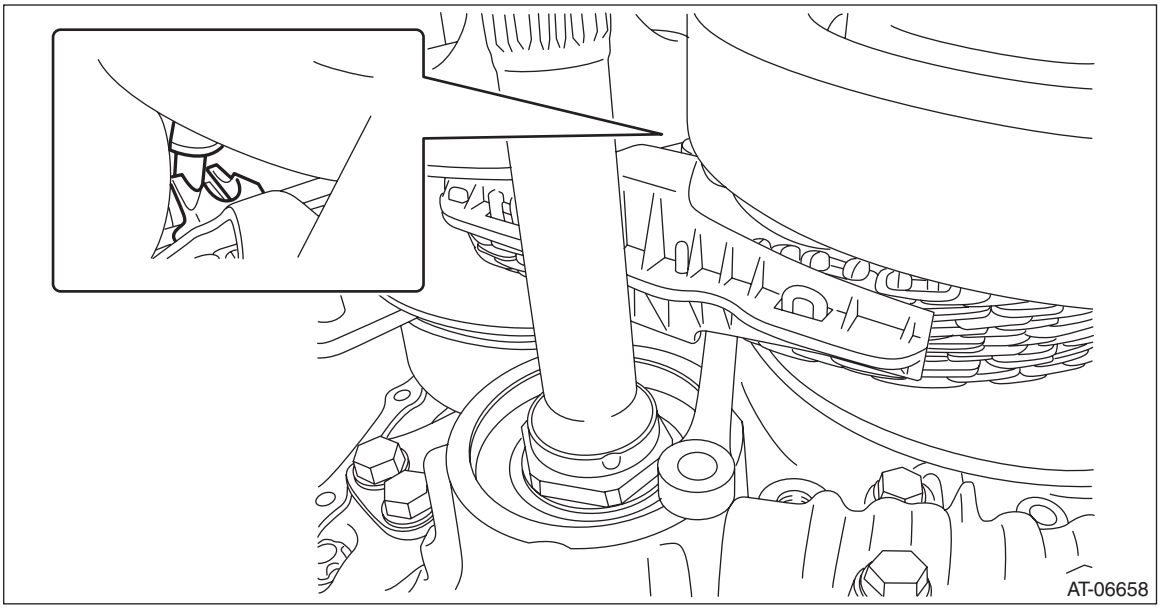
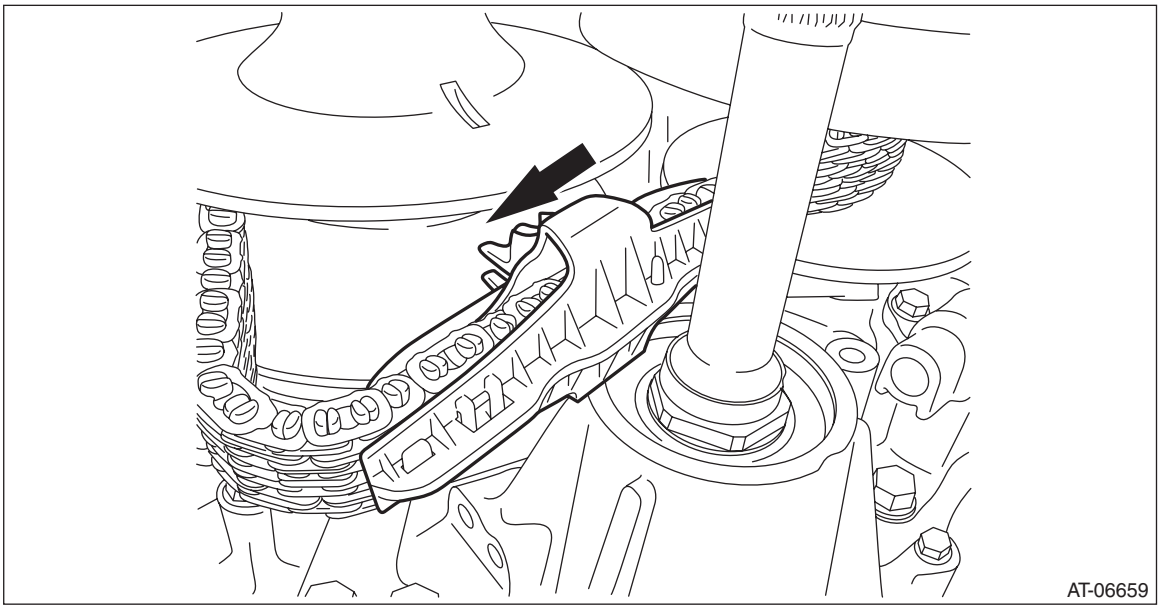
19) Remove the chain guide.
(1) Remove the chain guide from lubrication pipe.
(2) Detach the four claws to remove the chain guide.

AT-06655

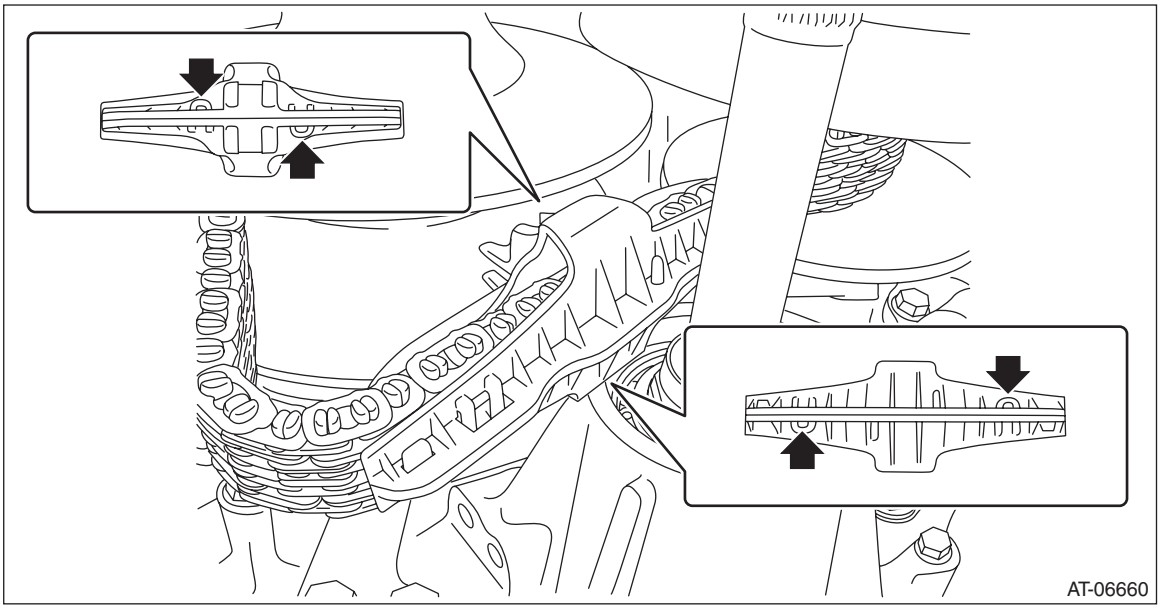


(3) Remove the lubrication pipe.

AT-06656

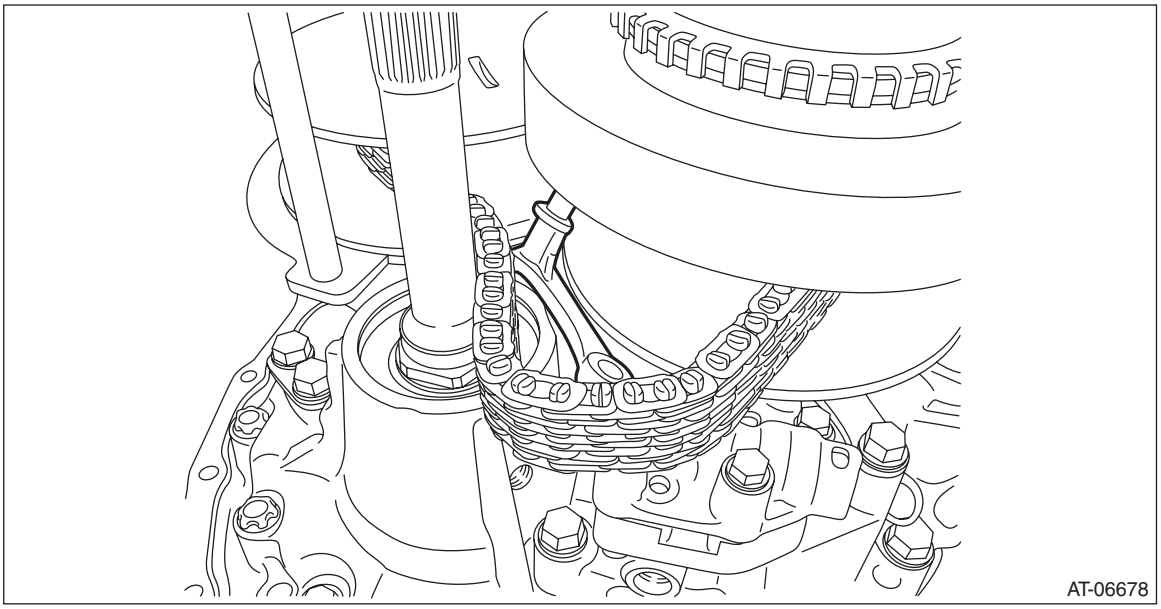


(4) Remove the support rod mounting bolts.

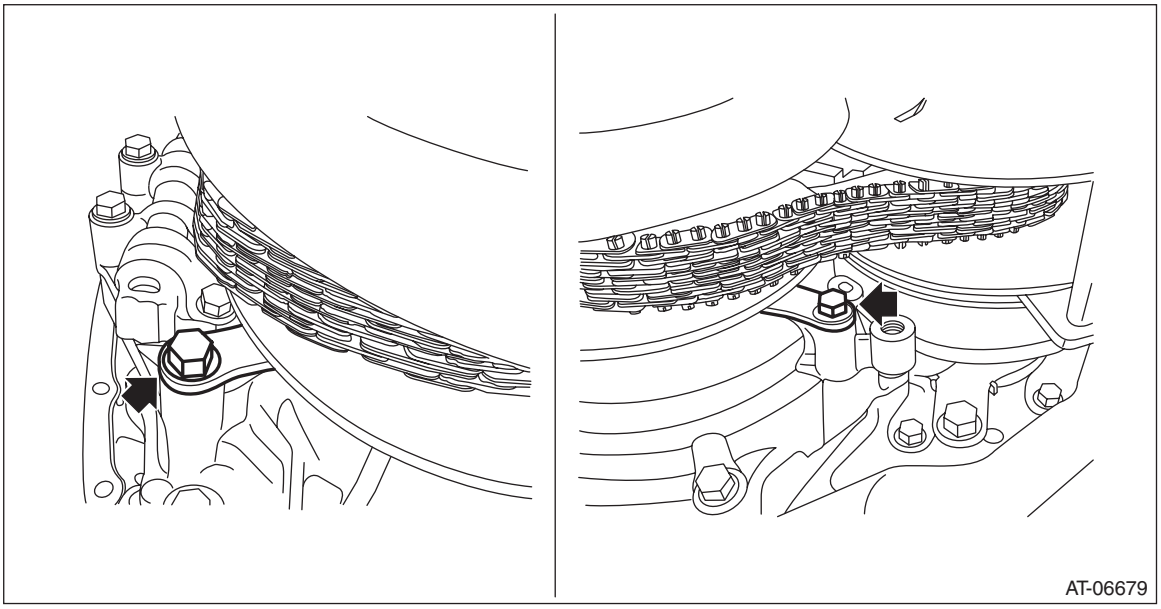


(5) Raise the support rod to remove the chain guide.

(6) Move the chain guide to the secondary pulley side.

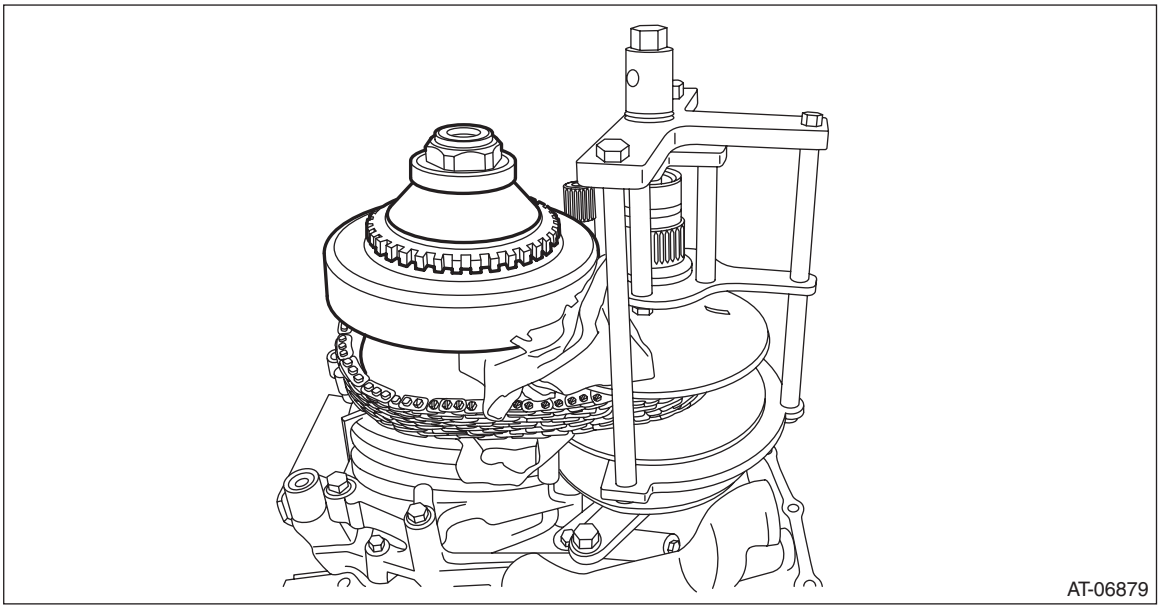


(7) Detach the four claws to remove the chain guide.

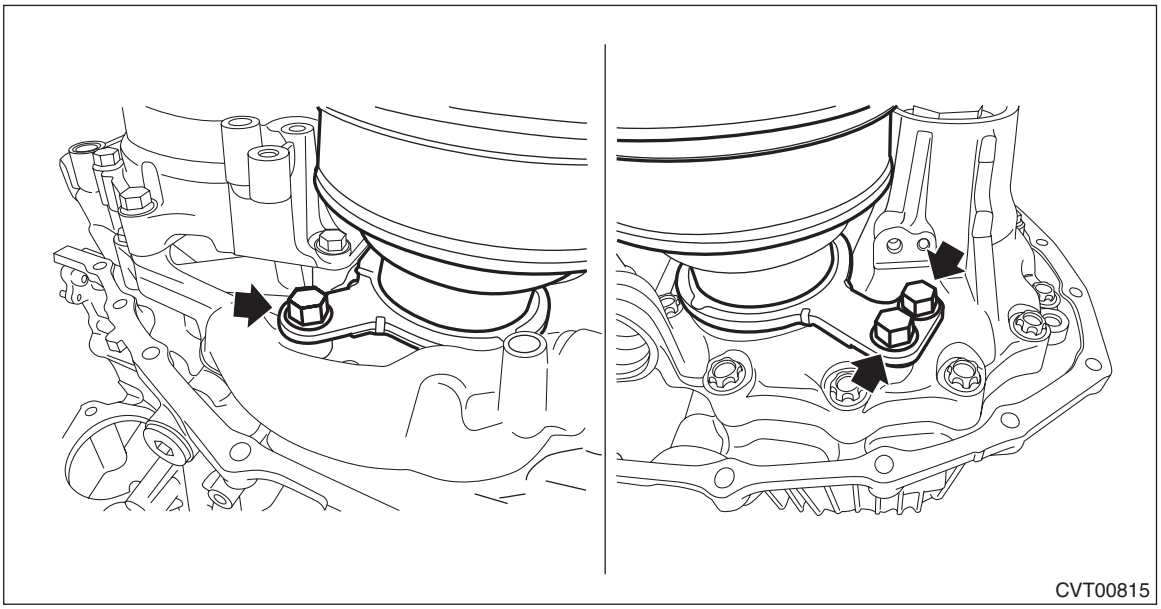


(8) Remove the support rod.

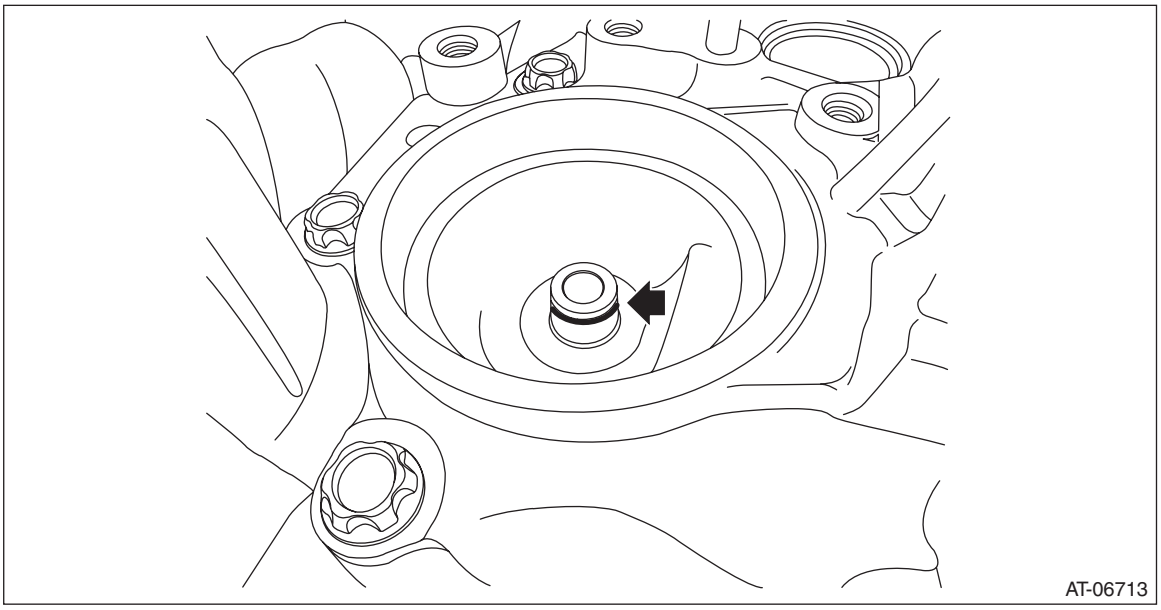
CAUTION:
Protect the both pulleys and variator chain from scratching.



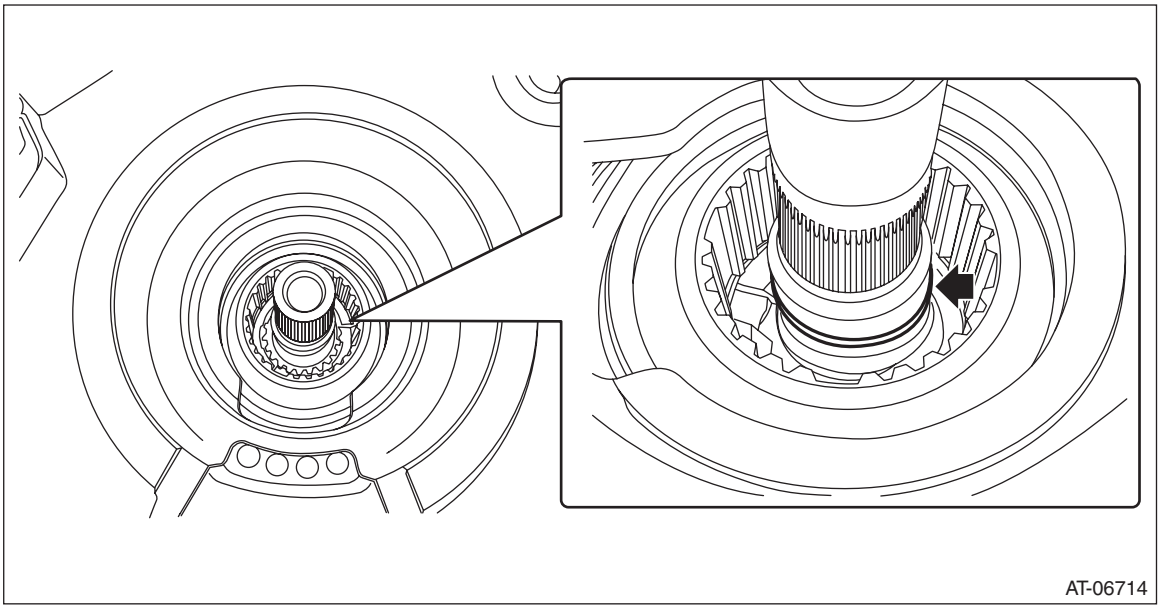
20) Remove the primary pulley mounting bolt.



21) Remove the primary pulley from the reverse brake housing and intersect the V groove of secondary pulley and the V groove of primary pulley. Remove the variator chain from primary pulley, and remove the primary pulley.

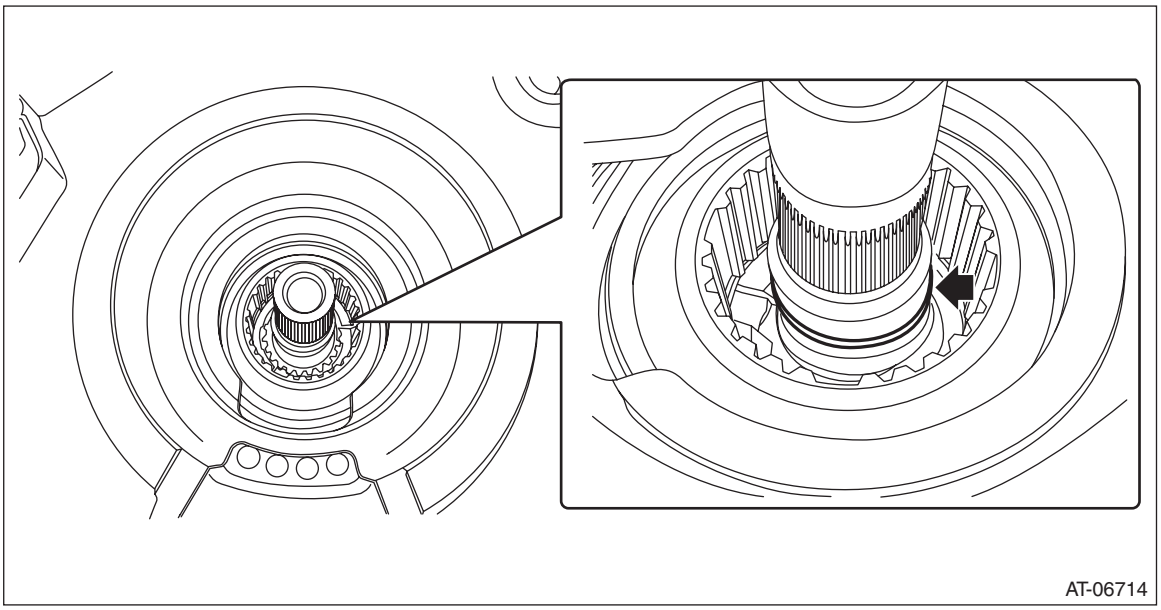


CAUTION:
Cover the V grooves of secondary pulley and primary pulley with cloth to protect the both pulleys and variator chain from scratching.



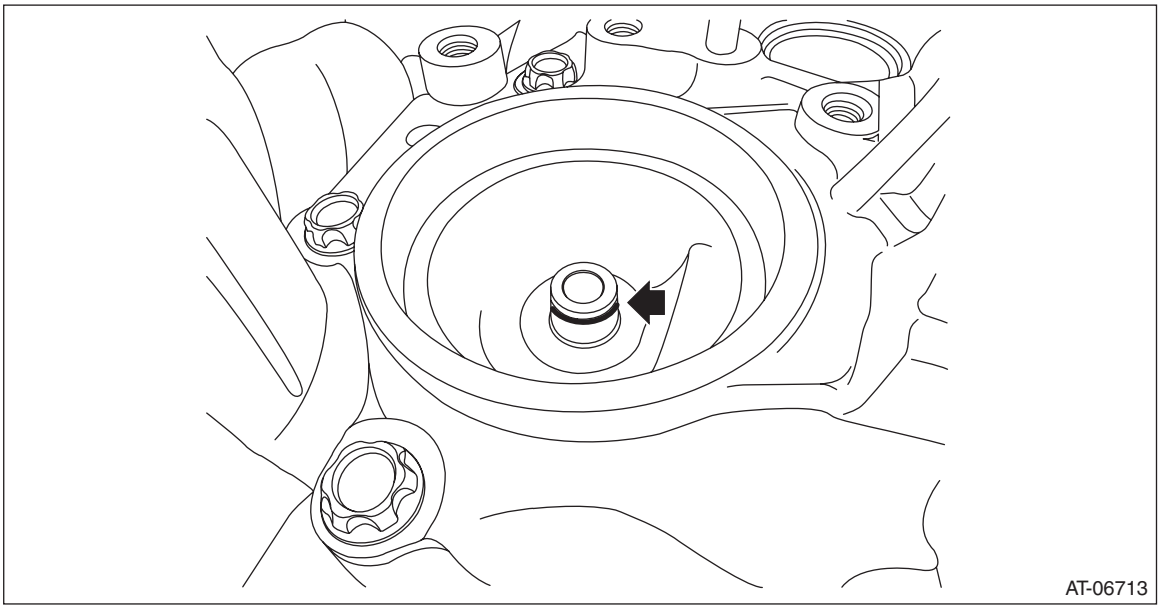
22) Remove the ST (EXPANDER PULLEY) from the secondary pulley.
23) Remove the variator chain from secondary pulley.
24) Remove the secondary pulley mounting bolts, and remove the secondary pulley.

25) Remove the seal ring from drive pinion retainer.



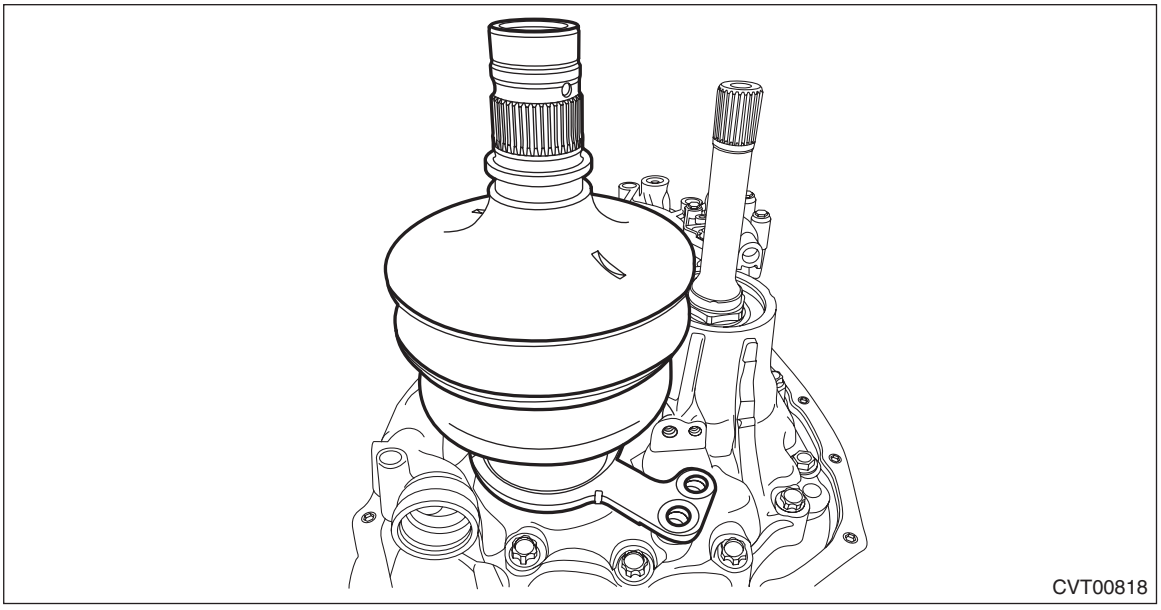
26) Remove the seal ring from the input shaft.

B: INSTALLATION



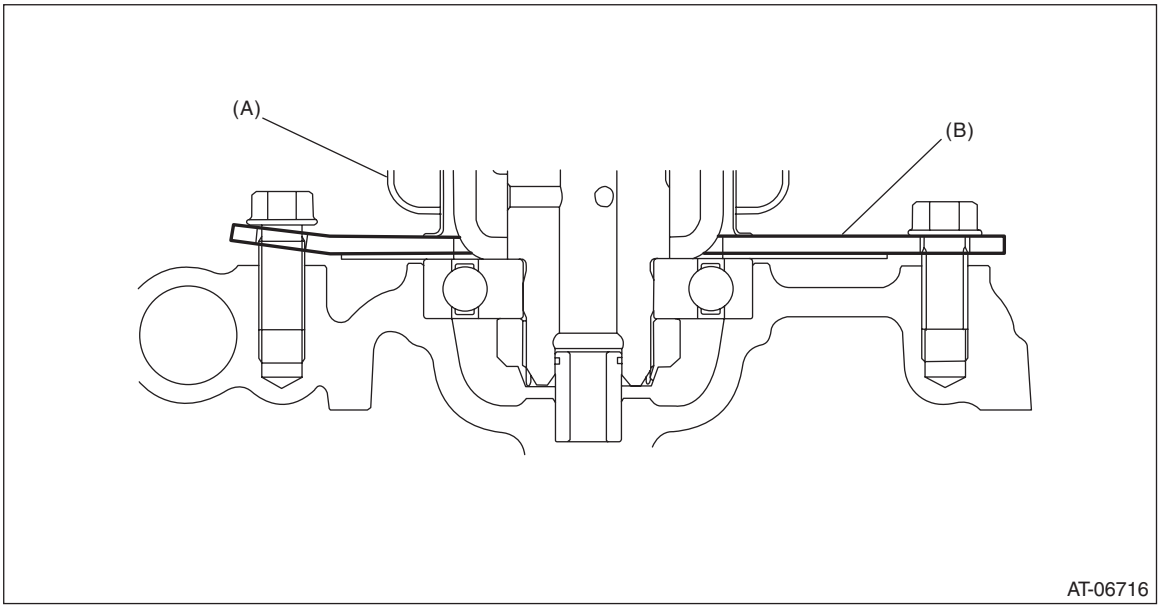
1) Select shims for pulley alignment. <Ref. to CVT(TR580)-278, ADJUSTMENT, Primary Pulley and Secondary Pulley.>
2) Install the seal ring to the input shaft.

NOTE:
- Use new seal rings.
- When installing the seal rings, do not expand the seal rings too much.
- Apply CVTF to the seal rings.



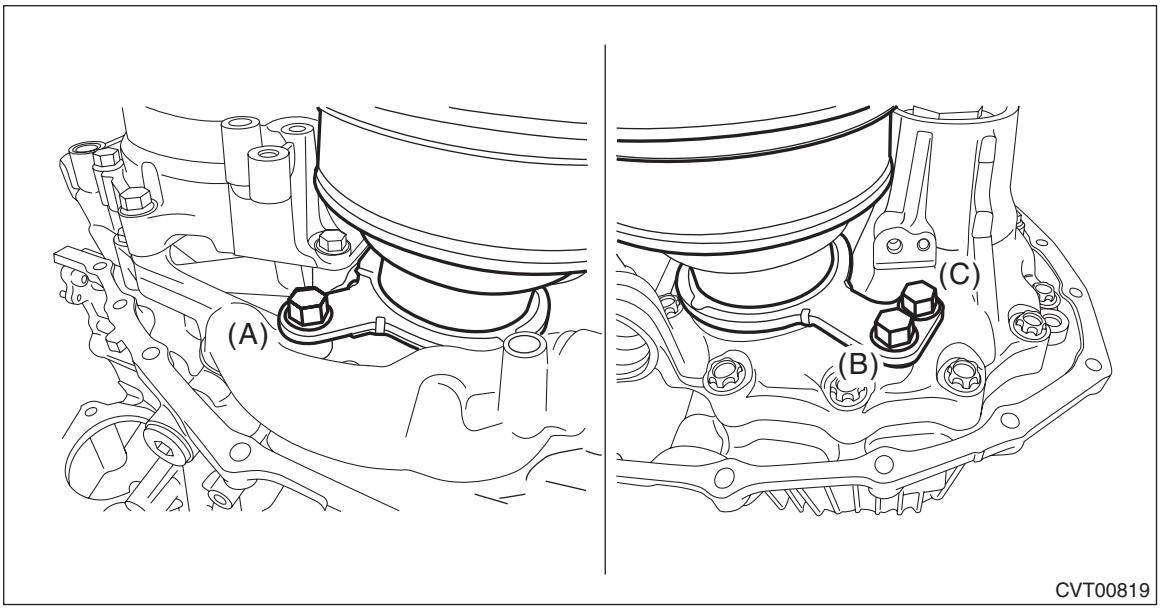
3) Install the seal ring to drive pinion retainer.

NOTE:
- Use new seal rings.
- When installing the seal rings, do not expand the seal rings too much.
- Apply CVTF to the seal rings.

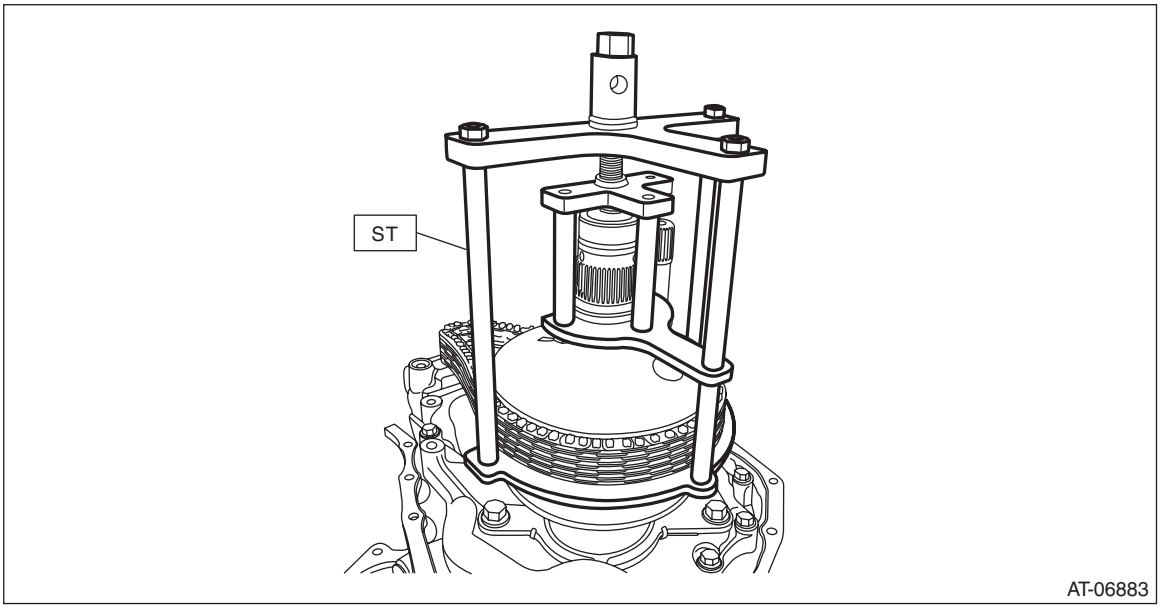


4) Install the selected shims to the primary pulley bearing catch surface.
5) Install the secondary pulley to the drive pinion retainer.

6) Install and tighten the secondary pulley securing bolts.
   (1) Tighten the three bolts until the seating surfaces contact the bearing retainer.



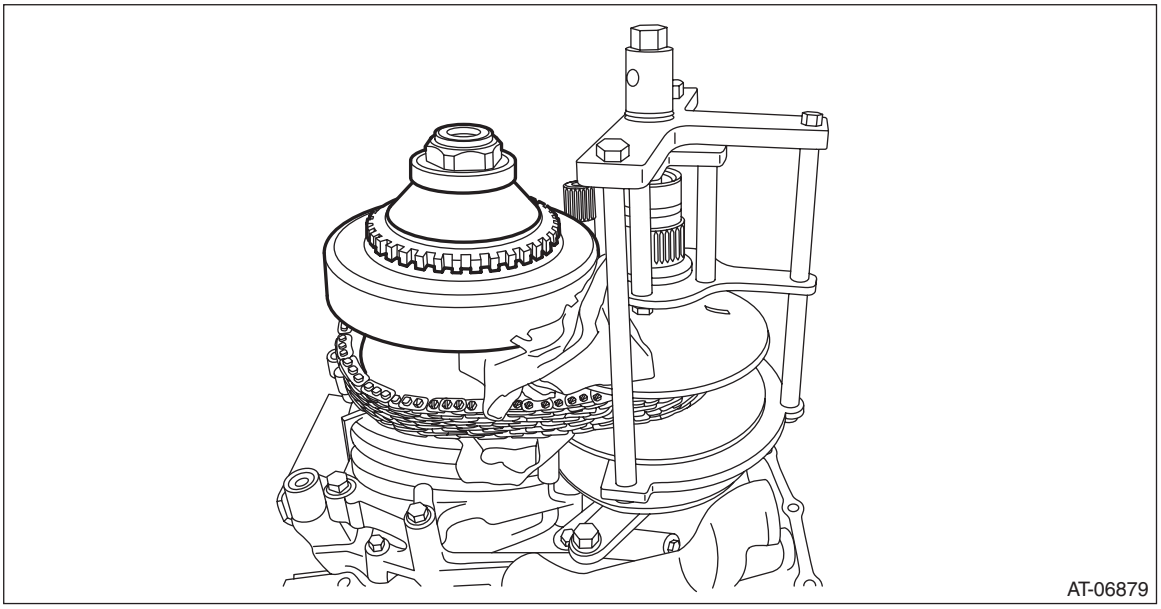
NOTE:
- Be careful not to tilt the bearing retainer of the secondary pulley.
- Apply CVTF to the bolt.



(A) Secondary pulley
(B) Bearing retainer

(2) Tighten the bolts in the order of (A) → (B) → (C) → (B).

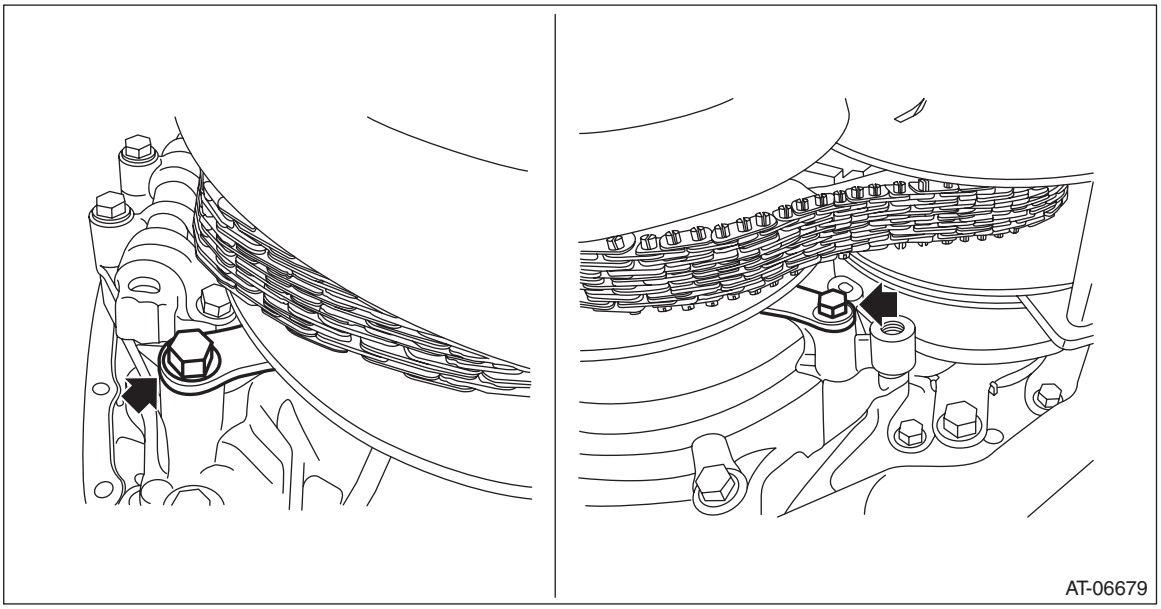
Tightening torque:
67.5 N·m (6.9 kgf-m, 49.8 ft-lb)



7) Place the variator chain on the V groove of the secondary pulley, and set the ST.
ST 18769AA010 EXPANDER PULLEY

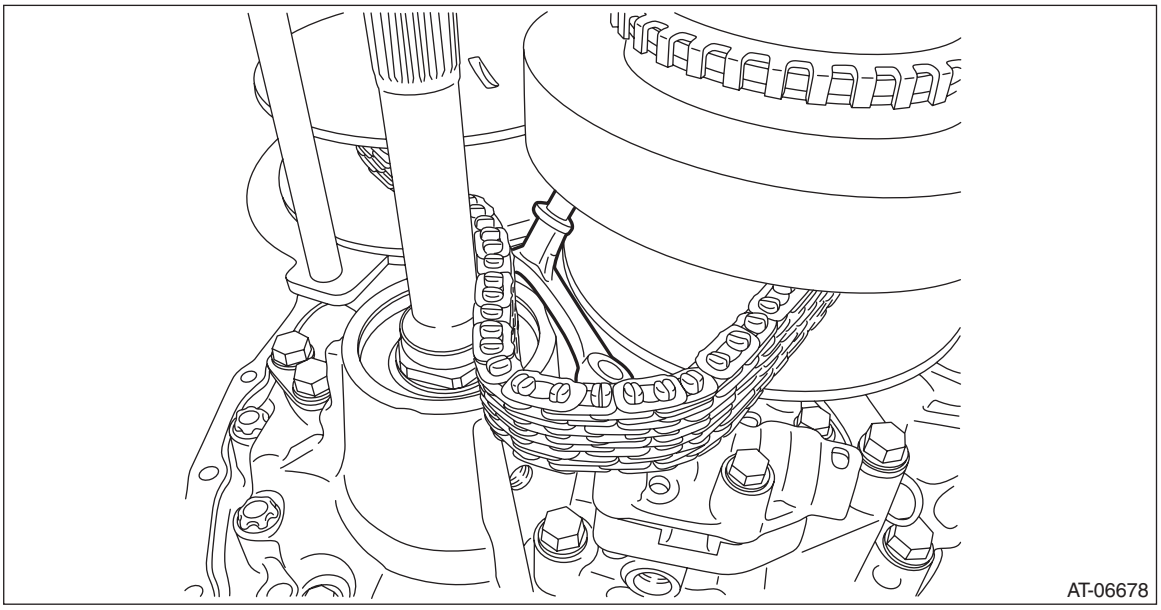
8) Expand the V groove of the secondary pulley.
9) Install the primary pulley to the reverse brake housing together with the variator chain.

CAUTION:
Cover the V grooves of primary pulley and secondary pulley with cloth to protect the both pulleys and variator chain from scratching.



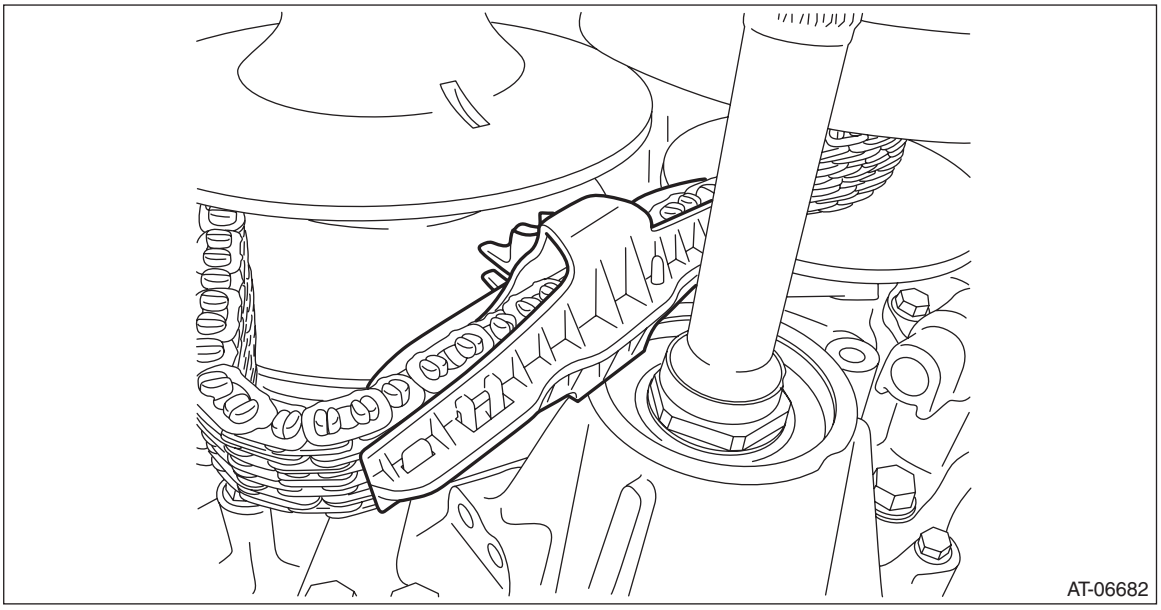
(1) Intersect the V groove of primary pulley and the V groove of secondary pulley and install the secondary pulley while placing the variator chain on secondary pulley.

(2) Install the primary pulley to the reverse brake housing so that the bolt hole of primary bearing retainer and the bolt hole of reverse brake housing are aligned.



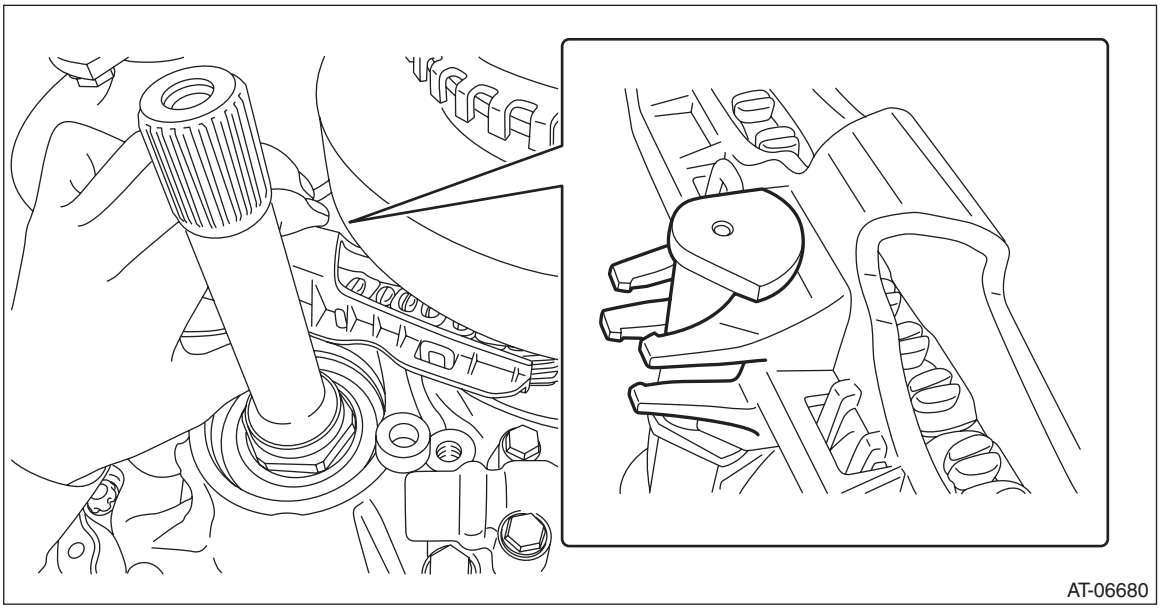
10) Install the primary pulley bolt.

Tightening torque:
21 N·m (2.1 kgf-m, 15.5 ft-lb)



11) Install the chain guide.
(1) Place the support rod inside of the variator chain.

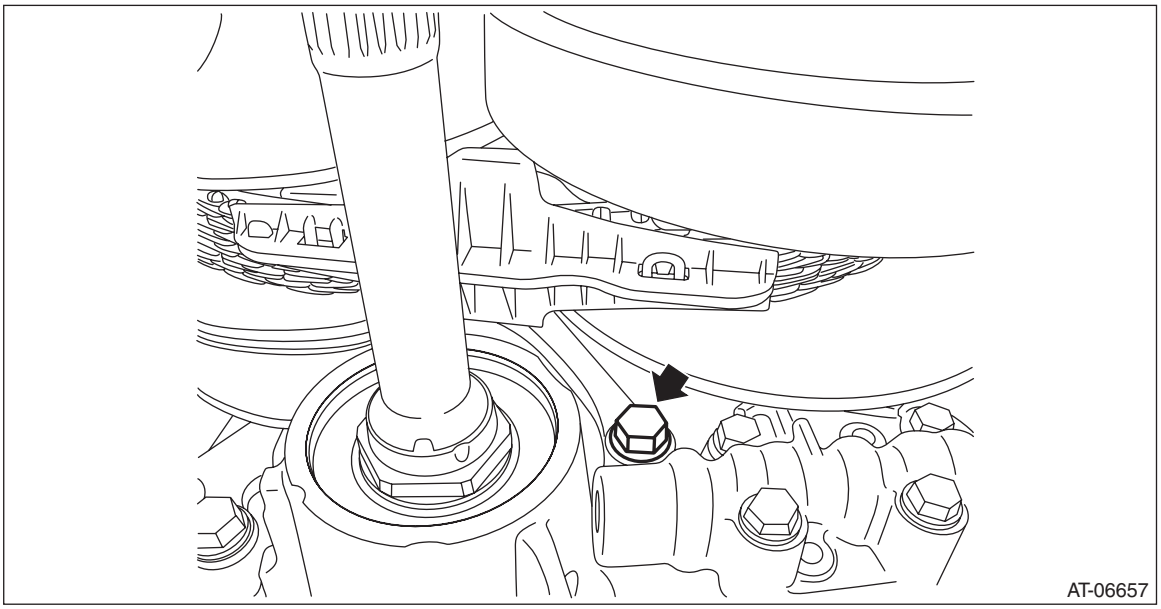
CAUTION:
Protect the both pulleys and variator chain from scratching.



AT-06678

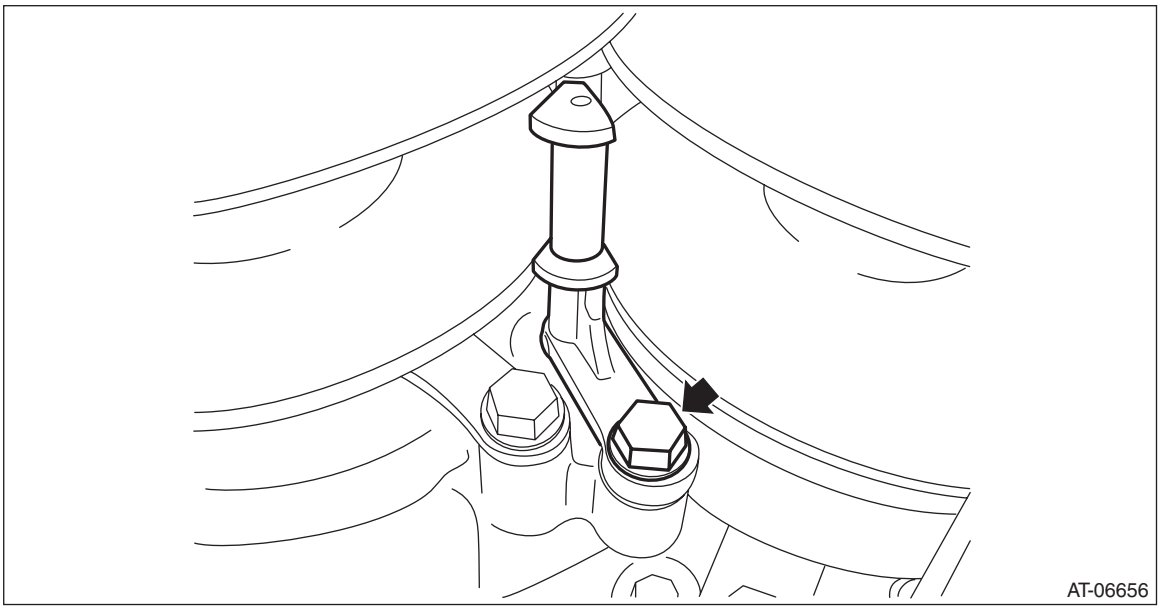
(2) Install the chain guide to the variator chain.

AT-06682



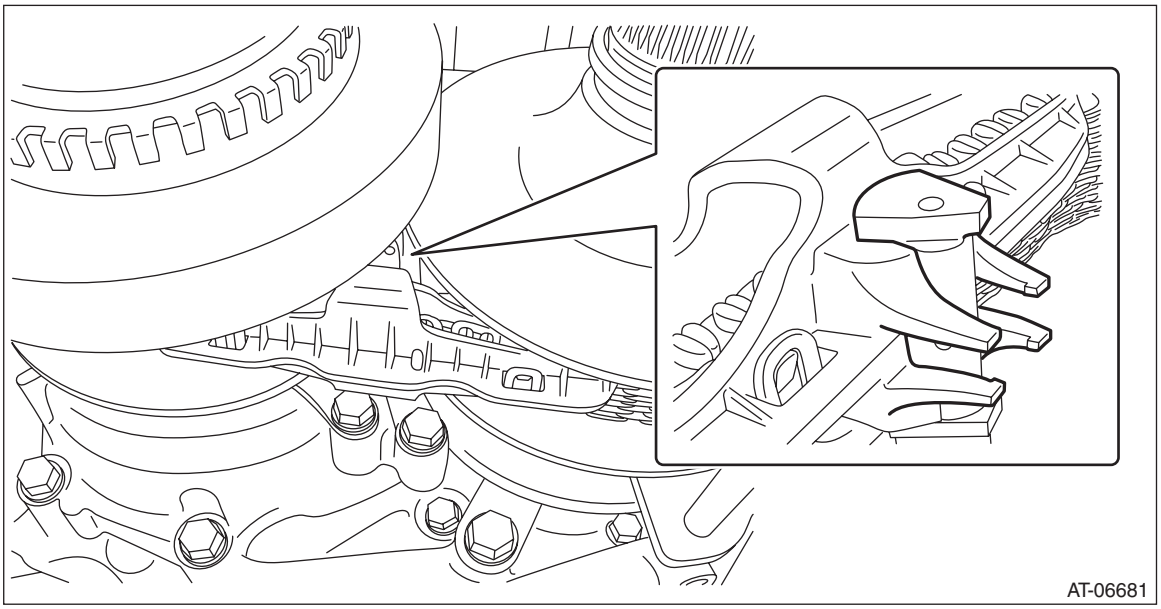
(3) Move the chain guide to the support rod side.

(4) While holding the support rod, press the chain guide so that the support rod runs through between the protrusions of chain guide and install the chain guide to the support rod.



(5) Install the support rod.

Tightening torque:
21 N·m (2.1 kgf-m, 15.5 ft-lb)



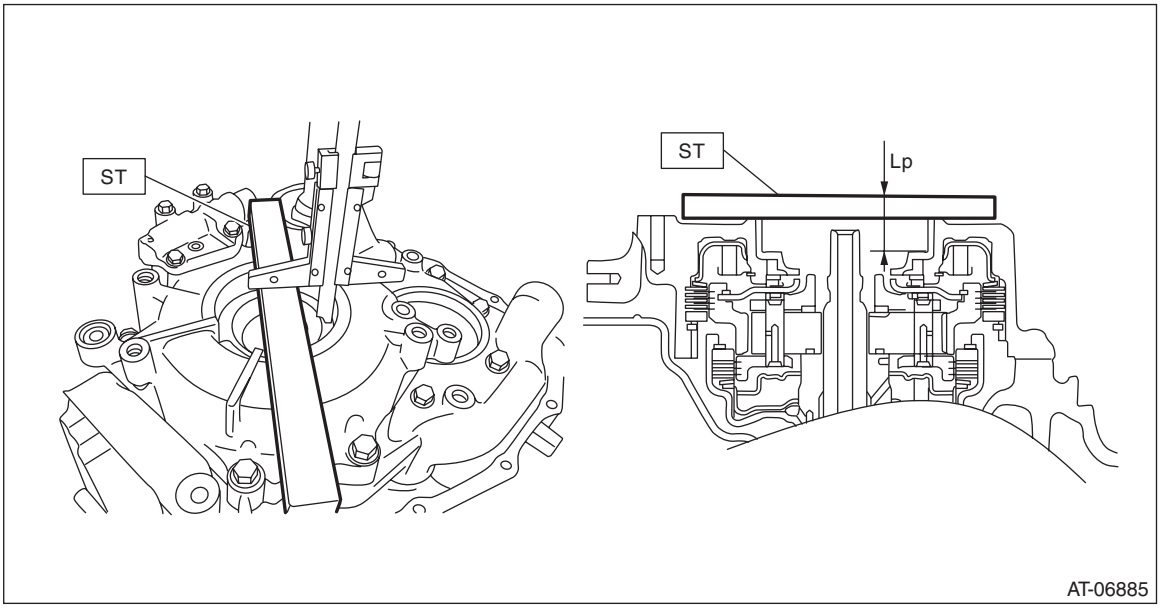
(6) Install the lubrication pipe.

Tightening torque:
21 N·m (2.1 kgf-m, 15.5 ft-lb)

(7) Install the chain guide so that the lubrication pipe runs through between the protrusions of each chain guide. Then remove the ST (PULLEY EXPANDER).

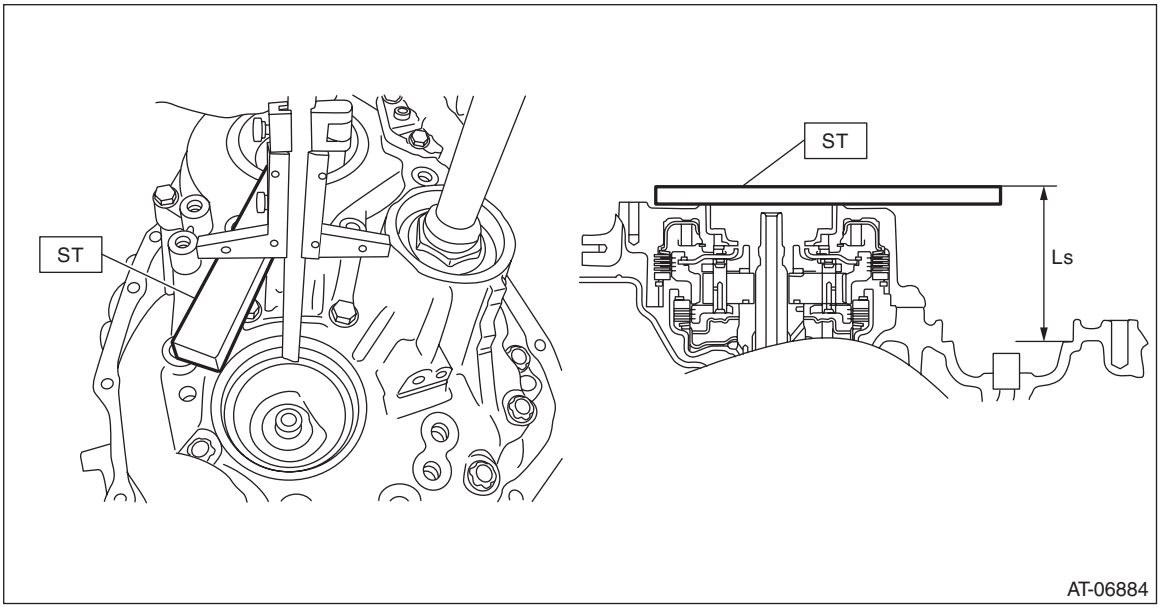
12) Install the reduction drive gear. <Ref. to CVT(TR580)-260, INSTALLATION, Reduction Drive Gear.>
13) Select the reduction drive gear shim. <Ref. to CVT(TR580)-262, ADJUSTMENT, Reduction Drive Gear.>
14) Install the transmission case. <Ref. to CVT(TR580)-249, INSTALLATION, Transmission Case.>
15) Install the transmission control device. <Ref. to CVT(TR580)-243, INSTALLATION, Transmission Control Device.>
16) Install the oil strainer and oil pan. <Ref. to CVT(TR580)-136, INSTALLATION, Oil Pan and Strainer.>
17) Install the reduction driven gear assembly. <Ref. to CVT(TR580)-232, INSTALLATION, Reduction Driven Gear.>
18) Install the transfer driven gear assembly. <Ref. to CVT(TR580)-228, INSTALLATION, Transfer Driven Gear.>
19) Install the transfer clutch assembly. <Ref. to CVT(TR580)-215, INSTALLATION, Transfer Clutch.>
20) Install the parking pawl. <Ref. to CVT(TR580)-231, INSTALLATION, Parking Pawl.>
21) Install the extension case. <Ref. to CVT(TR580)-210, INSTALLATION, Extension Case.>

22) Install the inhibitor switch. <Ref. to CVT(TR580)-115, INSTALLATION, Inhibitor Switch.>
23) Install the secondary speed sensor. <Ref. to CVT(TR580)-123, INSTALLATION, Secondary Speed Sensor.>
24) Install the primary speed sensor. <Ref. to CVT(TR580)-129, INSTALLATION, Primary Speed Sensor.>
25) Install the turbine speed sensor. <Ref. to CVT(TR580)-118, INSTALLATION, Turbine Speed Sensor.>
26) Install the transmission harness. <Ref. to CVT(TR580)-155, INSTALLATION, Transmission Harness.>
27) Install the control valve body. <Ref. to CVT(TR580)-144, INSTALLATION, Control Valve Body.>
28) Install the air breather hose. <Ref. to CVT(TR580)-200, INSTALLATION, Air Breather Hose.>
29) Install the transmission assembly. <Ref. to CVT(TR580)-81, INSTALLATION, Automatic Transmission Assembly.>



C: INSPECTION

- Check the surface of primary and secondary pulley cones for damage or wear.
- Check the primary and secondary pulley for damage.
- Check the bearing for seizure or wear.
- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.



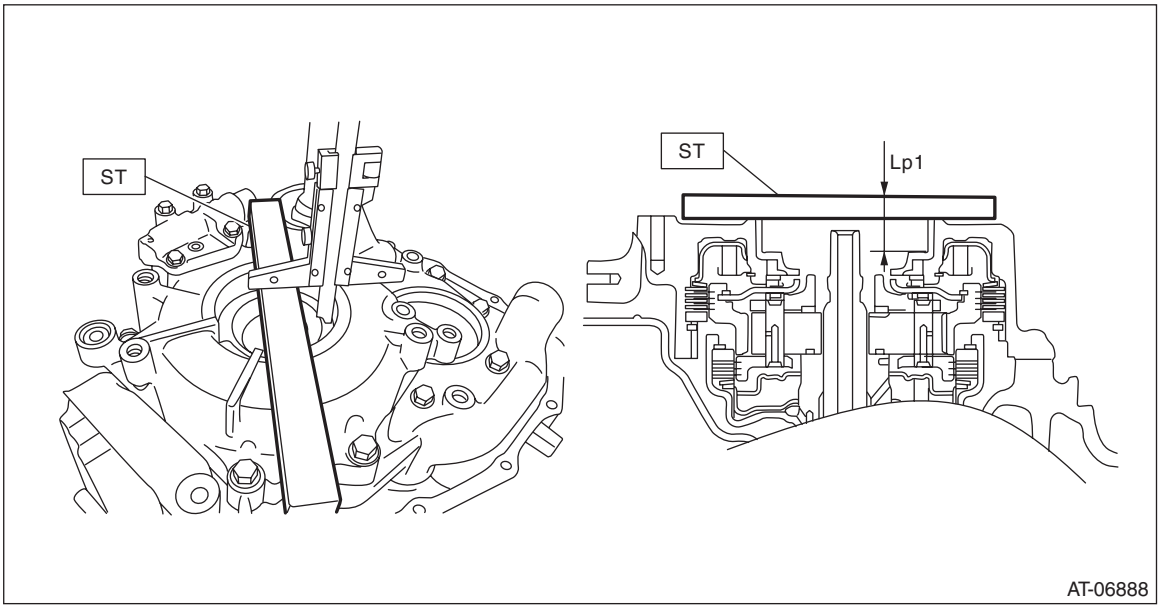
D: ADJUSTMENT

1. PROCEDURE IN REPLACEMENT OF PRIMARY AND SECONDARY PULLEY, OR IN REPLACEMENT OF PRIMARY PULLEY, SECONDARY PULLEY AND VARIATOR CHAIN

1) Measure depth “Lp” from the ST upper face to the primary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE

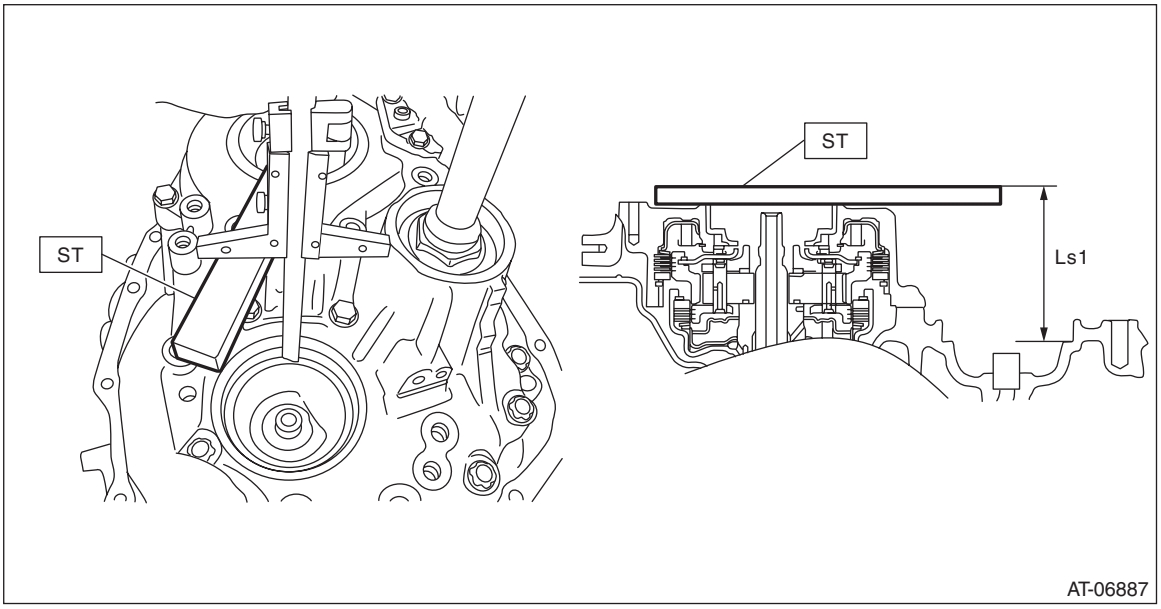
2) Measure the depth “Ls” from the ST upper face to the secondary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE

3) Calculate the following formula.
Calculation formula:
T (mm) = B – A + Lp – Ls – 28.602
[T (in) = B – A + Lp – Ls – 1.126]
T: Pulley alignment
A: Specified primary pulley dimension
B: Specified secondary pulley dimension
Lp: Depth from the ST upper face to the primary pulley bearing catch surface
Ls: Depth from the ST upper face to the secondary pulley bearing catch surface
28.602 mm (1.126 in): Constant



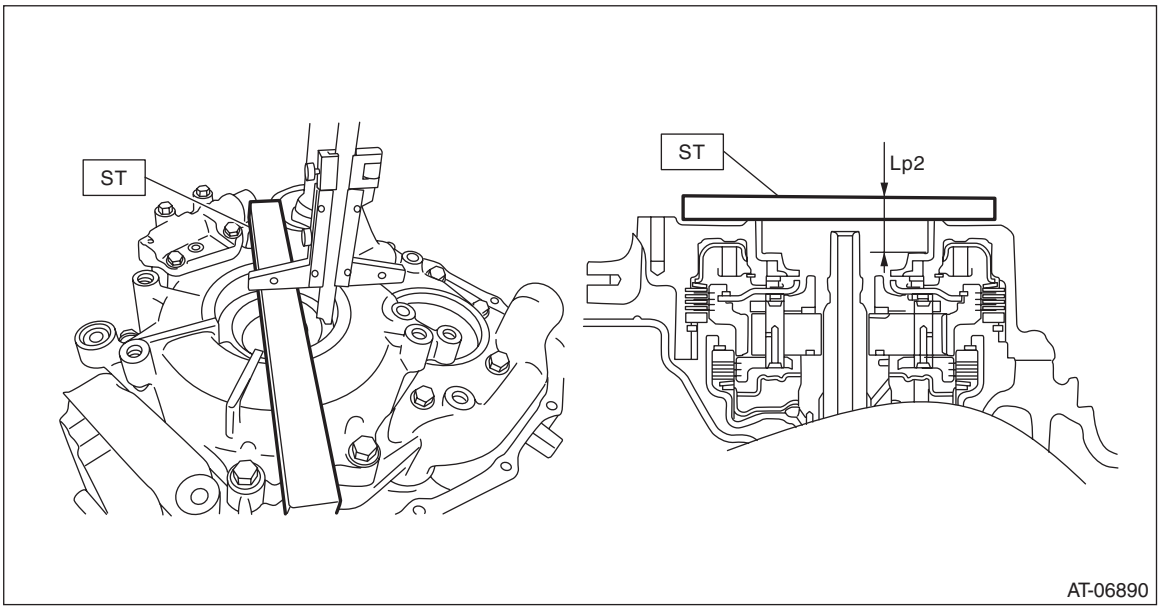
Pulley alignment T mm (in)	Thickness of shim mm (in)
–0.05 — 0.049(–0.002 — 0.002)	No shims
0.050 — 0.149(0.002 — 0.006)	0.1 (0.004)
0.150 — 0.249(0.006 — 0.010)	0.2 (0.008)
0.250 — 0.349(0.010 — 0.014)	0.3 (0.012)
0.350 — 0.449(0.014 — 0.018)	0.4 (0.016)
0.450 — 0.549(0.018 — 0.022)	0.5 (0.020)
0.550 — 0.649(0.022 — 0.026)	0.6 (0.024)
0.650 — 0.749(0.026 — 0.029)	0.7 (0.028)
0.750 — 0.849(0.029 — 0.033)	0.8 (0.031)
0.850 — 0.949(0.033 — 0.037)	0.9 (0.035)
0.950 — 1.049(0.037 — 0.041)	1.0 (0.039)
1.050 — 1.149(0.041 — 0.045)	1.1 (0.043)

4) Select one to two shims so that the total thickness meets the value obtained from step 3).

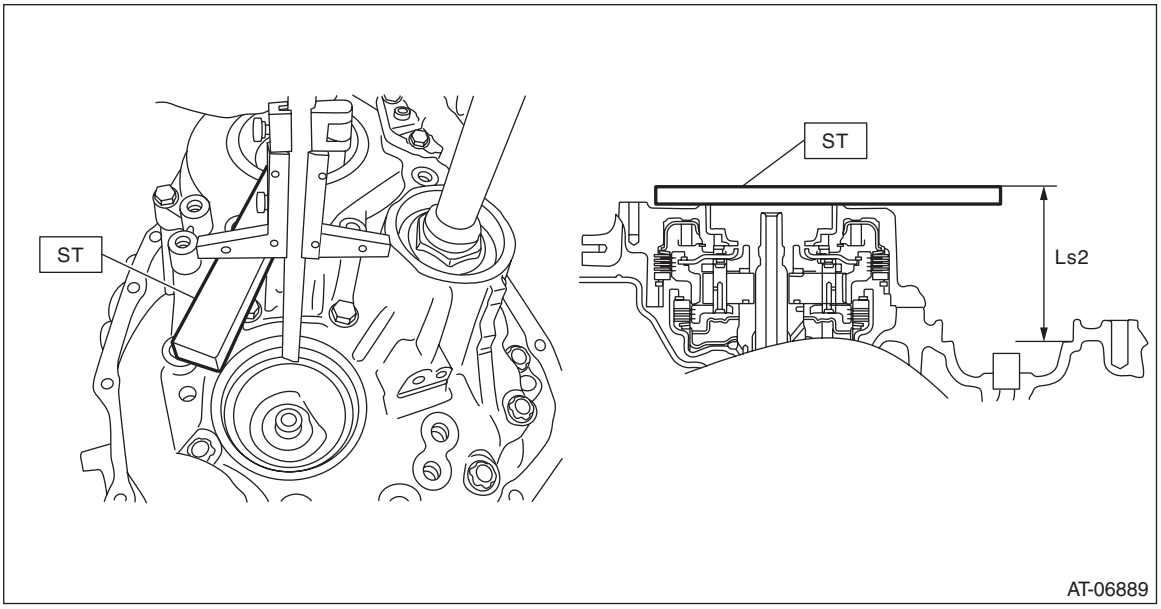


Part No.	Shim thickness mm (in)
32451AA050	0.1 (0.004)
32451AA060	0.2 (0.008)
32451AA070	0.3 (0.012)
32451AA080	0.4 (0.016)
32451AA090	0.5 (0.020)
32451AA100	0.6 (0.024)

2. PROCEDURE WHEN REPLACING ONLY DRIVE PINION RETAINER OR REVERSE BRAKE HOUSING



1) Clean the mating surface of current drive pinion retainer and converter case.
2) Measure and record the shim thickness that is attached on the current reverse brake housing.
3) Using the current drive pinion retainer, measure depth “Lp1” from the ST upper face to the primary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE



4) Using the current drive pinion retainer or current reverse brake housing, measure the depth “Ls1” from the ST upper face to the secondary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE

5) Calculate the “LD1” using the following formula and record it.
Calculation formula:
LD1 mm (in) = Ls1 – Lp1
LD1: Height from the primary pulley bearing catch surface to the secondary pulley bearing catch surface
Lp1: Depth from the ST upper face to the primary pulley bearing catch surface
Ls1: Depth from the ST upper face to the secondary pulley bearing catch surface
6) Using the new drive pinion retainer or new reverse brake housing, measure the depth “Lp2” from the ST upper face to the primary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE

7) Using the new drive pinion retainer or new reverse brake housing, measure the depth “Ls2” from the ST upper face to the secondary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE

8) Calculate the “LD2” using the following formula and record it.
Calculation formula:
LD2 mm (in) = Ls2 – Lp2
LD2: Height from the primary pulley bearing catch surface to the secondary pulley bearing catch surface
Lp2: Depth from the ST upper face to the primary pulley bearing catch surface
Ls2: Depth from the ST upper face to the secondary pulley bearing catch surface

9) Calculate the recorded values of “LD1” and “LD2” to obtain the positive number to select the shims.
Calculation formula: T1 mm (in) = LD1 – LD2 or T2 mm (in) = LD2 – LD1
T1, T2: Difference between new drive pinion retainer or new reverse brake housing and current drive pinion retainer or current reverse brake housing
LD1: Calculated value of current drive pinion retainer or current reverse brake housing
LD2: Calculated value of new drive pinion retainer or new reverse brake housing

Difference of the case (T1) mm (in)	Shim selection procedure
0 — 0.050 (0 — 0.00197)	Select a new shim of the same thickness with the shim that is used on the primary pulley side of the current reverse brake housing.
0.051 — 0.150 (0.00201 — 0.00591)	Select a shim which is 0.1 mm (0.004 in) thicker than the shim that is used on the primary pulley side of the current reverse brake housing.
0.151 — 0.250 (0.00594 — 0.00984)	Select a shim which is 0.2 mm (0.008 in) thicker than the shim that is used on the primary pulley side of the current reverse brake housing.
0.251 — 0.350 (0.00988 — 0.01378)	Select a shim which is 0.3 mm (0.012 in) thicker than the shim that is used on the primary pulley side of the current reverse brake housing.
0.351 — 0.450 (0.01382 — 0.01772)	Select a shim which is 0.4 mm (0.016 in) thicker than the shim that is used on the primary pulley side of the current reverse brake housing.
0.451 — 0.550 (0.01776 — 0.02165)	Select a shim which is 0.5 mm (0.020 in) thicker than the shim that is used on the primary pulley side of the current reverse brake housing.
0.551 — 0.600 (0.02169 — 0.02362)	Select a shim which is 0.6 mm (0.024 in) thicker than the shim that is used on the primary pulley side of the current reverse brake housing.

Difference of the case (T2) mm (in)	Shim selection procedure
0 — 0.050 (0 — 0.00197)	Select a new shim of the same thickness with the shim that is used on the primary pulley side of the current reverse brake housing.
0.051 — 0.150 (0.00201 — 0.00591)	Select a shim which is 0.1 mm (0.004 in) thinner than the shim that is used on the primary pulley side of the current reverse brake housing.
0.151 — 0.250 (0.00594 — 0.00984)	Select a shim which is 0.2 mm (0.008 in) thinner than the shim that is used on the primary pulley side of the current reverse brake housing.
0.251 — 0.350 (0.00988 — 0.01378)	Select a shim which is 0.3 mm (0.012 in) thinner than the shim that is used on the primary pulley side of the current reverse brake housing.
0.351 — 0.450 (0.01382 — 0.01772)	Select a shim which is 0.4 mm (0.016 in) thinner than the shim that is used on the primary pulley side of the current reverse brake housing.
0.451 — 0.550 (0.01776 — 0.02165)	Select a shim which is 0.5 mm (0.020 in) thinner than the shim that is used on the primary pulley side of the current reverse brake housing.
0.551 — 0.600 (0.02169 — 0.02362)	Select a shim which is 0.6 mm (0.024 in) thinner than the shim that is used on the primary pulley side of the current reverse brake housing.

Part No.	Shim thickness mm (in)
32451AA050	0.1 (0.004)
32451AA060	0.2 (0.008)
32451AA070	0.3 (0.012)
32451AA080	0.4 (0.016)
32451AA090	0.5 (0.020)
32451AA100	0.6 (0.024)

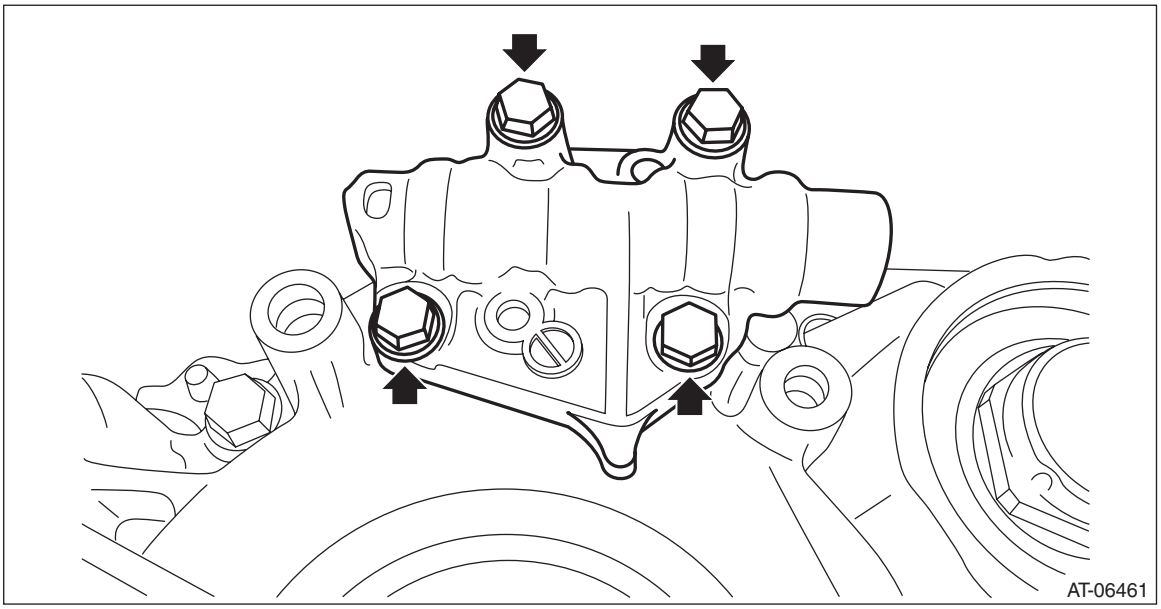
42.Variator Chain

A: REMOVAL

For removal of variator chain, refer to “Primary Pulley and Secondary Pulley”. <Ref. to CVT(TR580)-264, REMOVAL, Primary Pulley and Secondary Pulley.>

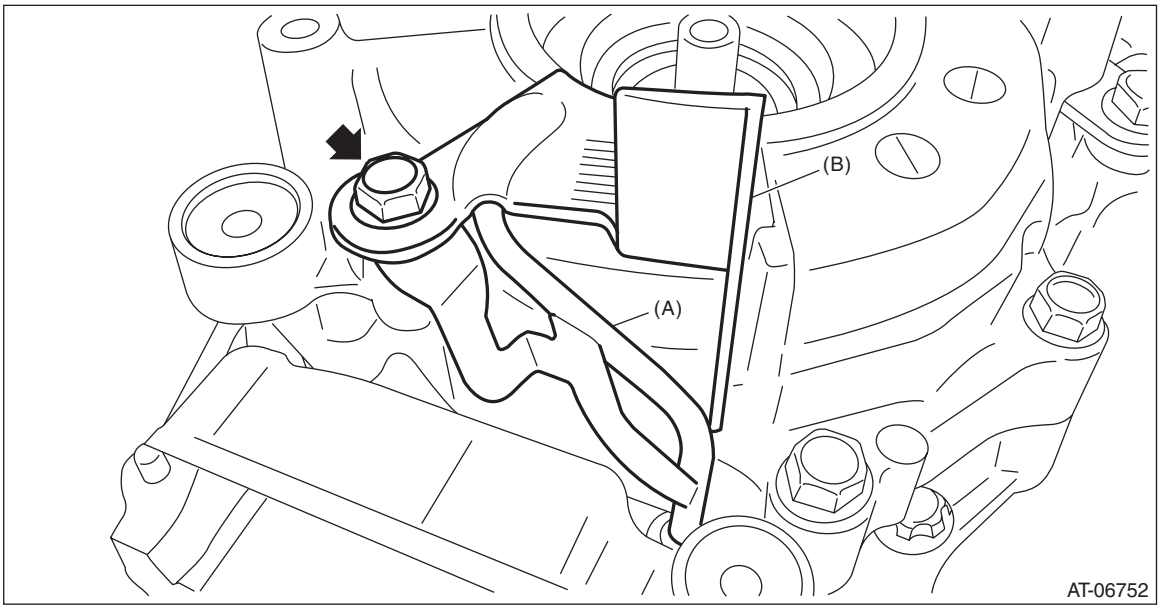
B: INSTALLATION

For installation of variator chain, refer to “Primary Pulley and Secondary Pulley”. <Ref. to CVT(TR580)-271, INSTALLATION, Primary Pulley and Secondary Pulley.>



C: INSPECTION

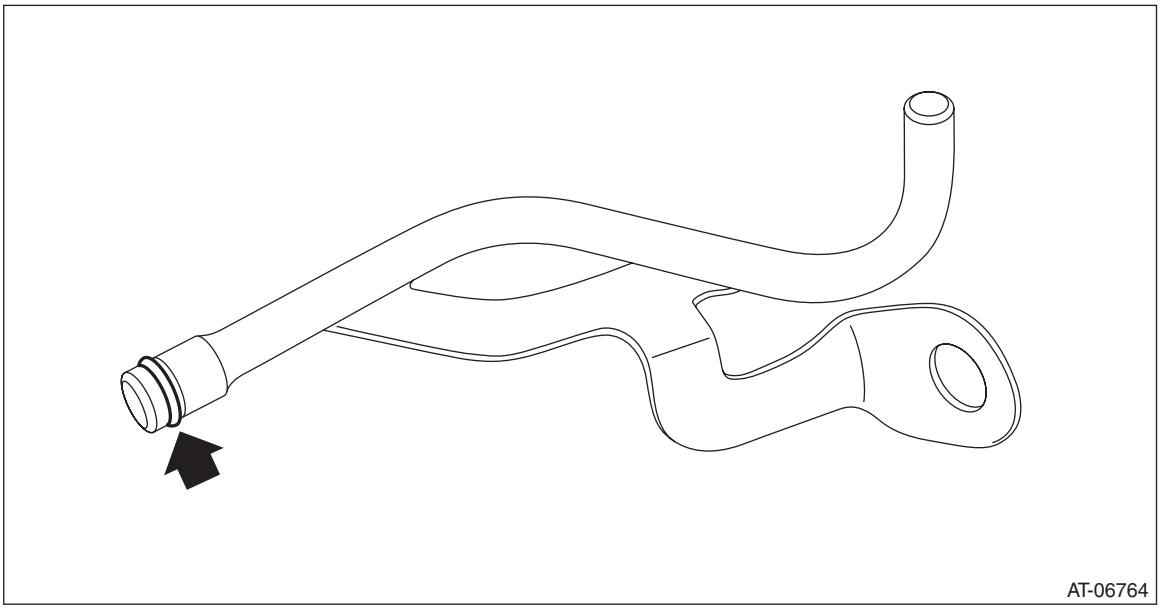
Check the variator chain for damage and wear.



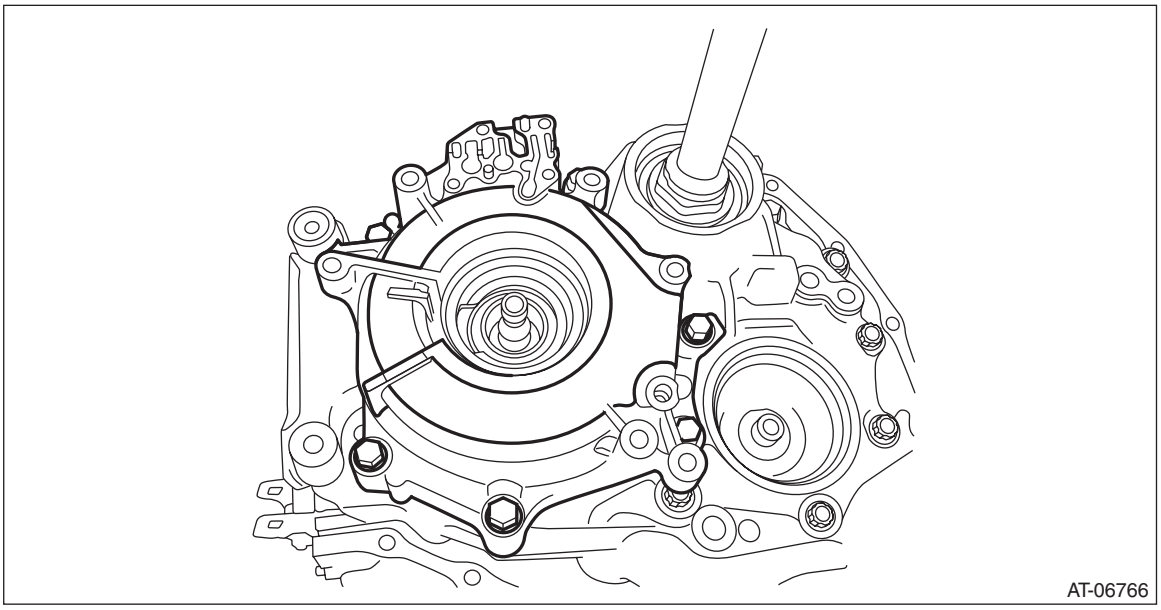
43.Reverse Brake Assembly

A: REMOVAL

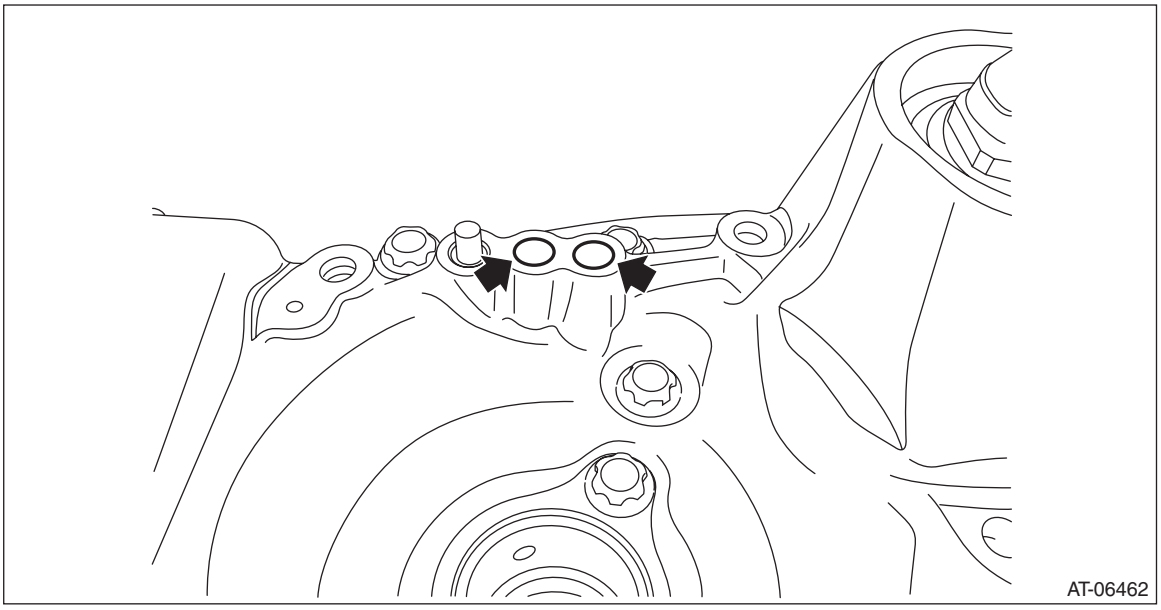
1) Remove the transmission assembly. <Ref. to CVT(TR580)-65, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR580)-198, REMOVAL, Air Breather Hose.>
3) Remove the control valve body. <Ref. to CVT(TR580)-138, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR580)-152, REMOVAL, Transmission Harness.>
5) Remove the turbine speed sensor. <Ref. to CVT(TR580)-118, REMOVAL, Turbine Speed Sensor.>
6) Remove the secondary speed sensor. <Ref. to CVT(TR580)-123, REMOVAL, Secondary Speed Sensor.>
7) Remove the primary speed sensor. <Ref. to CVT(TR580)-128, REMOVAL, Primary Speed Sensor.>
8) Remove the inhibitor switch. <Ref. to CVT(TR580)-114, REMOVAL, Inhibitor Switch.>
9) Remove the extension case. <Ref. to CVT(TR580)-209, REMOVAL, Extension Case.>
10) Remove the transfer clutch assembly. <Ref. to CVT(TR580)-213, REMOVAL, Transfer Clutch.>
11) Remove the transfer driven gear assembly. <Ref. to CVT(TR580)-227, REMOVAL, Transfer Driven Gear.>
12) Remove the parking pawl. <Ref. to CVT(TR580)-230, REMOVAL, Parking Pawl.>
13) Remove the reduction driven gear assembly. <Ref. to CVT(TR580)-232, REMOVAL, Reduction Driven Gear.>
14) Remove the oil pan and oil strainer. <Ref. to CVT(TR580)-135, REMOVAL, Oil Pan and Strainer.>
15) Remove the transmission control device. <Ref. to CVT(TR580)-240, REMOVAL, Transmission Control Device.>
16) Remove the transmission case. <Ref. to CVT(TR580)-246, REMOVAL, Transmission Case.>
17) Remove the reduction drive gear. <Ref. to CVT(TR580)-259, REMOVAL, Reduction Drive Gear.>
18) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR580)-264, REMOVAL, Primary Pulley and Secondary Pulley.>
19) Remove the manual valve assembly and separator plate.



20) Remove the oil guide and lubrication pipe.

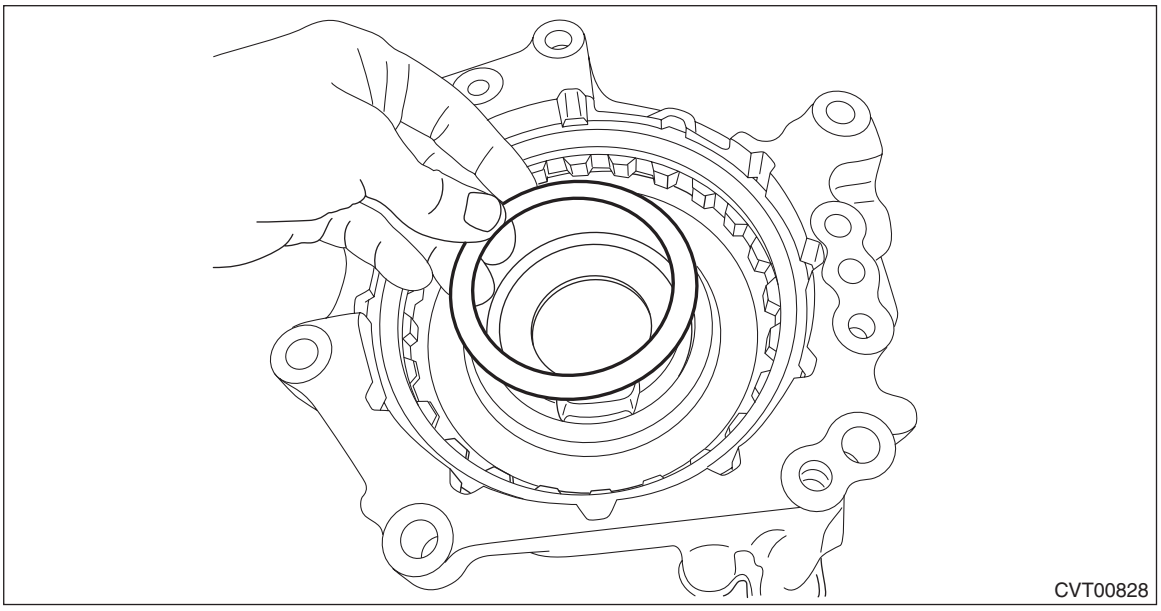


(A) Lubrication pipe
(B) Oil guide

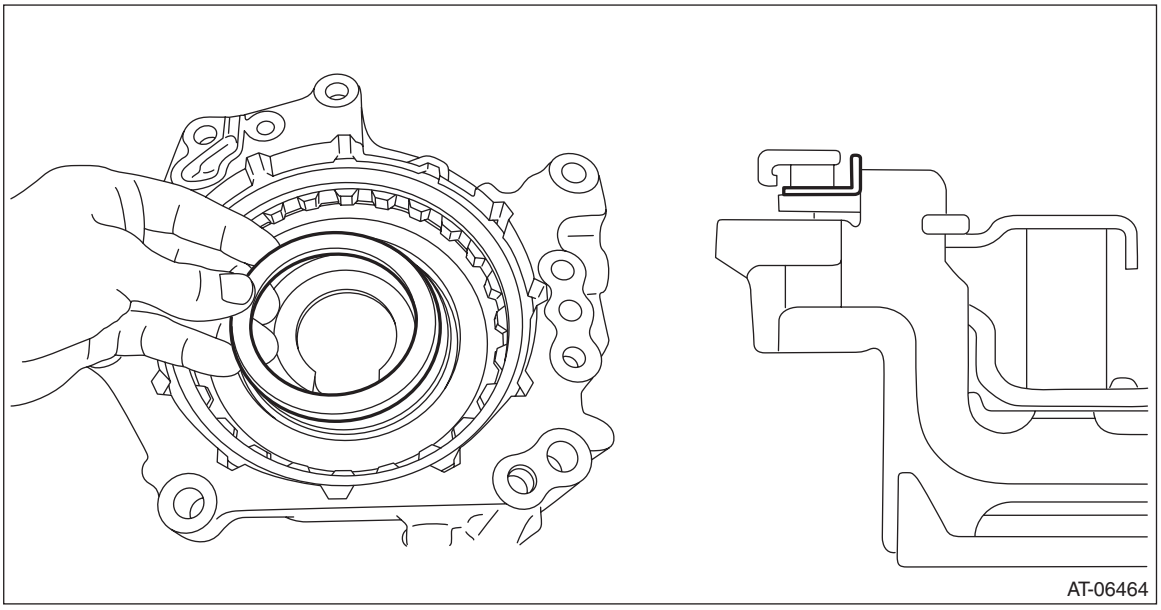


21) Remove the O-ring from lubrication pipe.

22) Remove the reverse brake assembly.

