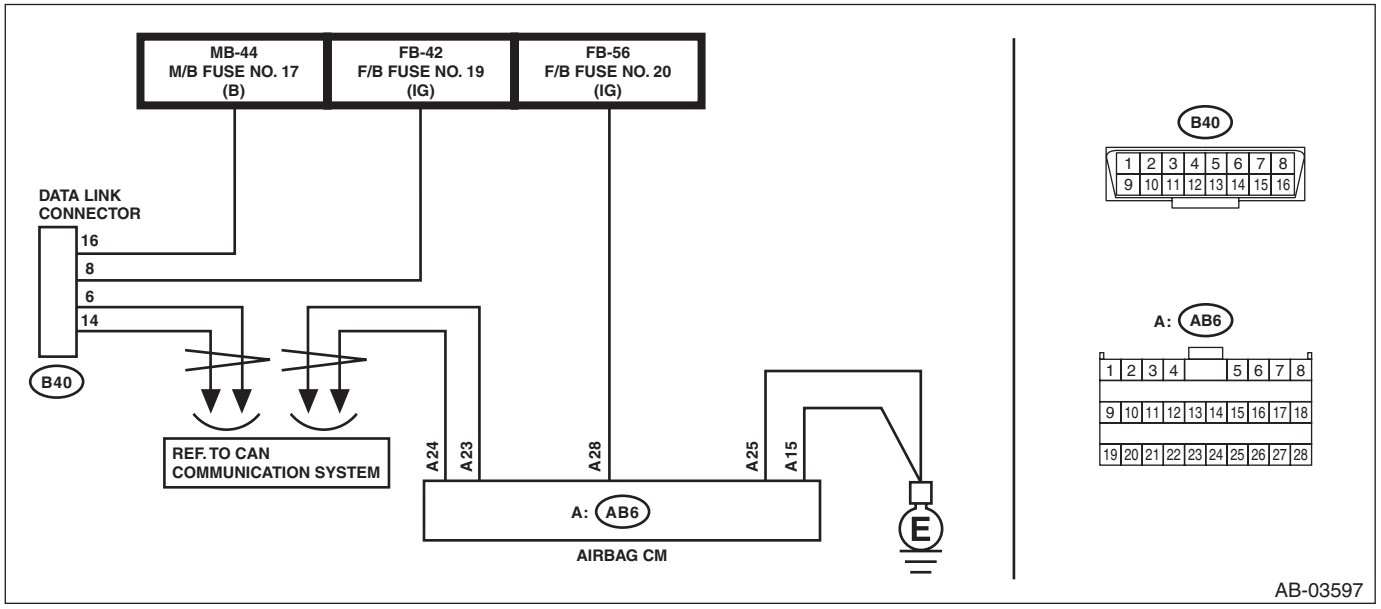
B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

DTC DETECTING CONDITION:

- Defective harness connector
- Defective CAN communication

TROUBLE SYMPTOM:



Communication is impossible between the airbag control module and the Subaru Select Monitor.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to AB(diag)-4, CAUTION, General Description.>

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK IGNITION SWITCH.**	Is the ignition switch ON?	Go to step **2**.	Turn the ignition switch to ON, and select the airbag mode using the Subaru Select Monitor.
2	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 11 V or more?	Go to step **3**.	Charge or replace the battery.
3	**CHECK BATTERY TERMINAL.**	Is there poor contact at battery terminal?	Repair or tighten the battery terminal.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check whether communication to other systems can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Go to step **9**.	Go to step **5**.
5	**CHECK SUBARU SELECT MONITOR.**	Is Subaru Select Monitor powered on?	Go to step **7**.	Go to step **6**.
6	**CHECK FUSE.** Remove a fuse in the data link connector and visually check the fuse.	Is the fuse OK?	Repair the harness between the battery and the data link connector.	Replace the fuse. If the fuse is blown out again, check the power supply circuit.
7	**CHECK AIRBAG CONTROL MODULE CONNECTOR.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Confirm that the connectors of airbag control module (AB6, AB17, AB18) are securely connected.	Is the connector of the airbag control module securely connected?	Go to step **8**.	Connect the connector of the airbag control module.
8	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Disconnect the airbag control module connector. 2) Connect the battery ground terminal. 3) Turn the ignition switch to ON. 4) Check whether communication to other systems can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **9**.
9	**CHECK FUSE.** Remove fuse No. 20 from the fuse & relay box, and perform visual inspection.	Is the fuse OK?	Go to step **10**.	Replace the fuse. If the fuse is blown out again, check the power supply circuit.
10	**CHECK AIRBAG CONTROL MODULE CONNECTOR.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Confirm that the connectors of airbag control module (AB6, AB17, AB18) are securely connected.	Is the connector of the airbag control module securely connected?	Go to step **11**.	Connect the connector of the airbag control module.
11	**CHECK CAN COMMUNICATION.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Repair it according to the diagnosis for LAN system.	Go to step **12**.

	Step	Check	Yes	No
12	**CHECK POWER SUPPLY CIRCUIT.** 1) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 2) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 3) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 4) Turn the ignition switch to ON. 5) Measure the voltage between connector (2AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(2AG) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **13**.	Repair the harness between the airbag control module and the battery. Or replace the airbag main harness along with the bulkhead harness.
13	**CHECK BETWEEN AIRBAG CONTROL MODULE AND CHASSIS GROUND.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between connector (2AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(2AG) No. 4 — Chassis ground:*** ***(2AG) No. 3 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **14**.	Repair the harness between the airbag control module and the chassis ground. Or replace the airbag main harness along with the bulkhead harness.
14	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact of the control module power supply, ground circuit and data link connector?	Repair the connector. (Replace the harness without repairing the airbag system connector.)	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>

8. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Airbag System».
3) On «Airbag System failure diagnosis» display, select «Diagnostic Code(s) Display».

NOTE:
- For details concerning the work procedure, refer to the “PC application help for Subaru Select Monitor”.
- For details concerning DTC, refer to List of Diagnostic Trouble Code (DTC). <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>

9. Inspection Mode

A: PROCEDURE

Recreate the circumstance by referring to the conditions described in the checklist.

10.Clear Memory Mode

A: OPERATION

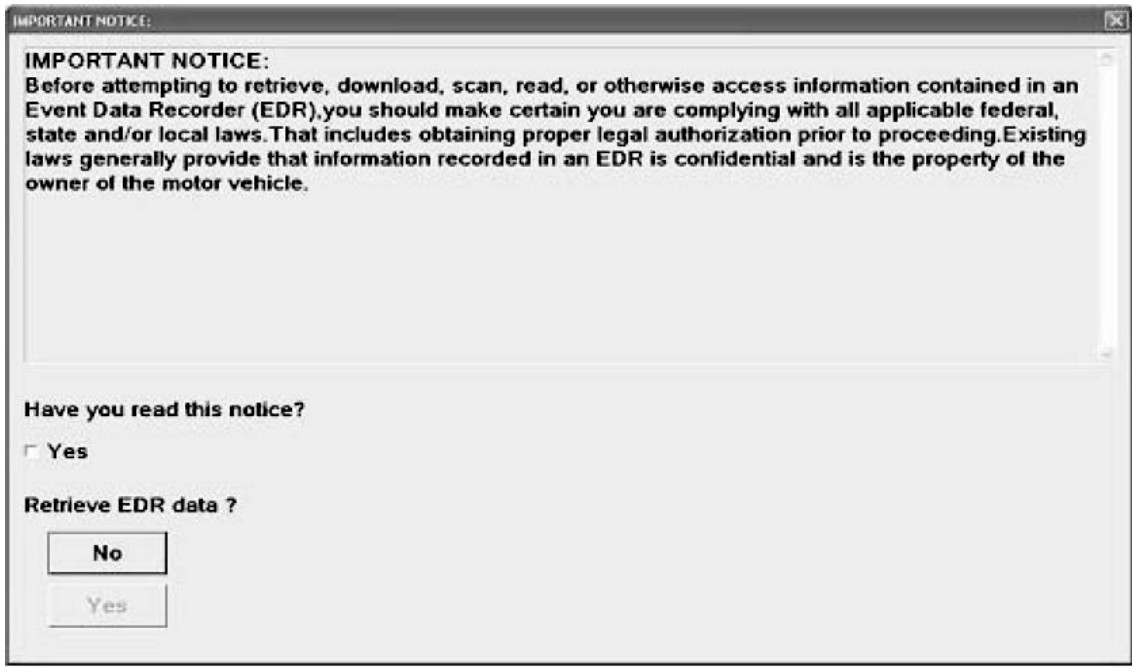
1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Airbag System».
3) On «Airbag System failure diagnosis» display, select «Clear Memory».

NOTE:
- For details concerning the work procedure, refer to the “PC application help for Subaru Select Monitor”.
- Clear the DTC stored in the airbag control module after repairing the airbag system.

11.Read Current Data

A: OPERATION

Check the operating condition of each sensor in the event of malfunction in the seat belt buckle switch, or when the seat belt buckle switch has been replaced.
1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Airbag System».
3) On «Airbag System» display, select «Current Data Display & Save».



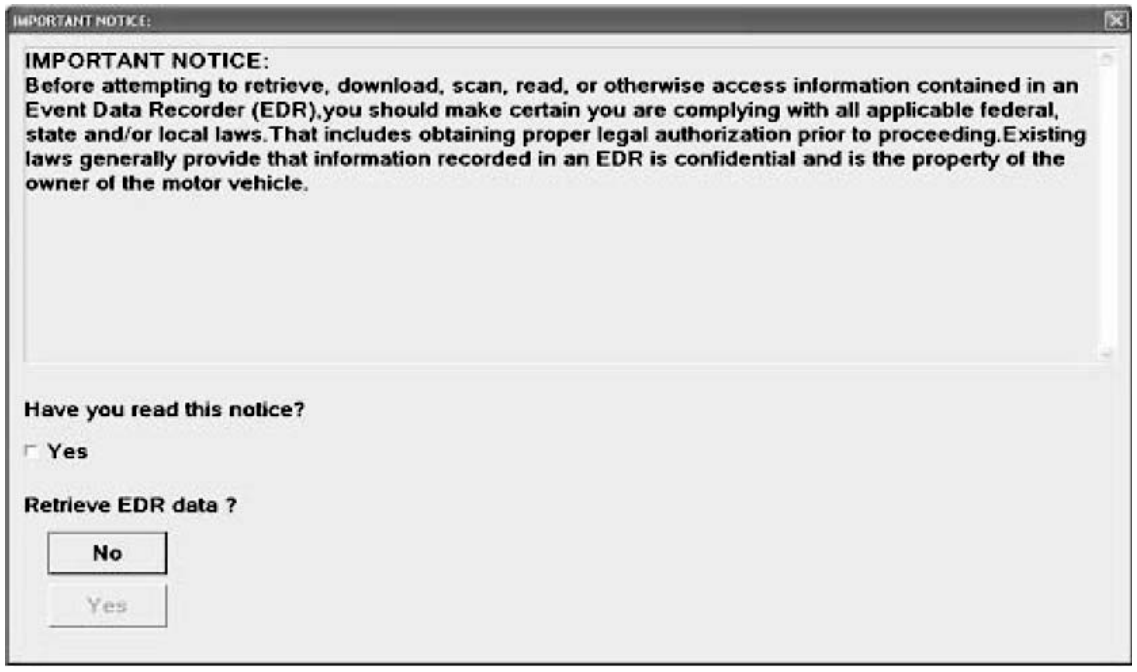
Item	Display	Note
Trip Count	—	<Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.>
Count	—	
Time Count	—	
Belt Buckle Switch LH	Unbelted/Belted/Other	“Belted” when the left side seat belt is fastened “Unbelted” when the left side seat belt is not fastened “Other” in other cases
Belt Buckle Switch RH	Unbelted/Belted/Other	“Belted” when the right side seat belt is fastened “Unbelted” when the right side seat belt is not fastened “Other” in other cases
Passenger Occupant Status	Occupied/Adult/Child/ Empty or CRS	“Occupied” when the occupant is present “Adult” “Child” “Empty or CRS” when the seat is unoccupied or when child restraint seat is installed **CAUTION:** **When checking the operating status, be careful of the followings.** **• When the seat is unoccupied: Do not place anything on the seat.** **• Child restraint seat: Install the seat according to its instruction manual.** **• When the seat is occupied: Someone who weighs at least approx. 70 kg (155 lbs) must be seated during the check.**
Passenger Airbag Status	ON/OFF	“ON” when the passenger occupant status is “Occupied” “OFF” when the status is “Empty or CRS”
Data record No.	Not assign/1	Displays “1” when any EDR data is recorded.
Data record No.	Not assign/1	Displays “1” when any EDR data is recorded.

NOTE:
For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

12.Event Record Data

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Airbag System».
3) On «Airbag System» display, select «Event Record Data». After selection, «IMPORTANT NOTICE» screen is displayed.
4) After checking the content of «IMPORTANT NOTICE», click the checkbox for “Yes”.
5) If the applicable law is not violated, click the «Yes» button to display the EDR data.



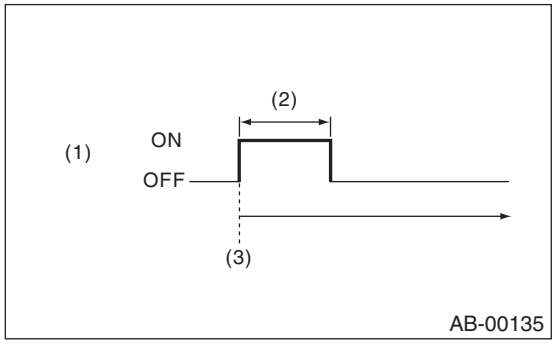
AB-02847

6) Select the items to be checked from each event record data.
7) Select the record data to be checked from each record data.
8) The selected record data is displayed. If there is no data recorded, «Event record data are not recorded» is displayed.
9) Select «Exit» to return to each event record data screen.

13.Batch save of Event record data

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Airbag System».
3) On «Airbag System» display, select «Batch save of Event record data». After selection, «IMPORTANT NOTICE» screen is displayed.
4) After checking the content of «IMPORTANT NOTICE», click the checkbox for “Yes”.
5) If the applicable law is not violated, click the «Yes» button to display the EDR data.



AB-02847

6) Specify the destination for the event record data to save the data there.
7) After saving the file, click the «OK» button to return the menu screen.

14.Airbag Warning Light Illumination Pattern

A: INSPECTION

Turn the ignition switch to ON, and confirm that the airbag warning light remains on for approx. 6 seconds then turns off afterwards.

(1) Airbag warning light
(2) Approx. 6 seconds
(3) Ignition switch ON

15.Airbag Warning Light Failure

A: AIRBAG WARNING LIGHT REMAINS ON

DETECTING CONDITION:

- Airbag warning light is faulty.
- Airbag control module to combination meter circuit is shorted or open.
- Grounding circuit is faulty.
- Airbag control module is faulty.
- Connector connection is improper.
- Connections of (AB6, AB17, AB18) to airbag control module are improper.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Repair it according to diagnosis of LAN system.	Go to step **2**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Check the connection status of airbag CM connector.	Is there poor contact of connector?	Reconnect the connector. Or repair the connector.	Go to step **3**.
3	**CHECK FOR POOR CONTACT.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is there any fault?	Replace the combination meter. <Ref. to IDI-11, REMOVAL, Combination Meter.>	Replace the airbag CM. <Ref. to AB-47, REMOVAL, Airbag Control Module.>

B: AIRBAG WARNING LIGHT REMAINS OFF

NOTE:
For the diagnostic procedure, refer to "AIRBAG WARNING LIGHT REMAINS ON". <Ref. to AB(diag)-36, AIRBAG WARNING LIGHT REMAINS ON, Airbag Warning Light Failure.>

16.List of Diagnostic Trouble Code (DTC)

17.Diagnostic Chart with Trouble Code

A: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

DIAGNOSIS START CONDITION:
Ignition voltage remains at 10 V or more for 1 second.
DTC DETECTING CONDITION:
Detected when malfunction occurs in CAN line.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”

DTC DETECTING CONDITION:
Detected when CAN data from ECM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

C: DTC U0101 LOST COMMUNICATION WITH TCM

DTC DETECTING CONDITION:
Detected when CAN data from TCM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

D: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

DTC DETECTING CONDITION:
Detected when CAN data from VDC CM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

E: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

DTC DETECTING CONDITION:
Detected when CAN data from body integrated unit does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

F: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

DTC DETECTING CONDITION:
Detected when CAN data from combination meter does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

G: DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”

DTC DETECTING CONDITION:
Detected when CAN data from ECM is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

H: DTC U0402 INVALID DATA RECEIVED FROM TCM

DTC DETECTING CONDITION:
This is detected when CAN data from TCM is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

I: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

DTC DETECTING CONDITION:
Detected when CAN data from VDC CM is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

J: DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

DTC DETECTING CONDITION:
Detected when CAN data from body integrated unit is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

K: DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

DTC DETECTING CONDITION:
Detected when CAN data from combination meter is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

L: DTC B1000 AIRBAG ECU MALFUNCTION

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-29, Read Diagnostic Trouble Code (DTC).>	Is «Airbag ECU Malfunction» displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Perform the Clear Memory Mode. <Ref. to AB(diag)-31, Clear Memory Mode.>

M: DTC B1003 AIRBAG ECU MALFUNCTION

NOTE:
Refer to DTC B1103 for details on DTC B1000. <Ref. to AB(diag)-44, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

N: DTC B1004 AIRBAG ECU MALFUNCTION

NOTE:
Refer to DTC B1104 for details on DTC B1000. <Ref. to AB(diag)-44, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

O: DTC B1005 AIRBAG ECU MALFUNCTION

NOTE:
Refer to DTC B1105 for details on DTC B1000. <Ref. to AB(diag)-44, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

P: DTC B1006 AIRBAG ECU MALFUNCTION

NOTE:
Refer to DTC B1106 for details on DTC B1000. <Ref. to AB(diag)-44, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

Q: DTC B111A AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B111A, refer to DTC B1000. <Ref. to AB(diag)-44, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

R: DTC B111B AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B111B, refer to DTC B1000. <Ref. to AB(diag)-44, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

S: DTC B1125 AIRBAG ECU MALFUNCTION

NOTE:
Refer to DTC B1125 for details on DTC B1000. <Ref. to AB(diag)-44, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

T: DTC B1126 AIRBAG ECU MALFUNCTION

NOTE:
Refer to DTC B1126 for details on DTC B1000. <Ref. to AB(diag)-44, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

U: DTC B1135 AIRBAG ECU MALFUNCTION

NOTE:
Refer to DTC B1135 for details on DTC B1000. <Ref. to AB(diag)-44, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

V: DTC B1136 AIRBAG ECU MALFUNCTION

NOTE:
Refer to DTC B1136 for details on DTC B1000. <Ref. to AB(diag)-44, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

W: DTC B113A AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B113A, refer to DTC B1000. <Ref. to AB(diag)-44, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

X: DTC B1145 AIRBAG ECU MALFUNCTION

NOTE:
Refer to DTC B1145 for details on DTC B1000. <Ref. to AB(diag)-44, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

Y: DTC B1146 AIRBAG ECU MALFUNCTION

NOTE:
Refer to DTC B1146 for details on DTC B1000. <Ref. to AB(diag)-44, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

Z: DTC B117A AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B117A, refer to DTC B1000. <Ref. to AB(diag)-44, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

AA:DTC B1185 AIRBAG ECU MALFUNCTION

NOTE:
Refer to DTC B1185 for details on DTC B1000. <Ref. to AB(diag)-44, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

AB:DTC B1195 AIRBAG ECU MALFUNCTION

NOTE:
Refer to DTC B1195 for details on DTC B1000. <Ref. to AB(diag)-44, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

AC:DTC B1196 AIRBAG ECU MALFUNCTION

NOTE:
Refer to DTC B1196 for details on DTC B1000. <Ref. to AB(diag)-44, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

AD:DTC B1197 AIRBAG ECU MALFUNCTION

NOTE:
Refer to DTC B1197 for details on DTC B1000. <Ref. to AB(diag)-44, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

AE:DTC B1198 AIRBAG ECU MALFUNCTION

NOTE:
Refer to DTC B1198 for details on DTC B1000. <Ref. to AB(diag)-44, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

AF:DTC B1199 AIRBAG ECU MALFUNCTION

NOTE:
Refer to DTC B1199 for details on DTC B1000. <Ref. to AB(diag)-44, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

AG:DTC B11E0 ROLLOVER IGNITION

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
This DTC is indicated when the curtain airbag module and the seat belt pretensioner are deployed.
Once this DTC is displayed, the memory cannot be cleared. Replace the following parts.

- Airbag control module <Ref. to AB-47, Airbag Control Module.>
- Curtain airbag module (operating side) <Ref. to AB-41, Curtain Airbag Module.>
- Curtain airbag sensor (operating side) <Ref. to AB-55, Curtain Airbag Sensor.>
- Front outer seat belt with pretensioner (operating side) <Ref. to SB-18, Front Seat Belt.>

AH:DTC B11F0 DISPOSAL PROCESS COMPLETE

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Disposal process of airbag control module is completed.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. (Current malfunction)	Is DTC B11F0 displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Perform memory clear. <Ref. to AB(diag)-31, Clear Memory Mode.>

AI: DTC B11F3 FRONT IMPACT IGNITION

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Front impact ignition, ignition delay (on the 2nd stage ignition)
This DTC is indicated when the front airbag module and the pretensioner are deployed.
Once this DTC is displayed, the memory cannot be cleared. Therefore replace the following parts.

- Airbag control module <Ref. to AB-47, Airbag Control Module.>
- Driver's airbag module <Ref. to AB-30, Driver's Airbag Module.>
- Passenger's airbag module <Ref. to AB-32, Passenger's Airbag Module.>
- Front sub sensor of both sides <Ref. to AB-49, Front Sub Sensor.>
- Front outer seat belt with pretensioner of both sides <Ref. to SB-18, Front Seat Belt.>
- Steering roll connector <Ref. to AB-57, Roll Connector.>
- Occupant detection system (passenger's seat cushion & frame assembly) <Ref. to SE-11, Front Seat.>
- Curtain airbag module (if deployed) <Ref. to AB-41, Curtain Airbag Module.>
- Seat cushion airbag module <Ref. to AB-35, Seat Cushion Airbag Module.>

AJ:DTC B11F4 FRONT IMPACT IGNITION

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Front impact ignition, ignition delay (on the 1st stage ignition)

NOTE:
For details on DTC B11F4, refer to DTC B11F3. <Ref. to AB(diag)-47, DTC B11F3 FRONT IMPACT IGNITION, Diagnostic Chart with Trouble Code.>

AK:DTC B11F5 FRONT IMPACT IGNITION

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Front impact ignition, ignition delay (when ignited simultaneously)

NOTE:
For details on DTC B11F5, refer to DTC B11F3. <Ref. to AB(diag)-47, DTC B11F3 FRONT IMPACT IGNITION, Diagnostic Chart with Trouble Code.>

AL:DTC B11F7 SIDE IMPACT IGNITION

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Side impact ignition, side airbag sensor RH ignited
This DTC is displayed when the side airbag module and curtain airbag module are deployed.
Once this DTC is displayed, the memory cannot be cleared. Replace the following parts.

- Airbag control module <Ref. to AB-47, Airbag Control Module.>
- Side airbag module (operating side) <Ref. to AB-38, Side Airbag Module.>
- Side airbag sensor (operating side) <Ref. to AB-53, Side Airbag Sensor.>
- Curtain airbag module (operating side) <Ref. to AB-41, Curtain Airbag Module.>
- Curtain airbag sensor (operating side) <Ref. to AB-55, Curtain Airbag Sensor.>
- Front door impact sensor (operating side) <Ref. to AB-51, Front Door Impact Sensor.>
- Front outer seat belt with pretensioner (operating side) <Ref. to SB-18, Front Seat Belt.>

AM:DTC B11F8 SIDE IMPACT IGNITION

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Side impact ignition, side airbag sensor LH ignited

NOTE:
For details on DTC B11F8. refer to DTC B11F7. <Ref. to AB(diag)-48, DTC B11F7 SIDE IMPACT IGNITION, Diagnostic Chart with Trouble Code.>

AN:DTC B11F9 SIDE IMPACT IGNITION

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Side impact ignition, curtain airbag sensor RH ignited

NOTE:
For details on DTC B11F9, refer to DTC B11F7. <Ref. to AB(diag)-48, DTC B11F7 SIDE IMPACT IGNITION, Diagnostic Chart with Trouble Code.>

AO:DTC B11FA SIDE IMPACT IGNITION

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Side impact ignition, curtain airbag sensor LH ignited

NOTE:
For details on DTC B11FA, refer to DTC B11F7. <Ref. to AB(diag)-48, DTC B11F7 SIDE IMPACT IGNITION, Diagnostic Chart with Trouble Code.>

AP:DTC B11FB SIDE IMPACT IGNITION

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Side impact ignition, door sensor RH ignited

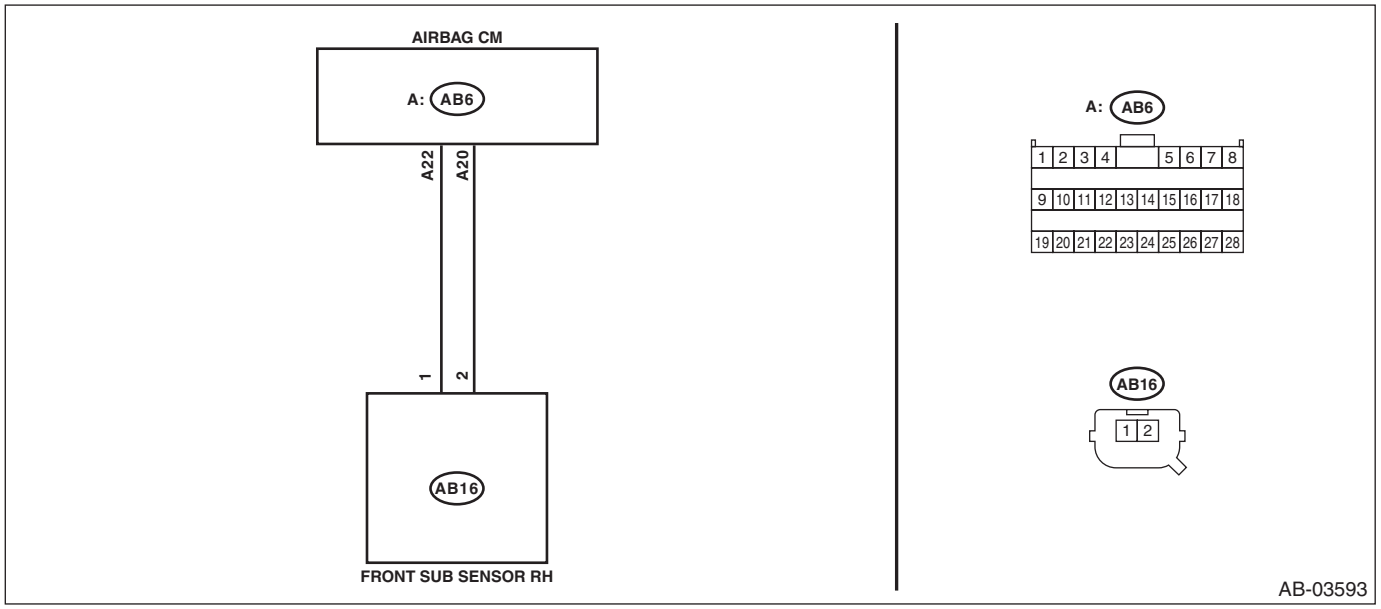
NOTE:
For details on DTC B11FB, refer to DTC B11F7. <Ref. to AB(diag)-48, DTC B11F7 SIDE IMPACT IGNITION, Diagnostic Chart with Trouble Code.>

AQ:DTC B11FC SIDE IMPACT IGNITION

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Side impact ignition, door sensor LH ignited

NOTE:
For details on DTC B11FC, refer to DTC B11F7. <Ref. to AB(diag)-48, DTC B11F7 SIDE IMPACT IGNITION, Diagnostic Chart with Trouble Code.>

AR:DTC B1610 FRONT SUB SENSOR RH FAILURE



DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Front sub sensor RH unit internal malfunction
If DTC B1610 is displayed, the circuit within the front sub sensor RH is faulty.
Replace the front sub sensor RH. <Ref. to AB-49, Front Sub Sensor.>

AS:DTC B1612 FRONT SUB SENSOR RH LOST COMMUNICATION

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Front sub sensor RH communication error (open/short circuit or connector connection failure between airbag CM and sensor, sensor internal communication circuit failure, CM internal communication circuit failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors (AB6, AB16) between the airbag control module and the front sub sensor RH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connectors (AB7) and (AB2). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Disconnect the connector (AB16) from the front sub sensor RH, and then connect the connector (1H) in the test harness H to connector (AB16). 8) Measure the resistance between connector (4AG) in the test harness AG and connector (3H) in the test harness H. ***Connector & terminal*** ***(4AG) No. 14 — (3H) No. 5:*** ***(4AG) No. 12 — (3H) No. 6:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS RH).** Measure the resistance between connector (4AG) in the test harness AG and chassis ground, and the resistance between connector (4AG) terminals in the test harness AG. ***Connector & terminal*** ***(4AG) No. 12 — Chassis ground:*** ***(4AG) No. 14 — Chassis ground:*** ***(4AG) No. 12 — (4AG) No. 14:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag main harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the front sub sensor RH. <Ref. to AB-49, REMOVAL, Front Sub Sensor.> Replace the airbag control module if not operating normally even after replacing the sensor. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code”. <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

AT:DTC B1613 FRONT SUB SENSOR RH INITIALIZATION ERROR

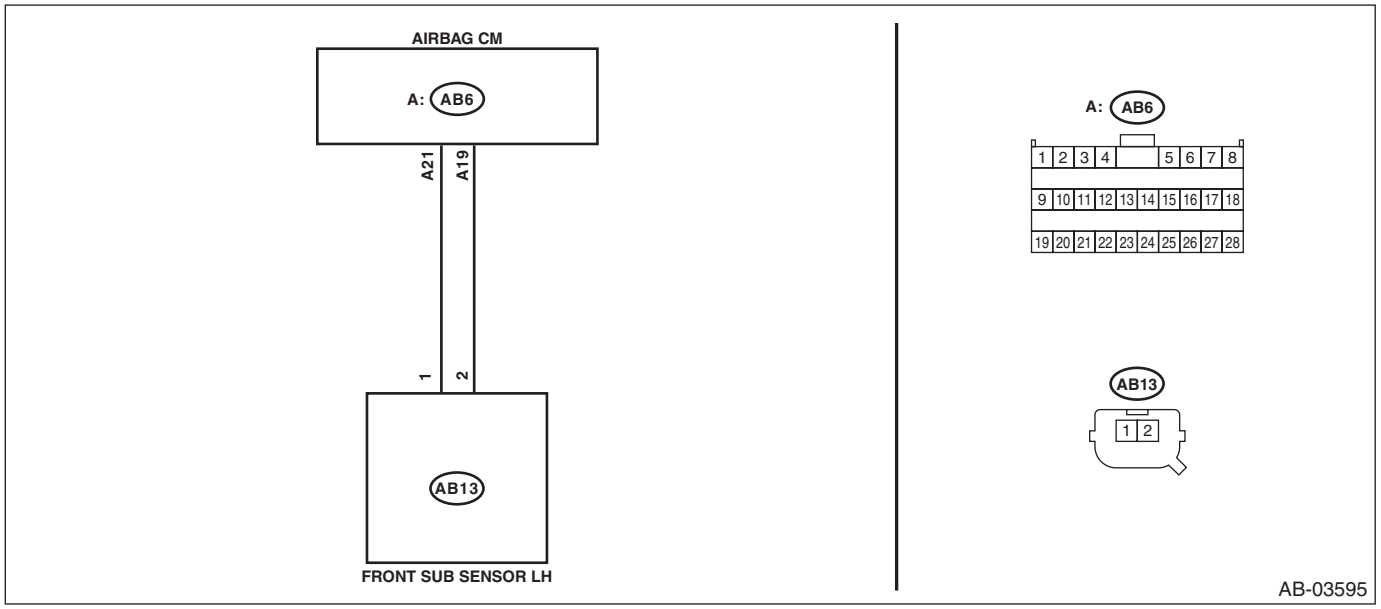
DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Front sub sensor RH unit malfunction (sensor type abnormal, sensor unit initialization error)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors (AB6, AB16) between the airbag control module and the front sub sensor RH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.
2	**CHECK AIRBAG CONTROL MODULE AFTER CHECK OR REPLACEMENT OF FRONT SUB SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front sub sensor RH. <Ref. to AB-49, Front Sub Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is DTC B1613 displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **3**.
3	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

AU:DTC B1615 FRONT SUB SENSOR LH FAILURE



DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Front sub sensor LH unit internal malfunction
If DTC B1615 is displayed, the circuit within the front sub sensor LH is faulty.
Replace the front sub sensor LH. <Ref. to AB-49, Front Sub Sensor.>

AV:DTC B1617 FRONT SUB SENSOR LH LOST COMMUNICATION

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Front sub sensor LH communication error (open/short circuit or connector connection failure between airbag CM and sensor, sensor internal communication circuit failure, CM internal communication circuit failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors (AB6, AB13) between the airbag control module and the front sub sensor LH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connectors (AB7) and (AB2). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Disconnect the connector (AB13) from the front sub sensor LH, and then connect the connector (1H) in the test harness H to connector (AB13). 8) Measure the resistance between connector (4AG) in the test harness AG and connector (3H) in the test harness H. ***Connector & terminal*** ***(4AG) No. 7 — (3H) No. 5:*** ***(4AG) No. 9 — (3H) No. 6:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS LH).** Measure the resistance between connector (4AG) in the test harness AG and chassis ground, and the resistance between connector (4AG) terminals in the test harness AG. ***Connector & terminal*** ***(4AG) No. 7 — Chassis ground:*** ***(4AG) No. 9 — Chassis ground:*** ***(4AG) No. 7 — (4AG) No. 9:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag main harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the front sub sensor LH. <Ref. to AB-49, REMOVAL, Front Sub Sensor.> Replace the airbag control module if not operating normally even after replacing the sensor. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.**	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code”. <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

AW:DTC B1618 FRONT SUB SENSOR LH INITIALIZATION ERROR

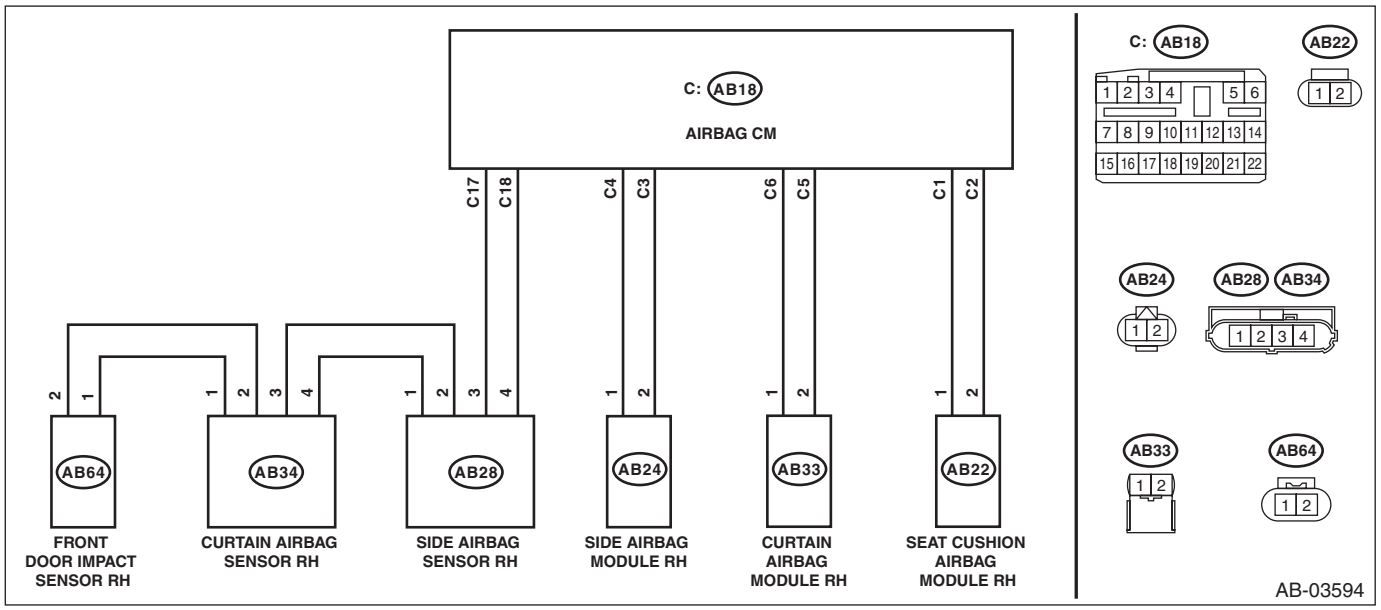
DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Front sub sensor LH unit malfunction (sensor type abnormal, sensor unit initialization error)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors (AB6, AB13) between the airbag control module and the front sub sensor LH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.
2	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front sub sensor LH. <Ref. to AB-49, REMOVAL, Front Sub Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **3**.
3	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

AX:DTC B1620 SIDE AIRBAG SENSOR RH FAILURE



DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Side airbag sensor RH unit internal malfunction
When DTC B1620 is displayed, the circuit within the side airbag sensor RH is faulty.
Replace the side airbag sensor RH. <Ref. to AB-53, Side Airbag Sensor.>

AY:DTC B1622 SIDE AIRBAG SENSOR RH LOST COMMUNICATION

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Side airbag sensor RH communication error (open/short circuit or connector connection failure between airbag CM and sensor, sensor internal communication circuit failure, CM internal communication circuit failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the side airbag sensor RH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the connector (AB24) of side airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Disconnect the connector (AB28) from side airbag sensor RH, and connect the connector (2V) in test harness V to connector (AB28). 10) Measure the resistance between connector (5AG) in the test harness AG and connector (3V) in the test harness V. ***Connector & terminal*** ***(5AG) No. 8 — (3V) No. 1:*** ***(5AG) No. 10 — (3V) No. 2:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR RH).** Measure the resistance between test harness AG connectors (5AG) and chassis ground, and the resistance between connectors (5AG) of the test harness AG. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Go to step **5**.	Go to step **6**.

	Step	Check	Yes	No
5	**REPLACE SIDE AIRBAG SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor RH. <Ref. to AB-53, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the system normal?	Go to step **6**.	Replace the curtain airbag sensor RH. <Ref. to AB-55, REMOVAL, Curtain Airbag Sensor.> Replace the airbag control module if not operating normally even after replacing the sensor. <Ref. to AB-47, REMOVAL, Airbag Control Module.>
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

AZ:DTC B1623 SIDE AIRBAG SENSOR RH INITIALIZATION ERROR

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Side airbag sensor RH unit malfunction (sensor type abnormal, sensor unit initialization error)

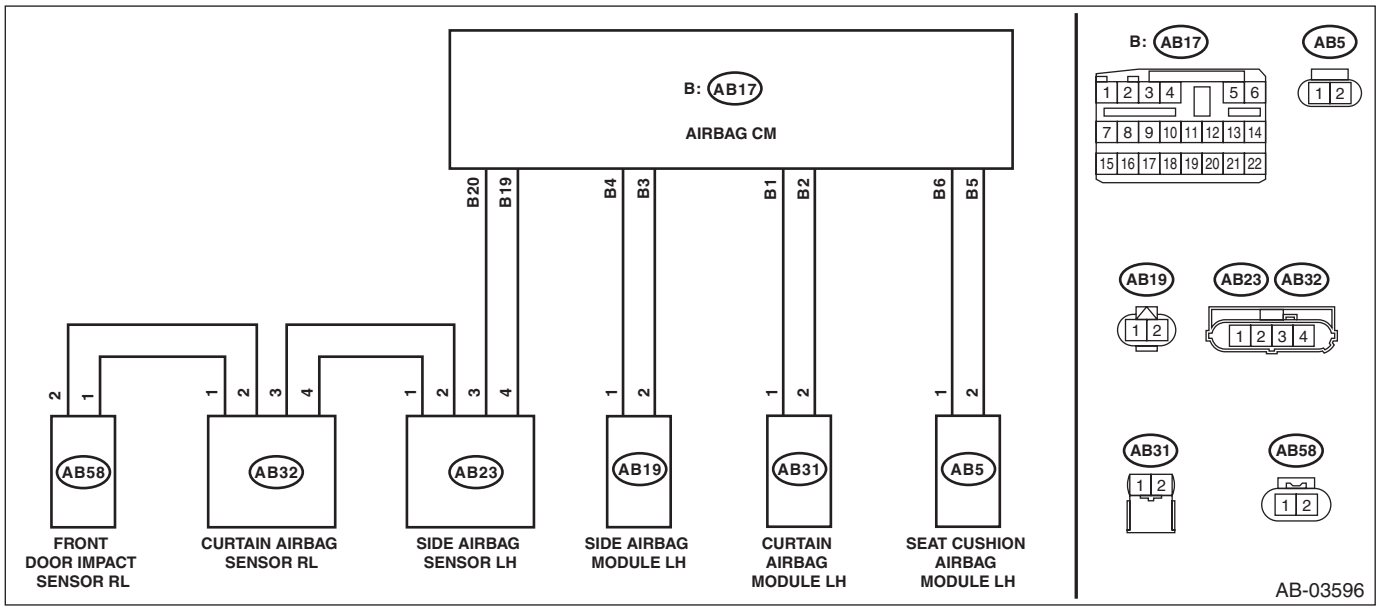
CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the side airbag sensor RH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.
2	**REPLACE SIDE AIRBAG SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor RH. <Ref. to AB-53, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the system normal?	Go to step **3**.	Replace the curtain airbag sensor RH. <Ref. to AB-55, REMOVAL, Curtain Airbag Sensor.> Replace the airbag control module if not operating normally even after replacing the sensor. <Ref. to AB-47, REMOVAL, Airbag Control Module.>

Step		Check	Yes	No
3	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BA:DTC B1625 SIDE AIRBAG SENSOR LH FAILURE



DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Side airbag sensor LH unit internal malfunction
When DTC B1625 is displayed, the circuit within the side airbag sensor LH is faulty.
Replace the side airbag sensor LH. <Ref. to AB-53, Side Airbag Sensor.>

BB:DTC B1627 SIDE AIRBAG SENSOR LH LOST COMMUNICATION

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Side airbag sensor LH communication error (open/short circuit or connector connection failure between airbag CM and sensor, sensor internal communication circuit failure, CM internal communication circuit failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the side airbag sensor LH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the connector (AB19) of the side airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Disconnect the connector (AB23) from side airbag sensor LH, and connect the connector (2V) in test harness V to connector (AB23). 10) Measure the resistance between connector (5AG) in the test harness AG and connector (3V) in the test harness V. ***Connector & terminal*** ***(5AG) No. 14 — (3V) No. 2:*** ***(5AG) No. 16 — (3V) No. 1:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR LH).** Measure the resistance between test harness AG connectors (5AG) and chassis ground, and the resistance between connectors (5AG) of the test harness AG. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Go to step **5**.	Go to step **6**.

	Step	Check	Yes	No
5	**REPLACE SIDE AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor LH. <Ref. to AB-53, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the system normal?	Go to step **6**.	Replace the curtain airbag sensor LH. <Ref. to AB-55, REMOVAL, Curtain Airbag Sensor.> Replace the airbag control module if not operating normally even after replacing the sensor. <Ref. to AB-47, REMOVAL, Airbag Control Module.>
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BC:DTC B1628 SIDE AIRBAG SENSOR LH INITIALIZATION ERROR

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Side airbag sensor LH unit malfunction (sensor type abnormal, sensor unit initialization error)

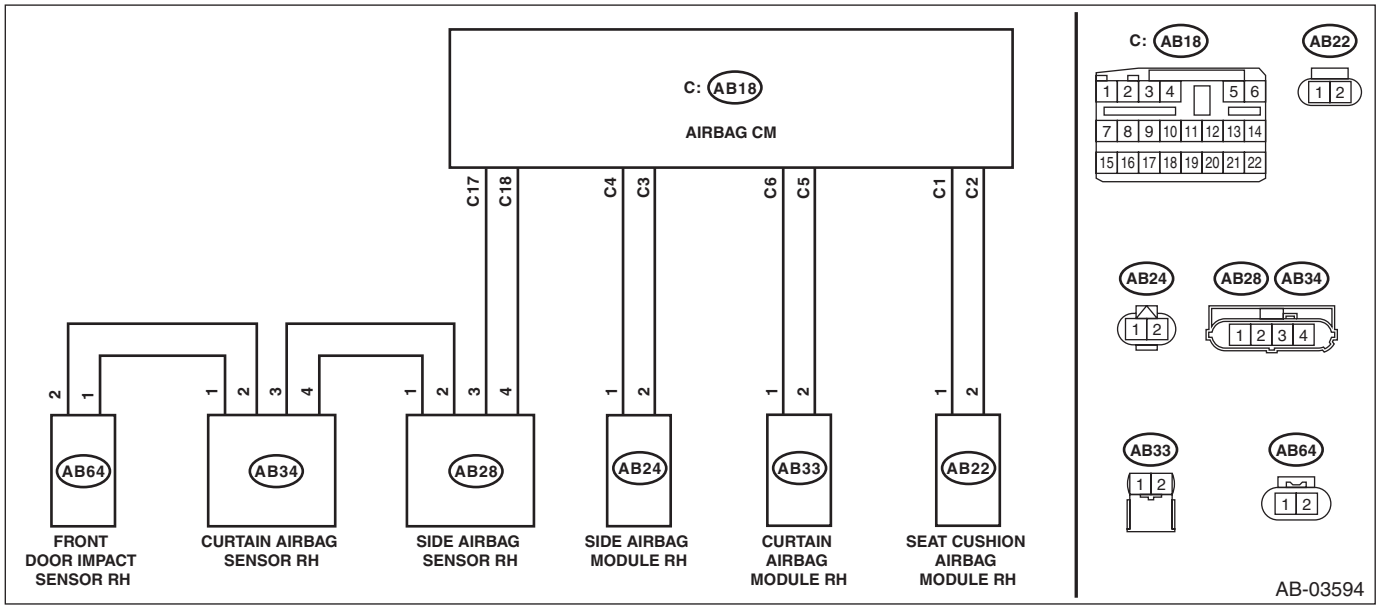
CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the side airbag sensor LH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.
2	**REPLACE SIDE AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor LH. <Ref. to AB-53, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the system normal?	Go to step **3**.	Replace the curtain airbag sensor LH. <Ref. to AB-55, REMOVAL, Curtain Airbag Sensor.> Replace the airbag control module if not operating normally even after replacing the sensor. <Ref. to AB-47, REMOVAL, Airbag Control Module.>

Step		Check	Yes	No
3	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BD:DTC B1630 CURTAIN AIRBAG SENSOR RH FAILURE



DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Curtain airbag sensor RH unit internal malfunction
If DTC B1630 is displayed, the circuit within the curtain airbag sensor RH is faulty.
Replace the curtain airbag sensor RH. <Ref. to AB-55, Curtain Airbag Sensor.>

BE:DTC B1632 CURTAIN AIRBAG SENSOR RH LOST COMMUNICATION

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Curtain airbag sensor RH communication error (open/short circuit or connector connection failure between airbag CM and sensor, sensor internal communication circuit failure, CM internal communication circuit failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK DTC.**	Is DTC B1622 displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the door sensor RH.	Is there poor contact?	Replace the airbag rear harness and the door harness.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR RH AND CURTAIN AIRBAG SENSOR RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the connector (AB24) of side airbag module RH. 6) Disconnect the connector (AB28) of side airbag sensor RH. 7) Connect the connector (AB28) of side airbag sensor RH and the connector (1AI) in the test harness AI. 8) Connect the connector (2AI) in the test harness AI and the connector (1V) in the test harness V. 9) Disconnect the connector (AB34) from curtain airbag sensor (RH), and connect the connector (2V) in test harness V to connector (AB34). 10) Measure the resistance between connector (3V) terminals in the test harness V. ***Connector & terminal*** ***(3V) No. 2 — (3V) No. 6:*** ***(3V) No. 1 — (3V) No. 7:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR RH).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) in test harness V. ***Connector & terminal*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — (3V) No. 1:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Replace the airbag rear harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Go to step **6**.	Go to step **8**.
6	**REPLACE CURTAIN AIRBAG SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor RH. <Ref. to AB-55, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Go to step **7**.	Go to step **8**.

	Step	Check	Yes	No
7	**REPLACE SIDE AIRBAG SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor RH. <Ref. to AB-53, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **8**.
8	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BF:DTC B1633 CURTAIN AIRBAG SENSOR RH INITIALIZATION ERROR

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Curtain airbag sensor RH unit malfunction (sensor type abnormal, sensor unit initialization error)

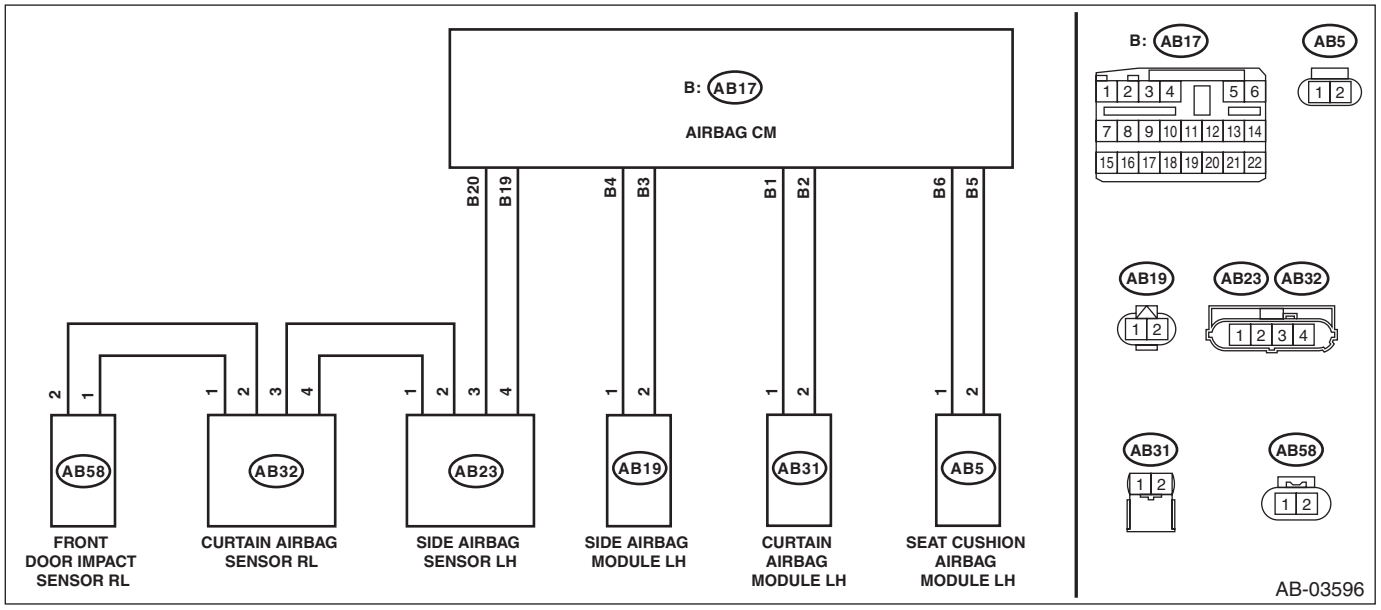
CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the curtain airbag sensor RH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **3**.
2	**REPLACE CURTAIN AIRBAG SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor RH. <Ref. to AB-55, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **3**.

Step		Check	Yes	No
3	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BG:DTC B1635 CURTAIN AIRBAG SENSOR LH FAILURE



DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Curtain airbag sensor LH unit internal malfunction
If DTC B1635 is displayed, the circuit within the curtain airbag sensor LH is faulty.
Replace the curtain airbag sensor LH. <Ref. to AB-55, Curtain Airbag Sensor.>

BH:DTC B1637 CURTAIN AIRBAG SENSOR LH LOST COMMUNICATION

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Curtain airbag sensor LH communication error (open/short circuit or connector connection failure between airbag CM and sensor, sensor internal communication circuit failure, CM internal communication circuit failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK DTC.**	Is DTC B1627 displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the door sensor LH.	Is there poor contact?	Replace the airbag rear harness and the door harness.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR LH AND CURTAIN AIRBAG SENSOR LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the connector (AB19) of the side airbag module LH. 6) Disconnect the connector (AB23) in the side airbag sensor LH. 7) Connect the connector (AB23) of side airbag sensor LH and the connector (1AI) in the test harness AI. 8) Connect the connector (2AI) in the test harness AI and the connector (1V) in the test harness V. 9) Disconnect the connector (AB32) from curtain airbag sensor LH, and connect it to the connector (2V) in test harness V. 10) Measure the resistance between connector (3V) terminals in the test harness V. ***Connector & terminal*** ***(3V) No. 2 — (3V) No. 6:*** ***(3V) No. 1 — (3V) No. 7:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR LH).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) in test harness V. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Replace the airbag rear harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Go to step **6**.	Go to step **8**.
6	**REPLACE CURTAIN AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor LH. <Ref. to AB-55, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Go to step **7**.	Go to step **8**.

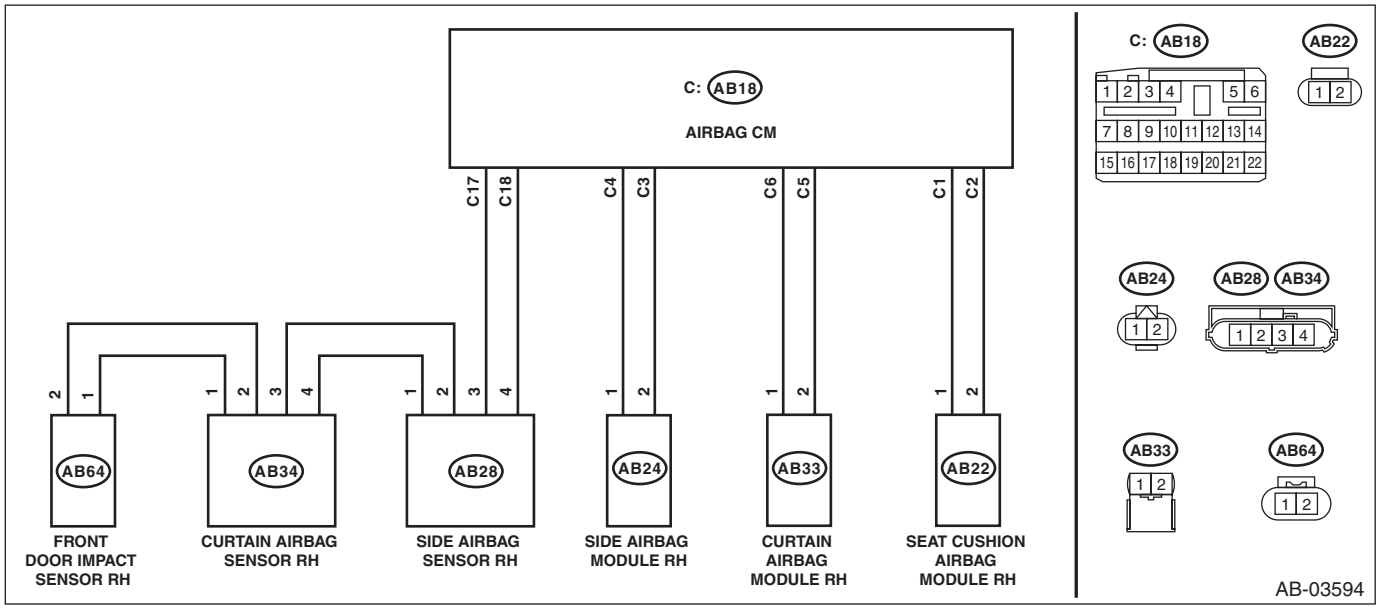
	Step	Check	Yes	No
7	**REPLACE SIDE AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor LH. <Ref. to AB-53, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **8**.
8	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BI: DTC B1638 CURTAIN AIRBAG SENSOR LH INITIALIZATION ERROR

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Curtain airbag sensor LH unit malfunction (sensor type abnormal, sensor unit initialization error)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the curtain airbag sensor LH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.
2	**REPLACE CURTAIN AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor LH. <Ref. to AB-55, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **3**.
3	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BJ:DTC B1643 SIDE SATELLITE SENSOR BUS RH INITIALIZATION ERROR

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Side sensor RH bus line communication initialization error (open/short circuit or connector connection failure between airbag CM and side airbag sensor RH, open/short circuit or connector connection failure between side airbag sensor RH and curtain airbag sensor RH, open/short circuit or connector connection failure between curtain airbag sensor RH and front door impact sensor RH, side airbag sensor RH internal communication circuit failure, curtain airbag sensor RH internal communication circuit failure, front door impact sensor RH internal communication circuit failure, ECM internal communication circuit failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. (Current malfunction)	Is DTC B1622, B1623 or B16EA displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK DTC.** Read the DTC. (Current malfunction)	Is DTC B1632, B1633 or B16EC displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Read the DTC. (Current malfunction)	Is DTC B1692 or B1693 displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front door impact sensor RH.	Is there poor contact?	Replace the airbag rear harness and the door harness.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the connector (AB24) of side airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Disconnect the connector (AB28) from side airbag sensor RH. 10) Connect the connector (2V) in the test harness V to the connector (AB28). 11) Measure the resistance between connector (5AG) in the test harness AG and connector (3V) in the test harness V. ***Connector & terminal*** ***(5AG) No. 8 — (3V) No. 1:*** ***(5AG) No. 10 — (3V) No. 2:***	Is the resistance less than 10 Ω?	Go to step **6**.	Replace the airbag rear harness along with body harness.
6	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR RH).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Replace the airbag rear harness along with body harness.

	Step	Check	Yes	No
7	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR RH).** 1) Disconnect the connector (2V) in the test harness V from the connector (AB28) of side airbag sensor RH. 2) Connect the connector (AB28) of side airbag sensor RH and the connector (1AI) in the test harness AI. 3) Connect the connector (2AI) in the test harness AI and the connector (1V) in the test harness V. 4) Disconnect the connector (AB34) from curtain airbag sensor (RH), and connect the connector (2V) in test harness V to connector (AB34). 5) Measure the resistance between connector (3V) terminals in the test harness V. ***Connector & terminal*** ***(3V) No. 1 — (3V) No. 6:*** ***(3V) No. 2 — (3V) No. 7:***	Is the resistance less than 10 Ω?	Go to step **8**.	Replace the airbag rear harness along with body harness.
8	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR RH).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **9**.	Replace the airbag rear harness along with body harness.
9	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR RH AND DOOR SENSOR RH).** 1) Disconnect the connector (AB64) from front door impact sensor RH. 2) Using a probe, measure the resistance between the connector (3V) in test harness V and connector (AB64). <Ref. to AB(diag)-18, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure to insert the probe from the inspection hole of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(3V) No. 4 — (AB64) No. 1:*** ***(3V) No. 5 — (AB64) No. 2:***	Is the resistance less than 10 Ω?	Go to step **10**.	Replace the airbag rear harness along with body harness.

	Step	Check	Yes	No
10	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR RH AND FRONT DOOR IMPACT SENSOR RH).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 4 — Chassis ground:*** ***(3V) No. 5 — Chassis ground:*** ***(3V) No. 4 — (3V) No. 5:***	Is the resistance 1 MΩ or more?	Go to step **11**.	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.
11	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Go to step **12**.	Go to step **15**.
12	**REPLACE SIDE AIRBAG SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor RH. <Ref. to AB-53, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Go to step **13**.	Go to step **15**.
13	**REPLACE CURTAIN AIRBAG SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor RH. <Ref. to AB-55, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Go to step **14**.	Go to step **15**.
14	**REPLACE FRONT DOOR IMPACT SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front door impact sensor RH. <Ref. to AB-51, REMOVAL, Front Door Impact Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **15**.
15	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Perform the diagnosis according to DTC.	Finish the diagnosis.

BK:DTC B1648 SIDE SATELLITE SENSOR BUS LH INITIALIZATION ERROR

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Side sensor LH bus line communication initialization error (open/short circuit or connector connection failure between airbag CM and side airbag sensor LH, open/short circuit or connector connection failure between side airbag sensor LH and curtain airbag sensor LH, open/short circuit or connector connection failure between curtain airbag sensor LH and front door impact sensor LH, side airbag sensor LH internal communication circuit failure, curtain airbag sensor LH internal communication circuit failure, front door impact sensor LH internal communication circuit failure, ECM internal communication circuit failure)

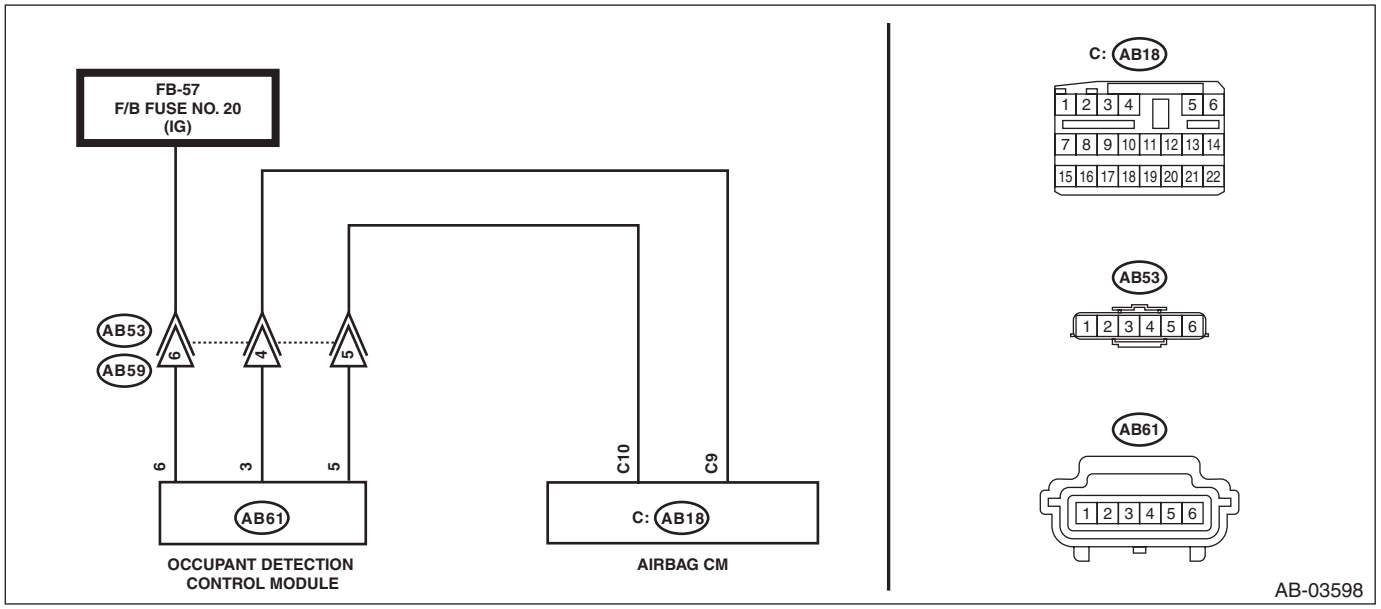
CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. (Current malfunction)	Is DTC B1627, B1628 or B16EB displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK DTC.** Read the DTC. (Current malfunction)	Is DTC B1637, B1638 or B16ED displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DTC.** Read the DTC. (Current malfunction)	Is DTC B1697 or B1698 displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front door impact sensor LH.	Is there poor contact?	Replace the airbag rear harness and the door harness.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the connector (AB19) of the side airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Disconnect the connector (AB23) from the side airbag sensor LH. 10) Connect the connector (2V) in the test harness V to the connector (AB23). 11) Measure the resistance between connector (5AG) in the test harness AG and connector (3V) in the test harness V. ***Connector & terminal*** ***(5AG) No. 14 — (3V) No. 2:*** ***(5AG) No. 16 — (3V) No. 1:***	Is the resistance less than 10 Ω?	Go to step **6**.	Replace the airbag rear harness along with body harness.
6	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR LH).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Replace the airbag rear harness along with body harness.

	Step	Check	Yes	No
7	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR LH).** 1) Disconnect the connector (2V) in the test harness V from the connector (AB23) of side airbag sensor LH. 2) Connect the connector (AB23) of side airbag sensor LH and the connector (1AI) in the test harness AI. 3) Connect the connector (2AI) in the test harness AI and the connector (1V) in the test harness V. 4) Disconnect the connector (AB32) from curtain airbag sensor LH, and connect the connector (2V) in test harness V to connector (AB32). 5) Measure the resistance between connector (3V) terminals in the test harness V. ***Connector & terminal*** ***(3V) No. 1 — (3V) No. 7:*** ***(3V) No. 2 — (3V) No. 6:***	Is the resistance less than 10 Ω?	Go to step **8**.	Replace the airbag rear harness along with body harness.
8	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR LH).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **9**.	Replace the airbag rear harness along with body harness.
9	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR LH AND DOOR SENSOR LH).** 1) Disconnect the connector (AB58) from front door impact sensor LH. 2) Using a probe, measure the resistance between the connector (3V) in test harness V and connector (AB58). <Ref. to AB(diag)-18, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure to insert the probe from the inspection hole of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(3V) No. 4 — (AB58) No. 1:*** ***(3V) No. 5 — (AB58) No. 2:***	Is the resistance less than 10 Ω?	Go to step **10**.	Replace the airbag rear harness along with body harness.
10	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR LH AND DOOR SENSOR LH).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 4 — Chassis ground:*** ***(3V) No. 5 — Chassis ground:*** ***(3V) No. 4 — (3V) No. 5:***	Is the resistance 1 MΩ or more?	Go to step **11**.	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.



Step		Check	Yes	No
11	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Go to step **12**.	Go to step **15**.
12	**REPLACE SIDE AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor LH. <Ref. to AB-53, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Go to step **13**.	Go to step **15**.
13	**REPLACE CURTAIN AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor LH. <Ref. to AB-55, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Go to step **14**.	Go to step **15**.
14	**REPLACE FRONT DOOR IMPACT SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front door impact sensor LH. <Ref. to AB-51, REMOVAL, Front Door Impact Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **15**.
15	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Perform the diagnosis according to DTC.	Finish the diagnosis.

BL:DTC B1650 OCCUPANT CLASSIFICATION SYSTEM MALFUNCTION

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Occupant detection sensor malfunction, communication failure between airbag CM and occupant detection sensor, rear harness malfunction, seat harness malfunction, blown out of fuse for occupant detection system

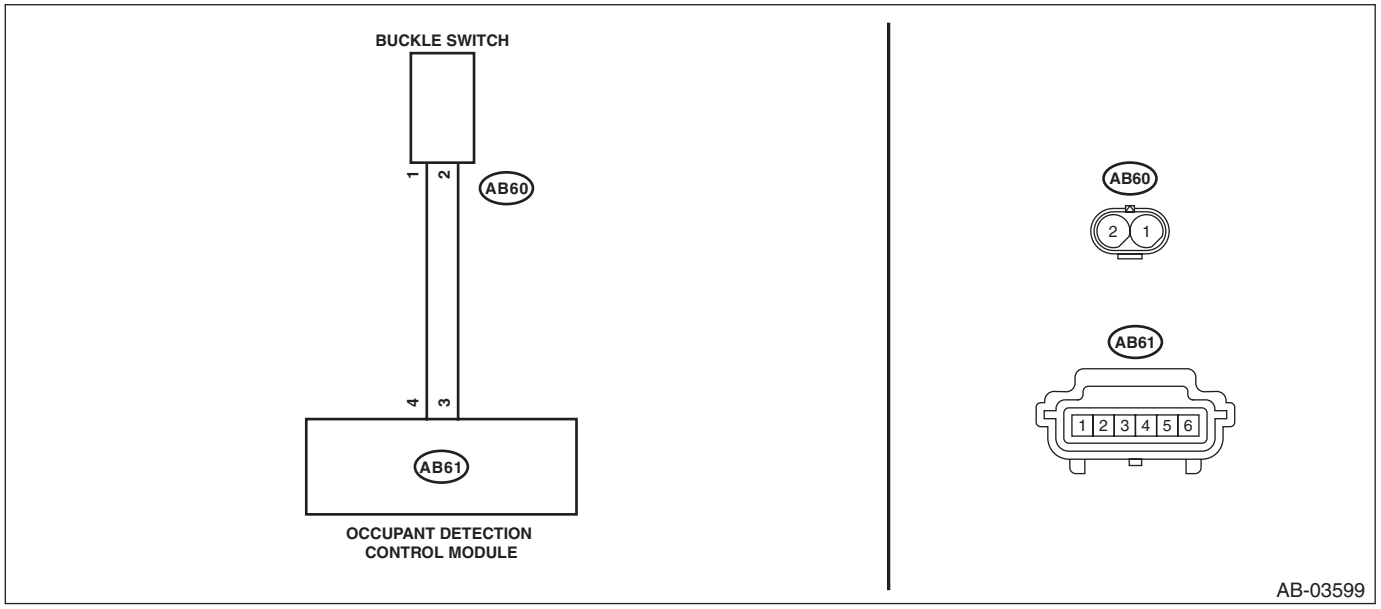
CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Occupant detection system <Ref. to WI-348, WIRING DIAGRAM, Occupant Detection System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read diagnostic trouble code (DTC) for the airbag system.	Is another DTC displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the occupant detection control module and airbag control module.	Is there poor contact?	When the connector is not fully connected, reconnect the connector correctly. Replace the faulty harness if the connector is faulty. (Replace the airbag rear harness along with body harness. Or replace the occupant detection harness (seat harness).)	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 3) Disconnect the connectors (AB59) and (AB53) under the passenger's seat. 4) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 5) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 6) Measure the resistance between connector (6AG) in the test harness AG and connector (AB53). **CAUTION:** **Connect terminal (1AW) in the test harness AW to connector (AB53) terminal, and apply the tester to terminal (2AW).** ***Connector & terminal*** ***(6AG) No. 10 — (AB53) No. 5:*** ***(6AG) No. 12 — (AB53) No. 4:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG REAR HARNESS.** Measure the resistance between connector (AB53) and chassis ground, and between connector (AB53) terminals. ***Connector & terminal*** ***(6AG) No. 10 — Chassis ground:*** ***(6AG) No. 12 — Chassis ground:*** ***(6AG) No. 10 — (6AG) No. 12:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Replace the airbag rear harness along with body harness.
5	**CHECK OCCUPANT DETECTION HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between connector (AB53) and chassis ground. **CAUTION:** **Connect terminal (1AW) in the test harness AW to connector (AB53) terminal, and apply the tester to terminal (2AW).** ***Connector & terminal*** ***(AB53) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Replace the occupant detection harness (seat harness). If defective is not improved, replace the occupant detection system (seat cushion & frame assembly), and then the airbag control module in this order. <Ref. to SE-25, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>	Check the battery voltage and fuse. If there is no fault, replace the airbag rear harness together with body harness.

BM:DTC B1652 HALF CONNECTION IN AIRBAG SENSOR ASSEMBLY CONNECTOR

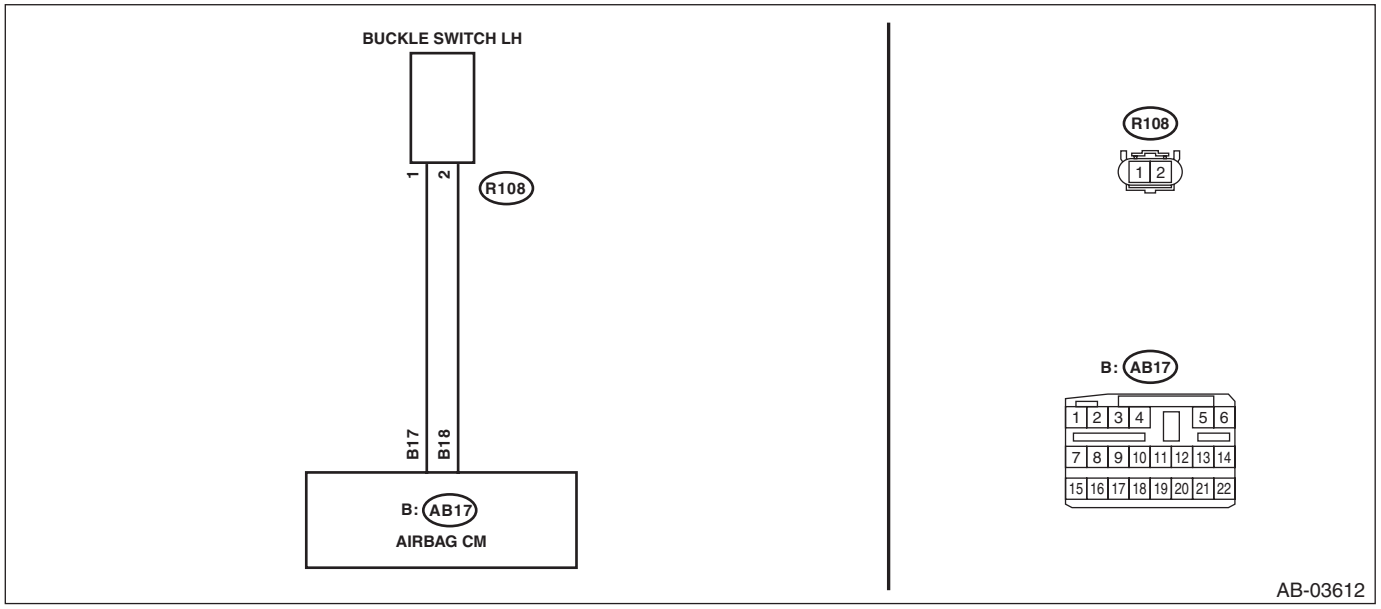


DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Connection failure of airbag CM connector

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** Check for poor contact of the airbag control module connector.	Is there poor contact?	When the connector is not fully connected, reconnect the connector correctly. Replace the faulty harness if the connector is faulty. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)	Go to step **2**.
2	**CHECK CONNECTOR.** Check the airbag main harness connector and the airbag rear harness connector.	Is there poor contact?	When the connector is not fully connected, reconnect the connector correctly. Replace the faulty harness if the connector is faulty. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

BN:DTC B1655 FRONT BUCKLE SWITCH RH FAILURE



DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Buckle switch RH failure (open, short, unit failure), seat harness malfunction (open, short), occupant detection system failure
WIRING DIAGRAM:
Occupant detection system <Ref. to WI-348, WIRING DIAGRAM, Occupant Detection System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of the occupant detection system.	Is DTC other than B1650 and B1655 displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the occupant detection control module and buckle switch.	Is there poor contact?	Reconnect the connector. If the fault is not fixed, replace the occupant detection harness.	Go to step **3**.
3	**CHECK BUCKLE SWITCH.** 1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait for 60 seconds. 2) Disconnect the buckle switch connector (AB60). 3) Connect the test harness AE and test harness connector Y to buckle switch connector (AB60). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the buckle switch. <Ref. to SB-18, SEAT BELT OUTER - FRONT, REMOVAL, Front Seat Belt.>	Check the occupant detection harness, and if any fault is found, replace the occupant detection harness. If the fault is not fixed, replace the occupant detection system. <Ref. to SE-25, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

BO:DTC B1656 FRONT BUCKLE SWITCH LH FAILURE

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Buckle switch LH failure (open, short, unit failure), seat harness malfunction (open, short), occupant detection system failure
WIRING DIAGRAM:
Occupant detection system <Ref. to WI-348, WIRING DIAGRAM, Occupant Detection System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read diagnostic trouble code (DTC) for the airbag system.	Is DTC other than B1656 displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the buckle switch.	Is there poor contact?	When the connector is not fully connected, reconnect the connector correctly. Replace the airbag rear harness together with body harness, if the connector is faulty.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND BUCKLE SWITCH).** 1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait for 60 seconds. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the connector (AB19) of the side airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Disconnect the buckle switch connector (R108). 10) Measure the resistance between connector (6AG) in the test harness AG and connector (R108). **CAUTION:** **Connect terminal (1AW) in test harness AW to connector (R108) terminal, and apply the tester to terminal (2AW).** ***Connector & terminal*** ***(6AG) No. 17 — (R108) No. 1:*** ***(6AG) No. 2 — (R108) No. 2:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag main harness along with body harness.
4	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND BUCKLE SWITCH).** Measure the resistance between connector (6AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(6AG) No. 17 — Chassis ground:*** ***(6AG) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Replace the airbag main harness along with body harness.
5	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND BUCKLE SWITCH).** 1) Turn the ignition switch to ON. 2) Measure the resistance between connector (6AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(6AG) No. 17 (+) — Chassis ground (–):*** ***(6AG) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **6**.	Replace the airbag main harness along with body harness.

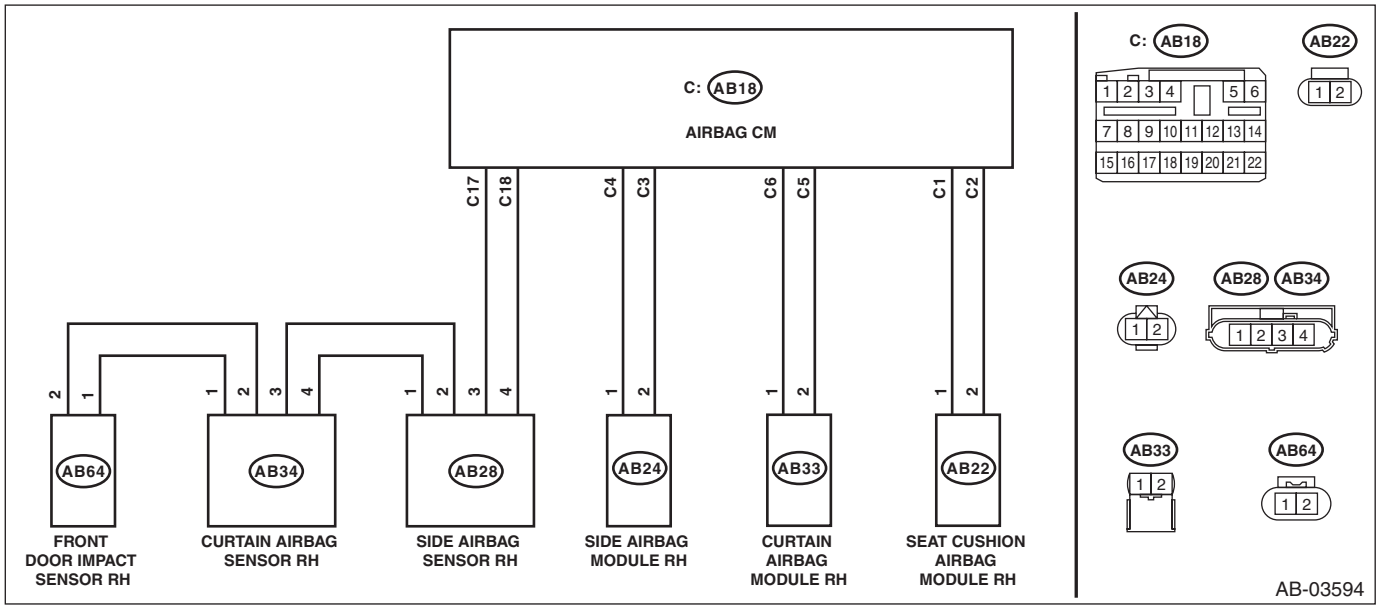
	Step	Check	Yes	No
6	**REPLACE BUCKLE SWITCH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the buckle switch. <Ref. to SB-18, SEAT BELT OUTER - FRONT, REMOVAL, Front Seat Belt.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is DTC B1656 displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **7**.
7	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code". <Ref. to AB(diag)-37, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BP:DTC B1661 PASSENGER'S AIRBAG ON/OFF INDICATOR FAILURE

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Passenger's airbag indicator failure received (CAN signal from combination meter)

NOTE:
Perform the diagnosis for combination meter. <Ref. to MET(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

BQ:DTC B1690 DOOR SENSOR RH FAILURE



DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Front door impact sensor RH unit internal malfunction
If DTC B1690 is displayed, the circuit within the front door impact sensor RH is faulty.
Replace the front door impact sensor RH. <Ref. to AB-51, REMOVAL, Front Door Impact Sensor.>

BR:DTC B1692 LOST COMMUNICATION WITH DOOR SENSOR RH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Front door impact sensor RH communication error (open/short circuit or connector connection failure between airbag CM and front door impact sensor, front door impact sensor internal communication circuit failure, CM internal communication circuit failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. (Current malfunction)	Is DTC B1622 or B1632 displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front door impact sensor RH.	Is there poor contact?	Replace the airbag rear harness and the door harness.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR RH AND DOOR SENSOR RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the connector (AB24) from side airbag module RH. 6) Disconnect the connector (AB34) from curtain airbag sensor (RH), and connect the connector (2V) in test harness V to connector (AB34). 7) Disconnect the connector (AB64) from front door impact sensor RH. 8) Using a probe, measure the resistance between the connector (3V) in test harness V and connector (AB64). <Ref. to AB(diag)-18, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure to insert the probe from the inspection hole of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(3V) No. 4 — (AB64) No. 1:*** ***(3V) No. 5 — (AB64) No. 2:***	Is the resistance less than 10 Ω?	Go to step **4**.	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.
4	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR RH AND DOOR SENSOR RH).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 4 — Chassis ground:*** ***(3V) No. 5 — Chassis ground:*** ***(3V) No. 4 — (3V) No. 5:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Go to step **6**.	Go to step **8**.

	Step	Check	Yes	No
6	**CHECK FRONT DOOR IMPACT SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front door impact sensor RH. <Ref. to AB-51, REMOVAL, Front Door Impact Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Go to step **7**.	Go to step **8**.
7	**REPLACE CURTAIN AIRBAG SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor RH. <Ref. to AB-55, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **8**.
8	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code”. <Ref. to AB(diag)-37, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BS:DTC B1693 DOOR SENSOR RH INITIALIZATION INCOMPLETE

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Front door impact sensor RH unit malfunction (sensor type abnormal, sensor unit initialization error)

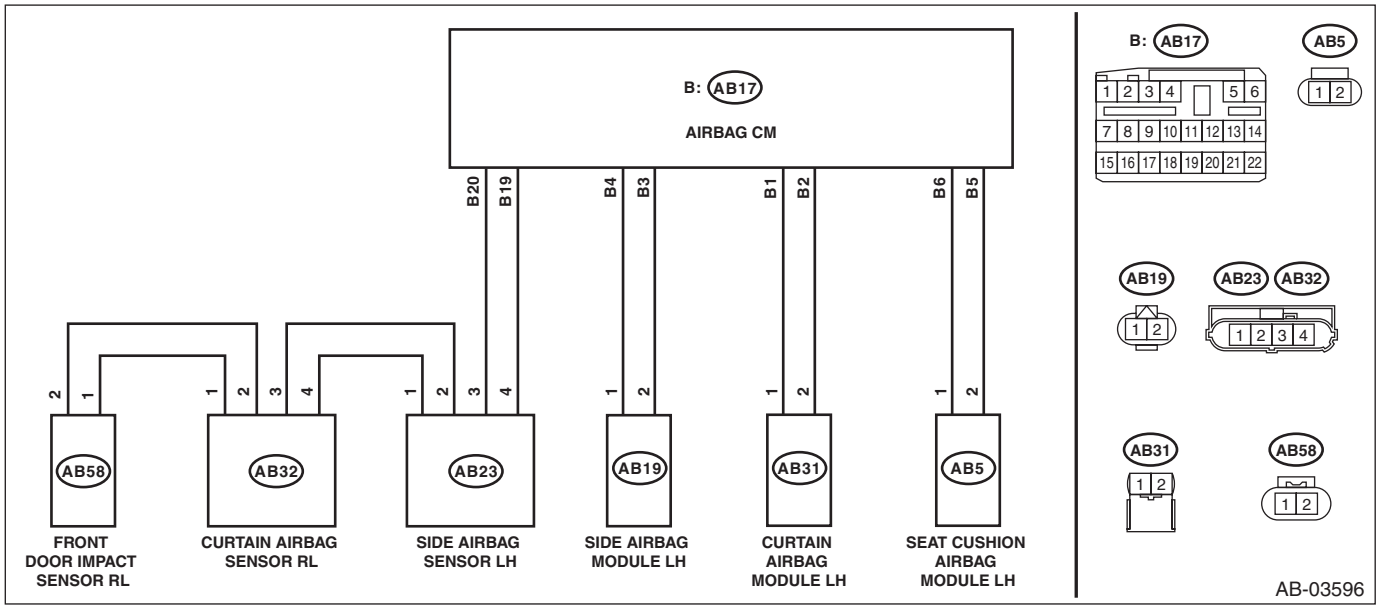
CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front door impact sensor RH.	Is there poor contact?	Replace the airbag rear harness and the door harness.	Go to step **2**.
2	**REPLACE FRONT DOOR IMPACT SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front door impact sensor RH. <Ref. to AB-51, REMOVAL, Front Door Impact Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **3**.

Step		Check	Yes	No
3	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code". <Ref. to AB(diag)-37, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BT:DTC B1695 DOOR SENSOR LH FAILURE



DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Front door impact sensor RH unit internal malfunction
If DTC AB is displayed, the circuit within the front door impact sensor LH is faulty.
Replace the front door impact sensor LH. <Ref. to AB-51, REMOVAL, Front Door Impact Sensor.>

BU:DTC B1697 LOST COMMUNICATION WITH DOOR SENSOR LH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Front door impact sensor LH communication error (open/short circuit or connector connection failure between airbag CM and front door impact sensor, front door impact sensor internal communication circuit failure, CM internal communication circuit failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. (Current malfunction)	Is DTC B1627 or B1637 displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front door impact sensor LH.	Is there poor contact?	Replace the airbag rear harness and the door harness.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR LH AND FRONT DOOR IMPACT SENSOR LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the connector (AB19) from side airbag module LH. 6) Disconnect the connector (AB32) from curtain airbag sensor LH, and connect the connector (2V) in test harness V to connector (AB32). 7) Disconnect the connector (AB58) from front door impact sensor LH. 8) Using a probe, measure the resistance between the connector (3V) terminal in test harness V and connector (AB58) terminal. <Ref. to AB(diag)-18, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure to insert the probe from the inspection hole of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(3V) No. 4 — (AB58) No. 1:*** ***(3V) No. 5 — (AB58) No. 2:***	Is the resistance less than 10 Ω?	Go to step **4**.	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.
4	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR LH AND FRONT DOOR IMPACT SENSOR LH).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 4 — Chassis ground:*** ***(3V) No. 5 — Chassis ground:*** ***(3V) No. 4 — (3V) No. 5:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Go to step **6**.	Go to step **8**.

	Step	Check	Yes	No
6	**CHECK FRONT DOOR IMPACT SENSOR LH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front door impact sensor LH. <Ref. to AB-51, REMOVAL, Front Door Impact Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Go to step **7**.	Go to step **8**.
7	**REPLACE CURTAIN AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor LH. <Ref. to AB-55, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **8**.
8	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code”. <Ref. to AB(diag)-37, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BV:DTC B1698 DOOR SENSOR LH INITIALIZATION INCOMPLETE

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Front door impact sensor LH unit malfunction (sensor type abnormal, sensor unit initialization error)

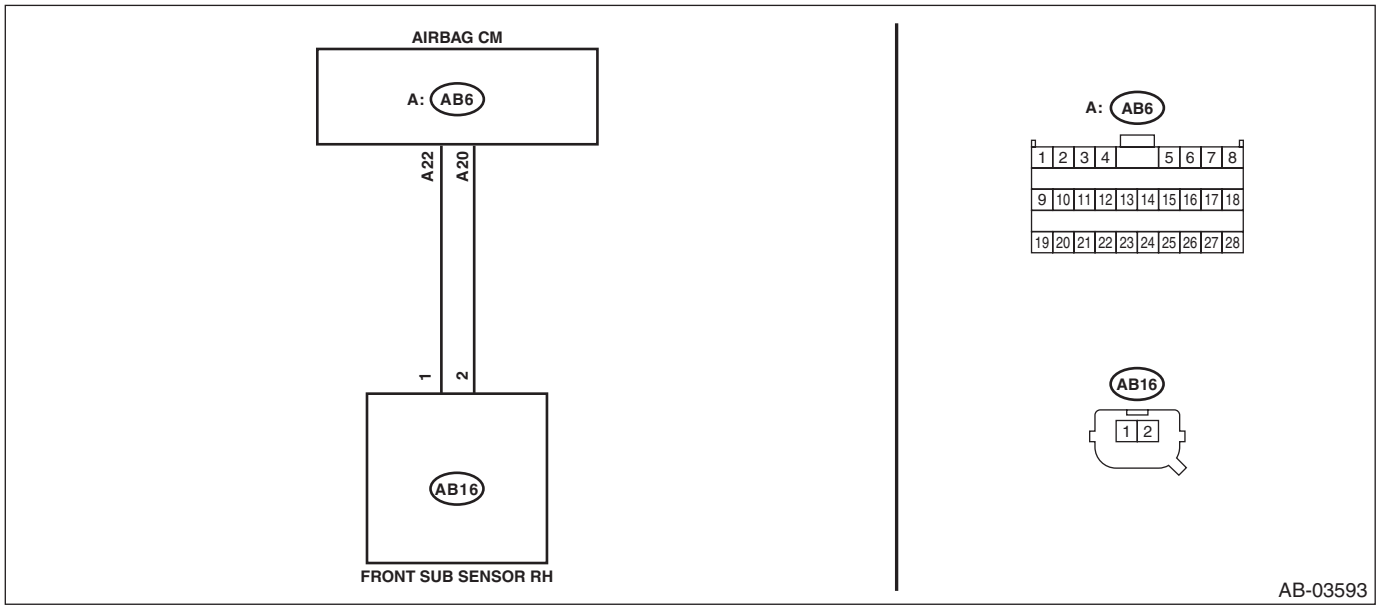
CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front door impact sensor LH.	Is there poor contact?	Replace the airbag rear harness and the door harness.	Go to step **2**.
2	**REPLACE FRONT DOOR IMPACT SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front door impact sensor LH. <Ref. to AB-51, REMOVAL, Front Door Impact Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **3**.

Step		Check	Yes	No
3	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code". <Ref. to AB(diag)-37, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BW:DTC B169F DOOR SENSOR FAILURE: ABNORMAL PRESSURE



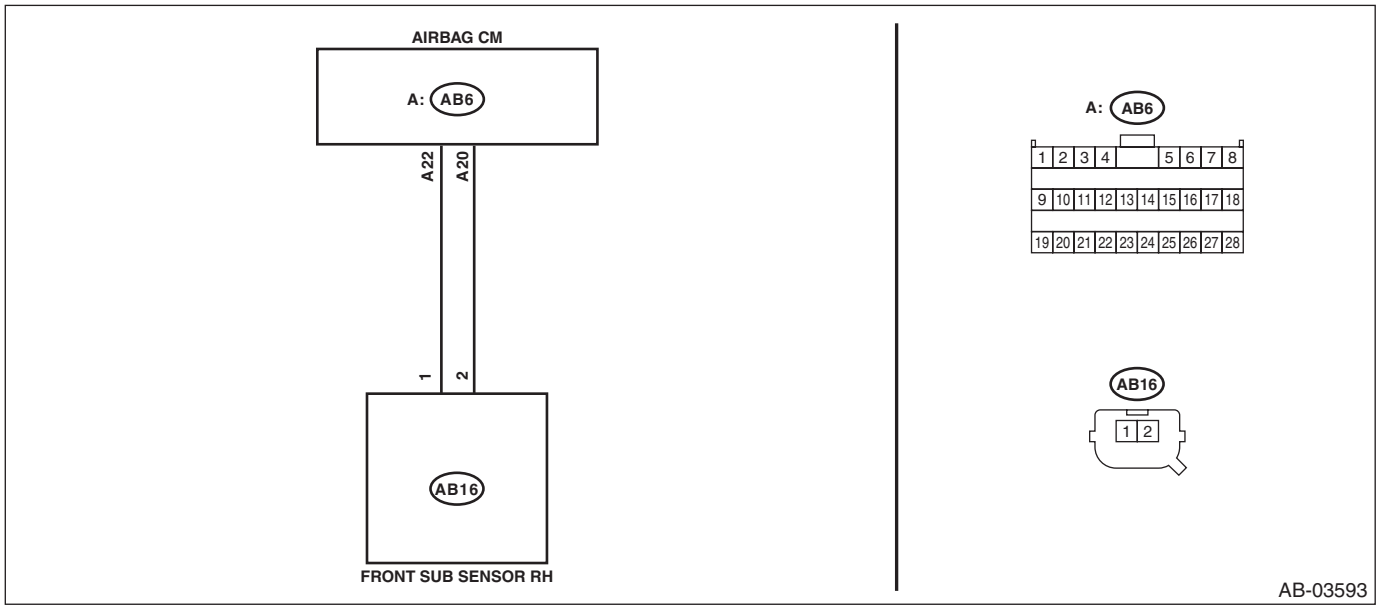
DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Front door impact sensor detected value abnormal (difference of the detected pressure values between front door impact sensor RH and LH exceeds a predetermined value), airbag CM process failure

	Step	Check	Yes	No
1	**CHECK FRONT DOOR IMPACT SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB64) from front door impact sensor RH. 3) Connect a new front door impact sensor RH to connector (AB64). 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is DTC B169F displayed?	Go to step **2**.	Replace the front door impact sensor RH. <Ref. to AB-51, REMOVAL, Front Door Impact Sensor.>
2	**CHECK FRONT DOOR IMPACT SENSOR LH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB58) from front door impact sensor LH. 3) Connect a new front door impact sensor LH to connector (AB58). 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is DTC B169F displayed?	Go to step **3**.	Replace the front door impact sensor LH. <Ref. to AB-51, REMOVAL, Front Door Impact Sensor.>
3	**CHECK FOR ANY OTHER DTC ON DISPLAY.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.> 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is DTC B16B2 displayed?	Check DTC using “List of Diagnostic Trouble Code”. <Ref. to AB(diag)-37, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BX:DTC B16A2 SHORT IN FRONT SUB SENSOR RH (TO GROUND)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Shorted between front sub sensor RH circuit and GND circuit
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>



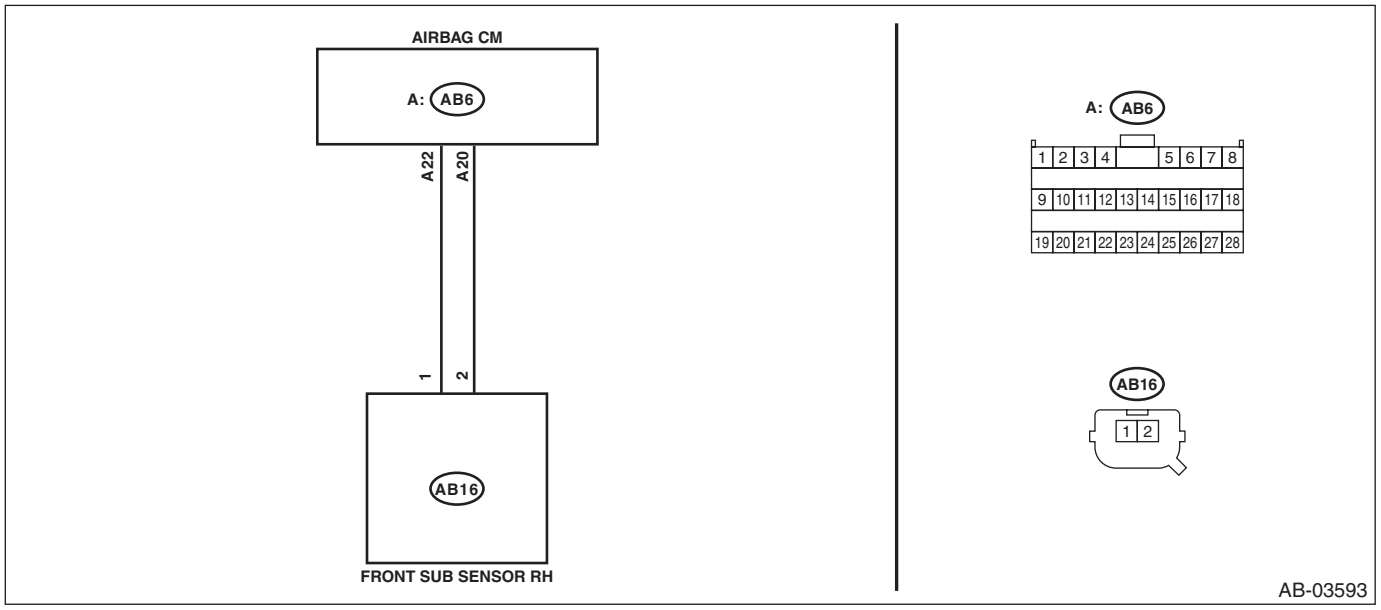
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front sub sensor RH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connectors (AB7) and (AB2). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Disconnect the connector (AB16) from the front sub sensor RH, and then connect the connector (1H) in the test harness H to connector (AB16). 8) Measure the resistance between connector (4AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(4AG) No. 14 — Chassis ground:*** ***(4AG) No. 12 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**REPLACE FRONT SUB SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front sub sensor RH. <Ref. to AB-49, REMOVAL, Front Sub Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is DTC B16B2 displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code”. <Ref. to AB(diag)-37, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BY:DTC B16A3 SHORT IN FRONT SUB SENSOR RH (TO +B)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Shorted between front sub sensor RH circuit and power supply circuit
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>



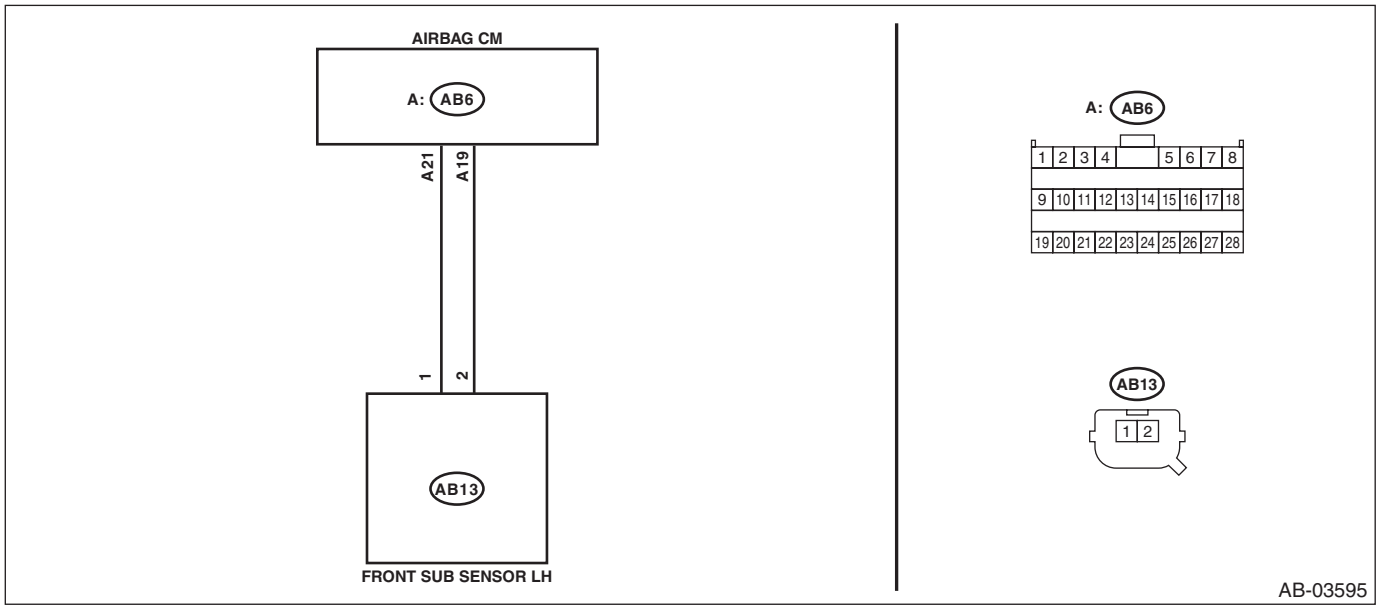
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front sub sensor RH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connectors (AB7) and (AB2). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Disconnect the connector (AB16) from the front sub sensor RH, and then connect the connector (1H) in the test harness H to connector (AB16). 8) Connect the battery ground terminal and turn the ignition switch to ON. 9) Measure the voltage between connector (4AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(4AG) No. 14 (+) — Chassis ground (–):*** ***(4AG) No. 12 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is DTC B16A3 displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code”. <Ref. to AB(diag)-37, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BZ:DTC B16A4 SHORT IN FRONT SUB SENSOR RH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit between front sub sensor RH circuit and other sensor circuit
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>



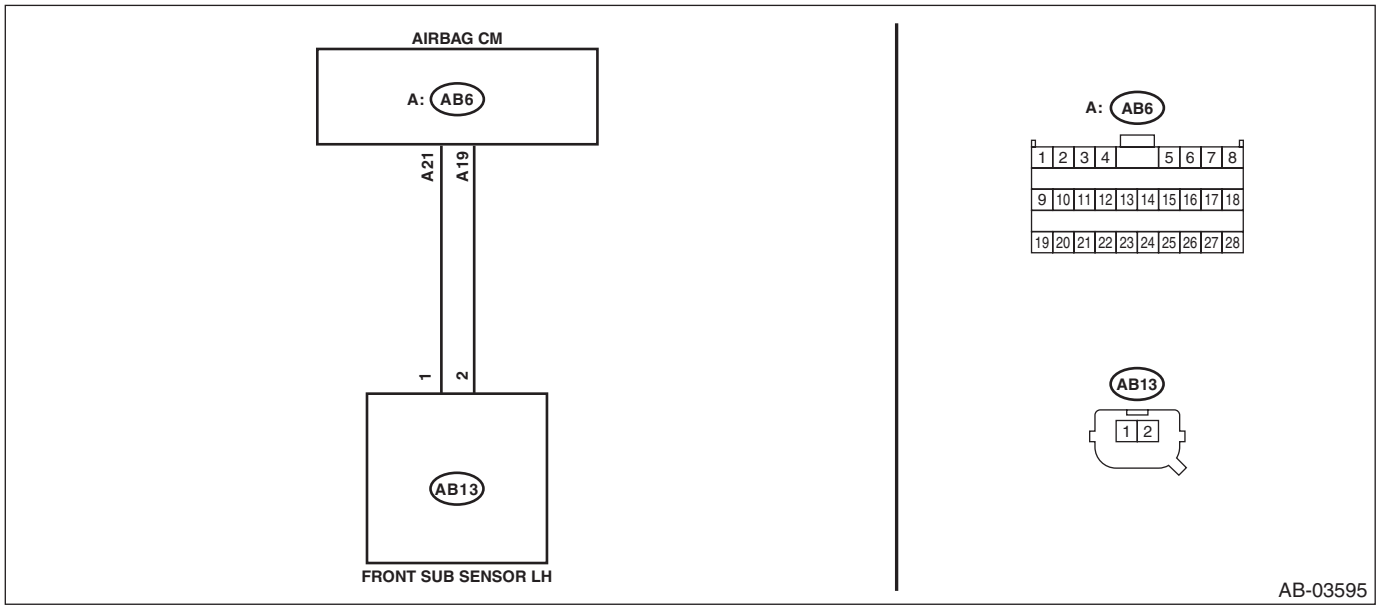
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front sub sensor RH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connectors (AB7) and (AB2). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Disconnect the connector (AB16) from the front sub sensor RH, and then connect the connector (1H) in the test harness H to connector (AB16). 8) Measure the resistance between connector (4AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(4AG) No. 14 — All terminals in test harness AG:*** ***(4AG) No. 12 — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Replace the faulty harness. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)

CA:DTC B16A7 SHORT IN FRONT SUB SENSOR LH (TO GROUND)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Shorted between front sub sensor LH circuit and GND circuit
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>



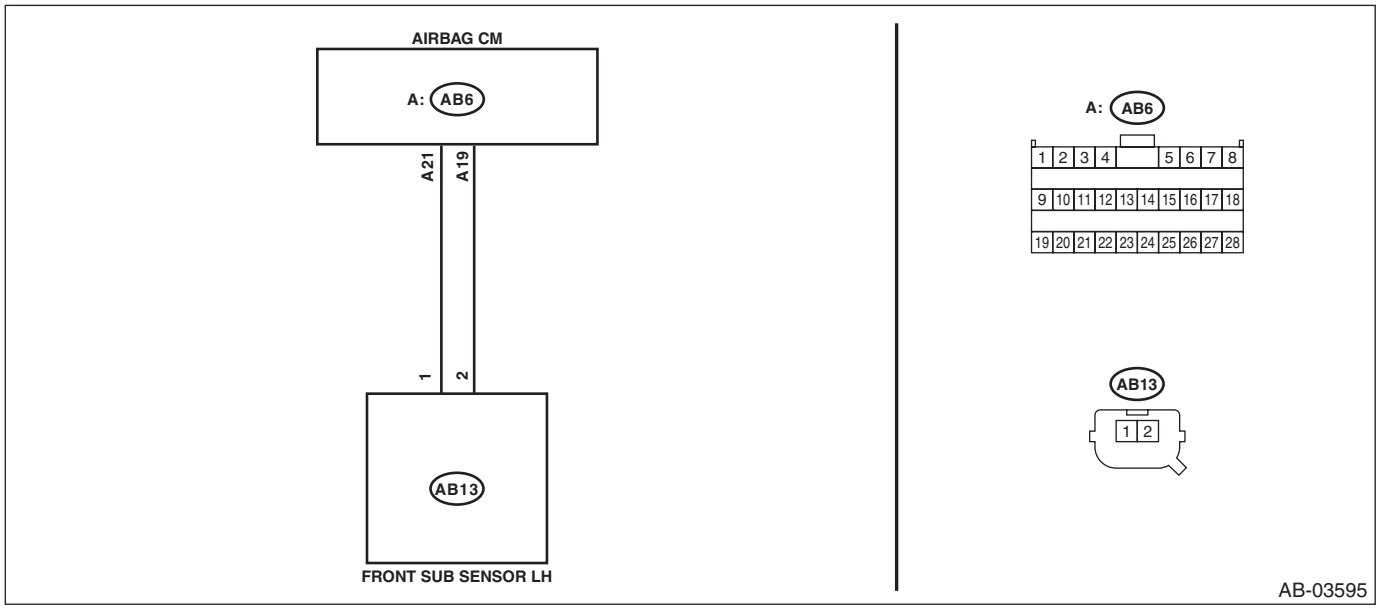
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front sub sensor LH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connectors (AB7) and (AB2). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Disconnect the connector (AB13) from the front sub sensor LH, and then connect the connector (1H) in the test harness H to connector (AB13). 8) Measure the resistance between connector (4AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(4AG) No. 7 — Chassis ground:*** ***(4AG) No. 9 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**REPLACE FRONT SUB SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front sub sensor LH. <Ref. to AB-49, REMOVAL, Front Sub Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is DTC B16B2 displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code”. <Ref. to AB(diag)-37, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CB:DTC B16A8 SHORT IN FRONT SUB SENSOR LH (TO +B)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Shorted between front sub sensor LH circuit and power supply circuit
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>



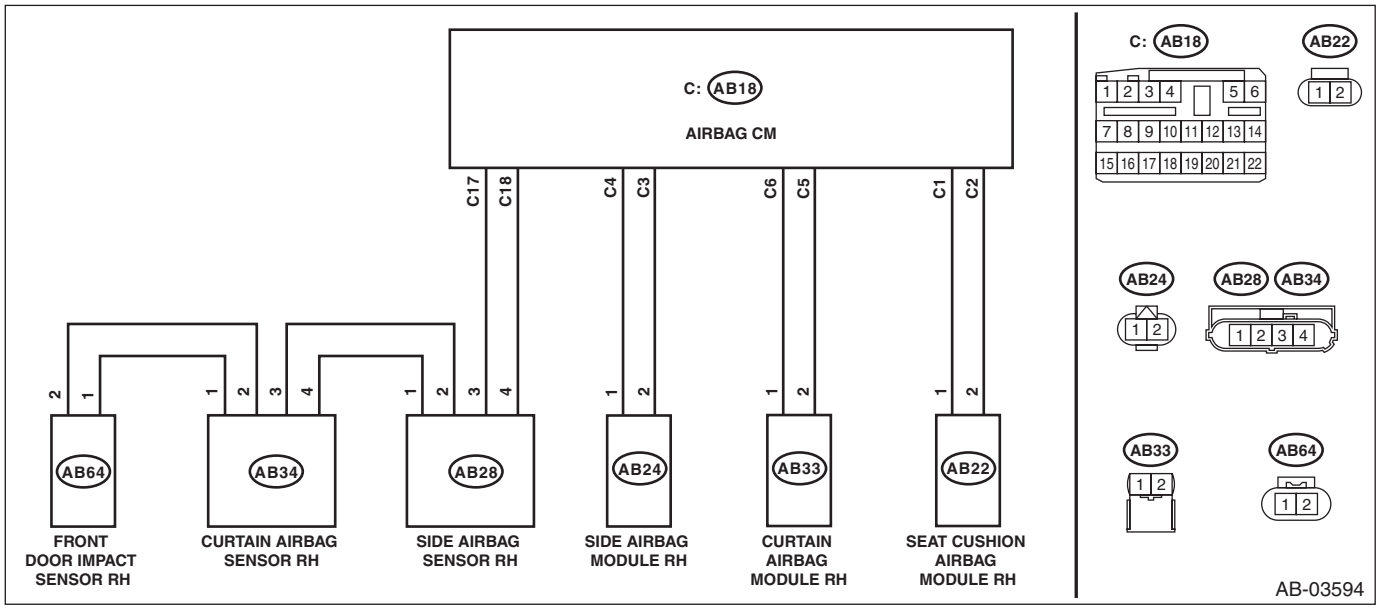
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front sub sensor LH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connectors (AB7) and (AB2). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Disconnect the connector (AB13) from the front sub sensor LH, and then connect the connector (1H) in the test harness H to connector (AB13). 8) Connect the battery ground terminal and turn the ignition switch to ON. 9) Measure the voltage between connector (4AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(4AG) No. 7 (+) — Chassis ground (–):*** ***(4AG) No. 9 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is DTC B16A8 displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code”. <Ref. to AB(diag)-37, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CC:DTC B16A9 SHORT IN FRONT SUB SENSOR LH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit between front sub sensor LH circuit and other sensor circuit
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front sub sensor LH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connectors (AB7) and (AB2). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Disconnect the connector (AB13) from the front sub sensor LH, and then connect the connector (1H) in the test harness H to connector (AB13). 8) Measure the resistance between connector (4AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(4AG) No. 7 — All terminals in test harness AG:*** ***(4AG) No. 9 — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Replace the faulty harness. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)

CD:DTC B16B2 SHORT IN SIDE SATELLITE SENSOR BUS RH (TO GROUND)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Shorted between side sensor RH circuit and GND circuit
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and side airbag sensor RH, curtain airbag sensor RH, or front door impact sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

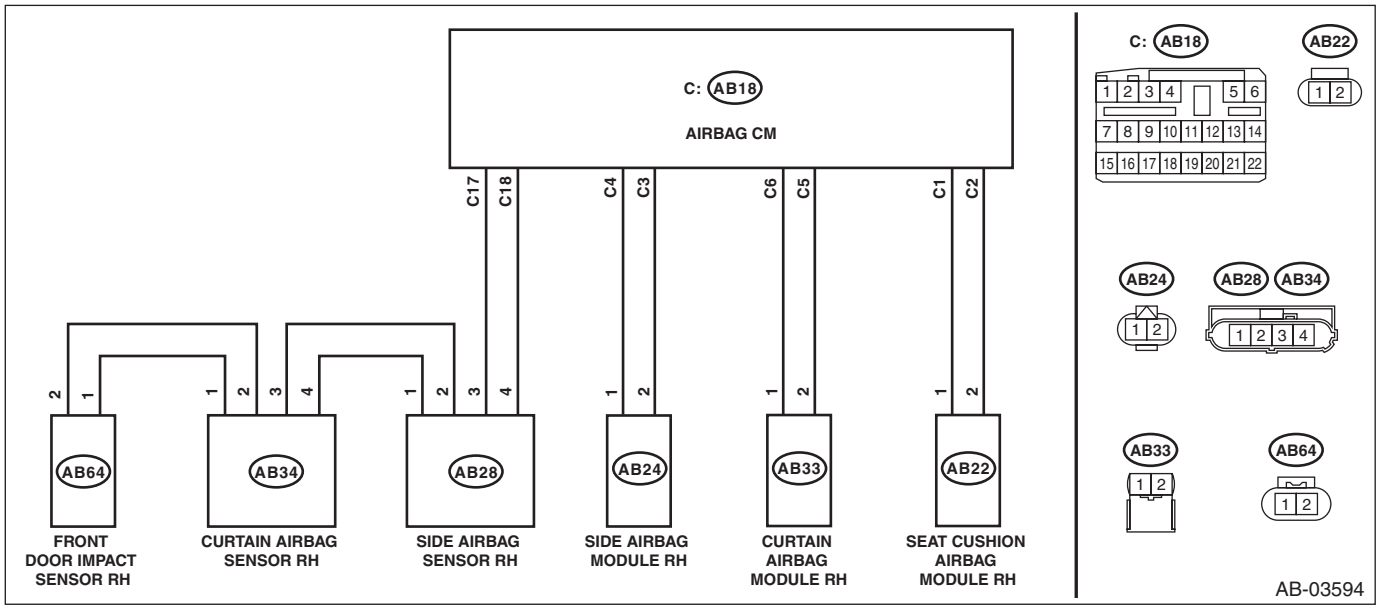
	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE SENSOR BUS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the connector (AB24) from side airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Disconnect the connector (AB28) from side airbag sensor RH. 10) Disconnect the connector (AB34) from curtain airbag sensor RH. 11) Disconnect the connector (AB64) from front door impact sensor RH. 12) Measure the resistance between connector (5AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(5AG) No. 8 — Chassis ground:*** ***(5AG) No. 10 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Go to step **4**.	Go to step **6**.
4	**CHECK CURTAIN AIRBAG SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor RH. <Ref. to AB-55, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Go to step **5**.	Go to step **6**.

	Step	Check	Yes	No
5	**REPLACE SIDE AIRBAG SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor RH. <Ref. to AB-53, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **6**.
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code". <Ref. to AB(diag)-37, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CE:DTC B16B3 SHORT IN SIDE SATELLITE SENSOR BUS RH (TO +B)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Shorted between side sensor RH circuit and power supply circuit
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>



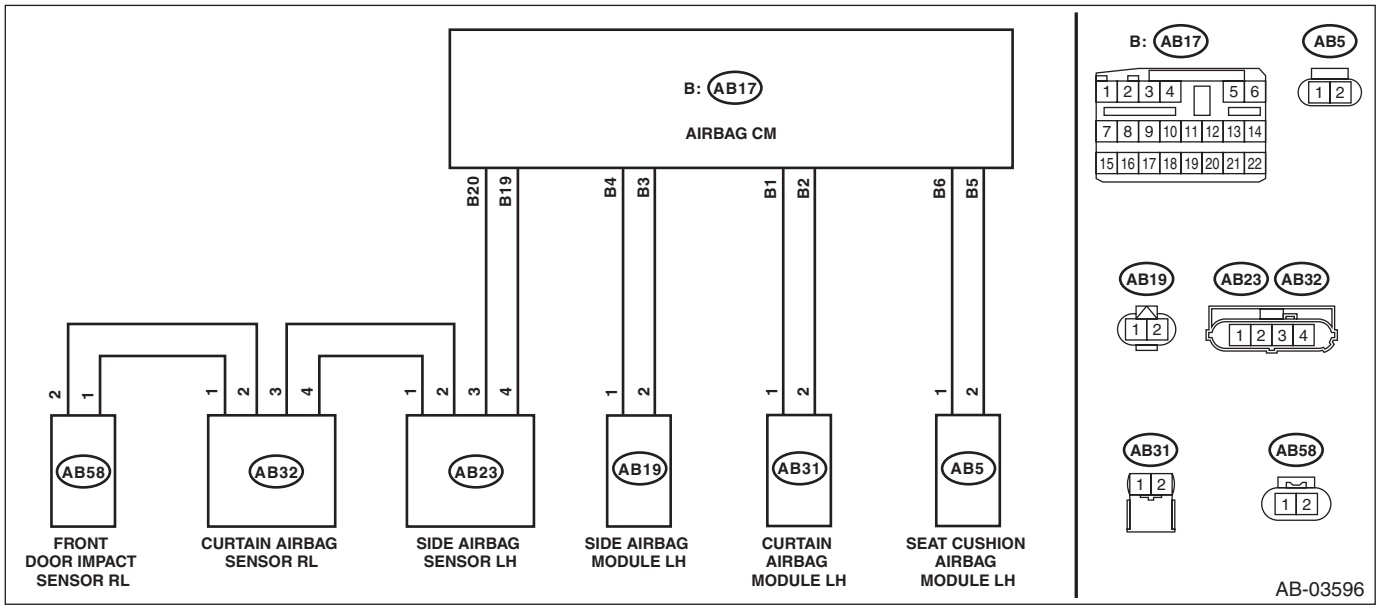
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and side airbag sensor RH, curtain airbag sensor RH, or front door impact sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE SENSOR BUS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the connector (AB24) from side airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Disconnect the connector (AB28) from side airbag sensor RH. 10) Disconnect the connector (AB34) from curtain airbag sensor RH. 11) Disconnect the connector (AB64) from front door impact sensor RH. 12) Turn the ignition switch to ON. 13) Measure the voltage between connector (5AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(5AG) No. 8 (+) — Chassis ground (–):*** ***(5AG) No. 10 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is DTC B16A3 displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code". <Ref. to AB(diag)-37, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CF:DTC B16B4 SHORT IN SIDE SATELLITE SENSOR BUS RH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit between side sensor RH circuit and other sensor circuit
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and side airbag sensor RH, curtain airbag sensor RH, or front door impact sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE SENSOR BUS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the connector (AB24) from side airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Disconnect the connector (AB28) from side airbag sensor RH. 10) Disconnect the connector (AB34) from curtain airbag sensor RH. 11) Disconnect the connector (AB64) from front door impact sensor RH. 12) Measure the resistance between connector (5AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(5AG) No. 8 — All terminals in test harness AG:*** ***(5AG) No. 10 — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the faulty harness. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is DTC B16B4 displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code”. <Ref. to AB(diag)-37, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CG:DTC B16B7 SHORT IN SIDE SATELLITE SENSOR BUS LH (TO GROUND)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Shorted between side sensor LH circuit and GND circuit
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and side airbag sensor LH, curtain airbag sensor LH, or front door impact sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

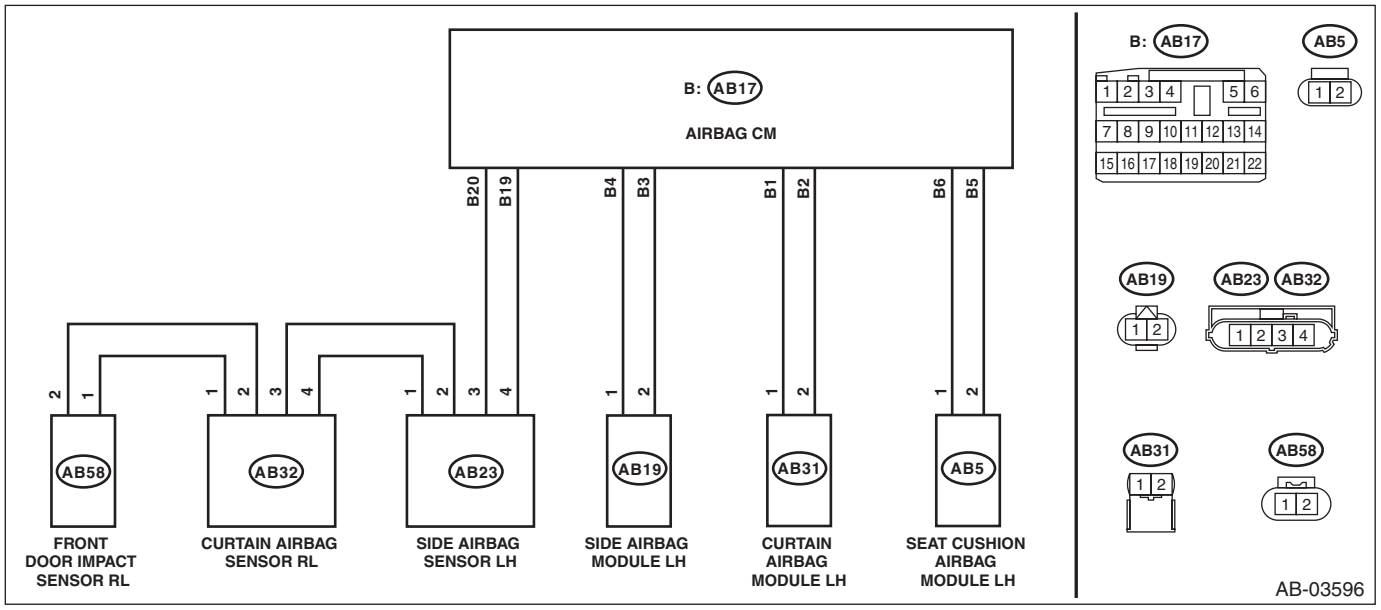
	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE SENSOR BUS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the connector (AB31) from curtain airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Disconnect the connector (AB23) from the side airbag sensor LH. 10) Disconnect the connector (AB32) from curtain airbag sensor LH. 11) Disconnect the connector (AB58) from front door impact sensor LH. 12) Measure the resistance between connector (5AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(5AG) No. 14 — Chassis ground:*** ***(5AG) No. 16 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Go to step **4**.	Go to step **6**.
4	**REPLACE CURTAIN AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor LH. <Ref. to AB-55, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Go to step **5**.	Go to step **6**.

	Step	Check	Yes	No
5	**REPLACE SIDE AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor LH. <Ref. to AB-53, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **6**.
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code". <Ref. to AB(diag)-37, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CH:DTC B16B8 SHORT IN SIDE SATELLITE SENSOR BUS LH (TO +B)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Shorted between side sensor LH circuit and power supply circuit
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>



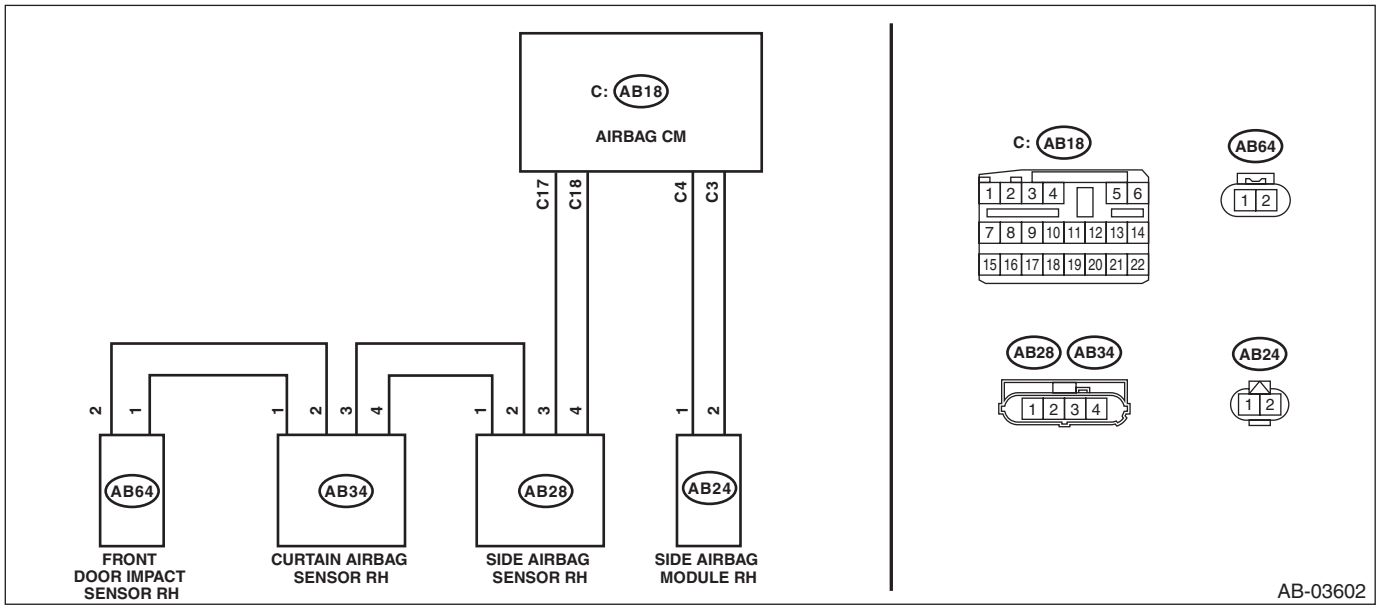
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and side airbag sensor LH, curtain airbag sensor LH, or front door impact sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE SENSOR BUS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the connector (AB31) from curtain airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Disconnect the connector (AB23) from the side airbag sensor LH. 10) Disconnect the connector (AB32) from curtain airbag sensor LH. 11) Disconnect the connector (AB58) from front door impact sensor LH. 12) Turn the ignition switch to ON. 13) Measure the voltage between connector (5AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(5AG) No. 14 (+) — Chassis ground (–):*** ***(5AG) No. 16 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code”. <Ref. to AB(diag)-37, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CI: DTC B16B9 SHORT IN SIDE SATELLITE SENSOR BUS LH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit between side sensor LH circuit and other sensor circuit
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and side airbag sensor LH, curtain airbag sensor LH, or front door impact sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE SENSOR BUS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the connector (AB31) from curtain airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Disconnect the connector (AB23) from the side airbag sensor LH. 10) Disconnect the connector (AB32) from curtain airbag sensor LH. 11) Disconnect the connector (AB58) from front door impact sensor LH. 12) Measure the resistance between connector (5AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(5AG) No. 14 — All terminals in test harness AG:*** ***(5AG) No. 16 — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the faulty harness. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code”. <Ref. to AB(diag)-37, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CJ:DTC B16EA SIDE AIRBAG SENSOR RH INITIALIZATION ERROR

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Side airbag sensor LH initialization error
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the side airbag sensor RH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the connector (AB24) from side airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Disconnect the connector (AB28) from side airbag sensor RH, and connect the connector (2V) in test harness V to connector (AB28). 10) Measure the resistance between connector (5AG) in the test harness AG and connector (3V) in the test harness V. ***Connector & terminal*** ***(5AG) No. 8 — (3V) No. 1:*** ***(5AG) No. 10 — (3V) No. 2:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR RH).** Measure the resistance between test harness AG connectors (5AG) and chassis ground, and the resistance between connectors (5AG) of the test harness AG. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Go to step **5**.	Go to step **6**.
5	**REPLACE SIDE AIRBAG SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor RH. <Ref. to AB-53, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **6**.

Step		Check	Yes	No
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CK:DTC B16EB SIDE AIRBAG SENSOR LH INITIALIZATION ERROR

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Side airbag sensor LH initialization error
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the side airbag sensor LH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the connector (AB19) from side airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Disconnect the connector (AB23) from side airbag sensor LH, and connect the connector (2V) in test harness V to connector (AB23). 10) Measure the resistance between connector (5AG) in the test harness AG and connector (3V) in the test harness V. ***Connector & terminal*** ***(5AG) No. 14 — (3V) No. 2:*** ***(5AG) No. 16 — (3V) No. 1:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR LH).** Measure the resistance between test harness AG connectors (5AG) and chassis ground, and the resistance between connectors (5AG) of the test harness AG. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Go to step **5**.	Go to step **6**.
5	**REPLACE SIDE AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor LH. <Ref. to AB-53, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **6**.

Step		Check	Yes	No
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code". <Ref. to AB(diag)-37, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CL:DTC B16EC CURTAIN AIRBAG SENSOR RH INITIALIZATION ERROR

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Curtain airbag sensor RH initialization error
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. (Current malfunction)	Is DTC B1622 displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front door impact sensor RH.	Is there poor contact?	Replace the airbag rear harness and the door harness.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR RH AND CURTAIN AIRBAG SENSOR RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the connector (AB24) from side airbag module RH. 6) Disconnect the connector (AB28) from side airbag sensor RH. 7) Connect the connector (AB28) of side airbag sensor RH and the connector (1AI) in test harness AI. 8) Connect the connector (2AI) in the test harness AI and the connector (1V) in the test harness V. 9) Disconnect the connector (AB34) from curtain airbag sensor (RH), and connect the connector (2V) in test harness V to connector (AB34). 10) Measure the resistance between connector (3V) terminals in the test harness V. ***Connector & terminal*** ***(3V) No. 2 — (3V) No. 6:*** ***(3V) No. 1 — (3V) No. 7:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR RH).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) in test harness V. ***Connector & terminal*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — (3V) No. 1:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Replace the airbag rear harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Go to step **6**.	Go to step **7**.
6	**REPLACE CURTAIN AIRBAG SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor RH. <Ref. to AB-55, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **7**.

Step		Check	Yes	No
7	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code". <Ref. to AB(diag)-37, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

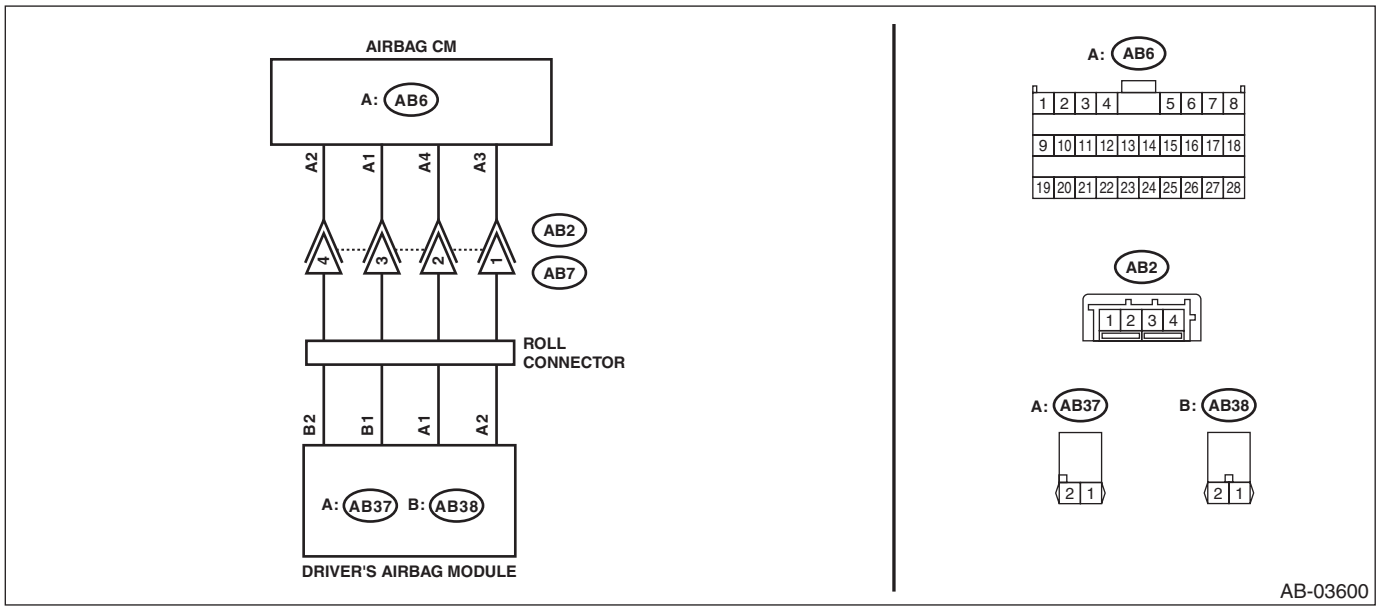
CM:DTC B16ED CURTAIN AIRBAG SENSOR LH INITIALIZATION ERROR

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Curtain airbag sensor LH initialization error
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK DTC.**	Is DTC B1627 displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the door sensor LH.	Is there poor contact?	Replace the airbag rear harness and the door harness.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR LH AND CURTAIN AIRBAG SENSOR LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the connector (AB19) from side airbag module LH. 6) Disconnect the connector (AB23) from the side airbag sensor LH. 7) Connect the connector (AB23) of side airbag sensor LH and the connector (1AI) in the test harness AI. 8) Connect the connector (2AI) in the test harness AI and the connector (1V) in the test harness V. 9) Disconnect the connector (AB32) from curtain airbag sensor LH, and connect the connector (2V) in test harness V to connector (AB32). 10) Measure the resistance between connector (3V) terminals in the test harness V. ***Connector & terminal*** ***(3V) No. 2 — (3V) No. 6:*** ***(3V) No. 1 — (3V) No. 7:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR LH).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) in test harness V. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Replace the airbag rear harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Go to step **6**.	Go to step **7**.
6	**REPLACE CURTAIN AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor LH. <Ref. to AB-55, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **7**.



Step		Check	Yes	No
7	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CN:DTC B1800 SHORT IN DRIVER'S AIRBAG

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Shorted between +/– lines (shorted between main harness lines, shorted between roll connector lines, shorted between driver's airbag lines, shorted between airbag CM internal lines)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-30, Driver's Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ROLL CONNECTOR AND AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the console front panel and disconnect the connector (AB9). 3) Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q. 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Measure the resistance between connector (2Q) terminals in test harness Q. ***Connector & terminal*** ***(2Q) No. 1 — (2Q) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Go to step **4**.
4	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 2) Measure the resistance between connector (3AG) terminals in test harness AG. ***Connector & terminal*** ***(3AG) No. 1 — (3AG) No. 3:***	Is the resistance 1 MΩ or more?	Replace the roll connector. <Ref. to AB-57, Roll Connector.>	Replace the airbag main harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **6**.
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CO:DTC B1801 OPEN IN DRIVER'S AIRBAG

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Open circuit failure (open circuit in main harness, open circuit in roll connector, open circuit in driver's airbag, open circuit in airbag CM internal circuit, connectors connection failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-30, Driver's Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ROLL CONNECTOR AND AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the console front panel and disconnect the connector (AB9). 3) Disconnect the airbag resistor from the connector (2N) in test harness N. 4) Disconnect the airbag resistor from the connector (2Q) of test harness Q. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Measure the resistance between connector (2Q) terminals in test harness Q. ***Connector & terminal (2Q) No. 1 — (2Q) No. 2:***	Is the resistance less than 10 Ω?	Go to step **5**.	Go to step **4**.
4	**CHECK ROLL CONNECTOR.** 1) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 2) Measure the resistance between connector (2Q) terminals in test harness Q. ***Connector & terminal (2Q) No. 1 — (2Q) No. 2:***	Is the resistance less than 10 Ω?	Replace the airbag main harness along with body harness.	Replace the roll connector. <Ref. to AB-57, Roll Connector.>
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **6**.
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CP:DTC B1802 SHORT IN DRIVER'S AIRBAG (TO GROUND)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
GND short circuit failure (shorted to ground in main harness, shorted to ground in roll connector, shorted to ground in driver's airbag, shorted to ground in airbag CM internal circuit)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-30, Driver's Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ROLL CONNECTOR.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 3) Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q. 4) Measure the resistance between connector (2Q) in the test harness Q and chassis ground. ***Connector & terminal*** ***(2Q) No. 1 — Chassis ground:*** ***(2Q) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the roll connector. <Ref. to AB-57, Roll Connector.>
4	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Disconnect the test harness N from connector (AB38). 2) Disconnect the test harness Q from connector (AB37). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Measure the resistance between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 1 — Chassis ground:*** ***(3AG) No. 3 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Replace the airbag main harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **6**.
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CQ:DTC B1803 SHORT IN DRIVER'S AIRBAG (TO +B)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit failure in power supply (shorted in main harness power supply, shorted in roll connector power supply, shorted in driver's airbag power supply, shorted in airbag CM internal circuit power supply)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-30, Driver's Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ROLL CONNECTOR.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 3) Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q. 4) Measure the voltage between connector (2Q) in the test harness Q and chassis ground. ***Connector & terminal*** ***(2Q) No. 1 (+) — Chassis ground (–):*** ***(2Q) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Replace the roll connector. <Ref. to AB-57, Roll Connector.>
4	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Disconnect the test harness N from connector (AB38). 2) Disconnect the test harness Q from connector (AB37). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Connect the battery ground terminal and turn the ignition switch to ON. 8) Measure the voltage between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 1 (+) — Chassis ground (–):*** ***(3AG) No. 3 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Replace the airbag main harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **6**.
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CR:DTC B1804 SHORT IN DRIVER'S AIRBAG

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit between driver's airbag circuit and other circuit

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-30, Driver's Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ROLL CONNECTOR.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q. 8) Measure the resistance between connector (2Q) in the test harness Q and all connector terminals in the test harness AG. ***Connector & terminal*** ***(2Q) No. 1 — All terminals in test harness AG (except for (3AG) No. 3):*** ***(2Q) No. 2 — All terminals in test harness AG (except for (3AG) No. 1):***	Is the resistance 1 MΩ or more?	Go to step **4**.	Roll connector <Ref. to AB-57, Roll Connector.> and faulty harness need to be replaced. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)
4	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Disconnect the test harness N from connector (AB38). 2) Disconnect the test harness Q from connector (AB37). 3) Measure the resistance between connector (3AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(3AG) No. 3 (+) — All terminals in test harness AG:*** ***(3AG) No. 1 (+) — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Replace the airbag control module <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Replace the faulty harness. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)

CS:DTC B1805 SHORT IN PASSENGER'S AIRBAG

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Shorted between +/– lines (shorted between main harness lines, shorted between passenger's airbag lines, shorted between airbag CM internal lines)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the passenger's airbag module connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Using a probe, measure the resistance between the terminals of connector (AB9). <Ref. to AB(diag)-18, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 1 — (AB9) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Disconnect the test harness AD AV from the connectors (AB6, AB17, AB18). 2) Connect the connector other than passenger's airbag module connector (AB9). 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect the passenger's airbag module connector (AB9). 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the passenger's airbag module. <Ref. to AB-32, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CT:DTC B1806 OPEN IN PASSENGER'S AIRBAG

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Open circuit failure (open circuit in main harness, open circuit in passenger's airbag, open circuit in airbag CM internal circuit, connector connection failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag main harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the passenger's airbag module connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Using a probe, measure the resistance between the terminals of connector (AB9). <Ref. to AB(diag)-18, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 1 — (AB9) No. 2:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect the connector other than passenger's airbag module connector (AB9). 2) Using a probe, short the terminals No. 1 and No. 2 of connector (AB9). <Ref. to AB(diag)-18, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When shorting the terminals, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 1 — (AB9) No. 2:*** 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect the passenger's airbag module connector (AB9). 3) Connect the battery negative terminal, and clear the memory. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the passenger's airbag module. <Ref. to AB-32, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CU:DTC B1807 SHORT IN PASSENGER'S AIRBAG (TO GROUND)

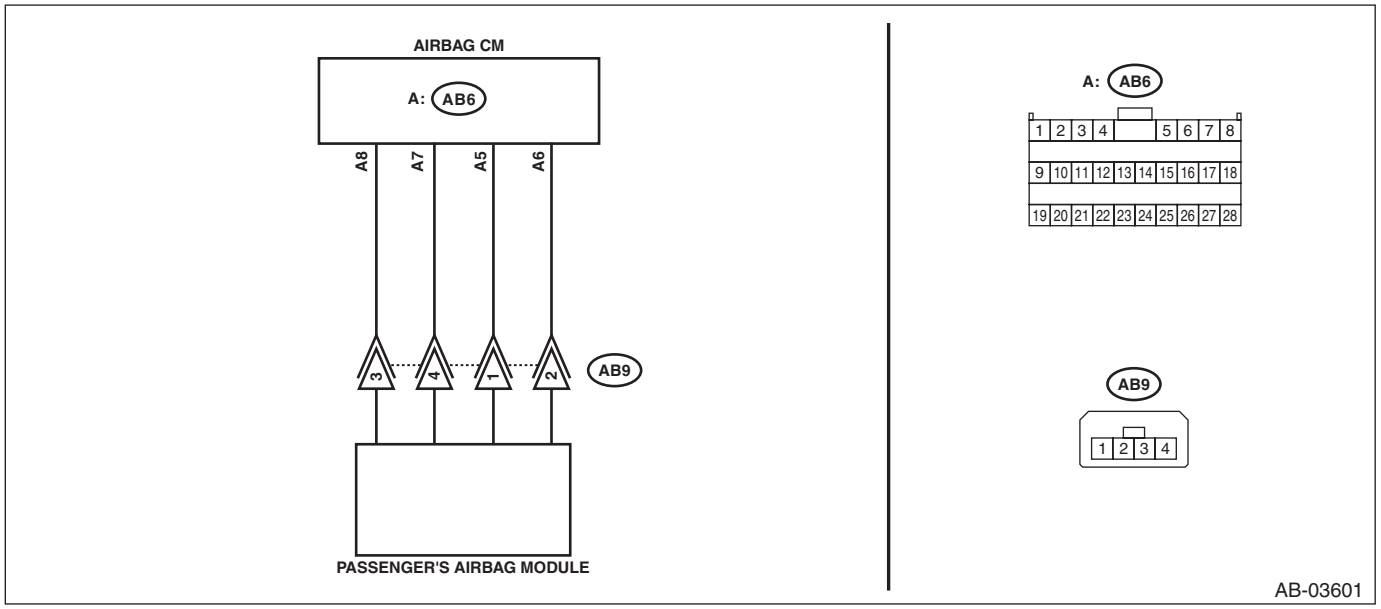
DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
GND short circuit failure (shorted to ground in main harness, shorted to ground in passenger's airbag, shorted to ground in airbag CM internal circuit)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag main harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the passenger's airbag module connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Using a probe, measure the resistance between the connector (AB9) and chassis ground. <Ref. to AB(diag)-18, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 1 — Chassis ground:*** ***(AB9) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect the connector other than passenger's airbag module connector (AB9). 2) Using a probe, short the terminals No. 1 and No. 2 of connector (AB9). <Ref. to AB(diag)-18, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When shorting the terminals, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 1 — (AB9) No. 2:*** 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect the passenger's airbag module connector (AB9). 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the passenger's airbag module. <Ref. to AB-32, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.



Step		Check	Yes	No
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CV:DTC B1808 SHORT IN PASSENGER'S AIRBAG (TO +B)

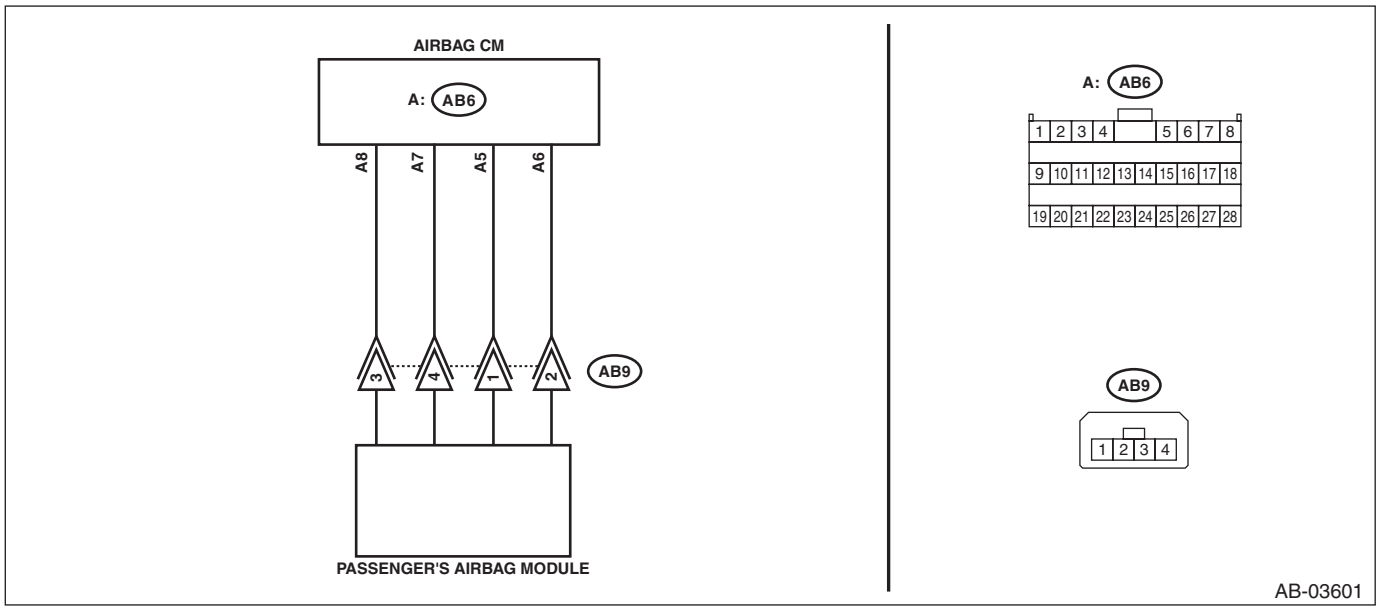
DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit failure in power supply (shorted in main harness power supply, shorted in passenger's airbag power supply, shorted in airbag CM internal circuit power supply)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag main harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the passenger's airbag module connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Using a probe, measure the voltage between the connector (AB9) and chassis ground. <Ref. to AB(diag)-18, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the voltage, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 1 (+) — Chassis ground (–):*** ***(AB9) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect the connector other than passenger's airbag module connector (AB9). 2) Using a probe, short the terminals No. 1 and No. 2 of connector (AB9). <Ref. to AB(diag)-18, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When shorting the terminals, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 1 — (AB9) No. 2:*** 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect the passenger's airbag module connector (AB9). 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the passenger's airbag module. <Ref. to AB-32, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.



Step		Check	Yes	No
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CW:DTC B1809 SHORT IN PASSENGER'S AIRBAG

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit between passenger's airbag circuit and other circuit

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag main harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the passenger's airbag module connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Using a probe, measure the resistance between the connector (AB9) and terminals of all connectors in test harness AG. <Ref. to AB(diag)-18, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 1 — All terminals in test harness AG (except for (3AG) No. 9):*** ***(AB9) No. 2 — All terminals in test harness AG (except for (3AG) No. 7):***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect the connector other than passenger's airbag module connector (AB9). 2) Using a probe, short the terminals No. 1 and No. 2 of connector (AB9). <Ref. to AB(diag)-18, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When shorting the terminals, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 1 — (AB9) No. 2:*** 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect the passenger's airbag module connector (AB9). 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the passenger's airbag module. <Ref. to AB-32, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CX:DTC B1810 SHORT IN DRIVER'S AIRBAG DUAL STAGE - 2ND STEP

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Open circuit failure (open circuit in main harness, open circuit in roll connector, open circuit in driver's airbag, open circuit in airbag CM internal circuit, connector connection failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-30, Driver's Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ROLL CONNECTOR AND AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the console front panel and disconnect the connector (AB9). 3) Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q. 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Measure the resistance between connector (2N) terminals in test harness N. ***Connector & terminal*** ***(2N) No. 1 — (2N) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Go to step **4**.
4	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 2) Disconnect the test harness Q from connector (AB37). 3) Measure the resistance between connector (3AG) terminals in test harness AG. ***Connector & terminal*** ***(3AG) No. 2 — (3AG) No. 4:***	Is the resistance 1 MΩ or more?	Replace the roll connector. <Ref. to AB-57, Roll Connector.>	Replace the airbag main harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **6**.
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CY:DTC B1811 OPEN IN DRIVER'S AIRBAG DUAL STAGE - 2ND STEP

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Open circuit failure (open circuit in main harness, open circuit in roll connector, open circuit in driver's airbag, open circuit in airbag CM internal circuit, connector connection failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-30, Driver's Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ROLL CONNECTOR AND AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the console front panel and disconnect the connector (AB9). 3) Disconnect the airbag resistor from the connector (2N) in test harness N. 4) Disconnect the airbag resistor from the connector (2Q) of test harness Q. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Measure the resistance between connector (2N) terminals in test harness N. ***Connector & terminal*** ***(2N) No. 1 — (2N) No. 2:***	Is the resistance less than 10 Ω?	Go to step **5**.	Go to step **4**.
4	**CHECK ROLL CONNECTOR.** 1) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 2) Measure the resistance between connector (2N) terminals in test harness N. ***Connector & terminal*** ***(2N) No. 1 — (2N) No. 2:***	Is the resistance less than 10 Ω?	Replace the airbag main harness along with body harness.	Replace the roll connector. <Ref. to AB-57, Roll Connector.>
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **6**.
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CZ:DTC B1812 SHORT IN DRIVER'S AIRBAG DUAL STAGE - 2ND STEP (TO GROUND)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
GND short circuit failure (shorted to ground in main harness, shorted to ground in roll connector, shorted to ground in driver's airbag, shorted to ground in airbag CM internal circuit)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-30, Driver's Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ROLL CONNECTOR.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 3) Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q. 4) Measure the resistance between connector (2N) in the test harness N and chassis ground. ***Connector & terminal*** ***(2N) No. 1 — Chassis ground:*** ***(2N) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the roll connector. <Ref. to AB-57, Roll Connector.>
4	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Disconnect the test harness N from connector (AB38). 2) Disconnect the test harness Q from connector (AB37). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Measure the resistance between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 2 — Chassis ground:*** ***(3AG) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Replace the airbag main harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **6**.
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DA:DTC B1813 SHORT IN DRIVER'S AIRBAG DUAL STAGE - 2ND STEP CIRCUIT (TO +B)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit failure in power supply (shorted in main harness power supply, shorted in roll connector power supply, shorted in driver's airbag power supply, shorted in airbag CM internal circuit power supply)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-30, Driver's Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ROLL CONNECTOR.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 3) Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q. 4) Measure the voltage between connector (2N) in the test harness N and chassis ground. ***Connector & terminal*** ***(2N) No. 1 (+) — Chassis ground (–):*** ***(2N) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Replace the roll connector. <Ref. to AB-57, Roll Connector.>
4	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Disconnect the test harness N from connector (AB38). 2) Disconnect the test harness Q from connector (AB37). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Measure the voltage between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 2 (+) — Chassis ground (–):*** ***(3AG) No. 4 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Replace the airbag main harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **6**.
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DB:DTC B1814 SHORT IN DRIVER'S AIRBAG DUAL STAGE - 2ND STEP

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit between driver's airbag circuit and other circuit

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-30, Driver's Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ROLL CONNECTOR.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q. 7) Measure the resistance between connector (2N) in the test harness N and all connector terminals in the test harness AG. ***Connector & terminal*** ***(2N) No. 1 — All terminals in test harness AG (except for (3AG) No. 4):*** ***(2N) No. 2 — All terminals in test harness AG (except for (3AG) No. 2):***	Is the resistance 1 MΩ or more?	Go to step **4**.	Roll connector <Ref. to AB-57, Roll Connector.> and faulty harness need to be replaced. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)
4	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Disconnect the test harness N from connector (AB38). 2) Disconnect the test harness Q from connector (AB37). 3) Measure the resistance between connector (3AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(3AG) No. 2 — All terminals in test harness AG:*** ***(3AG) No. 4 — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Replace the faulty harness. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)

DC:DTC B1815 OPEN IN PASSENGER'S AIRBAG DUAL STAGE - 2ND STEP

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Shorted between +/– lines (shorted between main harness lines, shorted between passenger's airbag lines, shorted between airbag CM internal lines)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the passenger's airbag module connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Using a probe, measure the resistance between the terminals of connector (AB9). <Ref. to AB(diag)-18, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 3 — (AB9) No. 4:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Disconnect the test harness AD AV from the connectors (AB6, AB17, AB18). 2) Connect the connector other than passenger's airbag module connector (AB9). 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect the passenger's airbag module connector (AB9). 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the passenger's airbag module. <Ref. to AB-32, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DD:DTC B1816 OPEN IN PASSENGER'S AIRBAG DUAL STAGE - 2ND STEP

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Open circuit failure (open circuit in main harness, open circuit in passenger's airbag, open circuit in airbag CM internal circuit, connector connection failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag main harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the passenger's airbag module connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Using a probe, measure the resistance between the terminals of connector (AB9). <Ref. to AB(diag)-18, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 3 — (AB9) No. 4:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect the connector other than passenger's airbag module connector (AB9). 2) Using a probe, short the terminals No. 3 and No. 4 of connector (AB9). <Ref. to AB(diag)-18, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When shorting the terminals, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 3 — (AB9) No. 4:*** 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect the passenger's airbag module connector (AB9). 3) Connect the battery negative terminal, and clear the memory. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the passenger's airbag module. <Ref. to AB-32, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DE:DTC B1817 SHORT IN PASSENGER'S AIRBAG DUAL STAGE - 2ND STEP (TO GROUND)

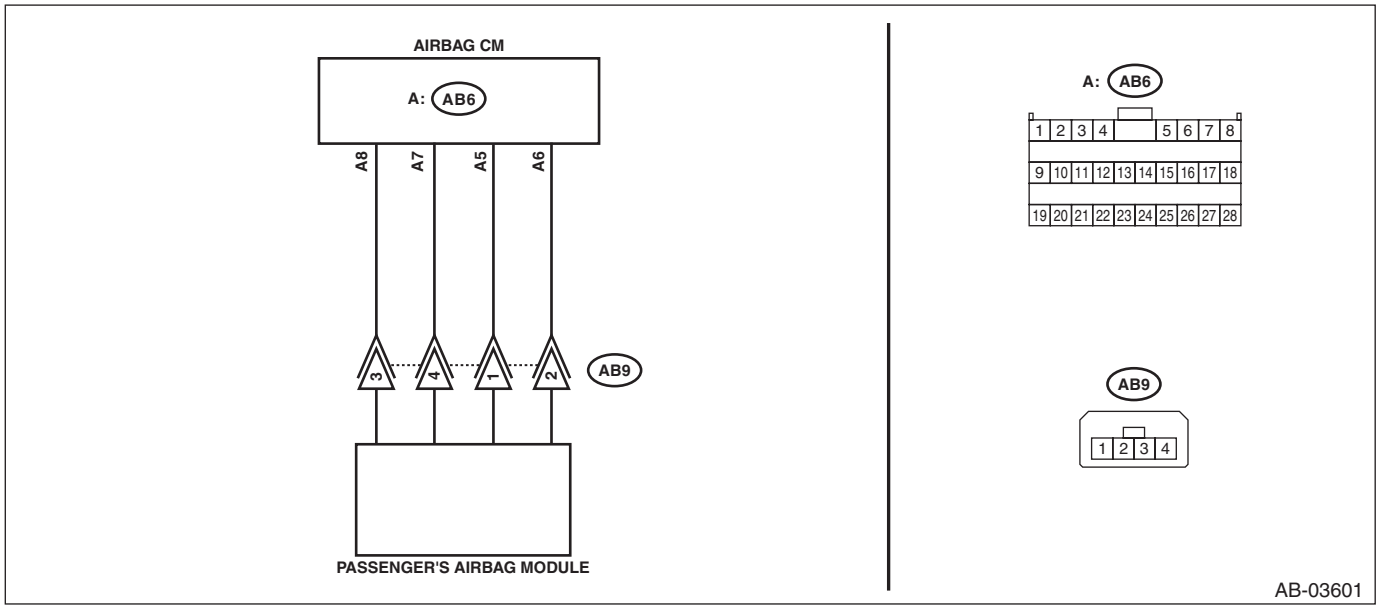
DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
GND short circuit failure (shorted to ground in main harness, shorted to ground in passenger's airbag, shorted to ground in airbag CM internal circuit)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag main harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the passenger's airbag module connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Using a probe, measure the resistance between the connector (AB9) and chassis ground. <Ref. to AB(diag)-18, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 3 — Chassis ground:*** ***(AB9) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect the connector other than passenger's airbag module connector (AB9). 2) Using a probe, short the terminals No. 3 and No. 4 of connector (AB9). <Ref. to AB(diag)-18, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When shorting the terminals, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 3 — (AB9) No. 4:*** 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect the passenger's airbag module connector (AB9). 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the passenger's airbag module. <Ref. to AB-32, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.



Step		Check	Yes	No
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DF:DTC B1818 SHORT IN PASSENGER'S AIRBAG DUAL STAGE - 2ND STEP CIRCUIT (TO +B)

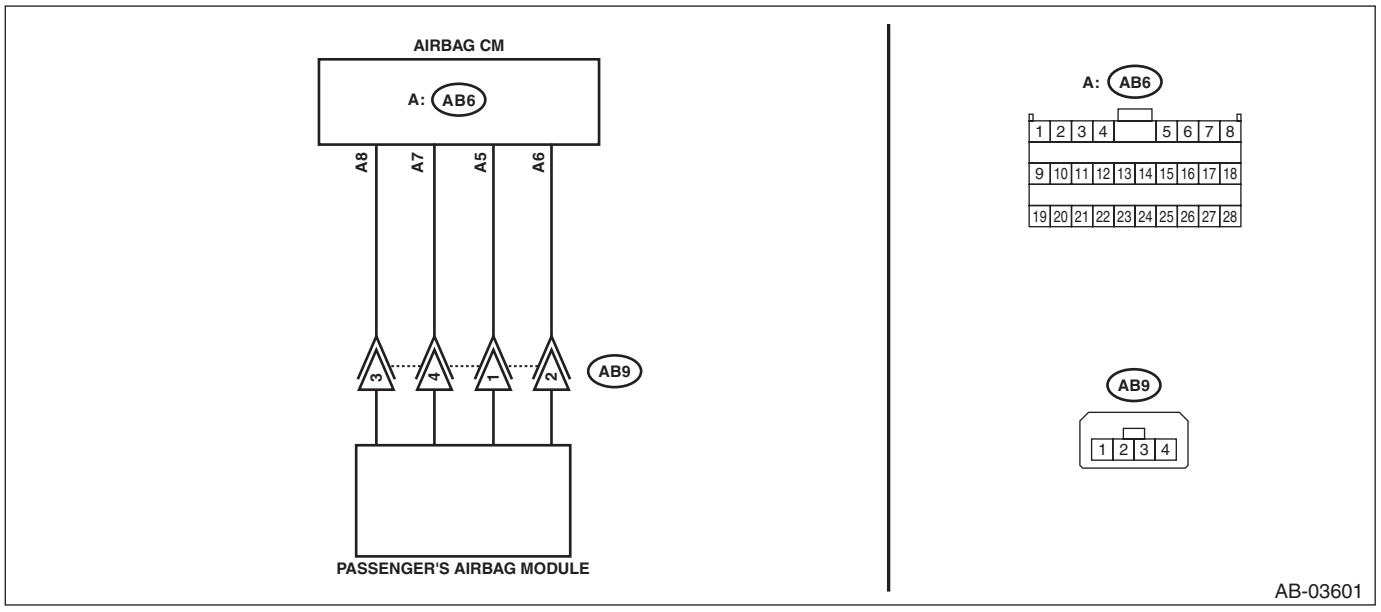
DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit failure in power supply (shorted in main harness power supply, shorted in passenger's airbag power supply, shorted in airbag CM internal circuit power supply)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag main harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the passenger's airbag module connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Using a probe, measure the voltage between the connector (AB9) and chassis ground. <Ref. to AB(diag)-18, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the voltage, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 3 (+) — Chassis ground (–):*** ***(AB9) No. 4 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect the connector other than passenger's airbag module connector (AB9). 2) Using a probe, short the terminals No. 3 and No. 4 of connector (AB9). <Ref. to AB(diag)-18, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When shorting the terminals, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 3 — (AB9) No. 4:*** 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect the passenger's airbag module connector (AB9). 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the passenger's airbag module. <Ref. to AB-32, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.



Step		Check	Yes	No
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DG:DTC B1819 SHORT IN PASSENGER'S AIRBAG DUAL STAGE - 2ND STEP

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit between passenger's airbag circuit and other circuit

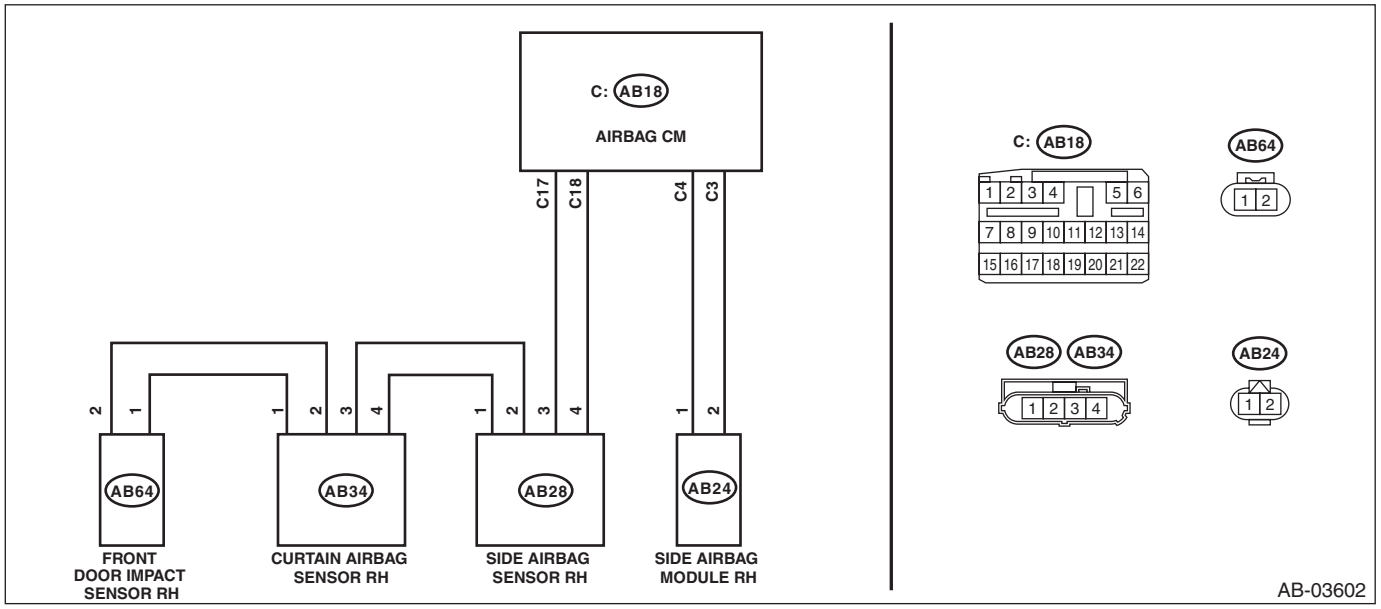
CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag main harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the passenger's airbag module connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 6) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 7) Using a probe, measure the resistance between the connector (AB9) and terminals of all connectors in test harness AG. <Ref. to AB(diag)-18, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the voltage, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 3 — All terminals in test harness AG (except for (3AG) No. 8):*** ***(AB9) No. 4 — All terminals in test harness AG (except for (3AG) No. 6):***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect the connector other than passenger's airbag module connector (AB9). 2) Using a probe, short the terminals No. 3 and No. 4 of connector (AB9). <Ref. to AB(diag)-18, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When shorting the terminals, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 3 — (AB9) No. 4:*** 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, REMOVAL, Airbag Control Module.>	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect the passenger's airbag module connector (AB9). 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the passenger's airbag module. <Ref. to AB-32, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.



DH:DTC B1820 SHORT IN SIDE AIRBAG RH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Shorted between +/– lines (shorted between main harness lines, shorted between front seat side airbag RH lines, shorted between airbag CM internal lines)

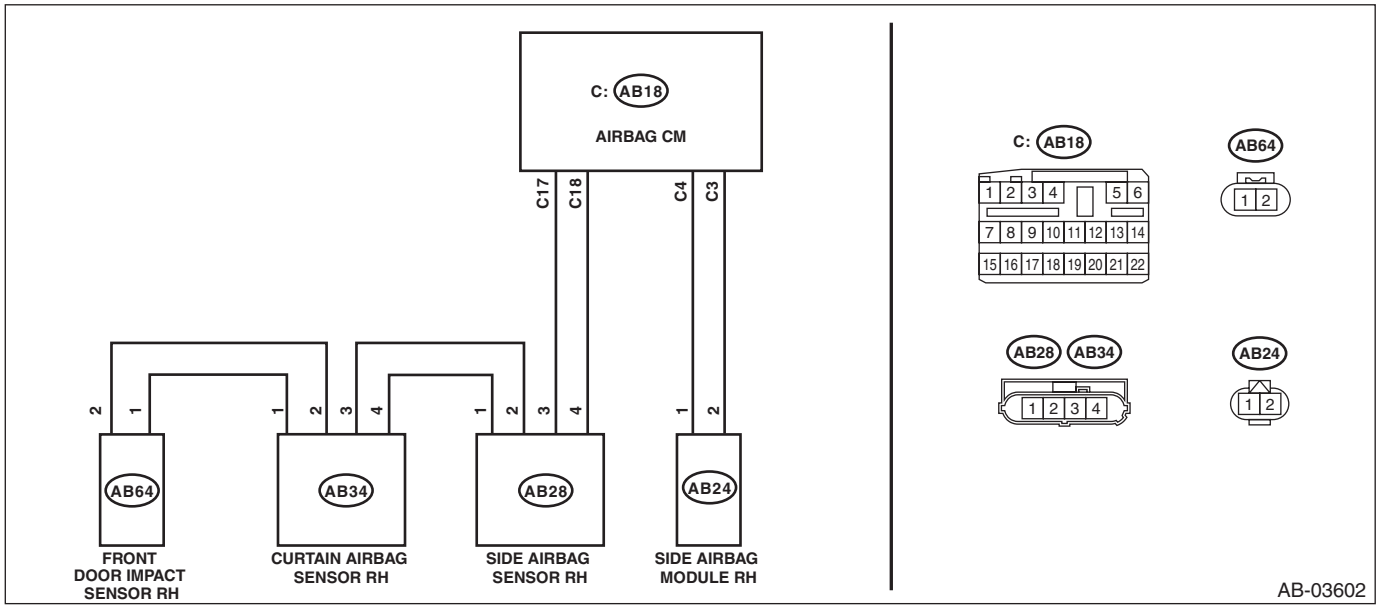
CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Before starting work, prepare two sets of TEST HARNESS AT (98299CA020).
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module RH and the side airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB33) from curtain airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between terminals of connector (AB24) of side airbag module RH. **CAUTION:** **Connect the terminal in test harness AT to connector (AB24) terminal, and apply the tester to test harness AT. Two sets of test harness AT are required.** ***Connector & terminal (AB24) No. 1 — (AB24) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors other than side airbag module RH connector (AB24). 2) Connect the battery ground terminal and turn the ignition switch to ON. 3) Clear the memory. 4) Perform the Inspection Mode. 5) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **4**.
4	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect all connectors. 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the side airbag module RH. <Ref. to AB-38, REMOVAL, Side Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.



DI: DTC B1821 OPEN IN SIDE AIRBAG RH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Open circuit failure (open circuit in main harness, open circuit in front seat side airbag RH, open circuit in airbag CM internal circuit, connector connection failure)

NOTE:
Before starting work, prepare two sets of TEST HARNESS AT (98299CA020).

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module RH and the side airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB33) from curtain airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Measure the resistance between terminals of connector (AB24) of side airbag module RH. **CAUTION:** **Connect the terminal in test harness AT to connector (AB24) terminal, and apply the tester to test harness AT. Two sets of test harness AT are required.** ***Connector & terminal (AB24) No. 1 — (AB24) No. 2:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors other than side airbag module RH connector (AB24). 2) Connect the battery ground terminal and turn the ignition switch to ON. 3) Clear the memory. 4) Perform the Inspection Mode. 5) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **4**.
4	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect all connectors. 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the side airbag module RH. <Ref. to AB-38, REMOVAL, Side Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

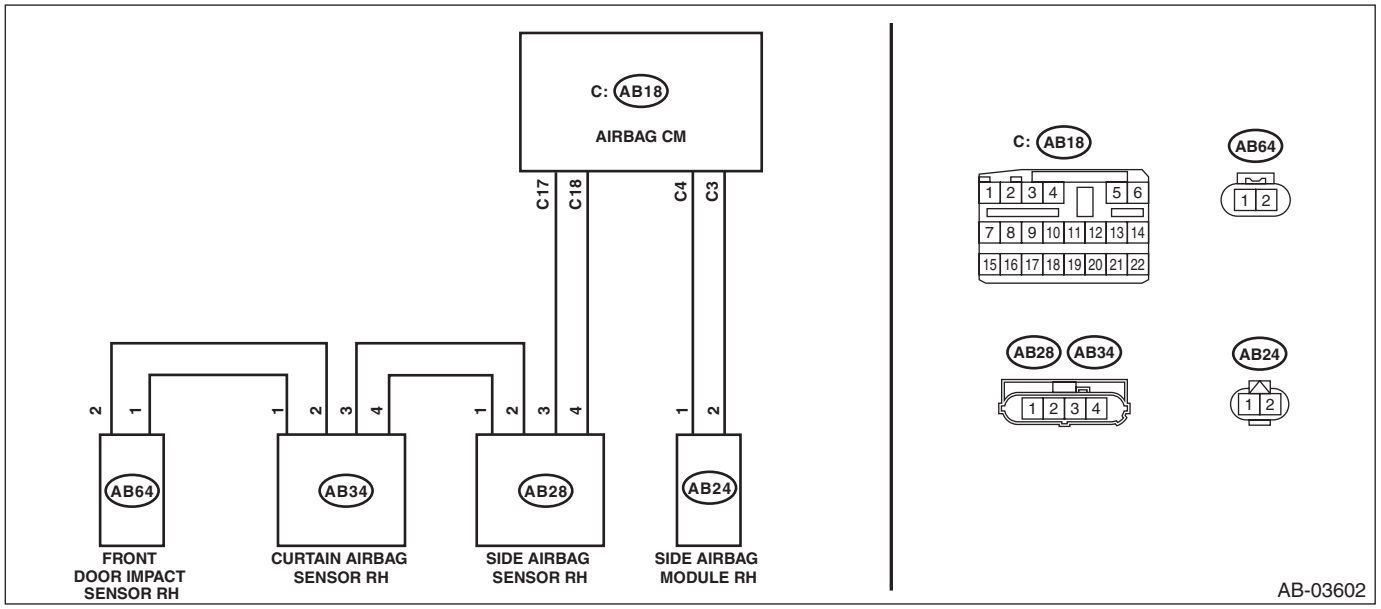
DJ:DTC B1822 SHORT IN SIDE AIRBAG RH (TO GROUND)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
GND short circuit failure (shorted to ground in main harness, shorted to ground in front seat side airbag RH, shorted to ground in airbag CM internal circuit)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module RH and the side airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.



Step		Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB33) from curtain airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Measure the resistance between connector (AB24) of side airbag module RH and chassis ground. **CAUTION:** **Connect the terminal in test harness AT to connector (AB24) terminal, and apply the tester to test harness AT.** ***Connector & terminal*** ***(AB24) No. 1 — Chassis ground:*** ***(AB24) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors other than side airbag module RH connector (AB24). 2) Connect the battery ground terminal and turn the ignition switch to ON. 3) Clear the memory. 4) Perform the Inspection Mode. 5) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **4**.
4	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect all connectors. 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the side airbag module RH. <Ref. to AB-38, REMOVAL, Side Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DK:DTC B1823 SHORT IN SIDE AIRBAG RH (TO +B)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit failure in power supply (shorted in main harness power supply, shorted in front seat side airbag RH power supply, shorted in airbag CM internal circuit power supply)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module RH and the side airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB33) from curtain airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Measure the voltage between connector (AB24) of side airbag module RH and chassis ground. **CAUTION:** **Connect the terminal in test harness AT to connector (AB24) terminal, and apply the tester to test harness AT.** ***Connector & terminal*** ***(AB24) No. 1 (+) — Chassis ground (–):*** ***(AB24) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors other than side airbag module RH connector (AB24). 2) Connect the battery ground terminal and turn the ignition switch to ON. 3) Clear the memory. 4) Perform the Inspection Mode. 5) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **4**.
4	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect all connectors. 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the side airbag module RH. <Ref. to AB-38, REMOVAL, Side Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DL:DTC B1824 SHORT IN SIDE AIRBAG RH

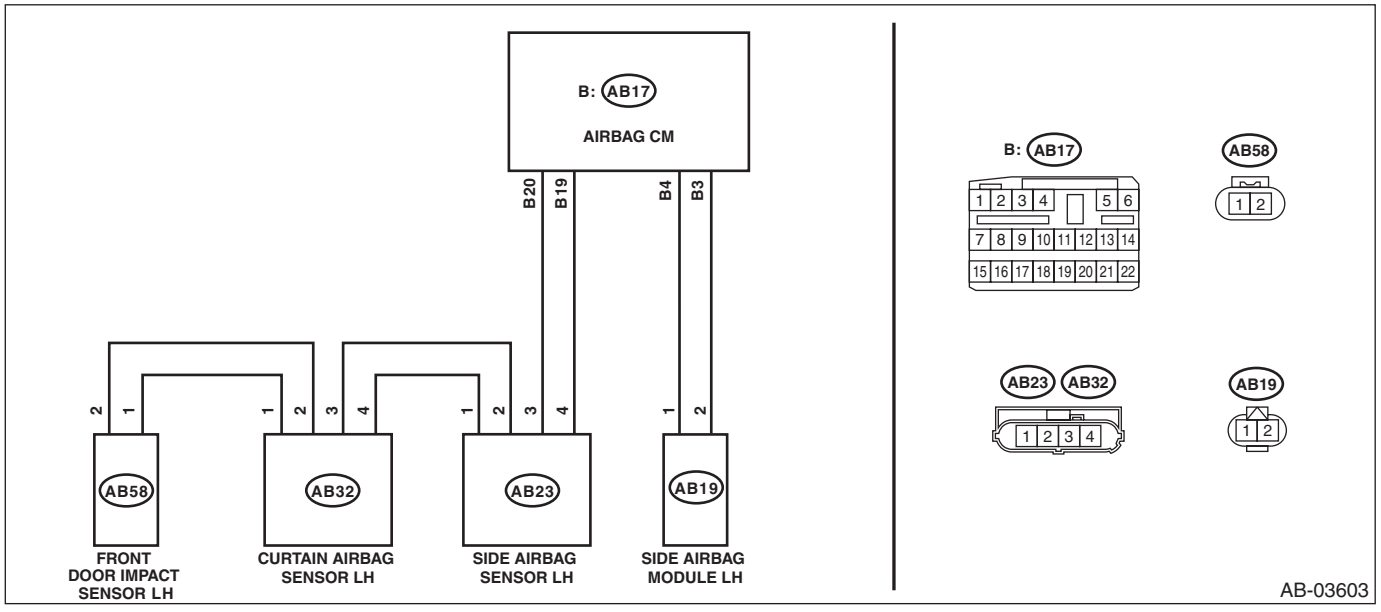
DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit between front seat side airbag RH circuit and other circuit

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module RH and the side airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB33) from curtain airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (5AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(5AG) No. 1 — All terminals in test harness AG:*** ***(5AG) No. 3 — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors other than side airbag module RH connector (AB24). 2) Connect the battery ground terminal and turn the ignition switch to ON. 3) Clear the memory. 4) Perform the Inspection Mode. 5) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **4**.
4	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect all connectors. 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the side airbag module RH. <Ref. to AB-38, REMOVAL, Side Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.



DM:DTC B1825 SHORT IN SIDE AIRBAG LH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Shorted between +/– lines (shorted between main harness lines, shorted between front seat side airbag LH lines, shorted between airbag CM internal lines)

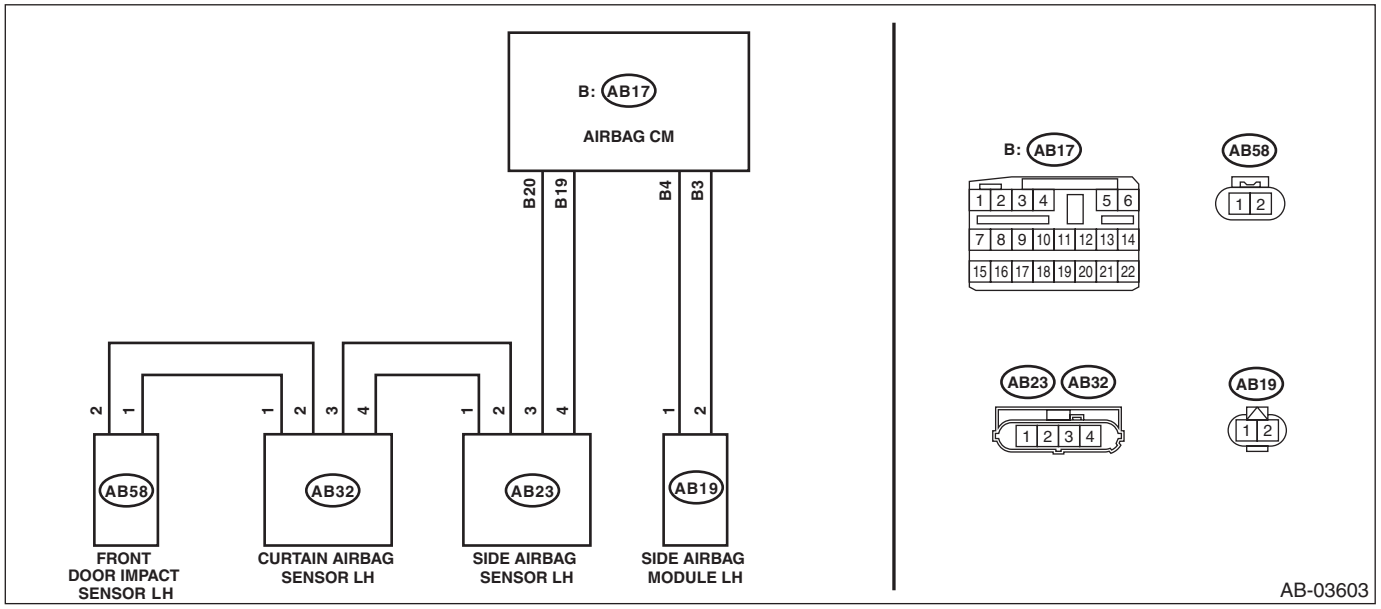
NOTE:
Before starting work, prepare two sets of TEST HARNESS AT (98299CA020).

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module LH and the side airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the connector (AB31) from curtain airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between terminals of connector (AB19) of side airbag module LH. **CAUTION:** **Connect the terminal in test harness AT to connector (AB19) terminal, and apply the tester to test harness AT. Two sets of test harness AT are required.** ***Connector & terminal (AB19) No. 1 — (AB19) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors other than side airbag module LH connector (AB19). 2) Connect the battery ground terminal and turn the ignition switch to ON. 3) Clear the memory. 4) Perform the Inspection Mode. 5) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **4**.
4	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect all connectors. 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the side airbag module LH. <Ref. to AB-38, REMOVAL, Side Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.



DN:DTC B1826 OPEN IN SIDE AIRBAG LH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Open circuit failure (open circuit in main harness, open circuit in front seat side airbag LH, open circuit in airbag CM internal circuit, connector connection failure)

NOTE:
Before starting work, prepare two sets of TEST HARNESS AT (98299CA020).

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module LH and the side airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the connector (AB31) from curtain airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Measure the resistance between terminals of connector (AB19) of side airbag module LH. **CAUTION:** **Connect the terminal in test harness AT to connector (AB19) terminal, and apply the tester to test harness AT. Two sets of test harness AT are required.** ***Connector & terminal (AB19) No. 1 — (AB19) No. 2:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors other than side airbag module LH connector (AB19). 2) Connect the battery ground terminal and turn the ignition switch to ON. 3) Clear the memory. 4) Perform the Inspection Mode. 5) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **4**.
4	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect all connectors. 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the side airbag module LH. <Ref. to AB-38, REMOVAL, Side Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DO:DTC B1827 SHORT IN SIDE AIRBAG LH (TO GROUND)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
GND short circuit failure (shorted to ground in main harness, shorted to ground in front seat side airbag LH, shorted to ground in airbag CM internal circuit)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module LH and the side airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the connector (AB31) from curtain airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Measure the resistance between connector (AB19) of side airbag module LH and chassis ground. **CAUTION:** **Connect the terminal in test harness AT to connector (AB19) terminal, and apply the tester to test harness AT.** ***Connector & terminal*** ***(AB19) No. 1 — Chassis ground:*** ***(AB19) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors other than side airbag module LH connector (AB19). 2) Connect the battery ground terminal and turn the ignition switch to ON. 3) Clear the memory. 4) Perform the Inspection Mode. 5) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **4**.
4	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect all connectors. 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the side airbag module LH. <Ref. to AB-38, REMOVAL, Side Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DP:DTC B1828 SHORT IN SIDE AIRBAG LH (TO +B)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit failure in power supply (shorted in main harness power supply, shorted in front seat side airbag LH power supply, shorted in airbag CM internal circuit power supply)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module LH and the side airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the connector (AB31) from curtain airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Measure the voltage between connector (AB19) of side airbag module LH and chassis ground. **CAUTION:** **Connect the terminal in test harness AT to connector (AB19) terminal, and apply the tester to test harness AT.** ***Connector & terminal*** ***(AB19) No. 1 (+) — Chassis ground (–):*** ***(AB19) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors other than side airbag module LH connector (AB19). 2) Connect the battery ground terminal and turn the ignition switch to ON. 3) Clear the memory. 4) Perform the Inspection Mode. 5) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **4**.
4	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect all connectors. 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the side airbag module LH. <Ref. to AB-38, REMOVAL, Side Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DQ:DTC B1829 SHORT IN SIDE AIRBAG LH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit between front seat side airbag LH circuit and other circuit

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module LH and the side airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the connector (AB31) from curtain airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (5AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(5AG) No. 5 — All terminals in test harness AG:*** ***(5AG) No. 7 — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors other than side airbag module LH connector (AB19). 2) Connect the battery ground terminal and turn the ignition switch to ON. 3) Clear the memory. 4) Perform the Inspection Mode. 5) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **4**.
4	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect all connectors. 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. 5) Perform the Inspection Mode. 6) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the side airbag module LH. <Ref. to AB-38, REMOVAL, Side Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DR:DTC B1830 SHORT IN CURTAIN AIRBAG RH SQUIB CIRCUIT

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Shorted between +/– lines (shorted between main harness lines, shorted between curtain airbag RH lines, shorted between airbag CM internal lines)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module RH and the curtain airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB33) from curtain airbag module RH. 3) Connect the connector (1N) in the test harness N to the connector (AB33). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the curtain airbag module RH. <Ref. to AB-41, Curtain Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the airbag resistor from test harness N. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (2N) terminals in test harness N. ***Connector & terminal (2N) No. 1 — (2N) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DS:DTC B1831 OPEN IN CURTAIN AIRBAG RH SQUIB CIRCUIT

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Open circuit failure (open circuit in main harness, open circuit in curtain airbag RH, open circuit in airbag CM internal circuit, connector connection failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module RH and the curtain airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB33) from curtain airbag module RH. 3) Connect the connector (1N) in the test harness N to the connector (AB33). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the curtain airbag module RH. <Ref. to AB-41, Curtain Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the airbag resistor from test harness N. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (6AG) in the test harness AG and connector (2N) in the test harness N. ***Connector & terminal*** ***(6AG) No. 1 — (2N) No. 2:*** ***(6AG) No. 3 — (2N) No. 1:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DT:DTC B1832 SHORT IN CURTAIN AIRBAG RH SQUIB CIRCUIT (TO GROUND)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
GND short circuit failure (shorted to ground in main harness, shorted to ground in curtain airbag RH, shorted to ground in airbag CM internal circuit)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module RH and the curtain airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB33), and connect the connector (1N) in test harness N to connector (AB33). 3) Connect the airbag resistor to the connector (2N) of test harness N. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the curtain airbag module RH. <Ref. to AB-41, Curtain Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the airbag resistor from test harness N. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (2N) in the test harness N and chassis ground. ***Connector & terminal*** ***(2N) No. 1 — Chassis ground:*** ***(2N) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DU:DTC B1833 SHORT IN CURTAIN SHIELD AIRBAG RH SQUIB CIRCUIT (TO +B)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit failure in power supply (shorted in main harness power supply, shorted in curtain airbag RH power supply, shorted in airbag CM internal circuit power supply)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module RH and the curtain airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB33), and connect the connector (1N) in test harness N to connector (AB33). 3) Connect the airbag resistor to the connector (2N) of test harness N. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the curtain airbag module RH. <Ref. to AB-41, Curtain Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the airbag resistor from test harness N. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Connect the battery ground terminal and turn the ignition switch to ON. 10) Measure the voltage between connector (2N) in the test harness N and chassis ground. ***Connector & terminal*** ***(2N) No. 1 (+) — Chassis ground (–):*** ***(2N) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DV:DTC B1834 SHORT IN CURTAIN AIRBAG RH SQUIB CIRCUIT

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit between curtain airbag RH circuit and other circuit

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module RH and the curtain airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB33), and connect the connector (1N) in test harness N to connector (AB33). 3) Connect the airbag resistor to the connector (2N) of test harness N. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the curtain airbag module RH. <Ref. to AB-41, Curtain Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the airbag resistor from test harness N. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (6AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(6AG) No. 1 — All terminals in test harness AG:*** ***(6AG) No. 3 — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DW:DTC B1835 SHORT IN CURTAIN AIRBAG LH SQUIB CIRCUIT

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Shorted between +/– lines (shorted between main harness lines, shorted between curtain airbag LH lines, shorted between airbag CM internal lines)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module LH and the curtain airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB31) from curtain airbag module LH. 3) Connect the connector (1N) in the test harness N to the connector (AB31). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the curtain airbag module LH. <Ref. to AB-41, Curtain Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the airbag resistor from test harness N. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (2N) terminals in test harness N. ***Connector & terminal*** ***(2N) No. 1 — (2N) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DX:DTC B1836 OPEN IN CURTAIN AIRBAG LH SQUIB CIRCUIT

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Open circuit failure (open circuit in main harness, open circuit in curtain airbag LH, open circuit in airbag CM internal circuit, connector connection failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module LH and the curtain airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB31) from curtain airbag module LH. 3) Connect the connector (1N) in the test harness N to the connector (AB31). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the curtain airbag module LH. <Ref. to AB-41, Curtain Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the airbag resistor from test harness N. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (6AG) in the test harness AG and connector (2N) in the test harness N. ***Connector & terminal*** ***(6AG) No. 8 — (2N) No. 2:*** ***(6AG) No. 6 — (2N) No. 1:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DY:DTC B1837 SHORT IN CURTAIN AIRBAG LH SQUIB CIRCUIT (TO GROUND)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
GND short circuit failure (shorted to ground in main harness, shorted to ground in curtain airbag LH, shorted to ground in airbag CM internal circuit)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module LH and the curtain airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB31), and connect the connector (1N) in test harness N to connector (AB31). 3) Connect the airbag resistor to the connector (2N) of test harness N. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the curtain airbag module LH. <Ref. to AB-41, Curtain Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the airbag resistor from test harness N. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (2N) in the test harness N and chassis ground. ***Connector & terminal*** ***(2N) No. 1 — Chassis ground:*** ***(2N) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DZ:DTC B1838 SHORT IN CURTAIN SHIELD AIRBAG LH SQUIB CIRCUIT (TO +B)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit failure in power supply (shorted in main harness power supply, shorted in curtain airbag LH power supply, shorted in airbag CM internal circuit power supply)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module LH and the curtain airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB31), and connect the connector (1N) in test harness N to connector (AB31). 3) Connect the airbag resistor to the connector (2N) of test harness N. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the curtain airbag module LH. <Ref. to AB-41, Curtain Airbag Module.>	Go to step **3**.

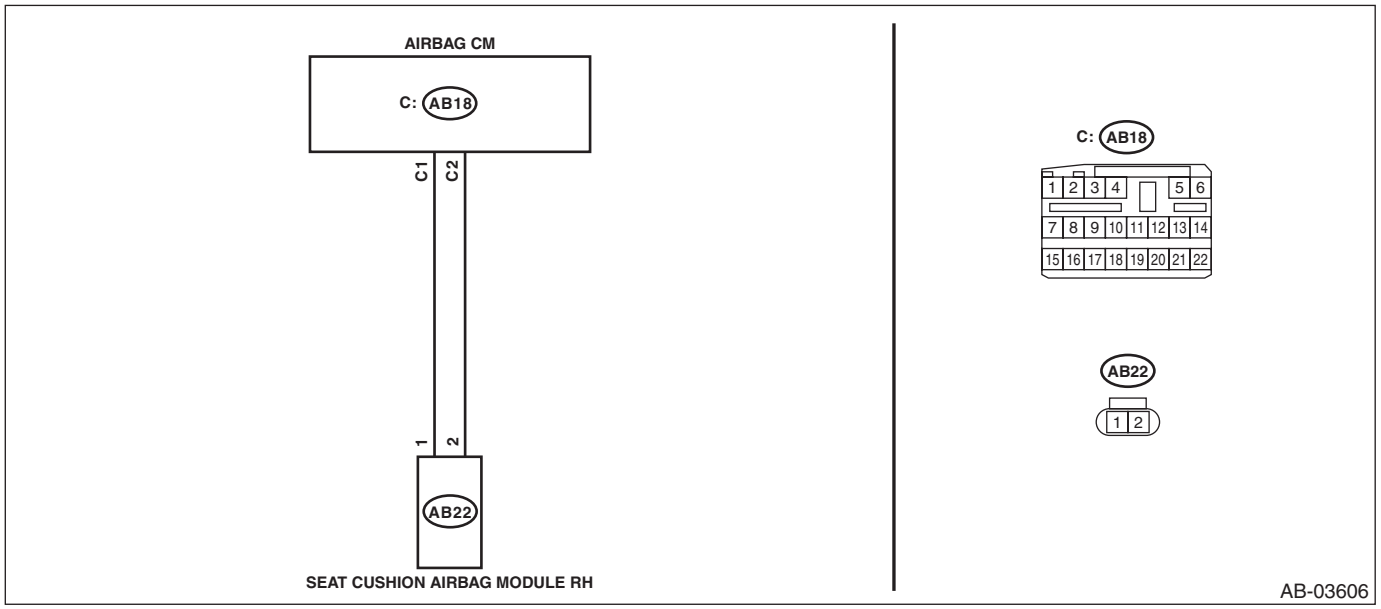
	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the airbag resistor from test harness N. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Connect the battery ground terminal and turn the ignition switch to ON. 10) Measure the voltage between connector (2N) in the test harness N and chassis ground. ***Connector & terminal*** ***(2N) No. 1 (+) — Chassis ground (–):*** ***(2N) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EA:DTC B1839 SHORT IN CURTAIN AIRBAG LH SQUIB CIRCUIT

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
GND short circuit failure (shorted to ground in main harness, shorted to ground in curtain airbag LH, shorted to ground in airbag CM internal circuit)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module LH and the curtain airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB31), and connect the connector (1N) in test harness N to connector (AB31). 3) Connect the airbag resistor to the connector (2N) of test harness N. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the curtain airbag module LH. <Ref. to AB-41, Curtain Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the airbag resistor from test harness N. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (6AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(6AG) No. 8 — All terminals in test harness AG:*** ***(6AG) No. 6 — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EB:DTC B1870 SHORT IN FRONT SEAT CUSHION AIRBAG RH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Shorted between +/– lines (shorted between rear harness lines, shorted between front seat cushion airbag RH lines, shorted between airbag CM internal lines)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat cushion airbag module RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT CUSHION AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB22) from the seat cushion airbag module RH, and connect the connector (1D) in the test harness D to connector (AB22). 3) Connect the airbag resistor to connector (3D) in the test harness D. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the seat cushion airbag module RH. <Ref. to AB-35, Seat Cushion Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SEAT CUSHION AIRBAG MODULE HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB24) of side airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the airbag resistor from test harness D. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3D) terminals in test harness D. ***Connector & terminal (3D) No. 3 — (3D) No. 4:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EC:DTC B1871 OPEN IN FRONT SEAT CUSHION AIRBAG RH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Open circuit failure (open circuit in rear harness, open circuit in front seat cushion airbag RH, open circuit in airbag CM internal circuit, connector connection failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat cushion airbag module RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT CUSHION AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB22) from the seat cushion airbag module RH, and connect the connector (1D) in the test harness D to connector (AB22). 3) Connect the airbag resistor to connector (3D) in the test harness D. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the seat cushion airbag module RH. <Ref. to AB-35, Seat Cushion Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SEAT CUSHION AIRBAG MODULE HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB24) of side airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the airbag resistor from test harness D. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3AG) in the test harness AG and connector (3D) in the test harness D. ***Connector & terminal*** ***(3AG) No. 11 — (3D) No. 4:*** ***(3AG) No. 13 — (3D) No. 3:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

ED:DTC B1872 SHORT IN FRONT SEAT CUSHION AIRBAG RH (TO GROUND)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
GND short circuit failure (shorted to ground in main harness, shorted to ground in front seat side airbag RH, shorted to ground in airbag CM internal circuit)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat cushion airbag module RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT CUSHION AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB22) from the seat cushion airbag module RH, and connect the connector (1D) in the test harness D to connector (AB22). 3) Connect the airbag resistor to connector (3D) in the test harness D. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat cushion airbag module RH. <Ref. to AB-35, Seat Cushion Airbag Module.>	Go to step **3**.

Step		Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SEAT CUSHION AIRBAG MODULE HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB24) from side airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the airbag resistor from test harness D. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3D) in the test harness D and chassis ground. ***Connector & terminal*** ***(3D) No. 4 — Chassis ground:*** ***(3D) No. 3 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EE:DTC B1873 SHORT IN FRONT SEAT CUSHION AIRBAG RH (TO +B)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit failure in power supply (shorted in main harness power supply, shorted in front seat side airbag RH power supply, shorted in airbag CM internal circuit power supply)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat cushion airbag module RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT CUSHION AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB22) from the seat cushion airbag module RH, and connect the connector (1D) in the test harness D to connector (AB22). 3) Connect the airbag resistor to connector (3D) in the test harness D. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat cushion airbag module RH. <Ref. to AB-35, Seat Cushion Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SEAT CUSHION AIRBAG MODULE HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB24) from side airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the airbag resistor from test harness D. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Connect the battery ground terminal and turn the ignition switch to ON. 10) Measure the voltage between connector (3D) in the test harness D and chassis ground. ***Connector & terminal*** ***(3D) No. 4 (+) — Chassis ground (–):*** ***(3D) No. 3 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EF:DTC B1874 SHORT IN FRONT SEAT CUSHION AIRBAG RH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit between front seat side airbag RH circuit and other circuit

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat cushion airbag module RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT CUSHION AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB22) from the seat cushion airbag module RH, and connect the connector (1D) in the test harness D to connector (AB22). 3) Connect the airbag resistor to connector (3D) in the test harness D. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat cushion airbag module RH. <Ref. to AB-35, Seat Cushion Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SEAT CUSHION AIRBAG MODULE HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB24) from side airbag module RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the airbag resistor from test harness D. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(3AG) No. 11 — All terminals in test harness AG:*** ***(3AG) No. 13 — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the faulty harness. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EG:DTC B1875 SHORT IN FRONT SEAT CUSHION AIRBAG LH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Shorted between +/– lines (shorted between rear harness lines, shorted between front seat cushion airbag LH lines, shorted between airbag CM internal lines)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat cushion airbag module LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT CUSHION AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB5) from the seat cushion airbag module LH, and connect the connector (1D) in the test harness D to connector (AB5). 3) Connect the airbag resistor to connector (3D) in the test harness D. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the seat cushion airbag module LH. <Ref. to AB-35, Seat Cushion Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SEAT CUSHION AIRBAG MODULE HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB19) of the side airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the airbag resistor from test harness D. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3D) terminals in test harness D. ***Connector & terminal (3D) No. 3 — (3D) No. 4:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EH:DTC B1876 OPEN IN FRONT SEAT CUSHION AIRBAG LH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Open circuit failure (open circuit in rear harness, open circuit in front seat cushion airbag LH, open circuit in airbag CM internal circuit, connector connection failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat cushion airbag module LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT CUSHION AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB5) from the seat cushion airbag module LH, and connect the connector (1D) in the test harness D to connector (AB5). 3) Connect the airbag resistor to connector (3D) in the test harness D. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the seat cushion airbag module LH. <Ref. to AB-35, Seat Cushion Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SEAT CUSHION AIRBAG MODULE HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB19) of the side airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the airbag resistor from test harness D. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3AG) in the test harness AG and connector (3D) in the test harness D. ***Connector & terminal*** ***(3AG) No. 17 — (3D) No. 3:*** ***(3AG) No. 19 — (3D) No. 4:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EI: DTC B1877 SHORT IN FRONT SEAT CUSHION AIRBAG LH (TO GROUND)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
GND short circuit failure (shorted to ground in main harness, shorted to ground in front seat cushion airbag LH, shorted to ground in airbag CM internal circuit)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat cushion airbag module LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT CUSHION AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB5) from the seat cushion airbag module LH, and connect the connector (1D) in the test harness D to connector (AB5). 3) Connect the airbag resistor to connector (3D) in the test harness D. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat cushion airbag module LH. <Ref. to AB-35, Seat Cushion Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SEAT CUSHION AIRBAG MODULE HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB19) of the side airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the airbag resistor from test harness D. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3D) in the test harness D and chassis ground. ***Connector & terminal*** ***(3D) No. 4 — Chassis ground:*** ***(3D) No. 3 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EJ: DTC B1878 SHORT IN FRONT SEAT CUSHION AIRBAG LH (TO +B)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit failure in power supply (shorted in main harness power supply, shorted in front seat cushion airbag LH power supply, shorted in airbag CM internal circuit power supply)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

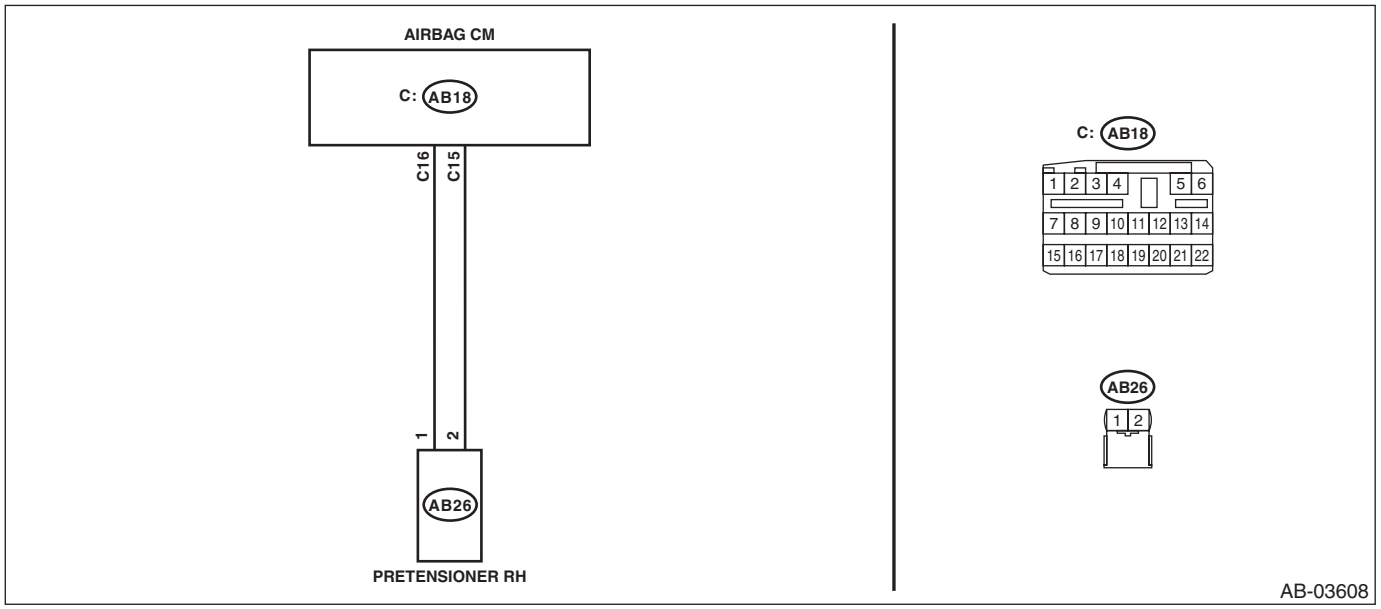
	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat cushion airbag module LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT CUSHION AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB5) from the seat cushion airbag module LH, and connect the connector (1D) in the test harness D to connector (AB5). 3) Connect the airbag resistor to connector (3D) in the test harness D. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat cushion airbag module LH. <Ref. to AB-35, Seat Cushion Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SEAT CUSHION AIRBAG MODULE HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB19) of the side airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the airbag resistor from test harness D. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Connect the battery ground terminal and turn the ignition switch to ON. 10) Measure the voltage between connector (3D) in the test harness D and chassis ground. ***Connector & terminal*** ***(3D) No. 4 (+) — Chassis ground (–):*** ***(3D) No. 3 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EK:DTC B1879 SHORT IN FRONT SEAT CUSHION AIRBAG LH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit between front seat cushion airbag LH circuit and other circuit

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat cushion airbag module LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT CUSHION AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB5) from the seat cushion airbag module LH, and connect the connector (1D) in the test harness D to connector (AB5). 3) Connect the airbag resistor to connector (3D) in the test harness D. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat cushion airbag module LH. <Ref. to AB-35, Seat Cushion Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SEAT CUSHION AIRBAG MODULE HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB19) of the side airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the airbag resistor from test harness D. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(3AG) No. 17 — All terminals in test harness AG:*** ***(3AG) No. 19 — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the faulty harness. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EL:DTC B1900 SHORT IN FRONT P/T RH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Shorted between +/– lines (shorted between rear harness lines, shorted between front seat pretensioner RH lines, shorted between airbag CM internal lines)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Connect the connector (1N) in the test harness N to the connector (AB26). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the seat belt pretensioner RH. <Ref. to SB-18, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from test harness N. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB33) from curtain airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3AG) terminals in test harness AG. ***Connector & terminal (3AG) No. 10 — (3AG) No. 12:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EM:DTC B1901 OPEN IN FRONT P/T RH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Open circuit failure (open circuit in rear harness, open circuit in front seat pretensioner RH, open circuit in airbag CM internal circuit, connector connection failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Connect the connector (1N) in the test harness N to the connector (AB26). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the seat belt pretensioner RH. <Ref. to SB-18, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRE-TENSIONER HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB33) from curtain airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3AG) in the test harness AG and connector (2N) in the test harness N. ***Connector & terminal*** ***(3AG) No. 10 — (2N) No. 1:*** ***(3AG) No. 12 — (2N) No. 2:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EN:DTC B1902 SHORT IN FRONT P/T RH (TO GROUND)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
GND short circuit failure (shorted to ground in rear harness, shorted to ground in front seat pretensioner RH, shorted to ground in airbag CM internal circuit)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Connect the connector (1N) in the test harness N to the connector (AB26). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat belt pretensioner RH. <Ref. to SB-18, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRE-TENSIONER HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB33) from curtain airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 10 — Chassis ground:*** ***(3AG) No. 12 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EO:DTC B1903 SHORT IN FRONT P/T RH (TO +B)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit failure in power supply (shorted in rear harness power supply, shorted in front seat pretensioner RH power supply, shorted in airbag CM internal circuit power supply)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Connect the connector (1N) in the test harness N to the connector (AB26). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat belt pretensioner RH. <Ref. to SB-18, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB33) from curtain airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Connect the battery ground terminal and turn the ignition switch to ON. 10) Measure the voltage between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 10 (+) — Chassis ground (–):*** ***(3AG) No. 12 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EP:DTC B1904 SHORT IN FRONT P/T RH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit between front seat pretensioner RH circuit and other circuit

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Connect the connector (1N) in the test harness N to the connector (AB26). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat belt pretensioner RH. <Ref. to SB-18, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect the connector (AB22) from seat cushion airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB33) from curtain airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(3AG) No. 10 — All terminals in test harness AG:*** ***(3AG) No. 12 — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the faulty harness. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EQ:DTC B1905 SHORT IN FRONT P/T LH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Shorted between +/– lines (shorted between rear harness lines, shorted between front seat pretensioner LH lines, shorted between airbag CM internal lines)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Connect the connector (1N) in the test harness N to the connector (AB21). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the seat belt pretensioner LH. <Ref. to SB-18, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the connector (AB31) from curtain airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3AG) terminals in test harness AG. ***Connector & terminal (3AG) No. 18 — (3AG) No. 20:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

ER:DTC B1906 OPEN IN FRONT P/T LH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Open circuit failure (open circuit in rear harness, open circuit in front seat pretensioner LH, open circuit in airbag CM internal circuit, connector connection failure)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Connect the connector (1N) in the test harness N to the connector (AB21). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the seat belt pretensioner LH. <Ref. to SB-18, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRE-TENSIONER HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the connector (AB31) from curtain airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3AG) in the test harness AG and connector (2N) in the test harness N. ***Connector & terminal*** ***(3AG) No. 18 — (2N) No. 2:*** ***(3AG) No. 20 — (2N) No. 1:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

ES:DTC B1907 SHORT IN FRONT P/T LH (TO GROUND)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
GND short circuit failure (shorted to ground in rear harness, shorted to ground in front seat pretensioner LH, shorted to ground in airbag CM internal circuit)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Connect the connector (1N) in the test harness N to the connector (AB21). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat belt pretensioner LH. <Ref. to SB-18, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the connector (AB31) from curtain airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 18 — Chassis ground:*** ***(3AG) No. 20 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

ET:DTC B1908 SHORT IN FRONT P/T LH (TO +B)

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit failure in power supply (shorted in rear harness power supply, shorted in front seat pretensioner LH power supply, shorted in airbag CM internal circuit power supply)

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Connect the connector (1N) in the test harness N to the connector (AB21). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat belt pretensioner LH. <Ref. to SB-18, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the connector (AB31) from curtain airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Connect the battery ground terminal and turn the ignition switch to ON. 10) Measure the voltage between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 18 (+) — Chassis ground (–):*** ***(3AG) No. 20 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

EU:DTC B1909 SHORT IN FRONT P/T LH

DIAGNOSIS START CONDITION:
Ignition voltage is 10 V to 16 V.
DTC DETECTING CONDITION:
Short circuit between front seat pretensioner LH circuit and other circuit

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:
Airbag system <Ref. to WI-100, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Connect the connector (1N) in the test harness N to the connector (AB21). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat belt pretensioner LH. <Ref. to SB-18, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRE-TENSIONER HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect the connector (AB5) from seat cushion airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the connector (AB31) from curtain airbag module LH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 8) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 9) Measure the resistance between connector (3AG) in the test harness AG and all connector terminals in the test harness AG. ***Connector & terminal*** ***(3AG) No. 18 — All terminals in test harness AG:*** ***(3AG) No. 20 — All terminals in test harness AG:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the faulty harness. (Replace the airbag main harness along with body harness. Or replace the airbag rear harness along with body harness.)
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC. (Current malfunction)	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-47, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction)	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

1. Basic Diagnostic Procedure

A: PROCEDURE

Step		Check	Yes	No
1	**CHECK WARNING LIGHT.** Check whether the airbag warning light in the combination meter is lit.	Does the airbag warning light illuminate?	Go to step **2**.	Perform the diagnosis according to phenomenon of the problem.
2	**READ DTC.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Read the DTC. <Ref. to OD(diag)-20, OPERATION, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to OD(diag)-17, INSPECTION, Subaru Select Monitor.> 5) Record all DTCs and freeze frame data.	Is DTC displayed?	Go to step **3**.	Go to "Airbag Warning Light Failure" <Ref. to AB(diag)-36, Airbag Warning Light Failure.>.
3	**PERFORM DIAGNOSIS.** 1) Determine the possible cause from "List of Diagnostic Trouble Code (DTC)" <Ref. to OD(diag)-28, List of Diagnostic Trouble Code (DTC).>. 2) Inspect the DTC using "List of Diagnostic Trouble Code (DTC)". 3) Repair the trouble cause. 4) Perform the Clear Memory Mode. <Ref. to OD(diag)-22, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to OD(diag)-21, Inspection Mode.> 6) Read any other DTCs displayed.	Is DTC displayed?	Perform the procedure 1) to 5) in step 3.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

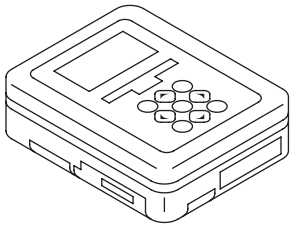
Customer's Name		Inspector's Name	
Date Vehicle Brought in	/ /	Registration No.	
Odometer reading	km miles	V.I.N.	
Date Problem Occurred	/ /	Registration Year	/ /
Weather	❑ Fine ❑ Cloudy ❑ Rainy ❑ Snowy ❑ Others:		
Temperature	°C (°F)		
Road Condition	❑ Flat road ❑ Uphill ❑ Downhill ❑ Gravel road ❑ Others:		
Vehicle Operation	❑ Starting ❑ Idling ❑ Driving ❑ Constant speed ❑ Accelerating ❑ Decelerating ❑ Turning ❑ Others:		
Details of Problem			
Airbag Warning Light Operation	❑ Normal (After turning the ignition switch to ON, illuminates for 6 seconds then goes off.) ❑ Remains ON ❑ Remains OFF		
Passengers airbag ON/OFF indicator operation	❑ Normal (After turning the ignition switch to ON, illuminates for 6 seconds then goes off for 2 seconds; Lights ON (adult) or OFF (children/unoccupied).) ❑ Both remain ON ❑ Both remain OFF		
DTC output	❑ OK code ❑ DTC: (Code:)		

3. General Description

A: CAUTION

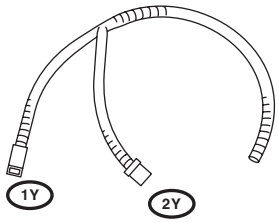
1) When replacing the occupant detection system, or removing or disassembling the passenger's seat, always perform «Rezero» of the occupant detection system after installing a seat in the vehicle. <Ref. to OD(diag)-24, Rezero.>
2) The occupant detection system (passenger seat only) control module and the occupant detection sensor are fixed to the seat cushion frame. Never remove the occupant detection control module or the occupant detection sensor from the seat cushion frame.
3) Do not replace the seat cushion pad by itself. Always replace the seat cushion pad and frame assembly as a set. The seat cushion pad and cushion frame are adjusted as a set at the time of manufacture. If cushion pads and cushion frames are combined from those of other vehicles or other sets, the occupant detection system may not operate properly.
4) If the seat cushion cover is removed, make sure to replace the hang wire on the seat cushion side with a new wire.
5) Never connect the battery in reverse polarity. Occupant detection system may be destroyed instantly.
6) Do not disconnect the battery terminals while the engine is running. A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as occupant detection control module.
7) Before disconnecting the connectors of each sensor and control module, be sure to turn the ignition switch to OFF and wait for 60 seconds or more. Occupant detection control module may be damaged.
8) Every occupant detection system-related part is a precision part. Do not drop them.

CAUTION:
• Do not use electrical test equipment on wiring harness and connector circuits of the airbag system.
• Be careful not to damage the airbag system wiring harness when servicing the occupant detection system.
• Refer to CAUTION in Airbag System when repairing the occupant detection system. <Ref. to AB-10, CAUTION, General Description.>

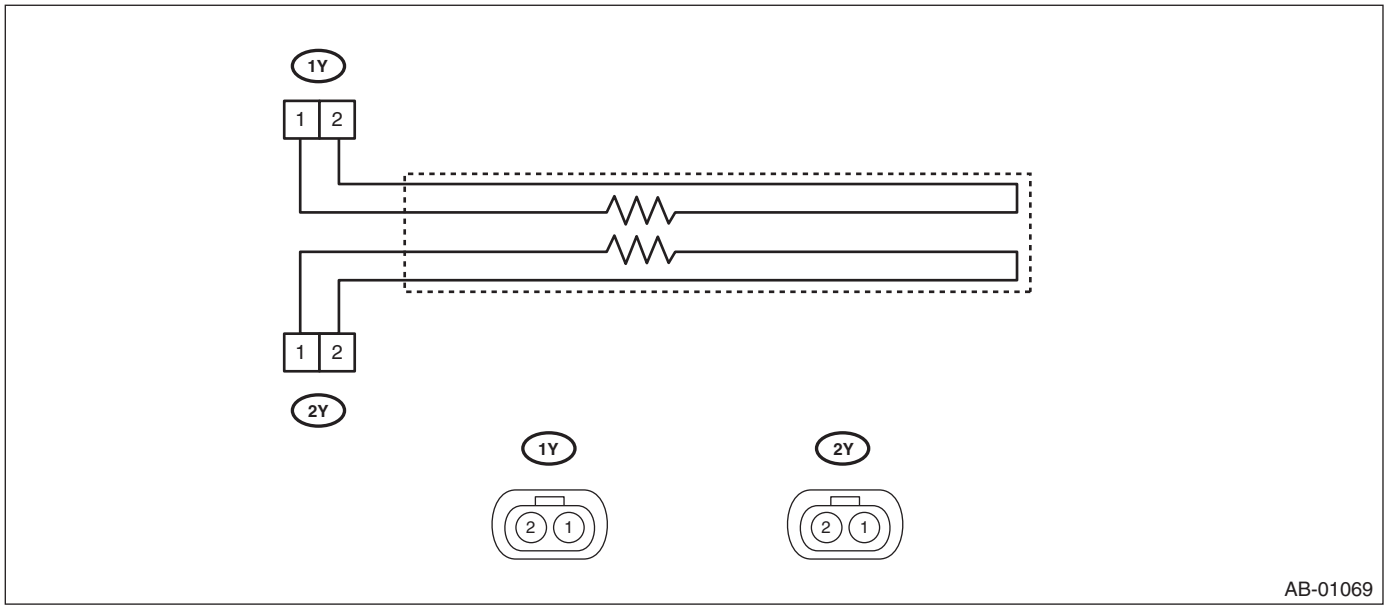


B: INSPECTION

Check the battery. <Ref. to SC(H4DO)-58, Battery.> <Ref. to SC(H6DO)-51, Battery.>



C: PREPARATION TOOL



CAUTION:
To measure the voltage and resistance of airbag system and occupant detection system components, be sure to use the specified test harness.

1. SPECIAL TOOL

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

4. Electrical Component Location

A: LOCATION

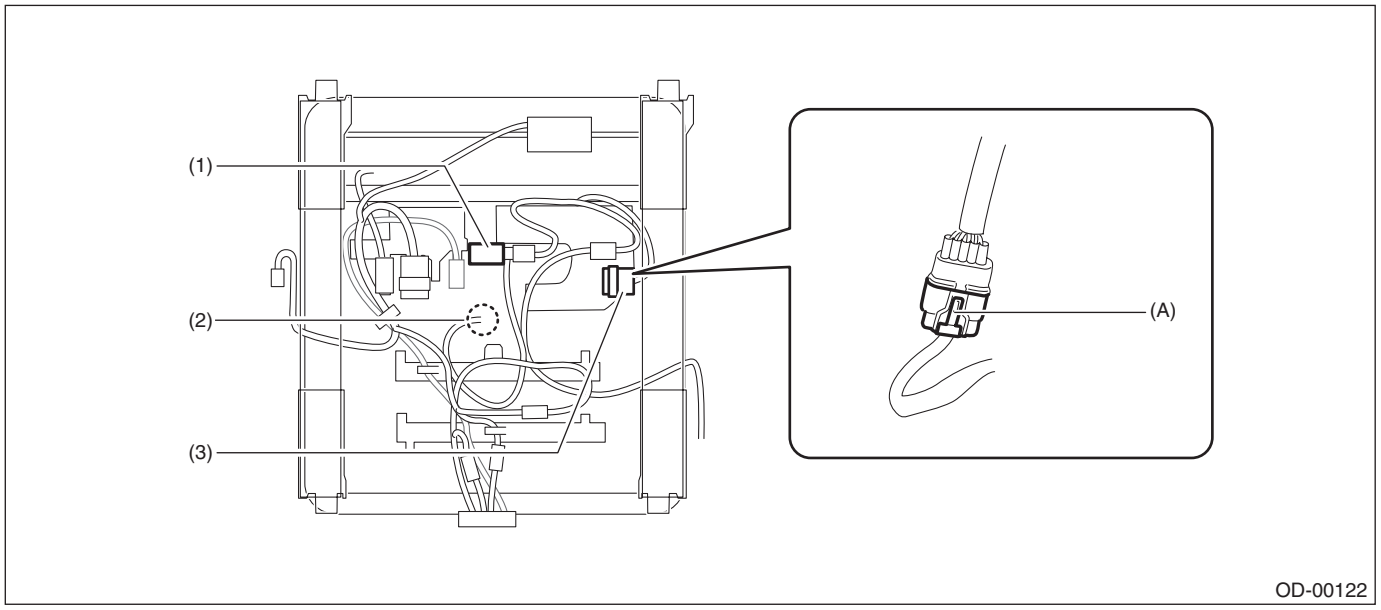
OD-00120

(1) Airbag ON/OFF indicator light

(2) Buckle switch (passenger's seat)

(3) Seat cushion & frame ASSY (occupant detection control module & occupant detection sensor)

(4) Belt tension sensor



5. Airbag Connector

A: PROCEDURE

1. OCCUPANT DETECTION SYSTEM (BETWEEN AIRBAG REAR HARNESS AND SEAT HARNESS)

1) How to disconnect:
Press the lock arm (A) and disconnect the connector.

CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(A) Lock arm

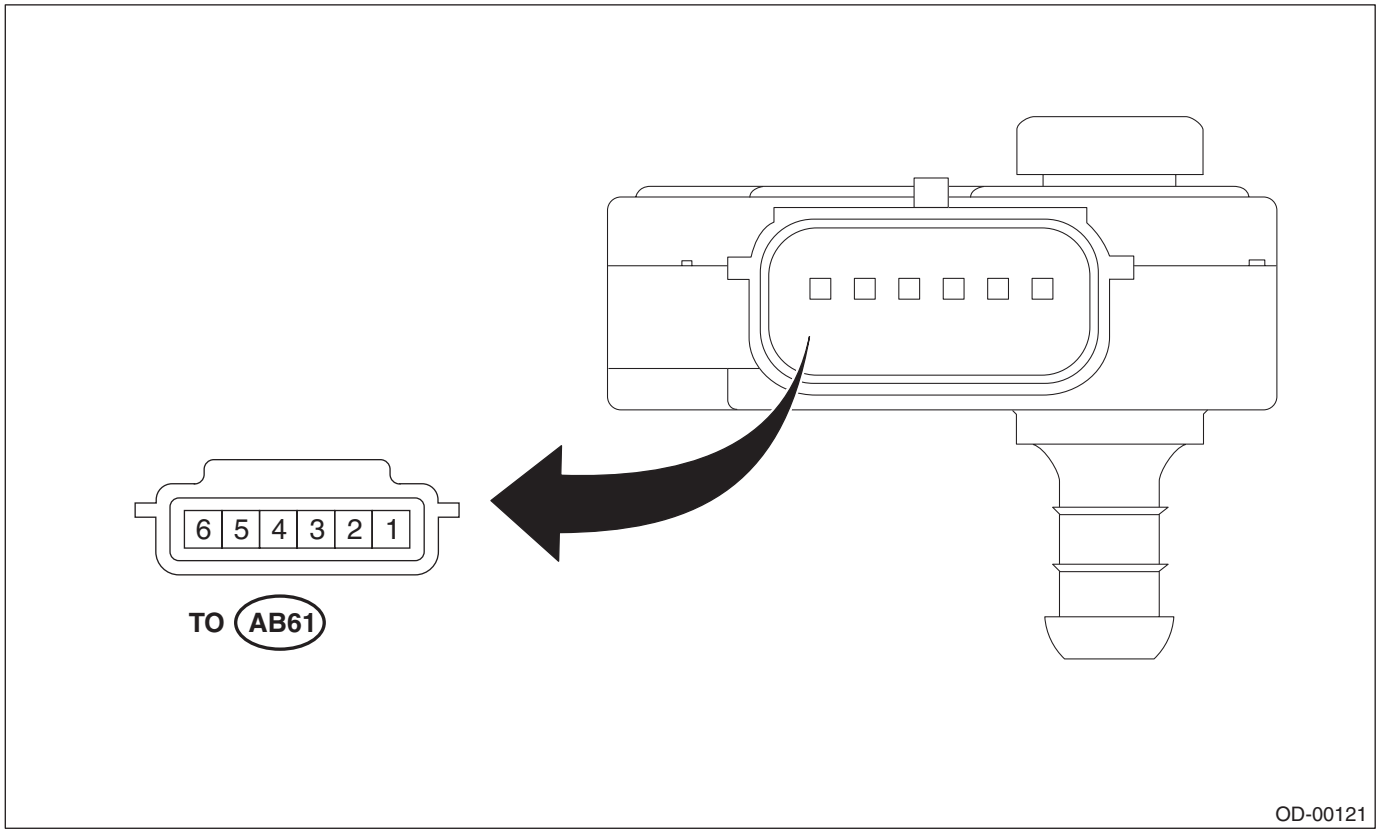
(1) Occupant detection control module
(2) Occupant detection sensor
(3) Occupant detection connector & harness

2) How to connect:
Holding the connector, push it in securely until a clicking sound is heard.

CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

2. AIRBAG CONTROL MODULE

Refer to the airbag system section. <Ref. to AB-18, AIRBAG CONTROL MODULE, PROCEDURE, Airbag Connector.>



3. BUCKLE SWITCH RH

Refer to the airbag system section. <Ref. to AB-22, SEAT CUSHION AIRBAG MODULE AND BUCKLE SWITCH RH, PROCEDURE, Airbag Connector.>

6. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

CAUTION:
Never remove the occupant detection control module, occupant detection sensor or seat frame because they are integrated into one unit.

Terminal No.	Description
1	Belt tension sensor output
2	Belt tension sensor power supply
3	GND
4	Seat belt buckle switch output
5	LIN communication line (airbag CM)
6	Ignition power supply

B: WIRING DIAGRAM

Refer to “Occupant Detection System” in the wiring diagram. <Ref. to WI-348, WIRING DIAGRAM, Occupant Detection System.>

7. Subaru Select Monitor

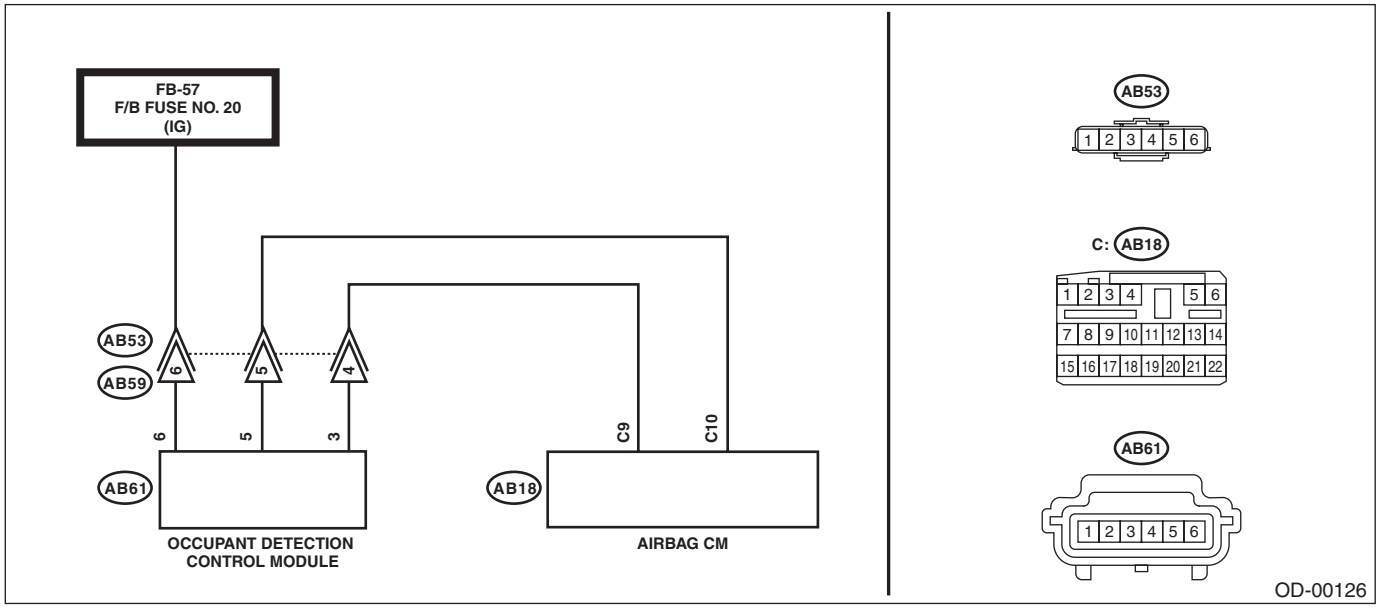
A: OPERATION

For operation procedures, refer to the “PC application help for Subaru Select Monitor”.

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING THE AIRBAG SYSTEM IS IMPOSSIBLE

DETECTING CONDITION:
Defective harness connector
TROUBLE SYMPTOM:
Communication is impossible between the airbag control module and the Subaru Select Monitor.



NOTE:
Refer to “Communication for Initializing Impossible” in AIRBAG SYSTEM (DIAGNOSTICS). <Ref. to AB(diag)-26, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>

2. COMMUNICATION FOR INITIALIZING ONLY THE OCCUPANT DETECTION SYSTEM IS IMPOSSIBLE

NOTE:
The occupant detection system communicates with the Subaru Select Monitor via the airbag control module.
DETECTING CONDITION:
Defective harness connector between airbag control module and occupant detection control module
TROUBLE SYMPTOM:
Communication is impossible between the airbag control module and the occupant detection control module.

CAUTION:
Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Occupant detection system <Ref. to WI-348, WIRING DIAGRAM, Occupant Detection System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the occupant detection control module and airbag control module.	Is there poor contact?	When the connector is not fully connected, reconnect the connector correctly. Replace the faulty harness if the connector is faulty. (Replace the airbag rear harness along with body harness. Or replace the occupant detection harness (seat harness).)	Go to step **2**.
2	**CHECK AIRBAG REAR HARNESS.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB59) and (AB53) under the passenger's seat. 3) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 4) Connect the connector (1AD) in test harness AD AV to the connectors (AB6, AB17, AB18). 5) Connect the connector (2AD) in test harness AD AV and the connector (1AG) in test harness AG. 6) Measure the resistance between connector (6AG) in the test harness AG and connector (AB53). **CAUTION:** **Connect terminal (1AW) in the test harness AW to connector (AB53) terminal, and apply the tester to terminal (2AW).** ***Connector & terminal*** ***(6AG) No. 10 — (AB53) No. 5:*** ***(6AG) No. 12 — (AB53) No. 4:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG REAR HARNESS.** Measure the resistance between connector (6AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(6AG) No. 10 — Chassis ground:*** ***(6AG) No. 12 — Chassis ground:*** ***(6AG) No. 10 — (6AG) No. 12:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.

	Step	Check	Yes	No
4	**CHECK OCCUPANT DETECTION HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between connector (AB53) and chassis ground. **CAUTION:** **Connect terminal (1AW) in the test harness AW to connector (AB53) terminal, and apply the tester to terminal (2AW).** ***Connector & terminal*** ***(AB53) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Replace the occupant detection harness (seat harness). If defective is not improved, replace the occupant detection system (seat cushion & frame assembly), and then the airbag control module in this order. <Ref. to SE-25, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>	Check the battery voltage and fuse. If there is no fault, replace the airbag rear harness together with body harness.

8. Read Diagnostic Trouble Code (DTC)

A: OPERATION

Read out DTCs stored in the airbag system and the occupant detection system.

1. AIRBAG SYSTEM

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Airbag System».
3) On «Airbag System failure diagnosis» display, select «Diagnostic Code(s) Display».

NOTE:
- For details concerning the work procedure, refer to the “PC application help for Subaru Select Monitor”.
- For details concerning DTC, refer to List of Diagnostic Trouble Code (DTC) in AIRBAG SYSTEM. <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>

2. OCCUPANT DETECTION SYSTEM

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Occupant Detection System».
3) On «Occupant Detection System» display, select «Diagnostic Code(s) Display».

NOTE:
- For details concerning the work procedure, refer to the “PC application help for Subaru Select Monitor”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to BC(diag)-33, List of Diagnostic Trouble Code (DTC).>

9. Inspection Mode

A: PROCEDURE

Recreate the circumstance by referring to the conditions described in the checklist.

10.Clear Memory Mode

A: OPERATION

After repairing the occupant detection system, clear the DTCs stored in the airbag control module and the occupant detection control module.

1. AIRBAG SYSTEM

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Airbag System».
3) On «Airbag System failure diagnosis» display, select «Clear Memory».

NOTE:
For details concerning the work procedure, refer to the “PC application help for Subaru Select Monitor”.

2. OCCUPANT DETECTION SYSTEM

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Occupant Detection System».
3) On «Occupant Detection System» display, select «Clear Memory».

NOTE:
For details concerning the work procedure, refer to the “PC application help for Subaru Select Monitor”.

11.Read Current Data

A: OPERATION

Check the operating condition of each sensor in the event of malfunction in the seat belt buckle switch, or when the seat belt buckle switch has been replaced.
1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Airbag System».
3) On «Airbag System» display, select «Current Data Display & Save».

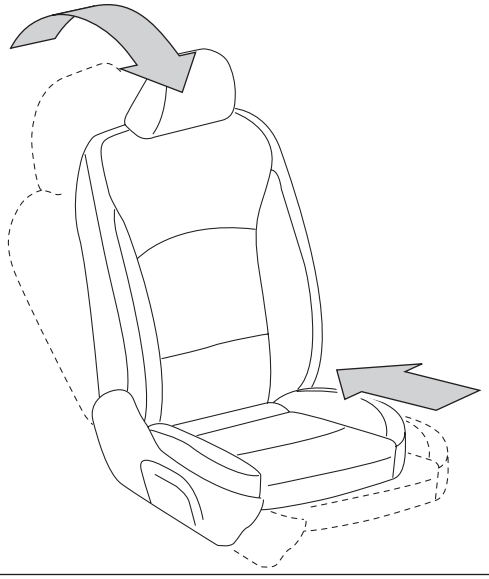
Item	Display	Note
Trip Count	—	<Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.>
Count	—	
Time Count	—	
Belt Buckle Switch LH	Unbelted/Belted/Other	“Belted” when the left side seat belt is fastened “Unbelted” when the left side seat belt is not fastened “Other” in other cases
Belt Buckle Switch RH	Unbelted/Belted/Other	“Belted” when the right side seat belt is fastened “Unbelted” when the right side seat belt is not fastened “Other” in other cases
Passenger Occupant Status	Occupied/Adult/Child/ Empty or CRS	“Occupied” when the occupant is present “Adult” “Child” “Empty or CRS” when the seat is unoccupied or when child restraint seat is installed **CAUTION:** **When checking the operating status, be careful of the followings.** **• When the seat is unoccupied: Do not place anything on the seat.** **• Child restraint seat: Install the seat according to its instruction manual.** **• When the seat is occupied: Someone who weighs at least approx. 70 kg (155 lbs) must be seated during the check.**
Passenger Airbag Status	ON/OFF	“ON” when the passenger occupant status is “Occupied” “OFF” when the status is “Empty or CRS”
Data record No.	Not assign/1	Displays “1” when any EDR data is recorded.
Data record No.	Not assign/1	Displays “1” when any EDR data is recorded.

NOTE:
For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

12.Rezero

A: OPERATION

NOTE:
When replacing the occupant detection system, or removing or disassembling the passenger's seat, always perform «Rezero» after installing a seat in the vehicle.



CAUTION:
When the trouble occurs in the system during «Rezero», «DTC B1762 OCCUPANT DETECTION MODULE CALIBRATION NOT INITIALIZED» of the occupant detection system is detected, and the airbag warning light illuminates. In this case, turn the ignition switch to OFF, and then perform «Rezero» again. Or, fix the fault, and then perform «Rezero».

1) Park empty vehicle on a level surface.
2) Check that all harness and connectors are connected.
3) Check the following items to adjust the condition of the vehicle.
- Adjust the seat backrest to be fully upright. (For models with power seats, press the power seat button until the backrest comes to a stop.)
- Adjust the seat slide position all the way back. (For models with power seats, press the power seat button until the seat slide does not move any further.)
- Do not place anything on the top of the seat cushion.
- Sit on the seat cushion to smooth the seat surface.
- Check that the passenger's seat belt is not inserted into the buckle, not tense or not stuck.
- Check that ambient temperature is in a range from 0 to 40°C (32 to 104°F).

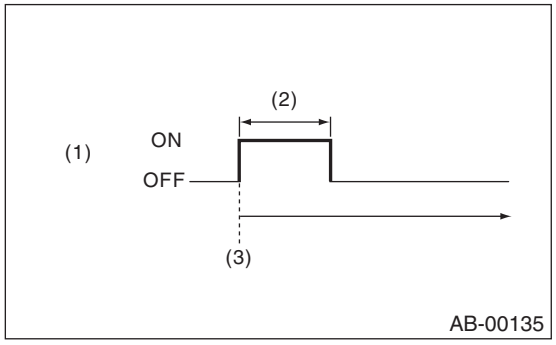
4) Turn the ignition switch to OFF, then turn it to ON again.

NOTE:
- This operation is performed to readjust the standard of occupant detection sensor.
- Do not touch the seat until the Rezero is completed. If you have touched the seat even if only once, perform operations from the step 3) again.

5) On «Main Menu» display, select «Each System Check».
6) On «System Selection Menu» display, select «Occupant Detection System».
7) On «Occupant Detection System» display, select «Work Support».
8) On «Work Support» display, select «Rezero».
9) When «See service manual. And check vehicle condition for successfully completing Rezero.» is displayed, check the condition of the vehicle.
10) The message, «Rezero Adjust the passenger seat to the condition shown in service manual.», is displayed on the screen. Slide the passenger's seat all the way to the back, check that the backrest is adjusted to the most upright position, and select «YES».

OD-00130

11) When «Rezero Unbelt the passenger seatbelt. YES NO» is displayed, make sure the passenger's seat belt is unfastened from the buckle, and select «YES».
12) When «Rezero Confirm seat temperature between 0 and 40°C (32and 104°F) YES NO» is displayed, check that ambient temperature of the seat is in a range from 0 to 40°C (32 to 104°F), and select «YES».
13) When «Rezero Empty the passenger seat. Turn Ignition OFF, and within 10 seconds, turn Ignition ON again. YES NO» is displayed, turn the ignition switch to OFF and then ON again while the passenger's seat is empty, make sure that airbag OFF indicator illuminates and airbag ON indicator does not illuminate, and then select «YES».

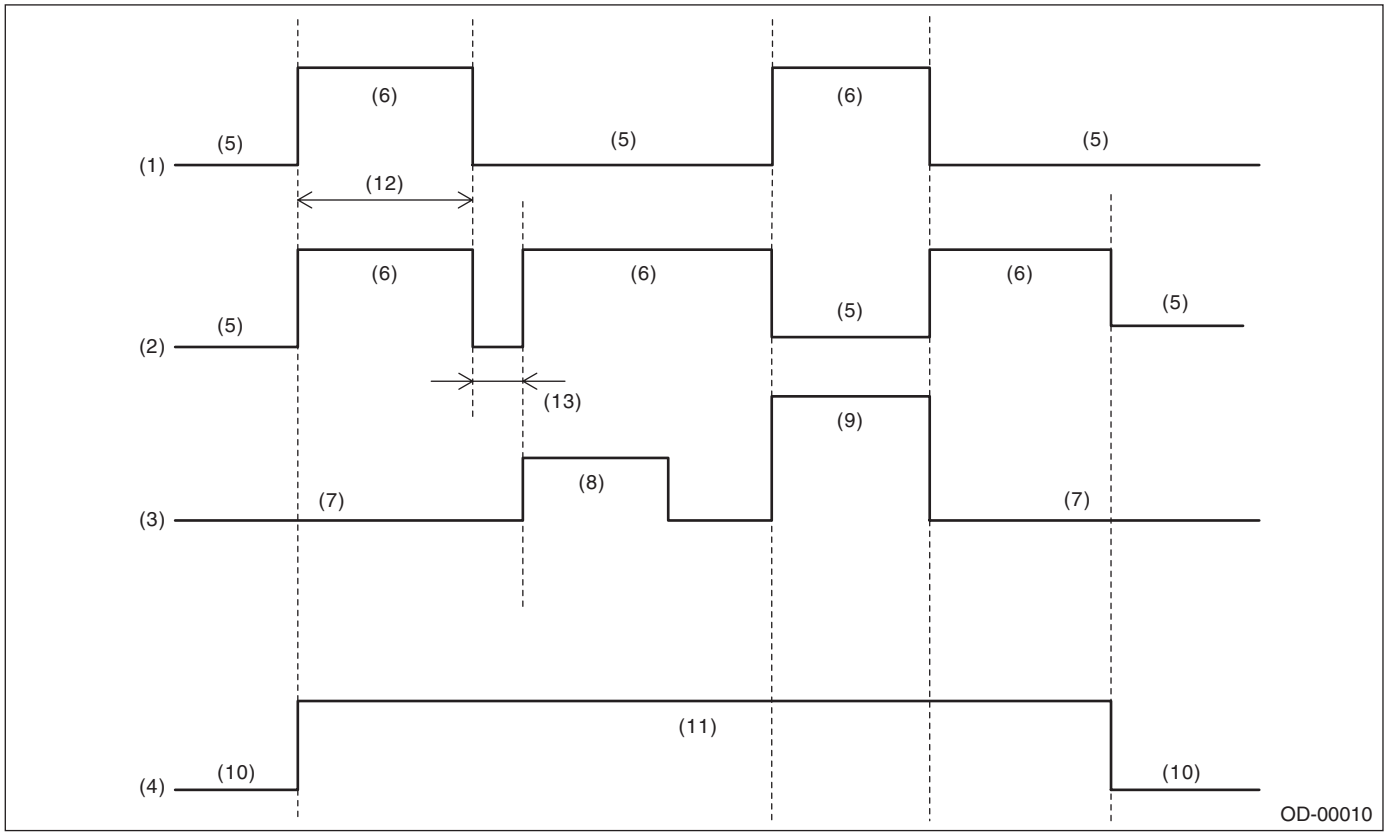


NOTE:
• After selecting «YES», «In process... Please wait for a while without touching vehicle.» is displayed. Do not touch or rock the vehicle while the message is displayed.
• During the Rezero process, if «Rezero is unsuccessful See service manual Press "YES" to END» is displayed, go to step 15).
14) When the Rezero is ended normally, «Rezero is successfully completed Press "YES" to END» is displayed. And then turn the ignition switch to OFF to finish the diagnosis.
15) During the Rezero process, if «Rezero is unsuccessful See service manual. Press "YES" to END» is displayed, turn the ignition switch to OFF and ON again, and then read the DTC of the airbag system. <Ref. to OD(diag)-20, Read Diagnostic Trouble Code (DTC).>
When DTC is input, fix the fault and then perform the Rezero. When DTC is not input, check the seat and vehicle status and then perform the Rezero again. <Ref. to OD(diag)-24, Rezero.>

NOTE:
When the Rezero is unsuccessful, there could be occupant detection system failure or improper seat and vehicle status. When the airbag warning light illuminates, read the DTC of the airbag system, and perform the diagnosis while referring to List of Diagnostic Trouble Code (DTC). <Ref. to OD(diag)-20, Read Diagnostic Trouble Code (DTC).>

13.Airbag Warning Light Illumination Pattern

A: INSPECTION



Turn the ignition switch to ON, and confirm that the airbag warning light remains on for approx. 6 seconds then turns off afterwards.

(1) Airbag warning light
(2) Approx. 6 seconds
(3) Ignition switch ON

14.Passenger's Airbag ON/OFF Indicator Light Illumination Pattern

A: INSPECTION

(1)	Passenger's airbag ON indicator light	(6)	Light ON	(10)	OFF
(2)	Passenger's airbag OFF indicator light	(7)	Empty	(11)	ON
(3)	Occupant seating	(8)	Child	(12)	Approx. 6 seconds
(4)	Ignition switch	(9)	Adult	(13)	Approx. 2 seconds
(5)	Light OFF				

15.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Note

16.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B1762 OCCUPANT DETECTION MODULE CALIBRATION NOT INITIALIZED

DTC DETECTING CONDITION:

- «Rezero» of the occupant detection system is not completed normally.
- Occupant detection control module is faulty.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of the occupant detection system. <Ref. to OD(diag)-20, Read Diagnostic Trouble Code (DTC).>	Is DTC other than DTC B1762 displayed?	Perform the diagnosis according to DTC. <Ref. to OD(diag)-28, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**PERFORM RE-ZEROING.** Perform «Rezero». <Ref. to OD(diag)-24, Rezero.>	Did «Rezero» complete properly?	Go to step **3**.	Replace the occupant detection system (seat cushion & frame assembly). <Ref. to SE-25, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>
3	**CHECK DTC.** 1) Perform the Clear Memory Mode. <Ref. to OD(diag)-22, Clear Memory Mode.> 2) Turn the ignition switch to OFF, and wait for 60 seconds or more. 3) Read the DTC of the occupant detection system. <Ref. to OD(diag)-20, Read Diagnostic Trouble Code (DTC).>	Is DTC B1762 displayed?	Replace the occupant detection system (seat cushion & frame assembly). <Ref. to SE-25, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>	When DTC other than B1762 is displayed, perform the diagnosis according to the DTC. <Ref. to OD(diag)-28, List of Diagnostic Trouble Code (DTC).> When DTC is not displayed, end the diagnosis.

B: DTC B1763 OCCUPANT DETECTION MODULE CALIBRATION

DTC DETECTING CONDITION:

- Malfunction is detected on vehicle delivery or at memory writing for «Rezero».
- Occupant detection control module is faulty.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of the occupant detection system. <Ref. to OD(diag)-20, Read Diagnostic Trouble Code (DTC).>	Is DTC other than DTC B1762 or B1763 displayed?	Perform the diagnosis according to DTC. <Ref. to OD(diag)-28, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**PERFORM RE-ZEROING.** Perform «Rezero». <Ref. to OD(diag)-24, Rezero.>	Did «Rezero» complete properly?	Go to step **3**.	Replace the occupant detection system (seat cushion & frame assembly). <Ref. to SE-25, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>
3	**CHECK DTC.** 1) Perform the Clear Memory Mode. <Ref. to OD(diag)-22, Clear Memory Mode.> 2) Turn the ignition switch to OFF, and wait for 60 seconds or more. 3) Read the DTC of the occupant detection system. <Ref. to OD(diag)-20, Read Diagnostic Trouble Code (DTC).>	Is DTC B1763 displayed?	Replace the occupant detection system (seat cushion & frame assembly). <Ref. to SE-25, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>	When DTC other than B1762 is displayed, perform the diagnosis according to the DTC. <Ref. to OD(diag)-28, List of Diagnostic Trouble Code (DTC).> When DTC is not displayed, end the diagnosis.

C: DTC B1764 OCCUPANT DETECTION MODULE CALIBRATION UNCOMPLETED

DTC DETECTING CONDITION:

- Memory writing is incomplete on the front seat delivery.
- Calibration of occupant detection control module is incomplete.
- Occupant detection control module is faulty.

When this DTC is displayed, the occupant detection control module is faulty. Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-25, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

D: DTC B1765 OCCUPANT DETECTION MODULE ROM

DTC DETECTING CONDITION:

Occupant detection control module is faulty.
When this DTC is displayed, the occupant detection control module is faulty.
Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-25, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

E: DTC B1766 OCCUPANT DETECTION MODULE STACK OVERFLOW

DTC DETECTING CONDITION:

Occupant detection control module is faulty.
When this DTC is displayed, the occupant detection control module is faulty.
Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-25, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

F: DTC B1767 OCCUPANT DETECTION MODULE EEPROM INITIALIZING

DTC DETECTING CONDITION:

Occupant detection control module is faulty.
When this DTC is displayed, the occupant detection control module is faulty.
Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-25, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

G: DTC B1768 OCCUPANT DETECTION MODULE EEPROM

DTC DETECTING CONDITION:

Occupant detection control module is faulty.
When this DTC is displayed, the occupant detection control module is faulty.
Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-25, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

H: DTC B1769 OCCUPANT DETECTION SENSOR TEMPERATURE CIRCUIT OPEN

DTC DETECTING CONDITION:

Occupant detection control module is faulty.
When this DTC is displayed, the occupant detection control module is faulty.
Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-25, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

I: DTC B176A OCCUPANT DETECTION SENSOR PRESSURE CIRCUIT OPEN

DTC DETECTING CONDITION:

Occupant detection control module is faulty.
When this DTC is displayed, the occupant detection control module is faulty.
Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-25, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

J: DTC B176B OCCUPANT DETECTION SENSOR PRESSURE TOO LOW

DTC DETECTING CONDITION:
Occupant detection control module is faulty.
When this DTC is displayed, the occupant detection control module is faulty.
Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-25, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

K: DTC B176C OCCUPANT DETECTION SENSOR PRESSURE TOO HIGH

DTC DETECTING CONDITION:
Occupant detection control module is faulty.
When this DTC is displayed, the occupant detection control module is faulty.
Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-25, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

L: DTC B176D OCCUPANT DETECTION SENSOR INPUT VOLTAGE LOW AT IG-SW ON

DTC DETECTING CONDITION:
Occupant detection control module is faulty.
When this DTC is displayed, the occupant detection control module is faulty.
Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-25, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

M: DTC B176E OCCUPANT DETECTION SENSOR GEL RUN OUT

DTC DETECTING CONDITION:
Occupant detection control module is faulty.
When this DTC is displayed, the occupant detection control module is faulty.
Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-25, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

N: DTC B176F OCCUPANT DETECTION SENSOR INPUT VOLTAGE LOW

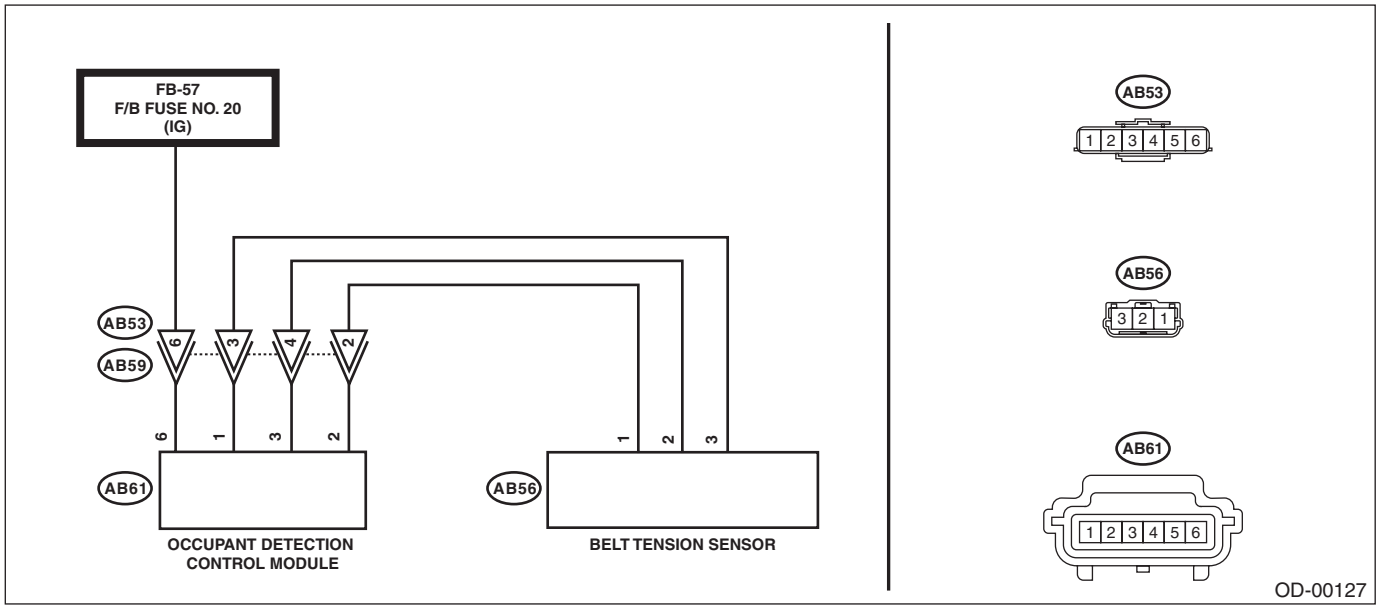
DTC DETECTING CONDITION:
Occupant detection control module is faulty.
When this DTC is displayed, the occupant detection control module is faulty.
Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-25, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

O: DTC B1770 OCCUPANT DETECTION SENSOR TEMPERATURE TOO HIGH

DTC DETECTING CONDITION:
Occupant detection control module is faulty.
When this DTC is displayed, the occupant detection control module is faulty.
Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-25, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

P: DTC B1772 OCCUPANT DETECTION SENSOR TEMPERATURE TOO LOW

DTC DETECTING CONDITION:
Occupant detection control module is faulty.
When this DTC is displayed, the occupant detection control module is faulty.
Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-25, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>



Q: DTC B1773 BELT TENSION SENSOR CIRCUIT OPEN

DTC DETECTING CONDITION:

- Passenger's seat belt tension sensor is faulty.
- Airbag main harness circuit is open or shorted.
- Occupant detection control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Occupant detection system <Ref. to WI-348, WIRING DIAGRAM, Occupant Detection System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the occupant detection control module and belt tension sensor.	Is there poor contact?	When the connector is not fully connected, reconnect the connector correctly. Replace the faulty harness if the connector is faulty. (Replace the airbag rear harness along with body harness, or replace the occupant detection harness (seat harness).)	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK BELT TENSION SENSOR.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the belt tension sensor connector (AB56) from the airbag harness. 3) Connect the connector (1AX) in the test harness AX to the connector (AB56). 4) Connect the connector (2AX) in the test harness AX and the test harness AC. 5) Connect the ground cable to battery.	Does the airbag warning light illuminate for approximately 6 seconds and go off?	Replace the seat belt outer. <Ref. to SB-20, SEAT BELT INNER - FRONT, REMOVAL, Front Seat Belt.>	Go to step **3**.
3	**CHECK AIRBAG HARNESS.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the test harness AC from the connector (2AX) in test harness AX. 3) Connect the connector (2AX) in test harness AX and the connector (1AD) in test harness AD. 4) Disconnect the airbag harness connector (AB53), and connect the connector (1AW) of test harness AW. 5) Measure the resistance between connector (2AD) in test harness AD and connector (AB53). **CAUTION:** **Connect terminal (1AW) in the test harness AW to connector (AB53) terminal, and apply the tester to terminal (2AW).** ***Connector & terminal*** ***(AB53) No. 2 — (2AD) No. 3:*** ***(AB53) No. 4 — (2AD) No. 2:*** ***(AB53) No. 3 — (2AD) No. 1:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag harness along with chassis harness.
4	**CHECK AIRBAG HARNESS.** Measure the resistance between connector (AB53) terminals and between connector (AB53) and chassis ground. **CAUTION:** **Connect terminal (1AW) in the test harness AW to connector (AB53) terminal, and apply the tester to terminal (2AW).** ***Connector & terminal*** ***(AB53) No. 2 — (2AD) No. 2:*** ***(AB53) No. 2 — (2AD) No. 1:*** ***(AB53) No. 3 — (2AD) No. 3:*** ***(AB53) No. 3 — (2AD) No. 2:*** ***(AB53) No. 4 — (2AD) No. 3:*** ***(AB53) No. 4 — (2AD) No. 1:*** ***(AB53) No. 2 — Chassis ground:*** ***(AB53) No. 3 — Chassis ground:*** ***(AB53) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Replace the airbag harness along with chassis harness.

	Step	Check	Yes	No
5	**CHECK AIRBAG HARNESS.** 1) Connect the battery ground terminal and turn the ignition switch to ON. 2) Measure the voltage between connector (AB53) and chassis ground. **CAUTION:** **Connect terminal (1AW) in the test harness AW to connector (AB53) terminal, and apply the tester to terminal (2AW).** ***Connector & terminal*** ***(2AD) No. 1 (+) — Chassis ground (–):*** ***(2AD) No. 3 (+) — Chassis ground (–):***	Is the voltage 1 V or less?	Check the seat harness, and if any fault is found, replace the seat harness. If the fault is not fixed, replace the occupant detection system. <Ref. to SE-25, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>	Replace the airbag harness along with chassis harness.

R: DTC B1774 BELT TENSION SENSOR OUTPUT TOO HIGH

DTC DETECTING CONDITION:

- Passenger's seat belt tension sensor is faulty.
- Airbag main harness circuit is open or shorted.
- Occupant detection control module is faulty.

For the diagnostic procedure, refer to DTC B1773. <Ref. to OD(diag)-34, DTC B1773 BELT TENSION SENSOR CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

S: DTC B1775 BELT TENSION SENSOR OUTPUT TOO LOW

DTC DETECTING CONDITION:

- Passenger's seat belt tension sensor is faulty.
- Airbag main harness circuit is open or shorted.
- Occupant detection control module is faulty.

For the diagnostic procedure, refer to DTC B1773. <Ref. to OD(diag)-34, DTC B1773 BELT TENSION SENSOR CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

T: DTC B1776 BELT TENSION SENSOR INPUT VOLTAGE HIGH

DTC DETECTING CONDITION:

- Passenger's seat belt tension sensor is faulty.
- Airbag main harness circuit is open or shorted.
- Occupant detection control module is faulty.

For the diagnostic procedure, refer to DTC B1773. <Ref. to OD(diag)-34, DTC B1773 BELT TENSION SENSOR CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

U: DTC B1777 BELT TENSION SENSOR INPUT VOLTAGE LOW

DTC DETECTING CONDITION:

- Passenger's seat belt tension sensor is faulty.
- Airbag main harness circuit is open or shorted.
- Occupant detection control module is faulty.

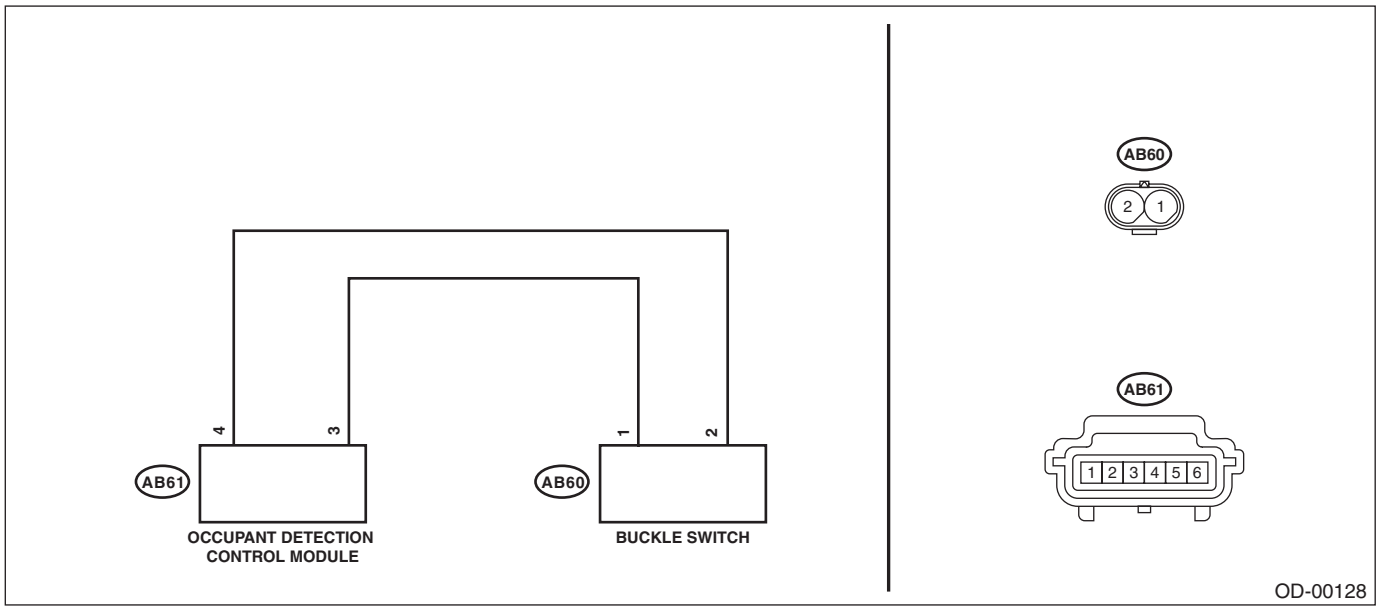
For the diagnostic procedure, refer to DTC B1773. <Ref. to OD(diag)-34, DTC B1773 BELT TENSION SENSOR CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

V: DTC B1778 BELT TENSION SENSOR CONTROL MODULE

DTC DETECTING CONDITION:

- Passenger's seat belt tension sensor is faulty.
- Airbag main harness circuit is open or shorted.
- Occupant detection control module is faulty.

For the diagnostic procedure, refer to DTC B1773. <Ref. to OD(diag)-34, DTC B1773 BELT TENSION SENSOR CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>



W: DTC B177E BUCKLE SWITCH RANGE

DTC DETECTING CONDITION:

- Passenger's buckle switch circuit is open, shorted or shorted to ground.
- Seat harness circuit is open, shorted or shorted to ground.
- Occupant detection control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Occupant detection system <Ref. to WI-348, WIRING DIAGRAM, Occupant Detection System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of the occupant detection system.	Is DTC other than DTC B177E, B1779, B177A or B177B displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the occupant detection control module and buckle switch.	Is there poor contact?	When the connector is not fully connected, reconnect the connector correctly. Replace the occupant detection harness (seat harness) if the connector is faulty.	Go to step **3**.

Step		Check	Yes	No
3	**CHECK BUCKLE SWITCH.** 1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait for 60 seconds. 2) Disconnect the buckle switch connector (AB60). 3) Connect the test harness AE and test harness connector Y to buckle switch connector (AB60). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the buckle switch. <Ref. to SB-18, SEAT BELT OUTER - FRONT, REMOVAL, Front Seat Belt.>	Check the occupant detection harness, and if any fault is found, replace the occupant detection harness. If the fault is not fixed, replace the occupant detection system. <Ref. to SE-25, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

X: DTC B1779 BUCKLE SWITCH CIRCUIT OPEN

DTC DETECTING CONDITION:

- Passenger's buckle switch circuit is open, shorted or shorted to ground.
- Seat harness circuit is open, shorted or shorted to ground.
- Occupant detection control module is faulty.

For the diagnostic procedure, refer to DTC B177E. <Ref. to OD(diag)-37, DTC B177E BUCKLE SWITCH RANGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Y: DTC B177A BUCKLE SWITCH CIRCUIT LOW

DTC DETECTING CONDITION:

- Passenger's buckle switch circuit is open, shorted or shorted to ground.
- Seat harness circuit is open, shorted or shorted to ground.
- Occupant detection control module is faulty.

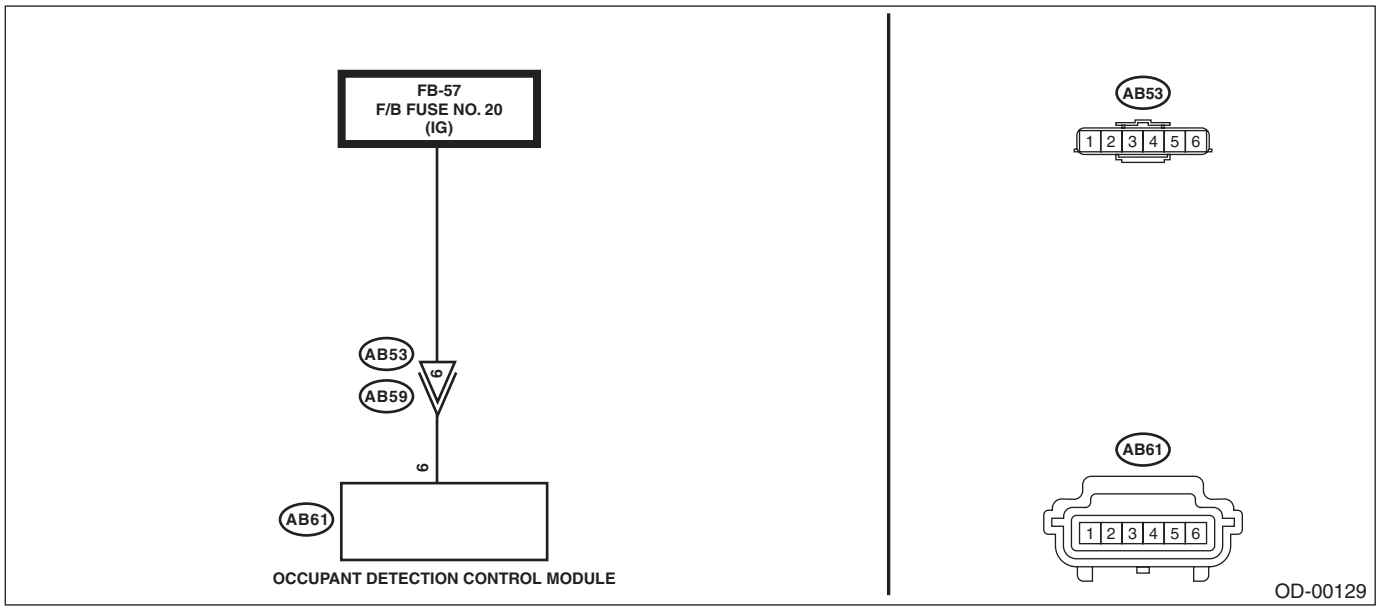
For the diagnostic procedure, refer to DTC B177E. <Ref. to OD(diag)-37, DTC B177E BUCKLE SWITCH RANGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Z: DTC B177B BUCKLE SWITCH CIRCUIT VOLTAGE HIGH

DTC DETECTING CONDITION:

- Passenger's buckle switch circuit is open, shorted or shorted to ground.
- Seat harness circuit is open, shorted or shorted to ground.
- Occupant detection control module is faulty.

For the diagnostic procedure, refer to DTC B177E. <Ref. to OD(diag)-37, DTC B177E BUCKLE SWITCH RANGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>



AA:DTC B177C IGNITION POWER SUPPLY HIGH VOLTAGE

DTC DETECTING CONDITION:

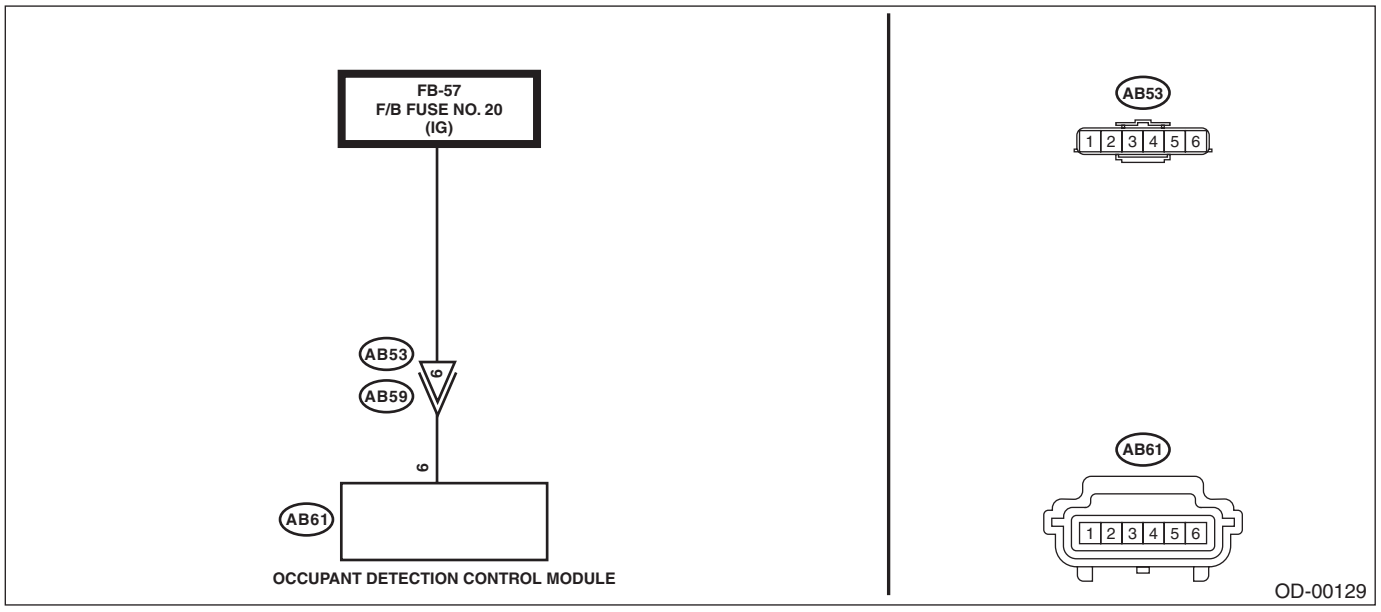
- Power supply voltage of occupant detection control module is faulty.
- Occupant detection control module is faulty.
- Seat harness circuit is open, shorted or shorted to ground.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Occupant detection system <Ref. to WI-348, WIRING DIAGRAM, Occupant Detection System.>

	Step	Check	Yes	No
1	**CHECK BATTERY VOLTAGE.** Measure the battery voltage.	Is the battery voltage 16 V or more?	Check the battery. <Ref. to SC(H4DO)-60, INSPECTION, Battery.> <Ref. to SC(H6DO)-53, INSPECTION, Battery.>	Go to step **2**.
2	**CHECK FUSE.** Check the fuse. (F/B fuse No. 20)	Is the fuse OK?	Go to step **3**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in the harness between the battery and occupant detection CM.

	Step	Check	Yes	No
3	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the occupant detection control module and airbag control module.	Is there poor contact?	When the connector is not fully connected, reconnect the connector correctly. Replace the faulty harness if the connector is faulty. (Replace the airbag rear harness along with body harness, or replace the occupant detection harness (seat harness).)	Go to step **4**.
4	**CHECK AIRBAG REAR HARNESS.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB59) and (AB53) under the passenger's seat. 3) Turn the ignition switch to ON. 4) Measure the voltage between connector (AB53) and chassis ground. **CAUTION:** **Connect terminal (1AW) in the test harness AW to connector (AB53) terminal, and apply the tester to terminal (2AW).** ***Connector & terminal*** ***(AB53) No. 6 (+) — Chassis ground (–):***	Is the voltage 16 V or less?	Replace the occupant detection harness (seat harness). If defective is not improved, replace the occupant detection system (seat cushion & frame assembly) <Ref. to SE-25, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>, and then the airbag control module <Ref. to AB-47, REMOVAL, Airbag Control Module.> in this order.	Replace the airbag rear harness along with body harness.



AB:DTC B177D IGNITION POWER SUPPLY LOW VOLTAGE

DTC DETECTING CONDITION:

- Power supply voltage of occupant detection control module is faulty.
- Occupant detection control module is faulty.
- Seat harness circuit is open, shorted or shorted to ground.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to "WIRING SYSTEM".
Occupant detection system <Ref. to WI-348, WIRING DIAGRAM, Occupant Detection System.>

	Step	Check	Yes	No
1	**CHECK BATTERY VOLTAGE.** Measure the battery voltage.	Is the battery voltage 8 V or less?	Check the battery. <Ref. to SC(H4DO)-60, INSPECTION, Battery.> <Ref. to SC(H6DO)-53, INSPECTION, Battery.>	Go to step **2**.
2	**CHECK FUSE.** Check the fuse. (F/B fuse No. 20)	Is the fuse OK?	Go to step **3**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in the harness between the battery and occupant detection CM.

	Step	Check	Yes	No
3	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the occupant detection control module and airbag control module.	Is there poor contact?	When the connector is not fully connected, reconnect the connector correctly. Replace the faulty harness if the connector is faulty. (Replace the airbag rear harness along with body harness, or replace the occupant detection harness (seat harness).)	Go to step **4**.
4	**CHECK AIRBAG REAR HARNESS.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB59) and (AB53) under the passenger's seat. 3) Turn the ignition switch to ON. 4) Measure the voltage between connector (AB53) and chassis ground. **CAUTION:** **Connect terminal (1AW) in the test harness AW to connector (AB53) terminal, and apply the tester to terminal (2AW).** ***Connector & terminal*** ***(AB53) No. 6 (+) — Chassis ground (–):***	Is the voltage 8 V or more?	Replace the occupant detection harness (seat harness). If defective is not improved, replace the occupant detection system (seat cushion & frame assembly) <Ref. to SE-25, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>, and then the airbag control module <Ref. to AB-47, REMOVAL, Airbag Control Module.> in this order.	Replace the airbag rear harness along with body harness.

AC:DTC B1795 ECU INTERNAL CIRCUIT FAULT

DTC DETECTING CONDITION:

When the following DTCs are detected:
B1763, B1764, B1765, B1766, B1767, B1768, B1769, B176A, B176B, B176C, B176D, B176E, B176F, B1770, B1772, B1776, B1777, B1778

NOTE:
DTC B1795 is detected at the same time when any of the DTCs above is detected. When the detected DTC is eliminated, DTC B1795 is cleared at the same time.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of the occupant detection system.	Is any of B1763, B1764, B1765, B1766, B1767, B1768, B1769, B176A, B176B, B176C, B176D, B176E, B176F, B1770, B1772, B1776, B1777, or B1778 displayed?	Perform the diagnosis according to DTC. <Ref. to OD(diag)-28, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK DTC.** 1) Perform the Clear Memory Mode. <Ref. to OD(diag)-22, Clear Memory Mode.> 2) Turn the ignition switch to OFF, and wait for 60 seconds or more. 3) Read the DTC of the occupant detection system. <Ref. to OD(diag)-20, Read Diagnostic Trouble Code (DTC).>	Is DTC B1795 displayed?	Replace the occupant detection system (seat cushion & frame assembly). <Ref. to SE-25, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>	When DTC other than B1795 is displayed, perform the diagnosis according to the DTC. <Ref. to OD(diag)-28, List of Diagnostic Trouble Code (DTC).> When DTC is not displayed, end the diagnosis.

SEAT BELT SYSTEM

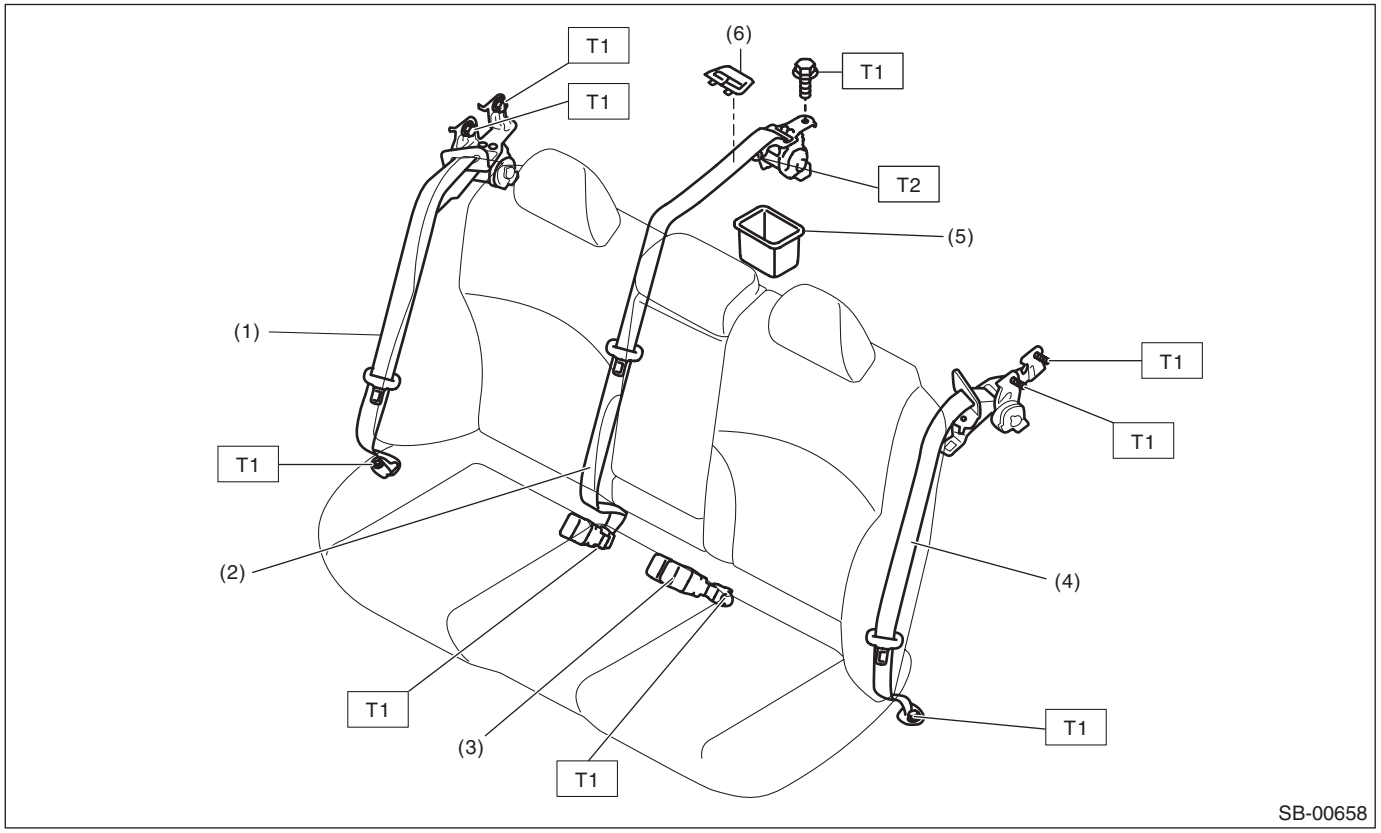
Page

1. General Description 2
2. Pretensioner Connector 13
3. Inspection Locations after a Collision 14
4. Seat Belt Warning System 15
5. Front Seat Belt 18
6. Rear Seat Belt 24
7. Disposal of Pretensioner 36

1. General Description

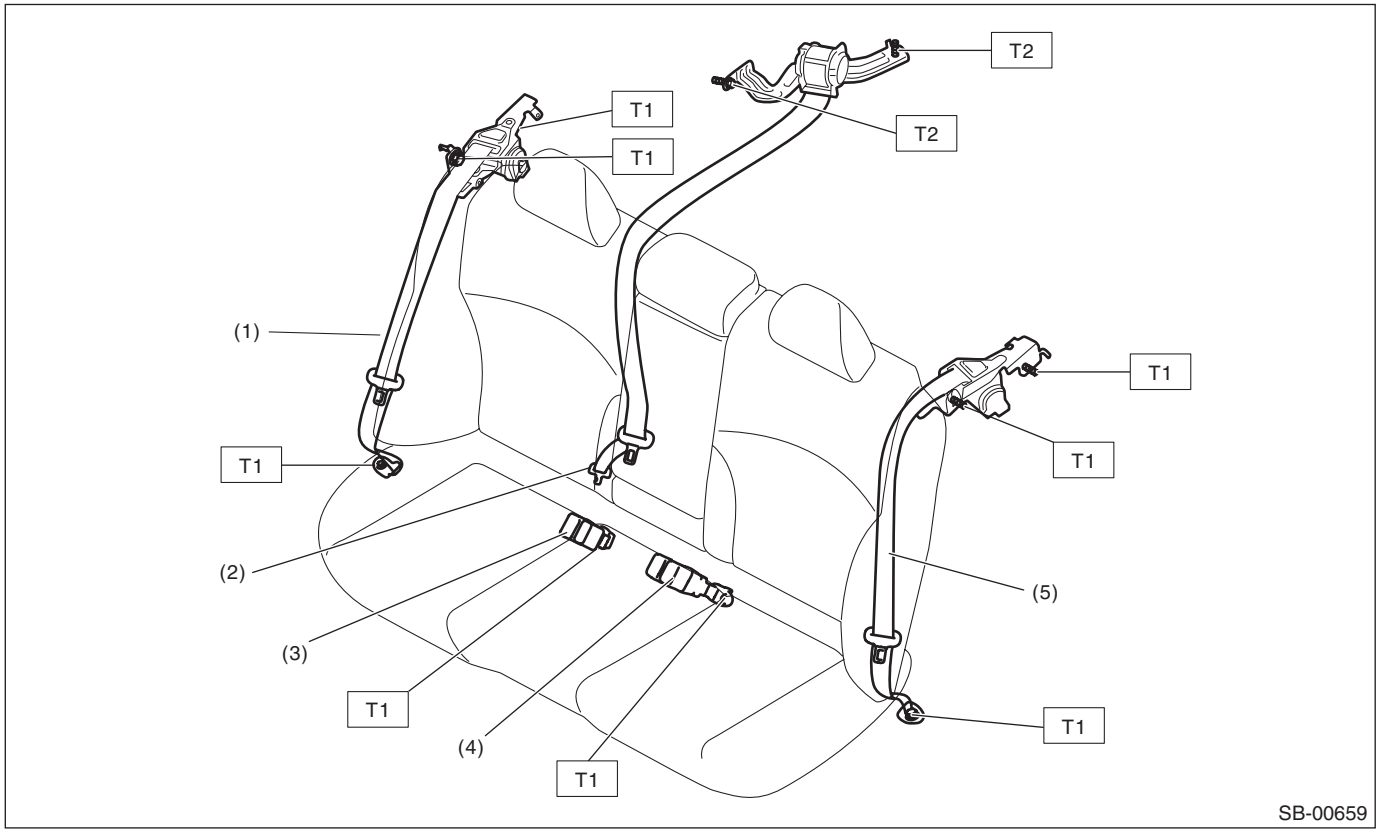
A: COMPONENT



1. FRONT SEAT BELT

(1) Adjuster ASSY - seat belt
(2) Trim panel - center pillar UPR
(3) Seat belt outer - front
(4) Wave washer
(5) Seat belt inner - front
(6) Seat belt outer - front (only on passenger's side with belt tension sensor)

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 30 (3.1, 22.1)
T3: 38 (3.9, 28.0)
T4: 53 (5.4, 39.1)



2. REAR SEAT BELT (SEDAN MODEL)

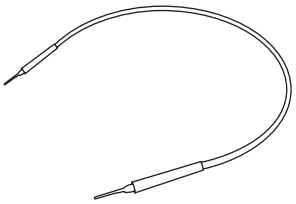
(1) Seat belt outer - rear RH
(2) Seat belt - rear shoulder CTR
(3) Seat belt - CTR LH
(4) Seat belt outer - rear LH
(5) Cover - ELR
(6) Cover - belt rear

Tightening torque: N·m (kgf-m, ft-lb)
T1: 30 (3.1, 22.1)
T2: 53 (5.4, 39.1)

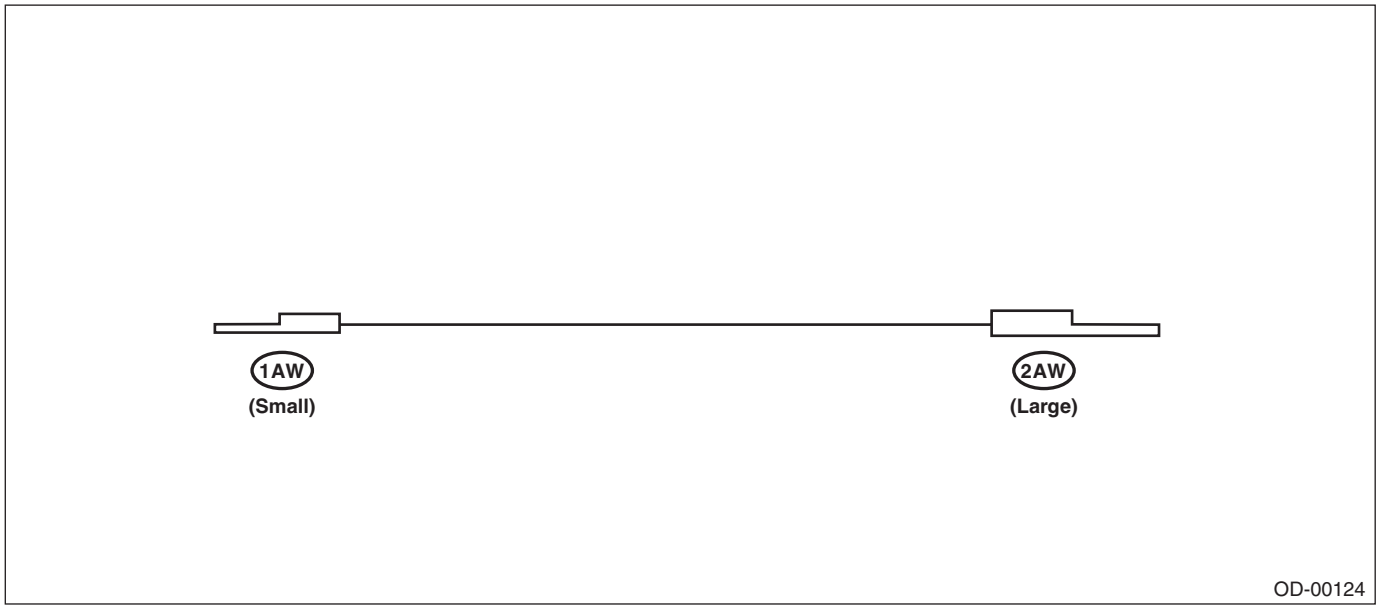
3. REAR SEAT BELT (OUTBACK MODEL)

(1) Seat belt outer - rear RH
(2) Seat belt - rear shoulder CTR
(3) Seat belt - CTR RH
(4) Seat belt - CTR LH
(5) Seat belt outer - rear LH

Tightening torque: N·m (kgf-m, ft-lb)
T1: 30 (3.1, 22.1)
T2: 53 (5.4, 39.1)



B: CAUTION



• Before starting the work, turn the ignition switch to OFF, disconnect the battery ground cable and wait for 60 seconds or more.
• The airbag system (including pretensioner) is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds or more before starting the service of airbag system.
• Do not drop or apply any impact to the pretensioner.
• If oil, grease or water gets on the pretensioner, wipe it off immediately with a dry cloth.
• Do not expose the pretensioner to high temperature or flame.
• Do not allow current to flow through or voltage to reach the pretensioner. Do not use a circuit tester to check resistance of the pretensioner.
• Do not disassemble or attempt to repair the pretensioner. If it is dented, cracked or deformed, replace it with a new genuine part.
• Do not use the airbag or pretensioner parts from other vehicles. Always use a new genuine part for replacement.
• When handling a seat belt with deployed pretensioner, wear gloves and goggles. Wash your hands afterwards.
• Do not reuse a seat belt with deployed pretensioner.
• Before disposal, make sure to perform an operation process to the pretensioners.
• If material from the pretensioner enters the eyes or contacts skin during operation process, wash it away with clean water, and then consult a doctor.

C: PREPARATION TOOL

AB-01069

- AIRBAG RESISTOR

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299PA040	98299PA040	AIRBAG RESISTOR	Used in replacement of airbag module for which resistance value is same as airbag module.

- TEST HARNESS ADAPTER D

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299SA010	98299SA010	TEST HARNESS ADAPTER D	• Used for operation process of pretensioner. • Used together with AIRBAG DEPLOYMENT TOOL. (98299PA030)

- AIRBAG DEPLOYMENT TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299PA030	98299PA030	AIRBAG DEPLOYMENT TOOL	• Used for operation process of pretensioner. • Used together with each test harness adapter.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.

2. Pretensioner Connector

A: PROCEDURE

For connectors of seat belt pretensioner and buckle switch RH, refer to “Airbag Connector” of “AIRBAG SYSTEM” section or “OCCUPANT DETECTION SYSTEM” section.

- Airbag system: <Ref. to AB-18, PROCEDURE, Airbag Connector.>
- Occupant detection system: <Ref. to OD(diag)-15, PROCEDURE, Airbag Connector.>

3. Inspection Locations after a Collision

A: INSPECTION

Refer to “Inspection Locations after a Collision” of “AIRBAG SYSTEM” section. <Ref. to AB-23, Inspection Locations after a Collision.>

4. Seat Belt Warning System

A: WIRING DIAGRAM

Refer to “Seat Belt Warning System” in the wiring diagram. <Ref. to WI-411, WIRING DIAGRAM, Seat Belt Warning System.>

B: INSPECTION

CAUTION:
• Before diagnosing the seat belt warning system and airbag system, always turn the ignition switch to OFF, disconnect the battery ground cable, and then wait for 60 seconds or more.
• When inspecting the airbag main harness, disconnect the driver’s seat airbag module connector and passenger’s seat airbag module connector for safety reasons.
• When inspecting the airbag rear harness, disconnect the side airbag module connector, seat cushion airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.
TROUBLE SYMPTOM:
- Driver’s side seat belt warning light does not illuminate or it remains illuminating.
- Warning buzzer does not beep.

	Step	Check	Yes	No
1	**CHECK FUNCTION.** 1) Sit on the driver’s seat and passenger’s seat and disconnect the seat belts of the both. 2) Turn the ignition switch to ON (engine OFF). 3) Check the illumination of the driver’s seat belt warning light in the combination meter, and the passenger’s seat belt warning light in the warning box, and the sounding of the buzzer.	Do the driver’s warning light and passenger’s warning light blink and the buzzer sound while blinking?	Go to step **2**.	Go to step **9**.
2	**CHECK FUNCTION.** 1) Wait until the buzzer sound stops in step 1. (for approximately six seconds after starting sounding) 2) Connect and disconnect the seat belts of the driver’s and passenger’s. 3) Check the illumination of the driver’s seat belt warning light in the combination meter and the passenger’s seat belt warning light in the warning box.	Do the seat belts warning light illuminate ←→ go off according to the operation?	Go to step **3**.	Go to step **5**.
3	**CHECK FUNCTION.** 1) Wait until the buzzer sound stops in step 2. (for approximately six seconds after starting sounding) 2) Start the engine, and set the vehicle speed at 20 km/h (12 MPH) or more. 3) Check the seat belt warning lights of the driver’s and the passenger’s, and if the warning buzzer sounds.	Do the driver’s warning light and passenger’s warning light blink and the buzzer sound while blinking?	Go to step **4**.	Go to step **10**.
4	**CHECK CURRENT DATA.** Check for poor contact of the connectors between the airbag control module and the seat belt buckle switch LH. 1) Sit in the driver’s seat. 2) Select «Current Data Display & Save» in the combination meter in Subaru Select Monitor, and display the data of «Belt Buckle Switch LH». 3) Fasten and detach the driver’s side seat belt buckle, and read the data of the seat belt switch. <Ref. to AB(diag)-32, OPERATION, Read Current Data.>	Does the seat belt switch display turn ON ←→ OFF according to the operation of the seat belt buckle?	Go to step **6**.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK BUCKLE SWITCH LH.** Perform the check in accordance with the diagnostic procedure DTC B1656 of the occupant detection system. <Ref. to AB(diag)-89, DTC B1656 FRONT BUCKLE SWITCH LH FAILURE, Diagnostic Chart with Trouble Code.>	Is the inspection result normal?	Go to step **6**.	Repair or replace with new parts according to DTC B1656.
6	**CHECK CURRENT DATA.** 1) Sit in the passenger's seat. 2) Select «Current Data Display & Save» in the combination meter in Subaru Select Monitor, and display the data of «Belt Buckle Switch RH». 3) Fasten and detach the passenger's side seat belt buckle, and read the data of the seat belt switch. <Ref. to AB(diag)-32, OPERATION, Read Current Data.>	Does the seat belt switch display turn ON ←→ OFF according to the operation of the seat belt buckle?	Go to step **8**.	Go to step **7**.
7	**CHECK AIRBAG SYSTEM AND OCCUPANT DETECTION SYSTEM.** Perform the check in accordance with the diagnostic procedure DTC B1650 of the airbag system. <Ref. to AB(diag)-85, DTC B1650 OCCUPANT CLASSIFICATION SYSTEM MALFUNCTION, Diagnostic Chart with Trouble Code.>	Is the inspection result normal?	Go to step **8**.	Repair or replace with new parts according to DTC B1650.
8	**CHECK BUCKLE SWITCH RH.** Perform the check in accordance with the diagnostic procedure DTC B1655 of the occupant detection system. <Ref. to AB(diag)-88, DTC B1655 FRONT BUCKLE SWITCH RH FAILURE, Diagnostic Chart with Trouble Code.>	Is the inspection result normal?	Go to step **9**.	Repair or replace with new parts according to DTC B1655.
9	**CHECK AIRBAG CONTROL MODULE AND COMBINATION METER COMMUNICATION CIRCUIT.** Perform the inspection according to the basic diagnostic procedure for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the inspection result normal?	Go to step **10**.	Repair or replace with new parts according to DTC B16F1.
10	**CHECK WARNING BOX POWER SUPPLY VOLTAGE.** 1) Disconnect the warning box connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between the ignition power supply and the warning box. ***Connector & terminal*** ***(R353) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **11**.	Check the harness for open or short between the fuse and the warning box.
11	**CHECK WARNING BOX GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between the warning box and chassis ground. ***Connector & terminal*** ***(R353) No. 5 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **12**.	Repair or replace the harness.
12	**CHECK HARNESS BETWEEN WARNING BOX AND COMBINATION METER.** 1) Disconnect the harness of the warning box and the combination meter. 2) Measure the resistance between warning box and combination meter. ***Connector & terminal*** ***(R353) No. 7 — (i10) No. 12:***	Is the resistance less than 10 Ω?	Go to step **13**.	Repair or replace the harness.

	Step	Check	Yes	No
13	**CHECK COMMUNICATION STATUS BETWEEN WARNING BOX AND COMBINATION METER.** 1) Remove the warning box, and install a properly operating warning box (new warning box). 2) Connect the connector and then turn the ignition switch to ON.	Is the warning box properly displayed?	Replace the warning box.	Replace the combination meter case assembly.

5. Front Seat Belt

A: REMOVAL

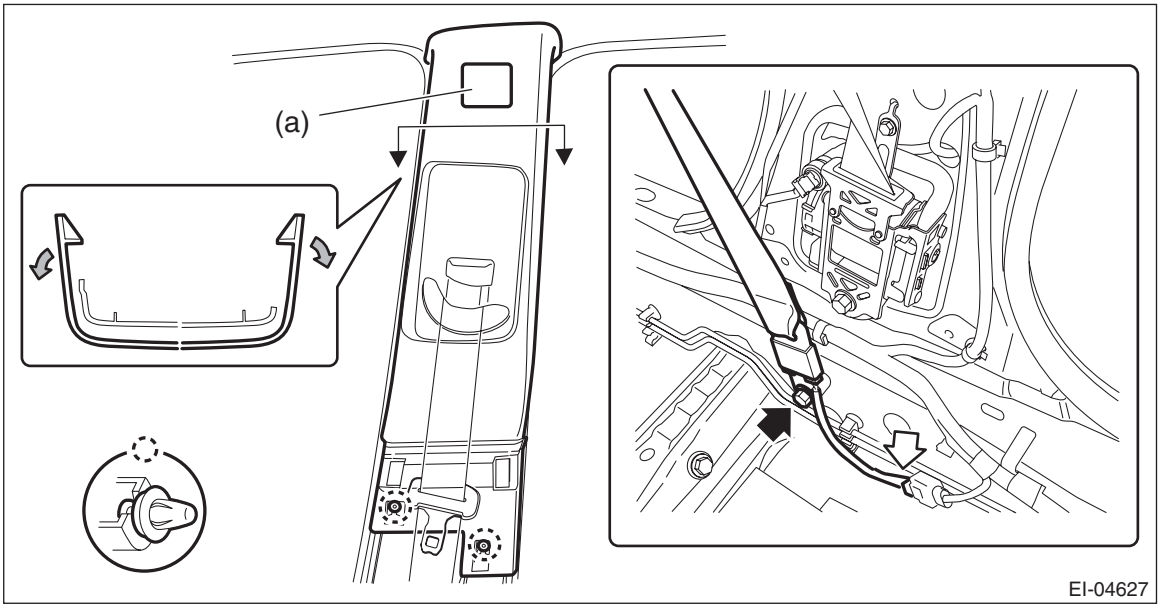
1. SEAT BELT OUTER - FRONT

CAUTION:
• The airbag system (including pretensioner) is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds or more before starting the service of airbag system.
• Do not drop or subject the pretensioner to any impact.
• Since the pretensioner and bracket are integrated as a unit, do not disassemble them.
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

SE-00937

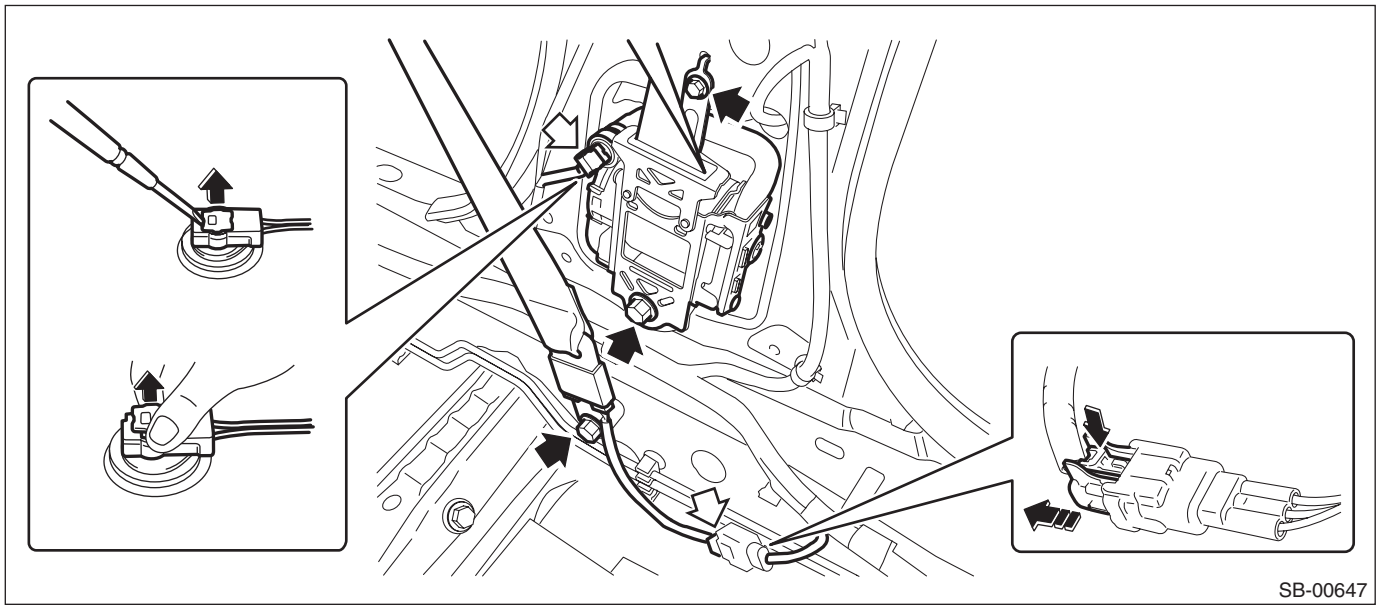
1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

NOTE:
For model with the power seat, move the seat to the front-most position before removing the battery ground terminal.
3) Tilt the front seat backrest assembly forward, and move the front seat all the way forward.



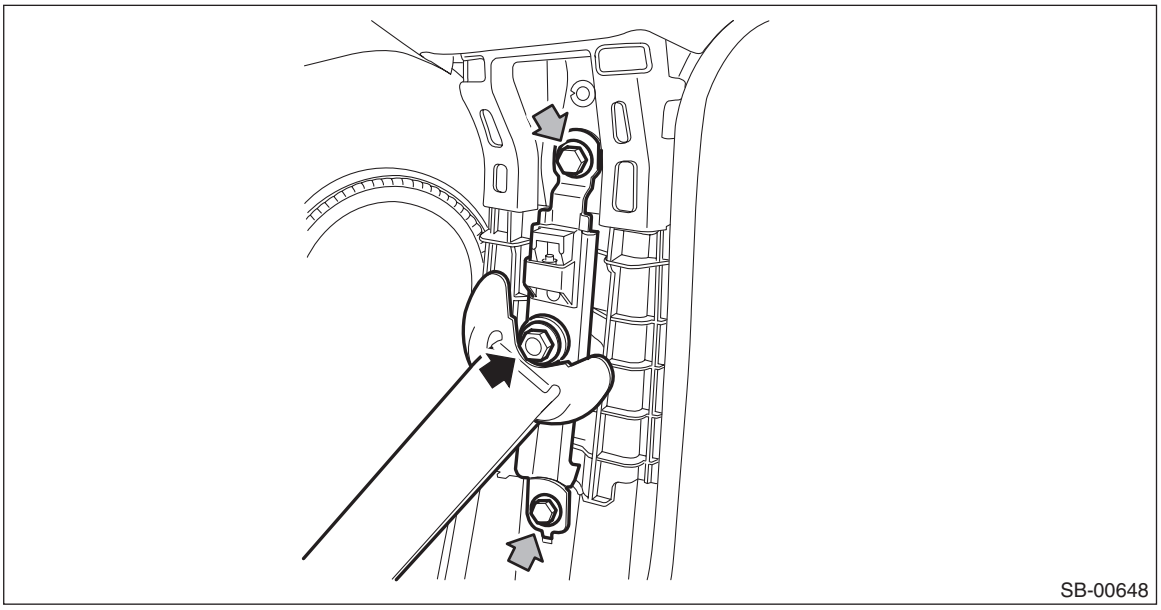
CAUTION:
For the power seat, move the seat, disconnect the battery ground cable, and then wait for 60 seconds or more before starting work.
4) Remove the rear seat cushion assembly. <Ref. to SE-33, REMOVAL, Rear Seat.>
5) Remove the cover side sill - front, cover side sill - rear, and the trim panel - center pillar LWR. (On the side where seat belt assembly is removed) <Ref. to EI-92, REMOVAL, Lower Inner Trim.>

6) Remove the trim panel - center pillar UPR. (On the side where seat belt assembly is removed)
(1) Remove the cap (a), and remove the bolts.
(2) Remove the lower anchor bolt of the seat belt outer - front.



NOTE:
On passenger's side, disconnect the connector of the seat belt tension sensor. <Ref. to AB-22, BELT TENSION SENSOR, PROCEDURE, Airbag Connector.>

(3) Release the clip by pulling the lower part of the trim toward you.
(4) Expand the claws outward, and remove the trim panel - center pillar UPR.

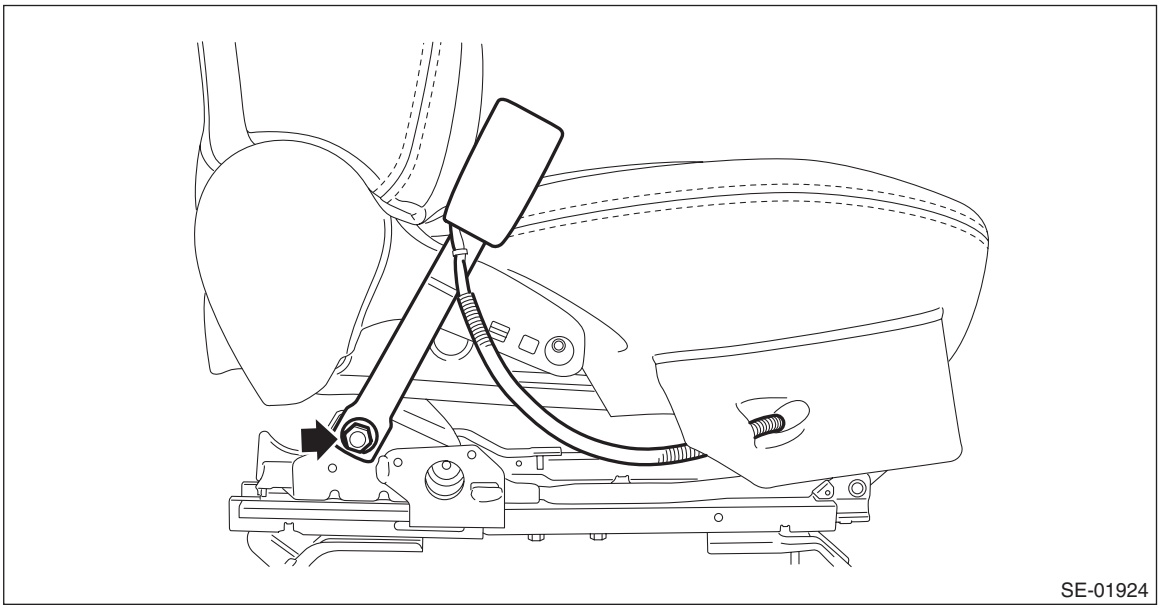


CAUTION:
• Do not expand the trim panel - center pillar UPR excessively. Doing so may damage the trim.
• If the claw is damaged, always replace the trim panel - center pillar UPR with a new part, because the damaged claw cannot hold the part sufficiently.

7) Remove the seat belt outer - front.
(1) Disconnect connector of the pretensioner. <Ref. to AB-19, DRIVER'S AIRBAG MODULE, CURTAIN AIRBAG MODULE AND PRETENSIONER, PROCEDURE, Airbag Connector.>
(2) Remove the bolt to remove the seat belt retractor.

(3) Remove the upper anchor bolt, and remove the seat belt outer - front.

NOTE:
Remove the bolts and remove the adjuster assembly - seat belt as necessary.



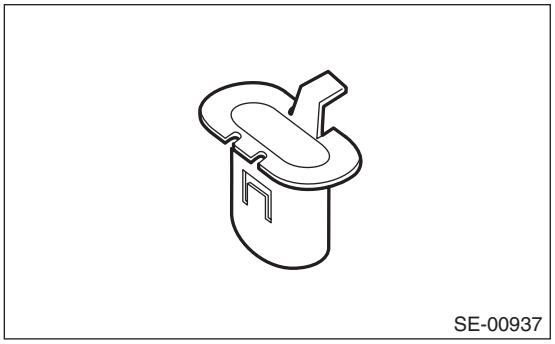
2. SEAT BELT INNER - FRONT

CAUTION:
The airbag system is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds before starting the service of airbag system.

1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

NOTE:
- For driver's side, lift the seating face before removing the seat.
- For models with power seat, remove the slide rail installing bolt before disconnecting the ground terminal from the battery sensor.

3) Remove the front seats. <Ref. to SE-11, REMOVAL, Front Seat.>
4) Remove the nut, and remove the seat belt inner - front.



NOTE:
For driver's side, remove the metal clip holding the inner belt harness to the slide rail.

B: INSTALLATION

1. SEAT BELT OUTER - FRONT

CAUTION:
• The parts of the driver and passenger sides are not the same. Before installation, make sure that the correct part is used.
• During installation, make sure that the seat belts are not twisted.
• After installation, make sure that the seat belt can be pulled out and retracted smoothly.
• Make sure that the seat belt harness is not caught anywhere. Wrong harness rooting may cause the harness short from pinch.
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

SE-00937

1) Before installation, perform a unit inspection of retractor. <Ref. to SB-22, INSPECTION, Front Seat Belt.>
2) Install the adjuster assembly - seat belt and the seat belt outer - front.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to SB-2, FRONT SEAT BELT, COMPONENT, General Description.>
3) Install the trim panel - rear pillar UPR.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
4) Install the trim panel - center pillar LWR, cover side sill - front, and cover side sill - rear.
5) Install the rear seat cushion assembly.
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
7) After installation, check the following points.
• The seat belt is not twisted.
• The seat belt can be pulled out and retracted smoothly.
• The adjuster assembly - seat belt can be moved smoothly.
• Check that the airbag warning light lights up for approximately 6 seconds and then turns off when connecting the battery ground cable and turning the ignition switch to ON.

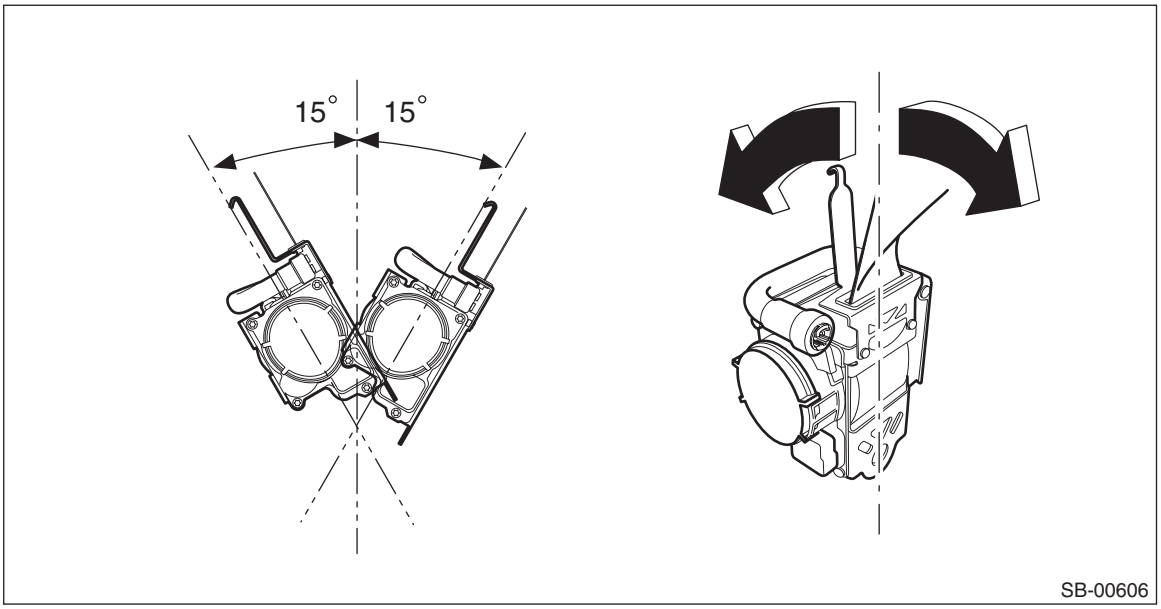
2. SEAT BELT INNER - FRONT

CAUTION:
- **Before installation, make sure that the correct part is used.**
- **During installation, make sure that the seat belts are not twisted.**
- **Check that there is no pinching of the seat belt harness. Wrong harness rooting may cause the harness short from pinch.**
- **Do not forget the wave washer, when installing front seat inner belt assembly.**

1) Install the seat belt inner - front.

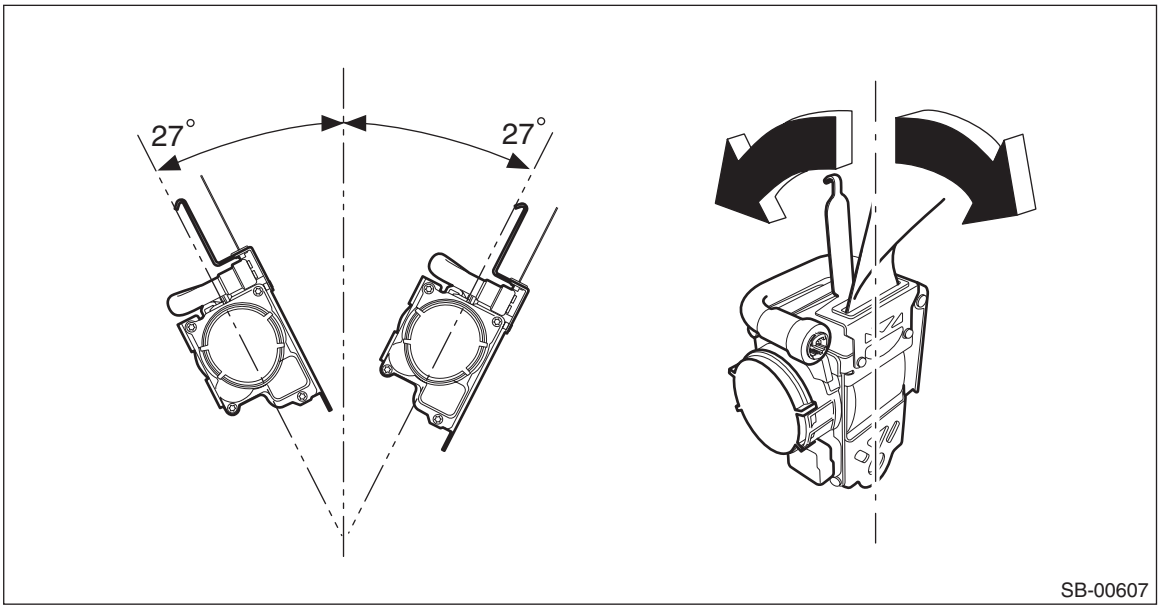
Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)

2) Install the seat assembly to the body. <Ref. to SE-12, INSTALLATION, Front Seat.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



C: INSPECTION

1. VISUAL INSPECTION

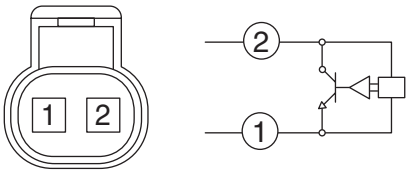


Check for the following, and replace with new parts if necessary.
- Pretensioner is cracked or deformed.
- Adjuster assembly - seat belt is cracked or deformed.
- Seat belt is slackened, bent or worn.
- Seat belt is abnormally wound or extended.
- Seat belt inner - front is deformed or damaged.
- Seat belt buckle cannot be engaged properly.

2. ELR LOCK MECHANISM INSPECTION

1) Hold the retractor upright (as installed in the vehicle) and check the ELR lock mechanism.
2) Tilt the retractor from the upright posture and check the following points.
- It does not lock if the inclination angle is 15° or less.

- It remains locked if the inclination angle is 27° or more.



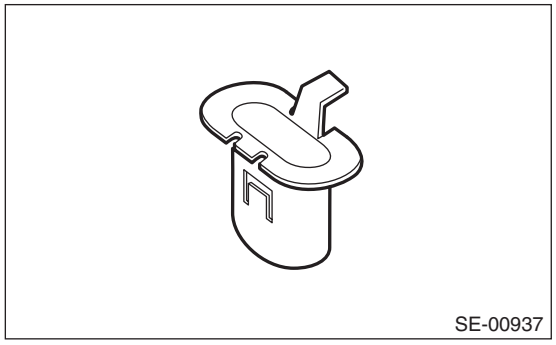
3) If the ELR lock mechanism does not operate properly, replace the seat belt outer - front with a new part.

3. SEAT BELT SWITCH INSPECTION

Preparation tool:
Circuit tester

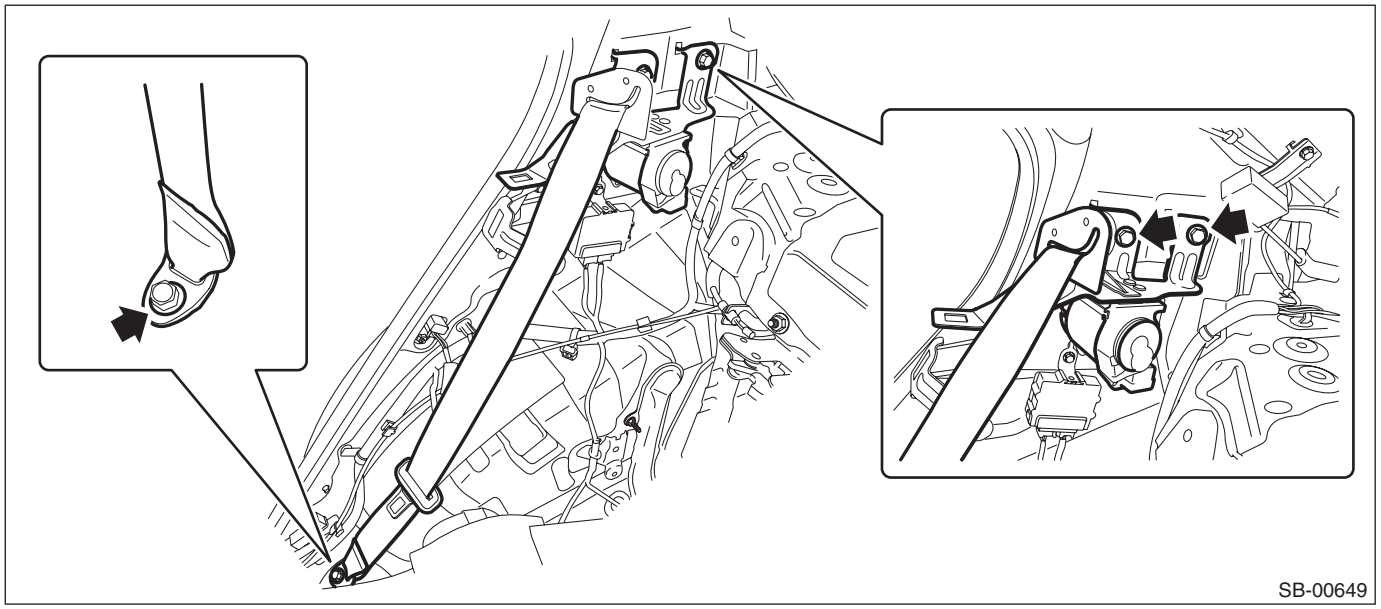
Measure the current value between the terminals when the seat belt inner - front is in each of the following operation conditions.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Tongue plate inserted	12 — 18 mA	
1 — 2	Tongue plate detached	4 — 7 mA	



Replace the seat belt inner - front if the inspection result is not within the standard.

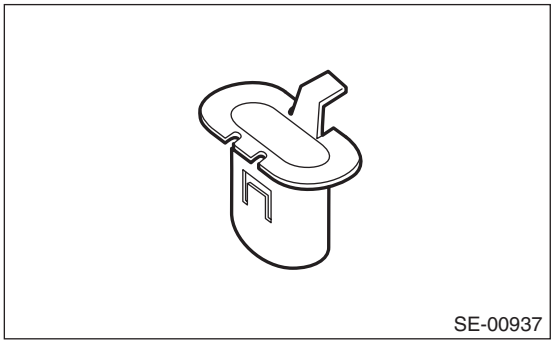
6. Rear Seat Belt



A: REMOVAL

1. SEAT BELT OUTER - REAR RH & LH (SEDAN MODEL)

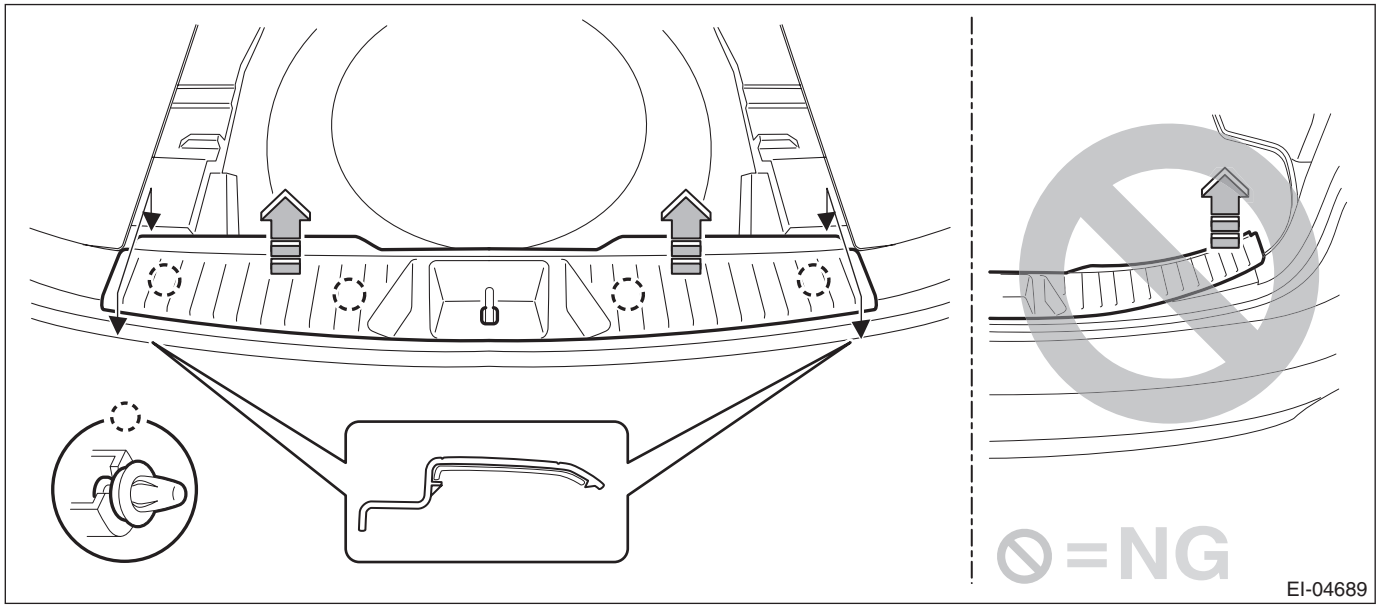
CAUTION:
• The airbag system is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds before starting the service of airbag system.
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.



SE-00937

1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the rear seat cushion assembly and backrest side pad. (On the side where seat belt assembly is removed) <Ref. to SE-33, SEDAN MODEL, REMOVAL, Rear Seat.>
4) Remove the trim panel - rear pillar UPR. (On the side where seat belt assembly is removed) <Ref. to EI-99, SEDAN MODEL, REMOVAL, Rear Quarter Trim.>
5) Remove the bolts, and remove the seat belt outer - rear.

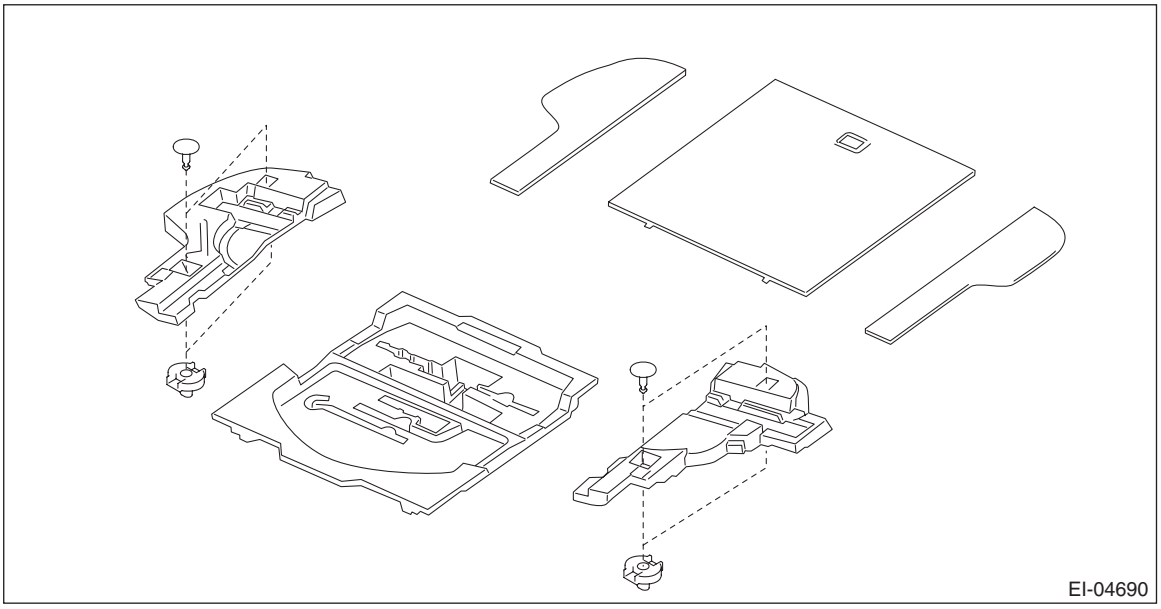
SB-00649



2. SEAT BELT OUTER - REAR RH & LH (OUTBACK MODEL)

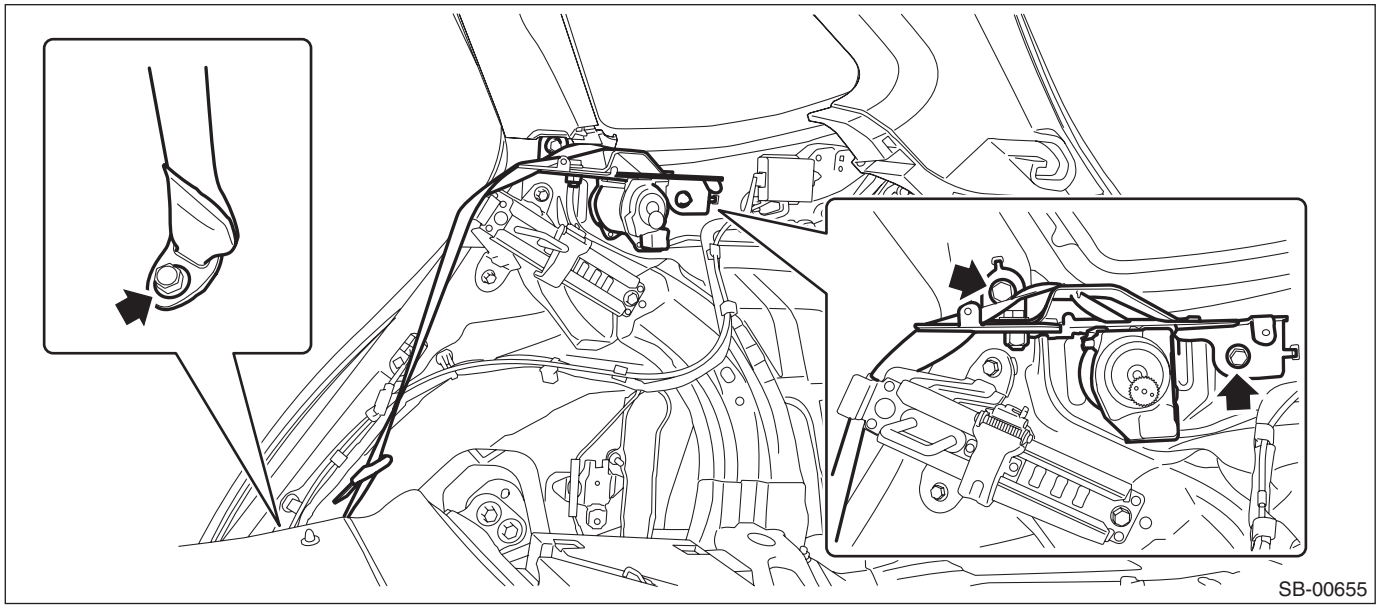
CAUTION:
• The airbag system is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds before starting the service of airbag system.
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

SE-00937



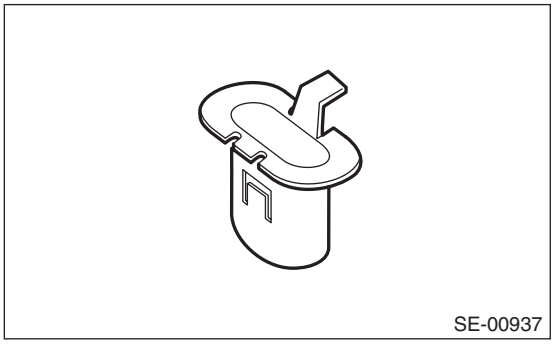
1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the rear seat cushion assembly and backrest side pad. (On the side where seat belt assembly is removed) <Ref. to SE-35, OUTBACK MODEL, REMOVAL, Rear Seat.>
4) Remove the clips, and remove the trim panel - rear skirt.

CAUTION:
Do not lift the trim panel - rear skirt from the edge. Doing so may damage the part.

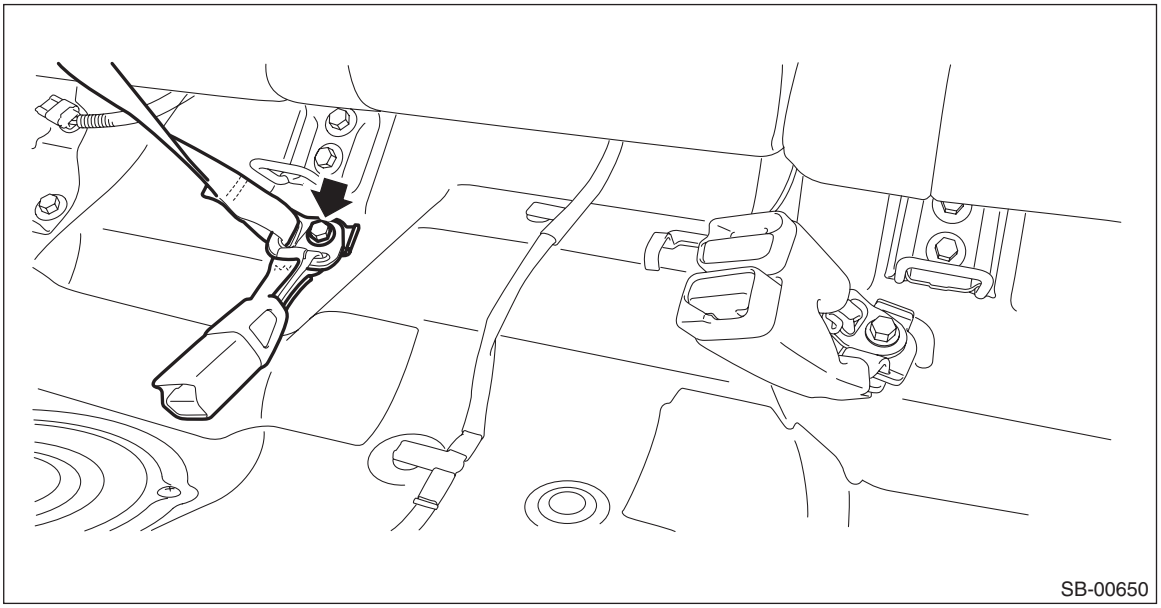


EI-04689

5) Remove the mat - rear floor, box - sub trunk, and spacer - rear floor.

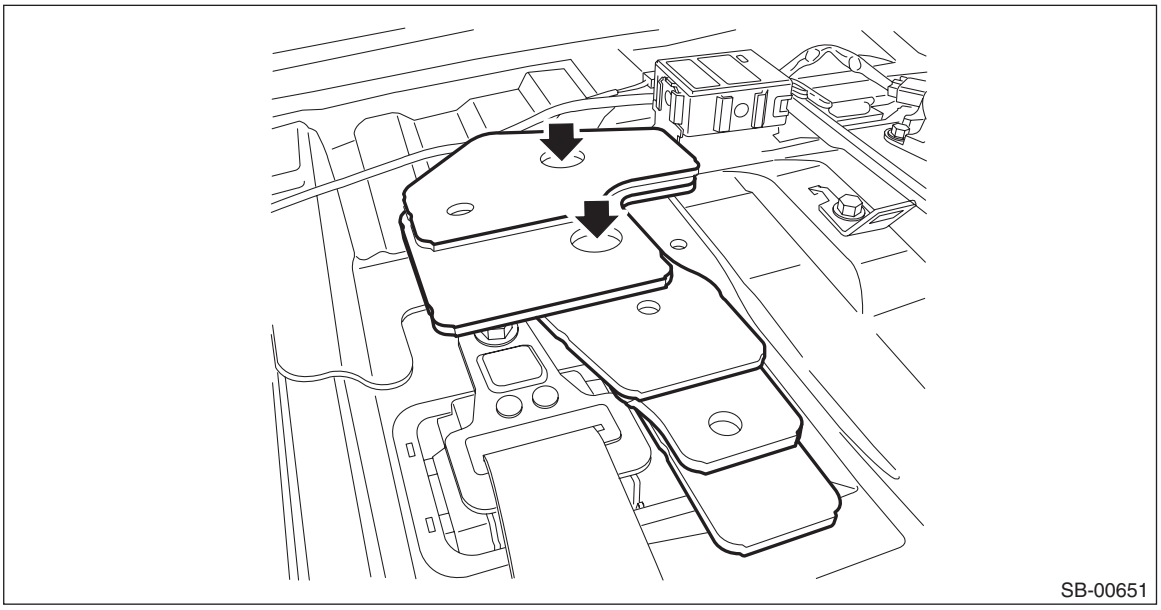


6) Remove the bolts, and remove the seat belt outer - rear.



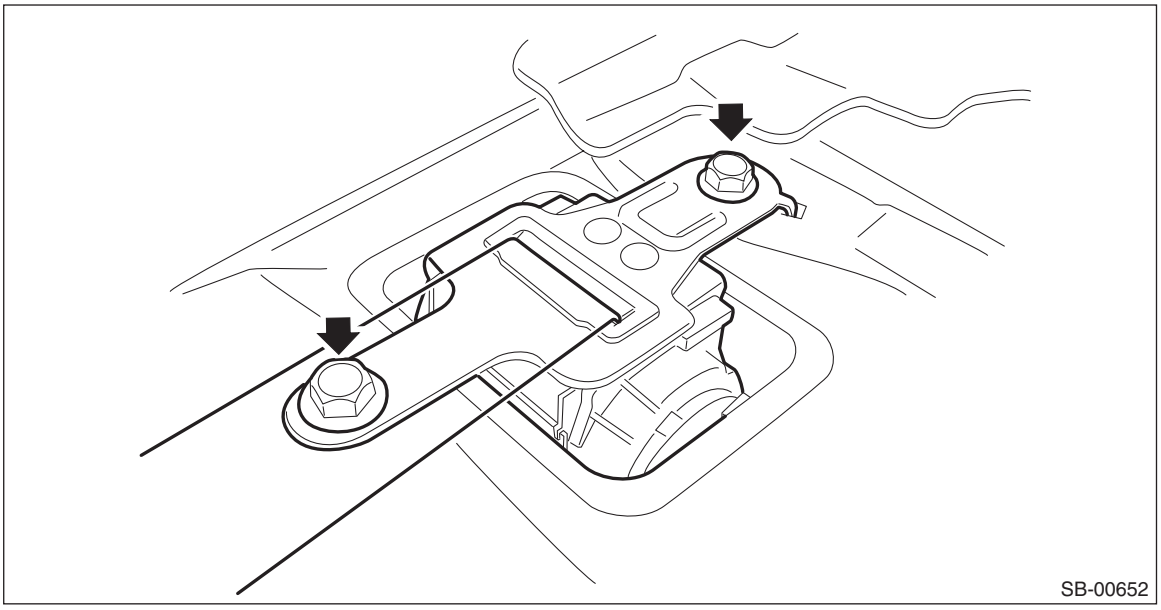
3. SEAT BELT - REAR SHOULDER CTR (SEDAN MODEL)

CAUTION:
• The airbag system is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds before starting the service of airbag system.
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.



SE-00937

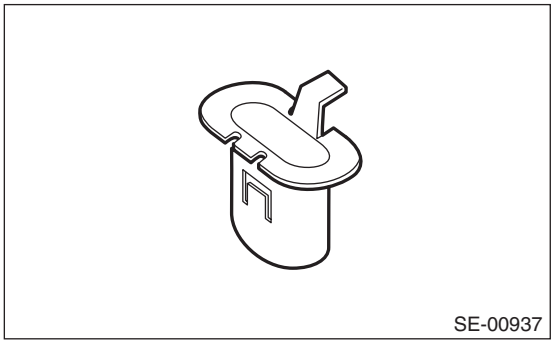
1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the rear seat cushion assembly. <Ref. to SE-33, SEDAN MODEL, REMOVAL, Rear Seat.>
4) Remove the side sill covers - rear and the trim panels - rear pillar UPR from the left and right sides. <Ref. to EI-99, REMOVAL, Rear Quarter Trim.>
5) Remove the bolts, and remove the lower anchor of the seat belt - rear shoulder CTR.



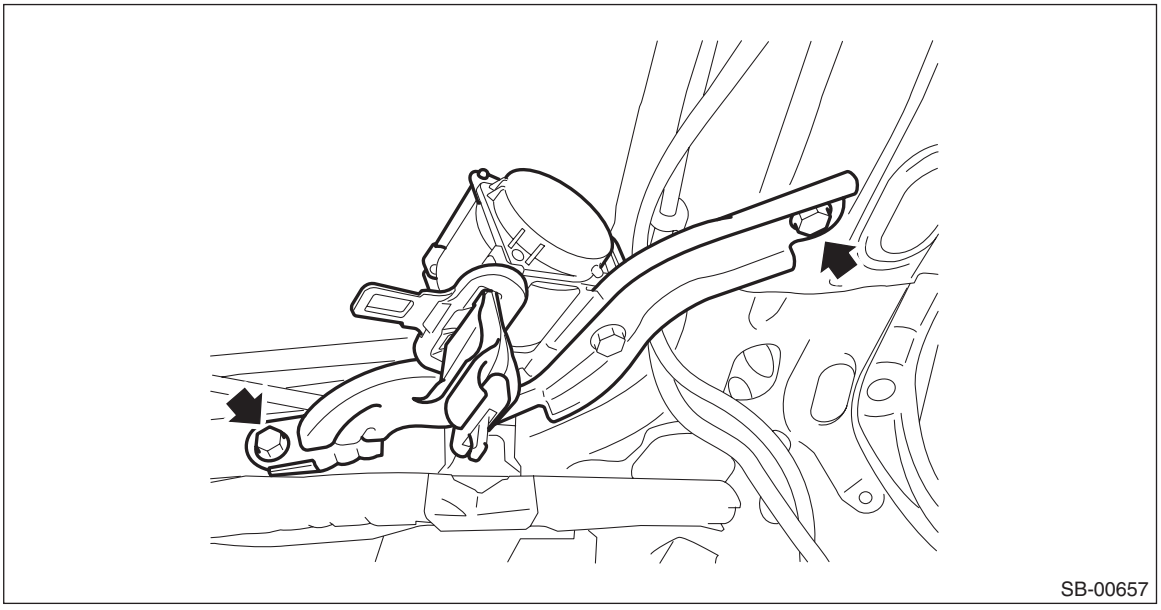
SB-00650

6) Remove the high-mounted stop light. <Ref. to LI-61, REMOVAL, High-mounted Stop Light.>
7) Remove the trim panel - rear shelf assembly. <Ref. to EI-106, REMOVAL, Rear Shelf Trim.>
8) Remove the seat belt - rear shoulder CTR.

(1) Remove the bolts and remove the plate - mass damper.

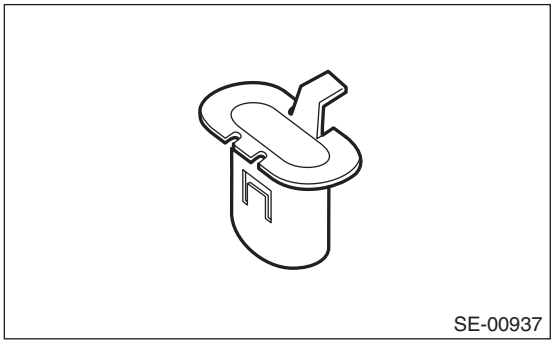


(2) Remove the bolts, and remove the seat belt - rear shoulder CTR.



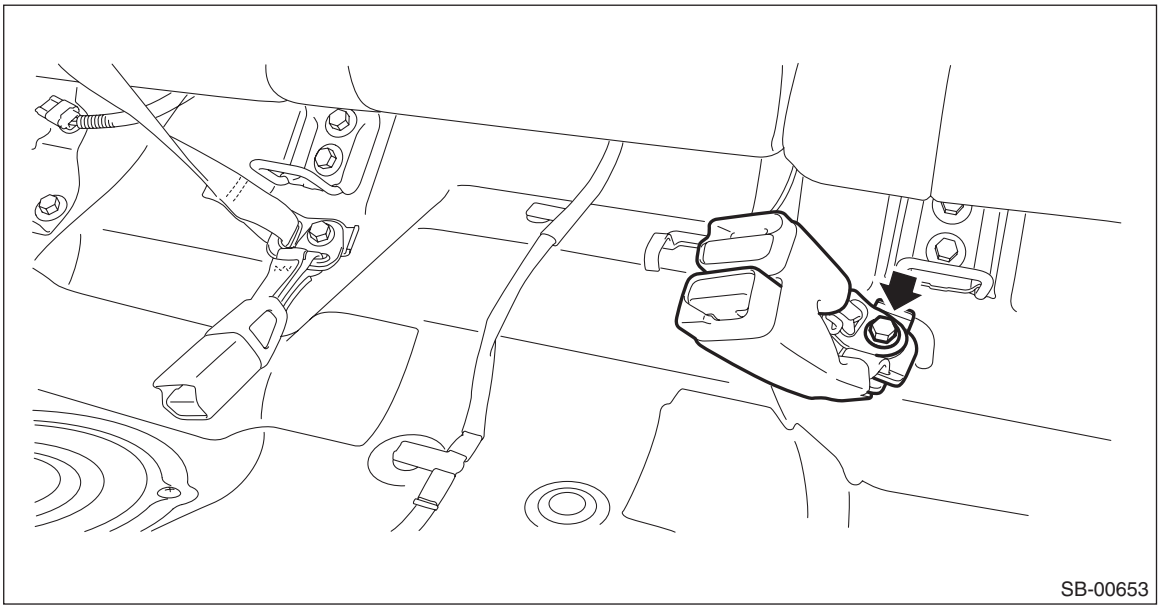
4. SEAT BELT - REAR SHOULDER CTR (OUTBACK MODEL)

CAUTION:
• The airbag system is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds before starting the service of airbag system.
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

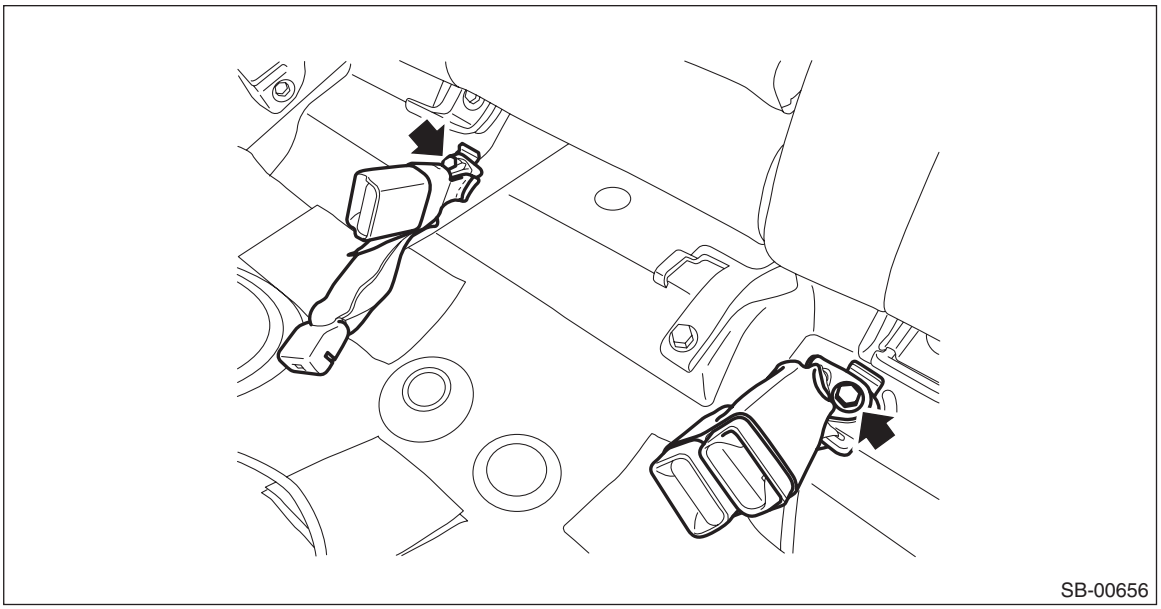


SE-00937

1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the rear seat cushion assembly. <Ref. to SE-35, OUTBACK MODEL, REMOVAL, Rear Seat.>
4) Remove the trim panel - roof assembly. <Ref. to EI-117, OUTBACK MODEL, REMOVAL, Roof Trim.>
5) Remove the bolts, and remove the seat belt - rear shoulder CTR.



SB-00657

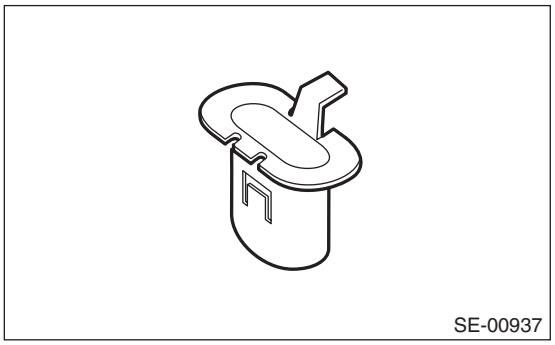


5. SEAT BELT - CTR RH AND LH

CAUTION:
• The airbag system is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds before starting the service of airbag system.
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

SE-00937

1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the rear seat cushion assembly. <Ref. to SE-33, REMOVAL, Rear Seat.>
4) Remove the bolts, and remove the seat belt - CTR RH and LH.



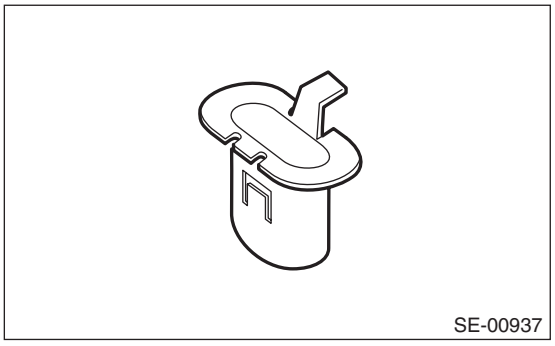
SB-00653

B: INSTALLATION

1. SEAT BELT OUTER - REAR RH & LH (SEDAN MODEL)

CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

1) Before installation, perform a unit inspection of retractor. <Ref. to SB-35, INSPECTION, Rear Seat Belt.>
2) Install the seat belt outer - rear.



CAUTION:
- **During installation, make sure that the seat belts are not twisted.**
- **After installation, make sure that the seat belts are smoothly extended and wound.**

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to SB-3, REAR SEAT BELT (SEDAN MODEL), COMPONENT, General Description.>
3) Install the backrest side pad and the trim panel - rear pillar UPR.

Tightening torque:
Backrest side pad: 53 N·m (5.4 kgf-m, 39.1 ft-lb)
4) Install the rear seat cushion assembly.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
6) After installation, check the following points.
- The seat belt is not twisted.
- The seat belt can be pulled out and retracted smoothly.

2. SEAT BELT OUTER - REAR RH & LH (OUTBACK MODEL)

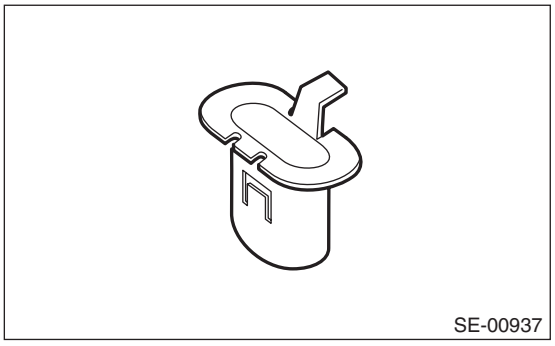
CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

SE-00937

1) Before installation, perform a unit inspection of retractor. <Ref. to SB-35, INSPECTION, Rear Seat Belt.>
2) Install the seat belt outer - rear.

CAUTION:
- **During installation, make sure that the seat belts are not twisted.**
- **After installation, make sure that the seat belts are smoothly extended and wound.**

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to SB-4, REAR SEAT BELT (OUTBACK MODEL), COMPONENT, General Description.>



3) Install the trim panel - rear skirt and the trim panel - rear apron.
4) Install the mat - rear floor, spacer - rear floor, and sub trunk box.
5) Install the backrest side pad.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)

6) Install the rear seat cushion assembly.
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
8) After installation, check the following points.
- The seat belt is not twisted.
- The seat belt can be pulled out and retracted smoothly.

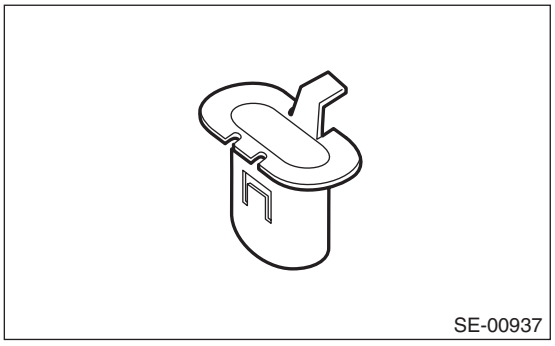
3. SEAT BELT - REAR SHOULDER CTR (SEDAN MODEL)

CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

SE-00937

1) Install the retractor of seat belt - rear shoulder CTR.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to SB-3, REAR SEAT BELT (SEDAN MODEL), COMPONENT, General Description.>
2) Install the trim panel assembly - rear shelf.
3) Install the high-mounted stop light.
4) Install the lower anchor of seat belt - rear shoulder CTR.



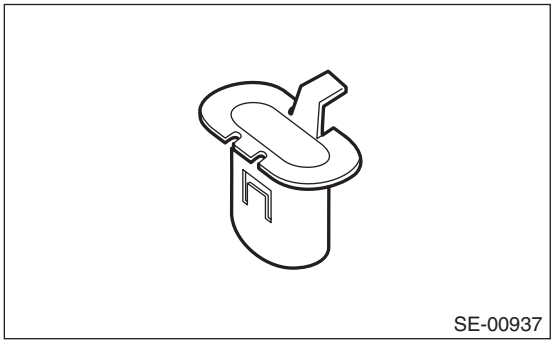
CAUTION:
- **During installation, make sure that the seat belts are not twisted.**
- **After installation, make sure that the seat belts are smoothly extended and wound.**

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)
5) Install the backrest side pad and the trim panel - rear pillar UPR.

Tightening torque:
Backrest side pad: 53 N·m (5.4 kgf-m, 39.1 ft-lb)
6) Install the rear seat cushion assembly.
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
8) After installation, check the following points.
- The seat belt is not twisted.
- The seat belt can be pulled out and retracted smoothly.

4. SEAT BELT - REAR SHOULDER CTR (OUTBACK MODEL)

CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.



1) Install the retractor of seat belt - rear shoulder CTR.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to SB-4, REAR SEAT BELT (OUTBACK MODEL), COMPONENT, General Description.>

2) Install the trim panel - roof assembly.
3) Install the rear seat cushion assembly.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) After installation, check the following points.
- The seat belt is not twisted.
- The seat belt can be pulled out and retracted smoothly.

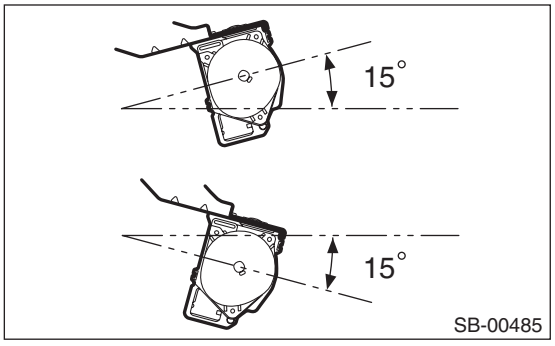
5. SEAT BELT - CTR RH AND LH

CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

1) Install the seat belt - CTR RH/LH.

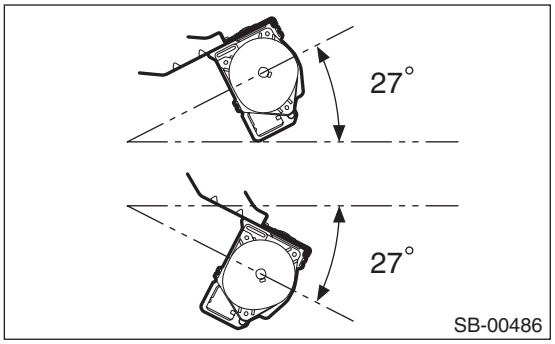
Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)

2) Install the rear seat cushion assembly.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) After installation, check the following points.
- The seat belt is not twisted.
- The seat belt buckle is pulled out properly, and seat belt engagement can be performed smoothly.



C: INSPECTION

1. VISUAL INSPECTION

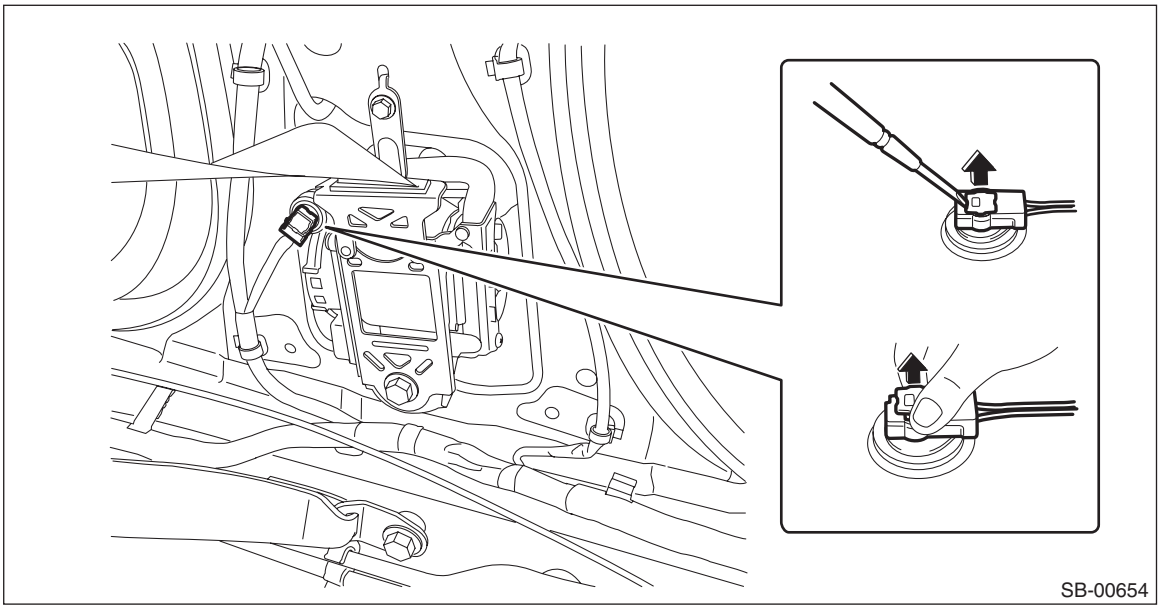


Check for the following, and replace with new parts if necessary.
- Seat belt is slackened, bent or worn.
- Seat belt is abnormally wound or extended.
- Seat belt inner - rear is deformed or damaged.
- Seat belt buckle cannot be engaged properly.

2. ELR LOCK MECHANISM INSPECTION

1) Hold the retractor upright (as installed in the vehicle) and check the ELR lock mechanism.
2) Tilt the retractor from the upright posture and check the following points.
- It does not lock if the inclination angle is 15° or less.

- It remains locked if the inclination angle is 27° or more.



3) If the ELR lock mechanism does not operate properly, replace the seat belt outer - rear with a new part.

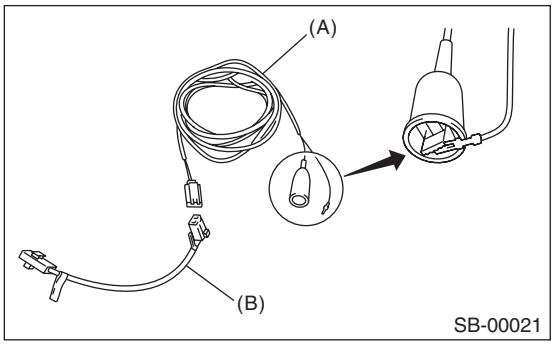
7. Disposal of Pretensioner

A: PROCEDURE

WARNING:
Make sure to follow the instructions below. Otherwise, personal injuries may occur.
• Before discarding a pretensioner, always perform an activation process to prevent any false activation.
• Wear protective gloves, safety goggles and earplugs during this operation. Wash your hands afterwards.
• Do not touch the pretensioner just after activation because it is very hot. Before handling it for disposal, wait for 40 minutes.

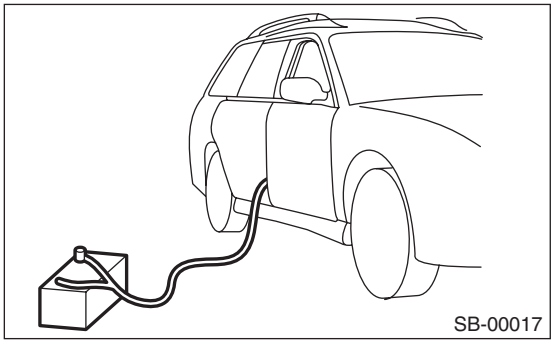
CAUTION:
• Perform a pretensioner operation process in a safe, level place. Do not perform the process outdoors when there is a strong rain or wind.
• Do not drop or damage the pretensioner.
• A large explosive noise will occur when the pretensioner is deployed. Warn persons in the area, and do not allow anyone to approach a radius of 5 m (16 ft) from the discard location.
• After activating the pretensioner, smoke may arise. Therefore, always perform an operation process in a well-ventilated place without any smoke sensor.
• Do not expose the activated pretensioner to water.
• Wrap the activated pretensioner in a sealed vinyl bag when discarding.
• If it is impossible to perform a pretensioner activation process due to some situational reasons, consult SUBARU dealership or one of the authorized workshops.
1) Fold the backrest all the way forward, and move the front seat all the way forward.
2) Turn the ignition switch to OFF.
3) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.> <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Remove the cover side sill - front INN, cover side sill - rear INN, and trim panel - center pillar LWR. (On the side where seat belt assembly is removed) <Ref. to EI-92, REMOVAL, Lower Inner Trim.>
5) Disconnect connector (a) of the pretensioner.

SB-00654



6) Short the alligator clip and terminal of the airbag deployment tool together.

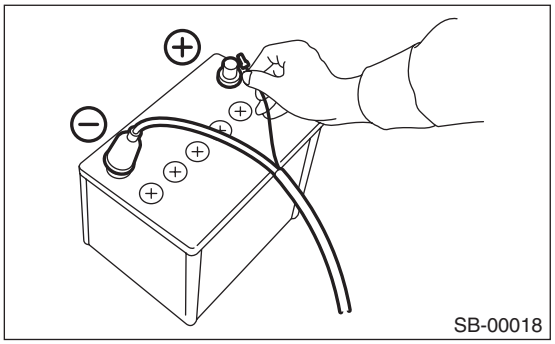
CAUTION:
Short the airbag deployment tool terminals until just before the pretensioner operation process.



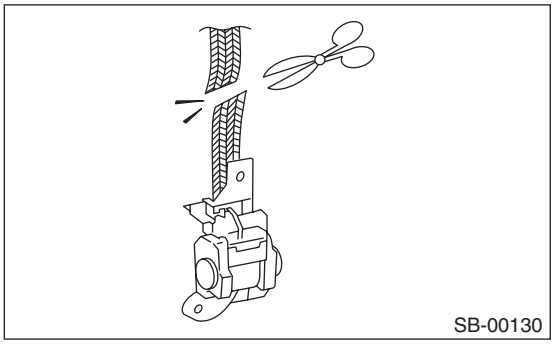
Preparation tool:
ST: AIRBAG DEPLOYMENT TOOL (98299PA030)

7) Connect the airbag deployment tool (A) and test harness adapter D (B).

Preparation tool:
ST: TEST HARNESS ADAPTER D (98299SA010)

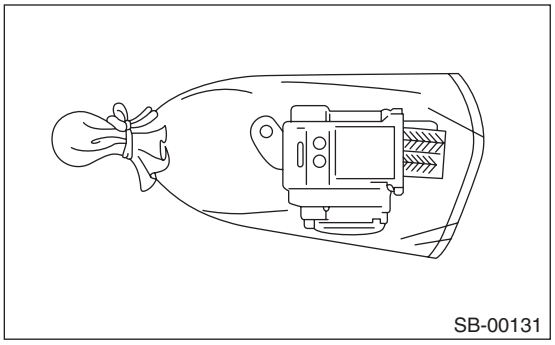


8) Connect the test harness adapter D connector to the pretensioner.
9) Make sure there is no one inside the vehicle.
10) Extend the wiring of airbag deployment tool to the limit, and close all the windows and rear gate completely.



11) Move the battery 5 m (16 ft) or more from the vehicle, and affix nearby.
12) Connect the airbag deployment tool alligator clip to the battery negative (–) terminal.
13) Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the pretensioner.

CAUTION:
• After activation, the pretensioner will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.
• Do not expose the activated pretensioner to water.



14) Remove the seat belt outer - front. <Ref. to SB-18, REMOVAL, Front Seat Belt.>

15) Cut the seat belt at a position as close as possible to the seat belt retractor.

16) Place the activated pretensioner in a sealed vinyl bag, then discard.

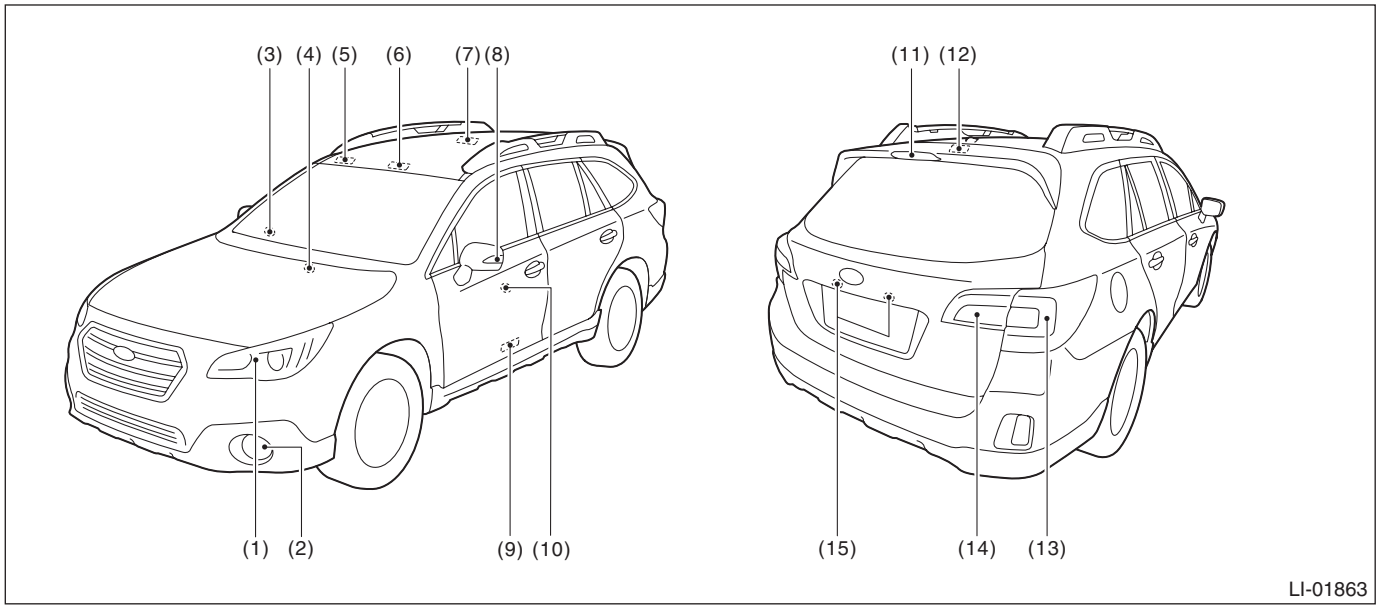
1. General Description

A: SPECIFICATION

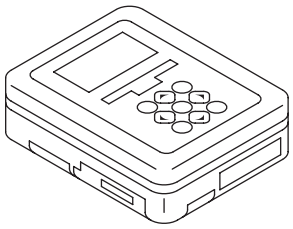


- Sedan model

No.	Description		Capacity and wattage	Type
(1)	Headlight	Low beam (halogen type)	12 V — 55 W	H11
		Low beam (HID type)	12 V — 35 W	D4S
		High beam	12 V — 60 W	HB3
		Front turn signal light	12 V — 21 W	WY21W
		Parking light	12 V — 1.2 W (LED)	*
		Side marker light	12 V — 5 W	W5W
(2)	Front fog light	Model without SRF	12 V — 19 W	H16
		Model with SRF	12 V — 55 W	H11
(3)	Glove box light		12 V — 1.4 W (LED)	*
(4)	Pocket light		12 V — 1.4 W (LED)	*
(5)	Vanity mirror light		14 V — 1.4 W	—
(6)	Spot map light		12 V — 8 W	—
(7)	Room light		12 V — 8 W	—
(8)	Side turn signal light		12 V — 1.1 W (LED)	*
(9)	Door step light		12 V — 5 W	W5W
(10)	Door pocket light		12 V — 1.4 W (LED)	*
(11)	High-mounted stop light		12 V — 0.8 W (LED)	*
(12)	Trunk room light		12 V — 3.8 W	SAE#194
(13)	Rear combination light	Tail & stop light	12 V — 0.4/4.7 W (LED)	*
		Turn signal light	12 V — 21 W	WY21W
		Side marker light	12 V — 5 W	W5W
(14)	Rear finisher light	Back-up light	12 V — 16 W	W16W
(15)	License plate light		12 V — 5 W	W5W

*: Non-disassembly type

- OUTBACK model



No.	Description		Capacity and wattage	Type
(1)	Headlight	Low beam (halogen type)	12 V — 55 W	H11
		Low beam (HID type)	12 V — 35 W	D4S
		High beam	12 V — 60 W	HB3

(9)	Door step light		12 V — 5 W	W5W
(10)	Door pocket light		12 V — 1.4 W (LED)	*
(11)	High-mounted stop light		12 V — 1.1 W (LED)	*
(12)	Luggage room light		12 V — 13 W	SAE#912
(13)	Rear combination light	Tail & stop light	12 V — 0.4/4.7 W (LED)	*
		Turn signal light	12 V — 21 W	WY21W
		Side marker light	12 V — 5 W	W5W
(14)	Rear finisher light	Back-up light	12 V — 16 W	W16W
(15)	License plate light		12 V — 5 W	W5W
*: Non-disassembly type				

B: CAUTION

• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.
• Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of “AIRBAG SYSTEM”. <Ref. to AB-10, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
• When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform “VDC sensor midpoint setting mode” of the VDC. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
• Always replace with a bulb that is the same model and wattage as those of the old one.

C: PREPARATION TOOL

1. SPECIAL TOOL

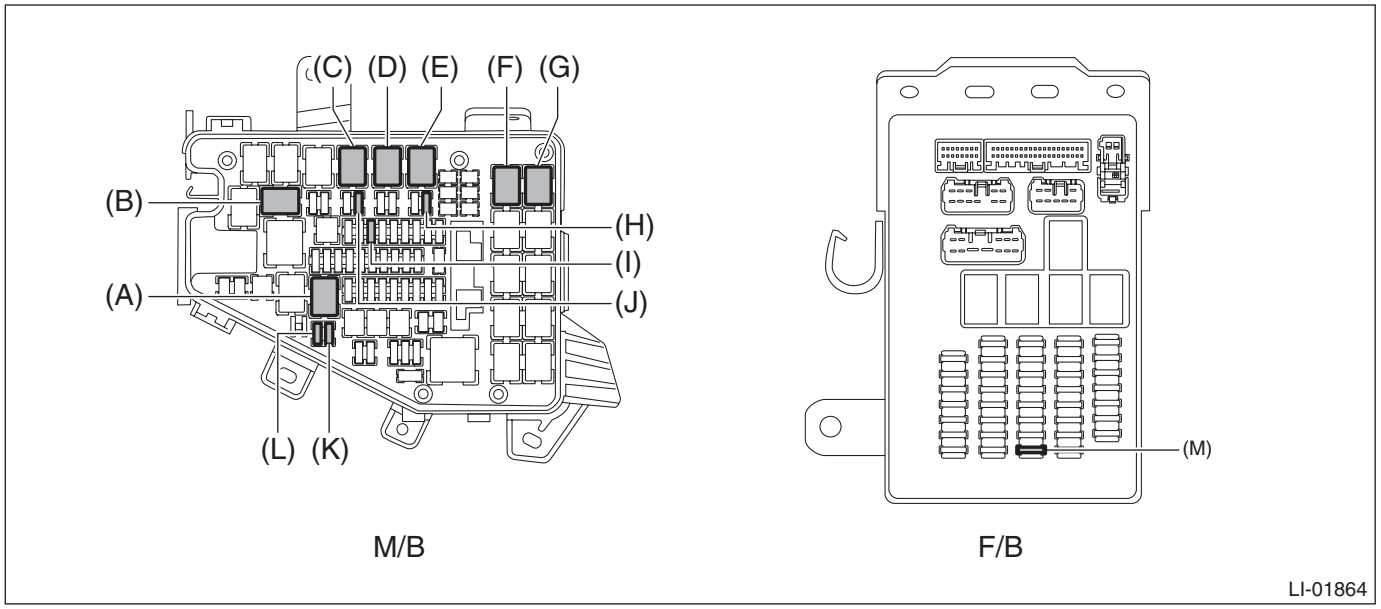

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of SUBARU SELECT MONITOR III KIT, refer to “PC application help for Subaru Select Monitor”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.

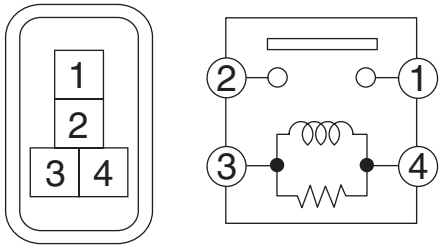
2. Relay and Fuse

A: LOCATION

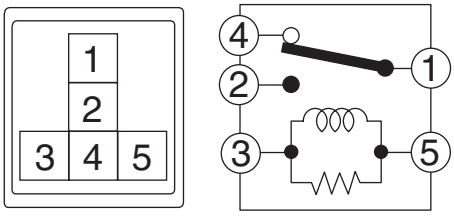
Main fuse box (M/B)	Front fog light relay	(A)
	Headlight relay HI (RH)	(B)
	Tail and illumination relay	(C)
	Headlight relay LO	(D)
	Headlight relay HI (LH)	(E)
	Daytime running light relay (RH)	(F)
	Daytime running light relay (LH)	(G)
	Fuse 10 A (headlight HI (LH))	(H)
	Fuse 10 A (headlight HI (RH))	(I)
	Fuse 10 A (license light (LH/RH), rear combination light (LH/RH))	(J)
	Fuse 10 A (front fog light (LH), SRF CM)	(K)
	Fuse 10 A (front fog light (RH), SRF CM)	(L)
Fuse & relay box (F/B)	Fuse 7.5 A (stop light and brake switch)	(M)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-23, Power Supply Circuit.>

B: INSPECTION



1. CHECK FUSE



1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

2. CHECK RELAY

1) Measure the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 LI-01273
1 — 2	Apply battery voltage between terminals 4 and 3.	Less than 1 Ω	

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 LI-01274
1 — 4	Always	Less than 1 Ω	
1 — 2	Apply battery voltage between terminals 3 and 5.	Less than 1 Ω	

2) Replace the relay if the inspection result is not within the standard value.

3. Headlight System

A: WIRING DIAGRAM

Refer to “Headlight System” in the wiring diagram. <Ref. to WI-294, WIRING DIAGRAM, Headlight System.>

B: INSPECTION

1. CHECK HEADLIGHT SYSTEM

	Step	Check	Yes	No
1	**CHECK HEADLIGHT AND TAIL LIGHT ILLUMINATION.** 1) Turn the ignition to ON. 2) Set the lighting switch to the switch 1 (TAIL) and switch 2 (HEAD).	Do the headlight and tail light illuminate?	The headlight system is normal.	Go to step **2**.
2	**CHECK BULB.** Check the headlight bulb.	Is the bulb normal?	Go to step **3**.	Replace the headlight bulb.
3	**CHECK CURRENT DATA.** Display the data of «Lighting I Switch Input» and «Lighting II Switch Input» using Subaru Select Monitor. NOTE: For detailed procedures, refer to “PC application help for Subaru Select Monitor”.	Does the display switch between OFF ←→ ON when the lighting switch is moved to the switch 1 (TAIL) and switch 2 (HEAD) positions?	Go to step **6**.	Go to step **4**.
4	**CHECK COMBINATION SWITCH (LIGHT).** 1) Turn the ignition to OFF. 2) Check the combination switch (light).	Is the combination switch (light) normal?	Go to step **5**.	Replace the combination switch (light).
5	**CHECK HARNESS.** 1) Disconnect the connectors of body integrated unit and combination switch (light). 2) Check the harness between body integrated unit and combination switch (light).	Is harness normal?	Check the body integrated unit and replace it if defective. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Repair or replace the harness.
6	**CHECK CURRENT DATA.** 1) Turn the ignition to ON. 2) Display the data of «Lighting I Lamp Output» and «Lighting II Lamp Output» using Subaru Select Monitor.	Does the display switch between OFF ←→ ON when the lighting switch is moved to the switch 1 (TAIL) and switch 2 (HEAD) positions?	Check the body integrated unit and replace it if defective. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Go to step **7**.
7	**CHECK HARNESS.** 1) Turn the ignition to OFF. 2) Check the harness between body integrated unit and headlight and between body integrated unit and tail light.	Is harness normal?	Check the body integrated unit and replace it if defective. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Repair or replace the harness.

2. AUTO HEADLIGHT SYSTEM CHECK

NOTE:
Check the headlight system before checking the auto headlight system. <Ref. to LI-7, CHECK HEADLIGHT SYSTEM, INSPECTION, Headlight System.>

	Step	Check	Yes	No
1	**CHECK HEADLIGHT AND TAIL LIGHT ILLUMINATION.** 1) Turn the ignition to ON. 2) Make the light control sensor vicinity dark. 3) Set the lighting switch to AUTO position. 4) Make the light control sensor vicinity bright. 5) Turn the lighting switch to the OFF position and turn to the AUTO position again.	Do the headlight and tail light illuminate?	The auto headlight system is normal.	Go to step **2**.
2	**CHECK CURRENT DATA.** 1) Using the Subaru Select Monitor, display the data of «Illumination Sensor Output». 2) Measure the voltage when the area around the light control sensor, which was dark, becomes bright. NOTE: For detailed procedures, refer to “PC application help for Subaru Select Monitor”. ***Illumination sensor output*** ***Dark condition: Approx. 0.6 V or less*** ***Bright condition: Approx. 3.0 V or more***	Is the voltage output according to the brightness?	Go to step **5**.	Go to step **3**.
3	**CHECK LIGHT CONTROL SENSOR.** Check the light control sensor. <Ref. to LI-26, INSPECTION, Light Control Sensor.>	Is the light control sensor normal?	Go to step **4**.	Replace the light control sensor.
4	**CHECK HARNESS.** 1) Disconnect the connectors from body integrated unit and light control sensor. 2) Check the harness between body integrated unit and light control sensor. ***Connector & terminal*** ***(i171) No. 8 — (i89) No. 1:*** ***(i171) No. 27 — (i89) No. 2:*** ***(i171) No. 28 — (i89) No. 3:***	Is harness normal?	Check the body integrated unit and replace it if defective. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Repair or replace the harness.
5	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display the data of «Lighting AUTO input».	Does the display switch between OFF ←→ ON when the lighting switch is moved to the AUTO position?	Check the body integrated unit and replace it if defective. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Go to step **6**.
6	**CHECK COMBINATION SWITCH (LIGHT).** 1) Turn the ignition to OFF. 2) Check the combination switch (light). <Ref. to LI-24, INSPECTION, Combination Switch (Light).>	Is the combination switch (light) normal?	Go to step **7**.	Replace the combination switch (light).
7	**CHECK HARNESS.** 1) Disconnect the connectors of body integrated unit and combination switch (light). 2) Check the harness between body integrated unit and combination switch (light).	Is harness normal?	Check the body integrated unit and replace it if defective. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Repair or replace the harness.

3. AUTO DIMMER CANCEL

	Step	Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT SETTING.** Display the data of «Auto Dimmer Cancel Setting» using Subaru Select Monitor. NOTE: For detailed procedures, refer to "PC application help for Subaru Select Monitor".	Is the setting ON?	Go to step **2**.	Turn the setting to ON.
2	**AUTO HEADLIGHT SYSTEM CHECK.** Check the operation of auto headlight system.	Is the auto headlight system normal?	Go to step **3**.	Check and repair the auto headlight system. <Ref. to LI-8, AUTO HEADLIGHT SYSTEM CHECK, INSPECTION, Headlight System.>
3	**CHECK ILLUMINATION CONTROL SYSTEM.** Check the operation of illumination control system.	Is the illumination control system normal?	Check the body integrated unit and replace it if defective. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Check and repair the illumination control system. <Ref. to IDI-10, SWITCH, INSPECTION, Combination Meter System.>

4. CHECK OF WELCOME LIGHTING SYSTEM (WELCOME LIGHT DOES NOT ILLUMINATE)

	Step	Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT SETTING.** Display the data of «Welcome Light Off Delay Time(Approaching)» or «Welcome Light Off Delay Time(Exiting)» using the Subaru Select Monitor. NOTE: For detailed procedures, refer to "PC application help for Subaru Select Monitor".	Is the setting ON?	Go to step **2**.	Turn the setting to ON.
2	**CHECK BODY INTEGRATED UNIT SETTING.** Display the data of «Illumination Sensor Setting» using Subaru Select Monitor.	Is the setting "ON"?	Go to step **3**.	Turn the setting to "ON".
3	**CHECK AUTO HEADLIGHT.** 1) Set the lighting switch to AUTO position. 2) Make the light control sensor vicinity dark. 3) Turn the ignition to ON.	Do the parking light, tail and headlight illuminate?	Go to step **4**.	Check the auto headlight system. <Ref. to LI-8, AUTO HEADLIGHT SYSTEM CHECK, INSPECTION, Headlight System.>
4	**CHECK DOOR LOCK.** Operate the door lock using the keyless transmitter or the access key.	Do the lock and unlock operate properly?	Go to step **5**.	• Check keyless entry system. <Ref. to SL-18, INSPECTION, Keyless Entry System.> • Check keyless access system. <Ref. to KPS(diag)-2, Basic Diagnostic Procedure.>

	Step	Check	Yes	No
5	**CHECK BODY INTEGRATED UNIT.** 1) Display the data of «IG power supply voltage» using Subaru Select Monitor. 2) Turn the ignition to ON.	Is the voltage 10 — 15 V?	Replace the body integrated unit. <Ref. to SL-81, Body Integrated Unit.>	Repair or replace the harness.

5. CHECK OF WELCOME LIGHTING SYSTEM (WELCOME LIGHT REMAINS ON)

	Step	Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT SETTING.** Display the data of «Welcome Light Off Delay Time(Approaching)» or «Welcome Light Off Delay Time(Exiting)» using the Subaru Select Monitor. NOTE: For detailed procedures, refer to “PC application help for Subaru Select Monitor”.	Is the illumination time setting correct?	Go to step **2**.	Set the illumination time.
2	**CHECK THE LIGHTS.** Set the lighting switch to the switch 1 (TAIL) and switch 2 (HEAD).	Do the parking light, tail light and headlight illuminate?	Go to step **3**.	Check the combination switch (light) and each light circuit.
3	**CHECK BODY INTEGRATED UNIT.** Using the Subaru Select Monitor, display the data of «Driver’s door SW input».	Does the display switch between OFF ←→ ON when driver’s door is opened/closed?	Go to step **4**.	Check the door switch. <Ref. to SL-21, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>
4	**CHECK DOOR LOCK.** Operate the door lock using the keyless transmitter or the access key.	Do the lock and unlock operate properly?	Replace the body integrated unit. <Ref. to SL-81, Body Integrated Unit.>	• Check keyless entry system. <Ref. to SL-18, INSPECTION, Keyless Entry System.> • Check the keyless access with push button start system. <Ref. to KPS(diag)-2, Basic Diagnostic Procedure.>

6. CHECK LIGHTING SWITCH

Refer to “Combination Switch (Light)”. <Ref. to LI-24, INSPECTION, Combination Switch (Light).>

7. CHECK DIMMER & PASSING SWITCH

Refer to “Combination Switch (Light)”. <Ref. to LI-24, INSPECTION, Combination Switch (Light).>

C: NOTE

For operation procedures of each component of the headlight system, refer to the respective section.
- Headlight Assembly: <Ref. to LI-27, Headlight Assembly.>
- Headlight bulb: <Ref. to LI-33, Headlight Bulb.>
- Combination switch (light): <Ref. to LI-22, Combination Switch (Light).>
- Light control sensor: <Ref. to LI-25, Light Control Sensor.>

4. Day Time Running Light System

A: WIRING DIAGRAM

Refer to “Headlight System” in the wiring diagram. <Ref. to WI-294, WIRING DIAGRAM, Headlight System.>

B: INSPECTION

1. DAYTIME RUNNING LIGHT MODULE CHECK

	Step	Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT.** Read the DTC of body integrated unit using Subaru Select Monitor. NOTE: For detailed procedures, refer to “PC application help for Subaru Select Monitor”.	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK CURRENT DATA.** Display the following items using Subaru Select Monitor. • «EPB Operating status» • «Shift position» • «Lighting II Switch Input»	Is the input signal normal?	Go to step **3**.	Check the defective part.
3	**CHECK FUSE.** Check the headlight HI fuse (LH/RH). <Ref. to LI-5, Relay and Fuse.>	Is the fuse OK?	Go to step **4**.	Replace the fuse.
4	**CHECK HEADLIGHT ILLUMINATION.** 1) Turn the ignition to ON. 2) Turn the lighting switch to the switch 2 (HEAD) position. 3) Turn the dimmer & passing switch to the switch UP position.	Does the headlight (high beam) illuminate?	Go to step **5**.	Check the combination switch (light) and headlight bulb.
5	**CHECK RELAY.** Check the daytime running light relay (LH/RH) and headlight HI relay (LO/HI). <Ref. to LI-5, Relay and Fuse.>	Is each relay normal?	Go to step **6**.	Replace the relay.
6	**CHECK DAYTIME RUNNING RESISTOR.** Check the daytime running resistor. <Ref. to LI-83, INSPECTION, Day Time Running Resistor.>	Does the daytime running resistor normal?	Go to step **7**.	Replace the daytime running resistor.
7	**CHECK HARNESS.** 1) Disconnect the connectors of body integrated unit, daytime running relay, daytime running resistor, and headlight. 2) Check each harness.	Is harness normal?	Replace the body integrated unit. <Ref. to SL-81, Body Integrated Unit.>	Repair or replace the harness.

C: NOTE

For operation procedures of each component of the daytime running light system, refer to the respective section.

- Headlight Assembly: <Ref. to LI-27, Headlight Assembly.>
- Headlight bulb: <Ref. to LI-33, Headlight Bulb.>
- Combination switch (light): <Ref. to LI-22, Combination Switch (Light).>
- Daytime running resistor: <Ref. to LI-82, Day Time Running Resistor.>

5. Clearance Light and Illumination Light System

A: WIRING DIAGRAM

Refer to “Clearance Light and Illumination Light System” in the wiring diagram. <Ref. to WI-158, WIRING DIAGRAM, Clearance Light and Illumination Light System.>

B: INSPECTION

1. CHECK LIGHTING SWITCH

Refer to “Combination Switch (Light)”. <Ref. to LI-24, INSPECTION, Combination Switch (Light).>

C: NOTE

For operation procedures of each component of the clearance light & illumination light system, refer to the respective sections.

- Headlight Assembly: <Ref. to LI-27, Headlight Assembly.>
- Combination switch (light): <Ref. to LI-22, Combination Switch (Light).>
- Parking light bulb: <Ref. to LI-37, Clearance/Parking Light Bulb.>
- Front side marker light bulb: <Ref. to LI-38, Front Side Marker Light Bulb.>
- Rear combination light assembly: <Ref. to LI-46, Rear Combination Light Assembly.>
- Tail light/stop light bulb: <Ref. to LI-51, Tail/Stop Light Bulb.>
- Rear side marker light bulb: <Ref. to LI-53, Rear Side Marker Light Bulb.>
- License plate light: <Ref. to LI-58, License Plate Light.>
- Ignition switch illumination: <Ref. to LI-76, Ignition Switch Illumination.>

6. Front Fog Light System

A: WIRING DIAGRAM

Refer to “Front Fog Light System” in the wiring diagram. <Ref. to WI-280, WIRING DIAGRAM, Front Fog Light System.>

B: INSPECTION

1. CHECK STEERING RESPONSIVE FOG LIGHT SYSTEM

Refer to “Basic Diagnostic Procedure” of “STEERING RESPONSIVE FOG LIGHTS (DIAGNOSTICS)”. <Ref. to SRF(diag)-2, Basic Diagnostic Procedure.>

2. CHECK FRONT FOG LIGHT SWITCH

Refer to “Combination Switch (Light)”. <Ref. to LI-24, INSPECTION, Combination Switch (Light).>

C: NOTE

For operation procedures of each component of the front fog light system, refer to the respective section.

- Combination switch (light): <Ref. to LI-22, Combination Switch (Light).>
- Front fog light assembly: <Ref. to LI-39, Front Fog Light Assembly.>
- Front fog light bulb: <Ref. to LI-44, Front Fog Light Bulb.>

7. Turn Signal Light and Hazard Light System

A: WIRING DIAGRAM

Refer to “Turn Signal Light and Hazard Light System” in the wiring diagram. <Ref. to WI-451, WIRING DIAGRAM, Turn Signal Light and Hazard Light System.>

B: INSPECTION

1. CHECK HAZARD LIGHT SYSTEM

	Step	Check	Yes	No
1	**CHECK HAZARD LIGHT OPERATION.** 1) Turn the hazard switch to ON. 2) Check that the hazard light operates properly.	Does the hazard light blink?	The hazard light system is normal.	Go to step **2**.
2	**CHECK BULB.** Check the hazard (turn signal) light bulb.	Is the bulb normal?	Go to step **3**.	Replace the hazard (turn signal) light bulb.
3	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display the data of «Hazard switch Input». NOTE: For detailed procedures, refer to “PC application help for Subaru Select Monitor”.	Does the display change to OFF ←→ ON, when the hazard switch is turned to ON?	Go to step **6**.	Go to step **4**.
4	**CHECK HAZARD SWITCH.** Check the hazard switch. <Ref. to LI-35, INSPECTION, Hazard Switch.>	Is the hazard switch normal?	Go to step **5**.	Replace the hazard switch.
5	**CHECK HARNESS.** 1) Disconnect the connectors of body integrated unit and hazard switch. 2) Check the harness between body integrated unit and hazard switch.	Is harness normal?	Check the body integrated unit and replace it if defective. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Repair or replace the harness.
6	**CHECK CURRENT DATA.** Display the data of «Left turn signal output» and «Right turn signal output» using Subaru Select Monitor.	Does the display change to OFF ←→ ON, when the hazard switch is turned to ON?	Check the body integrated unit and replace it if defective. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Go to step **7**.
7	**CHECK HARNESS.** 1) Disconnect the connectors of body integrated unit and each turn signal light. 2) Check the harness between body integrated unit and each turn signal light.	Is harness normal?	Check the body integrated unit and replace it if defective. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Repair or replace the harness.

2. CHECK TURN SIGNAL LIGHT SYSTEM

	Step	Check	Yes	No
1	**CHECK TURN SIGNAL LIGHT OPERATION.** 1) Turn the ignition to ON. 2) Turn the turn signal light switch LH and RH to ON.	Does the turn signal light blink?	The turn signal light system is normal.	Go to step **2**.
2	**CHECK CURRENT DATA.** Display the data of «Left turn signal input» and «Right turn signal input» using Subaru Select Monitor. NOTE: For detailed procedures, refer to "PC application help for Subaru Select Monitor".	Does the display change to OFF ⟷ ON, when the turn signal switch is turned to ON?	Check the body integrated unit and replace it if defective. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK TURN SIGNAL SWITCH.** Check the turn signal switch. <Ref. to LI-35, INSPECTION, Hazard Switch.>	Is the turn signal switch OK?	Go to step **4**.	Replace the combination switch (light).
4	**CHECK HARNESS.** 1) Disconnect the connectors of body integrated unit and combination switch (light). 2) Check the harness between body integrated unit and combination switch (light).	Is harness normal?	Check the body integrated unit and replace it if defective. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Repair or replace the harness.

3. CHECK ONE-TOUCH TURN SIGNAL (ONE-TOUCH TURN SIGNAL DOES NOT OPERATE)

	Step	Check	Yes	No
1	**CHECK HAZARD LIGHT SYSTEM.** Check the hazard light system. <Ref. to LI-14, CHECK HAZARD LIGHT SYSTEM, INSPECTION, Turn Signal Light and Hazard Light System.>	Is the hazard light system normal?	Go to step **2**.	Repair the hazard light system.
2	**CHECK TURN SIGNAL LIGHT SYSTEM.** Check the hazard light system. <Ref. to LI-15, CHECK TURN SIGNAL LIGHT SYSTEM, INSPECTION, Turn Signal Light and Hazard Light System.>	Is the turn signal light system normal?	Go to step **3**.	Repair the turn signal light system.
3	**CHECK BODY INTEGRATED UNIT SETTING.** Display the data of «Lane change signal setting» using Subaru Select Monitor. NOTE: For detailed procedures, refer to "PC application help for Subaru Select Monitor".	Is the setting ON?	Check the body integrated unit and replace it if defective. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Turn the setting to ON.

4. CHECK TURN SIGNAL SWITCH

Refer to "Combination Switch (Light)". <Ref. to LI-24, INSPECTION, Combination Switch (Light).>

5. CHECK HAZARD SWITCH

Refer to "Hazard Switch". <Ref. to LI-35, INSPECTION, Hazard Switch.>

C: NOTE

For operation procedures of each component of the turn signal and hazard light system, refer to the respective sections.

- Headlight Assembly: <Ref. to LI-27, Headlight Assembly.>
- Combination switch (light): <Ref. to LI-22, Combination Switch (Light).>
- Front turn signal light bulb: <Ref. to LI-36, Front Turn Signal Light Bulb.>
- Side turn signal light assembly: <Ref. to LI-45, Side Turn Signal Light Assembly.>
- Rear combination light assembly: <Ref. to LI-46, Rear Combination Light Assembly.>
- Rear turn signal light bulb: <Ref. to LI-52, Rear Turn Signal Light Bulb.>
- Hazard switch: <Ref. to LI-34, Hazard Switch.>

8. Back-up Light System

A: WIRING DIAGRAM

Refer to “Back-up Light System” in the wiring diagram. <Ref. to WI-139, WIRING DIAGRAM, Back-up Light System.>

B: INSPECTION

1. CHECK BACK-UP LIGHT SWITCH (MT MODEL)

Refer to “MANUAL TRANSMISSION AND DIFFERENTIAL” section. <Ref. to 6MT-58, INSPECTION, Switches and Harness.>

2. CHECK INHIBITOR SWITCH (CVT MODEL)

Refer to “Inhibitor Switch” in “CONTINUOUSLY VARIABLE TRANSMISSION” section.

- H4 model: <Ref. to CVT(TR580)-108, Inhibitor Switch.>
- H6 model: <Ref. to CVT(TR690)-102, Inhibitor Switch.>

C: NOTE

For operation procedures of each component of the back-up light system, refer to the respective section.

- Rear finisher light assembly: <Ref. to LI-54, Rear Finisher Light Assembly.>
- Back-up light bulb: <Ref. to LI-56, Back-up Light Bulb.>

9. Stop Light System

A: WIRING DIAGRAM

Refer to “Stop Light System” in the wiring diagram. <Ref. to WI-438, WIRING DIAGRAM, Stop Light System.>

B: INSPECTION

1. CHECK STOP LIGHT SWITCH

Refer to “Stop Light Switch” in “BRAKE” section. <Ref. to BR-69, INSPECTION, Stop Light Switch.>

C: NOTE

For operation procedures of each component of the stop light system, refer to the respective section.

- Rear combination light assembly: <Ref. to LI-46, Rear Combination Light Assembly.>
- Tail light/stop light bulb: <Ref. to LI-51, Tail/Stop Light Bulb.>
- High-mounted stop light: <Ref. to LI-61, High-mounted Stop Light.>

10.Interior Light System

A: WIRING DIAGRAM

Refer to “Interior Light System” in the wiring diagram. <Ref. to WI-308, WIRING DIAGRAM, Interior Light System.>

B: INSPECTION

1. CHECK DOOR SWITCH

Refer to “Door Switch”. <Ref. to LI-84, INSPECTION, Door Switch.>

2. CHECK TRUNK LID LATCH SWITCH

Refer to “Trunk Lid Latch and Actuator Assembly” in “SECURITY AND LOCKS” section. <Ref. to SL-54, ACTUATOR, INSPECTION, Trunk Lid Latch and Actuator Assembly.>

3. CHECK REAR GATE LATCH SWITCH

Refer to “Rear Gate Latch and Actuator Assembly” in “SECURITY AND LOCKS” section. <Ref. to SL-51, ACTUATOR, INSPECTION, Rear Gate Latch and Actuator Assembly.>

C: NOTE

For operation procedures of each component of the interior light system, refer to the respective section.

- Spot map light: <Ref. to LI-63, Spot Map Light.>
- Room light: <Ref. to LI-65, Room Light.>
- Trunk room light: <Ref. to LI-69, Trunk Room Light.>
- Luggage room light: <Ref. to LI-67, Luggage Room Light.>
- LED illumination light: <Ref. to LI-72, LED Illumination Light.>
- Vanity mirror light: <Ref. to LI-75, Vanity Mirror Light.>
- Door step light: <Ref. to LI-71, Door Step Light.>
- Door switch: <Ref. to LI-84, Door Switch.>

11.Auto Headlight Beam Leveler System

A: WIRING DIAGRAM

Refer to “Headlight Beam Leveler System” in the wiring diagram. <Ref. to WI-288, WIRING DIAGRAM, Headlight Beam Leveler System.>

- Model without SRF: <Ref. to WI-288, WITHOUT SRF, WIRING DIAGRAM, Headlight Beam Leveler System.>
- Model with SRF: <Ref. to WI-291, WITH SRF, WIRING DIAGRAM, Headlight Beam Leveler System.>

B: SPECIFICATION

1. TERMINAL ARRANGEMENT OF AUTO HEADLIGHT BEAM LEVELER CM

Refer to “Control Module I/O Signal” of “AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)” section. <Ref. to AL(diag)-6, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

Refer to “Basic Diagnostic Procedure” of “AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)” section. <Ref. to AL(diag)-2, Basic Diagnostic Procedure.>

D: PROCEDURE

When parts related to the auto headlight beam leveler system are removed or replaced, perform the following procedures to initialize or reinitialize.

NOTE:
Before performing initialization or reinitialization, check the following:

- Vehicle is parked on a level surface.
- The inflation pressure of tires is correct.
- Unload any cargo from the vehicle.
- Vehicle’s fuel tank is fully filled.
- Refer to the following chart to determine whether to initialize or reinitialize.

Initialization	When the auto headlight beam leveler CM was replaced with a new module.
Reinitialization	• When the auto headlight beam leveler CM was replaced with a part from another vehicle. • When suspension parts have been removed or replaced. (Cradle, front arm, sub frame, lateral link, housing, strut, etc.) • When the vehicle height sensor has been replaced or removed.

CAUTION:
If the indicator does not flash three times or the headlight beam does not operate, it can be assumed that there is an open circuit or faulty wiring in the harness of the auto headlight beam leveler CM, vehicle height sensors or headlight assembly. Perform inspection and repair according to the inspection results, then perform initialization/reinitialization again.

- **Initialization: <Ref. to LI-21, INITIALIZATION, PROCEDURE, Auto Headlight Beam Leveler System.>**
- **Reinitialization: <Ref. to LI-21, REINITIALIZATION, PROCEDURE, Auto Headlight Beam Leveler System.>**

1. INITIALIZATION

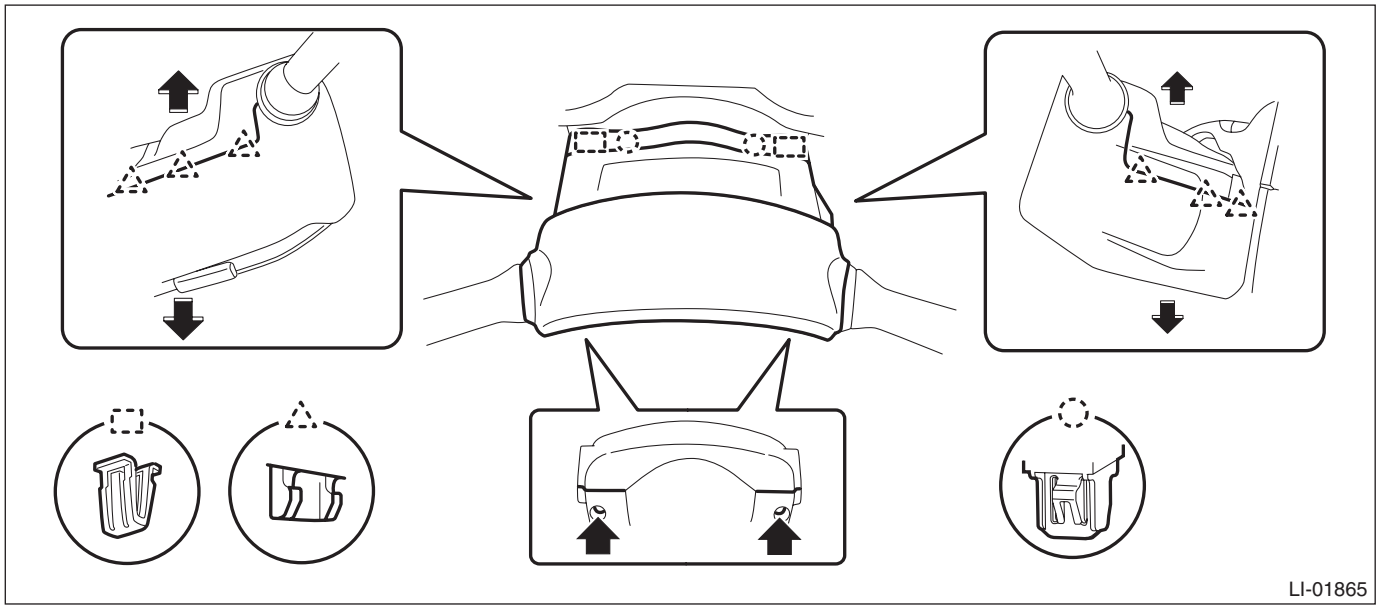
1) Check that the indicator in the meter is flashing twice repeatedly.
2) Bounce the vehicle several times to normalize the suspension.
3) Make certain that someone is seated in the driver's seat.
4) Turn the ignition switch to ON, and within 1.5 — 20 seconds, turn the lighting switch OFF → ON for three successive times.
5) Make sure that the indicator in the meter flashes three times and then turns OFF, indicating that initialization has been successfully completed. (At this time, the headlight beam drops once, and then returns to the original position.)
6) Perform beam adjustment for the headlight. <Ref. to LI-31, ADJUSTMENT, Headlight Assembly.>

2. REINITIALIZATION

1) Bounce the vehicle several times to normalize the suspension.
2) Make certain that someone is seated in the driver's seat.
3) Turn the ignition switch to ON, and, within 1.5 — 10 seconds, turn the lighting switch OFF → ON five or more successive times.
4) Check that the headlight beam drops once, then returns to normal.
5) After confirming 4), turn the ignition switch to OFF within 30 seconds.
6) Turn the ignition switch to ON again, and within 1.5 — 10 seconds, turn the lighting switch OFF → ON five or more successive times.
7) Make sure that the indicator in the meter flashes three times and then turns OFF, indicating that reinitialization has been successfully completed. (At this time, the headlight beam drops once, and then returns to the original position.)
8) Perform beam adjustment for the headlight. <Ref. to LI-31, ADJUSTMENT, Headlight Assembly.>

E: NOTE

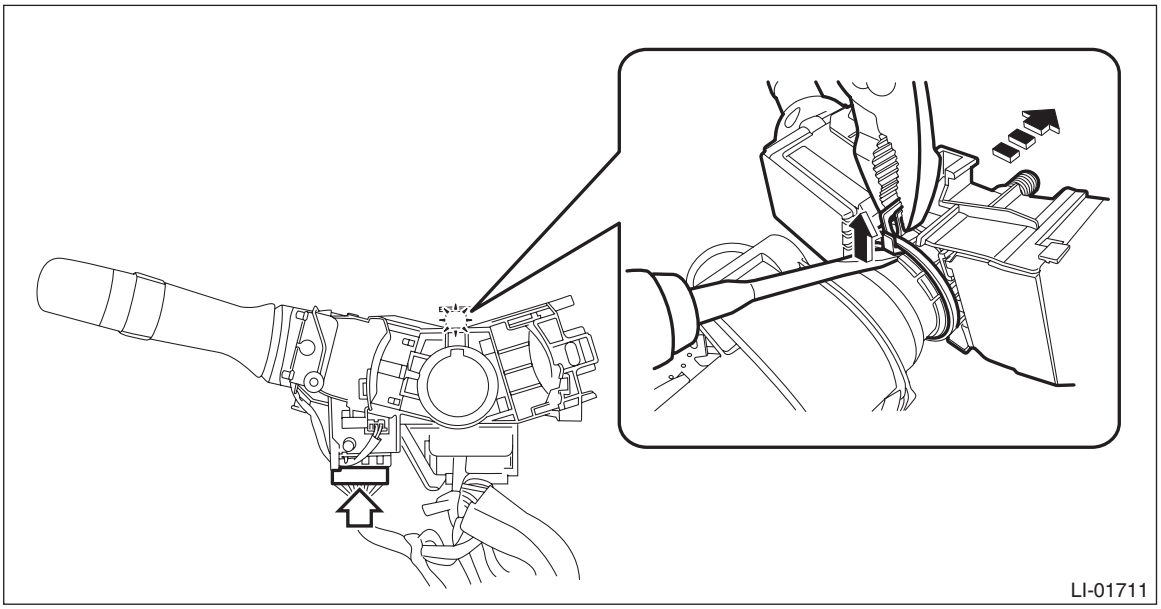
For operation procedures of each component of the auto headlight beam leveler system, refer to the respective section.



- Auto headlight beam leveler CM: <Ref. to LI-77, Auto Headlight Beam Leveler Control Module.>
- Vehicle height sensor: <Ref. to LI-80, Rear Height Sensor.>

12.Combination Switch (Light)

A: REMOVAL



CAUTION:
Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>

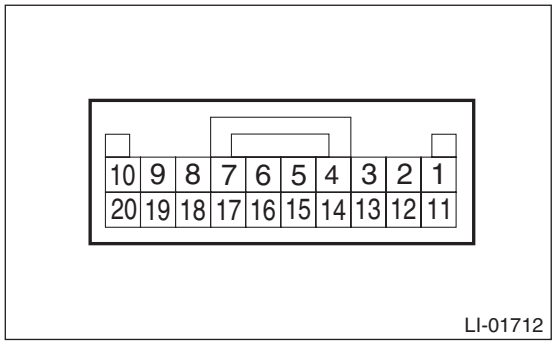
1) Set the tire to the straight-ahead position.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the driver's airbag module. <Ref. to AB-30, REMOVAL, Driver's Airbag Module.>
4) Remove the steering wheel. <Ref. to PS-9, REMOVAL, Steering Wheel.>
5) Remove the cover assembly - column.
   (1) Release the clips, and remove the cover assembly - steering UPR.
   (2) Remove the screws.
   (3) Release the claw, and remove the cover assembly - column UPR and the cover assembly - column LWR.

6) Remove the steering roll connector. <Ref. to AB-57, REMOVAL, Roll Connector.>
7) Remove the combination switch (wiper). <Ref. to WW-11, REMOVAL, Combination Switch (Wiper).>

8) Remove the switch assembly - combination turn dimmer.
(1) Disconnect the connector.
(2) Using pliers, loosen the clamp.
(3) With the clamp loosened, release the claw using a flat tip screwdriver, and remove the switch assembly - combination turn dimmer.

B: INSTALLATION

CAUTION:
• Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
• If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
1) Install the switch assembly - combination turn dimmer.
2) Install the combination switch (wiper).
3) Install the steering roll connector. <Ref. to AB-58, INSTALLATION, Roll Connector.>
4) Install the cover assembly - column.
5) Install the steering wheel.



Tightening torque:
39 N·m (4.0 kgf-m, 28.8 ft-lb)

Clearance:
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)
6) Install the driver's airbag module. <Ref. to AB-31, INSTALLATION, Driver's Airbag Module.>
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

- Lighting switch

Terminal No.	Inspection conditions	Standard
18 — 12 19 — 12 20 — 12	Switch OFF	1 MΩ or more
19 — 12	Switch AUTO	Less than 1 Ω
18 — 12	Switch 1 (TAIL)	Less than 1 Ω
18 — 12 20 — 12	Switch 2 (HEAD)	Less than 1 Ω

- Dimmer & passing switch

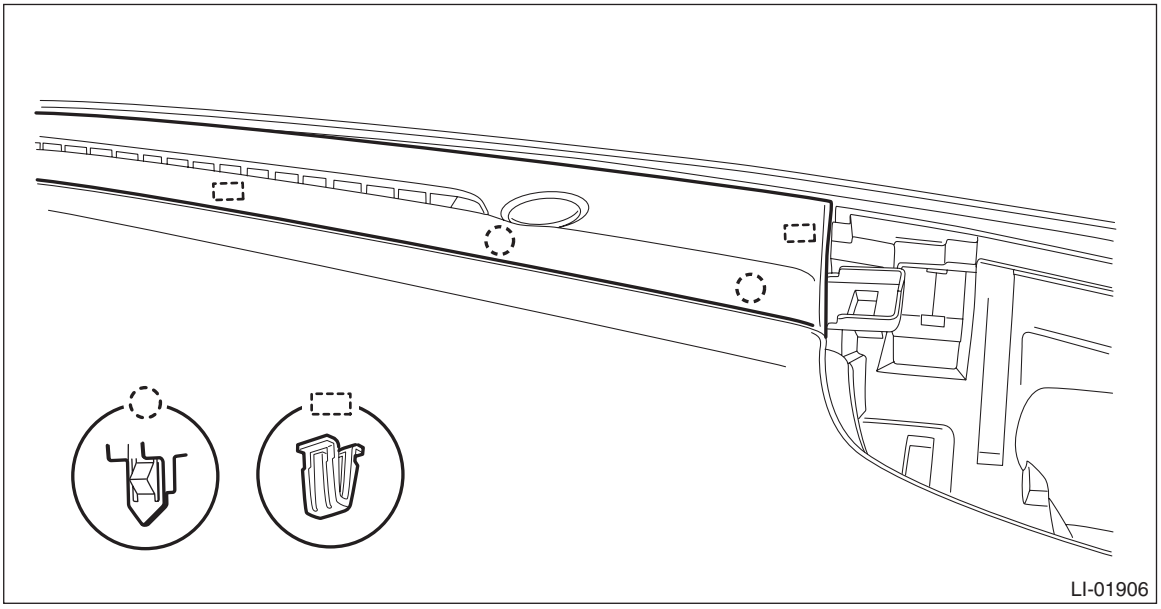
Terminal No.	Inspection conditions	Standard
11 — 12 17 — 12	Switch PASS	Less than 1 Ω
11 — 12	Switch UP	Less than 1 Ω

- Turn signal switch

Terminal No.	Inspection conditions	Standard
13 — 12	Switch TURN (RH)	Less than 1 Ω
15 — 12	Switch TURN (LH)	Less than 1 Ω

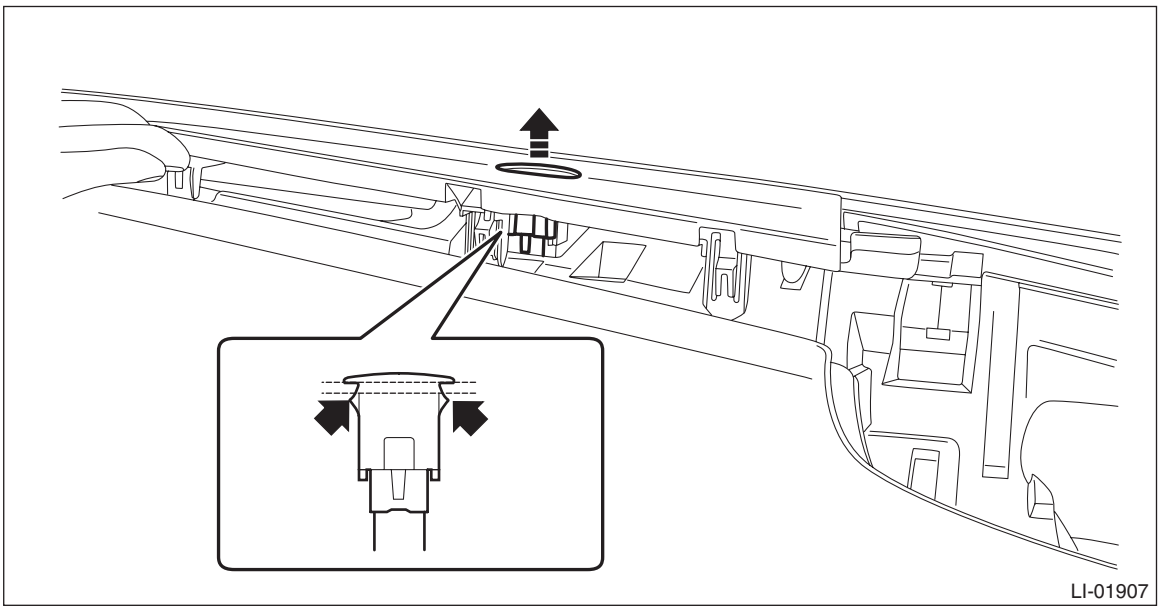
- Front fog light switch

Terminal No.	Inspection conditions	Standard
4 — 3	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω



2) Replace the switch assembly - combination turn dimmer if the inspection result is not within the standard value.

13.Light Control Sensor



A: REMOVAL

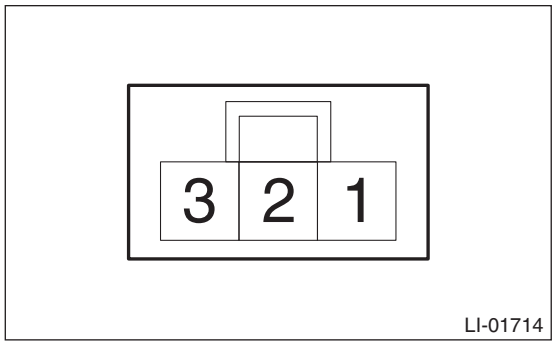
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front pillar UPR. <Ref. to EI-96, REMOVAL, Upper Inner Trim.>
3) Release the clips and claws, then detach the grille speaker side. <Ref. to ET-13, TWEETER, REMOVAL, Front Speaker.>
4) Remove the sensor - automatic light.
   (1) Release the claws of the panel COMPL - instrument UPR.

CAUTION:
• Secure minimum space for performing the operation. Do not remove the panel COMPL - instrument UPR. If the panel COMPL - instrument UPR is removed, it cannot be reinstalled unless the instrument panel is removed.
• Be careful not to damage the sensor and interior trim.

LI-01906

   (2) Release the claws, and pull out the sensor - automatic light from the panel COMPL - instrument UPR.
   (3) Disconnect the connector and remove the sensor - automatic light.

LI-01907



B: INSTALLATION

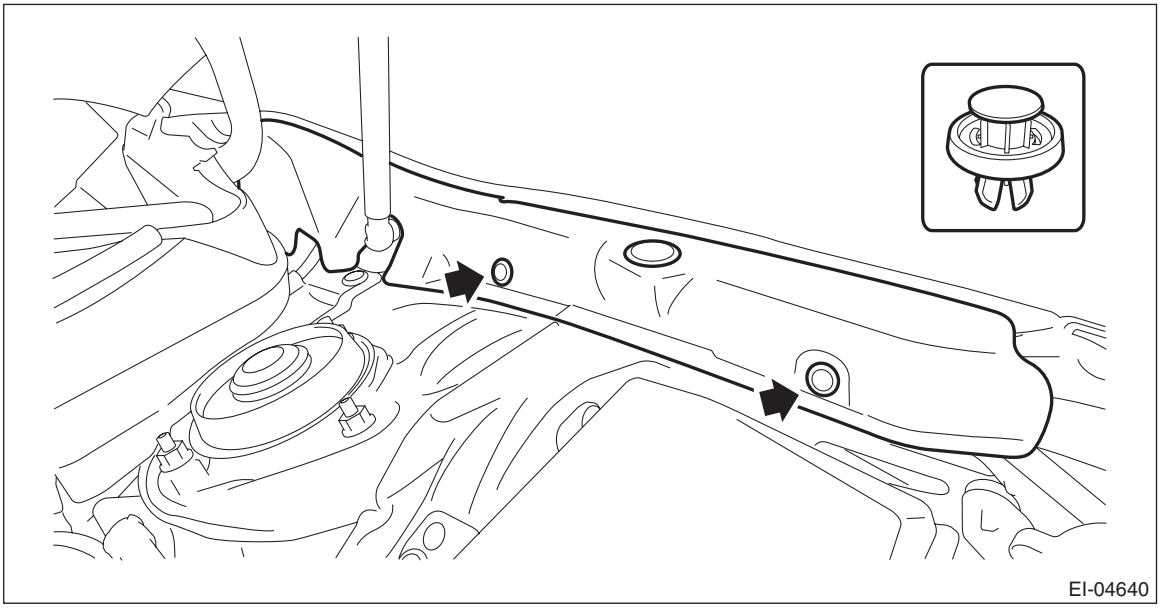
1) Install the sensor - automatic light.
2) Install the panel COMPL - instrument UPR.
3) Install the grille speaker side.
4) Install the trim panel - front pillar UPR. <Ref. to EI-97, INSTALLATION, Upper Inner Trim.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Connect the connector.
2) Turn the ignition switch to ON, and set the lighting switch to the AUTO position.
3) Measure the voltage between connector terminals.

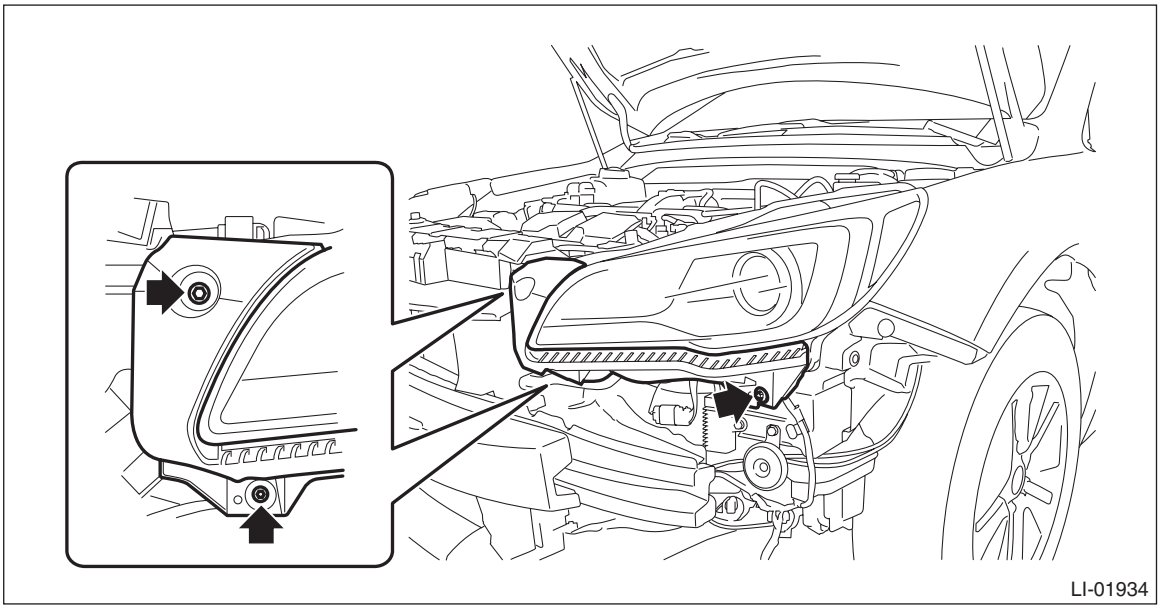
Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
2 (+) — 1 (–)	Measure the voltage when the area around the sensor - automatic light, which was dark, becomes bright.	Dark condition: Approx. 0.6 V or less
		Bright condition: Approx. 3.0 V or more



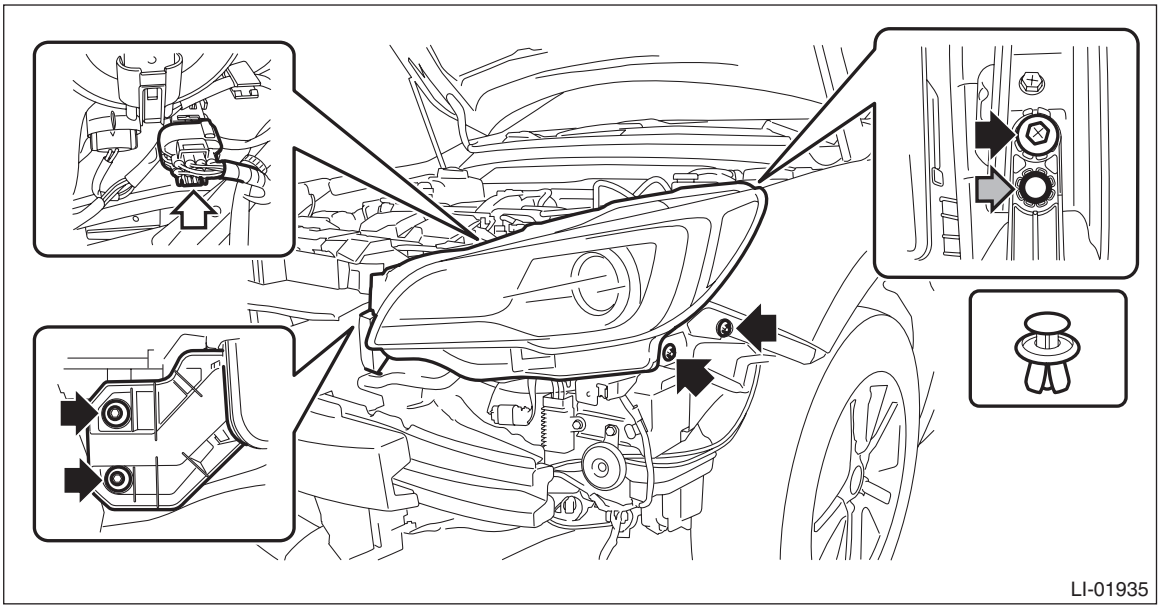
4) Replace the sensor - automatic light if the inspection result is not within the standard value.

14.Headlight Assembly



A: REMOVAL

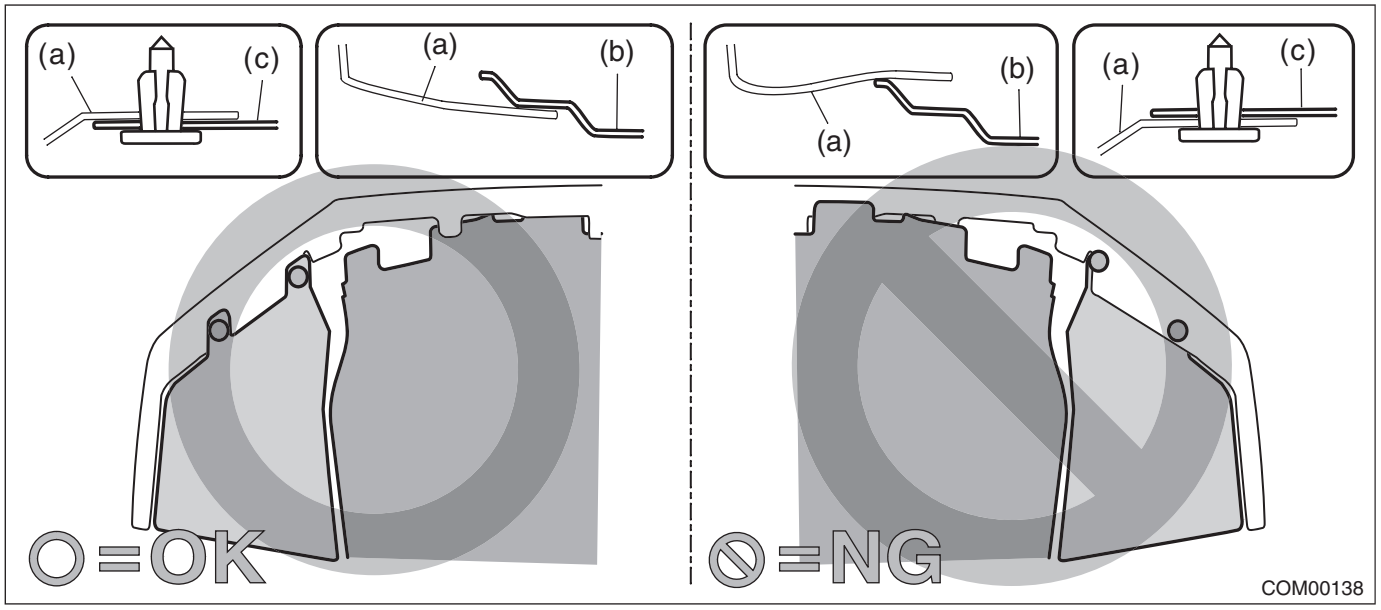
CAUTION:
Do not perform work with wet hands, because there is a possibility of electrical shock.



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the bumper face - front. <Ref. to EI-34, REMOVAL, Front Bumper.>
3) Remove the cover - front fender.
   (1) Remove the clip.
   (2) Release the claws, and then remove the cover - front fender UPR.

EI-04640

4) Remove the bolts, and then remove the bracket - front bumper corner.



LI-01934

5) Remove the light assembly - head.
(1) Disconnect the connector.
(2) Remove the bolts and clips, and remove the light assembly - head.

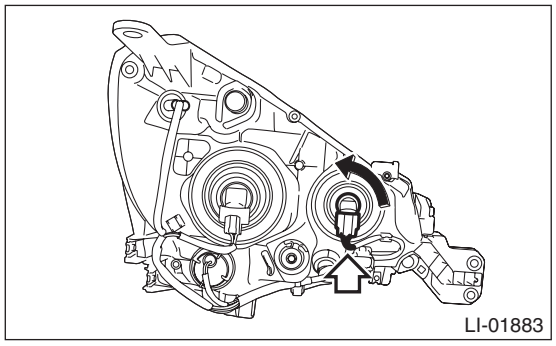
B: INSTALLATION

CAUTION:
• Install the bumper face - front so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).

• Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.

1) Install the light assembly - head.

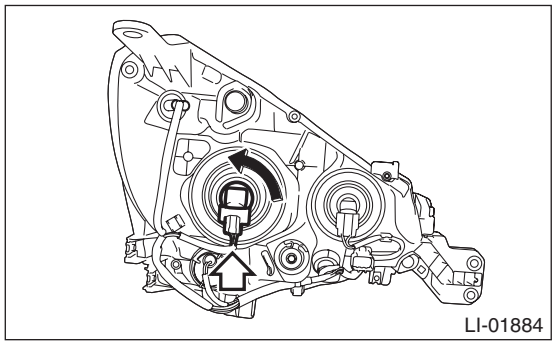
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the bracket - front bumper corner.



Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Install the cover - front fender UPR.
4) Install the bumper face - front. <Ref. to EI-38, INSTALLATION, Front Bumper.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
6) Adjust the headlight beam and fog light beam.
• Adjust the headlight beam. <Ref. to LI-31, HEADLIGHT BEAM ADJUSTMENT, ADJUSTMENT, Headlight Assembly.>
• Adjust the fog light beam. (Model with fog light) <Ref. to LI-41, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

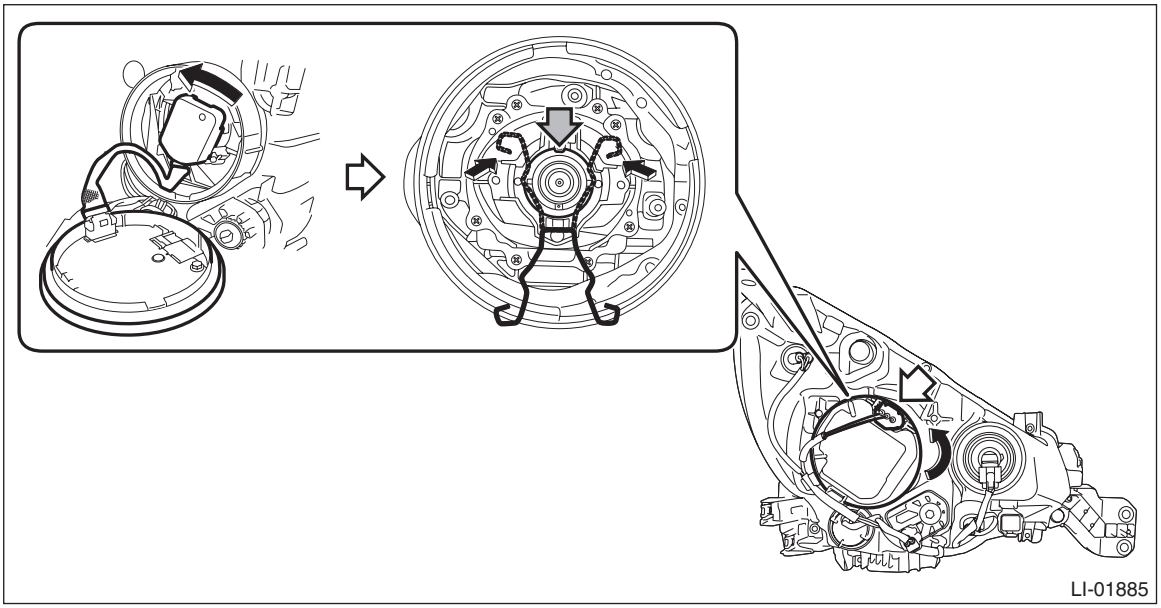
C: DISASSEMBLY

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.



1. HIGH BEAM BULB

1) Disconnect the connector.
2) Rotate in the direction of arrow shown in the figure to remove the high beam bulb.

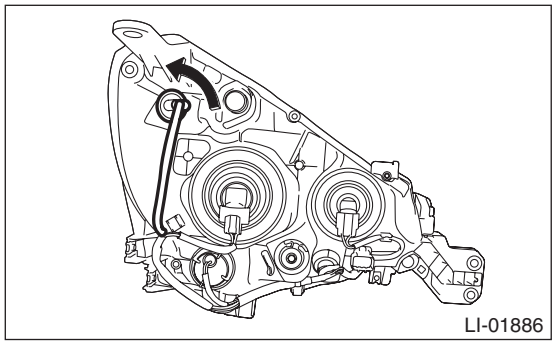


2. LOW BEAM BULB (HALOGEN TYPE)

1) Disconnect the connector.
2) Rotate in the direction of arrow shown in the figure to remove the low beam bulb.

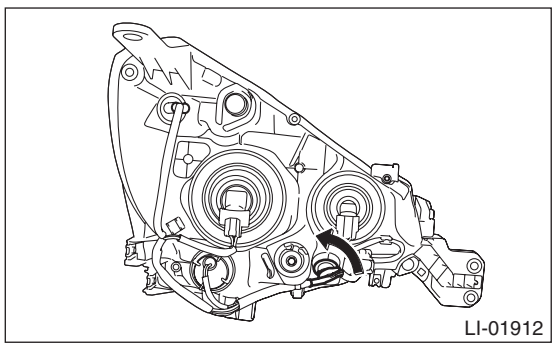
3. LOW BEAM BULB (HID TYPE)

1) Remove the connector and rotate the ballast - headlight in the arrow direction shown in the figure.
2) Rotate the bulb socket in the arrow direction shown in the figure to remove the ballast - headlight.
3) Unlock the bulb spring, and remove the low beam bulb.



4. PARKING LIGHT BULB

NOTE:
Since the LED type is a non-disassembled part, it cannot be removed.



5. SIDE MARKER LIGHT BULB

Rotate the bulb socket in the direction of arrow shown in the figure to remove the side marker light bulb.

6. TURN SIGNAL LIGHT BULB

Rotate the bulb socket in the direction of arrow shown in the figure to remove the turn signal light bulb.

D: ASSEMBLY

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

1. HIGH BEAM BULB

1) Install the high beam bulb.
2) Connect the connector.

2. LOW BEAM BULB (HALOGEN TYPE)

1) Install the low beam bulb.
2) Connect the connector.

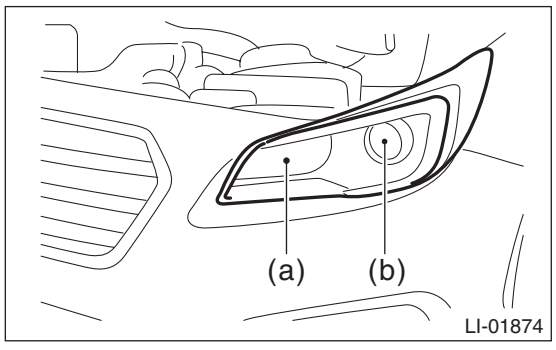
3. LOW BEAM BULB (HID TYPE)

1) Install the low beam bulb.
2) Install the ballast - headlight.

4. SIDE MARKER LIGHT BULB

1) Install the side marker light bulb.
2) Install the bulb socket.

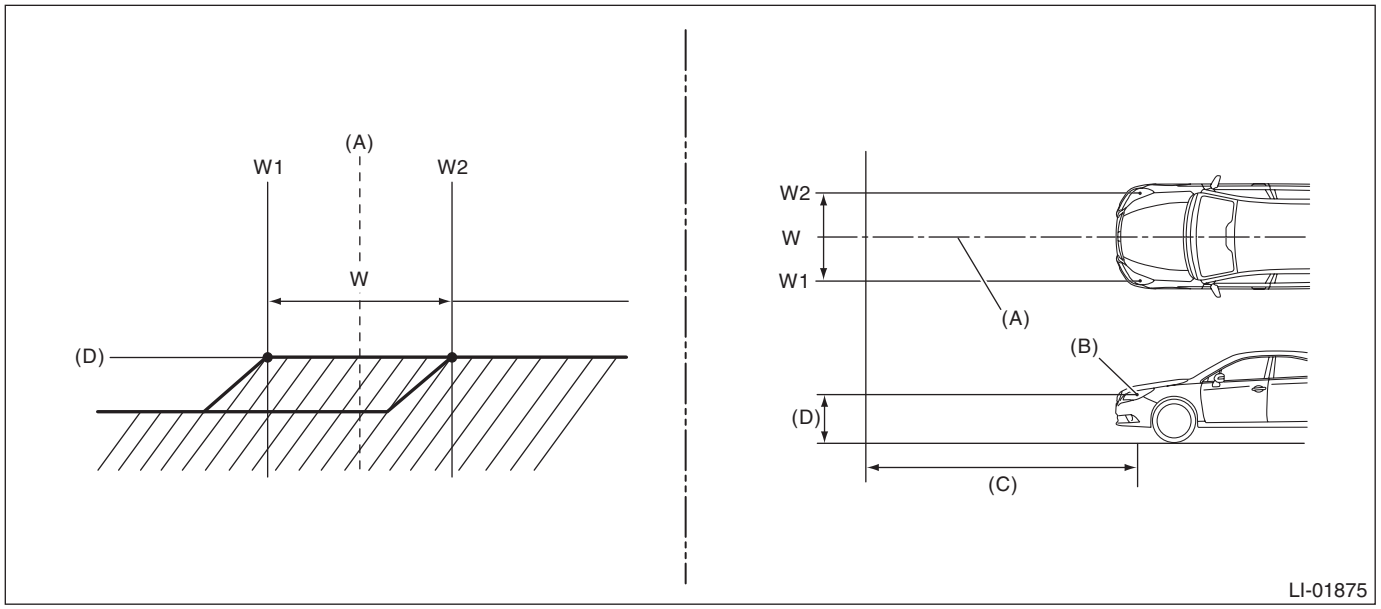
5. TURN SIGNAL LIGHT BULB



1) Install the turn signal light bulb.
2) Install the bulb socket.

E: ADJUSTMENT

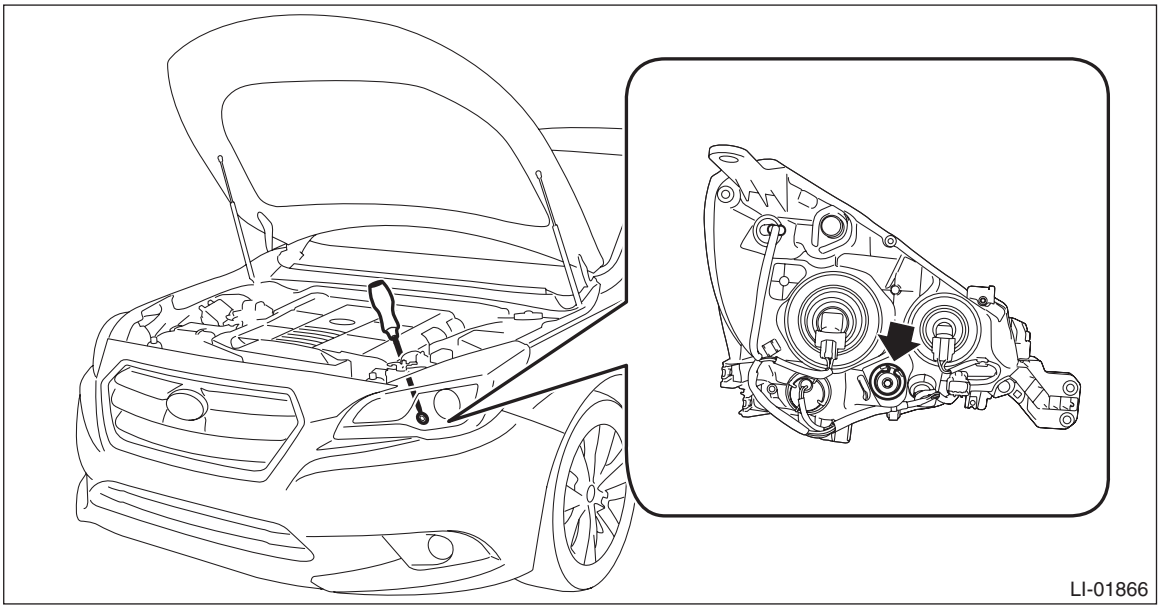
1. HEADLIGHT BEAM ADJUSTMENT



CAUTION:
• Turn off the light before adjusting the headlight beam level. If it is necessary to inspect the beam level, do not keep the light on for two minutes or more.
• When blocking the light emitted from the headlight, use a light shield or equivalent.
Do not apply the tape on the lens or place the cloth over it. It may raise the temperature in the light and cause deformation/bubble formations of the plastic lens.
1) Before checking the headlight beam level, be sure of the following:
- The area around the headlight has not sustained any scratches, damage or other type of deformation.
- The vehicle is parked on a level surface.
- The inflation pressure of tires is correct.
- The vehicle does not have load.
- Vehicle's fuel tank is fully filled.

2) Set the headlight beam leveler switch to "0" position. (Model with manual leveler)
3) Bounce the vehicle several times to normalize the suspension.
4) Make certain that someone is seated in the driver's seat.
5) Measure the distance between the low beam bulb centers and the height of the bulb center.

(a) High beam
(b) Low beam



6) Adjust the headlight beam.
(1) Place the vehicle with the front end facing to the measurement panel, open the front hood, and then illuminate the low beam.

(A) Vehicle center
(B) Bulb center marking
(C) 3 m (10 ft)
(D) Height of headlight center

W mm (in)
1,430 (56.3)

(2) Adjust the beam level by turning the aiming screw.

15.Headlight Bulb

A: REMOVAL

1. HIGH BEAM

CAUTION:
- **Do not perform work with wet hands, because there is a possibility of electrical shock.**
- **Do not leave the light assembly - head without the bulb for a long time. Dust, moisture, etc. entering the light may affect its performance.**

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the high beam bulb. <Ref. to LI-29, HIGH BEAM BULB, DISASSEMBLY, Headlight Assembly.>

2. LOW BEAM

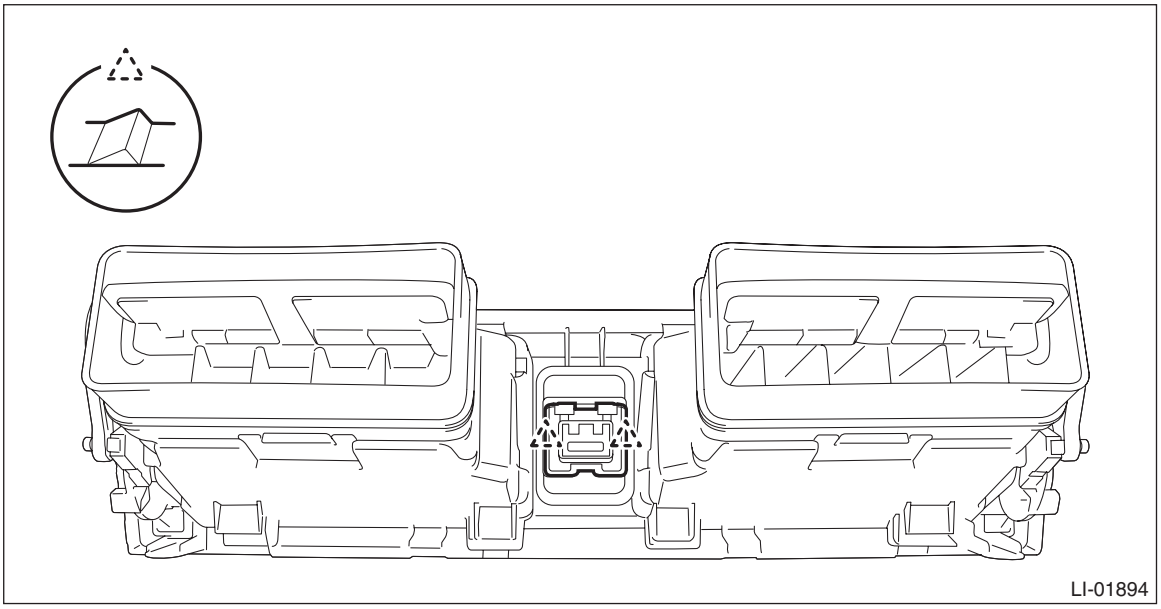
CAUTION:
- **Do not perform work with wet hands, because there is a possibility of electrical shock.**
- **Do not leave the light assembly - head without the bulb for a long time. Dust, moisture, etc. entering the light may affect its performance.**

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the low beam bulb. <Ref. to LI-29, LOW BEAM BULB (HALOGEN TYPE), DISASSEMBLY, Headlight Assembly.>
- Halogen type: <Ref. to LI-29, LOW BEAM BULB (HALOGEN TYPE), DISASSEMBLY, Headlight Assembly.>
- HID type: <Ref. to LI-30, LOW BEAM BULB (HID TYPE), DISASSEMBLY, Headlight Assembly.>

B: INSTALLATION

1. HIGH BEAM

1) Install the high beam bulb. <Ref. to LI-31, HIGH BEAM BULB, ASSEMBLY, Headlight Assembly.>
2) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



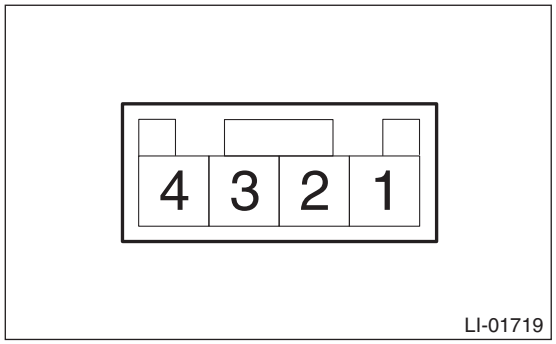
2. LOW BEAM

1) Install the low beam bulb. <Ref. to LI-31, LOW BEAM BULB (HALOGEN TYPE), ASSEMBLY, Headlight Assembly.>
2) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

16.Hazard Switch

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the center grille assembly. <Ref. to EI-79, REMOVAL, Center Console.>
3) Release the claws, and then remove the switch - hazard.



B: INSTALLATION

CAUTION:
Make sure that the center grille assembly is inserted into the air vent duct correctly.
1) Install the switch - hazard.
2) Install the center grille assembly.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
2 — 3	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check the lighting condition of the light.

Terminal No.	Inspection conditions	Specification
4 (+) — 1 (–)	Apply battery voltage.	Light ON

3) Replace the switch - hazard if the inspection result is not within the standard value.

17.Front Turn Signal Light Bulb

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the front turn signal light bulb. <Ref. to LI-30, TURN SIGNAL LIGHT BULB, DISASSEMBLY, Headlight Assembly.>

B: INSTALLATION

1) Install the front turn signal light bulb. <Ref. to LI-31, ASSEMBLY, Headlight Assembly.>
2) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

18.Clearance/Parking Light Bulb

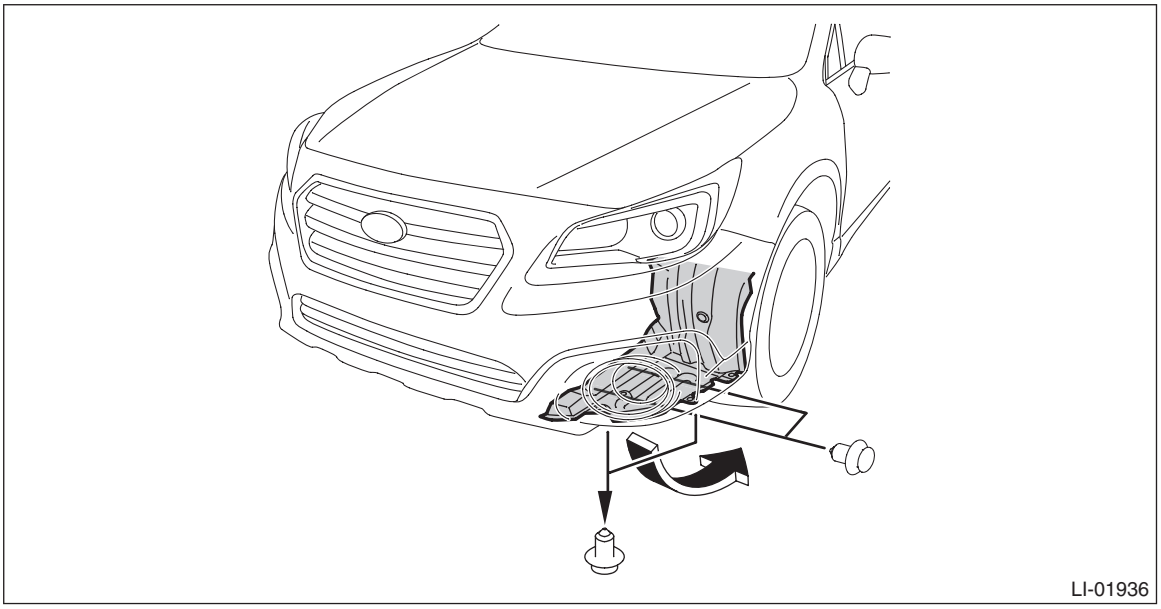
A: NOTE

Since the parking light bulb (LED) is a non-disassembled part, it cannot be removed from the headlight assembly.

19.Front Side Marker Light Bulb

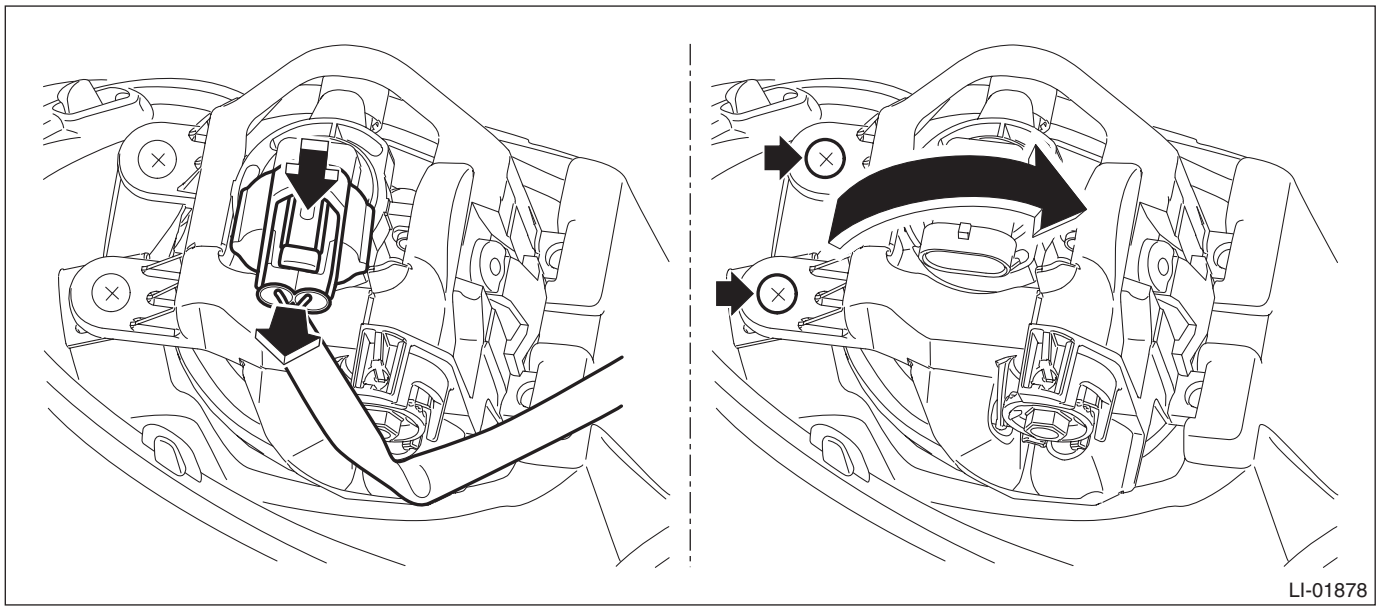
A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the front side marker light bulb. <Ref. to LI-30, SIDE MARKER LIGHT BULB, DISASSEMBLY, Headlight Assembly.>



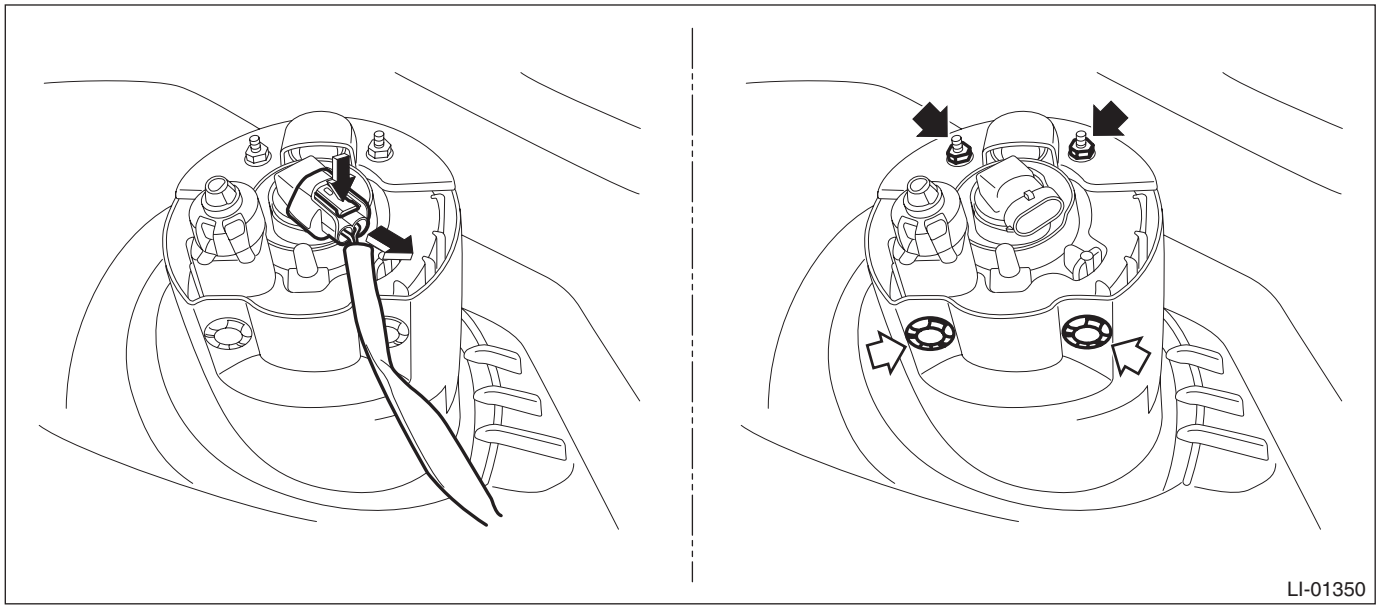
B: INSTALLATION

1) Install the front side marker light bulb. <Ref. to LI-31, SIDE MARKER LIGHT BULB, ASSEMBLY, Headlight Assembly.>
2) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



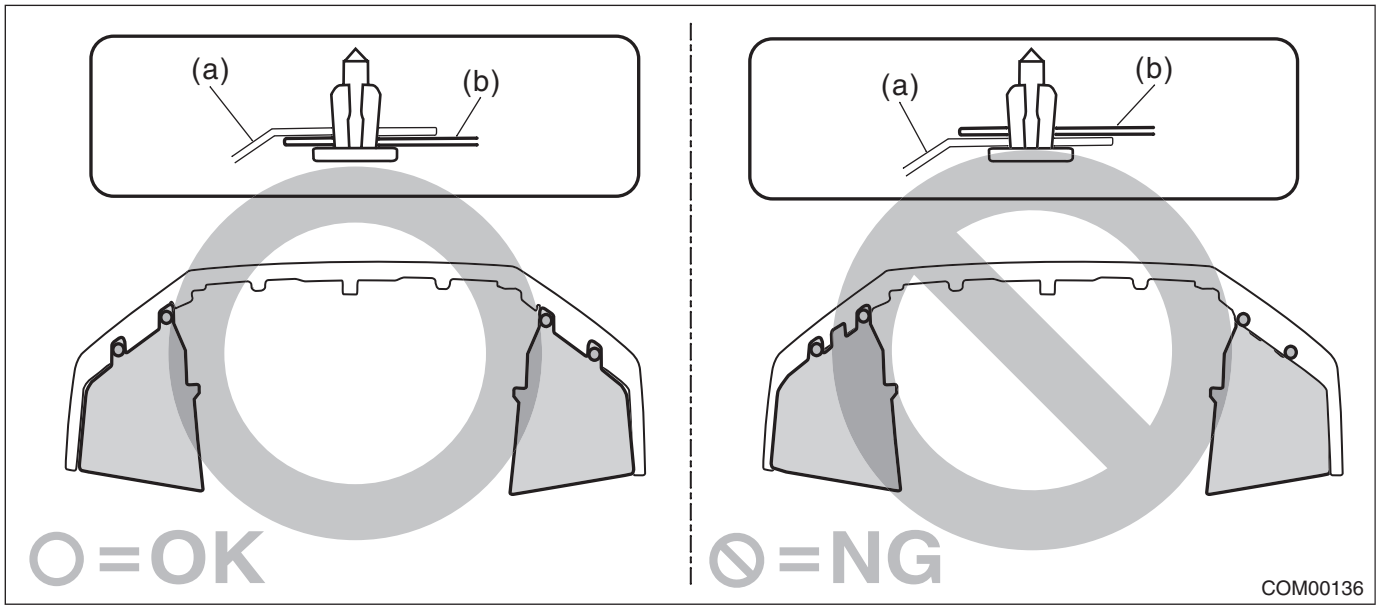
20.Front Fog Light Assembly

A: REMOVAL



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle.
3) Remove the clips, and turn over the mud guard - front.

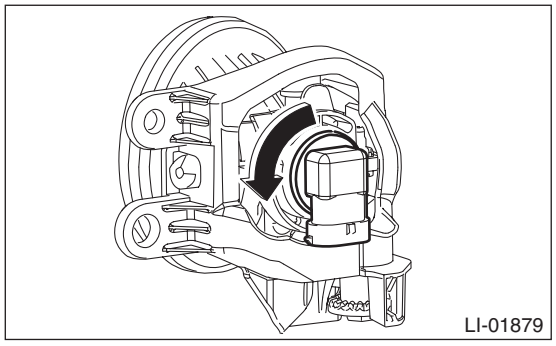
4) Remove the fog light assembly - front.
   (1) Disconnect the connector.
   (2) Remove the screws and clips, and remove the fog light assembly - front.
   • Sedan model



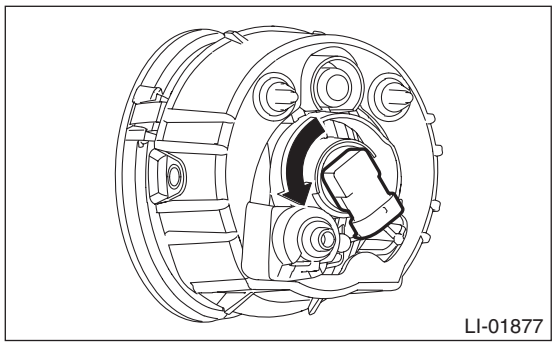
- OUTBACK model

B: INSTALLATION

CAUTION:
Install the mud guard - front so that the front end of the mud guard (b) comes outside the bumper face - front (a).



1) Install the fog light assembly - front.
2) Install the mud guard - front.
3) Lower the vehicle.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Adjust the fog light beam. <Ref. to LI-41, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>



C: DISASSEMBLY

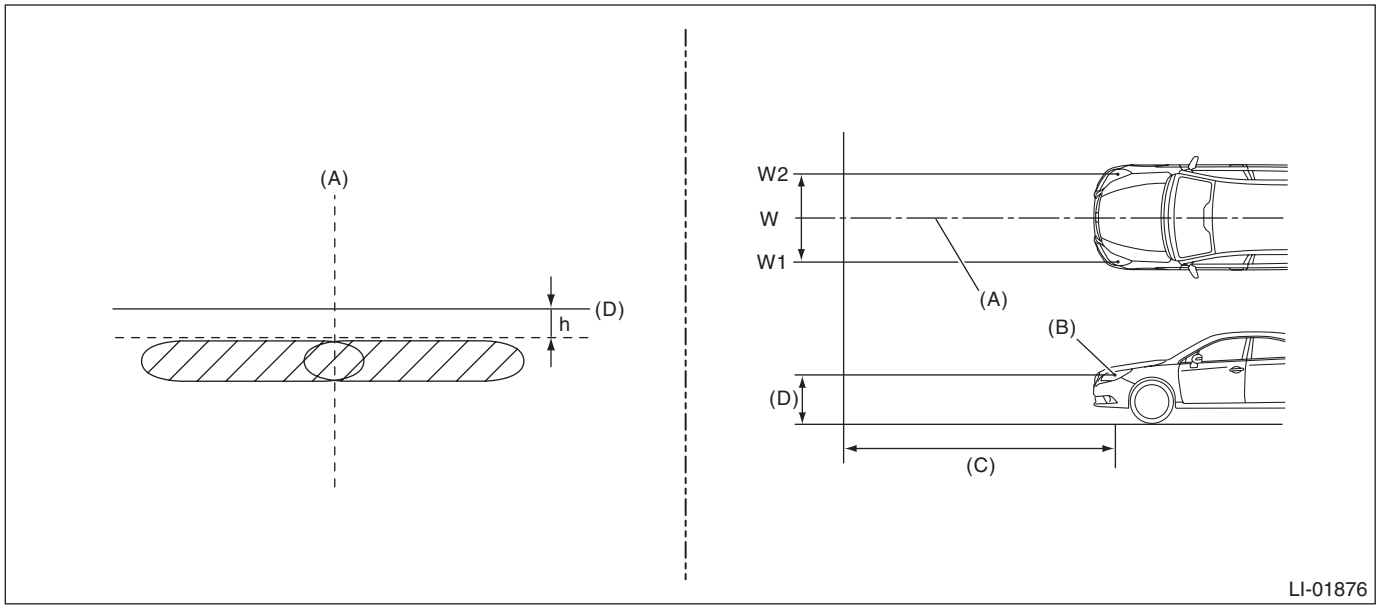
CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
Rotate in the direction of arrow shown in the figure to remove the front fog light bulb.

- Sedan model

- OUTBACK model

D: ASSEMBLY

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
Install the front fog light bulb.

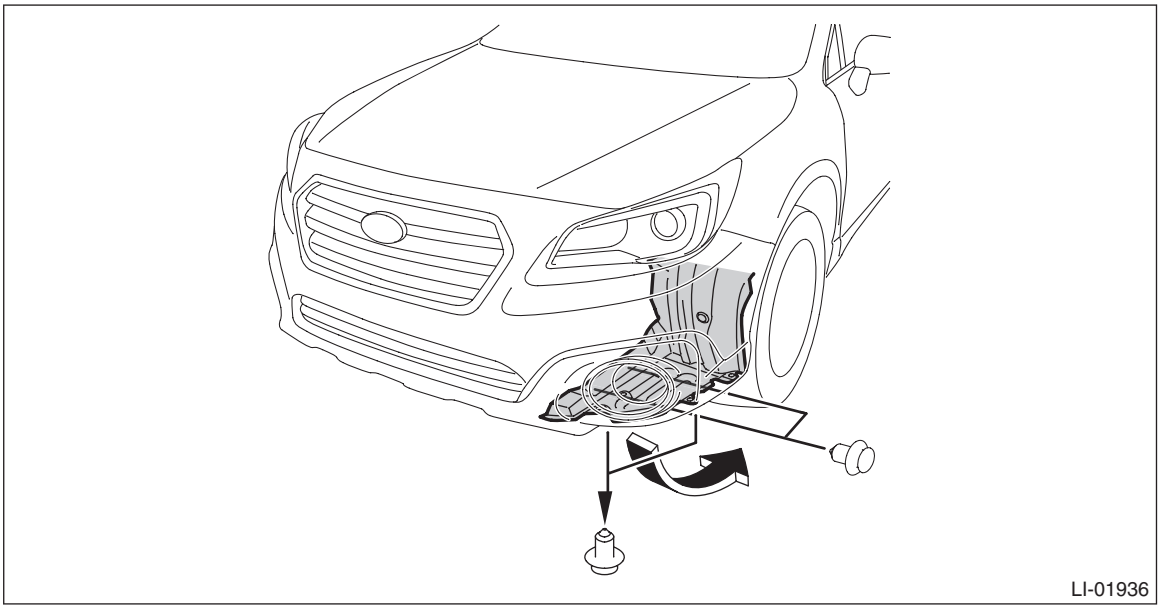


E: ADJUSTMENT

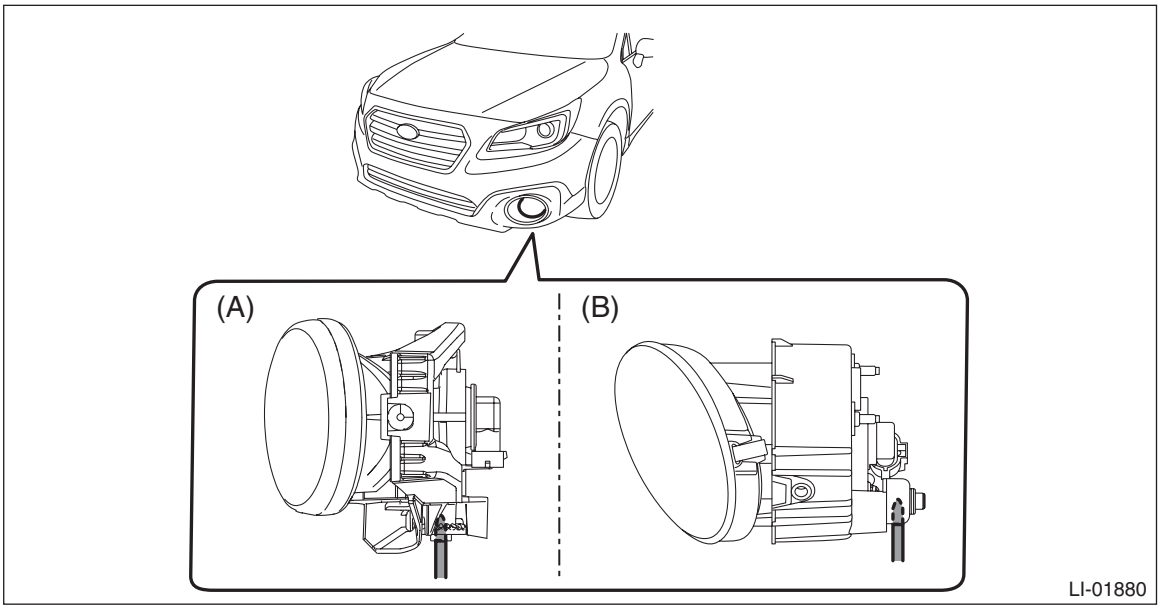
1. FOG LIGHT AIMING

1) Before checking the fog light beam level, be sure of the following:
- The area around the fog light has not sustained any accident, damage or other type of deformation.
- The vehicle is parked on a level surface.
- The inflation pressure of tires is correct.
- The vehicle does not have load.
- Vehicle's fuel tank is fully filled.

2) Bounce the vehicle several times to normalize the suspension.
3) Make certain that someone is seated in the driver's seat.



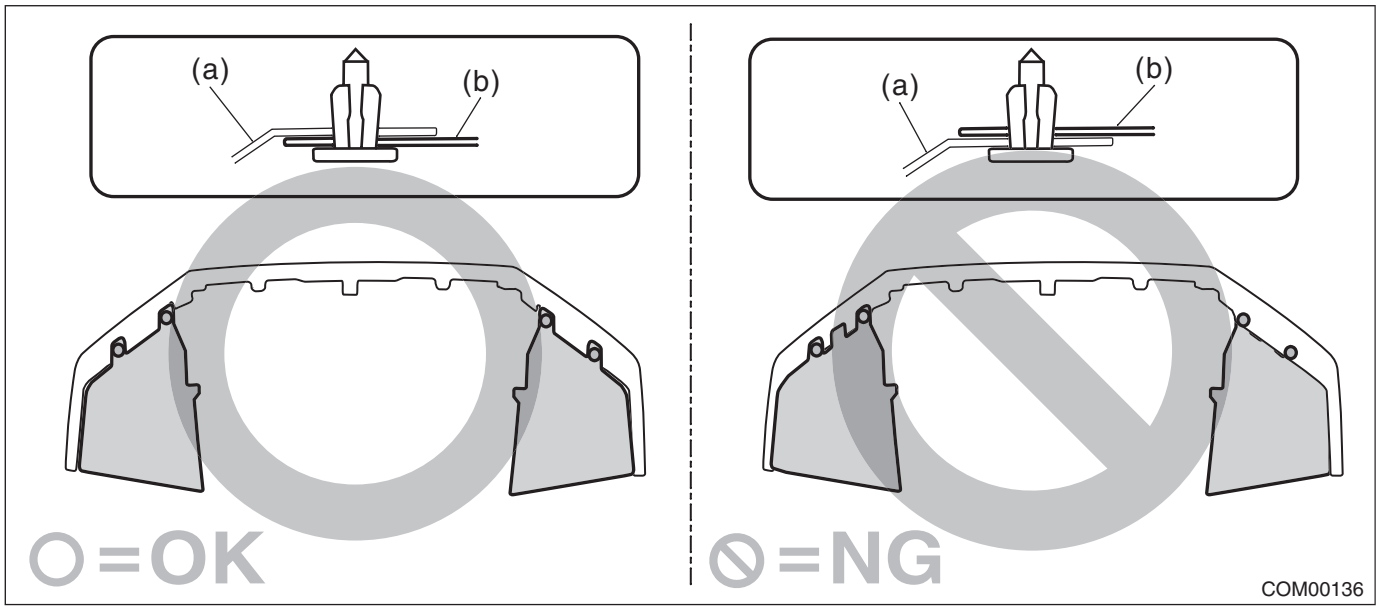
4) Place the vehicle with the front end facing to the measurement panel.



(A) Vehicle center
(B) Bulb center marking
(C) 3 m (10 ft)
(D) Height of fog light center

h mm (in) at 3 m (10 ft)
40 (1.58)

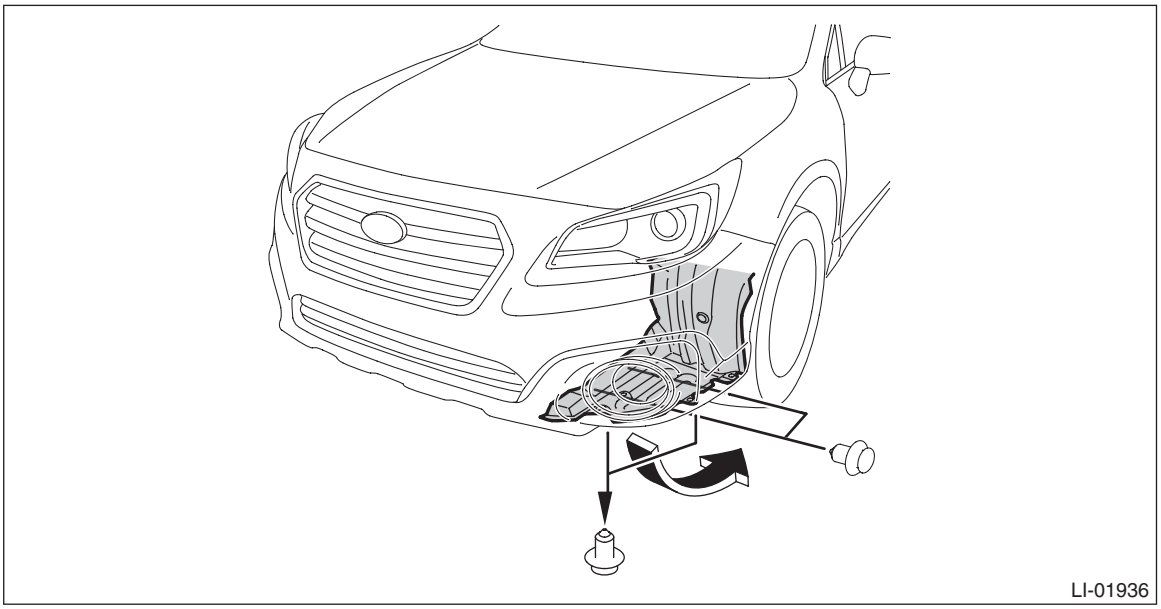
5) Adjust the fog light beam.
(1) Remove the clips, and turn over the mud guard - front.



(2) Adjust the beam level by turning the aiming screw.

(A) Sedan model (B) OUTBACK model

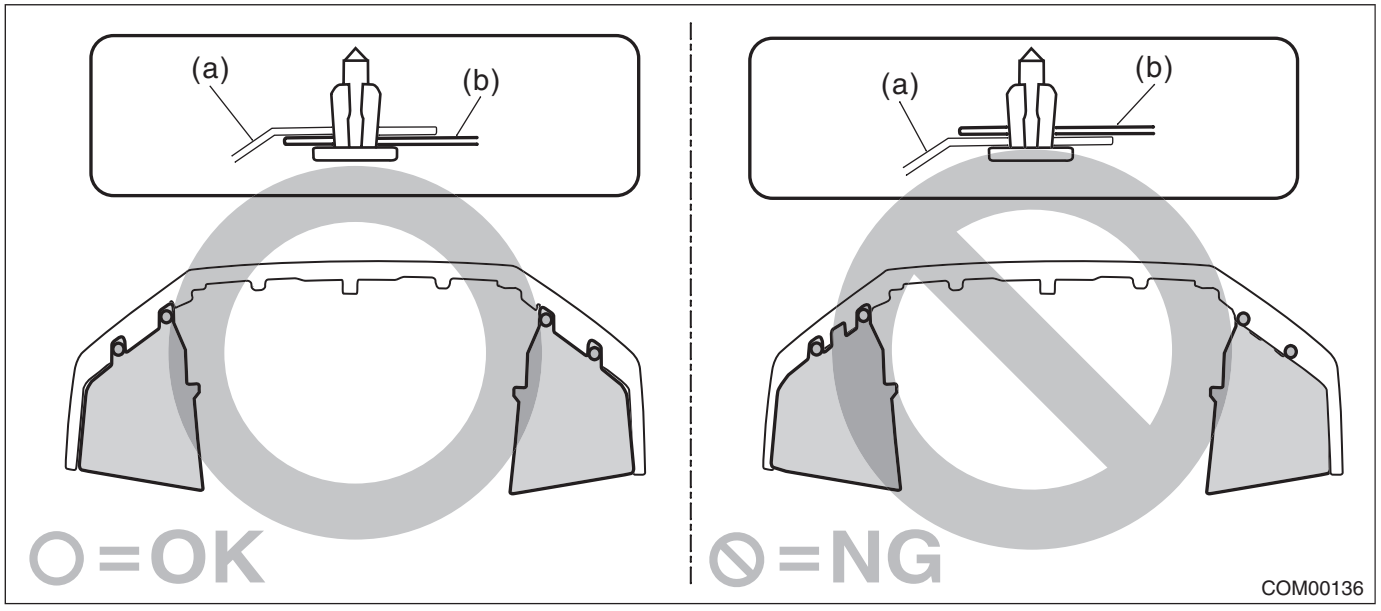
(3) Install the mud guard - front.



CAUTION:
Install the mud guard - front so that the front end of the mud guard (b) comes outside the bumper face - front (a).

21.Front Fog Light Bulb

A: REMOVAL



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the clips, and turn over the mud guard - front.

3) Remove the front fog light bulb. <Ref. to LI-41, DISASSEMBLY, Front Fog Light Assembly.>

B: INSTALLATION

CAUTION:
Install the mud guard - front so that the front end of the mud guard (b) comes outside the bumper face - front (a).

CAUTION:
After connecting the connector, make sure that the bulb is locked securely.
1) Install the front fog light bulb. <Ref. to LI-41, ASSEMBLY, Front Fog Light Assembly.>
2) Install the mud guard - front.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

22.Side Turn Signal Light Assembly

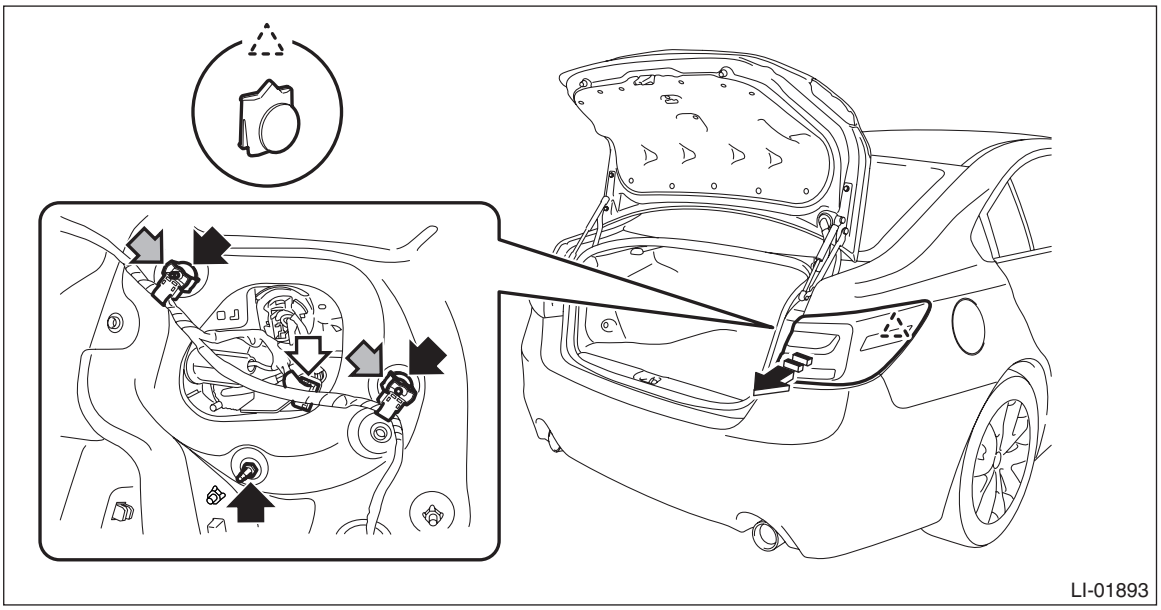
A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the outer mirror assembly. <Ref. to GW-26, REMOVAL, Outer Mirror Assembly.>
3) Remove the side turn signal light assembly. <Ref. to GW-28, DISASSEMBLY, Outer Mirror Assembly.>

B: INSTALLATION

1) Install the side turn signal light assembly.
2) Install the outer mirror assembly.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

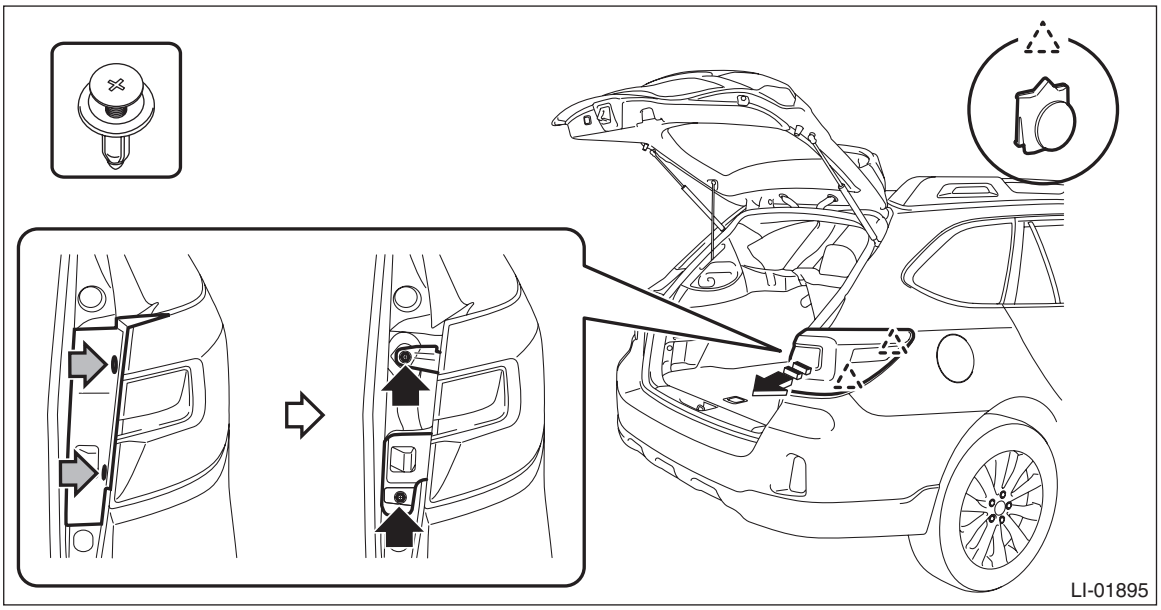


23.Rear Combination Light Assembly

A: REMOVAL

1. SEDAN MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trunk room trim. <Ref. to EI-110, REMOVAL, Trunk Room Trim.>
3) Remove the light assembly - rear combination.
   (1) Remove the harness clip and connector.
   (2) Release the nuts and clips, then remove the light assembly - rear combination.



CAUTION:
Be careful not to damage the clips.

2. OUTBACK MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the light assembly - rear combination.
   (1) Remove the clips and detach the rear combination light covers.
   (2) Remove the bolt and release the clip.
   (3) Disconnect the connector and remove the light assembly - rear combination.

CAUTION:
Be careful not to damage the clips.

B: INSTALLATION

1. SEDAN MODEL

1) Replace the gasket - rear combination with a new part.
2) Install the light assembly - rear combination.

CAUTION:
Be careful not to catch the harness in between the parts.

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

3) Install the trunk room trim.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. OUTBACK MODEL

1) Install the light assembly - rear combination.

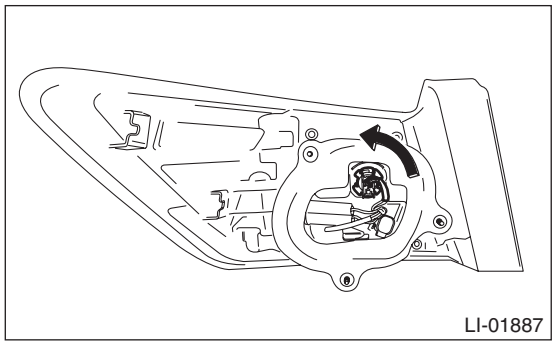
CAUTION:
Be careful not to catch the harness in between the parts.

Tightening torque:
7.5 N·m (8.0 kgf-m, 5.5 ft-lb)

2) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

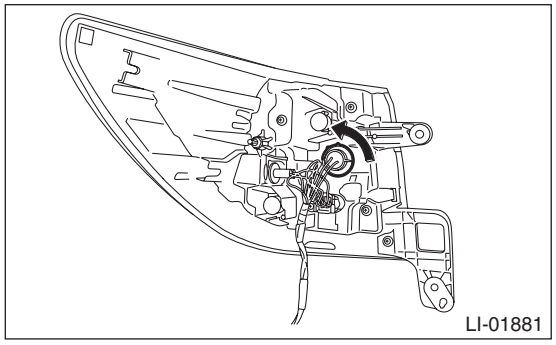
C: DISASSEMBLY

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.



1. TAIL LIGHT/STOP LIGHT BULB

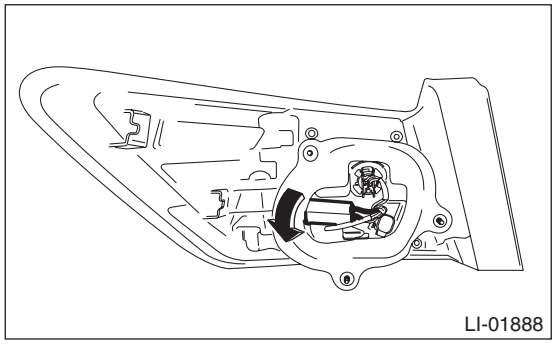
NOTE:
Since the LED type is a non-disassembled part, it cannot be removed.



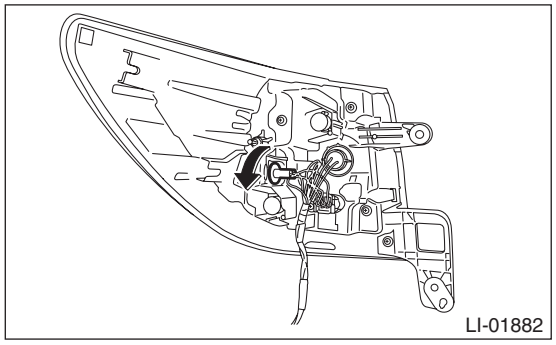
2. TURN SIGNAL LIGHT BULB

Rotate the bulb socket in the direction of arrow shown in the figure to remove the turn signal light bulb.

- Sedan model



- OUTBACK model



3. SIDE MARKER LIGHT BULB

1) Rotate the bulb socket in the direction of arrow shown in the figure to remove the side marker light bulb.

- Sedan model

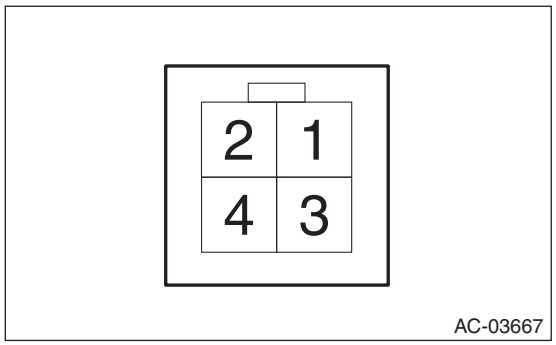
- OUTBACK model

D: ASSEMBLY

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

1. TURN SIGNAL LIGHT BULB

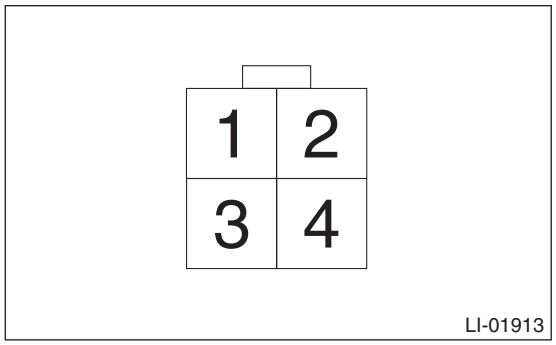
1) Install the turn signal light bulb.
2) Install the bulb socket.



2. SIDE MARKER LIGHT BULB

1) Install the side marker light bulb.
2) Install the bulb socket.

E: INSPECTION



1) Apply battery voltage between the connector terminals to check the lighting condition of the light.

- Sedan model

Terminal No.	Inspection conditions	Specification
3 (+) — 2 (–)	Apply battery voltage.	Stop light on
4 (+) — 2 (–)		Tail / side marker light on
1 (+) — 2 (–)		Turn signal light on

- OUTBACK model

Terminal No.	Inspection conditions	Specification
4 (+) — 3 (–)	Apply battery voltage.	Stop light on
2 (+) — 3 (–)		Tail / side marker light on
1 (+) — 3 (–)		Turn signal light on

2) Replace the harness and bulb if it is found defective.

24.Tail/Stop Light Bulb

A: NOTE

Since the tail light / stop light bulb (LED) is a non-disassembled part, it cannot be removed from the rear combination light assembly.

25.Rear Turn Signal Light Bulb

A: REMOVAL

1. SEDAN MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trunk room trim. <Ref. to EI-110, REMOVAL, Trunk Room Trim.>
3) Remove the rear turn signal light bulb. <Ref. to LI-48, TURN SIGNAL LIGHT BULB, DISASSEMBLY, Rear Combination Light Assembly.>

2. OUTBACK MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the light assembly - rear combination. <Ref. to LI-47, OUTBACK MODEL, REMOVAL, Rear Combination Light Assembly.>
3) Remove the rear turn signal light bulb. <Ref. to LI-48, TURN SIGNAL LIGHT BULB, DISASSEMBLY, Rear Combination Light Assembly.>

B: INSTALLATION

1. SEDAN MODEL

1) Install the rear turn signal light bulb. <Ref. to LI-49, TURN SIGNAL LIGHT BULB, ASSEMBLY, Rear Combination Light Assembly.>
2) Install the trunk room trim.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. OUTBACK MODEL

1) Install the rear turn signal light bulb. <Ref. to LI-49, TURN SIGNAL LIGHT BULB, ASSEMBLY, Rear Combination Light Assembly.>
2) Install the light assembly - rear combination.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

26.Rear Side Marker Light Bulb

A: REMOVAL

1. SEDAN MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trunk room trim. <Ref. to EI-110, REMOVAL, Trunk Room Trim.>
3) Remove the rear side marker light bulb. <Ref. to LI-48, SIDE MARKER LIGHT BULB, DISASSEMBLY, Rear Combination Light Assembly.>

2. OUTBACK MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the light assembly - rear combination. <Ref. to LI-47, OUTBACK MODEL, REMOVAL, Rear Combination Light Assembly.>
3) Remove the rear side marker light bulb. <Ref. to LI-48, SIDE MARKER LIGHT BULB, DISASSEMBLY, Rear Combination Light Assembly.>

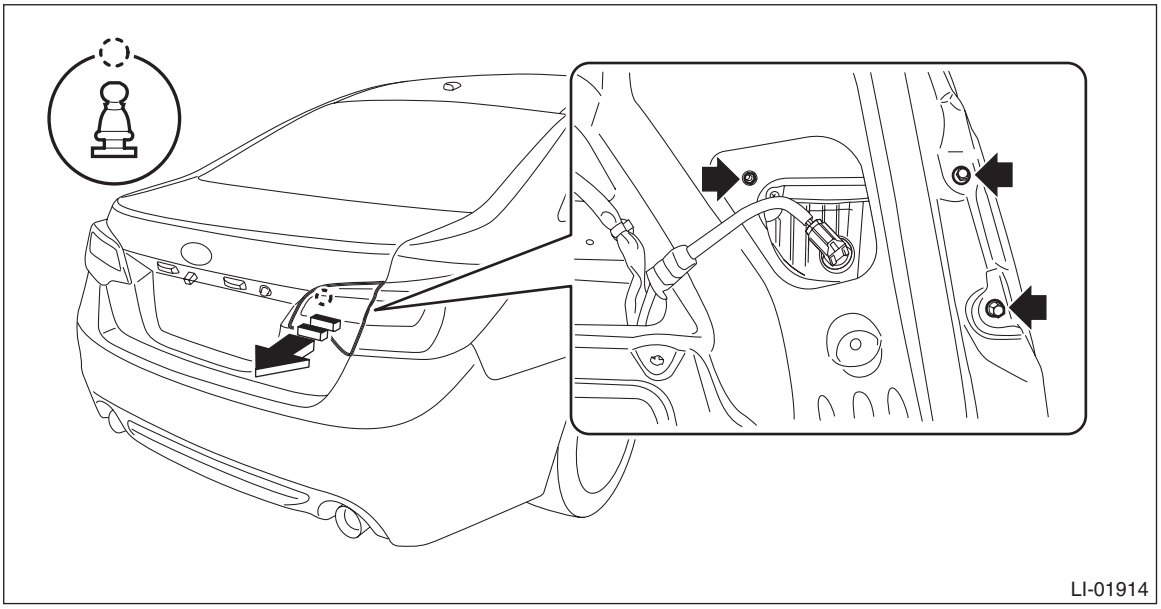
B: INSTALLATION

1. SEDAN MODEL

1) Install the rear side marker light bulb. <Ref. to LI-49, SIDE MARKER LIGHT BULB, ASSEMBLY, Rear Combination Light Assembly.>
2) Install the trunk room trim.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. OUTBACK MODEL

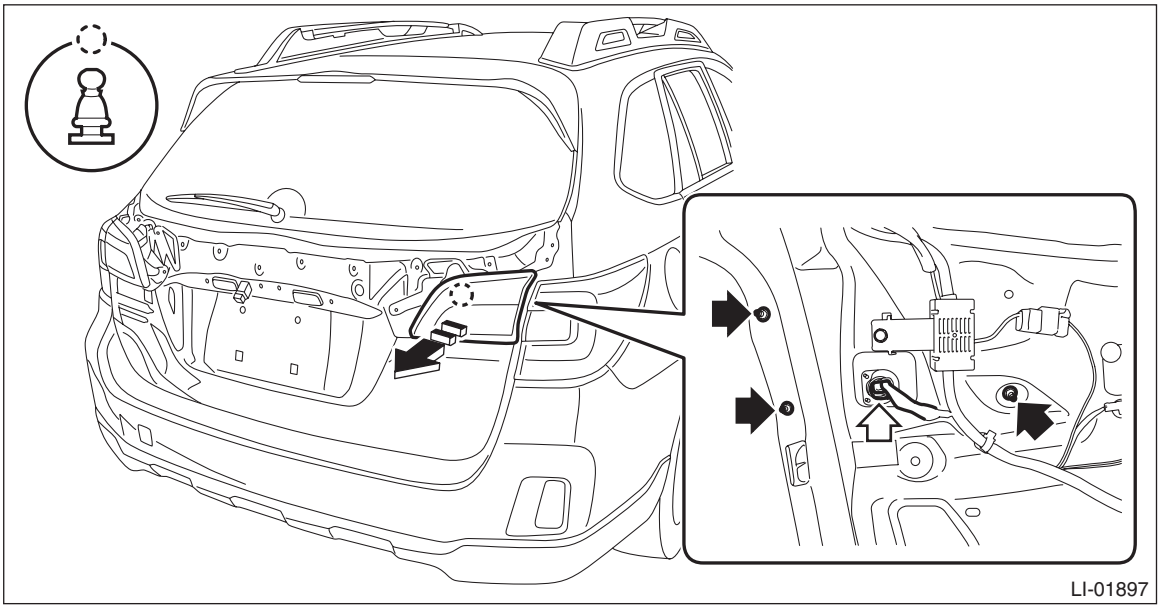
1) Install the rear side marker light bulb. <Ref. to LI-49, SIDE MARKER LIGHT BULB, ASSEMBLY, Rear Combination Light Assembly.>
2) Install the light assembly - rear combination.



Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

27.Rear Finisher Light Assembly

A: REMOVAL



1. SEDAN MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - trunk lid. <Ref. to EI-110, REMOVAL, Trunk Room Trim.>
3) Remove the garnish - rear gate. <Ref. to EI-110, REMOVAL, Trunk Room Trim.>
4) Remove the rear finisher light assembly.
   (1) Disconnect the connector.
   (2) Remove the nuts and release the pin, then remove the rear finisher light assembly.

2. OUTBACK MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate. <Ref. to EI-122, REMOVAL, Rear Gate Trim.>
3) Remove the garnish assembly - rear gate. <Ref. to EI-61, REMOVAL, Rear Gate Garnish.>
4) Remove the rear finisher light assembly.
   (1) Disconnect the connector.
   (2) Remove the nuts and release the pin, then remove the rear finisher light assembly.

B: INSTALLATION

1. SEDAN MODEL

1) Replace the body seal gasket with a new part.
2) Install the rear finisher light assembly.
3) Install the garnish - rear gate.

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

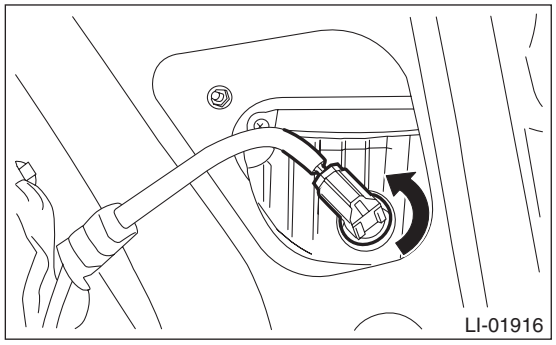
4) Install the trim panel - trunk lid.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. OUTBACK MODEL

1) Replace the body seal gasket with a new part.
2) Install the rear finisher light assembly.
3) Install the garnish assembly - rear gate.

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

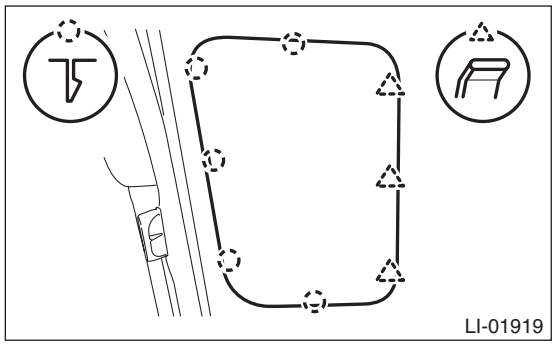
4) Install the trim panel - rear gate.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



28.Back-up Light Bulb

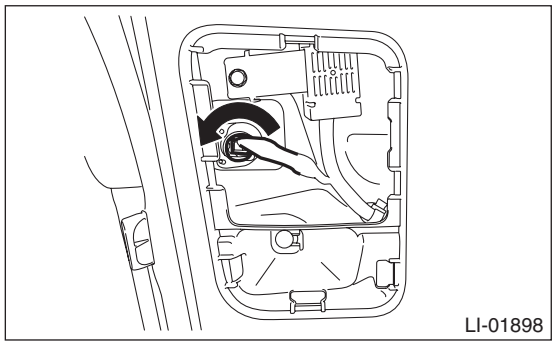
A: REMOVAL

1. SEDAN MODEL



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - trunk lid. <Ref. to EI-110, REMOVAL, Trunk Room Trim.>
3) Remove the bulb socket and back-up light bulb.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.



2. OUTBACK MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Release the claws and remove the bulb inspection cover of rear gate trim.

3) Remove the bulb socket and back-up light bulb.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

B: INSTALLATION

1. SEDAN MODEL

1) Install the back-up light bulb.

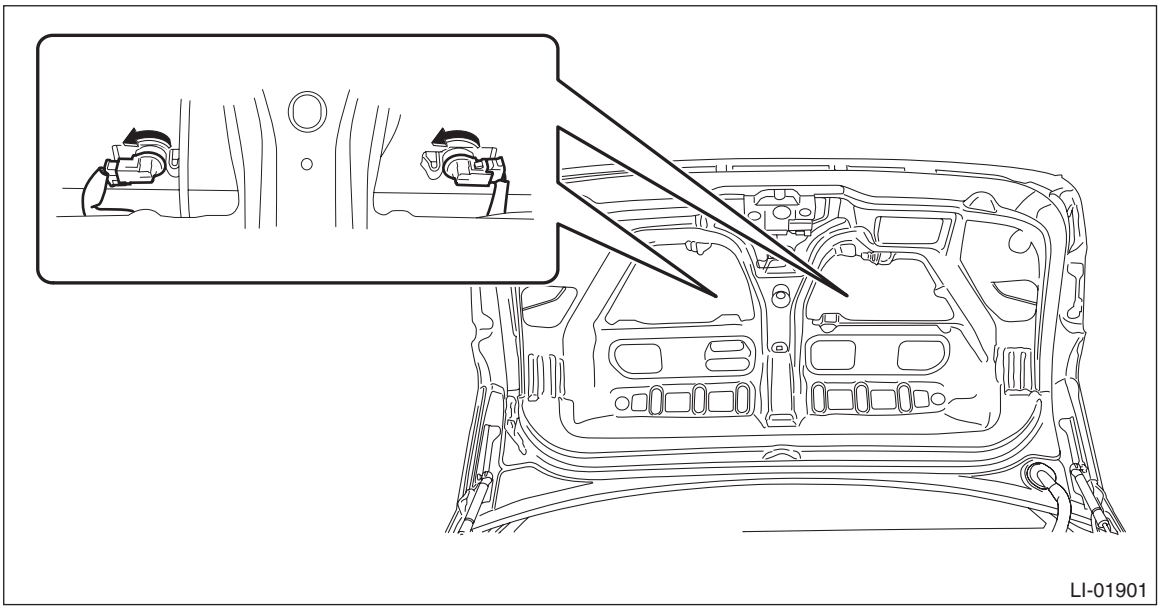
CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2) Install the trim panel - trunk lid.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. OUTBACK MODEL

1) Install the back-up light bulb.

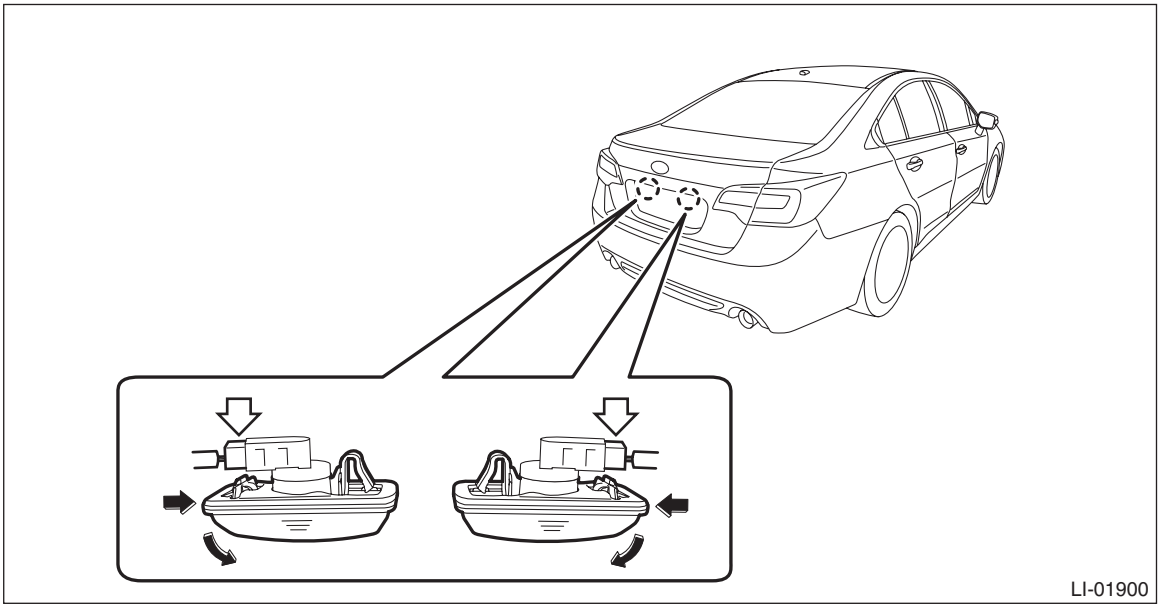
CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2) Install the bulb inspection cover.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

29.License Plate Light



A: REMOVAL

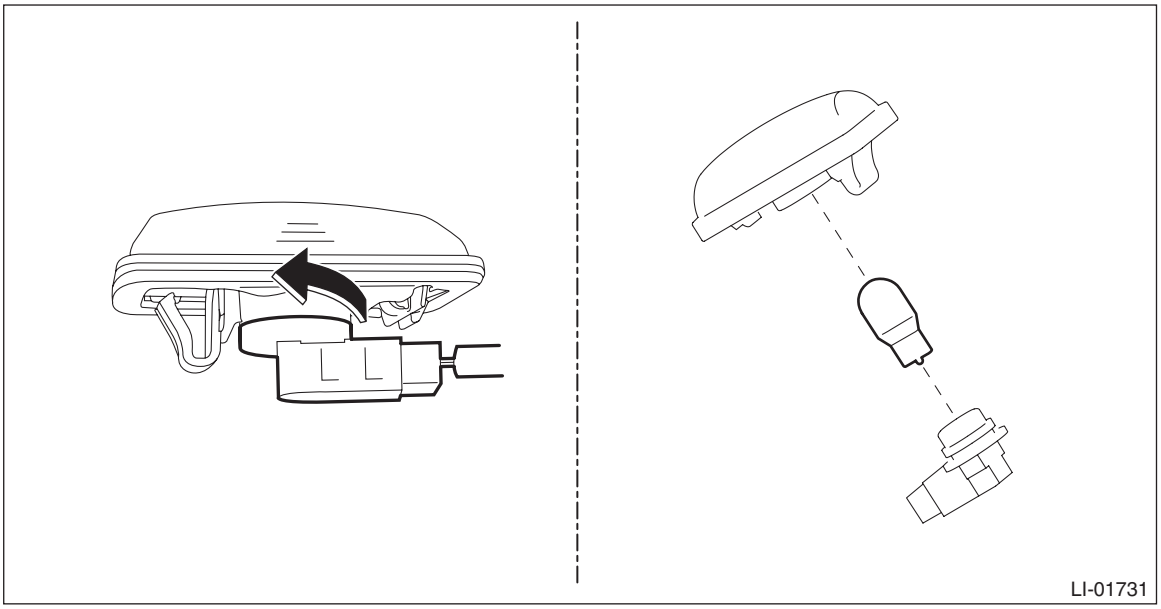
1. SEDAN MODEL



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - trunk lid. <Ref. to EI-110, REMOVAL, Trunk Room Trim.>

NOTE:
When removing the bulb only, remove the trim panel - trunk lid, then remove the bulb socket and the bulb.

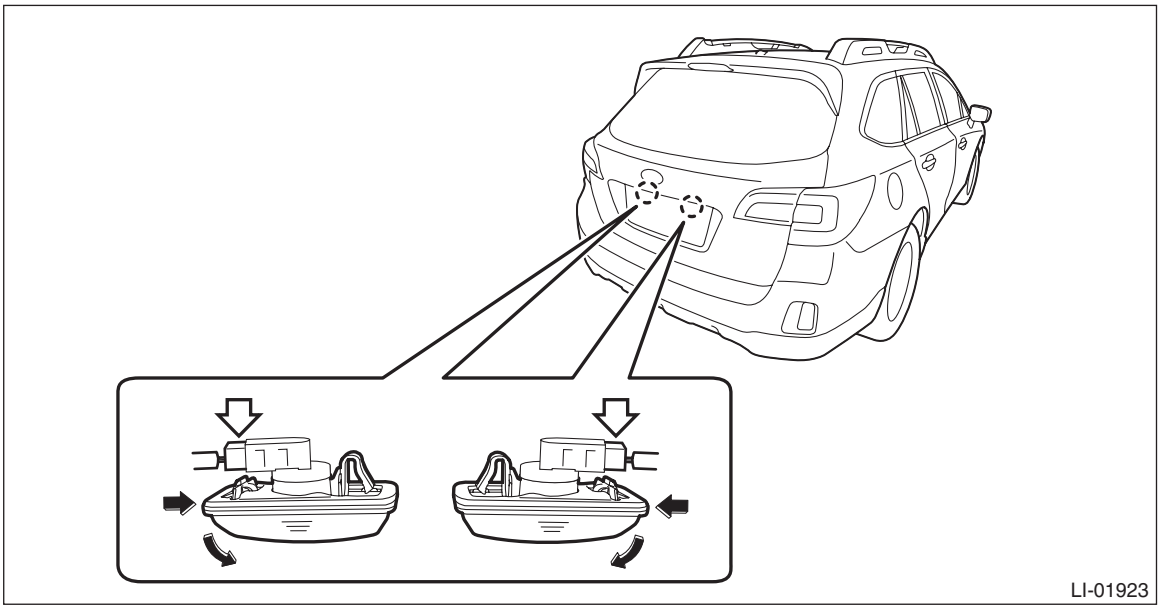
CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.



LI-01901

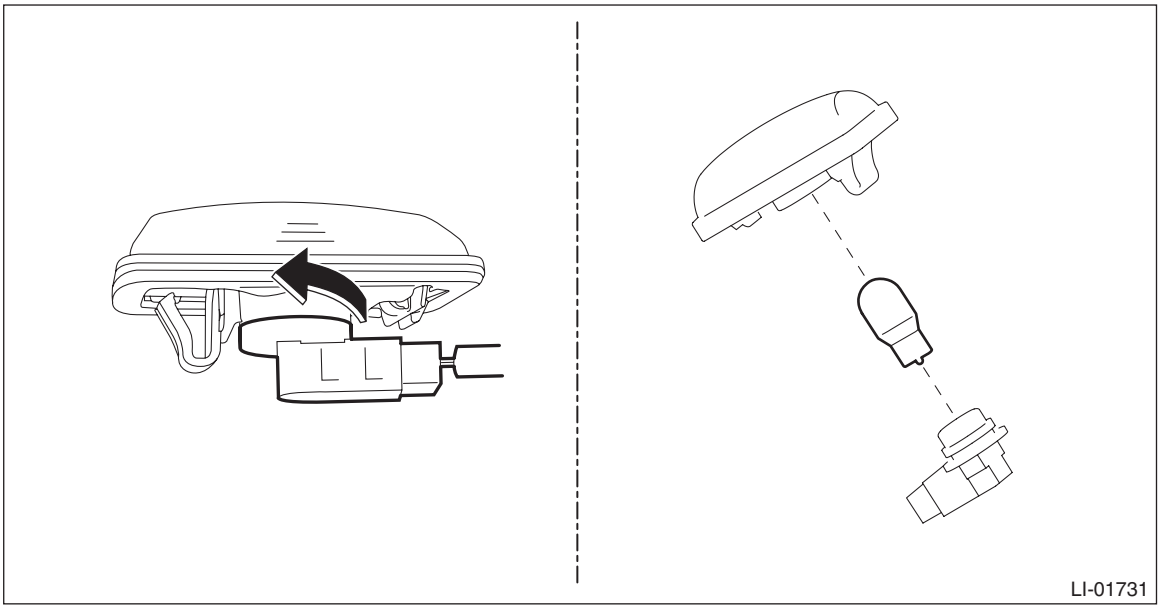
3) Remove the garnish - trunk. <Ref. to EI-60, REMOVAL, Trunk Lid Garnish.>
4) Remove the license plate light.
   (1) Release the claws and pull out the license plate light.
   (2) Disconnect the connector, and remove the license plate light.

LI-01900



5) Rotate the bulb socket in the direction of arrow shown in the figure to remove the license plate light bulb.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.



2. OUTBACK MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the license plate light.
   (1) Release the claws and pull out the license plate light.
   (2) Disconnect the connector, and remove the license plate light.

3) Rotate the bulb socket in the direction of arrow shown in the figure to remove the license plate light bulb.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

B: INSTALLATION

1. SEDAN MODEL

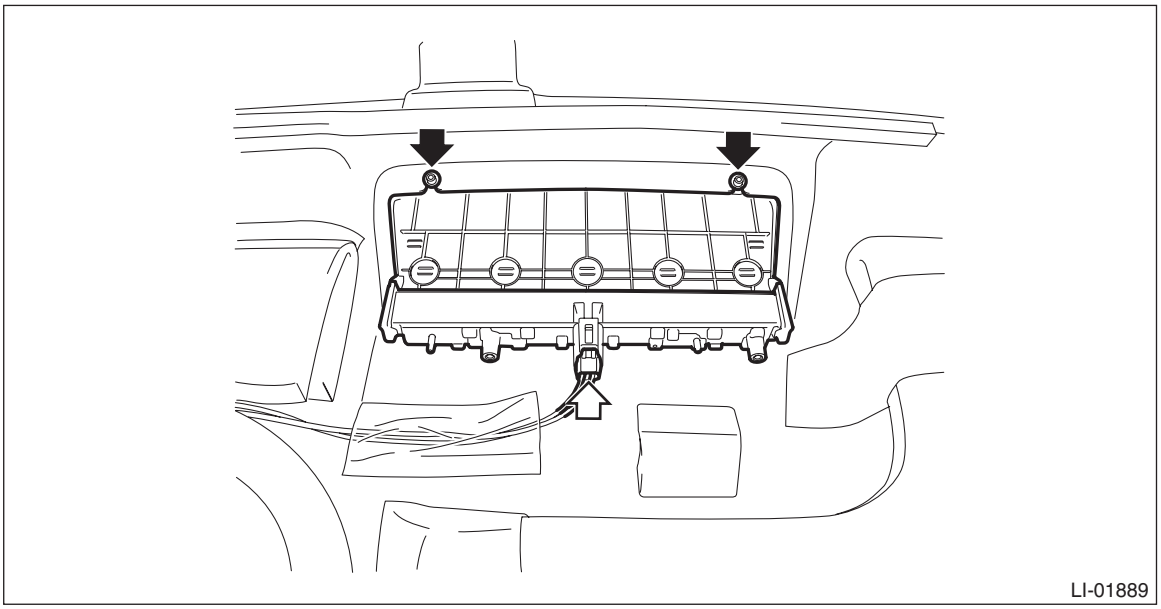
1) Install the license plate light bulb.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2) Install the license plate light.
3) Install the garnish - trunk. <Ref. to EI-60, INSTALLATION, Trunk Lid Garnish.>

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)
4) Install the trim panel - trunk lid.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. OUTBACK MODEL

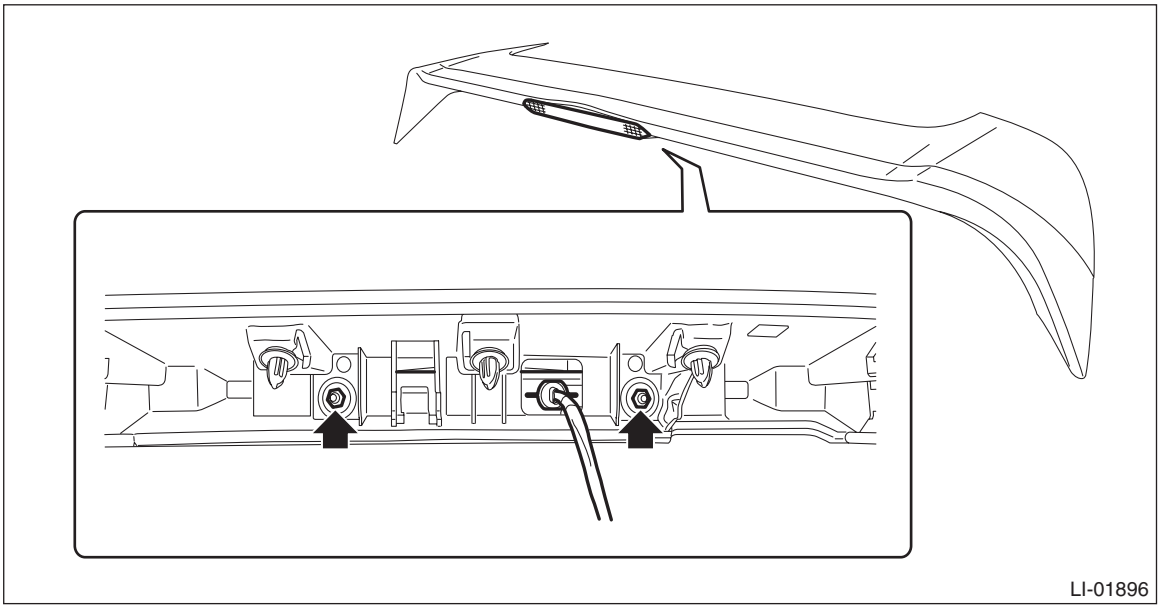
1) Install the license plate light bulb.



CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2) Install the license plate light.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

30.High-mounted Stop Light

A: REMOVAL



1. SEDAN MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel assembly - rear shelf. <Ref. to EI-106, REMOVAL, Rear Shelf Trim.>
3) Remove the light assembly - high-mounted.
   (1) Disconnect the connector.
   (2) Remove the lock washers and remove the high-mounted stop light.

2. OUTBACK MODEL

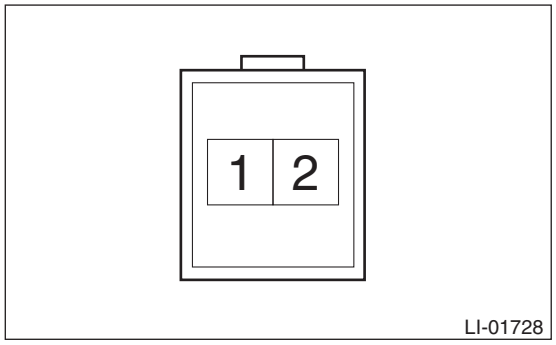
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate. <Ref. to EI-122, REMOVAL, Rear Gate Trim.>
3) Remove the roof spoiler. <Ref. to EI-66, REMOVAL, Roof Spoiler.>
4) Remove the nuts and remove the light assembly - high-mounted.

B: INSTALLATION

1. SEDAN MODEL

1) Install the light assembly - high-mounted.
2) Install the trim panel assembly - rear shelf. <Ref. to EI-108, INSTALLATION, Rear Shelf Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

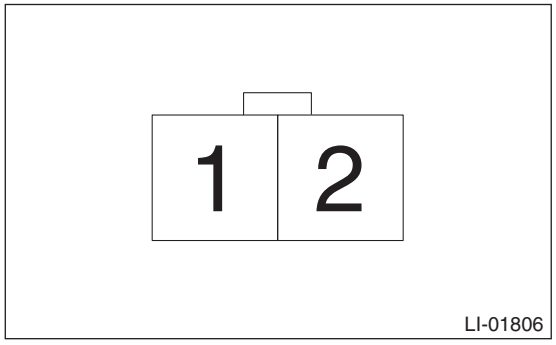
2. OUTBACK MODEL



CAUTION:
Make sure the bolt is tightened securely because improper roof spoiler installation may cause water leakage.
1) Install the light assembly - high-mounted.

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)
2) Install the roof spoiler.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Install the trim panel - rear gate.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

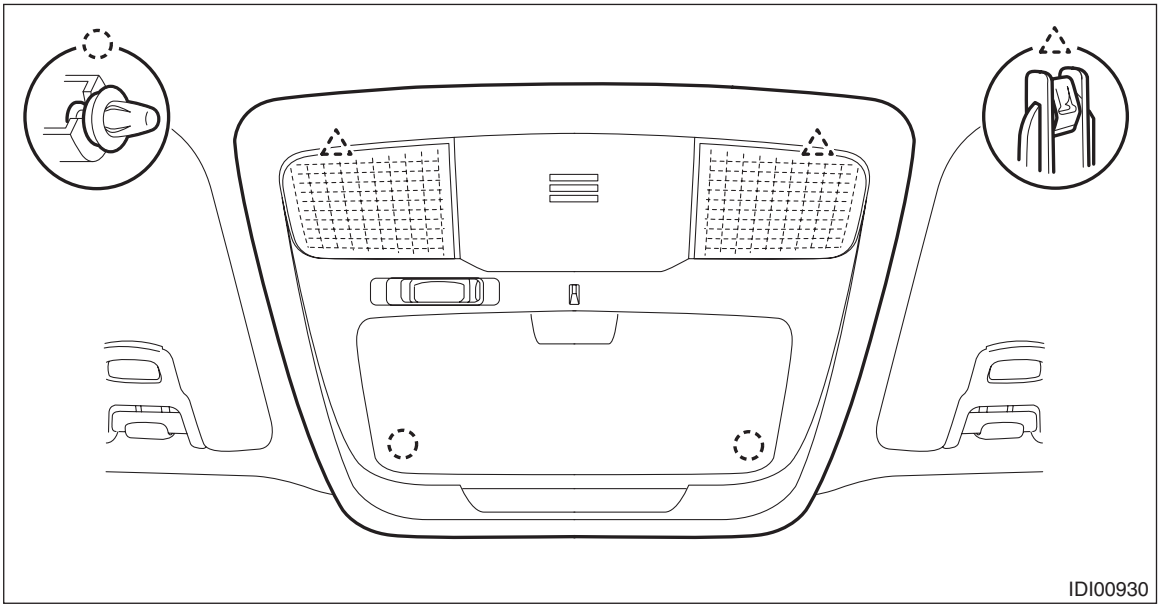


C: INSPECTION

1) Apply battery voltage between the connector terminals to check the lighting condition of the light.
- Sedan model

Terminal No.	Inspection conditions	Specification
1 (+) — 2 (–)	Apply battery voltage.	Light ON

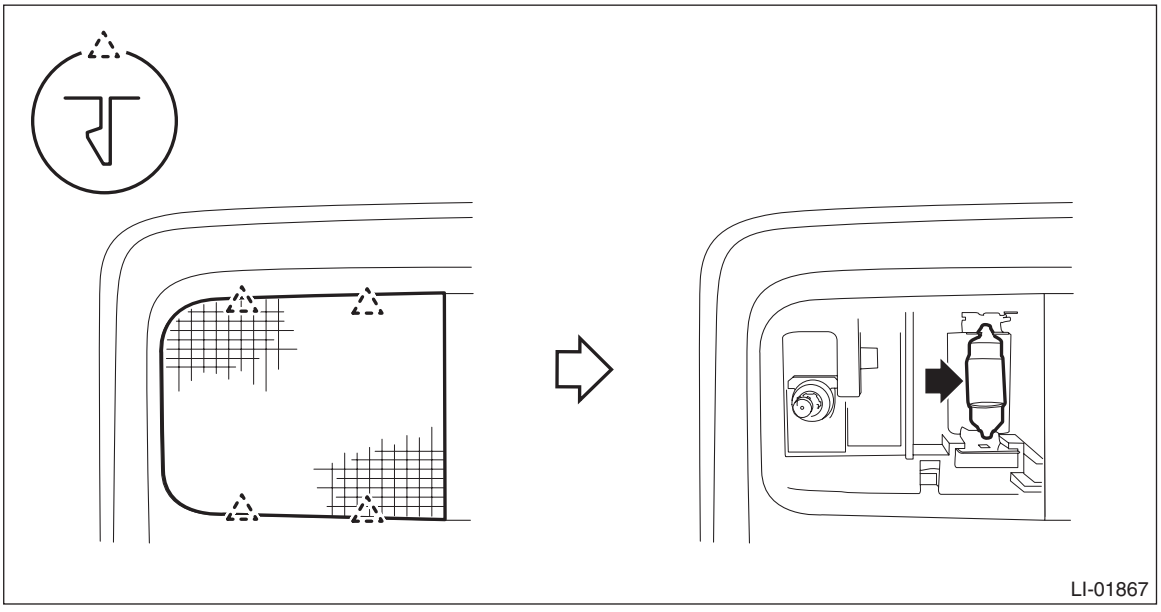
- OUTBACK model



Terminal No.	Inspection conditions	Specification
1 (+) — 2 (–)	Apply battery voltage.	Light ON

2) Replace the light assembly - high-mounted if faulty is found in the inspection.

31.Spot Map Light



A: REMOVAL

NOTE:
• The spot map light is a single unit with the overhead console or stereo camera cover. Replace the overhead console or stereo camera cover if faulty.
• Do not remove the spot map light if removing the bulb only.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the overhead console. (Models without EyeSight)
(1) Release the clips and claws.
(2) Disconnect the connector, and remove the overhead console.

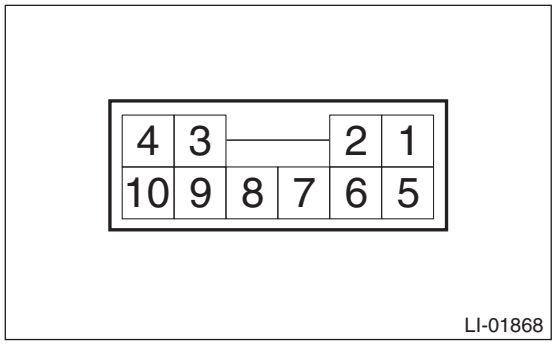
IDI00930

3) Remove the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-7, REMOVAL, Stereo Camera.>
4) Release the claws, then detach the spot map light cover and bulb.

CAUTION:
When using a flat tip screwdriver, apply protective tape or cloth and be careful not to cause damage.

LI-01867

B: INSTALLATION



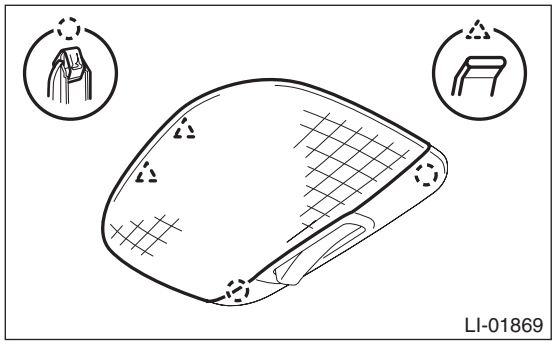
1) Install the spot map light cover and bulb.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2) Install the overhead console. (Models without EyeSight)
3) Install the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-10, INSTALLATION, Stereo Camera.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Measure the resistance between connector terminals.

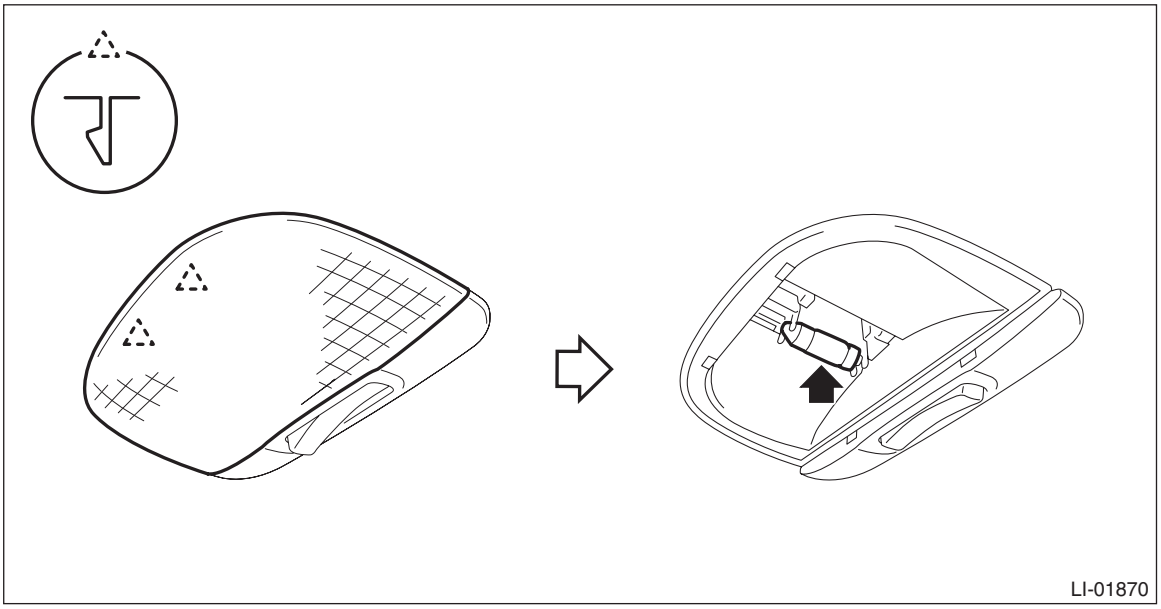
Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
5 — 6	Switch OFF	1 MΩ or more
	Switch ON	Approx. 18 Ω

2) Replace the overhead console or stereo camera cover if the inspection result is not within the standard value.

32.Room Light



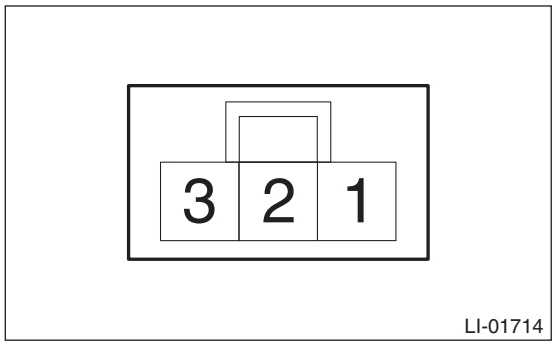
A: REMOVAL

NOTE:
Do not remove the room light if removing the bulb only.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the light assembly - room.
(1) Remove the clips, and then remove the hook.

(2) Disconnect the connector and remove the light assembly - room.
3) Release the claws, and detach the lens and bulb.

CAUTION:
When using a flat tip screwdriver, apply protective tape or cloth and be careful not to cause damage.

B: INSTALLATION



1) Install the lens and bulb.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2) Install the light assembly - room.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

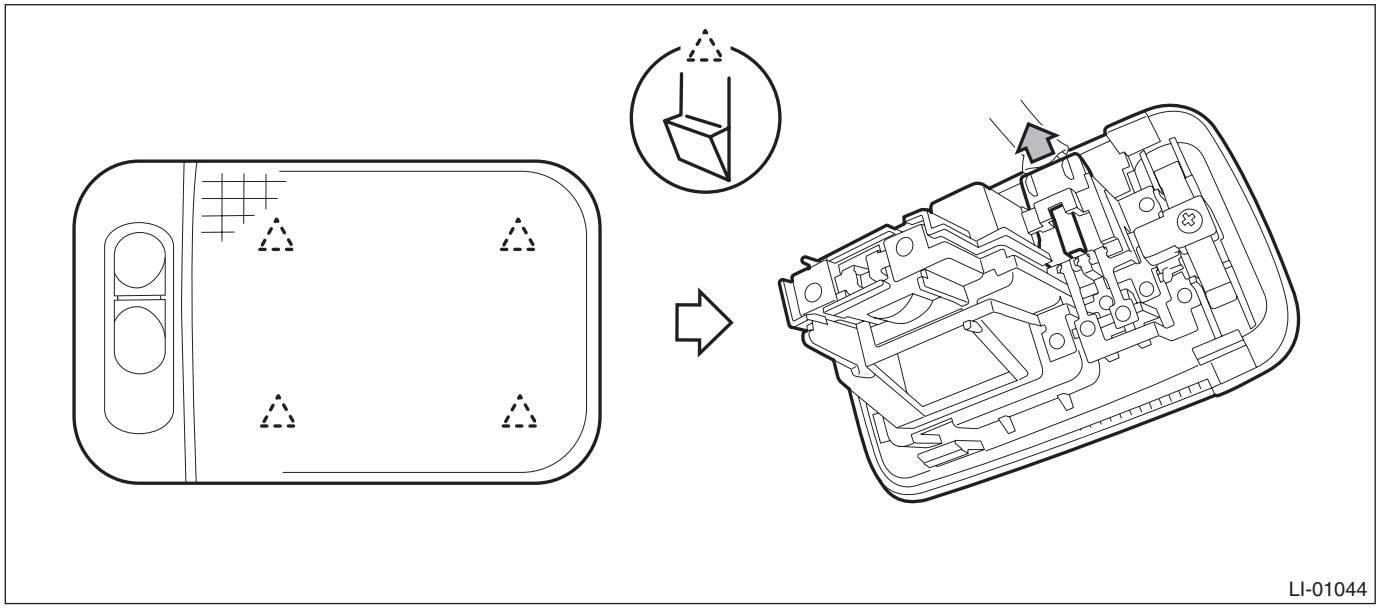
C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 3	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω
2 — 3	Switch door	Less than 1 Ω

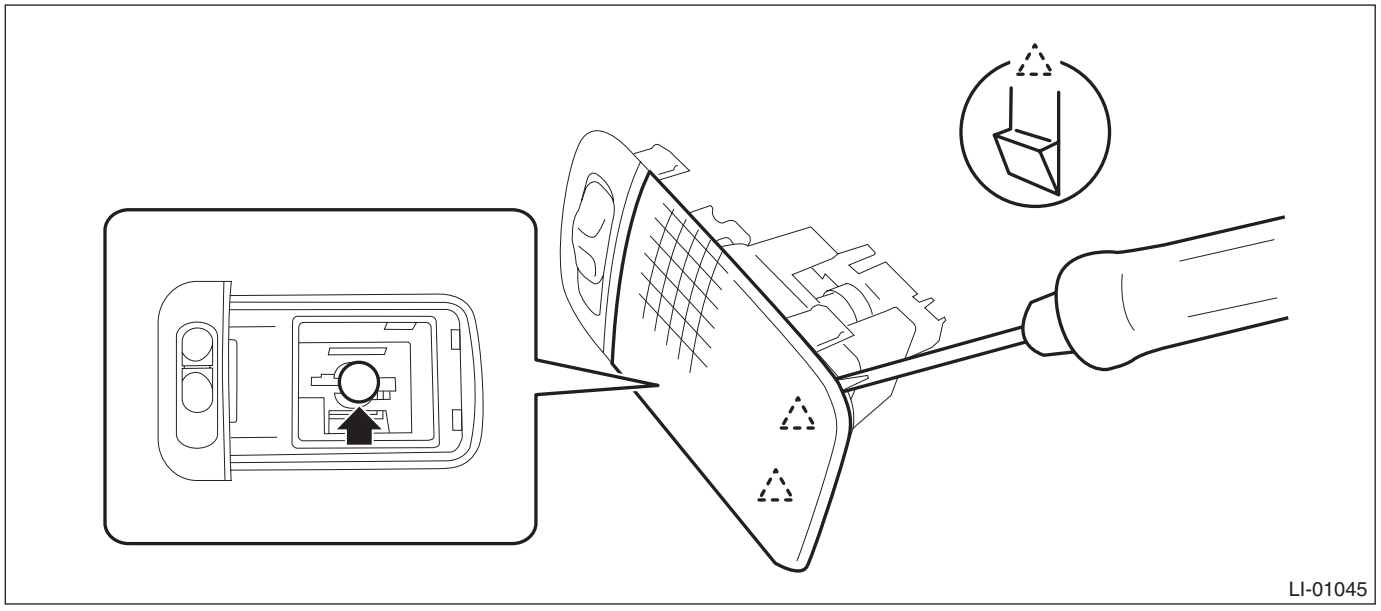
2) Apply battery voltage between the connector terminals to check the lighting condition of the light.



Terminal No.	Inspection conditions	Specification
3 (+) — 1 (–) 3 (+) — 2 (–)	Switch OFF	Light OFF
	Switch ON	Light ON
	Switch door	Light ON

3) Replace the light assembly - room if the inspection result is not within the standard value.

33.Luggage Room Light



A: REMOVAL

NOTE:
Do not remove the luggage room light if removing the bulb only.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the luggage room light.
   (1) Release the claws.
   (2) Disconnect the connector and remove the light assembly - luggage room.

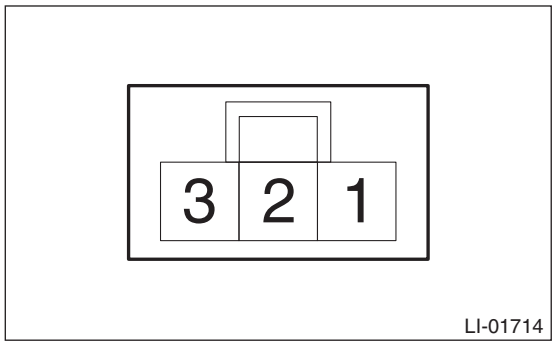
LI-01044

3) Release the claws, and detach the lens and bulb.

CAUTION:
When using a flat tip screwdriver, apply protective tape or cloth and be careful not to cause damage.

LI-01045

B: INSTALLATION



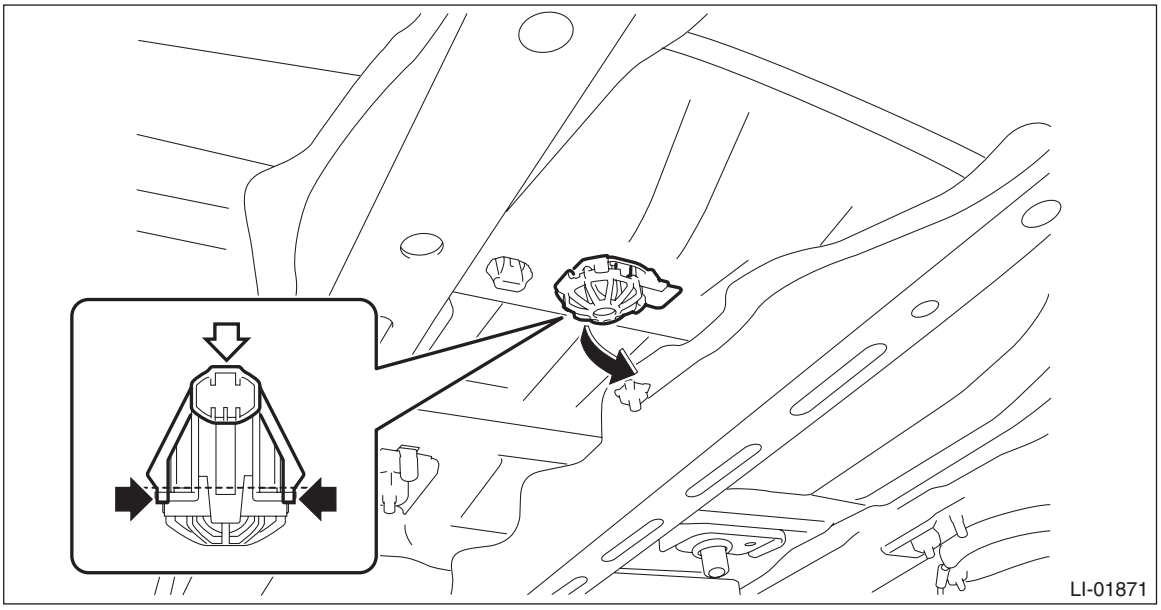
1) Install the lens and bulb.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2) Install the light assembly - luggage room.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Measure the resistance between connector terminals.

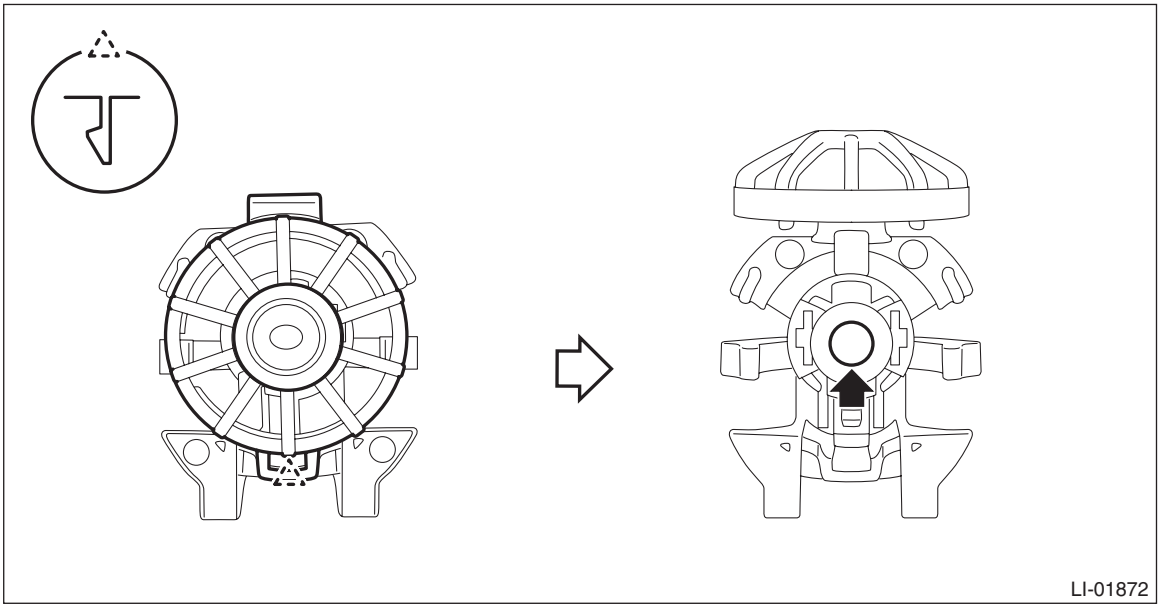
Preparation tool:
Circuit tester



Terminal No.	Inspection Conditions	Standard
—	Switch OFF	1 MΩ or more
1 — 2	Switch ON	Less than 1 Ω
2 — 3	Switch door	Less than 1 Ω

2) Replace the light assembly - luggage room if the inspection result is not within the standard value.

34.Trunk Room Light



A: REMOVAL

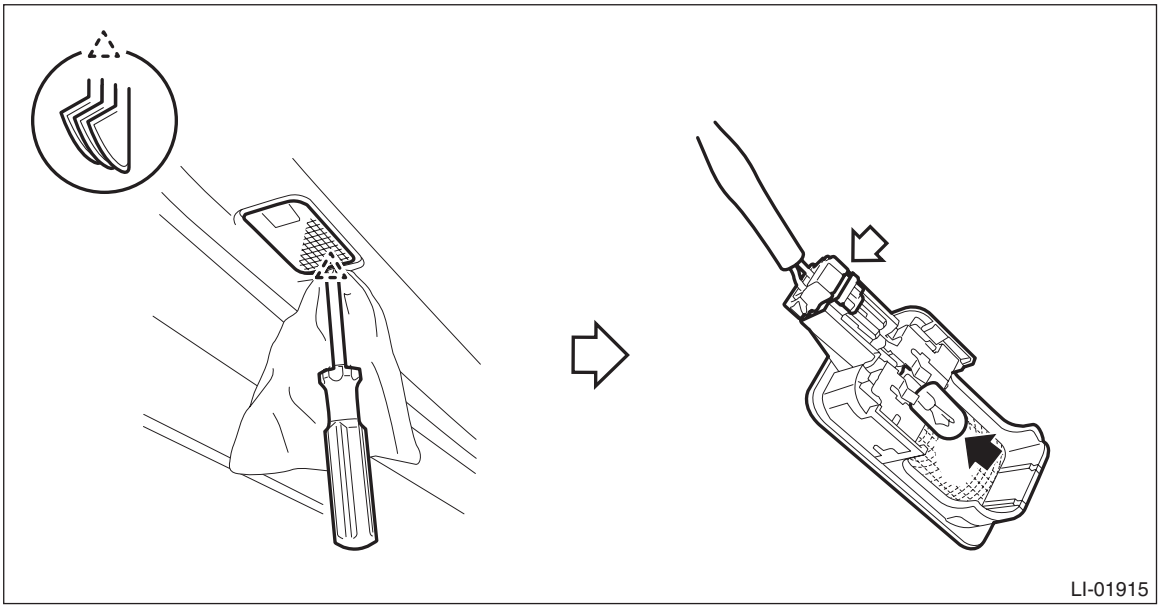
NOTE:
Do not remove the trunk room light if removing the bulb only.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the light assembly - trunk room.
   (1) Release the claws.
   (2) Disconnect the connector and remove the light assembly - trunk room.

3) Release the claws to open the bulb cover, then remove the bulb.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

B: INSTALLATION

1) Install the bulb and bulb cover.



CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2) Install the light assembly - trunk room.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

35.Door Step Light

A: REMOVAL

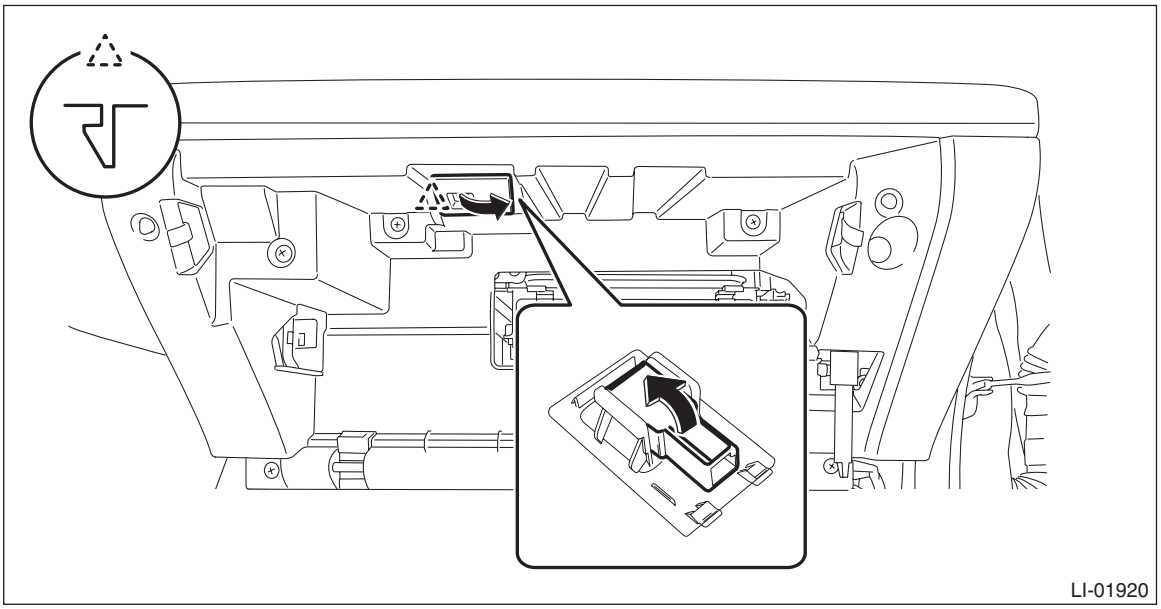
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the light assembly - door step.

CAUTION:
When using a flat tip screwdriver, apply protective tape or cloth and be careful not to cause damage.
(1) Insert a flat tip screwdriver into the slit of the light assembly - door step to release the claw.
(2) Disconnect the connector and remove the light assembly - door step and the bulb.

B: INSTALLATION

1) Install the bulb and light assembly - door step.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



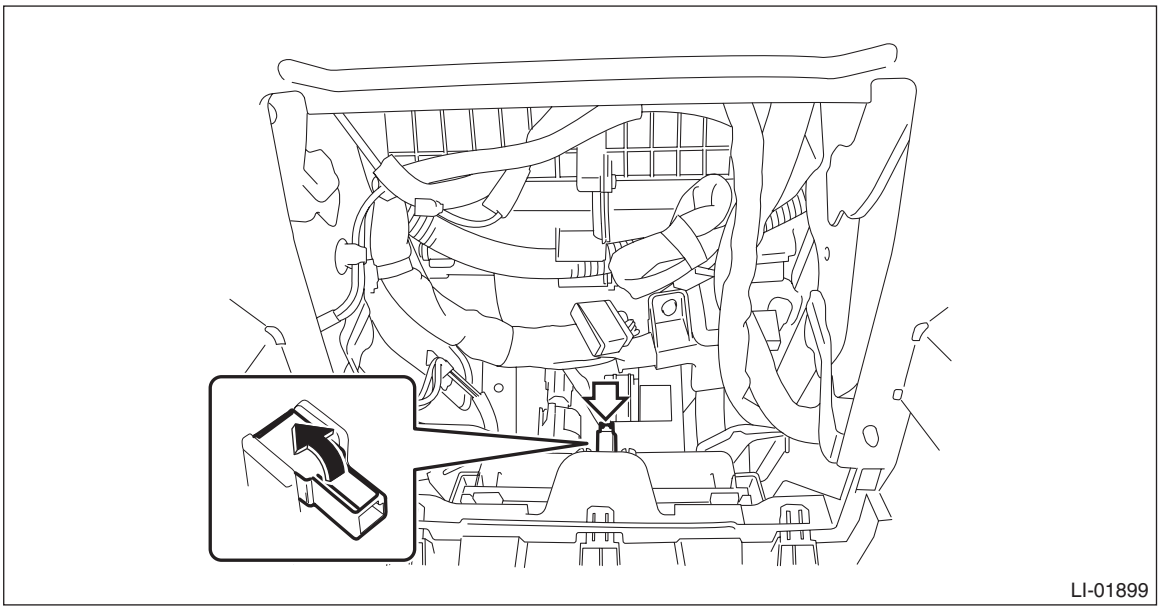
36.LED Illumination Light

A: REMOVAL

1. GLOVE BOX LIGHT

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the pocket assembly. <Ref. to EI-76, REMOVAL, Glove Box.>
3) Remove the light - pocket cover.

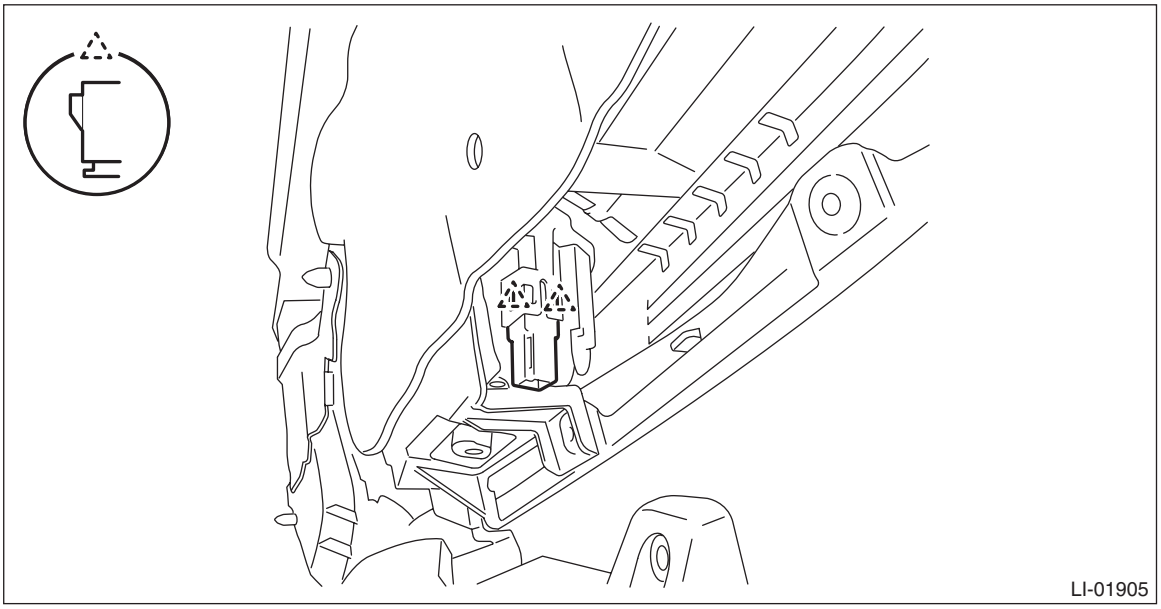
CAUTION:
When using a flat tip screwdriver, apply protective tape or cloth and be careful not to cause damage.
(1) Release the claws.
(2) Disconnect the connector, and remove the light - pocket cover.
4) Release the claws, and remove the light - pocket.



2. POCKET LIGHT

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the heater control assembly. <Ref. to AC-44, REMOVAL, Control Panel.>
3) Remove the light - pocket.

CAUTION:
When using a flat tip screwdriver, apply protective tape or cloth and be careful not to cause damage.



(1) Disconnect the connector.
(2) Release the claws, and remove the light - pocket.

3. DOOR POCKET LIGHT

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front door. <Ref. to EI-70, REMOVAL, Door Trim.>
3) Release the claws, and remove the light - door pocket.

CAUTION:
When using a flat tip screwdriver, apply protective tape or cloth and be careful not to cause damage.

B: INSTALLATION

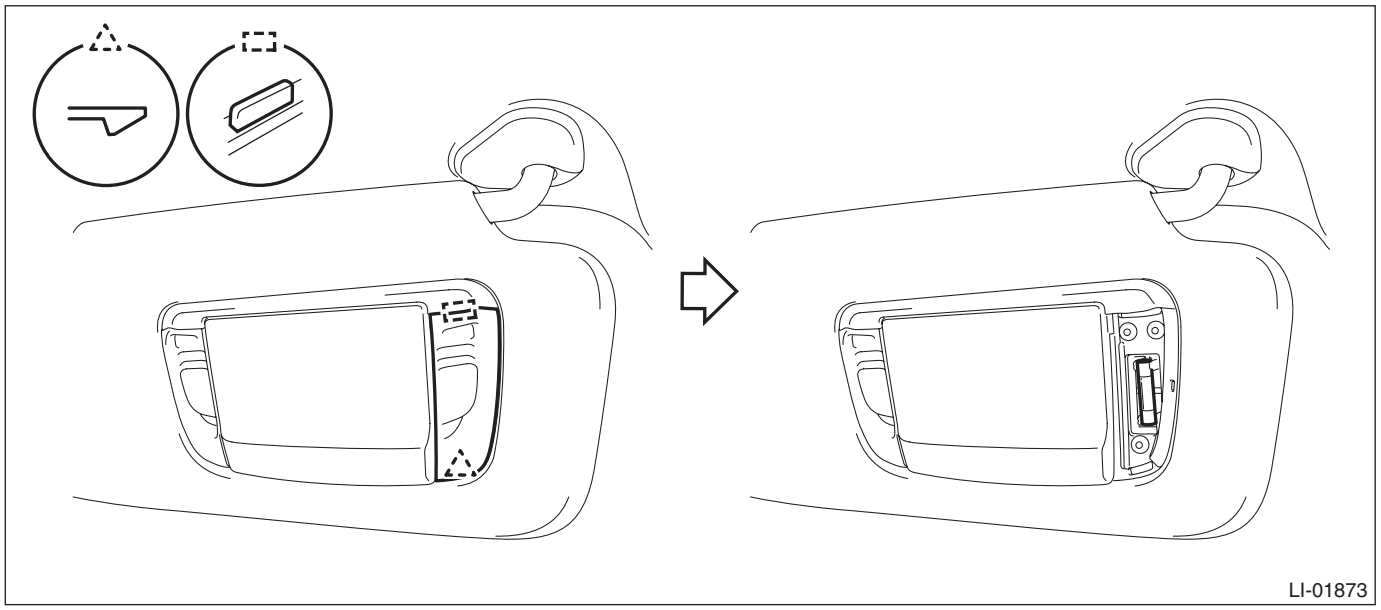
1. GLOVE BOX LIGHT

1) Install the light - pocket.
2) Install the light - pocket cover.
3) Install the pocket assembly.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. POCKET LIGHT

1) Install the light - pocket.
2) Install the heater control assembly.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

3. DOOR POCKET LIGHT



1) Install the light - door pocket.
2) Install the trim panel - front door. <Ref. to EI-71, INSTALLATION, Door Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

37.Vanity Mirror Light

A: REMOVAL

NOTE:
• The vanity mirror light is integrated into the sun visor assembly. Replace the sun visor assembly if faulty. <Ref. to EI-112, REMOVAL, Sun Visor.>
• Do not remove the sun visor assembly if removing the bulb only.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the sun visor assembly. <Ref. to EI-112, REMOVAL, Sun Visor.>
3) Release the claws and remove the lens and vanity mirror light bulb.

CAUTION:
• Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
• When using a flat tip screwdriver, apply protective tape or cloth and be careful not to cause damage.

B: INSTALLATION

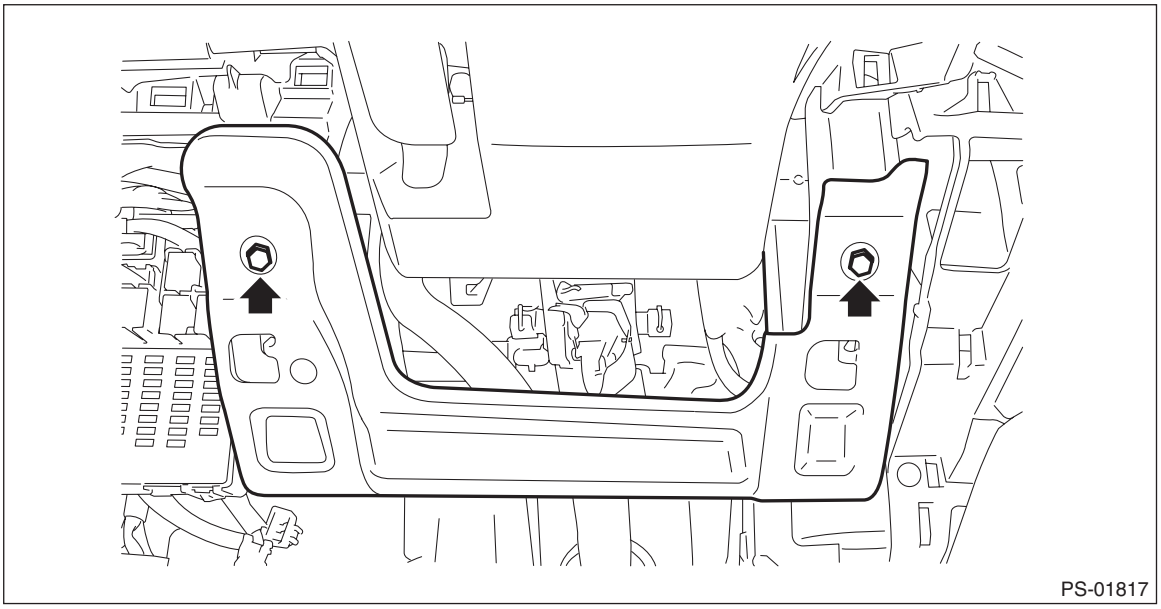
1) Install the bulb and lens.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2) Install the sun visor assembly.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

38.Ignition Switch Illumination

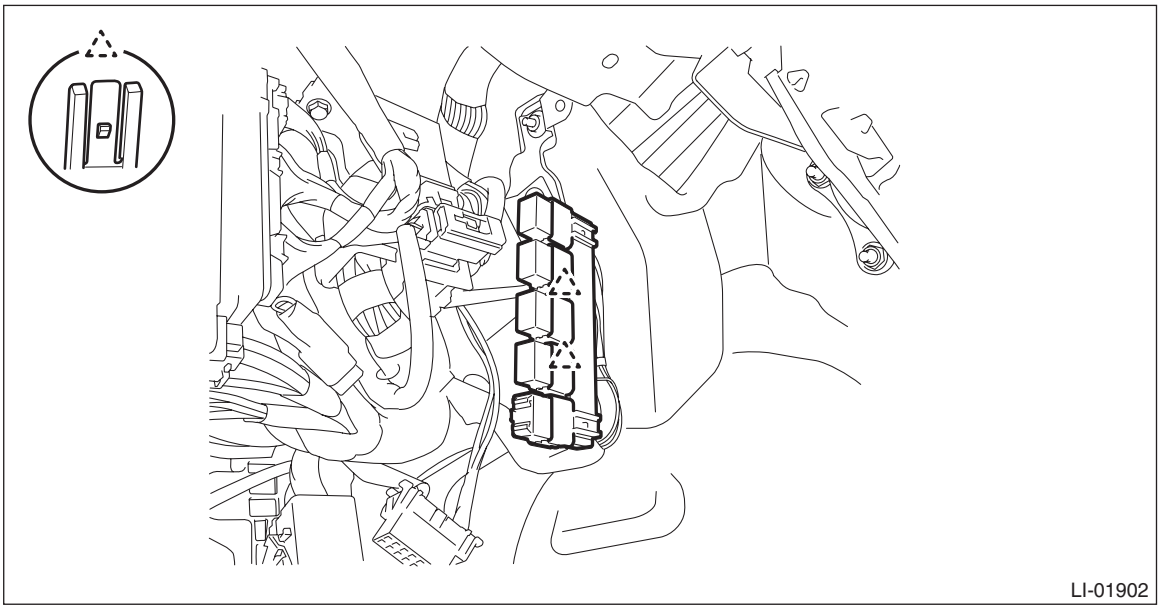
A: NOTE

The ignition switch illumination is integrated into the immobilizer antenna assembly. For operation procedures, refer to the “SECURITY AND LOCKS” section. <Ref. to SL-90, Immobilizer Antenna.>



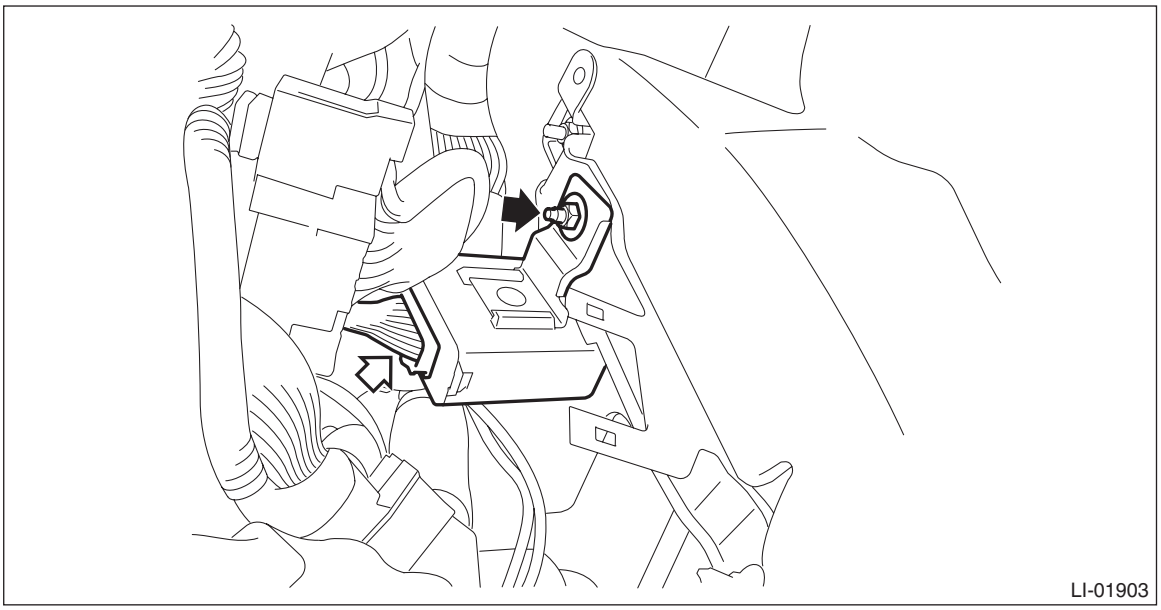
B: INSPECTION

	Step	Check	Yes	No
1	**CHECK IGNITION SWITCH ILLUMINATION.** 1) Turn the ignition switch to ON. 2) Check the lighting condition of the ignition switch illumination.	Does the ignition switch illumination blink?	Check the function setting of body integrated unit. <Ref. to BC(diag)-66, General Diagnostic Table.>	Go to step **2**.
2	**CHECK IGNITION SWITCH ILLUMINATION OPERATION.** 1) Turn the ignition switch to OFF. 2) Open and close the driver’s side door.	When door is opened/closed, does the ignition switch illumination switch between ON ⇔ OFF?	Ignition switch illumination is normal.	Go to step **3**.
3	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display the data of «Driver’s door SW input». NOTE: For detailed procedures, refer to “PC application help for Subaru Select Monitor”.	Does the display change to OFF → ON, when the door is opened/closed?	Go to step **4**.	Check the door switch circuit. <Ref. to SL-21, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>
4	**CHECK CURRENT DATA.** Display the data of «Key Illumination Light Output» using Subaru Select Monitor.	Does the display change to OFF → ON, when the door is opened/closed?	CHECK THE IGNITION SWITCH ILLUMINATION CIRCUIT. <Ref. to SL-25, CHECK IGNITION SWITCH ILLUMINATION, INSPECTION, Keyless Entry System.>	Check the body integrated unit and replace it if defective. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>



39.Auto Headlight Beam Leveler Control Module

A: REMOVAL



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-74, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the bolts, and then remove the panel - knee guard.

PS-01817

4) Release the lock and remove the relay holder.

LI-01902

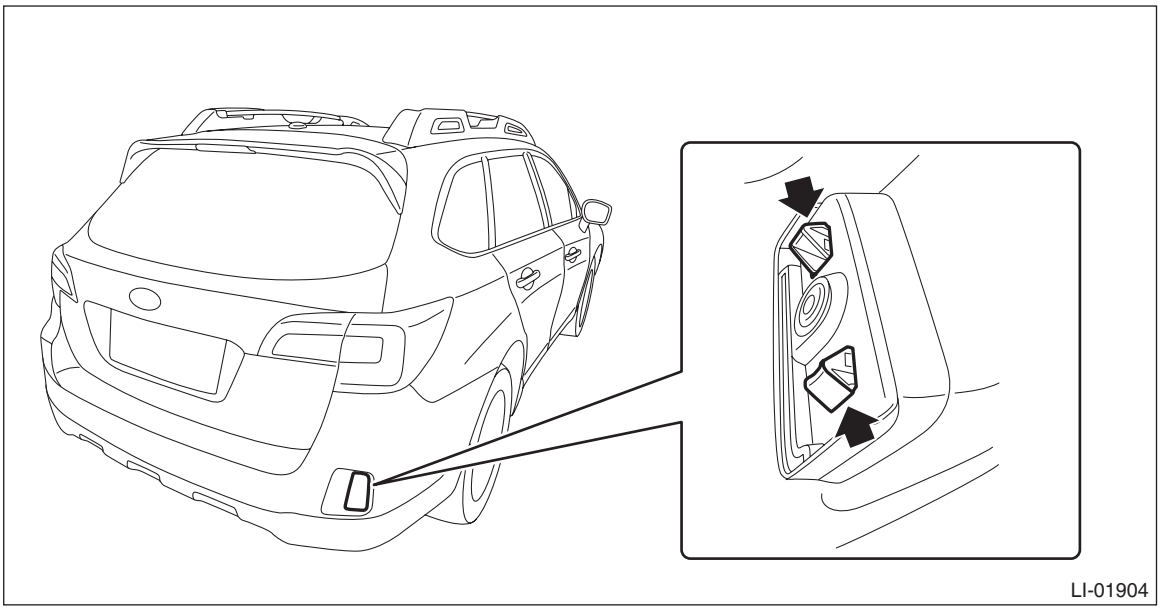
5) Remove the auto headlight beam leveler CM.
   (1) Remove the nut.
   (2) Disconnect the connector and remove the auto headlight beam leveler CM.

B: INSTALLATION

1) Install the auto headlight beam leveler CM.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the relay holder.
3) Install the panel - knee guard.



Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)

4) Install the cover assembly - instrument panel LWR driver.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
6) Perform initialization and reinitialization of the auto headlight beam leveler system. <Ref. to LI-20, PROCEDURE, Auto Headlight Beam Leveler System.>

40.Reflex Reflector

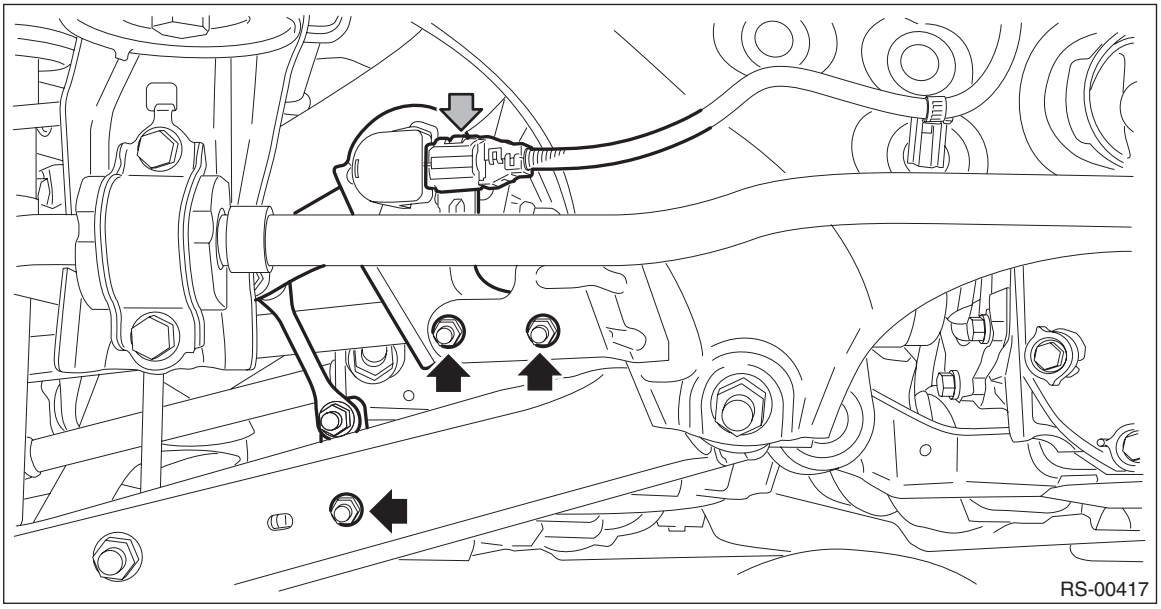
A: REMOVAL

Release the claws and then remove the reflex reflector.

B: INSTALLATION

Install the reflex reflector.

41.Rear Height Sensor



A: REMOVAL

CAUTION:
Always remove the sensor assembly - headlight beam leveler before removing any parts related to the suspension.

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle.
3) Remove the rear wheel on the left side.
4) Remove the sensor assembly - headlight beam leveler.

CAUTION:
Do not disassemble the sensor and lever.

(1) Disconnect the connector.
(2) Remove the nuts, and remove the sensor assembly - headlight beam leveler.

B: INSTALLATION

1) Install the sensor assembly - headlight beam leveler.

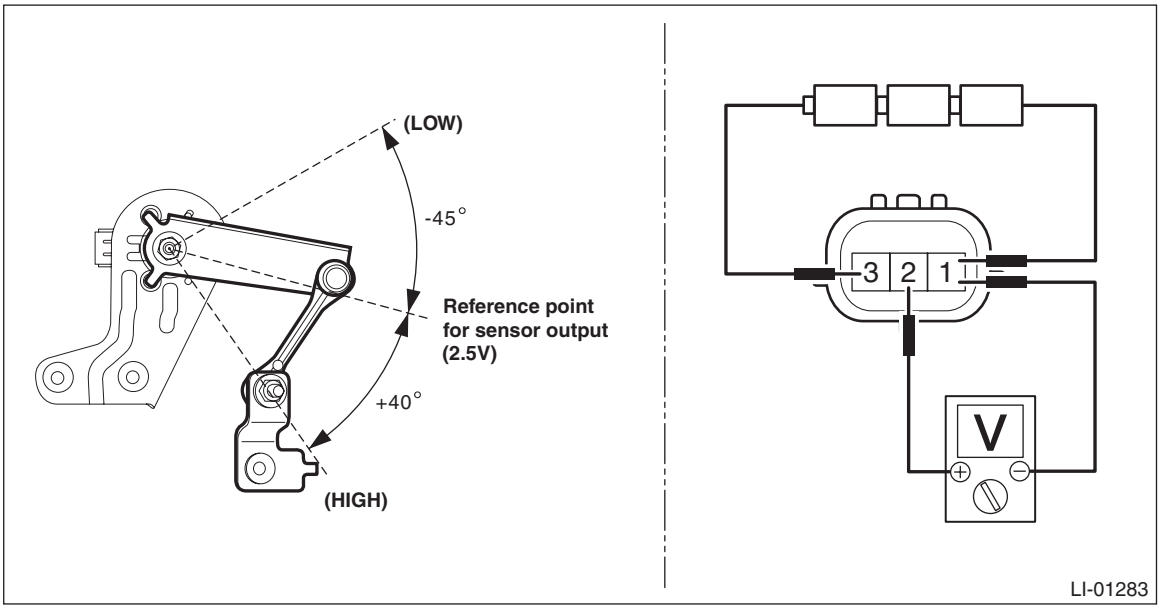
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

3) Lower the vehicle.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Perform reinitialization of the auto headlight beam leveler system. <Ref. to LI-21, REINITIALIZATION, PROCEDURE, Auto Headlight Beam Leveler System.>

NOTE:
When replacing the rear vehicle height sensor with a new part, perform the initialization. <Ref. to LI-21, INITIALIZATION, PROCEDURE, Auto Headlight Beam Leveler System.>



C: INSPECTION

Preparation tool:
Circuit tester

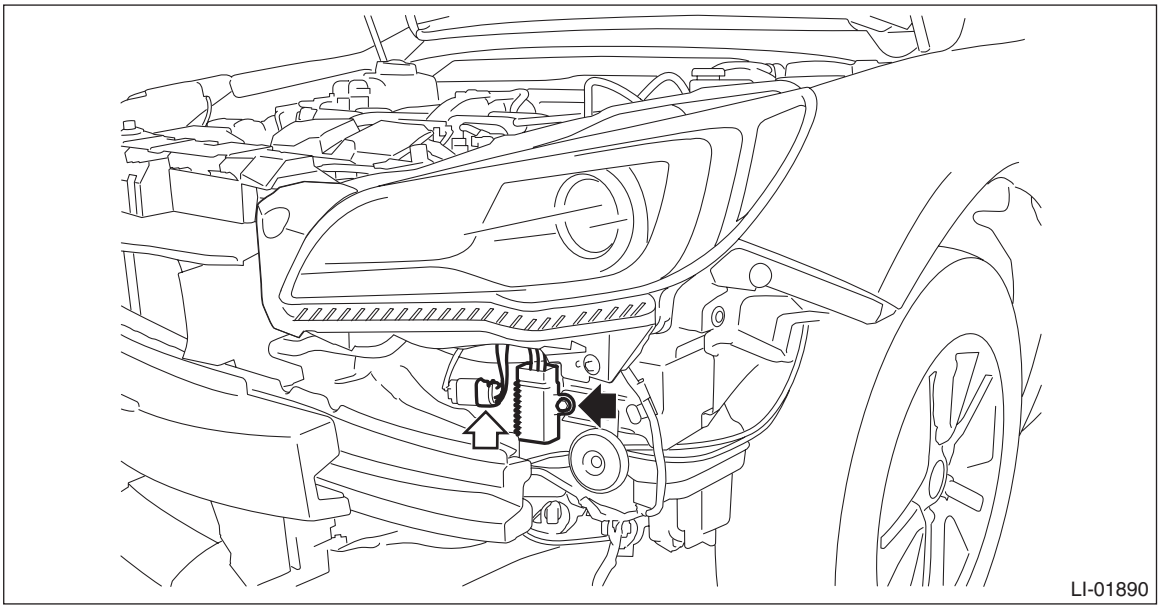
1) Connect three dry cell batteries (1.5 V) in series.

NOTE:
- Use new dry-cell batteries.
- Using circuit tester, check that the initial voltage of a single dry-cell battery is 1.6 V or more. And also check that the voltage of three batteries in series is between 4.8 V and 5.2 V.
- For power supply, 5 V DC voltage source can also be used.

2) Connect the cell battery positive terminal to the connector terminal No. 3, and the cell battery negative terminal to the connector terminal No. 1.
3) With voltage applied, measure the voltage between connector terminals when the sensor link is moved slowly up and down.

Terminal No.	Inspection conditions	Standard
2 (+) — 1 (–)	Move the link within the operation range.	0.5 — 4.1 V

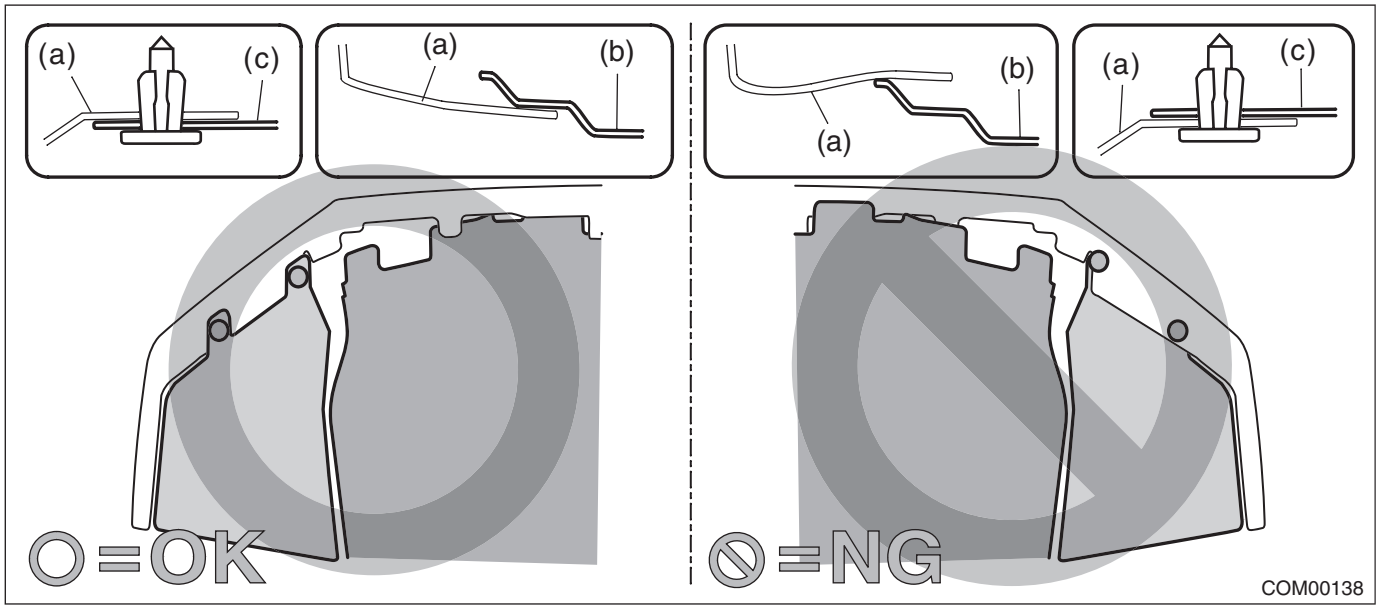
4) Replace the sensor assembly - headlight beam leveler if the inspection result is not within the standard value.



42.Day Time Running Resistor

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the bumper face - front. <Ref. to EI-34, REMOVAL, Front Bumper.>
3) Remove the resistor assembly - daytime running light.



CAUTION:
The resistor may become hot. Be careful not to burn yourself when removing it.

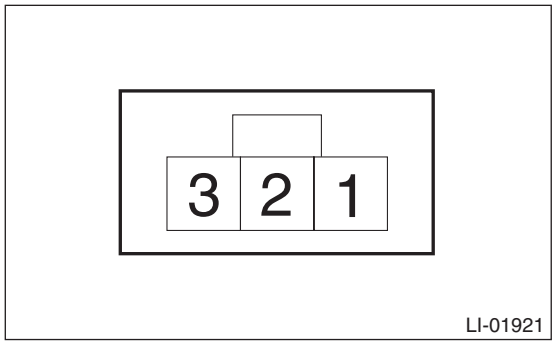
(1) Disconnect the connector.
(2) Remove the bolts, then remove the resistor assembly - daytime running light.

B: INSTALLATION

CAUTION:
Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).

1) Install the resistor assembly - daytime running light.

CAUTION:
Be careful not to allow the harness to interfere with vehicle body, etc. and prevent excessive force from being applied.



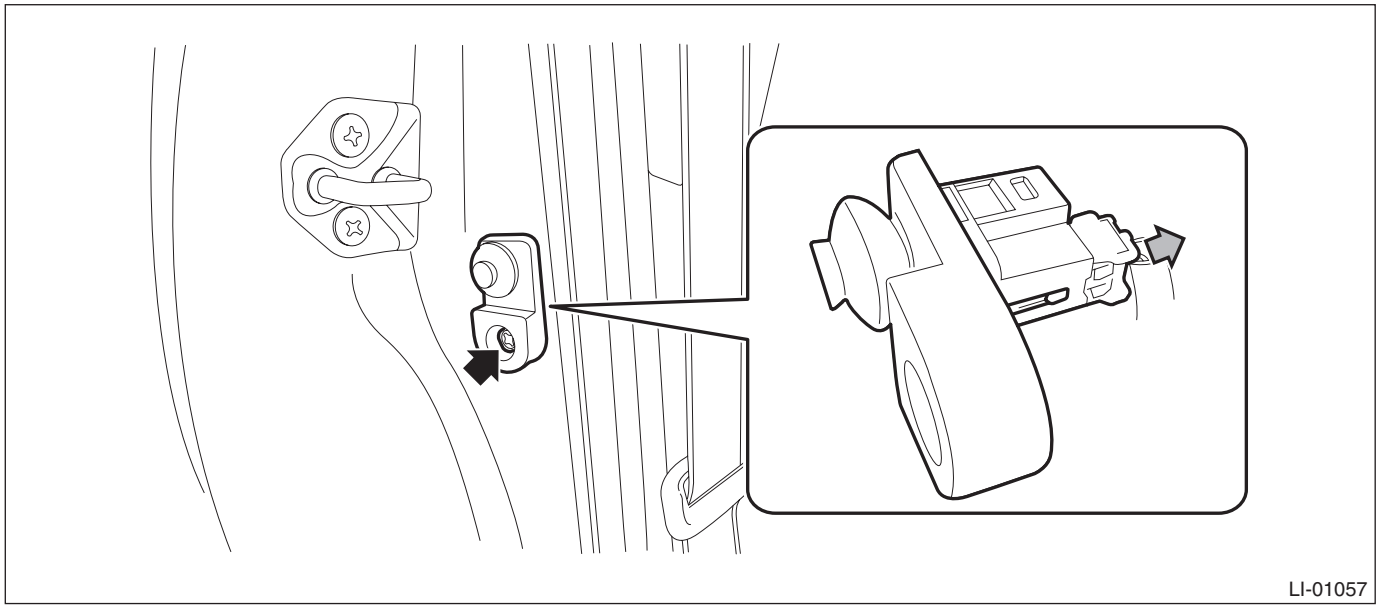
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the bumper face - front.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



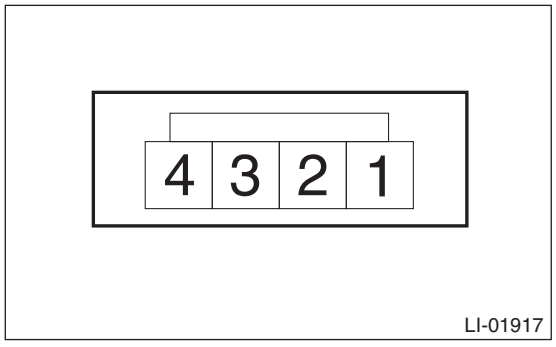
Terminal No.	Inspection conditions	Standard
1 — 2 2 — 3	Always	1.82±0.07 Ω

2) Replace the resistor assembly - daytime running light if the inspection result is not within the standard.

43.Door Switch

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the switch assembly - door.
   (1) Remove the screws, and pull out the switch assembly - door toward you.
   (2) Disconnect the connector and remove the switch assembly - door.



B: INSTALLATION

1) Install the switch assembly - door.
2) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

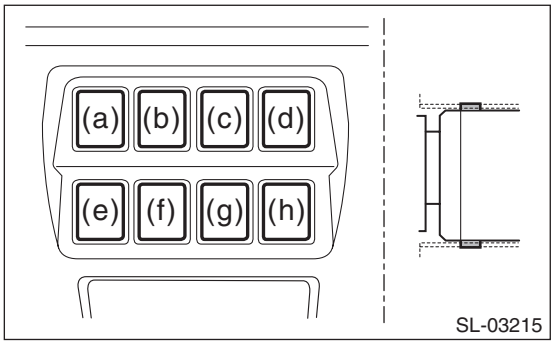
1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
Front LH: 1 — 2 Except for front LH: 1 — 4	When the switch is not pressed	Less than 1 Ω
	When the switch is pressed	1 MΩ or more

2) Replace the switch assembly - door if the inspection result is not within the standard value.

44.Steering Responsive Fog Lights CM



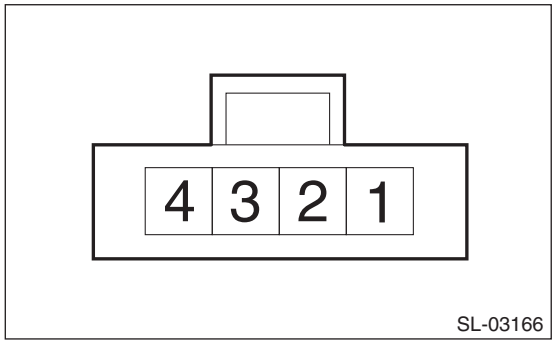
A: NOTE

The installation position of the auto headlight beam leveler control module can be used for the steering responsive fog light CM installation position. Refer to “Auto Headlight Beam Leveler Control Module” section for operation procedures. <Ref. to LI-77, Auto Headlight Beam Leveler Control Module.>

45.SRF OFF Switch

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-74, REMOVAL, Instrument Panel Lower Cover.>
3) Release the claws and remove the SRF OFF switch (b).



B: INSTALLATION

1) Install the SRF OFF switch.
2) Install the cover assembly - instrument panel LWR driver.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 4	OFF	1 MΩ or more
	ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
2 (+) — 3 (–)	Apply battery voltage.	Light ON

3) Replace the SRF OFF switch if the inspection result is not within the standard value.

AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)

AL(diag)

		Page

9.	Inspection Mode	12
10.	Read Current Data	13
11.	List of Diagnostic Trouble Code (DTC)	14
12.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	15
13.	Diagnostics with Phenomenon	19

1. Basic Diagnostic Procedure

A: PROCEDURE

NOTE:
Refer to STEERING RESPONSIVE FOGLAMP (DIAGNOSTICS) for models with steering responsive fog light system. <Ref. to SRF(diag)-2, Basic Diagnostic Procedure.>

	Step	Check	Yes	No
1	**PERFORM CUSTOMER INTERVIEW.** Using the Check List for Interview, ask the customer the condition of how the trouble occurred. <Ref. to AL(diag)-3, CHECK, Check List for Interview.>	Did you interview the customer?	Go to step **2**.	Interview the customer. <Ref. to AL(diag)-3, CHECK, Check List for Interview.>
2	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Perform the inspection according to the diagnosis for LAN system.	Go to step **3**.
3	**CHECK AUTO HEADLIGHT BEAM LEVELER SYSTEM.** Using the Subaru Select Monitor, read DTC of auto headlight beam leveler system. <Ref. to AL(diag)-10, OPERATION, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to AL(diag)-8, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>	Is DTC displayed?	Record DTC and time stamp, and perform the diagnosis according to DTC. <Ref. to AL(diag)-14, LIST, List of Diagnostic Trouble Code (DTC).> For time stamp, refer to “LAN SYSTEM”. <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.> After diagnosis is completed, Go to step **6**.	Go to step **4**.
4	**CHECK DIAGNOSTICS WITH PHENOMENON.** Check “Diagnostics with Phenomenon”. <Ref. to AL(diag)-19, Diagnostics with Phenomenon.>	Does the symptom apply?	Perform diagnosis according to the procedures in the diagnostics with phenomenon.	Go to step **5**.
5	**CHECK TROUBLE PHENOMENON.** 1) Perform the basic inspection and function check. <Ref. to AL(diag)-4, INSPECTION, General Description.> 2) Check the auto headlight beam leveler CM. <Ref. to AL(diag)-6, Control Module I/O Signal.> 3) Perform check of current data. <Ref. to AL(diag)-13, Read Current Data.> 4) Perform a unit check.	Was the trouble cause found?	Repair or replace the cause of trouble.	System is normal.
6	**PERFORM DIAGNOSIS.** 1) Perform the Clear Memory Mode. 2) Perform the Inspection Mode. <Ref. to AL(diag)-12, Inspection Mode.>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to AL(diag)-14, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

2. Check List for Interview

A: CHECK

- Inspect the following items regarding the vehicle's state.
- Print out this page for interviewing customers.

<table>
<tr><td colspan="4">Auto Headlight Beam Leveler System Check List for Interview
Date the Vehicle is Received Year Month Day</td></tr>
<tr><td colspan="2" rowspan="2">Customer's name</td><td>Registration No.</td><td>Initial year of registration
Year Month Date</td></tr>
<tr><td>Vehicle model</td><td>Frame number</td></tr>
<tr><td>Interviewer</td><td>Inspector</td><td>Engine type</td><td>Odometer reading</td></tr>
<tr><td colspan="4">Customer specified content
•
•
•</td></tr>
<tr><td>Date and time when the trouble occurred</td><td></td><td>Frequency of trouble occurrence</td><td>Always occurs
Sometimes occurs (times per day, times per month)</td></tr>
<tr><td rowspan="2">Condition of trouble occurrence
(How the trouble occurs)</td><td rowspan="2"></td><td>Weather</td><td>Fine • Cloudy • Rainy • Snowy • Others ( )</td></tr>
<tr><td>Temperature</td><td>°C (°F) — °C (°F)</td></tr>
<tr><td>Road conditions</td><td></td><td>Occurrence location</td><td></td></tr>

3. General Description

A: CAUTION

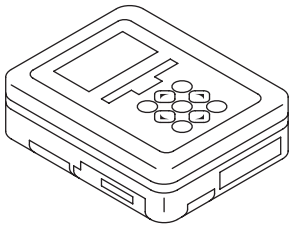
1. AIRBAG SYSTEM

CAUTION:
• Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
• Be careful not to damage the airbag system wiring harness.

B: INSPECTION

1. BASIC INSPECTION

Before performing the diagnosis, check the following items which may cause problems relating the wiper or light.
1) Check the battery. <Ref. to SC(H4DO)-60, INSPECTION, Battery.> <Ref. to SC(H6DO)-53, INSPECTION, Battery.>
2) Check the relay and fuse condition. <Ref. to LI-5, Relay and Fuse.>
3) Check the connecting condition of harness and harness connector.



2. FUNCTION CHECK

AUTO HEADLIGHT BEAM LEVELER SYSTEM

1) Turn the ignition switch to ON.
2) Turn on the headlight low beam.
3) Check that the beam axes move when the vehicle condition is kept for three seconds or more after the vehicle posture is changed with the vehicle stopped.

C: PREPARATION TOOL

1. SPECIAL TOOL

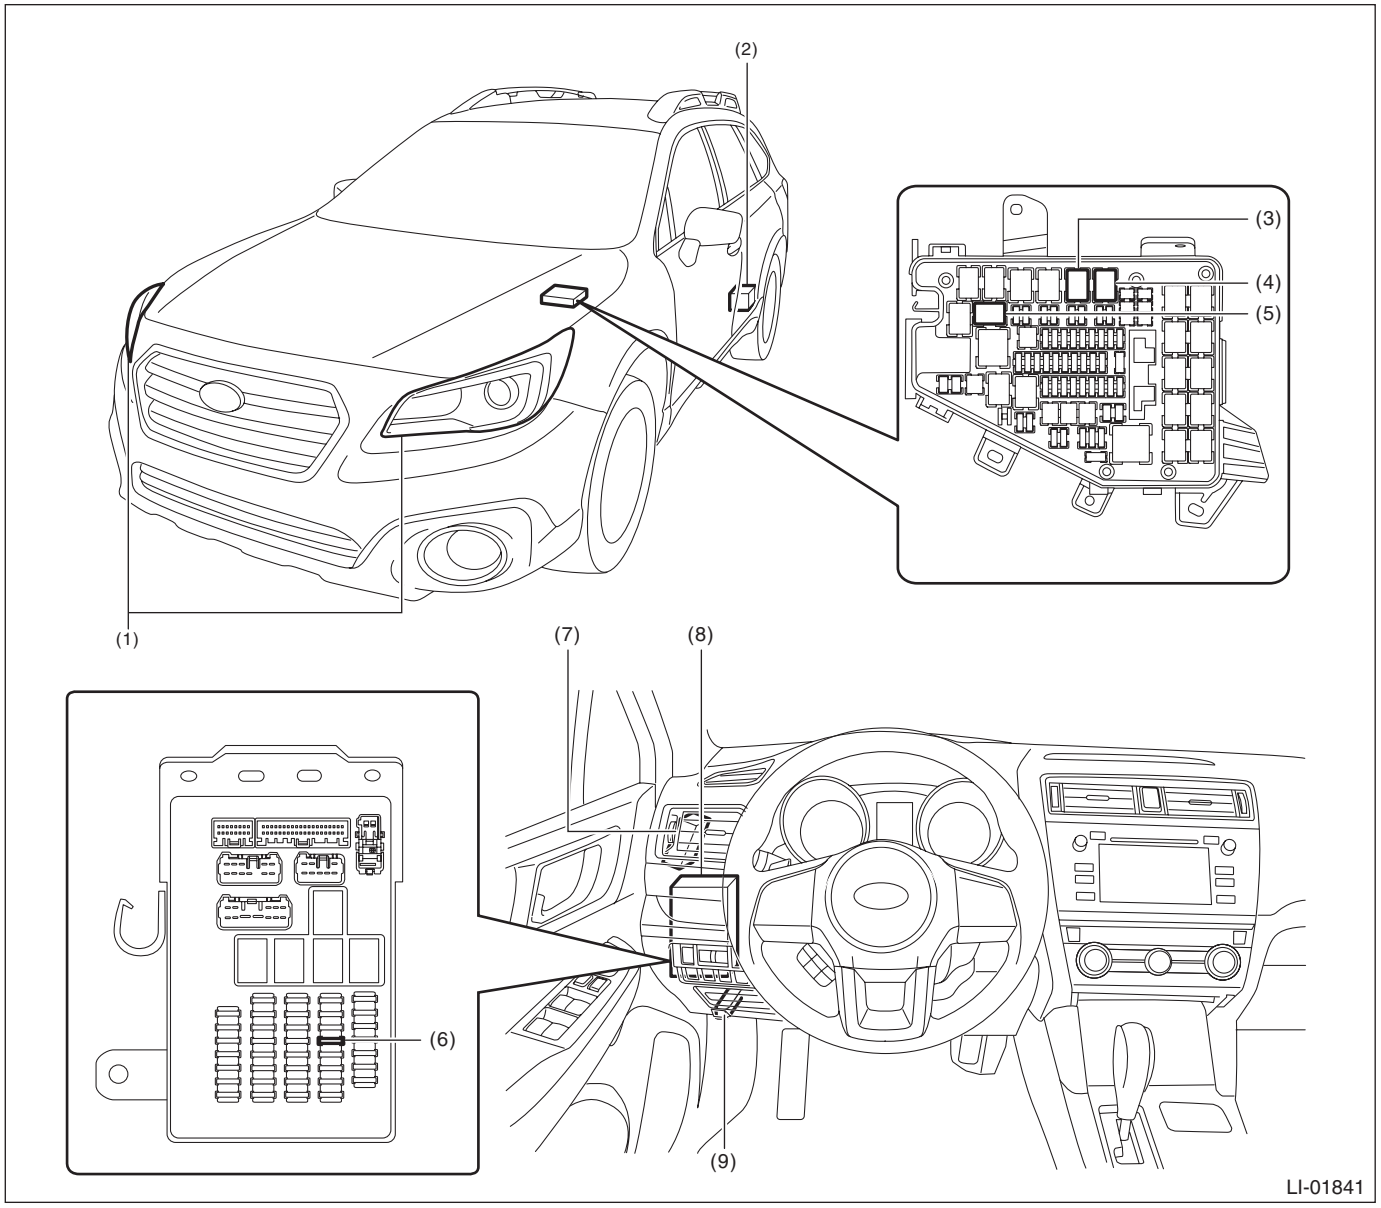


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
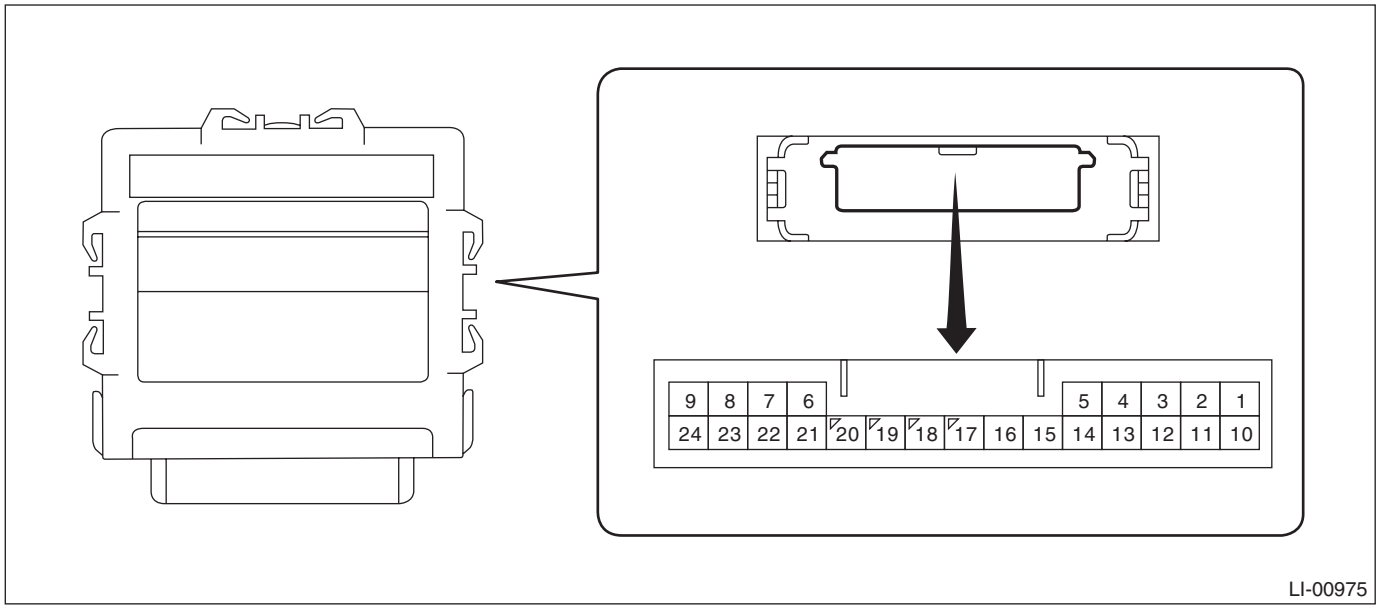
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

4. Electrical Component Location

A: LOCATION



(1) Headlight ASSY
– Headlight beam leveler actuator
(2) Rear vehicle height sensor
(3) Headlight relay Lo
(4) Headlight relay Hi LH
(5) Headlight relay Hi RH
(6) Fuse 7.5A (auto headlight beam leveler CM)
(7) Auto headlight beam leveler CM
(8) Body integrated unit
(9) Data link connector

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

1. AUTO HEADLIGHT BEAM LEVELER CM

Terminal No.	Content	Measuring condition	Standard
1 ←→ Chassis ground	Ignition power supply	Ignition switch ON	8 — 16 V
2 ←→ Chassis ground	GND	Always	Less than 1 Ω
3 ←→ Chassis ground	Rr vehicle height sensor GND	Always	Less than 1 Ω
4	—	—	—
5	—	—	—
6	—	—	—
7	—	—	—
8	—	—	—
9	—	—	—
10 ←→ Chassis ground	Leveling actuator power supply	Ignition switch ON	8 — 16 V
11 ←→ Chassis ground	Leveling actuator GND	Always	Less than 1 Ω
12 ←→ 3	Rr vehicle height sensor power supply	Ignition switch ON	4.75 — 5.25 V
13	—	—	—
14	—	—	—
15	—	—	—
16	—	—	—
17 ←→ Chassis ground	Leveling actuator signal	Headlight off → on	Less than 1 V → 1.0 — 14.4 V (for 17 seconds)
		Headlight on, no vehicle height change → change and hold vehicle height for 3 seconds or more	
18	—	—	—
19 ←→ Chassis ground	Rr sensor signal	IG ON (with no passenger, no load and vehicle stopped)	Approx. 2.5 V (changes according to vehicle condition)
20	—	—	—
21	—	—	—
22	—	—	—
23	CAN-H	Cannot be measured (CAN communication line)	—
24	CAN-L	Cannot be measured (CAN communication line)	—

B: WIRING DIAGRAM

Refer to “Headlight Beam Leveler System” in the wiring diagram. <Ref. to WI-288, WIRING DIAGRAM, Headlight Beam Leveler System.>

6. Subaru Select Monitor

A: OPERATION

- For operation procedures, refer to “Application help for Subaru Select Monitor”.
- If the auto headlight beam leveler CM can not communicate with Subaru Select Monitor, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE”. <Ref. to AL(diag)-8, INSPECTION, Subaru Select Monitor.>

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Communication error with auto headlight beam leveler CM

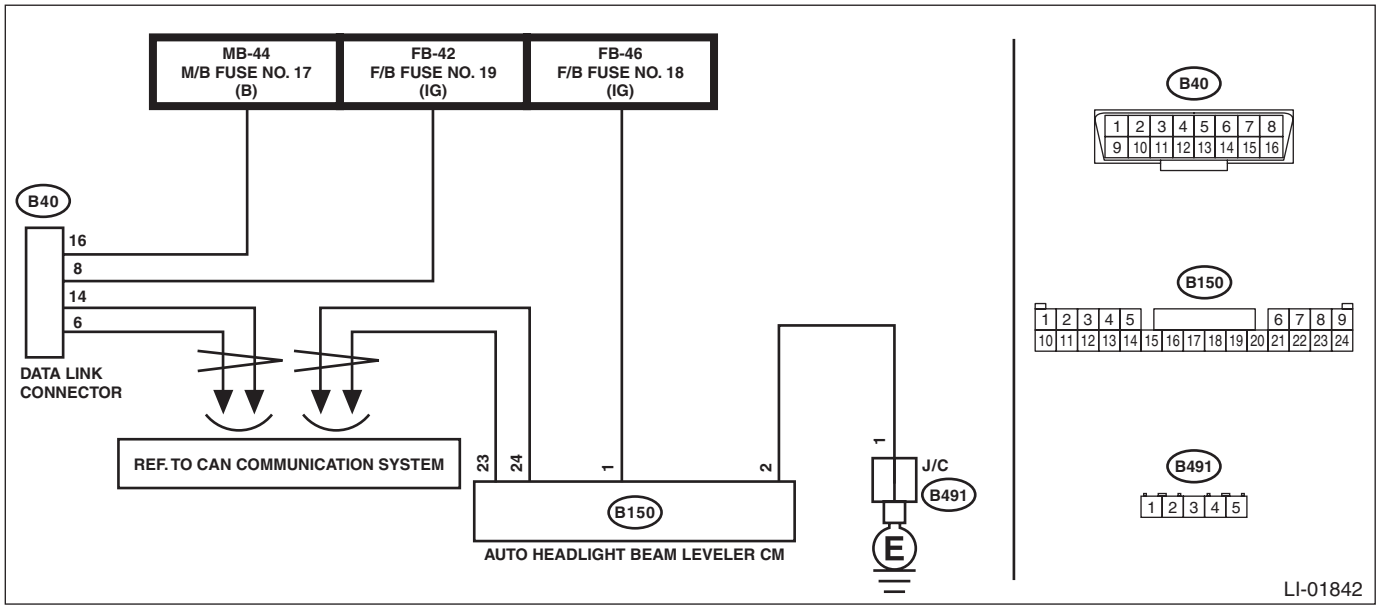
DETECTING CONDITION:

- Defective harness connector
- Power supply circuit malfunction
- Defective auto headlight beam leveler CM
- Defective CAN communication circuit
- Defective Subaru Select Monitor

TROUBLE SYMPTOM:

Communication is impossible between auto headlight beam leveler CM and Subaru Select Monitor.

CAUTION:



Initialization is required after replacing the auto headlight beam leveler CM.

WIRING DIAGRAM:

NOTE:

For the coupling connector, refer to “WIRING SYSTEM”.

Headlight beam leveler system <Ref. to WI-288, WIRING DIAGRAM, Headlight Beam Leveler System.>

Step		Check	Yes	No
1	**CHECK FUSE.** Check the fuse.	Is there any fault?	Go to step **2**.	Replace the fuse. If the replaced fuse has blown out immediately, repair the short circuit to ground in harness between battery and auto headlight beam leveler CM.

	Step	Check	Yes	No
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the auto headlight beam leveler CM connector. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **3**.	Repair the open circuit in the harness between auto headlight beam leveler CM connector and fuse.
3	**CHECK HARNESS.** Using a tester, measure the resistance between the auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 2 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness between auto headlight beam leveler CM connector and chassis ground.
4	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault?	Perform the inspection according to the diagnosis for LAN system.	Go to step **5**.
5	**CHECK BODY INTEGRATED UNIT.** 1) Turn the ignition switch to OFF. 2) Connect the auto headlight beam leveler CM connector. 3) Communicate with the body integrated unit using the Subaru Select Monitor.	Is communication possible?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the auto headlight beam leveler CM. <Ref. to LI-77, Auto Headlight Beam Leveler Control Module.>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Automatic Headlight Leveling System».
3) On «Automatic Headlight Leveling System» display, select «Diagnostic Code(s) Display».

NOTE:
- For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to AL(diag)-14, List of Diagnostic Trouble Code (DTC).>

8. Clear Memory Mode

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Automatic Headlight Leveling System».
3) On «Automatic Headlight Leveling System» display, select «Clear Memory».

NOTE:
For details concerning the work procedure, refer to the “PC application help for Subaru Select Monitor”.

9. Inspection Mode

A: PROCEDURE

1) Turn the ignition switch to ON.
2) Turn on the headlight low beam.
3) Check that the beam axes move when the vehicle condition is kept for three seconds or more after the vehicle posture is changed with the vehicle stopped.
4) Read the DTC and check that the DTC is not displayed.

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC.

10.Read Current Data

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Automatic Headlight Leveling System».
3) On «Integ. unit mode failure diag.» display, select «Current Data Display & Save».

NOTE:
For details concerning the work procedure, refer to the “PC application help for Subaru Select Monitor”.

B: LIST

Item Name	Contents	Standard	Note
Trip Count	Time stamp information, trip counter	—	—
Count	Time stamp information, original counter identification information	—	—
Time Count	Time stamp information, time counter	—	—
F Sensor Signal	Output voltage value from front vehicle height sensor	5V	Fixed at 5 V because front vehicle height sensor is not equipped.
R Sensor Signal	Output voltage value from rear vehicle height sensor	Approx. 2.5 V	Changes according to vehicle condition.
Actuator Signal	Power supply voltage value to headlight beam leveler actuator	Not in operation: 0% In operation: 10 — 90% (17 seconds)	Changes according to vehicle condition.
ECU ACC	IG voltage condition of auto headlight beam leveler CM	8 — 16 V	—
Indicator Signal	Meter indicator condition	Light off: Normal Light up: Abnormal Blinks 3 times at 2 Hz.: When blinking 3 times at 2 Hz Blinks 2 times at 2 Hz.: When blinking twice at 2 Hz Check Bulb: When checking bulbs	—
Vehicle speed signal	Vehicle speed condition	Show vehicle speed	—
H/L Lo Signal	Headlight lighting condition	Light off: light switch OFF Light up: light switch HEAD or light switch AUTO with light sensor operated	—
LED HEADLAMP(LH) error Signal	Open circuit detection signal status	OFF: Open circuit not detected ON: Open circuit detected	Displays as «Invalid» because the LED headlight is not equipped.
LED HEADLAMP(RH) error Signal	Open circuit detection signal status	OFF: Open circuit not detected ON: Open circuit detected	Displays as «Invalid» because the LED headlight is not equipped.

NOTE:
For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

11.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Reference
U0074	Control Module Communication Bus "Body-CAN" Off	<Ref. to AL(diag)-15, DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0122	Lost Communication With Vehicle Dynamics Control Module	<Ref. to AL(diag)-15, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0416	Invalid Data Received From Vehicle Dynamics Control Module	<Ref. to AL(diag)-15, DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1140	Lost Communication With Body Control Module Body-CAN	<Ref. to AL(diag)-15, DTC U1140 LOST COMMUNICATION WITH BODY CONTROL MODULE BODY-CAN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1422	Invalid Data Received From Body Control Module Body-CAN	<Ref. to AL(diag)-15, DTC U1422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE BODY-CAN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2900	AHLCU Error	<Ref. to AL(diag)-15, DTC B2900 AHLCU ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2902	Rear Height Sensor Error	<Ref. to AL(diag)-17, DTC B2902 REAR HEIGHT SENSOR ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

12.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF

Detected when CAN line abnormality is detected.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data (vehicle speed signal) is not received from VDC.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

C: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

DTC DETECTING CONDITION:
Detected when data (vehicle speed signal) from VDC CM is abnormal.
TROUBLE SYMPTOM:
The auto headlight beam leveler does not operate.

NOTE:
Perform the diagnosis for VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

D: DTC U1140 LOST COMMUNICATION WITH BODY CONTROL MODULE BODY-CAN

Detected when CAN data (headlights ON signal) is not received from the body integrated unit.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

E: DTC U1422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE BODY-CAN

Detected when CAN data (headlights ON signal) is invalid.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

F: DTC B2900 AHLCU ERROR

DTC DETECTING CONDITION:
Detected when internal malfunction occurs in the auto headlight beam leveler CM.
TROUBLE SYMPTOM:
The auto headlight beam leveler does not operate.

CAUTION:
Initialization is required after replacing the auto headlight beam leveler CM.

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF → ON. 2) Turn on the headlight low beam. 3) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. 4) Use the Subaru Select Monitor and read DTCs.	Is DTC B2900 displayed? (current malfunction)	Replace the auto headlight beam leveler CM. <Ref. to LI-77, Auto Headlight Beam Leveler Control Module.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

G: DTC B2902 REAR HEIGHT SENSOR ERROR

DTC DETECTING CONDITION:
Rear vehicle height sensor error is detected for 10 seconds or more.
TROUBLE SYMPTOM:
The auto headlight beam leveler does not operate.

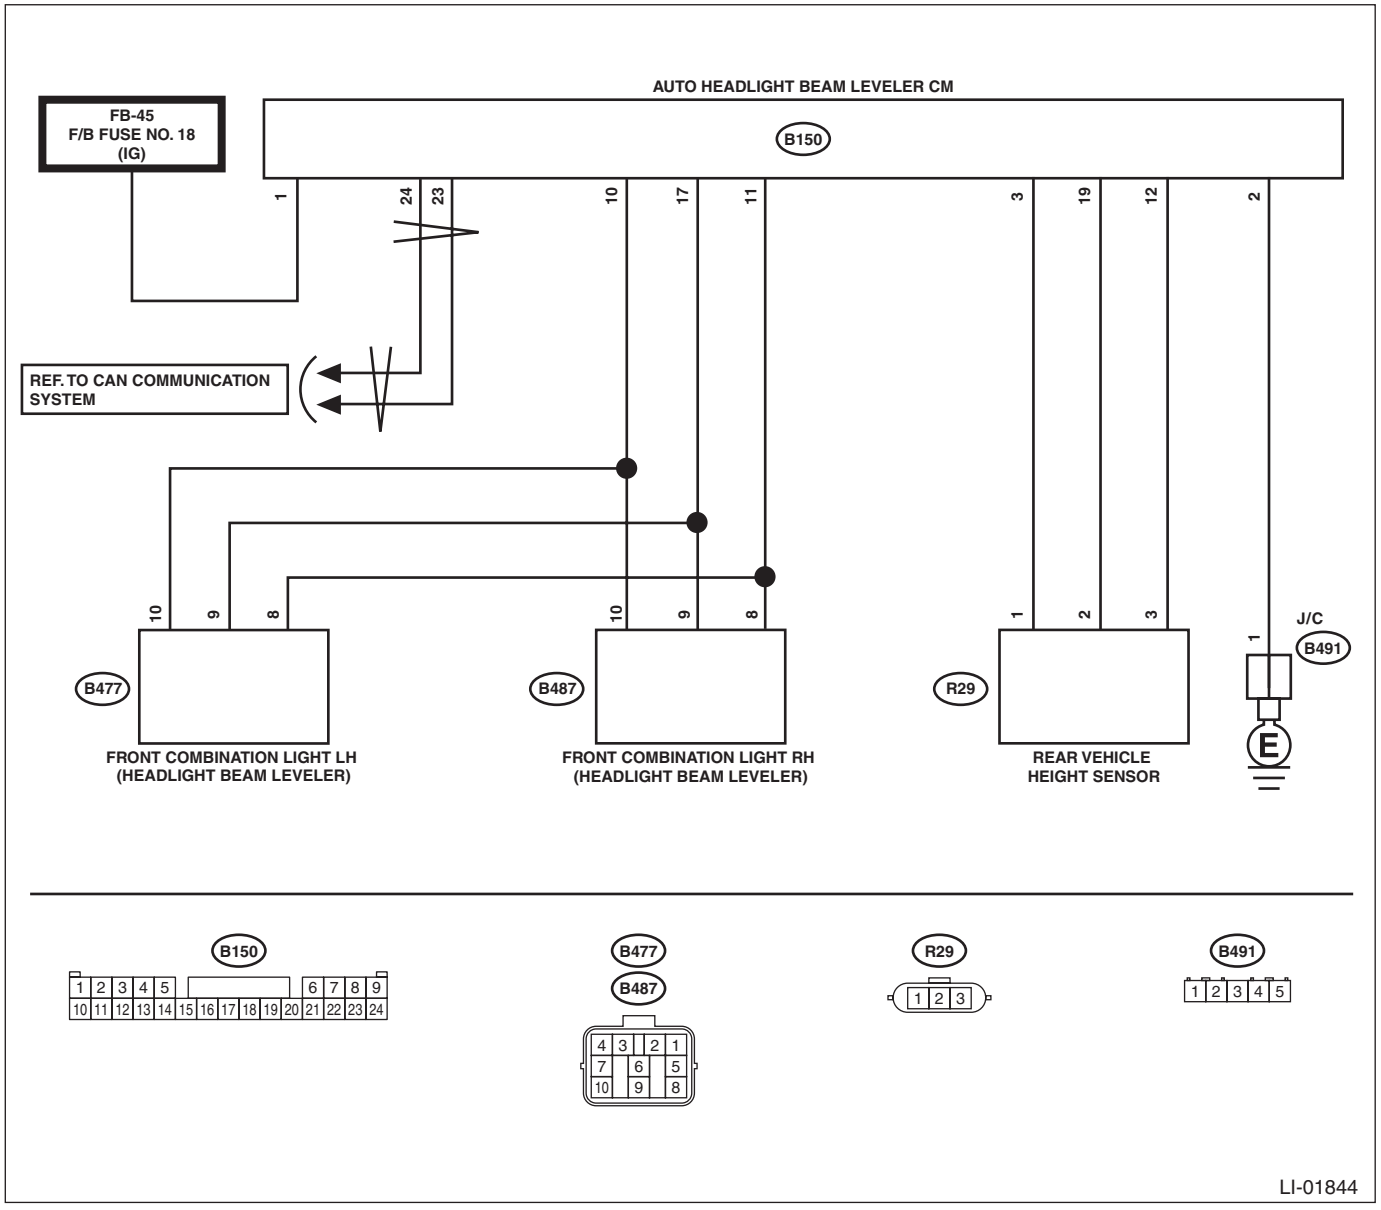
CAUTION:
Initialization is required after replacing the auto headlight beam leveler CM.
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Headlight beam leveler system <Ref. to WI-288, WIRING DIAGRAM, Headlight Beam Leveler System.>

Step		Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF → ON. 2) Turn on the headlight low beam. 3) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. 4) Use the Subaru Select Monitor and read DTCs.	Is DTC B2902 displayed? (current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK CURRENT DATA.** Display {R Sensor Signal} using Subaru Select Monitor.	Does the data indicate the standard value?	Replace the auto headlight beam leveler CM. <Ref. to LI-77, Auto Headlight Beam Leveler Control Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK CURRENT DATA.** 1) Display {R Sensor Signal} using Subaru Select Monitor. 2) Change the vehicle posture.	Does the data change?	Go to step **6**.	Go to step **4**.
4	**CHECK OUTPUT VOLTAGE BETWEEN AUTO HEADLIGHT BEAM LEVELER CM AND VEHICLE HEIGHT SENSOR.** 1) Disconnect the vehicle height sensor connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between the vehicle height sensor connector and chassis ground. ***Connector & terminal*** ***(R29) No. 3 (+) — Chassis ground (–):***	Is the voltage 5±0.25 V?	Go to step **5**.	Replace the auto headlight beam leveler CM. <Ref. to LI-77, Auto Headlight Beam Leveler Control Module.>
5	**CHECK REAR HEIGHT SENSOR.** 1) Remove the rear vehicle height sensor. 2) Perform the inspection of rear height sensor unit. <Ref. to LI-81, INSPECTION, Rear Height Sensor.>	Is the rear height sensor normal?	Go to step **6**.	Replace the rear height sensor. <Ref. to LI-80, Rear Height Sensor.>
6	**CHECK HARNESS.** 1) Disconnect the auto headlight beam leveler CM connector. 2) Using a tester, measure the resistance between the auto headlight beam leveler CM connector and rear height sensor connector. ***Connector & terminal*** ***(B150) No. 3 — (R29) No. 1:*** ***(B150) No. 19 — (R29) No. 2:*** ***(B150) No. 12 — (R29) No. 3:***	Is there continuity?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK HARNESS.** Using a tester, measure the resistance between the auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 3 — Chassis ground:*** ***(B150) No. 19 — Chassis ground:*** ***(B150) No. 12 — Chassis ground:***	Is the resistance 10 kΩ or more?	Replace the auto headlight beam leveler CM. <Ref. to LI-77, Auto Headlight Beam Leveler Control Module.>	Repair or replace the short circuit of the harness.

13.Diagnostics with Phenomenon



A: INSPECTION

1. BEAM LEVEL CONTROL DOES NOT FUNCTION

CAUTION:
- **Before performing diagnosis, check the fuse in this circuit.**
- **Initialization is required after replacing the auto headlight beam leveler CM.**

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Headlight beam leveler system <Ref. to WI-288, WIRING DIAGRAM, Headlight Beam Leveler System.>

Step		Check	Yes	No
1	**CHECK CURRENT DATA.** Display {ECU ACC} using Subaru Select Monitor.	Does the current data indicate the standard value?	Go to step **3**.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN POWER SUPPLY — AUTO HEADLIGHT BEAM LEVELER CM.** 1) Disconnect the auto headlight beam leveler CM connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between the auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 1 (+) — Chassis ground (–):***	Is the voltage 8 — 16 V?	Replace the auto headlight beam leveler CM. <Ref. to LI-77, Auto Headlight Beam Leveler Control Module.>	Repair or replace the harness.
3	**CHECK INDICATOR OUTPUT.** Turn the ignition switch to ON.	Does the warning indicator turn on for three seconds?	Go to step **5**.	Go to step **4**.
4	**CHECK CURRENT DATA.** 1) Display {Indicator Signal} using Subaru Select Monitor. 2) Turn the ignition switch to ON.	Is it set as ON for 3 seconds?	Check the combination meter. <Ref. to MET(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Replace the auto headlight beam leveler CM. <Ref. to LI-77, Auto Headlight Beam Leveler Control Module.>
5	**CHECK INDICATOR OUTPUT.** Leave the ignition switch to ON for 10 seconds.	Does the warning indicator light go off?	Go to step **6**.	Go to step **10**.
6	**CHECK HEADLIGHT ASSEMBLY (ACTUATOR) DRIVE.** 1) Connect the auto headlight beam leveler CM connector. 2) Turn the ignition switch to ON, and within 10 seconds, repeat the OFF → Low beam of headlight switch 5 times. 3) Check that the headlight beam drops once, then returns to normal. 4) Then, after waiting for 30 seconds or more with the ignition ON, turn the ignition switch to OFF.	Does the headlight beam drop down once, and then return?	Replace the auto headlight beam leveler CM. <Ref. to LI-77, Auto Headlight Beam Leveler Control Module.>	Go to step **7**.
7	**CHECK HEADLIGHT ASSEMBLY (ACTUATOR) OUTPUT.** 1) Display {Actuator Signal} using Subaru Select Monitor. 2) Turn the ignition switch to ON, and within 10 seconds, repeat the OFF → Low beam of headlight switch 5 times. 3) Check that the headlight beam drops once, then returns to normal. 4) Then, after waiting for 30 seconds or more with the ignition ON, turn the ignition switch to OFF.	Does the current data indicate the standard value? (Does the value change at 10 — 90%?)	Go to step **8**.	Replace the auto headlight beam leveler CM. <Ref. to LI-77, Auto Headlight Beam Leveler Control Module.>
8	**CHECK OUTPUT VOLTAGE BETWEEN HEADLIGHT ASSEMBLY (ACTUATOR).** 1) Disconnect the auto headlight beam leveler CM connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between the auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 10 (+) — Chassis ground (–):***	Is the voltage 8 — 16 V?	Replace the headlight assembly. <Ref. to LI-27, Headlight Assembly.>	Go to step **9**.

	Step	Check	Yes	No
9	**CHECK HARNESS BETWEEN AUTO HEADLIGHT BEAM LEVELER CM AND HEADLIGHT ASSEMBLY (ACTUATOR).** 1) Disconnect the connector of headlight assembly. 2) Measure the continuity between the auto headlight beam leveler CM connector and headlight assembly (actuator) connector. ***Connector & terminal*** ***• Headlight beam leveler RH*** ***(B150) No. 10 — (B487) No. 10:*** ***(B150) No. 17 — (B487) No. 9:*** ***(B150) No. 11 — (B487) No. 8:*** ***• Headlight beam leveler LH*** ***(B150) No. 10 — (B477) No. 10:*** ***(B150) No. 17 — (B477) No. 9:*** ***(B150) No. 11 — (B477) No. 8:***	Is there continuity?	Replace the auto headlight beam leveler CM. <Ref. to LI-77, Auto Headlight Beam Leveler Control Module.>	Repair the open circuit or poor contact of the connector in the harness between headlight assembly and auto headlight beam leveler CM.
10	**CHECK DTC.** Display DTC using the Subaru Select Monitor.	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to AL(diag)-14, LIST, List of Diagnostic Trouble Code (DTC).>	Replace the auto headlight beam leveler CM. <Ref. to LI-77, Auto Headlight Beam Leveler Control Module.>

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**PERFORM CUSTOMER INTERVIEW.** Using the Check List for Interview, ask the customer the condition of how the trouble occurred. <Ref. to SRF(diag)-3, CHECK, Check List for Interview.>	Did you interview the customer?	Go to step **2**.	Interview the customer. <Ref. to SRF(diag)-3, CHECK, Check List for Interview.>
2	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Perform the inspection according to the diagnosis for LAN system.	Go to step **3**.
3	**CHECK DTC.** Read the DTC of the steering responsive fog light using the Subaru Select Monitor. <Ref. to SRF(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to SRF(diag)-9, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>	Is DTC displayed?	Record DTC and time stamp, and perform the diagnosis according to DTC. <Ref. to SRF(diag)-16, LIST, List of Diagnostic Trouble Code (DTC).> For time stamp, refer to “LAN SYSTEM”. <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.> After diagnosis is completed, Go to step **6**.	Go to step **4**.
4	**CHECK DIAGNOSTICS WITH PHENOMENON.** Check “Diagnostics with Phenomenon”. <Ref. to SRF(diag)-25, Diagnostics with Phenomenon.>	Does the symptom apply?	Perform diagnosis according to the procedures in the diagnostics with phenomenon.	Go to step **5**.
5	**CHECK TROUBLE PHENOMENON.** 1) Perform the basic inspection and function check. <Ref. to SRF(diag)-4, INSPECTION, General Description.> 2) Check the SRF CM. <Ref. to SRF(diag)-7, Control Module I/O Signal.> 3) Perform check of current data. <Ref. to SRF(diag)-14, Read Current Data.> 4) Perform a unit check.	Was the trouble cause found?	Repair or replace the cause of trouble.	System is normal.
6	**PERFORM DIAGNOSIS.** 1) Perform the Clear Memory Mode. 2) Perform the Inspection Mode. <Ref. to SRF(diag)-13, Inspection Mode.>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to SRF(diag)-16, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

2. Check List for Interview

A: CHECK

- Inspect the following items regarding the vehicle's state.
- Print out this page for interviewing customers.

<table>
<tr><td colspan="4">Steering Responsive Fog Light Check List for Interview

3. General Description

A: CAUTION

1. AIRBAG SYSTEM

CAUTION:
• Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
• Be careful not to damage the airbag system wiring harness.

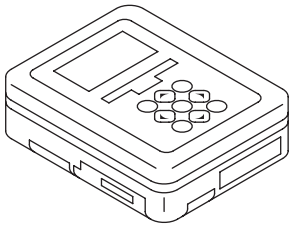
B: INSPECTION

1. BASIC INSPECTION

Before performing the diagnosis, check the following items which may cause problems relating the wiper or light.
1) Check the battery. <Ref. to SC(H4DO)-60, INSPECTION, Battery.> <Ref. to SC(H6DO)-53, INSPECTION, Battery.>
2) Check the relay and fuse condition. <Ref. to LI-5, Relay and Fuse.>
3) Check the connecting condition of harness and harness connector.

2. FUNCTION CHECK

Steering responsive fog light



1) Start the engine.
2) Turn the fog light switch to OFF.
3) Turn on the headlight low beam.
4) Check if when turning the steering wheel by 45 degree or more at a vehicle speed of 10 km/h (6 MPH) or more, the fog light on the turning side is only illuminated.

AUTO HEADLIGHT BEAM LEVELER SYSTEM

1) Turn the ignition switch to ON.
2) Turn on the headlight low beam.
3) Check that the beam axes move when the vehicle condition is kept for three seconds or more after the vehicle posture is changed with the vehicle stopped.

C: PREPARATION TOOL

1. SPECIAL TOOL

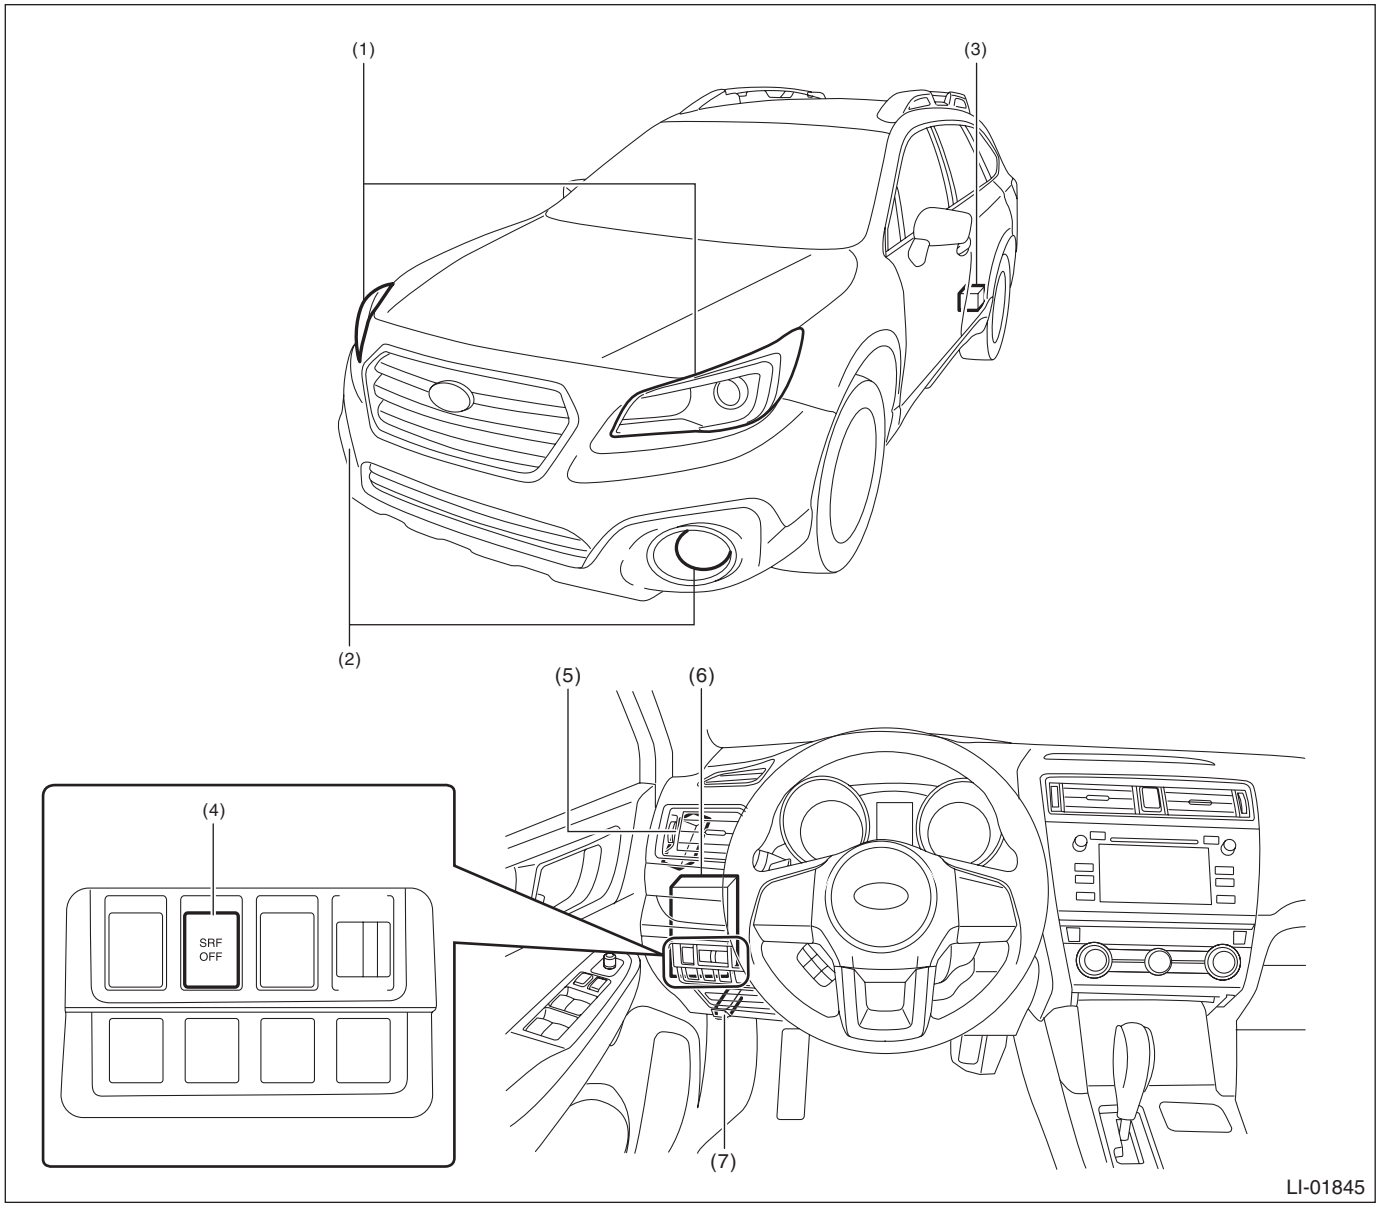


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
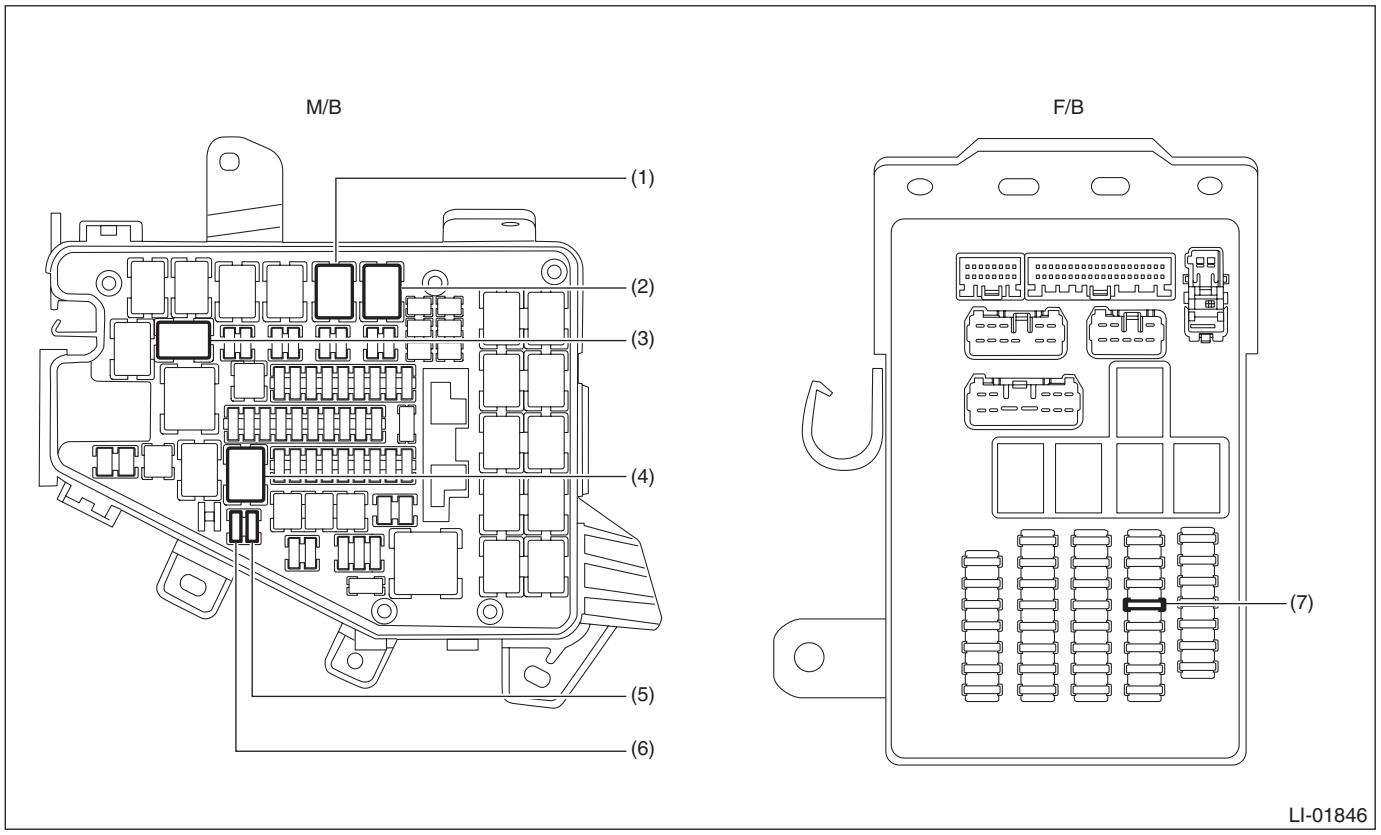
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.

2. GENERAL TOOL

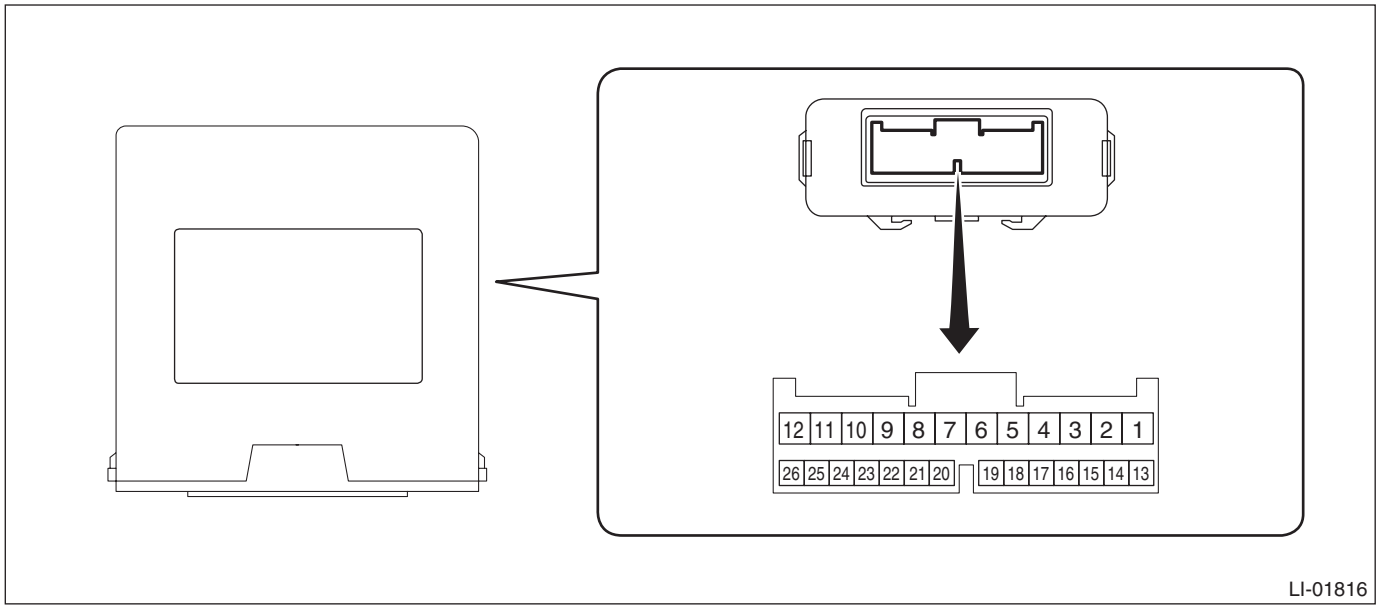


TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

4. Electrical Component Location

A: LOCATION

(1) Headlight ASSY
– Headlight beam leveler actuator
(2) Fog light ASSY
(3) Rear vehicle height sensor
(4) SRF OFF switch
(5) SRF CM
NOTE:
Part label: LIGHTING CONTROL MODULE
(6) Body integrated unit
(7) Data link connector



(1) Headlight relay Lo
(2) Headlight relay Hi (LH)
(3) Headlight relay Hi (RH)
(4) Front fog light relay
(5) Fuse 10A (SRF CM)
(6) Fuse 10A (SRF CM)
(7) Fuse 7.5A (SRF CM)

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

1. SRF CM

Terminal No.	Content	Measuring condition	Standard
1 ←→ Chassis ground	Battery power supply (right)	Always	8 — 16 V
2 ←→ Chassis ground	—	—	—
3 ←→ Chassis ground	Fog light output (right)		
4 ←→ Chassis ground	—	—	—
5 ←→ Chassis ground	SRF OFF switch		
6 ←→ Chassis ground	—	—	—
7 ←→ Chassis ground	—	—	—
8 ←→ Chassis ground	Rear vehicle height sensor signal*1	IG ON (with no passenger, no load and vehicle stopped)	Approx. 2.5 V (changes according to vehicle condition)
9 ←→ Chassis ground	—	—	—
10 ←→ Chassis ground	Fog light output (left)		
11 ←→ Chassis ground	—	—	—
12 ←→ Chassis ground	Battery power supply (left)	Always	8 — 16 V
13 ←→ Chassis ground	GND	Always	Less than 1 Ω
14 ←→ Chassis ground	Ignition power supply	Ignition switch ON	8 — 16 V
15 ←→ Chassis ground	Leveling actuator power supply*1	Ignition switch ON	8 — 16 V
16 ←→ Chassis ground	Leveling actuator GND*1	Always	Less than 1 Ω
17 ←→ Chassis ground	—	—	—
18 ←→ Chassis ground	—	—	—
19 ←→ Chassis ground	—	—	—
20 ←→ Chassis ground	—	—	—
21 ←→ Chassis ground	Leveling actuator signal*1	Headlight off → on	Less than 1 V → 1.0 — 14.4 V (for 17 seconds)
		Headlight on, no vehicle height change → change and hold vehicle height for 3 seconds or more	
22 ←→ Chassis ground	—	—	—
23 ←→ Chassis ground	Rear vehicle height sensor power supply*1	Ignition switch ON	4.75 — 5.25 V

Terminal No.	Content	Measuring condition	Standard
24 ←→ Chassis ground	Rear vehicle height sensor GND*1	Always	Less than 1 Ω
25 ←→ Chassis ground	CAN-H (CAN communication line)	Cannot be measured	—
26 ←→ Chassis ground	CAN-L (CAN communication line)	Cannot be measured	—

*1: With auto headlight beam leveler system

B: WIRING DIAGRAM

- With auto headlight beam leveler system

Refer to “Headlight Beam Leveler System” in the wiring diagram. <Ref. to WI-280, WIRING DIAGRAM, Front Fog Light System.> <Ref. to WI-288, WIRING DIAGRAM, Headlight Beam Leveler System.>

- Without auto headlight beam leveler system

Refer to “Front Fog Light System” in the wiring diagram. <Ref. to WI-280, WIRING DIAGRAM, Front Fog Light System.>

6. Subaru Select Monitor

A: OPERATION

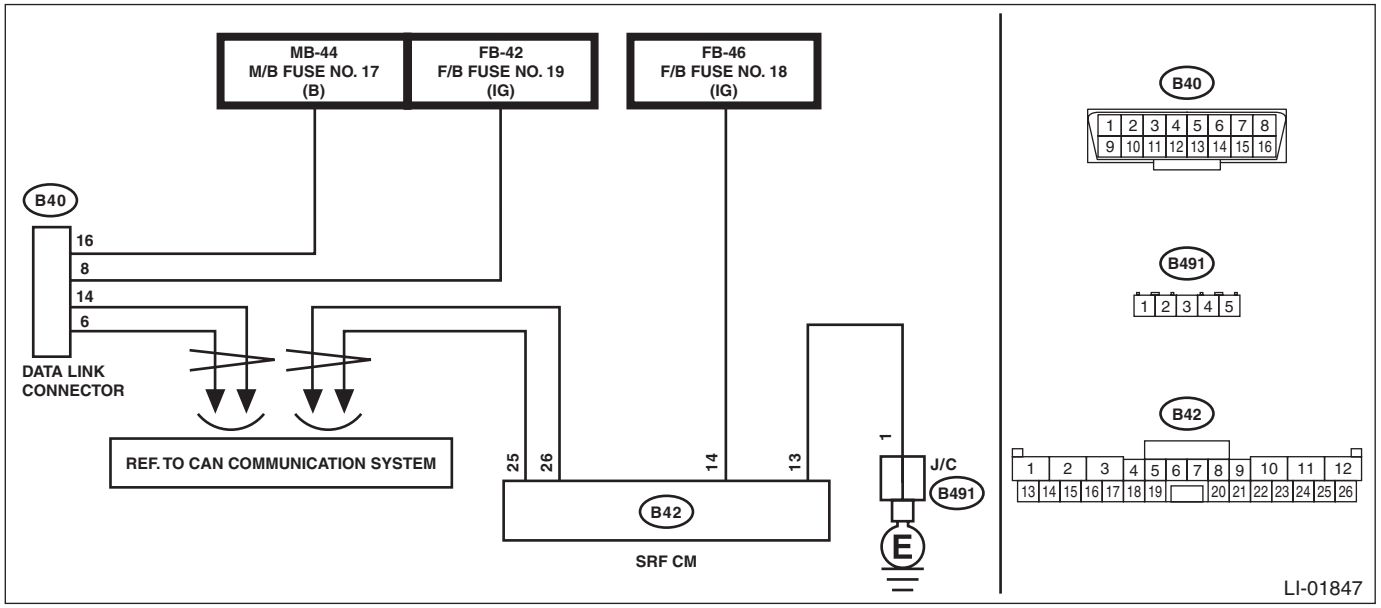
- For operation procedures, refer to “Application help for Subaru Select Monitor”.
- If the SRF CM cannot communicate with Subaru Select Monitor, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE”. <Ref. to SRF(diag)-9, INSPECTION, Subaru Select Monitor.>

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Communication error with SRF CM

DETECTING CONDITION:



- Defective harness connector
- Power supply circuit malfunction
- Defective SRF CM
- Defective CAN communication circuit
- Defective Subaru Select Monitor

TROUBLE SYMPTOM:

Communication is impossible between SRF CM and Subaru Select Monitor.

CAUTION:
Initialization is required after replacing the SRF CM.
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Front fog light system <Ref. to WI-280, WIRING DIAGRAM, Front Fog Light System.>
Headlight beam leveler system <Ref. to WI-288, WIRING DIAGRAM, Headlight Beam Leveler System.>

Step		Check	Yes	No
1	**CHECK FUSE.** Check the fuse.	Is there any fault?	Go to step **2**.	Replace the fuse. If the replaced fuse has blown out immediately, repair the short circuit to ground in harness between battery and SRF CM.

	Step	Check	Yes	No
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the SRF CM connector. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between SRF CM connector and chassis ground. ***Connector & terminal*** ***(B42) No. 14 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **3**.	Repair the open circuit in the harness between SRF CM connector and fuse.
3	**CHECK HARNESS.** Using a tester, measure the resistance between SRF CM connector and chassis ground. ***Connector & terminal*** ***(B42) No. 13 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness between SRF CM connector and chassis ground.
4	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault?	Perform the inspection according to the diagnosis for LAN system.	Go to step **5**.
5	**CHECK BODY INTEGRATED UNIT.** 1) Turn the ignition switch to OFF. 2) Connect the SRF CM connector. 3) Communicate with the body integrated unit using the Subaru Select Monitor.	Is communication possible?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the SRF CM. <Ref. to LI-85, Steering Responsive Fog Lights CM.>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Automatic Headlight Leveling System».
3) On «Automatic Headlight Leveling System» display, select «Diagnostic Code(s) Display».

NOTE:
- For details concerning the work procedure, refer to the “PC application help for Subaru Select Monitor”.
- Refer to List of Diagnostic Trouble Code (DTC) for DTC. <Ref. to SRF(diag)-16, List of Diagnostic Trouble Code (DTC).>

8. Clear Memory Mode

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Automatic Headlight Leveling System».
3) On «Automatic Headlight Leveling System» display, select «Clear Memory».

NOTE:
For details concerning the work procedure, refer to the “PC application help for Subaru Select Monitor”.

9. Inspection Mode

A: PROCEDURE

1. AUTO HEADLIGHT BEAM LEVELER SYSTEM

1) Turn the ignition switch to ON.
2) Turn on the headlight low beam.
3) Check that the beam axes move when the vehicle condition is kept for three seconds or more after the vehicle posture is changed with the vehicle stopped.
4) Read the DTC and check that the DTC is not displayed.

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC.

2. STEERING RESPONSIVE FOG LIGHT

1) Turn the ignition switch to ON.
2) Turn on the headlight low beam.
3) Turn the fog light switch to ON.
4) Check that the fog light illuminates.
5) Read the DTC and check that the DTC is not displayed.

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC.

10.Read Current Data

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Automatic Headlight Leveling System».
3) On «Integ. unit mode failure diag.» display, select «Current Data Display & Save».

NOTE:
For details concerning the work procedure, refer to the “PC application help for Subaru Select Monitor”.

B: LIST

Item Name	Contents	Standard	Note
Trip Count	Time stamp information, trip counter	—	—
Count	Time stamp information, original counter identification information	—	—
Time Count	Time stamp information, time counter	—	—
R Sensor Signal	Output voltage value from rear vehicle height sensor	Approx. 2.5 V	Changes according to vehicle condition. Not displayed for models without auto headlight beam leveler system.
Actuator Signal	Power supply voltage value to headlight beam leveler actuator	Not in operation: 0% In operation: 10 — 90% (17 seconds)	Changes according to vehicle condition. Not displayed for models without auto headlight beam leveler system.
ECU ACC	IG voltage condition of SRF CM	8 — 16 V	—
Indicator Signal	Meter indicator condition	Light off: Normal Light up: Abnormal Blinks 3 times at 2 Hz.: When blinking 3 times at 2 Hz Blinks 2 times at 2 Hz.: When blinking twice at 2 Hz Check Bulb: When checking bulbs	Fixed to OFF for models without auto headlight beam leveler system.
Vehicle speed signal	Vehicle speed condition	Show vehicle speed	—
H/L Lo Signal	Headlight (Lo) lighting condition	OFF: when unlit ON: when lit	—
Headlight High Beam Signal	Headlight (Hi) lighting condition	OFF: when unlit ON: when lit	—
Fog Light SW Signal	Front fog light switch status	OFF: when switch OFF ON: when switch ON	—
Steering Angle Signal	Steering angle status	Displays steering angle	—
Shift Position Signal	Shift lever position	Displays shift lever position	—
SRF Status	SRF switch status	SRF Function ON: when switch ON SRF Function OFF: when switch OFF	—
Fog Light Control Status	SRF operation status	LH/RH Light off: when all unlit LH Light on: when left fog light is lit RH Light on: when right fog light is lit LH/RH Light on: when all lit	—

11.System Operation Check Mode

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Automatic Headlight Leveling System».
3) On «Automatic Headlight Leveling System» display, select «Work Support».
4) On «Work Support» display, select «System Operation Check Mode».
5) On «System Operation Check Mode» display, select «Fog Light Lighting Test».

System operation check mode item	Display	Note
Fog Light Lighting Test	LH	Left side fog light is illuminated.
	RH	Right side fog light is illuminated.

NOTE:
For detailed operation procedures, refer to “Help for Subaru Select Monitor”.

12.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Reference
U0074	Control Module Communication Bus "Body-Can" Off	<Ref. to SRF(diag)-17, DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

13.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF

Detected when CAN line abnormality is detected.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: DTC U0101 LOST COMMUNICATION WITH TCM

Detected when CAN data (vehicle speed signal) is not received from TCM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

C: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data (vehicle speed signal) is not received from VDC CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

D: DTC U0402 INVALID DATA RECEIVED FROM TCM

Detected when CAN data from TCM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

E: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

Detected when data from VDC CM is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

F: DTC U1140 LOST COMMUNICATION WITH BODY CONTROL MODULE BODY-CAN

Detected when CAN data is not received from body integrated unit.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

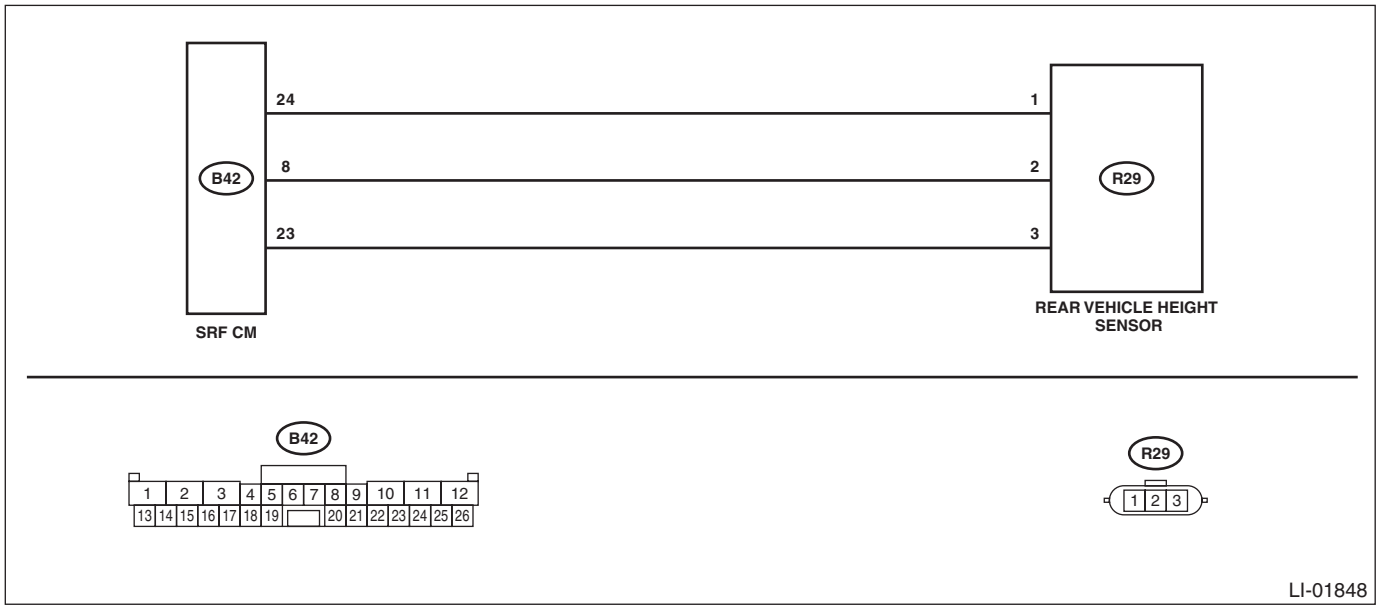
G: DTC U1422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE BODY-CAN

Detected when data from body integrated unit is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

H: DTC B2900 AHLCU ERROR

DTC DETECTING CONDITION:
Detected when internal malfunction occurs in SRF CM.
TROUBLE SYMPTOM:
The auto headlight beam leveler does not operate.



CAUTION:
Initialization is required after replacing the SRF CM.
(Initialization is not required for models without auto headlight beam leveler system)

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF → ON. 2) Turn on the headlight low beam. 3) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. 4) Use the Subaru Select Monitor and read DTCs.	Is DTC B2900 displayed? (current malfunction)	Replace the SRF CM. <Ref. to LI-85, Steering Responsive Fog Lights CM.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

I: DTC B2902 REAR HEIGHT SENSOR ERROR

DTC DETECTING CONDITION:
Rear vehicle height sensor error is detected for 10 seconds or more.
TROUBLE SYMPTOM:
The auto headlight beam leveler does not operate.

CAUTION:
Initialization is required after replacing the SRF CM.
WIRING DIAGRAM:
Headlight beam leveler system <Ref. to WI-288, WIRING DIAGRAM, Headlight Beam Leveler System.>

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF → ON. 2) Turn on the headlight low beam. 3) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. 4) Use the Subaru Select Monitor and read DTCs.	Is DTC B2902 displayed? (current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK CURRENT DATA.** Display {R Sensor Signal} using Subaru Select Monitor.	Does the data indicate the standard value?	Replace the SRF CM. <Ref. to LI-85, Steering Responsive Fog Lights CM.>	Go to step **3**.
3	**CHECK CURRENT DATA.** 1) Display {R Sensor Signal} using Subaru Select Monitor. 2) Change the vehicle posture.	Does the data change?	Go to step **6**.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK OUTPUT VOLTAGE BETWEEN SRF CM AND VEHICLE HEIGHT SENSOR.** 1) Disconnect the vehicle height sensor connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between the vehicle height sensor connector and chassis ground. ***Connector & terminal*** ***(R29) No. 3 (+) — Chassis ground (–):***	Is the voltage 5±0.25 V?	Go to step **5**.	Replace the SRF CM. <Ref. to LI-85, Steering Responsive Fog Lights CM.>
5	**CHECK REAR HEIGHT SENSOR.** 1) Remove the rear vehicle height sensor. 2) Perform the inspection of rear height sensor unit. <Ref. to LI-81, INSPECTION, Rear Height Sensor.>	Is the rear height sensor normal?	Go to step **6**.	Replace the rear height sensor. <Ref. to LI-80, Rear Height Sensor.>
6	**CHECK HARNESS.** 1) Disconnect the SRF CM connector. 2) Using a tester, measure the resistance between SRF CM connector and rear height sensor connector. ***Connector & terminal*** ***(B42) No. 24 — (R29) No. 1:*** ***(B42) No. 8 — (R29) No. 2:*** ***(B42) No. 23 — (R29) No. 3:***	Is there continuity?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK HARNESS.** Using a tester, measure the resistance between SRF CM connector and chassis ground. ***Connector & terminal*** ***(B42) No. 24 — Chassis ground:*** ***(B42) No. 8 — Chassis ground:*** ***(B42) No. 23 — Chassis ground:***	Is the resistance 10 kΩ or more?	Replace the SRF CM. <Ref. to LI-85, Steering Responsive Fog Lights CM.>	Repair or replace the short circuit of the harness.

J: DTC B2906 FOG LIGHT HARNESS(RH)

DTC DETECTING CONDITION:
Front fog light (RH) malfunction signal line error is detected.
TROUBLE SYMPTOM:
Warning will be displayed for front fog light malfunction, SRF malfunction.

CAUTION:
Initialization is required after replacing the SRF CM.
(Initialization is not required for models without auto headlight beam leveler system)
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.

Step		Check	Yes	No
1	**CHECK FUSE.** Check the fuse.	Is there any fault?	Replace the fuse. If the replaced fuse has blown out immediately, repair the short circuit to ground in harness between battery and SRF CM.	Go to step **2**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF → ON. 2) Turn on the headlight low beam. 3) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. 4) Use the Subaru Select Monitor and read DTCs.	Is DTC B2906 displayed? (current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Disconnect the SRF CM connector. 2) Using a tester, measure the voltage between SRF CM connector and chassis ground. ***Connector & terminal*** ***(B42) No. 1 (+) — Chassis ground (–):***	Is the voltage 8 — 16 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS.** 1) Disconnect the front fog light RH connector. 2) Using a tester, measure the resistance between SRF CM connector and front fog light RH connector. ***Connector & terminal*** ***(B42) No. 3 — (B488) No. 2:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** Use a tester to measure the resistance between front fog light RH connector and chassis ground. ***Connector & terminal*** ***(B488) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK FRONT FOG LIGHT.** Check the front fog light bulb.	Is there any fault?	Replace the bulb. <Ref. to LI-44, Front Fog Light Bulb.>	Replace the SRF CM. <Ref. to LI-85, Steering Responsive Fog Lights CM.>

K: DTC B2907 FOG LIGHT HARNESS(LH)

DTC DETECTING CONDITION:
Front fog light (LH) malfunction signal line error is detected.
TROUBLE SYMPTOM:
Warning will be displayed for front fog light malfunction, SRF malfunction.

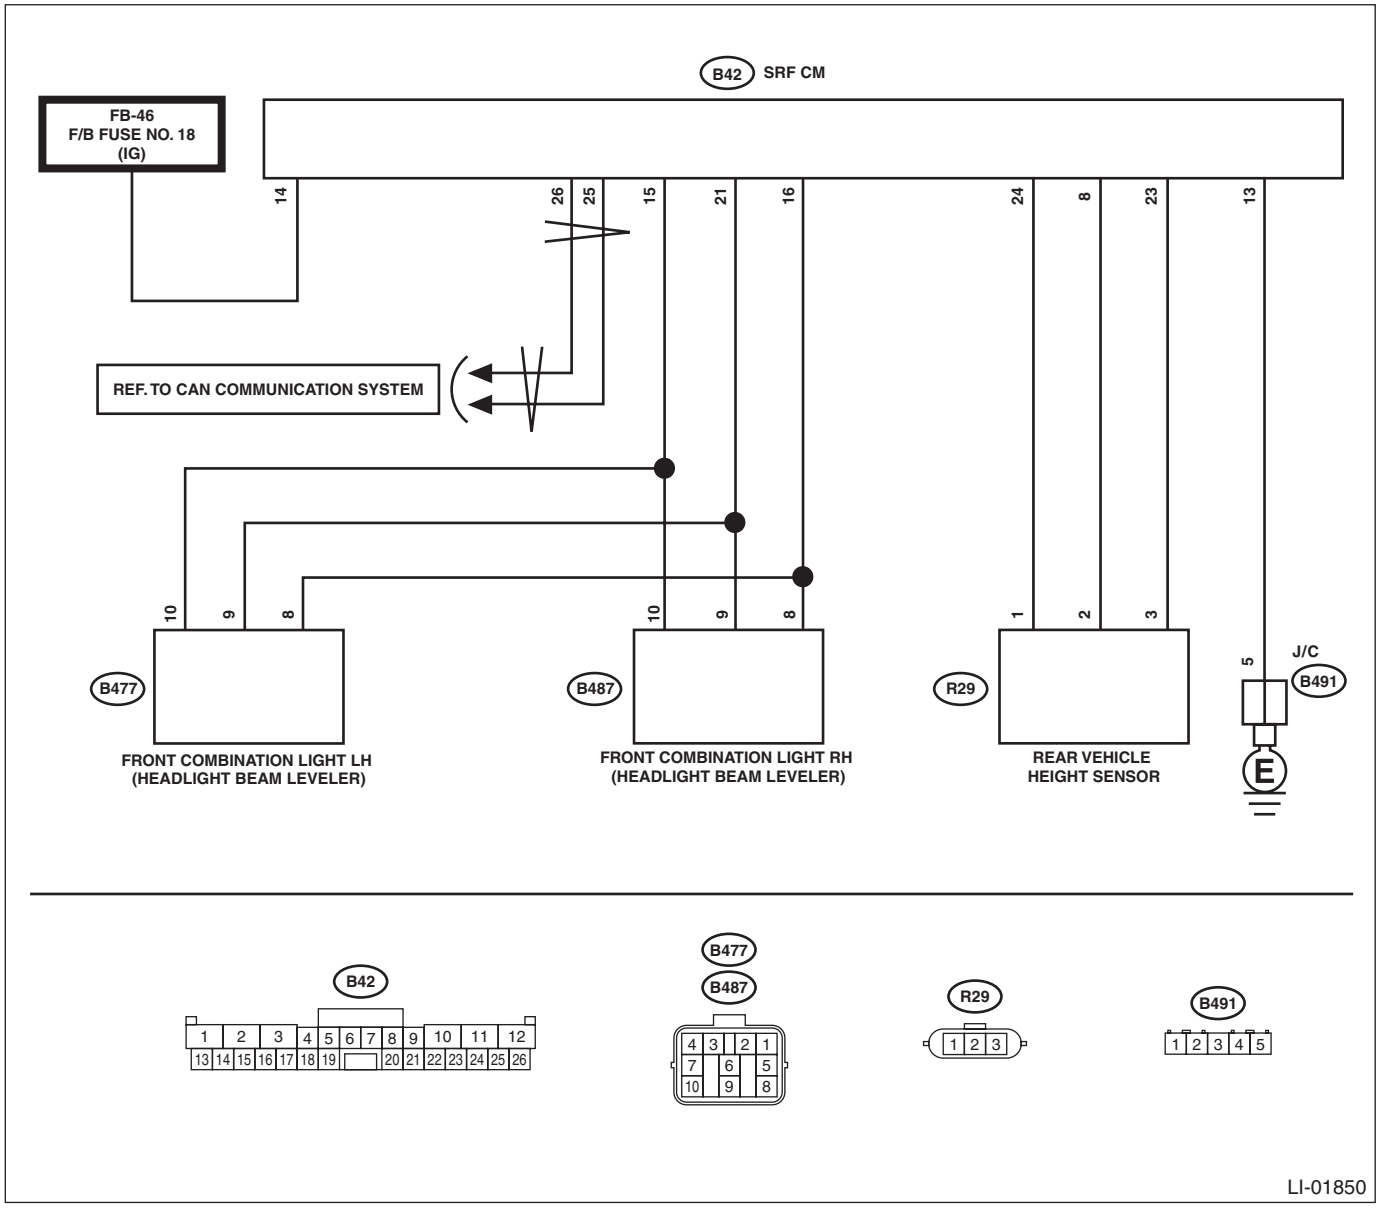
CAUTION:
Initialization is required after replacing the SRF CM.
(Initialization is not required for models without auto headlight beam leveler system)
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.

Step		Check	Yes	No
1	**CHECK FUSE.** Check the fuse.	Is there any fault?	Replace the fuse. If the replaced fuse has blown out immediately, repair the short circuit to ground in harness between battery and SRF CM.	Go to step **2**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF → ON. 2) Turn on the headlight low beam. 3) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. 4) Use the Subaru Select Monitor and read DTCs.	Is DTC B2907 displayed? (current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Disconnect the SRF CM connector. 2) Using a tester, measure the voltage between SRF CM connector and chassis ground. ***Connector & terminal*** ***(B42) No. 12 (+) — Chassis ground (–):***	Is the voltage 8 — 16 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS.** 1) Disconnect the front fog light LH connector. 2) Using a tester, measure the resistance between SRF CM connector and front fog light LH connector. ***Connector & terminal*** ***(B42) No. 10 — (B474) No. 2:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** Use a tester to measure the resistance between front fog light LH connector and chassis ground. ***Connector & terminal*** ***(B474) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK FRONT FOG LIGHT.** Check the front fog light bulb.	Is there any fault?	Replace the bulb. <Ref. to LI-44, Front Fog Light Bulb.>	Replace the SRF CM. <Ref. to LI-85, Steering Responsive Fog Lights CM.>

14.Diagnostics with Phenomenon



A: INSPECTION

1. DOES NOT CONTROL HEADLIGHT BEAM AXIS

CAUTION:
- **Before performing diagnosis, check the fuse in this circuit.**
- **Initialization is required after replacing the SRF CM.**

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Headlight beam leveler system <Ref. to WI-288, WIRING DIAGRAM, Headlight Beam Leveler System.>

Step		Check	Yes	No
1	**CHECK CURRENT DATA.** Display {ECU ACC} using Subaru Select Monitor.	Does the current data indicate the standard value?	Go to step **3**.	Go to step **2**.

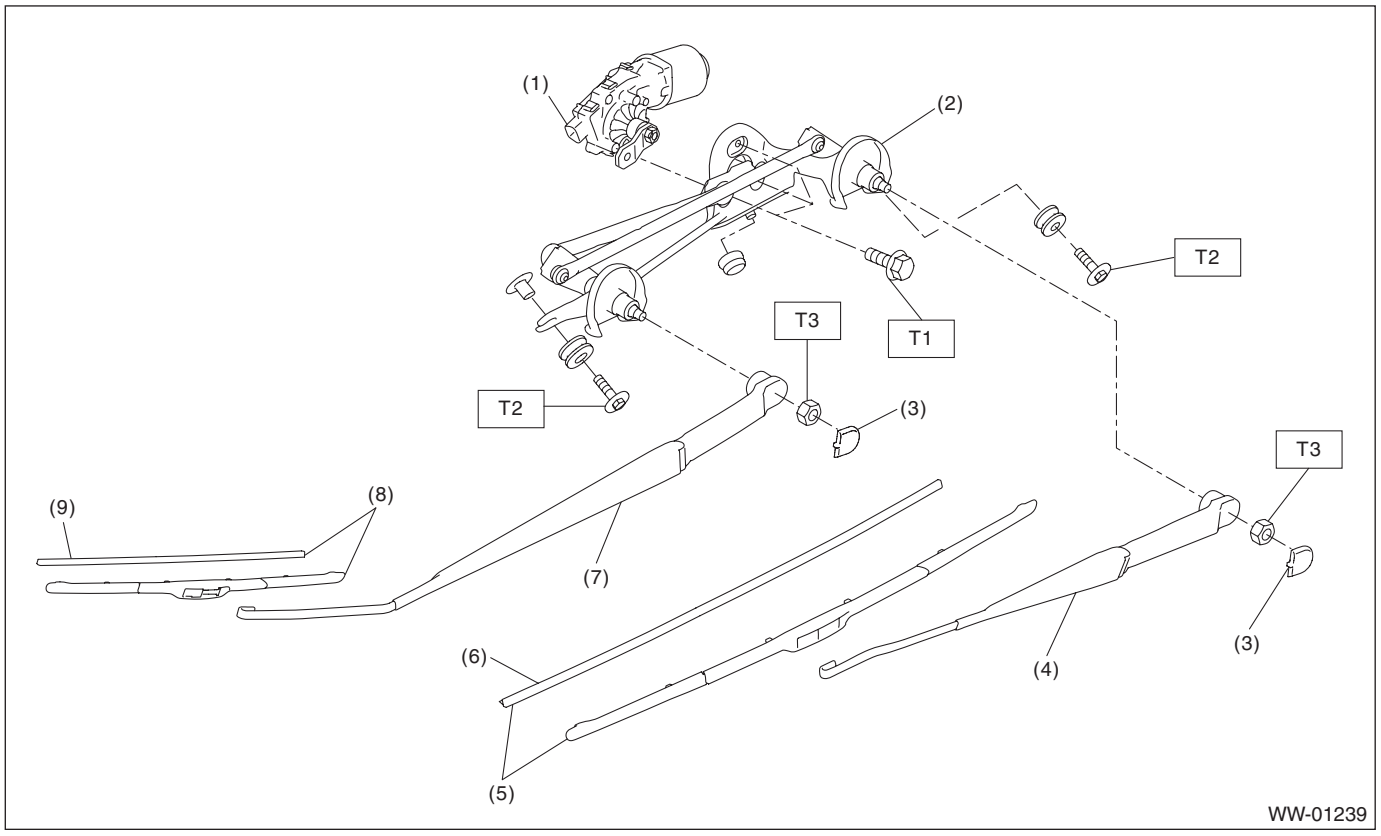
	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN IG POWER SUPPLY — SRF CM.** 1) Disconnect the SRF CM connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between SRF CM connector and chassis ground. ***Connector & terminal*** ***(B42) No. 14 (+) — Chassis ground (–):***	Is the voltage 8 — 16 V?	Replace the SRF CM. <Ref. to LI-85, Steering Responsive Fog Lights CM.>	Repair or replace the harness.
3	**CHECK INDICATOR OUTPUT.** Turn the ignition switch to ON.	Does the warning indicator turn on for three seconds?	Go to step **5**.	Go to step **4**.
4	**CHECK CURRENT DATA.** 1) Display {Indicator Signal} using Subaru Select Monitor. 2) Turn the ignition switch to ON.	Is it set as ON for 3 seconds?	Check the combination meter. <Ref. to MET(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Replace the SRF CM. <Ref. to LI-85, Steering Responsive Fog Lights CM.>
5	**CHECK INDICATOR OUTPUT.** Leave the ignition switch to ON for 10 seconds.	Does the warning indicator light go off?	Go to step **6**.	Go to step **10**.
6	**CHECK HEADLIGHT ASSEMBLY (ACTUATOR) DRIVE.** 1) Connect the SRF CM connector. 2) Turn the ignition switch to ON, and within 10 seconds, repeat the OFF → Low beam of headlight switch 5 times. 3) Check that the headlight beam drops once, then returns to normal. 4) Then, after waiting for 30 seconds or more with the ignition ON, turn the ignition switch to OFF.	Does the headlight beam drop down once, and then return?	Replace the SRF CM. <Ref. to LI-85, Steering Responsive Fog Lights CM.>	Go to step **7**.
7	**CHECK HEADLIGHT ASSEMBLY (ACTUATOR) OUTPUT.** 1) Display {Actuator Signal} using Subaru Select Monitor. 2) Turn the ignition switch to ON, and within 10 seconds, repeat the OFF → Low beam of headlight switch 5 times. 3) Check that the headlight beam drops once, then returns to normal. 4) Then, after waiting for 30 seconds or more with the ignition ON, turn the ignition switch to OFF.	Does the current data indicate the standard value? (Does the value change at 10 — 90%?)	Go to step **8**.	Replace the SRF CM. <Ref. to LI-85, Steering Responsive Fog Lights CM.>
8	**CHECK OUTPUT VOLTAGE BETWEEN HEADLIGHT ASSEMBLY (ACTUATOR).** 1) Disconnect the SRF CM connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between SRF CM connector and chassis ground. ***Connector & terminal*** ***(B42) No. 16 (+) — Chassis ground (–):***	Is the voltage 8 — 16 V?	Replace the headlight assembly. <Ref. to LI-27, Headlight Assembly.>	Go to step **9**.

Step		Check	Yes	No
9	**CHECK HARNESS BETWEEN SRF CM AND HEADLIGHT ASSEMBLY (ACTUATOR).** 1) Disconnect the connector of headlight assembly. 2) Measure the continuity between SRF CM connector and headlight assembly (actuator) connector. ***Connector & terminal*** ***• Headlight beam leveler RH*** ***(B42) No. 16 — (B487) No. 8:*** ***(B42) No. 21 — (B487) No. 9:*** ***(B42) No. 15 — (B487) No. 10:*** ***• Headlight beam leveler LH*** ***(B42) No. 16 — (B477) No. 8:*** ***(B42) No. 21 — (B477) No. 9:*** ***(B42) No. 15 — (B477) No. 10:***	Is there continuity?	Replace the SRF CM. <Ref. to LI-85, Steering Responsive Fog Lights CM.>	Repair the open circuit or poor contact of the connector in the harness between headlight assembly and SRF CM.
10	**CHECK DTC.** Display DTC using the Subaru Select Monitor.	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to SRF(diag)-16, LIST, List of Diagnostic Trouble Code (DTC).>	Replace the SRF CM. <Ref. to LI-85, Steering Responsive Fog Lights CM.>

WIPER AND WASHER SYSTEMS

WW

		Page
1.	General Description	2
2.	Relay and Fuse	8
3.	Wiper and Washer System	10
4.	Combination Switch (Wiper)	11
5.	Wiper Blade	16
6.	Washer Tank and Motor	21
7.	Front Wiper Arm	28
8.	Front Wiper Motor and Link	30
9.	Front Washer Nozzle	33
10.	Rear Wiper Arm	38
11.	Rear Wiper Motor	40
12.	Rear Washer	43



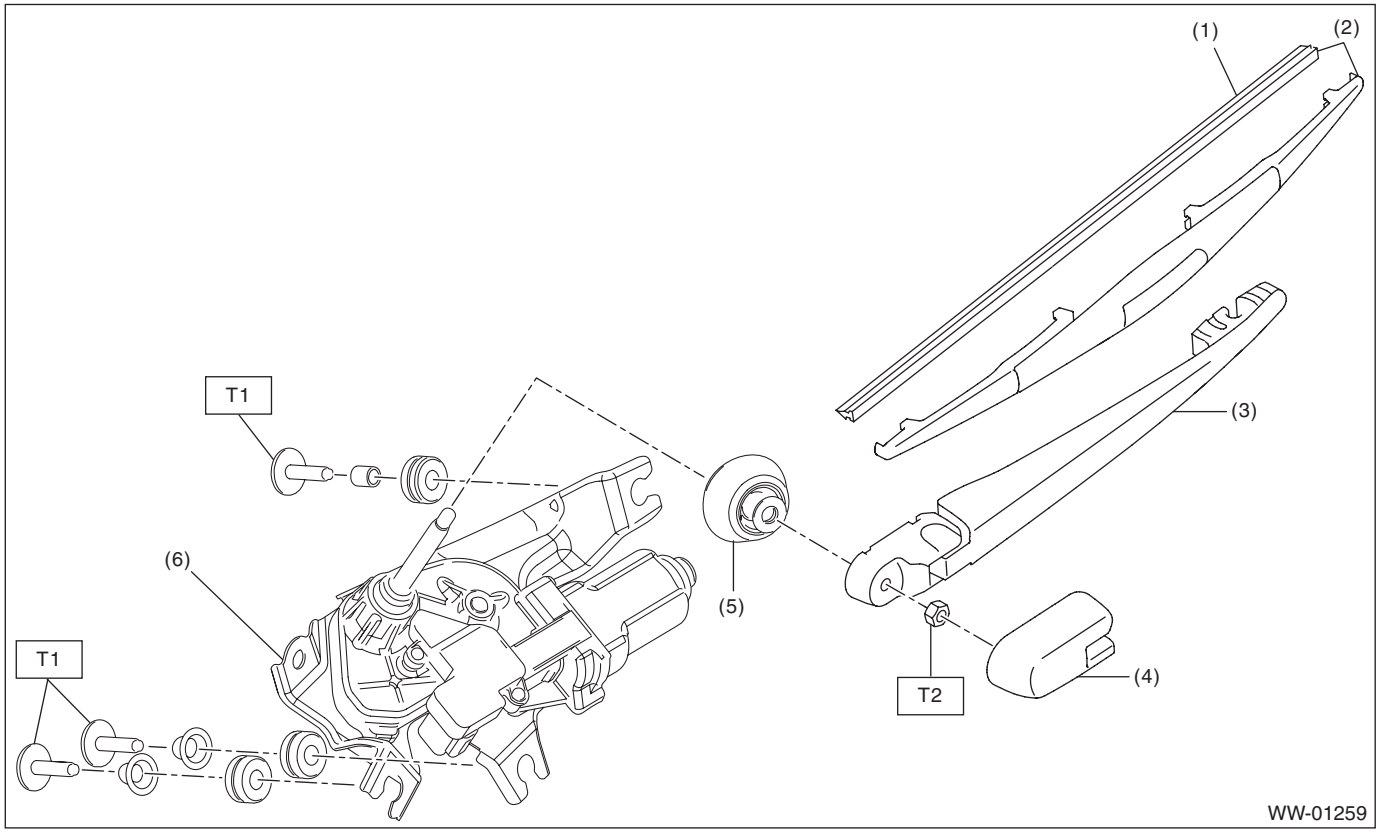
1. General Description

A: SPECIFICATION

Front wiper motor	Input	12 V — 72 W or less
Rear wiper motor	Input	12 V — 42 W or less
Front washer motor	Pump type	Centrifugal
	Input	12 V — 60 W or less
Rear washer motor	Pump type	Centrifugal
	Input	12 V — 36 W or less

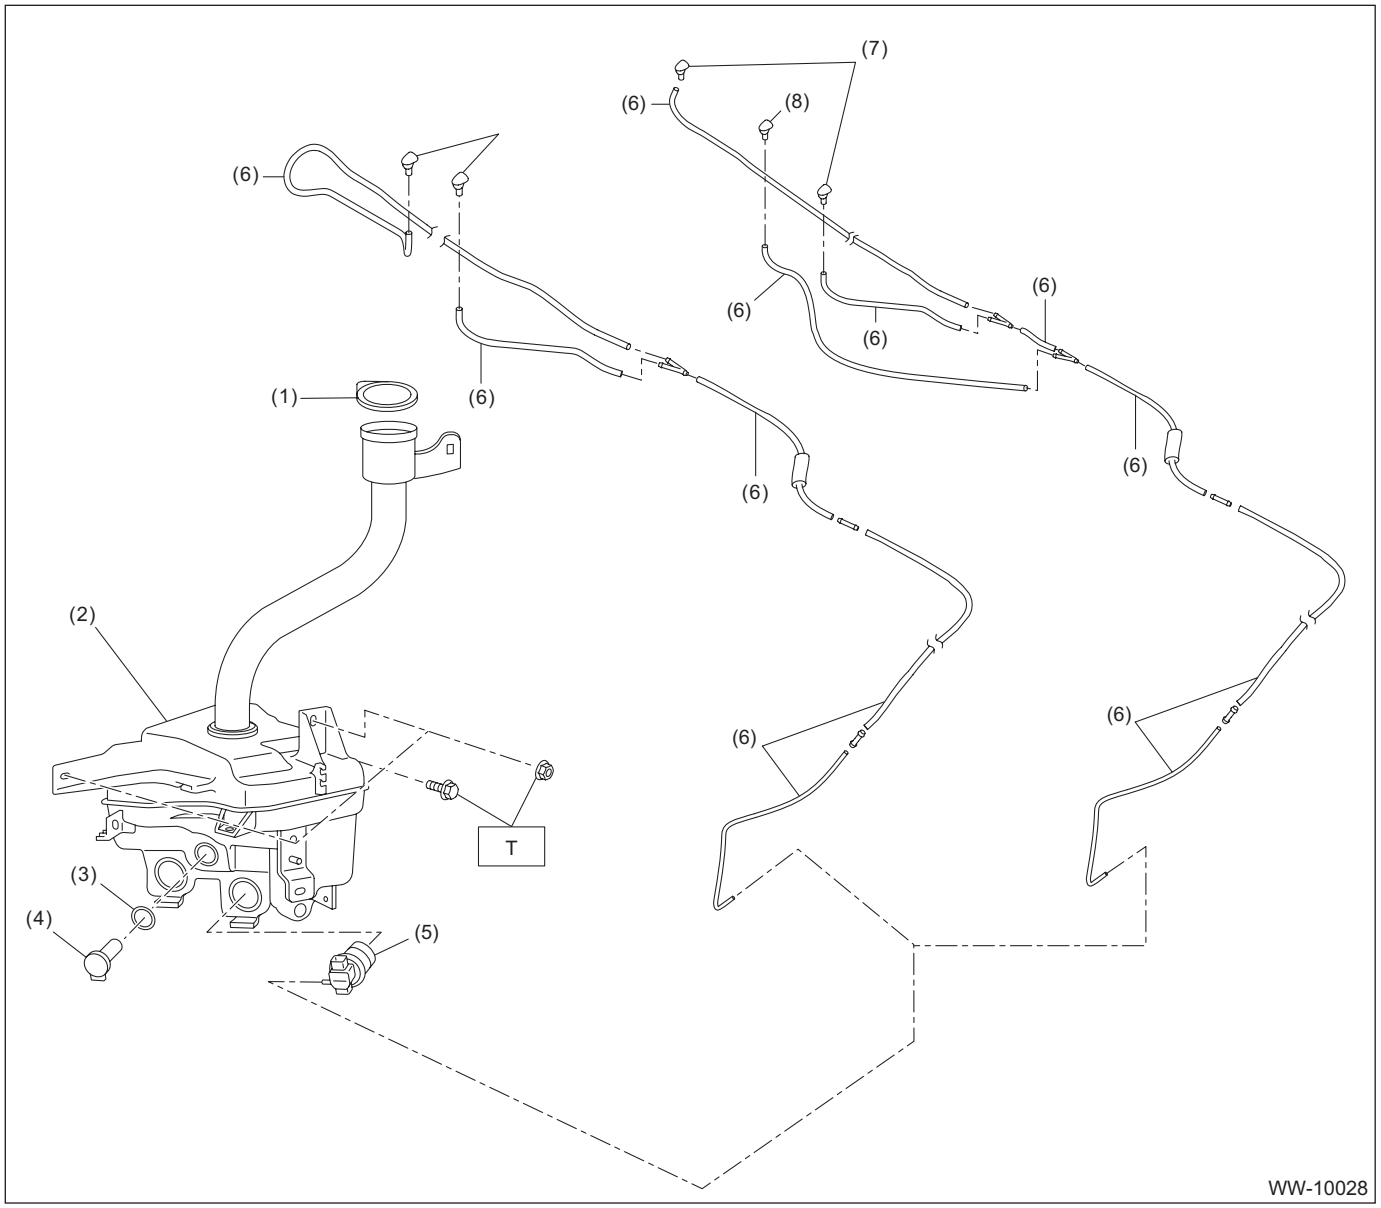
B: COMPONENT

1. FRONT WIPER



(1) Motor ASSY - windshield wiper
(2) Link ASSY - windshield wiper
(3) Cover - windshield wiper arm
(4) Arm ASSY - windshield wiper driver
(5) Blade ASSY - windshield wiper driver
(6) Rubber ASSY - windshield wiper driver
(7) Arm ASSY - windshield wiper assistor
(8) Blade ASSY - windshield wiper assistor
(9) Rubber ASSY - windshield wiper assistor

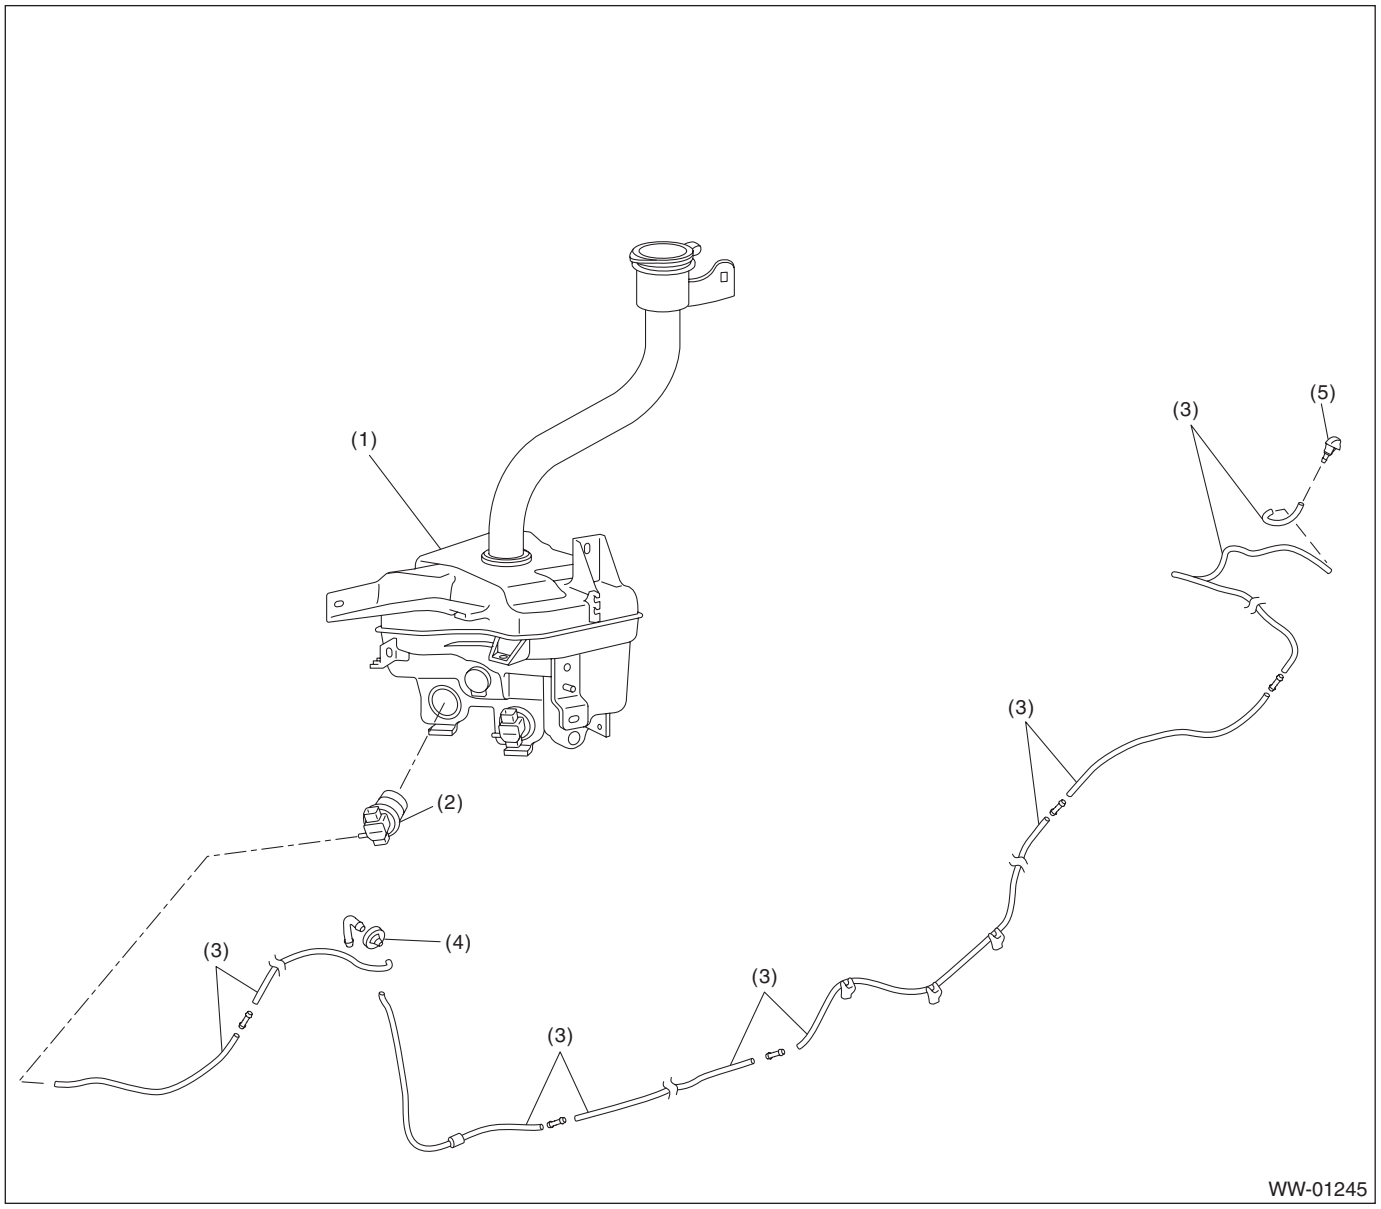
Tightening torque: N·m (kgf-m, ft-lb)



T1: 5.5 (0.6, 4.1)
T2: 6 (0.6, 4.4)
T3: 22 (2.2, 16.2)

2. REAR WIPER

(1)	Rubber ASSY - rear wiper	(4)	Cover - rear wiper arm	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Blade ASSY - rear wiper	(5)	Cap - pivot wiper	***T1: 7 (0.7, 5.2)***
(3)	Arm ASSY - rear wiper	(6)	Motor ASSY - rear wiper	***T2: 8 (0.8, 5.9)***

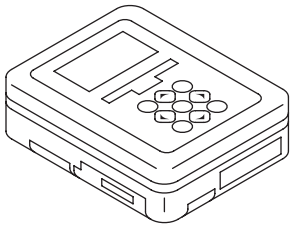


3. WASHER TANK (FRONT)

(1) Cap - washer tank
(2) Tank - washer
(3) Gasket
(4) Sensor - washer tank
(5) Motor pump ASSY - washer front
(6) Hose - windshield washer
(7) Nozzle - windshield washer
(8) Nozzle - windshield washer Eye-Sight (model with EyeSight)

Tightening torque: N·m (kgf-m, ft-lb)
T: 6 (0.6, 4.4)

4. WASHER TANK (REAR)

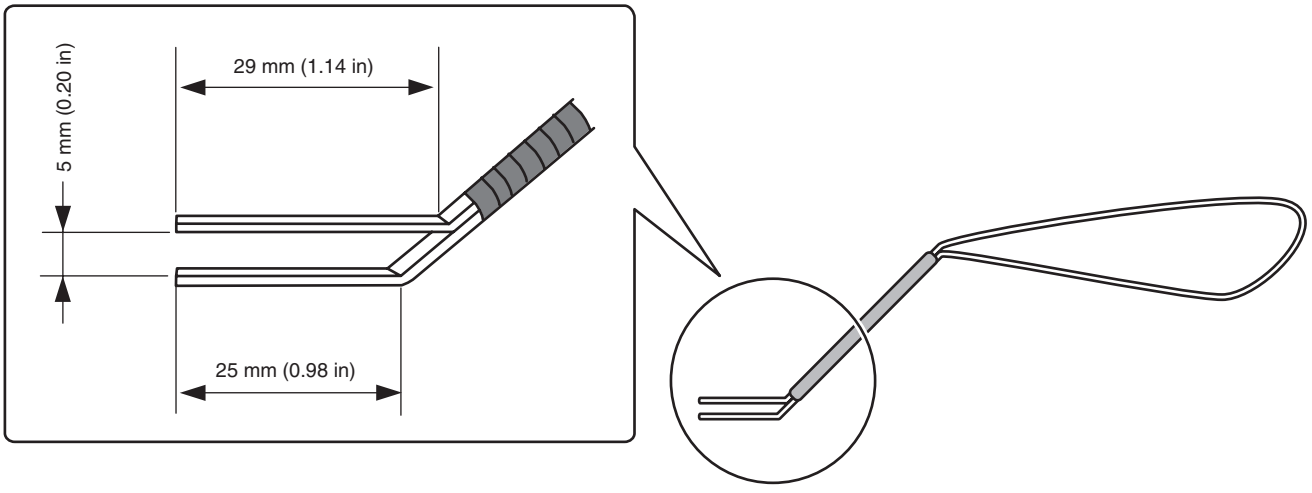


(1) Tank - washer
(2) Motor pump ASSY - washer rear
(3) Hose ASSY - rear washer
(4) Grommet - washer hose
(5) Nozzle - rear washer

C: CAUTION

- Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of “AIRBAG SYSTEM”. <Ref. to AB-10, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
- When connecting the pipe hoses, be careful not to cause bend or blockage.
- If even a small amount of silicon oil or grease enters the tank - washer and the washer fluid passages, an oil film will be formed on the glass and will cause the wiper to chatter and judder. Make sure that no oil comes into contact with the system.

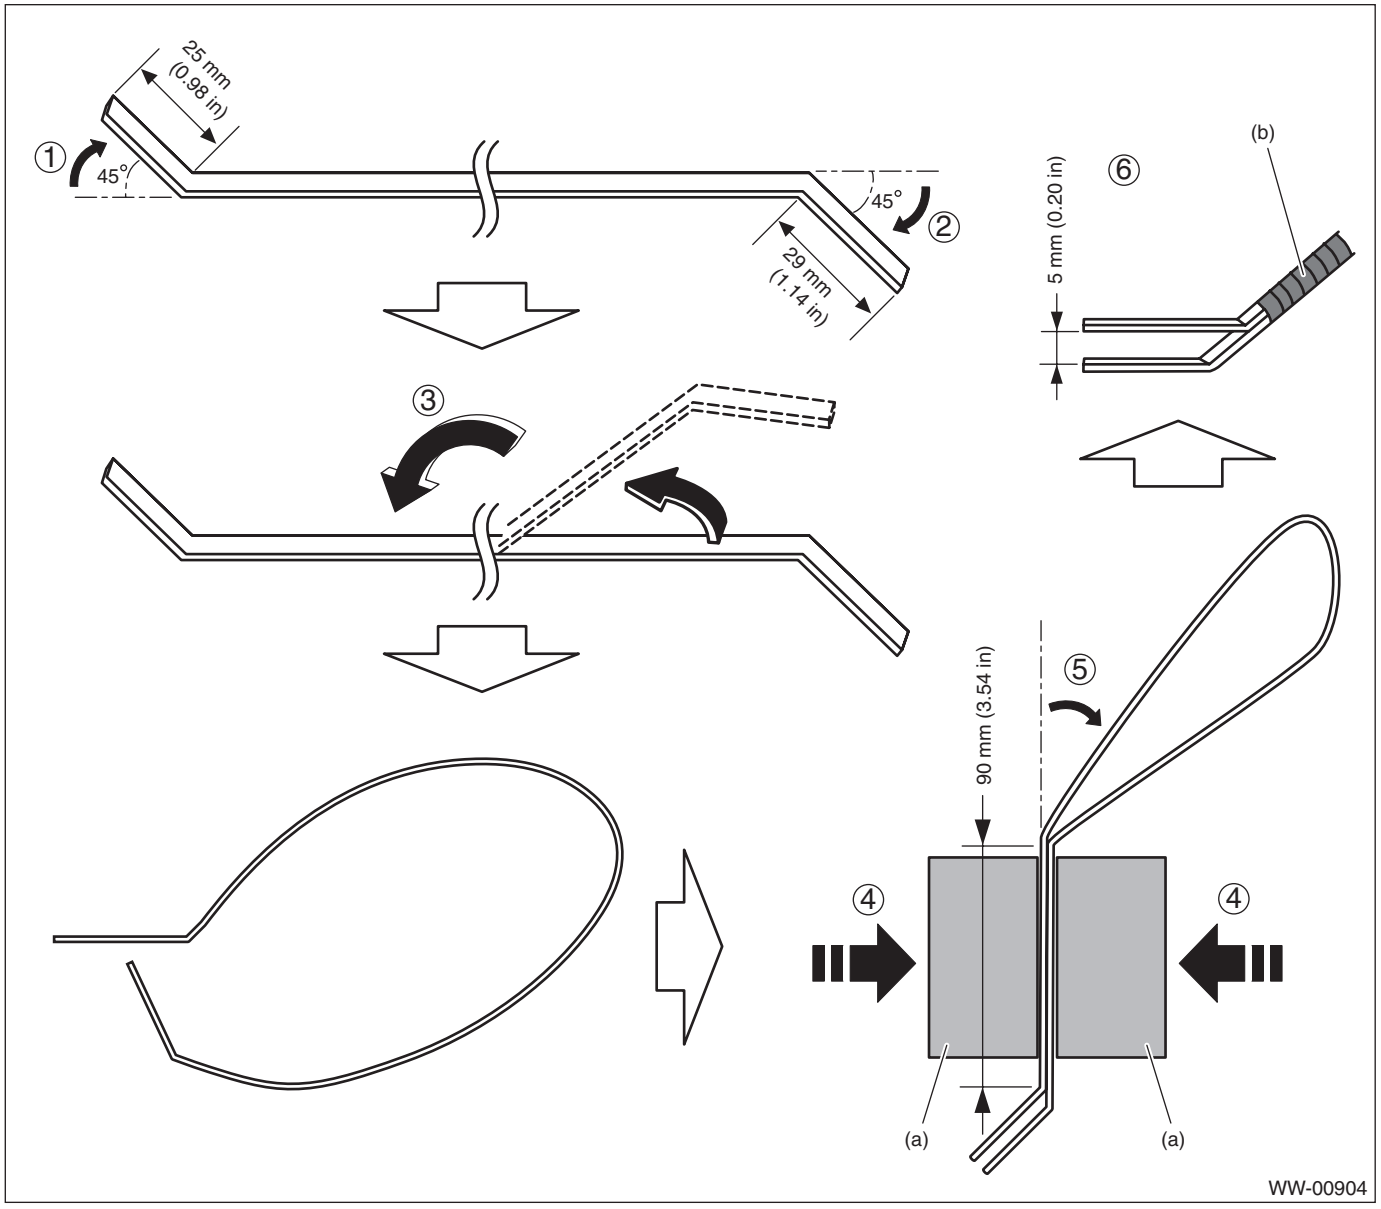
D: PREPARATION TOOL



1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for setting of each function and trouble-shooting for electrical system.

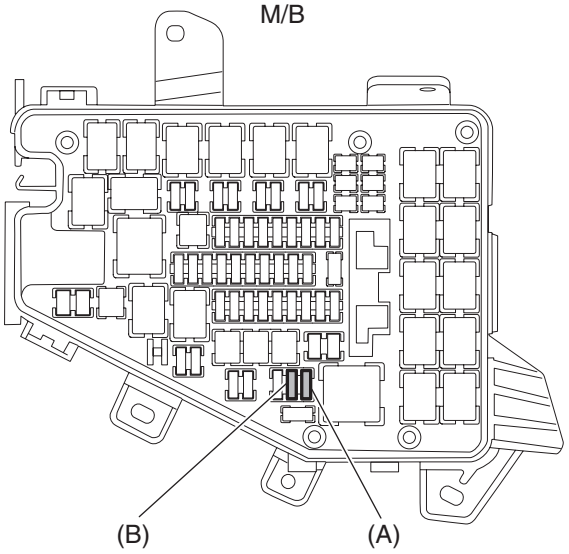
2. GENERAL TOOL



TOOL NAME	REMARKS
Circuit tester	Used for measuring voltage and resistance.

NOTE:
Referring to the data described below, prepare the materials to make a nozzle - windshield washer adjustment tool.

Materials
- Vertebra of wiper blade which is to be discarded
- Vinyl tape



Steps of making a front washer nozzle adjustment tool

1. Bend the vertebra at the position 25 mm (0.98 in) away from its end by 45°.
2. Bend the vertebra at the position 29 mm (1.14 in) away from the other end by 45°.
3. Double up the vertebra so that the longer end (29 mm (1.14 in)) comes upward.
4. Secure the vertebra with a vise (a) so that the tip clearance becomes 5 mm (0.20 in).
5. Bend the vertebra at the position approximately 90 mm (3.54 in) away from the bending point for the longer end.
6. Check that the tip clearance is 5 mm (0.20 in), and secure the vertebra with vinyl tape (b).

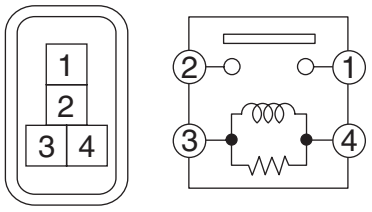
2. Relay and Fuse

A: LOCATION

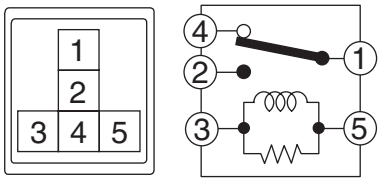
WW-01248

Main fuse box (M/B)	Fuse 30 A	(A)
	Fuse 15 A	(B)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-23, Power Supply Circuit.>



B: INSPECTION



1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

2. CHECK RELAY

1) Measure the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 SR-00180
1 — 2	Apply battery voltage between terminals 4 and 3.	Less than 1 Ω	

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 SL-01085
1 — 4	Always	Less than 1 Ω	
1 — 2	Apply battery voltage between terminals 3 and 5.	Less than 1 Ω	

2) Replace the relay if the inspection result is not within the standard value.

3. Wiper and Washer System

A: WIRING DIAGRAM

1. WIPER AND WASHER (FRONT)

Refer to “Front Wiper and Washer System” in the wiring diagram. <Ref. to WI-283, WIRING DIAGRAM, Front Wiper and Washer System.>

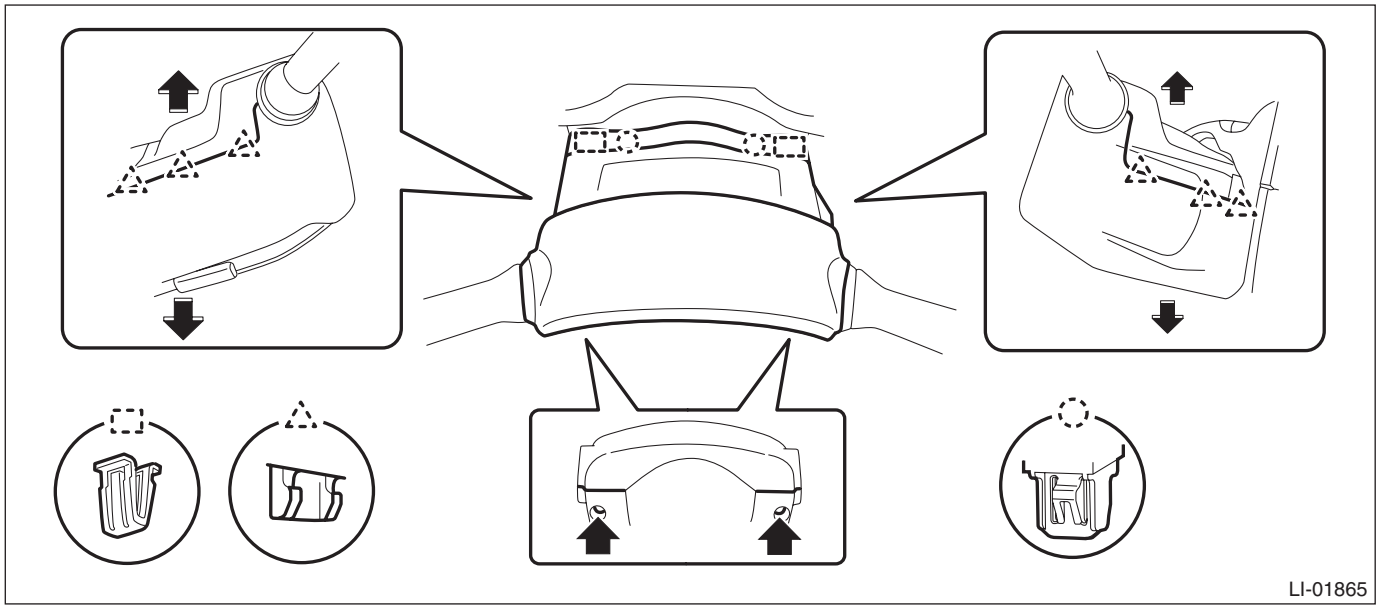
2. WIPER AND WASHER (REAR)

Refer to “Rear Wiper and Washer System” in the wiring diagram. <Ref. to WI-402, WIRING DIAGRAM, Rear Wiper and Washer System.>

B: INSPECTION

Symptoms	Repair order
Wiper and washers do not operate.	1. Wiper fuse 2. Combination switch 3. Motor assembly - wiper 4. Wiring harness
Wipers do not operate in LO or HI.	1. Combination switch 2. Motor assembly - wiper 3. Wiring harness
Wipers do not operate in INT.	1. Combination switch 2. Motor assembly - wiper 3. Wiring harness
Washer motor does not operate.	1. Combination switch 2. Motor pump assembly - washer 3. Wiring harness
Wipers do not operate when washer switch is ON.	1. Motor assembly - wiper 2. Wiring harness
Washer fluid spray does not operate properly.	1. Motor pump assembly - washer 2. Hose assembly - washer 3. Nozzle - washer

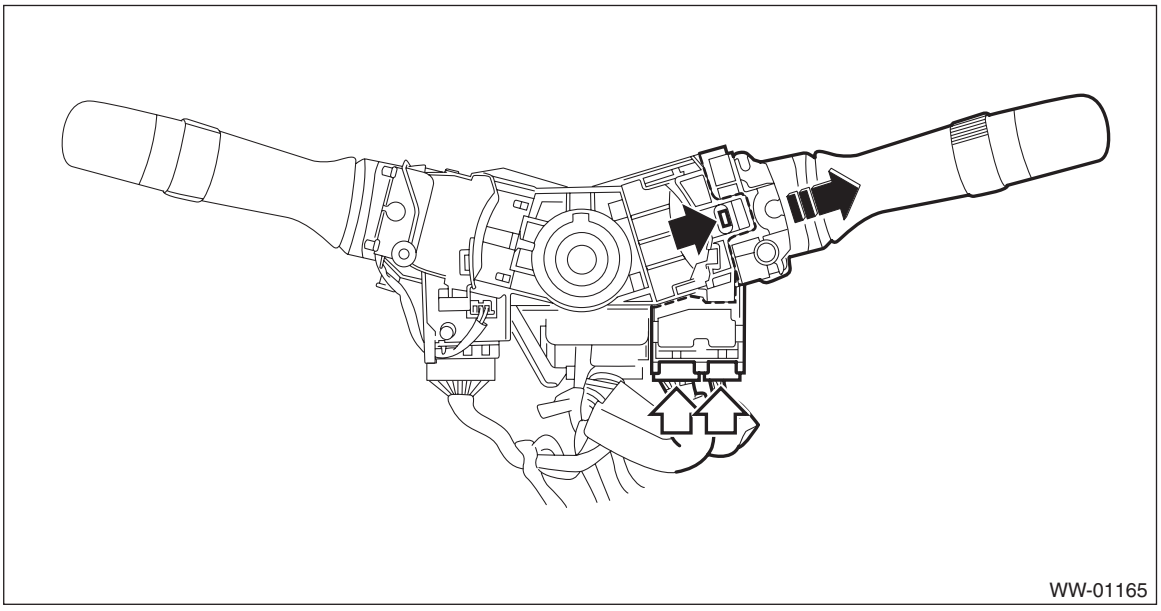
C: NOTE



For procedure of each component of the wiper and washer system, refer to the respective sections.

- Combination switch (wiper): <Ref. to WW-11, Combination Switch (Wiper).>
- Wiper blade: <Ref. to WW-16, Wiper Blade.>
- Front wiper arm: <Ref. to WW-28, Front Wiper Arm.>
- Front wiper motor and link: <Ref. to WW-30, Front Wiper Motor and Link.>
- Rear wiper arm: <Ref. to WW-38, Rear Wiper Arm.>
- Rear wiper motor: <Ref. to WW-40, Rear Wiper Motor.>
- Washer tank and motor: <Ref. to WW-21, Washer Tank and Motor.>
- Front washer nozzle: <Ref. to WW-33, Front Washer Nozzle.>
- Rear washer nozzle: <Ref. to WW-43, Rear Washer.>

4. Combination Switch (Wiper)



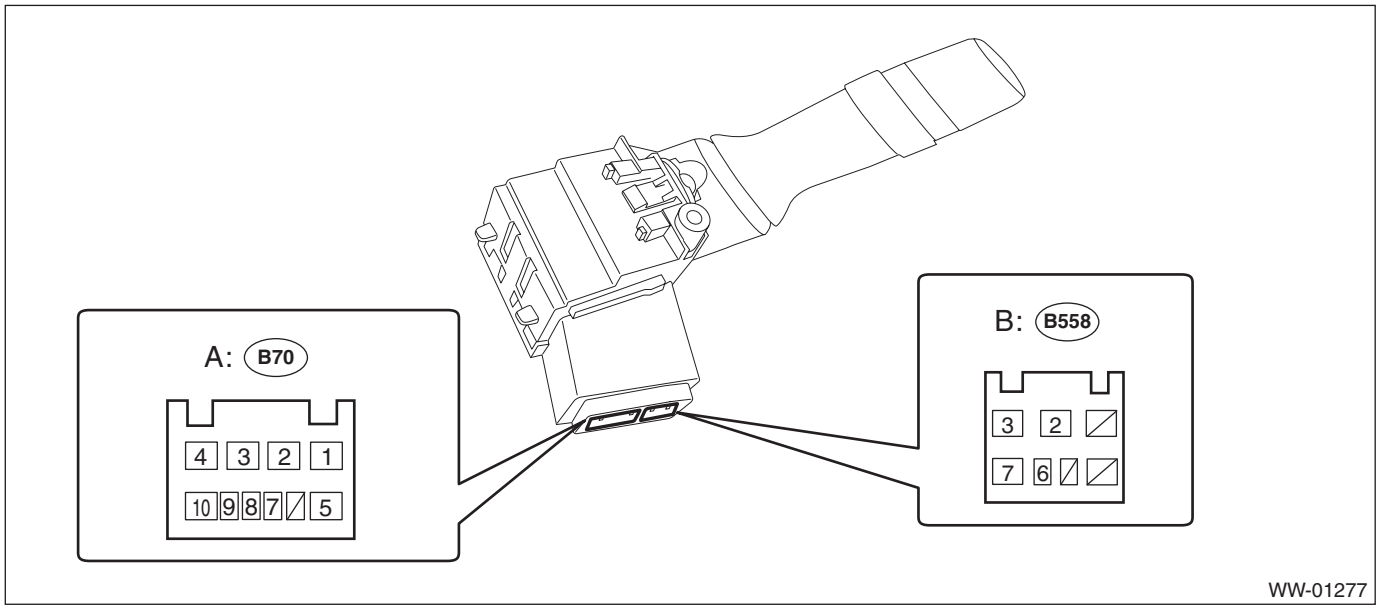
A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - column.
   (1) Remove the clips, and remove the cover - column.
   (2) Remove the screws by turning the steering wheel to right and left.
   (3) Release the claw, and remove the cover assembly - column UPR and the cover assembly - column LWR.

3) Remove the switch assembly - combination wiper select.
   (1) Disconnect the connector.
   (2) Release the claws, and pull out the switch assembly - combination wiper select.

CAUTION:
Do not press the claws with excessive force. They may be damaged.

B: INSTALLATION



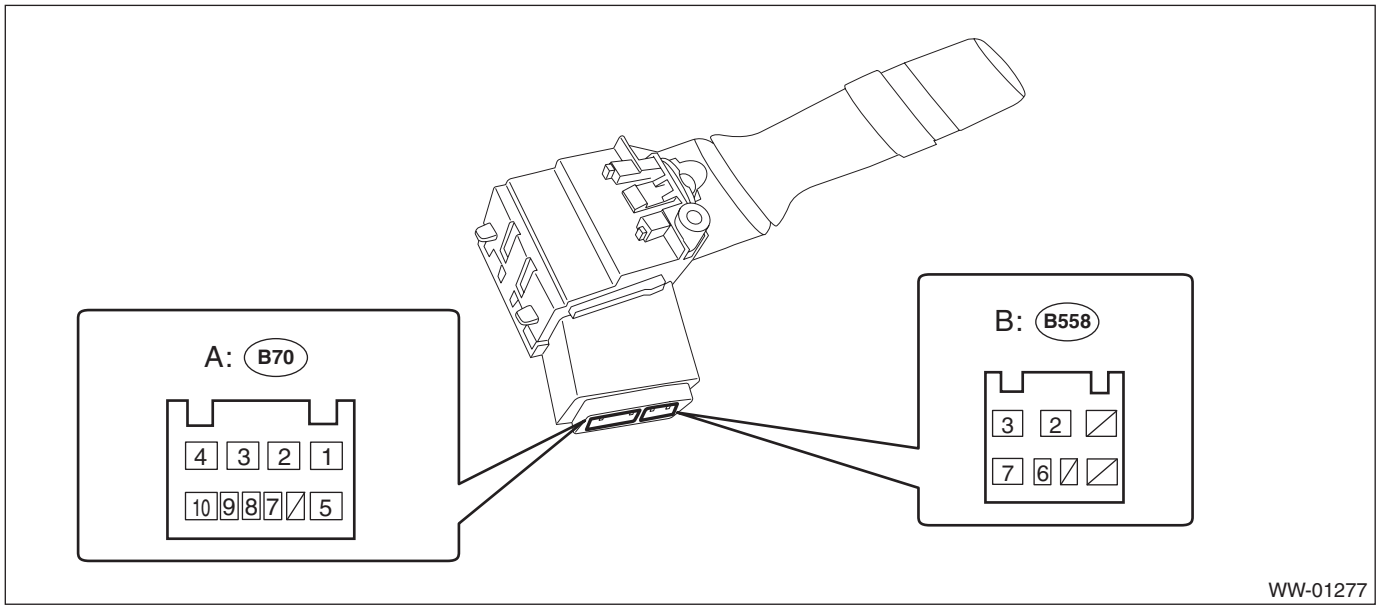
1) Install the switch assembly - combination wiper select.
2) Install the cover assembly - column.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1. INSPECTION OF SWITCH UNIT

1) Operate the switches to check the continuity between terminals.

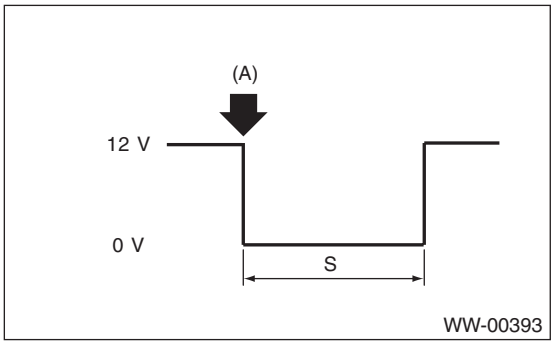
Preparation tool:
Circuit tester



Switch position	Terminal No.	Standard
OFF	A1 and A3	Less than 1 Ω
INT	A1 and A3	Less than 1 Ω
LO	A2 and A3	Less than 1 Ω
HI	A2 and A4	Less than 1 Ω
Washer ON	B2 and B3	Less than 1 Ω

2) Replace the switch if the inspection result is not within the standard value.
3) Install the switch assembly - combination wiper select. <Ref. to WW-12, INSTALLATION, Combination Switch (Wiper).>

2. FRONT WIPER



1) Check with Subaru Select Monitor
   (1) Check the input signal when the switch assembly - combination wiper select is turned to LO or HI, using the current data display.
   (2) Does the input signal change corresponding to the switch operation?
   - **Yes** → Finish the diagnosis.
   - **No** → Check the harness.

2) Check the intermittent operation (inspection of the wiper switch alone)

   (1) Set the voltmeter between terminals No. A2 (+) and No. B2 (–).
   (2) Connect the battery to connector. (Terminal No. A2 (+), terminal No. B2 & A3 (–))
   (3) Turn the switch assembly - combination wiper select to INT.
   (4) Connect the battery (+) to the terminal No. A2 for 5 seconds.
   (5) Connect the battery (–) to the terminal No. B2, and check the voltage between terminals No. A2 and No. A3 during intermittent operation.
   (6) Perform step (1) to (5) above when intermittent control switch is in MIN or MAX, and replace the switch if the operation is not as specified.

Intermittent stationary time
MIN: Approx. 2 seconds
MAX: Approx. 16 seconds

(A): Connect the battery (–) to the terminal No. B2.
S: Intermittent downtime (sec.)

3. REAR WIPER

1) Check input of body integrated unit
Check the input signal when the rear wiper switch is operated using Subaru Select Monitor.
(1) Turn the ignition switch to ON.
(2) Operate the rear wiper switch to ON and Washer ON.
(3) Does the input signal change corresponding to the switch operation?
- **Yes** → Go to step 4.
- **No** → Go to step 2.

2) Check harness
(1) Turn the ignition switch to OFF, disconnect the ground cable from battery.
(2) Disconnect the connector of body integrated unit and wiper switch.
(3) Measure the resistance between body integrated unit and wiper switch.

Connector & terminal
(i81) No. 1 — (i69) No. 5:
(i81) No. 3 — (i68) No. 6:
(i81) No. 19 — (i68) No. 7:
(4) Is the resistance less than 10 Ω?
- **Yes** → Go to step 3.
- **No** → Repair the harness between the body integrated unit and wiper switch.

3) Check input voltage of body integrated unit
(1) Connect the ground cable to battery.
(2) Turn the ignition switch to ON and check the input voltage of body integrated unit.

Connector & terminal
(B280) No. 4 (+) — Chassis ground (–):
(B280) No. 7 (+) — Chassis ground (–):
(B281) No. 32 (+) — Chassis ground (–):
(3) Is the voltage 10 V or more?
- **Yes** → Go to step 4.
- **No** → Check the harness and fuse.

4) Check output of body integrated unit
Check the output signal when the rear wiper switch is operated using Subaru Select Monitor.
(1) Turn the ignition switch to ON.
(2) Operate the rear wiper switch to ON and Washer ON.
(3) When the operation in step (2) is performed, check the output signal of body integrated unit to rear wiper motor.
(4) When the rear wiper switch is set to ON, is ON output continuous? Also, when the washer is set to ON, is ON output?
- **Yes** → Go to step 5.
- **No** → Replace the body integrated unit. <Ref. to SL-81, Body Integrated Unit.>

5) Check harness between body integrated unit and rear wiper motor
(1) Turn the ignition switch to OFF, disconnect the ground cable from battery.
(2) Disconnect the connector of body integrated unit and wiper switch.
(3) Measure the resistance between the harness connector terminals of the body integrated unit and rear wiper motor.

Connector & terminal
(i81) No. 1 — (B147) No. 1:
(4) Is the resistance less than 10 Ω?
- **Yes** → Go to step 6.
- **No** → Repair the open circuit of the harness between body integrated unit and rear wiper motor.

6) Check power supply circuit of the rear wiper motor
(1) Disconnect the harness connector of the rear wiper motor.
(2) Turn the ignition switch to ON.

(3) Measure the voltage between the rear wiper motor harness connector terminal and chassis ground.

Connector & terminal
(B147) No. 2 (+) — Chassis ground (–):
(4) Is the voltage 10 V or more?
- **Yes** → Go to step 7.
- **No** → Check the fuse (No. 42 in main fuse box).

7) Check ground circuit of rear wiper motor
(1) Turn the ignition switch to OFF.
(2) Measure the resistance between the rear wiper motor harness connector terminal and chassis ground.

Connector & terminal
(B147) No. 1 — Chassis ground:
(3) Is the resistance less than 10 Ω?
- **Yes** → Go to step 8.
- **No** → Repair the open circuit of the rear wiper motor ground circuit.

8) Check harness between body integrated unit and rear wiper motor
(1) Turn the ignition switch to OFF.
(2) Disconnect the harness connector of body integrated unit.
(3) Disconnect the harness connector of the rear wiper motor.
(4) Measure the resistance between the harness connector terminals of the body integrated unit and rear wiper motor.

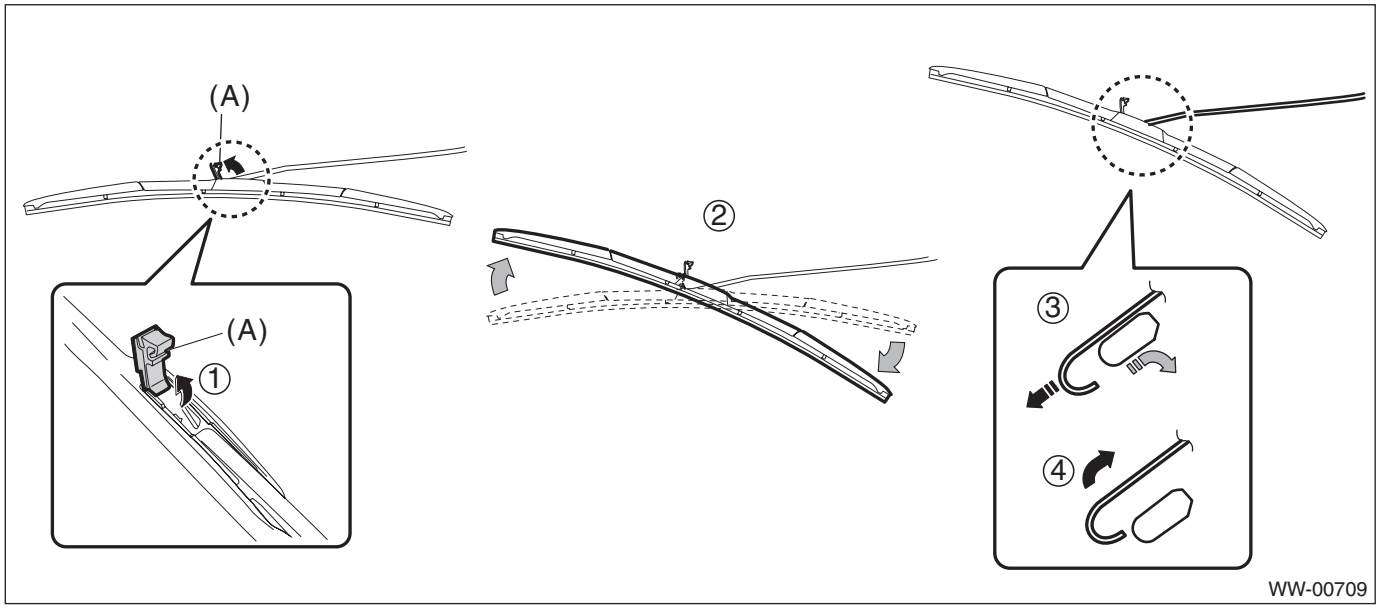
Connector & terminal
(i81) No. 1 — (B147) No. 1:
(5) Is the resistance less than 10 Ω?
- **Yes** → Go to step 9.
- **No** → Repair the open circuit of the harness between body integrated unit and rear wiper motor.

9) Check output of body integrated unit
(1) Connect the harness connector of body integrated unit.
(2) Disconnect the connector of the rear wiper motor.
(3) Turn the ignition switch to ON.
(4) Measure the voltage between rear wiper motor connector and chassis ground.

Connector & terminal
(B147) No. 2 (+) — Chassis ground (–):
(5) Is the voltage less than 1.5 V when the rear wiper switch is OFF, and is the voltage 10 V or more when the rear wiper switch is ON?
- **Yes** → Go to step 10.
- **No** → Replace the body integrated unit. <Ref. to SL-81, Body Integrated Unit.>

10) Check operation of rear wiper motor
(1) Remove the rear wiper motor.
(2) Check the rear wiper motor. <Ref. to WW-42, INSPECTION, Rear Wiper Motor.>
(3) Does the rear wiper motor rotate normally?
- **Yes** → Finished.
- **No** → Replace the rear wiper motor assembly.

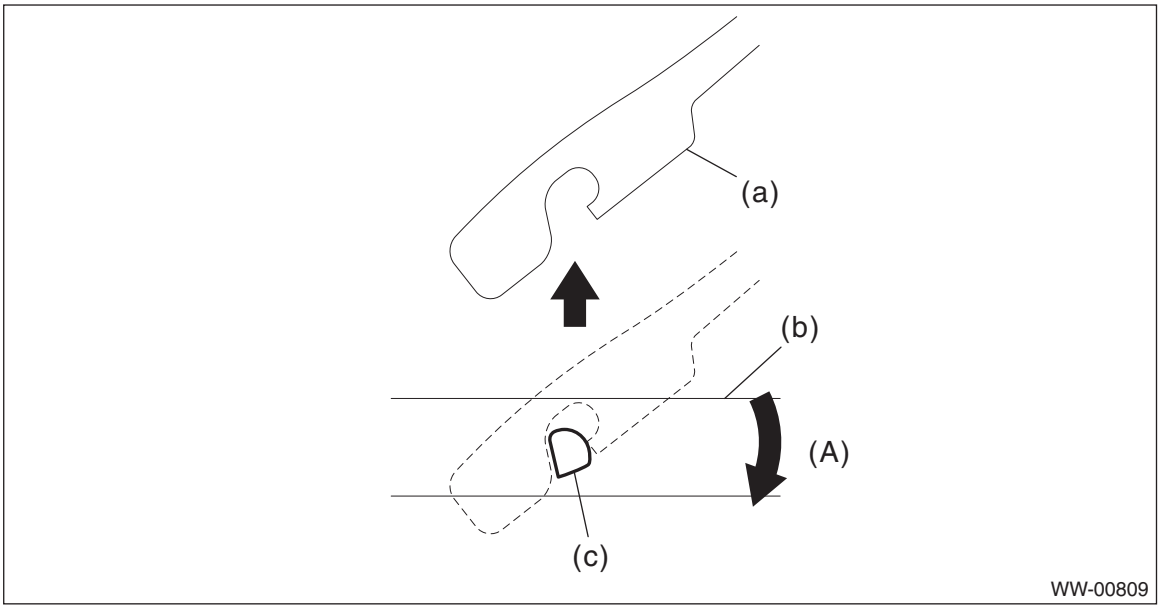
NOTE:
Rear wiper intermittent time



Select lever position	Vehicle speed (km/h (MPH))	Intermittent stopping time (sec.)
Rev.	—	Continuous operation
Except for reverse mode	80 — (50 —)	3
	50 — 80 (31 — 50)	6
	20 — 50 (12 — 31)	9
	0 — 20 (0 — 12)	12

5. Wiper Blade

A: REMOVAL



1. FRONT

NOTE:
Since the arm assembly - windshield wiper LH and RH can interfere with each other, remove the driver's side first.
1) Lift up the locking clip (A).
2) Turn the blade assembly - windshield wiper in the arrow direction.
3) Push in the arm assembly - windshield wiper.
4) Pull out the arm assembly - windshield wiper while pulling it up, and remove the blade assembly - windshield wiper from the arm assembly - windshield wiper.

2. REAR

Turn the blade assembly - rear wiper in the direction of arrow (A) and remove it from the arm assembly - rear wiper.

(A) Rotate the blade ASSY - rear wiper.

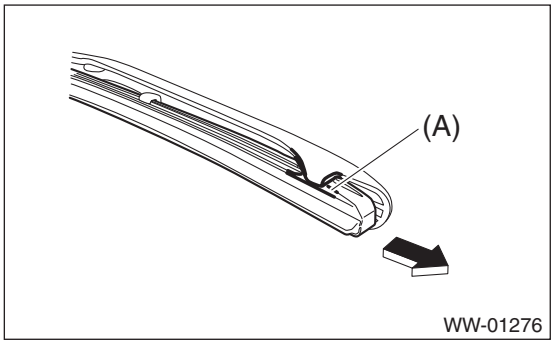
(a) Arm ASSY - rear wiper

(b) Blade ASSY - rear wiper

(c) Blade ASSY - rear wiper installation portion

B: INSTALLATION

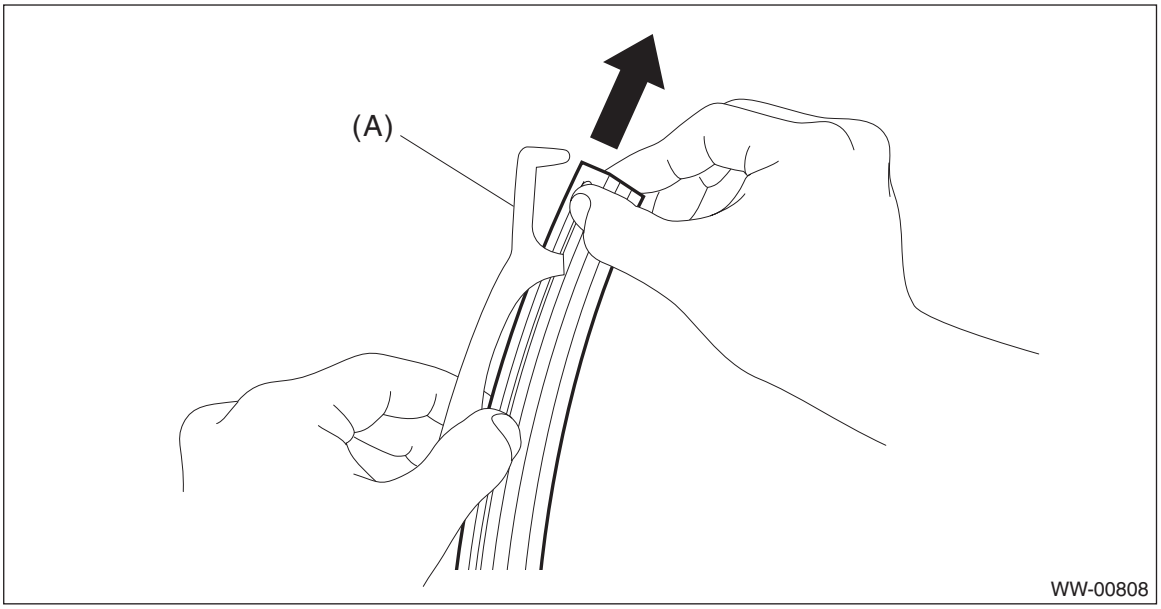
Install each part in the reverse order of removal.



CAUTION:
Make sure the locking clip is secured.

NOTE:
Since the arm assembly - windshield wiper LH and RH can interfere with each other, install the passenger's side first.