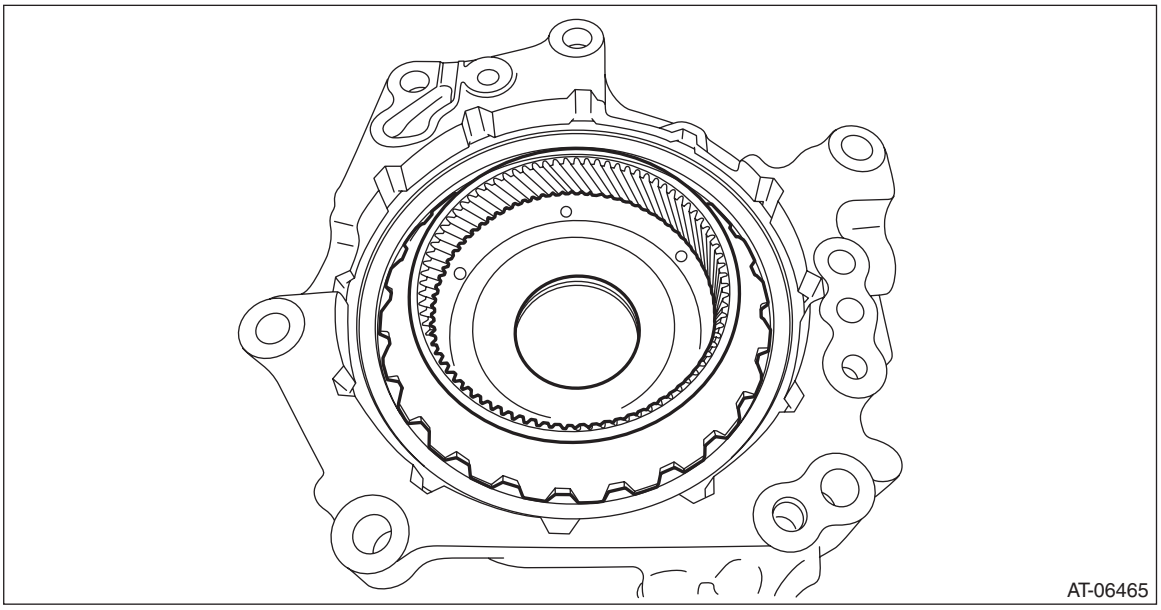


23) Remove the O-rings.



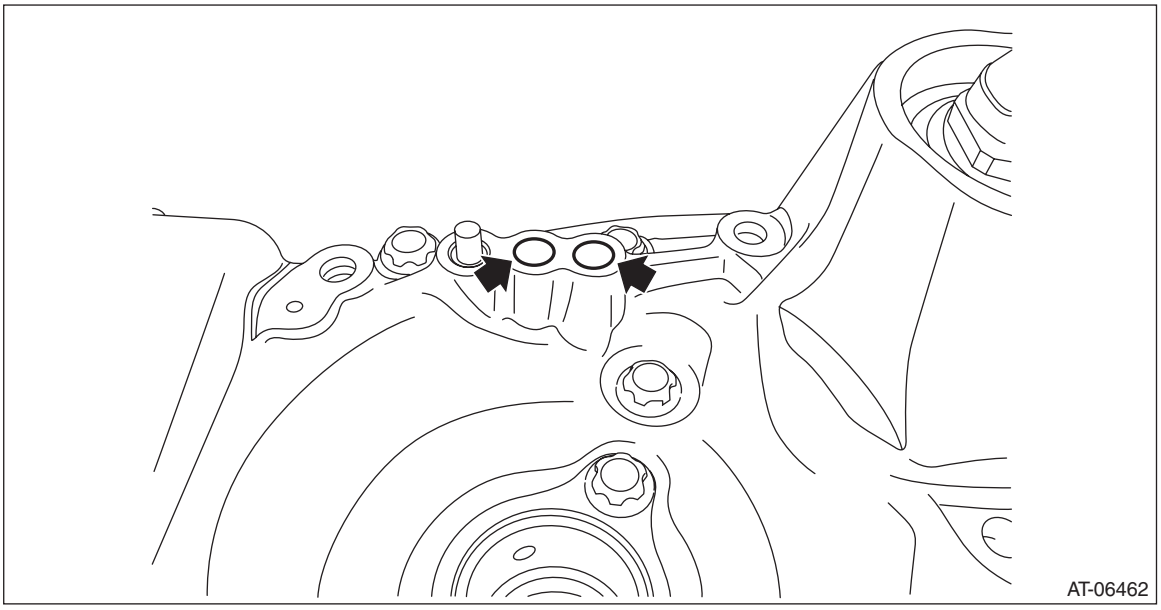
B: INSTALLATION

1) Select a washer. <Ref. to CVT(TR580)-318, ADJUSTMENT, Forward Clutch Assembly.>
2) Install the selected washer to the reverse brake housing.



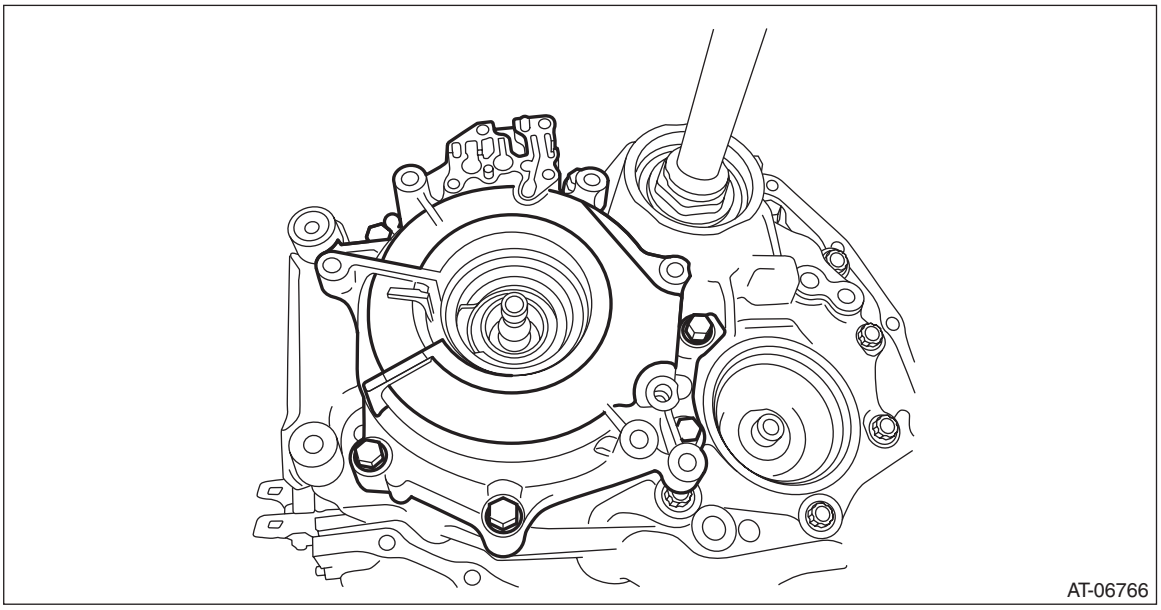
3) Install the thrust bearing to the reverse brake housing.

NOTE:
Face the temper color surface to the reverse brake side.



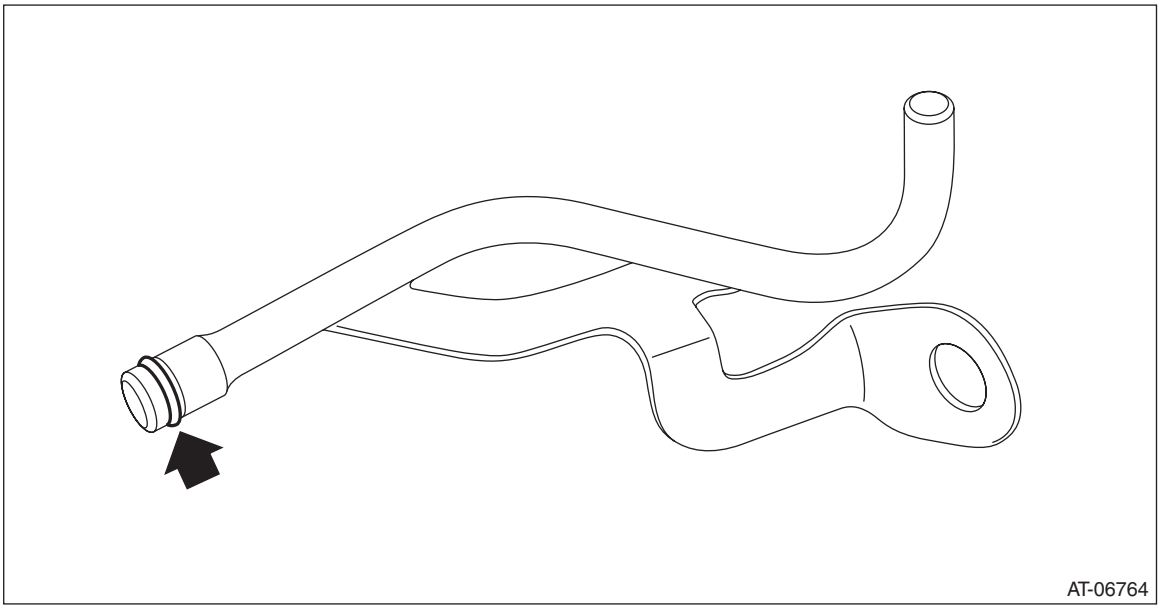
4) Remove the internal gear from the forward clutch assembly, and install it to the reverse brake housing.

5) Install the O-rings.



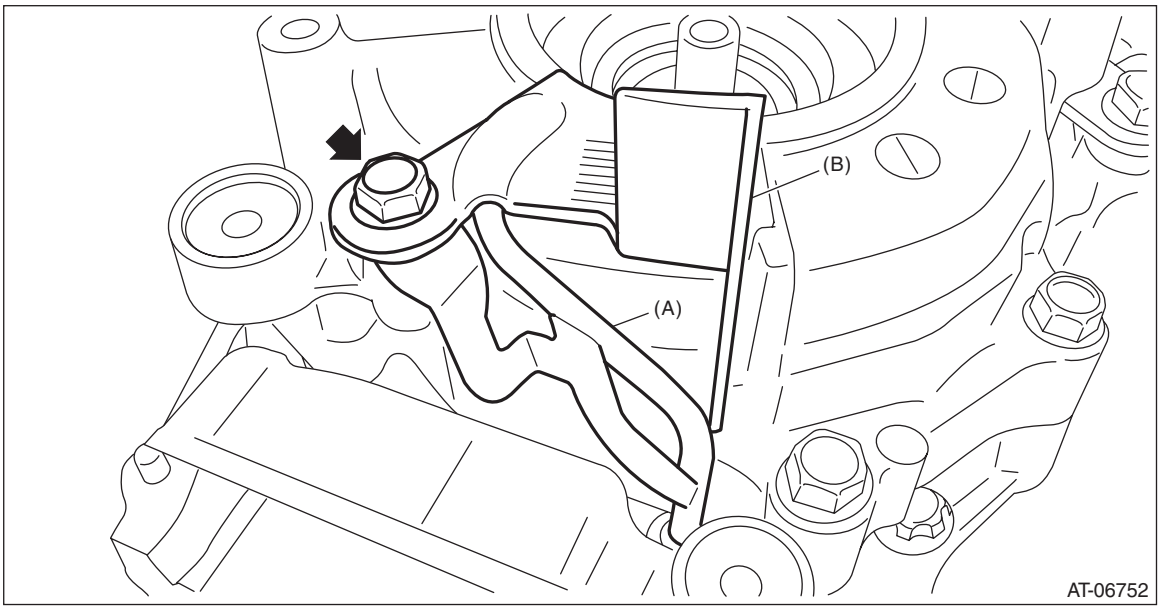
NOTE:
- Install a new O-ring.
- Apply CVTF to the O-rings.

6) Install the reverse brake assembly and internal gear as a unit to the drive pinion retainer.



NOTE:
Slowly rotate the input shaft by hand to engage the internal gear and pinion gear of planetary carrier.

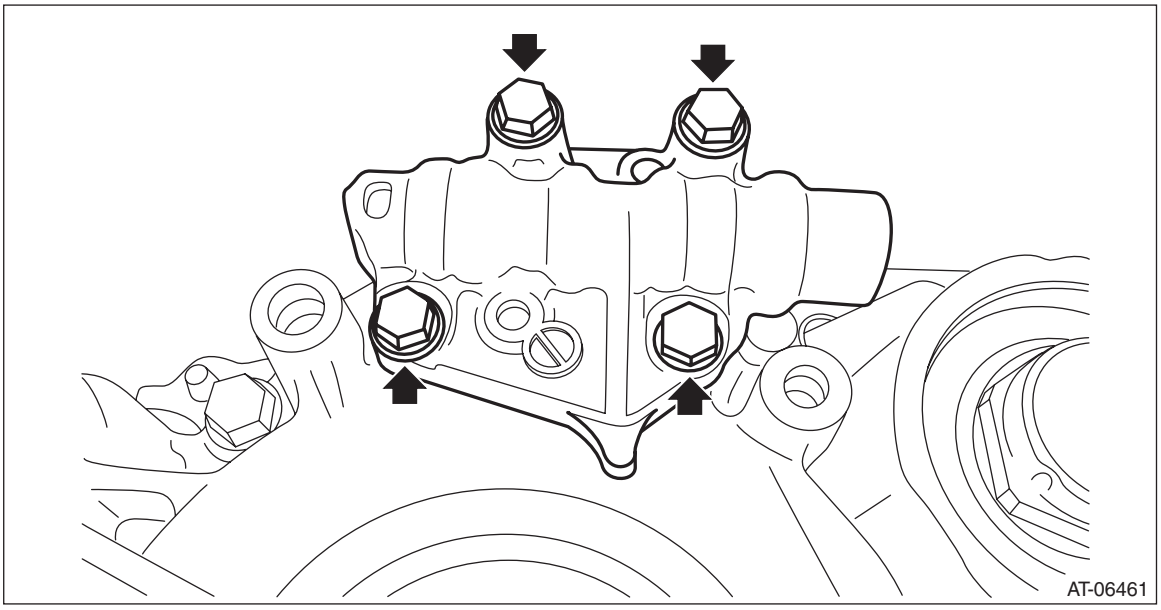
Tightening torque:
37 N·m (3.8 kgf-m, 27.3 ft-lb)



7) Install the O-ring to the lubrication pipe.

NOTE:
- Install a new O-ring.
- Apply CVTF to the O-rings.

8) Install the lubrication pipe and oil guide.

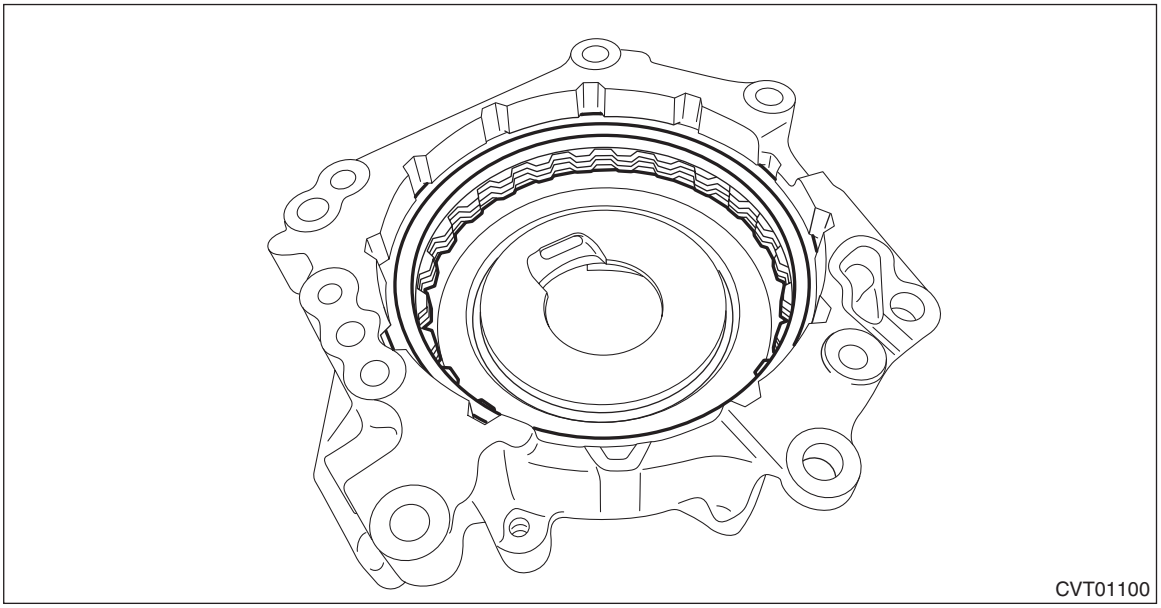


Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)

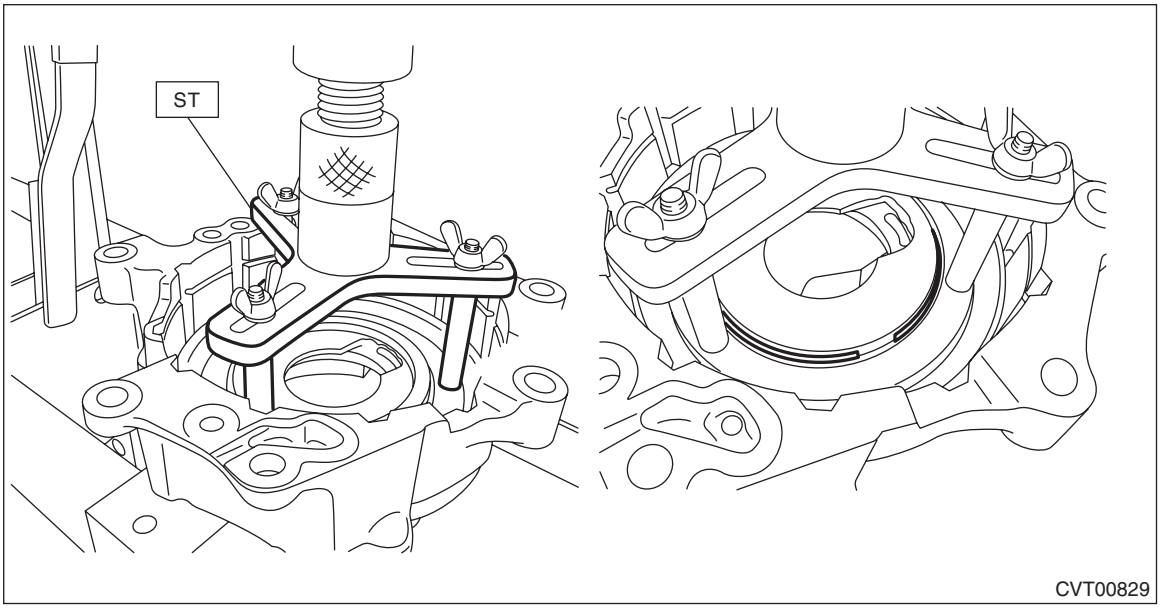
(A) Lubrication pipe
(B) Oil guide

9) Install the manual valve assembly and separator plate.

Tightening torque:
9 N·m (0.9 kgf-m, 6.6 ft-lb)

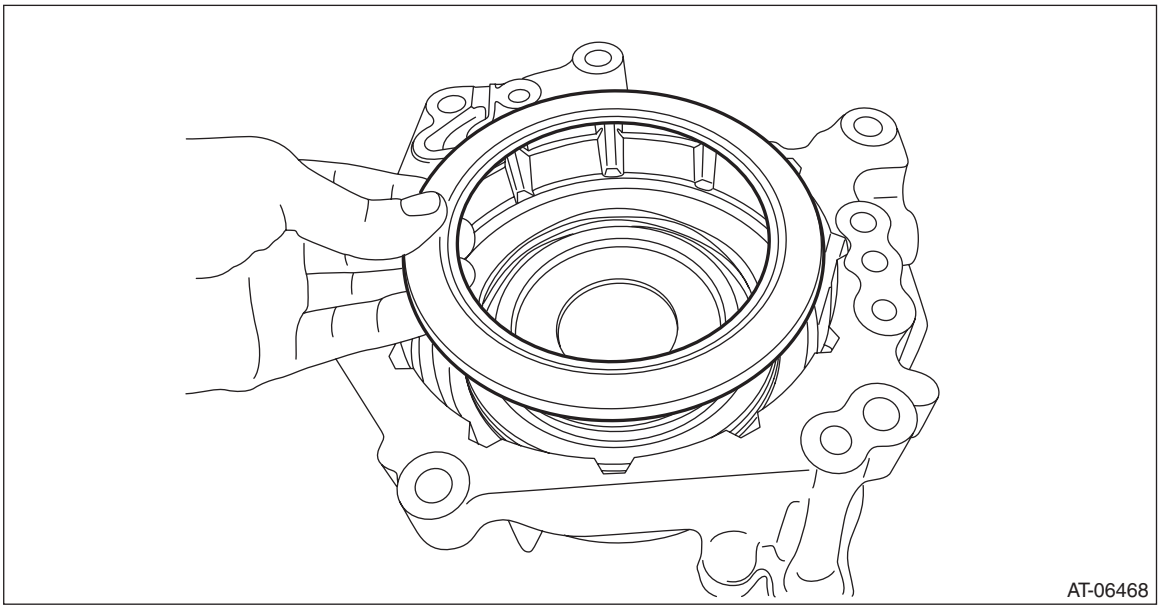


10) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR580)-271, INSTALLATION, Primary Pulley and Secondary Pulley.>
11) Select shims for pulley alignment. <Ref. to CVT(TR580)-278, ADJUSTMENT, Primary Pulley and Secondary Pulley.>
12) Install the reduction drive gear. <Ref. to CVT(TR580)-260, INSTALLATION, Reduction Drive Gear.>
13) Install the transmission case. <Ref. to CVT(TR580)-249, INSTALLATION, Transmission Case.>
14) Install the transmission control device. <Ref. to CVT(TR580)-243, INSTALLATION, Transmission Control Device.>

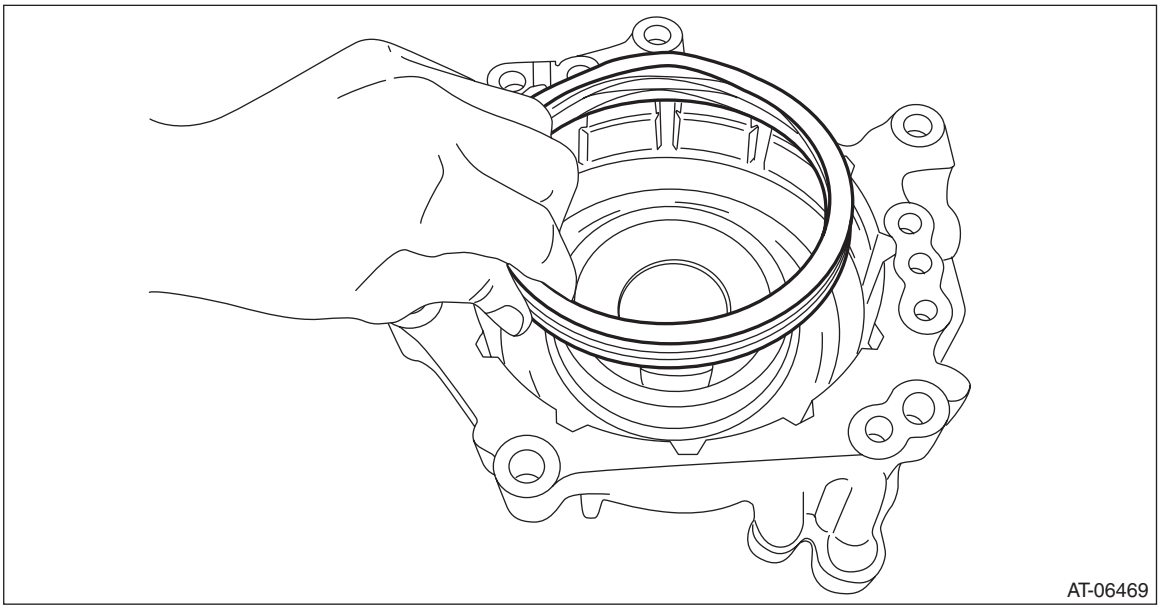


15) Install the oil strainer and oil pan. <Ref. to CVT(TR580)-136, INSTALLATION, Oil Pan and Strainer.>
16) Install the reduction driven gear assembly. <Ref. to CVT(TR580)-232, INSTALLATION, Reduction Driven Gear.>
17) Install the transfer driven gear assembly. <Ref. to CVT(TR580)-228, INSTALLATION, Transfer Driven Gear.>
18) Install the transfer clutch assembly. <Ref. to CVT(TR580)-215, INSTALLATION, Transfer Clutch.>
19) Install the parking pawl. <Ref. to CVT(TR580)-231, INSTALLATION, Parking Pawl.>
20) Install the extension case. <Ref. to CVT(TR580)-210, INSTALLATION, Extension Case.>
21) Install the inhibitor switch. <Ref. to CVT(TR580)-115, INSTALLATION, Inhibitor Switch.>
22) Install the secondary speed sensor. <Ref. to CVT(TR580)-123, INSTALLATION, Secondary Speed Sensor.>
23) Install the primary speed sensor. <Ref. to CVT(TR580)-129, INSTALLATION, Primary Speed Sensor.>
24) Install the turbine speed sensor. <Ref. to CVT(TR580)-118, INSTALLATION, Turbine Speed Sensor.>
25) Install the transmission harness. <Ref. to CVT(TR580)-155, INSTALLATION, Transmission Harness.>
26) Install the control valve body. <Ref. to CVT(TR580)-144, INSTALLATION, Control Valve Body.>
27) Install the air breather hose. <Ref. to CVT(TR580)-200, INSTALLATION, Air Breather Hose.>
28) Install the transmission assembly. <Ref. to CVT(TR580)-81, INSTALLATION, Automatic Transmission Assembly.>

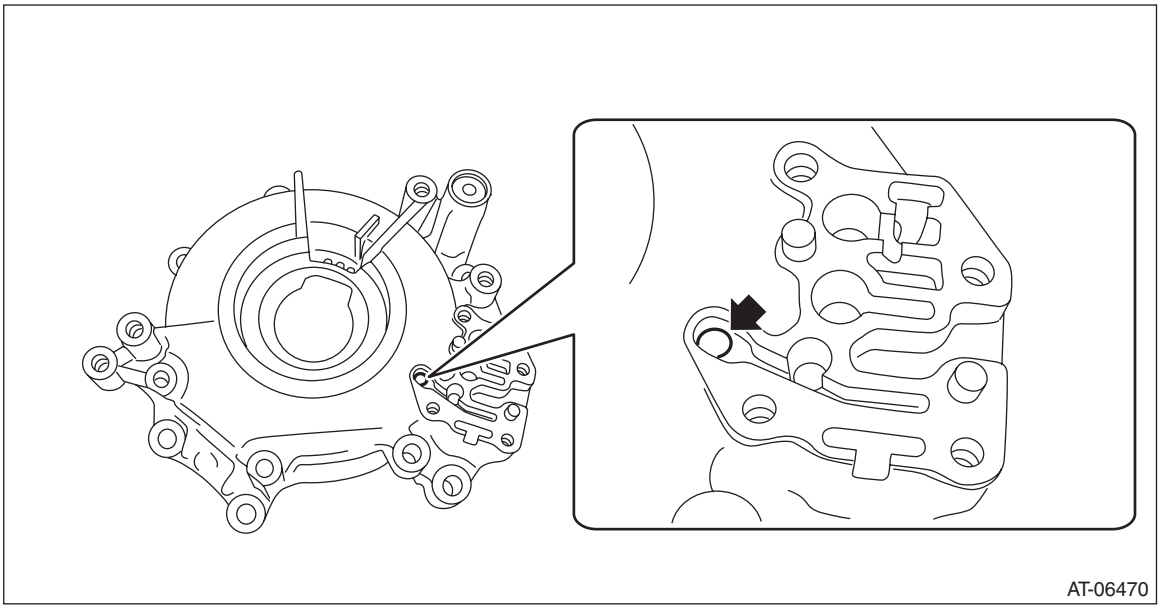
C: DISASSEMBLY



1) Remove the snap ring.
2) Remove the retaining plate, drive plate, driven plate and dish plate.

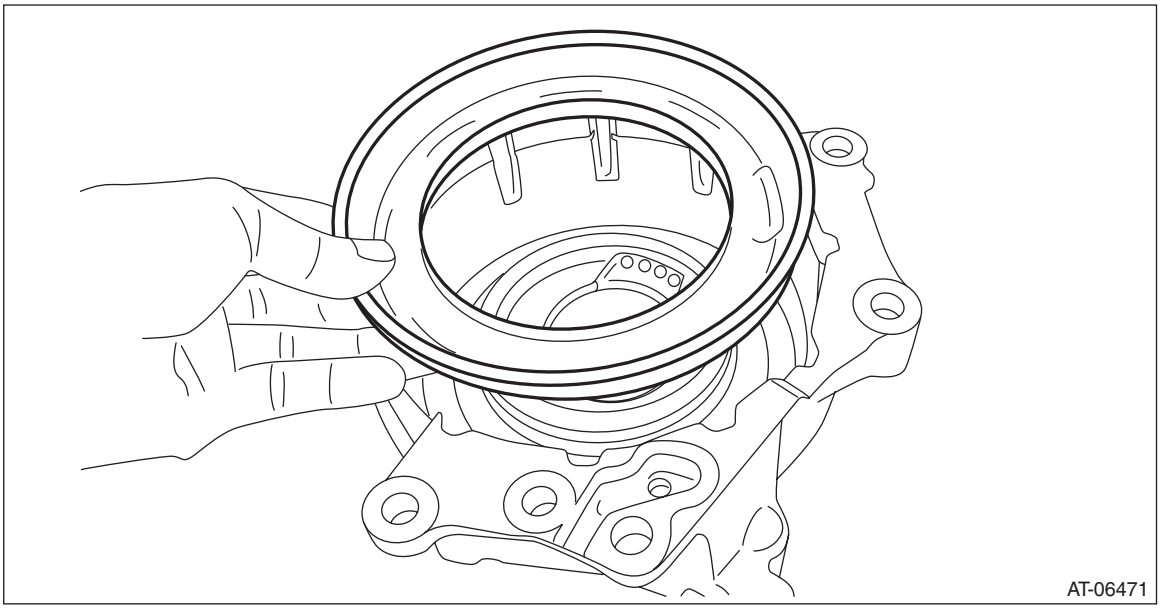


3) Compress the return spring using the ST to remove the snap ring.
ST 18762AA001 COMPRESSOR SPECIAL TOOL

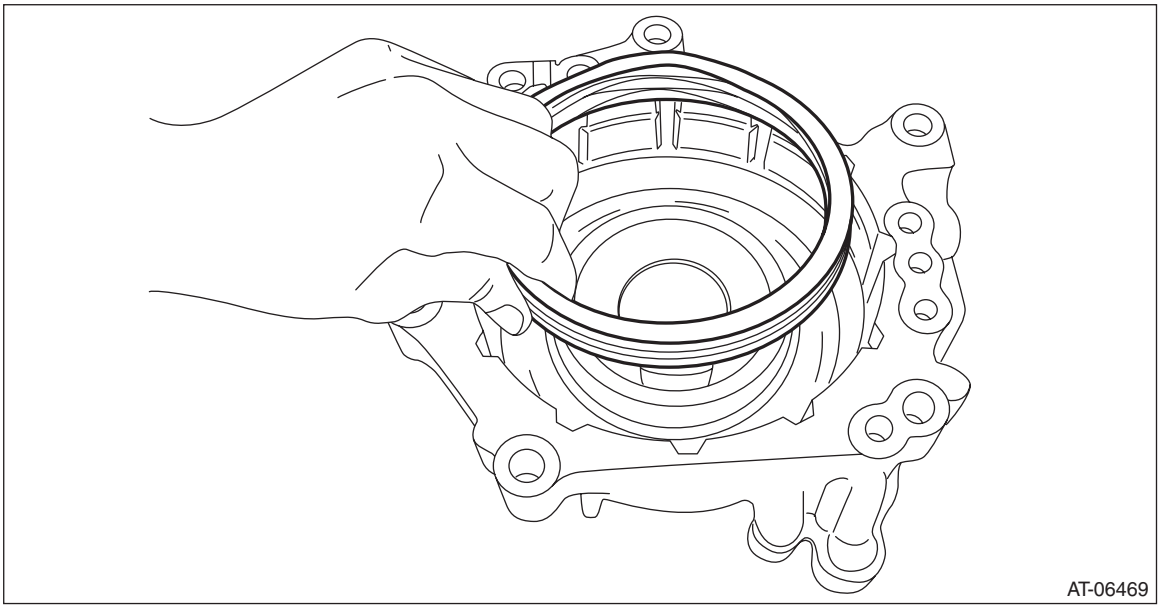


4) Using the ST, remove the snap ring and spring retainer.

5) Remove the return spring.

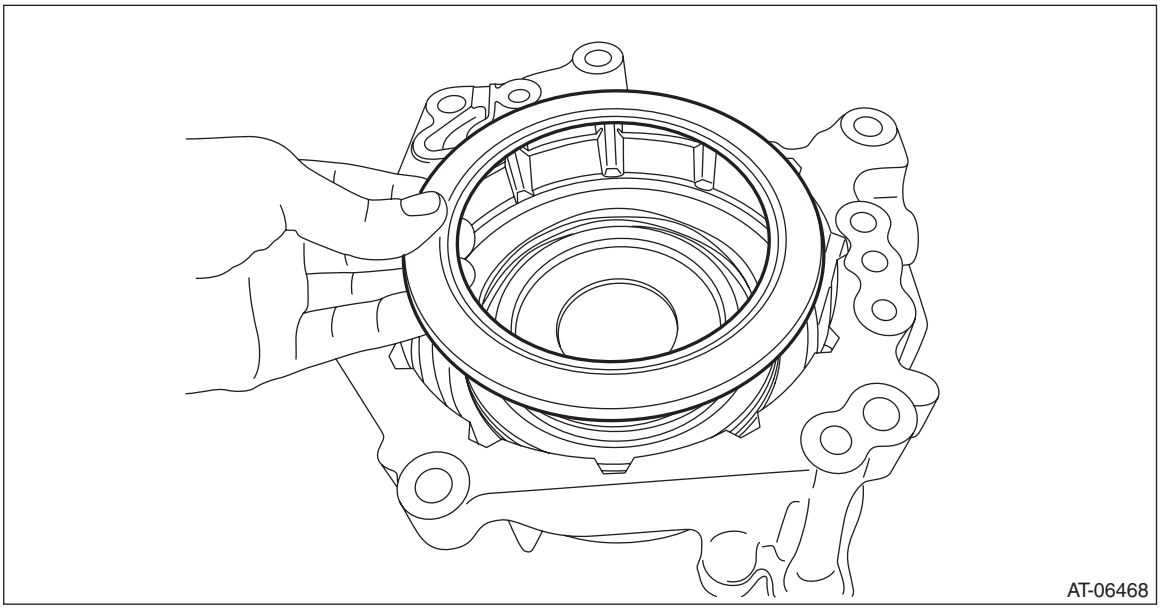


6) Remove the reverse brake piston by blowing compressed air intermittently from reverse brake housing hole.

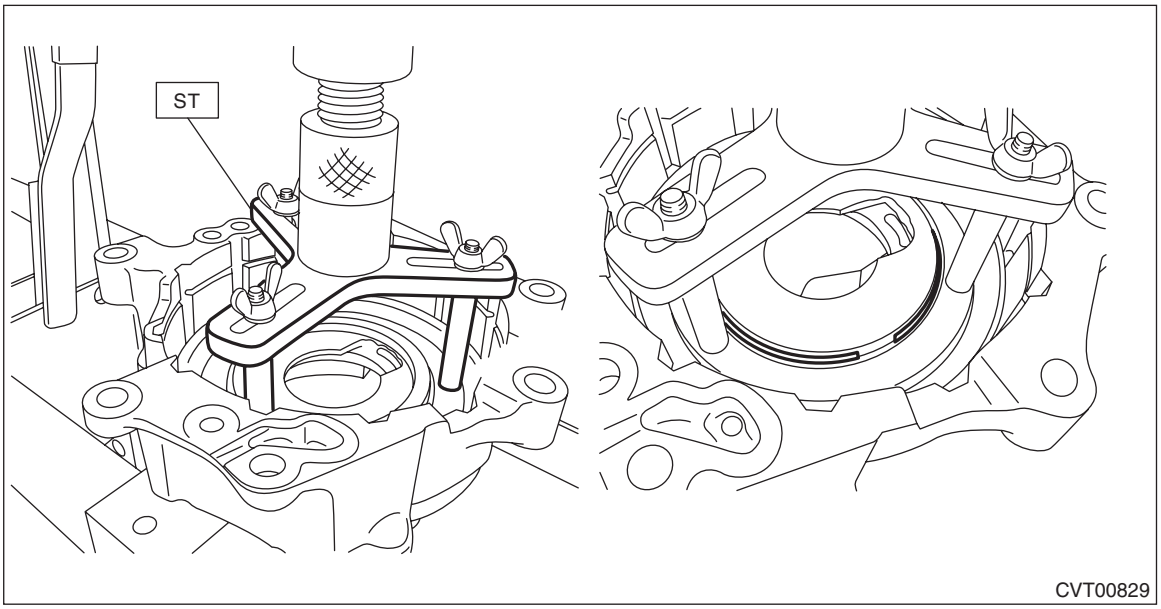


D: ASSEMBLY

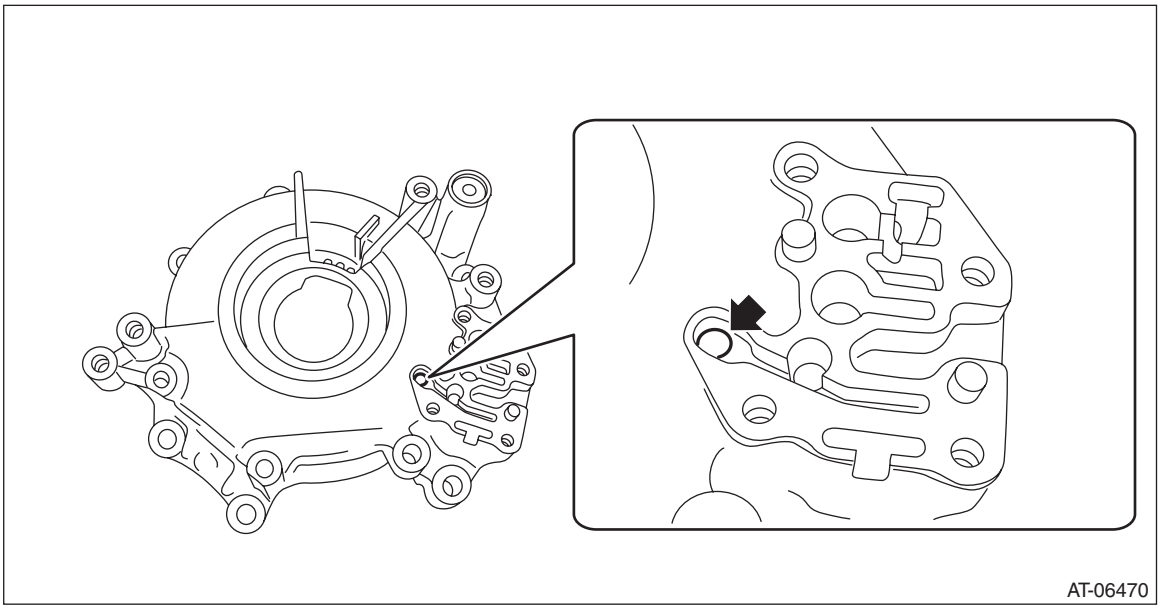
1) Install the reverse brake piston.



NOTE:
Apply CVTF to the sealing area of reverse brake piston.



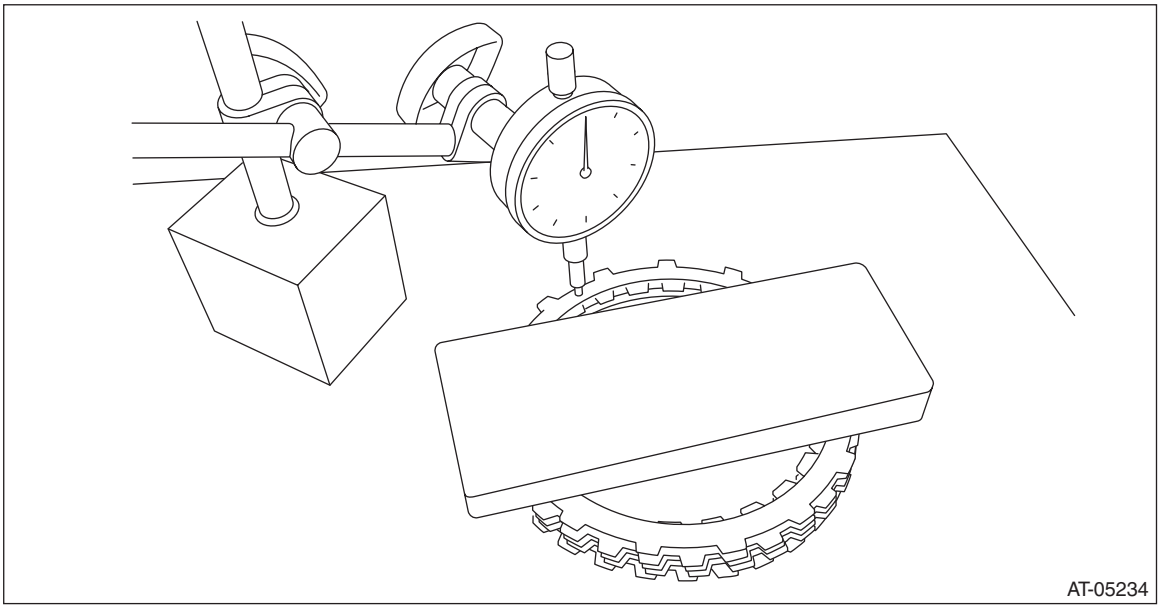
2) Install the return spring.



3) Install the spring retainer.

4) Compress the return spring using the ST to install the snap ring.
ST 18762AA001 COMPRESSOR SPECIAL TOOL

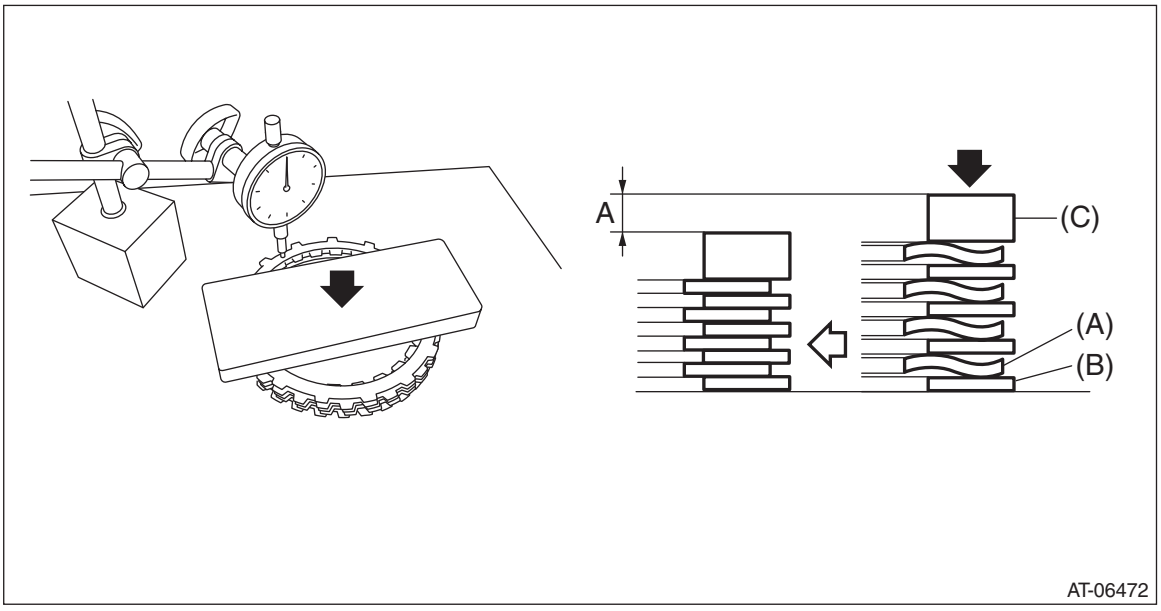
5) Check the operation of reverse brake piston by blowing compressed air intermittently from reverse brake housing hole.



6) Place the driven plate, drive plate and retaining plate neatly in this order on surface table.
7) Set the dial gauge to retaining plate, and read its scale.

NOTE:
The value, which is read in the gauge at this time, is zero point.

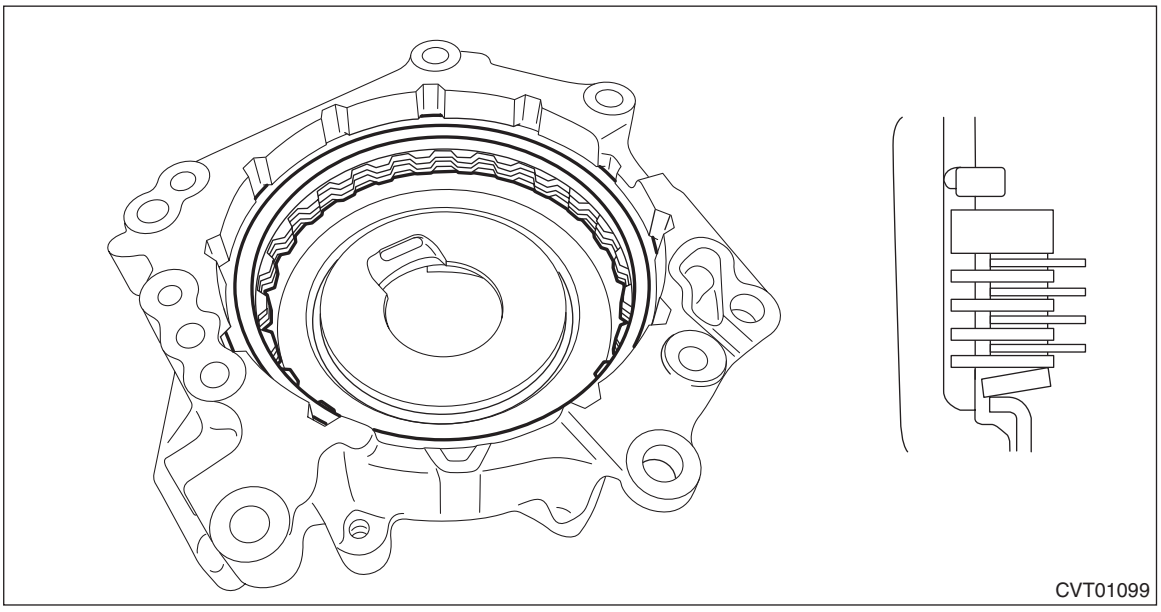
8) Scale and record the weight "Z" of a flat board which will be put on retaining plate.



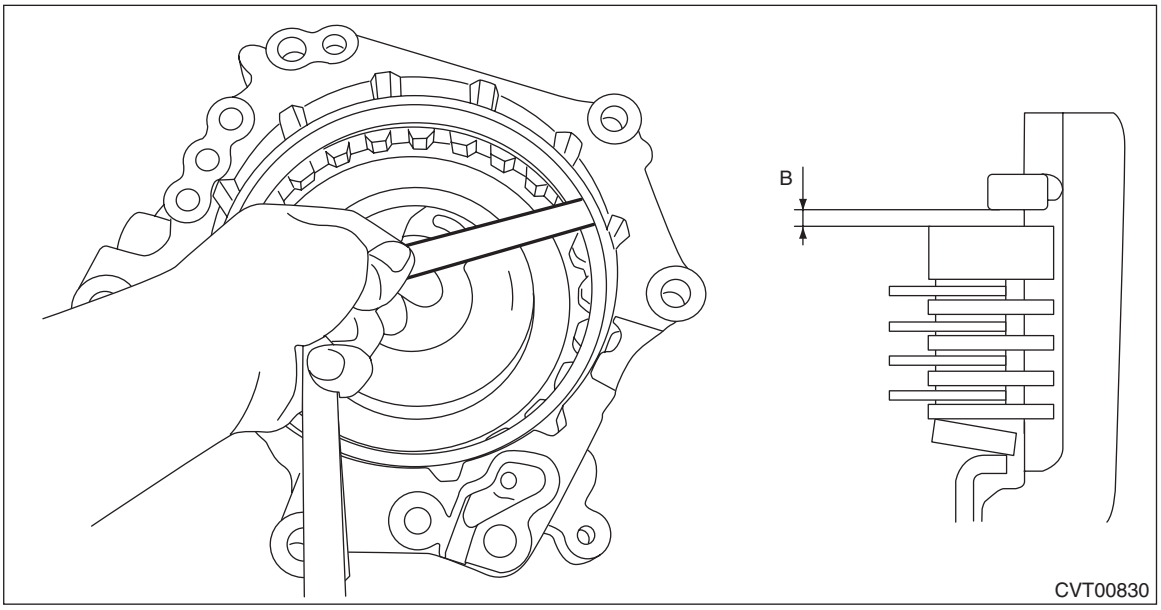
NOTE:
- Use a stiff board which does not bend against load as a flat board to be put on retaining plate.
- Use a flat board weighing less than 29 N (3.0 kgf, 6.5 lb).

9) Put the flat board on retaining plate.

10) Using the following formula, read the push/pull gauge and calculate “N”.
N = 29 N (3.0 kgf, 6.5 lb) – Z
29 N (3.0 kgf, 6.5 lb): Load applied to clutch plate
Z: Flat board weight
11) Press the center of retaining plate by applying a force of “N” using push/pull gauge, and then measure and record the compression amount “A”.



NOTE:
Measure at four points with a 90° interval and calculate the average.



(A) Drive plate
(B) Driven plate
(C) Retaining plate

12) Install the dish plate, drive plate, driven plate, retaining plate and snap ring to the reverse brake housing.

NOTE:
Install the dish plate in the correct direction.

13) Measure and record the clearance “B” between the retaining plate and snap ring.

14) Piston stroke calculation

Calculate with A and B dimensions recorded before. If it exceeds the limit, replace with a new drive plate and adjust within the initial standard value.

S mm (in) = A + B

S: Piston stroke

A: Compression amount of drive plate and dish plate

B: Clearance between retaining plate and snap ring

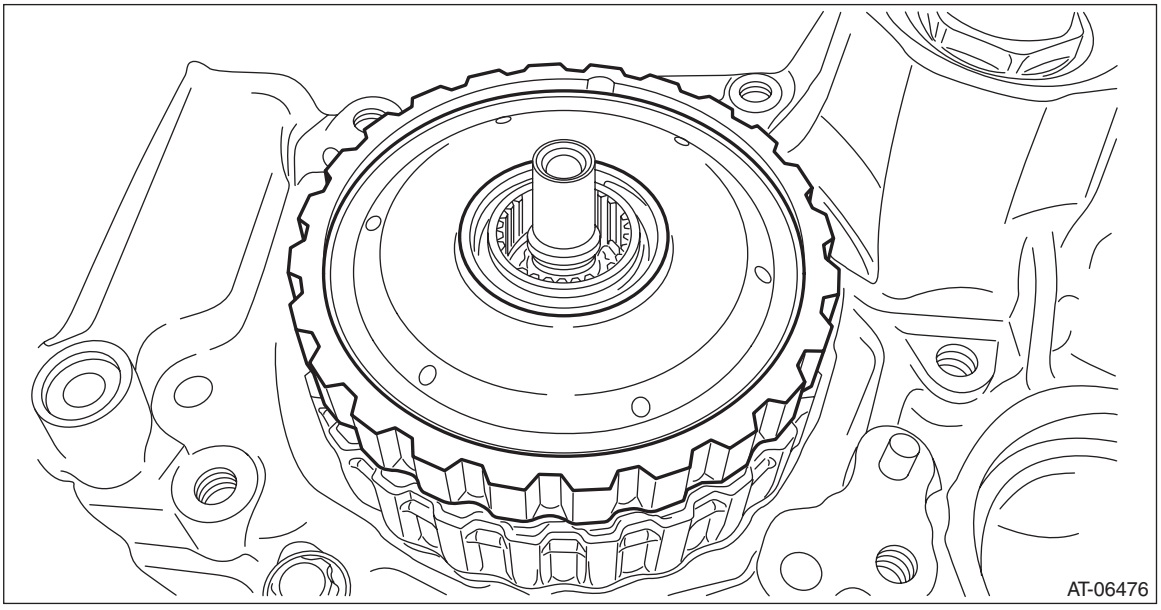
Initial standard:

2.3 — 2.7 mm (0.091 — 0.106 in)

Limit thickness:

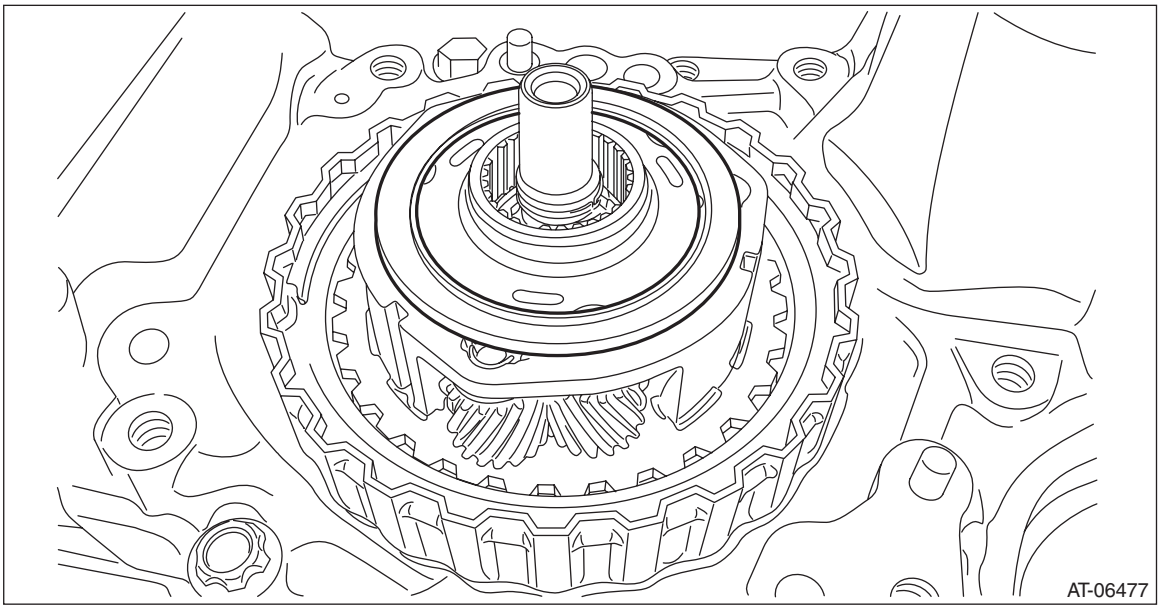
2.9 mm (0.114 in)

Retaining plate	
Part No.	Thickness mm (in)
31567AB750	4.2 (0.165)
31567AB800	4.4 (0.173)
31567AB810	4.6 (0.181)
31567AB820	4.8 (0.189)



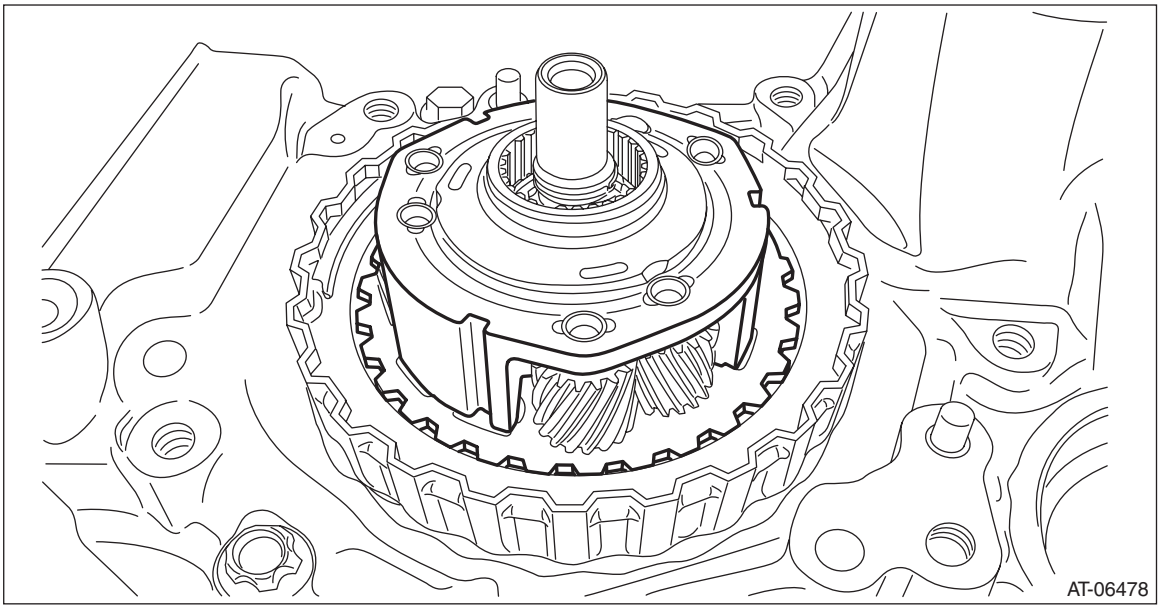
E: INSPECTION

- Inspect the drive plate facing for wear and damage.
- Check the driven plate for discoloration (burnt color).
- Check for worn snap ring, fatigue or damaged return spring or deformed spring retainer.
- Make sure the clearance between retaining plate and snap ring of reverse brake is within the limit. If it exceeds the limit, replace with a new drive plate and select and adjust the retaining plate within the initial standard value. <Ref. to CVT(TR580)-295, ASSEMBLY, Reverse Brake Assembly.>

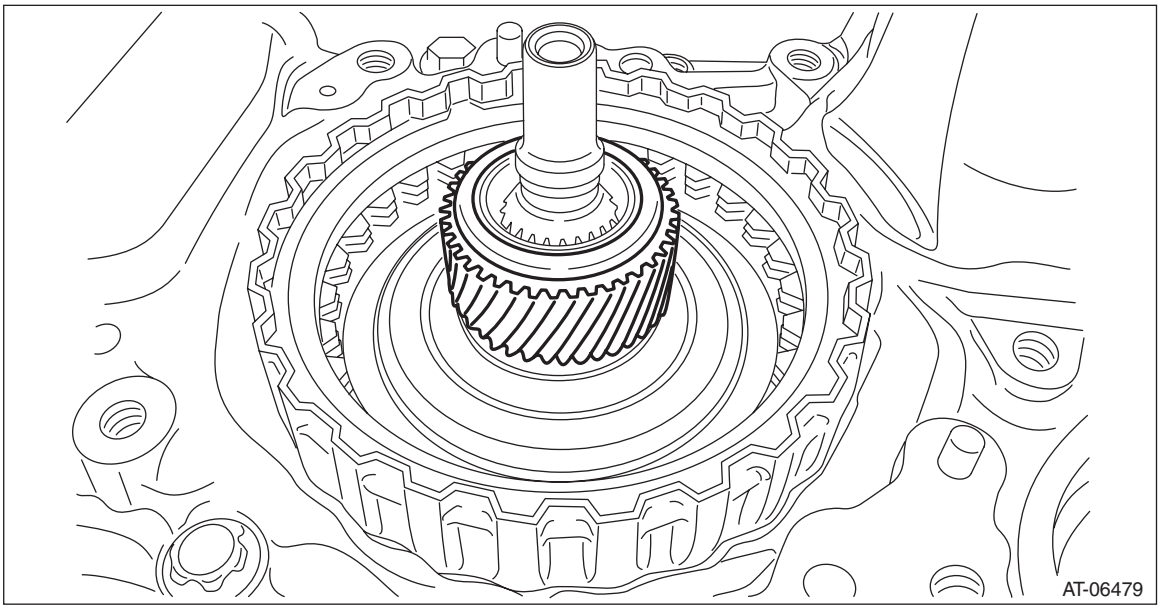


44.Forward Clutch Assembly

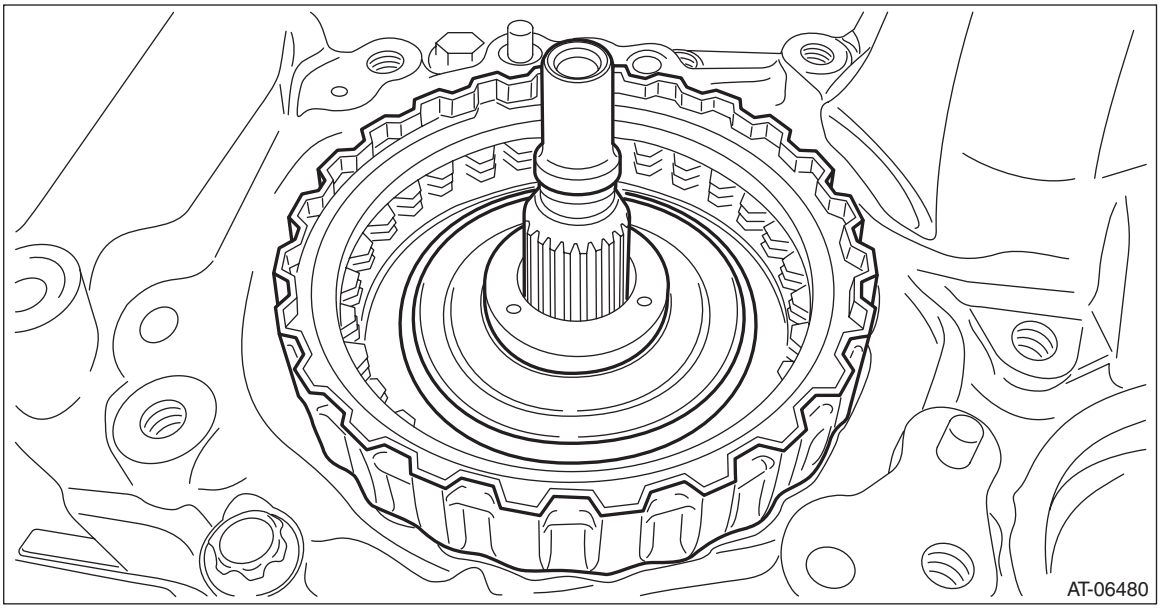
A: REMOVAL



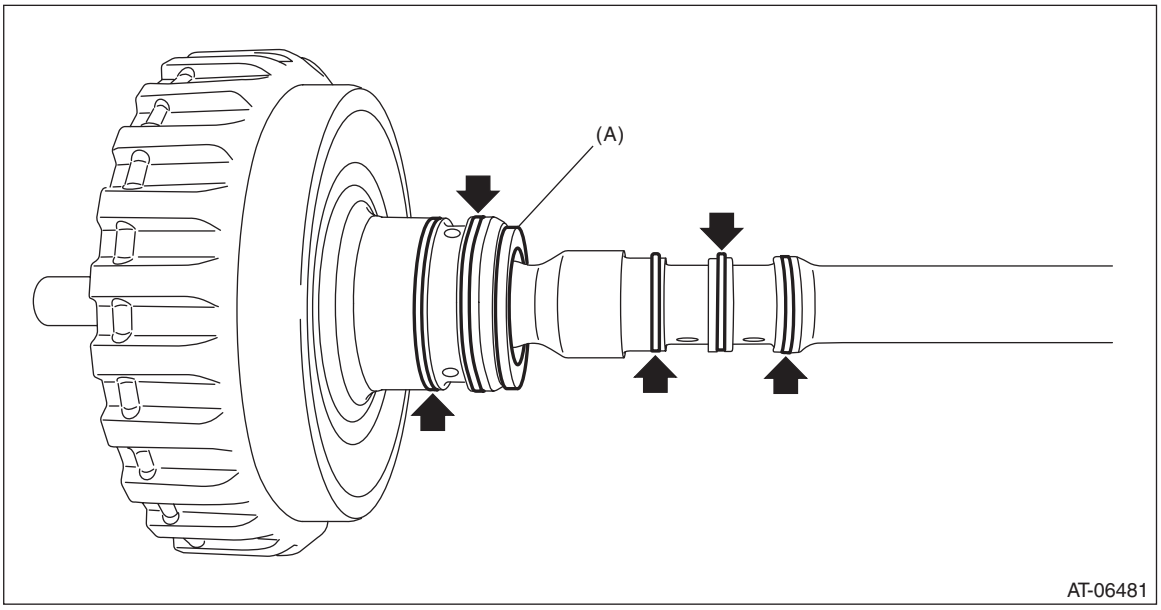
1) Remove the transmission assembly. <Ref. to CVT(TR580)-65, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR580)-198, REMOVAL, Air Breather Hose.>
3) Remove the control valve body. <Ref. to CVT(TR580)-138, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR580)-152, REMOVAL, Transmission Harness.>
5) Remove the turbine speed sensor. <Ref. to CVT(TR580)-118, REMOVAL, Turbine Speed Sensor.>
6) Remove the secondary speed sensor. <Ref. to CVT(TR580)-123, REMOVAL, Secondary Speed Sensor.>
7) Remove the primary speed sensor. <Ref. to CVT(TR580)-128, REMOVAL, Primary Speed Sensor.>
8) Remove the inhibitor switch. <Ref. to CVT(TR580)-114, REMOVAL, Inhibitor Switch.>
9) Remove the extension case. <Ref. to CVT(TR580)-209, REMOVAL, Extension Case.>
10) Remove the transfer clutch assembly. <Ref. to CVT(TR580)-213, REMOVAL, Transfer Clutch.>
11) Remove the transfer driven gear assembly. <Ref. to CVT(TR580)-227, REMOVAL, Transfer Driven Gear.>
12) Remove the parking pawl. <Ref. to CVT(TR580)-230, REMOVAL, Parking Pawl.>
13) Remove the reduction driven gear assembly. <Ref. to CVT(TR580)-232, REMOVAL, Reduction Driven Gear.>
14) Remove the oil pan and oil strainer. <Ref. to CVT(TR580)-135, REMOVAL, Oil Pan and Strainer.>
15) Remove the transmission control device. <Ref. to CVT(TR580)-240, REMOVAL, Transmission Control Device.>
16) Remove the transmission case. <Ref. to CVT(TR580)-246, REMOVAL, Transmission Case.>
17) Remove the reduction drive gear. <Ref. to CVT(TR580)-259, REMOVAL, Reduction Drive Gear.>
18) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR580)-264, REMOVAL, Primary Pulley and Secondary Pulley.>
19) Remove the reverse brake assembly. <Ref. to CVT(TR580)-285, REMOVAL, Reverse Brake Assembly.>
20) Remove the internal gear.



21) Remove the thrust bearing.



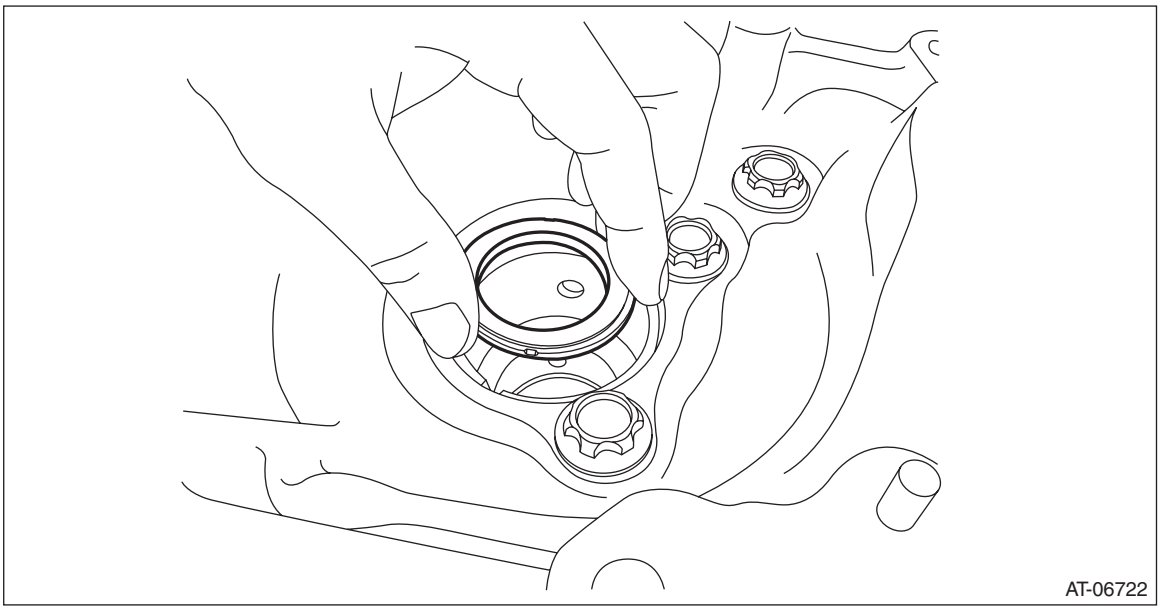
22) Remove the planetary carrier.



23) Remove the thrust bearing and sun gear.

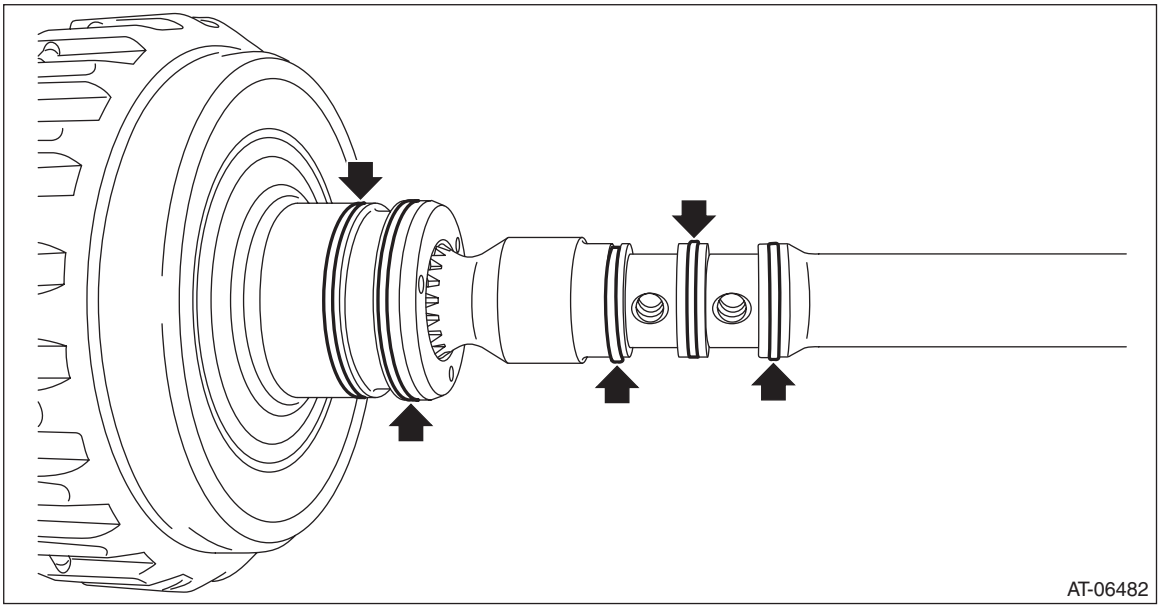
24) Remove the forward clutch assembly.

25) Remove the thrust bearing and seal ring.



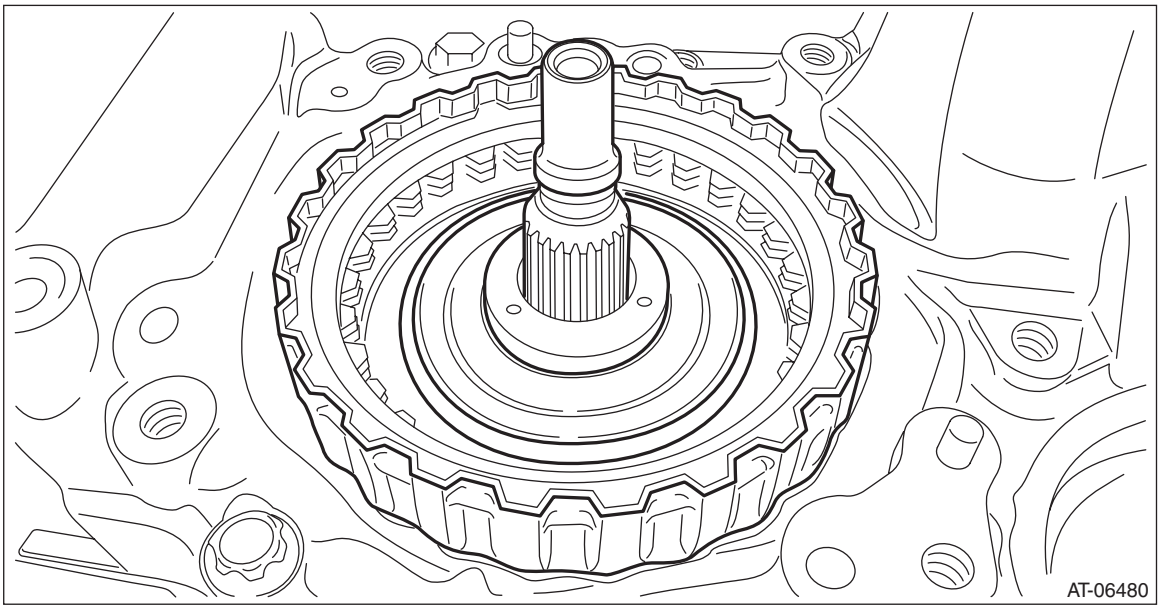
(A) Thrust bearing

B: INSTALLATION



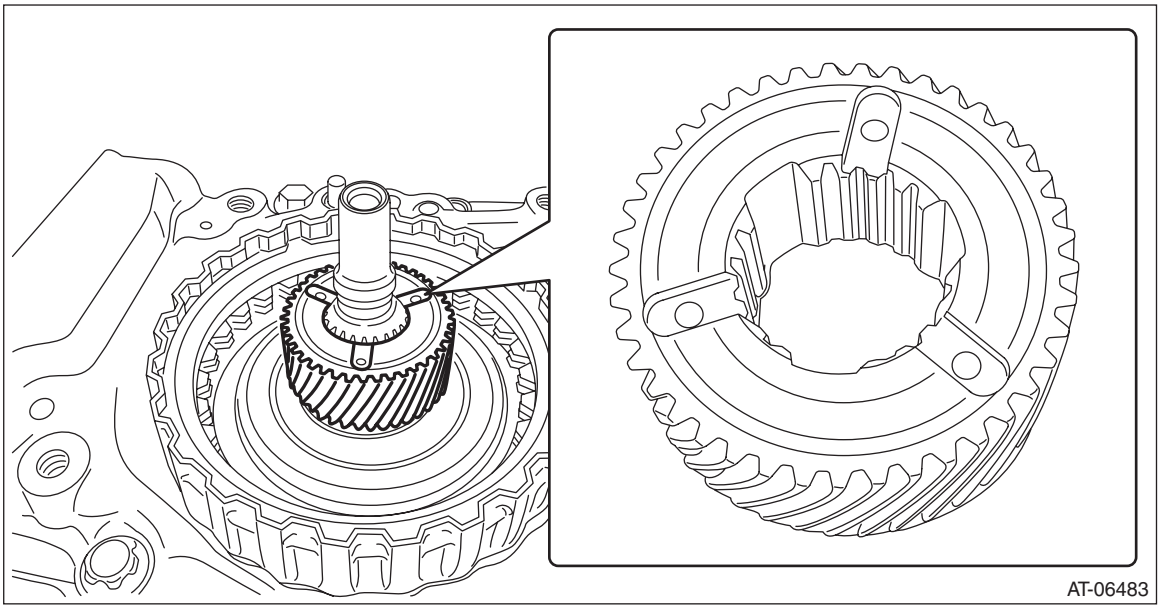
1) Install the thrust bearing to the converter case.

NOTE:
Face the temper color surface to the converter case side.

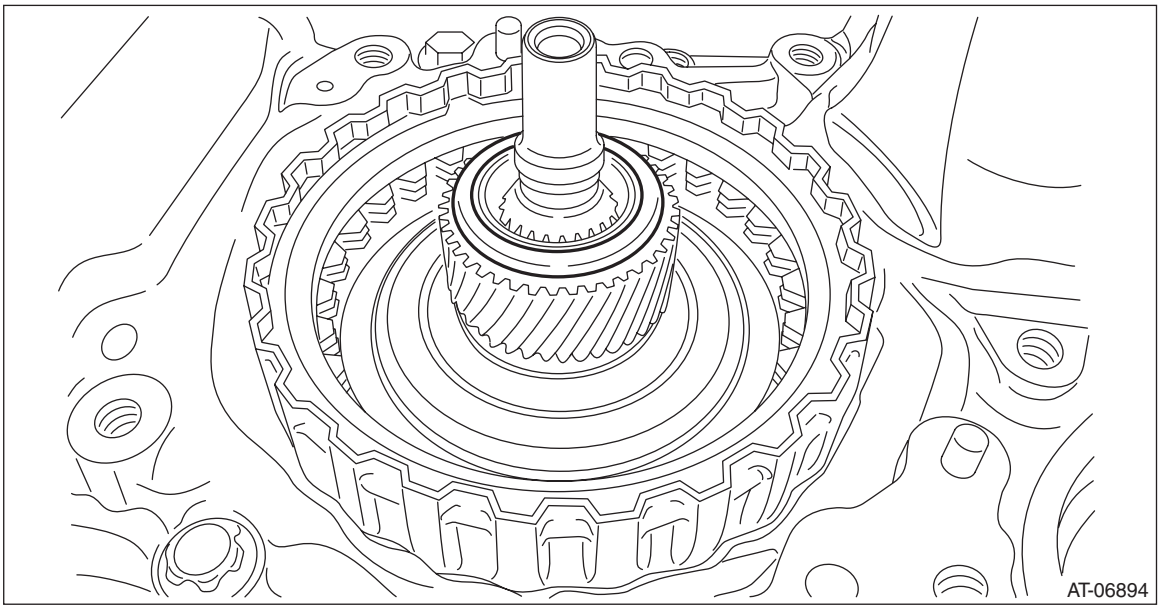


2) Install the seal ring to the input shaft.

NOTE:
- Use new seal rings.
- When installing the seal rings, do not expand the seal rings too much.
- Apply CVTF to the seal rings.

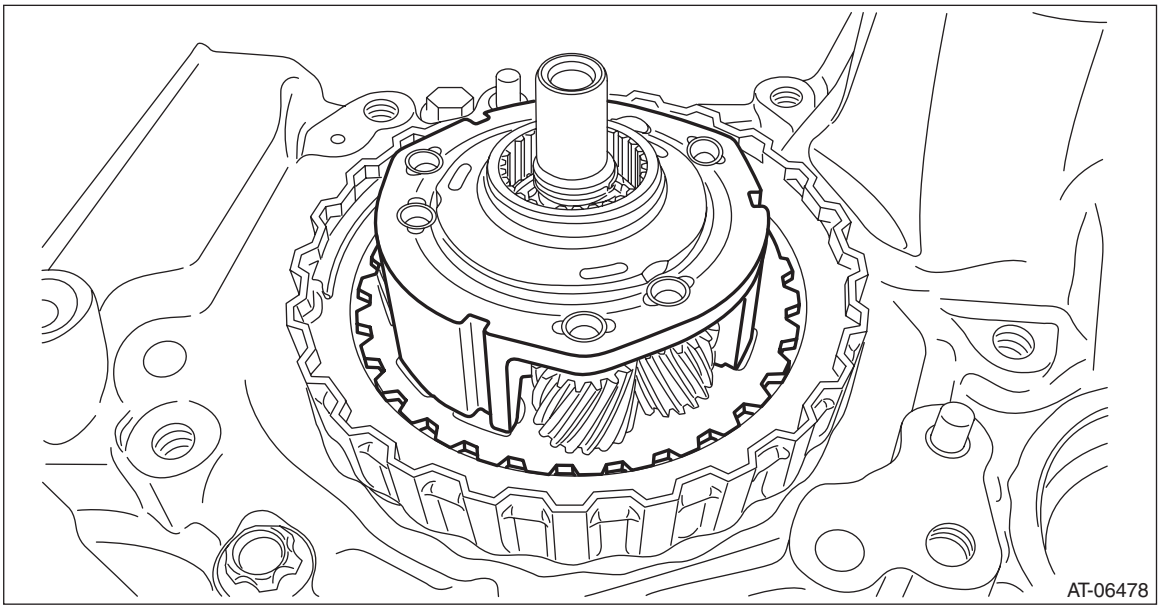


3) Install the forward clutch assembly to the converter case.



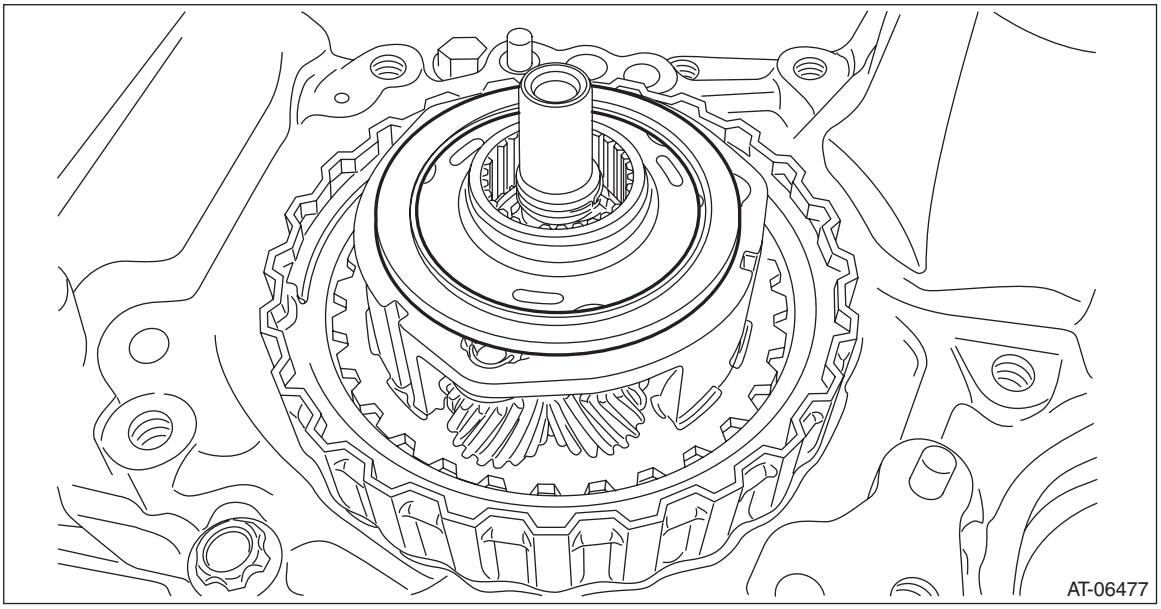
4) Install the sun gear.

NOTE:
Face the end face of the sun gear to the reverse brake side as shown in the figure.

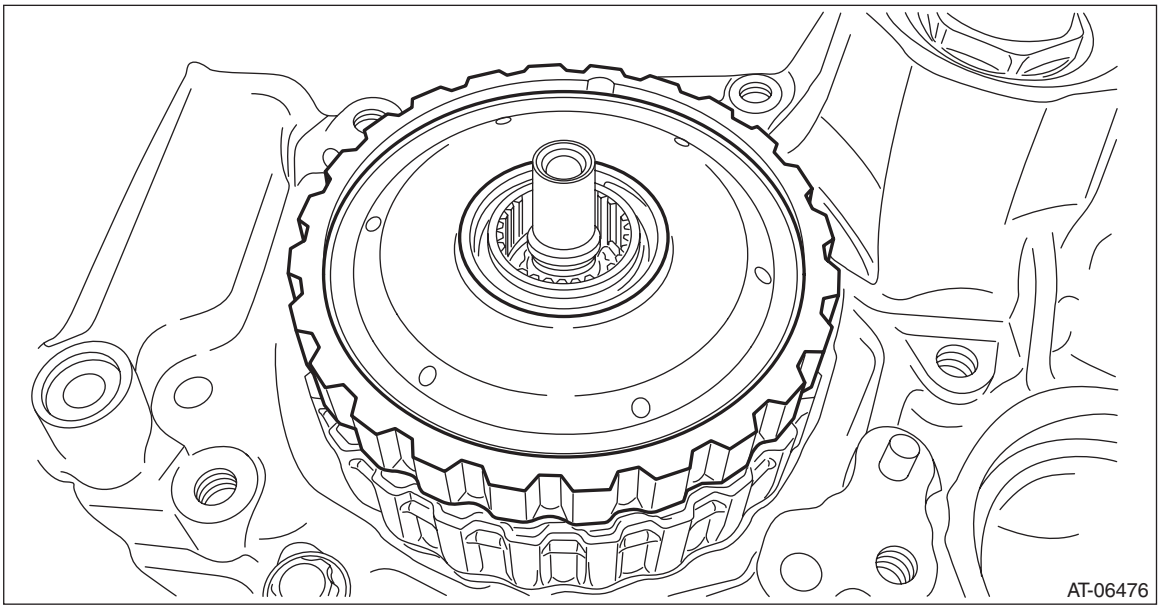


5) Install the thrust bearing to the sun gear.

NOTE:
Face the temper color surface to the reverse brake side.

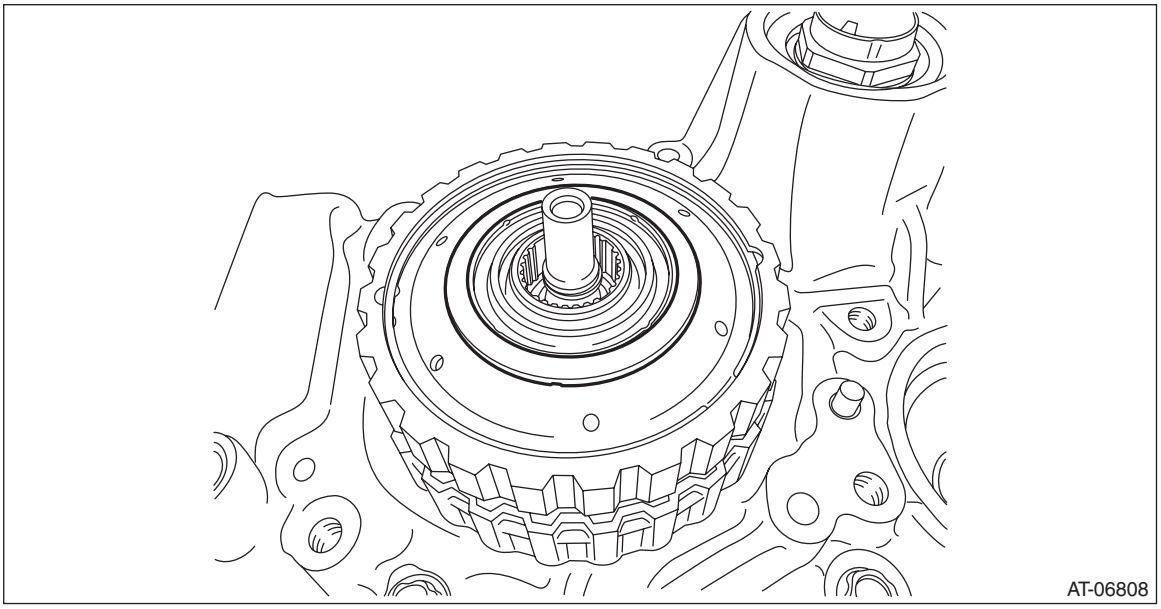


6) Install the planetary carrier.



7) Install the thrust bearing.

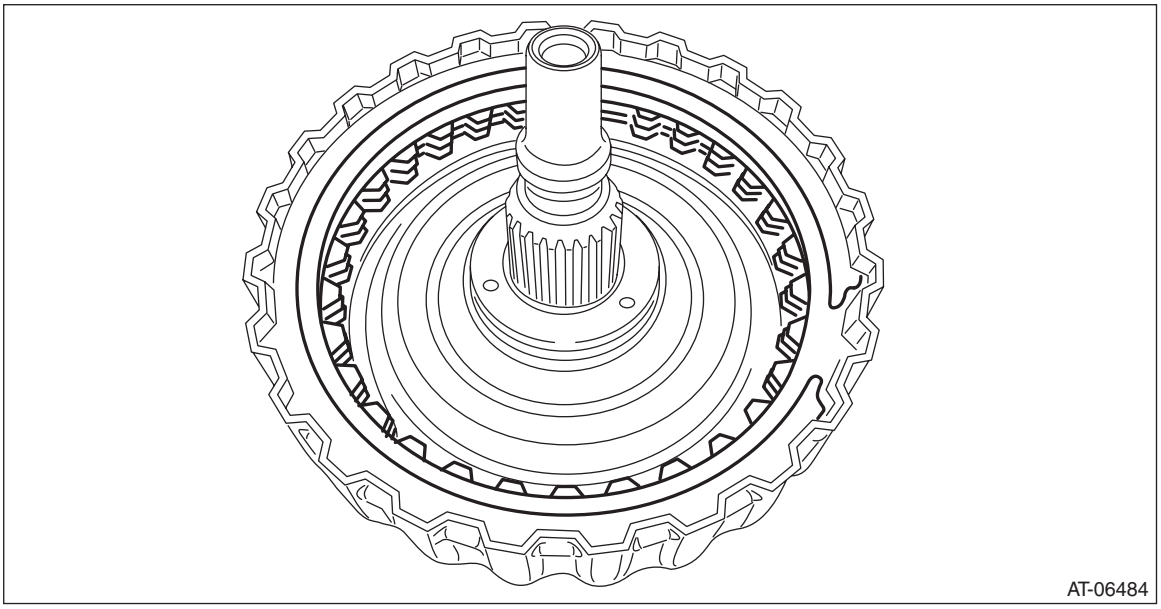
NOTE:
Face the temper color surface to the reverse brake side.



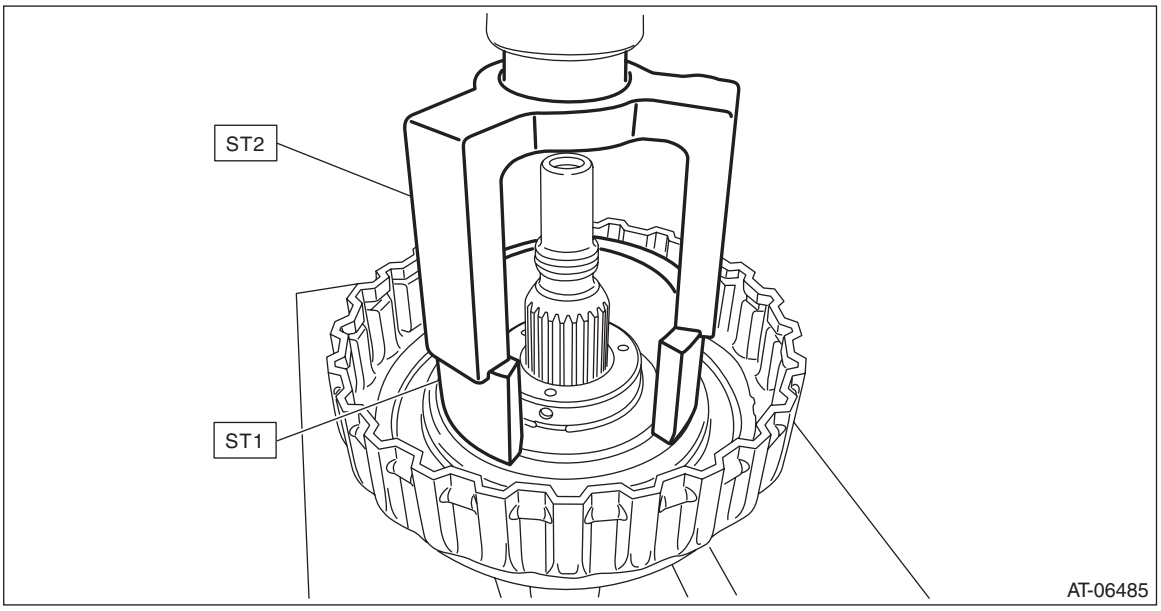
8) Install the internal gear.

9) Install the thrust bearing to the internal gear.

NOTE:
Face the temper color surface to the reverse brake side.

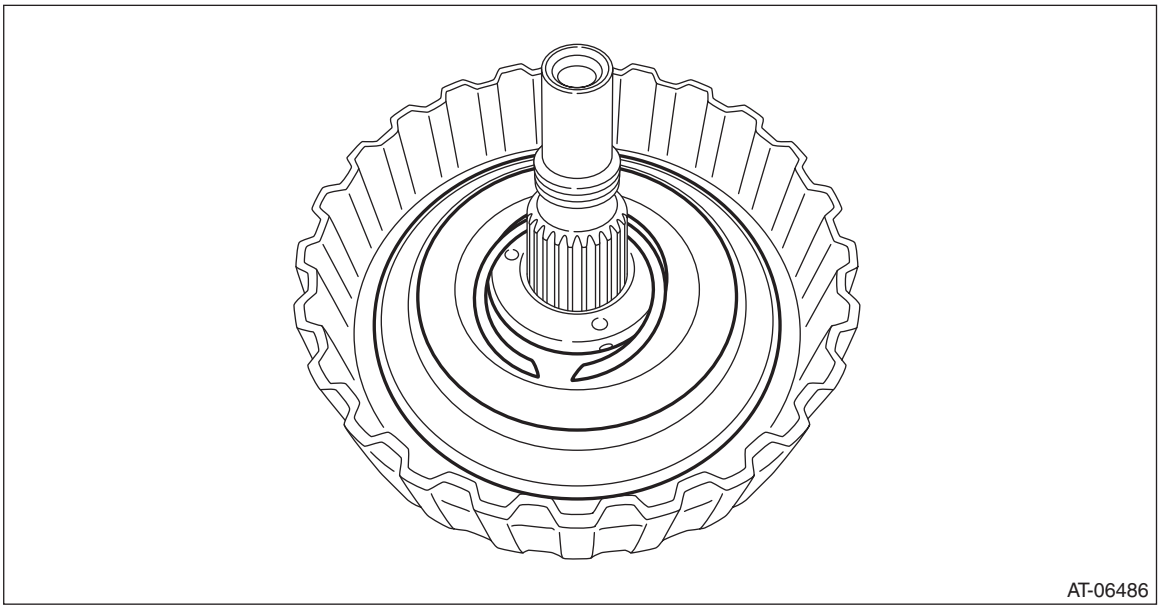


10) Select a washer. <Ref. to CVT(TR580)-318, ADJUSTMENT, Forward Clutch Assembly.>
11) Install the reverse brake assembly. <Ref. to CVT(TR580)-288, INSTALLATION, Reverse Brake Assembly.>
12) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR580)-271, INSTALLATION, Primary Pulley and Secondary Pulley.>
13) Install the reduction drive gear. <Ref. to CVT(TR580)-260, INSTALLATION, Reduction Drive Gear.>
14) Install the transmission case. <Ref. to CVT(TR580)-249, INSTALLATION, Transmission Case.>
15) Install the transmission control device. <Ref. to CVT(TR580)-243, INSTALLATION, Transmission Control Device.>
16) Install the oil strainer and oil pan. <Ref. to CVT(TR580)-136, INSTALLATION, Oil Pan and Strainer.>
17) Install the reduction driven gear assembly. <Ref. to CVT(TR580)-232, INSTALLATION, Reduction Driven Gear.>
18) Install the transfer driven gear assembly. <Ref. to CVT(TR580)-228, INSTALLATION, Transfer Driven Gear.>
19) Install the transfer clutch assembly. <Ref. to CVT(TR580)-215, INSTALLATION, Transfer Clutch.>
20) Install the parking pawl. <Ref. to CVT(TR580)-231, INSTALLATION, Parking Pawl.>
21) Install the extension case. <Ref. to CVT(TR580)-210, INSTALLATION, Extension Case.>
22) Install the inhibitor switch. <Ref. to CVT(TR580)-115, INSTALLATION, Inhibitor Switch.>
23) Install the secondary speed sensor. <Ref. to CVT(TR580)-123, INSTALLATION, Secondary Speed Sensor.>
24) Install the primary speed sensor. <Ref. to CVT(TR580)-129, INSTALLATION, Primary Speed Sensor.>
25) Install the turbine speed sensor. <Ref. to CVT(TR580)-118, INSTALLATION, Turbine Speed Sensor.>
26) Install the transmission harness. <Ref. to CVT(TR580)-155, INSTALLATION, Transmission Harness.>
27) Install the control valve body. <Ref. to CVT(TR580)-144, INSTALLATION, Control Valve Body.>
28) Install the air breather hose. <Ref. to CVT(TR580)-200, INSTALLATION, Air Breather Hose.>
29) Install the transmission assembly. <Ref. to CVT(TR580)-81, INSTALLATION, Automatic Transmission Assembly.>

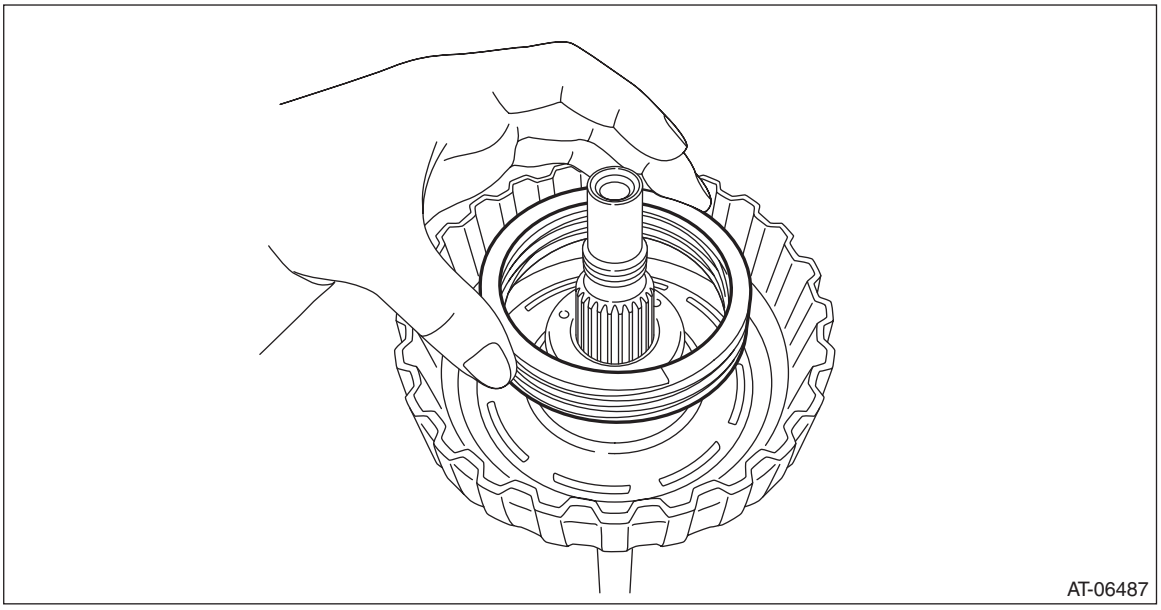


C: DISASSEMBLY

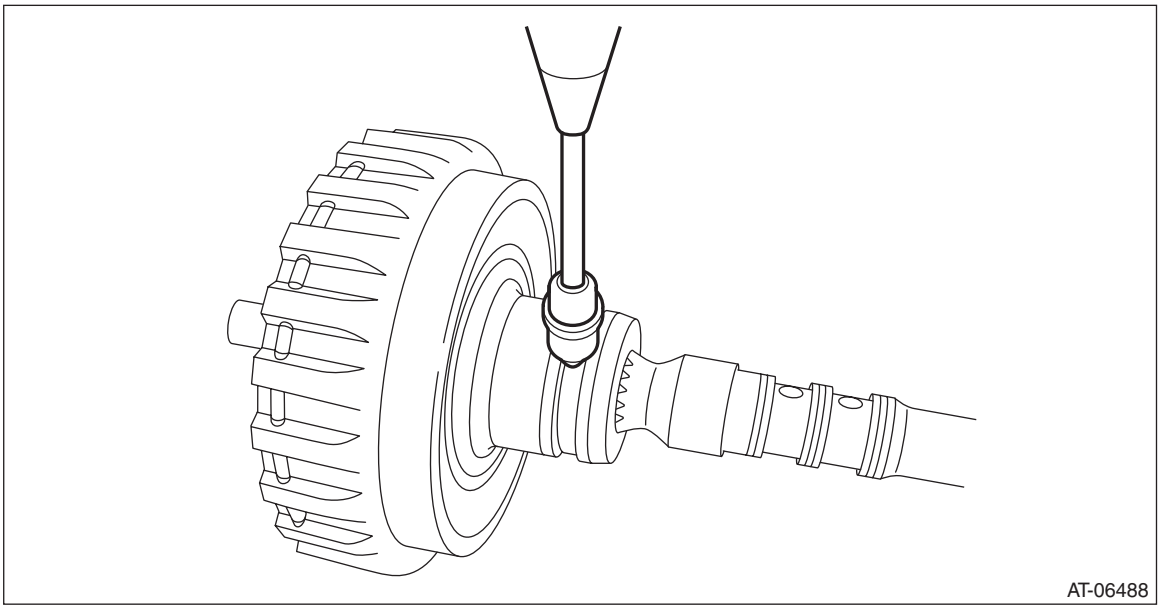
1. FORWARD CLUTCH ASSEMBLY



1) Remove the snap ring.
2) Remove the retaining plate, drive plate, driven plate and dish plate.

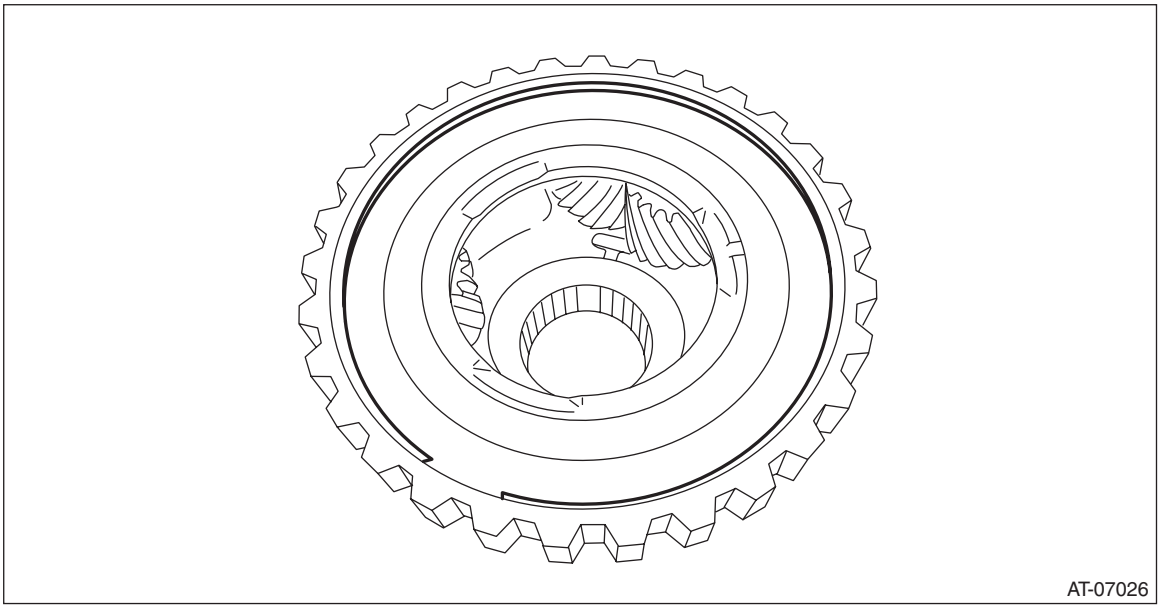


3) Compress the return spring using the ST to remove the snap ring.
ST1 18762AA010 COMPRESSOR SPECIAL TOOL
ST2 398673600 COMPRESSOR



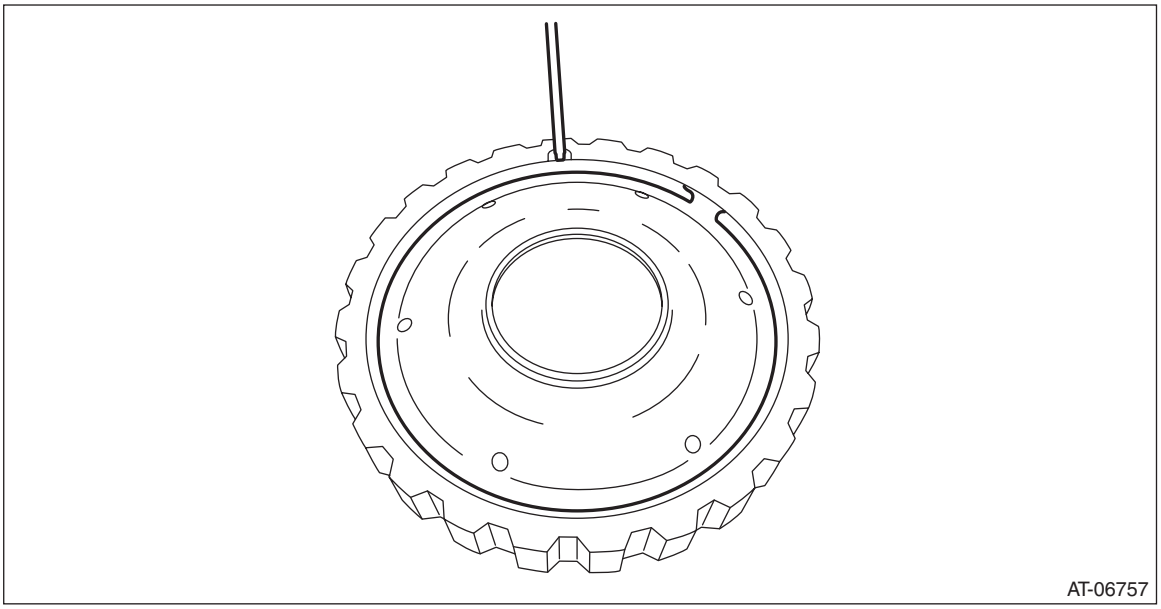
4) Remove the chamber COMPL and snap ring.

5) Remove the return spring.

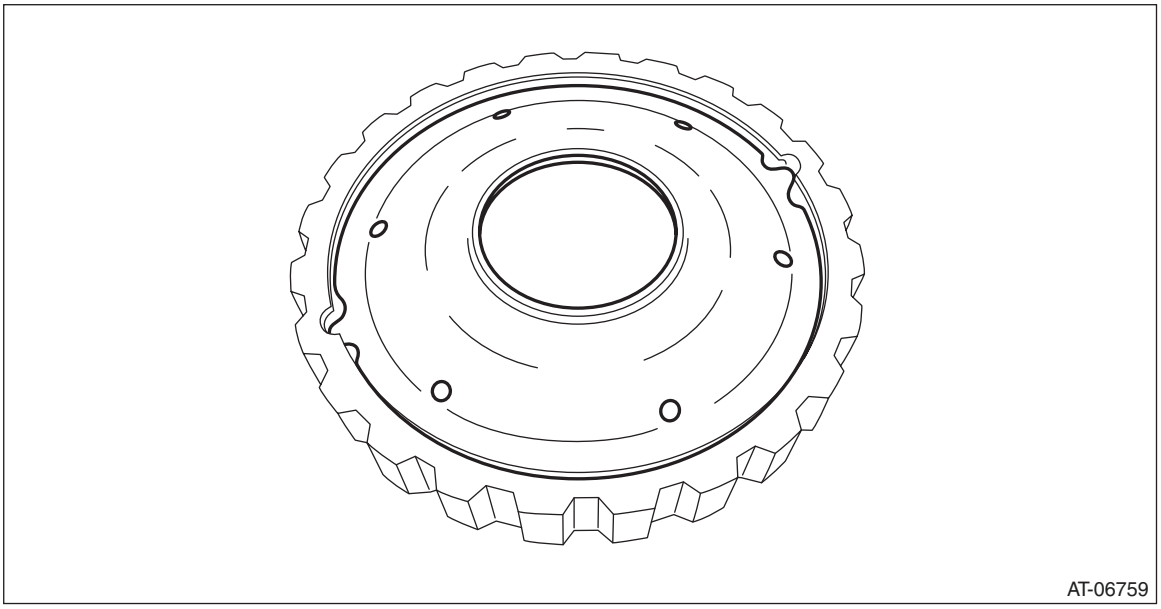


6) Remove the forward clutch piston by blowing compressed air intermittently from the forward clutch carrier hole.

2. PLANETARY CARRIER ASSEMBLY



NOTE:
Disassemble the balance oil guide only.
1) Remove the snap ring.

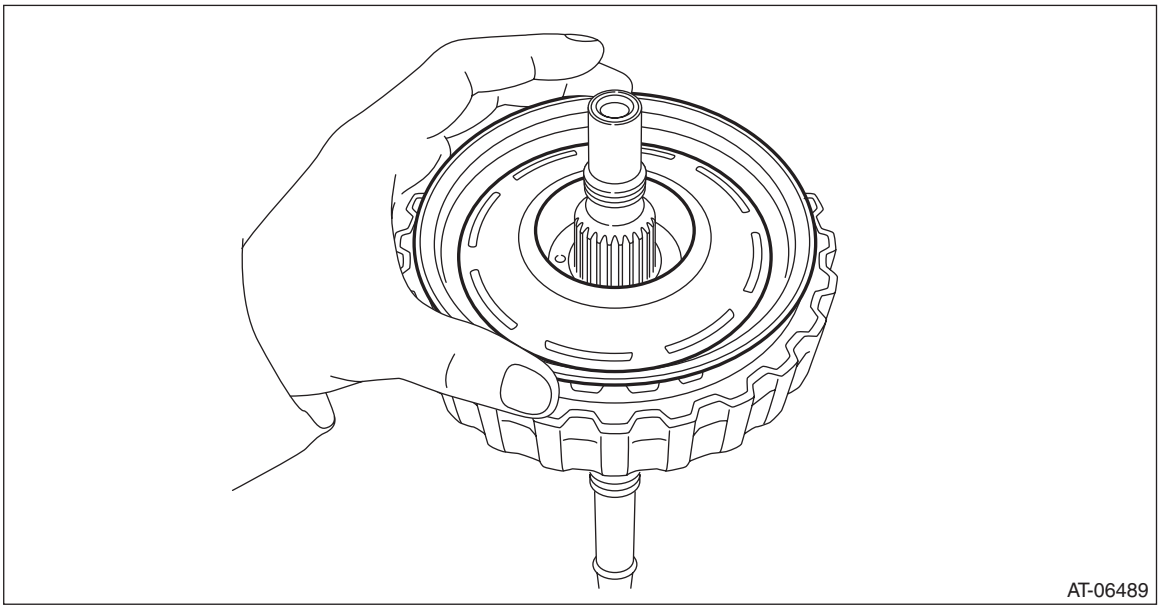


2) Remove the balance oil guide.

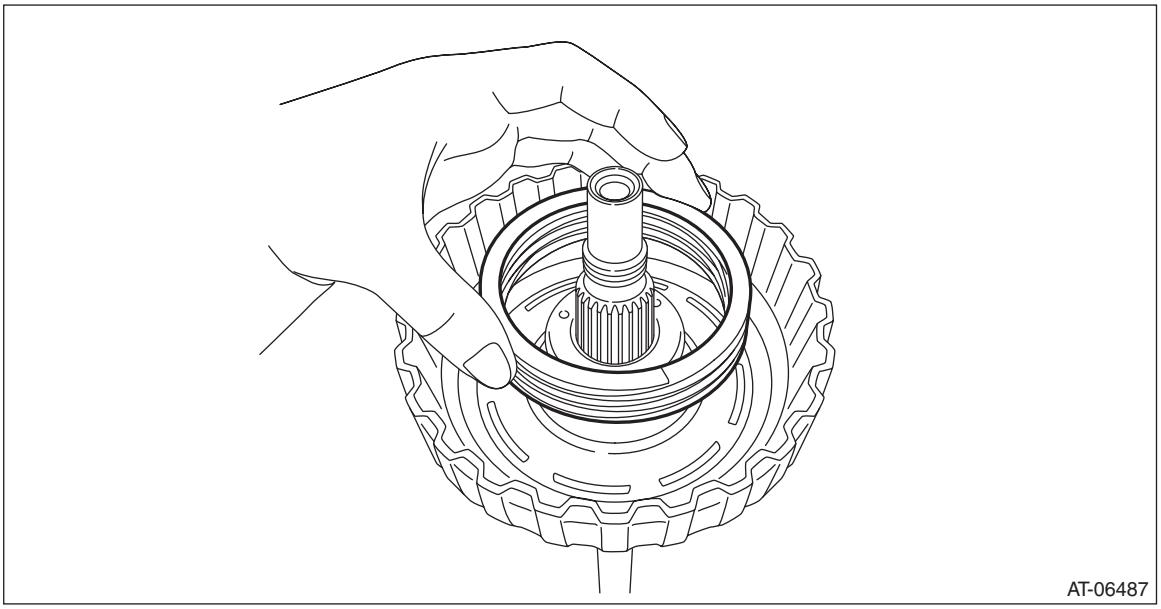
3. INTERNAL GEAR

1) Remove the snap ring.

2) Remove the thrust gear plate.



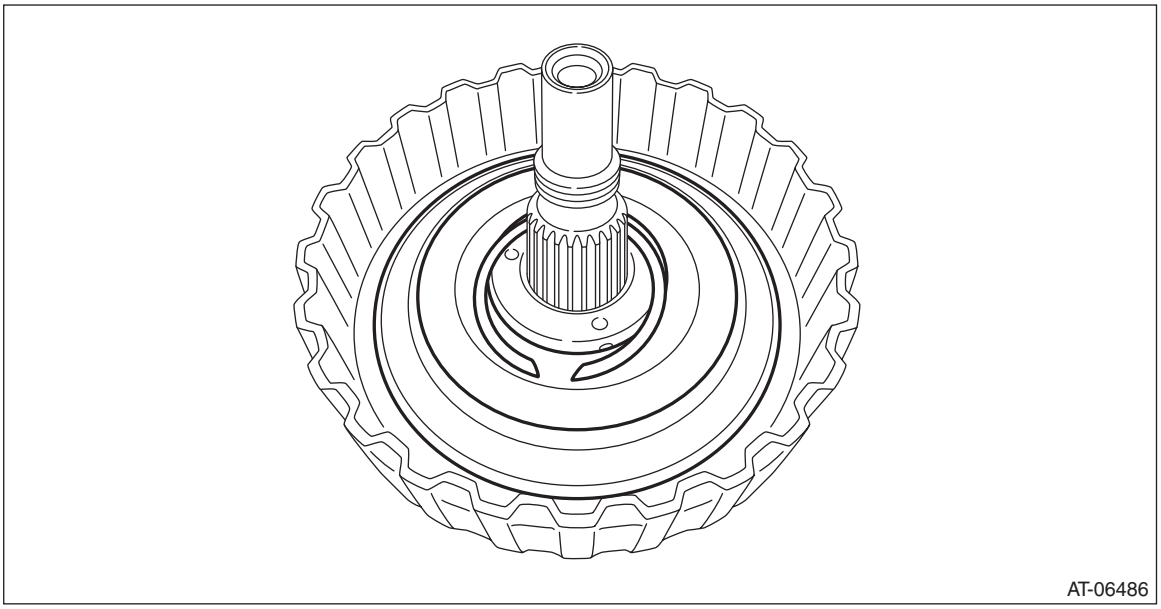
D: ASSEMBLY



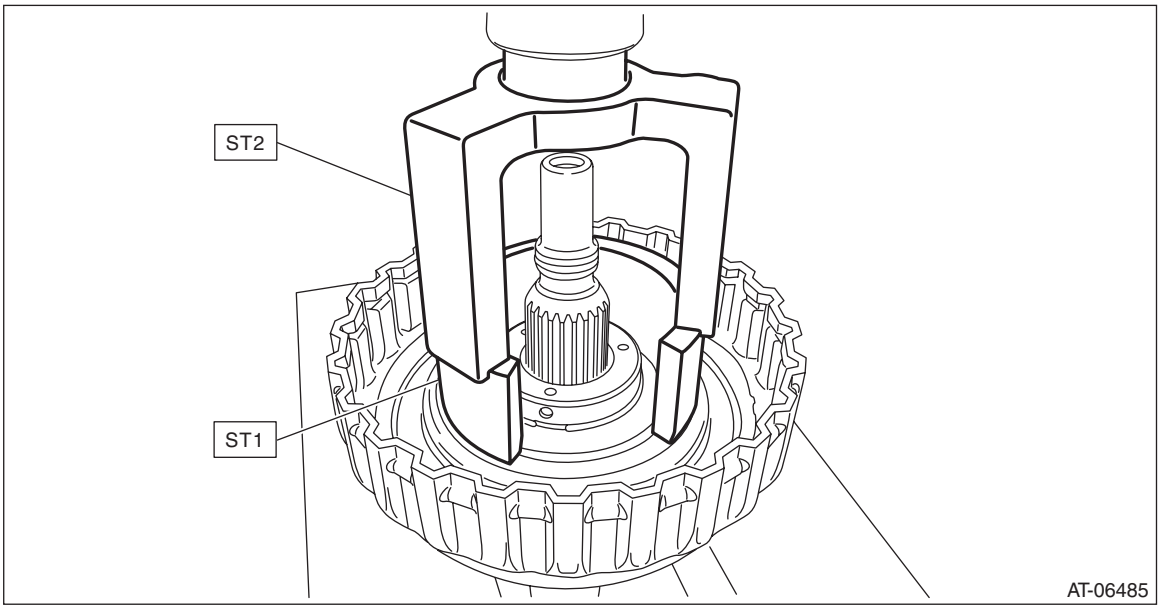
1. FORWARD CLUTCH ASSEMBLY

1) Install the forward clutch piston to forward clutch drum.

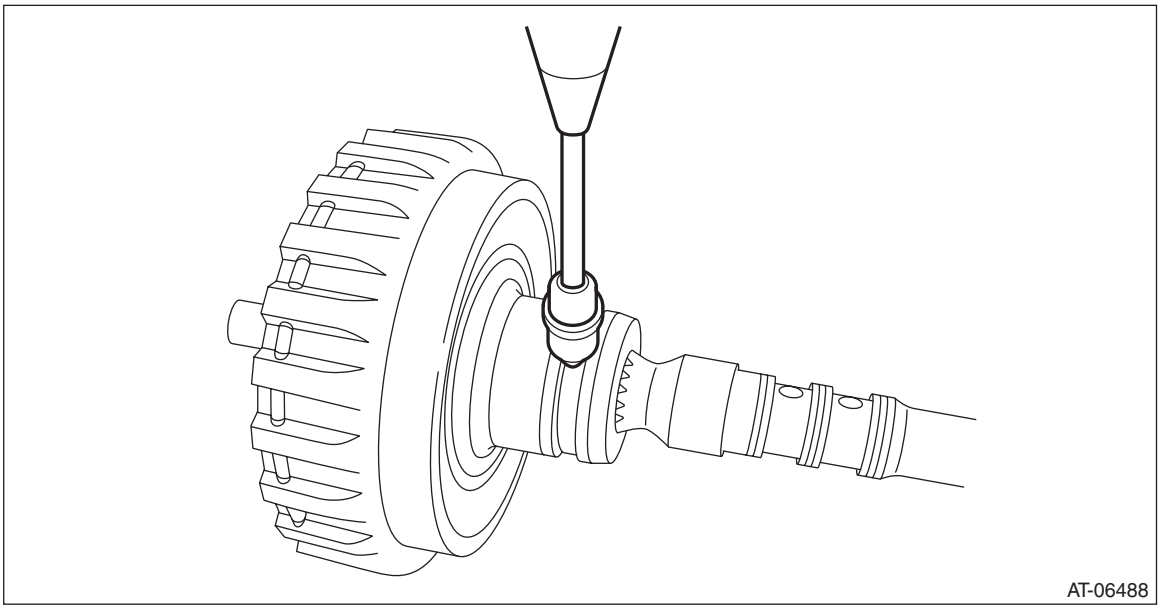
NOTE:
- Apply CVTF to the seal of forward clutch piston.
- Insert it all the way to the end.



2) Install the return spring.



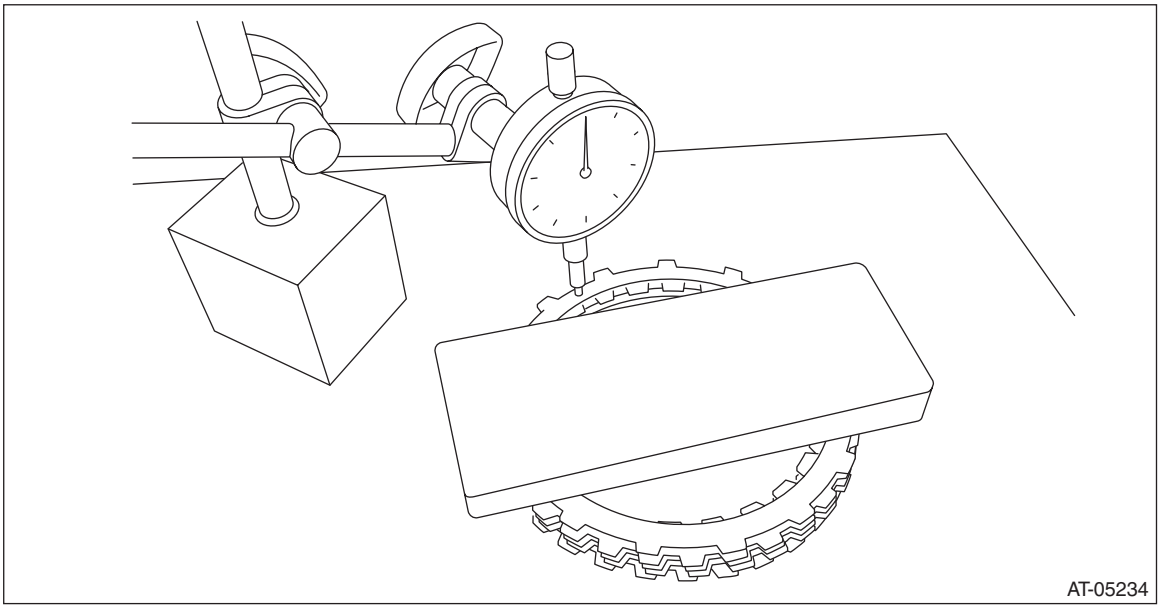
3) Install the chamber COMPL.



NOTE:
Apply CVTF to the sealing area of chamber COMPL.

4) Compress the return spring using the ST to install the snap ring.
ST1 18762AA010 COMPRESSOR SPECIAL TOOL
ST2 398673600 COMPRESSOR

5) Check the operation of forward clutch piston by blowing compressed air intermittently from forward clutch carrier hole.

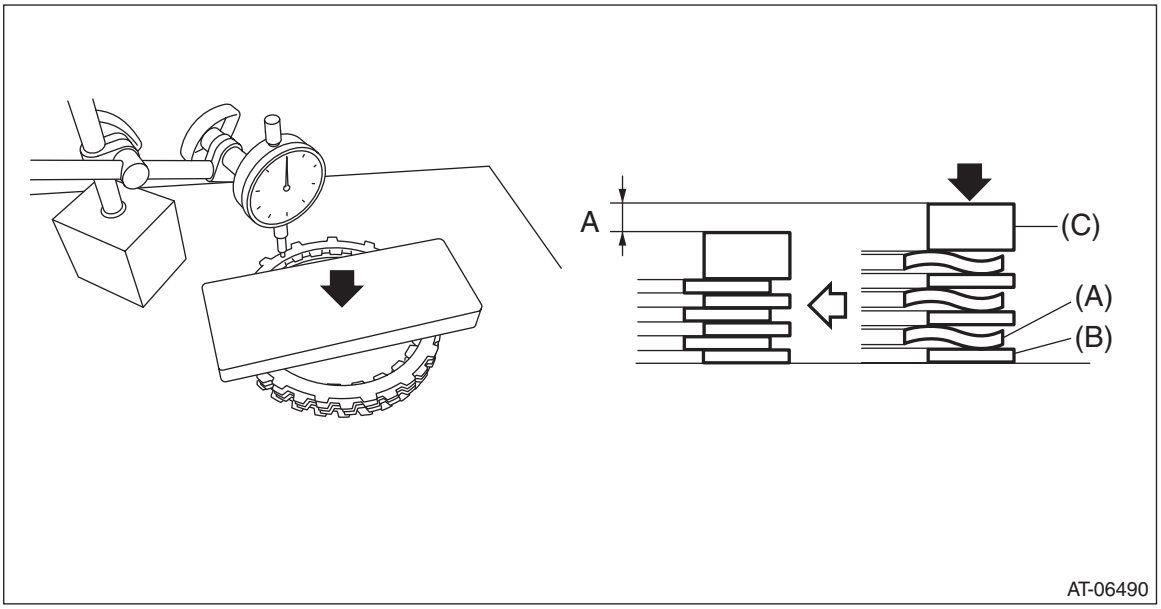


6) Place the driven plate, drive plate and retaining plate neatly in this order on surface table.
7) Set the dial gauge to retaining plate, and read its scale.

NOTE:
The value, which is read in the gauge at this time, is zero point.

8) Scale and record the weight "Z" of a flat board which will be put on retaining plate.

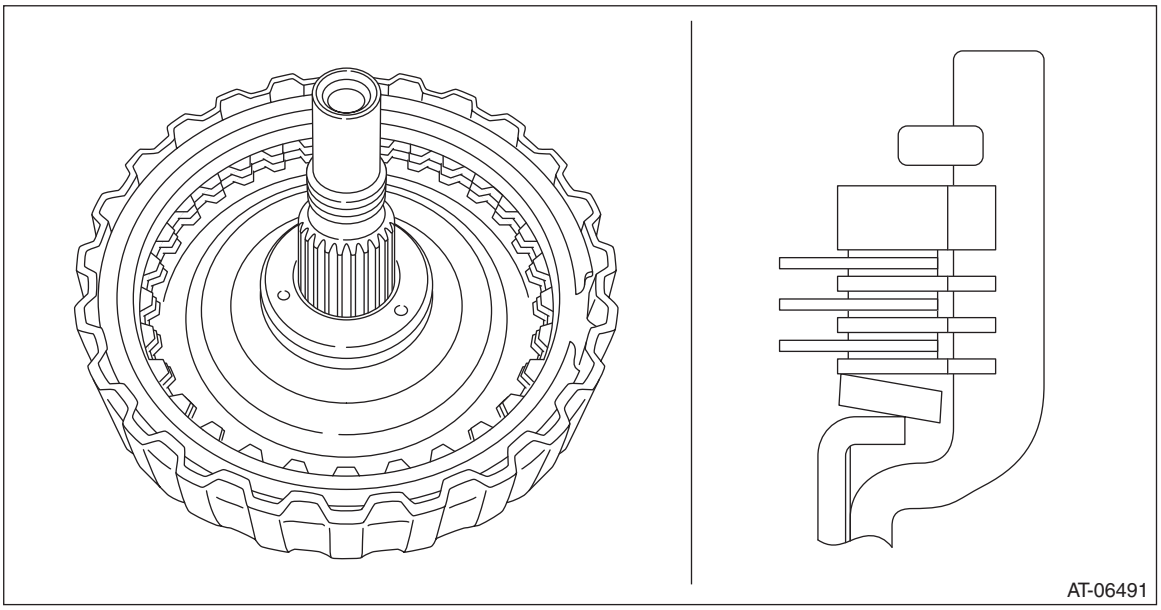
NOTE:
- Use a stiff board which does not bend against load as a flat board to be put on retaining plate.
- Use a flat board weighing less than 52 N (5.3 kgf, 11.7 lb).



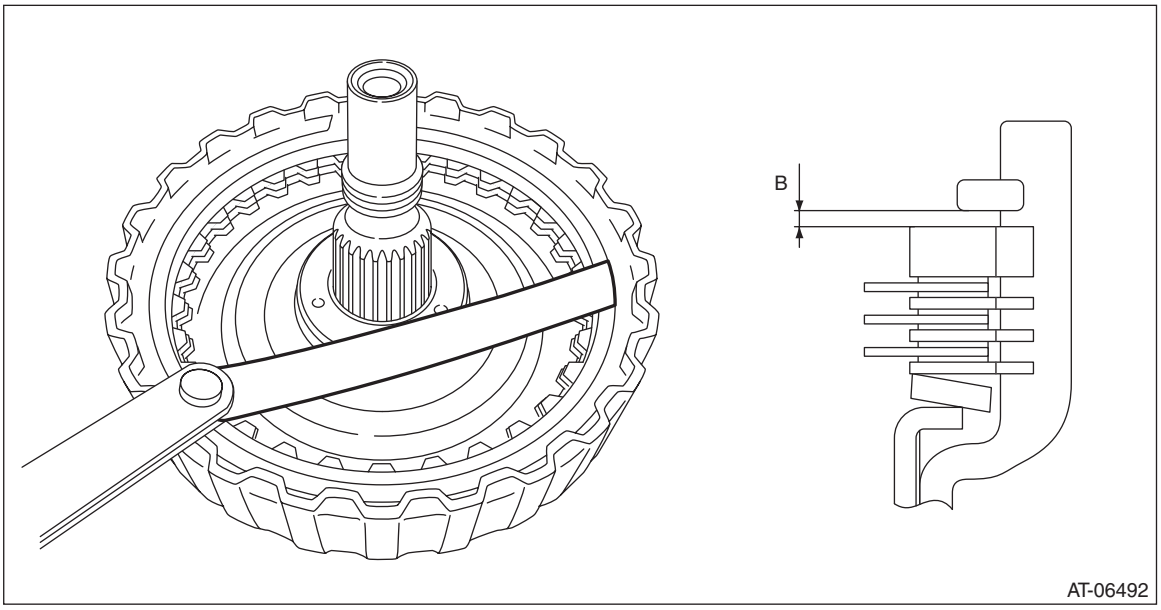
9) Put the flat board on retaining plate.

10) Using the following formula, read the push/pull gauge and calculate "N".
N = 52 N (5.3 kgf, 11.7 lb) – Z
52 N (5.3 kgf, 11.7 lb) : Load applied to clutch plate
Z: Flat board weight

11) Press the center of retaining plate by applying a force of “N” using push/pull gauge, and then measure and record the compression amount “A”.



NOTE:
Measure at four points with a 90° interval and calculate the average.



(A) Driven plate
(B) Drive plate
(C) Retaining plate

12) Install the dish plate, drive plate, driven plate, retaining plate and snap ring to the forward clutch carrier.

NOTE:
Install the dish plate in the correct direction.

13) Measure and record the clearance “B” between the retaining plate and snap ring.

14) Piston stroke calculation
Calculate with A and B dimensions recorded before.
If it exceeds the limit, replace with a new drive plate and adjust within the initial standard value.
S mm (in) = A + B
S: Piston stroke
A: Compression amount of drive plate and dish plate
B: Clearance between retaining plate and snap ring

Initial standard:
1.0 — 1.4 mm (0.040 — 0.055 in)

Limit thickness:
1.6 mm (0.063 in)

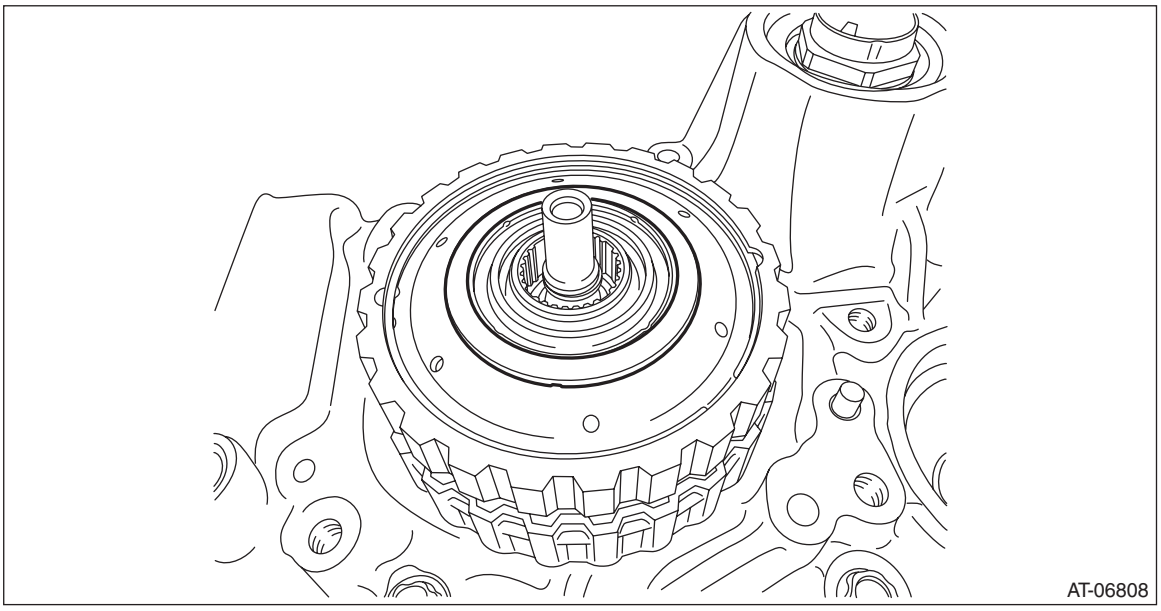
Retaining plate	
Item number	Thickness mm (in)
31567AB760	4.2 (0.165)
31567AB770	4.4 (0.173)
31567AB780	4.6 (0.181)
31567AB790	4.8 (0.189)
31567AB830	5.0 (0.197)

2. PLANETARY CARRIER ASSEMBLY

1) Install the balance oil guide.
2) Install the snap ring.

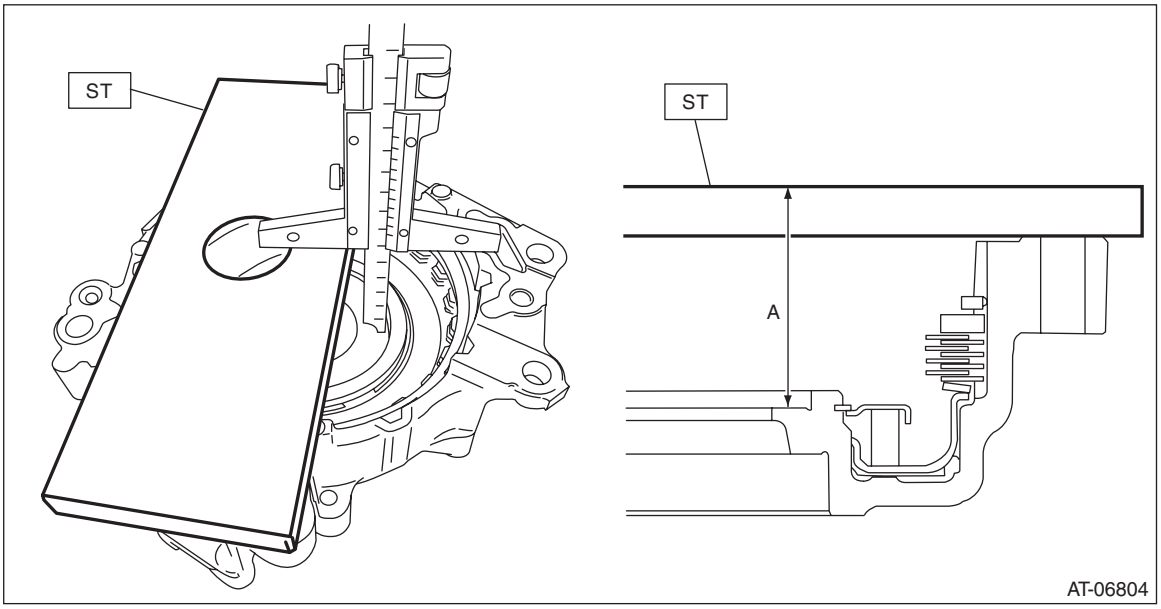
3. INTERNAL GEAR

1) Install the thrust gear plate.
2) Install the snap ring.



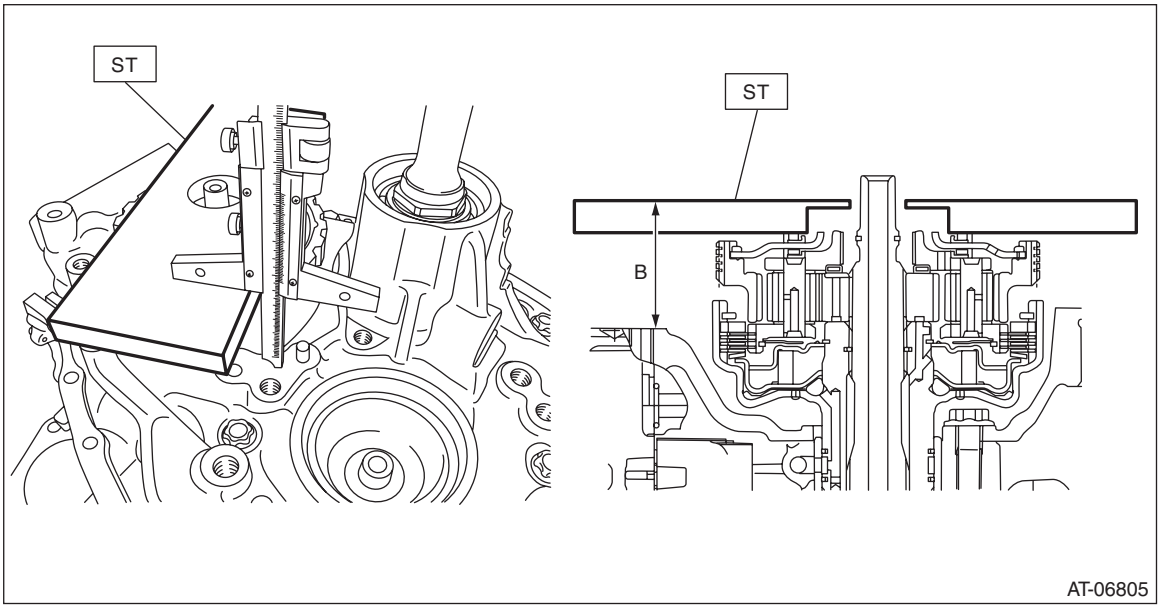
E: INSPECTION

- Check the forward clutch drum, internal gear, sun gear and forward clutch piston lip for wear or damage.
- Inspect the drive plate facing for wear and damage.
- Check the driven plate for discoloration (burnt color).
- Check for worn snap ring, fatigue or damaged return spring or deformed spring retainer.
- Make sure the clearance between retaining plate and internal gear of forward clutch is within the limit. If it exceeds the standard, replace the forward clutch. <Ref. to CVT(TR580)-313, ASSEMBLY, Forward Clutch Assembly.>



F: ADJUSTMENT

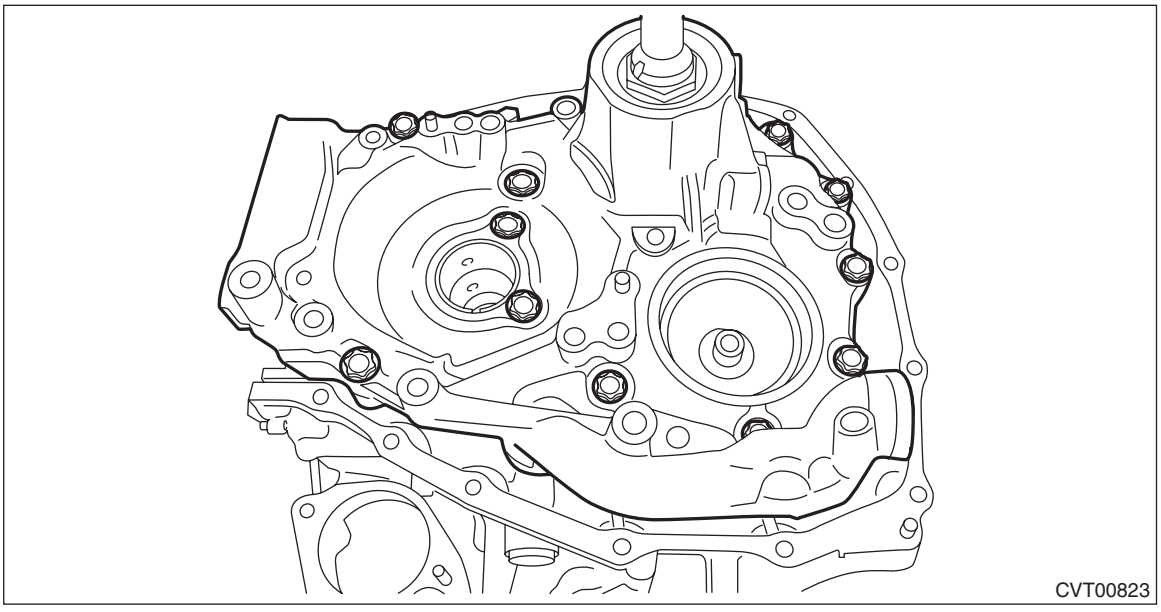
1) Install the thrust bearing to the internal gear.



NOTE:
Face the temper color surface to the reverse brake side.

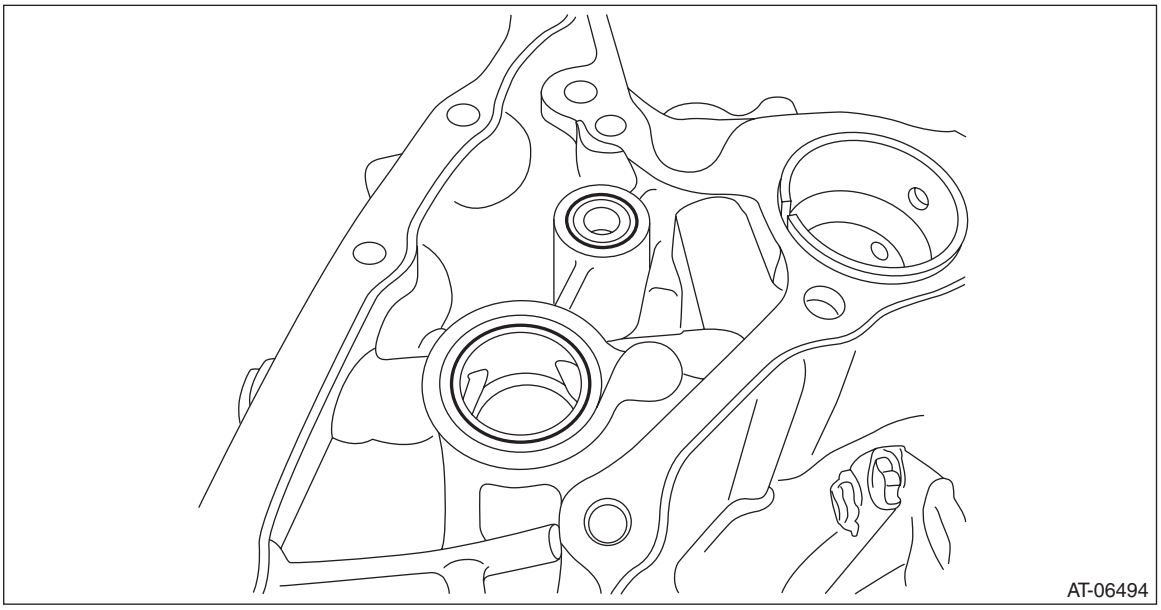
2) Measure depth “A” from the ST upper face to the washer mounting surface.
ST 499575600 GAUGE

3) Measure the height “B” from the ST upper face to the mating surface of the drive pinion retainer.
ST 499575600 GAUGE



4) Obtain the thickness of washer using the following formula to select the washer.
T (mm) = A – B – (0.35 — 0.70)
[T (in) = A – B – (0.014 — 0.028)]
T: Shim thickness
A: Depth from the ST upper face to the washer mounting surface
B: Height from ST upper face to the drive pinion retainer mating surface
0.35 — 0.70 mm (0.014 — 0.028 in): Clearance

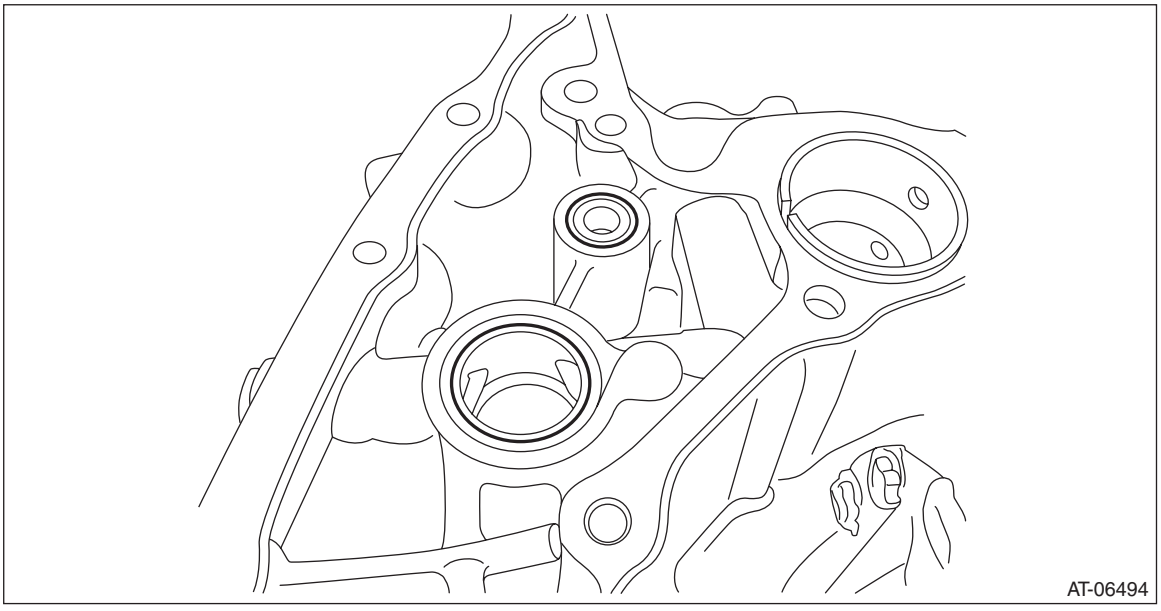
Washer	
Part No.	Thickness mm (in)
803064020	1.3 (0.051)
803064021	1.55 (0.061)
803064022	1.8 (0.071)
803064023	2.05 (0.081)
803064024	2.3 (0.091)
803064025	2.55 (0.100)



45.Drive Pinion Shaft Assembly

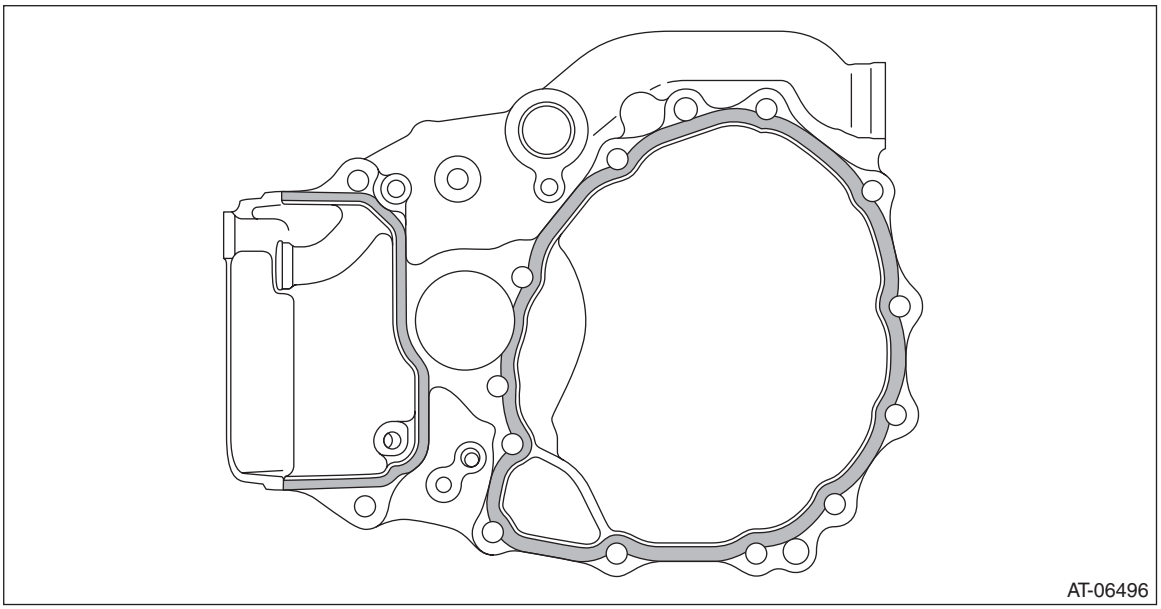
A: REMOVAL

1) Remove the transmission assembly. <Ref. to CVT(TR580)-65, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR580)-198, REMOVAL, Air Breather Hose.>
3) Remove the control valve body. <Ref. to CVT(TR580)-138, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR580)-152, REMOVAL, Transmission Harness.>
5) Remove the turbine speed sensor. <Ref. to CVT(TR580)-118, REMOVAL, Turbine Speed Sensor.>
6) Remove the secondary speed sensor. <Ref. to CVT(TR580)-123, REMOVAL, Secondary Speed Sensor.>
7) Remove the primary speed sensor. <Ref. to CVT(TR580)-128, REMOVAL, Primary Speed Sensor.>
8) Remove the inhibitor switch. <Ref. to CVT(TR580)-114, REMOVAL, Inhibitor Switch.>
9) Remove the extension case. <Ref. to CVT(TR580)-209, REMOVAL, Extension Case.>
10) Remove the transfer clutch assembly. <Ref. to CVT(TR580)-213, REMOVAL, Transfer Clutch.>
11) Remove the transfer driven gear assembly. <Ref. to CVT(TR580)-227, REMOVAL, Transfer Driven Gear.>
12) Remove the parking pawl. <Ref. to CVT(TR580)-230, REMOVAL, Parking Pawl.>
13) Remove the reduction driven gear assembly. <Ref. to CVT(TR580)-232, REMOVAL, Reduction Driven Gear.>
14) Remove the oil pan and oil strainer. <Ref. to CVT(TR580)-135, REMOVAL, Oil Pan and Strainer.>
15) Remove the transmission control device. <Ref. to CVT(TR580)-240, REMOVAL, Transmission Control Device.>
16) Remove the transmission case. <Ref. to CVT(TR580)-246, REMOVAL, Transmission Case.>
17) Remove the reduction drive gear. <Ref. to CVT(TR580)-259, REMOVAL, Reduction Drive Gear.>
18) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR580)-264, REMOVAL, Primary Pulley and Secondary Pulley.>
19) Remove the reverse brake assembly. <Ref. to CVT(TR580)-285, REMOVAL, Reverse Brake Assembly.>
20) Remove the forward clutch assembly. <Ref. to CVT(TR580)-300, REMOVAL, Forward Clutch Assembly.>
21) Using the ST, remove the drive pinion retainer.
ST 18270KA020 SOCKET (E20)



22) Remove the O-rings.

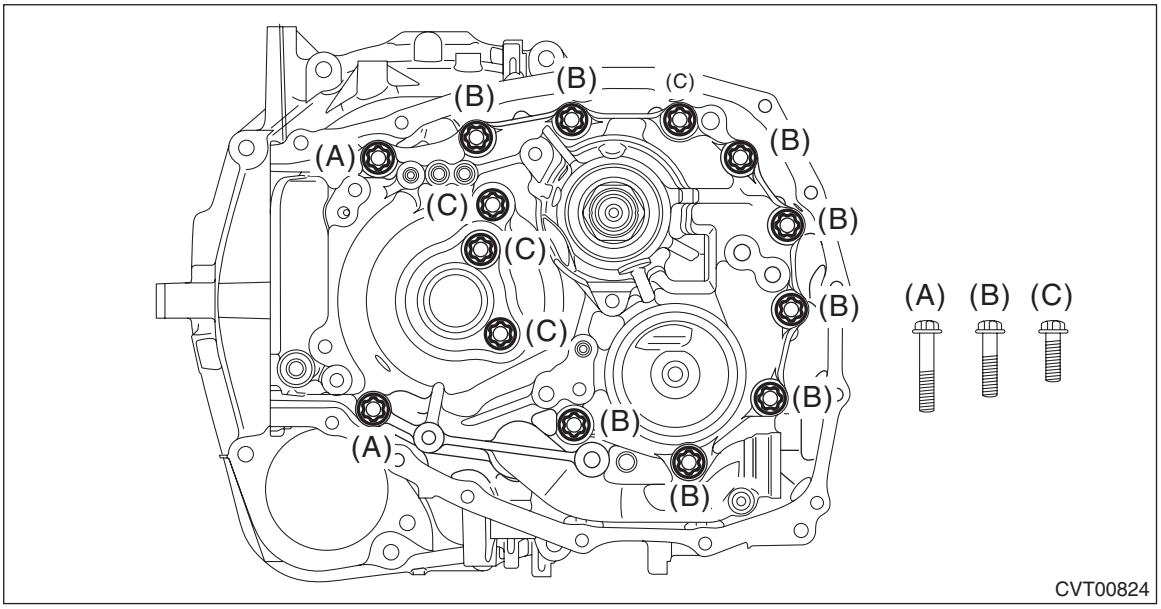
B: INSTALLATION



1) Clean the mating surface of drive pinion retainer and converter case.
2) Adjust the backlash and tooth contact between drive pinion shaft assembly and the front differential side gear. <Ref. to CVT(TR580)-343, ADJUSTMENT, Drive Pinion Shaft Assembly.>
3) Install O-rings in two locations to the converter case.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

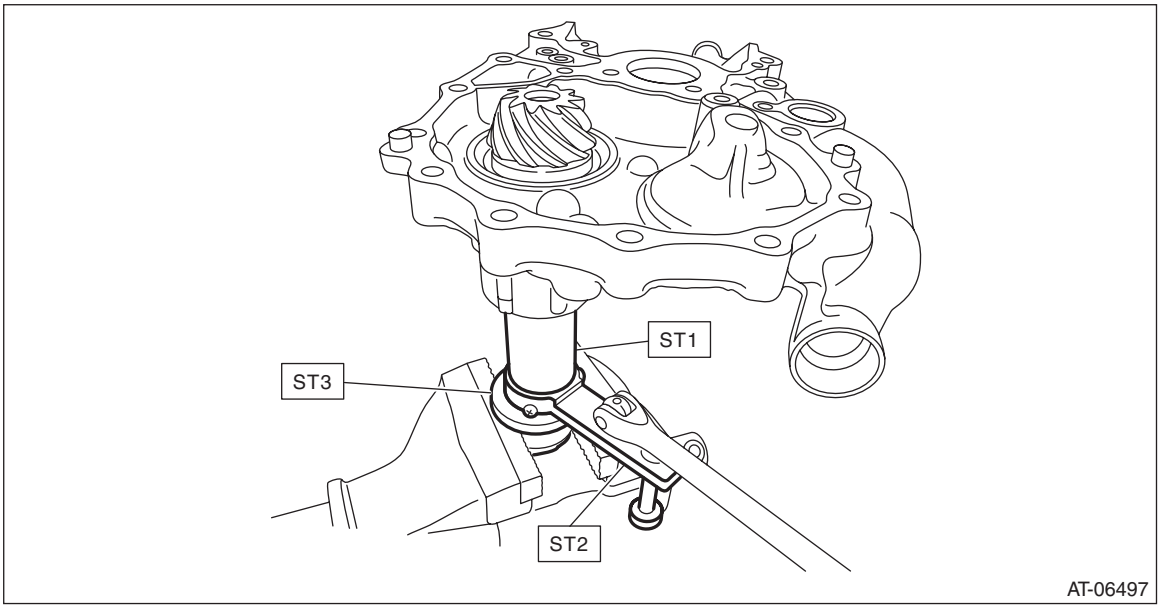
4) Apply liquid gasket seamlessly to the mating surface of drive pinion retainer.



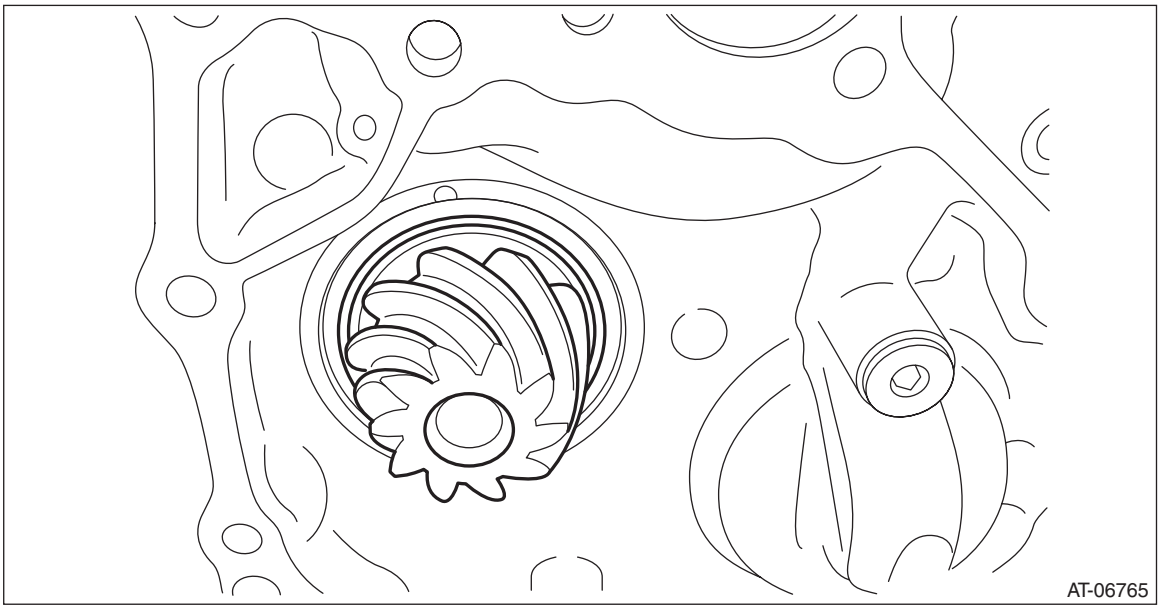
Liquid gasket:
THREE BOND 1215B or equivalent

5) Install the drive pinion retainer to converter case, and tighten the bolt using the ST.
ST 18270KA020 SOCKET (E20)

NOTE:
Do not confuse the three different-length bolts when installing.

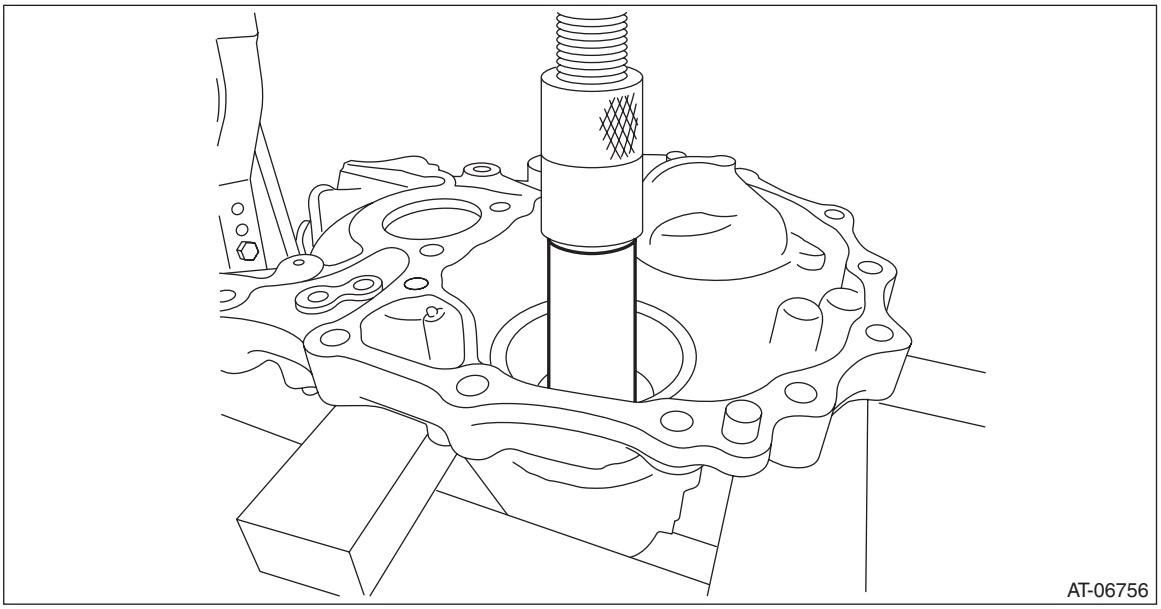


Tightening torque:
43 N·m (4.4 kgf-m, 31.7 ft-lb)

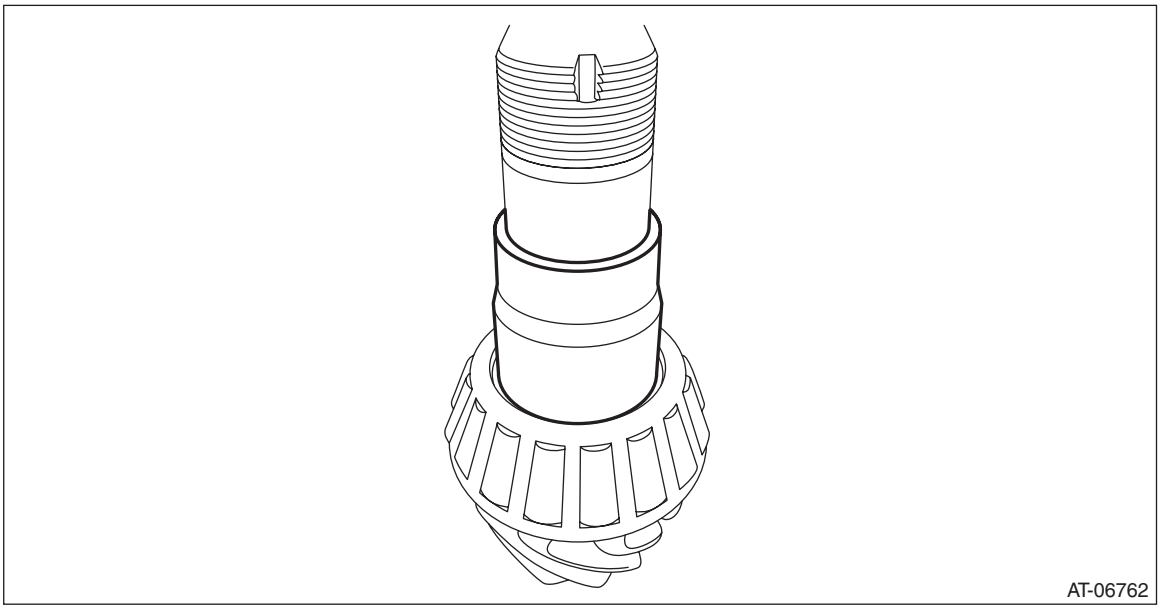


6) Install the forward clutch assembly. <Ref. to CVT(TR580)-303, INSTALLATION, Forward Clutch Assembly.>
7) Install the reverse brake assembly. <Ref. to CVT(TR580)-288, INSTALLATION, Reverse Brake Assembly.>
8) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR580)-271, INSTALLATION, Primary Pulley and Secondary Pulley.>
9) Install the reduction drive gear. <Ref. to CVT(TR580)-260, INSTALLATION, Reduction Drive Gear.>
10) Install the transmission case. <Ref. to CVT(TR580)-249, INSTALLATION, Transmission Case.>
11) Install the transmission control device. <Ref. to CVT(TR580)-243, INSTALLATION, Transmission Control Device.>
12) Install the oil strainer and oil pan. <Ref. to CVT(TR580)-136, INSTALLATION, Oil Pan and Strainer.>
13) Install the reduction driven gear assembly. <Ref. to CVT(TR580)-232, INSTALLATION, Reduction Driven Gear.>
14) Install the transfer driven gear assembly. <Ref. to CVT(TR580)-228, INSTALLATION, Transfer Driven Gear.>
15) Install the transfer clutch assembly. <Ref. to CVT(TR580)-215, INSTALLATION, Transfer Clutch.>
16) Install the parking pawl. <Ref. to CVT(TR580)-231, INSTALLATION, Parking Pawl.>
17) Install the extension case. <Ref. to CVT(TR580)-210, INSTALLATION, Extension Case.>
18) Install the inhibitor switch. <Ref. to CVT(TR580)-115, INSTALLATION, Inhibitor Switch.>
19) Install the secondary speed sensor. <Ref. to CVT(TR580)-123, INSTALLATION, Secondary Speed Sensor.>
20) Install the primary speed sensor. <Ref. to CVT(TR580)-129, INSTALLATION, Primary Speed Sensor.>
21) Install the turbine speed sensor. <Ref. to CVT(TR580)-118, INSTALLATION, Turbine Speed Sensor.>
22) Install the transmission harness. <Ref. to CVT(TR580)-155, INSTALLATION, Transmission Harness.>
23) Install the control valve body. <Ref. to CVT(TR580)-144, INSTALLATION, Control Valve Body.>
24) Install the air breather hose. <Ref. to CVT(TR580)-200, INSTALLATION, Air Breather Hose.>
25) Install the transmission assembly. <Ref. to CVT(TR580)-81, INSTALLATION, Automatic Transmission Assembly.>

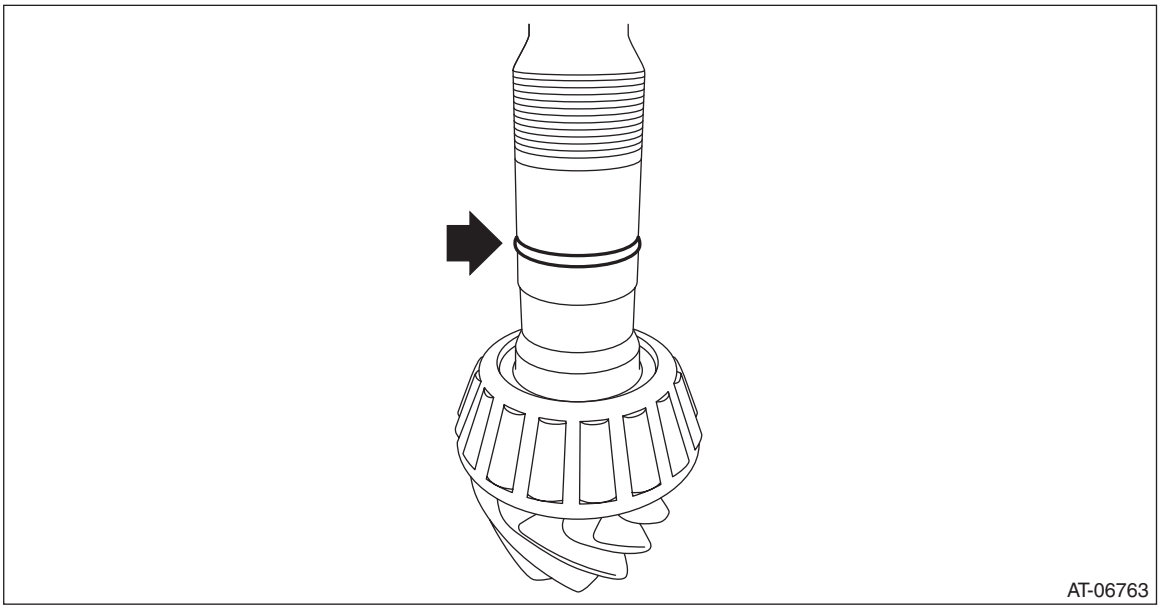
C: DISASSEMBLY



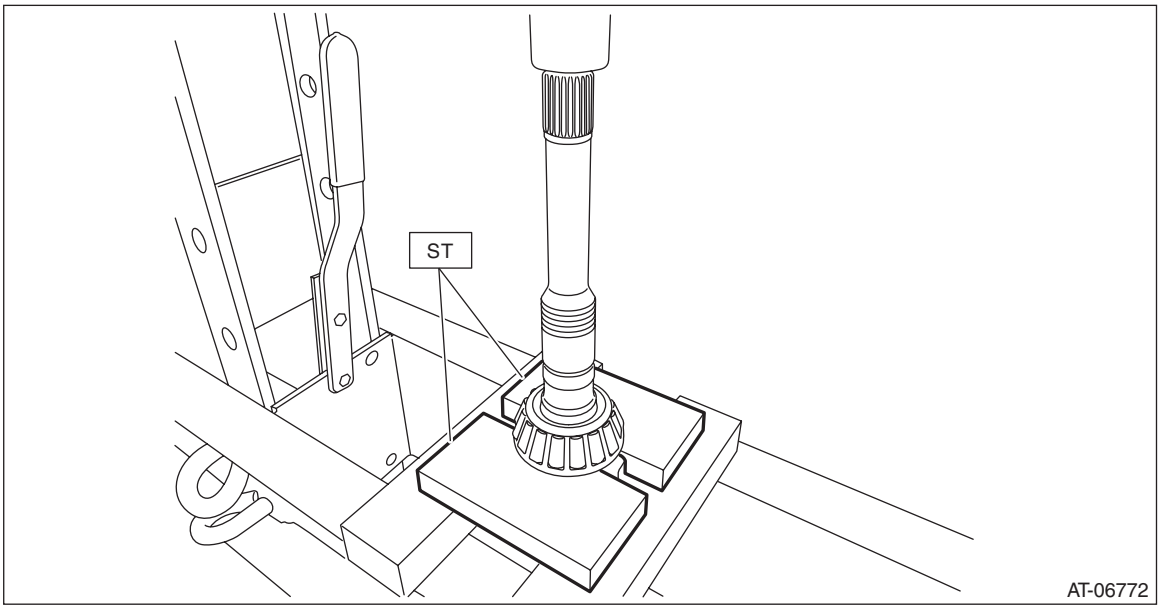
1) Flatten the tab of the lock nut.
2) Using ST1, ST2 and ST3, fix at the spline portion of drive pinion shaft to remove the lock nut.
ST1 499787500 ADAPTER
ST2 499787700 WRENCH
ST3 498937110 HOLDER



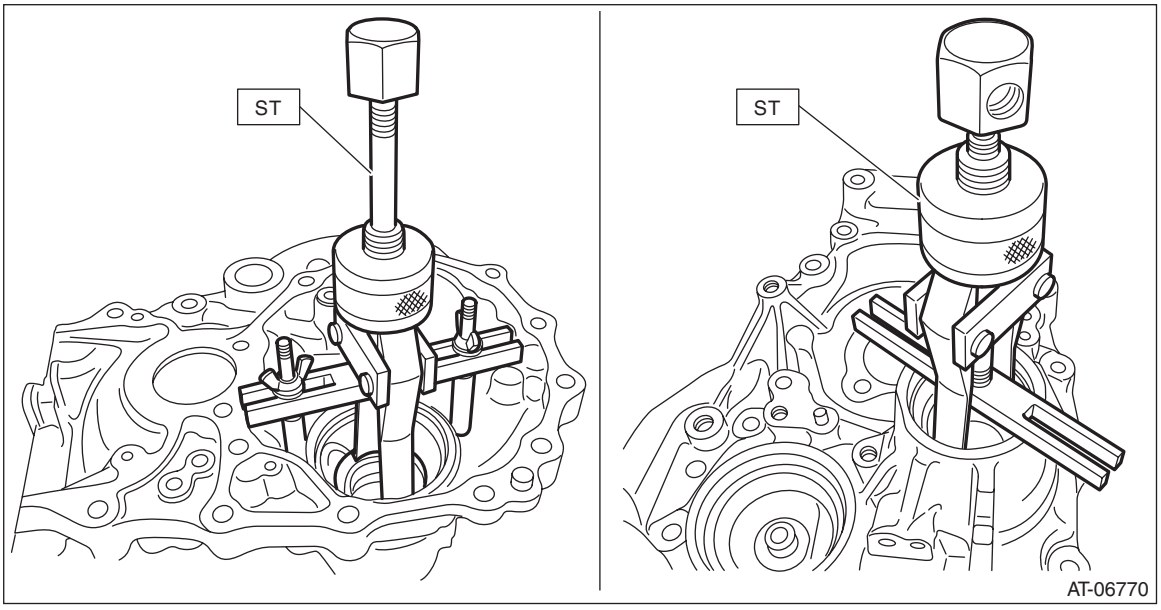
3) Remove the drive pinion shaft from the drive pinion retainer.



4) Using the round bar with diameter of 36 mm (1.42 in) or 37 mm (1.46 in), remove the bearing inner race and plug.

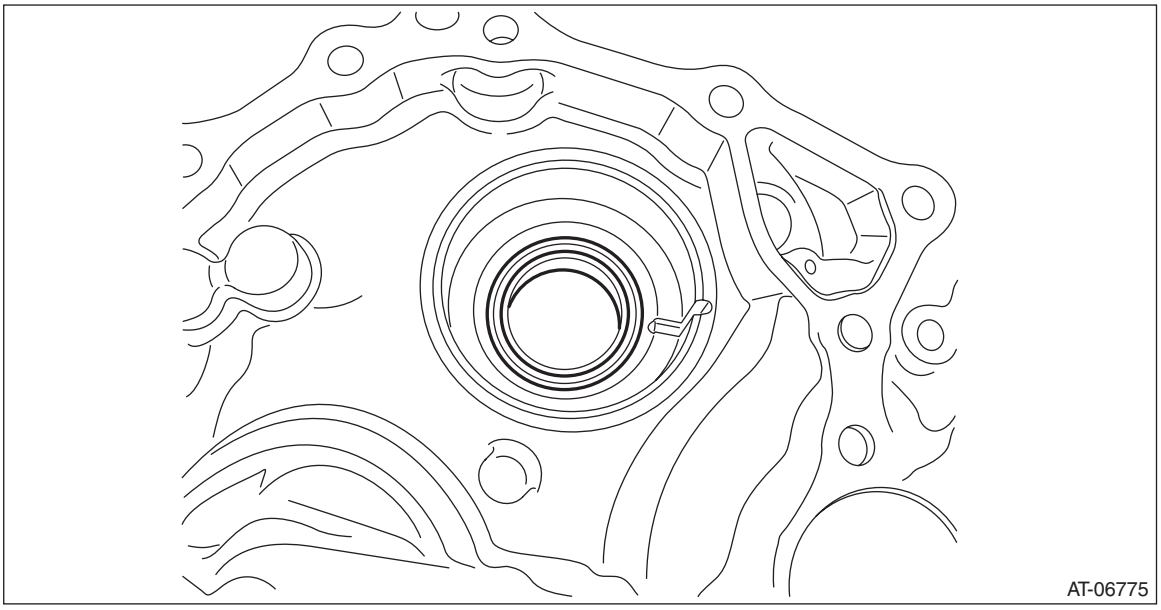


5) Remove the drive pinion washer.
6) Remove the drive pinion spacer.

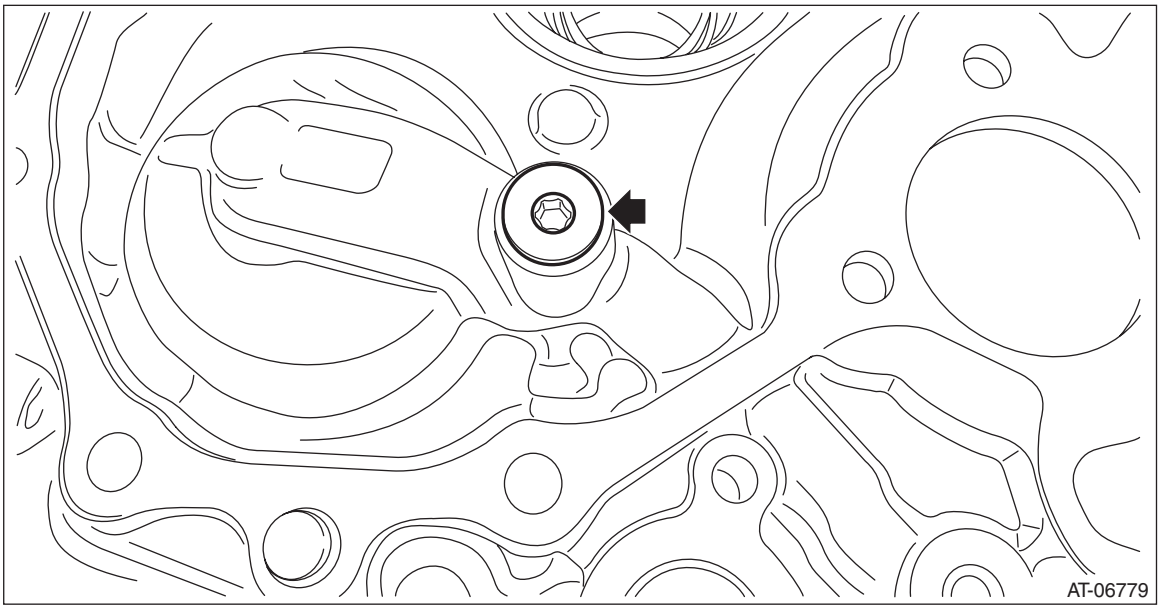


7) Remove the O-rings.

8) Remove the inner race and drive pinion shim from drive pinion shaft using ST.
ST 498515500 REMOVER



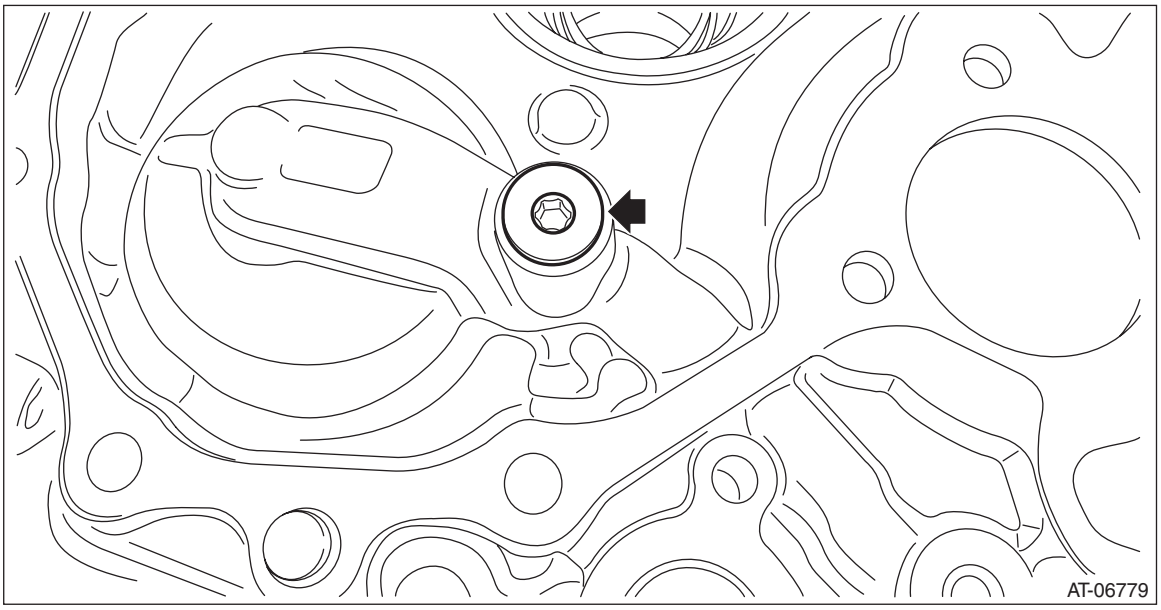
9) Using the ST, remove the outer race.
ST 398527700 PULLER ASSY



10) Remove the two oil seals using a screwdriver wrapped with cloth, etc.

CAUTION:
Do not damage the fitting surface of oil seal.

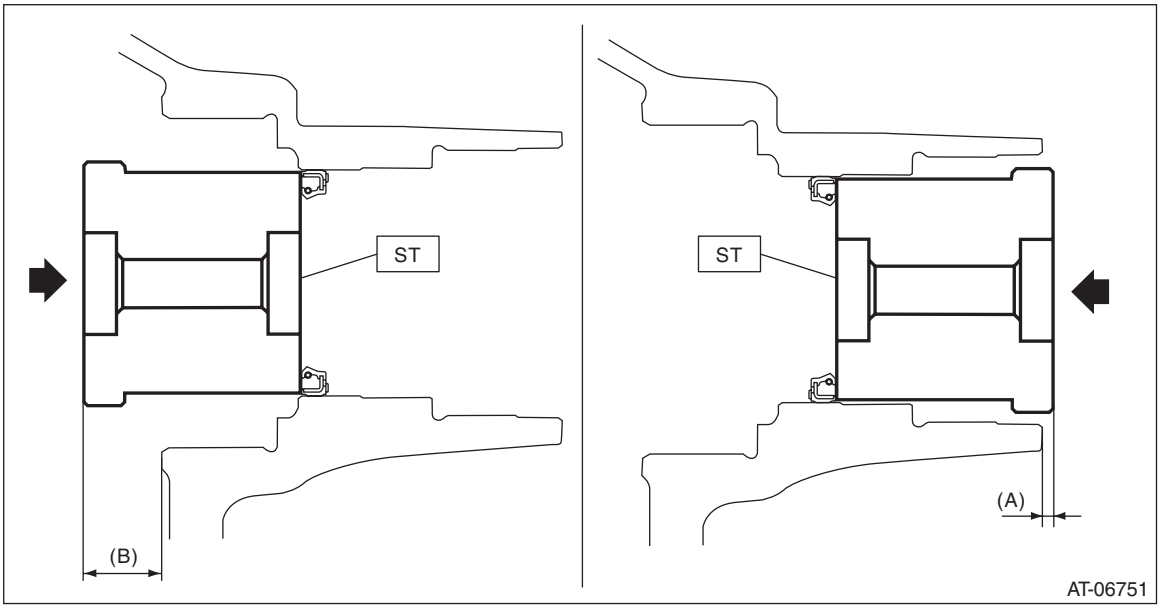
11) Remove the plug from drive pinion retainer.



D: ASSEMBLY

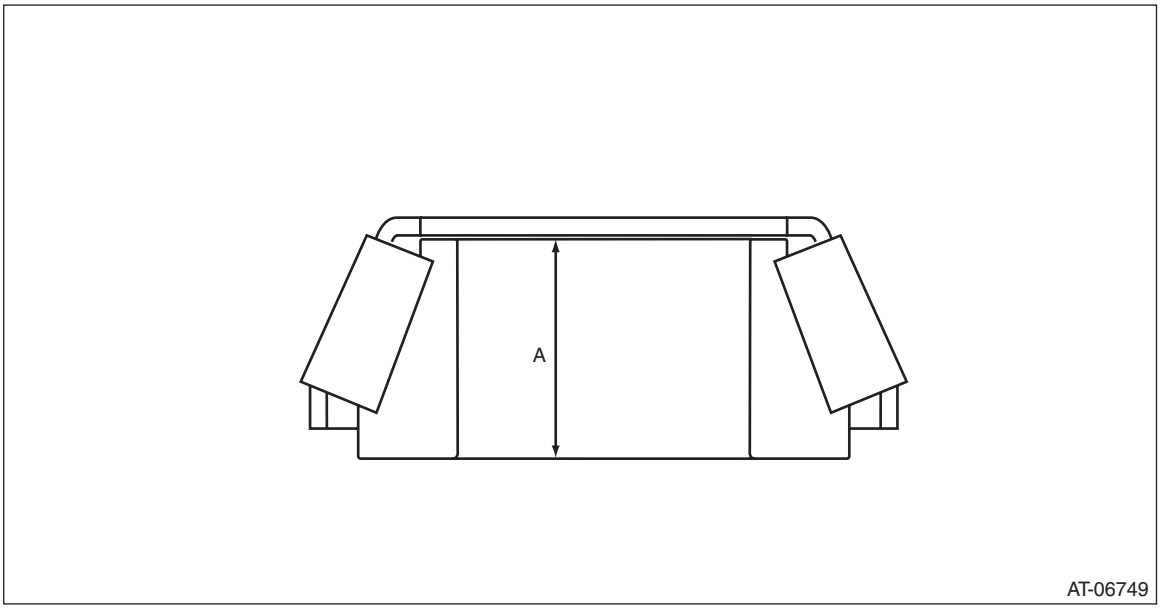
1) Install the plug to drive pinion retainer.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.



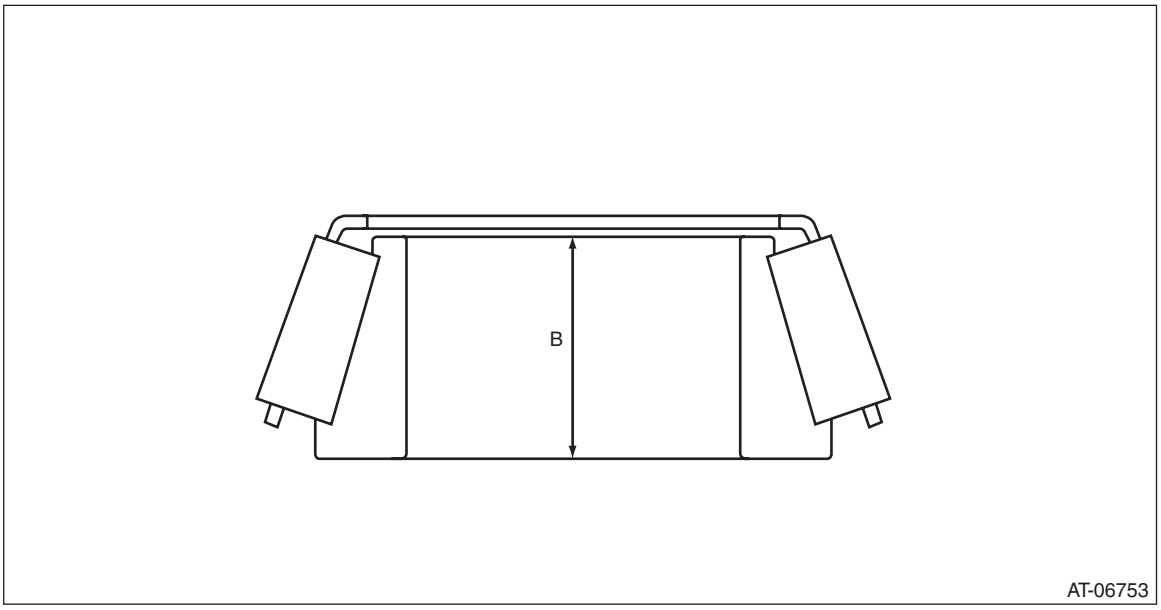
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) Using the ST, install the oil seal to drive pinion retainer.

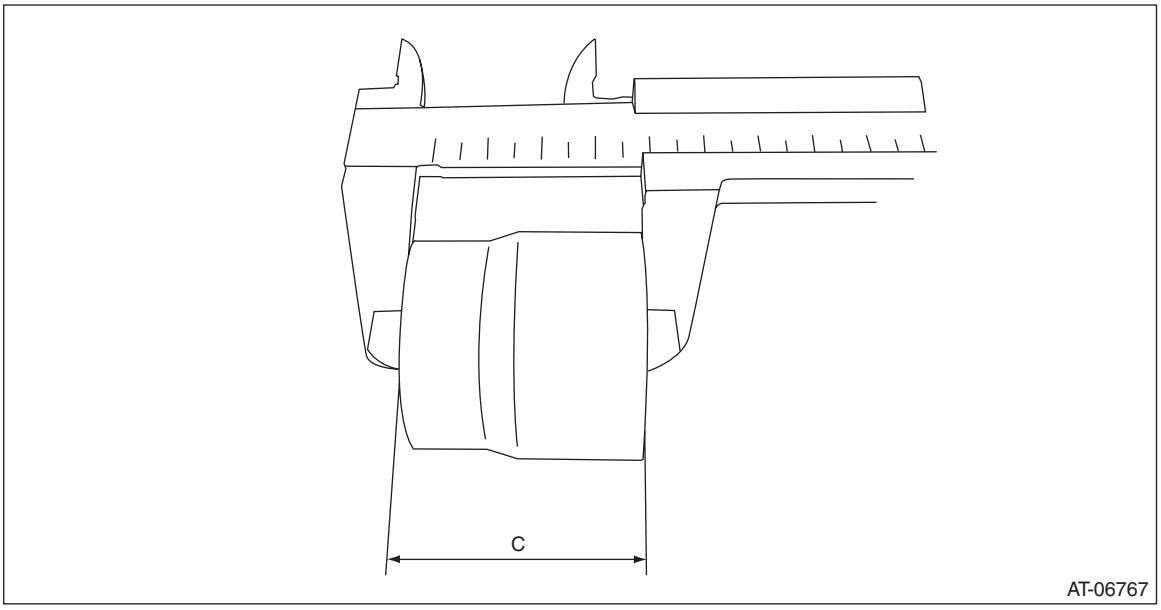


NOTE:
- Apply CVTF to the oil seal press-fitting surface and lip.
- Install the oil seal in the correct direction.

ST 927720000 HOUSING BUSHING INSTALLER AND REMOVER

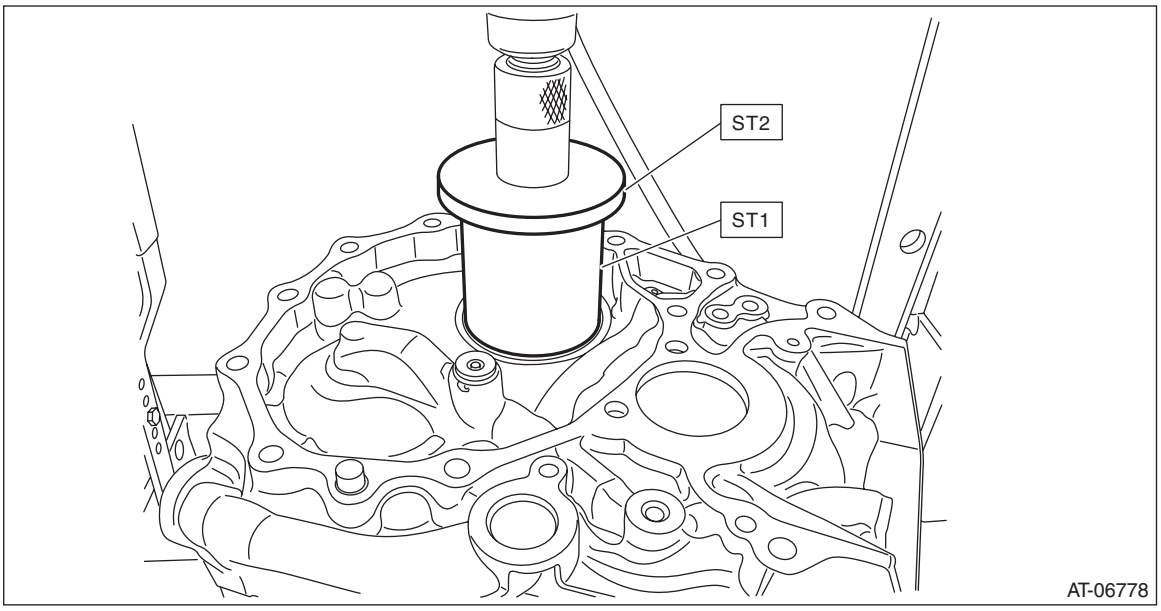


(A) 2.8 mm (0.11 in)
(B) 18.7 mm (0.74 in)

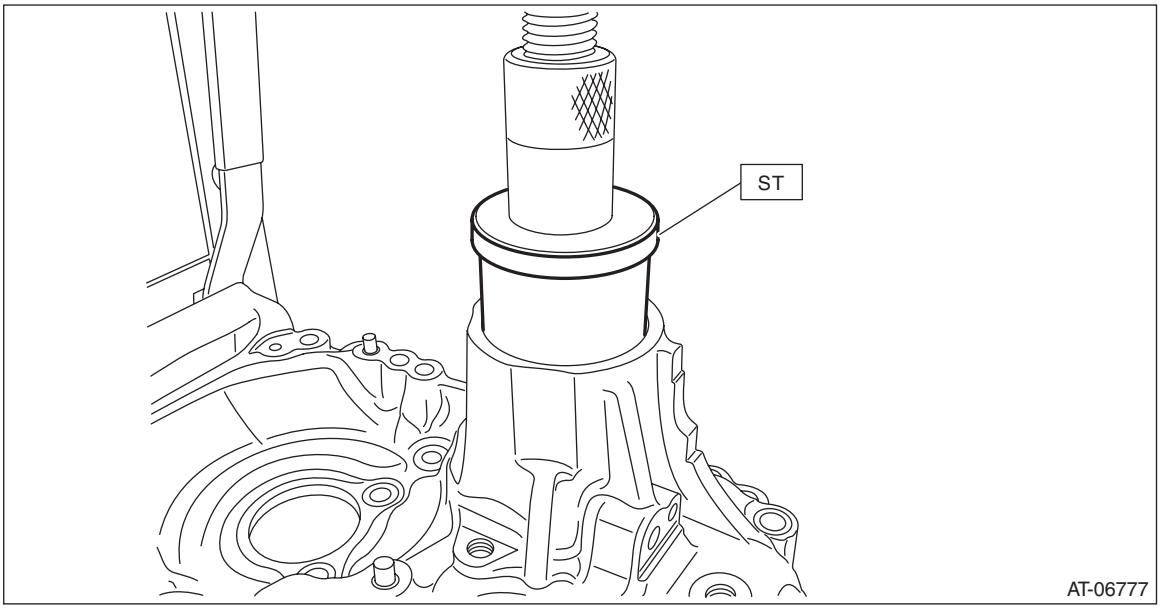


3) Select the drive pinion washer.
(1) Measure the roller bearing inner race width “A” on the front side.

(2) Measure the roller bearing inner race width “B” on the rear side.