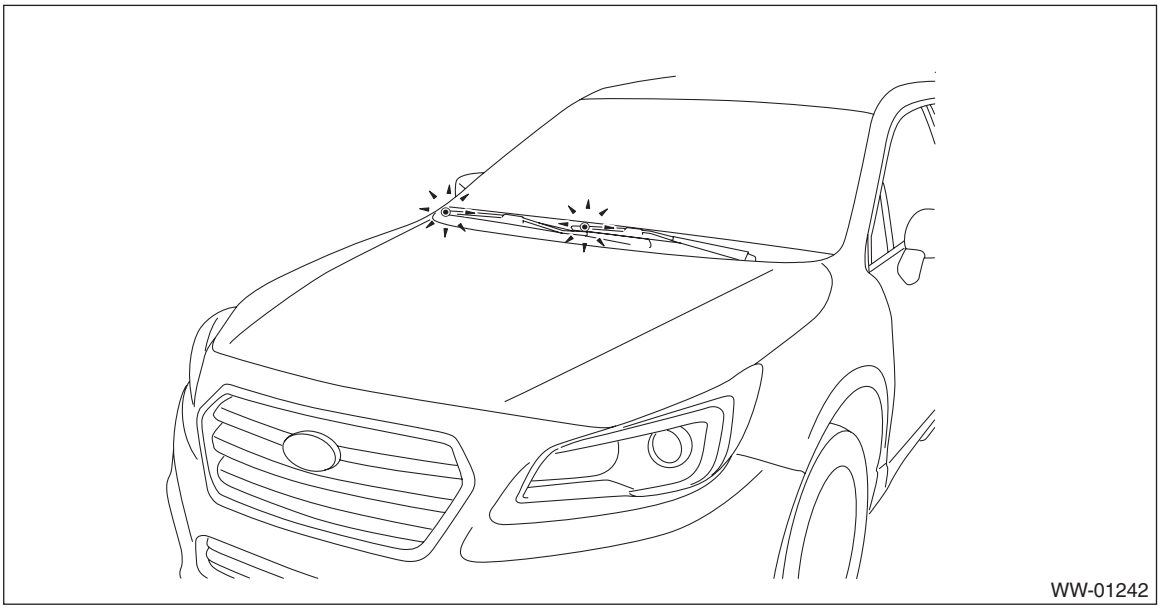
C: DISASSEMBLY



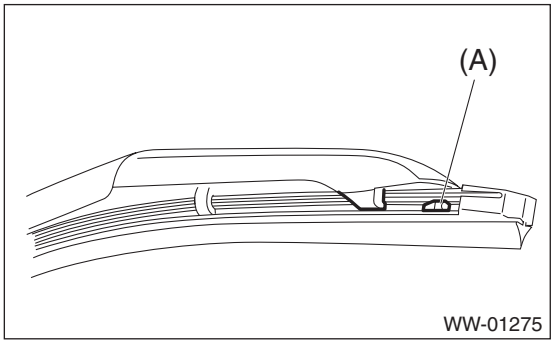
1. FRONT

Pull side (A) of the wiper rubber stopper, and remove the rubber assembly - windshield wiper from the blade assembly - windshield wiper.

2. REAR



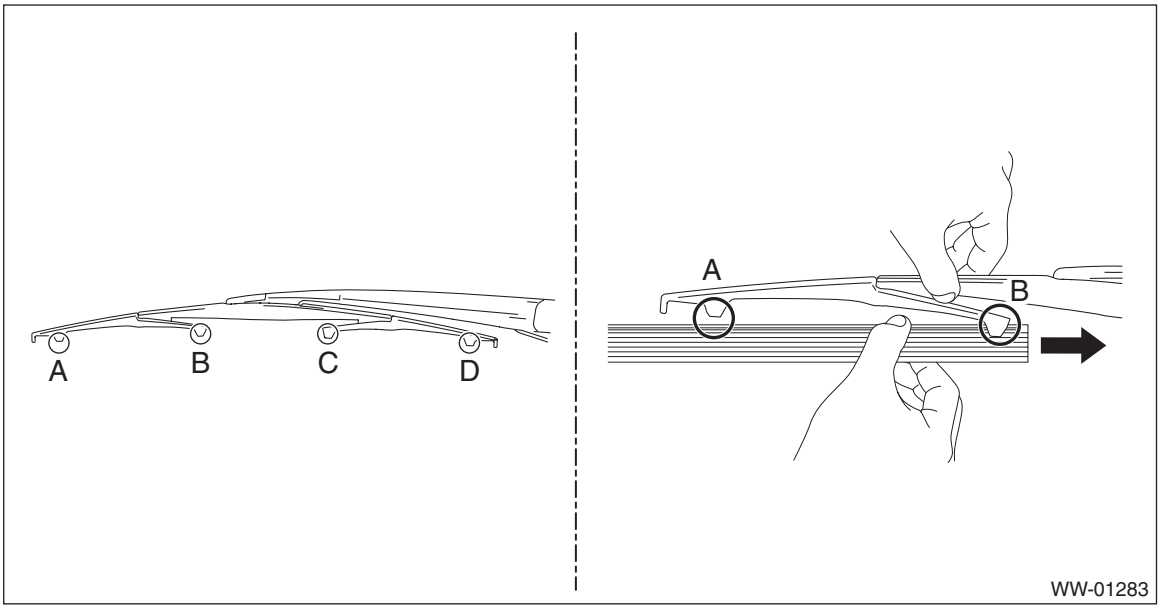
Slightly pull the top of the rubber assembly - rear wiper from the stopper (A), and pull out completely.



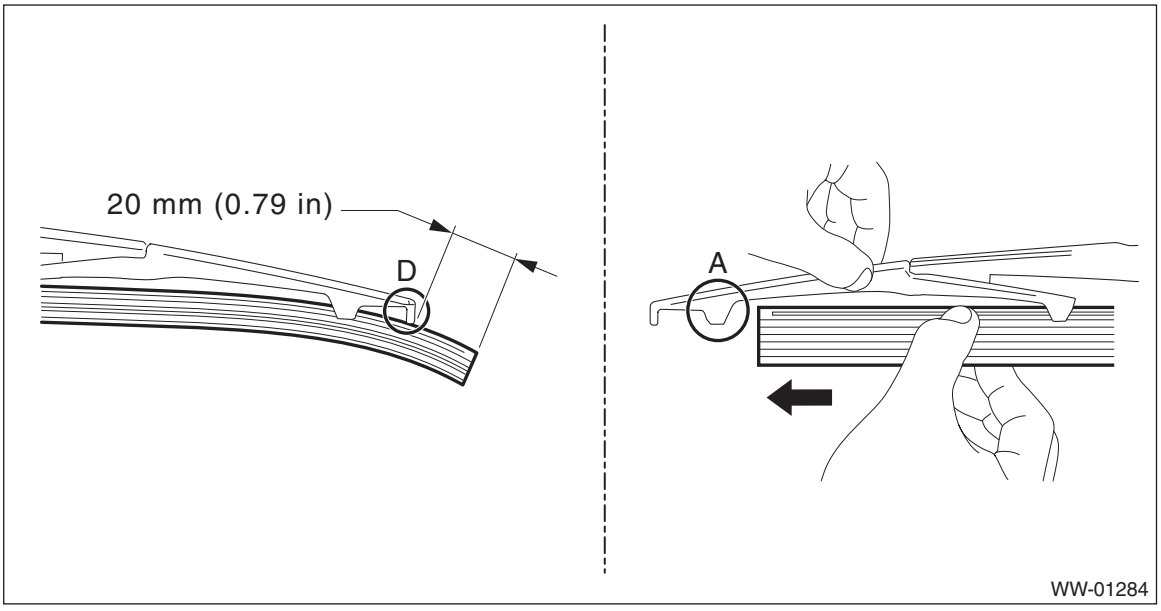
D: ASSEMBLY

1. FRONT

1) Insert the rubber assembly - windshield wiper onto the blade - windshield wiper so that the stopper is in the position shown in the figure.



2) Make sure the rubber assembly - windshield wiper is securely fastened to the pull stopper (A).



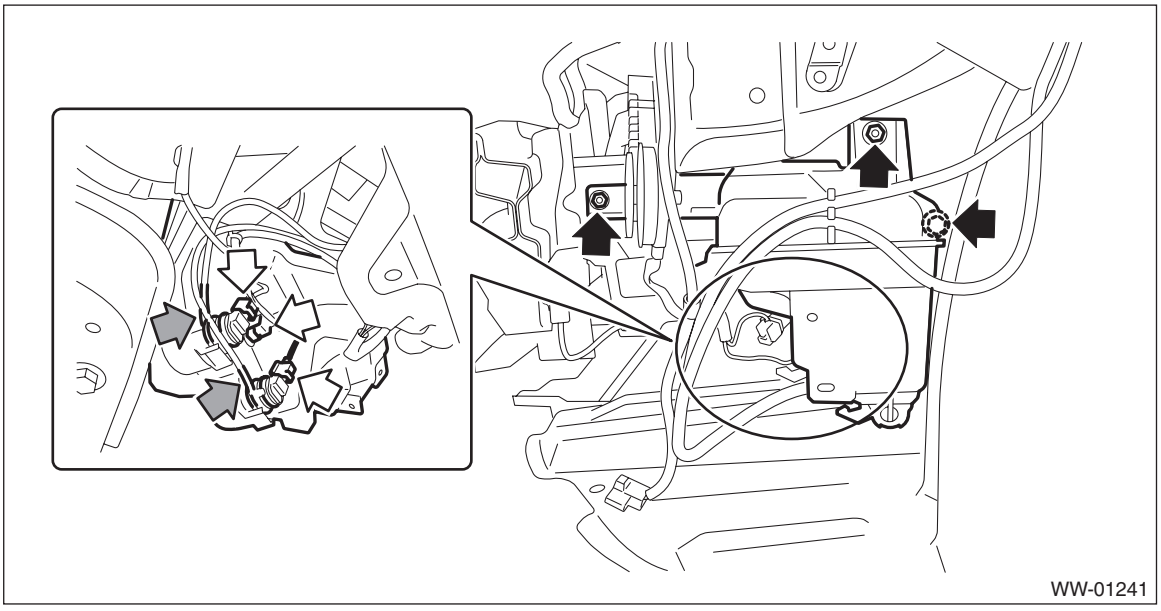
2. REAR

1) Insert the rubber assembly - rear wiper into claw (B).

2) Insert the rubber assembly - rear wiper until its top end protrudes approx. 20 mm (0.79 in) from stopper (D).
3) Insert the rubber assembly - rear wiper into claw (A).

E: INSPECTION

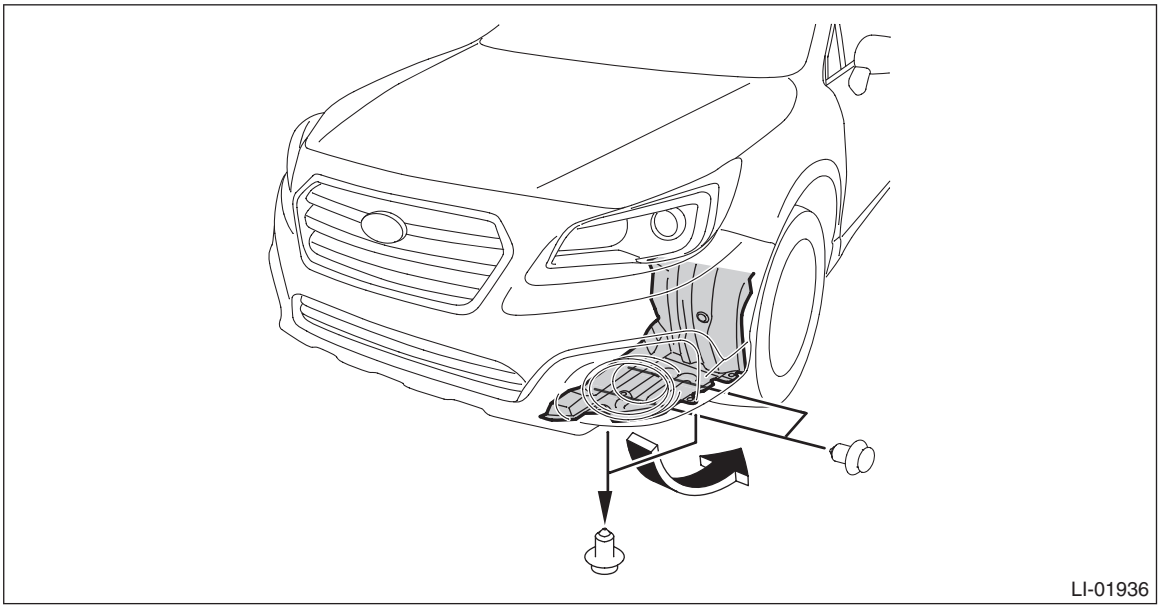
1) When the wiper does not operate properly, inspect the following item.
- Make sure the movable part of the blade assembly - rear wiper moves smoothly.
- Check that the rubber assembly - rear wiper rubber is not deformed or damaged.



2) Replace with a new part if damage is found.

6. Washer Tank and Motor

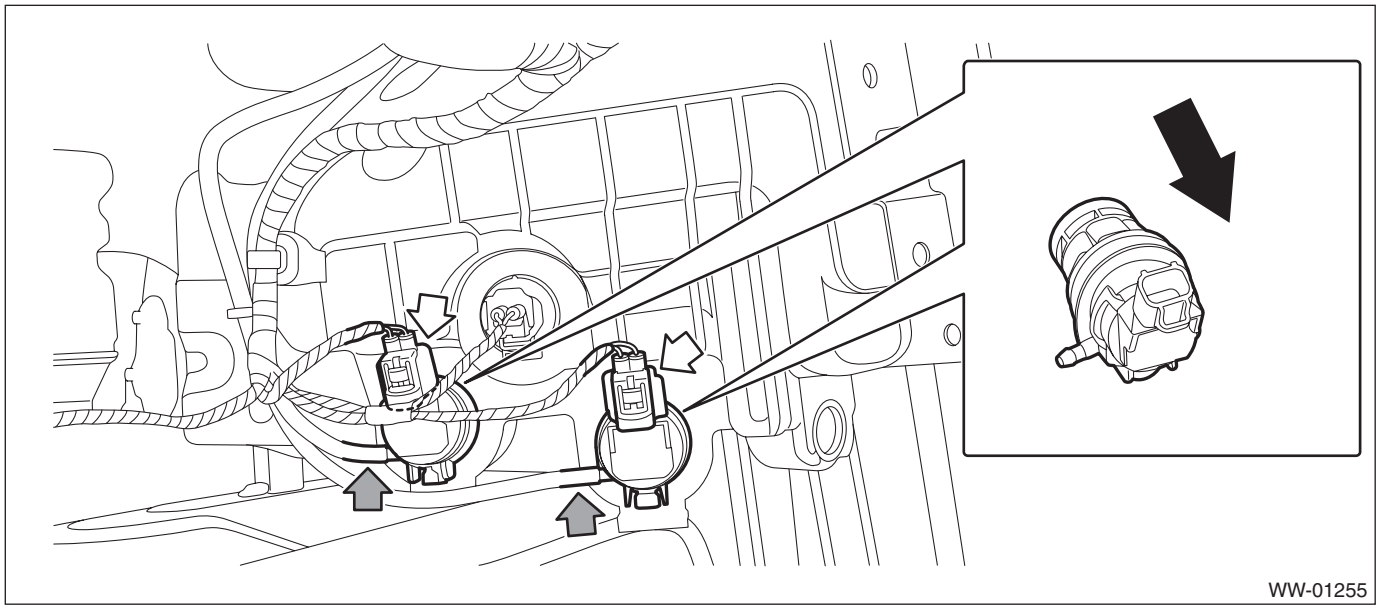
A: REMOVAL



1. WASHER TANK

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the bumper face - front. <Ref. to EI-34, REMOVAL, Front Bumper.>
3) Remove the tank - washer assembly.
   (1) Remove the clip of the holder - windshield washer tank.
   (2) Disconnect the connector from the motor pump assembly - washer and the sensor - washer tank, and then remove the harness clip.
   (3) Prepare a container before disconnecting the hose - washer, and drain all washer fluid in the tank - washer.
   (4) Remove the bolt and nuts and remove the tank - washer assembly.

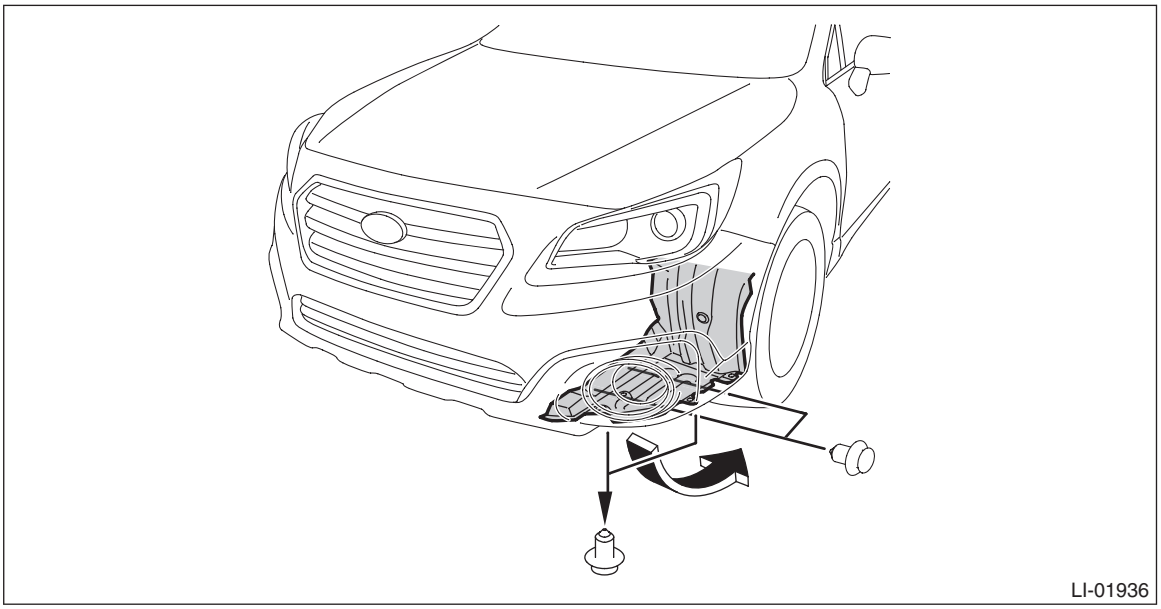
WW-01241



2. WASHER MOTOR

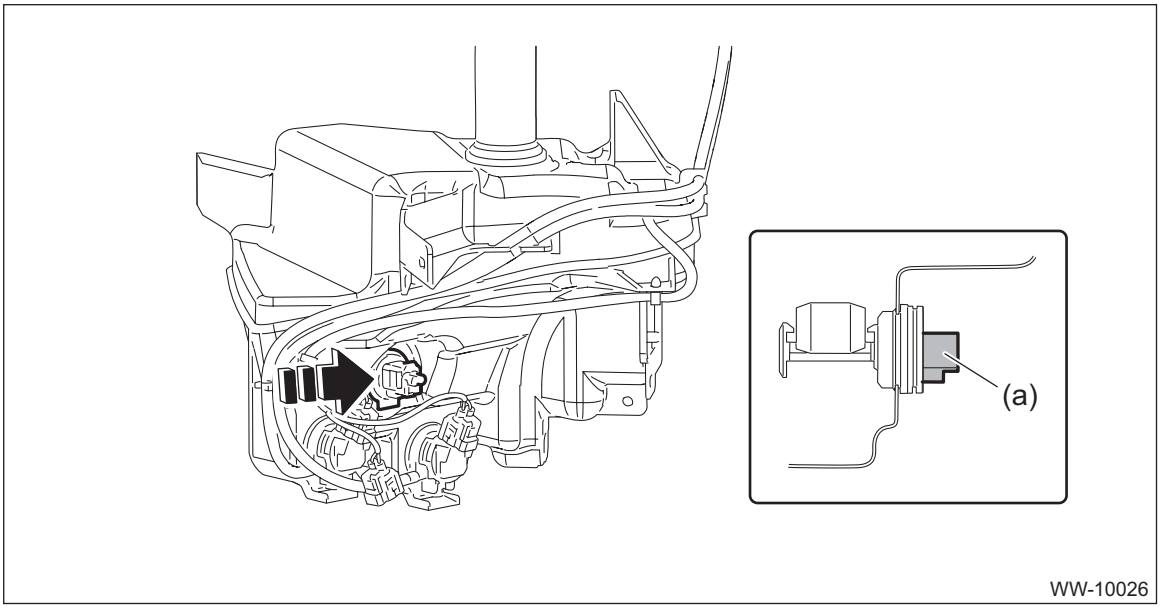
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the clips, and turn over the mud guard - front LH.

LI-01936



3) Disconnect the connector from the motor pump assembly - washer and remove the harness clip.

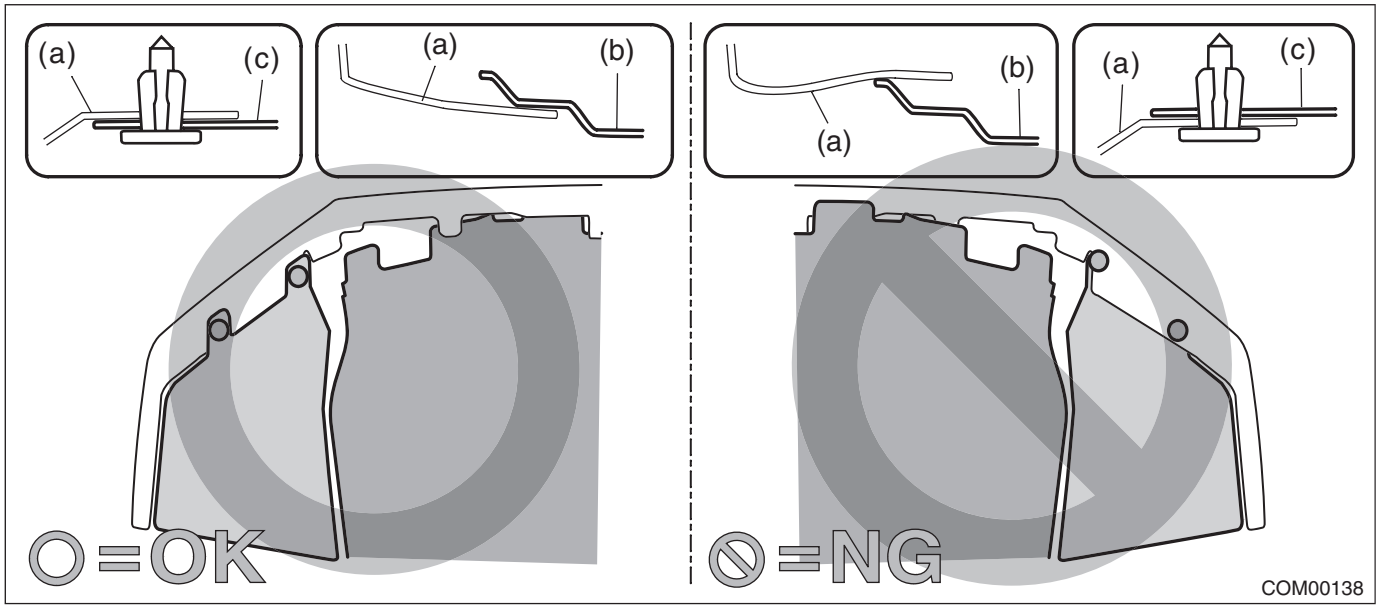
4) Prepare a container before disconnecting the hose - washer, and drain all washer fluid in the tank - washer.
5) Remove the motor pump assembly - washer.



3. WASHER FLUID LEVEL SENSOR

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the clips, and turn over the mud guard - front LH.

3) Disconnect the connector from the sensor - washer tank, and remove the harness clip.
4) Prepare a container before disconnecting the hose - washer, and drain all washer fluid in the tank - washer.
5) Push the section (a) in the direction of the arrow with a thick towel or the like to remove the sensor - washer tank.

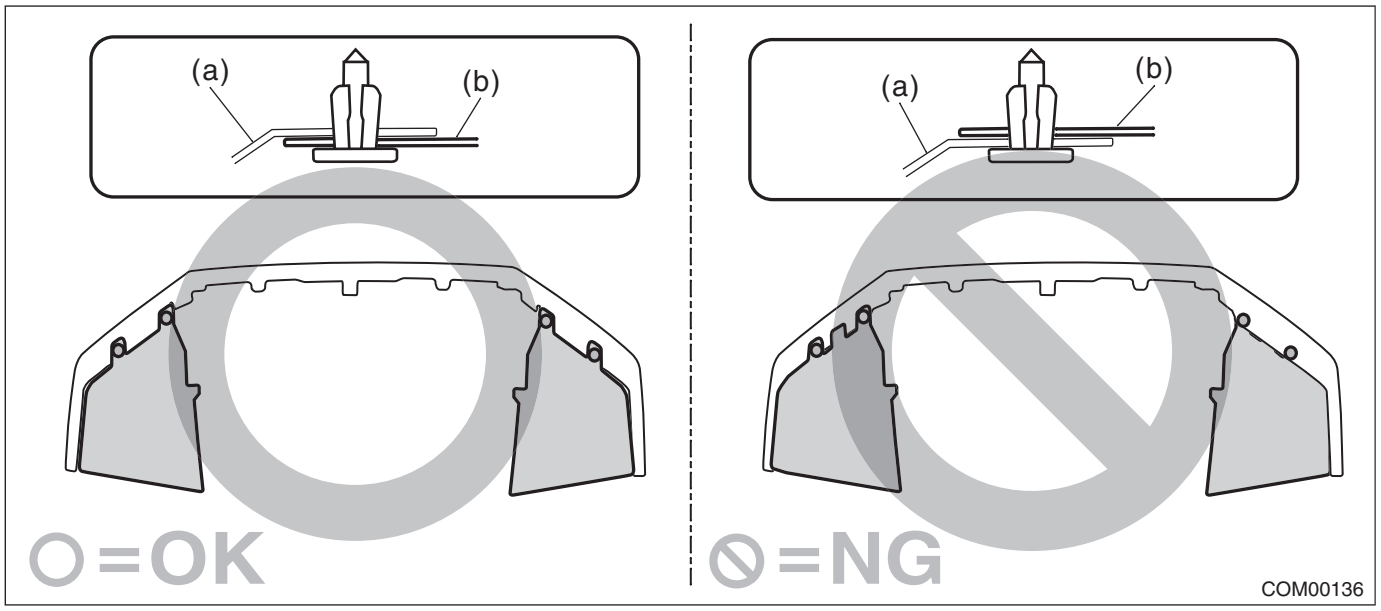


CAUTION:
Do not hit or apply any impact to the sensor - washer tank, because it has a poor resistance to impact. Sensor internal parts may be damaged when an impact is applied.

B: INSTALLATION

1. WASHER TANK

CAUTION:
• Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).

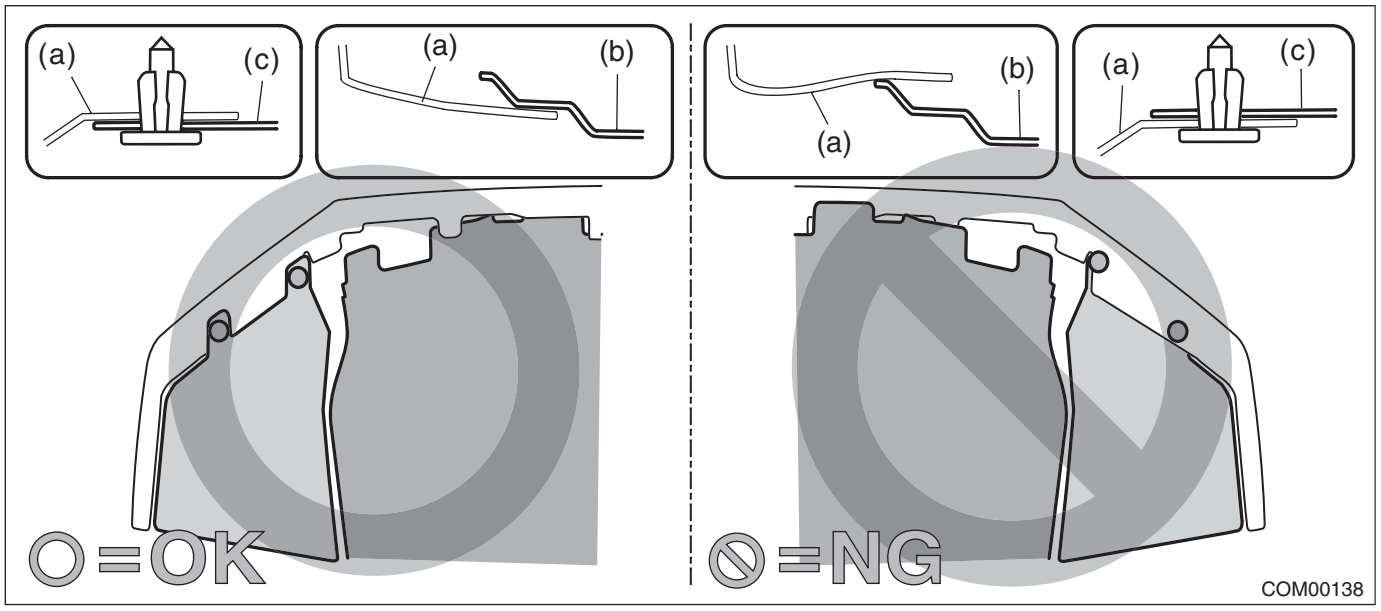


• Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.
1) Install the tank - washer assembly.

Tightening torque:
6 N·m (0.6 kgf-m, 4.4 ft-lb)
2) Connect the hose - washer.
3) Connect each connector and install the harness clip.

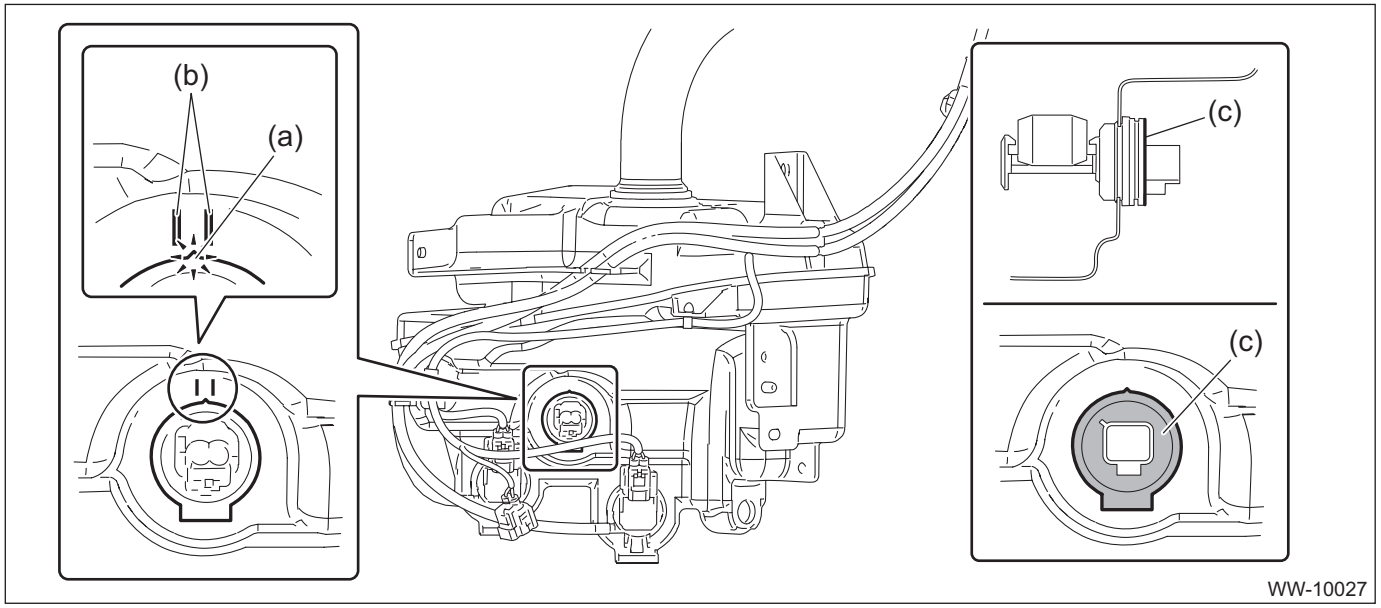
4) Install the mud guard - front.
5) Install the bumper face - front. <Ref. to EI-38, INSTALLATION, Front Bumper.>
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
7) Add new washer fluid.
8) Adjust the fog light beam. (Model with fog light) <Ref. to LI-41, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

2. WASHER MOTOR



CAUTION:
Install the mud guard - front so that the front end of the mud guard (b) comes outside the bumper face - front (a).

1) Install the motor pump assembly - washer to the tank - washer.
2) Connect the hose - washer.
3) Connect each connector and install the harness clip.
4) Install the mud guard - front LH.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
6) Add new washer fluid.
7) Adjust the fog light beam. (Model with fog light) <Ref. to LI-41, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>



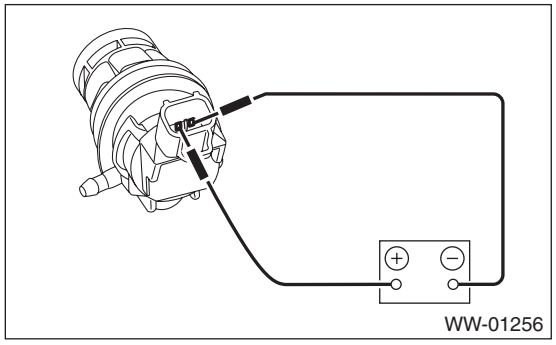
3. WASHER FLUID LEVEL SENSOR

CAUTION:
Install the under cover so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).

1) Align the protrusion (a) of the sensor - washer tank with a center position of double line marks (b) on the tank - washer side, and push the flat surface (c) to install.

CAUTION:
- **Do not hit or apply any impact to the sensor - washer tank, because it has a poor resistance to impact.**
- **When the installation is difficult, apply washer fluid to the packing. Do not use silicone grease.**

2) After installing the sensor - washer tank, perform the following confirmations.
- There is no gap between the tank - washer and the packing.
- There is no gap between the packing and the sensor - washer tank.
- There is no turn over to the packing and its peripheral area.



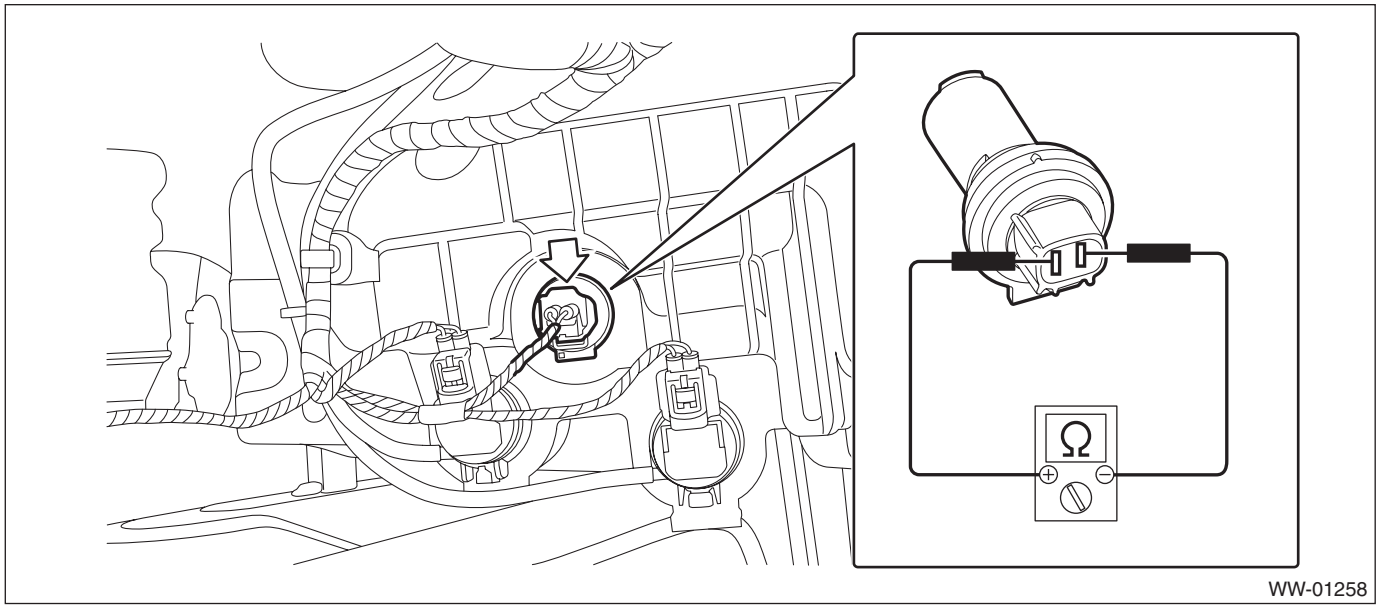
3) Connect each connector and install the harness clip.
4) Install the mud guard - front LH.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

6) Add new washer fluid.
7) Adjust the fog light beam. (Model with fog light) <Ref. to LI-41, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

C: INSPECTION

1. WASHER PUMP

Apply battery voltage to the connector terminal of the motor pump assembly - washer, and make sure that the motor operates.



2. WASHER FLUID LEVEL SENSOR

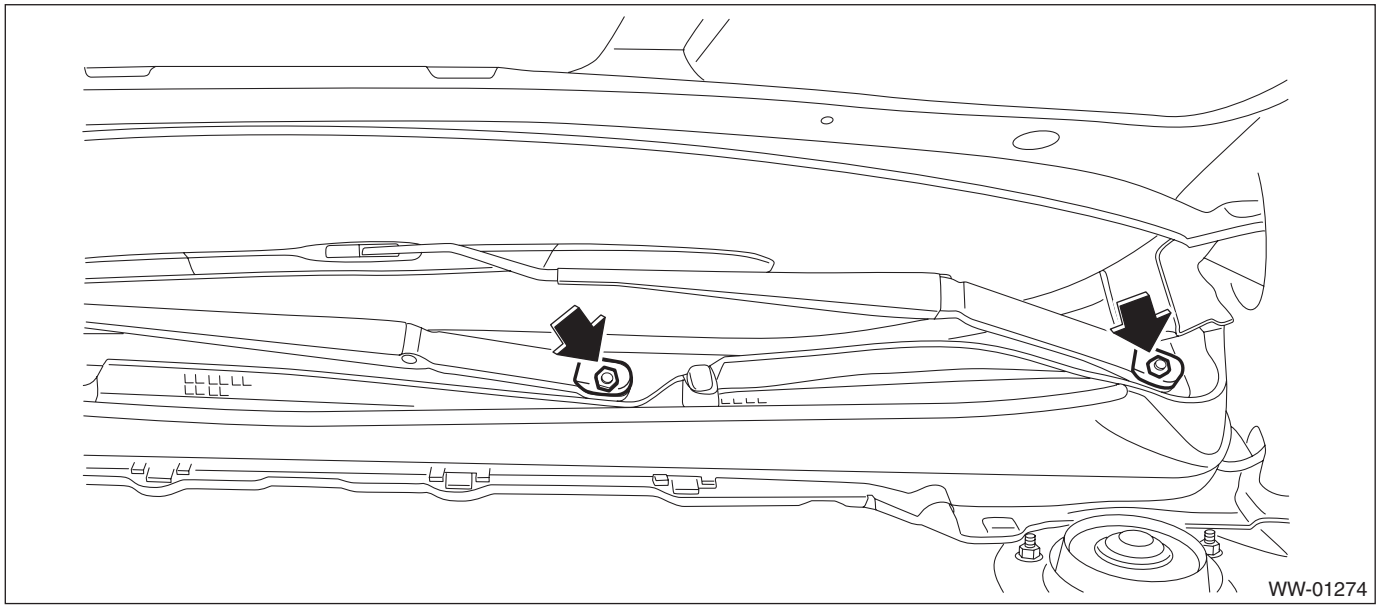
1) Check the connection status of washer fluid level sensor connector.
2) Does the low washer fluid warning light illuminate after draining the washer fluid? And does the low washer fluid warning light go off after refilling the washer fluid?
- **Yes → Normal operation.**
- **No → Perform step 3.**

3) Using a tester, measure the voltage of the washer fluid level sensor connector.
   (1) Is the voltage approx. 8.5 V or more?
   - **Yes → Perform step 4.**
   - **No → Check harness, meter and integrated unit, and replace if necessary.**

4) Does the meter indicator illuminate if you short the washer fluid level sensor connector?
- **Yes → Perform step 5.**
- **No → Check meter and integrated unit, and replace if necessary.**

5) Using a tester, measure the resistance of the washer fluid level sensor.
(1) Turn over the mud guard.
(2) Measure the resistance of the washer fluid level sensor.

Amount of washer fluid in the tank	Standard
No remaining quantity (ON)	Less than 10 Ω
There is remaining quantity (OFF)	1 MΩ or more



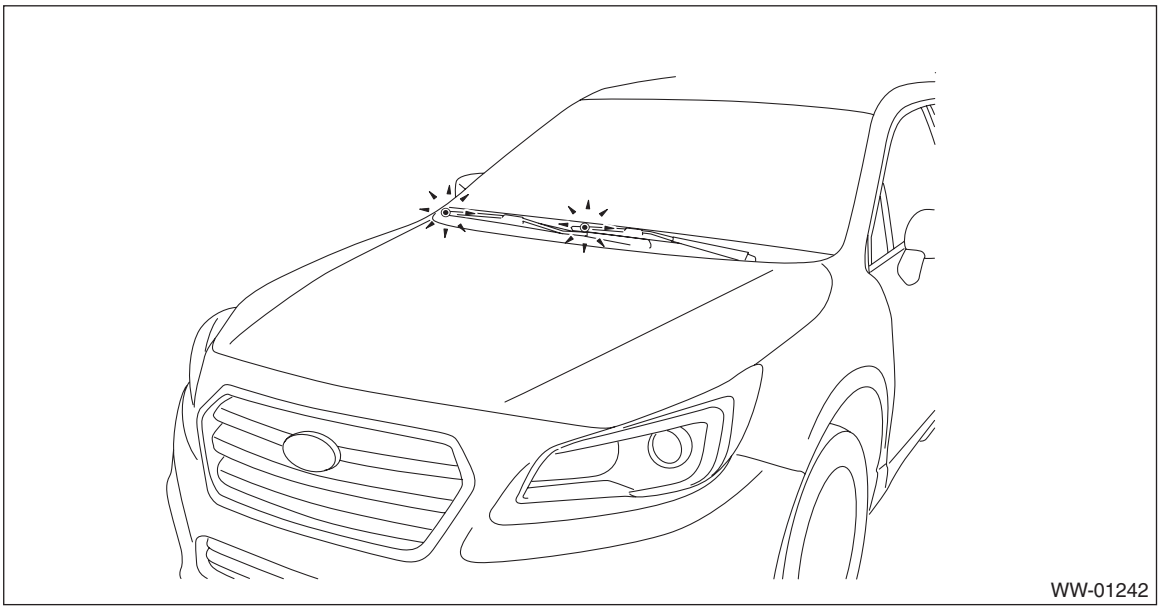
(3) Is the resistance within the standard?
- **Yes → Normal operation.**
- **No → Replace the washer fluid level sensor along with the washer tank.**

7. Front Wiper Arm

A: REMOVAL

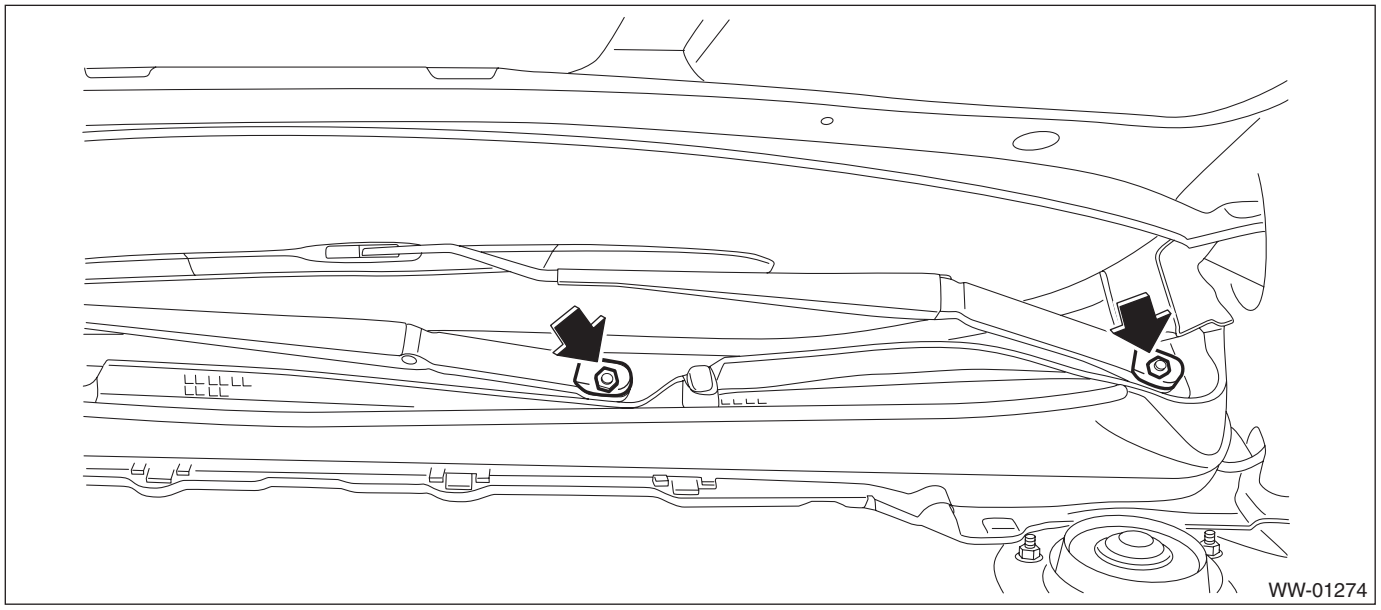
1) Remove the cover - windshield wiper arm.
2) Remove the nuts, and remove the arm assembly - windshield wiper.

NOTE:
Since the arm assembly - windshield wiper LH and RH can interfere with each other, remove the driver's side first.



B: INSTALLATION

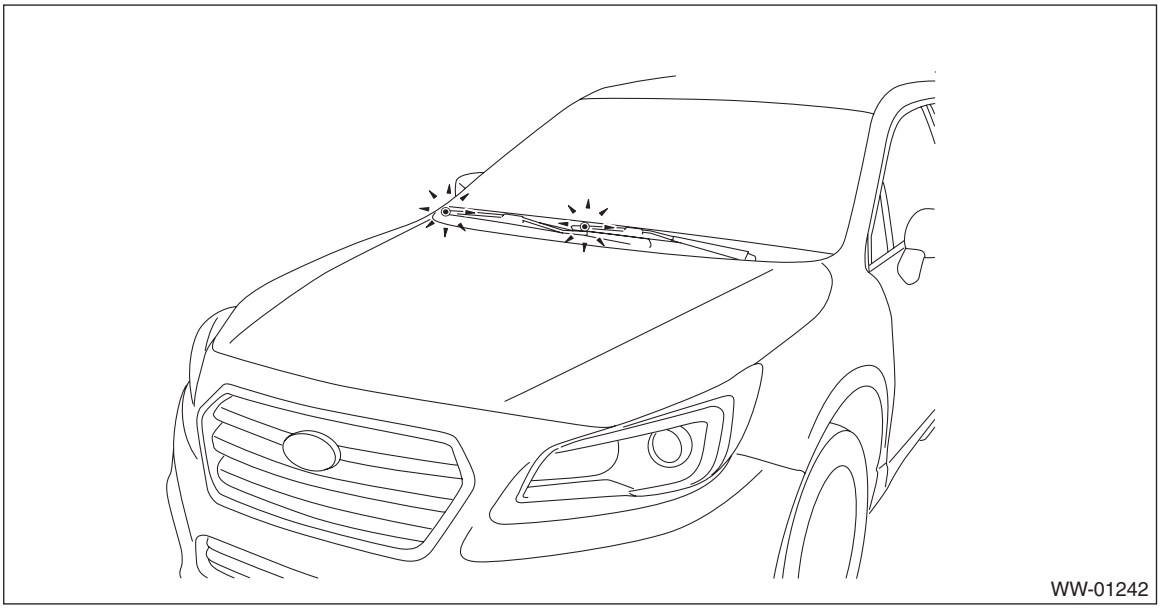
1) Install the arm assembly - windshield wiper.



NOTE:
Since the arm assembly - windshield wiper LH and RH can interfere with each other, install the passenger's side first.

(1) Assemble the arm assembly - windshield wiper so that the blade assembly - windshield wiper is aligned to the ceramic print point mark of the windshield glass.

(2) Tighten the arm assembly - windshield wiper to specified torque and install the cap.



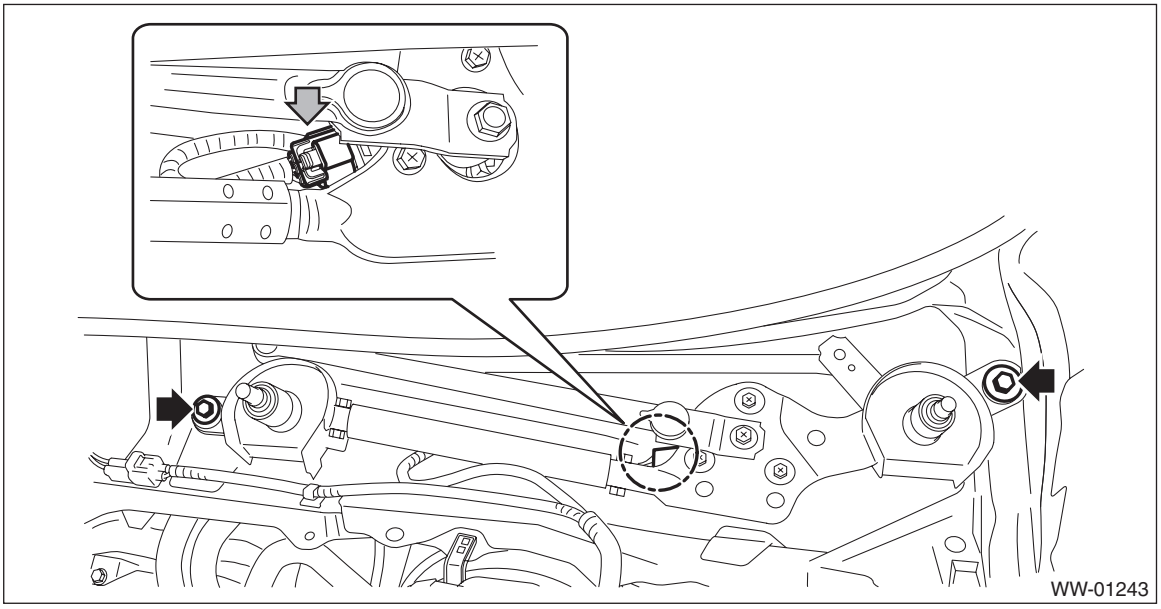
Tightening torque:
22 N·m (2.2 kgf-m, 16.2 ft-lb)

2) Check the position of windshield wiper. <Ref. to WW-29, ADJUSTMENT, Front Wiper Arm.>

C: ADJUSTMENT

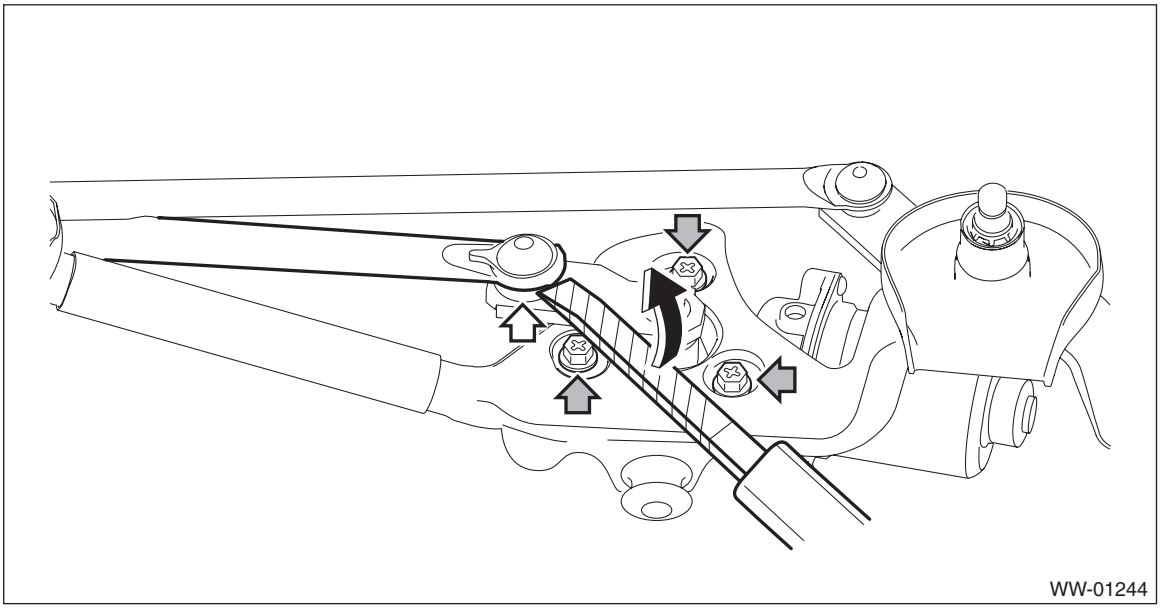
1) Operate the windshield wiper once.
2) Check that the wiper blade is aligned with the point mark.

3) If the wiper blade is not aligned with the point mark, perform the removal and installation of the windshield wiper. <Ref. to WW-28, REMOVAL, Front Wiper Arm.>



8. Front Wiper Motor and Link

A: REMOVAL



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the arm assembly - windshield wiper. <Ref. to WW-28, REMOVAL, Front Wiper Arm.>
3) Remove the cowl panel - side and the cowl panel assembly. <Ref. to EI-52, REMOVAL, Cowl Panel.>

CAUTION:
Before removing the cowl panel, use an air blower and nylon brush to sweep gravel from the lower area of the front side of the glass.

4) Remove the link assembly - windshield wiper.
   (1) Disconnect the connector of the motor assembly - windshield wiper.
   (2) Remove the bolts and harness clips, and remove the link assembly - windshield wiper.

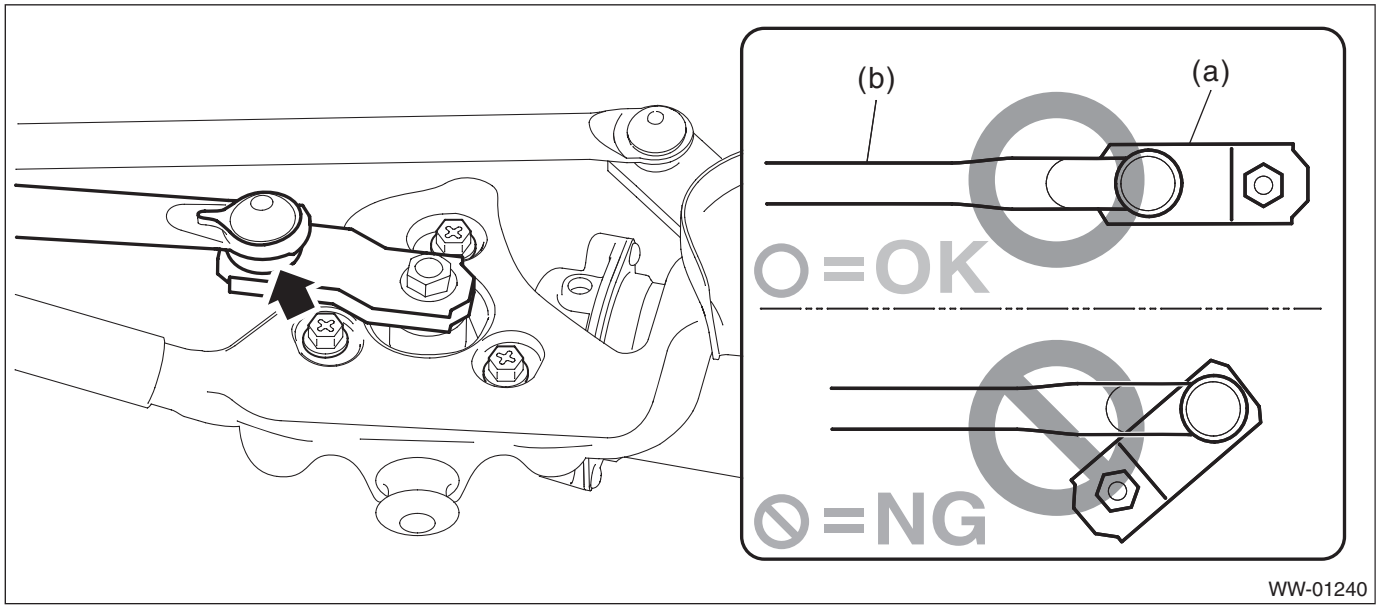
5) Remove the motor assembly - windshield wiper.
   (1) Using a crowbar wrapped with protective tape, disconnect the link assembly - windshield wiper from the link plate.
   (2) Remove the bolts, and remove the motor assembly - windshield wiper.

B: INSTALLATION

CAUTION:
Before installing the windshield glass and cowl panel, make sure there are no gravel in the installing area.

1) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Check that the motor assembly - windshield wiper is at the auto stop position.

CAUTION:
During motor operation, do not touch the movable part.



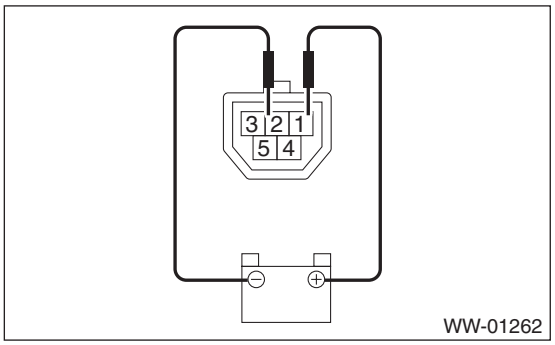
(1) Connect the harness of front wiper to the motor assembly - windshield wiper.
(2) Switch the wiper switch to ON/OFF once.

3) Disconnect the ground terminal from battery sensor again. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Install the motor assembly - windshield wiper.

Tightening torque:
5.5 N·m (0.6 kgf-m, 4.1 ft-lb)

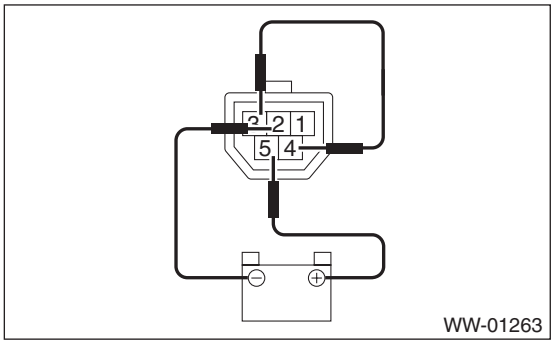
5) Install the link assembly - windshield wiper.

CAUTION:
Set the component where the rod (b) and link plate (a) are aligned in a straight line.



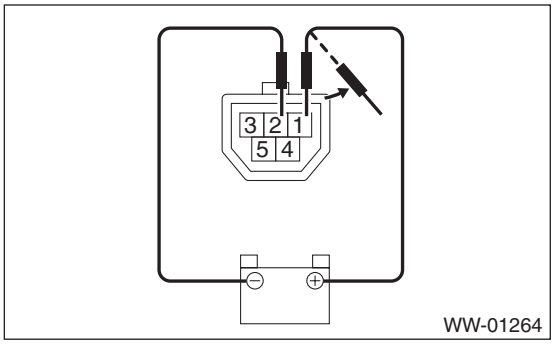
6) Install the cowl panel - side and the cowl panel assembly. <Ref. to EI-53, INSTALLATION, Cowl Panel.>
7) Remove the arm assembly - windshield wiper. <Ref. to WW-28, REMOVAL, Front Wiper Arm.>
8) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
9) Check the position of windshield wiper. <Ref. to WW-29, ADJUSTMENT, Front Wiper Arm.>

C: INSPECTION

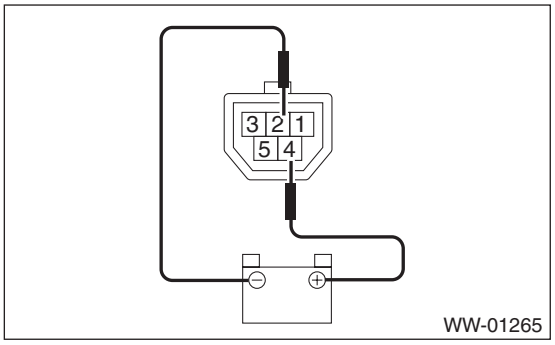


1) Check that the following operations perform normally.

CAUTION:
Fix the motor to prevent the motor from being shorted by moving during operation.



(1) When the battery is connected to the terminal of connectors, confirm that the motor operates at low speed.



(2) When the battery is connected to the terminal of connectors, confirm that the motor operates at high speed.

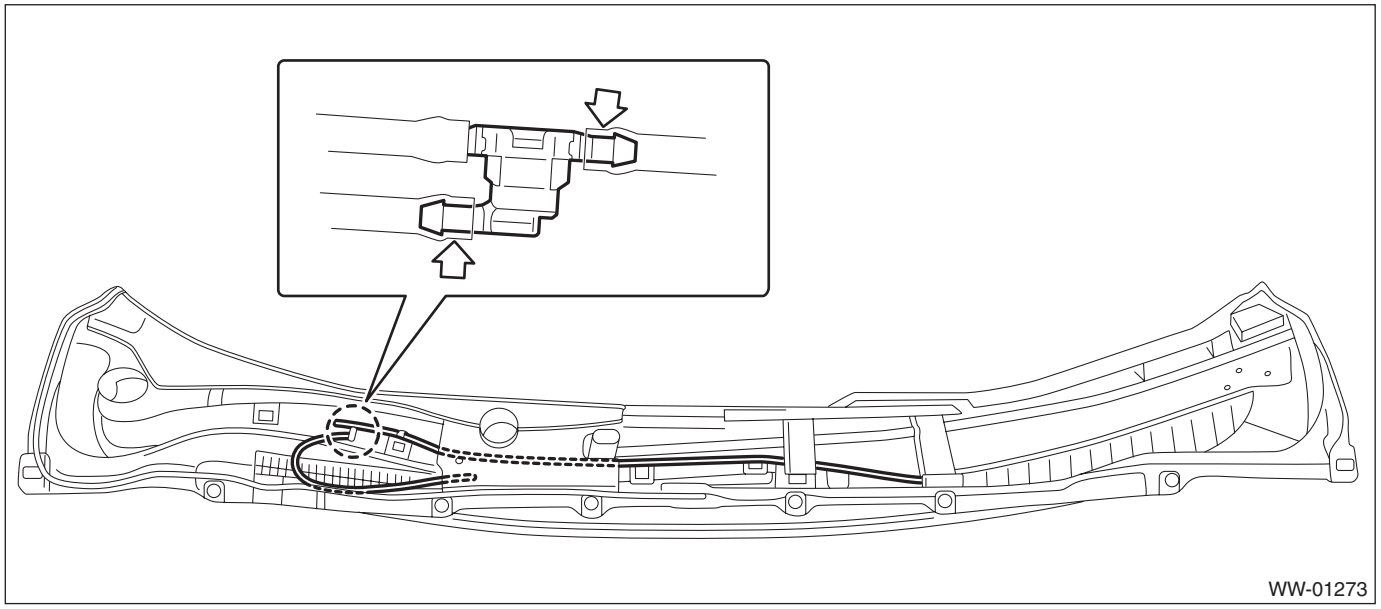
(3) Connect the battery to terminals of the connector, and remove the terminal connection with motor rotating at low speed, and stop the motor assembly - windshield wiper in mid-operation.

(4) Connect the battery and check that the motor stops at the automatic stop position after the motor operates at low speed again.

NOTE:
Replace the motor assembly - windshield wiper if the inspection result is not within the standard.

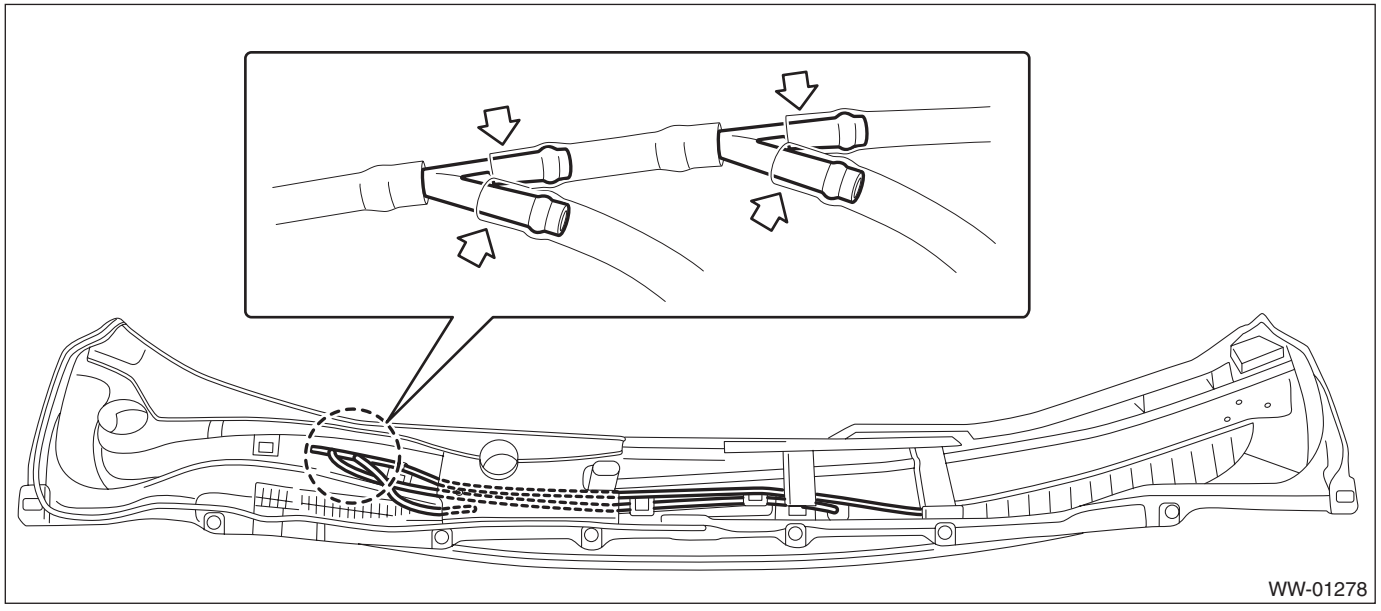
2) Install the motor assembly - windshield wiper. <Ref. to WW-31, INSTALLATION, Front Wiper Motor and Link.>

9. Front Washer Nozzle



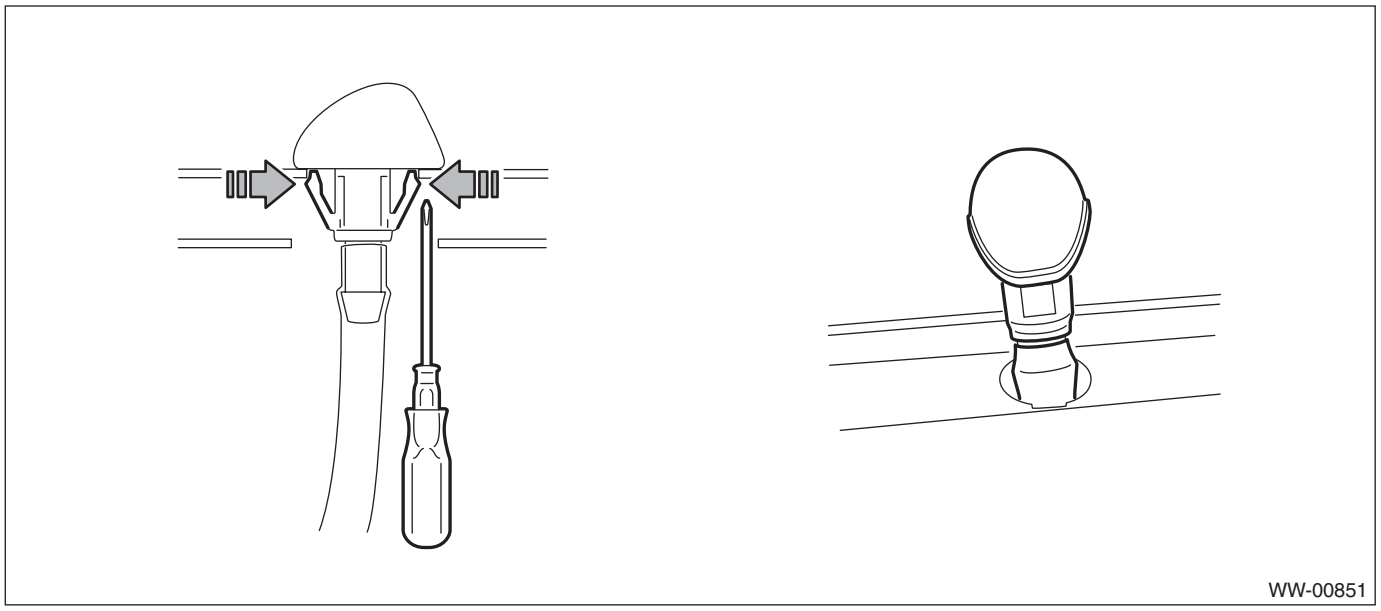
A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the arm assembly - windshield wiper. <Ref. to WW-28, REMOVAL, Front Wiper Arm.>
3) Remove the cowl panel - side and the cowl panel assembly. <Ref. to EI-52, REMOVAL, Cowl Panel.>



CAUTION:
Before removing the cowl panel, use an air blower and nylon brush to sweep gravel from the lower area of the front side of the glass.

4) Disconnect the hose - windshield washer.



- Models without EyeSight

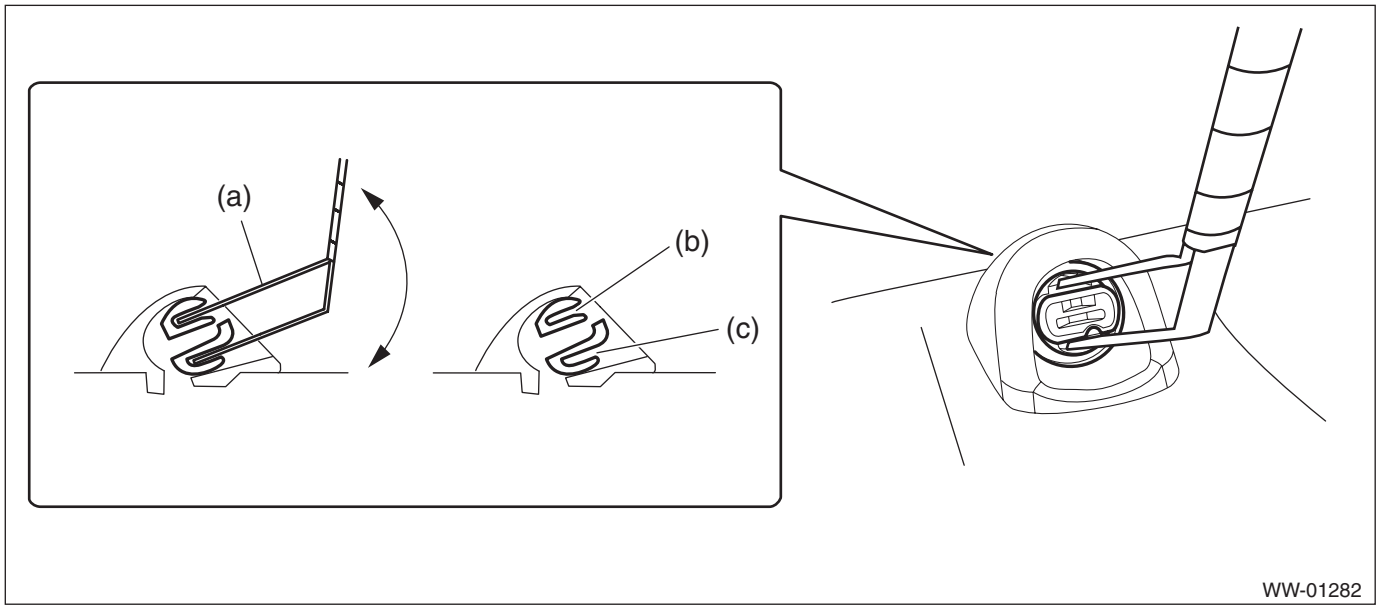
- Models with EyeSight

5) Remove the nozzle - windshield washer.
(1) Push the claw using a flat tip screwdriver, etc.
(2) When the nozzle - windshield washer lifts up, pull out the nozzle - windshield washer using a clip remover, etc.
(3) Disconnect the hose - windshield washer, and remove the nozzle - windshield washer.

B: INSTALLATION

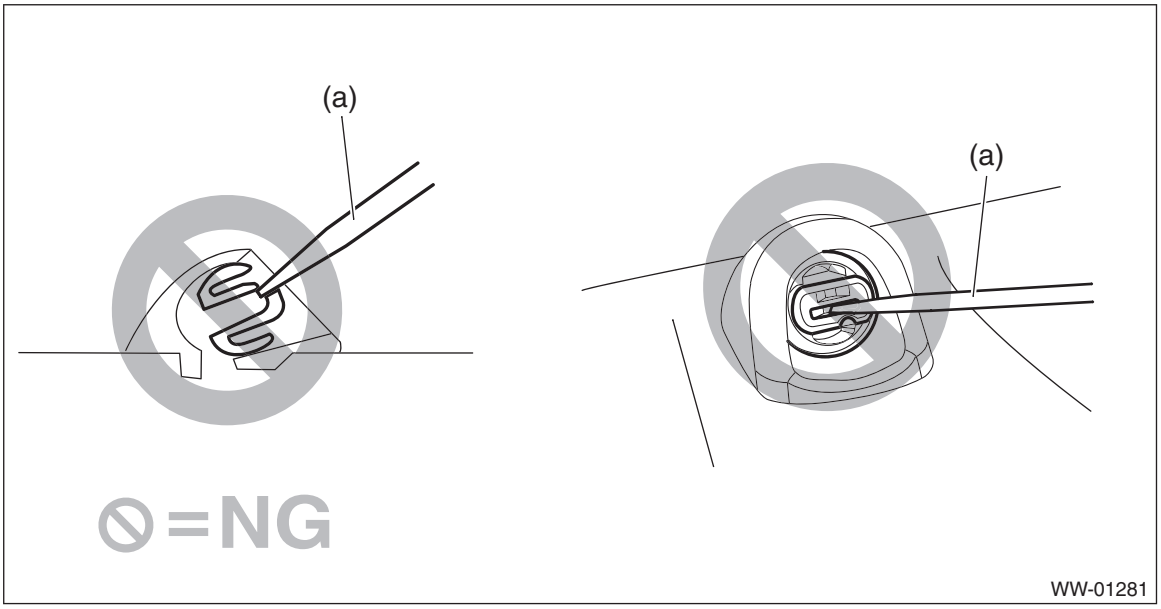
CAUTION:
Before installing the windshield glass and cowl panel, make sure there are no gravel in the installing area.

1) Install the nozzle - windshield washer.
(1) Install the nozzle - windshield washer.
(2) Install the hose - windshield washer.
2) Install the cowl panel - side and the cowl panel assembly. <Ref. to EI-53, INSTALLATION, Cowl Panel.>
3) Install the arm assembly - windshield wiper. <Ref. to WW-28, INSTALLATION, Front Wiper Arm.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Adjust the position of the nozzle - windshield washer. <Ref. to WW-35, ADJUSTMENT, Front Washer Nozzle.>



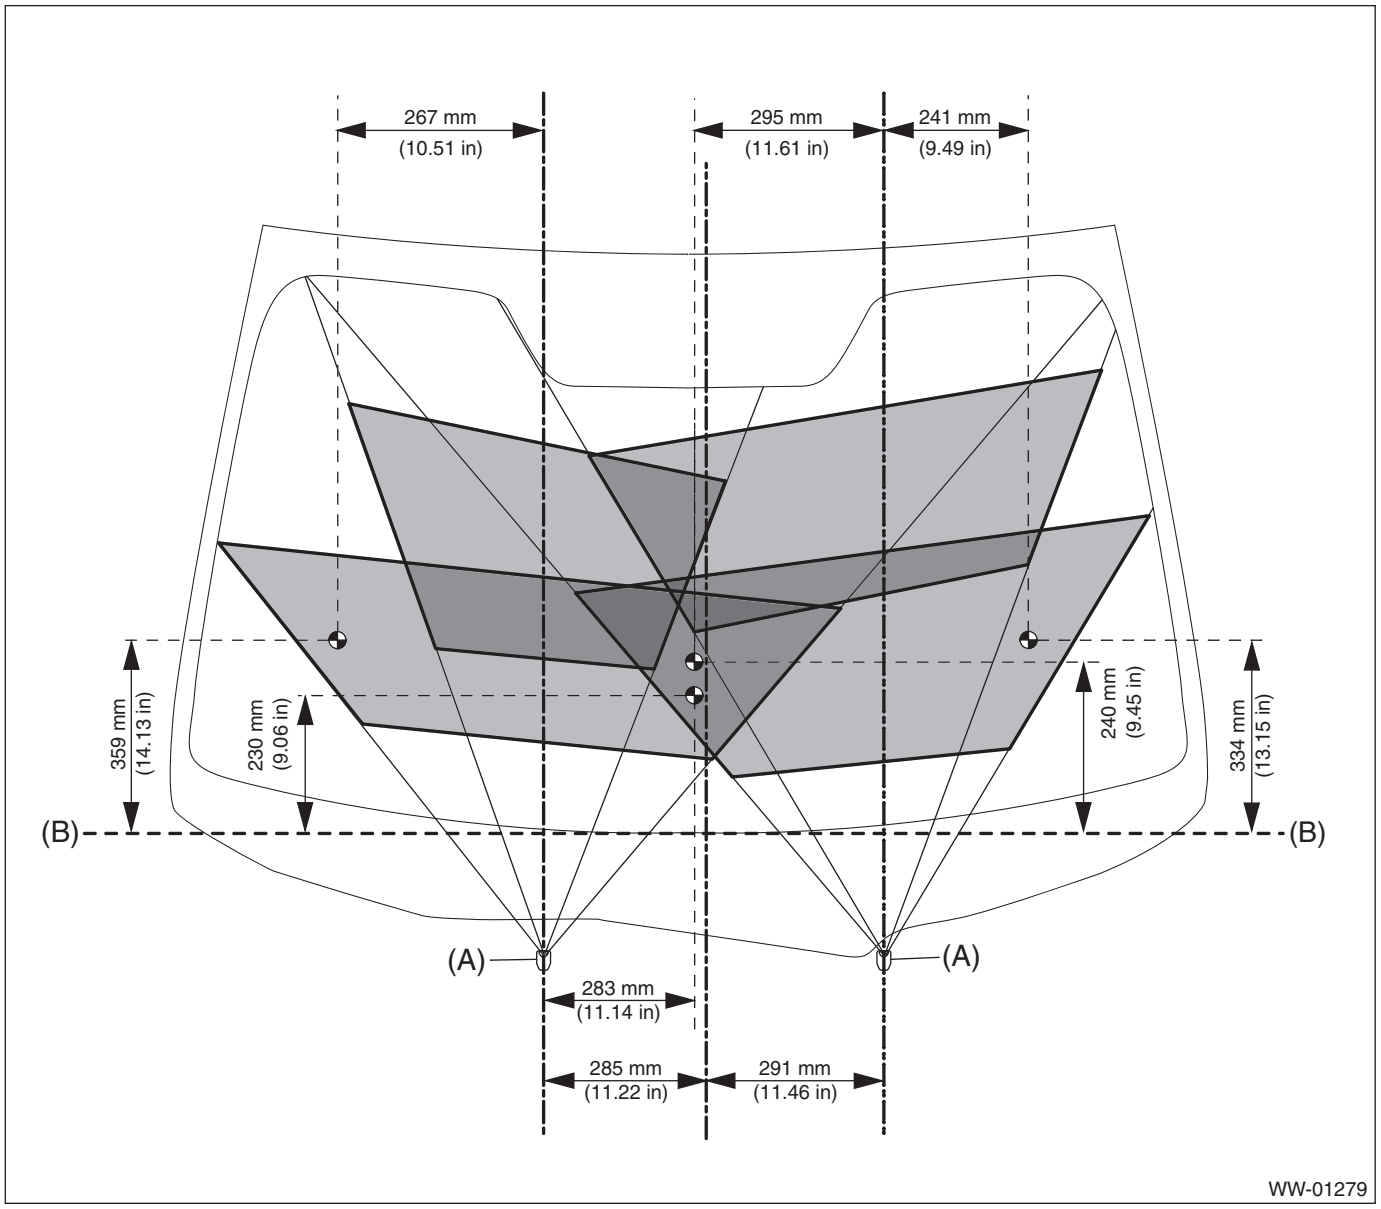
C: INSPECTION

- Make sure the nozzle - windshield washer and the hose - windshield washer are not clogged.
- Make sure the hose - windshield washer is not bent.
- Check the position of the nozzle - windshield washer. <Ref. to WW-35, ADJUSTMENT, Front Washer Nozzle.>



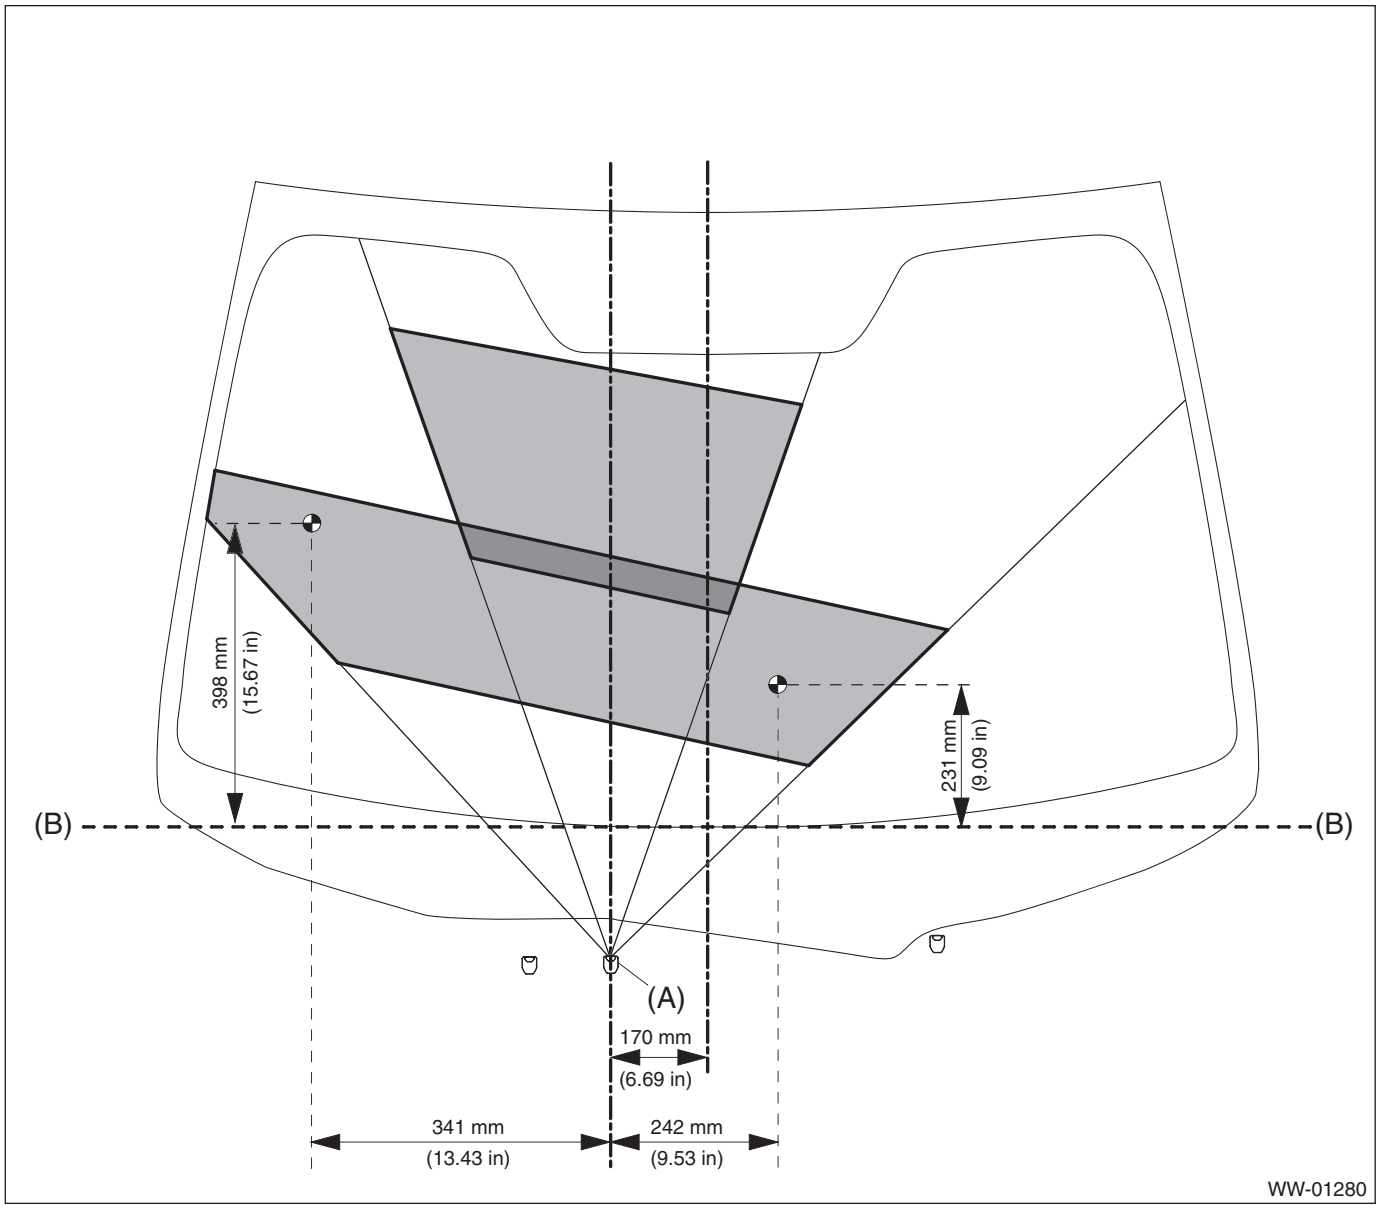
D: ADJUSTMENT

1. NOZZLE - WINDSHIELD WASHER



1) Turn the wiper switch to OFF position.
2) While the vehicle is at a standstill, insert the washer nozzle adjustment tool (a) into upper side (b) and lower side (c) of the nozzle - windshield washer to perform necessary adjustment.

CAUTION:
Washer nozzle is made of resin. If precision screwdriver (a) or equivalent is inserted into discharge port for adjustment, the discharge port can be deformed, and washer fluid cannot be sprayed.

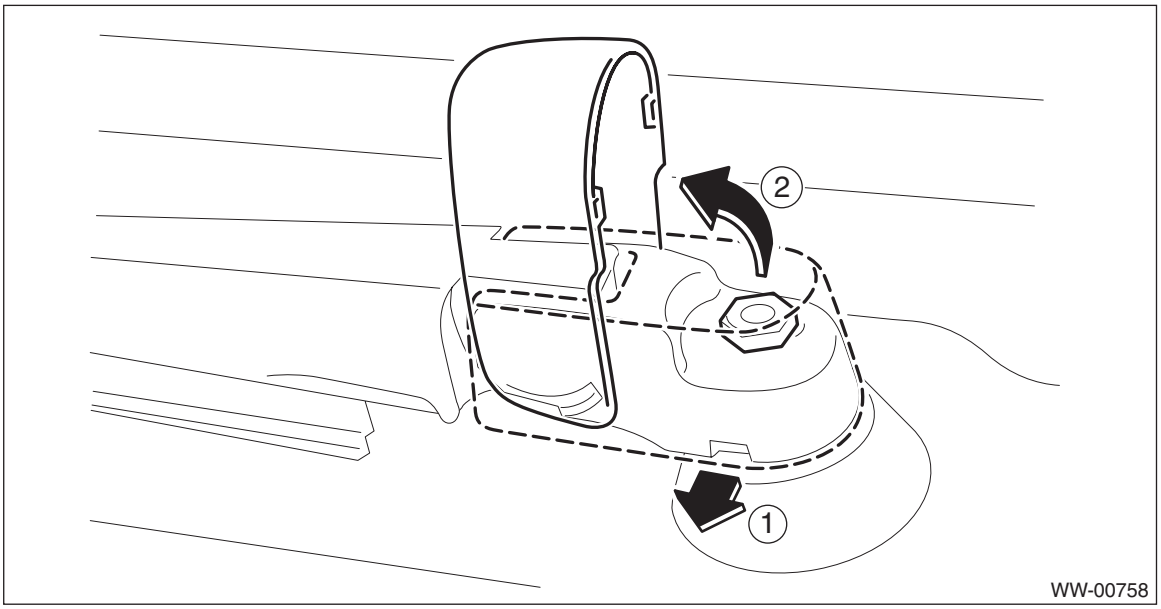


3) Adjust the washer injection position as shown in the figure.

(A) Nozzle - windshield washer (B) Ceramic line

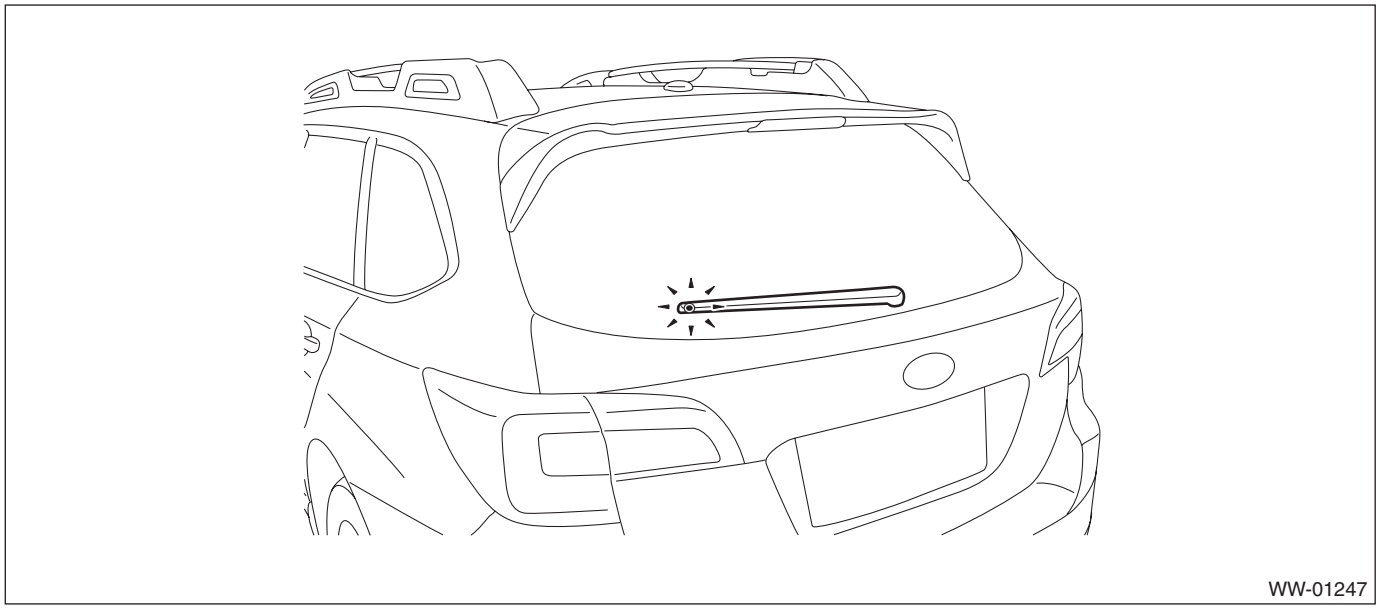
2. NOZZLE - WINDSHIELD WASHER EyeSight (MODEL WITH EyeSight ONLY)

1) Turn the wiper switch to OFF position.
2) Adjust the washer injection position as shown in the figure.



(A) Nozzle - windshield washer EyeSight
(B) Ceramic line

10.Rear Wiper Arm



A: REMOVAL

1) Pull up the cover - rear wiper arm.
2) Remove the nut, and remove the arm assembly - rear wiper.

B: INSTALLATION

1) Install the arm assembly - rear wiper.
   (1) Assemble the blade assembly - rear wiper aligning it with the marking on the glass.

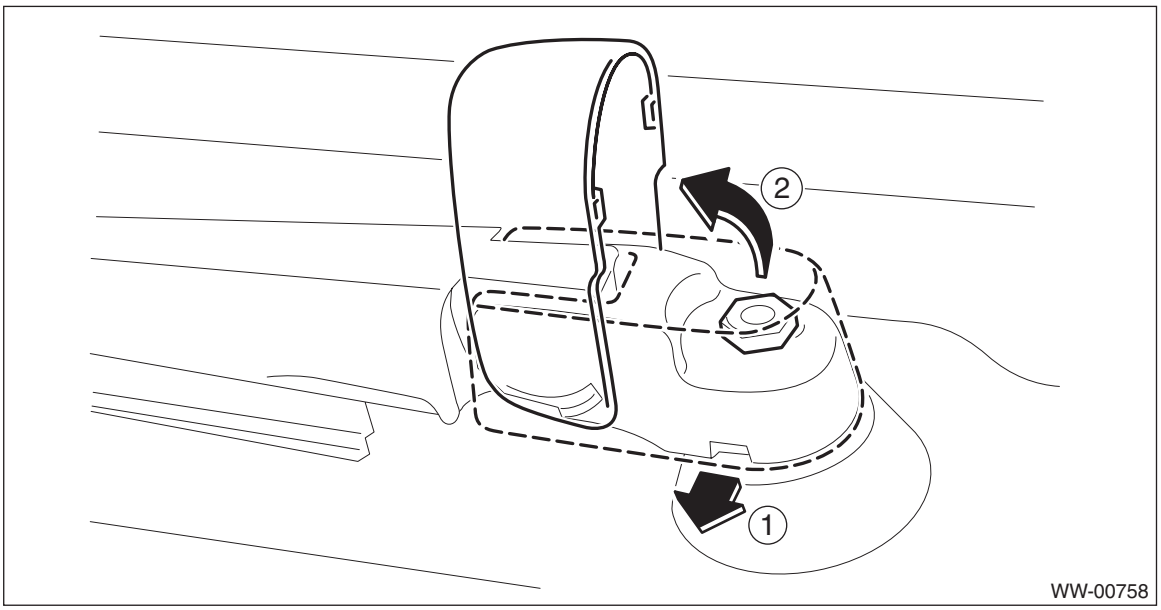
   (2) Tighten the arm assembly - rear wiper to the specified torque, and install the cover - rear wiper arm.

Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)

2) Check the position of rear wiper. <Ref. to WW-39, ADJUSTMENT, Rear Wiper Arm.>

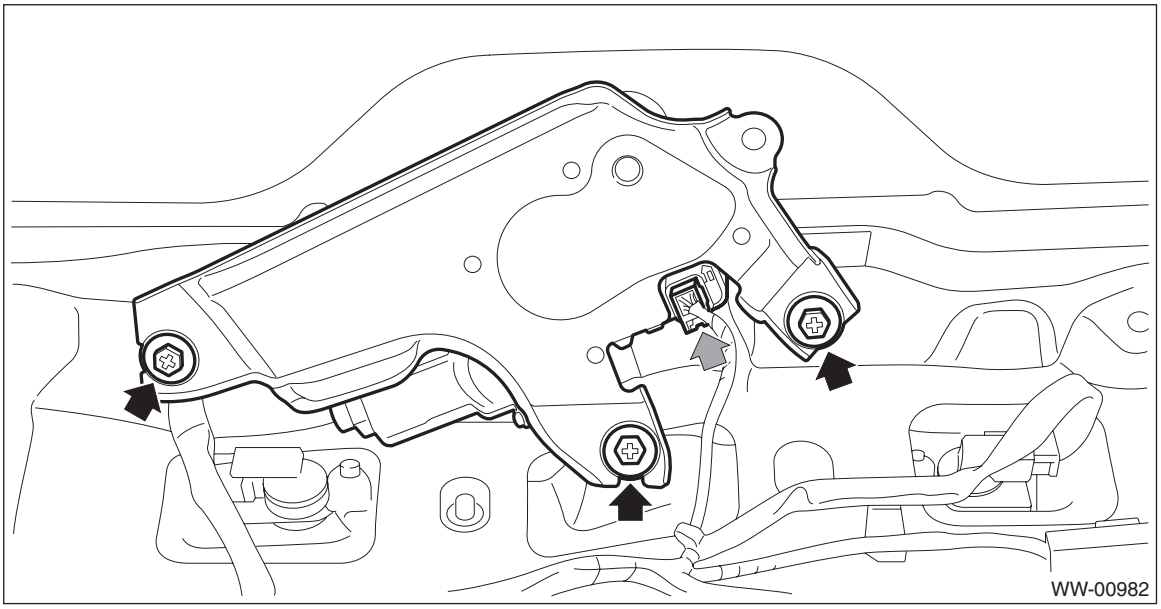
C: ADJUSTMENT

1) Operate the rear wiper once.
2) Check that the wiper blade is aligned with the point mark.



WW-01247

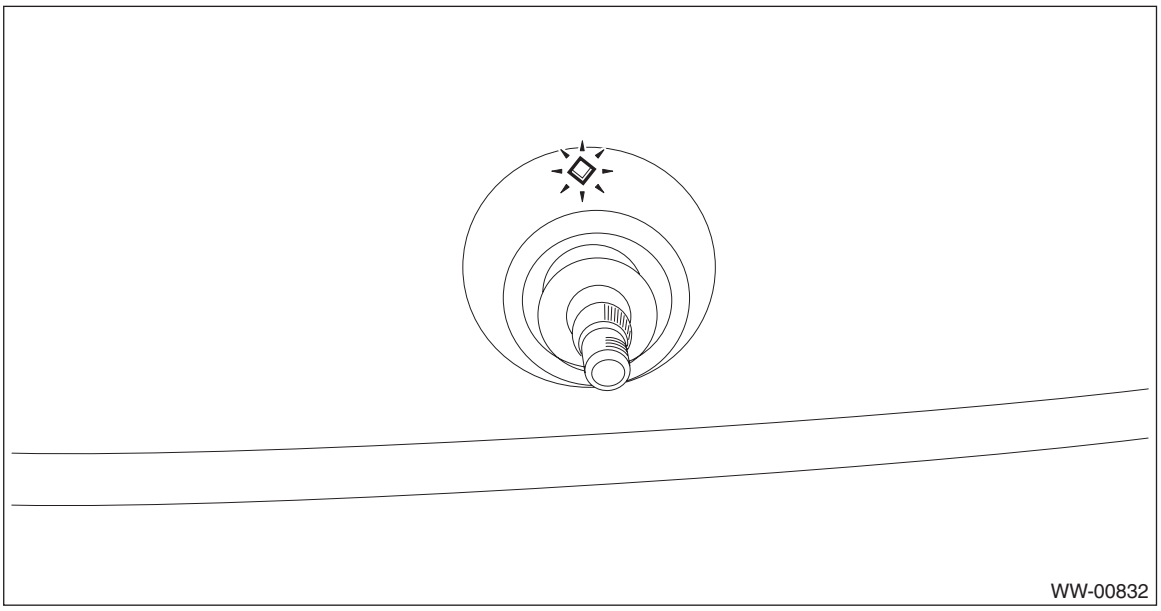
3) If the wiper blade is not aligned with the point mark, perform the removal and installation of the rear wiper. <Ref. to WW-38, REMOVAL, Rear Wiper Arm.>



11.Rear Wiper Motor

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the rear gate trim. <Ref. to EI-122, REMOVAL, Rear Gate Trim.>
3) Remove the arm assembly - rear wiper.
   (1) Remove the cover - rear wiper arm.
   (2) Remove the nut, and remove the arm assembly - rear wiper.



4) Remove the motor assembly - rear wiper.
   (1) Disconnect the harness connector of the motor assembly - rear wiper.
   (2) Remove the bolts, and remove the motor assembly - rear wiper.

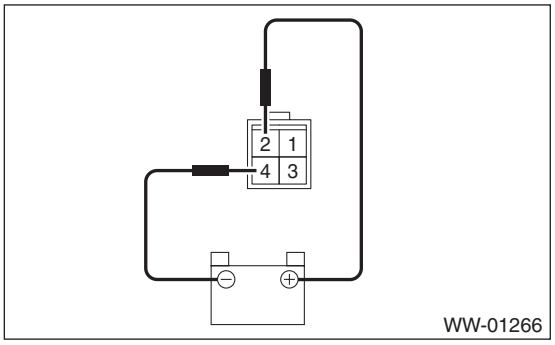
B: INSTALLATION

1) Check that the mark on the cap - pivot wiper faces up.

2) Install the motor assembly - rear wiper.
   (1) Install the bolts, and install the motor assembly - rear wiper.

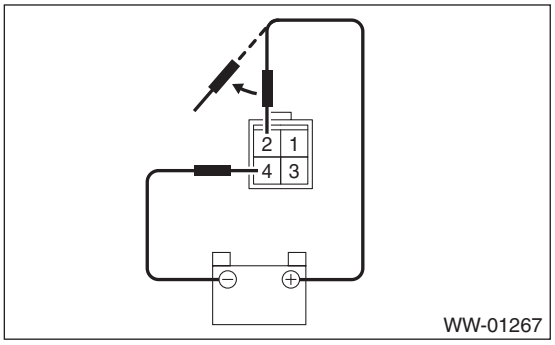
Tightening torque:
6 N·m (0.6 kgf-m, 4.4 ft-lb)

   (2) Install the harness connector of the motor assembly - rear wiper.
3) Install the arm assembly - rear wiper.
   (1) Install the nuts, and install the arm assembly - rear wiper.



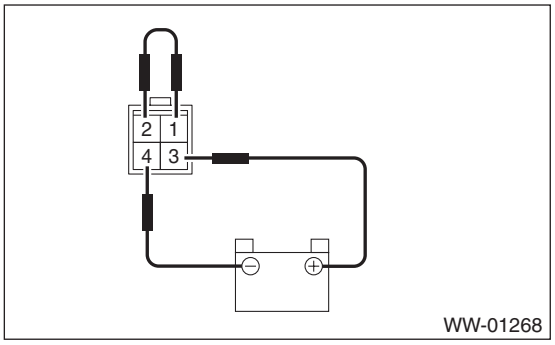
Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)

   (2) Install the cover - rear wiper arm.
4) Install the rear gate trim. <Ref. to EI-123, INSTALLATION, Rear Gate Trim.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



C: INSPECTION

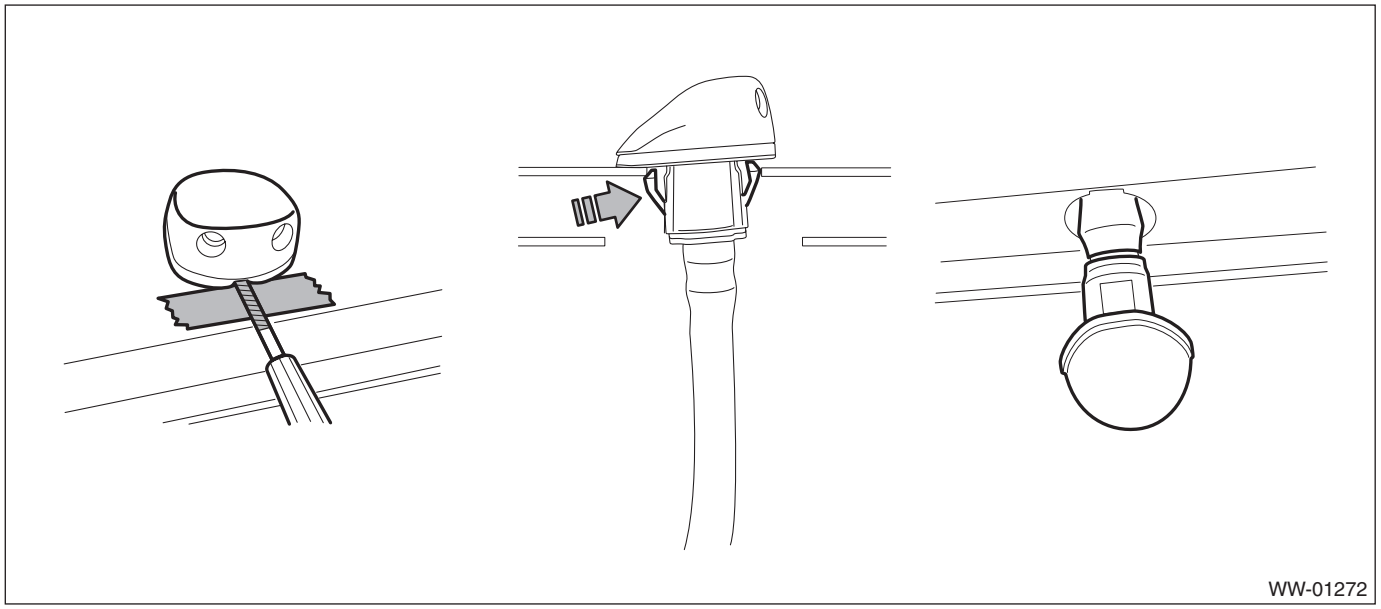
CAUTION:
Fix the motor to prevent the motor from being shorted by moving during operation.



1) Connect the battery to the motor assembly - rear wiper connector, and check that the motor assembly - rear wiper operates.

2) Connect the battery to terminals of the connector, and remove the terminal connection with motor rotating, and stop the motor in mid-operation.

3) Connect the battery and check that the motor stops at the automatic stop position after the motor operates at low speed again.



12.Rear Washer

A: REMOVAL

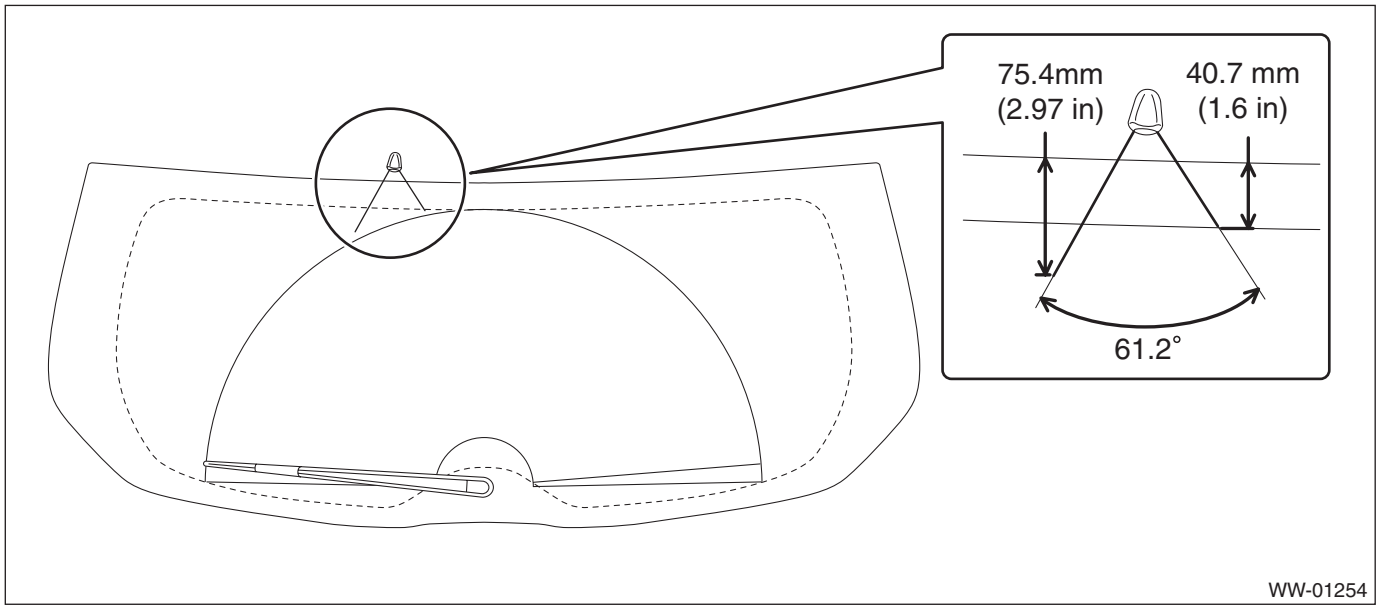
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the roof spoiler. <Ref. to EI-66, REMOVAL, Roof Spoiler.>
3) Remove the nozzle - rear washer.

CAUTION:
Before removing, apply protective tape to the body panel and used tools not to damage the panel - rear gate.

(1) Push the claw using a precision screwdriver, etc.
(2) When the nozzle - rear washer lifts up, pull out the nozzle - rear washer using a clip remover, etc.
(3) Disconnect the hose assembly - rear washer, and remove the nozzle - rear washer.

B: INSTALLATION

1) Connect the hose assembly - rear washer, and install the nozzle - rear washer.
2) Install the roof spoiler. <Ref. to EI-66, INSTALLATION, Roof Spoiler.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



C: INSPECTION

1. VISUAL INSPECTION

Check for the following items, and if any malfunction is found, replace the corresponding part.
- Make sure the nozzle - rear washer and the hose - rear washer are not clogged.
- Make sure the hose - rear washer is not bent.

2. INSPECTING THE SPRAY POSITION

1) Turn the wiper switch to OFF position.
2) While the vehicle is stopped, check that the washer spray position is as shown in the figure.
3) After inspection, if the spray position is significantly out of the specified range, replace the nozzle - rear washer with a new part.

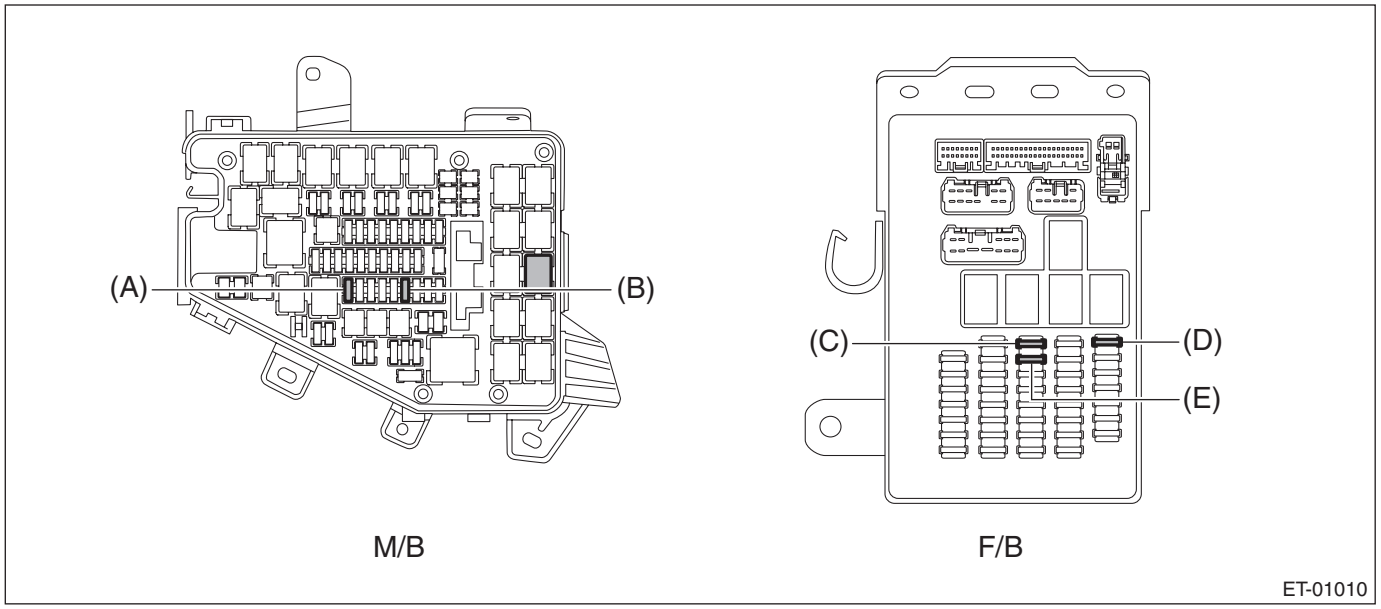
1. General Description

A: CAUTION

• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.
• Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of “AIRBAG SYSTEM”. <Ref. to AB-10, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
• When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform “VDC sensor midpoint setting mode” of the VDC. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>



B: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.

2. Relay and Fuse

A: LOCATION

Main fuse box (M/B)	Fuse 30 A (audio, navigation unit)	(A)
	Fuse 20 A (audio amplifier)	(B)
Fuse & relay box (F/B)	Fuse 20 A (rear accessory power supply socket)	(C)
	Fuse 15 A (audio, navigation unit, audio amplifier, external connection terminal)	(D)
	Fuse 10 A (front accessory power supply socket)	(E)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-23, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

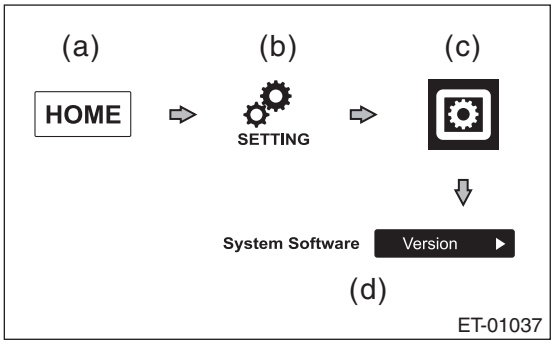
3. Audio System

A: WIRING DIAGRAM

1. AUDIO

Refer to “Audio System” in the wiring diagram.

- 6.2 inch display: <Ref. to WI-116, 6.2 INCH DISPLAY, WIRING DIAGRAM, Audio System.>
- 7 inch display (model without power amplifier): <Ref. to WI-123, 7 INCH DISPLAY (WITHOUT AUDIO AMPLIFIER), WIRING DIAGRAM, Audio System.>
- 7 inch display (model with power amplifier): <Ref. to WI-130, 7 INCH DISPLAY (WITH AUDIO AMPLIFIER), WIRING DIAGRAM, Audio System.>



B: OPERATION

Use the following operations to confirm the product information.

CAUTION:
For models with 7 inch display, refer to “OPERATION” in “Navigation System”. <Ref. to ET-8, OPERATION, Navigation System.>

1. STARLINK CONNECTION ID DISPLAY

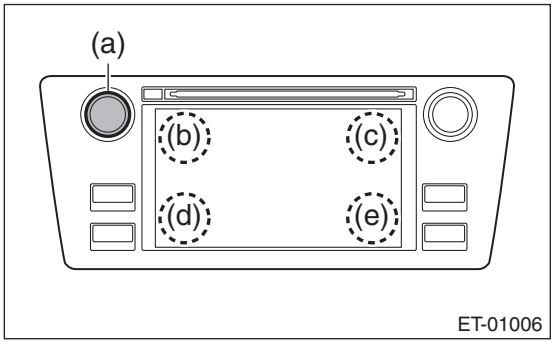
1) Turn the ignition switch to ACC.
2) Press the HOME button (a) to display the {HOME} screen.
3) Touch the {SETTINGS} (b) to display the {SETTINGS} screen.
4) Touch the {Settings General} (c) to display the {Settings General} screen.
5) Touch the {Version} (d) in {System Software}.

6) Confirm the Serial Number (8 digits).

2. SOFTWARE VERSION DISPLAY

1) Perform the same procedure as for the STARLINK connection ID display. <Ref. to ET-4, STARLINK CONNECTION ID DISPLAY, OPERATION, Audio System.>
2) Confirm the Software Ver.

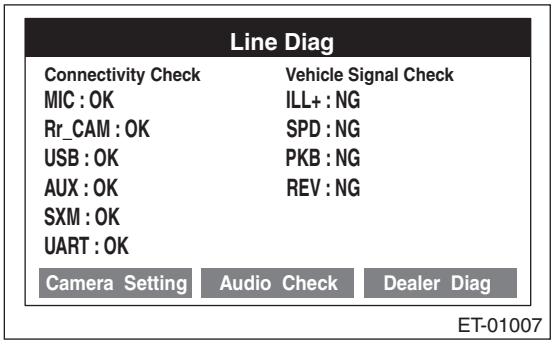
C: INSPECTION



NOTE:
If no problems are found in “CHECK AUDIO OPERATION”, “CHECK EACH CONNECTION” and “CHECK EACH VEHICLE SIGNAL” as described below, refer to “Basic Diagnostic Procedure” for “INFOTAINMENT SYSTEM (DIAGNOSTICS)”. (Model with 7 inch display) <Ref. to INF(diag)-2, Basic Diagnostic Procedure.>

1. CHECK AUDIO OPERATION

Symptoms	Inspection steps
No power coming in. (No display and no sound from speakers.)	1. Check the fuse and power supply for audio. 2. Check the audio ground. 3. Remove the audio and repair them.
A specific speaker does not operate.	1. Check the speaker. 2. Check the output circuit between audio and speaker. 3. Check the power amplifier. (Model with power amplifier)
Audio generates noise with engine running.	1. Check the audio ground. 2. Check the generator. 3. Check the ignition coil. 4. Remove the audio and repair them.
Volume is low in AM and FM modes or interference noise occurs.	1. Check the antenna. 2. Check the antenna amplifier. 3. Check the noise regulator. 4. Check the rear window defogger. 5. Check the audio ground. 6. Remove the audio and repair them.
Rear window defogger generates noise when it operate.	1. Check the rear window defogger.
Error message is displayed.	Refer to “Diagnostics with Phenomenon” in “INFOTAINMENT SYSTEM (DIAGNOSTICS)”. <Ref. to INF(diag)-2, Basic Diagnostic Procedure.>

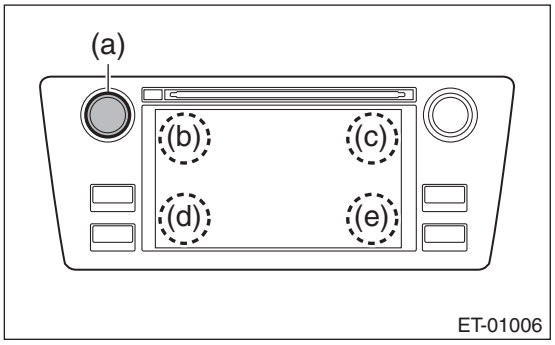


2. CHECK EACH CONNECTION

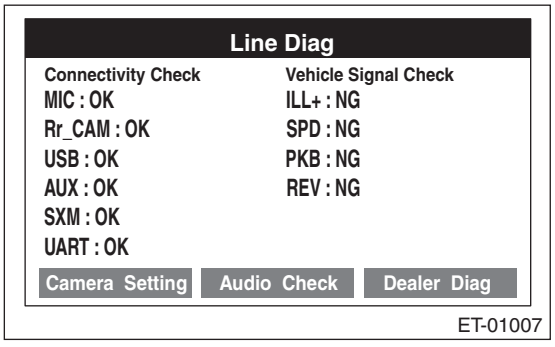
CAUTION:
For models with 7 inch display, refer to “Navigation System”. <Ref. to ET-9, CHECK EACH CONNECTION, INSPECTION, Navigation System.>
1) Turn the ignition switch to ACC.
2) (a) Press the button to display the Audio OFF screen.
3) Touch the screen in order from (b) to (e).

NOTE:
Pressing the button (a) or turning the ignition switch from the OFF to ACC position can exit the diagnostic mode.
4) {Line Diag} screen is displayed.

5) Check the connection status with the {Connectivity Check} in the {Line Diag} screen.



OK: Each connection device is connected properly.
NG: No connection or abnormal connection is detected.



NOTE:
Check the external connection terminals (USB and AUX) by connecting a memory for check or a pin jack.
6) Check the connection status of the connector. If there are no problems, the connection device or unit could be faulty.

3. CHECK EACH VEHICLE SIGNAL

CAUTION:
For models with 7 inch display, refer to "Navigation System". <Ref. to ET-10, CHECK EACH VEHICLE SIGNAL, INSPECTION, Navigation System.>
1) Turn the ignition switch to ACC.
2) (a) Press the button to display the Audio OFF screen.
3) Touch the screen in order from (b) to (e).

NOTE:
Pressing the button (a) or turning the ignition switch from the OFF to ACC position can exit the diagnostic mode.
4) {Line Diag} screen is displayed.
5) Check the connection status with the {Vehicle Signal Check} in the {Line Diag} screen.

• **Check illumination**

NOTE:
Before starting inspections, turn the ignition to ON.
1) Set the lighting switch to the parking position.
Make sure that the bright switch is not turned ON at this time.
2) Make sure that {OK} lights in ILL+ and then the screen becomes dim.
OK: Normal
NG: Abnormal. Check the signal line connector. If there are no problems, the unit could be faulty.

• **Check speed sensor**

NOTE:
- Before starting inspections, check the safety around the vehicle.
- Lift up the vehicle as necessary.
- When the diagnostic trouble code is input in the VDC CM, perform the Clear Memory operation.

1) Drive the vehicle at 8 km/h (5 MPH) or more.
2) Check that {OK} is displayed in SPD.
OK: Normal
NG: Vehicle speed is less than 8 km/h (5 MPH), or malfunction is detected in the signal line. Check the signal line connector. If there are no problems, the unit could be faulty.

• **Check parking brake signal**

1) Pull the parking brake switch.
2) Check that {OK} is displayed in PKB.
OK: Normal
NG: Abnormal. Check the signal line connector. If there are no problems, the unit could be faulty.

• **Check back sensor**

NOTE:
Before starting inspections, check the safety around the rear end of the vehicle and then turn the ignition to ON.
1) Pull the parking brake switch and depress the brake pedal, then place the select lever or gear shift lever in reverse.
2) Make sure that {OK} is displayed in REV.
OK: Normal
NG: Abnormal. Check the signal line connector. If there are no problems, the unit could be faulty.

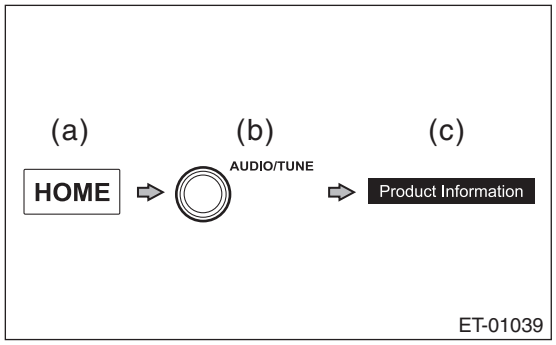
D: NOTE

For procedure of each component in the audio system, refer to the respective sections.
- Audio unit: <Ref. to ET-12, Audio.>
- Front speaker
  - Tweeter (instrument panel): <Ref. to ET-13, TWEETER, REMOVAL, Front Speaker.>
  - Door speaker: <Ref. to ET-14, DOOR SPEAKER, REMOVAL, Front Speaker.>
- Rear speaker: <Ref. to ET-16, Rear Speaker.>
- Woofer: <Ref. to ET-17, Woofer.>
- Power amplifier: <Ref. to ET-19, Power Amplifier.>
- Antenna: <Ref. to ET-20, Antenna.>
- Noise suppressor: <Ref. to ET-28, Noise Suppressor.>
- Steering satellite switch: <Ref. to ET-30, Steering Satellite Switch.>
- External connection terminal: <Ref. to ET-44, External Connection Terminal.>
- Rearview camera: <Ref. to ET-35, Rearview Camera System.>

4. Navigation System

A: WIRING DIAGRAM

Refer to “Navigation System” in the wiring diagram.

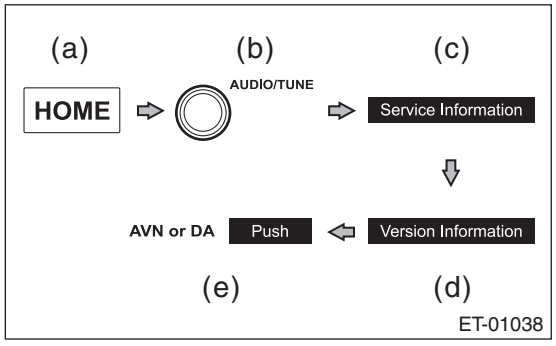


- Without audio amplifier: <Ref. to WI-332, WITHOUT AUDIO AMPLIFIER, WIRING DIAGRAM, Navigation System.>
- With audio amplifier: <Ref. to WI-339, WITH AUDIO AMPLIFIER, WIRING DIAGRAM, Navigation System.>

B: OPERATION

Use the following operations to confirm the product information.

1. STARLINK CONNECTION ID DISPLAY



1) Turn the ignition switch to ACC.
2) Press the AUDIO/TUNE knob (b) five times with the HOME button (a) pressed to display the {Service Menu} screen.
3) Touch the {Product Information} (c) to display the {Product Information} screen.

4) Confirm the connectivity ID (16 digits).

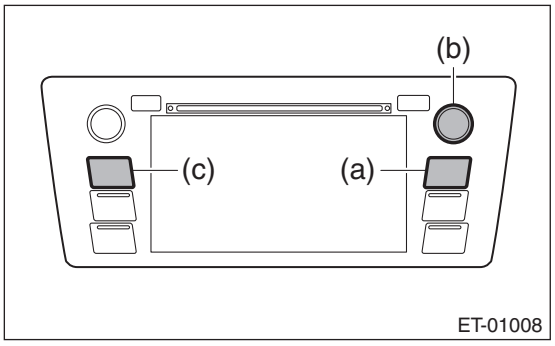
2. SOFTWARE VERSION DISPLAY

1) Turn the ignition switch to ACC.
2) Press the AUDIO/TUNE knob (b) five times with the HOME button (a) pressed to display the {Service Menu} screen.
3) Touch the {Service Information} (c).
4) Touch the {Version Information} (d) to display the {Version Information} screen.
5) Touch the {AVN or DA} (e) to display the {Unit Version Information} screen.

6) Confirm the version.

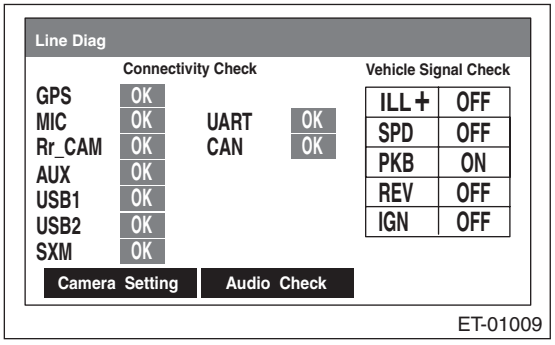
C: INSPECTION

NOTE:
If no problems are found in “CHECK OPERATION OF THE NAVIGATION”, “CHECK EACH CONNECTION” and “CHECK EACH VEHICLE SIGNAL” as described below, refer to “Basic Diagnostic Procedure” for “INFOTAINMENT SYSTEM (DIAGNOSTICS)”. <Ref. to INF(diag)-2, Basic Diagnostic Procedure.>



1. CHECK NAVIGATION OPERATION

Symptoms	Inspection steps
Map screen is not displayed.	1. Check the map data (microSD card). 2. Remove the map data (microSD card) to repair. 3. Remove the navigation to repair.

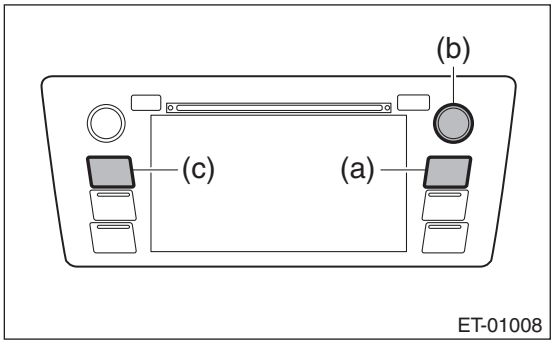


NOTE:
Refer to “Audio System” for navigation audio operation check. <Ref. to ET-5, CHECK AUDIO OPERATION, INSPECTION, Audio System.>

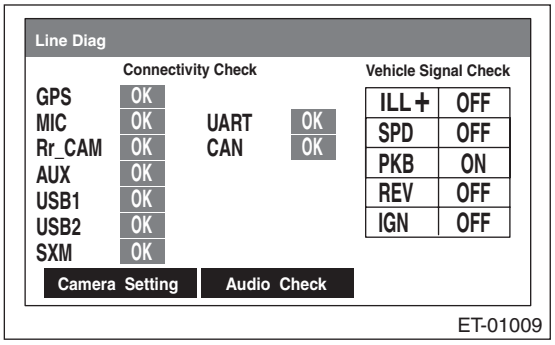
2. CHECK EACH CONNECTION

1) Turn the ignition switch to ACC.
2) Press the button (b) twice with the button (a) pressed.

NOTE:
Pressing the button (c) for 3 seconds or more, or turning the ignition switch from the OFF to ACC position can exit the diagnostic mode.
3) {Line Diag} screen is displayed.
4) Check the connection status with the {Connectivity Check} in the {Line Diag} screen.



NOTE:
GPS is displayed only for the navigation system.
OK: Each connection device is connected properly.
NG: No connection or abnormal connection is detected.



NOTE:
Check the external connection terminals (USB 1, 2 and AUX) by connecting a memory for check or a pin jack.
5) Check the connection status of the connector. If there are no problems, the connection device or unit could be faulty.

3. CHECK EACH VEHICLE SIGNAL

1) Turn the ignition switch to ACC.
2) Press the button (b) twice with the button (a) pressed.

NOTE:
Pressing the button (c) for 3 seconds or more, or turning the ignition switch from the OFF to ACC position can exit the diagnostic mode.
3) {Line Diag} screen is displayed.
4) Check the connection status with the {Vehicle Signal Check} in the {Line Diag} screen.

NOTE:
GPS is displayed only for the navigation system.

- **Check illumination**

NOTE:
Before starting inspections, turn the ignition switch to ON.
1) Set the lighting switch to the parking position.
Make sure that the bright switch is not turned ON at this time.
2) Make sure that {ON} lights in ILL+ and then the screen becomes dim.
ON: Normal
OFF: Abnormal. Check the signal line connector. If there are no problems, the unit could be faulty.

- **Check speed sensor**

NOTE:
- Before starting inspections, check the safety around the vehicle.
- Lift up the vehicle as necessary.
- When the diagnostic trouble code is input in the VDC CM, perform the Clear Memory operation.

1) Drive the vehicle at 9 km/h (6 MPH) or more.
2) Check that {ON} is displayed in SPD.
ON: Normal
OFF: Vehicle speed is less than 7 km/h (4 MPH), or malfunction is detected in the signal line. Check the signal line connector. If there are no problems, the unit could be faulty.

- **Check parking brake signal**

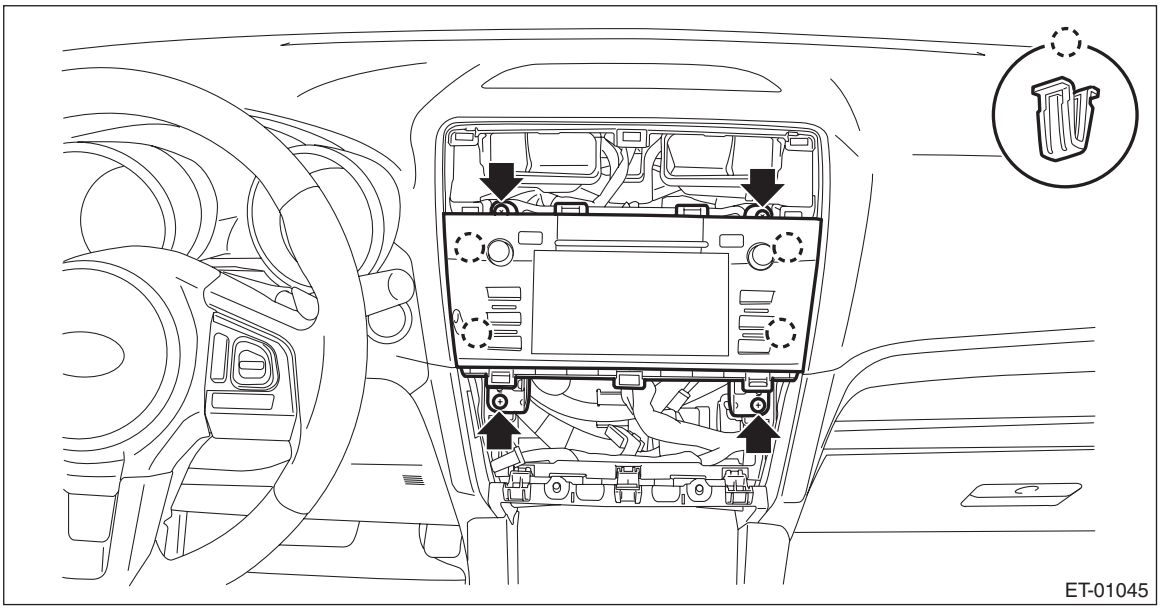
1) Pull the parking brake switch.
2) Check that {ON} is displayed in PKB.
ON: Normal
OFF: Abnormal. Check the signal line connector. If there are no problems, the unit could be faulty.

- **Check back sensor**

NOTE:
Before starting inspections, check the safety around the rear end of the vehicle and then turn the ignition to ON.
1) Pull the parking brake switch and depress the brake, then put the select lever in reverse.
2) Make sure that {ON} is displayed in REV.
ON: Normal
OFF: Abnormal. Check the signal line connector. If there are no problems, the unit could be faulty.

- **Check ignition signal**

1) Turn the ignition to ON.
2) Make sure that {ON} is displayed in IGN.
ON: Normal
OFF: Abnormal. Check the signal line connector. If there are no problems, the unit could be faulty.



D: NOTE

For procedure of each component in the navigation system, refer to the respective section.
- Navigation unit: <Ref. to ET-33, Navigation Body.>
- GPS antenna: <Ref. to ET-34, GPS Antenna.>

5. Audio

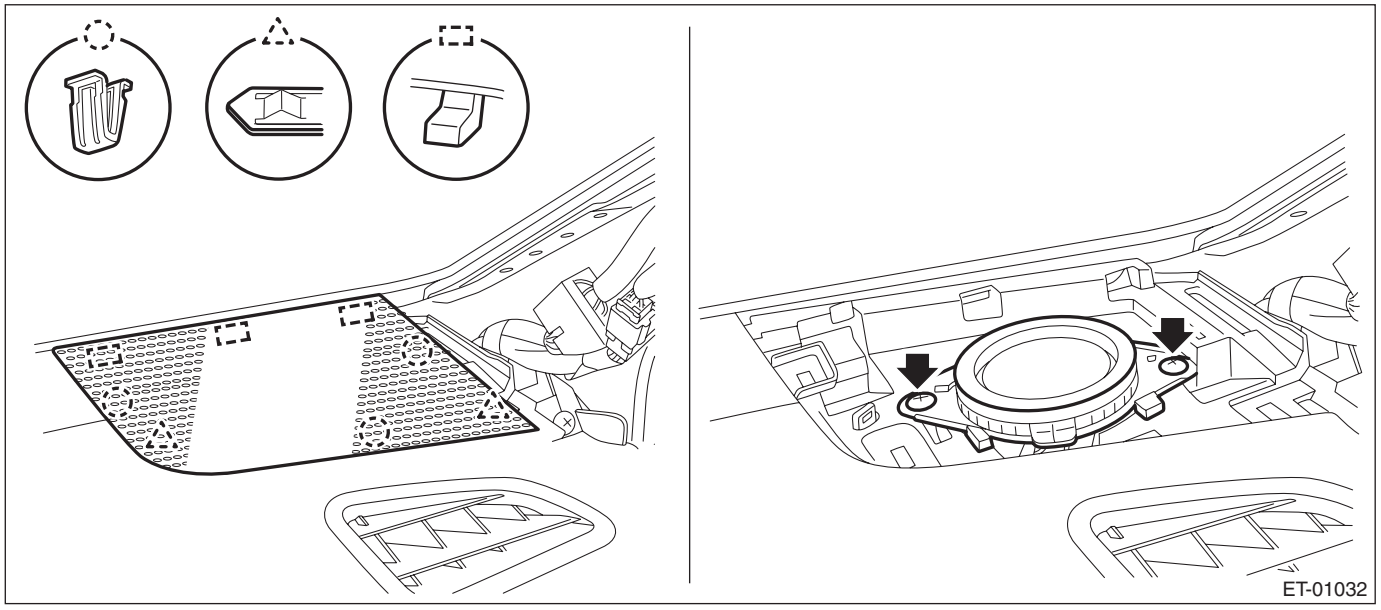
A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the center grille assembly. <Ref. to AC-89, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
3) Remove the heater control assembly. <Ref. to AC-44, REMOVAL, Control Panel.>
4) Remove the audio assembly.
   (1) Remove the screws and clips.
   (2) Disconnect the connector and remove the audio assembly.

B: INSTALLATION

CAUTION:
Make sure that the center grille assembly is inserted into the air vent duct correctly.
1) Install the audio assembly.
2) Install the heater control assembly.
3) Install the center grille assembly.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

6. Front Speaker



A: REMOVAL

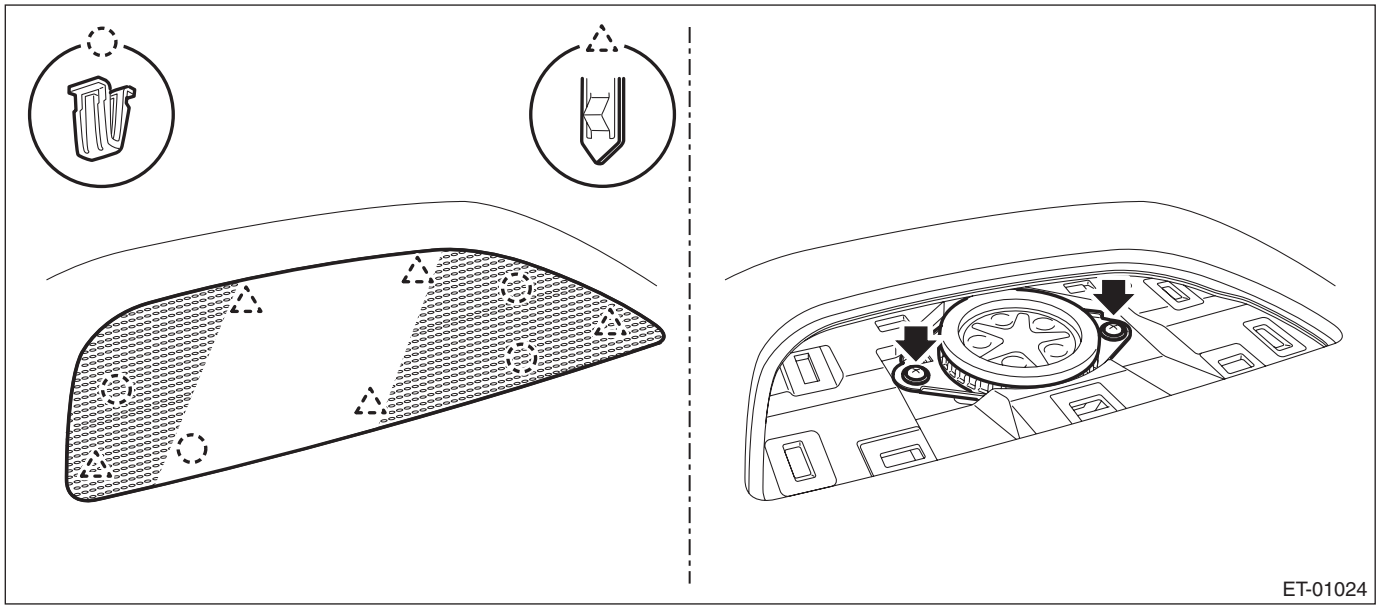
1. TWEETER

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front pillar UPR. <Ref. to EI-96, REMOVAL, Upper Inner Trim.>
3) Remove the speaker assembly - tweeter.
   (1) Release the clips and claws, then detach the grille speaker side.
   (2) Remove the screws.

Preparation tool:
Stubby screwdriver

   (3) Disconnect the connector and remove the speaker assembly - tweeter.

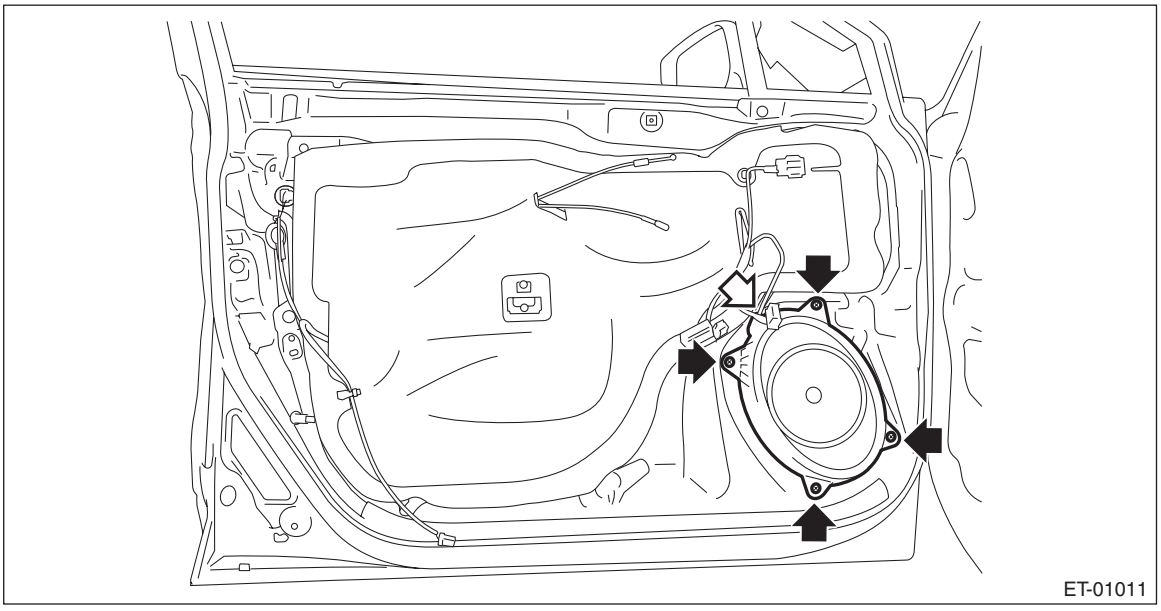
2. CENTER SPEAKER



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the speaker assembly - center.
   (1) Release the clips and claws, then detach the grille speaker center.

NOTE:
Remove the grille speaker center by using a plastic remover.

   (2) Remove the screws.



Preparation tool:
Stubby screwdriver

   (3) Disconnect the connector and remove the speaker assembly - center.

3. DOOR SPEAKER

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front door. <Ref. to EI-70, FRONT DOOR, REMOVAL, Door Trim.>
3) Remove the speaker assembly - front door.
   (1) Remove the screws.
   (2) Disconnect the connector and remove the speaker assembly - front door.

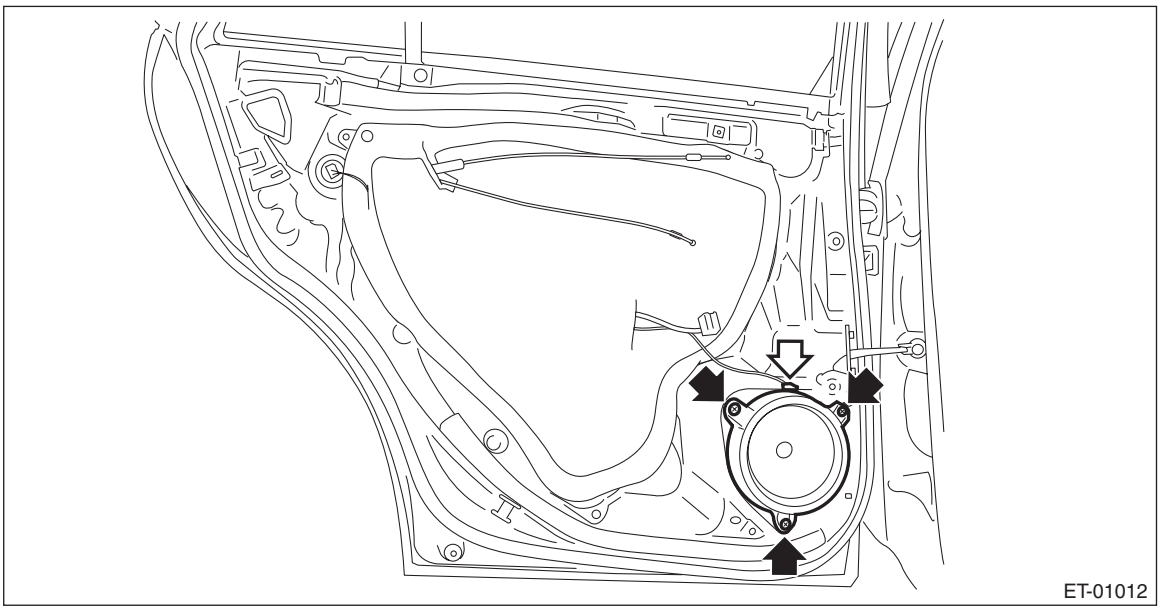
B: INSTALLATION

1. TWEETER

1) Install the speaker assembly - tweeter.
2) Install the grille speaker side.
3) Install the trim panel - front pillar UPR. <Ref. to EI-97, INSTALLATION, Upper Inner Trim.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. CENTER SPEAKER

1) Install the speaker assembly - center.
2) Install the grille speaker center.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



3. DOOR SPEAKER

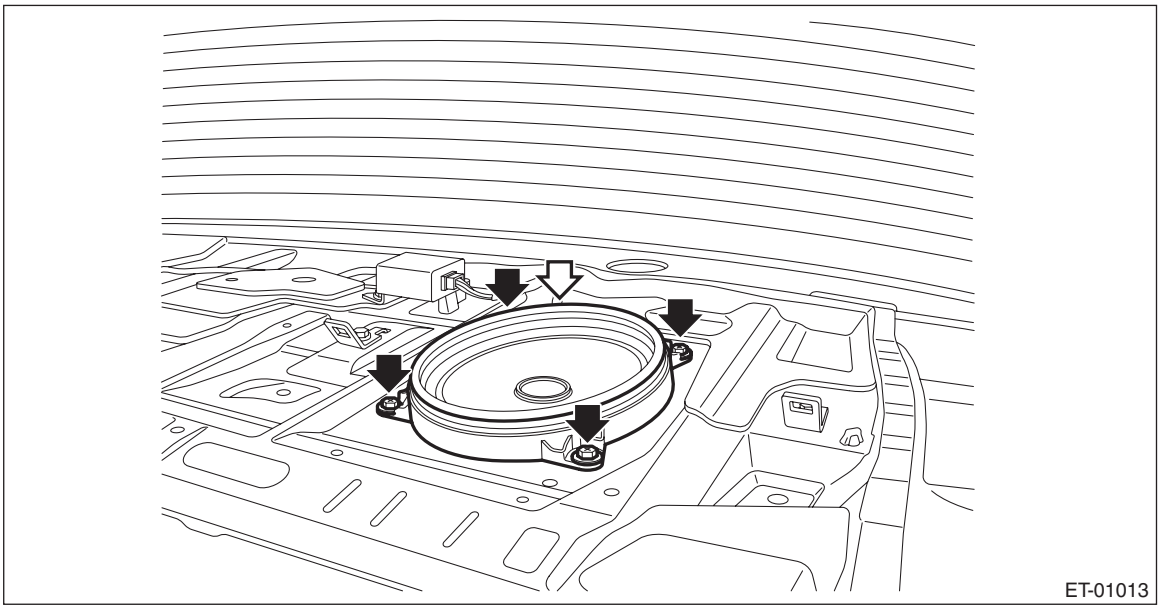
1) Install the speaker assembly - front door.
2) Install the trim panel - front door. <Ref. to EI-71, INSTALLATION, Door Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

7. Rear Speaker

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear door. <Ref. to EI-71, REAR DOOR, REMOVAL, Door Trim.>
3) Remove the speaker assembly - rear door.
   (1) Remove the screws.
   (2) Disconnect the connector and remove the speaker assembly - rear door.

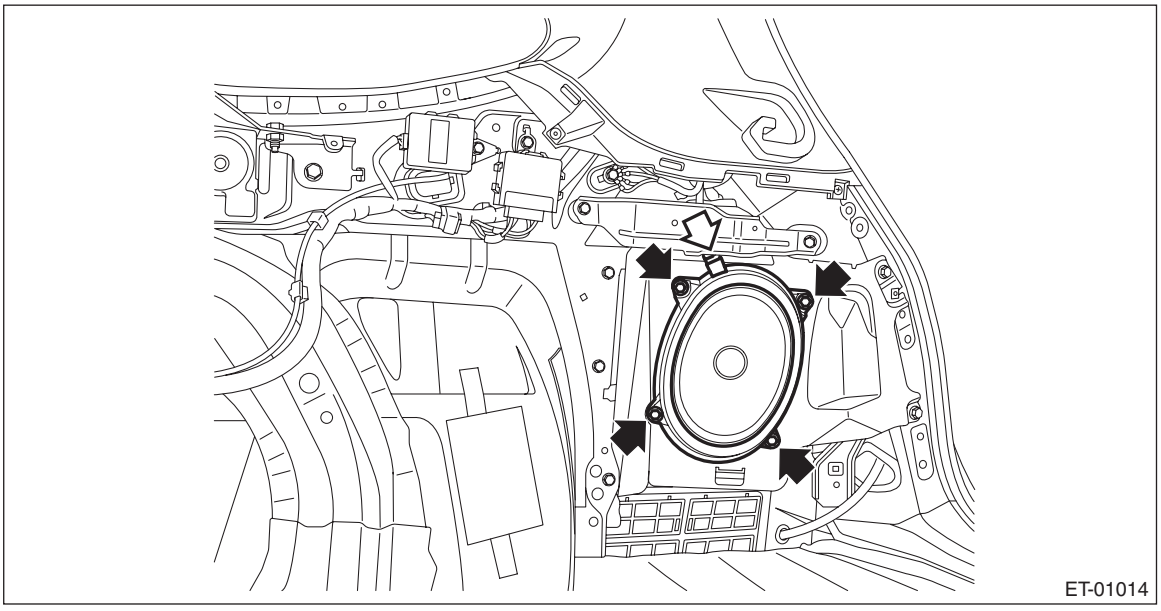
B: INSTALLATION



1) Install the speaker assembly - rear door.
2) Install the trim panel - rear door. <Ref. to EI-71, INSTALLATION, Door Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

8. Woofer

A: REMOVAL



1. SEDAN MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel assembly - rear shelf. <Ref. to EI-106, REMOVAL, Rear Shelf Trim.>
3) Remove the woofer assembly.
   (1) Remove the bolt.
   (2) Disconnect the connector and remove the woofer assembly.

2. OUTBACK MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear apron RH. <Ref. to EI-100, OUTBACK MODEL, REMOVAL, Rear Quarter Trim.>
3) Remove the woofer assembly.
   (1) Remove the bolt.
   (2) Disconnect the connector and remove the woofer assembly.

B: INSTALLATION

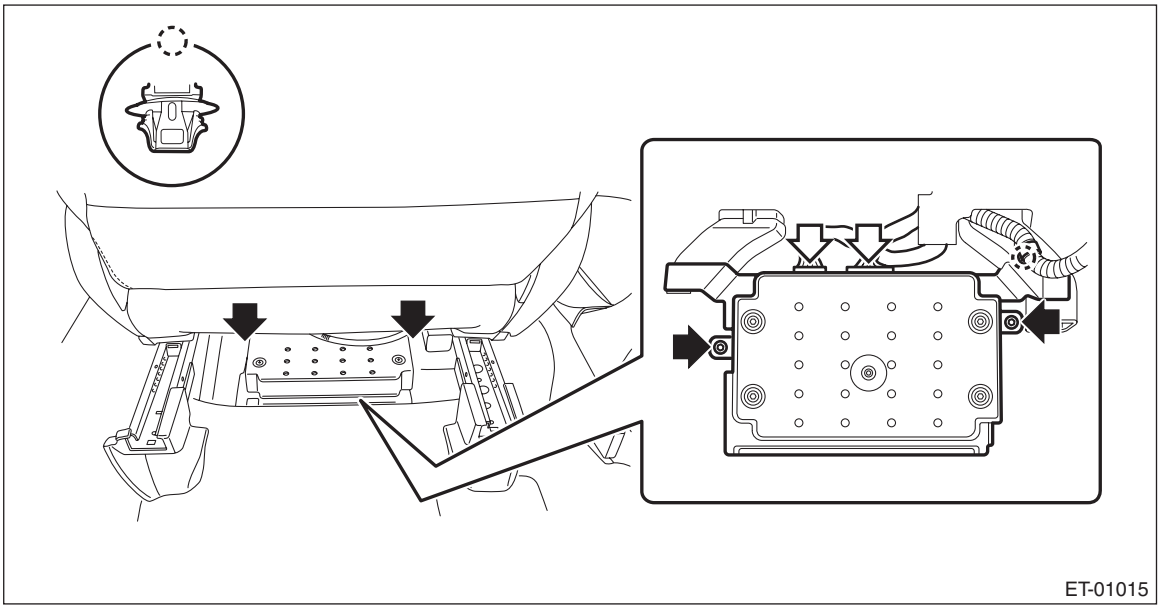
1. SEDAN MODEL

1) Install the woofer assembly.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the trim panel assembly - rear shelf. <Ref. to EI-106, REMOVAL, Rear Shelf Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. OUTBACK MODEL

1) Install the woofer assembly.



Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the trim panel - rear apron RH.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

9. Power Amplifier

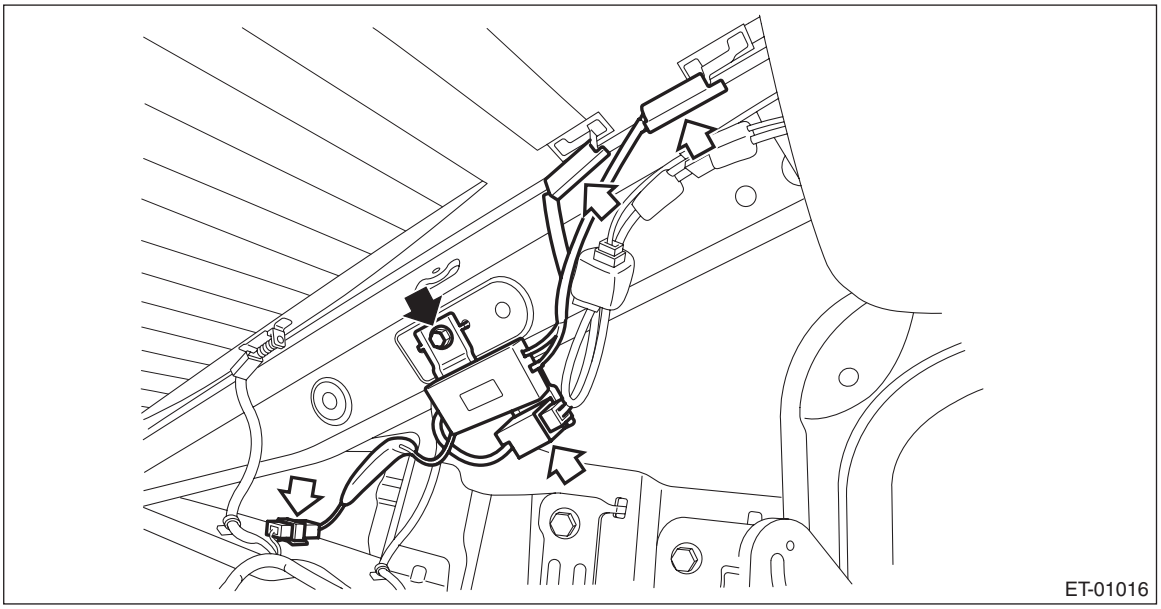
A: REMOVAL

NOTE:
Remove the power amplifier assembly after sliding the passenger's seat back and forth as necessary.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the power amplifier - assembly.
   (1) Remove the harness clip, and disconnect each connector.
   (2) Remove the nut and remove the power amplifier - assembly.

B: INSTALLATION

1) Install the power amplifier - assembly.

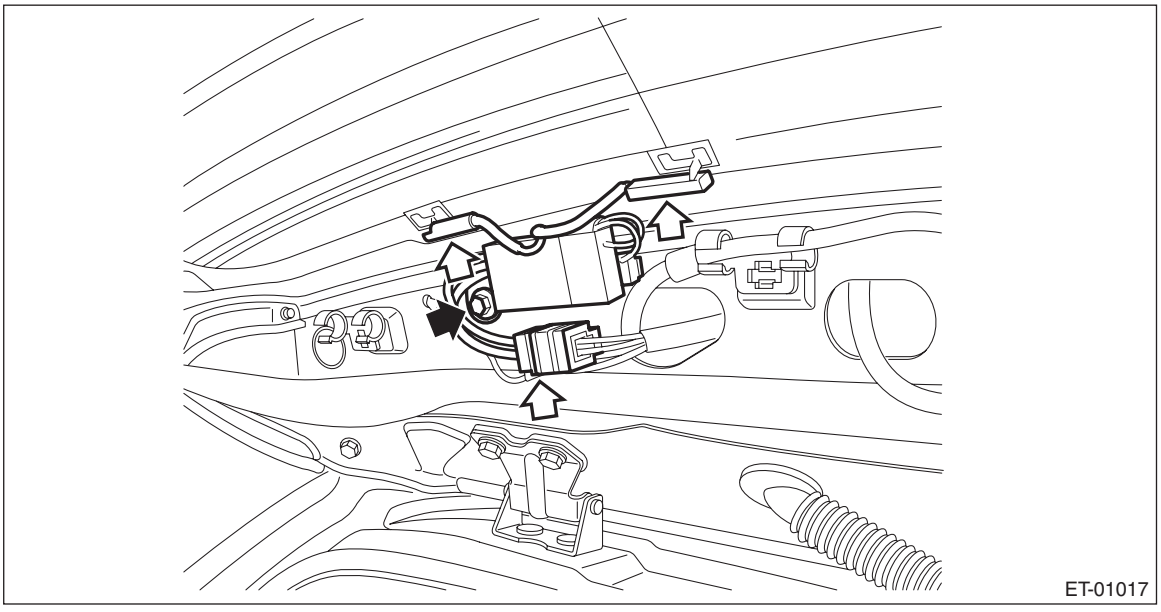
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



10.Antenna

A: REMOVAL

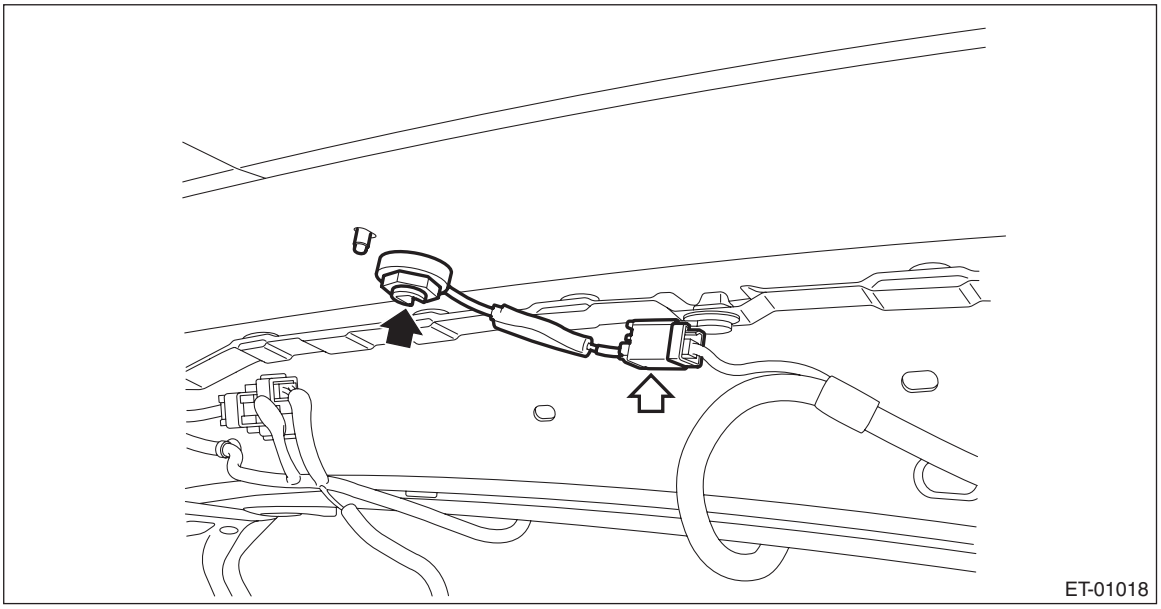
1. RADIO ANTENNA AMPLIFIER



• Sedan model

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear pillar UPR LH. <Ref. to EI-99, SEDAN MODEL, REMOVAL, Rear Quarter Trim.>
3) Remove the amplifier assembly - antenna.
   (1) Disconnect the connector.
   (2) Remove the bolts, and remove the amplifier assembly - antenna.

• OUTBACK model



1) Remove the trim panel - rear gate UPR. <Ref. to EI-122, REMOVAL, Rear Gate Trim.>
2) Remove the amplifier assembly - antenna.
   (1) Disconnect the connector.
   (2) Remove the bolts, and remove the amplifier assembly - antenna.

2. XM SATELLITE RADIO ANTENNA

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lower the trim panel - roof assembly.
- Sedan model: <Ref. to EI-114, SEDAN MODEL, REMOVAL, Roof Trim.>
- OUTBACK model: <Ref. to EI-117, OUTBACK MODEL, REMOVAL, Roof Trim.>

NOTE:
Procedures for the trim panel - roof assembly is performed inside the vehicle.
3) Remove the antenna assembly - roof.
   (1) Disconnect the connector.
   (2) Remove the nut, and remove the antenna assembly - roof.

3. ANTENNA FEEDER CORD

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lower the trim panel - roof assembly in the same manner as the removal procedure of XM satellite radio antenna.
- Sedan model: <Ref. to EI-114, SEDAN MODEL, REMOVAL, Roof Trim.>
- OUTBACK model: <Ref. to EI-117, OUTBACK MODEL, REMOVAL, Roof Trim.>

3) Remove the audio assembly. <Ref. to ET-12, REMOVAL, Audio.>
4) Remove the console box outer. <Ref. to EI-79, REMOVAL, Center Console.>
5) Remove the passenger's seat. <Ref. to SE-12, INSTALLATION, Front Seat.>
6) Remove the front cover - side sill and the cover side sill - front.
7) Turn over the floor mat, and remove the cord assembly - antenna feeder.

B: INSTALLATION

1. RADIO ANTENNA AMPLIFIER

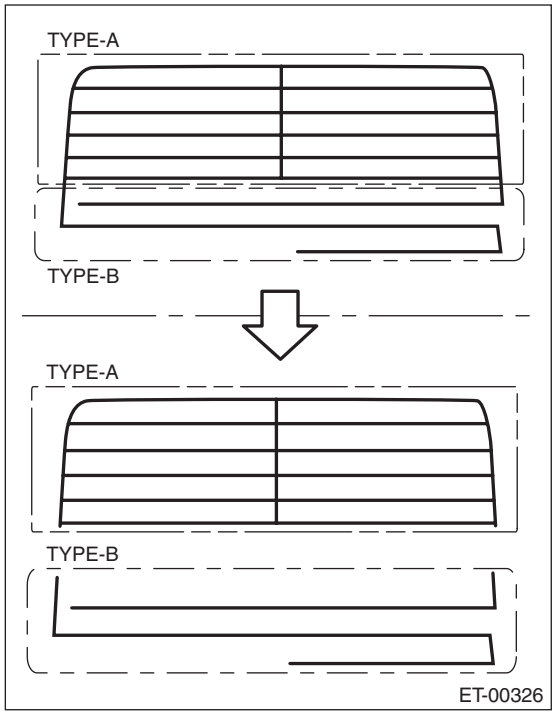
1) Install the amplifier assembly - antenna.

Tightening torque:
12±3 N·m (1.2±0.3 kgf-m, 8.9±2.2 ft-lb)
2) Install the trim panel - rear pillar UPR LH. (Sedan model)
3) Install the trim panel - rear gate UPR. (OUTBACK model)
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. XM SATELLITE RADIO ANTENNA

1) Install the antenna assembly - roof.

Tightening torque:
4.5±1.0 N·m (0.5±0.1 kgf-m, 3.3±0.7 ft-lb)
2) Install the trim panel - roof assembly. <Ref. to EI-119, INSTALLATION, Roof Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

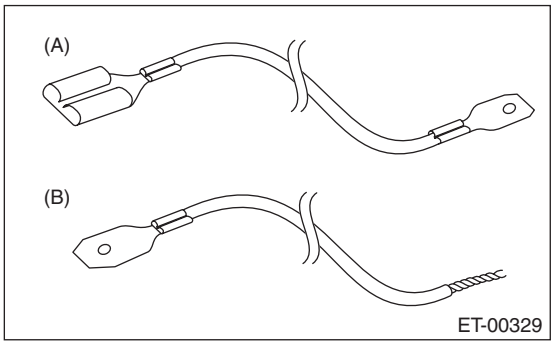


3. ANTENNA FEEDER CORD

1) Install the cord assembly - antenna feeder and the trim panel - roof assembly. <Ref. to EI-119, INSTALLATION, Roof Trim.>
2) Install the floor mat.
3) Install the front cover - side sill and the cover side sill - front.
4) Install the passenger's seat. <Ref. to SE-12, INSTALLATION, Front Seat.>
5) Install the console box outer. <Ref. to EI-79, INSTALLATION, Center Console.>
6) Install the audio assembly. <Ref. to ET-12, INSTALLATION, Audio.>
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

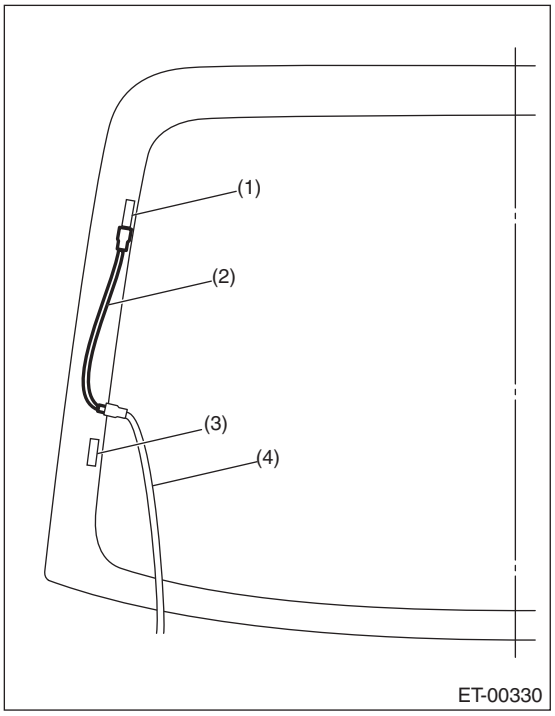
CAUTION:
When wiping dirt off of the glass to avoid heat wire damage, be careful of the following.
- **Use a dry and soft cloth.**
- **Move the cloth along the heat wire.**



Inspection method of antenna, it is different from printing pattern of antenna.

TYPE-A Printing pattern of grid
TYPE-B Printing pattern of straight

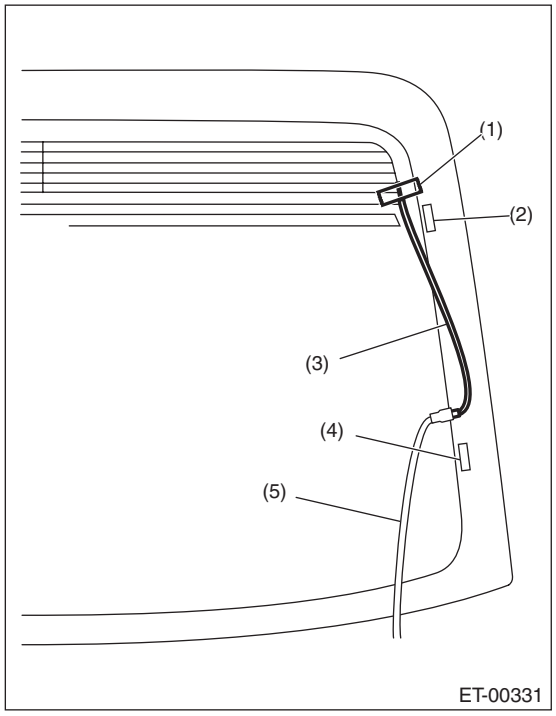
1. TYPE-A



1) Prepare the extension harness (A), (B).

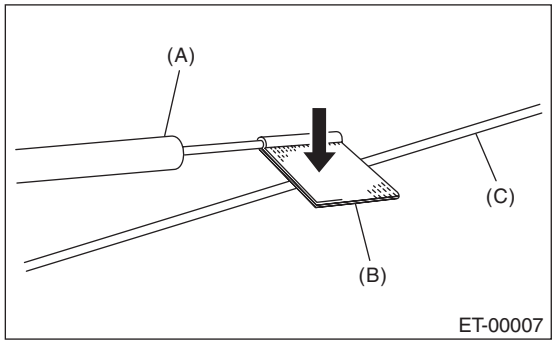
(A) Attach the flat terminals (male and female) to both ends of the harness of approx. 2 m (6.56 ft) length (electrical wire unit dimensions: approx. 2.0 mm^2 (0.0032 sq in)).

(B) Attach the flat terminal (female) to one side of the harness, another side to twist the harness of approx. 2 m (6.56 ft) length (electrical wire unit dimensions: approx. 2.0 mm^2 (0.0032 sq in)).



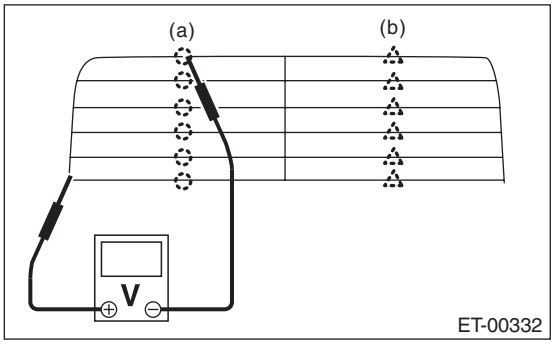
2) Connect the extension harness (A) to rear defogger harness (power supply side) terminal and antenna terminal.

(1) Antenna terminal
(2) Extension harness (A)
(3) Rear defogger terminal
(4) Rear defogger harness (power supply side - red blue)



3) Connect the extension harness (B) to rear defogger harness (ground side) terminal.

4) Fasten the another side of extension harness (B) to end of antenna pattern of grid with tape.



(1) Tape
(2) Antenna terminal
(3) Extension harness (B)
(4) Rear defogger terminal
(5) Rear defogger harness (ground side - black)

5) Connect the ground cable to battery.
6) Turn the ignition to ON.
7) Turn the rear defogger switch to ON.
8) Wrap a piece of aluminum foil around the tip of tester probe and press foil against antenna wire with your finger.

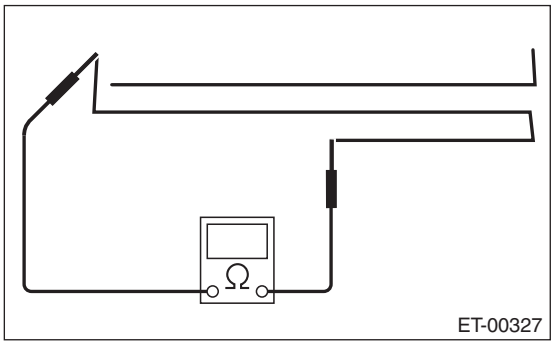
(A) Tester probe
(B) Aluminum foil
(C) Antenna wire

9) Measure the voltage around an antenna wire (a) and (b).

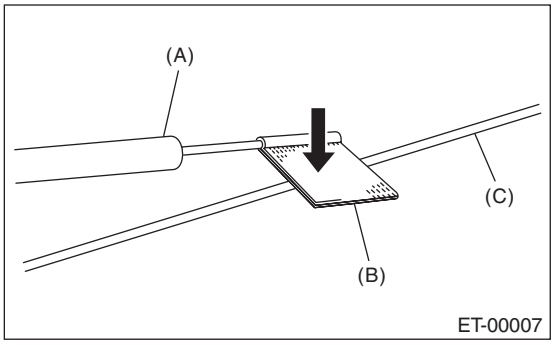
	Measured voltage value	Criteria
(a)	Approx. 3 V (standard value)	Normal
	Approx. 6 V or 0 V	Open
(b)	Approx. 9 V (standard value)	Normal
	Approx. 12 V or 6 V	Open

NOTE:
Measuring point (a)
• If the measured value is 6 V, heat wire is open between antenna wire center and positive (+) terminal of probe.
• If it is 0 V, the circuit is open between antenna wire center and ground.
Measuring point (b)
• If the measured value is 12 V, heat wire is open between antenna wire center and positive (+) side of probe.
• If it is 6 V, the circuit is open between antenna wire center and ground.

10) Fasten the voltmeter positive (+) side and negative (–) side to end of open harness positive side of step 12).



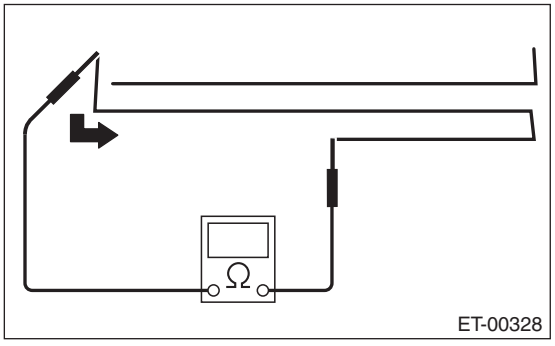
11) Search a point the voltage changes from 0 V, and move the negative (–) probe along antenna wire slowly.



12) Repair the antenna wire if the place of the open circuit is identified. <Ref. to ET-27, REPAIR, Antenna.>

2. TYPE-B

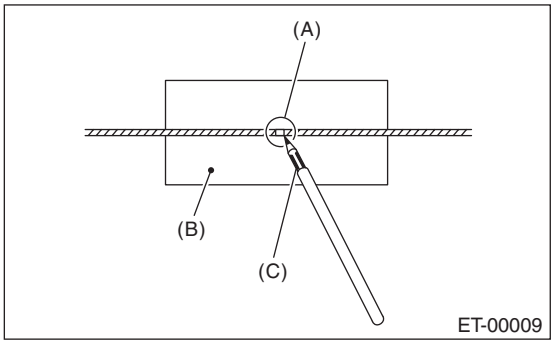
Measure the resistance between the antenna terminal and each antenna wire.



1) Disconnect the ground cable from battery.
2) Wrap a piece of aluminum foil around the tip of probe and press foil against antenna wire with your finger.

(A) Tester probe
(B) Aluminum foil
(C) Antenna wire

3) To locate the broken point, move the probe along antenna wire.



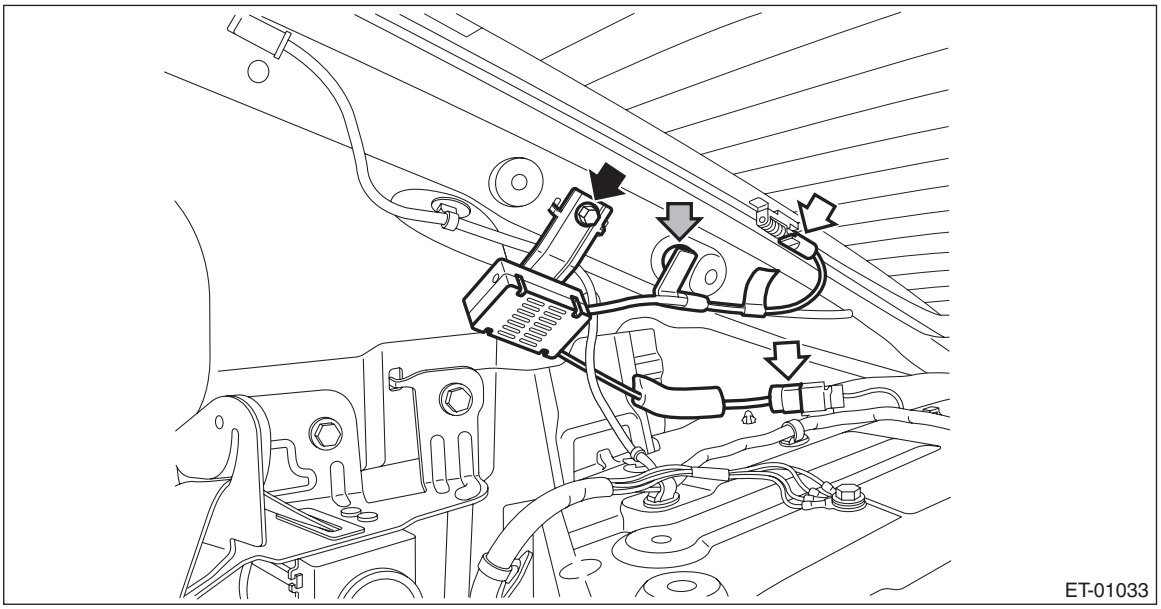
NOTE:
If an antenna wire is OK, resistance will be less than 20 Ω.
If an antenna wire is broken, resistance will be more than 1 MΩ.
4) Repair the antenna wire if the place of the open circuit is identified. <Ref. to ET-27, REPAIR, Antenna.>

D: REPAIR

1) Clean the external circumference of antenna wire and around with alcohol or appropriate cleaning solvent.
2) Paste a thin masking film on the glass along broken wire.
3) Apply the conductive silver composition on the broken portion with a drawing pen.

Conductive silver composition:
DUPONT No. 4817 or equivalent

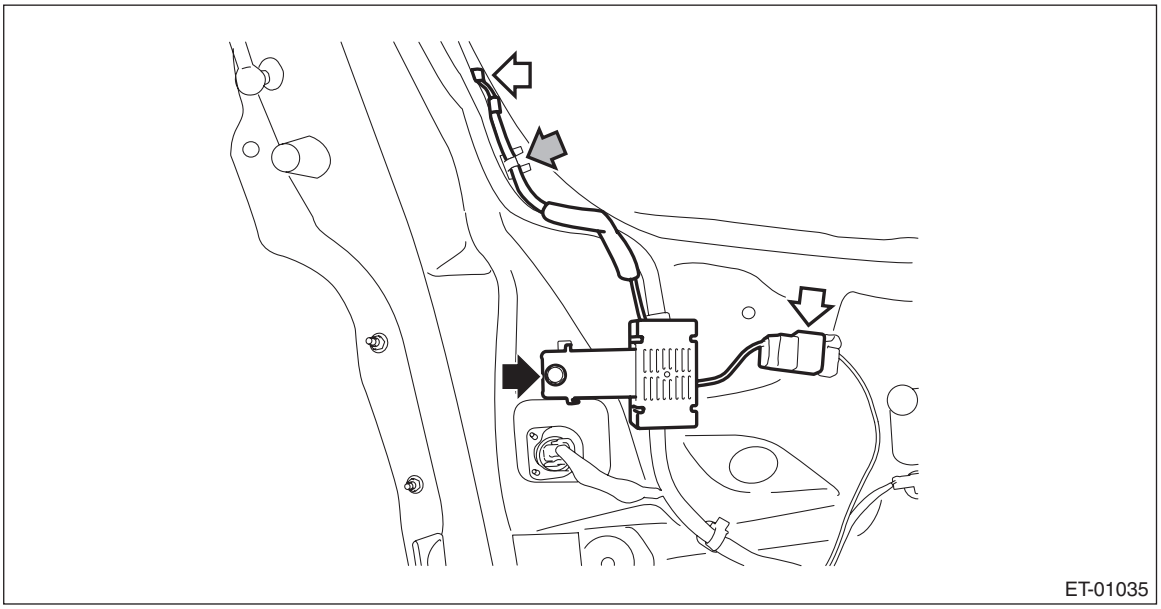
(A) Broken portion
(B) Masking film
(C) Conductive silver composition



4) Dry out the deposited portion.
5) After repair has been completed, measure the resistance in repaired wire and check that it is normal.

11.Noise Suppressor

A: REMOVAL



1. SEDAN MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear pillar UPR. <Ref. to EI-99, REMOVAL, Rear Quarter Trim.>
3) Remove the noise suppressor assembly.
   (1) Remove the connector and harness clip.
   (2) Remove the bolts, then remove the noise suppressor assembly.

2. OUTBACK MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate. <Ref. to EI-122, REMOVAL, Rear Gate Trim.>
3) Remove the noise suppressor assembly.
   (1) Remove the connector and harness clip.
   (2) Remove the bolts, then remove the noise suppressor assembly.

B: INSTALLATION

1) Install the noise suppressor assembly.

Tightening torque:
12±3 N·m (1.2±0.3 kgf-m, 8.9±2.2 ft-lb)

2) Install the trim panel - rear pillar UPR. (Sedan model) <Ref. to EI-104, INSTALLATION, Rear Quarter Trim.>
3) Install the trim panel - rear gate. (OUTBACK model) <Ref. to EI-123, INSTALLATION, Rear Gate Trim.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

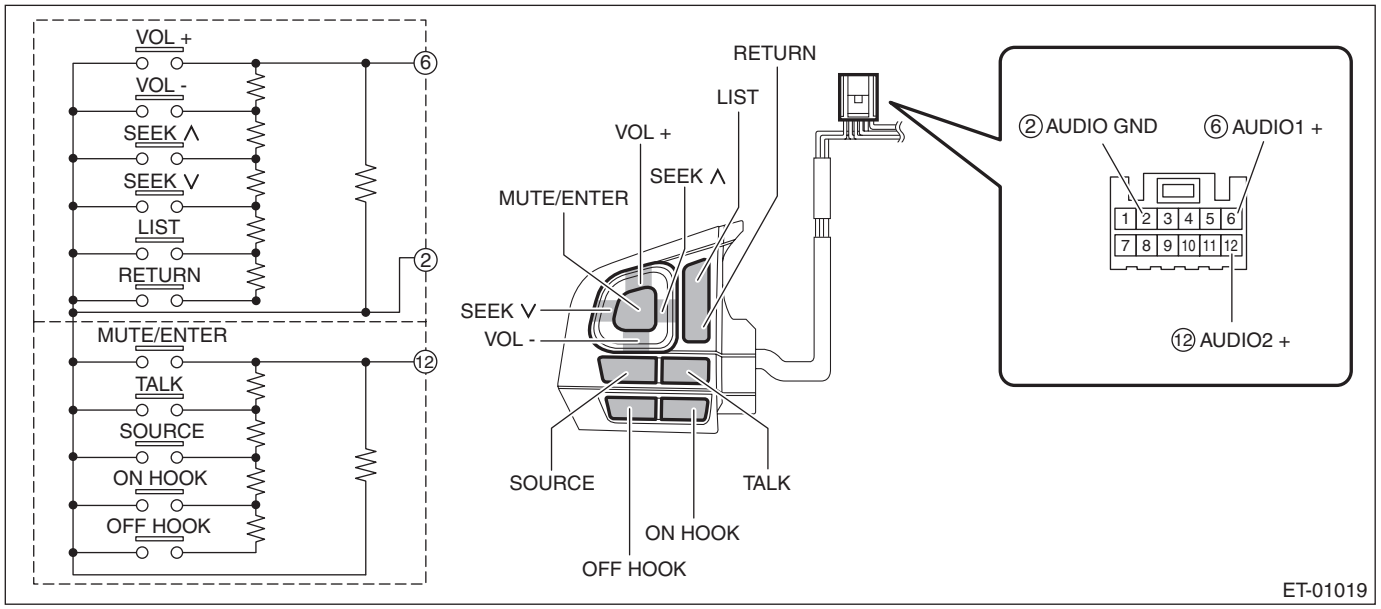
12.Steering Satellite Switch

A: REMOVAL

CAUTION:
Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) Set the tire to the straight-ahead position.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the driver's airbag module. <Ref. to AB-30, REMOVAL, Driver's Airbag Module.>
4) Remove the steering wheel. <Ref. to PS-9, REMOVAL, Steering Wheel.>
5) Remove the satellite switch assembly. <Ref. to PS-10, DISASSEMBLY, Steering Wheel.>

B: INSTALLATION

CAUTION:
• Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
• If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.
• If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• Securely install the switch. Improper insertion of the pin or claw of the switch may cause improper installation.
1) Install the satellite switch assembly.
2) Align the center position of the steering roll connector. <Ref. to AB-60, ADJUSTMENT, Roll Connector.>
3) Install the steering wheel.



Tightening torque:
39 N·m (4.0 kgf-m, 28.8 ft-lb)

Clearance:
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)
4) Install the driver's airbag module. <Ref. to AB-31, INSTALLATION, Driver's Airbag Module.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions		Standard
6 — 2	VOL (+) VOL (–) SEEK (∧) SEEK (∨) LIST RETURN	A circuit is all OFF.	Approx. 100 kΩ
	VOL (+)	ON	Less than 1 Ω
	VOL (–)	ON	Approx. 50 Ω
	Preset CH UP/SEEK (∧)	ON	Approx. 120 Ω
	Preset CH DOWN/SEEK (∨)	ON	Approx. 230 Ω
	LIST	ON	Approx. 430 Ω
	RETURN	ON	Approx. 1000 Ω
12 — 2	MUTE/ENTER TALK SOURCE ON HOOK OFF HOOK	B circuit is all OFF.	Approx. 100 kΩ
	MUTE/ENTER	ON	Less than 1 Ω
	TALK	ON	Approx. 50 Ω
	SOURCE	ON	Approx. 120 Ω
	ON HOOK	ON	Approx. 230 Ω
	OFF HOOK	ON	Approx. 430 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Standard
10 (+) — 11 (–)	Apply battery voltage.	Light ON

3) If the result of the measurement is not at the standard, replace the satellite switch assembly.

13.Microphone

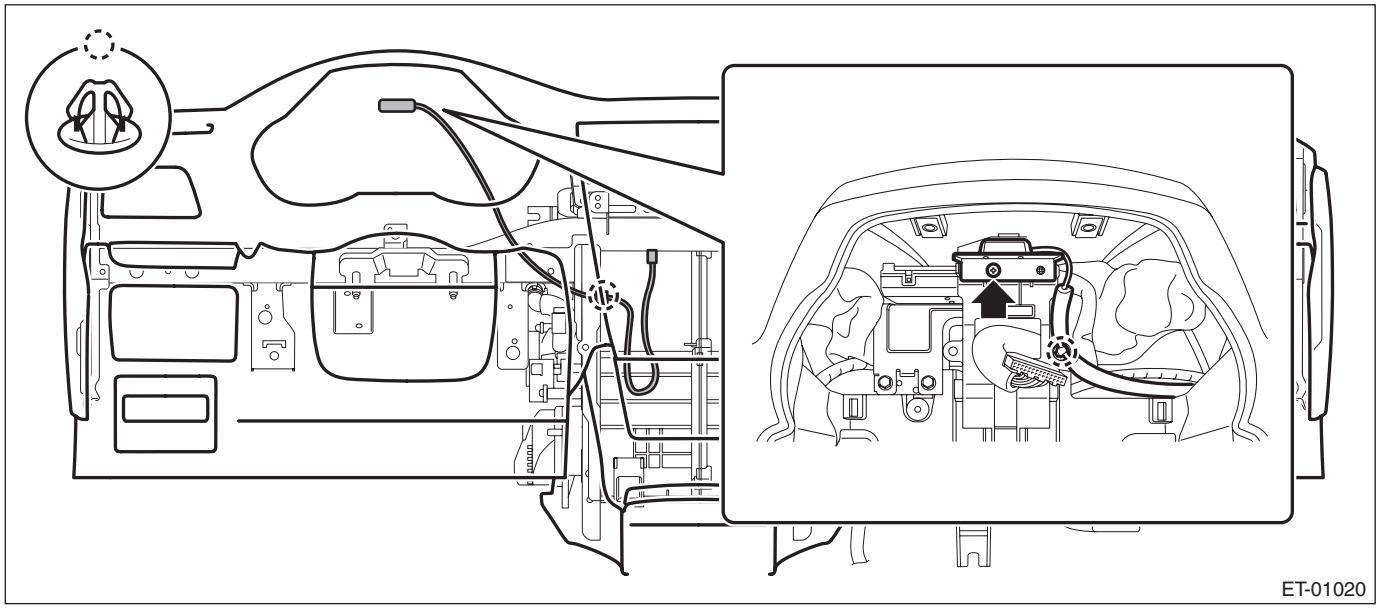
A: NOTE

The microphone is a single unit with the spot map light.
For the operation procedures for spot map light, refer to “LIGHTING SYSTEM” section. <Ref. to LI-63, Spot Map Light.>

14.Navigation Body

A: NOTE

For the operation procedures for navigation assembly, refer to “Audio” section. <Ref. to ET-12, REMOVAL, Audio.>



15.GPS Antenna

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the combination meter assembly. <Ref. to IDI-11, REMOVAL, Combination Meter.>
3) Remove the center grille assembly. <Ref. to EI-79, REMOVAL, Center Console.>
4) Remove the heater control assembly. <Ref. to EI-79, REMOVAL, Center Console.>
5) Remove the navigation assembly in the same manner as the removal procedure of the audio assembly. <Ref. to ET-12, REMOVAL, Audio.>
6) Remove the GPS antenna assembly.
   (1) Disconnect the GPS antenna assembly connector on the navigation unit side, and tie a string to the connector.

NOTE:
A string makes operation easier during installation.

   (2) Remove the screw and harness clamp, and pull out the GPS antenna assembly from the combination meter side.

   (3) When the GPS antenna assembly is pulled out, remove the string attached to the connector in step (1).

B: INSTALLATION

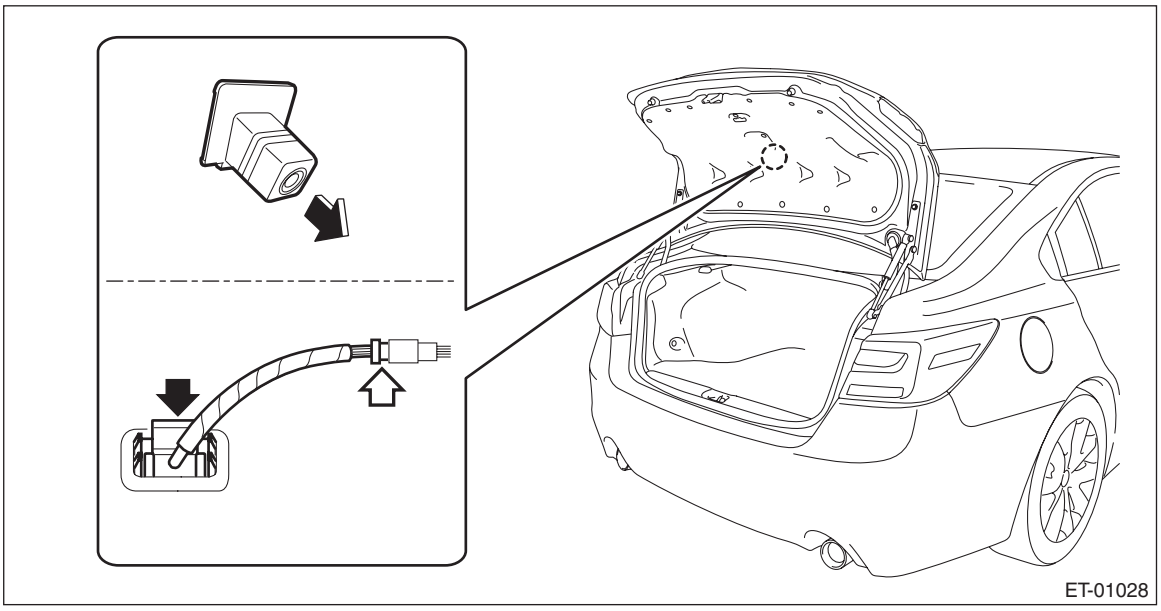
CAUTION:
Make sure that the center grille assembly is inserted into the air vent duct correctly.

1) Install the GPS antenna assembly.
2) Install the navigation assembly.
3) Install the heater control assembly.
4) Install the center grille assembly.
5) Install the combination meter assembly.
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

16.Rearview Camera System

A: WIRING DIAGRAM

Refer to “Rearview Camera System” in the wiring diagram. <Ref. to WI-386, WIRING DIAGRAM, Rearview Camera System.>



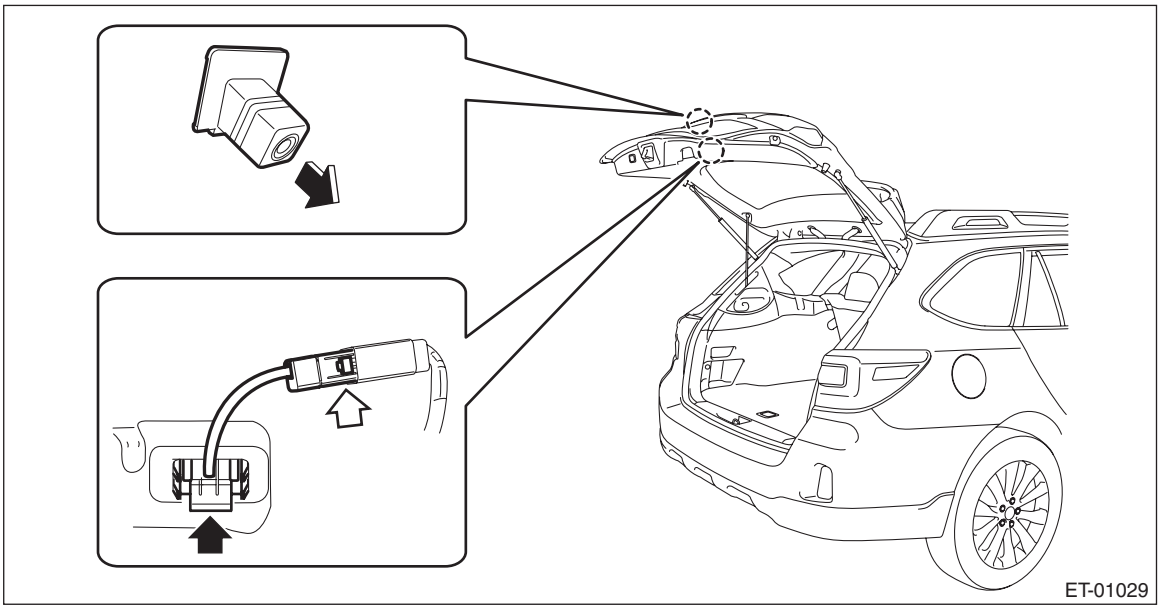
B: REMOVAL

1. SEDAN MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - trunk lid. <Ref. to EI-110, REMOVAL, Trunk Room Trim.>
3) Remove the garnish - trunk. <Ref. to EI-60, REMOVAL, Trunk Lid Garnish.>
4) Remove the rearview camera assembly.

CAUTION:
Do not drop or apply any impact to the rearview camera because it is a precision equipment.

(1) Disconnect the connector.
(2) Release the claw and hook, and then remove the rearview camera assembly.



2. OUTBACK MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate. <Ref. to EI-122, REMOVAL, Rear Gate Trim.>
3) Remove the garnish assembly - rear gate. <Ref. to EI-61, REMOVAL, Rear Gate Garnish.>
4) Remove the rearview camera assembly.

CAUTION:
Do not drop or apply any impact to the rearview camera because it is a precision equipment.

(1) Disconnect the connector.
(2) Release the claw and hook, and then remove the rearview camera assembly.

C: INSTALLATION

1. SEDAN MODEL

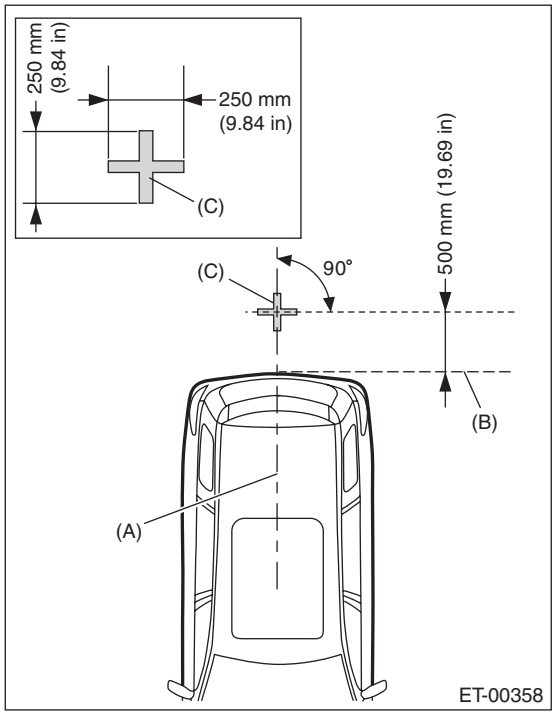
1) Install the rearview camera assembly.
2) Install the garnish - trunk.

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

3) Install the trim panel - trunk lid.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Confirm the marker position. <Ref. to ET-37, INSPECTION, Rearview Camera System.>

2. OUTBACK MODEL

1) Install the rearview camera assembly.
2) Install the garnish assembly - rear gate.



Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

3) Install the trim panel - rear gate.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Confirm the marker position. <Ref. to ET-37, INSPECTION, Rearview Camera System.>

D: INSPECTION

1) Park the vehicle at a level place where there are enough area at the rear of the vehicle.
2) Attach the tape as the target point for standard at the floor rearward of the vehicle as shown in the figure below.

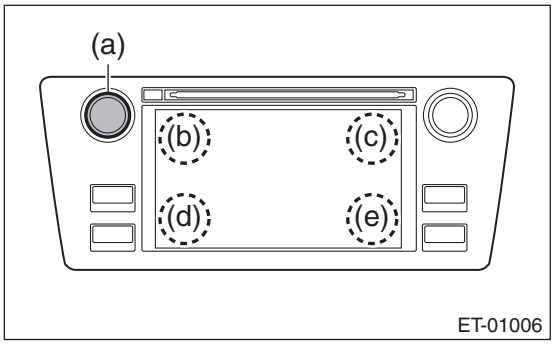
NOTE:
Standard tape width is about 30 — 50 mm (1.18 — 1.97 in) and brilliant color shall be used.

(A) Vehicle body center line
(B) Rear edge of bumper
(C) Target point

3) Confirm the following before checking the corresponding items.
(1) Rearview camera image is not displayed. (Audio and navigation screens are displayed normally.)
1. Check the condition of back sensor connection.
- Audio model: <Ref. to ET-5, CHECK EACH CONNECTION, INSPECTION, Audio System.>
- Navigation model: <Ref. to ET-9, CHECK EACH CONNECTION, INSPECTION, Navigation System.>

2. Check the condition of rearview camera connection.
- Audio model: <Ref. to ET-6, CHECK EACH VEHICLE SIGNAL, INSPECTION, Audio System.>
- Navigation model: <Ref. to ET-10, CHECK EACH VEHICLE SIGNAL, INSPECTION, Navigation System.>

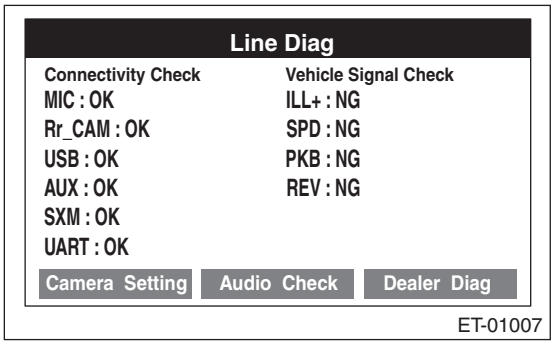
(2) Marker position is not aligned.
Adjust the marker position according to the MARKER ADJUSTMENT MODE. <Ref. to ET-38, MARKER ADJUSTMENT MODE, ADJUSTMENT, Rearview Camera System.>



E: ADJUSTMENT

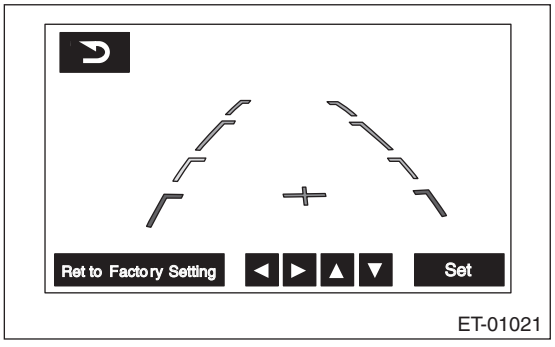
1. MARKER ADJUSTMENT MODE

Audio system



CAUTION:
For models with 7 inch display, refer to "Navigation System".

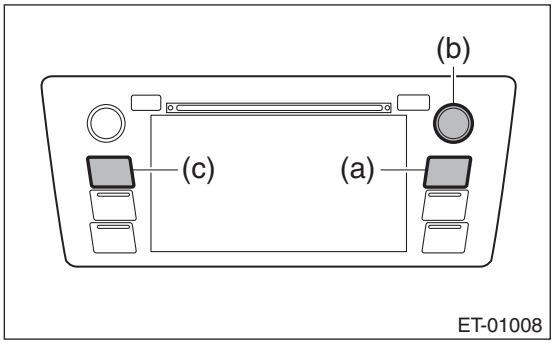
1) Prepare the target point. <Ref. to ET-37, INSPECTION, Rearview Camera System.>
2) Turn the ignition switch to ACC.
3) (a) Press the button to display the Audio OFF screen.
4) Touch the screen in order from (b) to (e).



NOTE:
Pressing the button (a) or turning the ignition switch from the OFF to ACC position can exit the diagnostic mode.

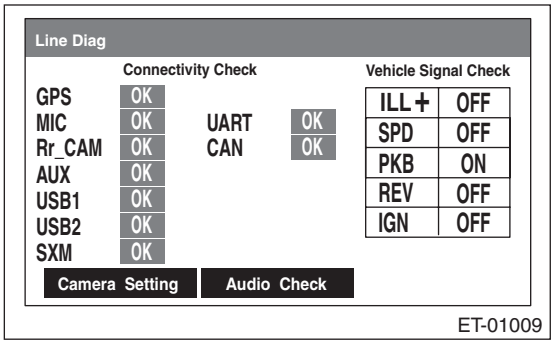
5) {Line Diag} screen is displayed.
6) Touch {Camera Setting} on the {Line Diag} screen.

7) The display will switch to the rear camera marker selection mode screen.
8) Touch the adjustment keys on the display screen to adjust the marker line.



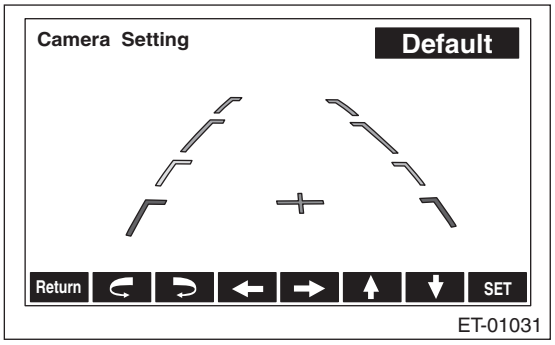
9) Touch {Set} to store the marker line setting information.

NOTE:
When {Return} is touched, the setting is not stored and the display switches to the {Line Diag} screen.



10) After the setting is completed, confirm that the marker line position is correctly adjusted.

Navigation system



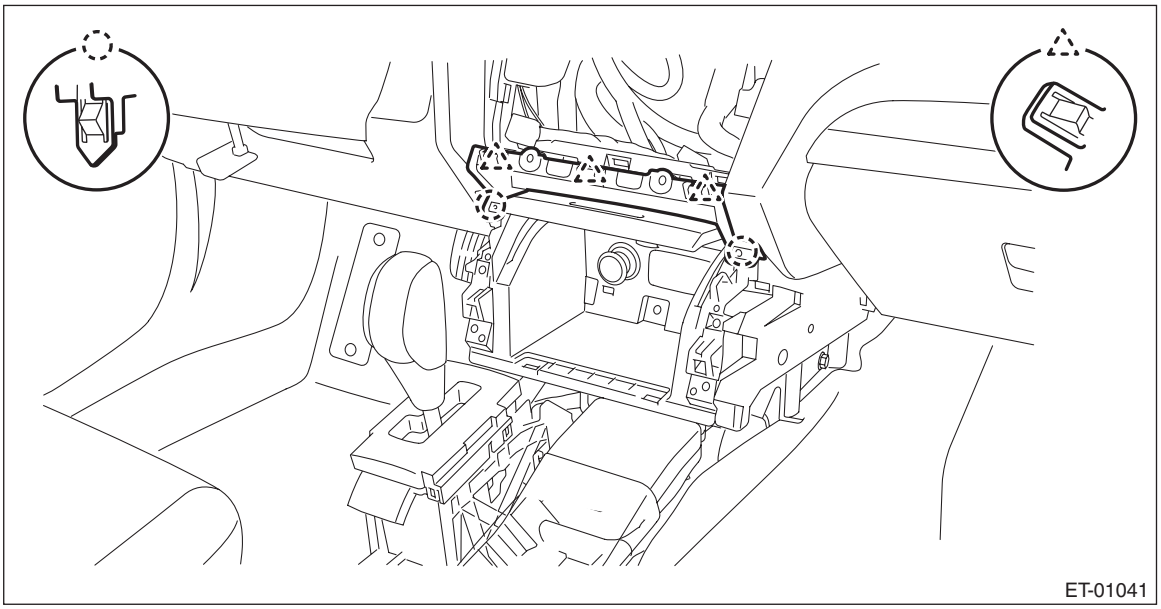
1) Prepare the target point. <Ref. to ET-37, INSPECTION, Rearview Camera System.>
2) Turn the ignition switch to ACC.
3) Press the button (b) twice with the button (a) pressed.

NOTE:
Pressing the button (c) for 3 seconds or more, or turning the ignition switch from the OFF to ACC position can exit the diagnostic mode.
4) {Line Diag} screen is displayed.
5) Touch {Camera Setting} on the {Line Diag} screen.

NOTE:
GPS is displayed only for the navigation system.
6) The display will switch to the rear camera marker selection mode screen.
7) Touch the adjustment keys on the display screen to adjust the marker line.

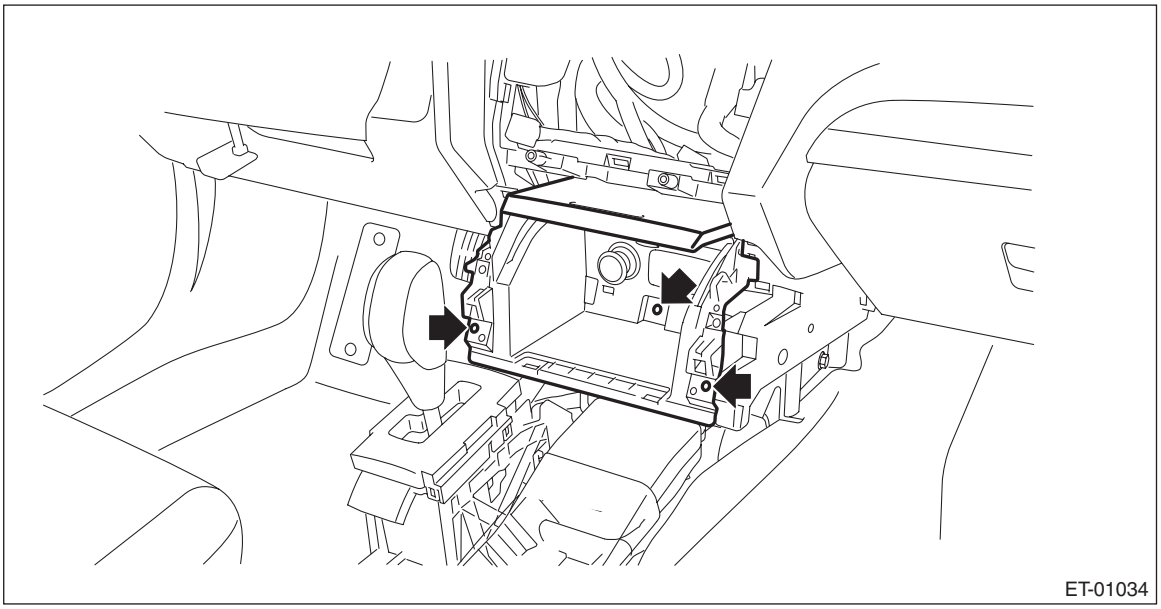
8) Touch {SET} to store the marker line setting information.

NOTE:
When {Return} is touched, the setting is not stored and the display switches to the {Line Diag} screen.
9) After the setting is completed, confirm that the marker line position is correctly adjusted.



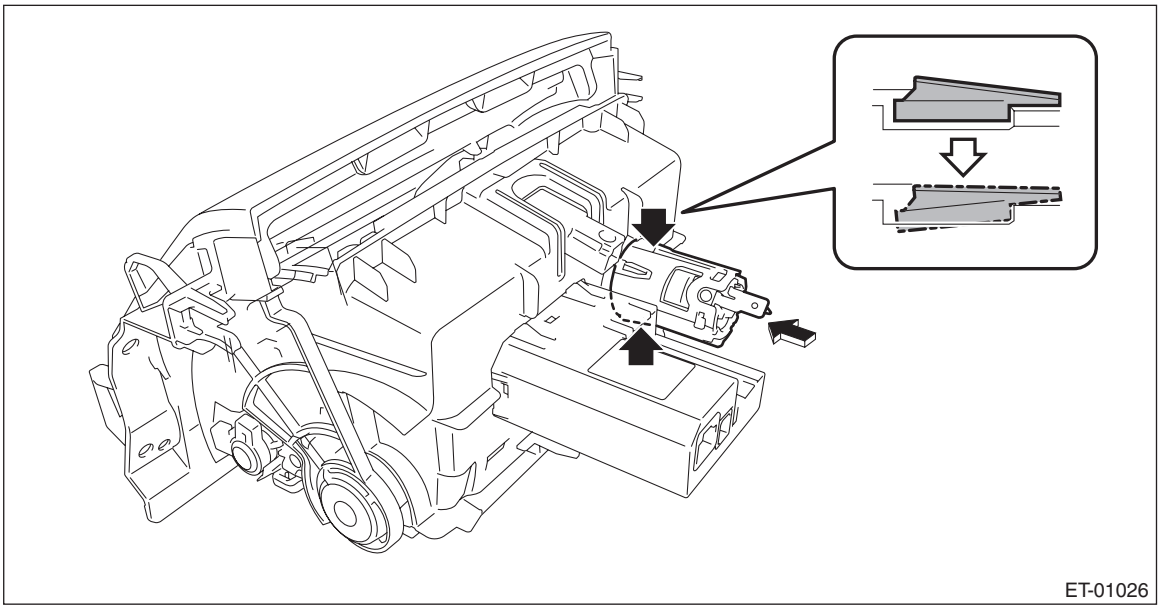
17.Front Accessory Power Supply Socket

A: WIRING DIAGRAM



Refer to “Front Accessory Power Supply Socket System” in the wiring diagram. <Ref. to WI-278, WIRING DIAGRAM, Front Accessory Power Supply Socket System.>

B: REMOVAL



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the heater control assembly. <Ref. to AC-44, REMOVAL, Control Panel.>
3) Remove the console box assembly. <Ref. to EI-80, REMOVAL, Console Box.>
4) Release the claws, and then remove the panel center LWR.

ET-01041

5) Remove the screws and remove the pocket assembly - CTR.

ET-01034

6) While releasing the claw, press it in from the rear to remove the socket assembly.

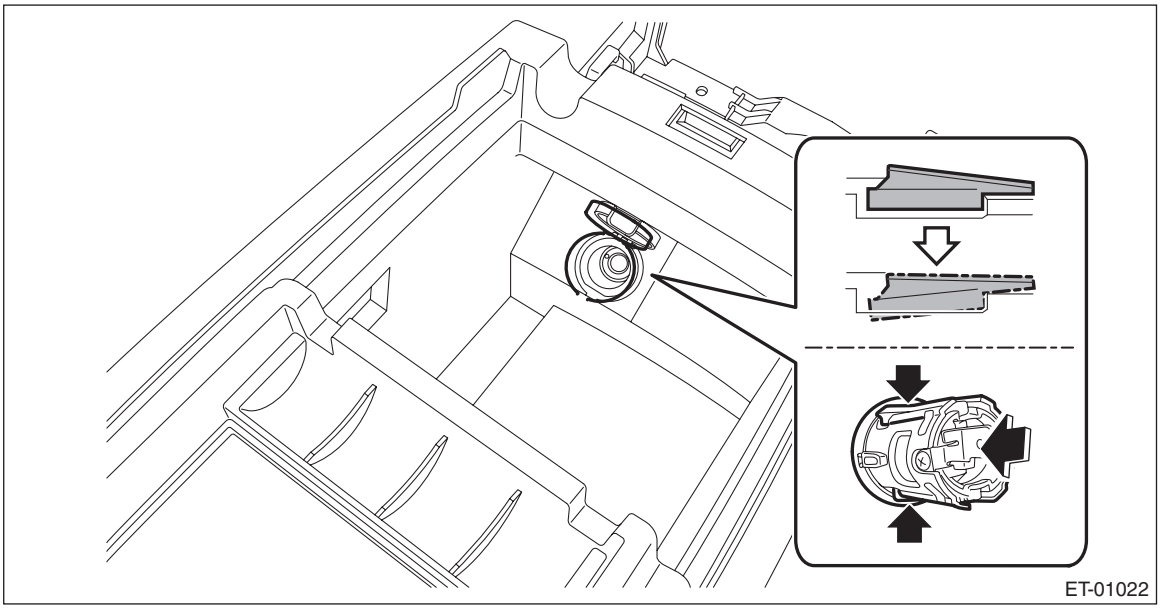
C: INSTALLATION

1) Install the socket assembly.

NOTE:
Align the groove of the pocket assembly - CTR with the claw of the socket assembly.

2) Install the pocket assembly - CTR.
3) Install the panel center LWR.
4) Install the console box assembly.
5) Install the heater control assembly.
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

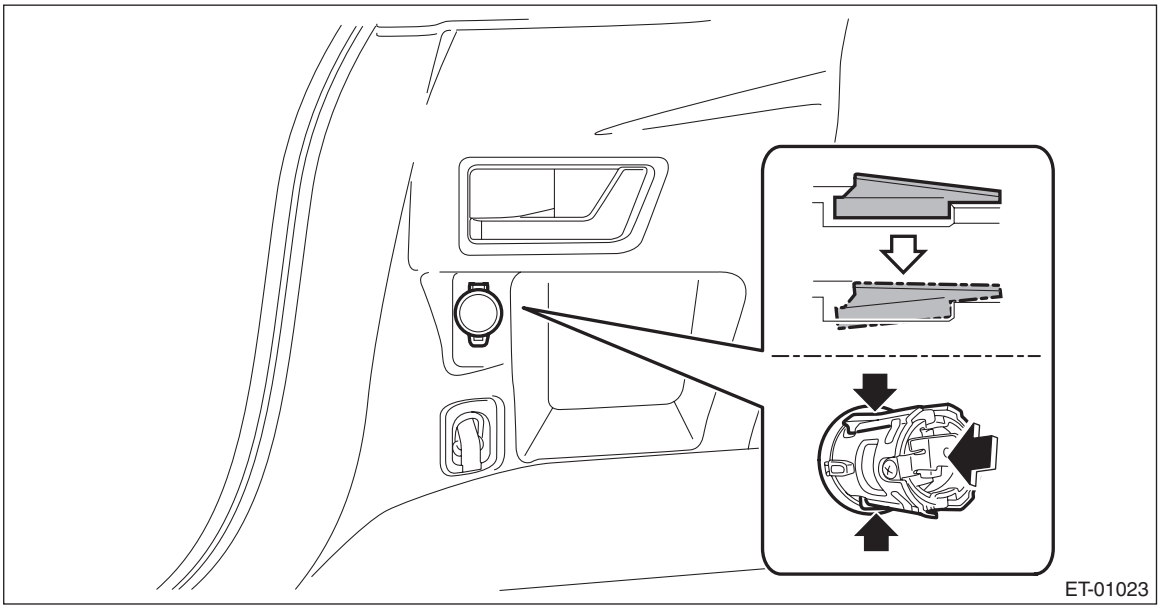
18.Rear Accessory Power Supply Socket



A: WIRING DIAGRAM

Refer to “Rear Accessory Power Supply Socket System” in the wiring diagram. <Ref. to WI-382, WIRING DIAGRAM, Rear Accessory Power Supply Socket System.>

B: REMOVAL



1. CONSOLE

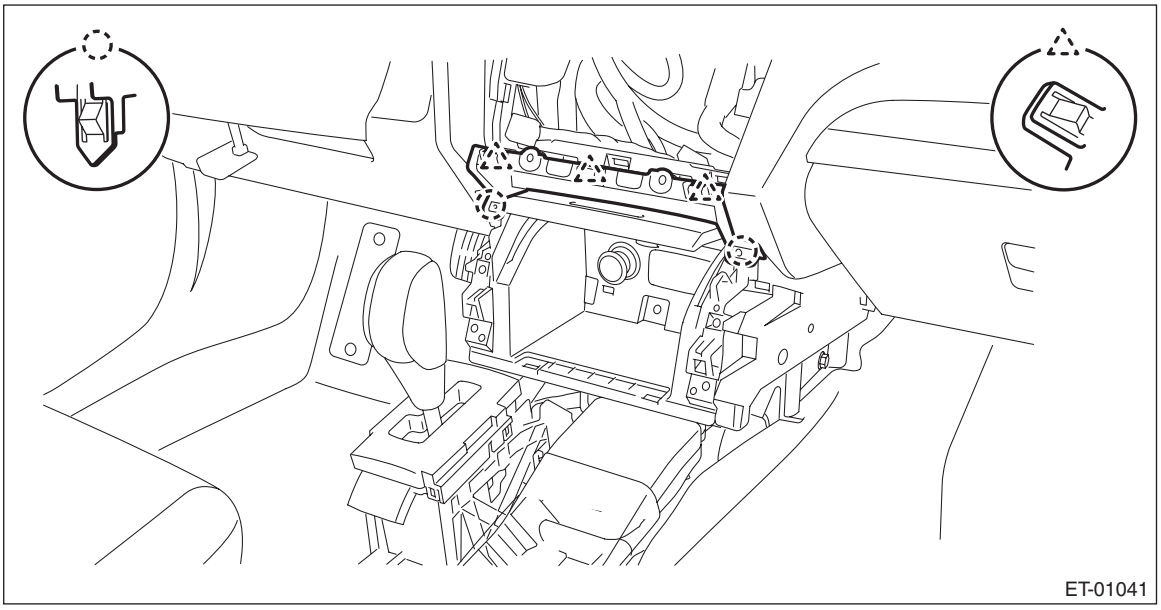
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the console box assembly. <Ref. to EI-80, REMOVAL, Console Box.>
3) While releasing the claw inside, press it in from the rear to remove the socket assembly.

2. LUGGAGE ROOM

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear apron LH. <Ref. to EI-100, OUTBACK MODEL, REMOVAL, Rear Quarter Trim.>
3) While releasing the claw inside, press it in from the rear to remove the socket assembly.

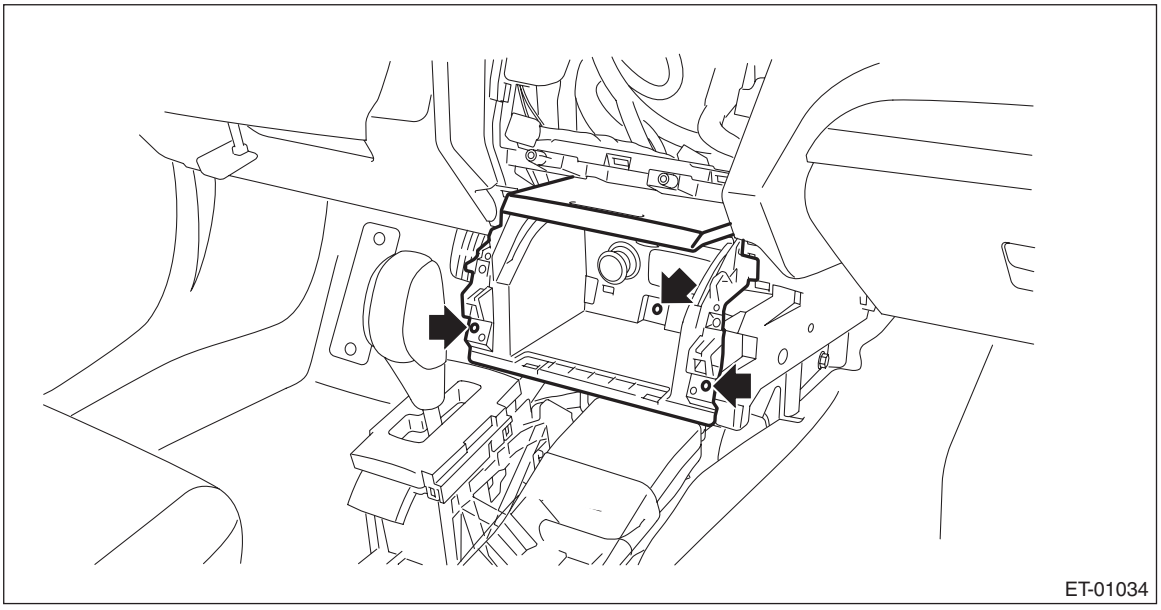
C: INSTALLATION

1) Install the socket assembly.



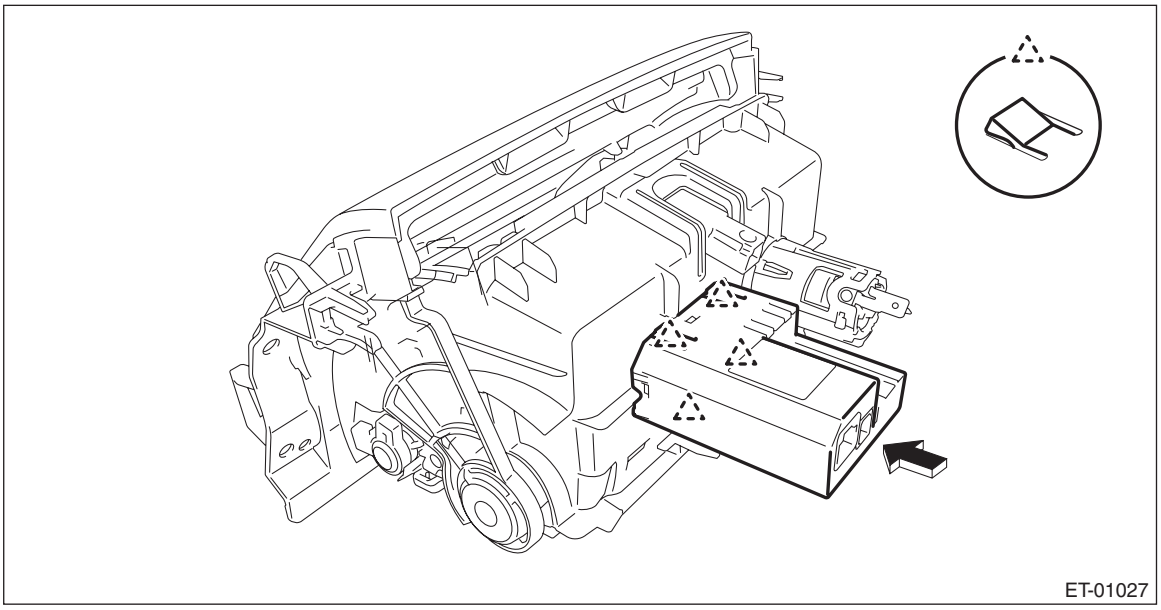
NOTE:
Align the groove of the console box assembly or the trim panel - rear apron LH with the claw of the socket assembly.

2) Install the console box assembly. (Console type)
3) Install the trim panel - rear apron LH. (Luggage room type)
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



19.External Connection Terminal

A: REMOVAL



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the heater control assembly. <Ref. to AC-44, REMOVAL, Control Panel.>
3) Remove the console box assembly. <Ref. to EI-80, REMOVAL, Console Box.>
4) Release the claws, and then remove the panel center LWR.

ET-01041

5) Remove the screws and remove the pocket assembly - CTR.

ET-01034

6) While pressing the claw, press it in from the rear to remove the unit assembly - AUX.

B: INSTALLATION

1) Install the unit assembly - AUX.
2) Install the pocket assembly - CTR.
3) Install the panel center LWR.
4) Install the console box assembly.
5) Install the heater control assembly.
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

INFOTAINMENT SYSTEM (DIAGNOSTICS)

INF(diag)

		Page
1.	Basic Diagnostic Procedure	2
2.	Check List for Interview	3
3.	General Description	5
4.	Electrical Component Location	6
5.	Control Module I/O Signal	7
6.	Subaru Select Monitor	10
7.	Read Diagnostic Trouble Code (DTC)	12
8.	Clear Memory Mode	13

10.	Read Current Data	15
11.	List of Diagnostic Trouble Code (DTC)	16
12.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	17
13.	Diagnostics with Phenomenon	31

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**PERFORM CUSTOMER INTERVIEW.** Using the Check List for Interview, ask the customer the condition of how trouble occurs.	Did you interview the customer?	Go to step **2**.	Interview the customer. <Ref. to INF(diag)-3, CHECK, Check List for Interview.>
2	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** Check for communication with the infotainment system. NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to INF(diag)-10, INSPECTION, Subaru Select Monitor.>	Is communication possible?	Go to step **3**.	Check the communication circuit.
3	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of the infotainment system. <Ref. to INF(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to INF(diag)-16, List of Diagnostic Trouble Code (DTC).> After diagnosis, Go to step **6**.	Go to step **4**.
4	**PERFORM DIAGNOSTICS WITH PHENOMENON.** Check the list of Diagnostics with Phenomenon. <Ref. to INF(diag)-31, Diagnostics with Phenomenon.>	Does the symptom apply?	Perform diagnosis according to the procedures in the diagnostics with phenomenon.	Go to step **5**.
5	**CHECK TROUBLE PHENOMENON.** 1) Perform the basic inspection. <Ref. to INF(diag)-5, INSPECTION, General Description.> 2) Check the control module I/O signal. <Ref. to INF(diag)-7, ELECTRICAL SPECIFICATION, Control Module I/O Signal.> 3) Perform check of current data. <Ref. to INF(diag)-15, Read Current Data.>	Was the trouble cause found?	Perform the Clear Memory after repairing or replacing the cause of trouble.	System is normal.
6	**PERFORM DIAGNOSIS.** 1) Perform the Clear Memory Mode. <Ref. to INF(diag)-13, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to INF(diag)-14, Inspection Mode.>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to INF(diag)-16, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

2. Check List for Interview

A: CHECK

- Inspect the following items regarding the vehicle's state.
- Print out this page for interviewing customers.

<table>
<tr><td colspan="2">Infotainment System Check List for Interview</td><td colspan="2">Received Year Month Date</td></tr>
<tr><td colspan="2" rowspan="2">Customer's name</td><td>Registration No.</td><td>Initial year of registration
Year Month Date</td></tr>
<tr><td>Vehicle model</td><td>Frame number</td></tr>
<tr><td>Interviewer</td><td>Inspector</td><td>Engine type</td><td>Odometer reading</td></tr>
<tr><td colspan="4">Customer specified content
•
•
•</td></tr>
<tr><td rowspan="3">Product information</td><td>Part No.</td><td>Manufacturer model number</td><td>Serial No.</td></tr>
<tr><td colspan="3">Software version*</td></tr>
<tr><td colspan="3">Connected device</td></tr>
<tr><td rowspan="3">Mobile phone</td><td colspan="3">Mobile network operator</td></tr>

</table>

Check List for Interview

Items to be checked	Fault in navigation system ❑ Cursor or map rotating ❑ Wrong location of vehicle ❑ Cursor hopping during driving ❑ Map image incomplete ❑ GPs062 ❑ Incorrect time display ❑ Guide not initiated ❑ No route search ❑ Caution remains on navigation screen ❑ Unexpected return back to opening screen ❑ Other • Map scale (Km/Mile) • Where it happened • Route
	STARLINK malfunction ❑ Bluetooth connection not established ❑ STARLINK app disabled ❑ Out of service ❑ Details of error message ❑ Other
	Display trouble ❑ Black screen ❑ White screen ❑ Blue screen ❑ Dim ❑ Vertical/horizontal noise (lines) ❑ Poor color tone ❑ Unclear ❑ Display corruption ❑ No picture ❑ Other • Display in question ❑ Navigation ❑ TV ❑ Audio ❑ Others ( )
	Operating problems ❑ Display does not switch ❑ Display changes unexpectedly ❑ Response is dull/slow ❑ Does not respond to key entry ❑ Does not change to night mode screen ❑ Cannot insert/eject disc ❑ Display panel does not open/close ❑ Other • BEEP on operation entry ❑ Present ❑ None • TV channel ch • SW color change at operation ❑ Present ❑ None • User's screen operation ❑ Possible ❑ Not possible ❑ Other
	Audio malfunction ❑ Does not sound ❑ Front (❑ R ❑ L) ❑ Rear (❑ R ❑ L) ❑ Operation related problems ❑ Cannot adjust volume level ❑ Cannot select stations ❑ Cannot select music ❑ Cannot select modes ❑ Cannot use tone control or adjust tone range ❑ Cannot record ❑ Noise • Type of sound ( ) ❑ Sound skipping ❑ CD ❑ DVD ❑ Others ( ) • Specific mode/disc( )
Check result	Reproductivity ❑ Reproduced ❑ Always ❑ Sometimes ❑ Cannot be reproduced
	Condition ❑ Cold ❑ Warm ❑ At starting ❑ Immediately after starting ❑ During warm-up ❑ At idle ❑ When start driving ❑ While driving ❑ At acceleration ❑ At deceleration ❑ When applying brake
DTC	

*: For each confirmation procedure, refer to Audio System or Navigation System. <Ref. to ET-4, OPERATION, Audio System.> <Ref. to ET-8, OPERATION, Navigation System.>

3. General Description

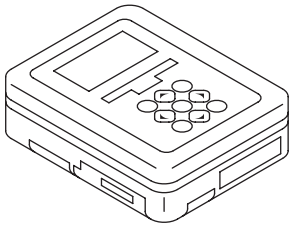
A: CAUTION

1. AIRBAG SYSTEM

Refer to “CAUTION” in “General Description” in AIRBAG SYSTEM. <Ref. to AB-10, CAUTION, General Description.>

2. INFOTAINMENT SYSTEM

Refer to “CAUTION” in “General Description” in ENTERTAINMENT. <Ref. to ET-2, CAUTION, General Description.>



B: INSPECTION

1. BASIC INSPECTION

Before performing diagnosis, check the following items which might affect the problems related to infotainment system.
1) Check the battery. <Ref. to SC(H4DO)-60, INSPECTION, Battery.> <Ref. to SC(H6DO)-53, INSPECTION, Battery.>
2) Check the relay and fuse condition. <Ref. to ET-3, Relay and Fuse.>
3) Check the connecting condition of harness and harness connector.

C: PREPARATION TOOL

1. SPECIAL TOOL

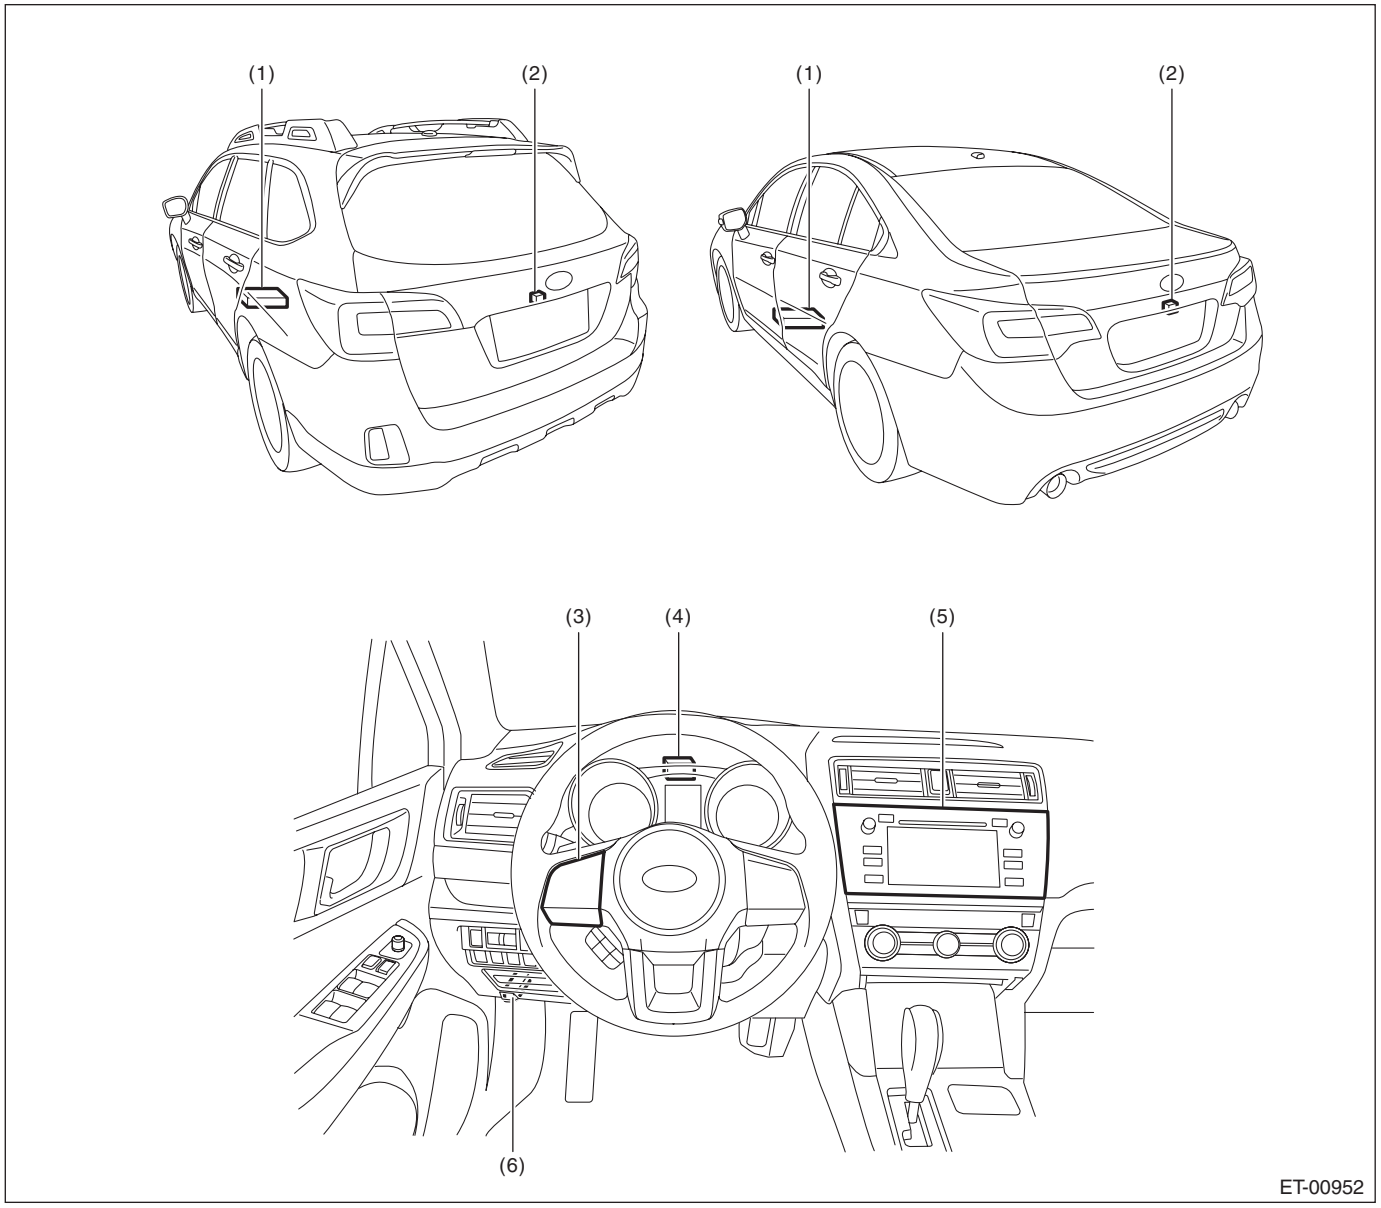


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
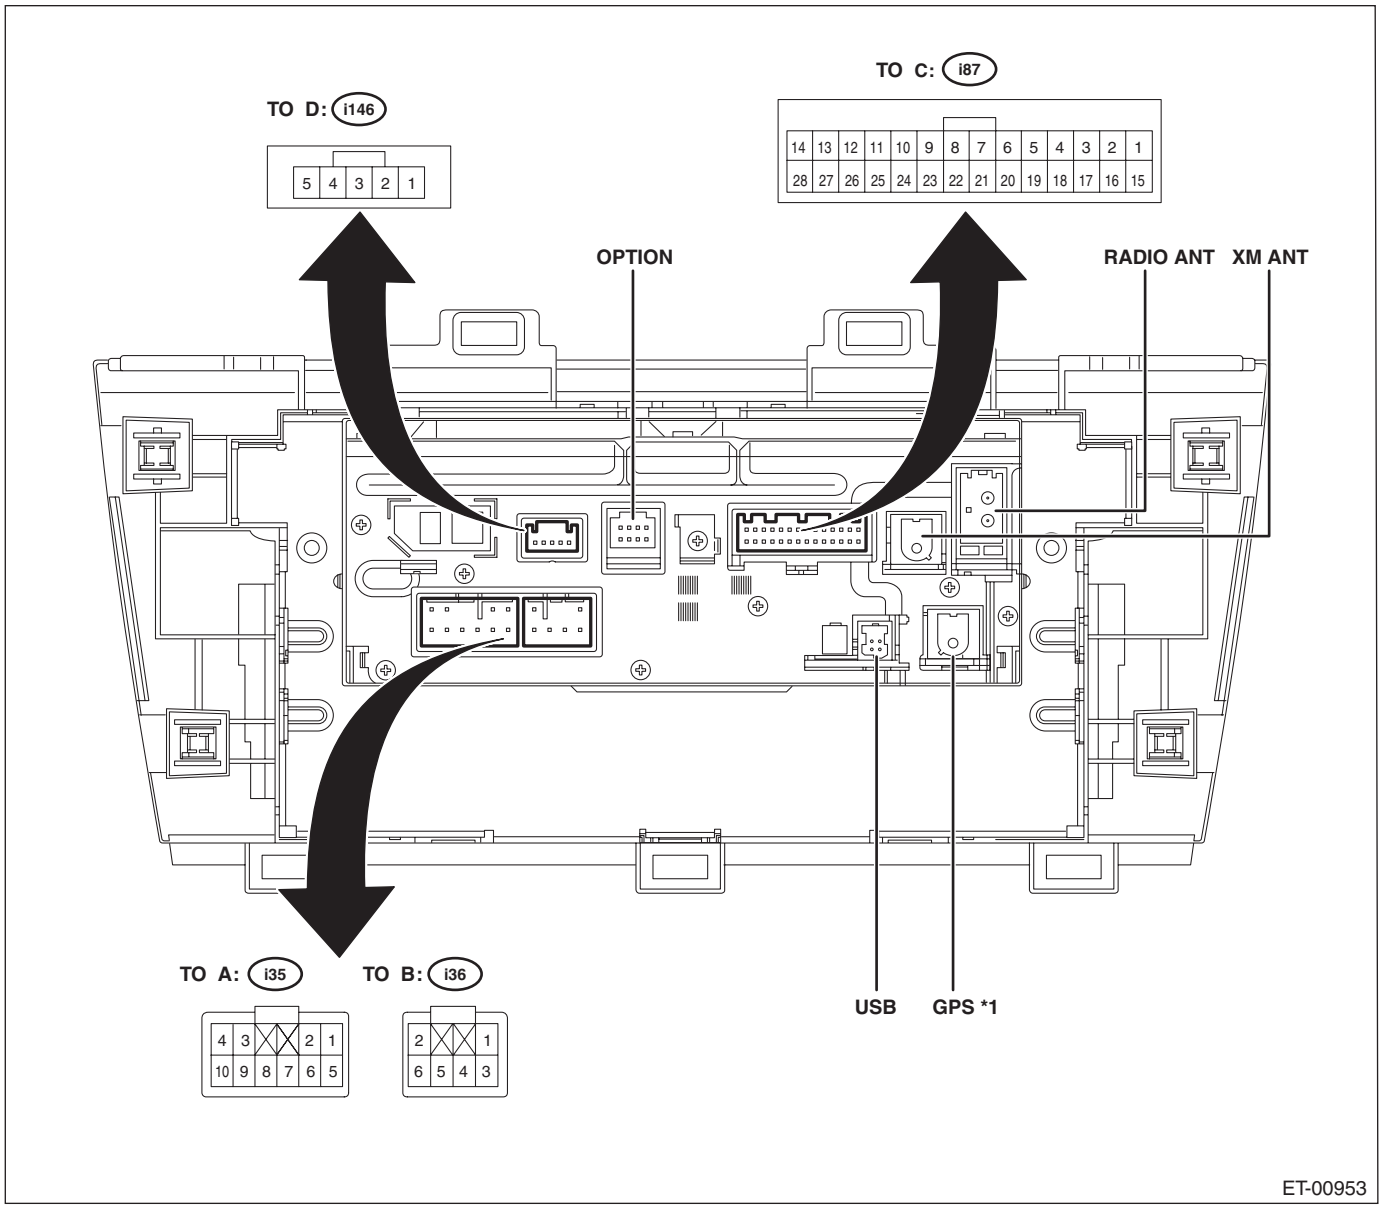
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

4. Electrical Component Location

A: LOCATION



(1) Audio amplifier (if equipped)
(2) Rearview camera (if equipped)
(3) Satellite switch
(4) GPS antenna (if equipped)
(5) Audio (7-inch display) or navigation unit
(6) Data link connector

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

1. NAVIGATION UNIT OR AUDIO (7-INCH DISPLAY)

*1: Models with navigation system

- Power supply and speaker output terminal

Terminal No.	Contents	Measuring condition	Measurement value	Note

B: WIRING DIAGRAM

Refer to “Audio System” in the wiring diagram. <Ref. to WI-116, WIRING DIAGRAM, Audio System.>
Refer to “Navigation System” in the wiring diagram. <Ref. to WI-332, WIRING DIAGRAM, Navigation System.>
Refer to “Rearview Camera System” in the wiring diagram. <Ref. to WI-386, WIRING DIAGRAM, Rearview Camera System.>

6. Subaru Select Monitor

A: OPERATION

- For operation procedures, refer to “PC application help for Subaru Select Monitor”.
- When the infotainment system cannot communicate with Subaru Select Monitor, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE”.

B: INSPECTION

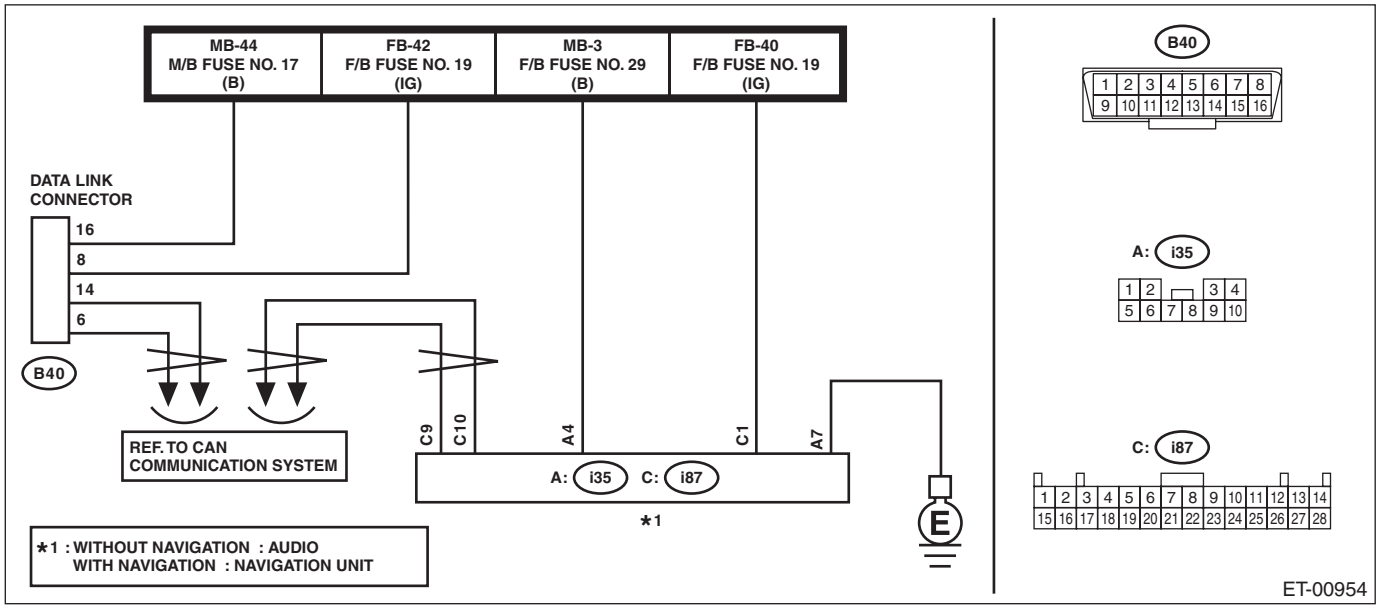
1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

When communication with the navigation unit is impossible

DETECTING CONDITION:

- Defective harness connector
- Power supply circuit malfunction
- Infotainment system module malfunction
- Defective CAN communication circuit
- Defective Subaru Select Monitor

TROUBLE SYMPTOM:



Communication is impossible between the infotainment system module and Subaru Select Monitor.

WIRING DIAGRAM:

NOTE:

For the coupling connector, refer to “WIRING SYSTEM”.

- Audio system <Ref. to WI-116, WIRING DIAGRAM, Audio System.>
- Navigation system <Ref. to WI-332, WIRING DIAGRAM, Navigation System.>

	Step	Check	Yes	No
1	**CHECK OTHER COMMUNICATION.** Communicate with the system other than the infotainment system using the Subaru Select Monitor.	Is the communication to other control module possible?	Go to step **2**.	Perform the “Communication for Initializing Impossible” of LAN system.
2	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Perform the inspection according to the diagnosis for LAN system.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK FUSE.** Check the fuse of the infotainment system. <Ref. to ET-3, LOCATION, Relay and Fuse.>	Is it normal?	Go to step **4**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit of the harness between the battery and audio (7-inch display) connector, or between the navigation unit connector.
4	**CHECK HARNESS.** 1) Turn off the audio (7-inch display) or navigation unit. 2) Disconnect the audio (7-inch display) connector or navigation unit connector. 3) Turn the ignition switch to ON. 4) Using the tester, measure the voltage between audio (7-inch display) connector or navigation unit connector and chassis ground. ***Connector & terminal*** ***(i35) No. 4 (+) — Chassis ground (–):*** ***(i87) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **5**.	Repair the open circuit of harness between audio (7-inch display) connector or navigation unit connector and fuse.
5	**CHECK INFOTAINMENT SYSTEM MODULE.** 1) Turn the ignition switch to OFF. 2) Connect the audio (7-inch display) connector or navigation unit connector. 3) Perform the communication with the infotainment system.	Is communication possible?	It is possible that temporary poor communication occurs.	Replace the audio (7-inch display) or navigation unit. <Ref. to ET-12, Audio.> <Ref. to ET-33, Navigation Body.>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «Each System Check» display, select «Infotainment System».
3) On «Infotainment System» display, select «Diagnostic Code(s) Display».

NOTE:
- For details concerning the work procedure, refer to the “PC application help for Subaru Select Monitor”.
- For details concerning DTC, refer to the List of Diagnostic Trouble Codes (DTC). <Ref. to INF(diag)-16, List of Diagnostic Trouble Code (DTC).>

8. Clear Memory Mode

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «Each System Check» display, select «Infotainment System».
3) On «Infotainment System» display, select «Clear Memory».

NOTE:
For details concerning the work procedure, refer to the “PC application help for Subaru Select Monitor”.

9. Inspection Mode

A: OPERATION

DTC can be diagnosed by executing the Inspection Mode. After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.
1) Perform the Clear Memory Mode.
2) Read the DTC and check that the DTC is not displayed.

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. After solving the DTC, repeat from step 1).
3) After the ignition switch is ON, wait for one minute or more.
4) Read the DTC and check that the DTC is not displayed.

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC.

10.Read Current Data

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «Each System Check» display, select «Infotainment System».
3) On «Infotainment System» display, select «Current Data Display & Save».

NOTE:
For details concerning the work procedure, refer to the “PC application help for Subaru Select Monitor”.

B: LIST

Display	Contents	Reference value	Unit of measure
Trip Count	Number of IG ON judged by the body integrated unit (CAN communication data)	—	—
Count	Number of IG ON, synchronous/asynchronous identification information of the elapsed time after IG ON	—	—
Time Count	Elapsed time (detail) after IG ON calculated by the infotainment system	—	—
ACC Power connection state	ACC power supply connection status	ON: when connected OFF: when not connected	—
IGN Power connection state	IGN power supply connection status	ON: when connected OFF: when not connected	—
Reverse connection state	Reverse signal connection status	ON: when connected OFF: when not connected	—
SPEED signal connection state	Vehicle speed signal open circuit status	ON: when connected OFF: when not connected	—
PKB connection state	Parking brake signal connection status	ON: when connected OFF: when not connected	—
Illumi connection state	Illumination signal connection status	ON: when connected OFF: when not connected	—
RADIO ant connection state	Antenna (radio) connection status	ON: when connected OFF: when not connected	—
DAB ant connection state	Antenna (DAB) connection status	ON: when connected OFF: when not connected	For EU model only
XM ant connection state	Antenna (XM) connection status	ON: when connected OFF: when not connected	For US model only
GPS ant connection state	Antenna (GPS) connection status	ON: when connected OFF: when not connected	Only for models with navigation
MIC connection state	Microphone connection status	ON: when connected OFF: when not connected	—
Steering switch connection state	Steering switch connection status	ON: when connected OFF: when not connected	—

U1140	Lost Communication With Body Control Module Body-CAN	<Ref. to INF(diag)-30, DTC U1140 LOST COMMUNICATION WITH BODY CONTROL MODULE BODY-CAN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1232	Lost Communication With Rear/Side Radar Control Module	<Ref. to INF(diag)-30, DTC U1232 LOST COMMUNICATION WITH REAR/SIDE RADAR CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

12.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B2240 CONTROL MODULE COMMUNICATION STICK

DTC DETECTING CONDITION:
Detected when the resistor is stuck during the CAN bus communication process.
TROUBLE SYMPTOM:
Screen display does not link with combination meter or vehicle.

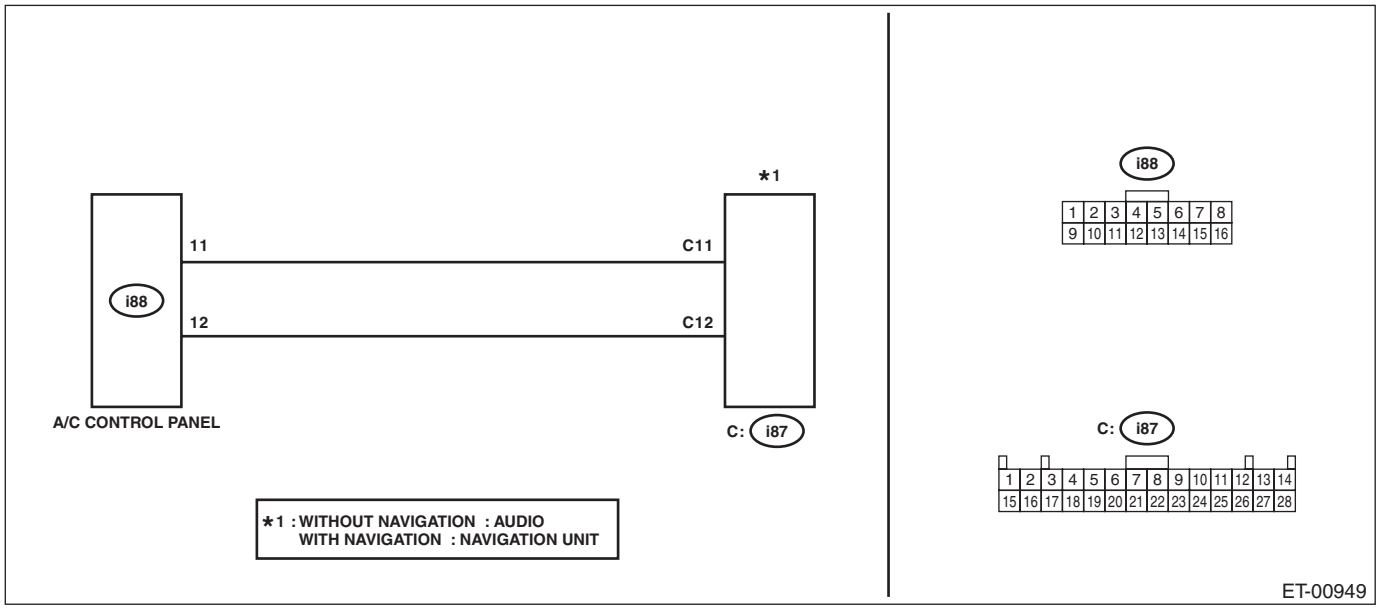
	Step	Check	Yes	No
1	**CHECK DTC.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Perform the diagnosis according to diagnosis for LAN system.	Go to step **2**.
2	**CHECK NAVIGATION UNIT.** 1) Perform the Clear Memory Mode. <Ref. to INF(diag)-13, Clear Memory Mode.> 2) Turn the ignition switch to OFF → ON. 3) Read the DTC again. <Ref. to INF(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2240 displayed? (Current malfunction)	Replace the audio (7-inch display) or navigation unit. <Ref. to ET-12, Audio.> <Ref. to ET-33, Navigation Body.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

B: DTC B2241 CAN COMMUNICATION

DTC DETECTING CONDITION:

Detected when there has been no proper communication in 10 seconds with the driver control of serial communication between CAN microcomputer and main microcomputer.

TROUBLE SYMPTOM:



Screen display does not link with combination meter or vehicle.

	Step	Check	Yes	No
1	**CHECK AUDIO (7-INCH DISPLAY) OR NAVIGATION UNIT.** 1) Turn the ignition switch to OFF. 2) Turn the ignition switch to ACC.	Is the audio (7-inch display) or navigation unit activated?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK DTC.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Perform the diagnosis according to diagnosis for LAN system.	Go to step **3**.
3	**CHECK AUDIO (7-INCH DISPLAY) OR NAVIGATION UNIT.** 1) Perform the Clear Memory Mode. <Ref. to INF(diag)-13, Clear Memory Mode.> 2) Turn the ignition switch to OFF → ON. 3) Read the DTC again. <Ref. to INF(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2241 displayed? (Current malfunction)	Replace the audio (7-inch display) or navigation unit. <Ref. to ET-12, Audio.> <Ref. to ET-33, Navigation Body.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

C: DTC B2242 UART COMMUNICATION

DTC DETECTING CONDITION:
Regular communication with A/C panel (20 ms) cannot be established for 10 seconds.
TROUBLE SYMPTOM:
- A/C operation cannot be activated using the voice control.
- Time displayed on the A/C panel cannot be corrected.

WIRING DIAGRAM:
Audio system <Ref. to WI-116, WIRING DIAGRAM, Audio System.>
Navigation system <Ref. to WI-332, WIRING DIAGRAM, Navigation System.>

	Step	Check	Yes	No
1	**CHECK A/C SYSTEM.** Check the A/C system. <Ref. to AC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Perform the diagnosis according to diagnosis for A/C system.	Go to step **2**.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the audio (7-inch display) connector or navigation unit connector. 2) Disconnect the A/C panel connector. 3) Using the tester, measure the resistance of harness between audio (7-inch display) connector or navigation unit connector and A/C panel connector. ***Connector & terminal*** ***(i88) No. 11 — (i87) No. 11:*** ***(i88) No. 12 — (i87) No. 12:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness between audio (7-inch display) connector or navigation unit connector and A/C panel connector.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using the tester, measure the resistance between audio (7-inch display) connector or navigation unit connector and chassis ground. ***Connector & terminal*** ***(i87) No. 11 — Chassis ground:*** ***(i87) No. 12 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short to ground in harness between audio (7-inch display) connector or navigation unit connector and A/C panel connector.

	Step	Check	Yes	No
4	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** Using the tester, measure the voltage between audio (7-inch display) connector or navigation unit connector and chassis ground. (With each connector disconnected) ***Connector & terminal*** ***(i87) No. 11 (+) — Chassis ground (–):*** ***(i87) No. 12 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair the short to power supply in harness between audio (7-inch display) connector or navigation unit connector and A/C panel connector.
5	**CHECK DTC.** 1) Perform the Clear Memory Mode. <Ref. to INF(diag)-13, Clear Memory Mode.> 2) Turn the ignition switch to OFF → ON. 3) Read the DTC again. <Ref. to INF(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2242 displayed? (Current malfunction)	Replace the A/C panel.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

D: DTC B2243 SD CARD COMMUNICATION

DTC DETECTING CONDITION:
Driver has detected a malfunction of SD card.
TROUBLE SYMPTOM:
Map is not displayed.

	Step	Check	Yes	No
1	**CHECK SD CARD.** Check the SD card. NOTE: Supported card type: microSDHC (SD High Capacity) Storage capacity: Max 32 GB	Is an authorized SD card used? Can the SD card be used in another media device?	Go to step **2**.	Replace the SD card with an authorized one.
2	**CHECK NAVIGATION UNIT.** Check the navigation unit.	Is there any defect in the card slot of the navigation unit? (Foreign matter such as dust, or deformation)	If it does not return to a normal condition after cleaning, replace the navigation unit. <Ref. to ET-33, Navigation Body.>	Go to step **3**.
3	**CHECK SD CARD.** 1) Replace the SD card. 2) Perform the Clear Memory Mode. <Ref. to INF(diag)-13, Clear Memory Mode.> 3) Turn the ignition switch to OFF → ON. 4) Read the DTC again. <Ref. to INF(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2243 displayed? (Current malfunction)	Replace the navigation unit. <Ref. to ET-33, Navigation Body.>	There was a defect in the SD card.

E: DTC B2244 AMPLIFIER COMMUNICATION

DTC DETECTING CONDITION:
Detected when no connection is established because there is no communication with the audio amplifier after the ACC is ON.

TROUBLE SYMPTOM:
Sound does not come out from the speaker.

WIRING DIAGRAM:
Audio system <Ref. to WI-116, WIRING DIAGRAM, Audio System.>
Navigation system <Ref. to WI-332, WIRING DIAGRAM, Navigation System.>

Step		Check	Yes	No
1	**CHECK FUSE.** Check the fuse.	Is it normal?	Go to step **2**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in the harness between the battery and audio amplifier.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the audio (7-inch display) connector or navigation unit connector. 2) Disconnect the amplifier connector. 3) Using the tester, measure the resistance of harness between audio (7-inch display) connector or navigation unit connector and audio amplifier connector. ***Connector & terminal*** ***(i87) No. 7 — (i262) No. 8:*** ***(i87) No. 8 — (i262) No. 7:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness between audio (7-inch display) connector or navigation unit connector and audio amplifier connector.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using the tester, measure the resistance between audio (7-inch display) connector or navigation unit connector and chassis ground. ***Connector & terminal*** ***(i87) No. 7 — Chassis ground:*** ***(i87) No. 8 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short to ground in harness between audio (7-inch display) connector or navigation unit connector and audio amplifier connector.

	Step	Check	Yes	No
4	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** Using the tester, measure the voltage between audio (7-inch display) connector or navigation unit connector and chassis ground. (With each connector disconnected) ***Connector & terminal*** ***(i87) No. 7 (+) — Chassis ground (–):*** ***(i87) No. 8 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair the short to power supply in harness between audio (7-inch display) connector or navigation unit connector and audio amplifier connector.
5	**CHECK DTC.** 1) Perform the Clear Memory Mode. <Ref. to INF(diag)-13, Clear Memory Mode.> 2) Turn the ignition switch to OFF → ON. 3) Read the DTC again. <Ref. to INF(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2244 displayed? (Current malfunction)	Replace the audio amplifier.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

F: DTC B2247 CD MECHANICAL

DTC DETECTING CONDITION:

- If EJECT error is detected
- If over-current is detected
- If DSP error is detected
- If playback failure is detected

TROUBLE SYMPTOM:

- CD and DVD cannot be played back.
- Cannot be inserted or ejected.

	Step	Check	Yes	No
1	**CHECK MEDIA.** 1) Check for dirt on the disc surface of the media, and clean the disc softly using soft and dry cloth such as a plastic eyeglasses cleaning cloth. When cleaning, make sure that wiping direction is from the center to the edge of the disc. **CAUTION:** **To avoid any scratch on the surface, do not apply excessive force with hand or do not use a rough cloth. Do not use solvent such as alcohol, benzene, thinner, etc. as well as chemical cloth to avoid damaging the disc.** 2) Insert the media and make sure that it can be played back.	Can it be played back?	There were some problems with the media.	Go to step **2**.
2	**CHECK MEDIA.** Insert another media which is properly functioning. NOTE: Supported media type: Audio CD, CD-R, CD-RW	Can it be played back?	There were some problems with the media.	Replace the audio (7-inch display) or navigation unit. <Ref. to ET-12, Audio.> <Ref. to ET-33, Navigation Body.>

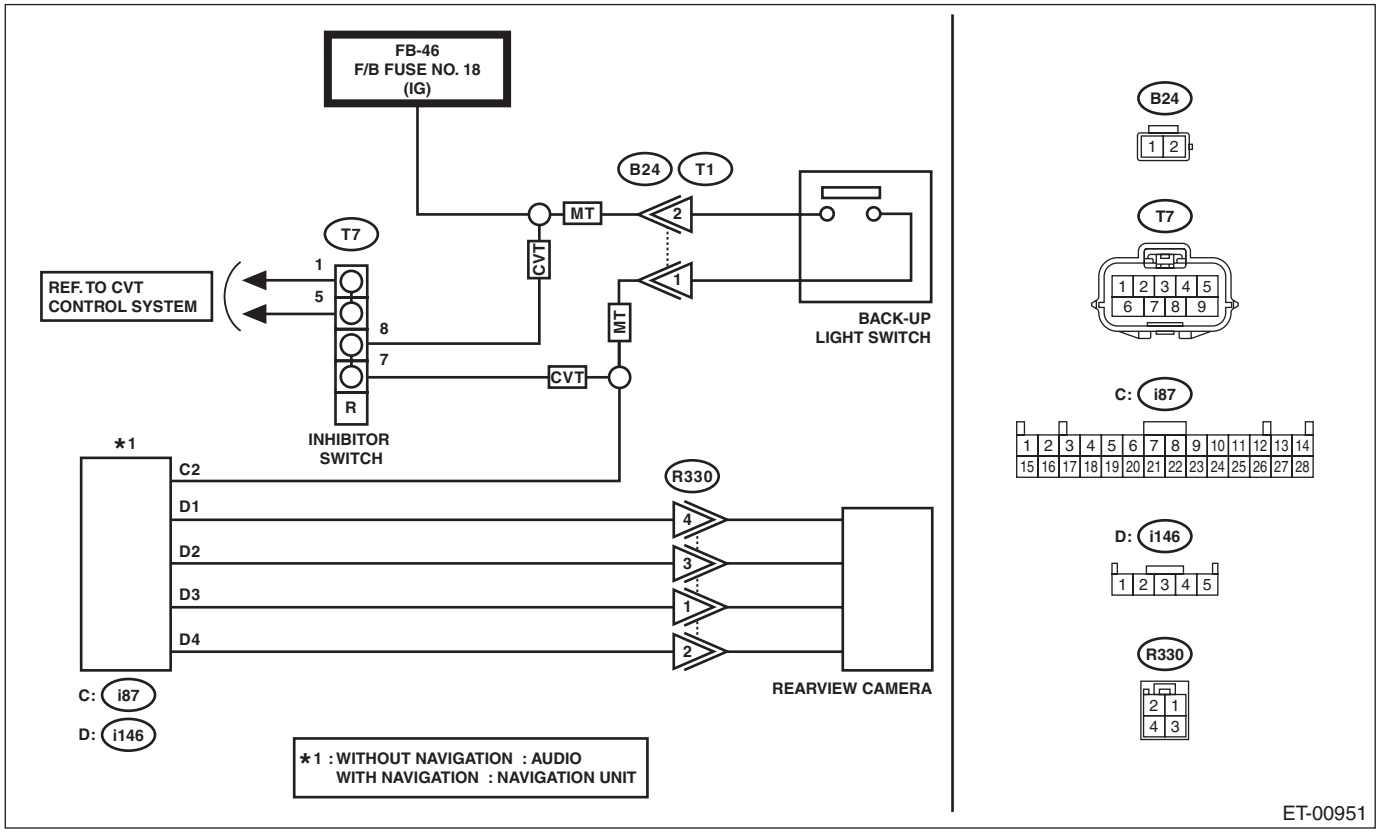
G: DTC B2249 BLUETOOTH MODULE

DTC DETECTING CONDITION:

• Detected when a connection between the Bluetooth module is lost (or there has already been no connection) and the connection cannot be established even after trying to reset the Bluetooth module hardware three times.

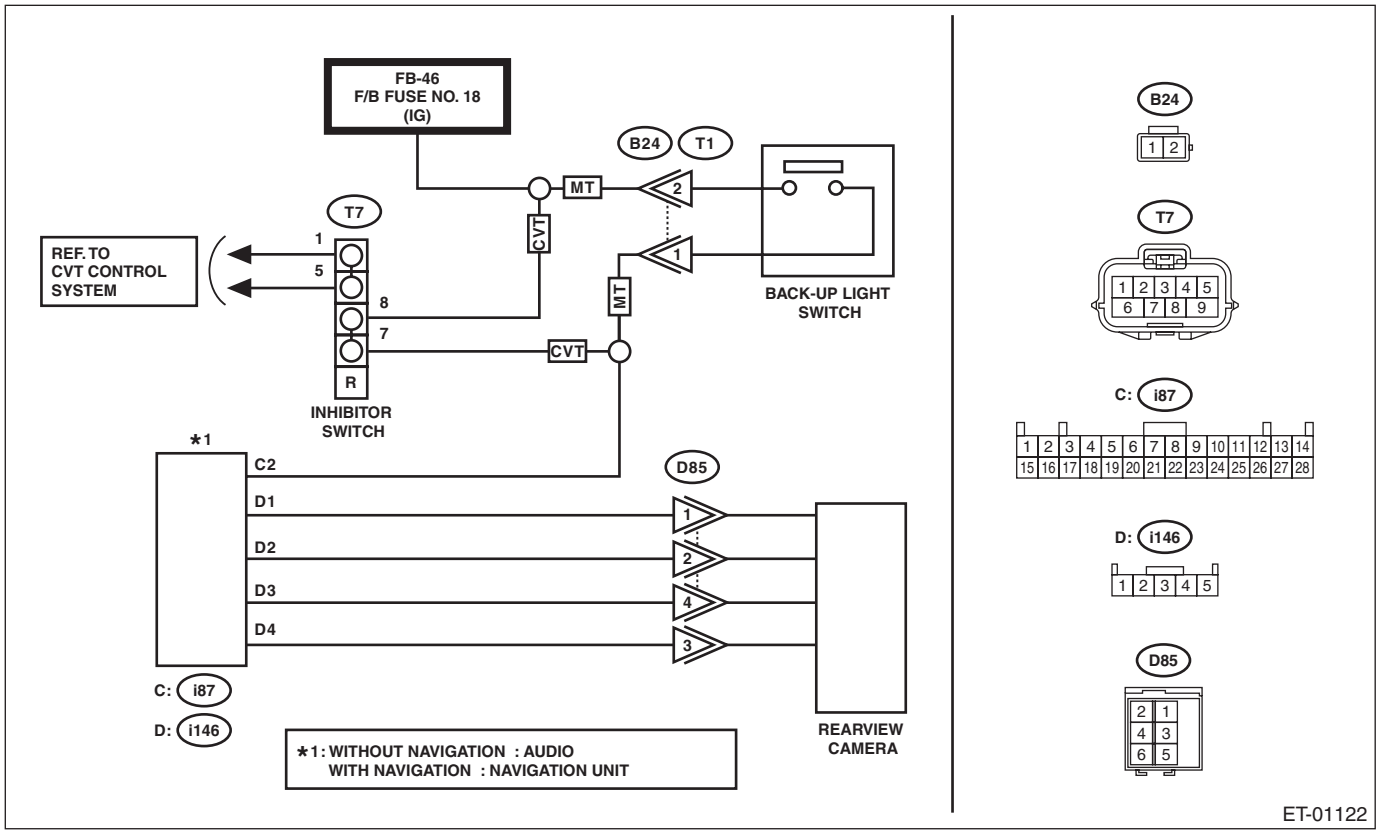
• Detected when the connection with the Bluetooth module has established but the module does not respond to the initialization request, and there is no response from the module even after trying to reset the Bluetooth module three times.

TROUBLE SYMPTOM:



Cannot connect with the Bluetooth device.

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Perform the Clear Memory Mode. <Ref. to INF(diag)-13, Clear Memory Mode.> 2) Turn the ignition switch to OFF → ON. 3) Read the DTC again. <Ref. to INF(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2249 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK BLUETOOTH DEVICE.** 1) Restart the Bluetooth device, and connect again. 2) Perform the Clear Memory Mode. <Ref. to INF(diag)-13, Clear Memory Mode.> 3) Turn the ignition switch to OFF → ON. 4) Read the DTC again. <Ref. to INF(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2249 displayed? (Current malfunction)	Go to step **3**.	Bluetooth device was faulty.
3	**CHECK BLUETOOTH DEVICE.** 1) Connect another Bluetooth device. NOTE: Supported network type: Ver. 3.0 +EDR compatible • Bluetooth Phone Profile – HFP: Ver. 1.6 – OPP: Ver. 1.2 – PBAP: Ver. 1.1 – MAP: Ver. 1.0 – SPP: Ver. 1.1 • Bluetooth Audio Device Profile – A2DP: Ver. 1.2 – AVRCP: Ver. 1.4 2) Perform the Clear Memory Mode. <Ref. to INF(diag)-13, Clear Memory Mode.> 3) Turn the ignition switch to OFF → ON. 4) Read the DTC again. <Ref. to INF(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2249 displayed? (Current malfunction)	Replace the audio (7-inch display) or navigation unit. <Ref. to ET-12, Audio.> <Ref. to ET-33, Navigation Body.>	Bluetooth device was faulty.



H: DTC B224A CAMERA IMAGE

DTC DETECTING CONDITION:
Detected when the synchronization error occurs in the condition of the picture input.
TROUBLE SYMPTOM:
Camera image does not appear.
WIRING DIAGRAM:
Rearview Camera System <Ref. to WI-386, WIRING DIAGRAM, Rearview Camera System.>
Navigation system <Ref. to WI-332, WIRING DIAGRAM, Navigation System.>
Audio system <Ref. to WI-116, WIRING DIAGRAM, Audio System.>
Back-up light system <Ref. to WI-139, WIRING DIAGRAM, Back-up Light System.>

- Sedan model

- OUTBACK model

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Confirm the current data «Rear camera connection state» of the infotainment system. <Ref. to INF(diag)-15, Read Current Data.>	Is «ON» displayed?	Go to step **2**.	Go to step **3**.
2	**CHECK CURRENT DATA.** Confirm the current data «Reverse connection state» of the infotainment system. <Ref. to INF(diag)-15, Read Current Data.>	Is «ON» displayed when the shift lever is set to the reverse range?	Go to step **3**.	Go to step **6**.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the audio (7-inch display) connector or navigation unit connector. 2) Disconnect the rearview camera connector. 3) Using the tester, measure the resistance of harness between rearview camera connector and audio (7-inch display) connector or navigation unit connector. ***Connector & terminal*** ***Sedan model*** ***(i146) No. 1 — (R330) No. 4:*** ***(i146) No. 2 — (R330) No. 3:*** ***(i146) No. 3 — (R330) No. 1:*** ***(i146) No. 4 — (R330) No. 2:*** ***OUTBACK model*** ***(i146) No. 1 — (D85) No. 1:*** ***(i146) No. 2 — (D85) No. 2:*** ***(i146) No. 3 — (D85) No. 4:*** ***(i146) No. 4 — (D85) No. 3:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness between audio (7-inch display) connector or navigation unit connector and rearview camera.

Step		Check	Yes	No
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using the tester, measure the resistance of harness between audio (7-inch display) connector or navigation unit connector and chassis ground. ***Connector & terminal*** ***Sedan model*** ***(i146) No. 1 — Chassis ground:*** ***(i146) No. 2 — Chassis ground:*** ***(i146) No. 3 — Chassis ground:*** ***(i146) No. 4 — Chassis ground:*** ***OUTBACK model*** ***(i146) No. 1 — Chassis ground:*** ***(i146) No. 2 — Chassis ground:*** ***(i146) No. 3 — Chassis ground:*** ***(i146) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short to ground in harness between audio (7-inch display) connector or navigation unit connector and rearview camera.
5	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between audio (7-inch display) connector or navigation unit connector and chassis ground. (With each connector disconnected) ***Connector & terminal*** ***Sedan model*** ***(i146) No. 1 (+) — Chassis ground (–):*** ***(i146) No. 2 (+) — Chassis ground (–):*** ***(i146) No. 3 (+) — Chassis ground (–):*** ***(i146) No. 4 (+) — Chassis ground (–):*** ***OUTBACK model*** ***(i146) No. 1 (+) — Chassis ground (–):*** ***(i146) No. 2 (+) — Chassis ground (–):*** ***(i146) No. 3 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **6**.	Repair the short to power supply in harness between audio (7-inch display) connector or navigation unit connector and rearview camera.
6	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the audio (7-inch display) connector or navigation unit connector. 2) Disconnect the inhibitor switch connector. 3) Using the tester, measure the resistance of harness between inhibitor switch connector or back-up light switch connector and audio (7-inch display) connector or navigation unit connector. ***Connector & terminal*** ***CVT model*** ***(i87) No. 2 — (T7) No. 7:*** ***MT model*** ***(i87) No. 2 — (B24) No. 1:***	Is the resistance less than 1 Ω?	Go to step **7**.	Repair the open circuit of harness between audio (7-inch display) connector or navigation unit connector and inhibitor switch connector or back-up light switch connector.
7	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using the tester, measure the resistance of harness between audio (7-inch display) connector or navigation unit connector and chassis ground. ***Connector & terminal*** ***(i87) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **8**.	Repair the short to ground in harness between audio (7-inch display) connector or navigation unit connector and inhibitor switch connector or back-up light switch connector.

	Step	Check	Yes	No
8	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between audio (7-inch display) connector or navigation unit connector and chassis ground. (With each connector disconnected) ***Connector & terminal*** ***(i87) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **9**.	Repair the short to power supply in harness between audio (7-inch display) connector or navigation unit connector and inhibitor switch connector or back-up light switch connector.
9	**CHECK REARVIEW CAMERA.** Check the rearview camera according to the instructions of rearview camera operation manual.	Is there any fault?	Replace the rearview camera. <Ref. to ET-35, Rearview Camera System.>	Replace the audio (7-inch display) or navigation unit. <Ref. to ET-12, Audio.> <Ref. to ET-33, Navigation Body.>

I: DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF

Detected when CAN line abnormality is detected.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

J: DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”

Detected when CAN data from ECM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

K: DTC U0101 LOST COMMUNICATION WITH TCM

Detected when CAN data from TCM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

L: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC CM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

M: DTC U0128 LOST COMMUNICATION WITH PARK BRAKE CONTROL MODULE

Detected when CAN data from VDC CM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

N: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

Detected when CAN data from combination meter does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

O: DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE

Detected when CAN data from A/C CM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

P: DTC U0167 LOST COMMUNICATION WITH IMMOBILIZER CONTROL MODULE

Detected when CAN data from immobilizer CM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Q: DTC U0327 SOFTWARE INCOMPATIBILITY WITH VEHICLE SECURITY CONTROL MODULE

Detected when CAN data is not received from keyless access CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

R: DTC U1140 LOST COMMUNICATION WITH BODY CONTROL MODULE BODY-CAN

Detected when CAN data is not received from body integrated unit.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

S: DTC U1232 LOST COMMUNICATION WITH REAR/SIDE RADAR CONTROL MODULE

Detected when CAN data from the radar sensor does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

13.Diagnostics with Phenomenon

A: LIST

1. CHECK ABNORMALITY OF STARLINK

Symptoms	Counter-measure
STARLINK app was terminated.	Perform the procedures described on “Confirm connection between smartphone and unit”. <Ref. to INF(diag)-31, STARLINK IS FAULTY, INSPECTION, Diagnostics with Phenomenon.>
Smartphone was powered off while connecting via the STARLINK.	
Bluetooth connection stops while connecting via the STARLINK.	
Communication gets out of service while connecting via the STARLINK.	
Radio wave reception becomes worse while connecting via the STARLINK.	

NOTE:
Possible STARLINK error messages with relation to the above symptoms

Details of message
Please disconnect mobile device and install the STARLINK application on your mobile device and try again. Bluetooth disconnected, please reconnect and try again. Smartphone data connection is poor, please try to connect again.

B: INSPECTION

1. STARLINK IS FAULTY

	Step	Check	Yes	No
1	**CHECK COMPATIBILITY OF SMARTPHONE.** Check that the customer’s smartphone is compatible with the system. • iPhone: iOS 4.3.5 or later • Android: Android 4.0 or later	Is it compatible?	Go to step **2**.	Notify the customer of the incompatibility.
2	**ACTIVATION OF APP.** Check the STARLINK app of the smartphone.	Is it installed?	Go to step **4**.	Go to step **3**.
3	**INSTALLATION OF APP.** Install STARLINK app to smartphone.	Is installation successful?	Go to step **4**.	Reboot the smartphone, and install the STARLINK.
4	**ACTIVATION OF APP.** Activate STARLINK app.	Is STARLINK app activated?	Go to step **5**.	Reinstall the app and activate it. If you still fail to activate it, the smartphone may be defective.

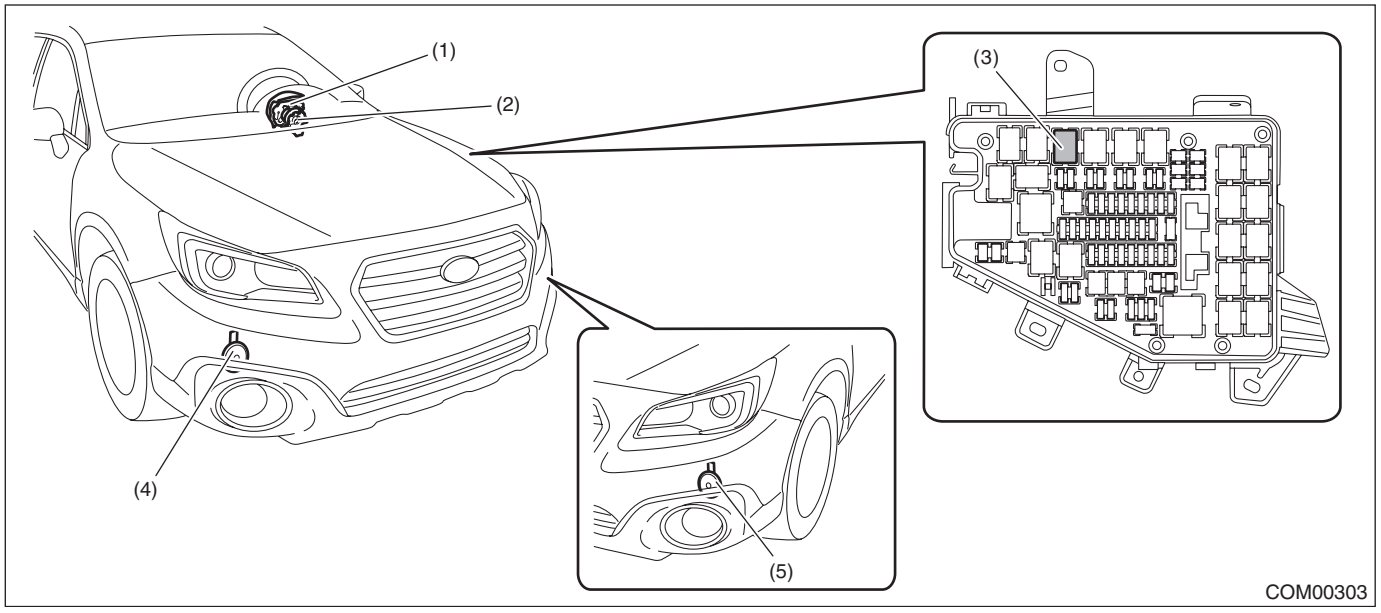
	Step	Check	Yes	No
5	**CHECK BLUETOOTH CONNECTION.** NOTE: For a 6.2-inch iPhone model (with USB connection), go to the next step. Confirm the Bluetooth connection with the unit.	Is Bluetooth connection established?	Go to step **7**.	Check that the unit can connect with other smartphones. If successful, the smartphone may be defective. If the unit cannot communicate with other smartphones, replace the audio or navigation unit. <Ref. to ET-12, Audio.> <Ref. to ET-33, Navigation Body.>
6	**CHECK USB (FOR A 6.2-INCH IPHONE MODEL).** Check that the USB cable is connected to the unit.	Is USB connection successful?	Go to step **7**.	Check that the unit can connect with other smartphones. If successful, the smartphone may be defective. If the unit cannot communicate with other smartphones, replace the audio or navigation unit. <Ref. to ET-12, Audio.> <Ref. to ET-33, Navigation Body.>
7	**REBOOT THE SMARTPHONE.** 1) Reboot the smartphone. 2) Reinstall the STARLINK app.	Is it operating normally?	The system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.	Go to step **8**.
8	**CHECK POWER SUPPLY.** Turn the ignition switch to OFF → ACC ON.	Is it operating normally?	The system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.	Go to step **9**.
9	**DELETE CACHE INFORMATION OF UNIT.** Delete cache information of the unit. Refer to the Notes in the margin.	Is it operating normally?	Cache information temporary stored in the unit was corrupted. Currently, it is normal.	Perform the procedures described on “Check STARLINK service”. <Ref. to INF(diag)-33, CHECK STARLINK SERVICE, INSPECTION, Diagnostics with Phenomenon.>

NOTE:
- 7-inch display
  1. Select STARLINK from the APPS screen.
  2. On the STARLINK display (including an error message screen), press and hold the right bottom corner of the screen for 30 seconds or more.
  3. Lift your finger off the screen. If the message [Select Audio Source] appears when you lift your finger off the screen, the cache information is successfully deleted.
- 6.2-inch display
  1. Press the HOME button to display the HOME screen.
  2. Press the SETTINGS key to display the SETTINGS screen. (The most recent set entry is displayed.)
  3. Press the Settings General key to display the Settings General screen.
  4. Press the System Software key to display the System Software screen.
  5. Press the Delete key, and press OK on the confirmation message display. Then the cache information is successfully deleted.

2. CHECK STARLINK SERVICE

	Step	Check	Yes	No
1	**CHECK SMARTPHONE.** Check the smartphone connection.	Can the smartphone connect the Internet?	Go to step **4**.	Go to step **2**.
2	**CHECK RADIO WAVE CONDITION.** Move to a location where the radio wave condition is good, and confirm the connection.	Can the smartphone connect the Internet?	Go to step **4**.	Go to step **3**.
3	**CHECK RADIO WAVE CONDITION.** Communication network gets busy at times even in a good radio wave location. In this case, wait for some time and then try again.	Can the smartphone connect the Internet?	Go to step **4**.	The smartphone may be defective.
4	**CHECK STARLINK.** Check service provision status with STARLINK.	Is there any problem in the service provision status?	Try to connect after the problem in service provision is solved.	Replace the audio or navigation unit. <Ref. to ET-12, Audio.> <Ref. to ET-33, Navigation Body.>

COMMUNICATION SYSTEM



COM

Page

1. General Description 2
2. Relay and Fuse 3
3. Horn System 4
4. Horn 5
5. Horn Switch 8

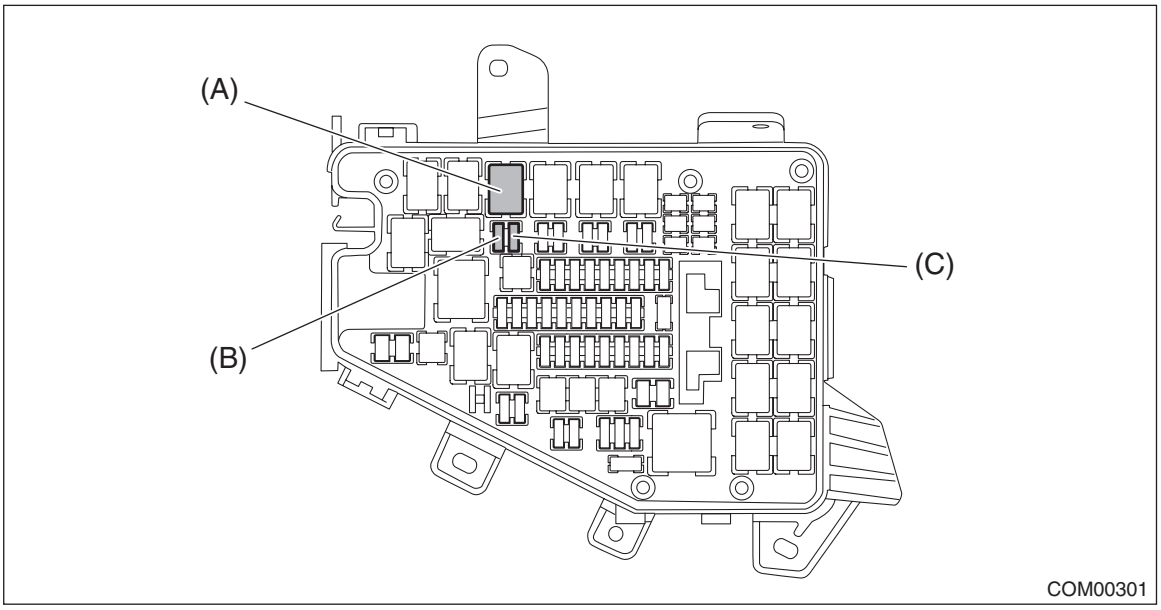
1. General Description

A: COMPONENT

(1) Horn switch (driver's airbag module ASSY)
(2) Roll connector
(3) Horn relay
(4) Horn ASSY - Hi
(5) Horn ASSY - Lo

B: CAUTION

- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- When replacing the parts provided with memory functions such as audio, record the memory contents before disconnecting the battery ground cable.
- Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
- When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-17, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>



C: PREPARATION TOOL

1. GENERAL TOOL

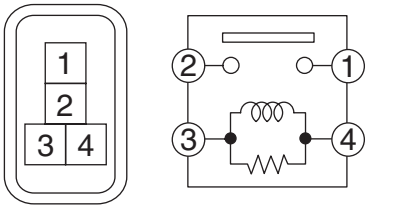
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.

2. Relay and Fuse

A: LOCATION

Main fuse box (M/B)	Horn relay	(A)
	Fuse 7.5 A (horn assembly - Hi)	(B)
	Fuse 7.5 A (horn assembly - Lo)	(C)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-23, Power Supply Circuit.>



B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

2. CHECK RELAY

1) Measure the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	
1 — 2	Apply battery voltage between terminals 4 and 3.	Less than 1 Ω	

2) Replace the relay if the inspection result is not within the standard value.

3. Horn System

A: WIRING DIAGRAM

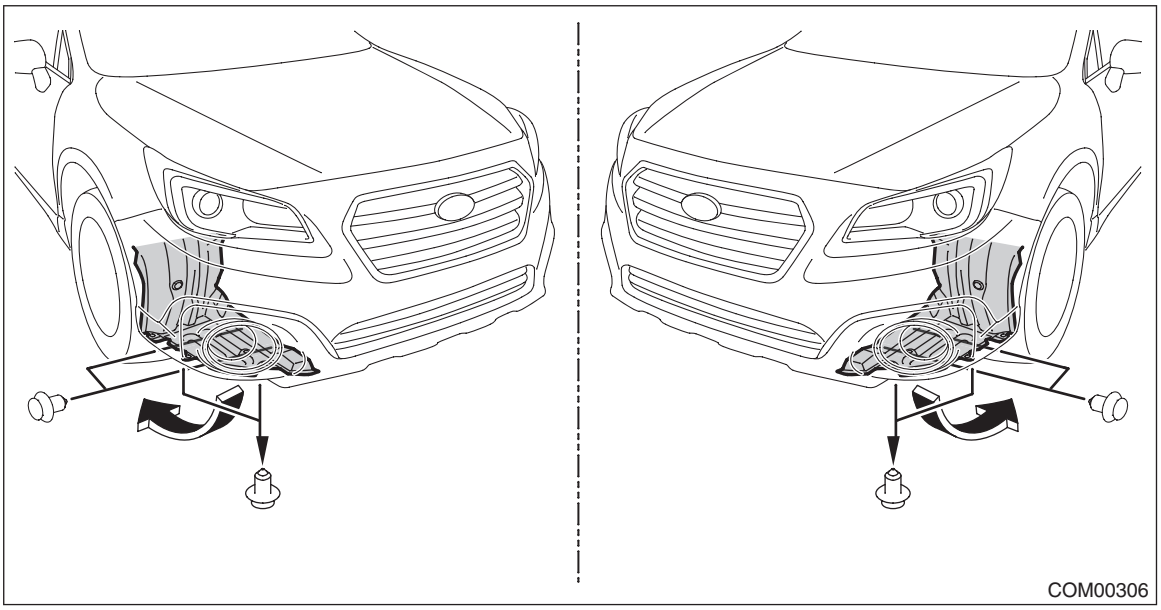
Refer to “Horn System” in the wiring diagram. <Ref. to WI-299, WIRING DIAGRAM, Horn System.>

B: INSPECTION

Symptoms	Inspection steps
Horn does not sound	1. Check the fuse.
	2. Check the horn relay.
	3. Check the roll connector.
	4. Check the horn switch.
	5. Check the horn assembly.
	6. Check the harness.

C: NOTE

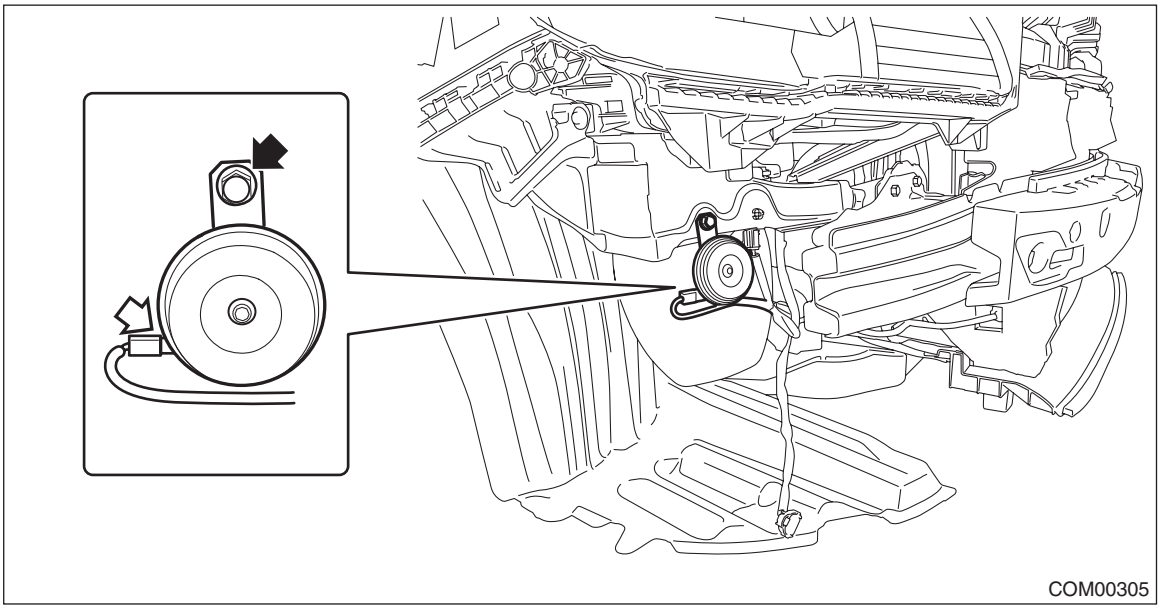
For procedure of each component in the horn system, refer to the respective section.



- Horn assembly: <Ref. to COM-5, Horn.>
- Horn switch: <Ref. to COM-8, Horn Switch.>

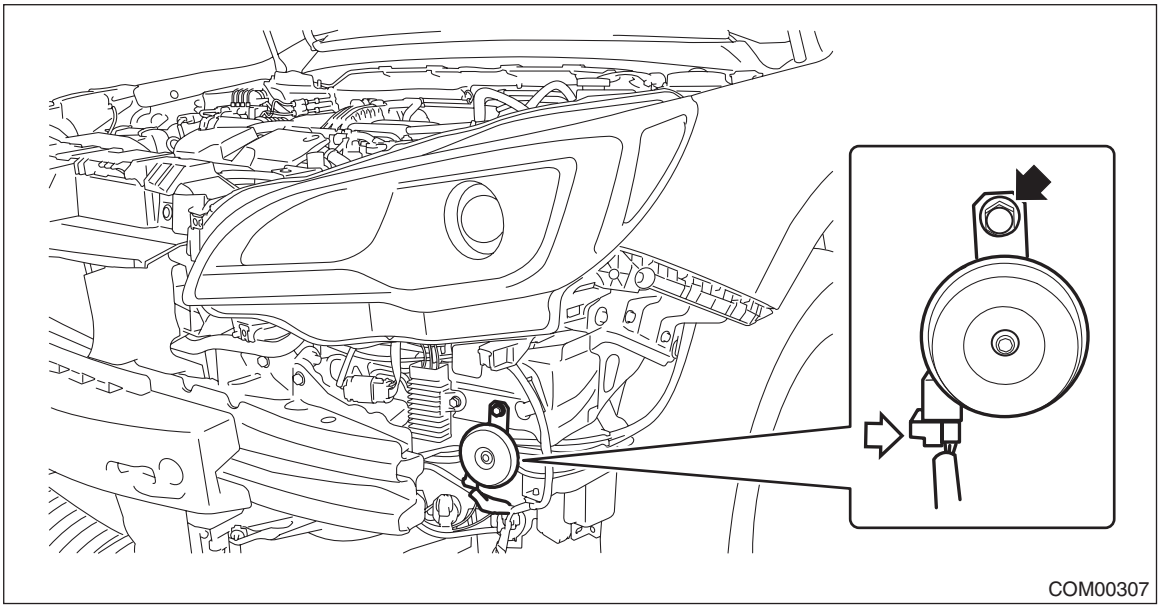
4. Horn

A: REMOVAL



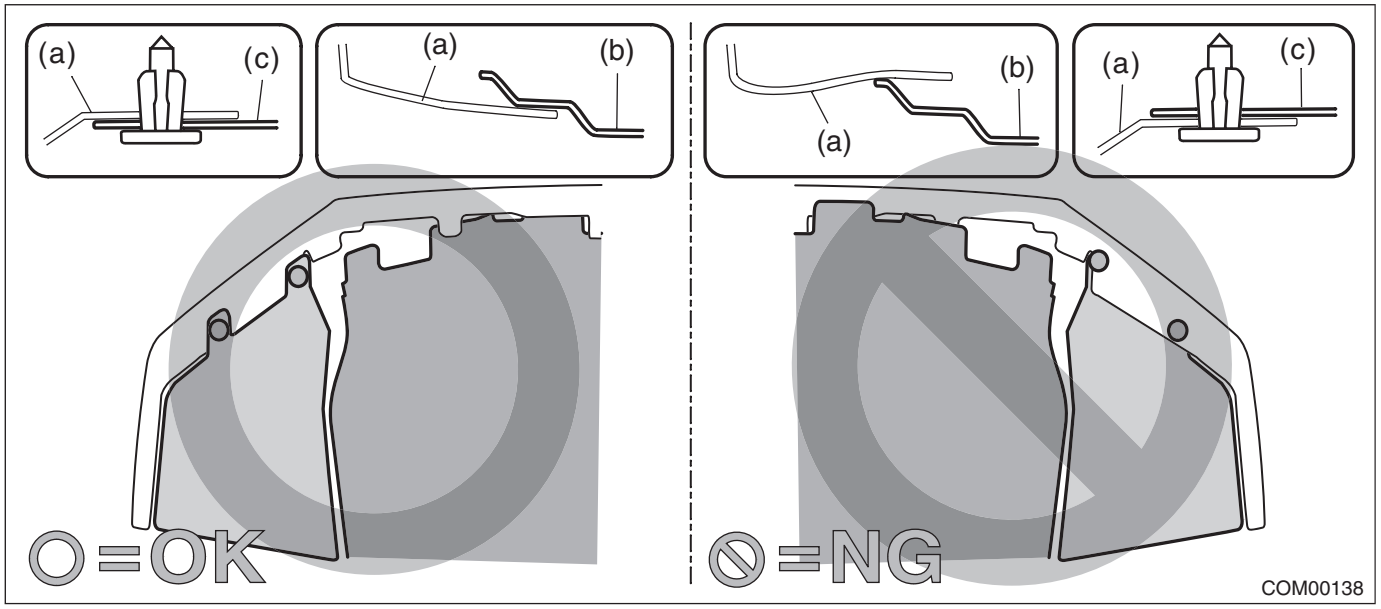
CAUTION:
When removing the horn, do not remove the bumper face – front. Bracket connection portion of the bumper face may become damaged.

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle.
3) Remove the clips, and turn over the mud guard - front.



NOTE:
- Hi side: Turn over the mud guard - front RH.
- Lo side: Turn over the mud guard - front LH.

4) Remove the horn assembly - Hi.
   (1) Disconnect the connector.
   (2) Remove the horn bracket mounting bolt, and remove the horn assembly - Hi.

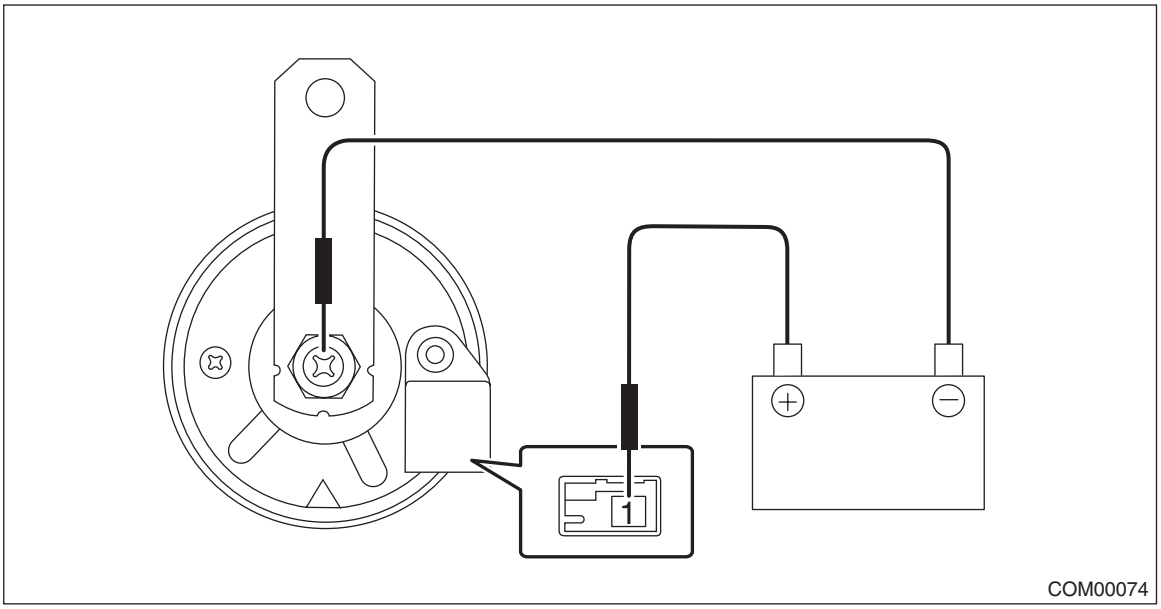


5) Remove the horn assembly - Lo.
   (1) Disconnect the connector.
   (2) Remove the horn bracket mounting bolt, and remove the horn assembly - Lo.

CAUTION:
The resistor may become hot. Be careful not to burn yourself.

B: INSTALLATION

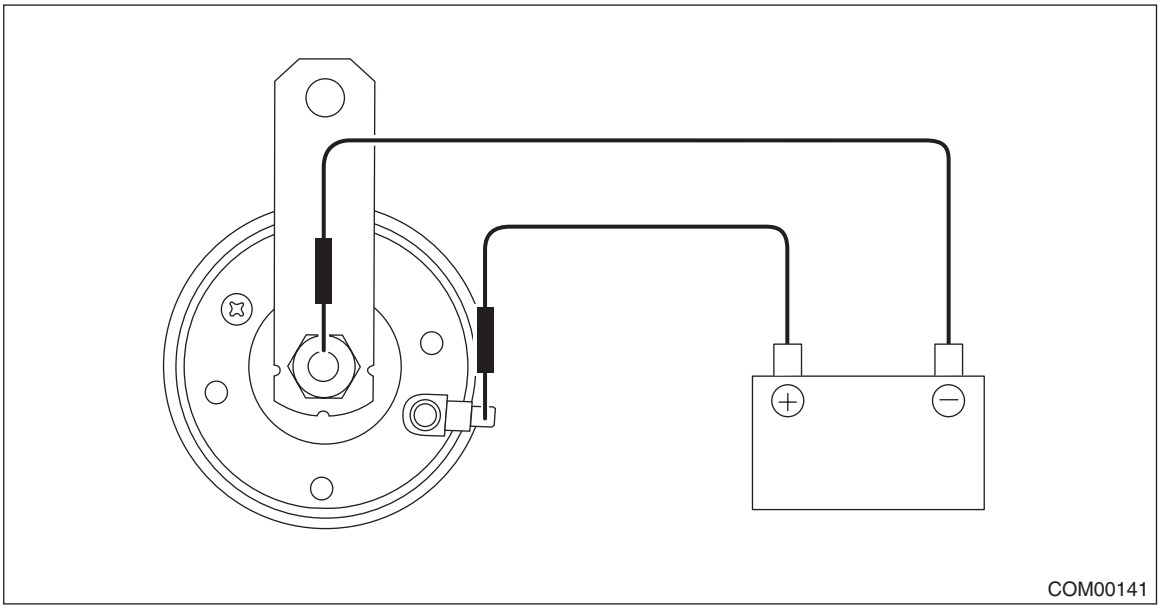
CAUTION:
Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).



1) Install the horn assembly.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)
2) Install the mud guard - front.
3) Lower the vehicle.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION



1) Remove the horn assembly (Hi side & Lo side). <Ref. to COM-5, REMOVAL, Horn.>
2) Check the horn sounds when applying the battery voltage to the horn assembly.

- Horn assembly - Lo side

Terminal No.	Inspection conditions	Specification
1 (+) — Horn case (–)	Connect battery to the terminals	Sounds

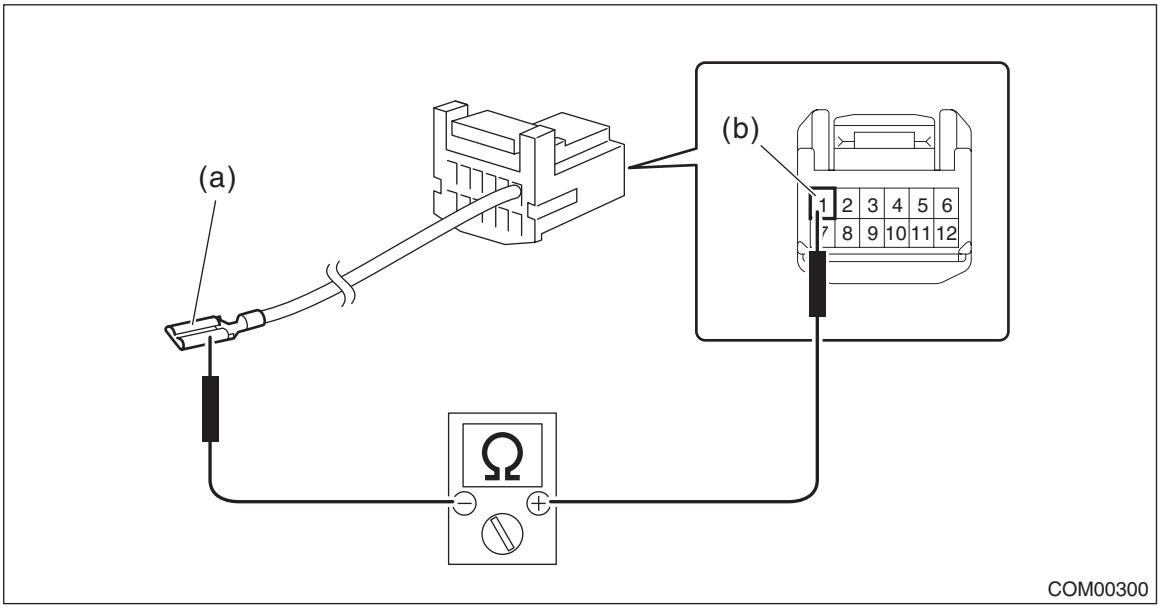
- Horn assembly - Hi side

Terminal No.	Inspection conditions	Specification
1 (+) — Horn case (–)	Connect battery to the terminals	Sounds

3) If it does not operate normally, replace the horn assembly.

5. Horn Switch

A: NOTE



- Horn switch is a unit with the driver's airbag module.
- Refer to "Airbag System" for removal and installation procedures of the driver's airbag module. <Ref. to AB-30, Driver's Airbag Module.>

B: INSPECTION

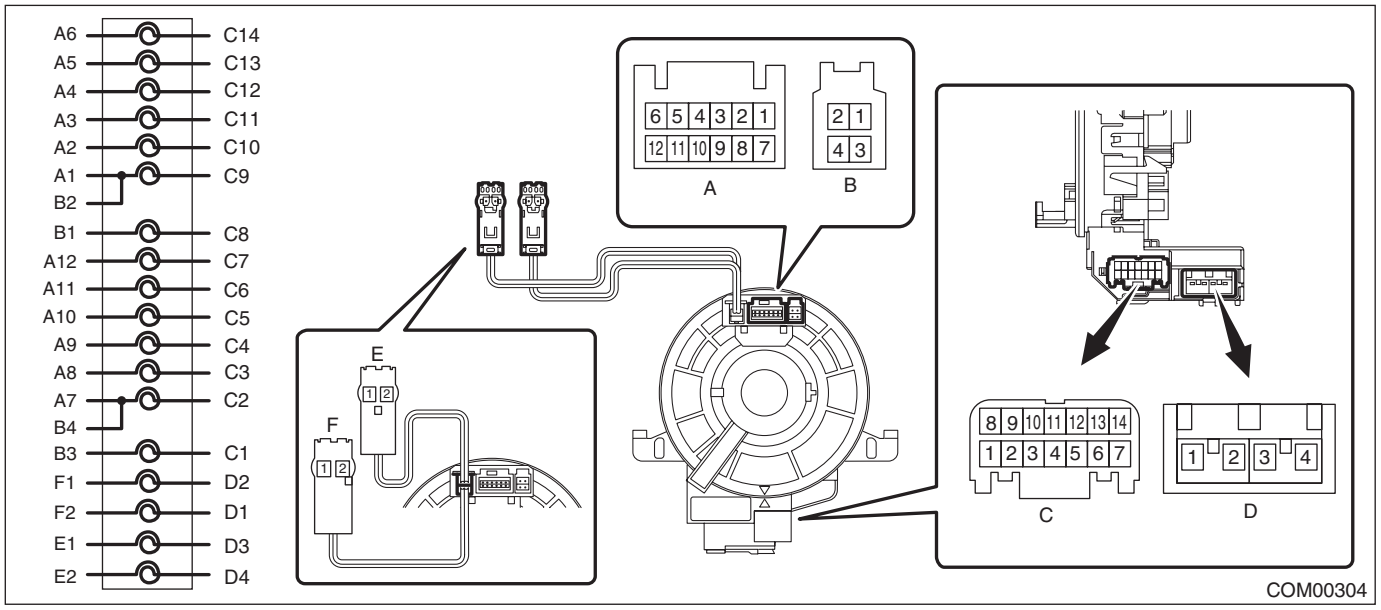
1. CHECK HORN SWITCH

1) Remove the driver's airbag module. <Ref. to AB-30, REMOVAL, Driver's Airbag Module.>
2) Check that the connection of the horn switch harness connector is correct.
3) Measure the resistance between connectors.

Preparation tool:
Circuit tester

(a) Ground terminal (b) Horn switch terminal

Terminal No.	Standard
Horn switch terminal — ground terminal	Less than 1 Ω



4) Replace the driver's airbag module if the inspection result is not within the standard value.

2. CHECK ROLL CONNECTOR

CAUTION:
If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

1) Remove the roll connector. <Ref. to AB-57, REMOVAL, Roll Connector.>
2) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
A1 — C9	Always	Less than 1 Ω

3) Replace the roll connector if the inspection result is not within the standard value.

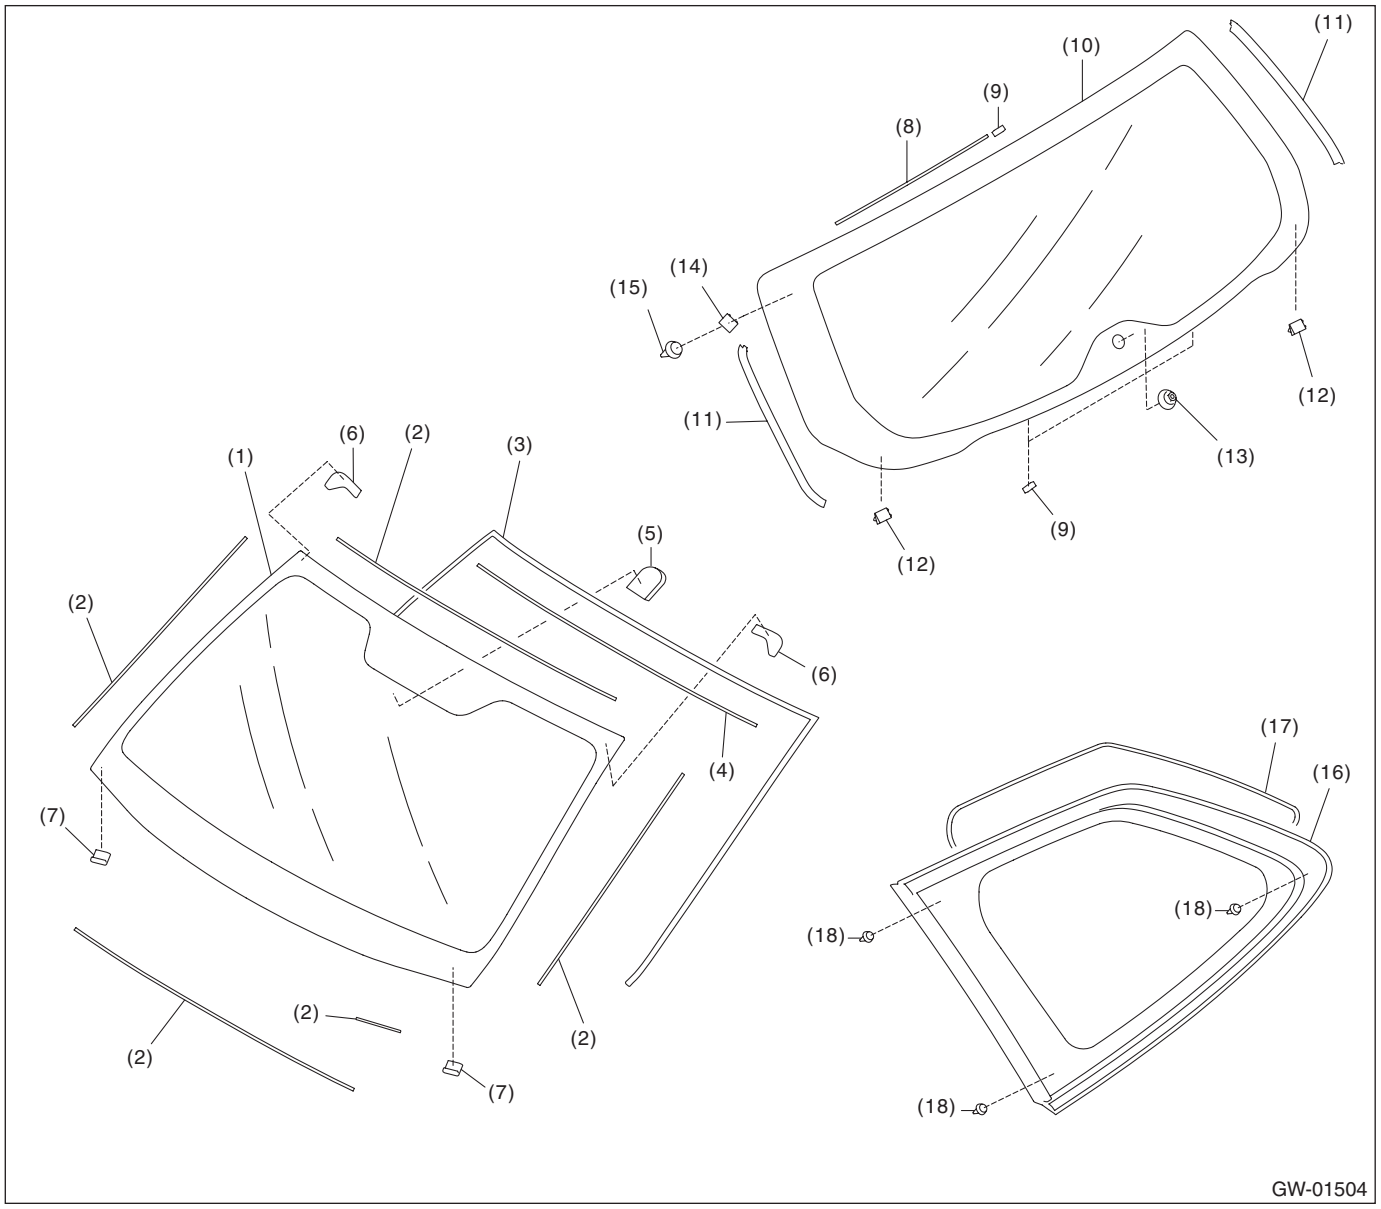
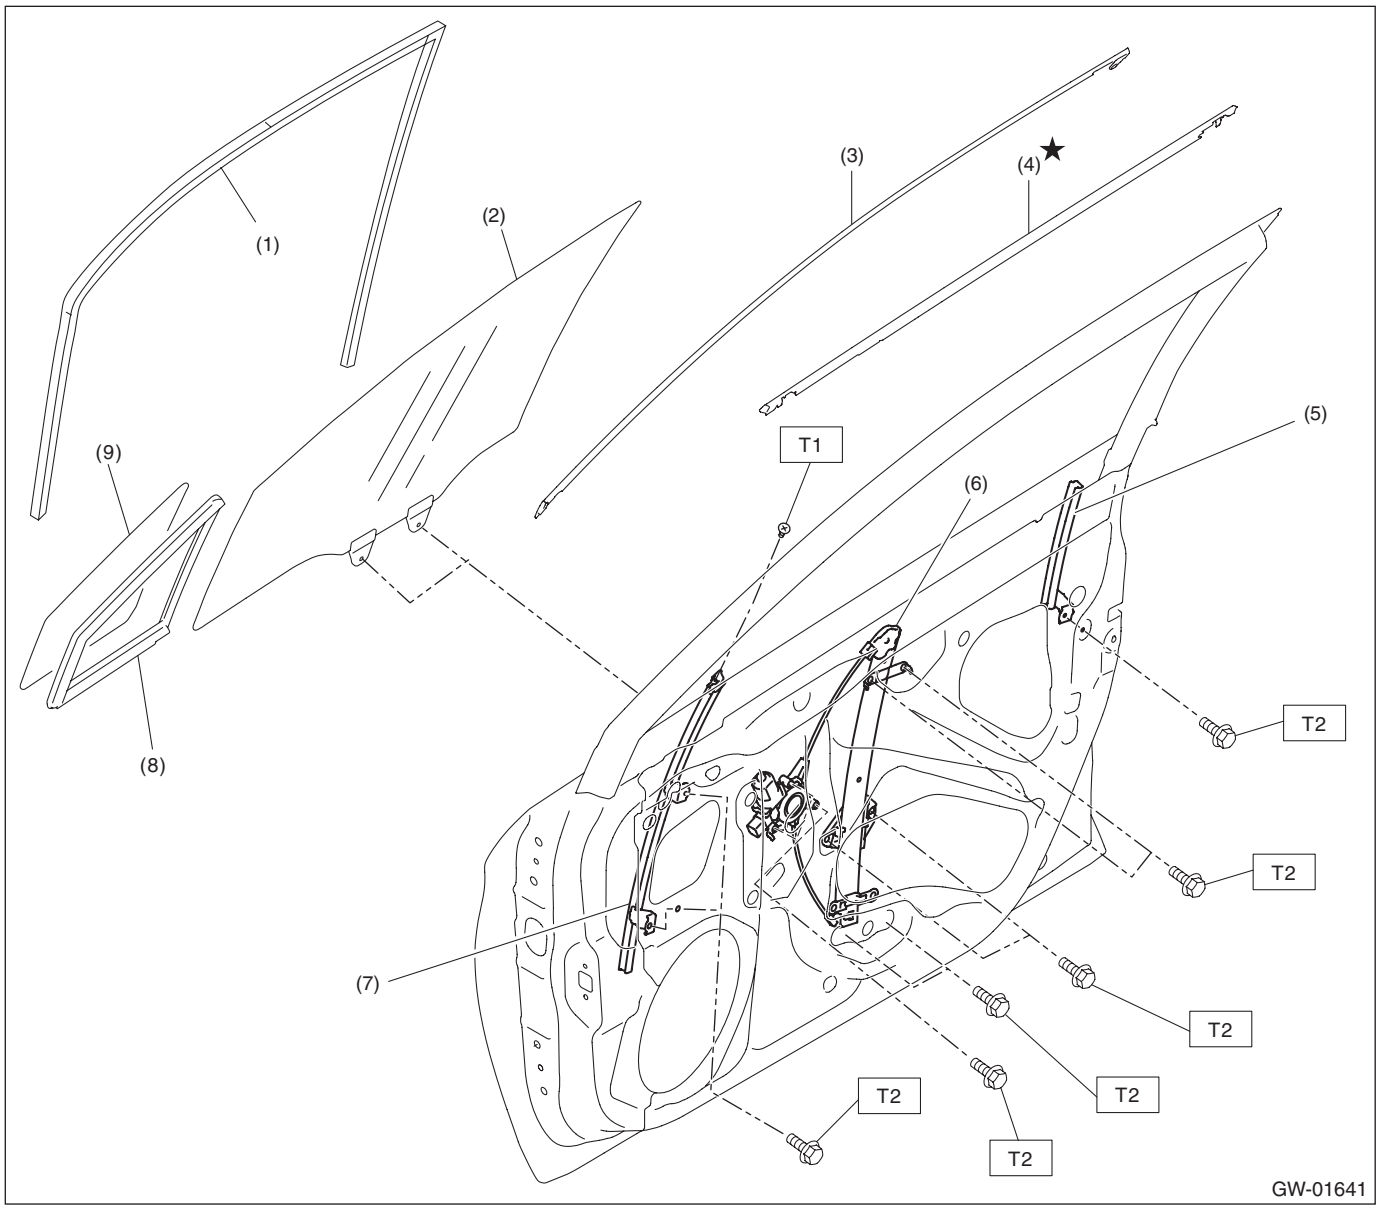
1. General Description



A: COMPONENT

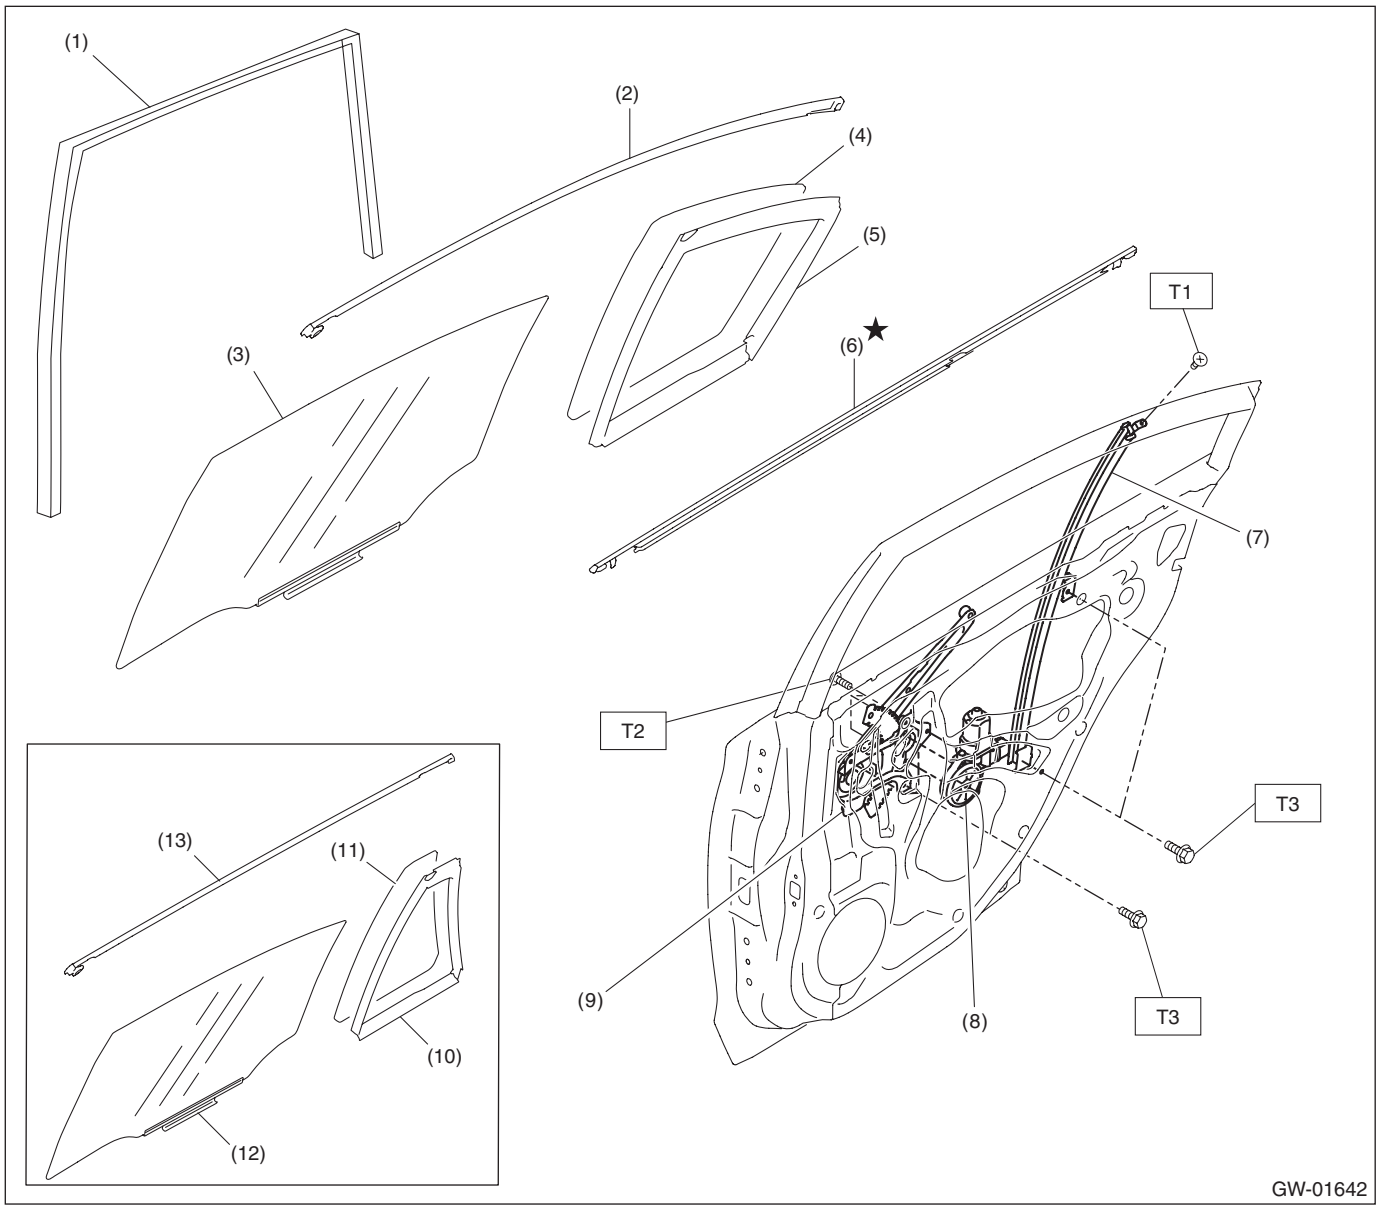
1. FIXED GLASS (SEDAN MODEL)



(1) Glass - front window
(2) Dam rubber - front
(3) Molding - front window
(4) Seal - upper side
(5) Base - inner mirror
(6) Locating pin - front window
(7) Seal - lower
(8) Molding - rear window
(9) Dam rubber - rear
(10) Glass - rear window
(11) Locating pin - rear window

2. FIXED GLASS (OUTBACK MODEL)

(1) Glass - front window
(2) Dam rubber - front
(3) Molding - front window
(4) Seal - upper
(5) Base - inner mirror
(6) Locating pin - front window
(7) Seal - lower
(8) Dam rubber - rear gate
(9) Spacer - rear gate
(10) Glass - rear gate
(11) Molding - rear gate side
(12) Locating pin - rear gate
(13) Cap - pivot
(14) Holder - rear gate upper
(15) Holder - clip rear gate
(16) Glass - rear quarter
(17) Dam rubber - rear quarter
(18) Clip



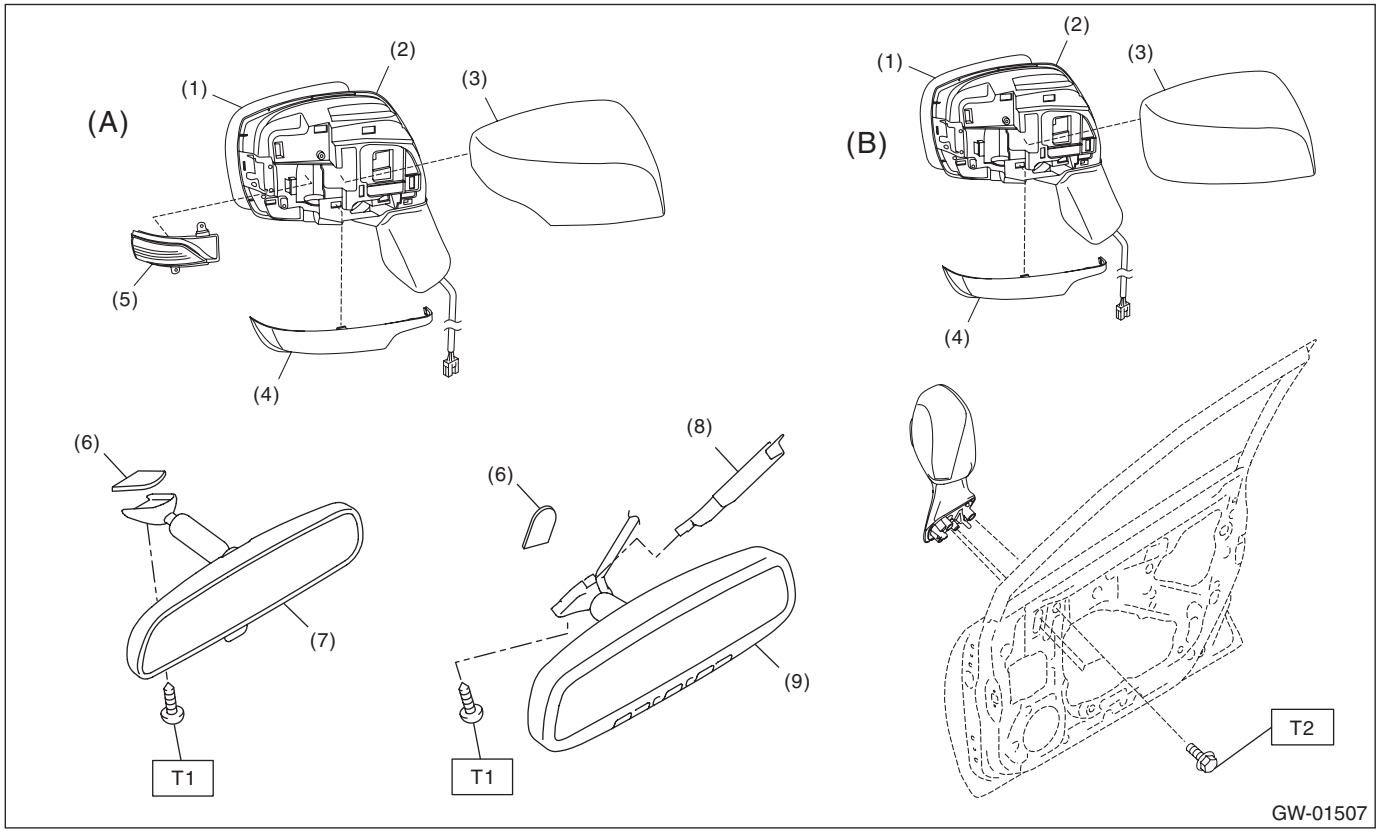
3. FRONT DOOR GLASS

(1) Running channel - front door
(2) Glass ASSY - front door
(3) Molding - door sash front
(4) Weather strip outer - front door
(5) Sash ASSY - lower
(6) Regulator & motor ASSY - front
(7) Sash ASSY - partition
(8) Weather strip - front door partition
(9) Glass - front door partition

Tightening torque: N·m (kgf-m, ft-lb)
T1: 2.2 (0.2, 1.6)
T2: 7.5 (0.8, 5.5)

4. REAR DOOR GLASS

(1)	Running channel - rear door	(8)	Motor - rear
(2)	Molding - door sash rear (sedan model)	(9)	Regulator - rear
(3)	Glass ASSY - rear door (sedan model)	(10)	Weather strip - rear door partition (OUTBACK model)
(4)	Glass - rear door partition (sedan model)	(11)	Glass - rear door partition (OUTBACK model)
(5)	Weather strip - rear door partition (sedan model)	(12)	Glass ASSY - rear door (OUTBACK model)
(6)	Weather strip outer - rear door	(13)	Molding - door sash rear (OUTBACK model)
(7)	Sash ASSY - rear partition		



Tightening torque: N·m (kgf-m, ft-lb)

T1: 2.2 (0.2, 1.6)

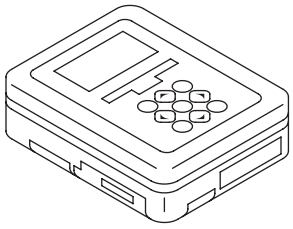
T2: 5.9 (0.6, 4.4)

T3: 7.5 (0.8, 5.5)

5. MIRROR

(A) Model with side turn
(B) Model without side turn

(1) Mirror - repair
(2) Mirror unit - door
(3) Cover - cap outer mirror
(4) Cover - cap outer mirror lower
(5) Light ASSY - side turn mirror
(6) Base - inner mirror
(7) Mirror ASSY - inner rearview (normal type)
(8) Harness cover
(9) Mirror ASSY - inner rearview (home link type)



Tightening torque: N·m (kgf-m, ft-lb)
T1: 2.0 (0.2, 1.5)
T2: 7.5 (0.8, 5.5)

B: CAUTION

• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.
• Avoid impact and damage to the glass.

C: PREPARATION TOOL

1. SPECIAL TOOL

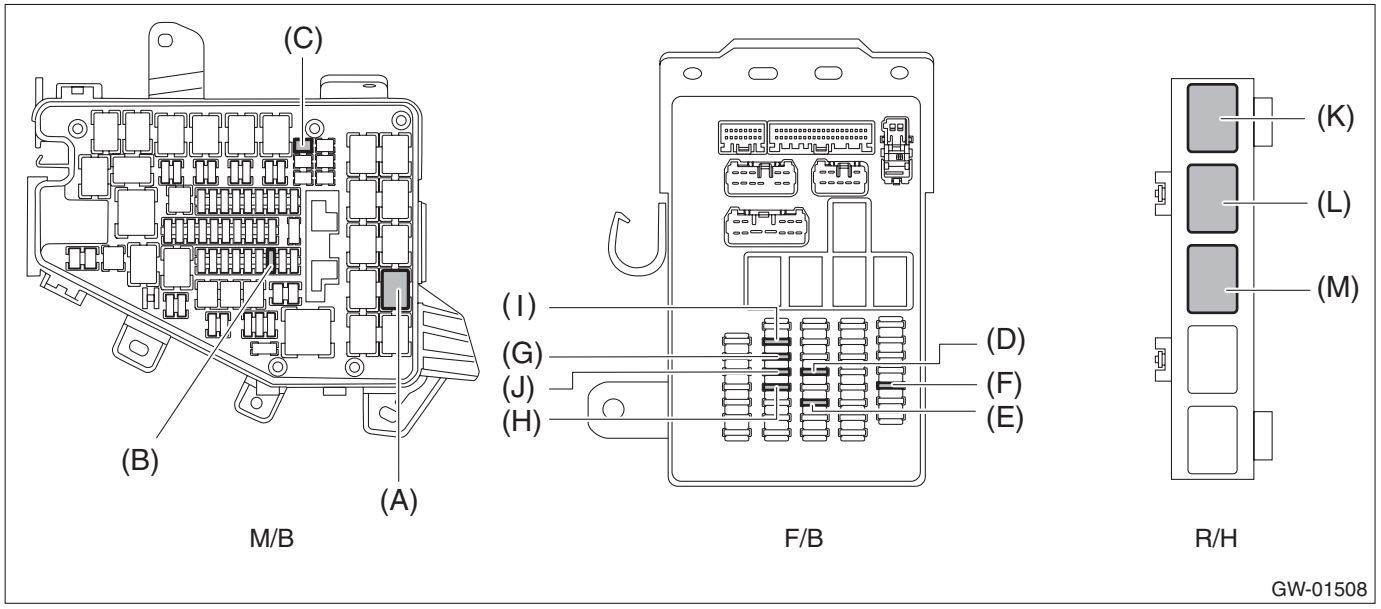


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for setting of each function and troubleshooting for electrical system.

2. GENERAL TOOL

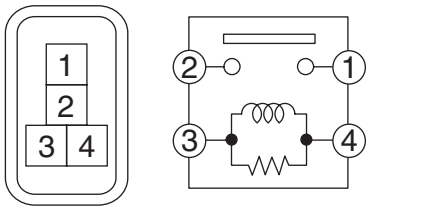
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.
Piano wire	Used for removing the window glass.
Cutter knife	Used for removing the window glass.
Windshield glass knife	Used for removing the window glass.

2. Relay and Fuse

A: LOCATION

Main fuse box (M/B)	Rear defogger relay	(A)
	Fuse 25 A (rear defogger)	(B)
	Slow blow fuse (power window)	(C)
Fuse & relay box (F/B)	Fuse 7.5 A (remote control mirror)	(D)
	Fuse 15 A (mirror heater, wiper deicer)	(E)
	Fuse 20 A (power window main switch)	(F)
	Fuse 30 A (power window main switch)	(G)
	Fuse 20 A (power window sub switch)	(H)
	Fuse 20 A (power window sub switch)	(I)
	Fuse 20 A (power window sub switch)	(J)
Relay holder (R/H)	Power window relay	(K)
	Wiper deicer relay	(L)
	Mirror heater relay	(M)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-23, Power Supply Circuit.>



B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

2. CHECK RELAY

1) Check the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 SR-00180
1 — 2	Apply battery voltage between terminals 4 and 3.	Less than 1 Ω	

2) Replace the relay if the inspection result is not within the standard value.

3. Power Window System

A: WIRING DIAGRAM

Refer to “Power Window System” in the wiring diagram. <Ref. to WI-368, WIRING DIAGRAM, Power Window System.>

B: INSPECTION

Symptoms	Inspection order
All power windows do not operate.	1. Check the fuse. 2. Check the power window relay. 3. Check the wiring harness.
Particular window does not operate.	1. Check the fuse. 2. Check the switch - power window main. 3. Check the switch - power window sub. 4. Check the power window motor. 5. Check the wiring harness.
“Window Lock” does not operate.	Check the switch - power window main.
Driver’s side window moves slightly (approx. 20 mm (0.79 in)).	1. Check the motor - front. 2. Check the switch - power window main. 3. Check the wiring harness.
Driver’s side window moves slightly (approx. 50 mm (1.97 in)). (This status is not a failure.)	Perform reset operation A. <Ref. to GW-10, RESET OPERATION A, OPERATION, Power Window System.>
Driver’s side window does not close completely. (Using AUTO UP allows the window to fully close first and then move in reverse resulting in slightly opening.)	Perform reset operation B. <Ref. to GW-10, RESET OPERATION B, OPERATION, Power Window System.>

C: OPERATION

1. RESET OPERATION A

1) Sit in the driver’s seat and close the door.
2) Turn the ignition switch to ON.
3) Operate the switch - power window main to open the glass assembly - front door halfway.
4) Operate the switch - power window main in “UP” direction to fully close the glass assembly - front door on the driver’s side.
5) While the glass assembly - front door is fully closed, hold down the switch - power window main in “UP” direction for one second.
6) Operate the switch - power window main in “AUTO DOWN” direction to check whether the window fully opens properly.

NOTE:
If the window does not fully open properly, repeat steps 1) to 6).

2. RESET OPERATION B

1) Sit in the driver’s seat and close the door.
2) Turn the ignition switch to ON.
3) On the glass assembly - front door of the driver’s side, operate the “AUTO UP” function (fully pull up the switch) using the switch - power window main, and perform auto-reverse operations 10 times in a row (after the window fully closes, it slightly opens).
4) Check that the “AUTO UP” function no longer operates.
5) Perform reset operation A.
6) Check that the window operates properly by operating the “AUTO UP” and “AUTO DOWN” switch.

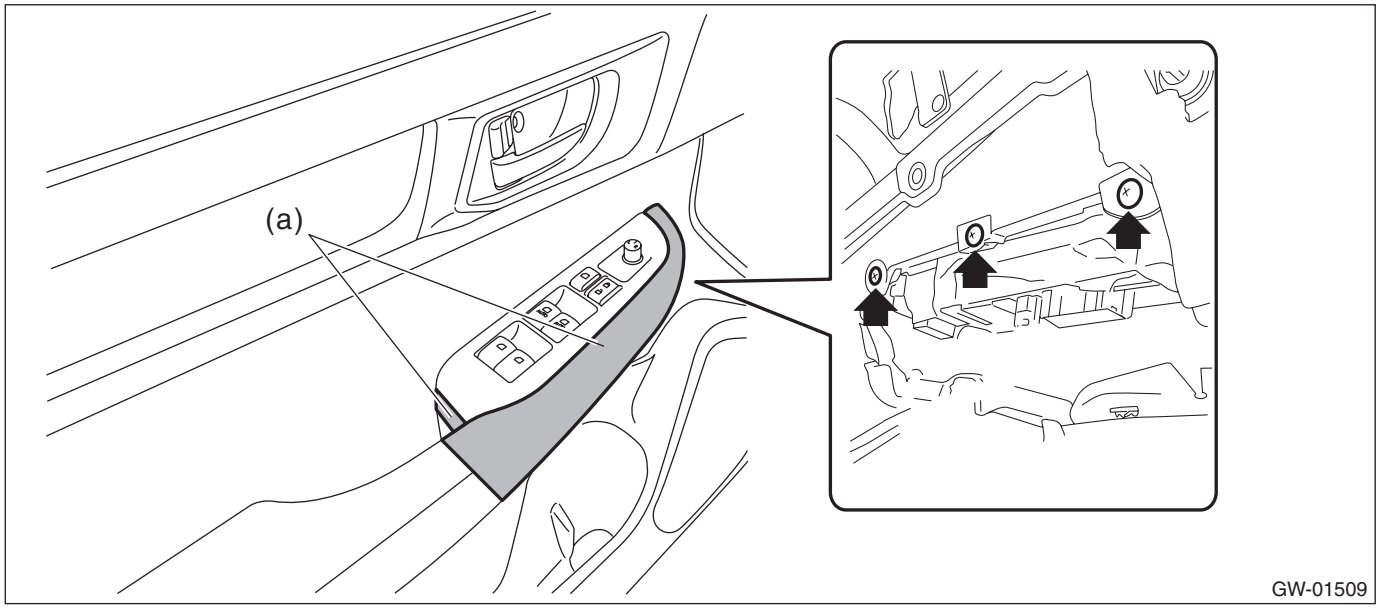
NOTE:
If the window does not fully open/close properly, repeat steps 1) to 6).

D: NOTE

For procedure of each component in the power window system, refer to the respective section.

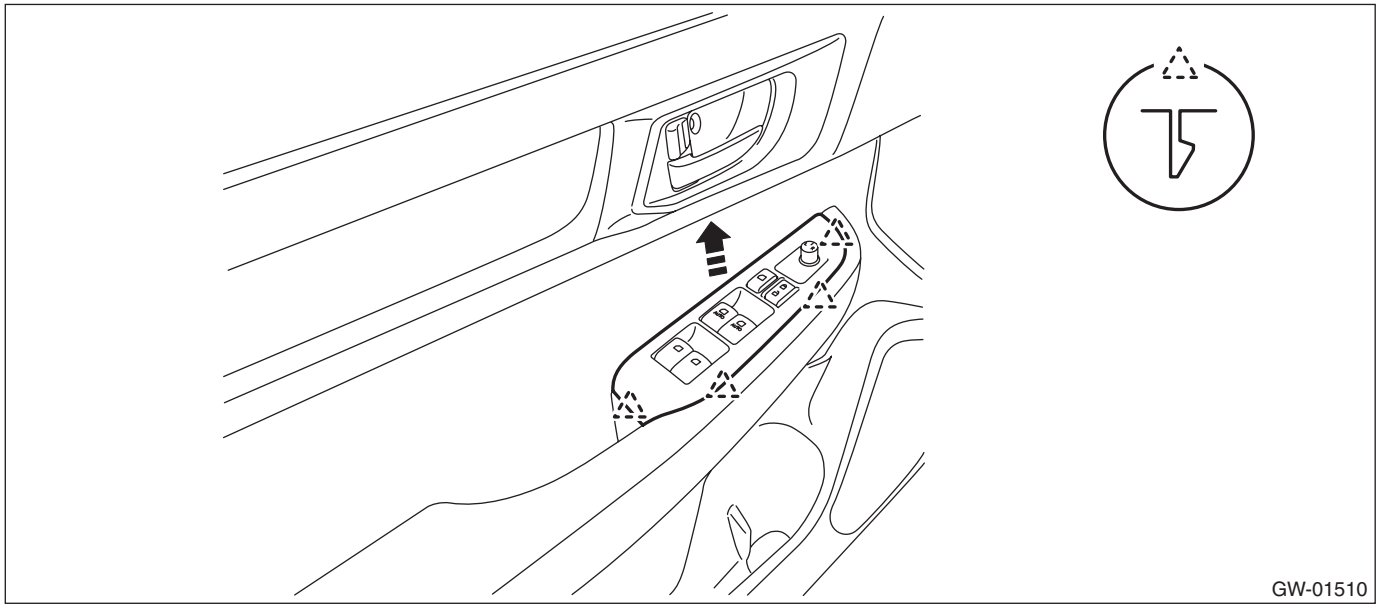
- Power window control switch: <Ref. to GW-12, Power Window Control Switch.>
- Front door glass: <Ref. to GW-20, Front Door Glass.>
- Front regulator and motor assembly: <Ref. to GW-23, Front Regulator and Motor Assembly.>
- Rear door glass: <Ref. to GW-33, Rear Door Glass.>
- Rear regulator and motor assembly: <Ref. to GW-35, Rear Regulator and Motor Assembly.>

4. Power Window Control Switch



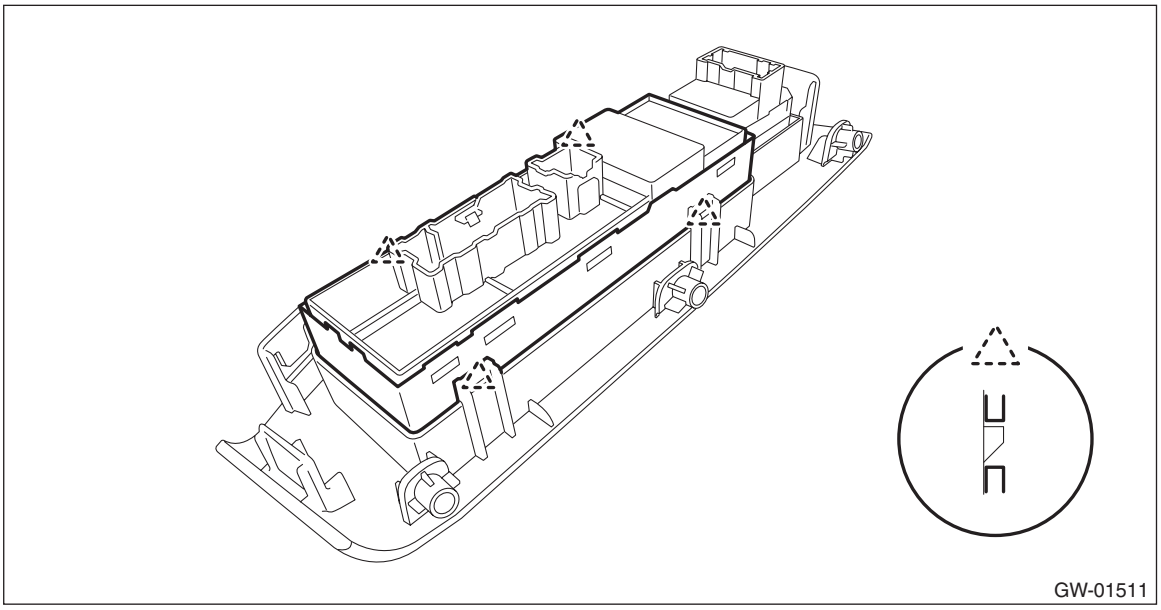
A: REMOVAL

1. MAIN SWITCH



1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front door. <Ref. to EI-70, FRONT DOOR, REMOVAL, Door Trim.>
3) Remove the panel - power window main switch.

CAUTION:
Be careful not to damage the trim panel - front door with the panel - power window main switch.



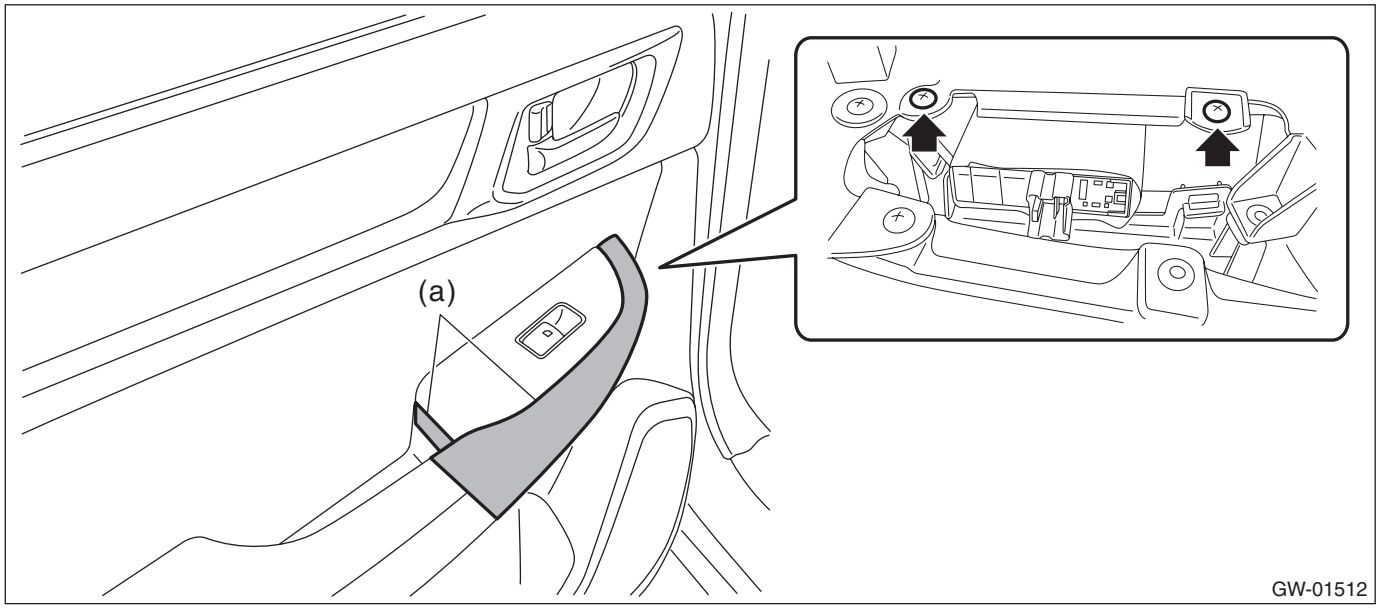
(1) Insert a sheet of protective paper (a) between panel - power window main switch and trim panel - front door.
(2) Remove the screws.

(3) Release the claws, and then remove the panel - power window main switch.

(4) Release the claws, and then remove the switch - power window main.

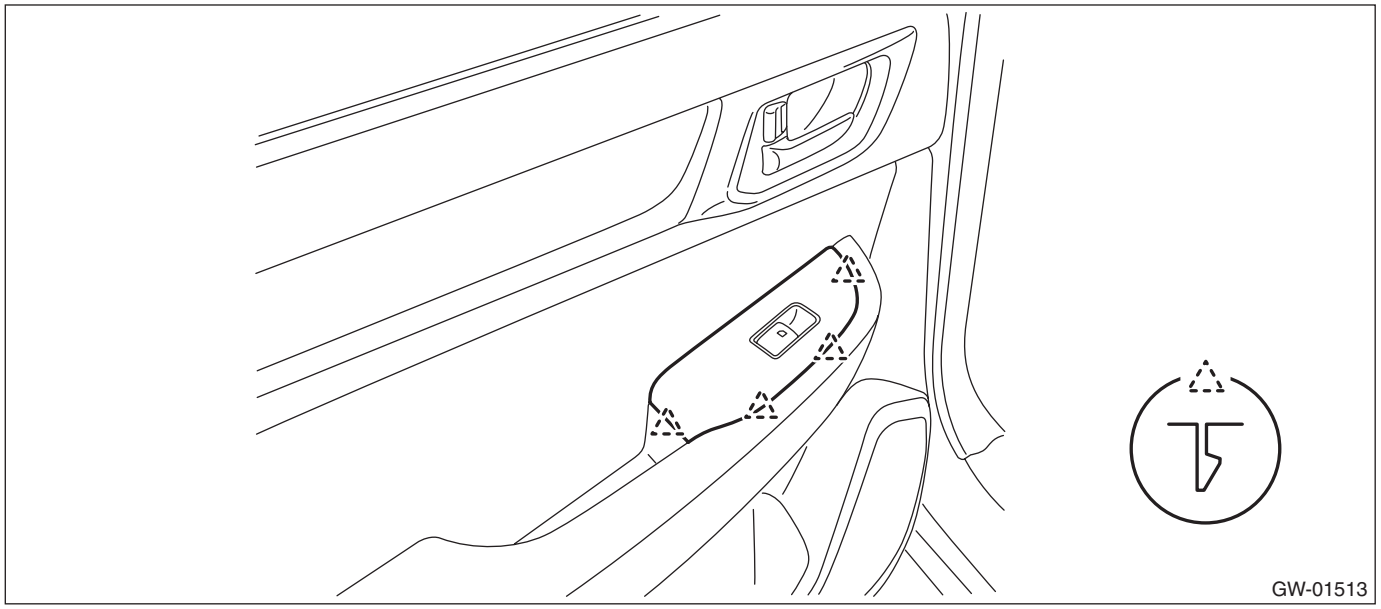
2. SUB-SWITCH

Switch - power window sub front



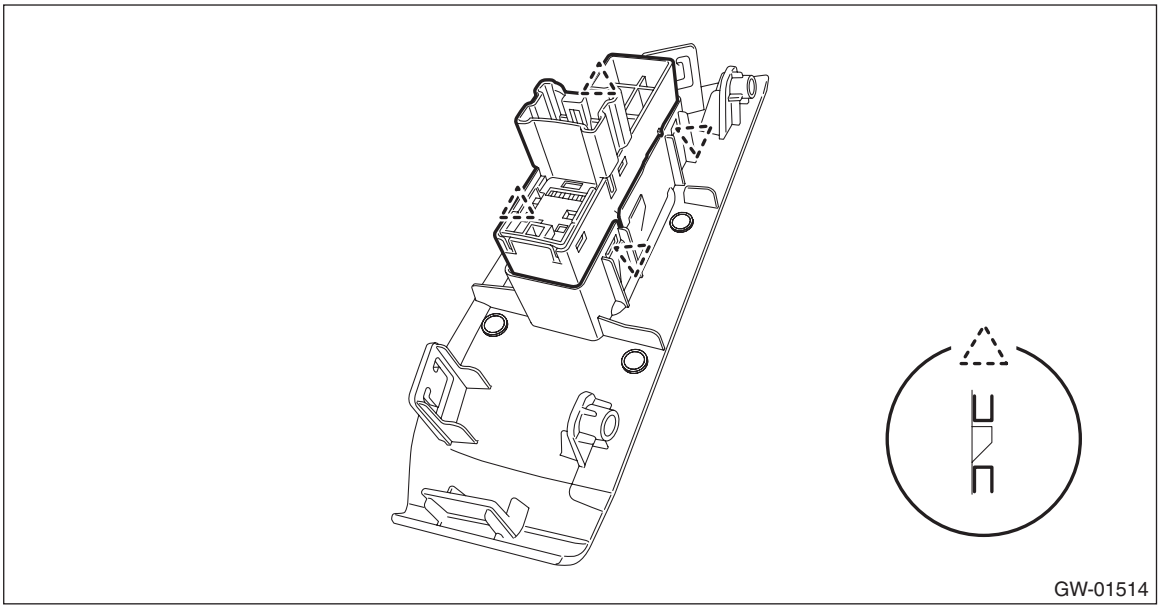
For removal of the switch - power window sub front on the passenger's seat, refer to the removal procedure of the switch - power window main. <Ref. to GW-12, MAIN SWITCH, REMOVAL, Power Window Control Switch.>

Switch - power window sub rear



1) Remove the ground terminal from the battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear door. <Ref. to EI-71, REAR DOOR, REMOVAL, Door Trim.>
3) Remove the panel - power window sub switch rear.

CAUTION:
Be careful not to damage the trim panel - rear door with the panel - power window sub switch rear.



(1) Insert a sheet of protective paper (a) between panel - power window sub switch rear and trim panel - rear door.
(2) Remove the screws.

(3) Release the claws, and then remove the panel - power window sub switch rear.

4) Release the claws, and then remove the switch - power window sub rear.

B: INSTALLATION

1. MAIN SWITCH

CAUTION:
• After installing the switch - power window main, always perform the initial setting.
Failure to do so may cause the improper activation of auto-reverse operation for pinching hazard prevention.
• Use protective paper to avoid damage to the trim panel.
1) Install the panel - power window main switch to the trim panel - front door.
2) Install the trim panel - front door. <Ref. to EI-71, INSTALLATION, Door Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Perform initial setting operation (reset operation A). <Ref. to GW-10, RESET OPERATION A, OPERATION, Power Window System.>

2. SUB-SWITCH

CAUTION:
Use protective paper to avoid damage to the trim panel.

Switch - power window sub front

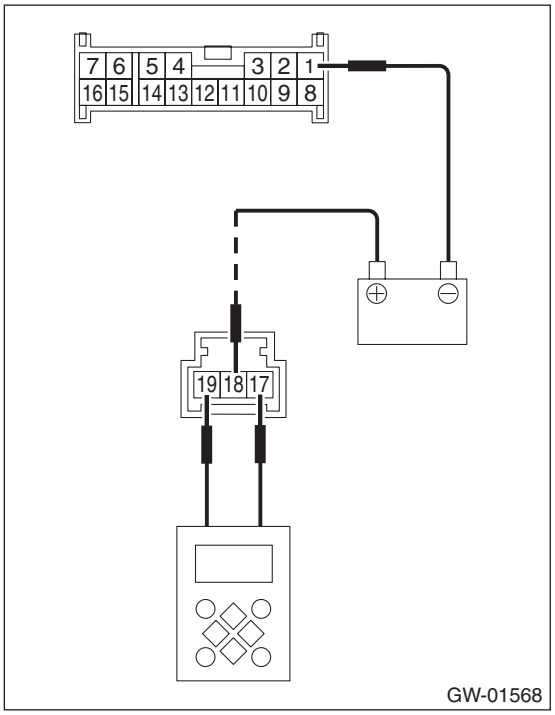
For installation of the switch - power window sub front on the passenger's seat, refer to the installation procedure of the switch - power window main. <Ref. to GW-15, MAIN SWITCH, INSTALLATION, Power Window Control Switch.>

Switch - power window sub rear

1) Install the panel - power window sub switch rear to the trim panel - rear door.
2) Install the trim panel - rear door. <Ref. to EI-71, INSTALLATION, Door Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1. MAIN SWITCH



• Driver's seat (model with AUTO)

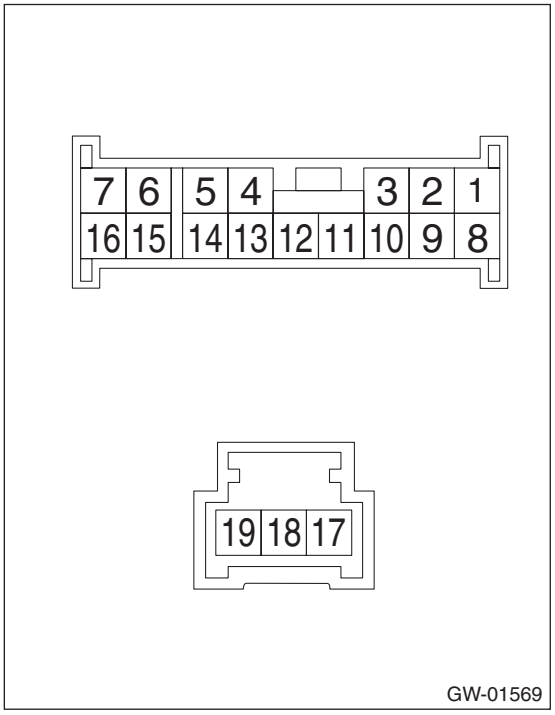
CAUTION:
• Since the switch - power window main is controlled by CPU, do not check continuity for switch alone with the circuit tester. Performing continuity check with circuit tester can damage the switch - power window main circuit.
• Since the passenger's seat switch cannot be checked by using the switch - power window main, use the switch - power window sub.
Check output from the switch - power window main to the driver's side motor using the oscilloscope function in the Subaru Select Monitor.
1) Remove the switch - power window main.
2) Connect the battery and the Subaru Select Monitor to the switch - power window main terminal.