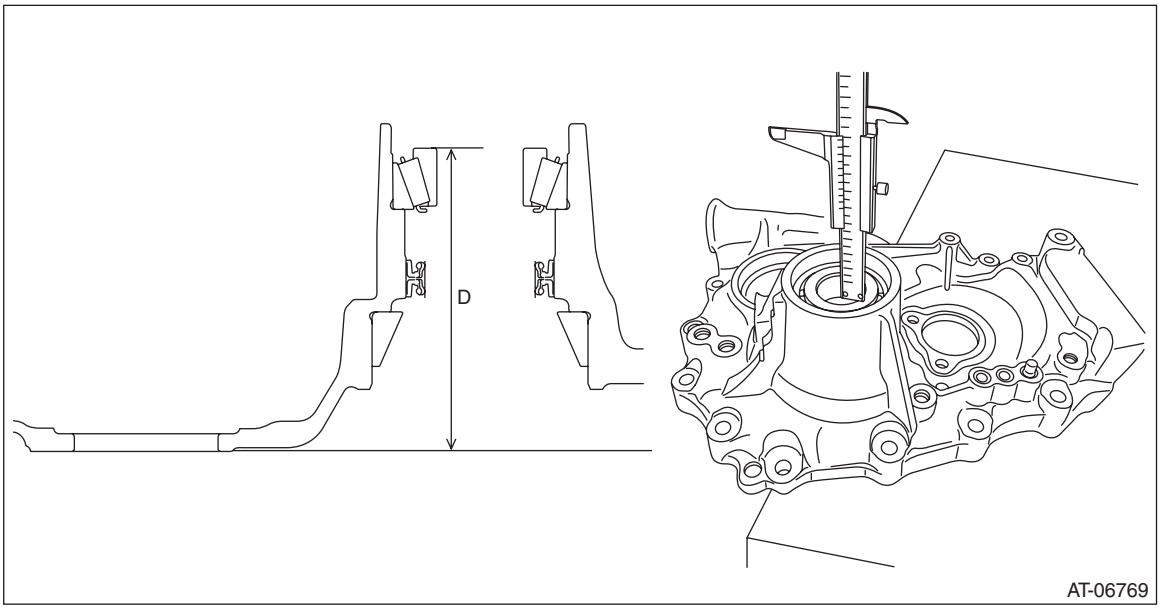
(3) Measure the spacer width “C”.



(4) Using the ST, install the front roller bearing outer race to the drive pinion retainer.

ST1 28499TC010 INSTALLER
ST2 398177700 INSTALLER

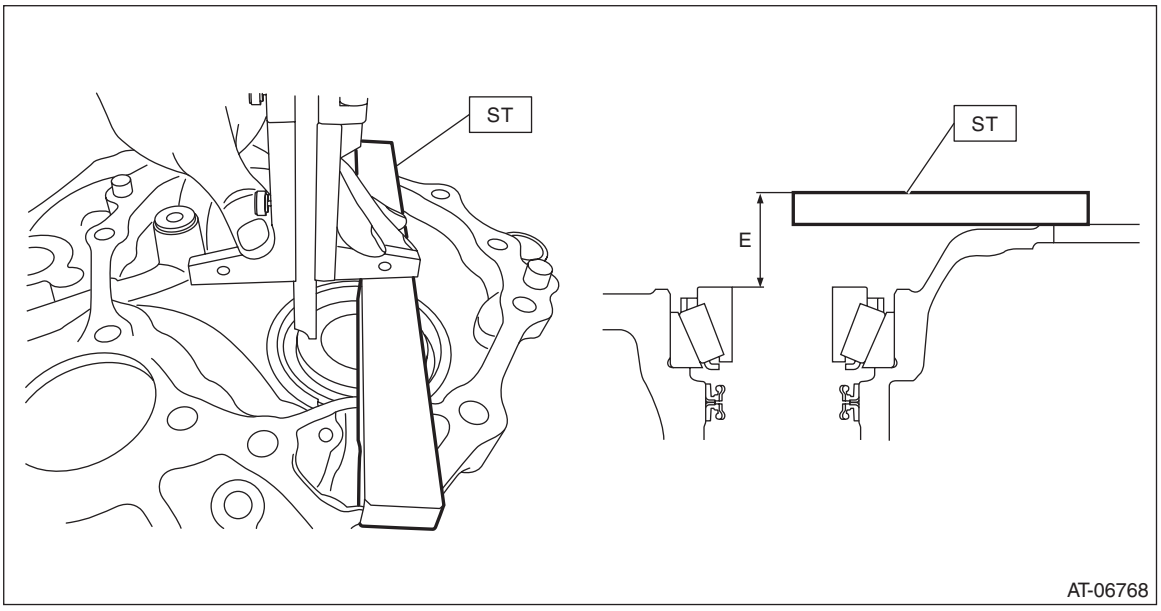
(5) Using the ST, install the rear roller bearing outer race to the drive pinion retainer.



ST 20099AE020 INSTALLER

(6) Place the drive pinion retainer on the surface plate, and install the inner race to the rear roller bearing outer race.

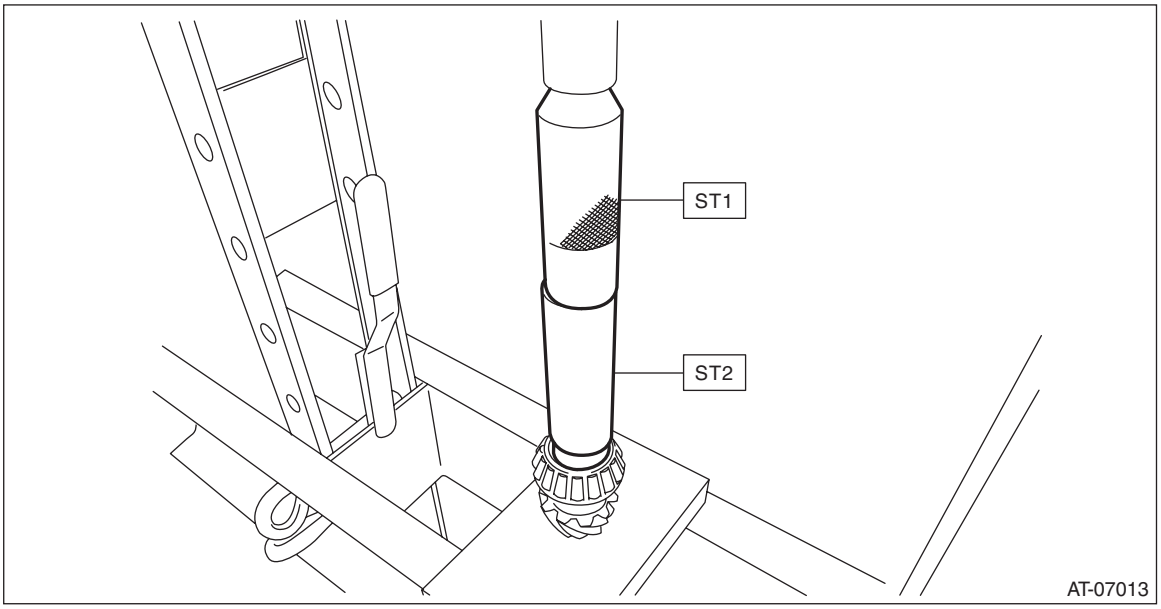
NOTE:
Place the drive pinion retainer so that the mating surface of the drive pinion retainer (mating surface with the converter case) contacts the surface plate.



(7) Measure the height “D” from the end face of the rear roller bearing inner race to the surface plate.

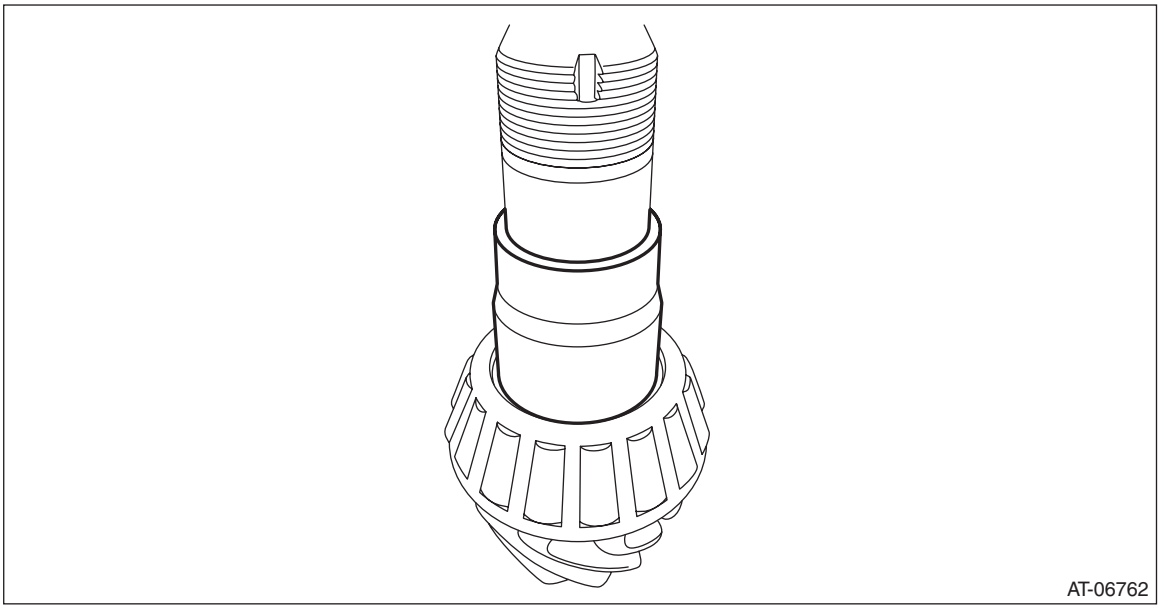
(8) Install the inner race to the front roller bearing outer race.

(9) Measure the depth “E” from the end face of the front roller bearing inner race to the end face of the ST.



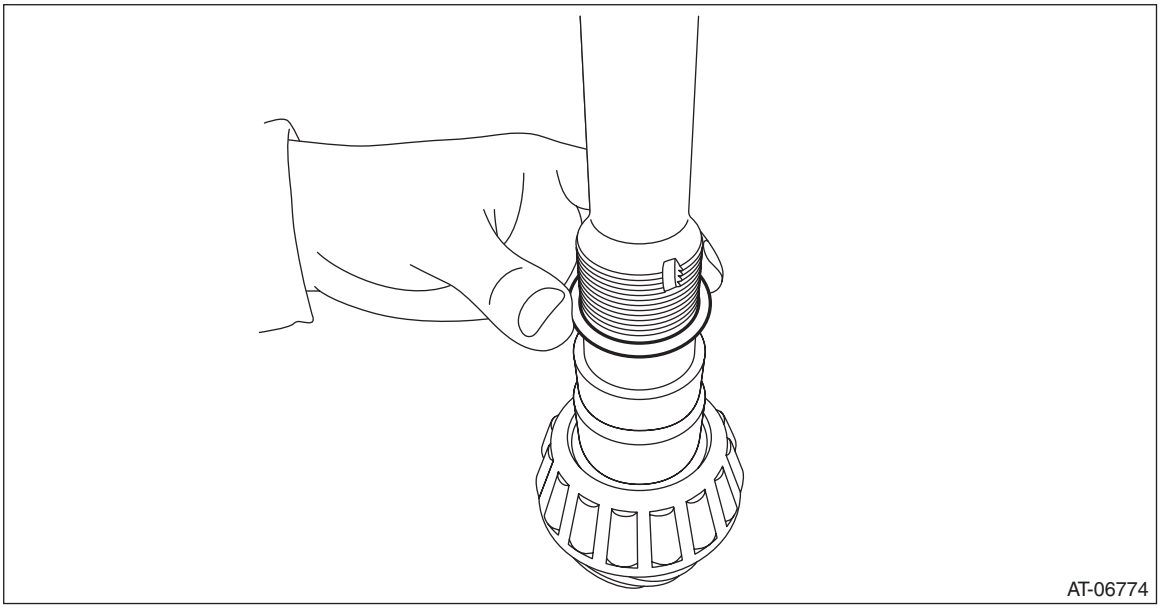
ST 499575400 GAUGE

(10) Using following formula, select one to three drive pinion washers.
T (mm) = D – (A + B + C + E – 15) – (0±0.0125)
[T (in) = D – (A + B + C + E – 0.591) – (0±0.0005)]
A: Front roller bearing width
B: Rear roller bearing width
C: Spacer width
D: Height from end face of rear roller bearing inner race to surface plate
E: Depth from end face of front roller bearing inner race to end face of ST
15 mm (0.591 in): Thickness of ST
T: Drive pinion washer thickness
0±0.0125 mm (0±0.0005 in): Clearance



Drive pinion washer	
Part No.	Thickness mm (in)
38336AA750	0.150 (0.0059)
38336AA760	0.175 (0.0069)
38336AA770	0.200 (0.0079)
38336AA780	0.225 (0.0089)
38336AA790	0.250 (0.0098)
38336AA800	0.275 (0.0108)
38336AA810	0.300 (0.0118)
38336AA820	0.400 (0.0157)

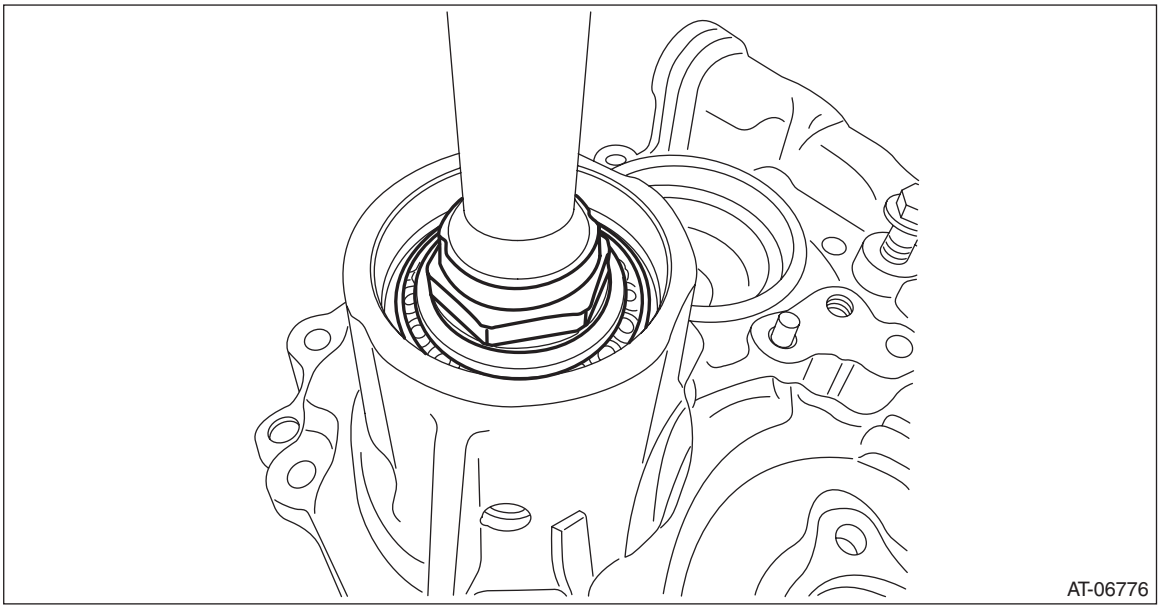
4) Measure and record the drive pinion shim thickness to be reused.
5) Install the drive pinion shim that is reused for the drive pinion shaft.
6) Using the ST1 and ST2, press-fit the inner race to the drive pinion shaft.
ST1 899580100 INSTALLER
ST2 927130000 EXTENSION DRIVE SHAFT



7) Install the drive pinion spacer.

NOTE:
Replace the O-ring with a new part after tooth contact inspection.

8) Install the selected drive pinion washer.



9) Insert the drive pinion shaft into the drive pinion retainer.

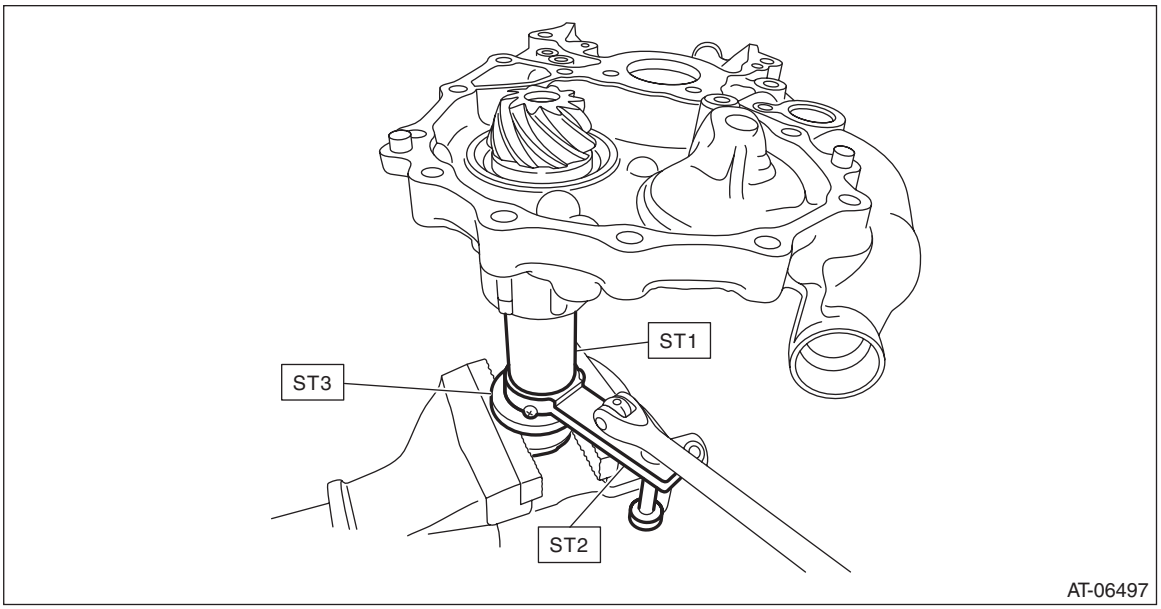
CAUTION:
Be careful not to damage the oil seal.

10) Install the inner bearing and lock nut.

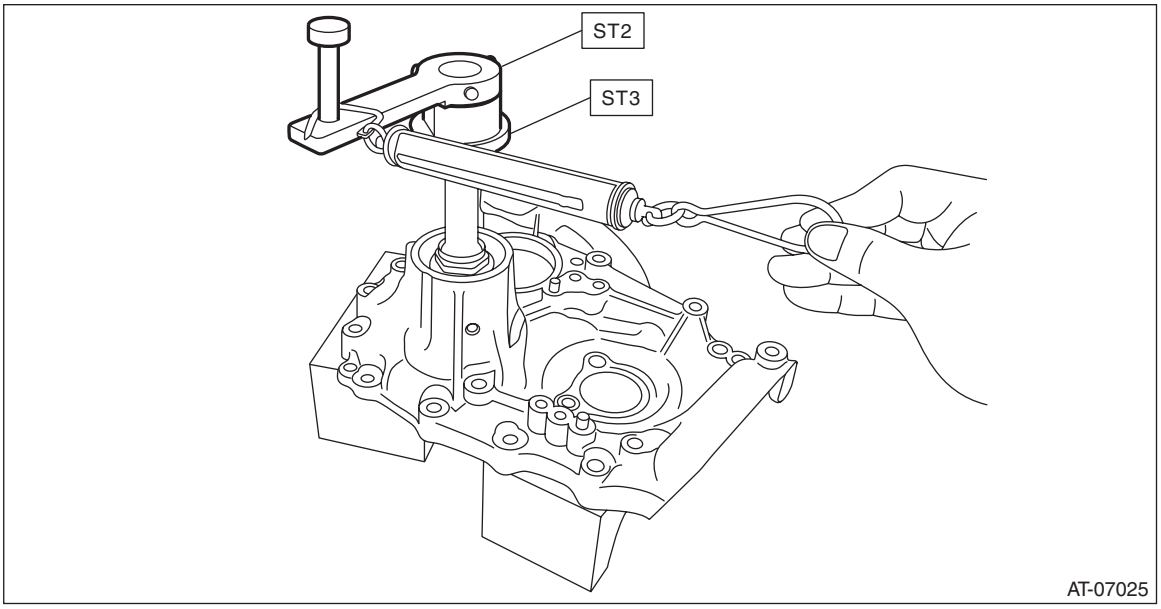
NOTE:
Use a new lock nut.

11) Using the ST, tighten the lock nut to the specified torque so that the starting torque of the drive pinion shaft is within the specified range.

CAUTION:
Before inspecting the starting torque, apply differential gear oil to roller of bearing and rotate the bearing several times.



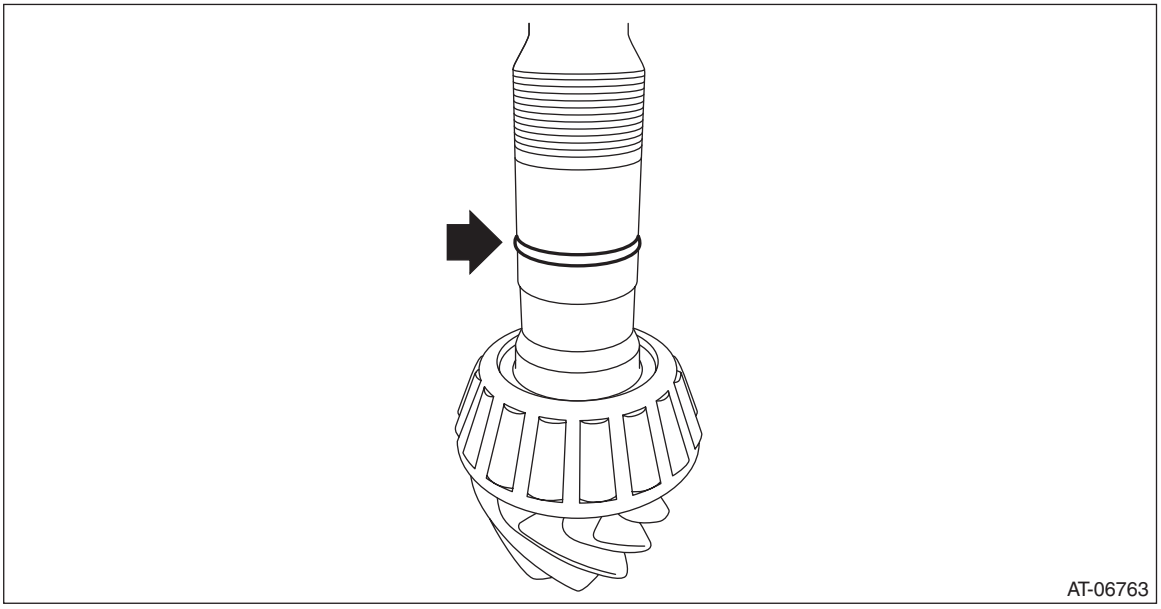
NOTE:
- Tighten the lock nut while directly aligning ST2 and torque wrench.
- If the starting torque is not within the specified range, select the drive pinion washer, and repeat the step until the starting torque is within the specified range.
- When a thicker drive pinion washer is selected, the starting torque decreases. When a thinner drive pinion washer is selected, the starting torque increases.



Starting torque:
5.1 — 17.1 N (0.5 — 1.7 kgf, 1.1 — 3.8 lbf)

ST1 499787500 ADAPTER
ST2 499787700 WRENCH
ST3 498937110 HOLDER

Using the following formula, calculate the tightening torque for a torque wrench.
$T2 = L2/(L1 + L2) \times T1$
T1: 170 — 250 N·m (17.3 — 25.5 kgf-m, 125.4 — 184.4 ft-lb) [Specified tightening torque range]
T2: Tightening torque
L1: ST1 length 0.072 m (2.83 in)
L2: Torque wrench length
Example:



Torque wrench length m (in)	Tightening torque N·m (kgf-m, ft-lb)
0.4 (15.75)	144 — 211 (14.7 — 21.5, 106.2 — 155.6)
0.45 (17.72)	147 — 215 (15.0 — 21.9, 108.4 — 158.6)
0.5 (19.69)	149 — 218 (15.2 — 22.2, 109.9 — 160.8)
0.55 (21.65)	150 — 221 (15.3 — 22.5, 110.6 — 163.0)

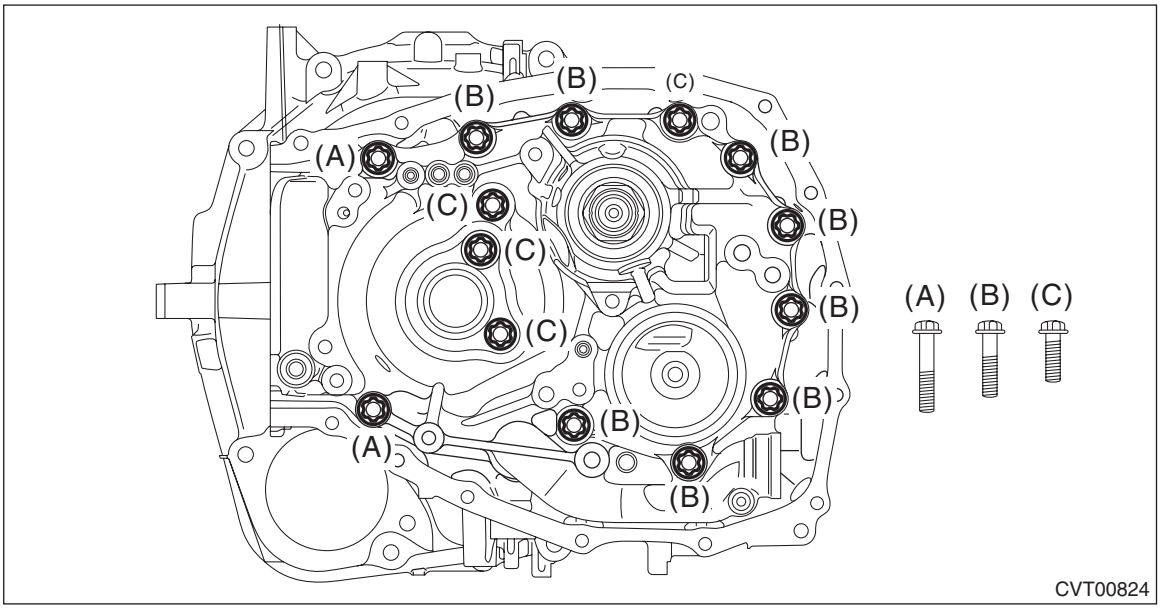
E: INSPECTION

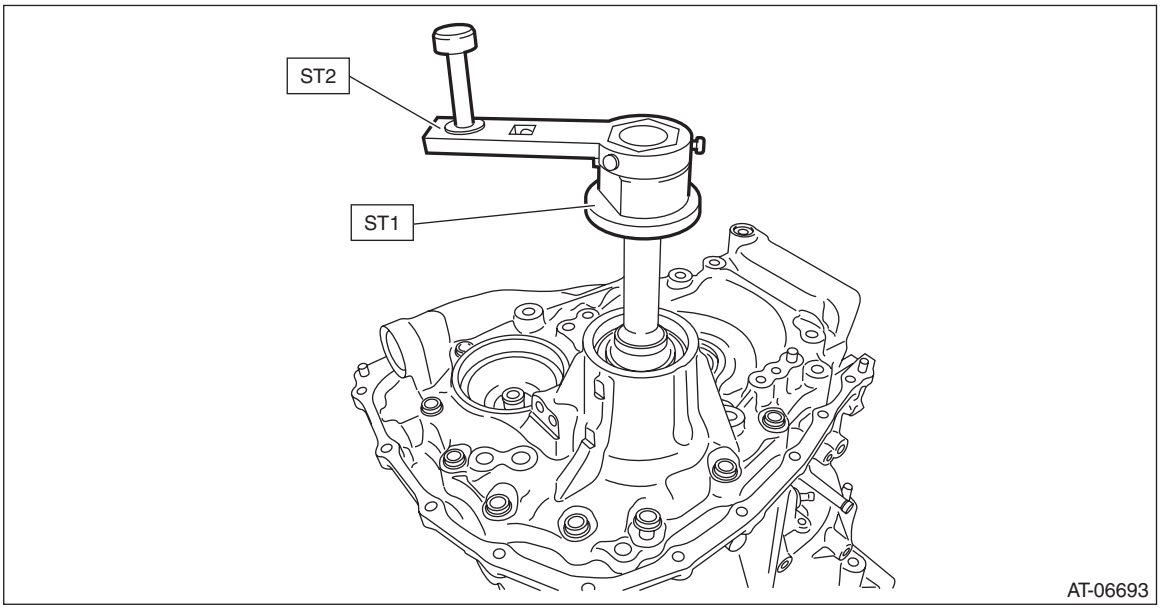
- Make sure that all component parts are free of scratches, holes and other faults.
- Check the tooth contact. <Ref. to CVT(TR580)-343, ADJUSTMENT, Drive Pinion Shaft Assembly.>
- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.
- Check the starting torque of drive pinion shaft.

CAUTION:
Before measuring, apply differential gear oil to roller of bearing and rotate the bearing several times.
ST1 498937110 HOLDER
ST2 499787700 WRENCH

Starting torque:
5.1 — 17.1 N (0.5 — 1.7 kgf, 1.1 — 3.8 lbf)



F: ADJUSTMENT



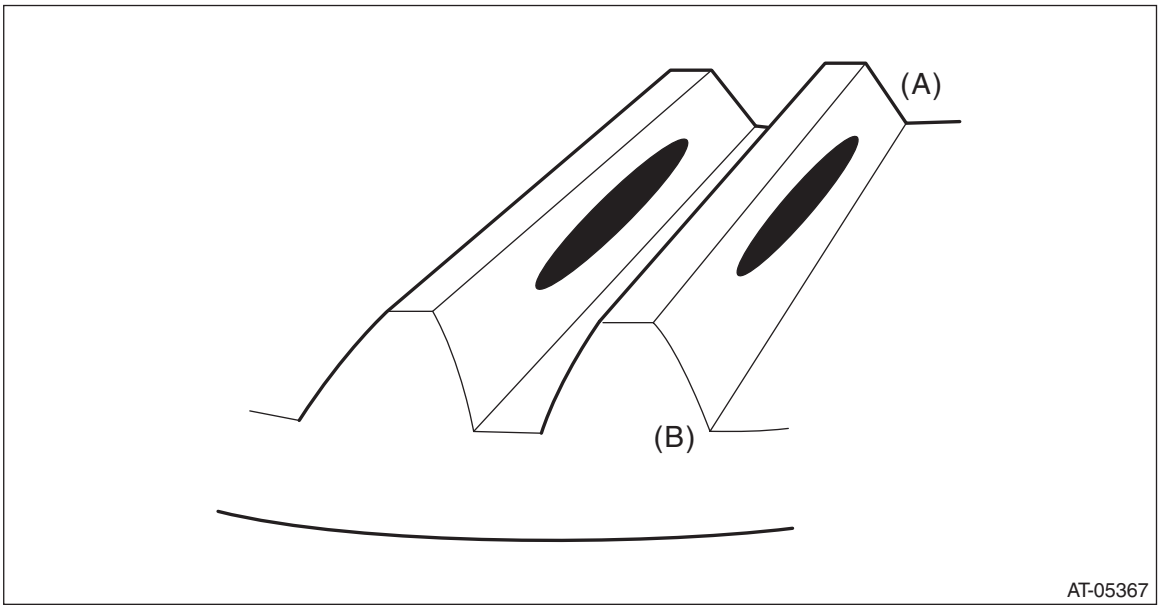
1) Remove the liquid gasket from the mating surface completely.
2) Using the ST, install the drive pinion retainer to converter case.
ST 18270KA020 SOCKET (E20)

NOTE:
Do not confuse the three different-length bolts when installing.

Tightening torque:
43 N·m (4.4 kgf-m, 31.7 ft-lb)

3) Rotate the drive pinion several times using ST1 and ST2.
ST1 498937110 HOLDER
ST2 499787700 WRENCH

4) Adjust the drive pinion and hypoid driven gear backlash. <Ref. to CVT(TR580)-366, ADJUSTMENT, Front Differential Assembly.>
5) Using the ST, remove the drive pinion retainer from converter case.
ST 18270KA020 SOCKET (E20)



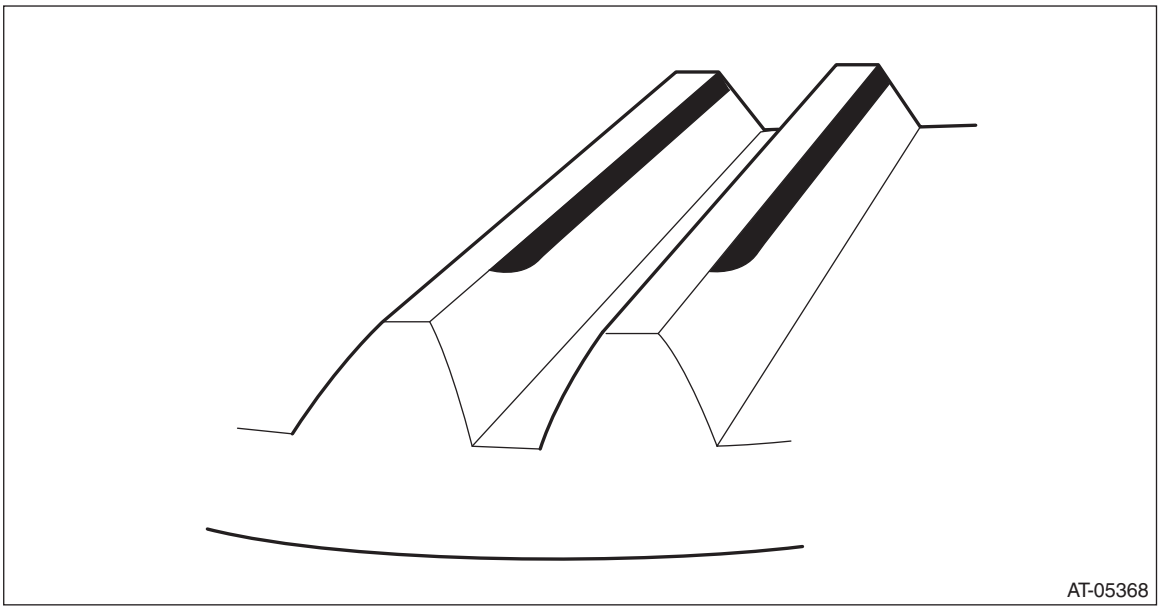
6) Apply lead-free red dye evenly on the both sides of three to four teeth of the hypoid driven gear. Then install the drive pinion retainer and rotate the drive pinion in both directions several times. Remove the drive pinion retainer and check the tooth contact pattern.
If the teeth contact is inappropriate, adjust the backlash or thickness of the shim. <Ref. to CVT(TR580)-366, ADJUSTMENT, Front Differential Assembly.>

NOTE:
After correction, wipe off the lead-free red dye.

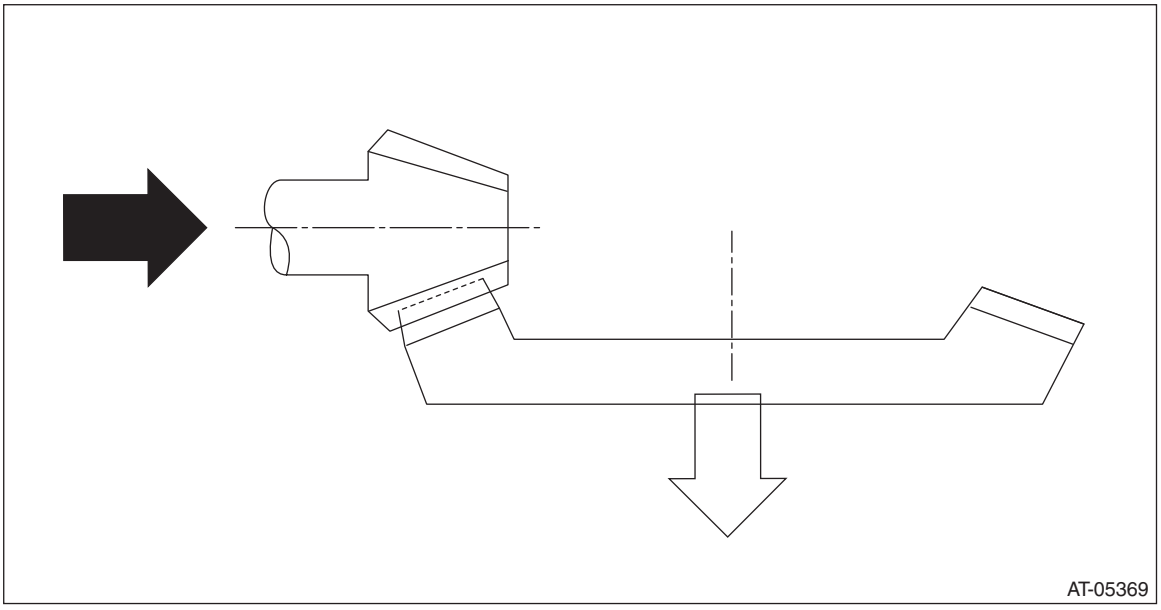
Drive pinion shim	
Part No.	Thickness mm (in)
31451AA320	0.150 (0.0059)
31451AA330	0.175 (0.0069)
31451AA340	0.200 (0.0079)
31451AA350	0.225 (0.0089)
31451AA360	0.250 (0.0098)
31451AA370	0.275 (0.0108)

- Correct tooth contact

Check item: Tooth contact surface is slightly shifted toward the toe side under a no-load condition. (When driving, it moves towards the heel side.)



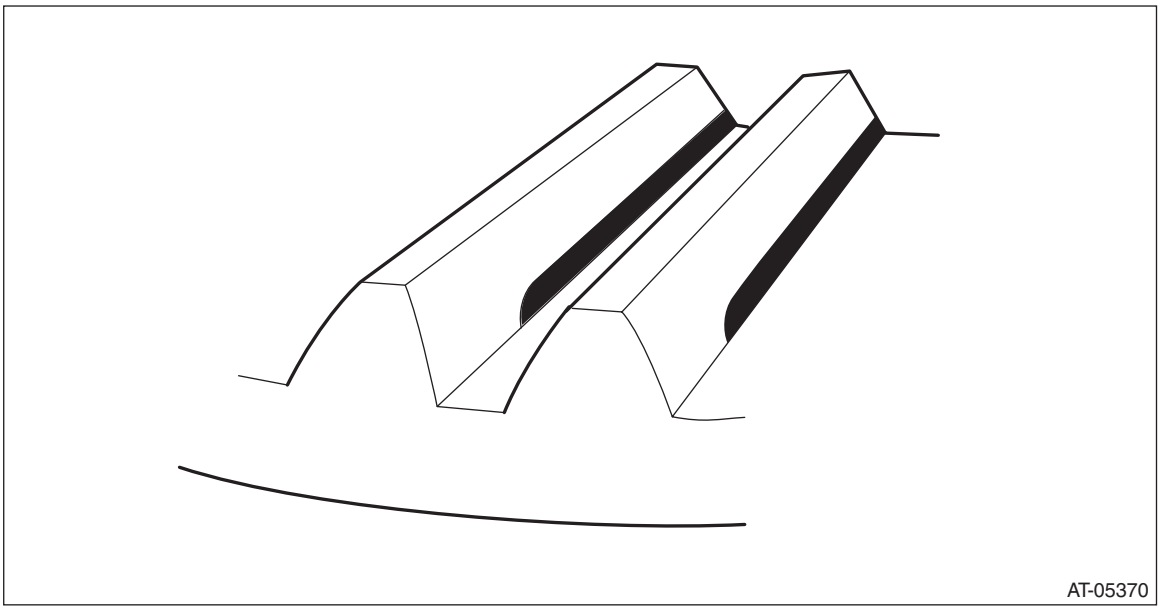
(A) Toe side
(B) Heel side



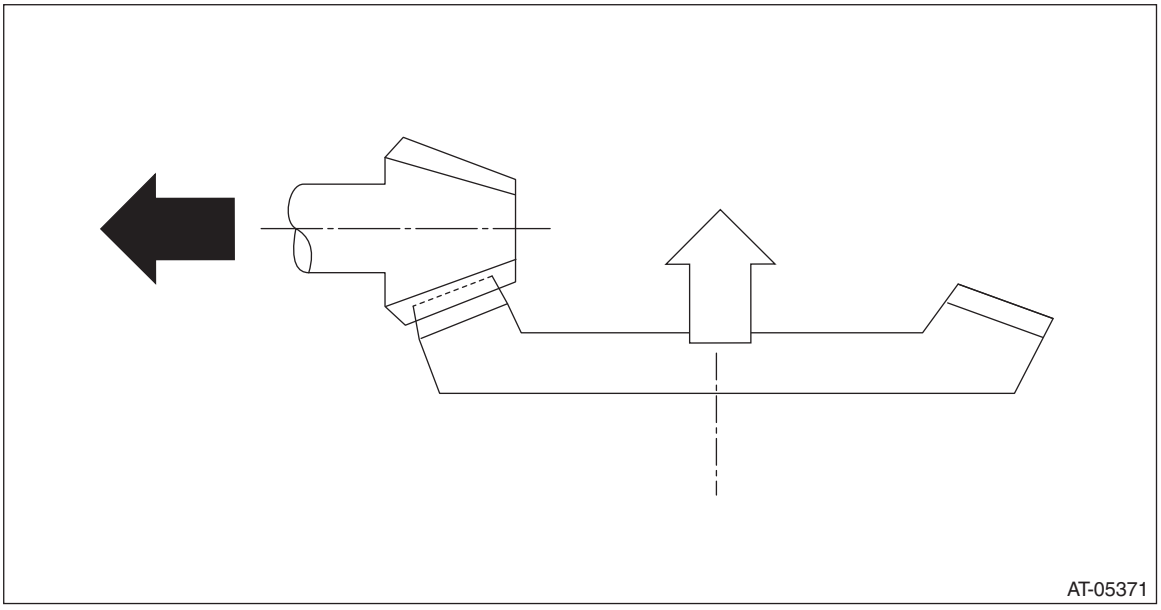
- Face contact

Check item: Backlash is too large.

Contact pattern



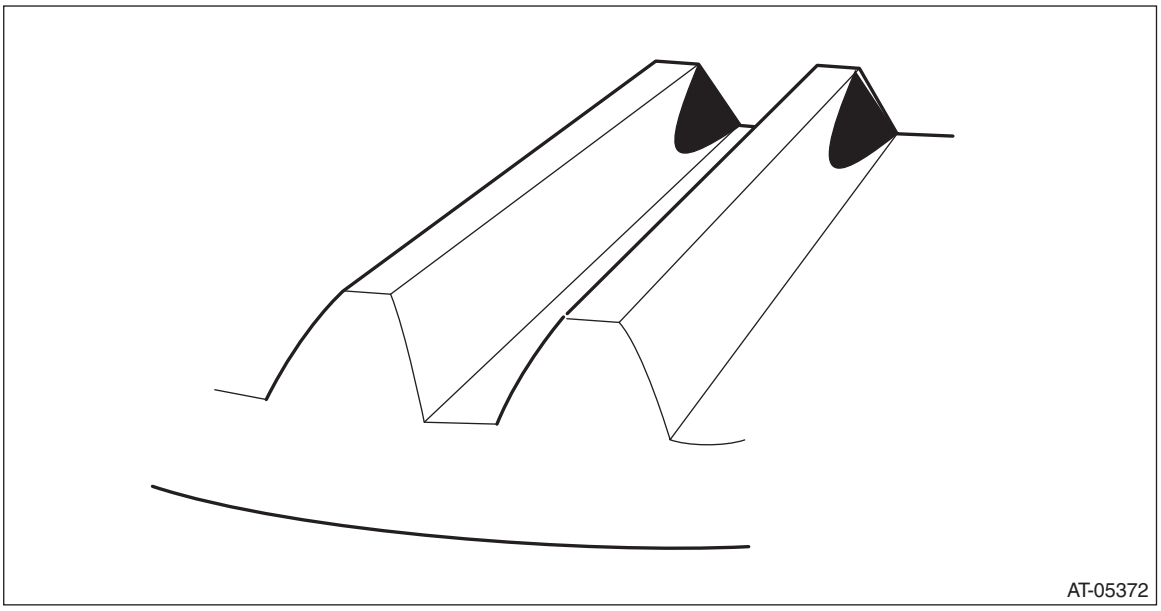
Corrective action: Increase thickness of drive pinion shim according to the procedures for moving the drive pinion close to hypoid driven gear.



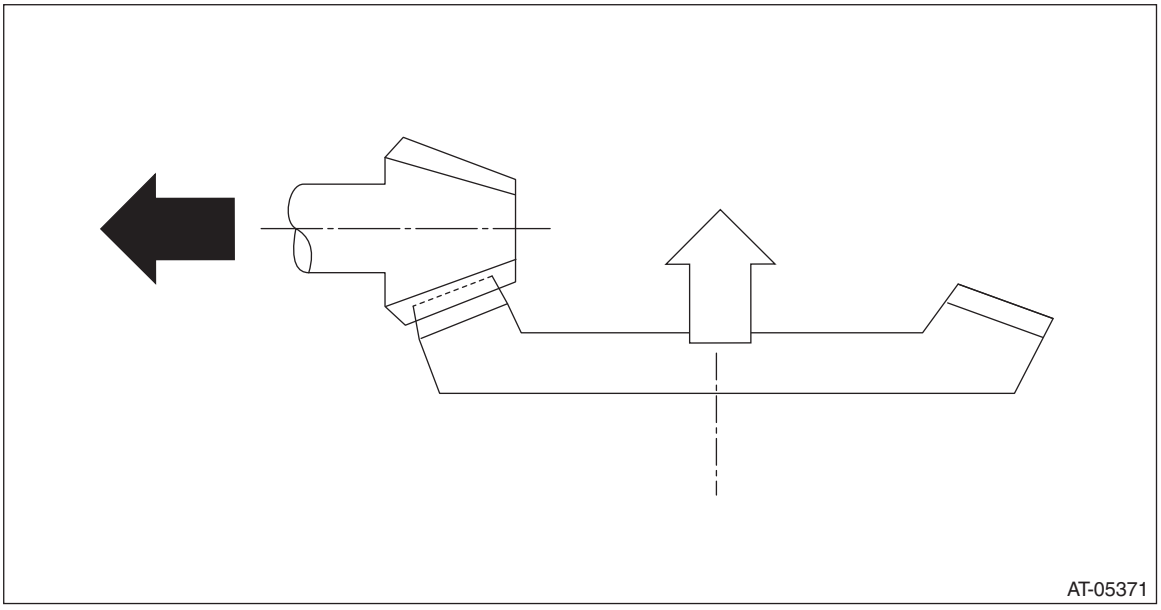
- Flank contact

Check item: Backlash is too small.

Contact pattern



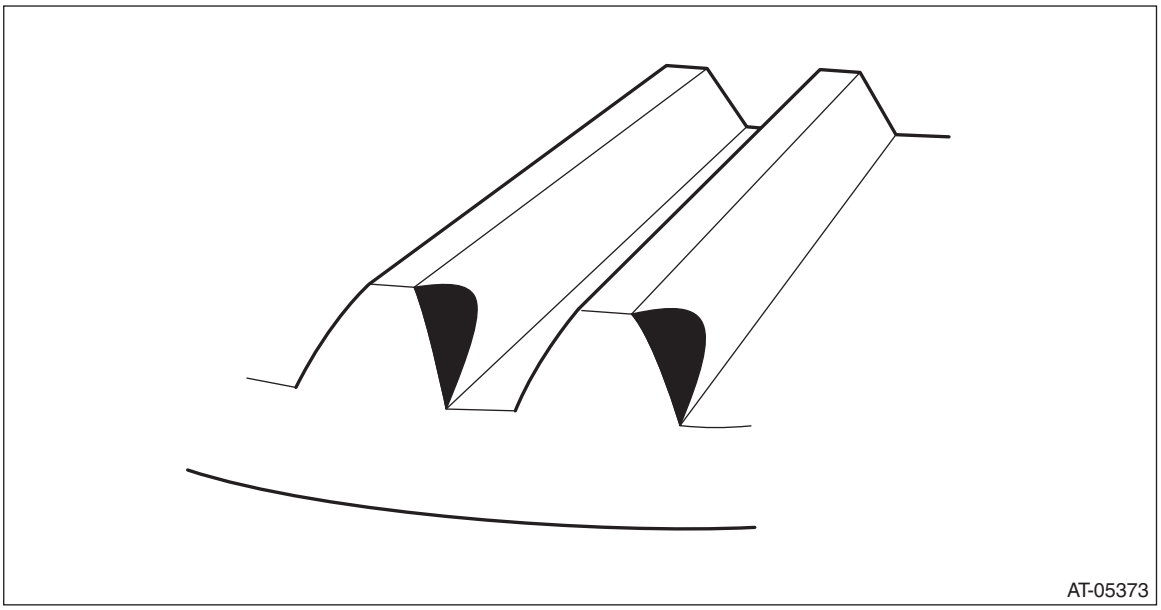
Corrective action: Reduce the thickness of the drive pinion shim according to the procedures for moving the drive pinion away from the hypoid driven gear.



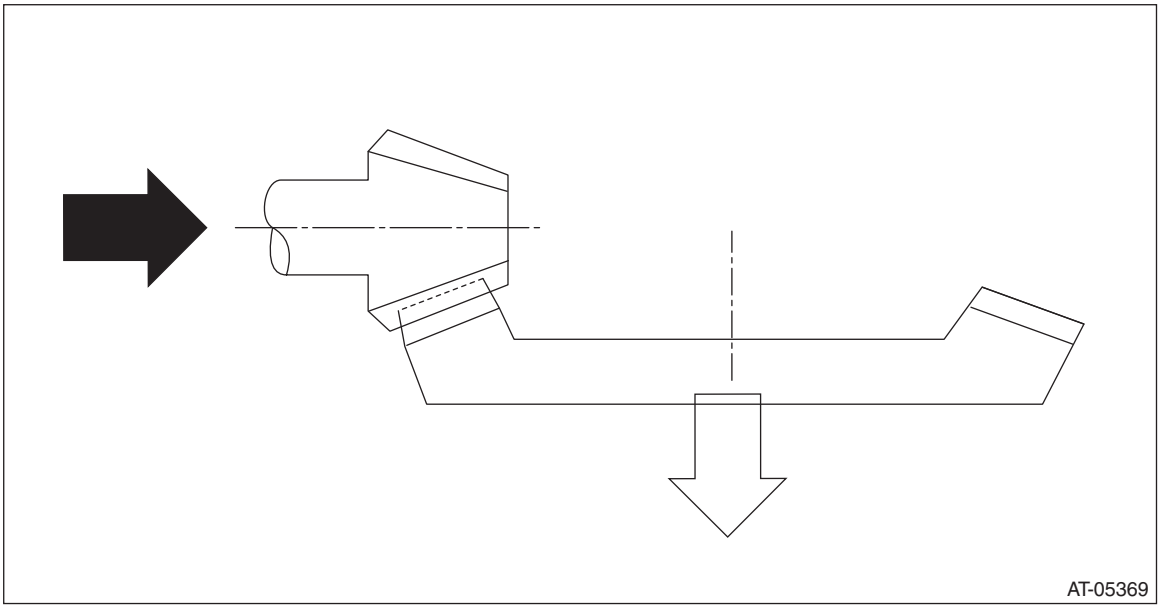
- Toe contact (inside contact)

Check item: Teeth contact area is too small.

Contact pattern



Corrective action: Reduce the thickness of the drive pinion shim according to the procedures for moving the drive pinion away from the hypoid driven gear side.

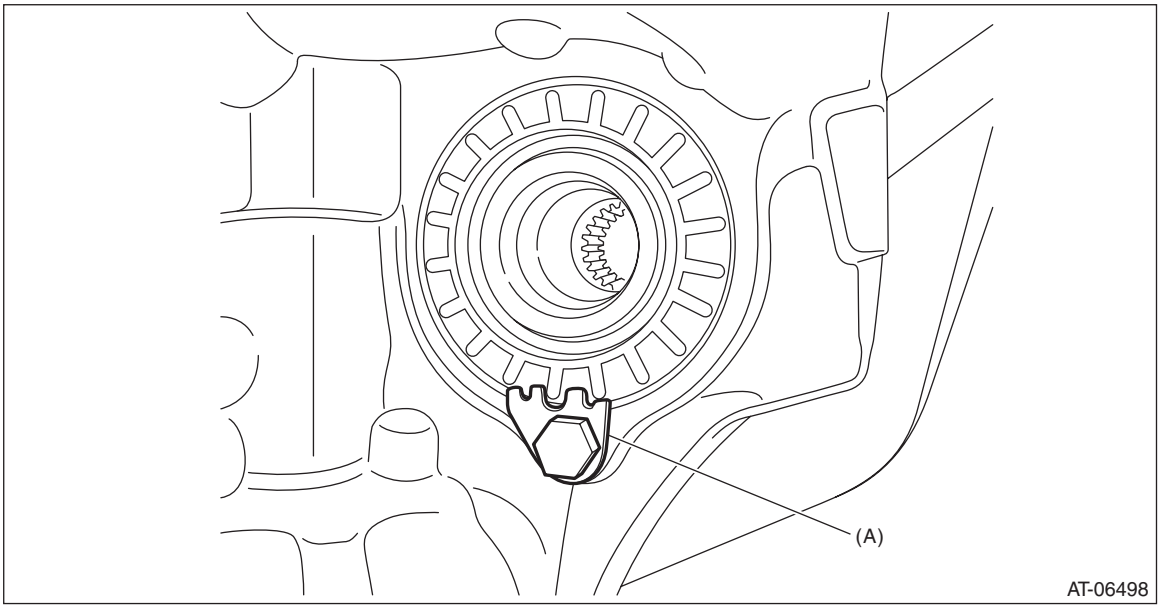


- Heel contact (outside end contact)

Check item: Teeth contact area is too small.

Contact pattern

Corrective action: Increase the thickness of the drive pinion shim according to the procedures for moving the drive pinion closer to the hypoid driven gear.



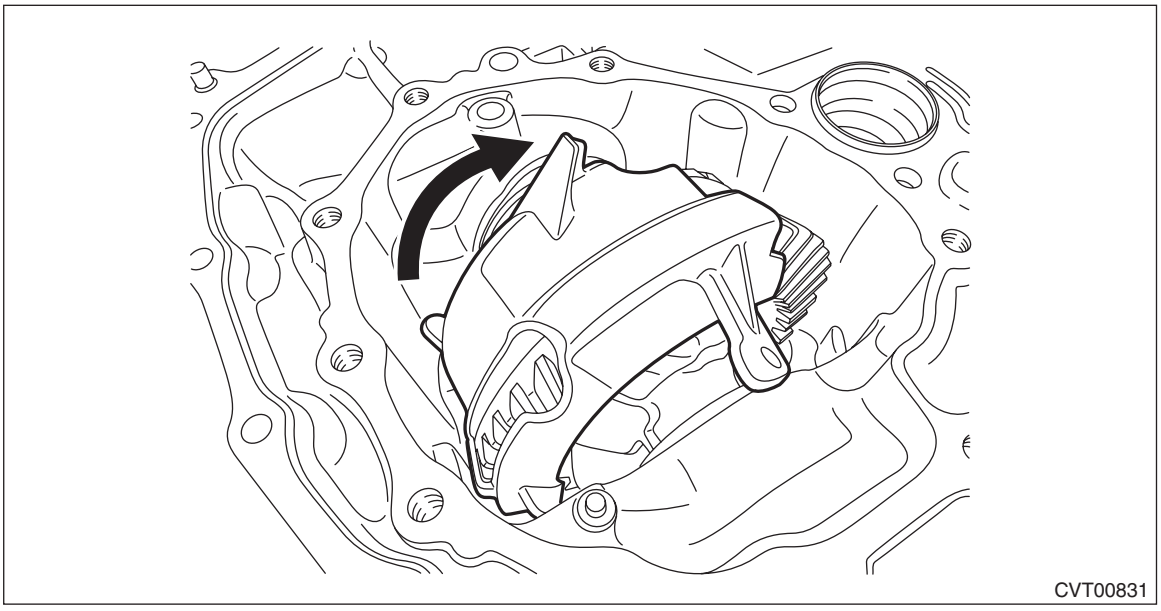
7) Using the ST, loosen the differential side retainer until the mounting groove of the O-ring appears, and then install the O-ring.

NOTE:
- When loosening the differential side retainer, record the number of the turns made.
- Perform this for both left and right differential side retainers.
- Use new O-rings.
- Apply the differential gear oil to O-ring.

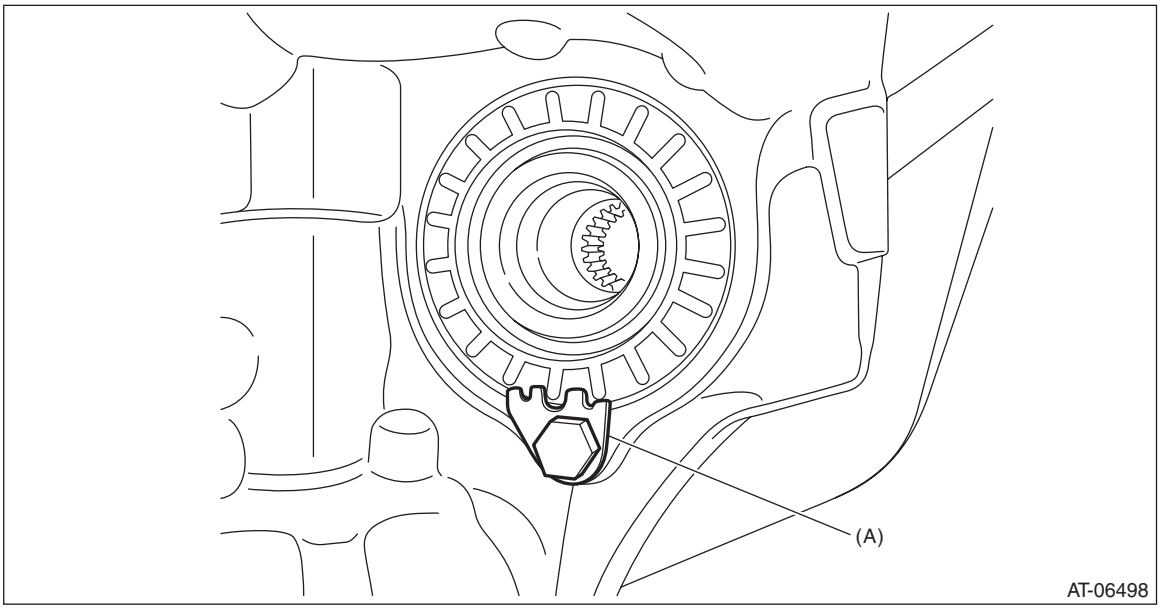
ST 18658AA020 WRENCH COMPL RETAINER

8) Using the ST, tighten the retainer to the position before it is loosened.
ST 18658AA020 WRENCH COMPL RETAINER
9) Replace the differential side retainer oil seal with a new part. <Ref. to CVT(TR580)-104, Differential Side Retainer Oil Seal.>
10) Install the lock plate.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



(A) Lock plate

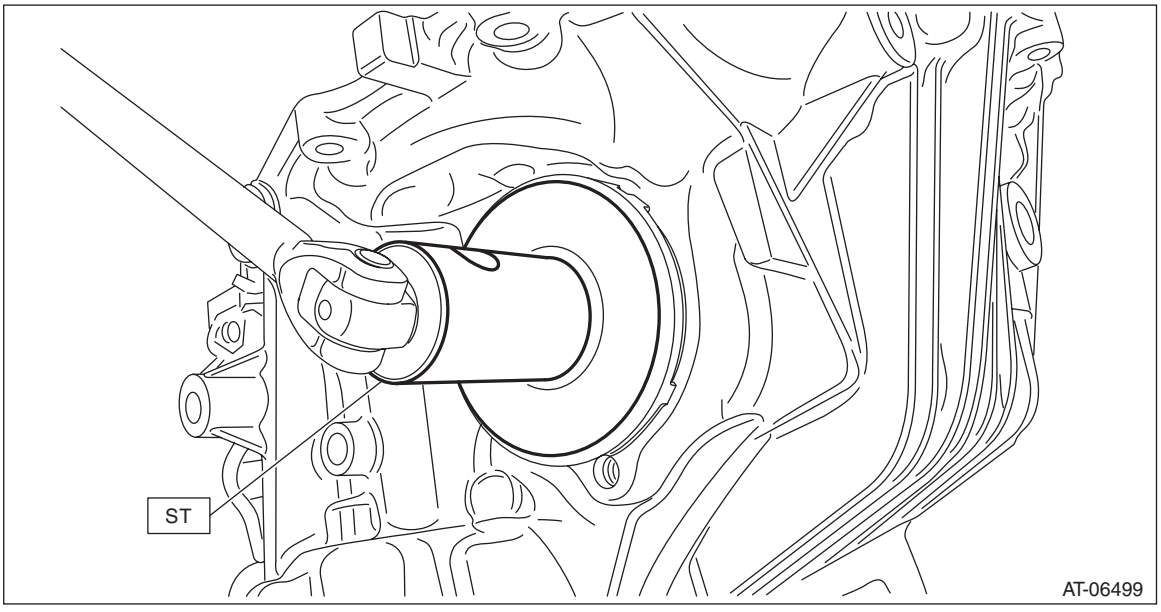


46.Front Differential Assembly

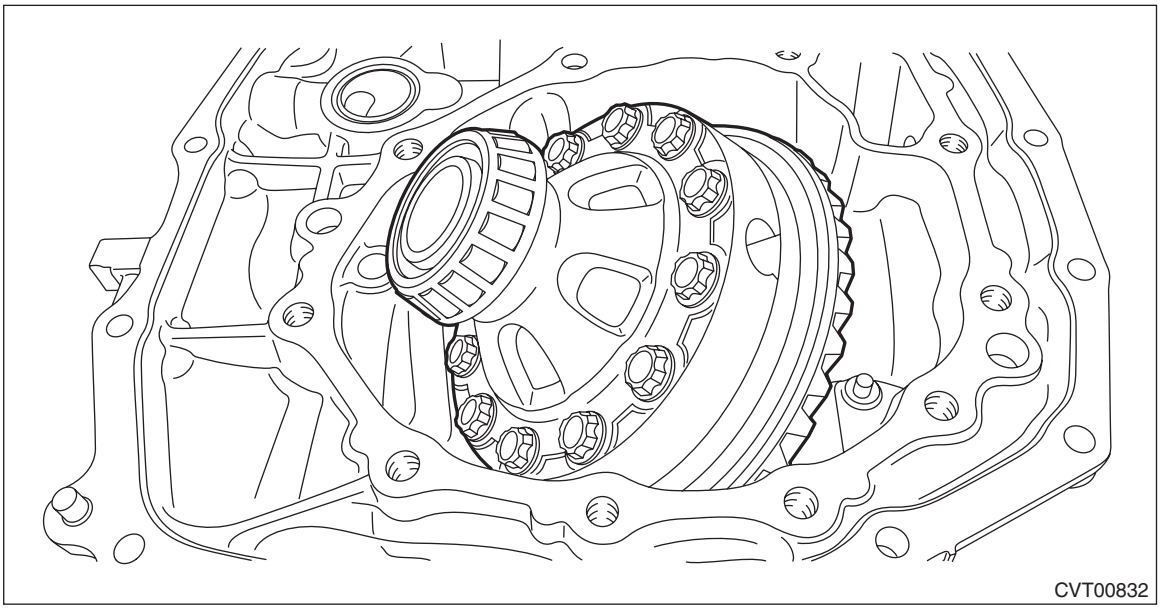
A: REMOVAL

1) Remove the transmission assembly. <Ref. to CVT(TR580)-65, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR580)-198, REMOVAL, Air Breather Hose.>
3) Remove the control valve body. <Ref. to CVT(TR580)-138, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR580)-152, REMOVAL, Transmission Harness.>
5) Remove the turbine speed sensor. <Ref. to CVT(TR580)-118, REMOVAL, Turbine Speed Sensor.>
6) Remove the secondary speed sensor. <Ref. to CVT(TR580)-123, REMOVAL, Secondary Speed Sensor.>
7) Remove the primary speed sensor. <Ref. to CVT(TR580)-128, REMOVAL, Primary Speed Sensor.>
8) Remove the inhibitor switch. <Ref. to CVT(TR580)-114, REMOVAL, Inhibitor Switch.>
9) Remove the extension case. <Ref. to CVT(TR580)-209, REMOVAL, Extension Case.>
10) Remove the transfer clutch assembly. <Ref. to CVT(TR580)-213, REMOVAL, Transfer Clutch.>
11) Remove the transfer driven gear assembly. <Ref. to CVT(TR580)-227, REMOVAL, Transfer Driven Gear.>
12) Remove the parking pawl. <Ref. to CVT(TR580)-230, REMOVAL, Parking Pawl.>
13) Remove the reduction driven gear assembly. <Ref. to CVT(TR580)-232, REMOVAL, Reduction Driven Gear.>
14) Remove the oil pan and oil strainer. <Ref. to CVT(TR580)-135, REMOVAL, Oil Pan and Strainer.>
15) Remove the transmission control device. <Ref. to CVT(TR580)-240, REMOVAL, Transmission Control Device.>
16) Remove the transmission case. <Ref. to CVT(TR580)-246, REMOVAL, Transmission Case.>
17) Remove the reduction drive gear. <Ref. to CVT(TR580)-259, REMOVAL, Reduction Drive Gear.>
18) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR580)-264, REMOVAL, Primary Pulley and Secondary Pulley.>
19) Remove the reverse brake assembly. <Ref. to CVT(TR580)-285, REMOVAL, Reverse Brake Assembly.>
20) Remove the forward clutch assembly. <Ref. to CVT(TR580)-300, REMOVAL, Forward Clutch Assembly.>
21) Remove the drive pinion shaft assembly. <Ref. to CVT(TR580)-320, REMOVAL, Drive Pinion Shaft Assembly.>
22) Remove the oil baffle.

23) Remove the lock plates on both sides.



(A) Lock plate

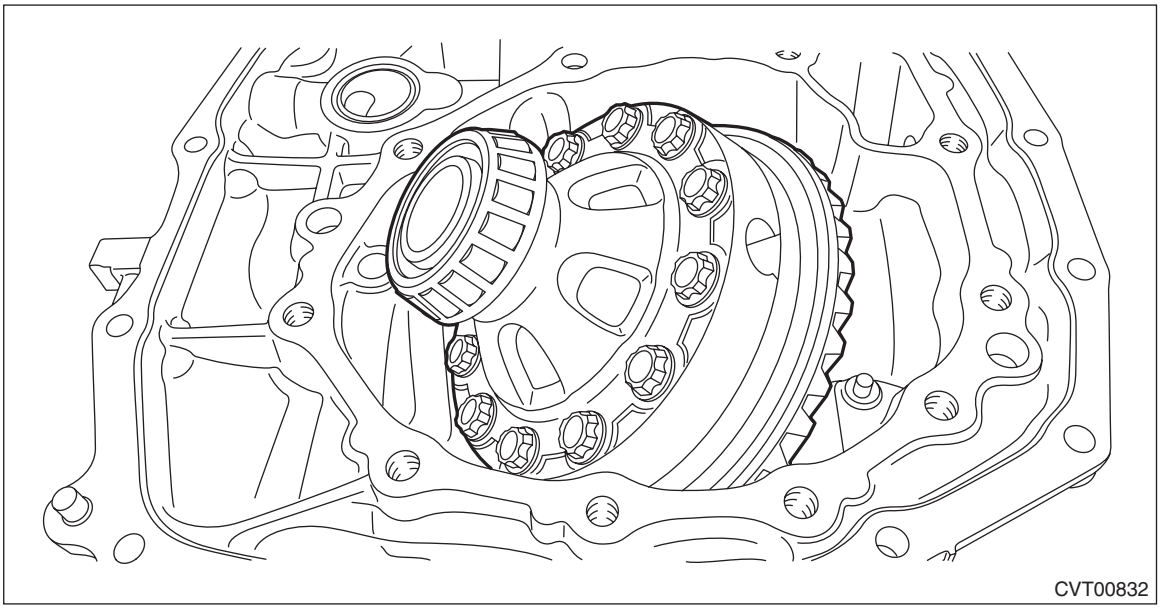


24) Remove the differential side retainers using ST.

NOTE:
• When the wrench COMPL retainer interferes with the converter case, align the cutout portion with the interference part.
• Support the differential case assembly by hand to avoid damaging the retainer mounting hole of the converter case.
• Keep the left and right differential side retainers and left and right bearing outer races by attaching tags or in similar ways to make it possible to identify RH and LH sides.

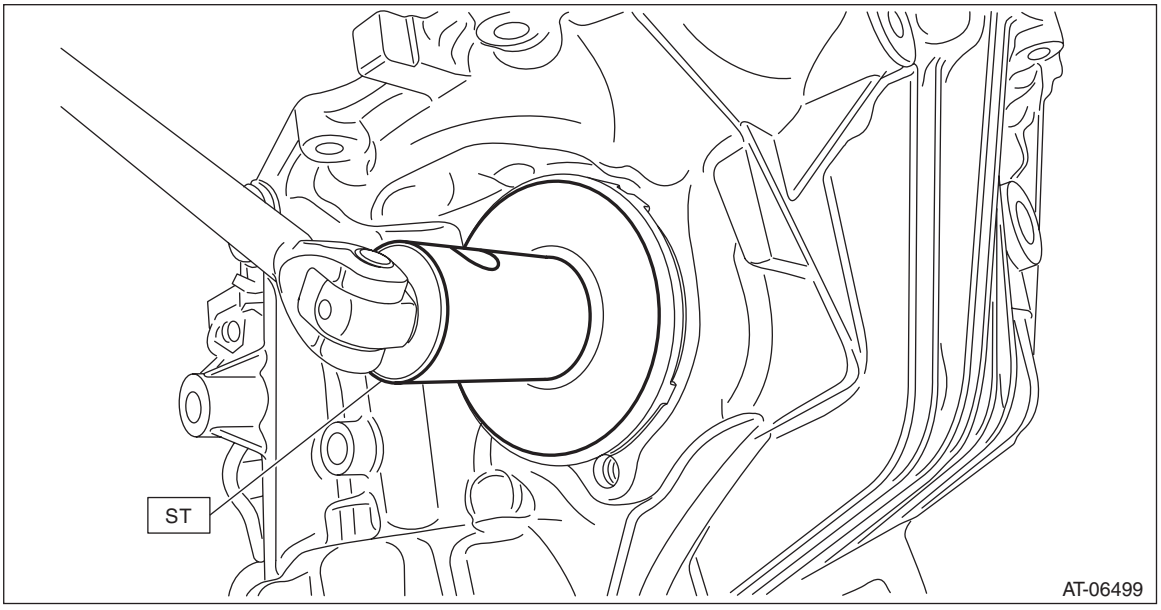
ST 18658AA020 WRENCH COMPL RETAINER

25) Remove the front differential assembly while being careful not to damage the attachment part of the retainer.



26) Remove the oil seals and O-rings from both differential side retainers. <Ref. to CVT(TR580)-359, SIDE RETAINER, DISASSEMBLY, Front Differential Assembly.>

B: INSTALLATION

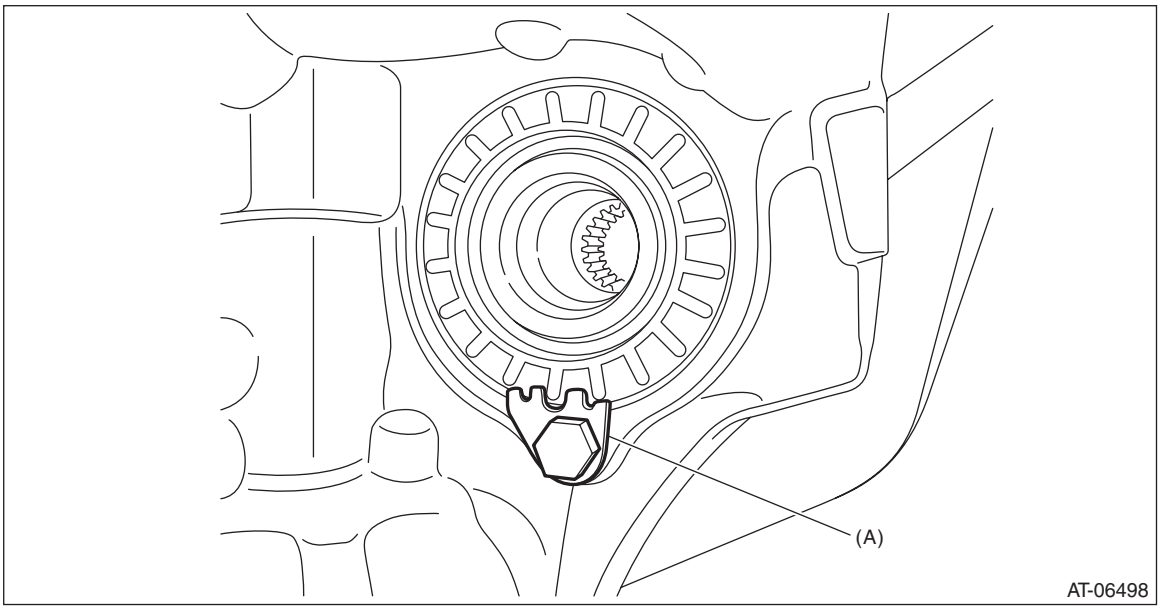


1) Install the front differential assembly to the converter case.

NOTE:
Be careful not to damage the inside of the case (especially the mounting surface of the differential side retainers).

2) Install the bearing outer race.

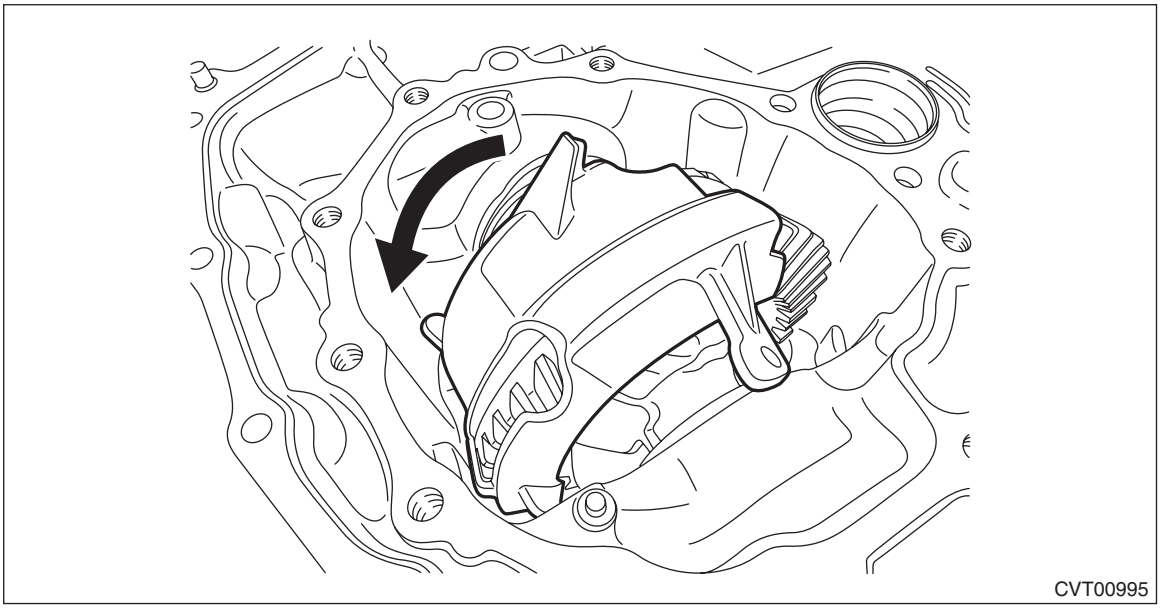
3) Temporarily install the differential side retainers using ST.
ST 18658AA020 WRENCH COMPL RETAINER



4) Adjust the backlash of the front differential. <Ref. to CVT(TR580)-366, ADJUSTMENT, Front Differential Assembly.>
5) Inspect and adjust the tooth contact. <Ref. to CVT(TR580)-343, ADJUSTMENT, Drive Pinion Shaft Assembly.>
6) Using the ST, loosen the differential side retainer until the mounting groove of the O-ring appears, and then install the O-ring.

NOTE:
- When loosening the differential side retainer, record the number of the turns made.
- Perform this for both left and right differential side retainers.
- Use new O-rings.
- Apply the differential gear oil to O-ring.

ST 18658AA020 WRENCH COMPL RETAINER
7) Using the ST, tighten the retainer to the position before it is loosened.
ST 18658AA020 WRENCH COMPL RETAINER
8) Install the oil seal to the differential side retainer. <Ref. to CVT(TR580)-104, Differential Side Retainer Oil Seal.>

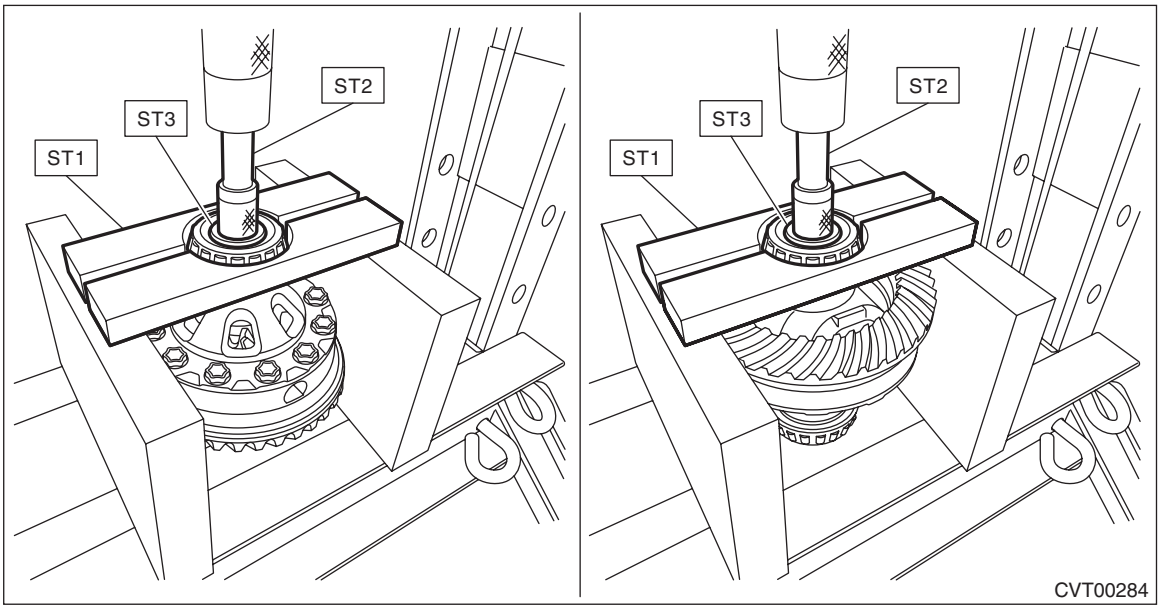


9) Install the lock plate.

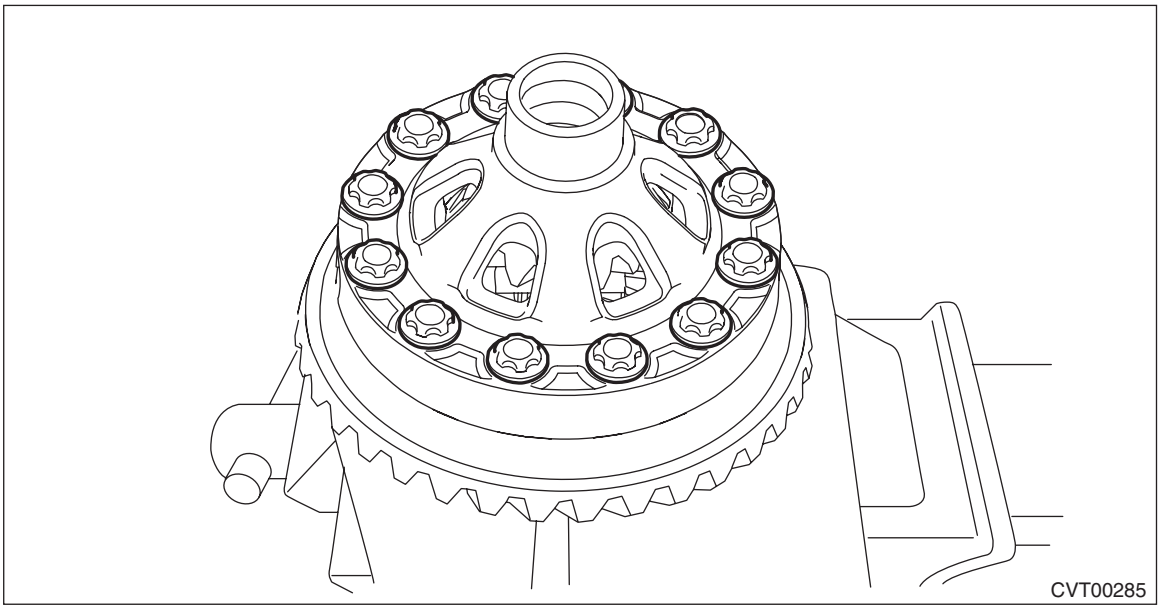
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

(A) Lock plate

10) Install the oil baffle.

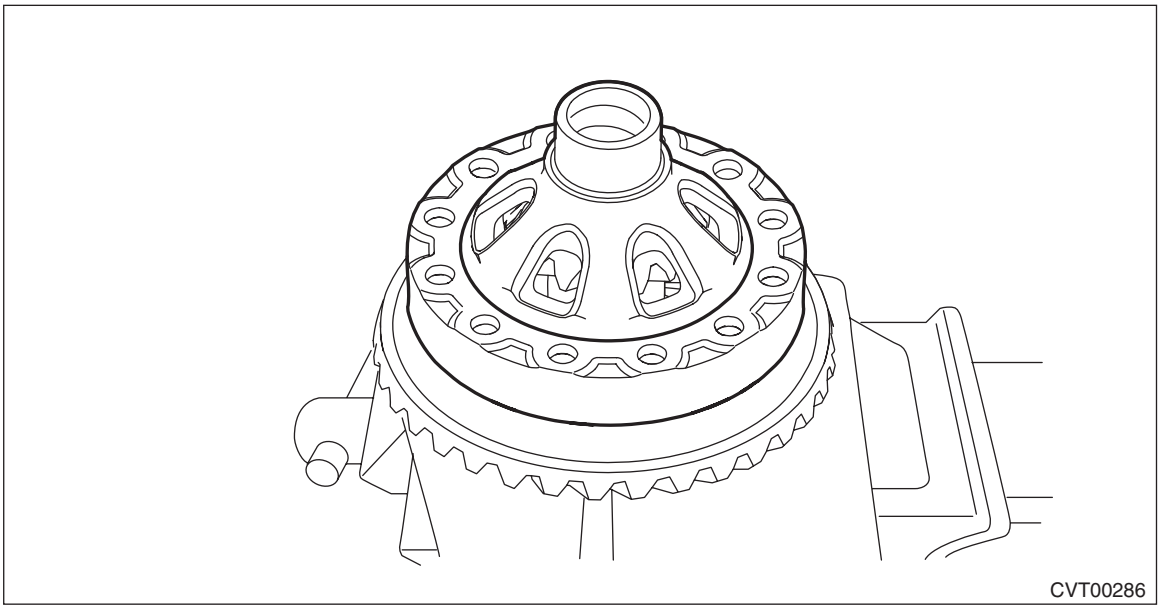


11) Install the drive pinion shaft assembly. <Ref. to CVT(TR580)-321, INSTALLATION, Drive Pinion Shaft Assembly.>
12) Install the forward clutch assembly. <Ref. to CVT(TR580)-303, INSTALLATION, Forward Clutch Assembly.>
13) Install the reverse brake assembly. <Ref. to CVT(TR580)-288, INSTALLATION, Reverse Brake Assembly.>
14) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR580)-271, INSTALLATION, Primary Pulley and Secondary Pulley.>
15) Install the reduction drive gear. <Ref. to CVT(TR580)-260, INSTALLATION, Reduction Drive Gear.>
16) Install the transmission case. <Ref. to CVT(TR580)-249, INSTALLATION, Transmission Case.>
17) Install the oil strainer and oil pan. <Ref. to CVT(TR580)-136, INSTALLATION, Oil Pan and Strainer.>
18) Install the transmission control device. <Ref. to CVT(TR580)-243, INSTALLATION, Transmission Control Device.>
19) Install the reduction driven gear assembly. <Ref. to CVT(TR580)-232, INSTALLATION, Reduction Driven Gear.>
20) Install the transfer driven gear assembly. <Ref. to CVT(TR580)-228, INSTALLATION, Transfer Driven Gear.>
21) Install the transfer clutch assembly. <Ref. to CVT(TR580)-215, INSTALLATION, Transfer Clutch.>
22) Install the parking pawl. <Ref. to CVT(TR580)-231, INSTALLATION, Parking Pawl.>
23) Install the extension case. <Ref. to CVT(TR580)-210, INSTALLATION, Extension Case.>
24) Install the inhibitor switch. <Ref. to CVT(TR580)-115, INSTALLATION, Inhibitor Switch.>
25) Install the secondary speed sensor. <Ref. to CVT(TR580)-123, INSTALLATION, Secondary Speed Sensor.>
26) Install the primary speed sensor. <Ref. to CVT(TR580)-129, INSTALLATION, Primary Speed Sensor.>
27) Install the turbine speed sensor. <Ref. to CVT(TR580)-118, INSTALLATION, Turbine Speed Sensor.>
28) Install the transmission harness. <Ref. to CVT(TR580)-155, INSTALLATION, Transmission Harness.>
29) Install the control valve body. <Ref. to CVT(TR580)-144, INSTALLATION, Control Valve Body.>
30) Install the air breather hose. <Ref. to CVT(TR580)-200, INSTALLATION, Air Breather Hose.>
31) Install the transmission assembly. <Ref. to CVT(TR580)-81, INSTALLATION, Automatic Transmission Assembly.>

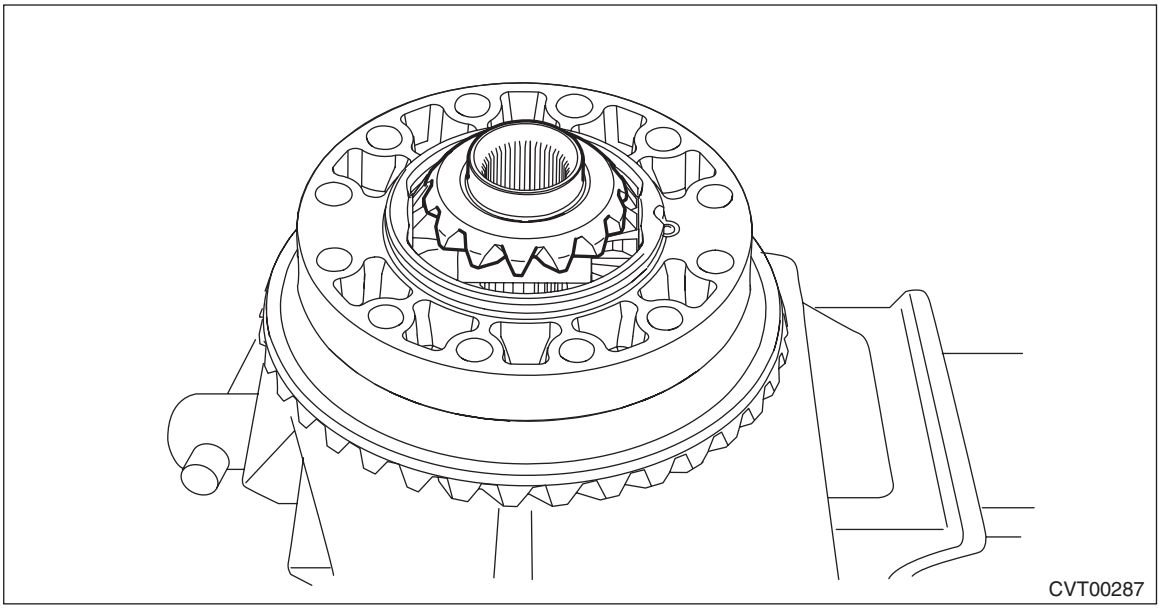


C: DISASSEMBLY

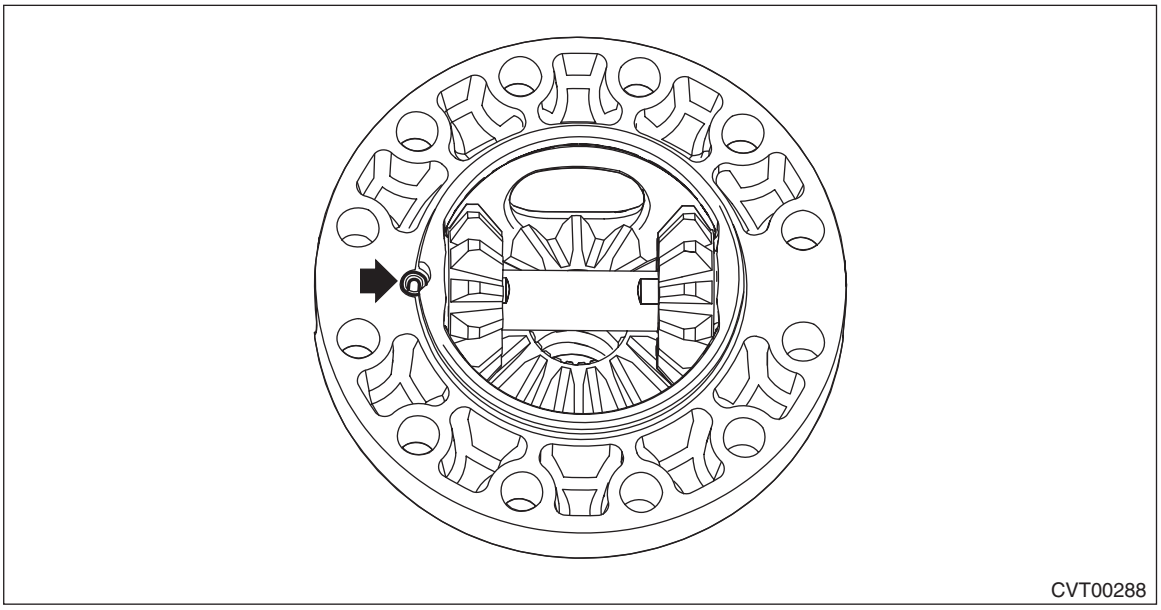
1. DIFFERENTIAL CASE ASSEMBLY



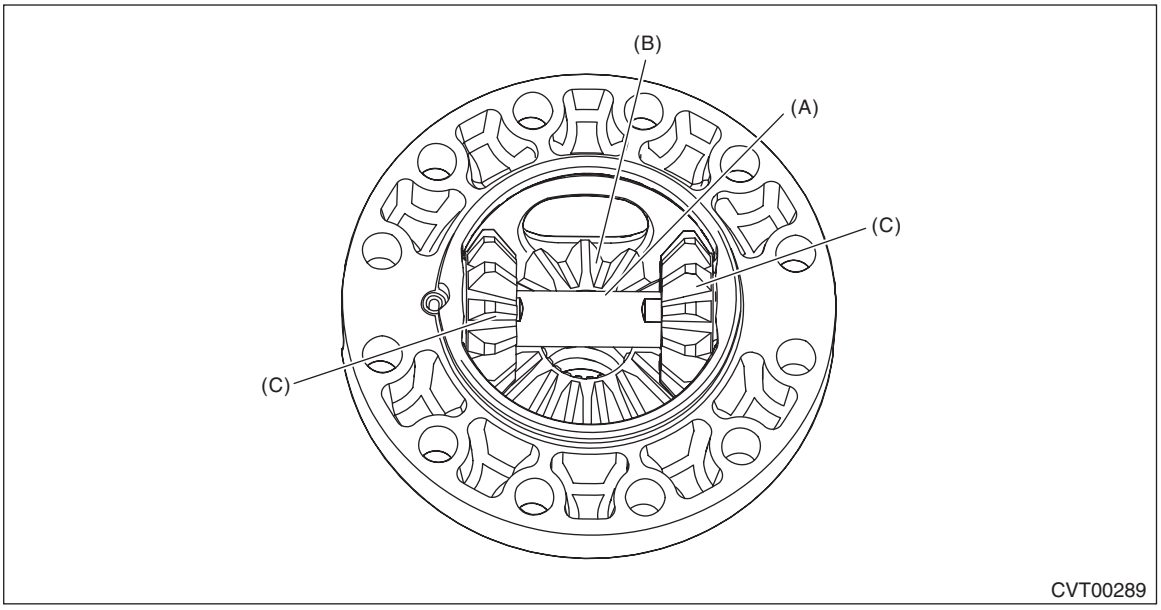
1) Remove the taper roller bearing using the ST.
ST1 498077000 REMOVER
ST2 899864100 REMOVER
ST3 398497701 SEAT



2) Remove the hypoid driven gear mounting bolt using the ST.
ST 18270KA020 SOCKET (E20)

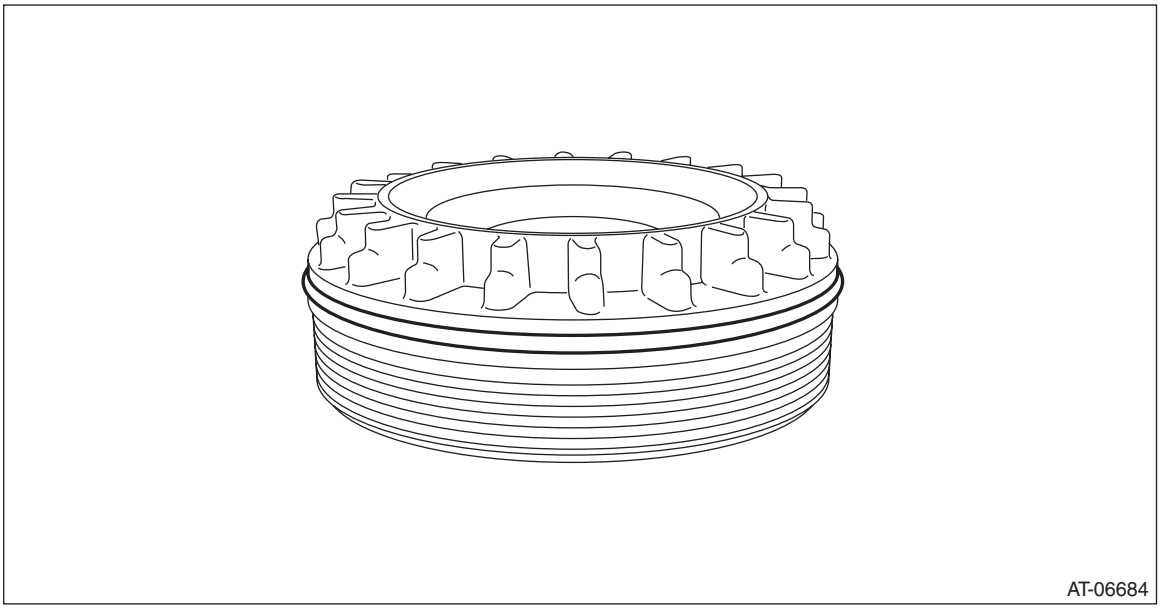


3) Remove the differential case (LH).

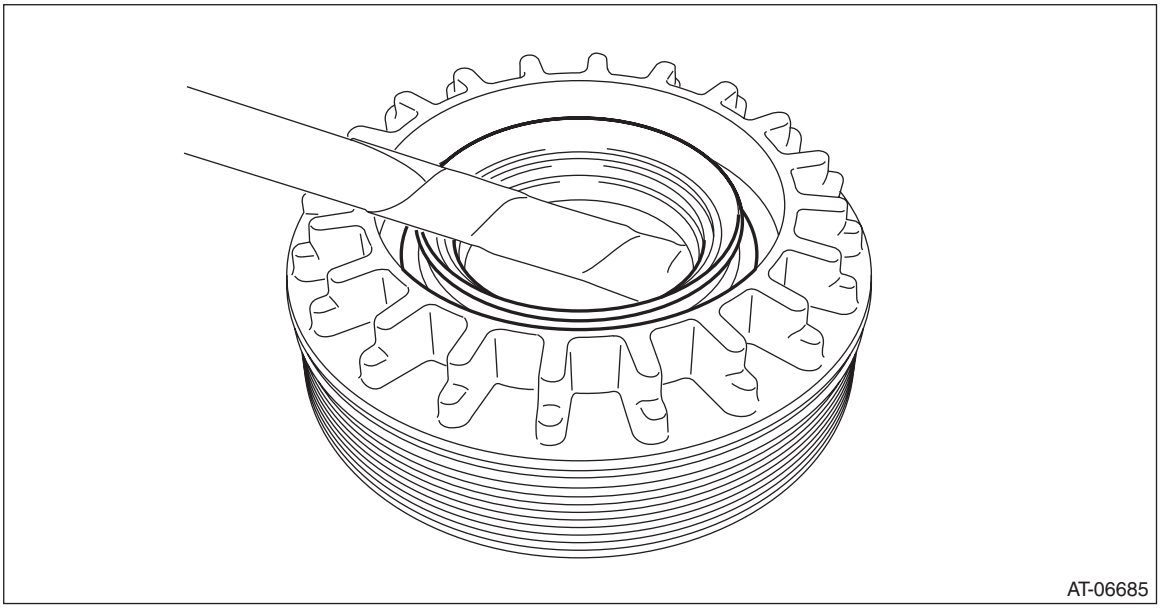


4) Remove the differential bevel gear and washer.