CAUTION:
Never mix up the terminals when connecting the harness connector of the switch - power window main and the battery. If the connection is wrong, the switch - power window main may be damaged.

NOTE:
• When the battery is connected to the switch - power window main terminal, the letters "AUTO" on the driver's side knob illuminates.

- For detailed procedures, refer to “Subaru Select Monitor Operation Manual”.

3) Operate the switch - power window main and check the output.



NOTE:
Since output time during window UP operation is extremely short, it cannot be checked without using a measuring instrument such as oscilloscope. Output is constantly produced while the switch is operated for window DOWN operation.

Inspection conditions	Output time	Standard
AUTO UP	Approx. 130 ms	Battery voltage
UP		
OFF	—	0 V
DOWN	During switch operation	Battery voltage
AUTO DOWN	Approx. 300 ms	

4) If the inspection result is not within the standard, replace the switch - power window main.

• **Passenger's seat and rear seat**

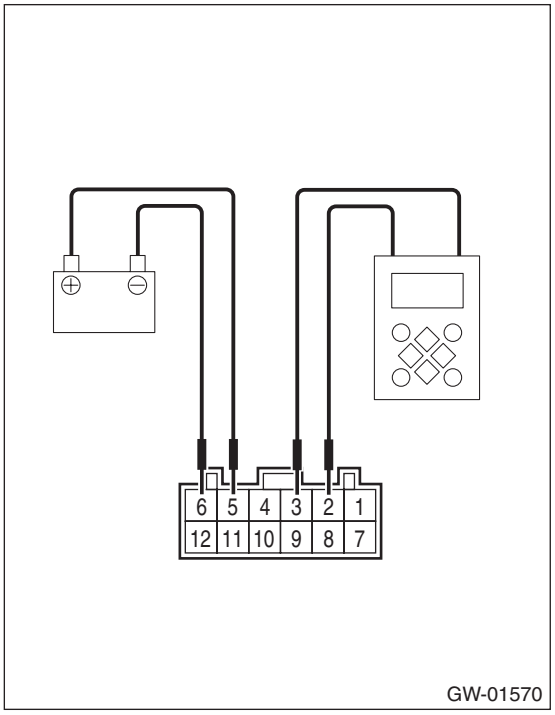
1) Check the resistance between connector terminals.

	Terminal No.	Inspection conditions	Standard
Passenger's seat (Model without AUTO)	14 — 8 2 — 1	UP	Less than 1 Ω
	14 — 2 14 — 8	OFF	1 MΩ or more
	1 — 2 1 — 8 2 — 8		Less than 1 Ω
	14 — 2 1 — 8	DOWN	Less than 1 Ω
Rear LH	14 — 15 1 — 16	UP	Less than 1 Ω
	14 — 15 14 — 16	OFF	1 MΩ or more
	1 — 15 1 — 16 15 — 16		Less than 1 Ω
	14 — 16 1 — 15	DOWN	Less than 1 Ω
Rear RH	14 — 7 1 — 6	UP	Less than 1 Ω
	14 — 6 14 — 7	OFF	1 MΩ or more
	1 — 6 1 — 7 6 — 7		Less than 1 Ω
	14 — 6 7 — 1	DOWN	Less than 1 Ω

2) If the inspection result is not within the standard, replace the switch - power window main.

2. SUB-SWITCH

Passenger's seat (model with AUTO)



CAUTION:
Since the switch - power window main is controlled by CPU, do not check continuity for switch alone with the circuit tester. Performing continuity check with circuit tester can damage the switch - power window main circuit.

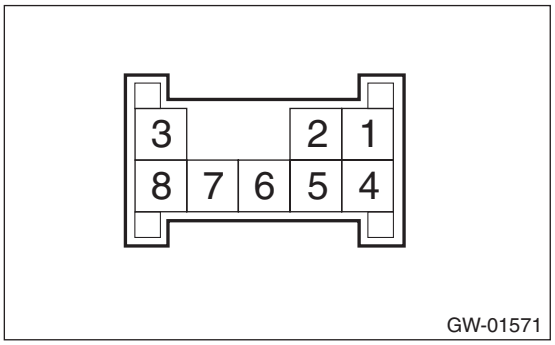
Check output from the switch - power window sub to the passenger's side motor using the oscilloscope function in the Subaru Select Monitor.

1) Remove the switch - power window sub.
2) Connect the battery and the Subaru Select Monitor to the switch - power window sub terminal.

CAUTION:
Never mix up the terminals when connecting the harness connector of the switch - power window sub and the battery. If the connection is wrong, the switch - power window sub may be damaged.

NOTE:
- When the battery is connected to the switch - power window sub terminal, the letters "AUTO" on the passenger's side knob illuminates.
- For detailed procedures, refer to "Subaru Select Monitor Operation Manual".

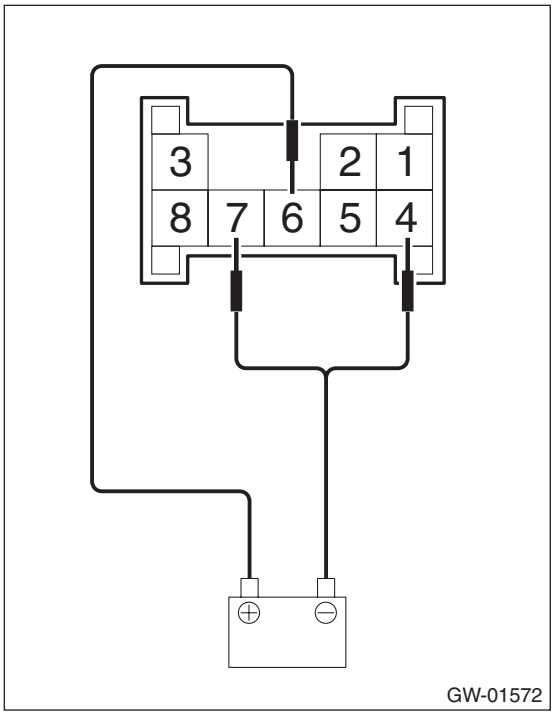
3) Operate the switch - power window sub and check the output.



NOTE:
Since output time during window UP operation is extremely short, it cannot be checked without using a measuring instrument such as oscilloscope. Output is constantly produced while the switch is operated for window DOWN operation.

Inspection conditions	Output time	Standard
AUTO UP	Approx. 130 ms	Battery voltage
UP		
OFF	—	0 V
DOWN	During switch operation	Battery voltage
AUTO DOWN	Approx. 300 ms	

4) If the inspection result is not within the standard, replace the switch - power window sub.



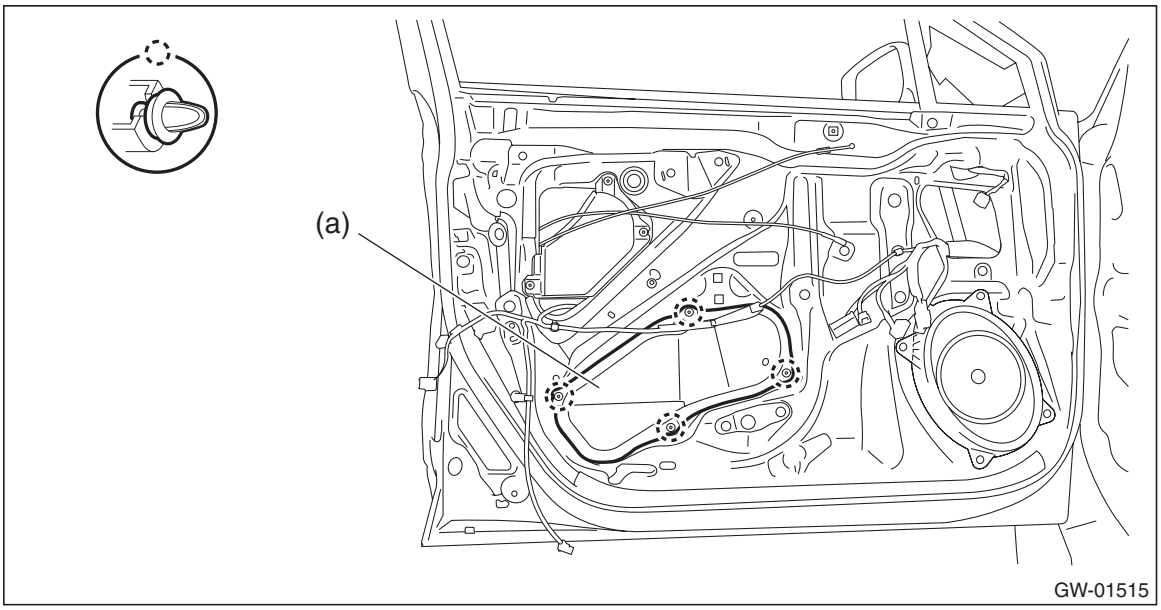
Passenger's seat and rear seat (model without AUTO)

1) Remove the switch - power window sub.
2) Check the resistance between connector terminals.

	Terminal No.	Inspection conditions	Standard
Passenger seat, rear	4 — 5 7 — 8	OFF	Less than 1 Ω
	5 — 6 6 — 8		1 MΩ or more
	5 — 6 7 — 8	UP	Less than 1 Ω
	4 — 5 4 — 8		1 MΩ or more
	4 — 5 6 — 8	DOWN	Less than 1 Ω
	4 — 6 7 — 8		1 MΩ or more

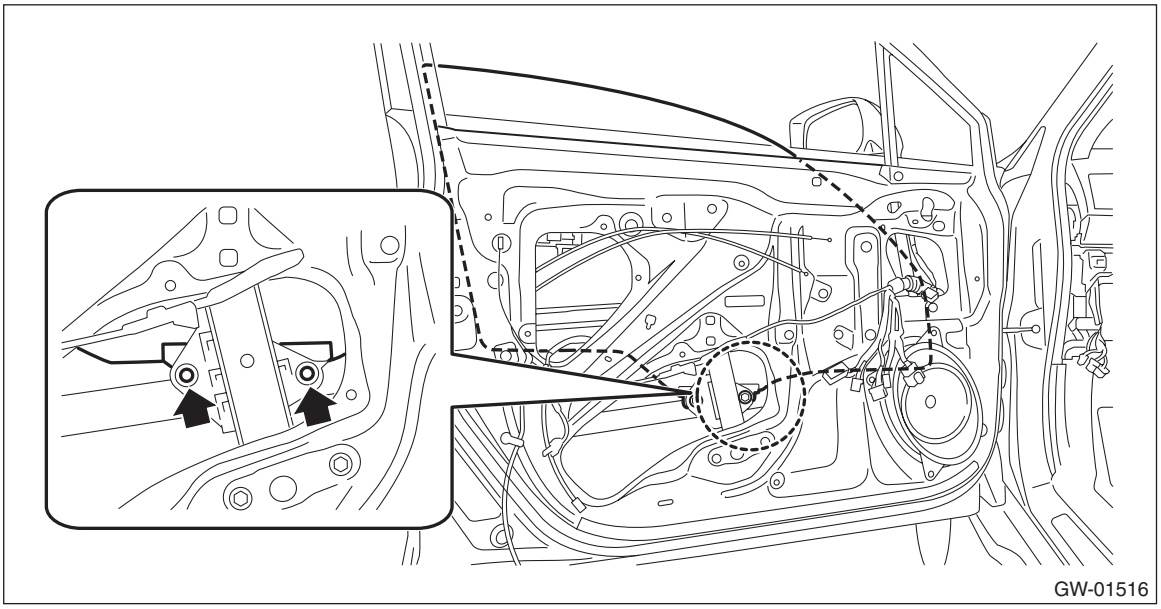
3) Check the switch light illumination condition.

	Terminal No.	Inspection conditions	Specification
Passenger seat, rear	6 — 7, 4	Battery connection between terminals	Light ON



4) If the inspection result is not within the standard, replace the switch - power window sub.

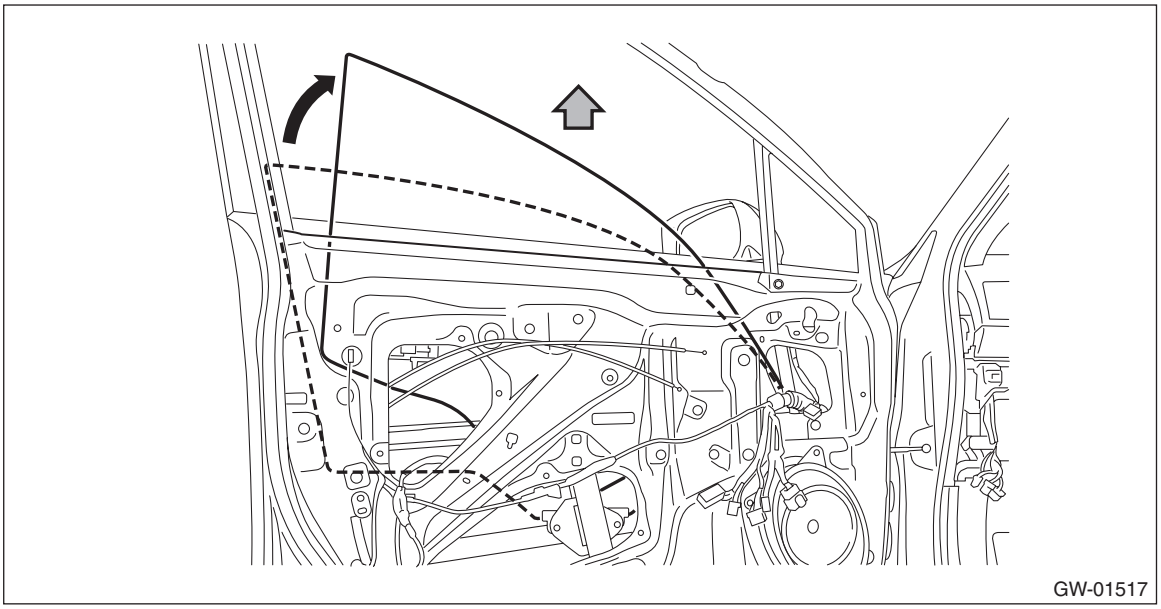
5. Front Door Glass



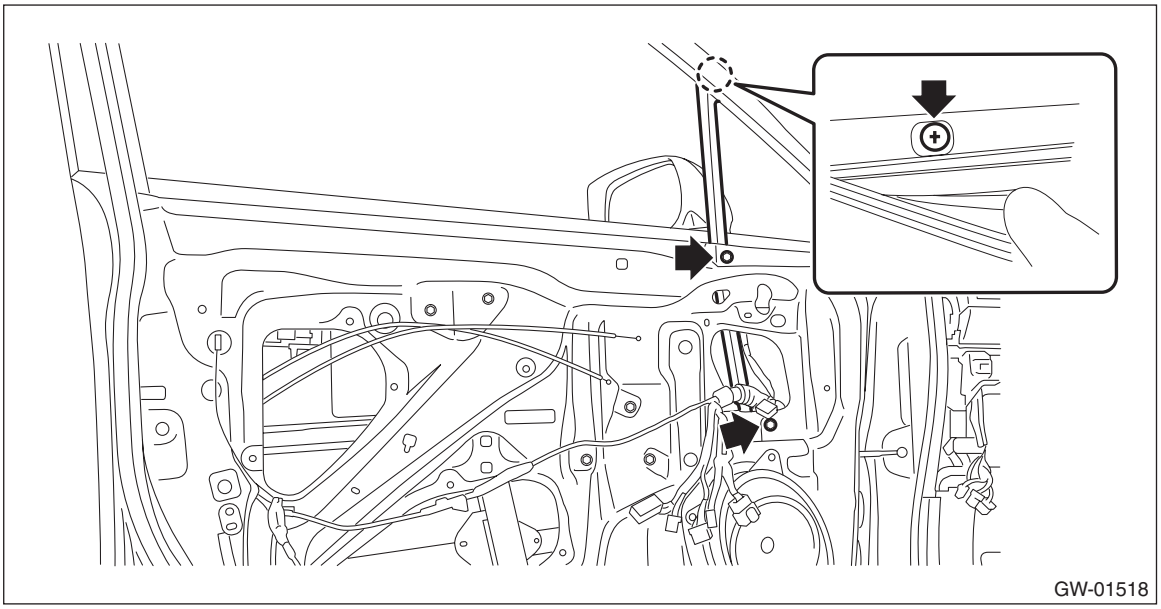
A: REMOVAL

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front door. <Ref. to EI-70, FRONT DOOR, REMOVAL, Door Trim.>
3) Remove the sealing cover - front door. <Ref. to EB-30, REMOVAL, Front Sealing Cover.>
4) Remove the front door inner pad (a).

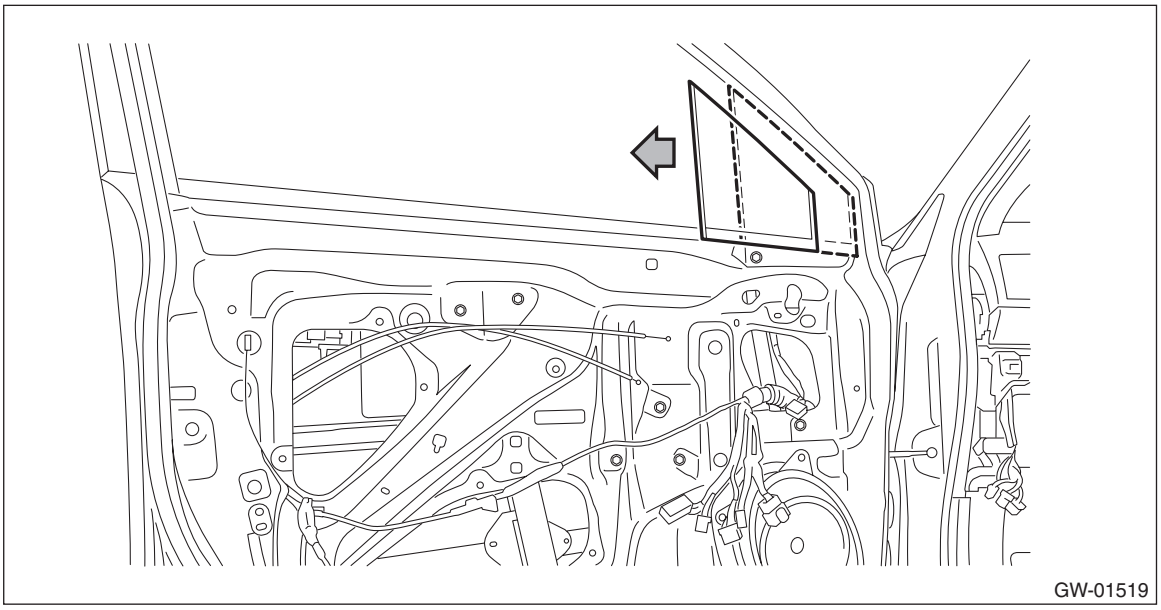
CAUTION:
If it is removed with an excessive force, the panel assembly - front door may be deformed. Also, if the clip is damaged, replace it with a new clip.



5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
6) Remove the glass assembly - front door.
   (1) Connect the switch - power window and then turn the ignition switch to ON.
   (2) Operate the switch - power window to move the glass assembly - front door to the position where the mounting bolts can be seen.
   (3) Remove the mounting bolts from the glass assembly - front door.



(4) While tilting the glass, remove the glass assembly - front door.



CAUTION:
Avoid impact and damage to the glass assembly - front door.

GW-01517

7) Remove the glass - front door partition.
(1) Remove the bolts and screws, and then remove the running channel - front door and the sash assembly - partition.

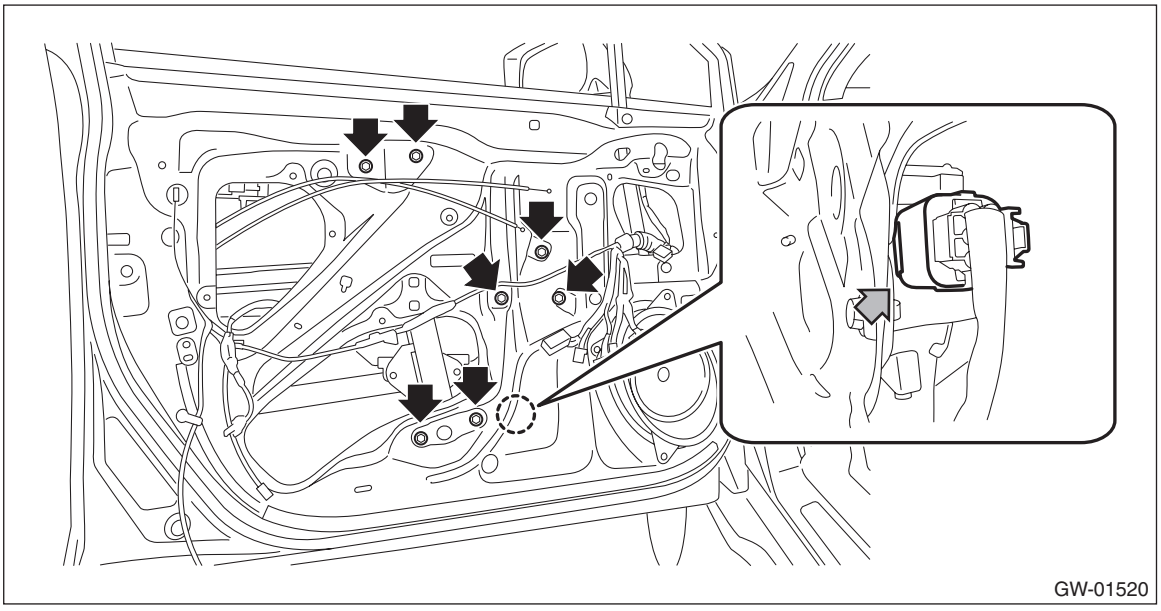
GW-01518

(2) Remove the glass - front door partition.

B: INSTALLATION

1) Install the glass - front door partition.
2) Install the running channel - front door and the sash assembly - partition.

CAUTION:
Check that the running channel - front door is securely fixed to the panel assembly - front door and to the sash assembly - partition.



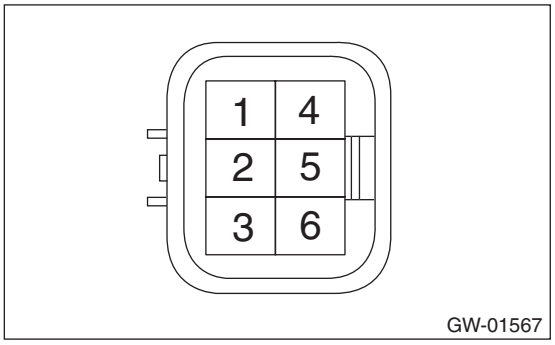
Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to GW-4, FRONT DOOR GLASS, COMPONENT, General Description.>
3) Install the glass assembly - front door.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
4) Install the front door inner pad.
5) Install the sealing cover - front door.
6) Install the trim panel - front door. <Ref. to EI-71, INSTALLATION, Door Trim.>
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

6. Front Regulator and Motor Assembly

A: REMOVAL

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front door. <Ref. to EI-70, FRONT DOOR, REMOVAL, Door Trim.>
3) Remove the sealing cover - front door. <Ref. to EB-30, REMOVAL, Front Sealing Cover.>
4) Remove the glass assembly - front door. <Ref. to GW-20, REMOVAL, Front Door Glass.>
5) Remove the regulator and motor assembly - front.
   (1) Disconnect the motor - front connector.
   (2) Remove the bolts, and then remove the regulator and motor assembly - front.



B: INSTALLATION

1) Install the regulator and motor assembly - front.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the glass assembly - front door. <Ref. to GW-22, INSTALLATION, Front Door Glass.>
3) Install the sealing cover - front door.
4) Install the trim panel - front door. <Ref. to EI-71, INSTALLATION, Door Trim.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Check the motor operation when battery voltage is applied between the connector terminals.

- LH side

Terminal No.	Inspection conditions	Standard
6 (+) — 3 (–)	Apply battery voltage between terminals.	Increase
3 (+) — 6 (–)	Apply battery voltage between terminals.	Decrease

- RH side

Terminal No.	Inspection conditions	Standard
1 (+) — 4 (–)	Apply battery voltage between terminals.	Increase
4 (+) — 1 (–)	Apply battery voltage between terminals.	Decrease

2) If it does not operate properly as a result of inspection, replace the regulator and motor assembly - front.

7. Remote Control Mirror System

A: WIRING DIAGRAM

Refer to “Remote Control Mirror System” in the wiring diagram. <Ref. to WI-405, WIRING DIAGRAM, Remote Control Mirror System.>

B: INSPECTION

1. SYMPTOM CHART

Symptoms	Inspection order
All function does not operate.	1. Check the fuse. 2. Check the remote control mirror switch. 3. Check the wiring harness.
One side of the mirror motor does not operate.	1. Check the remote control mirror switch. 2. Check the mirror motor. 3. Check the wiring harness.
Mirror heater does not operate.	1. Check the rear defogger switch. 2. Check the rear defogger relay. 3. Check the mirror heater. 4. Check the wiring harness. 5. Check body integrated unit.

NOTE:
The mirror heater operates with the rear window defogger at the same time. Refer to “INSPECTION” of “Rear Window Defogger System” for details. <Ref. to GW-52, INSPECTION, Rear Window Defogger System.>

C: NOTE

For procedure of each component in the remote control mirror system, refer to the respective section.

- Outer mirror assembly: <Ref. to GW-26, Outer Mirror Assembly.>
- Remote control mirror switch: <Ref. to GW-31, Remote Control Mirror Switch.>

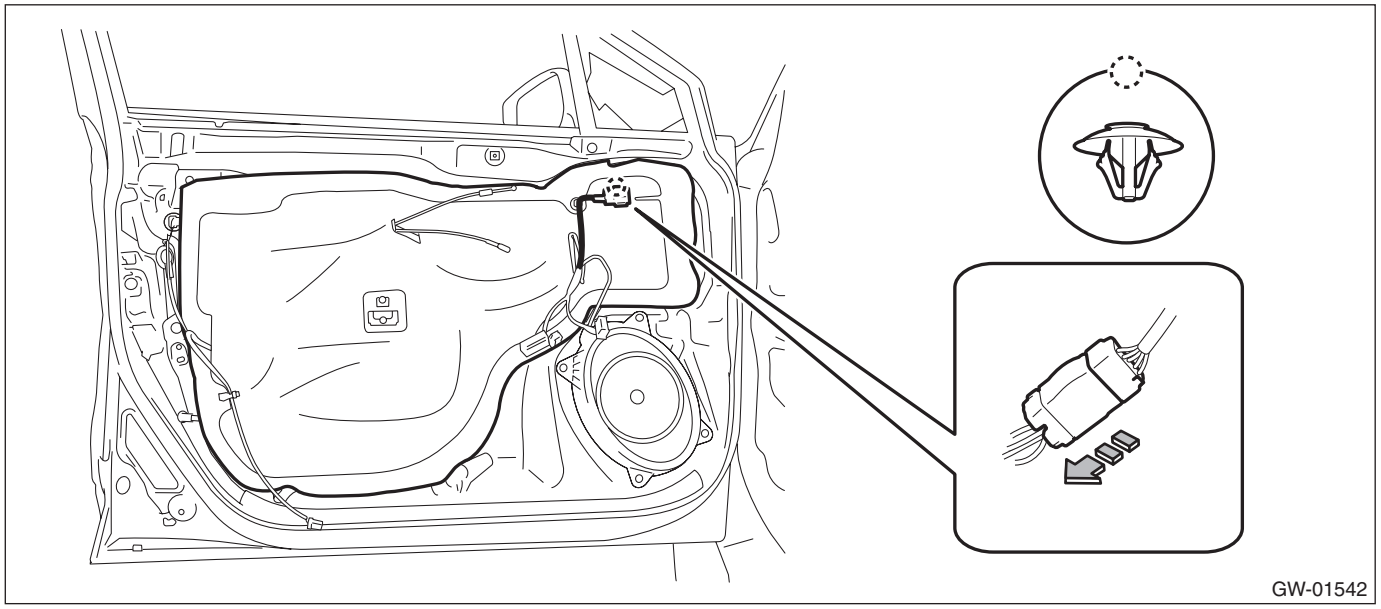
8. Outer Mirror Assembly

A: REMOVAL

Refer to “DISASSEMBLY” for removal procedures of scalp cap and mirror face. <Ref. to GW-28, DISASSEMBLY, Outer Mirror Assembly.>

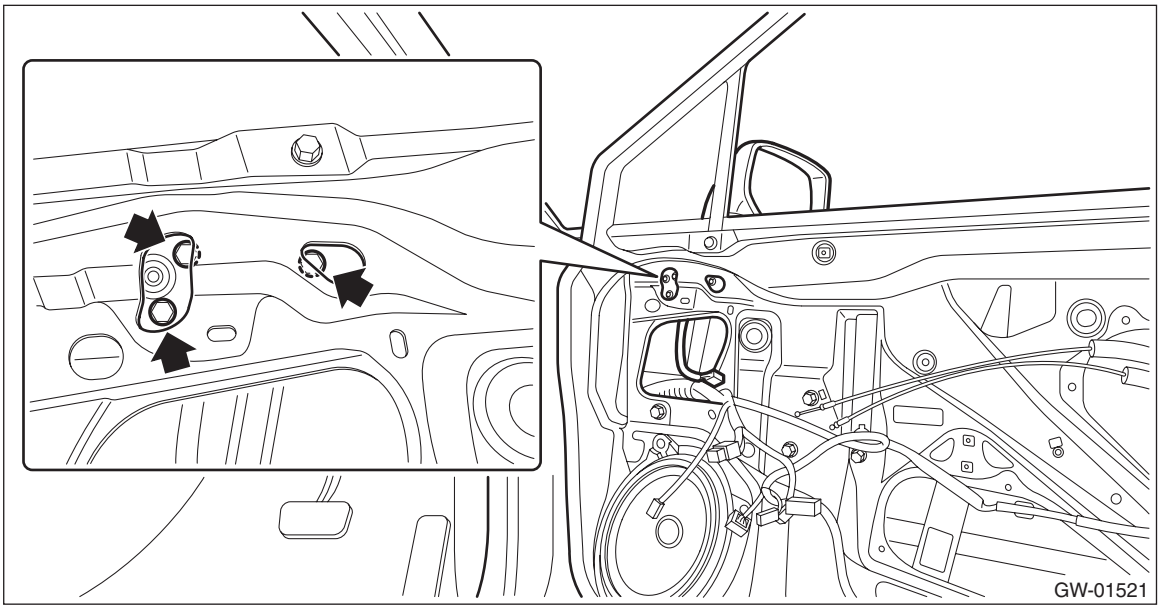
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2) Remove the trim panel - front door. <Ref. to EI-70, FRONT DOOR, REMOVAL, Door Trim.>



3) Turn over the sealing cover - front door.

CAUTION:



- **Carefully remove the butyl tape. Excessive force will easily break the sealing cover - front door.**
- **If the sealing cover - front door gets broken, replace it with a new part.**
- **Be careful not to allow the butyl tape to contact any trims and seats because the butyl tape, which has a strong adhesive force, is difficult to remove once it adhered.**

(1) Remove the connector clip that is installed on the panel assembly - front door, and disconnect the connector.

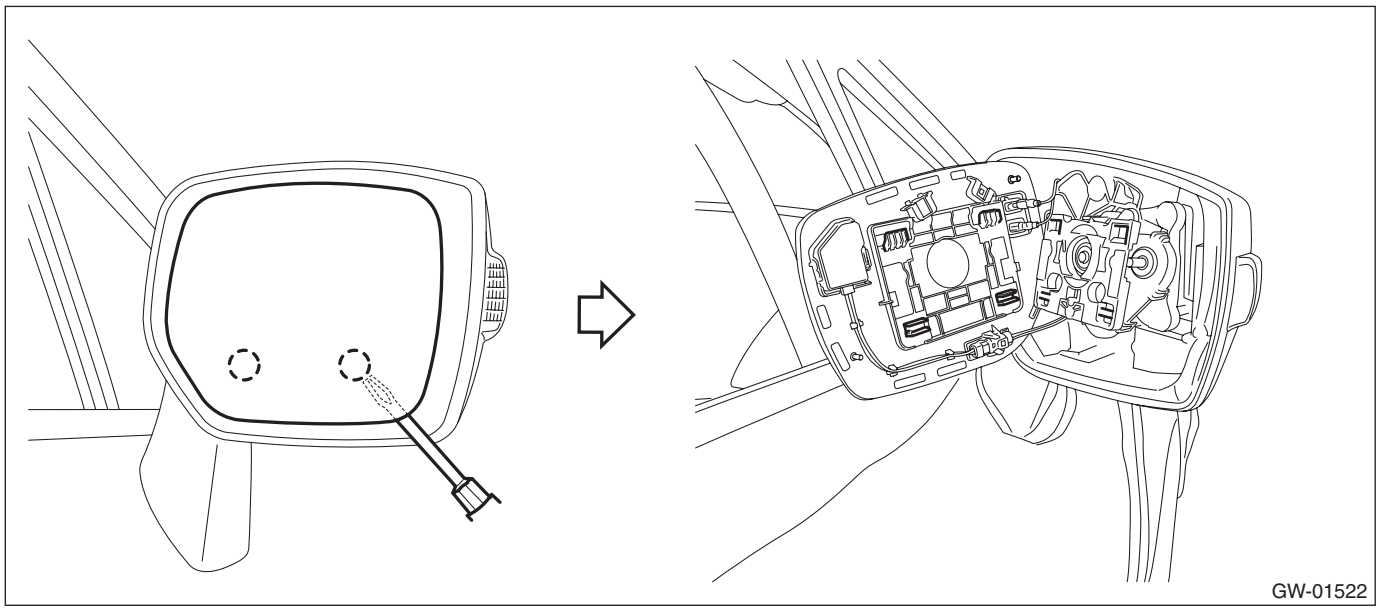
(2) Carefully remove and turn over the sealing cover - front door within the area where the operation can be performed.

4) Remove the bolts to remove outer mirror assembly.

B: INSTALLATION

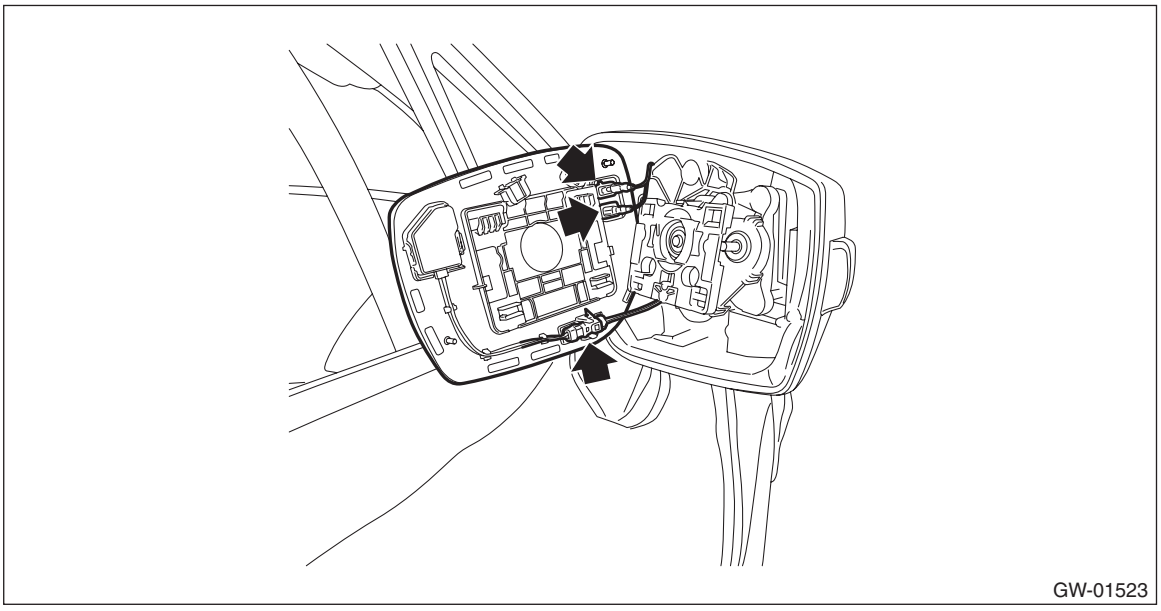
CAUTION:
Be careful not to catch the harness in between the parts.

1) Install the outer mirror assembly.



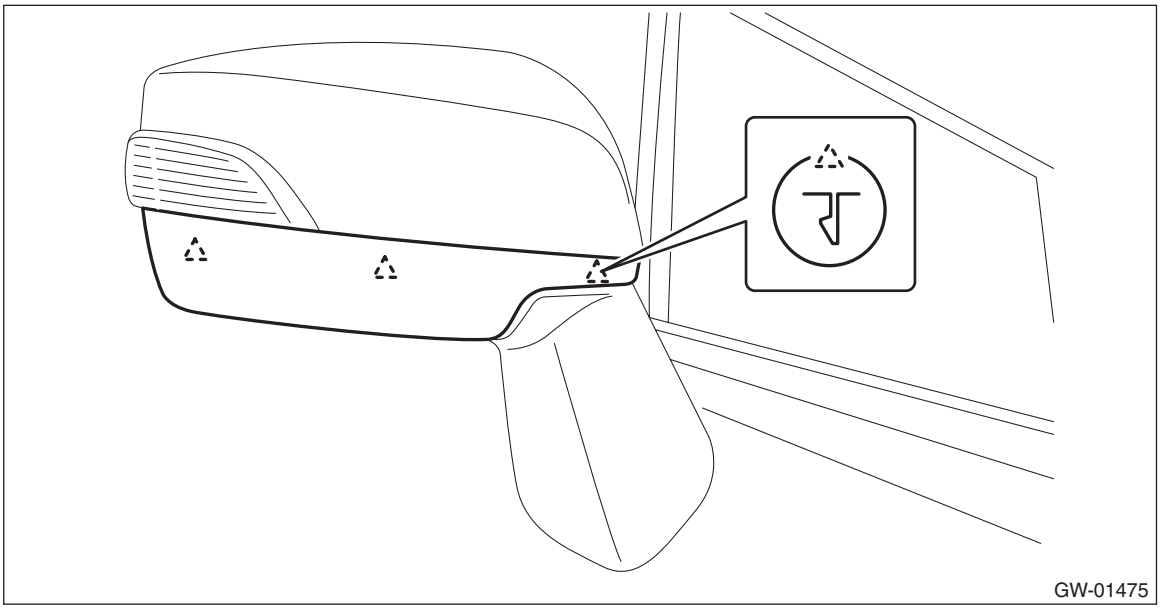
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the sealing cover - front door.
3) Install the trim panel - front door. <Ref. to EI-71, INSTALLATION, Door Trim.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



C: DISASSEMBLY

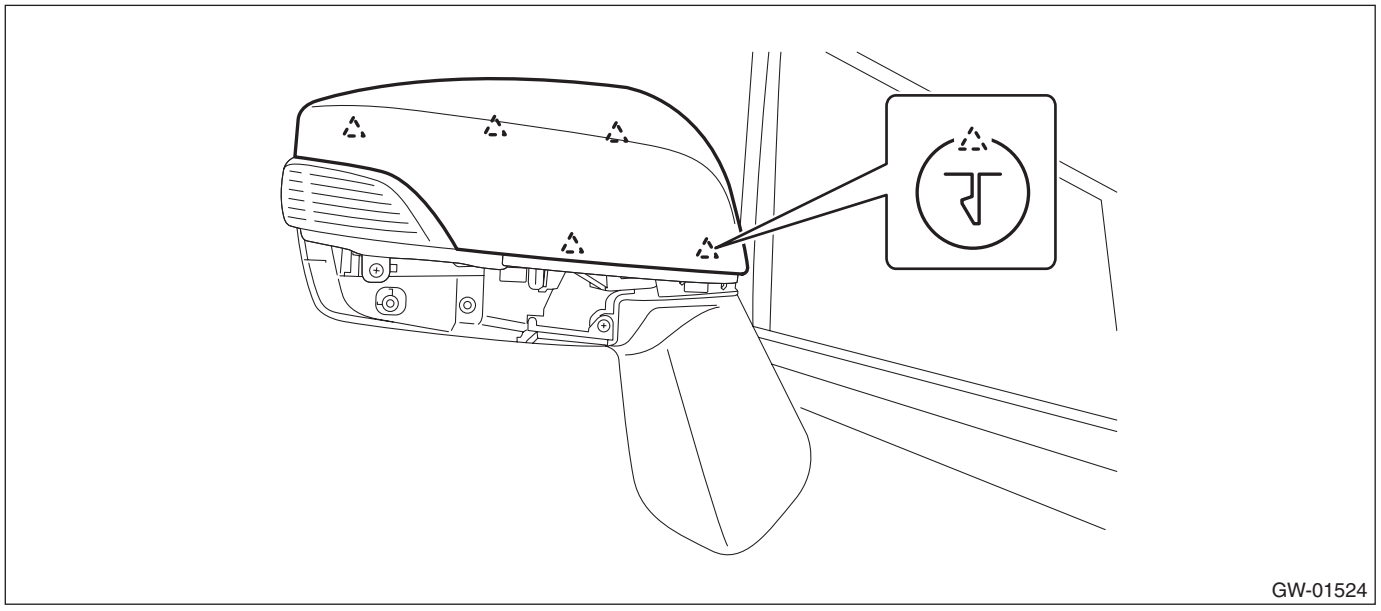
CAUTION:
• When removing the mirror - repair, be careful not to damage the back surface of mirror - repair with a flat tip screwdriver.
• When installing the mirror - repair, insert the connector and clip securely.



1) Operate the remote control mirror switch to face the mirror - repair upward.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the mirror - repair.
   (1) Using a flat tip screwdriver or similar tool, release the engagement shown in the figure, and slide the mirror - repair downward to remove.

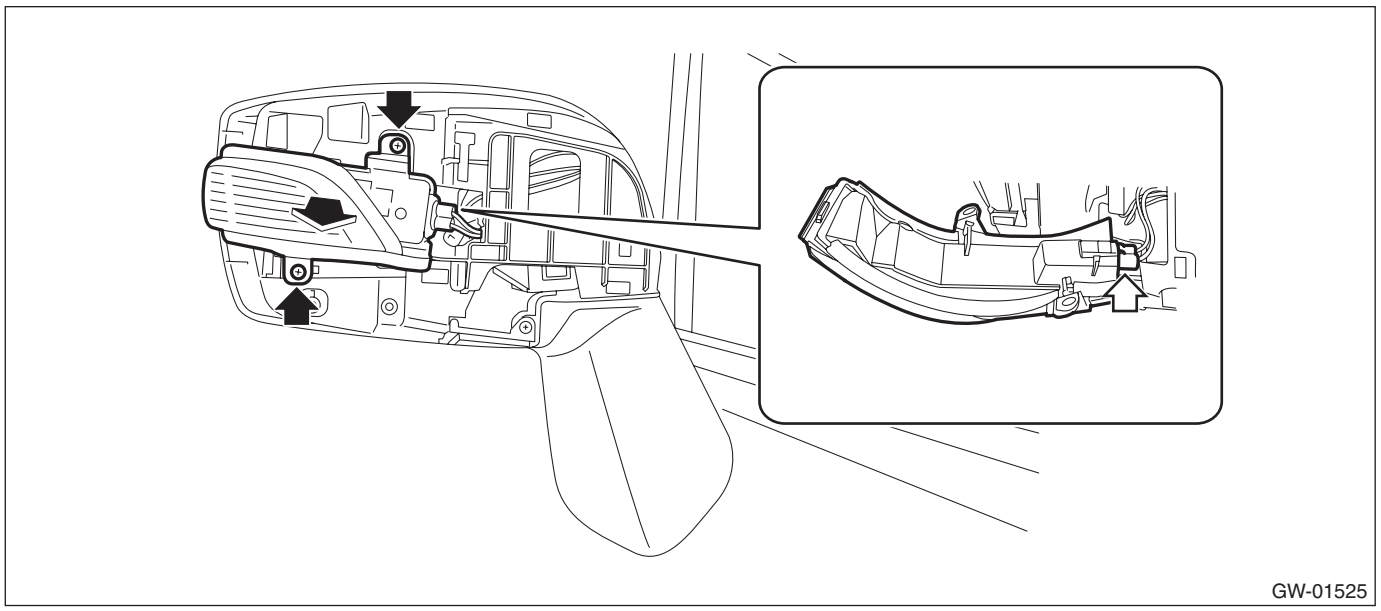
GW-01522

   (2) Disconnect the mirror heater connector and the SRVD indicator connector. (Model with mirror heater and SRVD)



GW-01523

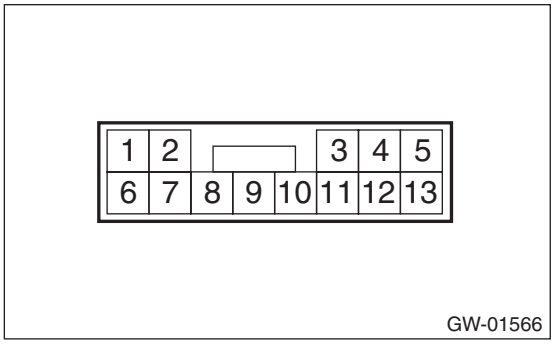
4) Release the claws, and then remove the cover - cap outer mirror lower.



5) Release the claws, and then remove the cover - cap outer mirror.

CAUTION:
Be careful not to apply excessive force when removing the cover - cap outer mirror, as the lower hooks may become damaged.

6) Remove the light assembly - side turn mirror. (Model with side turn signal light)
   (1) Remove the screws and pull out the light assembly - side turn mirror to the front of the vehicle.
   (2) Disconnect the connector and remove the light assembly - side turn mirror.



GW-01525

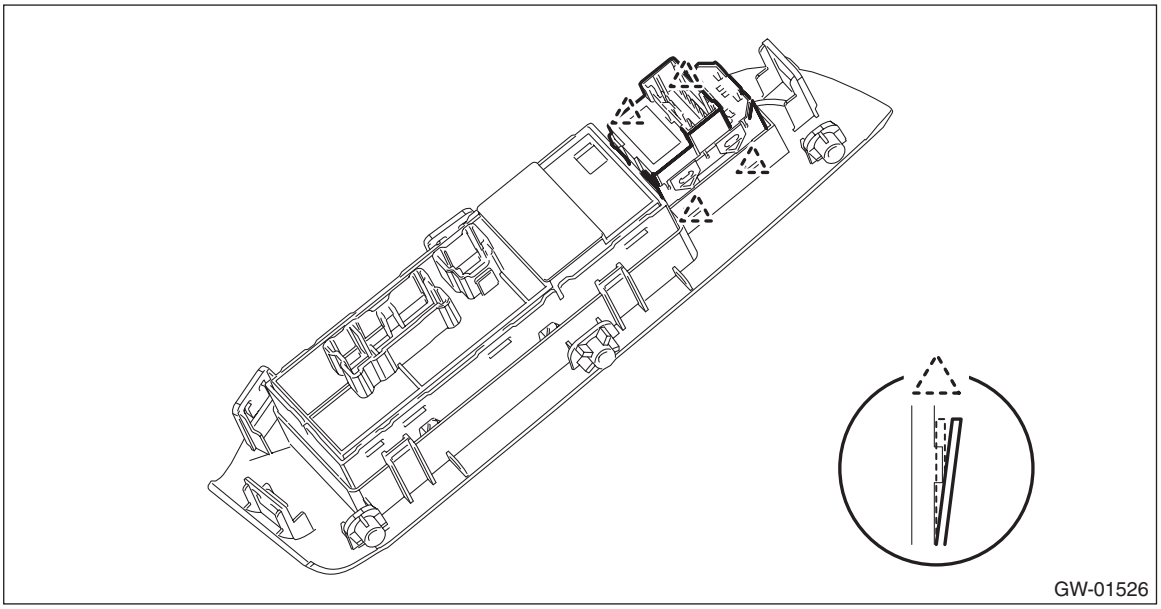
D: ASSEMBLY

CAUTION:
Be careful not to catch the harness in between the parts.
1) Install the light assembly - side turn mirror.
2) Install the cover - cap outer mirror.
3) Install the cover - cap outer mirror lower.
4) Check that all the claws are securely engaged.

E: INSPECTION

1) Check the mirror operation when battery voltage is applied between the connector terminals.

GW-01566



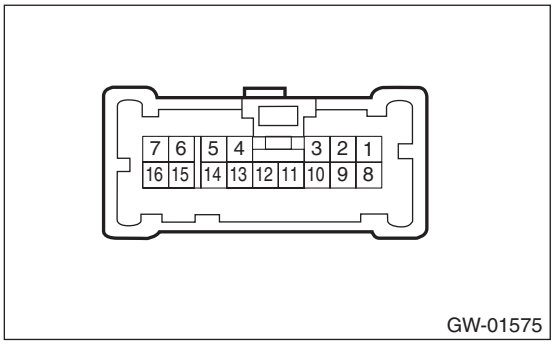
Terminal No.	Inspection conditions	Switch position
—	—	OFF
4 (+) — 3 (–)	Apply battery voltage between terminals.	UP
3 (+) — 4 (–)	Apply battery voltage between terminals.	DOWN
5 (+) — 4 (–)	Apply battery voltage between terminals.	LEFT
4 (+) — 5 (–)	Apply battery voltage between terminals.	RIGHT

2) If it does not operate normally, replace the outer mirror assembly.

9. Remote Control Mirror Switch

A: REMOVAL

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front door. <Ref. to EI-70, FRONT DOOR, REMOVAL, Door Trim.>
3) Remove the panel - power window main switch. <Ref. to GW-12, REMOVAL, Power Window Control Switch.>
4) Release the claws, and then remove the switch - door mirror from the panel - power window main switch.



B: INSTALLATION

1) Install the switch - door mirror to the panel - power window main switch.
2) Install the panel - power window main switch to the trim panel - front door.
3) Install the trim panel - front door. <Ref. to EI-71, INSTALLATION, Door Trim.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

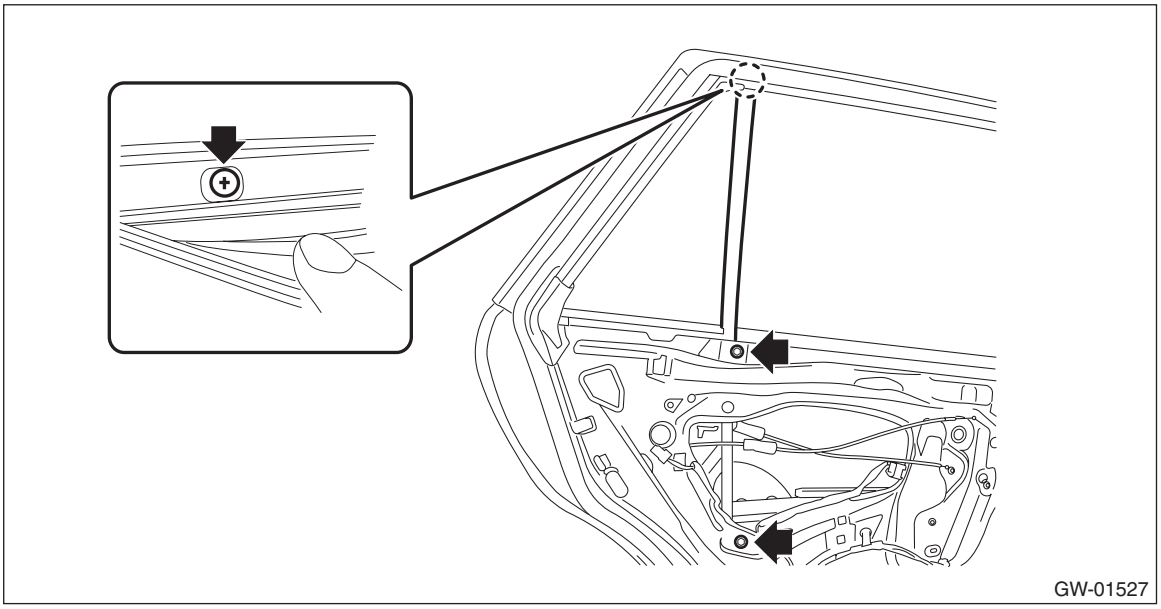
1) Check the resistance between connector terminals.

Preparation tool:
Circuit tester

- Changeover switch RH

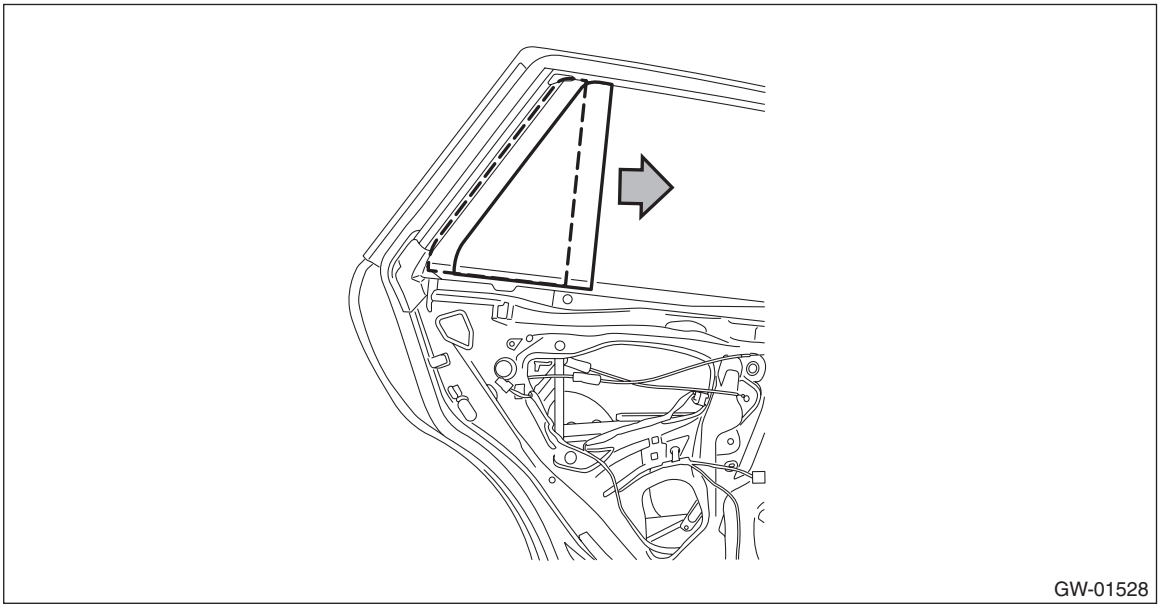
Terminal No.	Inspection conditions	Standard
—	OFF	1 MΩ or more
1 — 12 9 — 7	UP	Less than 1 Ω
1 — 9 12 — 7	DOWN	Less than 1 Ω
1 — 11 12 — 7	LEFT	Less than 1 Ω
1 — 12 11 — 7	RIGHT	Less than 1 Ω

- Changeover switch LH



Terminal No.	Inspection conditions	Standard
—	OFF	1 MΩ or more
1 — 14 8 — 7	UP	Less than 1 Ω
1 — 8 14 — 7	DOWN	Less than 1 Ω
1 — 10 14 — 7	LEFT	Less than 1 Ω
1 — 14 10 — 7	RIGHT	Less than 1 Ω

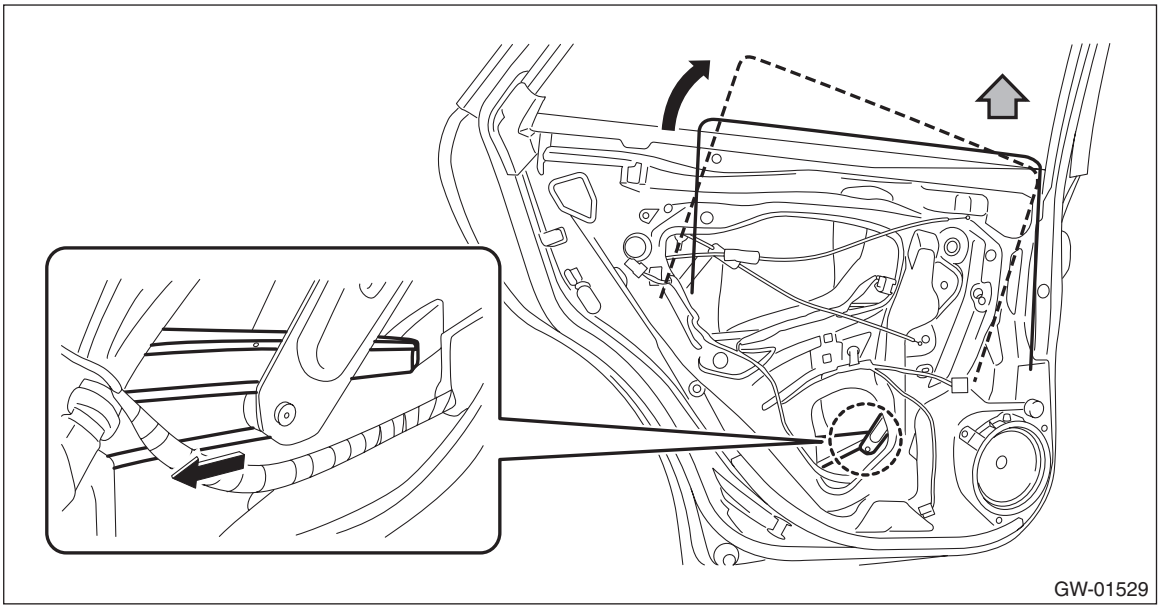
2) If the inspection result is not within the standard, replace the switch - door mirror.



10.Rear Door Glass

A: REMOVAL

1) Remove the ground terminal from the battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear door. <Ref. to EI-71, REAR DOOR, REMOVAL, Door Trim.>
3) Remove the sealing cover - rear door. <Ref. to EB-40, REMOVAL, Rear Sealing Cover.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Remove the glass assembly - rear door.
   (1) Install the switch - power window and then turn the ignition switch to ON.
   (2) Operate the switch - power window sub rear to move the glass assembly - rear door to the lowest position.
   (3) Remove the running channel - rear door.
   (4) Remove the screws and bolts, and then remove the sash assembly - rear partition.



GW-01527

   (5) Remove the glass - rear door partition.

GW-01528

(6) While tilting the glass assembly - rear door, remove the guide from the roller of the regulator and motor assembly - rear, then remove the glass assembly - rear door.

CAUTION:
Avoid impact and damage to the glass assembly - rear door.

B: INSTALLATION

1) Install the running channel - rear door to the panel assembly - rear door.

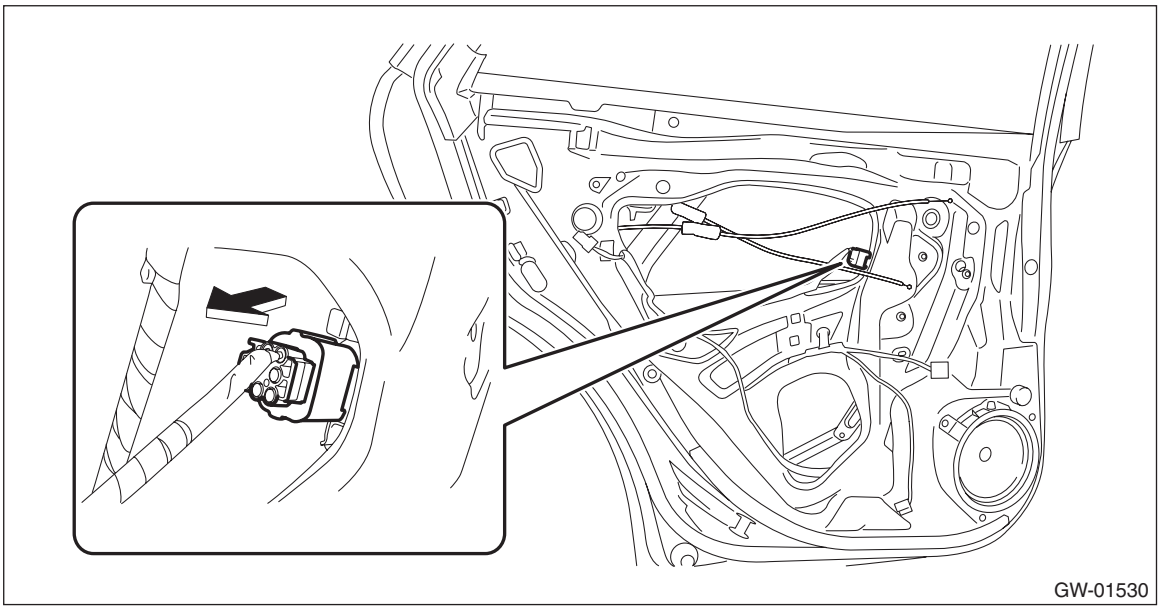
CAUTION:
Check that the running channel - rear door is securely fixed to the panel assembly - rear door and to the sash assembly - rear partition.

2) Install the glass assembly - rear door.

CAUTION:
Avoid impact and damage to the glass assembly - rear door.

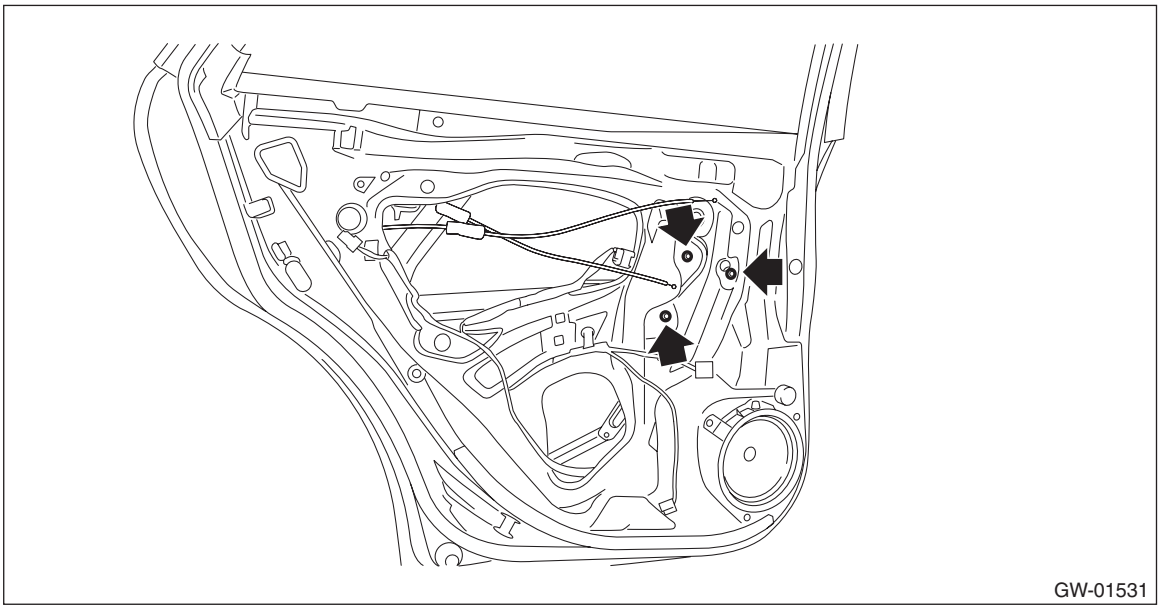
3) Install the glass - rear door partition and the sash assembly - rear partition.

NOTE:
Install the running channel - rear door before installing the sash assembly - rear partition, and then install to the panel assembly - rear door.



Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to GW-5, REAR DOOR GLASS, COMPONENT, General Description.>

4) Install the sealing cover - rear door. <Ref. to EB-40, INSTALLATION, Rear Sealing Cover.>
5) Install the trim panel - rear door. <Ref. to EI-71, INSTALLATION, Door Trim.>
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



11.Rear Regulator and Motor Assembly

A: REMOVAL

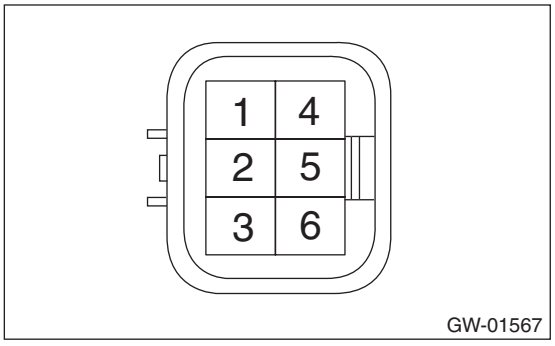
1) Remove the ground terminal from the battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear door. <Ref. to EI-71, REAR DOOR, REMOVAL, Door Trim.>
3) Remove the sealing cover - rear door.
4) Remove the glass assembly - rear door. <Ref. to GW-33, REMOVAL, Rear Door Glass.>
5) Remove the rear regulator and motor assembly.
   (1) Disconnect the connector of the motor - rear.

GW-01530

   (2) Remove the bolts, and then remove the regulator and motor assembly - rear.

GW-01531

B: INSTALLATION



1) Install the regulator and motor assembly rear.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the glass assembly - rear door. <Ref. to GW-34, INSTALLATION, Rear Door Glass.>
3) Install the sealing cover - rear door.
4) Install the trim panel - rear door. <Ref. to EI-71, INSTALLATION, Door Trim.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Check the motor operation when battery voltage is applied between the connector terminals.

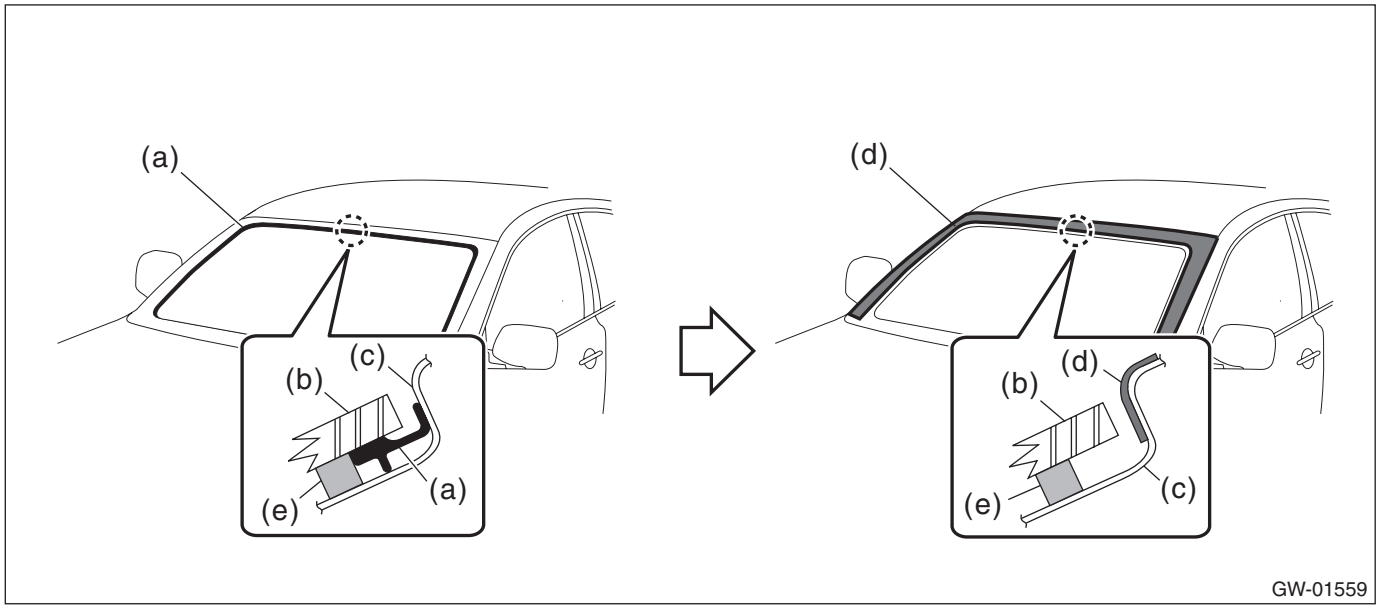
- LH side

Terminal No.	Inspection conditions	Standard
4 (+) — 1(–)	Apply battery voltage between terminals.	Increase
1 (+) — 4(–)	Apply battery voltage between terminals.	Decrease

- RH side

Terminal No.	Inspection conditions	Standard
3 (+) — 6(–)	Apply battery voltage between terminals.	Increase
6 (+) — 3(–)	Apply battery voltage between terminals.	Decrease

2) If it does not operate properly as a result of inspection, replace the regulator and motor assembly - rear.

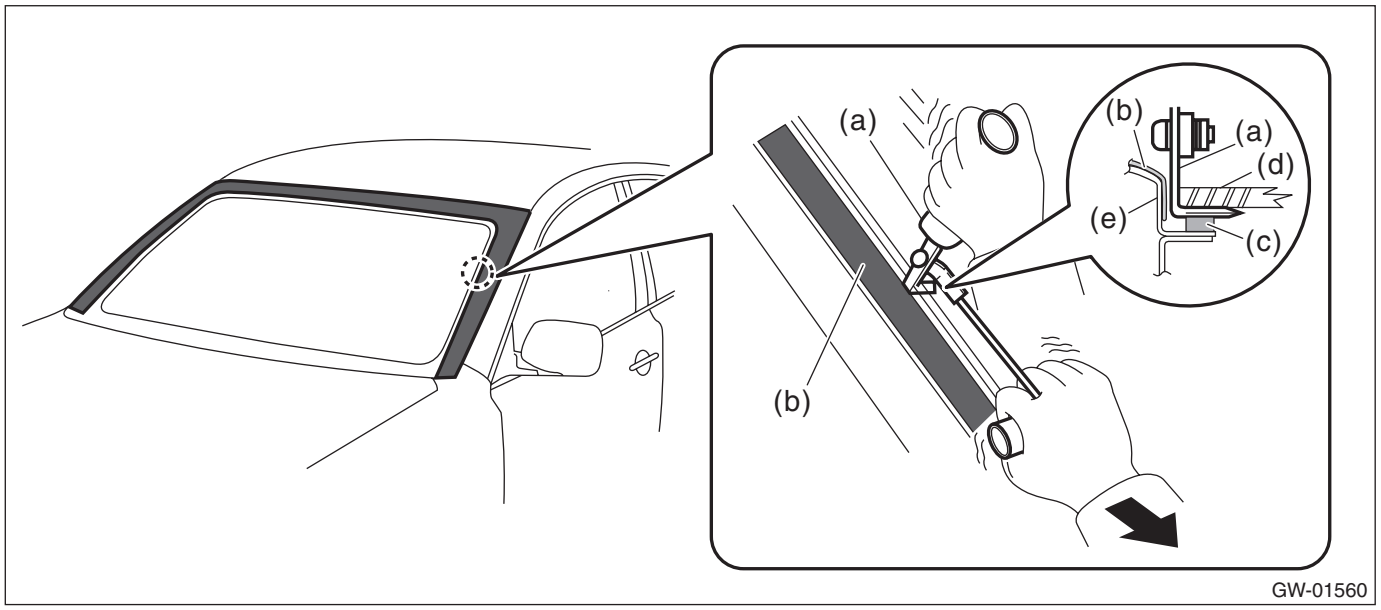


12.Windshield Glass

A: REMOVAL

CAUTION:
• For model with EyeSight, always remove the glass - front window after the stereo camera is removed.
• For model with EyeSight, always use Subaru genuine windshield glass specially designed for EyeSight. (If the windshield glass other than the glass specially designed for EyeSight is used, the visibility of the camera is blocked or the distortion of the glass prevents the correct measurement of the object, resulting in the EyeSight abnormal operation.)
• For model with EyeSight, if the windshield glass is installed after removal or replaced, always perform the "Inspection" and "Adjustment and check" of the stereo camera.
Inspection: <Ref. to ES(diag)-7, INSPECTION, General Description.>
Adjustment and check: <Ref. to ES-11, Camera Adjustment, Inspection.>
• For model with EyeSight, if the damage is found in the glass repair prohibited area, always replace the glass. Damage in the prohibited area can affect the recognition of the stereo camera even if it is repaired, and thereby EyeSight function may not operate properly.

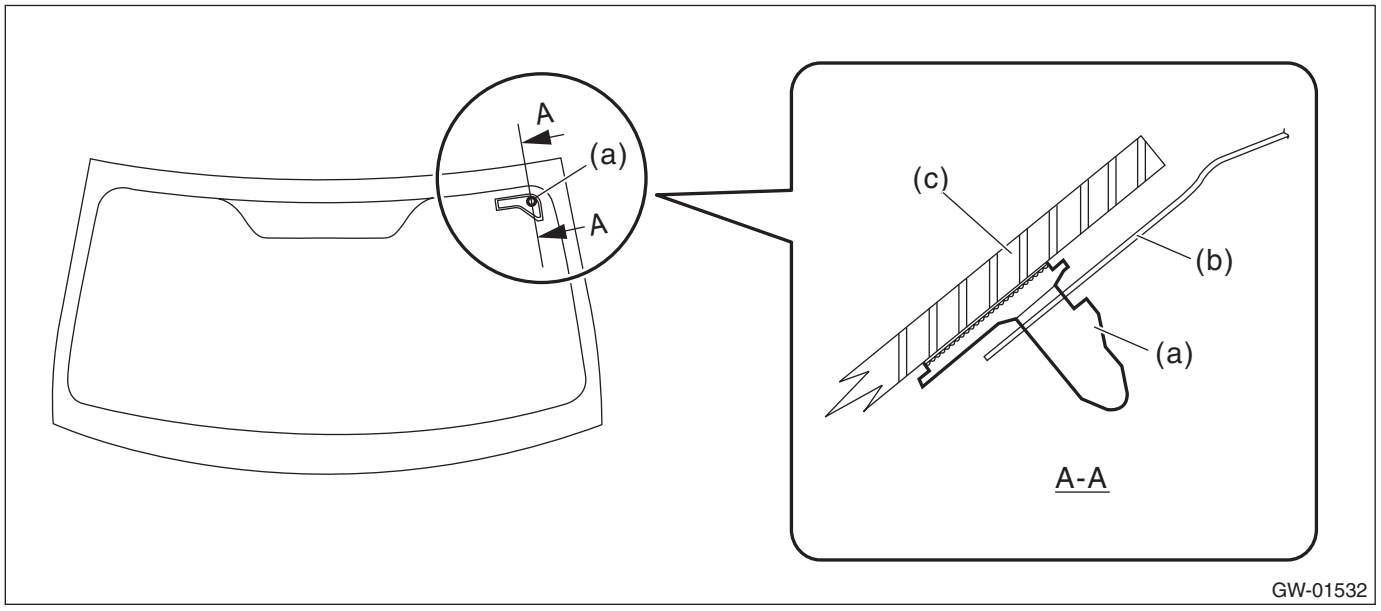
1. WHEN USING WINDSHIELD GLASS KNIFE



1) Remove the ground terminal from the battery sensor. (Models with wiper deicer) <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front pillar UPR. <Ref. to EI-96, REMOVAL, Upper Inner Trim.>
3) Remove the cowl panel assembly. <Ref. to EI-52, REMOVAL, Cowl Panel.>
4) Remove the stereo camera cover and stereo camera. (Models with EyeSight) <Ref. to ES-7, REMOVAL, Stereo Camera.>
5) Disconnect the wiper deicer connector. (Models with wiper deicer)
6) Remove the molding - front window from the glass - front window, and attach protective tape on the body side of the circumference of the glass - front window.

(a) Molding - front window
(b) Glass - front window
(c) Body panel
(d) Protective tape
(e) Adhesive

7) Remove the glass - front window.
(1) Apply sufficient amount of soapy water to the adhesive part and insert the windshield glass knife.
(2) While holding the edges of the knife and the glass - front window at a right angle, move the windshield glass knife parallel to the edge of the glass - front window, and cut the adhesive along the surface and the edge of the glass - front window.

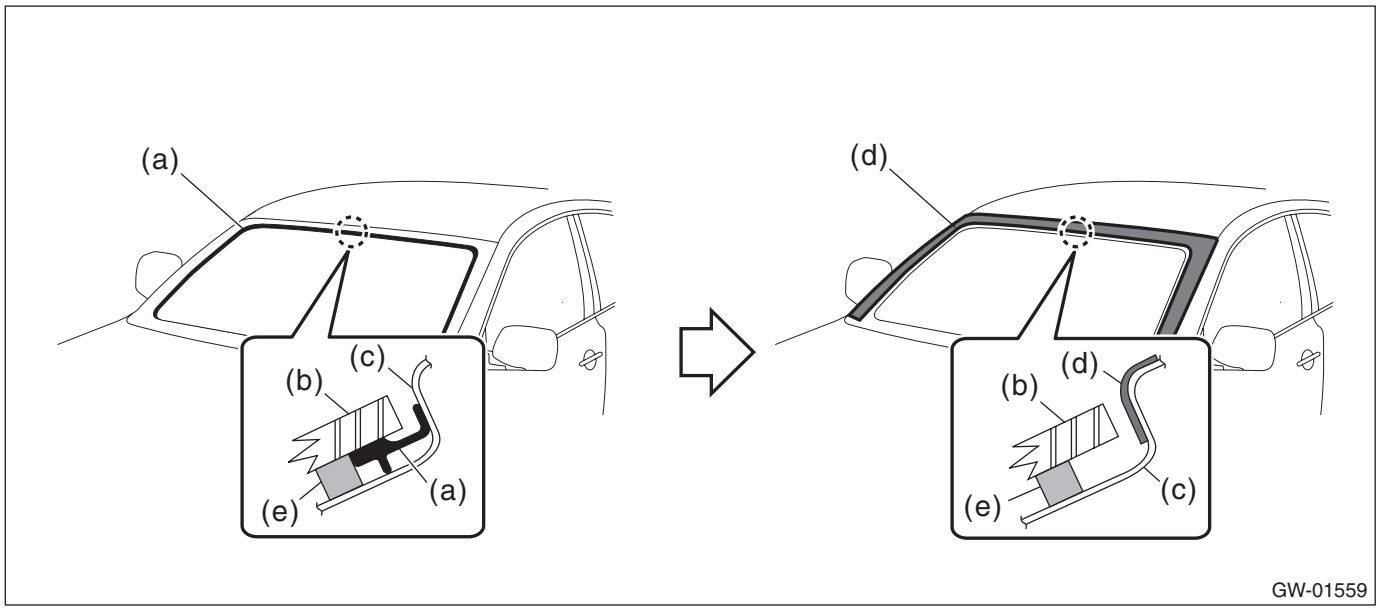


CAUTION:
• Cutting of adhesive part should be started from an area with wider gap between the glass - front window and the body.
• Never twist the windshield glass knife.

(a) Windshield glass knife
(b) Protective tape
(c) Adhesive
(d) Glass - front window
(e) Body panel

(3) Disconnect the locating pin - front window, and remove the glass - front window.

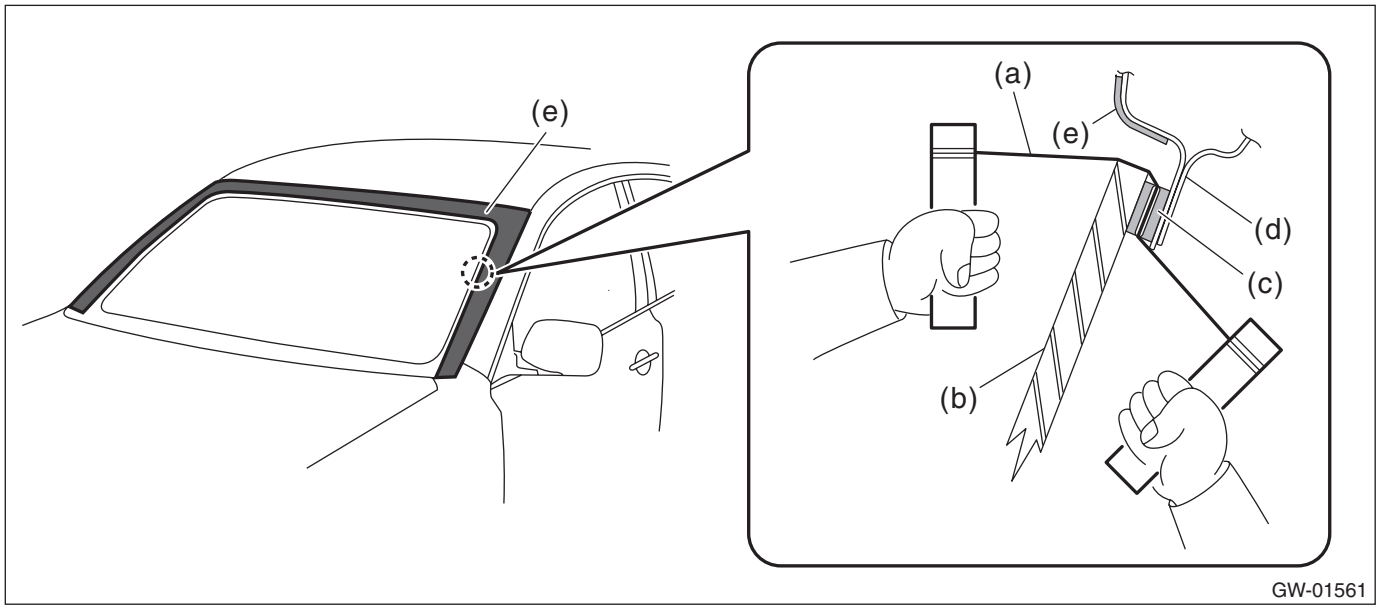
NOTE:
The locating pin - front window are bonded to the corners of the glass - front window. Use piano wire to disconnect the pins.



(a) Locating pin - front window
(b) Body panel
(c) Glass - front window

2. WHEN USING PIANO WIRE

CAUTION:
- **Do not tightly pull the piano wire against the glass - front window edge.**
- **Apply protective tape, etc, and be careful that the inner and outer components of the vehicle are not damaged.**
- **Do not cross piano wires. Otherwise they may be cut.**

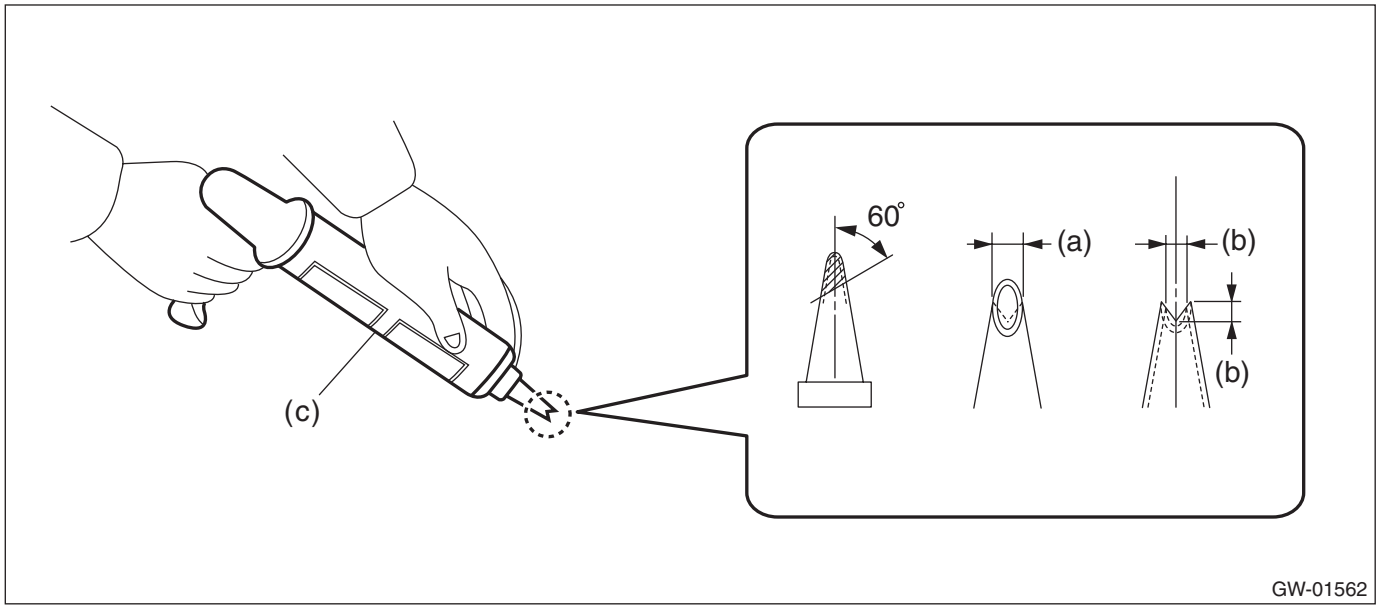


1) Remove the ground terminal from the battery sensor. (Models with wiper deicer) <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front pillar UPR. <Ref. to EI-96, REMOVAL, Upper Inner Trim.>
3) Remove the cowl panel assembly. <Ref. to EI-52, REMOVAL, Cowl Panel.>
4) Disconnect the wiper deicer connector. (Models with wiper deicer)
5) Remove the stereo camera cover and stereo camera. (Models with EyeSight) <Ref. to ES-7, REMOVAL, Stereo Camera.>
6) Remove the molding - front window from the glass - front window, and attach protective tape on the body side of the circumference of the glass - front window.

(a) Molding - front window
(b) Glass - front window
(c) Body panel
(d) Protective tape
(e) Adhesive

7) Remove the glass - front window.
(1) Using a drill, make a hole in the adhesive part.
(2) Pass the piano wire through the hole, and pull the wire ends alternately to cut off the adhesive part and the locating pin - front window.

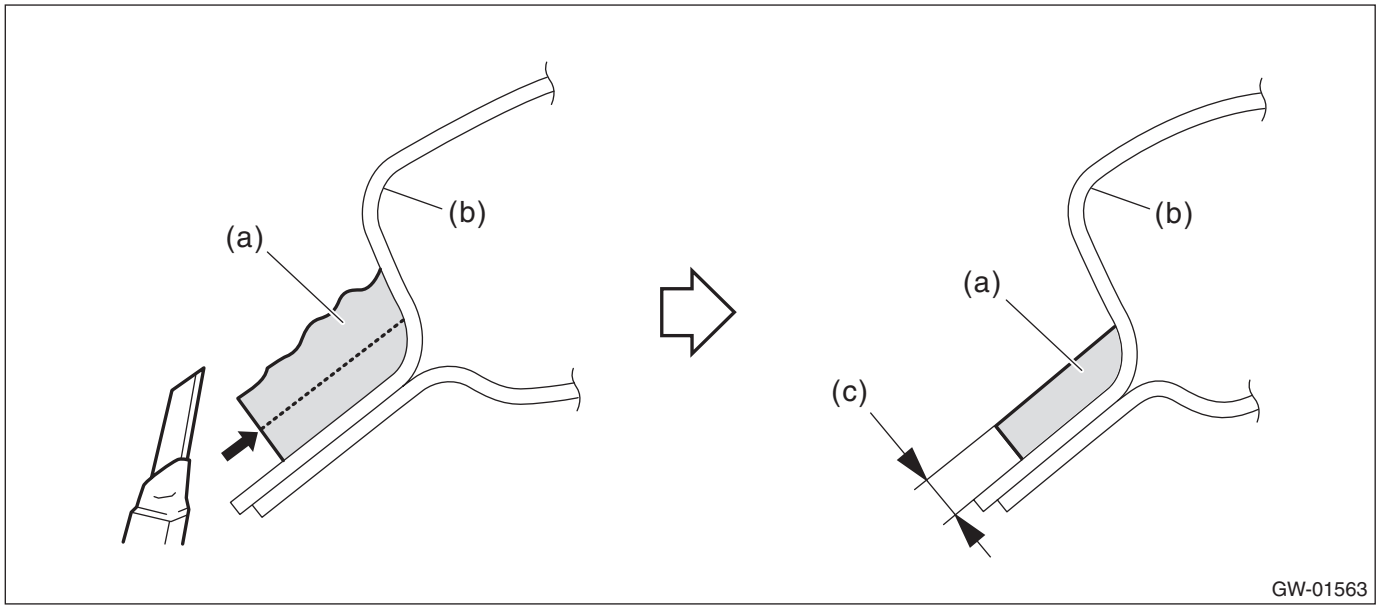
CAUTION:
Attach a piece of wood to both piano wire ends.



(a) Piano wire
(b) Glass - front window
(c) Adhesive
(d) Body panel
(e) Protective tape

B: INSTALLATION

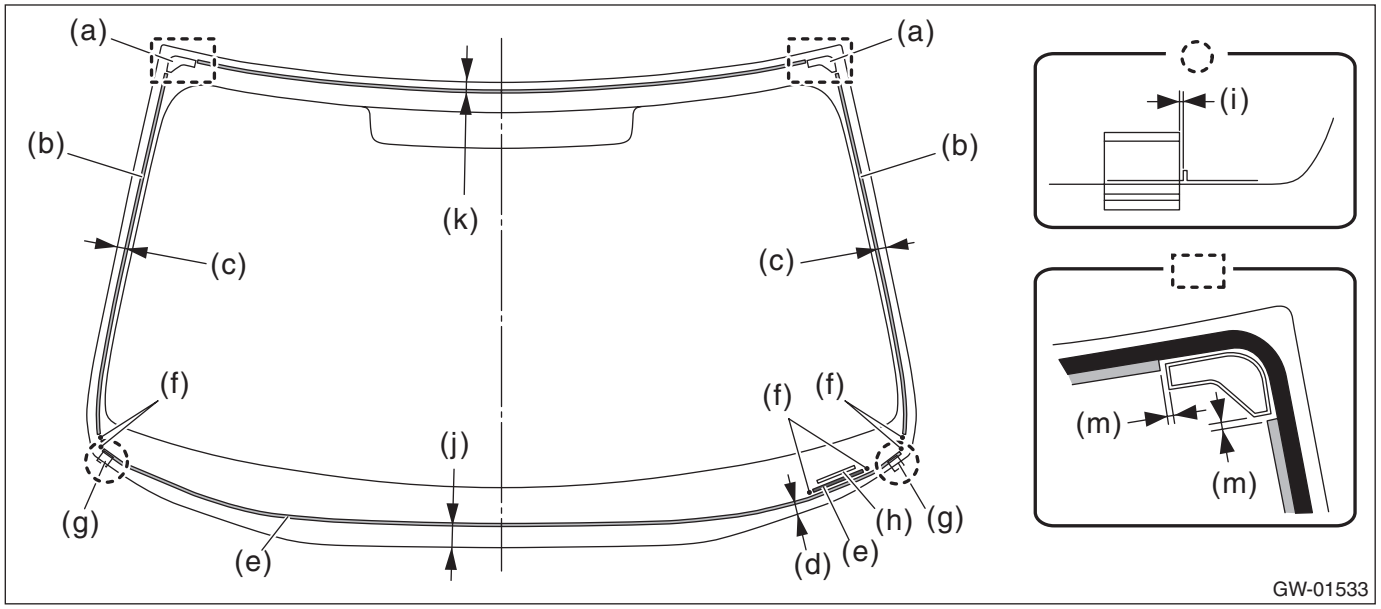
CAUTION:
• For model with EyeSight, always use Subaru genuine windshield glass specially designed for EyeSight. (If the windshield glass other than the glass specially designed for EyeSight is used, the visibility of the camera is blocked or the distortion of the glass prevents the correct measurement of the object, resulting in the EyeSight abnormal operation.)
• For model with EyeSight, if the windshield glass is installed after removal or replaced, always perform the "Inspection" and "Adjustment and check" of the stereo camera.
Inspection: <Ref. to ES(diag)-7, INSPECTION, General Description.>
Adjustment and check: <Ref. to ES-11, Camera Adjustment, Inspection.>
• For model with EyeSight, if the damage is found in the glass repair prohibited area, always replace the glass. Damage in the prohibited area can affect the recognition of the stereo camera even if it is repaired, and thereby EyeSight function may not operate properly.



1) Fabricate the cartridge nozzle tip as shown and set the sealant gun with the adhesive.

(a) 10 mm (0.39 in) (b) 8 mm (0.31 in) (c) Sealant gun

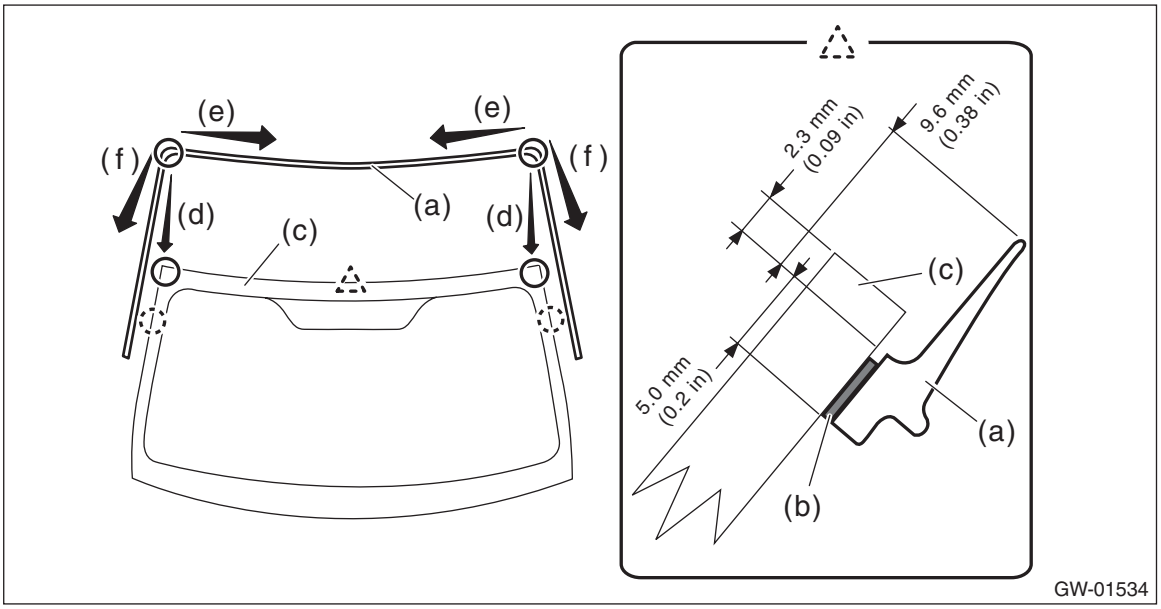
2) Remove the adhesive layer on the body using cutter knife to obtain smooth face of 2 mm (0.08 in) thick.



CAUTION:
- **Be careful not to damage the body and paint surface.**
- **Be sure to keep some of old adhesive.**

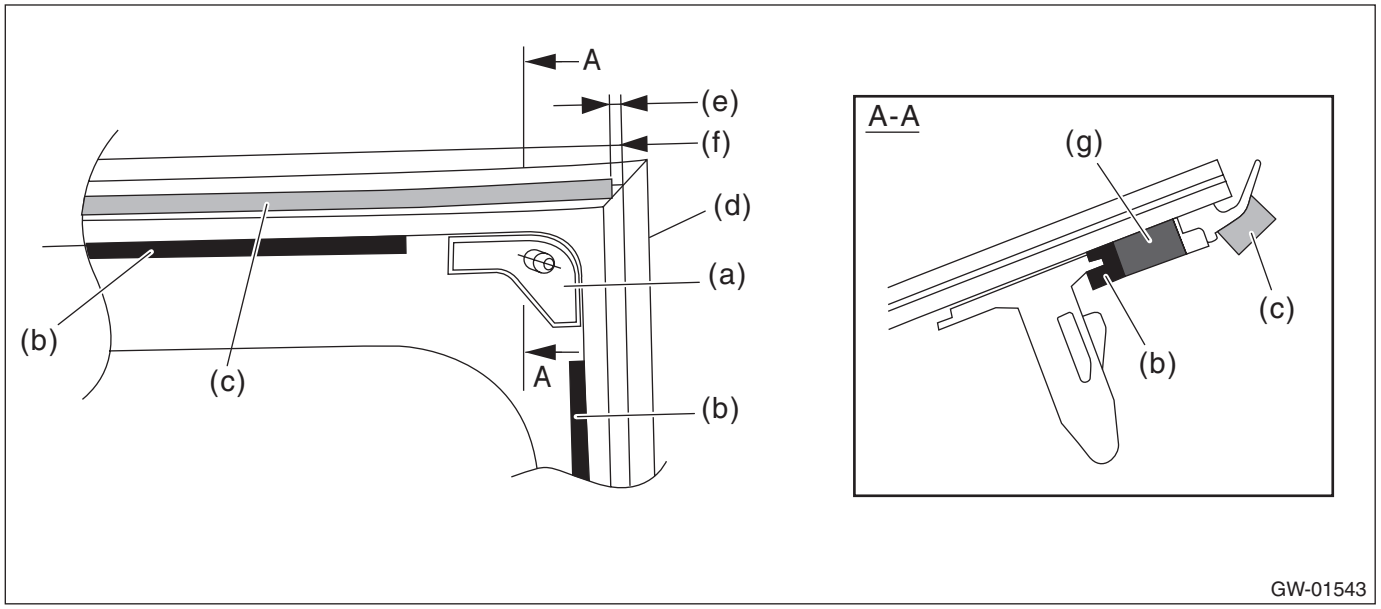
(a) Adhesive (b) Body panel (c) 2 mm (0.08 in)

3) Clean the glass - front window and the body with alcohol or appropriate cleaning solvent to completely eliminate cutting powder, dust and dirt.



4) Attach the dam rubber - front to the glass - front window.

(a)	Locating pin - front window	(e)	Dam rubber - front lower	(i)	0 + 5 mm (0 + 0.2 in)
(b)	Dam rubber - front upper	(f)	Dam rubber set mark	(j)	44.7 mm (1.76 in)
(c)	19.8 mm (0.78 in)	(g)	Seal - lower	(k)	20.3 mm (0.8 in)
(d)	26.2 mm (1.03 in)	(h)	Seal - lower VIN	(m)	0 + 3 mm (0 + 0.12 in)



5) Attach the molding - front window to the glass - front window.

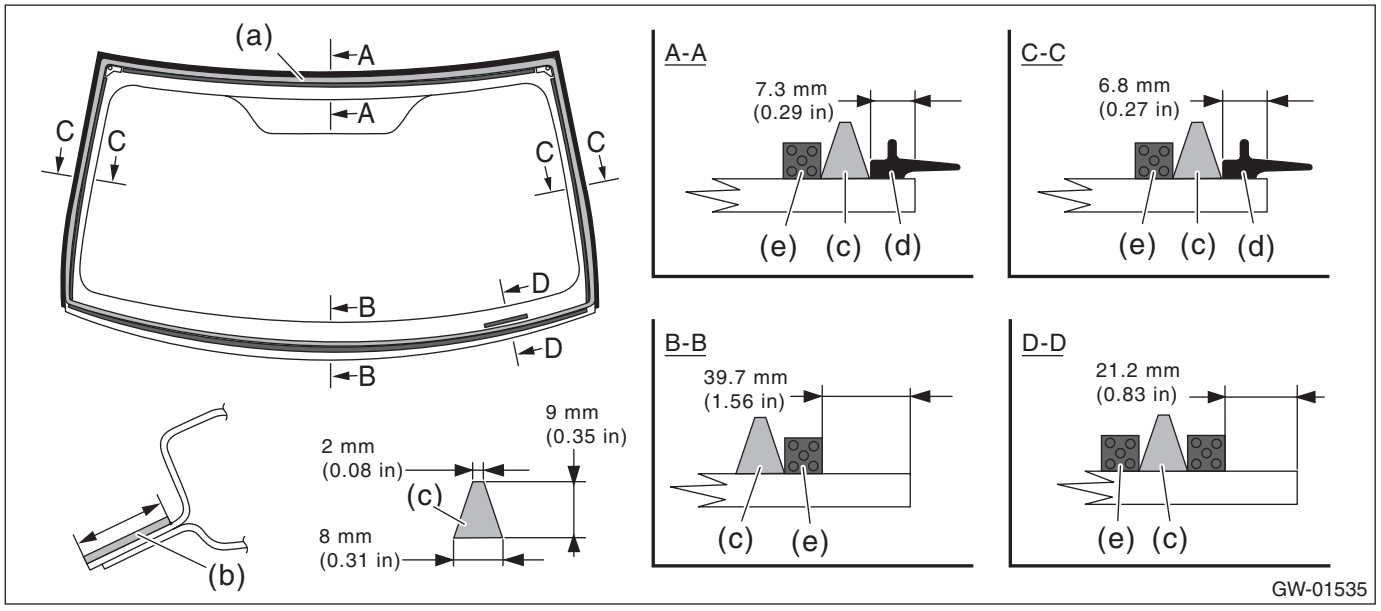
CAUTION:
Be careful to attach the molding - front window so that the molding has no loose or undulating part.

(1) Align the molding - front window (a) to the upper ends (d) of the glass - front window (c).
(2) Install the molding - front window from both corners of the upper edge toward the center. (e)
(3) Install the molding - front window from both corners of the upper edge toward the bottom. (f)
(4) Firmly apply the double sided tape (b) of the molding - front window evenly to the surface of the glass - front window.

6) Attach the seal - upper to the molding - front window.

(a) Locating pin - front window
(b) Dam rubber - front upper
(c) Seal - upper
(d) Molding - front window
(e) 0 + 3 mm (0 + 0.12 in)
(f) 165 mm (6.50 in)
(g) Adhesive

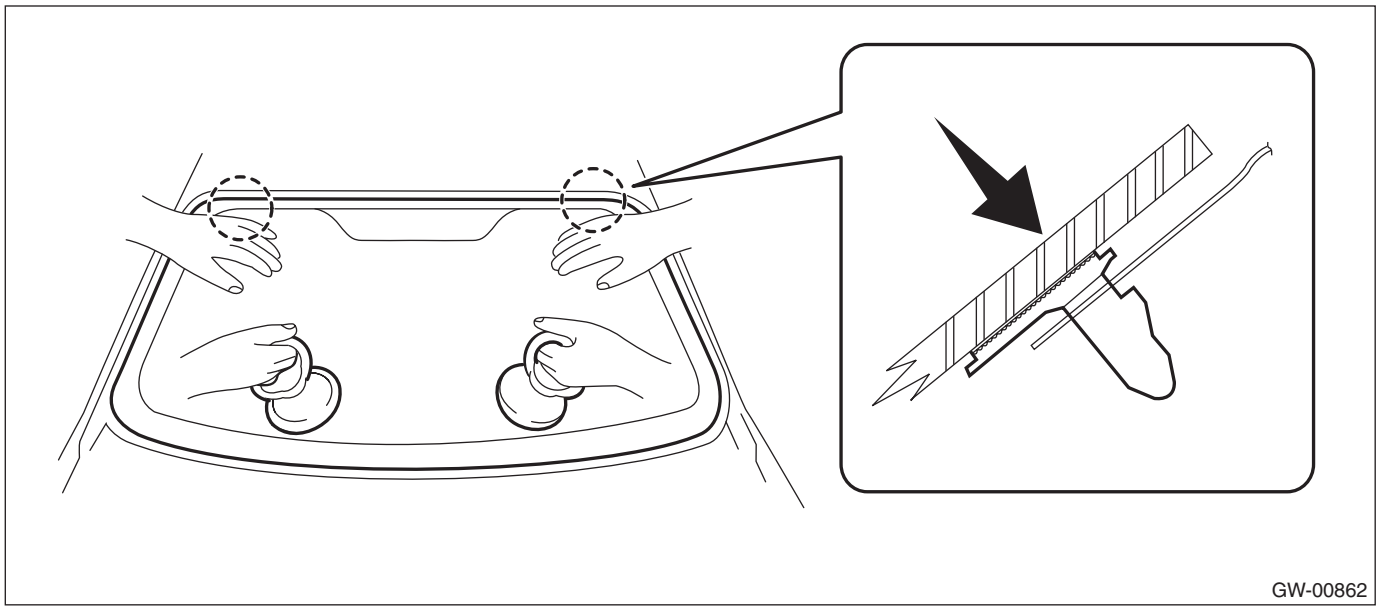
7) Install the glass - front window.
(1) Apply the primer to the adhesive surface of glass - front window side and body side using sponge.



Glass primer:
Dow Automotive ESSEX U-401, U-402 or equivalent

Painted surface primer:
Dow Automotive ESSEX U-413 or equivalent

NOTE:
- Primer once attached to the painted surface of the body and internal trim is hard to wipe off. Mask the circumference of such area.
- Let primer dry for about ten minutes before installing the glass - front window.
- Do not touch the surface coated with primer.



(2) Apply adhesive to the end back surface of the glass - front window.

Adhesive:
Dow Automotive ESSEX U-400HV or equivalent

(a) Application of primer (glass side)
(b) Application of primer (body side)
(c) Adhesive
(d) Molding - front window
(e) Dam rubber - front

(3) Fit the locating pins - front window to the vehicle body using suction rubber cups to install the windshield glass.

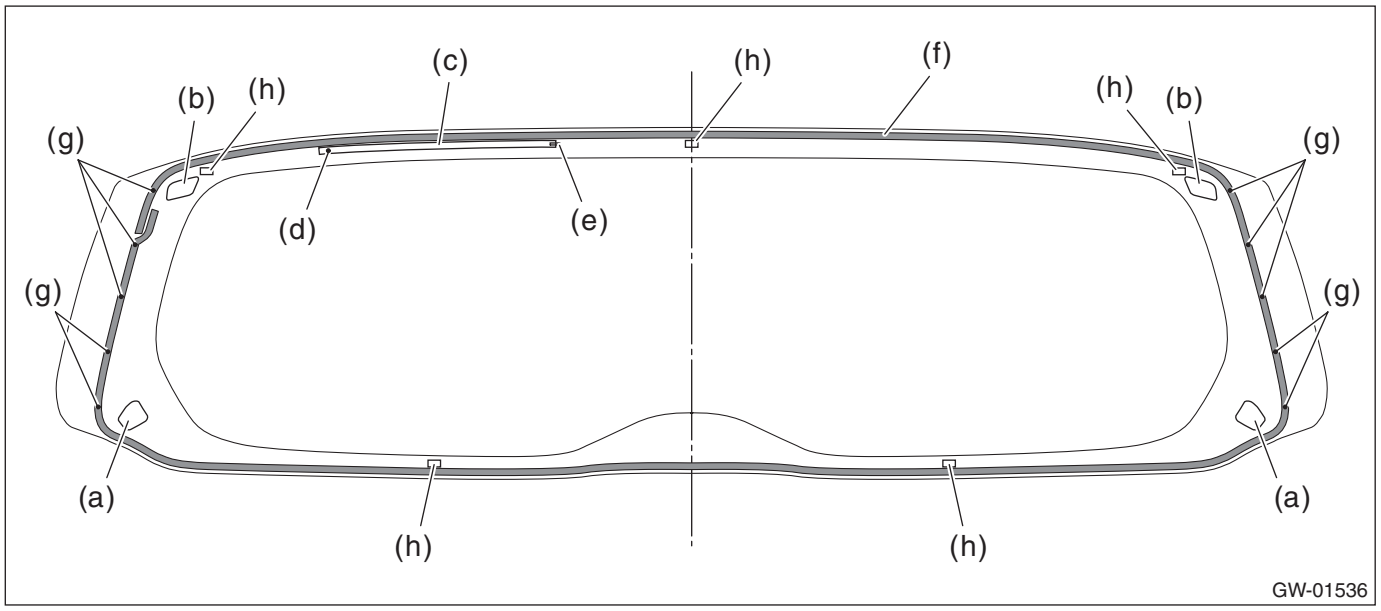
(4) Lightly press the entire perimeter of the glass - front window for tight fit.
(5) Make flush the adhesive surface jutted out using spatula.

8) After completion of all work, allow the vehicle to stand for about 24 hours.

NOTE:
• When opening/closing the door after the glass - front window was bonded, always lower the glass assembly - door first, and then open/close it carefully.
• Move the vehicle slowly.
• For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

9) Connect the wiper deicer connector. (Models with wiper deicer)
10) Install the cowl panel assembly. <Ref. to EI-53, INSTALLATION, Cowl Panel.>
11) Install the stereo camera cover and stereo camera. (Models with EyeSight) <Ref. to ES-10, INSTALLATION, Stereo Camera.>
12) Install the trim panel - front pillar UPR. <Ref. to EI-97, INSTALLATION, Upper Inner Trim.>
13) Connect the ground terminal to battery sensor. (Models with wiper deicer) <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
14) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

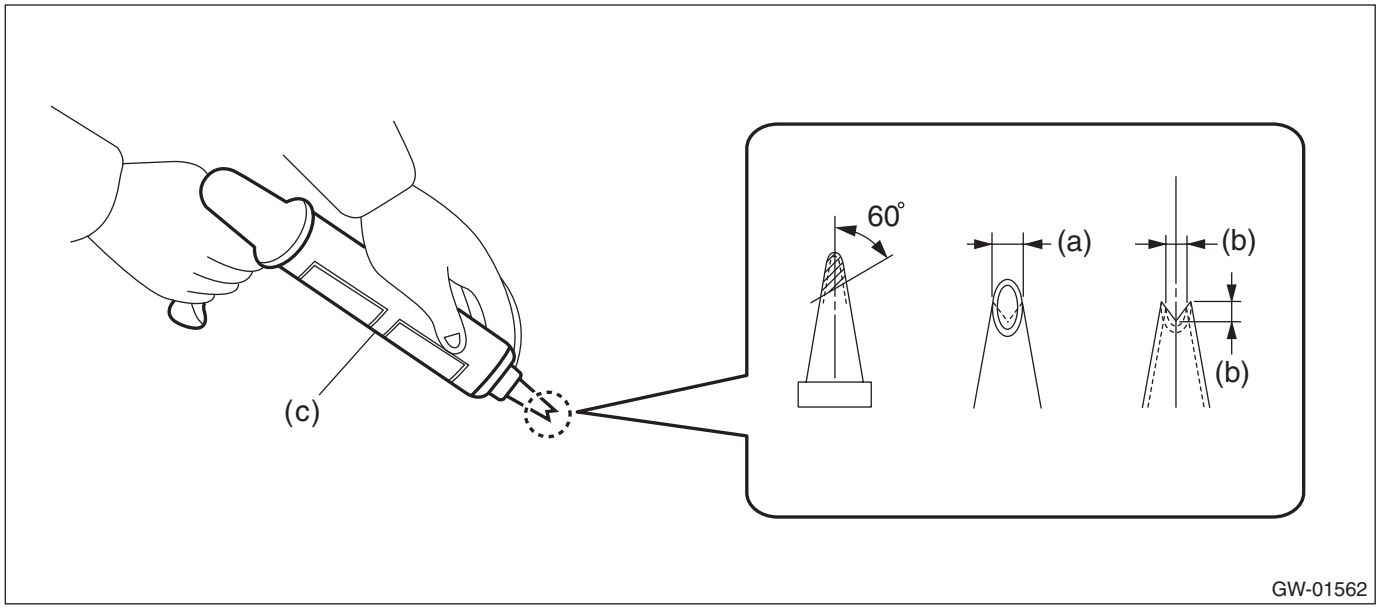
NOTE:
When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.



13.Rear Gate Glass

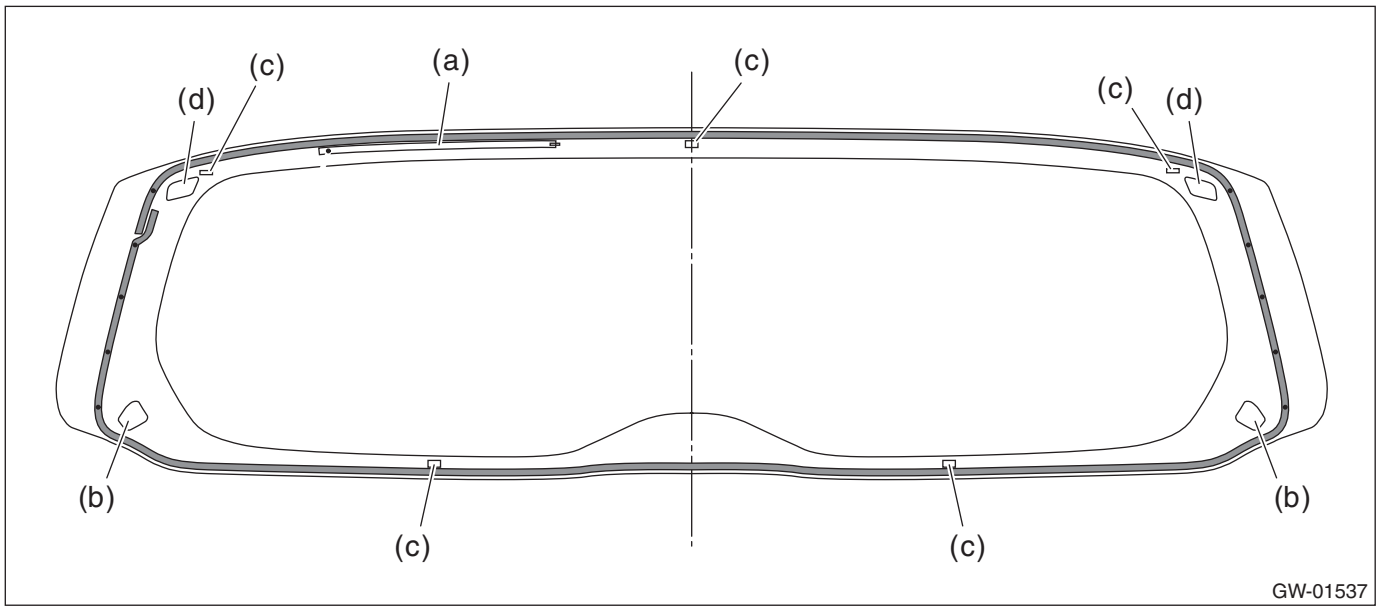
A: REMOVAL

1) Remove the ground terminal from the battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the roof spoiler. <Ref. to EI-66, REMOVAL, Roof Spoiler.>
3) Remove the trim panel - rear gate and the motor assembly - rear wiper. <Ref. to WW-40, REMOVAL, Rear Wiper Motor.>
4) Disconnect the rear defogger connector.
5) Remove the glass - rear gate in the same procedure as for the glass - front window. <Ref. to GW-37, REMOVAL, Windshield Glass.>



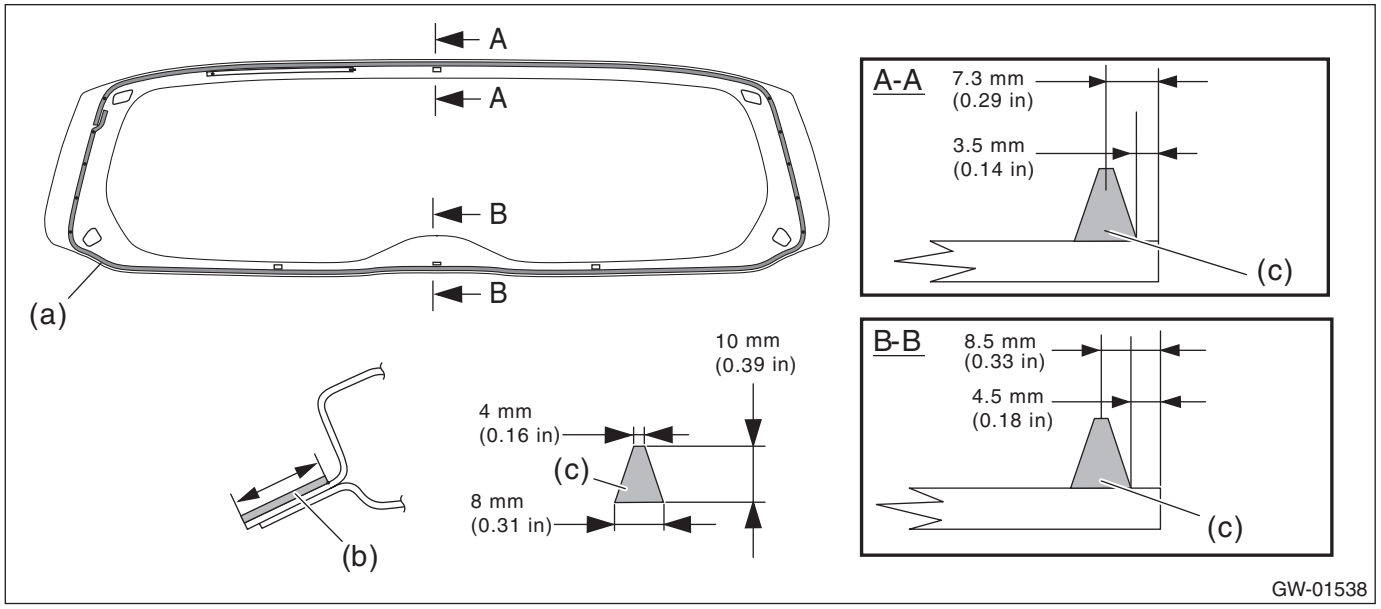
B: INSTALLATION

NOTE:
Use the markings on the glass to apply adhesive and primer, and to install the dam rubber - rear gate and the spacer - rear gate.



(a) Locating pin - rear gate
(b) Holder - rear gate upper
(c) Dam rubber - rear gate
(d) Marking for dam rubber - rear gate application (Ag print)
(e) Origin of attachment
(f) Adhesive line
(g) Adhesive application area
(h) Spacer - rear gate

1) Fabricate the cartridge nozzle tip as shown and set the sealant gun with the adhesive.



(a) 10 mm (0.39 in)
(b) 8 mm (0.31 in)
(c) Sealant gun

2) Smoothen and clean the adhesive surfaces of the glass - rear gate and body using the same procedures as for the glass - front window. <Ref. to GW-40, INSTALLATION, Windshield Glass.>
3) Attach the dam rubber - rear gate to the glass - rear gate.

(a) Dam rubber - rear gate
(b) Locating pin - rear gate
(c) Spacer - rear gate
(d) Holder - rear gate upper

4) Install the glass - rear gate.
(1) Apply the primer to the adhesive surface of glass - rear gate side and body side using sponge.
(2) Apply adhesive to the glass - rear gate end back surface.

(a) Application of primer (glass side) (b) Application of primer (body side) (c) Adhesive

(3) Attach the holder - clip rear gate to the holder - rear gate upper of the glass - rear gate.
(4) Insert the locating pins - rear gate into the rear gate panel holes, and install the glass - rear gate.
(5) Lightly press the entire perimeter of the glass - rear gate for tight fit.
(6) Make flush the adhesive surface jutted out using spatula.

5) After completion of all work, allow the vehicle to stand for about 24 hours.

NOTE:
• When opening/closing the door after the glass - rear gate was bonded, always lower the glass assembly - door first, and then open/close it carefully.
• Move the vehicle slowly.
• For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

6) Connect the rear defogger connector.
7) Install the motor assembly - rear wiper and the arm assembly - rear wiper. <Ref. to WW-41, INSTALLATION, Rear Wiper Motor.>

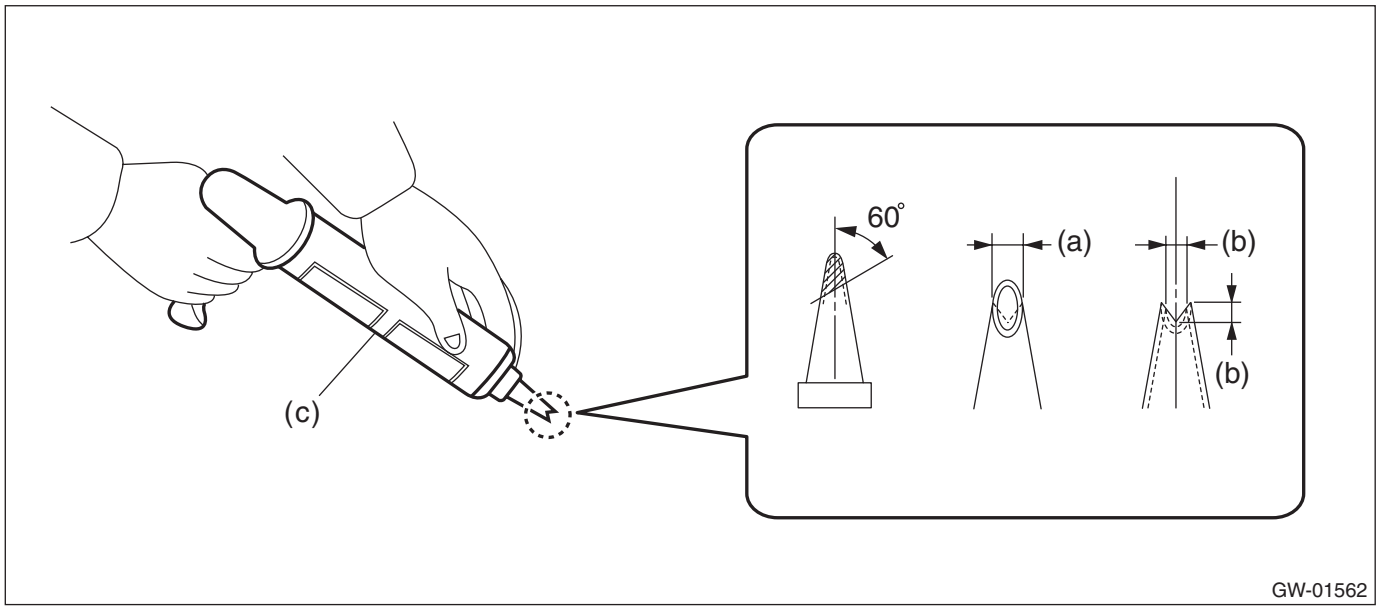
Tightening torque:
Motor assembly - rear wiper and arm assembly - rear wiper: <Ref. to WW-3, REAR WIPER, COMPONENT, General Description.>

8) Install the roof spoiler. <Ref. to EI-62, INSTALLATION, Rear Gate Garnish.>

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

9) Install the trim panel - rear gate. <Ref. to EI-123, INSTALLATION, Rear Gate Trim.>
10) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
11) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

NOTE:
When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

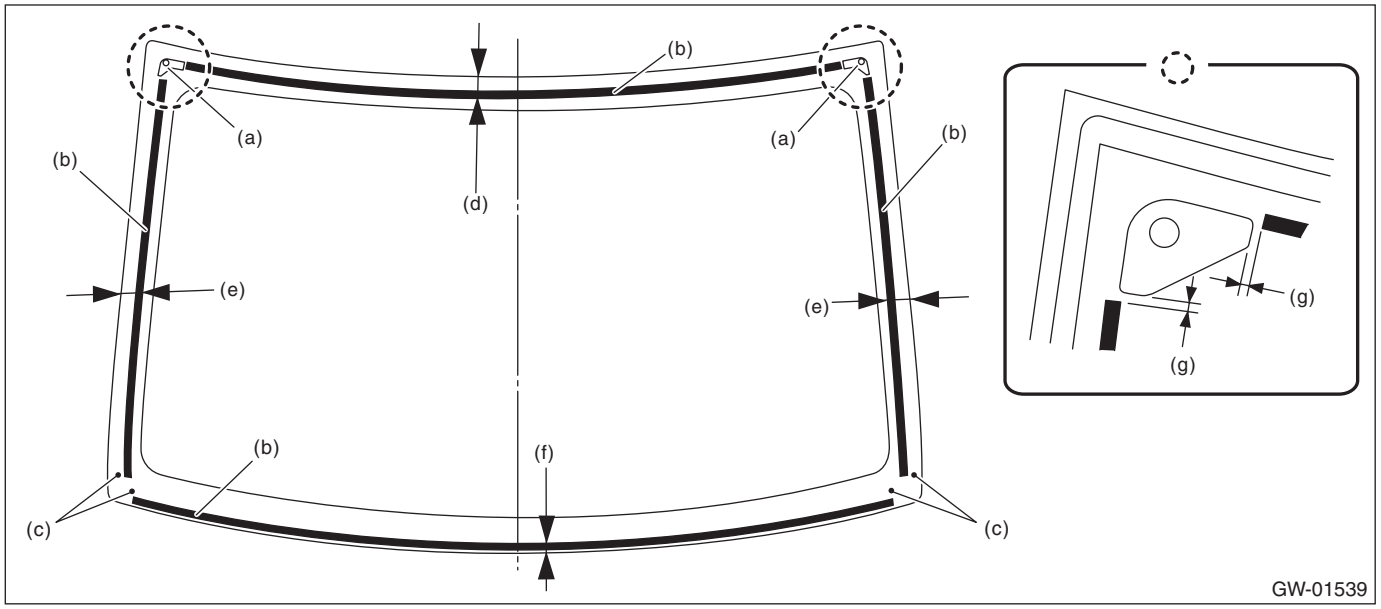


14.Rear Window Glass

A: REMOVAL

1) Remove the ground terminal from the battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Disconnect the rear defogger connector.
3) Remove the glass - rear window in the same procedure as for the glass - front window. <Ref. to GW-37, REMOVAL, Windshield Glass.>

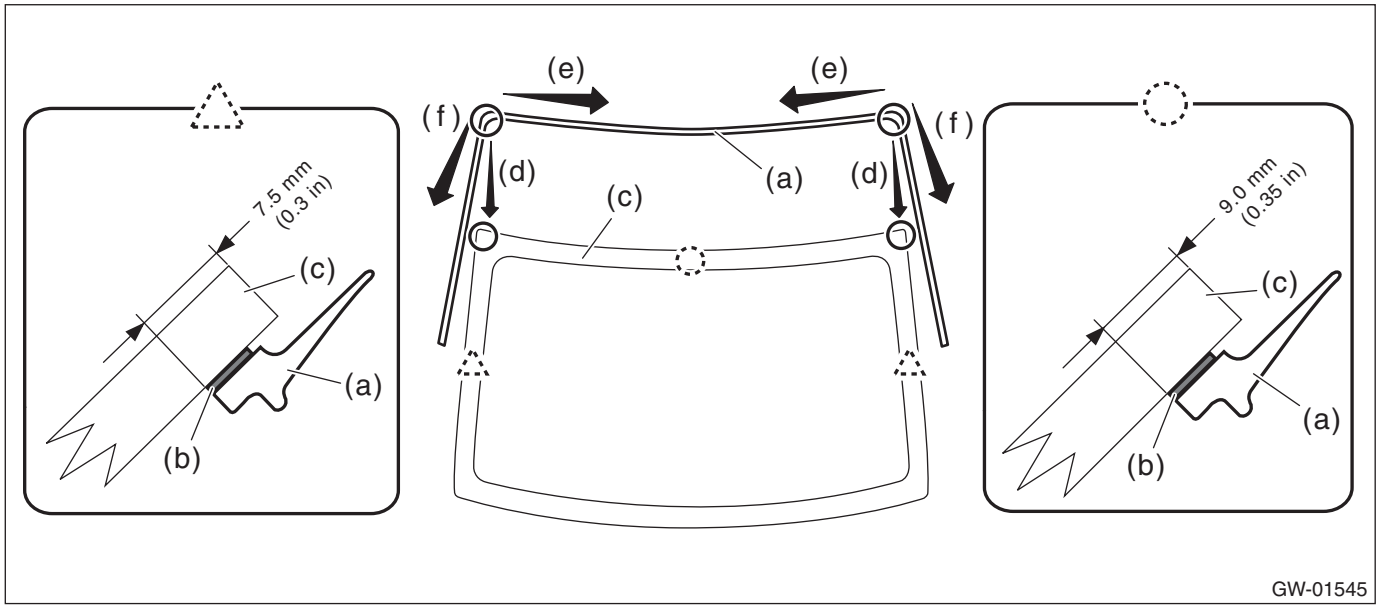
B: INSTALLATION



1) Fabricate the cartridge nozzle tip as shown and set the sealant gun with the adhesive.

(a) 10 mm (0.39 in) (b) 8 mm (0.31 in) (c) Sealant gun

2) Smoothen and clean the adhesive surfaces of the glass - rear window and body using the same procedures as for the glass - front window. <Ref. to GW-40, INSTALLATION, Windshield Glass.>

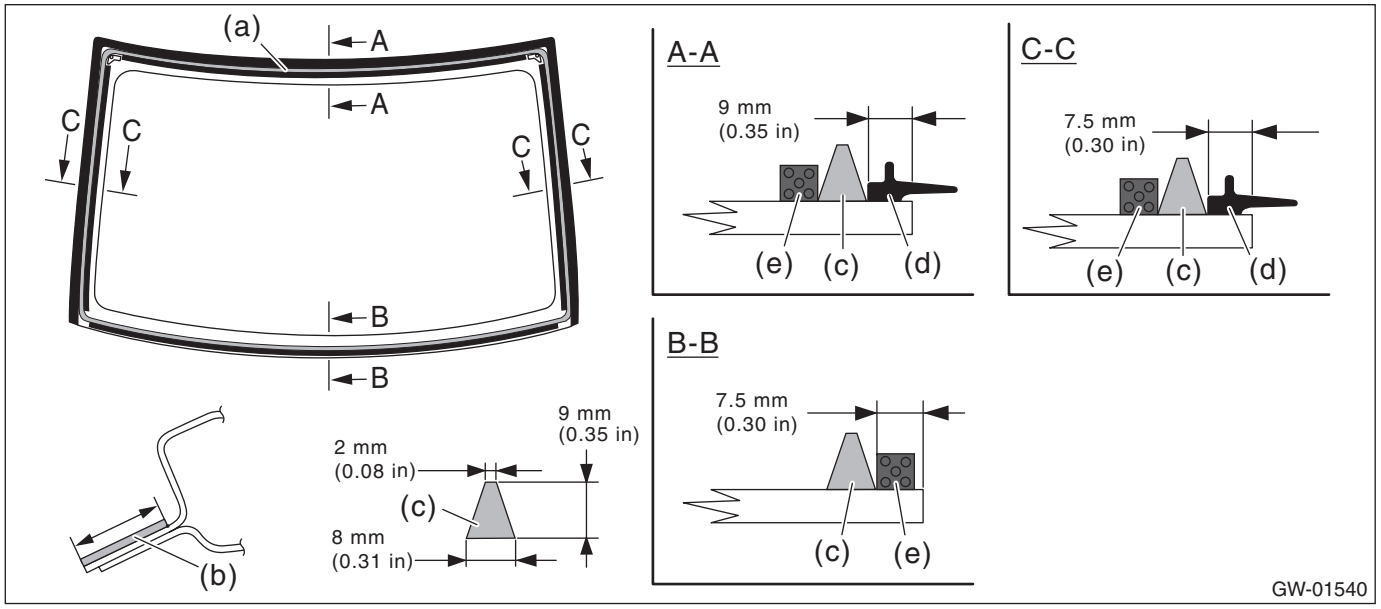


3) Attach the dam rubber - rear to the glass - rear window.

(a)	Locating pin - rear window	(d)	23.5 mm (0.93 in)	(g)	3 mm (0.12 in)
(b)	Dam rubber - rear	(e)	22 mm (0.87 in)		
(c)	Dam rubber set mark	(f)	7.5 mm (0.3 in)		

4) Attach the molding - rear window to the glass - rear window.

CAUTION:
Be careful to attach the molding - rear window so that the molding has no loose or undulating part.



(1) Align the molding - rear window (a) to the upper ends (d) of the glass - rear window (c).
(2) Install the molding - rear window from both corners of the upper edge toward the center. (e)
(3) Install the molding - rear window from both corners of the upper edge toward the bottom. (f)
(4) Firmly apply the double sided tape (b) of the molding - rear window evenly to the surface of the glass - rear window.

5) Install the glass - rear window in the same procedure as for the glass - front window. <Ref. to GW-40, INSTALLATION, Windshield Glass.>

(1) Apply the primer to the adhesive surface of glass - rear window side and body side using sponge.

(2) Apply adhesive to the end back surface of the glass - rear window.

(a) Application of primer (glass side)
(b) Application of primer (body side)
(c) Adhesive
(d) Molding - rear window
(e) Dam rubber - rear

(3) Insert the locating pins - rear window into the rear panel holes, and install the glass - rear window.

(4) Lightly press the entire perimeter of the glass - rear window for tight fit.

(5) Make flush the adhesive surface jutted out using spatula.

6) After completion of all work, allow the vehicle to stand for about 24 hours.

NOTE:

- When opening/closing the door after the glass - rear window was bonded, always lower the glass assembly - door first, and then open/close it carefully.
- Move the vehicle slowly.
- For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

7) Connect the rear defogger connector.

8) Install the terminal. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

9) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

NOTE:

When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

15.Rear Window Defogger System

A: WIRING DIAGRAM

Refer to “Rear Defogger System” in the wiring diagram. <Ref. to WI-384, WIRING DIAGRAM, Rear Defogger System.>

B: INSPECTION

1. SYSTEM INSPECTION

Symptoms	Inspection order
Rear window defogger does not operate.	1. Check the fuse. 2. Check the rear defogger relay. 3. Check the rear window defogger switch. 4. Check the heat wire. 5. Check the wiring harness. 6. Check body integrated unit.

NOTE:
Rear window defogger system can be customized using the Subaru Select Monitor, when the customize setting {Auto A/C ECU Setting} of the body integrated unit is set to {support}.

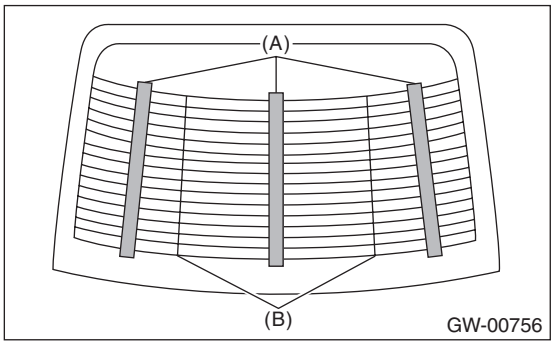
System name	Initial setting	Customize setting
Rear defogger operation mode	Normal	Continuous*

* When the battery voltage remains at 10 V or less for 30 seconds, the continuous operation is suspended and turned to the normal operation.

2. CHECK WITH SUBARU SELECT MONITOR

CAUTION:
Check whether the Rr Defogger op. mode setting is in initial setting or customize setting before performing inspection.

1) Check the input signal when the rear window defogger switch is operated using Subaru Select Monitor.
   (1) Prepare the Subaru Select Monitor. <Ref. to GW-7, PREPARATION TOOL, General Description.>
   (2) Turn the ignition to ON (engine OFF) and run the “PC application for Subaru Select Monitor”.
   (3) On «Main Menu» display, select «Each System Check».
   (4) On «System Selection Menu» display, select «Integ. unit mode».
   (5) On «Integ. unit mode failure diag.» display, select «Current Data Display & Save».
   (6) Select «Auto A/C ECU Setting» from «Current Data Display & Save».
   (7) Check the vehicle equipment and the settings of body integrated unit.
   (8) Select the «Rr Defogger output» on «Current Data Display & Save».
   (9) Check the displayed data (ON/OFF) by operating the rear window defogger switch.
2) Check the operation with rear window defogger switch ON.
• When customize setting is set as “Continuous”, it is normal if the 15-minute operation and 2-minute stop repeats.
• When customize setting is “Normal”, it is normal if the operation lasts for 15 minutes and then turns OFF.
3) When the operation in 2) above fails, replace the body integrated unit.



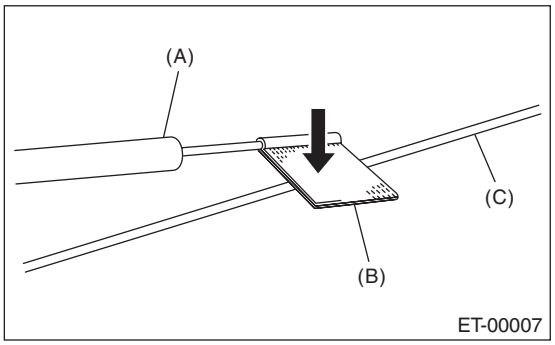
3. HEAT WIRE INSPECTION

CAUTION:
Use a dry soft cloth to wipe off dirt on the glass along the heat wires with care not to damage the heat wires.

1) Prepare the following checking items.
• Liquid crystal thermograph sheet (approximate Size: 300 × 300 mm (11.8 × 11.8 in) and thermal temperature: 35 — 40°C (95 — 104°F))
• Aluminum foil
2) Turn the ignition switch to ON.
3) Turn the defogger switch to ON.

4) Push the liquid crystal thermograph sheet from the outside of the glass - rear window.

NOTE:
Use the liquid crystal thermograph sheet every range it is separated with the separate line.

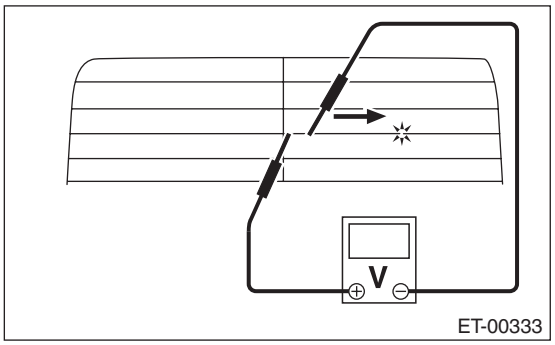


(A) Liquid crystal thermograph sheet
(B) Separate line

5) Determine the faulty heat wire by checking the color of the liquid crystal thermograph sheet.

Liquid crystal thermograph sheet	Criteria
Change occurred (red → blue)	Normal
No change (black)	Open

NOTE:
- Check from the inside of the glass - rear window if the liquid crystal thermograph sheet does not change.
- The time for the color change may differ depends on the surface temperature of the glass.

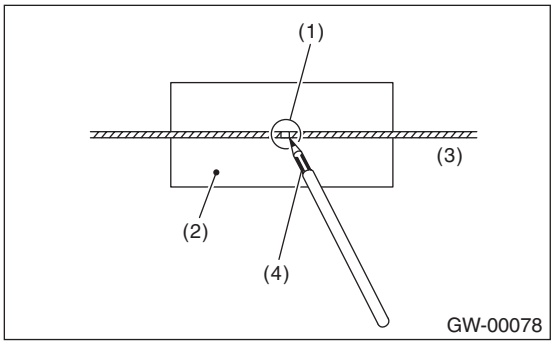


6) Wrap a piece of aluminum foil around the tip of tester probe and press it against the heat wire with your finger.

(A) Tester probe
(B) Aluminum foil
(C) Heat wire

7) To both ends of the section that has been found to include an open in the step 5), apply the tester positive (+) probe and the negative (–) probe.

8) Move the tester probe on the negative (–) side slowly along the heat wire. If voltage changes from zero while moving the tester probe, heat wire is open at the voltage change point.



9) Repair the heat wire that determines the place of the open circuit. <Ref. to GW-54, REPAIR, Rear Window Defogger System.>

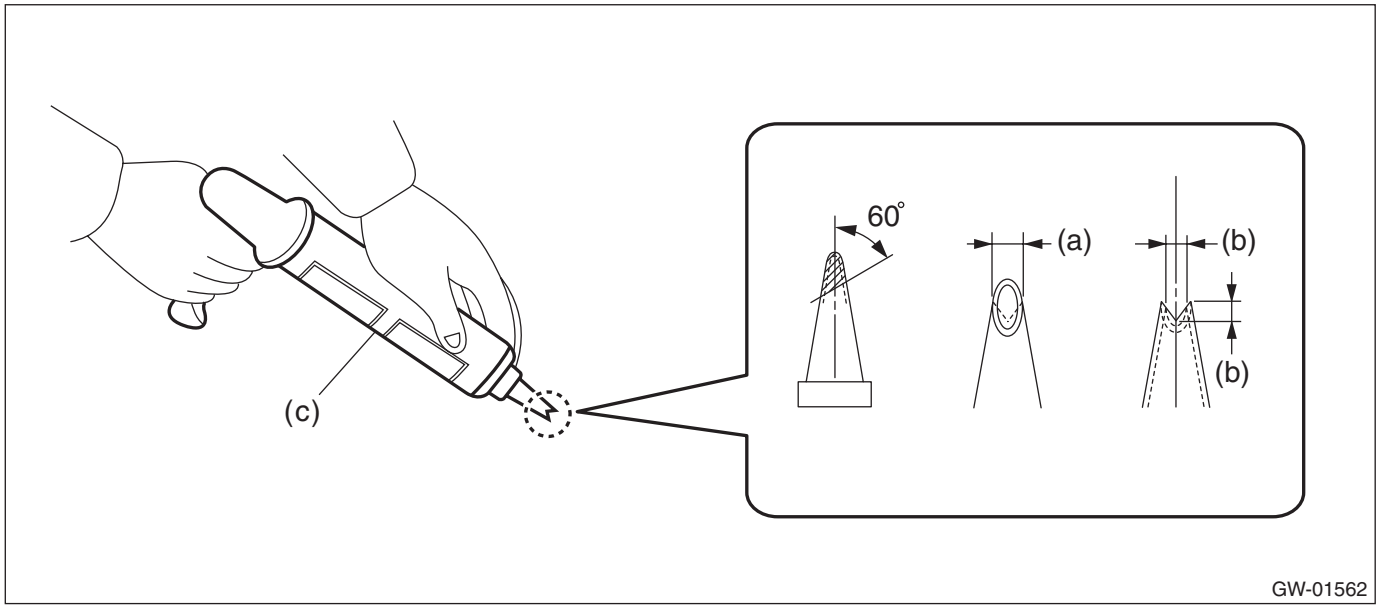
C: REPAIR

1) Clean the broken portion with alcohol or appropriate cleaning solvent.
2) Mask both side of wire with masking tape.
3) Apply the conductive silver composition to the broken portion.

Conductive silver composition:
Permatex QUICK GRID

(1) Broken portion
(2) Masking tape
(3) Broken wire
(4) Conductive silver composition

4) Dry using a dryer after applying the composition.
5) After repair, check the wire.

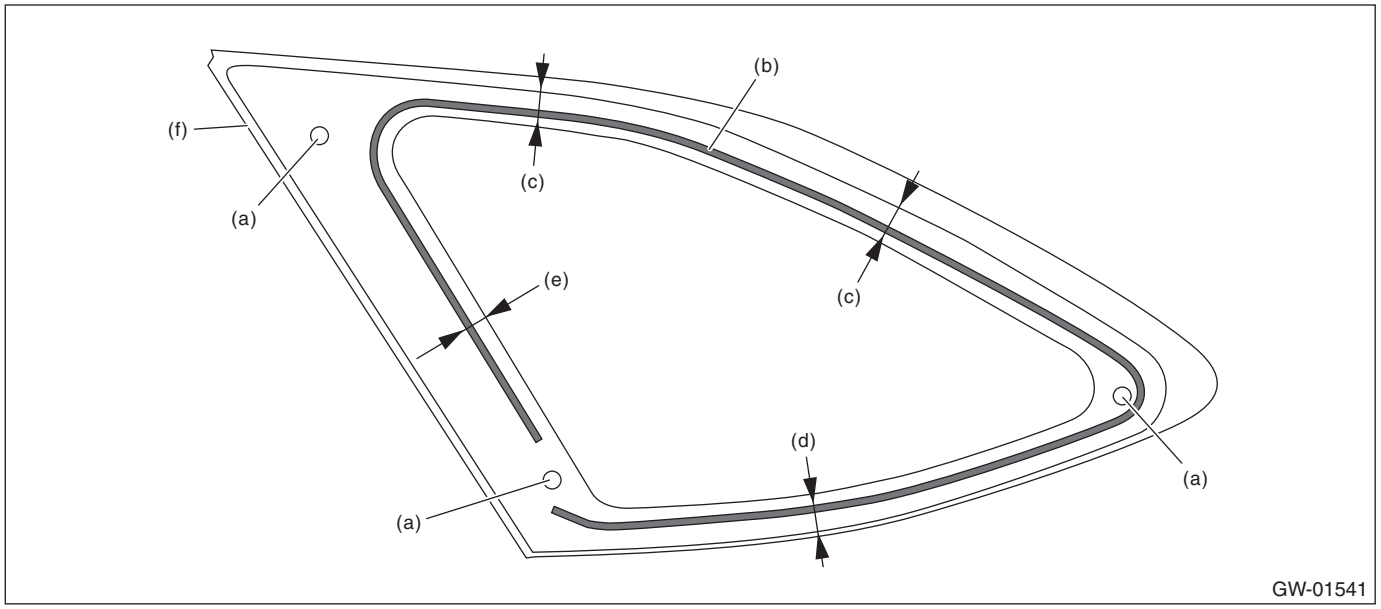


16.Rear Quarter Glass

A: REMOVAL

1) Remove the ground terminal from the battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear pillar UPR. <Ref. to EI-100, OUTBACK MODEL, REMOVAL, Rear Quarter Trim.>
3) Remove the glass - rear quarter in the same procedure as for the glass - front window. <Ref. to GW-37, REMOVAL, Windshield Glass.>

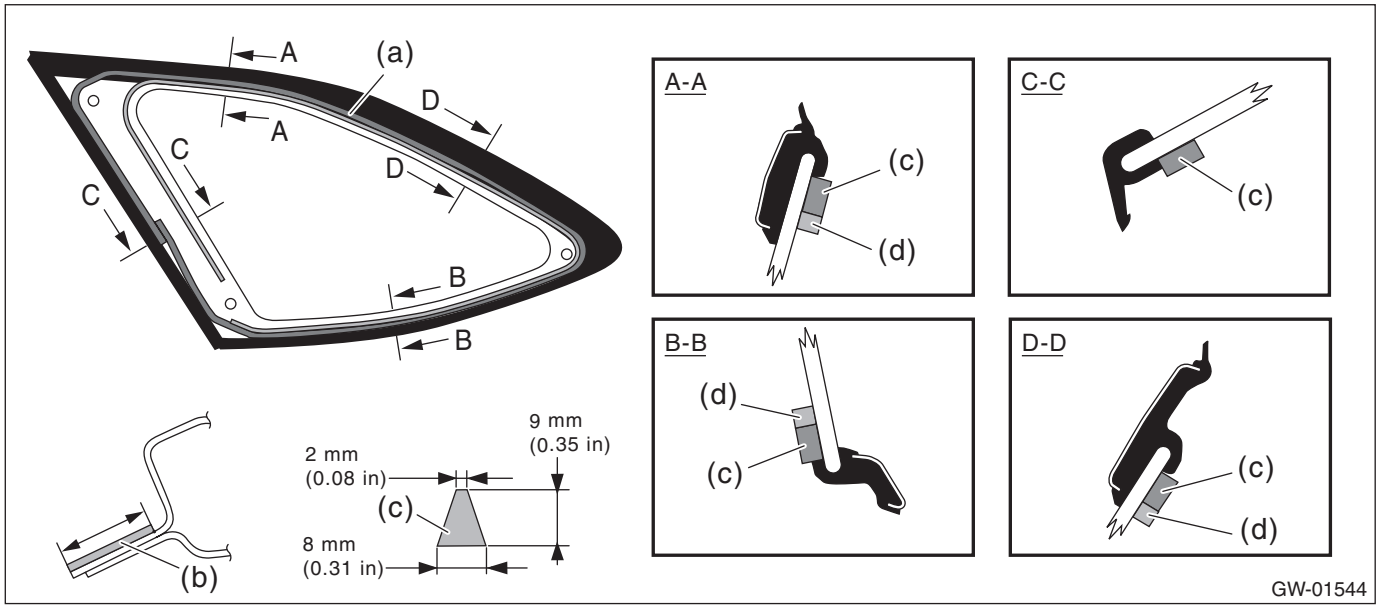
B: INSTALLATION



1) Fabricate the cartridge nozzle tip as shown and set the sealant gun with the adhesive.

(a) 10 mm (0.39 in) (b) 8 mm (0.31 in) (c) Sealant gun

2) Smoothen and clean the adhesive surfaces of the glass - rear quarter and body using the same procedures as for the glass - front window. <Ref. to GW-40, INSTALLATION, Windshield Glass.>



3) Attach the dam rubber - rear to the glass - rear quarter.

(a) Clip
(b) Dam rubber - rear quarter
(c) 18 mm (0.71 in)
(d) 16.2 mm (0.64 in)
(e) 17 mm (0.67 in)
(f) Molding

4) Install the glass - rear quarter in the same procedure as for the glass - front window. <Ref. to GW-40, INSTALLATION, Windshield Glass.>

(1) Apply the primer to the adhesive surface of glass - rear quarter side and body side using sponge.
(2) Apply adhesive to the glass - rear quarter end back surface.

(a) Application of primer (glass side)
(b) Application of primer (body side)
(c) Adhesive
(d) Dam rubber - rear quarter

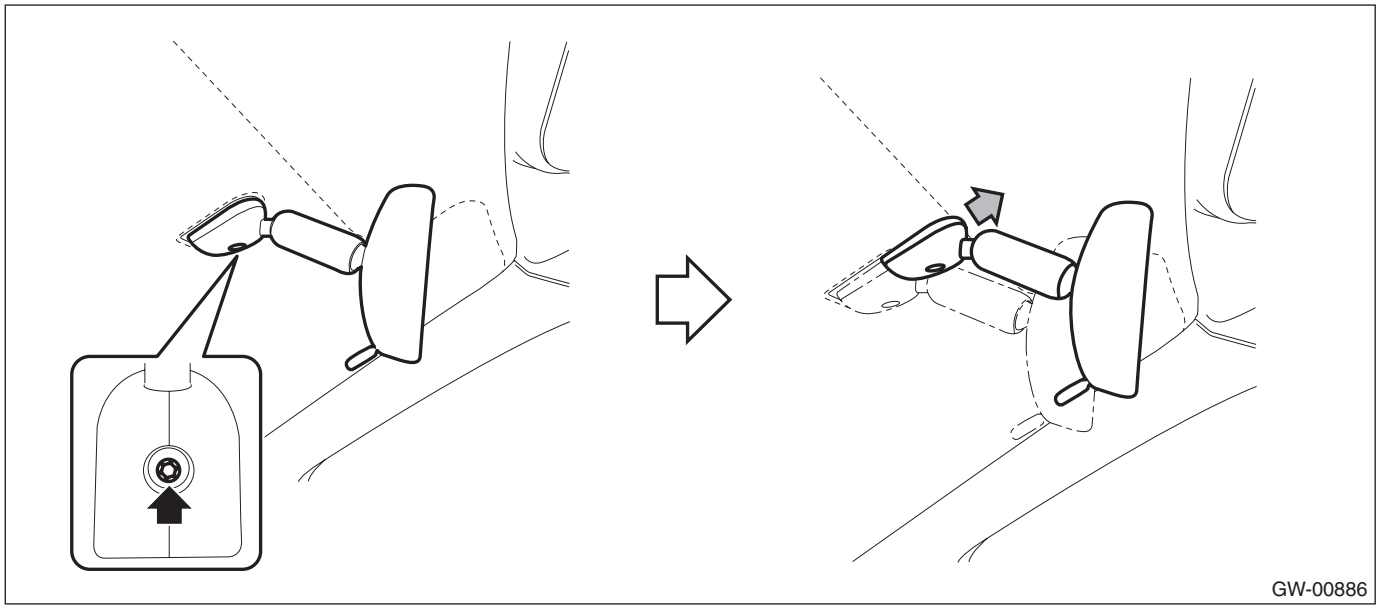
(3) Insert the clips in the side panel holes and install the glass - rear quarter.
(4) Lightly press the entire perimeter of the glass - rear quarter for tight fit.
(5) Make flush the adhesive surface jutted out using spatula.

5) After completion of all work, allow the vehicle to stand for about 24 hours.

NOTE:
• When opening/closing the door after the glass - rear quarter was bonded, always lower the glass assembly - door first, and then open/close it carefully.
• Move the vehicle slowly.
• For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

6) Install the trim panel - rear pillar UPR. <Ref. to EI-104, INSTALLATION, Rear Quarter Trim.>
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
8) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

NOTE:
When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.



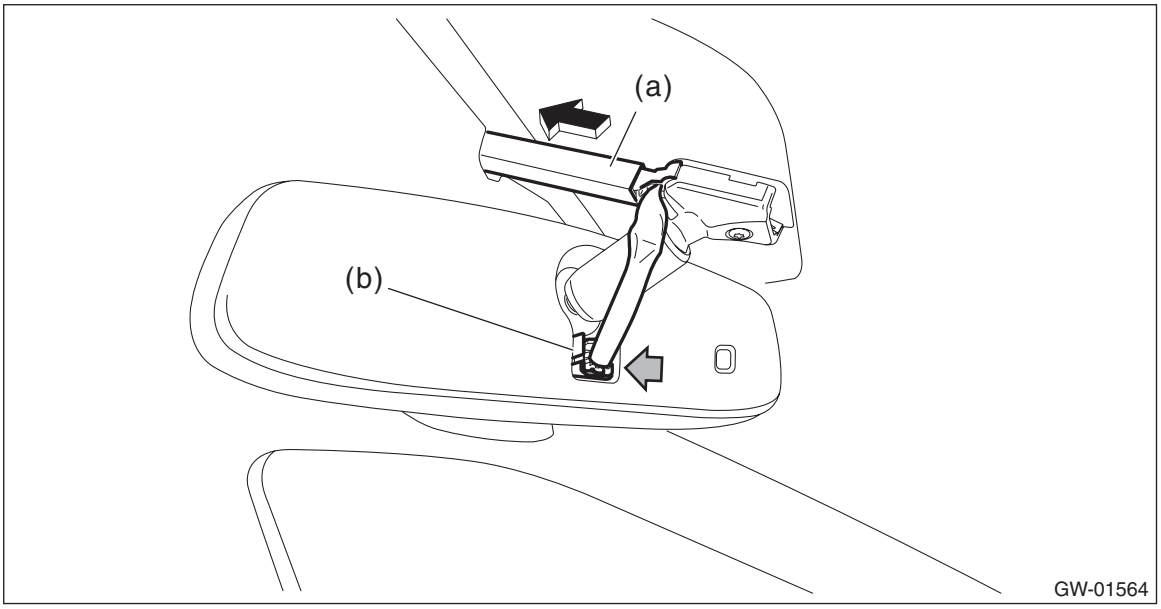
17.Rearview Mirror

A: REMOVAL

1. NORMAL MIRROR TYPE

CAUTION:
Be careful not to damage the mirror surface and windshield glass.
1) Remove the TORX® bolt, and slide the mirror assembly - inner rearview to remove.

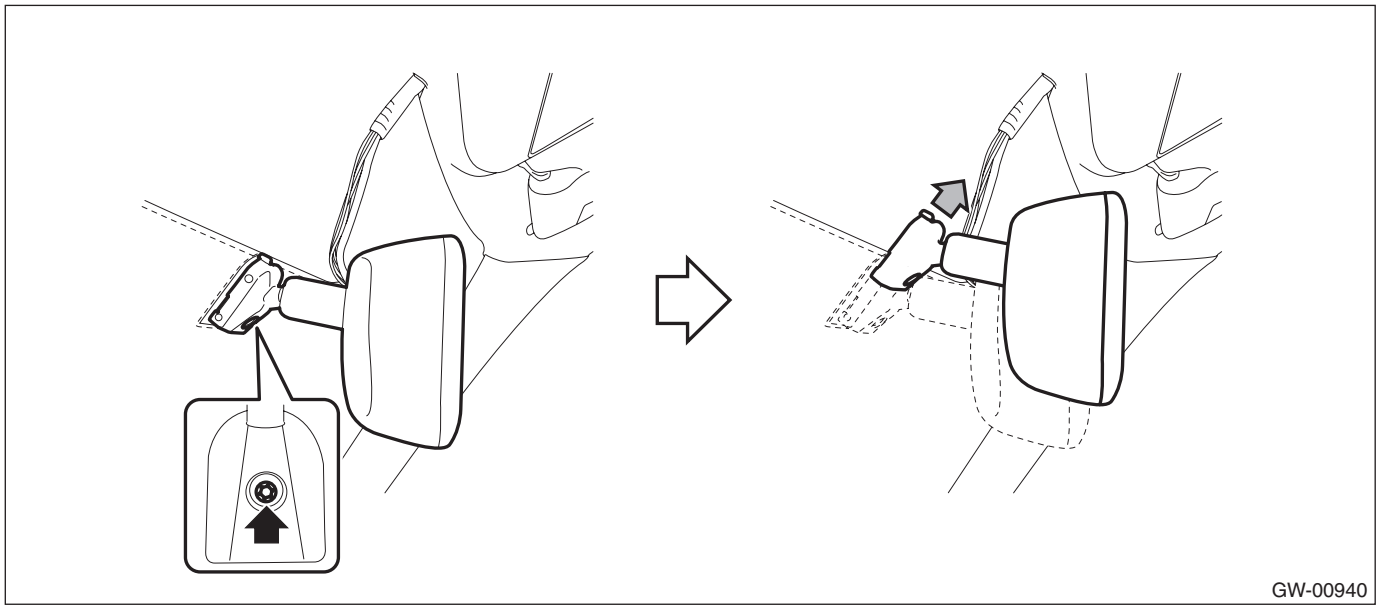
Preparation tool:
TORX® T20



2) If the mirror mounting is damaged, replace the windshield glass.

2. HOME LINK TYPE

CAUTION:
Be careful not to damage the mirror surface and windshield glass.
1) Remove the ground terminal from the battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



2) Remove the rearview mirror.
(1) Slide the upper section of the cover, and release the claws in the lower section, then remove the harness cover (a).
(2) Disconnect the rearview mirror connector (b).

CAUTION:
Be careful not to pull the harness.

(3) Remove the TORX® bolt, and then slide the rear view mirror to remove.

Preparation tool:
TORX® T20

3) If the mirror mounting is damaged, replace the windshield glass.

B: INSTALLATION

CAUTION:
When tightening the mounting TORX® screw, be sure to observe the tightening torque. Otherwise, the mount may be damaged in over-torque conditions.

1. NORMAL MIRROR TYPE

1) Slide the mirror assembly - inner rearview to the mirror mount to install.

NOTE:
If the mirror mounting is damaged, replace the windshield glass.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to GW-6, MIRROR, COMPONENT, General Description.>

2. HOME LINK TYPE

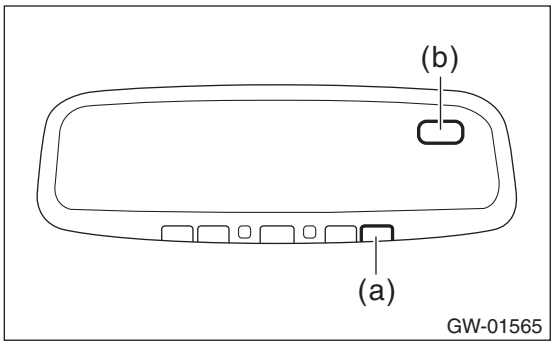
1) Slide the mirror assembly - inner rearview to the mirror mount to install.

NOTE:
If the mirror mounting is damaged, replace the windshield glass.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to GW-6, MIRROR, COMPONENT, General Description.>

2) Attach the harness cover (a).
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Perform calibration and zone setting of the rearview mirror. (With compass)
- CALIBRATION <Ref. to GW-61, CALIBRATION, ADJUSTMENT, Rearview Mirror.>
- ZONE SETTING <Ref. to GW-62, ZONE SETTING, ADJUSTMENT, Rearview Mirror.>

C: INSPECTION



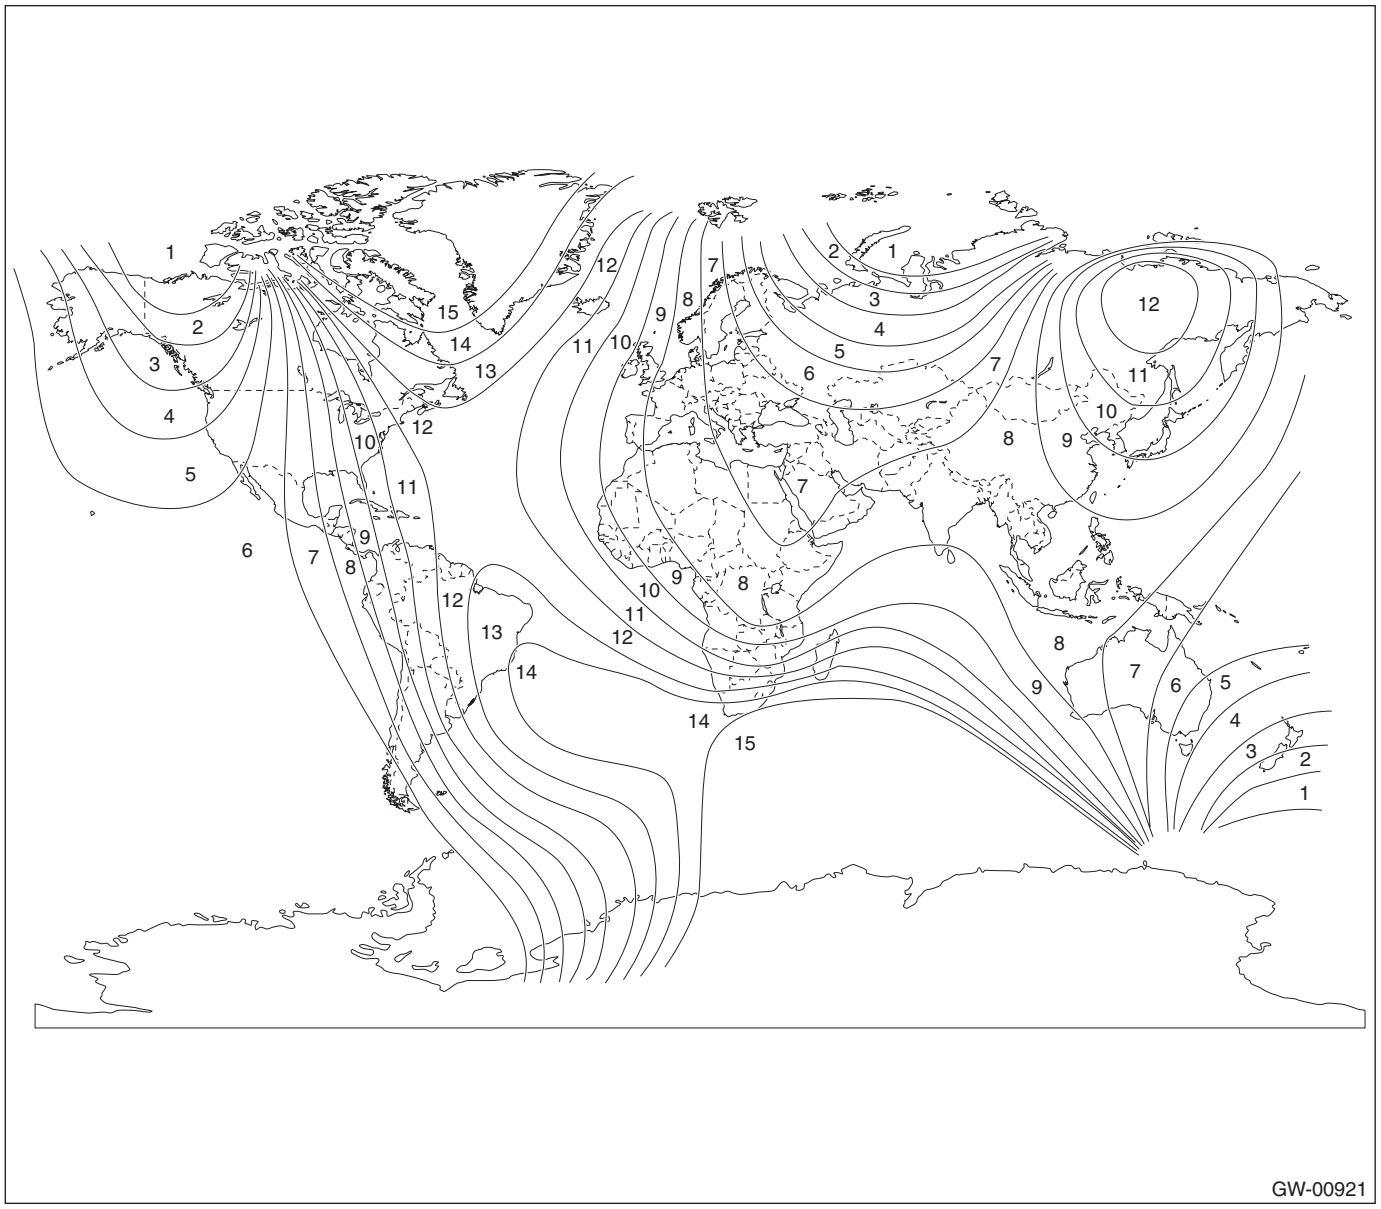
Check the mirror and mirror mount for damage.

D: ADJUSTMENT

CAUTION:
• When the rearview mirror with compass and home link is removed or replaced, perform calibration and zone setting by following the procedures below.
• The zone setting of the vehicle is set to zone "8" at factory setting.

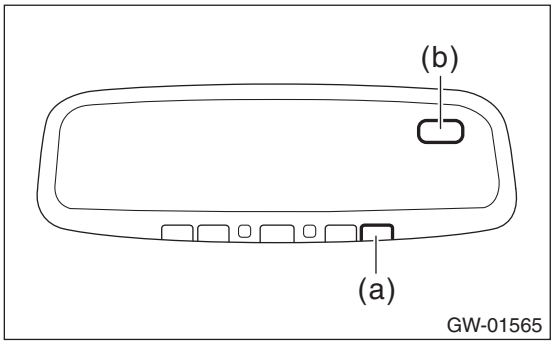
1. CALIBRATION

1) Before performing calibration, check the following items.
• There is a sufficient distance from a big metal object or a building.
• Vehicle is parked on a level surface.
• The switch of unnecessary accessories (A/C system, audio system and lighting system) is turned to "OFF".
• All doors are closed.
2) Start the engine.
3) Hold down the multi-function button (a) for six to nine seconds. Once calibration mode starts, "C" is displayed on the screen (b).



4) Drive the vehicle in a circle until the display of "C" on the screen goes off. (Approx. two or three times)
5) Display the compass to check the operation.

CAUTION:
The mirror may not be able to perform the reading correctly. Therefore, when the compass operates only to the specific direction, repeat steps 3) to 5).



2. ZONE SETTING

1) Refer to the compass zone map to check the zone number of area you use the vehicle.

Compass zone map

2) Turn the ignition switch to ON.
3) Hold down the multi-function button (a) for three to six seconds. Once zone setting mode starts, the zone number that is already set is displayed on the screen (b).

4) Push the multi-function button repeatedly until the zone number you want to set is displayed.

NOTE:
If you leave the multi-function button for three seconds, the zone setting mode is completed.

18.Wiper Deicer System

A: WIRING DIAGRAM

Refer to “Wiper Deicer System” in the wiring diagram. <Ref. to WI-460, Wiper Deicer System.>

B: INSPECTION

1. SYSTEM INSPECTION

NOTE:
- The wiper deicer does not operate when the ambient temperature becomes 5°C (41°F) or more.
- The wiper deicer operates with the rear window defogger at the same time.
- It is possible to perform a forced operation if you keep holding the rear window defogger switch for 3 seconds or more.

Symptoms	Inspection order
Wiper deicer does not operate.	1. Check the fuse. 2. Check the wiper deicer relay. 3. Check the wiper deicer switch. 4. Check the heat wire. 5. Check the wiring harness. 6. Check body integrated unit.

NOTE:
- Wiper deicer system can be customized using the Subaru Select Monitor, when the customize setting «Auto A/C ECU Setting» of the body integrated unit is set to {support}.
- Set the system using the Rr Defogger op. mode, and setting will be the same as rear defogger system setting.

System name	Initial setting	Customize setting
Rear defogger operation mode	Normal	Continuous operation*

*: When one of the following conditions occurs, the continuous operation is suspended and turned to the normal operation.
- Ambient temperature at 5°C (41°F) or more continues for 10 seconds.
- Malfunction occurs on ambient sensor.
- Vehicle speed of 15 km/h (9 MPH) or less continues 15 minutes (OFF when conditions are met)
- Malfunction occurs in CAN communication.
- Battery voltage remains at 10 V or less for 30 seconds.

2. CHECK WITH SUBARU SELECT MONITOR

CAUTION:
Before performing the inspection, check the following settings.
- **Wiper deicer setting → “support”. If “no support”, set to “support” using customize setting.**
- **Rr Defogger op. mode setting → Initial setting or customize setting.**

1) Check the input signal when the rear window defogger switch is operated using Subaru Select Monitor.
   (1) Prepare the Subaru Select Monitor. <Ref. to GW-7, PREPARATION TOOL, General Description.>
   (2) Turn the ignition to ON (engine OFF) and run the “PC application for Subaru Select Monitor”.
   (3) On «Main Menu» display, select «Each System Check».
   (4) On «System Selection Menu» display, select «Integ. unit mode».
   (5) On «Integ. unit mode failure diag.» display, select «Current Data Display & Save».
   (6) Select «Auto A/C ECU Setting» from «Current Data Display & Save».
   (7) Check the vehicle equipment and the settings of body integrated unit.
   (8) Select the «wiper deicer output» on «Current Data Display & Save».
   (9) Check the displayed data (ON/OFF) by operating the rear window defogger switch.
2) Check the operation with rear window defogger switch ON.
- When customize setting is set as “Continuous”, it is normal if the 15-minute operation and 2-minute stop repeats.
- When customize setting is “Normal”, it is normal if the operation lasts for 15 minutes and then turns OFF.

3) When the operation in 2) above fails, replace the body integrated unit.

3. HEAT WIRE INSPECTION

Refer to “HEAT WIRE INSPECTION” of “Rear Window Defogger System”. <Ref. to GW-52, HEAT WIRE INSPECTION, INSPECTION, Rear Window Defogger System.>

NOTE:
Heat wire inspection needs removing/installing procedure of instrument panel assembly.

C: REPAIR

Refer to “REPAIR” of “Rear Window Defogger System”. <Ref. to GW-54, REPAIR, Rear Window Defogger System.>

NOTE:
Heat wire repair needs removing/installing procedure of instrument panel assembly.

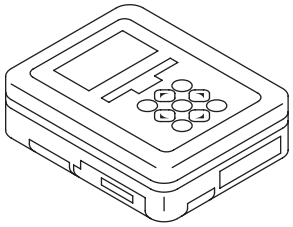
B: LOCATION



Refer to "LOCATION" of "INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS)" section. <Ref. to MET(diag)-5, LOCATION, Electrical Component Location.>

C: CAUTION

• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.
• Use gloves to avoid damage to and get fingerprints on the glass surface. Wipe off using a soft cloth, if the part is contaminated.
• When the combination meter assembly of the model without keyless access with push button start has been replaced, perform the registration of immobilizer. (Except for C0 and C5 models)
For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".
• Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
• When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

D: PREPARATION TOOL

1. SPECIAL TOOL

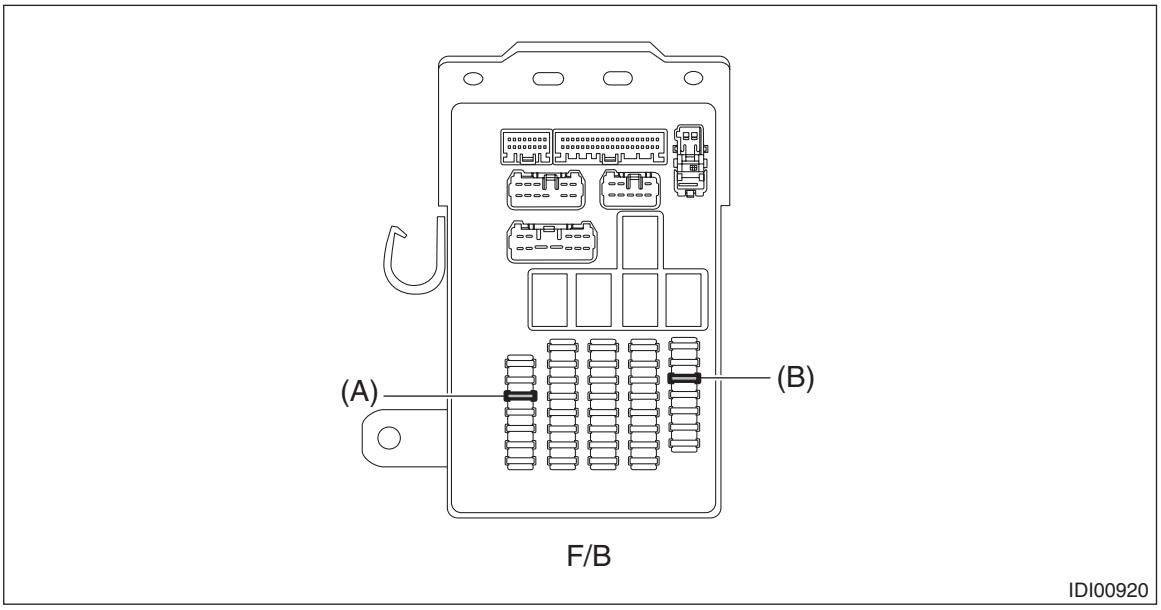


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of SUBARU SELECT MONITOR III KIT, refer to “PC application help for Subaru Select Monitor”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.

2. Relay and Fuse

A: LOCATION

Fuse & relay box (F/B)	Fuse 7.5 A (combination meter)	(A)
	Fuse 7.5 A (combination meter)	(B)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-23, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

3. Combination Meter System

A: WIRING DIAGRAM

Refer to “Combination Meter System” in the wiring diagram. <Ref. to WI-168, WIRING DIAGRAM, Combination Meter System.>

B: ELECTRICAL SPECIFICATION

1. COMBINATION METER ASSEMBLY

Refer to “Control Module I/O Signal” of “INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS)” section. <Ref. to MET(diag)-6, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: OPERATION

1. SELF-DIAGNOSIS DISPLAY MODE

The combination meter self-diagnosis can be performed as a single unit according to the following procedure.
When the self-diagnosis display mode operates, it switches in the order of [1. Meter pointer operation check] → [2. Meter pointer indication check] → [3. TFT display check].
1) Operation

CAUTION:
Perform the steps described in (1) through (4) within 10 seconds.

(1)	Within 3 seconds after turning the ignition switch to ON, set the parking light switch or the headlight switch to ON.
(2)	While the switch is in ON, press the trip reset switch three times.
(3)	Turn the parking light switch or the headlight switch to OFF, and press the trip reset switch three times.
(4)	Turn the parking light switch or the headlight switch to ON, and press the trip reset switch three times.

2) Go to the self-diagnosis display mode.

CAUTION:
If the procedure is not performed properly, turn the ignition switch from ON to OFF to stop the operation halfway, and then proceed from step (1) to (4).

NOTE:
• Turn the ignition to OFF (ACC OFF) to cancel the self-diagnosis function.
• When the engine starts during diagnosis, the self-diagnosis function is not cancelled, however, once the vehicle starts driving, the self-diagnosis function is deactivated automatically.
• If the self-diagnosis function is not deactivated, the check items in operation are displayed. After the check items 1 to 3 are displayed, the check item 1 is displayed repeatedly.
• The buzzer sounds when the check item is switched, to indicate that the item is switched and make sure that the buzzer sounds.

1. Meter pointer operation check

In meter pointer operation check, the meter operation, warning /indicator light, illumination and TFT are checked.
1) After a buzzer sounds for 0.5 seconds and “STEP1” is displayed on TFT, the meter pointer operation check mode is initiated.

Time (sec)	Meter indicator	TFT display, illumination	Warning/indicator light
6	MIN indication ↓ MAX indication	ILL1 (Min. brightness) ↓*3 ILL6 (Max. brightness)	*1, *2
6	MAX indication ↓ MIN indication	ILL6 (Max. brightness) ↓*3 ILL1 (Min. brightness)	

*1: Warning lights and indicator lights controlled by the meter drive circuit are illuminated. <Ref. to IDI-2, SPECIFICATION, General Description.>
*2: Warning lights and indicator lights controlled by other module are turned on/off according to the module control. <Ref. to IDI-2, SPECIFICATION, General Description.>
*3: Displays each level for one second.

2. Meter pointer indication check

In meter pointer indication check, the meter operation, warning /indicator light and fuel level warning light are checked.

NOTE:
ILL indication illuminates at the same brightness as immediately before entering “Meter pointer indication check”.
1) Press the trip reset switch.
2) After a buzzer sounds for 0.5 seconds and “STEP2” is displayed on TFT, the meter pointer indication check mode is initiated.

Time (sec)	Speedometer (km/h)	Tachometer (r/min)	Fuel gauge	Engine coolant temperature gauge	Fuel level warning light	Warning/indicator light
1.5	0	0	Lowest point	Lowest point	Light ON	*1, *2
1.5	40	1000	E	C	Light ON	
1.5	100	4000	1/2	Starting point of the red line	Light OFF	
1.5	140	8000	F	H	Light OFF	
1.5	100	4000	1/2	Starting point of the red line	Light OFF	
1.5	40	1000	E	C	Light ON	

*1: Warning lights and indicator lights controlled by the meter drive circuit go off. <Ref. to IDI-2, SPECIFICATION, General Description.>
*2: Warning lights and indicator lights controlled by other module are turned on/off according to the module control. <Ref. to IDI-2, SPECIFICATION, General Description.>

3. TFT display check

Check the TFT display.

NOTE:
- The meter needle indicate 0 or the lowest position.
- ILL indication illuminates at the same brightness as immediately before entering “TFT display check”.
- After No. 6 is displayed in the illumination order, display is repeated from No. 1 again.
- The version display contents of the illumination order No. 1 varies depending on the vehicle.

1) Press the trip reset switch.
2) After a buzzer sounds for 0.5 seconds and “STEP3” is displayed on TFT, the TFT display check mode is initiated.

Order	TFT display	Warning/indicator light	Time (sec)
1	Version display & black	Light OFF	10
2	Red	Light OFF	10
3	Green	Light OFF	10
4	Blue	Light OFF	10
5	White	Light OFF	10
6	Color gradation	Light OFF	10

2. DEMONSTRATION MODE

The demonstration mode screen of the combination meter can be displayed according to the following procedure.

CAUTION:
- **To avoid battery discharge, perform the operation under the following condition.**
  - **– Perform the operation while the battery is being charged.**
  - **– While performing the operation and displaying the demonstration mode, close all doors and do not operate any electrical parts.**
- **If the battery voltage is low, the demonstration mode is not initiated.**
- **To display the demonstration mode, set the Demonstration mode permission / fault permission of the user customize mode to permission. For operation procedures, refer to the “PC application help for Subaru Select Monitor”.**
- **When the demonstration mode display is completed, make sure to set “Demonstration mode permission / fault permission” of the user customize mode to “fault permission”. Do not deliver the vehicle to the customer with “Demonstration mode permission / fault permission” set to “permission”.**
- **Even if the backup fuse is removed, the demonstration mode can be initiated.**

1) Operation

CAUTION:
While the ignition is OFF (ACC OFF) and the odo/trip meter is not displayed, perform the steps described in 1) through 4) within 10 seconds.

(1)	Press the trip reset switch once.
(2)	Press the i/SET switch three times within three seconds after the operation (1) above is performed.
(3)	Press the trip reset switch once, and press the i/SET switch three times.
(4)	Press the trip reset switch once, and press the i/SET switch three times.

2) The demonstration mode is initiated.

CAUTION:
If the procedure is not performed properly, turn the ignition switch from ON to OFF to stop the operation halfway, and then proceed from step (1) to (4).

NOTE:
The demonstration mode will be cancelled in the following condition.
When resuming the operation after cancellation, the demonstration mode is displayed. However, the resuming can only be accepted after approx. 1 minute.
- At the completion of the “goodbye screen” display that is shown 60 minutes after the demonstration mode is initiated
- When the ignition is turned to ON
- When the i/SET switch is turned to ON for two seconds
- When the battery voltage is low
- When the push button ignition switch is pressed with the access key out of the passenger room
- When any request switch is pressed with the access key in the passenger room

3. VARIANT WORK

Perform when replacing the combination meter assembly.
- When communication with Subaru Select Monitor is possible («Read Control module setting information» is workable): Perform the operation procedure A.
- When communication with Subaru Select Monitor is not possible («Read Control module setting information» is not workable): Perform the operation procedure B.

CAUTION:
- **Subaru Select Monitor is required for variant work.**
- **If an error is displayed during the work, click the «OK» button and perform the variant work again.**

Operation procedure A

1) Connect the Subaru Select Monitor.
2) On «Main Menu» display, select «Each System Check».
3) On «System Selection Menu» display, select «Combination Meter».
4) On «Control module settings» display, select «Read Control module setting information».
5) Save and close the file.
6) Replace the combination meter assembly with a new part.
7) On «Main Menu» display, select «Each System Check».
8) On «System Selection Menu» display, select «Combination Meter».
9) On «Control module settings» display, select «Write Control module setting information».
10) Select «Write ECU setting save data», and open the file stored in «Read Control module setting information».
11) When the confirmation screen indicating the vehicle information appears, check that the correct information is displayed and click the «OK» button.
12) Confirm that «Write operation was completed.» is displayed, and click the «OK» button.

Operation procedure B

1) Replace the combination meter assembly with a new part.
2) Connect the Subaru Select Monitor.
3) On «Main Menu» display, select «Each System Check».
4) On «System Selection Menu» display, select «Combination Meter».
5) On «Control module settings» display, select «Write Control module setting information».
6) On «Read Control module setting information» display, select «Write ECU setting 12 columns of models». Enter the applied model and click the «OK» button. <Ref. to ID-2, IDENTIFICATION NUMBER & LABEL LOCATIONS, IDENTIFICATION, Identification.>
7) Enter the option code and click the «OK» button. <Ref. to ID-2, IDENTIFICATION NUMBER & LABEL LOCATIONS, IDENTIFICATION, Identification.>
8) Confirm the vehicle information on «Write ECU setting 12 columns of models» display and click the «OK» button.
9) When «Write?» is shown on the screen, click the «Yes» button.
10) Confirm that «Write operation was completed.» is displayed, and click the «OK» button.

D: INSPECTION

1. COMBINATION METER

Refer to “Basic Diagnostic Procedure” of “INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS)” section. <Ref. to MET(diag)-2, Basic Diagnostic Procedure.>

2. SWITCH

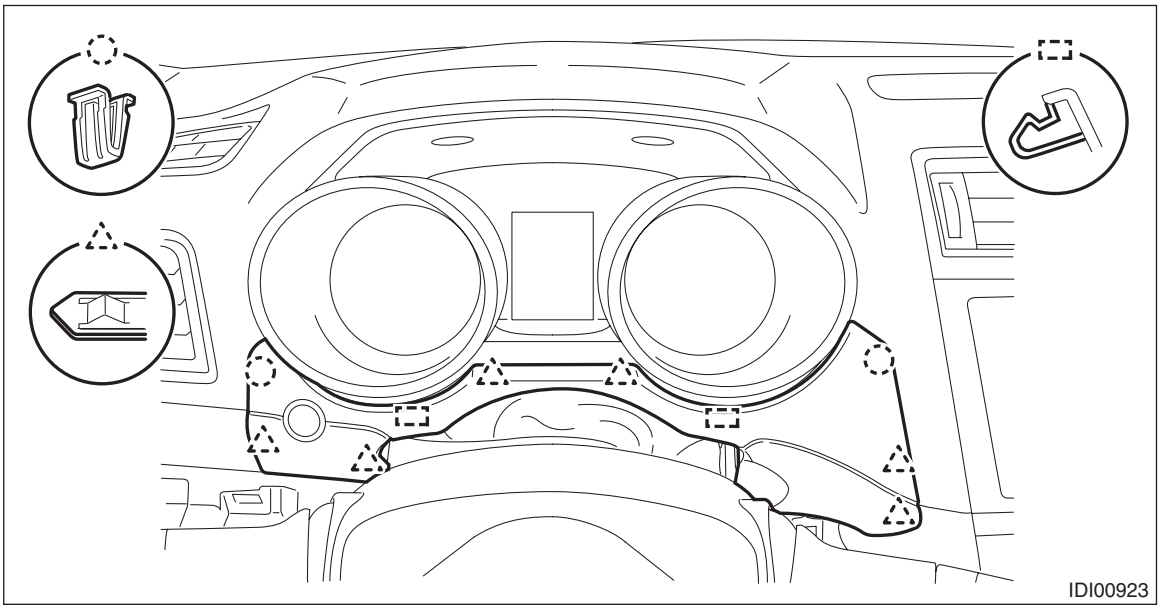
Illumination intensity does not change even when the illumination control switch is operated.

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Display the data of «Bright switch input state» and «Illumination control switch input state» using the Subaru Select Monitor. NOTE: For detailed procedures, refer to “PC application help for Subaru Select Monitor”.	Do the display switch between OFF ←→ ON and the value range from 0 to 100 when the bright switch and illumination control switch are operated?	Replace the combination meter.	Go to step **2**.
2	**CHECK ILLUMINATION CONTROL SWITCH UNIT.** Check the illumination control switch. <Ref. to IDI-22, ILLUMINATION CONTROL SWITCH, INSPECTION, Switches and Harness.>	Is the switch normal?	Go to step **3**.	Replace the illumination control switch.
3	**CHECK HARNESS.** 1) Disconnect the connectors of combination meter assembly and illumination control switch. 2) Measure the resistance between the combination meter assembly and the illumination control switch. ***Connector & terminal*** ***(i10) No. 29 — (i79) No. 6:*** ***(i10) No. 30 — (i79) No. 5:*** ***(i10) No. 31 — (i79) No. 4:*** ***(i10) No. 32 — (i79) No. 1:***	Is the resistance less than 1 Ω?	Replace the combination meter.	Repair or replace the harness.

E: NOTE

For procedure of each component in the combination meter system, refer to the respective section.

- Combination meter assembly: <Ref. to IDI-11, Combination Meter.>
- Speedometer: <Ref. to IDI-14, Speedometer.>
- Tachometer: <Ref. to IDI-15, Tachometer.>
- Fuel gauge: <Ref. to IDI-16, Fuel Gauge.>
- Engine coolant temperature gauge: <Ref. to IDI-17, Engine Coolant Temperature Gauge.>
- Switches and harness: <Ref. to IDI-18, Switches and Harness.>
- Warning box: <Ref. to IDI-23, Warning Box.>

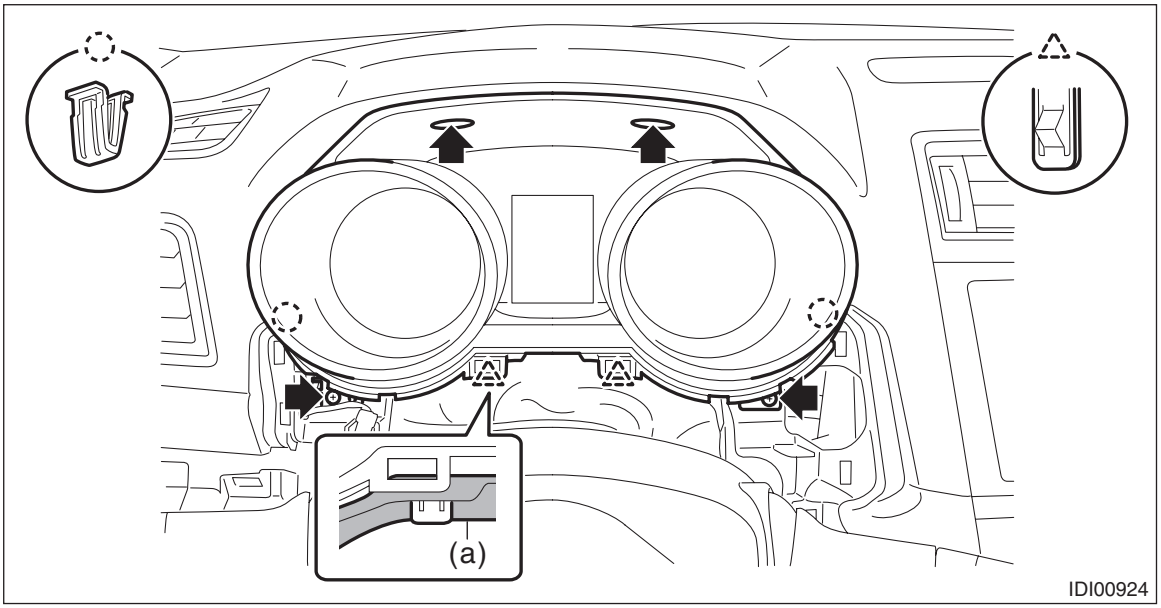


4. Combination Meter

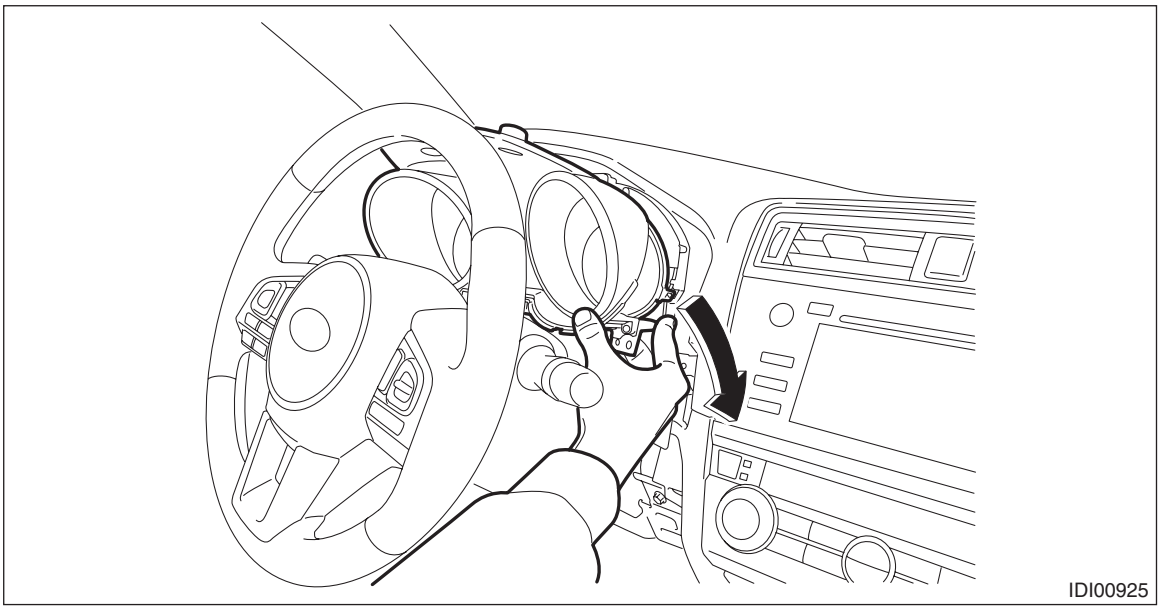
A: REMOVAL

CAUTION:
When the combination meter is replaced, perform the variant work. <Ref. to IDI-9, VARIANT WORK, OPERATION, Combination Meter System.>

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Release the lock, tilt the steering column to the lowest end and fully extend the column by the telescopic system.
3) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-74, REMOVAL, Instrument Panel Lower Cover.>
4) Remove the visor assembly - lower.
   (1) Release the clips and claws.
   (2) Disconnect the connector and remove the visor assembly - lower.



CAUTION:
Be careful not to damage the clips and claws by slowly removing the right and left edges of visor assembly - lower.



5) Remove the combination meter assembly.

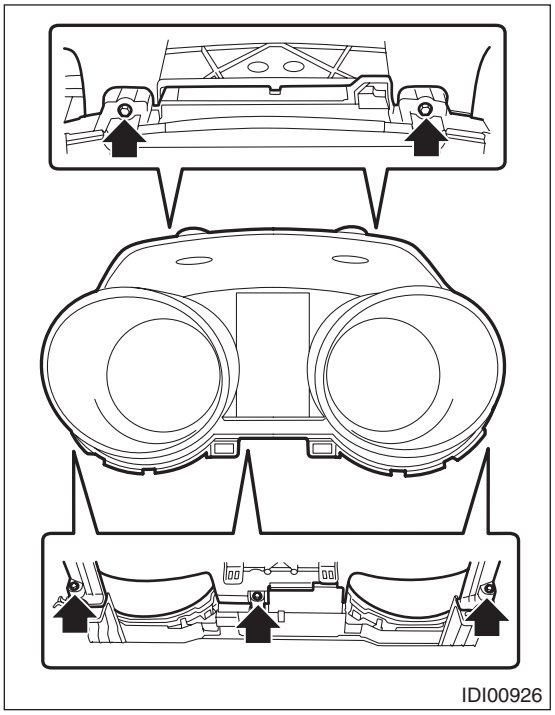
CAUTION:
Be careful not to damage the combination meter assembly, lens or instrument panel.

(1) Release the claws and remove the cover - column (a).
(2) Remove the screws and clips.

(3) Pull the combination meter assembly toward you and disconnect the connector.
(4) Remove the combination meter assembly as shown in the figure.

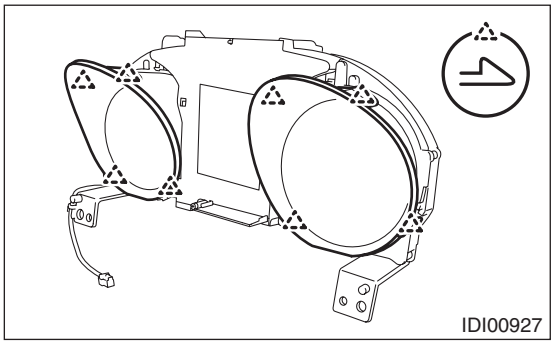
B: INSTALLATION

CAUTION:
- **Make sure the electrical connector is connected securely.**
- **Make sure that each meter operates normally.**
- **When the combination meter assembly of the model without keyless access with push button start has been replaced, perform the registration of immobilizer. (Except for C0 and C5 models)**
For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".
- **When the combination meter is replaced, perform the variant work. <Ref. to IDI-9, VARIANT WORK, OPERATION, Combination Meter System.>**



1) Install the combination meter assembly.
2) Install the cover steering COMPL - upper.
3) Install the visor assembly - lower.
4) Install the cover assembly - instrument panel LWR driver.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: DISASSEMBLY



CAUTION:
- **Use gloves to avoid damage and putting fingerprints on the lens surface and meter surfaces.**
- **Be sure not to touch the meter indicator needle.**
- **Because LEDs are used for all of warning lights and indicator lights, they are not removable from the meter - main assembly.**

1) Remove the screws, and then remove the outer mask.

Preparation tool:
TORX® T10

IDI00926

2) Release the claws and remove the lens.

IDI00927

D: ASSEMBLY

1) Install the lens.
2) Install the outer mask.

5. Speedometer

A: SPECIFICATION

Since the meter - main assembly cannot be disassembled, do not remove or inspect the speedometer alone. (Do not remove the cover on the back surface.)

6. Tachometer

A: SPECIFICATION

Since the meter - main assembly cannot be disassembled, do not remove or inspect the tachometer alone. (Do not remove the cover on the back surface.)

7. Fuel Gauge

A: SPECIFICATION

Since the meter - main assembly cannot be disassembled, do not remove or inspect the fuel gauge alone. (Do not remove the cover on the back surface.)

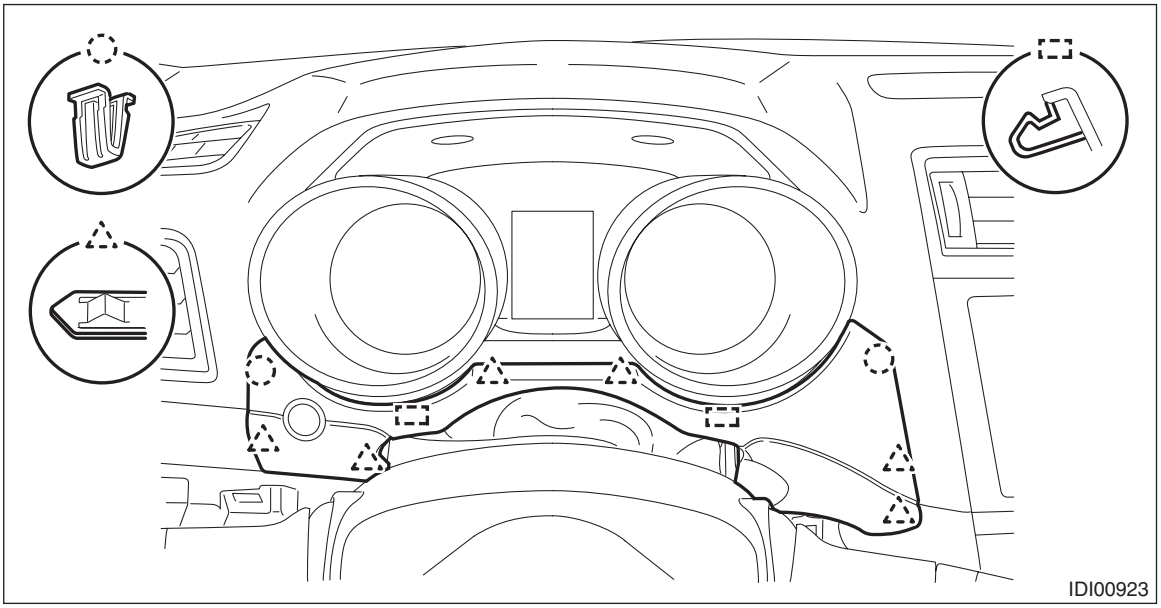
8. Engine Coolant Temperature Gauge

A: SPECIFICATION

Since the meter case assembly cannot be disassembled, do not remove or inspect the engine coolant temperature gauge alone. (Do not remove the cover on the back surface.)

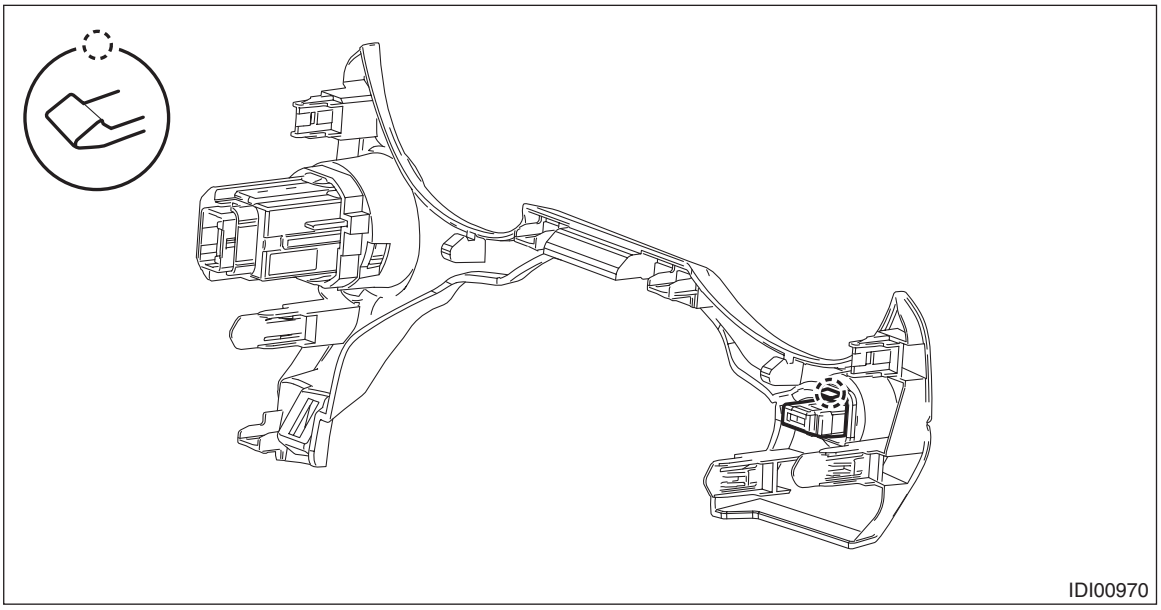
9. Switches and Harness

A: REMOVAL



1. MID SWITCH

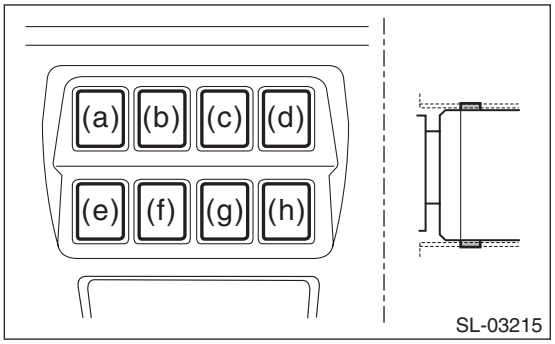
CAUTION:
Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
1) Set the tire to the straight-ahead position.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the driver's airbag module. <Ref. to AB-30, REMOVAL, Driver's Airbag Module.>
4) Remove the steering wheel. <Ref. to PS-9, REMOVAL, Steering Wheel.>
5) Remove the MID switch. <Ref. to PS-10, DISASSEMBLY, Steering Wheel.>



2. TRIP RESET SWITCH

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-74, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the visor assembly - lower.
   (1) Release the clips and claws.
   (2) Disconnect the connector and remove the visor assembly - lower.

CAUTION:
Be careful not to damage the clips and claws by slowly removing the right and left edges of visor assembly - lower.



4) Release the claws, and remove the switch assembly - trip reset.

3. ILLUMINATION CONTROL SWITCH

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-74, REMOVAL, Instrument Panel Lower Cover.>
3) Release the claws and remove the illumination control switch.

(b) Model without SRF
(d) Model with SRF

B: INSTALLATION

1. MID SWITCH

CAUTION:
• Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
• If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.
• If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• Securely install the switch. Improper insertion of the pin or claw of the switch may cause improper installation.
1) Install the MID switch.
2) Align the center position of the steering roll connector. <Ref. to AB-60, ADJUSTMENT, Roll Connector.>

3) Install the steering wheel.

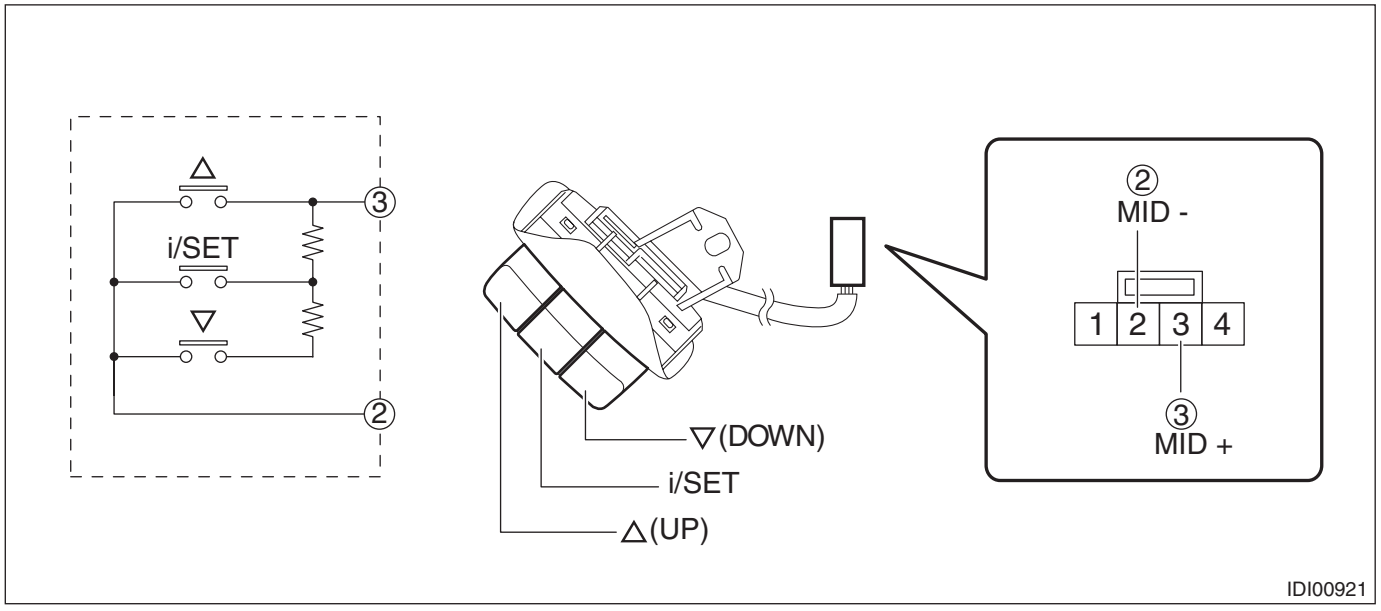
Tightening torque:
39 N·m (4.0 kgf-m, 28.8 ft-lb)

Clearance:
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)
4) Install the driver's airbag module. <Ref. to AB-31, INSTALLATION, Driver's Airbag Module.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. TRIP RESET SWITCH

1) Install the switch assembly - trip reset.
2) Install the visor assembly - lower.
3) Install the cover assembly - instrument panel LWR driver.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

3. ILLUMINATION CONTROL SWITCH



1) Install the illumination control switch.
2) Install the cover assembly - instrument panel LWR driver.
3) Connect the ground terminal to battery sensor. <Ref. to RC-2, NOTE, Repair Contents.>

C: INSPECTION

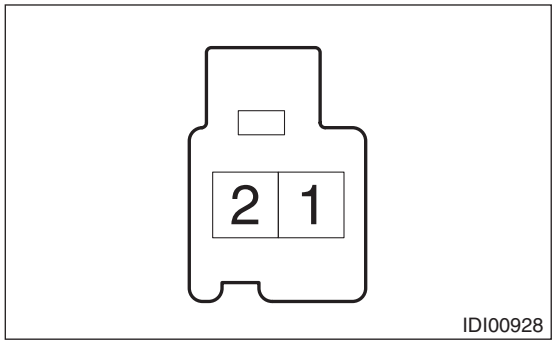
1. MID SWITCH

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions		Standard
3 — 2	△ (UP) i/SET ▽ (DOWN)	All OFF	Approx. 1 MΩ or more
3 — 2	△ (UP)	ON	Less than 1 Ω
3 — 2	i/SET	ON	Approx. 1000 Ω
3 — 2	▽ (DOWN)	ON	Approx. 3700 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.



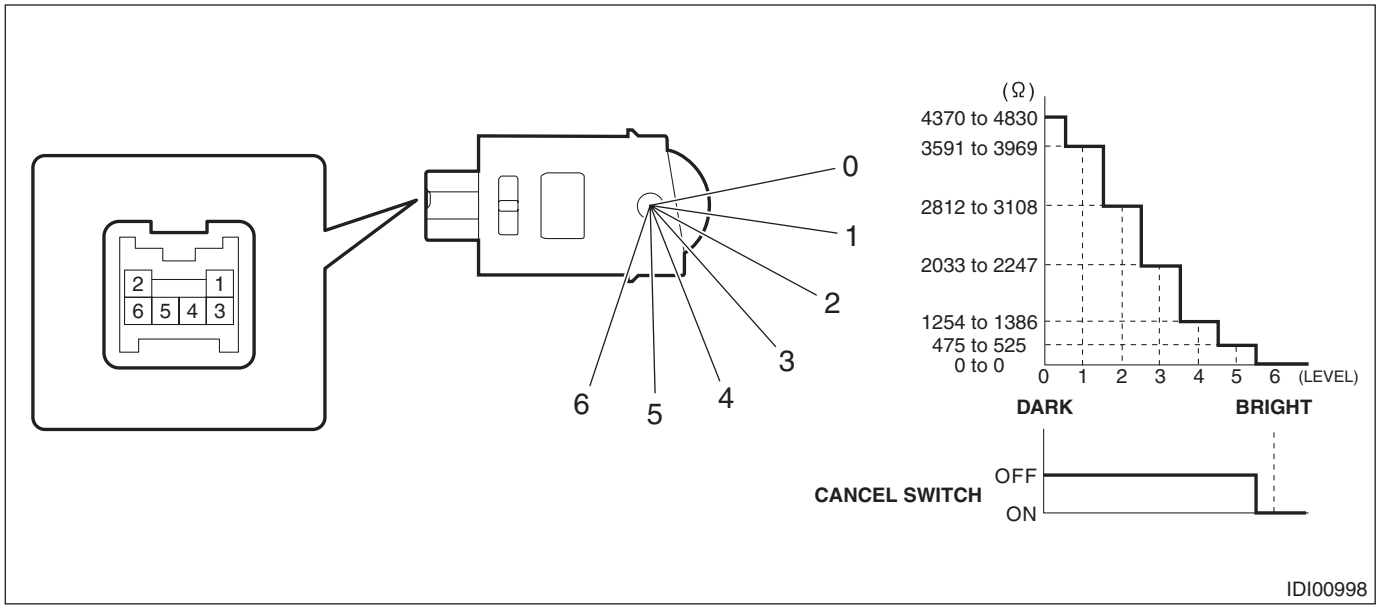
Terminal No.	Inspection conditions	Specification
4 (+) — 1 (–)	Apply battery voltage.	Light ON

3) Replace the MID switch if the inspection result is not within the standard value.

2. TRIP RESET SWITCH

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
1 — 2	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2) Replace the switch assembly - trip reset if the inspection result is not within the standard.

3. ILLUMINATION CONTROL SWITCH

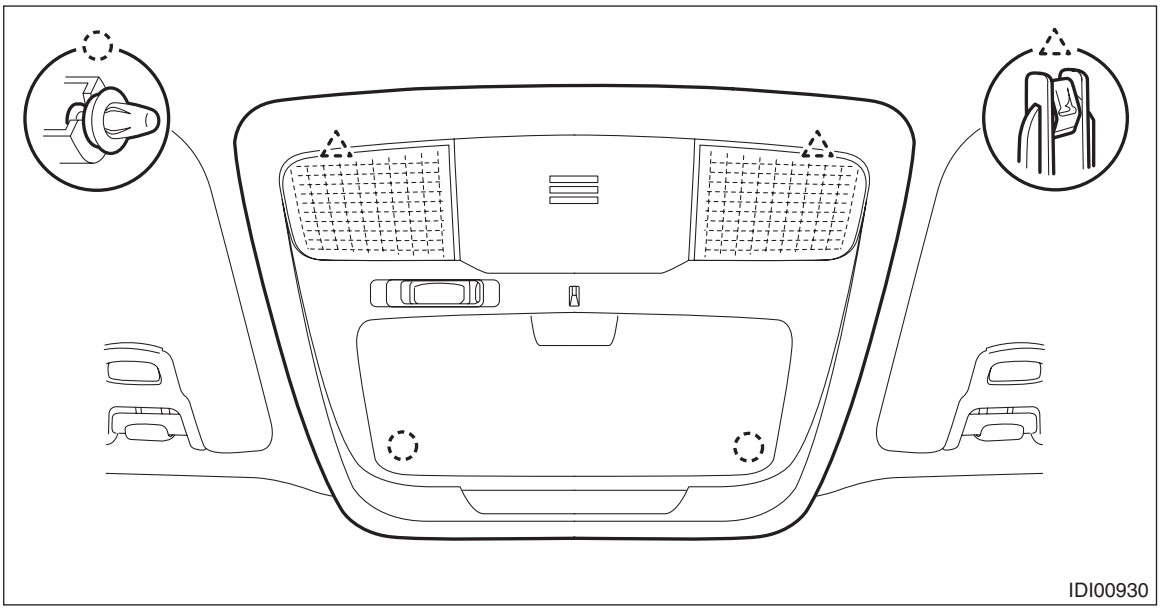
1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 6	Bright switch OFF	10 kΩ or more
	Bright switch ON	Less than 1 Ω
4 — 6	Always	4465 to 4935 Ω
5 — 6	Illumination control switch upward fully open	475 to 525 Ω
	Illumination control switch downward fully open	4370 to 4830 Ω

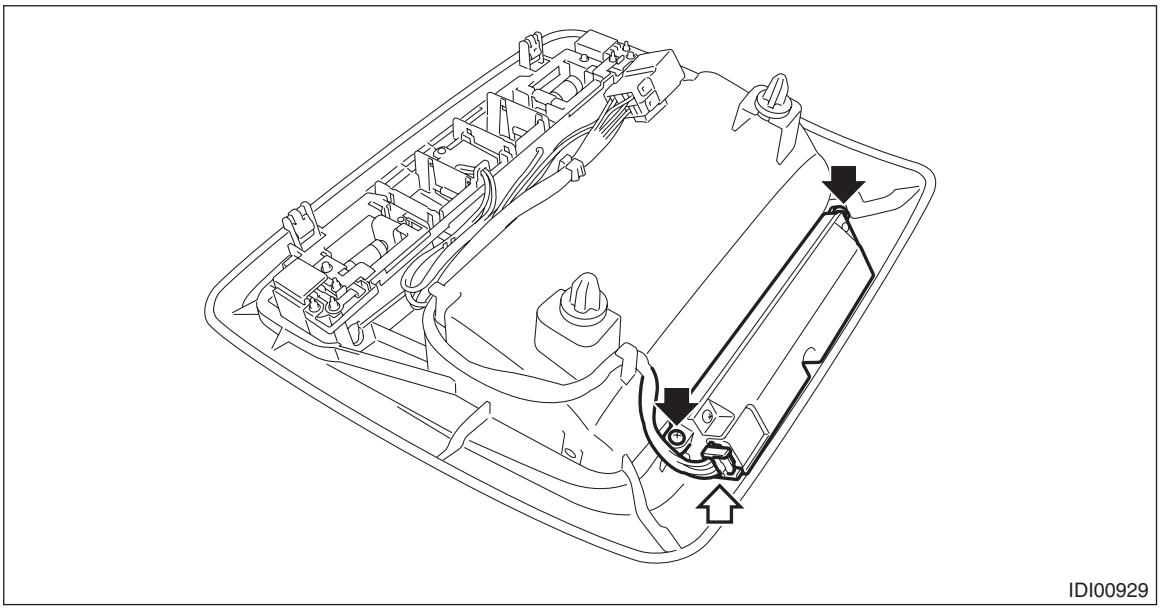
2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
2 (+) — 3 (–)	Apply battery voltage.	Light ON



3) Replace the illumination control switch if the inspection result is not within the standard value.

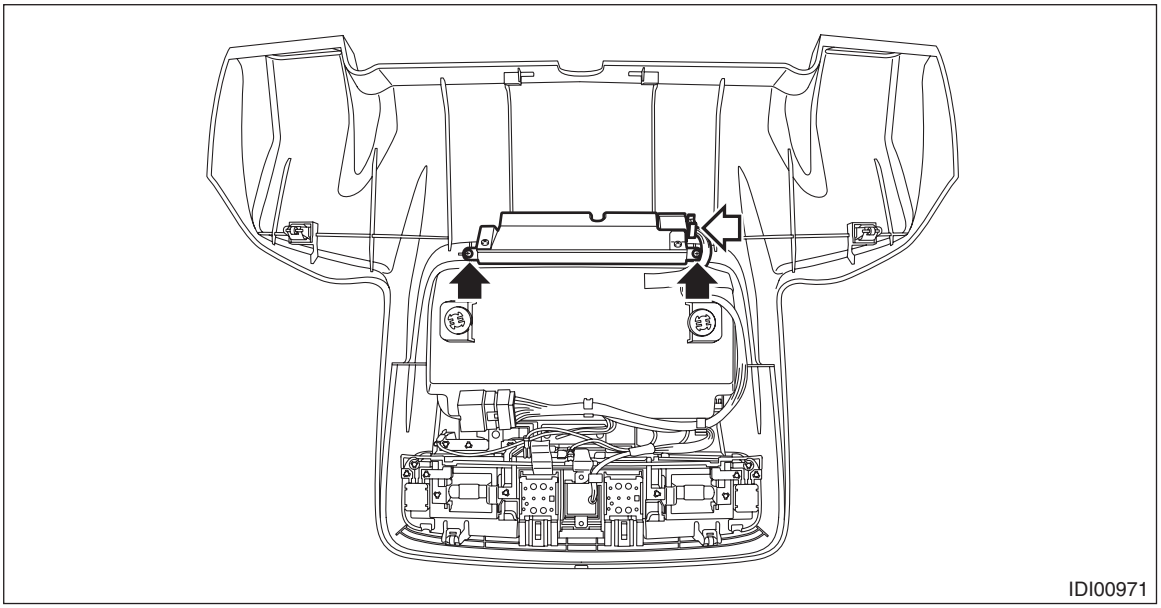
10.Warning Box



A: REMOVAL

1. MODELS WITHOUT EyeSight

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the overhead console.
   (1) Release the clips and claws.
   (2) Disconnect the connector, and remove the overhead console.



3) Remove connector and screw, and remove the warning box.

2. MODELS WITH EyeSight

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the stereo camera cover assembly. <Ref. to ES-7, REMOVAL, Stereo Camera.>
3) Remove connector and screw, and remove the warning box.

IDI00971

B: INSTALLATION

CAUTION:
- **Make sure the electrical connector is connected securely.**
- **Make sure that each indicator operates normally.**

1) Install the warning box.
2) Install the overhead console. (Models without EyeSight)
3) Install the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-10, INSTALLATION, Stereo Camera.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

COMBINATION METER (DIAGNOSTICS)

MET(diag)

		Page
1.	Basic Diagnostic Procedure	2
2.	Check List for Interview	3
3.	General Description	4
4.	Electrical Component Location	5
5.	Control Module I/O Signal	6

12.	User Customizing	19
13.	List of Diagnostic Trouble Code (DTC)	20
14.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	21

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**PERFORM CUSTOMER INTERVIEW.** Using the Check List for Interview, ask the customer the condition of how trouble occurs. <Ref. to MET(diag)-3, CHECK, Check List for Interview.>	Did you interview the customer?	Go to step **2**.	Interview the customer. <Ref. to MET(diag)-3, CHECK, Check List for Interview.>
2	**CHECK CAN COMMUNICATION.** Read the DTC of the CAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-29, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-79, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK COMBINATION METER.** Using the Subaru Select Monitor, read DTC of combination meter. <Ref. to MET(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Record DTC and time stamp, and perform the diagnosis according to DTC. <Ref. to MET(diag)-20, LIST, List of Diagnostic Trouble Code (DTC).> For time stamp, refer to “LAN SYSTEM”. <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.> Go to step **5**.	Go to step **4**.
4	**CHECK COMBINATION METER.** Check the operation of combination meter. <Ref. to MET(diag)-15, System Operation Check Mode.>	Is it operating normally?	System is normal.	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>
5	**PERFORM DIAGNOSIS.** 1) Perform the Clear Memory Mode. 2) Perform the Inspection Mode. <Ref. to MET(diag)-12, Inspection Mode.> 3) Using the Subaru Select Monitor, read DTC of combination meter.	Is DTC displayed?	Perform diagnosis according to the DTC.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

- Inspect the following items regarding the vehicle's state.
- Print out this page for interviewing customers.

<table>
<tr><td colspan="4">Combination Meter Check List for Interview
Date the Vehicle is Received Year Month Day</td></tr>
<tr><td colspan="2" rowspan="2">Customer's name</td><td>Registration No.</td><td>Initial year of registration

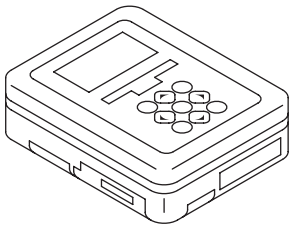
3. General Description

A: CAUTION

1. AIRBAG SYSTEM



CAUTION:
• Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
• Be careful not to damage the airbag system wiring harness.

B: INSPECTION

Before performing the diagnosis, check the following items which may cause problems relating the wiper or light.
1) Check the battery. <Ref. to SC(H4DO)-60, INSPECTION, Battery.> <Ref. to SC(H6DO)-53, INSPECTION, Battery.>
2) Check the fuse condition.
3) Check the connecting condition of harness and harness connector.

C: PREPARATION TOOL

1. SPECIAL TOOL

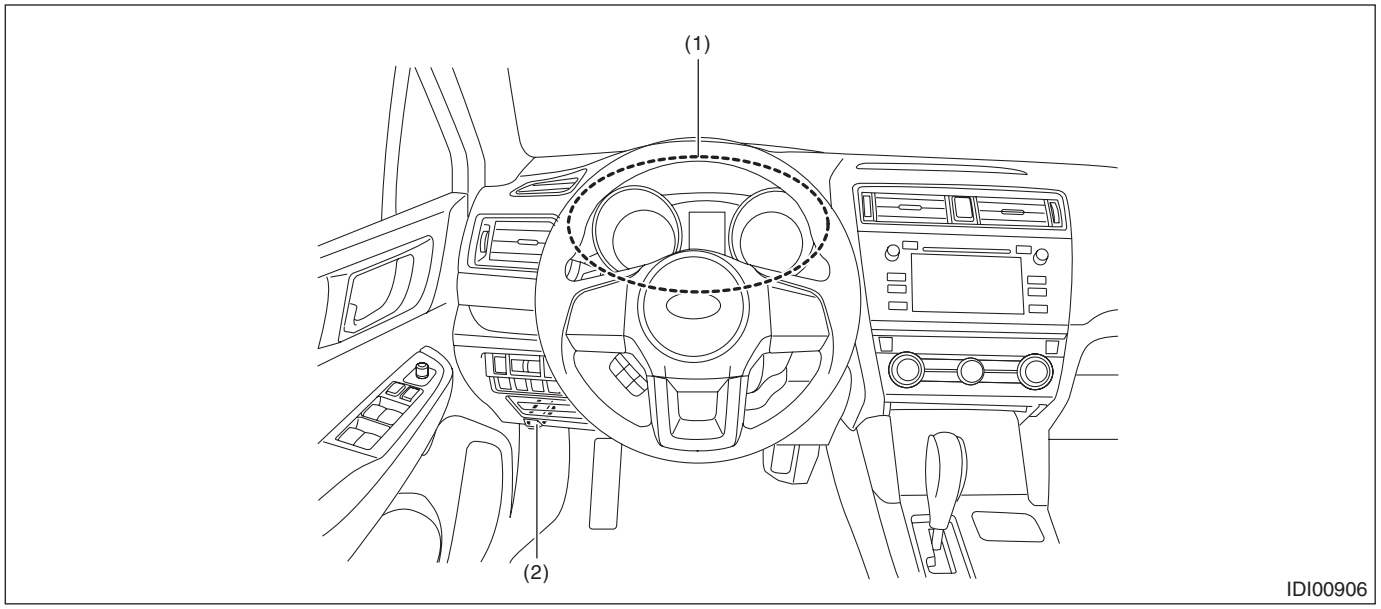


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
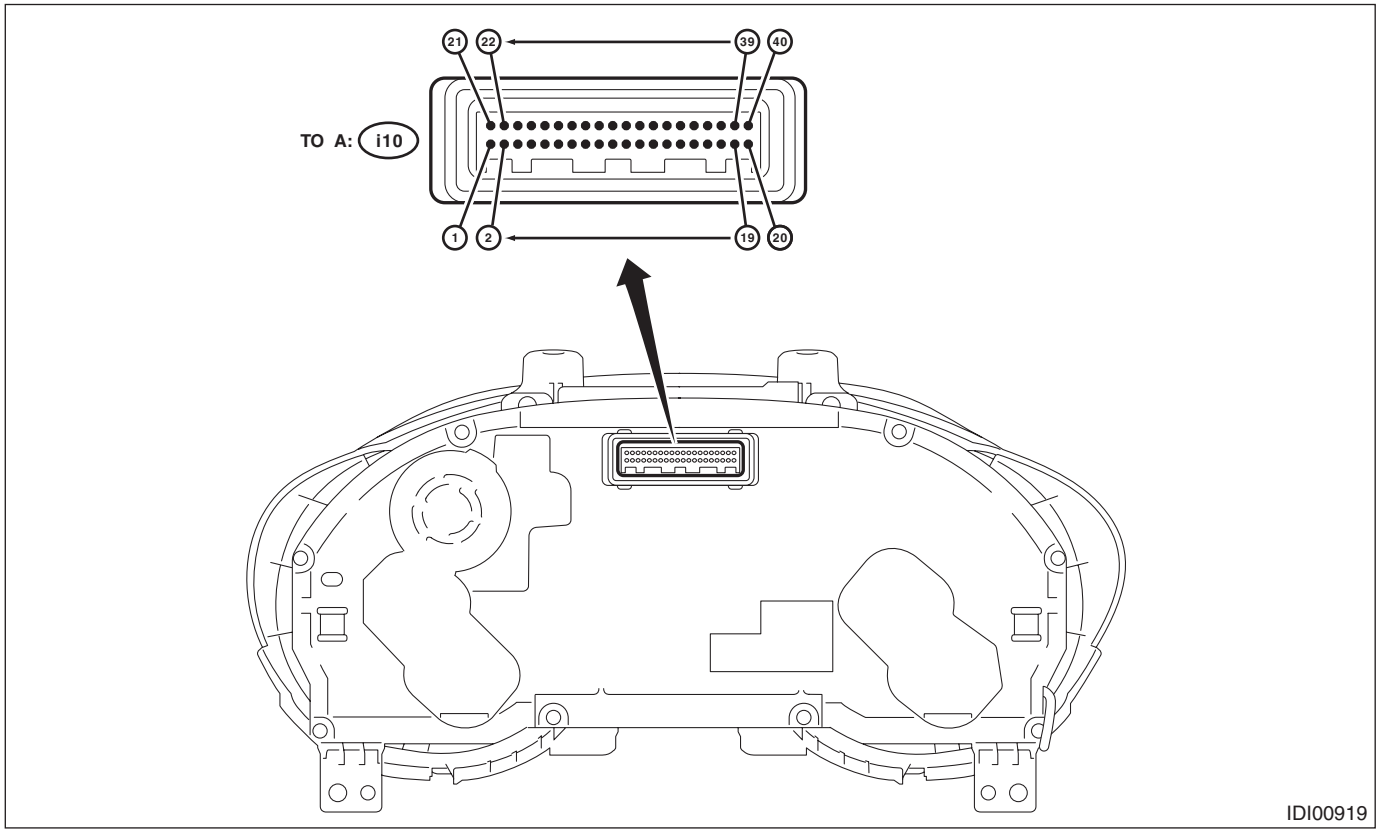
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

4. Electrical Component Location



A: LOCATION

(1) Combination meter
(2) Data link connector

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

Terminal No.	Contents	Measuring condition	Standard
1 ←→ Chassis ground	Battery power supply	Always	8 — 16 V
2 ←→ Chassis ground	Ignition power supply (main)	Ignition switch ON	8 — 16 V
3	—	—	—
4	—	—	—
5	—	—	—
6	CAN H (CAN communication line)	—	—
7	CAN L (CAN communication line)	—	—
8	—	—	—
9	—	—	—
10	—	—	—
11	AUDIO (UART communication line)	—	—
12	WARNING BOX (UART communication line)	—	—
13	Auto headlight beam leveler	—	—

37 ←→ Chassis ground	SI-X switch	Switch ON	Continuity exists
38 ←→ Chassis ground	TFT switch	Switch ON	Continuity exists
39	—	—	—
40	GND	Always	Less than 1 Ω

6. Subaru Select Monitor

A: OPERATION

- For operation procedures, refer to “PC application help for Subaru Select Monitor”.
- When the combination meter cannot communicate with Subaru Select Monitor, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE”. <Ref. to MET(diag)-8, INSPECTION, Subaru Select Monitor.>

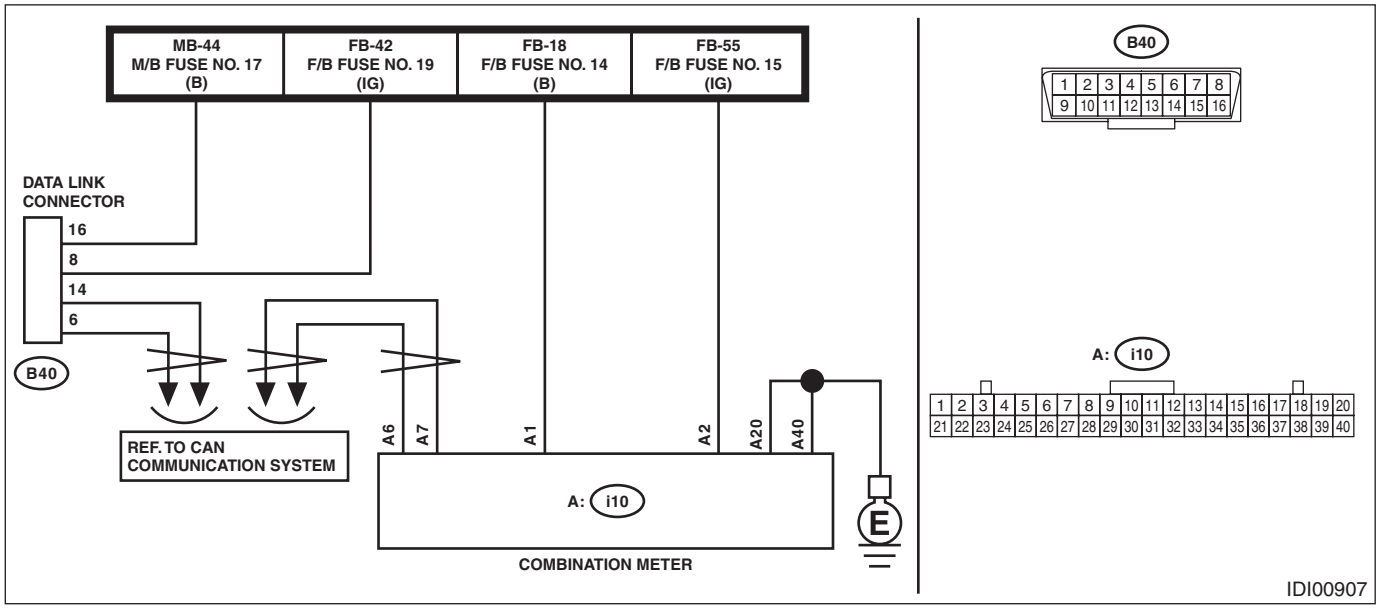
If the DTCs related to the LAN system are not displayed, perform the inspection by connecting the Subaru Select Monitor to another vehicle which is operating properly and by establishing the communication.

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

DETECTING CONDITION:

- Defective harness connector
- Power supply circuit malfunction
- Defective combination meter
- Defective CAN communication circuit
- Defective Subaru Select Monitor



TROUBLE SYMPTOM:

Communication is impossible between combination meter and Subaru Select Monitor.

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.

- Combination meter system <Ref. to WI-168, WIRING DIAGRAM, Combination Meter System.>
- CAN communication system <Ref. to WI-151, WIRING DIAGRAM, CAN Communication System.>

Step		Check	Yes	No
1	**CHECK FUSE.** Check the fuse.	Is there any fault?	Go to step **2**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in the harness between the battery and combination meter.

	Step	Check	Yes	No
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector of combination meter. 3) Turn the ignition switch to ON. 4) Use a tester to measure the voltage between the combination meter connector and chassis ground. ***Connector & terminal*** ***(i10) No. 1 (+) — Chassis ground (–):*** ***(i10) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **3**.	Repair the open circuit of harness between combination meter connector and fuse.
3	**CHECK HARNESS.** Use a tester to measure the resistance between the combination meter connector and chassis ground. ***Connector & terminal*** ***(i10) No. 20 — Chassis ground:*** ***(i10) No. 40 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness between combination meter connector and chassis ground.
4	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault?	Perform the inspection according to the diagnosis for LAN system.	Go to step **5**.
5	**CHECK COMBINATION METER.** 1) Turn the ignition switch to OFF. 2) Connect the combination meter connector. 3) Communicate with the combination meter using the Subaru Select Monitor.	Is communication possible?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Combination Meter».
3) On «Combination Meter» display, select «Diagnostic Code(s) Display».

NOTE:
- For details concerning the work procedure, refer to the “PC application help for Subaru Select Monitor”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to MET(diag)-20, List of Diagnostic Trouble Code (DTC).>

8. Clear Memory Mode

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Combination Meter».
3) On «Combination Meter» display, select «Clear Memory».

NOTE:
For details concerning the work procedure, refer to the “PC application help for Subaru Select Monitor”.

9. Inspection Mode

A: OPERATION

After the ignition switch is ON, wait for 10 seconds.

10.Read Current Data

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Combination Meter».
3) On «Combination Meter» display, select «Current Data Display & Save».

NOTE:
For details concerning the work procedure, refer to the “PC application help for Subaru Select Monitor”.

B: LIST

Item	Content / display range	Standard	Note

SRF OFF information	SRF OFF light equipment information is displayed	No function: when not equipped Function effective: when equipped	—

11.System Operation Check Mode

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Combination Meter».
3) On «Combination Meter» display, select «Work Support».
4) On «Work Support» display, select an item to be checked.

NOTE:
- For details concerning the work procedure, refer to the “PC application help for Subaru Select Monitor”.
- If not equipped (depending on destination area or vehicle equipment condition), process will not go on.

CAUTION:
After executing the system operation check mode, execute the Clear Memory Mode. <Ref. to MET(diag)-11, OPERATION, Clear Memory Mode.>

14.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when CAN line abnormality is detected.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”

Detected when CAN data from the engine control module (ECM) does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

C: DTC U0101 LOST COMMUNICATION WITH TCM

Detected when CAN data from TCM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

D: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

E: DTC U0128 LOST COMMUNICATION WITH PARK BRAKE CONTROL MODULE

Detected when CAN data from VDC CM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

F: DTC U0131 LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE

Detected when CAN data is not received from electric power steering CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

G: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Detected when CAN data is not received from body integrated unit.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

H: DTC U0151 LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE

Detected when CAN data is not received from airbag CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

I: DTC U0162 LOST COMMUNICATION WITH AUDIO VISUAL NAVIGATION DISPLAY MODULE

Detected when CAN data from AVN does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

J: DTC U0181 LOST COMMUNICATION WITH HEADLAMP LEVELING CONTROL MODULE

Detected when CAN data is not received from auto headlight beam leveler CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

K: DTC U0327 SOFTWARE INCOMPATIBILITY WITH VEHICLE SECURITY CONTROL MODULE

Detected when CAN data is not received from keyless access CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

L: DTC U1232 LOST COMMUNICATION WITH REAR/SIDE RADAR CONTROL MODULE

Detected when CAN data from the radar sensor does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

M: DTC U1235 LOST COMMUNICATION WITH EyeSight

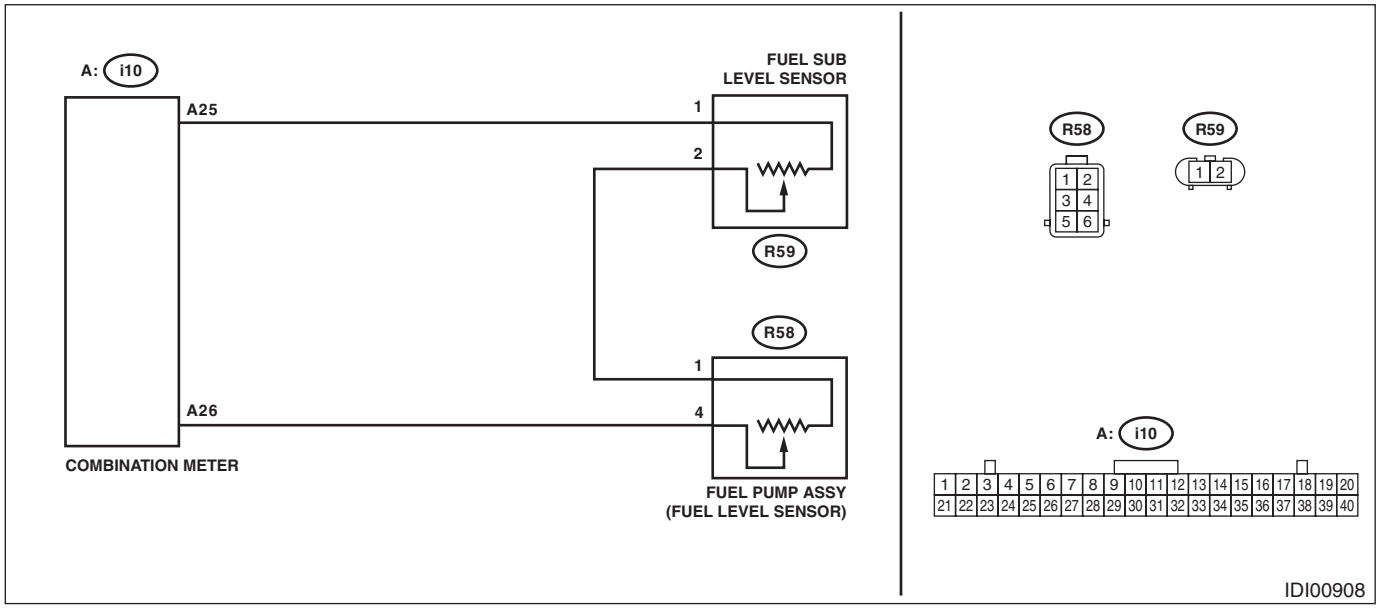
Detected when CAN data from the stereo camera does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

N: DTC U1433 INVALID DATA RECEIVED FROM EyeSight

Detected when CAN data from the stereo camera does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>



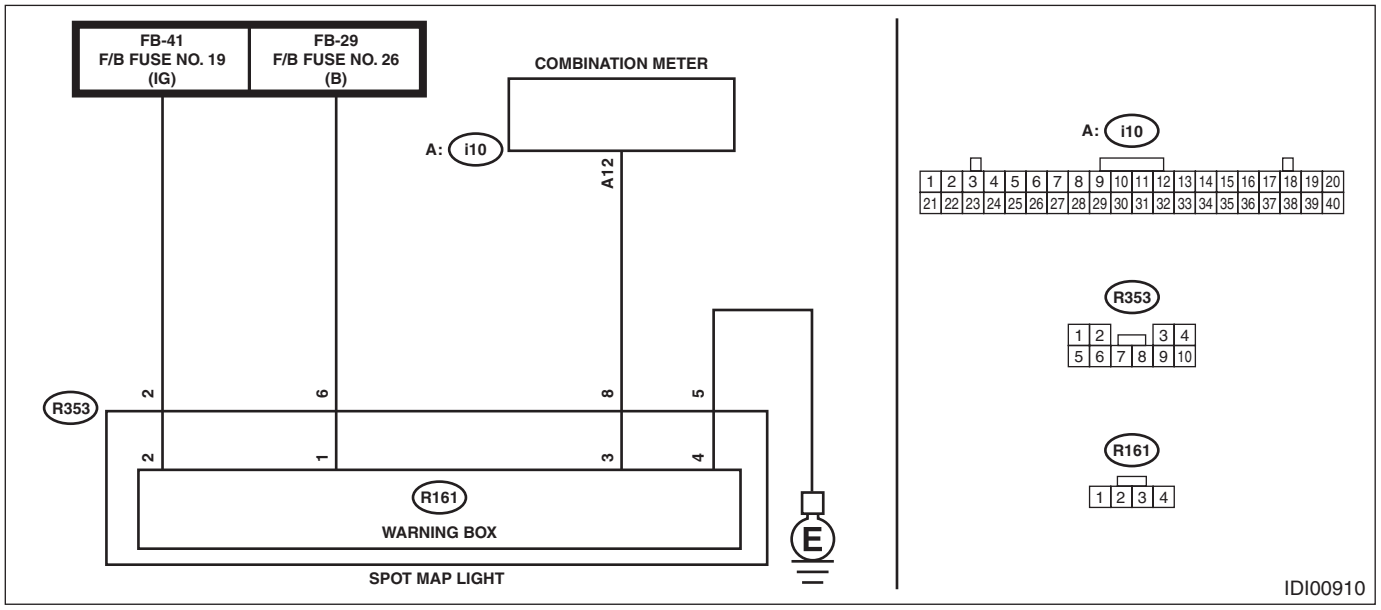
O: DTC B1500 FUEL SENDER OPEN/SHORT-CIRCUIT DETECTION

DTC DETECTING CONDITION:
The fuel gauge circuit is open or shorted.

TROUBLE SYMPTOM:
- Defective fuel gauge.
- Fuel level warning light blinks.

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Fuel gauge system <Ref. to WI-286, WIRING DIAGRAM, Fuel Gauge System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of the combination meter using the Subaru Select Monitor. <Ref. to MET(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1500 displayed? (Current malfunction)	Go to step **2**.	Go to step **7**.
2	**CHECK COMBINATION METER.** 1) Check the operation of combination meter using Subaru Select Monitor. 2) From the «System Operation Check Mode», select «Fuel Meter Operation» and «Remaining fuel warning». <Ref. to MET(diag)-15, System Operation Check Mode.>	Is the operation of combination meter OK?	Go to step **3**.	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the meter connector and the fuel sub level sensor connector and the fuel level sensor connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i10) No. 25 — (R59) No. 1:*** ***(i10) No. 26 — (R58) No. 4:***	Is the resistance 10 Ω or less?	Go to step **4**.	Repair the open circuit of harness or replace harness.
4	**CHECK HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i10) No. 25 — Chassis ground:*** ***(i10) No. 26 — Chassis ground:***	Is the resistance 10 Ω or less?	Repair the short circuit of harness or replace harness.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK FUEL SUB LEVEL SENSOR.** Check the fuel sub level sensor as a single part. <Ref. to FU(H4DO)-129, INSPECTION, Fuel Sub Level Sensor.> <Ref. to FU(H6DO)-133, INSPECTION, Fuel Sub Level Sensor.>	Is the sensor normal?	Go to step **6**.	Replace the sensor.
6	**CHECK FUEL LEVEL SENSOR.** Check the fuel level sensor as a single part. <Ref. to FU(H4DO)-122, INSPECTION, Fuel Level Sensor.> <Ref. to FU(H6DO)-126, INSPECTION, Fuel Level Sensor.>	Is the sensor normal?	Go to step **7**.	Replace the sensor.
7	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect connectors.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Go to step **8**.
8	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display the «Fuel sensing value» from «Current Data Display & Save». <Ref. to MET(diag)-13, Read Current Data.>	Does the data display 10 — 570 Ω?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>

P: DTC B1502 WARNING BOX COMMUNICATION STOP

DTC DETECTING CONDITION:
Communication error between combination meter and spot map light
TROUBLE SYMPTOM:
Malfunction of the warning light inside the spot map light
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Combination meter system <Ref. to WI-168, WIRING DIAGRAM, Combination Meter System.>

Step		Check	Yes	No
1	**CHECK POWER SUPPLY CIRCUIT.** Turn the ignition switch to ON, and make sure that the combination meter operates properly.	Does it operate properly?	Go to step **2**.	Check the combination meter power supply circuit.
2	**CHECK DTC.** Read the DTC. <Ref. to MET(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1502 displayed? (Current malfunction)	Go to step **3**.	Go to step **4**.
3	**CHECK COMMUNICATION CIRCUIT (HARNESS).** 1) Turn the ignition switch to OFF. 2) Disconnect the combination meter connector. 3) Disconnect the warning box connector. 4) Measure the resistance between combination meter connector and warning box connector. ***Connector & terminal*** ***(i10) No. 12 — (R161) No. 3:***	Is the resistance less than 10 Ω?	Replace the warning box. <Ref. to IDI-23, Warning Box.>	Repair the open circuit of harness between combination meter connector and warning box connector.

	Step	Check	Yes	No
4	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the combination meter connector. 3) Disconnect the warning box connector.	Is there any fault in the connector?	Repair or replace the connector.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Q: DTC B1507 EXTERNAL AIR TEMPERATURE OPEN/SHORT-CIRCUIT DETECTION

DTC DETECTING CONDITION:
Open or short circuit in ambient sensor
TROUBLE SYMPTOM:
- Defective ambient temperature display
- Defective air conditioner operation

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Air conditioning system <Ref. to WI-106, WIRING DIAGRAM, Air Conditioning System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of the meter using the Subaru Select Monitor. <Ref. to MET(diag)-10, Read Diagnostic Trouble Code (DTC).>	Is DTC B1507 a current malfunction?	Go to step **2**.	Go to step **6**.
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display the «External air temperature sensing value» from «Current Data Display & Save».	Is data displayed?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the meter connector and ambient sensor connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i10) No. 23 — (B480) No. 2:*** ***(i10) No. 24 — (B480) No. 1:***	Is the resistance 10 Ω or less?	Go to step **4**.	Repair the open circuit of harness or replace harness.
4	**CHECK HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i10) No. 23 — Chassis ground:*** ***(i10) No. 24 — Chassis ground:***	Is the resistance 10 Ω or less?	Repair the short circuit of harness or replace harness.	Go to step **5**.
5	**CHECK AMBIENT SENSOR.** Perform the inspection of ambient sensor unit. <Ref. to AC-69, INSPECTION, Ambient Sensor.>	Is the sensor normal?	Go to step **6**.	Replace the sensor.
6	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect connectors.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

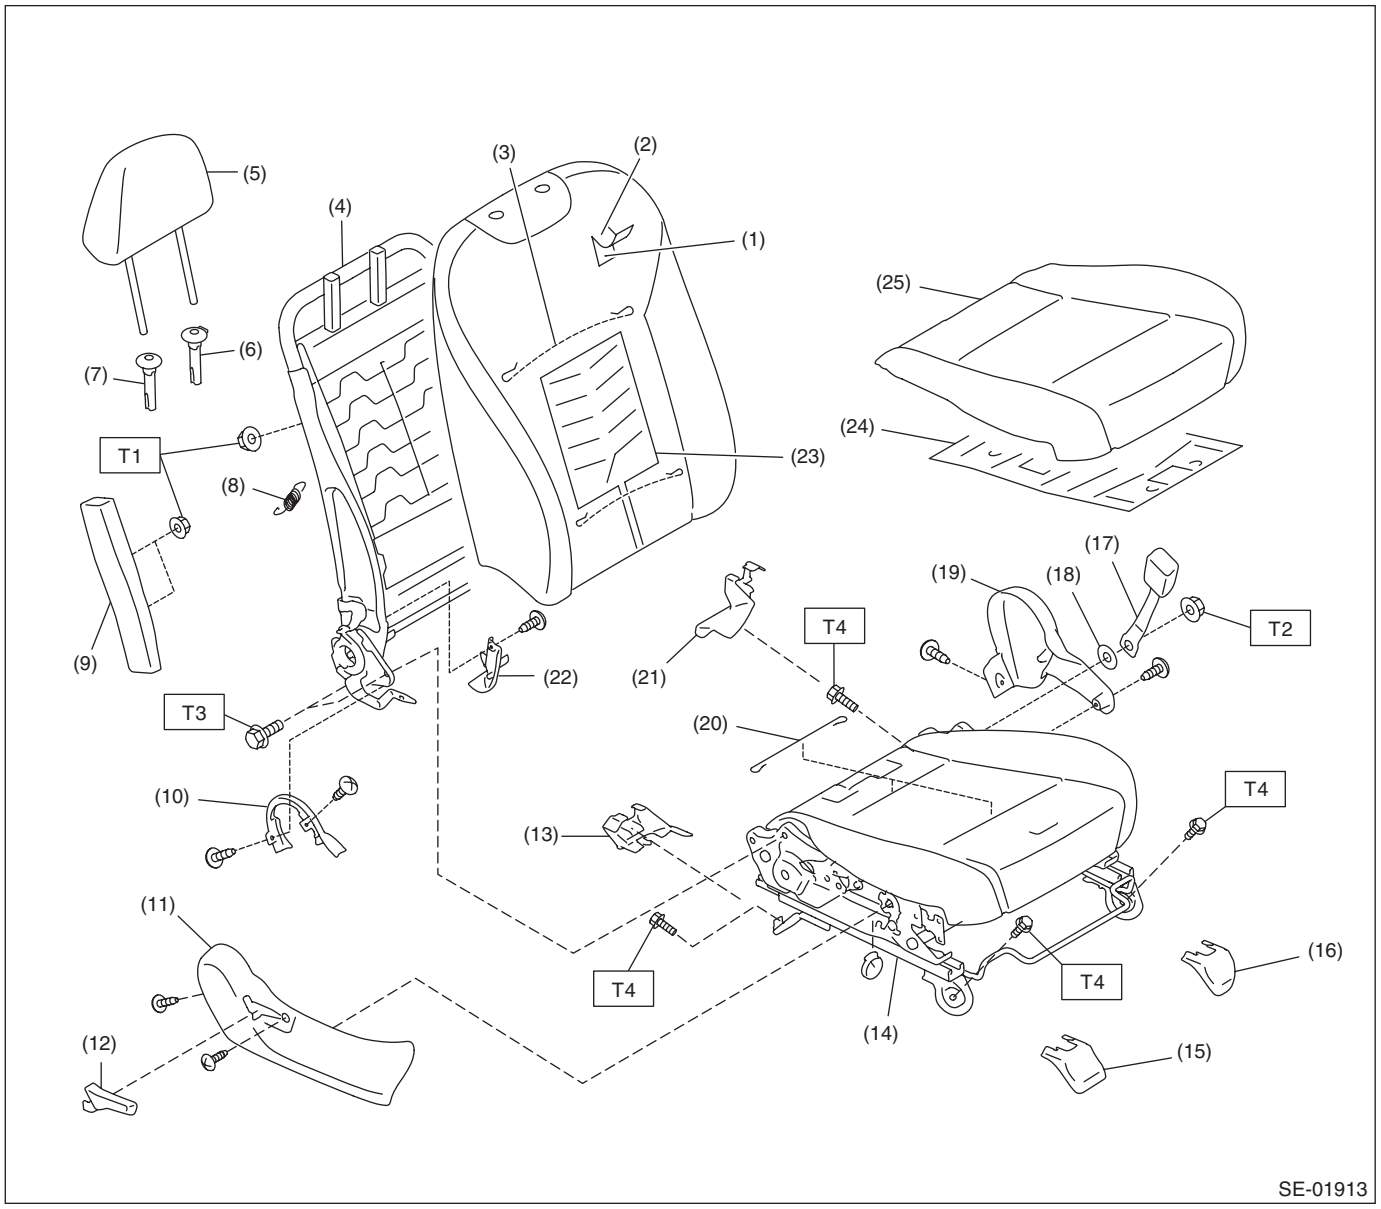
A: COMPONENT

1. FRONT SEAT

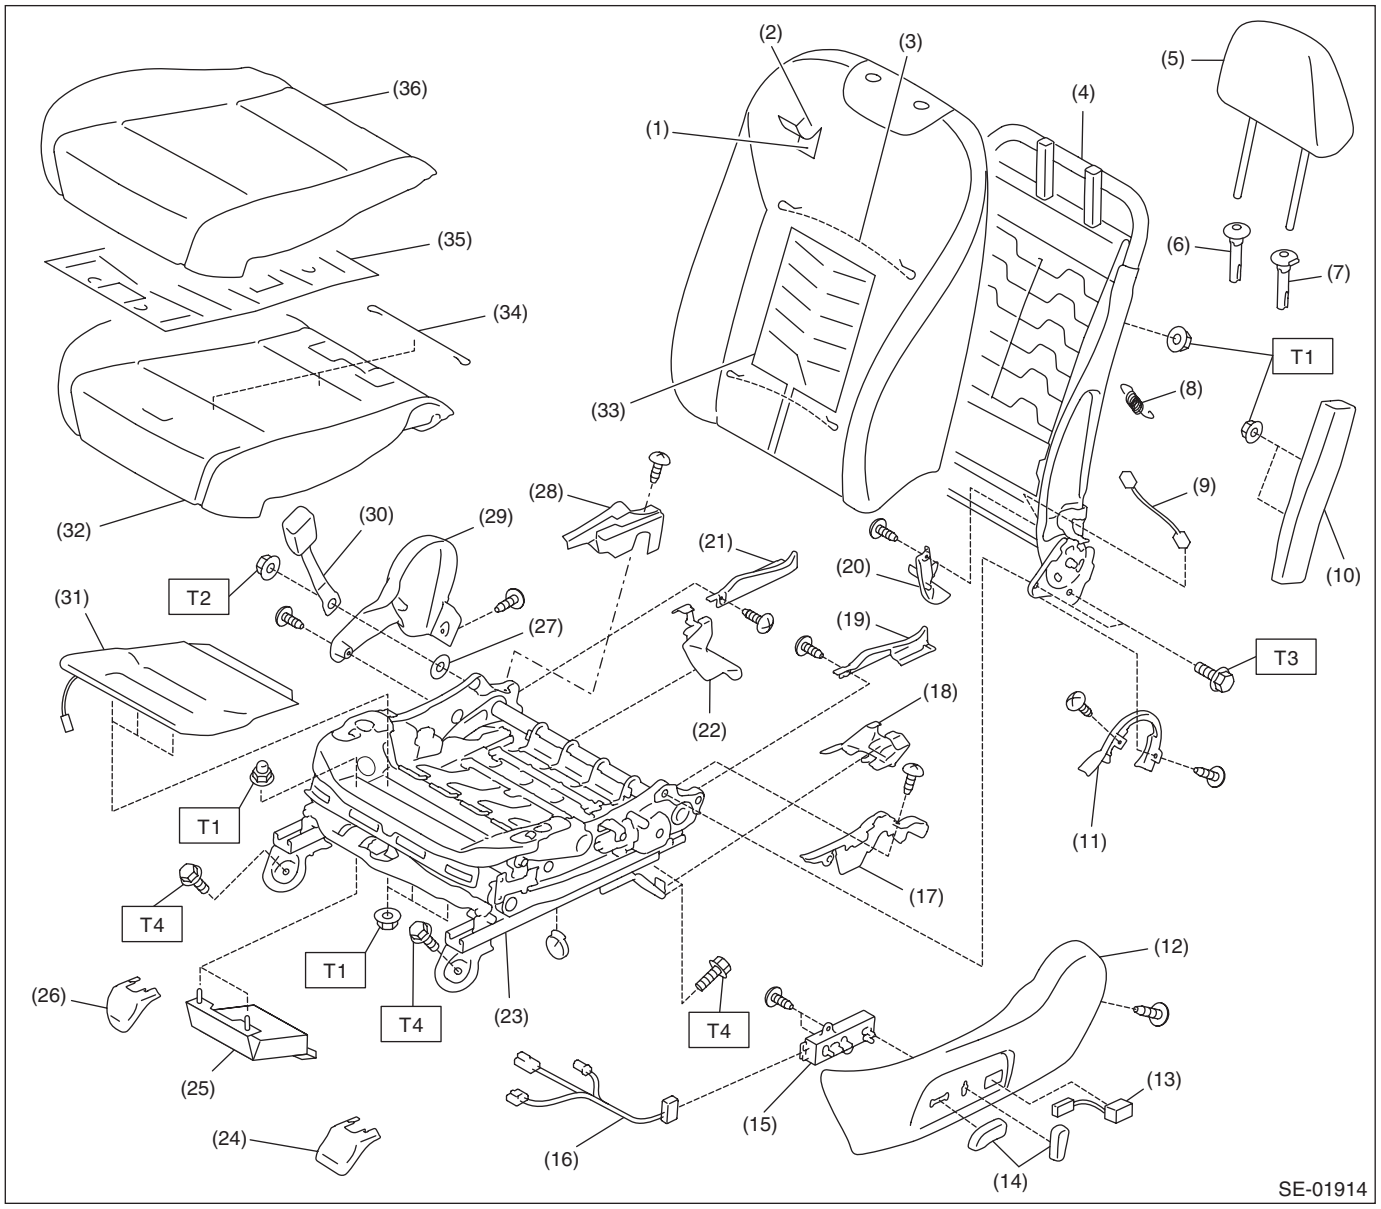
- Manual seat - driver's seat



(1) Pad ASSY - front seat backrest
(2) Cover COMPL - front backrest
(3) Wire set - front seat backrest
(4) Frame ASSY - front backrest
(5) Headrest ASSY - front
(6) Bushing - free headrest
(7) Bushing - lock headrest
(8) Hook spring - backrest front
(9) Side airbag module
(10) Cover - hinge base front seat
(11) Cover - hinge front seat OUT
(12) Lever - reclining
(13) Cap - lifter lever
(14) Knob - lifter
(15) Cover - bolt rear OUT
(16) TORX® bolt
(17) Inner cover - slide rail OUT
(18) Inner cover - slide rail INN
(19) Slide rail ASSY - OUT
(20) Lever - towel bar
(21) Cover - bolt front OUT
(22) Cover - bolt front INN
(23) Slide rail ASSY - INN
(24) Cover - bolt rear INN
(25) Wave washer
(26) Seat belt inner - front
(27) Frame ASSY - front seat cushion
(28) Cover - frame front seat cushion OUT
(29) Cover inner - front
(30) Cover - frame front seat cushion INN
(31) Cover - hinge front seat INN
(32) Heater module - front seat backrest
(33) Panel - front seat
(34) Seat cushion airbag module
(35) Pad ASSY - front seat cushion
(36) Wire set - front seat cushion
(37) Heater module - front seat cushion
(38) Cover COMPL - front seat cushion

Tightening torque: N·m (kgf-m, ft-lb)

T1: 6 (0.6, 4.4)
T2: 15 (1.5, 11.1)
T3: 38 (3.9, 28.0)
T4: 52 (5.3, 38.4)
T5: 53 (5.4, 39.1)

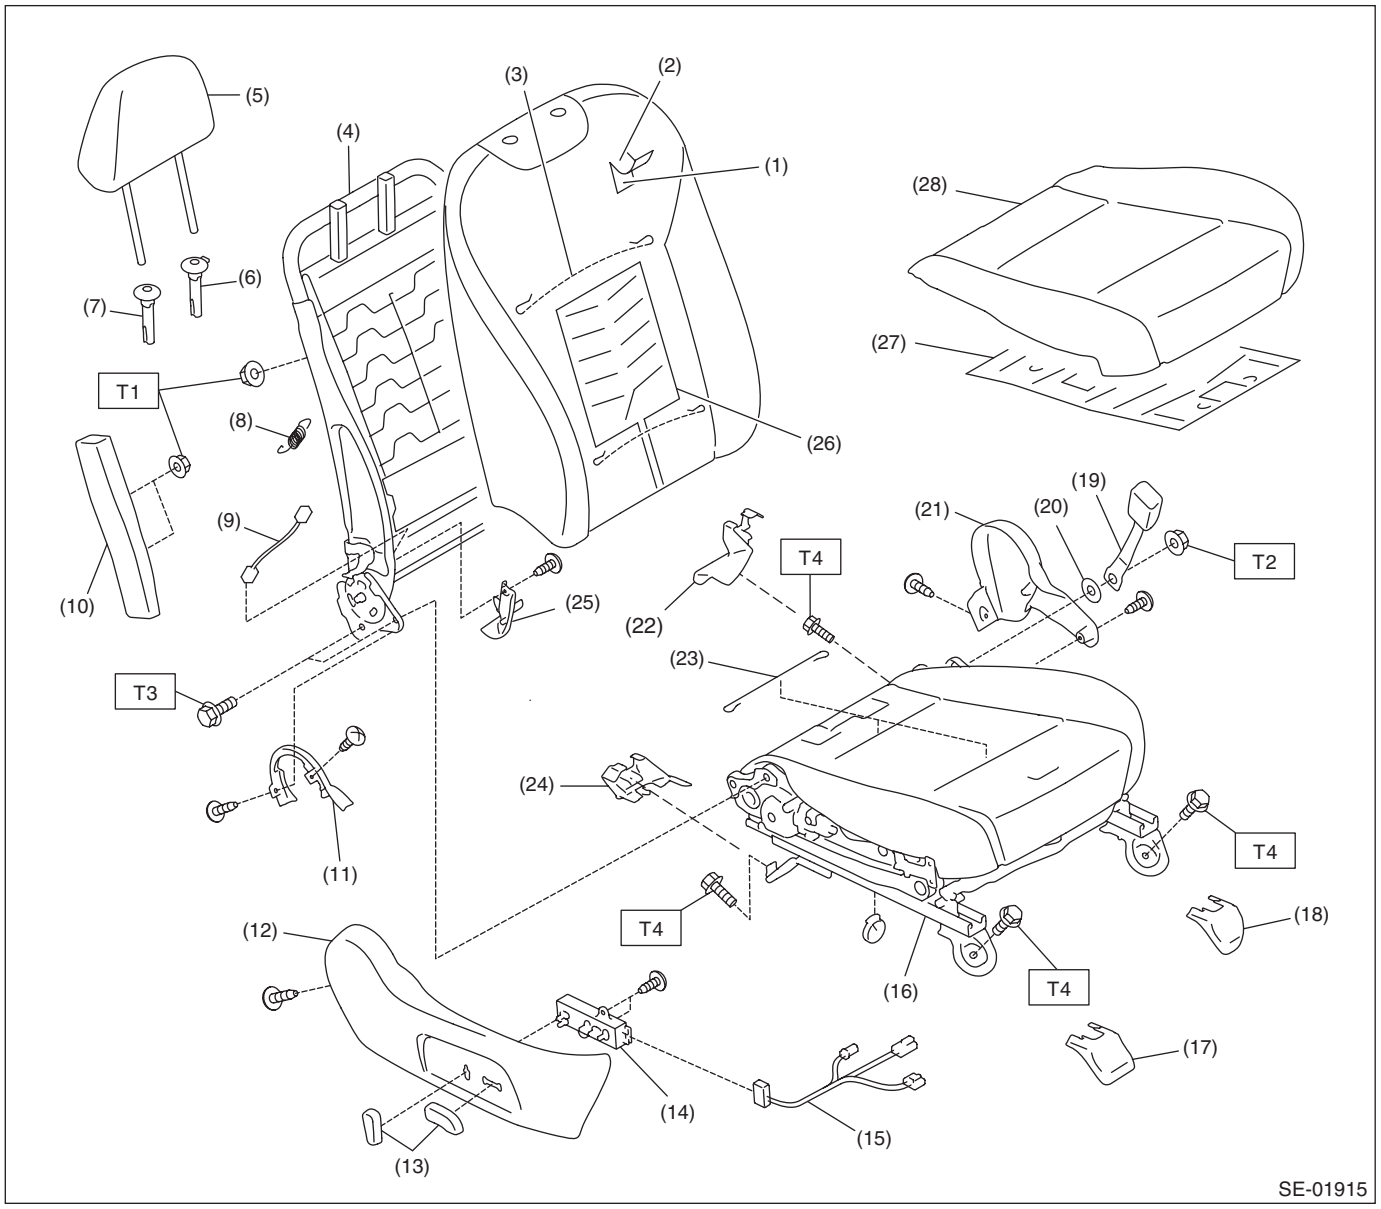


- Manual seat - passenger's seat

(1) Pad ASSY - front seat backrest
(2) Cover COMPL - front backrest
(3) Wire set - front seat backrest
(4) Frame ASSY - front backrest
(5) Headrest ASSY - front
(6) Bushing - lock headrest
(7) Bushing - free headrest
(8) Hook spring - backrest front
(9) Side airbag module
(10) Cover - hinge base front seat
(11) Cover - hinge front seat OUT
(12) Lever - reclining
(13) Cover - bolt rear OUT
(14) Seat cushion pad and frame ASSY
(15) Cover - bolt front OUT
(16) Cover - bolt front INN
(17) Seat belt inner - front
(18) Wave washer
(19) Cover - hinge front seat INN
(20) Wire set - front seat cushion
(21) Cover - bolt rear INN
(22) Cover - inner front
(23) Seat heater module - front seat backrest
(24) Seat heater module - front seat cushion
(25) Cover COMPL - front seat cushion

Tightening torque: N·m (kgf-m, ft-lb)	
T1:	*6 (0.6, 4.4)*
T2:	*38 (3.9, 28.0)*
T3:	*52 (5.3, 38.4)*
T4:	*53 (5.4, 39.1)*

- Power seat - driver's seat

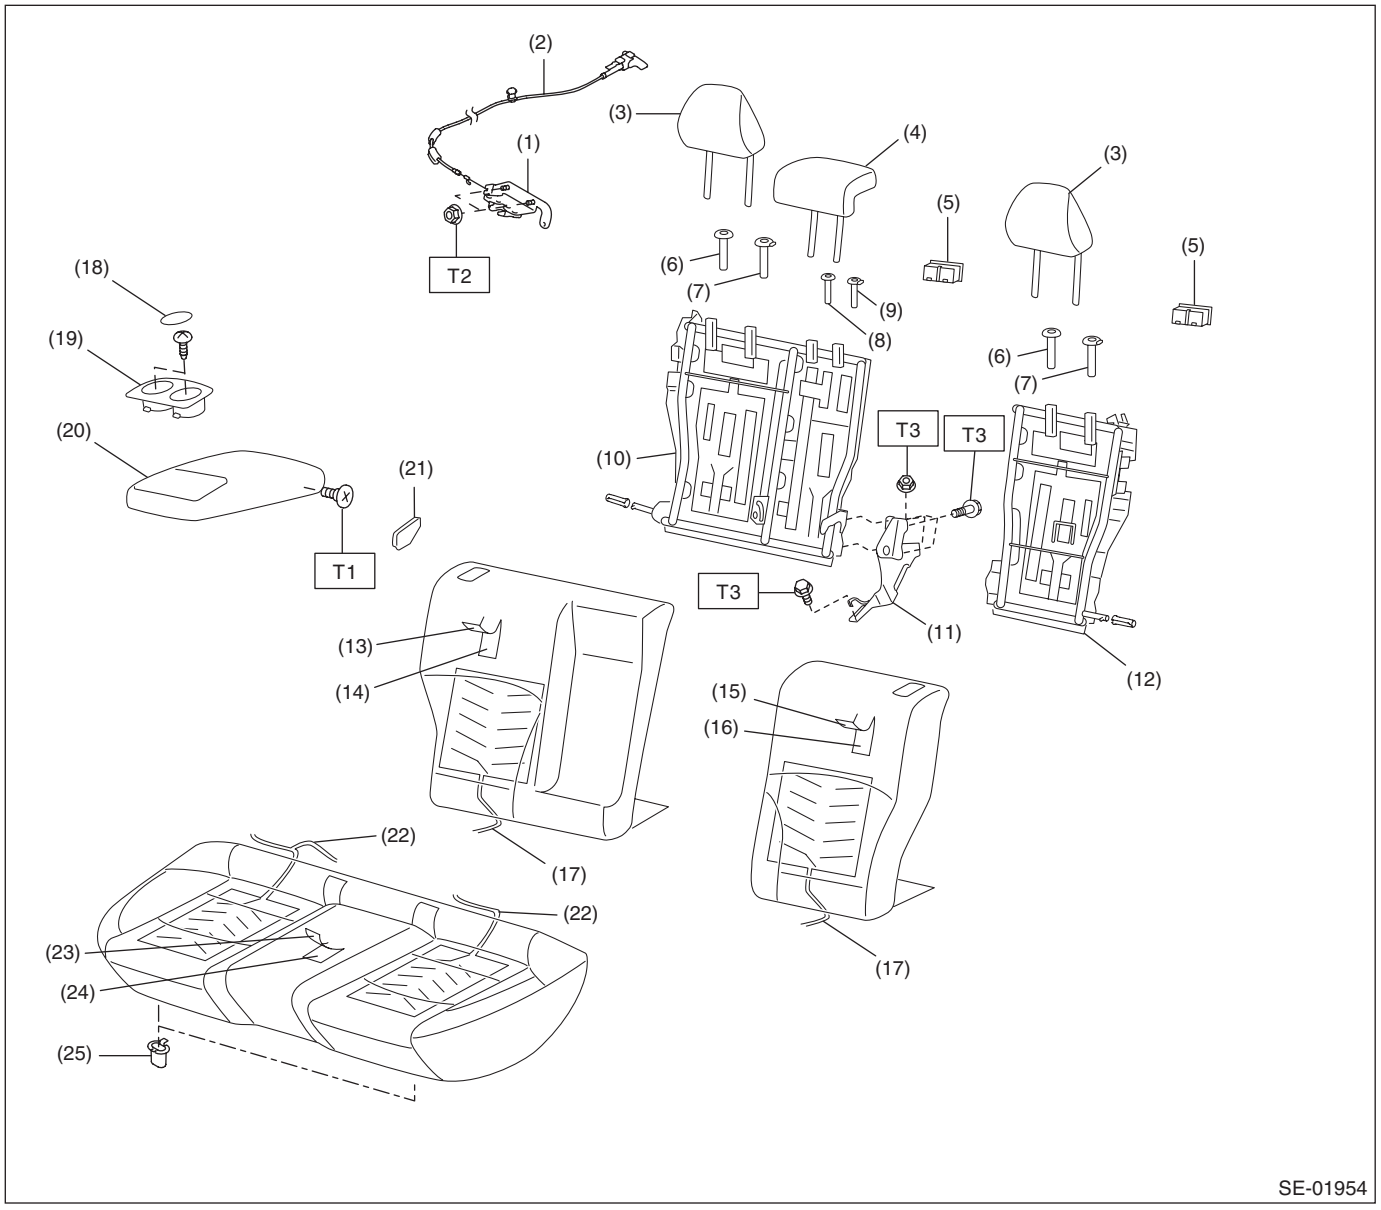


(1) Pad ASSY - front seat backrest
(2) Cover COMPL - front backrest
(3) Wire set - front seat backrest
(4) Frame ASSY - front backrest
(5) Headrest ASSY - front
(6) Bushing - lock headrest
(7) Bushing - free headrest
(8) Hook spring - backrest front
(9) Harness ASSY - reclining
(10) Side airbag module
(11) Cover - hinge base front seat
(12) Cover - hinge front seat OUT
(13) Switch ASSY - lumbar
(14) Knob - power seat
(15) Switch ASSY - power seat
(16) Harness ASSY - power seat
(17) Cover - frame front seat cushion OUT
(18) Cover - bolt rear OUT
(19) Cover - slide rail OUT
(20) Cover - inner front
(21) Cover - slide rail INN
(22) Cover - bolt rear INN
(23) Frame ASSY - front seat cushion
(24) Cover - bolt front OUT
(25) Seat memory unit
(26) Cover - bolt front INN
(27) Wave washer
(28) Cover - frame front seat cushion INN
(29) Cover - hinge front seat INN
(30) Seat belt inner - front
(31) Seat cushion airbag module
(32) Pad ASSY - front seat cushion
(33) Seat heater module - front seat backrest
(34) Wire set - front seat cushion
(35) Seat heater module - front seat cushion
(36) Cover COMPL - front seat cushion

Tightening torque: N·m (kgf-m, ft-lb)

T1: 6 (0.6, 4.4)
T2: 38 (3.9, 28.0)
T3: 52 (5.3, 38.4)
T4: 53 (5.4, 39.1)

- Power seat - passenger's seat

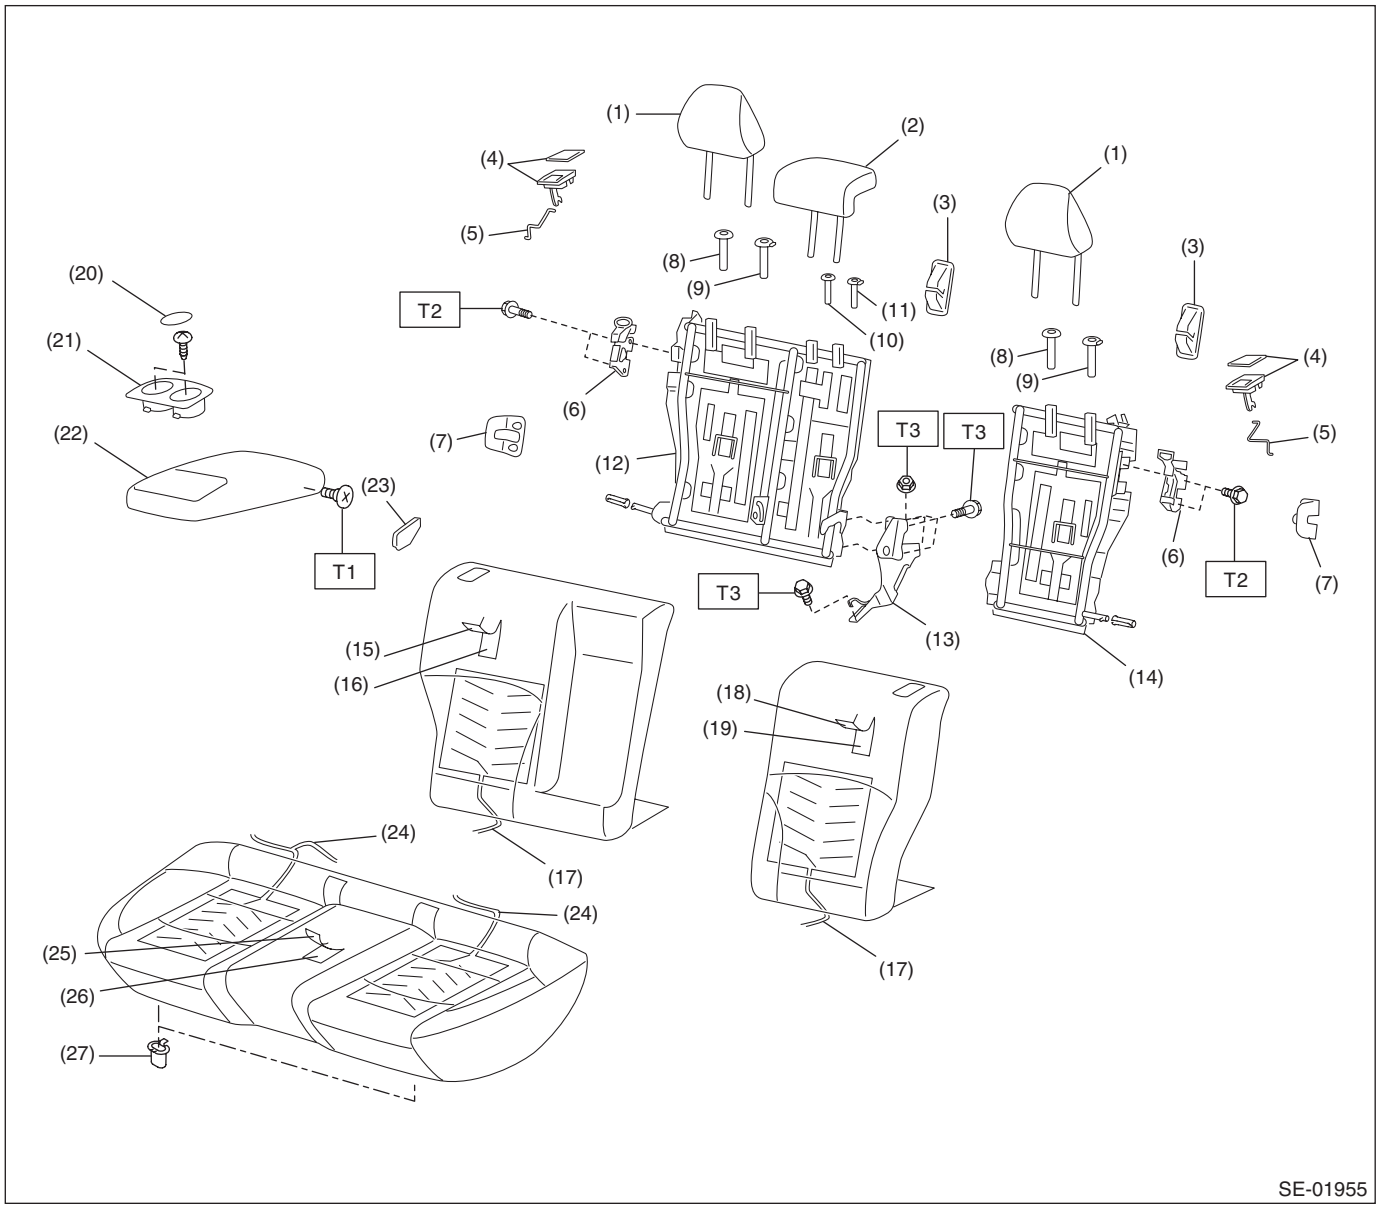


(1) Pad ASSY - front seat backrest
(2) Cover COMPL - front backrest
(3) Wire set - front seat backrest
(4) Frame ASSY - front backrest
(5) Headrest ASSY - front
(6) Bushing - lock headrest
(7) Bushing - free headrest
(8) Hook spring - backrest front
(9) Harness ASSY - reclining
(10) Side airbag module
(11) Cover - hinge base front seat
(12) Cover - hinge front seat OUT
(13) Knob - power seat
(14) Switch ASSY - power seat
(15) Harness ASSY - power seat
(16) Seat cushion pad and frame ASSY
(17) Cover - bolt front OUT
(18) Cover - bolt front INN
(19) Seat belt inner - front
(20) Wave washer
(21) Cover - hinge front seat INN
(22) Cover - bolt rear INN
(23) Wire set - front seat cushion
(24) Cover - bolt rear OUT
(25) Cover - inner front
(26) Seat heater module - front seat backrest
(27) Seat heater module - front seat cushion
(28) Cover COMPL - front seat cushion

Tightening torque: N·m (kgf-m, ft-lb)

T1: 6 (0.6, 4.4)
T2: 38 (3.9, 28.0)
T3: 52 (5.3, 38.4)
T4: 53 (5.4, 39.1)

2. REAR SEAT



- Sedan model

(1) Backrest lock ASSY
(2) Release lever ASSY
(3) Headrest ASSY
(4) Headrest ASSY CTR
(5) Striker cover
(6) Bushing - free headrest rear
(7) Bushing - lock headrest rear
(8) Bushing - free headrest rear CTR
(9) Bushing - lock headrest rear CTR
(10) Frame ASSY - backrest RH
(11) Hinge ASSY - CTR
(12) Frame ASSY - backrest LH
(13) Cover COMPL - backrest RH
(14) Pad ASSY - backrest RH
(15) Cover COMPL - backrest LH
(16) Pad ASSY - backrest LH
(17) Seat heater module - backrest
(18) Rubber - cup holder
(19) Cup holder ASSY
(20) Armrest ASSY
(21) Cover - armrest hinge
(22) Seat heater module - seat cushion
(23) Cover COMPL - seat cushion
(24) Pad ASSY - seat cushion
(25) Hook - rear seat

Tightening torque: N·m (kgf-m, ft-lb)
T1: 9.8 (1.0, 7.2)
T2: 24.5 (2.5, 18.1)
T3: 53 (5.4, 39.1)

- OUTBACK model

(1) Headrest ASSY
(2) Headrest ASSY CTR
(3) Anchor cover
(4) Lock button
(5) Wire
(6) Lock ASSY
(7) Cover - lock ASSY
(8) Bushing - free headrest rear
(9) Bushing - lock headrest rear
(10) Bushing - free headrest rear CTR
(11) Bushing - lock headrest rear CTR
(12) Frame ASSY - backrest RH
(13) Hinge ASSY - CTR
(14) Frame ASSY - backrest LH
(15) Cover COMPL - backrest RH
(16) Pad ASSY - backrest RH
(17) Seat heater module - backrest
(18) Cover COMPL - backrest LH
(19) Pad ASSY - backrest LH
(20) Rubber - cup holder
(21) Cup holder ASSY
(22) Armrest ASSY
(23) Cover - armrest hinge
(24) Seat heater module - seat cushion
(25) Cover COMPL - seat cushion
(26) Pad ASSY - seat cushion
(27) Hook - rear seat

Tightening torque: N·m (kgf-m, ft-lb)
T1: 24.5 (2.5, 18.1)
T2: 33 (3.4, 24.3)
T3: 53 (5.4, 39.1)

B: CAUTION

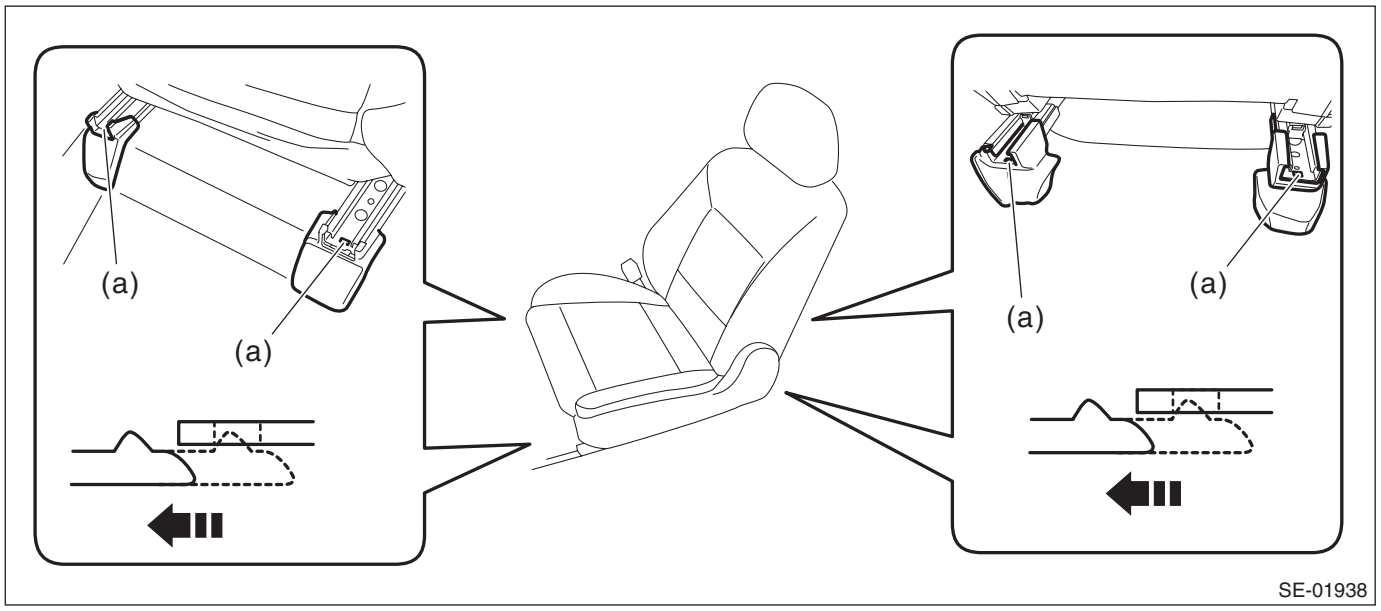
When removing the front seat from the vehicle, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM” section. <Ref. to AB-10, CAUTION, General Description.>

C: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Long nose pliers	Used for removing the hog ring.
Hog ring pliers	Used for installing the hog ring.
Circuit tester	Used for measuring resistance and voltage.

2. Front Seat



A: REMOVAL

CAUTION:
The airbag system is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds before starting the service of airbag system.

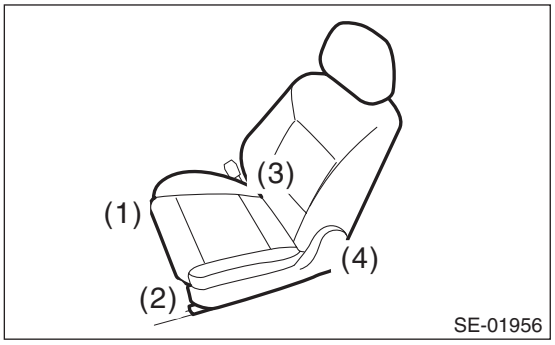
1) Remove the headrest assembly - front.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

NOTE:
For models with power seat, remove the slide rail installing bolt before disconnecting the ground terminal from the battery sensor.

3) Remove the slide rail assembly installing bolt.
   (1) Tilt the backrest assembly forward.
   (2) Press the bolt cover claw (a) to remove the bolt cover.
   (3) Remove the slide rail installing bolt.

4) Disconnect the connector under the front seat.
- Seat belt warning light connector (driver's seat)
- Occupant detection system harness connector (passenger's seat) <Ref. to OD(diag)-15, OCCUPANT DETECTION SYSTEM (BETWEEN AIRBAG REAR HARNESS AND SEAT HARNESS), PROCEDURE, Airbag Connector.>
- Side airbag connector <Ref. to AB-21, SIDE AIRBAG MODULE, PROCEDURE, Airbag Connector.>
- Seat cushion airbag connector <Ref. to AB-22, SEAT CUSHION AIRBAG MODULE AND BUCKLE SWITCH RH, PROCEDURE, Airbag Connector.>
- Seat heater connector (model with seat heater)
- Buckle switch RH connector (passenger's seat) <Ref. to AB-22, SEAT CUSHION AIRBAG MODULE AND BUCKLE SWITCH RH, PROCEDURE, Airbag Connector.>

5) Take out the front seat from the vehicle.



CAUTION:
Be careful not to damage the body.

B: INSTALLATION

1) Bring the front seat inside the vehicle.

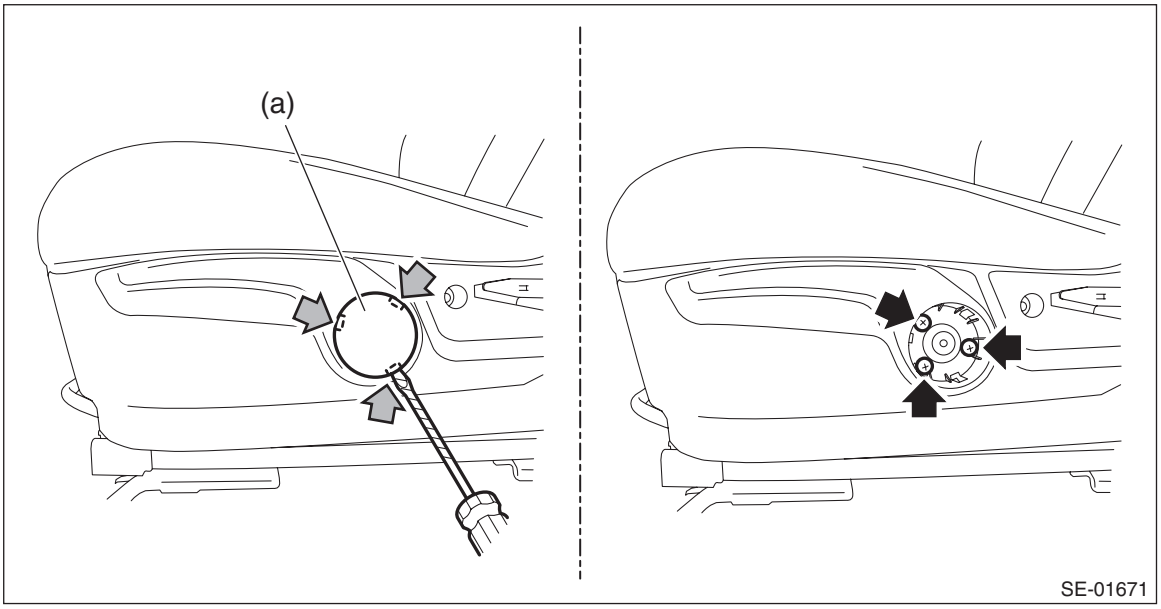
CAUTION:
Be careful not to damage the body.
2) Connect the connectors located under the front seat.
3) Install the seat assembly.

CAUTION:
Tighten the slide rail assembly installing bolts in the order as shown in the figure, in several steps by gradually increasing the torque until they reach the specified torque.

Tightening torque:
Front seat assembly: 53 N·m (5.4 kgf-m, 39.1 ft-lb)
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Install the headrest assembly - front.

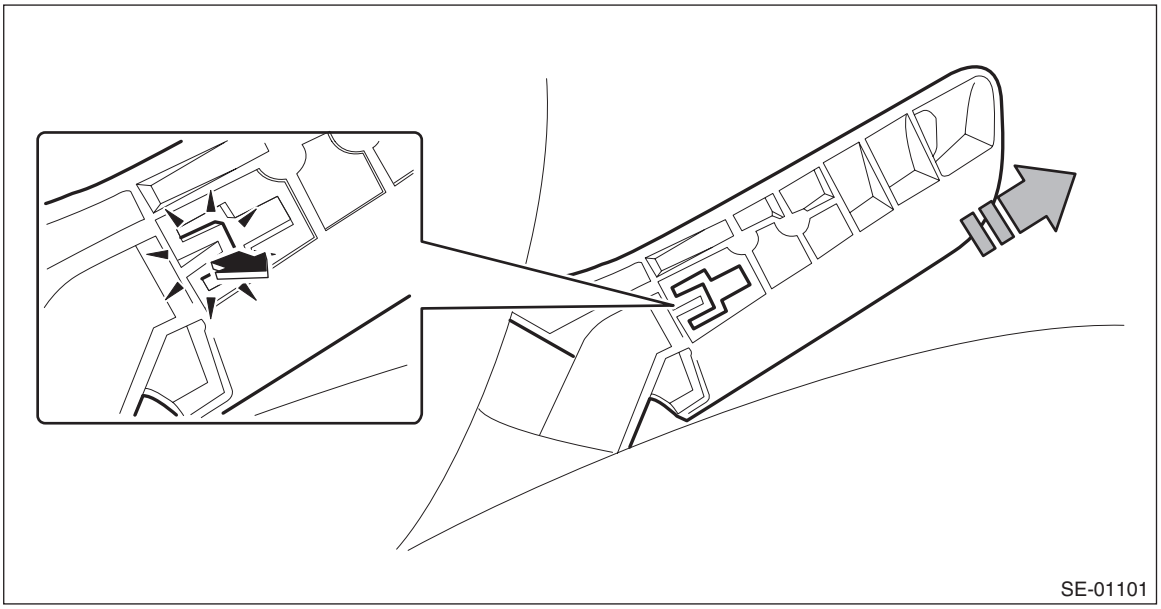
C: DISASSEMBLY

1. MANUAL SEAT (DRIVER'S SEAT)



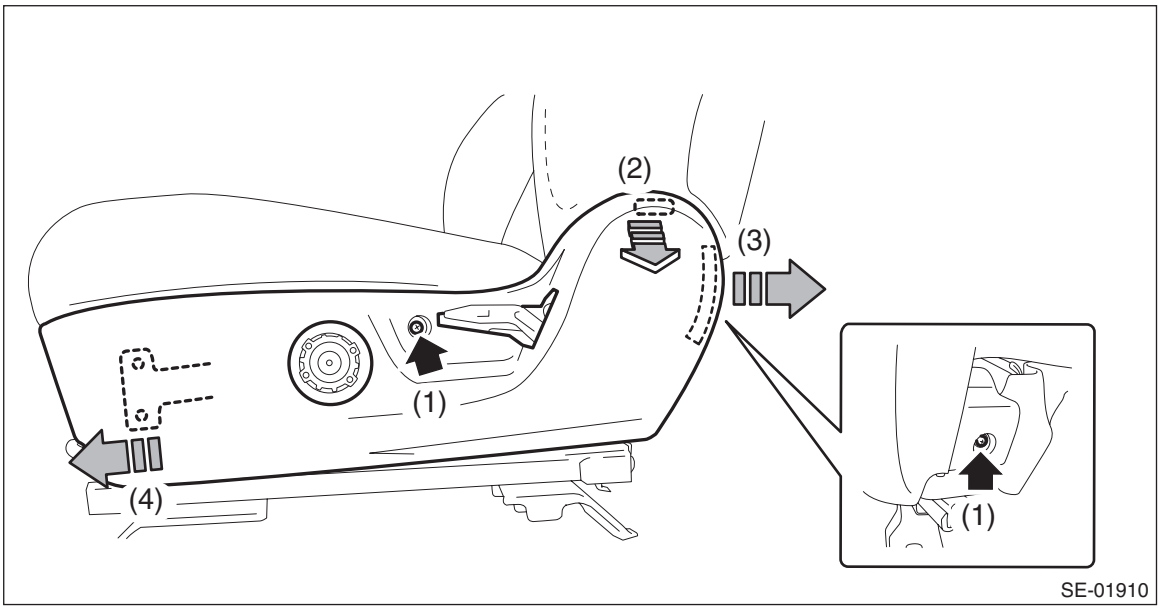
CAUTION:
• Before assembling, make sure how the harnesses are routed behind the seat cushion in order to avoid misarranging. Assembling with harnesses improperly routed may cause the harness to get caught and short out.
• Do not reuse hog rings.
1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

NOTE:
• Before removing the seat, raise the seating face.
• For models with power seat, remove the slide rail installing bolt before disconnecting the ground terminal from the battery sensor.
3) Remove the front seat from vehicle. <Ref. to SE-11, REMOVAL, Front Seat.>

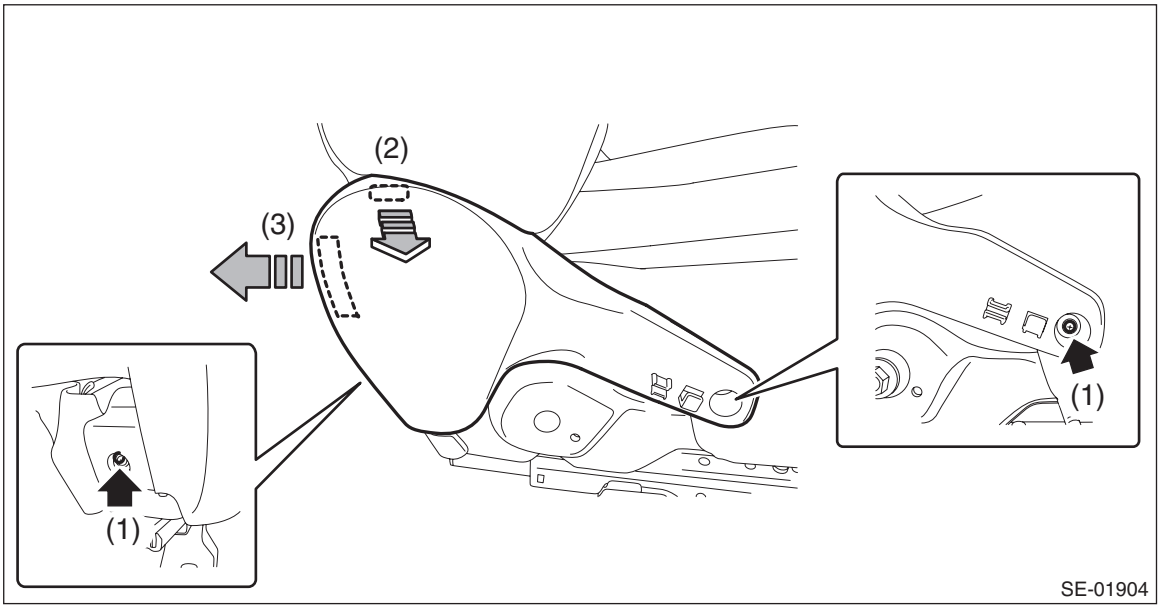


4) Remove the knob - lifter.
(1) Remove the cap - lifter lever (a).

NOTE:
Insert a flat tip screwdriver or similar tool wrapped with protective tape into the gap (shown with arrow) between the cap - lifter lever and the knob - lifter.

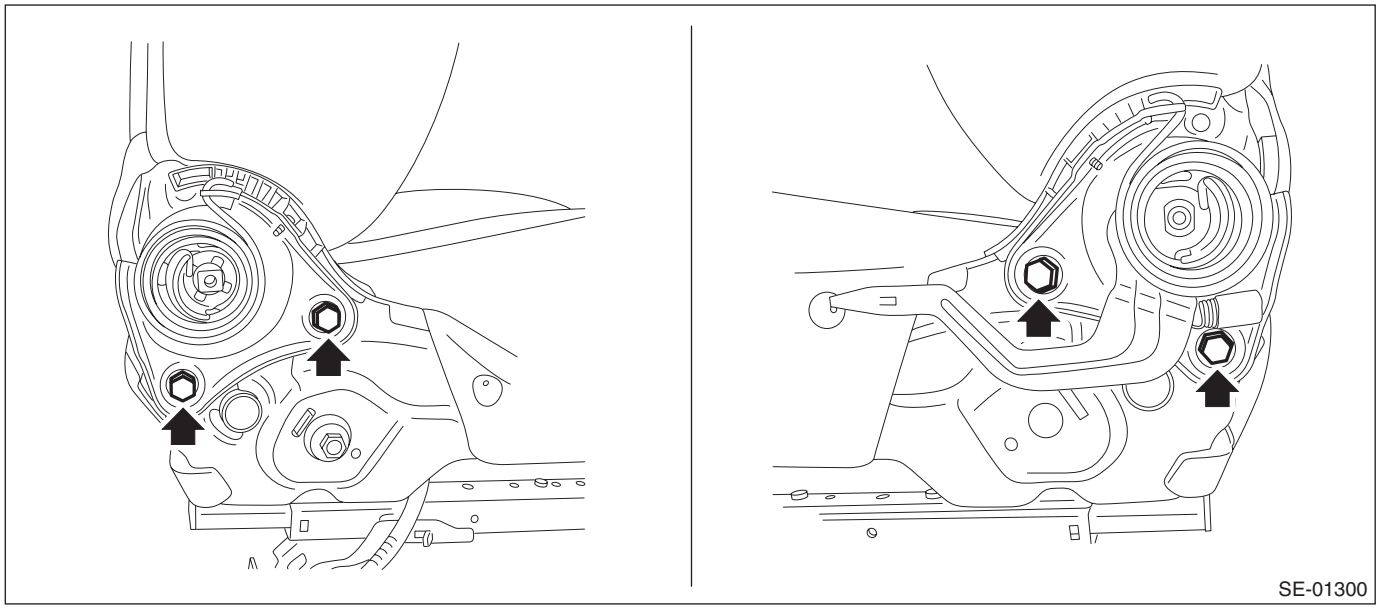


(2) Remove the screws and remove the knob - lifter.

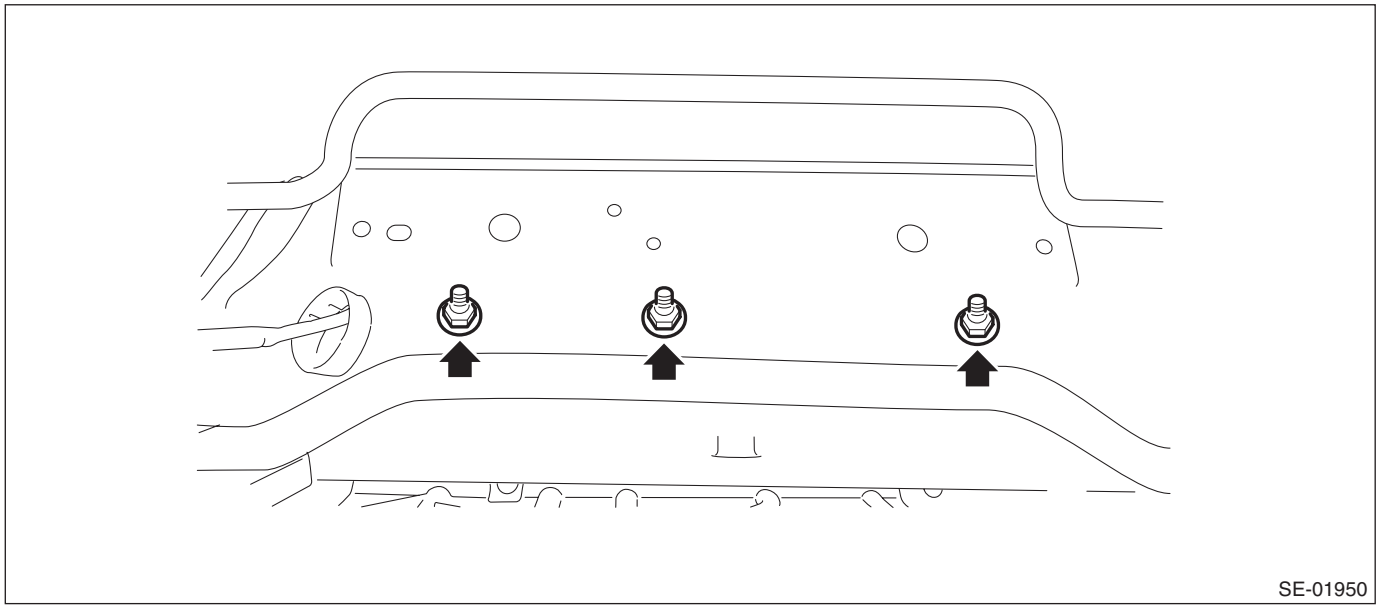


5) Remove the lever - reclining.
(1) Pull up the lever - reclining and release the claws on the back.
(2) Pull out the lever - reclining.

6) Remove the cover - hinge front seat OUT.
(1) Remove the screws.
(2) Release the claw in the upper section of the cover - hinge front seat OUT.
(3) Release the claw in the rear section of the cover - hinge front seat OUT.
(4) Release the claw in the front section of the cover - hinge front seat OUT, then remove the cover - hinge front seat OUT.

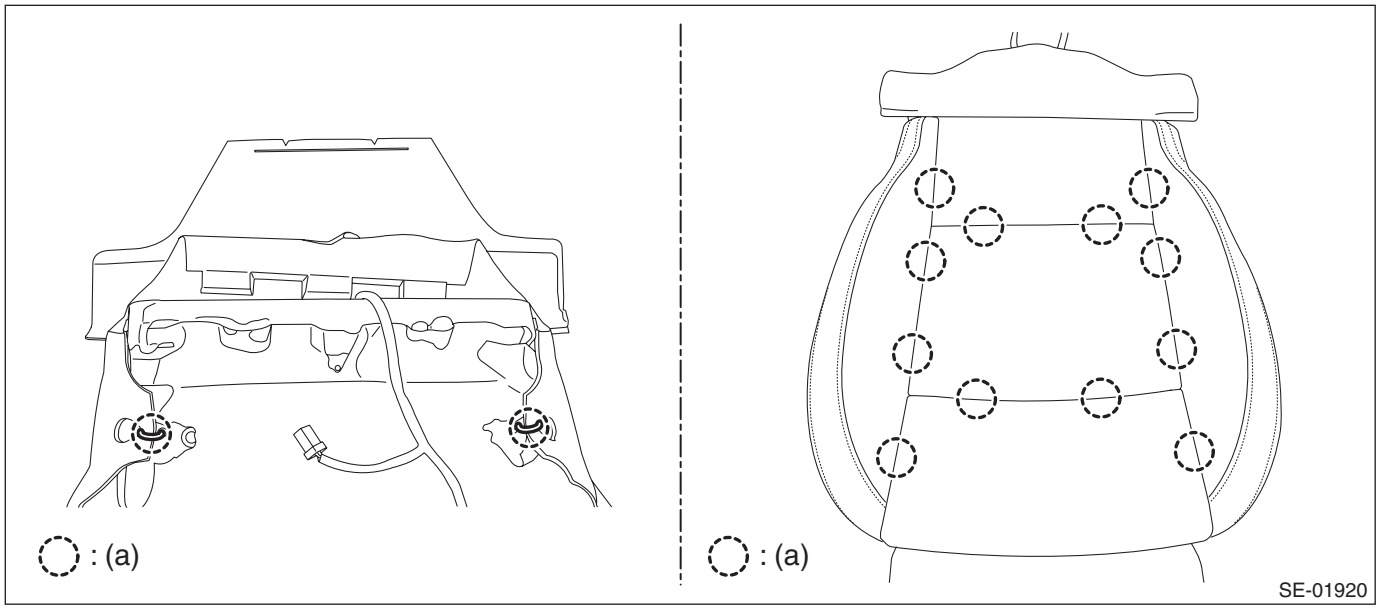


7) Remove the seat belt inner - front. <Ref. to SB-20, SEAT BELT INNER - FRONT, REMOVAL, Front Seat Belt.>
8) Remove the cover - hinge front seat INN.
(1) Remove the screws.
(2) Release the claw in the upper section of the cover - hinge front seat INN.
(3) Release the claw in the rear section of the cover - hinge front seat INN, then remove the cover - hinge front seat INN.



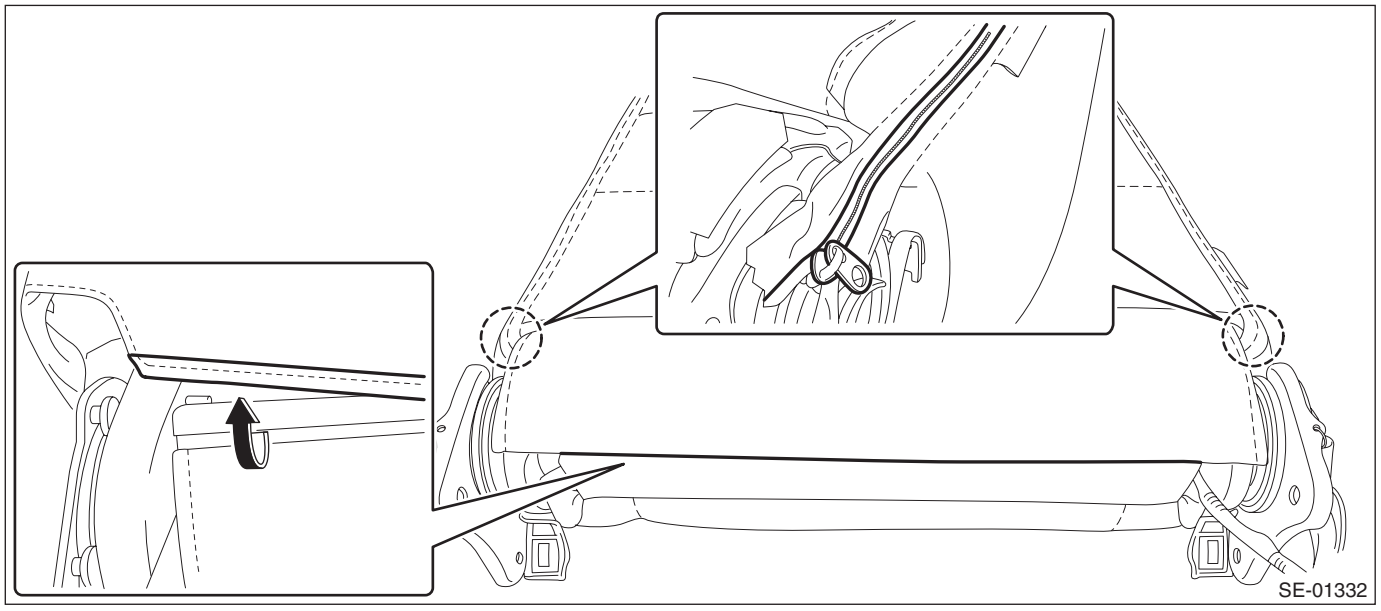
9) Separate the backrest assembly and the seat cushion assembly.
(1) Remove the following harnesses and connector clamps from the reverse side of the seat cushion assembly.
- Side airbag harness
- Seat cushion airbag harness
- Seat heater harness (with seat heater)

(2) Remove the bolts from reclining hinge of both sides.
(3) While taking care not to damage the airbag harness, separate the backrest assembly and the seat cushion assembly.

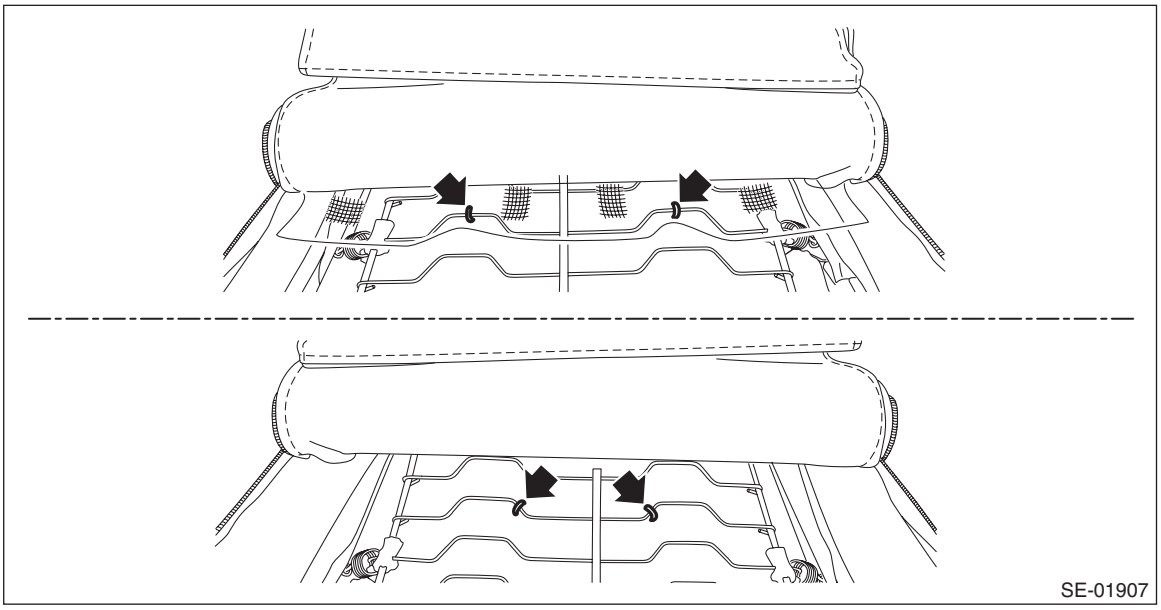


10) Remove the hook, and remove the pad assembly - front seat cushion and the cover - front seat cushion.

NOTE:
Turn over the rear side of the seat, and remove the hook on the front side of the seat cushion frame.
11) Remove the nuts and then remove the seat cushion airbag module.



12) Remove the cover - front cushion.
(1) Remove the hog ring (a).

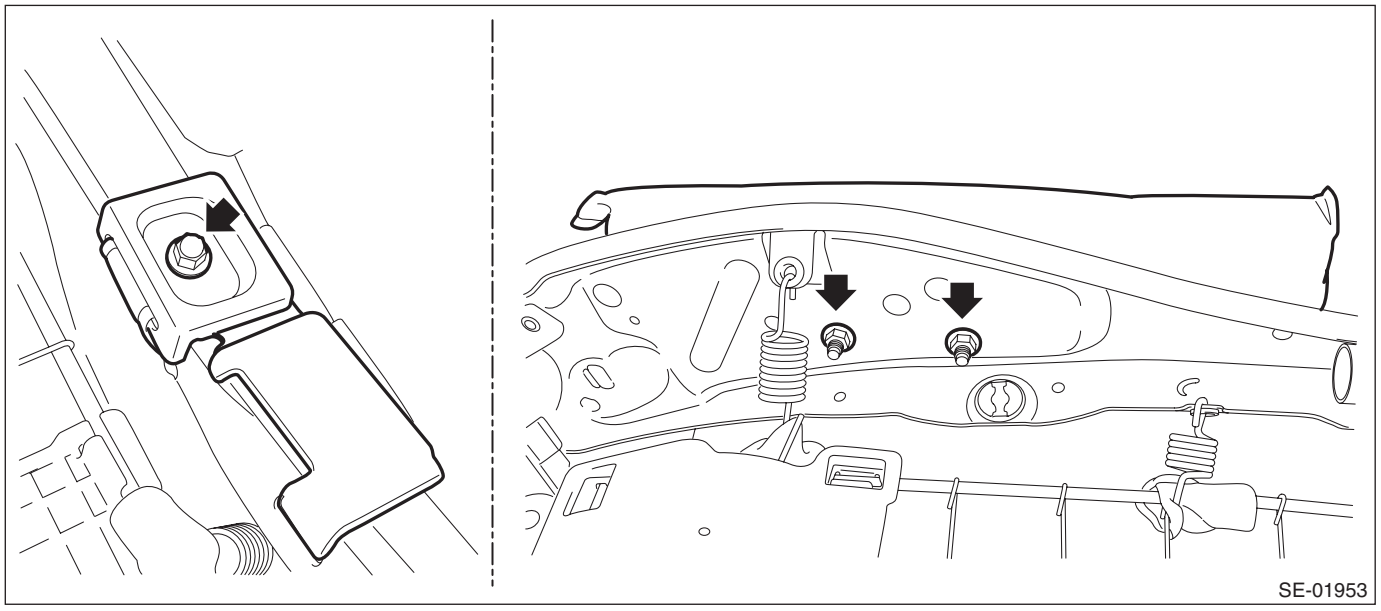


(2) Pull out the pad assembly - front seat cushion from the cover - front cushion.
(3) Remove the seat heater module from the pad assembly as necessary.

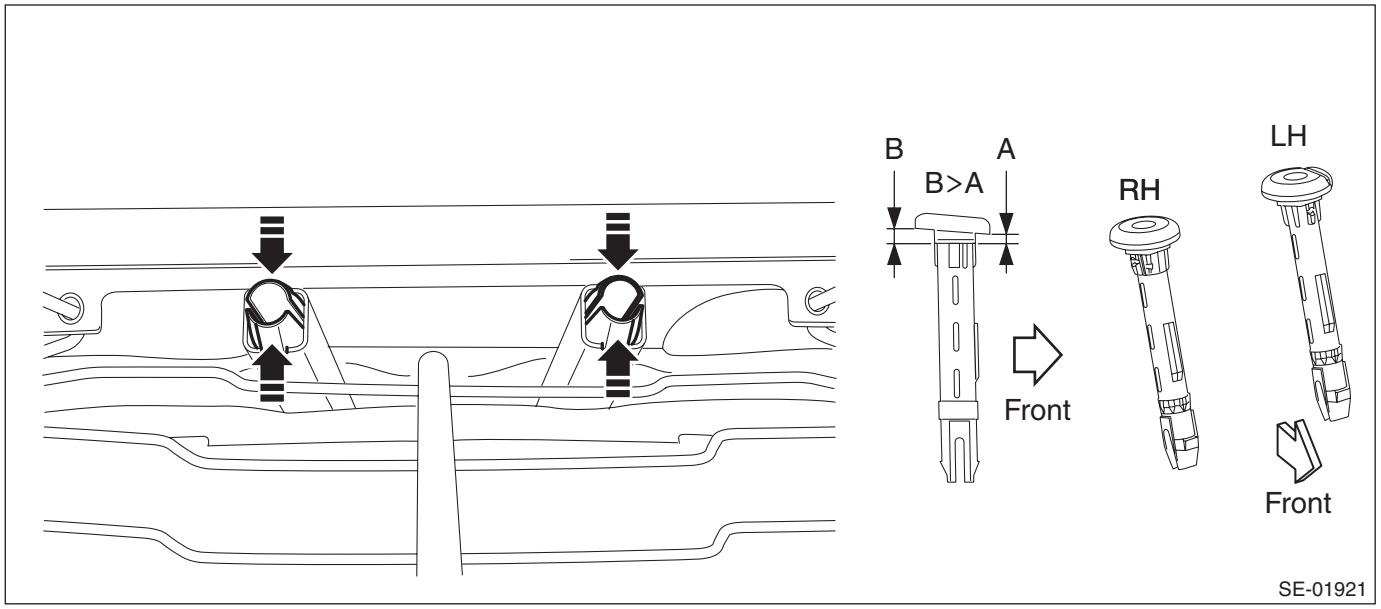
CAUTION:
- **If the seat heater module is removed, replace the pad assembly with a new part.**
- **If the seat heater module is reused, remove the polyurethane section from the reverse side completely.**

13) Remove the pad assembly - front seat backrest and the cover COMPL - front backrest.
(1) Remove the plastic fastener at the back side (bottom) of backrest assembly.
(2) Open the fastener at the rear side of backrest assembly.

(3) Remove the hog ring. (4 pieces)



(4) Remove the pad assembly - front seat backrest and the cover COMPL - front backrest from the backrest assembly.

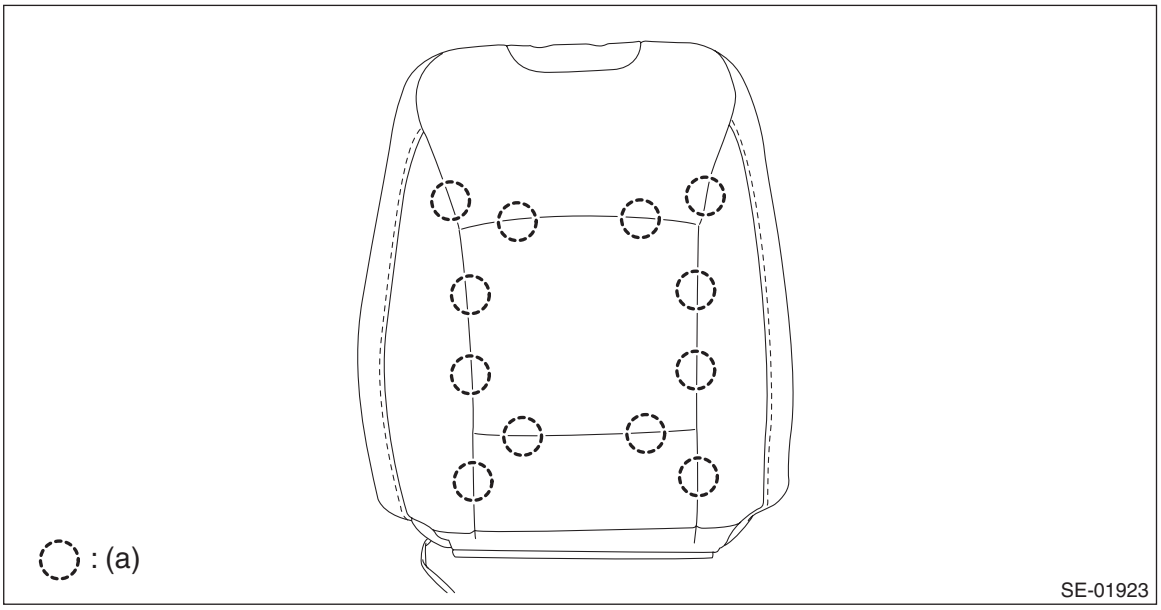


14) Remove the side airbag module.

CAUTION:
Do not open the protective cover of the side airbag. If any damage is present in the protective cover or the cloth of side airbag module comes out from the protective cover slit, replace the side airbag module with a new part.

(1) Remove the hexagon cap nut and nuts.
(2) While taking care not to damage the airbag protective cover, remove the side airbag module.

15) Remove the bushing - headrest.



NOTE:
Catch the tip of the bushing - headrest with pliers and push it outward from the inside of seat to remove it.

16) Pull out the frame assembly - front backrest.

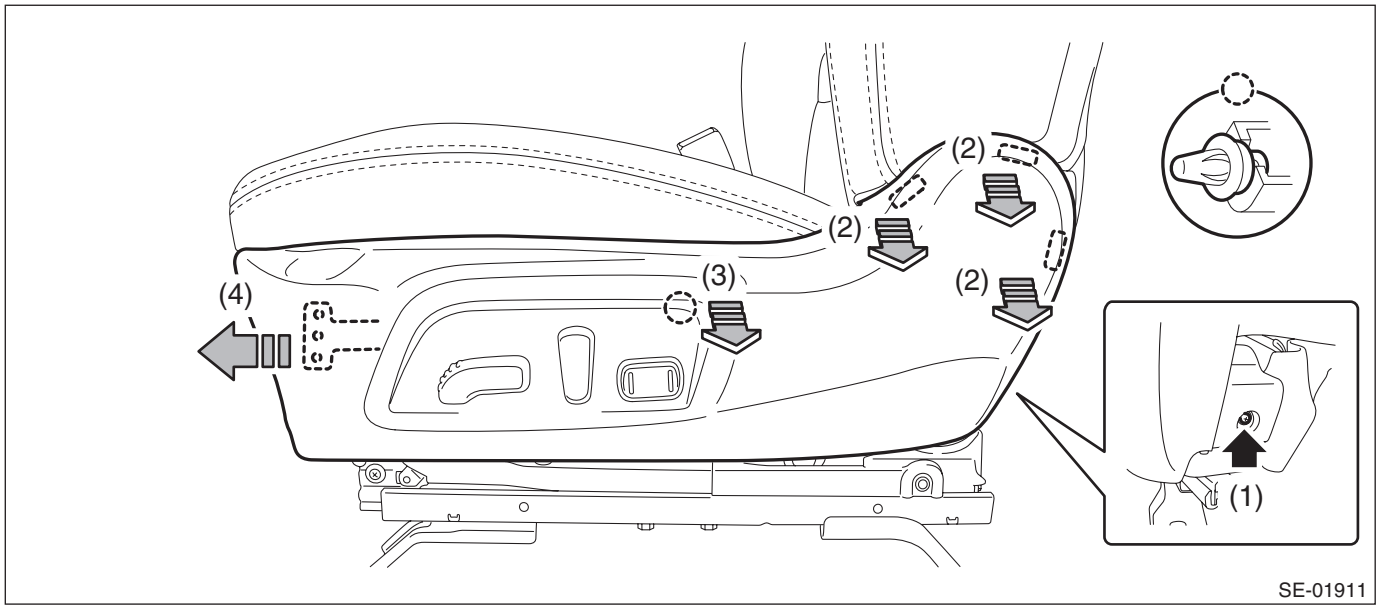
17) Remove the cover COMPL - front backrest.

(1) Remove the hog ring (a).

(2) Pull out the pad assembly - front seat backrest from the cover COMPL - front backrest.

(3) Remove the seat heater module from the pad assembly as necessary.

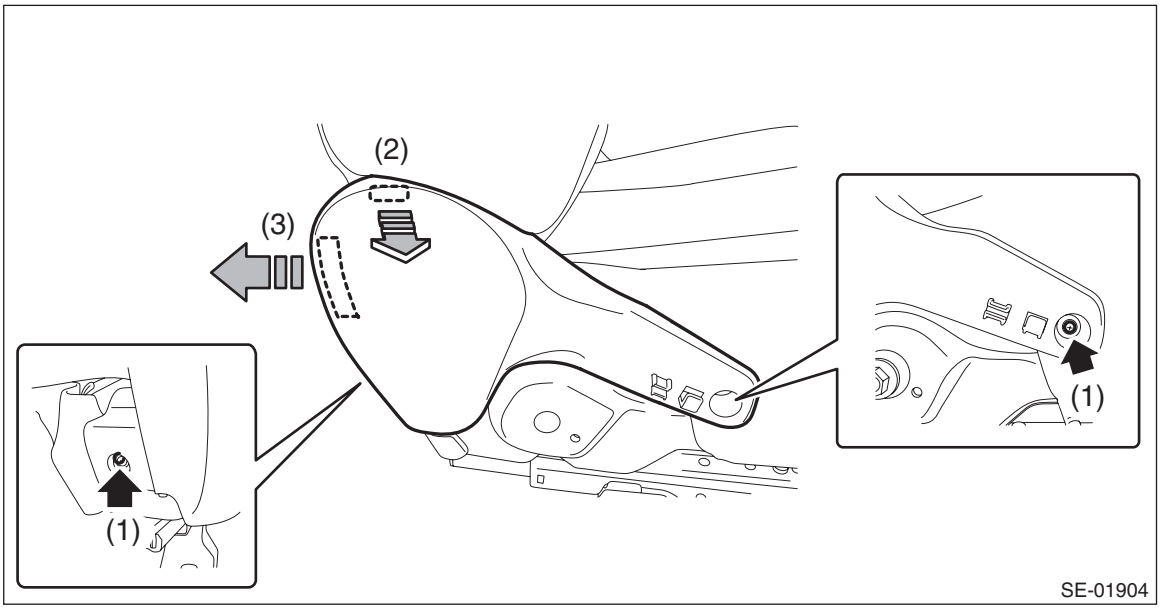
CAUTION:



- **If the seat heater module is removed, replace the pad assembly with a new part.**
- **If the seat heater module is reused, remove the polyurethane section from the reverse side completely.**

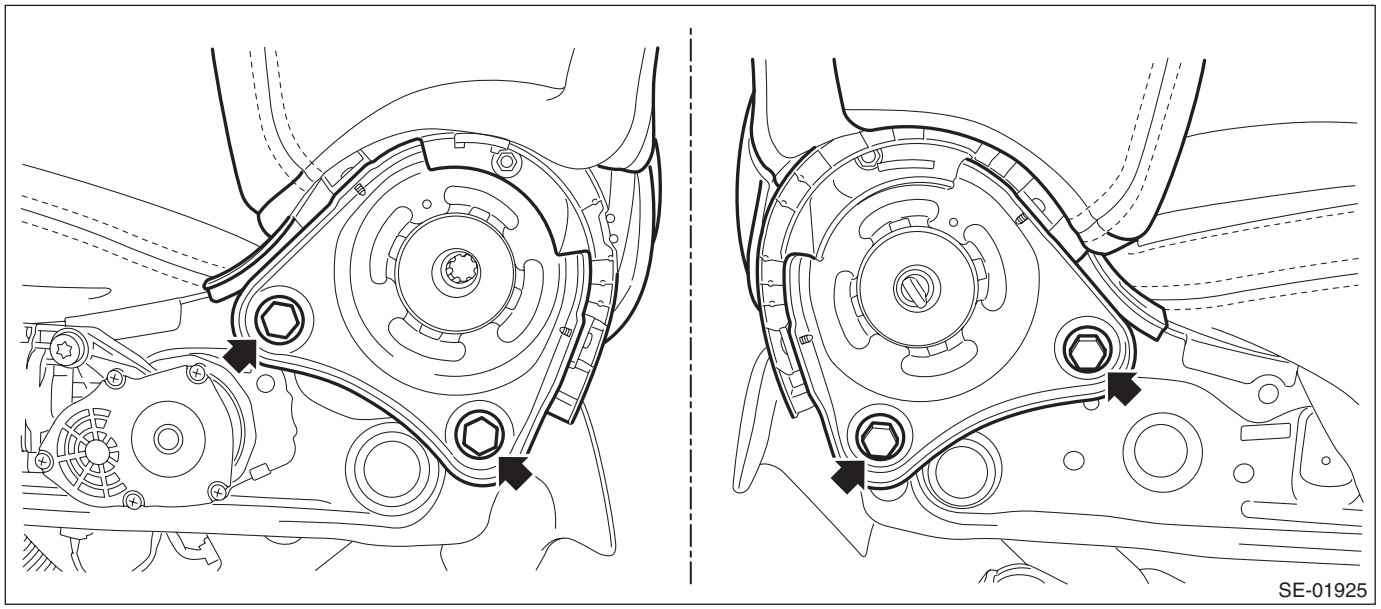
2. POWER SEAT (DRIVER'S SEAT)

CAUTION:
• Before assembling, make sure how the harnesses are routed behind the seat cushion in order to avoid misarranging. Assembling with harnesses improperly routed may cause the harness to get caught and short out.
• Do not reuse hog rings.
• Do not disassemble the backrest frame assembly and seat cushion frame and slide rail assembly.
1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



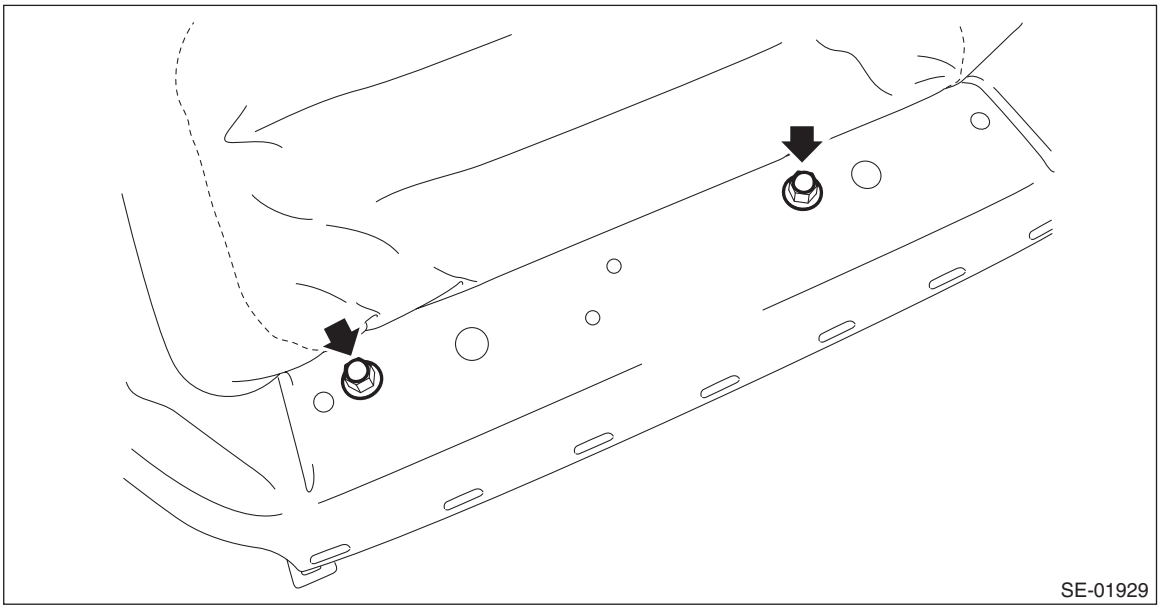
NOTE:
• Before removing the seat, raise the seating face.
• For models with power seat, remove the slide rail installing bolt before disconnecting the ground terminal from the battery sensor.
3) Remove the seat from vehicle. <Ref. to SE-11, REMOVAL, Front Seat.>
4) Remove the following harnesses and connector clamps from the reverse side of the seat cushion.
• Seat belt inner - front connector
• Side airbag module connector
• Seat cushion airbag module connector
• Seat heater harness (with seat heater)
• Power seat connector (with power seat)
• Reclining motor (with power seat)
• Lumber support motor (with lumber support)
5) Remove the cover - hinge front seat OUT.
(1) Remove the screws in the rear section of the cover - hinge front seat OUT.
(2) Release the claw in the upper section of the cover - hinge front seat OUT.

NOTE:
Use a plastic clip remover.
(3) Remove the clip in the center of the cover - hinge front seat OUT.
(4) Release the claw in the front section of the cover - hinge front seat OUT.

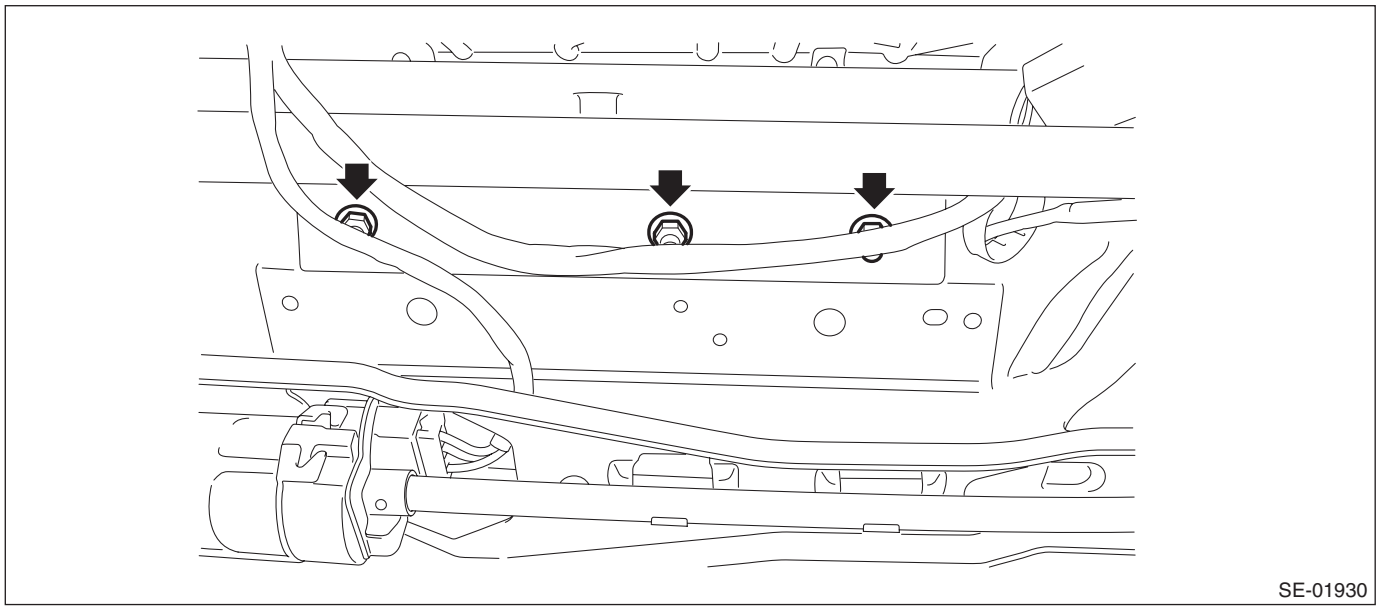


(5) Disconnect the power seat switch and lumber switch connector and remove the cover - hinge front seat OUT.
6) Remove the seat belt inner - front. <Ref. to SB-20, SEAT BELT INNER - FRONT, REMOVAL, Front Seat Belt.>

7) Remove the cover - hinge front seat INN.
(1) Remove the screws.
(2) Release the claw in the upper section of the cover - hinge front seat INN.
(3) Remove the cover - hinge front seat INN by pulling it backward.

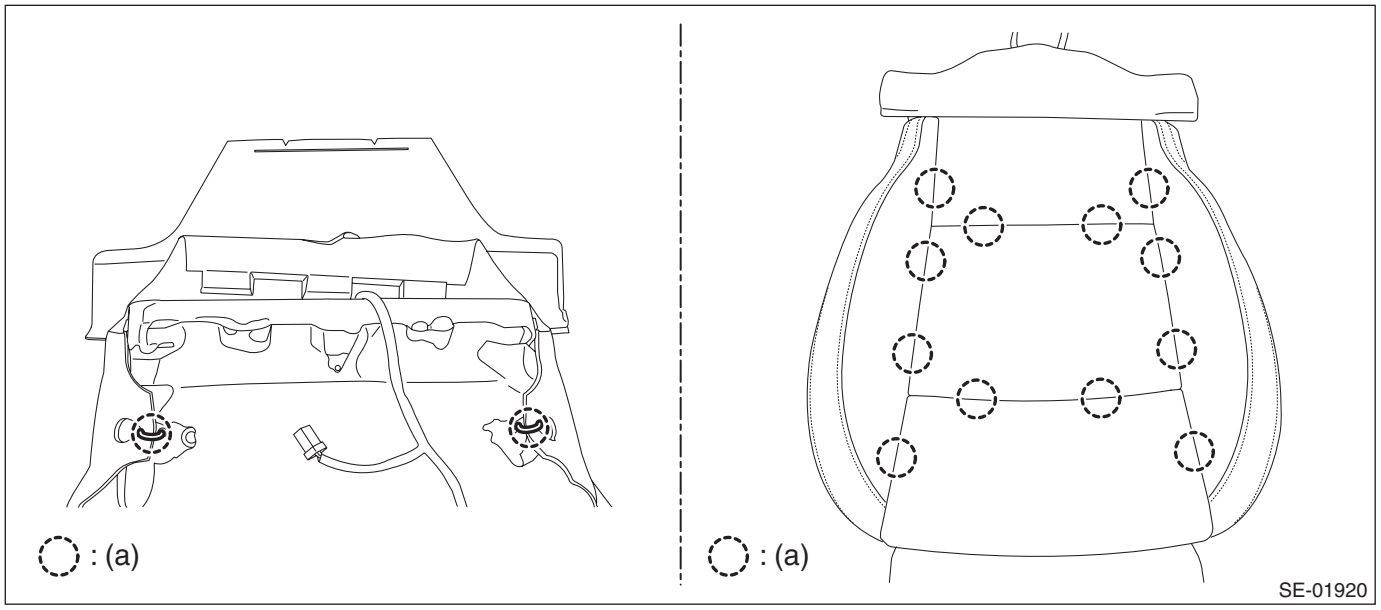


8) Separate the backrest assembly and the seat cushion assembly.
(1) Remove the bolts from reclining hinge of both sides.
(2) While taking care not to damage the airbag harness, separate the backrest assembly and the seat cushion assembly.



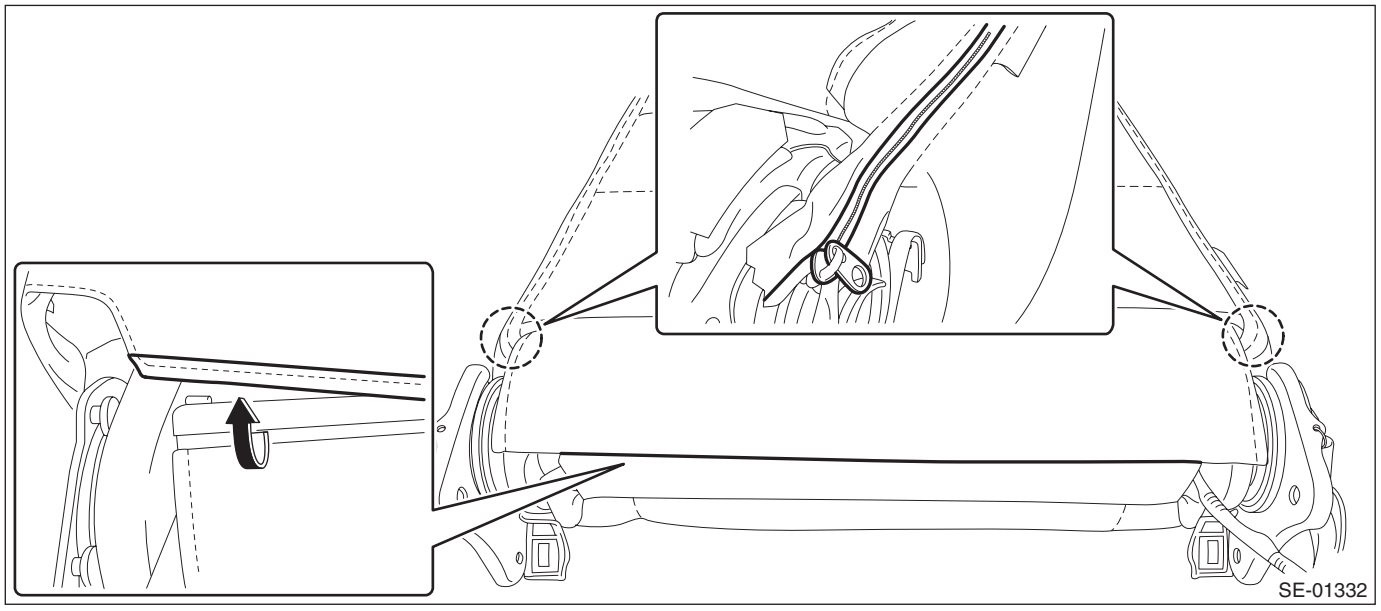
9) Remove the hook, and remove the pad assembly - front seat cushion and the cover - front cushion.

NOTE:
Turn over the rear side of the seat, and remove the hook on the front side of the seat cushion frame.

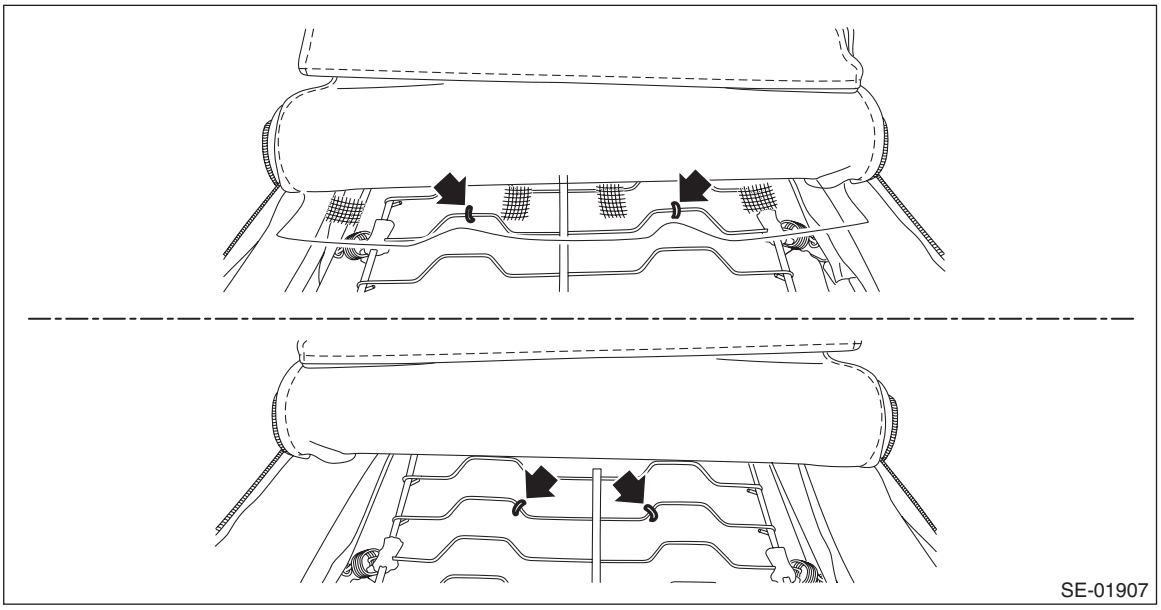


10) Remove the hexagon cap nuts, and remove the power seat control module. (Model with power seats with memory function)

11) Remove the nuts and then remove the seat cushion airbag module.



12) Remove the cover - front cushion.
(1) Remove the hog ring (a).

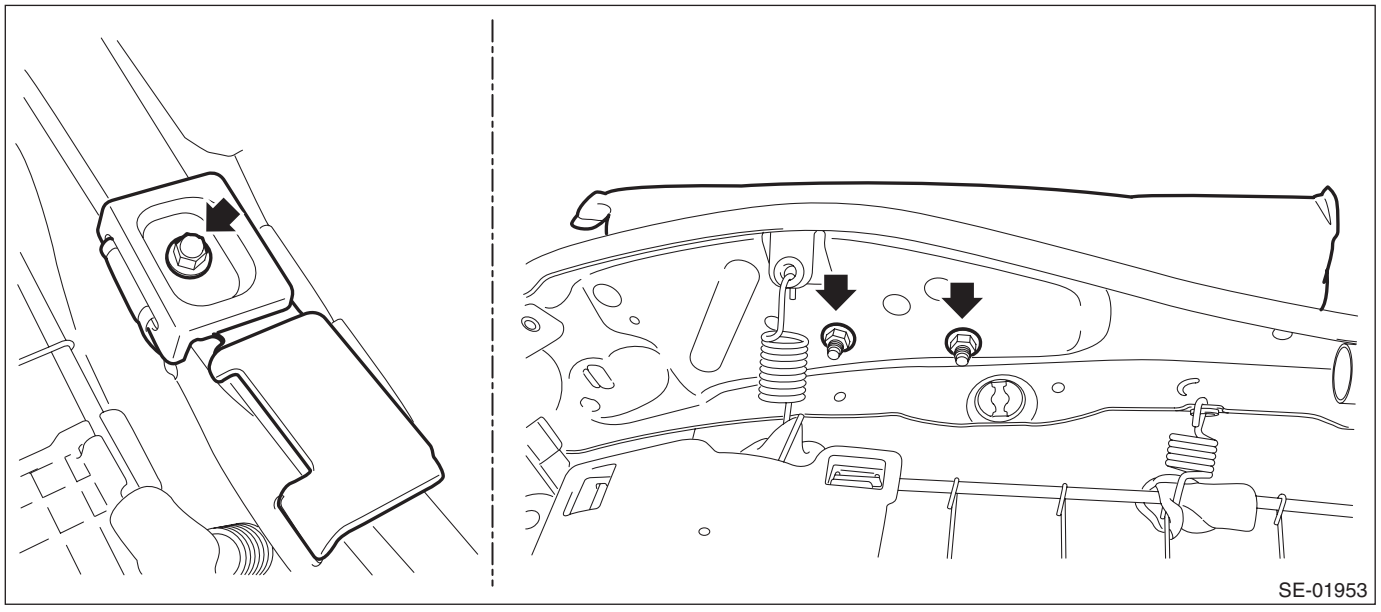


(2) Pull out the pad assembly - front seat cushion from the cover - front cushion.
(3) Remove the seat heater module from the pad assembly as necessary.

CAUTION:
- **If the seat heater module is removed, replace the pad assembly with a new part.**
- **If the seat heater module is reused, remove the polyurethane section from the reverse side completely.**

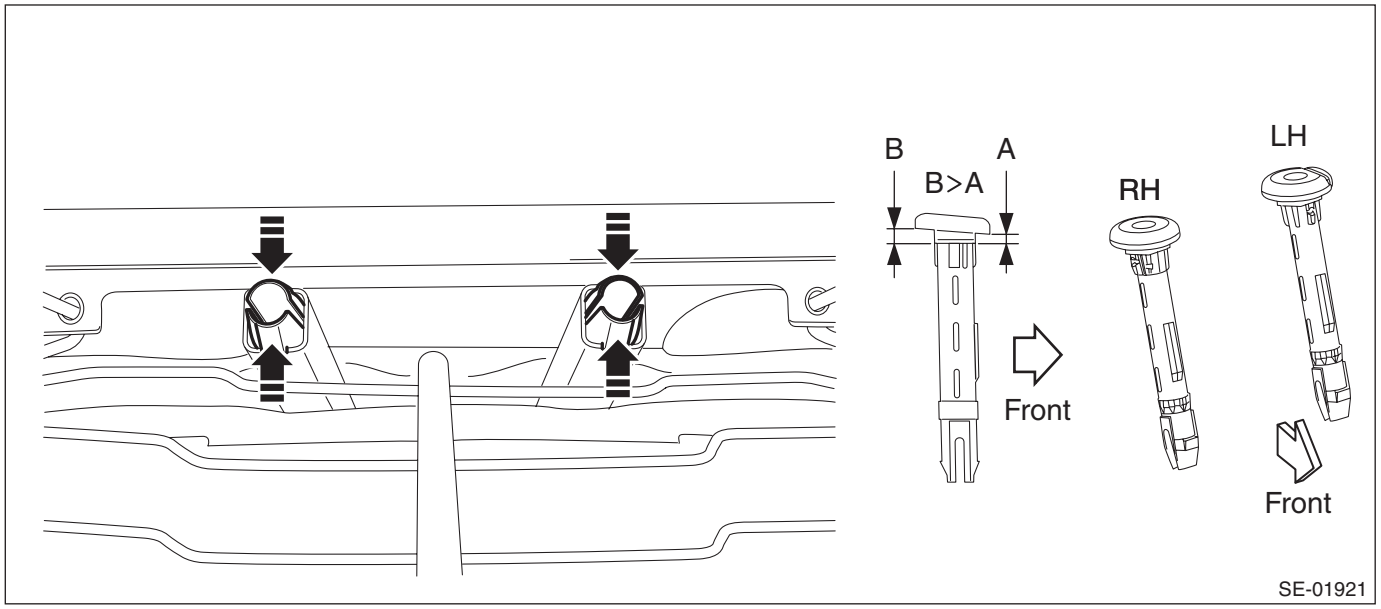
13) Remove the pad assembly - front seat backrest and the cover COMPL - front backrest.
(1) Remove the plastic fastener at the back side (bottom) of backrest assembly.
(2) Open the fastener at the rear side of backrest assembly.

(3) Remove the hog ring. (4 pieces)



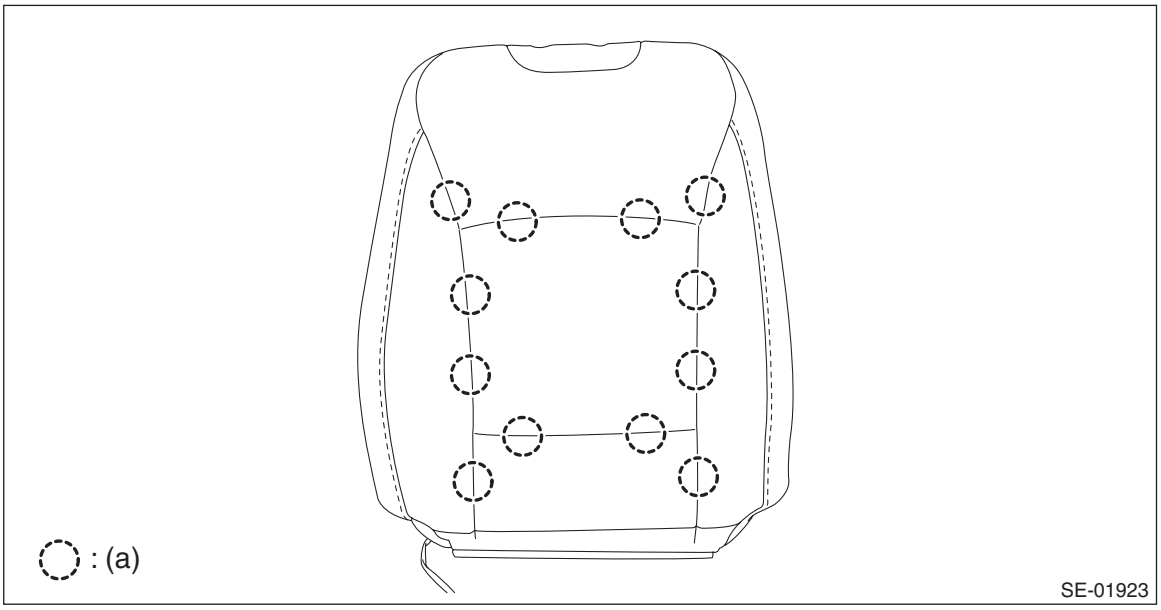
(4) Remove the backrest pad & cover from backrest assembly.

14) Remove the side airbag module.



CAUTION:
Do not open the protective cover of the side airbag. If any damage is present in the protective cover or the cloth of side airbag module comes out from the protective cover slit, replace the side airbag module with a new part.

(1) Remove the hexagon cap nut and nuts.

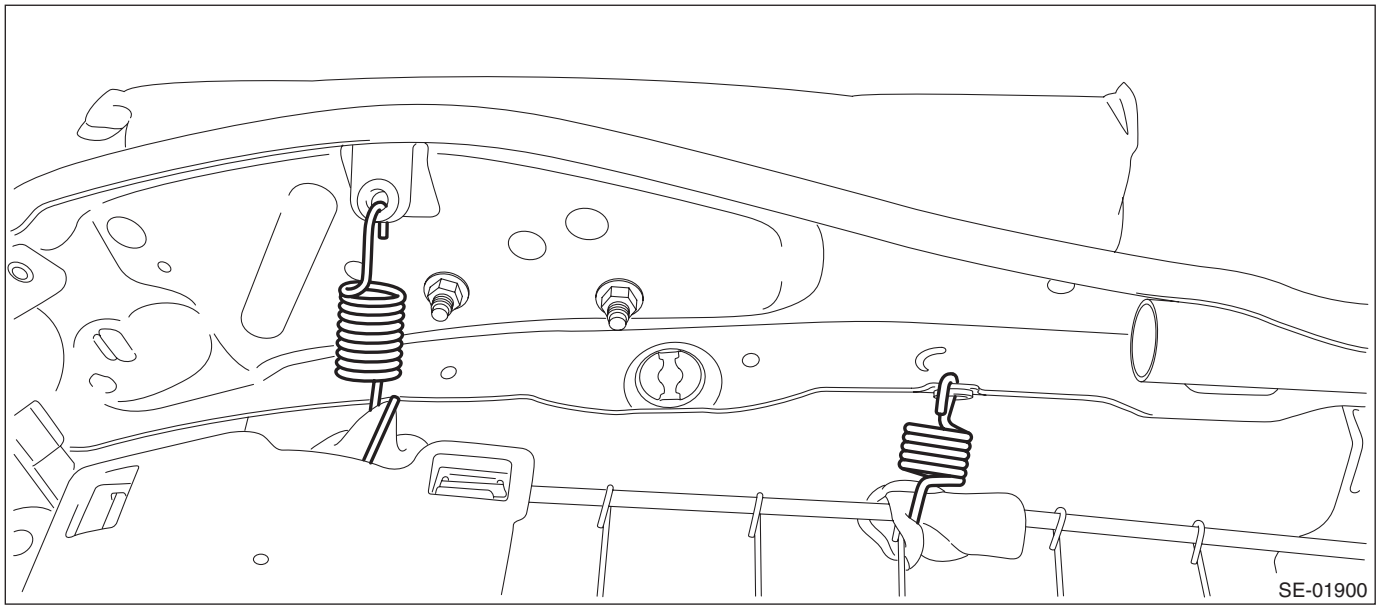


(2) While taking care not to damage the airbag protective cover, remove the side airbag module.

15) Remove the headrest bushing.

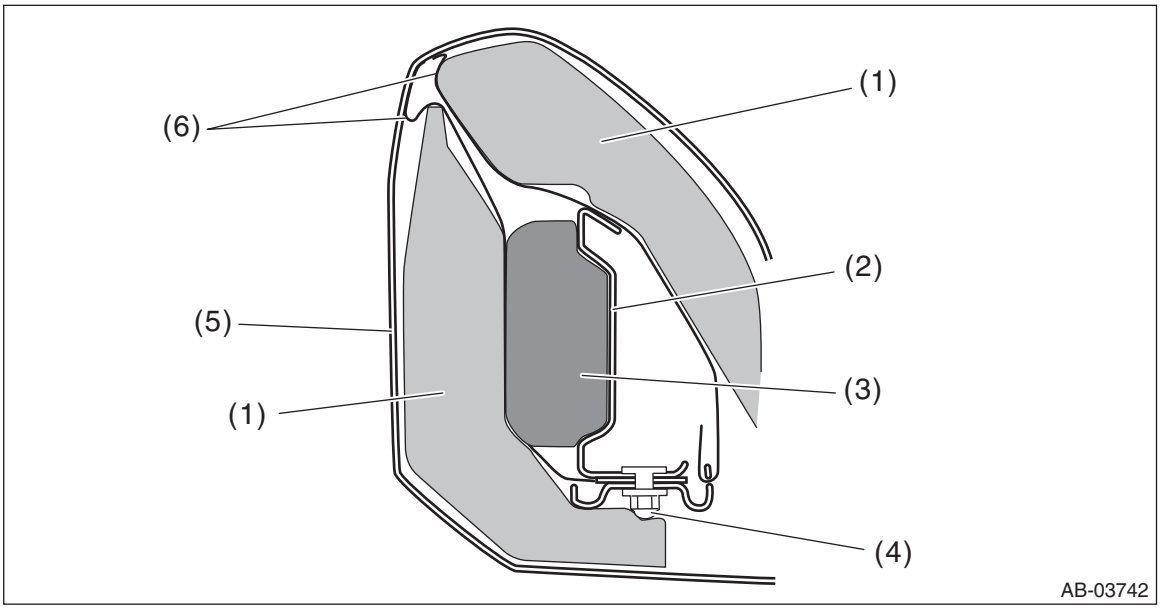
NOTE:
Catch the tip of headrest bushing with pliers and push it from inside seat to outside to remove it.
16) Pull out the frame assembly - front backrest.
17) Remove the cover COMPL - front backrest.
(1) Remove the hog ring (a).

(2) Pull out the pad assembly - front seat backrest from the cover COMPL - front backrest.
(3) Remove the seat heater module from the pad assembly as necessary.



CAUTION:
- **If the seat heater module is removed, replace the pad assembly with a new part.**
- **If the seat heater module is reused, remove the polyurethane section from the reverse side completely.**

3. PASSENGER'S SEAT



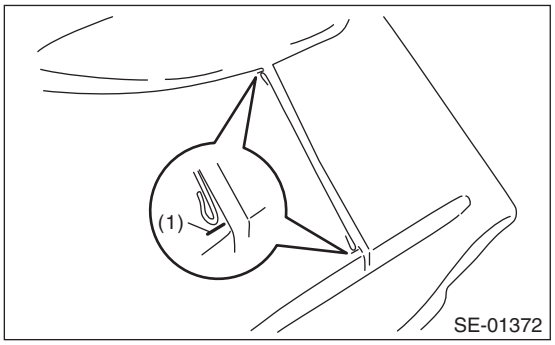
CAUTION:
• The occupant detection system (passenger's seat only) control module, the occupant detection sensor, the seat cushion airbag module, the pad assembly - front seat cushion and the frame assembly - front cushion are considered as a single seat cushion pad & frame assembly. Never remove the occupant detection control module or the occupant detection sensor from the frame assembly - front cushion.
• If the cover - front cushion is removed, make sure to replace the hang wire on the cover - front cushion side with a new wire.
• Never remove the occupant detection sensor connector from the occupant detection control module.
• When replacing the seat cover, be careful not to damage the occupant detection sensor while installing the hog ring.
• When removing or replacing the seat cover, perform "Occupant Detection System Inspection" after installing the seat to check if the occupant detection system operates normally. <Ref. to PI-14, SEAT, PRE-DELIVERY INSPECTION (PDI) PROCEDURE, Pre-delivery Inspection.>
• If the seat heater module is removed, replace the seat cushion pad & frame assembly with a new part.
• If the seat heater module is reused, remove the polyurethane section from the reverse side completely.
1) Remove the front seat (passenger's side) from vehicle. <Ref. to SE-11, REMOVAL, Front Seat.>
2) Refer to the disassembly procedures for the driver's seat.
- Manual seat: <Ref. to SE-12, MANUAL SEAT (DRIVER'S SEAT), DISASSEMBLY, Front Seat.>
- Power seat: <Ref. to SE-19, POWER SEAT (DRIVER'S SEAT), DISASSEMBLY, Front Seat.>

D: ASSEMBLY

CAUTION:
• Do not confuse the harness routing in the reverse side of the seat cushion. Assembling with harnesses improperly routed may cause the harness to get caught and short out.
• If the hook - spring of the frame assembly - front backrest is deformed or comes off due to the deformation, replace the hook - spring with a new part.

- **Make sure that the side airbag module is installed as shown in the figure.**

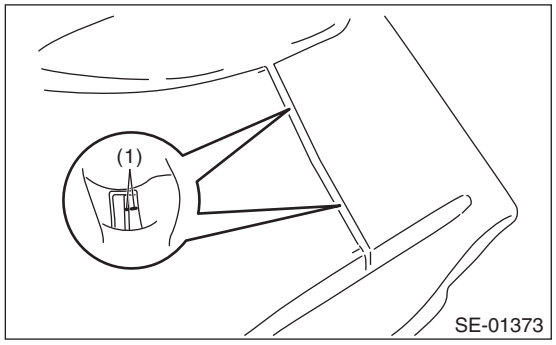
(1) Pad ASSY - front seat backrest
(2) Frame ASSY - front backrest
(3) Side airbag module
(4) Hexagon cap nut
(5) Cover COMPL - front backrest
(6) Side airbag guide cloth



Besides, if the cover COMPL - front backrest is not installed securely, the side airbag may not be activated properly, therefore keep strictly to the following procedures.
- **Be careful not to stain or damage the cover COMPL - front backrest during assembly.**
- **Do not reuse hog rings.**
- **Secure the hog ring using hog ring pliers.**
- **Install the hog rings to the specified points securely and make sure that there is no wrinkle or twisting on the cover COMPL - front backrest.**

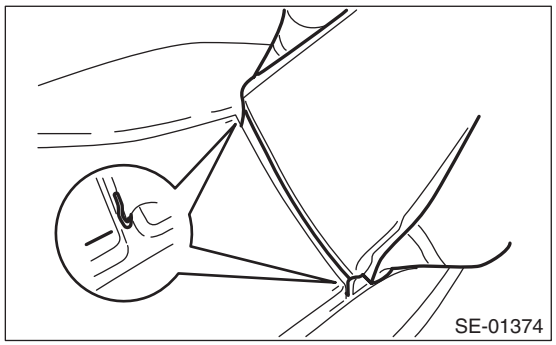
1) Install the seat heater module.

CAUTION:
- **If the seat heater module is removed, replace the pad assembly with a new part. (Driver's seat)**
- **If the seat heater module is removed, replace the seat cushion pad & frame assembly with a new part. (Passenger's seat)**
- **If the seat heater module is reused, remove the polyurethane section from the reverse side completely and attach a new pad assembly with a double-sided tape.**



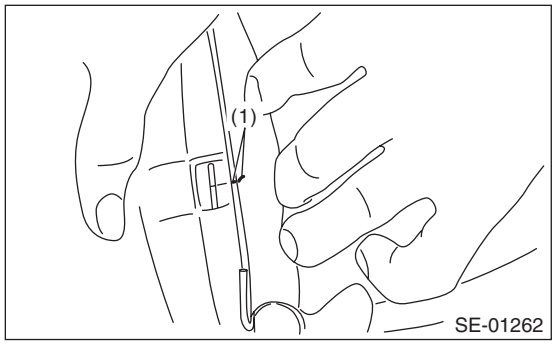
Double-sided tape:
NITTO DENKO 501L or equivalent

2) Make sure that there is no foreign matter on airbag module.
3) Assemble the seat cover.
   (1) Adjust so that the left and right clearances between wire and seat pad become equal, and mark the seat pad.



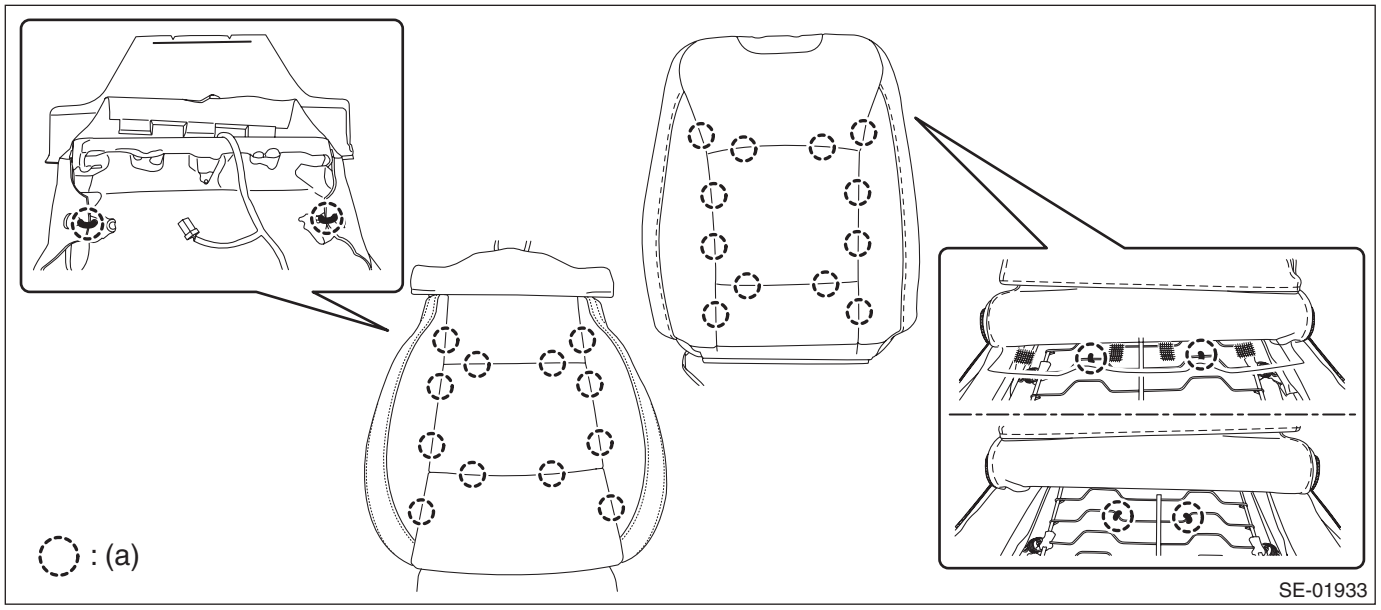
(1) Marking

(2) Mark the center of the wire on the pad side to which the hog ring is attached.

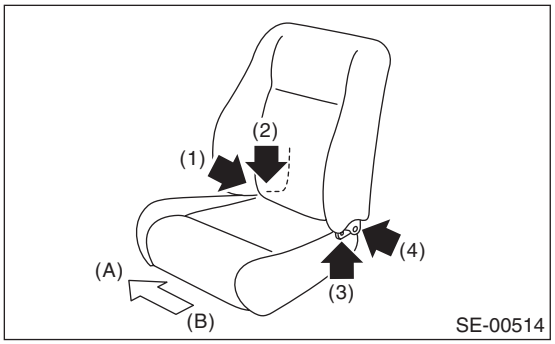


(1) Marking

(3) Insert the wire into the seat cover, and align the wire with the position marked in step 1).



(4) Mark the wire on the seat cover side according to the markings on the seat pad.



(1) Marking

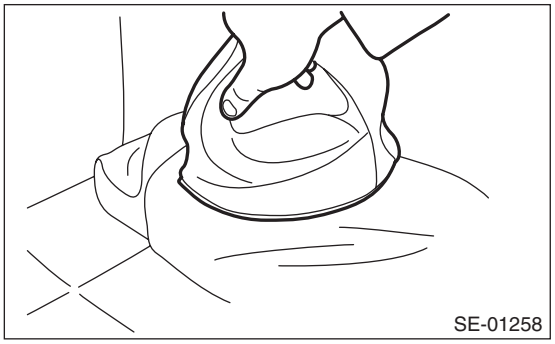
(5) Perform steps 1) — 4) to all sections to which the hog rings are attached.
(6) Make sure that all hog rings (a) are attached securely.

4) Assemble remaining parts in the reverse order of disassemble.

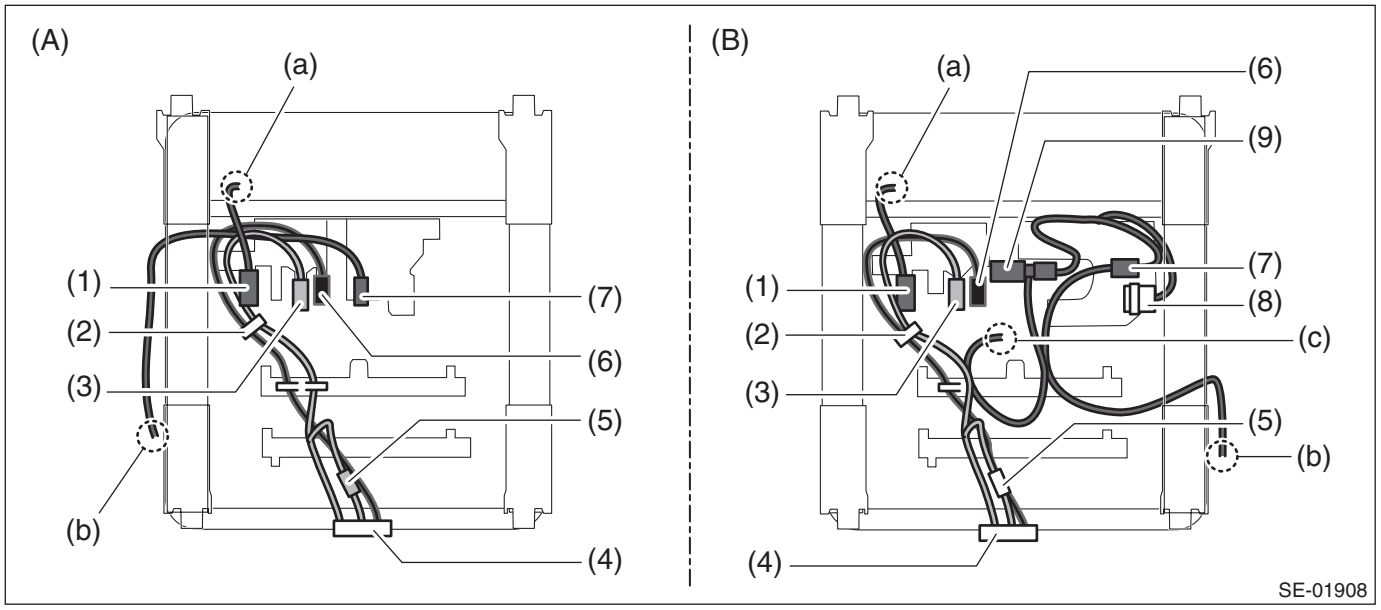
NOTE:
• When installing the seat belt inner - front, follow the procedures described in the “SEAT BELT SYSTEM” section. <Ref. to SB-21, INSTALLATION, Front Seat Belt.>
• When installing the seat cushion airbag module, follow the procedures described in the “AIRBAG SYSTEM” section. <Ref. to AB-36, INSTALLATION, Seat Cushion Airbag Module.>
• Install the backrest assembly and seat cushion assembly in the following procedure.
1. Temporarily tighten the four reclining hinge bolts.
2. Place the backrest in the most upright position.
3. Tighten the reclining hinge bolts in order from (1) to (4) two or three times, until they reach the specified torque.

(A) Vehicle inside
(B) Vehicle outside

Tightening torque:
Refer to “COMPONENT” of “General Description”. <Ref. to SE-2, FRONT SEAT, COMPONENT, General Description.>



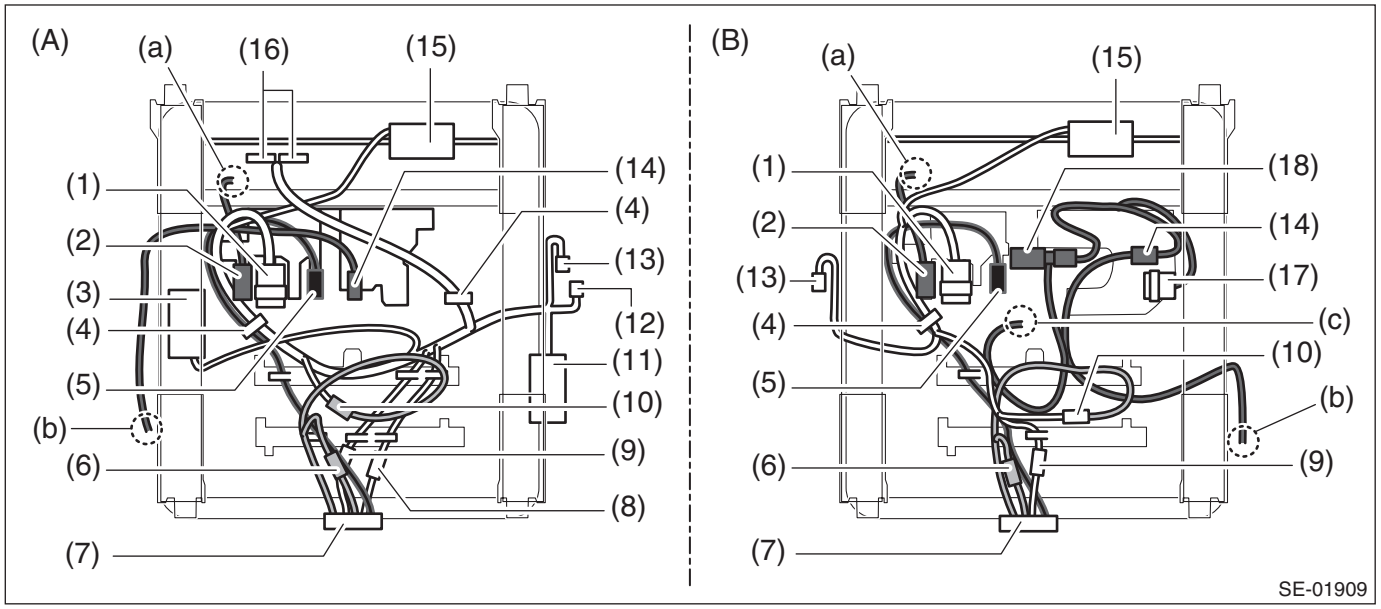
5) If any wrinkles are found after the assembly of the seat cover, finish the seat cover with iron.
(1) Place the wet towel on wrinkles.



(2) Touch up with warm iron.

CAUTION:
Keep moving the iron, otherwise the seat cover surface can be damaged.

NOTE:
This method is available for genuine leather, synthetic leather, cloth, etc.



6) Install connectors located under the front seat.
• Manual seat

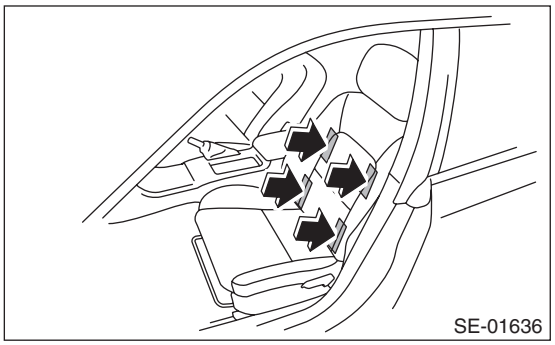
(A)	Driver's seat	(B)	Passenger's seat		
(1)	Seat cushion airbag connector & harness	(5)	Backrest heater connector & harness	(9)	Occupant detection control module
(2)	Band A	(6)	Side airbag connector & harness		
(3)	Seat heater harness connector & seat cushion heater harness	(7)	Seat belt INN - front connector & harness		
(4)	Velcro	(8)	Occupant detection connector & harness		
(a)	Seat cushion airbag module	(b)	Seat belt INN - front	(c)	Occupant detection sensor

- Power seat

(A)	Driver's seat	(B)	Passenger's seat		
(1)	Power seat switch connector	(7)	Velcro seat cushion - heater harness	(13)	Power seat switch connector
(2)	Seat cushion airbag connector & harness	(8)	Lumber motor connector & harness (model with lumber only)	(14)	Seat belt INN - front connector & harness
(3)	Tilt motor	(9)	Reclining motor connector & harness	(15)	Slide motor
(4)	Band A	(10)	Seat heater harness connector & seat cushion heater harness	(16)	Memory seat unit connector
(5)	Side airbag connector & harness	(11)	Lifter motor	(17)	Occupant detection connector & harness
(6)	Backrest heater connector & harness	(12)	Lumber switch connector (model with lumber only)	(18)	Occupant detection control module
(a)	Seat cushion airbag module	(b)	Seat belt INN - front	(c)	Occupant detection sensor

7) Install the seat assembly. <Ref. to SE-12, INSTALLATION, Front Seat.>

E: INSPECTION



1. SEAT COVER

Check that there is no tear or fray on the cover COMPL - front backrest and the cover - front seat cushion.

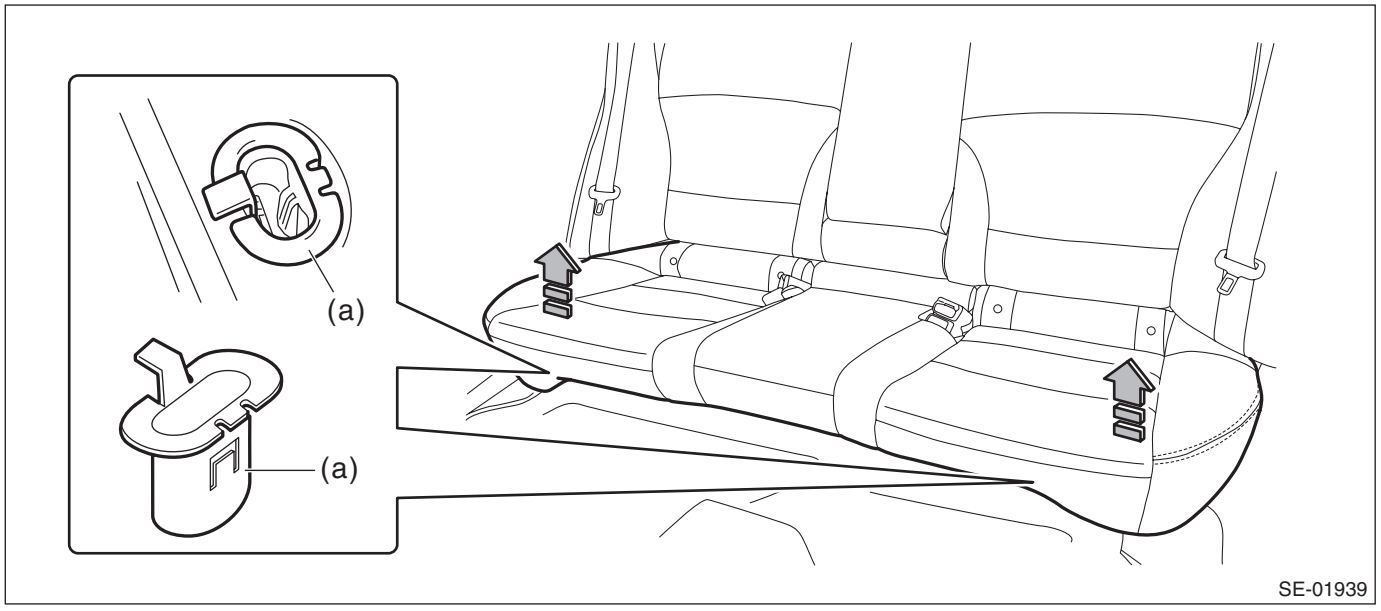
NOTE:
- If the door side of the cover COMPL - front backrest is torn or frayed, the side airbag may not be deployed properly. In this case, replace the cover COMPL - front backrest with a new part.
- If there are tears or loosening in the cover - front seat cushion, it may interfere with the proper operation of the seat cushion airbag. Replace the cover - front seat cushion with a new part.

2. HOOK - SPRING

Check the hook - spring by applying weight to the backrest assembly.

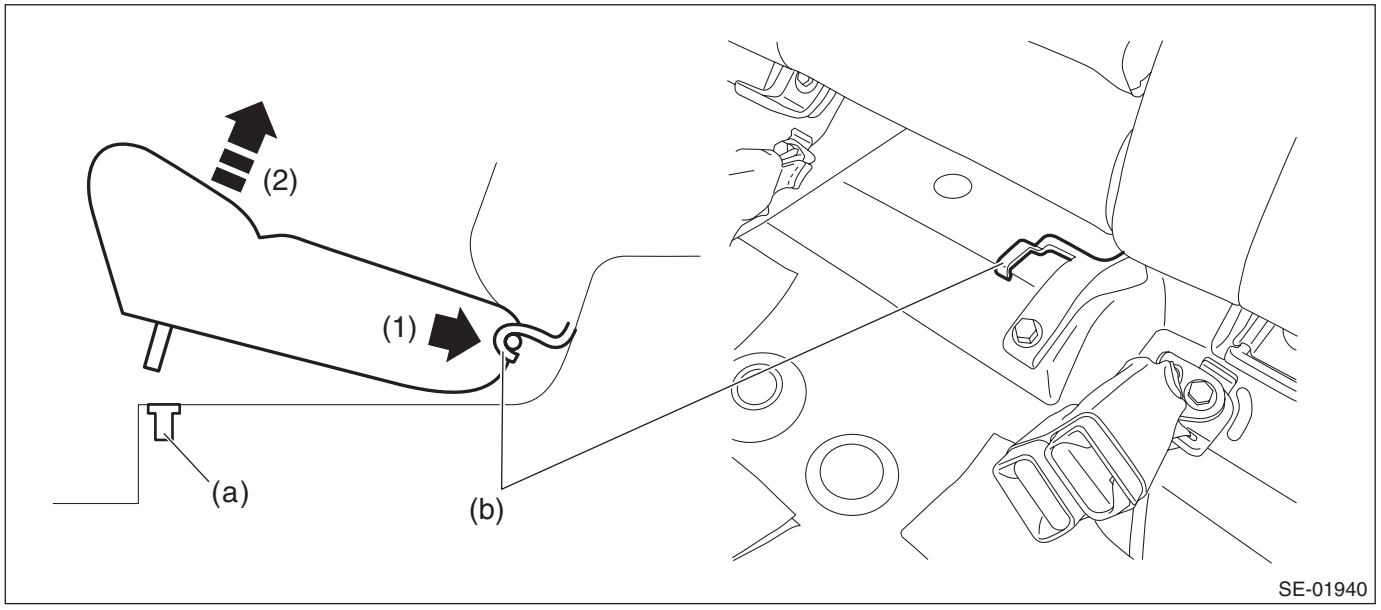
NOTE:
If the appropriate stiffness is not obtained by applying weight to the backrest assembly, the hook - spring may be disengaged.
If it is due to the deformation of the hook - spring, replace the hook - spring with a new part.

3. Rear Seat



A: REMOVAL

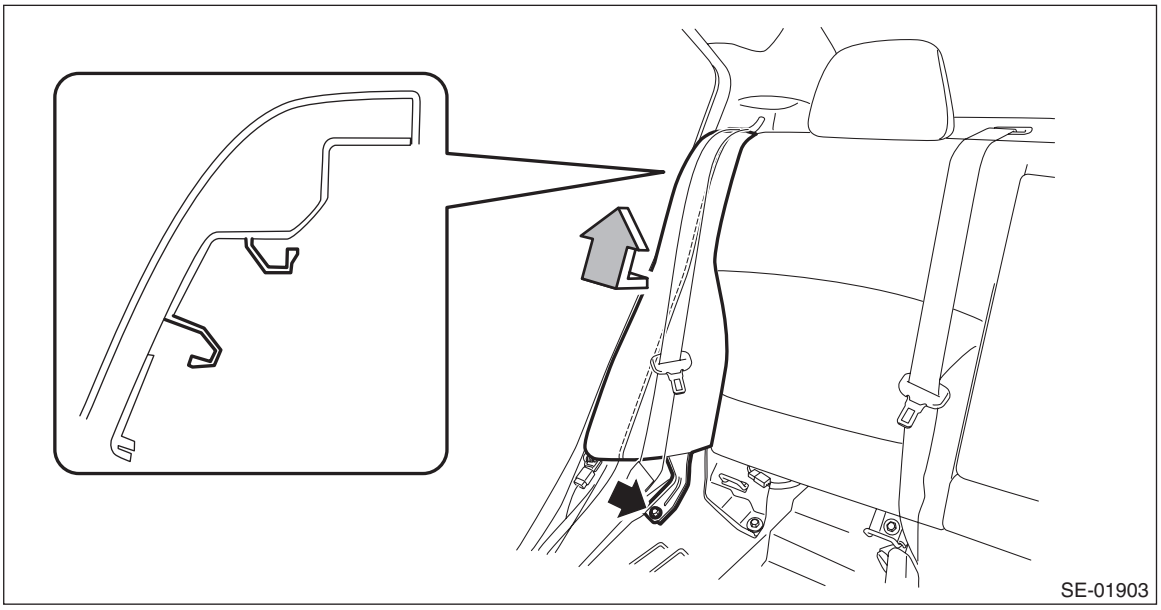
1. SEDAN MODEL



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the rear seat cushion.

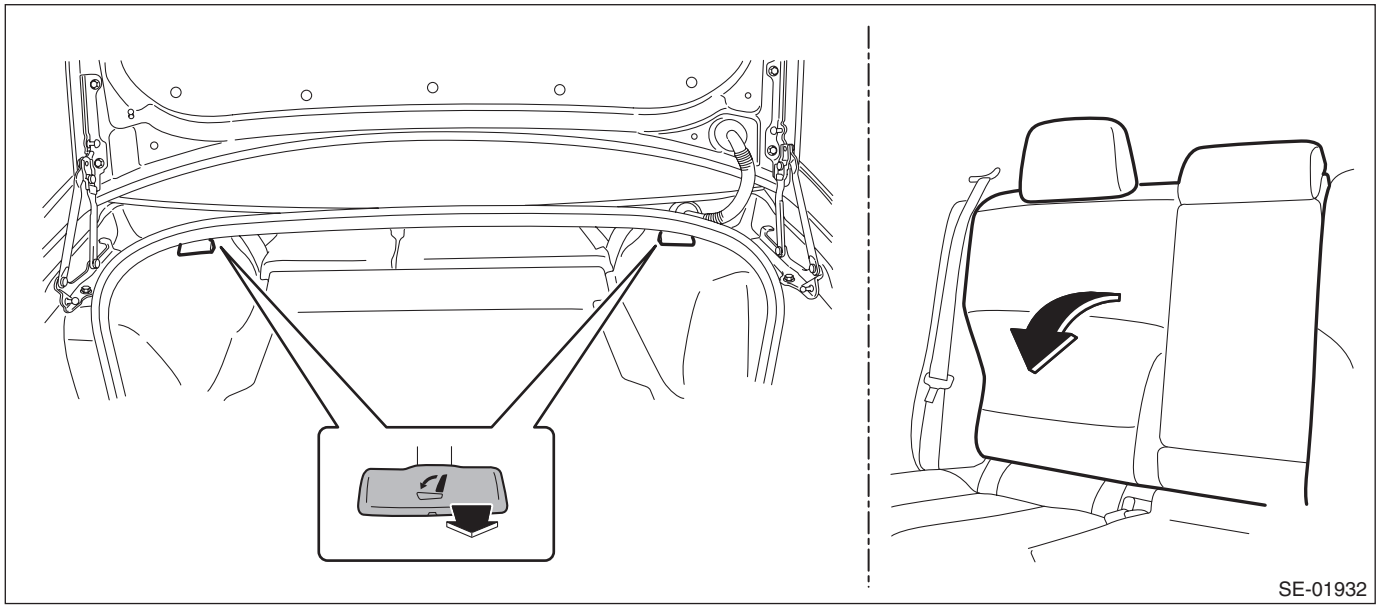
CAUTION:
If the hook - rear seat (a) is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

(1) Pull up the seat cushion and release the hook - rear seat (a).



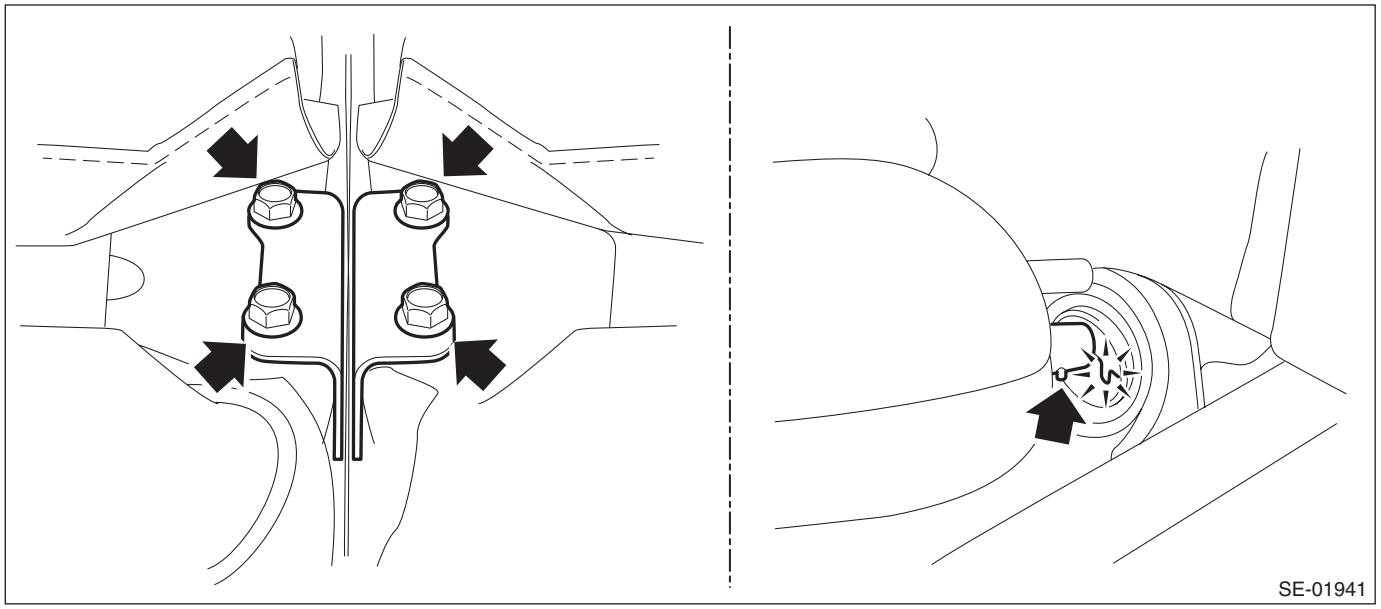
(2) Remove the hook (b) of the hinge assembly CTR by pushing it back while lifting the front side of the seat cushion, and remove the seat cushion.

NOTE:
For models with seat heater, disconnect the connector.



3) Remove the bolts, and pull up the backrest side pad to remove.

4) Remove the backrest assembly.

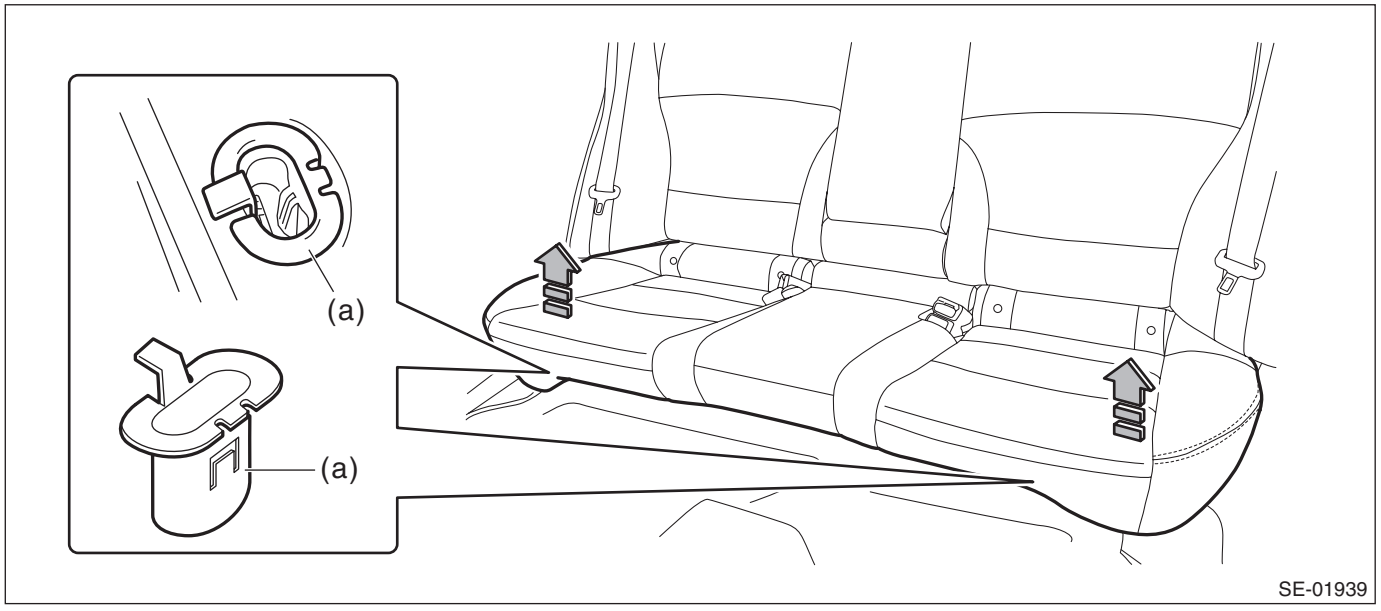


NOTE:
The backrest assembly can be removed without removing the backrest side pad.

(1) Pull the release lever in the trunk room, and then tilt the backrest forward.

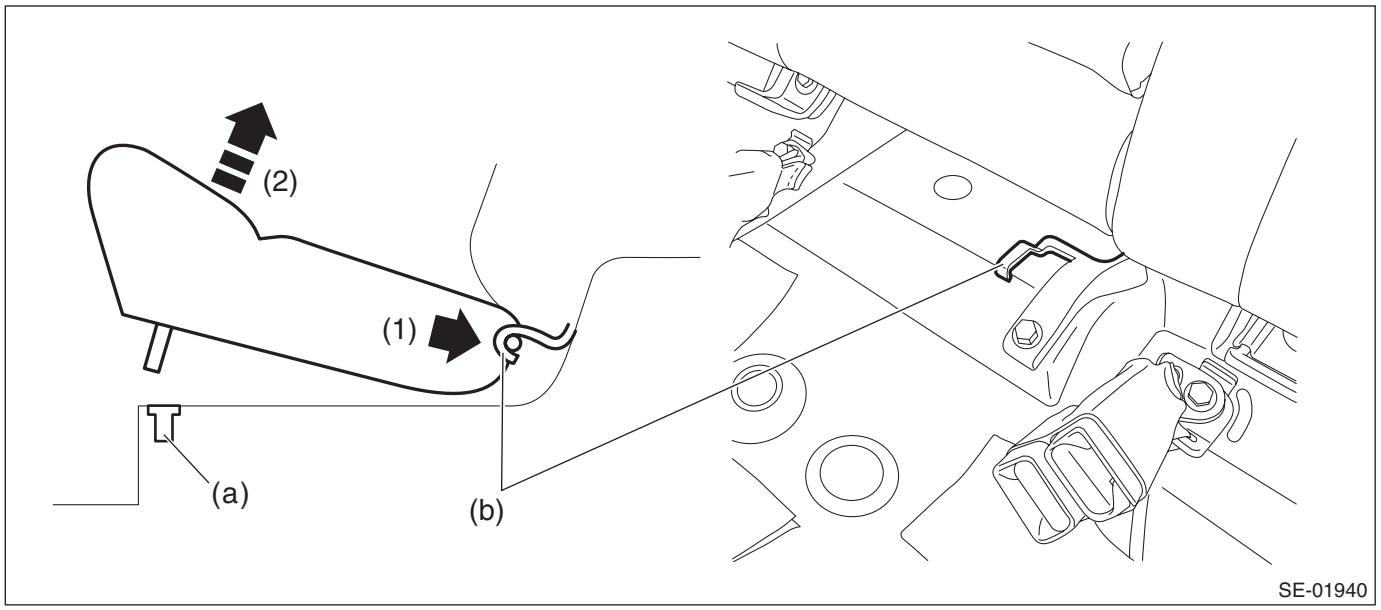
(2) Turn over the backrest mat, and remove the bolts on the rear side of the hinge assembly CTR.

(3) Remove the backrest assembly from the hinge assembly.



NOTE:
The backrests cannot be detached while pin positions of the hinge assembly and backrests are not aligned.
5) Remove the bolts, and then remove each hinge assembly.

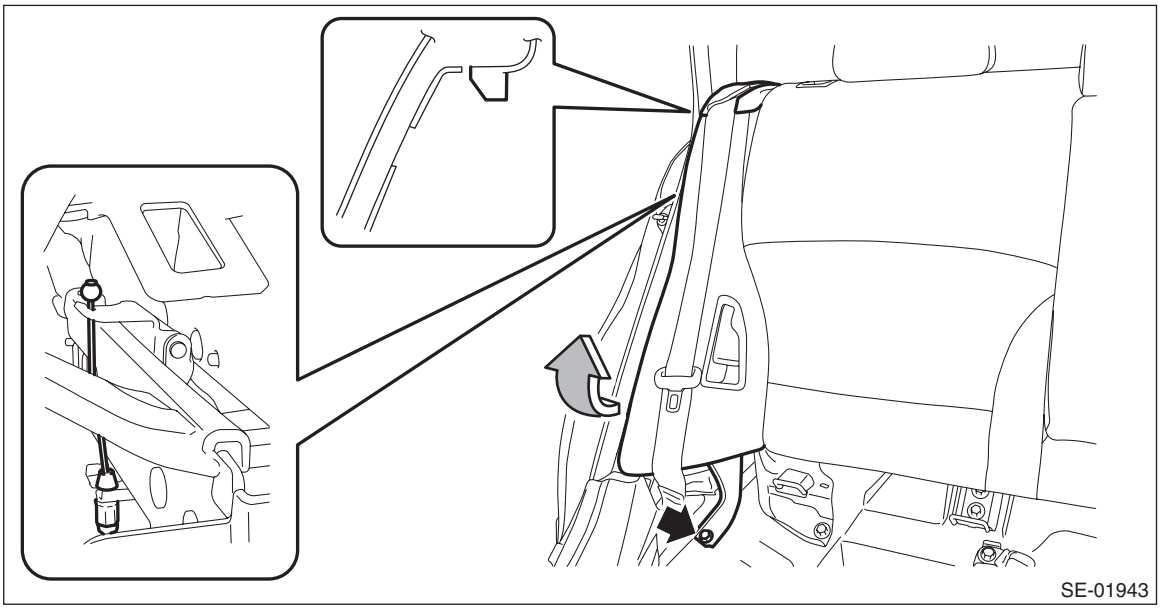
2. OUTBACK MODEL



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the rear seat cushion.

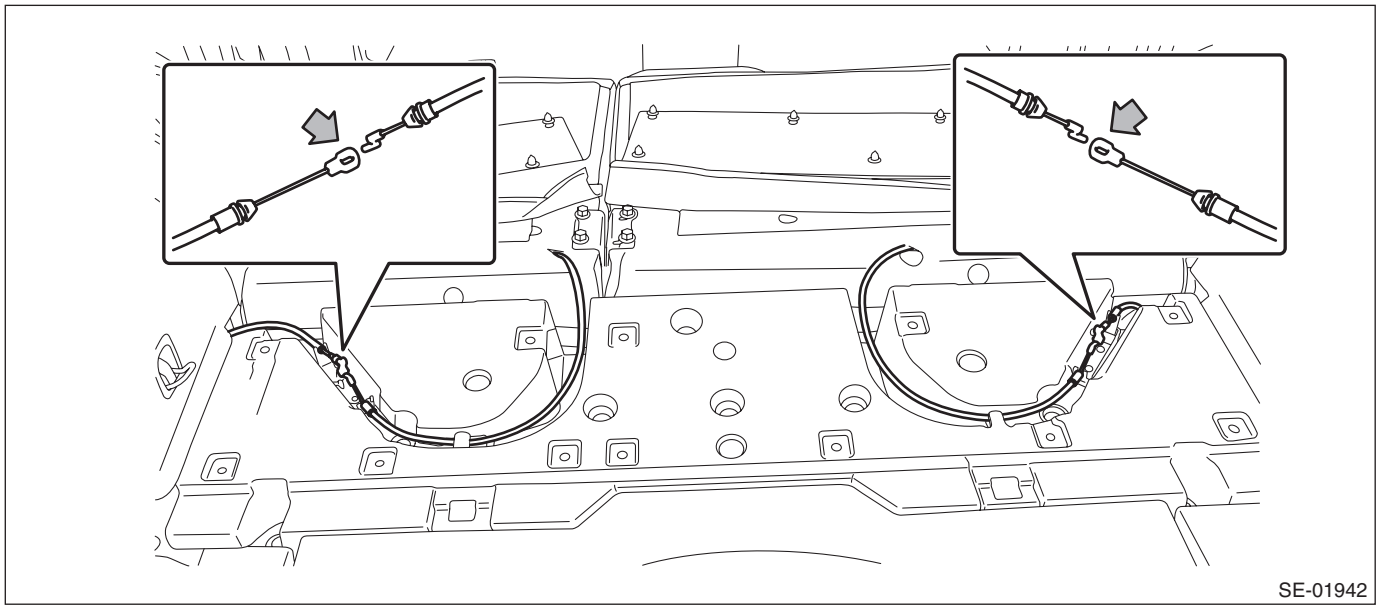
CAUTION:
If the hook - rear seat (a) is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

(1) Pull up the seat cushion and release the hook - rear seat (a).

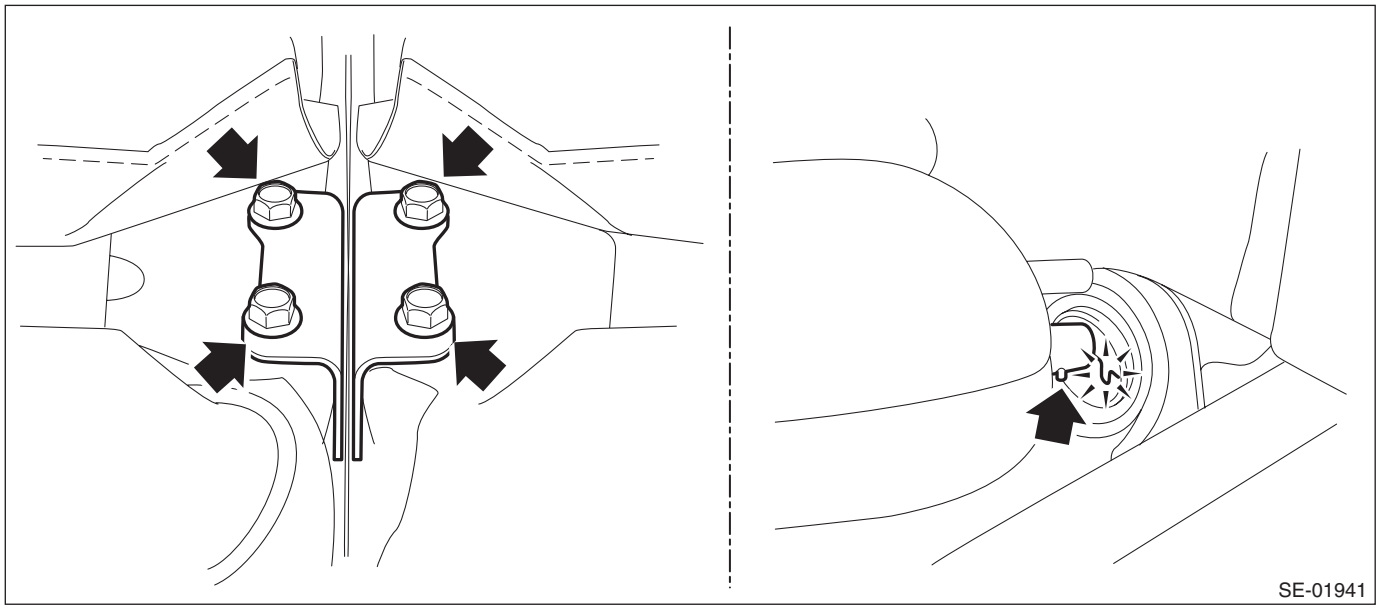


(2) Release the hook (b) of the hinge assembly CTR by lifting the front side of the seat cushion while pushing it backward, and remove the seat cushion.

NOTE:
For models with seat heater, disconnect the connector.



3) Remove the backrest side pad.
(1) Remove the bolts, and pull up the backrest side pad to remove.
(2) Disconnect the reclining, and then remove the backrest side pad.



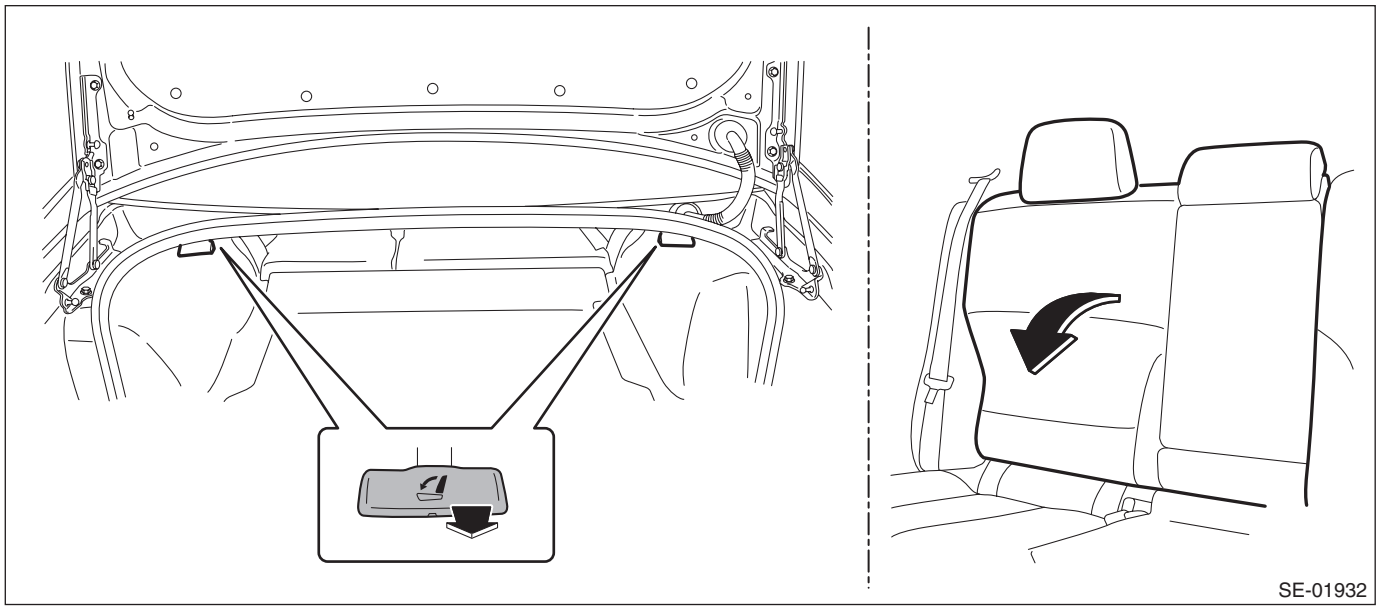
4) Remove the backrest assembly.

NOTE:
The backrest assembly can be removed without removing the backrest side pad.

(1) Tilt the backrest forward, and then turn over the backrest backside mat.
(2) Disconnect the backrest cable and the hold down cable.

SE-01942

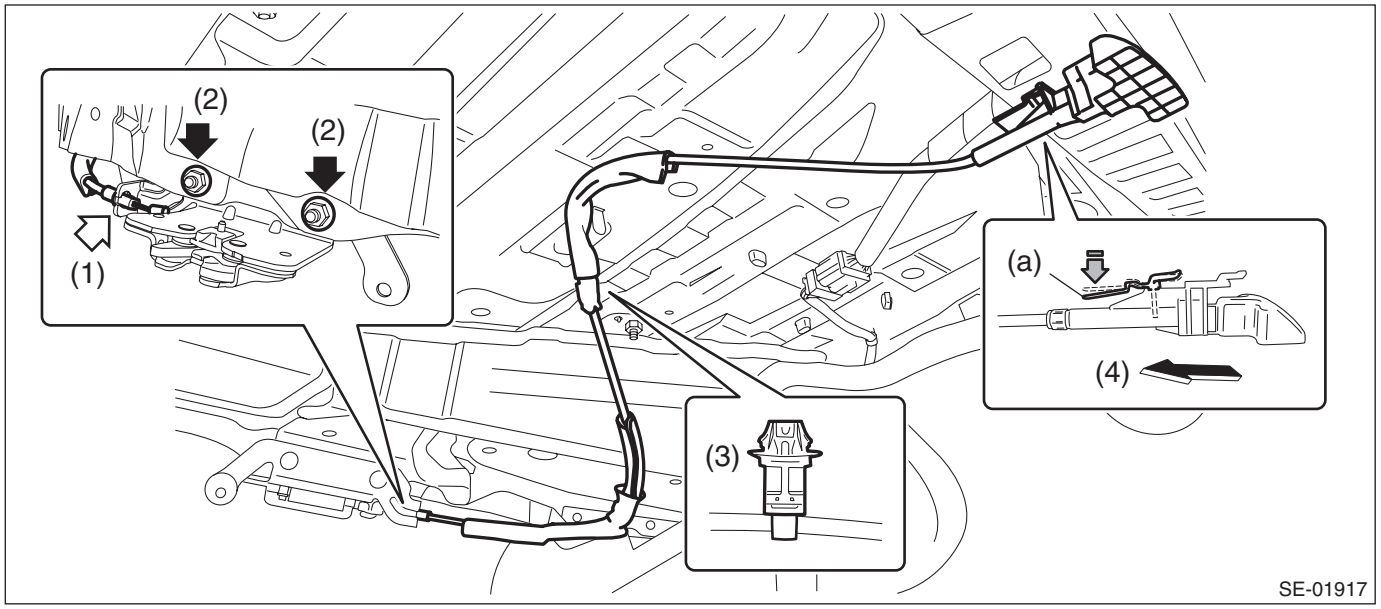
(3) Remove the bolts at the rear of backrest hinge.
(4) Remove the backrest assembly from the hinge assembly.



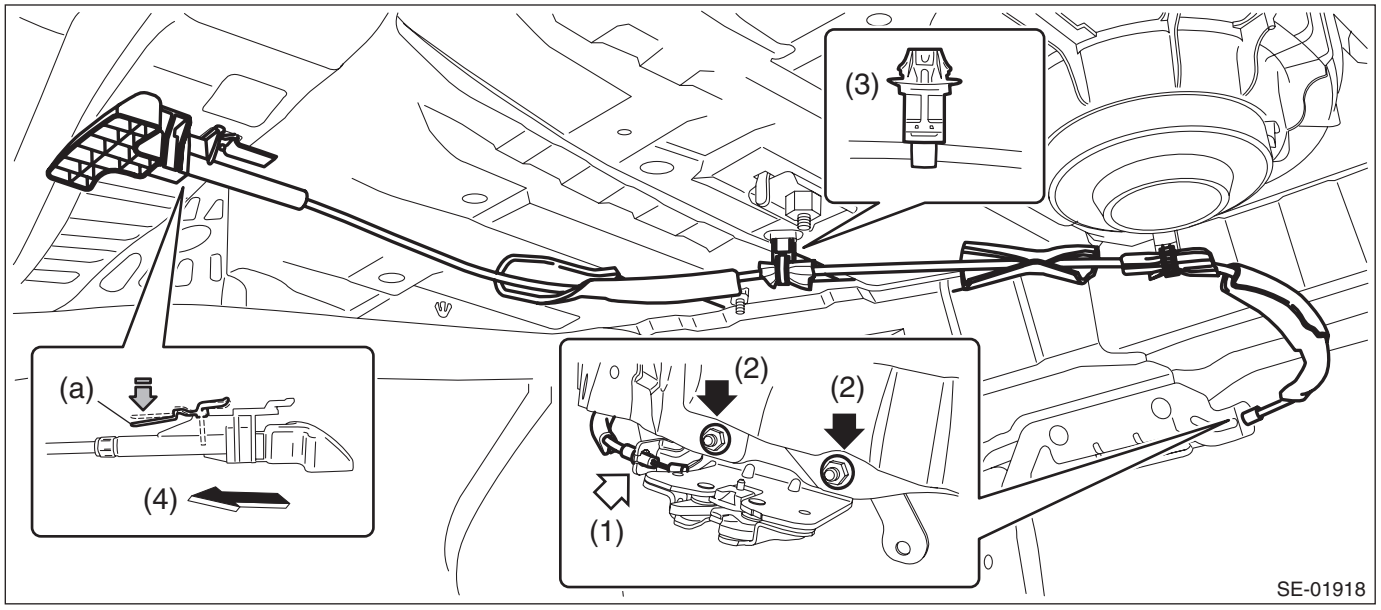
SE-01941

NOTE:
The backrests cannot be detached while pin positions of the hinge assembly and backrests are not aligned.

5) Remove the bolts, and then remove each hinge assembly.



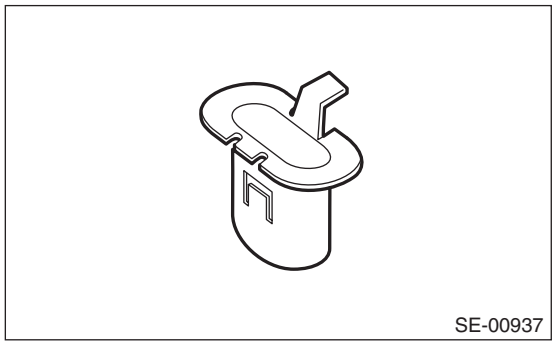
3. BACKREST TILT MECHANISM (SEDAN MODEL)

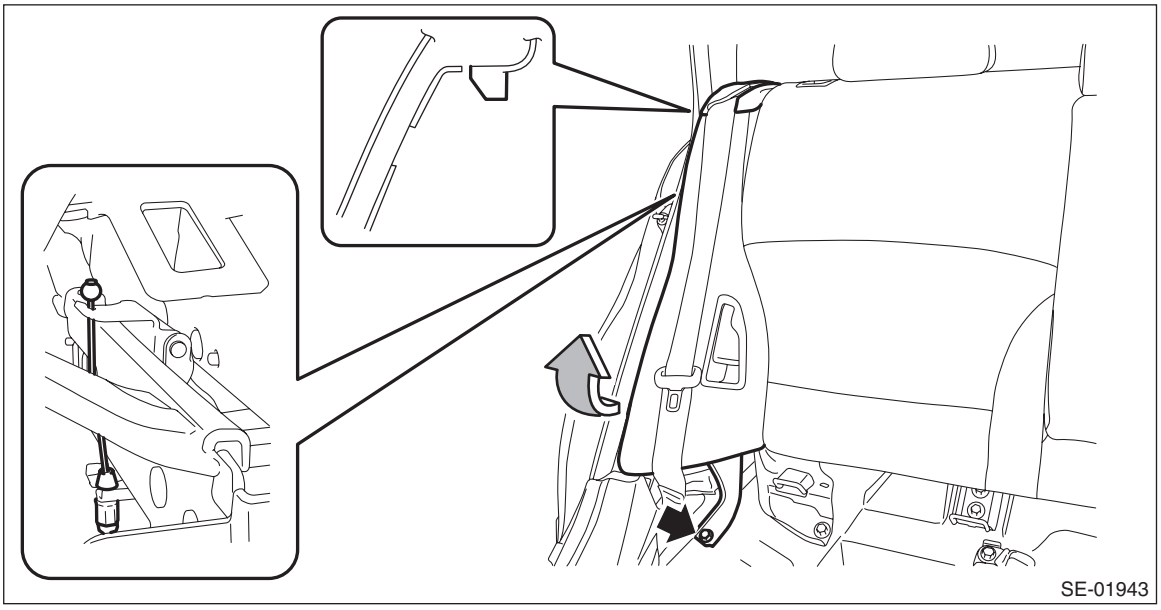


1) Pull the release lever in the trunk room, and then tilt the backrest forward.

2) Remove the release lever assembly and the lock assembly - backrest.
   (1) Disconnect the wire cable from the lock assembly - backrest.
   (2) Remove the nuts, and then remove the lock assembly - backrest.
   (3) Remove the wire cable holder.

(4) Press the stopper portion (a), and remove the release lever assembly while sliding it forward.

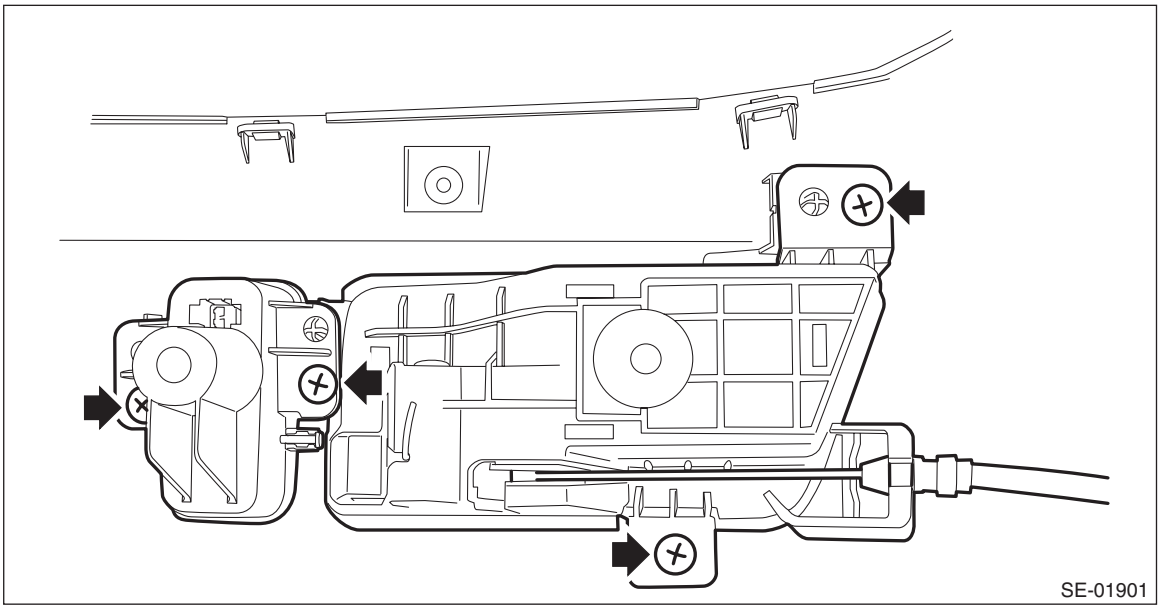




4. BACKREST TILT MECHANISM (OUTBACK MODEL)

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the rear seat cushion. <Ref. to SE-35, OUTBACK MODEL, REMOVAL, Rear Seat.>

CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.



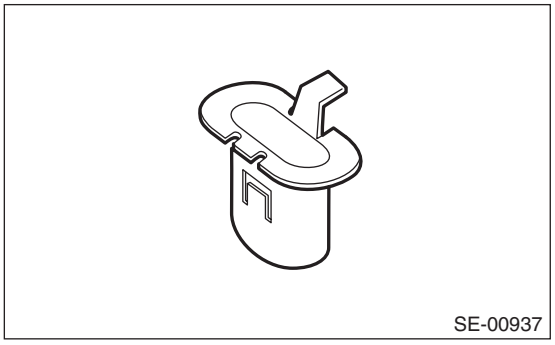
SE-00937

3) Remove the backrest side pad.
   (1) Remove the bolts, and pull up the backrest side pad to remove.
   (2) Disconnect the reclining cable, and then remove the backrest side pad.

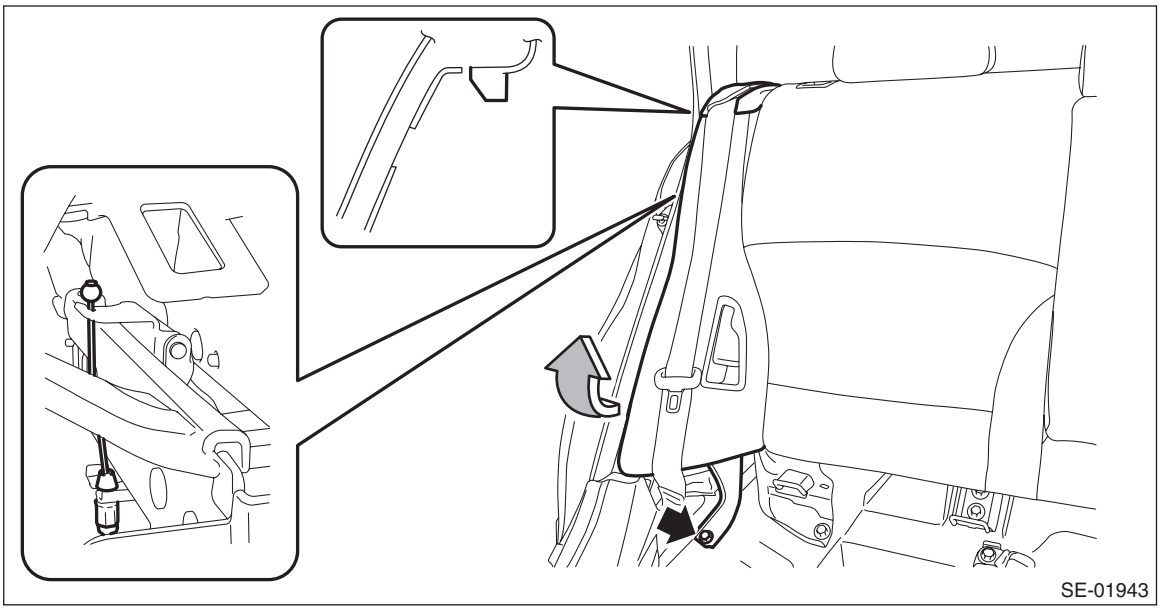
SE-01943

4) Remove the trim panel - rear apron. <Ref. to EI-100, OUTBACK MODEL, REMOVAL, Rear Quarter Trim.>

5) Remove the screw, and remove the lever assembly - rear backrest.

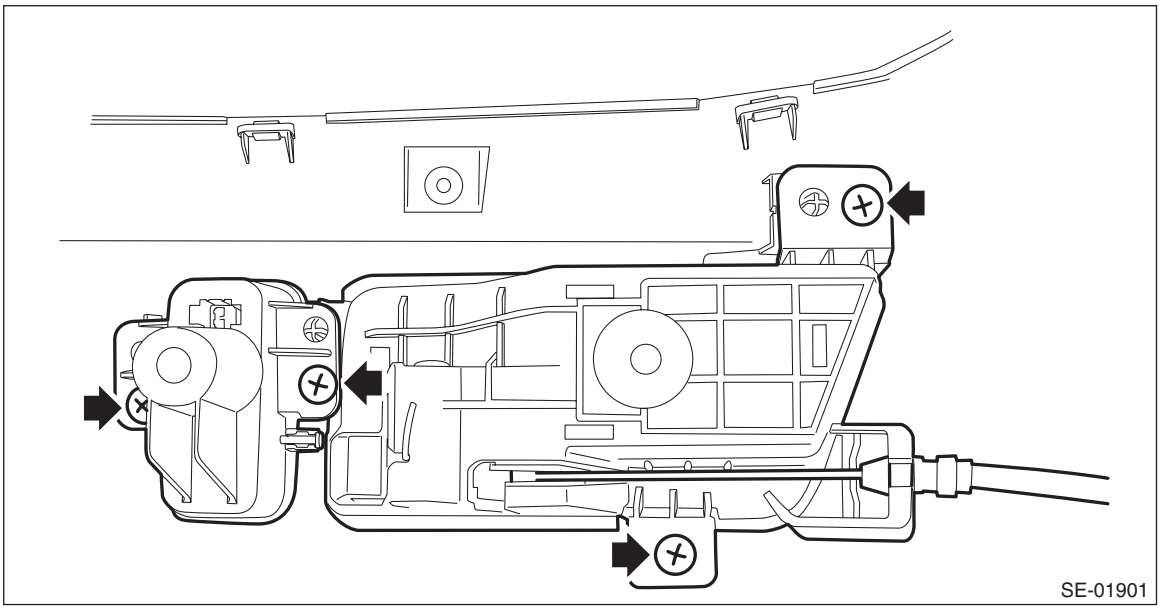


6) Remove the rear backrest assembly, and remove the release button - rear backrest and the remote lever cable. <Ref. to SE-46, DISASSEMBLY, Rear Seat.>



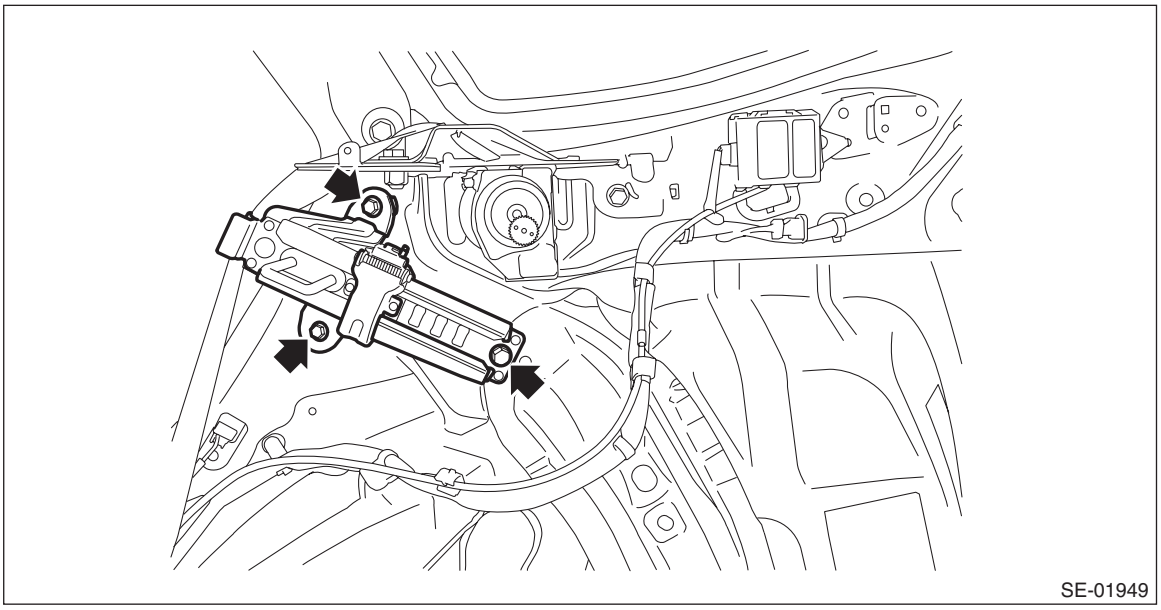
5. RECLINING MECHANISM (OUTBACK MODEL)

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the rear seat cushion. <Ref. to SE-35, OUTBACK MODEL, REMOVAL, Rear Seat.>



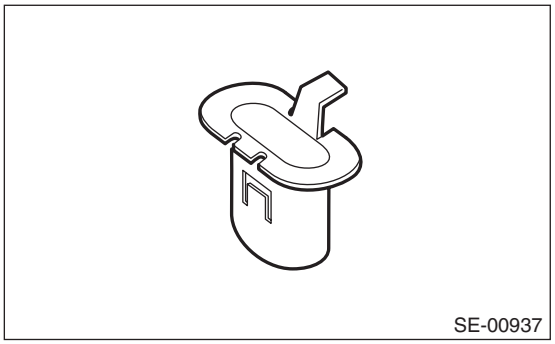
CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

3) Remove the backrest side pad.
   (1) Remove the bolts, and pull up the backrest side pad to remove.
   (2) Disconnect the reclining cable, and then remove the backrest side pad.



4) Remove the screw, and remove the lever assembly - rear backrest.

5) Remove the trim panel - rear apron. <Ref. to EI-100, OUTBACK MODEL, REMOVAL, Rear Quarter Trim.>



6) Remove the bolts, and then remove the striker - backrest rear.

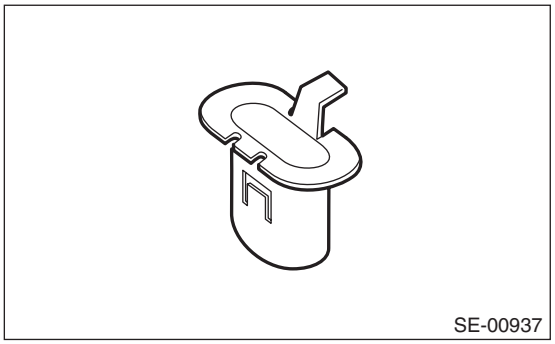
B: INSTALLATION

1. SEDAN MODEL

CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

1) Install the backrest assembly - rear seat.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)



2) Install the backrest side pad.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)

3) Install the rear seat cushion.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

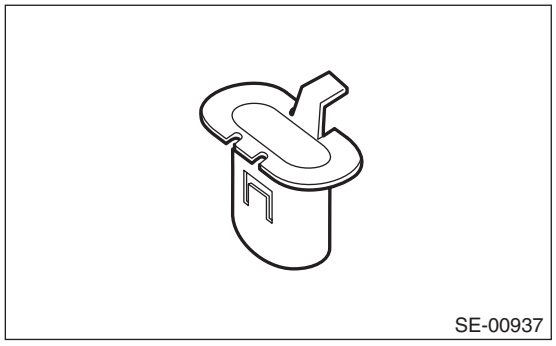
2. OUTBACK MODEL

CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

1) Install the backrest assembly - rear seat.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)
2) Install the backrest side pad.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)
3) Install the rear seat cushion.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



3. BACKREST TILT MECHANISM (SEDAN MODEL)

1) Install the lock assembly - backrest.

Tightening torque:
24.5 N·m (2.5 kgf-m, 18.1 ft-lb)
2) Install the release lever assembly.
3) Return the backrest to the original position, and move the release lever to check the operation.

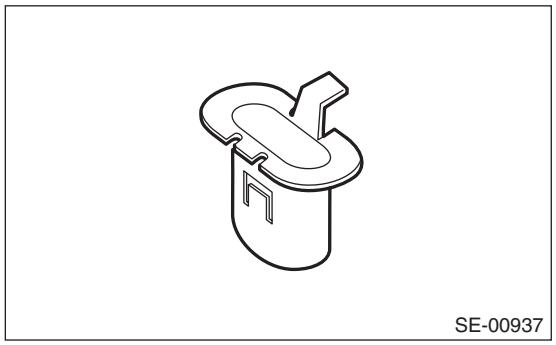
4. BACKREST TILT MECHANISM (OUTBACK MODEL)

CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

SE-00937

1) Install the release button - rear backrest and the remote lever cable.
2) Install the backrest assembly - rear seat.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)



3) Install the lever assembly - rear backrest.
4) Install the trim panel - rear apron.
5) Install the backrest side pad.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)

6) Install the rear seat cushion.
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

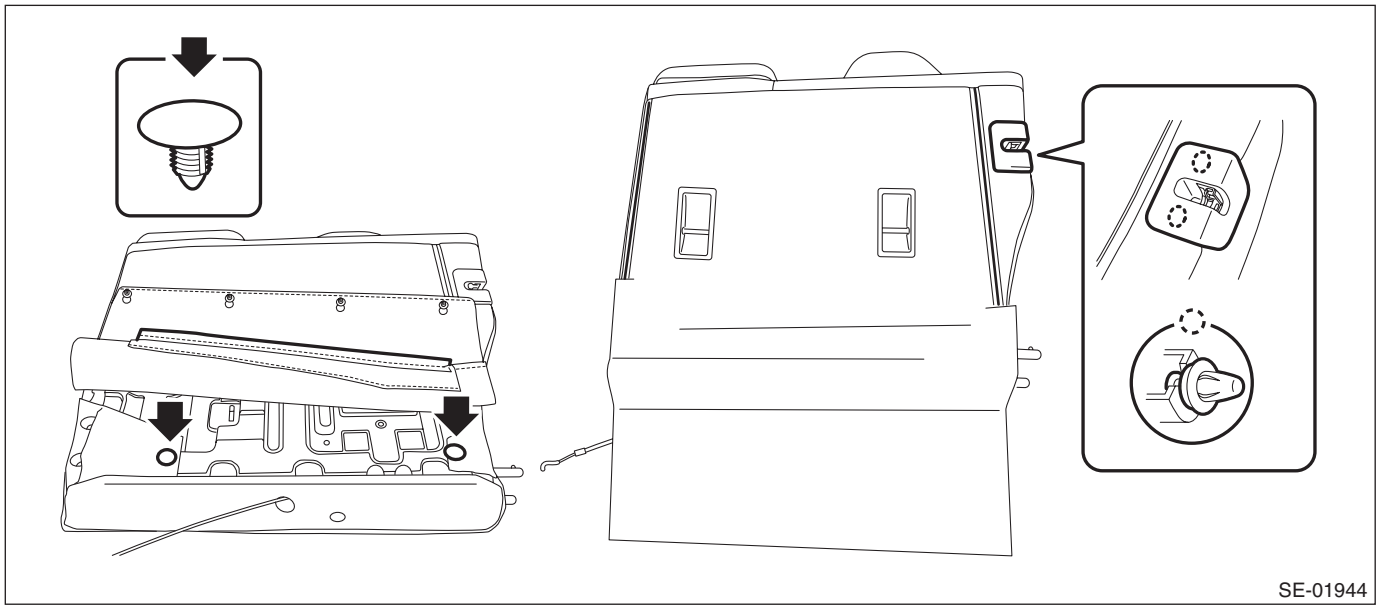
5. RECLINING MECHANISM (OUTBACK MODEL)

CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

SE-00937

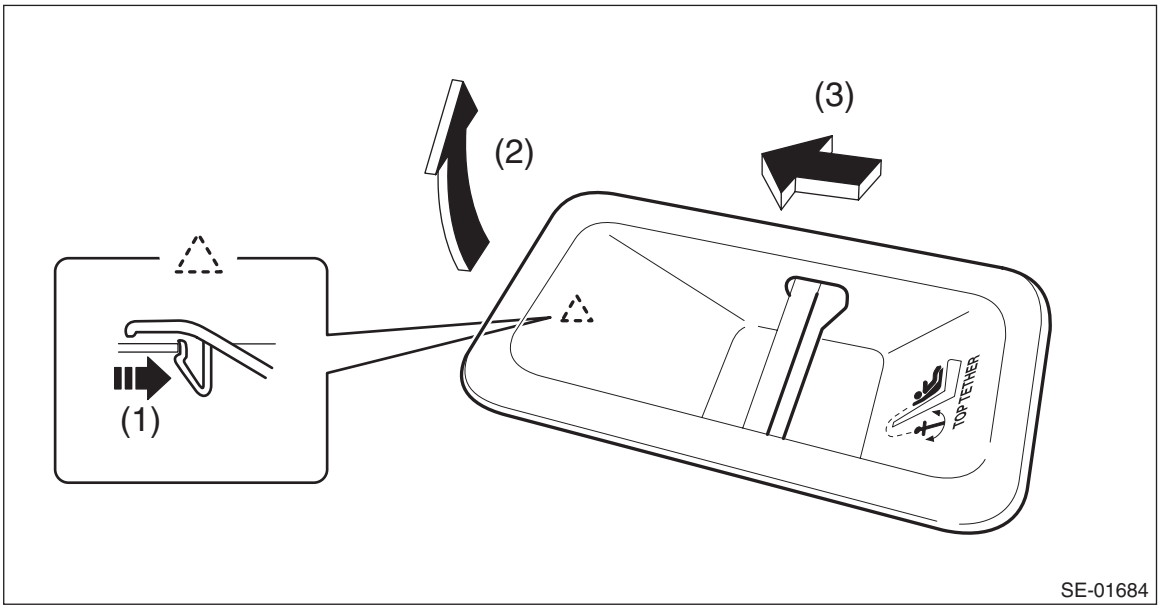
1) Install the striker - backrest rear.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)



2) Install the trim panel - rear apron.
3) Install the lever assembly - reclining.
4) Install the backrest side pad.

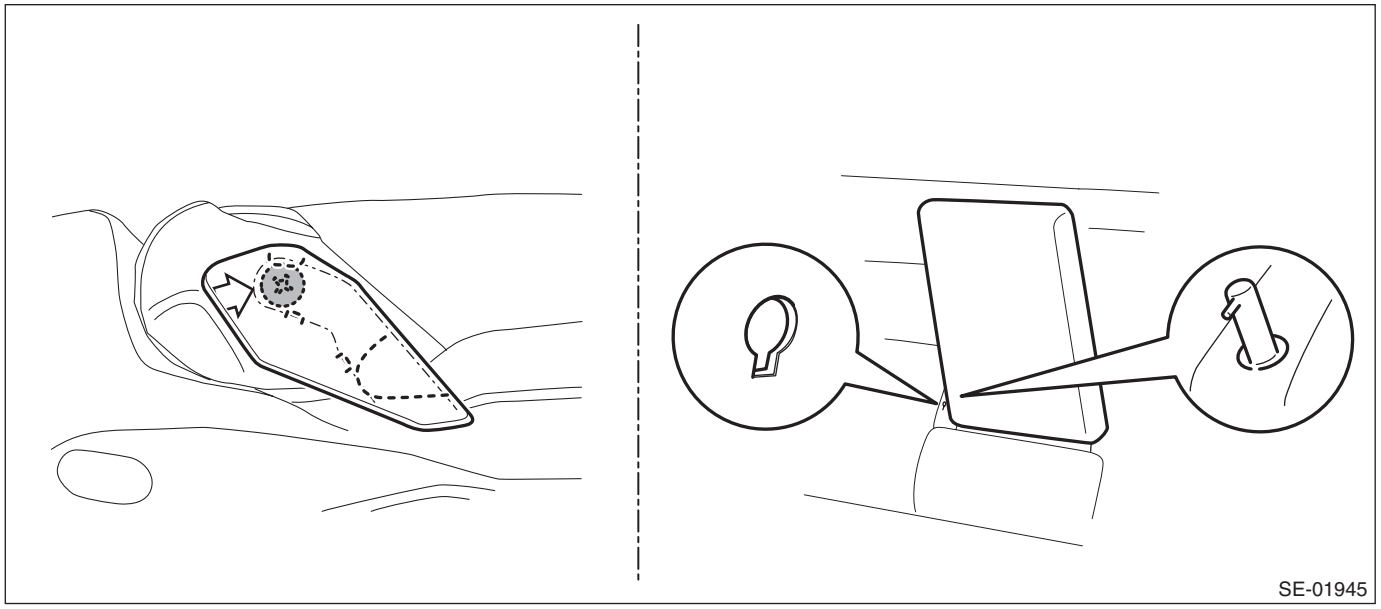
Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)



5) Install the rear seat cushion.
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

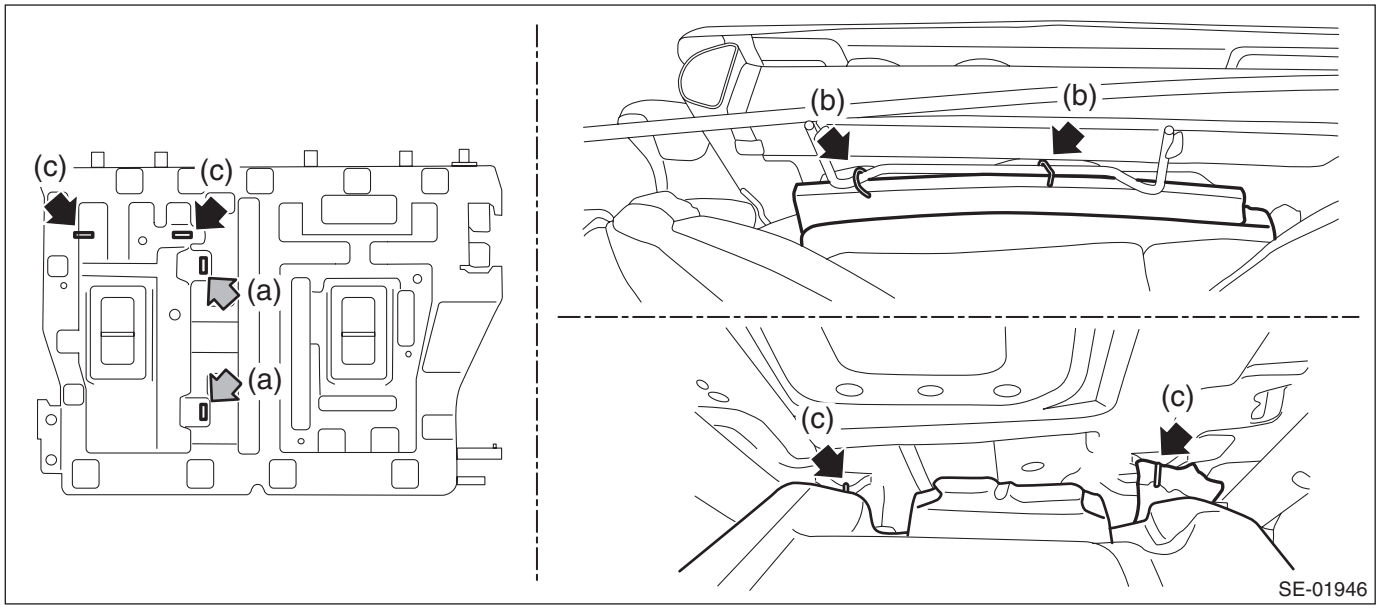
C: DISASSEMBLY

1) Remove the rear seat. <Ref. to SE-33, REMOVAL, Rear Seat.>
2) Remove the headrest assembly - rear backrest.
3) Remove the resin fasteners on the lower of the backrest assembly, and remove the clip.
4) Release the clips to remove the lock cover. (OUTBACK model)
5) Open the fastener and turn over the cover COMPL - rear backrest.



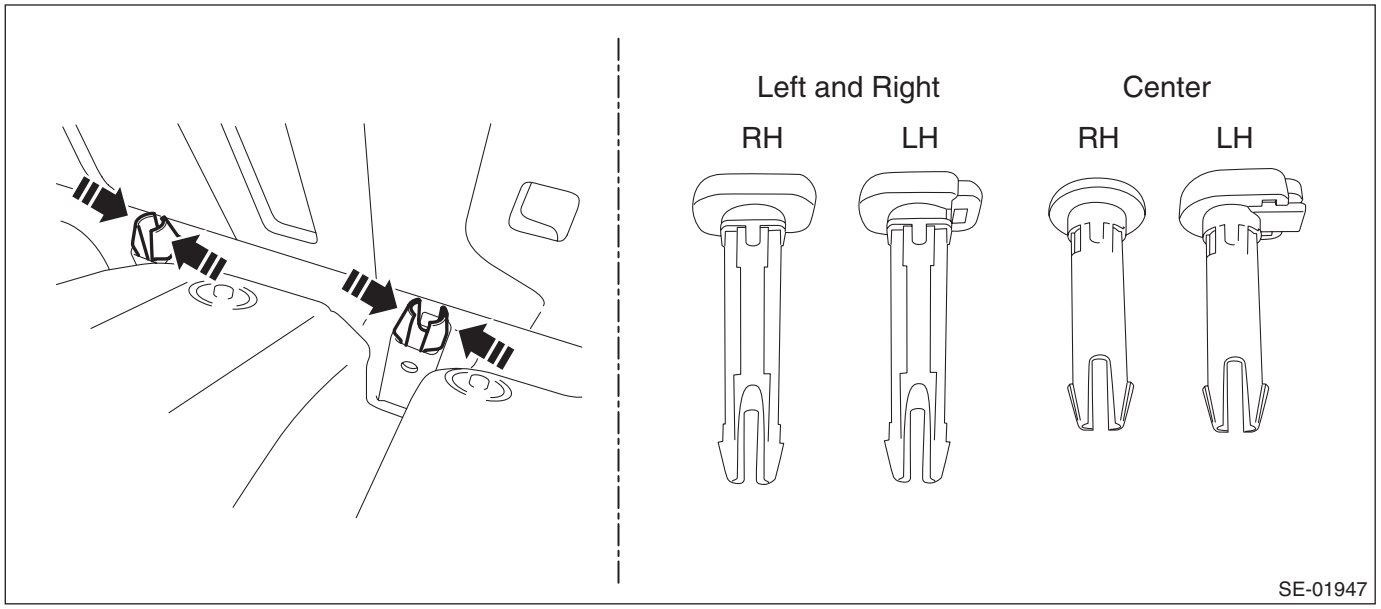
SE-01944

6) Pull up the pad and cover, and remove the tether anchor cover from the inside of back board. (OUTBACK model)

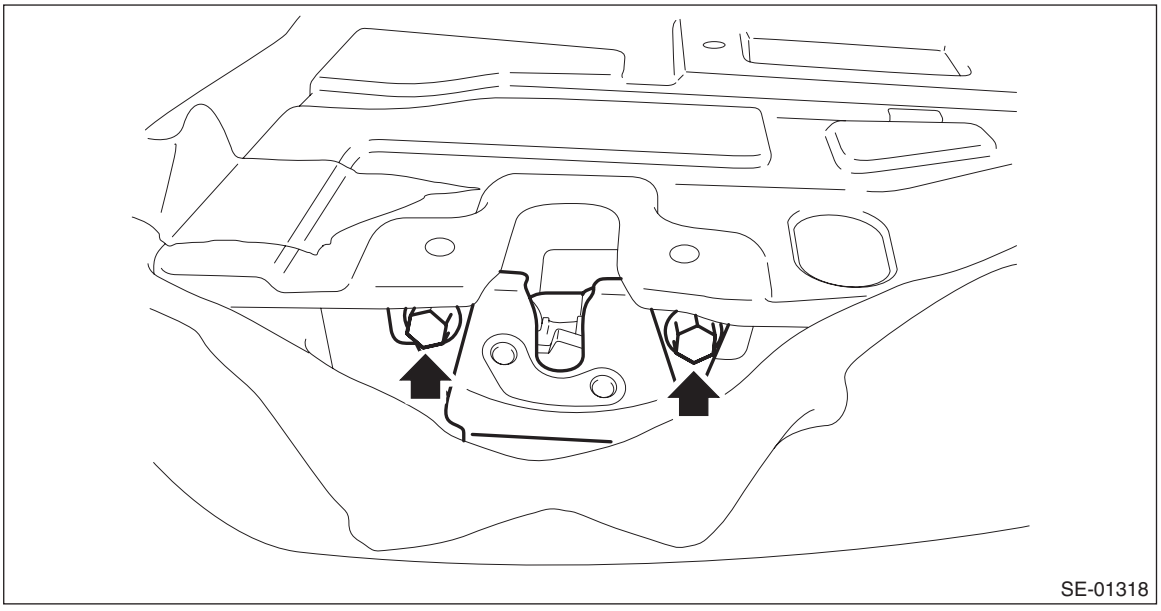


SE-01684

7) Remove the armrest assembly.
(1) Remove the armrest hinge cover.
(2) Remove the screws, and remove the armrest.



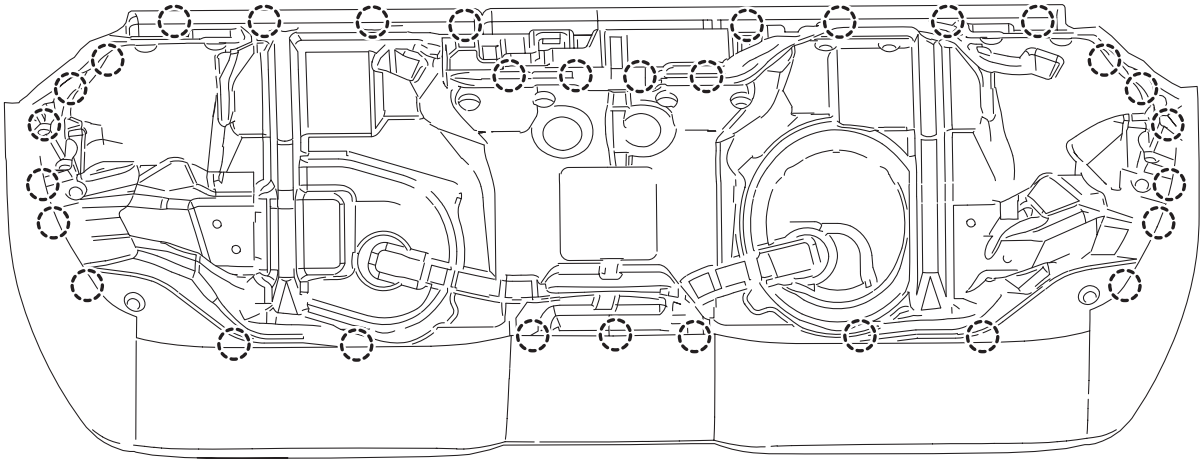
NOTE:
The armrests cannot be detached while the backrest assembly RH and armrest side pin positions are not aligned.



8) Remove the wire clamp (a) and the hog rings (b) and (c).

9) Remove the bushing - headrest.

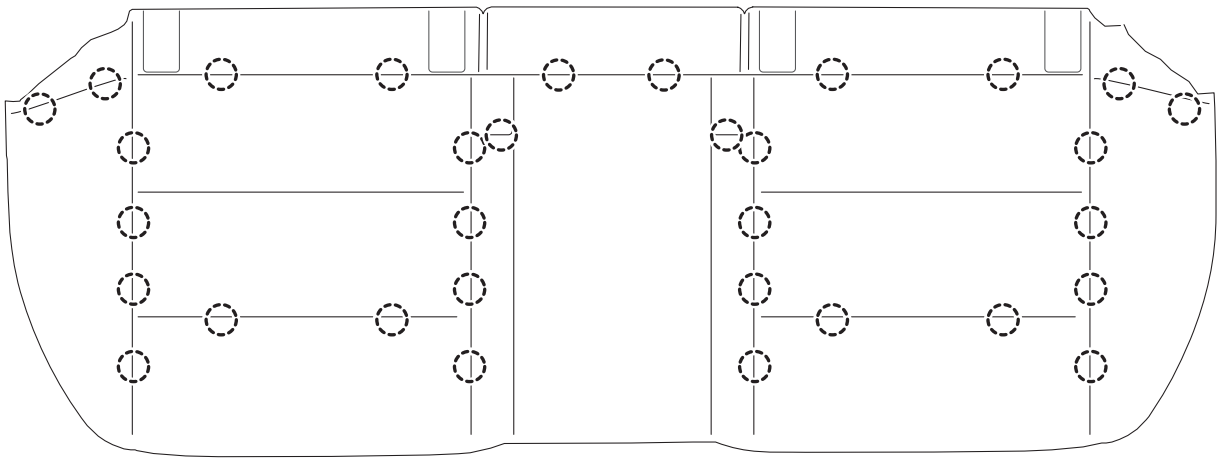
10) Remove the lock button. (OUTBACK model)
    (1) Remove the cover - lock button.
    (2) Remove the screw, disconnect the rod and the wire, and remove the cover - lock button.
11) Remove the lock assembly - rear backrest rear LH.



12) Remove the pad assembly - main from the frame assembly - rear backrest.
13) Remove the seat heater module from the pad assembly as necessary.

CAUTION:
- **If the seat heater module is removed, replace the pad assembly with a new part.**
- **If the seat heater module is reused, remove the polyurethane section from the reverse side completely.**

14) Referring to the above steps, disassemble the backrest assembly RH.



15) Remove the hog rings (a) on the back side of the rear seat cushion assembly.

◯: (a)

SE-01951

16) Remove the hog rings (a), then remove the cover - rear cushion.

◯: (a)

SE-01952

17) Remove the seat heater module from the pad assembly as necessary.

CAUTION:

- **If the seat heater module is removed, replace the pad assembly with a new part.**
- **If the seat heater module is reused, remove the polyurethane section from the reverse side completely.**

D: ASSEMBLY

CAUTION:
- **Do not reuse hog rings.**
- **Secure the hog ring using hog ring pliers.**
- **Install the hog rings to the specified points securely and make sure that there is no wrinkle or twisting on the cover COMPL - rear backrest.**

1) Install the seat heater module.

CAUTION:
- **If the seat heater module and seating sensor are removed, replace the pad assembly with a new part.**
- **If the seat heater module is reused, remove the polyurethane section from the reverse side completely and attach a new pad assembly with a double-sided tape.**

Double-sided tape:
NITTO DENKO 501L or equivalent

2) Assemble the cover COMPL - rear backrest and the cover - rear cushion in the same manner as for the front seat. <Ref. to SE-25, ASSEMBLY, Front Seat.>
3) Install the hog rings (A) on the back side of the rear seat cushion assembly.
4) Install the hog rings and wire clip, then install the cover COMPL - rear backrest LH.

NOTE:
- Do not contaminate or damage the cover COMPL - rear backrest and the cover - rear cushion.
- While installing the hog rings, prevent the cover COMPL - rear backrest and the cover - rear cushion from getting wrinkled.

5) Install the plastic fastener and hog ring, and then install the headrest cover.
6) Install the pad assembly - main LH.
7) Install the bushing - headrest and the bushing - lock assembly.
8) Install the lock assembly - rear backrest rear LH.

Tightening torque:
22.5 N·m (2.3 kgf-m, 16.6 ft-lb)

9) Install the plastic hooks on the back side of the backrest assembly LH.
10) Install the tether anchor cover.
11) Install the clips on the backside of the cover COMPL - rear backrest LH.
12) Install the knob - backrest. (Screw-in type)
13) Referring to the above steps, install the pad assembly - main RH.

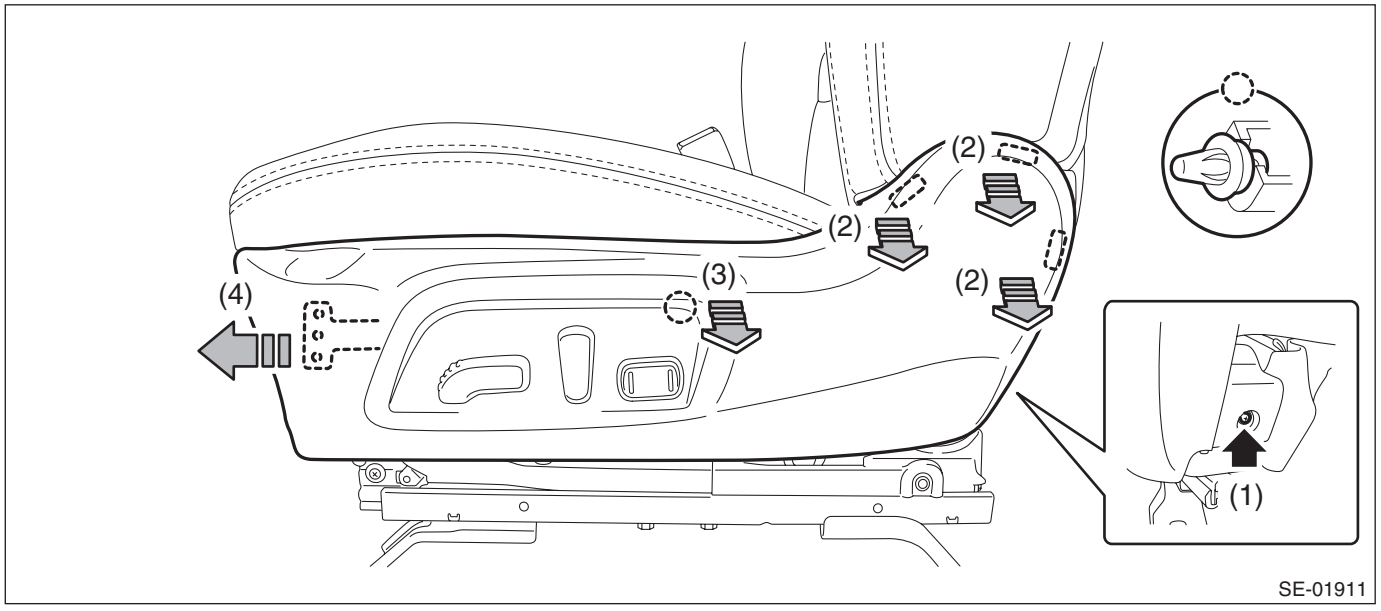
Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to SE-8, REAR SEAT, COMPONENT, General Description.>

14) Install the headrest assembly - rear backrest.
15) Before installation, check the following items.
- No tear and fray on the cover COMPL - rear backrest and the cover - rear cushion.
- No fray or deformation on each wire cable.

16) Install the rear seat. <Ref. to SE-43, INSTALLATION, Rear Seat.>

4. Power Seat System

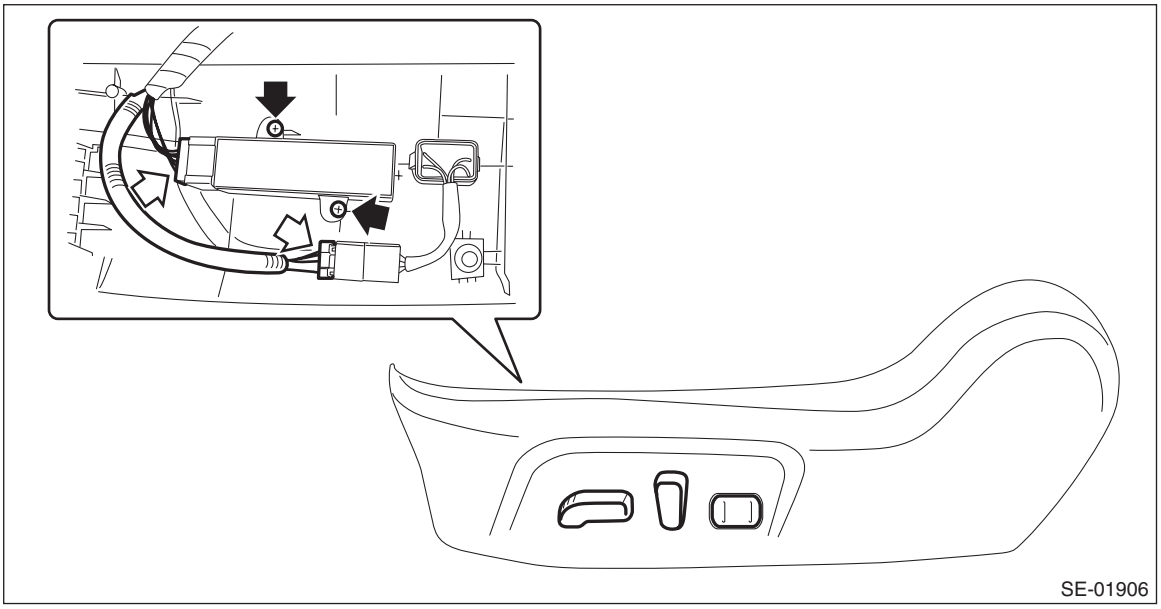
A: REMOVAL



CAUTION:
When removing the front seat, disconnect the ground cable from the battery before disconnecting the airbag system and the occupant detection system harness connector, and wait for 60 seconds before starting the operation.

1. POWER SEAT SWITCH

1) Remove the seat from vehicle. <Ref. to SE-11, REMOVAL, Front Seat.>
2) Remove the cover - hinge front seat OUT.
   (1) Remove the screws in the rear section of the cover - hinge front seat OUT.
   (2) Release the claw in the upper section of the cover - hinge front seat OUT.

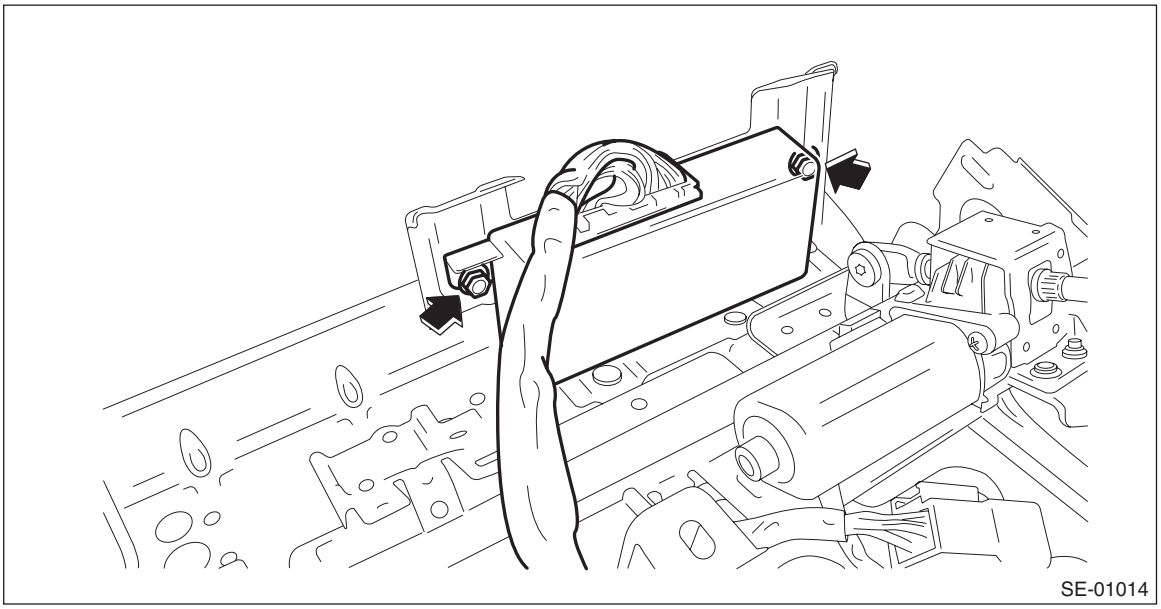


NOTE:
Use a plastic clip remover.

   (3) Remove the clip in the center of the cover - hinge front seat OUT.
   (4) Release the claw in the front section of the cover - hinge front seat OUT, then remove the cover - hinge front seat OUT.

   (5) Disconnect the power seat switch and lumber switch connector and remove the cover - hinge front seat OUT.

3) Remove the switch assembly - power seat.
   (1) Disconnect the connectors for power seat switch and lumbar switch.
   (2) Remove the knob - power seat.
   (3) Remove the screws to remove the switch assembly - power seat.
   (4) Remove the switch assembly - lumber. (Model with lumber support)



2. SEAT MEMORY SWITCH

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front door. <Ref. to EI-70, FRONT DOOR, REMOVAL, Door Trim.>
3) Release the claws, and remove the seat memory switch assembly.

3. POWER SEAT CONTROL MODULE (SEAT WITH MEMORY FUNCTION)

1) Raise the seat cushion by operating the switch.
2) Remove the front seat from the vehicle.
3) Remove the power seat control module.
   (1) Release the hooks on seat front and turn over the cushion cover.
   (2) Remove the nuts, and remove the power seat control module.

B: INSTALLATION

1. POWER SEAT SWITCH

1) Install the switch assembly - power seat.
2) Install the switch assembly - lumber. (Model with lumber support)
3) Install the knob - power seat.
4) Install the cover - hinge front seat OUT.
5) Install the seat assembly. <Ref. to SE-12, INSTALLATION, Front Seat.>

2. SEAT MEMORY SWITCH

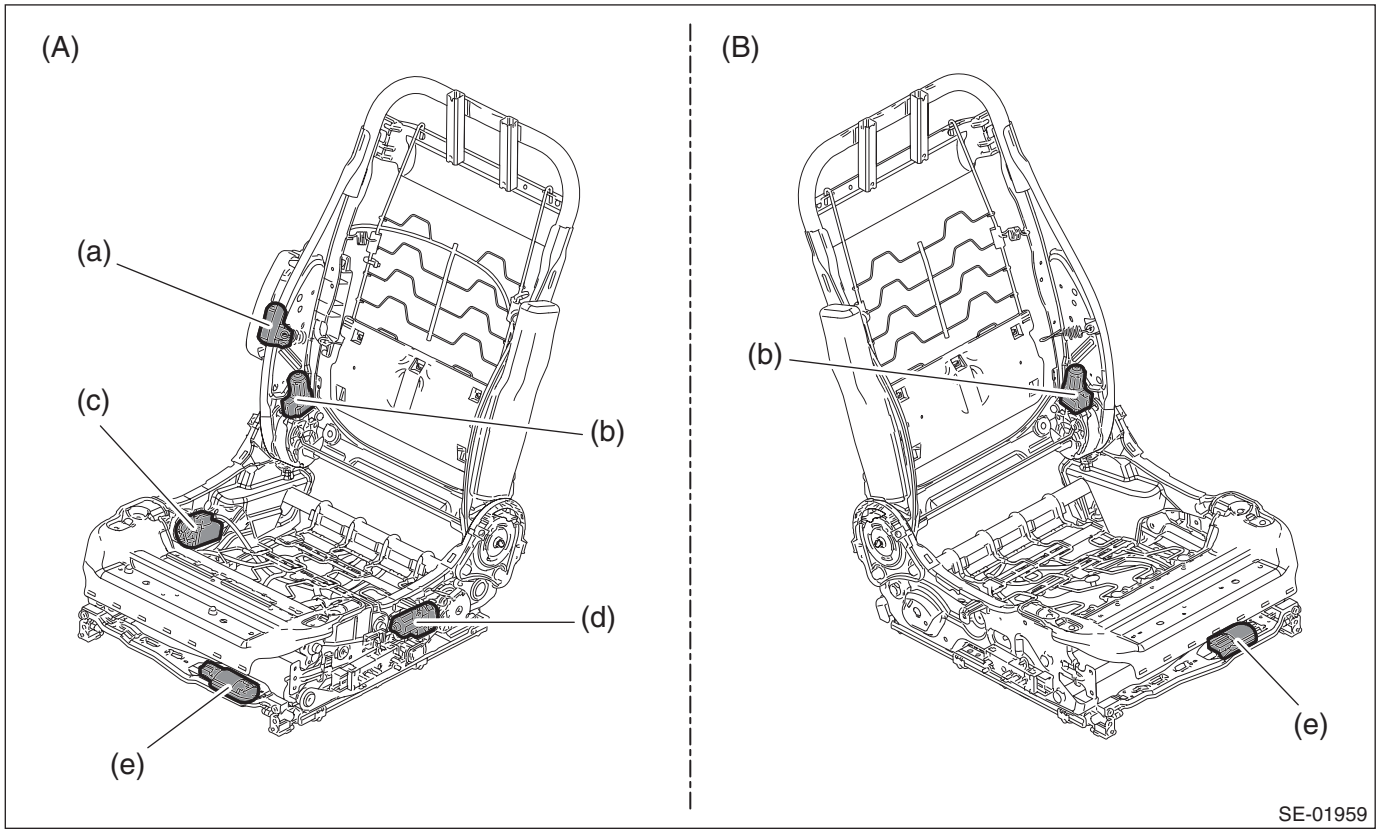
1) Release the claws, and install the seat memory switch assembly.
2) Install the trim panel - front door. <Ref. to EI-71, INSTALLATION, Door Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

3. POWER SEAT CONTROL MODULE (SEAT WITH MEMORY FUNCTION)

1) Install the power seat control module.

Tightening torque:
5.9 N·m (0.6 kgf-m, 4.4 ft-lb)
2) Install the seat assembly. <Ref. to SE-12, INSTALLATION, Front Seat.>
3) Raise the seat cushion by operating the switch.
4) Install the seat assembly. <Ref. to SE-12, INSTALLATION, Front Seat.>

NOTE:
- The seat with memory function must be initialized after installed. <Ref. to SE-75, ADJUSTMENT, Power Seat System.>
- After replacing a seat with memory function and the power seat control module, check the following items.
  1. Memory is reloaded by pressing the seat memory switch, when the ignition is ON and the select lever is set to the “P” range.
  2. Memory is not reloaded even if the seat memory switch is pressed, when the ignition is ON and the select lever is set to other than “P” range.
  3. Memory is reloaded when the ignition is OFF and the seat memory switch located inside the driver’s door is pressed within 45 seconds after the door is opened.
  4. Memory is reloaded automatically when the ignition is OFF and the driver’s door is opened after unlocked by access key. (Model with smart key interlock function)



C: INSPECTION

1. WIRING DIAGRAM

Refer to “Power Seat” in WI section.

- Driver’s seat (without memory): <Ref. to WI-360, DRIVER'S SEAT (WITHOUT MEMORY), WIRING DIAGRAM, Power Seat System.>
- Driver’s seat (with memory): <Ref. to WI-362, DRIVER'S SEAT (WITH MEMORY), WIRING DIAGRAM, Power Seat System.>
- Passenger’s seat: <Ref. to WI-360, WIRING DIAGRAM, Power Seat System.>

2. NOTE

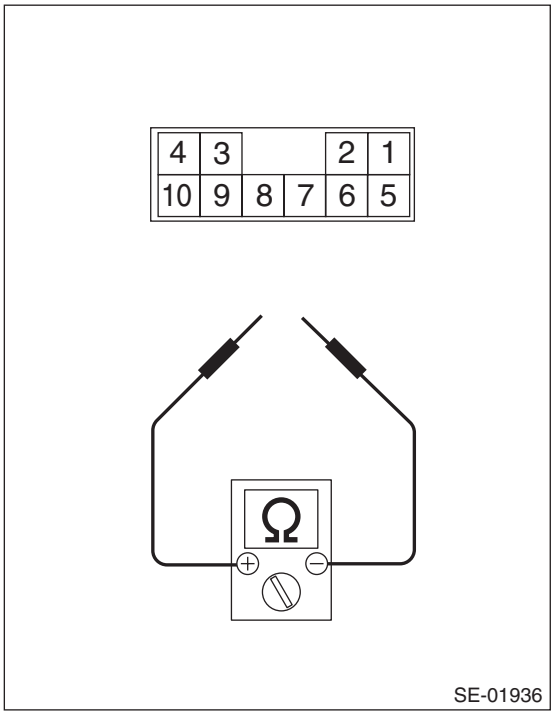
(A) Driver’s seat
(B) Passenger’s seat

(a) Lumber motor
(b) Reclining motor
(c) Tilt motor
(d) Lifter motor
(e) Slide motor

3. TROUBLE SYMPTOM

- Without memory function

Symptoms	Criteria
All functions do not operate. <Ref. to SE-60, ALL FUNCTIONS DO NOT OPERATE. (WITHOUT MEMORY), INSPECTION, Power Seat System.>	• Power seat switch • Lumbar switch • Power seat harness • Body harness
A part of function does not operate. <Ref. to SE-61, SOME MOTORS DO NOT OPERATE. (WITHOUT MEMORY), INSPECTION, Power Seat System.>	• Power seat switch • Lumbar switch • Power seat harness • Relevant motor



- With memory function

Symptoms	Criteria
Does not operate by manual operation. <Ref. to SE-64, IT DOES NOT FUNCTION WITH MANUAL OPERATION. (WITH MEMORY), INSPECTION, Power Seat System.>	• Power seat switch • Lumbar switch • Power seat harness • Body harness • Relevant motor and encoder
A part of function does not operate. <Ref. to SE-66, SOME MOTORS DO NOT OPERATE. (WITH MEMORY), INSPECTION, Power Seat System.>	• Power seat switch • Lumbar switch • Power seat harness • Relevant motor and encoder • Power seat control module
Fails to store the location to the memory <Ref. to SE-72, UNABLE TO SET POSITIONS INTO MEMORY (WITH MEMORY), INSPECTION, Power Seat System.>	• Memory switch • Power seat harness • Power seat control module
Restoring operation is impossible <Ref. to SE-73, UNABLE TO PERFORM THE RELOADING OPERATION (DRIVER'S SEAT WITH MEMORY), INSPECTION, Power Seat System.>	• Memory switch • Power seat control module • Motor and encoder • Power seat harness
No interlock with smart keyless <Ref. to SE-74, NO INTERLOCK WITH SMART KEYLESS, INSPECTION, Power Seat System.>	• Body integrated unit • Power seat control module • Motor and encoder • Power seat harness
Initial setting is impossible <Ref. to SE-74, UNABLE TO PERFORM INITIALIZATION, INSPECTION, Power Seat System.>	• Power seat harness • Power seat control module

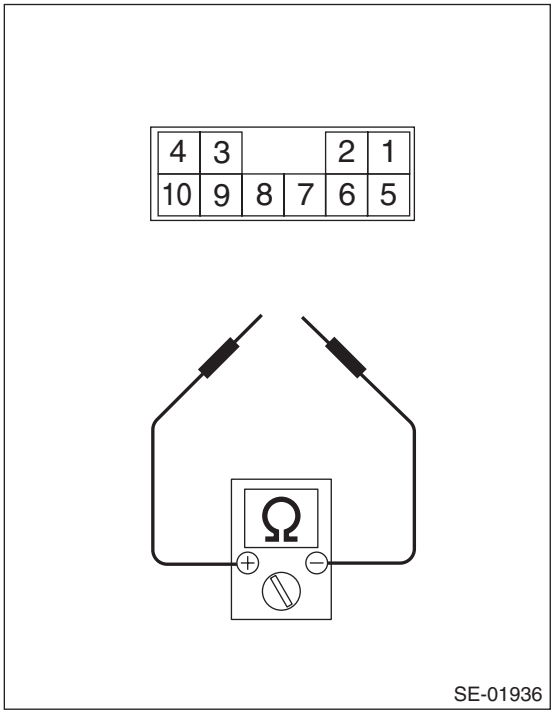
4. CHECK POWER SEAT SWITCH

• Without memory function

Measure resistance between terminals while operating each switch.

• Driver's seat

Switch position	Terminal No.	Standard
Slide forward	1 and 8 4 and 7	Less than 10 Ω
Slide rearward	1 and 7 4 and 8	Less than 10 Ω
Tilt up	1 and 3 4 and 2	Less than 10 Ω
Tilt down	1 and 2 4 and 3	Less than 10 Ω
Lifter up	1 and 6 4 and 9	Less than 10 Ω
Lifter down	1 and 9 4 and 6	Less than 10 Ω
Reclining forward	1 and 10 4 and 5	Less than 10 Ω
Reclining rearward	1 and 5 4 and 10	Less than 10 Ω



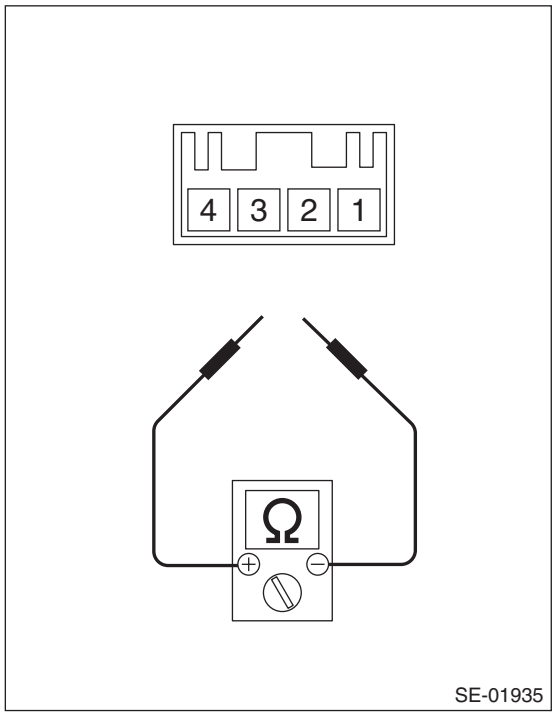
• Passenger's seat

Switch position	Terminal No.	Standard
Slide forward	1 and 8 4 and 7	Less than 10 Ω
Slide rearward	1 and 7 4 and 8	Less than 10 Ω
Reclining forward	1 and 10 4 and 5	Less than 10 Ω
Reclining rearward	1 and 5 4 and 10	Less than 10 Ω

Replace the power seat switch if the inspection result is not within the standard value.

- **With memory function**

Measure resistance between terminals while operating each switch.

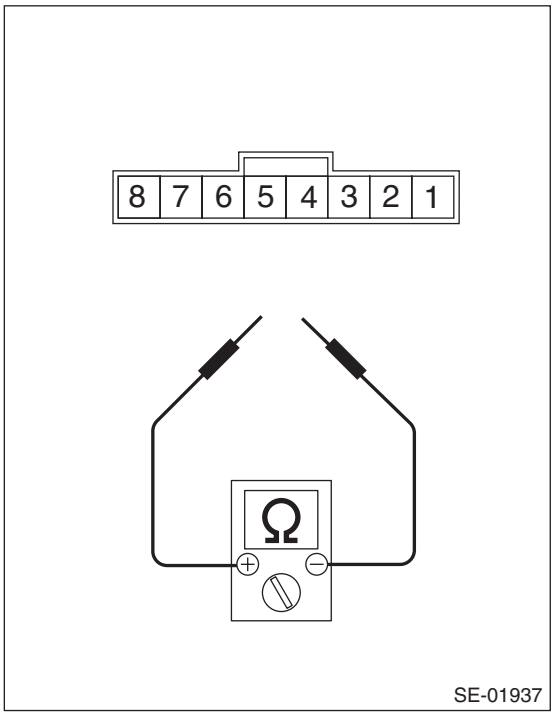


Switch position	Terminal No.	Standard
Slide forward	8 and 1	Less than 10 Ω
Slide rearward	7 and 1	Less than 10 Ω
Tilt up	3 and 1	Less than 10 Ω
Tilt down	2 and 1	Less than 10 Ω
Lifter up	6 and 1	Less than 10 Ω
Lifter down	9 and 1	Less than 10 Ω
Reclining forward	10 and 1	Less than 10 Ω
Reclining rearward	5 and 1	Less than 10 Ω

Replace the power seat switch if the inspection result is not within the standard value.

5. CHECK LUMBAR SWITCH

Measure resistance between terminals while operating each switch.



Switch position	Terminal No.	Standard
Lumbar forward	1 and 4 2 and 3	Less than 10 Ω
Lumbar backward	1 and 3 2 and 4	Less than 10 Ω

Replace the lumbar switch if the inspection result is not within the standard value.

6. CHECK MEMORY SWITCH (WITH MEMORY FUNCTION)

Measure resistance between terminals while operating each switch.

Switch position	Terminal No.	Standard
Memory 1	2 and 1	Less than 10 Ω
Memory 2	3 and 1	Less than 10 Ω
Set	8 and 1	Less than 10 Ω

Replace the memory switch if the inspection result is not within the standard value.

7. ALL FUNCTIONS DO NOT OPERATE. (WITHOUT MEMORY)

	Step	Check	Yes	No
1	**CHECK SEAT FUNCTIONS.** Operate each power seat switch and check that each power seat function operates normally.	Does all function fail to operate?	Go to step **2**.	Check the motor which does not operate. <Ref. to SE-61, SOME MOTORS DO NOT OPERATE. (WITHOUT MEMORY), INSPECTION, Power Seat System.>
2	**CHECK FUSE.** Check the power seat fuse inside the fuse box.	Is the fuse blown out?	Replace the appropriate fuse.	Go to step **3**.
3	**CHECK POWER SUPPLY CIRCUIT.** 1) Disconnect the connector of power seat switch assembly. 2) Measure the voltage between harness connector and chassis ground. ***Connector & terminal*** ***Driver's seat*** ***(R200) No. 1 (+) — Chassis ground (–):*** ***Passenger's seat*** ***(R190) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Check body harness.
4	**CHECK POWER SUPPLY CIRCUIT.** Measure the resistance between power seat switch harness connector and chassis ground. ***Connector & terminal*** ***Driver's seat*** ***(R200) No. 4 — Chassis ground:*** ***Passenger's seat*** ***(R190) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Replace the power seat switch assembly.	Check body harness.

8. SOME MOTORS DO NOT OPERATE. (WITHOUT MEMORY)

- Slide operation failure

	Step	Check	Yes	No
1	**CHECK SWITCH.** 1) Disconnect the connector of power seat switch assembly. 2) Measure the resistance between connector terminals when moving the switch to slide forward and slide backward. <Ref. to SE-56, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the inspection result normal?	Go to step **2**.	Replace the power seat switch assembly.
2	**CHECK HARNESS.** 1) Disconnect the power seat switch connector and slide motor connector. 2) Measure the resistance between power seat switch connector and slide motor connector. ***Connector & terminal*** ***Driver's seat*** ***(R202) No. 5 — (R200) No. 8:*** ***(R202) No. 1 — (R200) No. 7:*** ***Passenger's seat*** ***(R192) No. 5 — (R190) No. 8:*** ***(R192) No. 1 — (R190) No. 7:***	Is the resistance less than 10 Ω?	Go to step **3**.	Check power seat harness.
3	**CHECK SLIDE MOTOR.** 1) Connect the power seat switch connector and slide motor connector. 2) Apply 12 V to the slide motor and check the motor rotation. ***Connector & terminal*** ***Driver's seat*** ***(R202) No. 5 (+) — (R202) No. 1 (–):*** ***(R202) No. 1 (+) — (R202) No. 5 (–):*** ***Passenger's seat*** ***(R192) No. 5 (+) — (R192) No. 1 (–):*** ***(R192) No. 1 (+) — (R192) No. 5 (–):***	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in slide rail.	Slide motor problem. Replace the seat cushion frame assembly.

- Malfunction of tilt operation

	Step	Check	Yes	No
1	**CHECK SWITCH.** 1) Disconnect the connector of power seat switch assembly. 2) Measure the resistance between connector terminals when moving the switch to tilt up and tilt down. <Ref. to SE-56, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the inspection result normal?	Go to step **2**.	Replace the power seat switch assembly.
2	**CHECK HARNESS.** 1) Disconnect the power seat switch connector and tilt motor connector. 2) Measure the resistance between power seat switch connector and tilt motor connector. ***Connector & terminal*** ***Driver's seat*** ***(R203) No. 4 — (R200) No. 2:*** ***(R203) No. 6 — (R200) No. 3:***	Is the resistance less than 10 Ω?	Go to step **3**.	Check power seat harness.
3	**CHECK TILT MOTOR.** 1) Connect the power seat switch connector and tilt motor connector. 2) Apply 12 V to the tilt motor and check the motor rotation. ***Connector & terminal*** ***Driver's seat*** ***(R203) No. 4 (+) — (R203) No. 6 (–):*** ***(R203) No. 6 (+) — (R203) No. 4 (–):***	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in tilt mechanism.	Tilt motor problem. Replace the seat cushion frame assembly.

- Malfunction of lifter operation

	Step	Check	Yes	No
1	**CHECK SWITCH.** 1) Disconnect the connector of power seat switch assembly. 2) Measure the resistance between connector terminals when moving the switch to lifter up and lifter down. <Ref. to SE-56, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the inspection result normal?	Go to step **2**.	Replace the power seat switch assembly.
2	**CHECK HARNESS.** 1) Disconnect the power seat switch connector and lifter motor connector. 2) Measure the resistance between power seat switch connector and lifter motor connector. ***Connector & terminal*** ***Driver's seat*** ***(R204) No. 6 — (R200) No. 6:*** ***(R204) No. 4 — (R200) No. 9:***	Is the resistance less than 10 Ω?	Go to step **3**.	Check power seat harness.
3	**CHECK LIFTER MOTOR.** 1) Connect the power seat switch connector and lifter motor connector. 2) Apply 12 V to the lifter motor and check the motor rotation. ***Connector & terminal*** ***Driver's seat*** ***(R204) No. 6 (+) — (R204) No. 4 (–):*** ***(R204) No. 4 (+) — (R204) No. 6 (–):***	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in lifter mechanism.	Lifter motor problem. Replace the seat cushion frame assembly.

- Malfunction of reclining operation

Step		Check	Yes	No
1	**CHECK SWITCH.** 1) Disconnect the connector of power seat switch assembly. 2) Measure the resistance between connector terminals when moving the switch to reclining forward and reclining backward. <Ref. to SE-56, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the inspection result normal?	Go to step **2**.	Replace the power seat switch assembly.
2	**CHECK HARNESS.** 1) Disconnect the power seat switch connector and reclining motor connector. 2) Measure the resistance between power seat switch connector and reclining motor connector. ***Connector & terminal*** ***Driver's seat*** ***(R201) No. 6 — (R200) No. 10:*** ***(R201) No. 4 — (R200) No. 5:*** ***Passenger's seat*** ***(R191) No. 6 — (R190) No. 10:*** ***(R191) No. 4 — (R190) No. 5:***	Is the resistance less than 10 Ω?	Go to step **3**.	Check power seat harness.
3	**CHECK RECLINING MOTOR.** 1) Connect the power seat switch connector and reclining motor connector. 2) Apply 12 V to the reclining motor and check the motor rotation. ***Connector & terminal*** ***Driver's seat*** ***(R201) No. 6 (+) — (R201) No. 4 (–):*** ***(R201) No. 4 (+) — (R201) No. 6 (–):*** ***Passenger's seat*** ***(R191) No. 6 (+) — (R191) No. 4 (–):*** ***(R191) No. 4 (+) — (R191) No. 6 (–):***	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in reclining hinge.	Reclining motor problem. Replace the backrest frame assembly.

- Malfunction of lumbar operation

	Step	Check	Yes	No
1	**CHECK SWITCH.** 1) Disconnect the connector of lumbar switch assembly. 2) Measure the resistance between connector terminals when moving the switch to lumbar forward and lumbar backward. <Ref. to SE-58, CHECK LUMBAR SWITCH, INSPECTION, Power Seat System.>	Is the inspection result normal?	Go to step **2**.	Replace the lumbar switch assembly.
2	**CHECK HARNESS.** 1) Disconnect the lumbar switch connector and lumbar motor connector. 2) Measure the resistance between lumbar switch connector and lumbar motor connector. ***Connector & terminal*** ***Driver's seat*** ***(R198) No. 1 — (R195) No. 4:*** ***(R198) No. 2 — (R195) No. 3:***	Is the resistance less than 10 Ω?	Go to step **3**.	Check power seat harness.
3	**CHECK LUMBAR MOTOR.** 1) Connect the lumbar switch connector and lumbar motor connector. 2) Apply 12 V to the lumbar motor and check the motor rotation. ***Connector & terminal*** ***Driver's seat*** ***(R198) No. 1 (+) — (R198) No. 2 (–):*** ***(R198) No. 2 (+) — (R198) No. 1 (–):***	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in lumbar mechanism.	Lumbar motor problem. Replace the backrest frame assembly.

9. IT DOES NOT FUNCTION WITH MANUAL OPERATION. (WITH MEMORY)

	Step	Check	Yes	No
1	**CHECK SEAT FUNCTIONS.** Operate each power seat switch and check that each power seat function operates normally.	Does all function fail to operate?	Go to step **2**.	Check the motor which does not operate. <Ref. to SE-66, SOME MOTORS DO NOT OPERATE. (WITH MEMORY), INSPECTION, Power Seat System.>
2	**CHECK FUSE.** Check the power seat fuse inside the fuse box.	Is the fuse blown out?	Replace the appropriate fuse.	Go to step **3**.
3	**CHECK POWER SEAT CONTROL MODULE.** 1) Turn the ignition to ON. 2) Check the DTC of the power seat control module using the Subaru Select Monitor.	Is DTC detected?	Perform the diagnosis according to the "POWER SEAT MEMORY SYSTEM (DIAGNOSTICS)" section.	Go to step **4**.
4	**CHECK POWER SEAT CONTROL MODULE.** 1) Turn the ignition to ON. 2) Display «Battery Terminal Voltage» on the data monitor of the power seat control module in Subaru Select Monitor.	Is the voltage 10 V or more?	Go to step **7**.	Go to step **5**.

Step		Check	Yes	No
5	**CHECK POWER SUPPLY CIRCUIT.** 1) Disconnect the power seat control module connector. 2) Measure the voltage between harness connector and chassis ground. ***Connector & terminal*** ***(R155) No. 10 (+) — Chassis ground (–):*** ***(R156) No. 8 (+) — Chassis ground (–):*** ***(R156) No. 3 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **6**.	Check body harness.
6	**CHECK POWER SUPPLY CIRCUIT.** Measure the resistance between power seat control module harness connector and chassis ground. ***Connector & terminal*** ***(R156) No. 14 — Chassis ground:*** ***(R156) No. 12 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **7**.	Check body harness.
7	**CHECK HARNESS.** 1) Disconnect the power seat control module connector. 2) Measure the resistance of the following harnesses. ***Connector & terminal*** ***Slide:*** ***(R156) No. 15 — Chassis ground:*** ***(R156) No. 16 — Chassis ground:*** ***Tilt:*** ***(R156) No. 5 — Chassis ground:*** ***(R156) No. 4 — Chassis ground:*** ***Lifter:*** ***(R156) No. 2 — Chassis ground:*** ***(R156) No. 1 — Chassis ground:*** ***Reclining:*** ***(R156) No. 7 — Chassis ground:*** ***(R156) No. 6 — Chassis ground:***	Is the resistance value 10 kΩ or more?	Replace the power seat control module.	Check the harnesses between power seat motor and each motor and between power seat control module connector and each motor.

10.SOME MOTORS DO NOT OPERATE. (WITH MEMORY)

- Slide operation failure

	Step	Check	Yes	No
1	**CHECK OPERATION.** Check the slide motor rotation while moving the switch to slide forward and slide backward.	Does the motor operate when the switch is operated?	Go to step **2**.	Go to step **3**.
2	**CHECK OPERATION.** Check the slide motor rotation while moving the switch to slide forward and slide backward.	Does the motor operate at least 1 second when the switch is operated?	Temporary improper operation.	Go to step **8**.
3	**CHECK POWER SEAT CONTROL MODULE.** 1) Turn the ignition to ON. 2) Display «Slide SW» on the data monitor of the power seat control module in Subaru Select Monitor. NOTE: Perform the inspection after an item is selected in the data select display.	Does the display change corresponding to the switch operation?	Go to step **2**.	Go to step **4**.
4	**CHECK SWITCH.** 1) Disconnect the harness connector of power seat switch assembly. 2) Measure the resistance between connector terminals when moving the switch to slide forward and slide backward. <Ref. to SE-56, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the resistance less than 10 Ω?	Go to step **5**.	Replace the power seat switch assembly.
5	**CHECK POWER SEAT CONTROL MODULE.** 1) Turn the ignition to ON. 2) Display «Slide SW» on the data monitor of the power seat control module in Subaru Select Monitor. NOTE: Perform the inspection after an item is selected in the data select display.	Does the display change corresponding to the switch operation?	Go to step **6**.	Replace the power seat control module.
6	**CHECK HARNESS.** 1) Disconnect the power seat switch connector and slide motor connector. 2) Measure the resistance between the power seat control module connector and power seat switch connector. ***Connector & terminal*** ***(R155) No. 6 — (R200) No. 8:*** ***(R155) No. 7 — (R200) No. 7:***	Is the resistance less than 10 Ω?	Go to step **7**.	Check power seat harness.
7	**CHECK SLIDE MOTOR.** 1) Connect the slide motor connector. 2) Apply battery voltage to the slide motor connector and check the motor rotation. ***Connector & terminal*** ***(R202) No. 1 (+) — (R202) No. 5 (–):*** ***(R202) No. 5 (+) — (R202) No. 1 (–):***	Does the motor rotate normally?	Replace the power seat control module.	Slide motor problem. Replace the seat cushion frame assembly.
8	**CHECK HARNESS.** 1) Disconnect the power seat switch connector and slide motor connector. 2) Disconnect the connector of power seat control module and slide motor. ***Connector & terminal*** ***(R202) No. 2 — (R155) No. 19:***	Is the resistance less than 10 Ω?	Go to step **9**.	Check power seat harness.

	Step	Check	Yes	No
9	**CHECK HARNESS.** Measure the resistance between the power seat control module connector and chassis ground. ***Connector & terminal*** ***(R156) No. 15 — Chassis ground:*** ***(R156) No. 16 — Chassis ground:***	Is the resistance value 10 kΩ or more?	Go to step **10**.	Check power seat harness.
10	**CHECK HARNESS.** 1) Connect the power seat control module connector. 2) Measure the voltage between power seat control module connector and chassis ground when the slide switch is operated. ***Connector & terminal*** ***(R156) No. 15 (+) — Chassis ground (–):*** ***(R156) No. 16 (+) — Chassis ground (–):***	Is the voltage between 5 — 16 V?	Replace the power seat control module.	Slide motor problem. Replace the seat cushion frame assembly.

- Malfunction of tilt operation

	Step	Check	Yes	No
1	**CHECK OPERATION.** Check the tilt motor rotation while moving the switch to tilt up and tilt down.	Does the motor operate when the switch is operated?	Go to step **2**.	Go to step **3**.
2	**CHECK OPERATION.** Check the tilt motor rotation while moving the switch to tilt up and tilt down.	Does the motor operate at least 1 second when the switch is operated?	Temporary improper operation.	Go to step **8**.
3	**CHECK POWER SEAT CONTROL MODULE.** 1) Turn the ignition to ON. 2) Display «Tilt SW» on the data monitor of the power seat control module in Subaru Select Monitor. NOTE: Perform the inspection after an item is selected in the data select display.	Does the display change corresponding to the switch operation?	Go to step **2**.	Go to step **4**.
4	**CHECK SWITCH.** 1) Disconnect the harness connector of power seat switch assembly. 2) Measure the resistance between connector terminals when moving the switch to tilt up and tilt down. <Ref. to SE-56, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the resistance less than 10 Ω?	Go to step **5**.	Replace the power seat switch assembly.
5	**CHECK POWER SEAT CONTROL MODULE.** 1) Turn the ignition to ON. 2) Display «Tilt SW» on the data monitor of the power seat control module in Subaru Select Monitor. NOTE: Perform the inspection after an item is selected in the data select display.	Does the display change corresponding to the switch operation?	Go to step **6**.	Replace the power seat control module.
6	**CHECK HARNESS.** 1) Disconnect the power seat switch connector and tilt motor connector. 2) Measure the resistance between the power seat control module connector and power seat switch connector. ***Connector & terminal*** ***(R155) No. 5 — (R200) No. 3:*** ***(R155) No. 4 — (R200) No. 2:***	Is the resistance less than 10 Ω?	Go to step **7**.	Check power seat harness.

	Step	Check	Yes	No
7	**CHECK TILT MOTOR.** 1) Connect the tilt motor connector. 2) Apply battery voltage to the tilt motor connector and check the motor rotation. ***Connector & terminal*** ***(R203) No. 6 (+) — (R203) No. 4 (–):*** ***(R203) No. 4 (+) — (R203) No. 6 (–):***	Does the motor rotate normally?	Replace the power seat control module.	Tilt motor problem. Replace the seat cushion frame assembly.
8	**CHECK HARNESS.** 1) Disconnect the power seat switch connector and tilt motor connector. 2) Disconnect the connector of power seat control module and tilt motor. ***Connector & terminal*** ***(R203) No. 1 — (R155) No. 18:***	Is the resistance less than 10 Ω?	Go to step **9**.	Check power seat harness.
9	**CHECK HARNESS.** Measure the resistance between the power seat control module connector and chassis ground. ***Connector & terminal*** ***(R156) No. 5 — Chassis ground:*** ***(R156) No. 4 — Chassis ground:***	Is the resistance value 10 kΩ or more?	Go to step **10**.	Check power seat harness.
10	**CHECK HARNESS.** 1) Connect the power seat control module connector. 2) Measure the voltage between power seat control module connector and chassis ground when the tilt switch is operated. ***Connector & terminal*** ***(R156) No. 5 (+) — Chassis ground (–):*** ***(R156) No. 4 (+) — Chassis ground (–):***	Is the voltage between 5 — 16 V?	Replace the power seat control module.	Tilt motor problem. Replace the seat cushion frame assembly.

- Malfunction of lifter operation

	Step	Check	Yes	No
1	**CHECK OPERATION.** Check the lifter motor rotation while turning the switch to lifter up and lifter down.	Does the motor operate when the switch is operated?	Go to step **2**.	Go to step **3**.
2	**CHECK OPERATION.** Check the lifter motor rotation while turning the switch to lifter up and lifter down.	Does the motor operate at least 1 second when the switch is operated?	Temporary improper operation.	Go to step **8**.
3	**CHECK POWER SEAT CONTROL MODULE.** 1) Turn the ignition to ON. 2) Display «Lifter SW» on the data monitor of the power seat control module in Subaru Select Monitor. NOTE: Perform the inspection after an item is selected in the data select display.	Does the display change corresponding to the switch operation?	Go to step **2**.	Go to step **4**.
4	**CHECK SWITCH.** 1) Disconnect the harness connector of power seat switch assembly. 2) Measure the resistance between connector terminals when moving the switch to lifter up and lifter down. <Ref. to SE-56, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the resistance less than 10 Ω?	Go to step **5**.	Replace the power seat switch assembly.

	Step	Check	Yes	No
5	**CHECK POWER SEAT CONTROL MODULE.** 1) Turn the ignition to ON. 2) Display «Lifter SW» on the data monitor of the power seat control module in Subaru Select Monitor. NOTE: Perform the inspection after an item is selected in the data select display.	Does the display change corresponding to the switch operation?	Go to step **6**.	Replace the power seat control module.
6	**CHECK HARNESS.** 1) Disconnect the power seat switch connector and lifter motor connector. 2) Measure the resistance between the power seat control module connector and power seat switch connector. ***Connector & terminal*** ***(R155) No. 3 — (R200) No. 6:*** ***(R155) No. 2 — (R200) No. 9:***	Is the resistance less than 10 Ω?	Go to step **7**.	Check power seat harness.
7	**CHECK LIFTER MOTOR.** 1) Connect the lifter motor connector. 2) Apply battery voltage to the lifter motor connector and check the motor rotation. ***Connector & terminal*** ***(R204) No. 4 (+) — (R204) No. 6 (–):*** ***(R204) No. 6 (+) — (R204) No. 4 (–):***	Does the motor rotate normally?	Replace the power seat control module.	Lifter motor problem. Replace the seat cushion frame assembly.
8	**CHECK HARNESS.** 1) Disconnect the power seat switch connector and lifter motor connector. 2) Disconnect the connector of power seat control module and lifter motor. ***Connector & terminal*** ***(R204) No. 1 — (R155) No. 16:***	Is the resistance less than 10 Ω?	Go to step **9**.	Check power seat harness.
9	**CHECK HARNESS.** Measure the resistance between the power seat control module connector and chassis ground. ***Connector & terminal*** ***(R156) No. 2 — Chassis ground:*** ***(R156) No. 1 — Chassis ground:***	Is the resistance value 10 kΩ or more?	Go to step **10**.	Check power seat harness.
10	**CHECK HARNESS.** 1) Connect the power seat control module connector. 2) Measure the voltage between power seat control module connector and chassis ground when the lifter switch is operated. ***Connector & terminal*** ***(R156) No. 2 (+) — Chassis ground (–):*** ***(R156) No. 1 (+) — Chassis ground (–):***	Is the voltage between 5 — 16 V?	Replace the power seat control module.	Lifter motor problem. Replace the seat cushion frame assembly.

- Malfunction of reclining operation

	Step	Check	Yes	No
1	**CHECK OPERATION.** Check the reclining motor rotation while moving the switch to reclining forward and reclining backward.	Does the motor operate when the switch is operated?	Go to step **2**.	Go to step **3**.
2	**CHECK OPERATION.** Check the reclining motor rotation while moving the switch to reclining forward and reclining backward.	Does the motor operate at least 1 second when the switch is operated?	Temporary improper operation.	Go to step **8**.
3	**CHECK POWER SEAT CONTROL MODULE.** 1) Turn the ignition to ON. 2) Display «Reclining SW» on the data monitor of the power seat control module in Subaru Select Monitor. NOTE: Perform the inspection after an item is selected in the data select display.	Does the display change corresponding to the switch operation?	Go to step **2**.	Go to step **4**.
4	**CHECK SWITCH.** 1) Disconnect the harness connector of power seat switch assembly. 2) Measure the resistance between connector terminals when moving the switch to reclining forward and reclining backward. <Ref. to SE-56, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the resistance less than 10 Ω?	Go to step **5**.	Replace the power seat switch assembly.
5	**CHECK POWER SEAT CONTROL MODULE.** 1) Turn the ignition to ON. 2) Display «Reclining SW» on the data monitor of the power seat control module in Subaru Select Monitor. NOTE: Perform the inspection after an item is selected in the data select display.	Does the display change corresponding to the switch operation?	Go to step **6**.	Replace the power seat control module.
6	**CHECK HARNESS.** 1) Disconnect the power seat switch connector and reclining motor connector. 2) Measure the resistance between the power seat control module connector and power seat switch connector. ***Connector & terminal*** ***(R155) No. 8 — (R200) No. 10:*** ***(R155) No. 9 — (R200) No. 5:***	Is the resistance less than 10 Ω?	Go to step **7**.	Check power seat harness.
7	**CHECK RECLINING MOTOR.** 1) Connect the reclining motor connector. 2) Apply battery voltage to the reclining motor connector and check the motor rotation. ***Connector & terminal*** ***(R201) No. 4 (+) — (R201) No. 6 (–):*** ***(R201) No. 6 (+) — (R201) No. 4 (–):***	Does the motor rotate normally?	Replace the power seat control module.	Reclining motor problem. Replace the seat cushion frame assembly.
8	**CHECK HARNESS.** 1) Disconnect the power seat switch connector and reclining motor connector. 2) Disconnect the connector of power seat control module and reclining motor. ***Connector & terminal*** ***(R201) No. 1 — (R155) No. 17:***	Is the resistance less than 10 Ω?	Go to step **9**.	Check power seat harness.

	Step	Check	Yes	No
9	**CHECK HARNESS.** Measure the resistance between the power seat control module connector and chassis ground. ***Connector & terminal*** ***(R156) No. 7 — Chassis ground:*** ***(R156) No. 6 — Chassis ground:***	Is the resistance value 10 kΩ or more?	Go to step **10**.	Check power seat harness.
10	**CHECK HARNESS.** 1) Connect the power seat control module connector. 2) Measure the voltage between power seat control module connector and chassis ground when the reclining switch is operated. ***Connector & terminal*** ***(R156) No. 7 (+) — Chassis ground (–):*** ***(R156) No. 6 (+) — Chassis ground (–):***	Is the voltage between 5 — 16 V?	Replace the power seat control module.	Reclining motor problem. Replace the backrest frame assembly.

- Malfunction of lumbar operation

	Step	Check	Yes	No
1	**CHECK SWITCH.** 1) Disconnect the connector of lumbar switch assembly. 2) Measure the resistance between connector terminals when moving the switch to lumbar forward and lumbar backward. <Ref. to SE-58, CHECK LUMBAR SWITCH, INSPECTION, Power Seat System.>	Is the inspection result normal?	Go to step **2**.	Replace the lumbar switch assembly.
2	**CHECK HARNESS.** 1) Disconnect the lumbar switch connector and lumbar motor connector. 2) Measure the resistance between lumbar switch connector and lumbar motor connector. ***Connector & terminal*** ***(R195) No. 4 — (R198) No. 1:*** ***(R195) No. 3 — (R198) No. 2:***	Is the resistance less than 10 Ω?	Go to step **3**.	Check power seat harness.
3	**CHECK LUMBAR MOTOR.** 1) Connect the lumbar switch connector and lumbar motor connector. 2) Apply 12 V to the lumbar motor and check the motor rotation. ***Connector & terminal*** ***(R198) No. 1 (+) — (R198) No. 2 (–):*** ***(R198) No. 2 (+) — (R198) No. 1 (–):***	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in lumbar mechanism.	Lumbar motor problem. Replace the backrest frame assembly.

11.UNABLE TO SET POSITIONS INTO MEMORY (WITH MEMORY)

	Step	Check	Yes	No
1	**CHECK POWER SEAT CONTROL MODULE.** 1) Turn the ignition to ON. 2) Display «Set SW»«MEM SW1»«MEM SW2» on the data monitor of the power seat control module in Subaru Select Monitor. NOTE: Perform the inspection after an item is selected in the data select display.	Does the display change corresponding to the switch operation?	Go to step **5**.	Go to step **2**.
2	**CHECK SWITCH.** 1) Disconnect the harness connector of memory switch assembly. 2) Check memory switch. <Ref. to SE-59, CHECK MEMORY SWITCH (WITH MEMORY FUNCTION), INSPECTION, Power Seat System.>	Does the inspection result show normal status with no problem?	Go to step **3**.	Replace the memory switch assembly.
3	**CHECK HARNESS.** Measure the resistance between the memory switch connector and power seat control module connector. ***Connector & terminal*** ***(R155) No. 13 — (D143) No. 3:*** ***(R155) No. 14 — (D143) No. 2:*** ***(R155) No. 29 — (D143) No. 8:***	Is the resistance less than 10 Ω?	Go to step **4**.	Check power seat harness.
4	**CHECK GROUND CIRCUIT.** Measure the resistance between memory switch harness connector and chassis ground. ***Connector & terminal*** ***(R143) No. 1 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Check body harness.
5	**SYSTEM INITIALIZATION.** Initialize memory seat system. <Ref. to SE-75, ADJUSTMENT, Power Seat System.>	Is the initialization completed successfully?	Replace the power seat control module.	<Ref. to SE-74, UNABLE TO PERFORM INITIALIZATION, INSPECTION, Power Seat System.>

12.UNABLE TO PERFORM THE RELOADING OPERATION (DRIVER'S SEAT WITH MEMORY)

	Step	Check	Yes	No
1	**CHECK MEMORY FUNCTIONS.** Perform the memory operation of the seat position, and check the memory replay operation.	Does the seat position memory replay correctly?	Memory function is normal. It is considered that the memory was cleared because the voltage falls below the operation-ensured voltage temporarily during memory restoration or manual operation. It operates normally by registering a memory.	Go to step **2**.
2	**CHECK MEMORY FUNCTIONS.** At the memory operation of step 1, check the beep sound (once).	Was it possible to confirm the beep sound?	Go to step **3**.	<Ref. to SE-72, UNABLE TO SET POSITIONS INTO MEMORY (WITH MEMORY), INSPECTION, Power Seat System.>
3	**CHECK OPERATION.** Operate all power seat switches to check operation of each motor.	Does each motor rotate for one second or more when operating each switch?	Replace the power seat control module.	Check the motor which does not operate.

13.NO INTERLOCK WITH SMART KEYLESS

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor.	Is a DTC detected?	Perform a check according to the DTC.	Go to step **2**.
2	**CHECK POWER SEAT CONTROL MODULE.** 1) Turn the ignition to ON. 2) Check «Keyless Access Key Information» on the data monitor of the power seat control module in Subaru Select Monitor. 3) Check the status of key No. shown in «Keyless Access Key Information» using «Keyless Access & Start Link * Memorized». NOTE: Perform the inspection after an item is selected in the data select display.	Is “Yes” displayed for the status of registered key No.?	Go to step **3**.	If “No” displayed, register the keyless access key again.
3	**CHECK MEMORY FUNCTIONS.** Perform the memory operation of the seat position, and check the memory replay operation.	Does the seat position memory replay correctly?	Function is normal. It is considered that the memory was cleared because the voltage falls below the operation-ensured voltage temporarily during memory restoration or manual operation. It operates normally by registering a memory.	Perform the check item for “UNABLE TO PERFORM THE RELOADING OPERATION (DRIVER’S SEAT WITH MEMORY)”.

14.UNABLE TO PERFORM INITIALIZATION

	Step	Check	Yes	No
1	**CHECK OPERATION.** Operate all power seat switches to check operation of each motor.	Does each motor rotate for one second or more when operating each switch?	Go to step **2**.	Check the motor which does not operate.
2	**CHECK SWITCH.** 1) Disconnect the harness connector of power seat switch assembly. 2) Measure resistance between all terminals of power seat switch assembly. <Ref. to SE-56, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Does the inspection result show normal status with no problem?	Replace the power seat control module.	Replace the power seat switch assembly.

D: ADJUSTMENT

NOTE:
System calibration is necessary for driver's side seat with memory function only.

1. CONDITIONS FOR INITIALIZATION

The power seat control module must be initialized if the following conditions are met.
- The seat is removed from vehicle.
- Power seat control module is replaced.
- Slide rail assembly or backrest frame assembly is removed or replaced.
- Pulse generated when seat is moved do not match with the amount of actual travel. (When memory is not correctly reloaded.)

2. INITIALIZATION PROCEDURES

NOTE:
- Initialize the records inside the module by performing all the following steps regardless the item order.
- With each seat locked*, operating switches for 3 seconds make the buzzer sound once.
- If initialization is done after completing all items, the buzzer sounds three times when the last operation is completed and the switch is turned on then off.

1) Move the seat rearward using the slide switch, and keep the seat lock* status for three seconds or more.
2) Move the seat downward using tilt switch, and keep the seat lock* status for three seconds or more.
3) Move the seat downward using lifter switch, and keep the seat lock* status for three seconds or more.
4) Move the seat forward using reclining switch, and keep the seat lock* status for three seconds or more.

*: Seat lock is the status that there is no pulse output from the encoder within the specified period of time with the switch operated though the seat reaches the movable position end.

NOTE:
When the following conditions are met, the initializing operation is cancelled even though the procedure is carried out halfway.
- Interval between each initialization procedure of 1) to 4) exceeds 10 seconds.
- If any of initialization procedures 1) to 4) are not performed.
- The battery runs out or the voltage to the power seat control module falls out of the operation range during initialization.

5. Seat Heater System

A: REMOVAL

1. SEAT HEATER MODULE - FRONT

1) Remove the front seats. <Ref. to SE-11, REMOVAL, Front Seat.>
2) Remove the backrest cover of front seat and seat cushion cover. <Ref. to SE-12, DISASSEMBLY, Front Seat.>
3) Remove the seat heater module - front from the pad assembly.

CAUTION:
If the seat heater module is removed, replace the pad assembly with a new part.

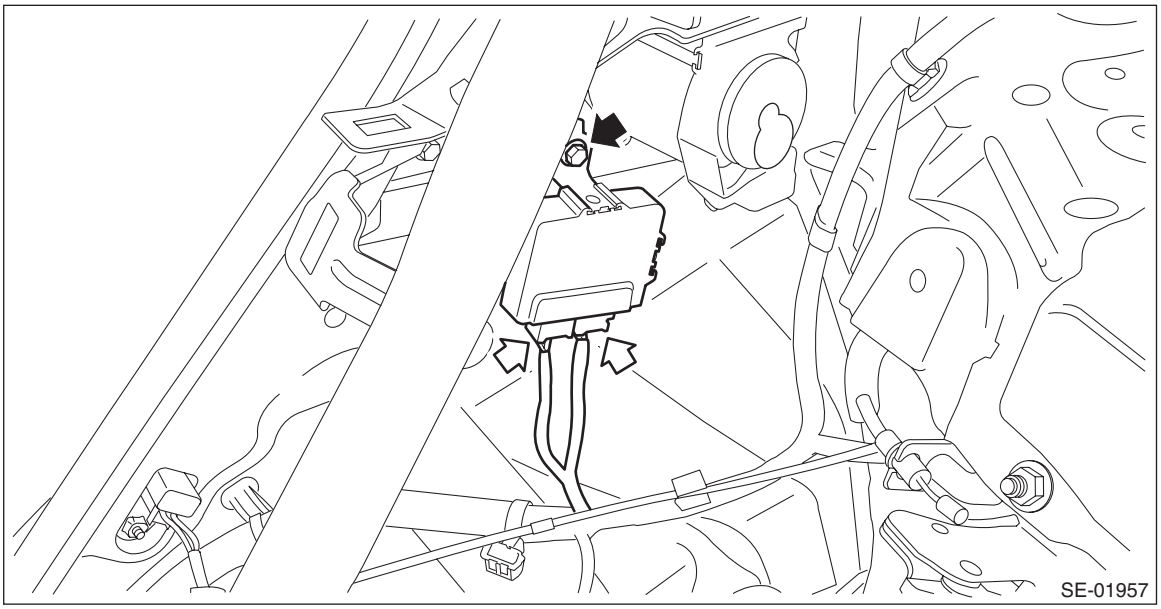
2. SEAT HEATER SWITCH - FRONT

Remove the heater control assembly. <Ref. to AC-44, REMOVAL, Control Panel.>

3. SEAT HEATER MODULE - REAR

1) Remove the rear seat cushion assembly. <Ref. to SE-11, REMOVAL, Front Seat.>
2) Remove the seat cushion cover from the rear seat. <Ref. to SE-46, DISASSEMBLY, Rear Seat.>
3) Remove the seat heater module - front from the pad assembly.

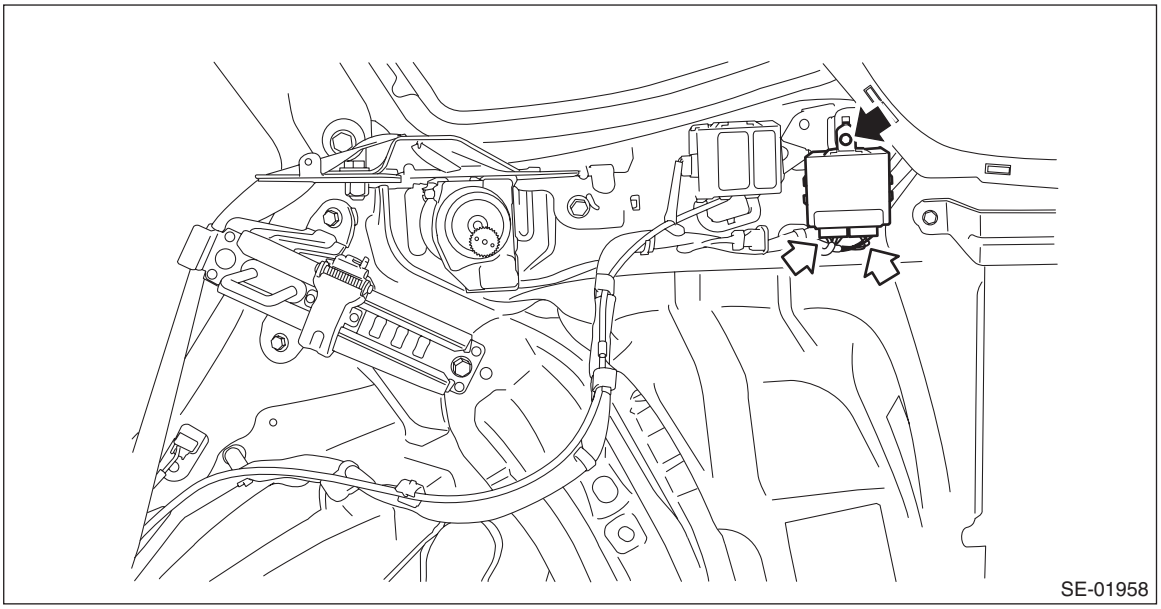
CAUTION:
If the seat heater module is removed, replace the pad assembly with a new part.



4. SEAT HEATER SWITCH - REAR

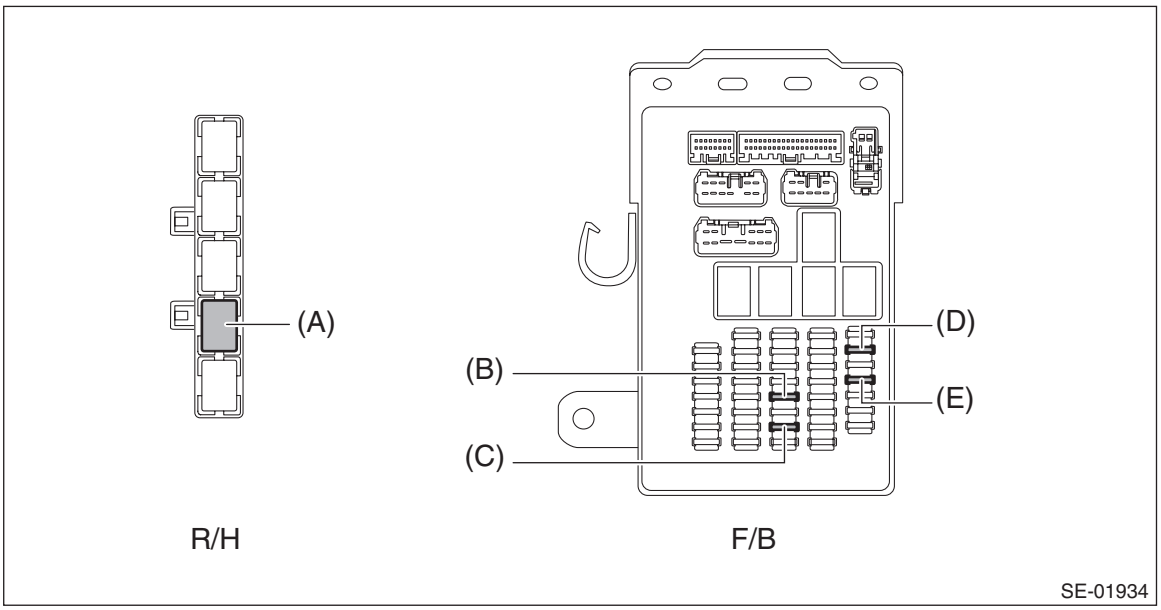
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the end cover - console box.
3) Remove the seat heater switch - rear.
   (1) Remove the heater duct - rear. (Model with rear seat heater)
   (2) Release the claws, and remove the seat heater switch - rear.

5. SEAT HEATER UNIT - REAR



Sedan model

1) Remove the trim panel - rear pillar UPR RH. <Ref. to EI-99, SEDAN MODEL, REMOVAL, Rear Quarter Trim.>
2) Remove the bolt, disconnect the connector and remove the seat heater unit - rear.



OUTBACK model

1) Remove the trim panel - rear apron RH. <Ref. to EI-100, OUTBACK MODEL, REMOVAL, Rear Quarter Trim.>
2) Remove the bolt, disconnect the connector and remove the seat heater unit - rear.

6. SEAT HEATER RELAY AND FUSE

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-74, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the seat heater relay and fuse.
   (1) Remove the relay & fuse box bolts.
   (2) Remove the seat heater relay from the relay holder.

Relay holder (R/H)	Seat heater relay (seat heater - front)	(A)
Relay & fuse box (F/B)	Fuse 15A (seat heater - rear)	(B)
	Fuse 15A (seat heater - front)	(C)
	Fuse 7.5A (ACC)	(D)
	Fuse 7.5A (IG)	(E)

B: INSTALLATION

1. SEAT HEATER MODULE - FRONT

1) Affix the seat heater module - front to the pad assembly.

CAUTION:
• If the cover - front cushion is removed, make sure to replace the hang wire on the cover - front cushion side with a new wire.
• When replacing the seat cover, be careful not to damage the occupant detection sensor while installing the hog ring.
• When removing or replacing the seat cover, perform “Occupant Detection System Inspection” after installing the seat to check if the occupant detection system operates normally. <Ref. to PI-14, SEAT, PRE-DELIVERY INSPECTION (PDI) PROCEDURE, Pre-delivery Inspection.>
• If the seat heater module is removed, replace the seat cushion pad & frame assembly with a new part.
• If the seat heater module is reused, remove the polyurethane section from the reverse side completely.

Double-sided tape:
NITTO DENKO 501L or equivalent

2) Assemble the front seat. <Ref. to SE-25, ASSEMBLY, Front Seat.>
3) Install the front seat.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)

2. SEAT HEATER SWITCH - FRONT

Install the heater control assembly. <Ref. to AC-45, INSTALLATION, Control Panel.>

3. SEAT HEATER MODULE - REAR

1) Affix the seat heater module - rear to the pad assembly.

Double-sided tape:
NITTO DENKO 501L or equivalent
2) Assemble the rear seat. <Ref. to SE-50, ASSEMBLY, Rear Seat.>
3) Install the rear seat. <Ref. to SE-43, INSTALLATION, Rear Seat.>

4. SEAT HEATER SWITCH - REAR

1) Install the seat heater switch - rear.
2) Install the end cover - console box.
3) Install the battery sensor to the ground terminal. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

5. SEAT HEATER UNIT - REAR

Sedan model

1) Install the seat heater module - rear.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the trim panel - rear pillar UPR RH. <Ref. to EI-104, SEDAN MODEL, INSTALLATION, Rear Quarter Trim.>

OUTBACK model

1) Install the seat heater module - rear.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the trim panel - rear apron RH. <Ref. to EI-104, OUTBACK MODEL, INSTALLATION, Rear Quarter Trim.>

6. SEAT HEATER RELAY AND FUSE

1) Install the seat heater relay & fuse.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the cover assembly - instrument panel LWR driver.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1. WIRING DIAGRAM

Refer to “Seat Heater System” in the wiring diagram.
- Front: <Ref. to WI-413, FRONT SEAT, WIRING DIAGRAM, Seat Heater System.>
- Rear: <Ref. to WI-415, REAR SEAT, WIRING DIAGRAM, Seat Heater System.>

2. DIAGNOSTIC CHART

Symptoms	Repair order
Front seat heater does not operate.	Refer to “HVAC SYSTEM (DIAGNOSTICS)”. <Ref. to AC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
Rear seat heater does not operate.	1. Check the fuse. <Ref. to SE-80, CHECK SEAT HEATER FUSE, INSPECTION, Seat Heater System.>
	2. Check the seat heater system power supply and ground circuit. <Ref. to SE-80, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Seat Heater System.>
	3. Check the seat heater module. <Ref. to SE-81, SEAT HEATER MODULE (REAR), INSPECTION, Seat Heater System.>
	4. Check the rear seat heater switch. <Ref. to SE-82, CHECK REAR SEAT HEATER SWITCH, INSPECTION, Seat Heater System.>
	5. Check the rear seat heater control module. <Ref. to SE-82, CHECK REAR SEAT HEATER CONTROL MODULE, INSPECTION, Seat Heater System.>

3. CHECK SEAT HEATER FUSE

Remove the seat heater fuse, and then visually check.
Is the fuse blown out?
- **Yes** → Replace the fuse.
- **No** → Check the power supply and ground circuits.

4. CHECK POWER SUPPLY AND GROUND CIRCUIT

1) Check power supply circuit
   (1) Disconnect the seat heater control module harness connector.
   (2) Measure the voltage between harness connector terminal and chassis ground.

Connector & terminal
(R49) No. 14 (+) — Chassis ground (–):
Is the voltage 10 V or more?
- **Yes** → Go to step 2.
- **No** → Repair or replace the harness.

2) Check power supply circuit
   (1) Turn the ignition switch to ON.
   (2) Measure the voltage between harness connector terminal and chassis ground.

Connector & terminal
(R49) No. 5 (+) — Chassis ground (–):
Is the voltage 10 V or more?
- **Yes** → Go to step 3.
- Repair or replace the harness.

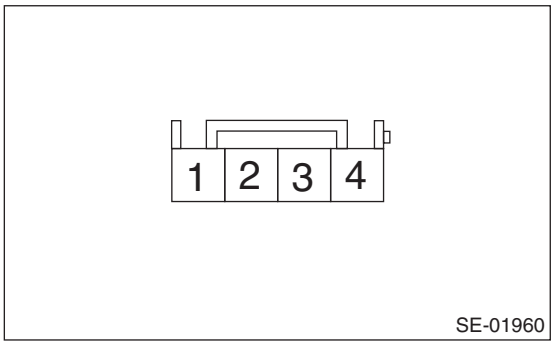
3) Check ground circuit
Measure the resistance between harness connector terminal and chassis ground.

Connector & terminal
(R49) No. 7 — Chassis ground:
(R138) No. 9 — Chassis ground:
Is the resistance less than 10 Ω?
- **Yes** → Go to step 4.
- **No** → Repair the harness.

4) Check harness
Measure the resistance between seat heater control module terminal and seat heater switch - rear terminal.

Connector & terminal
(R53) No. 14 — (R138) No. 1:
(R53) No. 16 — (R138) No. 6:
(R53) No. 6 — (R138) No. 2:
(R53) No. 4 — (R138) No. 5:
(R53) No. 2 — (R138) No. 13:
(R53) No. 8 — (R138) No. 4:

Is the resistance less than 10 Ω?
- **Yes** → Go to step 5.
- **No** → Repair the harness.



5) Check seat heater module (rear)
Check the seat heater module (rear) as a single part.

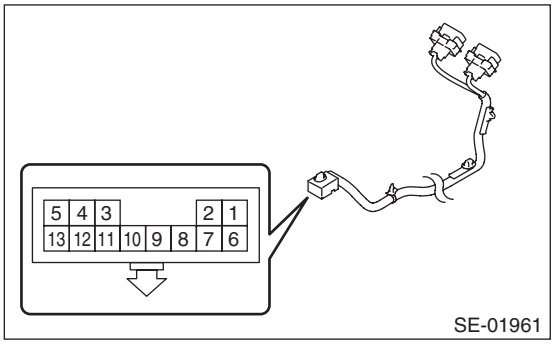
Connector & terminal
(R49) No. 7 — Chassis ground:
(R138) No. 9 — Chassis ground:

Is the inspection result normal?
- **Yes** → Replace the seat heater switch - rear or seat heater control module.
- **No** → Replace the seat heater module (rear).

5. SEAT HEATER MODULE (REAR)

1) Disconnect the seat heater unit connector, and check the continuity between terminals of connector.

Connector & terminal
Seat cushion:
LH side No. 4 — No. 3:
RH side No. 2 — No. 1:
Backrest LH:
No. 4 — No. 3:
Backrest RH:
No. 4 — No. 3:



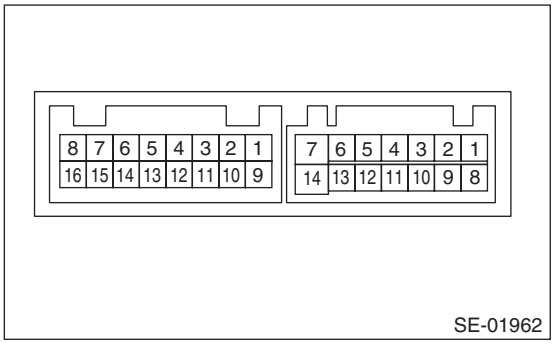
Inspection conditions	Standard	
Heater temperature 20°C (68°F)	Seat cushion	Approx. 4.7 Ω
	Backrest	Approx. 7.46 Ω

2) If no continuity exists, replace the seat heater module with a new part.

6. CHECK REAR SEAT HEATER SWITCH

1) Remove the rear seat heater switch and measure the resistance between switch terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
4-9	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω
2-9	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

NOTE:
If the light does not illuminate properly even though the continuity check result is normal, replace the switch.
2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Standard
11 (+) — 10 (–)	Apply battery voltage.	Light ON

3) Replace the rear seat heater switch if the inspection result is not within the standard value.

7. CHECK REAR SEAT HEATER CONTROL MODULE

1) Disconnect the connector of rear seat heater control module.
2) Check the continuity between the connectors.

Connector & terminal
5 — 7
14 — 7
Is there continuity?
- **Yes** → Repair or replace the harness.
- **No** → Replace the rear seat heater control module.

POWER SEAT MEMORY SYSTEM (DIAGNOSTICS)

PSM(diag)

14.	Diagnostics with Phenomenon	29

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**PERFORM CUSTOMER INTERVIEW.** Using the Check List for Interview, ask the customer the condition of how the trouble occurred.	Did you interview the customer?	Go to step **2**.	Interview the customer. <Ref. to PSM(diag)-3, CHECK, Check List for Interview.>
2	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Perform the inspection according to the diagnosis for LAN system.	Go to step **3**.
3	**CHECK POWER SEAT MEMORY SYSTEM.** Using the Subaru Select Monitor, read DTC of power seat memory system. <Ref. to PSM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to PSM(diag)-18, LIST, List of Diagnostic Trouble Code (DTC).> After the repair, Go to step **5**.	Go to step **4**.
4	**CHECK THE LIST OF TROUBLE SYMPTOMS.** Check “TROUBLE SYMPTOM” for the power seat system. <Ref. to SE-55, TROUBLE SYMPTOM, INSPECTION, Power Seat System.>	Does the symptom apply?	Perform the diagnosis according to the inspection procedures.	Currently, system is normal. The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
5	**PERFORM INSPECTION MODE.** Perform the Inspection Mode. <Ref. to PSM(diag)-13, Inspection Mode.>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to PSM(diag)-18, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

2. Check List for Interview

A: CHECK

- Inspect the following items regarding the vehicle's state.
- Print out this page for interviewing customers.

<table>
<tr><td colspan="4">Power Seat Memory System Check List for Interview
Date the Vehicle is Received Year Month Day</td></tr>
<tr><td colspan="2" rowspan="2">Customer's name</td><td>Registration No.</td><td>Initial year of registration
Year Month Date</td></tr>
<tr><td>Vehicle model</td><td>Frame number</td></tr>
<tr><td>Interviewer</td><td>Inspector</td><td>Engine type</td><td>Odometer reading</td></tr>
<tr><td colspan="4">Customer specified content
•
•
•</td></tr>
<tr><td>Date when problem occurred</td><td>Year Month Date</td><td>Frequency of trouble occurrence</td><td>Always occurs
Sometimes occurs
(times per day, times per month)</td></tr>

<tr><td>Road conditions</td><td></td><td>Occurrence location</td><td></td></tr>
<tr><td>Accessory installation condition</td><td colspan="3"></td></tr>
<tr><td>Confirmation of trouble condition</td><td colspan="3"></td></tr>
<tr><td>Diagnostic code</td><td colspan="3"></td></tr>
</table>

3. General Description

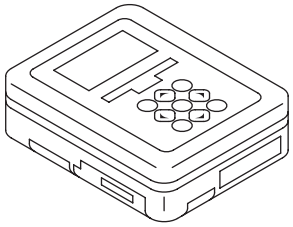
A: CAUTION

1. AIRBAG SYSTEM

CAUTION:
• Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
• Be careful not to damage the airbag system wiring harness.

2. POWER SEAT MEMORY SYSTEM

CAUTION:
• During inspection of the power seat memory system, be careful not to catch objects in.
• Perform communication with Subaru Select Monitor with IG ON.
(With IG OFF, communication cannot be established between the body integrated unit and seat memory CM.)



B: INSPECTION

1. BASIC INSPECTION

Before performing diagnosis, check the following items which might affect the problems related to power seat memory system.
1) Check the battery. <Ref. to SC(H4DO)-60, INSPECTION, Battery.> <Ref. to SC(H6DO)-53, INSPECTION, Battery.>
2) Check the relay and fuse condition.
3) Check the connecting condition of harness and harness connector.

C: PREPARATION TOOL

1. SPECIAL TOOL

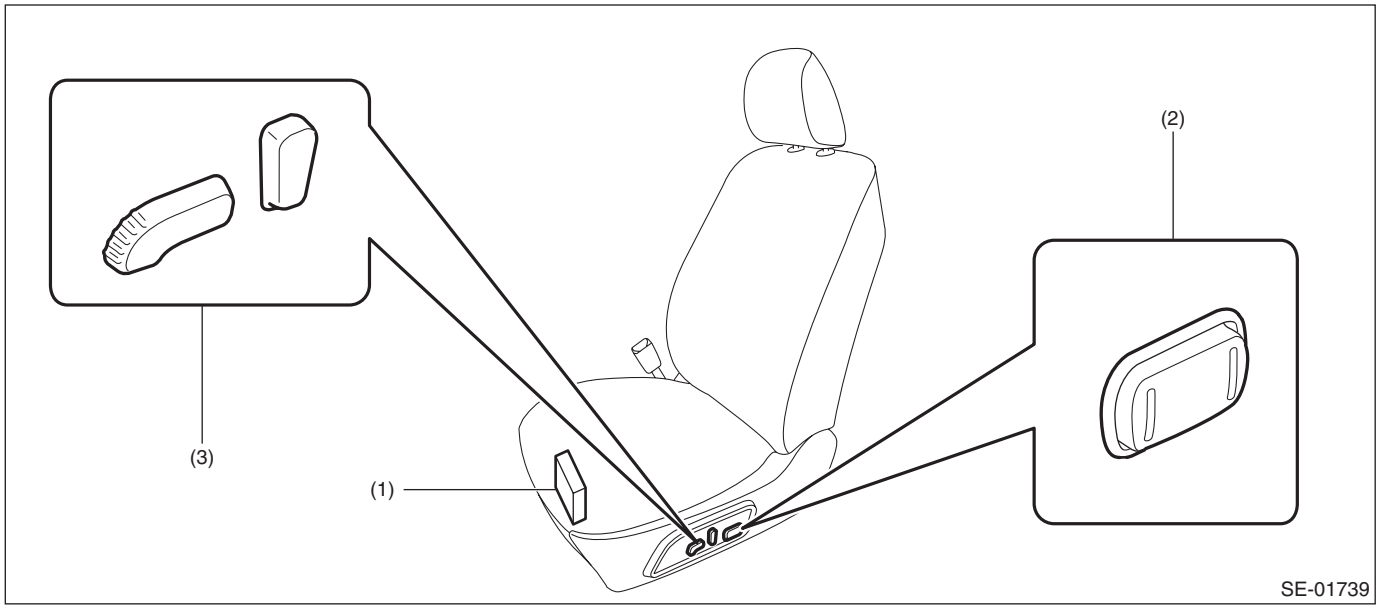


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
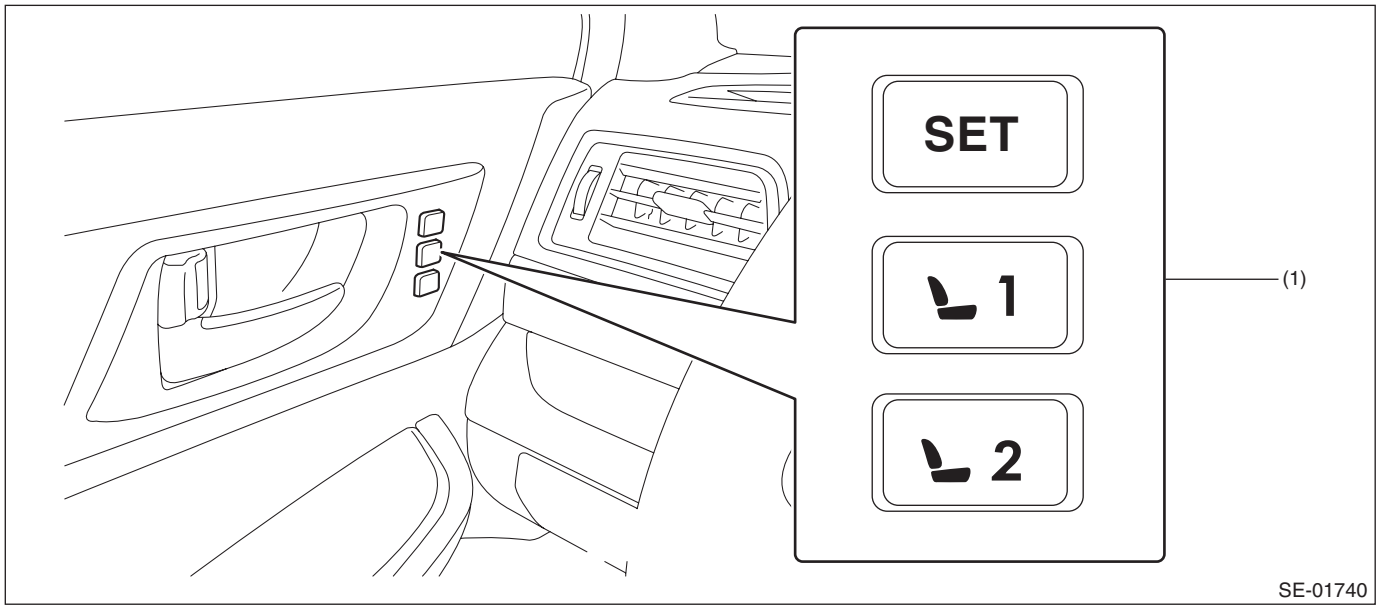
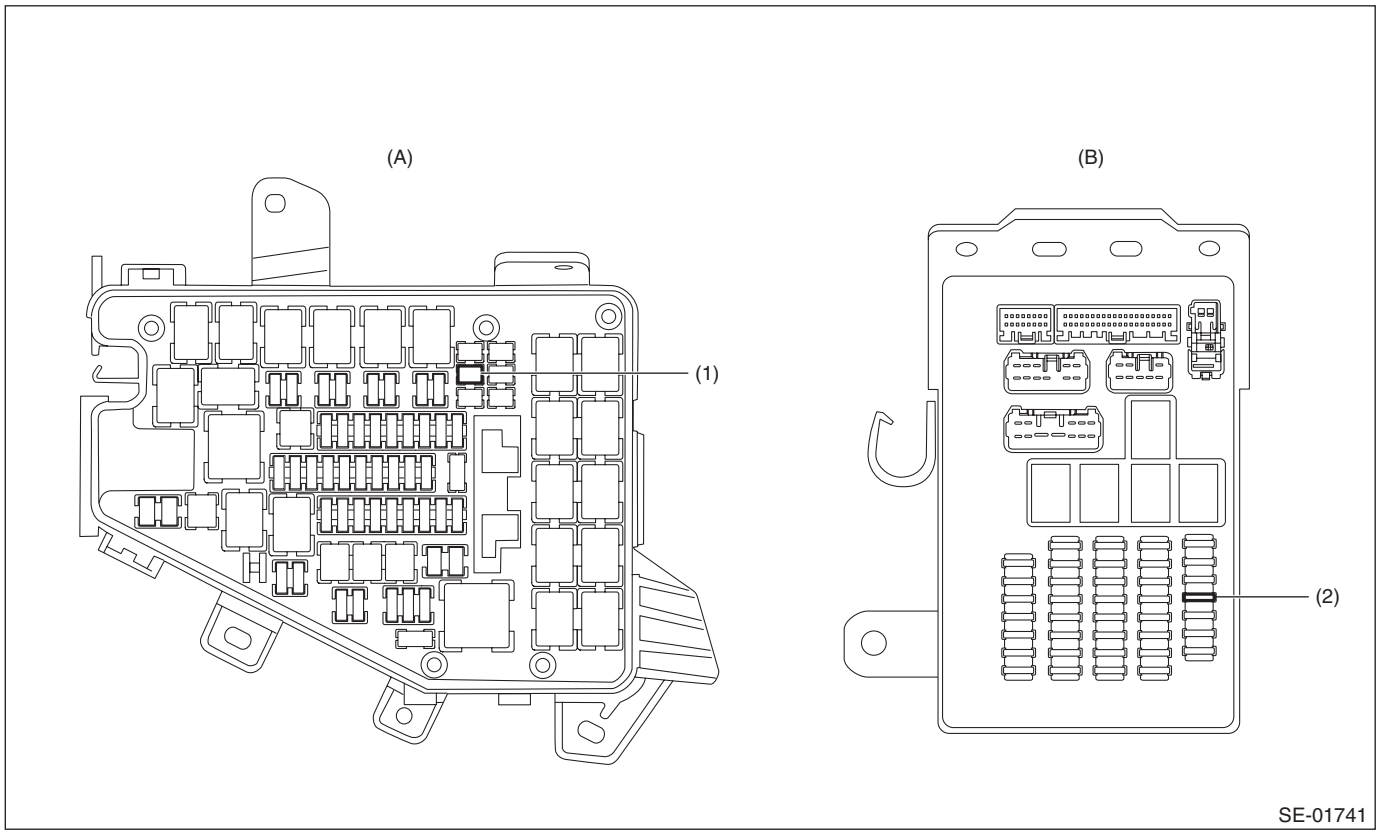
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.

2. GENERAL TOOL



TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

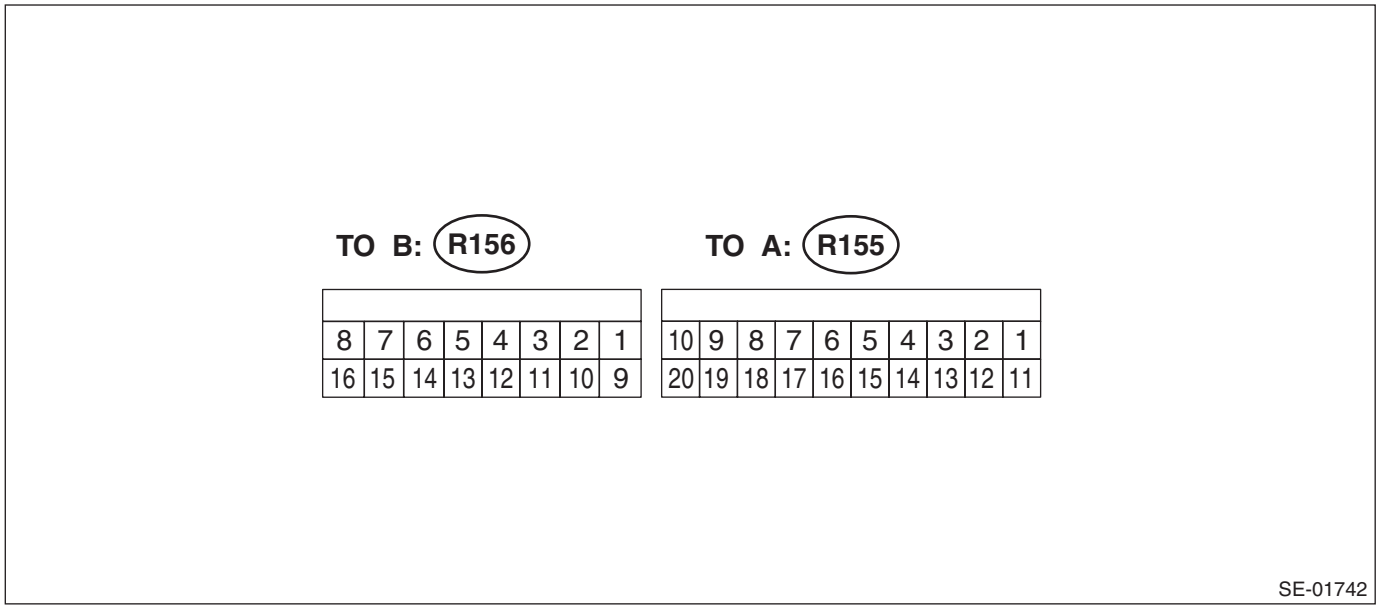
4. Electrical Component Location



A: LOCATION

(1) Power seat control module (2) Lumbar switch (3) Power seat switch

(1) Seat memory switch



(A) Engine compartment fuse box
(B) Interior fuse & relay box
(1) Fuse (30 A)
(2) Fuse (7.5 A)

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

1. POWER SEAT CONTROL MODULE

Terminal No.	Description	Measuring condition	Standard
(R155) No. 1	—	—	—
(R155) No. 2 ←→ Chassis ground	Lifter switch (down)	Switch ON	1.5 V or less
(R155) No. 3 ←→ Chassis ground	Lifter switch (up)	Switch ON	1.5 V or less
(R155) No. 4 ←→ Chassis ground	Tilt switch (down)	Switch ON	1.5 V or less
(R155) No. 5 ←→ Chassis ground	Tilt switch (up)	Switch ON	1.5 V or less
(R155) No. 6 ←→ Chassis ground	Slide switch (forward)	Switch ON	1.5 V or less
(R155) No. 7 ←→ Chassis ground	Slide switch (rearward)	Switch ON	1.5 V or less
(R155) No. 8 ←→ Chassis ground	Reclining switch (forward)	Switch ON	1.5 V or less
(R155) No. 9 ←→ Chassis ground	Reclining switch (backward)	Switch ON	1.5 V or less
(R155) No. 10 ←→ Chassis ground	Battery power supply	Always	10.5 — 16 V
(R155) No. 11 ←→ Chassis ground	Ignition power supply	When ignition switch is ON	10.5 — 16 V
(R155) No. 12	LIN communication line	Unmeasurable	—
(R155) No. 13 ←→ Chassis ground	Memory switch 1	Switch ON	1.5 V or less
(R155) No. 14 ←→ Chassis ground	Memory switch 2	Switch ON	1.5 V or less
(R155) No. 15 ←→ Chassis ground	SET switch	Switch ON	1.5 V or less
(R155) No. 16 ←→ (R155) No. 20	Reclining pulse signal	When the motor is in operation	Pulse output
(R155) No. 17 ←→ (R155) No. 20	Tilt pulse signal	When the motor is in operation	Pulse output
(R155) No. 18 ←→ (R155) No. 20	Lifter pulse signal	When the motor is in operation	Pulse output
(R155) No. 19 ←→ (R155) No. 20	Slide pulse signal	When the motor is in operation	Pulse output
(R155) No. 20 ←→ Chassis ground	Pulse signal GND	Always	1 Ω or less
(R156) No. 1 ←→ Chassis ground	Lifter motor up	When the motor is in operation	10.5 — 16 V
(R156) No. 2 ←→ Chassis ground	Lifter motor down	When the motor is in operation	10.5 — 16 V
(R156) No. 3 ←→ Chassis ground	Battery power supply	Always	10.5 — 16 V
(R156) No. 4 ←→ Chassis ground	Tilt motor up	When the motor is in operation	10.5 — 16 V
(R156) No. 5 ←→ Chassis ground	Tilt motor down	When the motor is in operation	10.5 — 16 V
(R156) No. 6 ←→ Chassis ground	Reclining motor forward	When the motor is in operation	10.5 — 16 V
(R156) No. 7 ←→ Chassis ground	Reclining motor backward	When the motor is in operation	10.5 — 16 V
(R156) No. 8 ←→ Chassis ground	Battery power supply	Always	10.5 — 16 V
(R156) No. 9 ←→ Chassis ground	Encoder power supply output	Always	1 MΩ or more
(R156) No. 10	—	—	—
(R156) No. 11	—	—	—
(R156) No. 12 ←→ Chassis ground	GND	Always	1 Ω or less
(R156) No. 13	—	—	—
(R156) No. 14 ←→ Chassis ground	GND	Always	1 Ω or less
(R156) No. 15 ←→ Chassis ground	Slide motor rearward	When the motor is in operation	10.5 — 16 V
(R156) No. 16 ←→ Chassis ground	Slide motor forward	When the motor is in operation	10.5 — 16 V

B: WIRING DIAGRAM

Refer to “Power Seat System” in the wiring diagram. <Ref. to WI-360, WIRING DIAGRAM, Power Seat System.>

6. Subaru Select Monitor

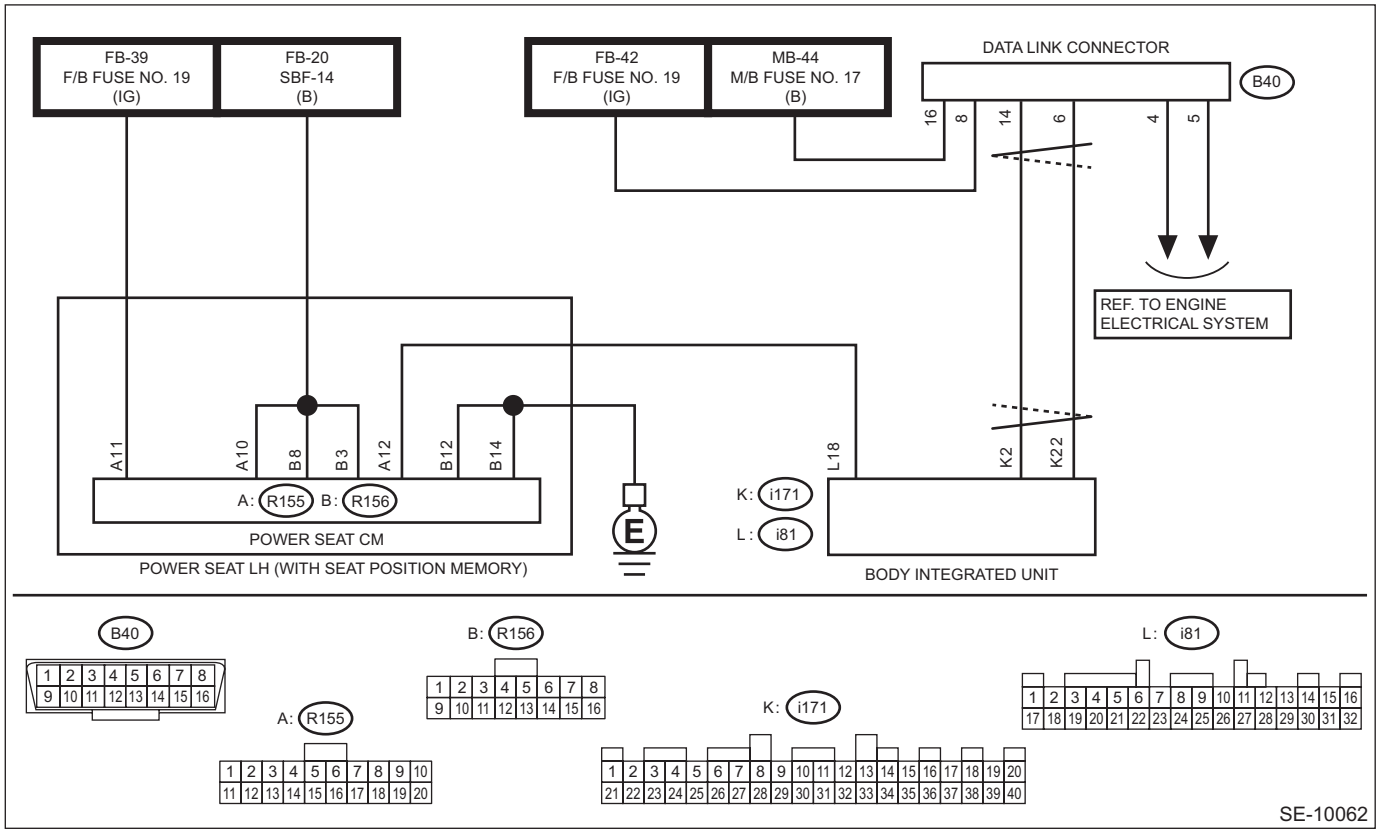
A: OPERATION

- For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.
- When communication with Subaru Select Monitor is not possible, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE”. <Ref. to PSM(diag)-9, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>

B: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

NOTE:
If the communication with the body integrated unit is not possible either, refer to BODY CONTROL SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-11, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>

DETECTING CONDITION:



- Defective harness
- Power supply circuit malfunction
- Defective power seat control module
- Body integrated unit malfunctioning
- Defective LIN communication circuit
- Defective Subaru Select Monitor

TROUBLE SYMPTOM:

Not communicable with Subaru Select Monitor.

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Power seat system <Ref. to WI-360, WIRING DIAGRAM, Power Seat System.>

	Step	Check	Yes	No
1	**CHECK FUSE.** Check the fuse.	Is there any fault?	Go to step **2**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in the harness between the battery and power seat CM.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the power seat CM connector. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between the power seat CM connector and chassis ground. ***Connector & terminal*** ***(R155) No. 10 (+) — Chassis ground (–):*** ***(R155) No. 11 (+) — Chassis ground (–):*** ***(R156) No. 3 (+) — Chassis ground (–):*** ***(R156) No. 8 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **3**.	Repair the open circuit of harness between the power seat CM connector and fuse.
3	**CHECK HARNESS.** Using a tester, measure the resistance between the power seat CM connector and chassis ground. ***Connector & terminal*** ***(R156) No. 12 — Chassis ground:*** ***(R156) No. 14 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness between the power seat CM connector and chassis ground.
4	**CHECK BODY INTEGRATED UNIT.** Check the body control system. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Is there any fault?	Perform the inspection according to the diagnosis for body control system.	Go to step **5**.
5	**CHECK POWER SEAT CM.** 1) Turn the ignition switch to OFF. 2) Connect the power seat CM connector. 3) Turn the ignition switch to ON. 4) Communicate with the power seat CM using the Subaru Select Monitor.	Is communication possible?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the power seat CM. <Ref. to SE-51, Power Seat System.>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «Each System Check» display, select «Power Seat Memory Mode».
3) On «Power Seat Memory Mode» display, select «Diagnostic Code(s) Display».

NOTE:
- For operation procedures, refer to the “PC application help for Subaru Select Monitor”.
- For details concerning DTC, refer to the List of Diagnostic Trouble Codes (DTC).

8. Clear Memory Mode

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «Each System Check» display, select «Power Seat Memory Mode».
3) On «Power Seat Memory Mode» display, select «Clear Memory».

NOTE:
- After performing memory clear, turn the ignition switch ON → OFF, and wait for one minute or more.
- For operation procedures, refer to the “PC application help for Subaru Select Monitor”.

9. Inspection Mode

A: PROCEDURE

It is possible to diagnose the DTC by performing the indicated inspection mode. After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. INSPECTION MODE 1

DTC	Item	Note
B2600	LIN Communication Failure	—
B2601	LIN Circuit Short	—
B2602	Speed Failure	—
B2603	EPB Failure	—
B2605	BATT Low Failure	—

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to PSM(diag)-12, Clear Memory Mode.>
2) After turning the ignition switch ON → OFF, wait for one minute or more.
3) Read the DTC and check that the DTC is not displayed. <Ref. to PSM(diag)-11, Read Diagnostic Trouble Code (DTC).>
4) Turn the ignition switch OFF → ON, and wait for 5 seconds or more.
5) Read the DTC and check that the DTC is not displayed.

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC.

2. INSPECTION MODE 2

DTC	Item	Note
B2604	EEPROM Failure	—

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to PSM(diag)-12, Clear Memory Mode.>
2) After turning the ignition switch ON → OFF, wait for one minute or more.
3) Read the DTC and check that the DTC is not displayed. <Ref. to PSM(diag)-11, Read Diagnostic Trouble Code (DTC).>
4) Initialize the power seat system. <Ref. to SE-75, INITIALIZATION PROCEDURES, ADJUSTMENT, Power Seat System.>
5) Turn the ignition switch OFF → ON, and wait for 5 seconds or more.
6) Read the DTC and check that the DTC is not displayed.

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC.

3. INSPECTION MODE 3

DTC	Item	Note
B2606	Pulse Power Circuit Short	—

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to PSM(diag)-12, Clear Memory Mode.>
2) After turning the ignition switch ON → OFF, wait for one minute or more.
3) Read the DTC and check that the DTC is not displayed. <Ref. to PSM(diag)-11, Read Diagnostic Trouble Code (DTC).>
4) Operate the power seat switch. (Any of slide/reclining/lifter/tilt)
5) Turn the ignition switch OFF → ON, and wait for 5 seconds or more.
6) Read the DTC and check that the DTC is not displayed.

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC.

10.Read Current Data

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «Each System Check» display, select «Power Seat Memory Mode».
3) On «Power Seat Memory Mode» display, select «Current Data Display & Save».

NOTE:
For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

B: LIST

Display	Description	Standard	Note
Battery Terminal Voltage	Battery voltage is displayed.	0 — 25.5 V	—
Ignition switch	Ignition switch status is displayed.	ON: when ignition switch is ON OFF: when ignition switch is OFF	—
Set SW	Status of the set switch in seat memory switch is displayed.	ON: when set switch is ON OFF: when set switch is OFF	—
Memory SW1	Status of the memory switch 1 in seat memory switch is displayed.	ON: when memory switch 1 is ON OFF: when memory switch 1 is OFF	—
Memory SW2	Status of the memory switch 2 in seat memory switch is displayed.	ON: when memory switch 2 is ON OFF: when memory switch 2 is OFF	—
Slide SW	Status of the slide switch in power seat switch is displayed.	OFF: when slide switch is OFF FRONT: when slide switch is set to FRONT REAR: when slide switch is set to REAR	—
Reclining SW	Status of the reclining switch in power seat switch is displayed.	OFF: when reclining switch is OFF FRONT: when reclining switch is set to FRONT REAR: when reclining switch is set to REAR	—
Lifter SW	Status of the lifter switch in power seat switch is displayed.	OFF: when lifter switch is OFF UP: when lifter switch is set to UP DOWN: when lifter switch is set to DOWN	—
Tilt SW	Status of the tilt switch in power seat switch is displayed.	OFF: when tilt switch is OFF UP: when tilt switch is set to UP DOWN: when tilt switch is set to DOWN	—
Pulse Power Circuit	Motor pulse sensor power supply circuit status is displayed.	Normal: when normal Abnormal: when abnormal	—
Slide Output	Power seat control module output status is displayed. (Slide motor)	OFF: when OFF FRONT: when moved in the front direction REAR: when moved in the rear direction	—
Reclining Output	Power seat control module output status is displayed. (Reclining motor)	OFF: when OFF FRONT: when moved in the front direction REAR: when moved in the rear direction	—
Lifter Output	Power seat control module output status is displayed. (Lifter motor)	OFF: when OFF UP: when moved in the upper direction DOWN: when moved in the lower direction	—
Tilt Output	Power seat control module output status is displayed. (Tilt motor)	OFF: when OFF UP: when moved in the upper direction DOWN: when moved in the lower direction	—
Memory SW1 Memorized	Registration status of the memory switch 1 in seat memory switch	ON: when registered OFF: when not registered	—
Memory SW2 Memorized	Registration status of the memory switch 2 in seat memory switch	ON: when registered OFF: when not registered	

Display	Description	Standard	Note
Keyless Access & Start Link 1 Memorized	Registration status of keyless access key	ON: when registered OFF: when not registered	Seat memory operates when key No. currently displayed in «Keyless Access Key Information» is set to ON.
Keyless Access & Start Link 2 Memorized	Registration status of keyless access key	ON: when registered OFF: when not registered	
Keyless Access & Start Link 3 Memorized	Registration status of keyless access key	ON: when registered OFF: when not registered	
Keyless Access & Start Link 4 Memorized	Registration status of keyless access key	ON: when registered OFF: when not registered	
Keyless Access & Start Link 5 Memorized	Registration status of keyless access key	ON: when registered OFF: when not registered	
Keyless Access & Start Link 6 Memorized	Registration status of keyless access key	ON: when registered OFF: when not registered	
Keyless Access & Start Link 7 Memorized	Registration status of keyless access key	ON: when registered OFF: when not registered	
Keyless Access Key Information	Key No. currently identified by the vehicle is displayed.	OFF: when no key is registered Keyless Access & Start Link 1: Keyless Access & Start Link 2: Keyless Access & Start Link 3: Keyless Access & Start Link 4: Keyless Access & Start Link 5: Keyless Access & Start Link 6: Keyless Access & Start Link 7:	—
Slide Position	Slide motor position is displayed.	-32768 — 32767	—
Reclining Position	Reclining motor position is displayed.	-32768 — 32767	—
Lifter Position	Lifter motor position is displayed.	-32768 — 32767	—
Tilt Position	Tilt motor position is displayed.	-32768 — 32767	—

11.Freeze Frame Data Display

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «Each System Check» display, select «Power Seat Memory Mode».
3) On «Power Seat Memory Mode» display, select «Freeze Frame Data Display».

NOTE:
For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

B: LIST

Display	Content	Note
Battery Terminal Voltage	Battery voltage is displayed.	—
Slide Output	Power seat control module output status is displayed. (Slide motor)	—
Reclining Output	Power seat control module output status is displayed. (Reclining motor)	—
Lifter Output	Power seat control module output status is displayed. (Lifter motor)	—
Tilt Output	Power seat control module output status is displayed. (Tilt motor)	—

12.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Reference
B2600	LIN Communication Failure	<Ref. to PSM(diag)-19, DTC B2600 LIN COMMUNICATION FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2601	LIN Circuit Short	<Ref. to PSM(diag)-20, DTC B2601 LIN CIRCUIT SHORT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2602	Speed Failure	<Ref. to PSM(diag)-21, DTC B2602 SPEED FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2603	EPB Failure	<Ref. to PSM(diag)-22, DTC B2603 EPB FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2604	EEPROM Failure	<Ref. to PSM(diag)-23, DTC B2604 EEPROM FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2605	BATT Low Failure	<Ref. to PSM(diag)-24, DTC B2605 BATT LOW FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2606	Pulse Power Circuit Short	<Ref. to PSM(diag)-26, DTC B2606 PULSE POWER CIRCUIT SHORT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

13.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B2600 LIN COMMUNICATION FAILURE

DTC DETECTING CONDITION:

No signal is received from body integrated unit for a certain period of time (2100 ms) or more. Or, transmission from the power seat control module is not possible for a certain period of time (2100 ms) or more.

TROUBLE SYMPTOM:

- Seat operation is possible with manual operation, but not with memory function.
- Registration is possible with memory switch, but not with keyless access push button start system.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of the power seat control module using the Subaru Select Monitor. <Ref. to PSM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B2600 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Is DTC U0208 displayed? (Current malfunction)	Perform inspection according to DTC. <Ref. to BC(diag)-54, DTC U0208 LOST COMMUNICATION WITH SEAT MEMORY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK BODY INTEGRATED UNIT.** 1) Replace with a power seat control module working properly. <Ref. to SE-52, POWER SEAT CONTROL MODULE (SEAT WITH MEMORY FUNCTION), REMOVAL, Power Seat System.> 2) Read the DTC of the power seat control module using the Subaru Select Monitor.	Is DTC B2600 displayed? (Current malfunction)	Replace the body integrated unit. <Ref. to SL-81, NOTE, Body Integrated Unit.>	There was an abnormality in power seat control module.

B: DTC B2601 LIN CIRCUIT SHORT

DTC DETECTING CONDITION:

LIN communication circuit with the body integrated unit is shorted for a certain period of time (400 ms) or more.

TROUBLE SYMPTOM:

Seat operation is possible with manual operation, but not with memory function.
Registration is possible with memory switch, but not with keyless access push button start system.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of the power seat control module using the Subaru Select Monitor. <Ref. to PSM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B2601 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Is DTC U0208 displayed? (Current malfunction)	Perform inspection according to DTC. <Ref. to BC(diag)-54, DTC U0208 LOST COMMUNICATION WITH SEAT MEMORY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK BODY INTEGRATED UNIT.** 1) Replace with a power seat control module working properly. <Ref. to SE-52, POWER SEAT CONTROL MODULE (SEAT WITH MEMORY FUNCTION), REMOVAL, Power Seat System.> 2) Read the DTC of the power seat control module using the Subaru Select Monitor.	Is DTC B2601 displayed? (Current malfunction)	Replace the body integrated unit. <Ref. to SL-81, NOTE, Body Integrated Unit.>	There was an abnormality in power seat control module.

C: DTC B2602 SPEED FAILURE

DTC DETECTING CONDITION:
Detection of 300 km/h or more continued for a certain period of time (300 ms) or more.
TROUBLE SYMPTOM:
Seat operation is possible with manual operation, but not with memory function.
(Memory registration is possible.)

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of the power seat control module using the Subaru Select Monitor. <Ref. to PSM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B2602 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK DTC.** Perform the inspection for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Perform the inspection according to the diagnosis for LAN system.	Go to step **3**.
3	**CHECK VEHICLE SPEED SIGNAL OF VDC MODULE.** Stop the vehicle, and read the current data values «FR Wheel Speed»«FL Wheel Speed»«RR Wheel Speed»«RL Wheel Speed» of VDC module using Subaru Select Monitor. <Ref. to VDC(diag)-16, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>	Is the displayed value abnormal?	Replace the VDC module, or inspect the vehicle speed sensor harness circuit.	Go to step **4**.
4	**CHECK BODY INTEGRATED UNIT VEHICLE SPEED SIGNAL.** Stop the vehicle, and read the current data «Front Wheel Speed» of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-20, Read Current Data.>	Is the displayed value abnormal?	Replace the body integrated unit. <Ref. to SL-81, NOTE, Body Integrated Unit.>	Go to step **5**.
5	**CHECK POWER SEAT CONTROL MODULE.** 1) Replace with a power seat control module working properly. <Ref. to SE-52, POWER SEAT CONTROL MODULE (SEAT WITH MEMORY FUNCTION), REMOVAL, Power Seat System.> 2) Read the DTC of the power seat control module using the Subaru Select Monitor.	Is DTC B2602 displayed? (Current malfunction)	Replace the body integrated unit. <Ref. to SL-81, NOTE, Body Integrated Unit.>	There was an abnormality in power seat control module.

D: DTC B2603 EPB FAILURE

DTC DETECTING CONDITION:
Detection of EPB abnormal signal continued for a certain period of time (2100 ms) or more.
TROUBLE SYMPTOM:
Seat operation is possible with manual operation, but not with memory function.
(Memory registration is possible.)

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of the power seat control module using the Subaru Select Monitor. <Ref. to PSM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B2603 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK DTC.** Perform the inspection for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Perform the inspection according to the diagnosis for LAN system.	Go to step **3**.
3	**CHECK BODY INTEGRATED UNIT.** 1) Replace with a power seat control module working properly. <Ref. to SE-52, POWER SEAT CONTROL MODULE (SEAT WITH MEMORY FUNCTION), REMOVAL, Power Seat System.> 2) Read the DTC of the power seat control module using the Subaru Select Monitor.	Is DTC B2603 displayed? (Current malfunction)	Replace the body integrated unit. <Ref. to SL-81, NOTE, Body Integrated Unit.>	There was an abnormality in power seat control module.

E: DTC B2604 EEPROM FAILURE

DTC DETECTING CONDITION:
There is a difference between writing value and reading value of power seat control module EEPROM.
TROUBLE SYMPTOM:
Seat operation is possible with manual operation, but not with memory function.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of the power seat control module using the Subaru Select Monitor. <Ref. to PSM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B2604 displayed? (Current malfunction)	Replace the power seat control module. <Ref. to SE-52, POWER SEAT CONTROL MODULE (SEAT WITH MEMORY FUNCTION), REMOVAL, Power Seat System.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

F: DTC B2605 BATT LOW FAILURE

DTC DETECTING CONDITION:
During the motor operation, voltage for power seat control module drops for a moment. (6 V or less)
TROUBLE SYMPTOM:
- Seat positions cannot be memorized.
- Seat operation is possible with manual operation, but not with memory function.

WIRING DIAGRAM:

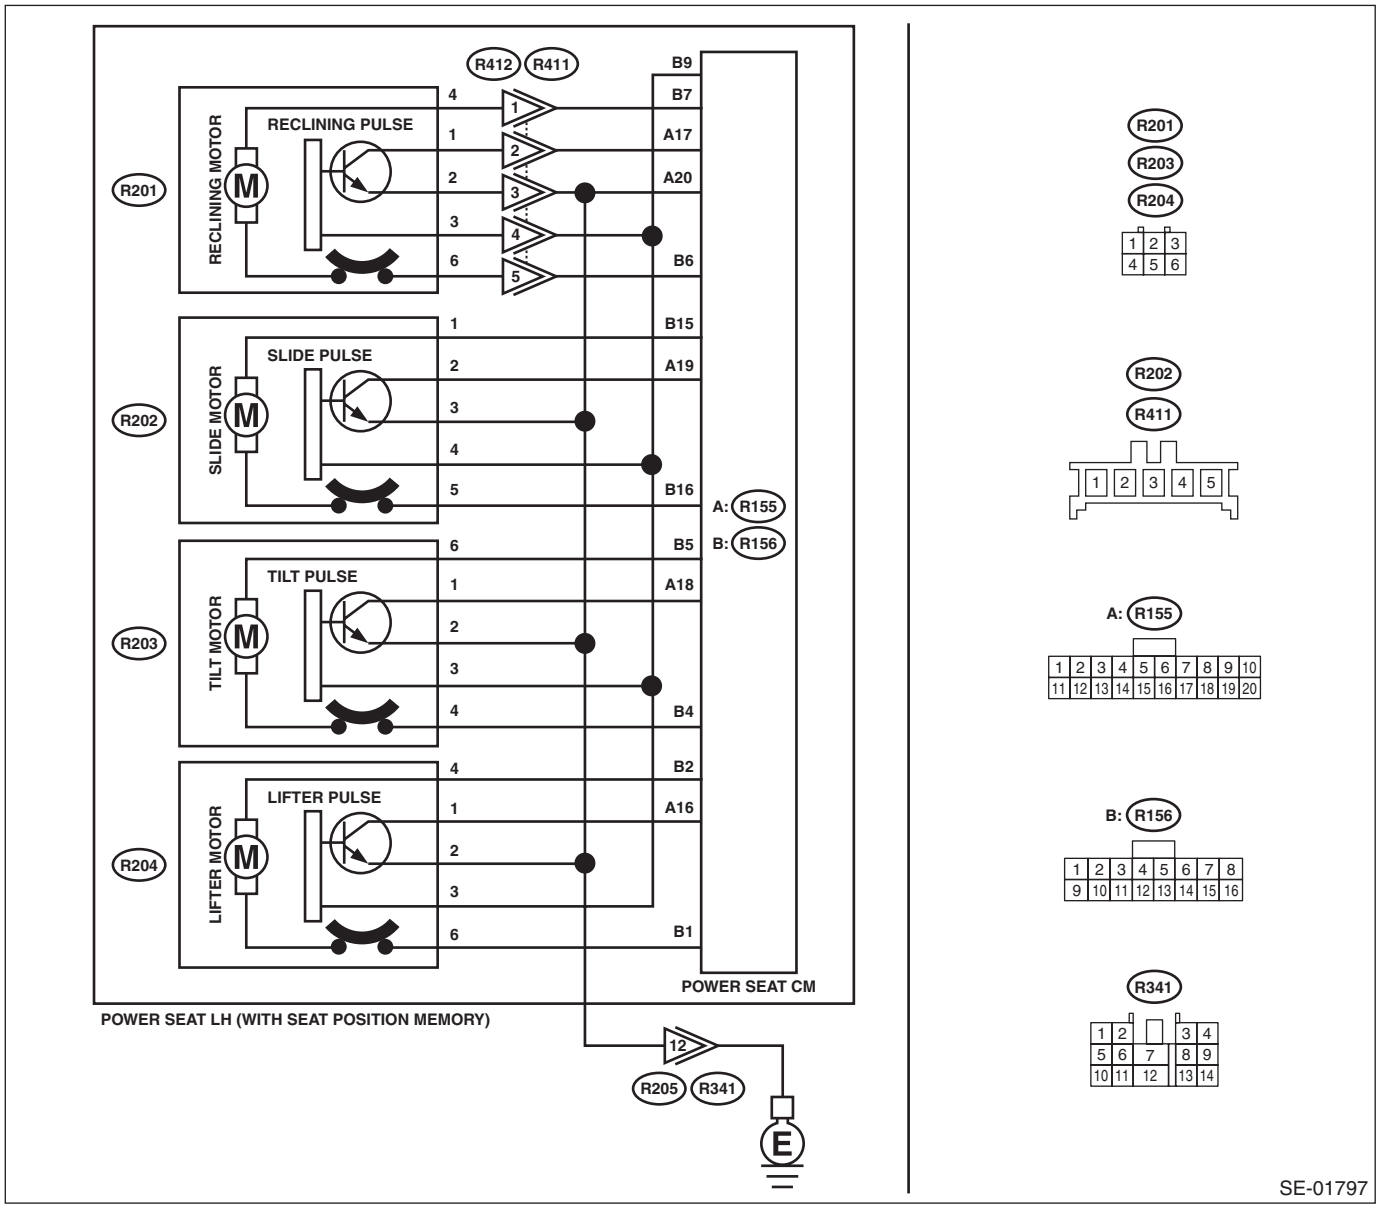
NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Power seat system <Ref. to WI-362, DRIVER'S SEAT (WITH MEMORY), WIRING DIAGRAM, Power Seat System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of the power seat control module using the Subaru Select Monitor. <Ref. to PSM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B2605 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK DTC.** 1) Perform the clear memory operation. <Ref. to PSM(diag)-12, OPERATION, Clear Memory Mode.> 2) Disconnect, and then connect the power seat control module connector. 3) Turn the ignition switch to ON. 4) Move the power seat. 5) Read the DTC of the power seat control module using the Subaru Select Monitor. <Ref. to PSM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B2605 displayed? (Current malfunction)	Go to step **3**.	Repair or replace the poor contact of connector.
3	**CHECK HARNESS.** 1) Disconnect the power seat control module connector. 2) Turn the ignition switch to ON. 3) Using the tester, measure the voltage between power seat control module connector and chassis ground. ***Connector & terminal*** ***(R155) No. 10 (+) — Chassis ground (–):*** ***(R155) No. 11 (+) — Chassis ground (–):*** ***(R156) No. 3 (+) — Chassis ground (–):*** ***(R156) No. 8 (+) — Chassis ground (–):***	Is the voltage 8.5 — 16.5 V?	Replace the power seat control module. <Ref. to SE-52, POWER SEAT CONTROL MODULE (SEAT WITH MEMORY FUNCTION), REMOVAL, Power Seat System.>	Repair the open circuit in harness between power seat control module connector and fuse.

G: DTC B2606 PULSE POWER CIRCUIT SHORT

DTC DETECTING CONDITION:



Short circuit in the pulse sensor is detected during the motor operation for a certain period of time (12 ms) or more.

TROUBLE SYMPTOM:

- Seat memory does not operate.
- Seat operation stops immediately after manual operation is performed.

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Power seat system <Ref. to WI-362, DRIVER'S SEAT (WITH MEMORY), WIRING DIAGRAM, Power Seat System.>

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Perform the clear memory operation. <Ref. to PSM(diag)-12, OPERATION, Clear Memory Mode.> 2) Disconnect, and then connect the power seat control module connector. 3) Turn the ignition switch to ON. 4) Move the power seat. 5) Read the DTC of the power seat control module using the Subaru Select Monitor. <Ref. to PSM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B2606 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (GROUND SHORT CIRCUIT).** 1) Disconnect the power seat control module connector. 2) Disconnect the connectors of all motors (slide/tilt/lifter/reclining). 3) Using the tester, measure the resistance between power seat control module connector and chassis ground. ***Connector & terminal*** ***(R156) No. 9 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair or replace the short circuit to ground in harness between power seat control module connector and motor connector.
3	**CHECK SLIDE MOTOR.** 1) Connect the slide motor connector. 2) Using the tester, measure the resistance between power seat control module connector and chassis ground. ***Connector & terminal*** ***(R156) No. 9 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the seat cushion frame assembly. <Ref. to SE-19, POWER SEAT (DRIVER'S SEAT), DISASSEMBLY, Front Seat.>
4	**CHECK TILT MOTOR.** 1) Disconnect the slide motor connector. 2) Connect the tilt motor connector. 3) Using the tester, measure the resistance between power seat control module connector and chassis ground. ***Connector & terminal*** ***(R156) No. 9 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Replace the seat cushion frame assembly. <Ref. to SE-19, POWER SEAT (DRIVER'S SEAT), DISASSEMBLY, Front Seat.>
5	**CHECK LIFTER MOTOR.** 1) Disconnect the tilt motor connector. 2) Connect the lifter motor connector. 3) Using the tester, measure the resistance between power seat control module connector and chassis ground. ***Connector & terminal*** ***(R156) No. 9 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Replace the seat cushion frame assembly. <Ref. to SE-19, POWER SEAT (DRIVER'S SEAT), DISASSEMBLY, Front Seat.>

Step		Check	Yes	No
6	**CHECK RECLINING MOTOR.** 1) Disconnect the lifter motor connector. 2) Connect the reclining motor connector. 3) Using the tester, measure the resistance between power seat control module connector and chassis ground. ***Connector & terminal*** ***(R156) No. 9 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the power seat control module. <Ref. to SE-52, POWER SEAT CONTROL MODULE (SEAT WITH MEMORY FUNCTION), REMOVAL, Power Seat System.>	Replace the backrest frame assembly. <Ref. to SE-19, POWER SEAT (DRIVER'S SEAT), DISASSEMBLY, Front Seat.>

14.Diagnostics with Phenomenon

A: INSPECTION

Refer to “TROUBLE SYMPTOM” for the power seat system. <Ref. to SE-55, TROUBLE SYMPTOM, INSPECTION, Power Seat System.>

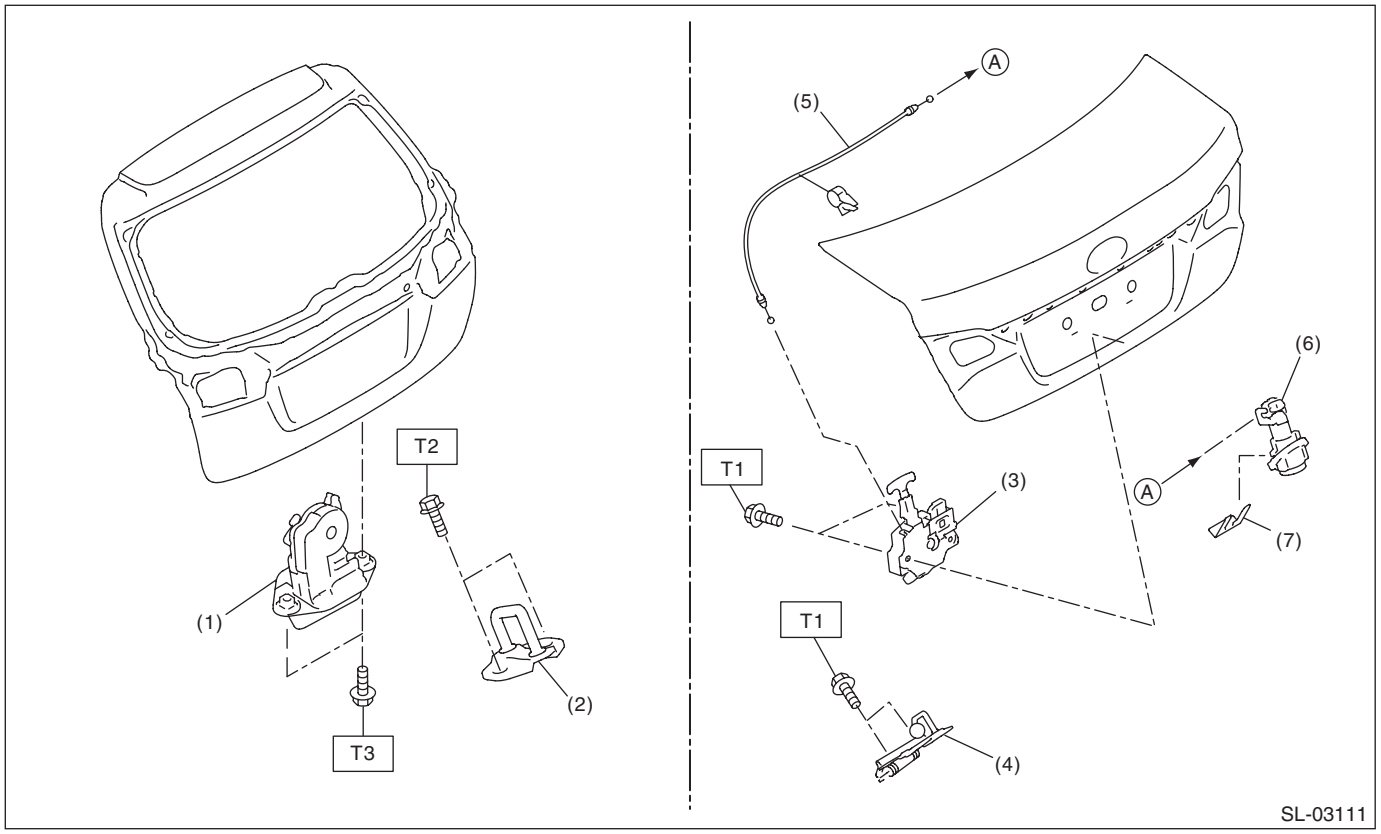
1. General Description

A: COMPONENT

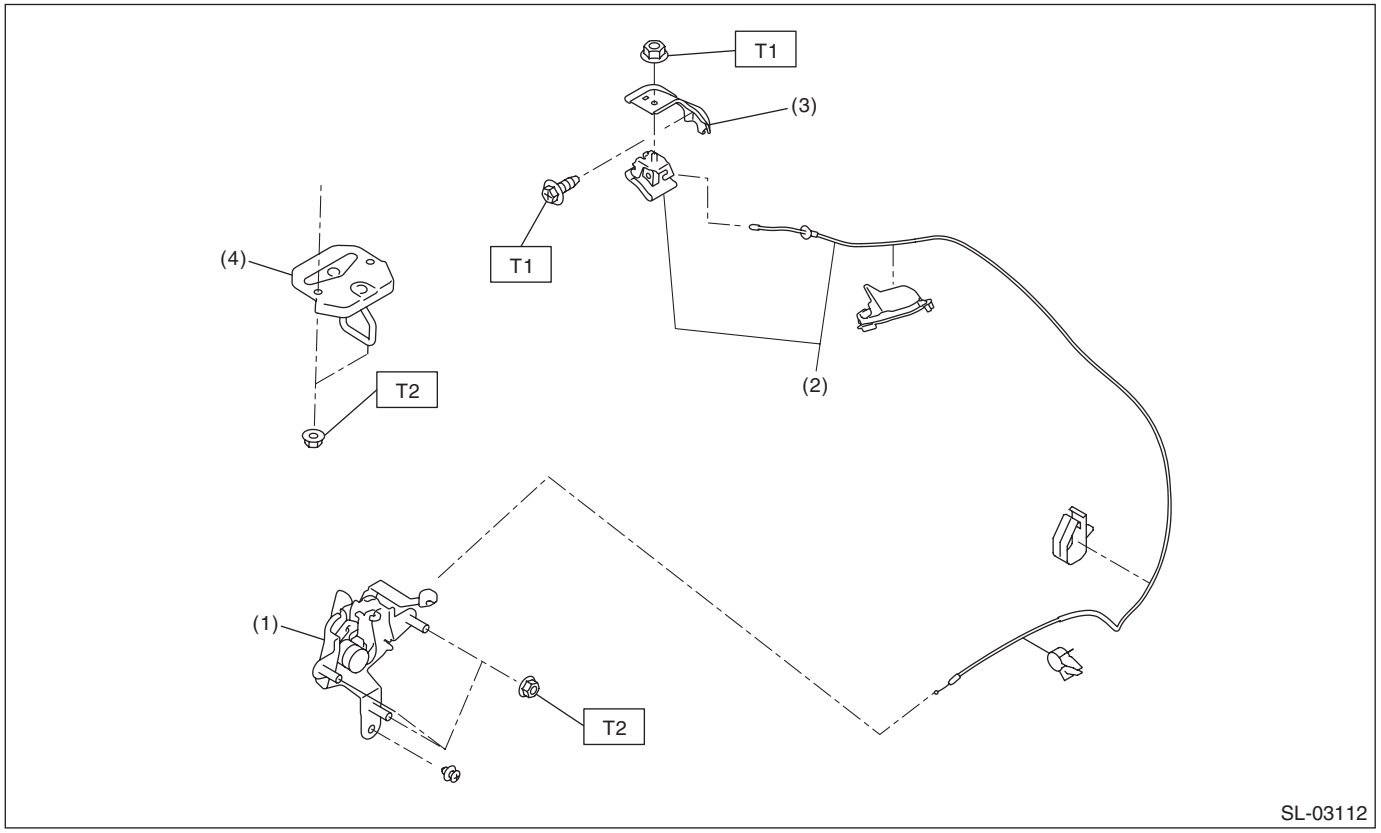
1. DOOR LOCK ASSEMBLY



(A) Front
(B) Rear

(1) Grommet - screw
(2) Remote ASSY - door
(3) Cap remote
(4) Latch & actuator ASSY - front
(5) Handle - door outer (model with keyless access with push button start)
(6) Cover - handle front outer (passenger's seat)
(7) Handle - door outer (model without keyless access with push button start)
(8) Cover - handle front outer (driver's seat)
(9) Key lock - door (driver's seat only)
(10) Spacer - door handle outer B
(11) Spacer - door handle outer A
(12) Frame ASSY - front door outer
(13) Striker - door
(14) Latch & actuator ASSY - rear
(15) Cover - handle rear outer
(16) Frame ASSY - rear door outer

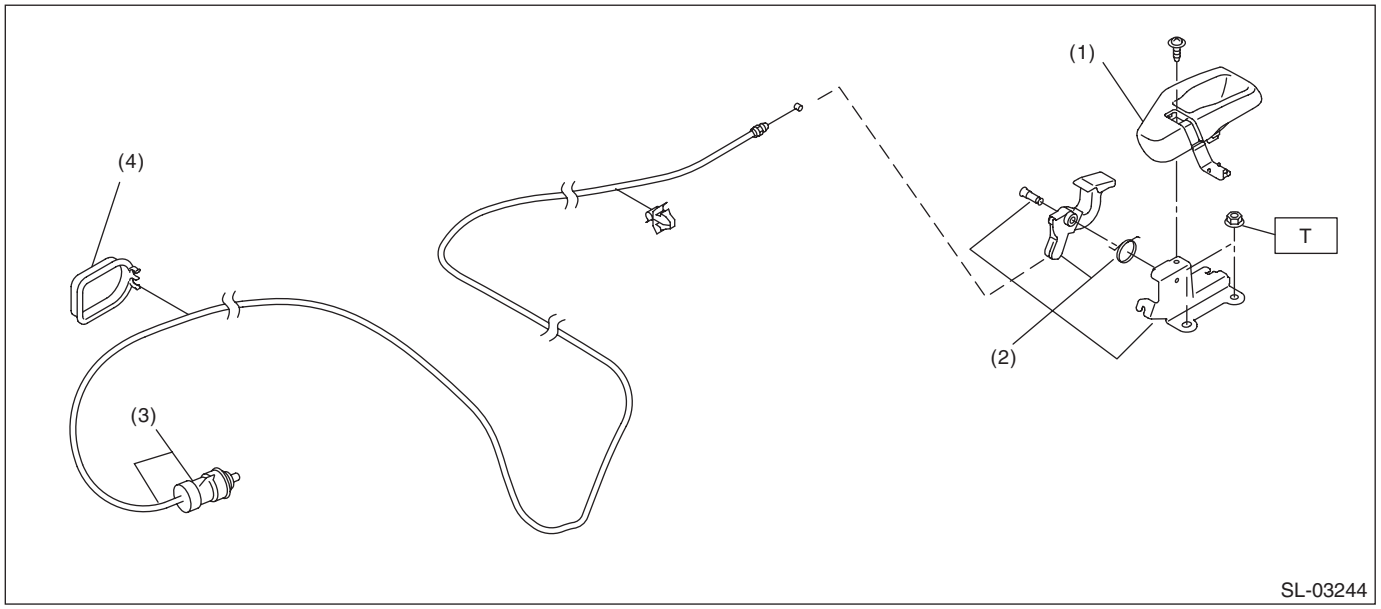
Tightening torque: N·m (kgf-m, ft-lb)
T1: 6.5 (0.7, 4.8)
T2: 7.5 (0.8, 5.5)
T3: 18 (1.8, 13.3)



2. REAR GATE LOCK AND TRUNK LID LOCK

(1) Latch & actuator - rear gate
(2) Striker - rear gate
(3) Lock ASSY - trunk lid
(4) Striker - trunk lid
(5) Cable ASSY - trunk lid
(6) Key cylinder (trunk lid only)
(7) Clamp - key trunk lid

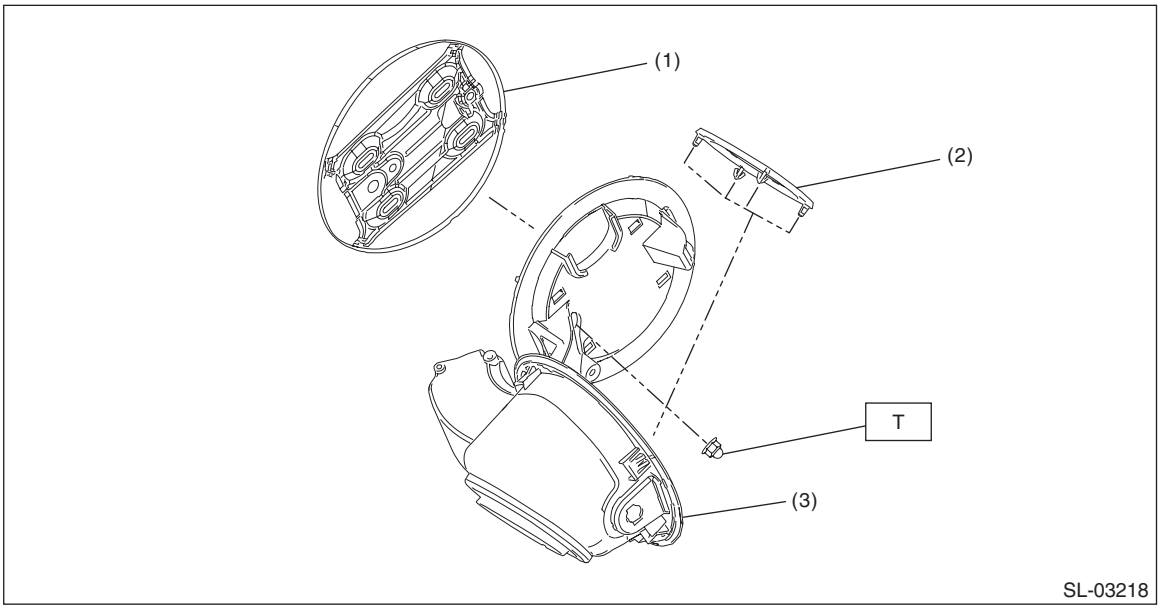
Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 25 (2.5, 18.4)
T3: 28 (2.9, 20.7)



3. FRONT HOOD LOCK

(1) Lock ASSY - front hood
(2) Cable - front hood
(3) Bracket - opener handle
(4) Striker - front hood

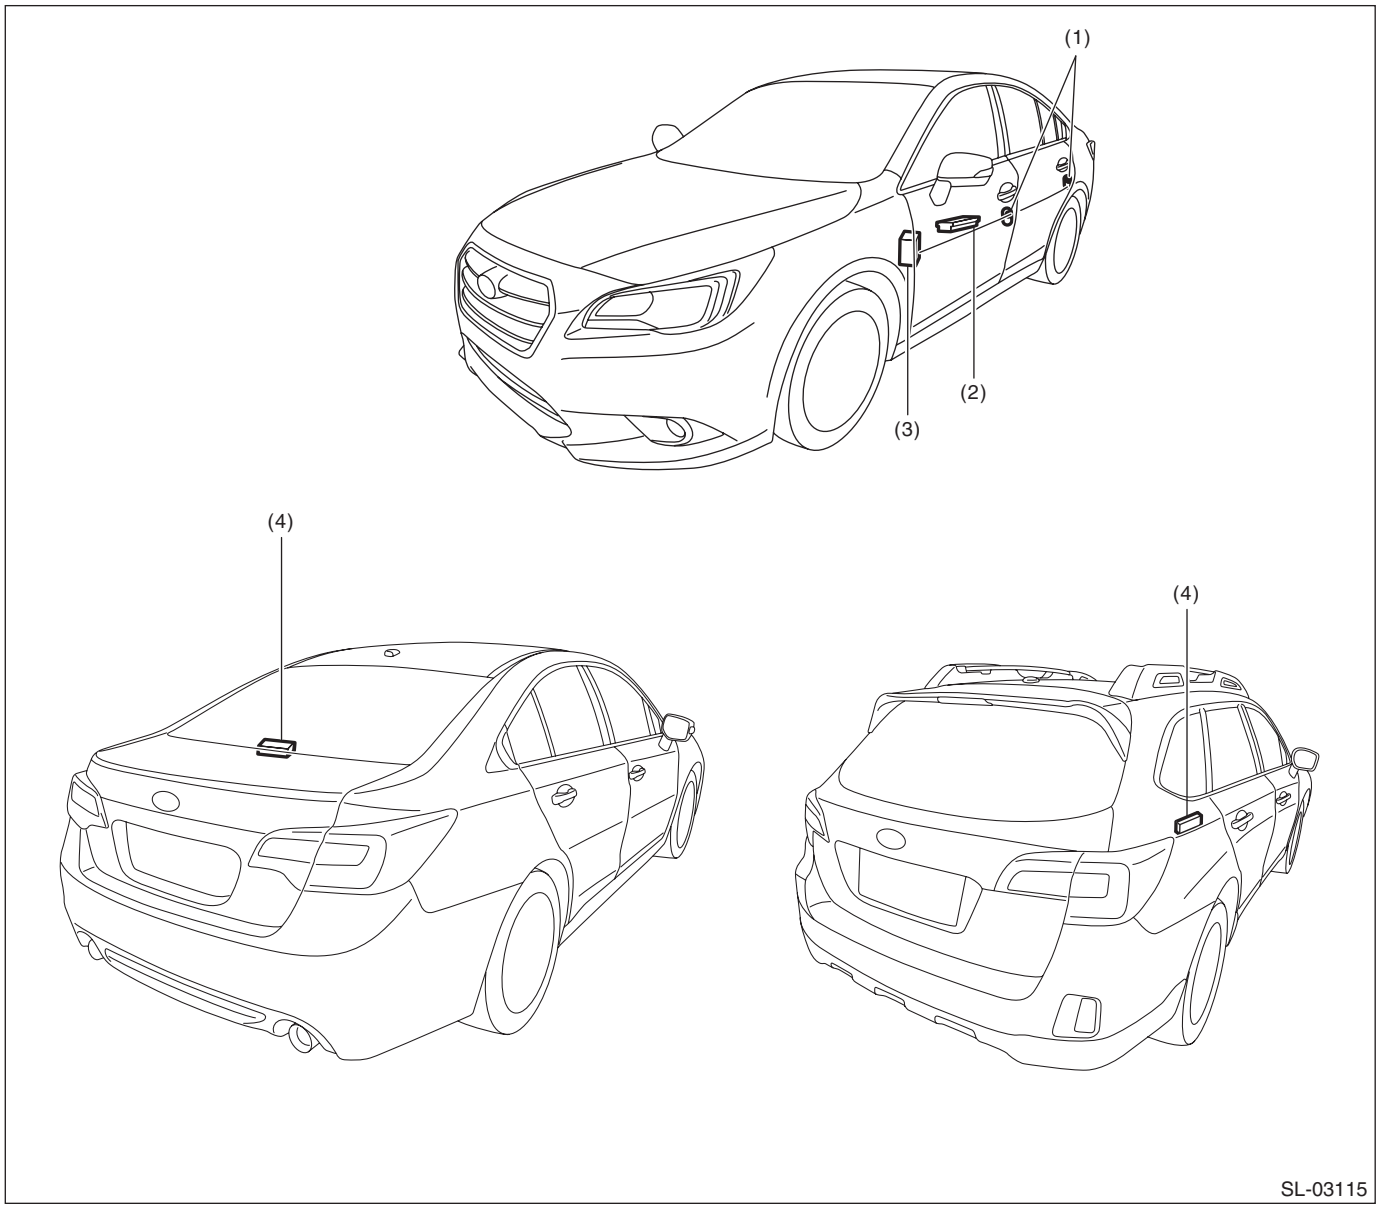
Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 33 (3.4, 24.3)



4. REMOTE OPENER

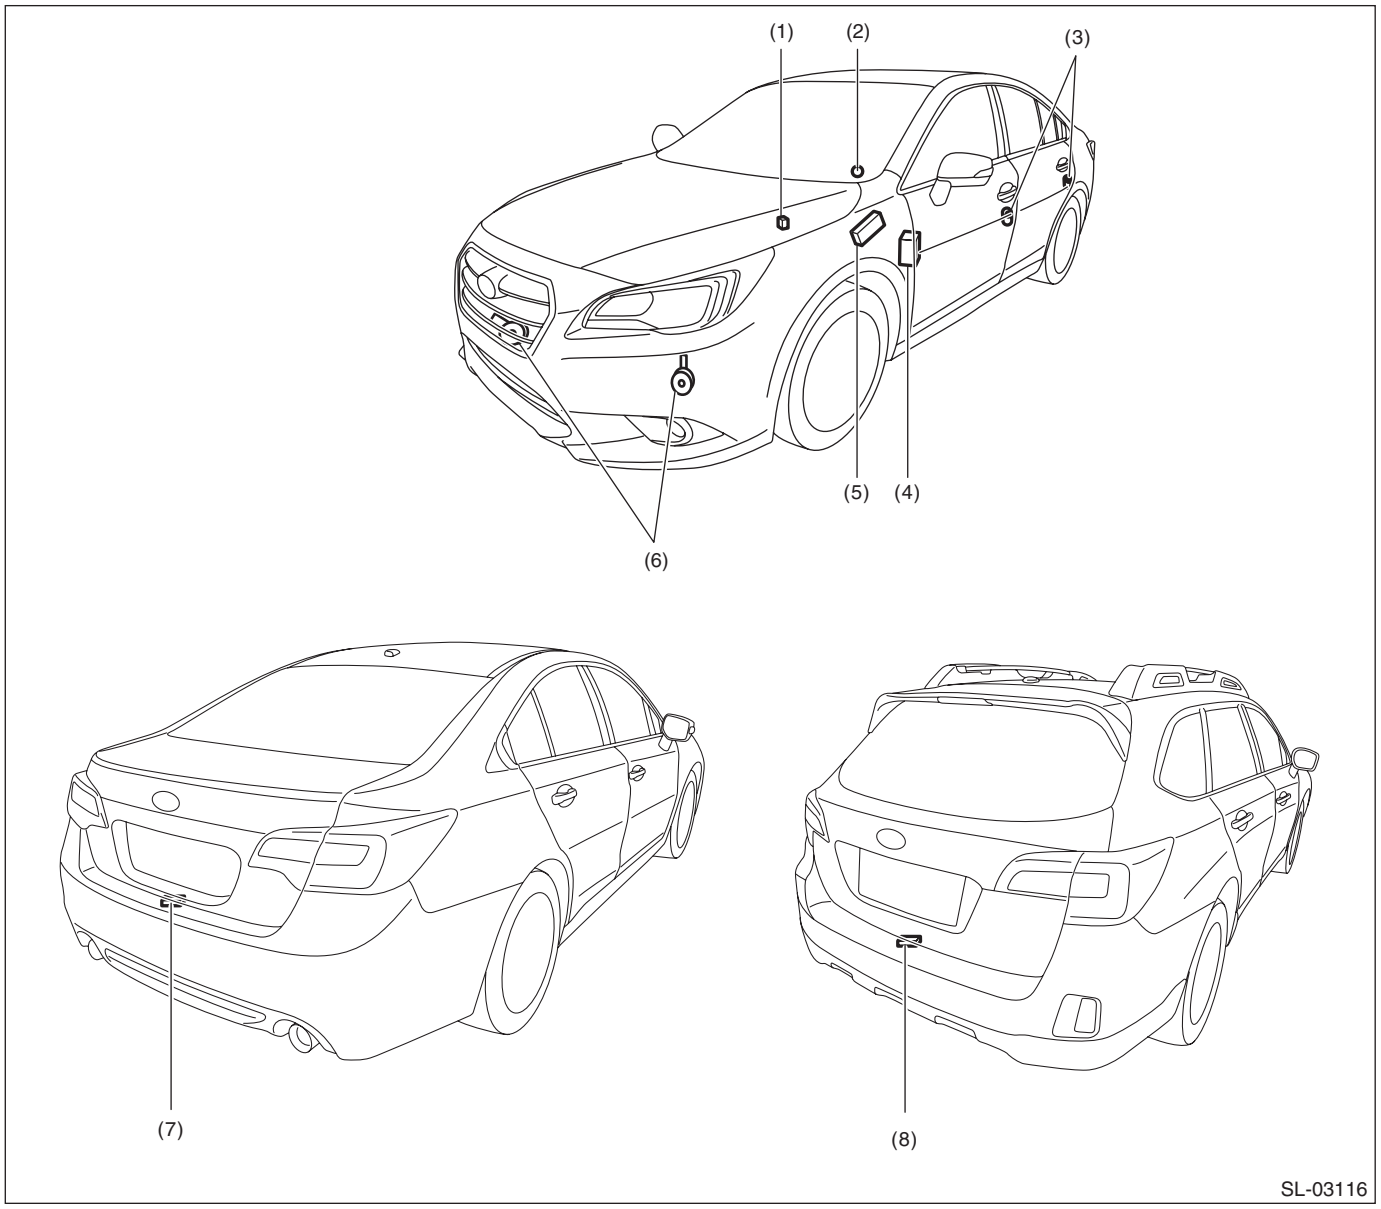
(1) Cover - handle
(2) Pull handle - opener
(3) Cable ASSY - fuel
(4) Protector - cable (OUTBACK model)

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)



5. FUEL FLAP

(1) Flap - COMPL fuel
(2) Ring clip
(3) Saucer - COMPL



Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

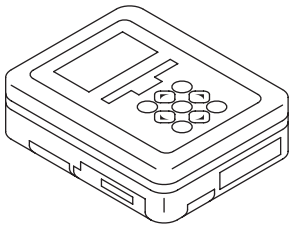
6. KEYLESS ENTRY SYSTEM

(1) Door switch
(2) Power window main switch
(3) Body integrated unit
(4) Keyless entry control module

7. SECURITY SYSTEM

(1)	Horn relay (in main fuse box)	(4)	Body integrated unit	(7)	Trunk lid latch switch (sedan model)
(2)	Security indicator light (in combination meter)	(5)	Impact sensor (driver's seat instrument panel side) (dealer option)	(8)	Rear gate latch switch (OUTBACK model)
(3)	Door switch	(6)	Horn		

8. KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM



NOTE:
- Except for model without keyless access with push button start
- Refer to "Electrical Component Location" of "KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)" section. <Ref. to KPS(diag)-11, Electrical Component Location.>

B: CAUTION

• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.
• If any immobilizer related part has been replaced, make sure to register the immobilizer.
• Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of “AIRBAG SYSTEM”. <Ref. to AB-10, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
• When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform “VDC sensor midpoint setting mode” of the VDC. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: PREPARATION TOOL

1. SPECIAL TOOL

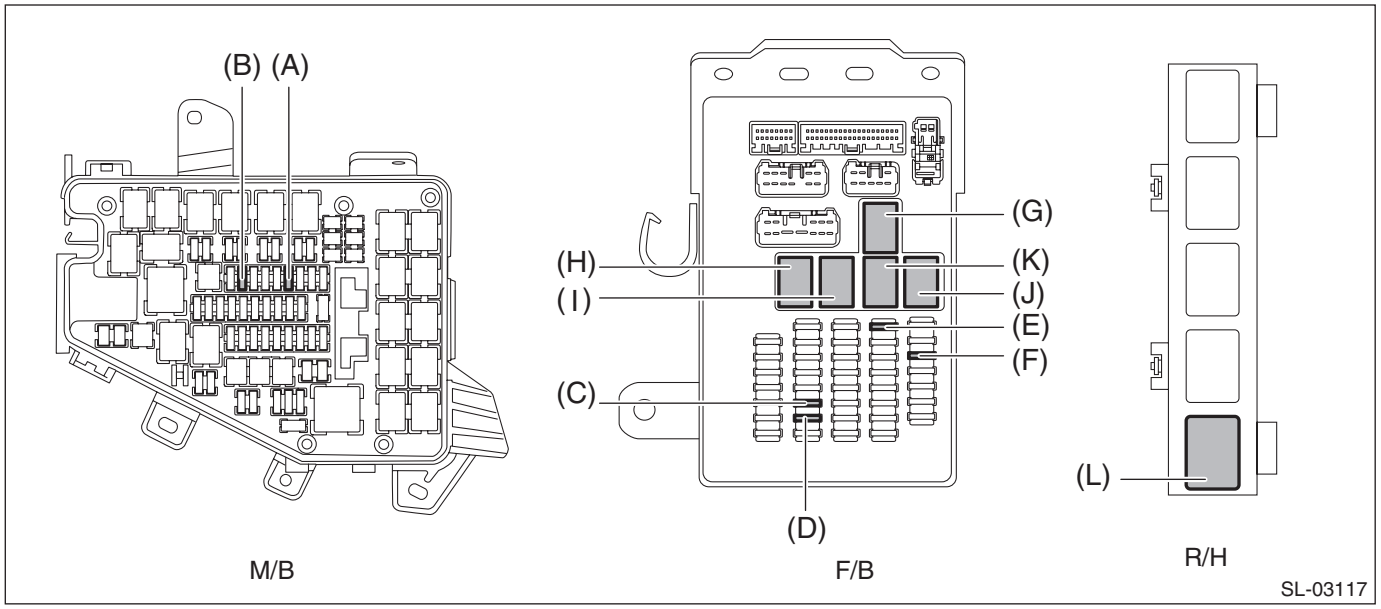


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system. NOTE: For detailed operation procedures of SUBARU SELECT MONITOR III KIT, refer to “PC application help for Subaru Select Monitor”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.
Drill	Used for replacing ignition key lock.
Reverse tap	Used for replacing ignition key lock.
TORX® T30	Used for removing and installing door outer handle cover and frame assembly.
Clip remover	Used for removing trim clip.

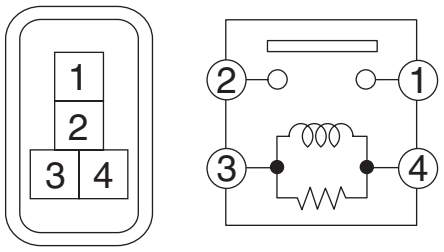
2. Relay and Fuse

A: LOCATION

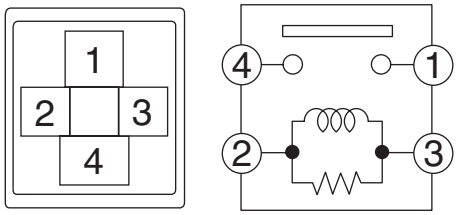
Main fuse box (M/B)	Fuse 15 A (body integrated unit)	(A)
	Fuse 20 A (body integrated unit)	(B)
Fuse & relay box (F/B)	Fuse 10 A (body integrated unit, immobilizer antenna)	(C)
	Fuse 7.5 A (keyless access CM)	(D)
	Fuse 7.5 A (immobilizer control module)	(E)
	Fuse 7.5 A (body integrated unit)	(F)
	IG relay 1	(G)
	IG relay 2	(H)
	Starter relay	(I)
	Accessory relay 1	(J)
	Accessory relay 2	(K)
Relay holder (R/H)	Starter cut relay	(L)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-23, Power Supply Circuit.>

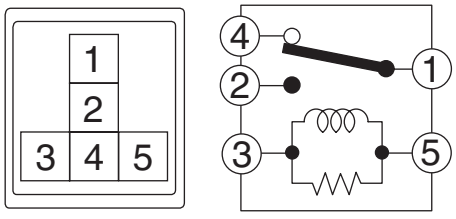
B: INSPECTION



1. CHECK FUSE



1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.



NOTE:
If the fuse is blown again, check the system wiring harness.

2. CHECK RELAY

1) Measure the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 LI-01273
1 — 2	Apply battery voltage between terminals 4 and 3.	Less than 1 Ω	

Terminal No.	Inspection conditions	Standard	Circuit
1 — 4	Always	1 MΩ or more	 AC-02796
1 — 4	Apply battery voltage between terminals 2 and 3.	Less than 1 Ω	

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 SL-01566
1 — 4	Always	Less than 1 Ω	
1 — 2	Apply battery voltage between terminals 3 and 5.	Less than 1 Ω	

2) Replace the relay if the inspection result is not within the standard value.

3. Door Lock Control System

A: WIRING DIAGRAM

Refer to “Keyless Entry System” in the wiring diagram. <Ref. to WI-326, WIRING DIAGRAM, Keyless Entry System.>

B: ELECTRICAL SPECIFICATION

1. BODY INTEGRATED UNIT

Refer to “Control Module I/O Signal” of “BODY CONTROL SYSTEM (DIAGNOSTICS)” section. <Ref. to BC(diag)-8, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

1. SYMPTOM CHART

Symptoms	Repair order	Reference
The door lock control system does not operate.	1. Remove and visually inspect the following fuses. • No. 14 (in fuse & relay box) • No. 26 (in fuse & relay box) • No. 14 (in main fuse box)	If the fuse is blown out, replace the fuse with a new part. When there is no defective with the fuse, check the power supply and ground circuit. <Ref. to SL-12, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Door Lock Control System.>
	2. Check the power supply and ground circuit for body integrated unit.	<Ref. to SL-12, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Door Lock Control System.>
	3. Check the door lock switch and the circuit.	<Ref. to SL-12, CHECK DOOR LOCK SWITCH, INSPECTION, Door Lock Control System.>
	4. Check the rear gate/trunk opener button and the circuit.	<Ref. to SL-15, CHECK REAR GATE OPENER BUTTON CIRCUIT, INSPECTION, Door Lock Control System.>
	5. Check the door lock actuator and the circuit.	<Ref. to SL-13, CHECK DOOR LOCK ACTUATOR AND CIRCUIT, INSPECTION, Door Lock Control System.>
A specific door lock actuator does not operate.	Check the door lock actuator and circuit.	<Ref. to SL-13, CHECK DOOR LOCK ACTUATOR AND CIRCUIT, INSPECTION, Door Lock Control System.>

2. CHECK POWER SUPPLY AND GROUND CIRCUIT

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY.** 1) Disconnect the connector of body integrated unit. 2) Measure the voltage between the body integrated unit connector and chassis ground. ***Connector & terminal*** ***(B280) No. 4 (+) — Chassis ground (–):*** ***(B280) No. 7 (+) — Chassis ground (–):*** ***(B281) No. 32 (+) — Chassis ground (–):***	Is the voltage 9 V or more?	Go to step **2**.	Check the harness for open or short circuit between body integrated unit and fuse.
2	**CHECK GROUND CIRCUIT.** Measure the resistance between the body integrated unit connector and chassis ground. ***Connector & terminal*** ***(i84) No. 4 — Chassis ground:*** ***(B280) No. 2 — Chassis ground:***	Is the resistance less than 10 Ω?	The power supply and ground circuit are OK.	Repair or replace the harness.

3. CHECK DOOR LOCK SWITCH

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display the data of «Manual lock SW input». NOTE: For detailed procedures, refer to “PC application help for Subaru Select Monitor”.	Does the display change to OFF ←→ ON, when the door lock switch is moved to LOCK?	Go to step **2**.	Go to step **3**.
2	**CHECK DOOR LOCK SWITCH.** From the condition in step 1), operate the door lock switch (driver’s and passenger’s) in the UNLOCK direction.	Does the display switch between OFF ←→ ON?	The door lock switch is OK.	Go to step **4**.
3	**CHECK POWER WINDOW MAIN SWITCH.** 1) Disconnect the power window main switch connector. 2) Measure the resistance between terminals when moving the power window switch (door lock switch) to LOCK direction. ***Connector & terminal*** ***Driver’s side*** ***(D7) No. 3 — (D7) No. 1:*** ***Passenger’s side*** ***(D125) No. 4 — (D125) No. 5:***	Does the resistance change from 1 MΩ or more to less than 10 Ω?	Go to step **4**.	Replace the power window main switch. <Ref. to GW-12, Power Window Control Switch.>
4	**CHECK POWER WINDOW MAIN SWITCH.** Measure the resistance between terminals when moving the power window switch (door lock switch) to UNLOCK direction. ***Connector & terminal*** ***Driver’s side*** ***(D7) No. 9 — (D7) No. 1:*** ***Passenger’s side*** ***(D125) No. 2 — (D125) No. 5:***	Does the resistance change from 1 MΩ or more to less than 10 Ω?	Go to step **5**.	Replace the power window main switch. <Ref. to GW-12, Power Window Control Switch.>

	Step	Check	Yes	No
5	**CHECK HARNESS.** Measure the resistance between the power window main switch connector and chassis ground. ***Connector & terminal*** ***Driver's side*** ***(D84) No. 3 — Chassis ground:*** ***Passenger's side*** ***(D83) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the harness.
6	**CHECK HARNESS.** 1) Disconnect the connector of body integrated unit. 2) Check the harness between body integrated unit and power window main switch. ***Connector & terminal*** ***Driver's side*** ***(D7) No. 3 — (i171) No. 32:*** ***(D7) No. 9 — (i171) No. 12:*** ***Passenger's side*** ***(D125) No. 4 — (i171) No. 32:*** ***(D125) No. 2 — (i171) No. 12:***	Is harness normal?	Replace the body integrated unit. <Ref. to SL-81, Body Integrated Unit.>	Repair or replace the harness.

4. CHECK DOOR LOCK ACTUATOR AND CIRCUIT

	Step	Check	Yes	No
1	**CHECK HARNESS (DOOR LOCK).** 1) Disconnect the body integrated unit and each door lock actuator connector. 2) Check the harness between body integrated unit and each door lock actuator. ***Connector & terminal*** ***Front door LH*** ***(i265) No. 6 — (D72) No. 4:*** ***Front door RH*** ***(i265) No. 7 — (D18) No. 4:*** ***Rear door LH*** ***(i266) No. 5 — (D26) No. 4:*** ***Rear door RH*** ***(i266) No. 4 — (D32) No. 4:***	Is harness normal?	Go to step **2**.	Repair or replace the harness.
2	**CHECK HARNESS (DOOR UNLOCK).** Check the harness between body integrated unit and each door lock actuator. ***Connector & terminal*** ***Front door LH*** ***(i84) No. 6 — (D72) No. 1:*** ***Front door RH*** ***(i265) No. 2 — (D18) No. 1:*** ***Rear door LH*** ***(i266) No. 9 — (D26) No. 1:*** ***Rear door RH*** ***(i266) No. 3 — (D32) No. 1:***	Is harness normal?	Sedan model: Go to step **5**. OUTBACK model: Go to step **3**.	Repair or replace the harness.
3	**CHECK HARNESS (REAR GATE UNLOCK).** Check the harness between the body integrated unit and rear gate lock actuator. ***Connector & terminal*** ***(i171) No. 7 — (D46) No. 1:***	Is harness normal?	Go to step **4**.	Repair or replace the harness.

	Step	Check	Yes	No
4	**CHECK HARNESS (REAR GATE UNLOCK).** Measure the resistance between the rear gate lock actuator connector and chassis ground. ***Connector & terminal*** ***(D46) No. 2 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **7**.	Repair or replace the harness.
5	**CHECK HARNESS (TRUNK UNLOCK).** Check the harness between the body integrated unit and trunk lid lock actuator. ***Connector & terminal*** ***(i266) No. 7 — (R186) No. 1:***	Is harness normal?	Go to step **6**.	Repair or replace the harness.
6	**CHECK HARNESS (TRUNK UNLOCK).** Measure the resistance between the trunk lid lock actuator connector and chassis ground. ***Connector & terminal*** ***(R186) No. 2 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **7**.	Repair or replace the harness.
7	**CHECK BODY INTEGRATED UNIT OUTPUT SIGNAL.** 1) Connect the body integrated unit connector. 2) Measure the voltage between terminals of the body integrated unit when operating the door lock switch to LOCK direction. ***Connector & terminal*** ***Except for front door LH*** ***(i265) No. 7 (+) — (i265) No. 2 (–):*** ***Front door LH*** ***(i265) No. 62 (+) — (i84) No. 6 (–):***	Does the voltage change from less than 1 V → 9 V or more? (During lock output)	Go to step **8**.	Replace the body integrated unit. <Ref. to SL-81, Body Integrated Unit.>
8	**CHECK BODY INTEGRATED UNIT OUTPUT SIGNAL.** Measure the voltage between terminals of the body integrated unit when operating the door lock switch to UNLOCK direction. ***Connector & terminal*** ***Except for front door LH*** ***(i265) No. 2 (+) — (i265) No. 7 (–):*** ***Front door LH*** ***(i84) No. 6 (+) — (i265) No. 6 (–):***	Does the voltage change from less than 1 V → 9 V or more? (During unlock output)	Go to step **9**.	Replace the body integrated unit. <Ref. to SL-81, Body Integrated Unit.>
9	**CHECK BODY INTEGRATED UNIT OUTPUT SIGNAL.** Measure the voltage between body integrated unit and chassis ground when operating the rear gate opener button. ***Connector & terminal*** ***(i171) No. 15 (+) — Chassis ground (–):***	Does the voltage change from less than 1 V → 9 V or more? (During unlock output)	Go to step **10**.	Replace the body integrated unit. <Ref. to SL-81, Body Integrated Unit.>
10	**CHECK DOOR LOCK ACTUATOR.** Check the door lock actuator. • Front door lock actuator: <Ref. to SL-40, INSPECTION, Front Door Latch and Door Lock Actuator Assembly.> • Rear door lock actuator: <Ref. to SL-47, INSPECTION, Rear Door Latch and Door Lock Actuator Assembly.>	Is the door lock actuator OK?	• Sedan model: Go to step **12**. • OUTBACK model: Go to step **11**.	Replace the door latch and door lock actuator assembly.
11	**CHECK REAR GATE LOCK ACTUATOR.** Check the rear gate lock actuator. <Ref. to SL-50, Rear Gate Latch and Actuator Assembly.>	Is the rear gate lock actuator normal?	Check the connection status of the harness and connector that may have a temporary poor contact.	Replace the rear gate latch and actuator assembly.

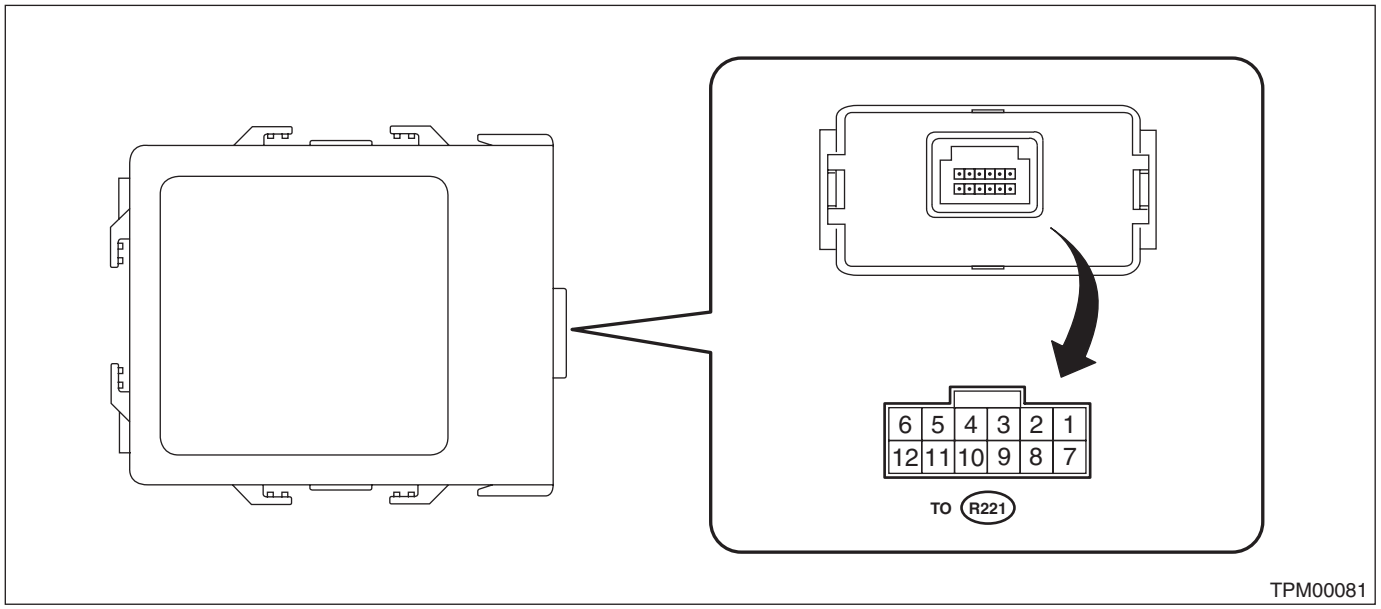
Step		Check	Yes	No
12	**CHECK TRUNK LID LOCK ACTUATOR.** Check the trunk lid lock actuator. <Ref. to SL-53, Trunk Lid Latch and Actuator Assembly.>	Is trunk lid lock actuator normal?	Check the connection status of the harness and connector that may have a temporary poor contact.	Replace the trunk lid latch & actuator assembly.

5. CHECK REAR GATE OPENER BUTTON CIRCUIT

Step		Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display the data of «R Gate Release SW input». <Ref. to BC(diag)-20, OPERATION, Read Current Data.> NOTE: For detailed procedures, refer to "PC application help for Subaru Select Monitor".	Does the display change to OFF ←→ ON, when the rear gate opener button is operated?	Rear gate opener button is normal.	Go to step **2**.
2	**CHECK HARNESS.** 1) Disconnect the connectors of body integrated unit and rear gate opener button. 2) Check the harness between the body integrated unit connector and rear gate opener button. ***Connector & terminal*** ***Model without keyless access with push button start*** ***(i171) No. 6 (+) — (D47) No. 1 (–):*** ***Model with keyless access with push button start*** ***(i171) No. 6 (+) — (D77) No. 1 (–):***	Is harness normal?	Go to step **3**.	Repair or replace the harness.
3	**CHECK HARNESS.** Measure the resistance between the rear gate opener button connector and chassis ground. ***Connector & terminal*** ***Model without keyless access with push button start*** ***(D47) No. 2 (+) — Chassis ground:*** ***Model with keyless access with push button start*** ***(D77) No. 1 (+) — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair or replace the harness.
4	**CHECK REAR GATE OPENER BUTTON.** Measure the resistance between terminals both when the rear gate opener button is pressed and when not pressed. ***Terminals*** ***Model without keyless access with push button start*** ***No. 1 (+) — No. 2 (–):*** ***Model with keyless access with push button start*** ***No. 1 (+) — No. 2 (–):***	Is the resistance less than 10 Ω when the switch is pressed and 1 MΩ or more when not pressed?	Replace the body integrated unit. <Ref. to SL-81, Body Integrated Unit.>	Replace the rear gate opener button.

6. CHECK TRUNK OPENER SWITCH CIRCUIT

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display the data of «R Gate Release SW input». <Ref. to BC(diag)-20, OPERATION, Read Current Data.> NOTE: For detailed procedures, refer to “PC application help for Subaru Select Monitor”.	Does the display switch between OFF ←→ ON when the trunk opener switch is operated?	The trunk opener switch is normal.	Go to step **2**.
2	**CHECK HARNESS.** 1) Disconnect the connectors of body integrated unit and trunk opener switch. 2) Check the harness between the body integrated unit connector and trunk opener switch. ***Connector & terminal*** ***(i171) No. 6 — (i258) No. 1:***	Is harness normal?	Go to step **3**.	Repair or replace the harness.
3	**CHECK HARNESS.** Measure the resistance between the trunk opener switch connector and chassis ground. ***Connector & terminal*** ***(i258) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair or replace the harness.
4	**CHECK TRUNK OPENER SWITCH.** Measure the resistance between terminals both when trunk opener switch is pressed and when not pressed. ***Terminals*** ***No. 1 — No. 4:***	Is the resistance less than 10 Ω when the switch is pressed and 1 MΩ or more when not pressed?	Replace the body integrated unit. <Ref. to SL-81, Body Integrated Unit.>	Replace the trunk opener switch.



4. Keyless Entry System

A: WIRING DIAGRAM

Refer to “Keyless Entry System” in the wiring diagram. <Ref. to WI-326, WIRING DIAGRAM, Keyless Entry System.>

B: ELECTRICAL SPECIFICATION

1. KEYLESS ENTRY CONTROL MODULE

Terminal No.	Item	Measuring condition	Standard
4 (IG) ←→ Chassis ground	Resistance	IG OFF → ON	0 V → 10 — 14 V
5 (GND) ←→ Chassis ground	Resistance	Always	Less than 1 Ω
6 (+B) ←→ Chassis ground	Voltage	Always	10 — 14 V
11 (U-ART com.)	—	Cannot be measured	—

2. BODY INTEGRATED UNIT

Refer to “Control Module I/O Signal” of “BODY CONTROL SYSTEM (DIAGNOSTICS)” section. <Ref. to BC(diag)-8, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

1. SYMPTOM CHART

Symptoms	Repair order	Reference
None of the functions of the keyless entry system operate.	1. Check the keyless transmitter battery.	<Ref. to SL-19, CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION, INSPECTION, Keyless Entry System.>
	2. Remove and visually inspect the following fuses. • No. 14 (in fuse & relay box) • No. 26 (in fuse & relay box) • No. 14 (in main fuse box)	If the fuse is blown out, replace the fuse with a new part. When there is no defective with the fuse, check the power supply and ground circuit. <Ref. to SL-12, CHECK DOOR LOCK SWITCH, INSPECTION, Door Lock Control System.>
	3. Check the keyless entry control module.	<Ref. to SL-20, CHECK KEYLESS ENTRY CONTROL MODULE, INSPECTION, Keyless Entry System.>
	4. Check the power supply and ground circuit for body integrated unit.	<Ref. to SL-20, CHECK BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Keyless Entry System.>
	5. Check the key warning switch.	<Ref. to SL-22, CHECK KEY WARNING SWITCH, INSPECTION, Keyless Entry System.>
	6. Check the body integrated unit.	<Ref. to BC(diag)-2, Basic Diagnostic Procedure.>
The keyless transmitter cannot be registered.	1. Check the keyless transmitter battery.	<Ref. to SL-19, CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION, INSPECTION, Keyless Entry System.>
	2. Check the key warning switch.	<Ref. to SL-22, CHECK KEY WARNING SWITCH, INSPECTION, Keyless Entry System.>
	3. Check the keyless entry control module.	<Ref. to SL-20, CHECK KEYLESS ENTRY CONTROL MODULE, INSPECTION, Keyless Entry System.>
	4. Check the body integrated unit.	<Ref. to BC(diag)-2, Basic Diagnostic Procedure.>
Door lock or unlock does not operate. NOTE: If the door lock control system does not operate when using the door lock switch, check the door lock control system. <Ref. to SL-11, INSPECTION, Door Lock Control System.>	1. Check the keyless transmitter battery.	<Ref. to SL-19, CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION, INSPECTION, Keyless Entry System.>
	2. Check the key warning switch.	<Ref. to SL-22, CHECK KEY WARNING SWITCH, INSPECTION, Keyless Entry System.>
	3. Check the door switch signal.	<Ref. to SL-21, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>
	4. Check the keyless entry control module.	<Ref. to SL-20, CHECK KEYLESS ENTRY CONTROL MODULE, INSPECTION, Keyless Entry System.>
	5. Check the body integrated unit.	<Ref. to BC(diag)-2, Basic Diagnostic Procedure.>

Symptoms	Repair order	Reference
The hazard light does not operate.	1. Check the hazard light operation.	<Ref. to SL-24, CHECK HAZARD LIGHT OPERATION, INSPECTION, Keyless Entry System.>
	2. Check the body integrated unit.	<Ref. to BC(diag)-2, Basic Diagnostic Procedure.>
Room light does not operate.	1. Check the room light operation.	<Ref. to SL-23, CHECK ROOM LIGHT OPERATION, INSPECTION, Keyless Entry System.>
	2. Check the body integrated unit.	<Ref. to BC(diag)-2, Basic Diagnostic Procedure.>
Ignition switch illumination does not operate.	1. Check the ignition switch illumination.	<Ref. to SL-25, CHECK IGNITION SWITCH ILLUMINATION, INSPECTION, Keyless Entry System.>
	2. Check the body integrated unit.	<Ref. to BC(diag)-2, Basic Diagnostic Procedure.>

2. CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION

CAUTION:
Be sure to reset keyless transmitter of other vehicles registered to the inspection target vehicle, and vehicles to which keyless transmitters were registered for inspection, to the condition before performing the inspection. (Re-register the keyless transmitters.)

	Step	Check	Yes	No
1	**CHECK KEYLESS TRANSMITTER BATTERY.** 1) Remove the battery from the keyless transmitter. <Ref. to SL-84, REMOVAL, Keyless Transmitter.> 2) Check the battery voltage. <Ref. to SL-85, INSPECTION, Keyless Transmitter.>	Is the voltage 2.5 V or more?	Go to step **2**.	Replace the keyless transmitter battery.
2	**CHECK KEYLESS TRANSMITTER.** Register the keyless transmitter which operates normally on other vehicles to the inspection target vehicle. <Ref. to SL-85, REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Keyless Transmitter.> 1) Close all the doors and trunk lid of inspection target vehicle. 2) Using the keyless transmitter, lock and unlock the doors, and unlock the trunk lid.	Can lock, unlock of doors and unlock of the trunk lid be performed properly on the inspection target vehicle?	Go to step **3**.	Due to vehicle malfunction, continue the keyless entry system diagnosis.
3	**CHECK KEYLESS TRANSMITTER.** Register the keyless transmitter of the inspected vehicle to another vehicle whose keyless system operates normally. <Ref. to SL-85, REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Keyless Transmitter.>	Is the keyless transmitter registered correctly?	Go to step **4**.	Replace the keyless transmitter and perform registration.
4	**CHECK KEYLESS TRANSMITTER.** Check the registered keyless transmitter. 1) Close all the doors and trunk lid of the vehicle which keyless system operates normally. 2) Using the keyless transmitter, lock and unlock the doors, and unlock the trunk lid.	Can lock, unlock of doors and unlock of the trunk lid be performed properly on the vehicle?	Keyless transmitter is OK.	Replace the keyless transmitter and perform registration.

3. CHECK KEYLESS ENTRY CONTROL MODULE

	Step	Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT.** Read the DTC using Subaru Select Monitor. NOTE: For detailed procedures, refer to "PC application help for Subaru Select Monitor".	Is DTC B1500 "KEYLESS UART COM. MALFUNCTION" displayed?	Go to step **2**.	Keyless entry control module is normal.
2	**CHECK POWER SUPPLY.** 1) Disconnect the keyless entry control module connector. 2) Measure the voltage between keyless entry control module connector and chassis ground. ***Connector & terminal*** ***(R221) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Check the harness for open or short circuits between the keyless entry control module and the fuse.
3	**CHECK GROUND CIRCUIT.** Measure the resistance between keyless entry control module connector and chassis ground. ***Connector & terminal*** ***(R221) No. 5 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair or replace the harness.
4	**CHECK KEYLESS ENTRY CONTROL MODULE CIRCUIT.** 1) Disconnect the body integrated unit connector. 2) Check the harness between keyless entry control module and body integrated unit. ***Connector & terminal*** ***(i81) No. 11 — (R221) No. 11:***	Is harness normal?	Replace the keyless entry control module.	Repair or replace the harness.

4. CHECK BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT

Refer to the "CHECK POWER SUPPLY AND GROUND LINE" of "Door Lock Control System" for detailed procedures. <Ref. to SL-12, CHECK DOOR LOCK SWITCH, INSPECTION, Door Lock Control System.>

5. CHECK DOOR SWITCH

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Display the following items using Subaru Select Monitor. • «Driver's door SW input» • «P-door SW input» • «Rear right door SW input» • «Rear left door SW input» • «R Gate SW input» NOTE: For detailed procedures, refer to "PC application help for Subaru Select Monitor".	Does the display switch between OFF ←→ ON when each door, trunk lid, or rear gate is opened/closed?	The door switches, trunk lid latch switch or rear gate latch switch are normal.	Go to step **2**.
2	**CHECK HARNESS.** 1) Disconnect the connector of body integrated unit. 2) Disconnect the connector of the door switch, trunk lid latch switch or rear gate latch switch that the display does not change. 3) Check the harness between body integrated unit and defective switch. ***Connector & terminal*** ***Front door LH*** ***(i171) No. 33 — (R9) No. 2:*** ***Front door RH*** ***(i171) No. 13 — (R12) No. 4:*** ***Rear door LH*** ***(i171) No. 14 — (R22) No. 4:*** ***Rear door RH*** ***(i171) No. 34 — (R16) No. 4:*** ***Trunk lid*** ***(i171) No. 15 — (R186) No. 3:*** ***Rear gate (model without power rear gate)*** ***(i171) No. 15 — (D46) No. 3:*** ***Rear gate (model with power rear gate)*** ***(i171) No. 15 — (D153) No. 3:***	Is harness normal?	Go to step **3**.	Repair or replace the harness.
3	**CHECK HARNESS.** Measure the resistance between the faulty switch connector and chassis ground. ***Connector & terminal*** ***Front door LH*** ***(R9) No. 1 — Chassis ground:*** ***Front door RH*** ***(R12) No. 1 — Chassis ground:*** ***Rear door LH*** ***(R22) No. 1 — Chassis ground:*** ***Rear door RH*** ***(R16) No. 1 — Chassis ground:*** ***Trunk lid*** ***(R186) No. 2 — Chassis ground:*** ***Rear gate (model without power rear gate)*** ***(D46) No. 4 — Chassis ground:*** ***Rear gate (model with power rear gate)*** ***(D153) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair or replace the harness.

Step		Check	Yes	No
4	**CHECK DOOR SWITCH.** Measure the resistance between faulty switch terminals. ***Terminals*** ***Front LH door switch*** ***No. 2 — No. 1:*** ***Front RH door switch*** ***No. 4 — No. 1:*** ***Rear LH door switch*** ***No. 4 — No. 1:*** ***Rear RH door switch*** ***No. 4 — No. 1:*** ***Trunk lid latch switch*** ***No. 3 — No. 2:*** ***Rear gate (model without power rear gate)*** ***No. 3 — No. 4:*** ***Rear gate (model with power rear gate)*** ***No. 3 — No. 4:***	Is the resistance 1 MΩ or more when the door switch is pushed and the trunk lid is closed?	Replace the body integrated unit. <Ref. to SL-81, Body Integrated Unit.>	Replace the faulty parts. • Door switches • Trunk lid latch and actuator assembly • Rear gate latch and actuator assembly

6. CHECK KEY WARNING SWITCH

Step		Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display the data of «key-lock warning SW». NOTE: For detailed procedures, refer to “PC application help for Subaru Select Monitor”.	Is the normal input signal displayed when the key is inserted in/removed from the ignition switch?	The key warning switch is OK.	Go to step **2**.
2	**CHECK FUSE.** Remove and visually check fuse No. 14 (in the main fuse box).	Is the fuse blown out?	Replace the fuse with a new part.	Go to step **3**.
3	**CHECK KEY WARNING SWITCH CIRCUIT.** 1) Disconnect the connector of body integrated unit. 2) Insert the key into ignition switch. (LOCK position) 3) Measure the voltage between the body integrated unit connector and chassis ground. ***Connector & terminal*** ***(i84) No. 10 (+) — Chassis ground (–):***	Is the voltage 9 V or more?	Go to step **4**.	Go to step **5**.
4	**CHECK KEY WARNING SWITCH CIRCUIT.** 1) Remove the key from ignition switch. 2) Measure the voltage between the body integrated unit connector and chassis ground. ***Connector & terminal*** ***(i84) No. 10 (+) — Chassis ground (–):***	Is the voltage less than 1.5 V?	The key warning switch is OK.	Go to step **5**.
5	**CHECK KEY WARNING SWITCH.** 1) Disconnect the connector of key warning switch. 2) Insert the key into ignition switch. (LOCK position) 3) Measure the resistance between key warning switch terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 1 Ω?	Go to step **6**.	Replace the key warning switch.

	Step	Check	Yes	No
6	**CHECK KEY WARNING SWITCH.** 1) Remove the key from ignition switch. 2) Measure the resistance between key warning switch terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 1 MΩ or more?	Check the following: • Harness for open circuits and shorts between the key warning switch and fuse. • Harness for open or short between the body integrated unit and key warning switch.	Replace the key warning switch.

7. CHECK ROOM LIGHT OPERATION

	Step	Check	Yes	No
1	**CHECK ROOM LIGHT OPERATION.** Make sure the room light illuminates when the room light switch is ON, and goes off when the switch is OFF.	Does the room light illuminate or go off?	Go to step **2**.	Check the room light circuit. <Ref. to LI-66, INSPECTION, Room Light.>
2	**CHECK ROOM LIGHT OPERATION.** 1) Turn the room light switch to the “DOOR” position. 2) Open and close any door.	Does the room light illuminate ←→ go off (including off delay) when the door is opened and closed?	Go to step **3**.	Go to step **4**.
3	**CHECK KEYLESS ENTRY OPERATION.** Press the LOCK/UNLOCK button of the keyless transmitter.	Does it operate properly?	Room light is normal.	Check keyless entry system. <Ref. to SL-18, SYMPTOM CHART, INSPECTION, Keyless Entry System.>
4	**CHECK ROOM LIGHT.** Check the room light. <Ref. to LI-66, INSPECTION, Room Light.>	Is room light normal?	Go to step **5**.	Replace the bulb or room light assembly.
5	**CHECK HARNESS.** 1) Disconnect the connectors of body integrated unit and room light. 2) Check the harness between body integrated unit and room light. ***Connector & terminal*** ***(i84) No. 9 — (R52) No. 2:***	Is harness normal?	Go to step **6**.	Repair or replace the harness.
6	**CHECK HARNESS.** Measure the voltage between the room light connector and chassis ground. ***Connector & terminal*** ***(R52) No. 3 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Replace the body integrated unit. <Ref. to SL-81, Body Integrated Unit.>	Repair or replace the harness.

8. CHECK HAZARD LIGHT OPERATION

	Step	Check	Yes	No
1	**CHECK HAZARD LIGHT OPERATION.** Make sure the hazard light blinks when hazard switch is turned to ON.	Does the hazard light blink?	Go to step **2**.	Check the hazard light circuit.
2	**CHECK BODY INTEGRATED UNIT SETTING.** Display the data of «Abnormal warning lamp flashing setting» using Subaru Select Monitor. NOTE: For detailed procedures, refer to “PC application help for Subaru Select Monitor”.	Is the setting ON?	Go to step **3**.	Turn the setting to ON.
3	**CHECK CURRENT DATA.** Display the data of «Left turn signal output» and «Right turn signal output» using Subaru Select Monitor.	Is output signal present when operating the transmitter LOCK/UNLOCK button?	Go to step **4**.	Check body integrated unit. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>
4	**CHECK KEYLESS ENTRY OPERATION.** Press the LOCK/UNLOCK button of the keyless transmitter.	Does it operate properly?	Replace the body integrated unit. <Ref. to SL-81, Body Integrated Unit.>	Check keyless entry system. <Ref. to SL-18, SYMPTOM CHART, INSPECTION, Keyless Entry System.>

9. CHECK DOOR LOCK SWITCH

For procedures, refer to the “INSPECTION OF DOOR LOCK SWITCH” of the “Door Lock Control System”. <Ref. to SL-13, CHECK DOOR LOCK ACTUATOR AND CIRCUIT, INSPECTION, Door Lock Control System.>

10.CHECK IGNITION SWITCH ILLUMINATION

	Step	Check	Yes	No
1	**CHECK IGNITION CIRCUIT.** Check the ignition circuit. <Ref. to SL-32, CHECK IGNITION SWITCH CIRCUIT, INSPECTION, Security System.>	Is the switch circuit normal?	Go to step **2**.	Repair or replace.
2	**CHECK DOOR SWITCH CIRCUIT.** Inspect door switch circuit. <Ref. to SL-21, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>	Is the switch circuit normal?	Go to step **3**.	Repair or replace.
3	**CHECK FUSE.** Remove and visually check fuse No. 14 (in the main fuse box).	Is the fuse blown out?	Replace the fuse with a new part.	Go to step **4**.
4	**CHECK HARNESS.** 1) Disconnect the ignition switch illumination connector. NOTE: The ignition switch illumination is integrated into the immobilizer antenna. 2) Measure the voltage between ignition switch illumination connector and chassis ground. ***Connector & terminal*** ***(i60) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Check the harness for open or short circuits between the ignition switch illumination and fuse.
5	**CHECK IGNITION SWITCH ILLUMINATION CIRCUIT.** 1) Disconnect the connector of body integrated unit. 2) Check the harness between body integrated unit and ignition switch illumination. ***Connector & terminal*** ***(i171) No. 9 — (i60) No. 6:***	Is harness normal?	Go to step **6**.	Check the harness for open circuits and shorts between the body integrated unit and ignition switch illumination.
6	**CHECK IGNITION SWITCH ILLUMINATION BULB.** Apply battery voltage between terminals of the bulb. ***Terminals*** ***No. 2 (+) — No. 6 (–):***	Does the bulb illuminate?	Replace the body integrated unit. <Ref. to SL-81, Body Integrated Unit.>	Replace the immobilizer antenna. <Ref. to SL-90, REMOVAL, Immobilizer Antenna.>

5. Keyless Access With Push Button Start System

A: WIRING DIAGRAM

Refer to “Keyless Access With Push Button Start System” in WI section. <Ref. to WI-313, WIRING DIAGRAM, Keyless Access With Push Button Start System.>

B: ELECTRICAL SPECIFICATION

Refer to “Control Module I/O Signal” of “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-13, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

1. KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

Refer to “Basic Diagnostic Procedure” of “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-2, Basic Diagnostic Procedure.>

2. PUSH BUTTON START SYSTEM

Ignition/ACC change function check

1) Check push button ignition switch function

(1) Check the change control through push button ignition switch, brake pedal operation, and shift position.

Shift lever position	Brake pedal operation	Push button ignition switch operation
P	Released	Repeat Ignition OFF → ACC ON → Ignition ON → Ignition OFF
P	Released	Engine running → Ignition OFF
P	Depressed	Ignition OFF → Engine started
P	Depressed	ACC ON → Engine started
P	Depressed	Ignition ON → Engine started
P	Depressed	Engine running → Ignition OFF
N	Released	Repeat Ignition OFF → ACC ON → Ignition ON → ACC ON
N	Released	Engine running → ACC ON
N	Depressed	Ignition OFF → Engine started
N	Depressed	ACC ON → Engine started
N	Depressed	Ignition ON → Engine started
N	Depressed	Engine running → ACC ON
Other than P or N	Released	Repeat Ignition OFF → ACC ON → Ignition ON → ACC ON
Other than P or N	Released	Engine running → ACC ON
Other than P or N	Depressed	Ignition OFF → Ignition ON
Other than P or N	Depressed	ACC ON → Ignition ON
Other than P or N	Depressed	Engine running → ACC ON

(2) Check the changeover functions other than push button ignition switch operation.
With ACC ON or the ignition ON, and the shift lever in “P” position, check that ACC is ON or Ignition is ON → Ignition is OFF when the vehicle is left for 1 hour or more.

(3) If the inspection result indicates an improper operation, check the push button start system. <Ref. to KPS(diag)-104, POWER SUPPLY SWITCHING SYSTEM, INSPECTION, General Diagnostic Table.>

2) Check power status display
(1) Check the power indicator display of the push button ignition switch.

NOTE:
*1: Key collation is normal, and the stop light switch (AT) is ON.
Indicator display

Push button ignition switch status	Indicator lighting status
Ignition OFF (except for condition *1)	Light OFF
ACC ON (except for condition *1)	Orange light
Ignition ON (except for condition *1)	Orange light
Engine start standby (*1)	Green light
After engine is started	Light OFF

(2) If the inspection result indicates an improper operation, check the push button start system. <Ref. to KPS(diag)-104, POWER SUPPLY SWITCHING SYSTEM, INSPECTION, General Diagnostic Table.>

NOTE:
The indicator blinks if any of the following malfunctions are detected.

Detected malfunction	Indicator lighting status
Steering lock stuck	Green blinking
Steering lock CM internal malfunction	Orange blinking
Keyless access CM internal malfunction	Orange blinking
Vehicle speed signal malfunction	Orange blinking

6. Security System

A: WIRING DIAGRAM

Refer to “Security System” in the wiring diagram. <Ref. to WI-418, WIRING DIAGRAM, Security System.>

B: ELECTRICAL SPECIFICATION

Refer to “Control Module I/O Signal” of “BODY CONTROL SYSTEM (DIAGNOSTICS)” section. <Ref. to BC(diag)-8, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

1. BASIC DIAGNOSTIC PROCEDURE

	Step	Check	Yes	No
1	**INITIAL CHECK.** Check the keyless entry system or keyless access system operation.	Does the keyless entry system or keyless access system operate normally?	Go to step **2**.	Check the keyless entry system or keyless access system. • Keyless entry system: <Ref. to SL-18, INSPECTION, Keyless Entry System.> • Keyless access system: <Ref. to KPS(diag)-5, KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM, CAUTION, General Description.>
2	**CHECK SECURITY ON/OFF SETTING.** 1) Remove the key from ignition switch or turn the ignition to OFF, and close all doors. 2) Check the status of security indicator light. 3) Press the LOCK button of the keyless transmitter or access key. 4) Check the security indicator light blinking patterns.	Is the security indicator light blinking patterns as follows? • Before pressing the LOCK button: Blinks once every three seconds. • After pressing the LOCK button: When monitoring lag is set to 0 seconds: Blinks twice every 0.5 seconds at 2 second intervals. When monitoring lag is set to 30 seconds: Blinks once every 0.4 seconds continuously for 30 seconds, then blinks twice every 0.5 seconds at 2 second intervals.	Go to step **4**.	Go to step **3**.
3	**CHANGE SETTING OF SECURITY SYSTEM.** Change the setting of security system to ON using Subaru Select Monitor. <Ref. to SL-31, SECURITY SYSTEM ON/OFF SETTING, INSPECTION, Security System.>	Is setting change completed correctly?	Go to step **4**.	Replace the body integrated unit. <Ref. to SL-81, Body Integrated Unit.>

	Step	Check	Yes	No
4	**CHECK SECURITY SYSTEM OPERATION.** 1) Remove the key from ignition switch or turn the ignition to OFF, and close all doors. 2) Press the LOCK button on the keyless transmitter or access key, then wait for 30 seconds. 3) Check the security indicator light blinking patterns.	Does the security indicator light blink twice within 0.5 seconds in 2 second intervals?	Go to step **5**.	Check the security indicator light. <Ref. to SL-31, CHECK SECURITY INDICATOR LIGHT CIRCUIT, INSPECTION, Security System.>
5	**CHECK SECURITY ALARM OPERATION.** 1) Operate the driver's door lock switch to the UNLOCK side. 2) Open any door, trunk lid or rear gate.	Does the security alarm operate when opening any door, trunk lid, or rear gate?	Go to step **6**.	Check the following parts. <Ref. to SL-21, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.> • Door switches • Trunk lid latch switch • Rear gate latch switch
6	**CHECK SECURITY ALARM OPERATION.** Check the security alarm operation status.	During the operation, does the horn keep sounding and the hazard light blink?	Go to step **7**.	Check the following parts. <Ref. to SL-21, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.> • Horn: <Ref. to SL-31, CHECK HORN, INSPECTION, Security System.> • Hazard light: <Ref. to SL-31, CHECK HAZARD LIGHT OPERATION, INSPECTION, Security System.>
7	**CHECK SECURITY ALARM CANCEL OPERATION.** Press any button of the transmitter or access key while the security alarm is operating.	Do the horn sound and the blinking of the hazard light stop?	Go to step **8**.	Replace the body integrated unit. <Ref. to SL-81, Body Integrated Unit.>
8	**CHECK IMPACT SENSOR (DEALER OPTION).** Check the sensibility of impact sensor. <Ref. to SL-78, CHECK IMPACT SENSOR, ADJUSTMENT, Impact Sensor.> * For models not equipped: Go to step **9**.	Is the sensibility set properly?	Go to step **9**.	Adjust the sensitivity. <Ref. to SL-78, IMPACT SENSITIVITY ADJUSTMENT, ADJUSTMENT, Impact Sensor.>

	Step	Check	Yes	No
9	**CHECK SECURITY SYSTEM CONDITION MEMORY.** 1) Remove the key from ignition switch or turn the ignition to OFF, and close all doors. 2) Open the front hood. 3) Press the LOCK button on the keyless transmitter or access key, then wait for 30 seconds. 4) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.> 5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.> 6) Check the status of security indicator light.	Does the security indicator light blinks twice within 0.5 seconds at 2 second intervals?	Go to step **10**.	Replace the body integrated unit. <Ref. to SL-81, Body Integrated Unit.>
10	**CHECK SECURITY SYSTEM MANUAL ON/OFF SETTING.** 1) Press the UNLOCK button of the keyless transmitter or access key. 2) Change the setting of security system. <Ref. to SL-31, SECURITY SYSTEM ON/OFF SETTING, INSPECTION, Security System.>	Is setting change completed correctly?	Restore the security system settings to those before the diagnosis and finish the diagnosis.	Check the following parts. • Ignition switch circuit: <Ref. to SL-69, INSPECTION, Ignition Key Lock.> • Door lock switch circuit: <Ref. to SL-13, CHECK DOOR LOCK ACTUATOR AND CIRCUIT, INSPECTION, Door Lock Control System.>

NOTE:
If the horn sounds when the security is turned on (monitor condition) using the keyless transmitter or access key, check the function setting of the body integrated unit. As a cause, it is possible that the impact sensor present (ON) / not present (OFF) setting is set to ON in the customization function though there is no impact sensor. <Ref. to BC(diag)-27, User Customizing.>

2. CHECK SECURITY SYSTEM CONDITION MEMORY

1) Pull out the key from the ignition switch, or turn the ignition to OFF.
2) Close all the doors, trunk lid or rear gate.
3) Open the front hood.
4) Press the LOCK button of the keyless transmitter or access key.

NOTE:
Wait until the security indicator light blinks twice within 0.5 seconds at 2 second intervals.
If the 30 second monitoring lag has been set, wait for 30 seconds.
5) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
7) Check that the security indicator light blinks twice within 0.5 seconds at 2 second intervals. When it does not blink, replace the body integrated unit.

3. SECURITY SYSTEM ON/OFF SETTING

NOTE:
It can be set by «Security Alarm Setup» in unit customizing using Subaru Select Monitor.
For detailed procedures, refer to “PC application help for Subaru Select Monitor”.
1) Close all doors, trunk lid or rear gate, and sit down on the driver seat. Press the UNLOCK button of the keyless transmitter or access key.
2) Turn the ignition to ON.
3) Press the central door unlock switch and open the driver’s door simultaneously. (Keep the central door unlock switch pressed down.)
4) When the condition in step 3) continues for 10 seconds, the system switches to a mode reverse to the current mode.

Setting	Horn activation	Meter display
ON → OFF	Twice	[AL_OF]
OFF → ON	Once	[AL_ON]

4. CHECK DOOR SWITCH

For operation procedure, refer to “CHECK DOOR SWITCH” of “Keyless Entry System”. <Ref. to SL-21, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>

5. CHECK SECURITY INDICATOR LIGHT CIRCUIT

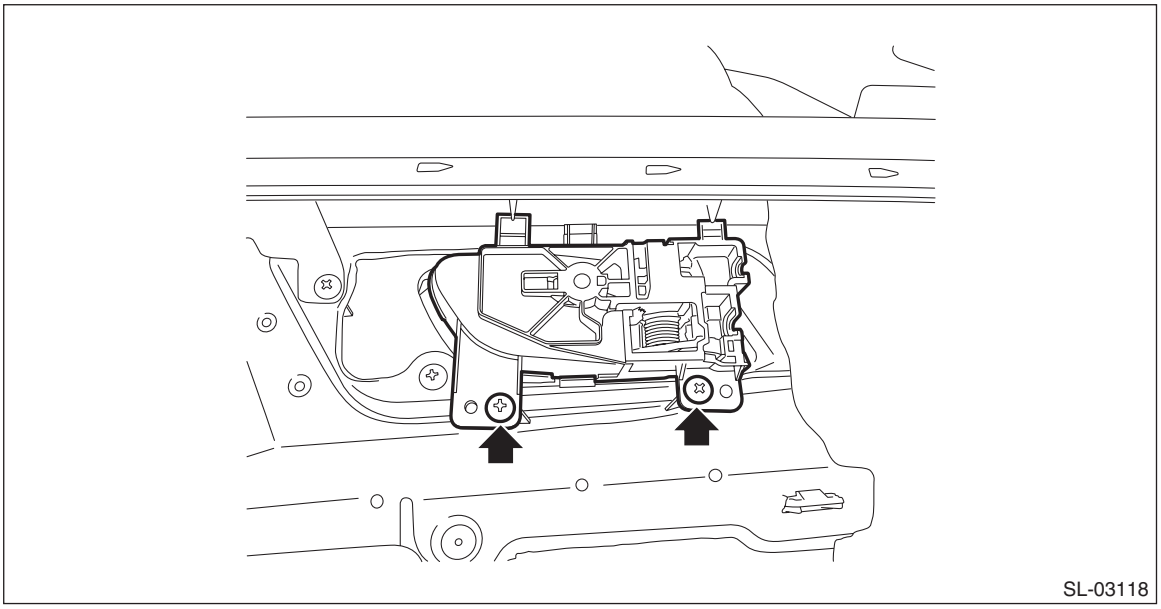
For operation procedures, refer to “CHECK SECURITY INDICATOR LIGHT CIRCUIT” of “IMMOBILIZER (DIAGNOSTICS)” section. <Ref. to IM(diag)-17, CHECK SECURITY INDICATOR LIGHT CIRCUIT, INSPECTION, Diagnostics Chart for Security Indicator Light.>

6. CHECK HORN

	Step	Check	Yes	No
1	**CHECK HORN OPERATION.** Check the horn sounds when the horn switch is pushed.	Does the horn sound?	Go to step **2**.	Check the horn circuit.
2	**CHECK BODY INTEGRATED UNIT.** Select and perform the «Horn Output» using Subaru Select Monitor. NOTE: For detailed procedures, refer to “PC application help for Subaru Select Monitor”.	Does the horn sound?	Horn circuit is OK.	Go to step **3**.
3	**CHECK HORN RELAY CIRCUIT.** 1) Turn the ignition to OFF. 2) Disconnect the connector of body integrated unit. 3) Remove the horn relay. 4) Check the harness between body integrated unit and horn relay. ***Connector & terminal*** ***(B281) No. 20 — Horn relay No. 4:***	Is harness normal?	Check body integrated unit. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Repair or replace the harness.

7. CHECK HAZARD LIGHT OPERATION

For operation procedure, refer to “CHECK HAZARD LIGHT OPERATION” of “Keyless Entry System”. <Ref. to SL-24, CHECK HAZARD LIGHT OPERATION, INSPECTION, Keyless Entry System.>



8. CHECK IGNITION SWITCH CIRCUIT

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Display the data of «BATT voltage» and «IG power supply voltage» using the Subaru Select Monitor. NOTE: For detailed procedures, refer to “PC application help for Subaru Select Monitor”.	Does the «IG power supply voltage» indicate 0 V when the ignition is OFF, and fall within a range of ±1 V from the «BATT voltage» when the ignition is ON?	The ignition switch input circuit is OK.	Go to step **2**.
2	**CHECK IGNITION SWITCH CIRCUIT.** 1) Turn the ignition to OFF. 2) Disconnect the connector of body integrated unit. 3) Turn the ignition switch to ON. 4) Measure the voltage between the body integrated unit connector and chassis ground. ***Connector & terminal*** ***(i84) No. 10 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Check body integrated unit. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Check the harness for open or short circuit between body integrated unit and fuse.

7. Front Inner Remote

A: REMOVAL

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front door. <Ref. to EI-70, FRONT DOOR, REMOVAL, Door Trim.>
3) Remove the screw, and remove the remote assembly - door.

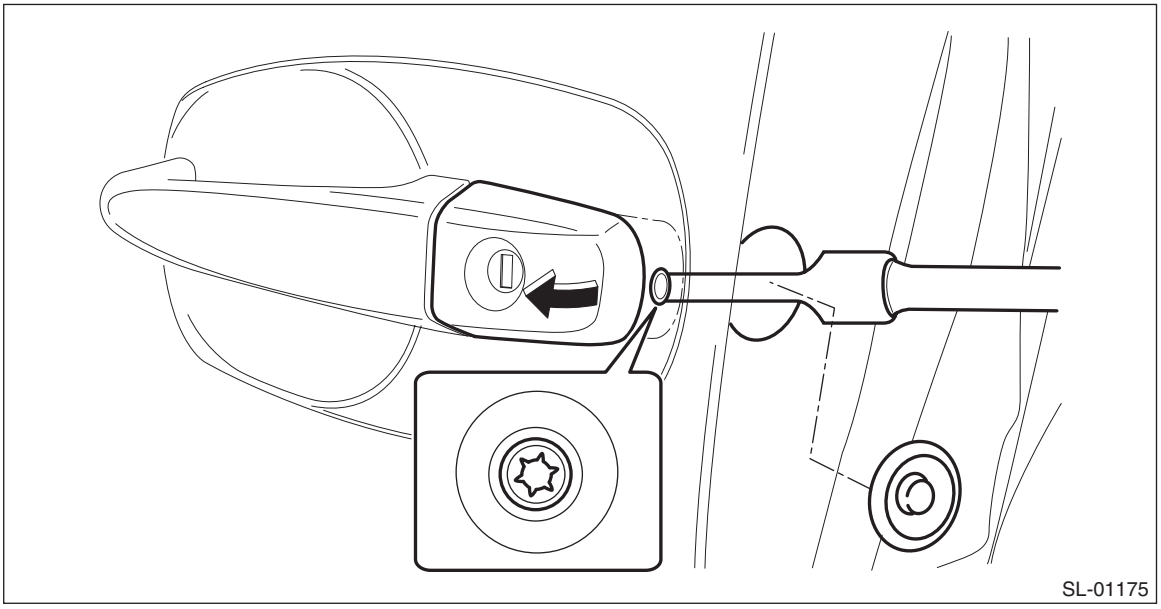
B: INSTALLATION

1) Before installation, check the following items.
- Cable is free from deformation such as fray.
- Grease is applied sufficiently to cable joints.

If grease is insufficient, add it as necessary before assembling the cable.
2) Install the remote assembly - door.
3) Install the trim panel - front door. <Ref. to EI-71, INSTALLATION, Door Trim.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

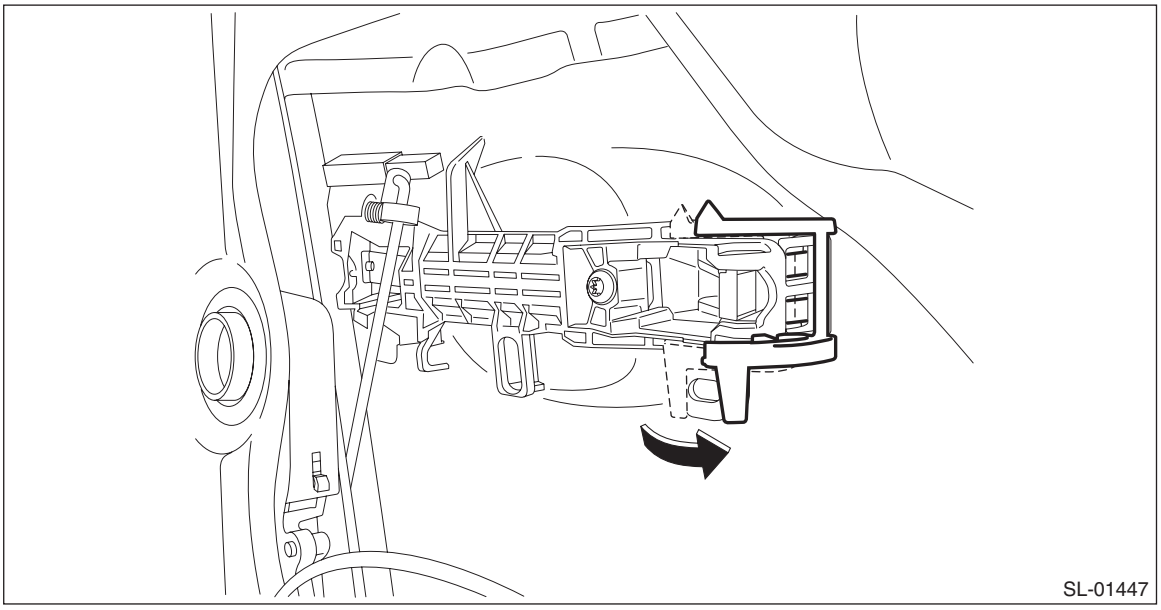
C: INSPECTION

Check if the remote handle operates normally.
- If the lever is faulty, replace the remote handle.
- If the cable is deformed, replace the latch & actuator assembly - front.



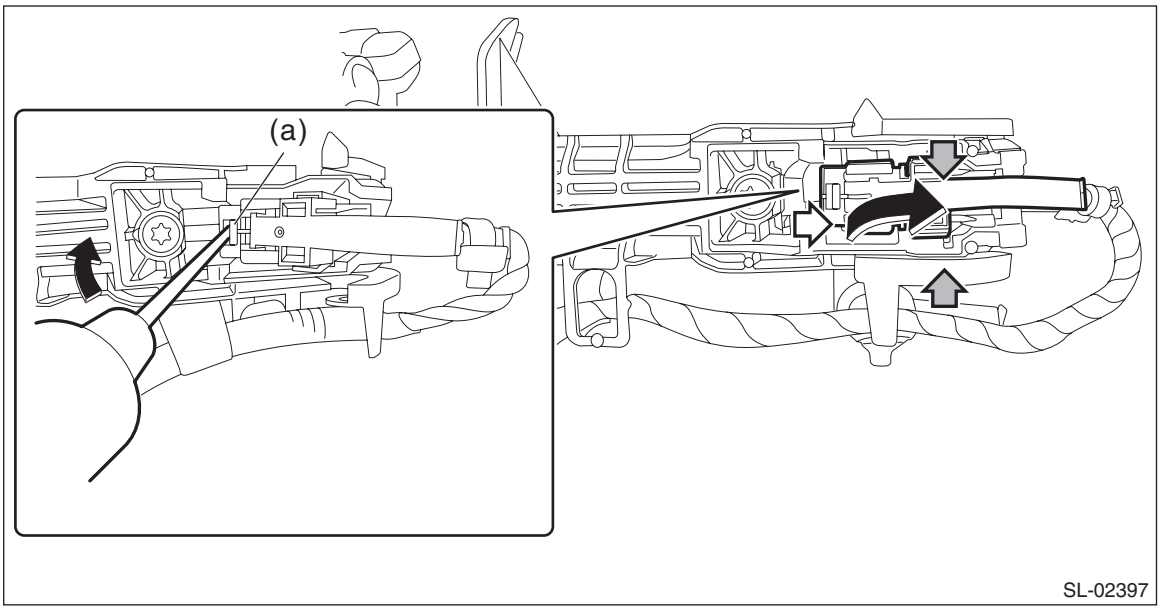
8. Front Outer Handle

A: REMOVAL



1) Raise the glass assembly - front door to the top position.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the trim panel - front door. <Ref. to EI-70, FRONT DOOR, REMOVAL, Door Trim.>
4) Remove the sealing cover - front door. <Ref. to EB-30, REMOVAL, Front Sealing Cover.>
5) Remove the cover - handle front outer.

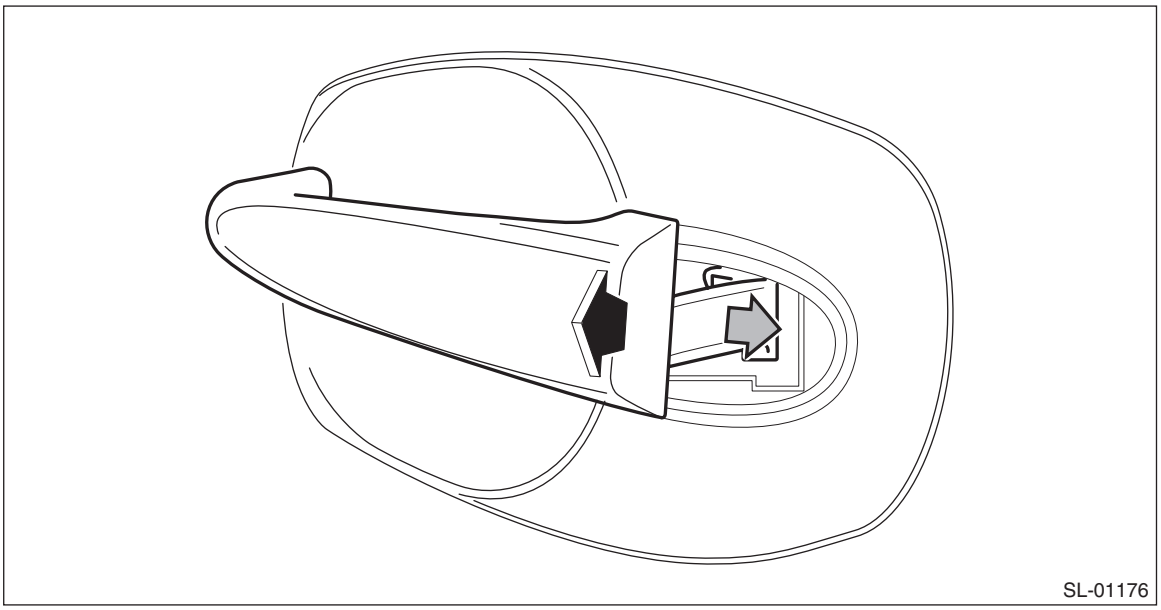
Preparation tool:
TORX® T30



(1) Remove the plug at the rear end of the panel assembly - front door.
(2) Loosen the TORX® bolt and remove the cover - handle front outer.

SL-01175

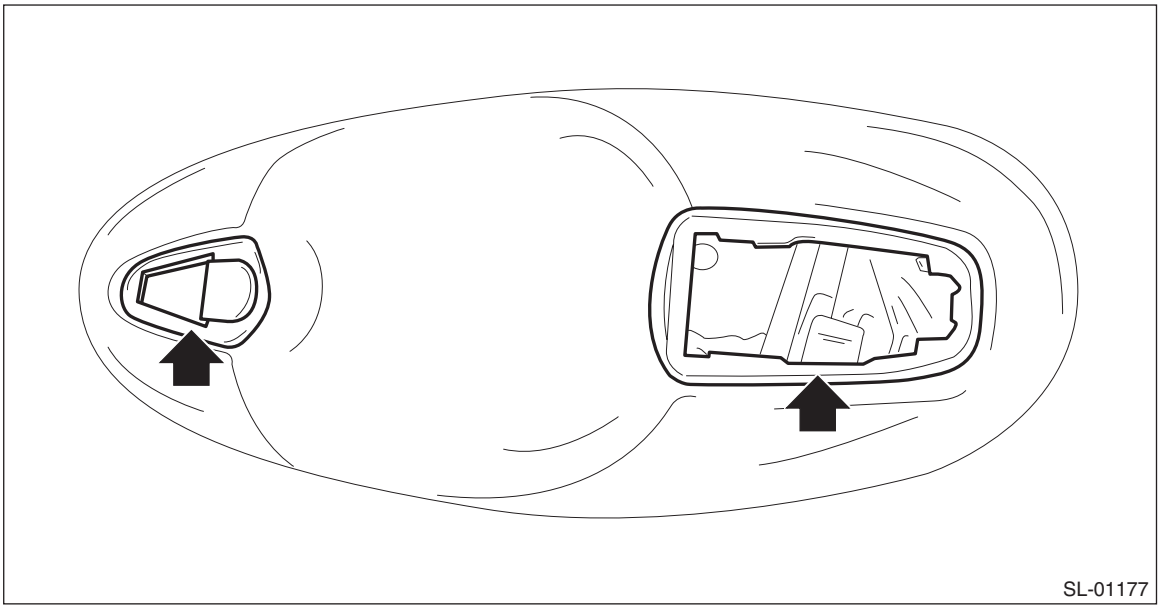
6) Remove the holder of the frame assembly - front door outer.



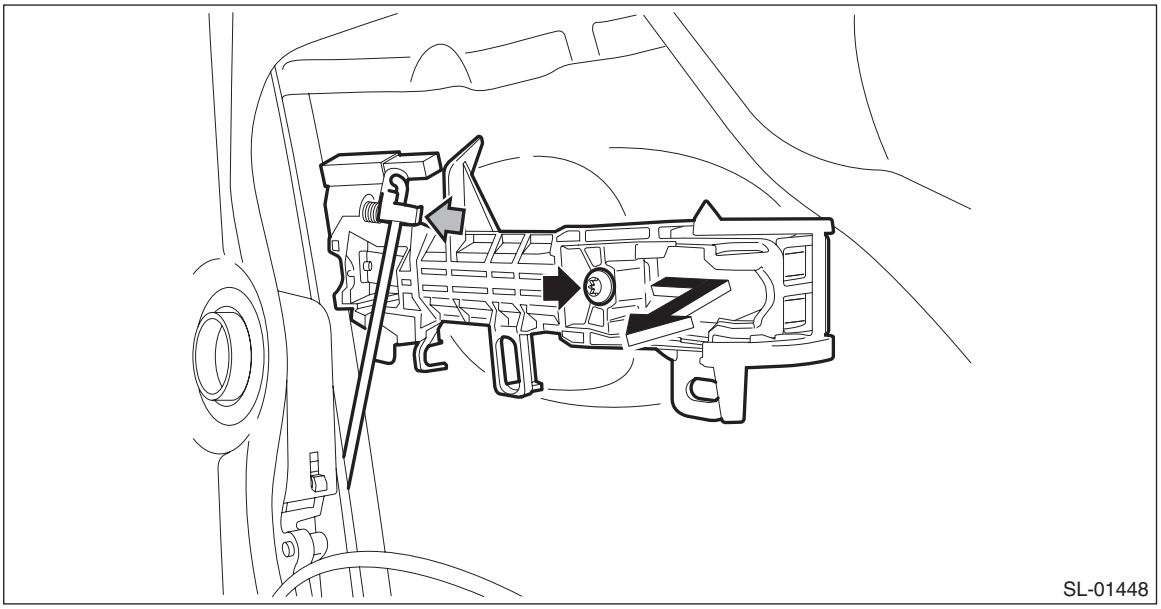
SL-01447

NOTE:
• For model with keyless access with push button start, disconnect the harness clip and exterior antenna (touch sensor) connector.
• Using (a) shown in the figure as a supporting point, pry it with a flat tip screwdriver to remove.

7) Remove the handle - door outer.



CAUTION:
Do not apply excessive force to remove the handle - door outer from the frame assembly - front door.
(1) Pull the handle - door outer rearward to release engagement of the frame assembly - front door outer.
(2) Pull the handle - door outer towards yourself to remove the handle - door outer.



8) Remove the frame assembly - front door outer.

Preparation tool:
TORX® T30

(1) Remove the spacer - door handle outer.

(2) Remove the rod clamp and remove the rod.
(3) Loosen the TORX® bolt and remove the frame assembly - front door outer.

B: INSTALLATION

1) Before installation, check the following items.
- Rod is free from deformation.
- Grease is applied sufficiently to rod joints.

If grease is insufficient, add it as necessary before assembling the rod.
2) Install the frame assembly - front door outer.

Preparation tool:
TORX® T30

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to SL-2, DOOR LOCK ASSEMBLY, COMPONENT, General Description.>

3) Install the spacer - door handle outer.
4) Install the handle - door outer.

NOTE:
For model with keyless access with push button start, connect the harness clip and exterior antenna (touch sensor) connector.

(1) Insert the end of the handle - door outer to the frame assembly - front door outer.
(2) Push forward while inserting the rear end of the handle - door outer to the frame assembly - front door outer.

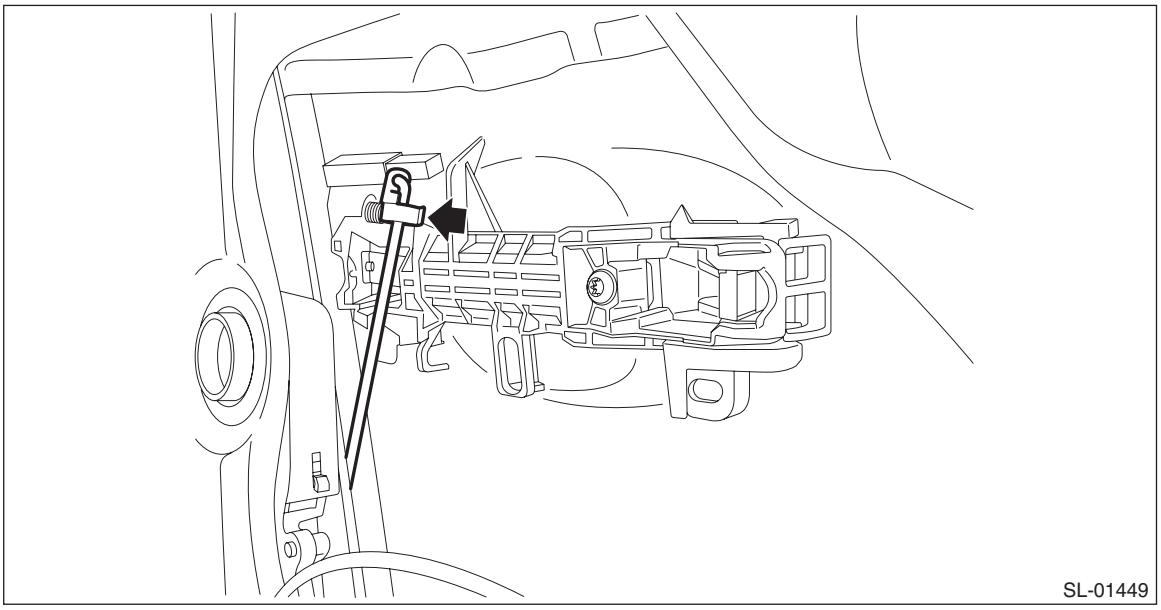
5) Install the cover - handle front outer.

CAUTION:
When installing the cover - handle front outer on driver's side, make sure that the key cylinder shaft is correctly inserted into the latch & actuator assembly - front.

Preparation tool:
TORX® T30

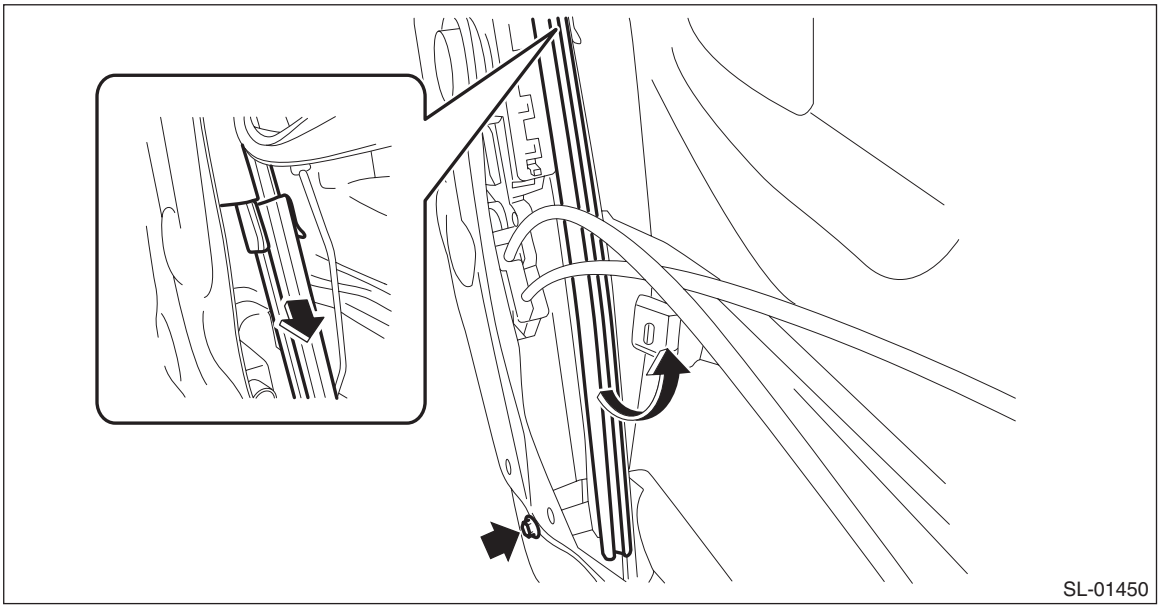
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

6) Install the sealing cover - front door.
7) Install the trim panel - front door. <Ref. to EI-71, INSTALLATION, Door Trim.>
8) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



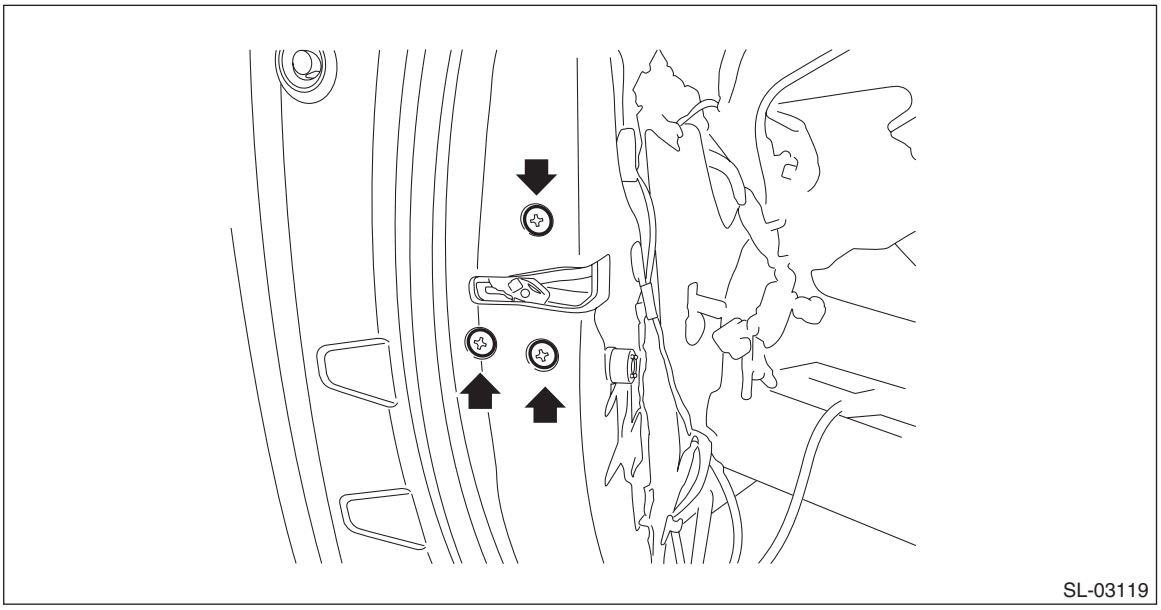
C: INSPECTION

Check if the outer handle operates normally.
- If the lever is faulty, replace the handle - door outer.
- If the rod is deformed, replace the door latch & actuator assembly - front.



9. Front Door Latch and Door Lock Actuator Assembly

A: REMOVAL



1) Raise the glass assembly - front door to the top position.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the trim panel - front door. <Ref. to EI-70, FRONT DOOR, REMOVAL, Door Trim.>
4) Remove the sealing cover - front door. <Ref. to EB-30, REMOVAL, Front Sealing Cover.>
5) Remove the rod clamp and remove the rod.

SL-01449

6) Remove the sash COMPL - lower.
   (1) Remove the lower side of the running channel - front door.
   (2) Remove the bolts, and remove the sash COMPL - lower.

SL-01450

7) Remove the screws to remove the latch & actuator assembly - front.

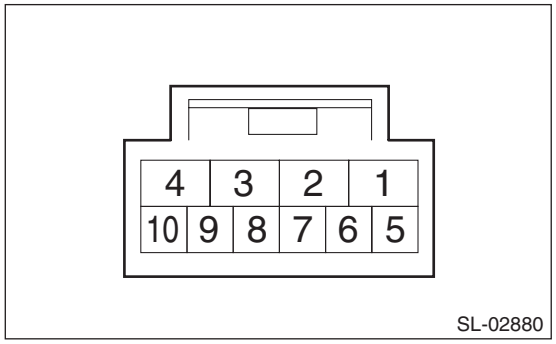
B: INSTALLATION

1) Before installation, check the following items.
- Cable and rod are free from deformation.
- Grease is applied sufficiently to rod joints.

If grease is insufficient, add it as necessary before assembling the rod.
2) Install the latch and actuator assembly - front.

Tightening torque:
6.5 N·m (0.7 kgf-m, 5.2 ft-lb)
3) Install the rod clamp to the frame assembly - front door outer.
4) Install the sash COMPL - lower.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
5) Install the sealing cover - front door.
6) Install the trim panel - front door. <Ref. to EI-71, INSTALLATION, Door Trim.>
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



C: INSPECTION

1. LATCH

Check if the latch operates normally.
If the cable or rod is faulty, replace the latch & actuator assembly - front.

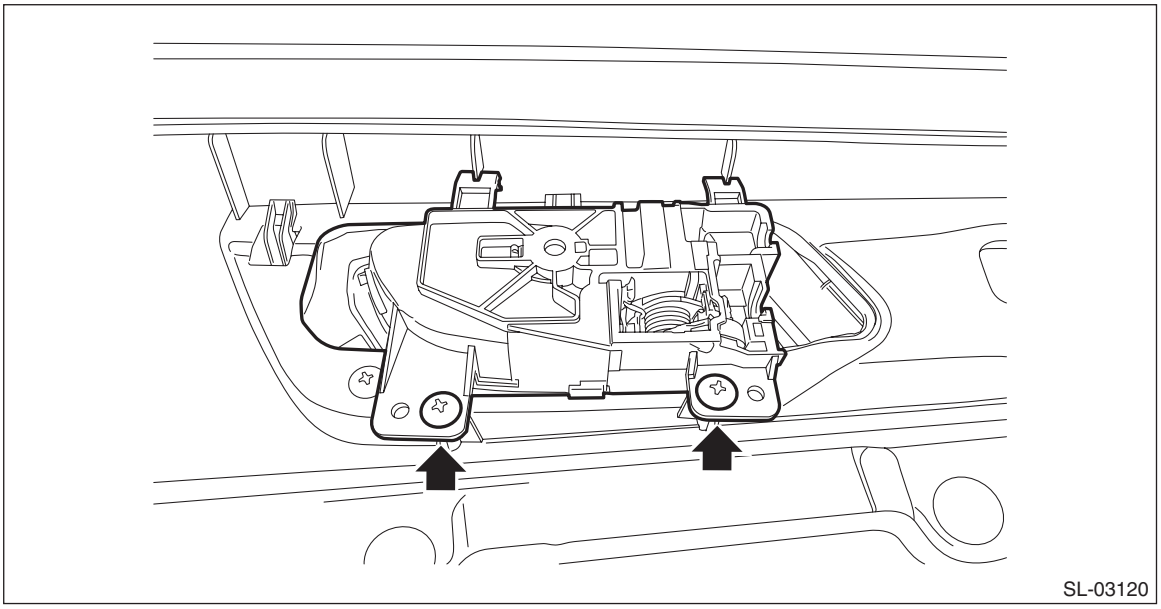
2. LOCK ACTUATOR

1) Check door lock operation
Check the door lock operation when battery voltage is applied between the connectors.

Terminal No.	Inspection conditions	Standard
4 (+) — 1 (–)	Apply battery voltage.	LOCK
1 (+) — 4 (–)		UNLOCK

2) Check position switch
Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
8 — 7	LOCK	1 MΩ or more
	UNLOCK	Less than 1 Ω

3) Replace the latch & actuator assembly - front if it is found defective.

10.Rear Inner Remote

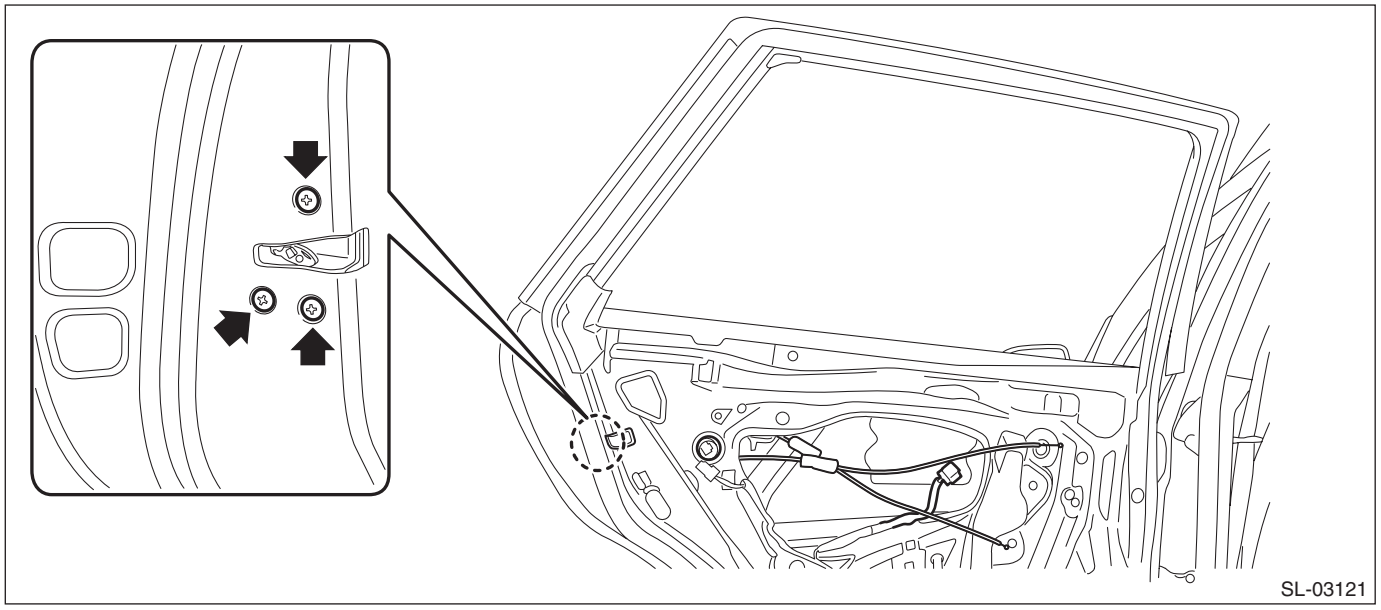
A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear door. <Ref. to EI-71, REAR DOOR, REMOVAL, Door Trim.>
3) Remove the screw, and remove the remote assembly - door.

B: INSTALLATION

1) Before installation, check the following items.
- Cable is free from deformation such as fray.
- Grease is applied sufficiently to cable joints.

If grease is insufficient, add it as necessary before assembling the cable.
2) Install the remote assembly - door.
3) Install the trim panel - rear door. <Ref. to EI-71, INSTALLATION, Door Trim.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

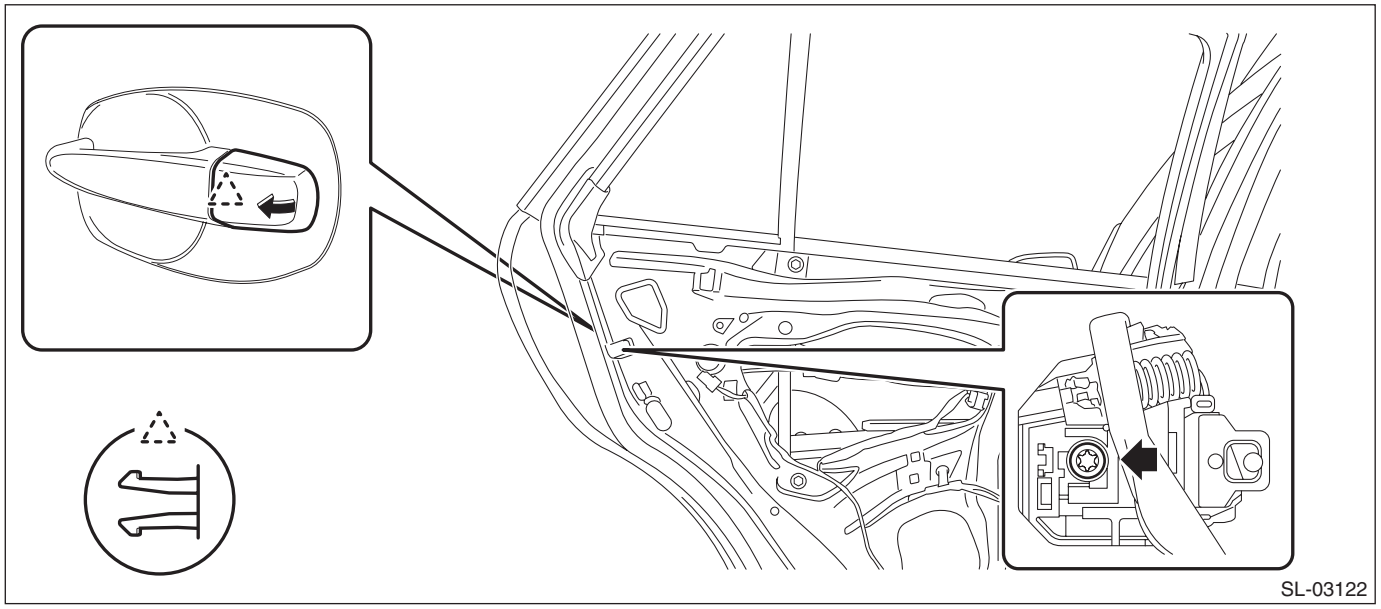


C: INSPECTION

Check if the remote handle operates normally.
- If the lever is faulty, replace the remote handle.
- If the cable is deformed, replace the latch & actuator assembly - rear.

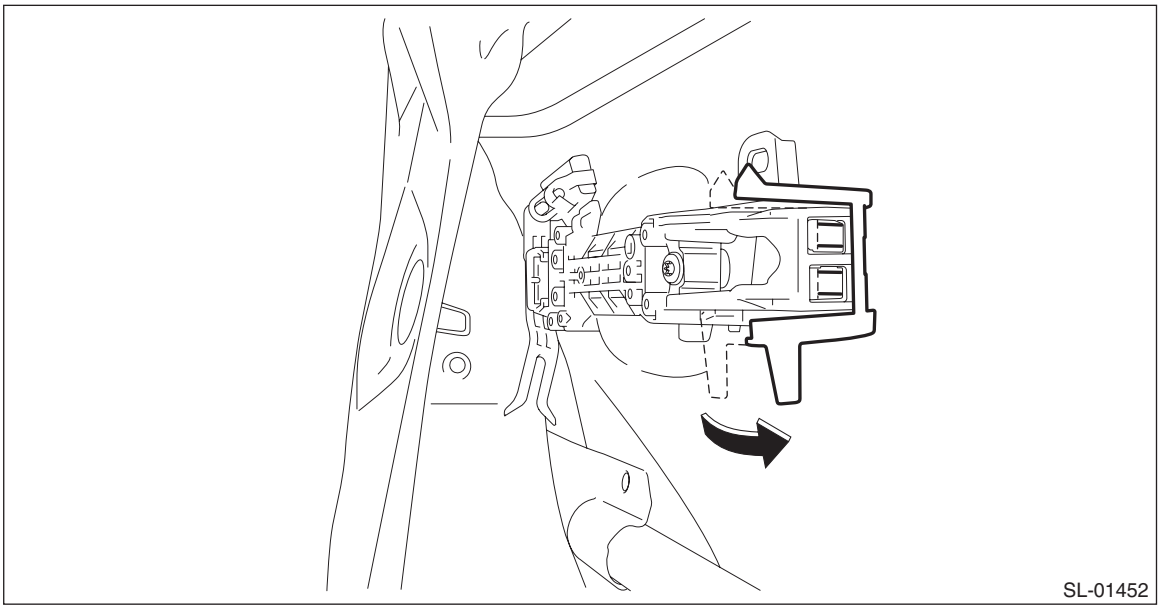
11.Rear Outer Handle

A: REMOVAL



1) Raise the glass assembly - rear door to the top position.
2) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the trim panel - rear door. <Ref. to EI-71, REAR DOOR, REMOVAL, Door Trim.>
4) Remove the sealing cover - rear door. <Ref. to EB-40, REMOVAL, Rear Sealing Cover.>
5) Remove the screws and move downward the latch & actuator assembly - rear.

SL-03121

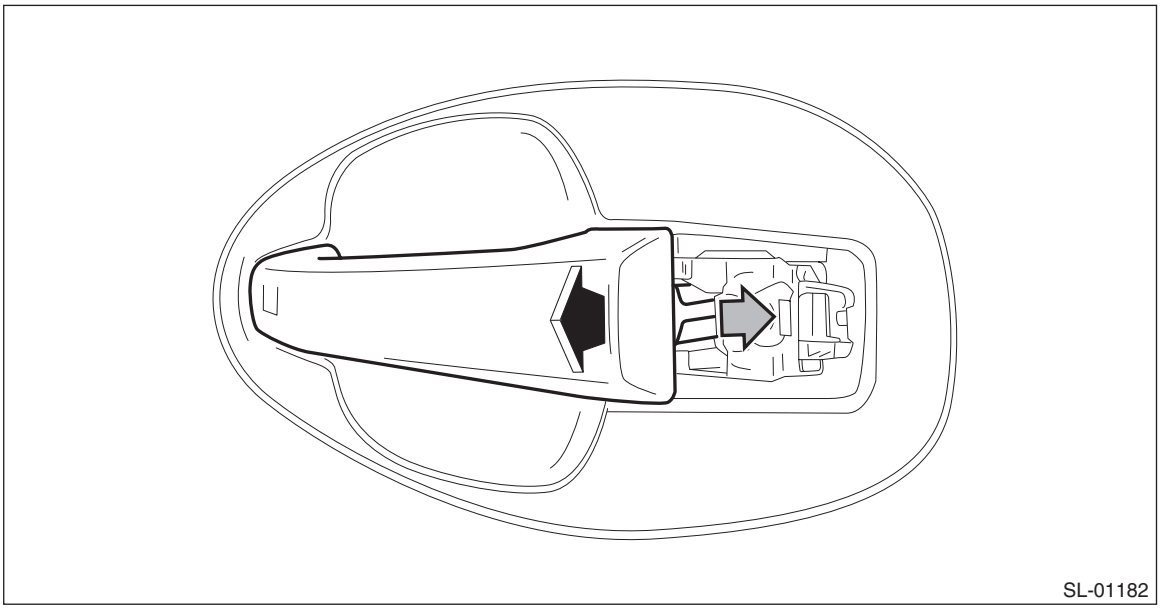


6) Remove the cover - handle rear outer.

Preparation tool:
TORX® T30

(1) Loosen the TORX® bolt.
(2) Release the claws, and then remove the cover - handle rear outer.

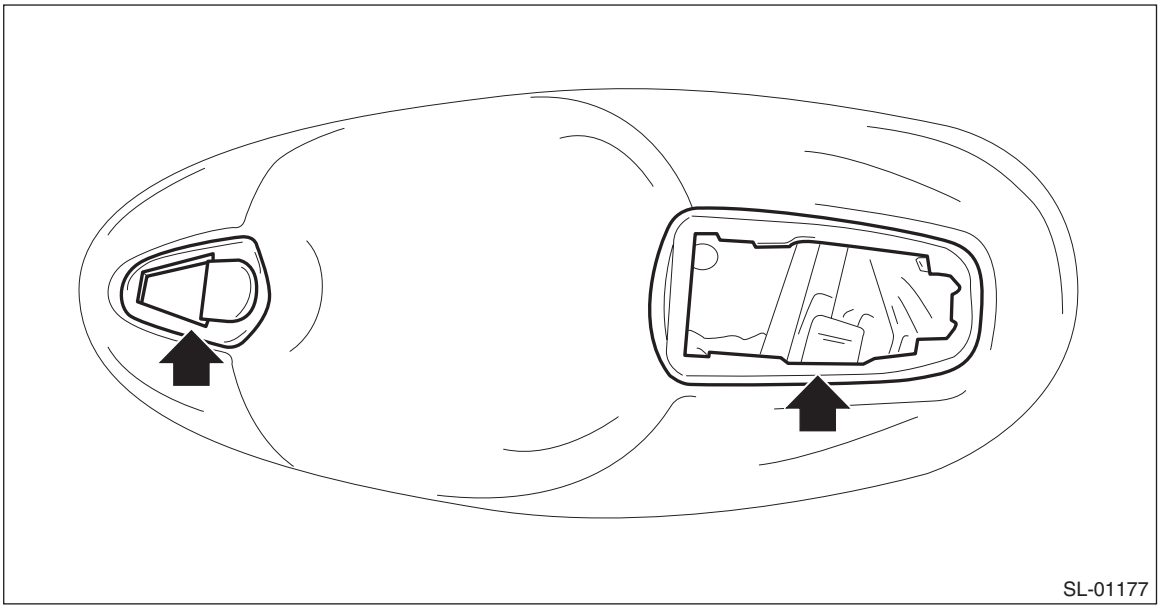
SL-03122



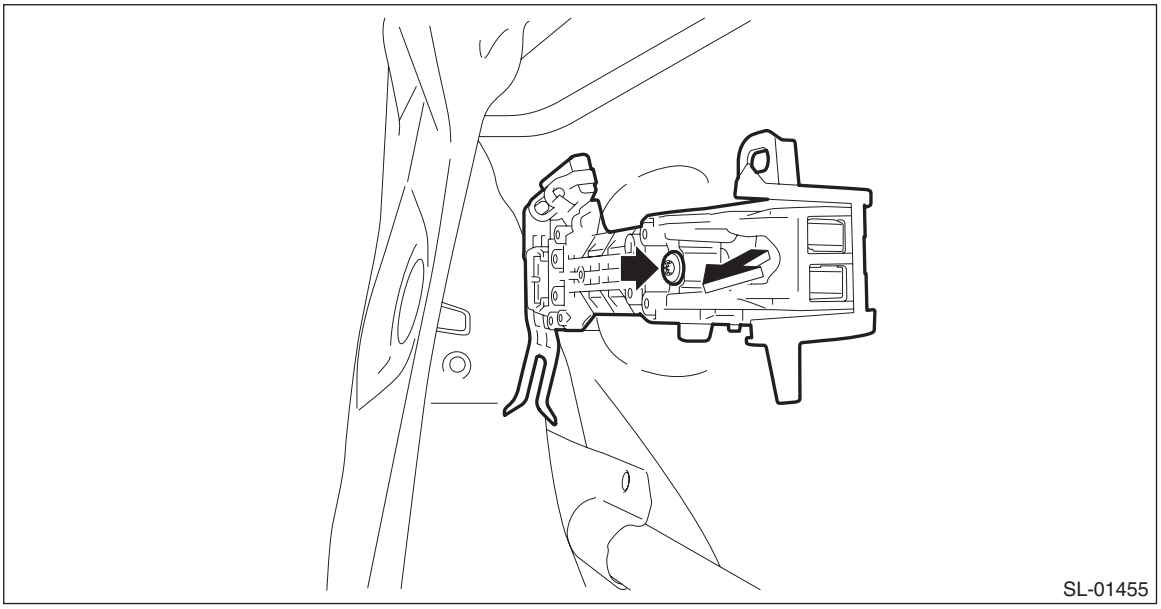
7) Remove the holder of the frame assembly - rear door outer.

8) Remove the handle - door outer.

CAUTION:
Do not apply excessive force to remove the handle - door outer from the frame assembly - front door.



(1) Pull the handle - door outer rearward to release engagement of the frame assembly - front door outer.
(2) Pull the handle - door outer towards yourself to remove the handle - door outer.



9) Remove the frame assembly - rear door outer.

Preparation tool:
TORX® T30

(1) Remove the spacer - door handle outer.

(2) Loosen the TORX® bolt and remove the frame assembly - rear door outer.

B: INSTALLATION

1) Before installation, check the following items.
- Lever is free from deformation.
- Grease is applied sufficiently to lever joints.

If grease is insufficient, add it as necessary before assembling.
2) Install the frame assembly - rear door outer.

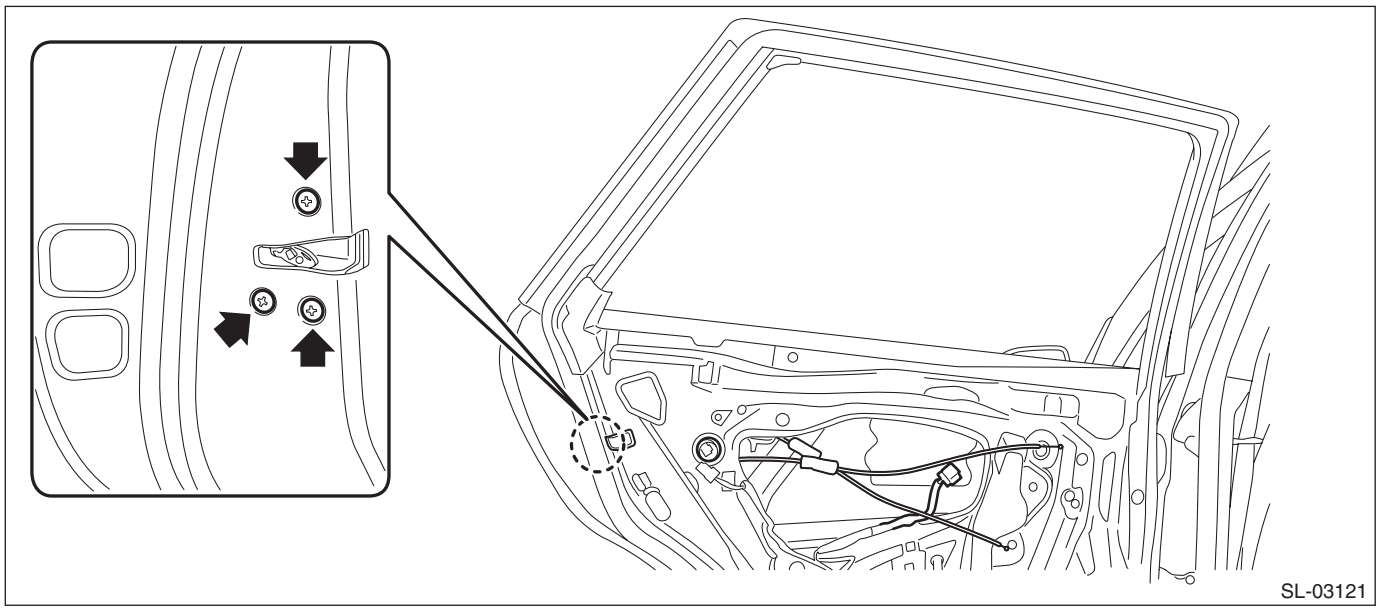
Preparation tool:
TORX® T30

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Install the spacer - door handle outer.
4) Install the handle - door outer.
(1) Insert the end of the handle - door outer to the frame assembly - rear door outer.
(2) Push forward while inserting the rear end of the handle - door outer to the frame assembly - rear door outer.
5) Install the cover - handle rear outer.

Preparation tool:
TORX® T30

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
6) Install the latch and actuator assembly - rear.

Tightening torque:
6.5 N·m (0.7 kgf-m, 5.2 ft-lb)
7) Install the sealing cover - rear door.
8) Install the trim panel - rear door. <Ref. to EI-71, INSTALLATION, Door Trim.>
9) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



C: INSPECTION

Check if the outer handle operates normally.
If the lever is faulty, replace the handle - door outer.

12.Rear Door Latch and Door Lock Actuator Assembly

A: REMOVAL

1) Raise the glass assembly - rear door to the top position.
2) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the trim panel - rear door. <Ref. to EI-71, REAR DOOR, REMOVAL, Door Trim.>
4) Remove the sealing cover - rear door. <Ref. to EB-40, REMOVAL, Rear Sealing Cover.>
5) Remove the glass assembly - rear door. <Ref. to GW-33, REMOVAL, Rear Door Glass.>
6) Remove the screws to remove the latch & actuator assembly - rear.

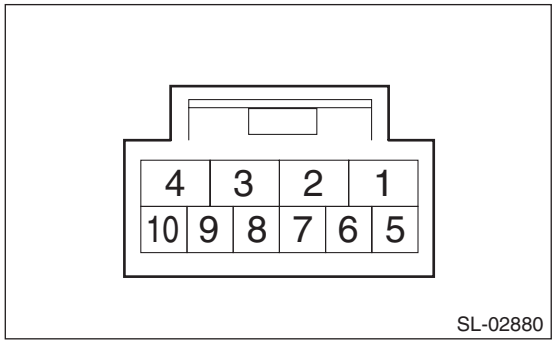
B: INSTALLATION

NOTE:
Make sure the child safety lock works correctly after installation.
1) Before installation, check the following items.
- Cable is free from deformation.
- Grease is applied sufficiently to lever joints.

If grease is insufficient, add it as necessary before assembling.
2) Install the latch and actuator assembly - rear.

Tightening torque:
6.5 N·m (0.7 kgf-m, 5.2 ft-lb)

3) Install the glass assembly - rear door. <Ref. to GW-34, INSTALLATION, Rear Door Glass.>
4) Install the sealing cover - rear door.
5) Install the trim panel - rear door. <Ref. to EI-71, INSTALLATION, Door Trim.>
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



C: INSPECTION

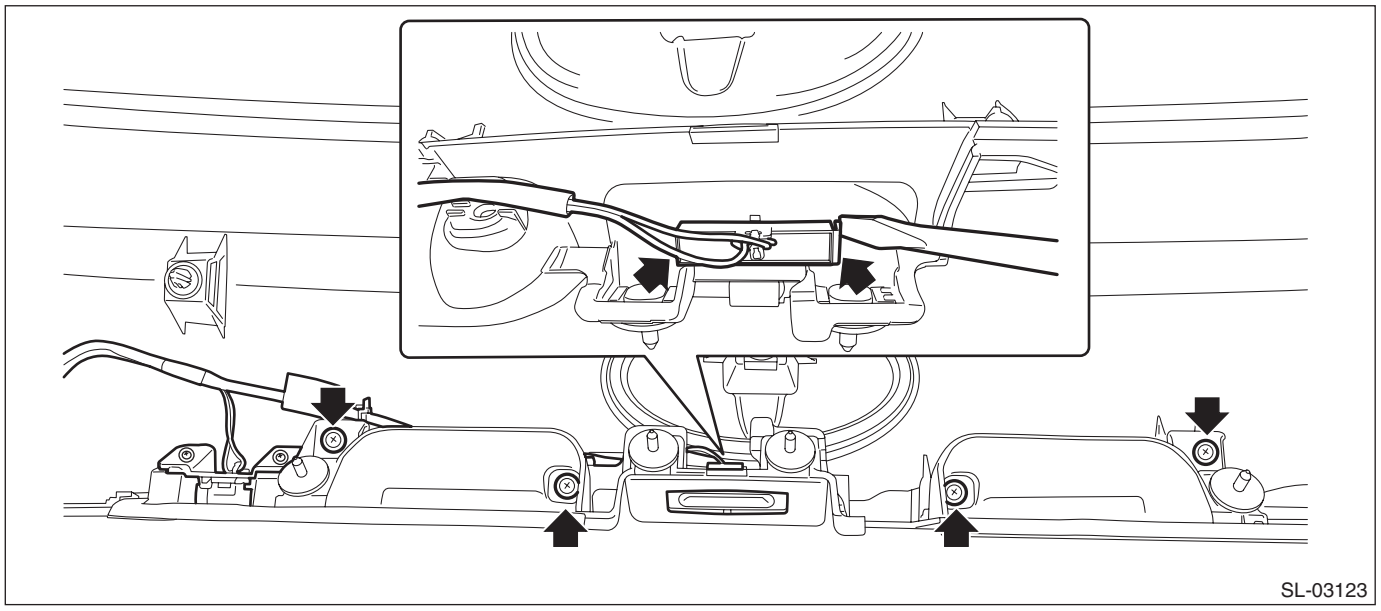
1. LATCH

Check if the latch operates normally.
If the cable is faulty, replace the latch & actuator assembly - rear.

2. ACTUATOR

1) Check door lock operation
Check the door lock operation when battery voltage is applied between the connectors.

Terminal No.	Inspection conditions	Standard
4 (+) — 1 (–)	Apply battery voltage.	LOCK
1 (+) — 4 (–)		UNLOCK



2) If it does not operate properly as a result of inspection, replace the latch & actuator assembly - rear.

13.Rear Gate Opener Button

A: REMOVAL

NOTE:
- The button - opener rear gate is integrated with the rear lock button.
- Open the panel - rear gate before disconnecting the ground terminal from battery sensor.

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate. <Ref. to EI-122, REMOVAL, Rear Gate Trim.>
3) Remove the garnish assembly - rear gate. <Ref. to EI-61, REMOVAL, Rear Gate Garnish.>
4) Remove the button - opener rear gate.
   (1) Remove the garnish switch bracket from the garnish assembly - rear gate.
   (2) While pushing the locks at both ends of the button - opener rear gate with a flat tip screwdriver, remove the button - opener rear gate together with the rear lock button.

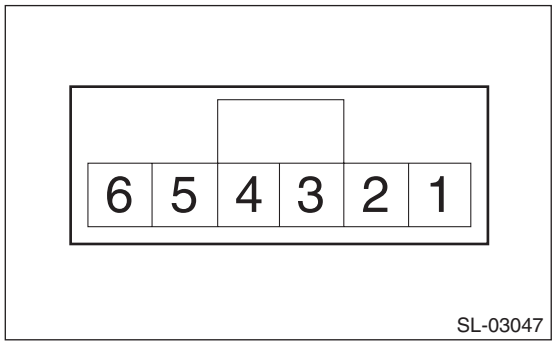
SL-03123

B: INSTALLATION

CAUTION:
Make sure that the harness grommet is securely installed.
If not properly installed, this may cause leaks.

1) Install the button - opener rear gate and rear lock button.
2) Install the garnish switch bracket to the garnish assembly - rear gate.
3) Install the garnish assembly - rear gate. <Ref. to EI-62, INSTALLATION, Rear Gate Garnish.>

Tightening torque
4.5 N·m (0.4 kgf-m, 3.3 ft-lb)



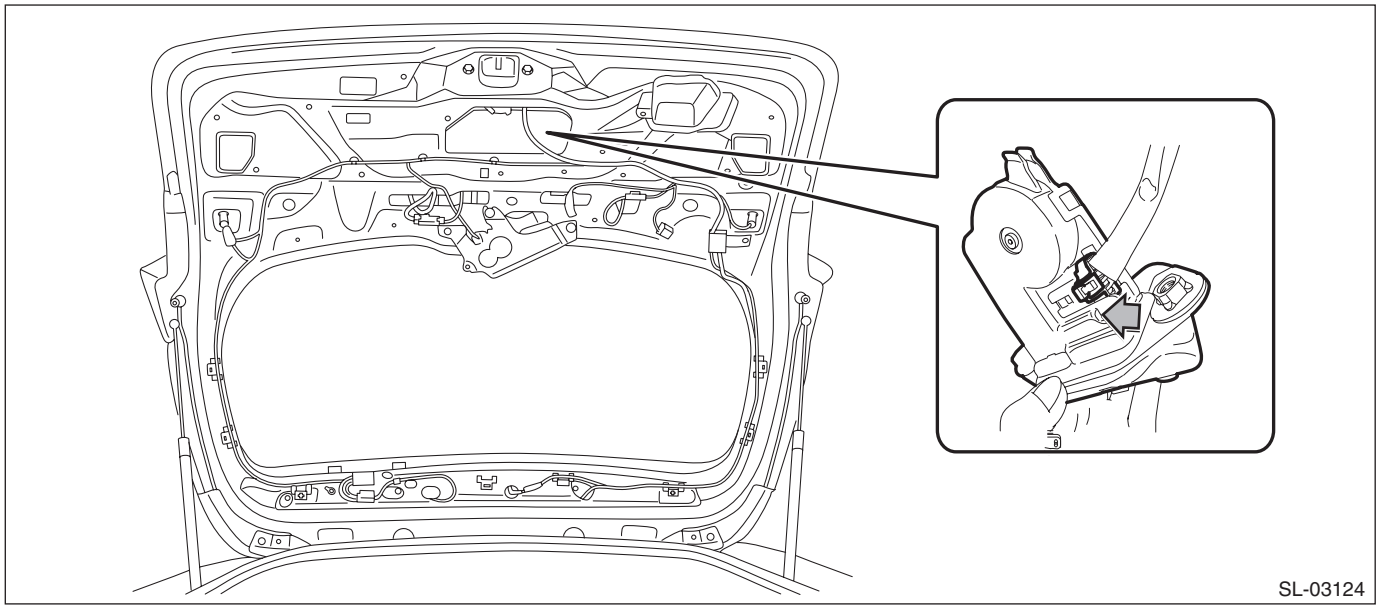
4) Install the trim panel - rear gate. <Ref. to EI-123, INSTALLATION, Rear Gate Trim.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

Unit inspection

Preparation tool:
Circuit tester

1) Check the resistance between connector terminals.



Terminal No.	Inspection conditions	Standard
1 — 2	OPEN	Less than 5 Ω
	CLOSE	1 MΩ or more

2) If the inspection result is not within the standard, replace the button - opener rear gate.

14.Rear Gate Latch and Actuator Assembly

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate. <Ref. to EI-122, REMOVAL, Rear Gate Trim.>
3) Remove the latch and actuator - rear gate.
   (1) Disconnect the connector.
   (2) Remove the bolts, and remove the latch and actuator - rear gate.

B: INSTALLATION

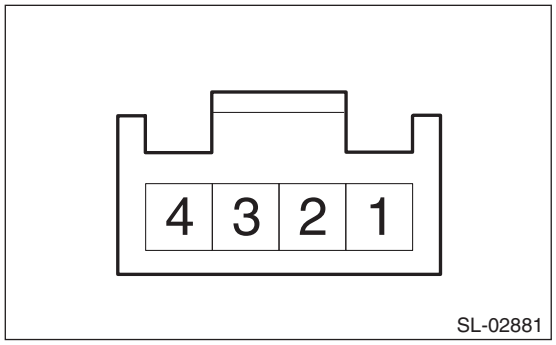
1) Install the latch and actuator - rear gate.

Tightening torque
25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) Install the trim panel - rear gate. <Ref. to EI-122, REMOVAL, Rear Gate Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

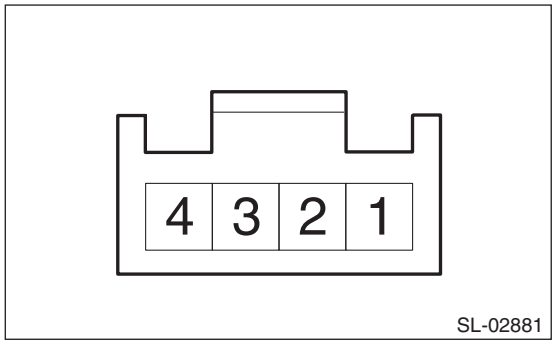
1. LATCH



Check if the latch operates normally.
If latch deformation, abnormal wear, or unsmooth lock operation is observed, replace the latch and actuator - rear gate.

2. ACTUATOR

Unit inspection

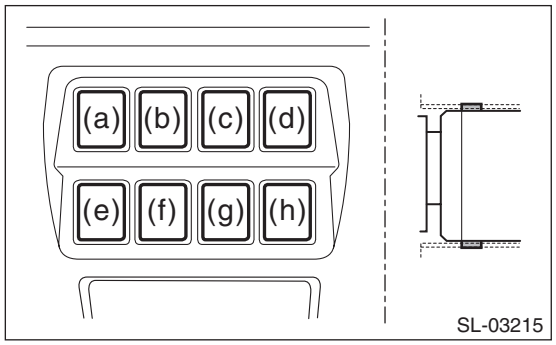


Preparation tool:
Circuit tester

1) Check door lock operation
Check the door lock operation when battery voltage is applied between the connectors.

Terminal No.	Inspection conditions	Specification
1 (+) — 2 (–)	Connect battery to the terminals	OPEN

2) Check switch
Check the resistance between connector terminals.



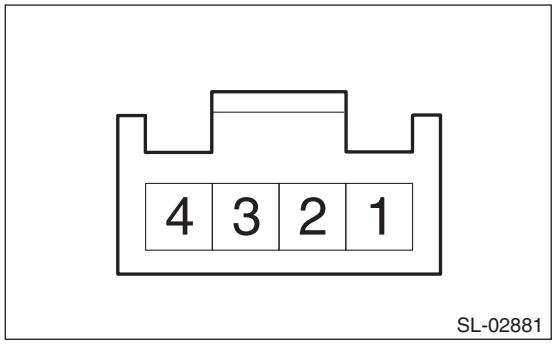
Terminal No.	Inspection conditions	Standard
3 — 4	OPEN	Less than 1.5 Ω
	CLOSE	1 MΩ or more

3) If it does not operate properly as a result of inspection, replace the latch and actuator - rear gate.

15.Trunk Opener Switch

A: REMOVAL

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-74, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the trunk opener switch.
(1) Release the claws and remove the trunk opener button (a).



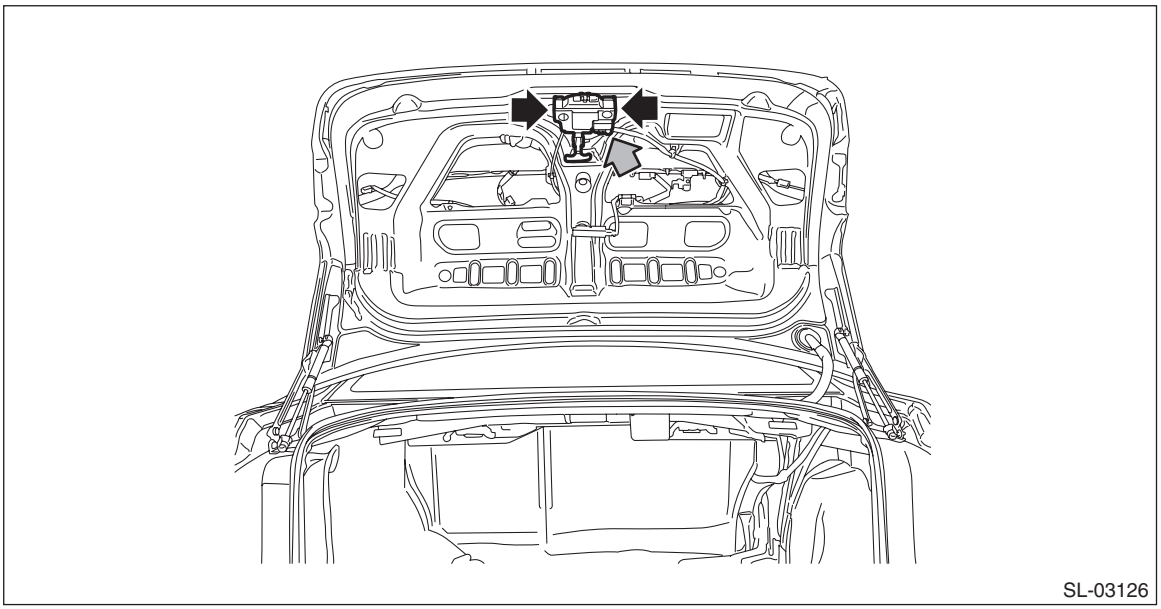
B: INSTALLATION

1) Install the switch - trunk opener.
2) Install the cover assembly - instrument panel LWR driver. <Ref. to EI-75, INSTALLATION, Instrument Panel Lower Cover.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
1 — 4	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2) If the inspection result is not within the standard, replace the switch - trunk opener.

16.Trunk Lid Latch and Actuator Assembly

A: REMOVAL

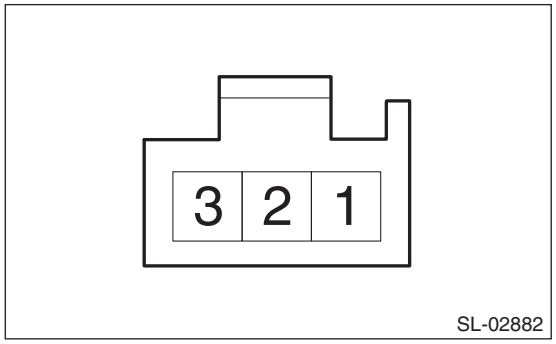
1) Open the trunk lid COMPL.
2) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the trim panel - trunk lid. <Ref. to EI-110, REMOVAL, Trunk Room Trim.>
4) Remove the lock assembly - trunk lid.
   (1) Disconnect the connector.
   (2) Remove the bolts, then remove the lock assembly - trunk lid.

B: INSTALLATION

1) Install the lock assembly - trunk lid.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Install the trim panel - trunk lid. <Ref. to EI-111, INSTALLATION, Trunk Room Trim.>



C: INSPECTION

1. LATCH

Check if the latch operates normally.
If latch deformation, abnormal wear, or unsmooth lock operation is observed, replace the lock assembly - trunk lid.

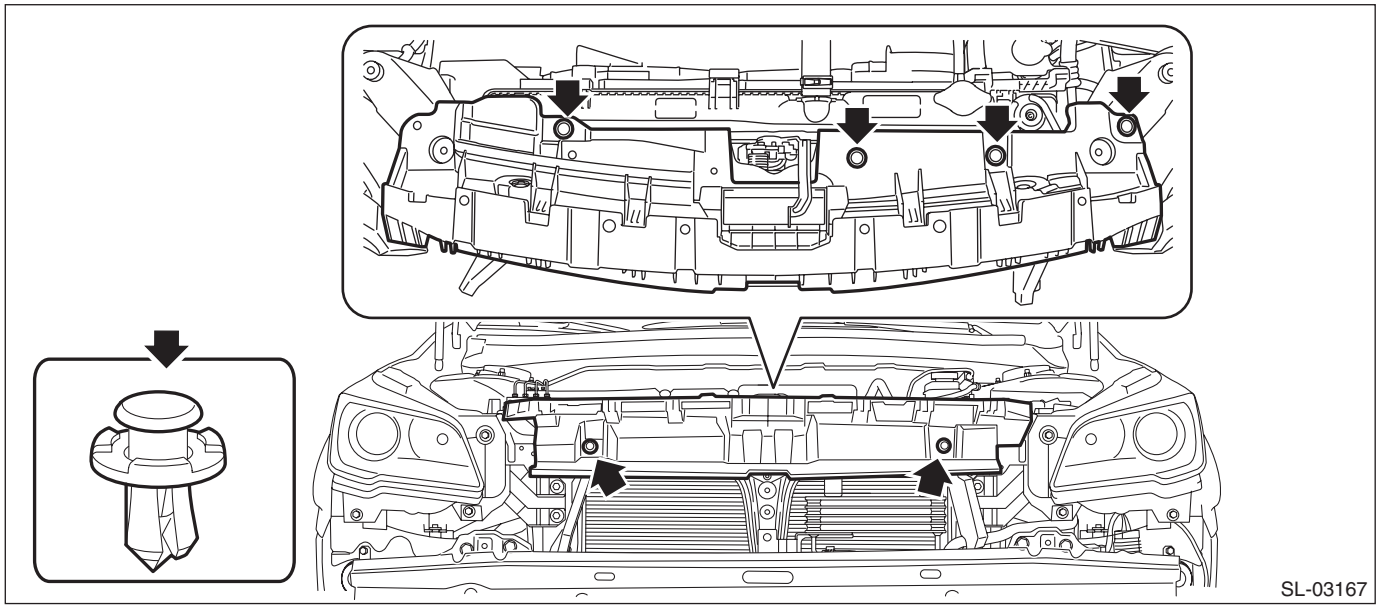
2. ACTUATOR

1) Check door lock operation
Check the door lock operation when battery voltage is applied between the connectors.