5) Remove the straight pin.



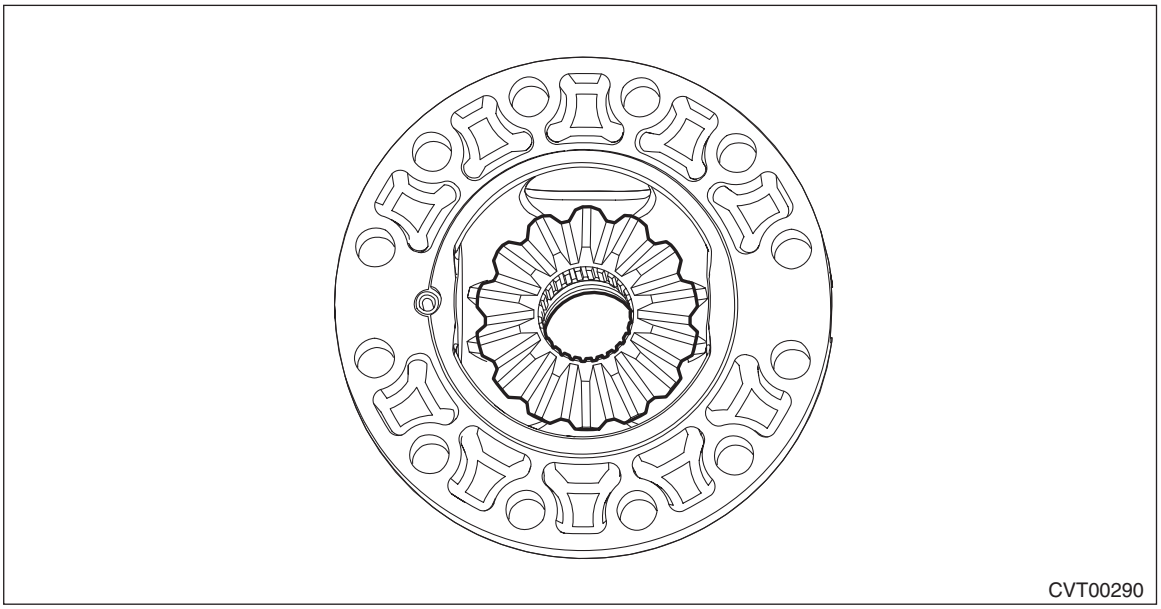
6) Remove the pinion shaft, then remove the differential bevel gear, washer and differential bevel pinion.



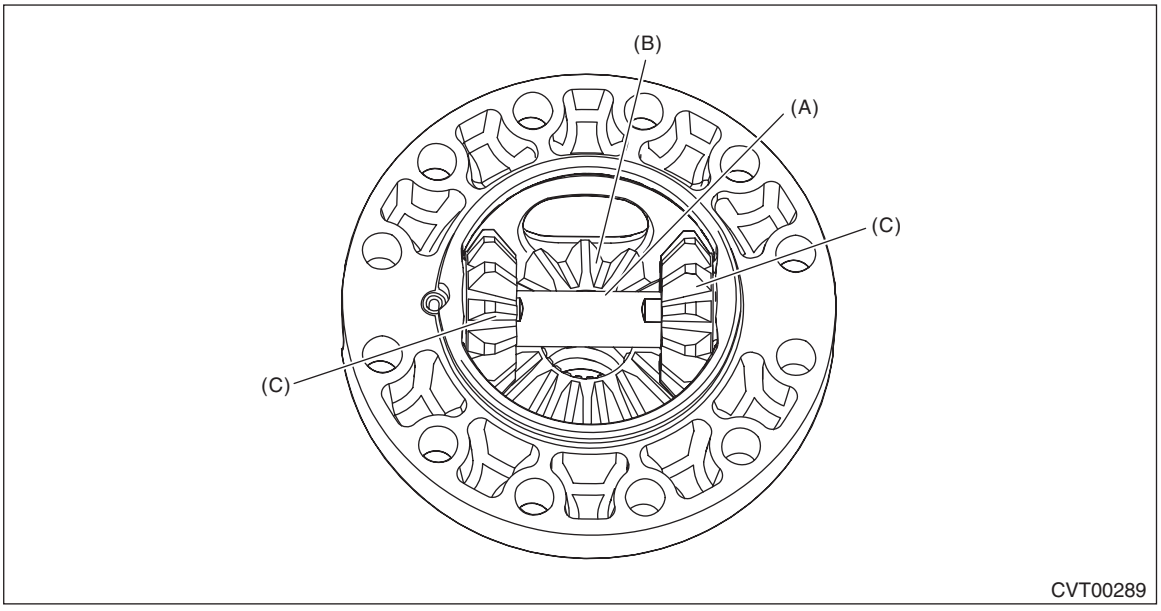
(A) Pinion shaft
(B) Differential bevel gear
(C) Differential bevel pinion

2. SIDE RETAINER

NOTE:
After adjusting the drive pinion backlash and tooth contact, replace the oil seal and O-ring with new parts.
1) Remove the O-rings.



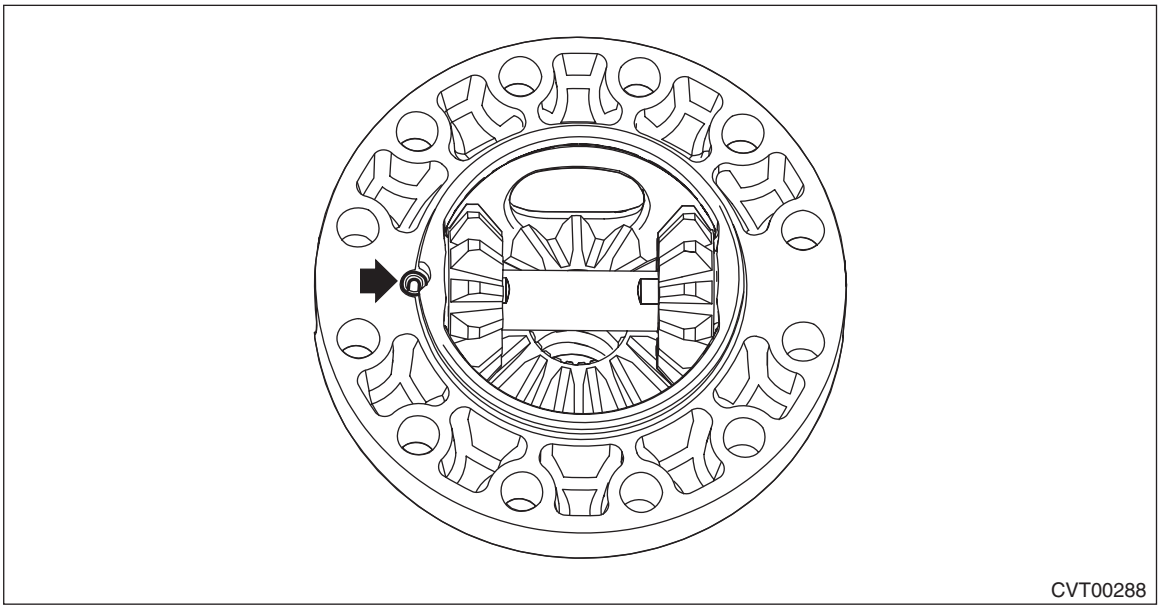
2) Remove the oil seal.



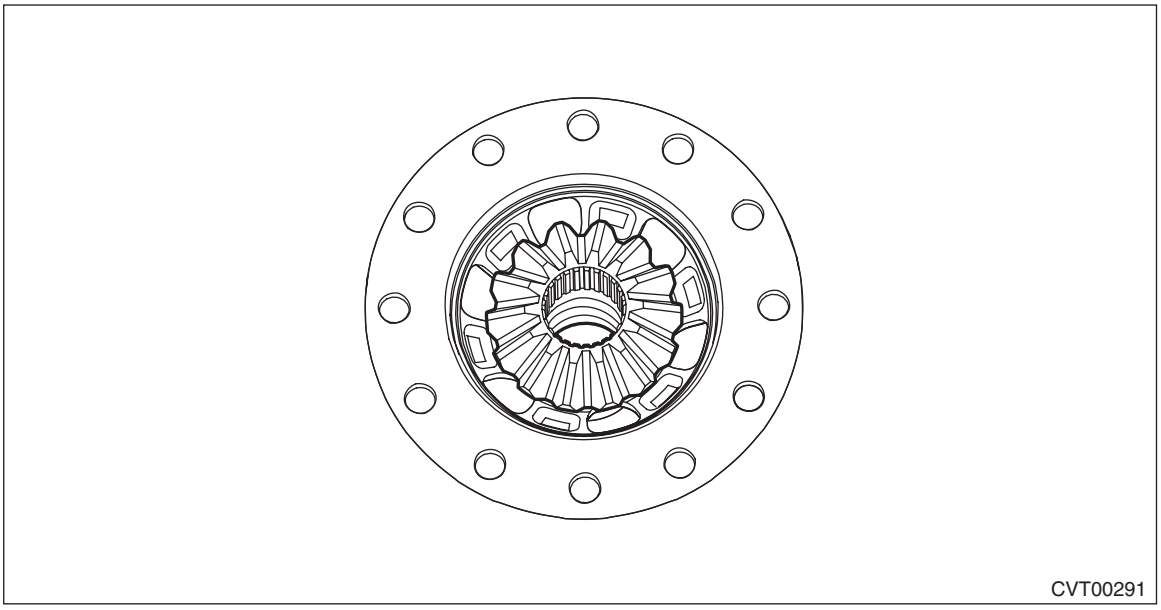
D: ASSEMBLY

1. DIFFERENTIAL CASE ASSEMBLY

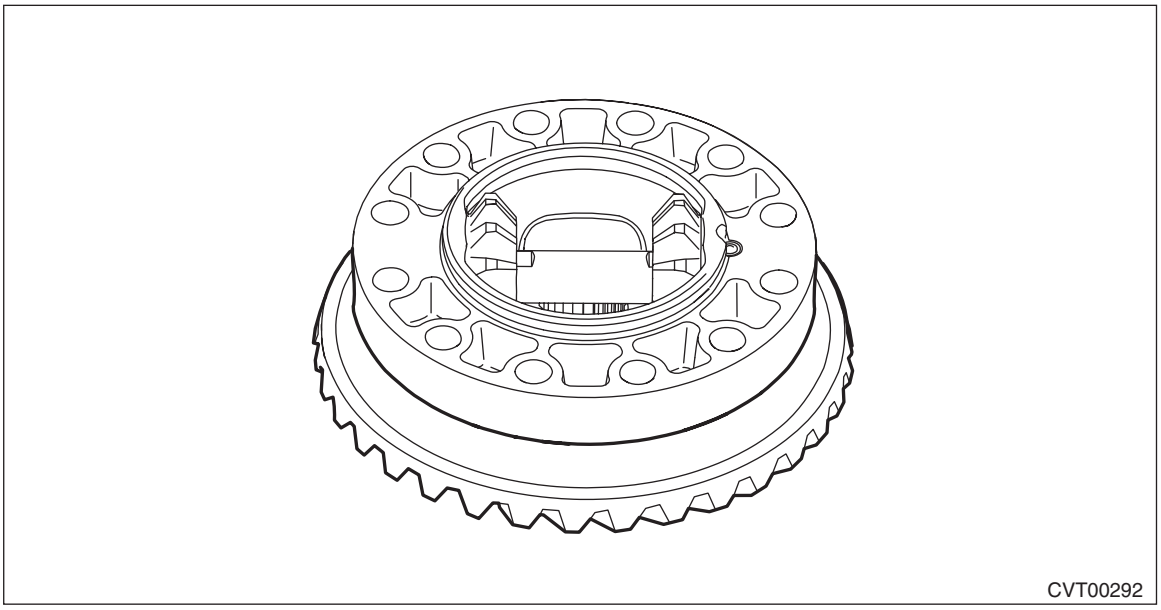
1) Install the washer and differential bevel gear into the differential case (RH).



2) Install the differential bevel pinions into differential case (RH) and install the pinion shaft.

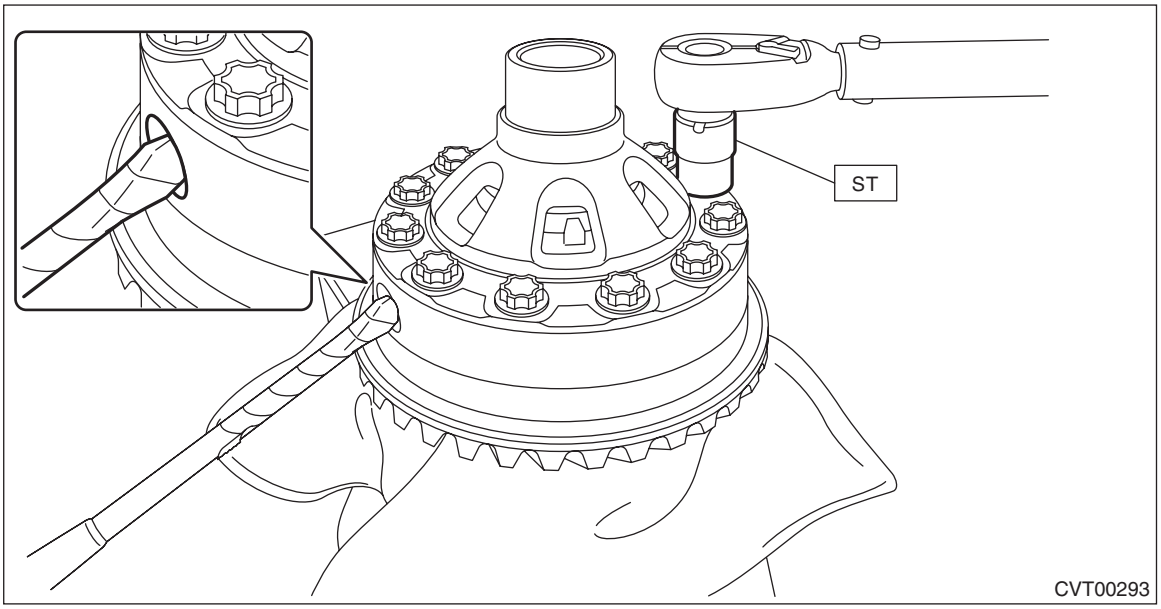


(A) Pinion shaft
(B) Differential bevel gear
(C) Differential bevel pinion



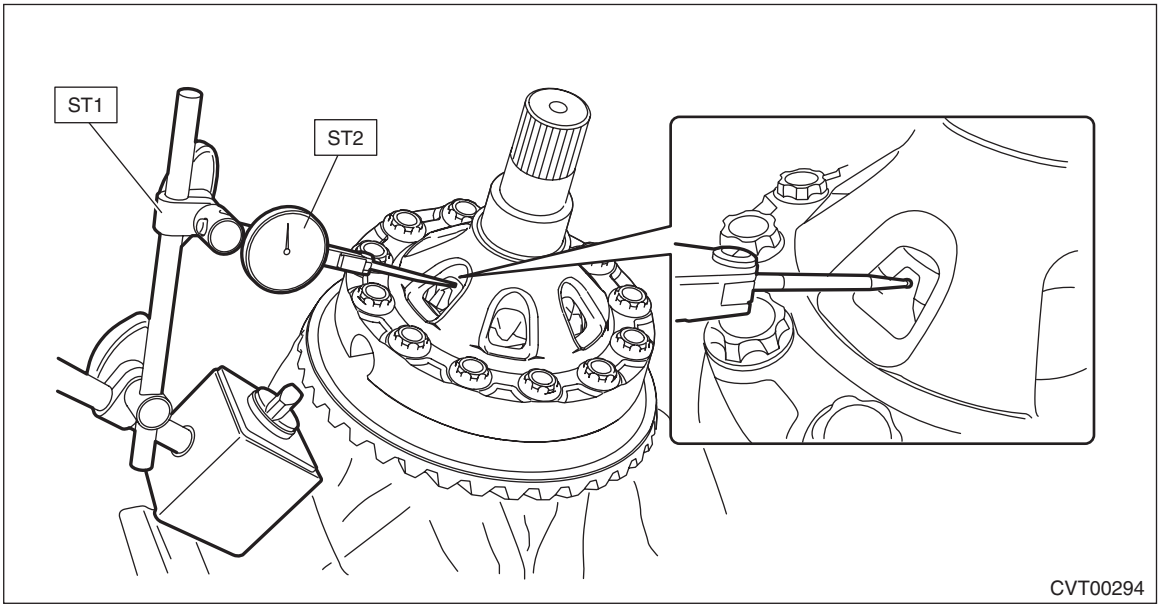
3) Install the straight pin.

4) Install the washer and differential bevel gear to the differential case (LH).



5) Install the differential case (RH) to the hypoid driven gear.

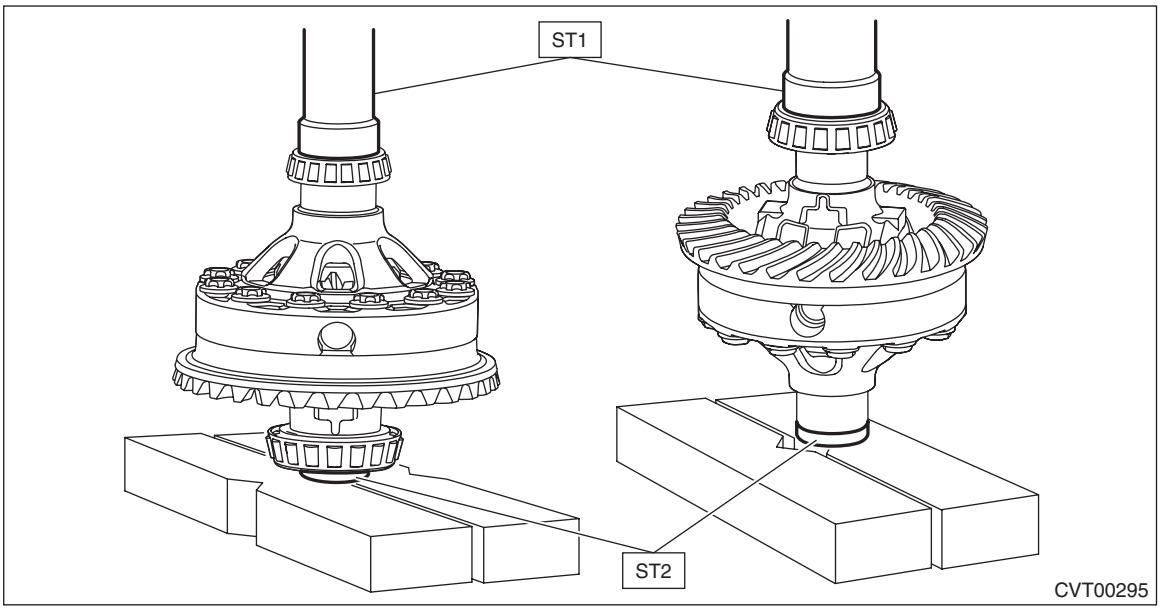
6) Install the differential case (LH) to the differential case (RH).
7) Using the ST, install the hypoid driven gear by tightening the installation bolt.
ST 18270KA020 SOCKET (E20)



Tightening torque:
64 N·m (6.5 kgf-m, 47.2 ft-lb)

8) Measure the backlash, and select the washer.
(1) Install the SUBARU genuine axle shaft to differential case.
Part No. 38415AA070 Axle shaft
(2) Using ST1 and ST2, insert the ST2 through the window of differential case. Measure the backlash of the gear.

NOTE:
• Measure the backlash by applying a differential bevel pinion tooth between two differential bevel gear teeth.
• When measuring, fix the differential bevel pinion in place with a screwdriver covered with cloth, or a similar tool.
ST1 498247001 MAGNET BASE
ST2 498247100 DIAL GAUGE

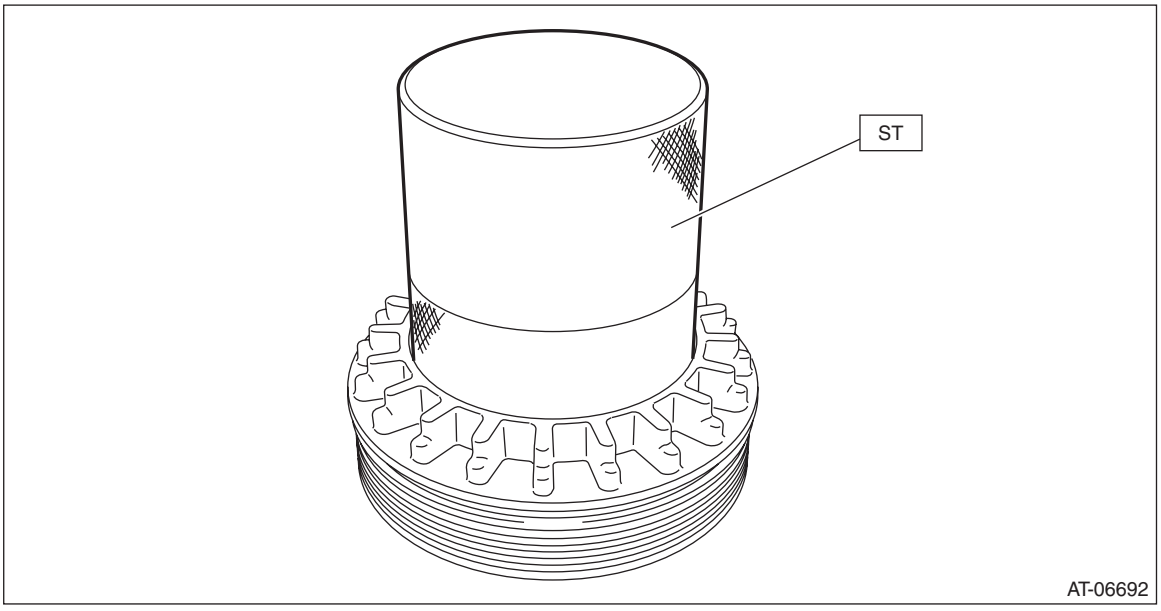


Specification:
0.13 — 0.18 mm (0.0051 — 0.0071 in)

(3) If the backlash is not within specification, select a washer from the table below and replace.

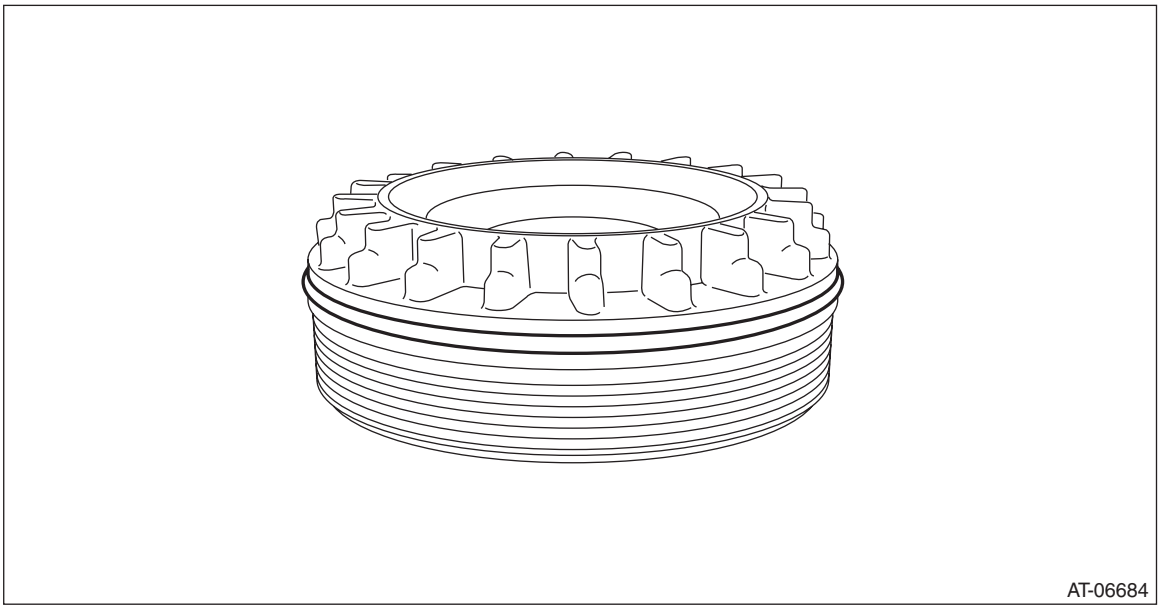
Washer	
Part No.	Thickness mm (in)
803038021	0.95 (0.037)
803038022	1.00 (0.039)
803038023	1.05 (0.041)

9) Using the ST, install the left and right taper roller bearings.
ST1 499277100 BUSHING 1-2 INSTALLER
ST2 398497701 SEAT



2. SIDE RETAINER

NOTE:
After adjusting the backlash and tooth contact, replace the oil seal and O-ring of side retainer with new parts.
1) Using the ST, install the oil seal.

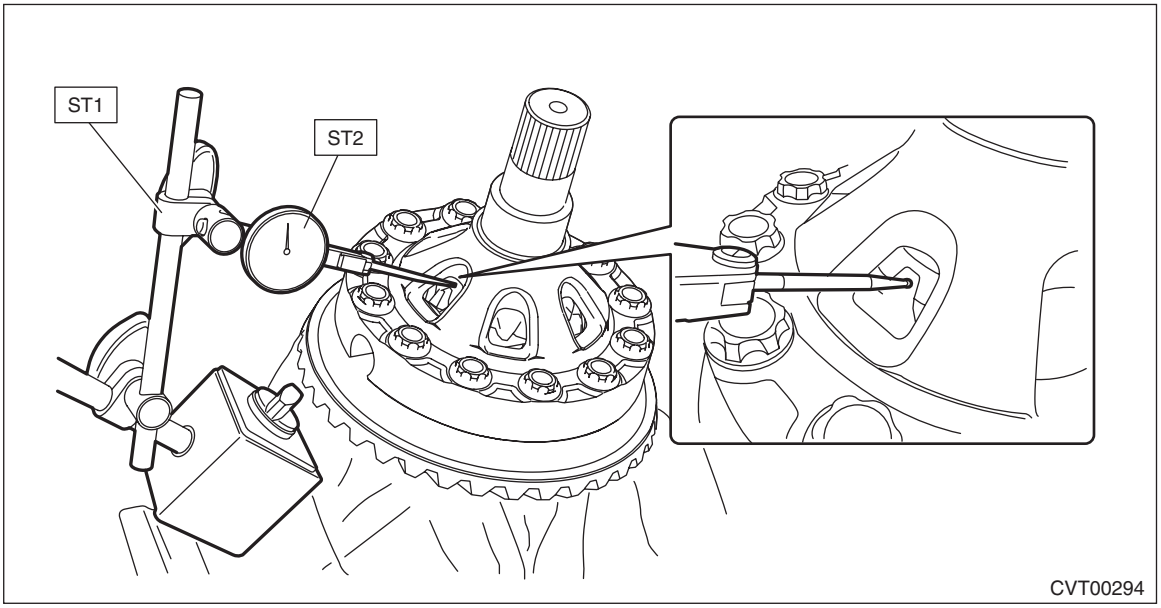


NOTE:
- Use a new oil seal.
- Apply differential gear oil to the oil seal lip and press-fitting surface.
- Oil seal has an identification mark (R, L). When installing oil seals, do not confuse the left and right.

ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

2) Install the O-rings.

NOTE:
- Use new O-rings.
- Apply the differential gear oil to O-ring.

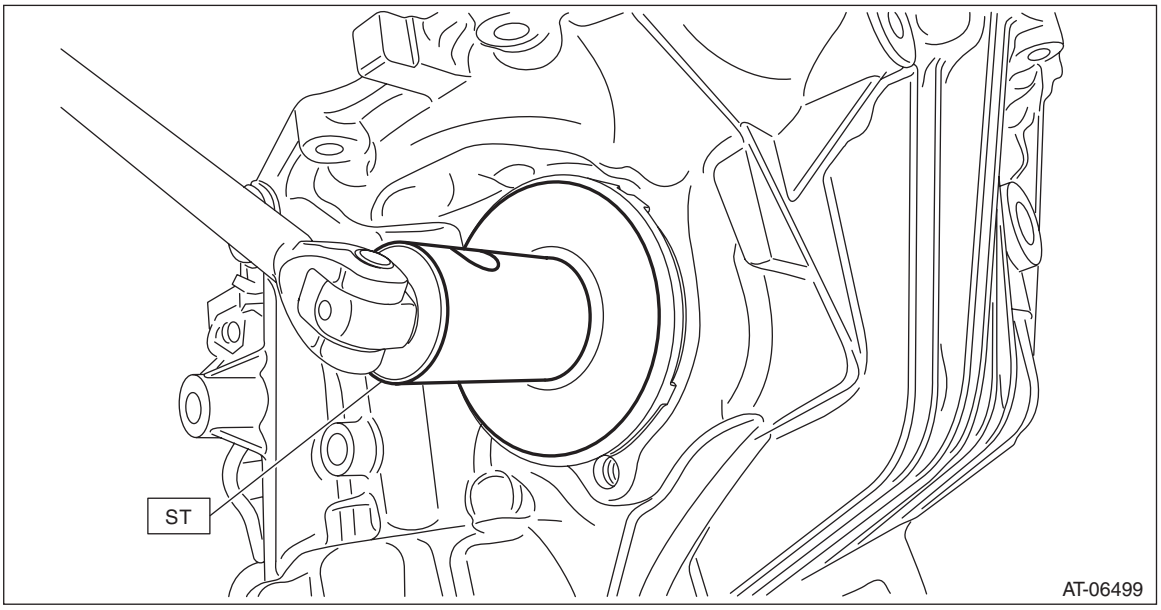


E: INSPECTION

- Check each component for scratches, damage or other faults.
- Using the ST, check the backlash of pinion gear.

ST1 498247001 MAGNET BASE
ST2 498247100 DIAL GAUGE

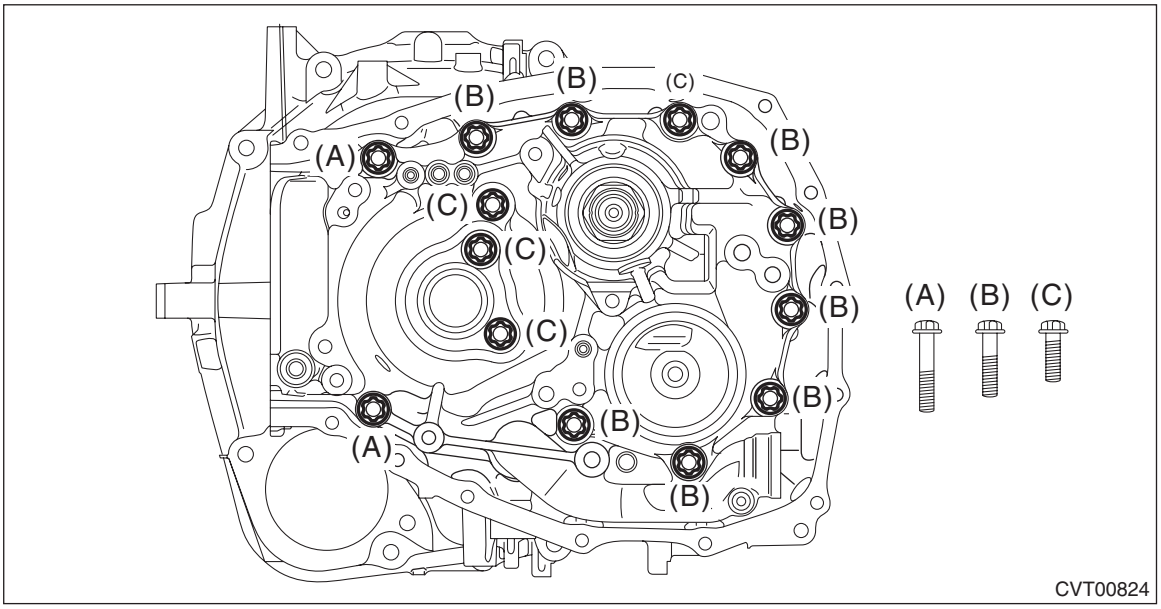
Specification:
0.13 — 0.18 mm (0.0051 — 0.0071 in)



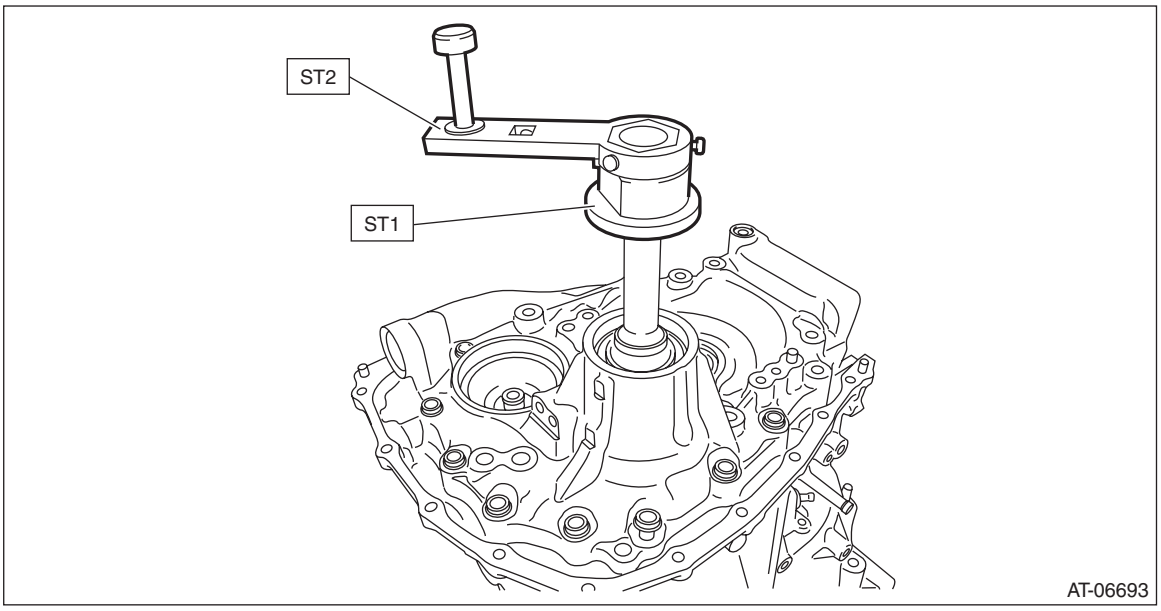
- Measure the hypoid gear backlash, and then adjust it to be within specification. <Ref. to CVT(TR580)-366, ADJUSTMENT, Front Differential Assembly.>

F: ADJUSTMENT

1) Using the ST, screw-in the retainer until resistance is felt.

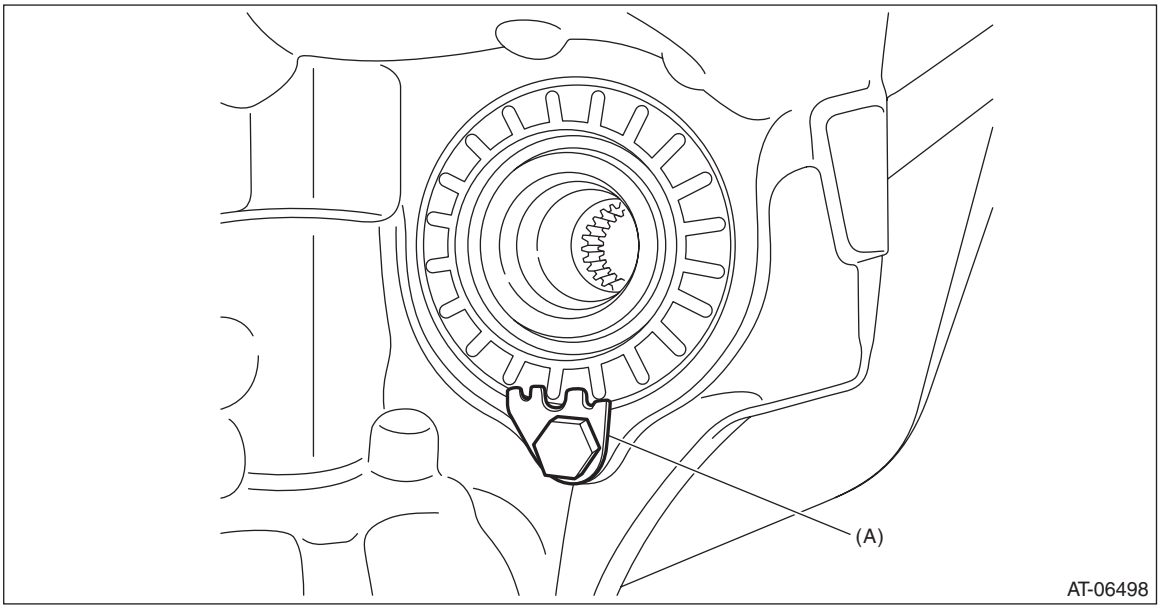


NOTE:
RH side should be screwed-in more than LH side.
ST 18658AA020 WRENCH COMPL RETAINER



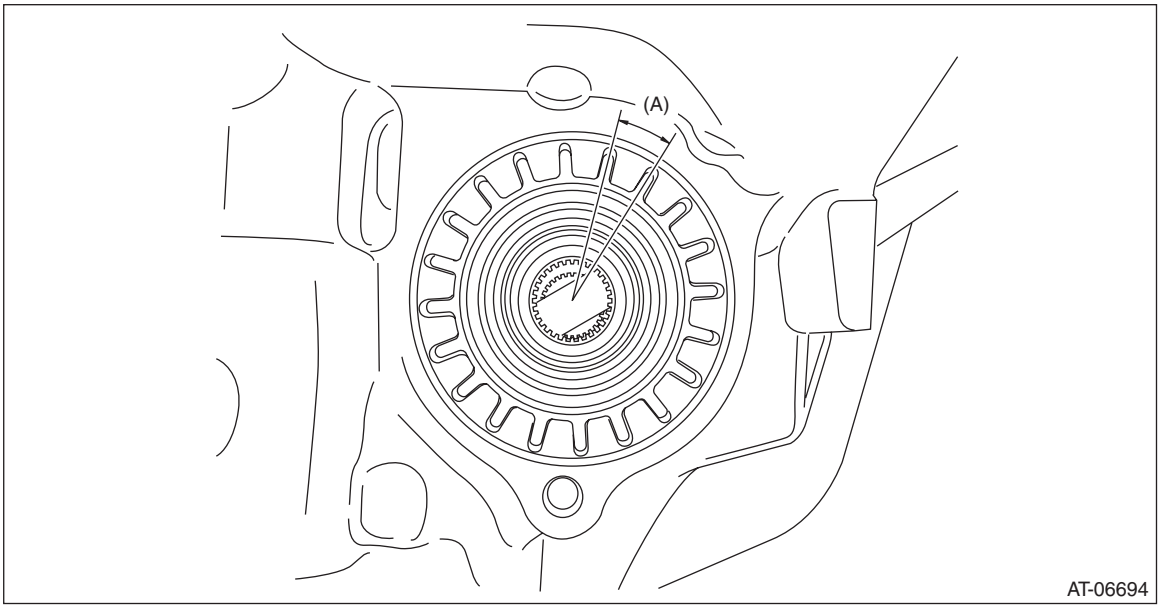
2) Remove the remaining liquid gasket from the mating surface completely.
3) Using the ST, install the drive pinion assembly to converter case.
ST 18270KA020 SOCKET (E20)

NOTE:
Do not confuse the three different-length bolts when installing.

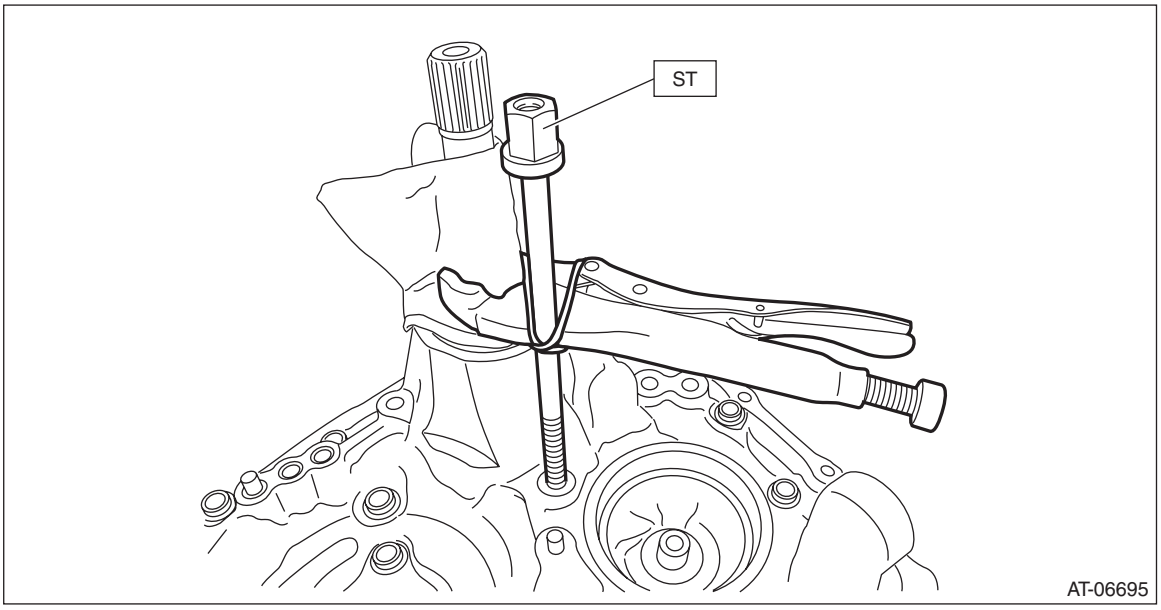


Tightening torque:
43 N·m (4.4 kgf-m, 31.7 ft-lb)

4) Rotate the drive pinion shaft ten times or more using ST1 and ST2.
ST1 498937110 HOLDER
ST2 499787700 WRENCH

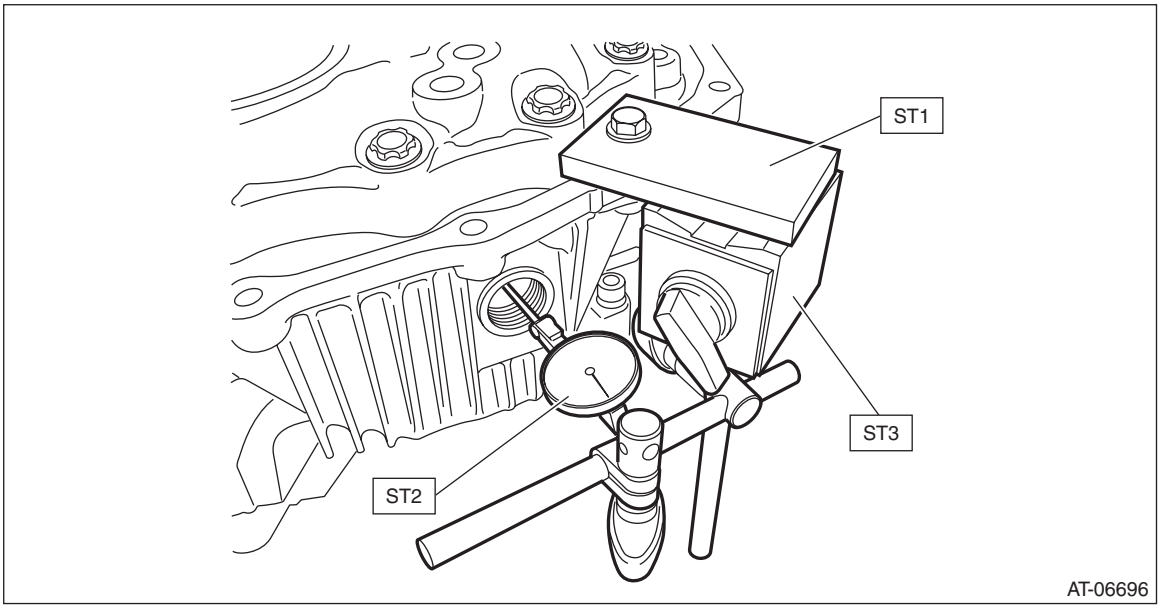


5) While rotating the pinion shaft, tighten the retainer LH and loosen the retainer RH until the shaft can't be turned anymore. The backlash is “zero” when the pinion shaft comes to the point where it doesn't rotate.
6) After the “zero” state is established, loosen the retainer LH by 3 notches and secure it with the lock plate. Retighten the retainer RH until it stops. Rotate the drive pinion 2 or 3 times. Tighten the retainer RH further 1-3/4 notches. This sets the preload. Finally, secure the retainer with its lock plate.



(A) Lock plate

NOTE:
Turning the retainer by every one tooth changes the backlash approx. 0.05 mm (0.0020 in).

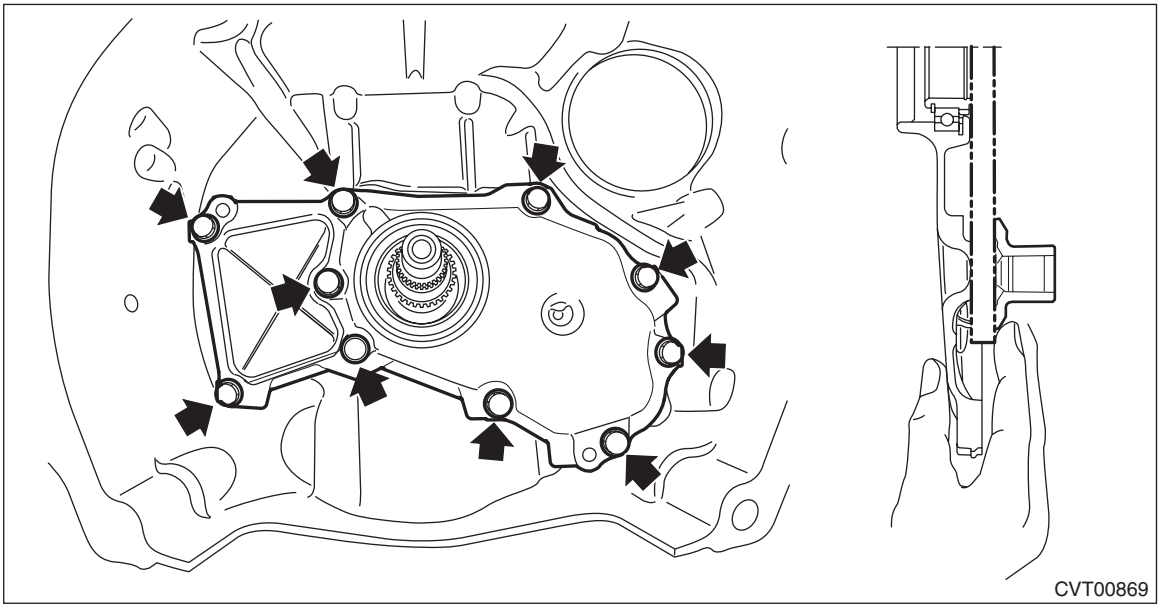


(A) 1 tooth

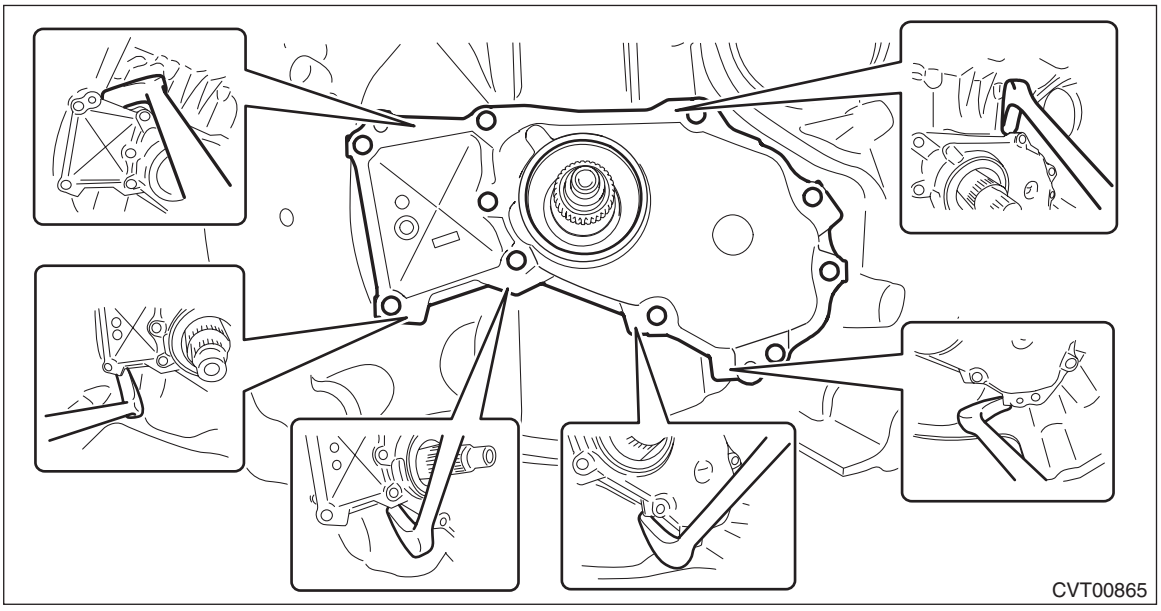
7) Insert the two SUBARU genuine axle shafts into differential case.
Part No. 38415AA070 Axle shaft
8) Install the ST to the drive pinion retainer, and wrap the drive pinion shaft with cloth and pinch with vise pliers. Using a tie-wrap or a wire, fix the vise pliers to the ST.
Make sure the drive pinion shaft does not move.
ST 18763AA000 COMPRESSOR SHAFT

9) Check the backlash is within specification using ST1, ST2 and ST3.
ST1 498255400 PLATE
ST2 498247100 DIAL GAUGE
ST3 498247001 MAGNET BASE

Backlash:
0.13 — 0.18 mm (0.005 — 0.007 in)

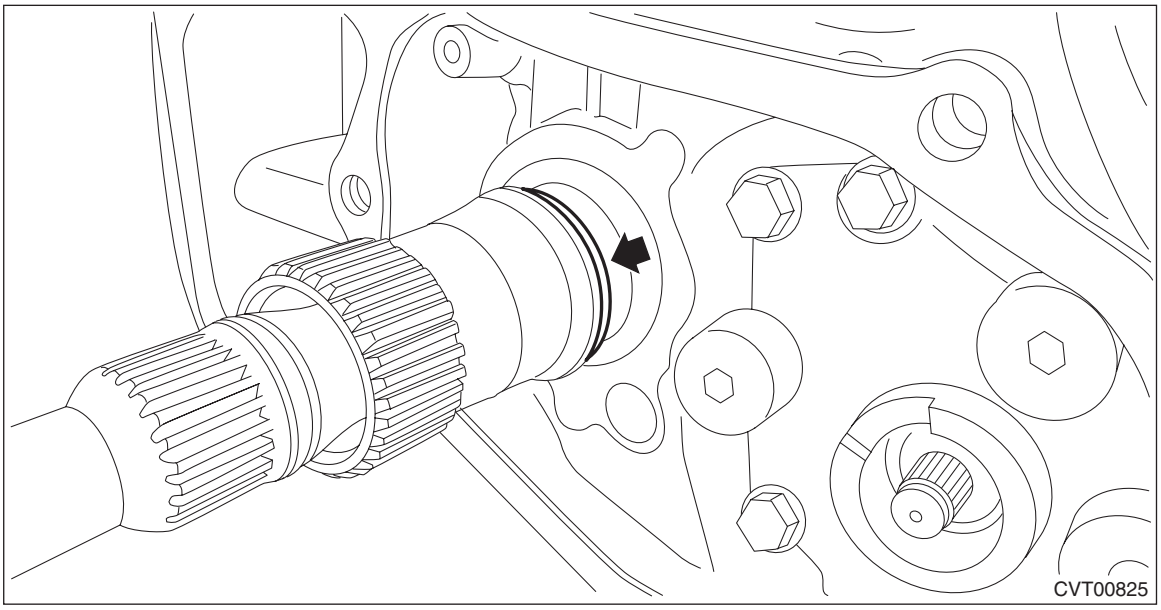


10) Adjust the teeth contact of the front differential and drive shaft. <Ref. to CVT(TR580)-343, ADJUSTMENT, Drive Pinion Shaft Assembly.>



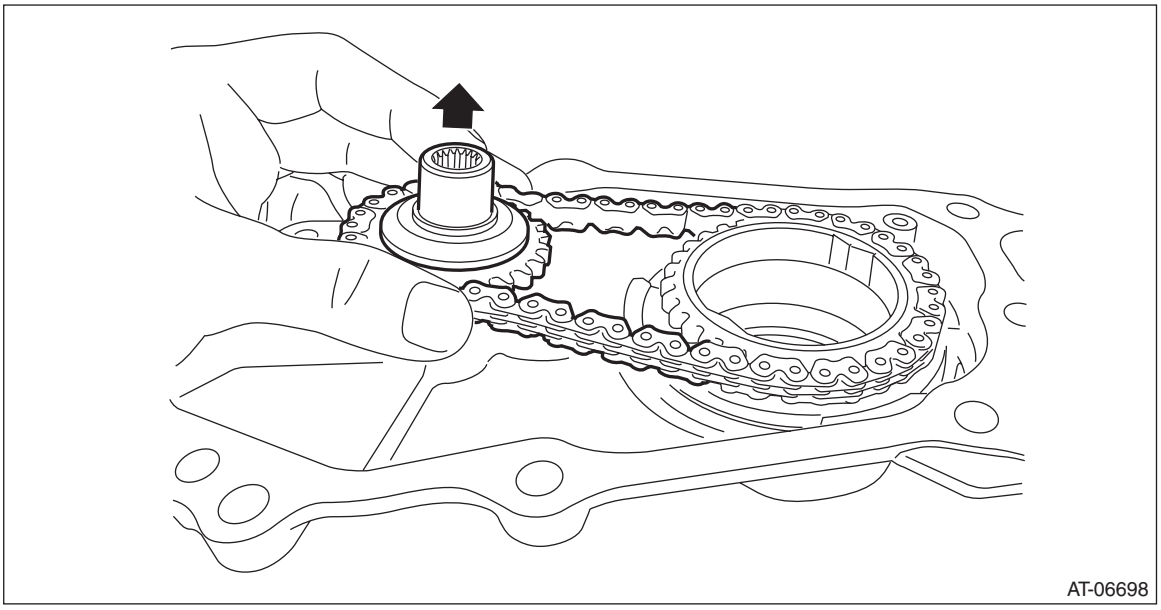
47.Oil Pump Chain

A: REMOVAL

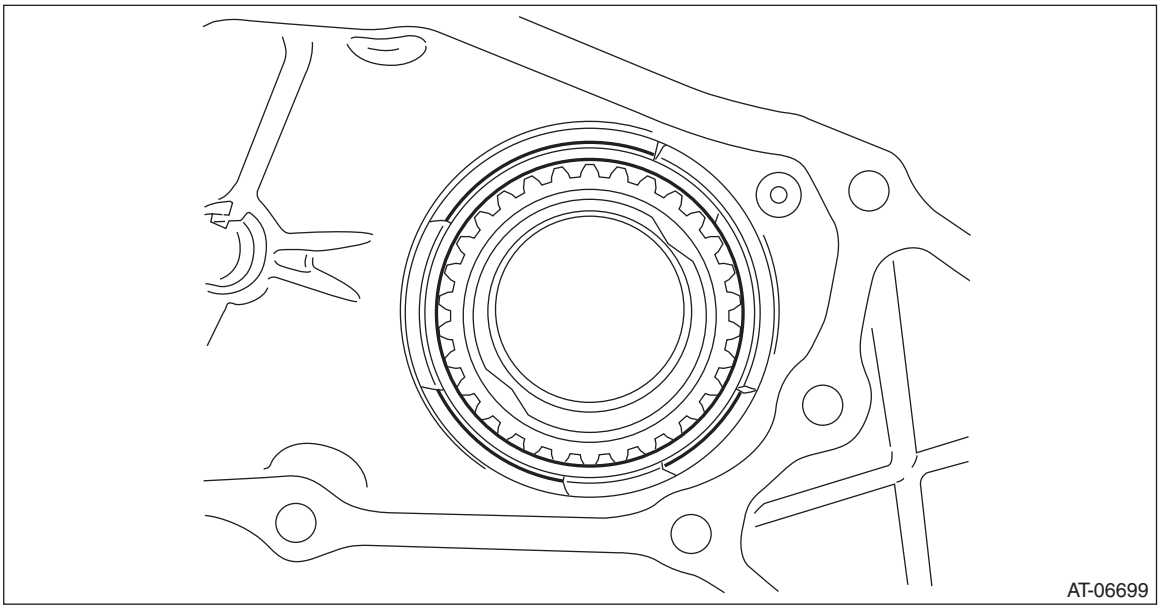


1) Remove the transmission assembly. <Ref. to CVT(TR580)-65, REMOVAL, Automatic Transmission Assembly.>
2) Remove the torque converter assembly. <Ref. to CVT(TR580)-205, REMOVAL, Torque Converter Assembly.>
3) Remove the oil pump chain cover.

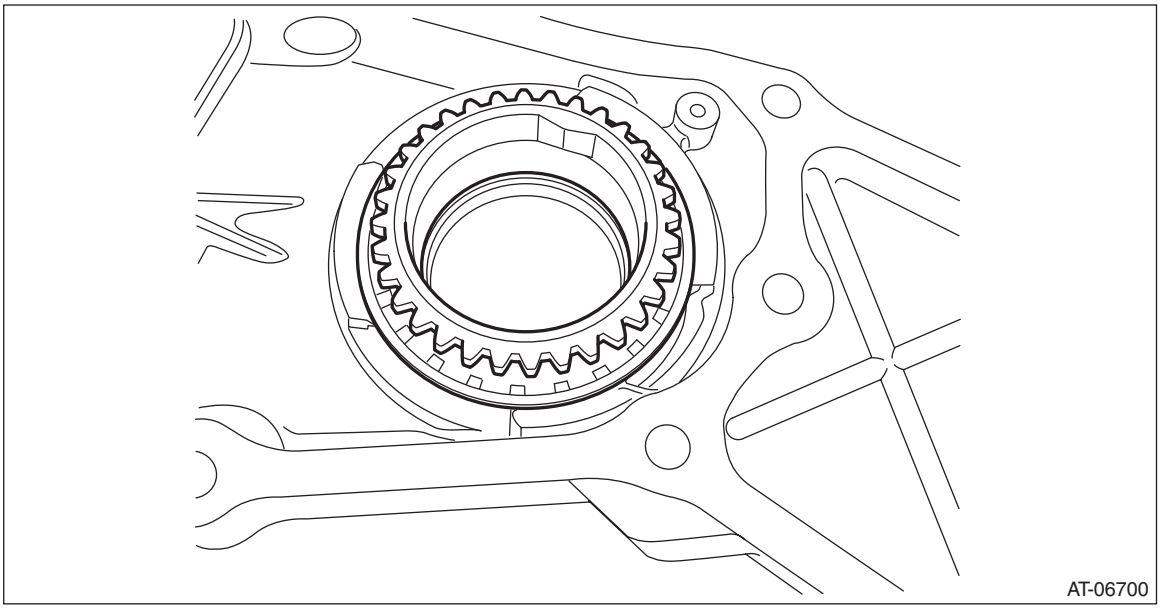
NOTE:
Oil pump chain cover may be hard to remove because the driven sprocket is installed to the shaft side of the oil pump. Do not remove it forcibly. Remove it while holding the driven sprocket by hand.



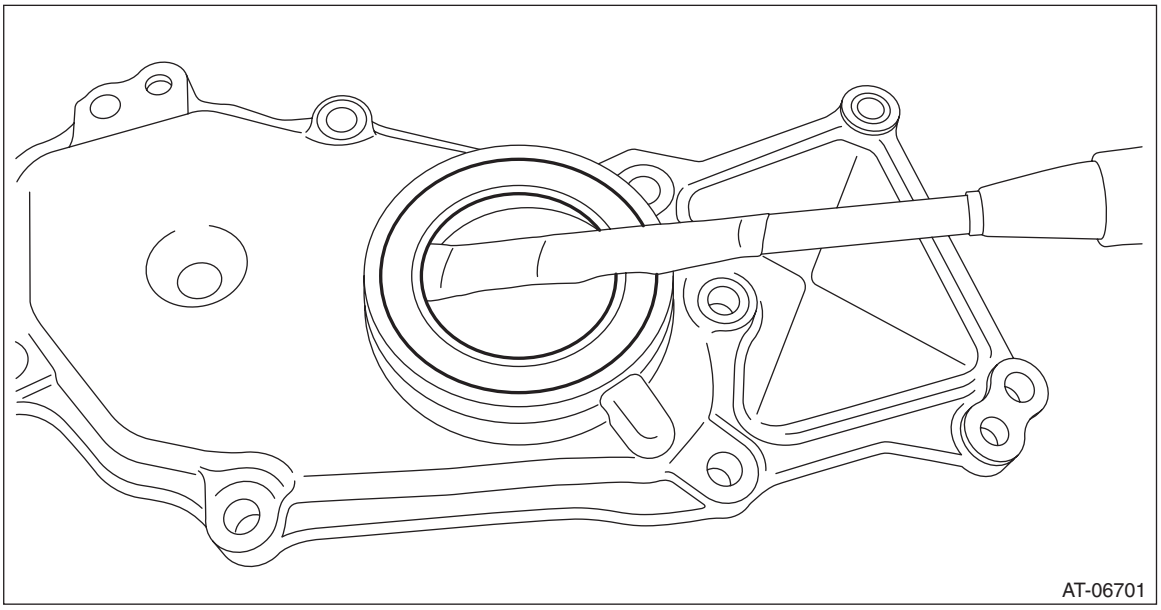
4) Remove the seal rings.



5) Remove the driven sprocket from oil pump chain cover to remove the oil pump chain.



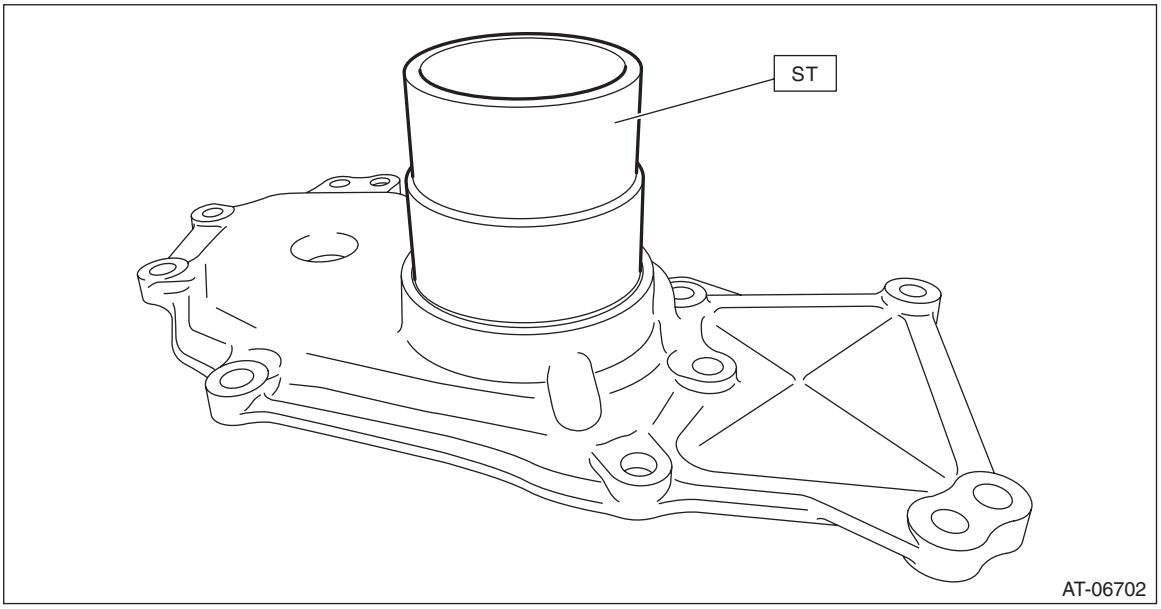
NOTE:
- The driven sprocket is replaced as an assembly only, because it is a non-disassembly part.
- If the ball bearing is removed from the driven sprocket, replace with a new part.



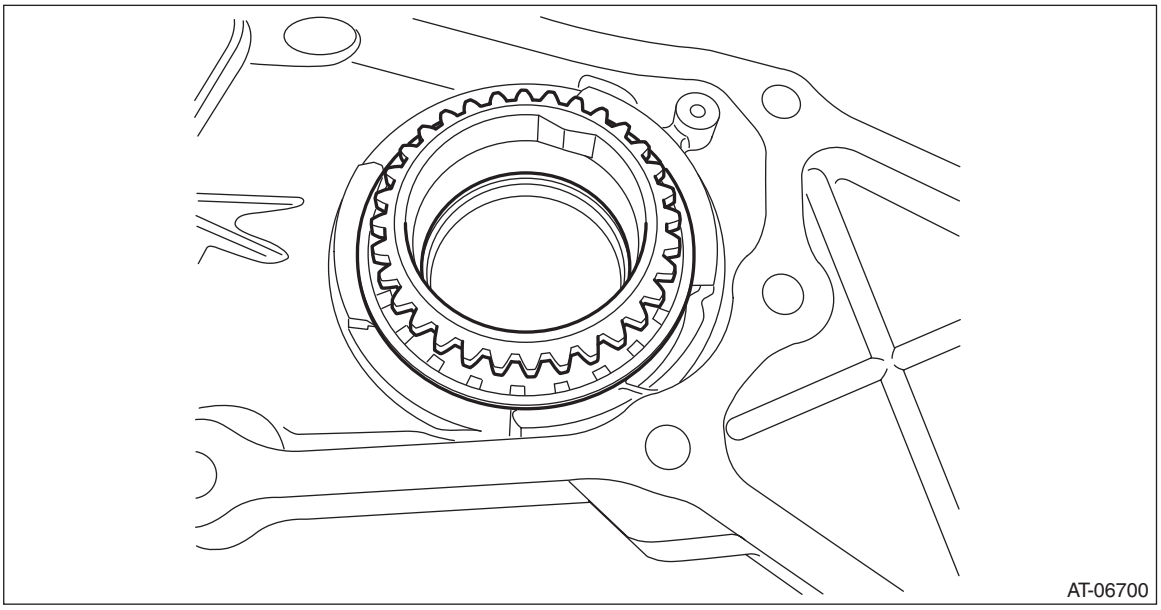
6) Remove the snap ring.

7) Remove the drive sprocket.

8) Remove the oil seal from the oil pump chain cover.

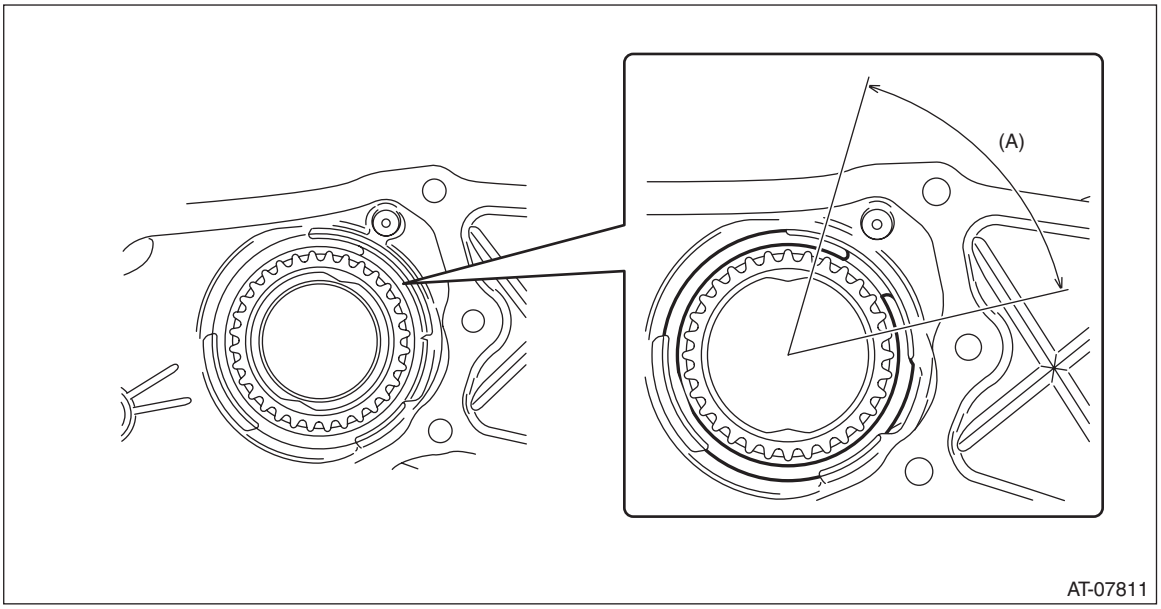


B: INSTALLATION



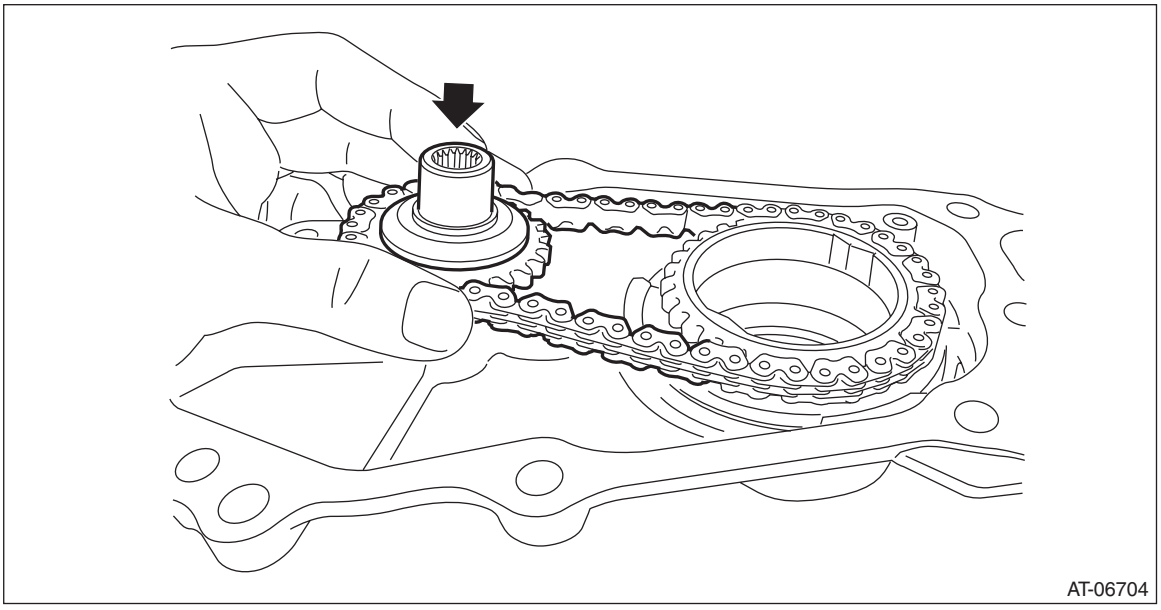
1) Clean the mating surface of oil pump chain cover and converter case.
2) Using the ST, install the oil seal.

NOTE:
- Use a new oil seal.
- Apply CVTF to the oil seal lip and press-fitting surface.

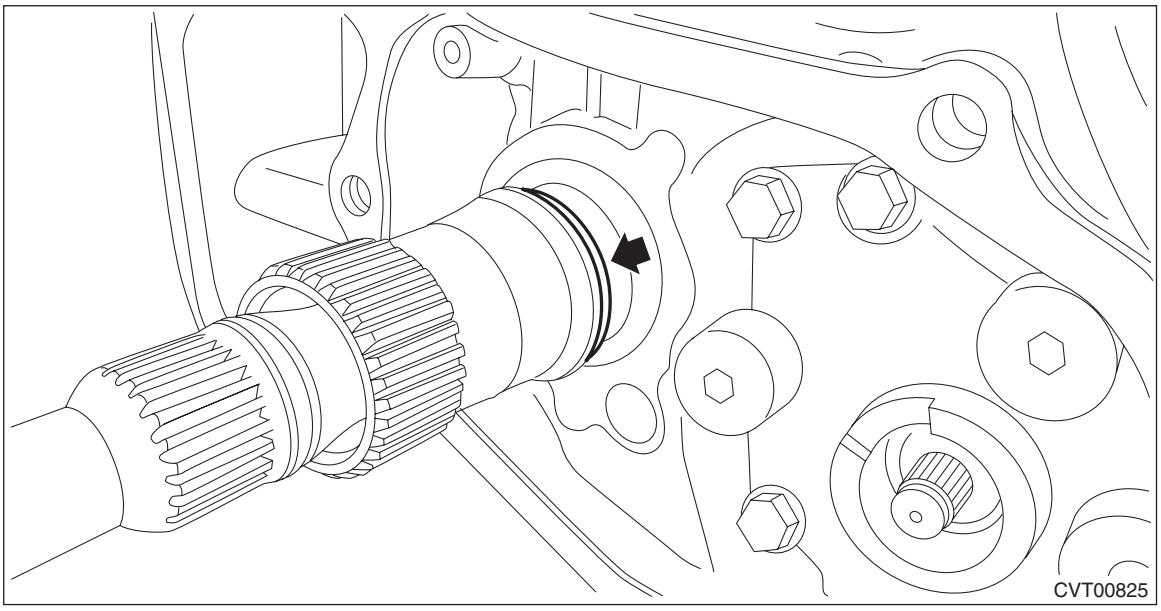


ST 499755602 PRESS SNAP RING

3) Install the drive sprocket.



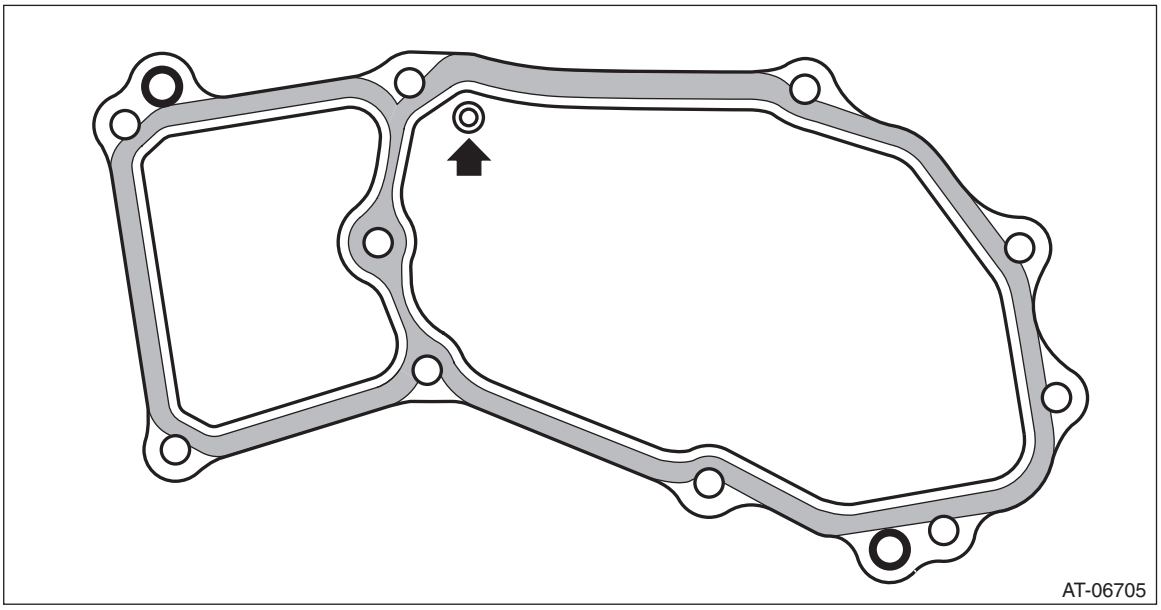
4) Install the snap ring so that its cutout portion is securely fitted into the snap ring groove of the oil pump chain cover.



(A) Installation range of cutout portion for snap ring

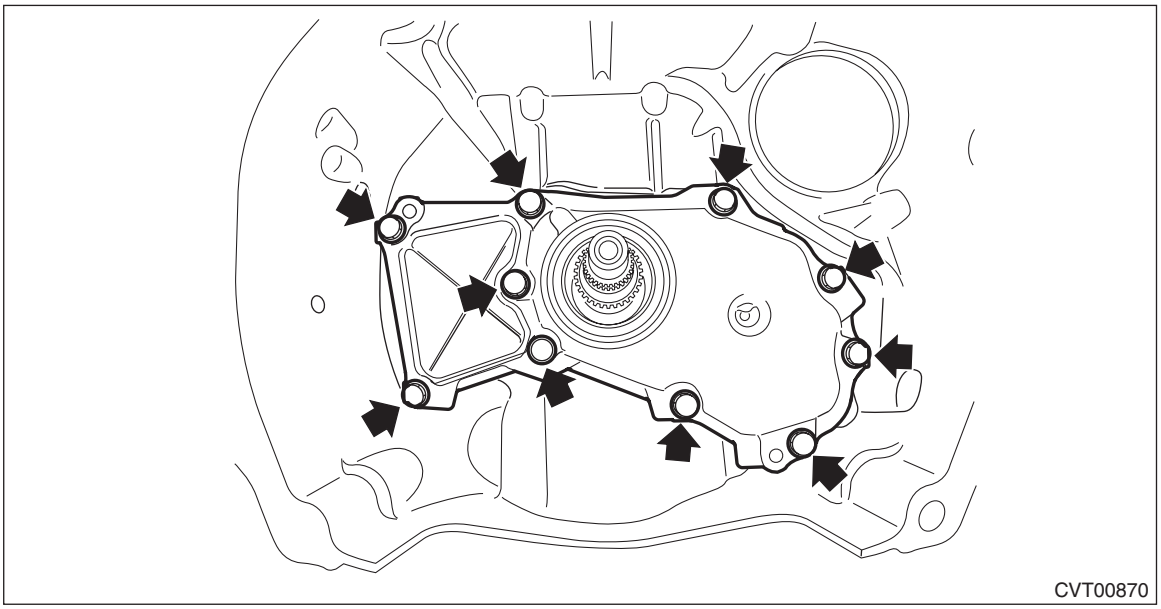
5) Place the oil pump chain on drive sprocket.
6) Place the oil pump chain on driven sprocket and install the driven sprocket to oil pump chain cover.

7) Install the seal rings.



NOTE:
- Use new seal rings.
- Apply CVTF to the seal rings.
- When installing the seal rings, do not expand the seal rings too much.

8) Apply liquid gasket seamlessly to the mating surface of oil pump chain cover.

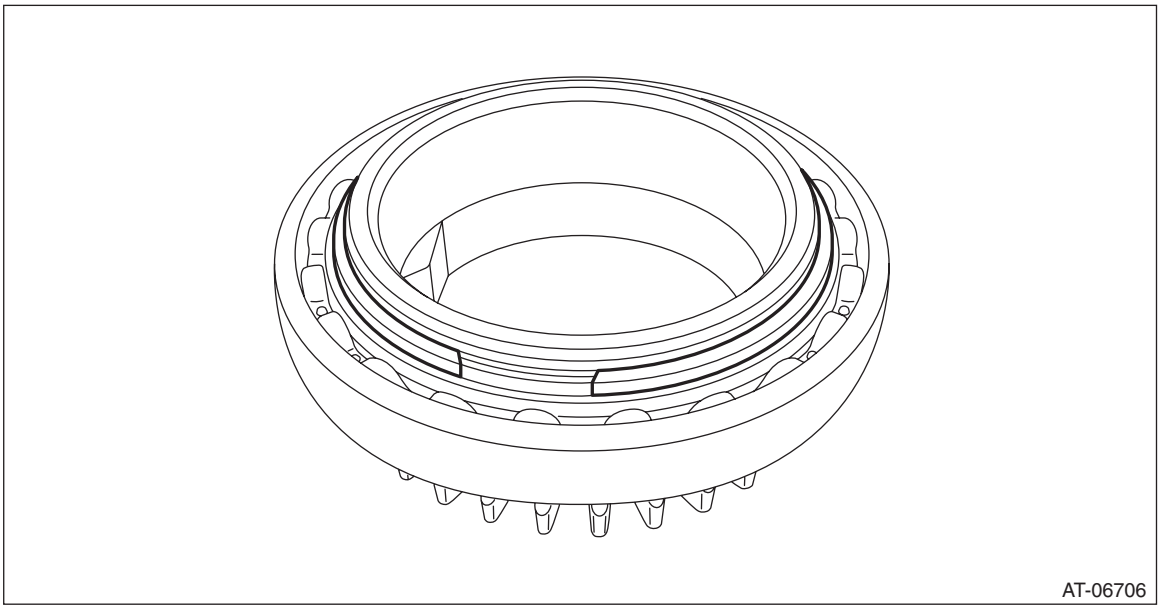


CAUTION:
Do not apply liquid gasket at the arrowed hole.

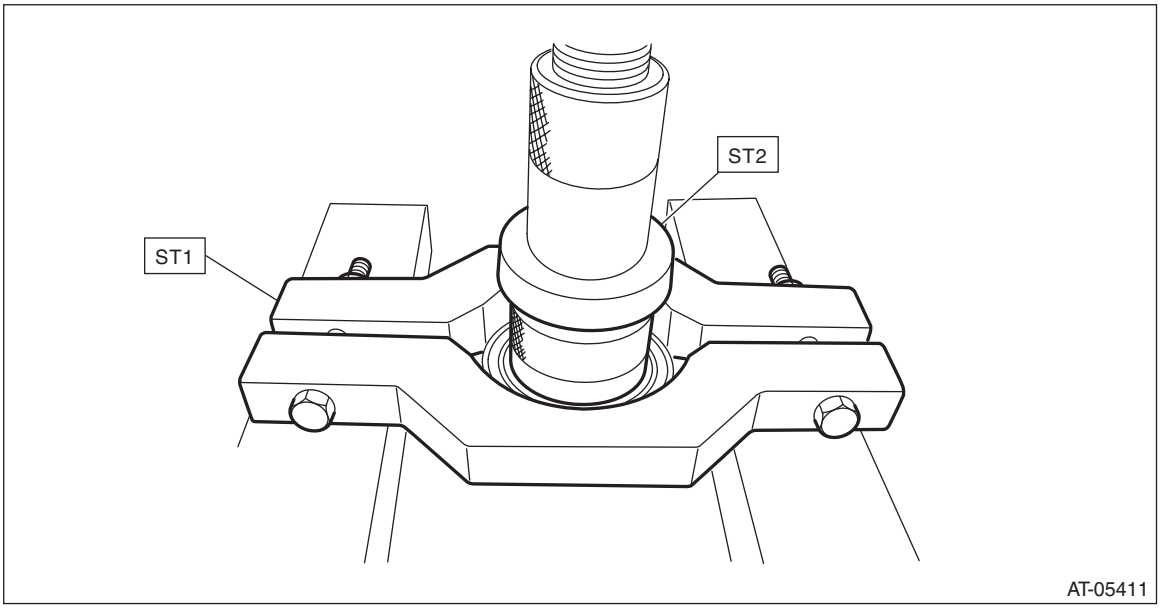
Liquid gasket:
THREE BOND 1215B or equivalent

9) Install the oil pump chain cover.

Tightening torque:
21 N·m (2.1 kgf-m, 15.5 ft-lb)



10) Install the torque converter assembly. <Ref. to CVT(TR580)-206, INSTALLATION, Torque Converter Assembly.>
11) Install the transmission assembly. <Ref. to CVT(TR580)-81, INSTALLATION, Automatic Transmission Assembly.>

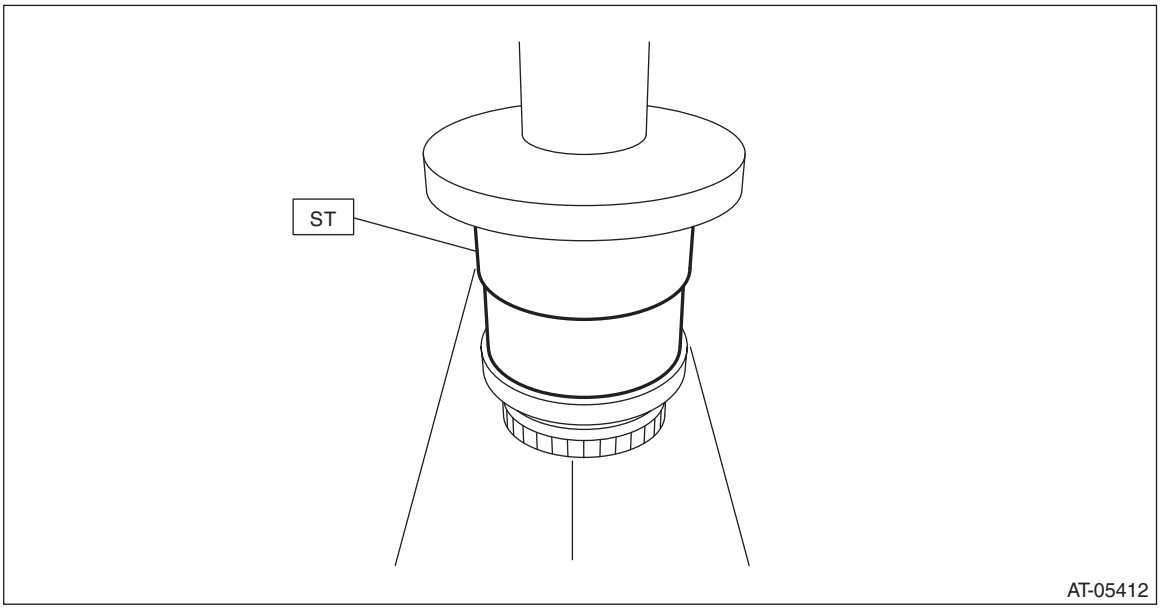


C: DISASSEMBLY

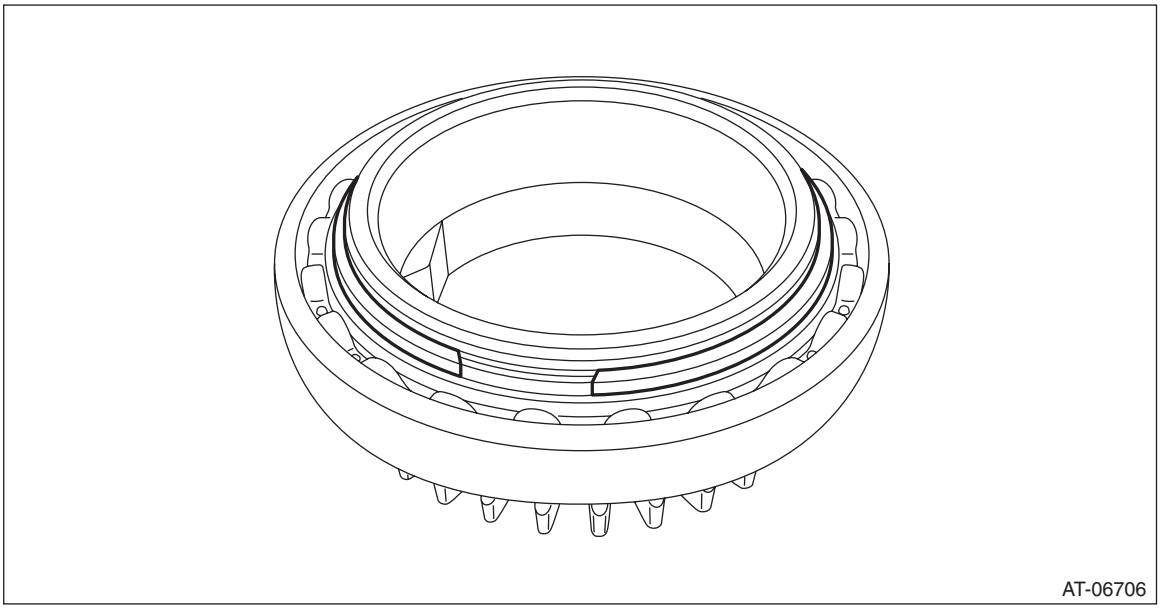
1. DRIVE SPROCKET

1) Remove the snap ring.

2) Remove the ball bearing using ST.
ST1 498077600 REMOVER
ST2 399513600 INSTALLER



D: ASSEMBLY

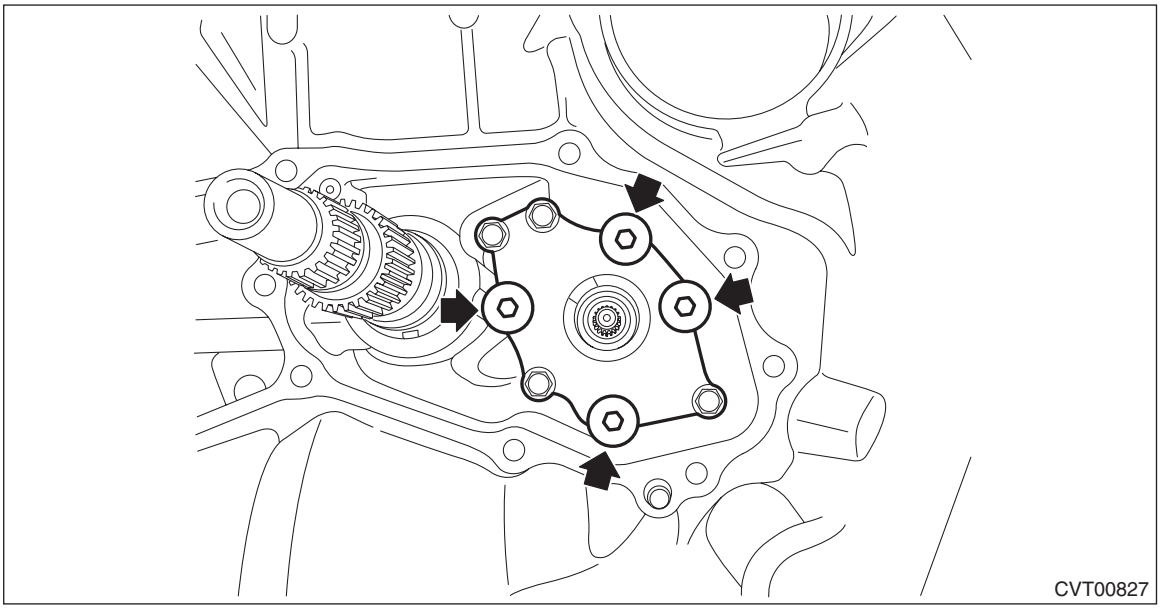


1. DRIVE SPROCKET

1) Using the ST, install the ball bearing.

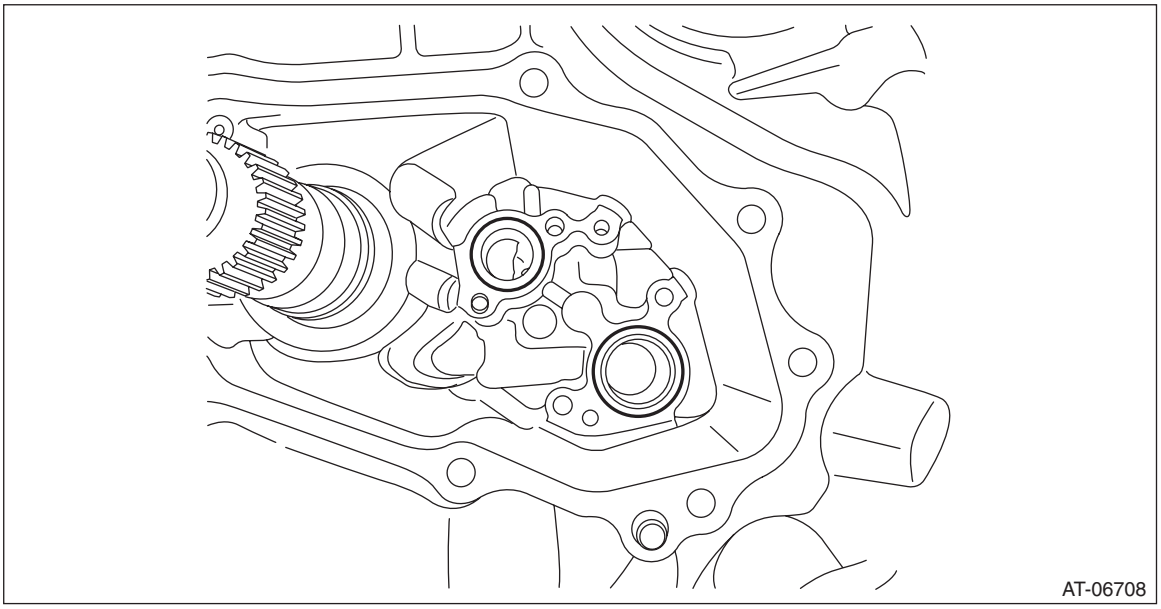
NOTE:
Use a new ball bearing.
ST 499755502 PRESS SNAP RING

2) Install the snap ring.



E: INSPECTION

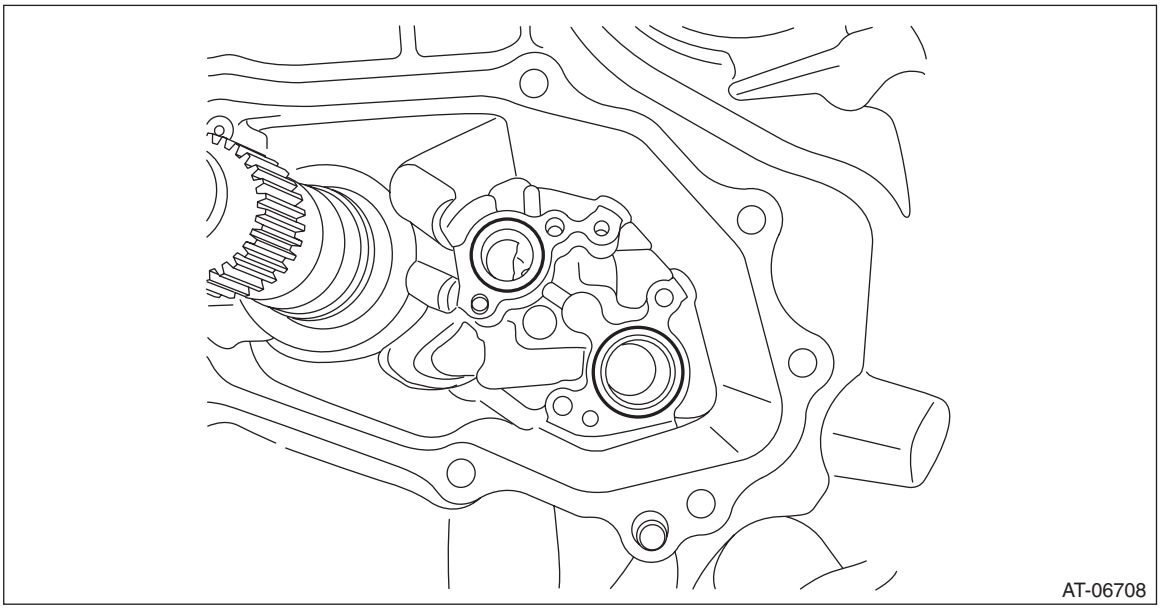
- Check the oil pump chain for damage.
- Replace if gear teeth are broken, damaged, sharpen or excessively worn.
- Check the bearing for seizure or wear.
- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.
- Check the oil pump chain cover for damage.
- Check for leakage of CVTF from the mating surface of oil pump chain cover.
- Check the oil seal for damage.