Terminal No.	Inspection conditions	Standard
1 (+) — 2 (–)	Connect battery to the terminals	LOCK → UNLOCK

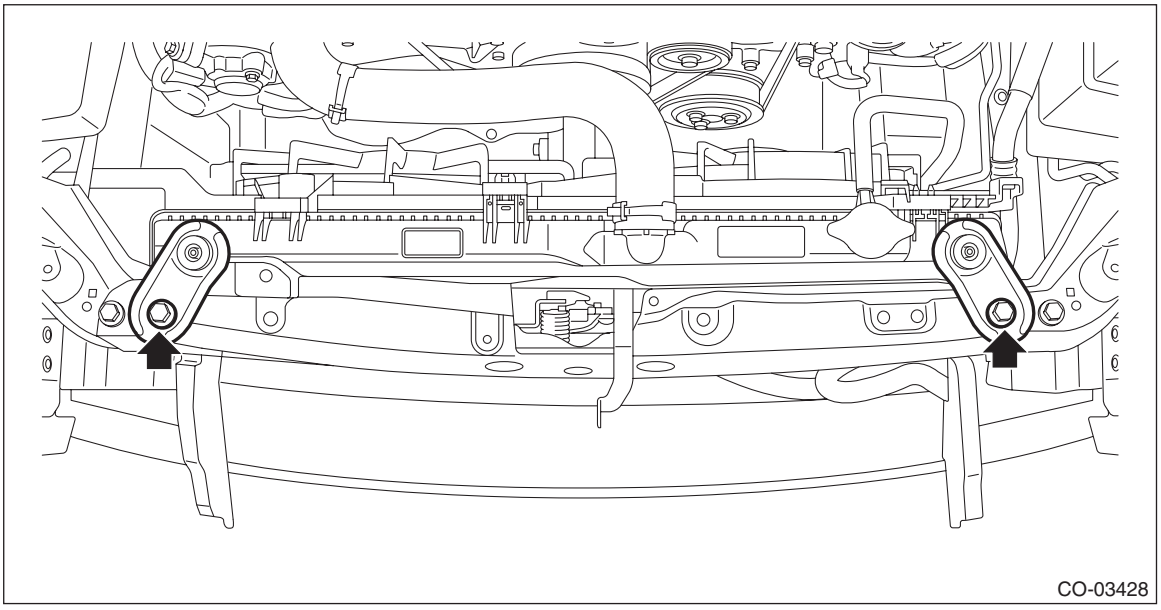
2) Check switch
Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



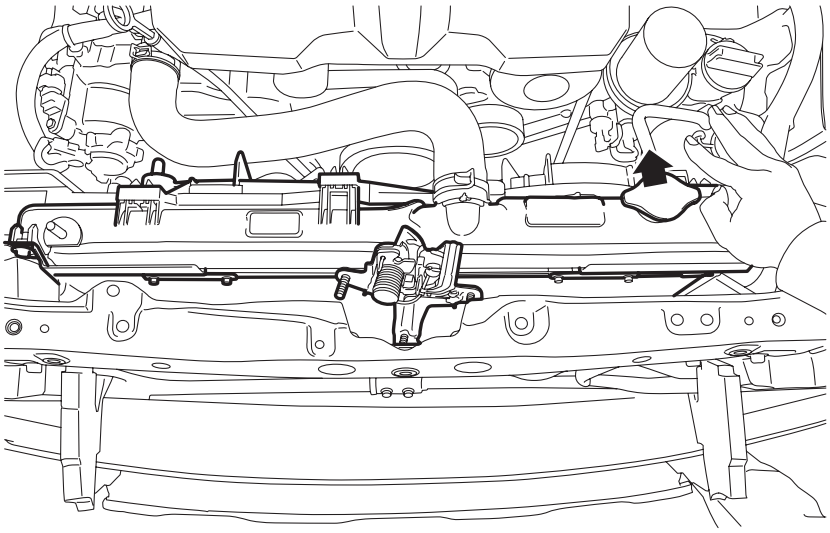
Terminal No.	Inspection conditions	Standard
2 — 3	LOCK	1 MΩ or more
	UNLOCK	Less than 1 Ω

3) If it does not operate normally, replace the lock assembly - trunk lid.

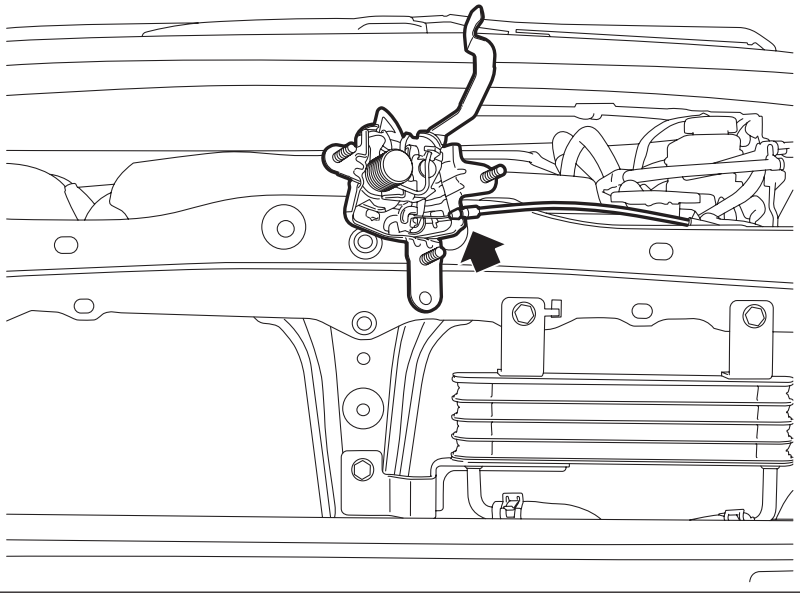


17.Front Hood Lock Assembly

A: REMOVAL



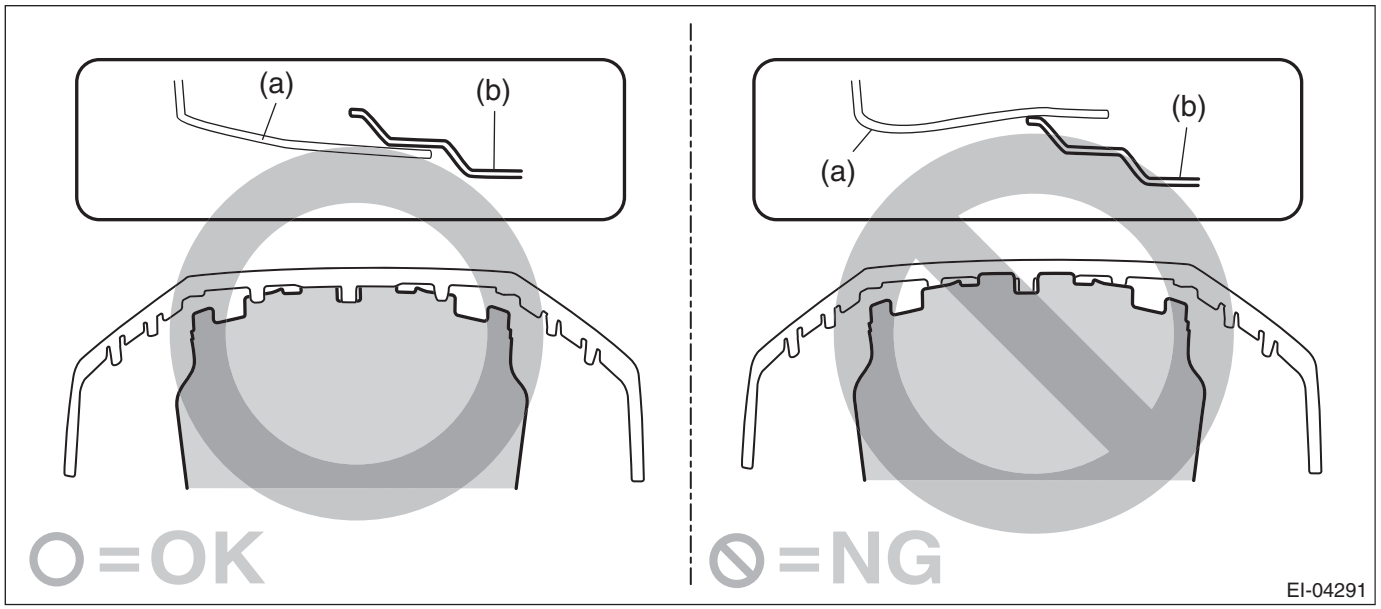
1) Open the front hood.
2) Remove the air intake duct. <Ref. to IN(H4DO)-12, REMOVAL, Air Intake Duct.>
3) Remove the bumper face - front. <Ref. to EI-34, REMOVAL, Front Bumper.>
4) Remove the bracket - grille.



5) Remove the radiator upper brackets.

6) Remove the lock assembly - front hood.
(1) Remove the nuts and clips, and push the radiator to the rear to pull out the lock assembly - front hood through the clearance.

SL-03127



(2) Disconnect the release cable, and detach the lock assembly - front hood.

SL-03128

NOTE:
When disconnecting the release cable, refer to “FRONT HOOD OPENER” of “Remote Openers”. <Ref. to SL-59, FRONT HOOD OPENER, REMOVAL, Remote Openers.>

B: INSTALLATION

CAUTION:
• Install the bumper face - front so that the front end of the under cover (b) comes inside the bumper face - front (a).

• Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.
1) Before installation, check the following items.
- Is the cable deformed?
- Grease is applied sufficiently to cable joints.

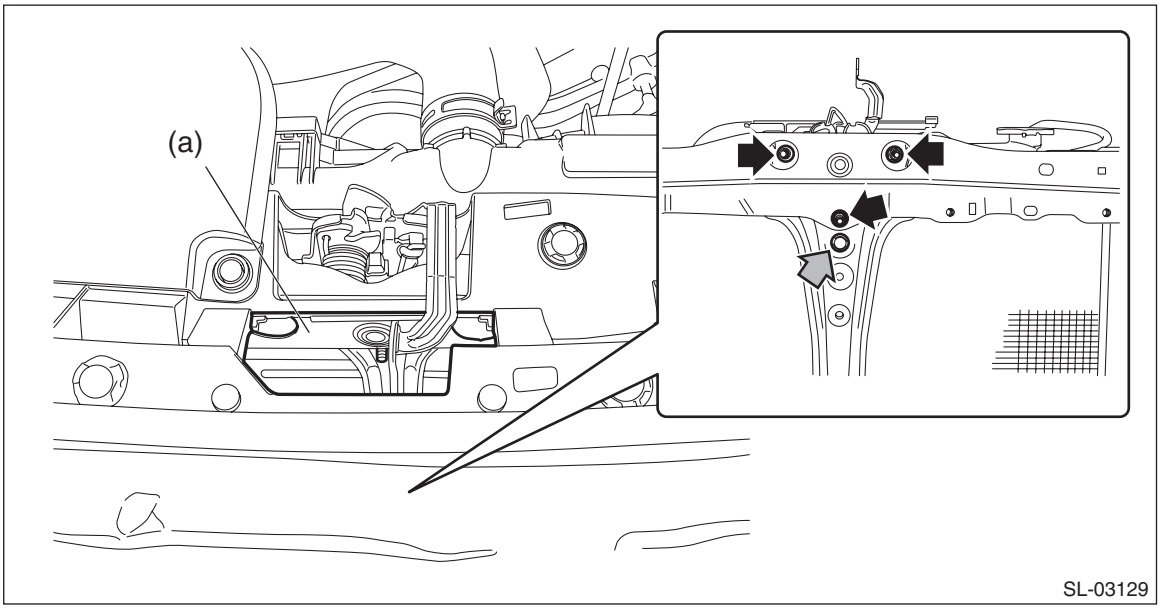
If grease is insufficient, add it as necessary before assembling the cable.
2) Adjust and install the lock assembly - front hood.

NOTE:
Refer to “ADJUSTMENT” for adjustment of the lock assembly - front hood. <Ref. to SL-58, ADJUSTMENT, Front Hood Lock Assembly.>

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)
3) Install the radiator upper brackets.

Tightening torque:
12 N·m (1.2 kgf-m, 8.9 ft-lb)
4) Attach the bracket - grille.
5) Install the bumper face - front. <Ref. to EI-38, INSTALLATION, Front Bumper.>
6) Install the air intake duct. <Ref. to IN(H4DO)-12, INSTALLATION, Air Intake Duct.>

C: ADJUSTMENT



1) Remove the bumper face - front. <Ref. to EI-34, REMOVAL, Front Bumper.>

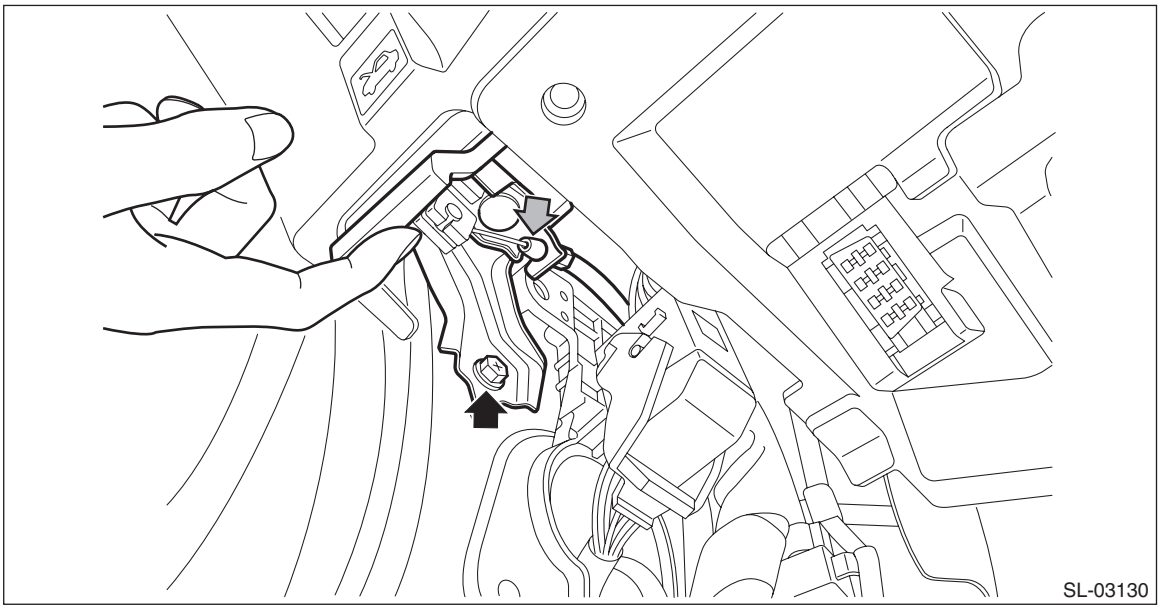
NOTE:
Remove the bumper face - front only at the first adjustment.
2) Remove the center ring clip from the lock assembly - front hood.

NOTE:
Remove the center ring clip only at the first adjustment.
After adjusting the lock assembly - front hood, dispose the clips since they are no longer needed.
The clips cannot be inserted because the clip holes become smaller due to adjustment.
3) Loosen the nuts through the adjustment window (a) of the lock assembly - front hood, and adjust the lock assembly - front hood while moving it up and down.

CAUTION:
After adjustment, tighten the bolts securely.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

D: INSPECTION



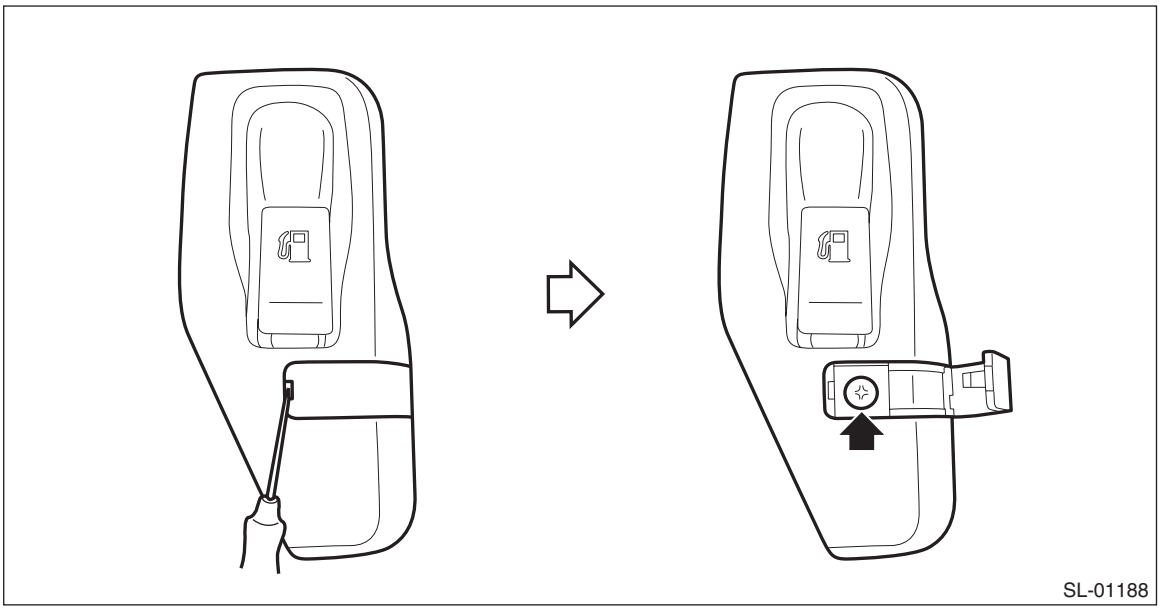
Check if the lock assembly operates normally.
If lever deformation, abnormal wear, or unsmooth lock operation is observed, replace the lock assembly - front hood.

18.Remote Openers

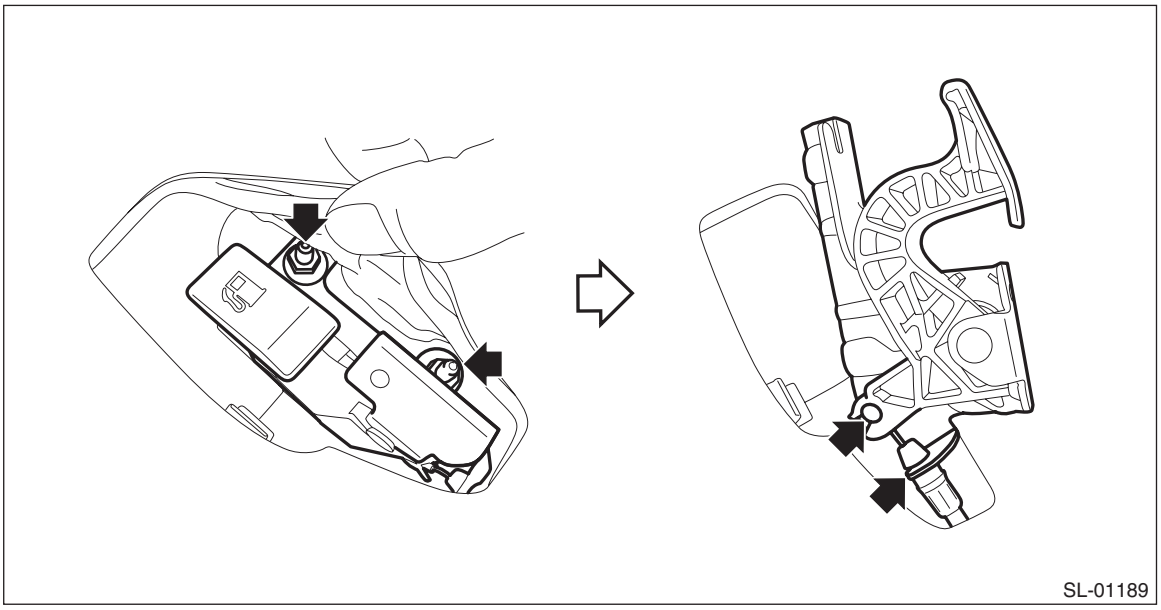
A: REMOVAL

1. FRONT HOOD OPENER

1) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-74, REMOVAL, Instrument Panel Lower Cover.>
2) Remove the cover side sill - front LH and front cover - side sill LH. <Ref. to EI-92, REMOVAL, Lower Inner Trim.>
3) Remove the opener handle.
   (1) Remove the cable - front hood.
   (2) Remove the bolt, and remove the opener handle.



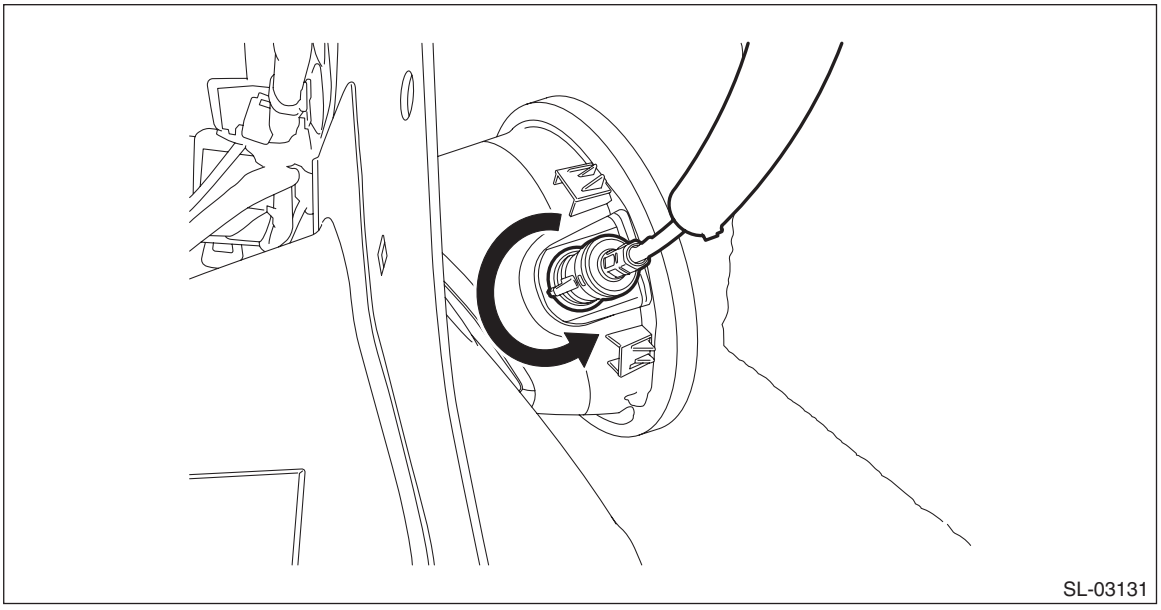
4) Remove the mud guard - front LH. <Ref. to EI-29, REMOVAL, Mud Guard.>
5) Remove the lock assembly - front hood. <Ref. to SL-55, REMOVAL, Front Hood Lock Assembly.>
6) Attach a string to the end of cable - front hood, and remove the cable clip and cable - front hood.



NOTE:
Leave the string attached to the body, and use it during installation.

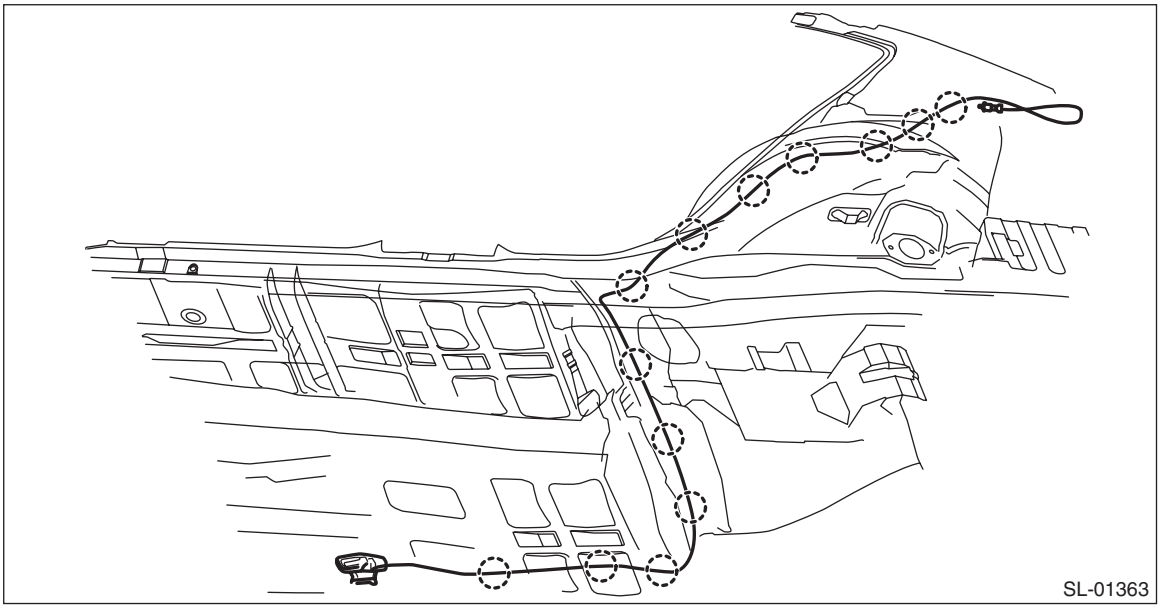
2. FUEL FLAP OPENER

1) Remove the lower inner trim. <Ref. to EI-92, REMOVAL, Lower Inner Trim.>
2) Remove the cover - handle.
   (1) Open the cover by using a flat tip screwdriver.
   (2) Remove the screws and detach the cover - handle.



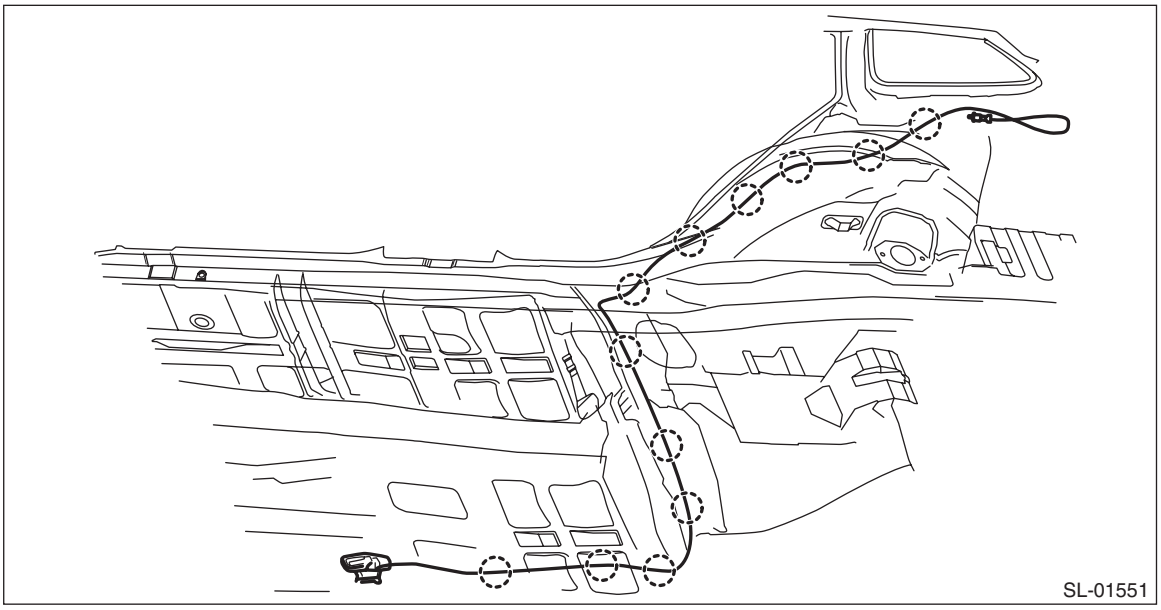
SL-01188

3) Remove the pull handle - opener.
   (1) Remove the nut.
   (2) Remove the cable from pull handle - opener.



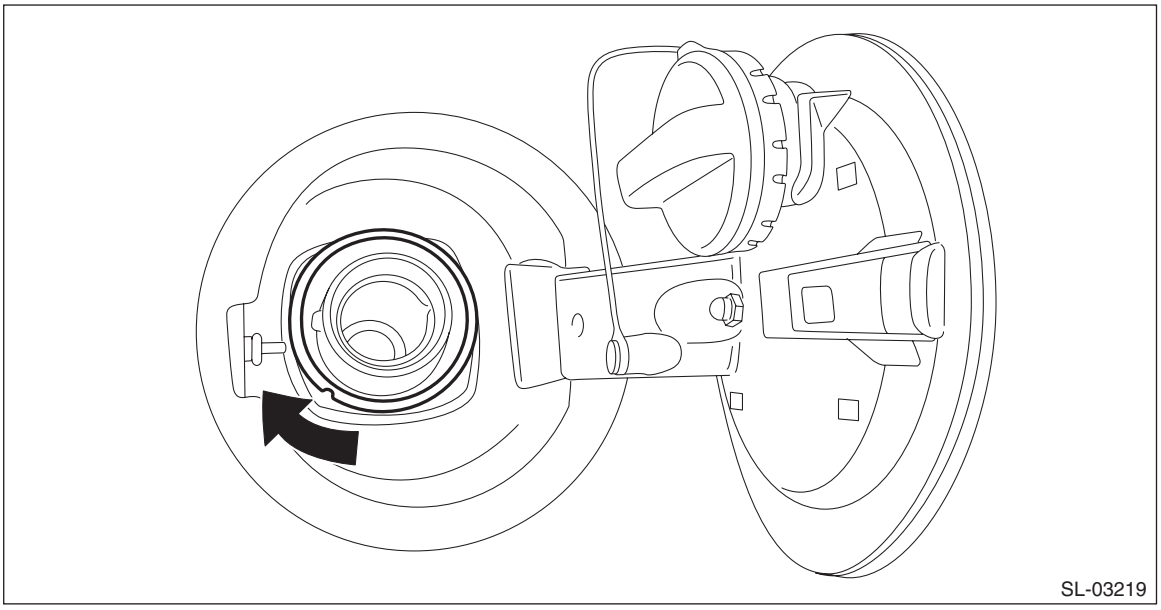
SL-01189

4) Remove the trim panel - rear apron RH. (OUTBACK model) <Ref. to EI-100, OUTBACK MODEL, REMOVAL, Rear Quarter Trim.>
5) Remove the trim panel - trunk side RH. (Sedan model) <Ref. to EI-110, REMOVAL, Trunk Room Trim.>

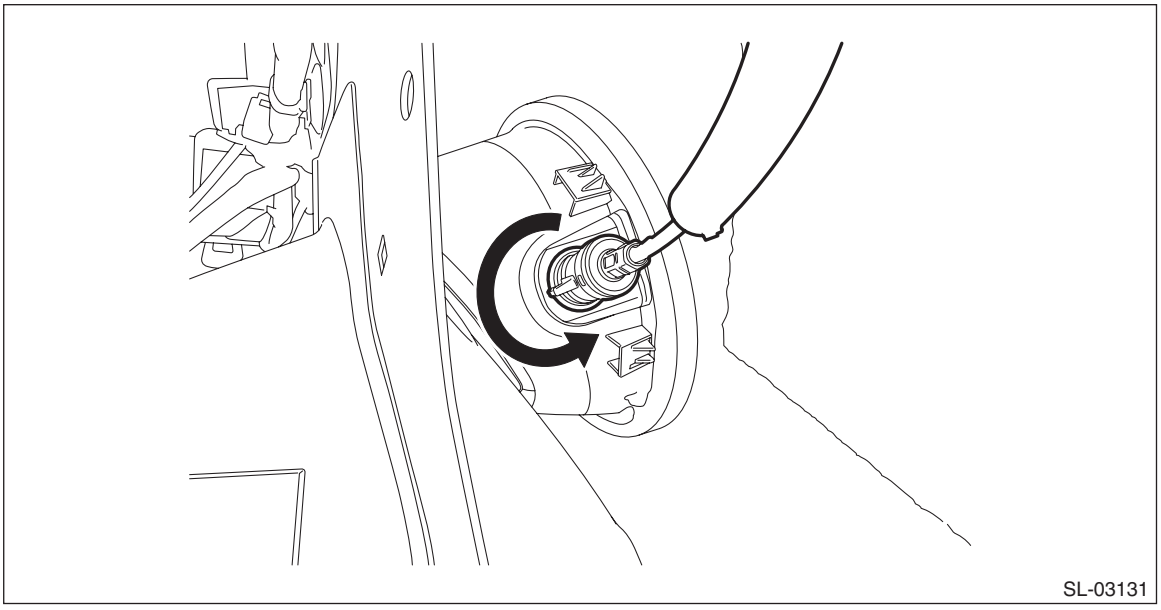


6) Remove the cable assembly - fuel inside the quarter panel.
(1) Turn the cable assembly - fuel counterclockwise and pull toward vehicle rear.

7) Remove the cable clip, and remove the cable.
- Sedan model

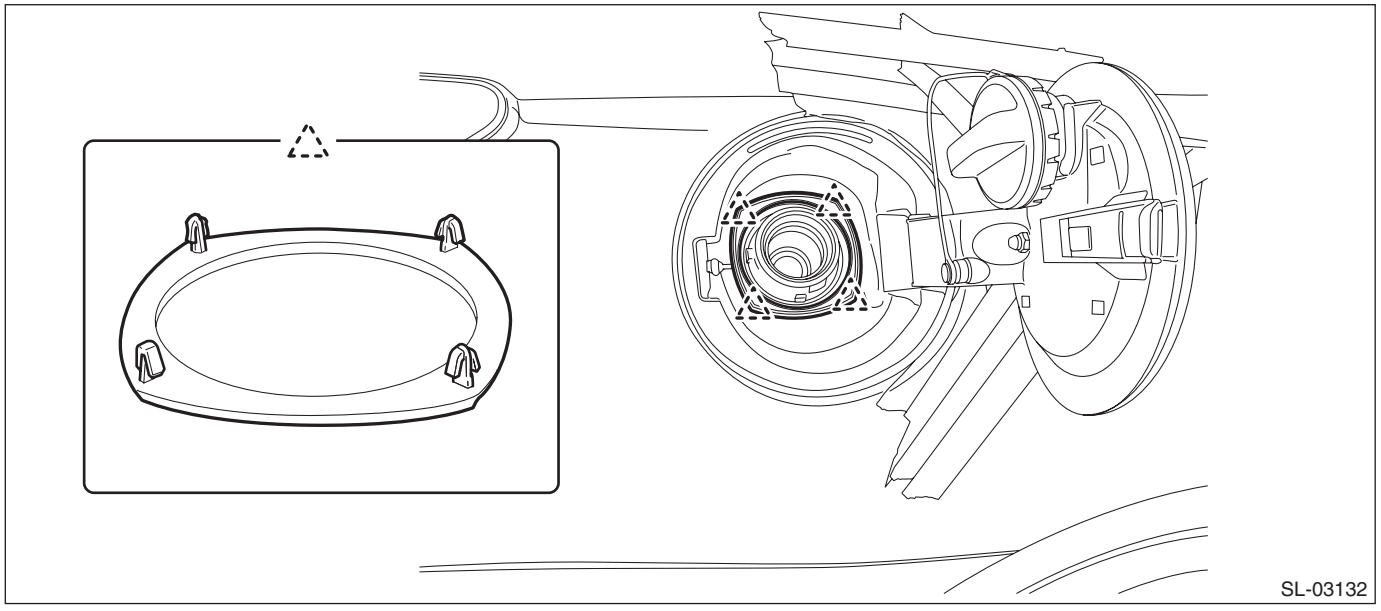


- OUTBACK model



3. FUEL FLAP

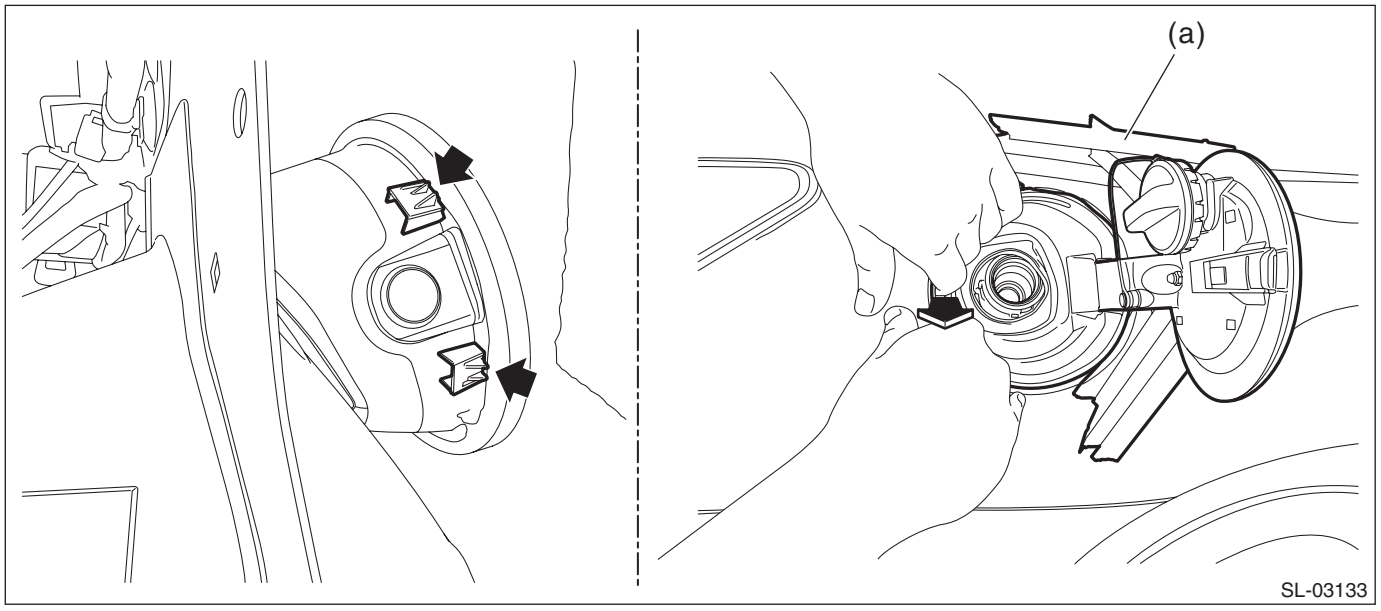
1) Open the fuel flap and remove the fuel filler cap.
2) Turn the fuel filler pipe protector in the direction of the arrow to unlock and remove it.



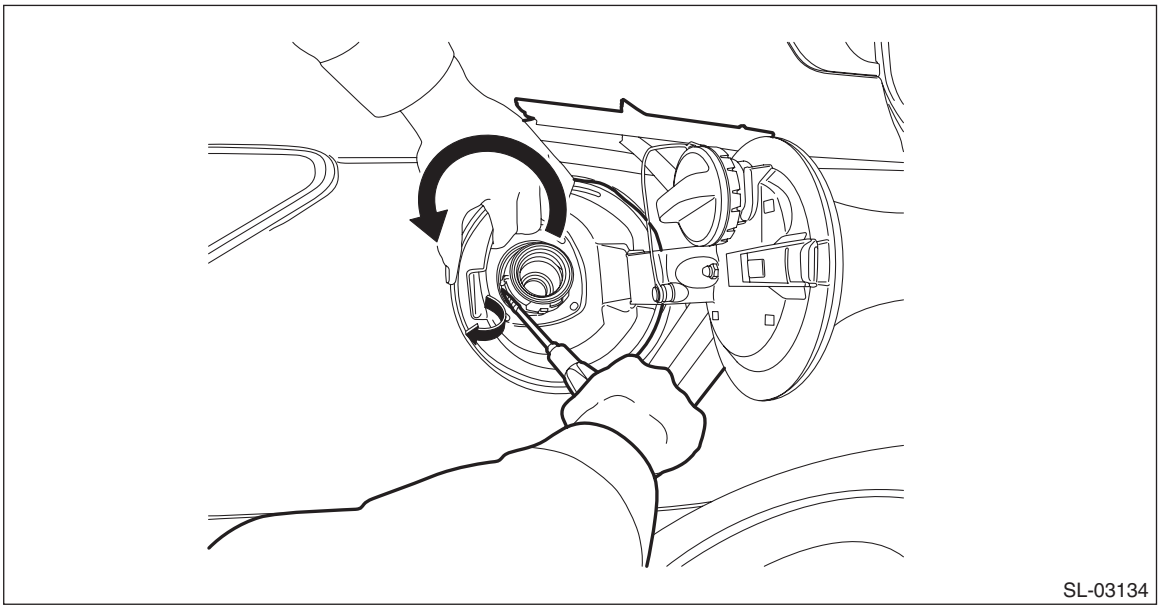
3) Remove the trim panel - rear apron RH. (OUTBACK model) <Ref. to EI-100, OUTBACK MODEL, REMOVAL, Rear Quarter Trim.>
4) Remove the trim panel - trunk side RH. (Sedan model) <Ref. to EI-110, REMOVAL, Trunk Room Trim.>

5) Remove the cable assembly - fuel inside the quarter panel.
(1) Turn the cable assembly - fuel counterclockwise and pull toward vehicle rear.

6) Disconnect the ring clips.

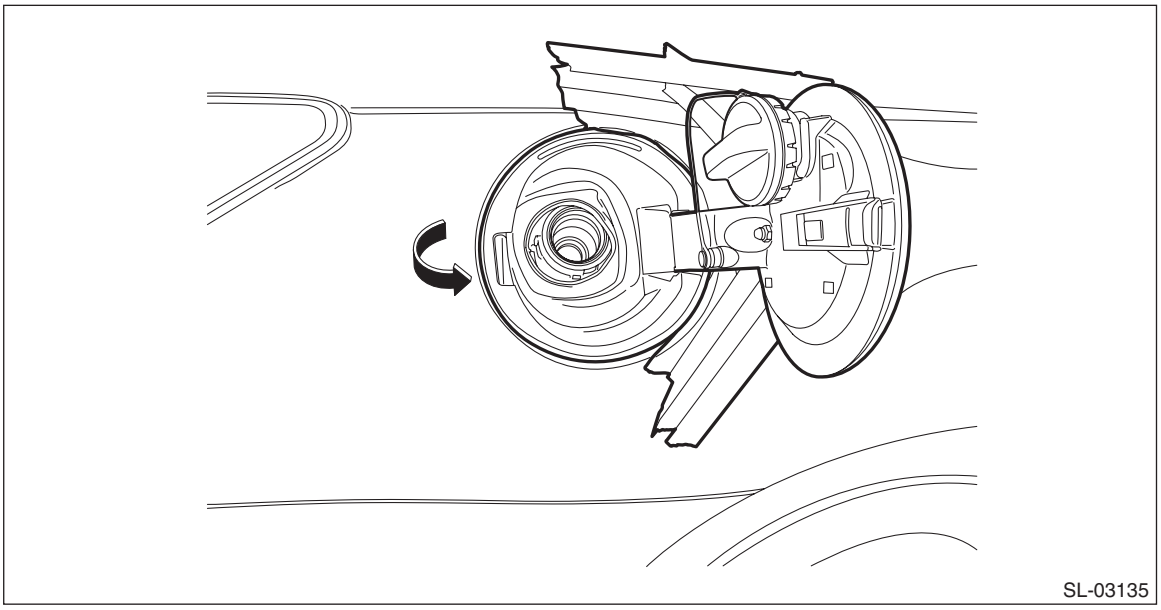


CAUTION:
Always replace with a new part, because engagement of the claw weakens.

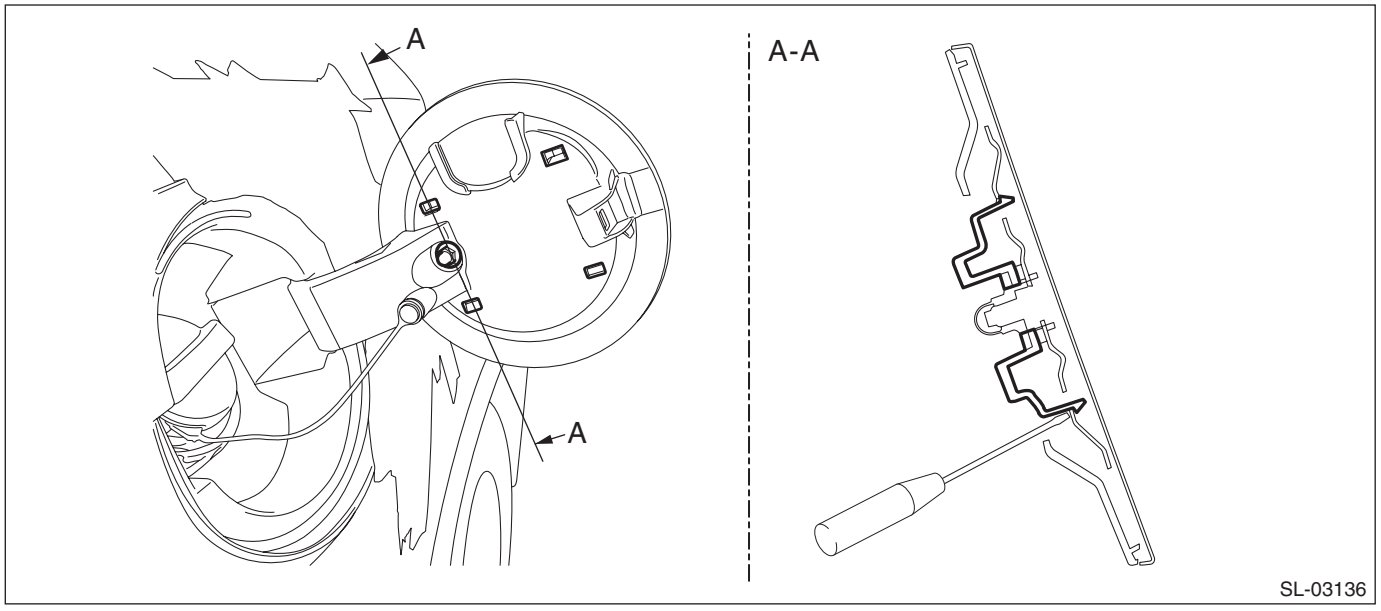


7) Remove the saucer - COMPL.

CAUTION:
Be careful not to damage by forcibly prying at the rubber portion with a flat tip screwdriver or similar tool.



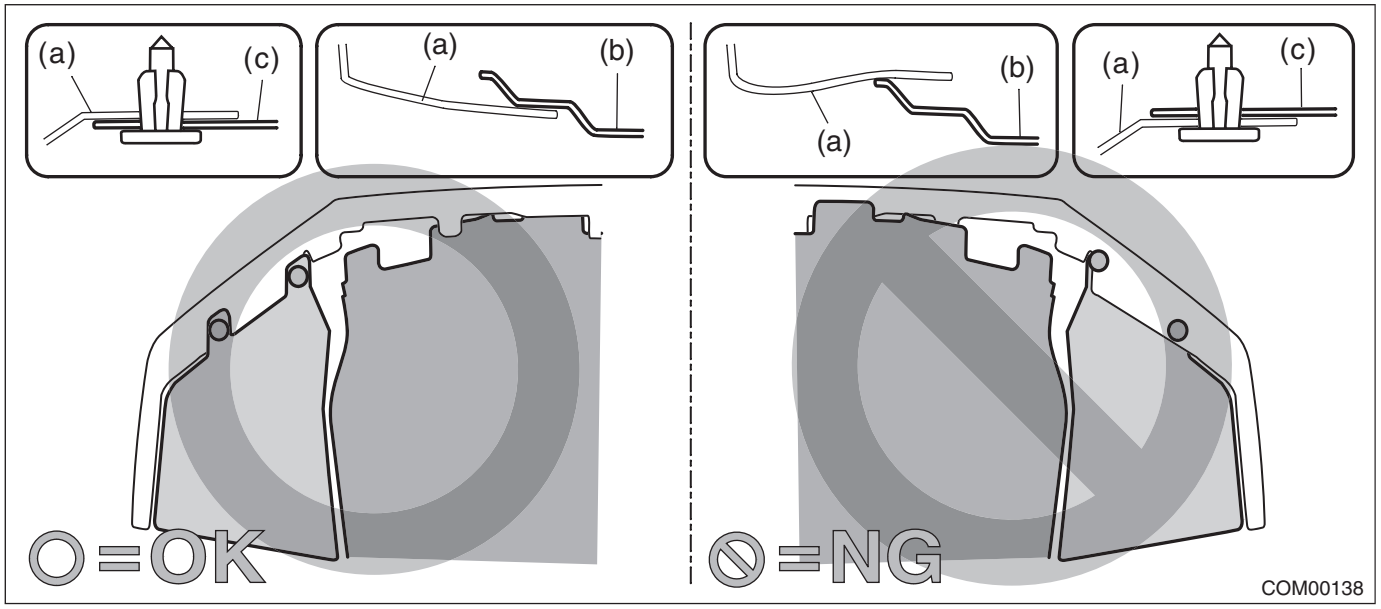
(1) Attach the protective tape (a) to the panel side outer.
(2) Hold the position shown in the figure with your hands, push the claw from vehicle inside and pull out toward yourself.



(3) While pulling out toward yourself, remove the rubber portion from the fuel filler pipe using a flat tip screwdriver or similar tool wrapped with a protection tape.

(4) Pull out while tilting toward the front of vehicle.

8) Remove the flap - COMPL fuel from the saucer - COMPL.
(1) Remove the nut and release the claws using a flat tip screwdriver or similar tool wrapped with a protection tape.



9) Remove the clips, and remove the fuel filler cap from the saucer - COMPL.

CAUTION:
Always replace with a new clip, because engagement of the claw weakens.

B: INSTALLATION

1. FRONT HOOD OPENER

CAUTION:
• Install the bumper face - front so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).

• Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.
1) Before installation, check the following items.
• Cable is free from deformation such as fray.
2) Pull the string attached to the cable - front hood into the vehicle, and install the cable clip and cable - front hood.
3) Install the lock assembly - front hood. <Ref. to SL-57, INSTALLATION, Front Hood Lock Assembly.>
4) Install the opener handle.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
5) Install the cover side sill - front.
6) Install the cover assembly - instrument panel LWR driver.
7) Install the mud guard - front LH.

2. FUEL FLAP OPENER

1) Install the cable assembly - fuel.
2) Install the pull handle - opener and cover - handle.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Install the trim panel - trunk side RH. (Sedan model)
4) Install the trim panel - rear apron RH. (OUTBACK model)
5) Install the lower inner trim.

3. FUEL FLAP

1) Install the flap - COMPL fuel to the saucer - COMPL.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the saucer - COMPL.

NOTE:
Securely install the rubber portion of the saucer - COMPL to the fuel filler pipe assembly.

3) Install the fuel filler cap to the saucer - COMPL.

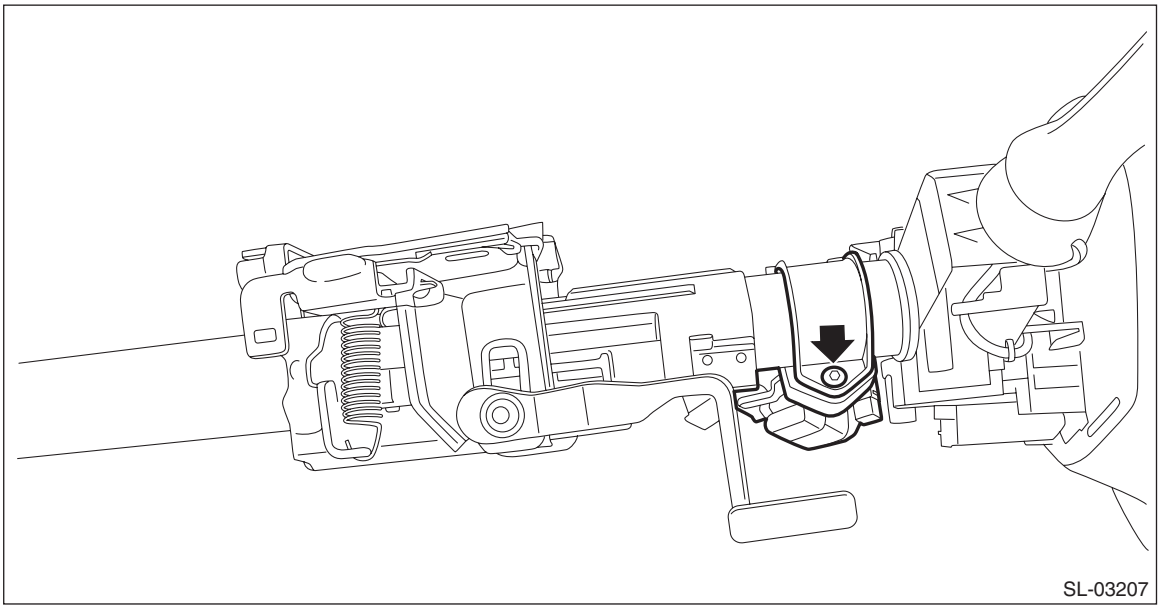
CAUTION:
Always replace with a new clip, because engagement of the claw weakens.

4) Attach the ring clips.

CAUTION:
Always replace with a new part, because engagement of the claw weakens.

5) Install the fuel filler pipe protector.
6) Install the cable assembly - fuel.
7) Install the trim panel - trunk side RH. (Sedan model)
8) Install the trim panel - rear apron RH. (OUTBACK model)

C: INSPECTION



Check if the front hood and fuel flap operate normally.

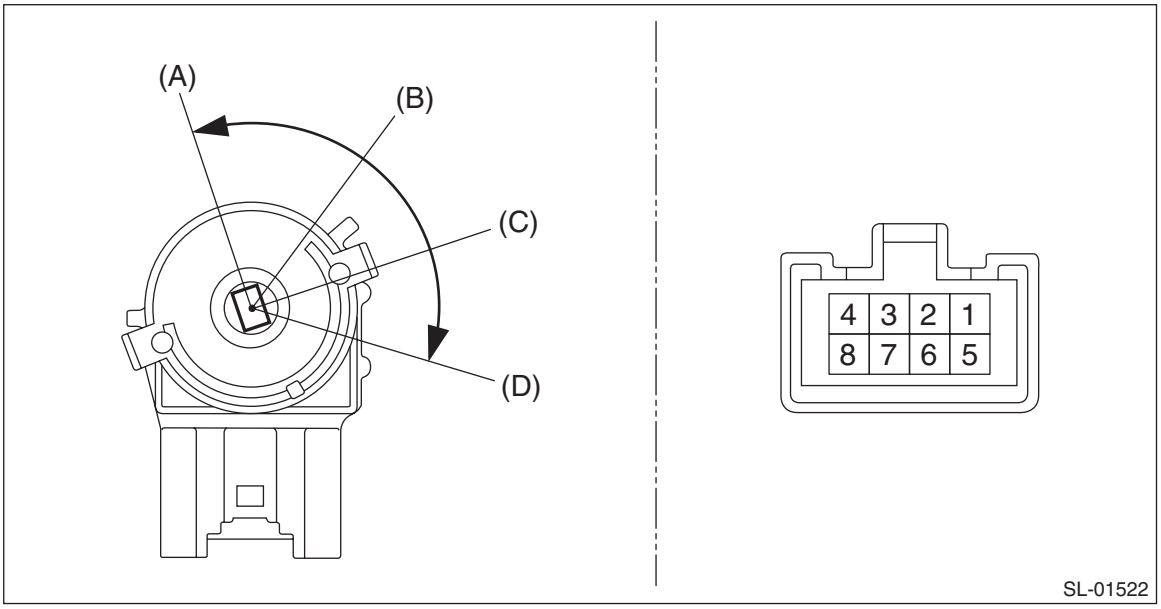
19.Ignition Key Lock

A: REPLACEMENT

CAUTION:
• Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
• If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the column assembly - steering. <Ref. to PS-19, REMOVAL, Steering Column.>
3) Remove the ignition key lock.
   (1) Secure the column assembly - steering in a vise.
   (2) Use the reverse tap and drill to remove the set bolt and remove the ignition key lock.

4) Install the ignition key lock.
   (1) Secure the ignition key lock to the column assembly - steering.
   (2) Use new set bolts. Tighten the bolt until the bolt head is broken (bolt head wrenched off).
5) Install the column assembly - steering. <Ref. to PS-21, INSTALLATION, Steering Column.>
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



B: DISASSEMBLY

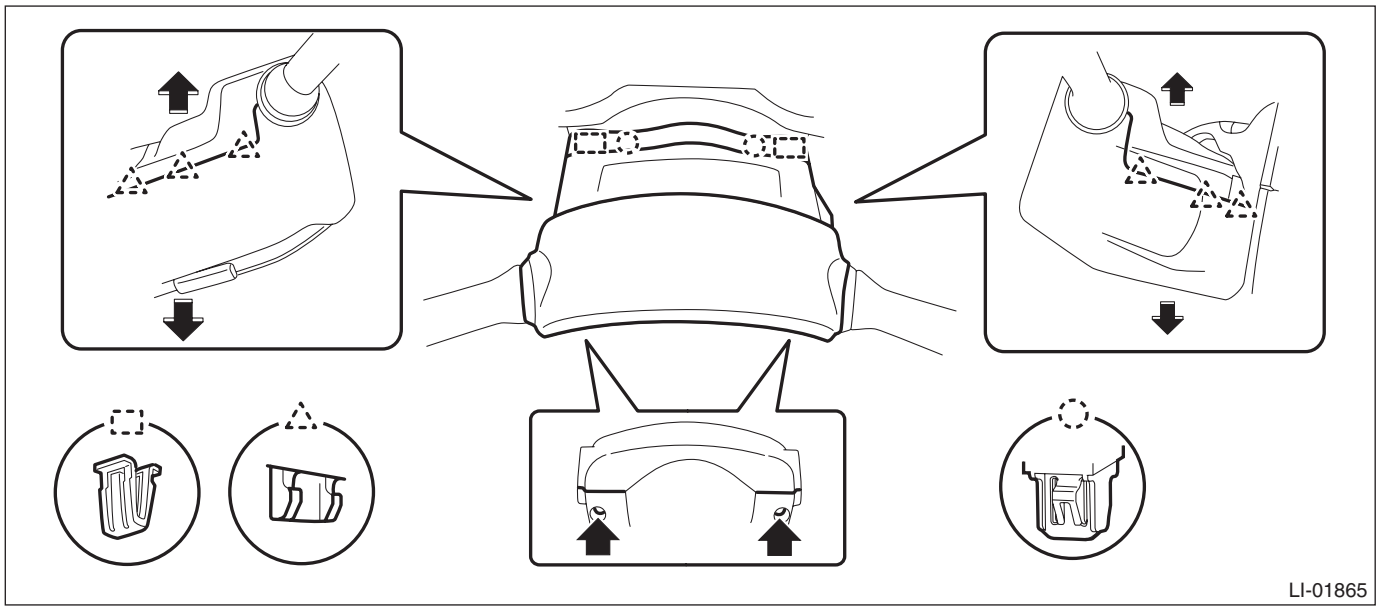
NOTE:
Refer to "Key Lock Cylinders" for disassembly of the ignition key lock. <Ref. to SL-70, STEERING LOCK, REMOVAL, Key Lock Cylinders.>

C: INSPECTION

1) Measure the resistance between connector terminals.

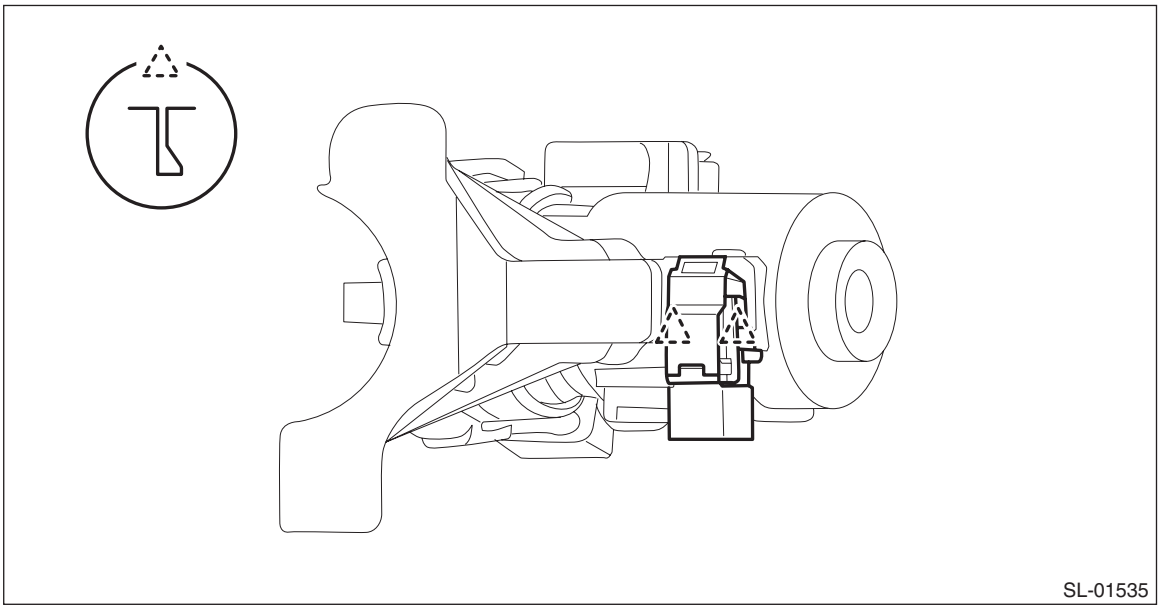
Preparation tool:
Circuit tester

Terminal No.	Inspection conditions		Standard
Between all terminals	(A)	LOCK	1 MΩ or more
2 — 4	(B)	ACC	Less than 1 Ω
1 — 2 — 4 5 — 6	(C)	ON	Less than 1 Ω
1 — 3 — 4 5 — 6 — 7	(D)	ST	Less than 1 Ω



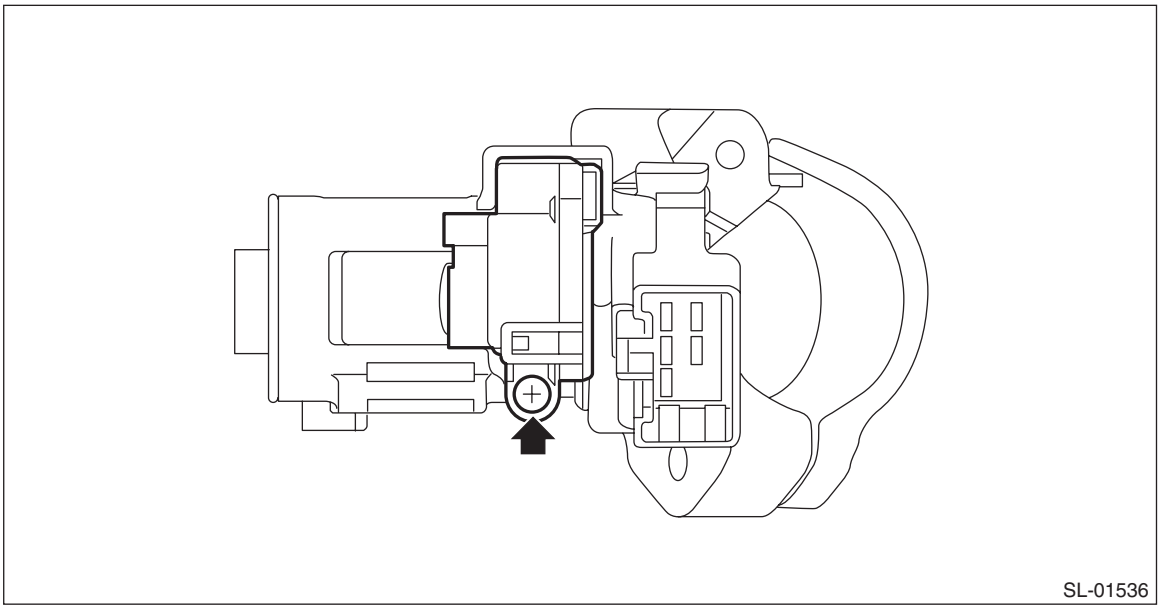
2) Replace the ignition switch assembly if the inspection result is not within the standard.

20.Key Lock Cylinders

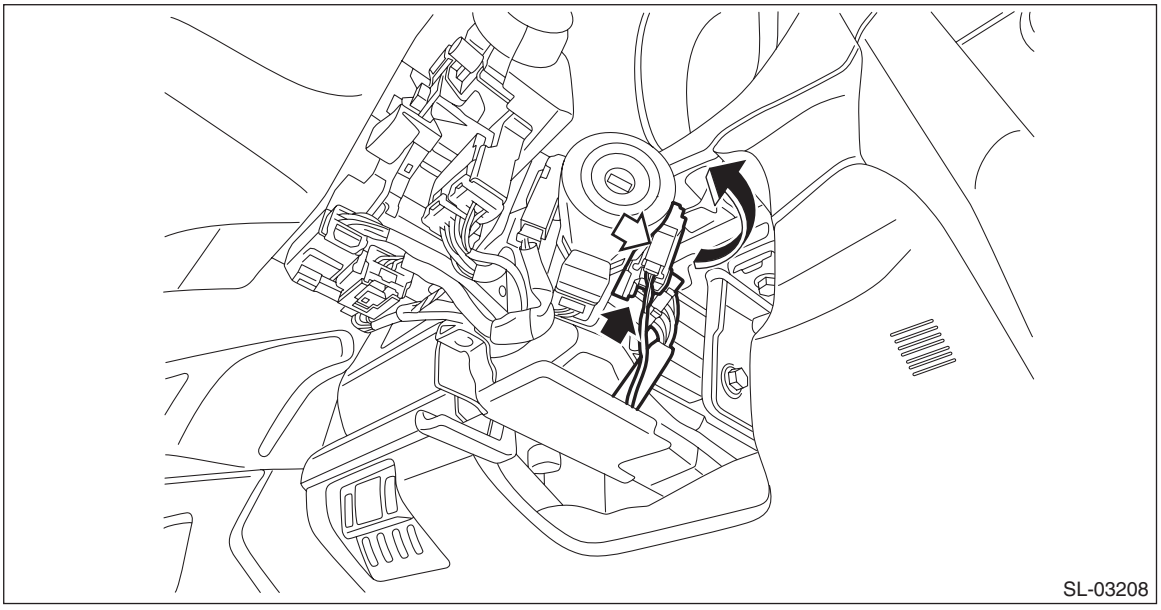


A: REMOVAL

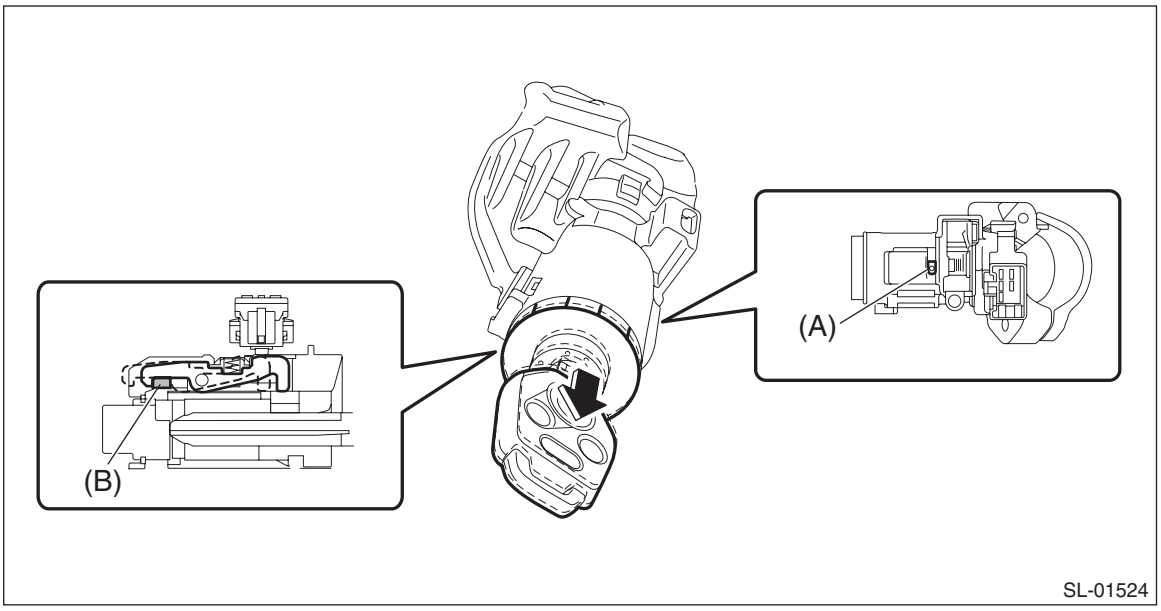
1. STEERING LOCK



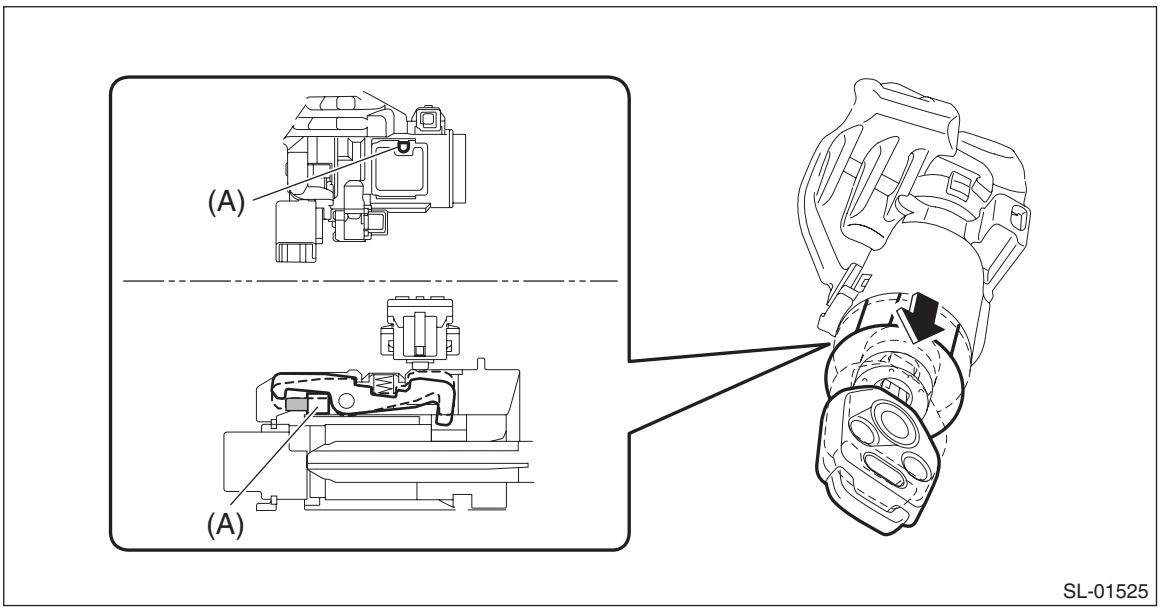
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - column.
   (1) Release the clips, and remove the cover assembly - steering UPR.
   (2) Remove the screws.
   (3) Release the claw, and remove the cover assembly - column UPR and the cover assembly - column LWR.



3) Remove the immobilizer antenna assembly. <Ref. to SL-90, REMOVAL, Immobilizer Antenna.>
4) Release the claws, and pull the key warning switch downwards to remove.



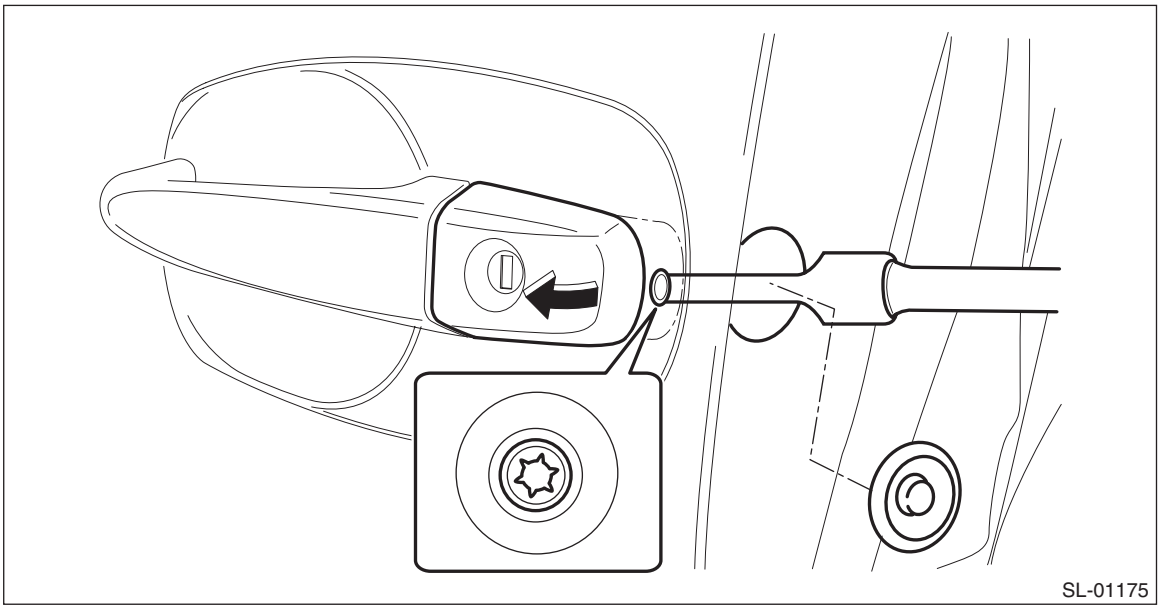
5) Remove the screws and remove the key lock solenoid.



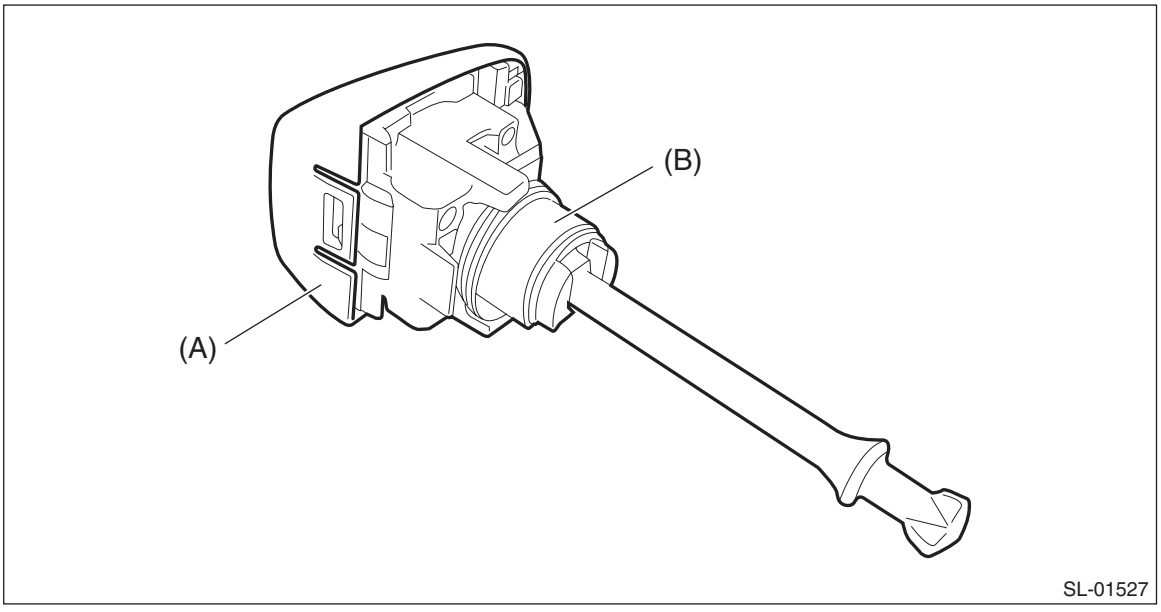
6) Remove the key lock solenoid.
   (1) Disconnect the connector.
   (2) Remove the screws and remove the key lock solenoid.

7) Replace the key cylinder.
(1) Insert the key into the key cylinder, and turn the key to the ACC position.
(2) Insert a flat tip screwdriver from the steering lock frame hole (A), and pull the key cylinder until the key cylinder claws touch the steering lock frame stopper (B).

(3) Insert a flat tip screwdriver from the steering lock frame hole (A), and release the claws to pull out the key cylinder.



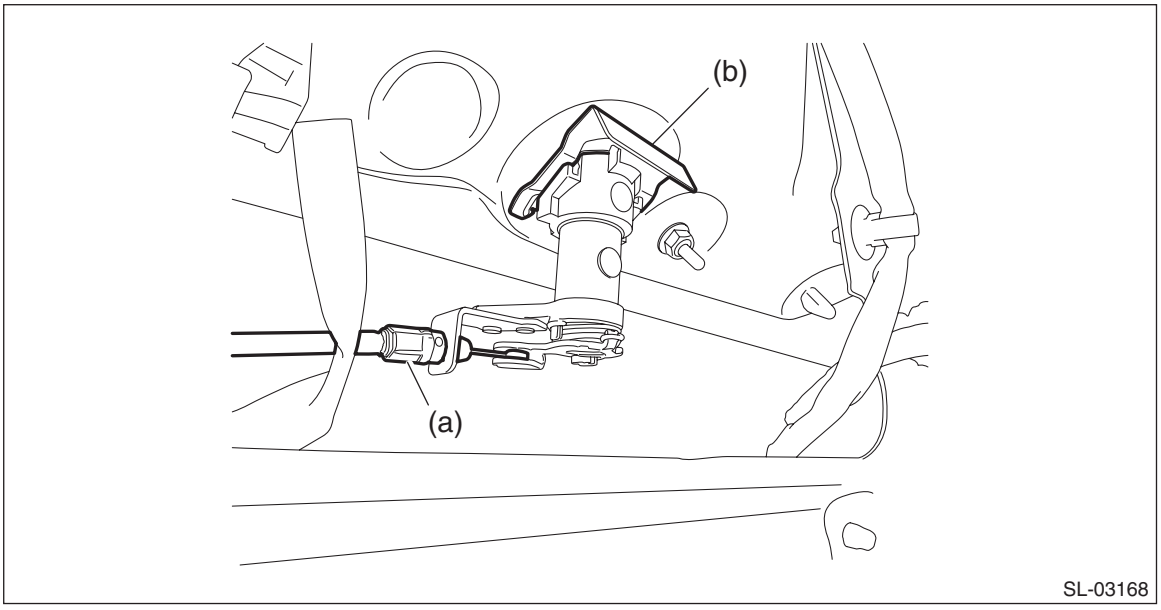
2. FRONT DOOR



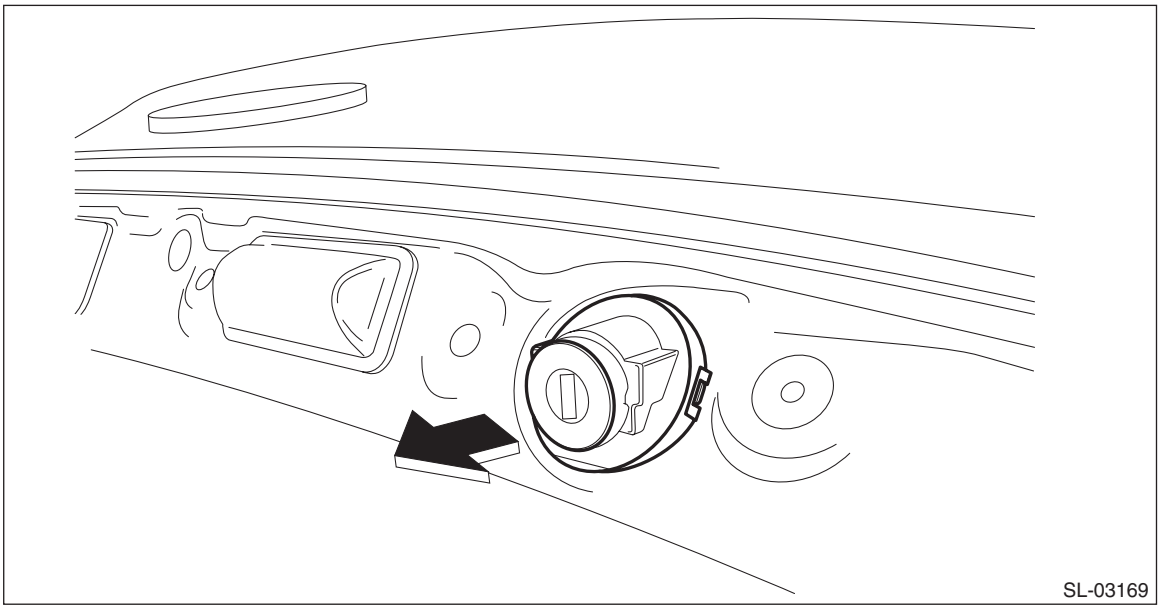
1) Raise the glass assembly - front door to the top position.
2) Remove the cover - handle front outer.

Preparation tool:
TORX® T30

(1) Remove the plug at the rear end of the panel assembly - front door.
(2) Loosen the TORX® bolt and remove the cover - handle front outer.



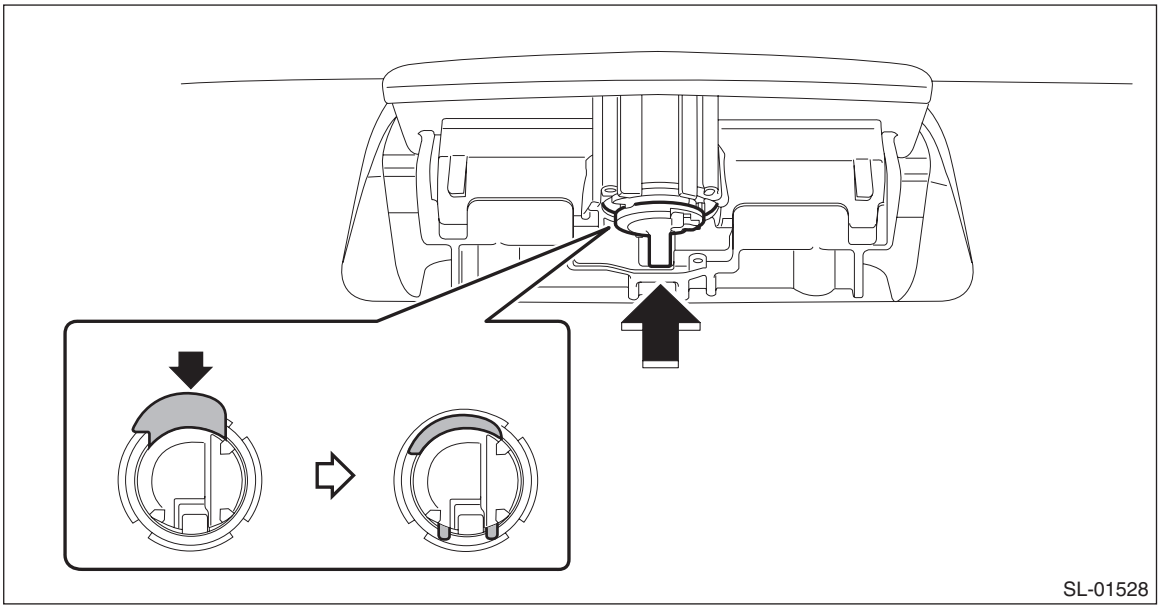
3) Remove the key cylinder (B) from the cover - handle front outer (A), and replace the key cylinder.



3. TRUNK LID

1) Remove the garnish assembly - trunk. <Ref. to EI-60, REMOVAL, Trunk Lid Garnish.>
2) Remove the key cylinder.
   (1) Remove the cable (a) and clip (b).

   (2) Remove the key cylinder from the trunk lid, and replace the key cylinder.



4. GLOVE BOX LID

1) Remove the pocket assembly.
   (1) Remove the damper COMPL - pocket.
   (2) Release the stoppers and remove the pocket assembly by pulling it toward you.

2) Replace the key cylinder.
   (1) Pull up the lock knob.
   (2) Push out the key cylinder from the pocket assembly while pressing in the metal plate.

B: INSTALLATION

1. STEERING LOCK

1) Install the key cylinder.
2) Install the key lock solenoid and immobilizer antenna assembly.
3) Install the cover assembly - column.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. FRONT DOOR

1) Install the key cylinder.
2) Install the cover - handle front outer.

CAUTION:
When installing the cover - handle front outer on driver's side, make sure that the key cylinder shaft is correctly inserted into the latch & actuator assembly - front.

Preparation tool:
TORX® T30

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3. TRUNK LID

1) Install the key cylinder.
2) Install the trunk lid garnish. <Ref. to EI-60, INSTALLATION, Trunk Lid Garnish.>

4. GLOVE BOX LID

1) Install the key cylinder.
2) Install the pocket assembly.

21.Impact Sensor

A: REMOVAL

1) Pull out the key from the ignition switch, or turn the ignition to OFF.
2) Close all the doors, trunk lid and rear gate.
3) Press the UNLOCK button of the keyless transmitter or access key.
4) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Remove the impact sensor.
6) Change the setting of impact sensor using Subaru Select Monitor.

B: INSTALLATION

1) Pull out the key from the ignition switch, or turn the ignition to OFF.
2) Close all the doors, trunk lid and rear gate.
3) Press the UNLOCK button of the keyless transmitter or access key.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Install the impact sensor.
6) Change the setting of impact sensor using Subaru Select Monitor.

C: OPERATION

1. IMPACT SENSOR SETTING USING SUBARU SELECT MONITOR

1) Prepare the Subaru Select Monitor kit.
2) Turn the ignition to ON (engine OFF) and run the “PC application for Subaru Select Monitor”.
3) On «System Selection Menu» display, select «Integ. unit mode».
4) On «Work Support» display, select «Unit customizing».
5) Make an impact monitor setting.
- When installing: ON
- When removing: OFF

6) Make an impact monitor ON/OFF setting.
- When installing: ON
- When removing: OFF

7) Turn the ignition to OFF, and then remove the Subaru Select Monitor.

D: ADJUSTMENT

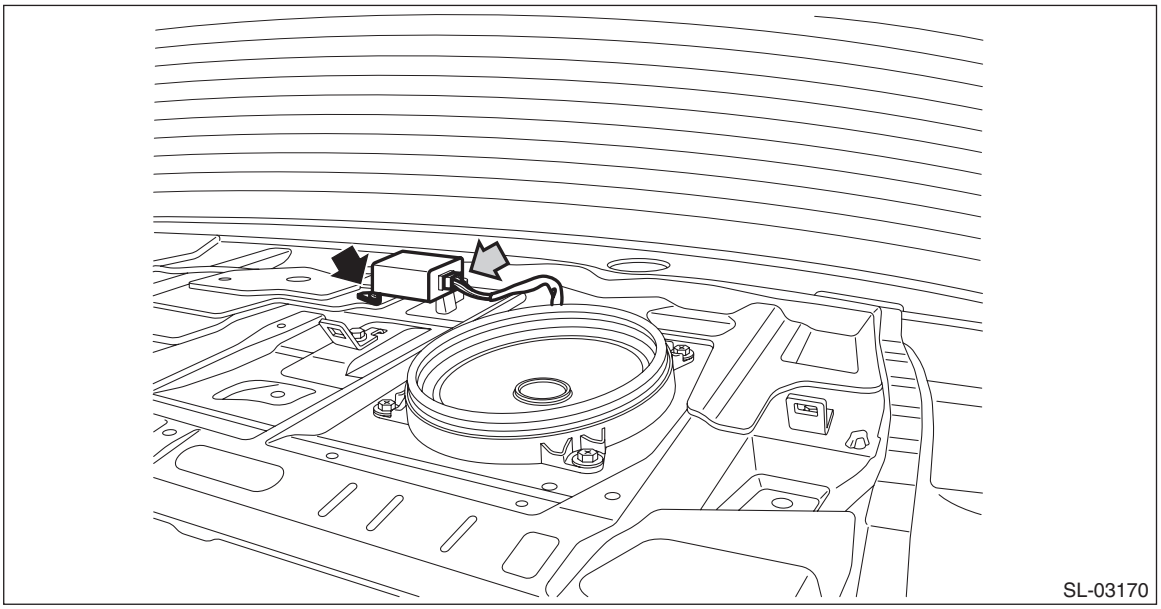
1. CHECK IMPACT SENSOR

1) Pull out the key from the ignition switch, or turn the ignition to OFF.
2) Close all the windows.
3) Close all the doors, trunk lid and rear gate. Leave open the front hood.
4) Press the LOCK button of the keyless transmitter or access key from outside of vehicle.
5) Check that the security indicator light blinks twice within 0.5 seconds in 2 second cycles immediately after door lock or after 30 seconds.
6) Hit all windows with the palm with force repeatedly, to check for whether the security alarm operates. Lift up the front hood approx. 12 cm (4.7 in) or more, and then drop it off to check the operation of security alarm.
7) If NG, adjust the impact sensitivity.

2. IMPACT SENSITIVITY ADJUSTMENT

1) Prepare the Subaru Select Monitor kit.
2) Turn the ignition to ON (engine OFF) and run the “PC application for Subaru Select Monitor”.
3) On «System Selection Menu» display, select the «Impact Sensor».
4) Make a «Sensitivity Adjustment Mode».
- Sensitivity can be adjusted in 11 levels (0 to 10).
- Initial setting is 5.
- Smaller number means more sensitive.
- Larger number means less sensitive.

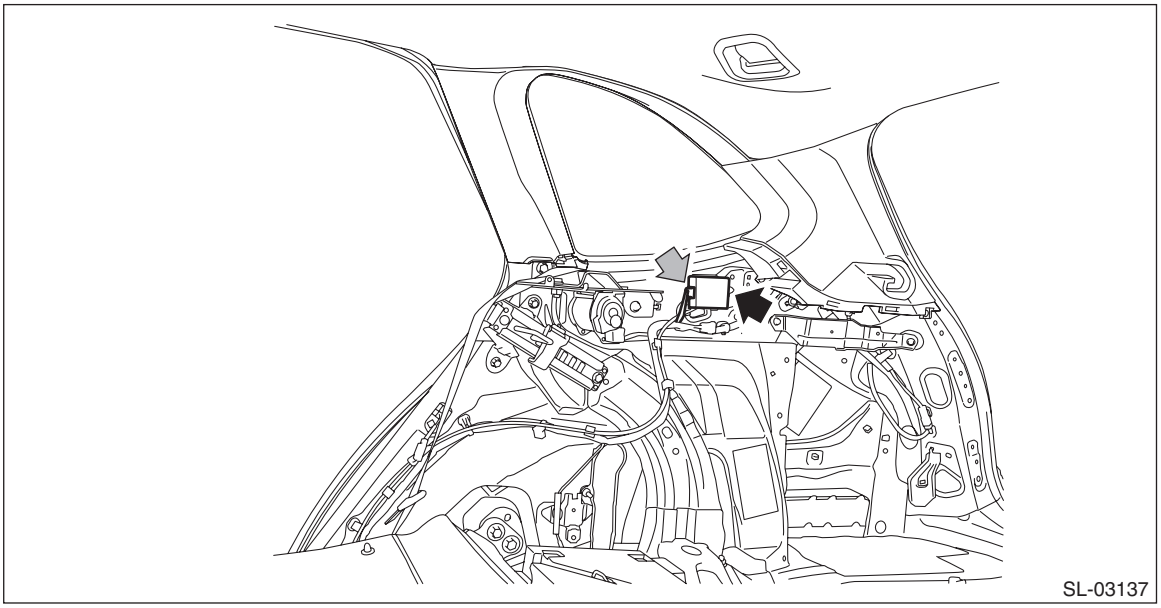
5) Turn the ignition to OFF, and then remove the Subaru Select Monitor.



NOTE:
- Set the sensor so that it is not triggered by normal vibrations (someone reclining on the door, hit by a ball, etc.).
- Set the sensor to operate the alarm when the windshield glass or door is hit hard repeatedly, etc, where it can be assumed that there is an attempt to damage the car by a burglar, etc.
- Even if there is no burglary attempt, if there is vibration (road construction, elevated parking lots, passage of trains or boarding of ferries), the alarm can be triggered. Because of this, ask the customer about their parking conditions, and set an appropriate sensitivity level after discussion.
- If the sensitivity setting was not performed properly, a buzzer will sound four times. In this case, check that there is no error in CAN communication.

22.Keyless Entry Control Module

A: REMOVAL



1. SEDAN MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel assembly - rear shelf. <Ref. to EI-106, REMOVAL, Rear Shelf Trim.>
3) Remove the keyless entry control module.
   (1) Disconnect the connector.
   (2) Remove the bolt and then remove the keyless entry control module.

2. OUTBACK MODEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear apron RH. <Ref. to EI-100, OUTBACK MODEL, REMOVAL, Rear Quarter Trim.>
3) Remove the keyless entry control module.
   (1) Disconnect the connector.
   (2) Remove the bolt and then remove the keyless entry control module.

B: INSTALLATION

1. SEDAN MODEL

1) Install the keyless entry control module.

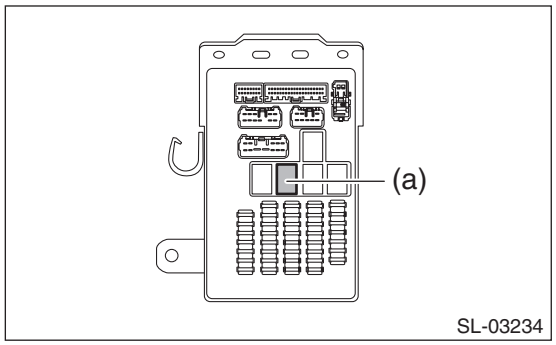
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the trim panel assembly - rear shelf. <Ref. to EI-108, INSTALLATION, Rear Shelf Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. OUTBACK MODEL

1) Install the keyless entry control module.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the trim panel - rear apron RH. <Ref. to EI-104, OUTBACK MODEL, INSTALLATION, Rear Quarter Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

23.Body Integrated Unit



A: NOTE

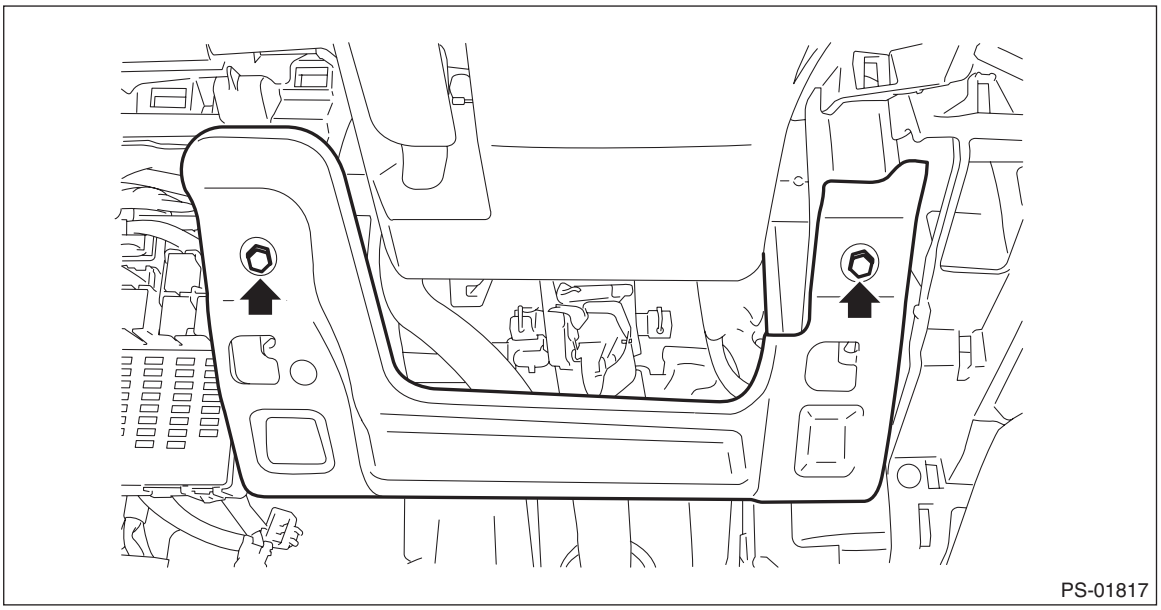
1. WHEN REPLACING THE BODY INTEGRATED UNIT

1) Check and record the current setting. <Ref. to BC(diag)-29, CONFIRM CURRENT SETTING, OPERATION, Registration Body Integrated Unit.>

CAUTION:
- **When the body integrated unit is replaced, registration of the immobilizer is required.**

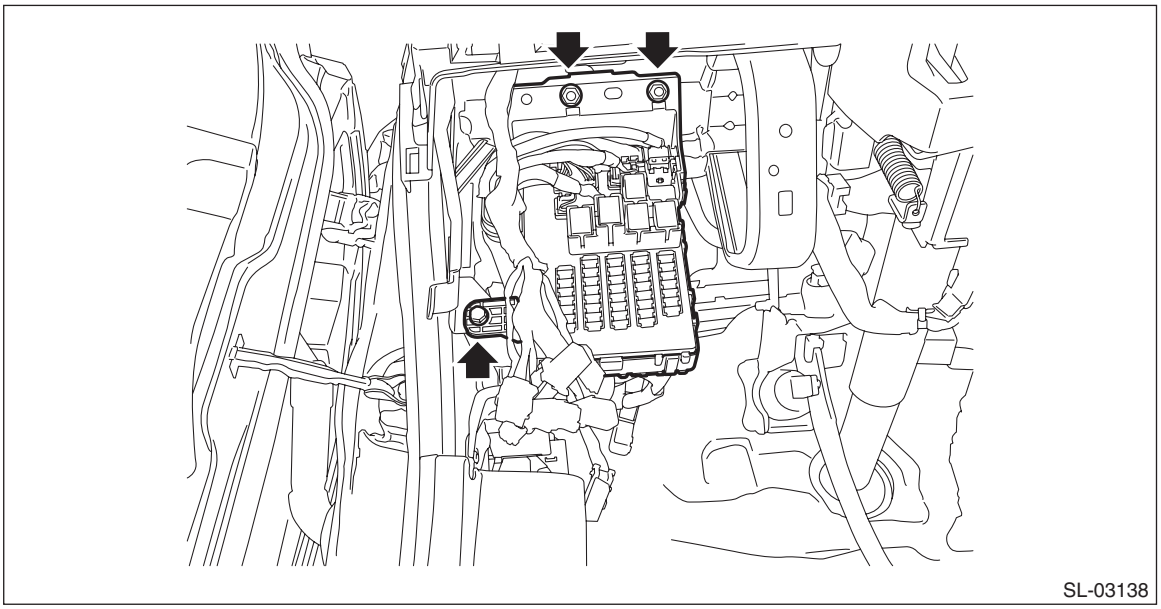
For detailed operation procedure, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER". (Models without the keyless access with push button start)
- **When replacing the body integrated unit, install the starter relay (a) to the relay holder.**

NOTE:
The fuse & relay box is a single unit with the body integrated unit.



2. AFTER REPLACING THE BODY INTEGRATED UNIT

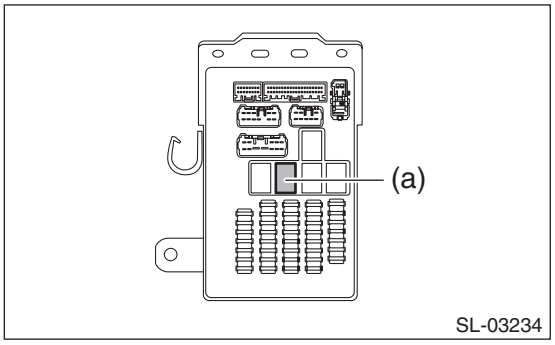
1) Set the current settings as recorded.
2) Register the immobilizer. (Models without the keyless access with push button start, and except for C0 and C5 models)



NOTE:
For detailed operation procedure, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

B: REMOVAL

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-74, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the panel - knee guard.



PS-01817

4) Disconnect the body integrated unit (fuse & relay box).
   (1) Disconnect the connector.
   (2) Remove the bolts and nuts, and remove the body integrated unit (fuse & relay box).

SL-03138

C: INSTALLATION

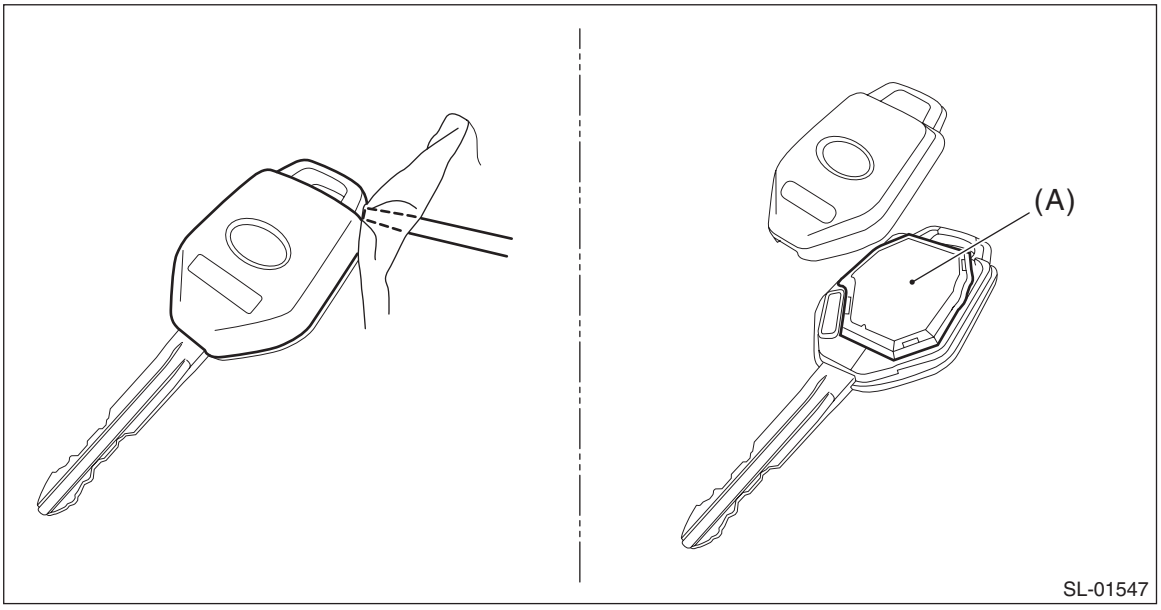
CAUTION:
• Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• When replacing the body integrated unit, install the starter relay (a) to the relay holder.

NOTE:
Make sure that there are no differences from the contents of the current settings after installation. <Ref. to BC(diag)-20, LIST, Read Current Data.>
1) Install the body integrated unit (fuse & relay box).

Tightening torque:
Relay & fuse box: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the panel - knee guard.

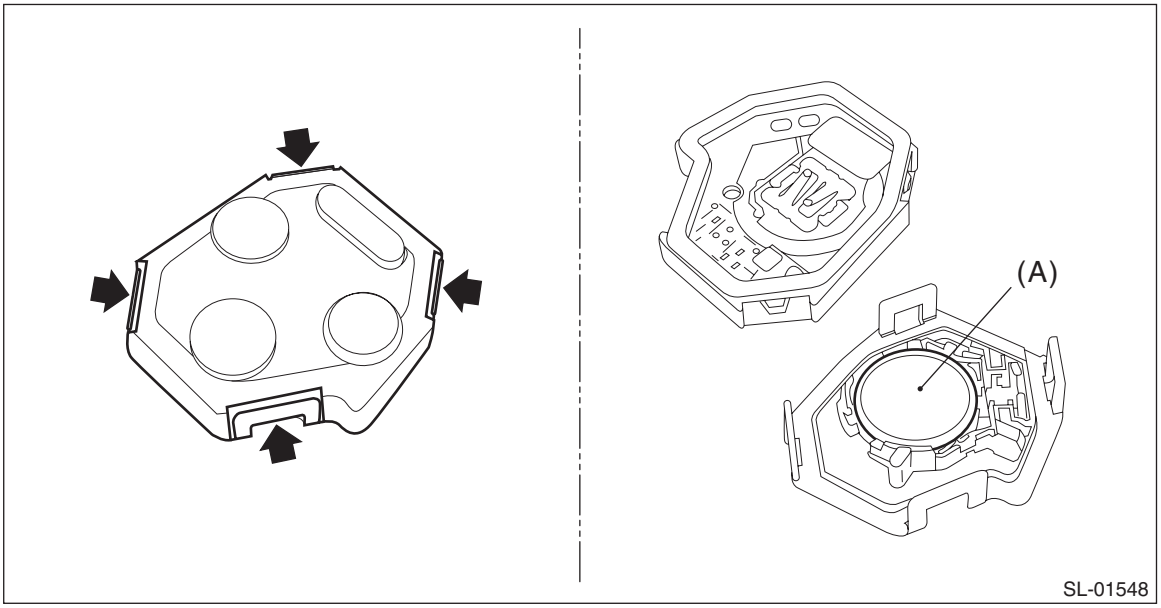
Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)
3) Install the cover assembly - instrument panel LWR driver.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

24.Keyless Transmitter



A: REMOVAL

1. KEYLESS TRANSMITTER BATTERY



CAUTION:
To prevent static electricity damage to the keyless transmitter printed circuit board, touch the steel area of building with hand to discharge static electricity carried on body or clothes before disassembling the keyless transmitter.

1) Remove the keyless transmitter cover, and take out the transmitter case (A).

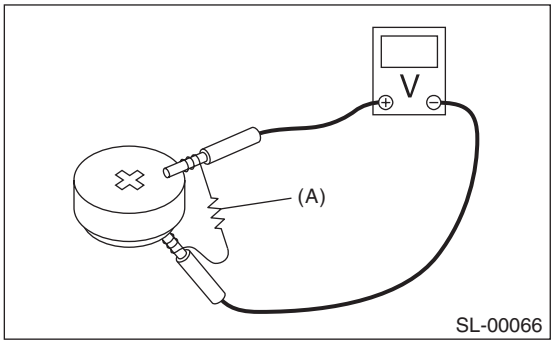
NOTE:
Use a flat tip screwdriver with protective tape or cloth in order not to damage the components.

2) Release the claws to open the transmitter case, then remove the battery (A).

B: INSTALLATION

1. KEYLESS TRANSMITTER BATTERY

Install each part in the reverse order of removal.



C: INSPECTION

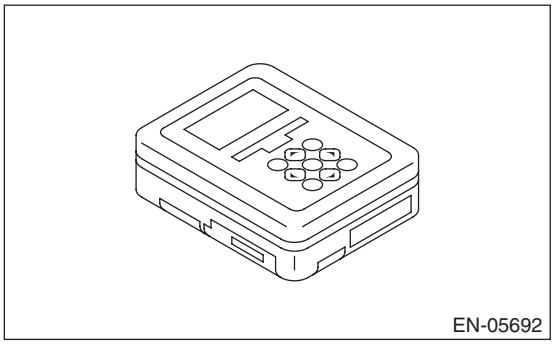
1. KEYLESS TRANSMITTER BATTERY

1) Measure the keyless transmitter battery voltage.

Preparation tool:
Circuit tester

NOTE:
Complete the measurement within 5 seconds because the battery discharges during measurement.

Battery terminal	Inspection Conditions	Standard
(+) — (–)	Connect resistor (A) 47 Ω	2.5 — 3.0 V



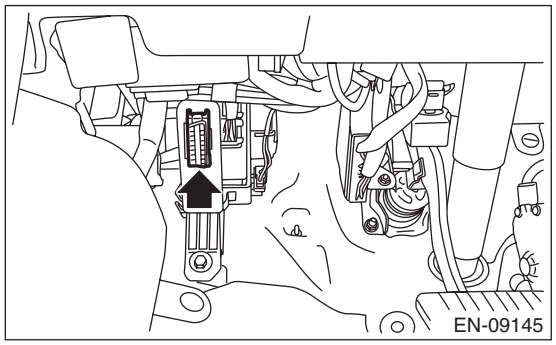
2) Replace the battery if the inspection result is not within the standard value. (Use CR1620 or equivalent.)

D: REPLACEMENT

1. REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR

NOTE:
- A maximum of four keyless transmitters can be registered for each individual vehicle.
- When replacing or adding the keyless transmitter, new registration of transmitter is necessary.

1) Prepare the Subaru Select Monitor kit. <Ref. to SL-8, SPECIAL TOOL, PREPARATION TOOL, General Description.>



2) Prepare PC with Subaru Select Monitor installed.
3) Connect the USB cable to SDI (Subaru Diagnosis Interface) and USB port on the personal computer (dedicated port for the Subaru Select Monitor).

NOTE:
The dedicated port for the Subaru Select Monitor means the USB port which was used to install the Subaru Select Monitor.
4) Connect the diagnosis cable to SDI.

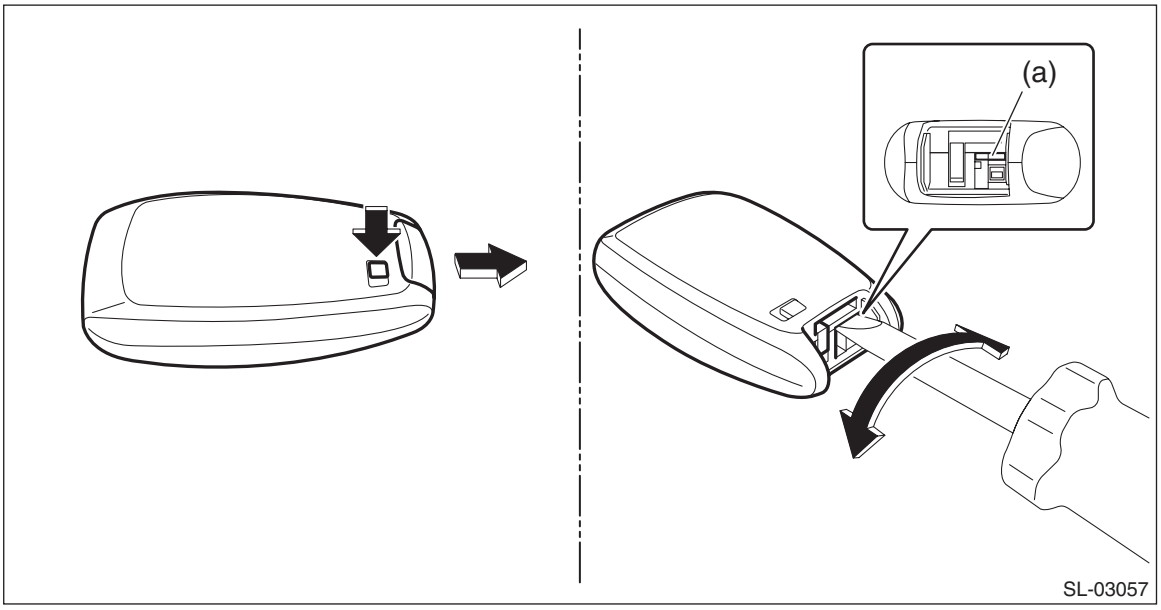
5) Connect SDI to data link connector located in the lower portion of the instrument panel (on the driver's side).

CAUTION:
Do not connect scan tools other than the Subaru Select Monitor.

6) Start the PC.
7) Turn the ignition switch to OFF and run the "PC application for Subaru Select Monitor".
8) On the «Main Menu» of the Subaru Select Monitor, select «Each System Check» → «Integ. unit mode» → «Work Support» → «Keyless ID registration».
9) According to the directions on the screen, press the button of the transmitter to be registered in the LOCK → UNLOCK order. «When registration completed, interior buzzer sound once.» Repeat the registration as many times as desired.
10) Press the [Exit] button to finish the operations.

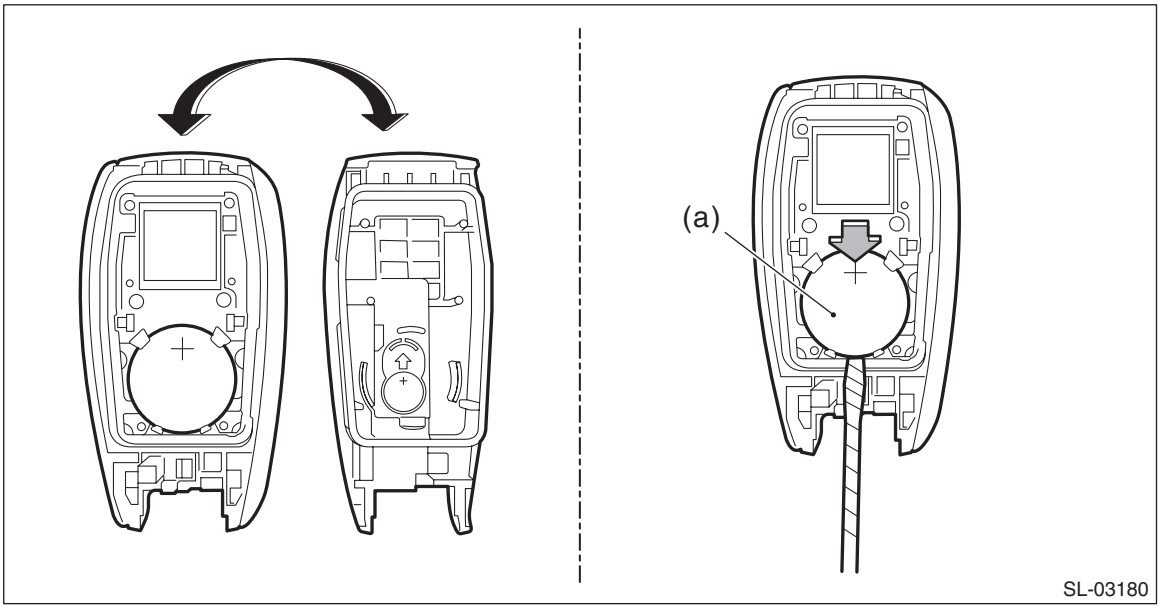
NOTE:
When attempting to register a key that has already been registered, the passenger room buzzer sounds twice.

25.Access Key



A: REMOVAL

NOTE:
Refer to keyless transmitter for model without keyless access with push button start. <Ref. to SL-84, KEYLESS TRANSMITTER BATTERY, REMOVAL, Keyless Transmitter.>



1. ACCESS KEY BATTERY

CAUTION:
To prevent static electricity damage to the access key printed circuit board, touch the steel area of building with hand to discharge static electricity carried on body or clothes before disassembling the access key.

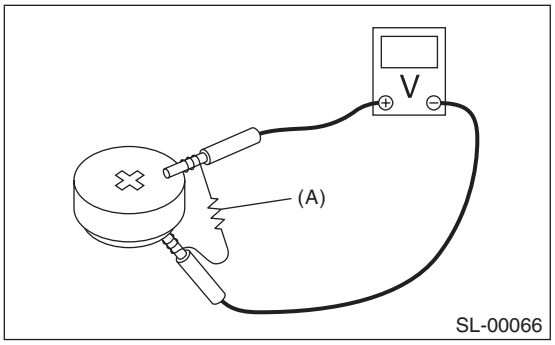
1) Push the lock button and remove the mechanical key from the access key.
2) Insert a flat tip screwdriver into the slit (a) of the access key to open the case.

3) Insert a flat tip screwdriver to remove the battery (a) from the case.

B: INSTALLATION

1. ACCESS KEY BATTERY

Install each part in the reverse order of removal.



C: INSPECTION

1. ACCESS KEY BATTERY

Measure the access key battery voltage.

Preparation tool:
Circuit tester

NOTE:
Complete the measurement within 5 seconds because the battery discharges during measurement.

Battery terminal	Inspection conditions	Standard
(+) — (–)	Connect resistor (A) 47 Ω	2.5 — 3.0 V

Replace the battery if the inspection result is not within the standard value. (Use CR2032 V or equivalent.)

D: REPLACEMENT

1. ACCESS KEY REGISTRATION

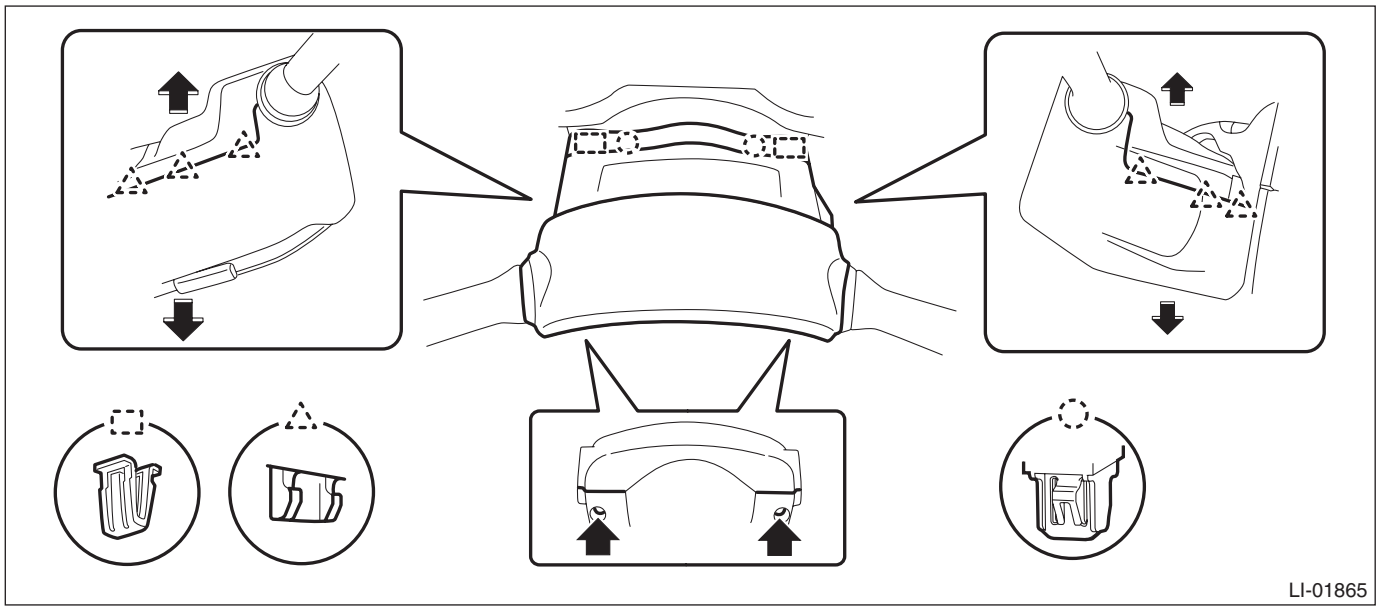
NOTE:
- A maximum of seven access keys can be registered for each individual vehicle.
- When replacing or adding an access key, new registration of the access key is necessary.
- When the access key has been newly added, it is registered to the immobilizer system at the same time.

2. CLEARING ACCESS KEY REGISTRATION

Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” for clearing access key registration.

26.Immobilizer Control Module

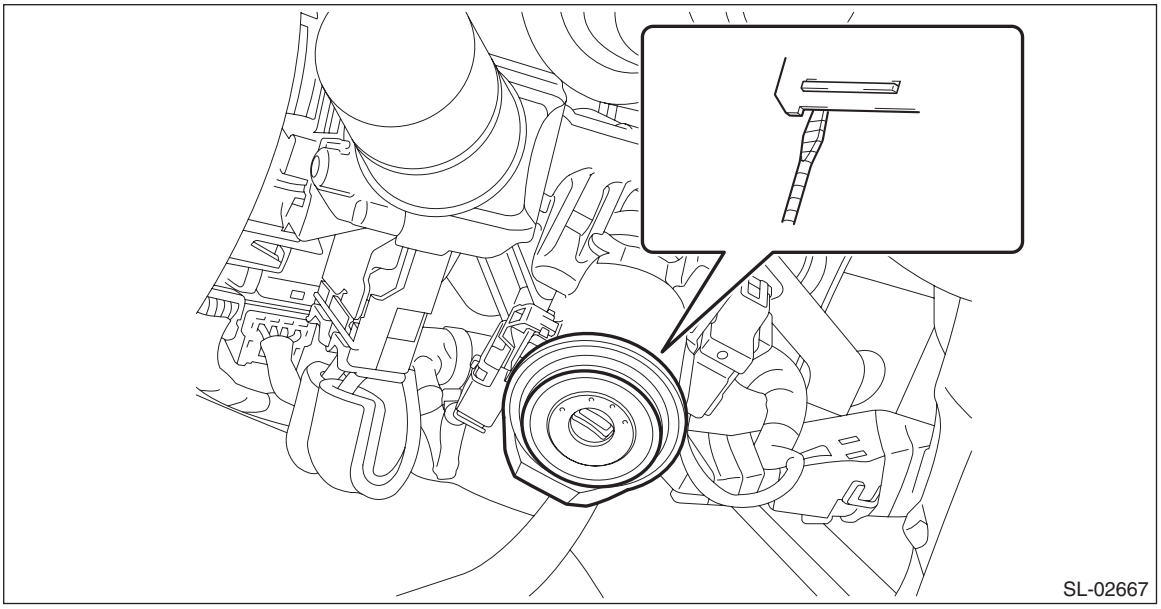
A: NOTE



For removal/installation procedures of immobilizer control module, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER”.

27.Immobilizer Antenna

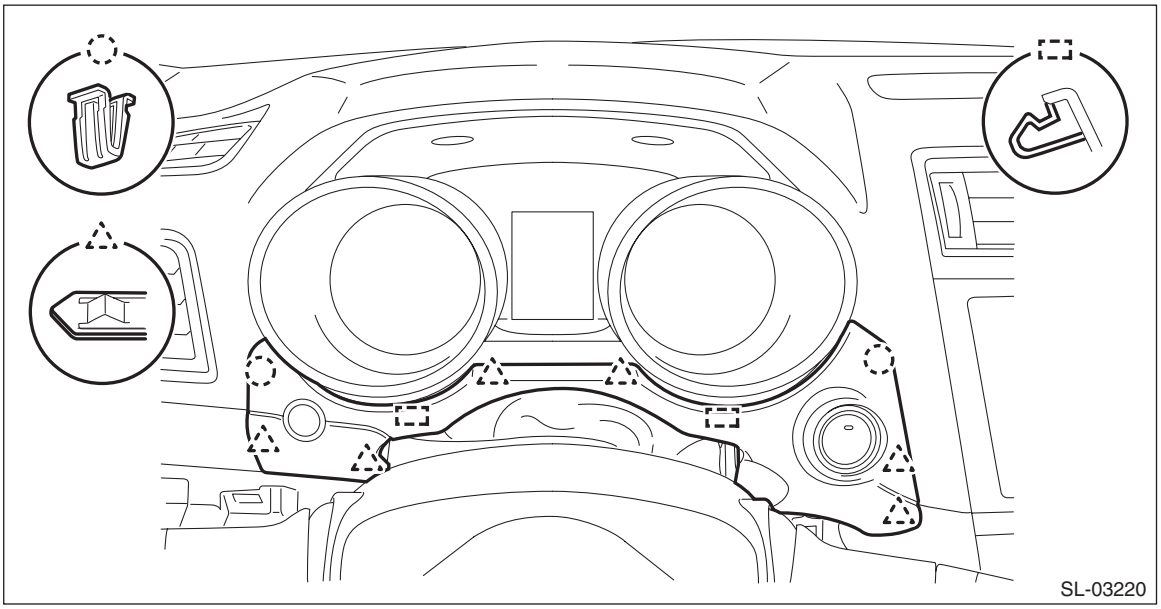
A: REMOVAL



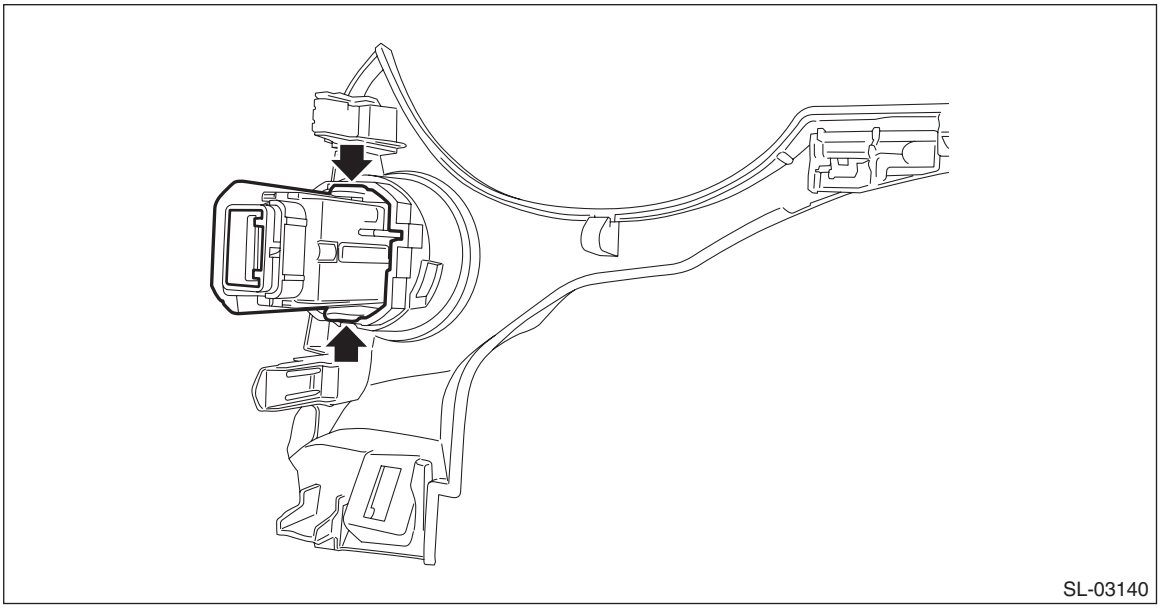
1. MODEL WITHOUT KEYLESS ACCESS WITH PUSH BUTTON START

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - column.
   (1) Release the clips, and remove the cover assembly - steering UPR.
   (2) Remove the screws.
   (3) Release the claw, and remove the cover assembly - column UPR and the cover assembly - column LWR.

3) Remove the immobilizer antenna assembly.
   (1) Disconnect the connector.
   (2) Release two claws using a flat tip screwdriver or similar tool wrapped with a protection tape, and remove the immobilizer antenna assembly.



CAUTION:
Do not apply excessive force to disengage the lock of immobilizer antenna assembly. Otherwise they may be broken because those parts are the products made of a plastic.



2. MODEL WITH KEYLESS ACCESS WITH PUSH BUTTON START

NOTE:
Immobilizer antenna is integrated with the push button ignition switch.
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-74, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the visor assembly - lower.
   (1) Release the clips and claws.
   (2) Disconnect the connector and remove the visor assembly - lower.

CAUTION:
Be careful not to damage the clips and claws by slowly removing the right and left edges of visor assembly - lower.

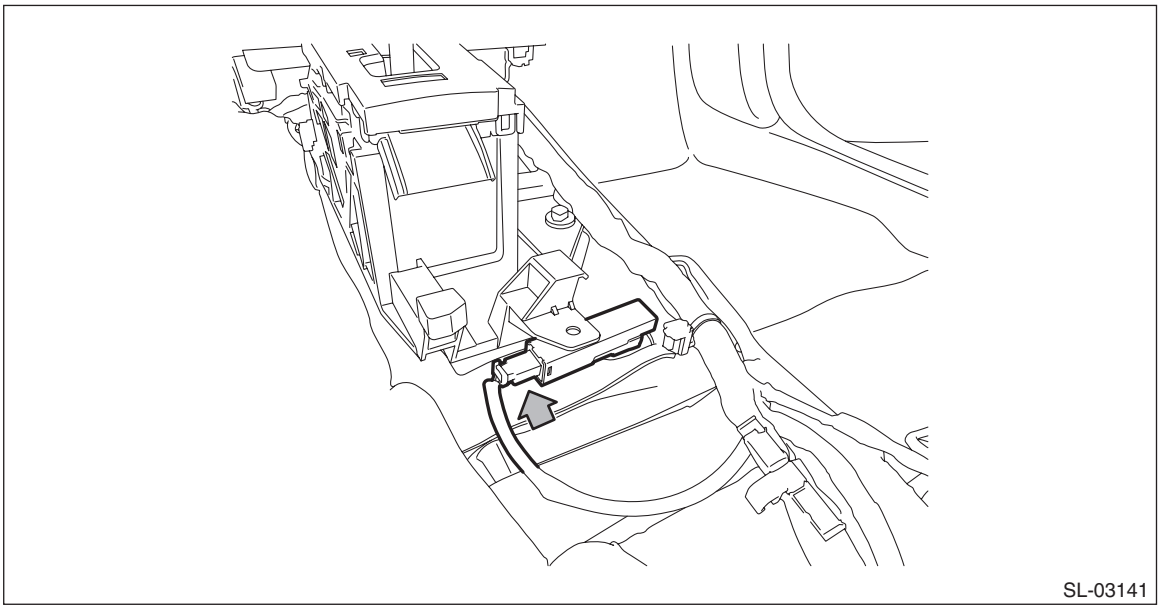
4) Remove the push button ignition switch.
(1) Release the claws and remove the push button ignition switch from the visor assembly - lower.

B: INSTALLATION

1. MODEL WITHOUT KEYLESS ACCESS WITH PUSH BUTTON START

1) Install the immobilizer antenna assembly.
2) Install the cover assembly - column.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. MODEL WITH KEYLESS ACCESS WITH PUSH BUTTON START



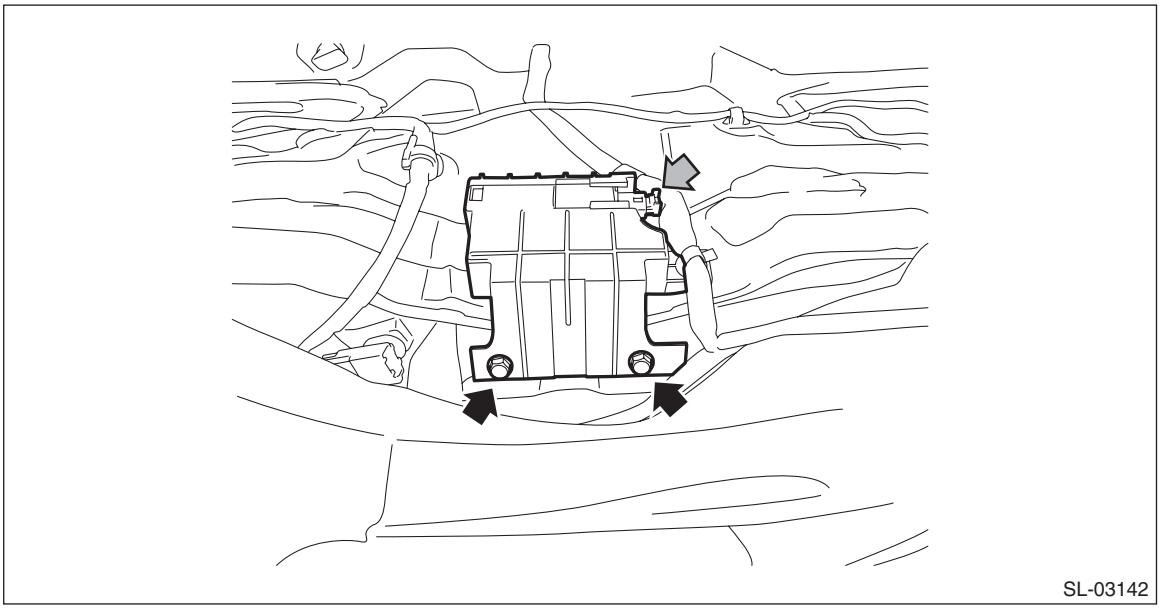
1) Install the push button ignition switch to the visor assembly - lower.
2) Install the visor assembly - lower.
3) Install the cover assembly - instrument panel LWR driver.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

28.Keyless Access Indoor Antenna

A: REMOVAL

1. FRONT ANTENNA

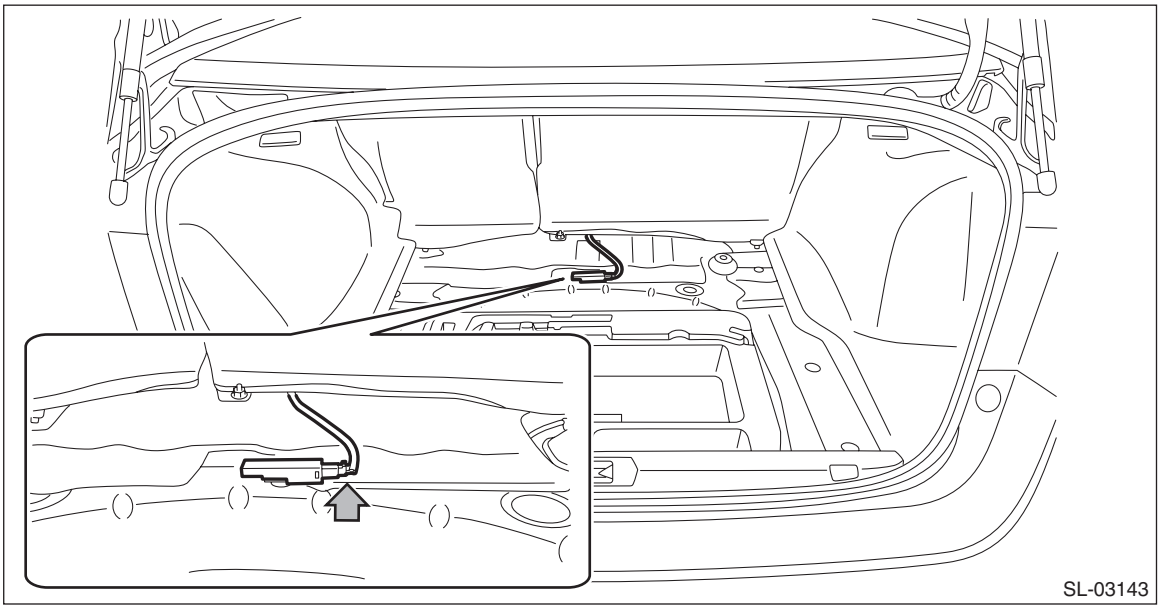
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - front and the console box assembly. <Ref. to EI-80, REMOVAL, Console Box.>
3) Remove the panel center assembly. <Ref. to EI-79, REMOVAL, Center Console.>
4) Remove the console front duct. <Ref. to AC-91, REMOVAL, Heater Duct.>
5) Disconnect the connector and remove the front antenna assembly - interior.



2. CENTER ANTENNA

CAUTION:
The airbag system is fitted with the airbag power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds before starting the service of airbag system.

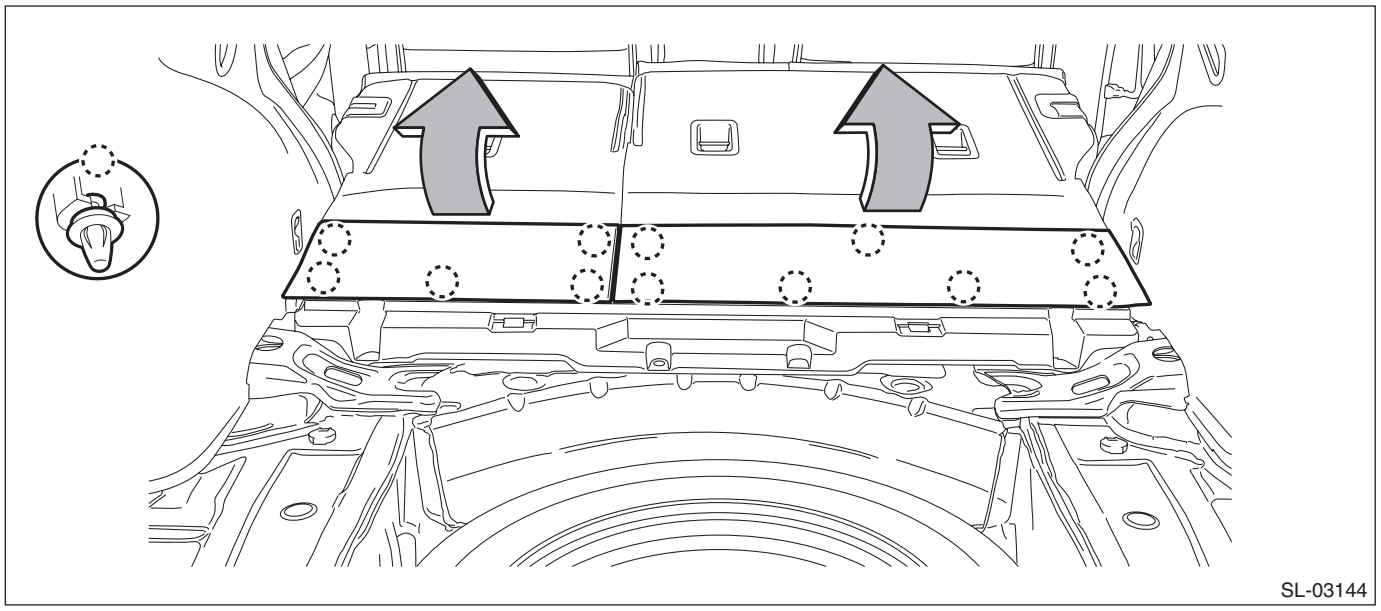
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the rear seat cushion assembly. <Ref. to SE-33, REMOVAL, Rear Seat.>
3) Remove the center antenna assembly - interior.



NOTE:
Do not remove the antenna assembly from the cover. If removed, the antenna assembly and cover mounting becomes loose, causing abnormal noises.

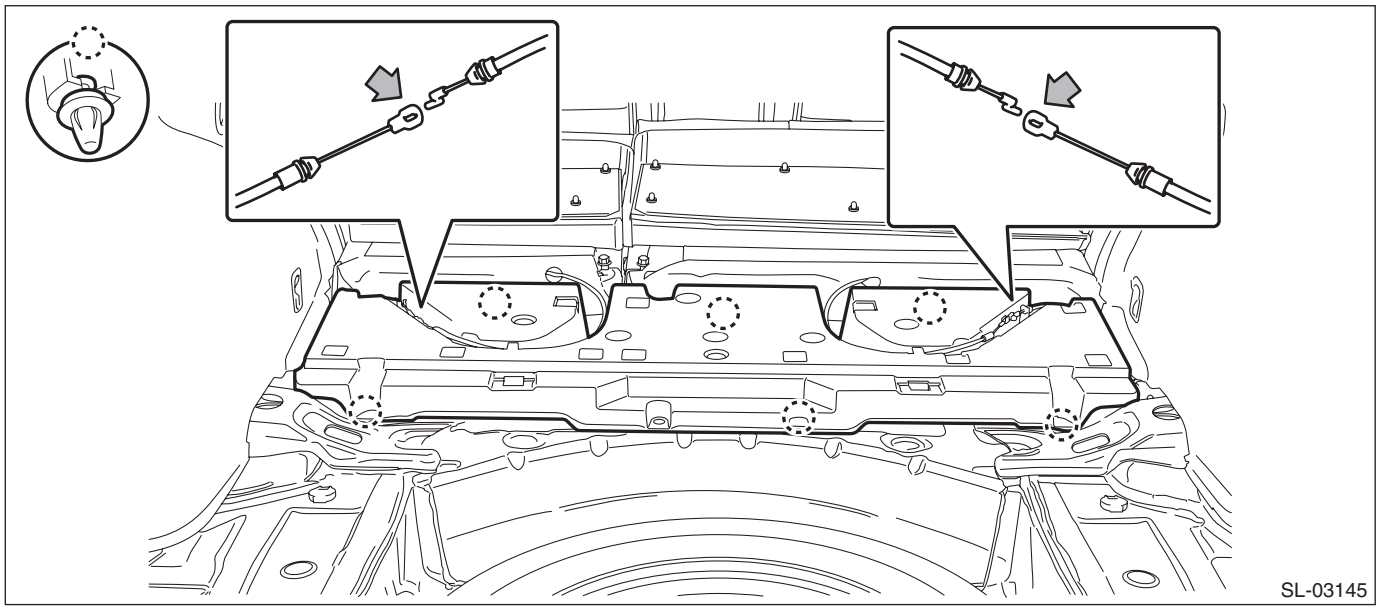
(1) Disconnect the connector.
(2) Turn over the floor mat, and remove the center antenna assembly - interior.

SL-03142



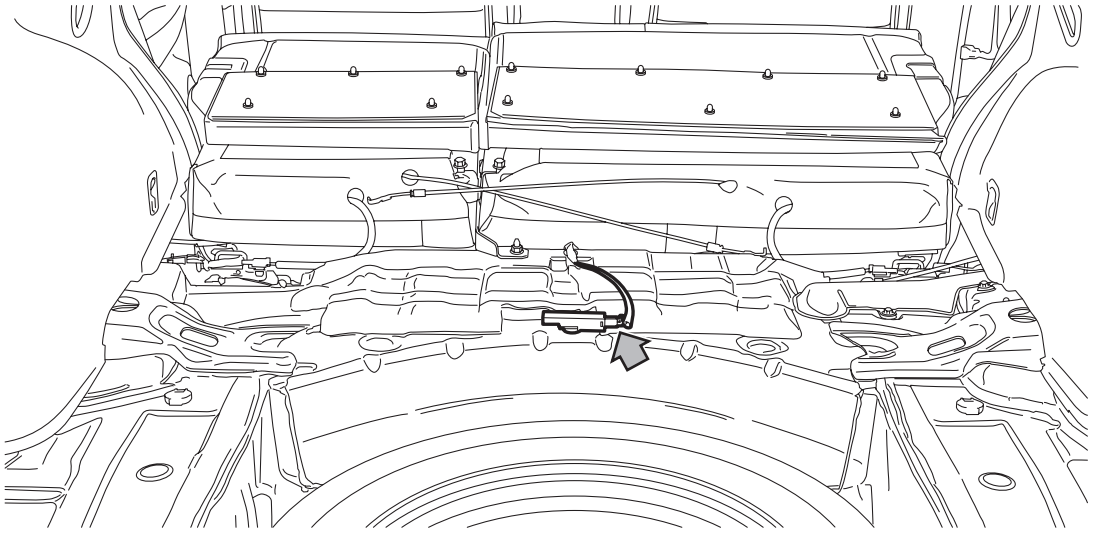
3. REAR ANTENNA (SEDAN MODEL)

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the mat - trunk.
3) Disconnect the connector and remove the rear antenna assembly - interior.



SL-03143

4. REAR ANTENNA (OUTBACK MODEL)



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the spacer - rear floor front.
   (1) Remove the mat - rear floor RH, mat - rear floor LH, and mat - rear floor CTR.
   (2) Remove the spacer - rear floor side RH, spacer - rear floor side LH, and sub trunk assembly.
   (3) Tilt the backrest assembly forward, and remove the clips located at the bottom of the cover COMPL - rear backrest LH and RH.

SL-03144

   (4) Remove the reclining cable, and remove the spacer - rear floor front.

SL-03145

3) Disconnect the connector and remove the rear antenna assembly - interior.

SL-03146

B: INSTALLATION

1. FRONT ANTENNA

1) Install the front antenna assembly - interior.
2) Install the console front duct.
3) Install the pocket assembly - CTR. <Ref. to ET-44, REMOVAL, External Connection Terminal.>
4) Install the console box assembly.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. CENTER ANTENNA

1) Install the center antenna assembly - interior.
2) Install the rear seat cushion assembly. <Ref. to SE-43, INSTALLATION, Rear Seat.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

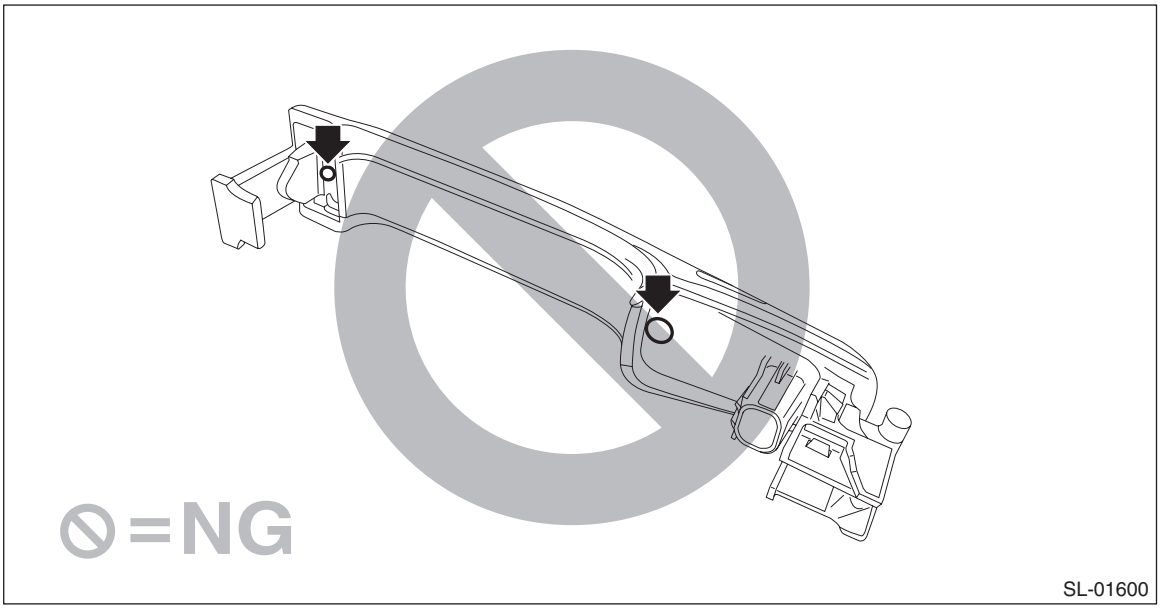
3. REAR ANTENNA (SEDAN MODEL)

1) Install the rear antenna assembly - interior.
2) Install the mat - trunk.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

4. REAR ANTENNA (OUTBACK MODEL)

1) Install the rear antenna assembly - interior.
2) Install the spacer - rear floor front.
3) Install the spacer - rear floor side RH, spacer - rear floor side LH, and sub trunk assembly.
4) Install the mat - rear floor RH, mat - rear floor LH, and mat - rear floor CTR.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

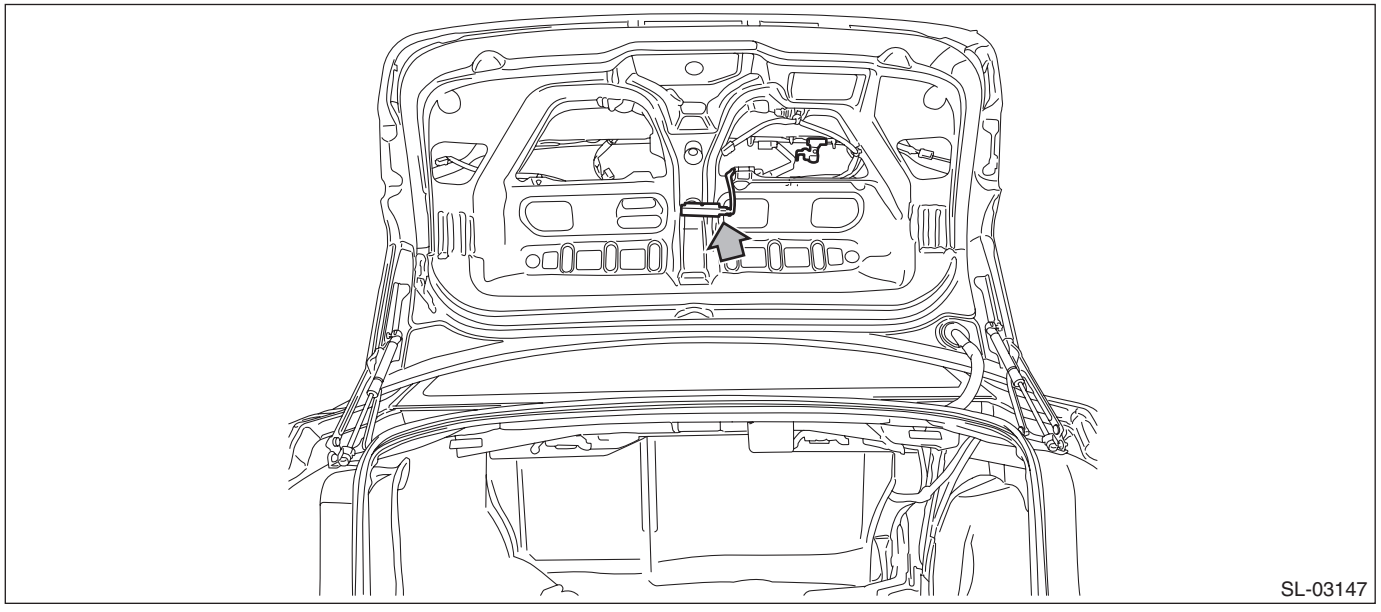


1) Check the setting by performing Keyless access system check using the Subaru Select Monitor. <Ref. to KPS(diag)-36, OPERATION, Keyless Access System Check.>
2) Disconnect the Subaru Select Monitor. After placing the access key near the changed antenna, operate the push button ignition switch to check that the power can be switched.
3) If the system does not operate normally as the result of inspection, refer to “General Diagnostic Table” of the “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-104, KEYLESS ACCESS SYSTEM, INSPECTION, General Diagnostic Table.>

29.Keyless Access Outdoor Antenna

A: REMOVAL

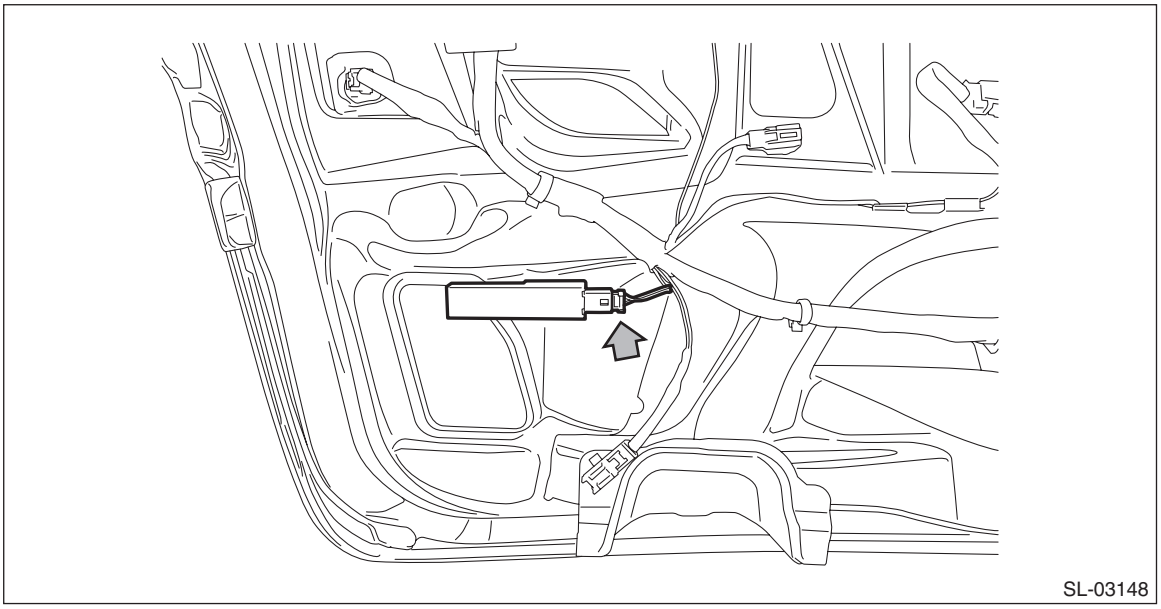
1. FRONT ANTENNA



CAUTION:
Do not detach the antenna from the front door outer handle.
If replacement is required, replace the front outer handle assembly as a whole.

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the handle - door outer. <Ref. to SL-34, REMOVAL, Front Outer Handle.>

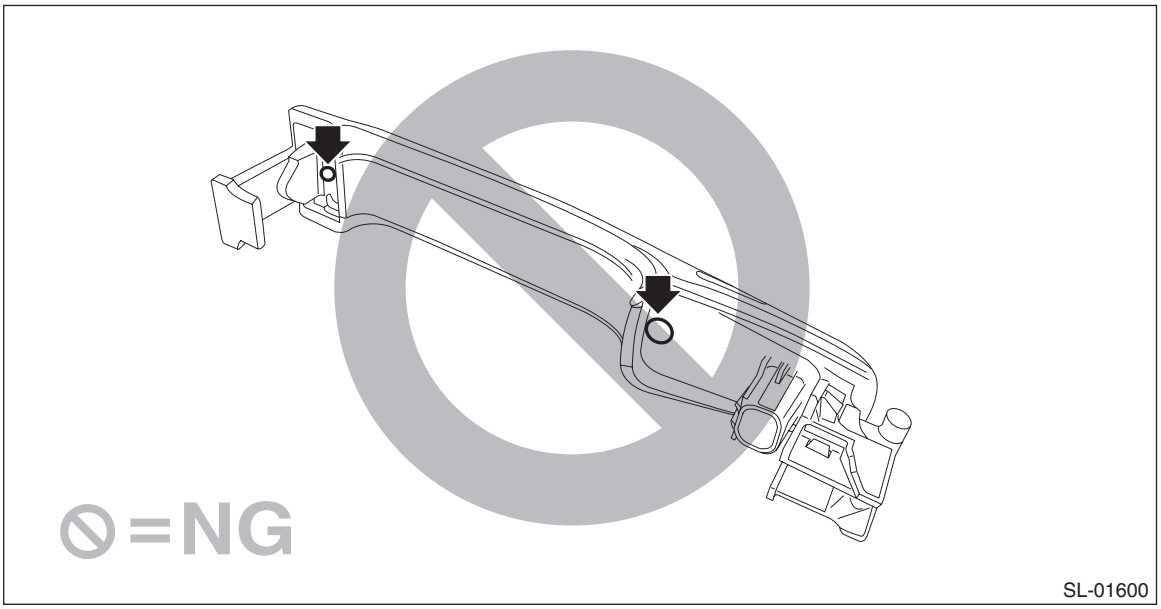
2. REAR ANTENNA (SEDAN MODEL)



CAUTION:
Do not detach the antenna except when replacing it. Detaching unnecessarily will lead to insecure attachment of the antenna.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - trunk lid. <Ref. to EI-110, REMOVAL, Trunk Room Trim.>
3) Disconnect the connector and remove the rear antenna assembly - exterior.

3. REAR ANTENNA (OUTBACK MODEL)

CAUTION:
Do not detach the antenna except when replacing it. Detaching unnecessarily will lead to insecure attachment of the antenna.



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate. <Ref. to EI-122, REMOVAL, Rear Gate Trim.>
3) Disconnect the connector and remove the rear antenna assembly - exterior.

SL-03148

B: INSTALLATION

1. FRONT ANTENNA

CAUTION:
Do not detach the antenna from the front door outer handle.
If replacement is required, replace the front outer handle assembly as a whole.

SL-01600

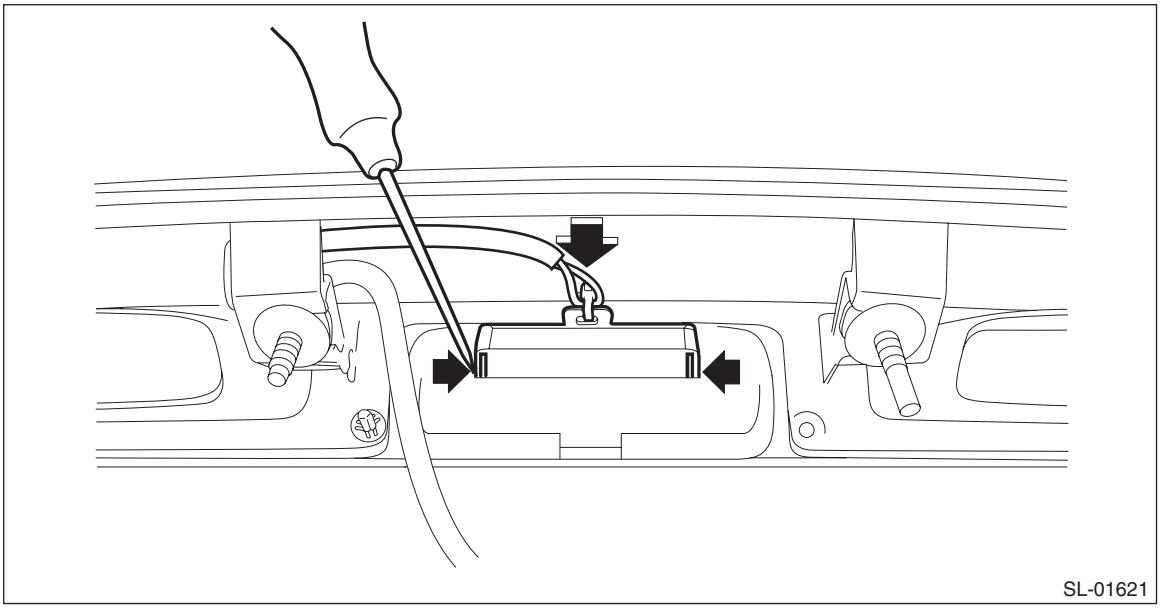
1) Install the handle - door outer. <Ref. to SL-37, INSTALLATION, Front Outer Handle.>
2) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. REAR ANTENNA (SEDAN MODEL)

1) Install the rear antenna assembly - exterior.
2) Install the trim panel - trunk lid. <Ref. to EI-111, INSTALLATION, Trunk Room Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

3. REAR ANTENNA (OUTBACK MODEL)

1) Install the rear antenna assembly - exterior.
2) Install the trim panel - rear gate. <Ref. to EI-122, REMOVAL, Rear Gate Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



C: INSPECTION

1) Check the setting by performing Keyless access system check using the Subaru Select Monitor. <Ref. to KPS(diag)-36, OPERATION, Keyless Access System Check.>
2) Disconnect the Subaru Select Monitor. While bringing the access key, operate the opener switch on the rear gate and the lock request switch to check if the door lock or lock operates. (OUTBACK model)
3) Disconnect the Subaru Select Monitor. While bringing the access key, operate the trunk opener button to check if the trunk is opened. (Sedan model)
4) If the system does not operate normally as the result of inspection, refer to “General Diagnostic Table” of the “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-104, KEYLESS ACCESS SYSTEM, INSPECTION, General Diagnostic Table.>

30.Trunk Opener Button

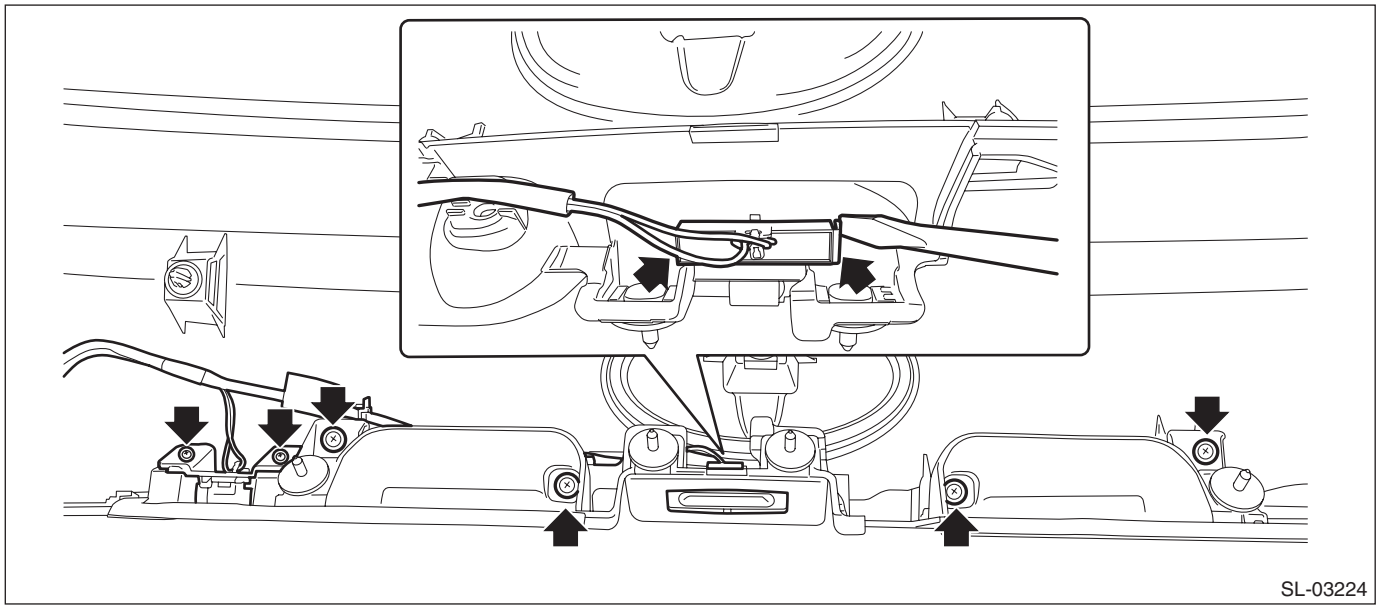
A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the garnish - trunk. <Ref. to EI-60, REMOVAL, Trunk Lid Garnish.>
3) Release the locks at both ends of the trunk opener button by pushing them with a flat tip screwdriver.

B: INSTALLATION

1) Install the trunk opener button to the garnish - trunk.
2) Install the garnish - trunk.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION



1) Display the current data using the Subaru Select Monitor.
2) Check that the display changes when the trunk opener button is operated.
3) If the display is not correct as the result of inspection, refer to “General Diagnostic Table” of the “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-104, KEYLESS ACCESS SYSTEM, INSPECTION, General Diagnostic Table.>

31.Rear Lock Button

A: REMOVAL

NOTE:
- The rear lock button is integrated with the switch - opener rear gate.
- Open the panel - rear gate before disconnecting the ground terminal from battery sensor.

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate. <Ref. to EI-122, REMOVAL, Rear Gate Trim.>
3) Remove the garnish assembly - rear gate. <Ref. to EI-61, REMOVAL, Rear Gate Garnish.>
4) Remove the rear lock button.
   (1) Remove the garnish switch bracket from the garnish assembly - rear gate.
   (2) Release the locks at both ends of the button - opener rear gate by pushing them with a flat tip screwdriver, and remove the button - opener rear gate.
   (3) Remove the screws and detach the rear lock button.

B: INSTALLATION

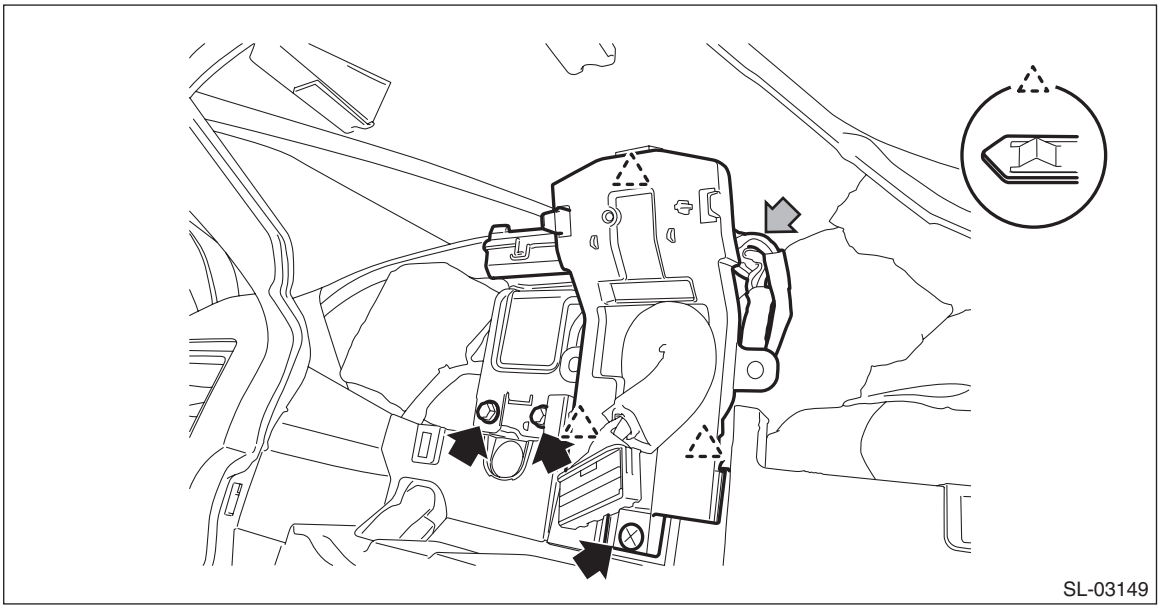
CAUTION:
Make sure that the harness grommet is securely installed.
If not properly installed, this may cause leaks.

1) Install the rear lock button and the switch - opener rear gate.
2) Install the garnish assembly - rear gate. <Ref. to EI-62, INSTALLATION, Rear Gate Garnish.>

Tightening torque
4.5 N·m (0.4 kgf-m, 3.3 ft-lb)

3) Install the trim panel - rear gate. <Ref. to EI-123, INSTALLATION, Rear Gate Trim.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION



1) Display the current data using the Subaru Select Monitor.
2) Check if the display changes when the rear lock button is operated.
3) If the display is not correct as the result of inspection, refer to “General Diagnostic Table” of the “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-104, KEYLESS ACCESS SYSTEM, INSPECTION, General Diagnostic Table.>

32.Keyless Access CM

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the combination meter assembly. <Ref. to IDI-11, REMOVAL, Combination Meter.>
3) Remove the keyless access CM.
    (1) Remove the reinforcement - combination meter.

NOTE:
For model with navigation, remove the GPS antenna assembly. <Ref. to ET-34, REMOVAL, GPS Antenna.>
    (2) Disconnect the connector and remove the bolt.

B: INSTALLATION

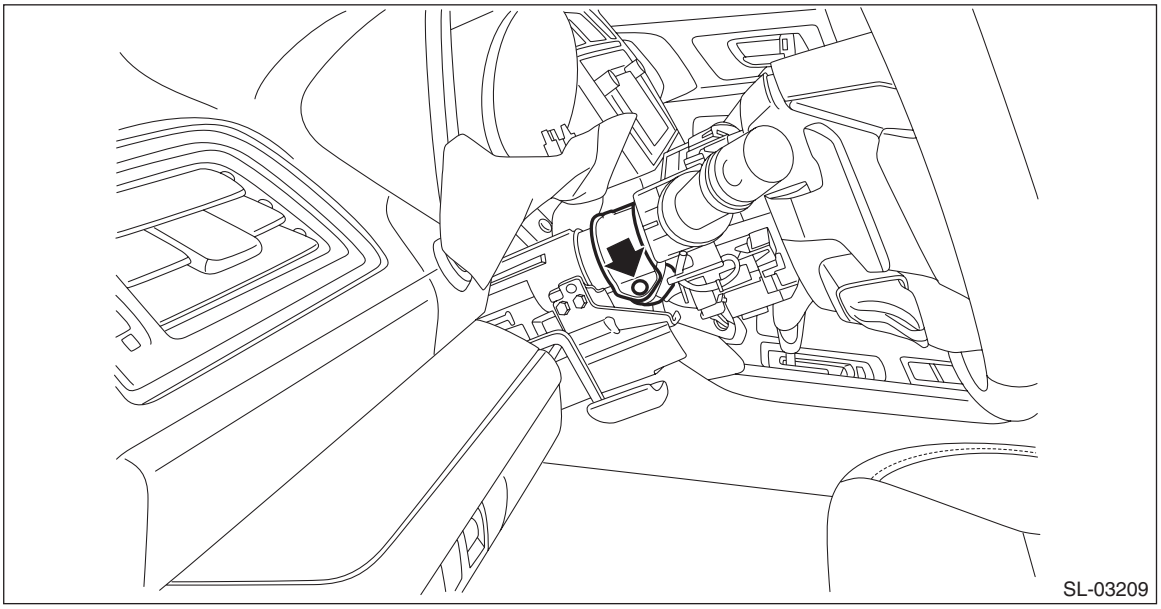
NOTE:
Make sure that there are no differences from the contents of the current settings after installation. <Ref. to BC(diag)-20, LIST, Read Current Data.>
1) Install the reinforcement - combination meter and keyless access CM.

NOTE:
For model with navigation, install the GPS antenna assembly. <Ref. to ET-34, INSTALLATION, GPS Antenna.>

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the combination meter assembly. <Ref. to IDI-12, INSTALLATION, Combination Meter.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

33.ID Code Box

A: NOTE



For removal/installation procedures of ID code box, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER”.

34.Steering Lock CM

A: REMOVAL

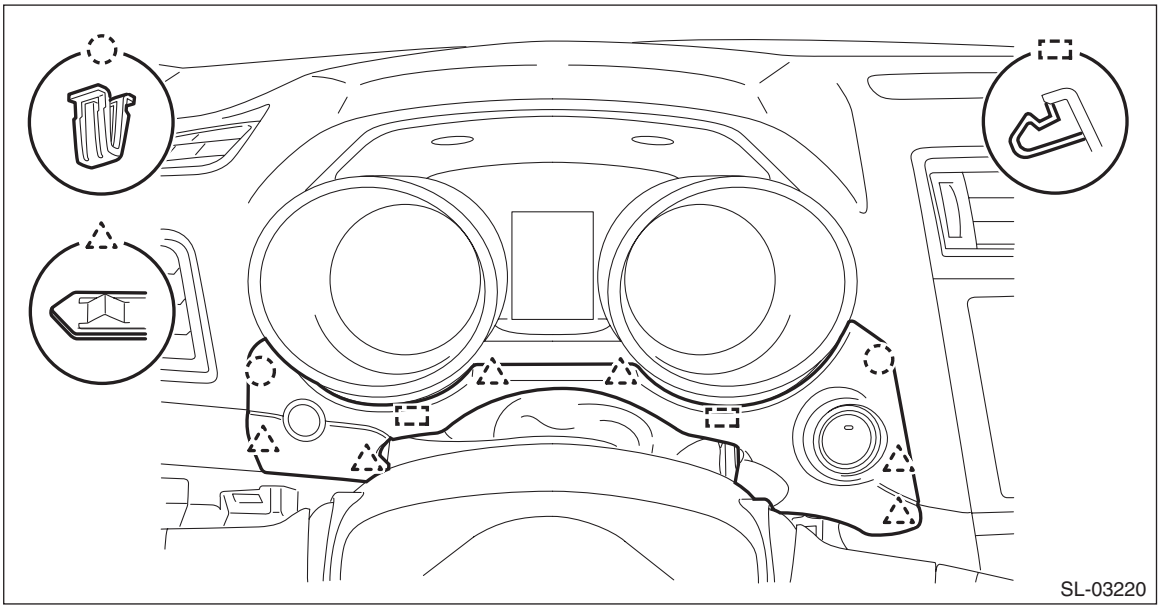
CAUTION:
• Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
• If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the column assembly - steering. <Ref. to PS-19, REMOVAL, Steering Column.>
3) Remove the steering lock CM.
(1) Secure the column assembly - steering in a vise.
(2) Use the reverse tap or drill to remove the set bolt and remove the steering lock CM.

CAUTION:
Do not apply any impact to the set bolt by a chisel or punch. Doing so may damage the CM.

B: INSTALLATION

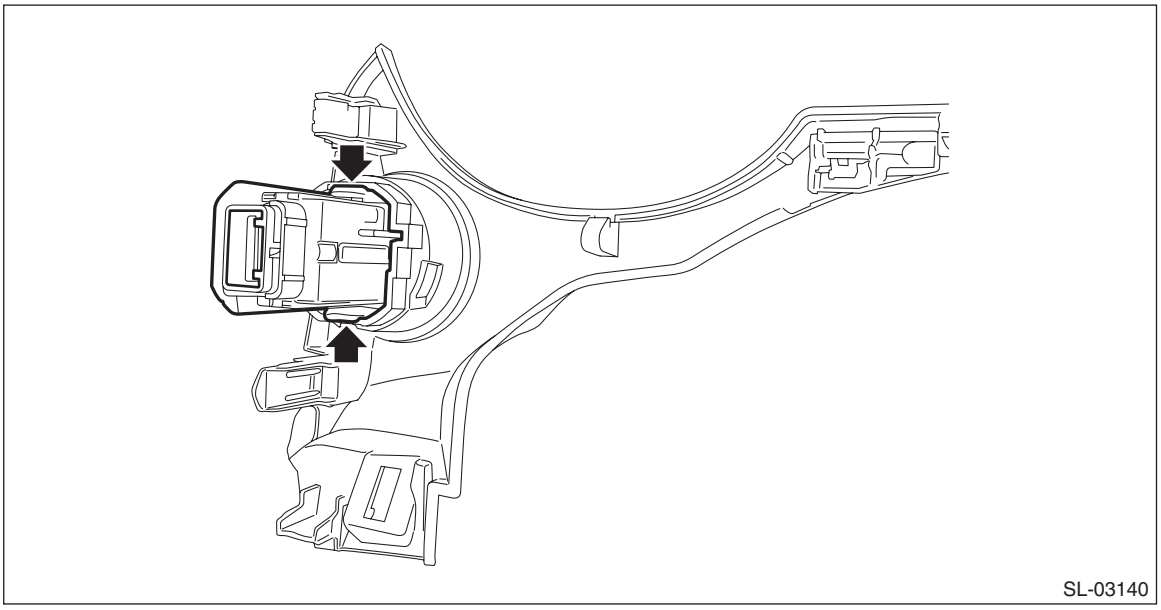
CAUTION:
• Registration of the immobilizer is necessary when a immobilizer-related control module has been replaced. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".
• Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
• If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
1) Secure the steering lock CM to the steering column.
2) Use new set bolts. Tighten the bolt until the bolt head is broken (bolt head wrenched off).
3) Install the column assembly - steering.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION



1) Check if the steering lock is released when you start the engine using the push button ignition switch.
2) If the system does not operate normally as the result of inspection, refer to "General Diagnostic Table" of the "KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)" section. <Ref. to KPS(diag)-104, STEERING LOCK SYSTEM, INSPECTION, General Diagnostic Table.>

35.Push Button Ignition Switch

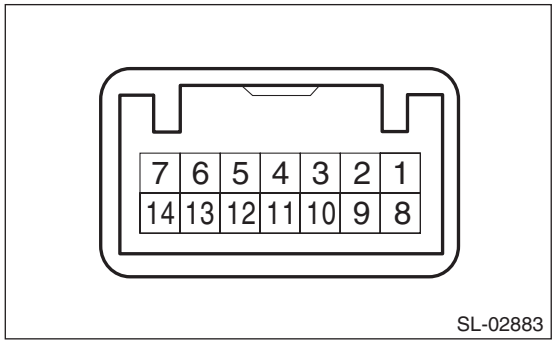


A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-74, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the visor assembly - lower.
   (1) Release the clips and claws.
   (2) Disconnect the connector and remove the visor assembly - lower.

CAUTION:
Be careful not to damage the clips and claws by slowly removing the right and left edges of visor assembly - lower.

4) Remove the push button ignition switch.
   (1) Release the claws and remove the push button ignition switch from the visor assembly - lower.



B: INSTALLATION

1) Install the push button ignition switch to the visor assembly - lower.
2) Install the visor assembly - lower.
3) Install the cover assembly - instrument panel LWR driver.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

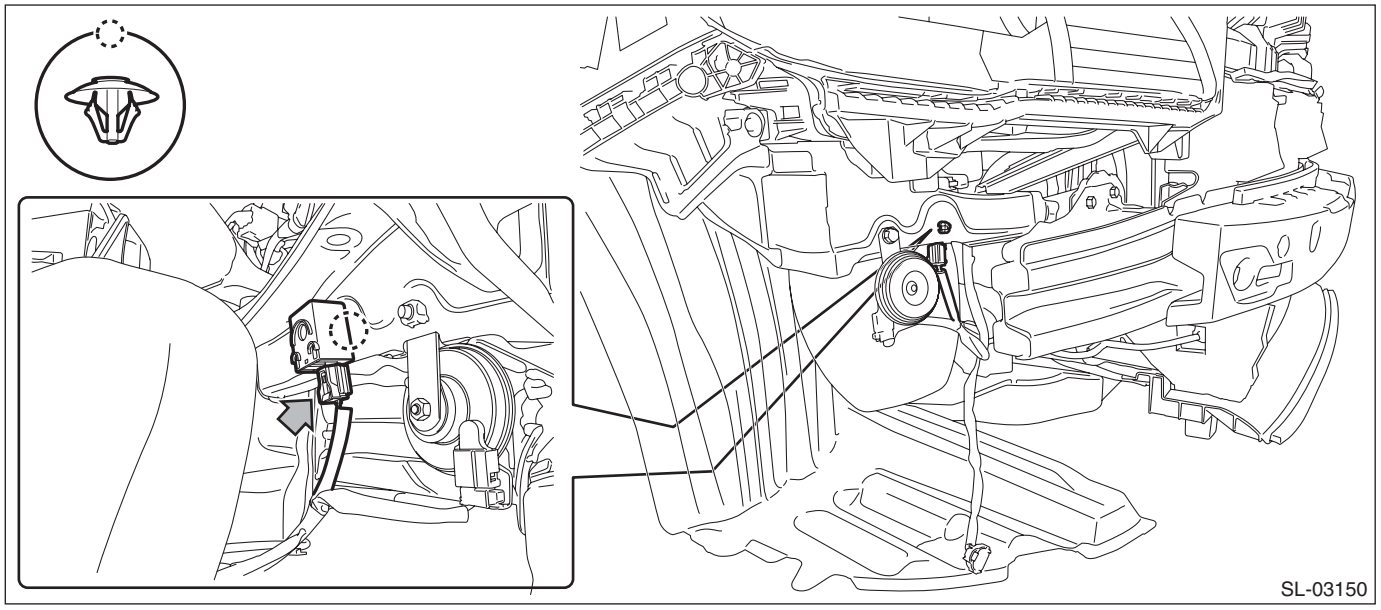
C: INSPECTION

1) Check the continuity between the connectors.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Specification
4 (COM) — 5 (GND)	Always	Continuity exists
7 (SSW1) — 5 (GND)	Push button ignition switch released → pressed	Continuity exists
2 (SSW2) — 5 (GND)	Push button ignition switch released → pressed	Continuity exists

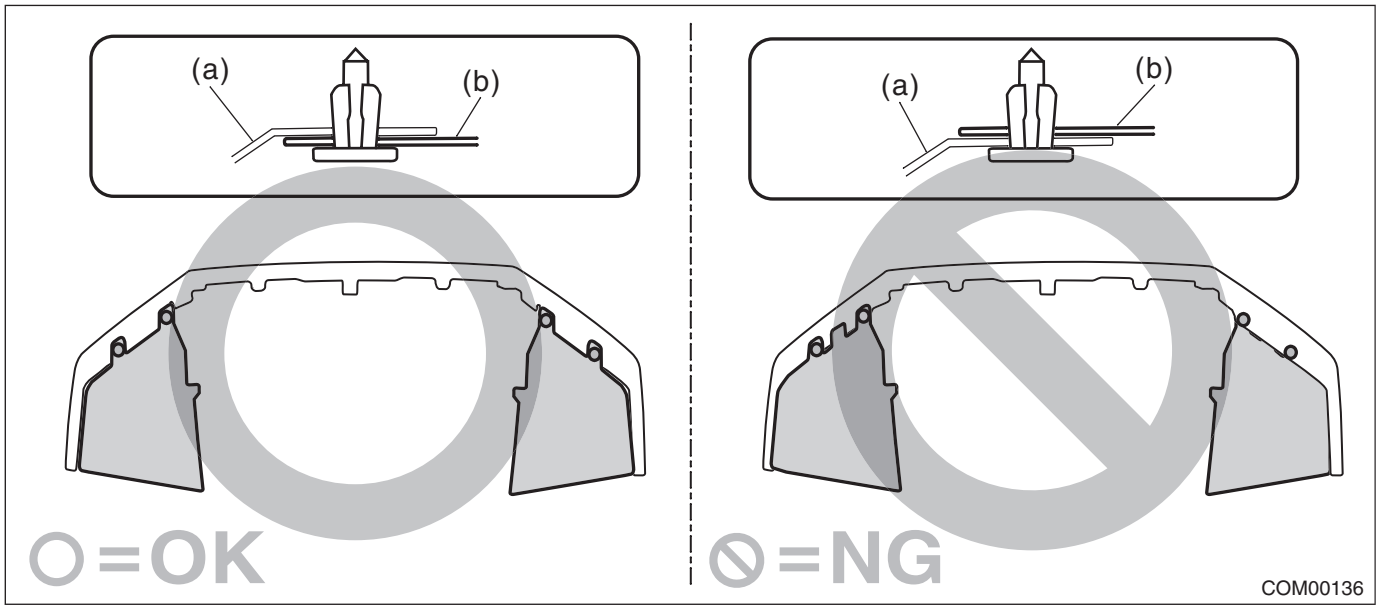
2) Check the push button ignition switch operation when battery voltage is applied between the connectors.



Terminal No.	Inspection conditions	Specification
11 (SWIL) — 5 (GND)	Connect battery to the terminals	Goes off → Red switch illumination light
12 (INDS) — 5 (GND)		Turns off → Switch indicator lights in green
13 (INDW) — 5 (GND)		Turns off → Switch indicator lights in orange

3) Replace the push button ignition switch if the inspection result is not within the standard value.

36.Access Buzzer



A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the access buzzer.
   (1) Remove the clips, and turn over the mud guard - front.
   (2) Disconnect the connector.
   (3) Remove the clip and detach the access buzzer.

B: INSTALLATION

CAUTION:
Install the mud guard - front so that the front end of the mud guard (b) comes outside the bumper face - front (a).

1) Install the access buzzer.
2) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

Using the Subaru Select Monitor, perform forced operation of the access buzzer. <Ref. to BC(diag)-27, OPERATION, User Customizing.>
If the buzzer does not sound, replace the access buzzer.

37.Function Setting (Customize)

A: OPERATION

Disabling/Activating the keyless access system

The following functions are disabled when the keyless access system functions are disabled:

- LOCK function performed by the operation of touch sensor on the door outer handle
- UNLOCK function by the door touch sensor
- Trunk lid open function by trunk opener button operation in the trunk lid lock condition
- Lockout prevention feature
- Warning function
- Engine starting control using keyless access collation

B: PROCEDURE

1) Check that the vehicle status is as follows:
- Ignition switch OFF
- One window is completely open
- Keyless access system is activated (or disabled if re-activating)

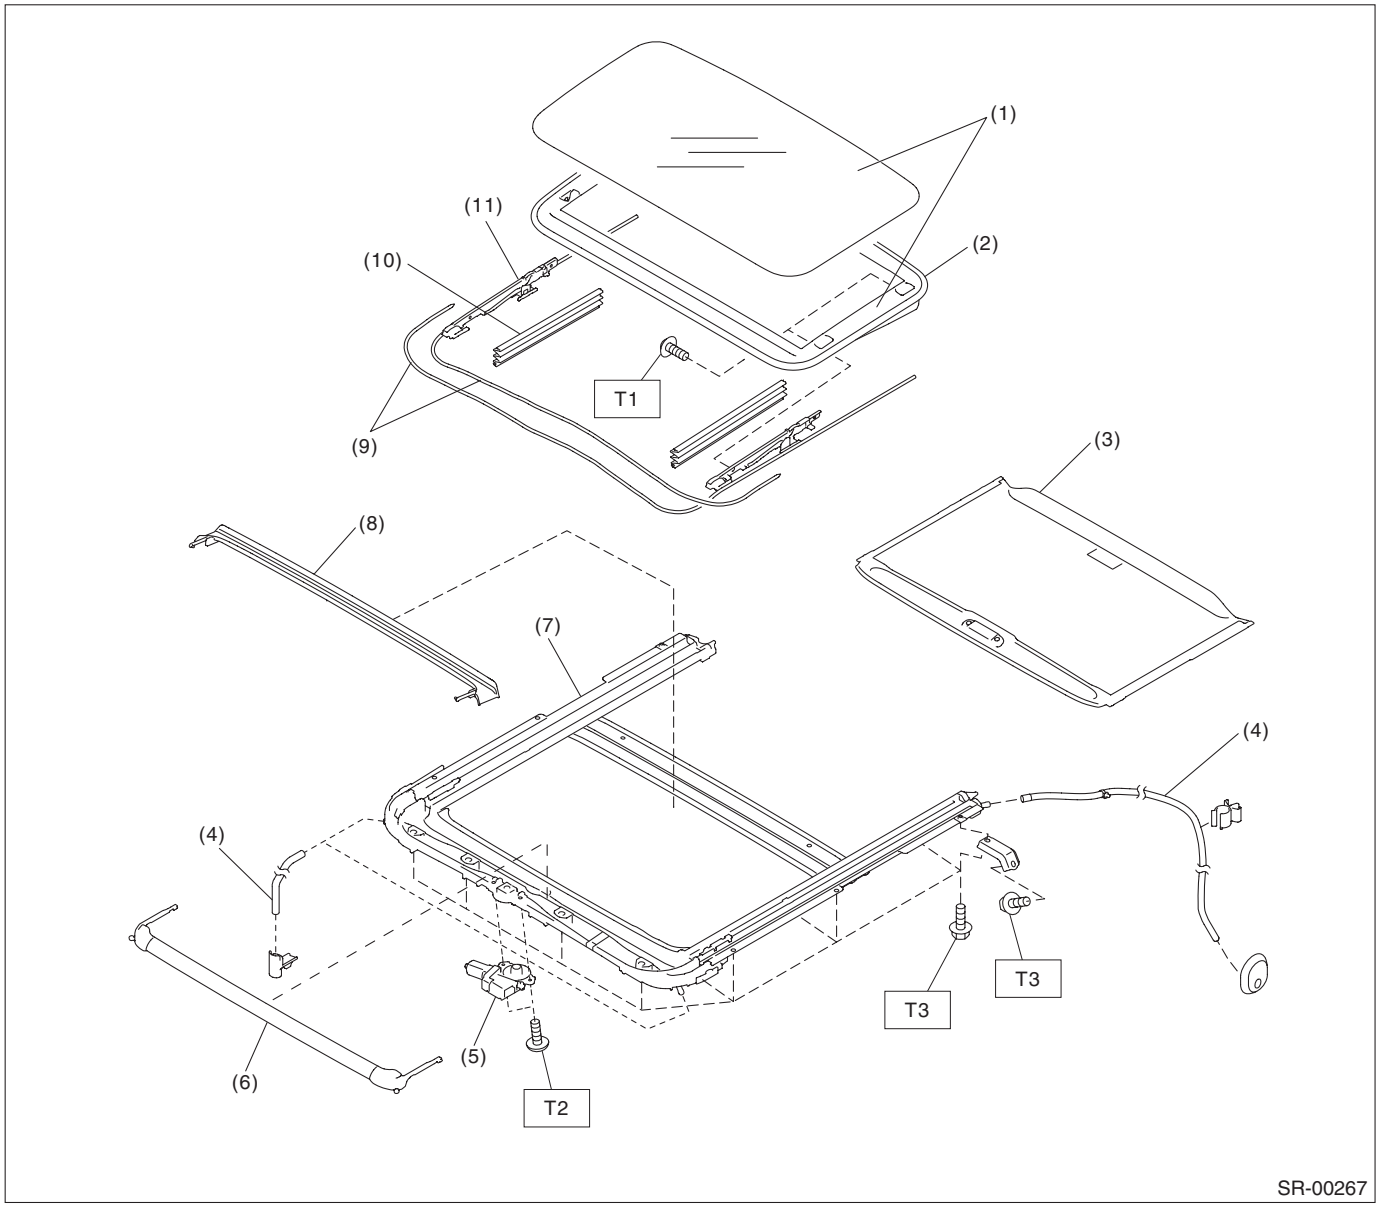
2) Sit in the driver's seat with the door closed and press the door lock switch to UNLOCK once.
3) Open the driver's door within five seconds.
4) Within 5 seconds, with the driver's door opened, slowly press the door lock switch to UNLOCK twice.
5) Within 30 seconds, perform the closing → opening operation of the driver's door twice.
6) Within 30 seconds, with the driver's door opened, slowly press the door lock switch to UNLOCK twice.
7) Within 30 seconds, perform the closing → opening operation of the driver's door once.
8) Within five seconds, close the driver's door.

NOTE:
- Perform the same procedures to re-activate the keyless access system from the disabled condition.
- If the driver's door is opened or closed in step 4) and step 6), the cancel operation is disabled.

38.Diagnostics with Phenomenon

A: INSPECTION

Refer to “Diagnostics with Phenomenon” of “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-105, Diagnostics with Phenomenon.>



SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

SR

		Page
1.	General Description	2
2.	Relay and Fuse	4
3.	Sunroof Control System	5
4.	Glass Lid	7
5.	Sunroof Assembly	11
6.	Sunroof Motor	17
7.	Sunroof Switch	19
8.	Sunshade	21

1. General Description

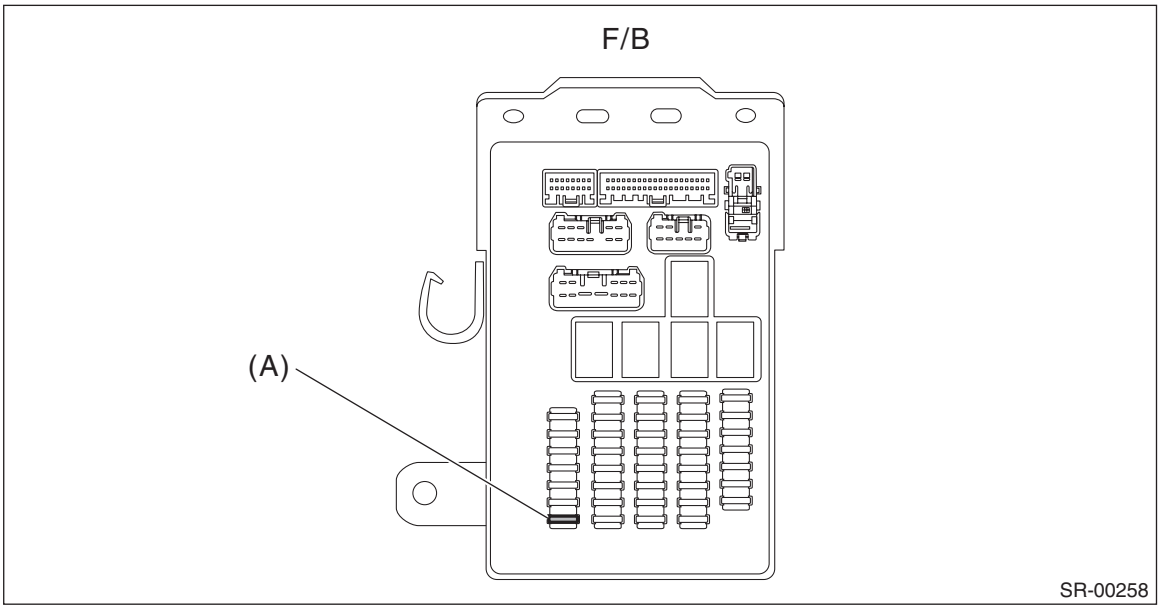
A: COMPONENT

(1) Lid ASSY - sunroof
(2) Weather strip
(3) Sunshade ASSY
(4) Drain tube - sunroof
(5) Motor ASSY - sunroof
(6) Deflector ASSY - sunroof
(7) Rail ASSY - sunroof
(8) Drain ASSY - sunroof
(9) Cable ASSY
(10) Lid cover
(11) Link - drain sunroof

Tightening torque: N·m (kgf-m, ft-lb)
T1: 4.5 (0.5, 3.3)
T2: 5.4 (0.6, 4.0)
T3: 6.0 (0.6, 4.4)

B: CAUTION

Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.



C: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.
TORX® T25	Used for removing and installing the lid assembly - sunroof.

2. Relay and Fuse

A: LOCATION

Fuse & relay box (F/B)	Fuse 20A	(A)

NOTE:
For details concerning other fuses and relays, refer to the wiring diagram. <Ref. to WI-23, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

3. Sunroof Control System

A: WIRING DIAGRAM

Refer to “Sunroof Control System” in the wiring diagram. <Ref. to WI-446, WIRING DIAGRAM, Sunroof Control System.>

B: INSPECTION

Symptoms	Inspection steps
Water leakage	1. Check the roof panel and the lid assembly - sunroof for improper or poor sealing. 2. Check the drain tube - sunroof for clogging. 3. Check the joints of the rail assembly - sunroof for improper sealing and for proper installation to the body.
Booming noise, wind noise and other noise	1. Check the lid assembly - sunroof and the roof panel for improper clearance. 2. Check the sunshade assembly and the trim panel - roof assembly for improper clearance.
Abnormal motor noise	1. Check installing part of motor for looseness. 2. Check gears and bearings for wear. 3. Check cable assembly for wear. 4. Check cable pipe for deformities.
Failure of sunroof (Motor operates properly.)	1. Check guide rail for foreign particles. 2. Check guide rail for improper installation. 3. Check parts for mutual interference. 4. Check cable slider for improper clinching. 5. Check cable assembly for improper installation.
Motor does not rotate or it does not rotate normally.	1. Check fuse for blown out. 2. Check switch for improper function. 3. Check motor assembly for incorrect terminal voltage. 4. Check the relay for improper operation. 5. Check harness for open or short and terminals for poor connections.
Incorrect reverse operation of the lid assembly - sunroof	Check guide rail for foreign particles.

Incorrect reverse operation of the lid assembly - sunroof while driving on rough road

The lid assembly - sunroof has auto-reverse function. When the lid assembly - sunroof is pushed in the opening direction with a force of 110±10 N (11.2 kgf, 24.7 lbf±1.0 kgf, 2.2 lbf), the glass lid moves in reverse and stops.

Therefore, if you operate (open or close) the lid assembly - sunroof while driving on rough road, the vibration may be judged as a force and the lid may incorrectly move in the reverse direction.

When the incorrect reverse operation is occurred repeatedly, perform inspection around the sunroof frame. If there are no problems, perform the initialization operation with following procedure.

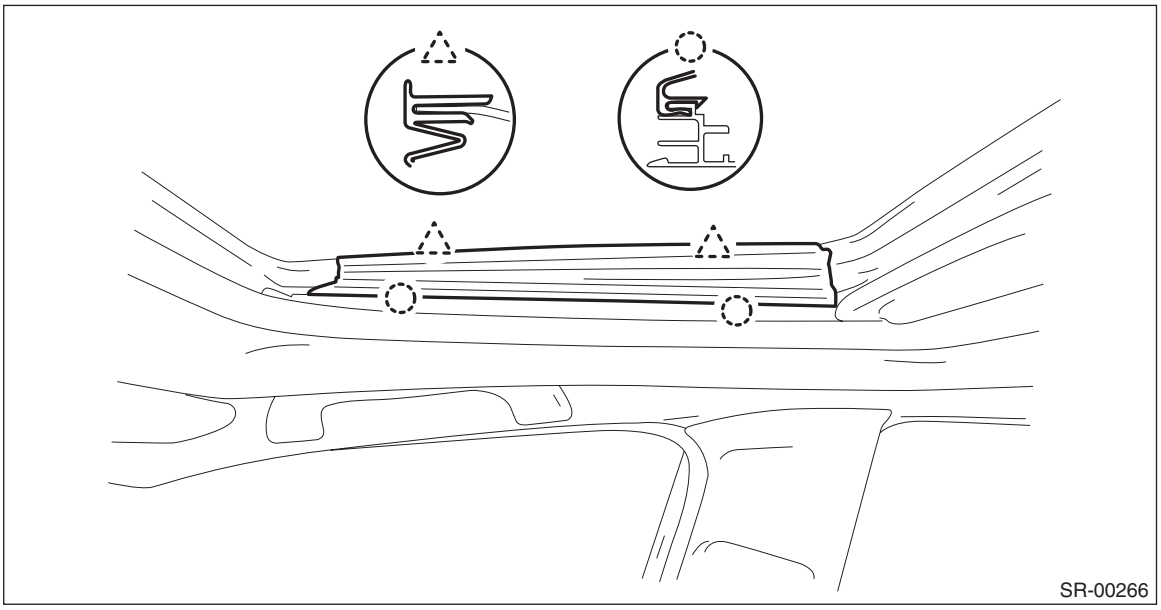
C: OPERATION

1. INITIALIZE OPERATION

CAUTION:
If the switch is released during initialization operation, perform the procedure over again.
1) Turn the ignition switch to ON.
2) Completely tilt open the lid assembly - sunroof.
3) Release the switch once, and press and hold the tilt up switch or close switch again for approx. 3 minutes.
4) Initial learning mode will start to operate until the fully tilt closed position. The lid assembly - sunroof moves to the fully closed position, fully open position, and the fully closed position successively, and stops at the fully closed position.
5) Release the tilt up switch or the close switch, and turn the ignition switch to OFF.
6) Initial learning is completed.

D: NOTE

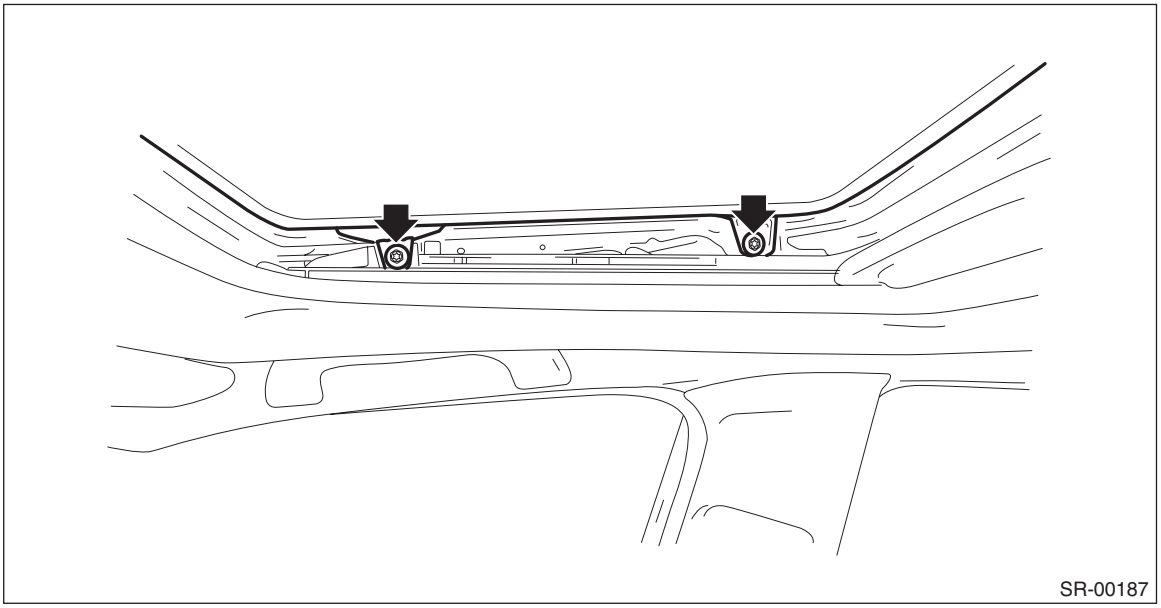
For procedure of each component in the sunroof control system, refer to the respective section.
- Glass lid: <Ref. to SR-7, Glass Lid.>
- Sunroof assembly: <Ref. to SR-11, Sunroof Assembly.>
- Sunroof motor: <Ref. to SR-17, Sunroof Motor.>
- Sunroof switch: <Ref. to SR-19, Sunroof Switch.>
- Sunshade: <Ref. to SR-21, Sunshade.>



4. Glass Lid

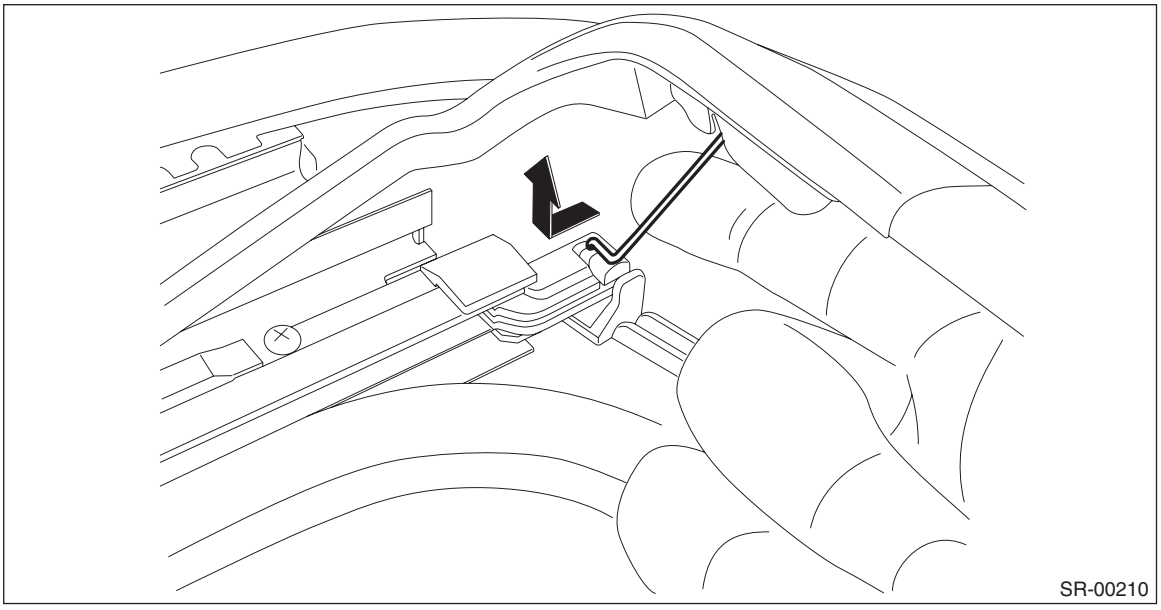
A: REMOVAL

1. GLASS LID



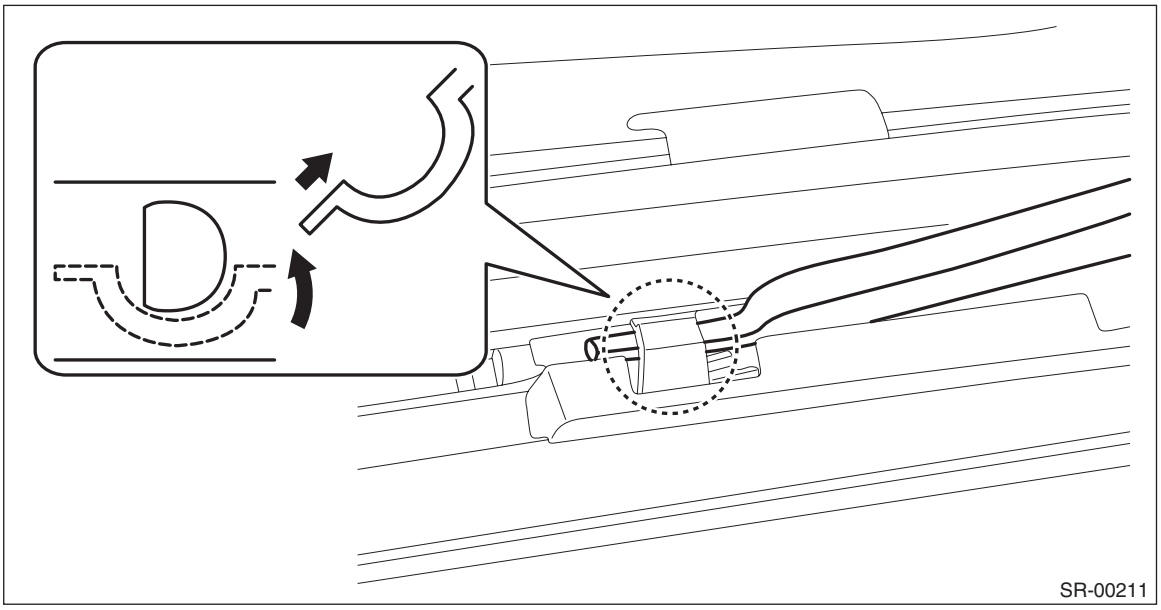
CAUTION:
Be careful not to damage the lid assembly - sunroof.

1) Completely close the lid assembly - sunroof, and open the sunshade assembly.
2) Disconnect the claws and then remove the lid cover.



3) Remove the lid assembly - sunroof.

Preparation tool:
TORX® T25



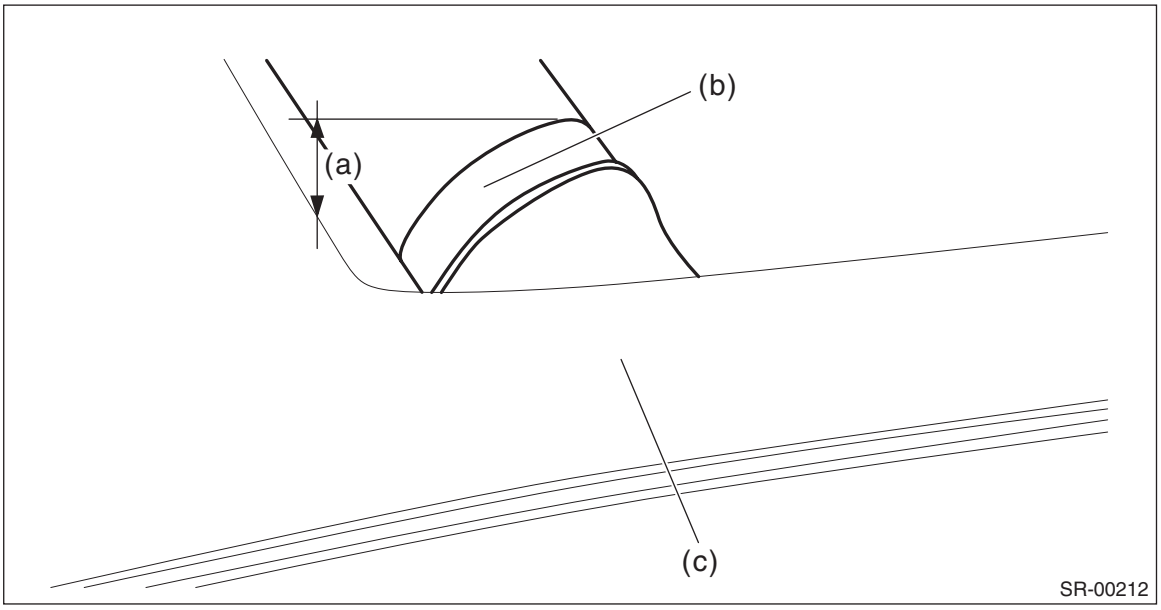
2. DEFLECTOR ASSEMBLY

1) Open the lid assembly - sunroof and the sunshade assembly.
2) Remove the deflector assembly - sunroof.
   (1) Remove the spring from the rail assembly - sunroof.

   (2) While lifting up the deflector assembly - sunroof, remove the deflector assembly - sunroof from the hook on the rail assembly - sunroof.

B: INSTALLATION

1. GLASS LID



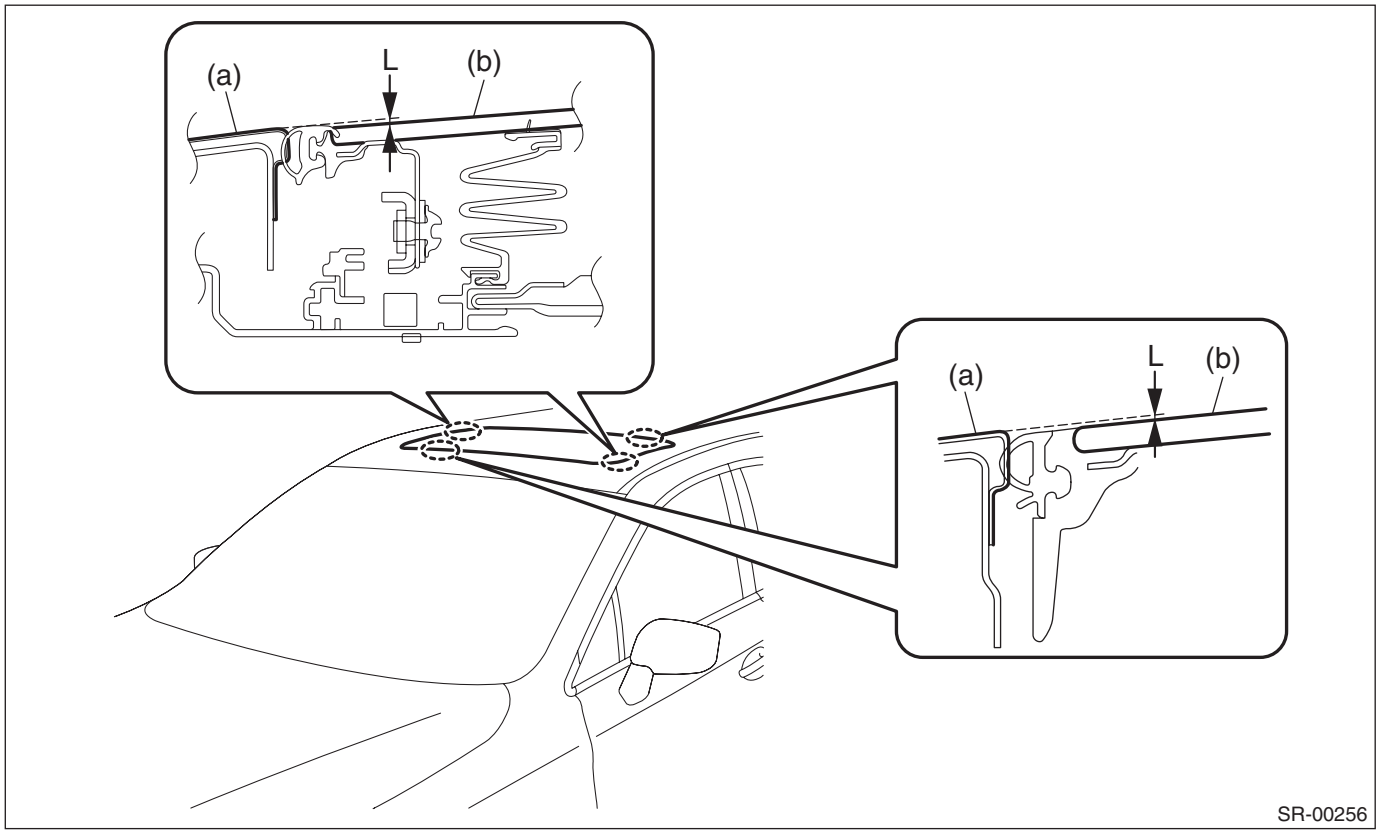
1) Install the lid assembly - sunroof.

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

2) Perform the open/close operation checks for the glass lid.
3) Check the height of the lid assembly - sunroof and the roof panel, and perform adjustment when there is a difference between up and down, and left and right. <Ref. to SR-10, ADJUSTMENT, Glass Lid.>
4) Install the lid cover.

2. DEFLECTOR ASSEMBLY

1) Install the deflector assembly - sunroof.
2) After installation, measure the height from the roof panel when deflector assembly - sunroof is activated.



(a) 14 mm (0.55 in)
(b) Deflector ASSY - sunroof
(c) Roof panel

C: ADJUSTMENT

1) Adjust the height of the lid assembly - sunroof and the roof panel.
2) Loosen the lid assembly - sunroof mounting bolts, and then adjust the height by moving the lid assembly - sunroof side.

Lid assembly - sunroof height difference L:
Lid assembly - sunroof to Roof panel: 0±1.0 mm (0±0.04 in)

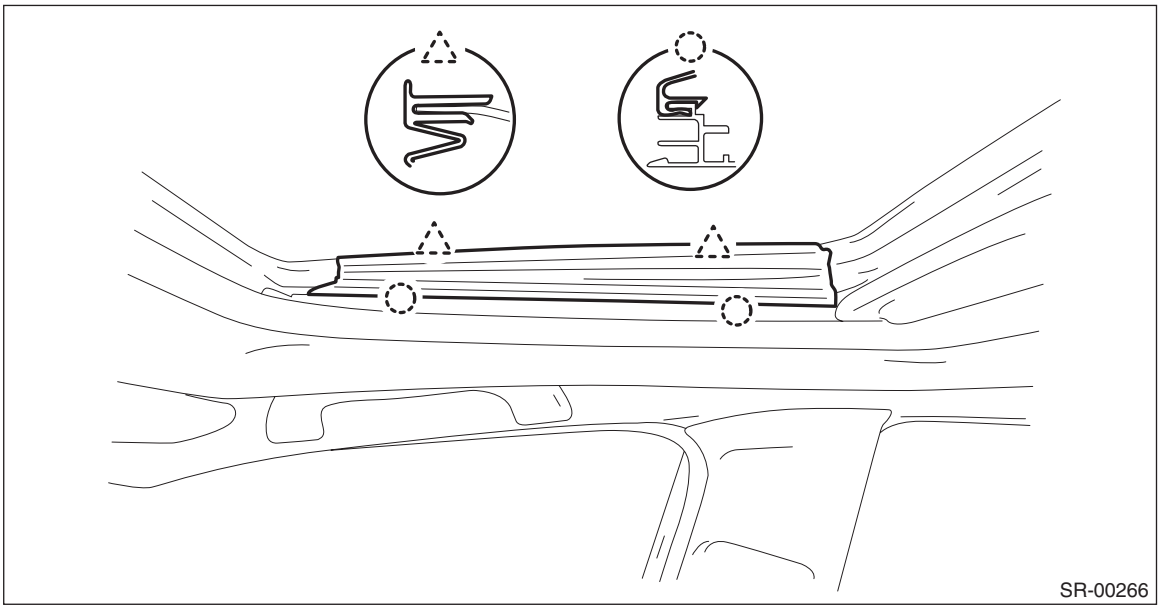
(a) Roof panel (b) Lid ASSY - sunroof

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

D: FORCED DRIVE

CAUTION:
After a forced operation, make sure to perform an initialize operation. <Ref. to SR-6, INITIALIZE OPERATION, OPERATION, Sunroof Control System.>
If the lid assembly - sunroof does not operate or the motor assembly is not supplied with power, remove the motor assembly to move the lid assembly - sunroof manually.
1) Remove the light assembly - map. <Ref. to LI-63, REMOVAL, Spot Map Light.>
2) Remove the connector and bolt to remove the motor assembly.
3) Move the lid assembly - sunroof by hand.
4) Install the connector and bolt.
5) Install the light assembly - map. <Ref. to LI-64, INSTALLATION, Spot Map Light.>

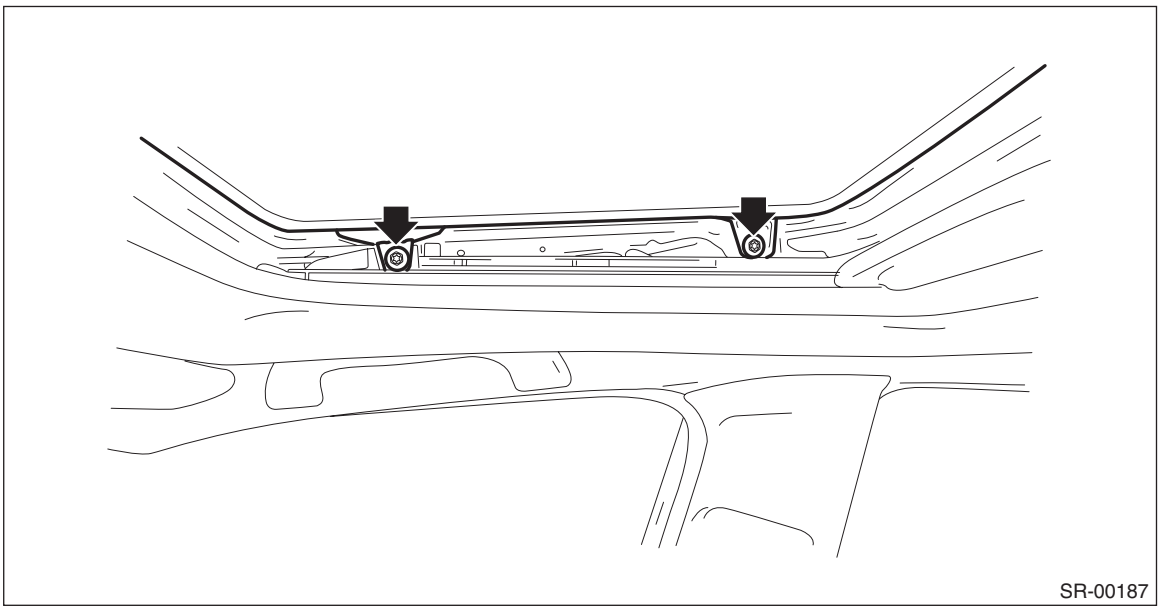
5. Sunroof Assembly



A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

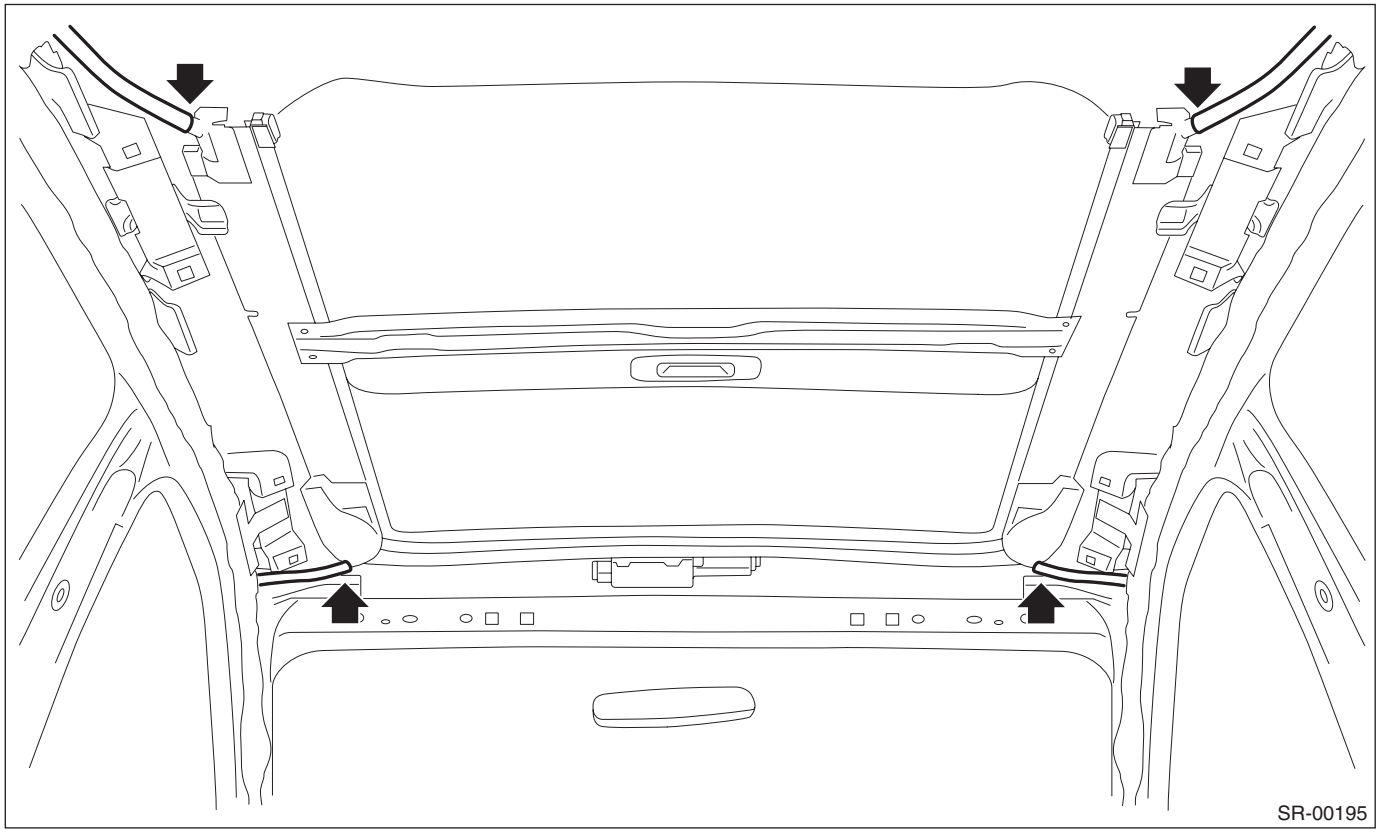
NOTE:
Completely close the lid assembly - sunroof, then disconnect the ground terminal from battery sensor.
2) Remove the lid assembly - sunroof.



CAUTION:
Be careful not to damage the lid assembly - sunroof.

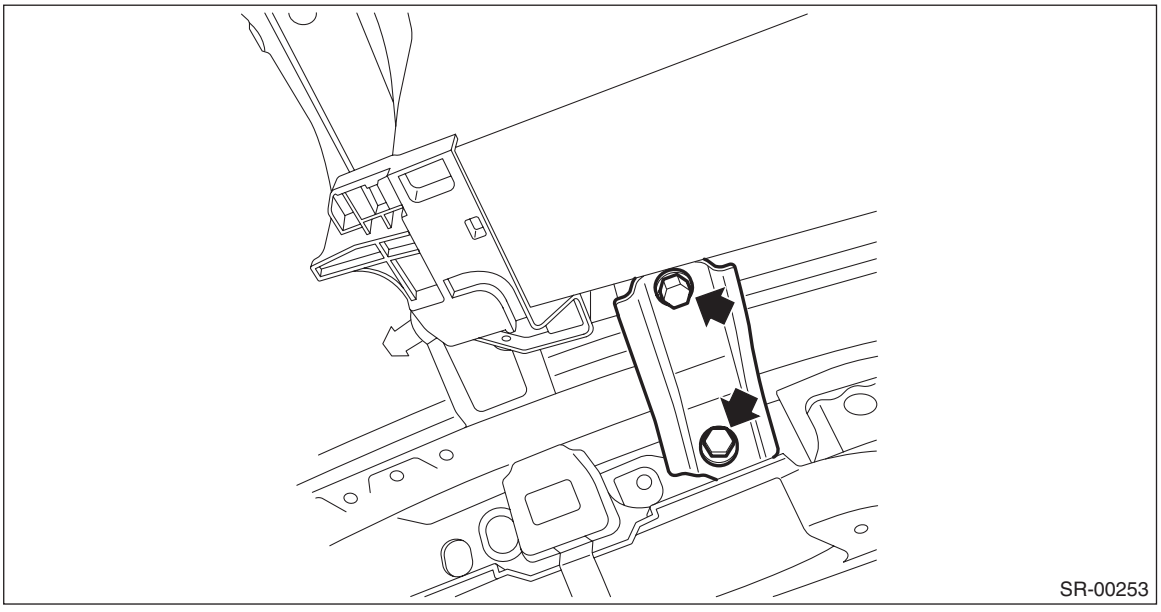
(1) Completely close the lid assembly - sunroof, and open the sunshade assembly.
(2) Disconnect the claws and then remove the lid cover.

SR-00266



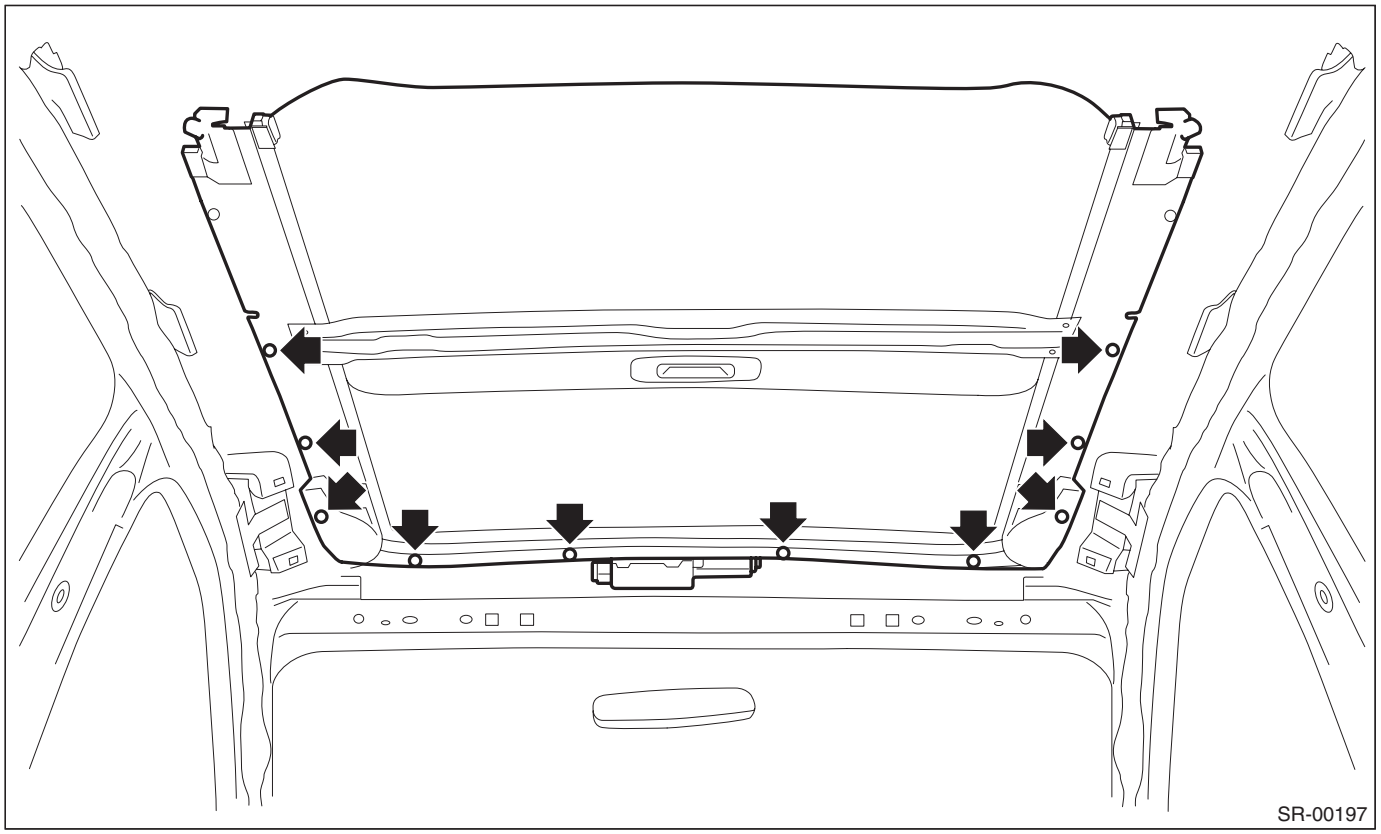
(3) Remove the lid assembly - sunroof.

Preparation tool:
TORX® T25



SR-00187

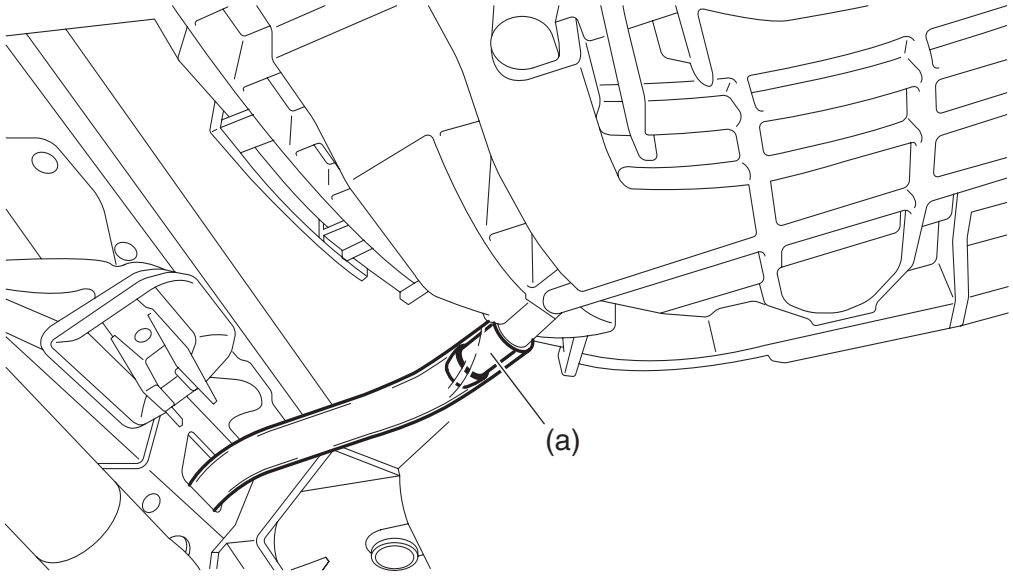
3) Remove the trim panel - roof assembly. <Ref. to EI-114, REMOVAL, Roof Trim.>
4) Disconnect the connector of the motor assembly - sunroof.
5) Remove the rail assembly - sunroof.



(1) Remove the drain tube - sunroof.

(2) Remove the curtain airbag module. <Ref. to AB-41, REMOVAL, Curtain Airbag Module.>
(3) Remove the bolts and then remove the sunroof bracket.

(4) Remove the bolts, then remove the rail assembly.



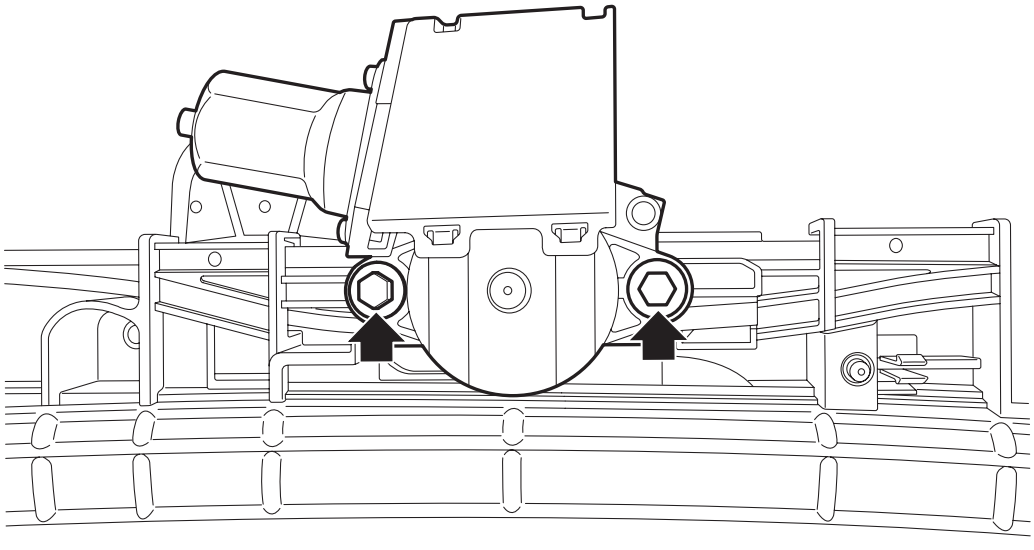
B: INSTALLATION

CAUTION:
Be careful not to snag the harness.
1) Install the rail assembly - sunroof.

Tightening torque:
6 N·m (0.6 kgf-m, 4.4 ft-lb)
2) Install the curtain airbag module. <Ref. to AB-45, INSTALLATION, Curtain Airbag Module.>

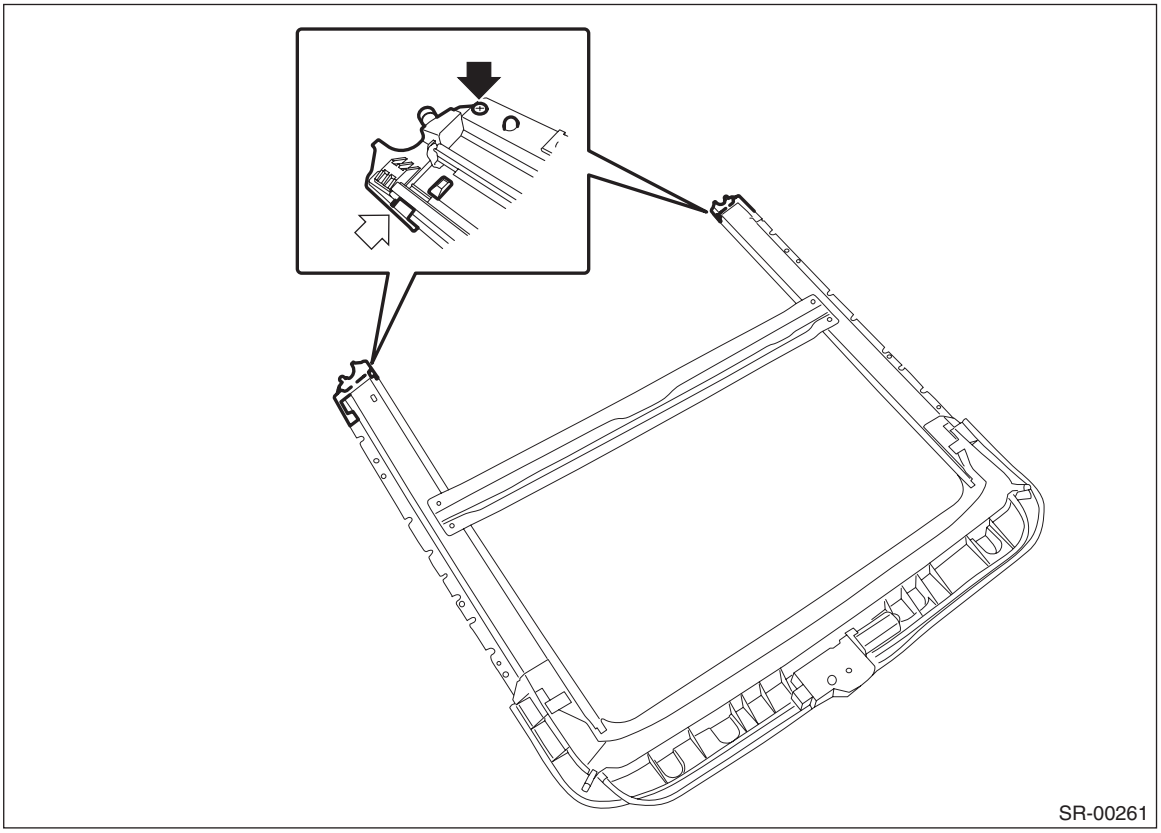
3) Connect the harness connector of the drain tube - sunroof and the motor assembly.

CAUTION:
Insert the four drain tubes 15 mm (0.59 in) or more into the drain pipes (a).



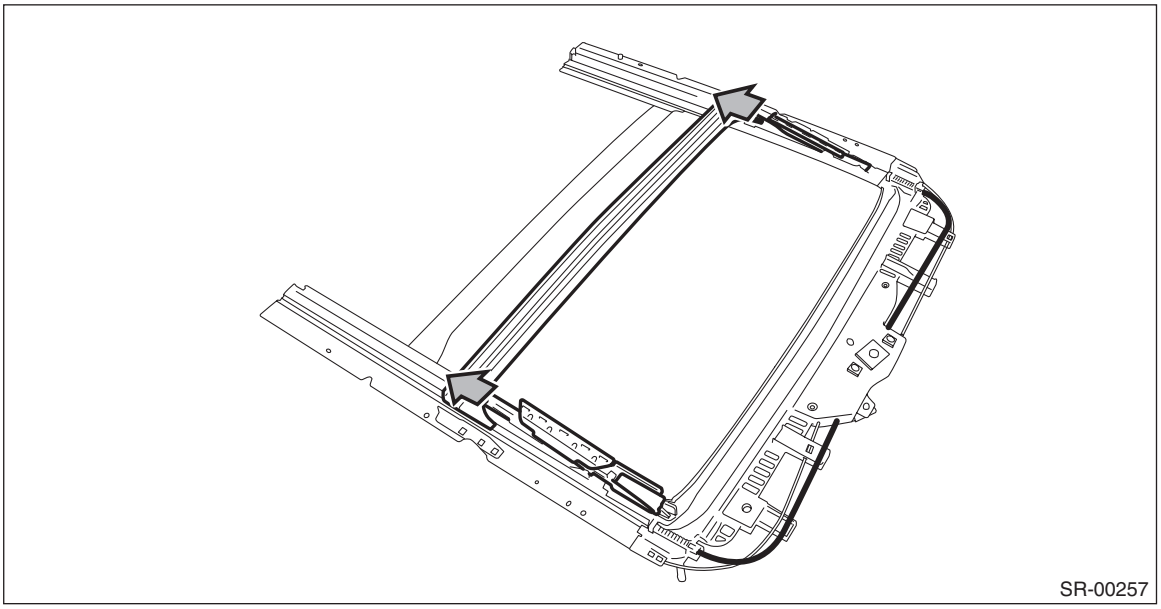
SR-00259

4) Install the trim panel - roof assembly. <Ref. to EI-119, INSTALLATION, Roof Trim.>
5) Install the lid assembly - sunroof.



Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

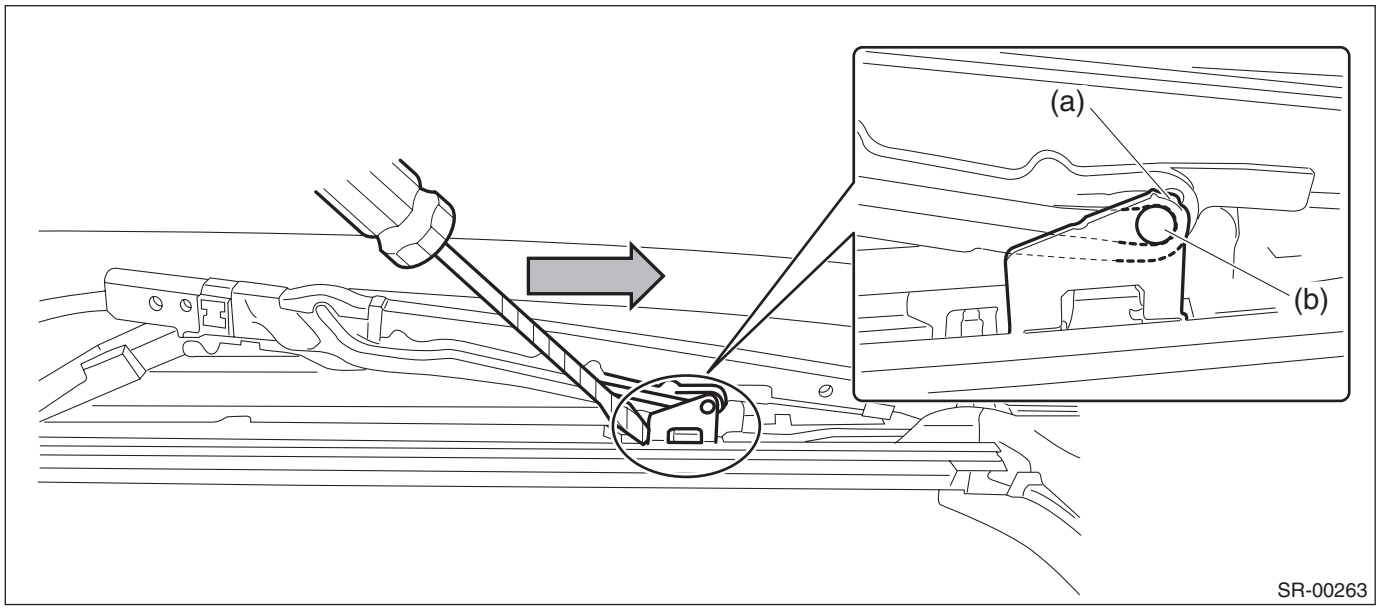
C: DISASSEMBLY



1) Remove the bolt, and then remove the motor assembly - sunroof.

SR-00254

2) Remove the screws and release the claws, then detach the drain holder.



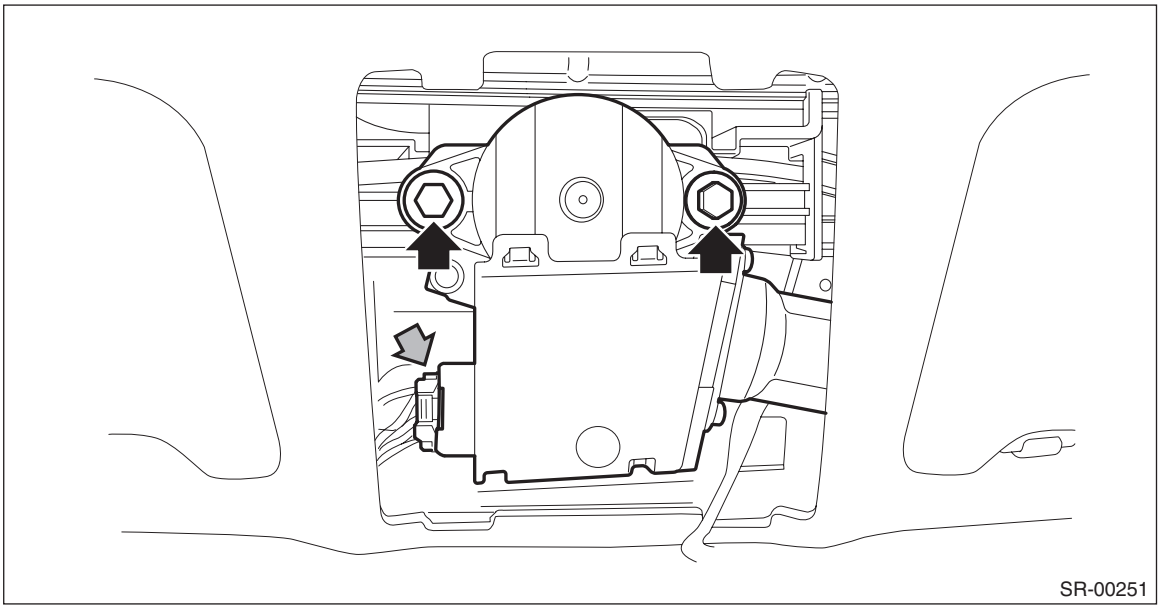
3) Remove the sunshade assembly together with the cable assembly from the rail assembly - sunroof.

D: ASSEMBLY

1) Insert the cable assembly and sunshade assembly into the rail assembly - sunroof.
2) Install the drain holder.
3) Using a flat tip screwdriver wrapped with protective tape, move the link - drain sunroof to the foremost position of the lid assembly - sunroof.

(a) Lid ASSY - sunroof side
(b) Link - drain sunroof side

4) Install the motor assembly - sunroof.



Tightening torque:
5.4 N·m (0.6 kgf-m, 4.0 ft-lb)

6. Sunroof Motor

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the light assembly - map. <Ref. to LI-63, REMOVAL, Spot Map Light.>
3) Remove the motor assembly - sunroof.
   (1) Disconnect the harness connector.
   (2) Remove the bolt, and then remove the motor assembly - sunroof.

CAUTION:
When removing the motor assembly - sunroof, do not allow the cable assembly to move.

B: INSTALLATION

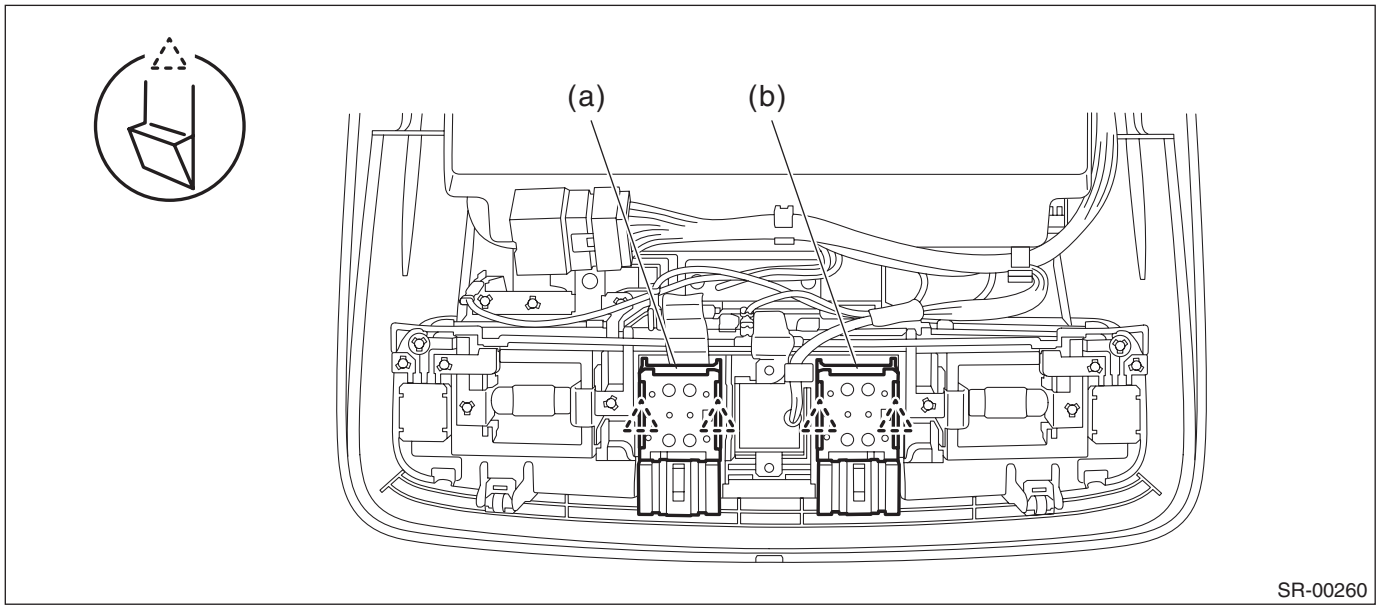
CAUTION:
When installing the motor assembly - sunroof, do not allow the cable assembly to move.
1) Install the motor assembly - sunroof.

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)
2) Install the light assembly - map. <Ref. to LI-64, INSTALLATION, Spot Map Light.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Perform the initialize operation. <Ref. to SR-6, INITIALIZE OPERATION, OPERATION, Sunroof Control System.>
5) Check the operation of sunroof by following the table below.

Operation	Switch position
(1) Lid assembly - sunroof closes completely.	Close
(2) Lid assembly - sunroof is tilted up to the top position.	Tilt up
(3) Lid assembly - sunroof closes completely.	Tilt down
(4) Lid assembly - sunroof opens 368 mm (14.49 in) away from completely closed position.	Open
(5) Lid assembly - sunroof opens completely.	Open
(6) Lid assembly - sunroof closes completely.	Close

C: INSPECTION

Check the auto-reverse mechanism.



CAUTION:
Do not place objects in the way to check the auto-reverse mechanism.
1) Open the lid assembly - sunroof.
2) Push the lid assembly - sunroof in the opening direction with a force of 110±10 N (11.2 kgf, 24.7 lbf±1.0 kgf, 2.2 lbf) during the auto-closing operation, and check whether the window auto-reverse mechanism functions.

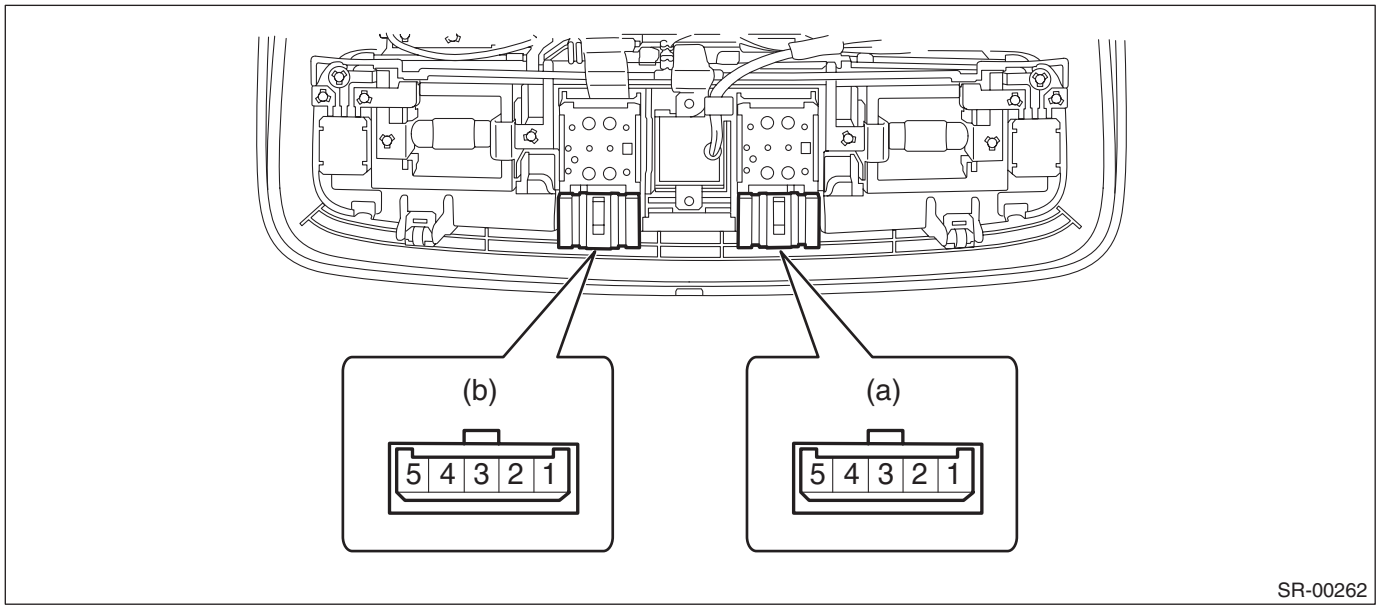
NOTE:
If the auto function is cancelled, perform the initialize operation. <Ref. to SR-6, INITIALIZE OPERATION, OPERATION, Sunroof Control System.>

7. Sunroof Switch

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the light assembly - map. <Ref. to LI-63, REMOVAL, Spot Map Light.>
3) Release the claws and remove the sunroof switch from the light assembly - map.

(a) Sunroof switch (tilt)
(b) Sunroof switch (slide)



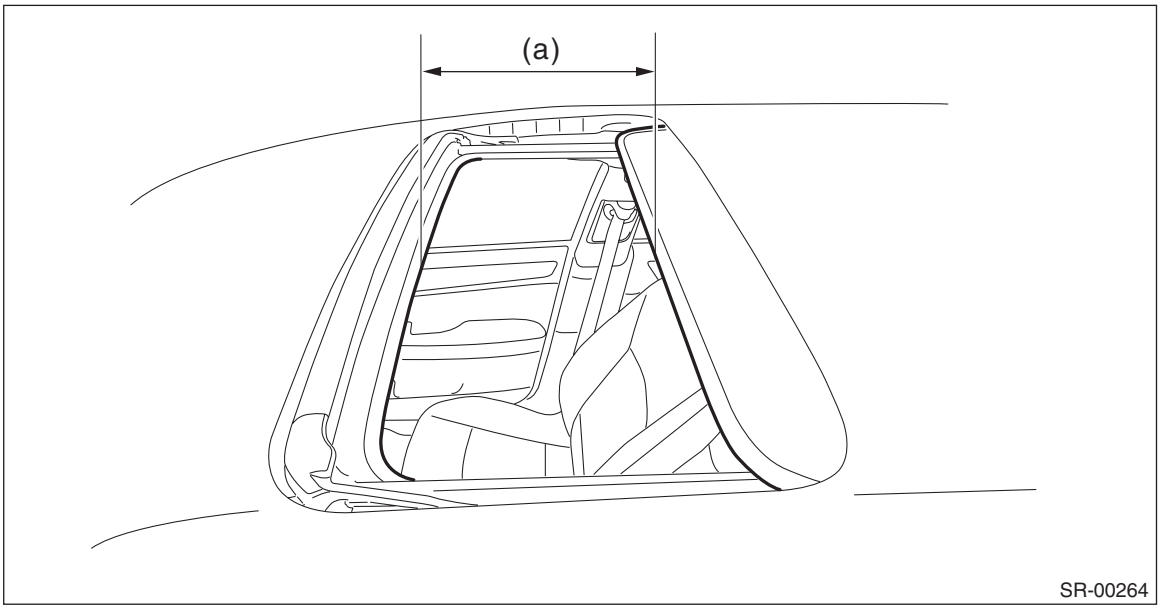
B: INSTALLATION

1) Install the sunroof switch.
2) Install the light assembly - map. <Ref. to LI-64, INSTALLATION, Spot Map Light.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



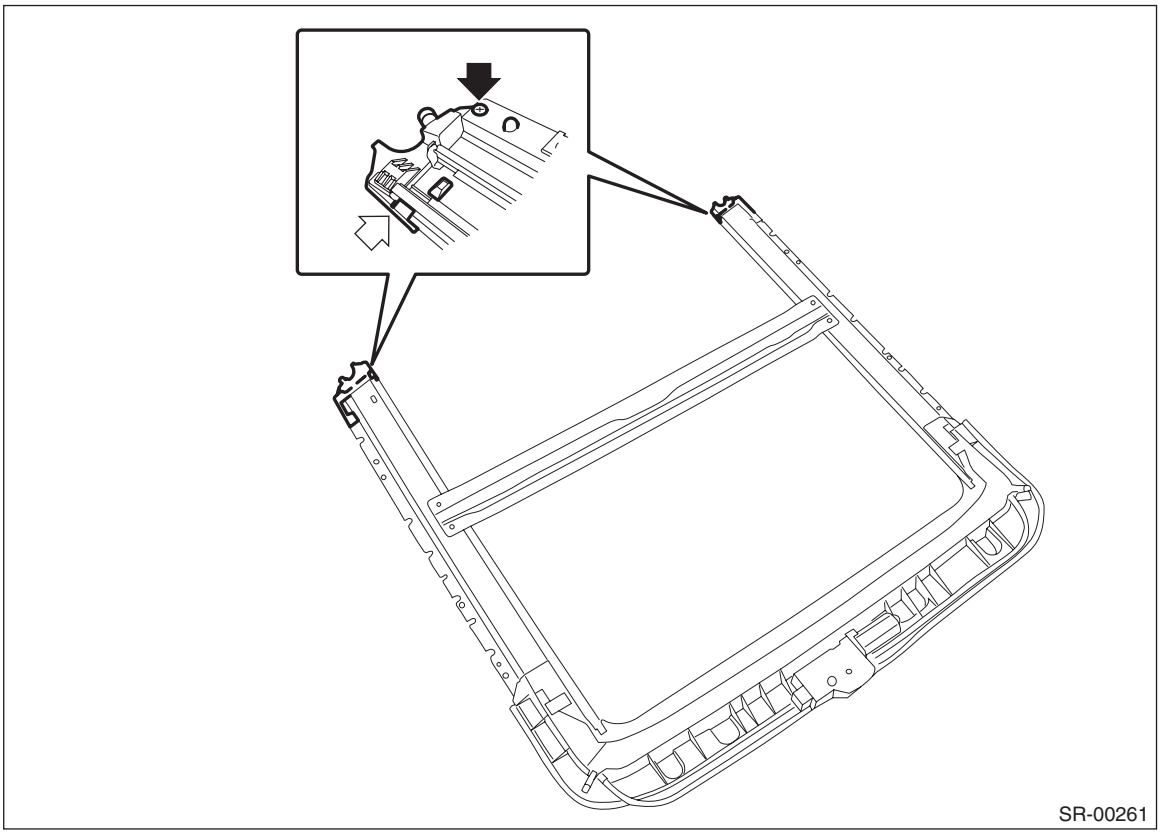
Connector	Terminal No.	Inspection conditions	Standard
(a)	1 — 3	Open	Less than 1 Ω
	4 — 3	Close	Less than 1 Ω
(b)	1 — 3	Tilt down	Less than 1 Ω
	4 — 3	Tilt up	Less than 1 Ω

2) Replace the sunroof switch if the inspection result is not within the standard value.

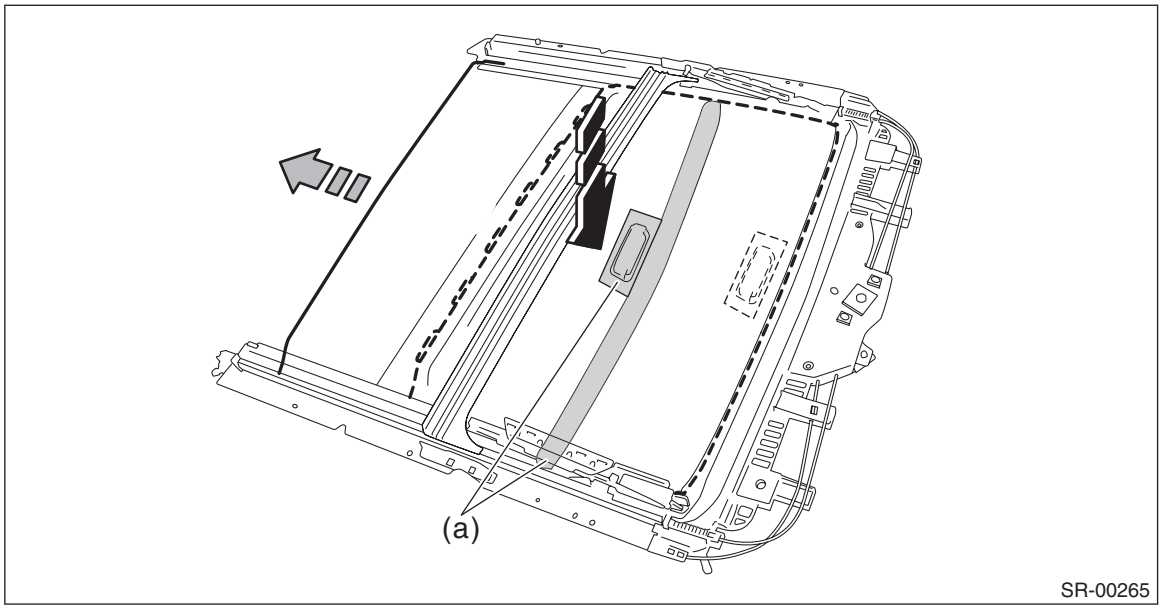
8. Sunshade

A: REMOVAL

1) Remove the lid assembly - sunroof. <Ref. to SR-7, REMOVAL, Glass Lid.>
2) Operate the sunroof switch with the sunshade fully closed to open the sunshade to the position (a) indicated below.



(a) 170 mm (6.69 in): Clearance between sunroof opening and front edge of sunshade



3) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Remove the trim panel - roof assembly. <Ref. to EI-114, REMOVAL, Roof Trim.>
5) Remove the rail assembly - sunroof. <Ref. to SR-11, REMOVAL, Sunroof Assembly.>
6) Remove the sunshade assembly.

CAUTION:
Be careful not to damage the sunshade assembly.

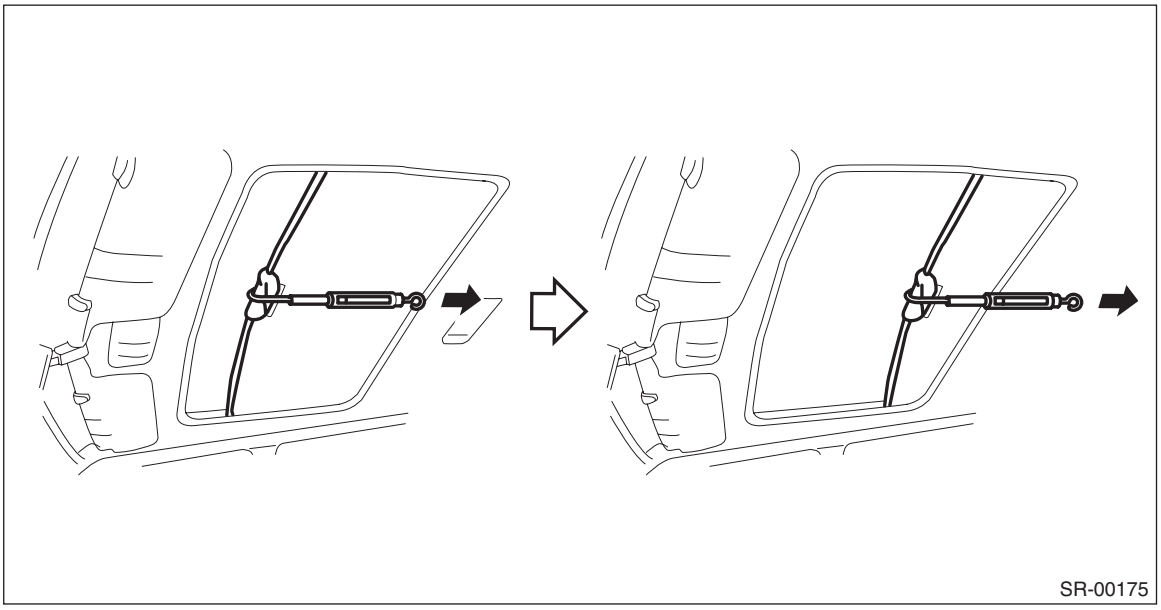
(1) Remove the screws and release the claws, then detach the drain holder.

SR-00261

(2) Attach protective tape (a) on the handle and the edge surface of the sunshade assembly.
(3) At the center of the brace, remove the sunshade assembly while pushing it downward slightly.

SR-00265

B: INSTALLATION



1) Attach protective tape on the handle and the edge surface of the sunshade assembly, and install the sunshade assembly.
2) Install the drain holder.
3) Install the rail assembly - sunroof. <Ref. to SR-13, INSTALLATION, Sunroof Assembly.>
4) Install the trim panel - roof assembly. <Ref. to EI-119, INSTALLATION, Roof Trim.>
5) Install the lid assembly - sunroof. <Ref. to SR-9, INSTALLATION, Glass Lid.>
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1. MOVING LOAD OF SUNSHADE ASSEMBLY

1) Attach a spring scale together with a cloth to the edge of sunshade assembly.
2) Pull the spring scale to check the moving load of the sunshade assembly.

Moving load of sunshade assembly:
17±8.5 N (1.73 kgf, 3.8 lbf±0.87 kgf, 1.9 lbf)

NOTE:
Moving load is larger at the beginning of pulling a spring scale, so take a spring scale reading while the sunshade assembly is sliding smoothly.
3) If the inspection result exceeds the standard, check that the sunshade assembly or the rail assembly - sunroof is installed properly. If necessary, replace the sunshade assembly or the rail assembly - sunroof.

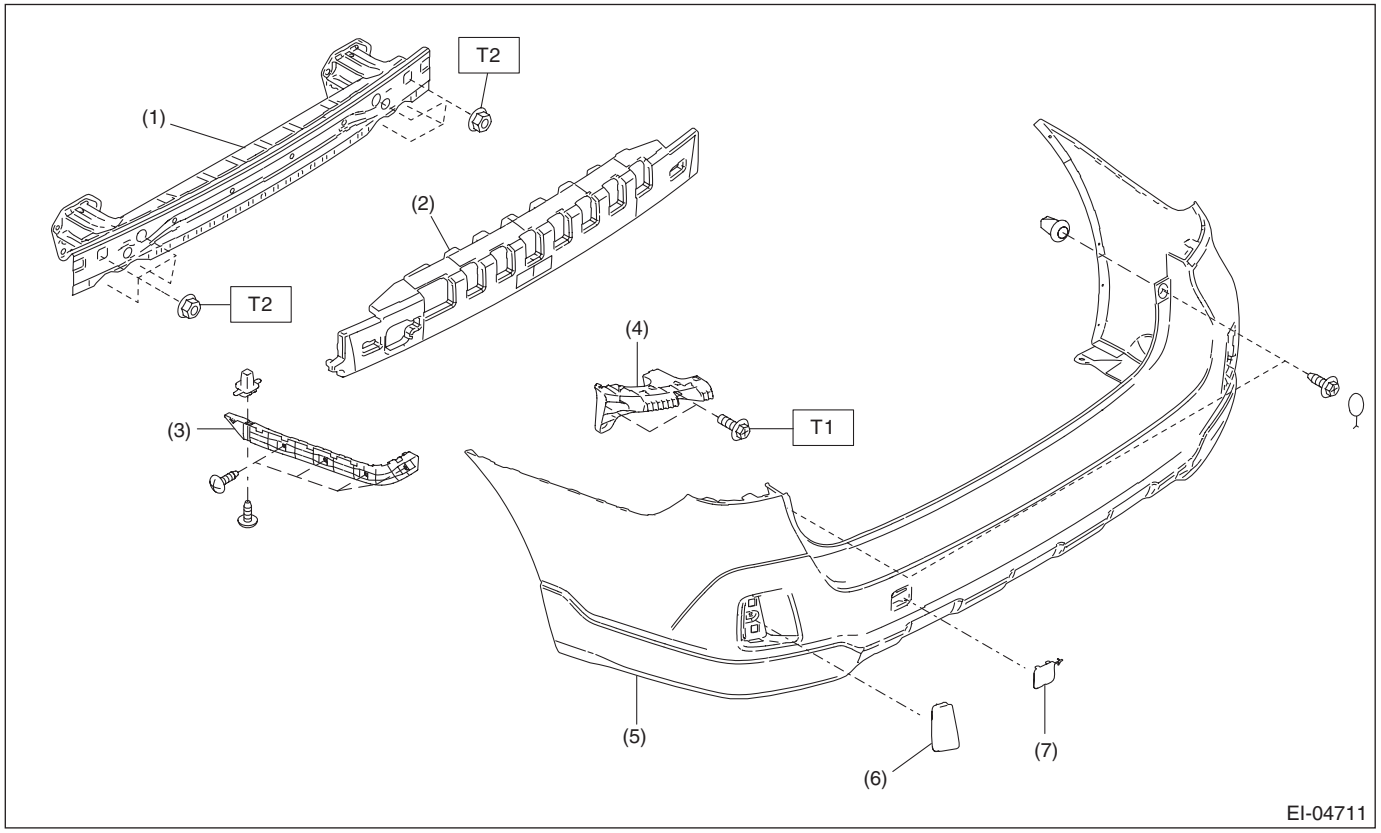
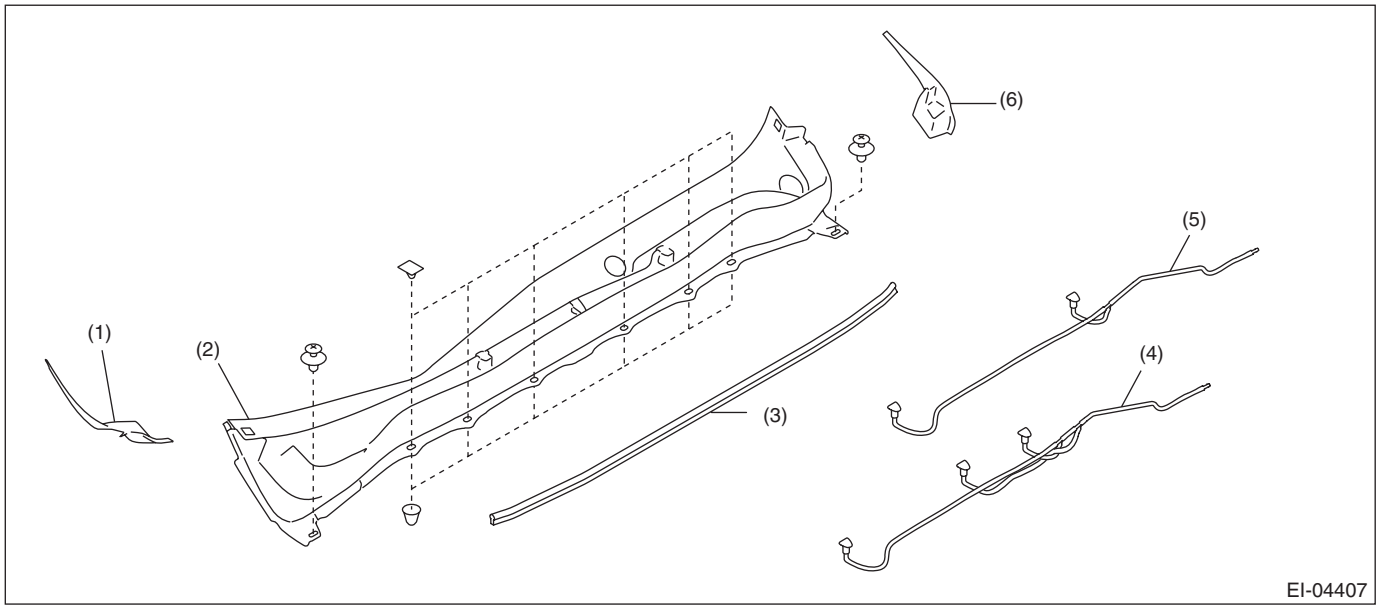
6. REAR BUMPER



- Sedan model

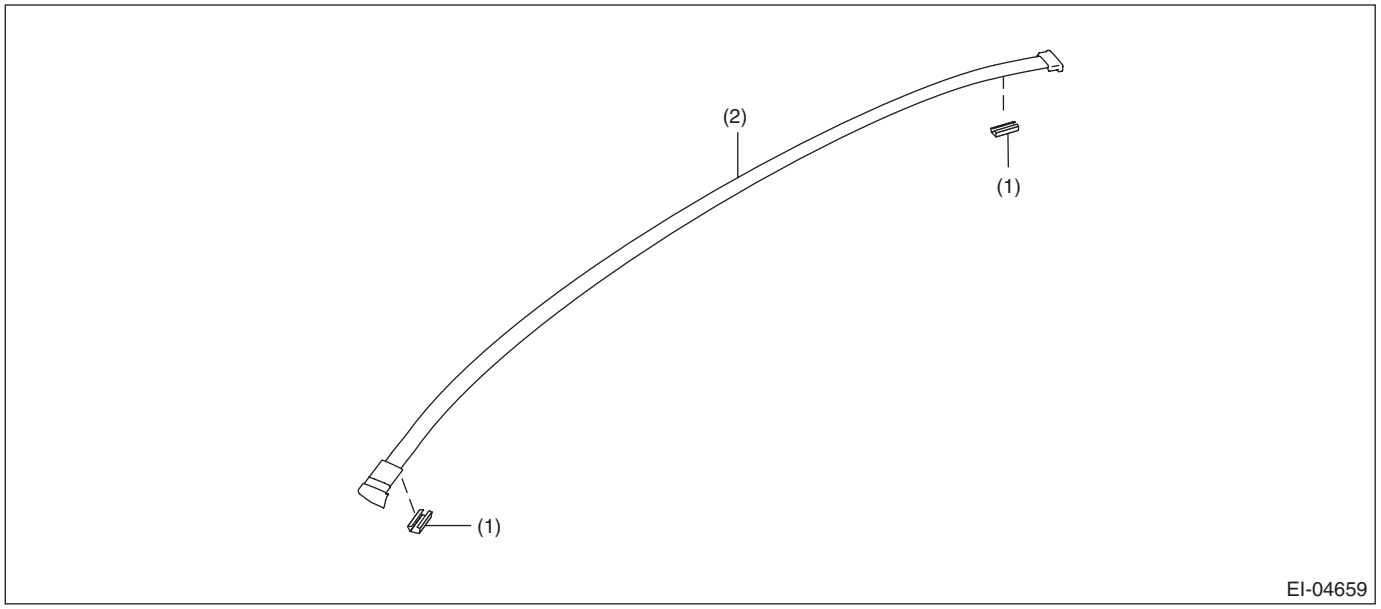
(1) Bumper beam COMPL - rear
(2) Energy absorber foam
(3) Bracket - rear bumper side
(4) Bracket - rear bumper corner
(5) Bumper face - rear
(6) Cover - rear bumper
(7) Cover - bumper (H4 model)

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 53 (5.4, 39.1)



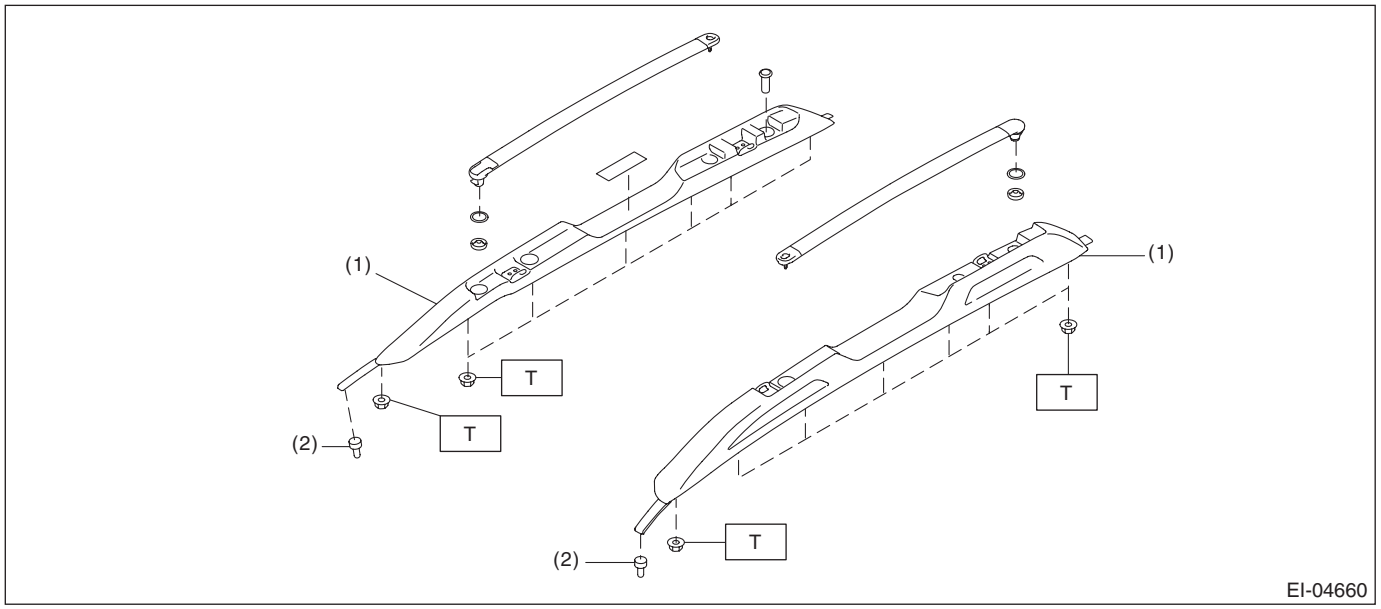
- OUTBACK model

(1) Bumper beam COMPL - rear
(2) Energy absorber foam
(3) Bracket - rear bumper side
(4) Bracket - rear bumper corner
(5) Bumper face - rear
(6) Reflex reflector
(7) Cover - rear bumper



Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 53 (5.4, 39.1)

7. COWL PANEL

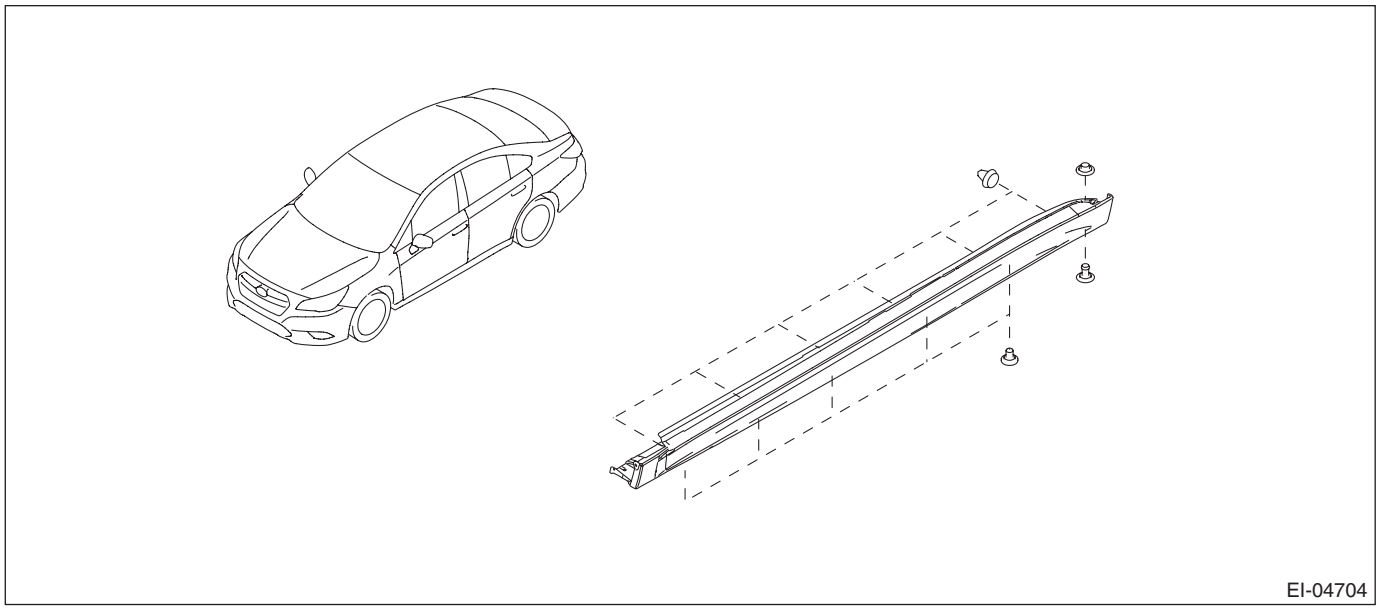


(1) Cowl panel - side RH
(2) Cowl panel ASSY
(3) Seal - cowl panel
(4) Hose ASSY - washer UPR (model with EyeSight)
(5) Hose ASSY - washer UPR
(6) Cowl panel - side LH

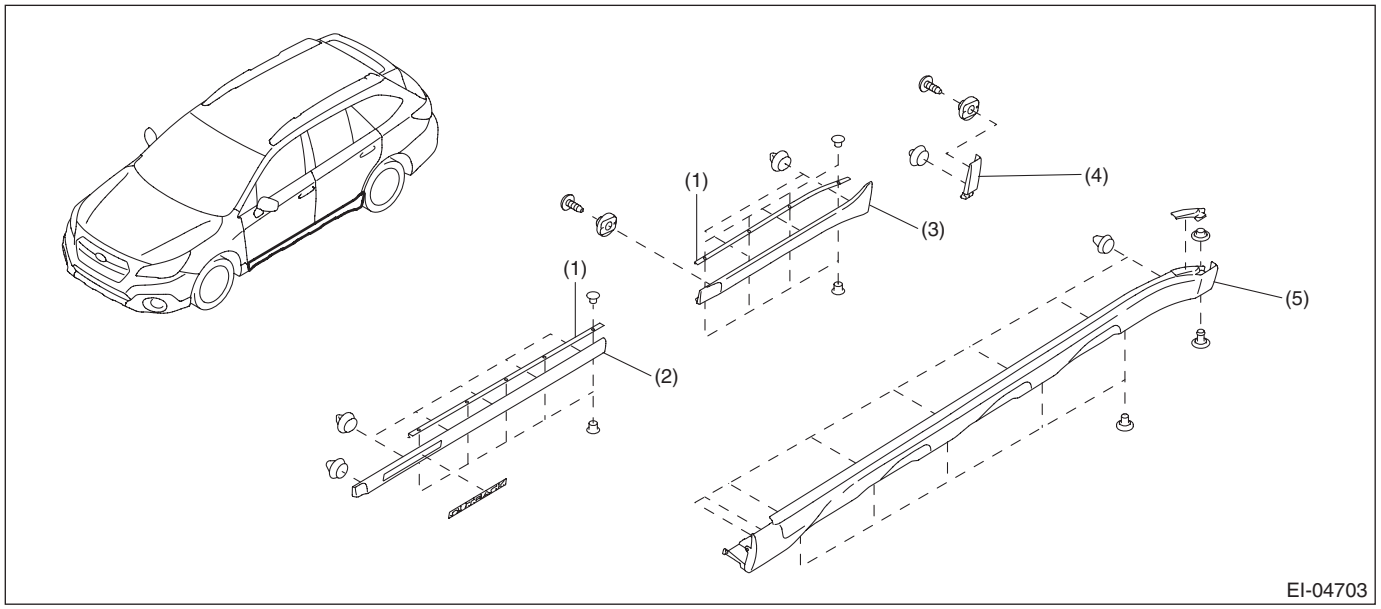
8. ROOF MOLDING

(1) Clip - roof molding
(2) Molding - roof

9. ROOF RAIL



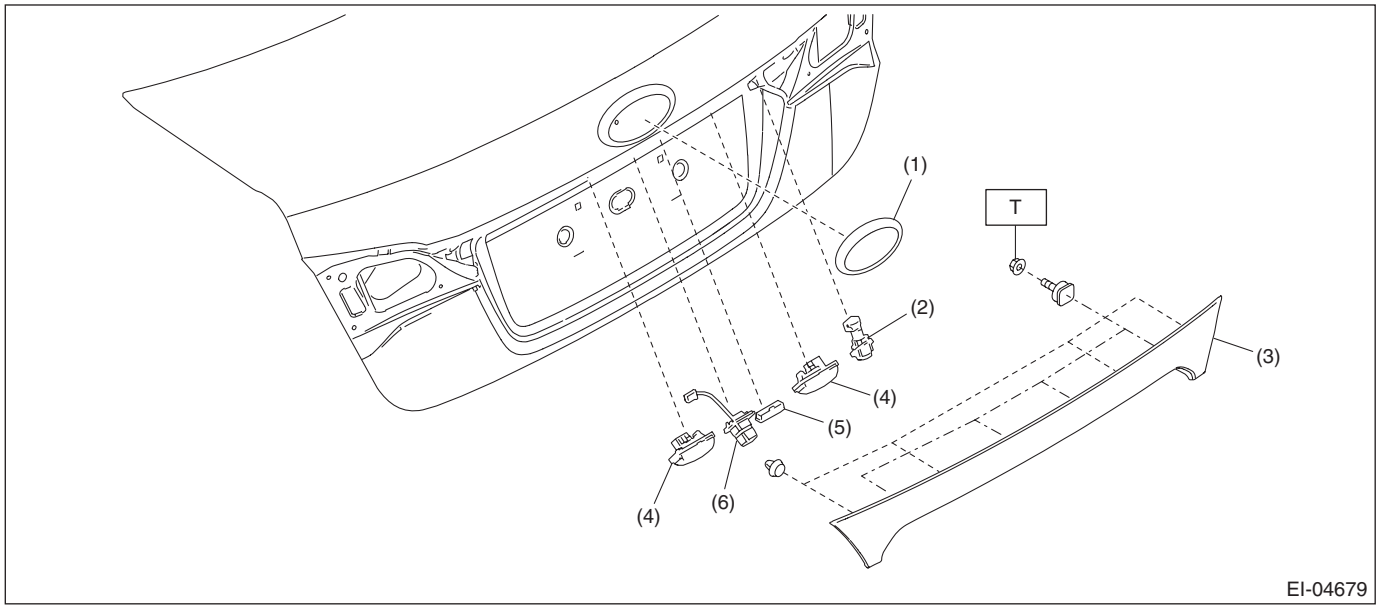
(1) Roof rail ASSY
(2) Rivet



Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

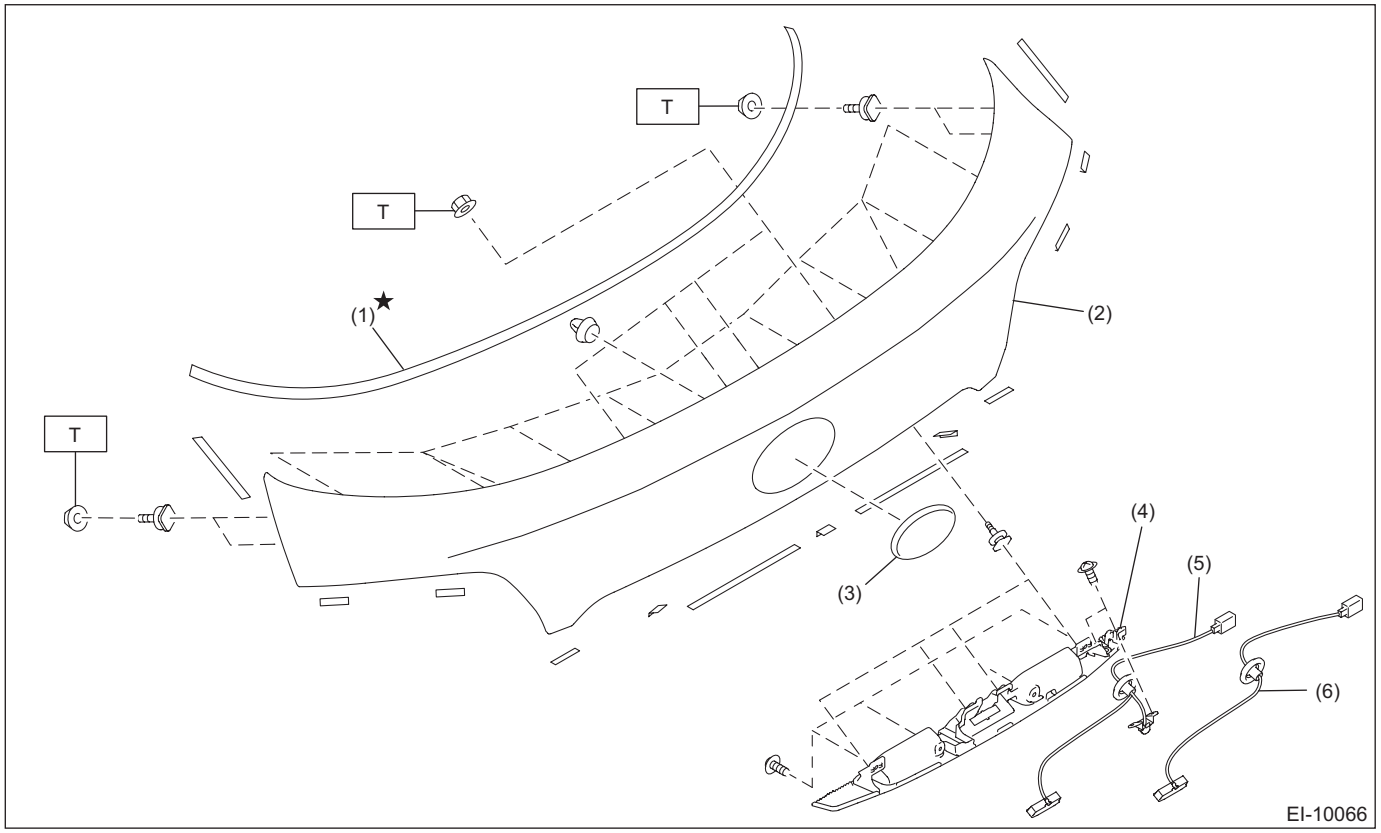
10.SIDE GARNISH

- Sedan model



- OUTBACK model

(1) Double-sided tape
(2) Garnish ASSY front door
(3) Garnish ASSY rear door
(4) Garnish ASSY rear quarter
(5) Side sill garnish ASSY



11.TRUNK LID GARNISH

(1) Ornament
(2) Key cylinder
(3) Garnish ASSY - trunk
(4) License plate light
(5) Trunk opener button
(6) Rearview camera ASSY

Tightening torque: N·m (kgf-m, ft-lb)

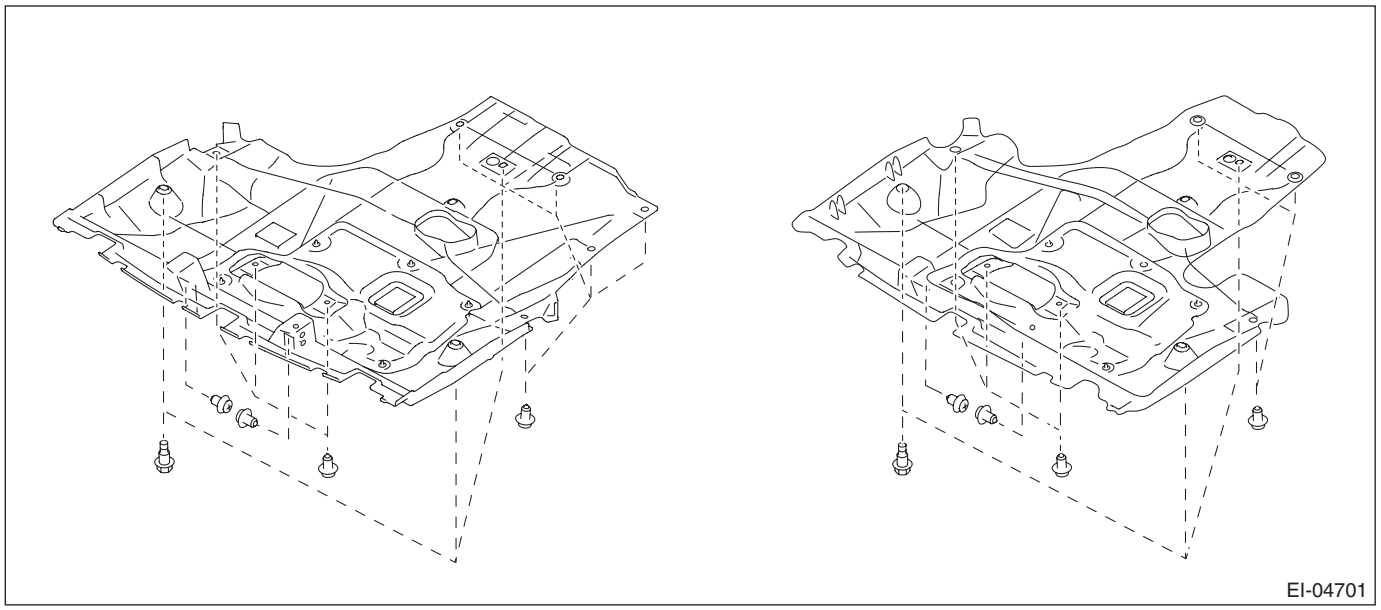
(6) Holder - power rear gate inner switch
(7) Power rear gate inner switch
(8) Cover - rear gate latch
(9) Cap - rear gate LWR
(10) Cover - rear gate grip
(11) Cap ASSY - rear gate LWR RH

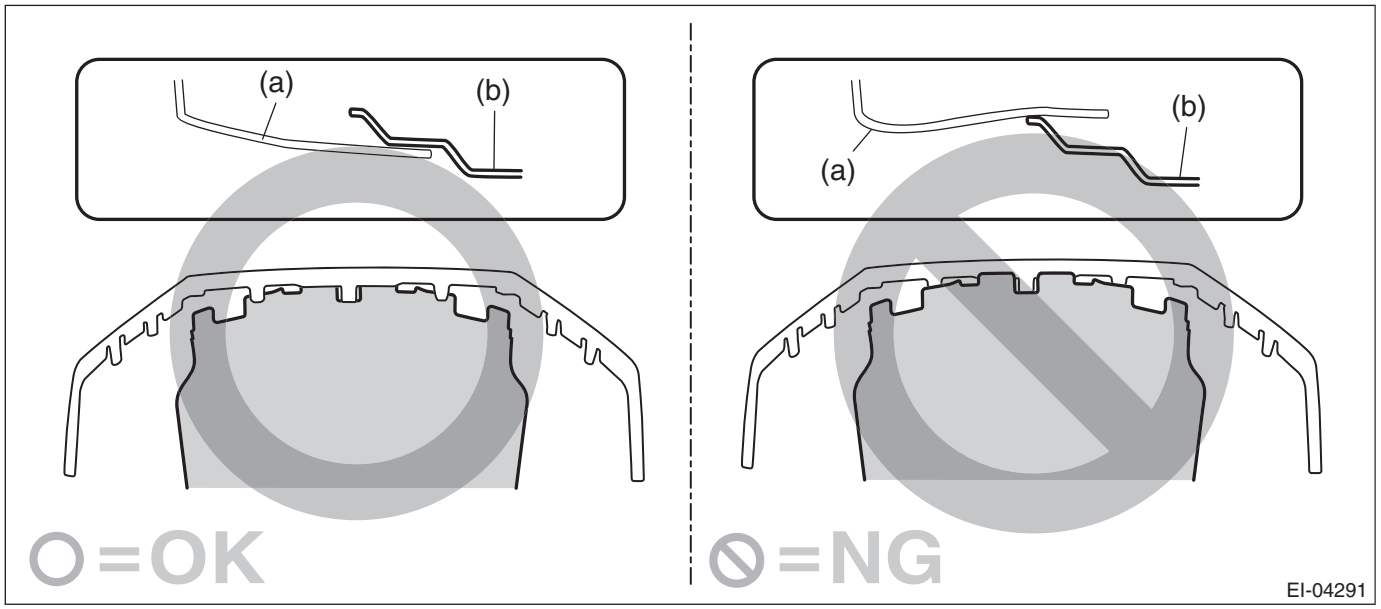
Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)



B: PREPARATION TOOL

TOOL NAME	REMARKS
Clip remover	Used for removing trim. • KTC AP201-10A • KTC AP201-CN • KTC AP201-CF • KTC AP201-HF • KTC AP201-HN • KTC AP201-HS • KTC AP203-10A • KTC AP20L-10B Or equivalent.
Clip clamp pliers	Used for removal of various clips and clamps. • KTC CCP-190 • KTC AP202A • KTC AP202B Or equivalent.

2. Front Under Cover

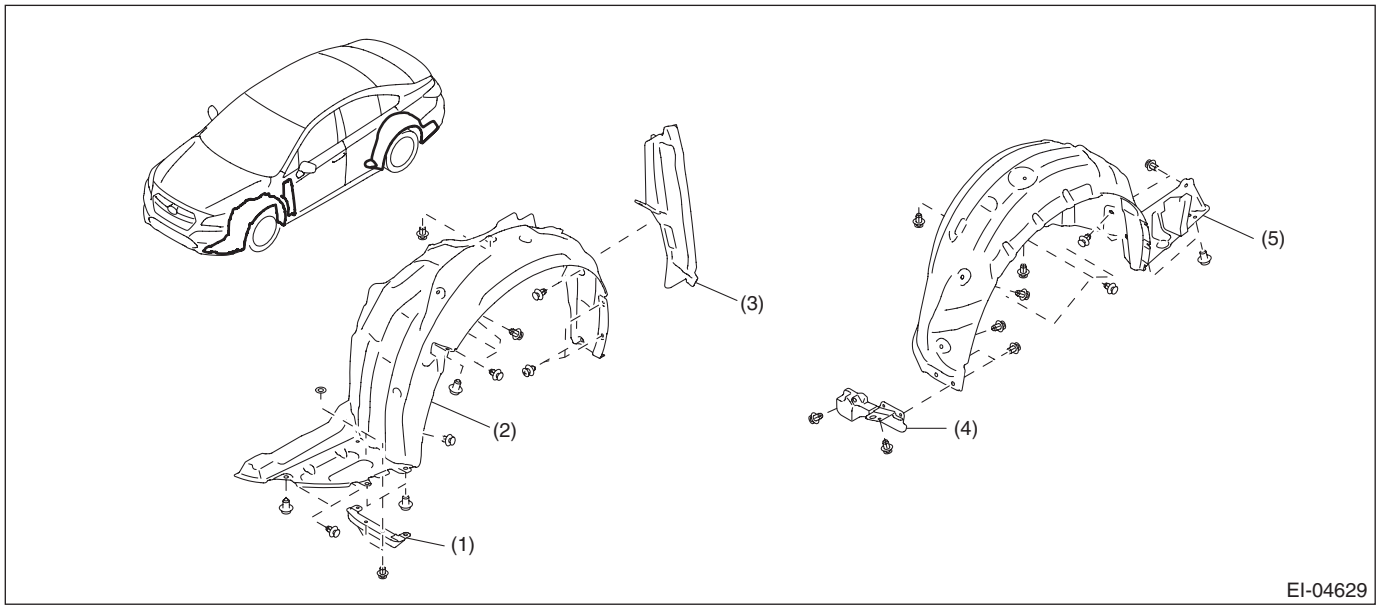


A: REMOVAL

1) Lift up the vehicle.
2) Remove the bolts and clips, and remove the under cover - front.

B: INSTALLATION

CAUTION:
Install the under cover so that the under cover front end (b) comes inside of the bumper face - front (a).



1) Install the under cover - front.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EI-2, FRONT UNDER COVER, COMPONENT, General Description.>
2) Lower the vehicle.

3. Mud Guard

A: REMOVAL

1) Lift up the vehicle.
2) Remove the wheels.
3) Remove the clips, then remove the mud guard.

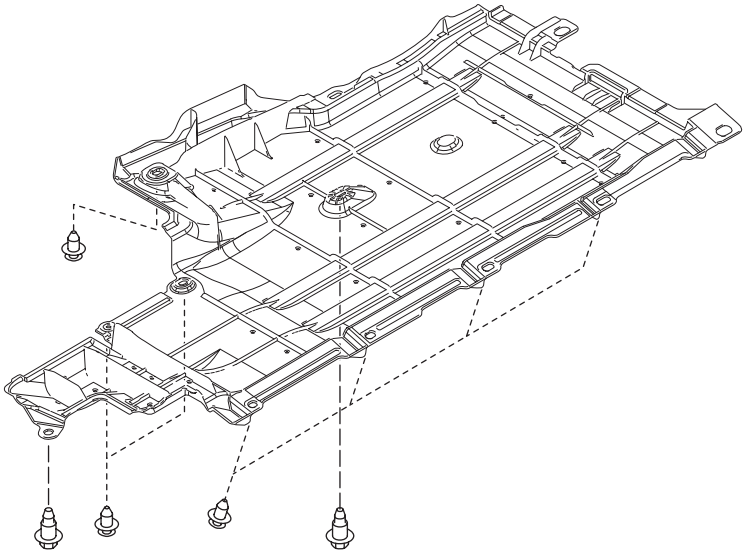
(1) Air flap - front
(2) Mud guard - front
(3) Cover - fender LWR
(4) Air flap - rear
(5) Mud guard - rear

B: INSTALLATION

1) Install the mud guard.
2) Install the wheel.

Tightening torque:
Wheel nut: 120 N·m (12.2 kgf-m, 88.5 ft-lb)
3) Lower the vehicle.

4. Floor Under Protector



A: REMOVAL

1) Lift up the vehicle.

NOTE:
A plate type lift cannot be used.

2) Remove the fuel tank protector.
- H4 model: <Ref. to FU(H4DO)-94, REMOVAL, Fuel Tank Protector.>
- H6 model: <Ref. to FU(H6DO)-99, REMOVAL, Fuel Tank Protector.>

3) Remove the bolts and clips, and remove the floor under protector.

EI-04705

B: INSTALLATION

1) Install the floor under protector.

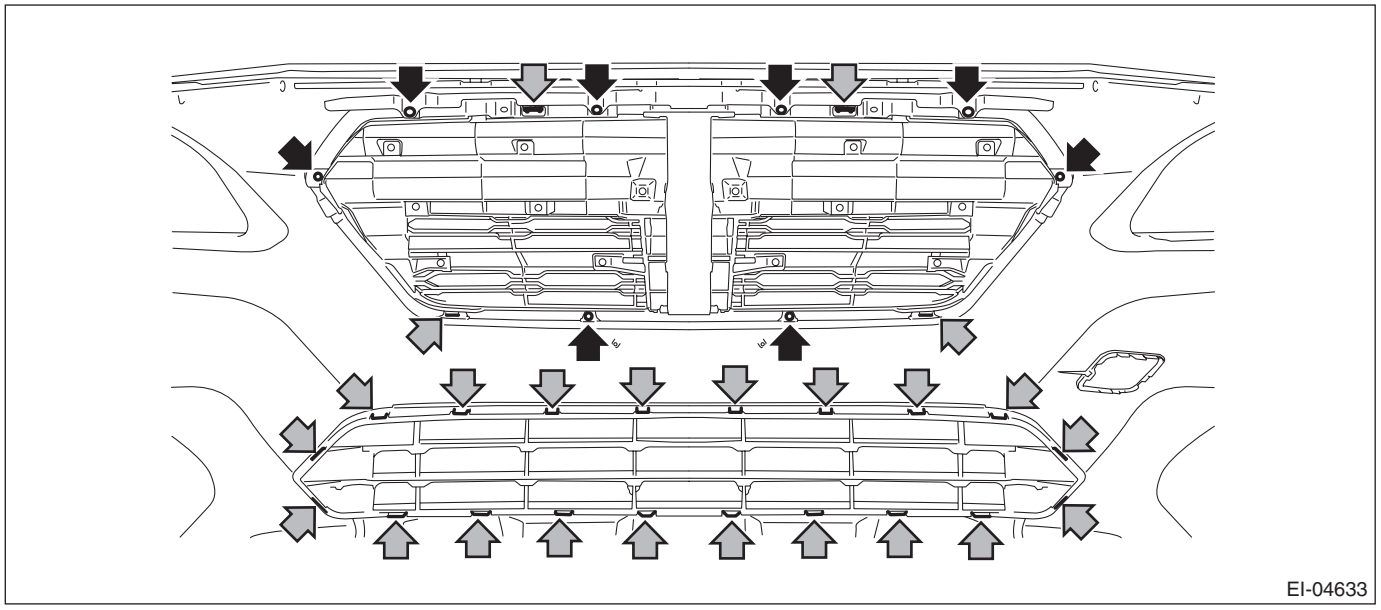
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the fuel tank protector.
- H4 model: <Ref. to FU(H4DO)-94, INSTALLATION, Fuel Tank Protector.>
- H6 model: <Ref. to FU(H6DO)-99, INSTALLATION, Fuel Tank Protector.>

3) Lower the vehicle.

5. Fuel Tank Protector

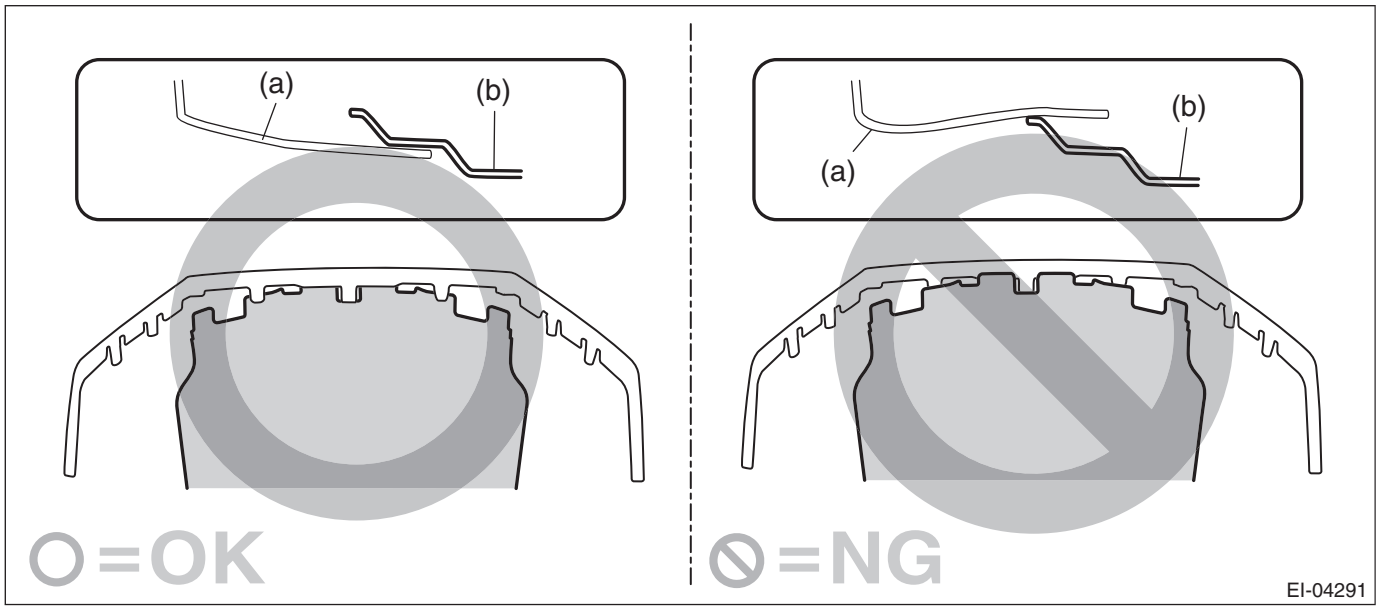
A: NOTE



Refer to “FUEL INJECTION” section for removal and installation procedure of the fuel tank protector.

- H4 model: <Ref. to FU(H4DO)-94, REMOVAL, Fuel Tank Protector.>
- H6 model: <Ref. to FU(H6DO)-99, REMOVAL, Fuel Tank Protector.>

6. Front Grille

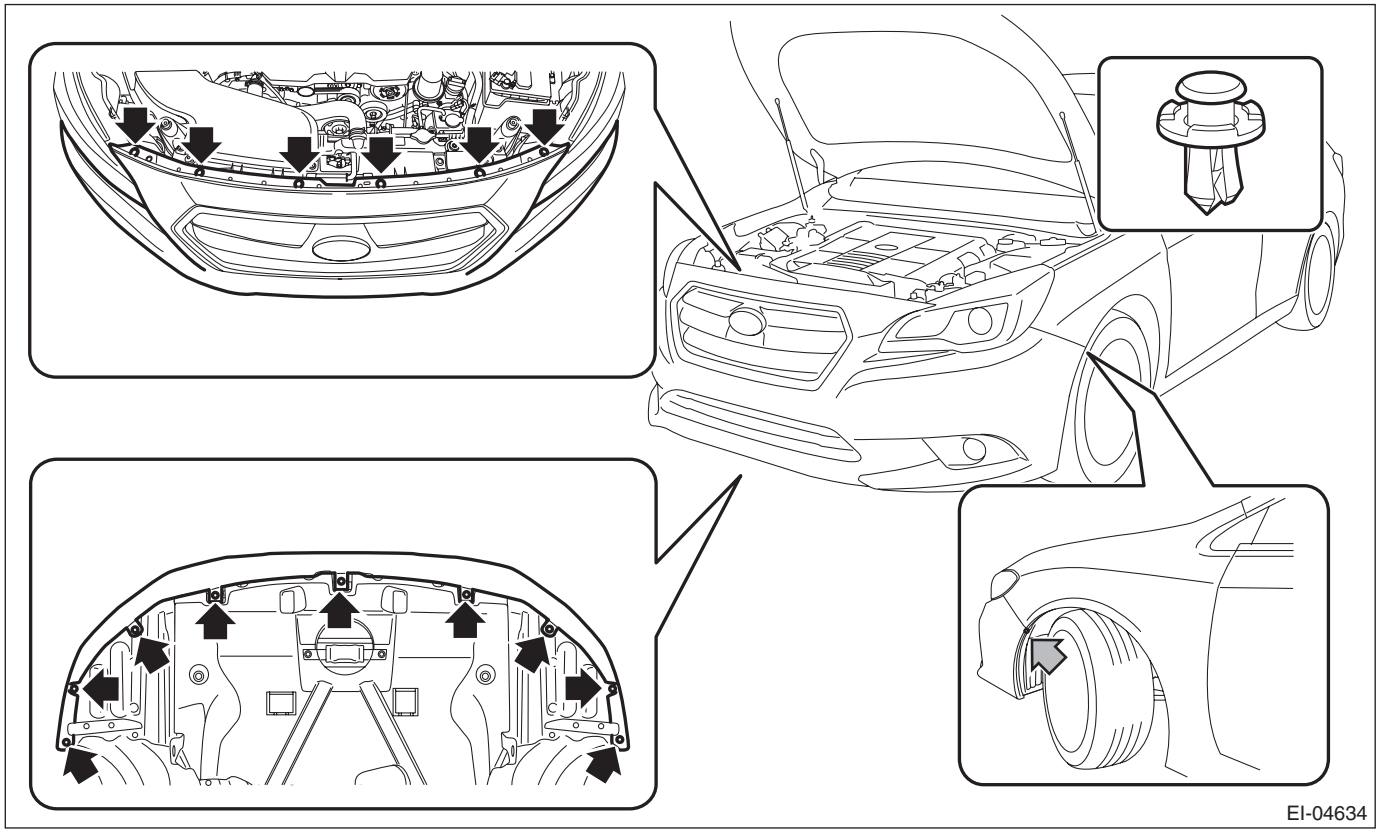


A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the bumper face - front. <Ref. to EI-34, REMOVAL, Front Bumper.>
3) Remove the front grille assembly.
   (1) Remove the screws on the back side.
   (2) Release the claws, and remove the front grille assembly and the cover intake - front.

B: INSTALLATION

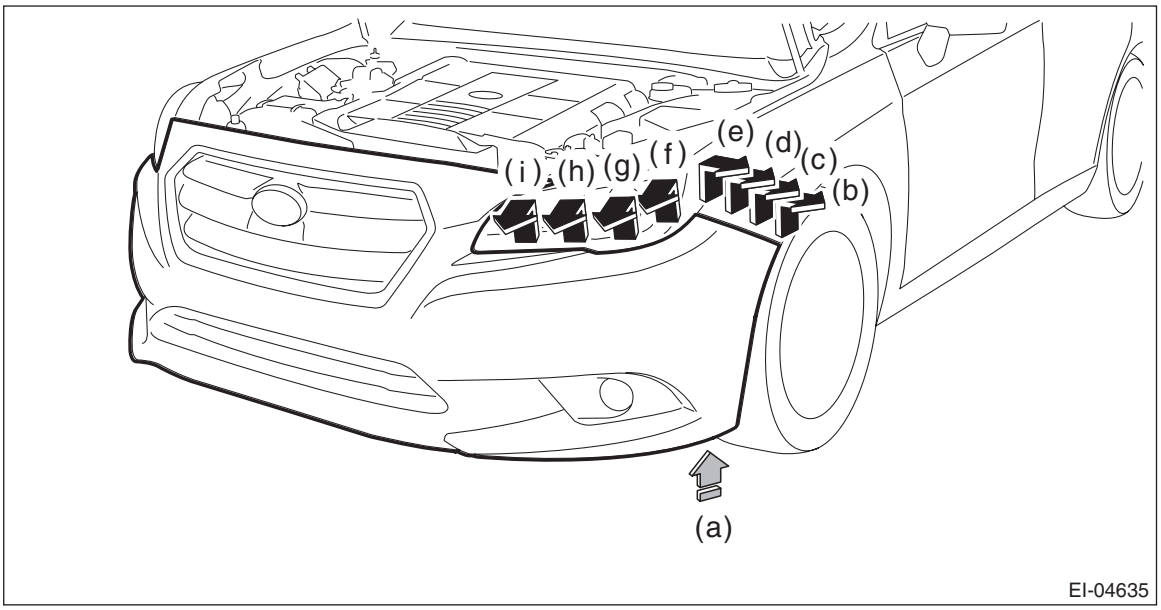
CAUTION:
• Install the bumper face - front so that the front end of the under cover (b) comes inside the bumper face - front (a).



• Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.
1) Install the front grille assembly.
2) Install the bumper face - front. <Ref. to EI-38, INSTALLATION, Front Bumper.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Adjust the fog light beam. (Model with fog light) <Ref. to LI-41, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

7. Front Bumper

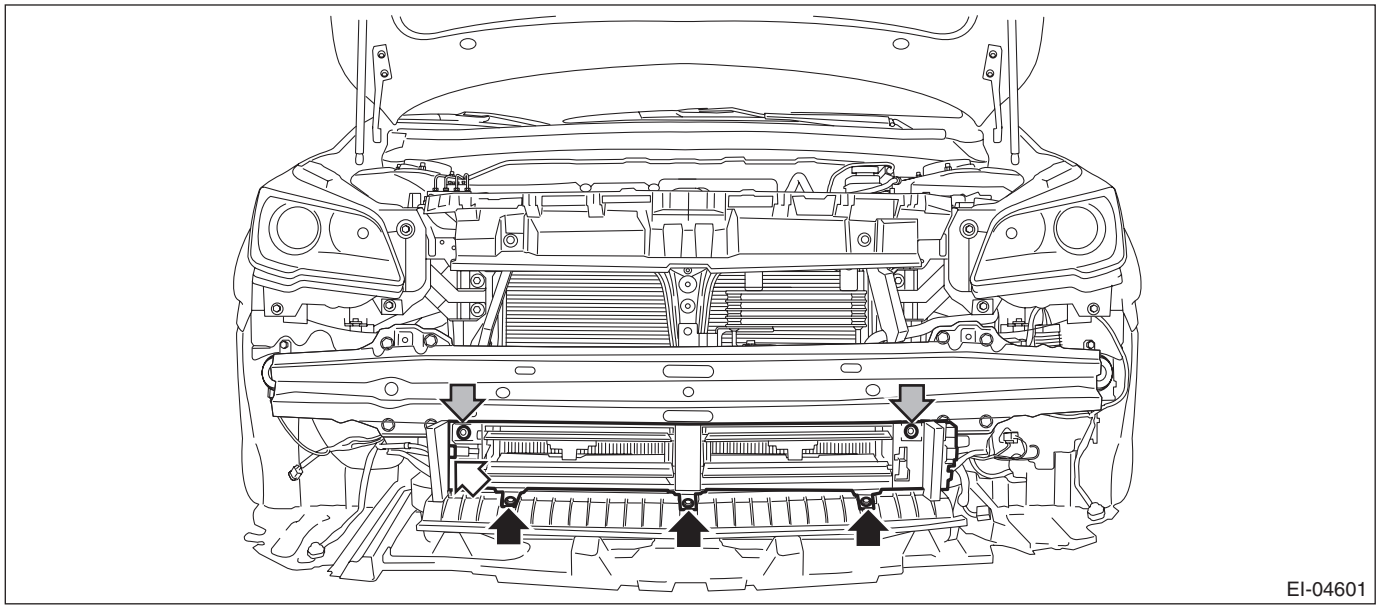
A: REMOVAL



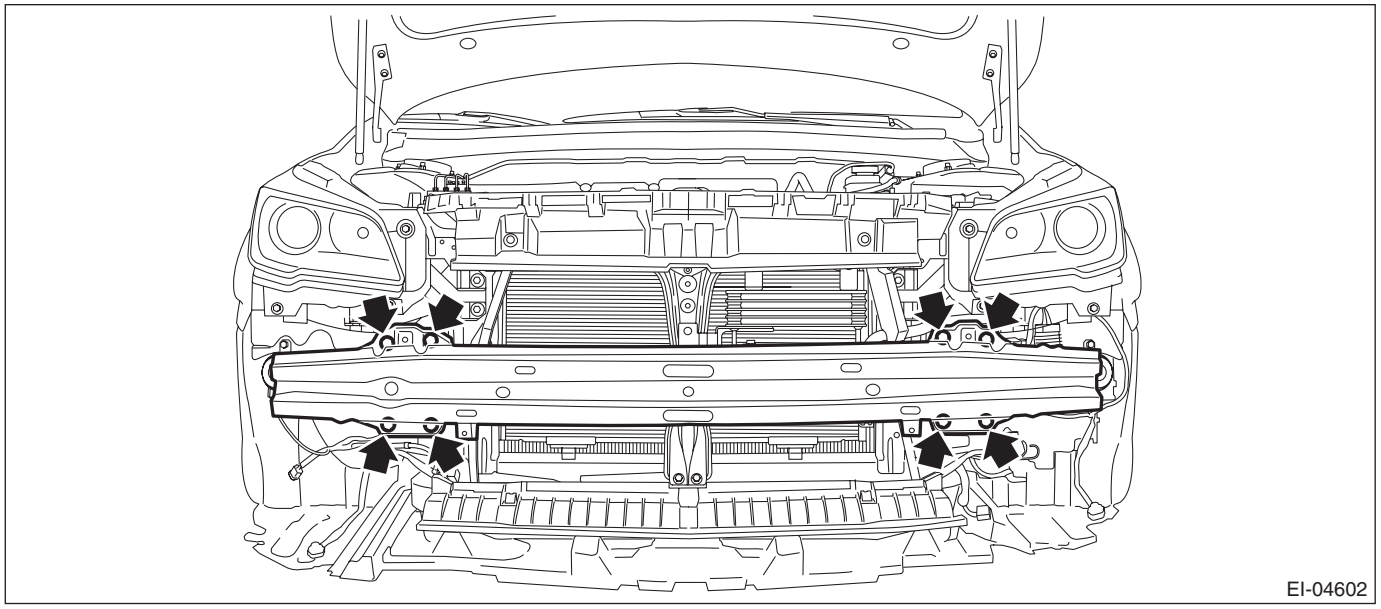
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the bumper face - front.
   (1) Remove the clips at the upper side of the bumper face - front.
   (2) Remove the clips from the fender.
   (3) Remove the clips at the lower side of the bumper face - front.

   (4) Disconnect the fog light assembly connector.

(5) While pushing up the lower side (a) of the bumper face - front, release the engagement in the order from (b) to (i).

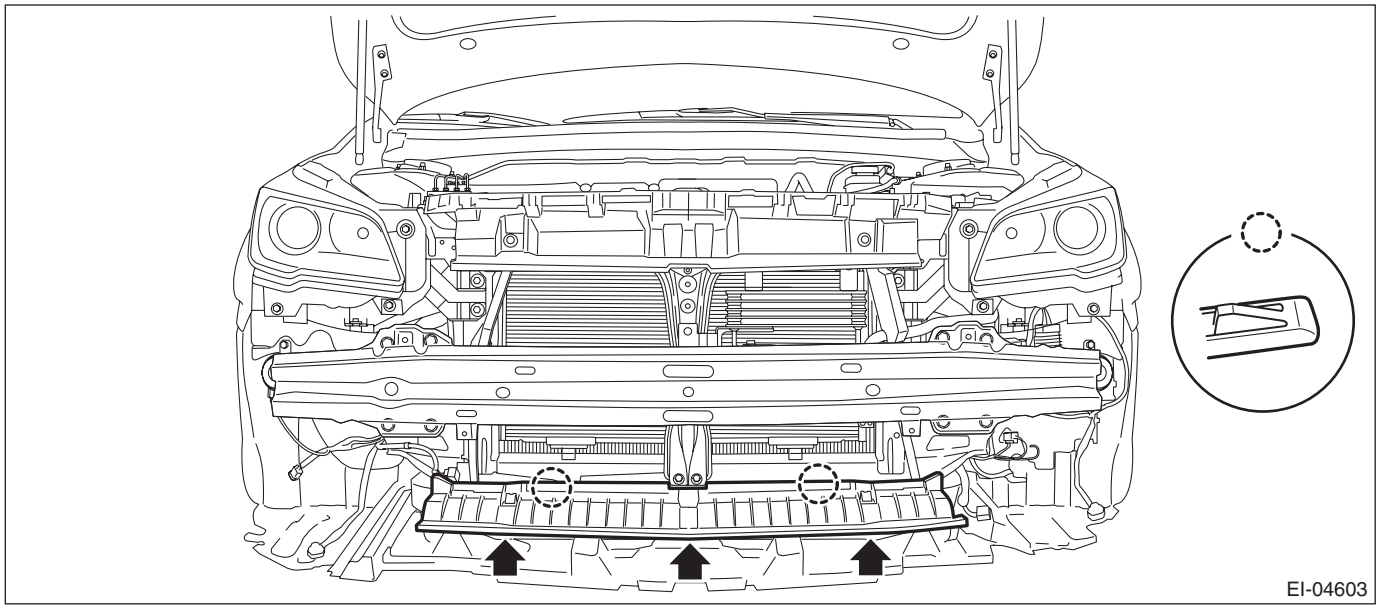


CAUTION:
Do not pull forcibly. It may damage the flange section on the bumper face - front side when it comes off from the claws of the bracket - front bumper.

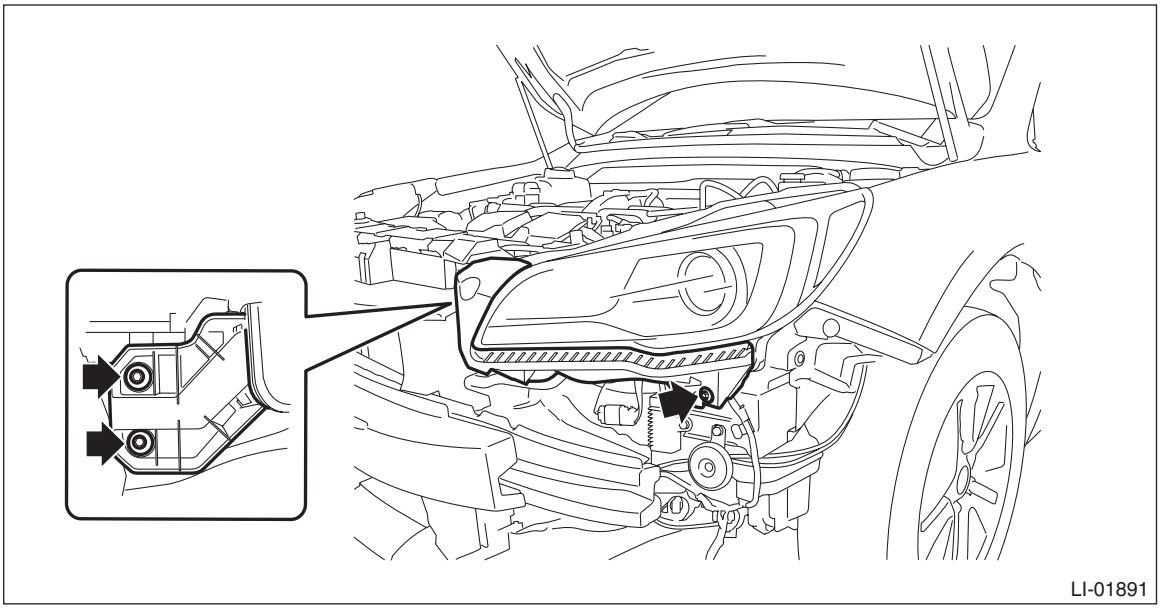


NOTE:
Detach the opposite side in the same manner.
3) Remove the energy absorber foam - front.

4) Remove the bolts and clips, disconnect the connector and remove the active grille shutter. (H4 model)

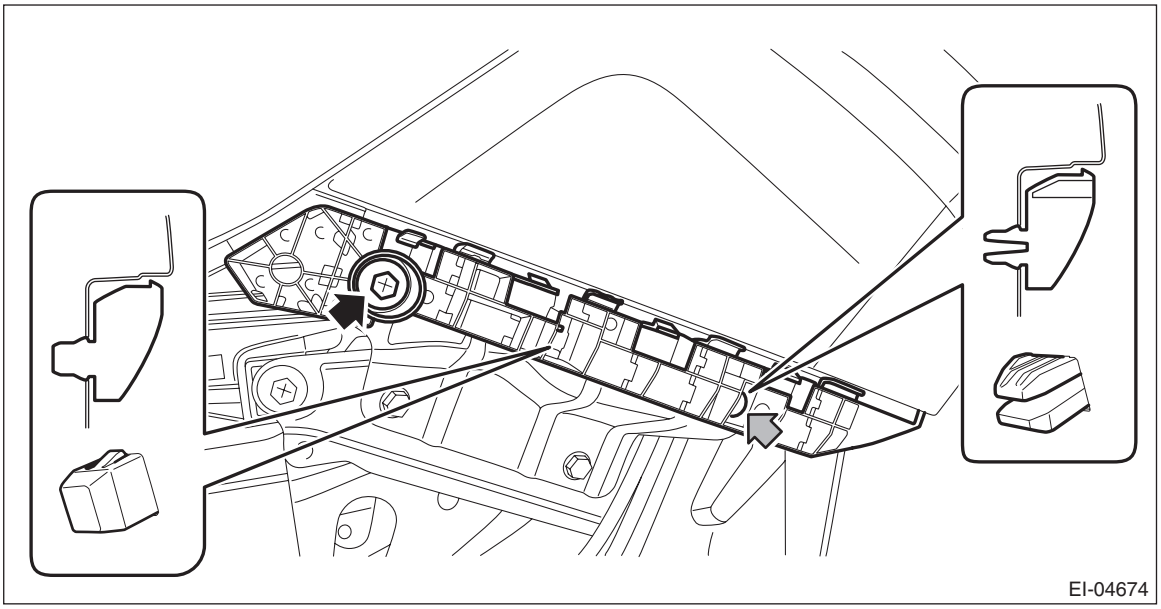


5) Remove the bolts, and remove the bumper beam COMPL - front.



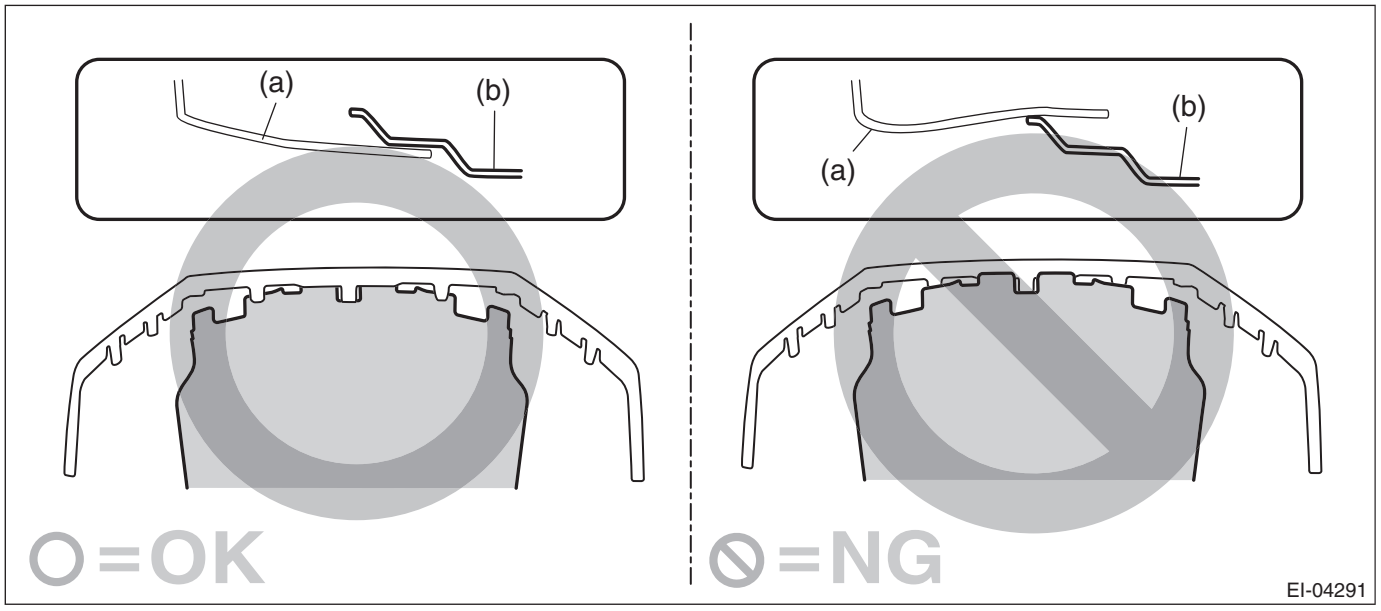
NOTE:
After the bolts are removed, raise the bumper beam COMPL - front a little to remove it from vehicle body.

6) Remove the under cover - front. <Ref. to EI-28, REMOVAL, Front Under Cover.>



7) Remove the bolts, and pull the bracket - front center LWR to remove.

8) Remove the bolts and clips, and remove the bracket - front bumper corner.



9) Remove the bracket - front bumper side.
(1) Remove the bolts and screws.
(2) Remove the claws from behind the fender COMPL - front, and remove the bracket - front bumper side.

10) Remove the fog light assembly - front. <Ref. to LI-39, REMOVAL, Front Fog Light Assembly.>

B: INSTALLATION

CAUTION:
• Install the bumper face - front so that the front end of the under cover (b) comes inside the bumper face - front (a).

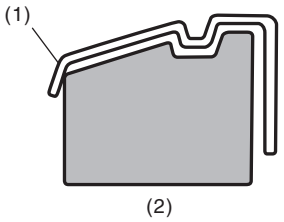
• Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.

1) Install the fog light assembly - front.
2) Install the bracket - front bumper side.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Install the bracket - front bumper corner.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
4) Install the bracket - front center LWR.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
5) Install the under cover - front. <Ref. to EI-28, REMOVAL, Front Under Cover.>
6) Install the bumper beam COMPL - front.



Tightening torque:
32 N·m (3.3 kgf-m, 23.6 ft-lb)
7) Install the active grille shutter. (H4 model)

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
8) Install the energy absorber foam - front.
9) Install the bumper face - front.

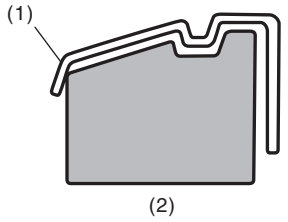
NOTE:
Secure the flange section of the bumper face - front to the bracket - front bumper side.
10) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
11) Adjust the fog light beam. <Ref. to LI-41, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

C: REPAIR

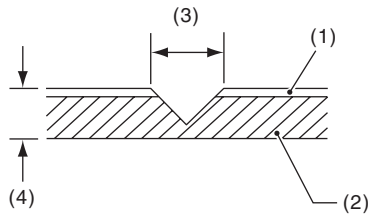
1. COATING METHOD FOR PP BUMPER

Process No.	Process name	Job contents	
1	Bumper installation	Place the bumper on a paint worktable as required. Use the paint worktable conforming to inner shape of bumper if possible.	 EI-00234 (1) Bumper (2) Set bumper section
2	Masking	Mask specified part (black base) with masking tape. Use masking tape for PP.	
3	Degreasing/ cleaning	Clean all parts to be painted with appropriate cleaning solvent, normal alcohol, etc. to remove dirt, oil, grease, etc.	
4	Primer paint	Apply primer to all parts to be painted, using spray gun. Use primer (clear).	
5	Drying	Dry at normal temperature. [10 — 15 min. at 20°C (68°F)] In half-dried condition, PP primer paint is dissolved by solvent, e.g. thinner, etc. Therefore, if dust or dirt must be removed, use ordinary alcohol etc.	
6	Top coat paint (I)	Non-colored	Metallic paint
		Use section (block) paint for top coat. For paint/hardener mixture, observe the specifications recommended by the manufacturers. • Viscosity: 10 — 13 sec./20°C (68°F) • Film thickness: 35 — 45 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm^2, 36 — 50 psi)	Use section (block) paint for top coat. For paint/hardener mixture, observe the specifications recommended by the manufacturers. • Viscosity: 10 — 13 sec./20°C (68°F) • Film thickness: 15 — 20 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm^2, 36 — 50 psi)
7	Drying	Not required.	Dry at normal temperature [at least 10 min. at 20°C (68°F)]. In half-dried condition, avoid dust, dirt.
8	Top coat paint (II)	Not required.	Apply a clear coat to parts with top coat paint (I), three times at 5 — 7 minute intervals. For paint/hardener mixture, observe the specifications recommended by the manufacturers. • Viscosity: 14 — 16 sec./20°C (68°F) • Film thickness: 25 — 30 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm^2, 36 — 50 psi)
9	Drying	60°C (140°F), 60 min. or 80°C (176°F), 30 min. If the temperature is higher than 80°C (176°F), PP may be deformed. Keep maximum temperature at 80°C (176°F) or less.	
10	Inspection	Check paint.	
11	Removal of masking	Remove the masking tape applied in procedure 2.	

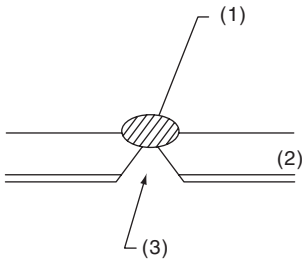
2. REPAIR INSTRUCTIONS FOR COLORED PP BUMPER



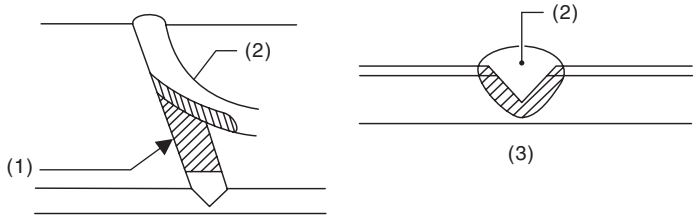
NOTE:
All PP bumpers are provided with a grained surface, and if the surface is damaged, it cannot normally be restored to its former condition. Damages limited to the shallow scratches that cause only a change in the luster of the base material or coating, can be almost fully restored. Before repairing a damaged area, explain this point to the customer and obtain an understanding about the matter.
Repair methods are outlined below, based on a classification of the extent of damage.
1) Minor damage causing only a change in the luster of the bumper due to a light touch
Almost restorable.



Process No.	Process name	Job contents	
1	Cleaning	Clean the area to be repaired using water.	
2	Sanding	Grind the repairing area with #500 sand paper in a “feathering” motion.	
3	Finish	Resin section	Coated section
		Repeatedly apply wax to the affected area using soft cloth (such as flannel). Recommended wax: Tire wax or equivalent	Perform either the same procedures as for the resin section or process No. 18 and subsequent in section 3), depending on the degree and nature of damage.
		Polish the waxed area with clean cloth after 5 — 10 minutes.	



2) Deep damage caused by scratching with fences etc.
A dent cannot be repaired but a whitened or swelled part can be removed.



Process No.	Process name	Job contents	
1	Cleaning	Clean the damaged area with water.	
2	Removal of damaged area	Cut off protruding area, if any, due to collision, using a putty knife.	
3	Sanding	Grind the affected area with #100 — #500 sand paper.	
4	Finish	Resin section	Coated section
		Same as process No. 3 in section “1)”.	Perform process No. 12 and subsequent operations in section “3)”.

3) Deep damage such as a break or hole that requires filling
Much of the peripheral grained surface must be sacrificed for repair. The degree of restoration is not really worth the expense. (The surface, however, will become almost flush with adjacent areas.)

Process No.	Process name	Job contents	
1	Bumper removal	Remove the bumper as required.	
2	Removal of parts	Remove the parts built into bumper as required.	
3	Bumper placement	Place the bumper on a paint worktable as required. It is recommended to use the paint worktable conforming to internal shape of bumper.	 EI-00234 (1) Bumper (2) Set bumper section
4	Surface preparation	Remove dust, oil, etc. from areas to be repaired and surrounding areas, using an appropriate solvent (appropriate cleaning solvent or alcohol, etc.).	

<table>
<tr><th>Process No.</th><th>Process name</th><th colspan="2">Job contents</th></tr>
<tr><td>5</td><td>Cutting</td><td>If the damage is a crack or a hole, cut a guide slit of 20 to 30 mm (0.79 to 1.18 in) in length along the crack or hole up to the bumper base surface. Next, use a knife or grinder to carve a V-shaped groove in the area for repair.</td><td>

EI-00235

For paint/hardener mixture, observe the specifications recommended by the manufacturers.
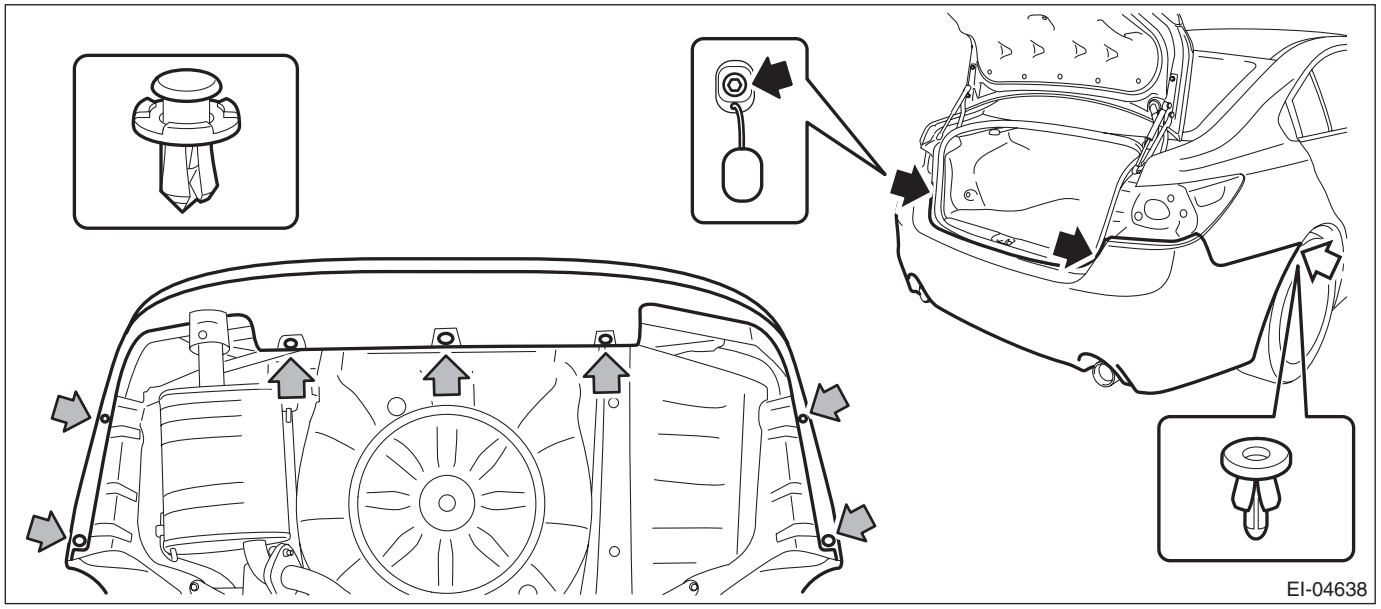
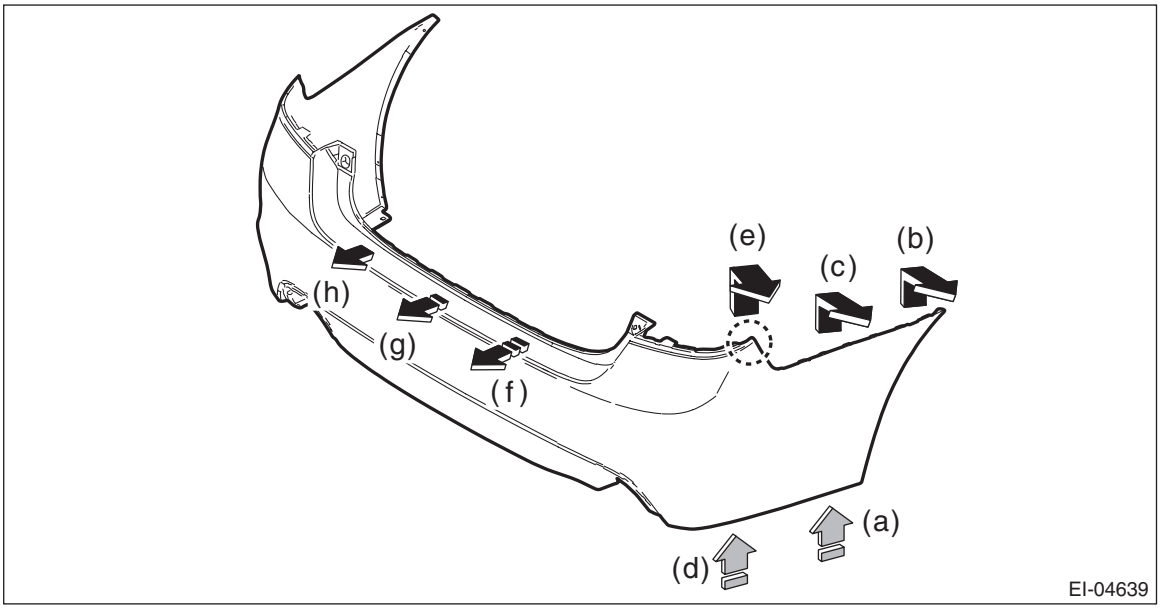
• Viscosity: 10 — 13 sec./20°C (68°F)
• Coating film thickness: 20 — 30 µ
• Spraying pressure: 245 — 343 kPa
(2.5 — 3.5 kgf/cm^2, 36 — 50 psi)</td></tr>
</table>



Process No.	Process name	Job contents
22	Drying	Allow the coated surface to dry for two hours at 20°C (68°F) or 30 minutes at 60°C (140°F). NOTE: Do not allow the temperature to exceed 80°C (176°F) since this will deform the PP substrate.
23	Inspection	Carefully check the condition of the repaired area.
24	Removal of masking	Remove the masking tape applied in process No. 11 and 13.
25	Parts installation	Install parts on the bumper in reverse order of removal.
26	Bumper installation	Install the bumper.

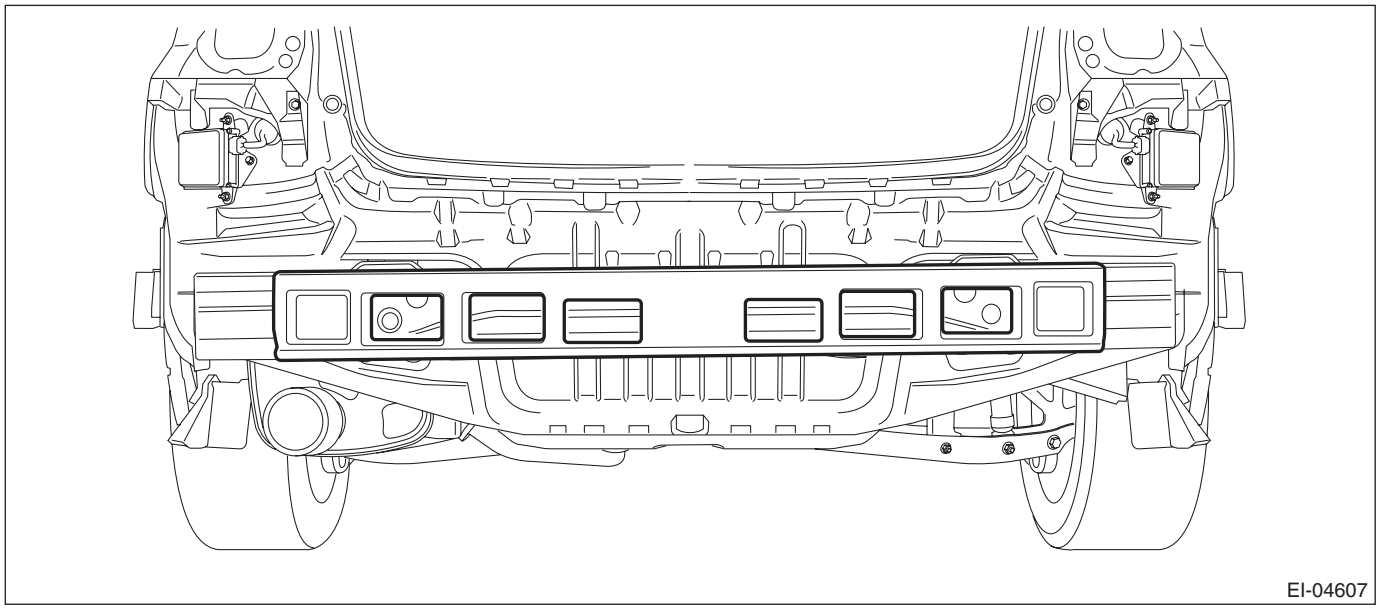
8. Rear Bumper

A: REMOVAL

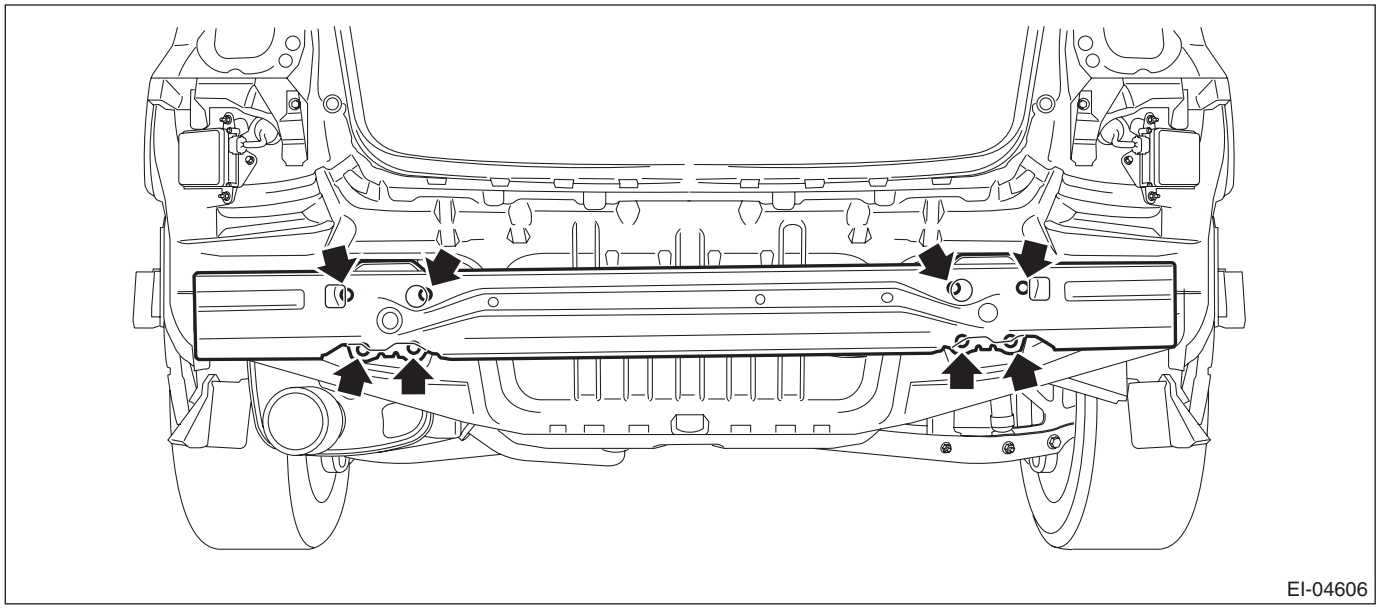


1. SEDAN MODEL

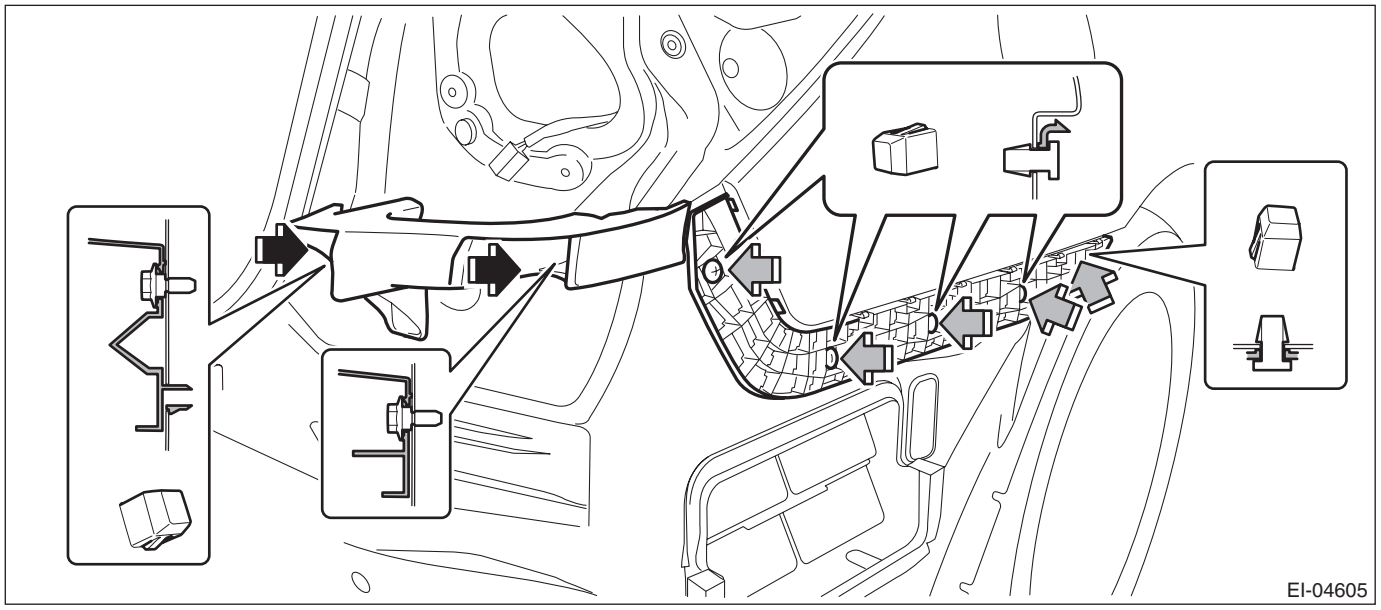
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trunk room mat.
3) Remove the light assembly - rear combination. <Ref. to LI-46, REMOVAL, Rear Combination Light Assembly.>
4) Remove the bumper face - rear.
   (1) Remove the clips inside the wheel housing.
   (2) Remove the screws from trunk opening.
   (3) Remove the clips at the lower side of the bumper face - rear.



(4) Detach (b) and (c) while pulling up (a) of the bumper face - rear.
(5) Detach (e) while pulling up (d) of the bumper face - rear.
(6) Detach the opposite side in the same manner.
(7) Detach in order from (f) to (h) while pulling up the center part of the bumper face - rear.

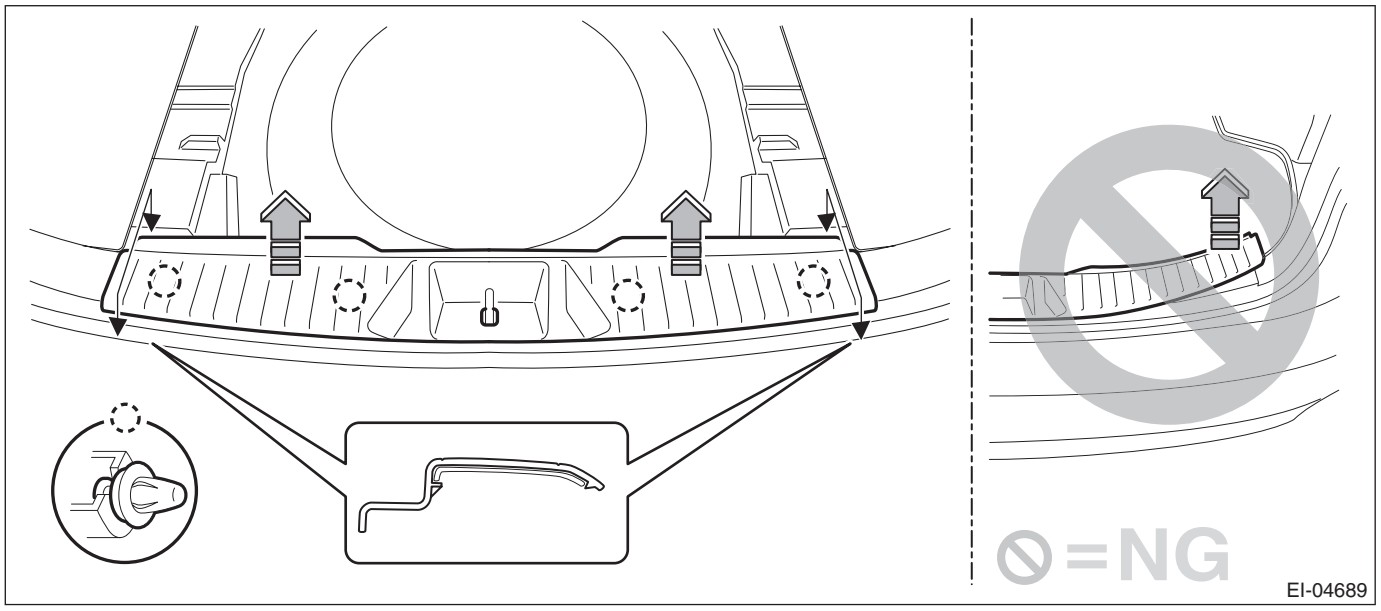


CAUTION:
Do not pull forcibly. It may damage the flange section on the bumper face - rear side when it comes off from the claws of the bracket - rear bumper.

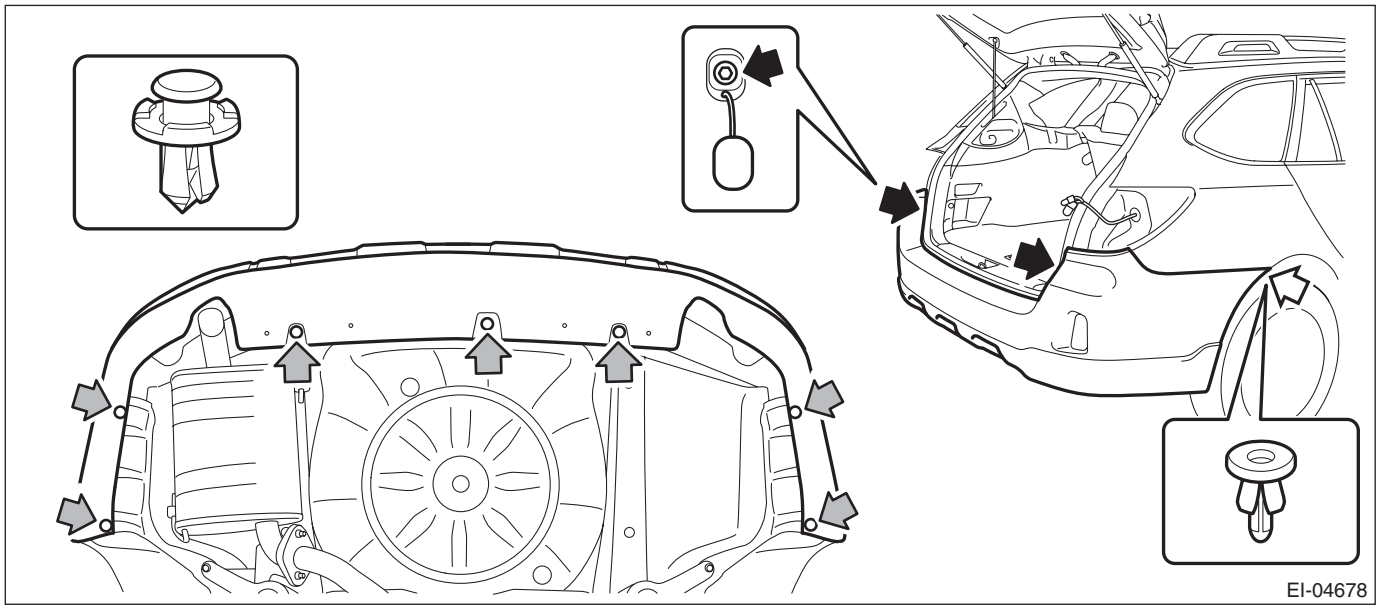


5) Remove the energy absorber foam - rear.

6) Remove the nuts, and remove the bumper beam COMPL - rear.



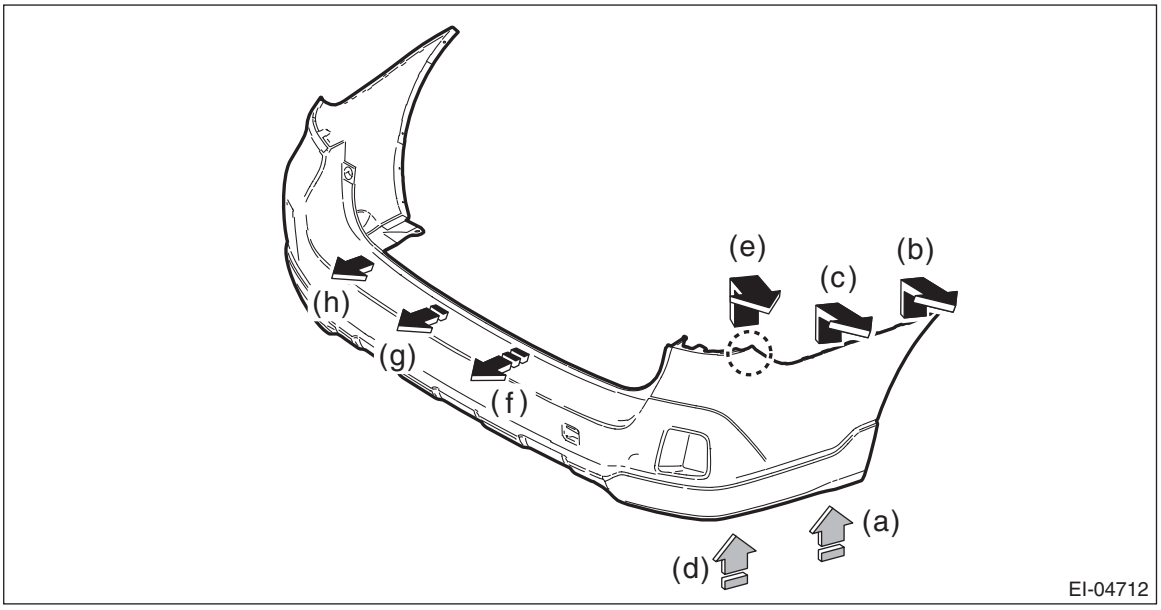
7) Remove bumper brackets.
   (1) Remove the bolts and screws.
   (2) Turn over the trim panel - trunk side, and detach the claw of the clip from the back side.



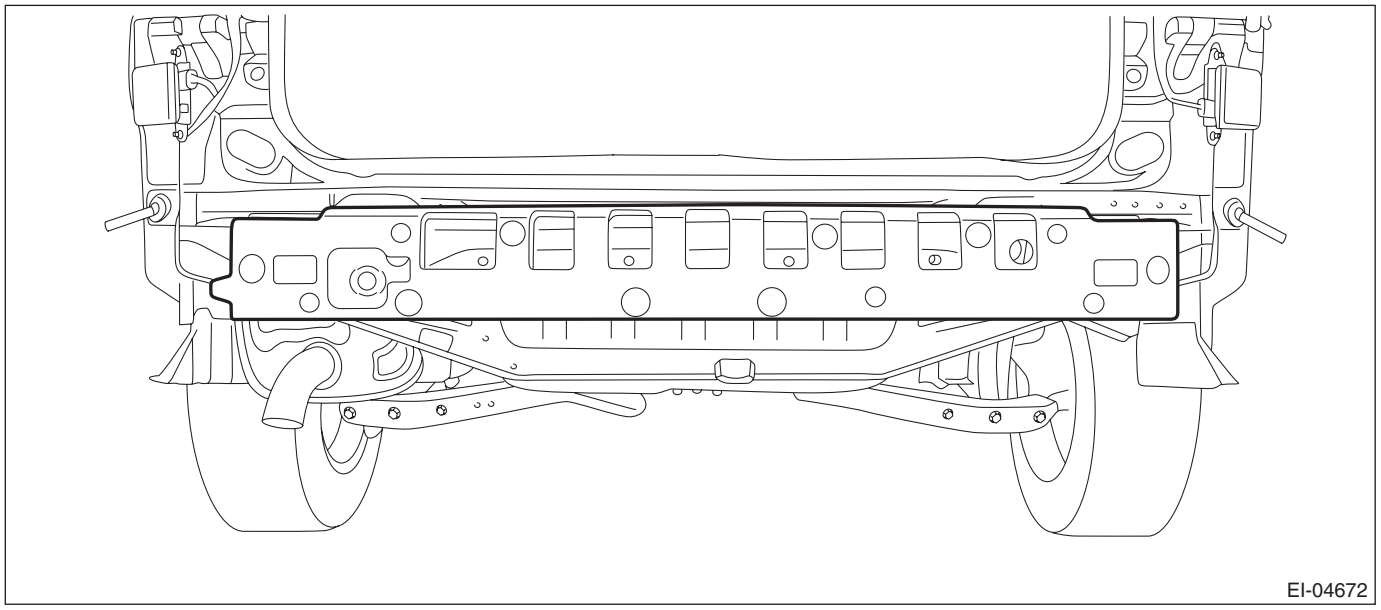
2. OUTBACK MODEL

1) Disconnect the ground terminal from the battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the mat floor - rear, and remove the trim panel - rear skirt.

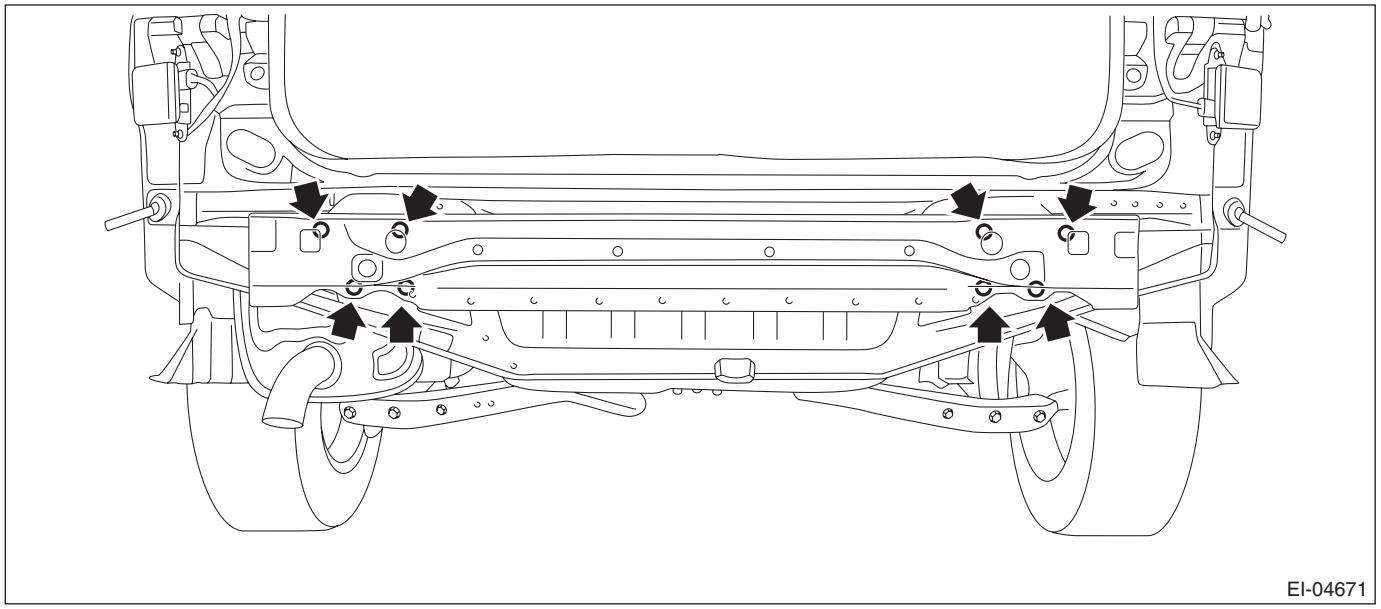
CAUTION:
Do not lift the trim panel - rear skirt from the edge. Doing so may damage the part.



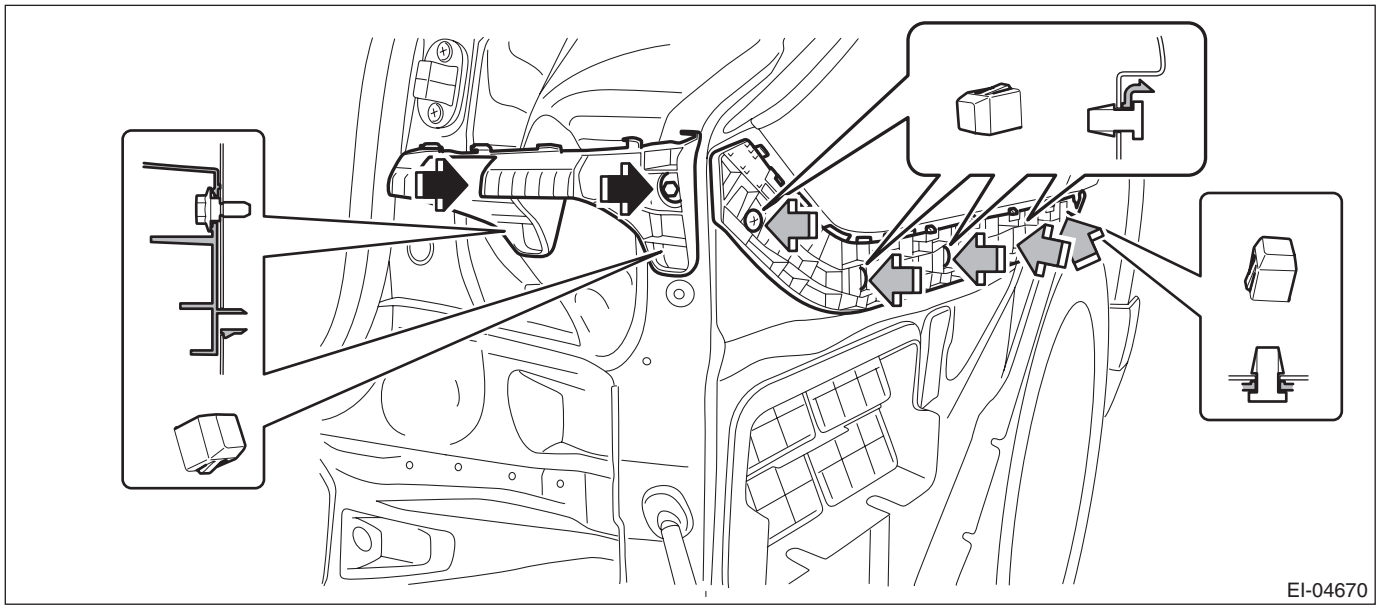
3) Remove the light assembly - rear combination. <Ref. to LI-46, REMOVAL, Rear Combination Light Assembly.>
4) Remove the bumper face - rear.
   (1) Remove the clips inside the wheel housing.
   (2) Remove the clips at the lower side of the bumper face - rear.



(3) Detach (b) and (c) while pulling up (a) of the bumper face - rear.
(4) Detach (e) while pulling up (d) of the bumper face - rear.
(5) Detach the opposite side in the same manner.
(6) Detach in order from (f) to (h) while pulling up the center part of the bumper face - rear.



CAUTION:
Do not pull forcibly. It may damage the flange section on the bumper face - rear side when it comes off from the claws of the bracket - rear bumper.



5) Remove the energy absorber foam - rear.

6) Remove the nuts, and remove the bumper beam COMPL - rear.

7) Remove bumper brackets.
   (1) Remove the bolts and screws.
   (2) Turn over the trim panel - trunk side, and detach the claw of the clip from the back side.

B: INSTALLATION

1. SEDAN MODEL

CAUTION:
Before installing the bumper face, match the claws on the bracket - rear bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.
1) Install each bumper bracket.
2) Install the bumper beam COMPL - rear.

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)
3) Install the bumper face - rear.

NOTE:
If the bumper face - rear comes off too easily, adjust the hook of the center bracket side.
4) Replace the gasket - rear combination with a new part.
5) Install the light assembly - rear combination.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
6) Install the trim panel - trunk rear and trunk room mat.
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. OUTBACK MODEL

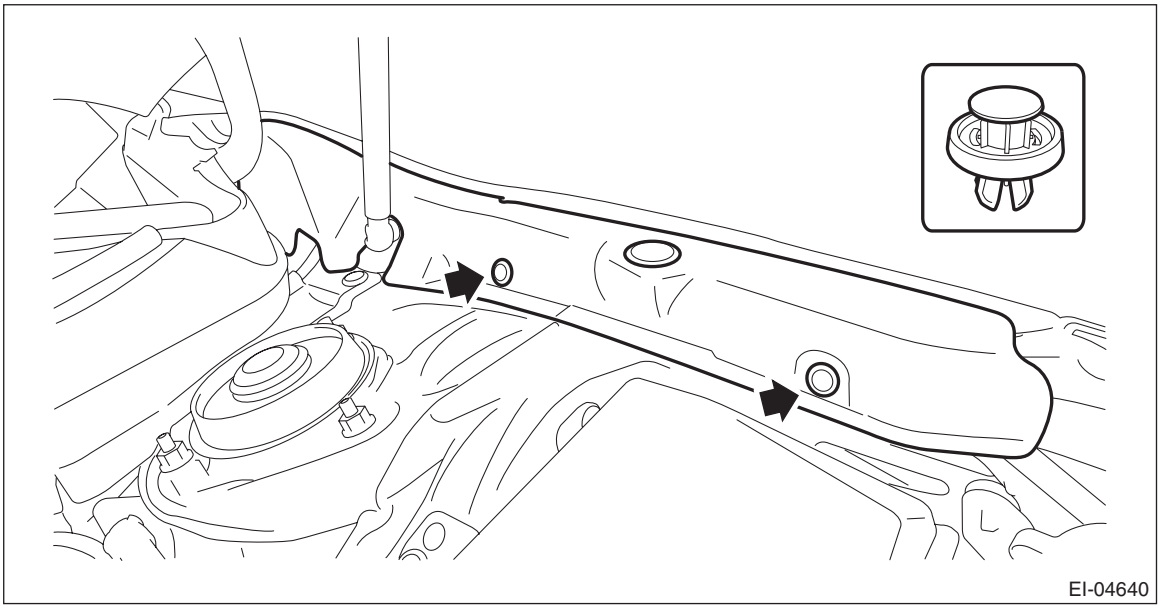
CAUTION:
Before installing the bumper face, match the claws on the bracket - rear bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.
1) Install each bumper bracket.
2) Install the bumper beam COMPL - rear.

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)
3) Install the bumper face - rear.

NOTE:
If the bumper face - rear comes off too easily, adjust the hook of the center bracket side.
4) Install the light assembly - rear combination.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
5) Remove the mat floor - rear, and install the trim panel - rear skirt.
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

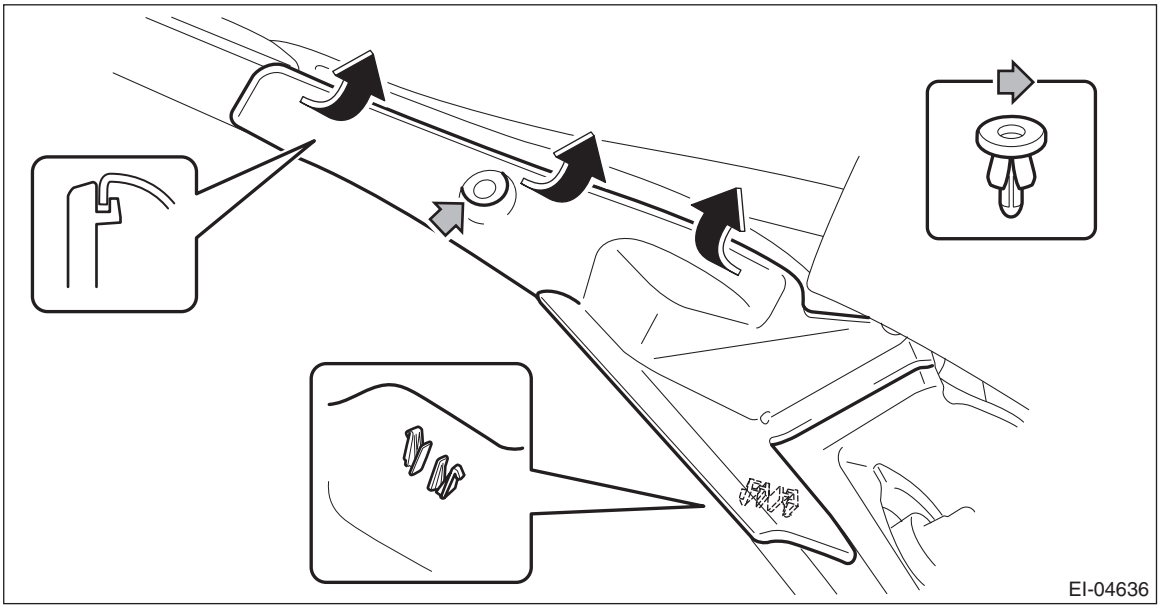
C: REPAIR



Refer to the description concerning repair in “Front Bumper” section. <Ref. to EI-40, REPAIR, Front Bumper.>

9. Cowl Panel

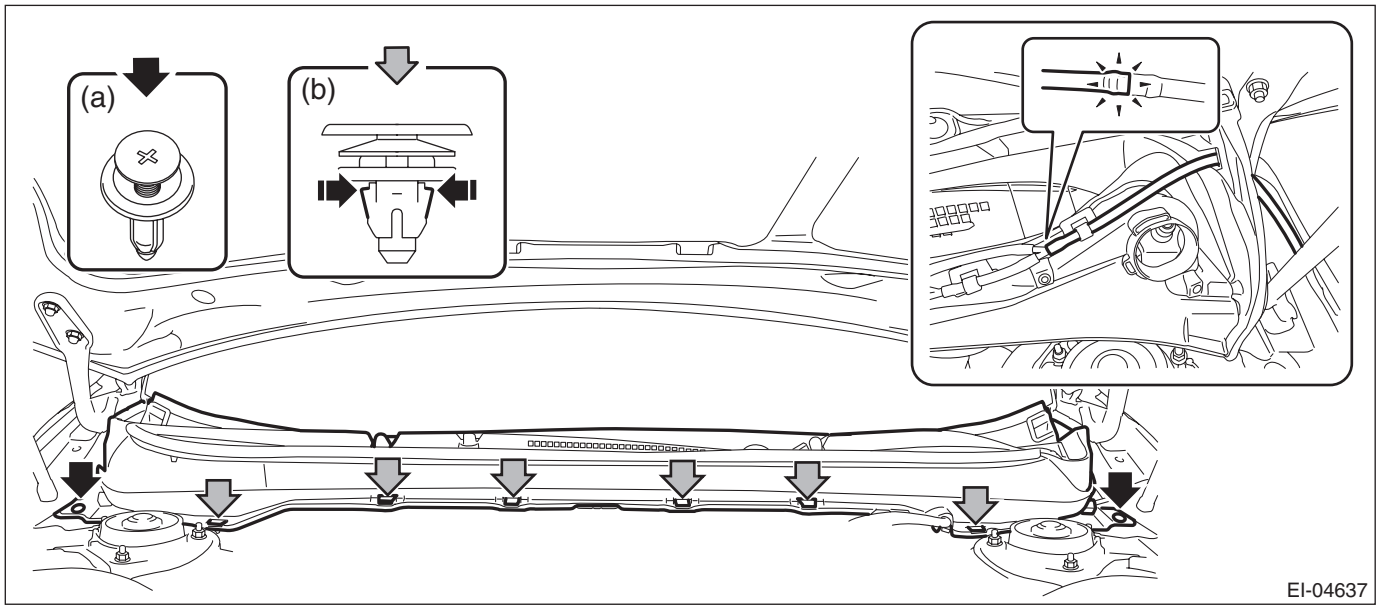
A: REMOVAL



1) Remove the arm assembly - windshield wiper. <Ref. to WW-28, REMOVAL, Front Wiper Arm.>
2) Remove the cover - front fender UPR.
   (1) Remove the clip.
   (2) Release the claws by pulling them forward, and remove the cover - front fender UPR.

CAUTION:
Forcibly removing the part may cause creases.

3) Remove the cowl panel - side.
   (1) Remove the clips.
   (2) Release the claws, and then remove the cowl panel - side.

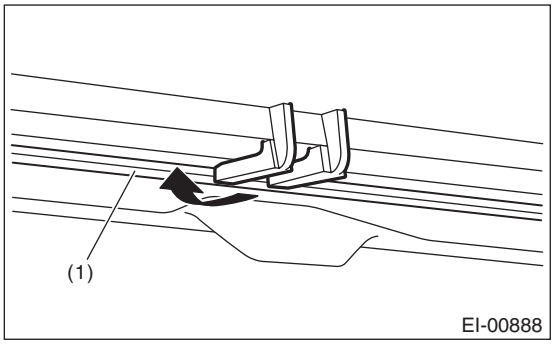


CAUTION:
Pulling with excessive force may damage the cowl panel - side. If it is difficult to remove, use a plastic remover or equivalent tool.

4) Remove the cowl panel assembly.

CAUTION:
• Before removing the cowl panel, use an air blower and nylon brush to sweep gravel from the lower area of the front side of the glass.
• When removing the clip (b), push the claws of the clip first.
Be careful not to apply excessive force when pulling the clip (b), as the clip may become damaged.

(1) Remove the clips (a).
(2) Check the direction of the clip (b), and push the claws from both sides to remove it.
(3) Remove the cowl panel assembly by pulling it out towards the front of the vehicle.
(4) Disconnect the washer hose.



B: INSTALLATION

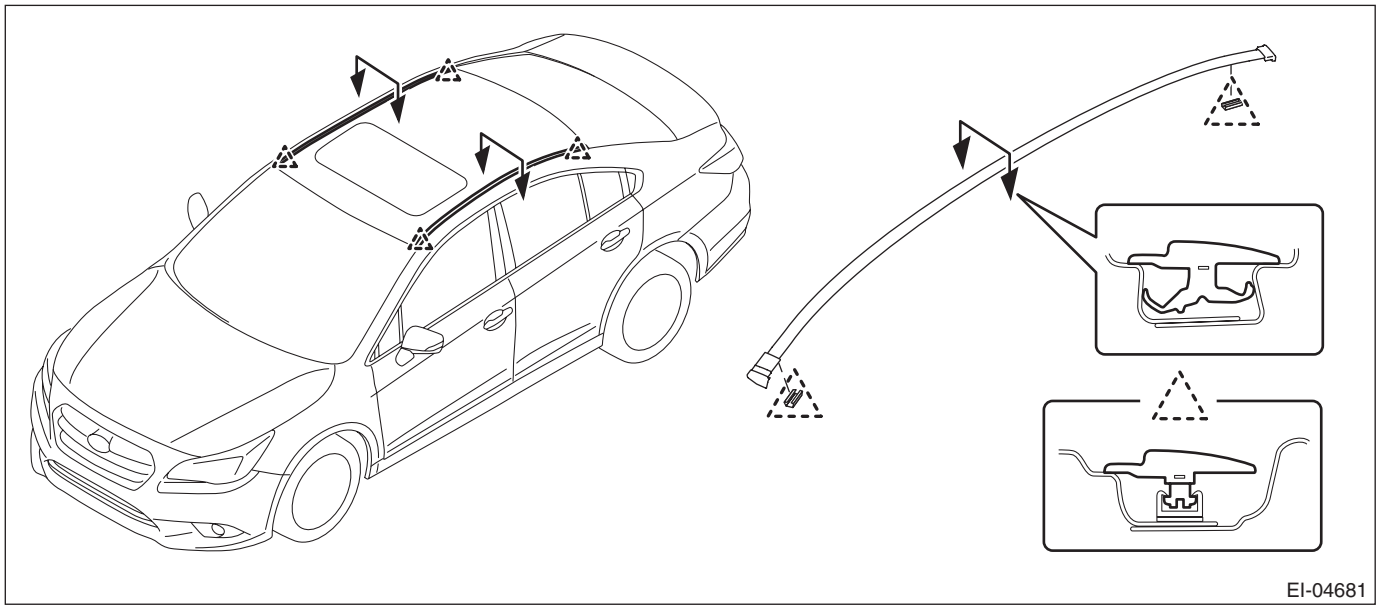
CAUTION:
Before installing the windshield glass and cowl panel, make sure there are no gravel in the installing area.

1) Install the cowl panel assembly.

CAUTION:
If the cowl panel assembly cannot be installed properly, do not hit or set it forcibly. The claws of the cowl panel or the windshield glass may be damaged.

(1) Hook the claw of the cowl panel on the lower end (1) of the windshield.

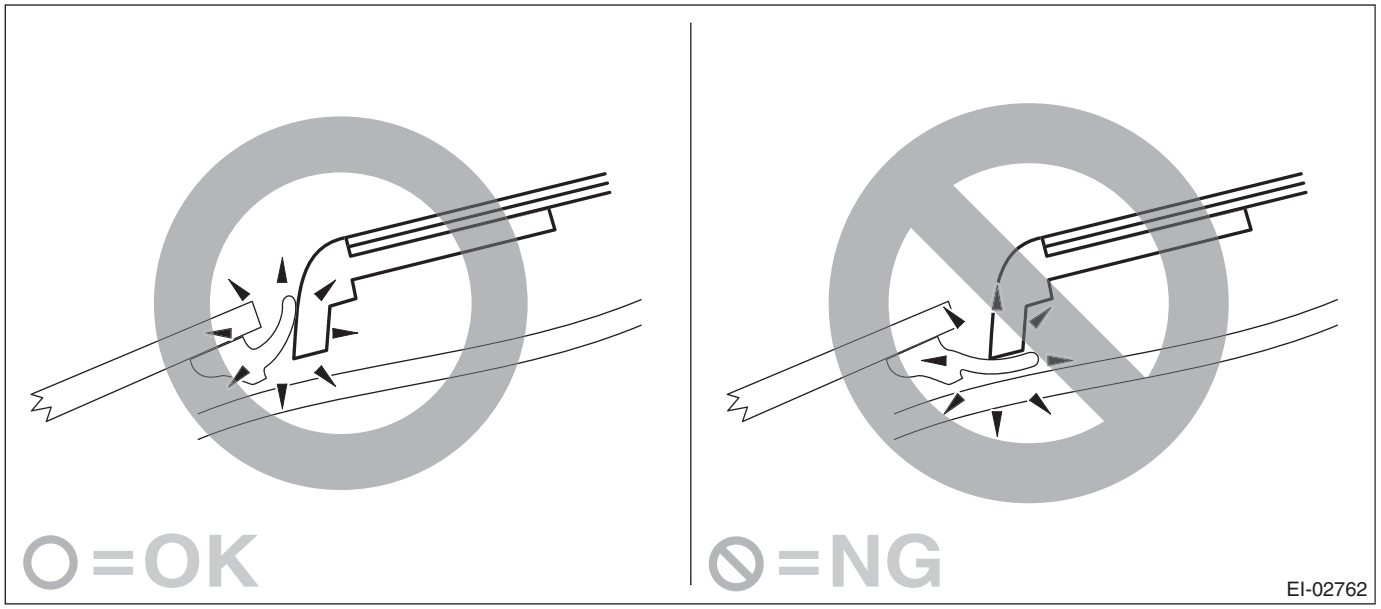
(2) Align the center claw of the cowl panel assembly to the cutout portion of the vehicle side, then install the cowl panel assembly.



2) Install the cowl panel - side.
3) Install the cover - front fender.
4) Install the arm assembly - windshield wiper. <Ref. to WW-28, INSTALLATION, Front Wiper Arm.>
5) If the washer nozzles have been removed from the cowl panel assembly, adjust the washer spray positions. <Ref. to WW-35, ADJUSTMENT, Front Washer Nozzle.>

10.Roof Molding

A: REMOVAL



CAUTION:
- **Be careful not to damage the body.**
- **Do not remove the clip - roof molding.**
- **If the clip - roof molding is damaged, replace it with a new clip.**

Release the clips, and remove the molding - roof.

B: INSTALLATION

CAUTION:
- **Always replace the clips that were damaged during removal of the molding - roof with new parts.**
- **While installing the molding - roof, be careful not to catch the glass molding with the tip of the front side and rear side.**

- **When installing the clip - roof molding, remove adhesive remaining on the installation surface of vehicle body side, then clean the body side.**
- **Use the primer provided with the adhesive. (Do not allow the primer to dry. It is two-liquid type adhesive though it is named as such.)**

1) Soften the clip - roof molding using an industrial dryer.

CAUTION:
If it is possible that hot air from the dryer may cause paint surface discoloration, use the dryer with a narrow nozzle.

2) Remove the clip - roof molding with a longnose pliers while applying hot air.

CAUTION:
Be careful not to scratch the paint surface with the edge of clip - roof molding.

3) Remove adhesive remaining on the vehicle body side by scraping it with a plastic spatula while applying hot air using a dryer, and clean the area where adhesive has been removed.

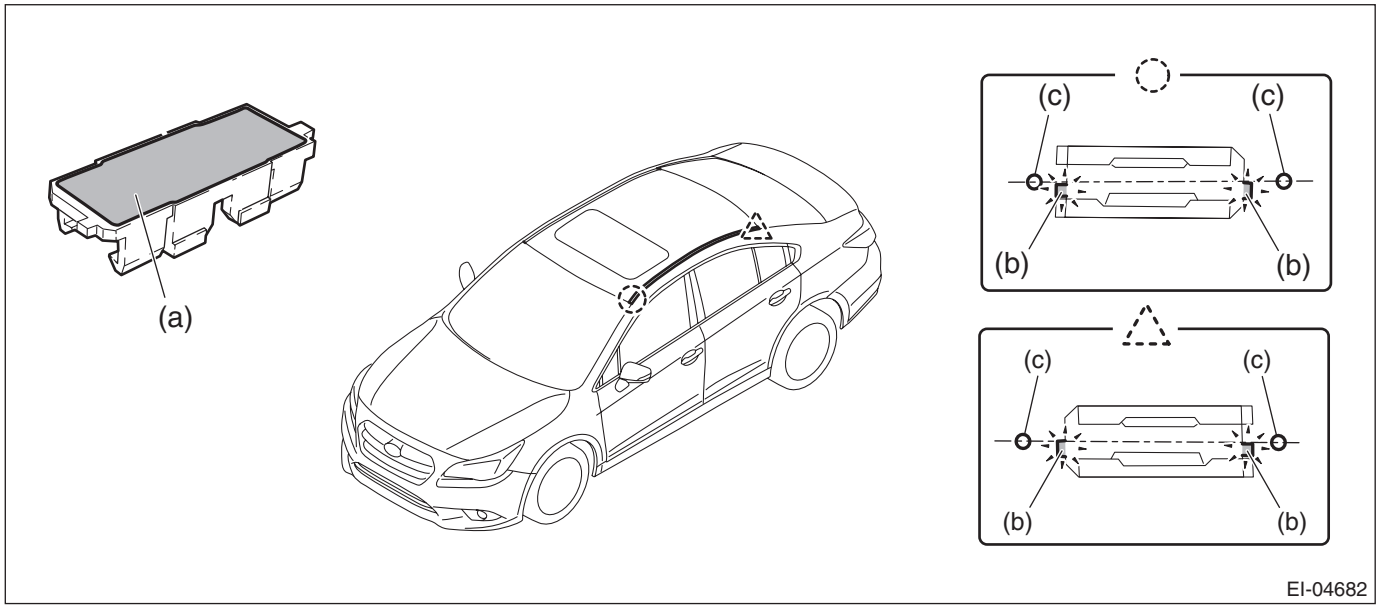
4) Install the clip - roof molding.

(1) Apply approx. 0.5 mm (0.02 in) thickness of adhesive evenly on the clip - roof molding.

CAUTION:
If sealant has been applied when the body was repaired, smoothen the sealant on the clip installation area.

Adhesive:
3M DP-100 or equivalent

(2) Apply primer to the body side of the clip - roof molding installation area.



CAUTION:
Do not allow primer to dry.

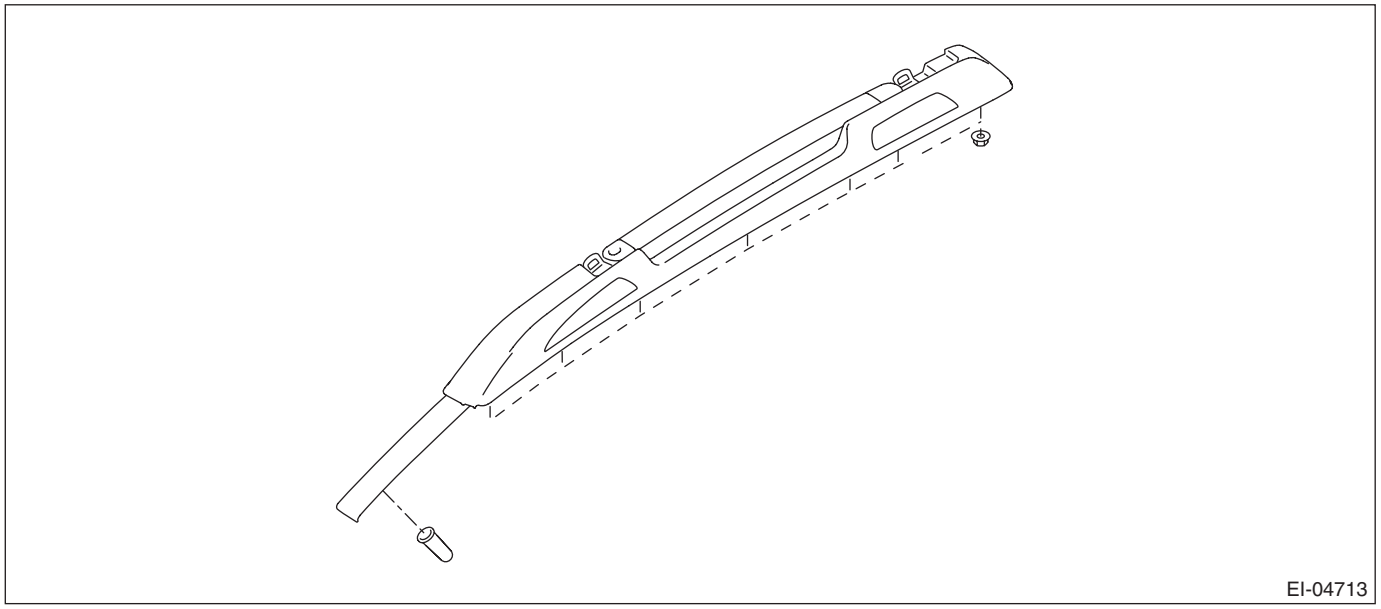
Primer:
Primer provided with 3M DP-100 or equivalent

(3) After primer is applied, affix the clip according to the position shown in the figure.

CAUTION:
Install the molding - roof when 40 minutes or more have passed after the clip - roof molding was press-fit.

1. Align the protrusion (b) of the clip - roof molding to the outside of vehicle, against the convex portion (c) of the roof panel.
2. Gently rub the clip - roof molding to make adhesive and primer fit in.
3. Press-fit the clip - roof molding firmly.

(a) Adhesive: Apply approx. 0.5 mm (0.02 in) thickness of adhesive evenly.
(b) Clip protrusion
(c) Roof panel convex portion



5) Install the molding - roof.
(1) Fit the molding - roof in the clip on the front side.
(2) While pressing the center of the molding - roof to the body side, fit the clip on the rear side.

11.Roof Rail

A: REMOVAL

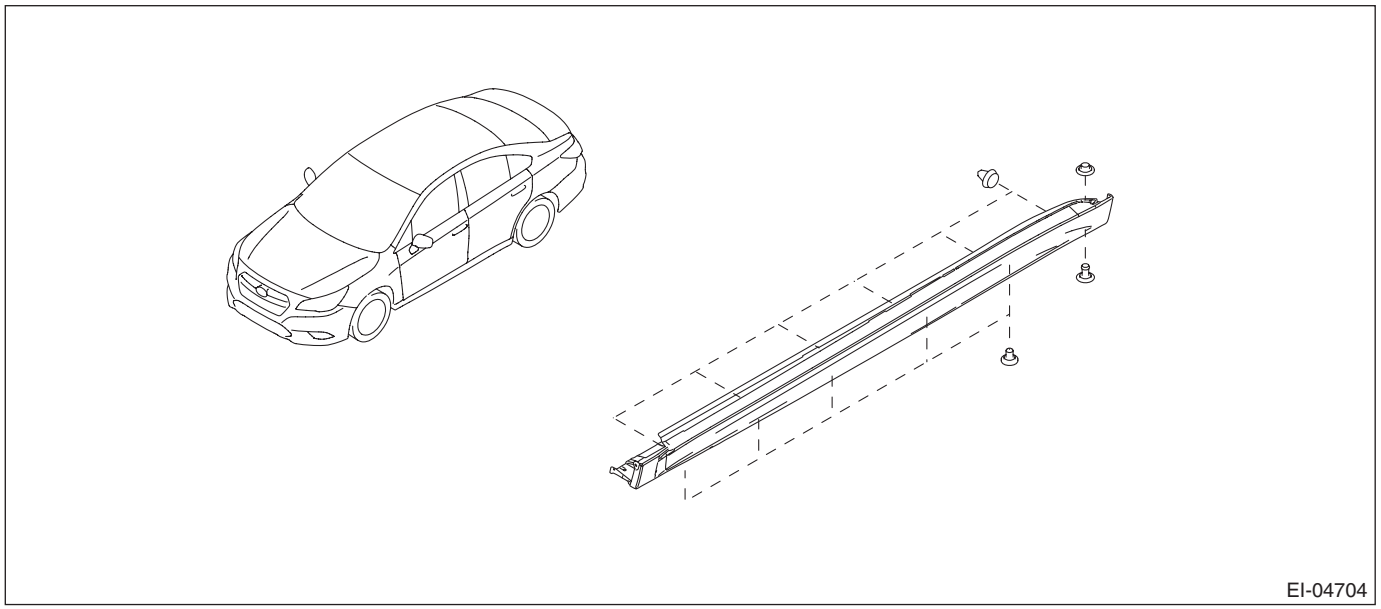
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the roof trim. <Ref. to EI-117, OUTBACK MODEL, REMOVAL, Roof Trim.>
3) Remove the curtain airbag module. <Ref. to AB-43, OUTBACK MODEL, REMOVAL, Curtain Airbag Module.>

CAUTION:
• Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-10, CAUTION, General Description.>
• When removing and installing the curtain airbag module, observe the operation procedures in the "AIRBAG SYSTEM" section.
• Be careful not to damage the curtain airbag module during removal and installation.
4) Remove the roof rail assembly.
(1) Remove the nut.
(2) Release the rivet on the tip portion, and remove the roof rail assembly.

EI-04713

B: INSTALLATION

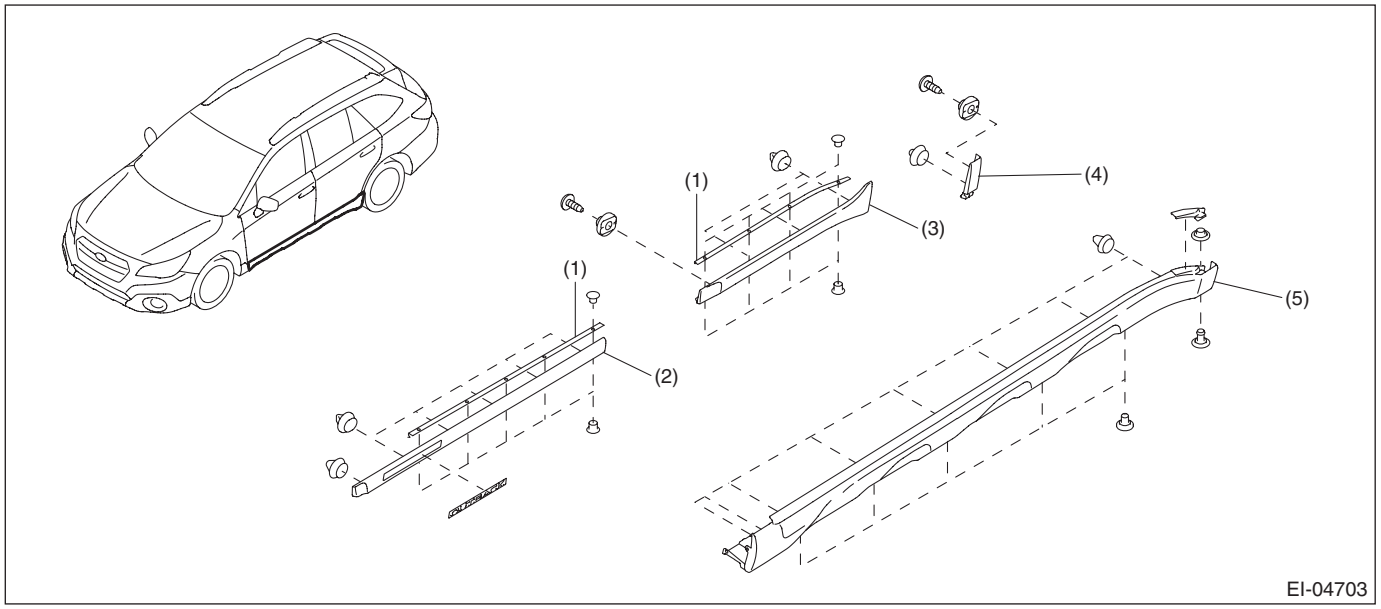
CAUTION:
• When removing or installing the roof rail, be careful not to scratch the body panel with the stud bolt of roof rail.
• Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-10, CAUTION, General Description.>
• When removing and installing the curtain airbag module, observe the operation procedures in the "AIRBAG SYSTEM" section.
• Do not reuse the clip securing the curtain airbag module.
• Be careful not to damage the curtain airbag module during removal and installation.
1) Install the roof rail assembly.



Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the curtain airbag module. <Ref. to AB-45, INSTALLATION, Curtain Airbag Module.>
3) Install the roof trim. <Ref. to EI-119, INSTALLATION, Roof Trim.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

12.Side Garnish

A: REMOVAL



1. SEDAN MODEL

Remove the clips and detach the side garnish assembly.

2. OUTBACK MODEL

1) Remove the clips and detach the side garnish assembly.

(1) Double-sided tape
(2) Garnish ASSY front door
(3) Garnish ASSY rear door
(4) Garnish ASSY rear quarter
(5) Side sill garnish ASSY

2) Remove the garnish assembly - door and the garnish assembly - rear quarter.
(1) Attach the protective tape to the periphery of the garnish.
(2) Heat the garnish section for 3 — 5 minutes at 40°C — 60°C (104°F — 140°F) using a heat light or a drier.

CAUTION:
Be careful not to burn yourself.
(3) Separate the bonded part of double sided tape with a nylon cord or equivalent.
(4) Release the clips, and remove the garnish assembly.

B: INSTALLATION

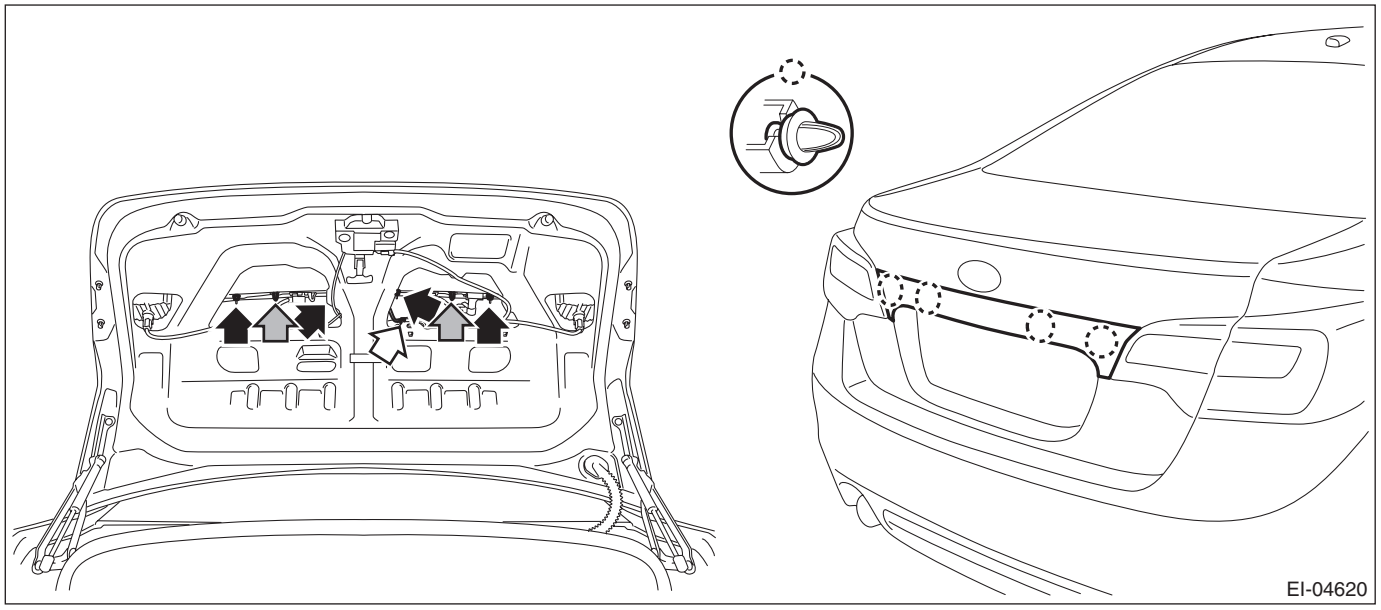
1. SEDAN MODEL

CAUTION:
Make sure that there is a gasket attached on the clip of the garnish assembly. If a gasket is not attached, water leakage may occur.
Install the side garnish assembly.

2. OUTBACK MODEL

CAUTION:
Make sure that there is a gasket attached on the clip of the garnish assembly. If a gasket is not attached, water leakage may occur.
1) Install the side garnish assembly.
2) Install the garnish assembly - door and the garnish assembly - rear quarter.
(1) Remove the double-sided tape remaining on the vehicle body, then clean the adhesive surface.

CAUTION:
If even a slight amount of double-sided tape remains on the adhesive surface, it may lead to improper adhesion.
(2) Heat the vehicle body and the garnish for 1 — 3 minutes using a heat light or a drier.



CAUTION:
Be careful not to burn yourself.
(3) Apply primer to the installation surfaces of garnish, and wait till the primer dries.
(4) Attach new double-sided tape on garnish.
(5) Apply primer to the garnish installation surface on the vehicle body side, and wait till the primer dries.
(6) Peel off the backing papers, engage the clips, and adhere the garnish assembly to the vehicle body.

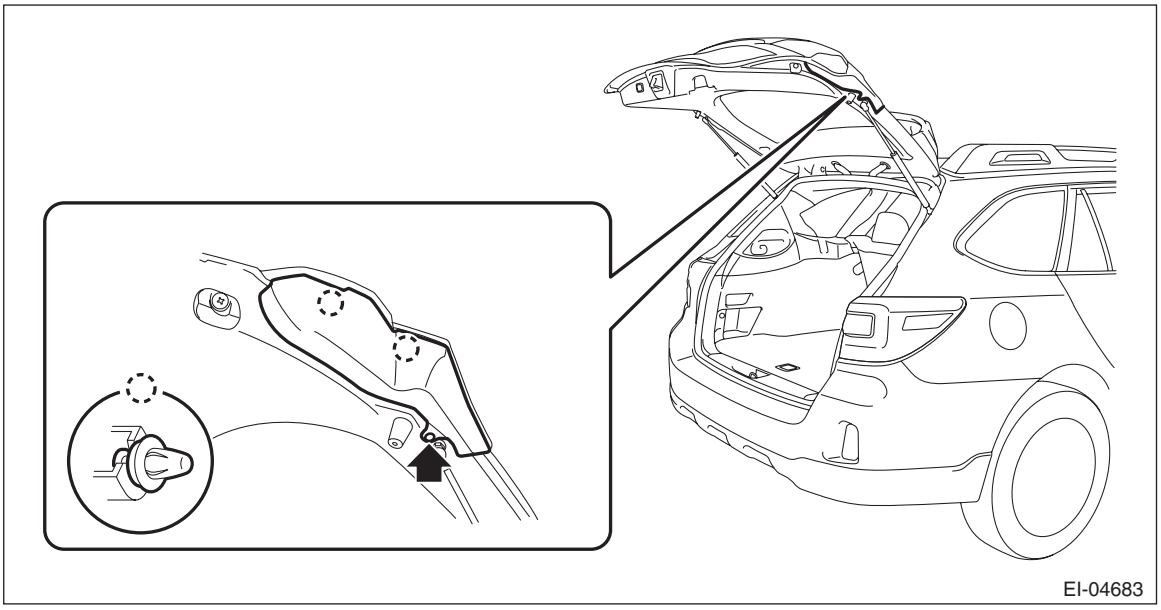
CAUTION:
Press-fit the garnish assembly to adhere securely.

13.Trunk Lid Garnish

A: REMOVAL

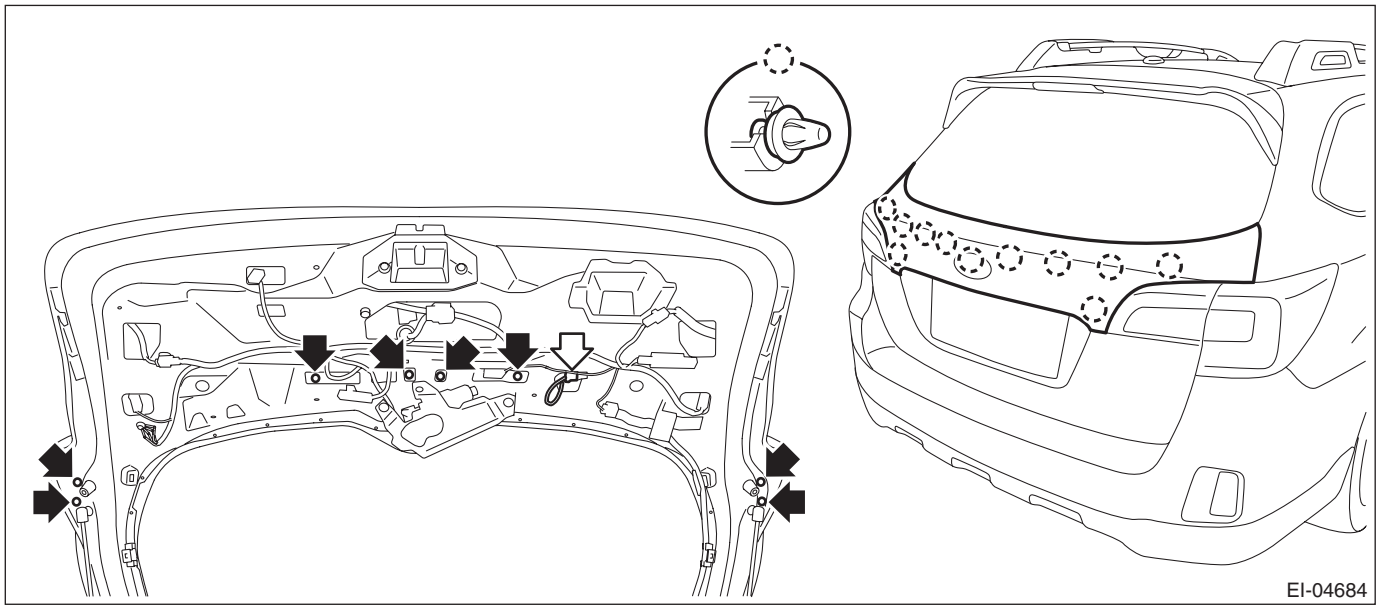
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - trunk lid. <Ref. to EI-110, REMOVAL, Trunk Room Trim.>
3) Remove the garnish - trunk.
   (1) Remove the nut.
   (2) Disconnect the clips and connectors, and remove the garnish - trunk.

B: INSTALLATION



CAUTION:
Make sure that there is a gasket attached on the clip of the garnish assembly. If a gasket is not attached, water leakage may occur.
1) Install the garnish - trunk.

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)
2) Install the trim panel - trunk lid.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



14.Rear Gate Garnish

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the rear gate trim. <Ref. to EI-122, REMOVAL, Rear Gate Trim.>
3) Remove the garnish assembly - rear gate.
   (1) Remove the bolts and clips, and remove the cover - rear gate RH and LH.

EI-04683

   (2) Remove the power rear gate touch sensor LWR. (Model with power rear gate) <Ref. to PRG-15, REMOVAL, Power Rear Gate Touch Sensor.>
   (3) Disconnect the request switch harness connector.
   (4) Remove the nuts.
   (5) Remove the clips and remove the garnish assembly - rear gate.

EI-04684

B: INSTALLATION

CAUTION:
Make sure that there is a gasket attached on the clip of the garnish assembly. If a gasket is not attached, water leakage may occur.

1) Install the garnish assembly - rear gate.

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

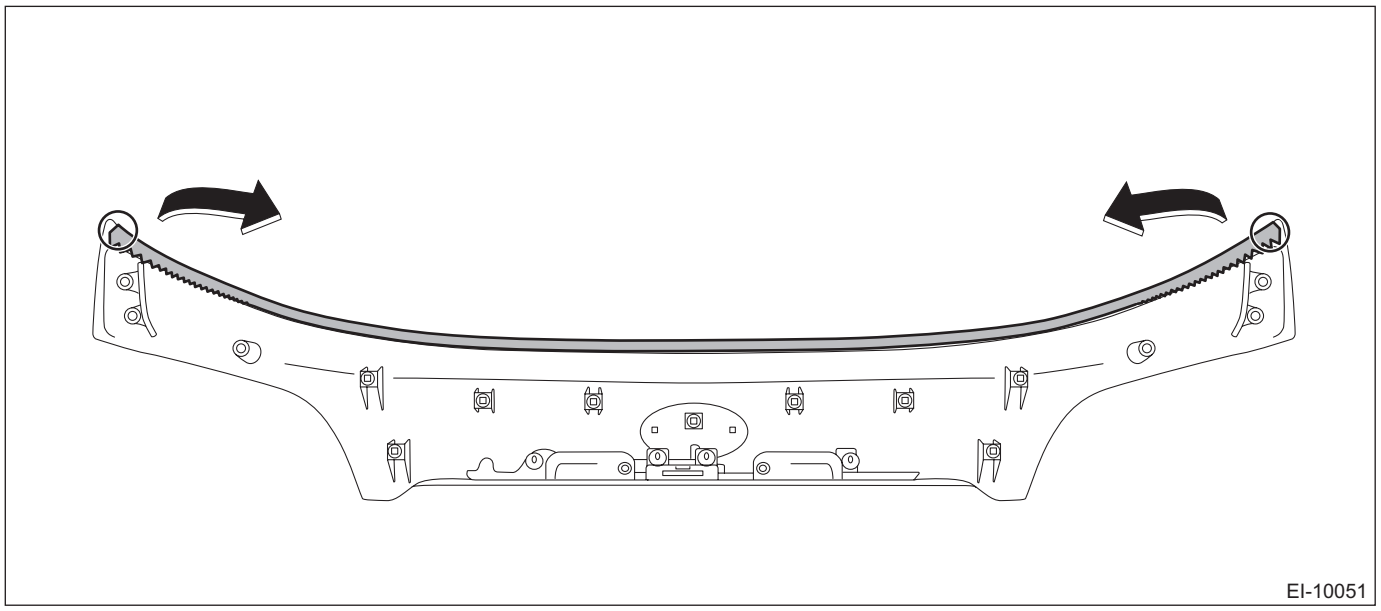
2) Install the cover - rear gate.

Tightening torque:
1.5 N·m (0.2 kgf-m, 1.1 ft-lb)

3) Install the power rear gate touch sensor LWR. (Model with power rear gate) <Ref. to PRG-16, INSTALLATION, Power Rear Gate Touch Sensor.>
4) Install the rear gate trim.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: DISASSEMBLY

1) Remove the protector UPR. <Ref. to EI-63, REPLACEMENT, Rear Gate Garnish.>
2) Remove the button - opener rear gate. <Ref. to SL-48, REMOVAL, Rear Gate Opener Button.>
3) Remove the rear antenna assembly - exterior. <Ref. to SL-98, REAR ANTENNA (OUTBACK MODEL), REMOVAL, Keyless Access Outdoor Antenna.>
4) Remove the garnish LWR as required.



D: ASSEMBLY

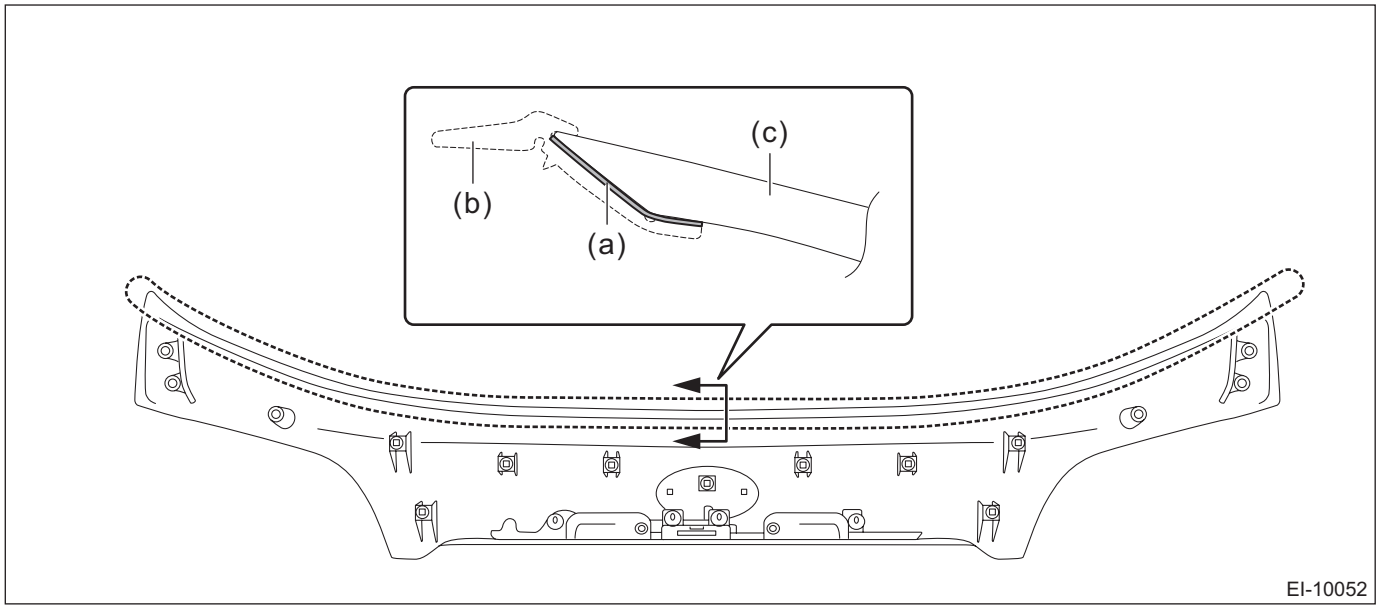
1) Install the garnish LWR.
2) Install the rear antenna assembly - exterior. <Ref. to SL-99, REAR ANTENNA (OUTBACK MODEL), INSTALLATION, Keyless Access Outdoor Antenna.>
3) Install the switch - opener rear gate. <Ref. to SL-48, INSTALLATION, Rear Gate Opener Button.>
4) Install the protector UPR. <Ref. to EI-63, REPLACEMENT, Rear Gate Garnish.>

E: REPLACEMENT

1) Slowly remove the protector UPR from the end of right and left protectors.

CAUTION:
- **Be careful not to damage the surface of garnish assembly during operation.**
- **Do not reuse the protector UPR.**

2) Remove the double-sided tape remaining on the garnish side, then clean the adhesive surface.



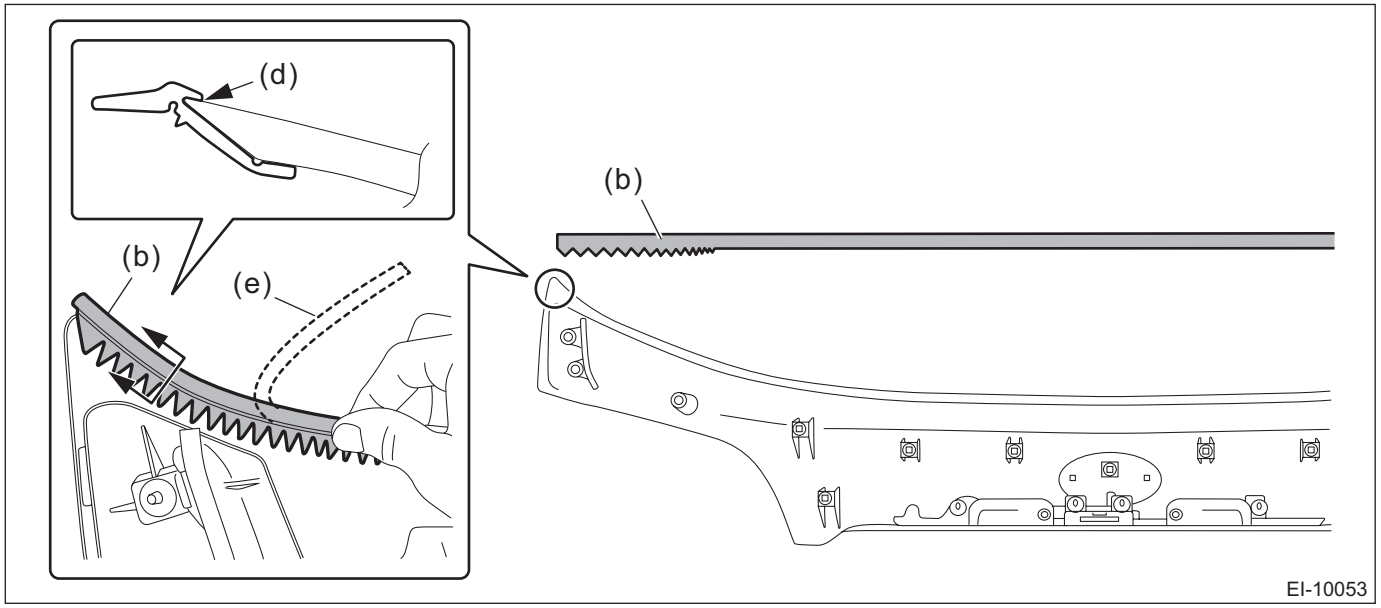
CAUTION:
- **If even a slight amount of double-sided tape remains on the adhesive surface, it may lead to improper adhesion.**

Completely remove the double-sided tape from the overlapped portion with the end of inner garnish, where the double-sided tape easily remains.
- **Do not use any solvents that may damage the garnish coating.**

3) Degrease the mounting surface of protector with appropriate cleaning solvent or alcohol.

4) Apply primer to the mounting surfaces of garnish.

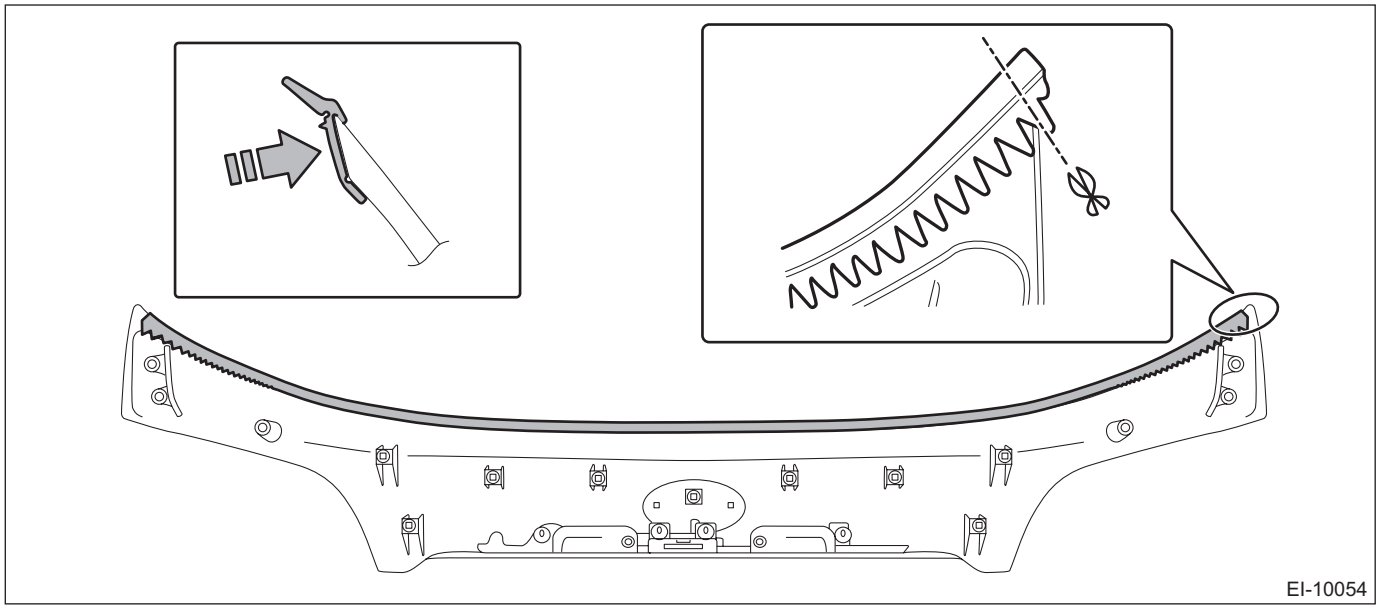
Primer:
Manufactured by 3M
K-520, K-500 or equivalent



(a) Application of primer (b) Protector UPR (c) Garnish ASSY

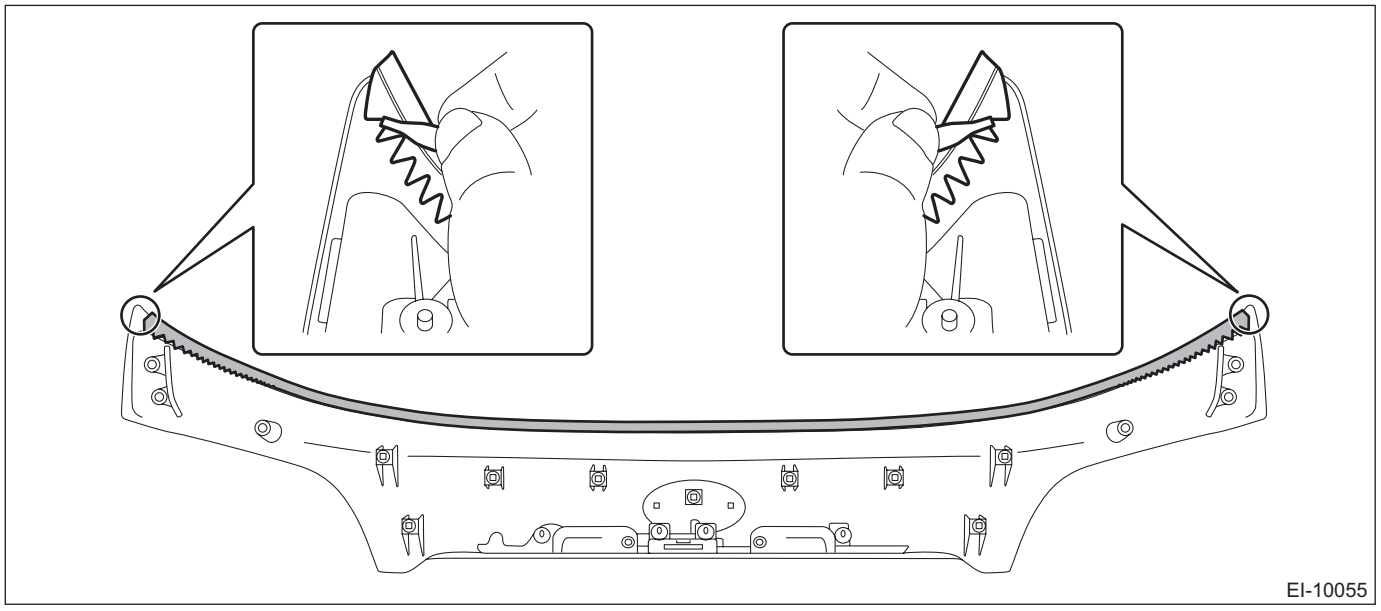
5) Affix the protector UPR.

CAUTION:
Affix so that there should be no gap (d) between garnish assembly and protector UPR.



(1) Confirm that primer is dried, and check the protector UPR installation conditions.
(2) Remove a part of backing sheet (e) from the right end of protector UPR (left side viewing from garnish assembly reverse side), and affix by aligning the both ends of protector and garnish.

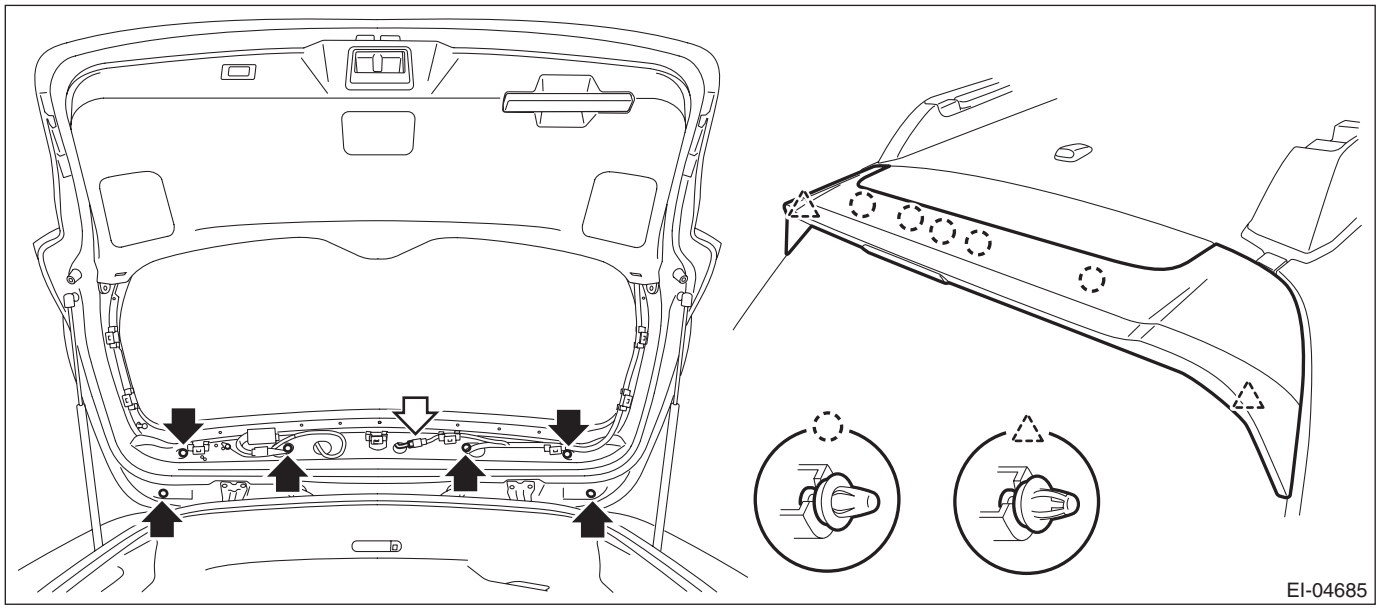
(b) Protector UPR (d) Gap between garnish assembly and protector UPR (e) Backing sheet



(3) After this, affix the protector UPR securely while peeling it away from the backing sheet.

NOTE:
If there is an extra end of protector, cut the extra portion projecting from the garnish assembly after aligning the cutting positions and angles at both sides with the end shape.

(4) Press-fit the protector UPR, and then apply instant glue to both ends of protector UPR to affix.



CAUTION:
Be careful not to spread instant glue over the design face.

15.Roof Spoiler

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate UPR and the trim panel - rear gate pillar side. <Ref. to EI-122, REMOVAL, Rear Gate Trim.>
3) Remove the roof spoiler.
   (1) Disconnect the connector of high-mounted stop light.
   (2) Remove the bolts and nuts.
   (3) Remove the clips, and remove the roof spoiler.

B: INSTALLATION

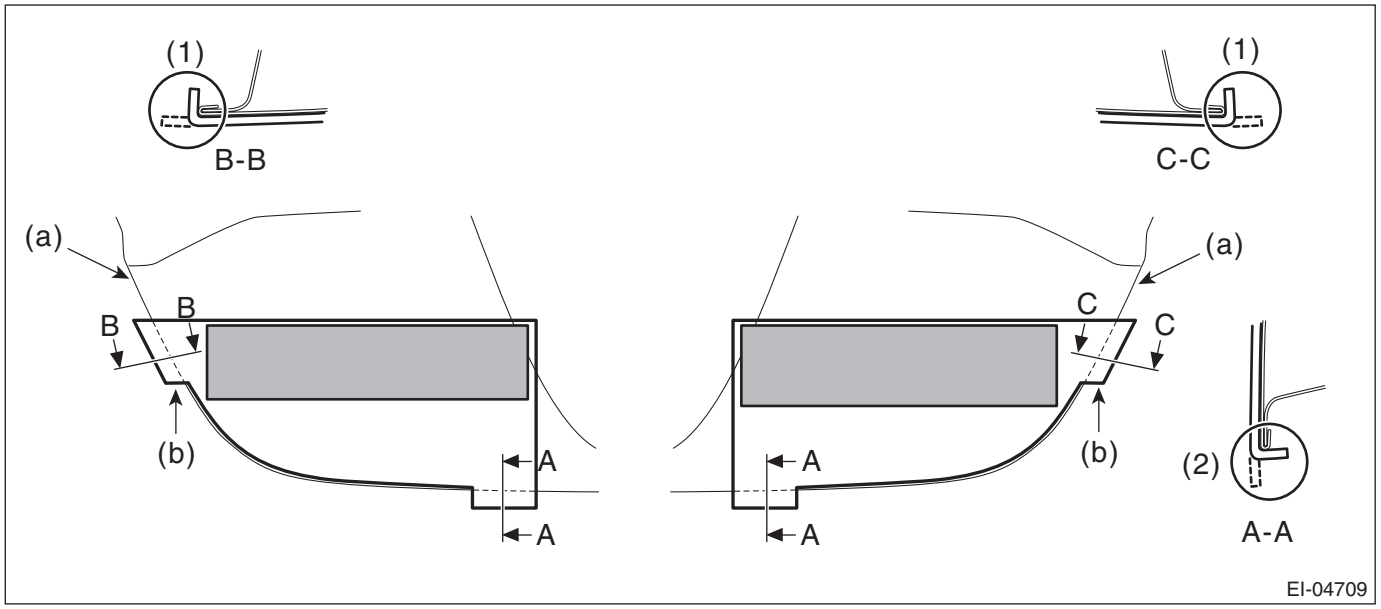
CAUTION:
• Make sure that packings are attached on the clips of the roof spoiler assembly. If a gasket is not attached, water leakage may occur.
• Connect the connector of the light assembly - high-mounted securely.
1) Install the roof spoiler.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the drip - rear gate.
3) Install the trim panel - rear gate UPR and the trim panel - rear gate pillar side. <Ref. to EI-123, INSTALLATION, Rear Gate Trim.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

16.Heat Shield Cover

A: NOTE

Refer to “EXHAUST” section for removal and installation procedure of the heat shield cover.



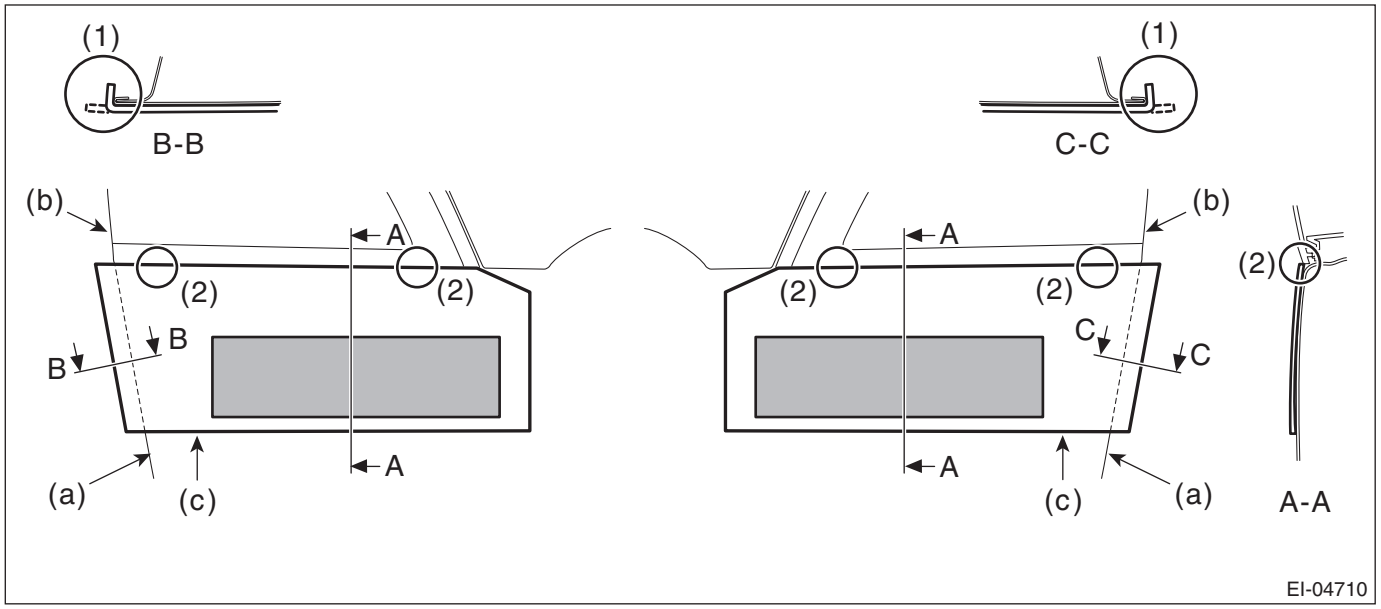
17.Ornament

A: INSTALLATION

1. LETTER MARK

Align the application tape to the following position, and adhere the letter mark.

- Sedan model



(a) Trunk lid panel end

(b) Application tape end

(1) Bend the end of the application tape to fit along the end of the trunk lid panel.

(2) Bend the end of the application tape to fit along the end of the trunk lid panel.

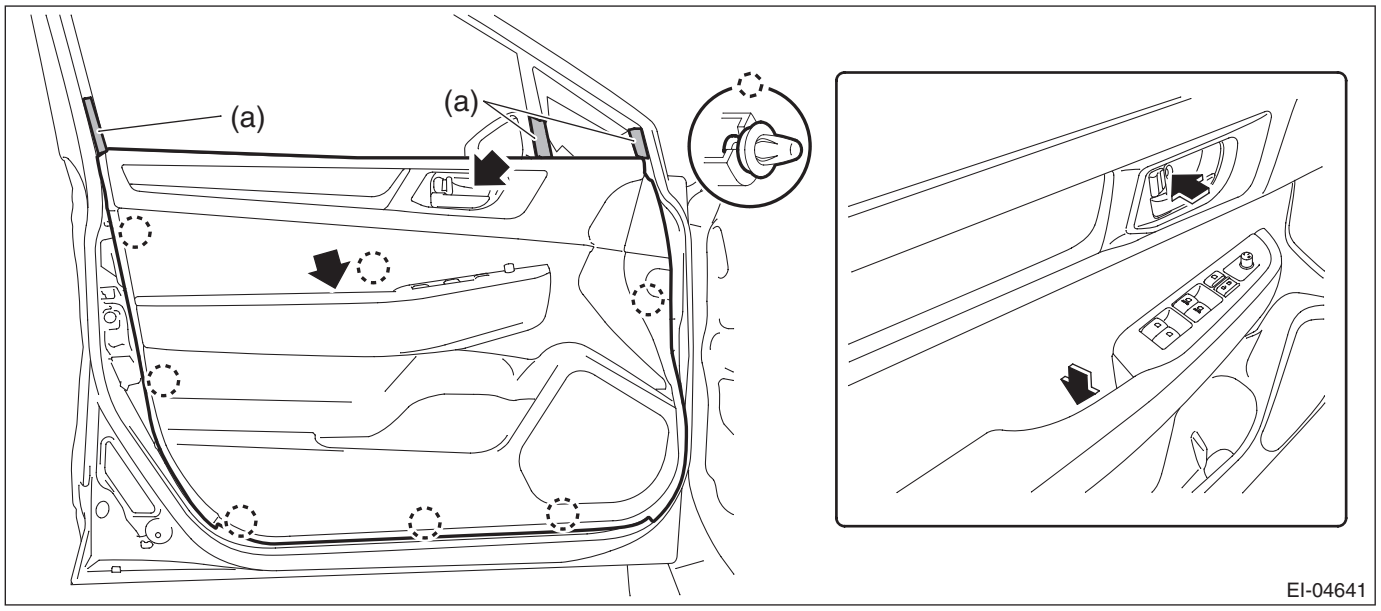
- OUTBACK model

(a) End of rear gate panel

(b) End of rear finisher light

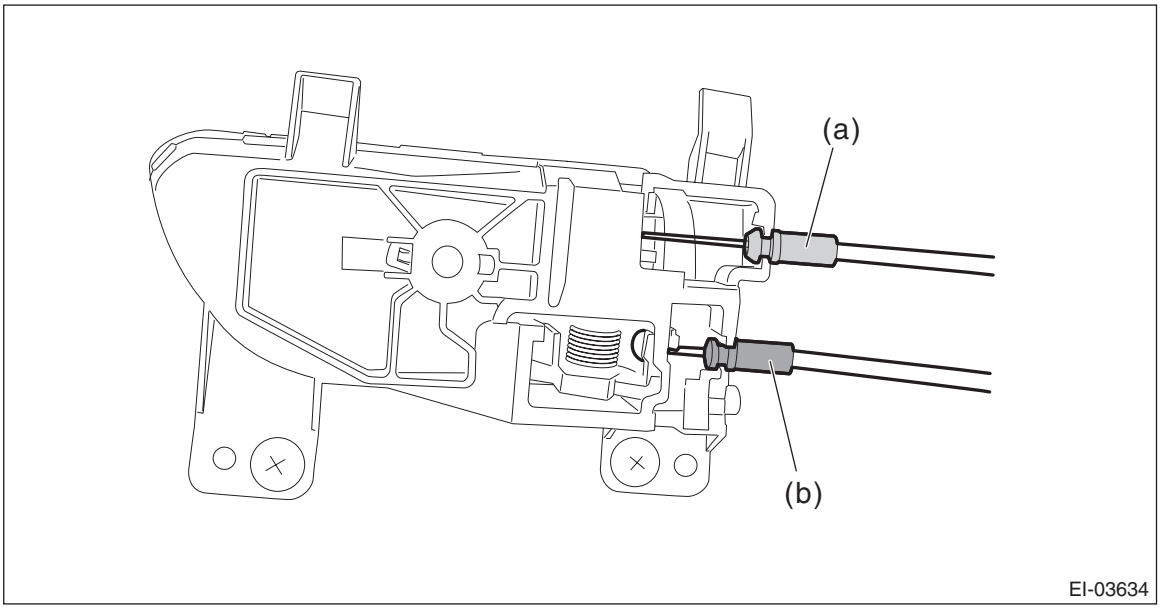
(c) Application tape end

(1) Bend the end of the application tape to fit along the end of the rear gate panel.



(2) Align the top end of application tape to the bottom of the rear finisher light.

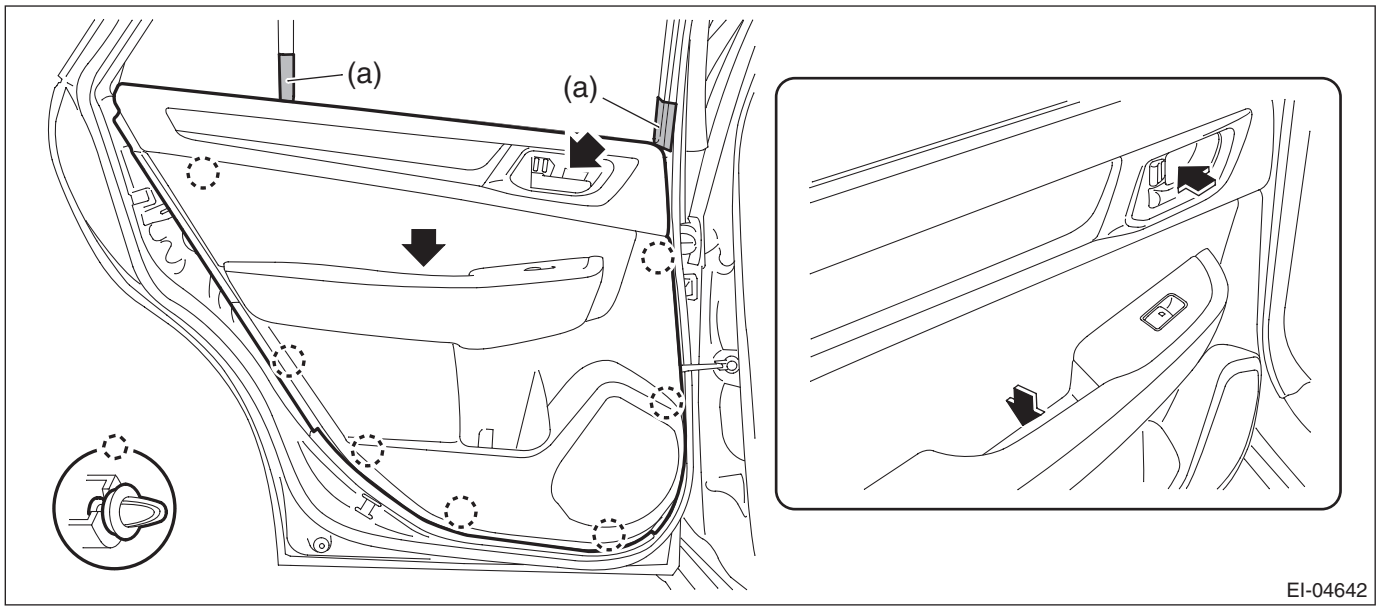
18.Door Trim



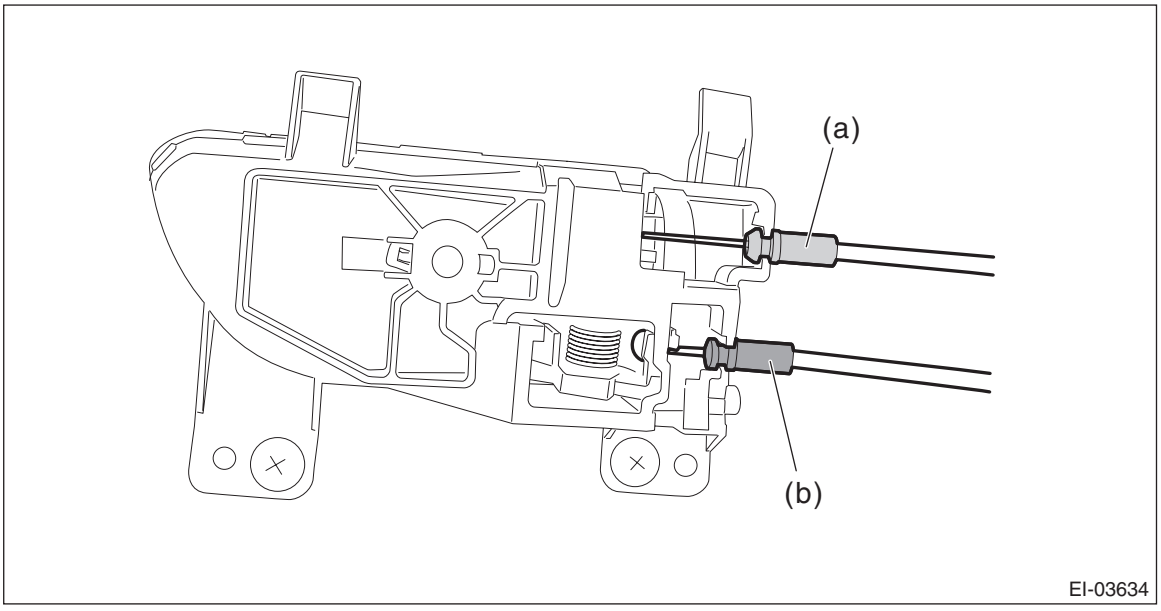
A: REMOVAL

1. FRONT DOOR

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front door.
(1) Attach the protective tape (a).
(2) Open the cover and remove the screw.
(3) Remove the clips, and remove the trim panel - front door from the panel assembly - front door.



(4) Detach the door lock cable (a) and door open cable (b) from the remote assembly - door.



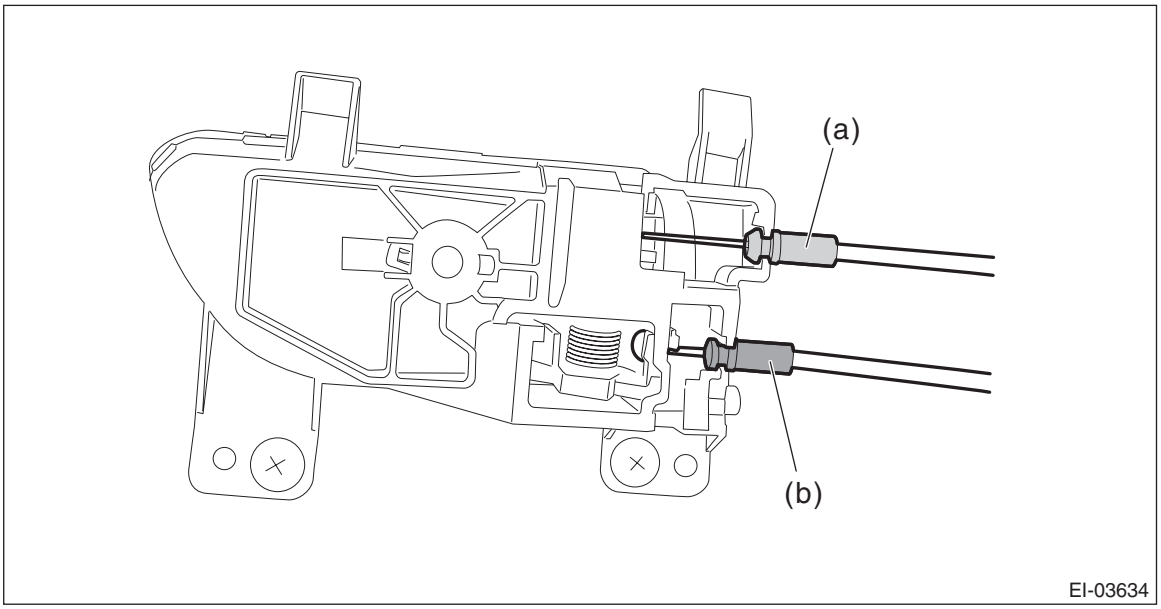
(5) Disconnect the harness connector and remove the trim panel - front door.
3) Remove each part as required.
• Remote assembly - door: <Ref. to SL-33, REMOVAL, Front Inner Remote.>
• Switch - power window main: <Ref. to GW-12, MAIN SWITCH, REMOVAL, Power Window Control Switch.>
• Weather strip - door INN: <Ref. to EI-72, DISASSEMBLY, Door Trim.>

2. REAR DOOR

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear door.
   (1) Attach the protective tape (a).
   (2) Open the cover and remove the screw.
   (3) Remove the clips, and remove the trim panel - rear door from the panel assembly - rear door.

   (4) Detach the door lock cable (a) and door open cable (b) from the remote assembly - door.

   (5) Disconnect the harness connector and remove the trim panel - rear door.
3) Remove each part as required.
- Remote assembly - door: <Ref. to SL-41, REMOVAL, Rear Inner Remote.>
- Switch - power window sub: <Ref. to GW-13, SUB-SWITCH, REMOVAL, Power Window Control Switch.>
- Weather strip - door INN: <Ref. to EI-72, DISASSEMBLY, Door Trim.>

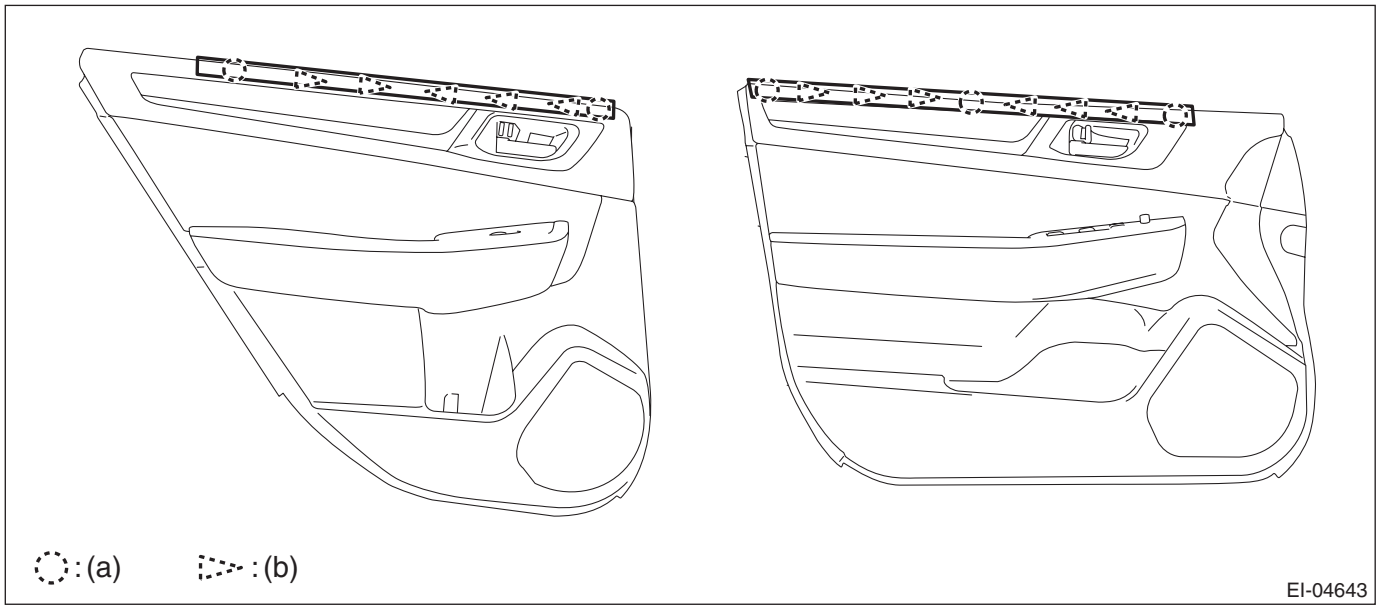


B: INSTALLATION

1) Before installation, check the following items.
- Cable is free from deformation such as fray.
- Grease is applied sufficiently to cable joints.

If grease is insufficient, add it as necessary before assembling the cable.

2) Install the removed parts to the trim panel - door.
3) Install the trim panel - door.



NOTE:
Attach the door lock cable (a - end ball: small) to the upper side, and attach the door open cable (b - end ball: large) to the lower side.

4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

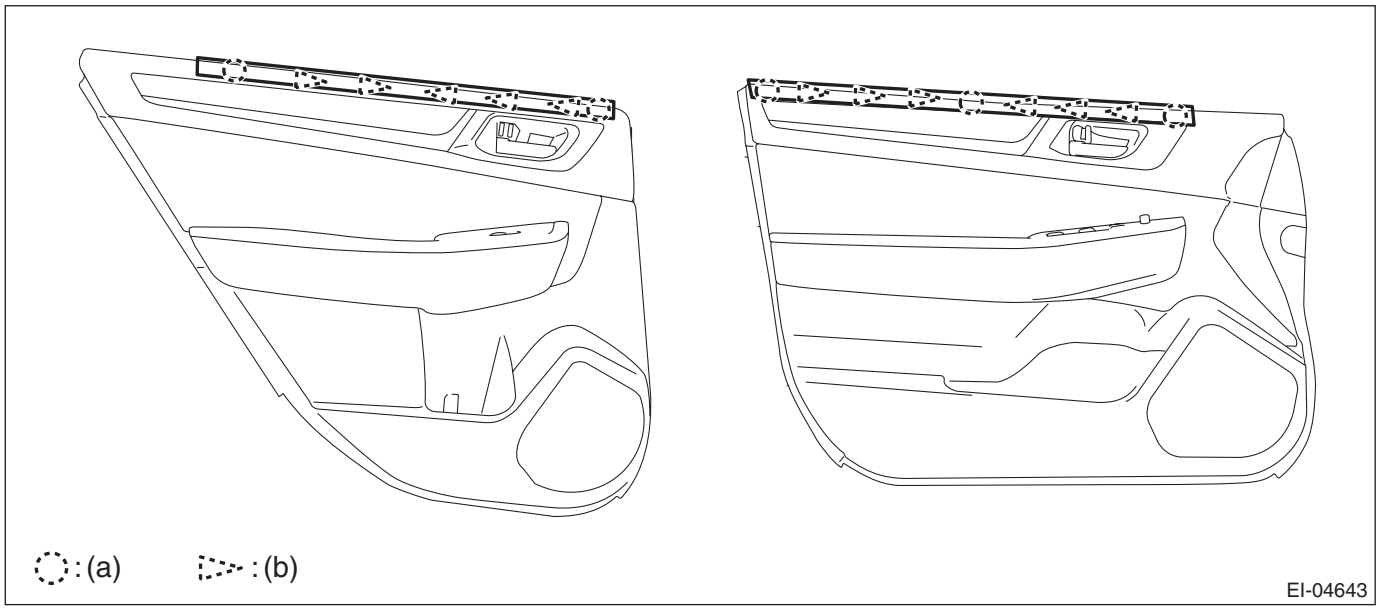
C: DISASSEMBLY

1) Remove the trim panel - door.
2) Disengage the rivets and claws, and remove the weather strip - door INN from the trim panel - door.

(a) Rivet (b) Claw

NOTE:
Remove the rivets with a rivet cutter or nipper, etc.

D: ASSEMBLY



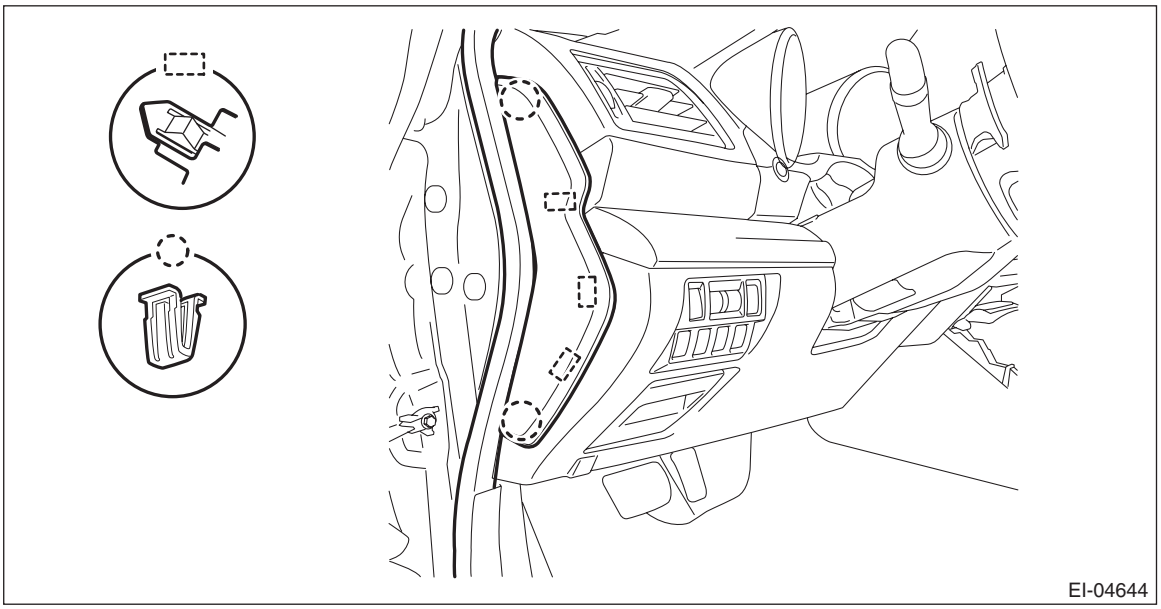
1) Bend the claws while pushing the weather strip - door INN against the trim panel - door.

CAUTION:
Beware of the direction of folding the claws.

2) Install the rivets and apply unwoven cloth tape.

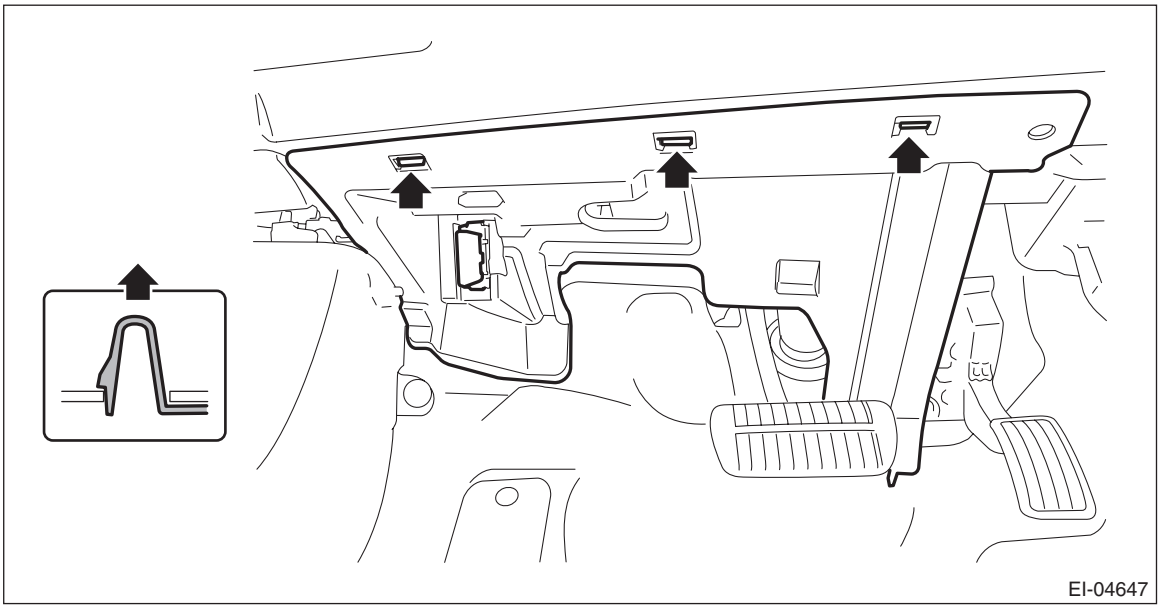
CAUTION:
Set the height of rivet crimped section as 3 mm (0.12 in). If the crimp is not sufficient, press it with pliers, etc. in order not to interfere the trim panel - door.

Preparation tool and item:
Hand riveter (corresponding to ϕ3.2 mm (0.13 in))
Rivet
Unwoven cloth (cut into 15 x 15 mm (0.59 x 0.59 in))



(a) Rivet (b) Direction of folding claws

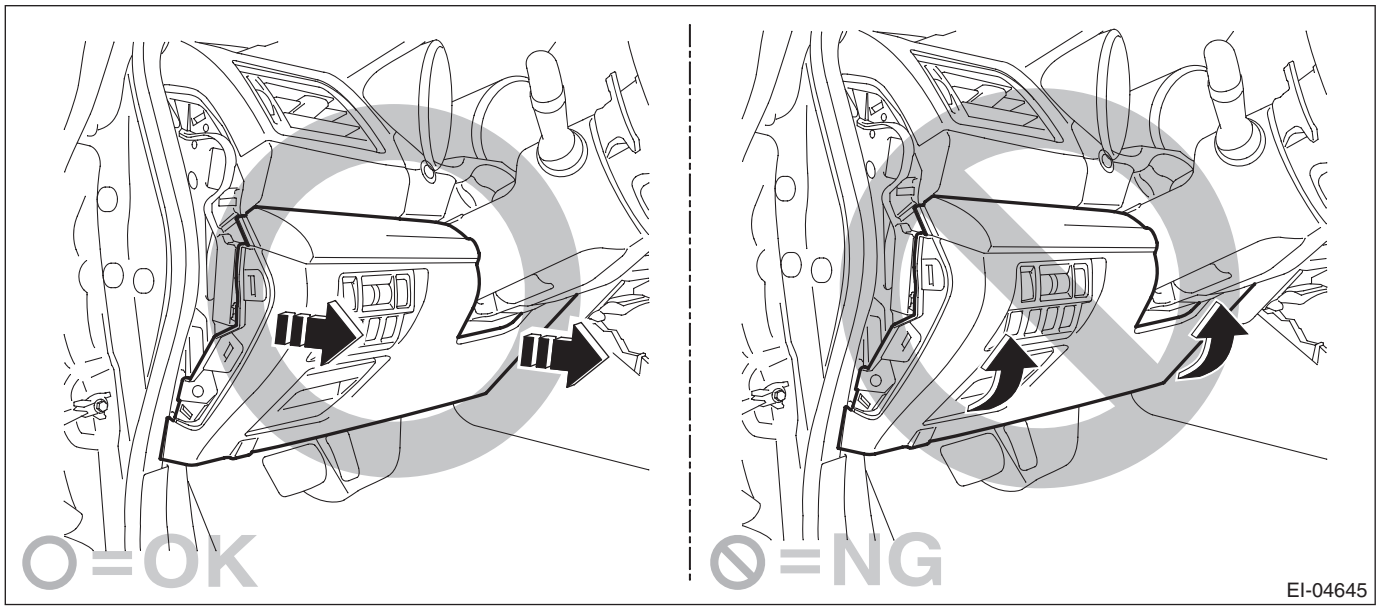
3) After installing the weather strip - door INN, perform the following checks.
- Make sure there are no gaps between the weather strip - door INN and the trim panel - door.
- Make sure there are no looseness when pulling the weather strip - door INN lightly.



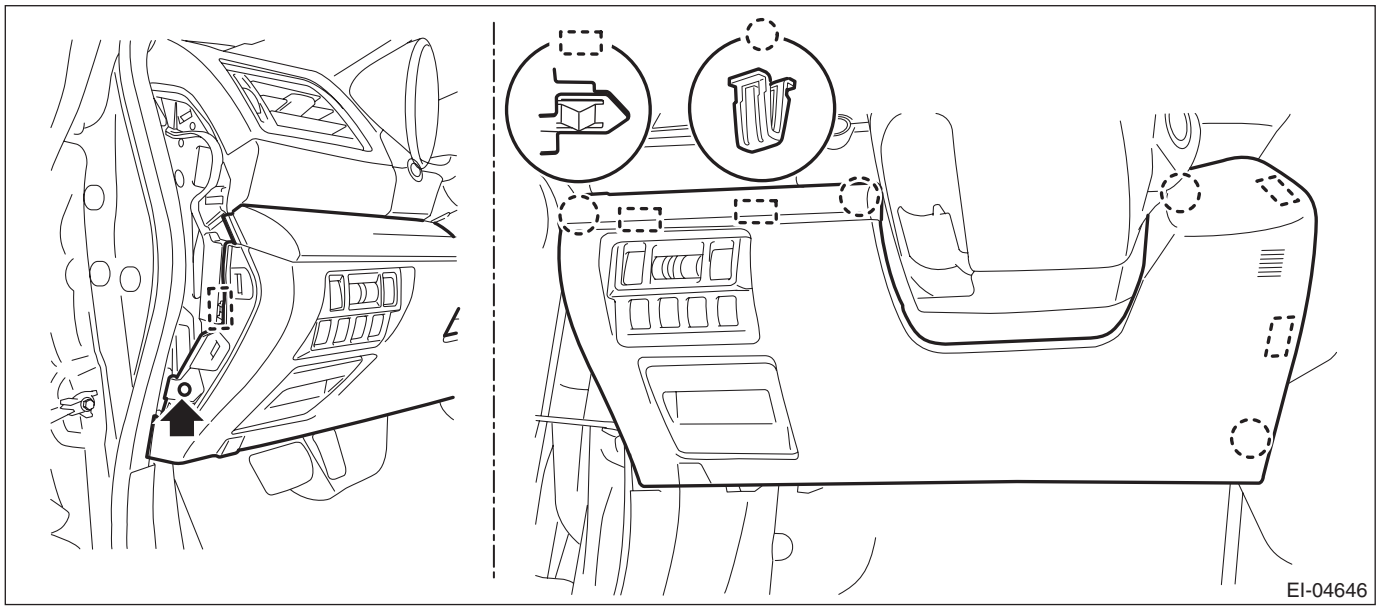
19.Instrument Panel Lower Cover

A: REMOVAL

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the clips, and remove the cover - instrument panel side LH.



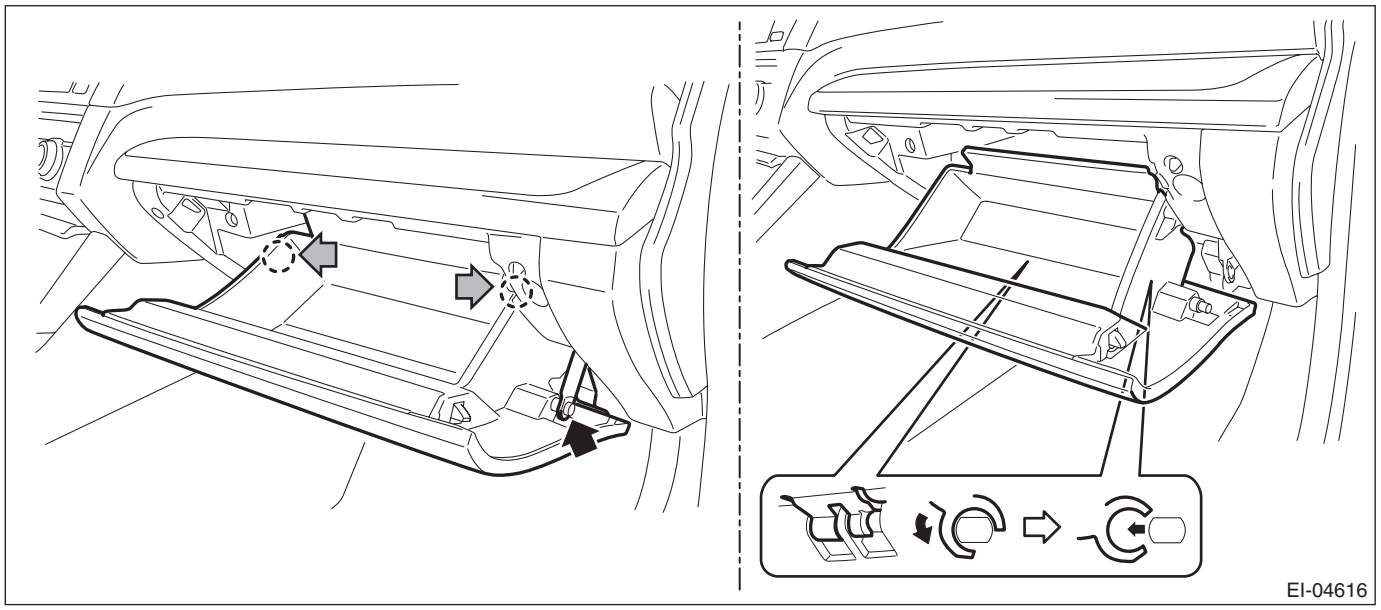
NOTE:
Remove the weather strip - body side flange to facilitate the work.
3) Remove the data link connector and release the hook, and then remove the under cover assembly - driver.



4) Remove the cover assembly - instrument panel LWR driver.

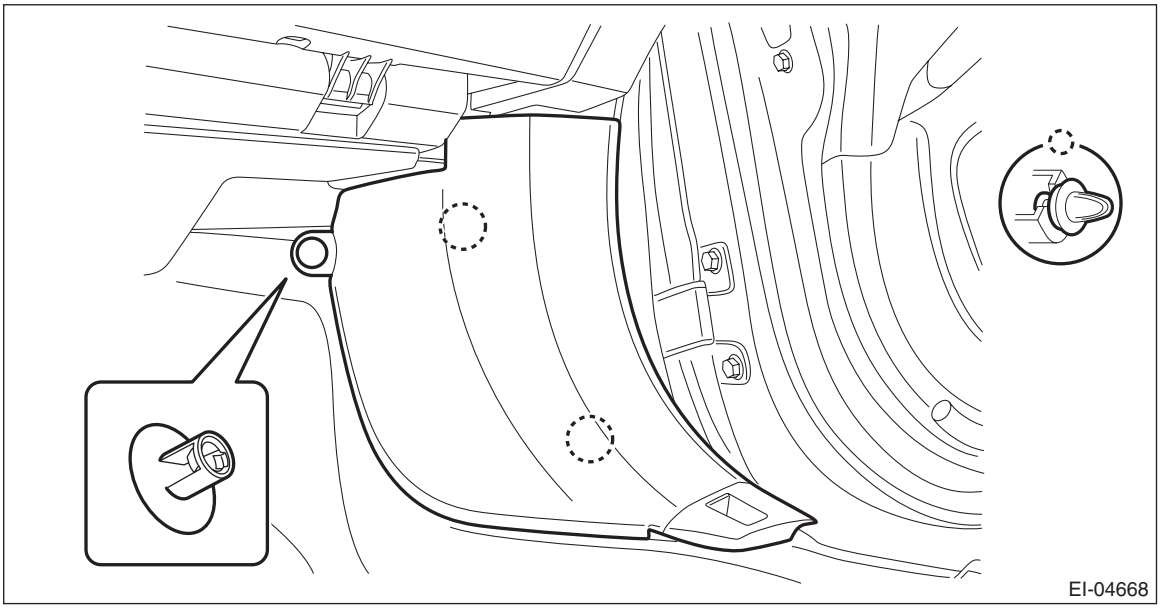
CAUTION:
When removing the cover assembly - instrument panel LWR driver, be sure to pull it toward you. If attempting to remove by turning it upward, the claws may be damaged.

(1) Remove the screws and release the clips and claws.
(2) Disconnect the harness connectors, and remove the cover assembly - instrument panel LWR driver.



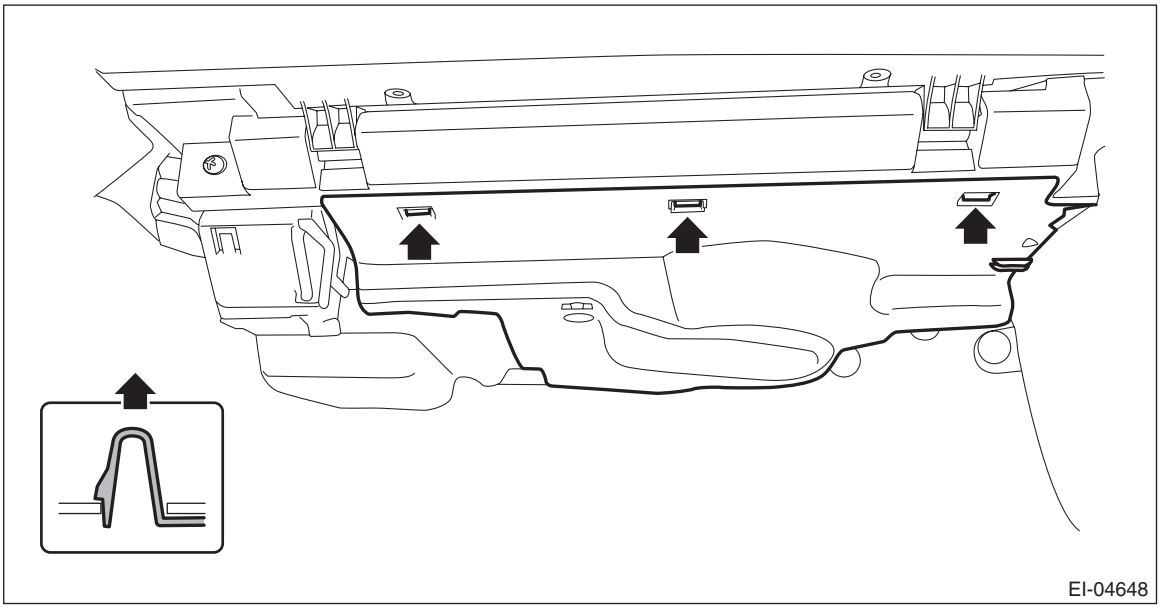
B: INSTALLATION

1) Install the cover assembly - instrument panel LWR driver.
2) Install the data link connector, and install the under cover assembly - driver.
3) Install the cover - instrument panel side LH.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

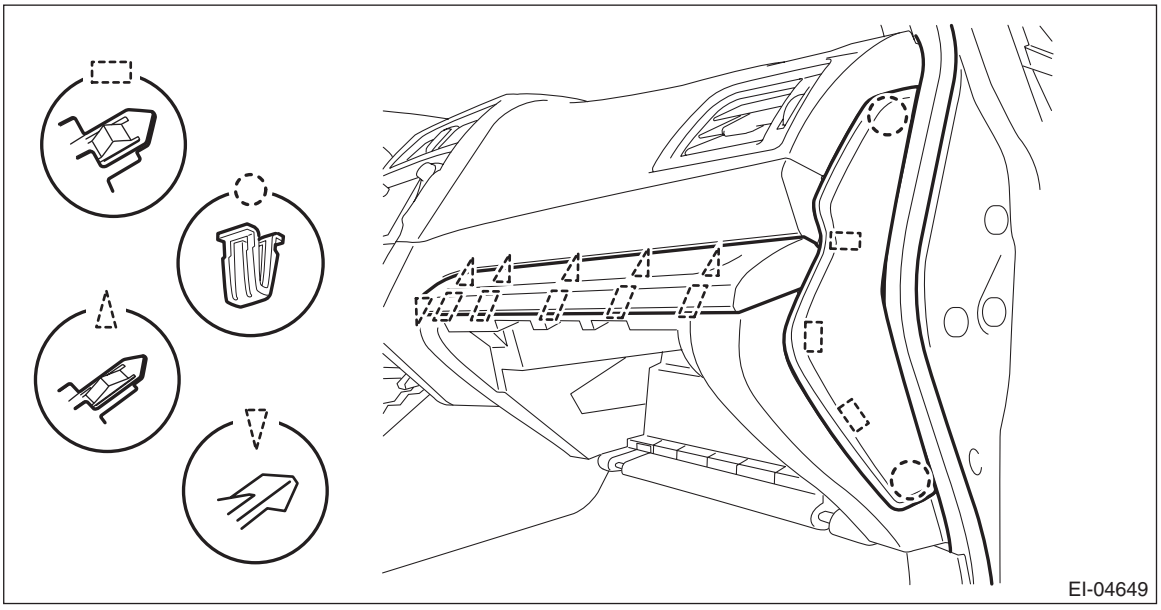


20.Glove Box

A: REMOVAL

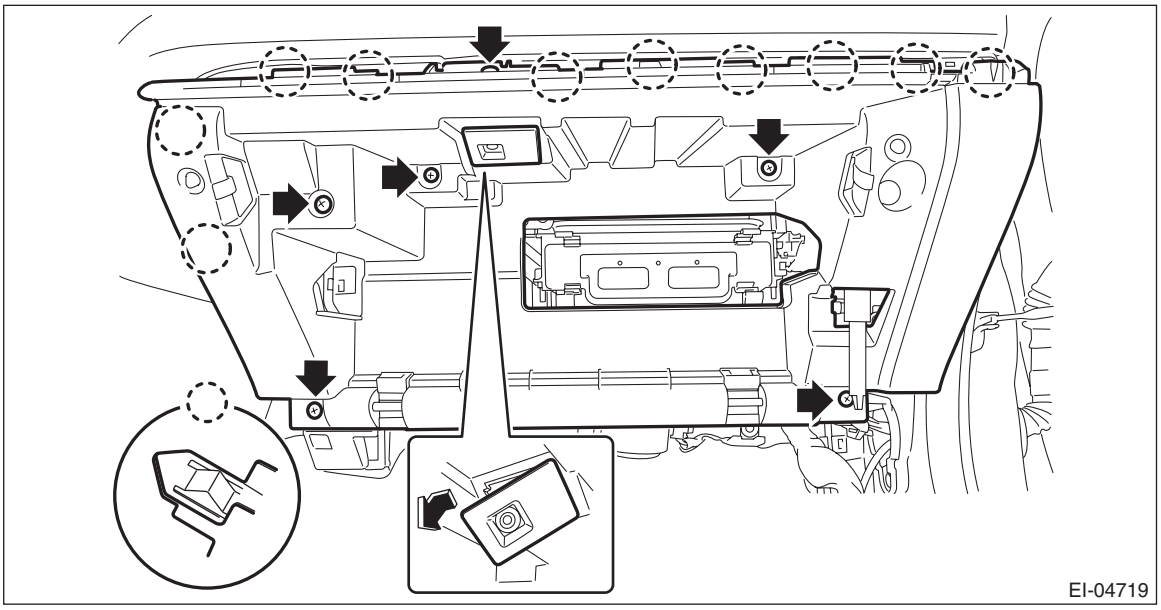


NOTE:
Refer to “Security and Locks” section for key cylinder replacement. <Ref. to SL-75, GLOVE BOX LID, REMOVAL, Key Lock Cylinders.>
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the pocket assembly.
   (1) Remove the damper COMPL - pocket.
   (2) Release the stoppers and remove the pocket assembly by pulling it toward you.



3) Remove the clips, and remove the cover side sill - front.

4) Remove the back panel - pocket.
(1) Release the hook, and remove the under cover assembly - passenger.



(2) Remove the clips, and remove the cover - instrument panel side RH.
(3) Release the clips, and remove the ornament - panel assembly passenger.

(4) Disconnect the glove box light LED connector.

(5) Remove the screws, claws and harness clamp, then remove the back panel - pocket.

B: INSTALLATION

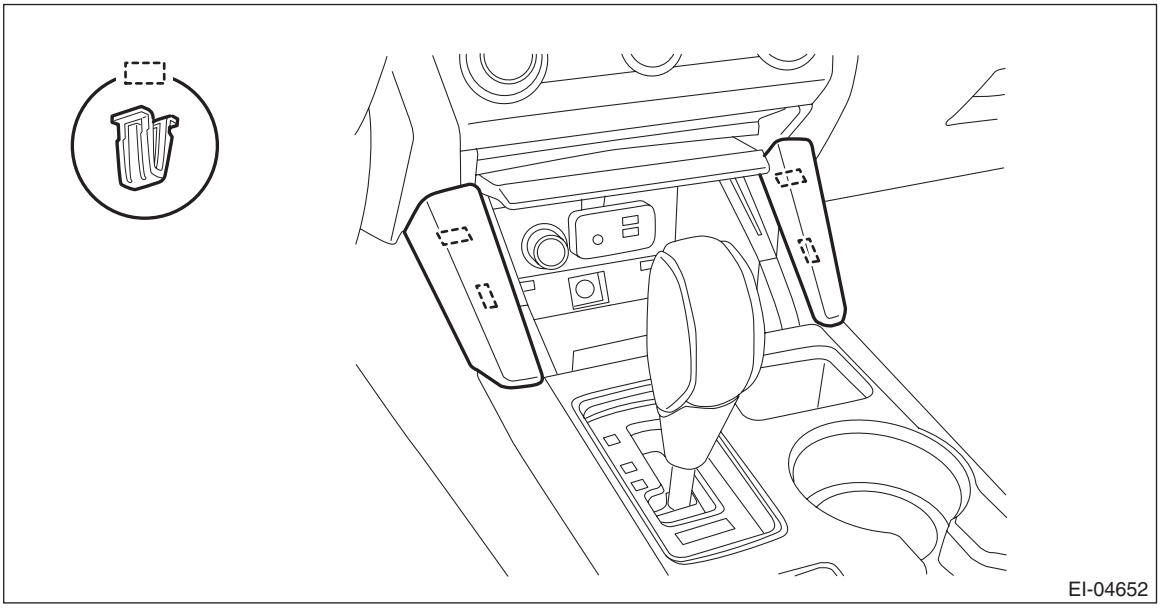
1) Install the back panel - pocket.
2) Connect the glove box light LED connector.
3) Install the ornament - panel assembly passenger.
4) Install the under cover assembly - passenger.
5) Install the pocket assembly.
6) Install the cover - instrument panel side RH.
7) Install the back panel - pocket.
8) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

21.Center Console

A: REMOVAL

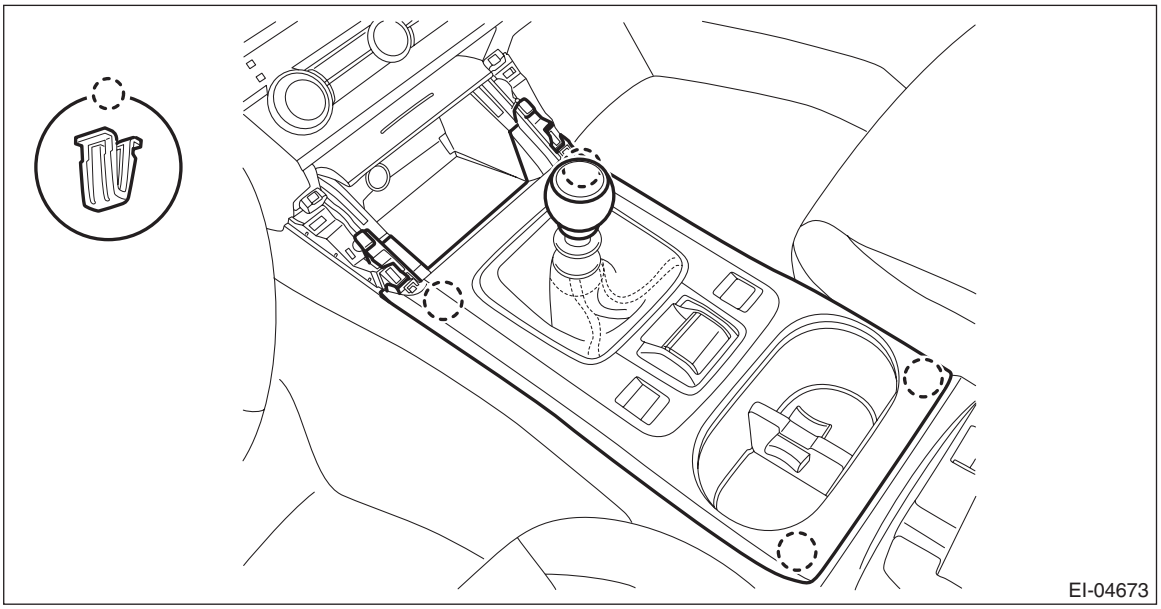
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the center grille assembly. <Ref. to AC-89, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
3) Remove the heater control assembly. <Ref. to AC-44, REMOVAL, Control Panel.>
4) Remove the audio assembly. <Ref. to ET-12, REMOVAL, Audio.>

B: INSTALLATION

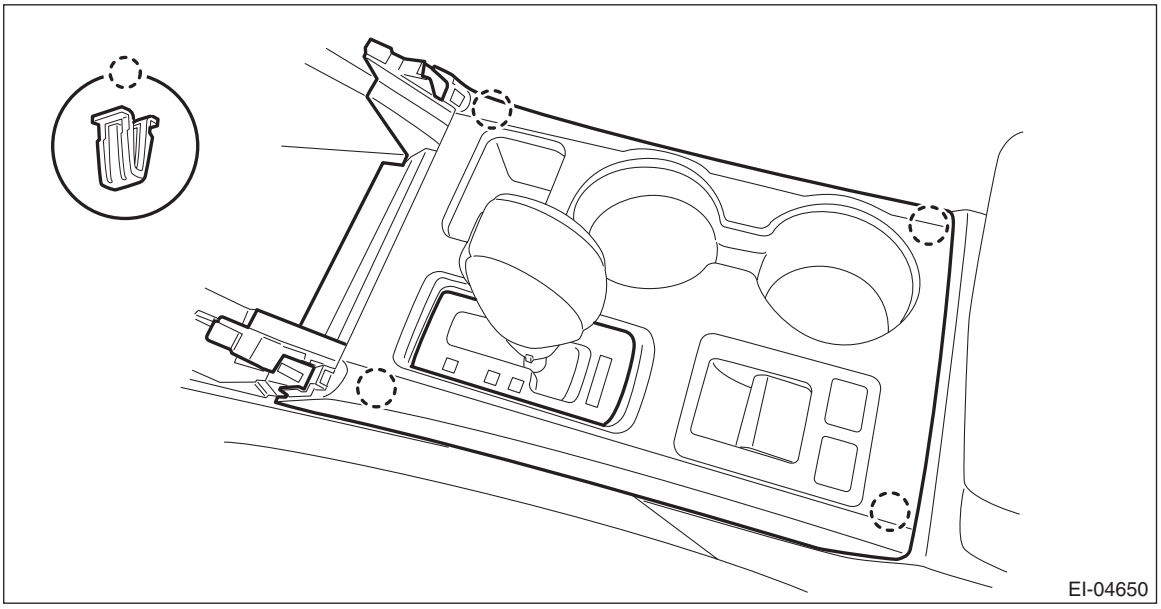


CAUTION:
Make sure that the center grille assembly is inserted into the air vent duct correctly.
1) Install the audio assembly.
2) Install the heater control assembly.
3) Install the center grille assembly.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

22.Console Box

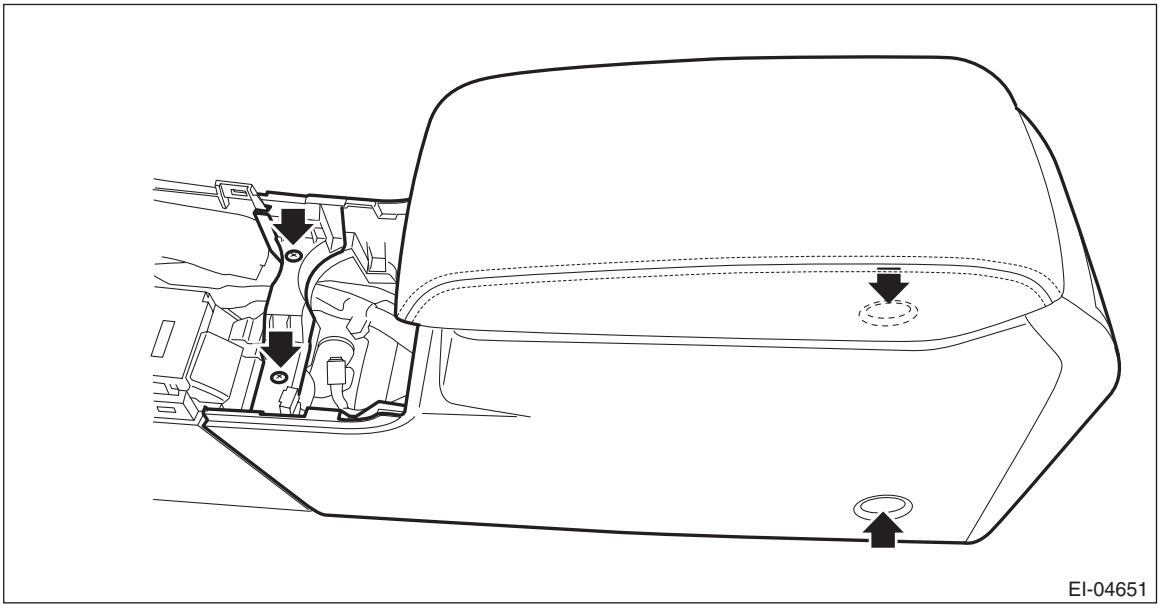


A: REMOVAL

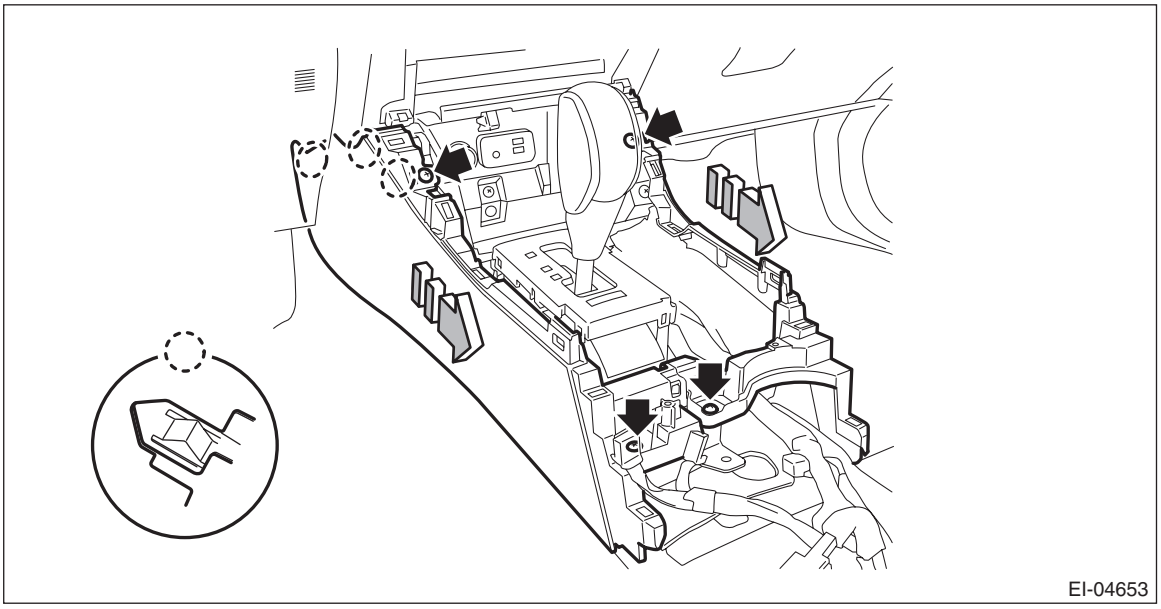


1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

NOTE:
Shift the select lever into “N” before disconnecting the battery ground terminal.
2) Release the clips, and remove the ornament panel - console.



3) Remove the cover assembly - front.
   (1) Remove the shift knob. (MT model)
   (2) Pull up the cover assembly - front, and release the clips.
   (3) Disconnect the connectors, and remove the cover assembly - front.



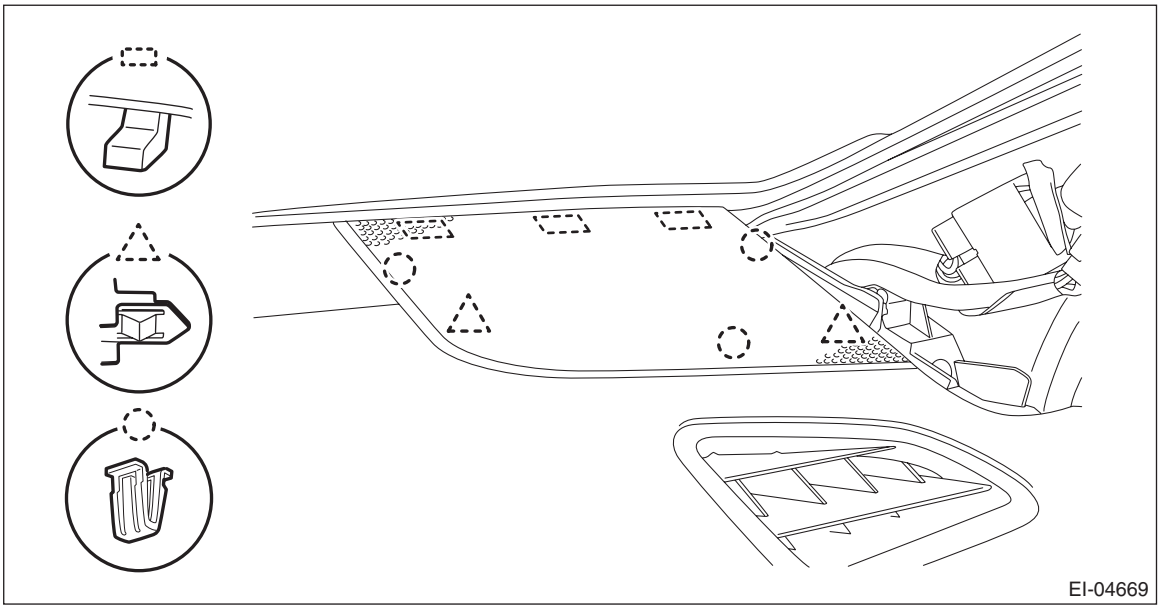
4) Remove the console box assembly.
   (1) Remove the caps, and remove the bolts.
   (2) Remove the screws, disconnect the harness connector and remove the console box assembly.

5) Remove the left and right panel center LWR.
   (1) Remove the screws and clips.
   (2) Release the claws, and then pull the panel center LWR to remove.

B: INSTALLATION

1) Install the panel center LWR.
2) Install the console box assembly.
3) Install the cover assembly - front.
4) Install the shift knob.

NOTE:
For 6MT model, refer to “MT GEAR SHIFT LEVER” in “CS” section. <Ref. to CS-59, INSTALLATION, MT Gear Shift Lever.>

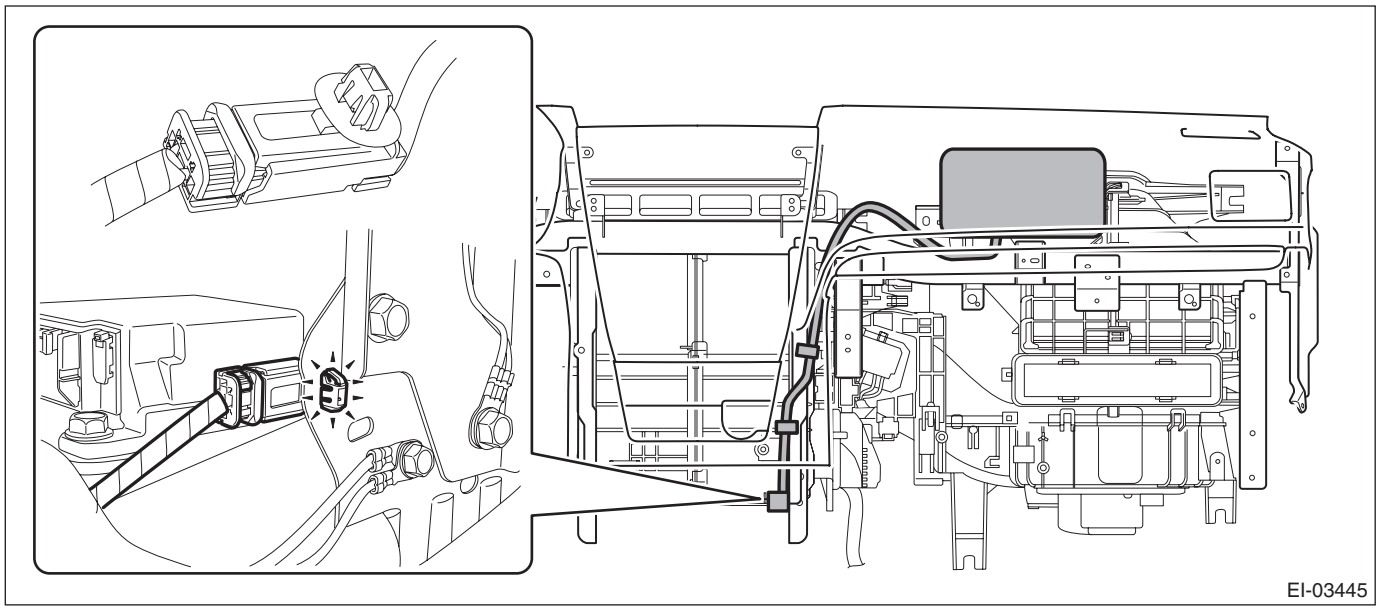


5) Install the ornament panel - console.
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

23.Instrument Panel Assembly

A: REMOVAL

CAUTION:
• Refer to “CAUTION” of “General Description” before handling the airbag module. <Ref. to AB-10, CAUTION, General Description.>
• Be careful not to damage the airbag system harness when servicing the instrument panel. Damage may cause the system to malfunction.
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

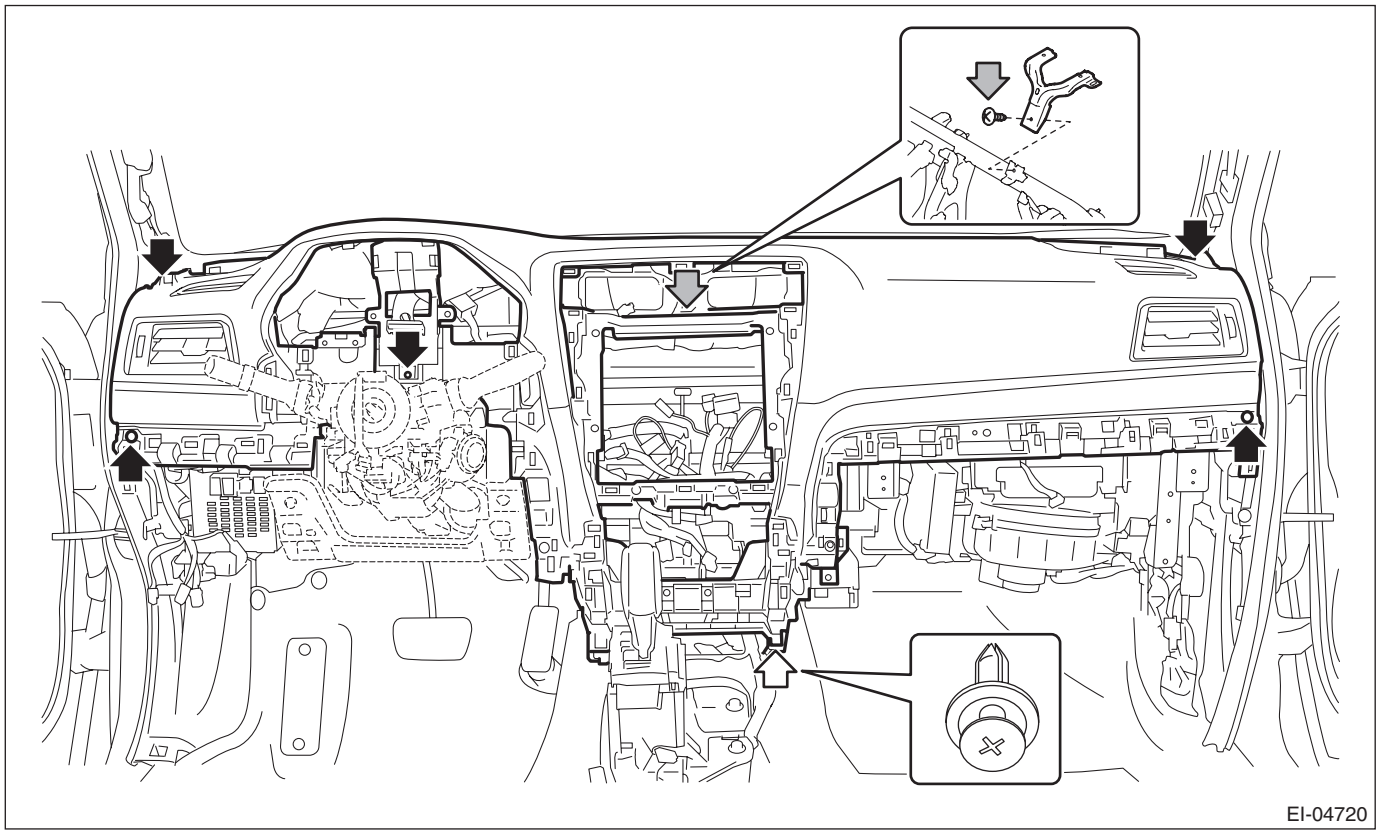


NOTE:
• On CVT models, shift the select lever into “N” before disconnecting the battery ground cable.
• For models with power seat, remove the slide rail installing bolt before disconnecting the ground terminal from the battery sensor.
2) Remove the front seats. <Ref. to SE-11, REMOVAL, Front Seat.>
3) Remove the ornament panel - console, cover assembly - front, console box assembly and the panel center LWR. <Ref. to EI-80, REMOVAL, Console Box.>
4) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-74, REMOVAL, Instrument Panel Lower Cover.>
5) Remove the visor assembly - lower. <Ref. to IDI-18, TRIP RESET SWITCH, REMOVAL, Switches and Harness.>
6) Remove the combination meter assembly. <Ref. to IDI-11, REMOVAL, Combination Meter.>
7) Remove the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>
8) Remove the trim panel - front pillar UPR on the left and right sides. <Ref. to EI-96, REMOVAL, Upper Inner Trim.>
9) Release the clips and claws, then detach the left and right grille speaker side.

NOTE:
Remove the grille speaker side by using a plastic remover.
10) Remove the glove box assembly. <Ref. to EI-76, REMOVAL, Glove Box.>
11) Remove the center grille assembly. <Ref. to AC-89, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
12) Remove the heater control assembly. <Ref. to AC-44, REMOVAL, Control Panel.>
13) Remove the audio assembly or navigation assembly. <Ref. to ET-12, REMOVAL, Audio.>
14) Remove the pocket assembly - CTR. <Ref. to ET-44, REMOVAL, External Connection Terminal.>

15) Remove the speaker assembly. <Ref. to ET-12, REMOVAL, Audio.>
- Tweeter: <Ref. to ET-13, TWEETER, REMOVAL, Front Speaker.>
- Center speaker: <Ref. to ET-14, CENTER SPEAKER, REMOVAL, Front Speaker.>

16) Disconnect the passenger's airbag module connector. <Ref. to AB-19, PASSENGER'S AIRBAG MODULE, PROCEDURE, Airbag Connector.>



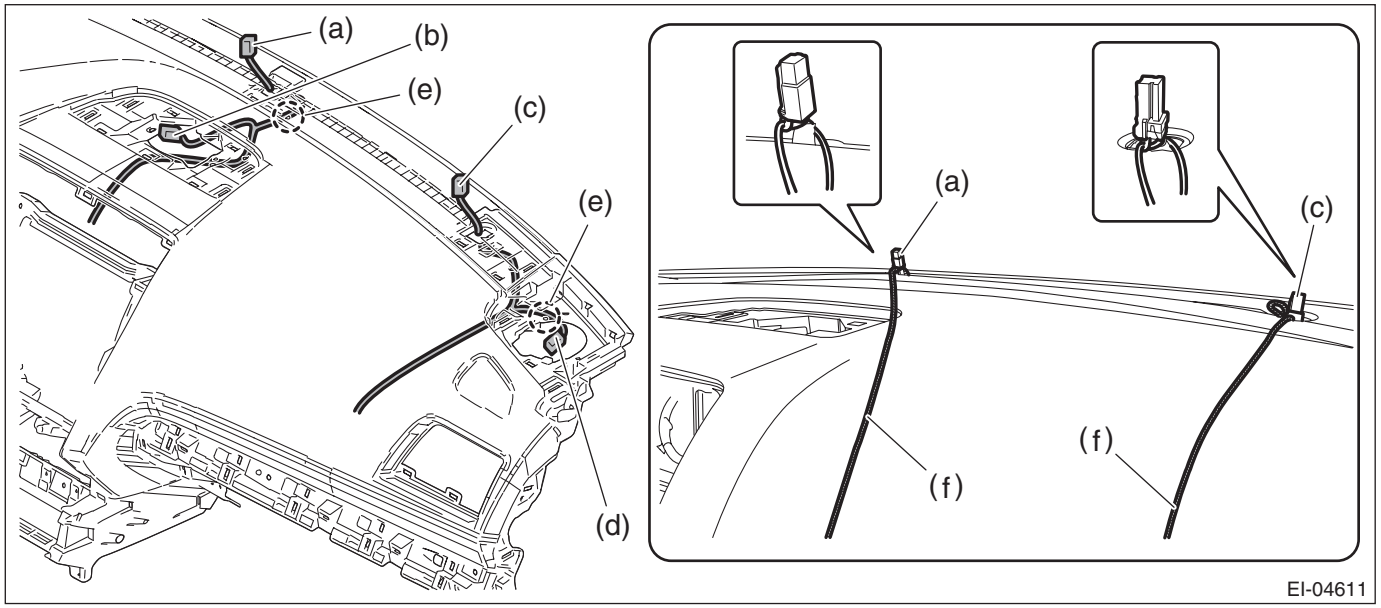
EI-03445

17) Remove the column assembly - steering. <Ref. to PS-19, REMOVAL, Steering Column.>
18) Release the claws, and then remove the cover side sill - front LH and RH. <Ref. to EI-92, REMOVAL, Lower Inner Trim.>
19) Remove the body side weather strip - flange front.

20) Remove the instrument panel assembly.

CAUTION:
Always work in a team of two persons when removing the instrument panel assembly from the vehicle, so as not to damage the vehicle interior.

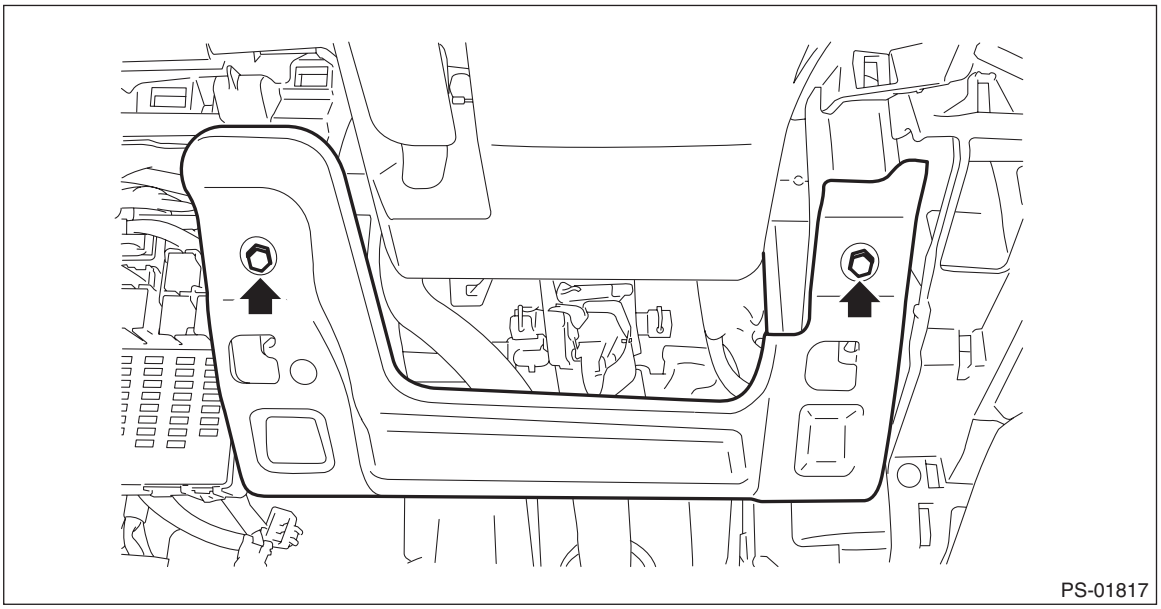
(1) Remove the screws.



NOTE:
• Remove the screw indicated with a gray arrow after removing the harness clamp, and remove the bracket - center UPR.
• For models with rear heater, remove the clip indicated with white arrow.

(2) Prepare two strings of 2 m (78.7 in).
(3) Remove the sunload sensor and sensor - auto light.
• Sunload sensor: <Ref. to AC-70, REMOVAL, Sunload Sensor (Auto A/C Model).>
• Sensor - automatic light: <Ref. to LI-25, REMOVAL, Light Control Sensor.>
(4) Tie a string to the connector harness side, and remove the harness clamp.

(5) When the sensor connectors are pulled out to the lower side of the instrument panel by pulling the string, remove the string.

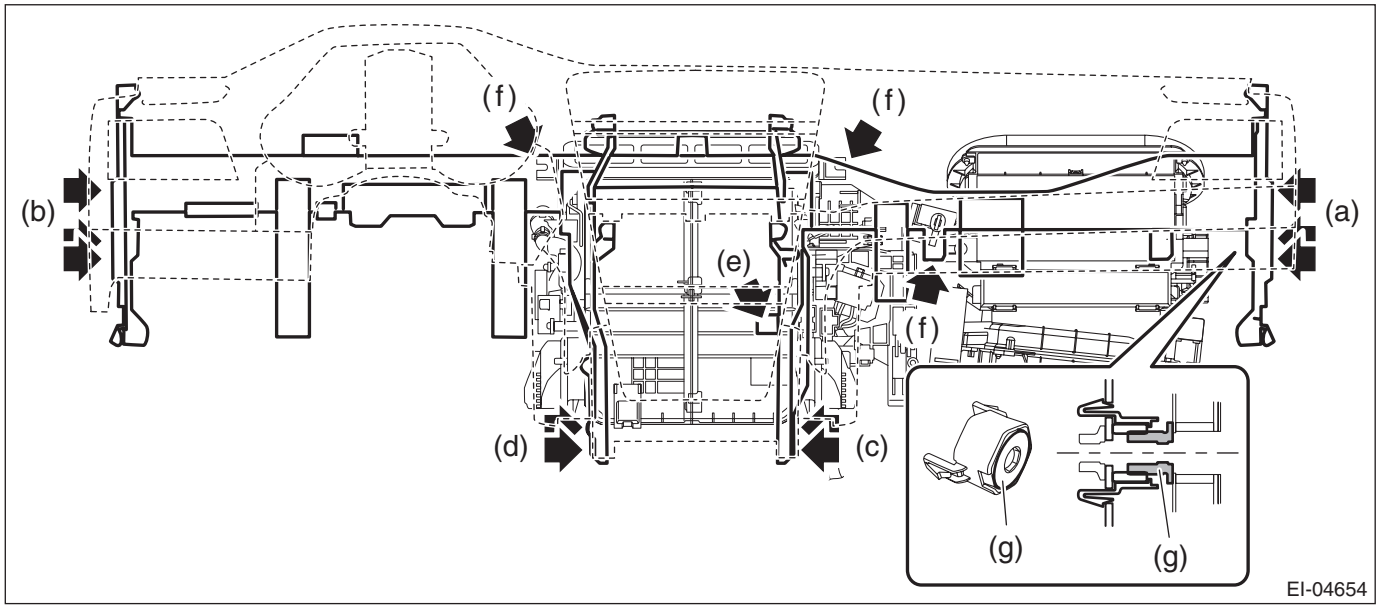


NOTE:
If the string falls out, the assembling work becomes very difficult. Therefore, secure the string on the instrument panel with an adhesive tape to prevent it from falling out.

(a) Sensor - sunload connector
(b) Center speaker connector
(c) Sensor - auto light connector
(d) Tweeter connector
(e) Harness clamp
(f) String

(6) After confirming that all harness clamps and connectors of the instrument panel harness are disconnected, take it out of the vehicle.

21) Remove the bolts, and then remove the panel - knee guard.

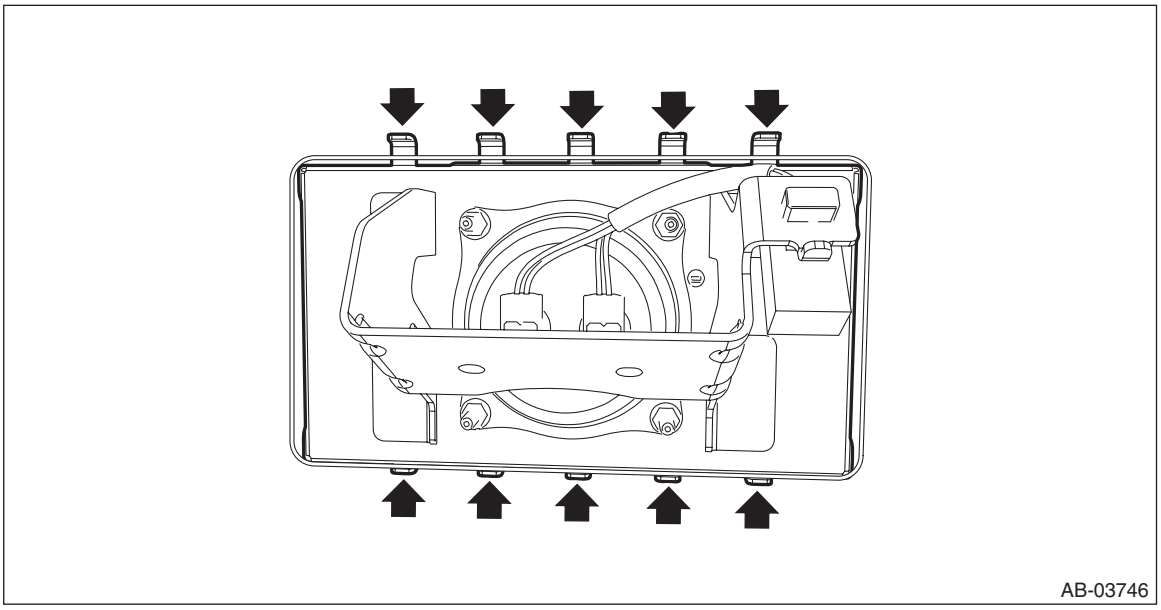


22) Remove the beam COMPL - steering.
(1) Remove the fuse box and relay box.
(2) Disconnect all harness clamps and connectors of the instrument panel harness.
(3) Remove the cap - bolt and remove the TORX® bolt. (a), (b)

Preparation tool:
TORX® T40

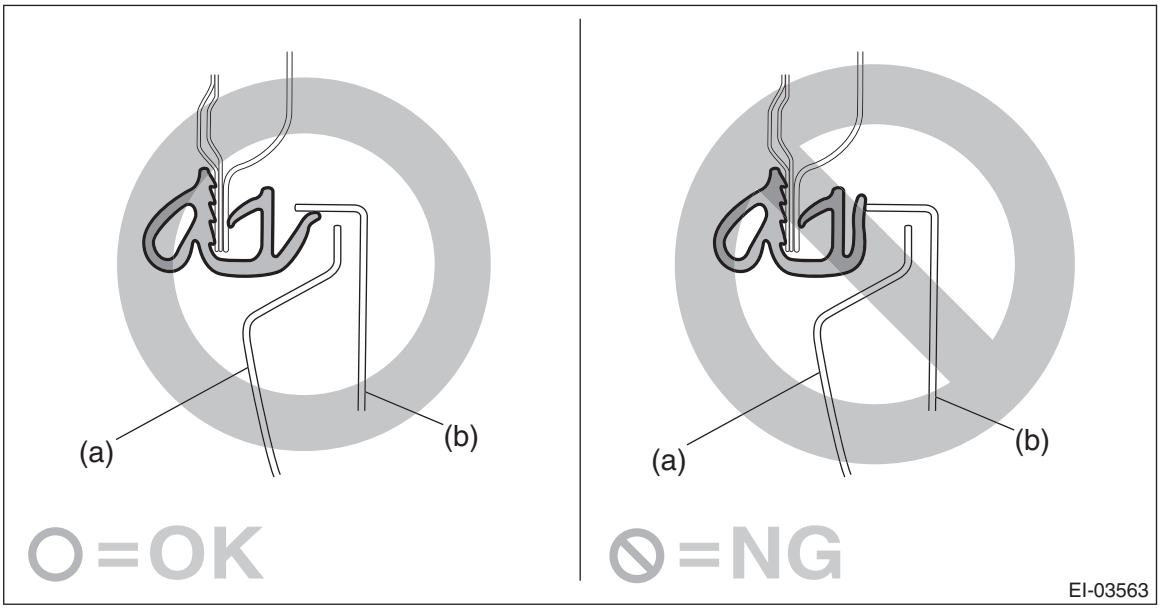
(4) Remove the bolts at the floor center. (c), (d)
(5) Remove the bolts and nuts, and disconnect the heater & cooling unit assembly. (e), (f)
(6) Loosen the adjuster portion (g) of the adjuster - clip space. (Only RH side of the beam COMPL - steering)

Preparation tool:
Hexagon wrench: 8 mm (0.31 in)



(7) Slightly lift the beam COMPL - steering to detach the left and right pins. Then pull it toward you to remove.

CAUTION:
• Check that all harness clamps and connectors are detached.
• When taking the beam COMPL - steering out of the vehicle, be careful not to damage the vehicle interior.



23) Remove the grille front defroster.
24) Remove the screws, and then remove each vent duct.

25) Remove the claws, and remove the passenger's airbag module.

B: INSTALLATION

CAUTION:
• Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-10, CAUTION, General Description.>
• After installing the panel center assembly, check that the air vent grille of the panel center assembly is inserted correctly into the air vent duct.
• When installing the cover - instrument panel side (a), make sure that the body side weather strip - flange front does not come inside the panel COMPL - instrument (b).

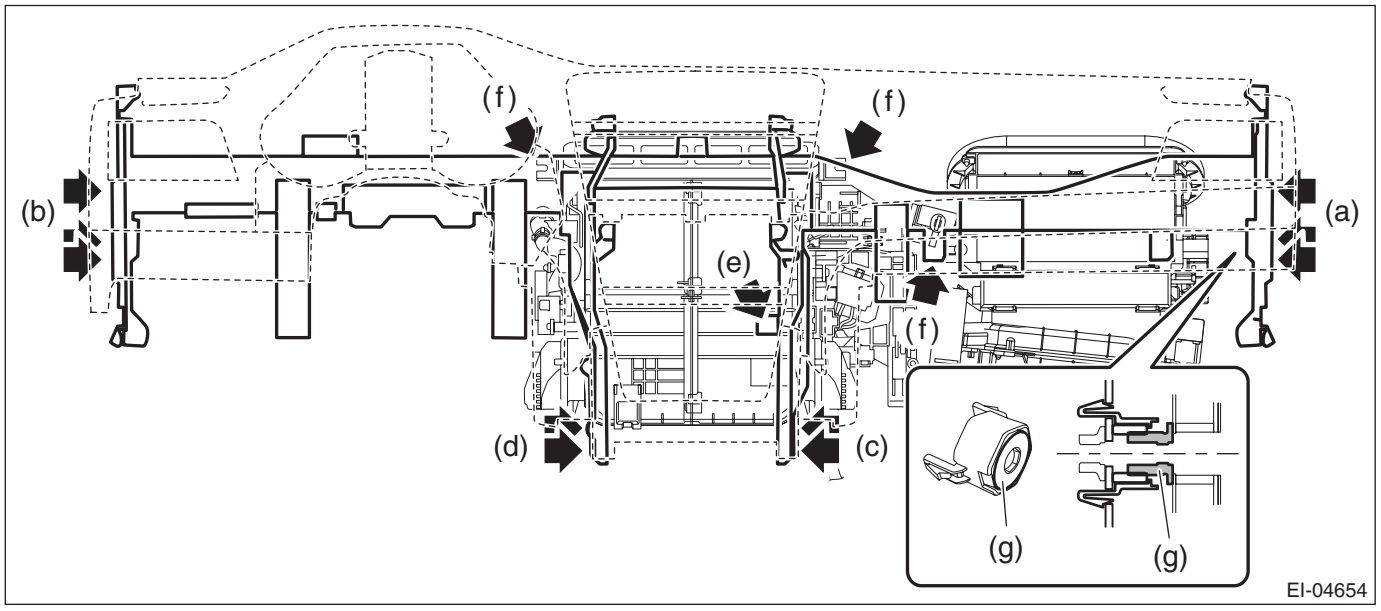
• When reusing the tether clip on the upper part of the trim panel - front pillar UPR, check that there is no damage to the tether clip. If the clip is damaged, its holding force is reduced and the trim panel - front pillar UPR may come off. Be sure to replace it with a new clip.
• Do not reuse the tether clip removed from the upper part of the trim panel - front pillar UPR. Always replace with a new part.

1) Attach components until the instrument panel assembly is formed, in the reverse order of removal.

NOTE:
Method of installing insulator
- Adhesive

Use polyurethane adhesive. When assembling the instrument panel assembly, wait until the adhesive has evaporated to prevent filling of the smell in the compartment.
- Double-sided tape

Use commercial double-sided tape. (Use strong double-sided adhesive tape.)



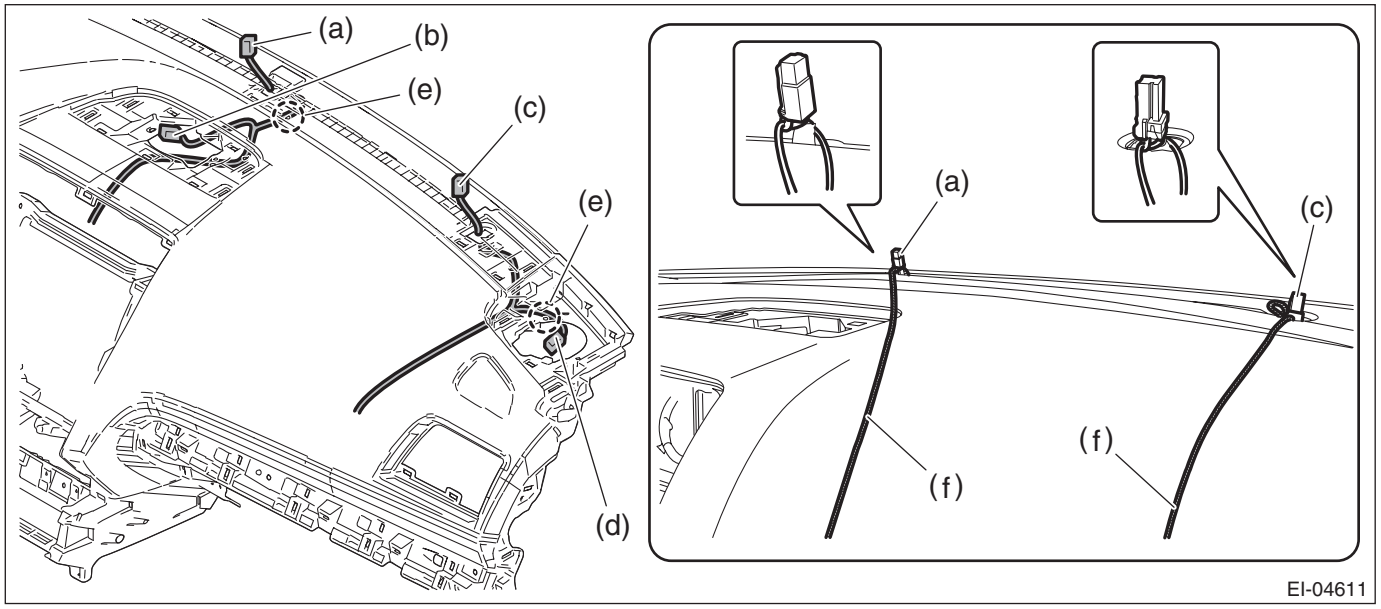
2) Install the beam COMPL - steering.
   (1) Place the beam COMPL - steering on the vehicle, and check that the pins on both sides are inserted securely and the harness is routed properly. Connect each connector.
   (2) Secure the beam COMPL - steering to the heater and cooling unit assembly. (e), (f)

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

   (3) Temporarily tighten the bolts (c) and (d) of the beam COMPL - steering.

Preparation tool:
Hexagon wrench: 8 mm (0.31 in)

Tightening torque:
Adjuster - clip space: 0.4 — 4 N·m (0.04 — 0.4 kgf-m, 0.3 — 3 ft-lb)



NOTE:
When the TORX® bolt is tightened after setting the adjuster portion (g) of the adjuster - clip space to the free position, the adjuster is secured at the position where there is no gap to the body, and then the TORX® bolt is tightened.

   (5) Tighten the beam COMPL - steering in the order from (a) to (d) to the specified torque.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

3) Install the instrument panel assembly.
   (1) Tie a string to the sensor - sunload and the sensor - auto light, and then pull the string so that each sensor is placed at the specified position.
   (2) Secure the harness clamp.

(a)	Sensor - sunload connector	(c)	Sensor - auto light connector	(e)	Harness clamp
(b)	Center speaker connector	(d)	Tweeter connector	(f)	String

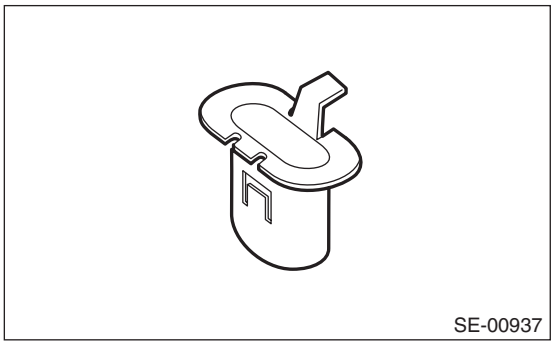
   (3) Install the sensor - sunload and the sensor - auto light.
   (4) Insert the matching pins on the body side (three locations - one in the center and the remaining two on both sides) into the instrument panel assembly and the beam COMPL - steering.
   (5) Install the duct - center vent front, and secure the instrument panel assembly to the beam COMPL - steering with screws.
4) Insert the matching pins on the body side (three locations - one in the center and the remaining two on both sides) into the instrument panel assembly and the beam COMPL - steering.
5) Install the passenger's airbag module.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
6) Install the column assembly - steering.

Tightening torque:
Column assembly - steering: <Ref. to PS-3, STEERING WHEEL AND COLUMN, COMPONENT, General Description.>
7) Install the cover side sill - front on the RH and LH sides.
8) Install the speaker assembly.
9) Install the keyless access CM.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

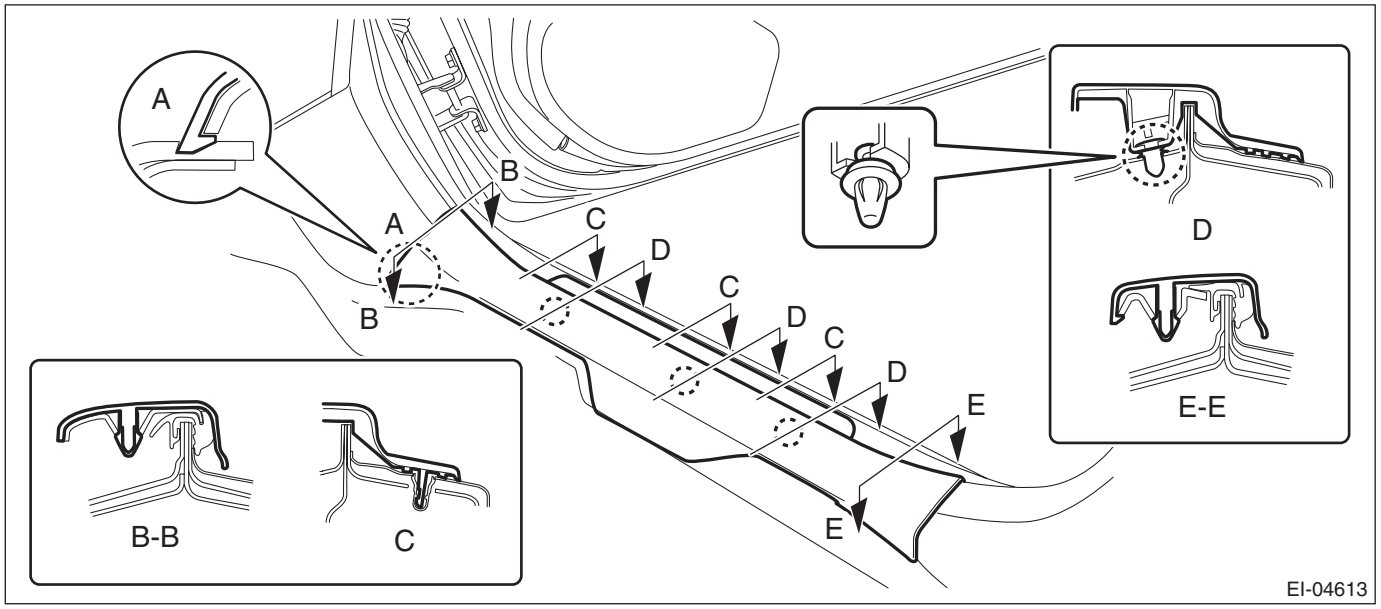
10) Install the combination meter assembly.
11) Install the visor assembly - lower.
12) Install the audio assembly or navigation assembly.
13) Install the heater control assembly.
14) Install the center grille assembly.
15) Install the glove box assembly.
16) Install the trim panel - front pillar UPR on the RH and LH sides.
17) Install the grille speaker side on the RH and LH sides.
18) Install the panel - knee guard.



Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)
19) Install the cover assembly - instrument panel LWR driver.
20) Install the body side weather strip - flange front.
21) Install the ornament panel - console, cover assembly - front, console box assembly and the panel center LWR.

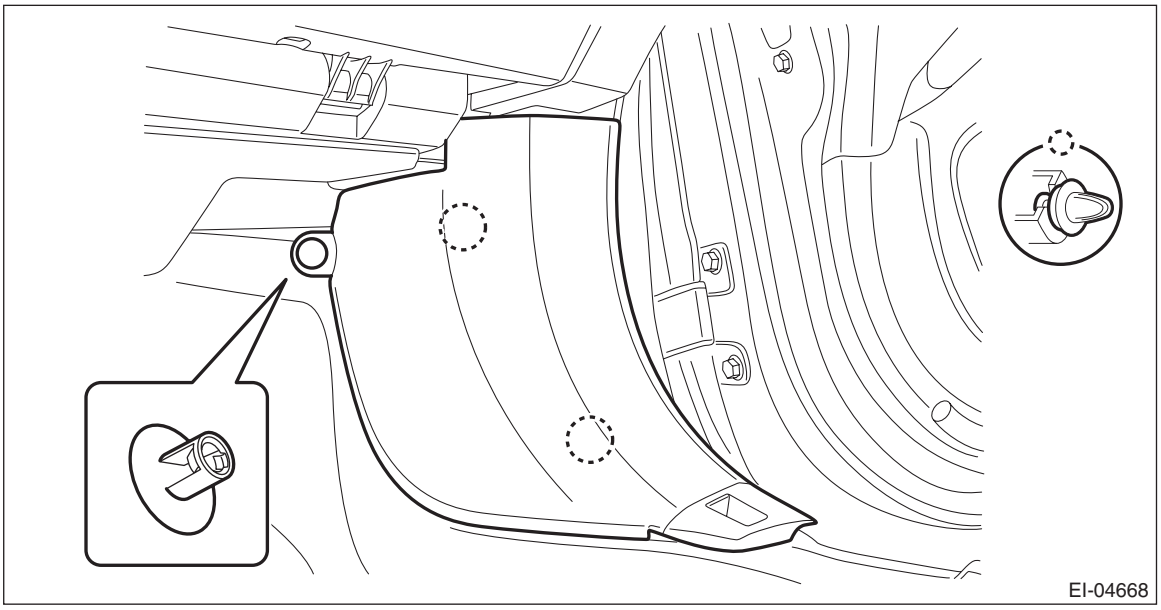
Tightening torque:
Console box assembly: 6.5 N·m (0.6 kgf-m, 4.8 ft-lb)
22) Install the front seat assembly to the body. <Ref. to SE-12, INSTALLATION, Front Seat.>
23) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

24.Lower Inner Trim



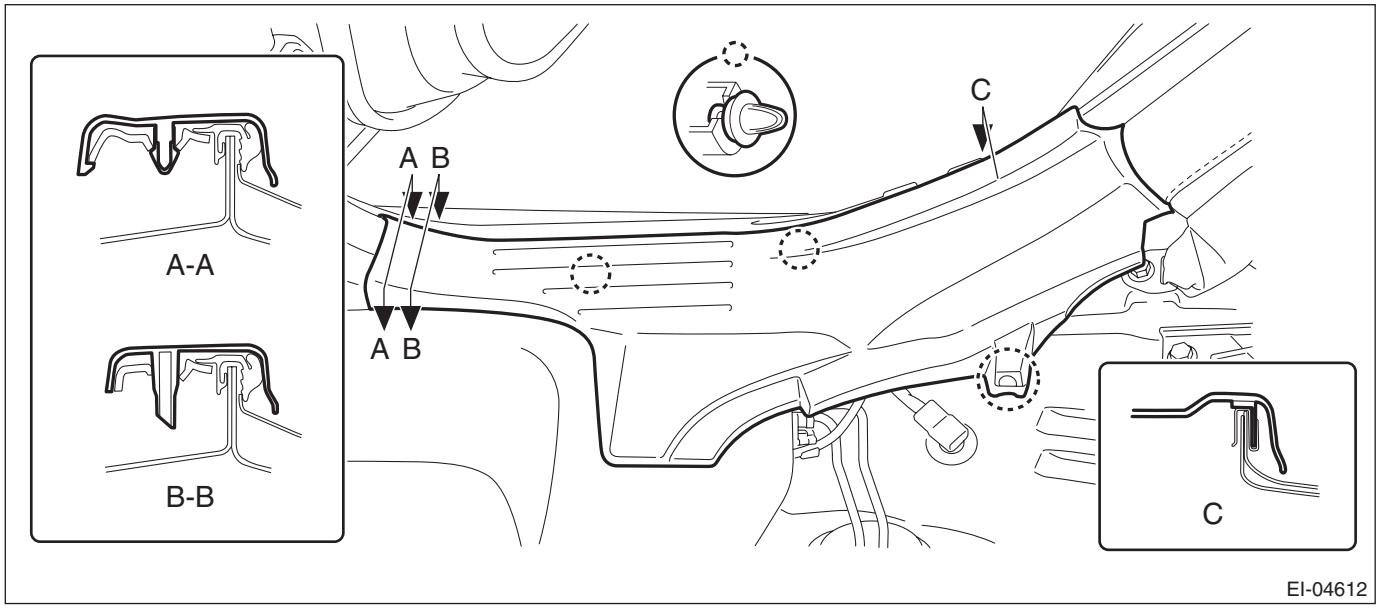
A: REMOVAL

CAUTION:
• The airbag system is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds before starting the service of airbag system.
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

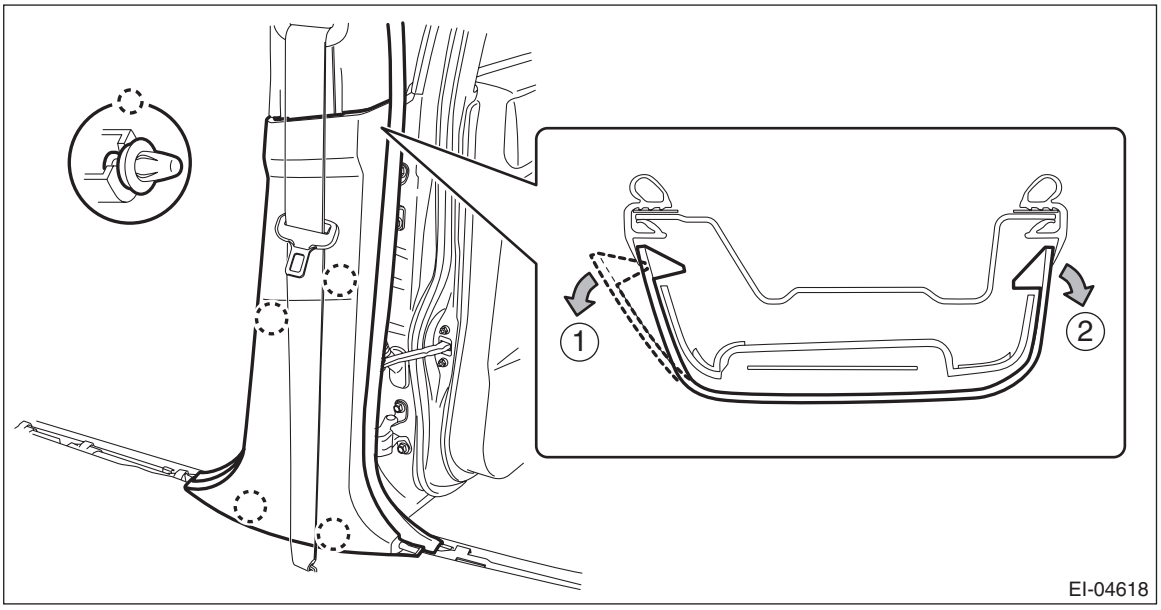


1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Release the claws, and then remove the cover side sill - front.

CAUTION:
Do not pull with excessive force. Doing so may damage the claws of the cover side sill - front.

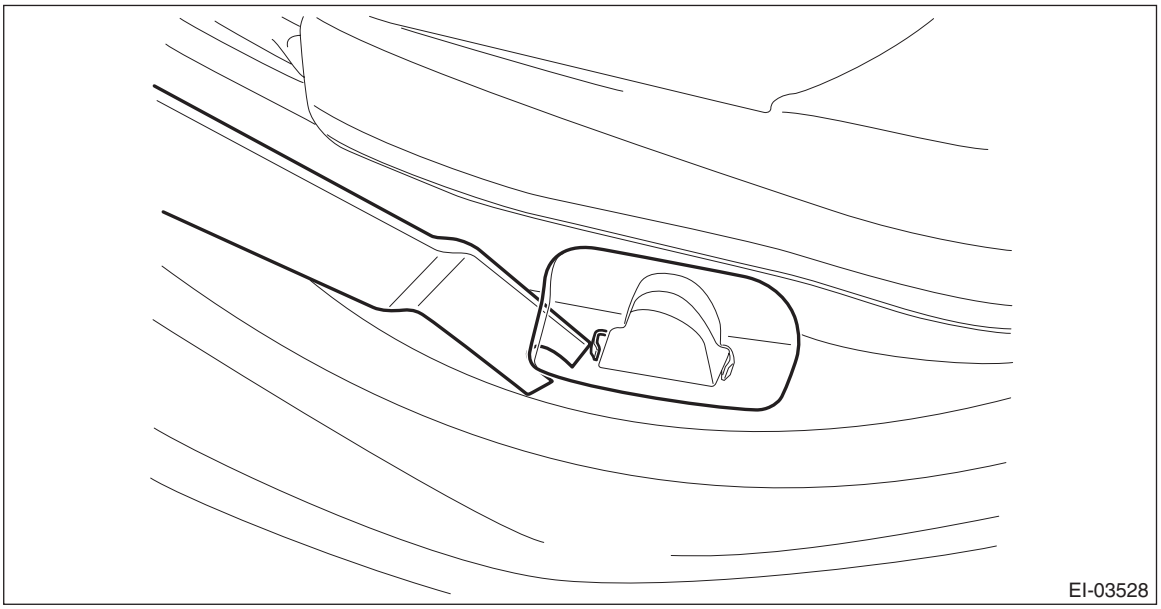


3) Remove the clips, and remove the cover side sill - front.



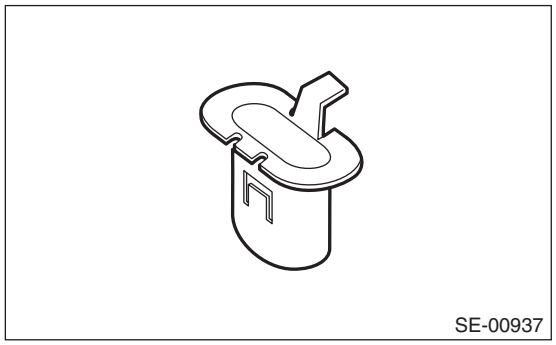
4) Remove the rear seat cushion assembly. <Ref. to SE-33, REMOVAL, Rear Seat.>
5) Release the clips and claws, and then remove the cover side sill - rear.

CAUTION:
Do not pull with excessive force. Doing so may damage the claws of the cover side sill - rear.



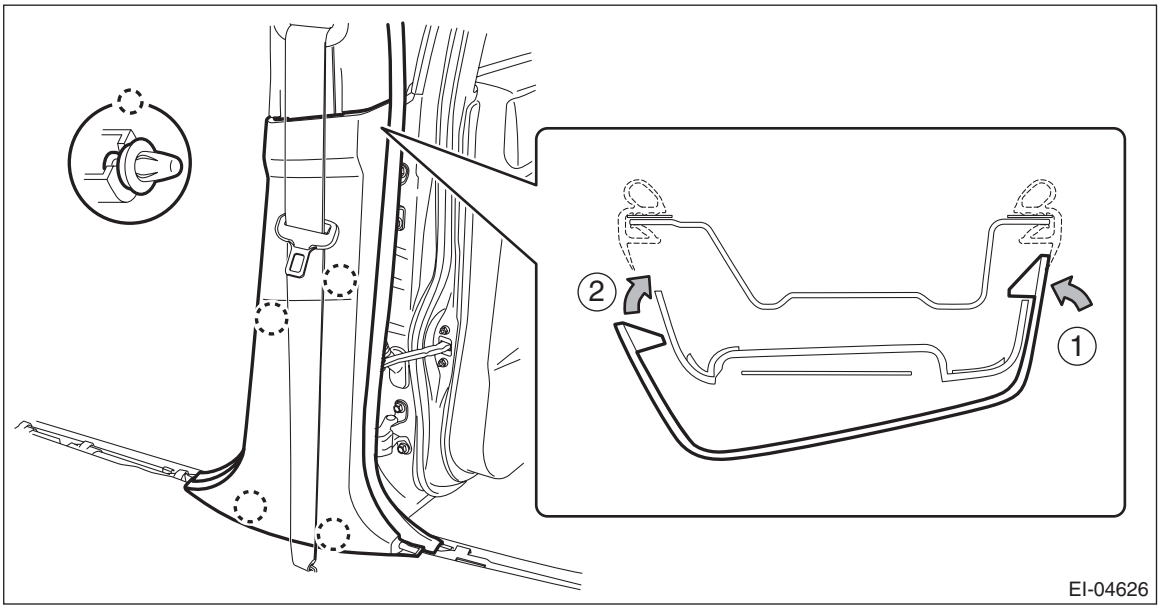
6) Remove the trim panel - center pillar LWR.
(1) Release the clip by pulling the trim panel - center pillar LWR toward you.
(2) Expand the claws of the trim panel - center pillar LWR outward, and remove it from the trim panel - center pillar UPR.

CAUTION:
- **Do not expand the trim panel - center pillar LWR excessively. Doing so may damage the trim.**
- **If the claw is damaged, always replace the trim panel - center pillar LWR with a new part, because the damaged claw cannot hold the part sufficiently.**



NOTE:
First release the claw located to the front of the vehicle.
7) Disconnect the claws and remove the cover - catcher.

NOTE:
Remove the cover - catcher by using a plastic remover.

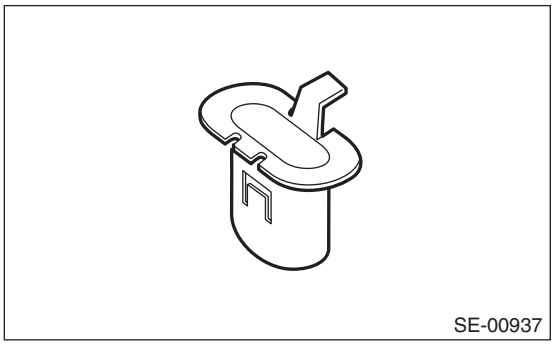


B: INSTALLATION

CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

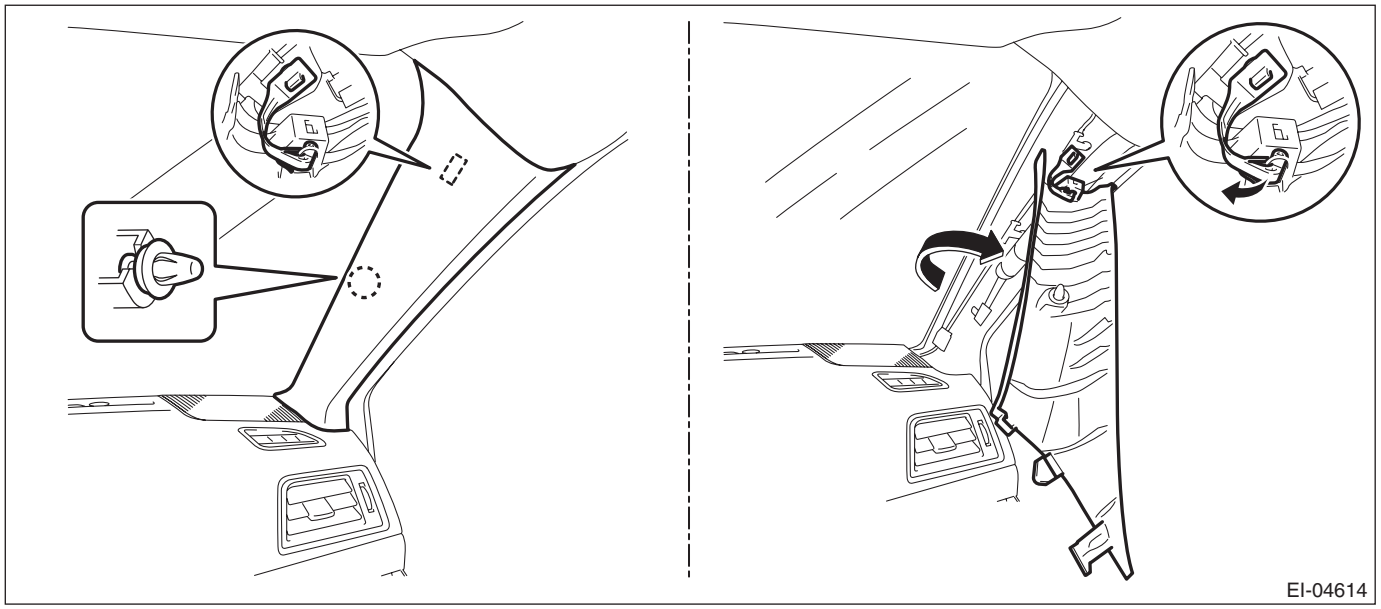
1) Install the cover - catcher.
2) Install the trim panel - center pillar LWR.

NOTE:
Assemble the trim panel - center pillar LWR to the trim panel - center pillar UPR securely.



3) Install the cover side sill - rear.
4) Install the rear seat cushion assembly.
5) Install the cover side sill - front.
6) Install the cover side sill - front.

25.Upper Inner Trim



A: REMOVAL

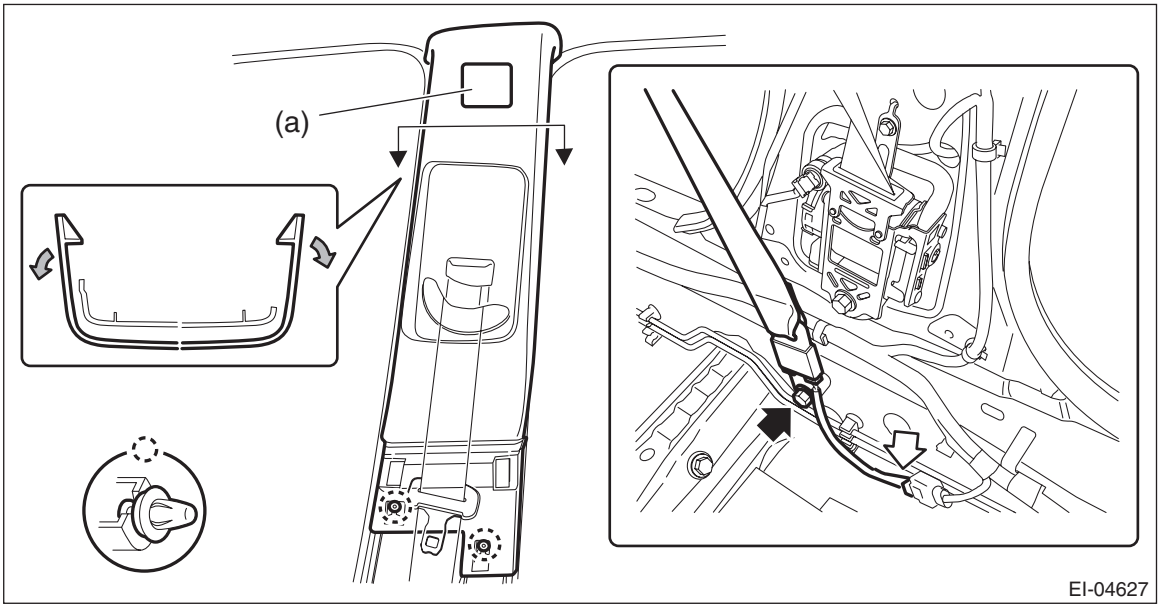
CAUTION:
• The airbag system is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds before starting the service of airbag system.
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

SE-00937

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front pillar UPR.
(1) Pull the trim panel - front pillar UPR towards the center of the vehicle to release the clips.
(2) Rotate the trim panel - front pillar UPR in the arrow direction.
(3) Release the hook at the end of the tether clip, and remove the trim panel - front pillar UPR.

CAUTION:
• Do not use any tool when releasing the hook at the end of the trim panel - front pillar UPR.
• Be careful not to damage the surface of the trim panel - front pillar UPR and the curtain airbag module.

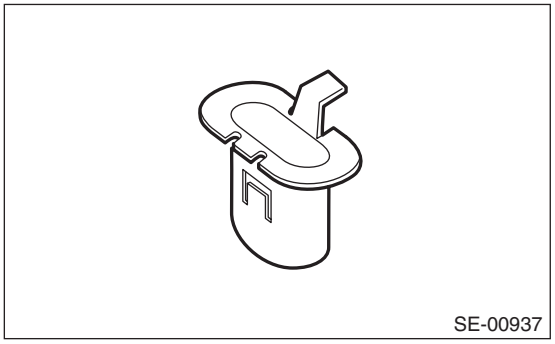
EI-04614



3) Remove the rear seat cushion assembly. <Ref. to SE-33, REMOVAL, Rear Seat.>
4) Remove the cover side sill - front, cover side sill - rear, and the trim panel - center pillar LWR. <Ref. to EI-92, REMOVAL, Lower Inner Trim.>

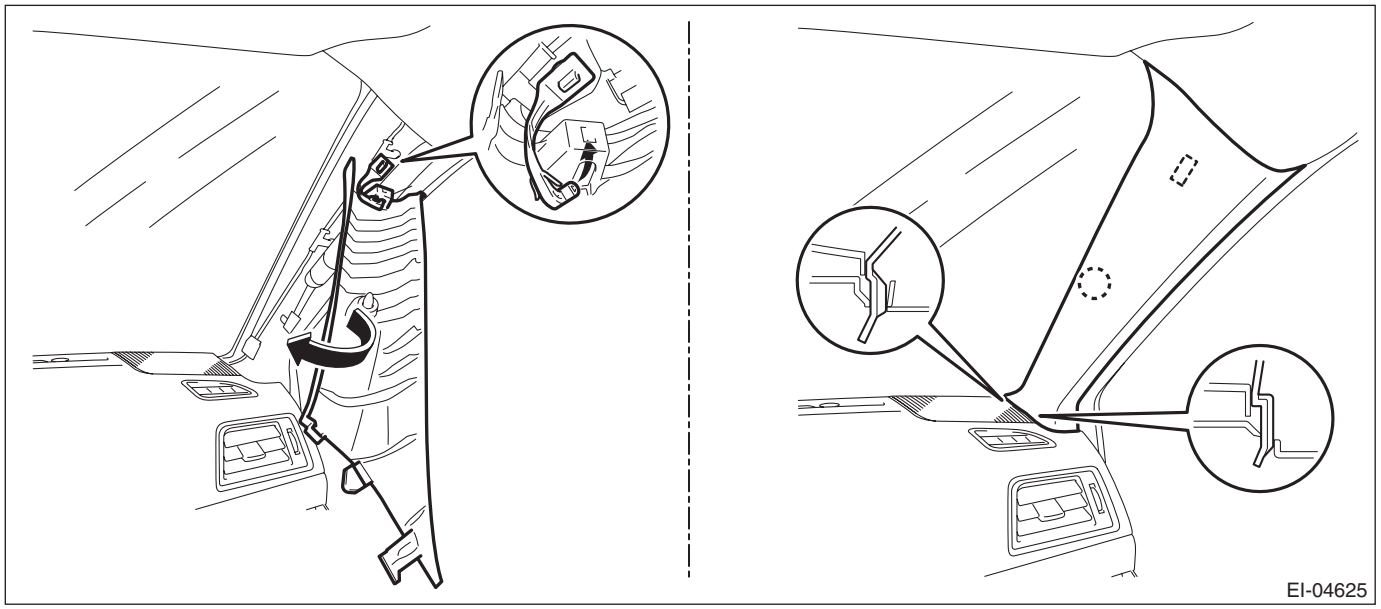
5) Remove the trim panel - center pillar UPR.
(1) Remove the cap (a), and remove the bolts.
(2) Remove the lower anchor bolt of the seat belt outer - front.

NOTE:
On passenger's side, disconnect the connector of the seat belt tension sensor. <Ref. to AB-22, BELT TENSION SENSOR, PROCEDURE, Airbag Connector.>



(3) Release the clip by pulling the lower part of the trim toward you.
(4) Expand the claws outward, and remove the trim panel - center pillar UPR.

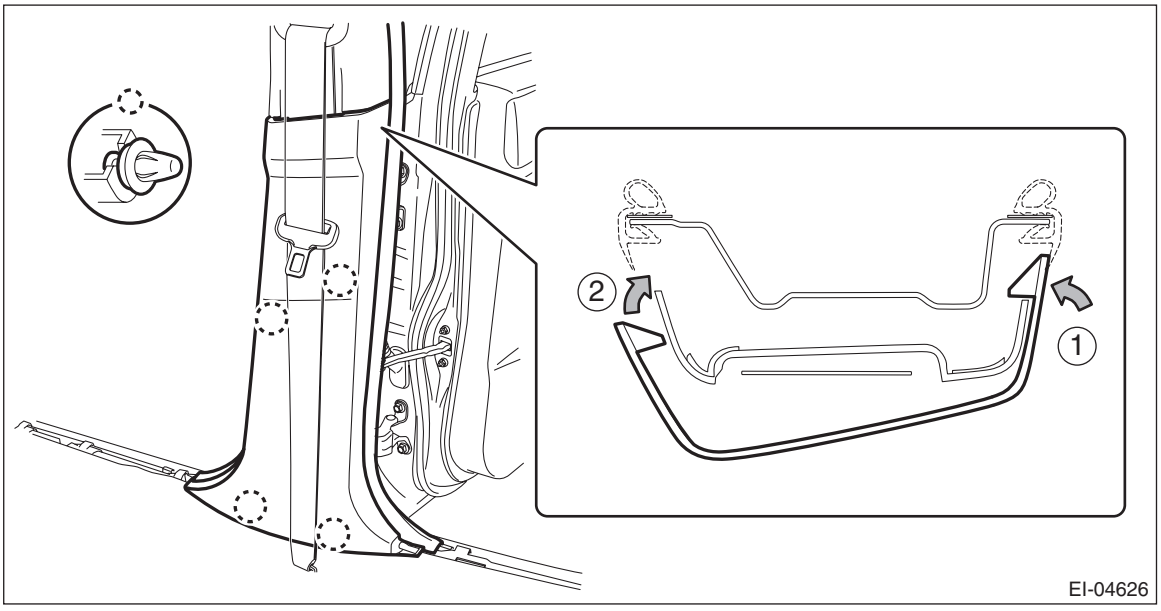
CAUTION:
• Do not expand the trim panel - center pillar UPR excessively. Doing so may damage the trim.
• If the claw is damaged, always replace the trim panel - center pillar UPR with a new part, because the damaged claw cannot hold the part sufficiently.



B: INSTALLATION

CAUTION:
• When reusing the tether clip on the upper part of the trim panel - front pillar UPR, check that there is no damage to the tether clip. If the clip is damaged, its holding force is reduced and the trim panel - front pillar UPR may come off. Be sure to replace it with a new clip.
• Do not reuse the tether clip removed from the upper part of the trim panel - front pillar UPR. Always replace with a new part.
• Before installing the trim panel - front pillar UPR, check the condition of protective non-woven fabric (white) of the curtain airbag. If it is damaged (airbag module cloth is exposed), replace the curtain airbag module assembly with a new part.
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

1) Remove the remaining tether clips from the vehicle body.
2) Install the trim panel - front pillar UPR.
   (1) Hook the tip of the tether clip on the trim panel - front pillar UPR.
   (2) Rotate the trim panel - front pillar UPR in the arrow direction as shown in the figure.
   (3) Insert the claw at the end of the trim panel - front pillar UPR, and engage the clip.

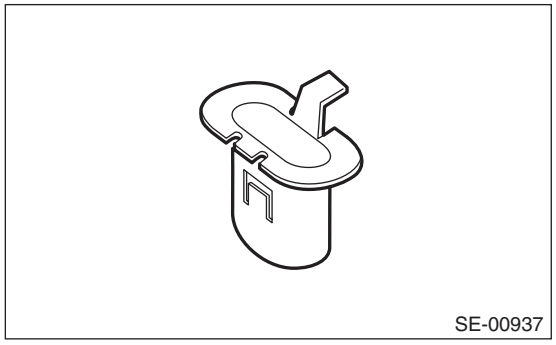


3) Install the trim panel - center pillar UPR.

Tightening torque:
Trim panel - center pillar UPR: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
Front seat belt anchor: 30 N·m (3.1 kgf-m, 22.1 ft-lb)

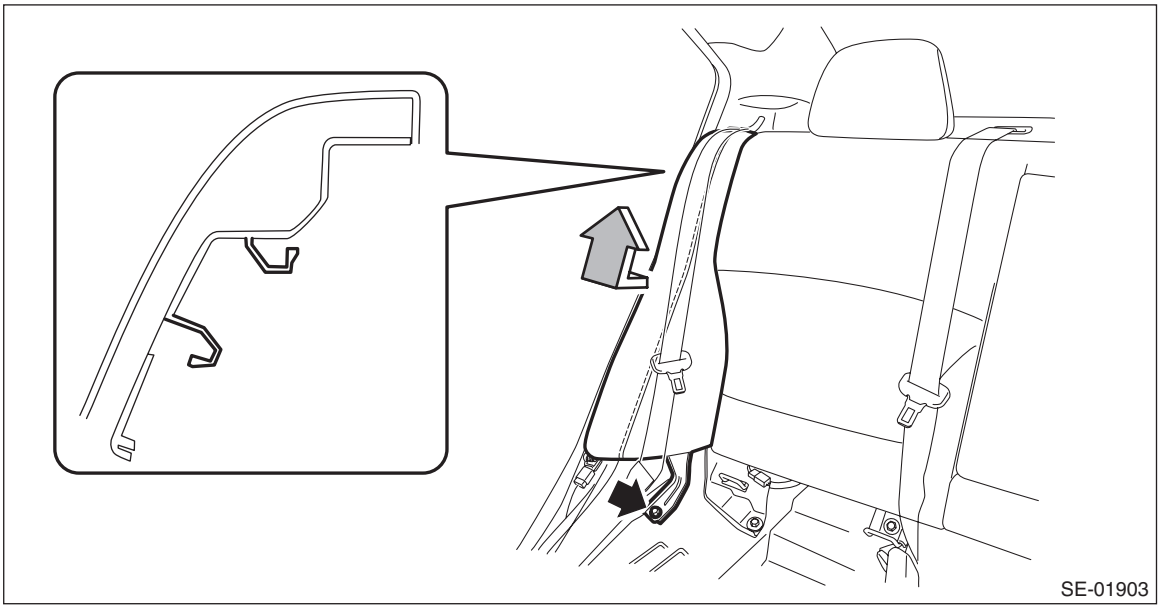
4) Install the trim panel - center pillar LWR, cover side sill - front, and cover side sill - rear.

NOTE:
Assemble the trim panel - center pillar LWR to the trim panel - center pillar UPR securely.



5) Install the rear seat cushion assembly.

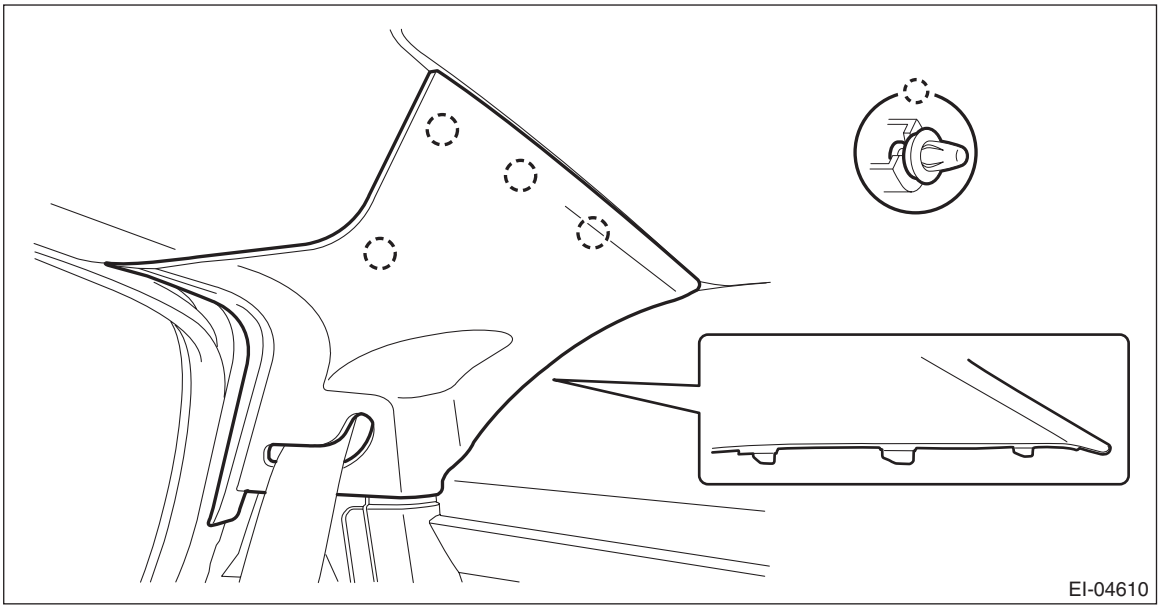
26.Rear Quarter Trim



A: REMOVAL

1. SEDAN MODEL

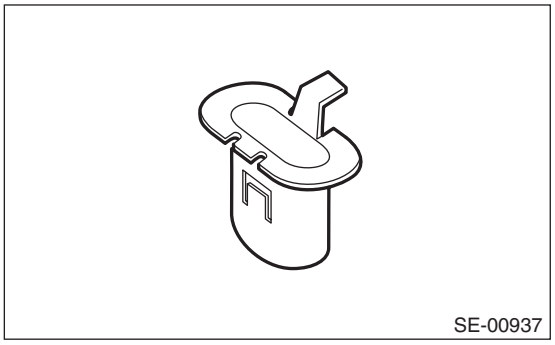
CAUTION:
• The airbag system is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds before starting the service of airbag system.
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.



SE-00937

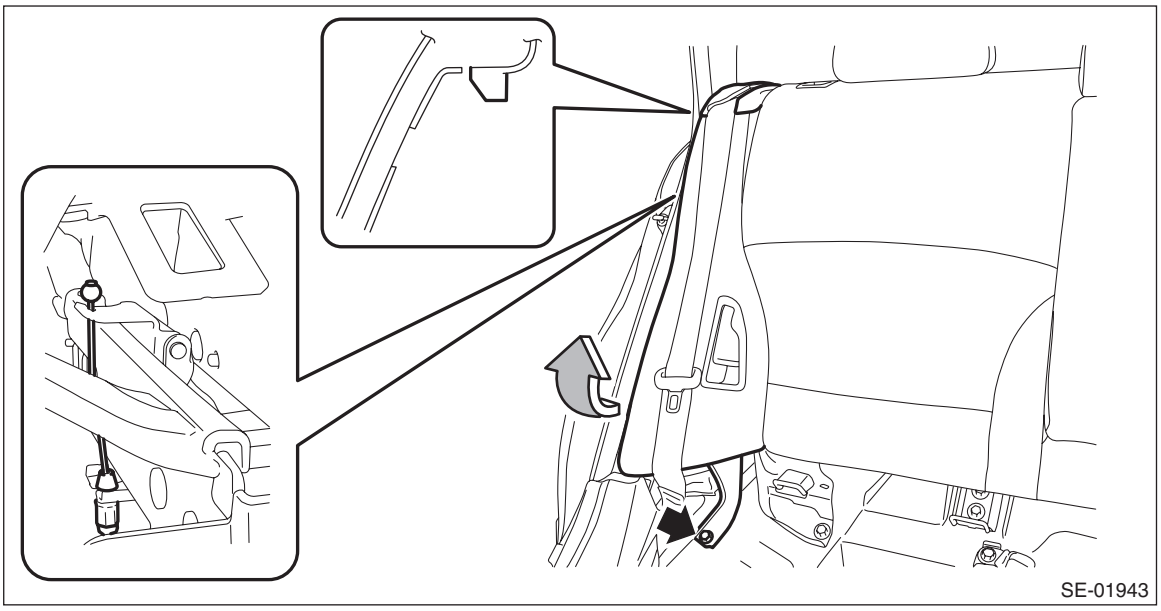
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the rear seat cushion assembly. <Ref. to SE-33, REMOVAL, Rear Seat.>
3) Remove the bolts, and pull up the backrest side pad to remove.

SE-01903



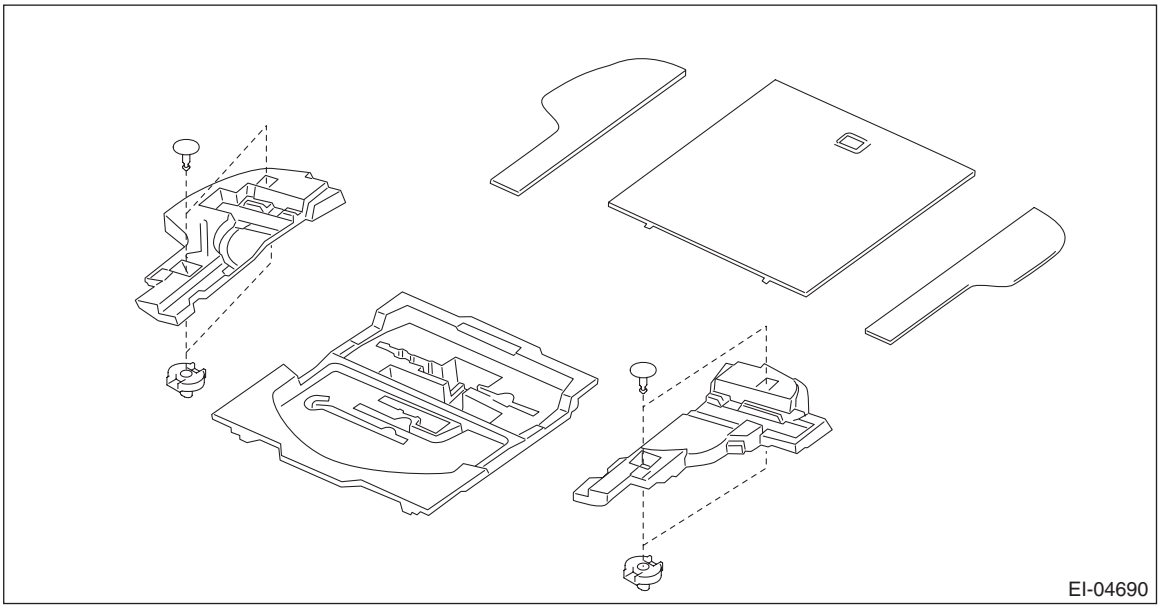
4) Remove the clips, and remove the trim panel - rear pillar UPR.

NOTE:
Remove the seat belt from the opening.



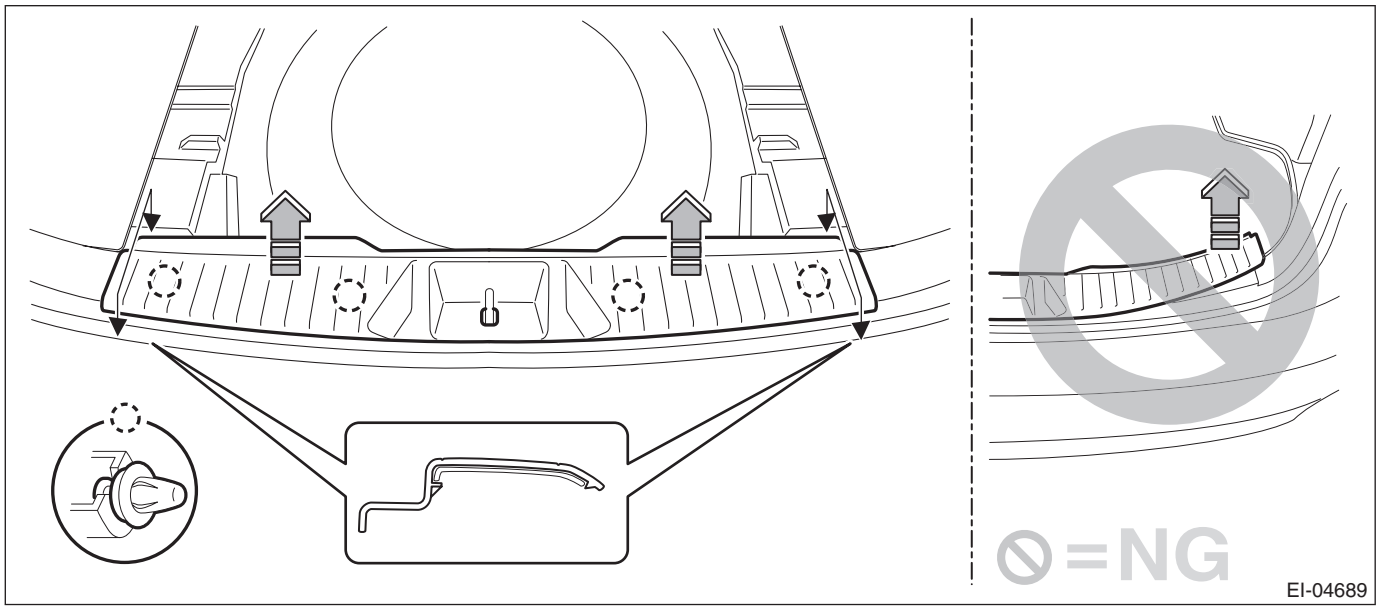
2. OUTBACK MODEL

CAUTION:
• The airbag system is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds before starting the service of airbag system.
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.



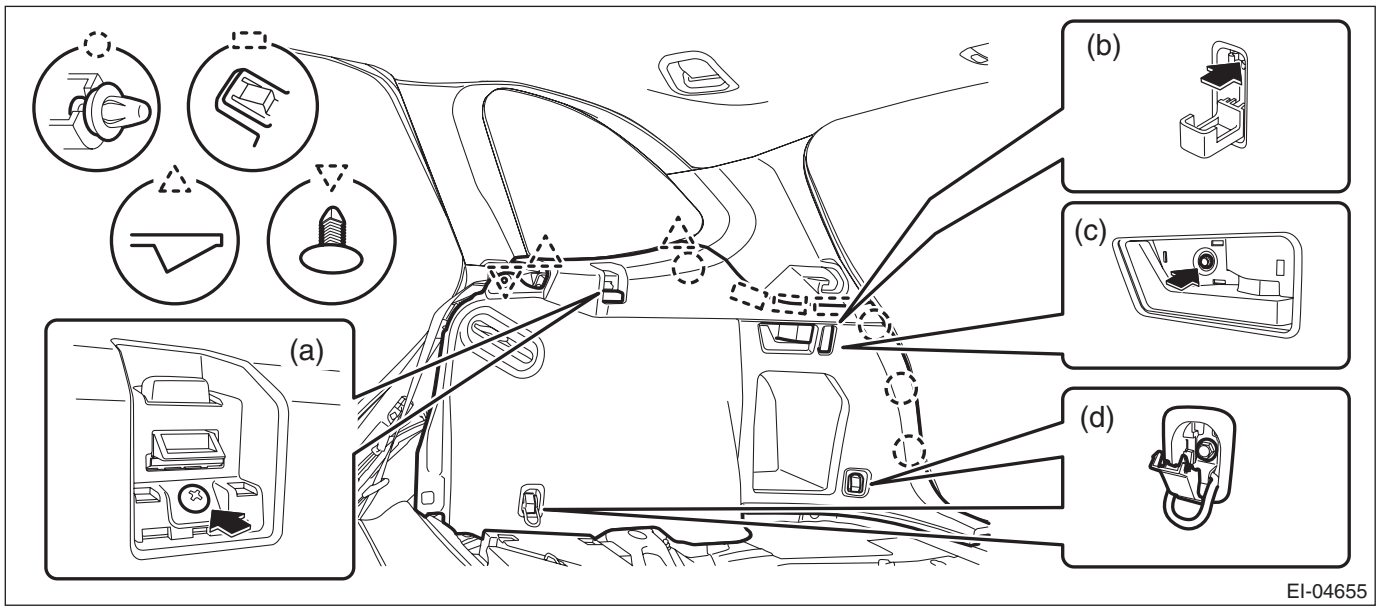
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the rear seat cushion assembly. <Ref. to SE-33, REMOVAL, Rear Seat.>

3) Remove the backrest side pad.
(1) Remove the bolts, and pull up the backrest side pad to remove.
(2) Disconnect the reclining cable, and then remove the backrest side pad.



SE-01943

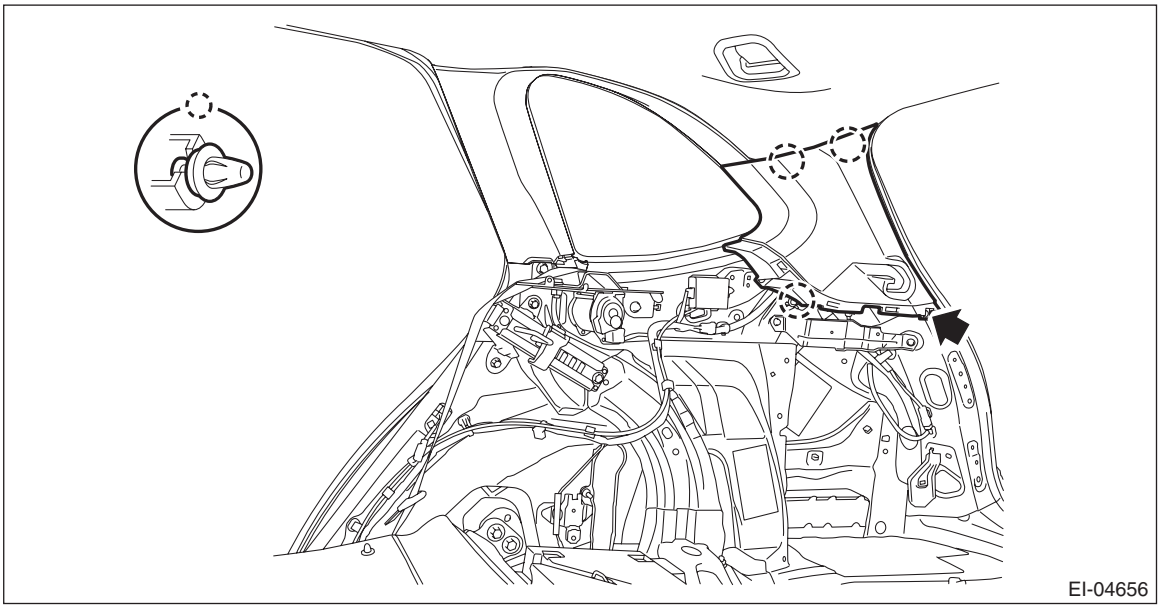
4) Remove the mat - rear floor, box - sub trunk, and spacer - rear floor.



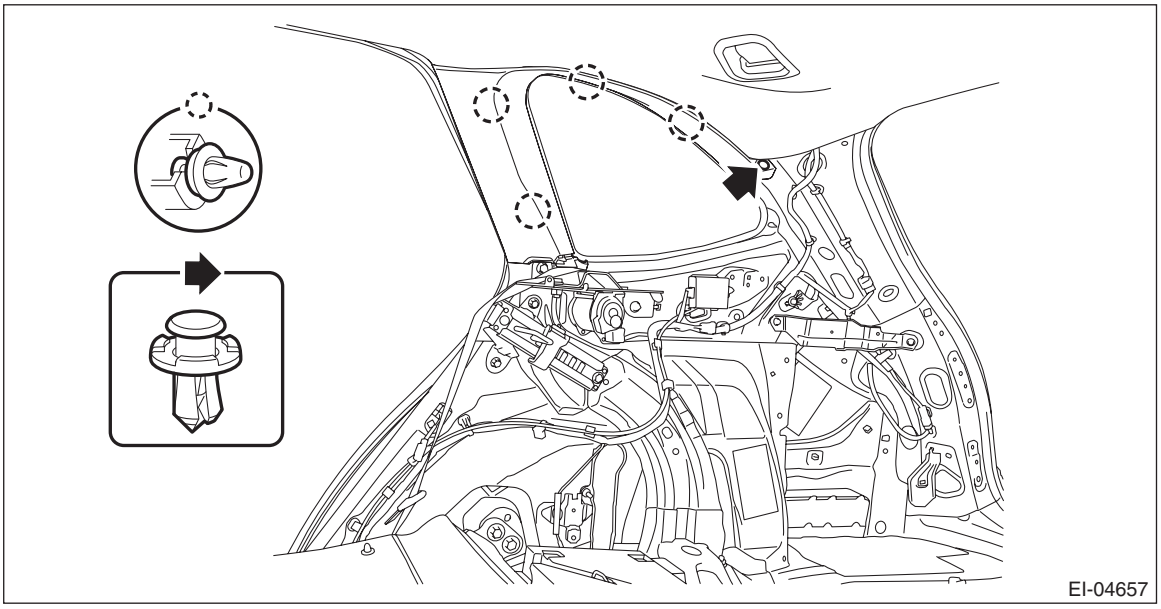
EI-04690

5) Remove the clips, and remove the trim panel - rear skirt.

CAUTION:
Do not lift the trim panel - rear skirt from the edge. Doing so may damage the part.

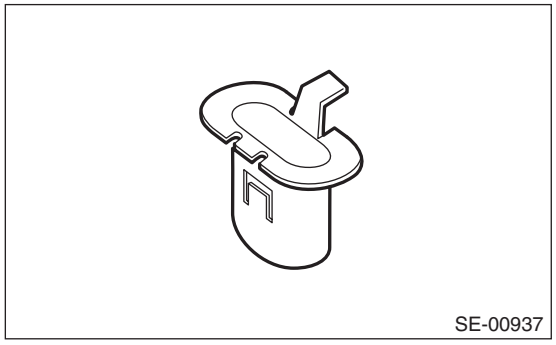


6) Remove the trim panel - rear apron.
(1) Remove the covers, screws, and bolts. (a), (c), (d)
(2) Take out the hook and remove the screw inside. (b)
(3) Remove the clips, and remove the trim panel - rear apron.



NOTE:
For LH side, disconnect the accessory socket connector.

7) Remove the rear quarter trim UPR.
(1) Remove the screws and clips, and remove the rear quarter trim UPR - rear.

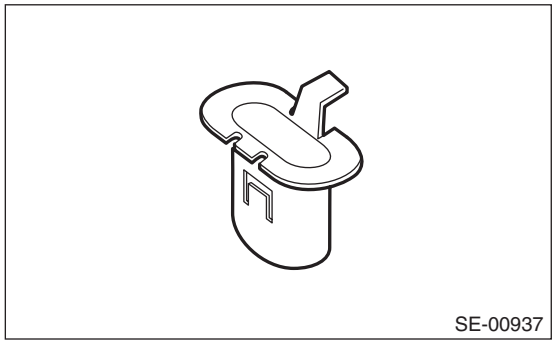


(2) Remove the clips, and remove the rear quarter trim UPR - front.

B: INSTALLATION

1. SEDAN MODEL

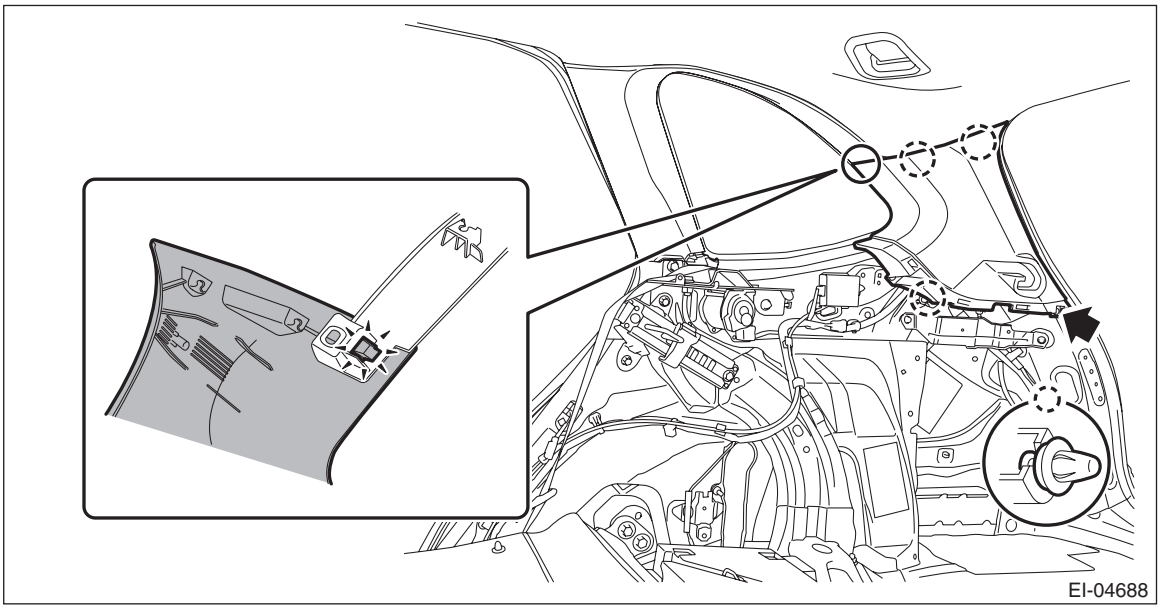
CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.



1) Install the trim panel - rear pillar UPR.
2) Install the backrest side pad.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)

3) Install the rear seat cushion assembly.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



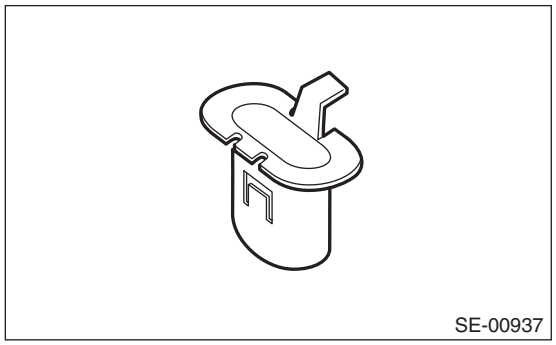
2. OUTBACK MODEL

CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

1) Install the rear quarter trim UPR.

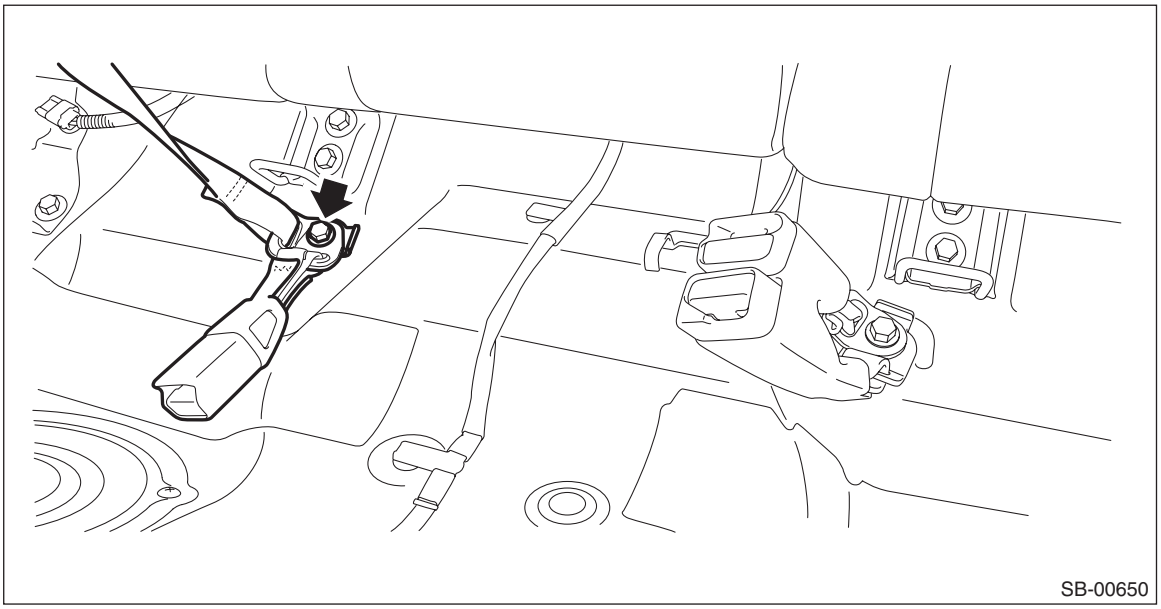
NOTE:
Insert the claw of the rear quarter trim UPR - rear into the rear quarter trim UPR - front.

2) Install the trim panel - rear apron.
3) Install the mat - rear floor, box - sub trunk, and spacer - rear floor.
4) Remove the clips, and install the trim panel - rear skirt.
5) Install the backrest side pad.



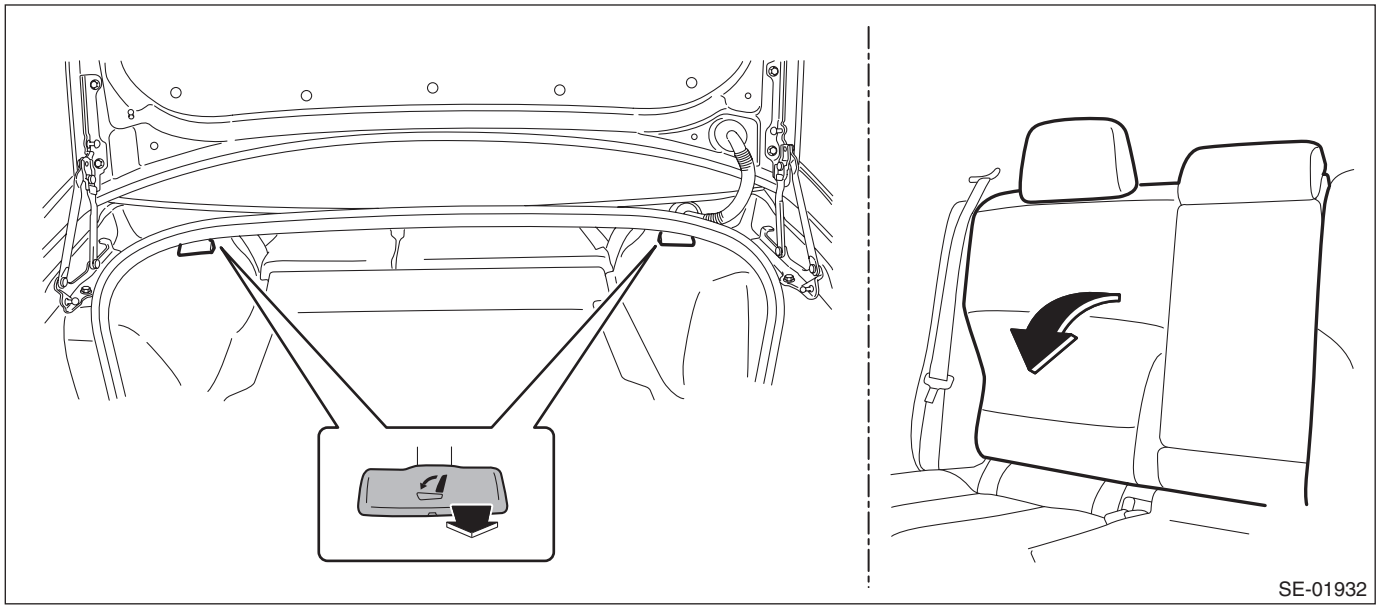
Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)

6) Install the rear seat cushion assembly.
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



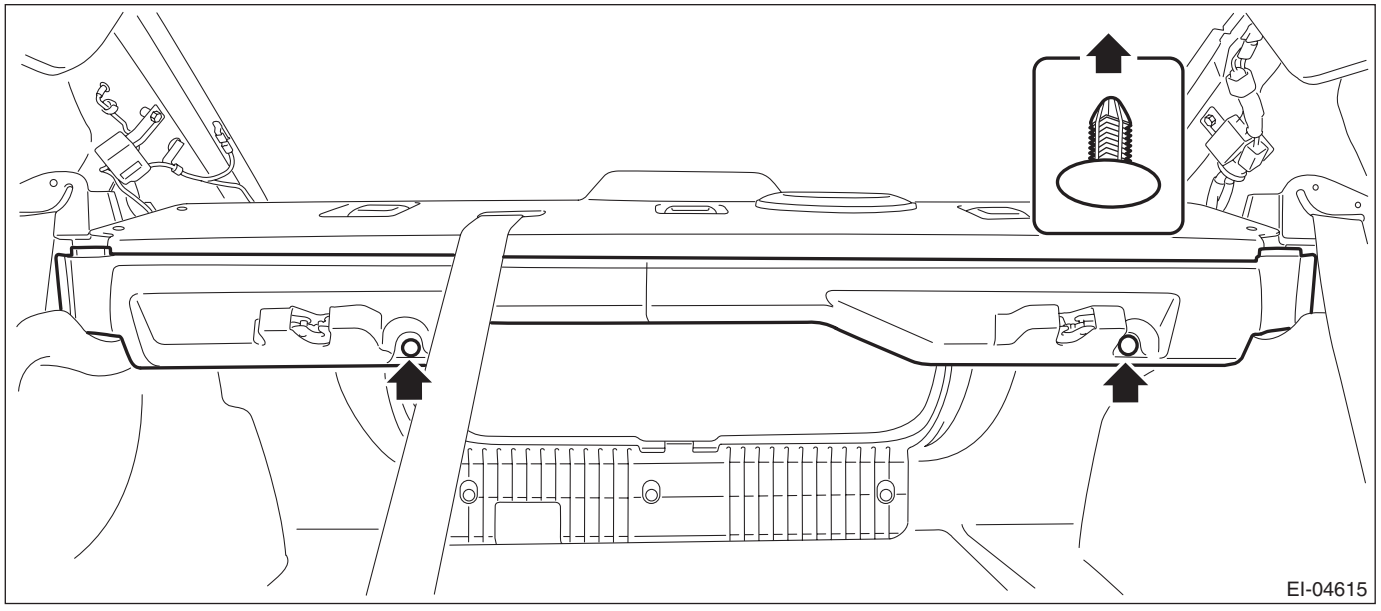
27.Rear Shelf Trim

A: REMOVAL



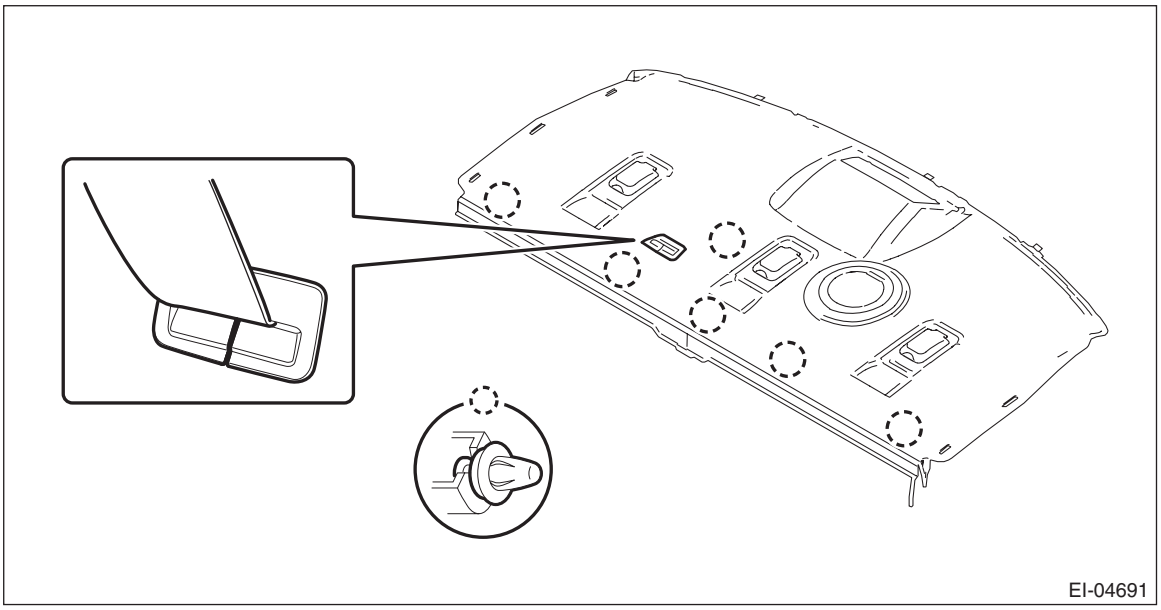
CAUTION:
• The airbag system is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds before starting the service of airbag system.
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

SE-00937



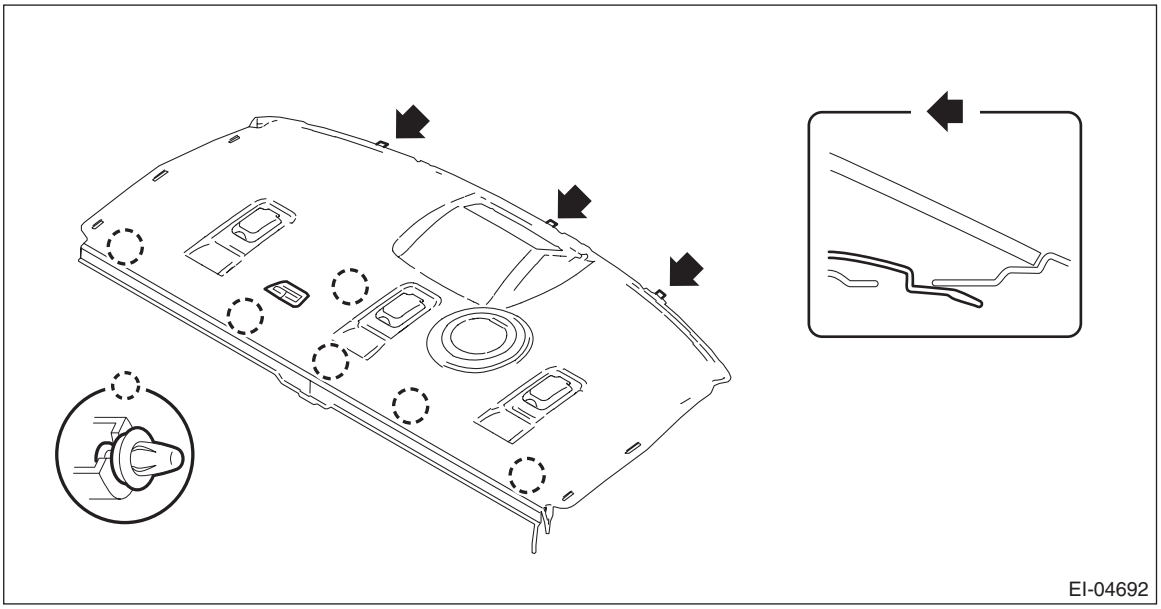
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the rear seat cushion assembly. <Ref. to SE-33, REMOVAL, Rear Seat.>
3) Remove the backrest side pads and the trim panels - rear pillar UPR on the left and right sides. <Ref. to EI-99, SEDAN MODEL, REMOVAL, Rear Quarter Trim.>
4) Remove the bolts, and remove the lower anchor of the seat belt - rear shoulder CTR.

SB-00650

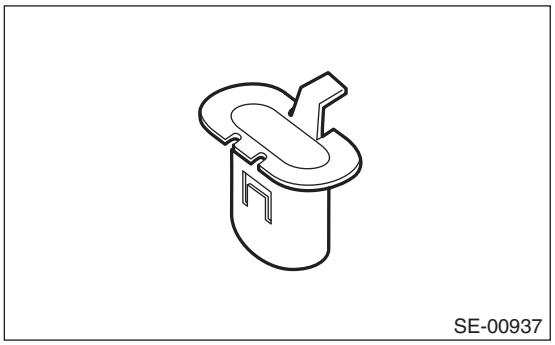


5) Pull the release lever in the trunk room, and then tilt the backrest forward.

6) Release the clips and remove the trunk trim panel assembly - front on the left and right sides.



7) Remove the trim panel assembly - rear shelf.
(1) Release the clips to float the trim panel assembly - rear shelf.
(2) Release the belt guide, and guide the anchor of the seat belt - rear shoulder CTR to behind the trim panel - rear shelf assembly.
(3) Disconnect the connector of the light assembly - high-mounted.
(4) Remove the trim panel assembly - rear shelf.



EI-04691

B: INSTALLATION

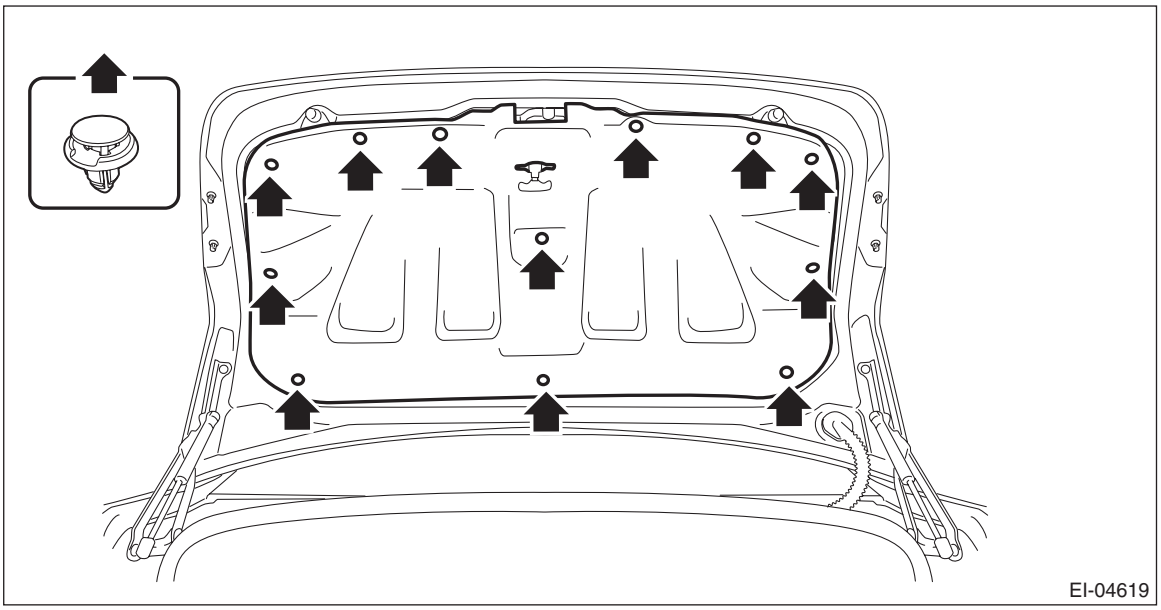
CAUTION:
• Make sure that the claw behind the trim panel assembly - rear shelf is securely attached to the hole of vehicle body.

EI-04692

• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

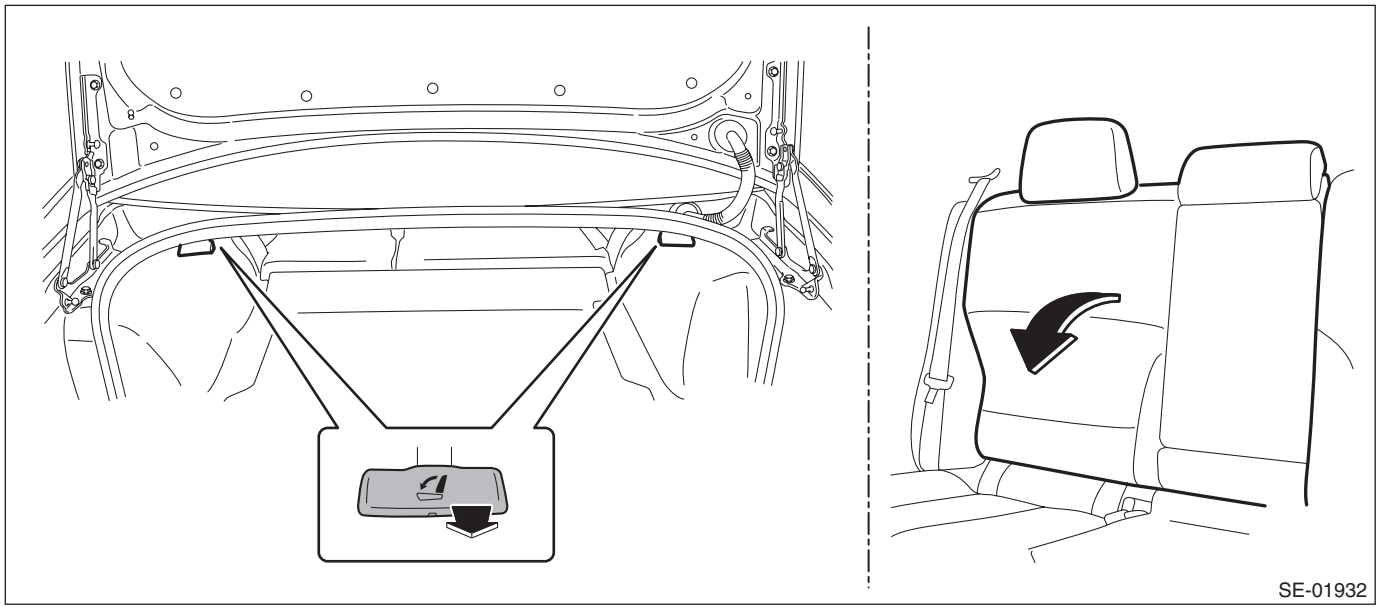
1) Install the trim panel assembly - rear shelf.
2) Install the high-mounted stop light.

CAUTION:
Make sure that the claw behind the light assembly - high-mounted is securely attached to the trim panel assembly - rear shelf.
3) Install the lower anchor of seat belt - rear shoulder CTR.



Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)
4) Install the trim panel - rear pillar UPR.
5) Install the backrest side pad.

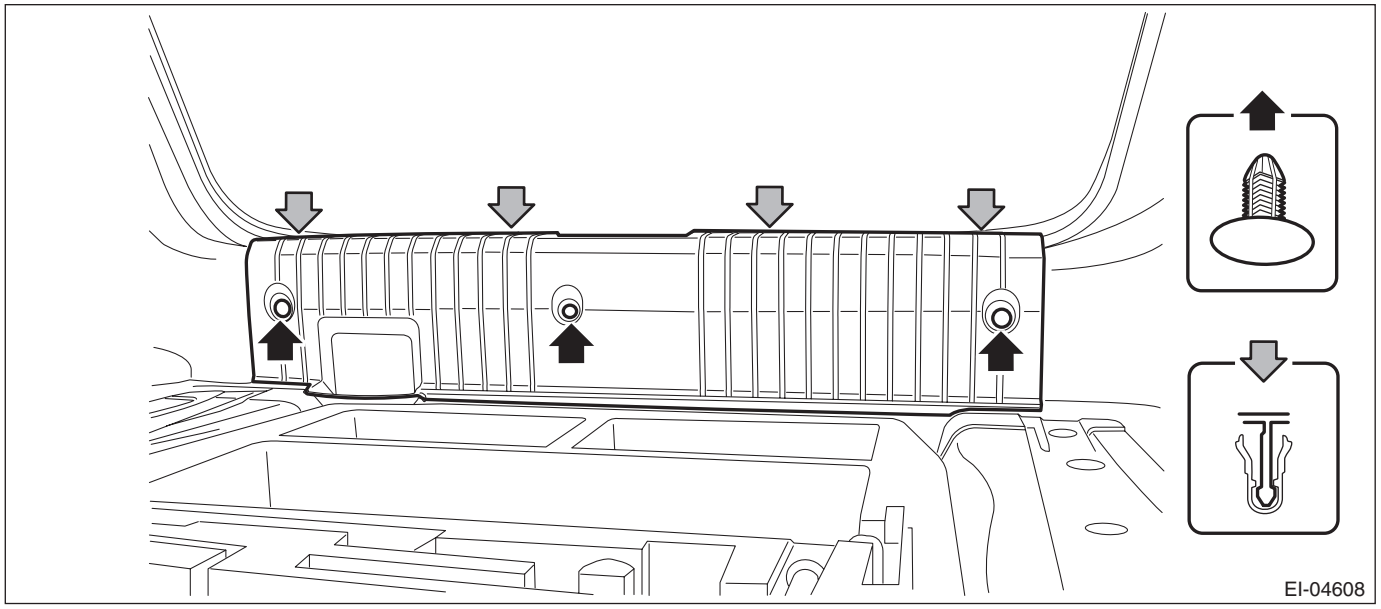
Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)
6) Install the rear seat cushion assembly.
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



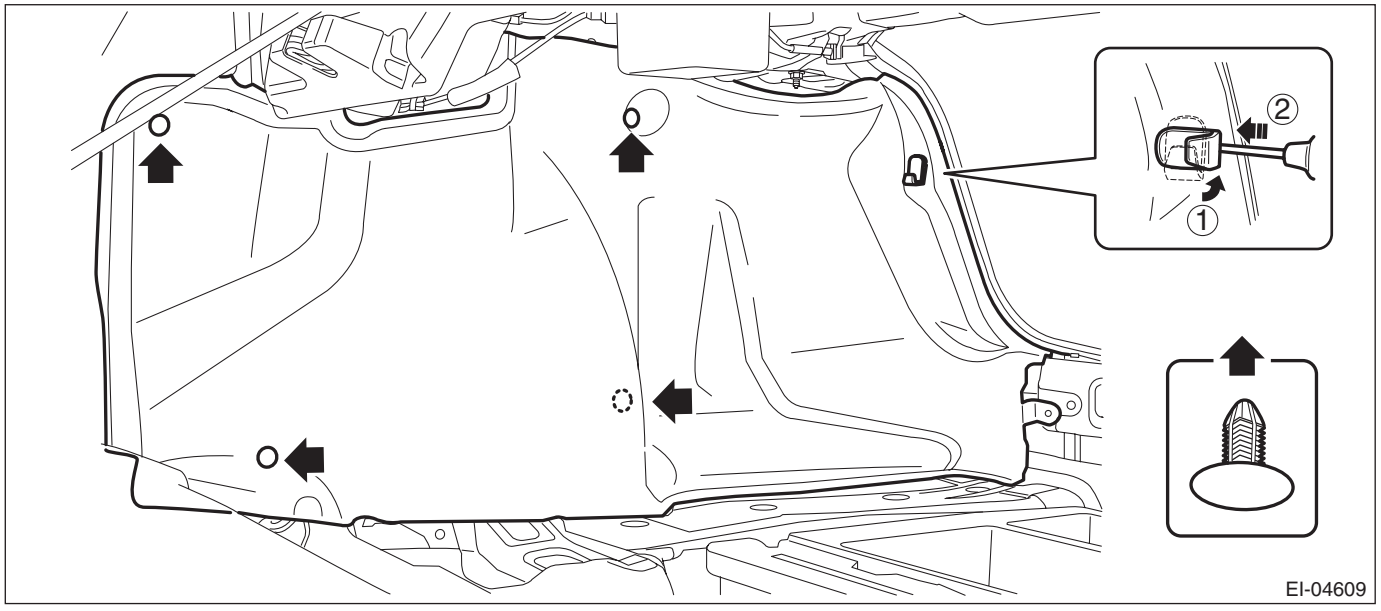
28.Trunk Room Trim

A: REMOVAL

1) Remove the clips, and remove the trim panel - trunk lid.



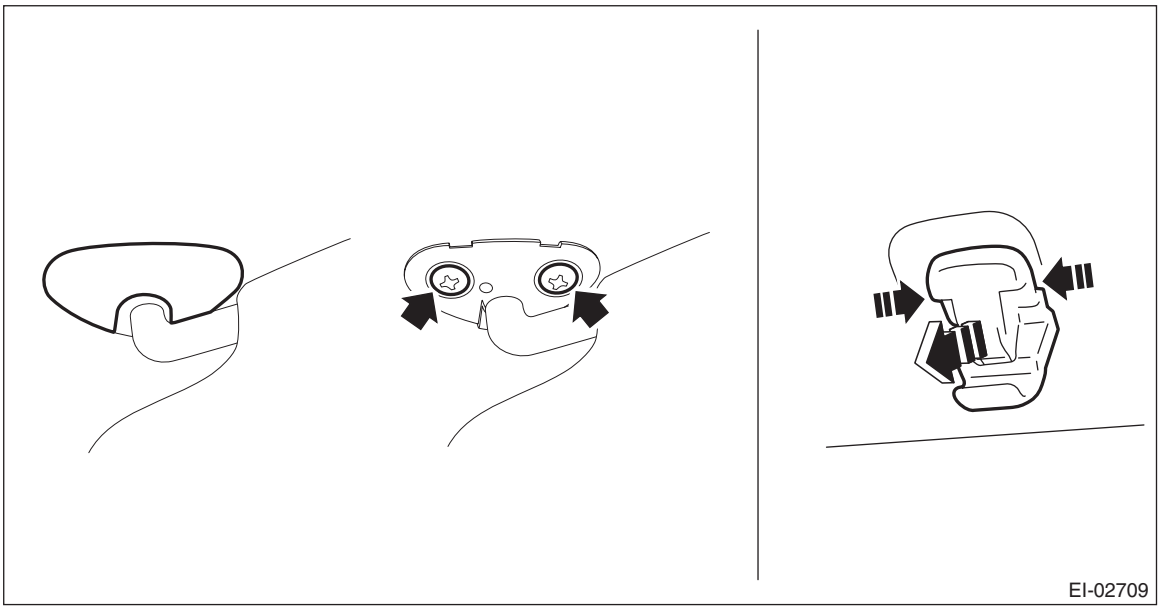
2) Pull the release lever in the trunk room, and then tilt the backrest forward.



3) Remove the mat - trunk.

4) Remove the trim panel - trunk rear.
   (1) Remove the clip.
   (2) Release the claws, and remove the trim panel - trunk rear.

5) Remove the trunk trim panel - side.
   (1) Remove the hook.
   1. Turn the hook to 90°.
   2. Press the claw using a screwdriver to detach the hook.
   (2) Release the clips and remove the trunk trim panel - side.

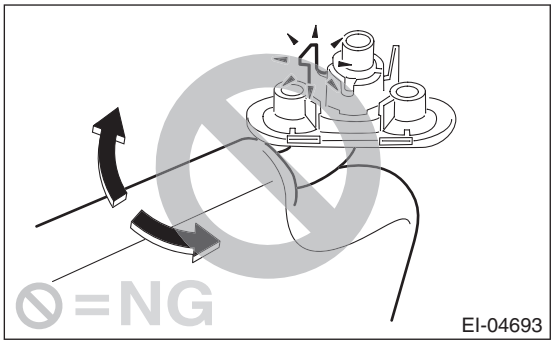


B: INSTALLATION

1) Install the trim panel - trunk lid.
2) Install the trunk room mat.
3) Install the trim panel - trunk rear.

29.Sun Visor

A: REMOVAL

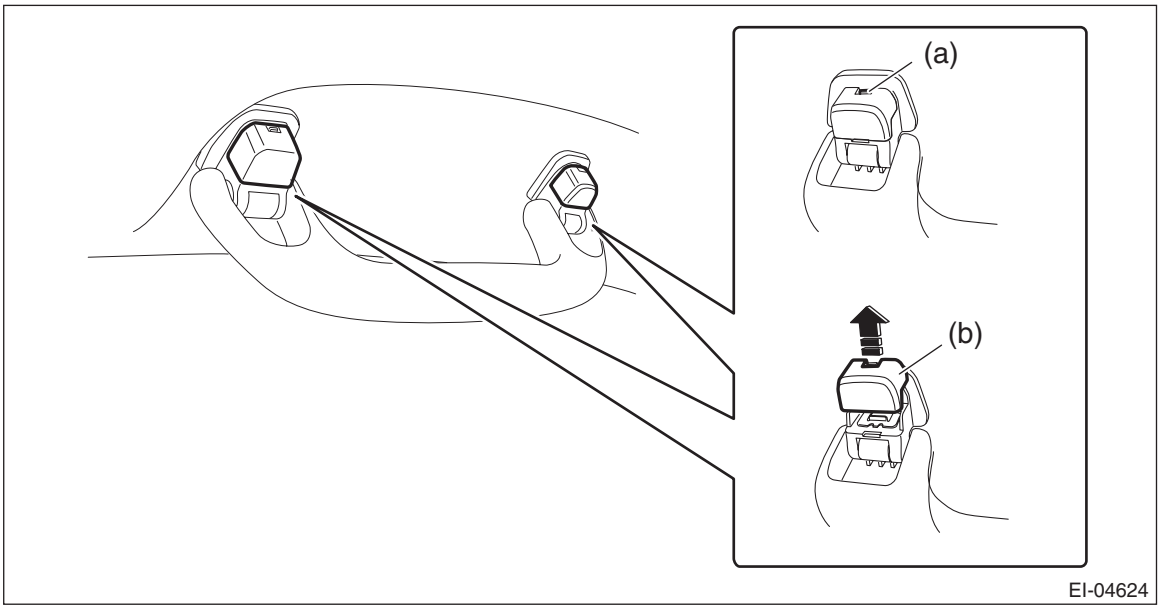


1) Remove the sun visor assembly.
   (1) Detach the cover, and remove the screws.
   (2) Disconnect the connector, and remove the sun visor assembly.
2) Remove the hook - sun visor.
   (1) Press both sides using a flat tip screwdriver.
   (2) Remove the hook - sun visor by pulling it toward you.

B: INSTALLATION

1) Install the hook - sun visor.
2) Install the sun visor assembly.

CAUTION:
Do not rotate the sun visor assembly when it is temporarily installed. The claw for temporary installation may be damaged.



Tightening torque:
2 N·m (0.2 kgf-m, 1.5 ft-lb)

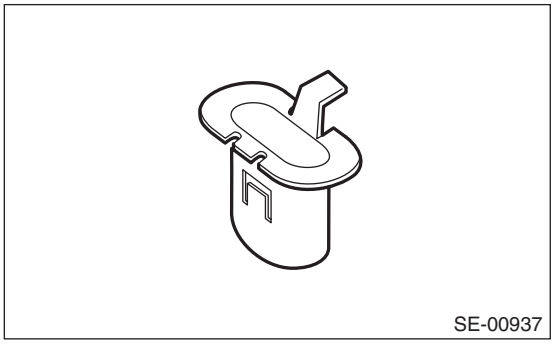
30.Assist Grip

A: REMOVAL

1) Pull up the cap (b) while pulling the knob (a) toward you with a flat tip screwdriver or similar tool wrapped with a protection tape.
2) Pull the assist grip toward yourself (toward the vehicle center) to remove.

B: INSTALLATION

1) Pinch the metal clip with pliers, and remove it from the assist grip BRKT.
2) Install the metal clip to the assist grip side.
3) Install the cap to the assist grip.



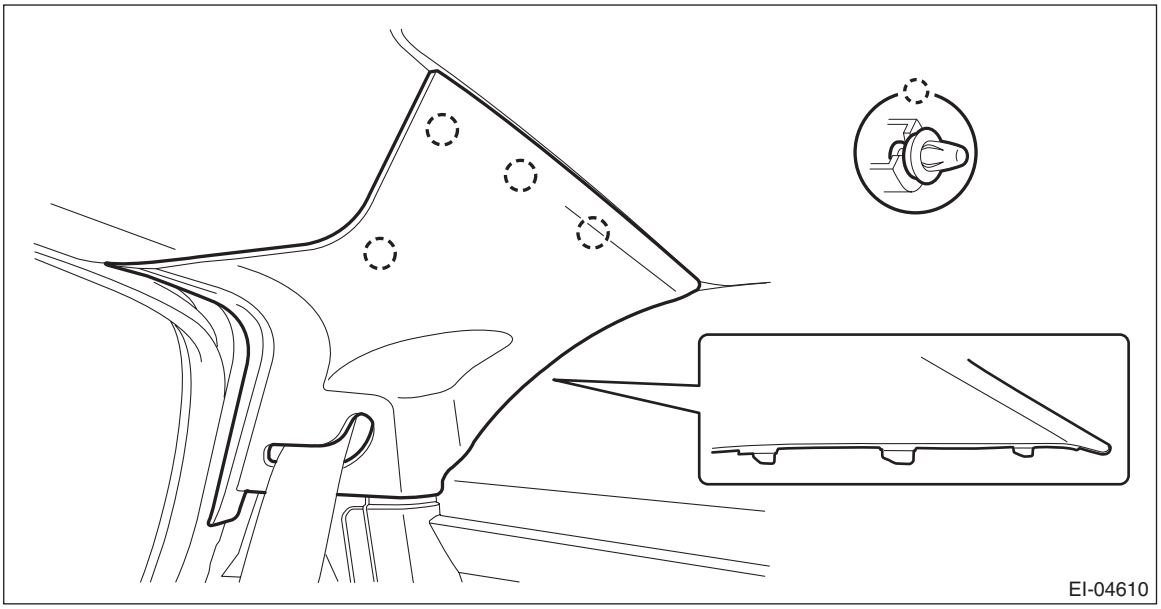
NOTE:
If the metal clip is not inserted to the end, the cap cannot be installed.
4) Install the assist grip to the vehicle.

31.Roof Trim

A: REMOVAL

1. SEDAN MODEL

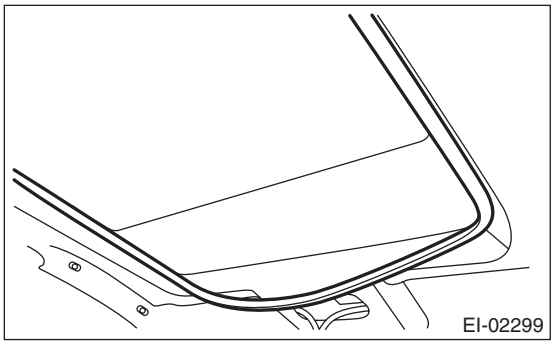
CAUTION:
• The airbag system is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds before starting the service of airbag system.
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.



SE-00937

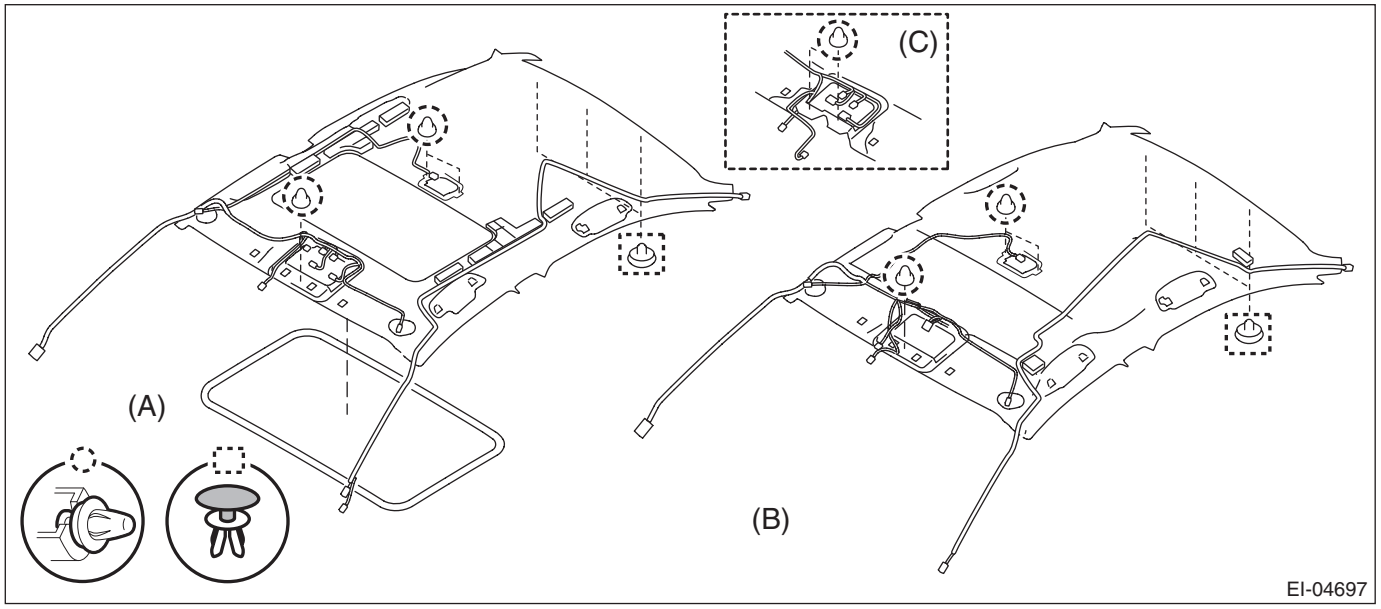
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work.

NOTE:
• On CVT models, shift the select lever into “N” before disconnecting the battery ground cable.
• For the power seat, remove the slide rail installing bolt before disconnecting the ground terminal from the battery sensor.
2) Remove the front seats. <Ref. to SE-11, REMOVAL, Front Seat.>
3) Remove the rear seat cushion assembly. <Ref. to SE-33, REMOVAL, Rear Seat.>
4) Remove the console box assembly and the cover - shift lever. <Ref. to EI-80, REMOVAL, Console Box.>
5) Cover the following areas to protect from damage.
• Steering wheel
• Instrument panel surface
• Glove box surface
6) Remove the lower inner trim on the RH and LH sides. <Ref. to EI-92, REMOVAL, Lower Inner Trim.>
7) Remove the upper inner trim on the RH and LH sides. <Ref. to EI-96, REMOVAL, Upper Inner Trim.>



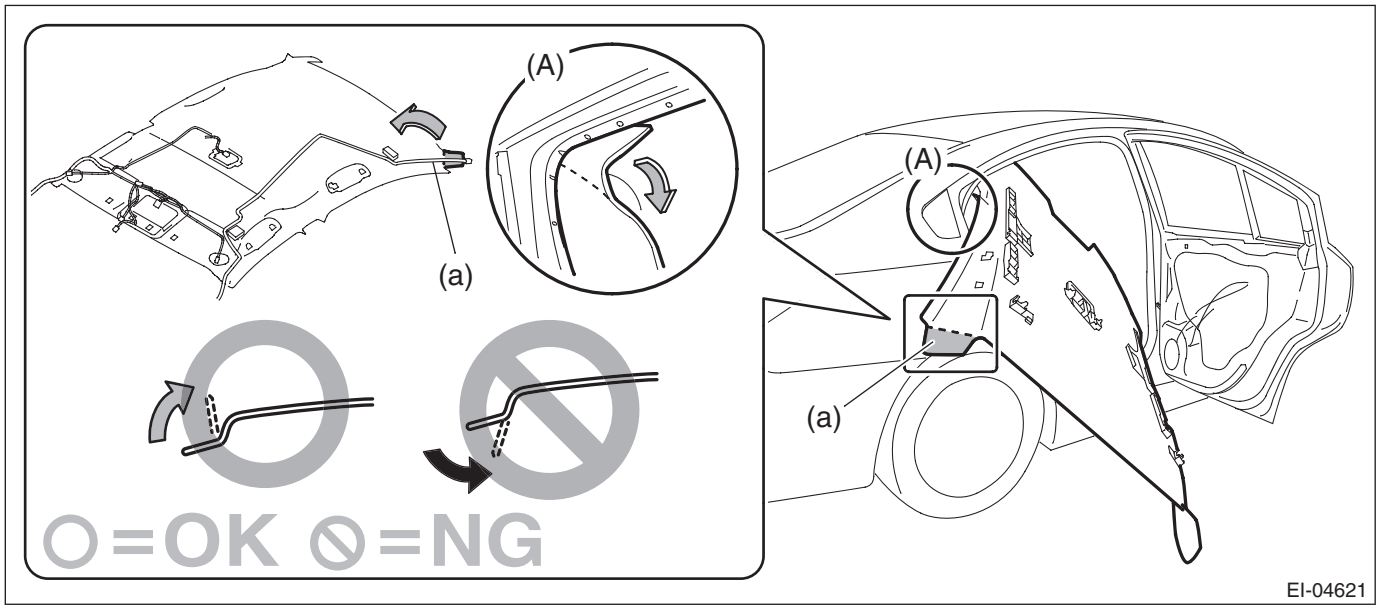
8) Remove the clips, and remove the trim panel - rear pillar UPR on the left and right sides.

NOTE:
Remove the seat belt from the opening.



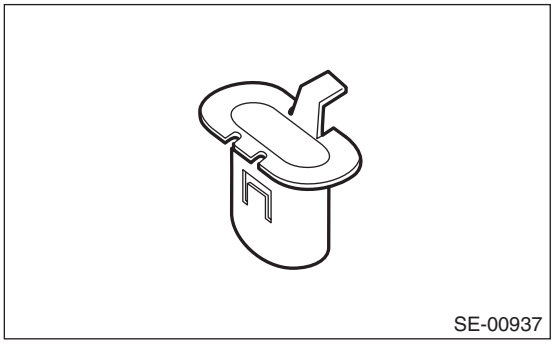
9) Remove the following parts from the passenger's side rear door.
- Rear door trim assembly: <Ref. to EI-71, REAR DOOR, REMOVAL, Door Trim.>
- Rear speaker assembly: <Ref. to ET-16, REMOVAL, Rear Speaker.>
- Checker assembly - rear door: <Ref. to EB-31, REAR DOOR PANEL, REMOVAL, Rear Door.>

10) Remove the overhead console assembly. (Models without EyeSight) <Ref. to LI-63, REMOVAL, Spot Map Light.>
11) Remove the stereo camera cover. (Models with EyeSight) <Ref. to ES-7, REMOVAL, Stereo Camera.>
12) Remove the left and right sun visor assembly. <Ref. to EI-112, REMOVAL, Sun Visor.>
13) Remove the light assembly - room. <Ref. to LI-65, REMOVAL, Room Light.>
14) Remove all assist grip assembly. <Ref. to EI-113, REMOVAL, Assist Grip.>
15) Remove the sunroof garnish. (Model with sunroof)



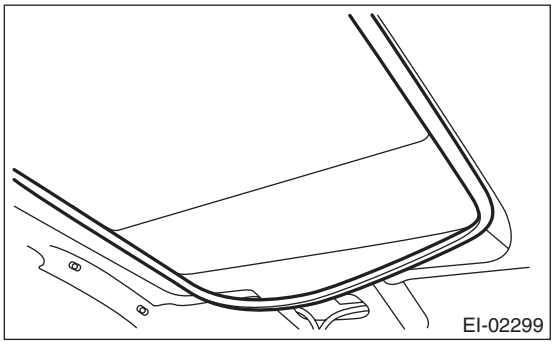
16) Remove the trim panel - roof assembly.
(1) Remove the harness clamp of the cord assembly - antenna feeder and the cord - roof, and disconnect the connectors.
(2) Remove the clip and the weather strip - body side flange from the front/rear and left/right doors, and remove the trim panel - roof assembly.

(A) Model with sunroof (B) Model without sunroof (C) Models with EyeSight

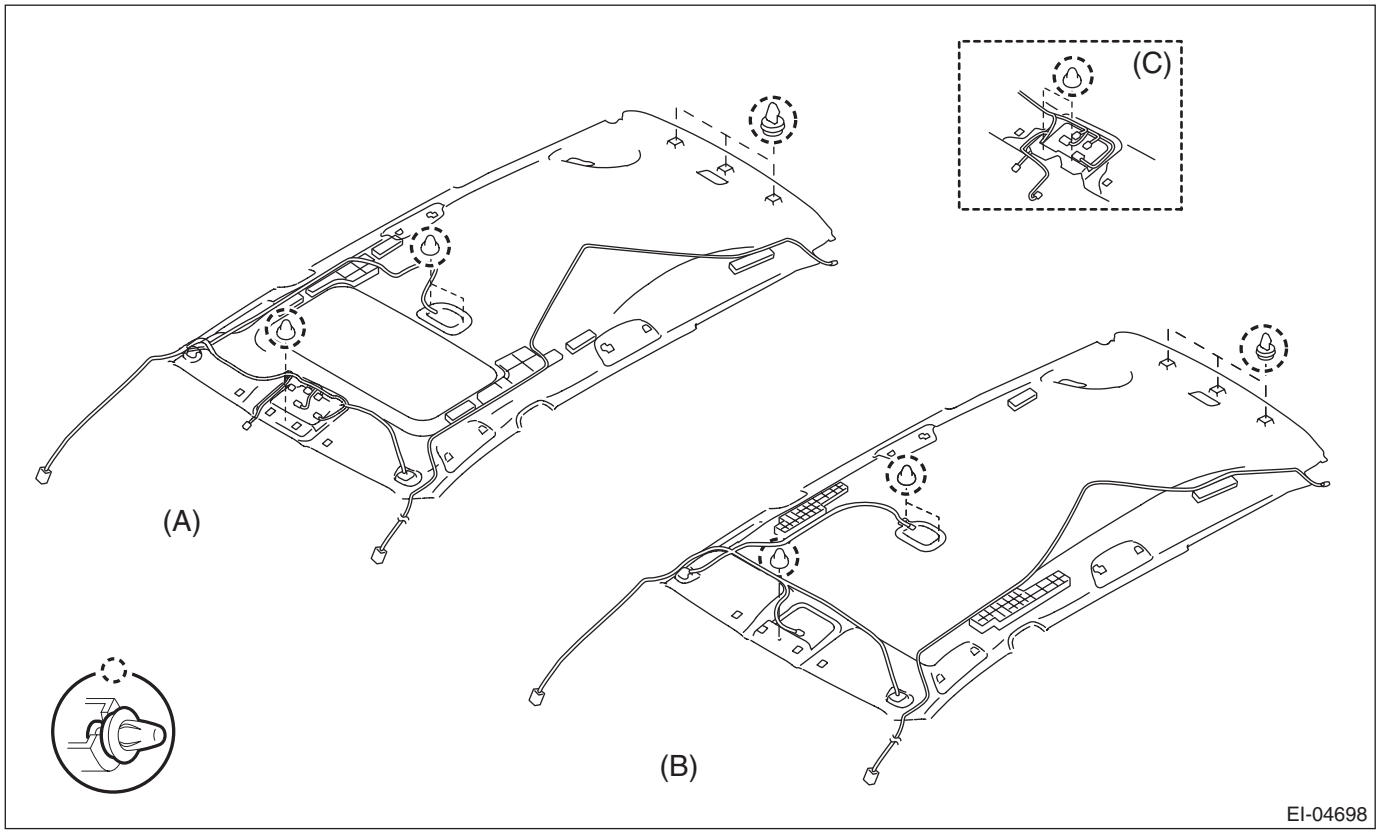


(3) Slightly bend the rear end of the trim panel - roof assembly along the character line, and take it out of the vehicle from the passenger's side rear door opening.

CAUTION:
Be careful of the bending direction. If the direction is wrong, the trim panel - roof assembly may be wrinkled.



2. OUTBACK MODEL

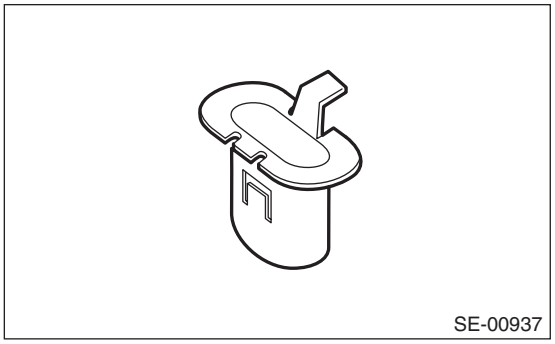


CAUTION:
• The airbag system is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds before starting the service of airbag system.
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

SE-00937

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work.
2) Remove the rear seat cushion assembly. <Ref. to SE-33, REMOVAL, Rear Seat.>
3) Remove the lower inner trim on the RH and LH sides. <Ref. to EI-92, REMOVAL, Lower Inner Trim.>
4) Remove the upper inner trim on the RH and LH sides. <Ref. to EI-96, REMOVAL, Upper Inner Trim.>
5) Remove the backrest side pad, trim panel - rear apron, and rear quarter trim UPR. <Ref. to EI-100, OUTBACK MODEL, REMOVAL, Rear Quarter Trim.>
6) Remove the overhead console assembly. (Models without EyeSight) <Ref. to LI-63, REMOVAL, Spot Map Light.>
7) Remove the stereo camera cover. (Models with EyeSight) <Ref. to ES-7, REMOVAL, Stereo Camera.>
8) Remove the left and right sun visor assembly. <Ref. to EI-112, REMOVAL, Sun Visor.>
9) Remove the light assembly - room. <Ref. to LI-65, REMOVAL, Room Light.>
10) Remove all assist grip assembly. <Ref. to EI-113, REMOVAL, Assist Grip.>
11) Remove the sunroof garnish. (Model with sunroof)

EI-02299

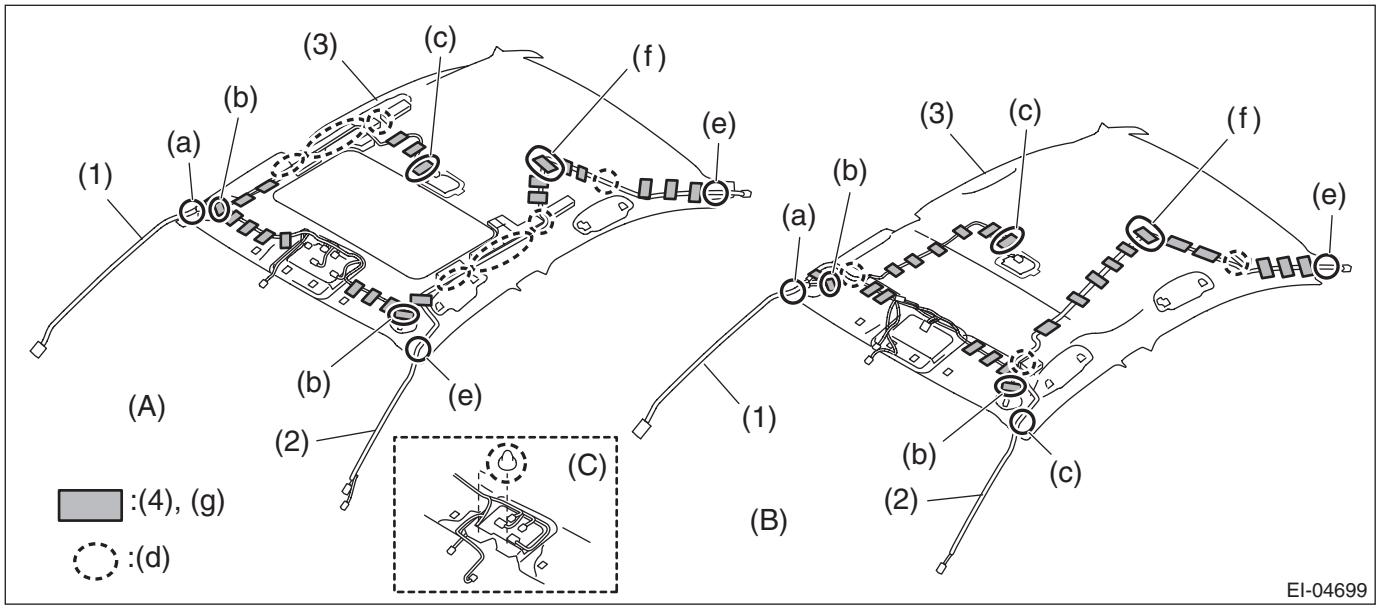


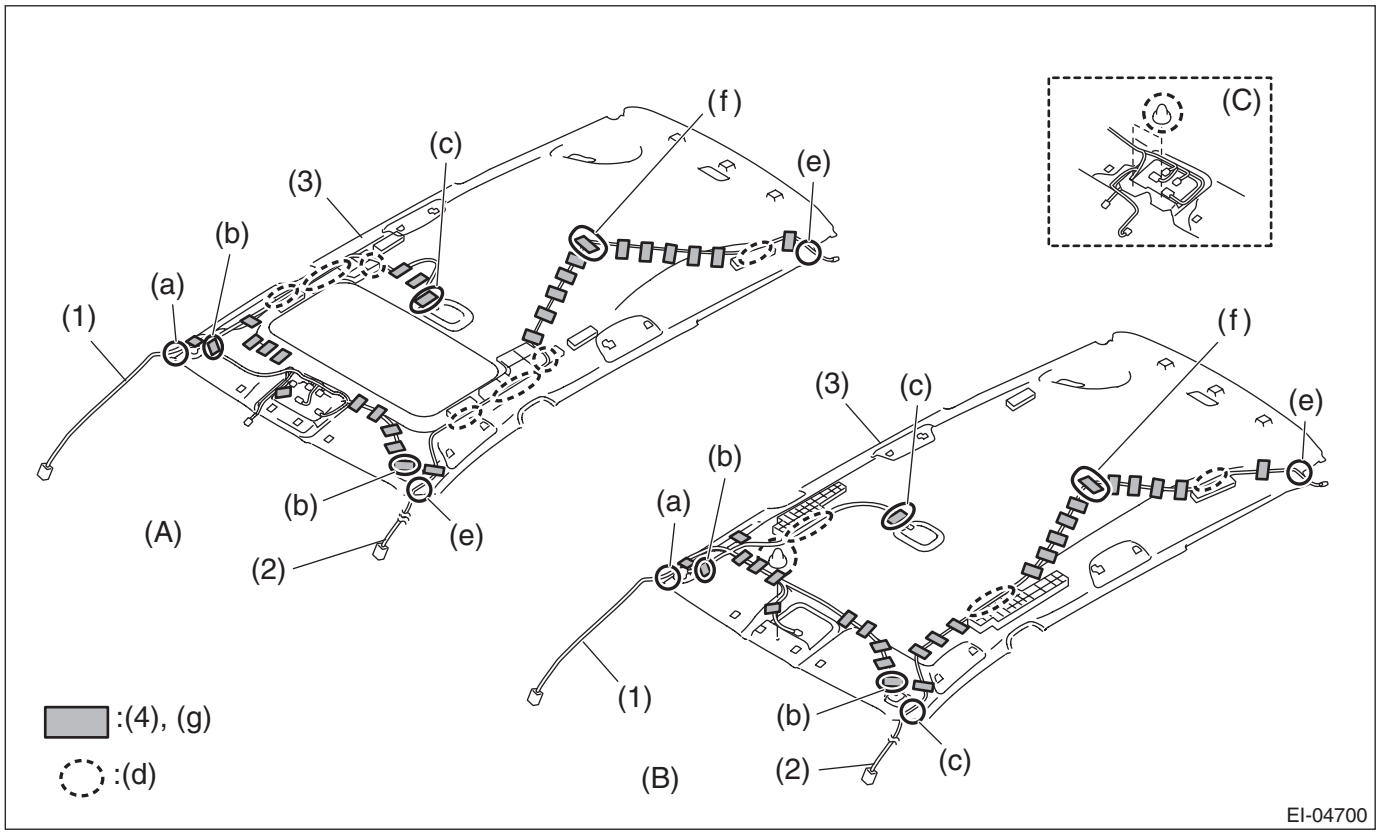
12) Remove the trim panel - roof assembly.
(1) Remove the harness clamp of the cord assembly - antenna feeder and the cord - roof, and disconnect the connectors.
(2) Remove the clip and the weather strip - body side flange from the front/rear and left/right doors, and remove the trim panel - roof assembly.

(A) Model with sunroof
(B) Model without sunroof
(C) Models with EyeSight

B: INSTALLATION

CAUTION:
• When reusing the tether clip on the upper part of the trim panel - front pillar UPR, check that there is no damage to the tether clip. If the clip is damaged, its holding force is reduced and the trim panel - front pillar UPR may come off. Be sure to replace it with a new clip.
• Do not reuse the tether clip removed from the upper part of the trim panel - front pillar UPR. Always replace with a new part.
• Before installing the trim panel - front pillar UPR, check the condition of protective non-woven fabric (white) of the curtain airbag. If it is damaged (airbag module cloth is exposed), replace the curtain airbag module assembly with a new part.
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.





1) Install the trim panel - roof assembly.
   (1) Bring the trim panel - roof assembly inside the vehicle.
   (2) Attach the feeder cord and roof cord to the roof trim.

CAUTION:
Route each cord carefully. The cord may interfere, thus preventing normal deployment of the curtain airbag when necessary.

Tape:
Item number: 86359SC000/TAPE

NOTE:
Use the tape (service parts) by cutting into 100 mm × 50 mm (3.9 in × 2.0 in).

(A)	Model with sunroof	(B)	Model without sunroof	(C)	Models with EyeSight
(1)	Roof cord	(3)	Trim panel - roof	(4)	Tape
(2)	Feeder cord				
(a)	Secure the cord to the clamp.	(d)	Secure it to the roof pad clamp.	(g)	Secure the cord with tape while avoiding any raised part.
(b)	Secure the end of the spacer SV base with tape while aligning it with the mark-off line of the roof trim.	(e)	Secure the polyurethane section to the clamp.		
(c)	Secure the end of the polyurethane section with tape while aligning it with the mark-off line of the roof trim.	(f)	Fix with the tape by adjusting the excess portion of cord at the (f) position.		

(3) Secure the trim panel - roof assembly with the clips.
2) Install the garnish - roof. (Model with sunroof)
3) Install the assist rail.
4) Install the light assembly - room.
5) Install the sun visor assembly.

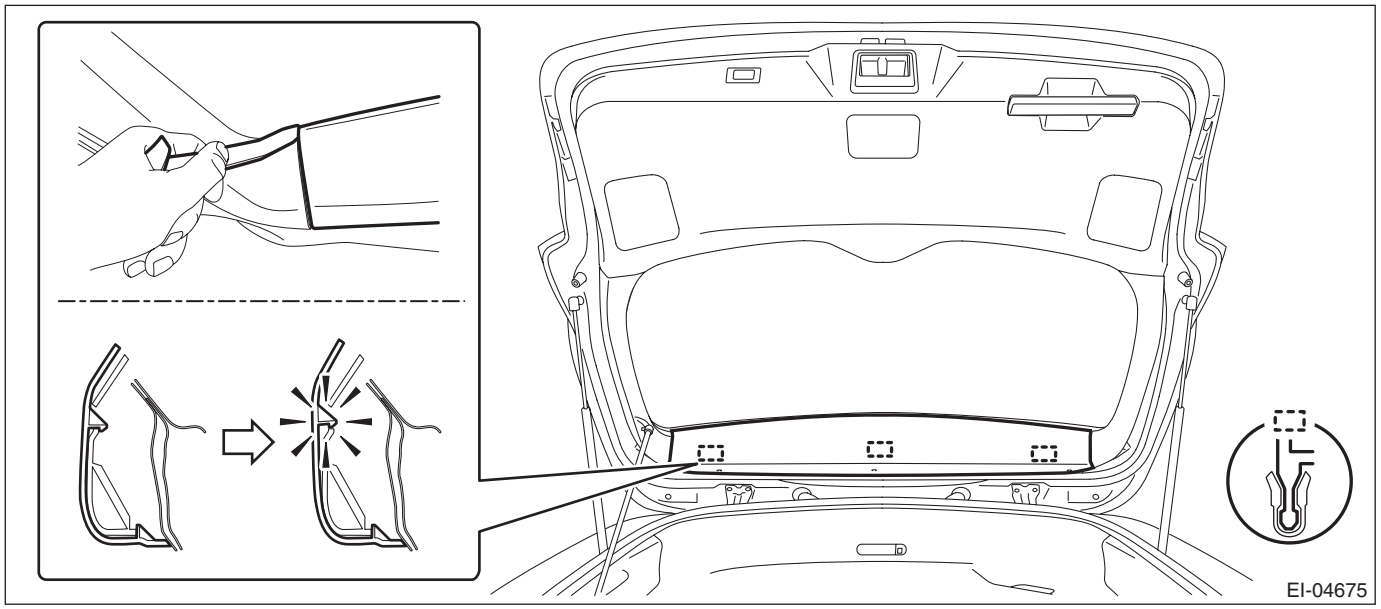
Tightening torque:
2 N·m (0.2 kgf-m, 1.5 ft-lb)
6) Install the light assembly - map.
7) Install the trim panel - rear pillar UPR.
8) Install the upper inner trim.

Tightening torque:
Trim panel - center pillar UPR: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
Front seat belt anchor: 30 N·m (3.1 kgf-m, 22.1 ft-lb)

9) Install the lower inner trim.
10) Install the rear seat cushion assembly.
11) Install the console box assembly and cover - shift lever. (Sedan model)

Tightening torque:
6.5 N·m (0.7 kgf-m, 4.8 ft-lb)
12) Install the front seat. (Sedan model)

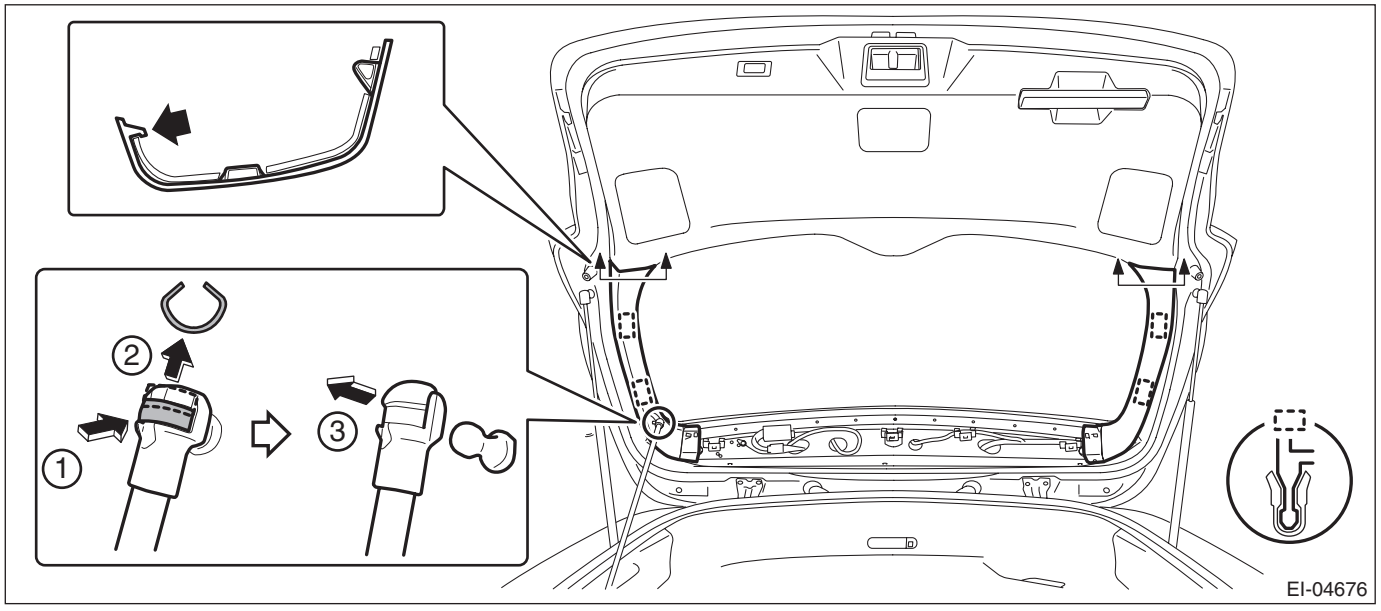
Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)
13) Install each part of rear doors. (Sedan model)
- Checker assembly - rear door:



Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)
- Rear door trim assembly:
- Rear speaker assembly:

14) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

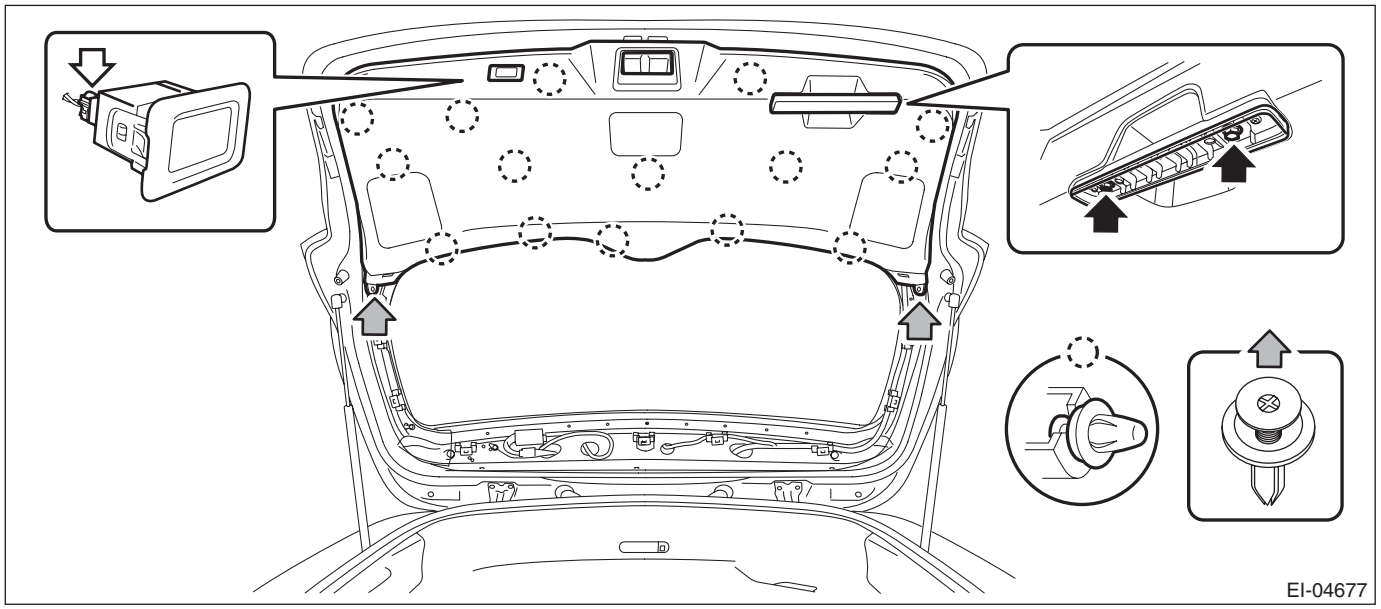
32.Rear Gate Trim



A: REMOVAL

1) Remove the trim panel - rear gate UPR.
   (1) Remove the claws on the trim edge.
   (2) Release the claws in the center of trim, and remove the trim panel - rear gate UPR.

2) Remove the trim panel - rear gate pillar side.
   (1) Disconnect the rod - power rear gate before removing the trim panel - rear gate pillar side LH. (Only for models with power rear gate)



CAUTION:
For the disconnection procedure of the rod - power rear gate, refer to "REMOVAL", "Power Rear Gate Rod" in the "POWER REAR GATE" section and observe the precautions for removal. <Ref. to PRG-9, REMOVAL, Power Rear Gate Rod.>
   (2) Release the claws.
   (3) Remove the claws on the bottom of trim, and remove the trim panel - rear gate pillar side.

3) Remove the trim panel - rear gate LWR.
   (1) Remove the power rear gate inner switch and disconnect the connector. (Only for models with power rear gate)

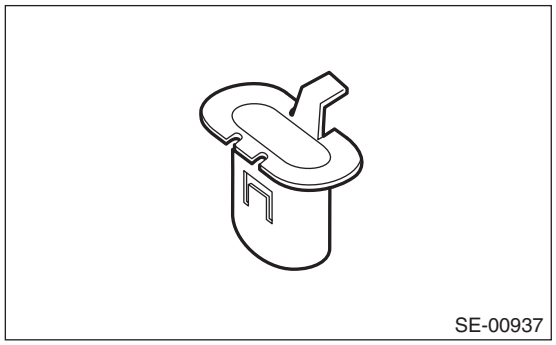
NOTE:
Insert a flat tip screwdriver wrapped with protective tape into the slit on the left.
   (2) Remove the cover - grip, and remove the bolts.

NOTE:
Insert a flat tip screwdriver wrapped with protective tape into the side slit.
   (3) Remove the clips, and remove the trim panel - rear gate LWR.

B: INSTALLATION

CAUTION:
For installation of the rod - power rear gate, refer to "INSTALLATION", "Power Rear Gate Rod" in the "POWER REAR GATE" section and observe the precautions for installation. <Ref. to PRG-10, INSTALLATION, Power Rear Gate Rod.>

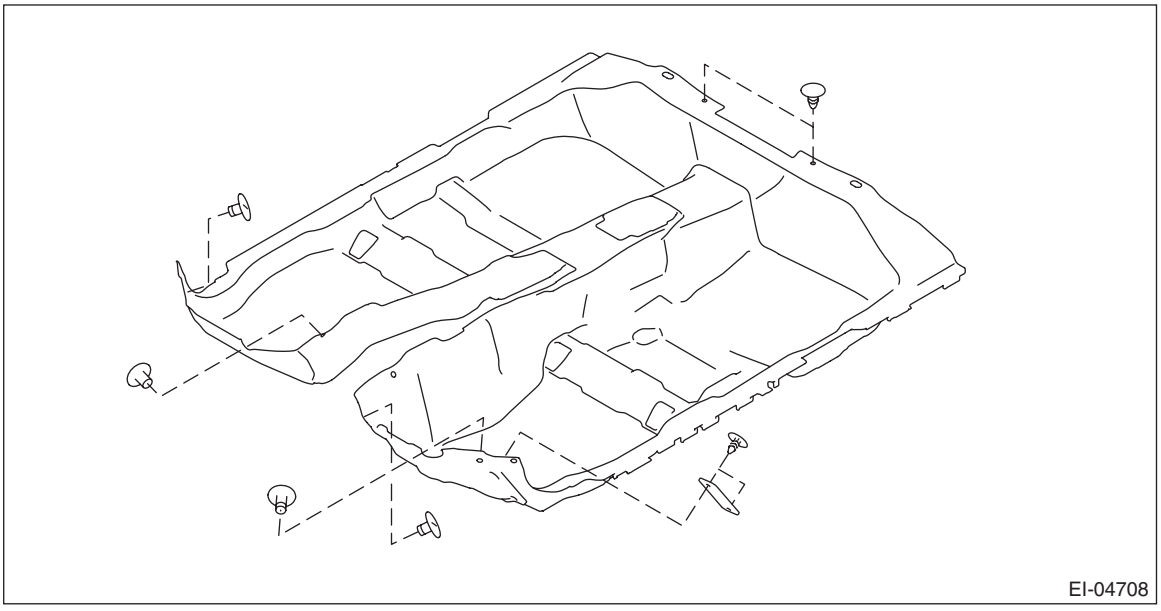
1) Install the trim panel - rear gate LWR.
   (1) Install the power rear gate inner switch.
   (2) Install the hand grip.



Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the trim panel - rear gate pillar side.
3) Install the trim panel - rear gate pillar UPR.

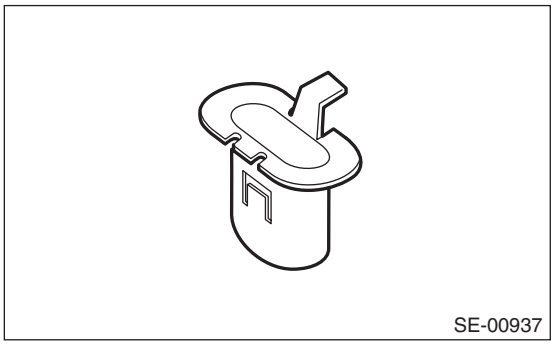
33.Floor Mat



A: REMOVAL

CAUTION:
• The airbag system is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds before starting the service of airbag system.
• If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

SE-00937



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

NOTE:
On CVT models, shift the select lever into “N” before disconnecting the battery ground cable.
2) Remove the front seat assembly. <Ref. to SE-11, REMOVAL, Front Seat.>
3) Remove the rear seat cushion assembly. <Ref. to SE-33, REMOVAL, Rear Seat.>
4) Remove the console box assembly, the cover - shift lever and the panel center LWR. <Ref. to EI-80, REMOVAL, Console Box.>
5) Remove the lower inner trim on the RH and LH sides. <Ref. to EI-92, REMOVAL, Lower Inner Trim.>
6) Remove the pull handle cover. <Ref. to SL-62, FUEL FLAP, REMOVAL, Remote Openers.>
7) Take out the floor mat from the vehicle.
(1) Remove the clips from the floor mat using the remover.
(2) Remove the mat hook on both sides.
(3) Take out the floor mat after folding down.

EI-04708

B: INSTALLATION

CAUTION:
If the hook - rear seat is disconnected from the vehicle body, make sure to replace the hook - rear seat with a new part to prevent the decline of the fixed force of the seat.

1) Install the pull handle cover.
2) Install the lower inner trim.
3) Install the console box assembly, the cover - shift lever and the panel center LWR.

Tightening torque:
Console box assembly: 6.5 N·m (0.7 kgf-m, 4.8 ft-lb)
4) Install the rear seat cushion assembly.
5) Install the front seat.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

EXTERIOR BODY PANELS

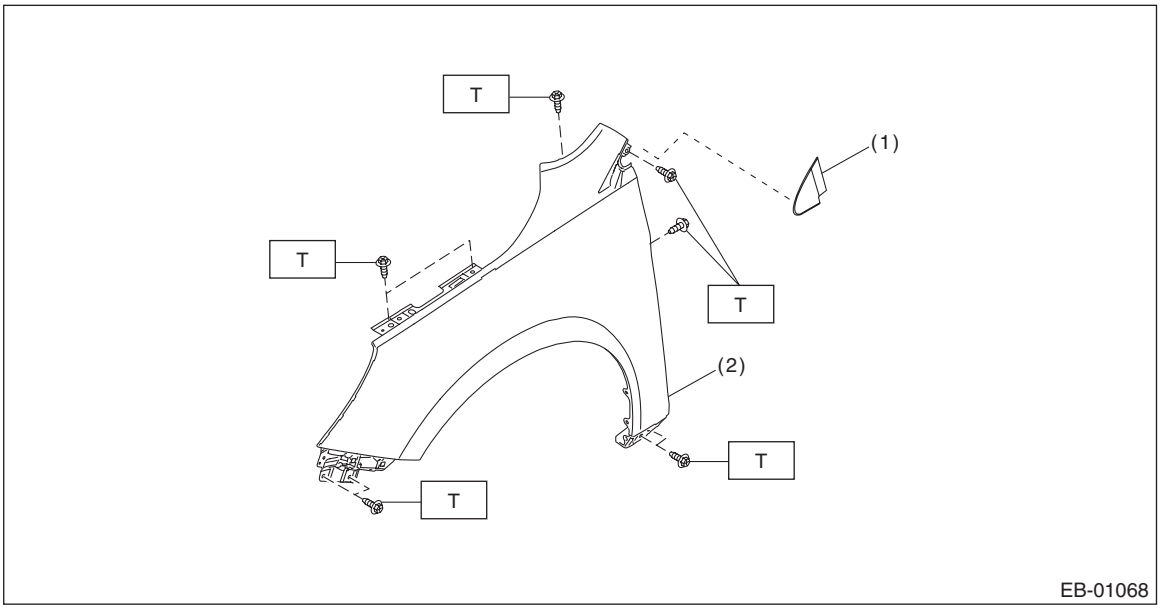
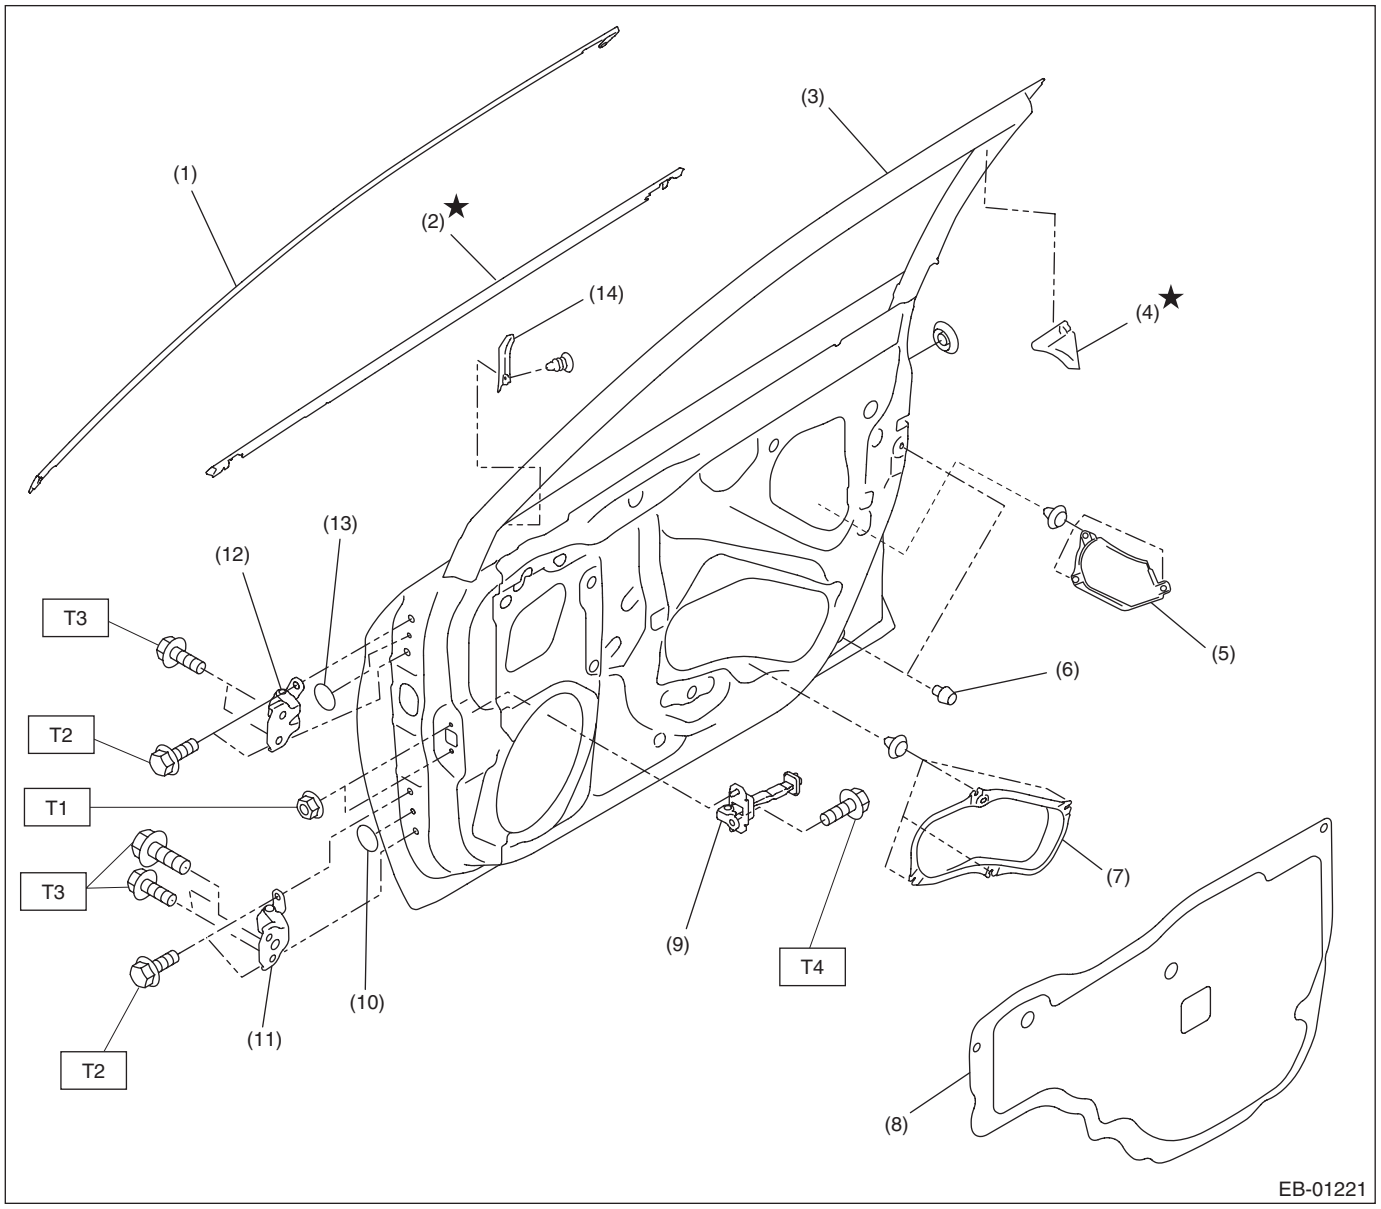
1. General Description



A: COMPONENT

1. FRONT HOOD

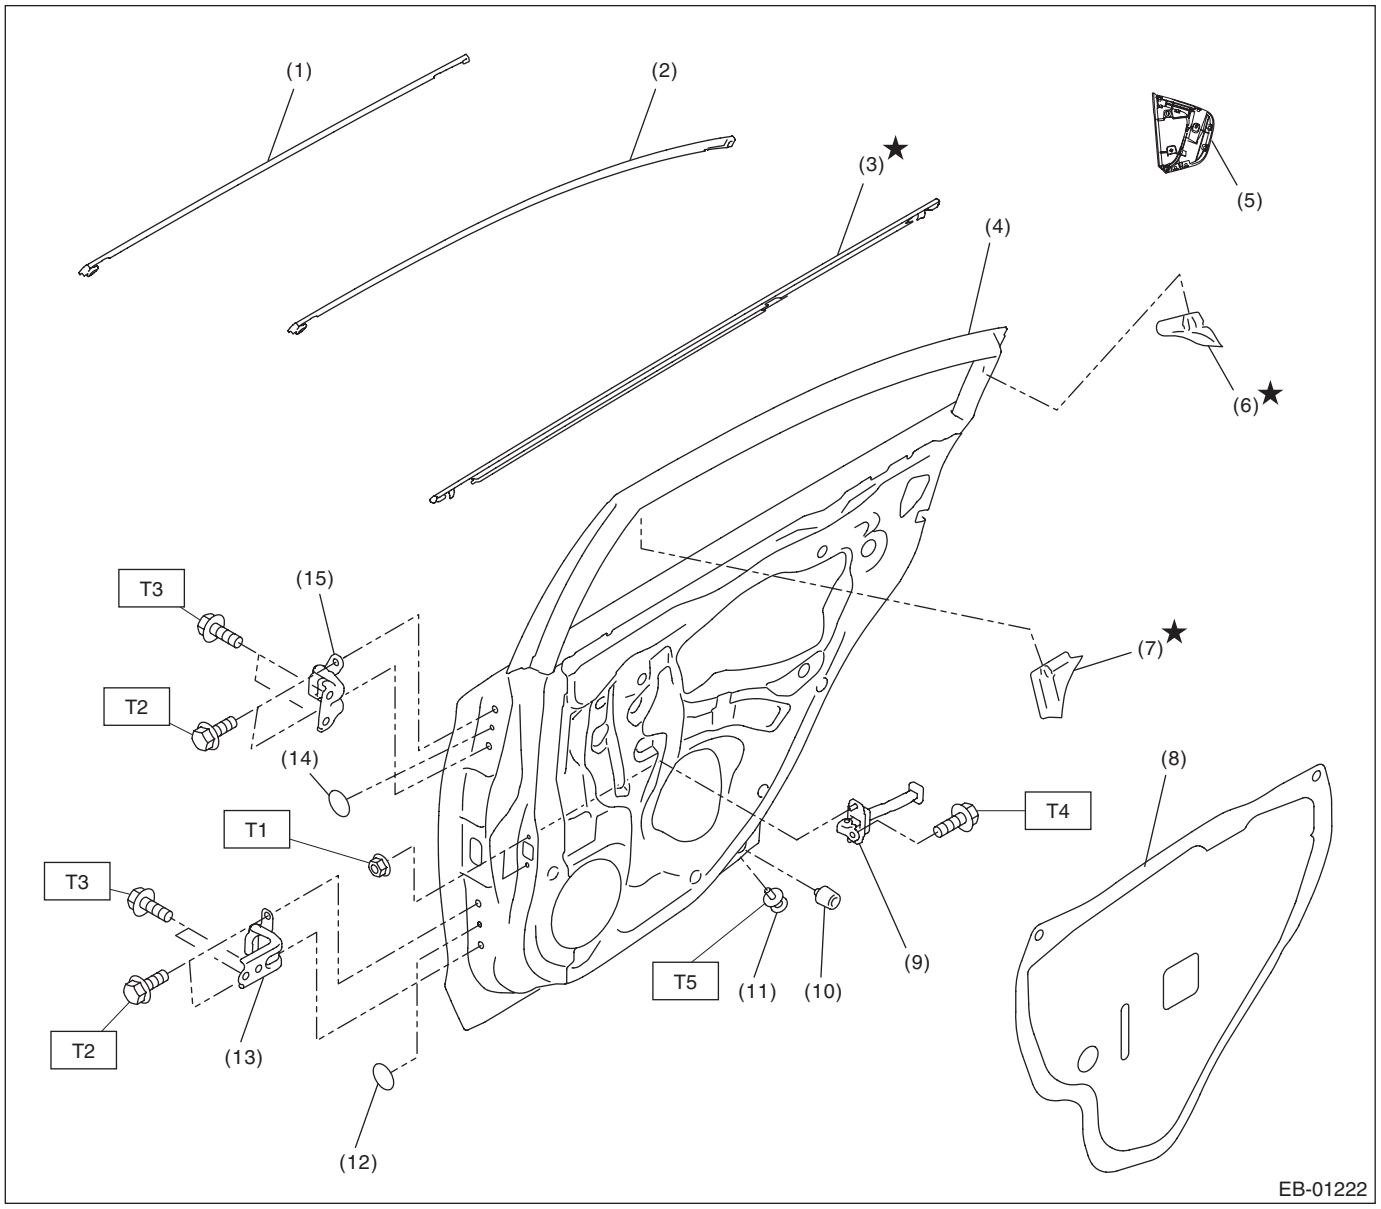
(1)	Hood COMPL - front	(5)	Cover - front fender UPR	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Striker - front hood	(6)	Stay ASSY - front hood	***T1: 20 (2.0, 14.8)***
(3)	Buffer - front hood	(7)	Stopper - front hood	***T2: 25 (2.5, 18.4)***
(4)	Insulator - front hood	(8)	Hinge COMPL - front hood	***T3: 33 (3.4, 24.3)***



2. FRONT FENDER

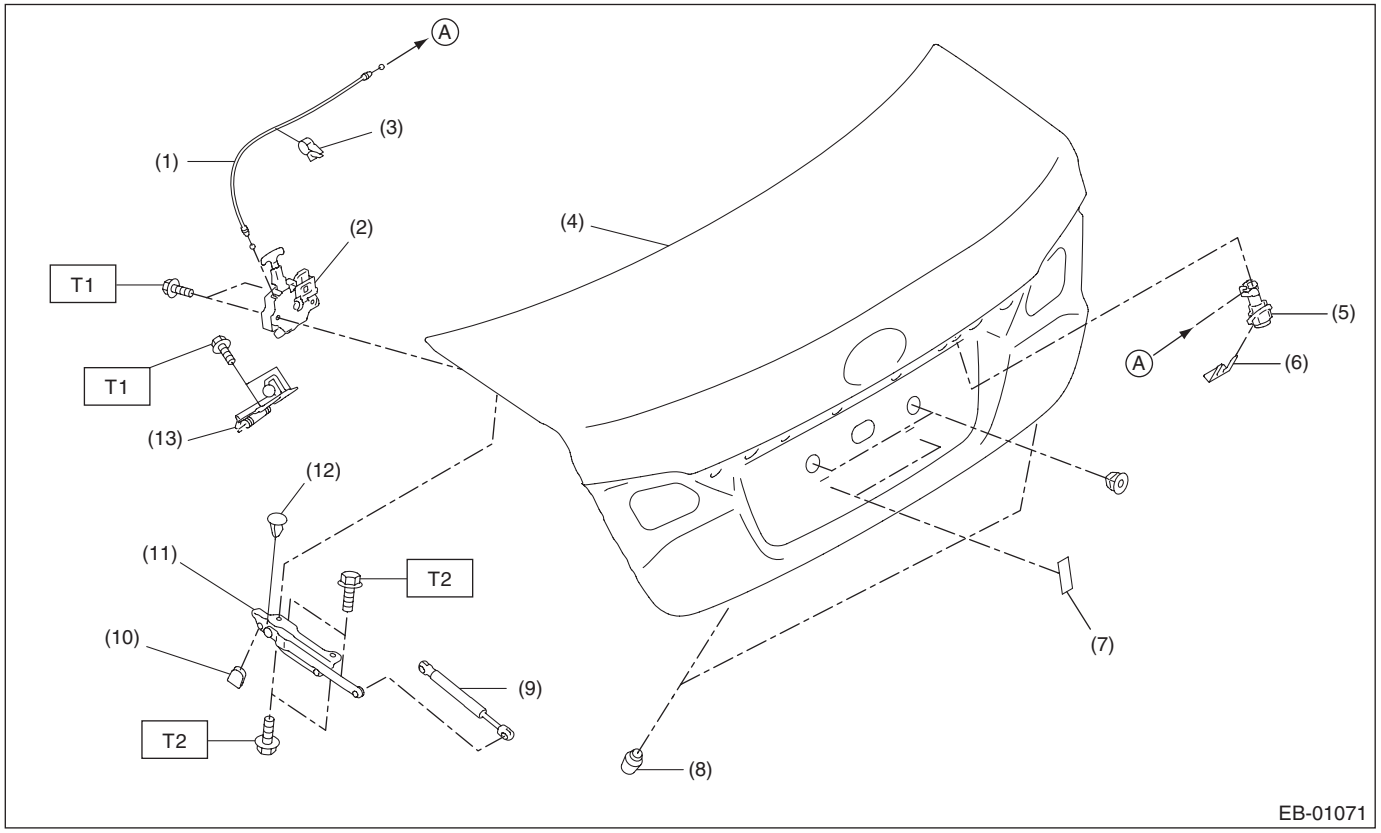
(1) Cover - A pillar ASSY
(2) Fender COMPL - front

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)



3. FRONT DOOR

(1)	Molding - door sash front	(8)	Sealing cover - front door
(2)	Weather strip outer - front door	(9)	Checker ASSY - front door
(3)	Panel ASSY - front door	(10)	Grommet - lower
(4)	Cover B pillar - front door INN	(11)	Lower hinge - front door
(5)	Plate - door	(12)	Upper hinge - front door
(6)	Stopper - rubber	(13)	Grommet - upper
(7)	Front door inner pad	(14)	Cover sash - inner front

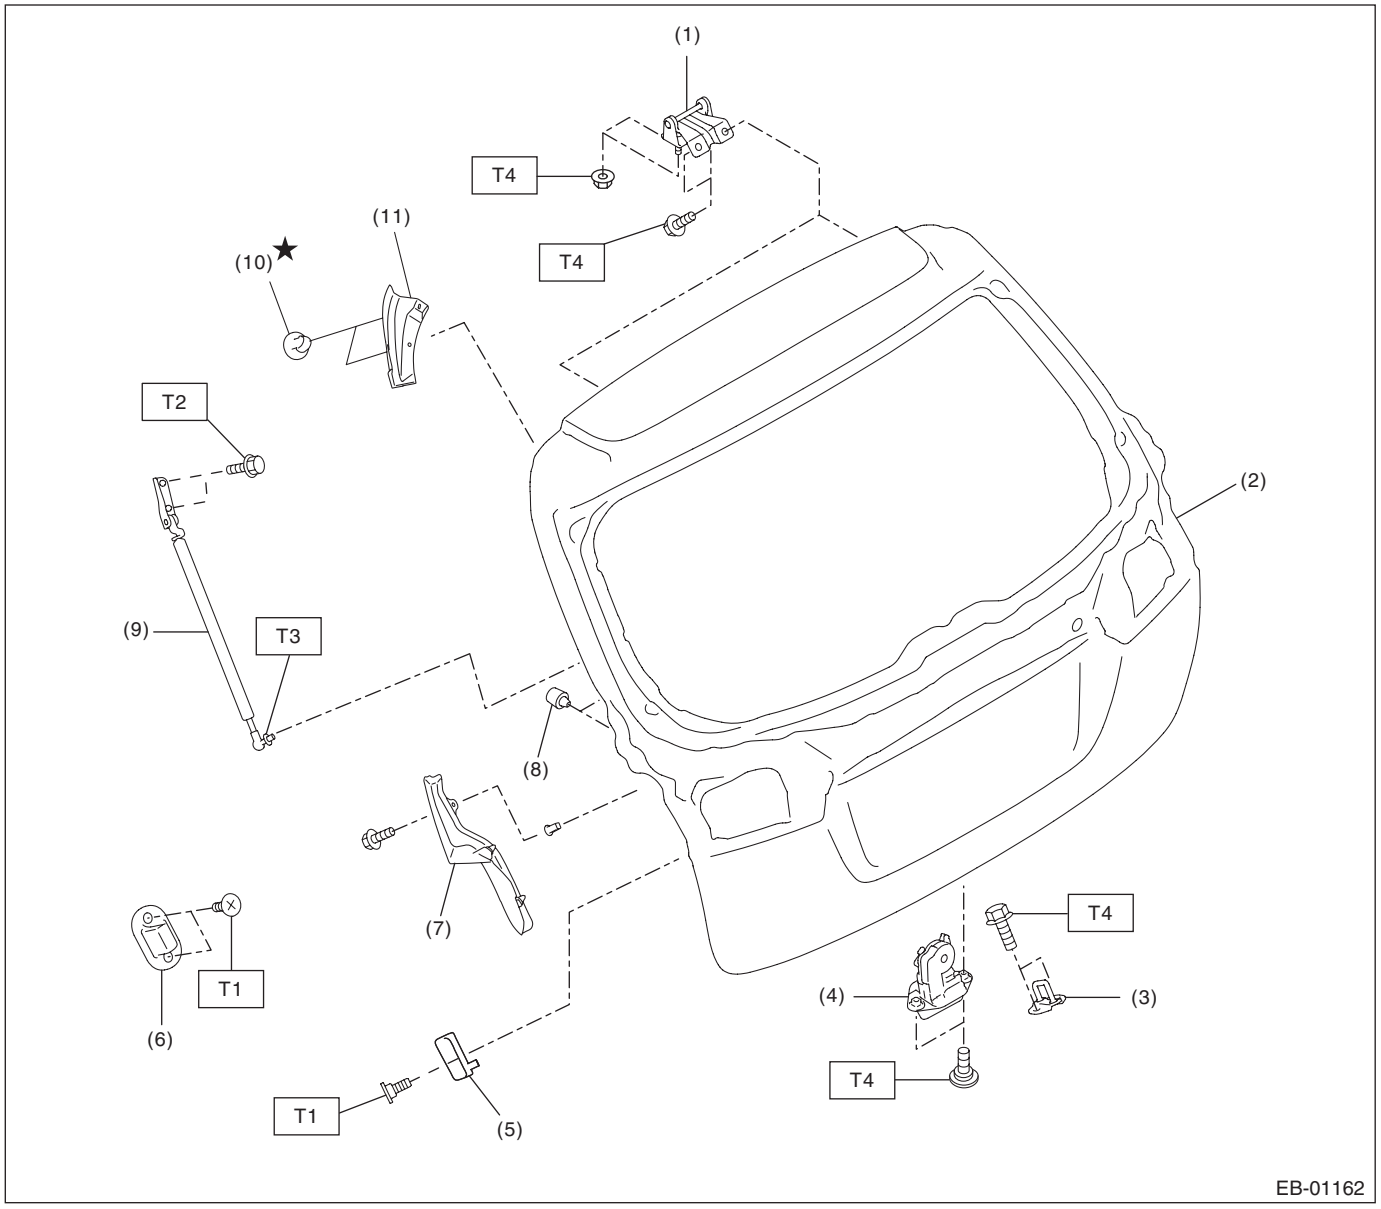


Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 25 (2.5, 18.4)
T3: 30 (3.1, 22.1)
T4: 33 (3.4, 24.3)

4. REAR DOOR

(1)	Molding - door sash rear (OUTBACK model)	(9)	Checker ASSY - rear door	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Molding - door sash rear (sedan model)	(10)	Stopper - rubber	***T1: 7.5 (0.8, 5.5)***
(3)	Weather strip outer - rear door	(11)	Catcher - rear door	***T2: 25 (2.5, 18.4)***
(4)	Panel ASSY - rear door	(12)	Grommet - lower	***T3: 30 (3.1, 22.1)***
(5)	Cover - C pillar ASSY (sedan model)	(13)	Lower hinge - rear door	***T4: 33 (3.4, 24.3)***
(6)	Cover C pillar - rear door INN	(14)	Grommet - upper	***T5: 38 (3.9, 28.0)***
(7)	Cover B pillar - rear door INN	(15)	Upper hinge - rear door	
(8)	Sealing cover - rear door			

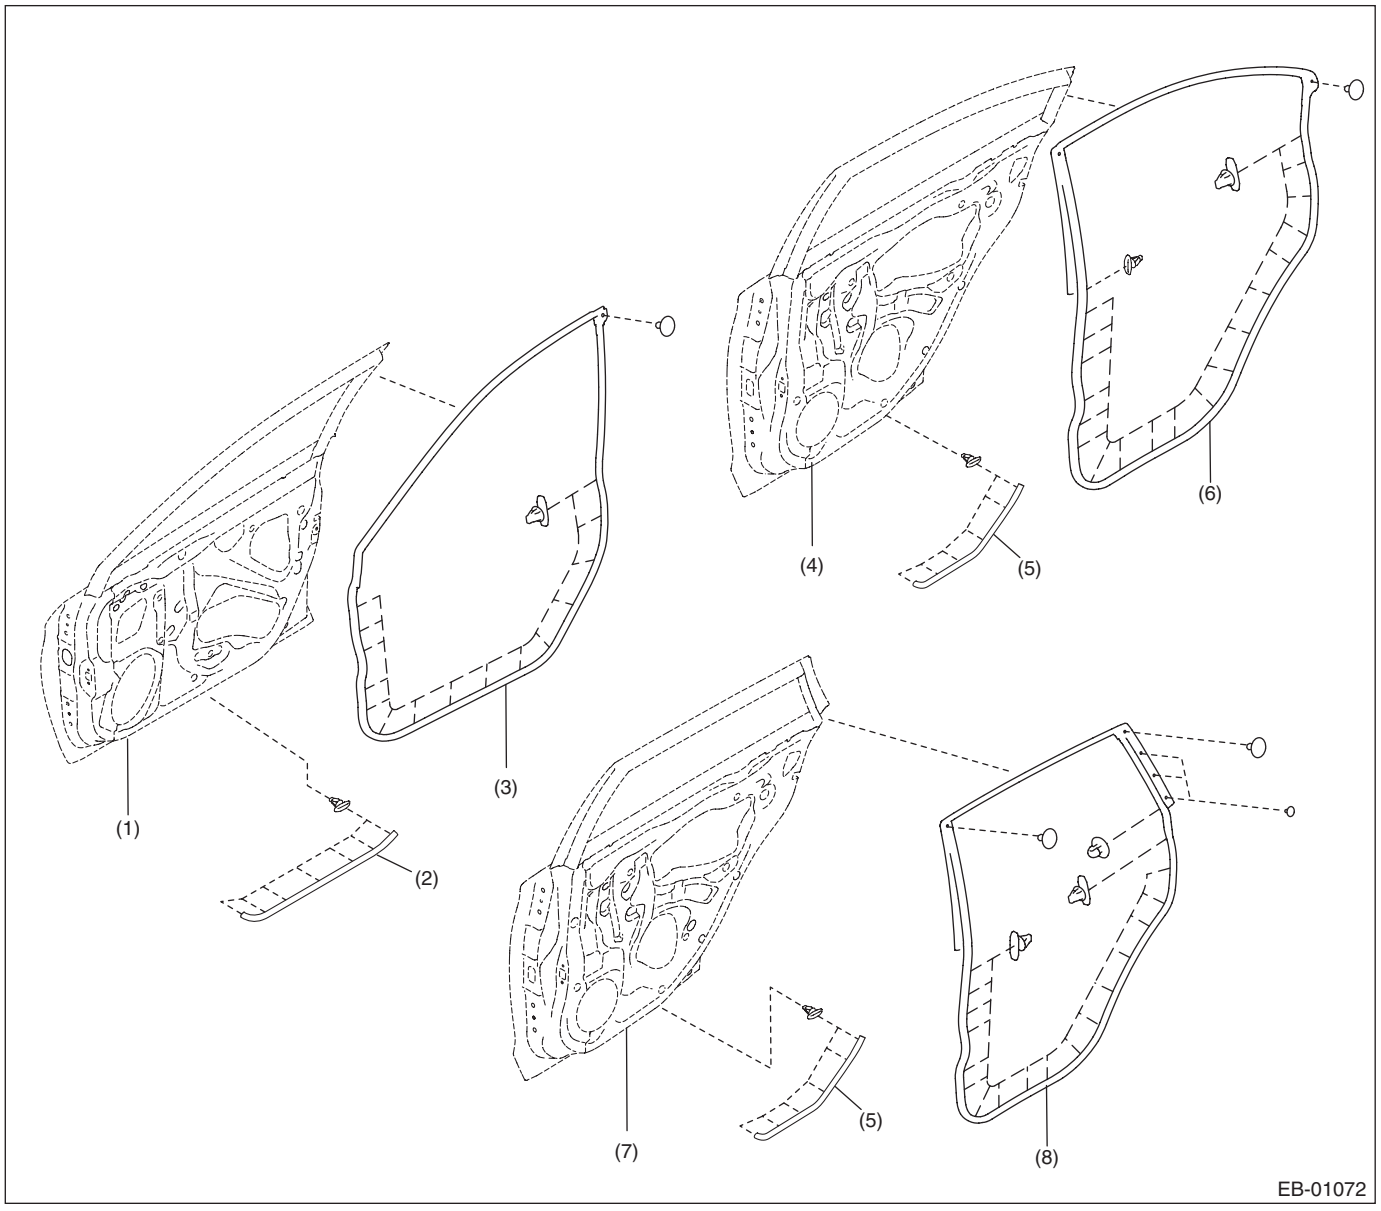
5. TRUNK LID PANEL



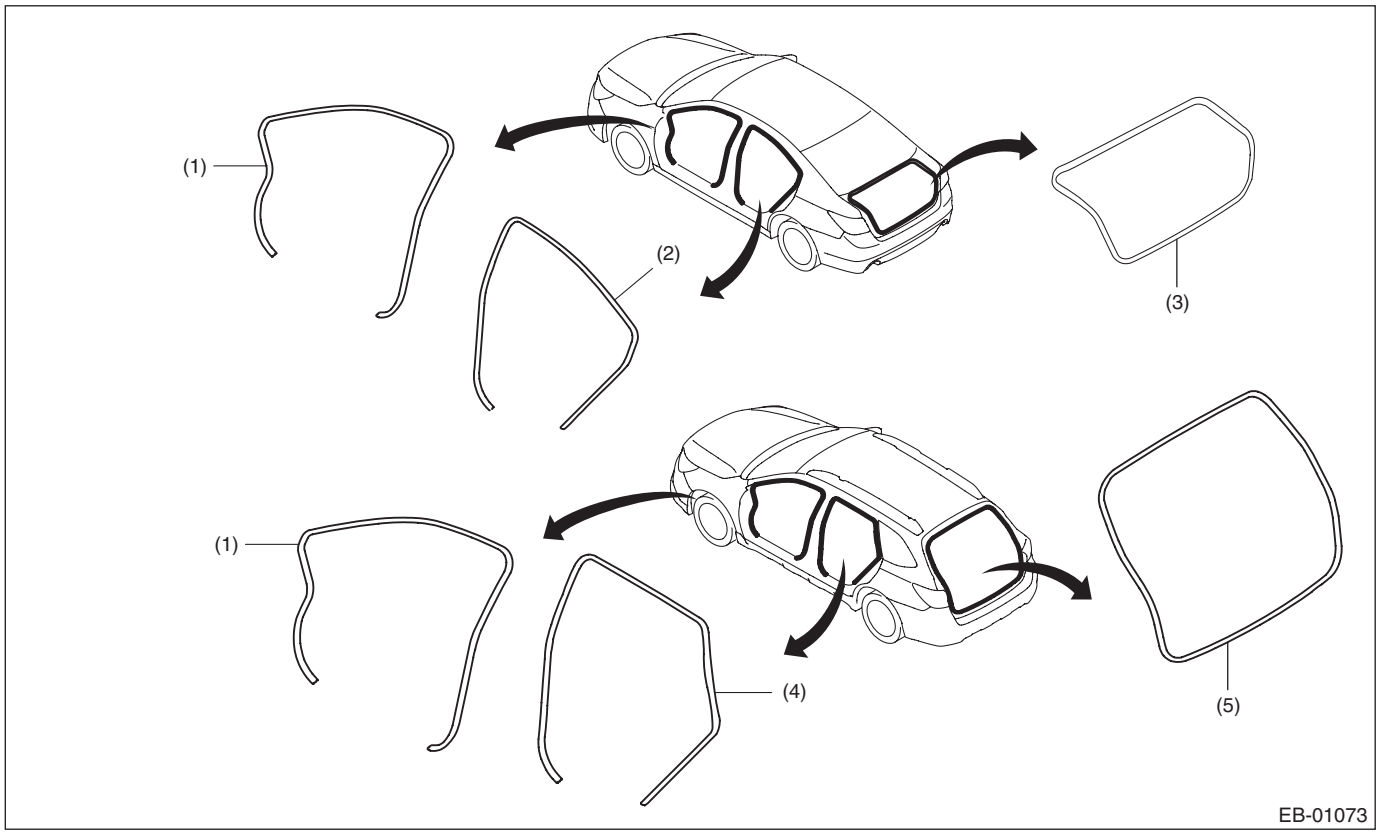
(1) Cable ASSY - trunk lid
(2) Lock ASSY - trunk lid
(3) Clip
(4) Trunk lid COMPL
(5) Key lock - trunk lid
(6) Clamp - key trunk lid
(7) Cushion - license
(8) Stopper - trunk lid LWR
(9) Stay ASSY - trunk lid
(10) Stopper - hinge
(11) Hinge ASSY - trunk lid
(12) Clip
(13) Striker - trunk lid

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 25 (2.5, 18.4)

6. REAR GATE



NOTE:
For the components of power rear gate, refer to the power rear gate system. <Ref. to PRG-2, UNIT AND REAR GATE, COMPONENT, General Description.>

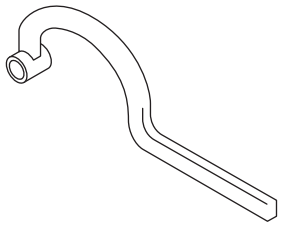


(1) Hinge - rear gate
(2) Panel - rear gate
(3) Striker - rear gate
(4) Latch & actuator - rear gate
(5) Buffer - rear gate (panel - rear gate side)
(6) Buffer - rear gate (body side)
(7) Cover - rear gate
(8) Stopper rubber
(9) Stay ASSY - rear gate
(10) Clip
(11) Drip - rear gate

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 16 (1.6, 11.8)
T3: 20 (2.0, 14.8)
T4: 25 (2.5, 18.4)

7. WEATHER STRIP

(1) Panel ASSY - front door
(2) Weather strip - front door - lower
(3) Weather strip - front door
(4) Panel ASSY - rear door
(5) Weather strip - rear door - lower
(6) Weather strip - rear door
(7) Panel ASSY - rear door (sedan model)
(8) Weather strip - rear door (OUTBACK model)



(1) Weather strip - body side flange front
(2) Weather strip - body side flange rear (sedan model)
(3) Weather strip - trunk lid
(4) Weather strip - body side flange rear (OUTBACK model)
(5) Weather strip - rear gate (OUTBACK model)

B: CAUTION

Exterior body panels are heavy. When removing or installing, do not drop and damage the panels. Do not damage the panel painting surface.

C: PREPARATION TOOL

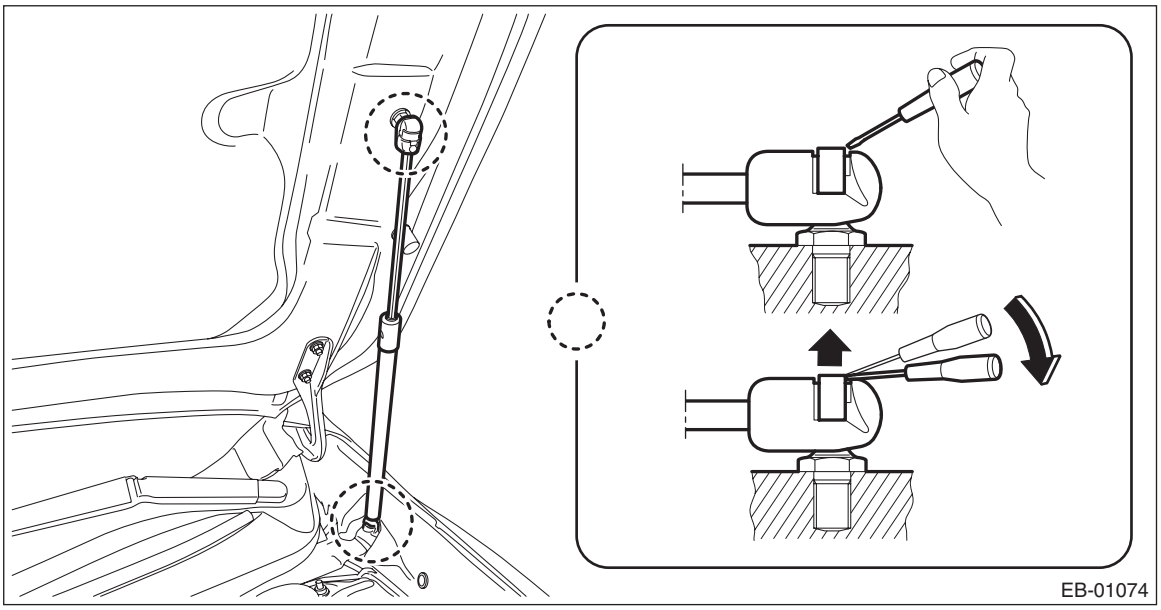
1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-925610000	925610000	WRENCH	Used for removing and installing door hinge.

2. GENERAL TOOL

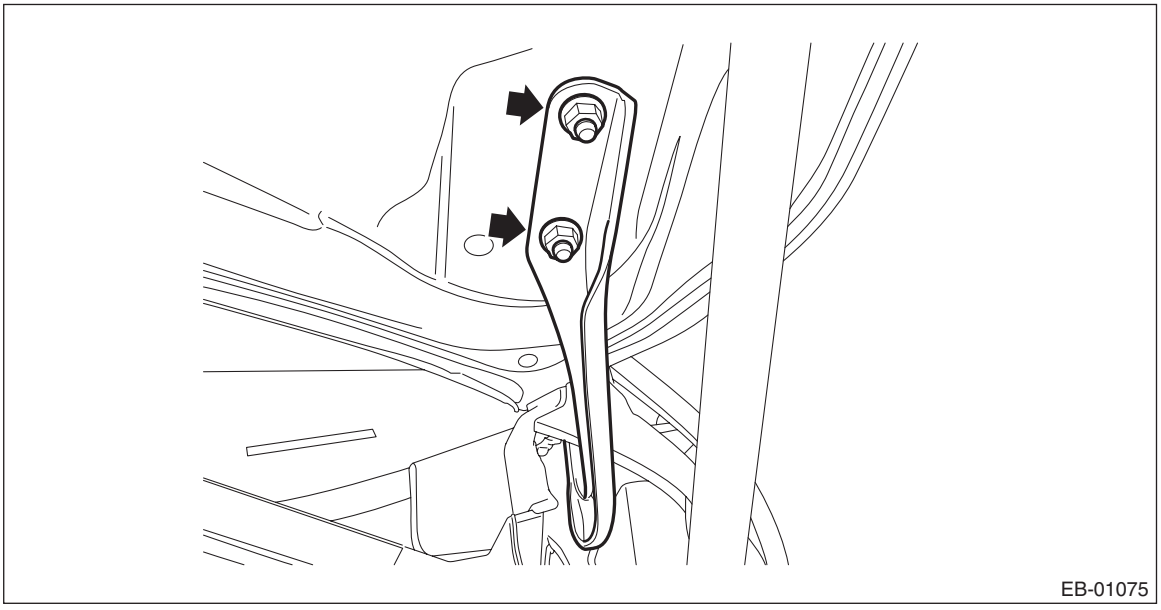
TOOL NAME	REMARKS
Support jack	Used for supporting door panel.
Clip remover	Used for removing various types of clips.

2. Front Hood



A: REMOVAL

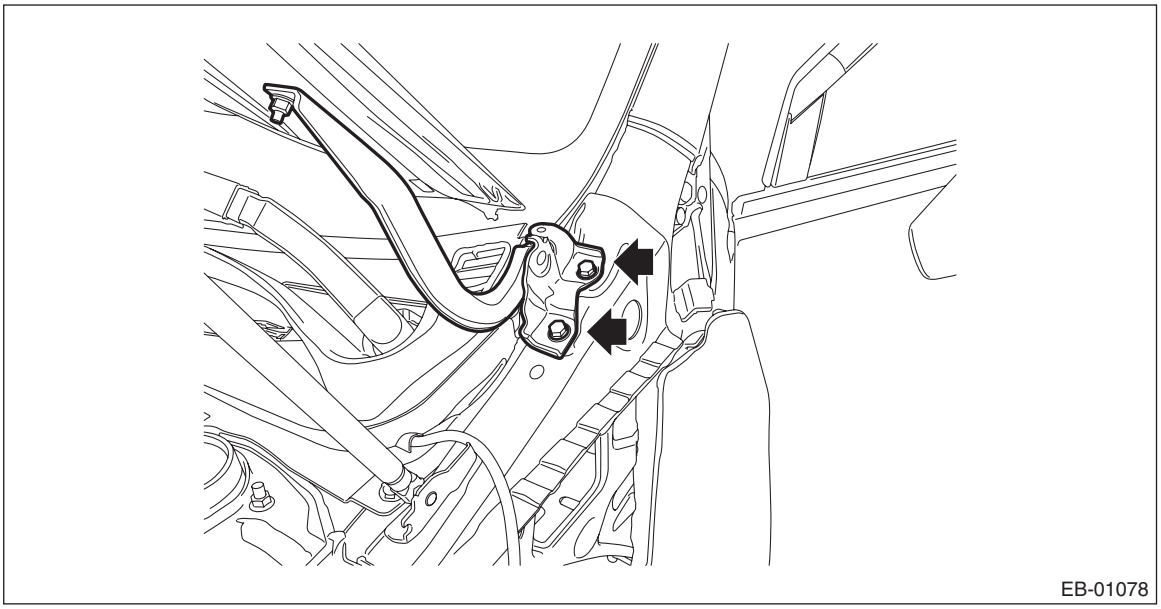
CAUTION:
The hood COMPL - front is heavy. When removing and installing it, always work in a team of two or more persons.



1) Open the hood COMPL - front.
2) Remove the stay assembly - front hood.

CAUTION:
Do not remove the stop ring completely. Raise it to the position enough to remove the ball stud.

(1) Gently push the stop ring against the ball stud to be raised with a flat tip screwdriver.
(2) Pull the stay assembly - front hood toward you, and remove the stay assembly - front hood from the ball stud.



3) Remove the nut on the hood COMPL - front side, and remove the hood COMPL - front.

4) Remove the hinge COMPL - front hood from the body.

NOTE:
The hinge COMPL - front hood cannot be removed with the fender COMPL - front attached. Therefore, remove the fender COMPL - front beforehand.

B: INSTALLATION

1) Temporarily fit the hinge COMPL - front hood around the original position on the vehicle body.
2) Install the hood COMPL - front to the hinge COMPL - front hood.

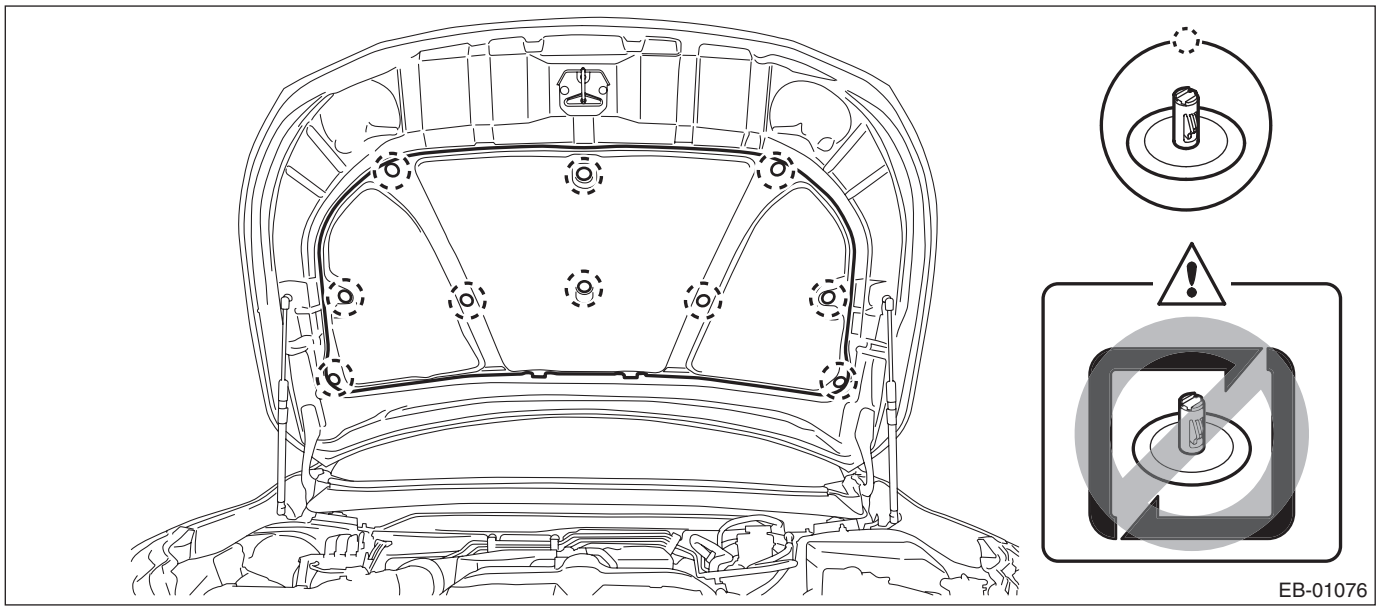
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

3) Install the stay assembly - front hood.
4) When temporarily fitting the fender COMPL - front and adjusting the clearance, make sure that a uniform clearance is created around the hood COMPL - front.

NOTE:
When installing the fender COMPL - front, make sure that a uniform clearance is created around it.
- Fender COMPL - front to Hood COMPL - front: <Ref. to EB-17, ADJUSTMENT, Front Hood.>
- Fender COMPL - front to Panel assembly - front door: <Ref. to EB-28, ADJUSTMENT, Front Door.>

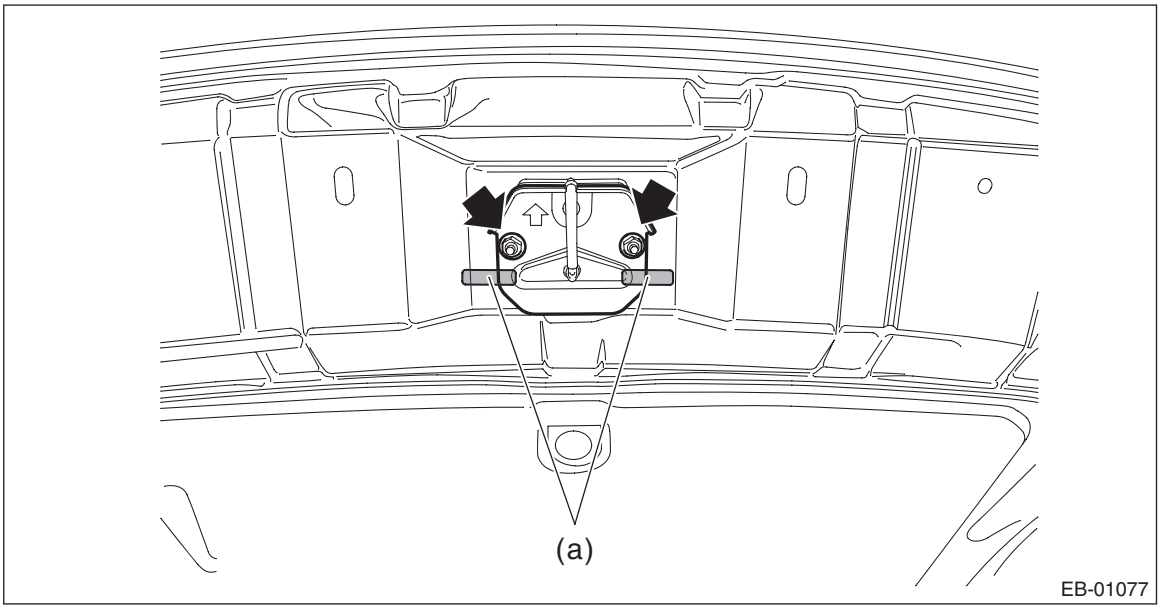
5) Install the hinge COMPL - front hood.
(1) Tighten the bolts at the front side, and temporarily fit the bolts at the rear side.
(2) Remove the fender COMPL - front, and tighten to the specified torque.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



6) Readjust the fender COMPL - front to install.

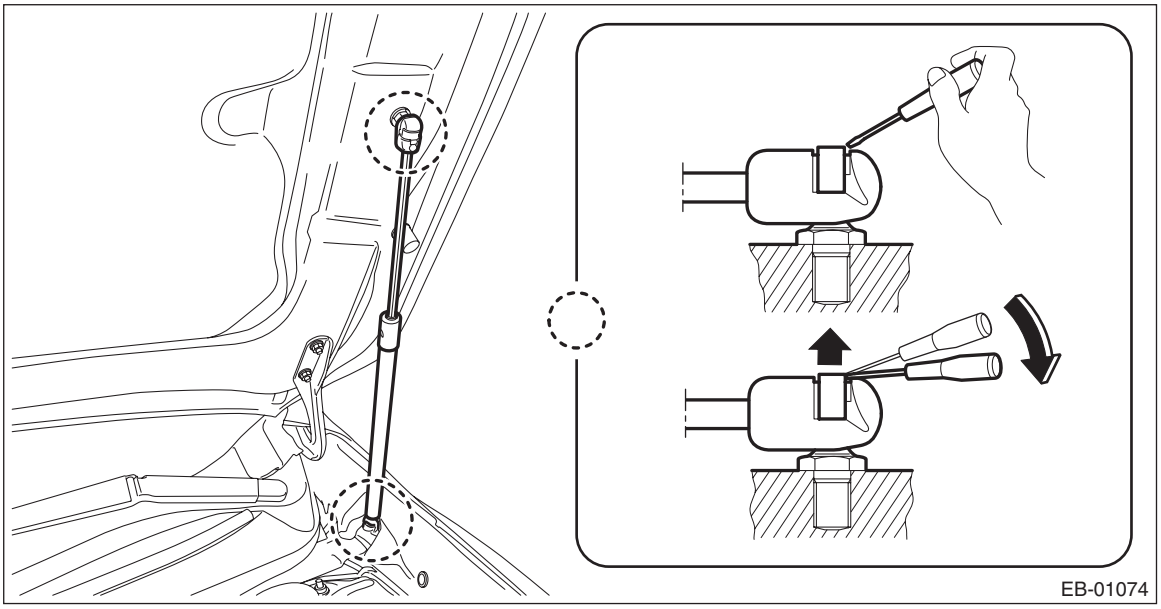
NOTE:
When installing the fender COMPL - front, make sure that a uniform clearance is created around it.
- Fender COMPL - front to Hood COMPL - front: <Ref. to EB-17, ADJUSTMENT, Front Hood.>
- Fender COMPL - front to Panel assembly - front door: <Ref. to EB-28, ADJUSTMENT, Front Door.>



C: DISASSEMBLY

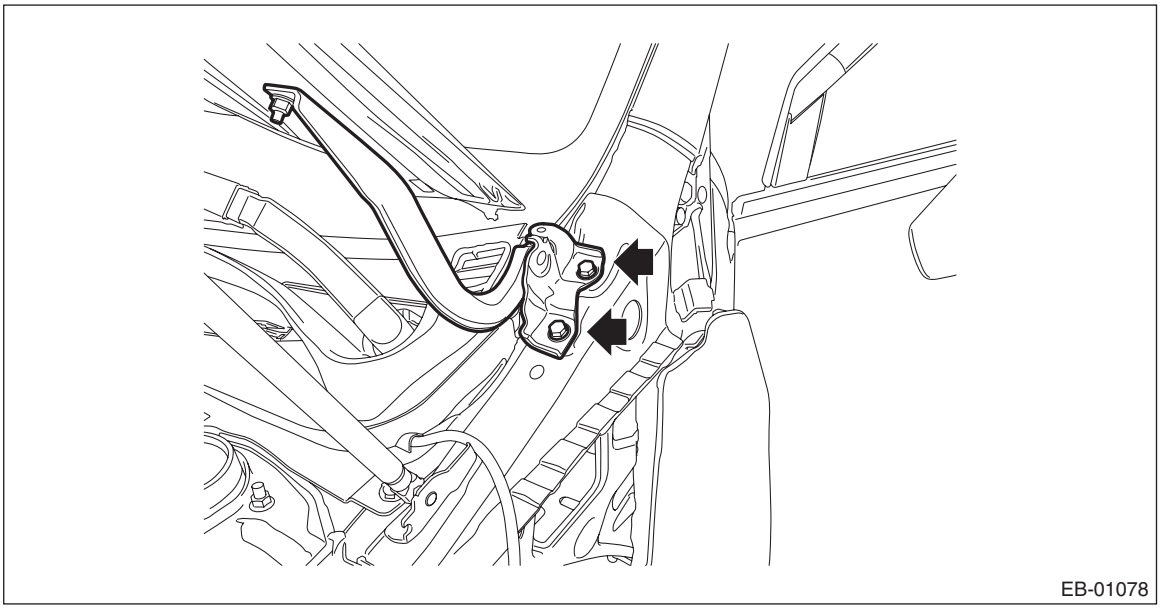
CAUTION:
- **Do not damage piston rods and oil seals.**
- **Never disassemble cylinders: They contain gas.**
- **The hood COMPL - front is heavy. When removing or installing the hood COMPL - front, stay assembly - front hood, and hinge COMPL - front hood, be sure to work in a team of two or more persons.**
- **Do not reuse any clips damaged during removal. The damaged clip cannot fix the insulator securely. Therefore, always replace with a new part.**

1) Remove the clips, and remove the insulator - front hood.



2) Make alignment marks (a), and remove the striker - front hood from the hood COMPL - front.

3) Remove the stay assembly - front hood.



CAUTION:
Do not remove the stop ring completely. Raise it to the position enough to remove the ball stud.

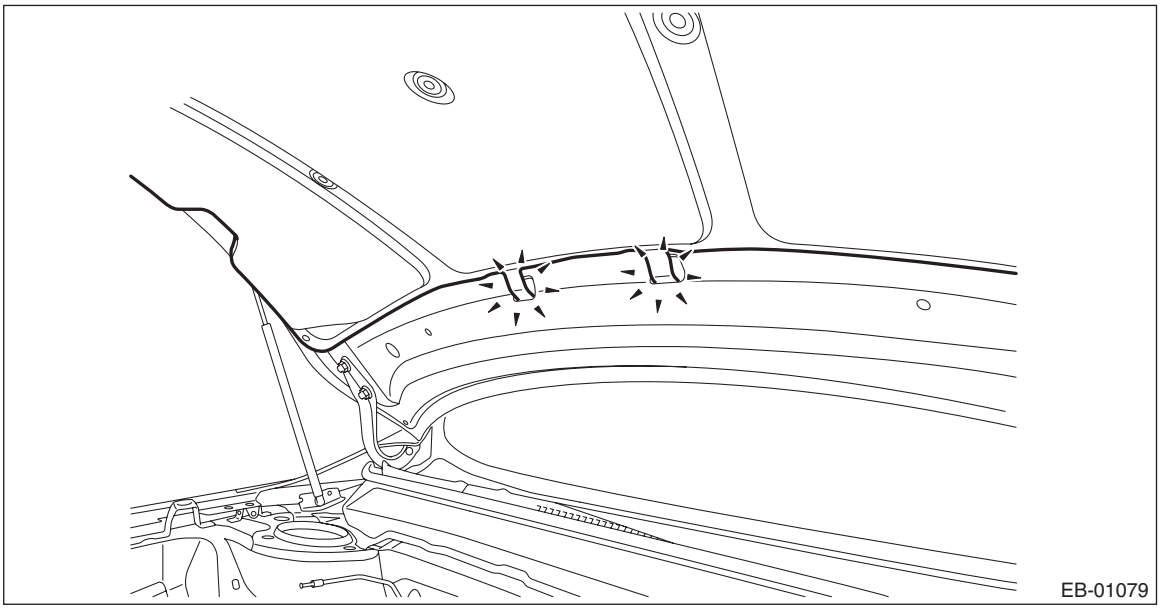
(1) Gently push the stop ring against the ball stud to be raised with a flat tip screwdriver.
(2) Pull the stay assembly - front hood toward you, and remove the stay assembly - front hood from the ball stud.

4) Remove the hinge COMPL - front hood from the body.

NOTE:
The hinge COMPL - front hood cannot be removed with the fender COMPL - front attached. Therefore, remove the fender COMPL - front beforehand.

D: ASSEMBLY

1) Install the hinge COMPL - front hood.

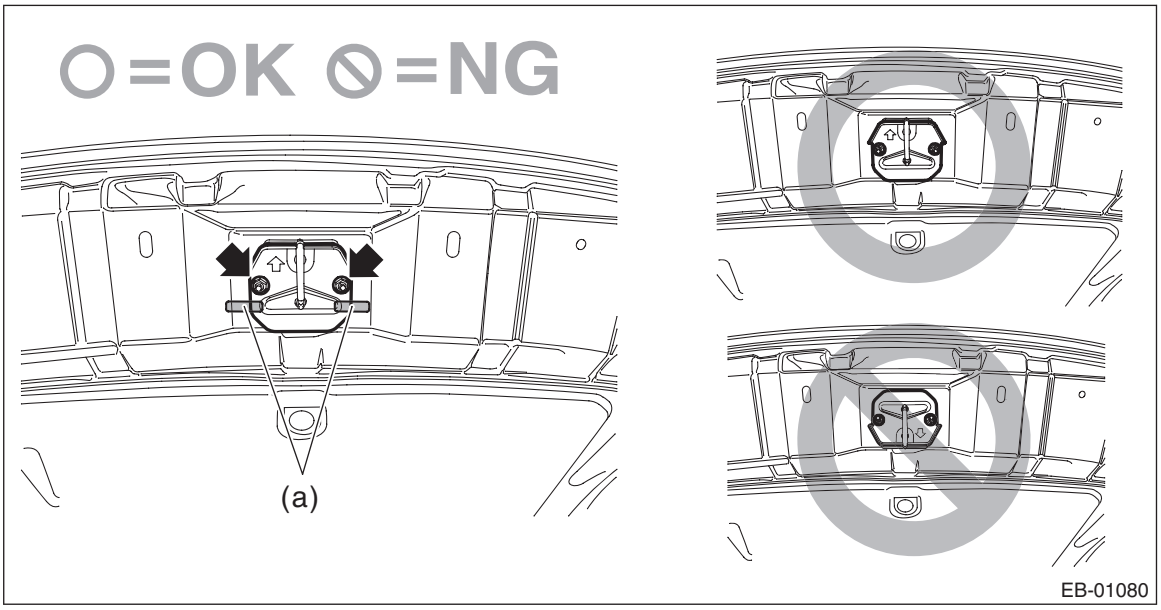


Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) Install the stay assembly - front hood.

Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)

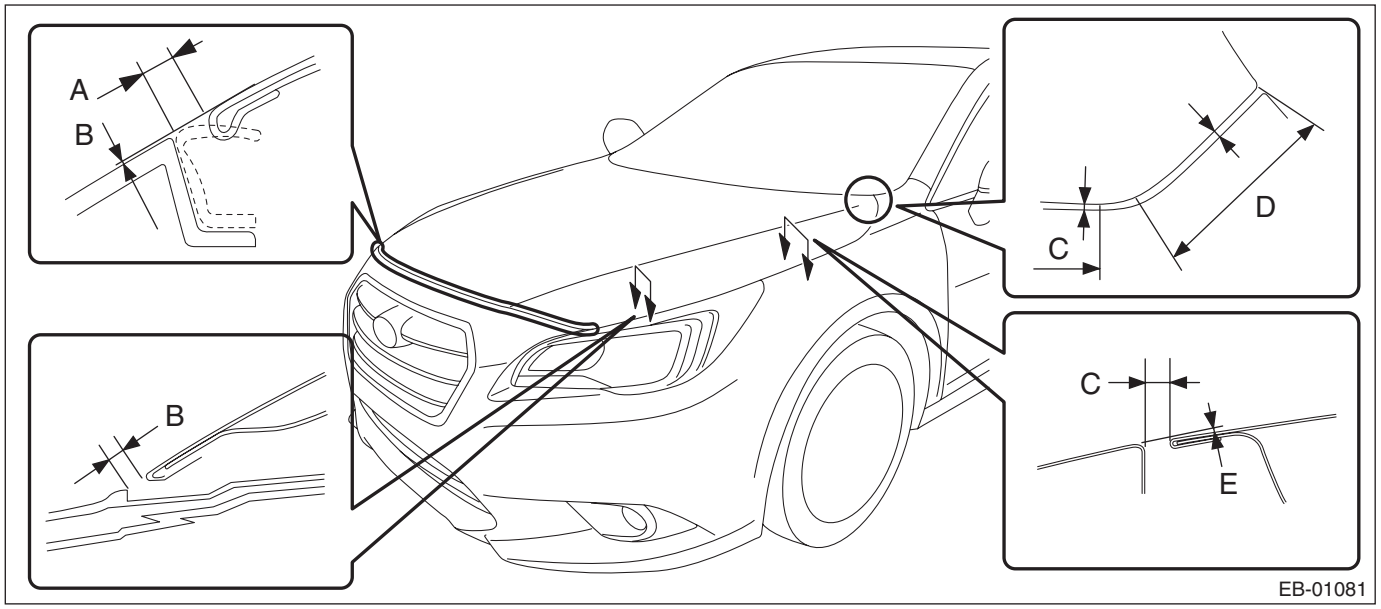
3) Install the insulator - front hood.



NOTE:
Securely insert the claws of the insulator - front hood.

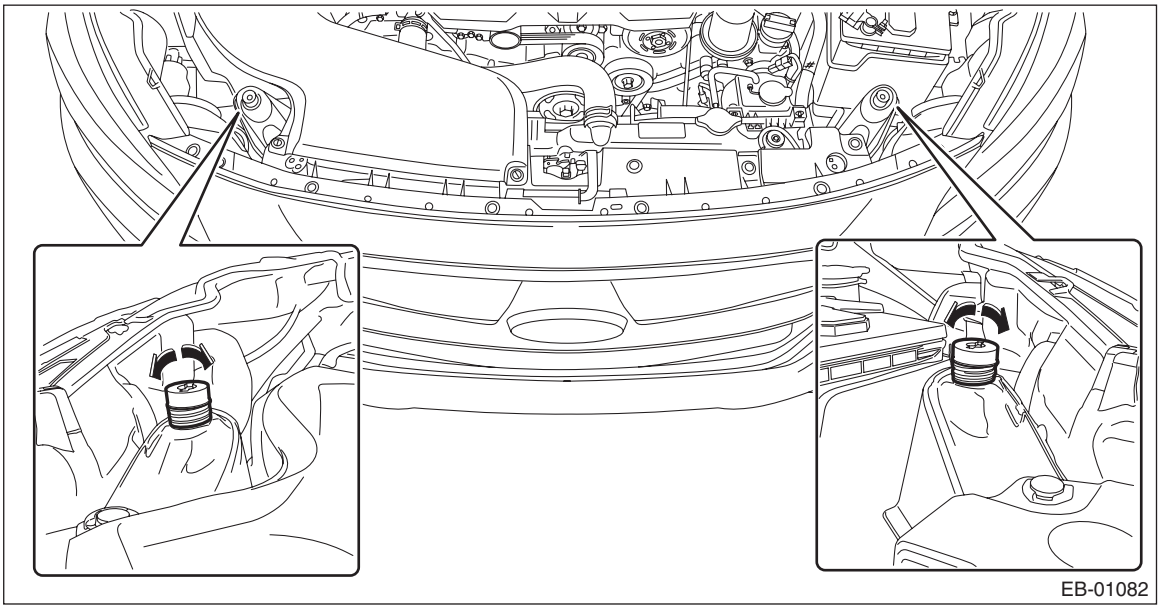
4) Align the alignment marks (a), and install the striker - front hood to the hood COMPL - front.