48.Oil Pump

A: REMOVAL

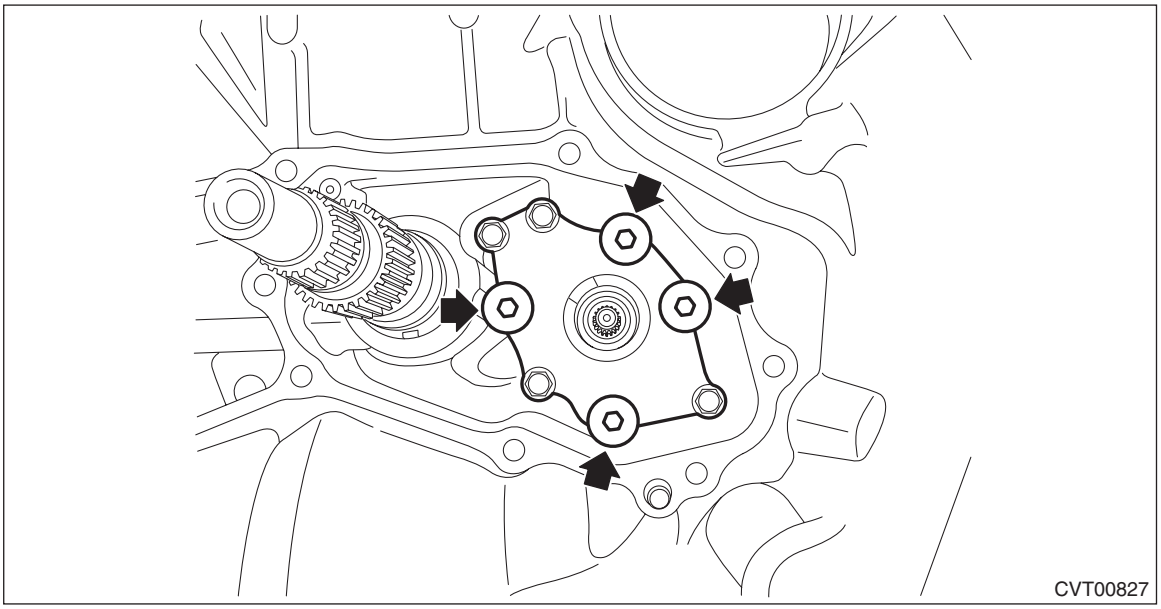
1) Remove the transmission assembly. <Ref. to CVT(TR580)-65, REMOVAL, Automatic Transmission Assembly.>
2) Remove the torque converter assembly. <Ref. to CVT(TR580)-205, REMOVAL, Torque Converter Assembly.>
3) Remove the oil pump chain cover. <Ref. to CVT(TR580)-370, REMOVAL, Oil Pump Chain.>
4) Remove the oil pump and the plate.



5) Remove the O-rings.

B: INSTALLATION

1) Install the O-rings.



NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

2) Install the plate and the oil pump.

NOTE:
Apply CVTF to the bolt.

Tightening torque:
8.5 N·m (0.9 kgf-m, 6.3 ft-lb)

3) Install the oil pump chain cover. <Ref. to CVT(TR580)-373, INSTALLATION, Oil Pump Chain.>
4) Install the torque converter assembly. <Ref. to CVT(TR580)-206, INSTALLATION, Torque Converter Assembly.>
5) Install the transmission assembly. <Ref. to CVT(TR580)-81, INSTALLATION, Automatic Transmission Assembly.>

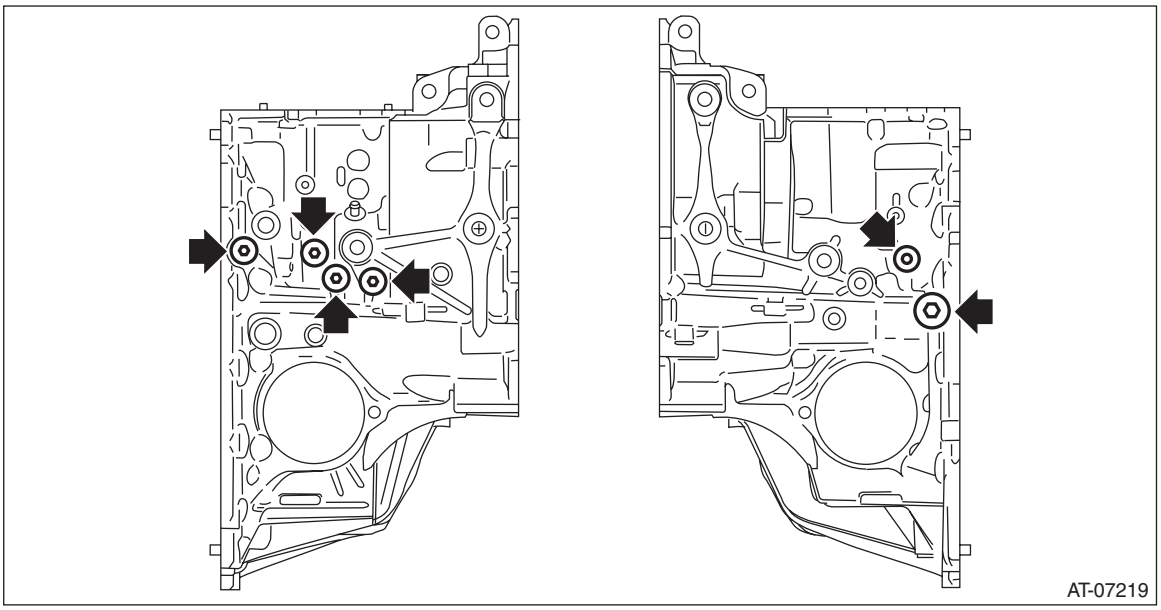
C: INSPECTION

Check the following items.
- Check the oil pump for damage and wear.
- Rotate the oil pump by hand, and check that it rotates smoothly.

1) Measure the secondary pressure. <Ref. to CVT(TR580)-53, INSPECTION, Secondary Pressure (Line Pressure) Test.>
2) Remove the oil pan and oil strainer. <Ref. to CVT(TR580)-138, REMOVAL, Control Valve Body.>
3) Check oil strainer for clogging.
When oil strainer has no clogging, replace the oil pump.

49.Converter Case

A: REMOVAL



1) Remove the transmission assembly. <Ref. to CVT(TR580)-65, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR580)-198, REMOVAL, Air Breather Hose.>
3) Remove the control valve body. <Ref. to CVT(TR580)-138, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR580)-152, REMOVAL, Transmission Harness.>
5) Remove the turbine speed sensor. <Ref. to CVT(TR580)-118, REMOVAL, Turbine Speed Sensor.>
6) Remove the secondary speed sensor. <Ref. to CVT(TR580)-123, REMOVAL, Secondary Speed Sensor.>
7) Remove the primary speed sensor. <Ref. to CVT(TR580)-128, REMOVAL, Primary Speed Sensor.>
8) Remove the inhibitor switch. <Ref. to CVT(TR580)-114, REMOVAL, Inhibitor Switch.>
9) Remove the extension case. <Ref. to CVT(TR580)-209, REMOVAL, Extension Case.>
10) Remove the transfer clutch assembly. <Ref. to CVT(TR580)-213, REMOVAL, Transfer Clutch.>
11) Remove the transfer driven gear assembly. <Ref. to CVT(TR580)-227, REMOVAL, Transfer Driven Gear.>
12) Remove the parking pawl. <Ref. to CVT(TR580)-230, REMOVAL, Parking Pawl.>
13) Remove the reduction driven gear assembly. <Ref. to CVT(TR580)-232, REMOVAL, Reduction Driven Gear.>
14) Remove the oil pan and oil strainer. <Ref. to CVT(TR580)-135, REMOVAL, Oil Pan and Strainer.>
15) Remove the transmission control device. <Ref. to CVT(TR580)-240, REMOVAL, Transmission Control Device.>
16) Remove the transmission case. <Ref. to CVT(TR580)-246, REMOVAL, Transmission Case.>
17) Remove the reduction drive gear. <Ref. to CVT(TR580)-259, REMOVAL, Reduction Drive Gear.>
18) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR580)-264, REMOVAL, Primary Pulley and Secondary Pulley.>
19) Remove the reverse brake assembly. <Ref. to CVT(TR580)-285, REMOVAL, Reverse Brake Assembly.>
20) Remove the forward clutch assembly. <Ref. to CVT(TR580)-300, REMOVAL, Forward Clutch Assembly.>
21) Remove the drive pinion shaft assembly. <Ref. to CVT(TR580)-320, REMOVAL, Drive Pinion Shaft Assembly.>
22) Remove the front differential assembly. <Ref. to CVT(TR580)-350, REMOVAL, Front Differential Assembly.>
23) Remove the oil pump chain cover. <Ref. to CVT(TR580)-370, REMOVAL, Oil Pump Chain.>
24) Remove the oil pump. <Ref. to CVT(TR580)-379, REMOVAL, Oil Pump.>

B: INSTALLATION

1) Install the oil pump. <Ref. to CVT(TR580)-380, INSTALLATION, Oil Pump.>
2) Install the oil pump chain cover. <Ref. to CVT(TR580)-373, INSTALLATION, Oil Pump Chain.>
3) Install the front differential assembly. <Ref. to CVT(TR580)-352, INSTALLATION, Front Differential Assembly.>
4) Install the drive pinion shaft assembly. <Ref. to CVT(TR580)-321, INSTALLATION, Drive Pinion Shaft Assembly.>
5) Install the forward clutch assembly. <Ref. to CVT(TR580)-303, INSTALLATION, Forward Clutch Assembly.>
6) Install the reverse brake assembly. <Ref. to CVT(TR580)-288, INSTALLATION, Reverse Brake Assembly.>
7) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR580)-271, INSTALLATION, Primary Pulley and Secondary Pulley.>
8) Install the reduction drive gear. <Ref. to CVT(TR580)-260, INSTALLATION, Reduction Drive Gear.>
9) Install the transmission case. <Ref. to CVT(TR580)-249, INSTALLATION, Transmission Case.>
10) Install the transmission control device. <Ref. to CVT(TR580)-243, INSTALLATION, Transmission Control Device.>
11) Install the oil strainer and oil pan. <Ref. to CVT(TR580)-136, INSTALLATION, Oil Pan and Strainer.>
12) Install the reduction driven gear assembly. <Ref. to CVT(TR580)-232, INSTALLATION, Reduction Driven Gear.>
13) Install the transfer driven gear assembly. <Ref. to CVT(TR580)-228, INSTALLATION, Transfer Driven Gear.>
14) Install the transfer clutch assembly. <Ref. to CVT(TR580)-215, INSTALLATION, Transfer Clutch.>
15) Install the parking pawl. <Ref. to CVT(TR580)-231, INSTALLATION, Parking Pawl.>
16) Install the extension case. <Ref. to CVT(TR580)-210, INSTALLATION, Extension Case.>
17) Install the inhibitor switch. <Ref. to CVT(TR580)-115, INSTALLATION, Inhibitor Switch.>
18) Install the secondary speed sensor. <Ref. to CVT(TR580)-123, INSTALLATION, Secondary Speed Sensor.>
19) Install the primary speed sensor. <Ref. to CVT(TR580)-129, INSTALLATION, Primary Speed Sensor.>
20) Install the turbine speed sensor. <Ref. to CVT(TR580)-118, INSTALLATION, Turbine Speed Sensor.>
21) Install the transmission harness. <Ref. to CVT(TR580)-155, INSTALLATION, Transmission Harness.>
22) Install the control valve body. <Ref. to CVT(TR580)-144, INSTALLATION, Control Valve Body.>
23) Install the air breather hose. <Ref. to CVT(TR580)-200, INSTALLATION, Air Breather Hose.>
24) Install the transmission assembly. <Ref. to CVT(TR580)-81, INSTALLATION, Automatic Transmission Assembly.>

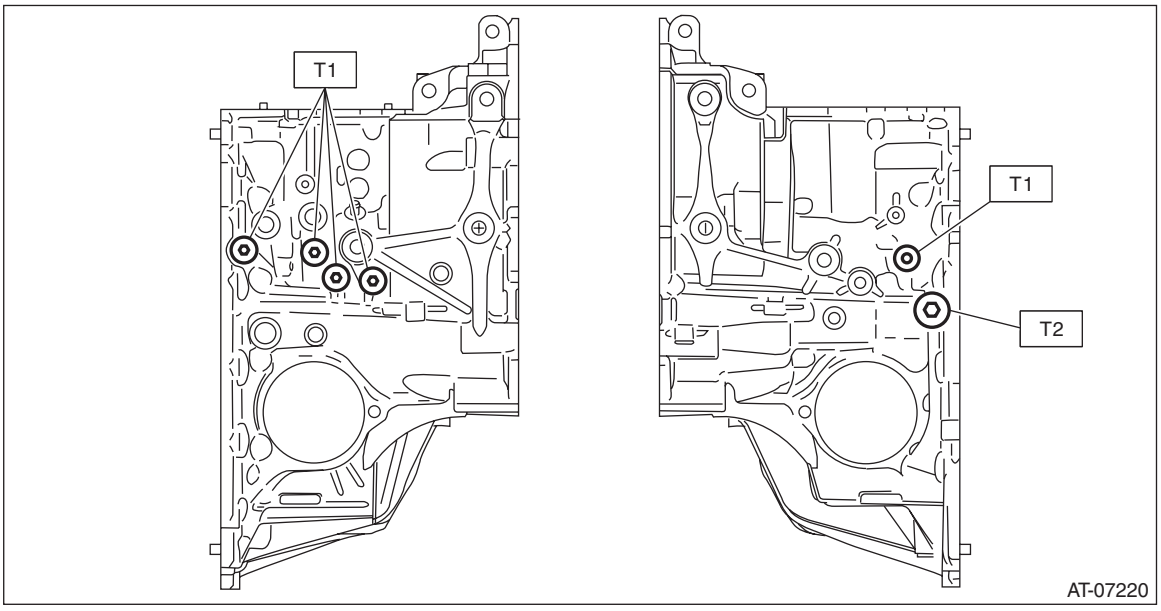
C: DISASSEMBLY

1) Remove the transmission hanger and transmission radio ground cord, if mounted.
2) Remove the filler plug, oil drain plug and overflow drain plug. <Ref. to CVT(TR580)-46, REPLACEMENT, Differential Gear Oil.>
3) Remove all plugs.

D: ASSEMBLY

1) Install the oil drain plug.

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)



2) Install the overflow drain plug.

NOTE:
Overflow plug of differential gear oil is temporarily attached.

3) Install all plugs.

NOTE:
Use new O-rings.

Tightening torque:
T1: 25 N·m (2.5 kgf-m, 18.4 ft-lb)
T2: 22.5 N·m (2.3 kgf-m, 16.6 ft-lb)

4) Install the transmission hanger and transmission radio ground cord.

Tightening torque:
41 N·m (4.2 kgf-m, 30.2 ft-lb)

E: INSPECTION

- Check for leakage of CVTF from the connection between converter case and transmission case.
- Check there is no damage or cracks on the converter case.

50.Diagnostics with Phenomenon

A: INSPECTION

Symptoms	Faulty parts
Stall speed is low after warming-up, with select lever in “D” or “R” range.	Engine control system
Vehicle does not move despite engine speed rising up, with select lever in “D” or “R” range.	• Engine control system • Select cable • CVTF • Secondary pressure circuit • Pulley, gear and variator chain • Forward/reverse changeover section • TCM • Control valve body • Inhibitor switch
Vehicle does not move by engine stall, with select lever in “D” or “R” range.	• Parking mechanism • Select cable • Bearing • Forward/reverse changeover section
Excessive shock occurs at starting, with select lever in “D” or “R” range.	• Secondary pressure circuit • Pulley, gear and variator chain
Acceleration speed from standstill is insufficient, with select lever in “D” or “R” range.	• Control valve body • Forward/reverse changeover section
Engine speed suddenly rises up during driving, with select lever in “D” or “R” range.	• Control valve body • Secondary pressure circuit • Primary pressure circuit
Vibration occurs during driving, with select lever in “D” or “R” range.	• Secondary pressure circuit • Primary pressure circuit • Forward/reverse changeover section • Pulley and variator chain • Torque converter assembly • Hydraulic pressure circuit to torque converter • Control valve body
Sudden braking occurs during driving, with select lever in “D” or “R” range.	• Secondary pressure circuit • Primary pressure circuit • Control valve body
During deceleration, lockup clutch does not disengage until just before halting, with select lever in “D” or “R” range.	• Control valve body • Torque converter assembly
Engine stalls with vehicle at a standstill, with select lever in “D” or “R” range.	• Engine control system • Control valve body
Excessive lockup shock occurs during driving, with select lever in “D” range.	Control valve body
Slipping occurs at lockup, or lockup does not occur during driving, with select lever in “D” range.	• Control valve body • Lockup hydraulic line • Torque converter assembly
Excessive shift shock occurs when shifting the select lever from “N” range to “D” range, or from “N” range to “R” range.	• Inhibitor switch • Control valve body • Forward/reverse changeover section
Vehicle does not keep at standstill with select lever in “P” range, or parking cannot be released when shifting from “P” range to another range.	• Select cable • Parking mechanism
Select lever does not shift smoothly.	• Select cable • Inhibitor switch • Detent spring • Manual plate

1. General Description

A: SPECIFICATION

1. TORQUE CONVERTER

Model		3.6 L non-turbo
Type		Symmetric, 3-element, single stage, 2-phase torque converter
Stall torque ratio		1.80
Nominal	mm (in)	246 (9.69)
Stall speed (at sea level)	r/min	1,870 — 2,900 (D range) 1,750 — 2,750 (R range)
One-way clutch		Sprag type one-way clutch

2. OIL PUMP

Type		Internal gear pump
Driving method		Driven by chain
Number of teeth	Inner rotor	8
	Outer rotor	9

3. TRANSMISSION CONTROL ELEMENT

Type	Forward continuously variable speed change, 1 reverse, planetary gear
Multi-plate clutch	1 sets
Multi-plate brake	1 sets

4. TRANSMISSION GEAR RATIO

Forward	3.105 — 0.482
Rev	3.018

5. PLATE

Number of input clutch drive plates	5
Number of forward clutch drive plates	6
Number of reverse brake drive plates	5

6. SELECTOR POSITION

P (Park)	Transmission neutral, output shaft locked, engine start enabled
R (Reverse)	Rev
N (Neutral)	Transmission neutral, engine start enabled
D (Drive)	Forward continuously variable speed change
M (Manual mode) (paddle shift +side)	Manual gear change 1st → 2nd → 3rd → 4th → 5th → 6th
M (Manual mode) (paddle shift –side)	Manual gear change 1st ← 2nd ← 3rd ← 4th ← 5th ← 6th

7. HYDRAULIC CONTROL AND LUBRICATION

Type	Electronic hydraulic control (speed changed by signals of vehicle speed and accelerator opening angle)
Fluid	Specified fluid: Subaru High Torque CVT Fluid **CAUTION:** **Always use specified CVTF. Using other fluid will cause malfunction.**
Fluid capacity L (US qt, Imp qt)	12.45 — 12.95 (13.2 — 13.7, 11.0 — 11.4)
Lubrication system	Forced feed lubrication with oil pump

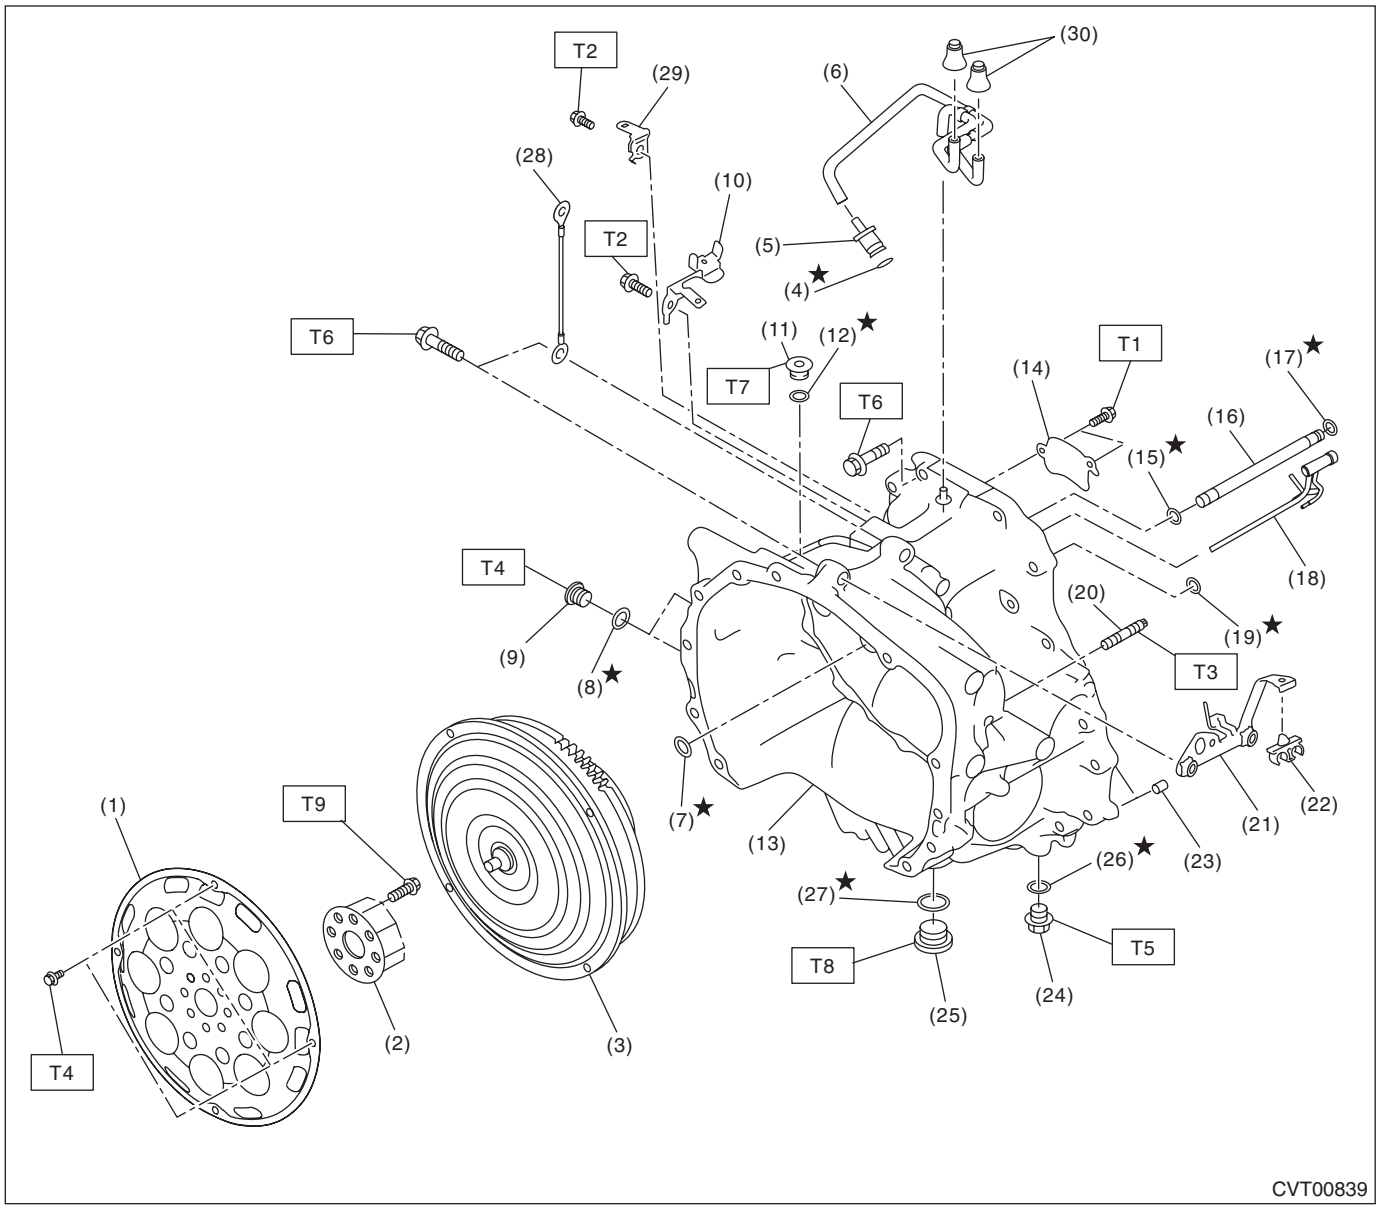
8. COOLING AND HARNESS

Model	Sedan	OUTBACK
Cooling system	Liquid-cooler incorporated in radiator	Liquid-cooler incorporated in radiator + CVTF cooler (air cool)
Inhibitor switch harness	12 poles	
Transmission harness	20 poles	

9. TRANSFER

Transfer type	Multi-plate transfer (MP-T)
Number of transfer clutch drives & driven plates	6
Control method	Electronic hydraulic type
Reduction gear ratio	1.000 (37/37)

10.REDUCTION GEAR RATIO

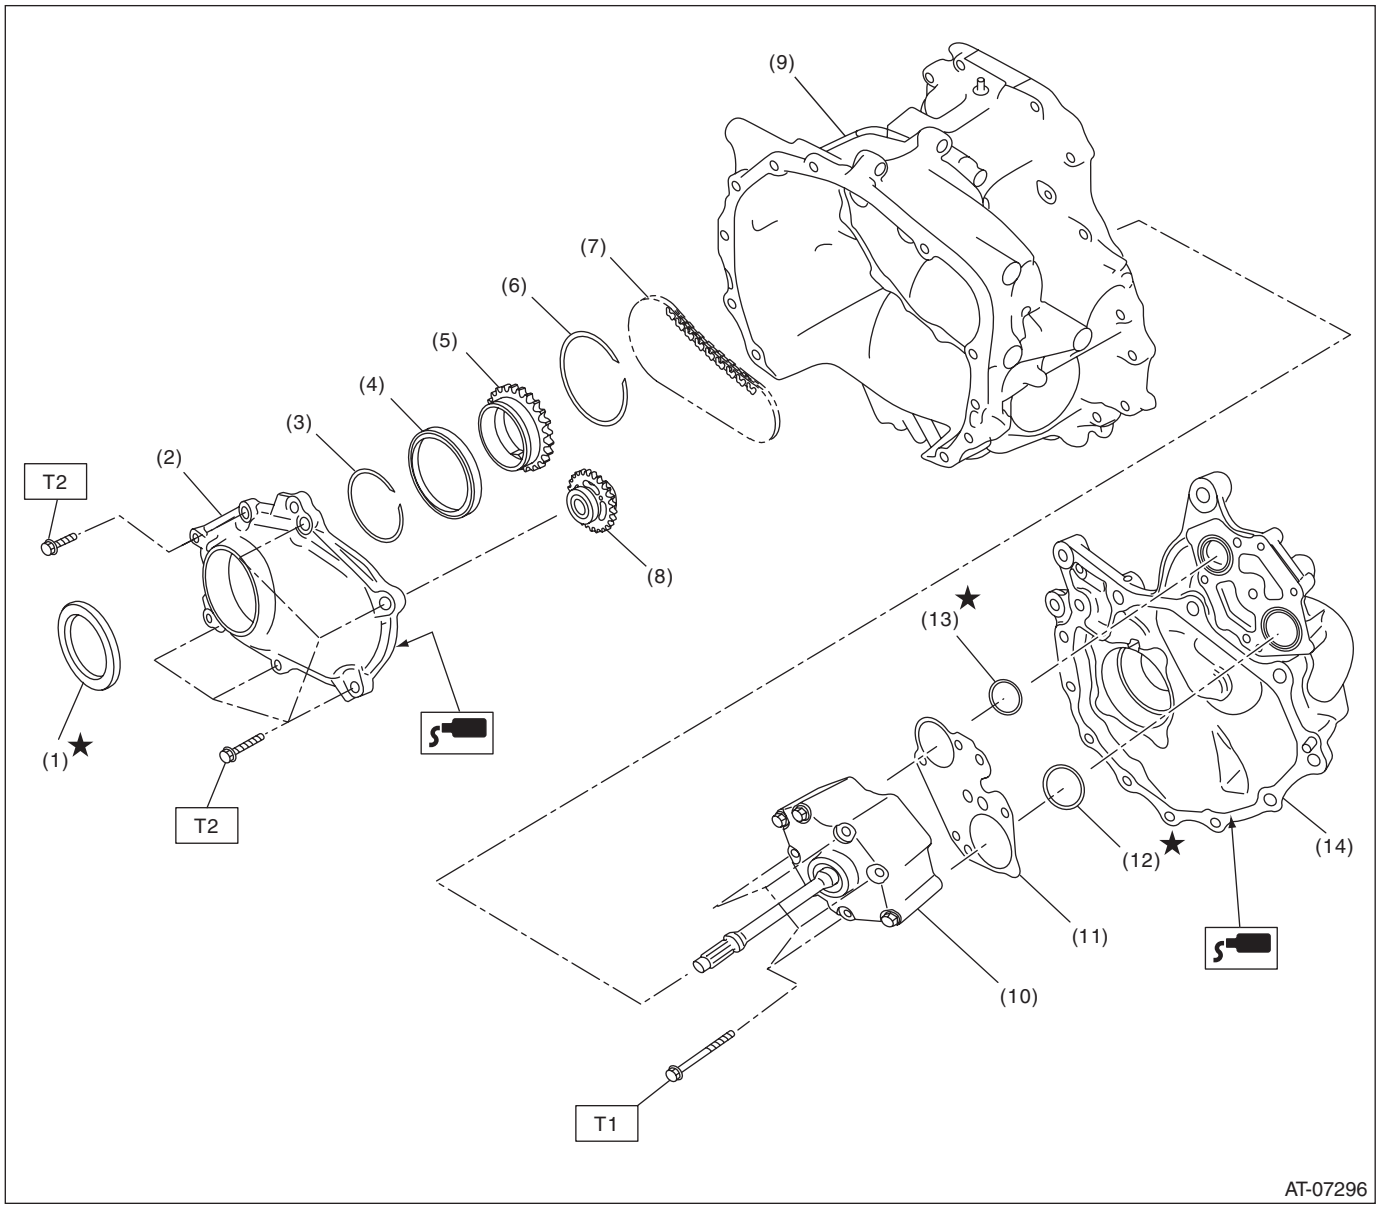


Front final reduction gear ratio	4.111

11.FRONT DIFFERENTIAL GEAR OIL

Fluid	Recommended fluid: SUBARU GEAR OIL EXTRA MT **CAUTION:** **If an alternative transmission oil is used, you may not have expected functionality and performance.** Alternative fluid: GL-5 (75W-90)
Fluid capacity L (US qt, Imp qt)	1.3 — 1.5 (1.4 — 1.6, 1.1 — 1.3)

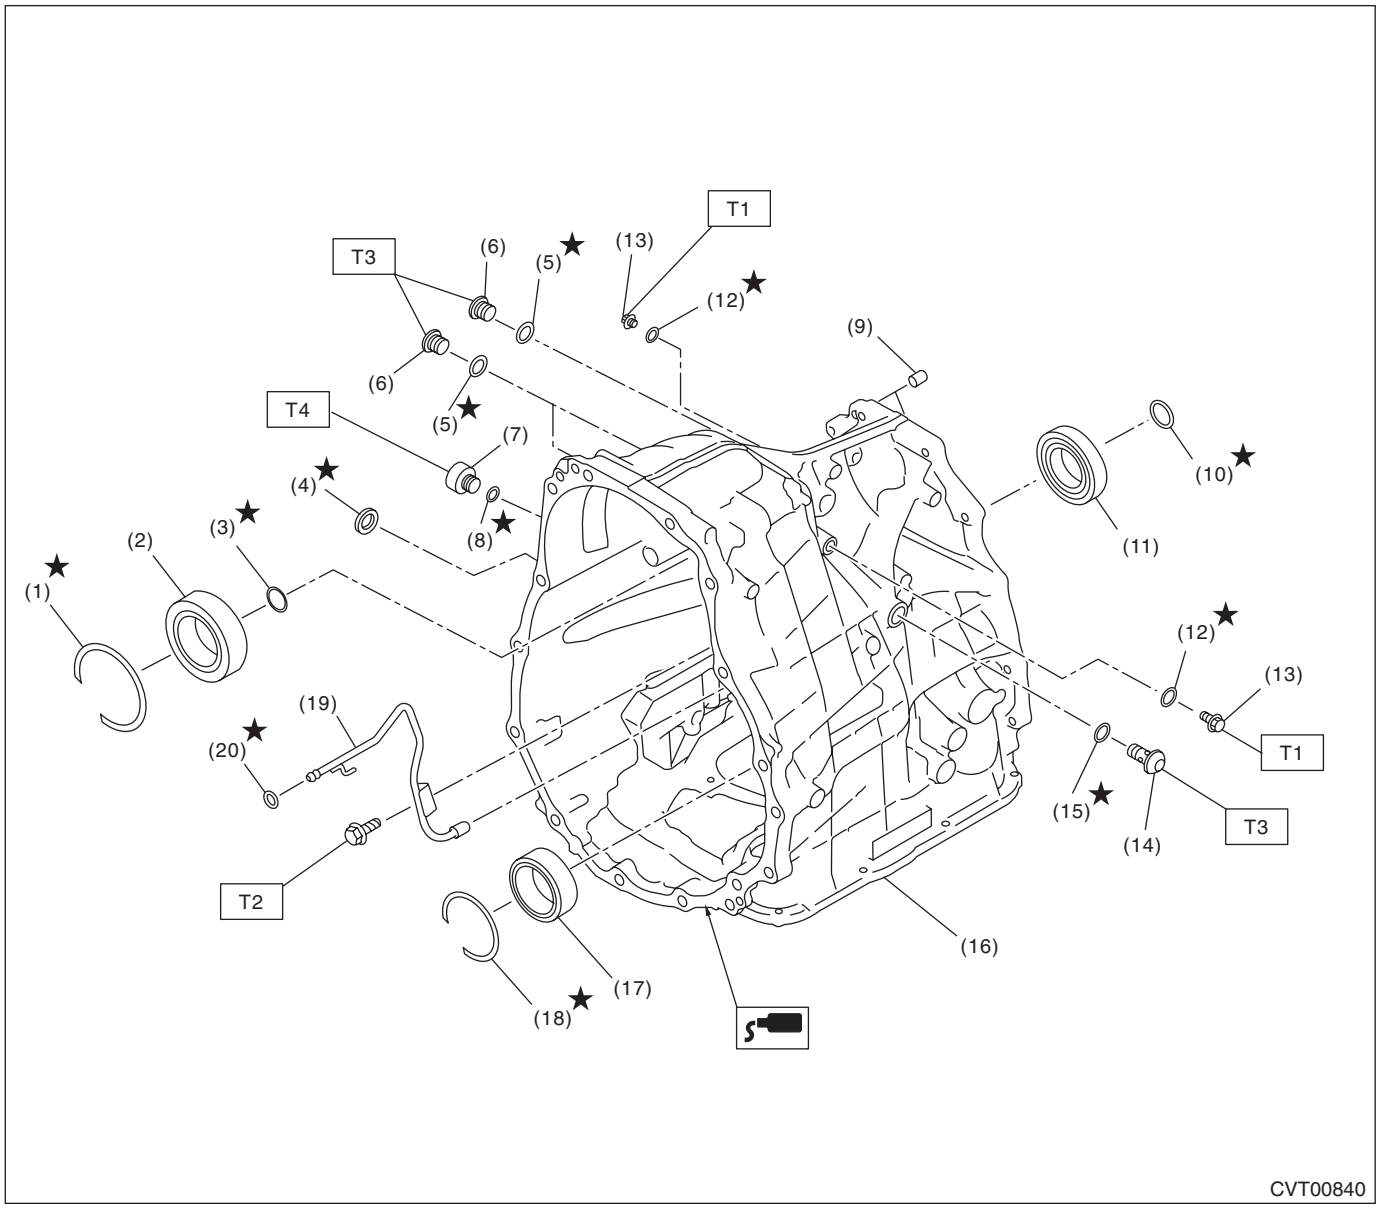
B: COMPONENT



1. TORQUE CONVERTER ASSEMBLY AND CONVERTER CASE

(1) Drive plate
(2) Reinforcement drive plate
(3) Torque converter ASSY
(4) O-ring
(5) Oil charge pipe cap
(6) Air breather hose
(7) O-ring
(8) O-ring
(9) Plug
(10) Transmission harness stay
(11) Plug
(12) O-ring
(13) Converter case
(14) Oil stopper plate
(15) O-ring
(16) Lubrication pipe
(17) O-ring
(18) Lubrication pipe
(19) O-ring
(20) Stud bolt
(21) Transmission hanger
(22) Clip
(23) Straight pin
(24) Overflow drain plug
(25) Front differential gear oil drain plug
(26) Gasket
(27) Gasket
(28) Transmission radio ground cord
(29) Harness stay
(30) Air breather cap

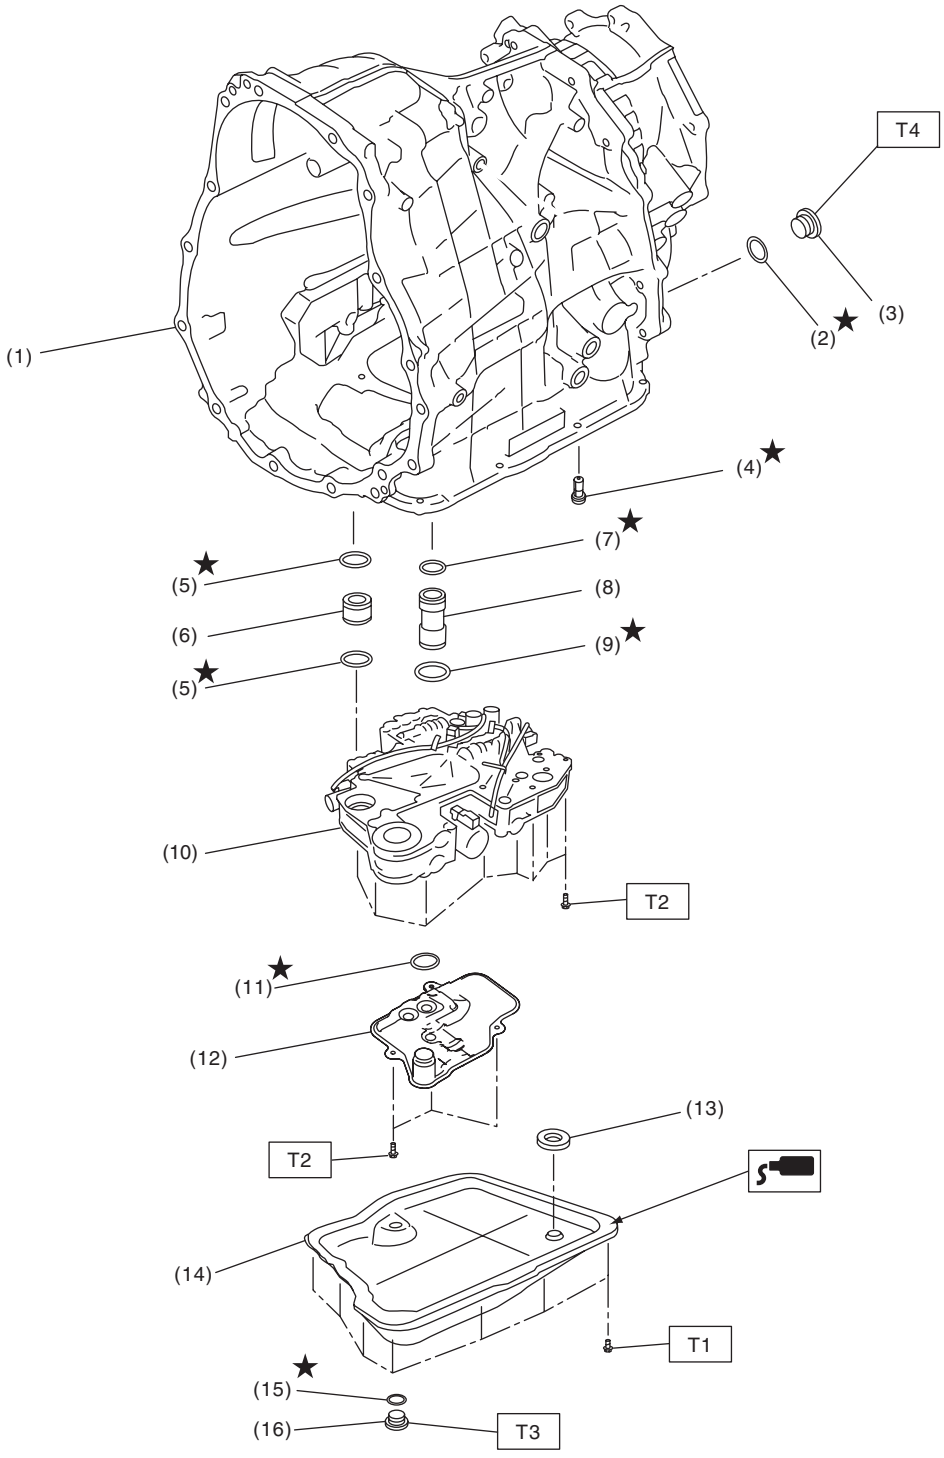
Tightening torque: N·m (kgf-m, ft-lb)
T1: 9 (0.9, 6.6)
T2: 16 (1.6, 11.8)
T3: 18 (1.8, 13.3)
T4: 25 (2.5, 18.4)
T5: 35 (3.6, 25.8)
T6: 41 (4.2, 30.2)
T7: 50 (5.1, 36.9)
T8: 70 (7.1, 51.6)
T9: <Ref. to CVT(TR690)-154, INSTALLATION, Drive Plate.>



2. OIL PUMP ASSEMBLY

(1) Oil seal
(2) Oil pump chain cover
(3) Snap ring
(4) Ball bearing
(5) Drive sprocket
(6) Snap ring
(7) Oil pump chain
(8) Driven sprocket
(9) Converter case
(10) Oil pump ASSY
(11) Plate
(12) O-ring (large)
(13) O-ring (small)
(14) Drive pinion retainer

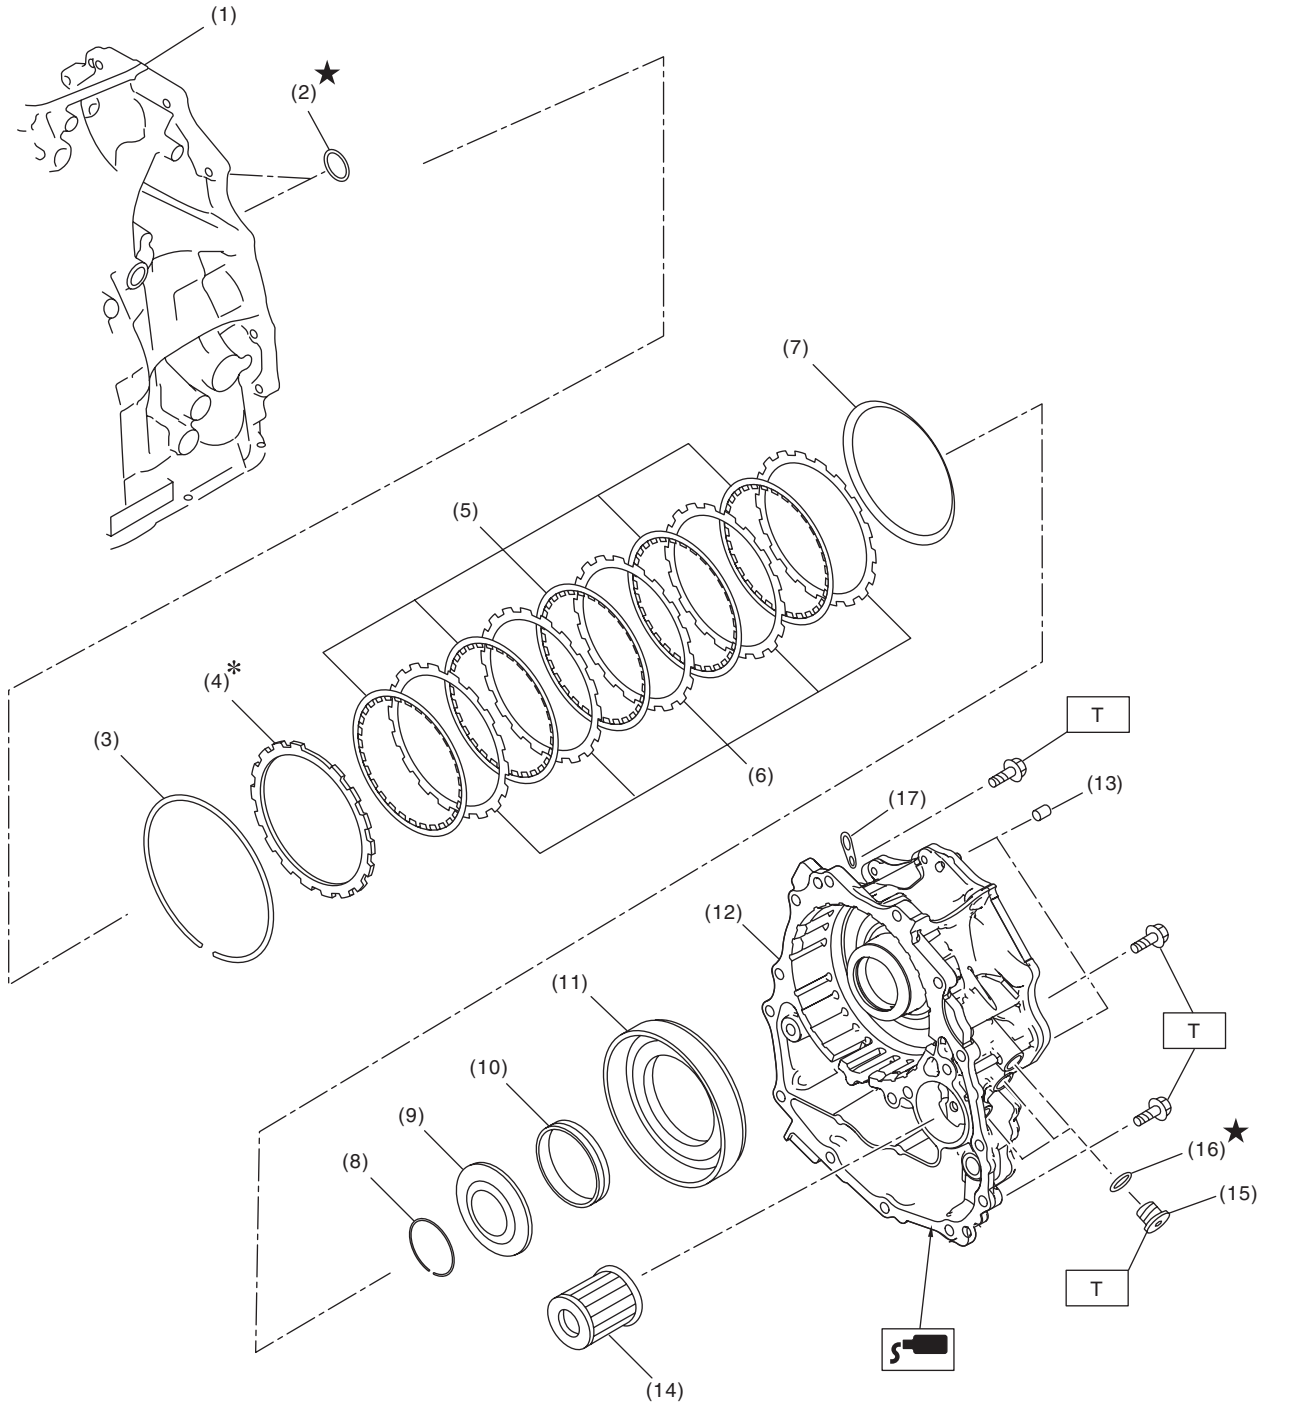
Tightening torque: N·m (kgf-m, ft-lb)
T1: 8.5 (0.9, 6.3)
T2: 24 (2.4, 17.7)



3. TRANSMISSION CASE

(1) Snap ring
(2) Roller bearing
(3) Seal ring
(4) Oil seal
(5) O-ring
(6) Plug
(7) Plug
(8) Gasket
(9) Straight pin
(10) Seal ring
(11) Ball bearing
(12) O-ring
(13) Plug
(14) Plug
(15) O-ring
(16) Transmission case
(17) Roller bearing
(18) Snap ring
(19) Lubrication pipe
(20) O-ring

Tightening torque: N·m (kgf-m, ft-lb)
T1: 13 (1.3, 9.6)
T2: 16 (1.6, 11.8)
T3: 25 (2.5, 18.4)
T4: 35 (3.6, 25.8)

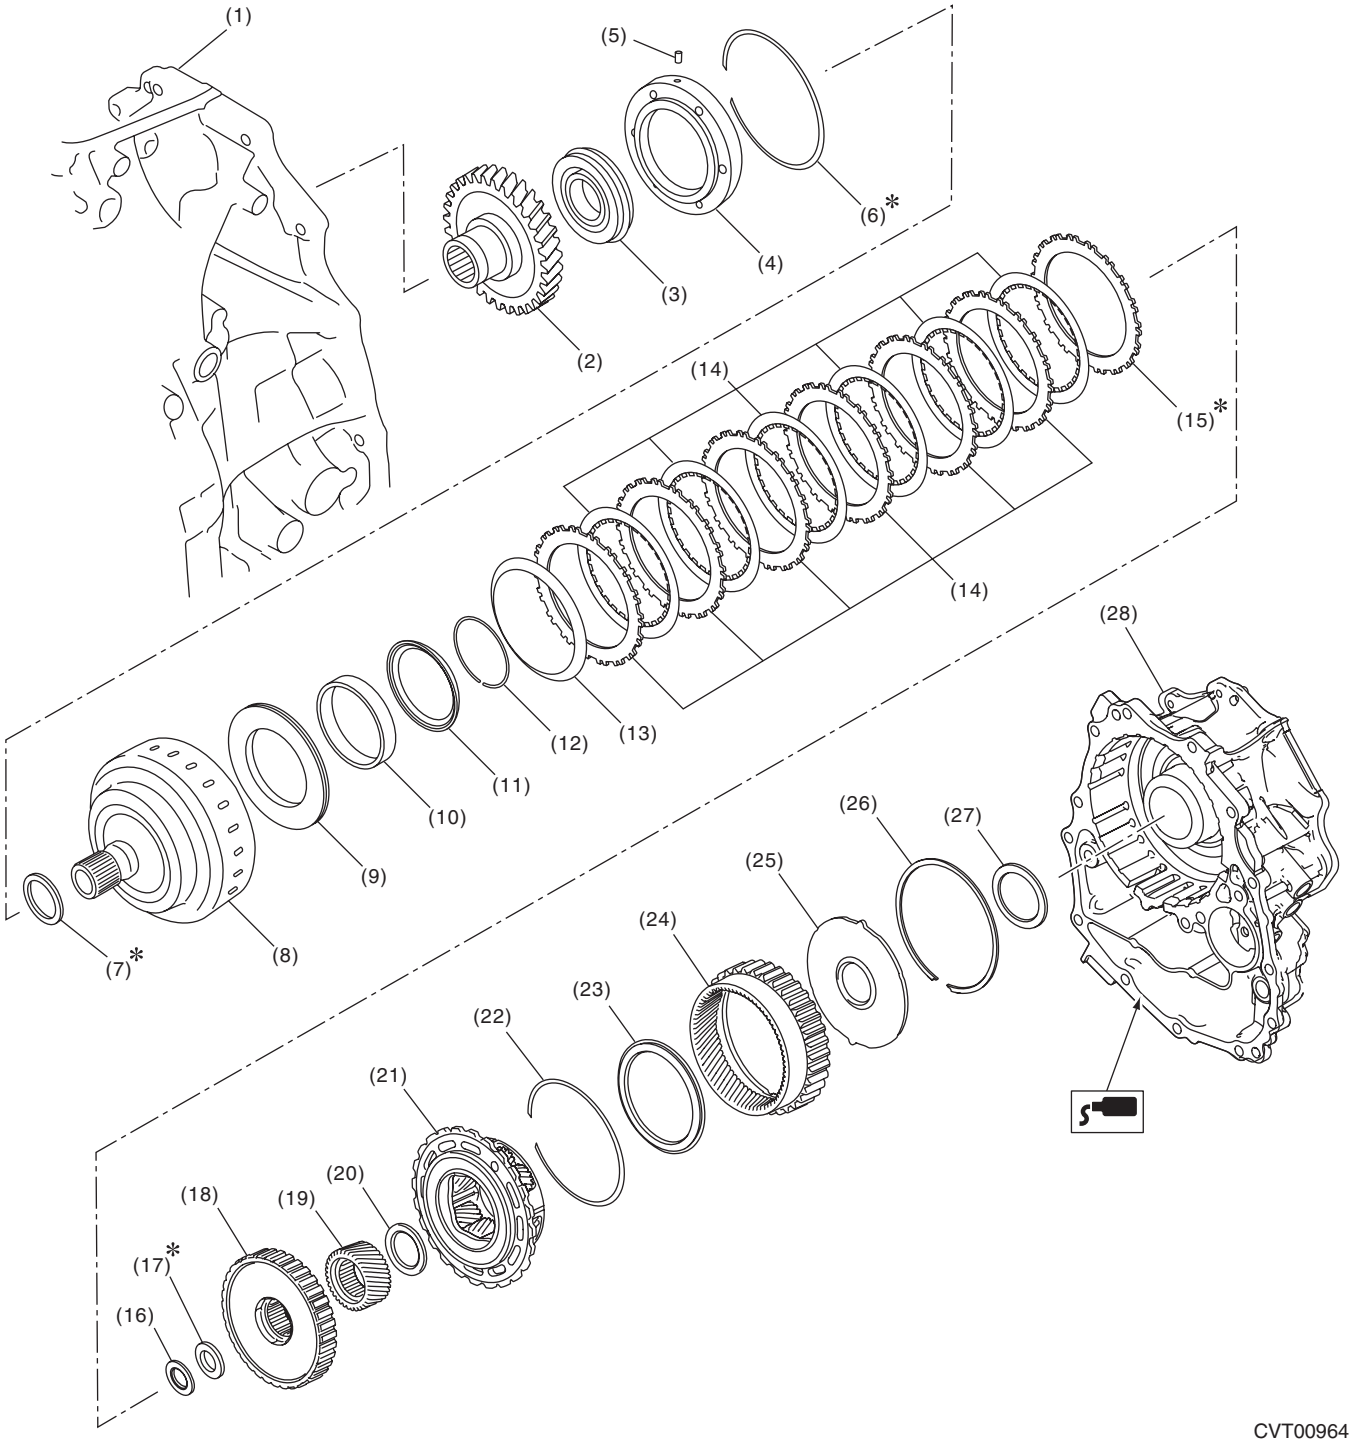


4. CONTROL VALVE BODY

(1) Transmission case
(2) Gasket
(3) Filler plug
(4) CVTF filter
(5) O-ring
(6) Pressure pipe
(7) O-ring (small)
(8) CVTF pipe
(9) O-ring (large)
(10) Control valve body
(11) O-ring
(12) Oil strainer
(13) Magnet
(14) Oil pan
(15) Gasket
(16) CVTF drain plug

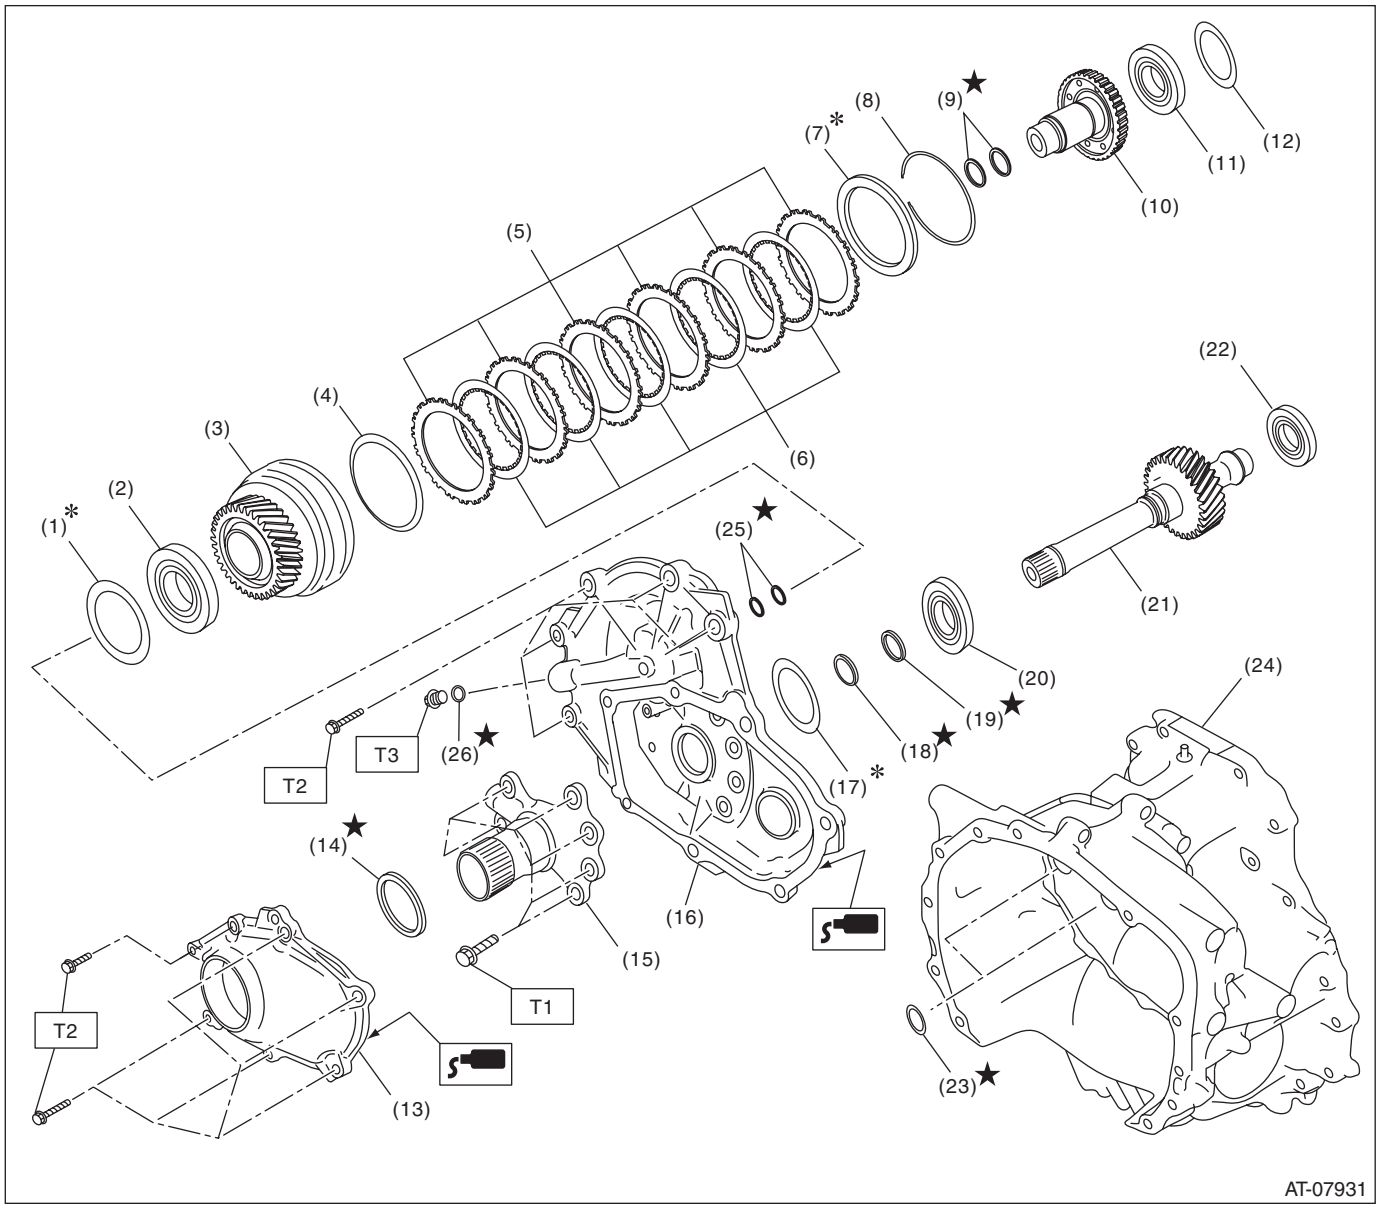
Tightening torque: N·m (kgf-m, ft-lb)
T1: 5 (0.5, 3.7)
T2: 9 (0.9, 6.6)
T3: 39.2 (4.0, 28.9)
T4: 50 (5.1, 36.9)

5. REVERSE BRAKE ASSEMBLY AND INTERMEDIATE CASE



AT-07299

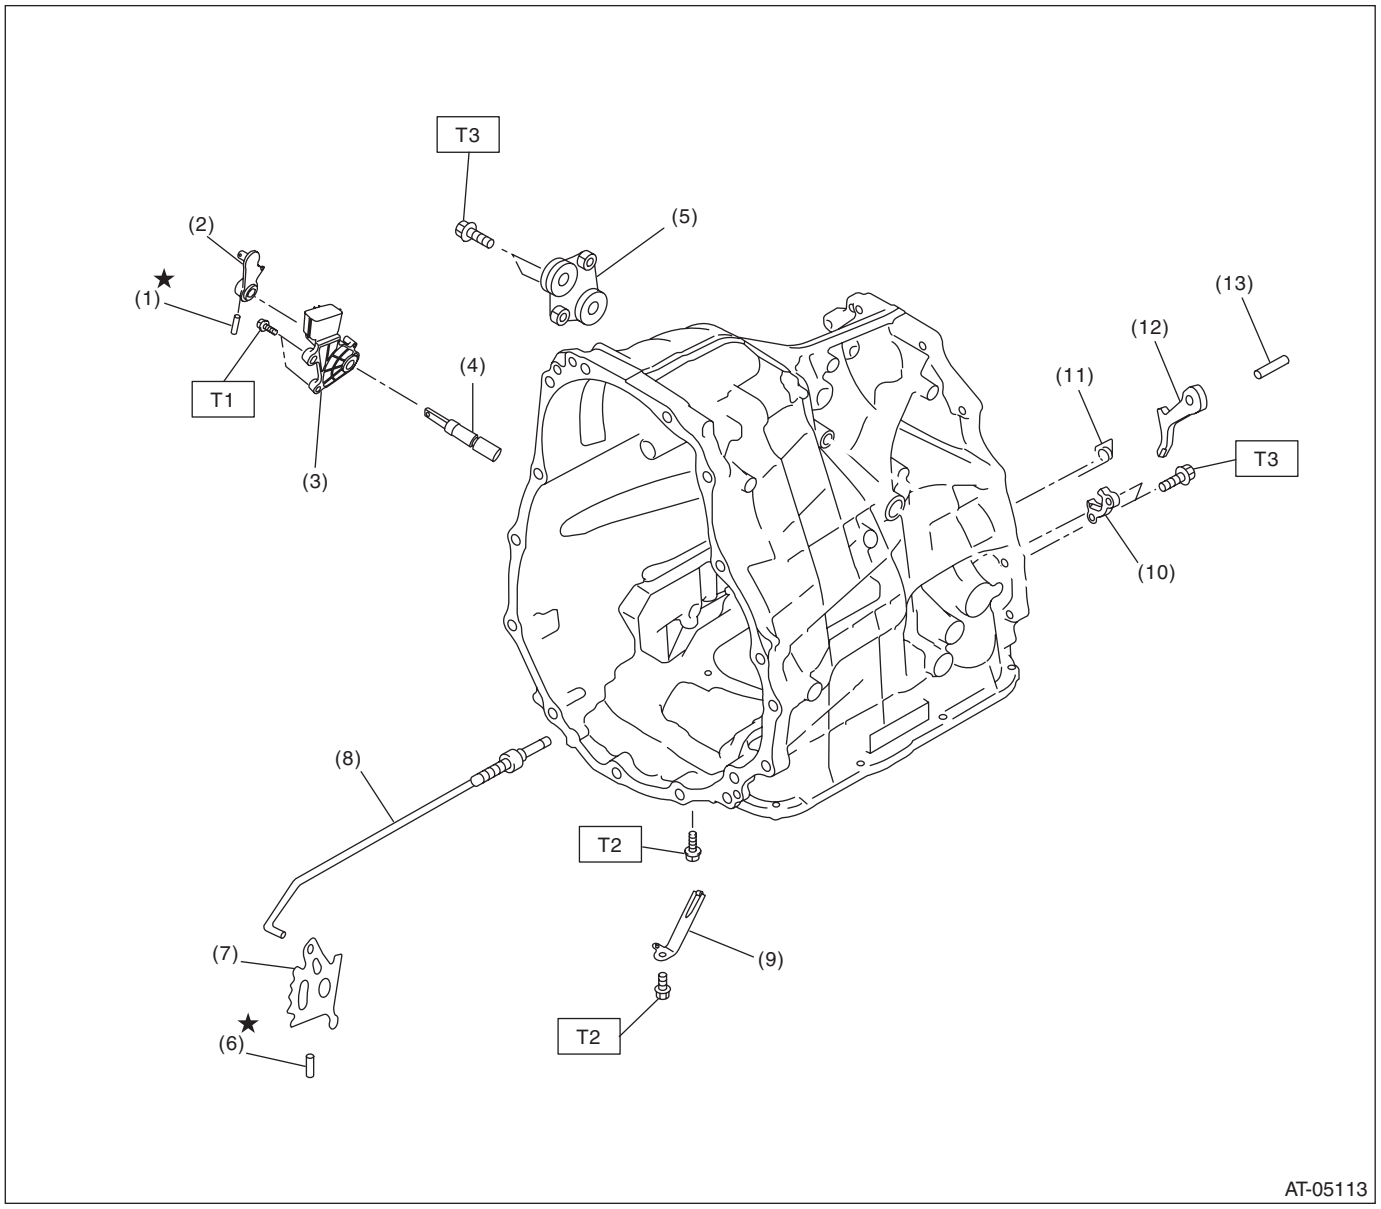
(1) Transmission case
(2) O-ring
(3) Snap ring
(4) Retaining plate
(5) Drive plate
(6) Driven plate
(7) Dish plate
(8) Snap ring
(9) Spring retainer
(10) Return spring
(11) Reverse brake piston
(12) Intermediate case
(13) Straight pin
(14) CVTF filter
(15) Plug
(16) O-ring
(17) Transmission hanger



Tightening torque: N·m (kgf-m, ft-lb)
T: 25 (2.5, 18.4)

6. FORWARD CLUTCH ASSEMBLY AND REDUCTION DRIVEN GEAR

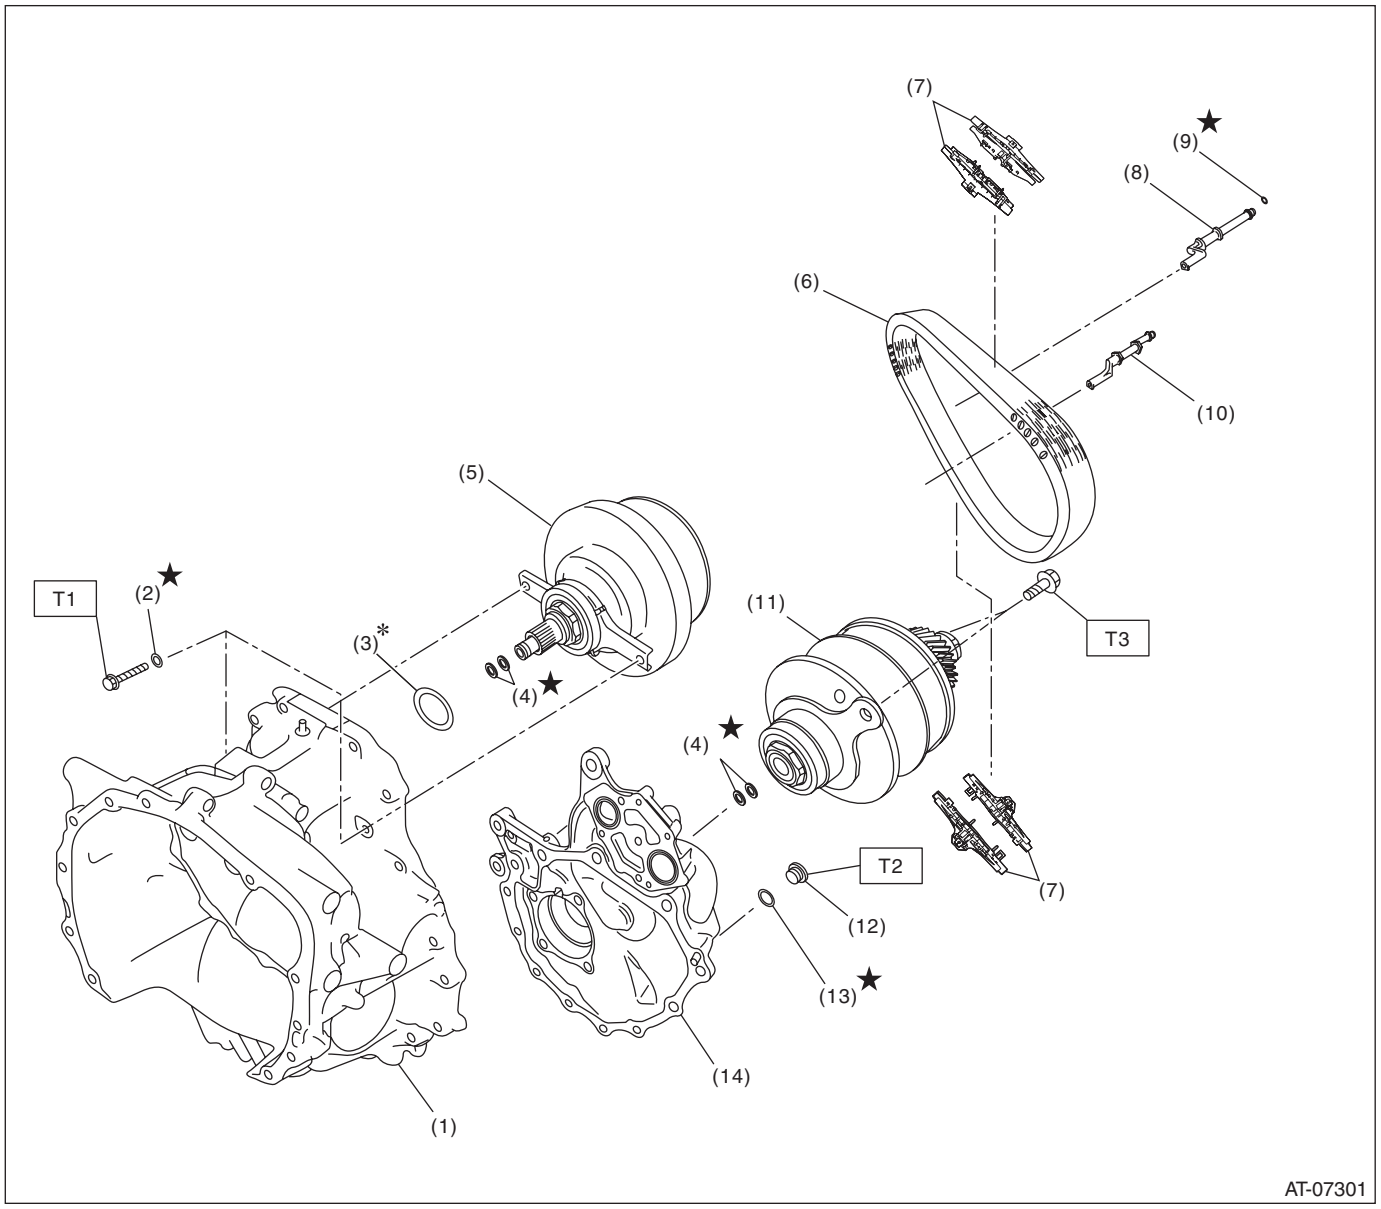
(1) Transmission case
(2) Reduction driven gear
(3) Ball bearing
(4) Reduction driven gear retainer
(5) Straight pin
(6) Snap ring
(7) Washer
(8) Forward clutch drum
(9) Forward clutch piston
(10) Return spring
(11) Forward clutch piston retainer
(12) Snap ring
(13) Dish plate
(14) Forward clutch plate
(15) Retaining plate
(16) Thrust needle bearing
(17) Washer
(18) Forward clutch hub
(19) Sun gear
(20) Thrust needle bearing
(21) Planetary carrier ASSY
(22) Snap ring
(23) Thrust needle bearing
(24) Internal gear
(25) Thrust gear plate
(26) Snap ring
(27) Thrust needle bearing
(28) Intermediate case



7. FRONT REDUCTION DRIVE GEAR AND FRONT REDUCTION DRIVEN GEAR

(1) Shim
(2) Ball bearing
(3) Front reduction driven gear
(4) Dish plate
(5) Driven plate
(6) Drive plate
(7) Retaining plate
(8) Snap ring
(9) Seal ring
(10) Front reduction driven shaft
(11) Ball bearing
(12) Shim
(13) Oil pump chain cover
(14) Seal ring
(15) Center support COMPL
(16) Converter case cover
(17) Shim
(18) O-ring
(19) Seal ring
(20) Ball bearing
(21) Front reduction drive gear
(22) Ball bearing
(23) O-ring
(24) Converter case
(25) Seal ring
(26) O-ring

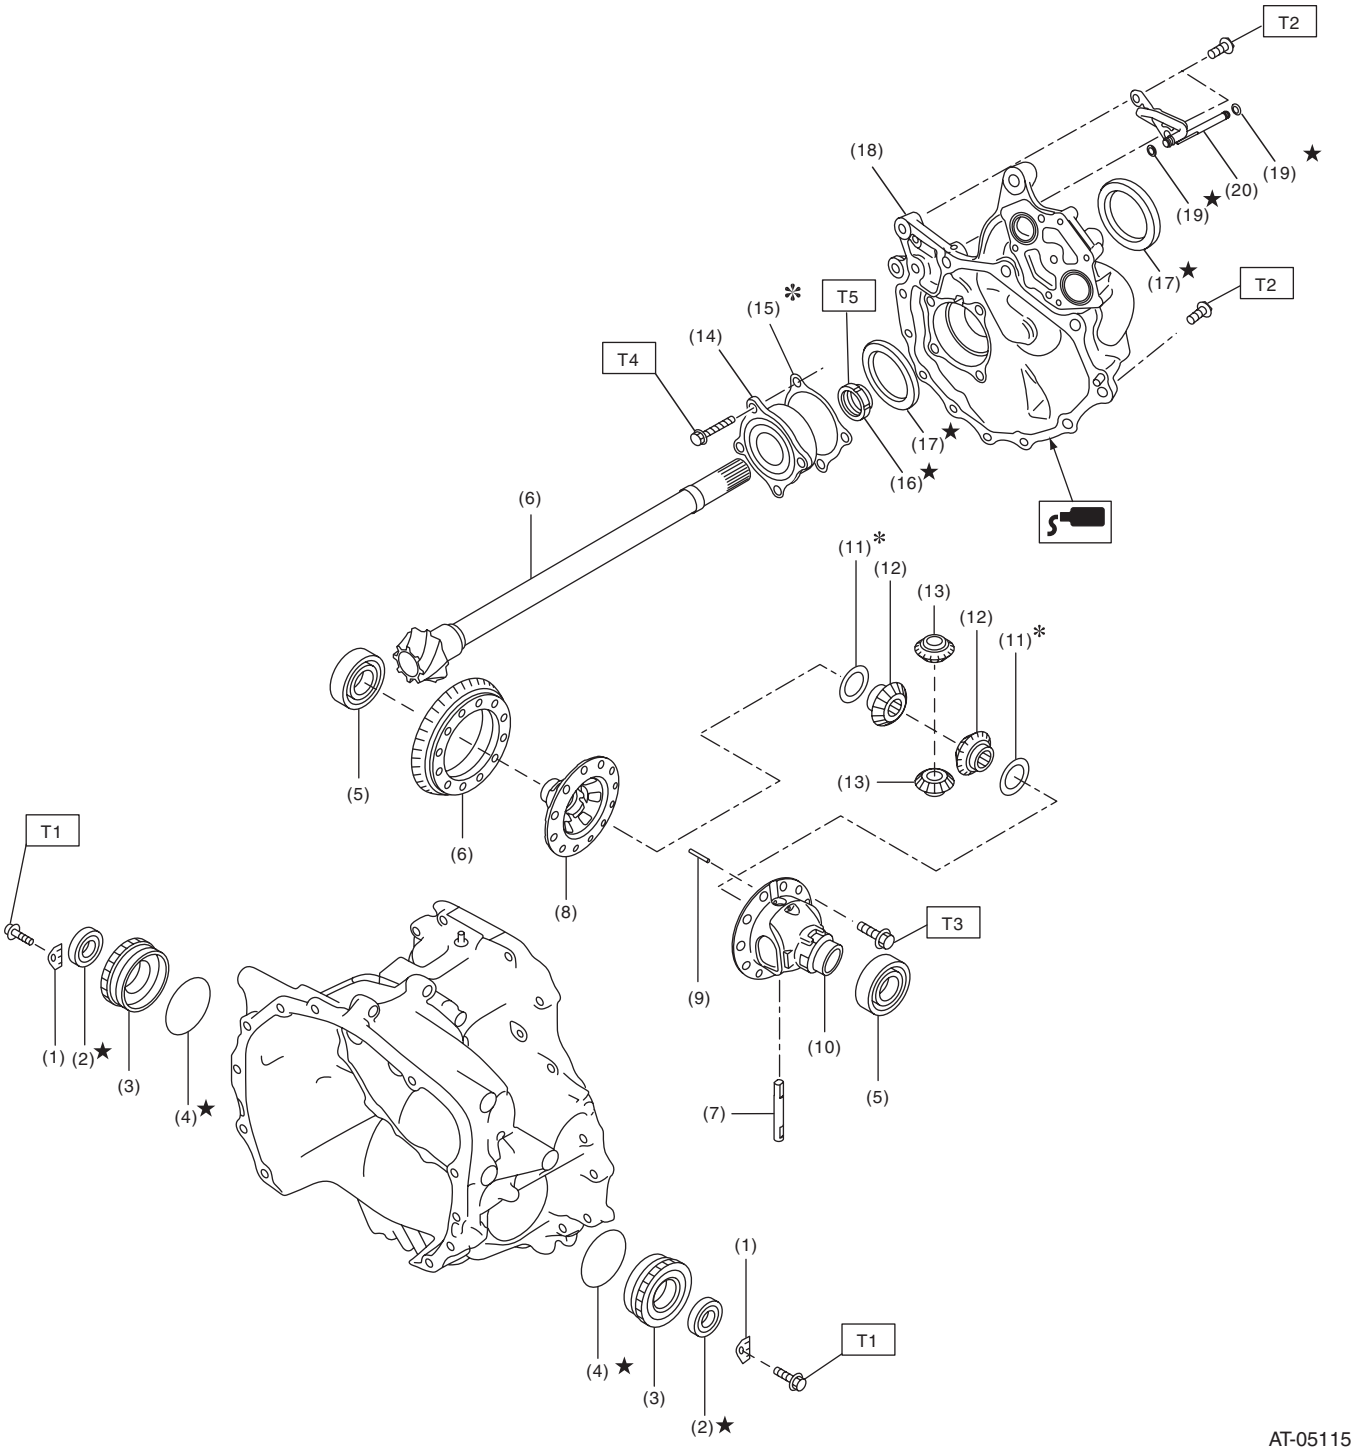
Tightening torque: N·m (kgf-m, ft-lb)
T1: 21.5 (2.2, 15.9)
T2: 24 (2.4, 17.7)
T3: 25 (2.5, 18.4)



8. TRANSMISSION CONTROL DEVICE

(1) Spring pin
(2) Shifter arm
(3) Inhibitor switch
(4) Shifter arm shaft
(5) Plate ASSY
(6) Spring pin
(7) Manual plate
(8) Parking rod
(9) Detent spring
(10) Parking support
(11) Return spring
(12) Parking pawl
(13) Shaft

Tightening torque: N·m (kgf-m, ft-lb)
T1: 5 (0.5, 3.7)
T2: 7 (0.7, 5.2)
T3: 25 (2.5, 18.4)

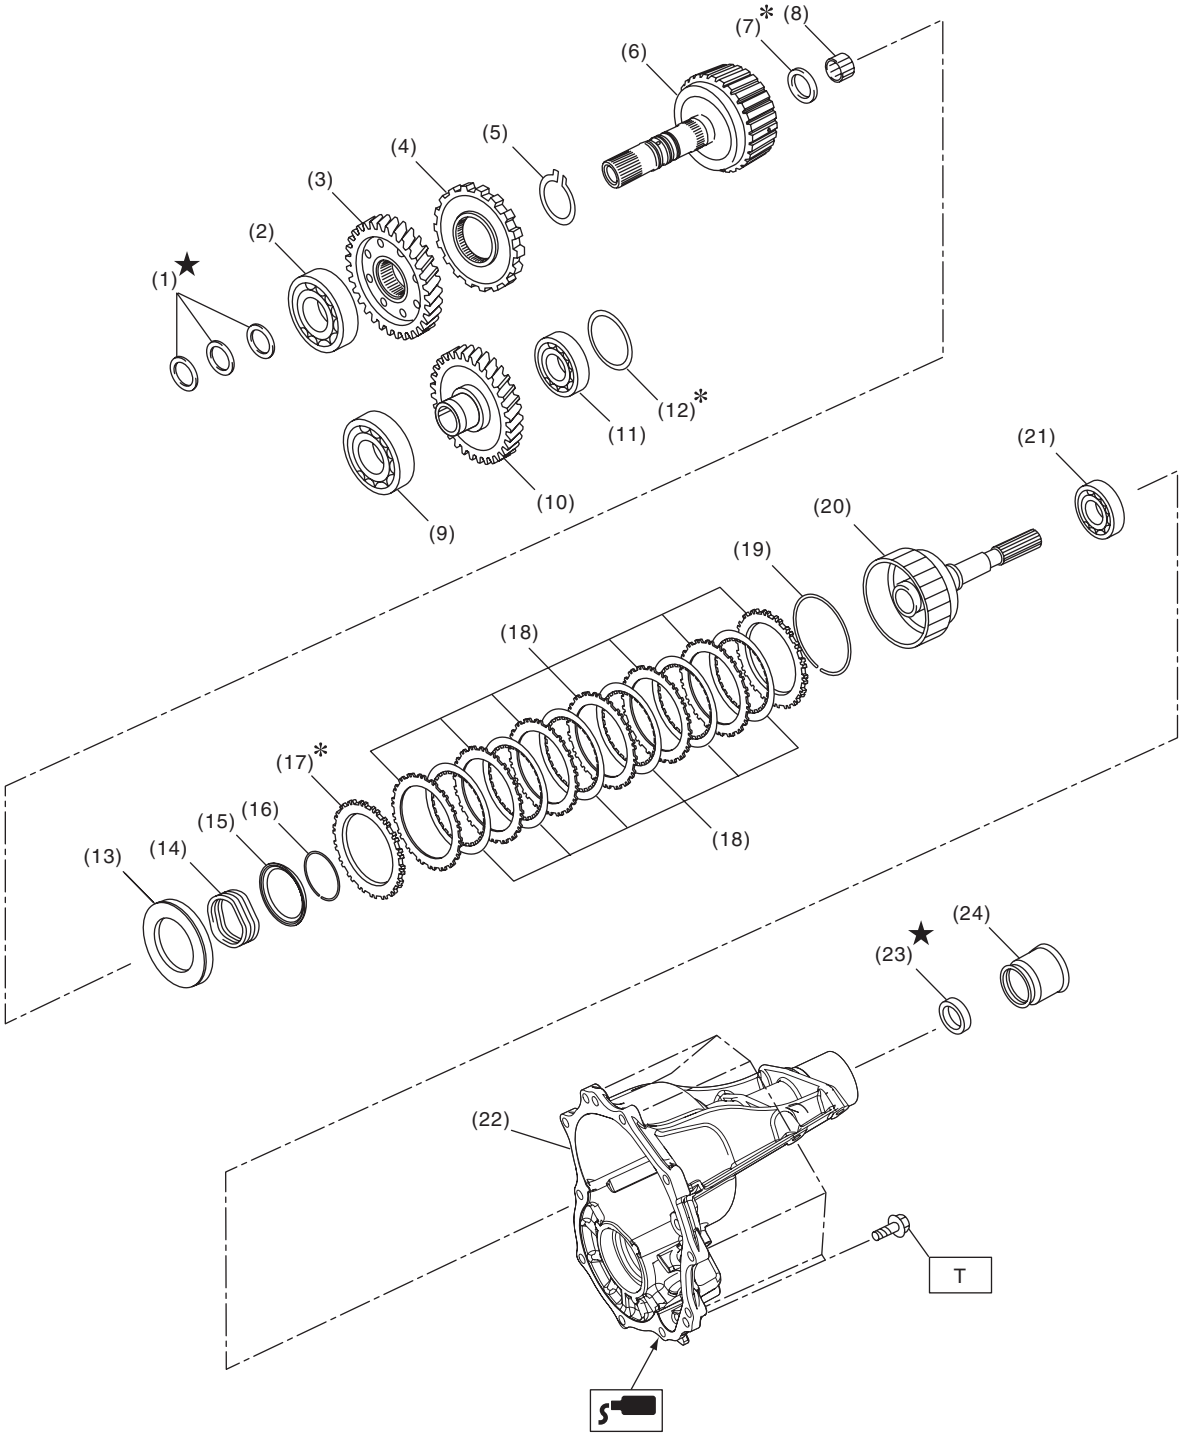


9. PRIMARY PULLEY, SECONDARY PULLEY AND VARIATOR CHAIN

(1)	Converter case	(8)	Lubrication pipe
(2)	Seal washer	(9)	O-ring
(3)	Shim	(10)	Support rod
(4)	Seal ring	(11)	Secondary pulley ASSY
(5)	Primary pulley ASSY	(12)	Plug
(6)	Variator chain	(13)	O-ring
(7)	Chain guide	(14)	Drive pinion retainer

Tightening torque: N·m (kgf-m, ft-lb)
T1: 21 (2.1, 15.5)
T2: 25 (2.5, 18.4)
T3: 33 (3.4, 24.3)

10.FRONT DIFFERENTIAL GEAR

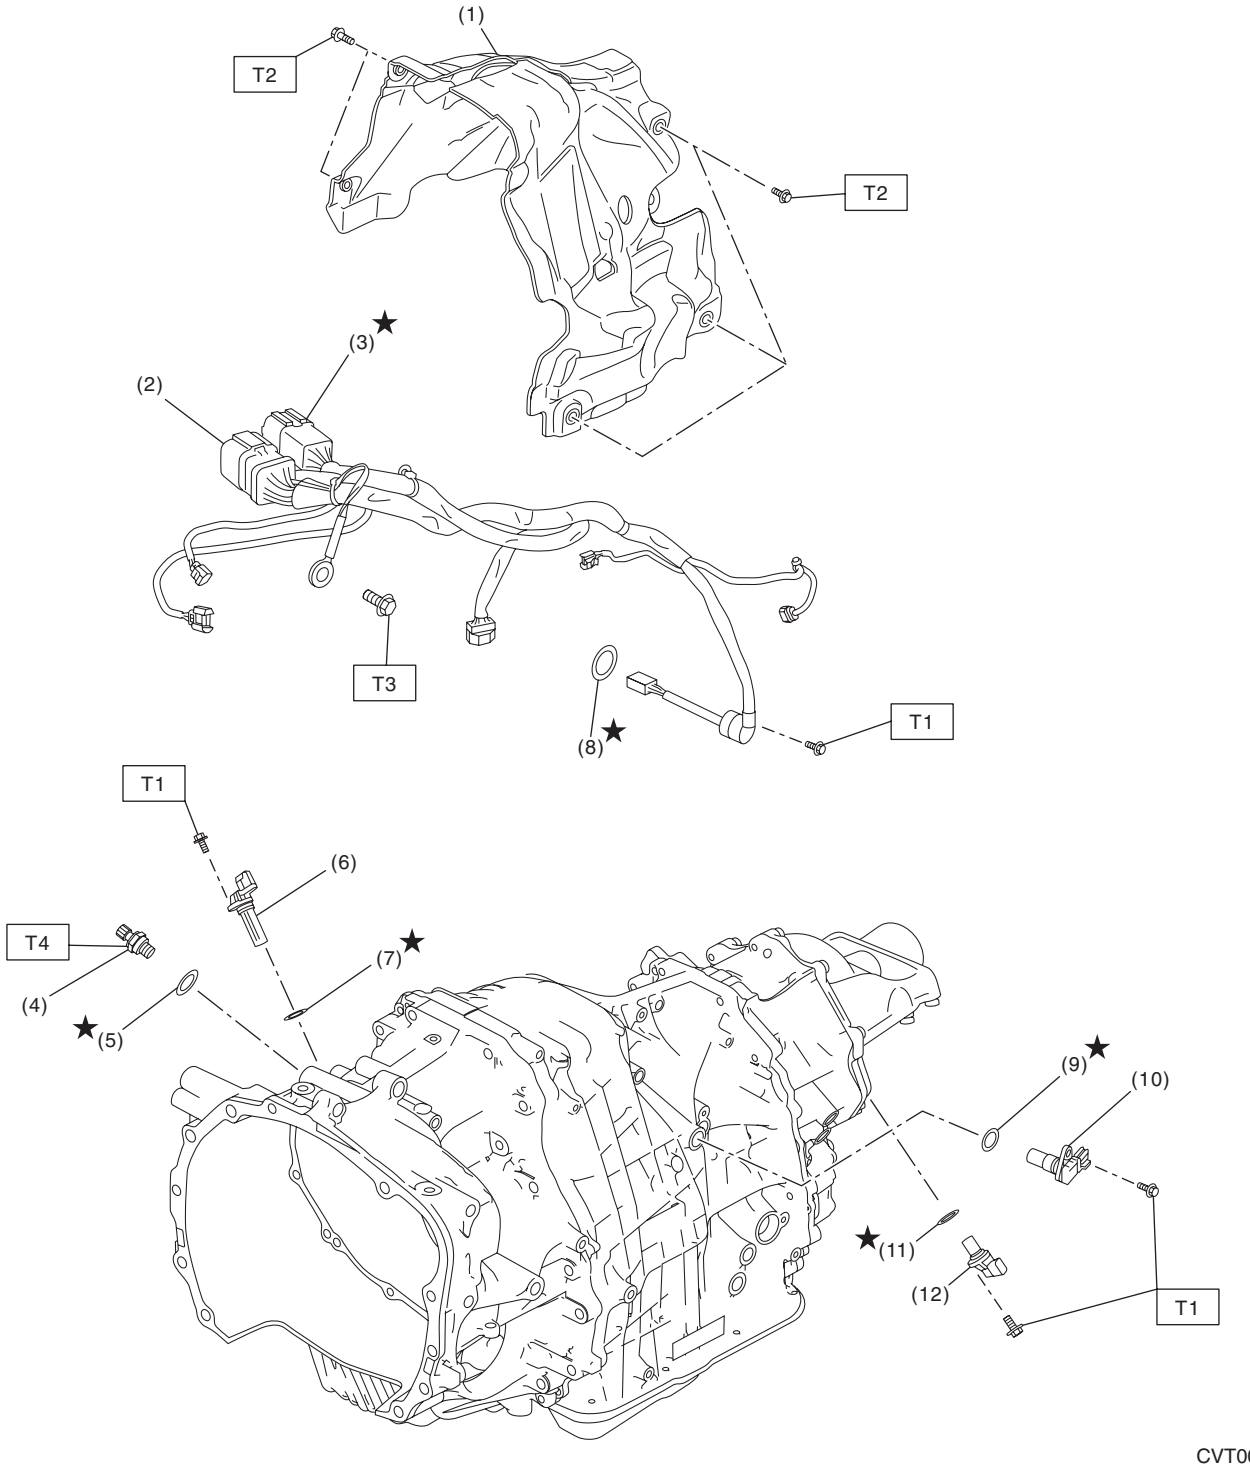


(1) Lock plate
(2) Oil seal
(3) Differential side retainer
(4) O-ring
(5) Taper roller bearing
(6) Drive pinion gear set
(7) Pinion shaft
(8) Differential case RH
(9) Straight pin
(10) Differential case LH
(11) Washer
(12) Differential bevel gear
(13) Differential bevel pinion
(14) Taper roller bearing
(15) Shim
(16) Lock nut
(17) Oil seal
(18) Drive pinion retainer
(19) O-ring
(20) Lubrication pipe

Tightening torque: N·m (kgf-m, ft-lb)

T1: 25 (2.5, 18.4)
T2: 43 (4.4, 31.7)
T3: <Ref. to CVT(TR690)-303, DIFFERENTIAL CASE ASSEMBLY, ASSEMBLY, Front Differential Assembly.>
T4: 70 (7.1, 51.6)
T5: 130 (13.3, 95.9)

11.TRANSFER AND EXTENSION CASE

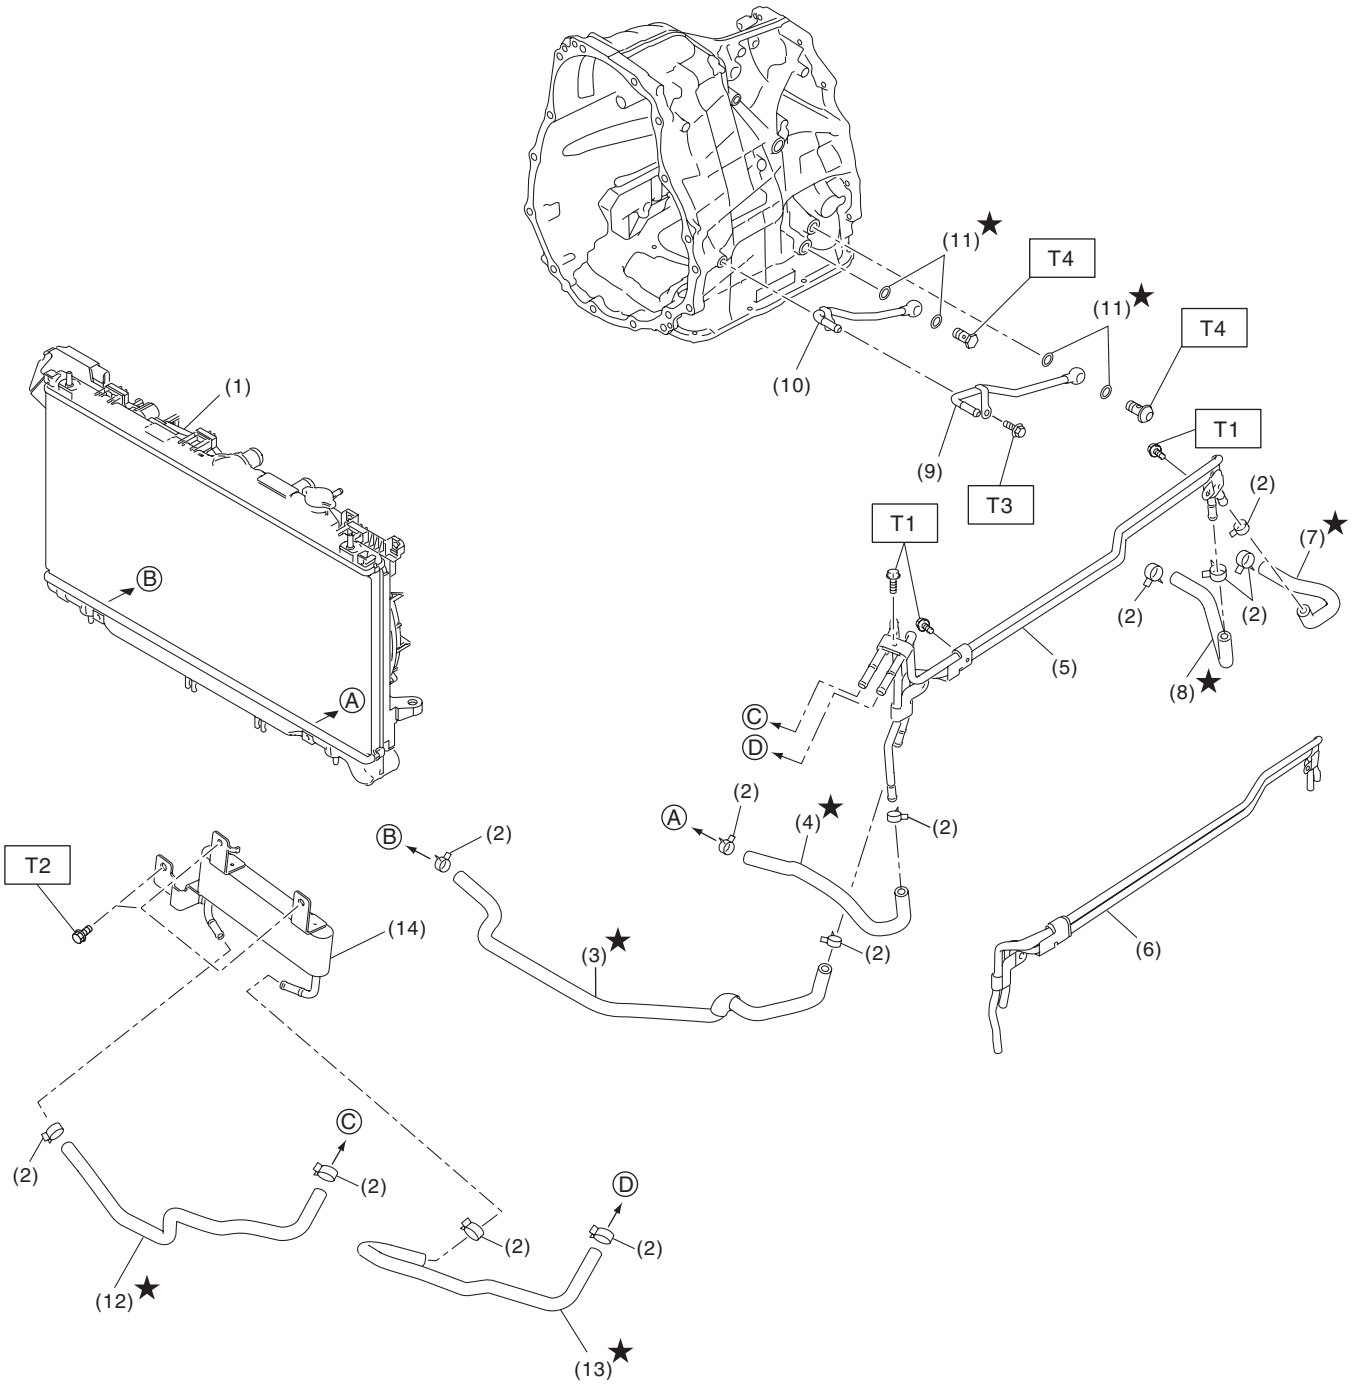


AT-07860

(1) Seal ring
(2) Ball bearing
(3) Transfer drive gear
(4) Parking gear
(5) Snap ring
(6) Reduction drive gear shaft
(7) Thrust needle bearing
(8) Needle bearing
(9) Ball bearing
(10) Transfer reduction driven gear
(11) Ball bearing
(12) Shim
(13) Transfer piston
(14) Return spring
(15) Transfer piston seal
(16) Snap ring
(17) Pressure plate
(18) Transfer clutch plate set
(19) Snap ring
(20) Rear drive shaft
(21) Ball bearing
(22) Extension case
(23) Oil seal
(24) Dust cover