CAUTION:
When installing the striker - front hood, make sure that the front and rear sides are positioned in a correct direction.



Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

NOTE:
It is not necessary to adjust the striker - front hood because there is no span of adjustable range.

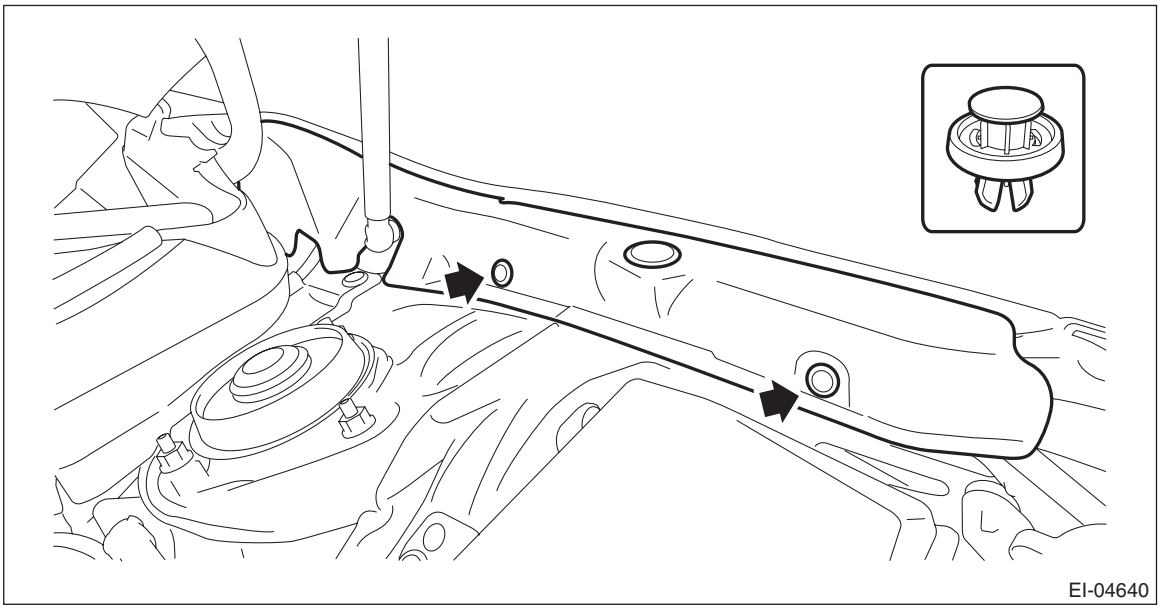


E: ADJUSTMENT

NOTE:
Adjustment should be performed on the fender COMPL - front, lock assembly - front hood and buffer - front hood, because adjustment cannot be performed on the hinge COMPL - front hood.
Adjust the clearance around the hood COMPL - front as follows.

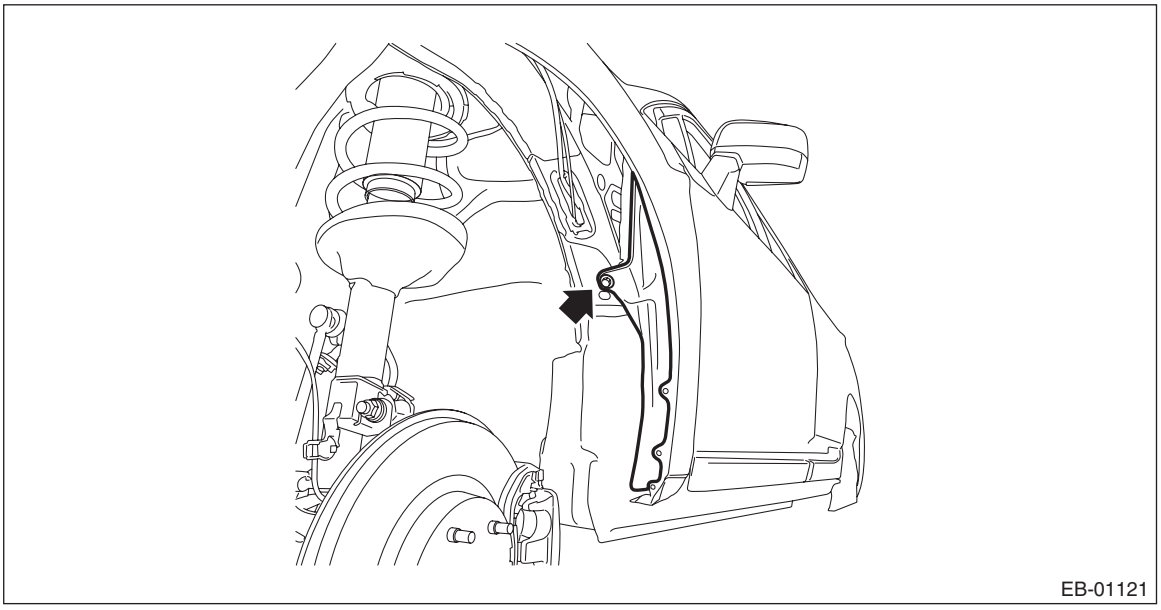
	Part	Standard
A	Hood COMPL - front to Bumper face front	4.2±1.7 mm (0.17±0.07 in)
B	Offset value: Hood COMPL - front to Front end of fender COMPL - front	–0.2+1.7, –1.2 mm (0.01+0.07, –0.05 in)
C	Hood COMPL - front to Fender COMPL - front (from front end to just before curved portion)	4.0±1.5 mm (0.16±0.06 in)
D	Hood COMPL - front to Fender COMPL - front (from rear end to just before curved portion)	4.0±1.0 mm (0.16±0.04 in)
E	Surface level gap: Hood COMPL - front to Fender COMPL - front	0.5±1.0 mm (0.02±0.04 in)

1) Adjust the front end height of the hood COMPL - front. <Ref. to SL-58, ADJUSTMENT, Front Hood Lock Assembly.>
2) Rotate the buffer - front hood of the hood COMPL - front to adjust the height.



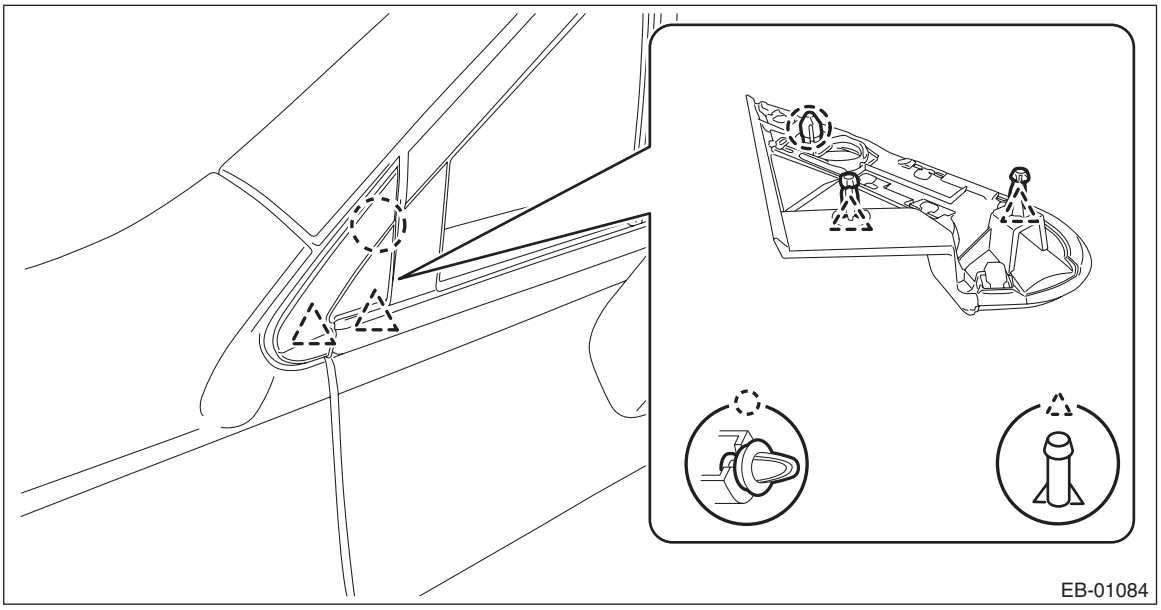
3. Front Fender

A: REMOVAL



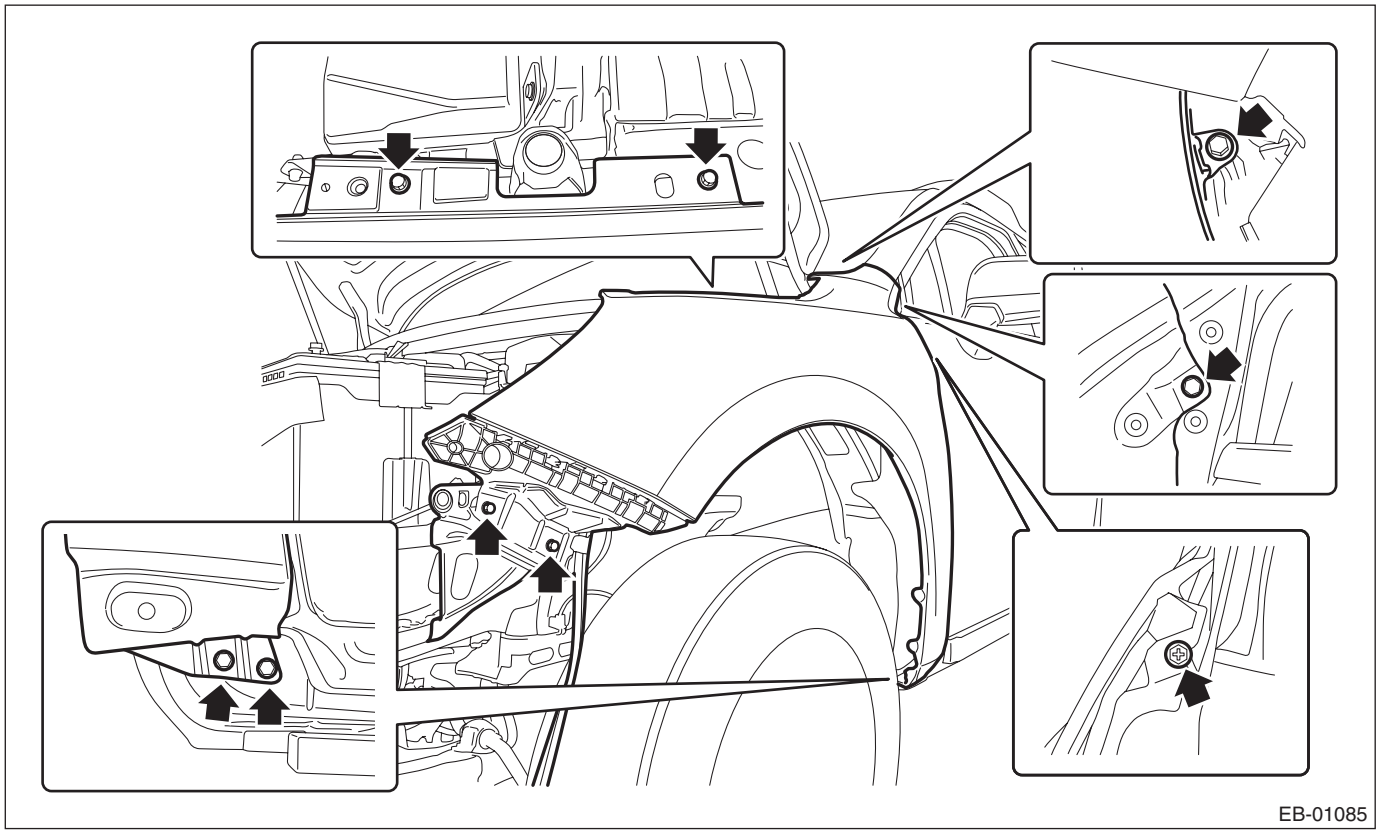
1. FENDER PANEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the bumper face - front. <Ref. to EI-34, REMOVAL, Front Bumper.>
3) Remove the light assembly - head. <Ref. to LI-27, REMOVAL, Headlight Assembly.>
4) Remove the cover - front fender UPR.
   (1) Remove the clip.
   (2) Release the claws by pulling them forward, and remove the cover - front fender UPR.



CAUTION:
Forcibly removing the part may cause creases.

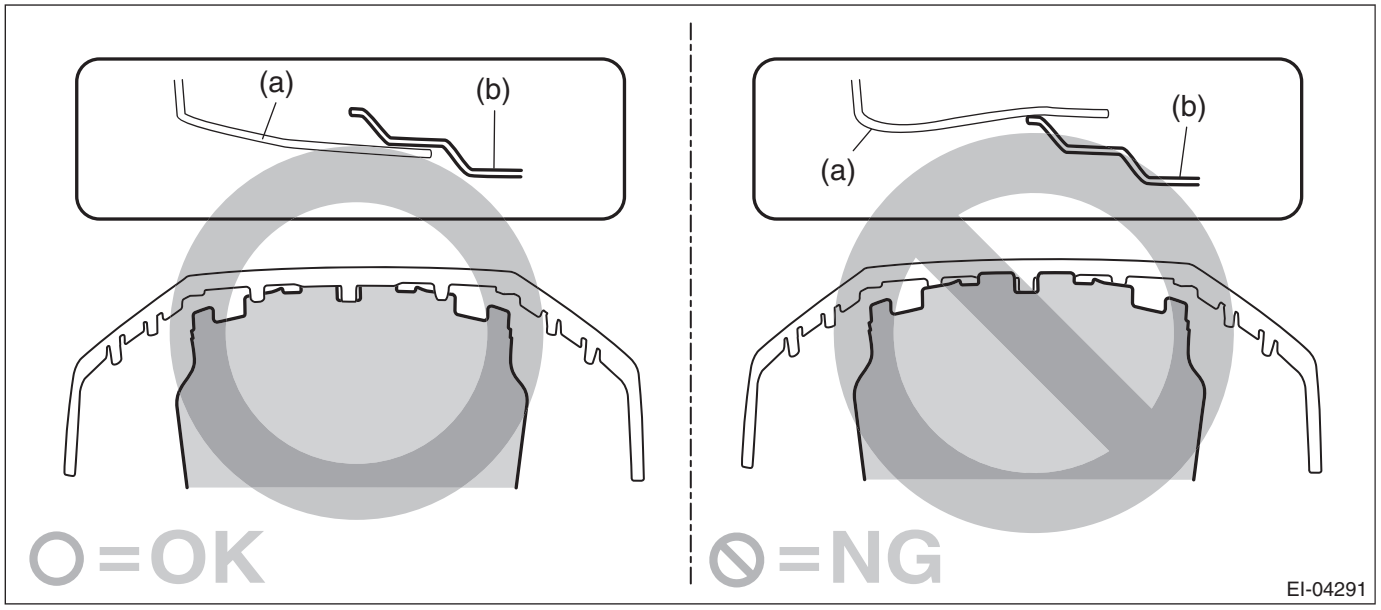
EI-04640



5) Remove the mud guard - front. <Ref. to EI-29, REMOVAL, Mud Guard.>
6) Remove the side garnish assembly. <Ref. to EI-58, REMOVAL, Side Garnish.>
7) Remove the cover - fender LWR.

EB-01121

8) Remove the cover - A pillar assembly.



9) Remove the fender COMPL - front.

B: INSTALLATION

1. FENDER PANEL

CAUTION:
- **After installing the fender COMPL - front, be sure to perform headlight beam adjustment.**
- **Install the bumper face - front so that the front end of the under cover (b) comes inside the bumper face - front (a).**

- **Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.**

1) Install the fender COMPL - front.

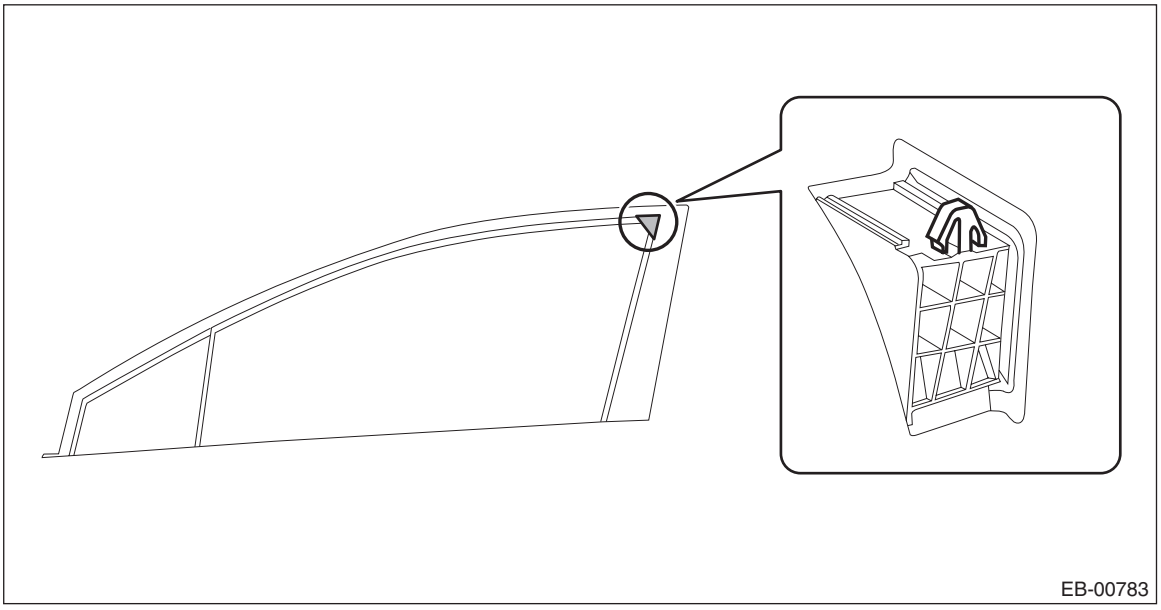
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

NOTE:
When installing the fender COMPL - front, make sure that a uniform clearance is created around it.
- Fender COMPL - front to Hood COMPL - front: <Ref. to EB-17, ADJUSTMENT, Front Hood.>
- Fender COMPL - front to Panel assembly - front door: <Ref. to EB-28, ADJUSTMENT, Front Door.>

2) Install the cover - A pillar assembly.
3) Install the spoiler assembly - side. <Ref. to EI-59, INSTALLATION, Side Garnish.>
4) Install the mud guard - front.
5) Install the light assembly - head.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

6) Install the bumper face - front. <Ref. to EI-38, INSTALLATION, Front Bumper.>
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
8) Adjust the headlight beam and fog light beam.
- Adjust the headlight beam. <Ref. to LI-31, HEADLIGHT BEAM ADJUSTMENT, ADJUSTMENT, Headlight Assembly.>
- Adjust the fog light beam. (Model with fog light) <Ref. to LI-41, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

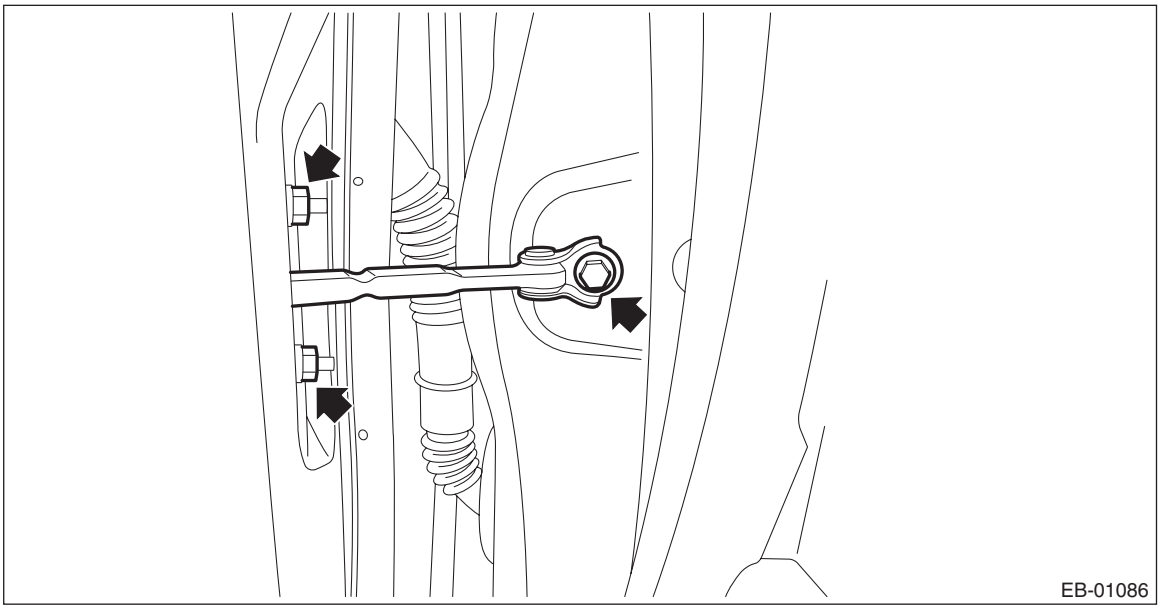


4. Front Door

A: REMOVAL

1. FRONT DOOR PANEL

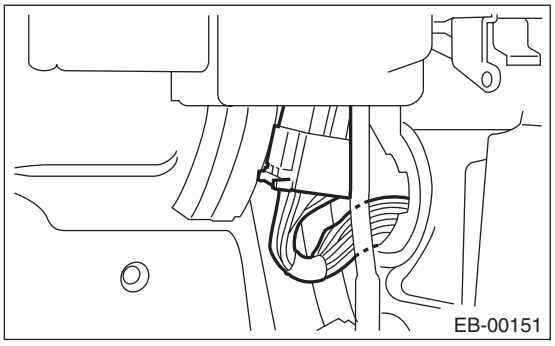
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the garnish assembly - door. (OUTBACK model) <Ref. to EI-58, OUTBACK MODEL, REMOVAL, Side Garnish.>
3) Remove the trim panel - front door. <Ref. to EI-70, FRONT DOOR, REMOVAL, Door Trim.>
4) Remove the sealing cover - front door. <Ref. to EB-30, REMOVAL, Front Sealing Cover.>
5) Remove the outer mirror assembly. <Ref. to GW-26, REMOVAL, Outer Mirror Assembly.>
6) Remove the front door speaker assembly. <Ref. to ET-14, DOOR SPEAKER, REMOVAL, Front Speaker.>
7) Remove the cover B pillar - front door INN.



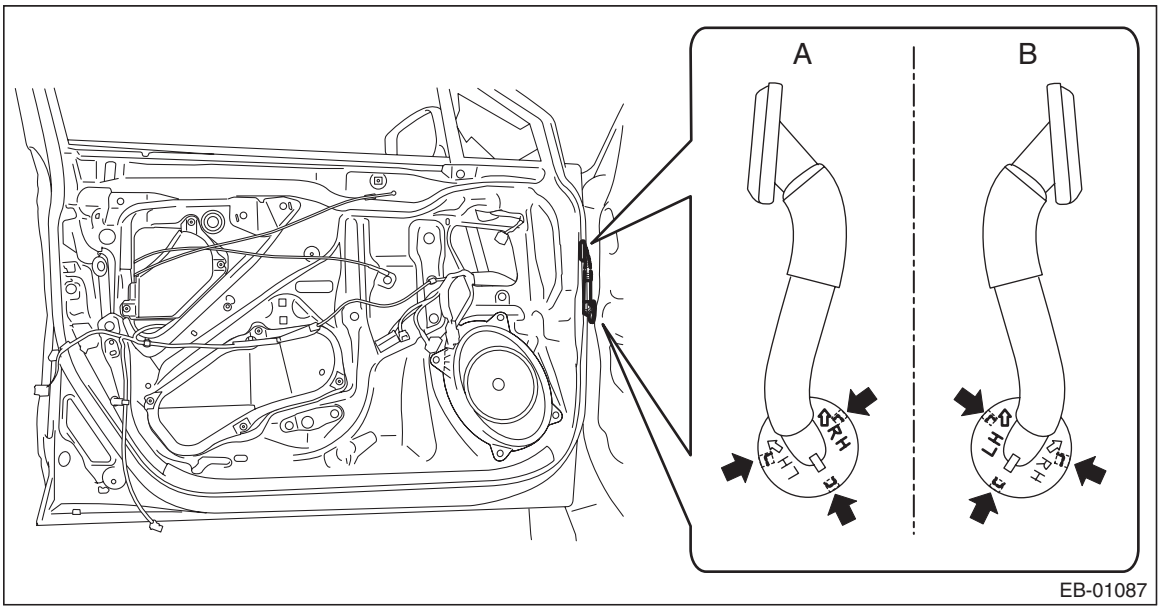
CAUTION:
Always replace with a new part, because engagement of the claw weakens.

8) Remove the front door impact sensor assembly. <Ref. to AB-51, REMOVAL, Front Door Impact Sensor.>
9) Remove the glass assembly - front door and the glass - front door partition. <Ref. to GW-20, REMOVAL, Front Door Glass.>
10) Remove the regulator & motor assembly - front of the front door. <Ref. to GW-23, REMOVAL, Front Regulator and Motor Assembly.>
11) Remove the door sash tape. <Ref. to EB-41, FRONT DOOR, REMOVAL, Door Sash Tape.>
12) Remove the latch and actuator assembly - front. <Ref. to SL-38, REMOVAL, Front Door Latch and Door Lock Actuator Assembly.>
13) Remove the handle - door outer. <Ref. to SL-34, REMOVAL, Front Outer Handle.>
14) Remove the weather strip - front door. <Ref. to EB-68, REPLACEMENT, Weather Strip.>
15) Remove the clips and the upper hooks, and remove the cover sash - inner front.

CAUTION:
Do not forcibly pull the cover sash - inner front. Otherwise, the hook section of the cover sash - inner front may be damaged.



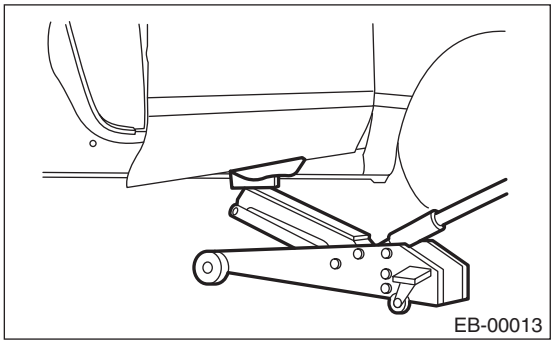
16) Remove the bolts and nuts, and then detach the checker assembly - front door.



17) Remove the cover side sill - front INN and cover side sill - front. <Ref. to EI-92, REMOVAL, Lower Inner Trim.>

18) Disconnect the front door harness connectors.

(1) Disconnect the connector of door harness from body harness.

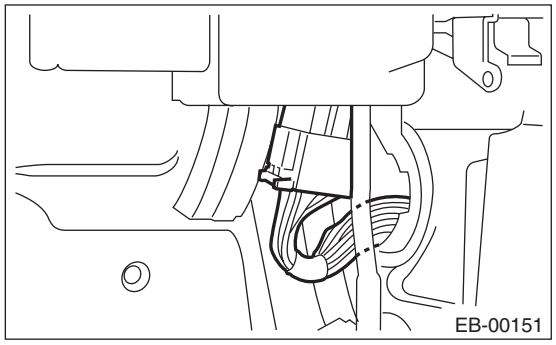


(2) Push in the claws to remove the grommet, and pull out the door harness connector.

A Driver's side B Passenger's side

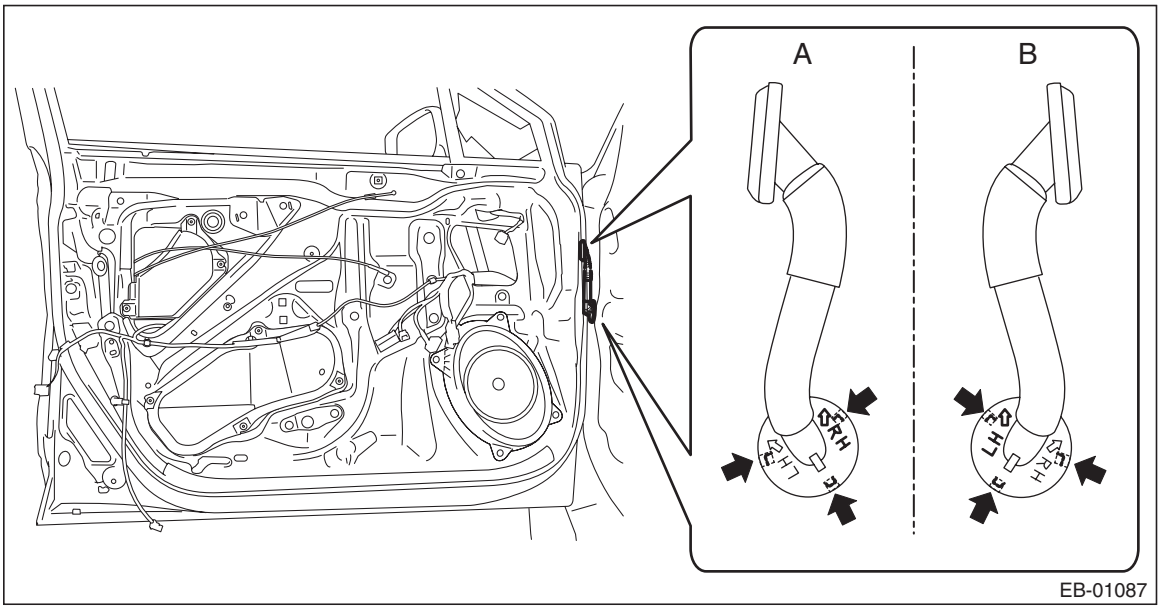
19) Before removing the panel assembly - front door, make the following preparations.

(1) Put a wooden block on a floor jack and place the jack under the panel assembly - front door.
(2) Support the panel assembly - front door with the jack to protect it from damage.



CAUTION:
- **Do not excessively lift the panel assembly - front door with the floor jack. The door hinges may be damaged.**
- **While removing or installing, do not use a jack, etc. on the garnish section.**

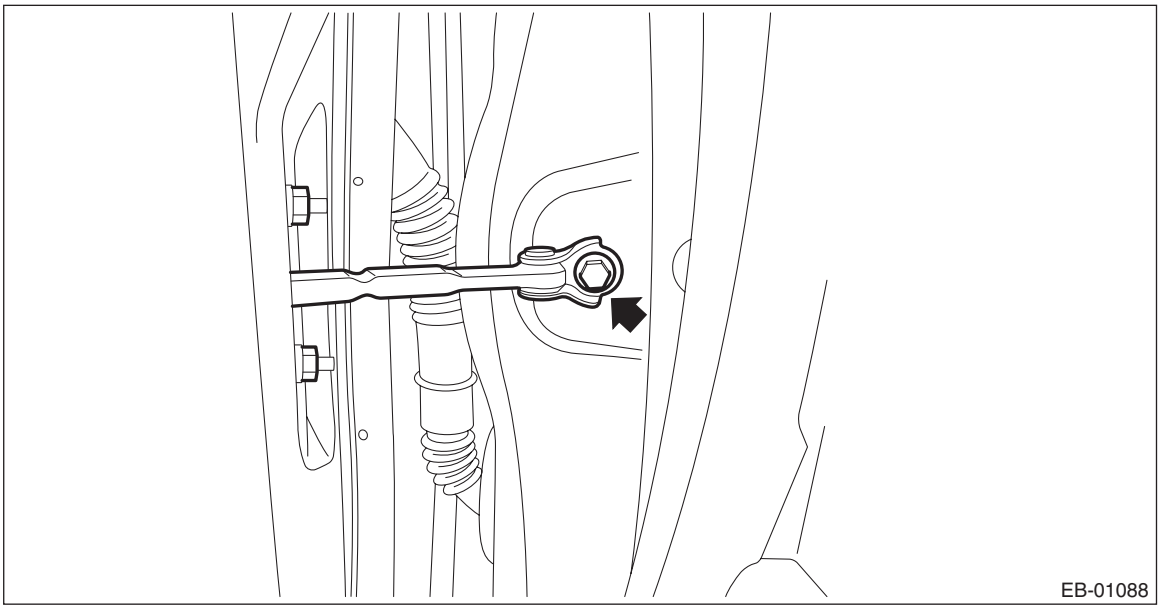
20) Remove the bolts on the side of the panel assembly - front door of the upper hinge - front door and the lower hinge - front door to remove the panel assembly - front door.



CAUTION:
The panel assembly - front door is heavy. When removing and installing it, always work in a team of two or more persons.

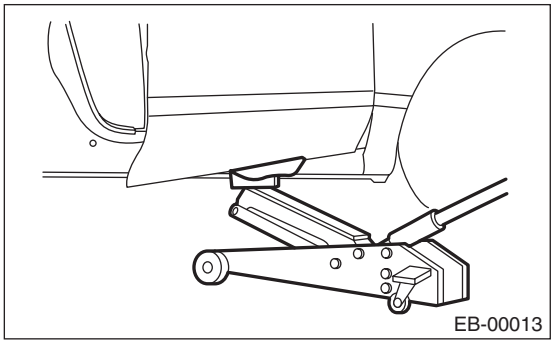
2. FRONT DOOR HINGE

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the garnish assembly - door. (OUTBACK model) <Ref. to EI-58, OUTBACK MODEL, REMOVAL, Side Garnish.>
3) Remove the cover side sill - front INN and cover side sill - front. <Ref. to EI-92, REMOVAL, Lower Inner Trim.>
4) Disconnect the front door harness connectors.
(1) Disconnect the connector of door harness from body harness.



(2) Push in the claws to remove the grommet, and pull out the door harness connector.

A Driver's side B Passenger's side



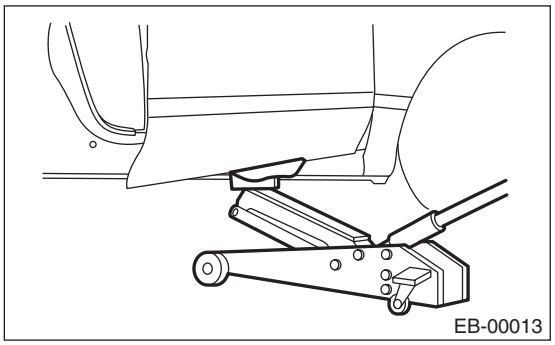
5) Remove the bolts on the vehicle side to disconnect the checker assembly - front door.

6) Before removing the door hinge, make the following preparations.

CAUTION:
• The panel assembly - front door is heavy. When removing and installing it, always work in a team of two or more persons.
• Do not excessively lift the panel assembly - front door with the floor jack. The door hinges may be damaged.
• While removing or installing, do not use a jack, etc. on the garnish section.

(1) Put a wooden block on a floor jack and place the jack under the panel assembly - front door.
(2) Support the panel assembly - front door with the jack to protect it from damage.

7) Remove the bolts on the side of the panel assembly - front door of the upper hinge - front door or the lower hinge - front door.



CAUTION:
Do not remove the upper hinge - front door and the lower hinge - front door at the same time.

8) Remove the hinge - front door from the vehicle.

B: INSTALLATION

1. FRONT DOOR PANEL

1) Put a wooden block and the like on a jack and place the panel assembly - front door on it.

2) Adjust the height by the jack, and temporarily install the panel assembly - front door to the upper hinge - front door and the lower hinge - front door.

NOTE:
- When installing the panel assembly - front door, make sure that a uniform clearance is created around the panel.
- Perform installation while paying attention to the assembly direction of the grommet.

3) Adjust the clearance around the panel assembly - front door. <Ref. to EB-28, ADJUSTMENT, Front Door.>
4) Tighten the mounting bolts of the panel assembly - front door to the specified torque.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

5) Tighten the bolts and nuts of the checker assembly - front door.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-4, FRONT DOOR, COMPONENT, General Description.>

6) Connect door harness connector, and install the cover side sill - front. <Ref. to EI-95, INSTALLATION, Lower Inner Trim.>
7) Attach the door sash tape. <Ref. to EB-45, FRONT DOOR, INSTALLATION, Door Sash Tape.>
8) Before installing each part, check the following items.
- Rod of the latch and actuator assembly - front is free from deformation.
- Grease is applied sufficiently to the rod joints of the latch and actuator assembly - front.
- Cable of the latch and actuator assembly - front is free from deformation such as fray.
- Grease is applied sufficiently to the cable joints of the latch and actuator assembly - front.

9) Install door internal parts in the reverse order of removal.
- Weather strip - front door
- Handle - door outer

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

- Latch & actuator ASSY - front

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

- Regulator & motor assembly - front for the front door

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

- Running channel - front door

CAUTION:
Check that the running channel - front door is securely fixed to the panel assembly - front door and to the sash COMPL - partition.

- Glass assembly - front door, and glass - front door partition

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

10) Install the front door impact sensor.

CAUTION:
• Do not reuse the bolt and nut.
Always replace with the specified new bolts and nuts.
• Thoroughly clean the sensor mounting area before installing the front door impact sensor.
• When installing the sensor, insert the set pin on the backside of the sensor into the hole on the body side securely.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

11) Install the cover B pillar - front door INN.

CAUTION:
Always replace with a new part, because engagement of the claw weakens.

12) Install the front door speaker assembly.
13) Install the outer mirror assembly. <Ref. to GW-27, INSTALLATION, Outer Mirror Assembly.>

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

14) Install the sealing cover. <Ref. to EB-30, INSTALLATION, Front Sealing Cover.>
15) Install the trim panel - front door. <Ref. to EI-71, INSTALLATION, Door Trim.>
16) Install the garnish assembly - door. (OUTBACK model) <Ref. to EI-59, OUTBACK MODEL, INSTALLATION, Side Garnish.>
17) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. FRONT DOOR HINGE

1) Apply grease to the sliding area of door hinges, and install the door hinge to vehicle.

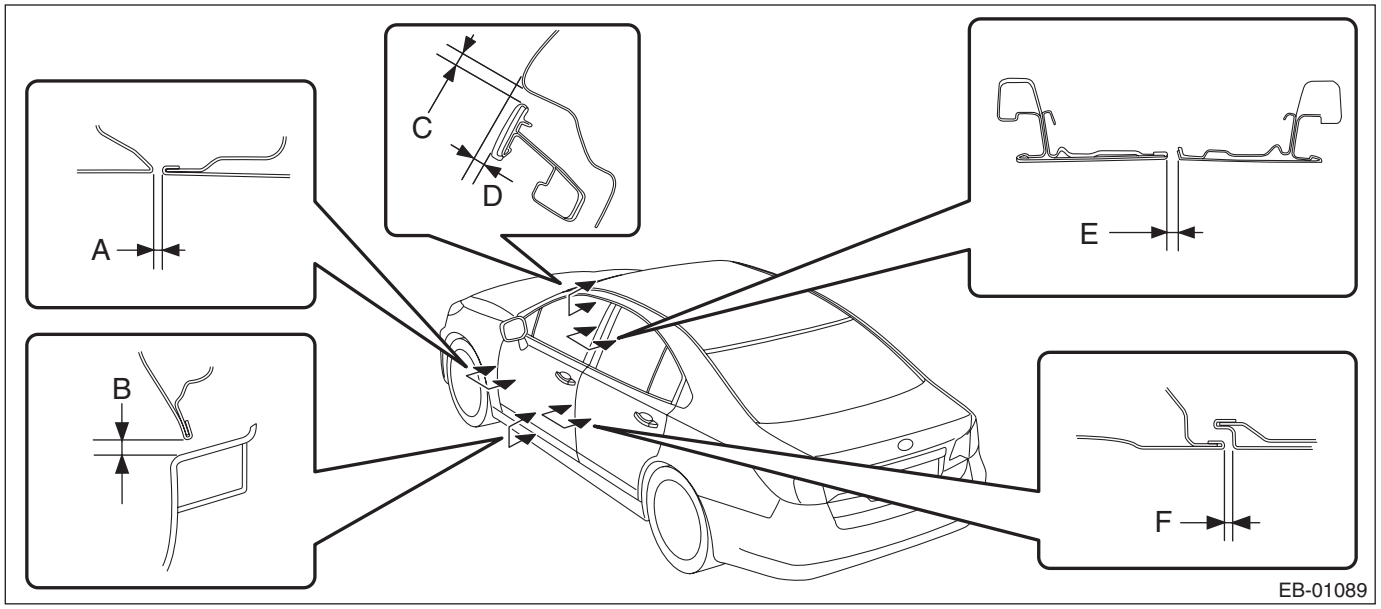
Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)

2) Adjust the height by the jack, and temporarily install the panel assembly - front door to the upper hinge - front door and the lower hinge - front door.

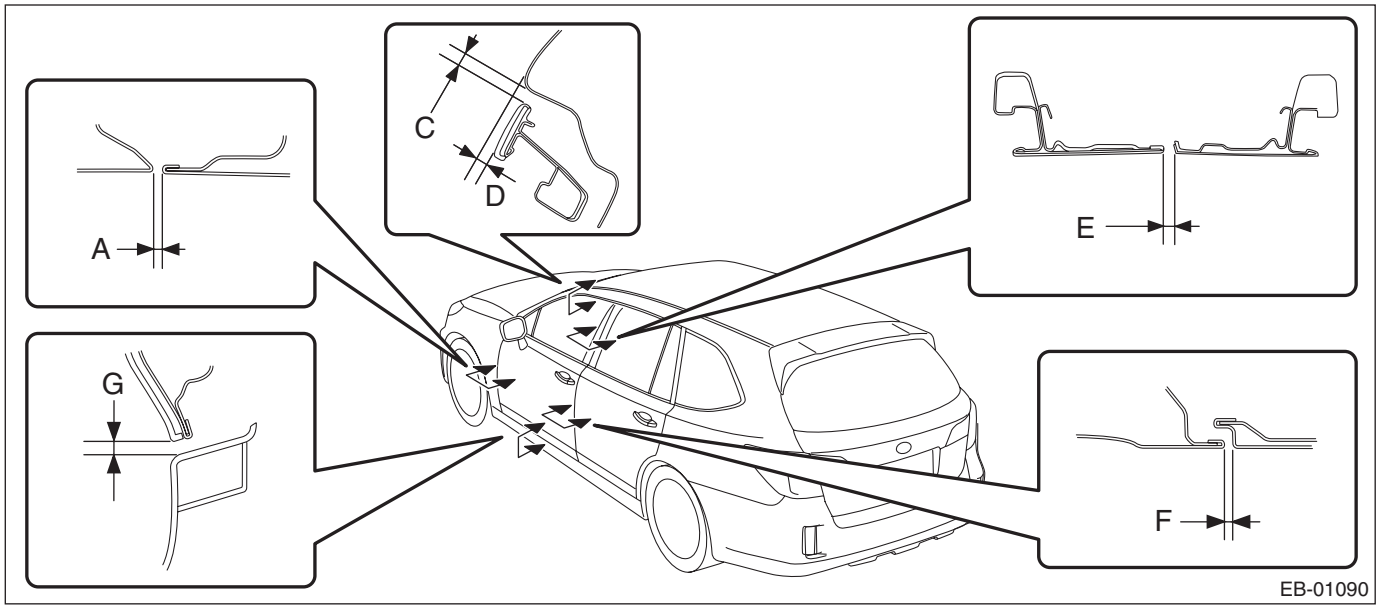
NOTE:
When installing the panel assembly - front door, make sure that a uniform clearance is created around the panel.

3) Adjust the clearance around the panel assembly - front door. <Ref. to EB-28, ADJUSTMENT, Front Door.>
4) Tighten the bolts of the panel assembly - front door to the specified torque.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



5) Connect door harness connector, and install the cover side sill - front. <Ref. to EI-95, INSTALLATION, Lower Inner Trim.>
6) Tighten the bolts on the vehicle side of the checker assembly - front door.



Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-4, FRONT DOOR, COMPONENT, General Description.>

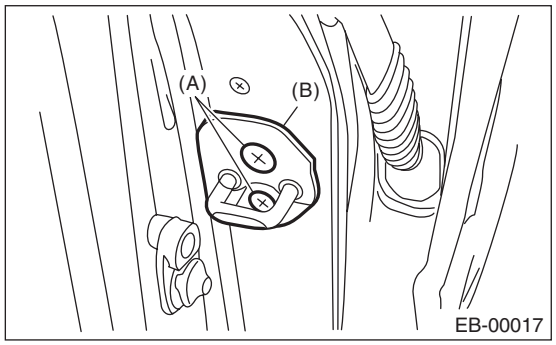
7) Install the garnish assembly - door. (OUTBACK model) <Ref. to EI-59, OUTBACK MODEL, INSTALLATION, Side Garnish.>
8) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: ADJUSTMENT

Adjust the clearance around the panel assembly - front door as follows.

	Part	Standard
A	Fender COMPL - front to Panel assembly - front door	4.2±1.25 mm (0.17±0.05 in)
B	Panel assembly - front door to Side sill garnish assembly (sedan model)	5.7±1.5 mm (0.22±0.06 in)
C	Panel side outer to Front door sash	5.2+1.5, –1.0 mm (0.2+0.06, –0.04 in)
D	Surface level gap between panel side outer and front door sash	4.9±1.5 mm (0.19±0.06 in)
E	Front door sash to Rear door sash	4.4+1.5 — 1.0 mm (0.17+0.06 — 0.04 in)
F	Panel assembly - front door to Panel assembly - rear door	4.2±1.25 mm (0.17±0.05 in)
G	Garnish assembly front door to Side sill garnish assembly (OUTBACK model)	5.7±1.5 mm (0.22±0.06 in)

1) Adjust the vertical and horizontal positions of the panel assembly - front door.



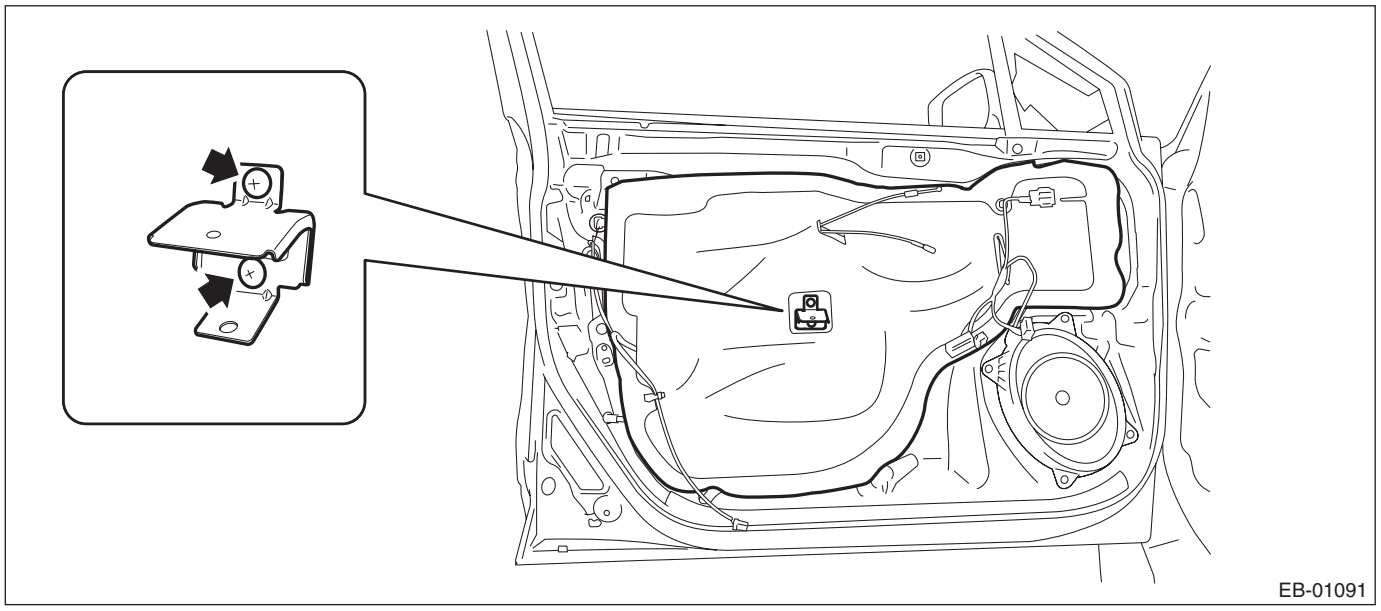
Preparation tool:
ST: WRENCH (925610000)

(1) Using ST, loosen the vehicle side bolts of the upper hinge - front door and the lower hinge - front door.
(2) Adjust the vertical and horizontal clearance of the panel assembly - front door.

2) Adjust the surface level gap between the panel assembly - front door and the panel assembly - rear door.

CAUTION:
Do not use an impact wrench. Welding area on the striker nut plate is easily broken.

(1) Loosen the screws (A).
(2) Tap the striker - front door (B) using a plastic hammer to adjust the surface level gap between the rear end of the panel assembly - front door and the front end of the panel assembly - rear door.



5. Front Sealing Cover

A: REMOVAL

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front door. <Ref. to EI-70, FRONT DOOR, REMOVAL, Door Trim.>
3) Remove the sealing cover - front door.

CAUTION:
- **Carefully remove the butyl tape. Excessive force will easily break the cover.**
- **If the sealing cover - front door gets broken, replace it with a new part.**
- **Be careful not to allow the butyl tape to contact any trims and seats because the butyl tape, which has a strong adhesive force, is difficult to remove once it adhered.**

(1) Remove the screw to remove the bracket - door trim front.
(2) Disconnect connectors.
(3) Carefully remove the butyl tape to remove the sealing cover - front door.

B: INSTALLATION

CAUTION:
- **If the sealing cover - front door gets broken, replace it with a new part.**
- **Apply a uniform bead of butyl tape.**
- **Attach the sealing cover - front door, keeping it from becoming wrinkled.**
- **Breaks in the bead will allow water leakage and contamination.**

1) Install the sealing cover - front door.
(1) Forcefully push the butyl tape portion to prevent any floating on surface.
(2) When replacing the sealing cover, use the butyl tape.

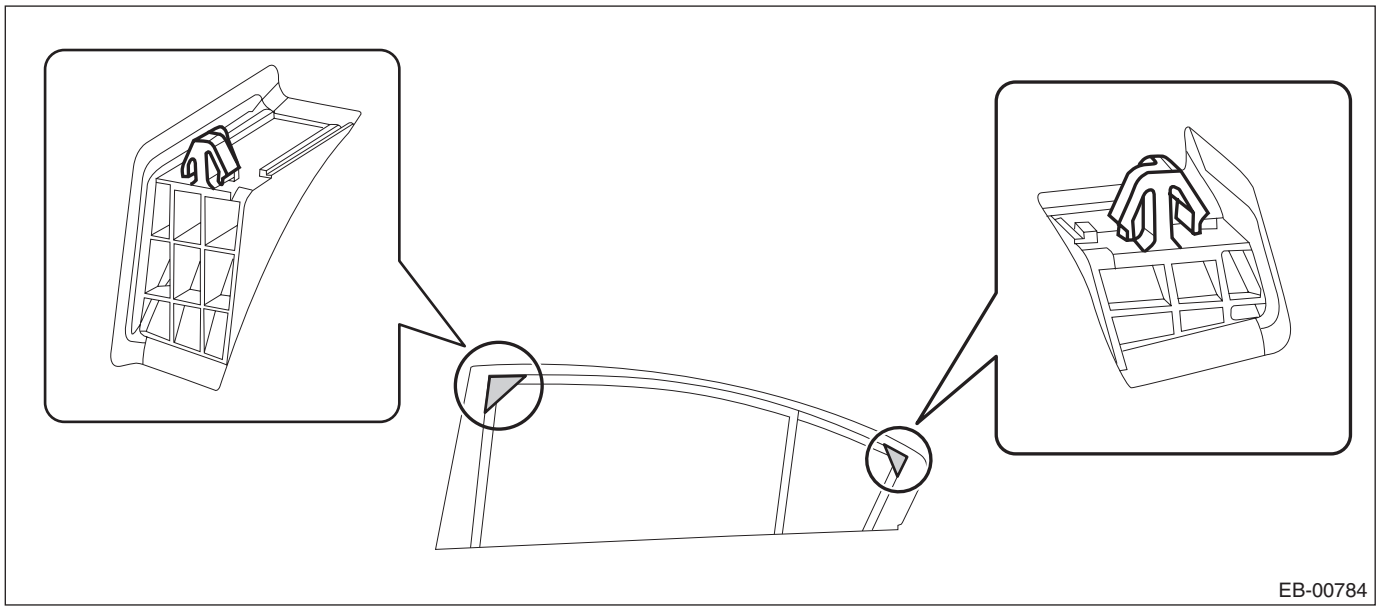
Butyl tape:
3M Butyl Tape 8626 or equivalent

2) Install the trim panel - front door. <Ref. to EI-71, INSTALLATION, Door Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

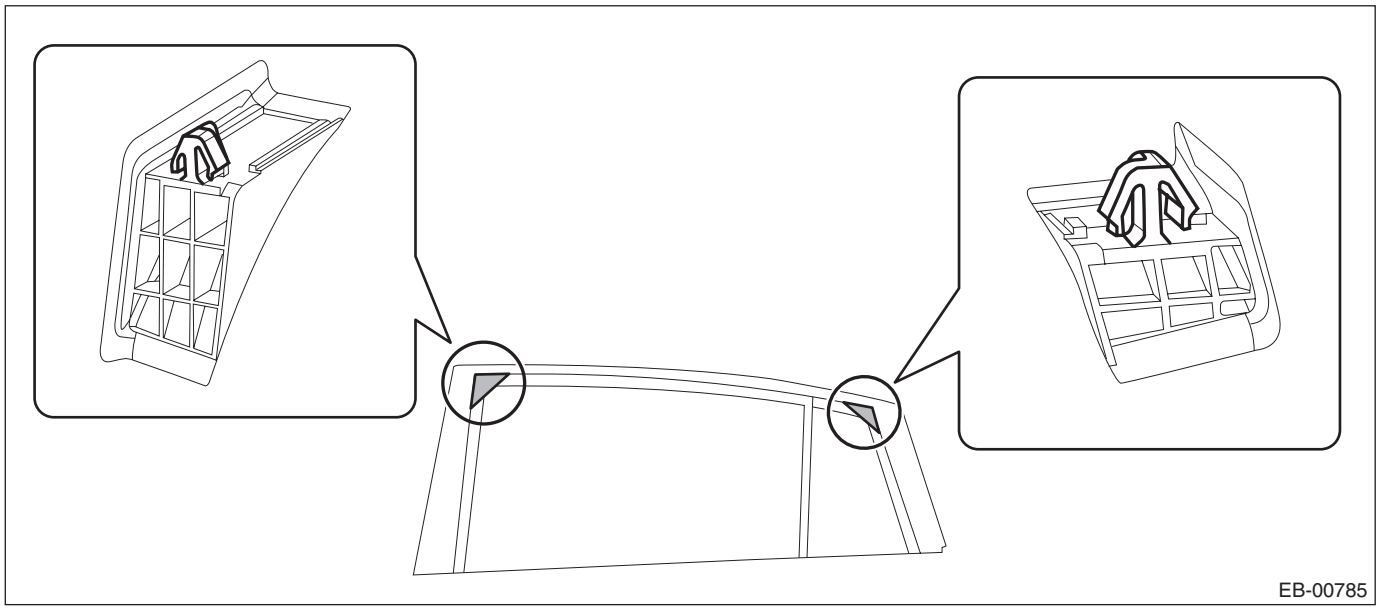
If the sealing cover - front door is broken, replace it with a new part.

6. Rear Door



A: REMOVAL

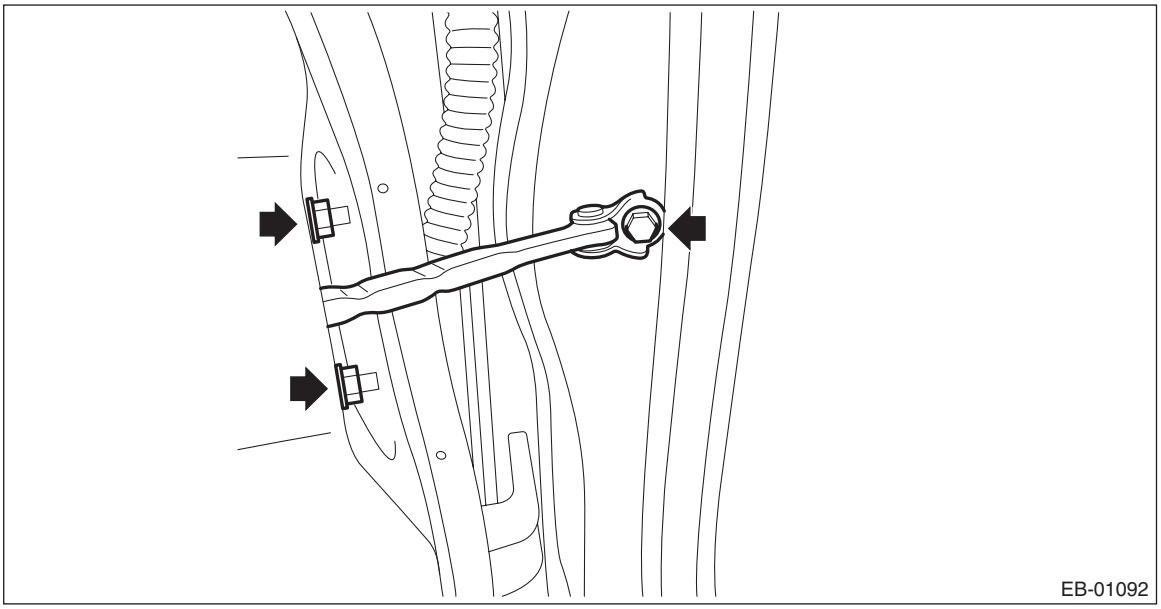
1. REAR DOOR PANEL



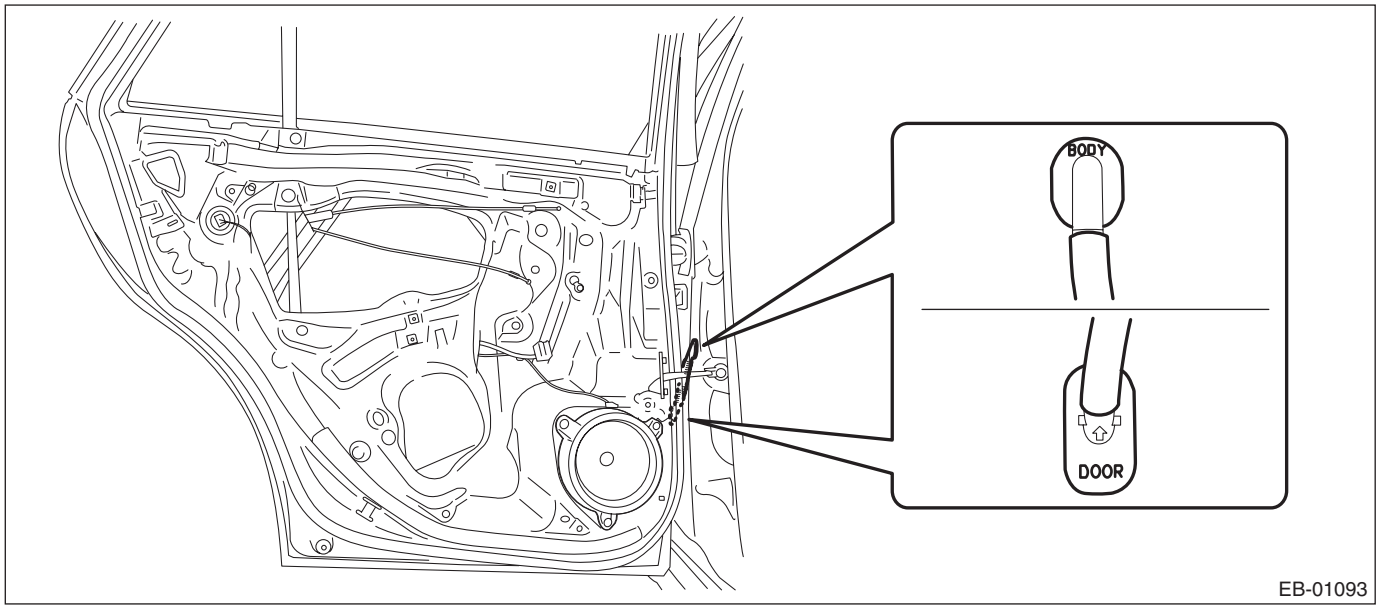
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the garnish assembly - door. (OUTBACK model) <Ref. to EI-58, OUTBACK MODEL, REMOVAL, Side Garnish.>
3) Remove the trim panel - rear door. <Ref. to EI-71, REAR DOOR, REMOVAL, Door Trim.>
4) Remove the sealing cover - rear door. <Ref. to EB-40, REMOVAL, Rear Sealing Cover.>
5) Remove the cover B pillar - rear door INN and the cover C pillar - rear door INN.

CAUTION:
Always replace with a new part, because engagement of the claw weakens.

- Sedan model

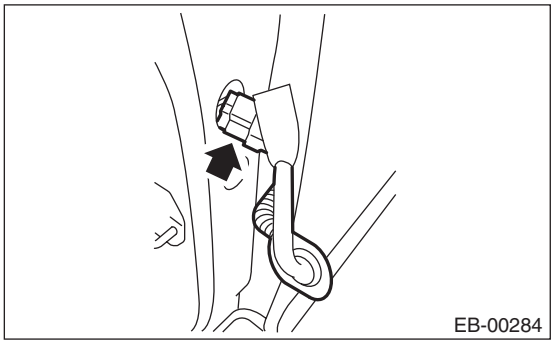


- OUTBACK model



6) Remove the rear door speaker assembly. <Ref. to ET-16, REMOVAL, Rear Speaker.>
7) Remove the sash COMPL - rear partition and the glass assembly - rear door. <Ref. to GW-33, REMOVAL, Rear Door Glass.>

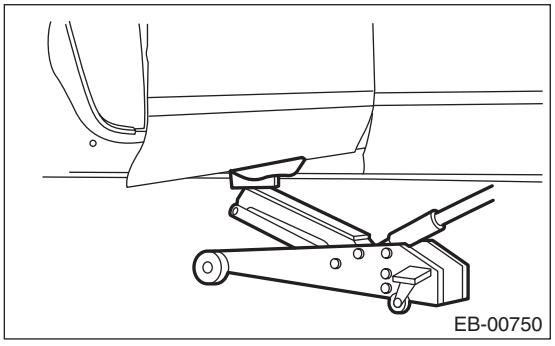
8) Remove the regulator - rear. <Ref. to GW-35, REMOVAL, Rear Regulator and Motor Assembly.>
9) Remove the door sash tape. <Ref. to EB-42, REAR DOOR, REMOVAL, Door Sash Tape.>
10) Remove the latch and actuator assembly - rear. <Ref. to SL-46, REMOVAL, Rear Door Latch and Door Lock Actuator Assembly.>
11) Remove the cover - handle rear outer. <Ref. to SL-42, REMOVAL, Rear Outer Handle.>
12) Remove the weather strip - rear door. <Ref. to EB-68, REPLACEMENT, Weather Strip.>
13) Remove the bolts and nuts, and then detach the checker assembly - rear door.



EB-01092

14) Remove the trim panel - center pillar LWR. <Ref. to EI-92, REMOVAL, Lower Inner Trim.>
15) Disconnect the rear door harness connectors.
(1) Remove the grommet and pull out the rear door harness connector from inside the center pillar.

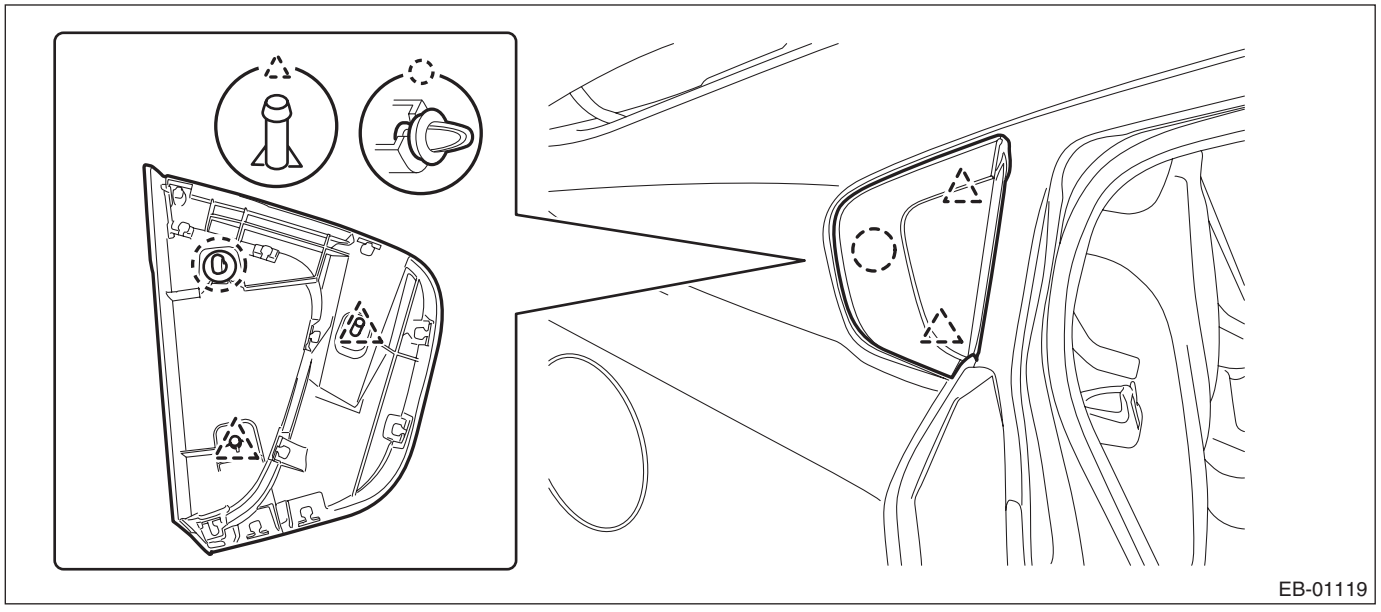
EB-01093



(2) Disconnect the rear door harness connectors.

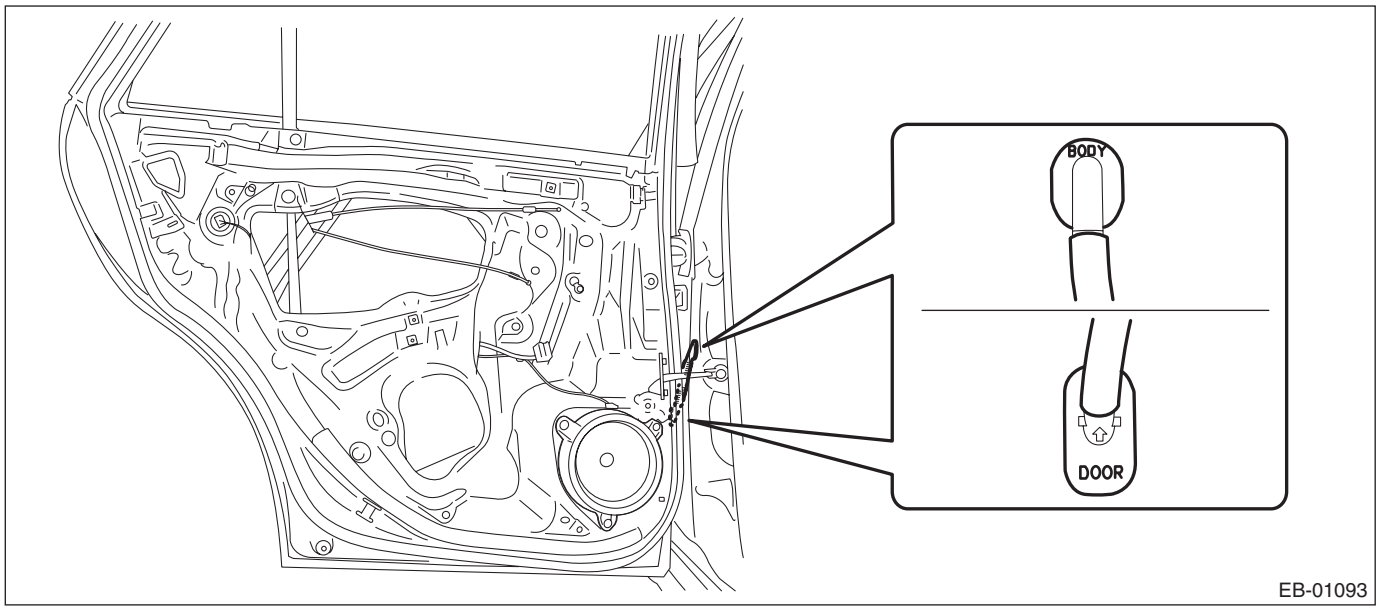
16) Before removing the panel assembly - rear door, make the following preparations.

CAUTION:
• Do not excessively lift the panel assembly - front door with the floor jack. The door hinges may be damaged.
• While removing or installing, do not use a jack, etc. on the garnish section.



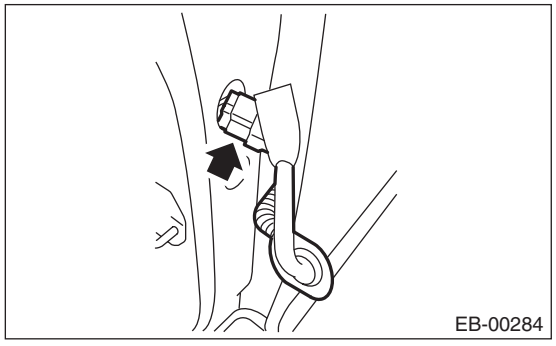
(1) Put a wooden block on a floor jack and place the jack under the panel assembly - rear door.
(2) Support the panel assembly - rear door with the jack to protect it from damage.

17) Remove the door-side bolts for the upper hinge - rear door and the lower hinge - rear door to remove the panel assembly - rear door.

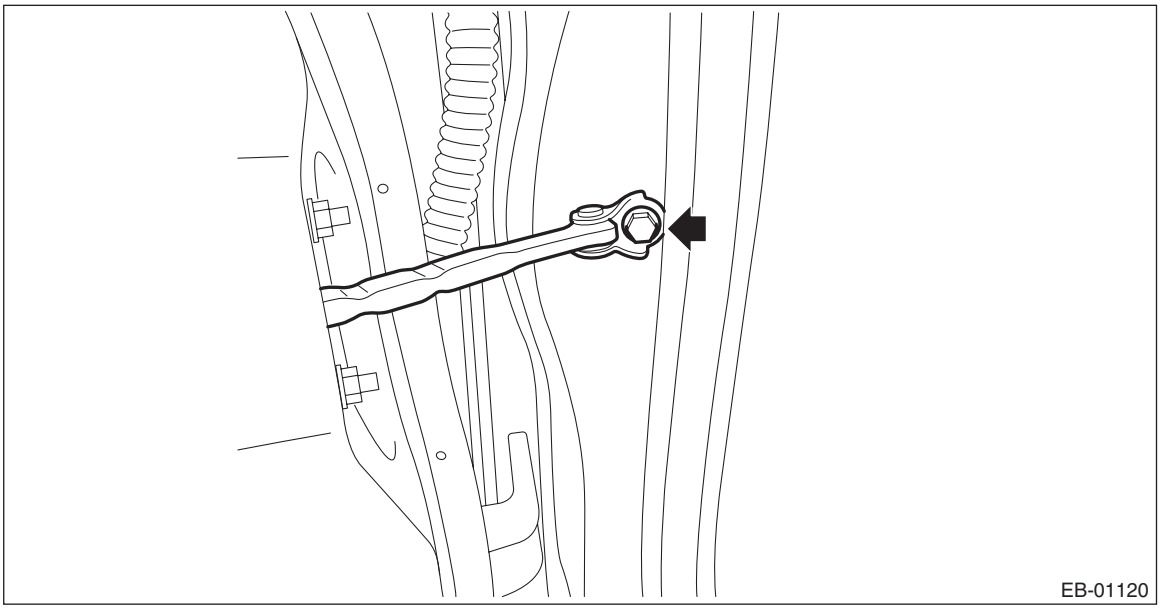


CAUTION:
The panel assembly - rear door is heavy. When removing and installing it, always work in a team of two or more persons.

18) Remove the cover - C pillar assembly. (Sedan model)

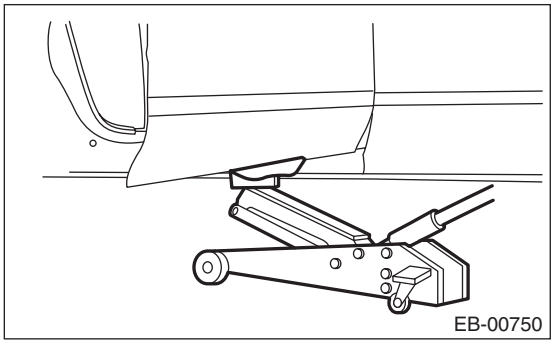


2. REAR DOOR HINGE



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the garnish assembly - door. (OUTBACK model) <Ref. to EI-58, OUTBACK MODEL, REMOVAL, Side Garnish.>
3) Remove the trim panel - center pillar LWR. <Ref. to EI-92, REMOVAL, Lower Inner Trim.>
4) Disconnect the rear door harness connectors.
   (1) Remove the grommet and pull out the rear door harness connector from inside the center pillar.

   (2) Disconnect the rear door harness connectors.



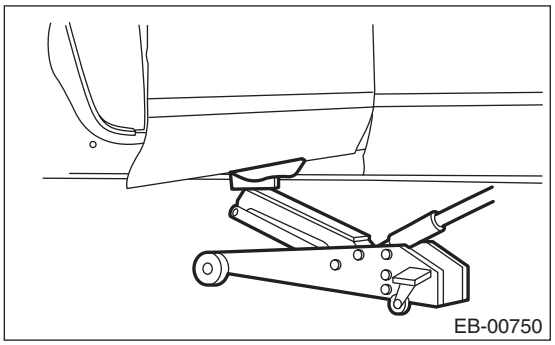
5) Remove the bolts on the vehicle side to disconnect the checker assembly - front door.

6) Before removing the panel assembly - rear door, make the following preparations.

CAUTION:
• The panel assembly - front door is heavy. When removing and installing it, always work in a team of two or more persons.
• Do not excessively lift the panel assembly - front door with the floor jack. The door hinges may be damaged.
• While removing or installing, do not use a jack, etc. on the garnish section.

(1) Put a wooden block on a floor jack and place the jack under the panel assembly - rear door.
(2) Support the panel assembly - rear door with the jack to protect it from damage.

7) Remove the bolts on the side of the panel assembly - rear door of the upper hinge - rear door or the lower hinge - rear door.



CAUTION:
Do not remove the upper hinge - rear door and the lower hinge - rear door at the same time.

8) Remove the hinge - rear door from the vehicle.

B: INSTALLATION

1. REAR DOOR PANEL

1) Put a wooden block and the like on a jack and place the panel assembly - rear door on it.

2) Adjust the height by the jack, and temporarily install the panel assembly - rear door to the upper hinge - rear door and the lower hinge - rear door.

NOTE:
- When installing the panel assembly - rear door, make sure that a uniform clearance is created around the panel.
- Perform installation while paying attention to the assembly direction of the grommet.

3) Adjust the clearance around the panel assembly - rear door. <Ref. to EB-38, ADJUSTMENT, Rear Door.>
4) Tighten the mounting bolts of the panel assembly - rear door to the specified torque.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

5) Tighten the bolts and nuts of the checker assembly - rear door.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-5, REAR DOOR, COMPONENT, General Description.>

6) Connect the door harness connector, and install the trim panel - center pillar LWR. <Ref. to EI-95, INSTALLATION, Lower Inner Trim.>
7) Attach the door sash tape. <Ref. to EB-47, REAR DOOR, INSTALLATION, Door Sash Tape.>
8) Before installing each part, check the following items.
- Is the lever of the frame assembly - rear door outer is free from deformation?
- Is grease applied sufficiently to the lever joints of the latch and actuator assembly - rear.
- Is the cable of the latch and actuator assembly - rear free from deformation such as fray.
- Is grease applied sufficiently to the cable joints of the latch and actuator assembly - rear?

9) Install door internal parts in the reverse order of removal.
- Weather strip - rear door
- Handle - door outer

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

- Latch & actuator ASSY - rear

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

NOTE:
Make sure the child safety lock works correctly after installation.

- Regulator & motor assembly - rear for the rear door

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

- Sash COMPL - rear partition, and glass assembly - rear door

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
- Running channel - rear door

CAUTION:
Check that the running channel - rear door is securely fixed to the panel assembly - rear door and to the sash COMPL - partition.
10) Install the cover B pillar - rear door INN and the cover C pillar - rear door INN.

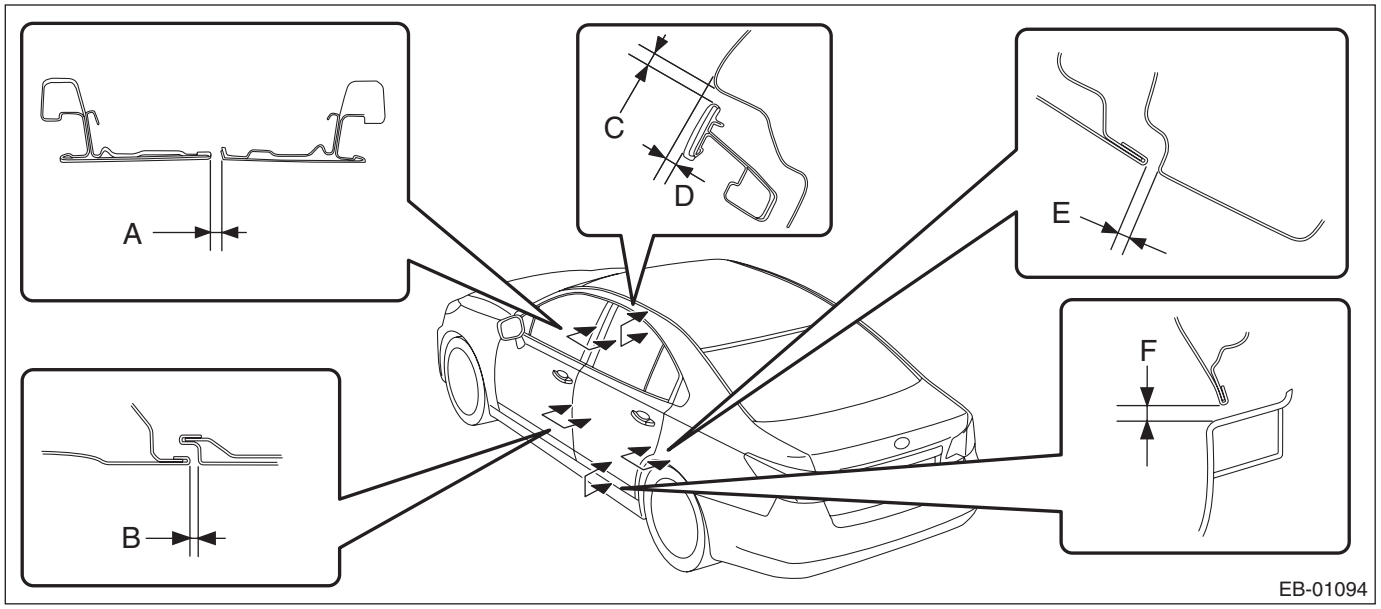
CAUTION:
Always replace with a new part, because engagement of the claw weakens.
11) Install the rear door speaker assembly.
12) Install the sealing cover. <Ref. to EB-40, INSTALLATION, Rear Sealing Cover.>
13) Install the trim panel - rear door. <Ref. to EI-71, INSTALLATION, Door Trim.>
14) Install the garnish assembly - door. (OUTBACK model) <Ref. to EI-59, OUTBACK MODEL, INSTALLATION, Side Garnish.>
15) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. REAR DOOR HINGE

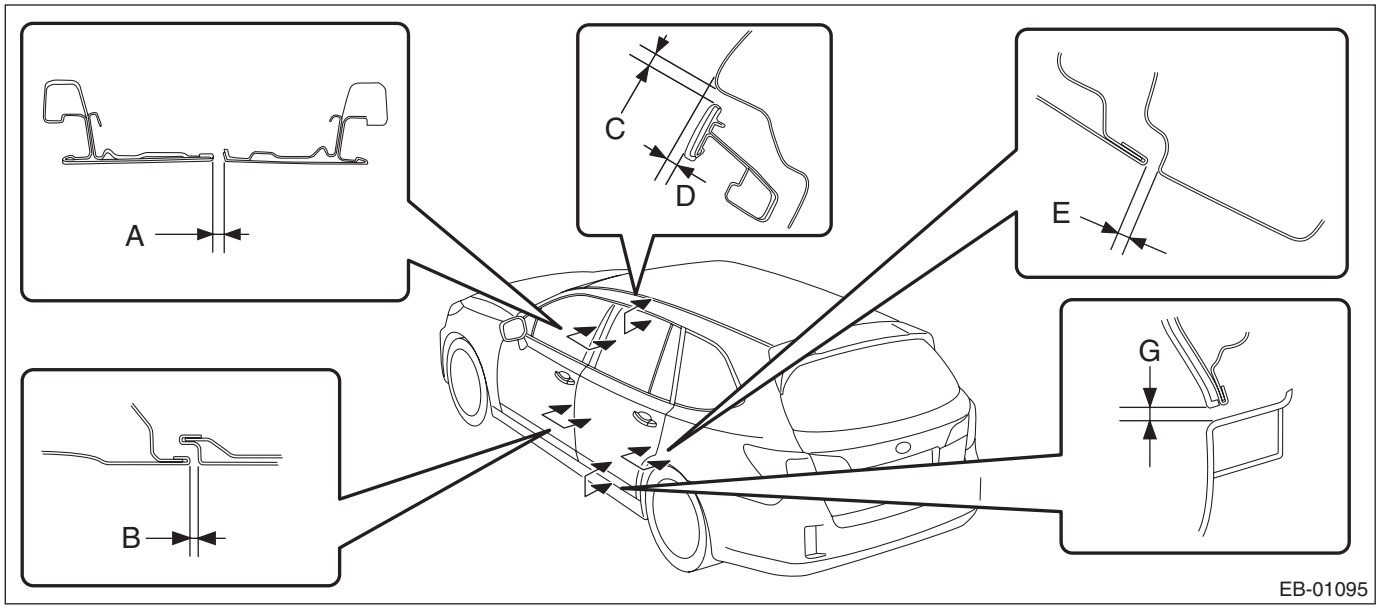
1) Apply grease to the sliding area of door hinges, and install to vehicle.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)
2) Adjust the height by the jack, and temporarily install the panel assembly - rear door to the upper hinge - rear door and the lower hinge - rear door.

NOTE:
When installing the panel assembly - rear door, make sure that a uniform clearance is created around the panel.
3) Adjust the clearance around the panel assembly - rear door. <Ref. to EB-38, ADJUSTMENT, Rear Door.>



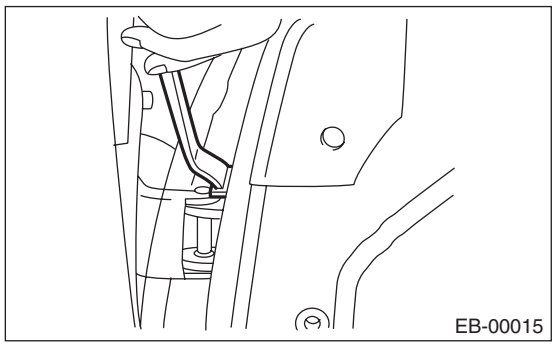
NOTE:
When installing the panel assembly - rear door, make sure that a uniform clearance is created around the panel.
4) Tighten the bolts of the panel assembly - rear door to the specified torque.



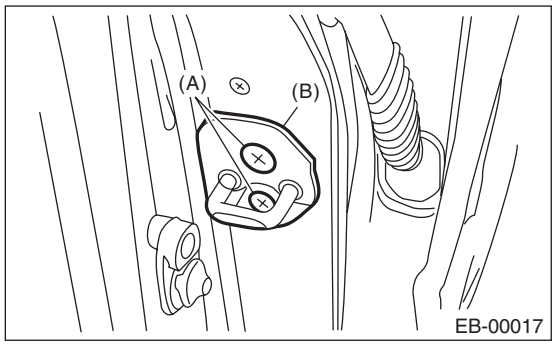
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)
5) Connect the door harness connector, and install the trim panel - center pillar LWR. <Ref. to EI-95, INSTALLATION, Lower Inner Trim.>
6) Tighten the bolts on the vehicle side of the checker assembly - rear door.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-5, REAR DOOR, COMPONENT, General Description.>
7) Install the garnish assembly - door. (OUTBACK model) <Ref. to EI-59, OUTBACK MODEL, INSTALLATION, Side Garnish.>
8) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: ADJUSTMENT



Adjust the clearance around the panel assembly - rear door as follows.

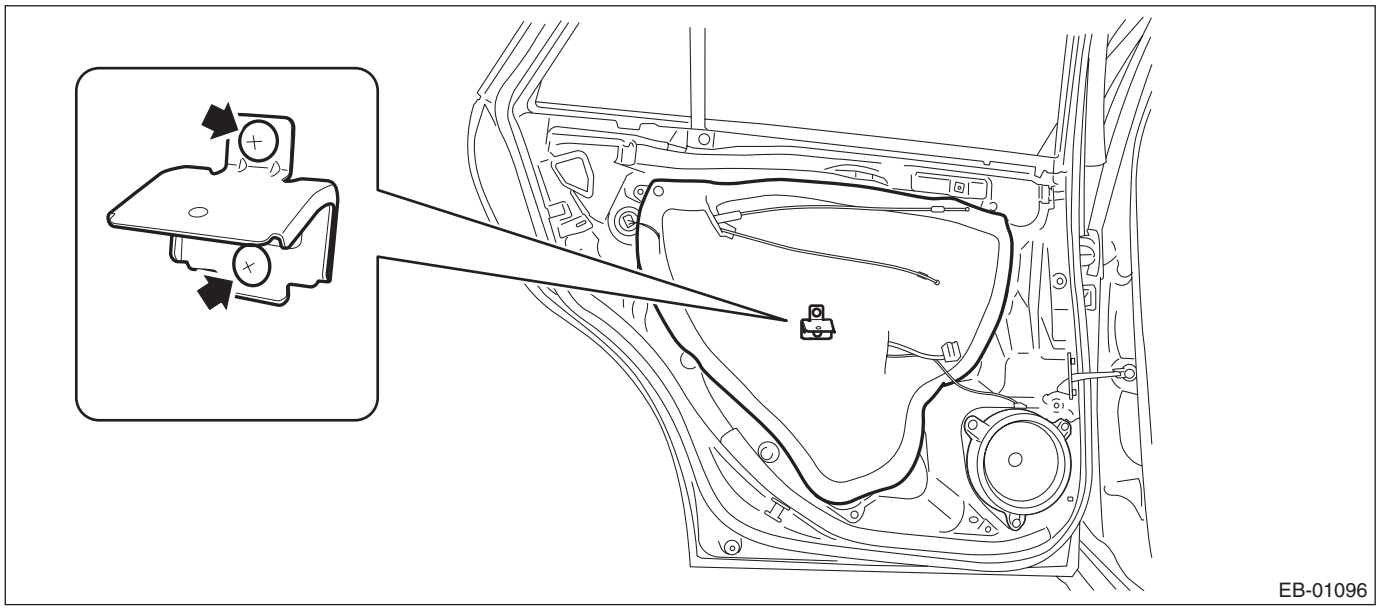


Part		Standard
A	Panel assembly - front door to Panel assembly - rear door	4.4+1.5, –1.0 mm (0.17+0.06, –0.04 in)
B	Front door sash to Rear door sash	4.2±1.25 mm (0.17±0.05 in)
C	Panel side outer to Rear door sash	5.2+1.5, –1.0 mm (0.2+0.06, –0.04 in)
D	Surface level gap between panel side outer and rear door sash	4.1±1.5 mm (0.16±0.06 in)
E	Panel assembly - rear door to Panel side outer	3.7±1.25 mm (0.15±0.05 in)
F	Panel assembly - rear door to Side sill garnish assembly (sedan model)	5.7±1.5 mm (0.22±0.06 in)
G	Panel assembly - rear door to Side sill garnish assembly (OUTBACK model)	5.7±1.5 mm (0.22±0.06 in)

1) Adjust the vertical and horizontal positions of the panel assembly - rear door.
   (1) Loosen the body side bolts of the upper hinge - rear door and the lower hinge - rear door.
   (2) Adjust the vertical and horizontal clearance of the panel assembly - rear door.

2) Adjust the surface level gap between the panel assembly - rear door and the body.

CAUTION:
Do not use an impact wrench. Welding area on the striker nut plate is easily broken.
   (1) Loosen the screws (A).
   (2) Tap the striker - rear door (B) using a plastic hammer to adjust the surface level gap between the rear end of the panel assembly - rear door and the rear quarter.



7. Rear Sealing Cover

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear door. <Ref. to EI-71, REAR DOOR, REMOVAL, Door Trim.>
3) Remove the sealing cover - rear door.

CAUTION:
- **Carefully remove the butyl tape. Excessive force will easily break the cover.**
- **If the sealing cover - rear door gets broken, replace it with a new part.**
- **Be careful not to allow the butyl tape to contact any trims and seats because the butyl tape, which has a strong adhesive force, is difficult to remove once it adhered.**

(1) Remove the screw to remove the bracket - door trim rear.
(2) Disconnect connectors.
(3) Carefully remove the butyl tape to remove the sealing cover - rear door.

B: INSTALLATION

CAUTION:
- **If the sealing cover - rear door gets broken, replace it with a new part.**
- **Apply a butyl tape evenly.**
- **Attach the sealing cover - rear door, keeping it from becoming wrinkled.**
- **Breaks in the bead will allow water leakage and contamination.**

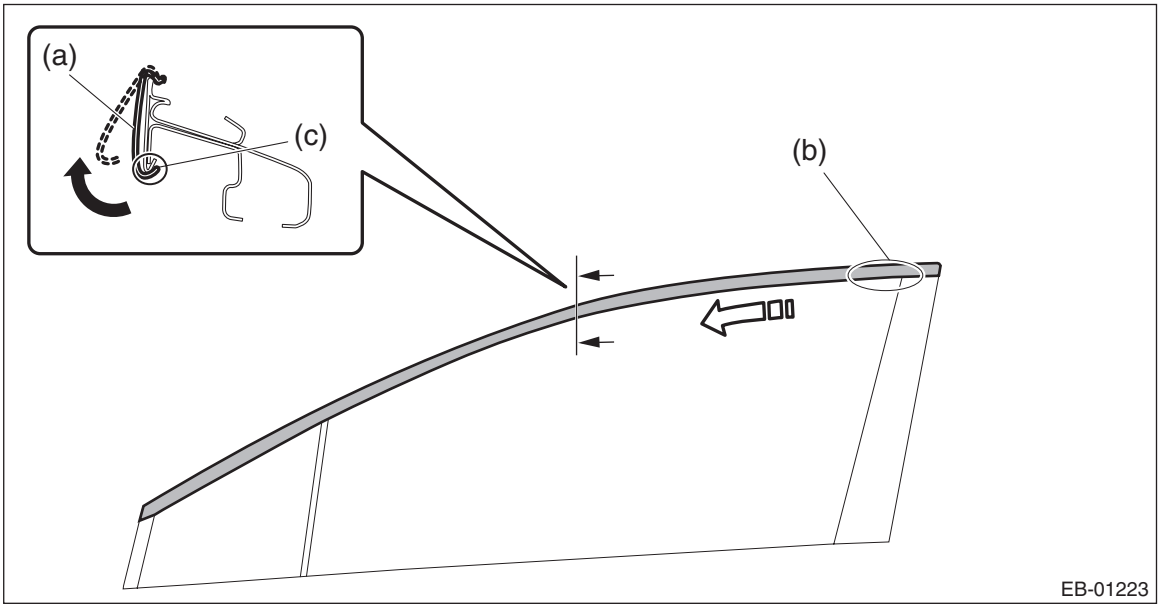
1) Install the sealing cover.
(1) Forcefully push the butyl tape portion to prevent any floating on surface.
(2) When replacing the sealing cover, use the butyl tape.

Butyl tape:
3M Butyl Tape 8626 or equivalent

2) Install the trim panel - rear door. <Ref. to EI-71, INSTALLATION, Door Trim.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

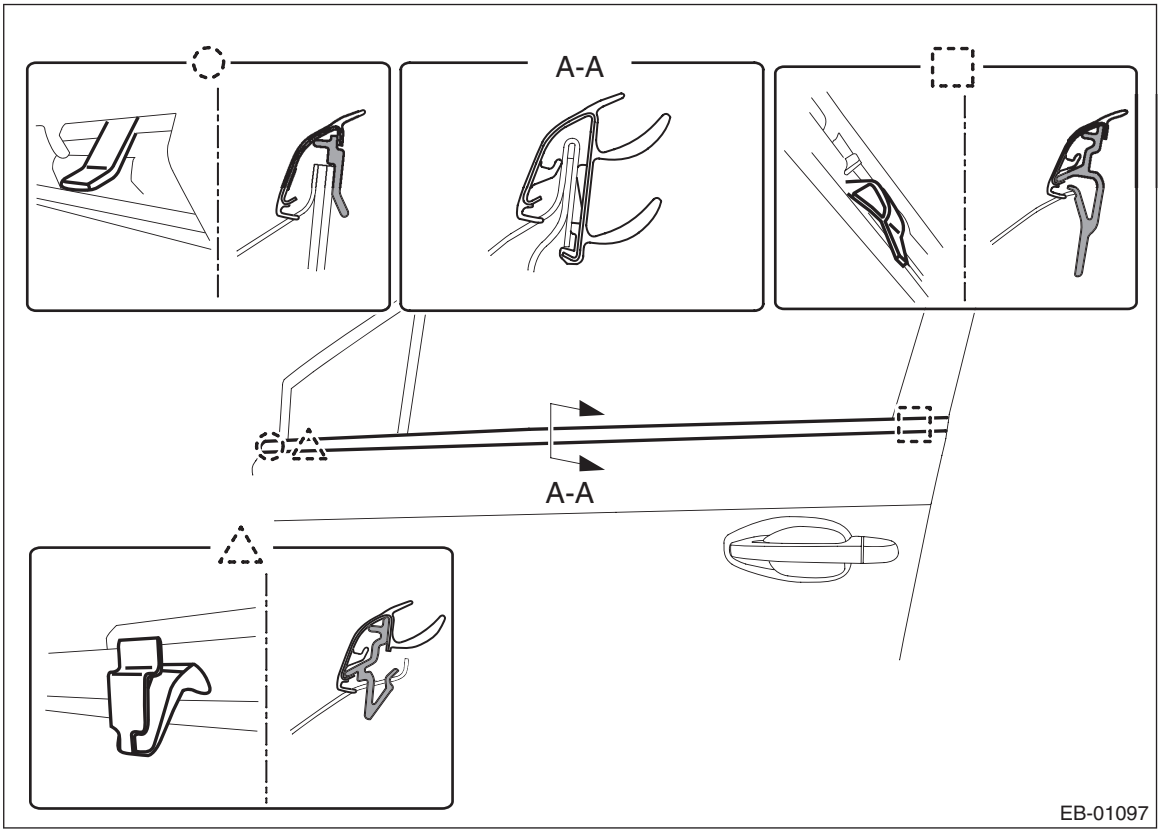
If the sealing cover - rear door is broken, replace it with a new part.



8. Door Sash Tape

A: REMOVAL

1. FRONT DOOR



1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - front door. <Ref. to EI-70, FRONT DOOR, REMOVAL, Door Trim.>
3) Remove the outer mirror assembly. <Ref. to GW-26, REMOVAL, Outer Mirror Assembly.>
4) Remove the sealing cover - front door. <Ref. to EB-30, REMOVAL, Front Sealing Cover.>
5) Remove the glass assembly - front door. <Ref. to GW-20, REMOVAL, Front Door Glass.>
6) Remove the running channel - front door.
7) Remove the clip, and remove the weather strip - door upper side. <Ref. to EB-68, DOOR, REPLACEMENT, Weather Strip.>
8) Remove the molding - door sash front (a) by disengaging the bottom part (c) from the specified position (b) toward the front side of the vehicle.

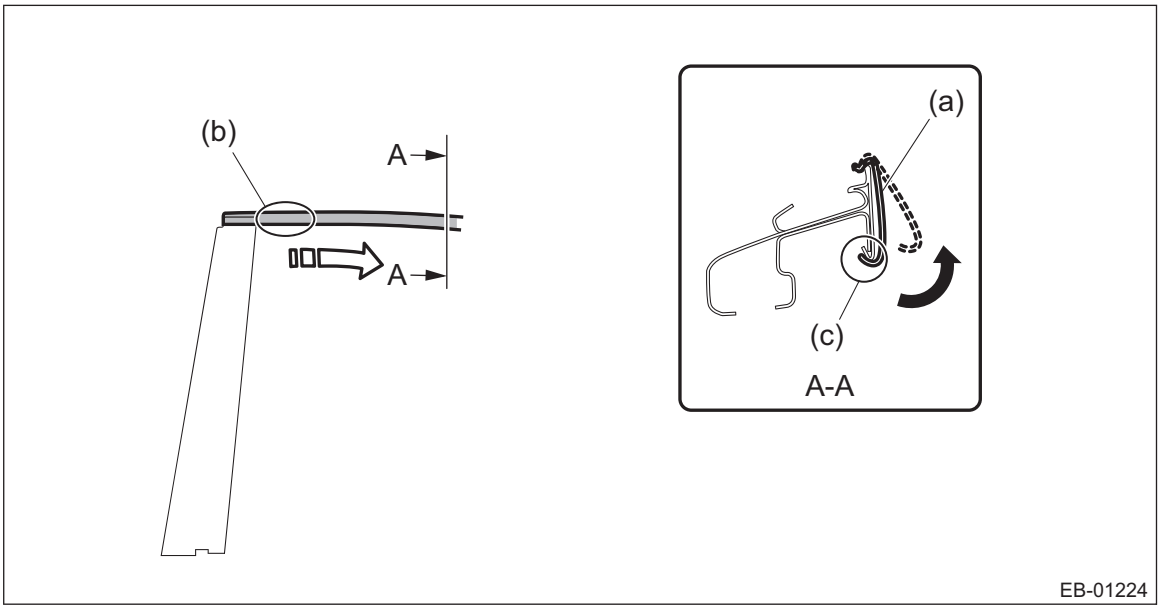
CAUTION:
- **When removing the molding - door sash, take special care to avoid the distortion.**
- **When distortion occurred to the molding - door sash, always replace it with a new part.**

9) Remove the weather strip outer - front door.

CAUTION:
- **When removing the weather strip outer, be careful not to damage the vehicle.**
- **Do not reuse the weather strip outer. Always replace with a new part.**

10) Peel the door sash tape from the door sash.

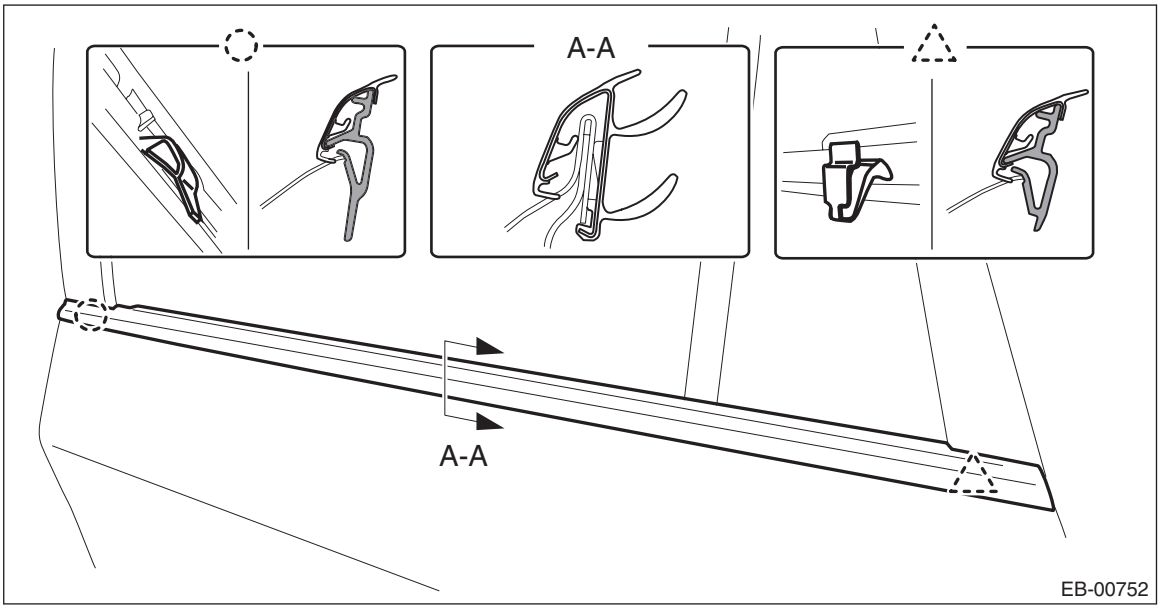
NOTE:
- If the tape is difficult to detach, warm it by a hot air drier.



Use a household hairdryer. Do not use industrial dryers.
- If tape residue is remaining on the door sash, wipe clean.

2. REAR DOOR

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear door. <Ref. to EI-71, REAR DOOR, REMOVAL, Door Trim.>
3) Remove the sealing cover - rear door. <Ref. to EB-40, REMOVAL, Rear Sealing Cover.>
4) Remove the glass assembly - rear door. <Ref. to GW-33, REMOVAL, Rear Door Glass.>
5) Remove the running channel - rear door.
6) Remove the clip, and remove the weather strip - door upper side. <Ref. to EB-68, DOOR, REPLACEMENT, Weather Strip.>



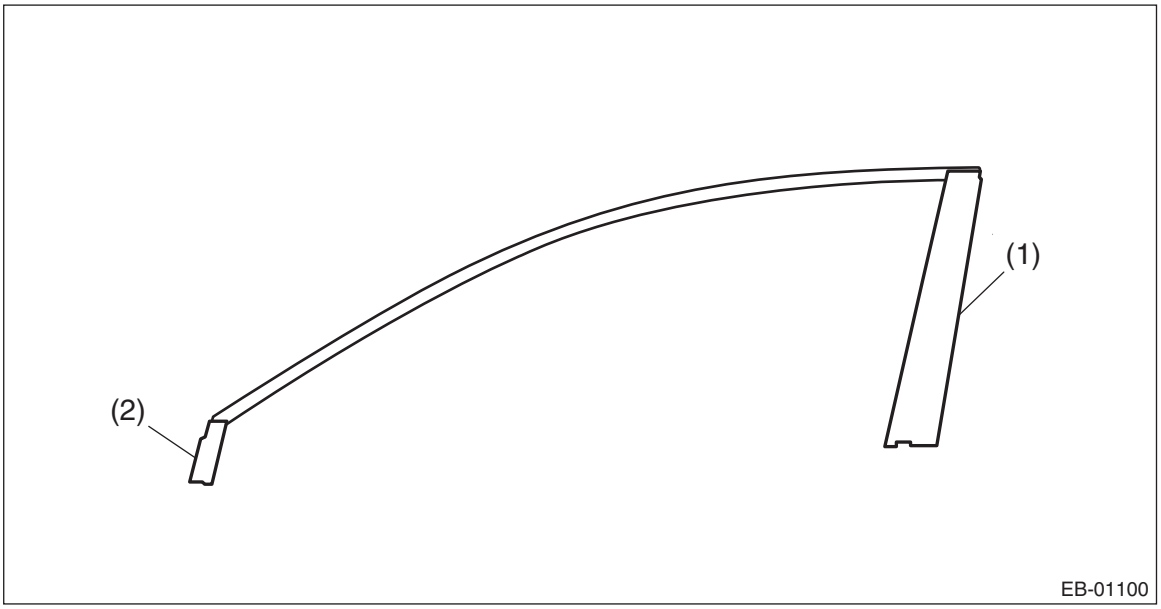
7) Remove the molding - door sash rear (a) by disengaging the bottom part (c) from the specified position (b) toward the rear side of the vehicle.

CAUTION:
- **When removing the molding - door sash, take special care to avoid the distortion.**
- **When distortion occurred to the molding - door sash, always replace it with a new part.**

8) Remove the weather strip outer - rear door.

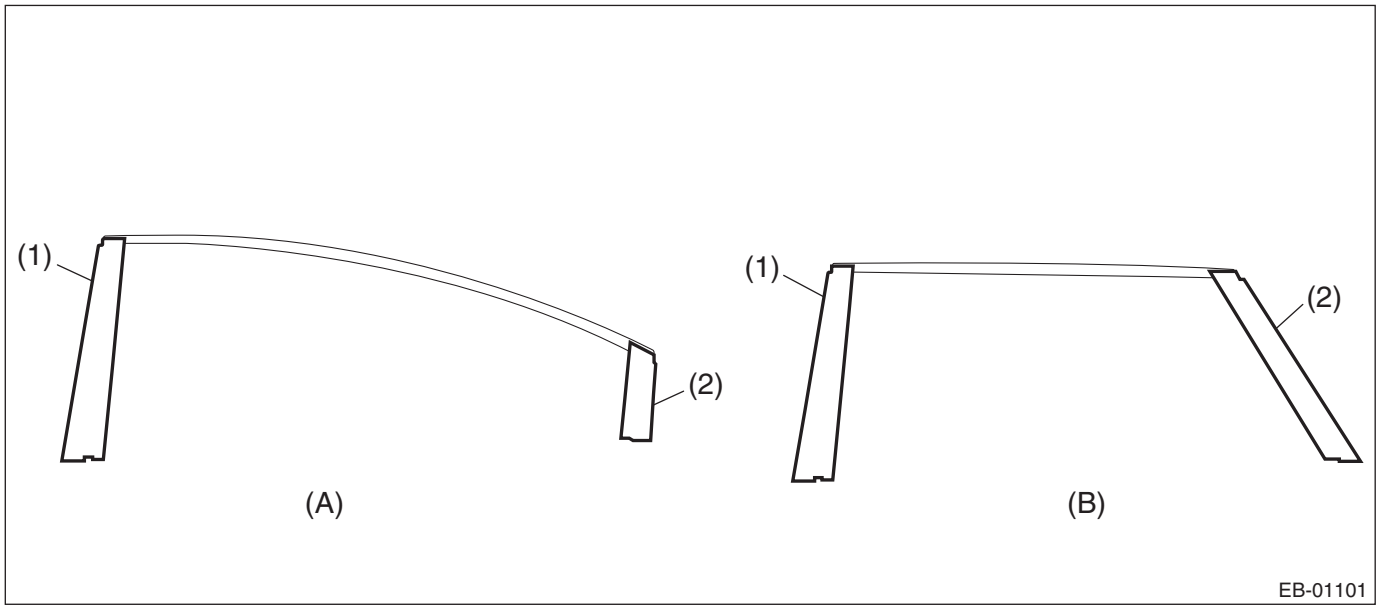
CAUTION:
- **When removing the weather strip outer, be careful not to damage the vehicle.**
- **Do not reuse the weather strip outer. Always replace with a new part.**

9) Peel the door sash tape from the door sash.



NOTE:
- If the tape is difficult to detach, warm it by a hot air drier.

Use a household hairdryer. Do not use industrial dryers.
- If tape residue is remaining on the door sash, wipe clean.

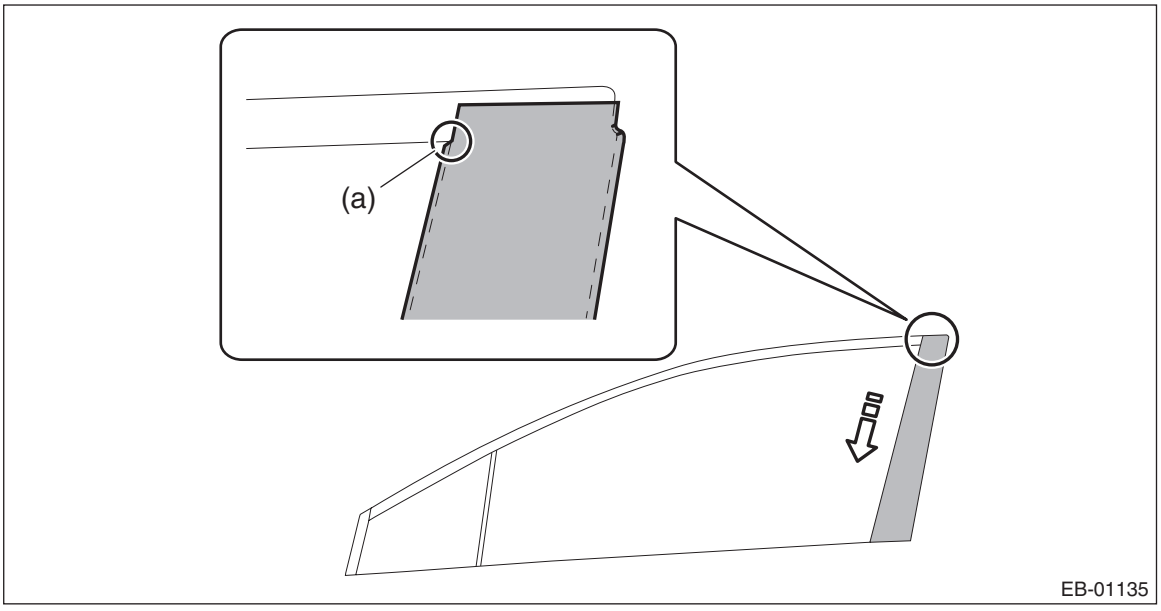


B: INSTALLATION

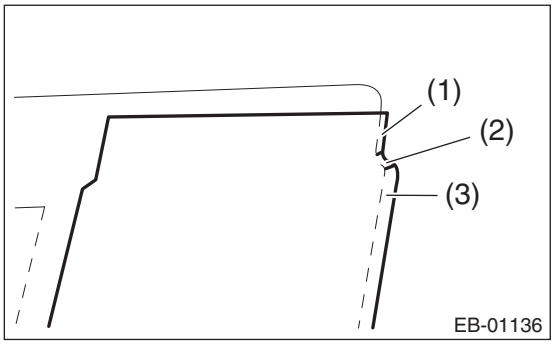
CAUTION:
- **Do not reuse the removed door sash tape. Replace it with a new tape.**
- **When applying tape, use a spatula, etc. to apply evenly, pushing it against the sash to make sure that no air bubbles are formed.**

If air bubbles are formed, reapply the tape.
- **If the tape is wrinkled, etc. during application, replace the tape.**
- **Folded edges and ends of the tape will be a cause for peeling off if the bonding pressure is insufficient, so make sure to push down on the tape firmly to adhere.**
- **There are locations where the tape ends will overlap each other. When applying the tape, be careful of the order of their application.**
  - **Front**

  - **Rear**

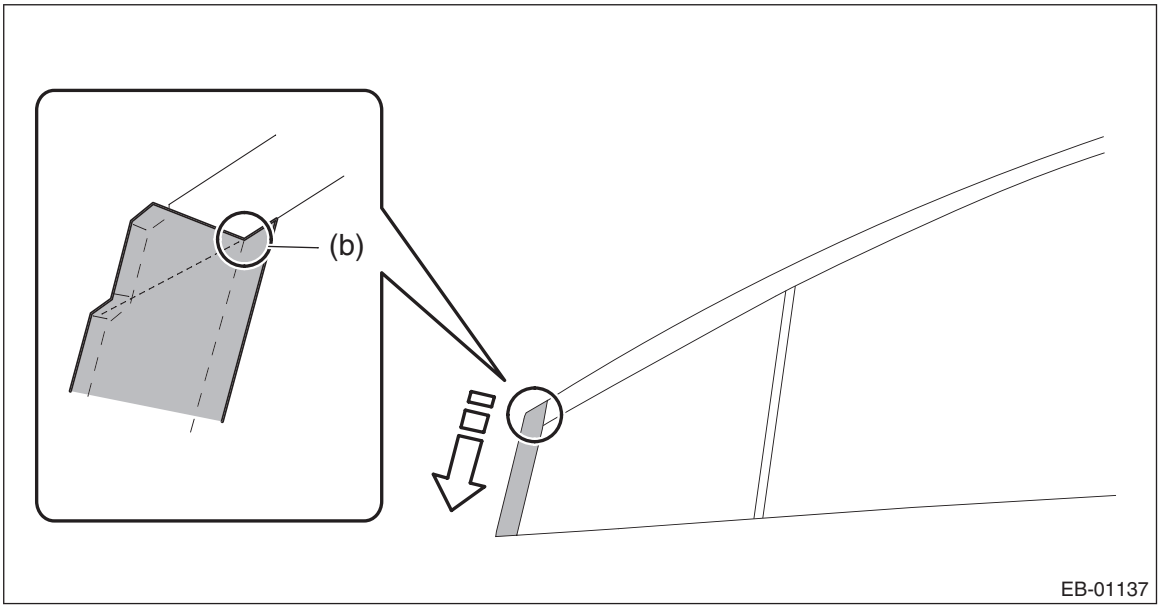


(A) Sedan model (B) OUTBACK model

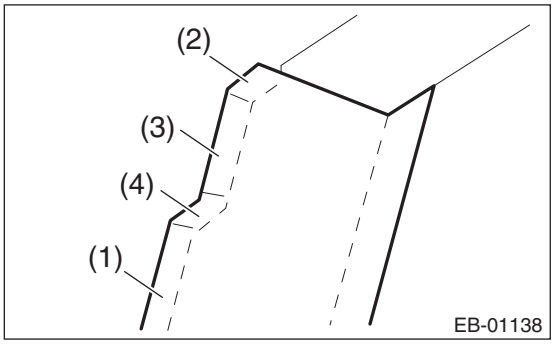


- **Do not reuse the weather strip outer. Always replace with a new part.**

1. FRONT DOOR

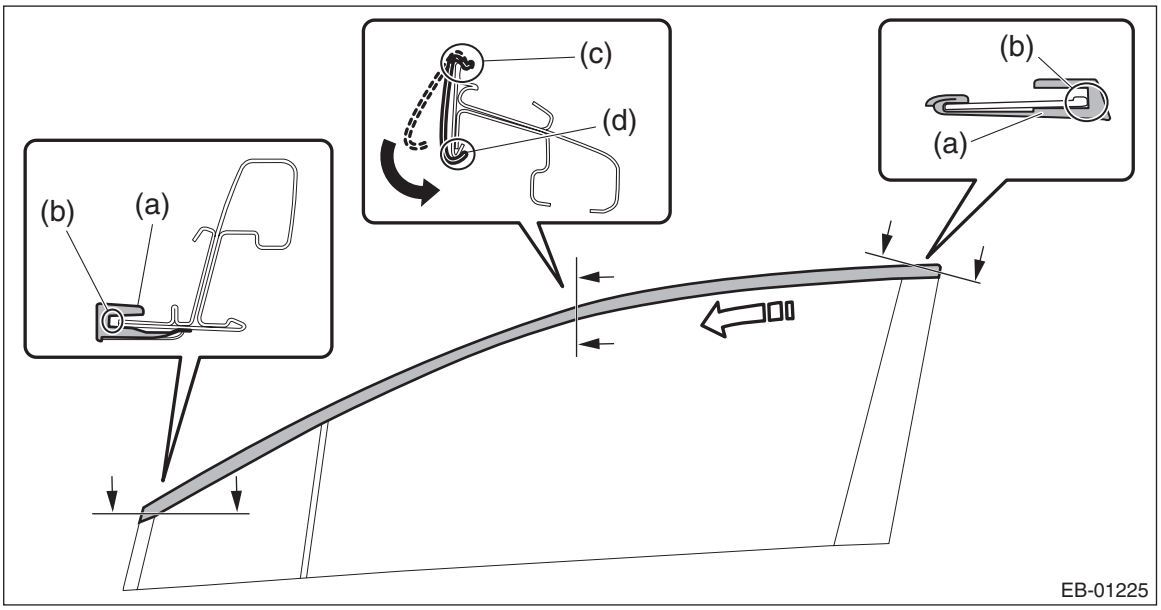


1) Apply the front door sash tape - rear from the top of the vehicle towards the bottom as shown in the figure (a).



2) Fold the corners at the door upper end area in the order of (1) — (3).

3) Apply the front door sash tape - front from the top of the vehicle towards the bottom as shown in the figure (b).

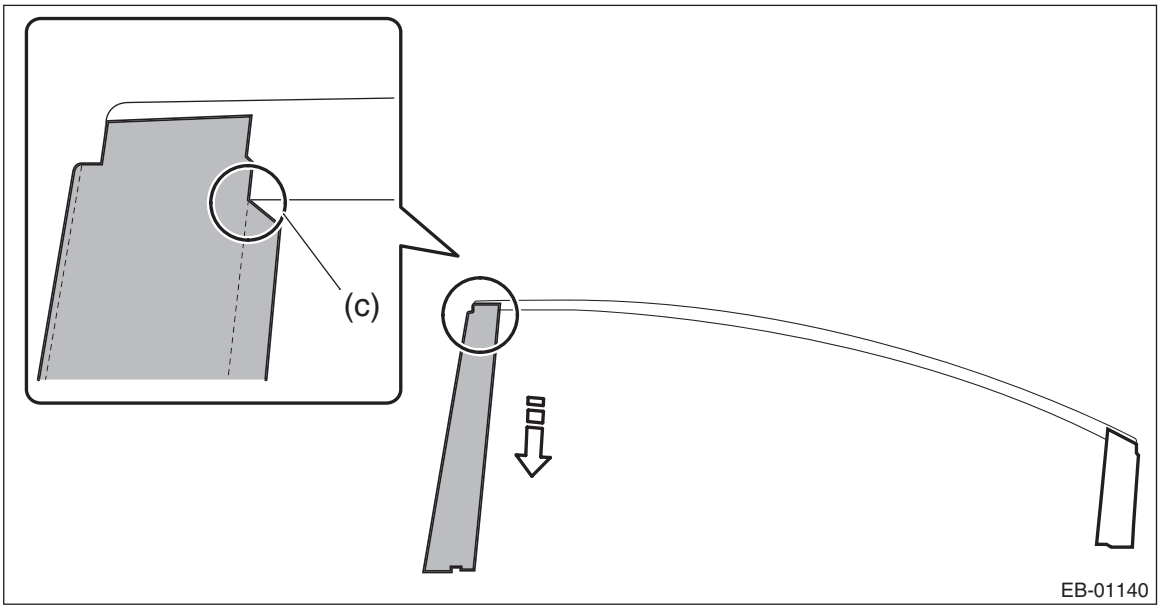


4) Fold the corners at the door upper end area in the order of (1) — (4).

5) Install the molding - door sash front.
   (1) Align the molding - door sash front (a) with the end of the sash (b), then temporarily install by hooking it on the upper edge (c) of the sash.
   (2) Fit the lower edge of the sash (d) from the rear side of vehicle toward the front side of the vehicle.

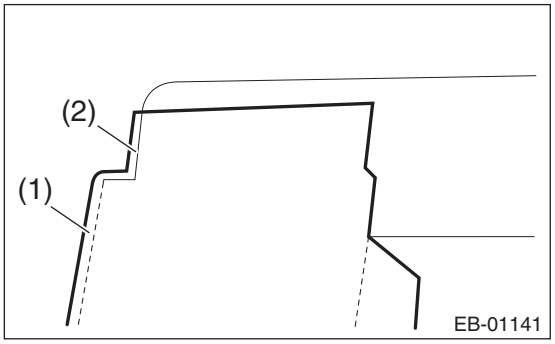
CAUTION:
• Do not apply a concentrated load to any location of the molding - door sash, because such a load may bend the parts.
• When distortion occurred to the molding - door sash, always replace it with a new part.

6) Install the weather strip outer - front door.
7) Install the running channel - front door.
8) Install the glass assembly - front door.



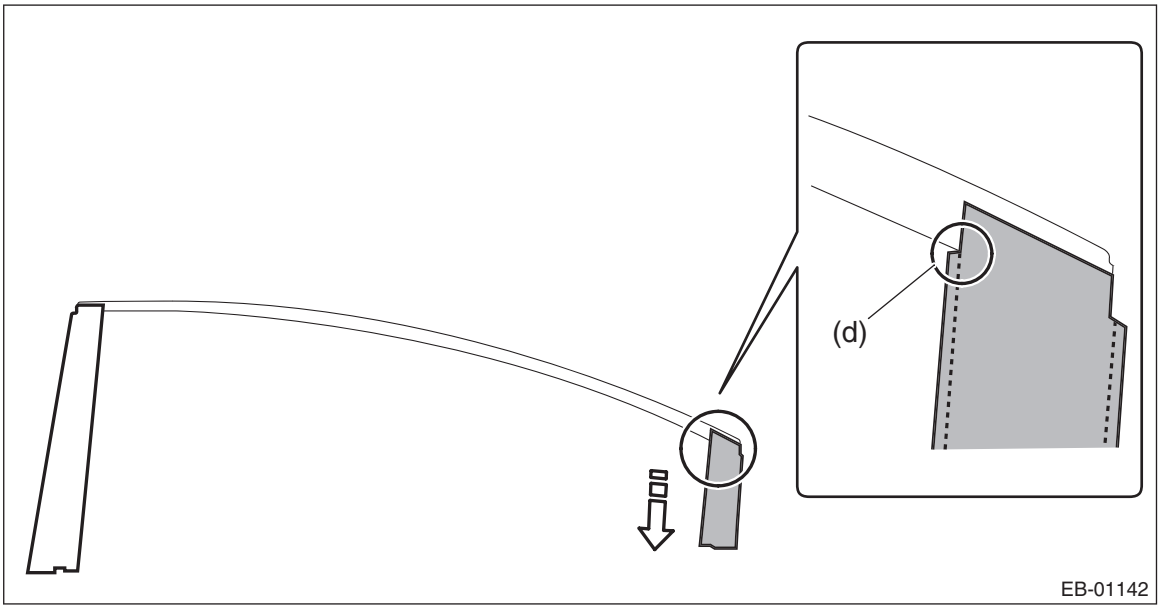
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
9) Install the weather strip - front door.
10) Install the sealing cover - front door.
11) Install the outer mirror assembly.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
12) Install the trim panel - front door. <Ref. to EI-71, INSTALLATION, Door Trim.>
13) Connect the ground terminal to the battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
14) When installing the panel assembly - front door, make sure that a uniform clearance is created around the panel. For the dimension of clearance, refer to “ADJUSTMENT” in “Front Door”. <Ref. to EB-28, ADJUSTMENT, Front Door.>

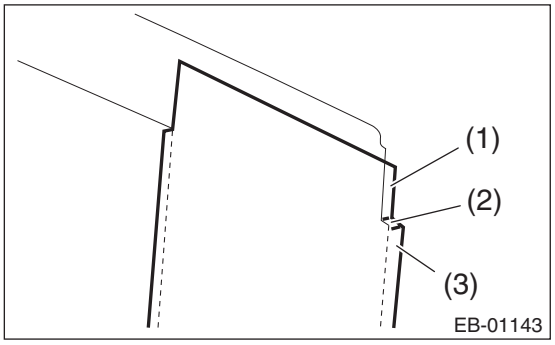


2. REAR DOOR

Sedan model

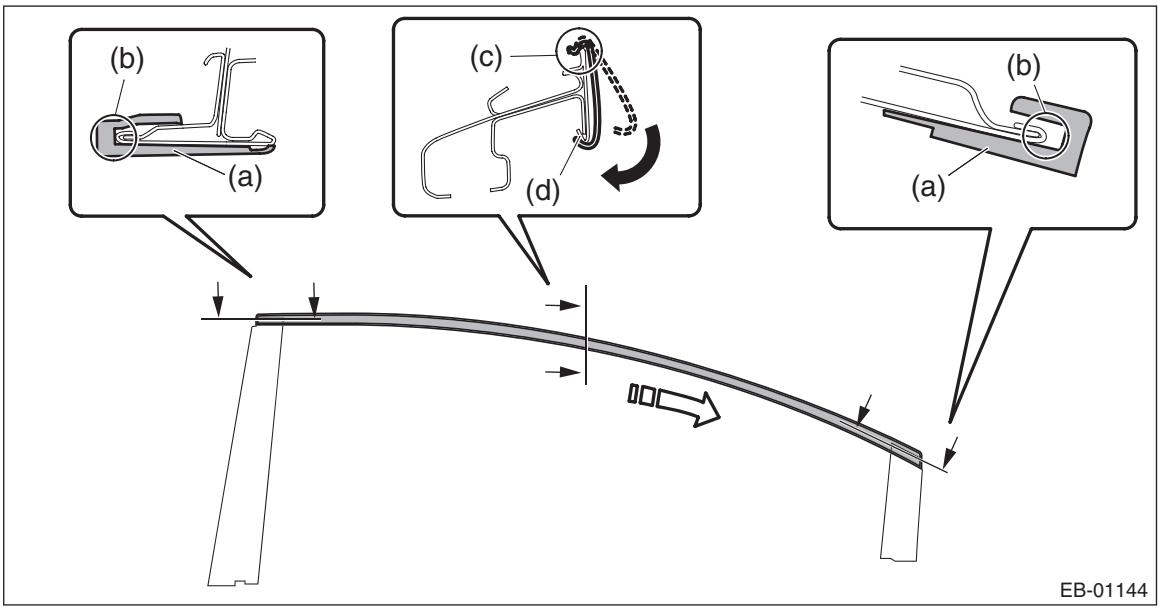


1) Apply the rear door sash tape - front from the top of the vehicle towards the bottom as shown in the figure (c).



2) Fold the corners at the door upper end area in the order of (1) — (2).

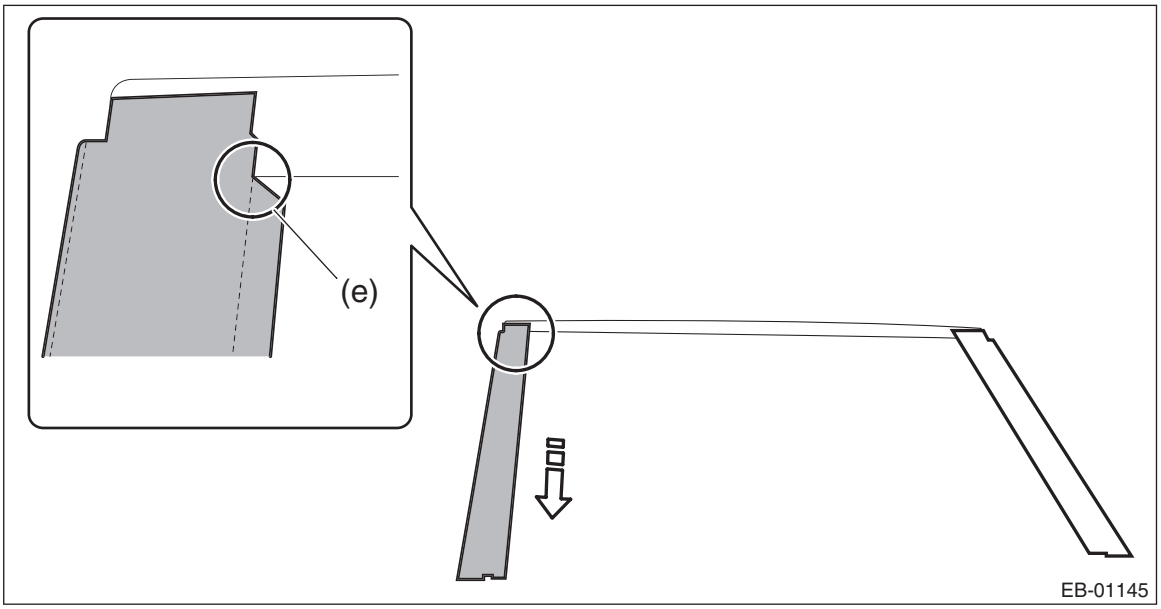
3) Apply the rear door sash tape - rear from the top of the vehicle towards the bottom as shown in the figure (d).



4) Fold the corners at the door upper end area in the order of (1) — (3).

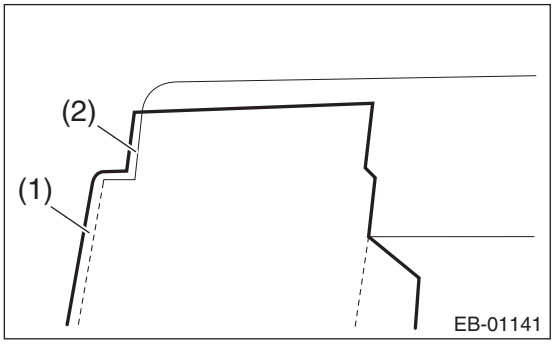
5) Install the molding - door sash rear.
(1) Align the molding - door sash rear (a) with the end of the sash (b), then temporarily install by hooking it on the upper edge (c) of the sash.
(2) Fit the lower edge of the sash (d) from the front side of vehicle toward the rear side of the vehicle.

CAUTION:
• Do not apply a concentrated load to any location of the molding - door sash, because such a load may bend the parts.
• When distortion occurred to the molding - door sash, always replace it with a new part.



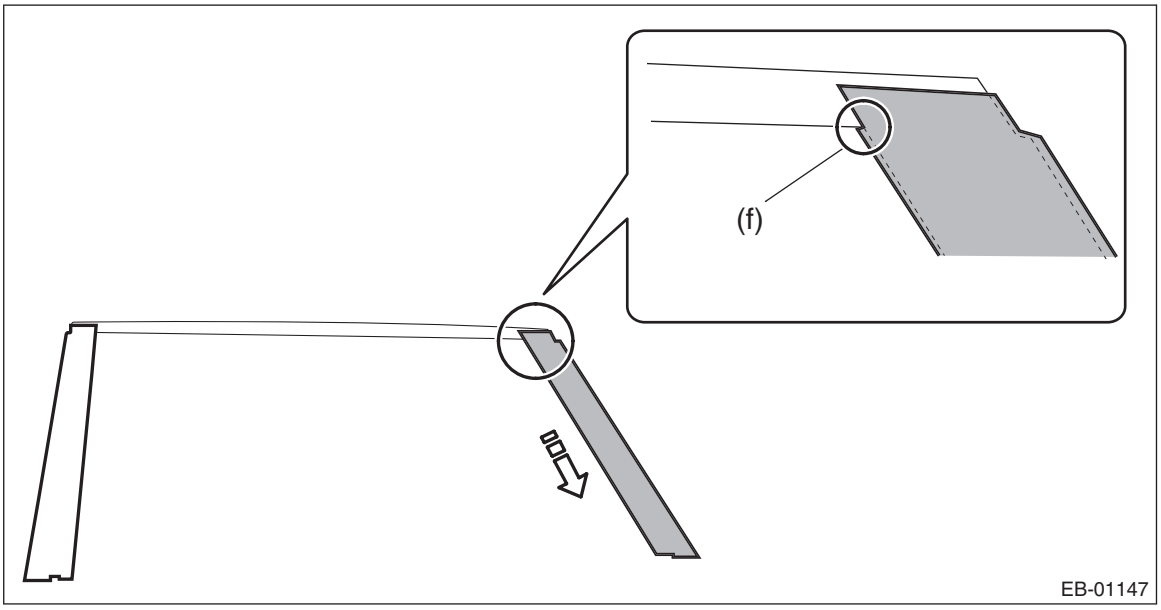
6) Install the weather strip outer - rear door.
7) Install the running channel - rear door.
8) Install the glass assembly - rear door.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
9) Install the weather strip - rear door.
10) Install the sealing cover - rear door.
11) Install the trim panel - rear door. <Ref. to EI-71, INSTALLATION, Door Trim.>
12) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
13) When installing the panel assembly - rear door, make sure that a uniform clearance is created around the panel. For the dimension of clearance, refer to “ADJUSTMENT” in “Rear Door”. <Ref. to EB-38, ADJUSTMENT, Rear Door.>

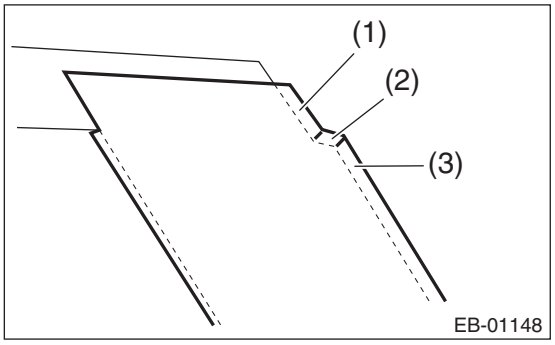


3. REAR DOOR

OUTBACK model

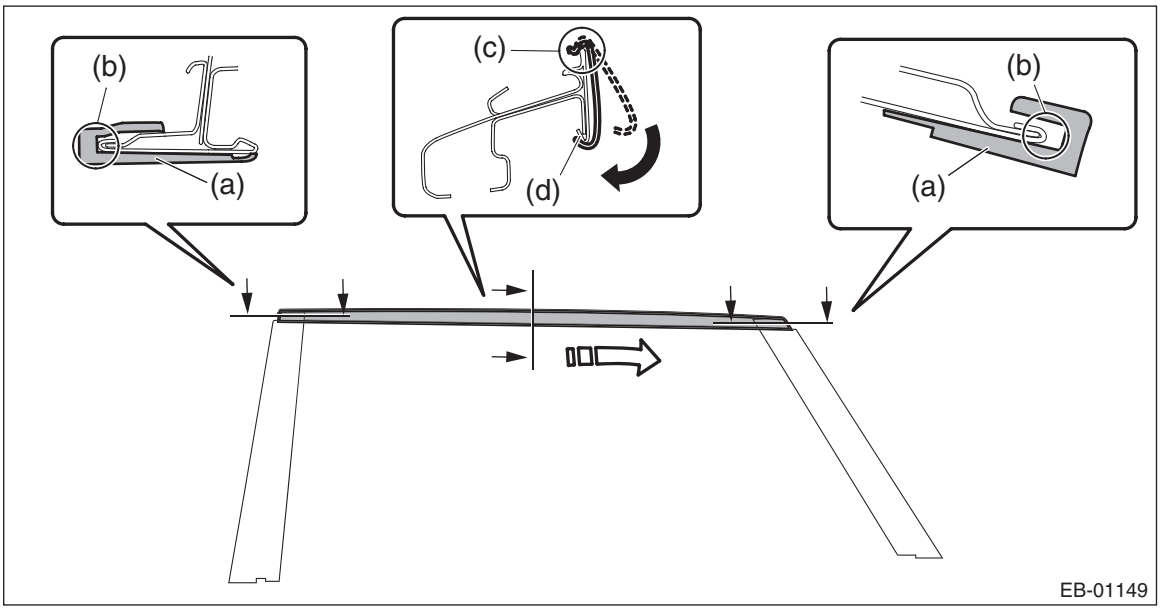


1) Apply the rear door sash tape - front from the top of the vehicle towards the bottom as shown in the figure (e).



2) Fold the corners at the door upper end area in the order of (1) — (2).

3) Apply the rear door sash tape - rear from the top of the vehicle towards the bottom as shown in the figure (f).



4) Fold the corners at the door upper end area in the order of (1) — (3).

5) Install the molding - door sash rear.
(1) Align the molding - door sash rear (a) with the end of the sash (b), then temporarily install by hooking it on the upper edge (c) of the sash.
(2) Fit the lower edge of the sash (d) from the front side of vehicle toward the rear side of the vehicle.

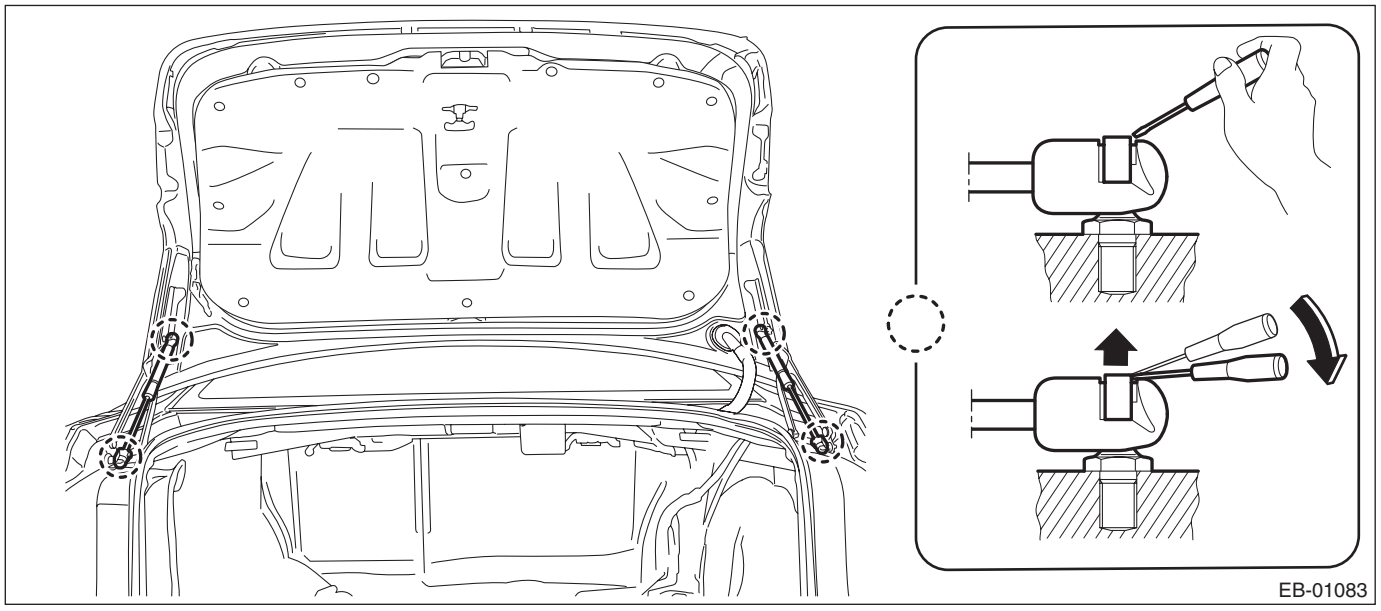
CAUTION:
• Do not apply a concentrated load to any location of the molding - door sash, because such a load may bend the parts.
• When distortion occurred to the molding - door sash, always replace it with a new part.

6) Install the weather strip outer - rear door.
7) Install the running channel - rear door.
8) Install the glass assembly - rear door.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
9) Install the weather strip - rear door.
10) Install the sealing cover - rear door.
11) Install the trim panel - rear door. <Ref. to EI-71, INSTALLATION, Door Trim.>
12) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
13) When installing the panel assembly - rear door, make sure that a uniform clearance is created around the panel. For the dimension of clearance, refer to “ADJUSTMENT” in “Rear Door”. <Ref. to EB-38, ADJUSTMENT, Rear Door.>

9. Trunk Lid

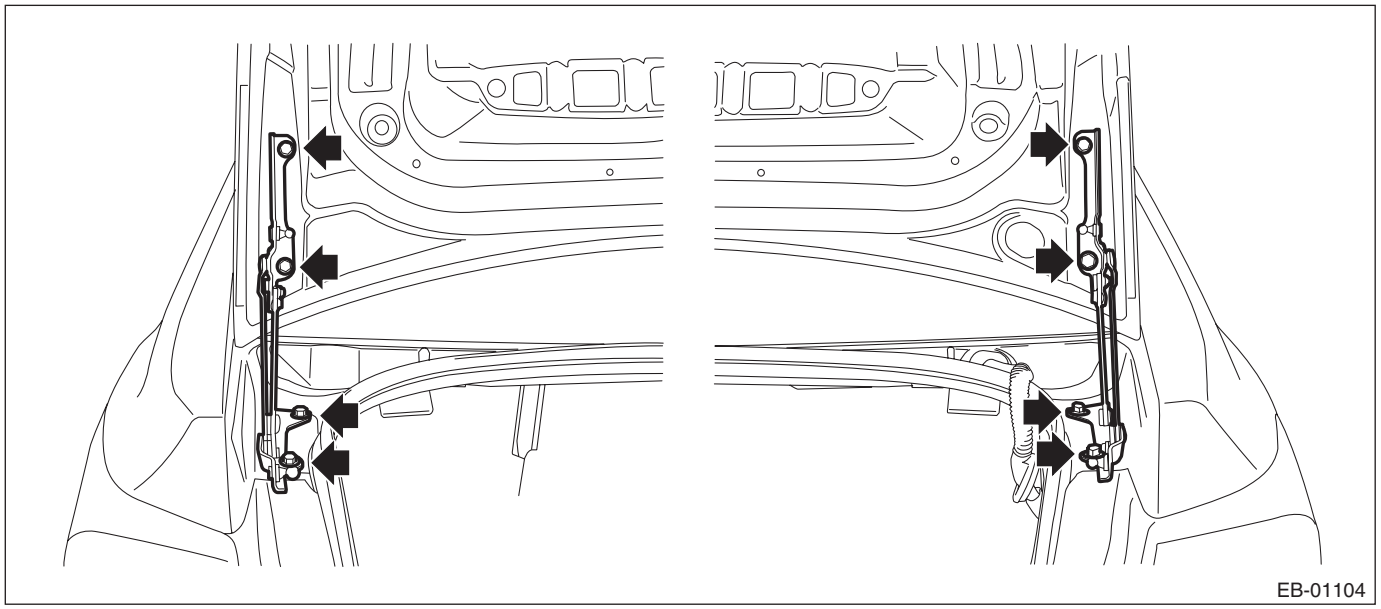
A: REMOVAL



CAUTION:
Trunk lid COMPL is heavy. When removing and installing it, always work in a team of two or more persons.

1. TRUNK LID DAMPER STAY

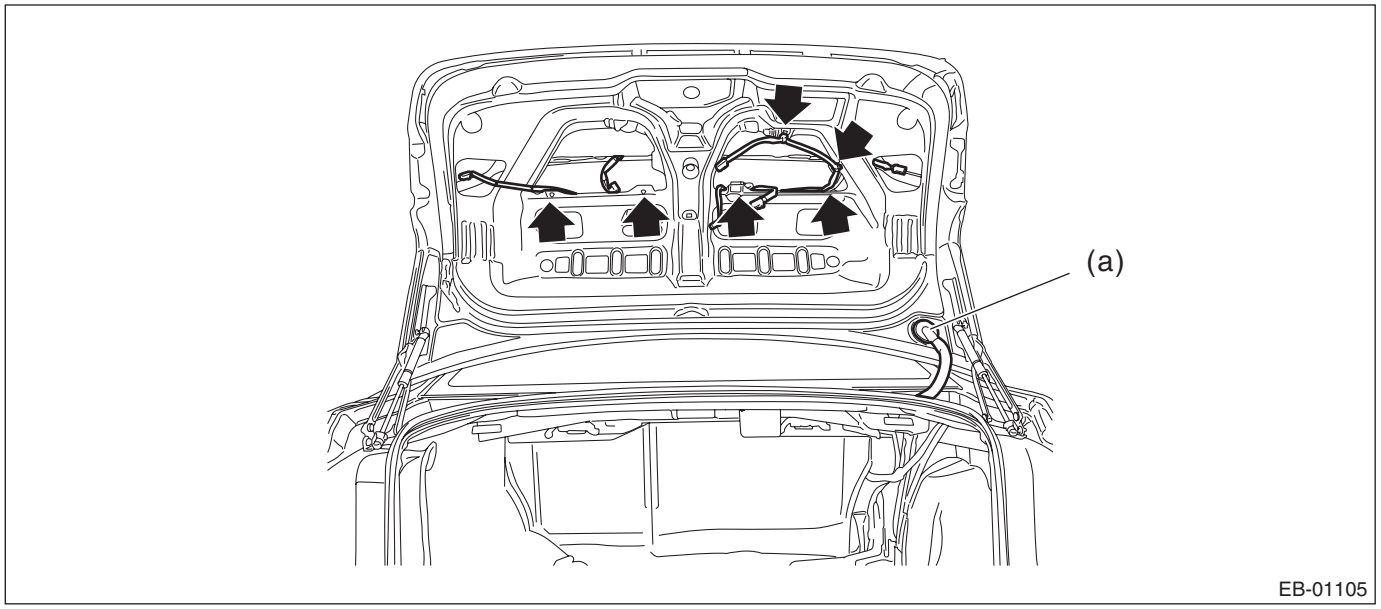
1) Open the trunk lid COMPL.
2) Remove the stay assembly - trunk lid.



CAUTION:
Do not remove the stop ring completely. Raise it to the position enough to remove the ball stud.

(1) Remove the stopper - hinge.
(2) Gently push the stop ring against the ball stud to be raised with a flat tip screwdriver.
(3) Pull the stay assembly - trunk lid toward you, and remove the stay assembly - trunk lid from the ball stud.

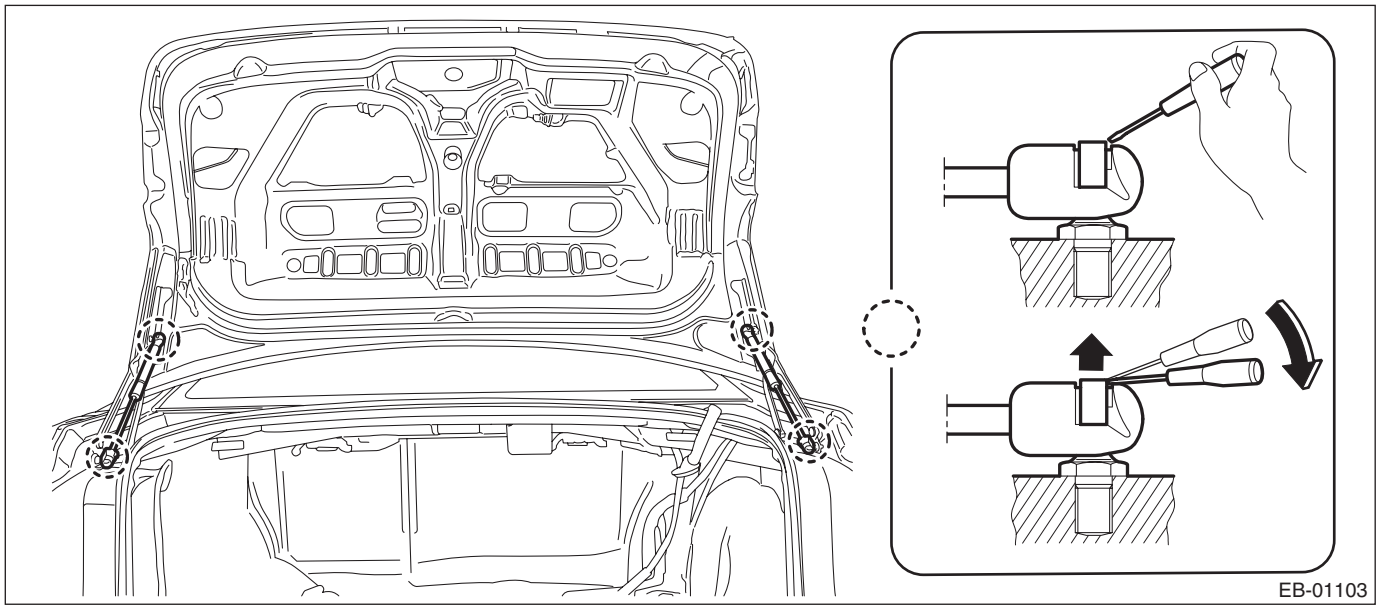
2. TRUNK LID HINGE



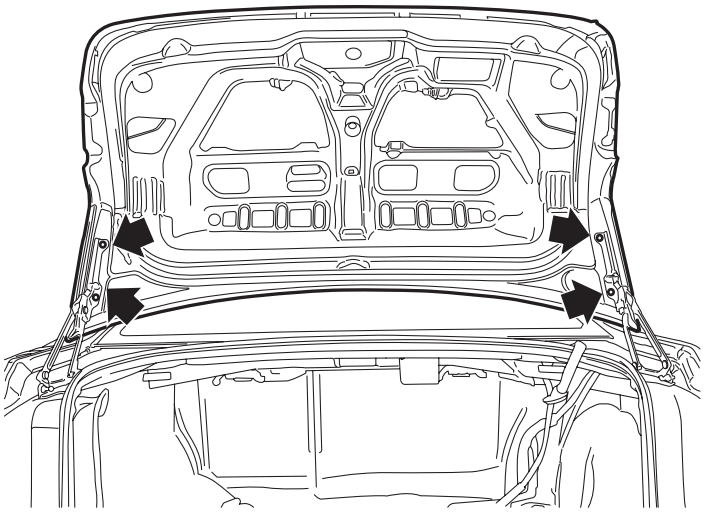
1) Open the trunk lid COMPL.
2) Remove the stay assembly - trunk lid. <Ref. to EB-51, TRUNK LID DAMPER STAY, REMOVAL, Trunk Lid.>
3) Remove the hinge assembly - trunk lid.

3. TRUNK LID PANEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - trunk lid. <Ref. to EI-110, REMOVAL, Trunk Room Trim.>
3) Remove the garnish - trunk. <Ref. to EI-60, REMOVAL, Trunk Lid Garnish.>
4) Remove the key lock - trunk lid. <Ref. to SL-74, TRUNK LID, REMOVAL, Key Lock Cylinders.>
5) Remove the light assembly - rear finisher. <Ref. to LI-54, SEDAN MODEL, REMOVAL, Rear Finisher Light Assembly.>
6) Remove the license plate light. <Ref. to LI-58, SEDAN MODEL, REMOVAL, License Plate Light.>
7) Remove the rearview camera assembly. <Ref. to ET-35, SEDAN MODEL, REMOVAL, Rearview Camera System.>
8) Remove the rear antenna assembly - exterior. (Model with keyless access with push button start) <Ref. to SL-97, REAR ANTENNA (SEDAN MODEL), REMOVAL, Keyless Access Outdoor Antenna.>
9) Remove the latch and actuator - trunk lid. <Ref. to SL-53, REMOVAL, Trunk Lid Latch and Actuator Assembly.>
10) Remove the stopper - trunk lid LWR.



11) Disconnect the harness clip, and then pull out the harness as shown in the figure (a).



12) Remove the stay assembly - trunk lid.

CAUTION:
Do not remove the stop ring completely. Raise it to the position enough to remove the ball stud.

(1) Remove the stopper - hinge.
(2) Gently push the stop ring against the ball stud to be raised with a flat tip screwdriver.
(3) Pull the stay assembly - trunk lid toward you, and remove the stay assembly - trunk lid from the ball stud.

13) Remove the trunk lid COMPL.

EB-01106

14) Remove the hinge assembly - trunk lid from the body.

B: INSTALLATION

1) Install the hinge assembly - trunk lid.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) Install the trunk lid COMPL.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

3) Install the stopper - trunk lid LWR.
4) Adjust while paying attention to make a uniform clearance around the trunk lid COMPL. <Ref. to EB-55, ADJUSTMENT, Trunk Lid.>
5) Install the stay assembly - trunk lid.

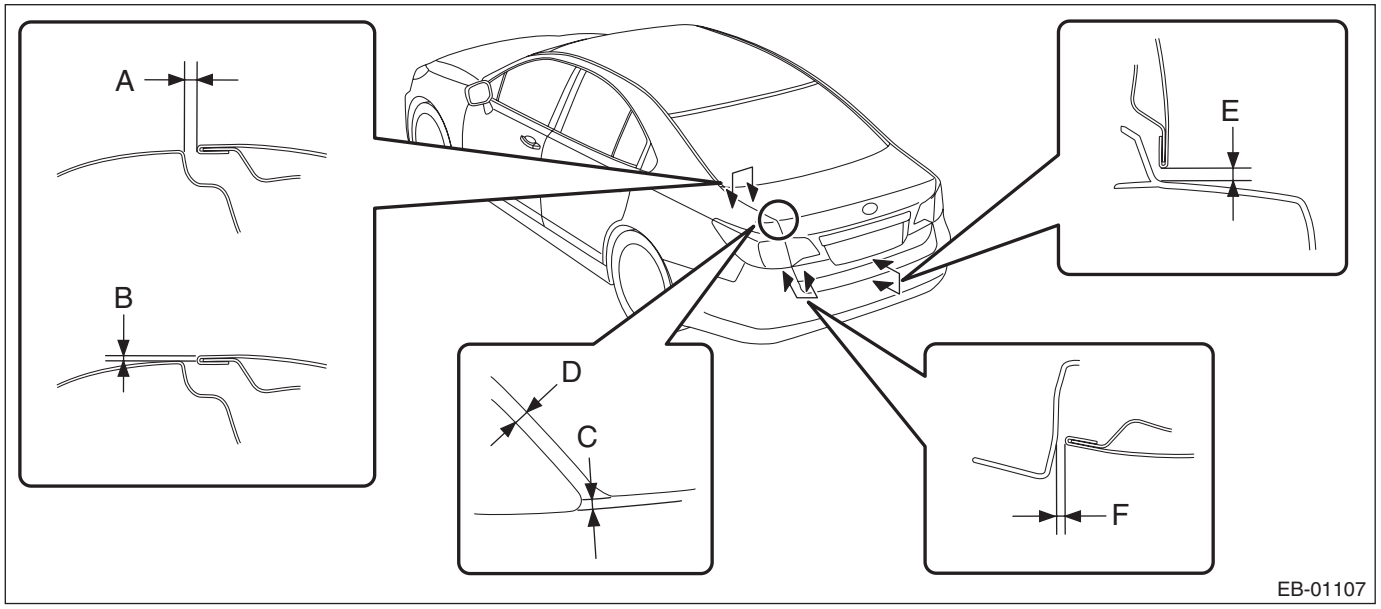
Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-6, TRUNK LID PANEL, COMPONENT, General Description.>

6) Install the stopper - hinge.
7) Install the harness clip and the harness.
8) Install the light assembly - rear finisher. <Ref. to LI-55, SEDAN MODEL, INSTALLATION, Rear Finisher Light Assembly.>

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

9) Install the license plate light. <Ref. to LI-60, SEDAN MODEL, INSTALLATION, License Plate Light.>
10) Install the key lock - trunk lid.
11) Install the rearview camera assembly. <Ref. to ET-36, SEDAN MODEL, INSTALLATION, Rearview Camera System.>
12) Install the garnish - trunk. <Ref. to EI-60, INSTALLATION, Trunk Lid Garnish.>

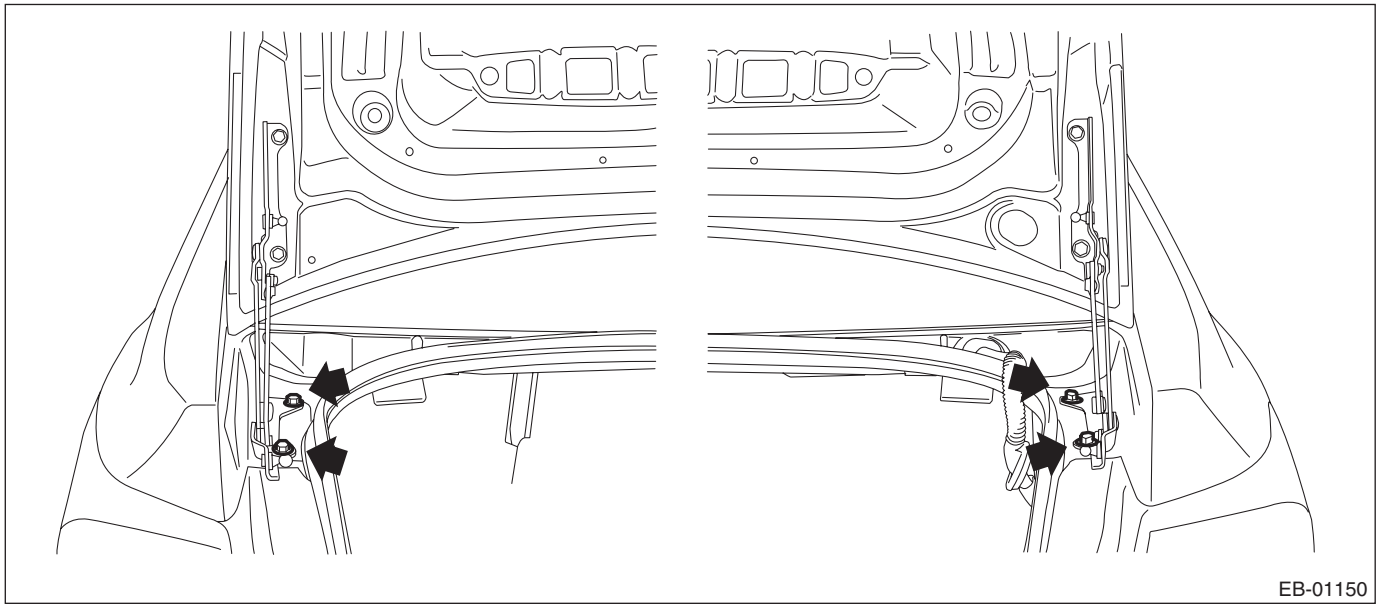
Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)



13) Install the rear antenna assembly - exterior.
14) Install the latch and actuator - trunk lid.

Tightening torque
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

15) Install the trim panel - trunk lid. <Ref. to EI-111, INSTALLATION, Trunk Room Trim.>
16) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



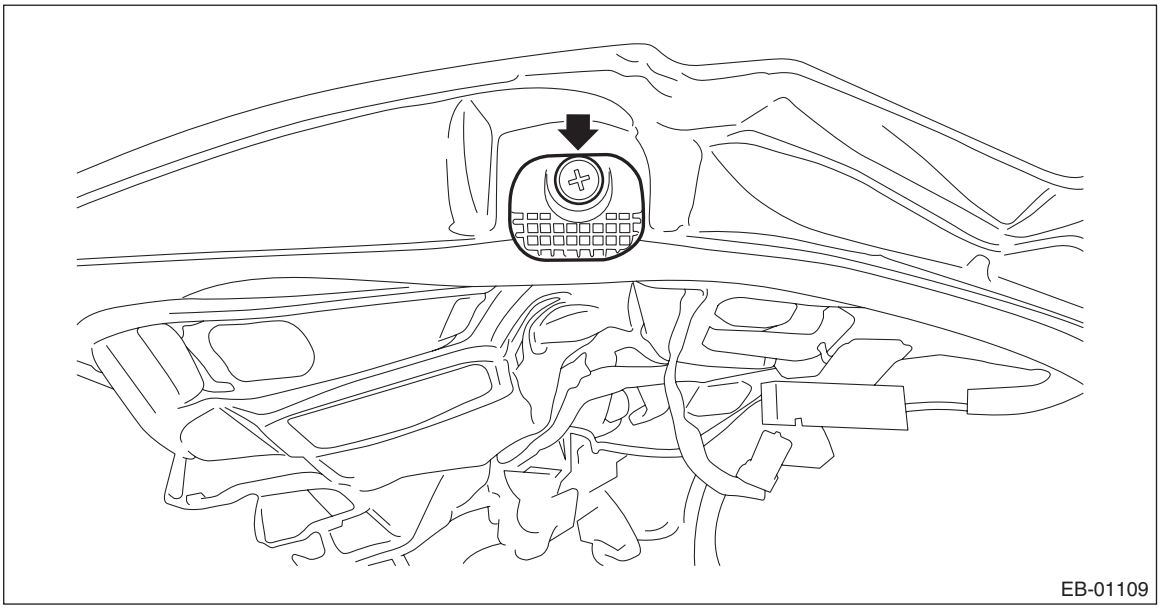
C: ADJUSTMENT

Adjust the clearance around the trunk lid COMPL as follows.

	Part	Standard
A	Trunk lid COMPL and Panel - side outer	3.5±1.0 mm (0.14±0.04 in)
B	Surface level gap between Trunk lid COMPL and Panel - side outer	0±1.0 mm (0±0.04 in)
C	Surface level gap between Trunk lid COMPL and Panel - side outer	–0.5±1.0 mm (–0.02±0.04 in)
D	Trunk lid COMPL and Panel - side outer	4.5±1.0 mm (0.18±0.04 in)
E	Trunk lid COMPL to Bumper face - rear	6.8±1.5 mm (0.27±0.06 in)
F	Trunk lid COMPL to Bumper face - rear	5±1.5 mm (0.2±0.06 in)

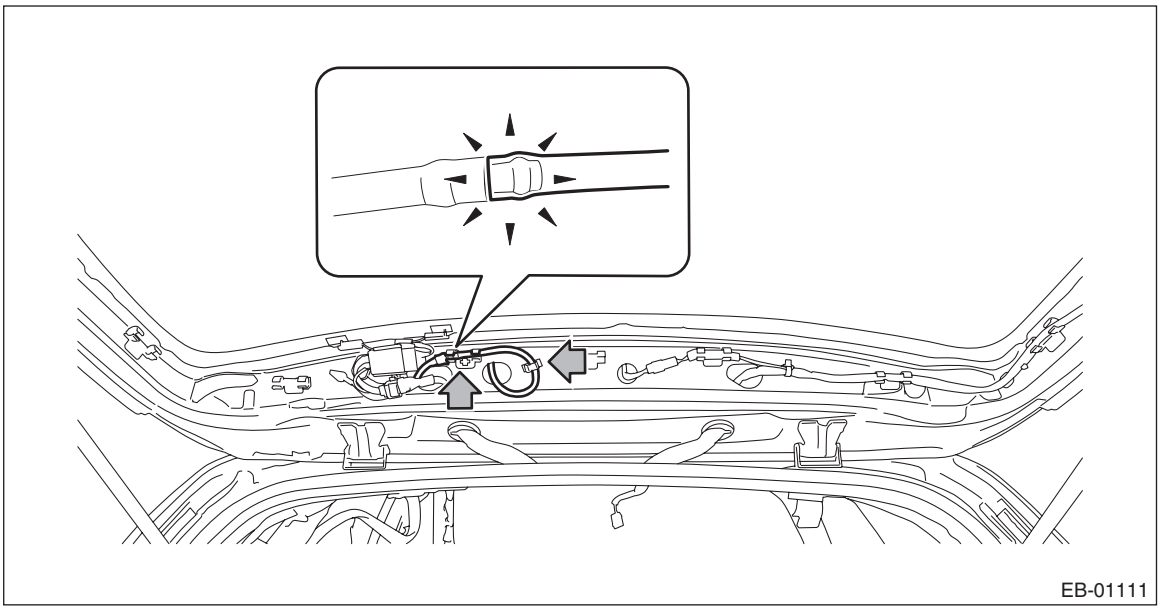
1) Adjust the horizontal position of the trunk lid COMPL.
   (1) Loosen the mounting bolt.
   (2) Adjust the horizontal clearance of the trunk lid COMPL.

2) Adjust the surface level gap between the trunk lid COMPL and the body.
   (1) Remove the trim panel - trunk rear.
   (2) Loosen the bolt.
   (3) Tap the striker - trunk using a plastic hammer to adjust the surface level gap between the trunk lid COMPL and the body.



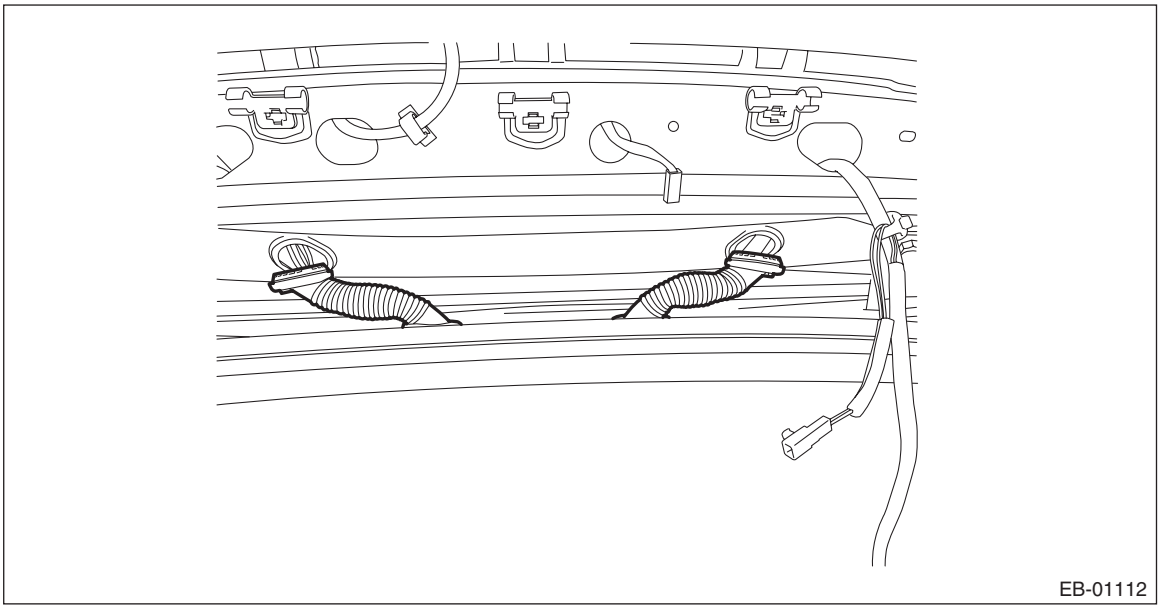
10.Rear Gate

A: REMOVAL

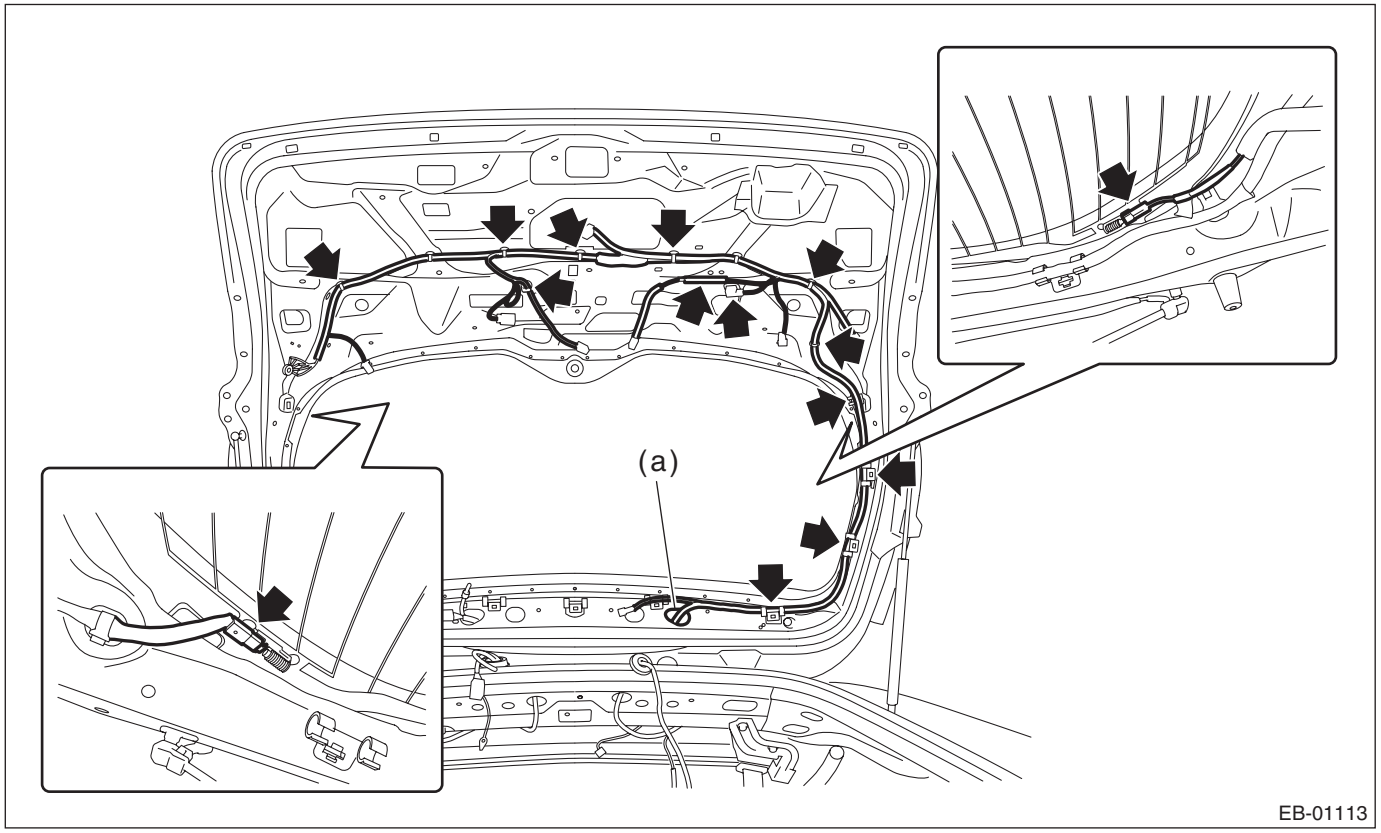


1. REAR GATE PANEL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the rod - power rear gate. (Model with power rear gate) <Ref. to PRG-9, REMOVAL, Power Rear Gate Rod.>
3) Remove the trim panel - rear gate. <Ref. to EI-122, REMOVAL, Rear Gate Trim.>
4) Remove the garnish assembly - rear gate. <Ref. to EI-61, REMOVAL, Rear Gate Garnish.>
5) Remove the power rear gate touch sensor. (Model with power rear gate) <Ref. to PRG-15, REMOVAL, Power Rear Gate Touch Sensor.>
6) Remove the light assembly - rear finisher. <Ref. to LI-54, OUTBACK MODEL, REMOVAL, Rear Finisher Light Assembly.>
7) Remove the license plate light. <Ref. to LI-59, OUTBACK MODEL, REMOVAL, License Plate Light.>
8) Remove the rearview camera assembly. <Ref. to ET-36, OUTBACK MODEL, REMOVAL, Rearview Camera System.>
9) Remove the antenna assembly - radio. <Ref. to ET-20, RADIO ANTENNA AMPLIFIER, REMOVAL, Antenna.>
10) Remove the arm assembly - rear wiper and the motor assembly - rear wiper. <Ref. to WW-40, REMOVAL, Rear Wiper Motor.>
11) Remove the rear antenna assembly - exterior. (Model with keyless access with push button start) <Ref. to SL-97, REAR ANTENNA (SEDAN MODEL), REMOVAL, Keyless Access Outdoor Antenna.>
12) Remove the rear gate latch and actuator - rear gate. <Ref. to SL-50, REMOVAL, Rear Gate Latch and Actuator Assembly.>
13) Remove the buffer - rear gate.

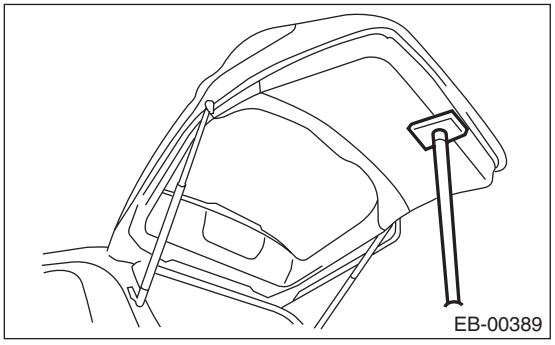


14) Remove the roof spoiler. <Ref. to EI-66, REMOVAL, Roof Spoiler.>

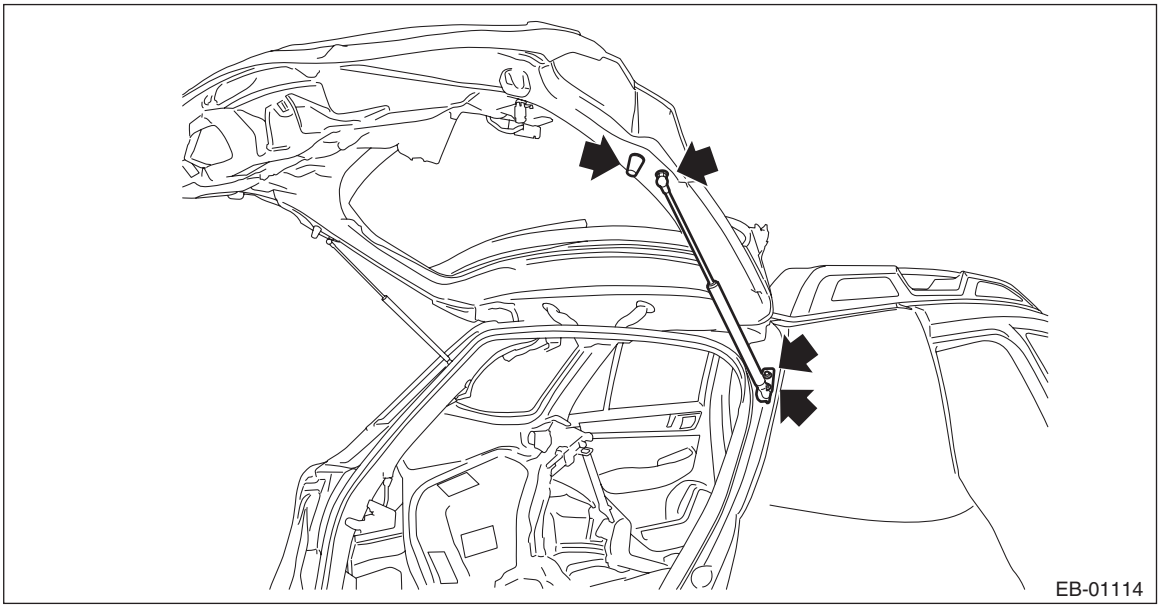


15) Disconnect the hose assembly - rear washer.
(1) Disconnect the joint portion of the hose assembly - rear washer.
(2) Remove the clip.

16) Remove the nozzle - rear washer. <Ref. to WW-43, REMOVAL, Rear Washer.>
17) Remove the rubber duct connection.



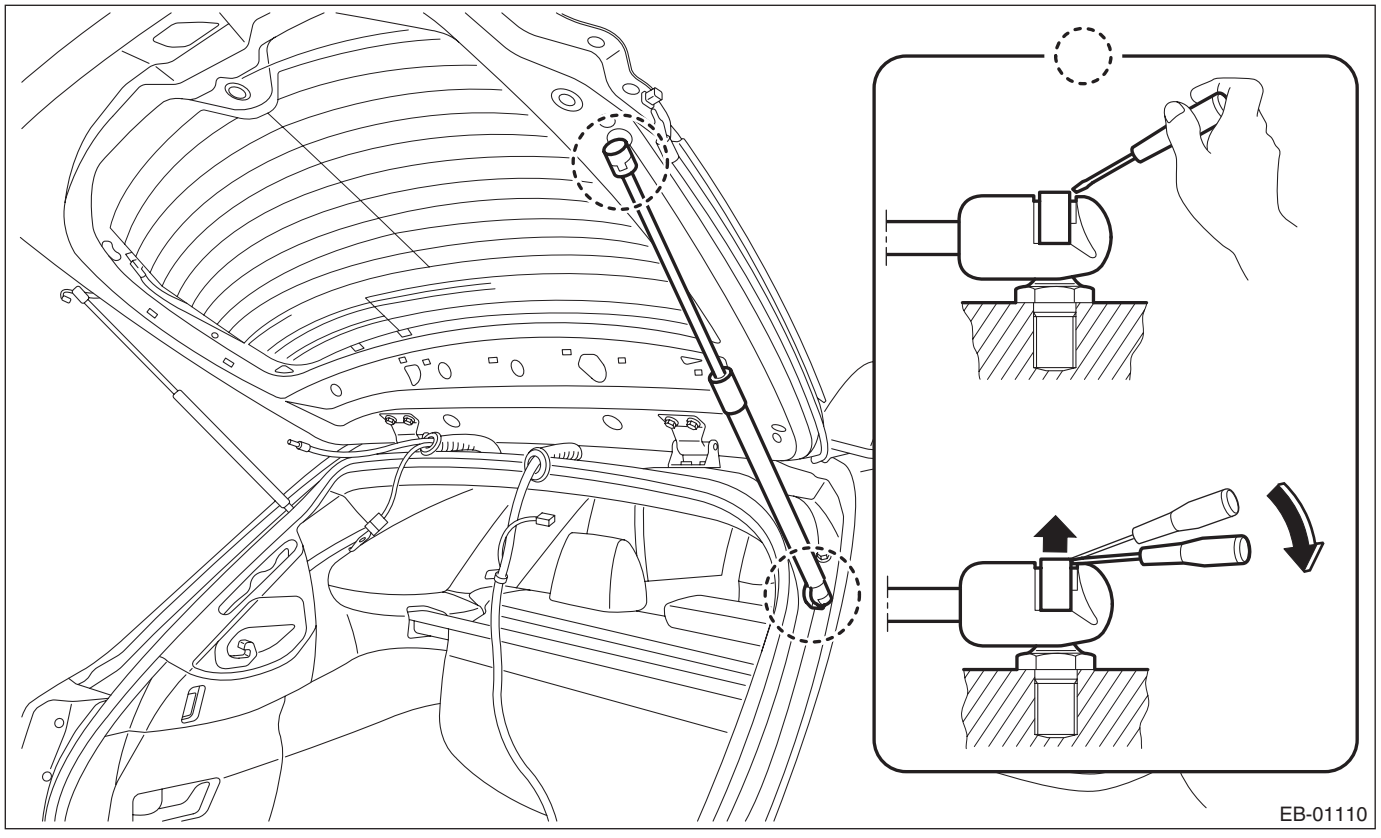
18) Disconnect the connector, and then pull out the harness from the panel - rear gate shown in the figure (a).



19) Remove the harness clip from the panel - rear gate.
20) Before removing the stay assembly - rear gate, prevent the panel - rear gate from closing by using a prop or the like.

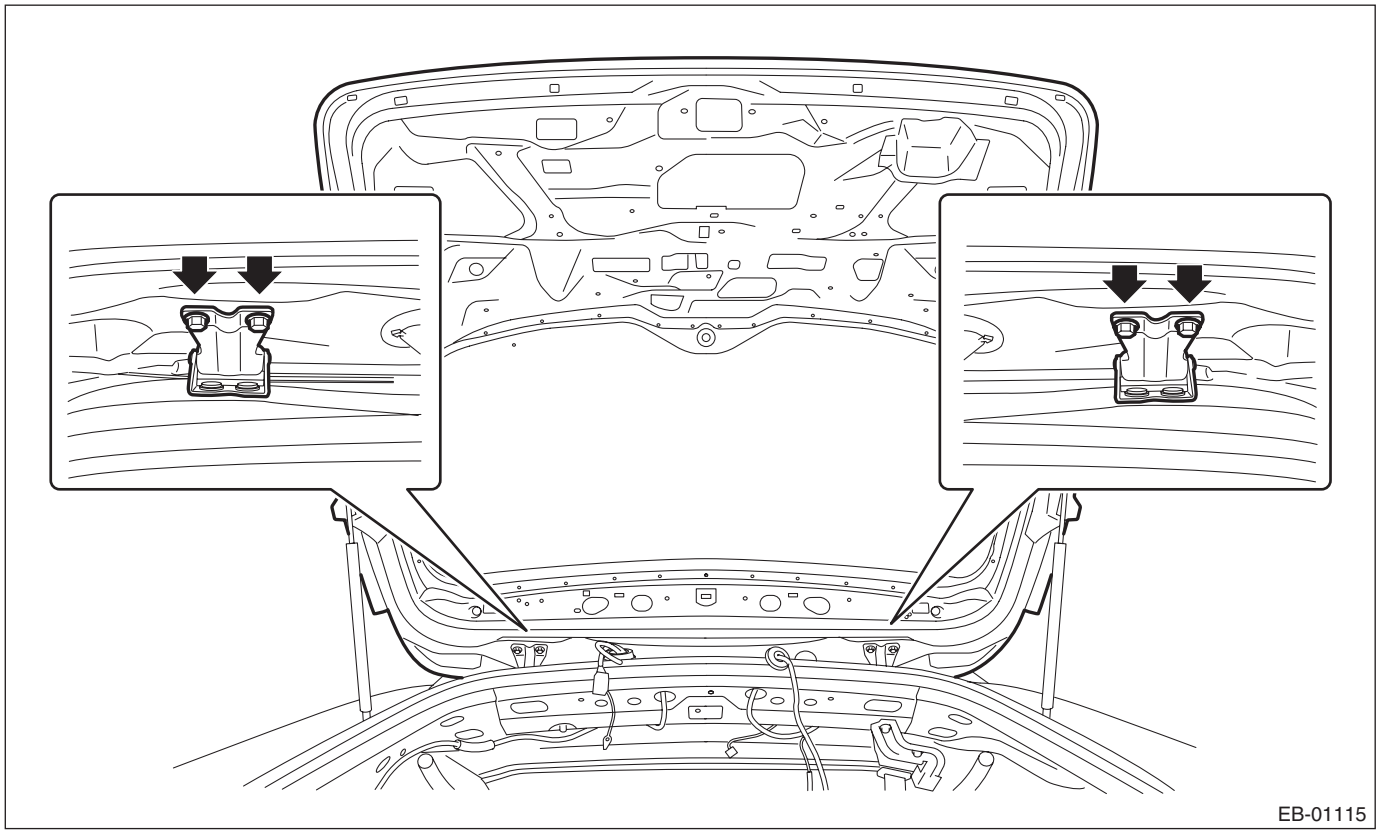
CAUTION:
If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the panel - rear gate with secure material to prevent injury or damage.

21) Remove the stay assembly - rear gate.



- Model without power rear gate
  1. Remove the stopper - rear gate and remove the attachment section on the side of the stay assembly - rear gate.
  2. Remove the mounting bolts on the body side.

- Model with power rear gate

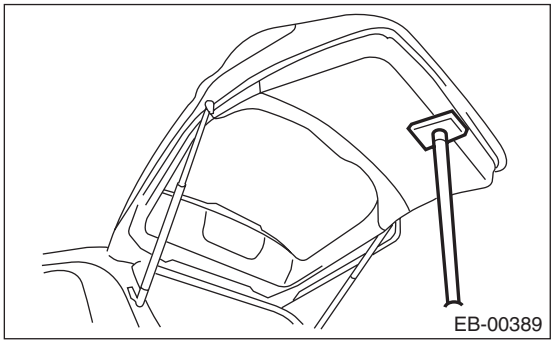


CAUTION:
Do not remove the stop ring completely. Raise it to the position enough to remove the ball stud.

1. Gently push the stop ring against the ball stud to be raised with a flat tip screwdriver.
2. Pull the stay assembly - rear gate toward you, and remove the stay assembly - rear gate from the ball stud.

22) Remove the bolts of the hinge - rear gate, and remove the panel - rear gate.

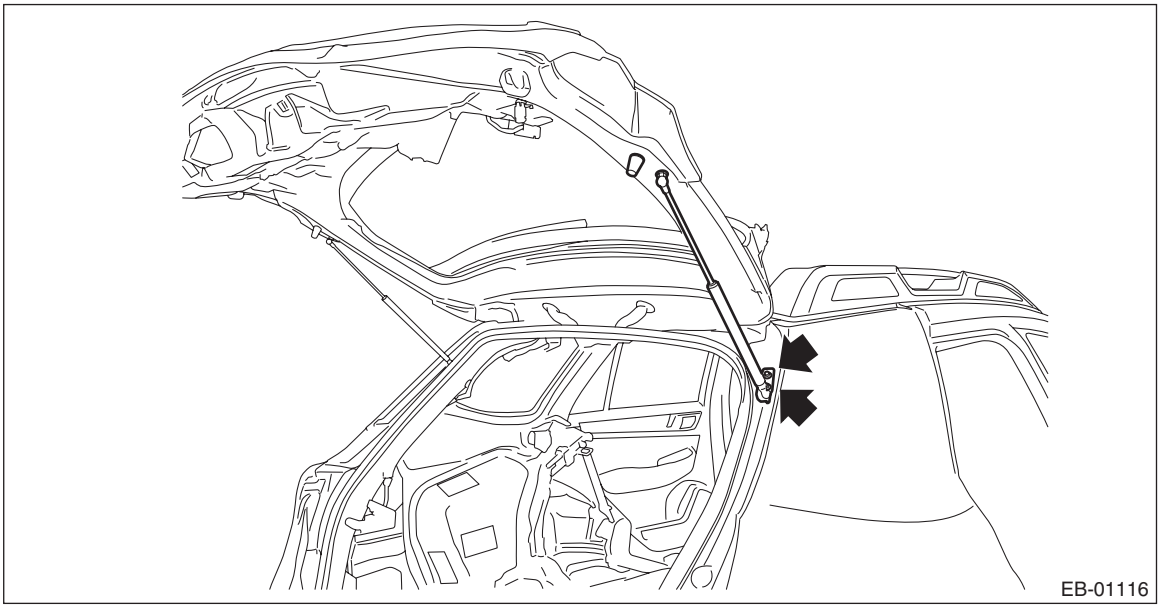
CAUTION:
The panel - rear gate is heavy. When removing and installing it, always work in a team of two or more persons.



23) Remove the hinge - rear gate from the vehicle.

2. REAR GATE DAMPER STAY

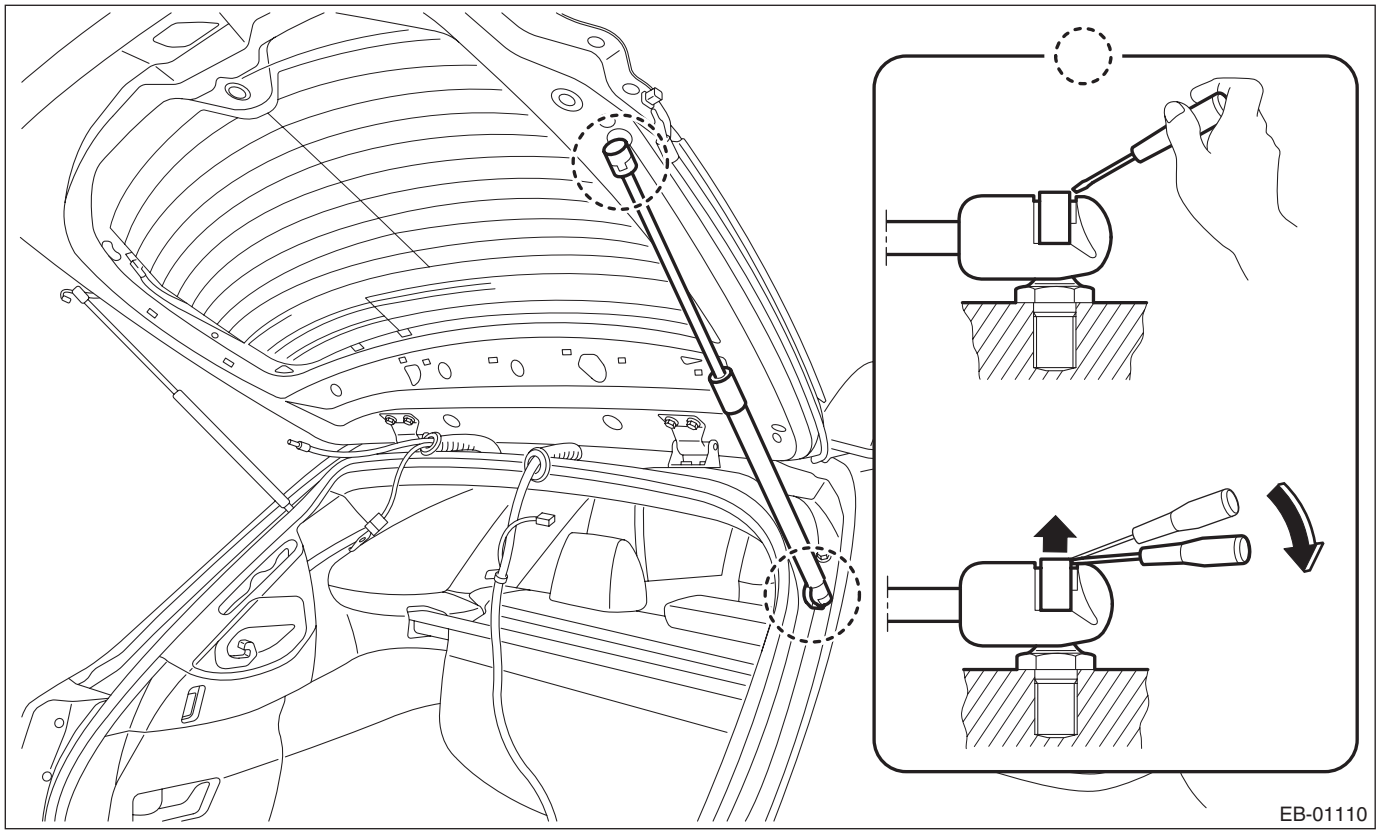
CAUTION:
- **Do not damage piston rods and oil seals.**
- **Never disassemble cylinders: They contain gas.**
- **The panel - rear gate is heavy. When removing and installing it, always work in a team of two or more persons.**



1) Before removing the stay assembly - rear gate, prevent the panel - rear gate from closing by using a prop or the like.

CAUTION:
If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the panel - rear gate with secure material to prevent injury or damage.

2) Remove the stay assembly - rear gate.



- Model without power rear gate
  1. Remove the mounting portion on the stay assembly - rear gate.
  2. Remove the mounting bolts on the body side.

- Model with power rear gate

CAUTION:
Do not remove the stop ring completely. Raise it to the position enough to remove the ball stud.

1. Gently push the stop ring against the ball stud to be raised with a flat tip screwdriver.
2. Pull the stay assembly - rear gate toward you, and remove the stay assembly - rear gate from the ball stud.

B: INSTALLATION

1. REAR GATE PANEL

CAUTION:
The panel - rear gate is heavy. When removing and installing it, always work in a team of two or more persons.

1) Install the hinge - rear gate to the vehicle body.
2) Temporarily install the panel - rear gate to the hinge - rear gate.

NOTE:
When installing, make sure that a uniform clearance is created around the panel - rear gate.

3) Adjust the clearance around the panel - rear gate. <Ref. to EB-65, ADJUSTMENT, Rear Gate.>
4) Tighten the bolts of the hinge - rear gate.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

5) Install the stay assembly - rear gate.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-7, REAR GATE, COMPONENT, General Description.>

6) Install the harness clip and the harness.
7) Install the light assembly - rear finisher. <Ref. to LI-55, OUTBACK MODEL, INSTALLATION, Rear Finisher Light Assembly.>

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

8) Install the license plate light. <Ref. to LI-60, OUTBACK MODEL, INSTALLATION, License Plate Light.>
9) Install the rearview camera assembly. <Ref. to ET-36, OUTBACK MODEL, INSTALLATION, Rearview Camera System.>
10) Install the rear gate garnish. <Ref. to EI-62, INSTALLATION, Rear Gate Garnish.>

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

11) Install the nozzle - rear washer.
12) Install the roof spoiler. <Ref. to EI-62, INSTALLATION, Rear Gate Garnish.>

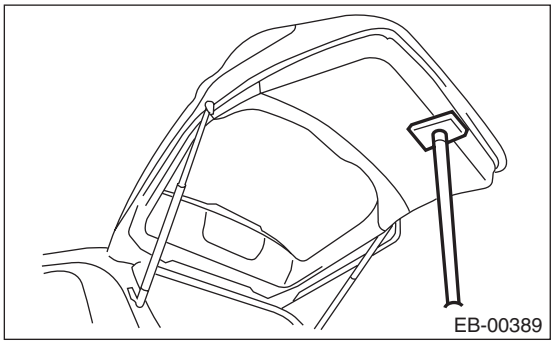
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

13) Install the antenna assembly - radio.

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

14) Install the power rear gate touch sensor. (Model with power rear gate) <Ref. to PRG-16, INSTALLATION, Power Rear Gate Touch Sensor.>
15) Install the motor assembly - rear wiper and the arm assembly - rear wiper. <Ref. to WW-41, INSTALLATION, Rear Wiper Motor.>

Tightening torque:
Motor assembly - rear wiper and arm assembly - rear wiper: <Ref. to WW-3, REAR WIPER, COMPONENT, General Description.>
16) Install the rear antenna assembly - exterior. (Model with keyless access with push button start)
17) Attach the buffer - rear gate and the stopper - rear gate.



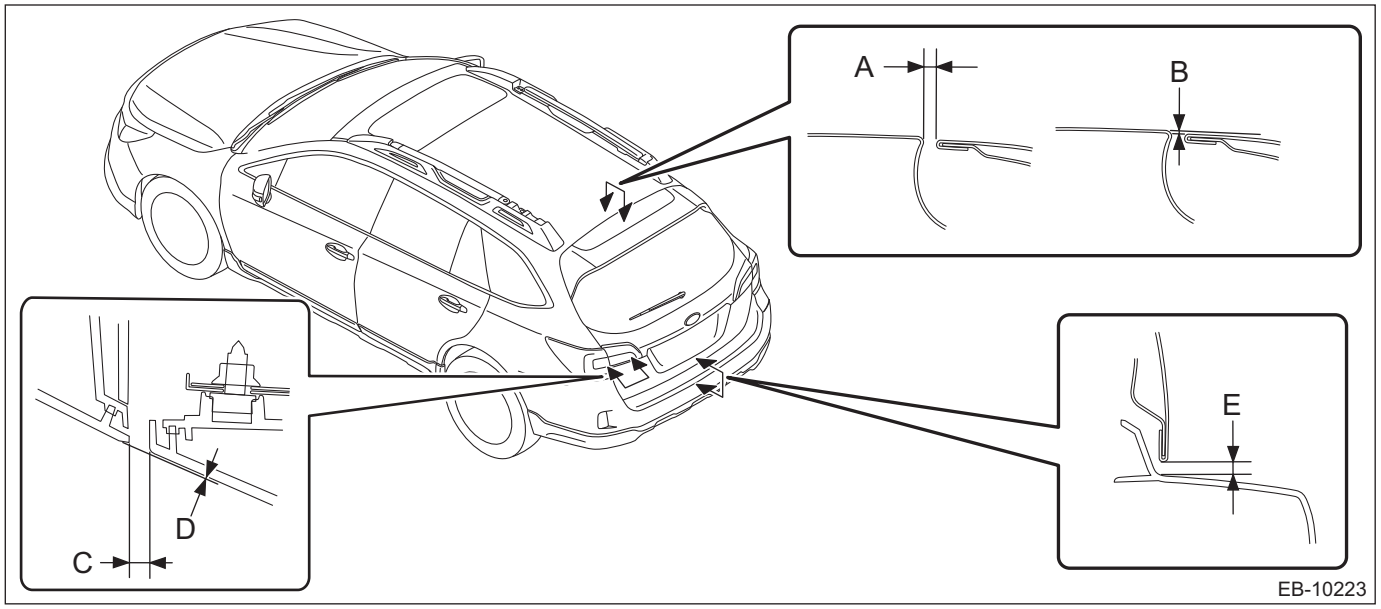
Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-7, REAR GATE, COMPONENT, General Description.>
18) Install the latch and actuator - rear gate. <Ref. to SL-50, INSTALLATION, Rear Gate Latch and Actuator Assembly.>

Tightening torque
25 N·m (2.5 kgf-m, 18.4 ft-lb)
19) Install the trim panel - rear gate. <Ref. to EI-123, INSTALLATION, Rear Gate Trim.>
20) Install the rod - power rear gate. <Ref. to PRG-10, INSTALLATION, Power Rear Gate Rod.>
21) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. REAR GATE DAMPER STAY

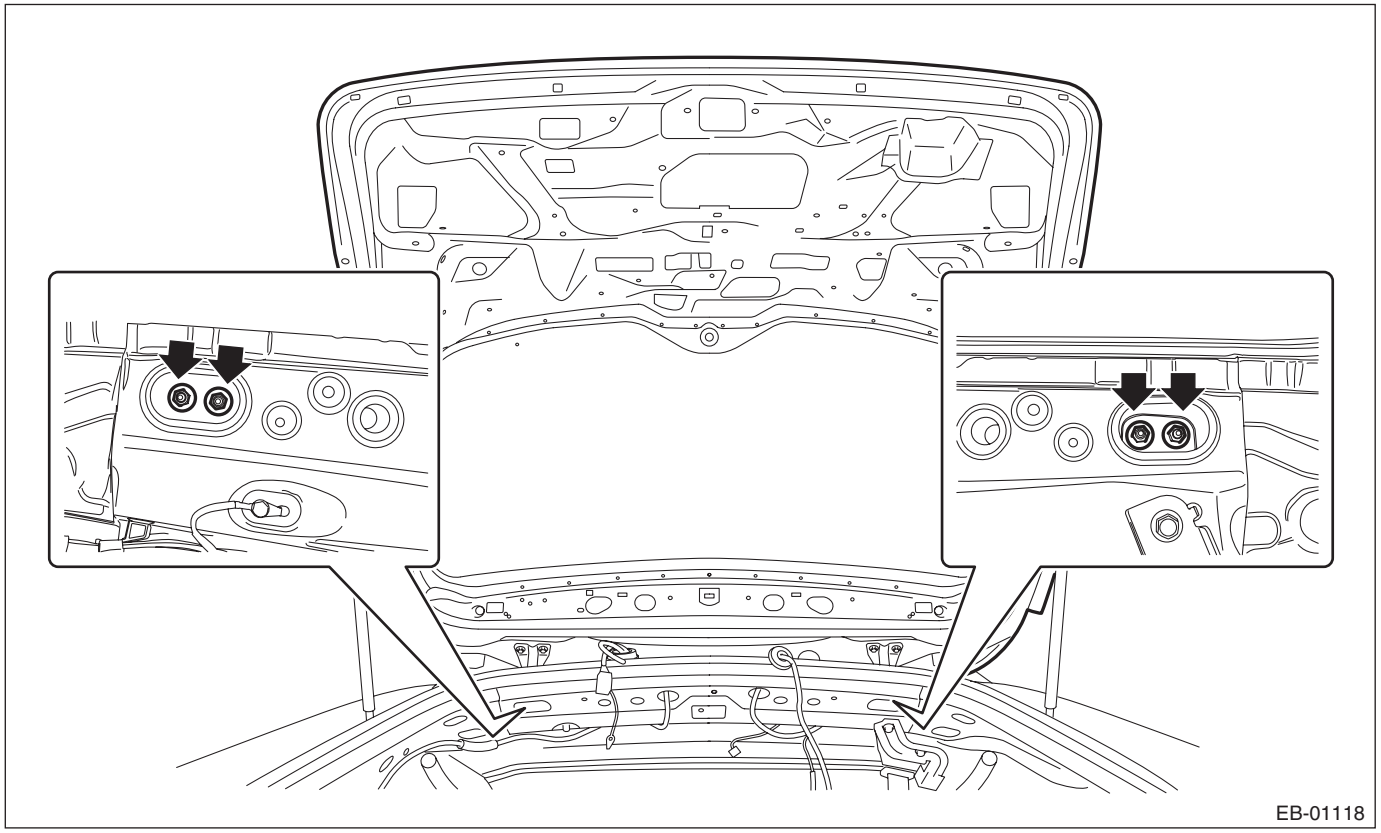
CAUTION:
The panel - rear gate is heavy. When removing and installing it, always work in a team of two or more persons.
1) Prevent the panel - rear gate from closing using prop or the like.

CAUTION:
If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the panel - rear gate with secure material to prevent injury or damage.



2) Install the stay assembly - rear gate.

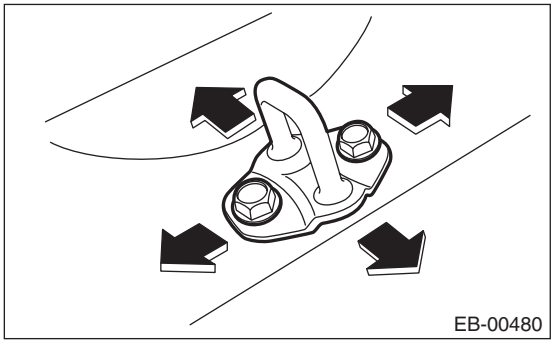
Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-7, REAR GATE, COMPONENT, General Description.>



C: ADJUSTMENT

Adjust the clearance around the panel - rear gate as follows.

Part		Standard
A	Panel - rear gate to Roof panel	6.6+1.5, –1.0 mm (0.26+0.06, –0.04 in)
B	Surface level gap: Panel - rear gate to Roof panel	0.5+0.5, –1.5 mm (0.02+0.02, –0.06 in)
C	Finisher - light to Rear combination light	4.8±2 mm (0.19±0.08 in)
D	Surface level gap: Finisher - light to Rear combination light	0±1.6 mm (0±0.06 in)
E	Panel - rear gate to Bumper face - rear	8.0±1.5 mm (0.31±0.06 in)



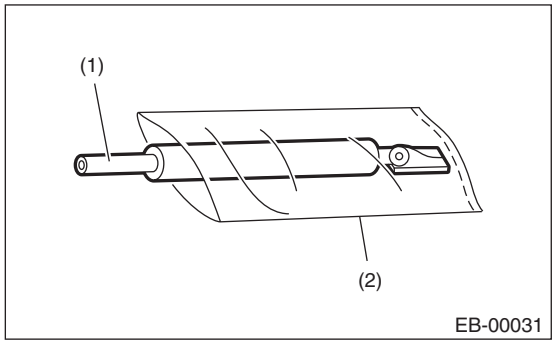
1) Adjust the vertical and horizontal positions of the panel - rear gate.

(1) Loosen the mounting bolts of the hinge - rear gate.
(2) Adjust the vertical and horizontal clearance of the panel - rear gate.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) Adjust the surface level gap between the panel - rear gate and the body.

(1) Remove the trim panel - rear skirt.
(2) Loosen the bolt.
(3) Tap the striker - rear gate using a plastic hammer to adjust the surface level gap between the panel - rear gate and the body.

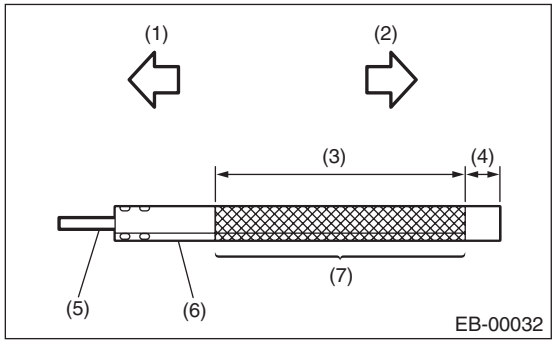


Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

D: DISPOSAL

1. REAR GATE DAMPER STAY

CAUTION:
Gas is colorless, odorless, and harmless. However, gas pressure may spray cutting powder or oil. Be sure to wear dust-resistant goggles.



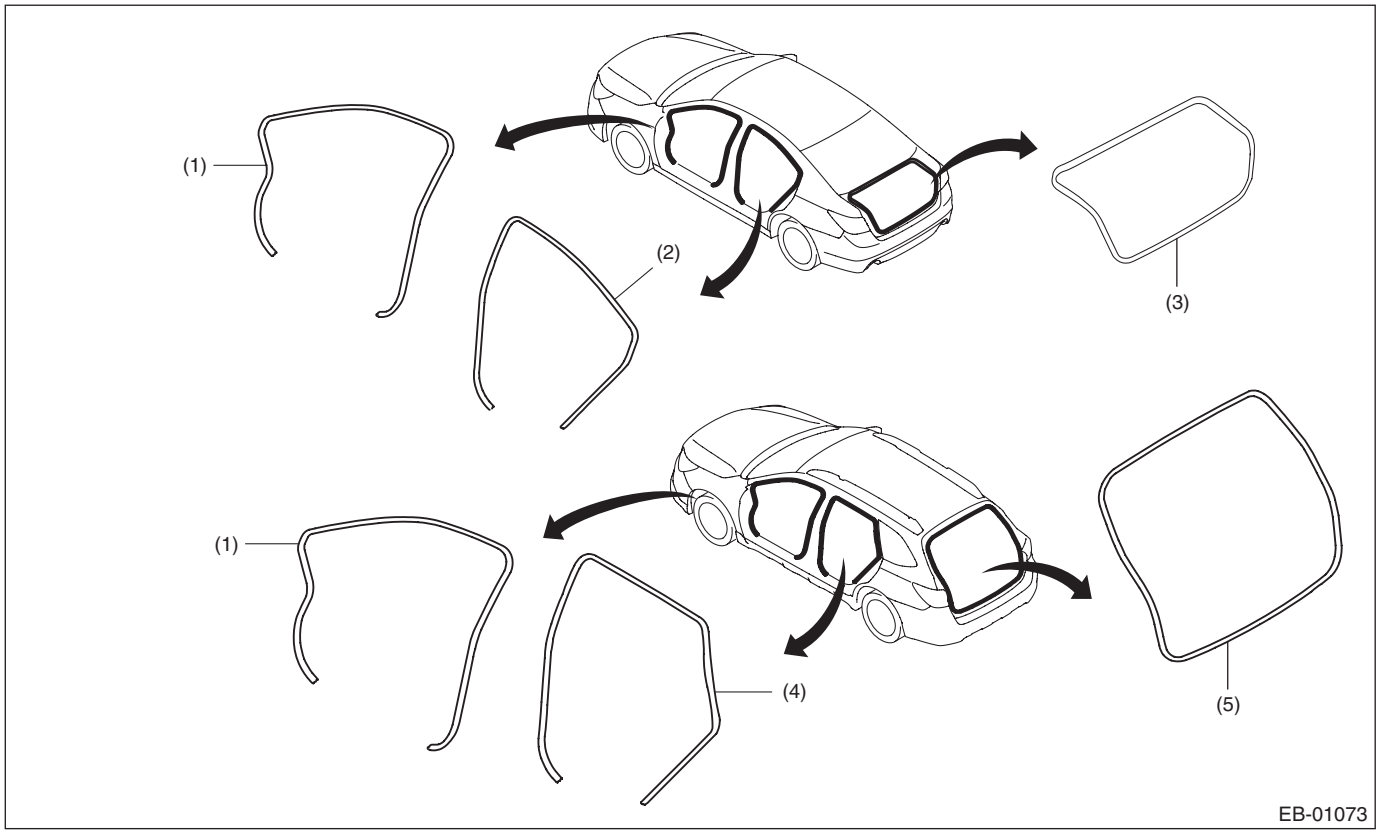
1) Cover with a vinyl sack as shown in the figure.

(1) Stay ASSY - rear gate
(2) Vinyl sack

NOTE:
Prevent the vinyl sack from being caught by drill cutting edge.

2) Lift the body side slightly with piston rods fully extended, and secure the body side with vise.
Drill a hole of 2 to 3 mm (0.08 to 0.12 in) diameter at a point 6 to 196 mm (0.24 to 7.72 in) from the body side, and bleed the gas in the rear gate damper stay completely.

(1) Door side
(2) Body side
(3) 196 mm (7.72 in)
(4) 6 mm (0.24 in)
(5) Piston rod
(6) Cylinder
(7) Portion to be drilled



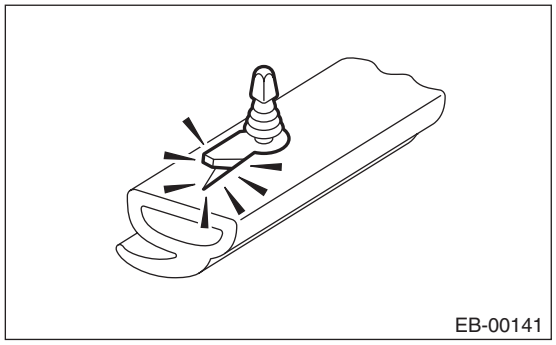
11.Weather Strip

A: REPLACEMENT

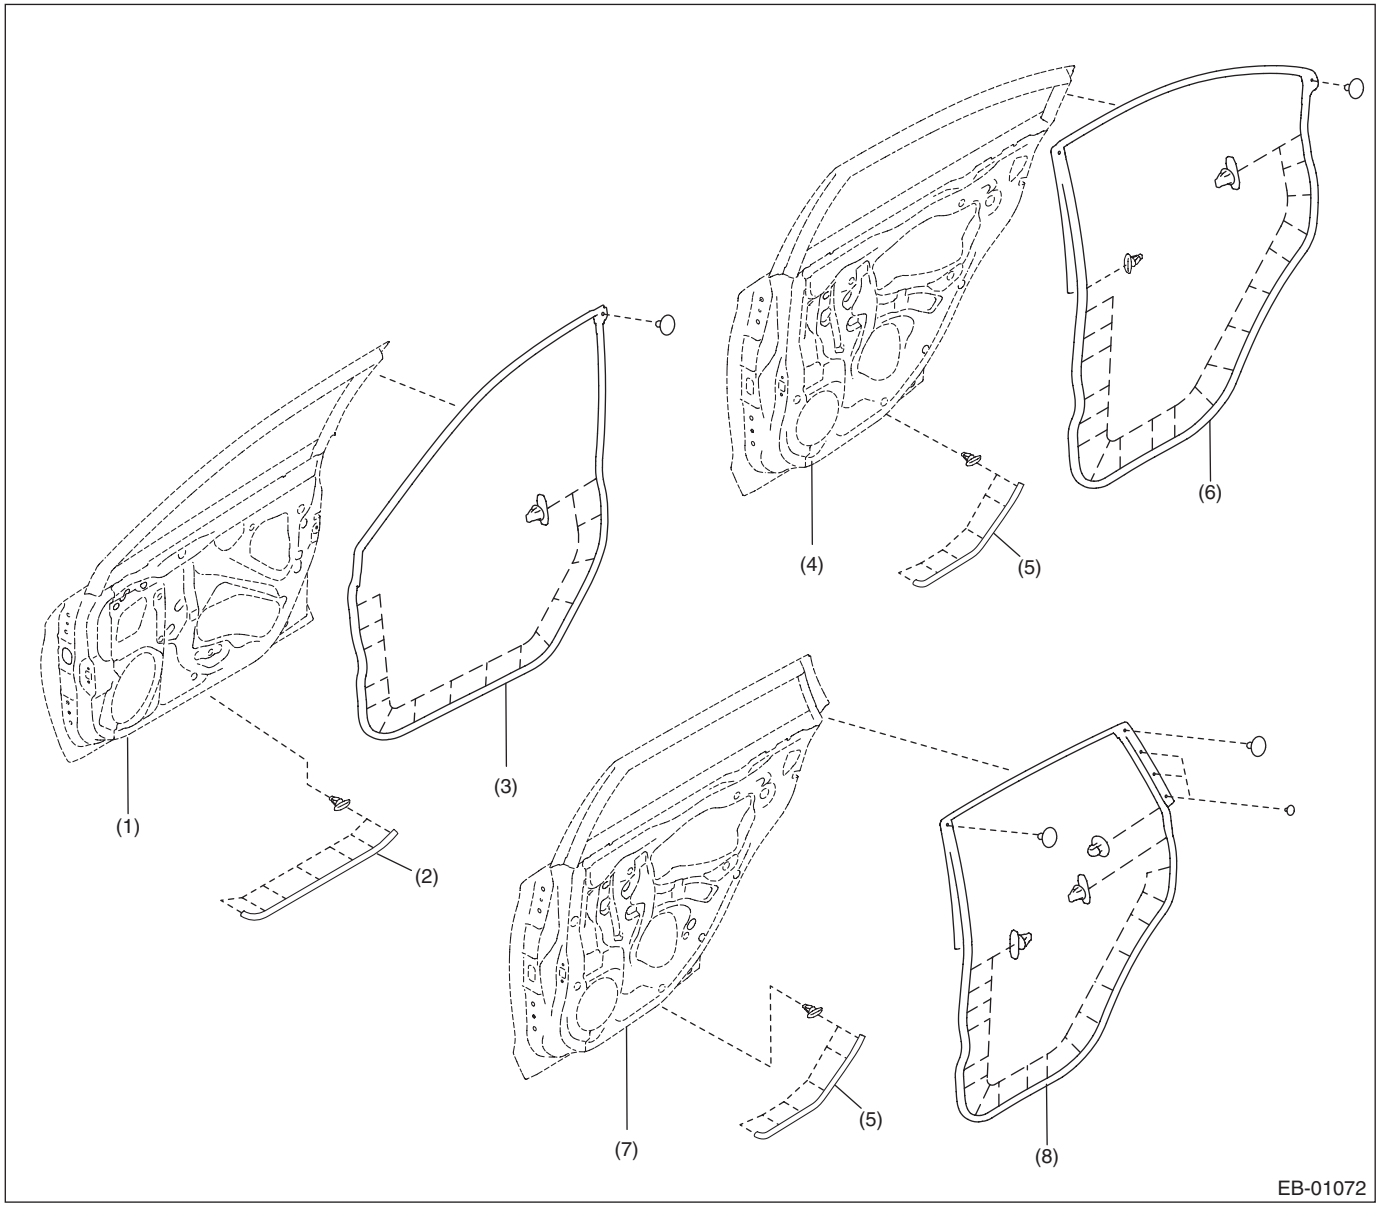
1. FLANGE

1) Remove the weather strip - body side flange while pulling the rubber. Be careful not to tear the rubber.
2) Replace the weather strip - trunk lid while pulling the rubber. Be careful not to tear the rubber.

NOTE:
While removing the weather strip - trunk lid, be careful not to allow adhesive to contact the trim panel - roof assembly and trim panel - trunk side.



(1) Weather strip - body side flange front
(2) Weather strip - body side flange rear (sedan model)
(3) Weather strip - trunk lid
(4) Weather strip - body side flange rear (OUTBACK model)
(5) Weather strip - rear gate (OUTBACK model)



2. DOOR

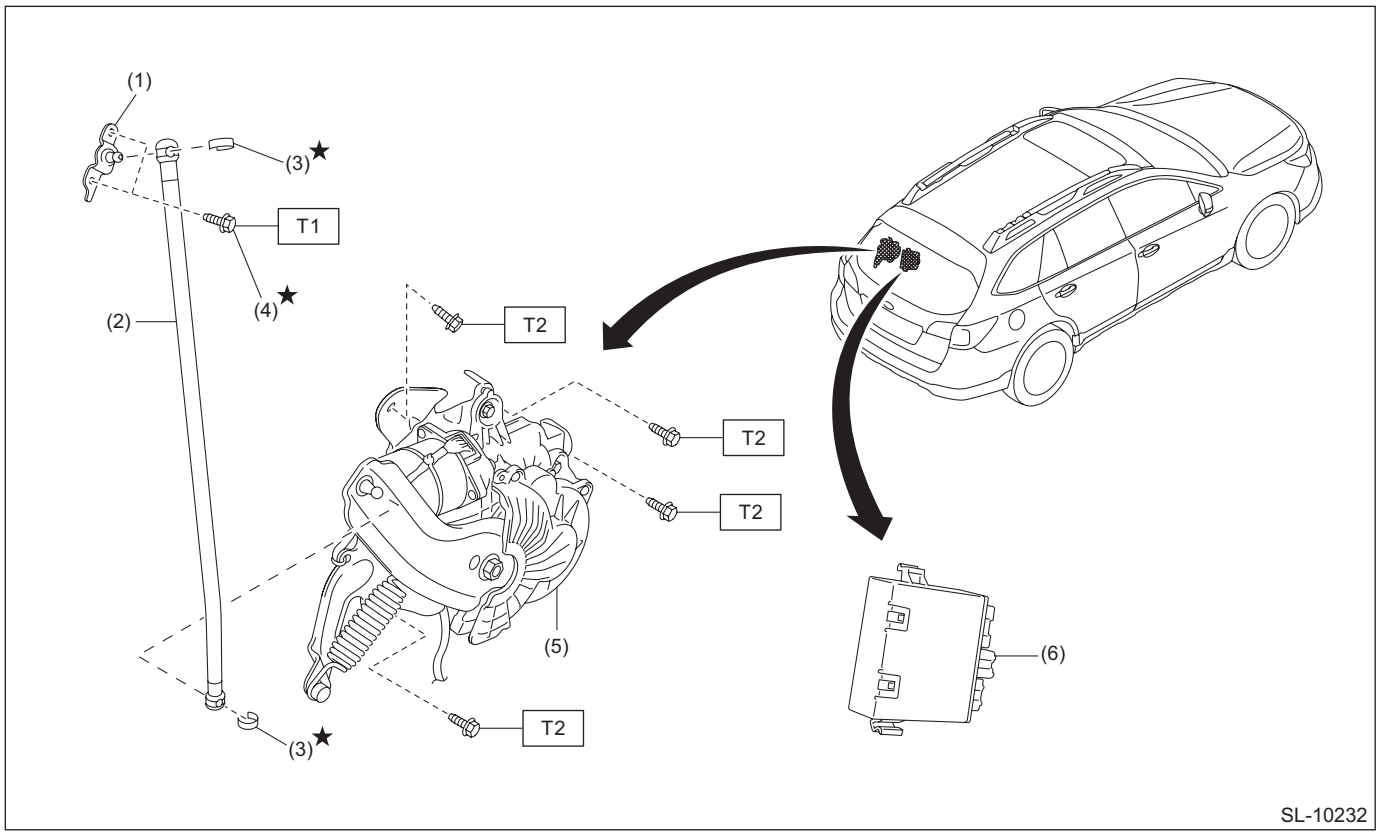
1) Remove the weather strip after removing the clip. Be careful not to tear the rubber.

Weather Strip

CAUTION:
If the weather strip clip is removed with excessive force, the weather strip may be damaged. Be sure to use clip remover to remove.

(1)	Panel ASSY - front door	(4)	Panel ASSY - rear door	(7)	Panel ASSY - rear door (sedan model)
(2)	Weather strip - front door - lower	(5)	Weather strip - rear door - lower	(8)	Weather strip - rear door (OUTBACK model)
(3)	Weather strip - front door	(6)	Weather strip - rear door		

POWER REAR GATE SYSTEM



PRG

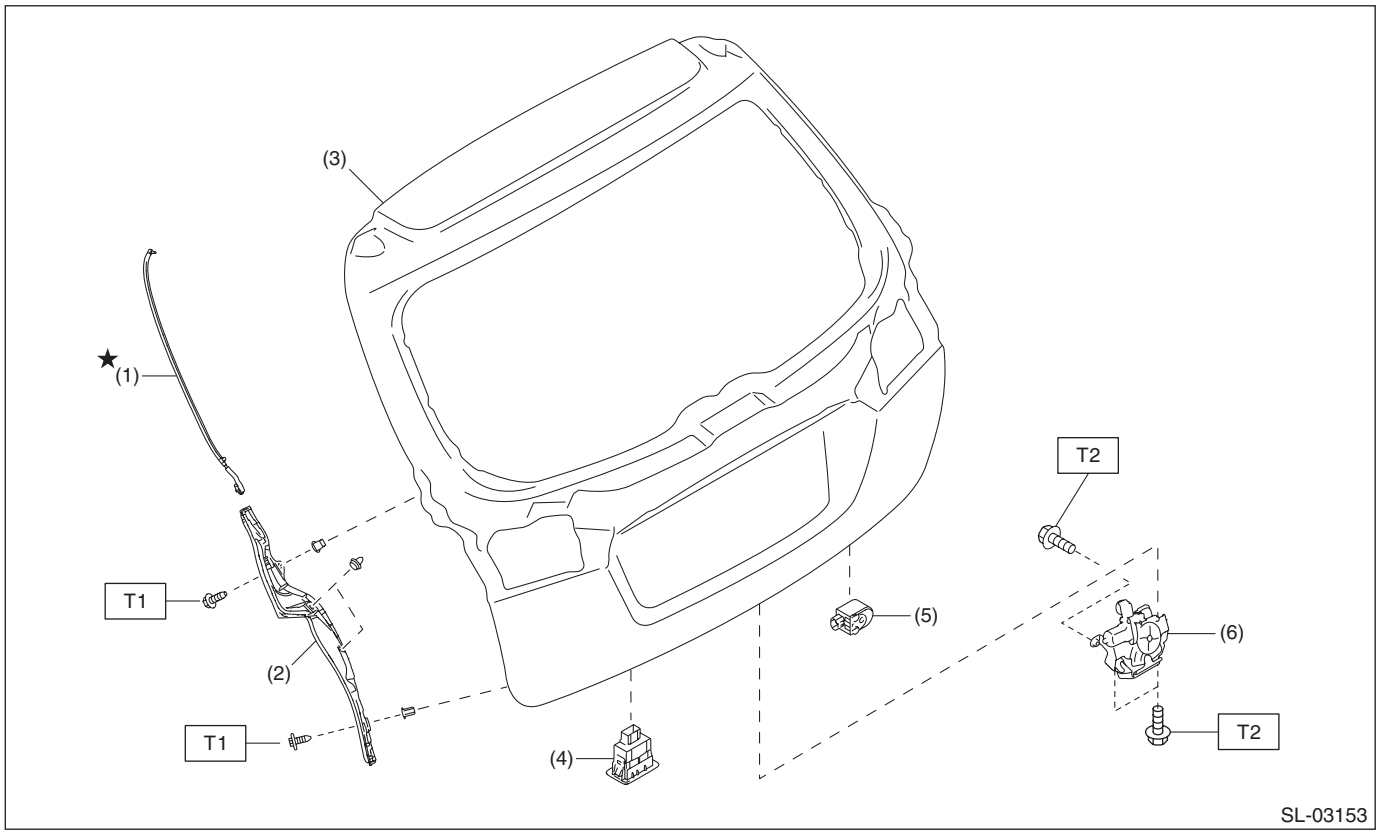
15.	Diagnostics with Phenomenon	23



1. General Description

A: COMPONENT

1. UNIT AND REAR GATE

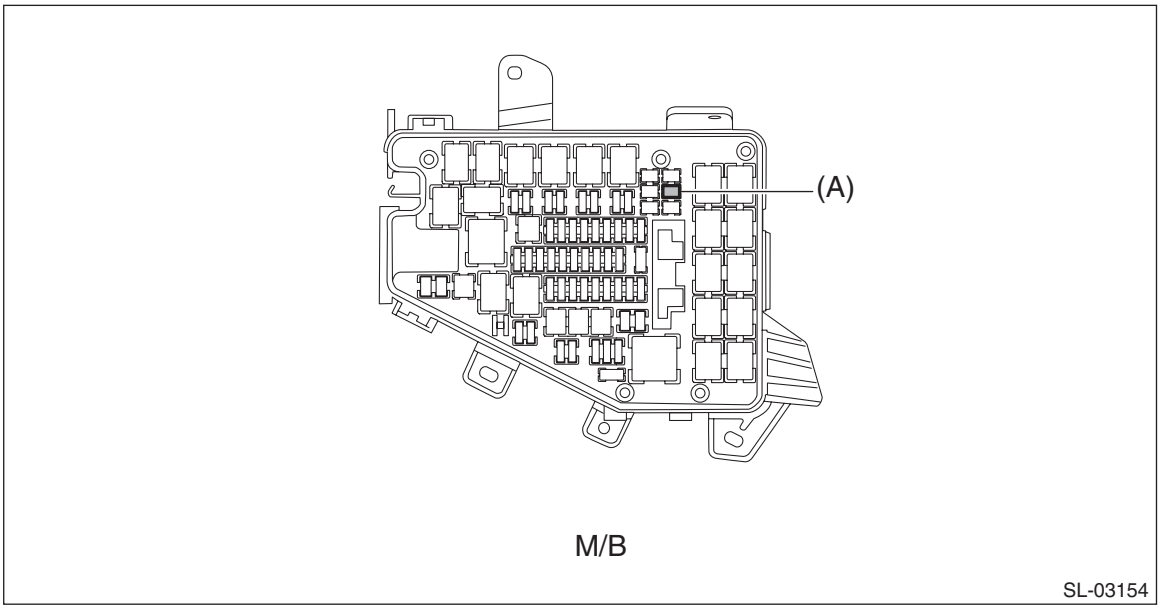
(1)	Bracket rod - power rear gate	(4)	Power rear gate drive unit (PRG D/U)	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Rod - power rear gate	(5)	Power rear gate control module (PRG CM)	***T1: 16 (1.6, 11.4)***
(3)	Stop ring			***T2: 25 (2.5, 18.4)***

(1)	Power rear gate touch sensor UPR	(4)	Power rear gate inner switch	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Power rear gate touch sensor LWR	(5)	Power rear gate buzzer	***T1: 1.5 (0.2, 1.1)***
(3)	Panel - rear gate	(6)	Power rear gate auto closer	***T2: 25 (2.5, 18.4)***

B: LOCATION

Refer to “LOCATION” in the “POWER REAR GATE SYSTEM (DIAGNOSTICS)” section. <Ref. to PRG(diag)-5, LOCATION, Electrical Component Location.>

C: CAUTION



• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.
• After reassembly, close the rear gate and then connect the battery ground cable. Initialization of the power rear gate auto closer is necessary, when connection is performed with the rear gate open. <Ref. to PRG-5, INITIALIZATION, PROCEDURE, Power Rear Gate System.>

D: PREPARATION TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.

2. Relay and Fuse

A: LOCATION

Main fuse box (M/B)	Fuse 30 A (power rear gate control module)	(A)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-23, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

3. Power Rear Gate System

A: WIRING DIAGRAM

Refer to “Power Rear Gate System” in the wiring diagram. <Ref. to WI-356, WIRING DIAGRAM, Power Rear Gate System.>

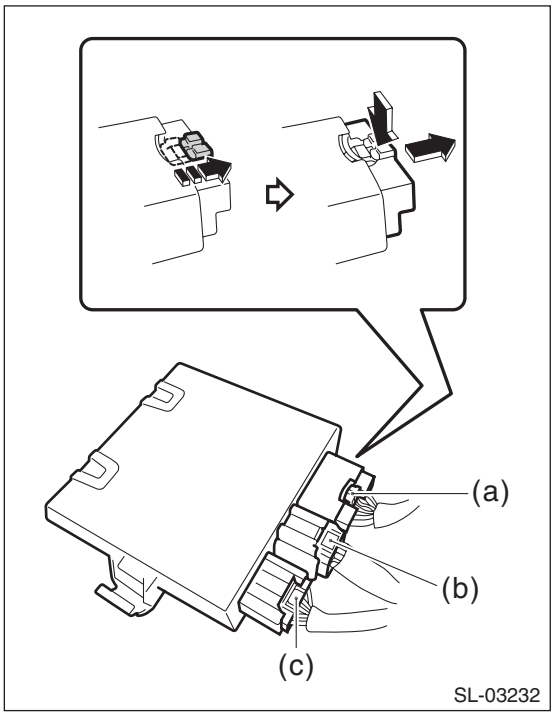
B: INSPECTION

Refer to “Basic Diagnostic Procedure” of “POWER REAR GATE SYSTEM (DIAGNOSTICS)”. <Ref. to PRG(diag)-2, Basic Diagnostic Procedure.>

C: PROCEDURE

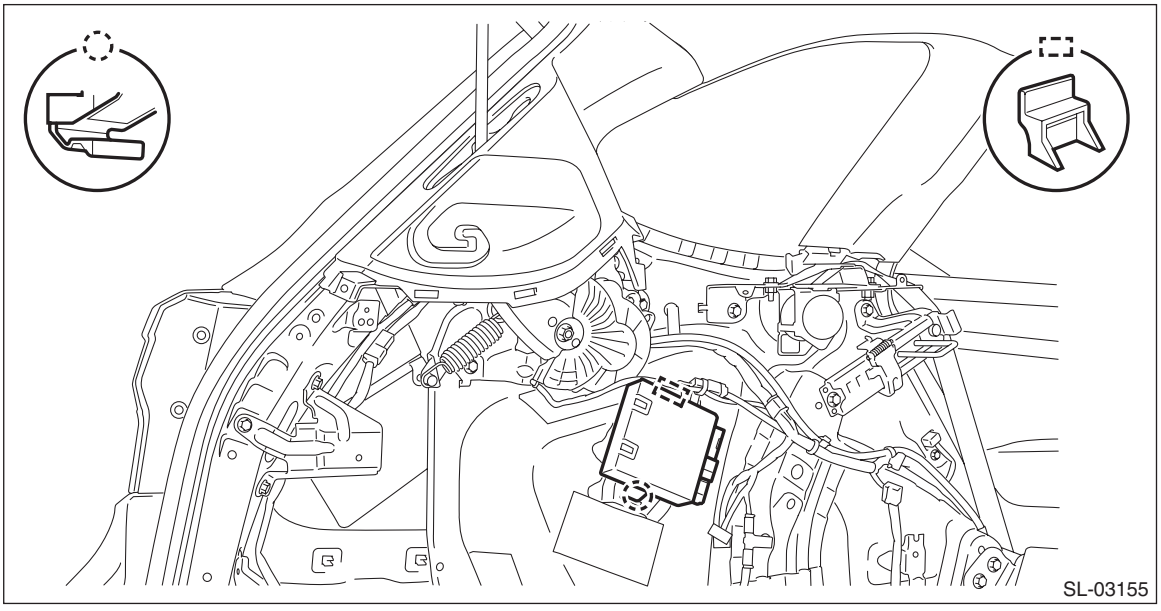
1. INITIALIZATION

NOTE:
Perform the initialization of the power rear gate auto closer, when the battery ground cable is connected with the rear gate open. Initialization is not required when the battery ground cable is connected with the rear gate closed.
1) Turn the ignition to OFF.
2) Close the rear gate slowly, and release the hold of rear gate after a clicking sound is heard when the latch is engaged halfway.
3) The auto closer function then operates and pulls the rear gate to engage fully.
4) Operate the power rear gate switches after the rear gate is closed fully to check that automatic open/close of the power rear gate operates normally. If the power rear gate still does not operate properly, perform the following diagnostic procedures. <Ref. to PRG(diag)-2, Basic Diagnostic Procedure.>



D: NOTE

For procedure of each component in the power rear gate system, refer to the respective section.
- Power rear gate control module (PRG CM): <Ref. to PRG-6, Power Rear Gate Control Module.>
- Power rear gate drive unit (PRG D/U): <Ref. to PRG-8, Power Rear Gate Drive Unit.>
- Power rear gate rod: <Ref. to PRG-9, Power Rear Gate Rod.>
- Power rear gate auto closer: <Ref. to PRG-11, Power Rear Gate Auto Closer.>
- Power rear gate touch sensor: <Ref. to PRG-15, Power Rear Gate Touch Sensor.>
- Power rear gate buzzer: <Ref. to PRG-17, Power Rear Gate Buzzer.>
- Power rear gate inner switch: <Ref. to PRG-18, Power Rear Gate Inner Switch.>
- Power rear gate driver’s switch: <Ref. to PRG-19, Power Rear Gate Driver’s Switch.>
- Memory height switch: <Ref. to PRG-20, Memory Height Switch.>
- Power rear gate opener button (PRG): <Ref. to PRG-21, Rear Gate Opener Button.>
- Body integrated unit: <Ref. to PRG-22, Body Integrated Unit.>



4. Power Rear Gate Control Module

A: REMOVAL

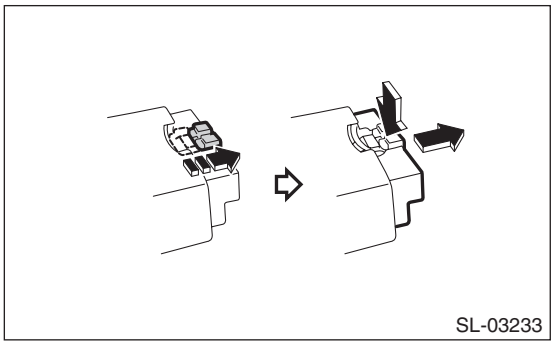
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear apron LH. <Ref. to EI-99, REMOVAL, Rear Quarter Trim.>
3) Remove the power rear gate control module (PRG CM).
   (1) Disconnect the connectors in the following order.
   1: Disconnect the connector (b).
   2: Pull the slide lock in the arrowed direction, and disconnect the connector (a) by pressing in the lock.
   3: Disconnect the connector (c).

(2) Release the lock and hook, and remove the power rear gate control module (PRG CM).

B: INSTALLATION

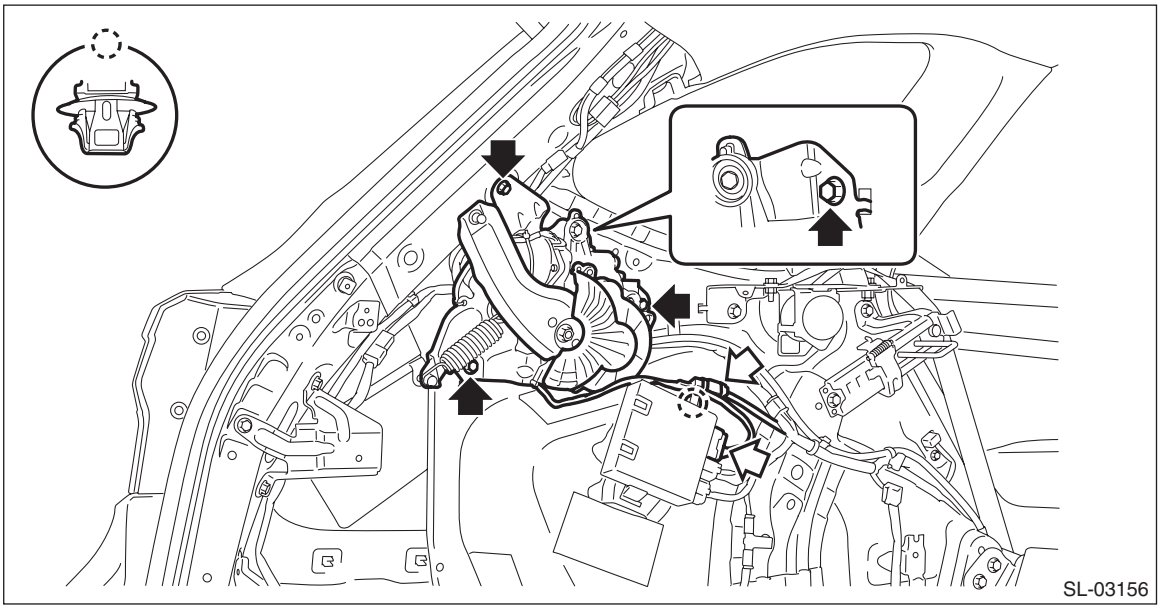
1) Install the power rear gate control module (PRG CM).

NOTE:
Connect the connectors in reverse order of removal.



2) Install the trim panel - rear apron LH.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

5. Power Rear Gate Drive Unit



A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the rod - power rear gate. <Ref. to PRG-9, REMOVAL, Power Rear Gate Rod.>
3) Remove the trim panel - rear apron LH and trim panel - rear quarter trim UPR rear LH. <Ref. to EI-99, REMOVAL, Rear Quarter Trim.>
4) Remove the power rear gate drive unit (PRG D/U).
   (1) Remove the harness clip, and disconnect the connector.

NOTE:
Pull the slide lock in the arrowed direction, and disconnect the PRG CM connector by pressing in the lock.

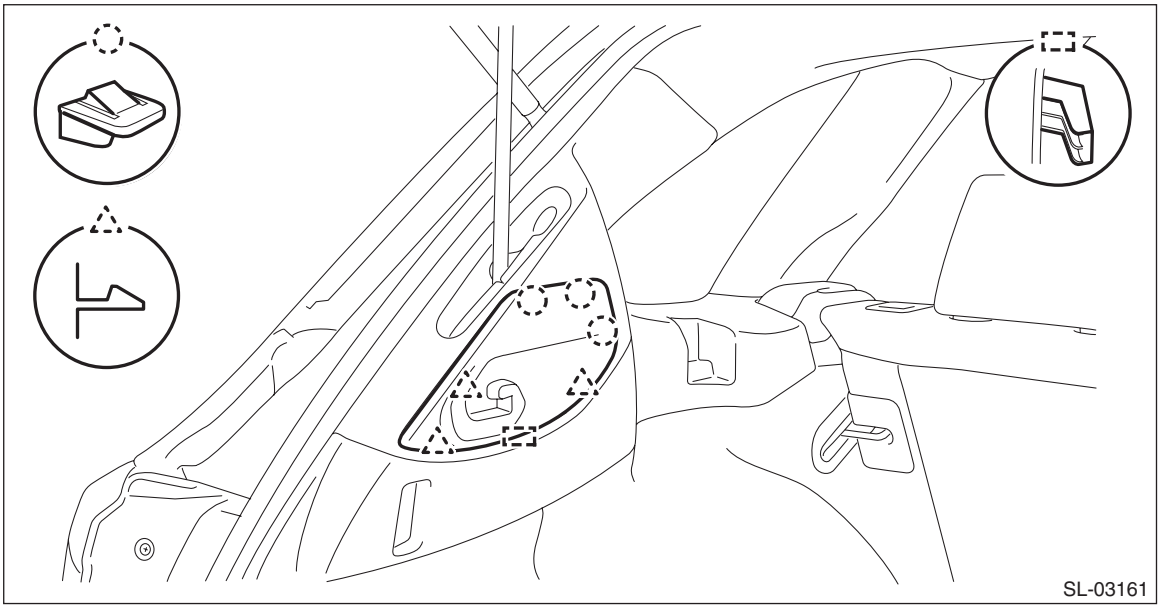
SL-03233

(2) Remove the bolts, and then remove the power rear gate drive unit (PRG D/U).

SL-03156

B: INSTALLATION

1) Install the power rear gate drive unit (PRG D/U).

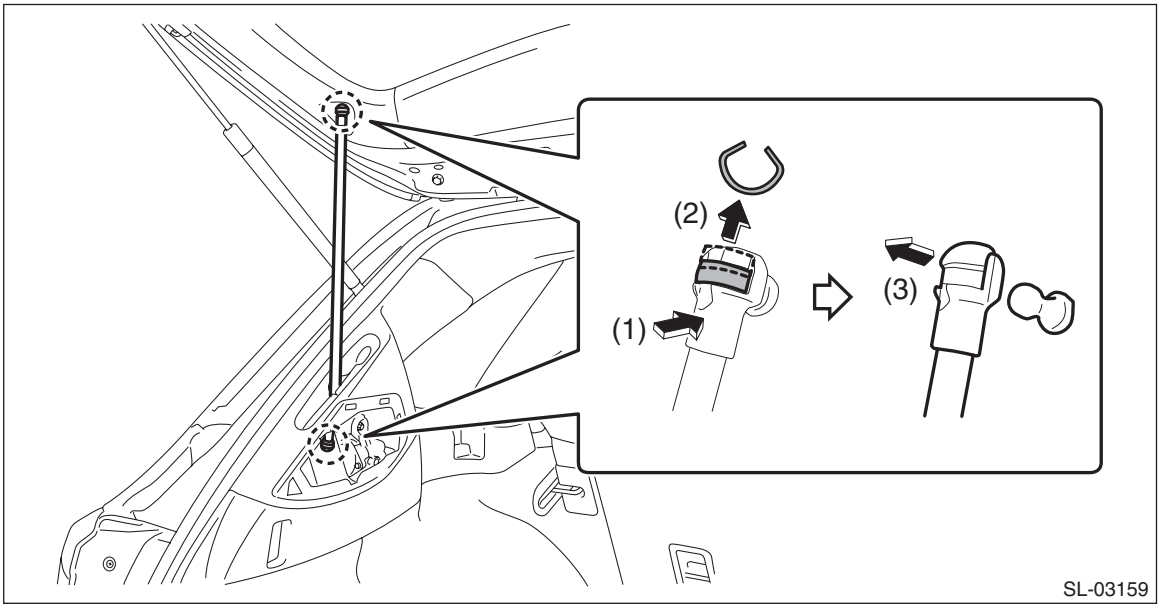


Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) Install the trim panel - rear apron LH and trim panel - rear quarter trim UPR rear LH.
3) Install the rod - power rear gate. <Ref. to PRG-10, INSTALLATION, Power Rear Gate Rod.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

6. Power Rear Gate Rod

A: REMOVAL

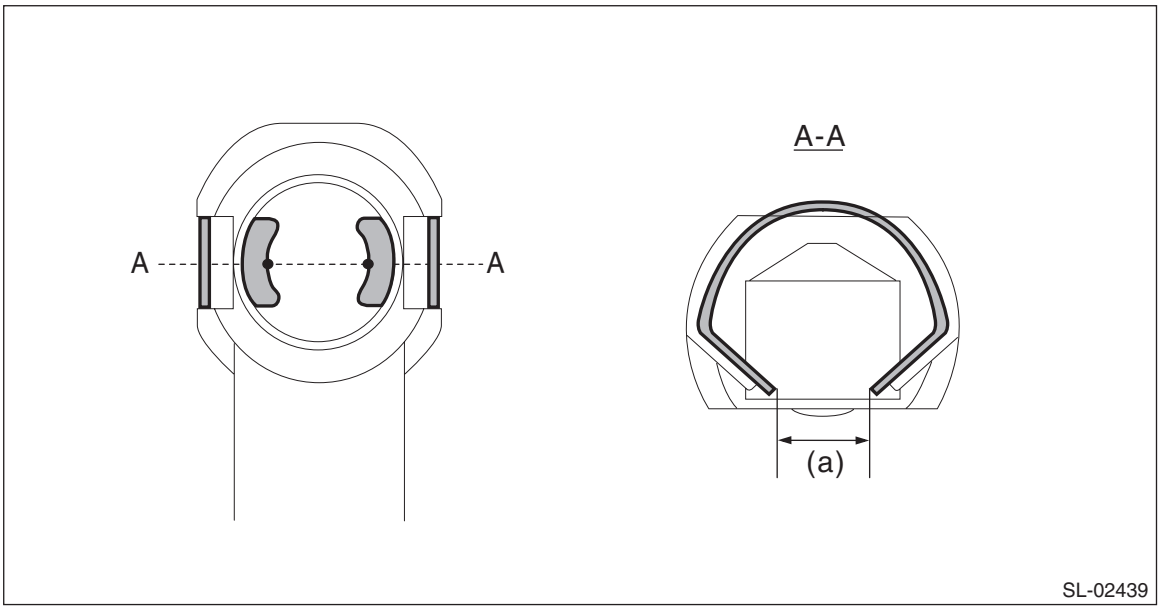


1) Hold the rear gate to the fully open position.
2) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Release the claws and then remove the cap - rear quarter pillar LH.

4) Remove the rod - power rear gate.

CAUTION:
• Using a small flat tip screwdriver wrapped with protective tape, remove the part by gradually applying force.
• When the rod - power rear gate is removed, it could lead to abnormal play or noise. Therefore, always replace the stop ring with a new part. Also, be sure to check the clearance of the stop ring before installing. <Ref. to PRG-10, INSTALLATION, Power Rear Gate Rod.>

(1) Press down the rod - power rear gate to the ball stud (bracket rod - power rear gate).
(2) With the rod pressed, remove the stop ring while sliding along the ball housing groove.
(3) Disconnect the rod - power rear gate from the ball stud (bracket rod - power rear gate).

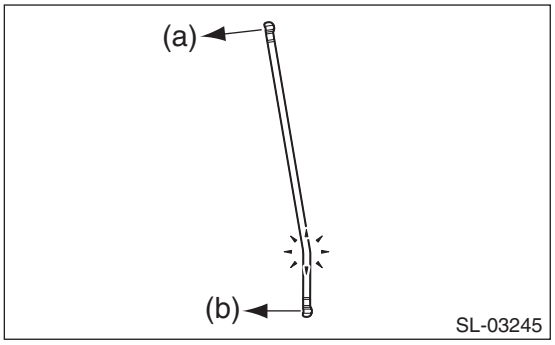


B: INSTALLATION

1) Install the new stop ring to the rod - power rear gate.

CAUTION:
- **Do not reuse the stop ring.**
- **Align the stop ring to the ball housing groove, and attach the ring by gradually applying force, while paying attention not to deform it.**

2) Check the clearance (a) of the stop ring.



Specification:
6.4 — 7.2 mm (0.25 — 0.28 in)

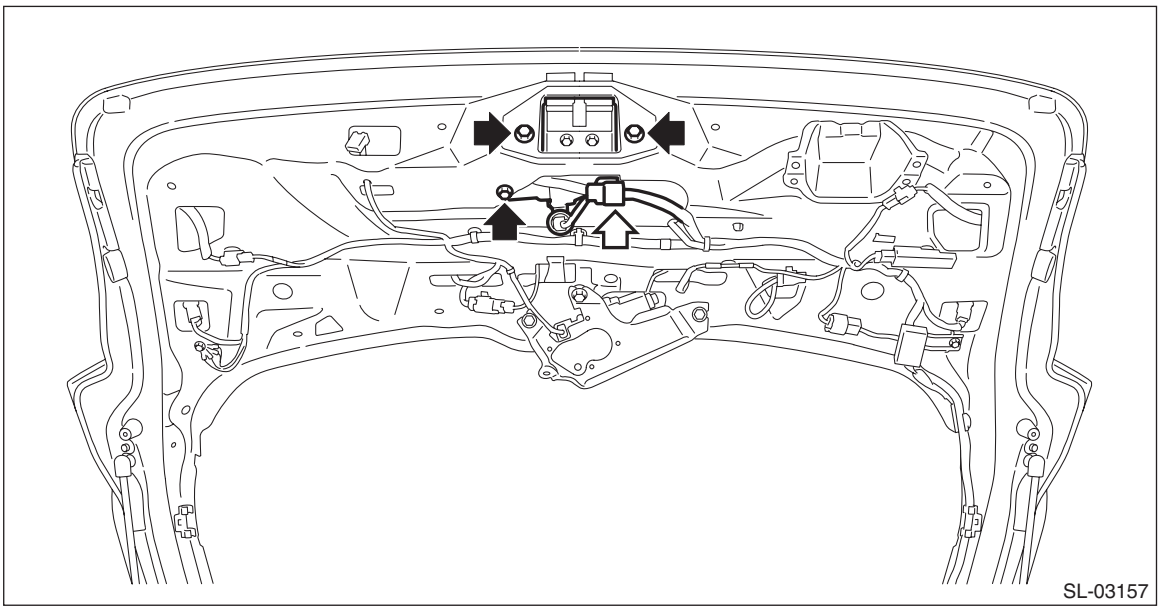
Replace the stop ring if the inspection result is not within the standard value.

3) Install the rod - power rear gate.

CAUTION:
- **Do not install the battery sensor ground terminal before installing the rod. If the power rear gate drive unit moves by wrong operation of the switch, the installation of the rod may be no longer possible.**
- **Check that the stop ring and ball stud are vertically placed, and then slowly press in the rod.**
- **Install the rod with its angular end facing downward.**

(a) Rear gate side
(b) PRG D/U side

4) Install the cap - rear quarter pillar UPR LH.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



C: INSPECTION

Check the ball housing and ball stud (bracket rod - power rear gate) of the rod - power rear gate for excessive play, wear or bent. Replace the rod - power rear gate if defective.

7. Power Rear Gate Auto Closer

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate. <Ref. to EI-122, REMOVAL, Rear Gate Trim.>
3) Remove the power rear gate auto closer.
   (1) Disconnect the connector.
   (2) Remove the bolts, and then remove the power rear gate auto closer.

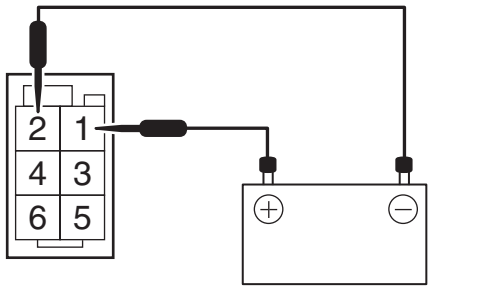
B: INSTALLATION

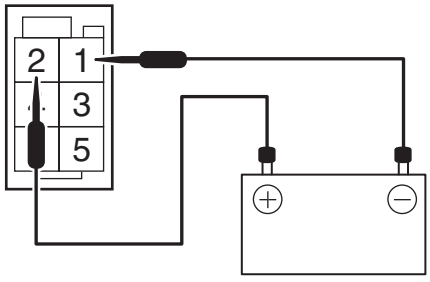
1) Install the power rear gate auto closer.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) Install the trim panel - rear gate.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

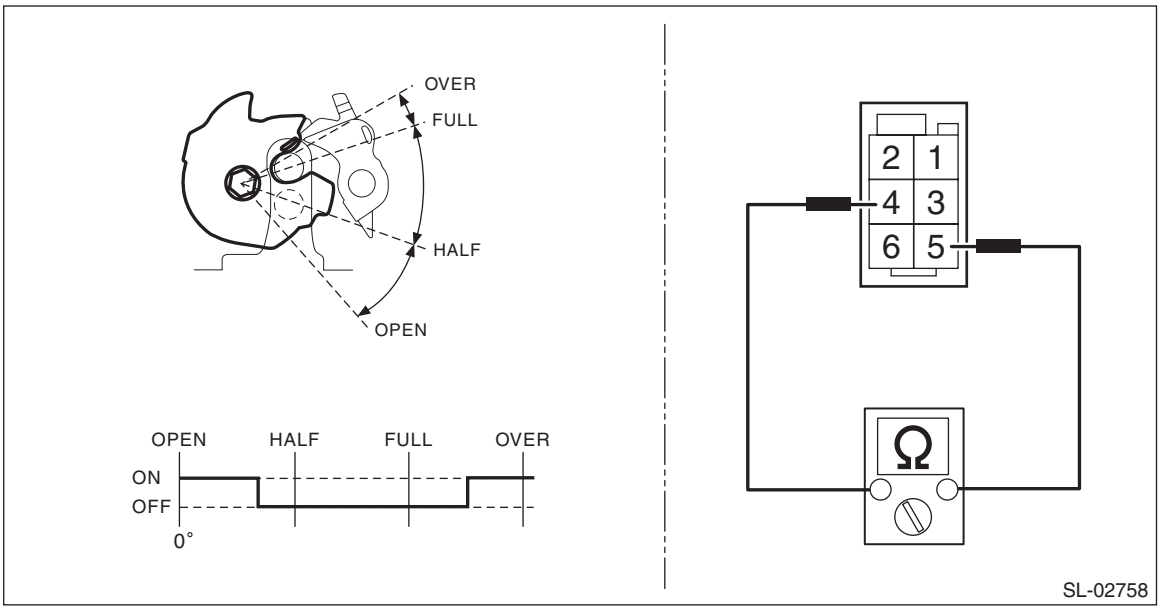




1. LATCH

Pull the emergency lever to check that the latch operates properly.
If latch deformation, abnormal wear, or unsmooth lock operation is observed, replace the power rear gate auto closer.

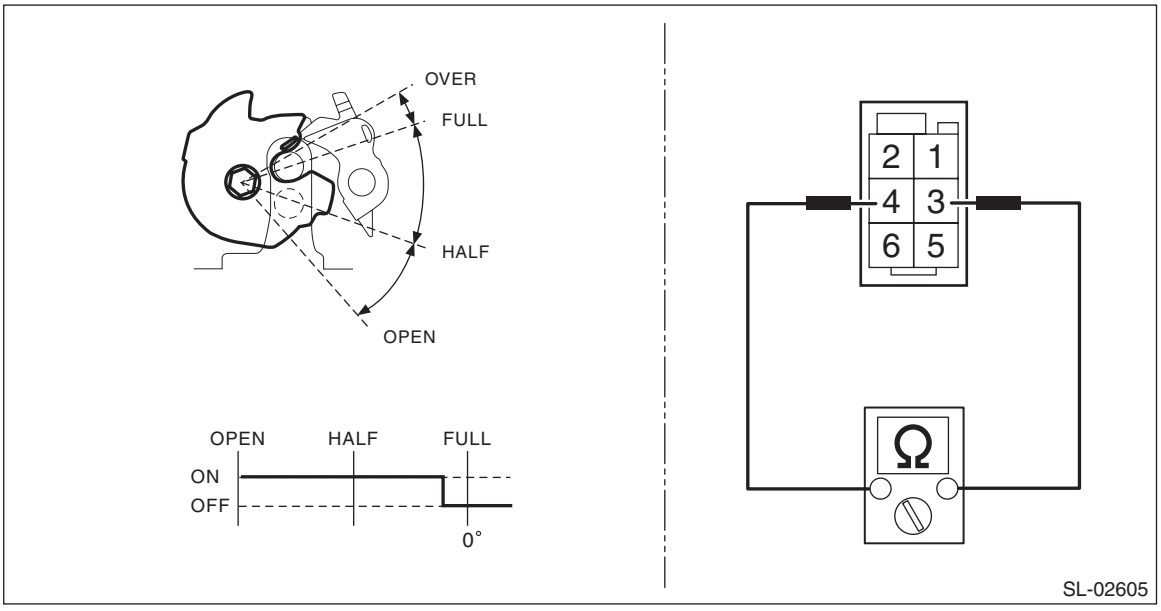
2. ACTUATOR



Preparation tool:
Circuit tester

1) Check motor operation
(1) Check the motor operation when battery voltage is applied between the terminals of motor.

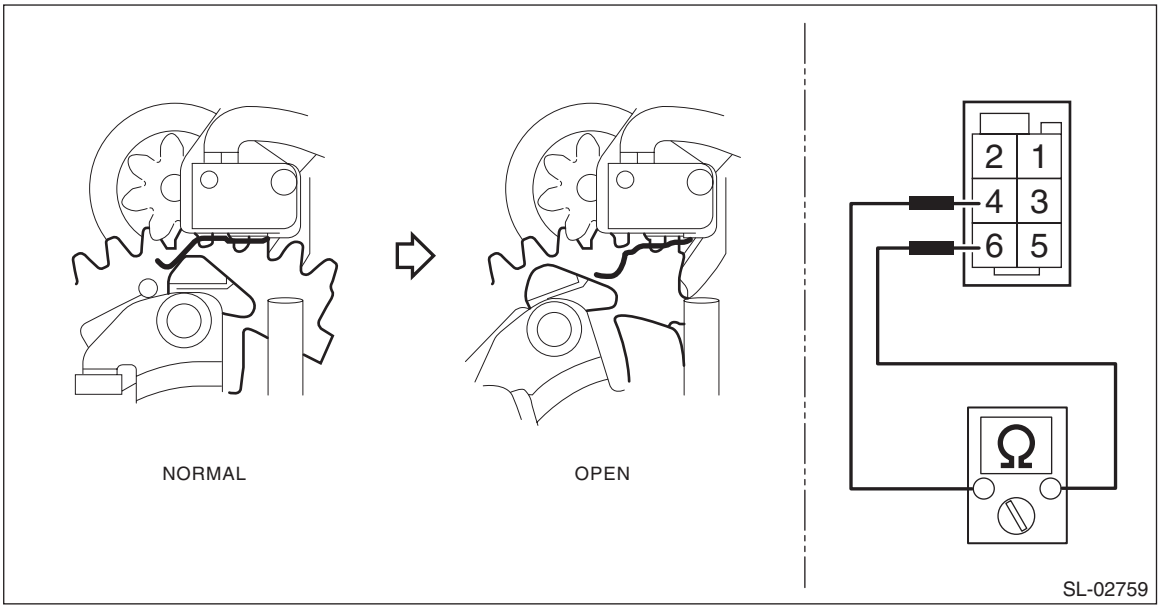
Terminal No.	Inspection conditions	Specification	Connection diagram
1 (+) — 2 (–)	Connect battery to the terminals	CLOSE rotation	 SL-02432
2 (+) — 1 (–)		OPEN rotation	 SL-02431



(2) After the motor operation check is completed, perform initialization of the sector switch in the following procedures.
1. Operate the motor in the OPEN direction for approximately 2 seconds.
2. Connect the connector of power rear gate auto closer.
3. Connect the battery ground cable with the rear gate fully open.

2) Check switch
(1) Check the resistance between switch terminals.
• Latch switch

Terminal No.	Inspection conditions	Standard
5 — 4	OPEN	Less than 1 Ω
	HALF	10 kΩ or more
	FULL	10 kΩ or more
	OVER	Less than 1 Ω



• Courtesy switch

Terminal No.	Inspection conditions	Standard
3 — 4	OPEN	Less than 1 Ω
	HALF	Less than 1 Ω
	FULL	10 kΩ or more

- Sector switch

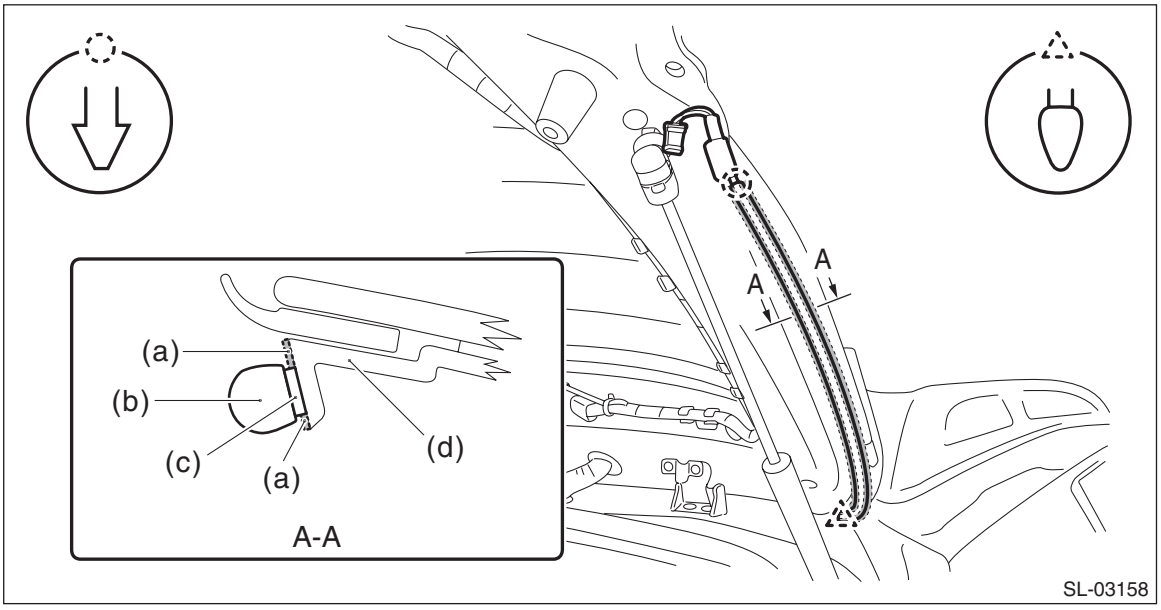
CAUTION:
Perform the check while operating the motor in the OPEN direction with the battery voltage applied between the terminals of motor. For detailed procedures, refer to 1) Check motor operation.

Terminal No.	Inspection conditions	Standard
4 — 6	Switch ON (NORMAL)	Less than 1 Ω
	Switch OFF (OPEN)	10 kΩ or more

(2) After the switch check is completed, perform initialization of the sector switch in the following procedures.
1. Operate the motor in the OPEN direction for approximately 2 seconds.
2. Connect the connector of power rear gate auto closer.
3. Connect the battery ground cable with the rear gate fully open.

3) Replace the power rear gate auto closer if it is found defective.

8. Power Rear Gate Touch Sensor



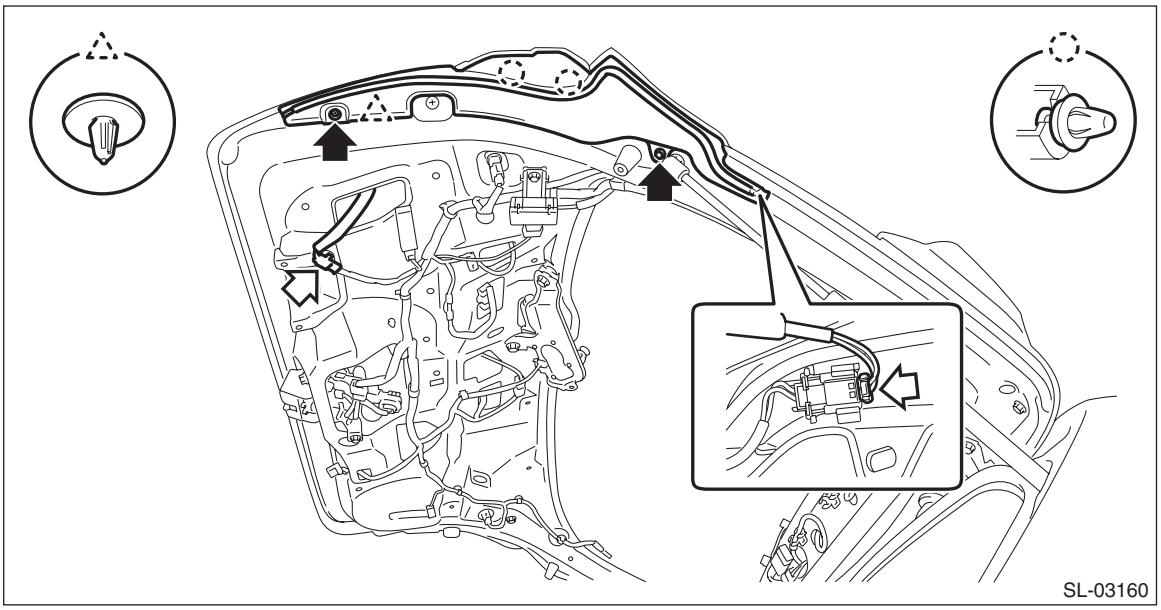
A: REMOVAL

1. TOUCH SENSOR UPR

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the touch sensor LWR. <Ref. to PRG-15, TOUCH SENSOR LWR, REMOVAL, Power Rear Gate Touch Sensor.>
3) Remove the power rear gate touch sensor UPR.

CAUTION:
• The touch sensor UPR can be removed only when it is defective because it is secured with double-sided tape.
• When removing the touch sensor UPR, be careful not to deform the touch sensor UPR bracket.
• Always replace the touch sensor UPR with a new part after removal.

(1) Affix masking tape on the touch sensor UPR bracket so that the tape runs along the touch sensor UPR.
(2) Remove the rubber clip and remove the power rear gate touch sensor UPR.



(a) Masking tape (area covered with tape)
(b) Touch sensor UPR
(c) Double-sided tape
(d) Touch sensor UPR bracket

2. TOUCH SENSOR LWR

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate. <Ref. to EI-122, REMOVAL, Rear Gate Trim.>

3) Remove the power rear gate touch sensor LWR.
   (1) Remove the screws and clips.
   (2) Disconnect the connector and remove the power rear gate touch sensor LWR.

B: INSTALLATION

1. TOUCH SENSOR UPR

1) Install the power rear gate touch sensor UPR.
   (1) Clean the bracket surface of the touch sensor UPR to remove dust and dirt fully.
   (2) Using a sponge, apply primer to the bracket surface of the touch sensor UPR that is not covered with masking tape.

CAUTION:
- **Do not apply primer beyond masking tape. This may cause discolored touch sensor UPR bracket.**
- **Dry the primered surface for approx. 10 minutes without touching it.**

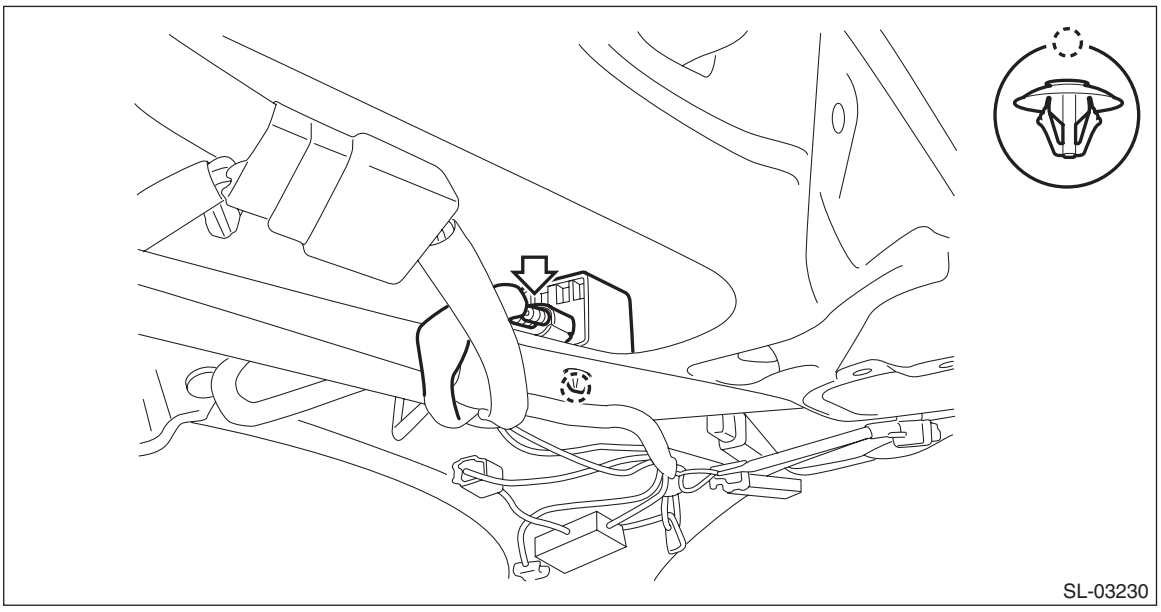
Primer:
3M 4298-UV or equivalent
   (3) Install the touch sensor UPR.

CAUTION:
When affix the touch sensor UPR, do not use tools.
   1. Affix a new touch sensor UPR along the masking tape.
   2. Press-fit the touch sensor UPR securely and remove the masking tape.

2) Install the power rear gate touch sensor LWR. <Ref. to PRG-16, TOUCH SENSOR LWR, INSTALLATION, Power Rear Gate Touch Sensor.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

2. TOUCH SENSOR LWR

1) Install the power rear gate touch sensor LWR.



CAUTION:
- **Make sure the electrical connector is connected securely.**
- **When installing the touch sensor LWR, be careful not to get the connector or harness crimped or deformed.**

Tightening torque:
1.5 N·m (0.2 kgf-m, 1.1 ft-lb)
2) Install the trim panel - rear gate.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

9. Power Rear Gate Buzzer

A: REMOVAL

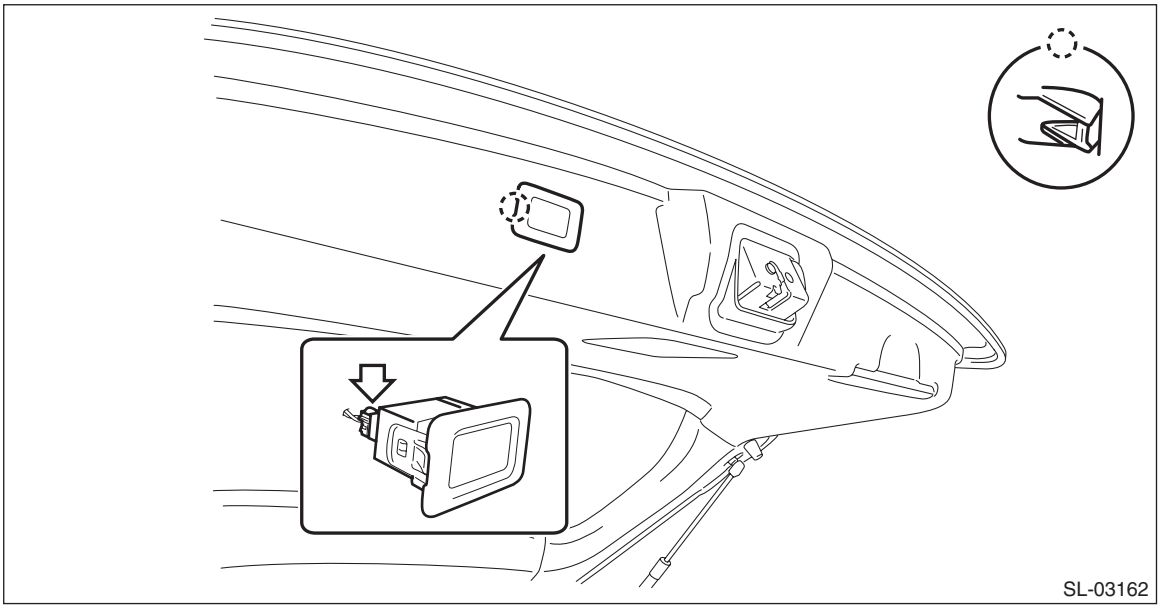
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trim panel - rear gate. <Ref. to EI-122, REMOVAL, Rear Gate Trim.>
3) Remove the power rear gate buzzer.
   (1) Disconnect the connector.
   (2) Release the claws, and then remove the power rear gate buzzer.

B: INSTALLATION

1) Install the power rear gate buzzer.
2) Install the trim panel - rear gate.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

Refer to “Diagnostics with Phenomenon” in the “POWER REAR GATE SYSTEM (DIAGNOSTICS)” section. <Ref. to PRG(diag)-48, THE BUZZER DOES NOT SOUND, INSPECTION, Diagnostics with Phenomenon.>



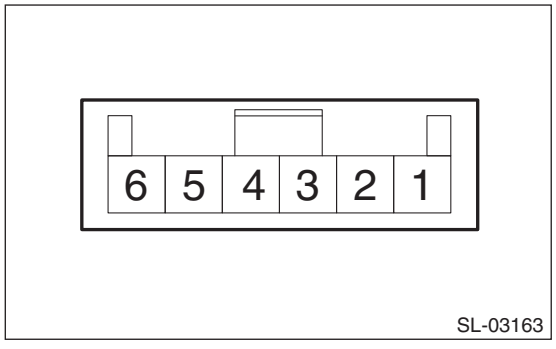
10.Power Rear Gate Inner Switch

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the power rear gate inner switch.
   (1) Release the claws and pull out the power rear gate inner switch rearward.

NOTE:
Insert a flat tip screwdriver wrapped with protective tape into the slit on the left.

   (2) Disconnect the connector and remove the power rear gate inner switch.



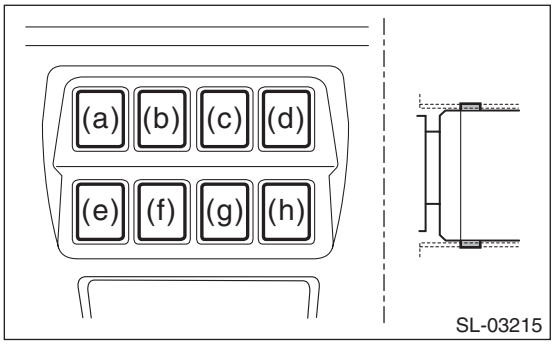
B: INSTALLATION

1) Install the power rear gate inner switch.
2) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



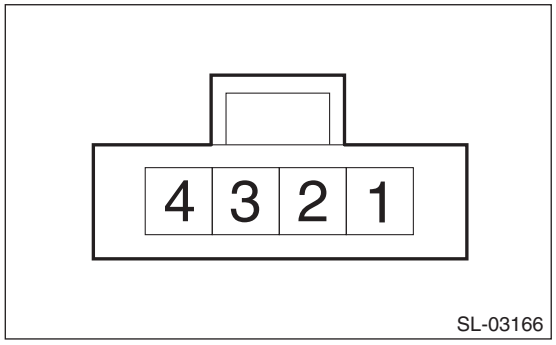
Terminal No.	Inspection conditions	Standard
1 — 2	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2) Replace the power rear gate inner switch, if the inspection result is not within the standard value.

11.Power Rear Gate Driver's Switch

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-74, REMOVAL, Instrument Panel Lower Cover.>
3) Release the claws, and then remove the power rear gate driver's switch (a).



B: INSTALLATION

1) Install the power rear gate driver's switch.
2) Install the cover assembly - instrument panel LWR driver.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

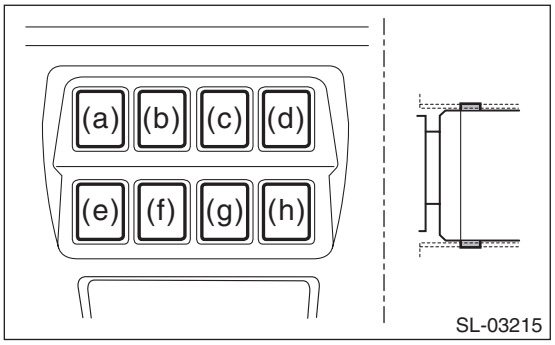
C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 4	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.



Terminal No.	Inspection conditions	Specification
2 (+) — 3 (–)	Apply battery voltage.	Light ON

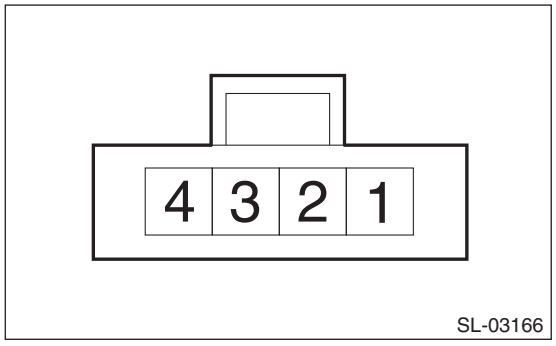
3) Replace the power rear gate driver's switch if the inspection result is not within the standard value.

12.Memory Height Switch

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-74, REMOVAL, Instrument Panel Lower Cover.>
3) Release the claws and remove the memory height switch.

(c) Model with SRF
(d) Model without SRF



B: INSTALLATION

1) Install the memory height switch.
2) Install the cover assembly - instrument panel LWR driver.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Measure the resistance between switch terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 4	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
2 (+) — 3 (–)	Apply battery voltage.	Light ON

3) Replace the memory height switch, if the inspection result is not within the standard value.

13.Rear Gate Opener Button

A: NOTE

Refer to the “SECURITY AND LOCKS” section for operation procedures of the rear gate opener button (PRG). <Ref. to SL-48, Rear Gate Opener Button.>

14.Body Integrated Unit

A: NOTE

Refer to the “SECURITY AND LOCKS” section for operation procedures of the body integrated unit. <Ref. to SL-81, Body Integrated Unit.>

15.Diagnostics with Phenomenon

A: INSPECTION

Refer to “Diagnostics with Phenomenon” in the “POWER REAR GATE SYSTEM (DIAGNOSTICS)” section. <Ref. to PRG(diag)-47, Diagnostics with Phenomenon.>

POWER REAR GATE SYSTEM (DIAGNOSTICS)

11.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	16
12.	General Diagnostic Table	46
13.	Diagnostics with Phenomenon	47

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**PERFORM CUSTOMER INTERVIEW.** Using the Check List for Interview, ask the customer the condition of how the trouble occurred. <Ref. to PRG(diag)-3, CHECK, Check List for Interview.>	Did you interview the customer?	Go to step **2**.	Interview the customer. <Ref. to PRG(diag)-3, CHECK, Check List for Interview.>
2	**INITIALIZATION OF PRG SYS.** 1) Open the PRG manually. 2) Manually close PRG to the partially latched position, and operate the auto closer to fully close PRG. 3) Press any of the PRG operation switches to perform the automatic operation of PRG. <Ref. to PRG-5, INITIALIZATION, PROCEDURE, Power Rear Gate System.>	Is the initialization operation possible?	Go to step **4**.	Go to step **3**.
3	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Perform the inspection according to the diagnosis for LAN system.	Go to step **4**.
4	**CHECK POWER REAR GATE SYSTEM.** Using the Subaru Select Monitor, read DTC of power rear gate system. <Ref. to PRG(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to PRG(diag)-9, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>	Is DTC displayed?	Record DTC and perform the diagnosis according to the DTC. <Ref. to PRG(diag)-15, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **5**.
5	**CHECK DIAGNOSTICS WITH PHENOMENON.** Check “Diagnostics with Phenomenon”. <Ref. to PRG(diag)-47, Diagnostics with Phenomenon.>	Does the symptom apply?	Perform diagnosis according to the procedures in the diagnostics with phenomenon.	Currently, system is normal. A temporary poor contact may be a possible cause. Therefore, check the harness connector.

2. Check List for Interview

A: CHECK

- Inspect the following items regarding the vehicle's state.
- Print out this page for interviewing customers.

<table>
<tr><td colspan="4">Power Rear Gate System Check List for Interview
Date the Vehicle is Received Year Month Day</td></tr>
<tr><td colspan="2" rowspan="2">Customer's name</td><td>Registration No.</td><td>Initial year of registration
Year Month Date</td></tr>
<tr><td>Vehicle model</td><td>Frame number</td></tr>

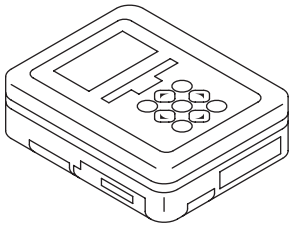
</table>

3. General Description

A: CAUTION

1. AIRBAG SYSTEM

CAUTION:
• Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
• Be careful not to damage the airbag system wiring harness.



B: INSPECTION

1. BASIC INSPECTION

Before performing diagnosis, check the following items which might affect power rear gate related problems.
1) Check the battery. <Ref. to SC(H4DO)-60, INSPECTION, Battery.> <Ref. to SC(H6DO)-53, INSPECTION, Battery.>
2) Check the relay and fuse condition. <Ref. to PRG-4, Relay and Fuse.>
3) Check the connecting condition of harness and harness connector.

C: PREPARATION TOOL

1. SPECIAL TOOL

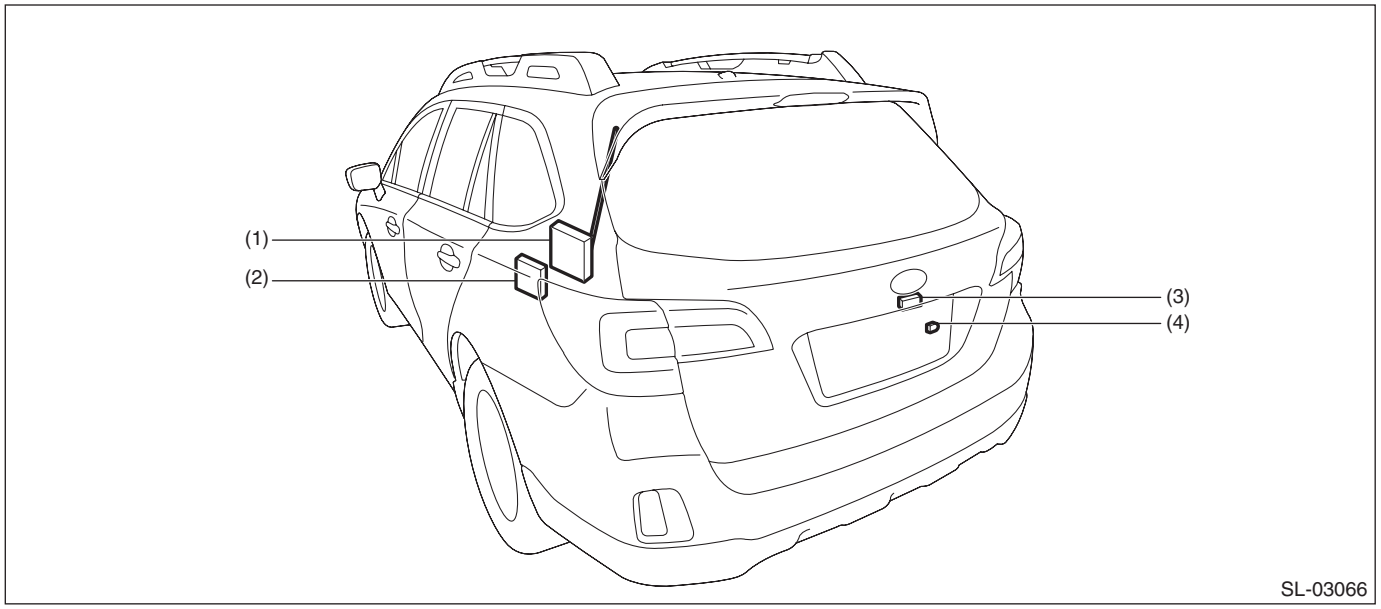


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
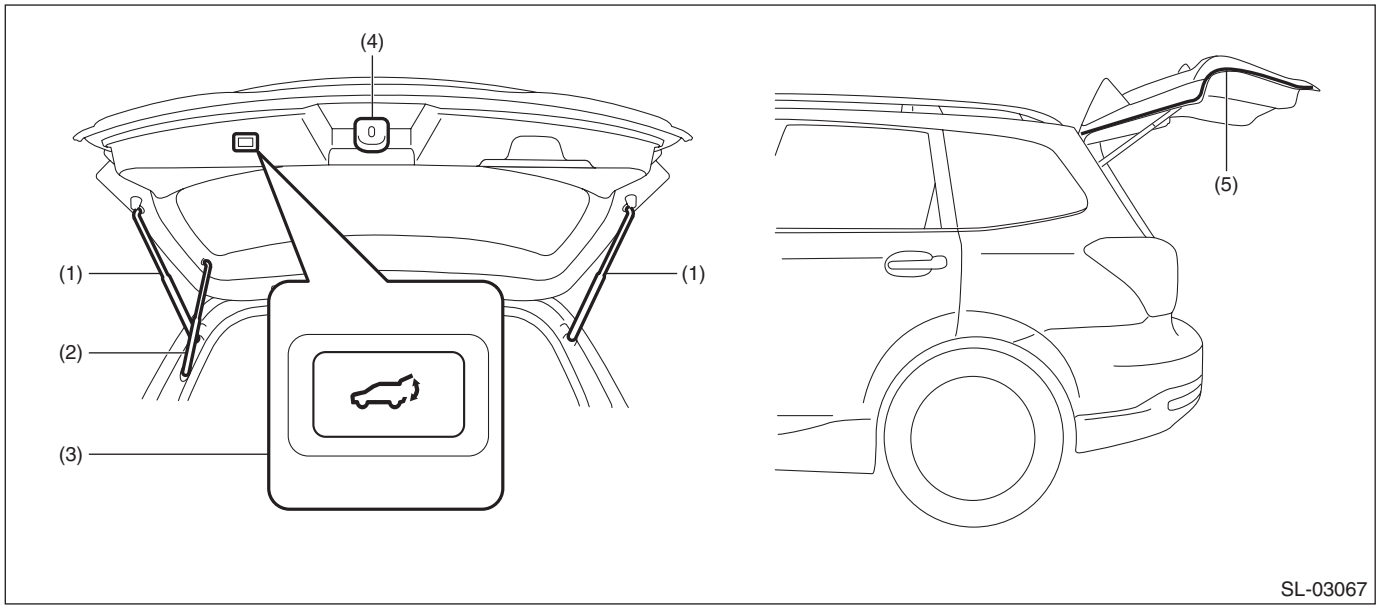
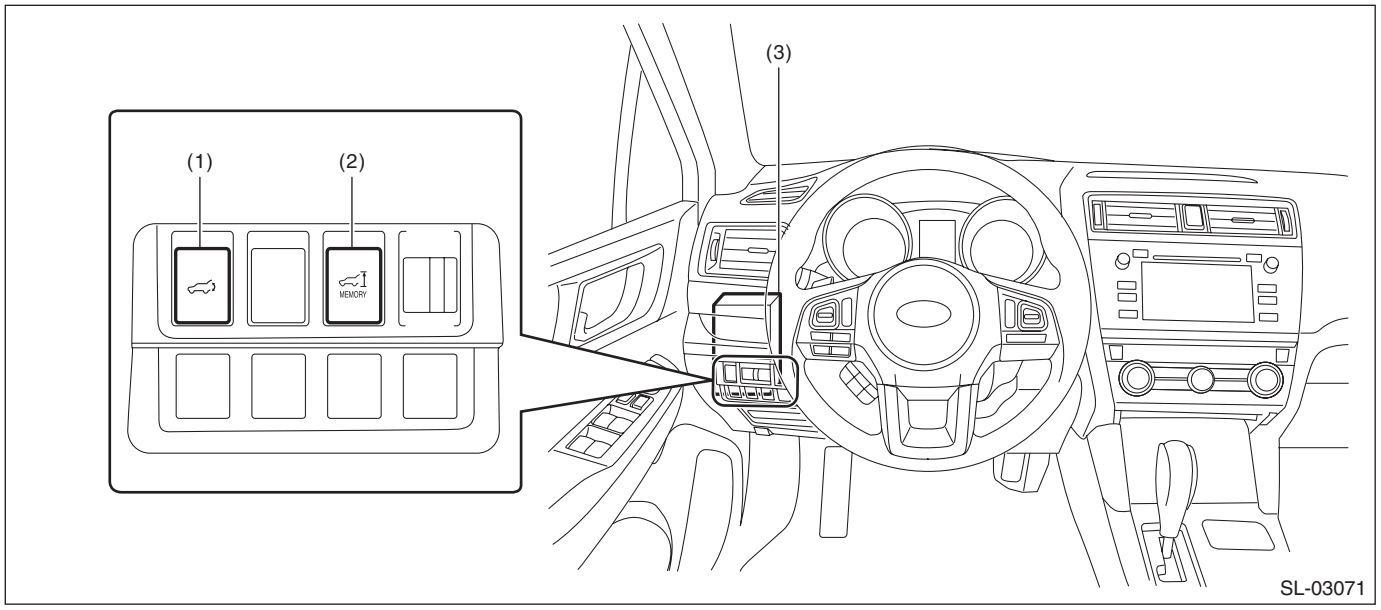
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.

2. GENERAL TOOL

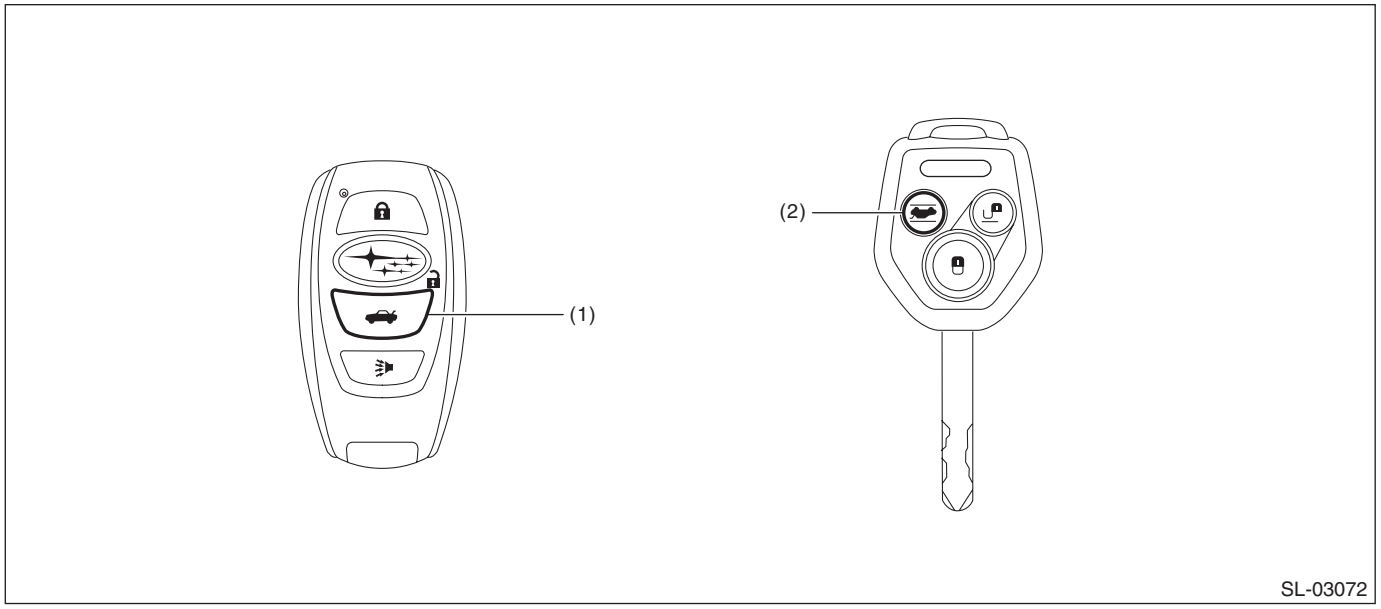


TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

4. Electrical Component Location



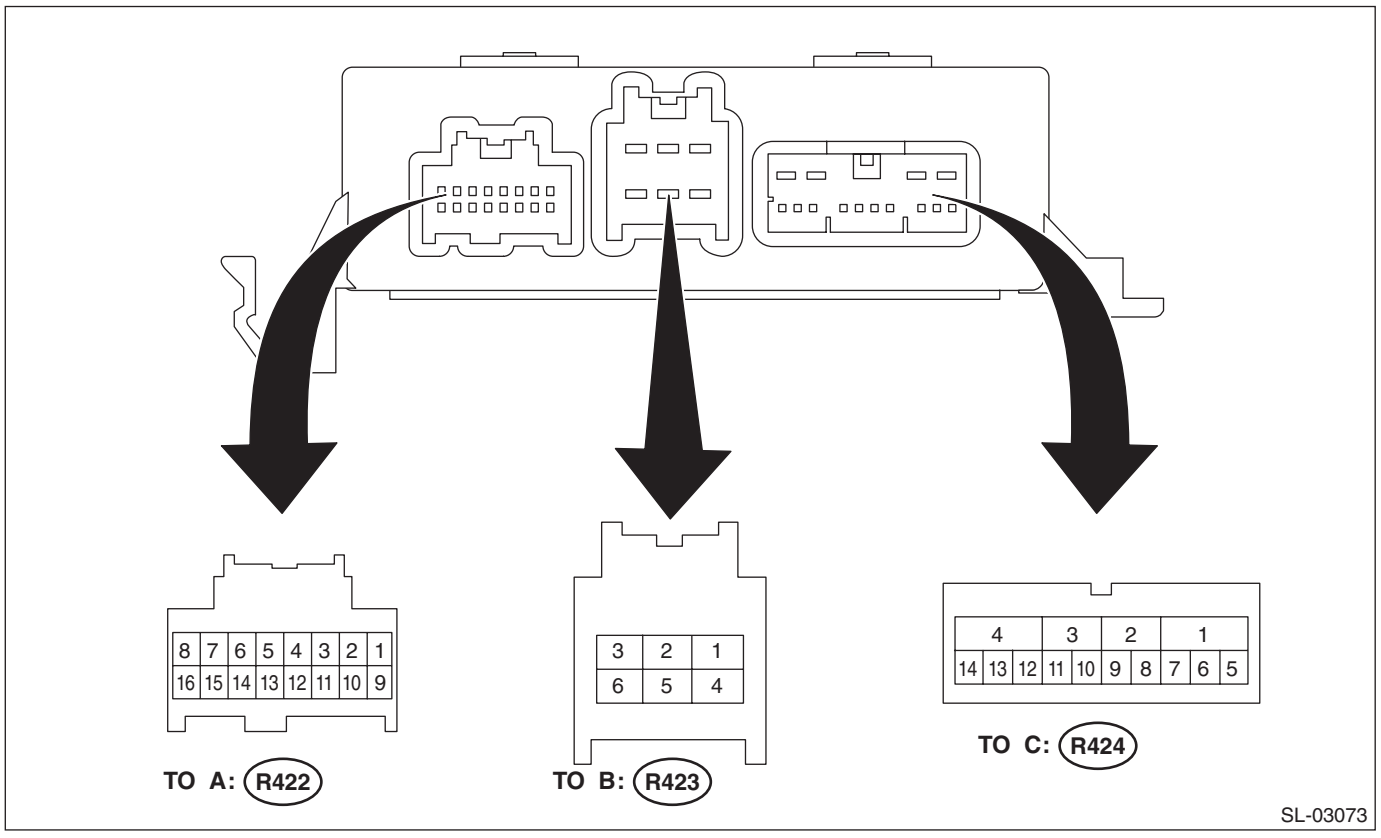
A: LOCATION



(1) Power rear gate drive unit (PRG DU)
(2) Power rear gate control module (PRG CM)
(3) Rear gate opener button (PRG)
(4) Power rear gate buzzer

(1) Gas damper
(2) Rod - power rear gate
(3) Power rear gate inner switch
(4) Power rear gate auto closer
(5) Power rear gate touch sensor

(1) Power rear gate driver's switch (2) Memory height switch (3) Body integrated unit



(1) Rear gate/trunk SW (access key) (with keyless access with push button start system)

(2) Rear gate/trunk SW (keyless transmitter) (without keyless access with push button start system)

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

1. POWER REAR GATE CONTROL MODULE

Terminal No.	Description	Measuring condition	Standard
(R422) No. 1 ←→ (R422) No. 9	Touch sensor	When sensor is ON	2.7 V or less
(R422) No. 2 ←→ Chassis ground	—	—	—
(R422) No. 3 ←→ (R422) No. 9	Latch switch	When rear gate is fully closed	9 — 16 V
(R422) No. 4 ←→ (R422) No. 9	Courtesy switch	When rear gate is fully closed	9 — 16 V
(R422) No. 5 ←→ (R422) No. 9	Sector switch	When rear gate is fully closed	Less than 1 V
(R422) No. 6 ←→ (R422) No. 9	PRG inner SW	When power rear gate inner switch is ON	Less than 1 V
(R422) No. 7	—	—	—
(R422) No. 8 ←→ Chassis ground	Memory height switch	When memory height switch is ON	Less than 1 V
(R422) No. 9	Switch GND	—	—
(R422) No. 10	LIN communication line	—	—
(R422) No. 11	—	—	—
(R422) No. 12 ←→ Chassis ground	Ignition SW	When ignition switch is ON	—
(R422) No. 13 ←→ Chassis ground	Power rear gate driver's switch	When driver's switch is ON	Less than 1 V
(R422) No. 14 ←→ Chassis ground	—	—	—
(R422) No. 15 ←→ Chassis ground	Hazard output	When hazard is not operating	Less than 1 V
(R422) No. 16 ←→ Chassis ground	—	—	—

B: WIRING DIAGRAM

Refer to "Power Rear Gate System" in the wiring diagram. <Ref. to WI-356, WIRING DIAGRAM, Power Rear Gate System.>

6. Subaru Select Monitor

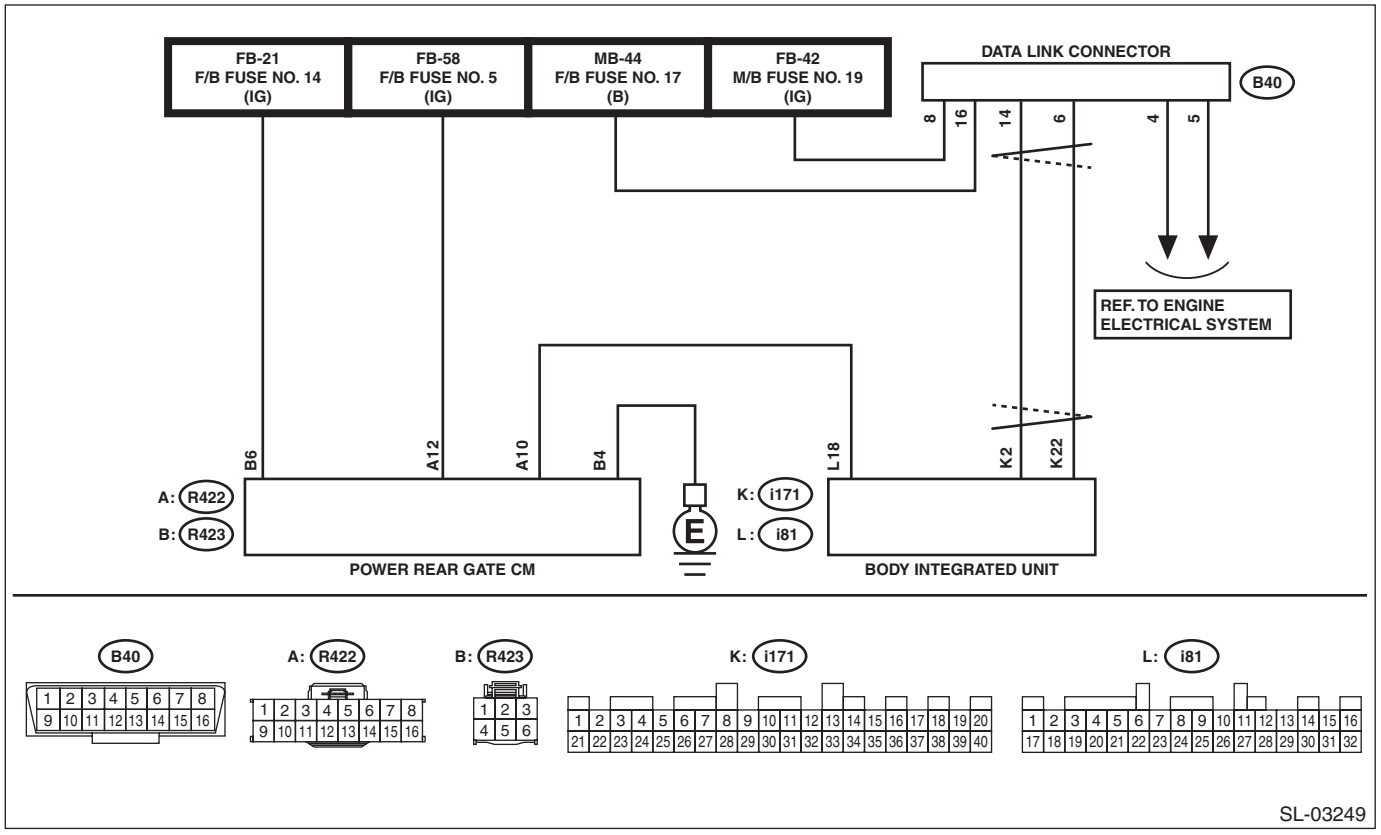
A: OPERATION

- For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.
- When communication with Subaru Select Monitor is not possible, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE”. <Ref. to PRG(diag)-9, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>

B: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

NOTE:
If the communication with the body integrated unit is not possible either, refer to LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-11, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>

DETECTING CONDITION:



- Defective harness
- Power supply circuit malfunction
- Body integrated unit malfunctioning
- Defective LIN communication circuit
- Defective Subaru Select Monitor

TROUBLE SYMPTOM:

Not communicable with Subaru Select Monitor.

WIRING DIAGRAM:

Power rear gate system <Ref. to WI-356, WIRING DIAGRAM, Power Rear Gate System.>

	Step	Check	Yes	No
1	**CHECK FUSE.** Check the fuse.	Is there any fault?	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in the harness between the battery and power rear gate CM.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the power rear gate CM connector. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between the power rear gate CM connector and chassis ground. ***Connector & terminal*** ***(R422) No. 12 (+) — Chassis ground (–):*** ***(R423) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **3**.	Repair the open circuit of harness between the power rear gate CM connector and fuse.
3	**CHECK HARNESS.** Using a tester, measure the resistance between the power rear gate CM connector and chassis ground. ***Connector & terminal*** ***(R423) No. 4 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness between the power rear gate CM connector and chassis ground.
4	**CHECK BODY INTEGRATED UNIT.** Check the body control system. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Is there any fault?	Perform the inspection according to the diagnosis for body control system.	Go to step **5**.
5	**CHECK POWER REAR GATE CM.** 1) Turn the ignition switch to OFF. 2) Connect the power rear gate CM connector. 3) Communicate with the power rear gate CM using the Subaru Select Monitor.	Is communication possible?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the power rear gate CM. <Ref. to PRG-6, Power Rear Gate Control Module.>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Power Rear Gate».
3) On «Power Rear Gate» display, select «Diagnostic Code(s) Display».

NOTE:
- For operation procedures, refer to the “PC application help for Subaru Select Monitor”.
- For details concerning DTC, refer to the List of Diagnostic Trouble Codes (DTC). <Ref. to PRG(diag)-15, LIST, List of Diagnostic Trouble Code (DTC).>

8. Clear Memory Mode

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Power Rear Gate».
3) On «Power Rear Gate» display, select «Clear Memory».

NOTE:
For operation procedures, refer to the “PC application help for Subaru Select Monitor”.

9. Read Current Data

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Power Rear Gate».
3) On «Power Rear Gate» display, select «Current Data Display & Save».

NOTE:
- For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.
- Communication with PRG CM and Subaru Select Monitor takes time. It takes time to show all the items, and the status cannot be reflected on the display. Therefore, select items only that need to be checked or up to two to three items, when checking the status. (When displaying selected items only, place a check mark for the item to be displayed and press the “Select” button.)

B: LIST

Item Name	Description	Standard	Note
+POWER B	Power supply voltage value	9 — 16 V	—
+ B	PRG CM power supply voltage value	9 — 16 V	—
IGN SW	Ignition switch status	ON: IGN ON OFF: IGN OFF	—
Memory stop SW	Memorized height switch status	ON: switch ON OFF switch OFF	—
D SW	Driver’s seat switch status	ON: switch ON OFF switch OFF	—
R/G inner SW	PRG inner switch status	ON: switch ON OFF switch OFF	—
COURTESY SW	Courtesy switch status	ON: switch ON OFF switch OFF	—
LATCH SW	Latch switch status	ON: switch ON OFF switch OFF	—
SECTOR SW	Sector switch status	ON: switch ON OFF switch OFF	—
PRG MOTOR (OPEN)	Output status of rear gate motor open signal	OPEN: when operating rear gate open OFF: OFF	—
PRG MOTOR (CLOSE)	Output status of rear gate motor close signal	CLOSE: when operating rear gate close OFF: OFF	—
CLOSER (OPEN)	Output status of auto power rear gate closer motor open signal	OPEN: when open output OFF: OFF	—
CLOSER (CLOSE)	Output status of auto power rear gate closer motor close signal	CLOSE: when close output OFF: OFF	—
Buzzer output	Buzzer output status	ON: when buzzer sounding OFF: when buzzer stopping	—
HAZARD	Hazard output status	ON: when hazard ON OFF: when hazard OFF	—
Connection Continuing Flag	Communication continuation request status	Flag: when communication continuation is requested not Flag: when no communication continuation is requested	—
Idle Stop Cancel Flag	Auto Start Stop cancel request status	Flag: when Auto Start Stop cancellation not Flag: when Auto Start Stop	—
IGN	Ignition switch status (body integrated unit)	ON: IGN ON OFF: IGN OFF	—
R/G Open SW	PRG opener switch status	OFF: when OFF Short Push: when operating Short Push Long Push: when operating Long Push	—
Front Wheel Speed	Vehicle speed condition	Show vehicle speed	—

Item Name	Description	Standard	Note
Normal Keyless R/G SW	Status of normal keyless R/G switch	OFF: when OFF Short Push: when operating Short Push Long Push: when operating Long Push	—
Smart Keyless R/G SW	Status of keyless access key R/G switch	OFF: when OFF Short Push: when operating Short Push Long Push: when operating Long Push	—
Idle Stop Control	Status of Auto Start Stop control	Idle Stop Control: when Idle Stop Control Idle Stop Uncontrol: other than Idle Stop Control	—
P range SW	Status of shift lever P	ON: when in P range OFF: when other than in P range	—
MT/AT	Vehicle information (body integrated unit)	MT: MT model AT: AT model	—
R/G Open Authorized State	Status of PRG permission	Authorized State: PRG Open Authorized State Unauthorized State: PRG Open Unauthorized State	—
Answer-Back Buzzer Information	Body integrated unit customizing information	ON: when buzzer sounding ON OFF: when buzzer sounding OFF	—
EPB Status	Electronic parking brake status	Error: when EPB error Release: when EPB is released Operate: when EPB is operated In operation: when EPB is in operation Releasing: when EPB is releasing Dynamic parking: When dynamic parking is operating	—
TOUCH SENSOR	Touch sensor status	ON: sensor ON OFF: sensor OFF	—
Rear Gate Target Speed	Rear gate target speed	Displays rear gate open/close target speed	—
Rear Gate Speed	Rear gate actual speed	Displays rear gate open/close speed	—
PRG MOTOR Duty	Rear gate motor DUTY output value	Displays rear gate motor DUTY output	—
Pulse-count 2	Rear gate motor pulse count output	Displays rear gate position	—
Rear Gate Pos Init Flag	Rear gate position initialization status	ON: when pulse-count is recognized (when initialization is complete) OFF: when no pulse-count is recognized	—
PRG State 2	PRG status	Fully open: when pulse-count is more than fully open stop position Half Stop: when pulse-count is less than fully open stop position In operation: when PRG motor or closer motor is in operation Full Close: fully latched status	—

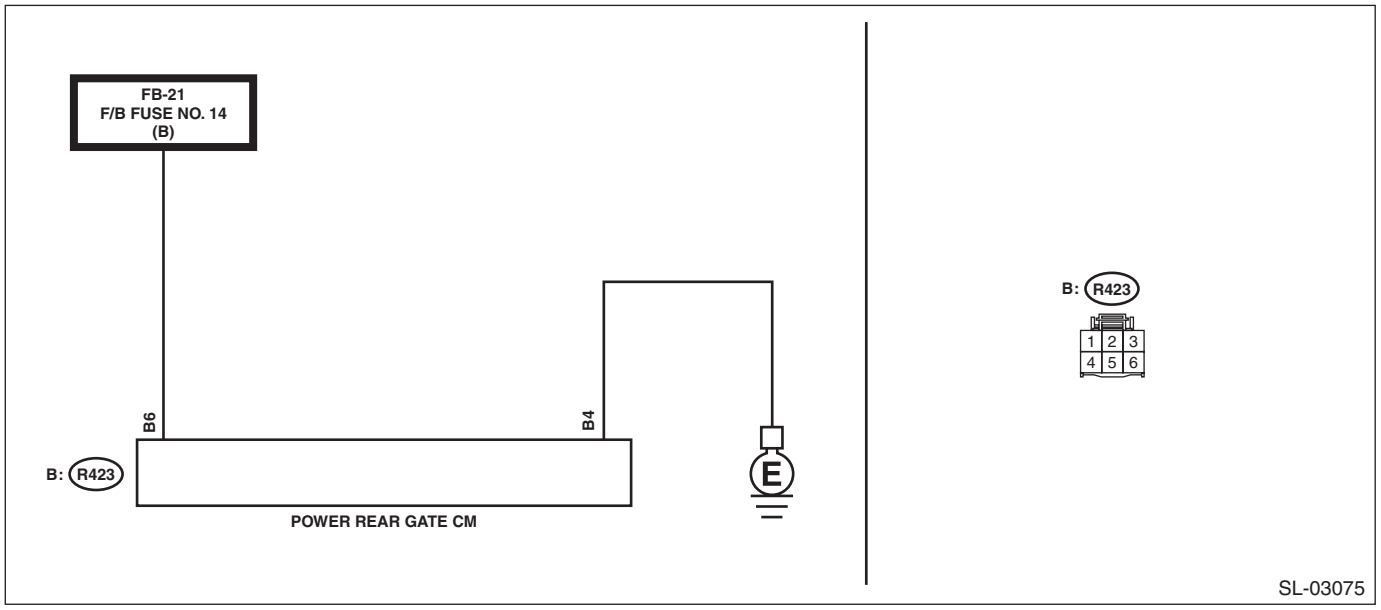
11.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B2500 BATT P/SUPPLY FAILURE

DTC DETECTING CONDITION:



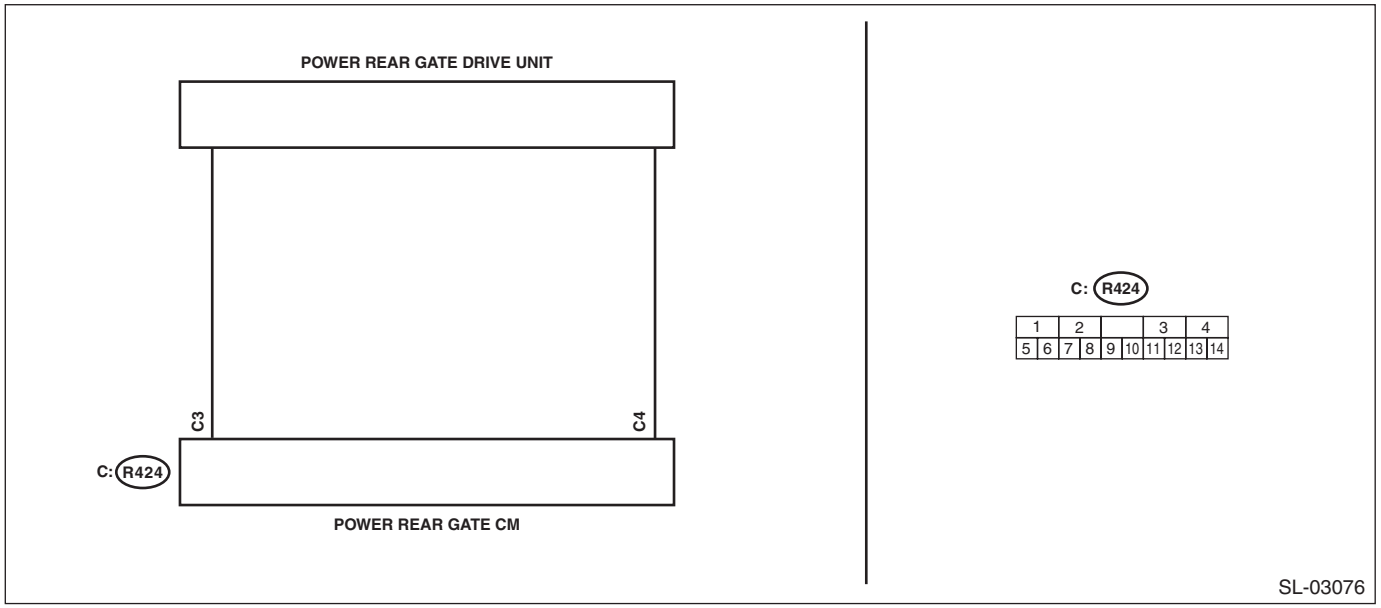
Detected when the power supply voltage is less than 9 V or 16 V or more at starting PRG operation (when SW is operated).

TROUBLE SYMPTOM:

The power rear gate does not operate.

WIRING DIAGRAM:

Power rear gate system <Ref. to WI-356, WIRING DIAGRAM, Power Rear Gate System.>

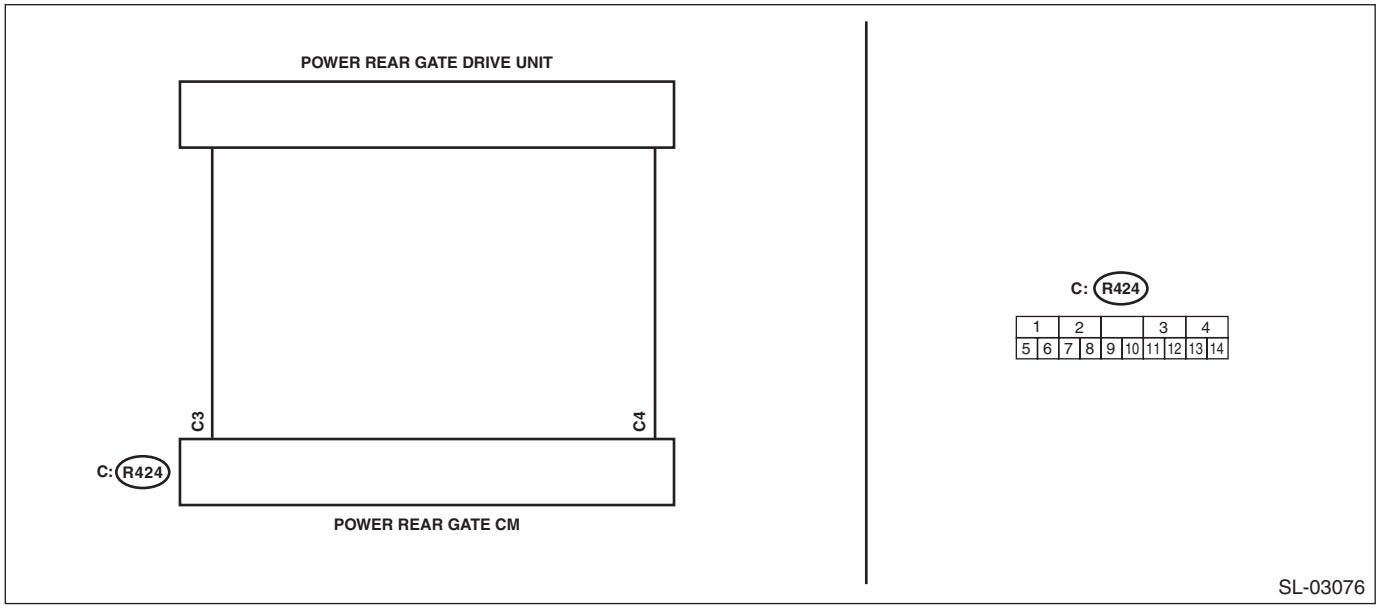


Step		Check	Yes	No
1	**CHECK AUTO OPERATION.** 1) Turn the ignition switch to OFF. 2) Using operation switch, perform power rear gate auto open/close operation from full close position or full open position.	Is auto operation activated?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, read DTC of PRG CM.	Is DTC B2500 displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse. <Ref. to PRG-4, Relay and Fuse.>	Is the fuse OK?	Go to step **4**.	Replace the defective fuse. When the fuse is blown immediately, repair the short circuit.
4	**CHECK HARNESS.** 1) Disconnect the PRG CM connector. 2) Using a tester, measure the voltage between the PRG CM connector and chassis ground. ***Connector & terminal*** ***(R423) No. 6 (+) — Chassis ground (–):***	Is the voltage 9 V or more?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** Using a tester, measure the resistance between the PRG CM connector and chassis ground. ***Connector & terminal*** ***(R423) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the PRG CM connector.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>

B: DTC B2507 PRG MOTOR OPEN

DTC DETECTING CONDITION:
When the open circuit in motor is detected during the motor operation.
TROUBLE SYMPTOM:
The power rear gate does not operate.
WIRING DIAGRAM:
Power rear gate system <Ref. to WI-356, WIRING DIAGRAM, Power Rear Gate System.>

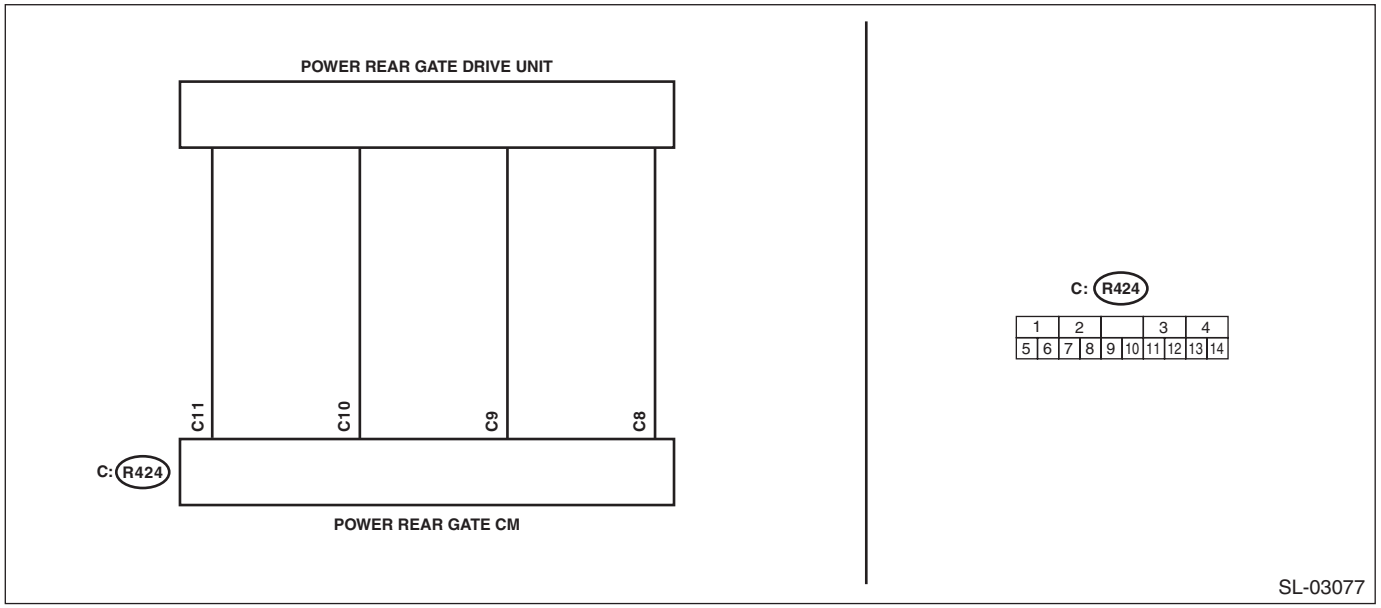


Step		Check	Yes	No
1	**CHECK AUTO OPERATION.** 1) Turn the ignition switch to OFF. 2) Using operation switch, perform power rear gate auto open/close operation from full close position or full open position.	Is auto operation activated?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, read DTC of PRG CM.	Is DTC B2507 displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK POWER REAR GATE DRIVE UNIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the PRG DU connector from PRG CM. 3) Measure the resistance between PRG DU connectors. ***Connector & terminal*** ***(R424) No. 3 — (R424) No. 4:***	Is the resistance less than 1 Ω?	Go to step **4**.	Replace the PRG DU. <Ref. to PRG-8, Power Rear Gate Drive Unit.>
4	**CHECK CONNECTOR.** Check the PRG DU connector.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Replace the PRG DU. <Ref. to PRG-8, Power Rear Gate Drive Unit.>

C: DTC B2508 PRG MOTOR GND SHORT OUT

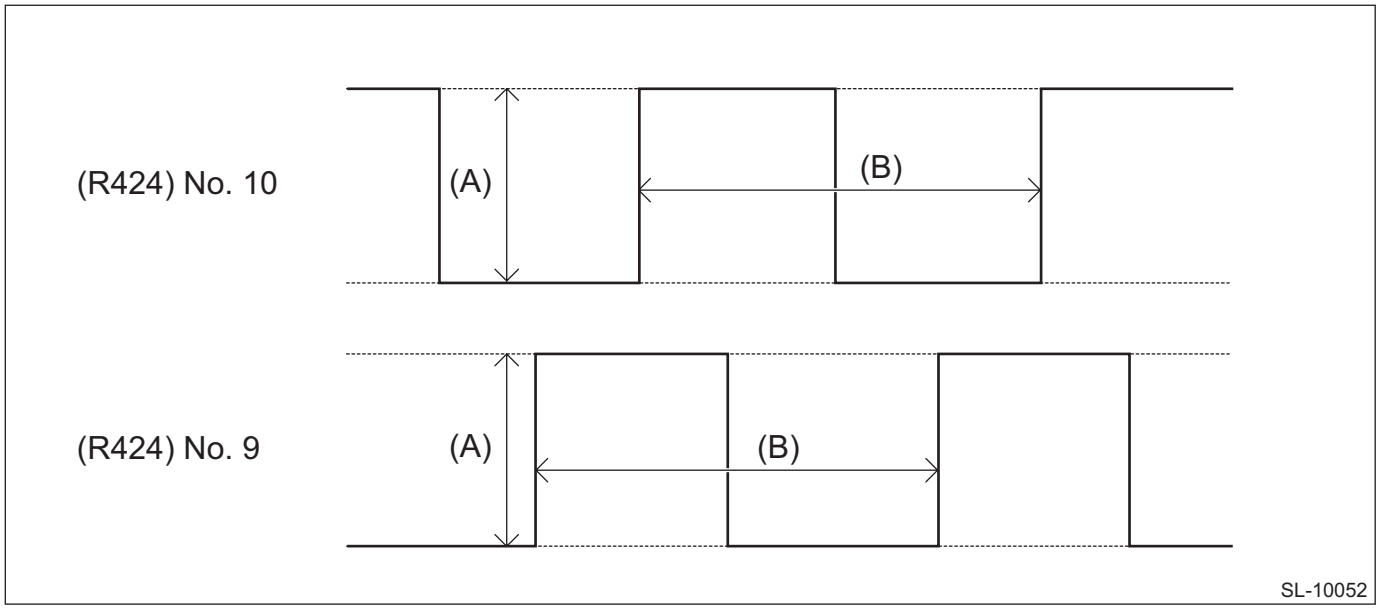
DTC DETECTING CONDITION:
When the short to ground in motor circuit is detected.
TROUBLE SYMPTOM:
The power rear gate does not operate.
WIRING DIAGRAM:
Power rear gate system <Ref. to WI-356, WIRING DIAGRAM, Power Rear Gate System.>



Step		Check	Yes	No
1	**CHECK AUTO OPERATION.** 1) Turn the ignition switch to OFF. 2) Using operation switch, perform power rear gate auto open/close operation from full close position or full open position.	Is auto operation activated?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, read DTC of PRG CM.	Is DTC B2508 displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the PRG DU connector from PRG CM. 3) Using a tester, measure the resistance between the PRG DU connector and chassis ground. ***Connector & terminal*** ***(R424) No. 3 — Chassis ground:*** ***(R424) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the PRG DU. <Ref. to PRG-8, Power Rear Gate Drive Unit.>
4	**CHECK HARNESS.** Using a tester, measure the resistance between the PRG DU connectors. ***Connector & terminal*** ***(R424) No. 3 — (R424) No. 4:***	Is the resistance 0.1 Ω or more?	Go to step **5**.	Replace the PRG DU. <Ref. to PRG-8, Power Rear Gate Drive Unit.>
5	**CHECK CONNECTOR.** Check the PRG DU connector.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>

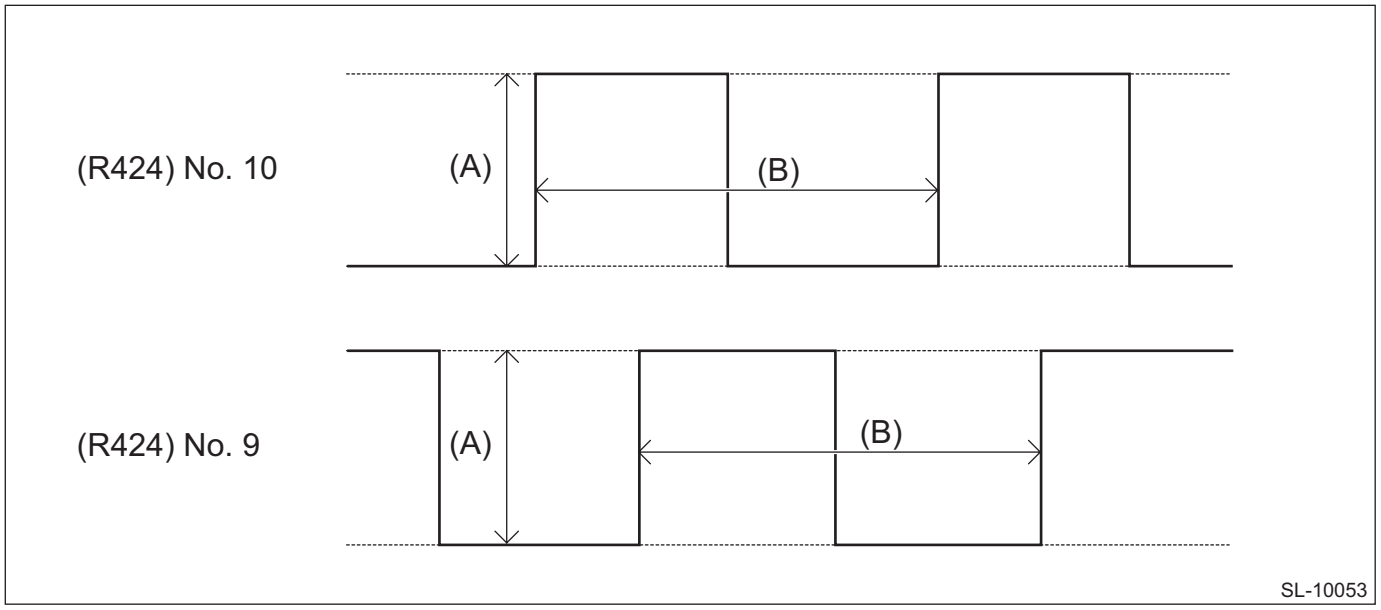
D: DTC B250B ROTATION SENSOR FAILURE (A OUTPUT FIXATION)



DTC DETECTING CONDITION:
When output of drive unit rotation sensor does not last for 1 sec during the auto-operation.
TROUBLE SYMPTOM:
The power rear gate does not operate.
WIRING DIAGRAM:
Power rear gate system <Ref. to WI-356, WIRING DIAGRAM, Power Rear Gate System.>

Step		Check	Yes	No
1	**CHECK AUTO OPERATION.** 1) Turn the ignition switch to OFF. 2) Using operation switch, perform power rear gate auto open/close operation from full close position or full open position.	Does it work as fully open → fully close and fully close → fully open?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, read DTC of PRG CM.	Is DTC B250B, B250D, or B2525 displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK ROTATION SENSOR SIGNAL.** Using an oscilloscope, measure the waveform between PRG CM connectors. ***Connector & terminal*** ***(R424) No. 9 — (R424) No. 8:*** ***(R424) No. 10 — (R424) No. 8:***	Does the voltage change (approx. 0 V ←→ 12 V), when the power rear gate is manually opened/closed?	Go to step **4**.	Replace the PRG DU. <Ref. to PRG-8, Power Rear Gate Drive Unit.>
4	**CHECK PRG CM.** Using an oscilloscope, measure the waveform between PRG CM connectors. ***Connector & terminal*** ***(R424) No. 9 (+) — (R424) No. 11 (–):*** ***(R424) No. 10 (+) — (R424) No. 11 (–):***	Does the waveform change as noted in the margin when the power rear gate is manually opened/closed?	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>	Replace the PRG DU. <Ref. to PRG-8, Power Rear Gate Drive Unit.>



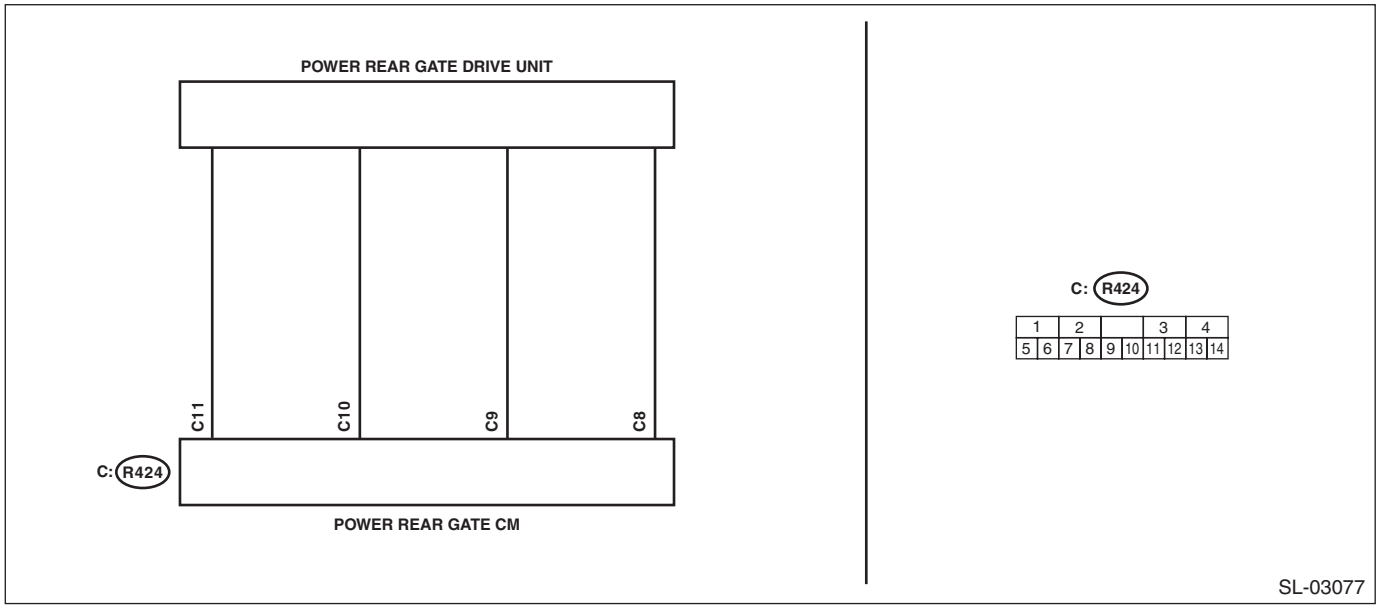
NOTE:
• When the power rear gate is open

(A) Approx. 10 V

(B) Approx. 15 ms (Waveform cycle changes according to the time the power rear gate is opened/closed.)

- When the power rear gate is closed

(A) Approx. 10 V

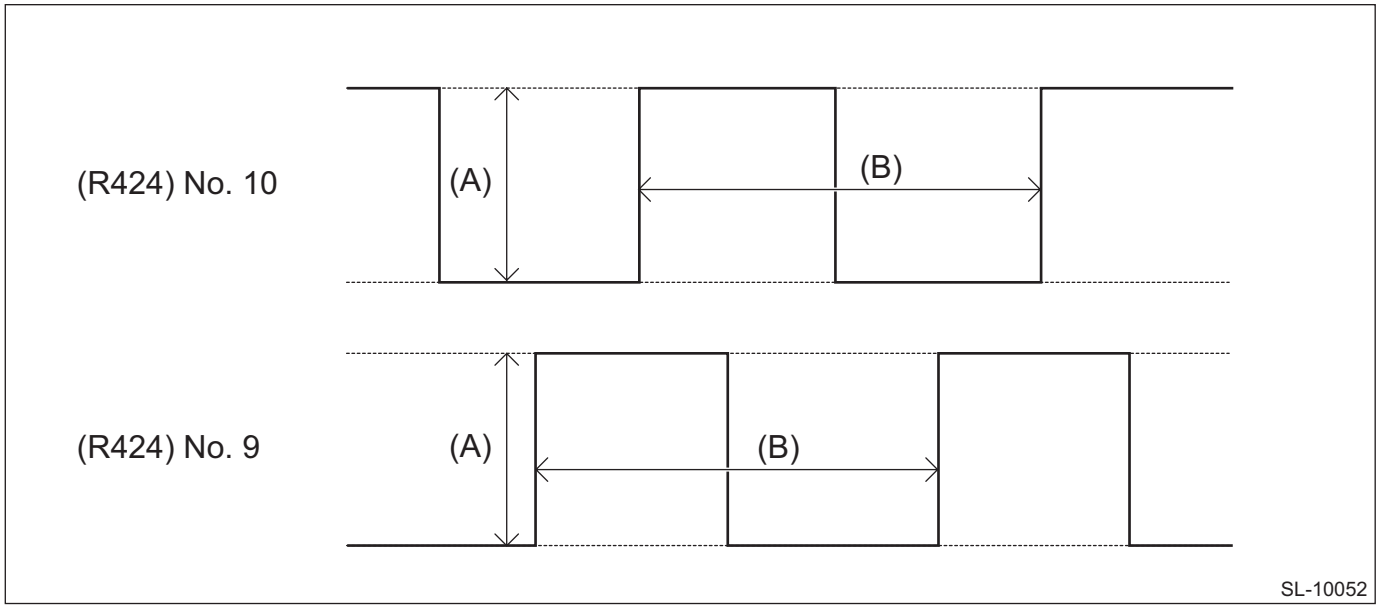


(B) Approx. 14 ms (Waveform cycle changes according to the time the power rear gate is opened/closed.)

E: DTC B250D ROTATION SENSOR FAILURE (B OUTPUT FIXATION)

NOTE:
For the diagnostic procedure, refer to DTC B250B. <Ref. to PRG(diag)-22, DTC B250B ROTATION SENSOR FAILURE (A OUTPUT FIXATION), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

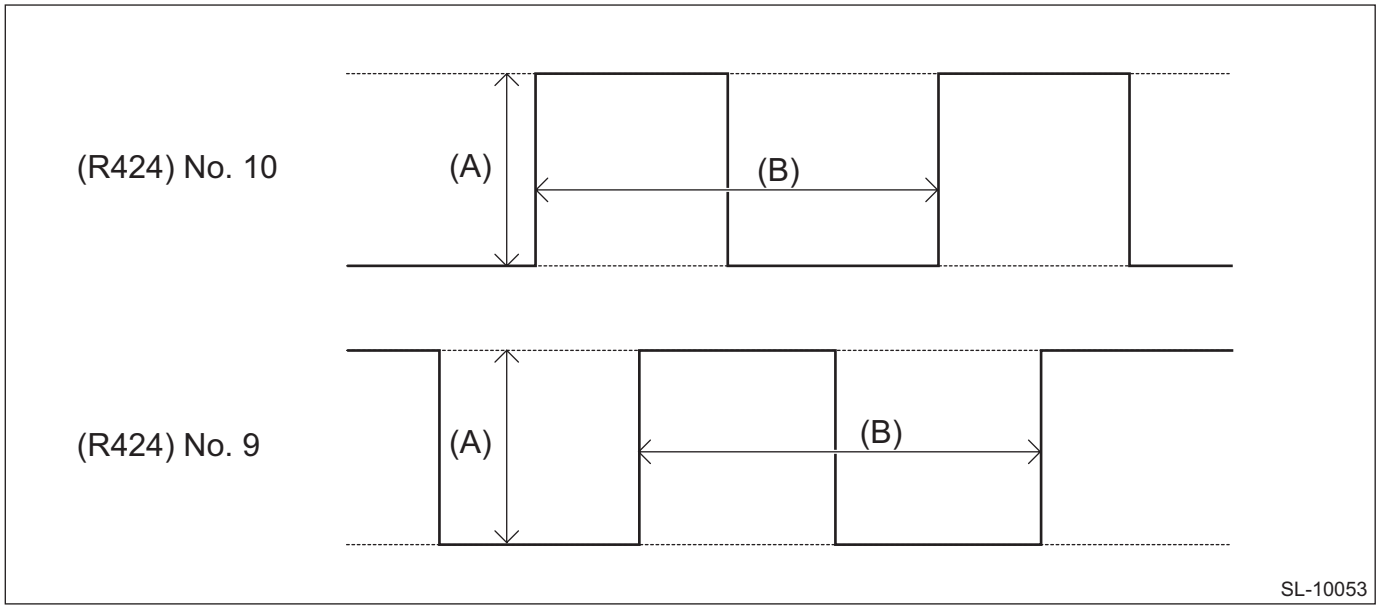
F: DTC B250F ROTATION SENSOR FAILURE (PULSE-COUNT FAILURE)



DTC DETECTING CONDITION:
Output of the power rear gate drive unit rotation sensor is out of specified range.
TROUBLE SYMPTOM:
Auto operation stops halfway.
WIRING DIAGRAM:
Power rear gate system <Ref. to WI-356, WIRING DIAGRAM, Power Rear Gate System.>

Step		Check	Yes	No
1	**CHECK AUTO OPERATION.** 1) Turn the ignition switch to OFF. 2) Using operation switch, perform power rear gate auto open/close operation from full close position or full open position.	Does it work as fully open → fully close and fully close → fully open?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, read DTC of PRG CM.	Is DTC B250F displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK CURRENT DATA.** 1) Activate the auto closer to a fully closed position. 2) Using the Subaru Select Monitor, confirm the «Pulse-count 2» when fully closed and fully open. <Ref. to PRG(diag)-13, Read Current Data.> NOTE: When confirming the current data, display only one item to be checked at a time. When the displayed items are too many, changes in the pulses will not be retrieved.	Does the value show six pulses when fully closed, and 1800 pulses when fully open?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK PRG CM.** Using an oscilloscope, measure the waveform between PRG CM connectors. ***Connector & terminal*** ***(R424) No. 9 (+) — (R424) No. 11 (–):*** ***(R424) No. 10 (+) — (R424) No. 11 (–):***	Does the waveform change as noted in the margin when the power rear gate is manually opened/closed?	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>	Replace the PRG DU. <Ref. to PRG-8, Power Rear Gate Drive Unit.>

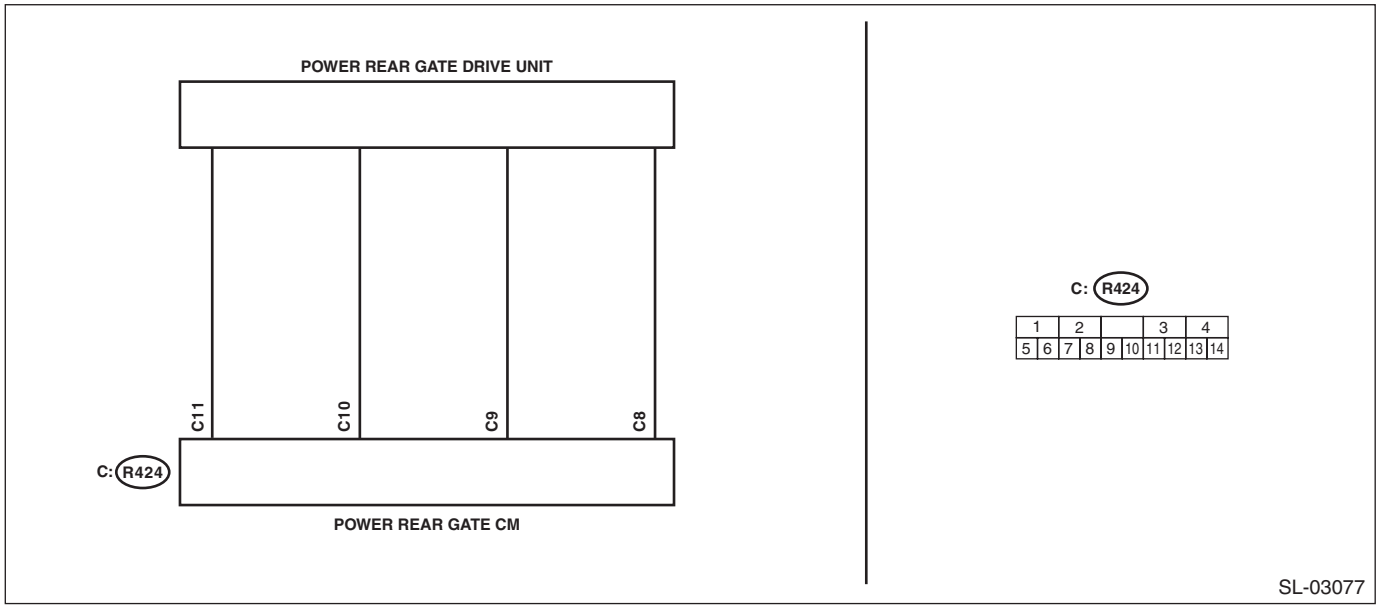


NOTE:
- When the power rear gate is open

(A) Approx. 10 V

(B) Approx. 15 ms (Waveform cycle changes according to the time the power rear gate is opened/closed.)

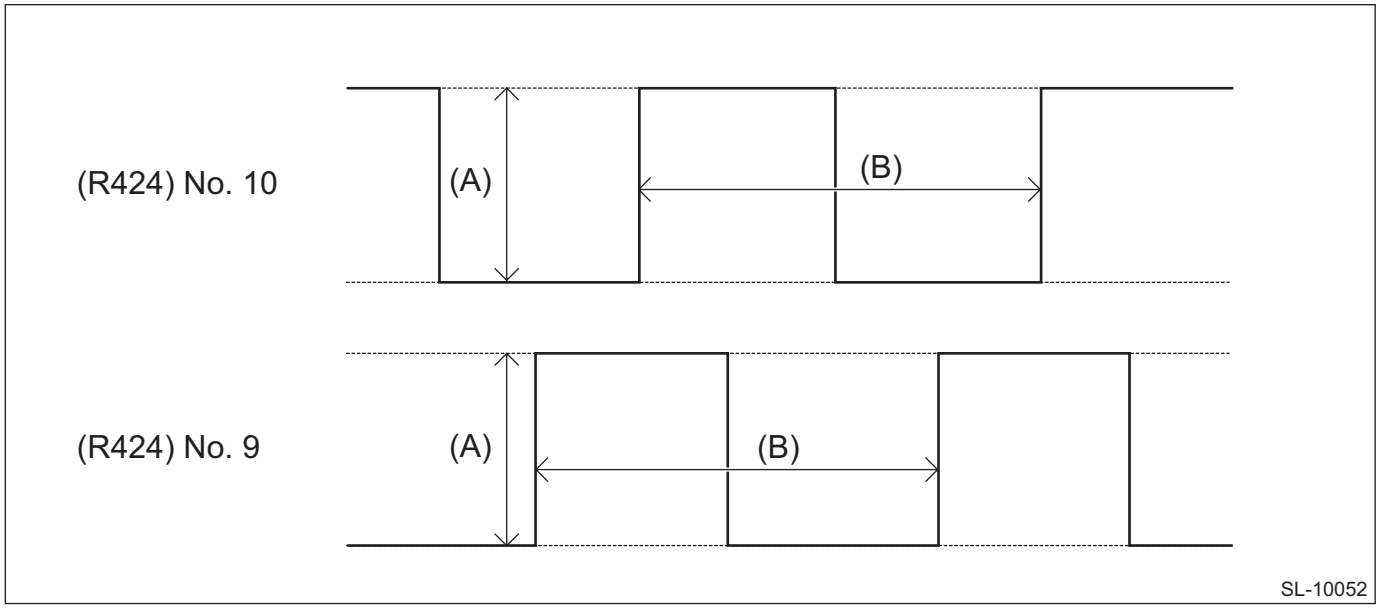
- When the power rear gate is closed



(A) Approx. 10 V

(B) Approx. 14 ms (Waveform cycle changes according to the time the power rear gate is opened/closed.)

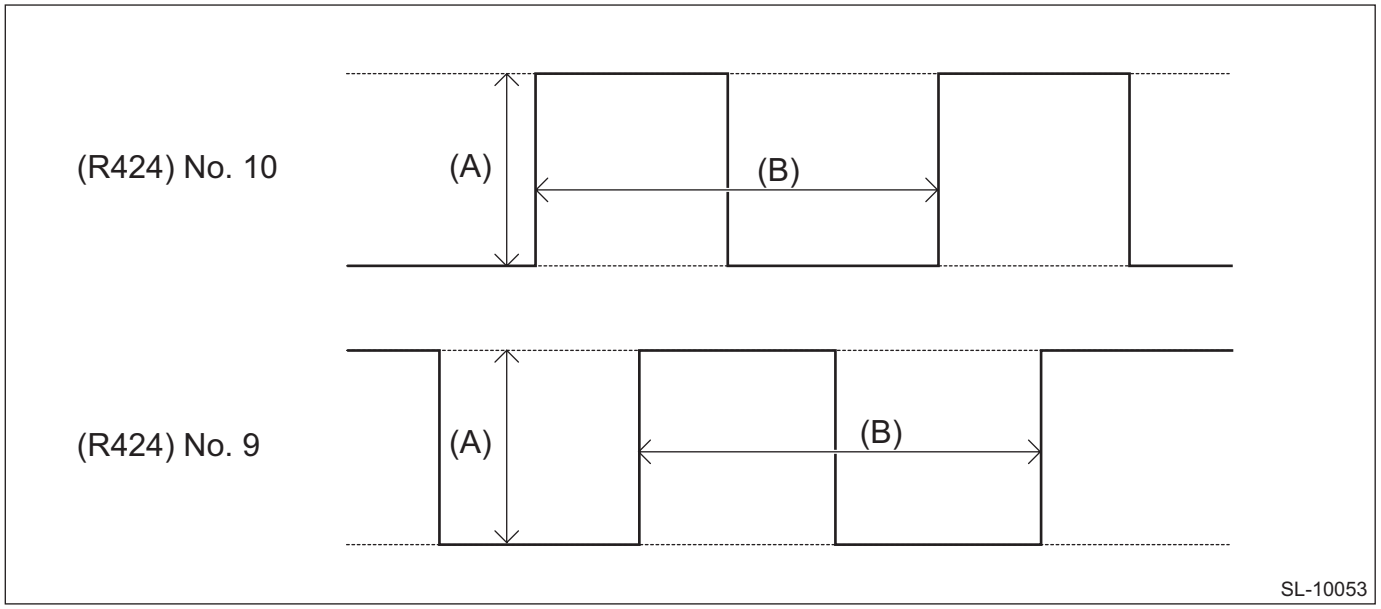
G: DTC B2511 ROTATION SENSOR FAILURE (REVERSE DIRECTION PULSE FAILURE)



DTC DETECTING CONDITION:
When output of the power rear gate drive unit rotation sensor is different from the direction that it should be.
TROUBLE SYMPTOM:
Auto-operation does not function.
WIRING DIAGRAM:
Power rear gate system <Ref. to WI-356, WIRING DIAGRAM, Power Rear Gate System.>

Step		Check	Yes	No
1	**CHECK AUTO OPERATION.** 1) Turn the ignition switch to OFF. 2) Using operation switch, perform power rear gate auto open/close operation from full close position or full open position.	Does it work as fully open → fully close and fully close → fully open?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, read DTC of PRG CM.	Is DTC B2511 displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK CURRENT DATA.** 1) Activate the auto closer to a fully closed position. 2) Press the operation switch to perform the auto-open/close operation. 3) Using the Subaru Select Monitor, confirm the «Pulse-count 2» when fully closed and fully open. <Ref. to PRG(diag)-13, Read Current Data.> NOTE: When confirming the current data, display only one item to be checked at a time. When the displayed items are too many, changes in the pulses will not be retrieved.	Does the pulse count increase during the open operation? And does the pulse count decrease during the close operation?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK PRG CM.** Using an oscilloscope, measure the waveform between PRG CM connectors. ***Connector & terminal*** ***(R424) No. 9 (+) — (R424) No. 11 (–):*** ***(R424) No. 10 (+) — (R424) No. 11 (–):***	Does the waveform change as noted in the margin when the power rear gate is manually opened/closed?	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>	Replace the PRG DU. <Ref. to PRG-8, Power Rear Gate Drive Unit.>



NOTE:
- When the power rear gate is open

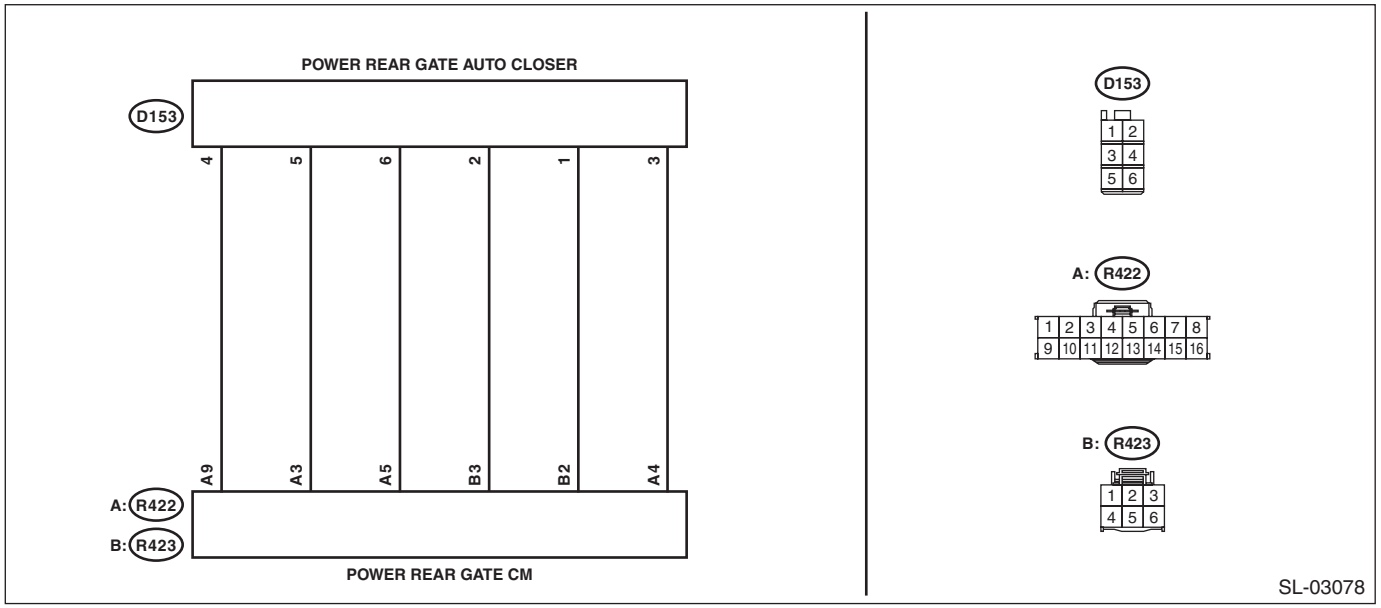
(A) Approx. 10 V

(B) Approx. 15 ms (Waveform cycle changes according to the time the power rear gate is opened/closed.)

- When the power rear gate is closed

(A) Approx. 10 V

(B) Approx. 14 ms (Waveform cycle changes according to the time the power rear gate is opened/closed.)



H: DTC B2512 DAMPER BREAKAGE FAILURE

DTC DETECTING CONDITION:
Abrupt drop in the rear gate has been detected after PRG operation stopped.
TROUBLE SYMPTOM:
Does not hold at the full-open position.

	Step	Check	Yes	No
1	**CHECK REAR GATE CONDITION.** Check the rear gate.	Is there any non genuine parts equipped to the rear gate? Or does it have foreign objects such as snow?	Remove non genuine parts or foreign objects. Go to step **2**.	Go to step **2**.
2	**CHECK REAR GATE.** Hold the rear gate at the fully open position.	Does it hold at the fully open position?	Go to step **3**.	Replace the rear gate dumper stay. <Ref. to EB-61, REAR GATE DAMPER STAY, REMOVAL, Rear Gate.>
3	**CHECK PRG CM.** 1) Close the rear gate fully. 2) Press the operation switch to perform the auto-open operation to a full open position. 3) Repeat the auto-open operation at least three times. 4) Turn the ignition switch to ON. 5) Using the Subaru Select Monitor, read DTC of PRG CM.	Is DTC B2512 displayed? (Current malfunction)	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

I: DTC B2513 LATCH CONDITION FAILURE

DTC DETECTING CONDITION:
When the status of power rear gate auto closer changes differently from normal condition.
TROUBLE SYMPTOM:
Auto-operation does not function.
WIRING DIAGRAM:
Power rear gate system <Ref. to WI-356, WIRING DIAGRAM, Power Rear Gate System.>

	Step	Check	Yes	No
1	**CHECK REAR GATE.** Visually inspect the rear gate.	Is it free from any foreign matters caught in and installed without misalignment?	Go to step **2**.	Remove the foreign matters. Adjust the alignment.
2	**CHECK PRG AUTO CLOSER.** 1) Close the rear gate fully. 2) Disconnect the PRG CM connector. 3) Disconnect the PRG auto closer connector. 4) Check the continuity between PRG auto closer connectors. ***Connector & terminal*** ***(D153) No. 5 — (D153) No. 4 (latch switch)*** ***(D153) No. 3 — (D153) No. 4 (courtesy switch):*** ***(D153) No. 6 — (D153) No. 4 (sector switch):***	Is the continuity condition as follows? Latch switch: No continuity Courtesy switch: No continuity Sector switch: Continuity present	Go to step **3**.	Replace the PRG auto closer. <Ref. to PRG-11, Power Rear Gate Auto Closer.>
3	**CHECK PRG AUTO CLOSER.** 1) Connect the disconnected connectors. 2) Press the operation switch to perform the auto-open operation to a full open position. 3) Disconnect the PRG CM connector. 4) Disconnect the PRG auto closer connector. 5) Check the continuity between PRG auto closer connectors. ***Connector & terminal*** ***(D153) No. 5 — (D153) No. 4 (latch switch)*** ***(D153) No. 3 — (D153) No. 4 (courtesy switch):*** ***(D153) No. 6 — (D153) No. 4 (sector switch):***	Is the continuity condition as follows? Latch switch: Continuity present Courtesy switch: Continuity present Sector switch: Continuity present	Go to step **4**.	Replace the PRG auto closer. <Ref. to PRG-11, Power Rear Gate Auto Closer.>

	Step	Check	Yes	No
4	**CHECK HARNESS.** Measure the resistance between PRG CM connector and chassis ground. ***Connector & terminal*** ***(R422) No. 3 — Chassis ground:*** ***(R422) No. 4 — Chassis ground:*** ***(R422) No. 5 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK HARNESS.** Measure the resistance between PRG CM connector and PRG auto closer connector. ***Connector & terminal*** ***(R422) No. 3 — (D153) No. 5:*** ***(R422) No. 4 — (D153) No. 3:*** ***(R422) No. 5 — (D153) No. 6:***	Is the resistance 10 Ω or less?	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>	Repair or replace the short circuit of the harness.

J: DTC B2514 IG FAILURE

DTC DETECTING CONDITION:
When the LIN communication signal and direct line signal do not match.
TROUBLE SYMPTOM:
The power rear gate does not operate.
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Power rear gate system <Ref. to WI-356, WIRING DIAGRAM, Power Rear Gate System.>

Step		Check	Yes	No
1	**CHECK DTC.** 1) Fully open the rear gate. 2) Turn the ignition switch to OFF. 3) Wait for five seconds or more. 4) Turn the ignition switch to ON. 5) Wait for five seconds or more. 6) Using the Subaru Select Monitor, read DTC of PRG CM.	Is DTC B2514 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK CURRENT DATA.** Check «Ignition Signal» and «IGN SW» using the Subaru Select Monitor. NOTE: When confirming the current data, display only 2 items to be checked at a time. When the displayed items are too many, changes in the pulses will not be retrieved.	When the ignition switch is turned to ON/OFF, are these two data synchronized?	Go to step **3**.	When «Ignition Signal» is not synchronized: Go to step **4**. When «IGN SW» is not synchronized: Go to step **8**.

	Step	Check	Yes	No
3	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the PRG CM connector.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
4	**CHECK CURRENT DATA.** Check the current data «Voltage of IGN» of body integrated unit using Subaru Select Monitor.	When the ignition switch is turned to ON/OFF, does the value change? (At ON: 10 — 15 V)	Go to step **5**.	Check the body control system. <Ref. to BC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
5	**CHECK HARNESS.** 1) Disconnect the PRG CM connector. 2) Disconnect the body integrated unit connector. 3) Measure the resistance between PRG CM connector and body integrated unit. ***Connector & terminal*** ***(i81) No. 18 — (R422) No. 10:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK HARNESS.** Measure the resistance between PRG CM connector and chassis ground. ***Connector & terminal*** ***(R422) No. 10 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair or replace the short circuit of the harness.
7	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between PRG CM connector and chassis ground. ***Connector & terminal*** ***(R422) No. 10 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **8**.	Repair or replace the short circuit of the harness.
8	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between PRG CM connector and chassis ground. ***Connector & terminal*** ***(R422) No. 12 (+) — Chassis ground (–):***	Is the voltage 9 V or more?	Go to step **9**.	Repair or replace the open circuit of harness.
9	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the PRG CM connector.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>

K: DTC B2515 LATCH SW FAILURE

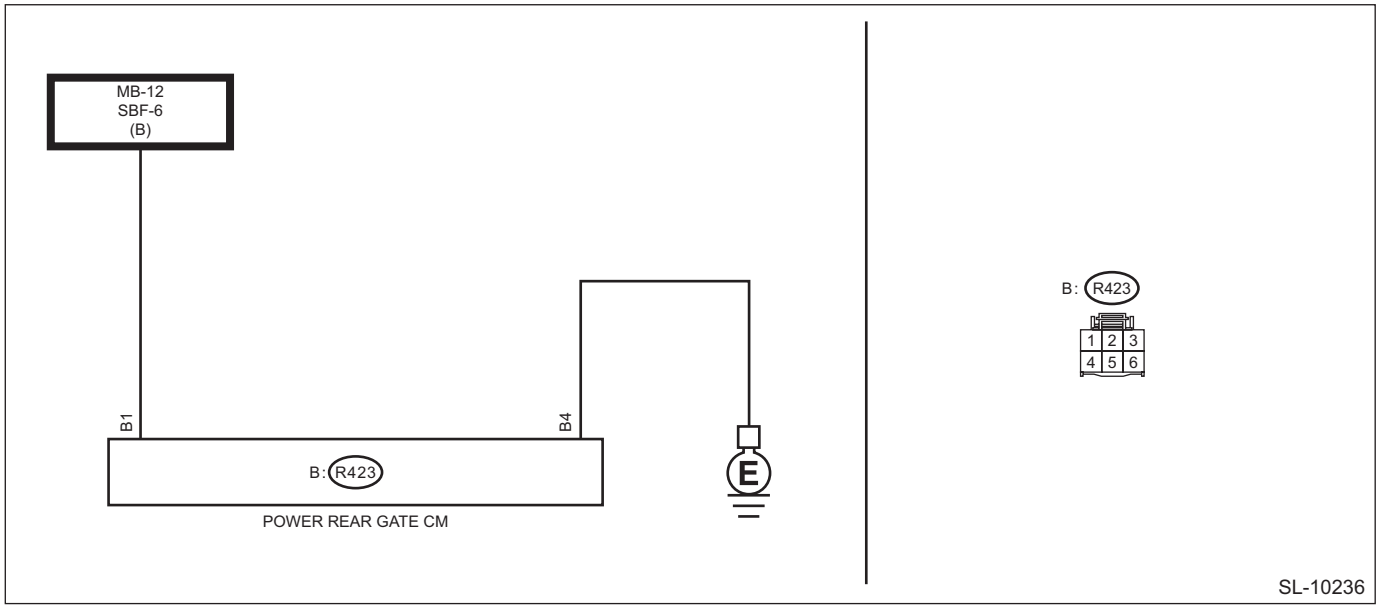
NOTE:
For the diagnostic procedure, refer to DTC B2513. <Ref. to PRG(diag)-32, DTC B2513 LATCH CONDITION FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

L: DTC B2516 SECTOR SW FAILURE

DTC DETECTING CONDITION:
Change of sector SW cannot be detected.
TROUBLE SYMPTOM:
Auto-operation does not function.
WIRING DIAGRAM:
Power rear gate system <Ref. to WI-356, WIRING DIAGRAM, Power Rear Gate System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Using the operation switch, fully open the power rear gate. 2) Turn the ignition switch to ON. 3) Check «SECTOR SW» using the Subaru Select Monitor.	Does the «SECTOR SW» indicate ON?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK SECTOR SW.** 1) Turn the ignition switch to OFF. 2) Disconnect the PRG CM connector. 3) Disconnect the PRG auto closer connector. 4) Check the sector SW. <Ref. to PRG-12, INSPECTION, Power Rear Gate Auto Closer.>	Is the sector switch normal?	Go to step **3**.	Replace the PRG auto closer. <Ref. to PRG-11, Power Rear Gate Auto Closer.>
3	**CHECK HARNESS.** Measure the resistance between PRG CM connector and chassis ground. ***Connector & terminal*** ***(R422) No. 5 — Chassis ground:*** ***(R422) No. 9 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.

	Step	Check	Yes	No
4	**CHECK PRG CM.** Measure the resistance between PRG CM connector and PRG auto closer connector. ***Connector & terminal*** ***(R422) No. 5 — (D153) No. 6:***	Is the resistance 10 Ω or less?	Replace the PRG CM. <Ref. to PRG-6, Power Rear Gate Control Module.>	Repair or replace the open circuit of harness.



M: DTC B2517 COURTESY SW FAILURE

NOTE:
For the diagnostic procedure, refer to DTC B2513. <Ref. to PRG(diag)-32, DTC B2513 LATCH CONDITION FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

N: DTC B2519 POWER +B OPEN

DTC DETECTING CONDITION:
When power supply malfunction is detected in power system.
TROUBLE SYMPTOM:
When SW is operated, buzzer sounds and PRG auto-operation does not function.
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Power rear gate system <Ref. to WI-356, WIRING DIAGRAM, Power Rear Gate System.>

Step		Check	Yes	No