Tightening torque: N·m (kgf-m, ft-lb)
T: 25 (2.5, 18.4)

12.TRANSMISSION HARNESS AND SENSOR

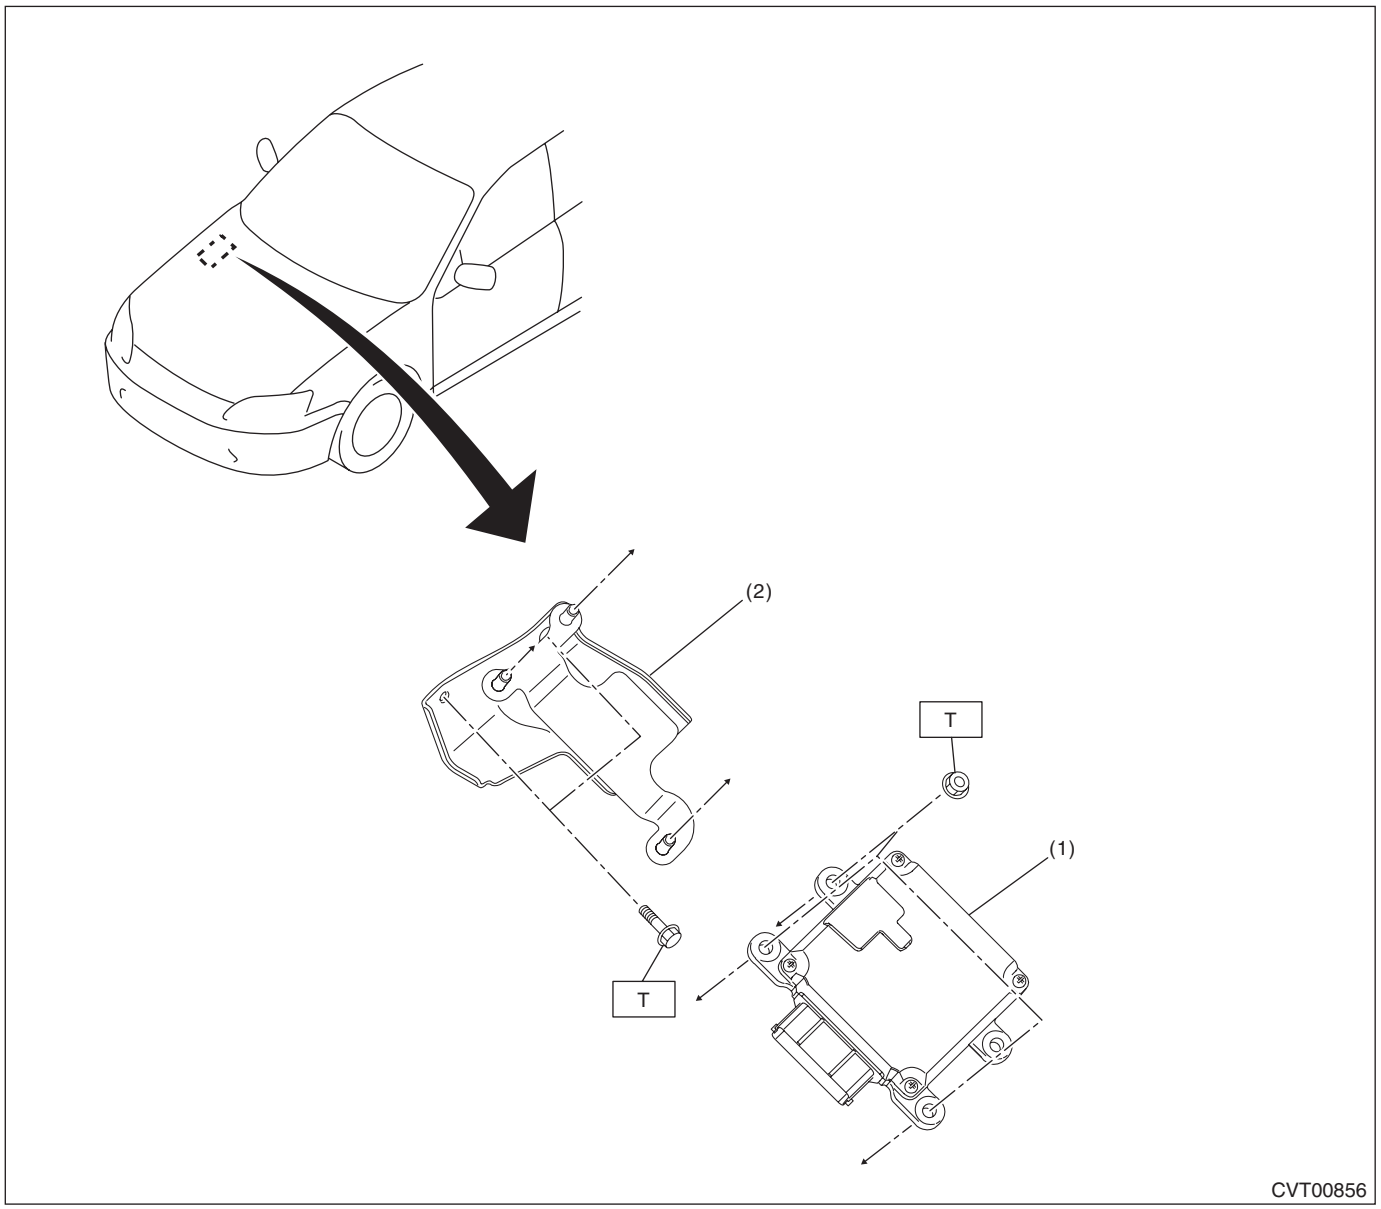


CVT00841

(1)	Transmission cover	(7)	O-ring
(2)	Transmission harness	(8)	O-ring
(3)	Inhibitor harness	(9)	O-ring
(4)	Secondary pressure sensor	(10)	Secondary speed sensor
(5)	O-ring	(11)	O-ring
(6)	Primary speed sensor	(12)	Front wheel speed sensor

Tightening torque: N·m (kgf-m, ft-lb)
T1: 5 (0.5, 3.7)
T2: 8 (0.8, 5.9)
T3: 16 (1.6, 11.8)
T4: 39 (4.0, 28.8)

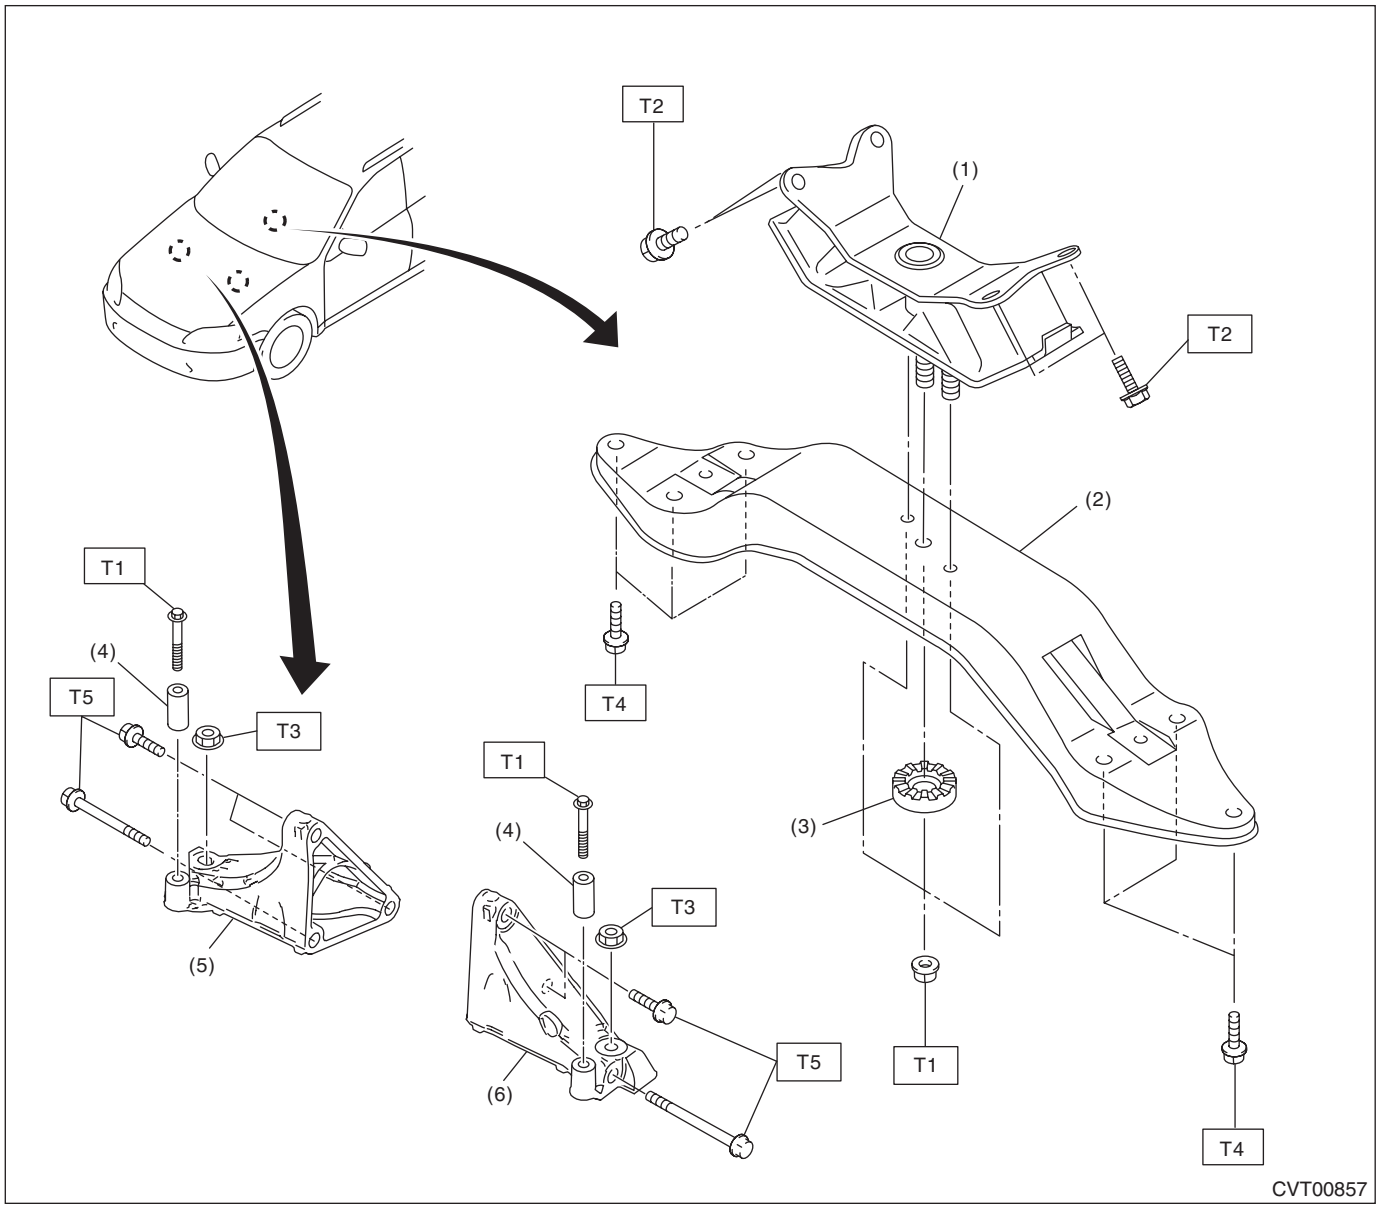
13.CVTF COOLER PIPE AND HOSE



CVT00969

(1) Radiator
(2) CVTF hose clip
(3) CVTF radiator inlet hose
(4) CVTF radiator outlet hose
(5) CVTF cooler pipe ASSY (OUTBACK model)
(6) CVTF cooler pipe ASSY (sedan model)
(7) CVTF CVT inlet hose
(8) CVTF CVT outlet hose
(9) CVT outlet pipe
(10) CVT inlet pipe
(11) Gasket
(12) CVTF cooler (air cool) inlet hose (OUTBACK model)
(13) CVTF cooler (air cool) outlet hose (OUTBACK model)
(14) CVTF cooler (air cool) (OUTBACK model)

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 12 (1.2, 8.9)
T3: 16 (1.6, 11.8)
T4: 40 (4.1, 29.5)



14.TRANSMISSION CONTROL MODULE

(1) Transmission control module (TCM)
(2) Bracket

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

15.TRANSMISSION MOUNTING

(1)	Rear cushion rubber	(4)	Collar
(2)	Transmission crossmember	(5)	Transmission main mounting bracket (RH)
(3)	Stopper	(6)	Transmission main mounting bracket (LH)

Tightening torque: N·m (kgf-m, ft-lb)

T1: 35 (3.6, 25.8)

T2: 40 (4.1, 29.5)

T3: 45 (4.6, 33.2)

T4: 75 (7.6, 55.3)

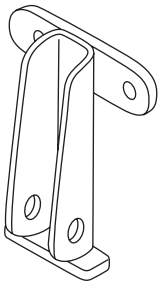
T5: 75 (7.6, 55.3)

C: CAUTION

- Wear appropriate work clothing, including a cap, protective goggles and protective shoes when performing any work.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Do not place the oil pan with its inner side facing up until it is installed, to prevent intrusion of foreign matter into the control valve body.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- When disassembling the case and other light alloy parts, use a plastic hammer to force it apart. Do not pry apart with screwdrivers or other tools.
- Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine CVTF and recommended grease. Do not mix CVTF, grease etc. of different grades or manufacturers.
- Be sure to tighten bolts and nuts to the specified torque.
- Place lifts, shop jacks or rigid racks at specified locations.
- Apply CVTF onto sliding or revolving surfaces before installation.
- Apply CVTF onto the press-fitting surface of the part before press-fitting the part using a press.
- Replace deformed or damaged snap rings with new parts.
- Before installing O-rings or oil seals, apply sufficient amount of CVTF to avoid damage and deformation.
- Be careful not to incorrectly install or fail to install O-rings, snap rings and other such parts.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or cloth between the part and the vise.
- Avoid damaging the mating surface of the case.
- Before applying liquid gasket, completely remove the old liquid gasket.
- After removing the sensors, breather hose and plugs, plug the holes to avoid foreign materials intruding as necessary.
- During disassembly or assembly, be sure to use nylon gloves or paper towels. Do not use cloth gloves or waste cloth.

D: PREPARATION TOOL

1. SPECIAL TOOL



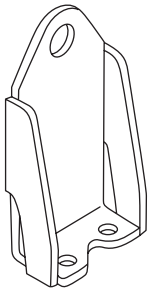


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
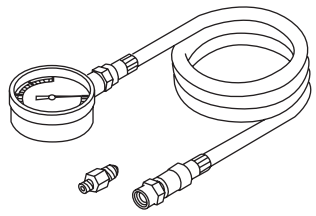
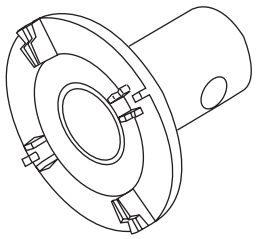
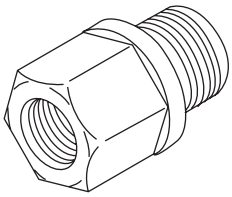
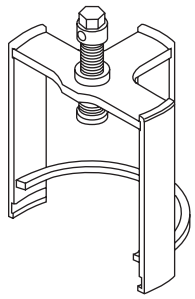
 ST41099AJ010	41099AJ010	SPECIAL TOOL H6	• Used for removing and installing transmission. • For H6 engine.
 ST18360AA020	18360AA020	HANGER	• Used for removing and installing transmission. • For H6 engine.









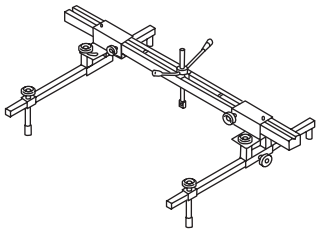


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
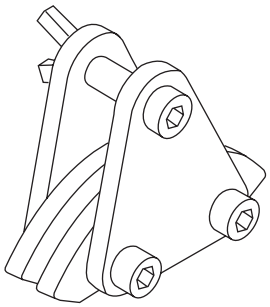
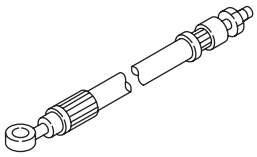
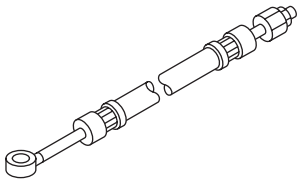
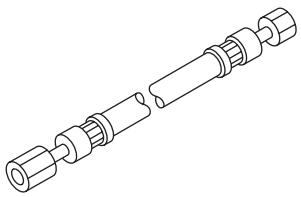
 ST18801AA000	18801AA000	OIL PRESSURE GAUGE ASSY	Used for measuring the secondary pressure (line pressure).
 ST18658AA020	18658AA020	WRENCH COMPL RETAINER	Used for removing and installing the differential side retainer.
 ST18681AA000	18681AA000	PRESSURE GAUGE ADAPTER	Used for measuring the secondary pressure (line pressure) and transfer clutch hydraulic pressure. NOTE: Used together with the genuine O-ring (part No. 806911080).
 ST18769AA000	18769AA000	EXPANDER PULLEY	Used for removing and installing the secondary pulley assembly.
 ST99099AJ000	99099AJ000	ENGINE HANGER	• Used for removing and installing the automatic transmission assembly. • Used together with CHAIN BALANCER (99099AJ010).









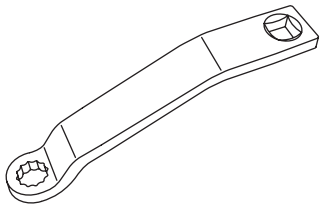


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
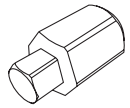
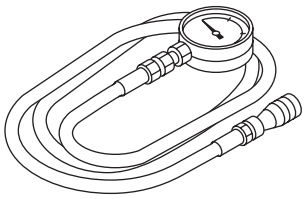
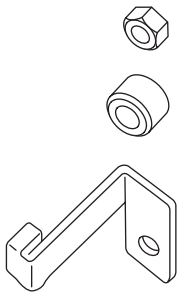
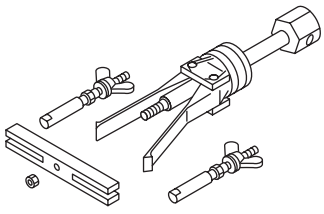
 ST99099AJ010	99099AJ010	CHAIN BALANCER	• Used for removing and installing the automatic transmission assembly. • Used together with ENGINE HANGER (99099AJ000).
 ST-498897700	498897700	OIL PRESSURE ADAPTER SET	Used for measuring the secondary pressure (line pressure) hydraulic pressure.
 ST34099AC020	34099AC020	ADAPTER HOSE B	Used for measuring the transfer clutch hydraulic pressure. NOTE: Used with genuine union screw (Part No. 801914010) and gasket (Part No. 803914060).
 ST34099AC010	34099AC010	ADAPTER HOSE A	Used for measuring the transfer clutch hydraulic pressure.
 ST73099SG000	73099SG000	SPECIAL TOOL CONDENSER	Used for installing the transfer clutch pressure test plug.









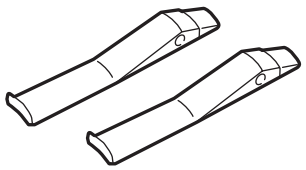


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
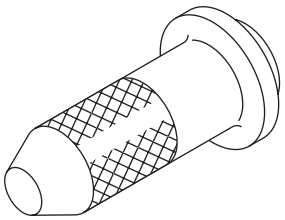
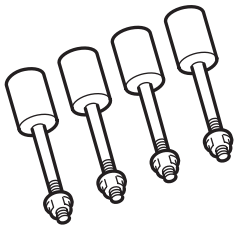
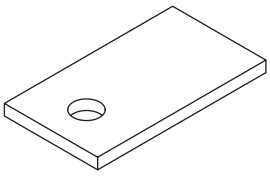
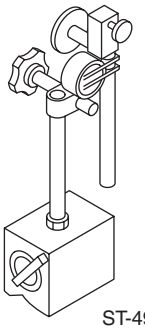
 ST18270AA040	18270AA040	SOCKET	Used for installing the transfer clutch pressure test plug.
 ST-498575400	498575400	OIL PRESSURE GAUGE ASSY	Used for measuring the transfer clutch hydraulic pressure.
 ST-498277200	498277200	STOPPER SET	• Used for removing and installing automatic transmission assembly to engine. • Used for preventing the torque converter from dropping off.
 ST-398527700	398527700	PULLER ASSY	• Used for removing the extension case oil seal. • Used for removing the roller bearing of the primary pulley and secondary pulley. • Used for removing the bearing of reduction driven gear. • Used for removing the differential side retainer bearing outer race.
 ST18760AA000	18760AA000	CLAW	• Used for removing ball bearing of front reduction driven gear. • Used together with PULLER ASSY (398527700).









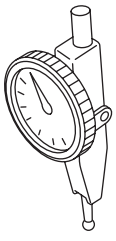


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
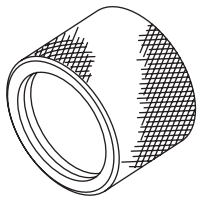
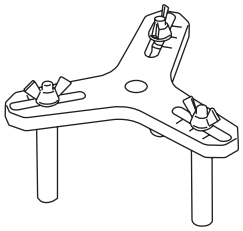
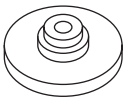
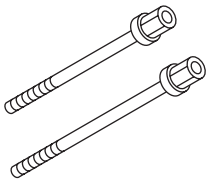
 ST-498057300	498057300	INSTALLER	Used for installing the extension case oil seal.
 ST18632AA000	18632AA000	TRANSMISSION STAND	Used for disassembling and assembling the transmission.
 ST-498255400	498255400	PLATE	Used for measuring the backlash of hypoid gear.
 ST-498247001	498247001	MAGNET BASE	• Used for measuring the backlash of differential bevel pinion gear. • Used for measuring the backlash of hypoid gear. • Used for measuring the clearance in forward clutch. • Used together with DIAL GAUGE (498247100).
 ST-498247100	498247100	DIAL GAUGE	• Used for measuring the backlash of differential bevel pinion gear. • Used for measuring the backlash of hypoid gear. • Used for measuring the clearance in forward clutch. • Used together with DIAL GAUGE (498247101).









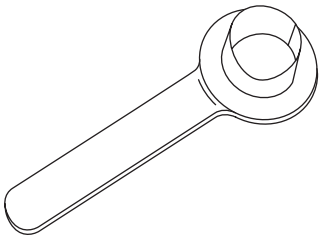


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
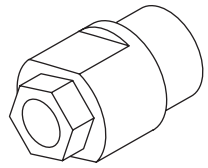
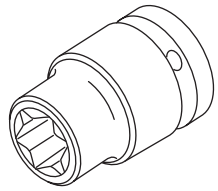
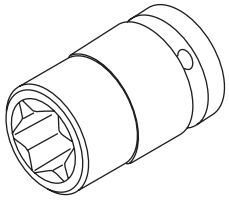
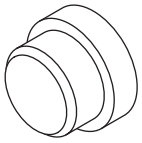
 ST18675AA000	18675AA000	DIFFERENTIAL SIDE OIL SEAL INSTALLER	Used for installing the differential side retainer oil seal.
 ST18762AA001	18762AA001	COMPRESSOR SPECIAL TOOL	• Used for disassembling and installing the multi-plate clutch piston for shifting. • COMPRESSOR SPECIAL TOOL (18762AA000) can also be used.
 ST18765AA000	18765AA000	COMPRESSOR SUPPORT	Used for disassembling and installing the multi-plate clutch for shifting.
 ST18763AA000	18763AA000	COMPRESSOR SHAFT	Used for disassembling and installing the multi-plate clutch for shifting.
 ST28399SA010	28399SA010	OIL SEAL PROTECTOR	Used for protecting oil seal when installing front drive shaft.









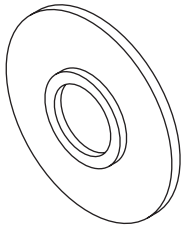


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
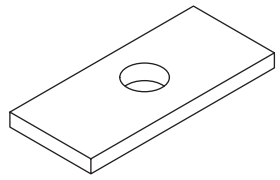
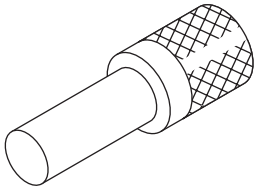
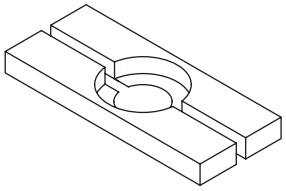
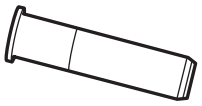
 ST18667AA010	18667AA010	HOLDER	• Used for removing and installing the drive pinion lock nut. • Used as a holder to rotate gear when checking tooth contact.
 ST18270KA010	18270KA010	SOCKET (E16)	Used for removing and installing the center support COMPL.
 ST18270KA020	18270KA020	SOCKET (E20)	• Used for removing and installing the hypoid driven gear. • Used for removing and installing the drive pinion shaft retainer.
 ST-398497701	398497701	SEAT	Used for removing and installing the ball bearing.
 ST-398177700	398177700	INSTALLER	• Used for removing and installing the ball bearing and tapered roller bearing. • Used for installing the parking gear.









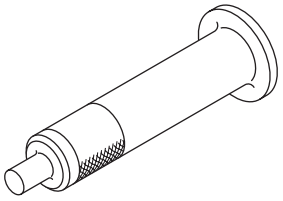


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
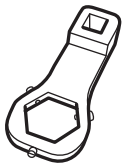
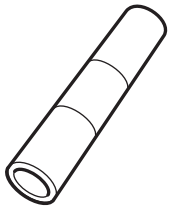
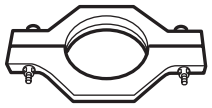
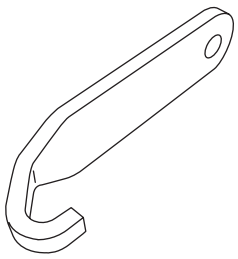
 ST-398643600	398643600	GAUGE	Used for measuring the total end play, extension end play and drive pinion height.
 ST-899864100	899864100	REMOVER	Used for removing and installing the ball bearing.
 ST-498077000	498077000	REMOVER	• Used for removing ball bearing of front reduction drive gear. • Used for removing the inner bearing inner race of the drive pinion shaft. • Used for removing the differential taper roller bearing.
 ST18657AA010	18657AA010	INSTALLER	Used for installing the oil seal of inhibitor switch.
 ST18657AA020	18657AA020	OIL SEAL INSTALLER	Used for installing the oil seal.









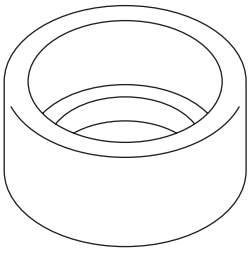


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
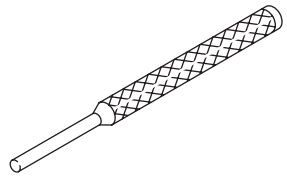
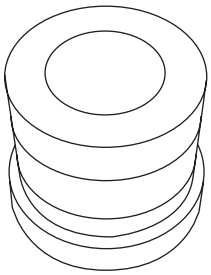
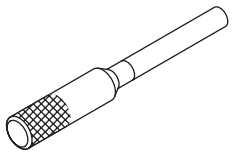
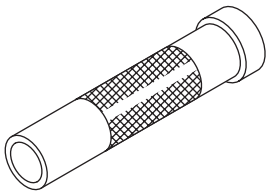
 ST18621AA000	18621AA000	ADAPTER WRENCH	Used for removing and installing the drive pinion shaft lock nut.
 ST18651AA000	18651AA000	INSTALLER	Used for installing the bearing of front reduction drive gear.
 ST18720AA000	18720AA000	REMOVER	Used for removing ball bearing of reduction driven gear.
 ST-498497300	498497300	CRANKSHAFT STOPPER	Used for stopping the drive plate rotation when removing and installing the drive plate.
 ST20299AG010	20299AG010	PRESS SNAP RING	Used for installing the bearing on primary pulley side.









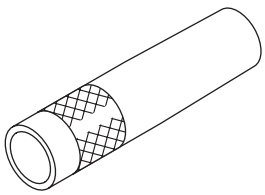


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
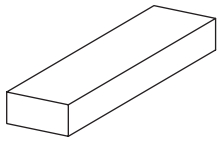
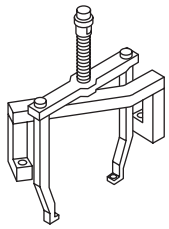
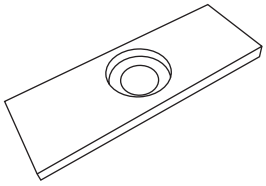
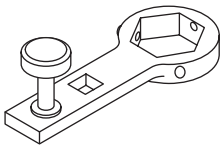
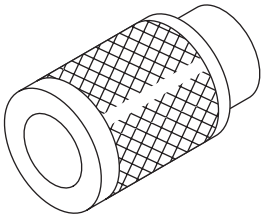
 ST-398791600	398791600	REMOVER	Used for removing and installing the shifter arm spring pin.
 ST-399513600	399513600	INSTALLER	• Used for removing the ball bearing of the rear drive shaft. • Used for removing the bearing of the oil pump chain sprocket.
 ST-499267300	499267300	STOPPER PIN	Used for adjusting the inhibitor switch.
 ST-499277100	499277100	BUSHING 1-2 INSTALLER	• Used for installing the front differential taper roller bearing. • Used for removing and installing the transfer reduction drive gear. • Used for installing the ball bearing of the transfer reduction drive gear. • Used for installing the oil seal. • Used for installing the ball bearing of the transfer reduction driven gear.
 ST-499277200	499277200	INSTALLER	• Used for installing the inner bearing inner race of drive pinion shaft. • Used for installing the reduction driven gear.

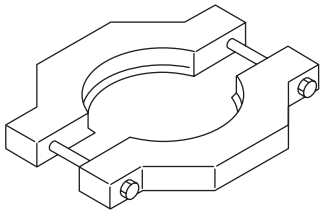


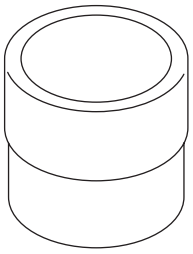


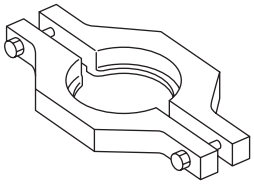


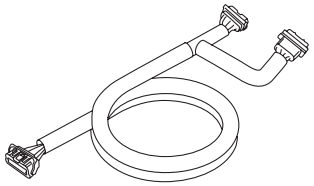












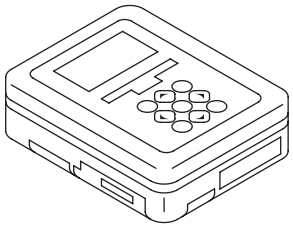


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-499575400	499575400	GAUGE	Used for measuring height of end play.
 ST-499737100	499737100	PULLER SET	• Used for measuring height of forward clutch. • Used for measuring the transfer end play. • Use the rack only.
 ST-499575600	499575600	GAUGE	• Used for measuring height of forward clutch. • Used for measuring height of end play.
 ST-499787700	499787700	WRENCH	Used for measuring the differential pinion shaft backlash.
 ST-499757002	499757002	INSTALLER	Used for removing the bearing of front reduction driven gear.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18767AA000	18767AA000	BEARING REMOVER	• Used for removing the transfer reduction drive gear. • Used for removing the reduction driven gear bearing retainer. • Used for removing the front reduction driven shaft.
 ST-499755602	499755602	PRESS SNAP RING	• Used for installing the oil seal. • Used for installing the ball bearing and roller bearing.
 ST-498077600	498077600	REMOVER	• Used for removing the ball bearing of the rear drive shaft. • Used for removing the ball bearing of transfer reduction driven gear. • Used for removing ball bearing of reduction driven gear. • Used for removing the ball bearing of drive sprocket.
 ST18460AA040	18460AA040 (Newly adopted tool)	CHECK BOARD	Used for inspecting the TCM terminal.
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.

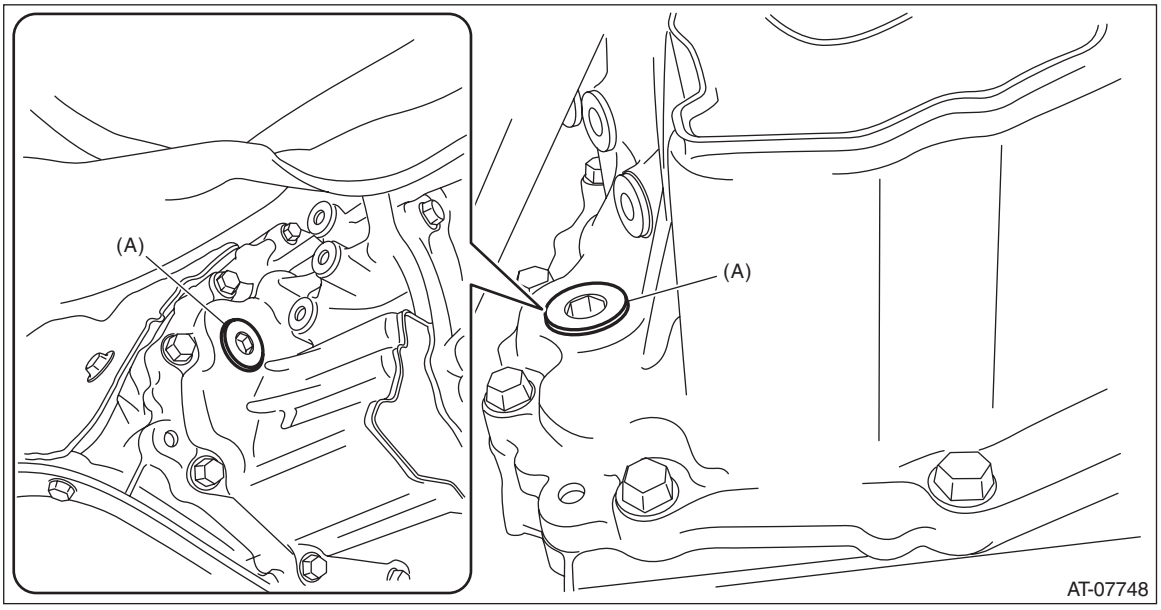
2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.
Thickness gauge	Used for the clearance in reverse brake, transfer clutch and input clutch.
Caliper	Used for measuring the clearance at the parts.
Spring scale	Used for measuring the starting torque of the drive pinion.
TORX® bit T70	Used for removing and installing differential gear oil drain plug.
Straight pin remover	Used for removing and installing the spring pin.
Deep socket	Used for removing and installing the secondary pressure sensor. NOTE: Use Ko-ken 3/8 12-point 27 mm (manufacturer product No. 3305M-27).
Push/pull gauge	Used for measuring clutch clearance.
Angle gauge	• Used for installing the hypoid driven gear. • Used for installing the drive plate.
Chain sling	Used for removing and installing transmission. • Length: 0.8 — 1 m (2.6 — 3.3 ft) • Load capacity: 1.2 t (2646 lb) or more • Diameter: 6 mm (0.24 in) or 6.3 mm (0.25 in) • Chain external width: 23.5 mm (0.93 in) or less • Chain internal width: 8.5 mm (0.33 in) or more
Screw shackle	Used for removing and installing transmission. • Load capacity: 250 kg (551 lb) or more • Use two pieces.

2. CVTF

A: INSPECTION

Check for leakage of CVTF from transmission.



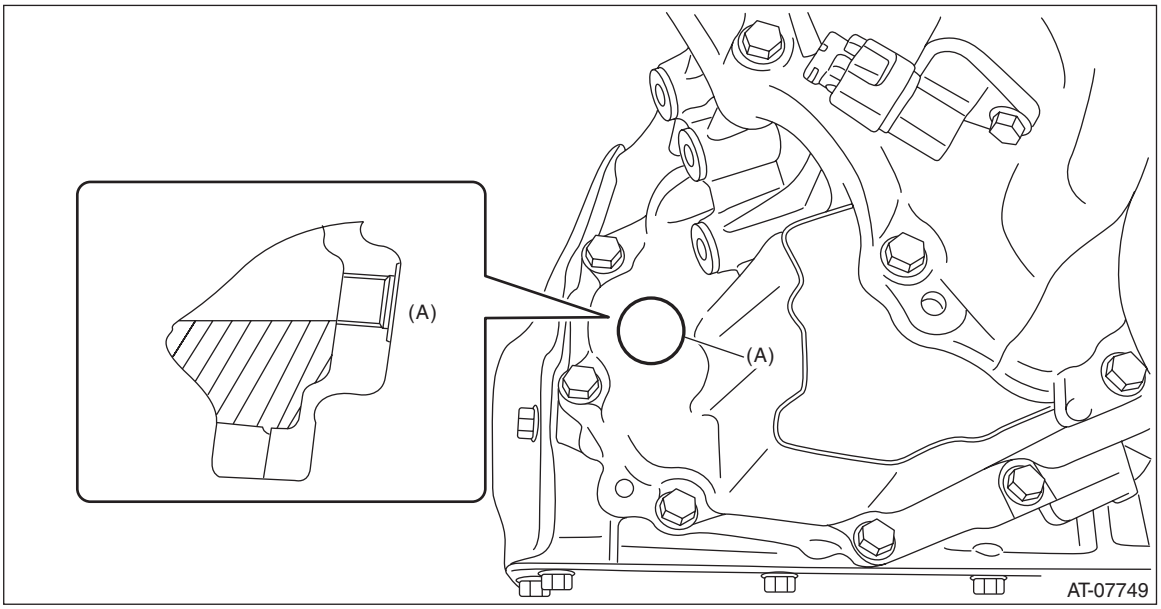
B: ADJUSTMENT

CAUTION:
• CVTF level changes along with CVTF temperature. When inspecting CVTF level, observe the specified CVTF temperature.
• Always use specified CVTF. Using other fluid will cause malfunction.

1) Idle the engine to raise CVTF temperature to 35 — 45°C (95 — 113°F) on Subaru Select Monitor.
2) Operate the select lever in P → R → N → D and D → N → R → P to circulate CVTF with the engine idling.
3) With the engine running, lift up the vehicle and remove the filler plug.

CAUTION:
Pay special attention to the following operations as the engine is at idle.

NOTE:
CVTF is at the specified level when it is up to the filler plug hole lower section.



(A) Filler plug

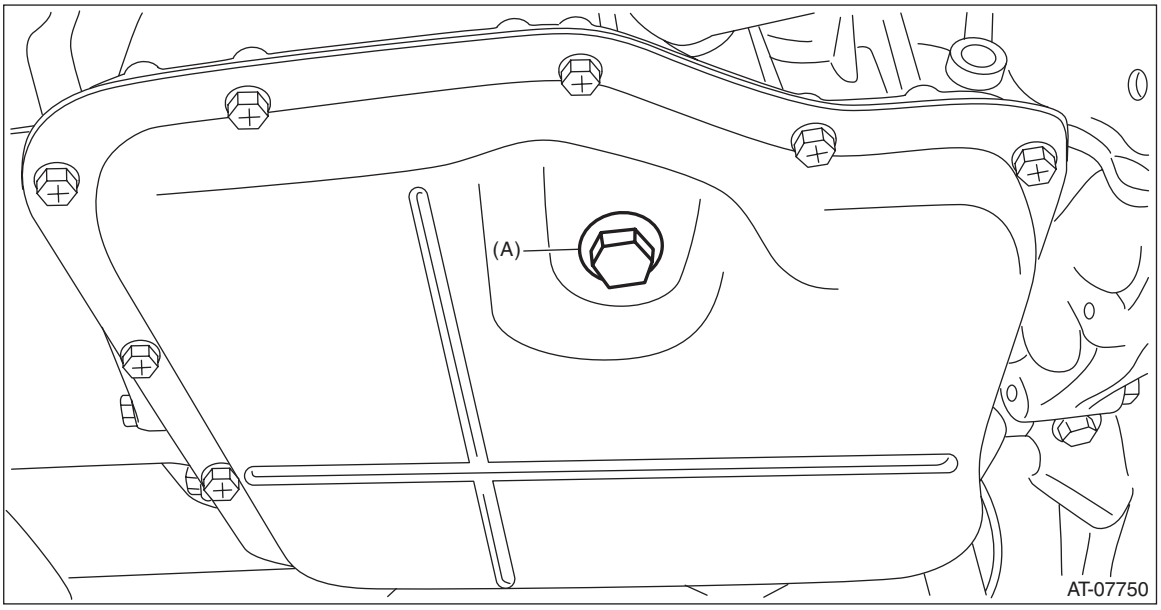
4) When there is no CVTF leakage from the transmission, add the specified fluid up to the filler plug hole lower section.

Specified fluid:
<Ref. to CVT(TR690)-4, HYDRAULIC CONTROL AND LUBRICATION, SPECIFICATION, General Description.>

CAUTION:
Note that when CVTF is added up to the lower section of filler plug while the transmission is in cold condition, overfilling of CVTF occurs, causing the oil to spill out.

(A) Filler plug hole

5) Install the filler plug.



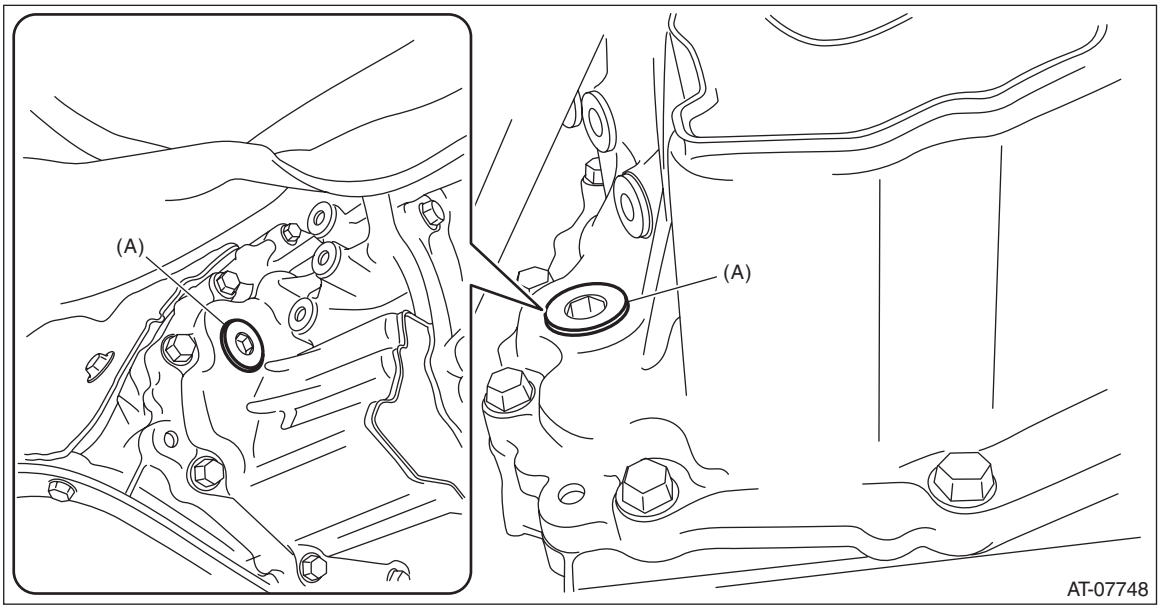
NOTE:
Use a new gasket.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

C: REPLACEMENT

CAUTION:
• Directly after the vehicle has been running or the engine has been idling for a long time, the CVTF is hot. Be careful not to burn yourself.
• Be careful not to spill the CVTF on exhaust pipe to prevent it from emitting smoke or causing fires. If CVTF adheres, wipe it off completely.
• Always use specified CVTF. Using other fluid will cause malfunction.

1) Lift up the vehicle, and remove the CVTF drain plug.



(A) CVTF drain plug

2) Check the CVTF condition. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>
3) Install the CVTF drain plug and gasket.

NOTE:
Use a new gasket.

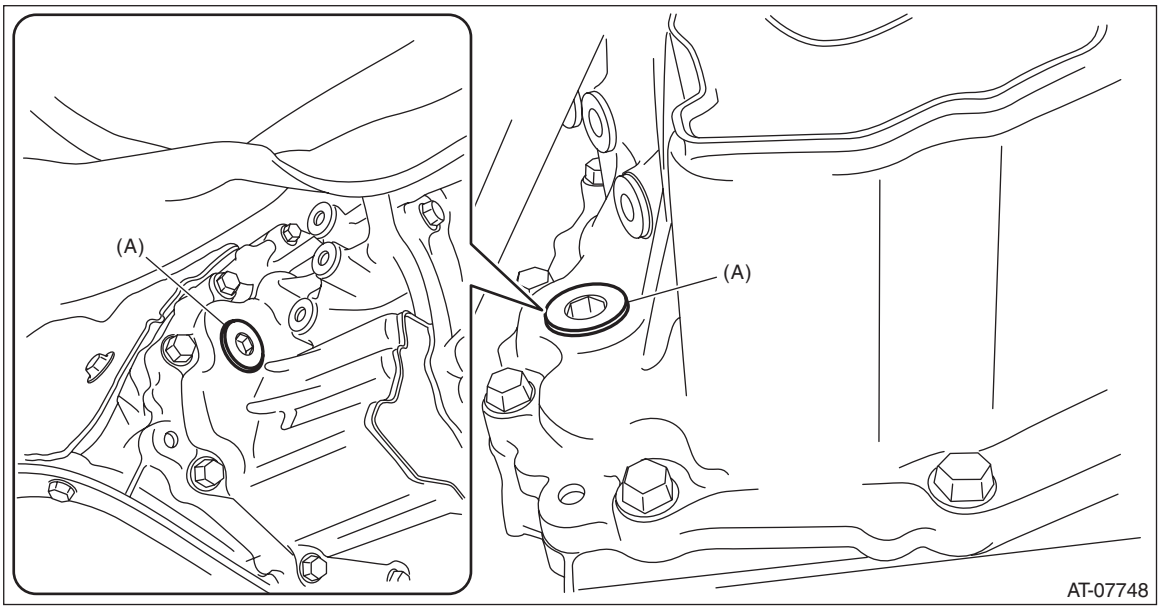
Tightening torque:
39.2 N·m (4.0 kgf-m, 28.9 ft-lb)

4) Remove the filler plug.

(A) Filler plug

5) Fill in the specified fluid through the filler plug.

Specified fluid:
<Ref. to CVT(TR690)-4, HYDRAULIC CONTROL AND LUBRICATION, SPECIFICATION, General Description.>



Capacity:
Fill with the same amount of CVTF as drained.

6) Temporarily tighten the filler plug.
7) Idle the engine to raise CVTF temperature to 35 — 45°C (95 — 113°F) on Subaru Select Monitor.
8) Operate the select lever in P → R → N → D and D → N → R → P to circulate CVTF with the engine idling.

CAUTION:
Pay special attention to the following operations as the engine is at idle.
9) Place the select lever in “P” range. Then lift up the vehicle with the engine at idle to adjust the CVTF level and check for leakage. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.>

10) Replace with a new gasket, and attach the filler plug.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

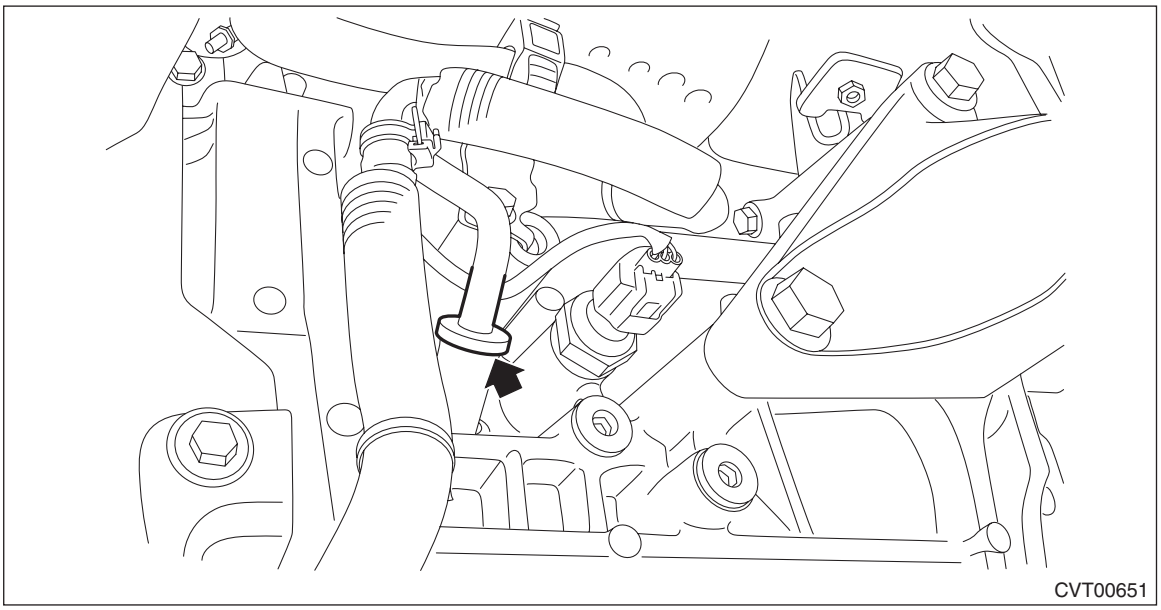
(A) Filler plug

D: CONDITION CHECK

NOTE:
When replacing CVTF, determine the condition inside the transmission body by inspecting the drained CVTF.

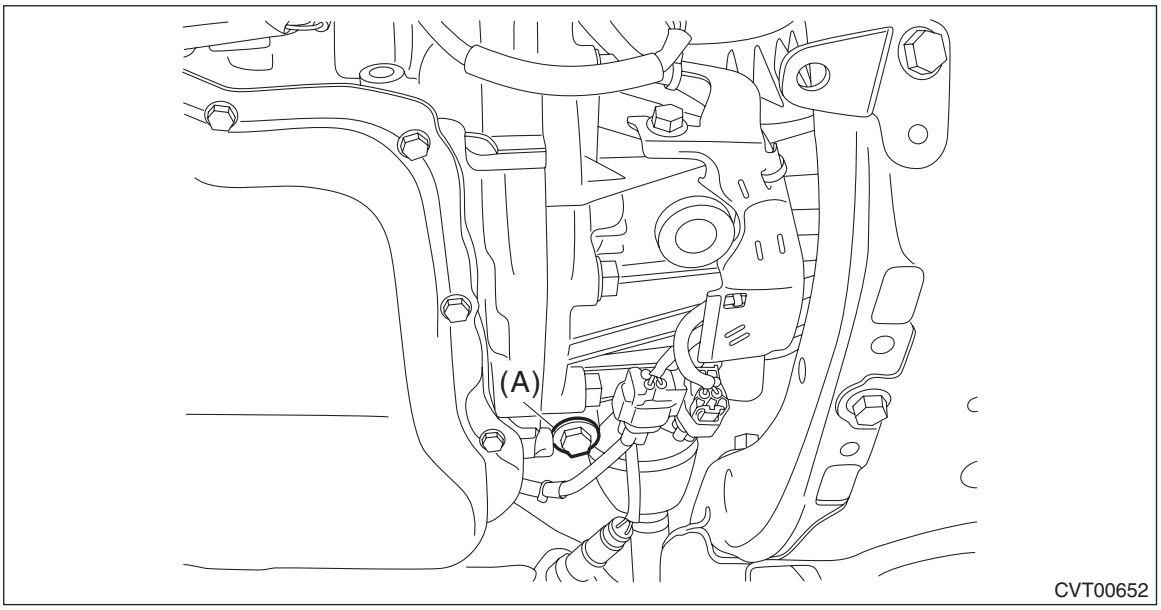
Fluid condition	Trouble and possible cause	Corrective action
Metal particles.	Excessive wear of the internal of the transmission body.	Replace CVTF and check if CVT operates correctly.
Thick and varnish-form fluid.	Burnt clutches	Replace CVTF and check the CVT body or vehicle for faulty.
Clouded CVTF or bubbles.	Water mixed in fluid.	Replace CVTF and check the water entering point.

3. Differential Gear Oil



A: INSPECTION

Check that there is no leakage of differential gear oil from the converter case.



B: ADJUSTMENT

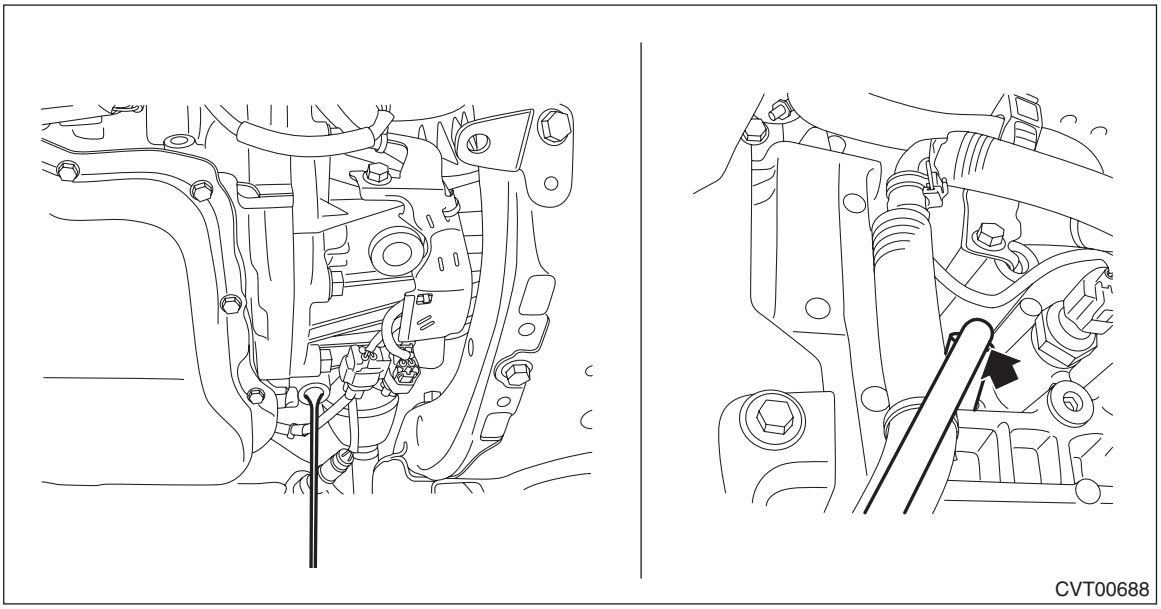
NOTE:
Immediately after removing the overflow drain plug, remaining gear oil (approx. 8 cc) may come out of the overflow pipe. This is not included in the specified amount. When removing the overflow drain plug, make sure the gear oil flows out of the overflow drain plug hole by filling with gear oil.

1) Lift up the vehicle.
2) Remove the front under cover. <Ref. to EI-28, REMOVAL, Front Under Cover.>
3) Remove the oil charge pipe cap.

CVT00651

4) Remove the overflow drain plug.

CVT00652



(A) Overflow drain plug

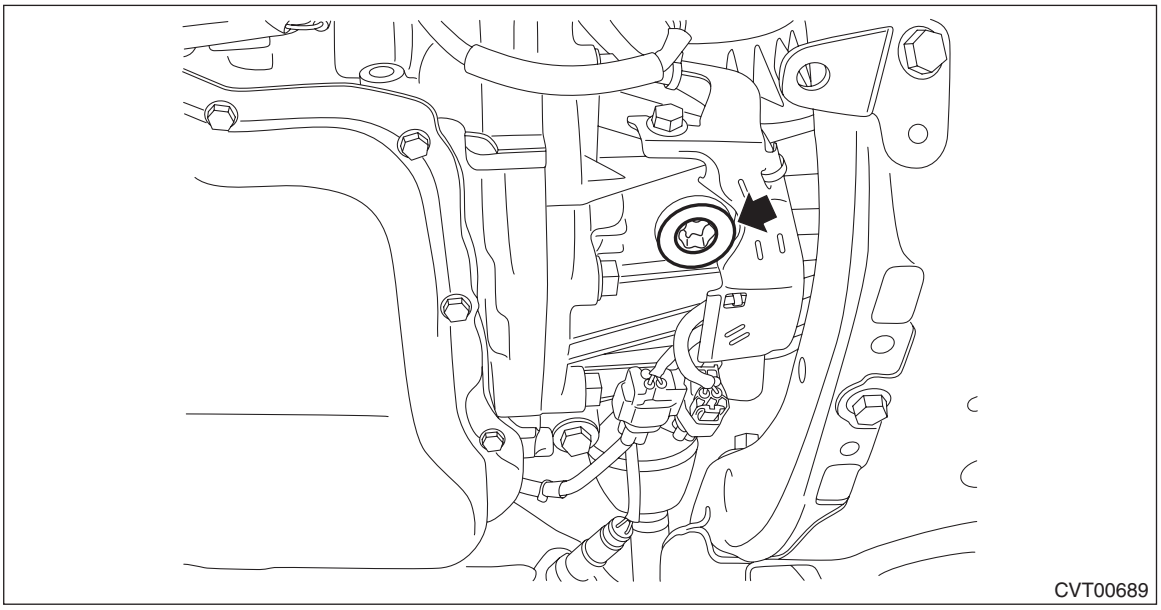
5) Fill in the differential gear oil through the charge pipe up to where the oil flows out of the overflow drain plug.

Recommended gear oil:
<Ref. to CVT(TR690)-4, FRONT DIFFERENTIAL GEAR OIL, SPECIFICATION, General Description.>
6) When the flow of the differential gear oil turns into a narrow stream, install the overflow drain plug.

NOTE:
Use a new gasket.

Tightening torque:
35 N·m (3.6 kgf-m, 25.8 ft-lb)

7) Install the oil charge pipe cap.

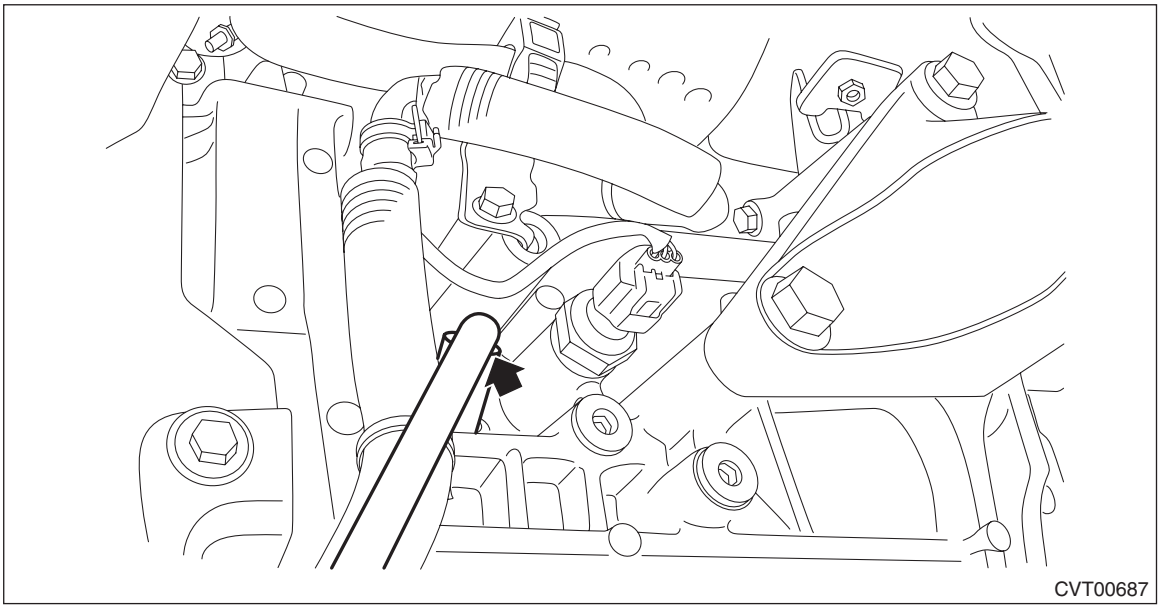


C: REPLACEMENT

CAUTION:
• Immediately after the vehicle has been running or after idling for a long time, the differential gear oil will be hot. Be careful not to burn yourself.
• Be careful not to spill differential gear oil on the exhaust pipe to prevent it from emitting smoke or causing a fire. If gear oil adheres, wipe it off completely.
1) Lift up the vehicle.
2) Remove the differential gear oil drain plug using TORX® bit T70. Drain differential gear oil.

3) Install the differential gear oil drain plug using TORX® bit T70.

NOTE:
Use a new gasket.



Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)

4) Pour gear oil from the charge pipe.

Recommended gear oil:
<Ref. to CVT(TR690)-4, FRONT DIFFERENTIAL GEAR OIL, SPECIFICATION, General Description.>

Gear oil capacity:
<Ref. to CVT(TR690)-4, FRONT DIFFERENTIAL GEAR OIL, SPECIFICATION, General Description.>

5) Adjust the level of differential gear oil. <Ref. to CVT(TR690)-43, ADJUSTMENT, Differential Gear Oil.>

4. Variator Chain Break-in

A: GENERAL DESCRIPTION

Perform Variator Chain Break-in when the following work has been performed.
- Variator chain replacement
- Primary pulley and secondary pulley replacement

B: PROCEDURE

NOTE:
- During variator chain break-in, VDC warning light illuminate because of the difference between the vehicle speed value and G sensor value. This is not a malfunction. If the warning light illuminates, clear the VDC memory after the variator chain break-in is finished. <Ref. to VDC(diag)-24, Clear Memory Mode.>
- If the above malfunction code is detected during variator chain break-in, the system enters into fail mode, and the vehicle shows symptom such as engine speed rapid increases even if the accelerator pedal is gradually depressed.

1) Lift up the vehicle.

CAUTION:
Lift up the vehicle until the tire bottom is 0.3 m (0.98 ft) or more above the ground.

2) Shift the select lever to “P” or “N” range.
3) Apply the electronic parking brake.
4) Connect the Subaru Select Monitor to data link connector.
5) Idle the engine to raise the CVTF temperature to 40 — 50°C (104 — 122°F) displayed on the Subaru Select Monitor.

NOTE:
When CVTF temperature does not rise easily or if you want to rise CVTF temperature faster, maintain the engine speed within 2,000 — 2,500 r/min at “P” or “N” range to raise the CVTF temperature.

6) With the select lever in “P” or “N” range, increase the engine speed to 3,000 — 3,500 r/min from the idling condition, and maintain the speed for approximately five seconds, then release the accelerator pedal.
7) Depress the accelerator pedal gradually again from idling condition to increase the engine speed to 3,000 — 3,500 r/min, maintain the speed for approximately five seconds, then release the accelerator pedal.
8) Release the electronic parking brake.
9) Shift the select lever into manual mode and set to 1st.
10) Depress the accelerator pedal gradually, and increase the engine speed to 5,300 r/min from engine idling condition.

NOTE:
Increase the engine speed while taking care that the engine speed does not become too high.

11) Release the accelerator pedal to fully closed position to lower the engine speed to 4,000 r/min.
12) Depress the accelerator pedal gradually again, and increase the engine speed to 5,300 r/min.
13) Repeat the steps 12) and 13) for 40 times.
14) Release the accelerator pedal to return the engine speed to idling.
15) Shift the select lever to “P” range, and then turn the engine to OFF.

5. AWD ON/OFF Switching Mode

A: GENERAL DESCRIPTION

- Follow the messages displayed on the Subaru Select Monitor when working.
- Perform as necessary in FWD mode.
- When switched to FWD, AWD light illuminates.

B: PROCEDURE

CAUTION:
• Do not turn the power of the Subaru Select Monitor OFF during work, and do not disconnect the data link connector.
• On completing the work in FWD, switch back in AWD.
1) Shift the select lever to “P” range.
2) Connect the Subaru Select Monitor to data link connector.
3) Turn the ignition switch to ON. (For model with push button start, press the push button ignition switch twice without depressing brake pedal.)
4) Turn off all switches causing an electrical load, such as headlights, A/C, seat heater and rear defogger.
5) Select «Work Support» in the «Transmission Diagnosis» display screen of the Subaru Select Monitor.
6) Select «Maintenance mode» in the «Work Support» screen of Subaru Select Monitor.
7) Select «AWD ON/OFF switching mode» in the «Maintenance mode» screen of the Subaru Select Monitor.
8) Follow the messages displayed on the Subaru Select Monitor screen when working.
Switching completes successfully if any of the following messages is displayed.
- When switching from AWD to FWD: «Switched to FF. To return to AWD, perform basic mode again.»
- When switching from FWD to AWD: «Switched to AWD. To return to FF, perform basic mode again.»

NOTE:
- If communication error occurs during switching mode, start in the “AWD ON/OFF switching mode” again.
- If operation is interrupted before the successful end message is displayed, perform the «AWD ON/OFF switching mode» from the beginning until confirming the operation is successfully ended. If this mode fails to complete successfully, the cause is as follows.
  - Select lever is not in “P” range.
  - Engine is running.
- For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

6. Road Test

A: INSPECTION

NOTE:
Turn OFF the X mode switch and perform inspection.

1. GENERAL PRECAUTION

Road tests should be conducted to properly diagnose the condition of CVT.

CAUTION:
Always observe the local traffic laws when performing the test.

2. D RANGE SHIFT FUNCTION

Make sure that the engine speed is 1,100 — 1,300 r/min while driving on the level road at 50 km/h (31 MPH) after accelerating from halting to 1/4 of accelerator opening angle. Then stop the vehicle. Check normal gear change has occurred while the vehicle speed changes from a constant speed to zero.

3. KICK-DOWN FUNCTION

Check if engine speed will rise by operating the accelerator opening angle to the full from a constant speed of 50 km/h (31 MPH) or more.

4. ENGINE BRAKE OPERATION

Check down shifting operation, engine braking, and indicators inside the meters.

- Drive in “6th speed of manual mode” [70 — 80 km/h (43 — 50 MPH)], and shift down from 6th to 5th. Check if the indicator of combination meter switches “6” → “5”. At the same time, check the engine brake in 5th gear.
- Drive in “5th speed of manual mode” [60 — 70 km/h (37 — 43 MPH)], and shift down from 5th to 4th. Check if the indicator of combination meter switches “5” → “4”. At the same time, check the engine brake in 4th gear.
- Drive in “4th speed of manual mode” [50 — 60 km/h (31 — 37 MPH)], and shift down from 4th to 3rd. Check if the indicator of combination meter switches “4” → “3”. At the same time, check the engine brake in 3rd gear.
- Drive in “3rd speed of manual mode” [30 — 40 km/h (19 — 25 MPH)], and shift down from 3rd to 2nd. Check if the indicator of combination meter switches “3” → “2”. At the same time, check the engine brake in 2nd gear.
- Drive in “2nd speed of manual mode” [20 — 30 km/h (12 — 19 MPH)], and shift down from 2nd to 1st. Check if the indicator of combination meter switches “2” → “1”. At the same time, check the engine brake in 1st gear.

5. LOCK-UP FUNCTION

When the accelerator is lightly depressed while driving on a flat road in “D” range, check that rpm does not change abruptly.

6. P RANGE OPERATION

Stop the vehicle on an uphill grade of 5% or more and shift to the “P” range and apply the electronic parking brake. Check that the vehicle does not move when the parking brake is released.

7. NOISE AND VIBRATION

Check for noise and vibration during driving at a constant speed, accelerating, decelerating and manual shift operation.

8. OIL LEAKAGE

After the driving test, inspect for leakage of CVTF and differential gear oil from the transmission body.

7. Stall Test

A: INSPECTION

CAUTION:
Make sure no other person is around the vehicle during stall test measurement.

NOTE:
Stall test is extremely important in diagnosing the condition of CVT and engine. The test is necessary to measure the engine stall speeds in “R” and “D” range.
Purposes of the stall test:
- Operational check of forward clutch and reverse brake
- Operational check of the torque converter assembly
- Engine performance check

1) Place wheel chocks at the front and rear of all wheels and engage the electronic parking brake.
2) Turn the A/C OFF.
3) Using the Subaru Select Monitor, check if the throttle valve operates when you depress the accelerator pedal. <Ref. to EN(H6DO)(diag)-52, OPERATION, Subaru Select Monitor.>
4) Check the engine oil level. <Ref. to LU(H6DO)-2, General Description.>
5) Check the coolant level. <Ref. to CO(H6DO)-13, Engine Coolant.>
6) Adjust the CVTF level. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.>
7) Increase the CVTF temperature to 60 — 80°C (140 — 176°F) by idling the engine with the select lever shifted to “N” or “P” range.
8) Shift the select lever to “D” range.
9) Depress the accelerator pedal to the full while fully depressing the foot brake pedal with your left foot.
10) When the engine speed stabilizes, quickly record the engine speed and release accelerator pedal. Shift the select lever to “N” range. Let the engine idle for one minute or more to cool it down.
11) Shift to “R” range and perform the same stall test.

NOTE:
- Do not perform a stall test for over 5 seconds at a time. (From closed throttle, fully open throttle to stall speed reading.) Failure to follow this instruction will cause the engine oil and CVTF to deteriorate and the clutch and brake to be adversely affected.
- Be sure to cool down the engine for at least one minute after each stall test with the select lever set in the “P” or “N” range and with the idle speed of 1,200 r/min or less.
- If the stall speed is higher than the specified range, attempt to finish the stall test in as short a time as possible, in order to prevent the CVT from sustaining damage.

Stall speed standard:
1,870 — 2,900 r/min (D range)
1,750 — 2,750 r/min (R range)

Stall test judgment

Range	Range	Probable cause
Lower than standard value	D, R	• Throttle valve is not fully open. • Insufficient engine output • Torque converter malfunction
Higher than standard value	D	• Forward clutch slippage • Secondary pressure (line pressure) is low. • Variator chain malfunction • Input clutch slippage
	R	• Reverse brake slippage • Secondary pressure (line pressure) is low. • Variator chain malfunction • Input clutch slippage
	D, R	• Torque converter malfunction • Control valve body malfunction • TCM malfunction • Damaged harness and harness connector

8. Time Lag Test

A: INSPECTION

NOTE:
When the select lever is shifted while the engine is idling, there will be a certain time elapse or lag before shock is felt. This symptom helps to check the condition of forward clutch and reverse brake.
- Perform the test at normal operation CVTF temperature of 60 — 80°C (140 — 176°F).
- Be sure to allow one minute or more interval between tests.
- Make three measurements and take the average value.

1) Apply the electronic parking brake.
2) Start the engine. Check the idle speed. (A/C OFF)
3) Shift the select lever from “N” to “D” range. Using a stop watch, measure the time elapsed from shifting the lever until the shock is felt.

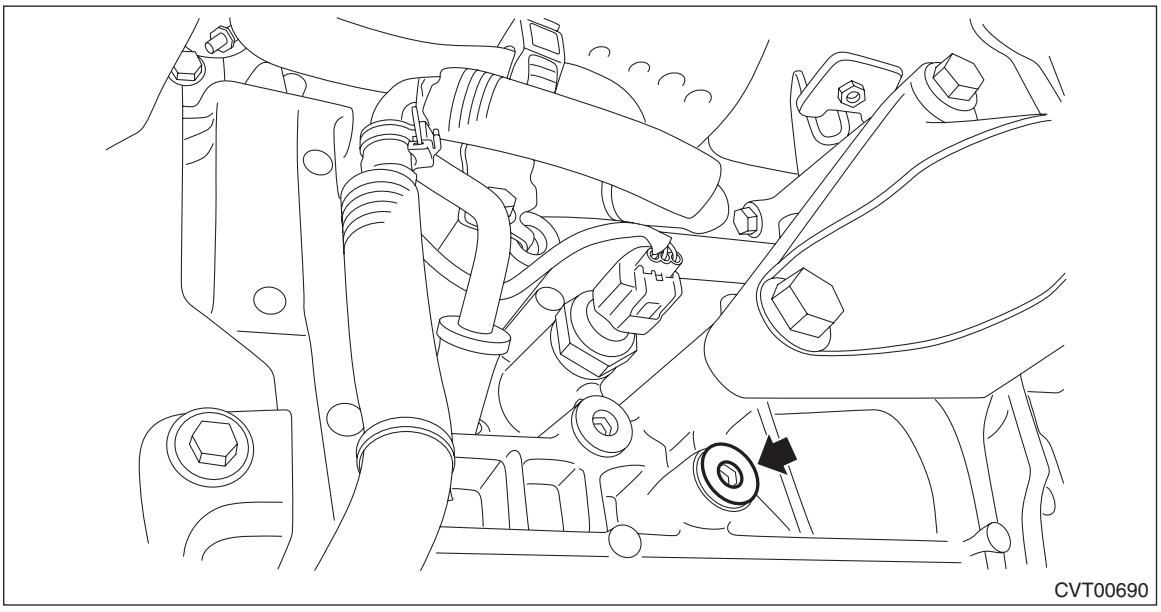
Time lag standard:
1.2 seconds or less

If “N” → “D” time lag is longer than specified:
- Secondary pressure (line pressure) is too low.
- Forward clutch worn
- Piston malfunction
- Control valve body malfunction
- Learning incomplete

4) In the same manner, measure the time lag when shifting from “N” range to “R” range.

Time lag standard:
1.5 seconds or less

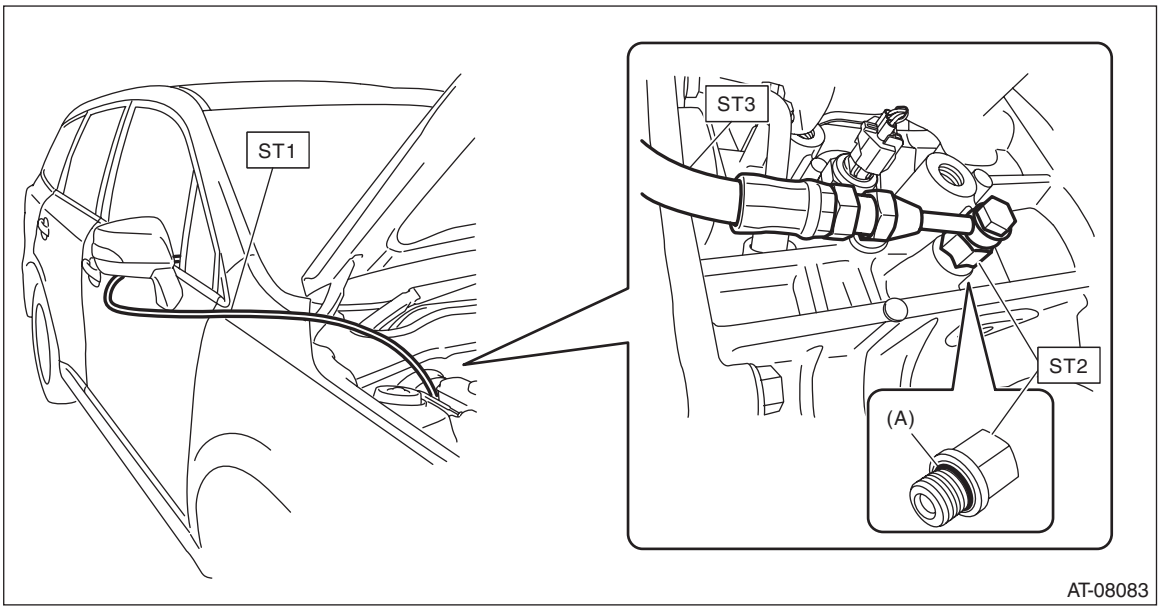
If “N” → “R” time lag is longer than specified:
- Secondary pressure (line pressure) is too low.
- Reverse brake worn
- Piston malfunction
- Control valve body malfunction
- Learning incomplete



9. Secondary Pressure (Line Pressure) Test

A: INSPECTION

CAUTION:
Make sure no other person is around the vehicle during secondary pressure (line pressure) test measurement.



NOTE:
• If the pulley and variator chain, clutch or brake show signs of slipping or shift feel is not correct, check the secondary pressure (line pressure).
• Connect Subaru Select Monitor to vehicle so as to measure the engine speed and actual secondary pressure (secondary pressure (line pressure)).
• In many cases, slippage or inability to operate the vehicle may be due to insufficient oil pressure for the operation of clutch, brake or control valve.

1) Remove the front wheel RH. <Ref. to WT-5, REMOVAL, Tire and Wheel.>
2) Lift up the vehicle.
3) Remove the test plug for secondary pressure (line pressure).

4) Attach ST1, ST2 and ST3 to transmission.
ST1 18801AA000 OIL PRESSURE GAUGE ASSY
ST2 18681AA000 PRESSURE GAUGE ADAPTER
ST3 498897700 OIL PRESSURE ADAPTER SET

NOTE:
Use ST2 PRESSURE GAUGE ADAPTER with genuine O-ring (part No. 806911080) attached.

(A) O-ring (genuine part)

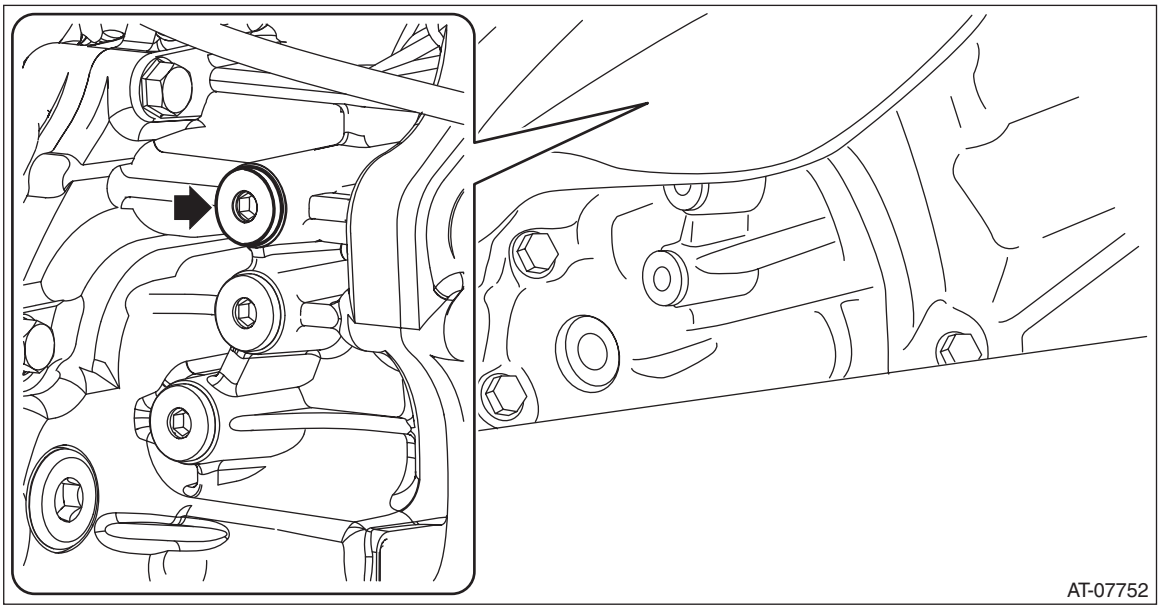
5) Set the gauge so that it can be seen from the driver's seat.
6) Install the front wheel RH. <Ref. to WT-5, INSTALLATION, Tire and Wheel.>
7) Using the Subaru Select Monitor, check if the throttle valve operates when you depress the accelerator pedal. <Ref. to EN(H6DO)(diag)-52, OPERATION, Subaru Select Monitor.>
8) Check the engine oil level. <Ref. to LU(H6DO)-2, General Description.>
9) Check the coolant level. <Ref. to CO(H6DO)-13, Engine Coolant.>
10) Adjust the CVTF level. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.>
11) Increase the CVTF temperature to 60 — 80°C (140 — 176°F) by idling the engine with the select lever shifted to "N" or "P" range.
12) Shift the select lever to "D" range.
13) Depress the accelerator pedal to the full while fully depressing the foot brake pedal with your left foot.

14) Immediately after the engine speed becomes steady, record the reading of the secondary pressure (line pressure), engine speed and actual secondary pressure on Subaru Select Monitor. And then release the accelerator pedal. Shift the select lever to “N” range. Let the engine idle for one minute or more to cool it down.

NOTE:
• Do not continue the stall test for 5 seconds or more at a time (from fully closed throttle, fully open throttle to secondary pressure (line pressure) reading). Failure to follow this instruction will cause the engine oil and CVTF to deteriorate and the clutch and brake to be adversely affected.
• After performing the secondary pressure (line pressure) test, be sure to cool down the engine for at least one minute with the select lever set in “P” or “N” range and with the idle speed at 1,200 r/min or less.
• Under each condition, check that the measured pressure matches almost totally with actual secondary pressure.
• When both measured pressure and actual secondary pressure are out of specification, judge as control valve malfunction.
• The value at stall is for reference because the pressure changes under different conditions or circumstances.
• The value at idling is steady because it is not affected by any condition or circumstance.

Secondary pressure (line pressure) standard				
	Range	Throttle	Brake	Secondary pressure (line pressure) (MPa (kgf/cm^2, psi))
Stall	D, R	Full open	ON	4.5 — 6 (45.9 — 61.2, 652 — 870)
Idling	P, N	Full closed	OFF	0.5 — 1.5 (5.1 — 15.3, 72 — 218)

15) Remove the ST and install the plug after measurement.



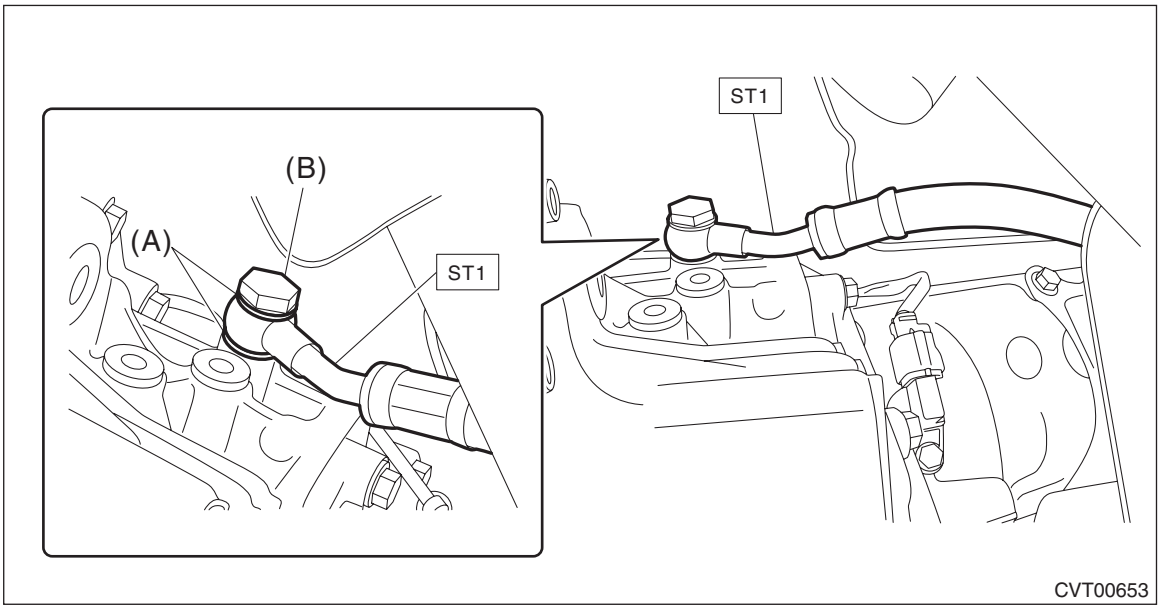
NOTE:
Use new O-rings.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

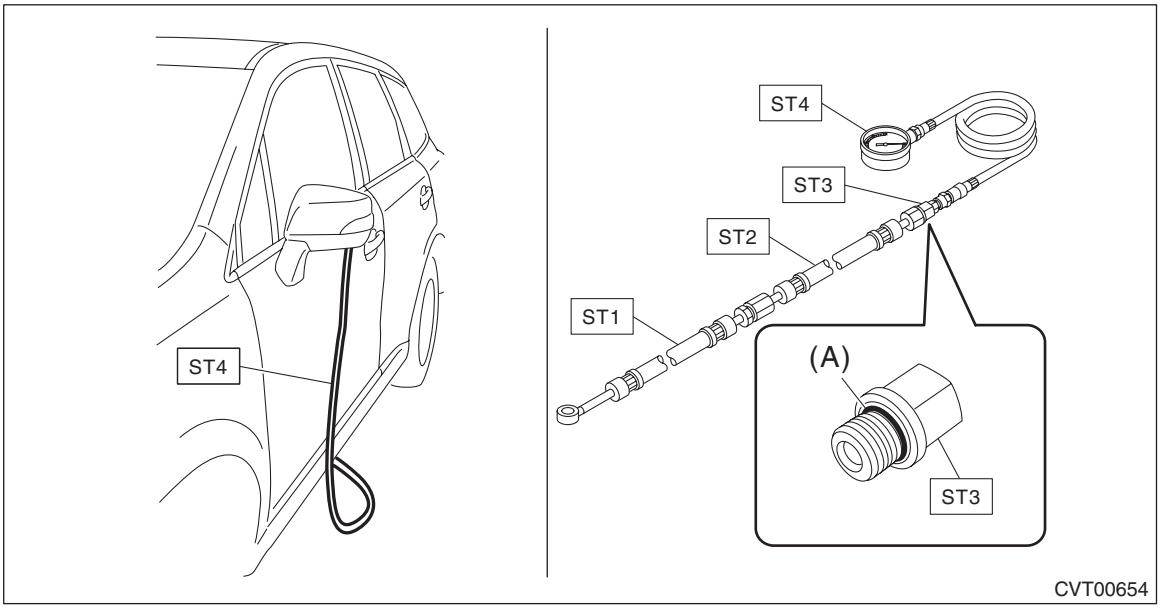
10.Transfer Clutch Pressure Test

A: INSPECTION

1) Lift up the vehicle.
2) Remove the test plug.



3) Set the ST1, ST2, ST3 and ST4 to the transmission.



CAUTION:
Be careful when setting tools so that the hoses do not touch the exhaust pipes.

NOTE:
• Use ST1 ADAPTER HOSE B with genuine union screw (part No. 801914010) and gasket (part No. 803914060) attached.
• Use ST3 PRESSURE GAUGE ADAPTER with genuine O-ring (part No. 806911080) attached.

ST1 34099AC020 ADAPTER HOSE B
ST2 34099AC010 ADAPTER HOSE A
ST3 18681AA000 PRESSURE GAUGE ADAPTER
ST4 498575400 OIL PRESSURE GAUGE ASSY

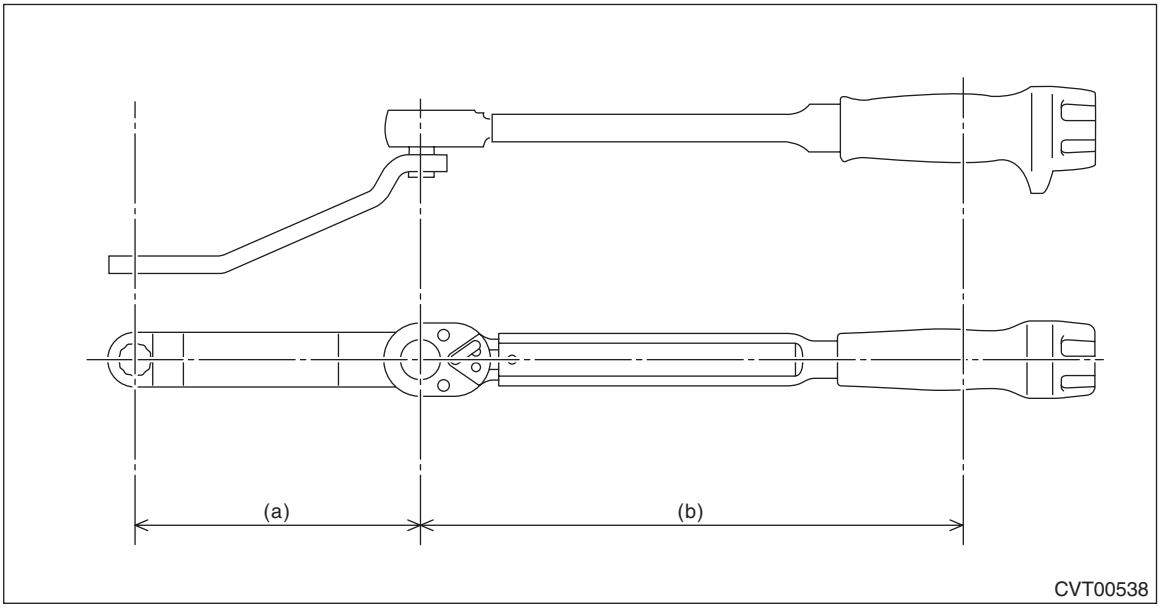
(A) Gasket (genuine part)
(B) Union screw (genuine part)

(A) O-ring (genuine part)

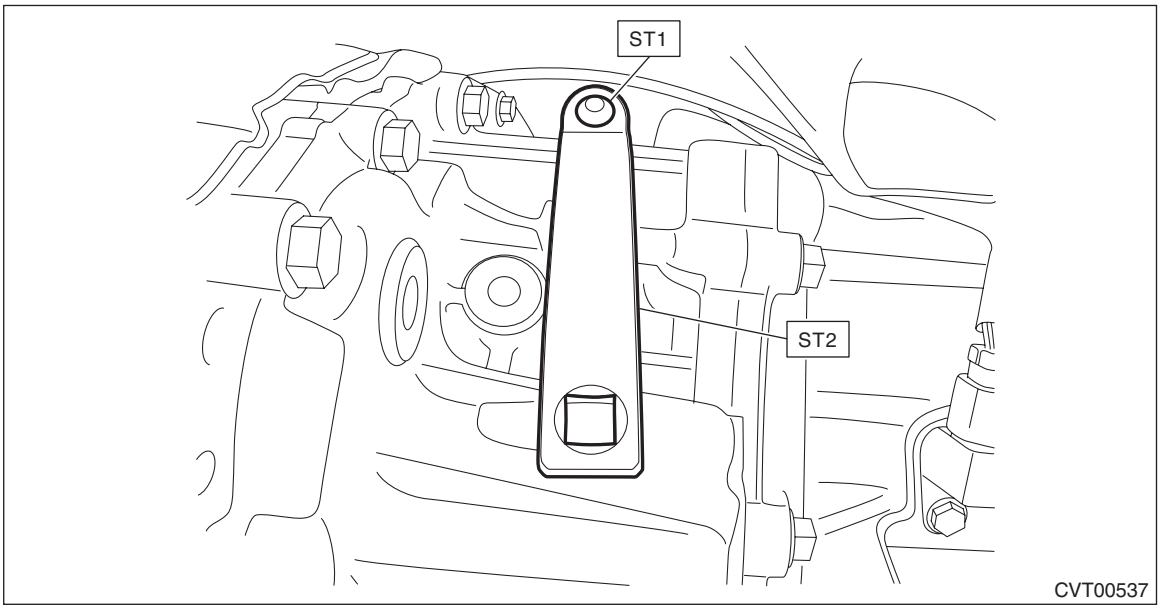
4) Lower the vehicle.
5) Connect the Subaru Select Monitor to the data link connector and read the current data.
6) Check the transfer clutch pressure as in secondary pressure (line pressure) test. <Ref. to CVT(TR690)-51, Secondary Pressure (Line Pressure) Test.>

NOTE:
- Turn OFF the X mode switch and perform inspection.
- If oil pressure is not produced or it does not change, the control valve body may be malfunctioning.

Range position	ON Duty ratio (%)	Accelerator pedal opening angle (%)	Standard transfer clutch pressure kPa (kgf/cm^2, psi)
D	95 — 100	Fully opened (100)	1,000 — 1,200 (10.2 — 12.2, 145 — 174)
	60	Adjust ON Duty ratio to 60%.	400 — 700 (4.1 — 7.1, 58 — 102)
	0	Fully closed (0)	—
N or P	0	Fully closed (0)	0



7) Lift up the vehicle.
8) Remove the ST.

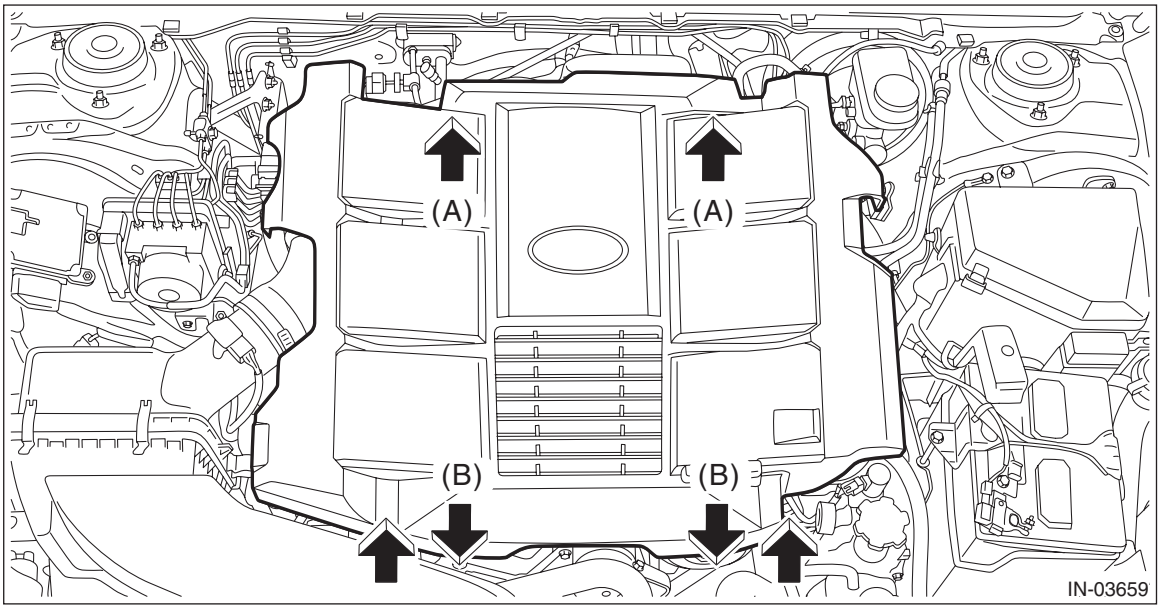


9) Install the test plug using ST1 and ST2.

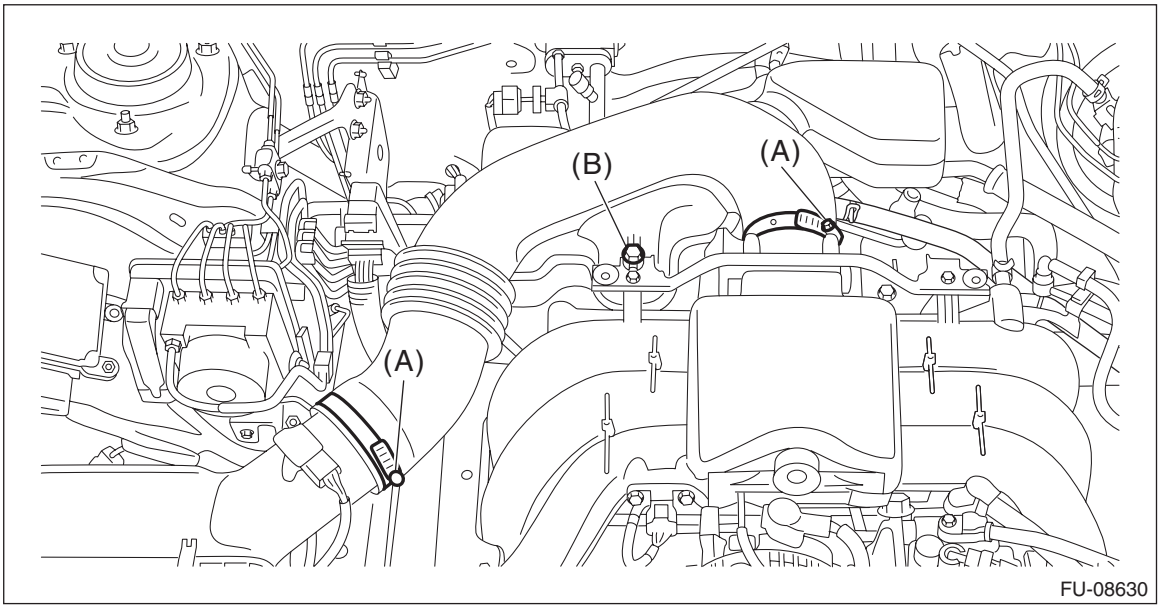
NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.
- Tighten the test plug while directly aligning ST2 and torque wrench.

ST1 18270AA040 SOCKET
ST2 73099SG000 SPECIAL TOOL CONDENSER
Using the following formula, calculate the tightening torque for a torque wrench.
T2 = L2/(L1 + L2) × T1
T1: 25 N·m (2.5 kgf-m, 18.4 ft-lb)
L1: ST2 length 0.1 m (3.94 in) (a)
L2: Torque wrench length (b) m (in)

[Required torque setting]
T2: Tightening torque: N·m (kgf-m, ft-lb)

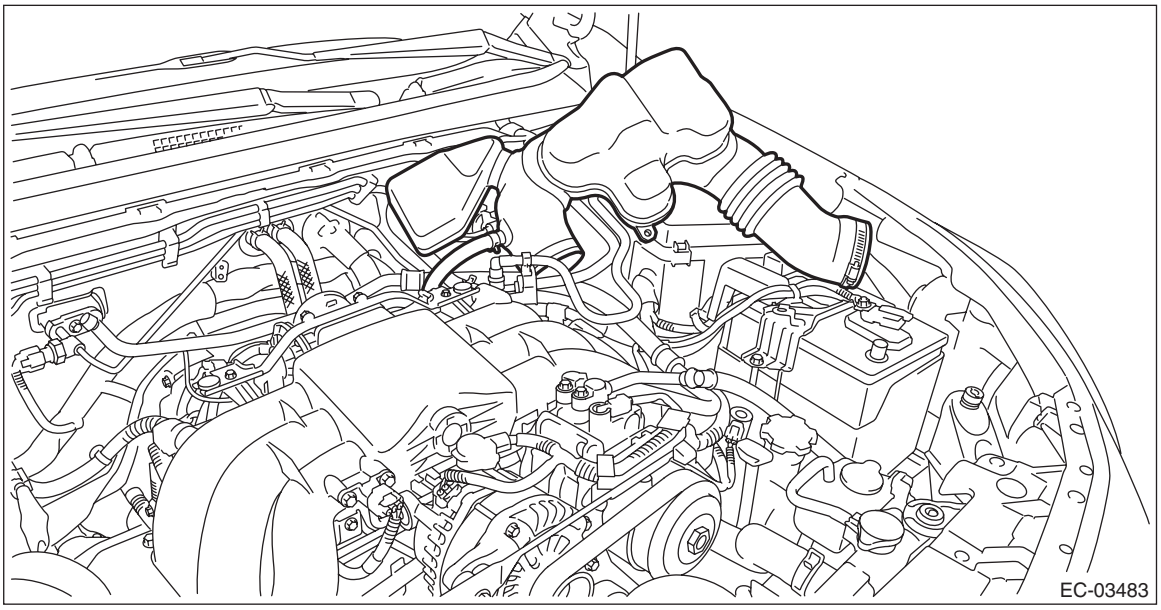


10) Lower the vehicle.

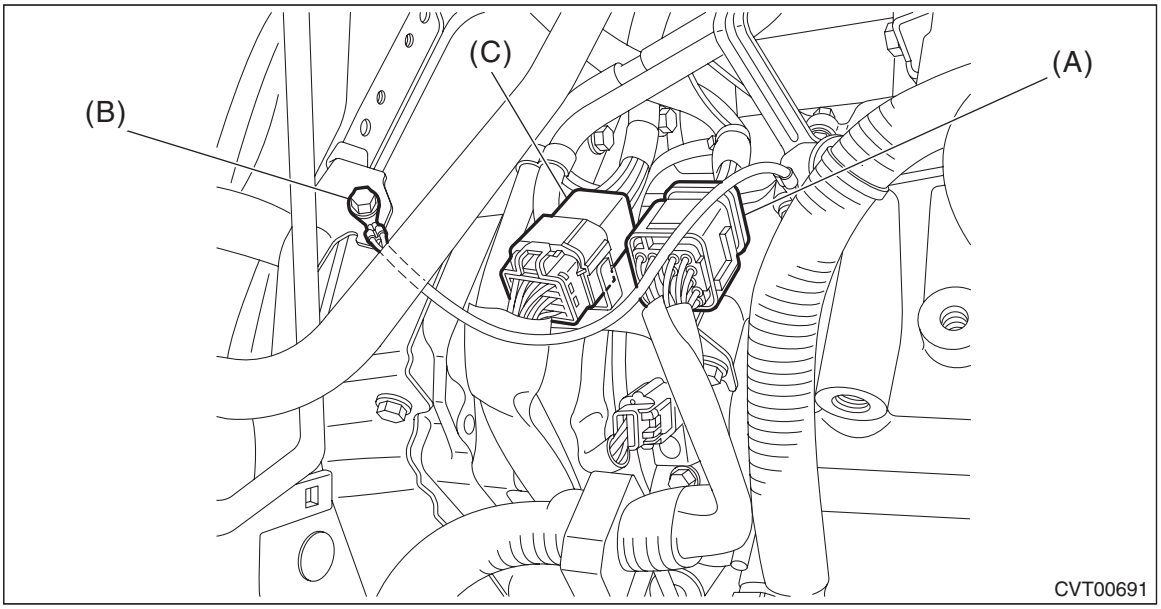


11.Automatic Transmission Assembly

A: REMOVAL

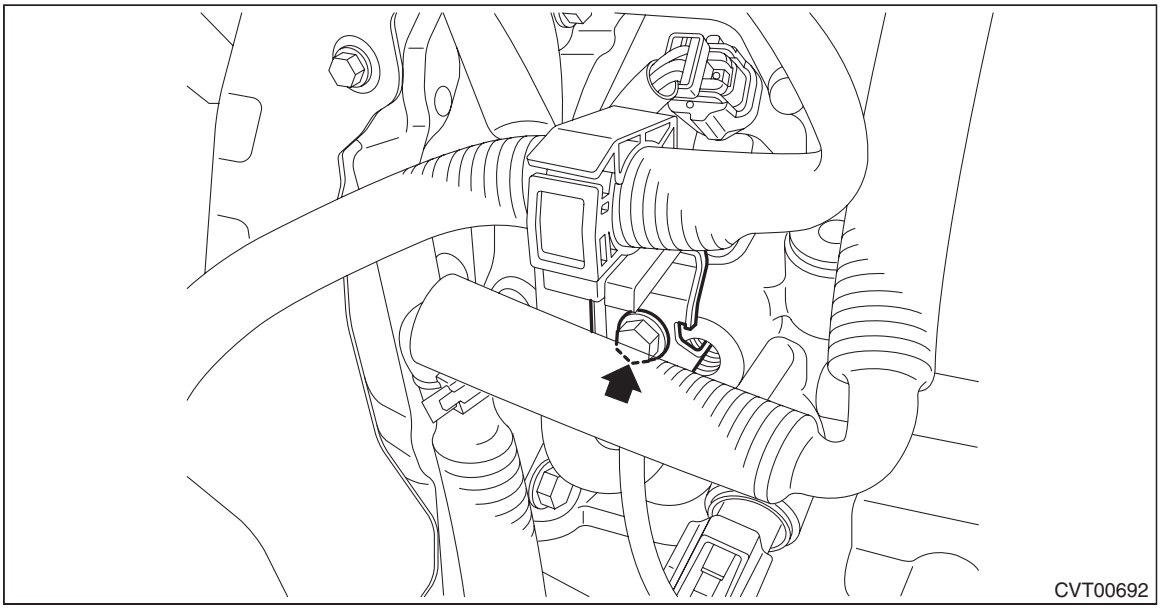


1) Remove the front wheels.
2) Remove the collector cover.
   (1) Carefully pull up the rear of collector cover at two positions (A).
   (2) Carefully pull up the front of collector cover at two positions (B) while moving it forward.

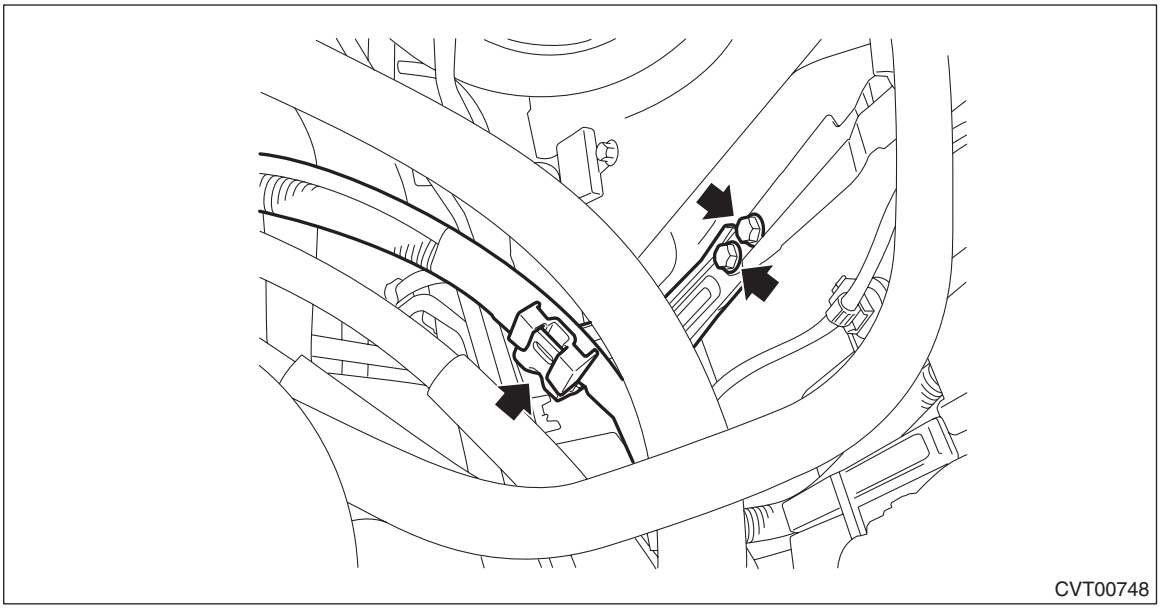


3) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Remove the air intake duct. <Ref. to IN(H6DO)-12, REMOVAL, Air Intake Duct.>
5) Loosen the clamp (A) which connects the air intake boot.
6) Loosen the bolt (B) securing the air intake boot to the collector cover bracket.

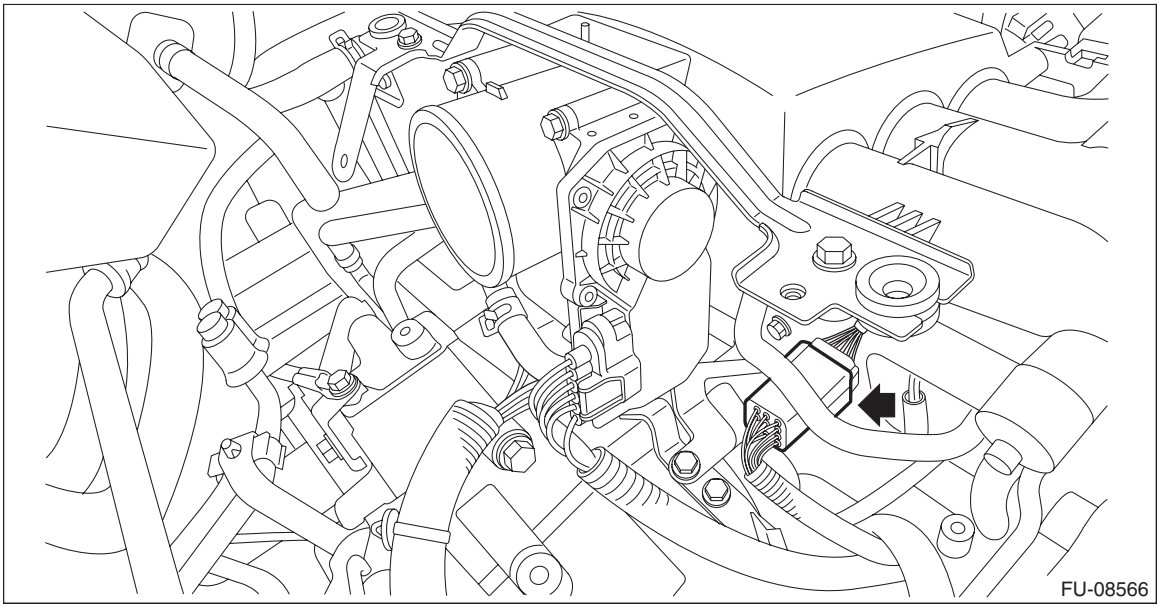
7) Remove the air intake boot from the throttle body, and move the air intake boot to the left side wheel apron.



8) Disconnect the following connectors.
- Transmission harness connectors
- Transmission radio ground terminal
- Inhibitor harness connector

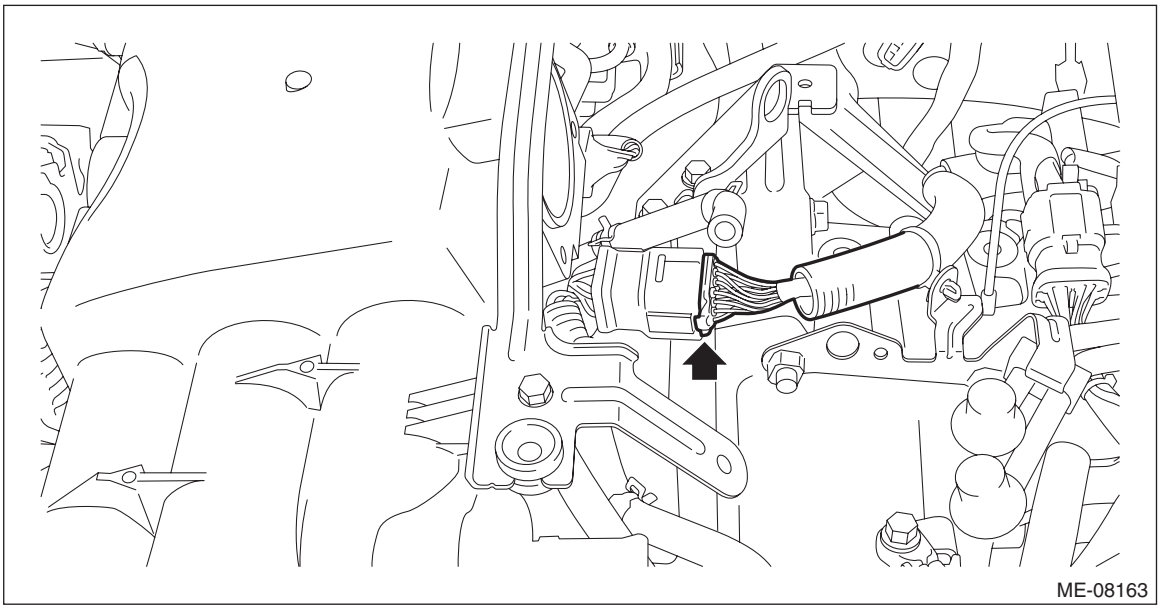


(A) Transmission harness connectors
(B) Transmission radio ground terminal
(C) Inhibitor harness connector

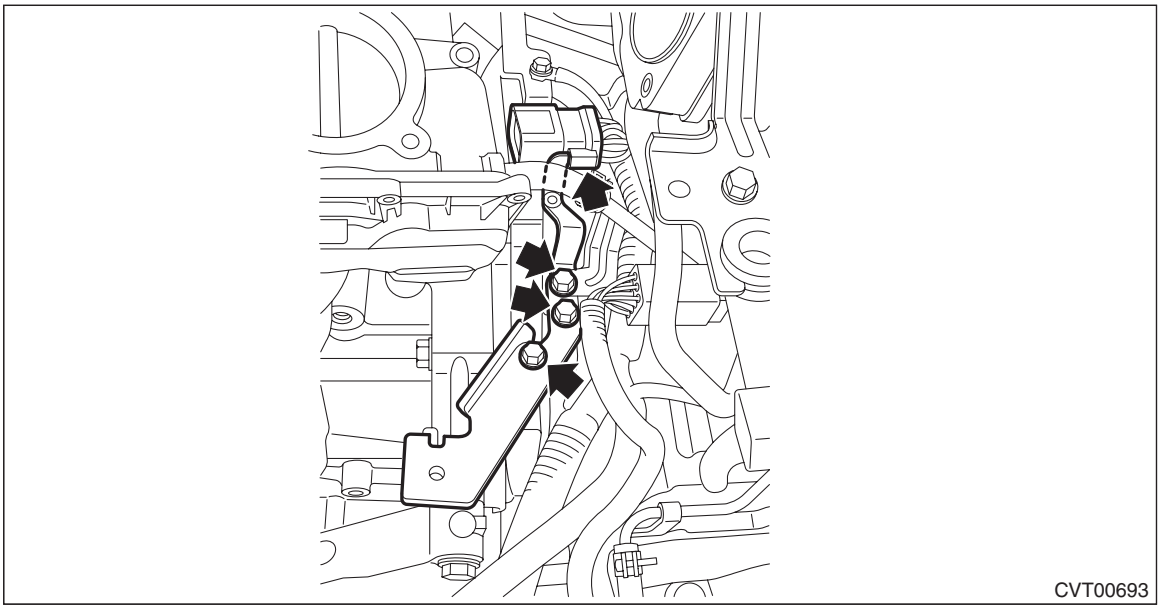


9) Remove the harness stay from the transmission.

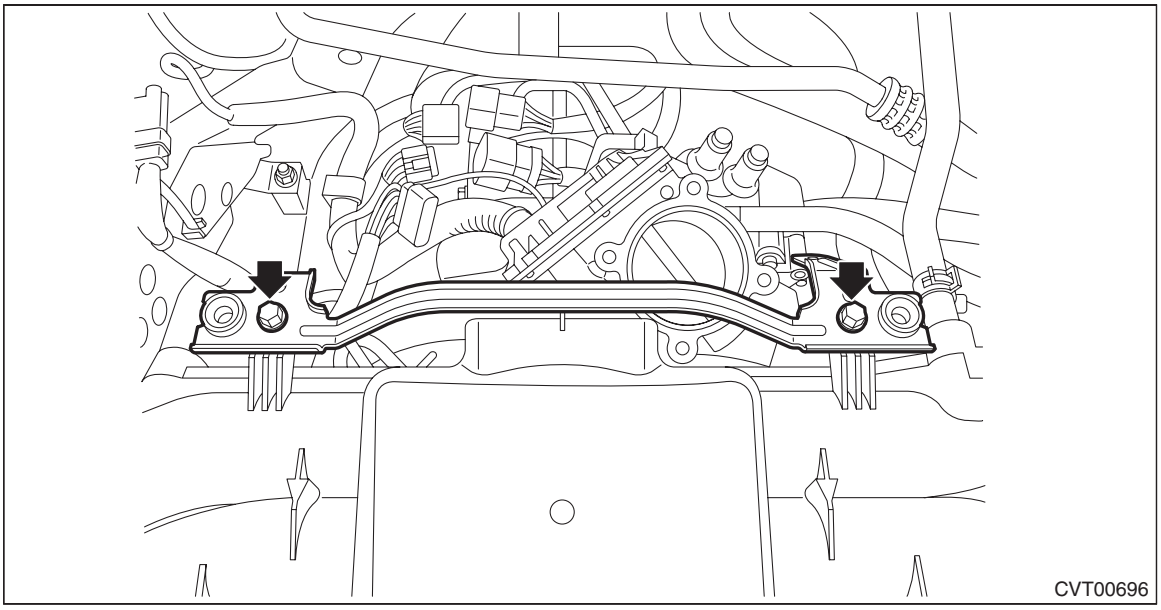
10) Separate the ground cable clip to remove the battery cable bracket.



11) Disconnect the engine harness connector.

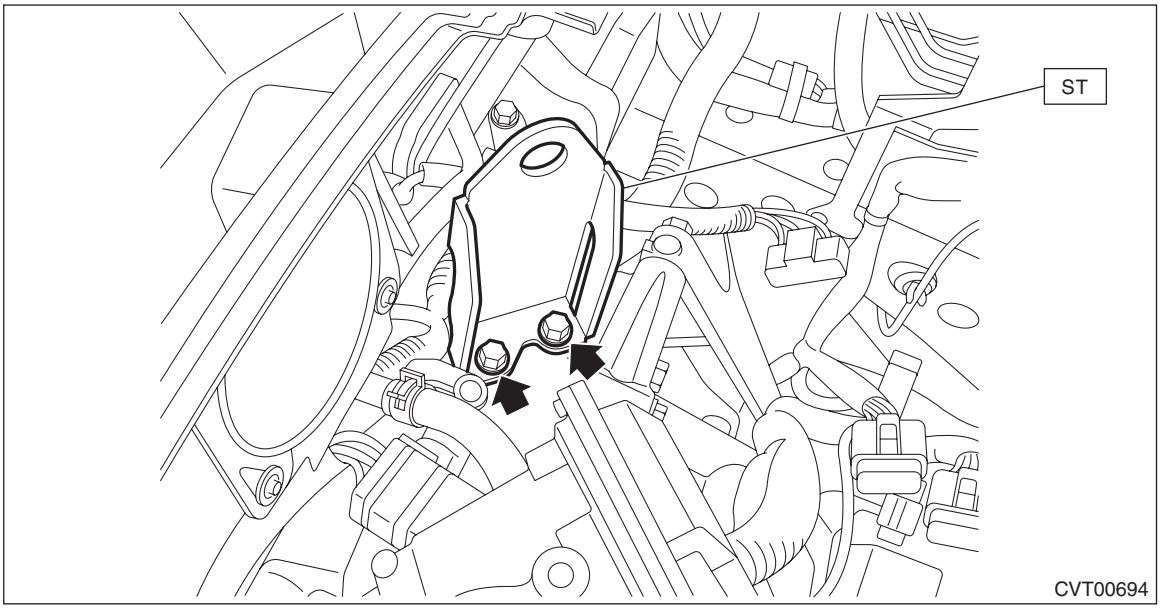


12) Remove the throttle body with the engine coolant hose connected. <Ref. to FU(H6DO)-19, REMOVAL, Throttle Body.>

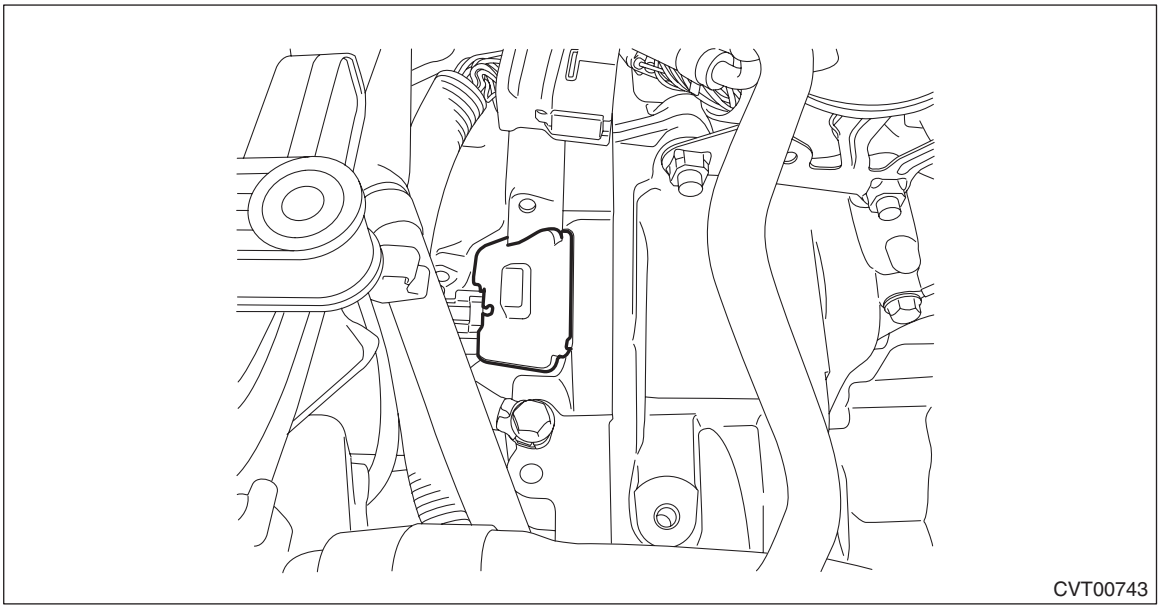


13) Disconnect the oxygen sensor harness connector.

14) Disconnect the harness connector, and then remove the engine hanger rear.

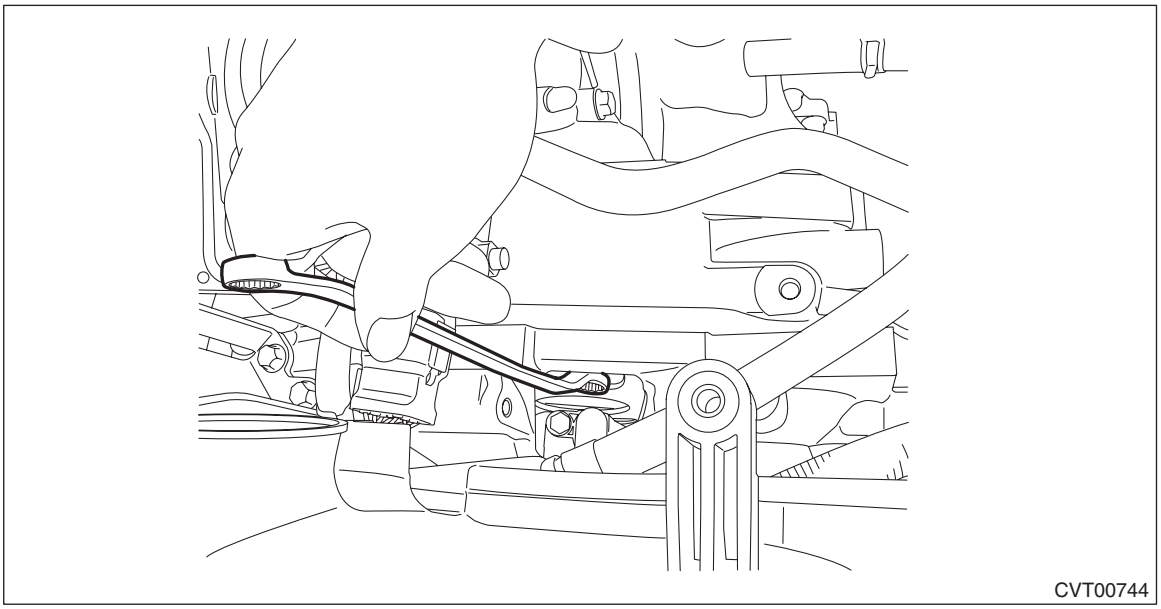


15) Remove the collector cover bracket.

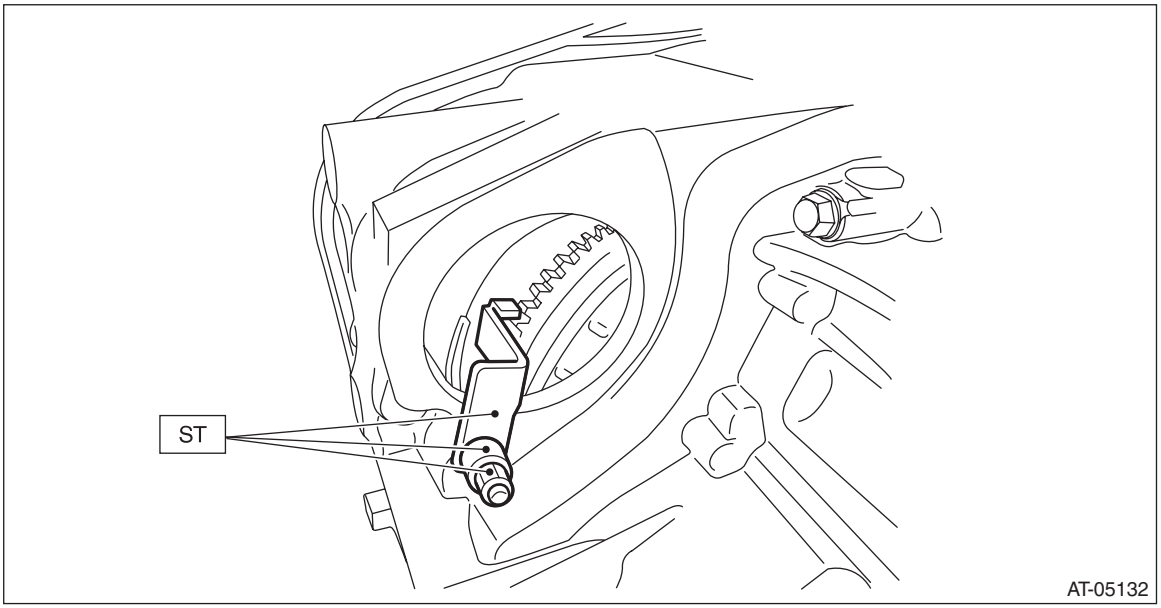


16) Attach the ST to the engine.

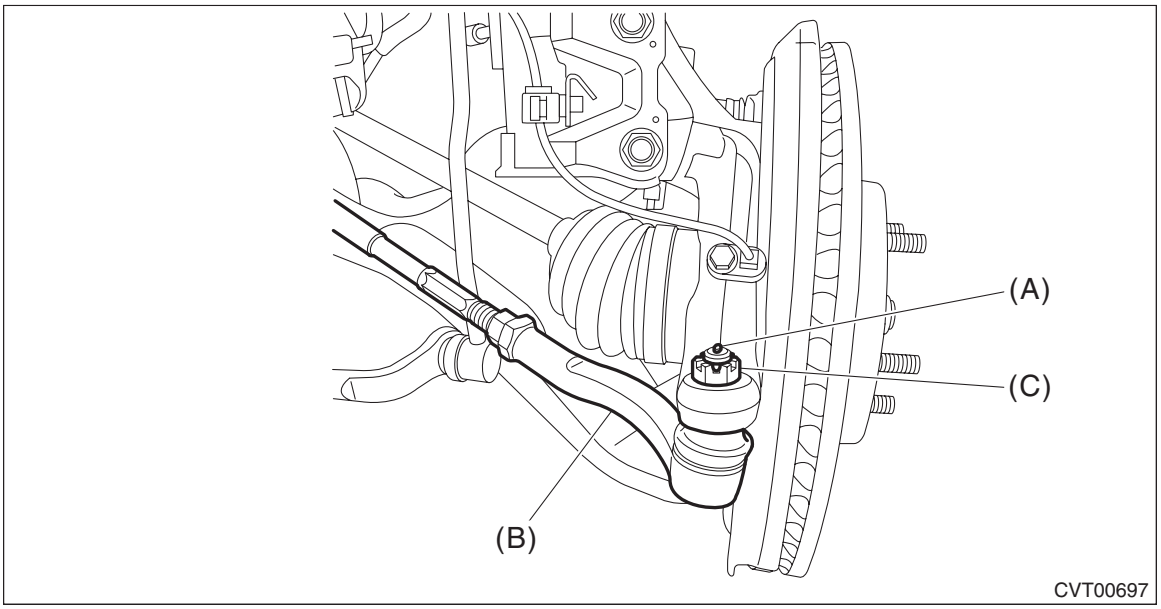
Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)
ST 18360AA020 HANGER



17) Remove the starter. <Ref. to SC(H6DO)-7, REMOVAL, Starter.>
18) Remove the service hole plug.

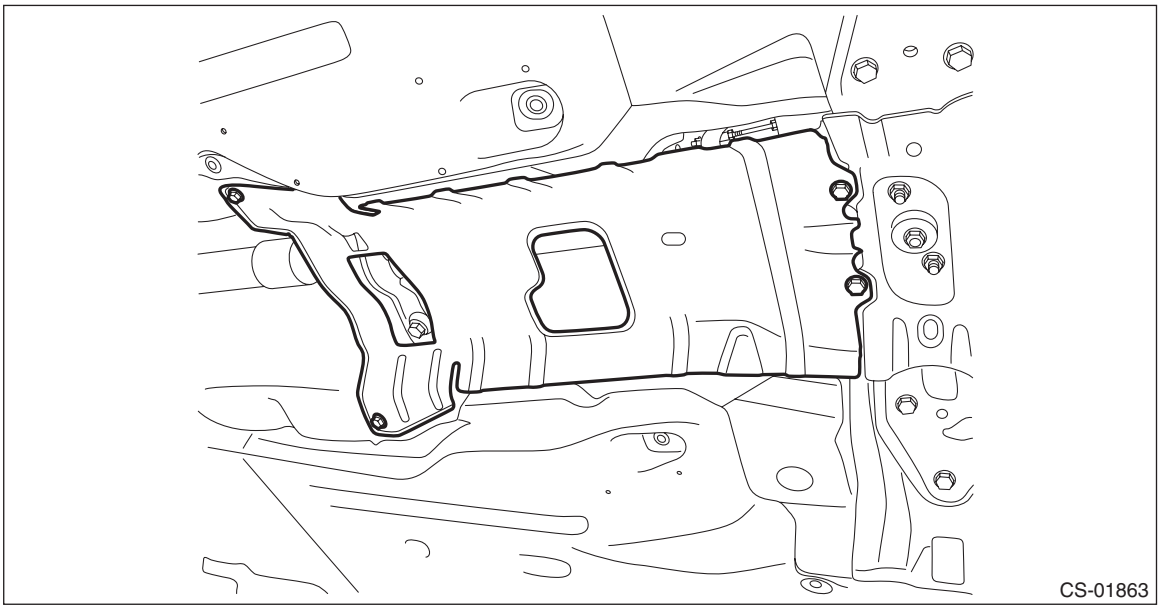


19) Remove the four bolts combining the torque converter and drive plate while rotating the crank pulley a little at a time in the same direction as engine revolution.

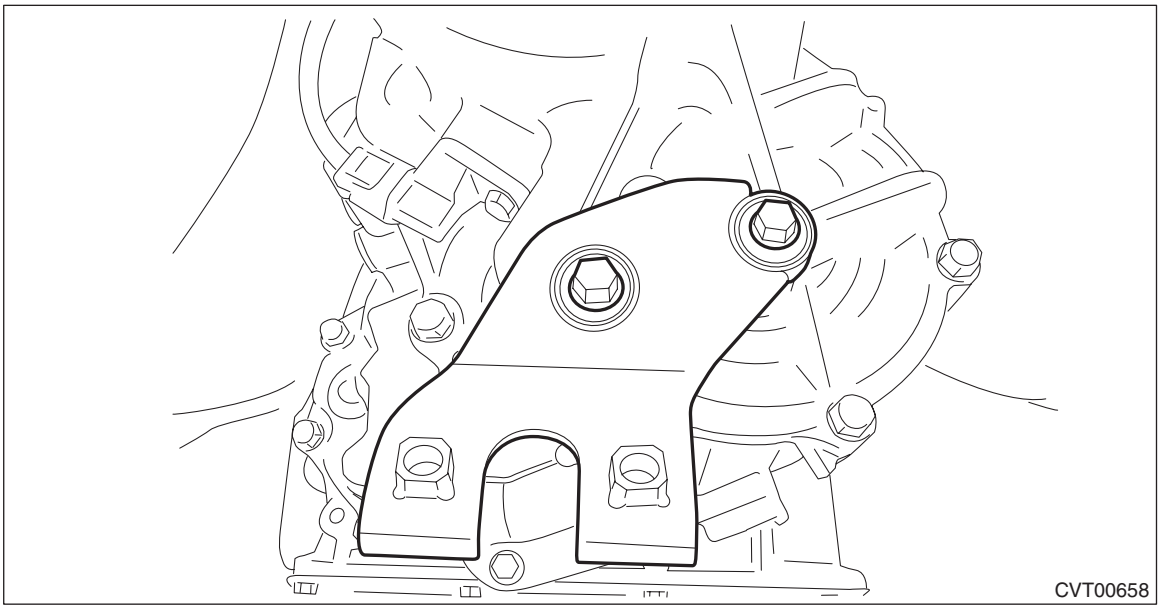


CAUTION:
- **Be careful not to drop bolts into converter housing.**
- **Be careful not to damage the mounting bolts.**

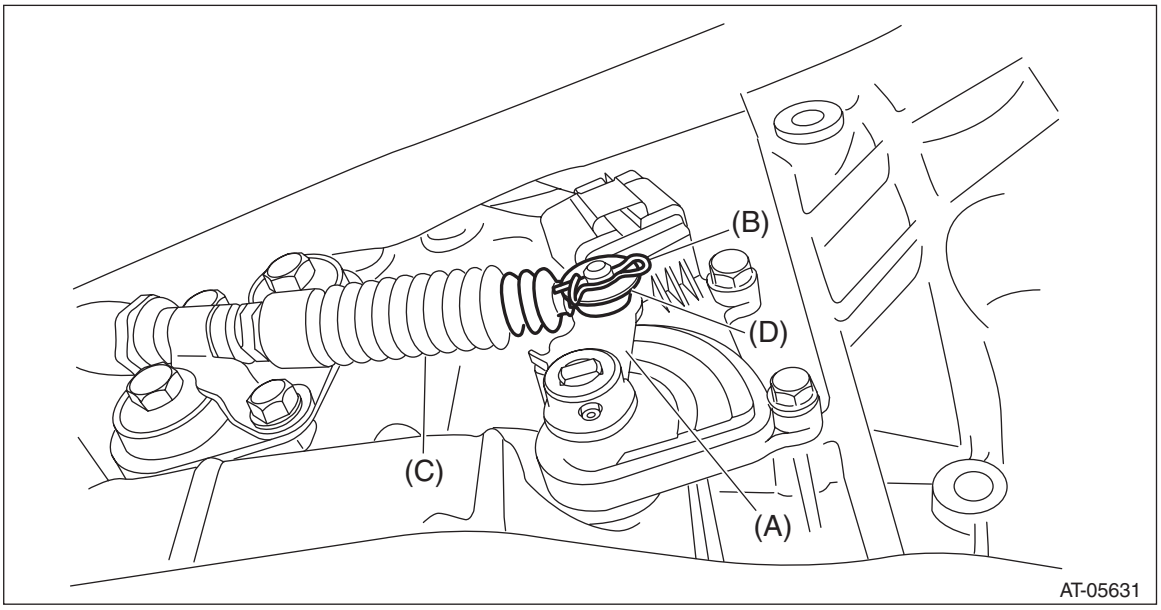
20) Make sure the torque converter moves freely by rotating with finger through the starter installation hole.
21) Attach the ST to the converter case.
ST 498277200 STOPPER SET



22) After pulling off the cotter pin and removing the castle nut, use a puller to remove the tie-rod end from the knuckle arm.

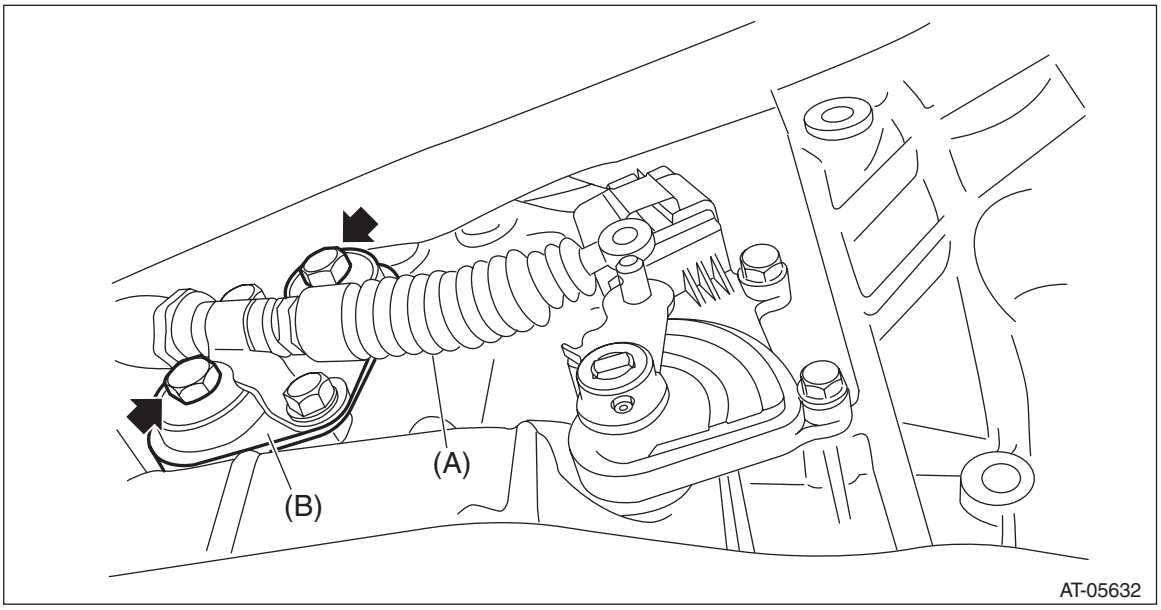


(A) Cotter pin
(B) Tie-rod end
(C) Castle nut

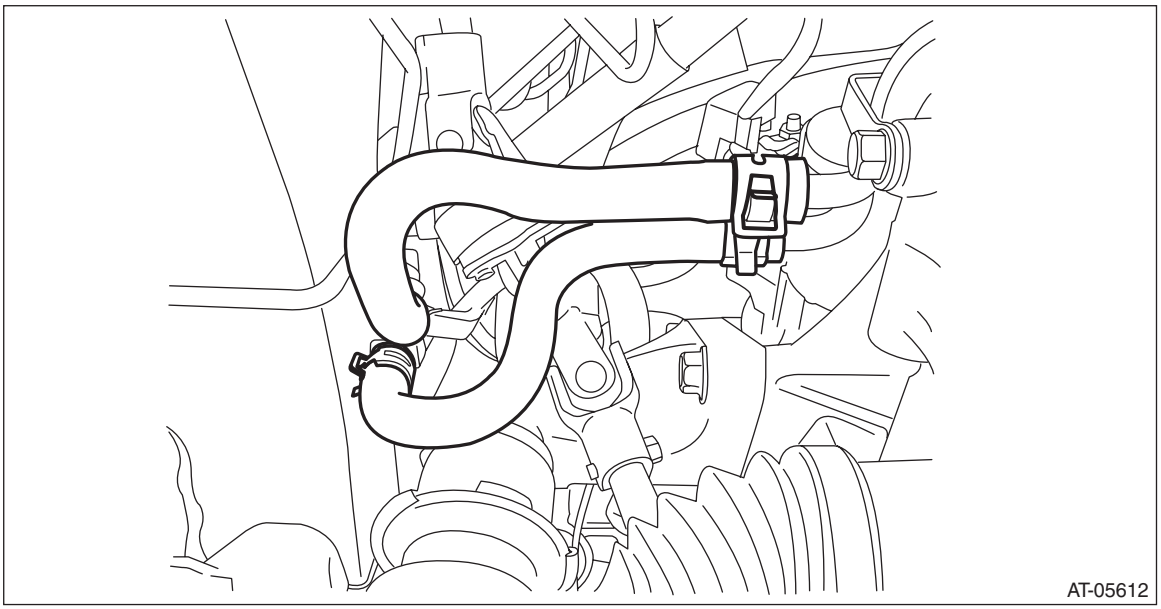


23) Lift up the vehicle.
24) Remove the front under cover. <Ref. to EI-28, REMOVAL, Front Under Cover.>
25) Remove the front exhaust pipe. <Ref. to EX(H6DO)-6, REMOVAL, Front Exhaust Pipe.>
26) Remove the center exhaust cover.

27) Remove the exhaust hanger bracket.

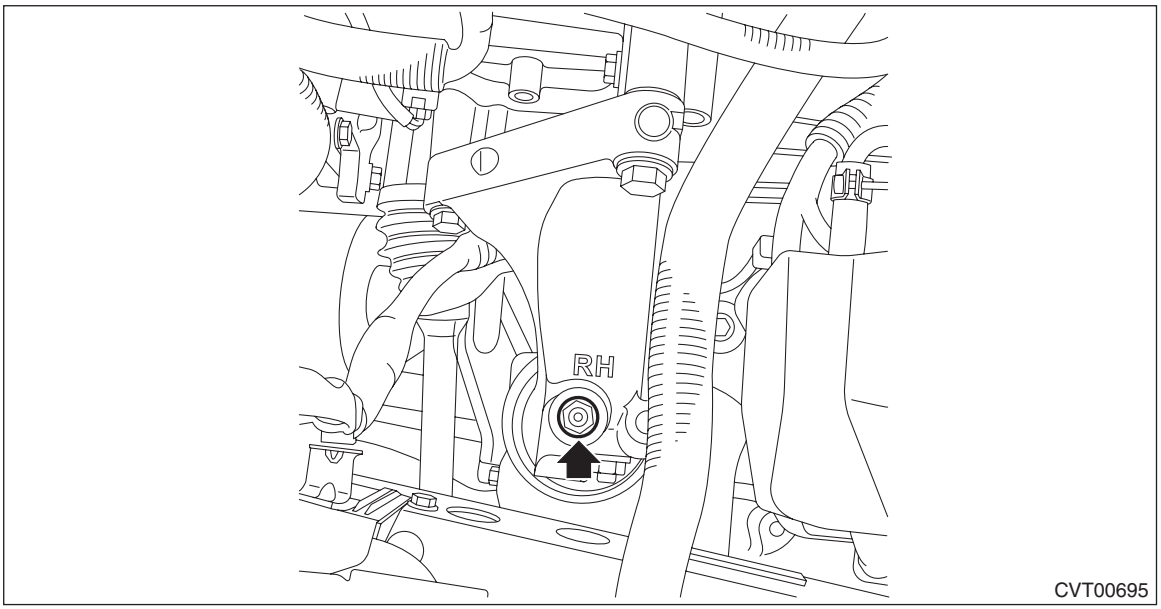


28) Remove the CVTF drain plug to drain CVTF. <Ref. to CVT(TR690)-40, REPLACEMENT, CVTF.>
29) Remove the snap pin and washer from shifter arm and remove the select cable from shifter arm.



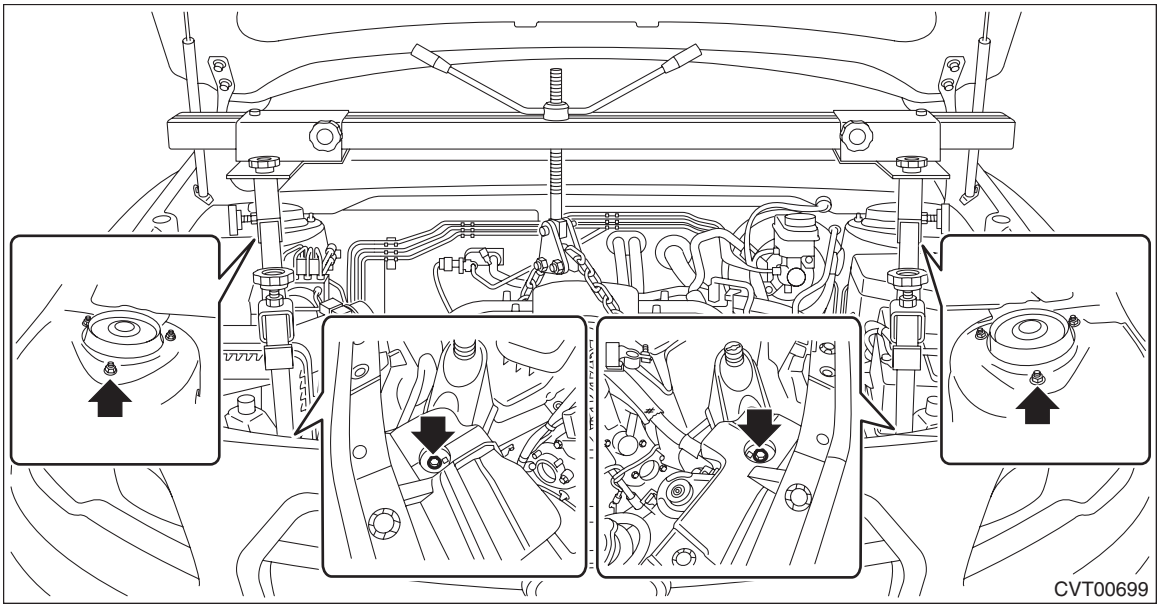
(A) Shifter arm
(B) Snap pin
(C) Select cable
(D) Washer

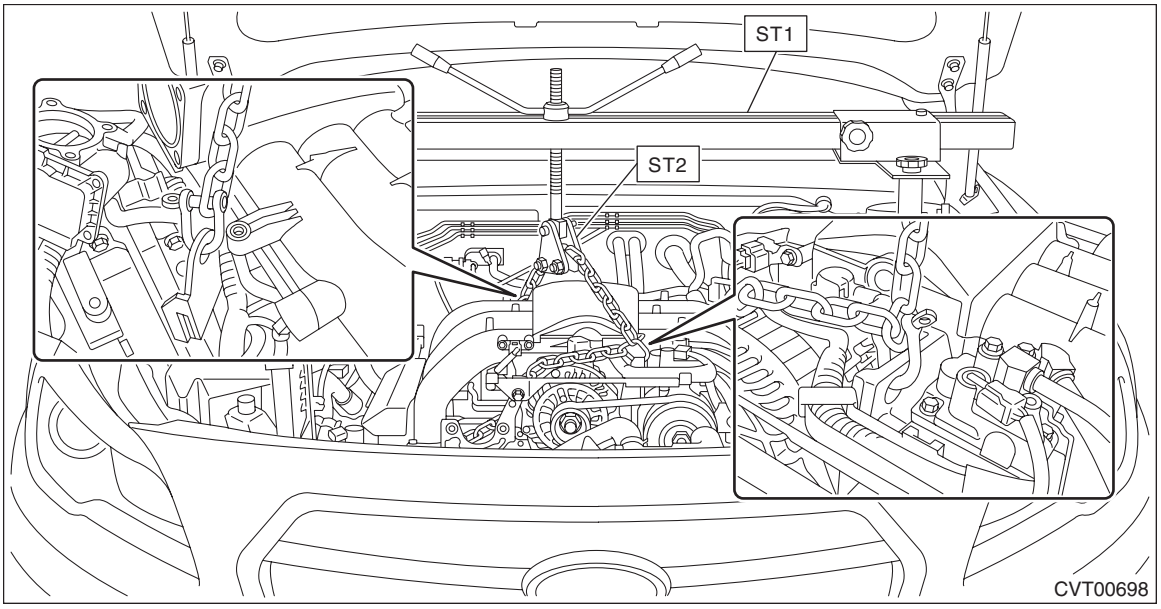
30) Remove the plate assembly from the transmission case.



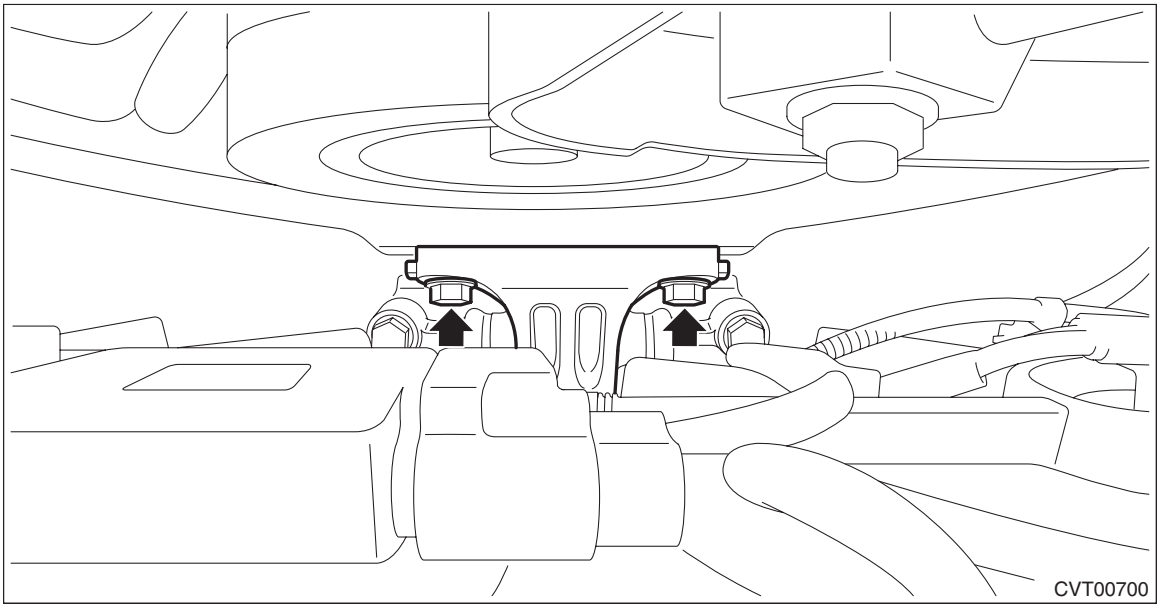
(A) Select cable
(B) Plate ASSY

31) Drain differential gear oil. <Ref. to CVT(TR690)-44, REPLACEMENT, Differential Gear Oil.>
32) Remove the CVTF CVT inlet hose and CVTF CVT outlet hose.



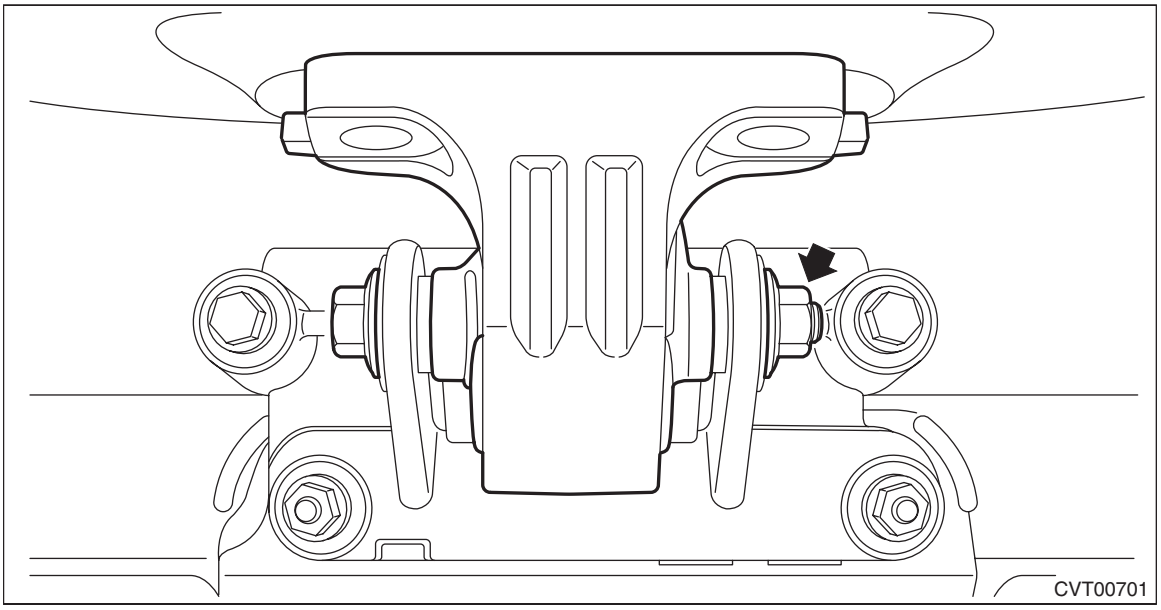


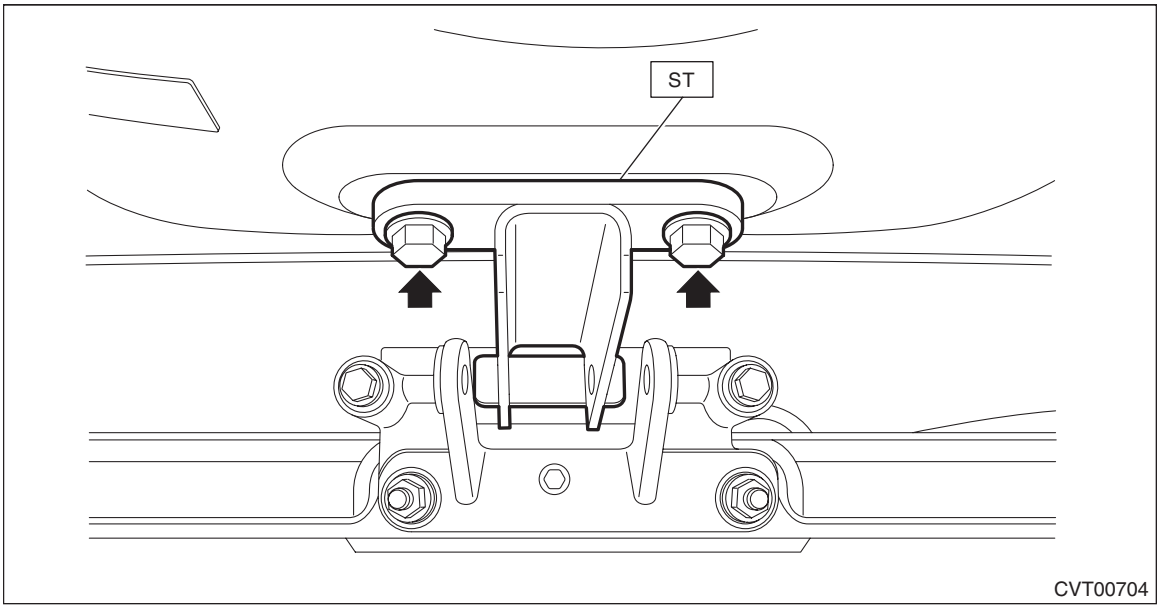
33) Remove the universal joint. <Ref. to PS-14, REMOVAL, Universal Joint.>
34) Remove the propeller shaft. <Ref. to DS-10, REMOVAL, Propeller Shaft.>
35) Remove the stabilizer link.
36) Disconnect the lower arm ball joint and housing.
37) Pull out the front drive shaft from transmission using a crowbar.
38) Holding the joint of front drive shaft from transmission side, pull out the drive shaft from transmission with care not to stretch the boot.
39) Lower the vehicle.
40) Remove the nuts from left and right transmission mounting brackets.



41) Set the ST1 and ST2 to vehicle.
ST1 99099AJ000 ENGINE HANGER
ST2 99099AJ010 CHAIN BALANCER

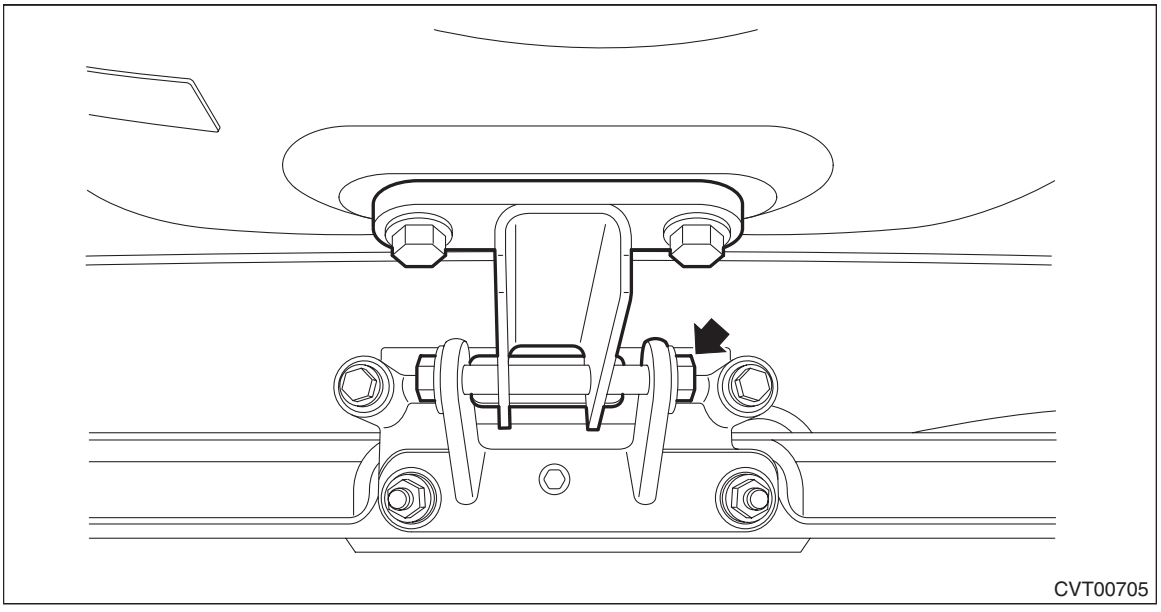
CAUTION:
- **Set so that the chain sling does not contact the engine parts.**
- **Install a bolt of ϕ8 mm (0.3 in) at the locations shown in the figure, and place the front side arms of ST (ENGINE HANGER).**
- **Set the rear arms of ST (ENGINE HANGER) at the locations shown in the figure.**





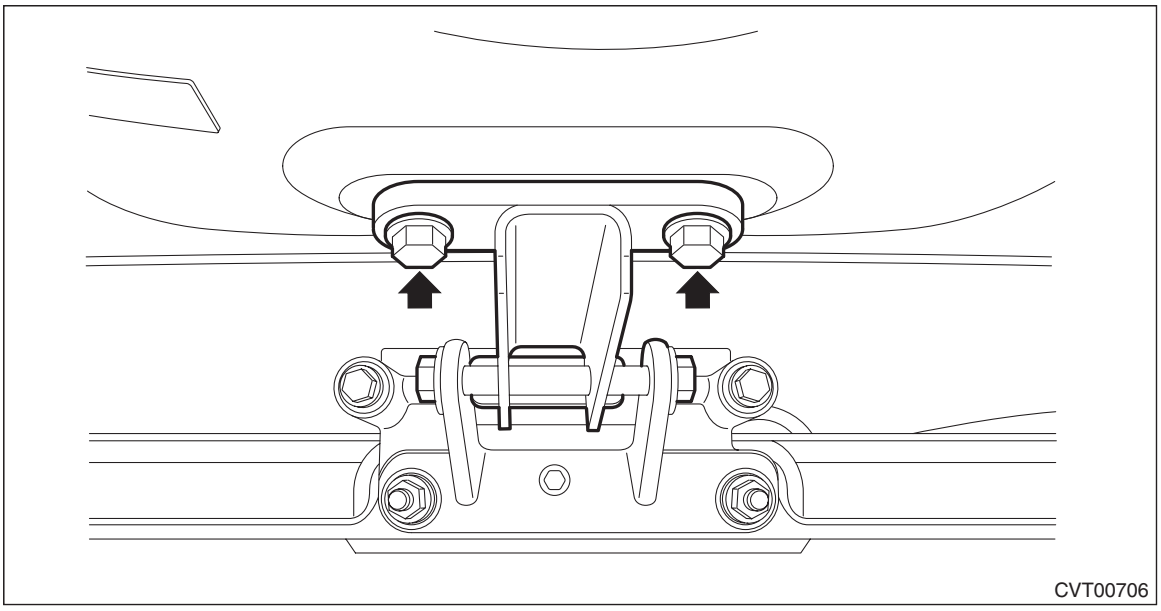
42) Lift the engine slightly and remove the bolts of front cushion rubber.

43) Remove the front cushion rubbers.



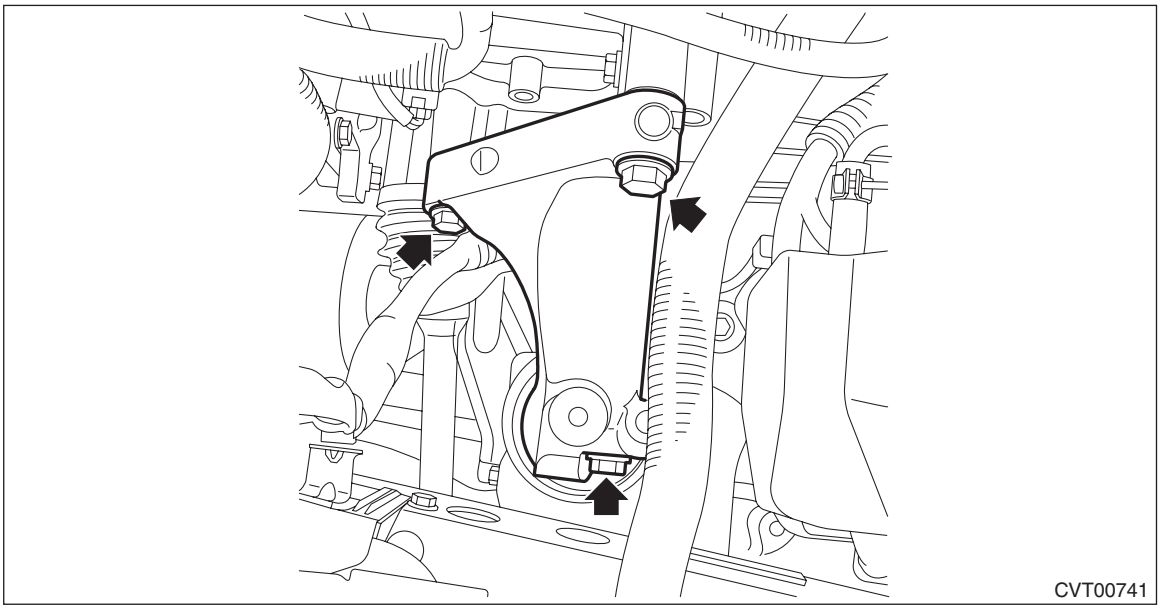
44) Temporarily attach ST by using two bolts.
ST 41099AJ010 SPECIAL TOOL H6

45) Lift up the engine unit high enough to install the bolt and nut to vehicle.



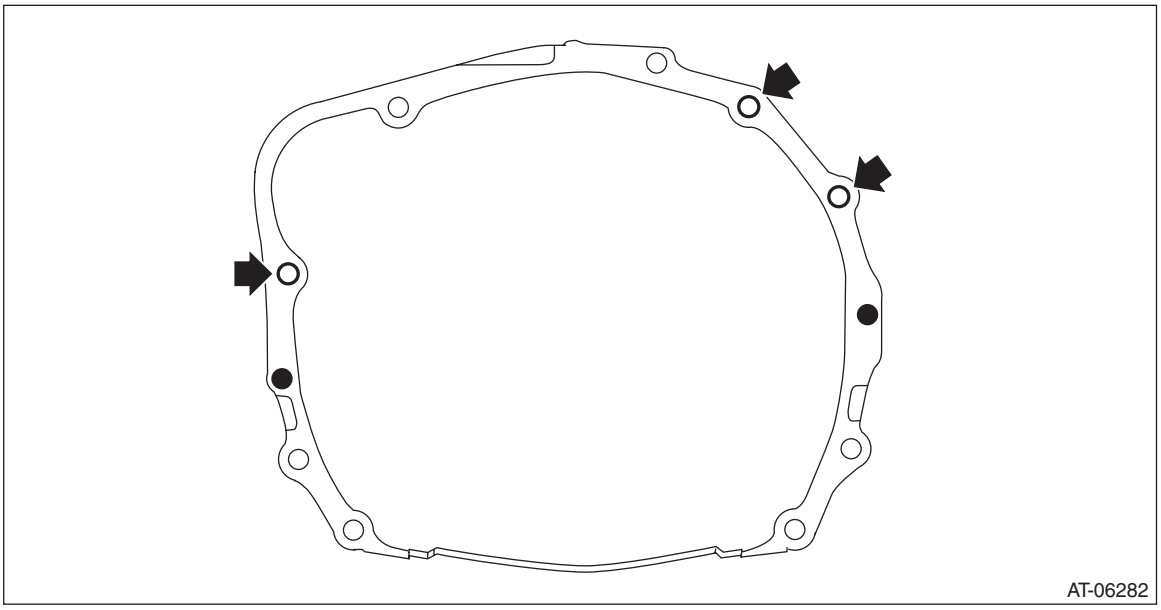
CAUTION:
Do not lift up higher than enough level to install the ST to avoid damage to the hoses and pipes inside the engine room.

NOTE:
If it is difficult to pull out the stud bolt from transmission mounting bracket, slightly shake the engine unit while lifting up.

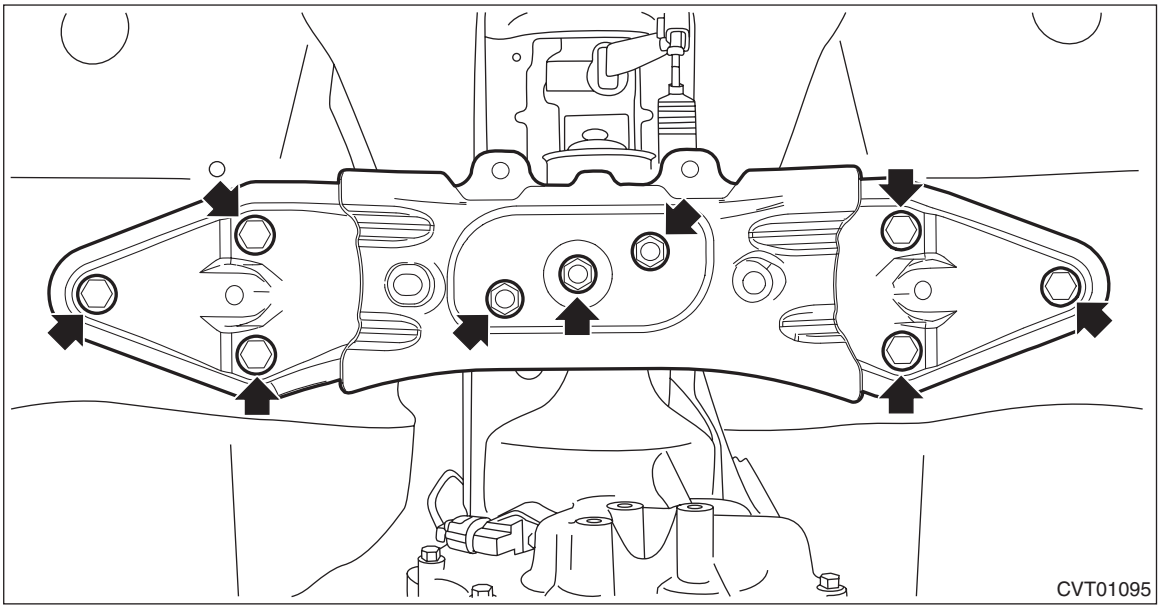


46) Tighten the mounting bolts on the engine side.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

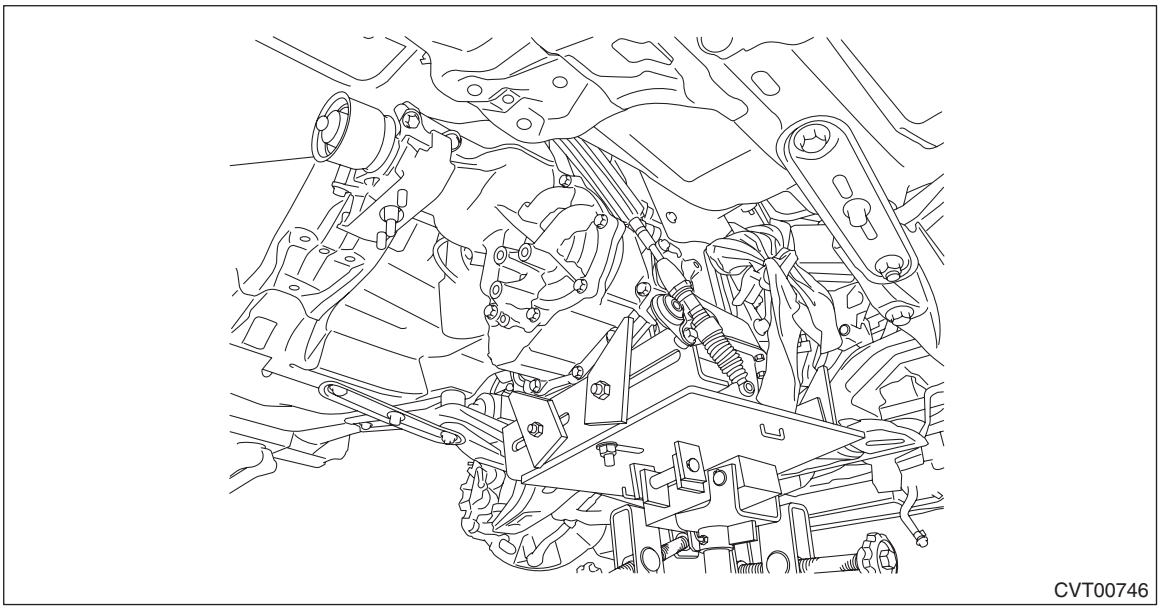


47) Remove the ST (ENGINE HANGER).
48) Remove the left and right transmission mounting brackets.

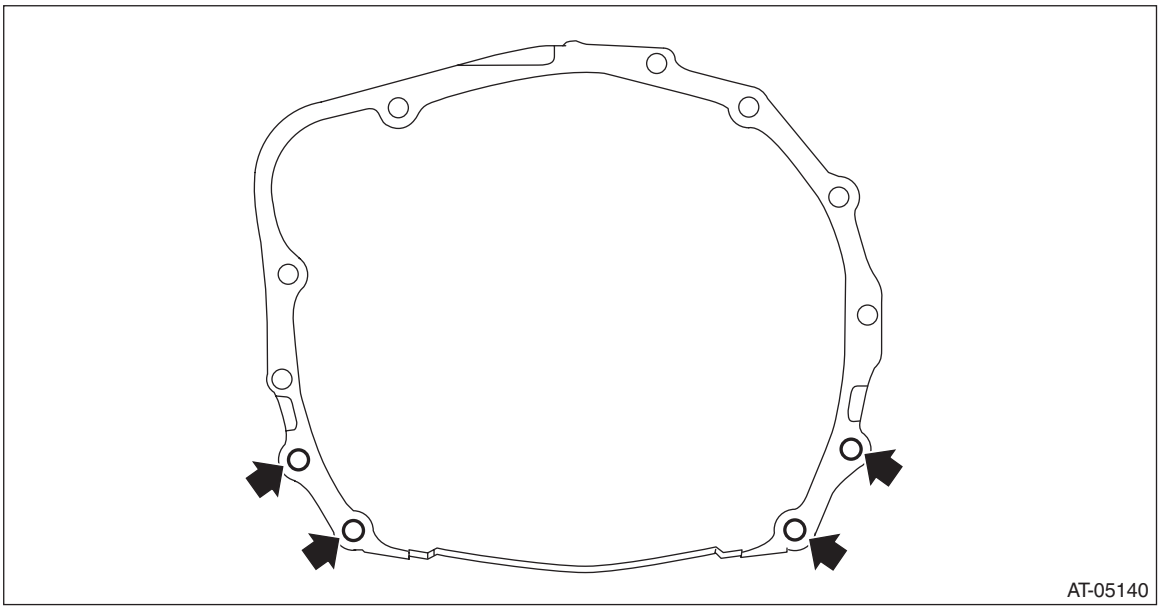


NOTE:
First, remove the transmission mounting bracket on the right side of vehicle, and then tilt the engine unit to remove the left transmission mounting bracket.

49) Remove the three transmission connecting bolts.



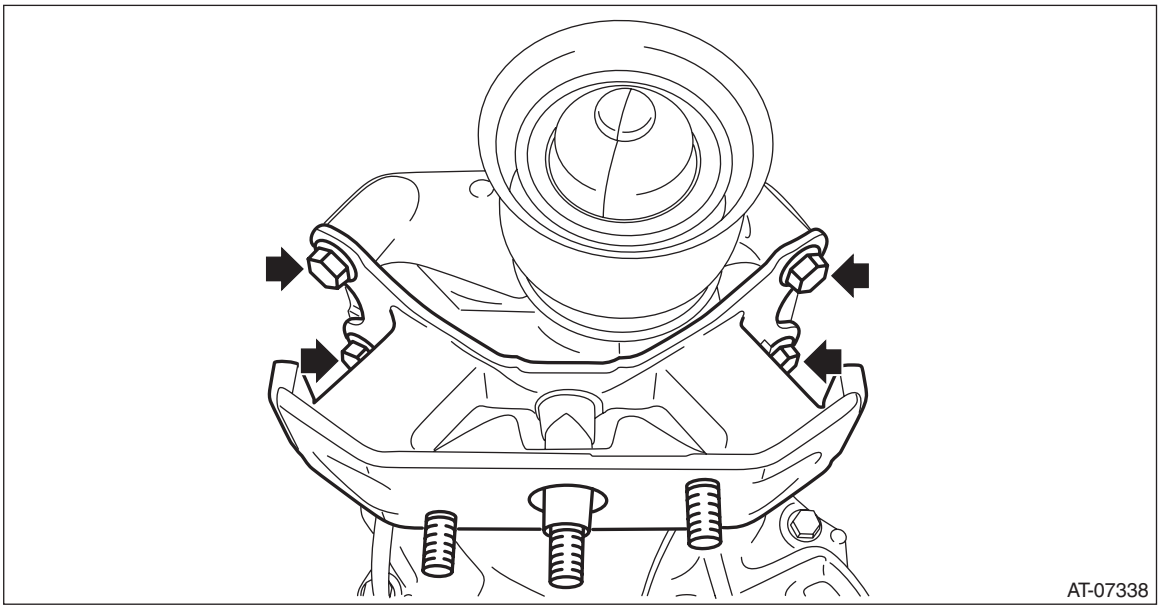
50) Set the ST (ENGINE HANGER) again to loosen the chain sling.
51) Lift up the vehicle.
52) Set the transmission jack under the transmission.
53) Remove the rear crossmember.



54) Lower the transmission rear end (dust cover rear end).

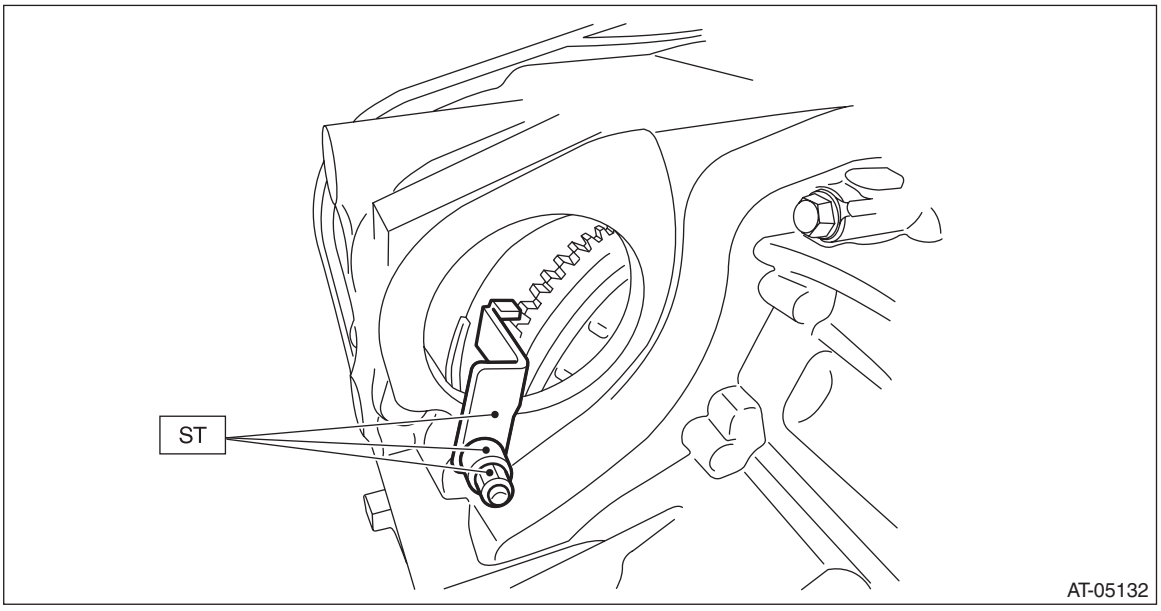
CAUTION:
When lowering the transmission rear end, be careful not to let the converter case and steering mechanical parts contact each other.

NOTE:
Lower the transmission rear end by approx. 80 mm (3.1 in) (reference).



55) Rotate the handle of ST (ENGINE HANGER) to apply tension to the chain sling.
56) Remove the two transmission connecting bolts and two nuts (lower side).

57) Remove the transmission assembly.

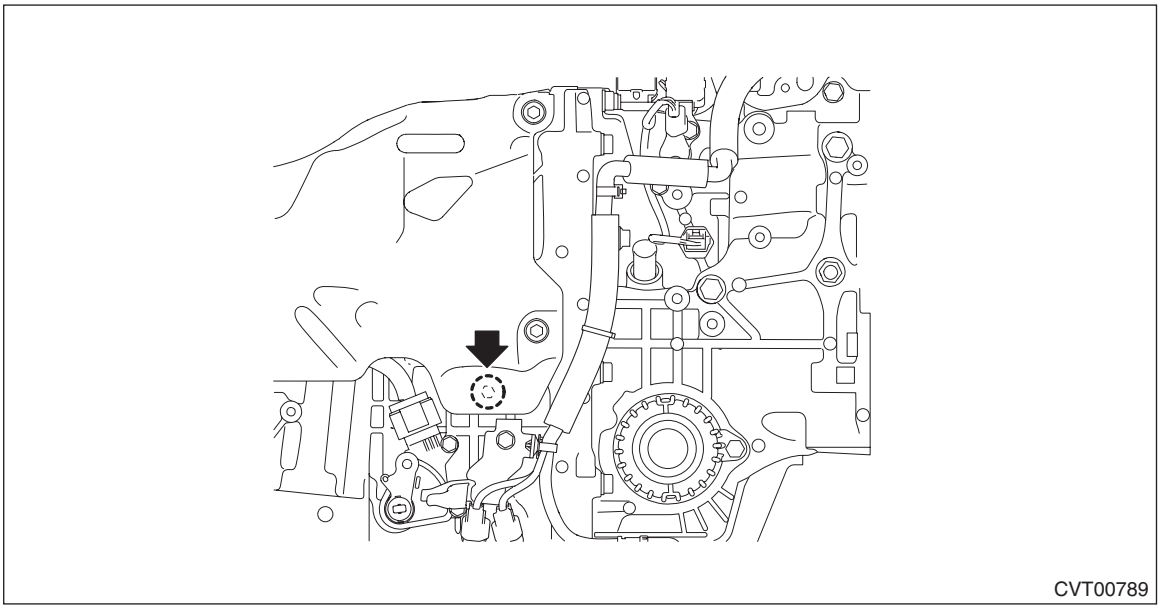


NOTE:
Remove it while moving the transmission jack up and down so that the engine and transmission remain directly aligned.

58) Remove the cushion rubber.

B: INSTALLATION

1) Attach the ST to converter case.
ST 498277200 STOPPER SET

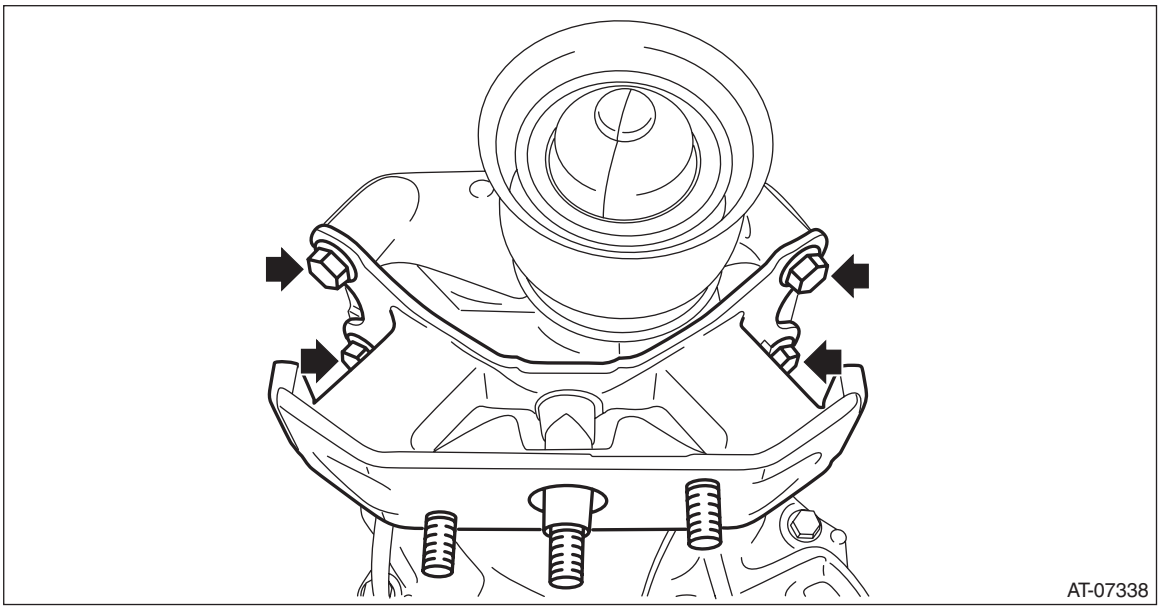


2) When completely overhauling the transmission, refill approx. 10 L (2.6 US qt, 8.8 Imp qt) of CVTF through the transmission right side plug, and install the plug.

CAUTION:
Always use specified CVTF. Using other fluid will cause malfunction. <Ref. to CVT(TR690)-4, HYDRAULIC CONTROL AND LUBRICATION, SPECIFICATION, General Description.>

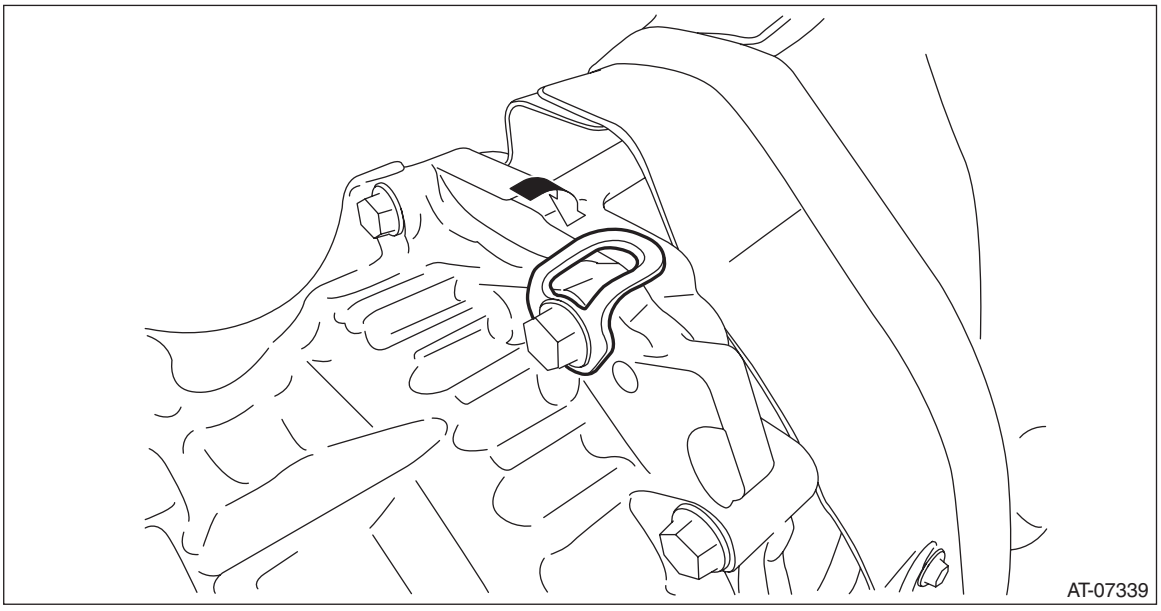
NOTE:
Use a new gasket.

Tightening torque:
35 N·m (3.6 kgf-m, 25.8 ft-lb)



3) Replace the front differential side retainer oil seal. <Ref. to CVT(TR690)-99, REPLACEMENT, Differential Side Retainer Oil Seal.>

NOTE:
- Be sure to replace the differential side retainer oil seal with a new part whenever the front drive shaft is removed from the transmission.
- When a new differential side retainer oil seal has been installed, replacement is not required.

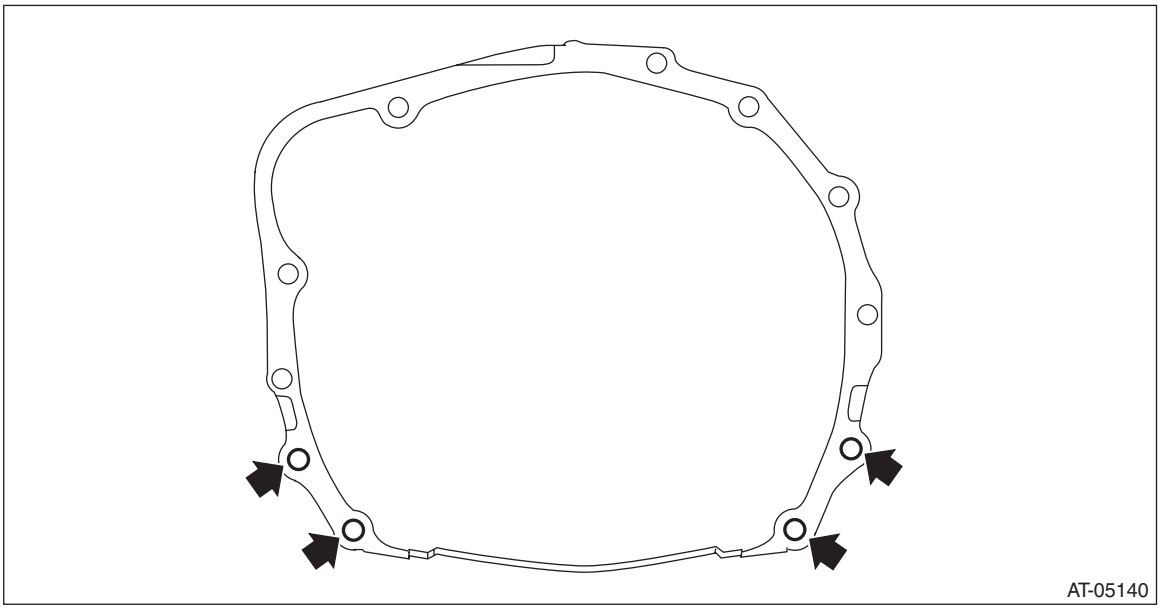


4) Install the cushion rubber on the transmission.

Tightening torque:
40 N·m (4.1 kgf-m, 29.5 ft-lb)

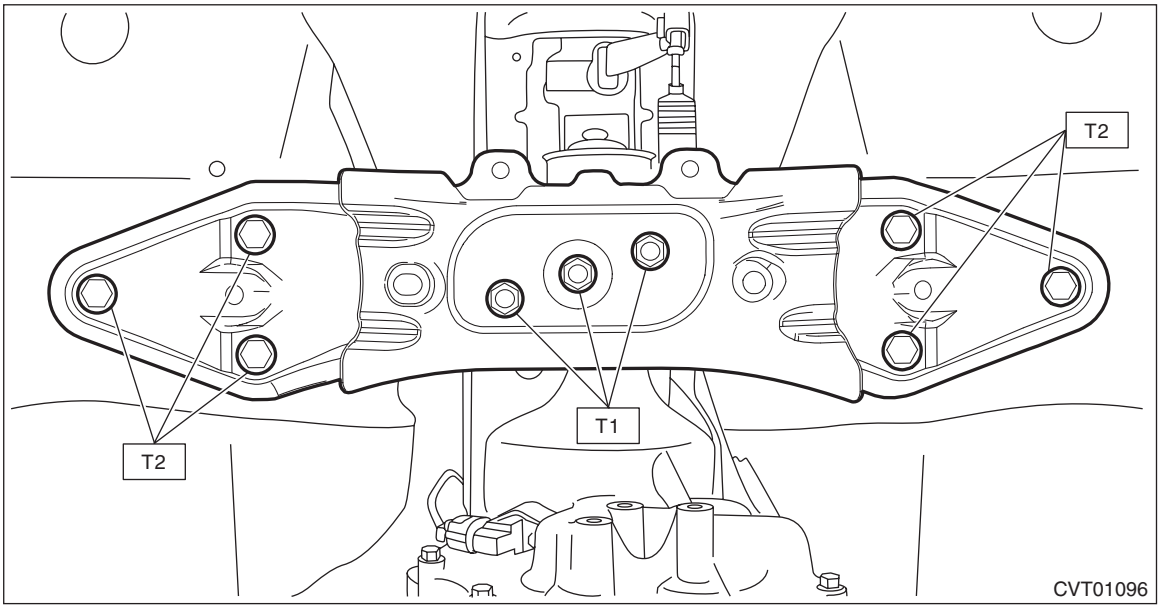
5) Mount the transmission onto the transmission jack.
6) Strike and bend the transmission hanger of transmission rear with a soft rubber hammer etc. so that it gets in contact with the transmission case.

CAUTION:
Do not apply extra overload or impact to the transmission case.



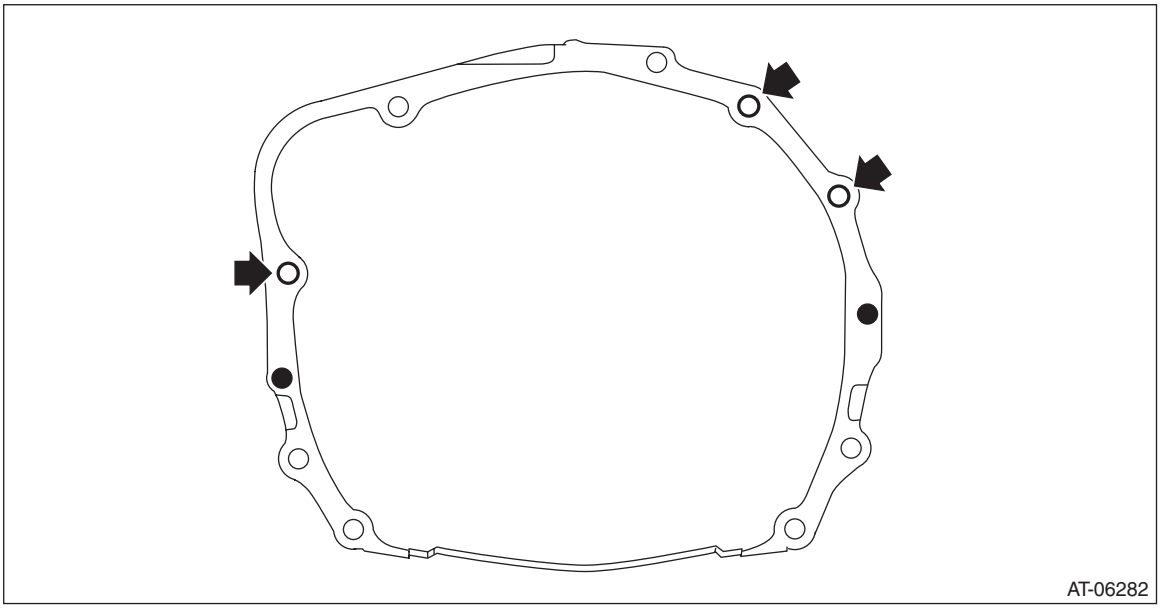
7) While lifting up the transmission gradually, install the transmission to the engine.

CAUTION:
This operation requires at least two persons.



NOTE:
Keep the engine level.
8) Install the two engine connecting bolts and two nuts (lower side).

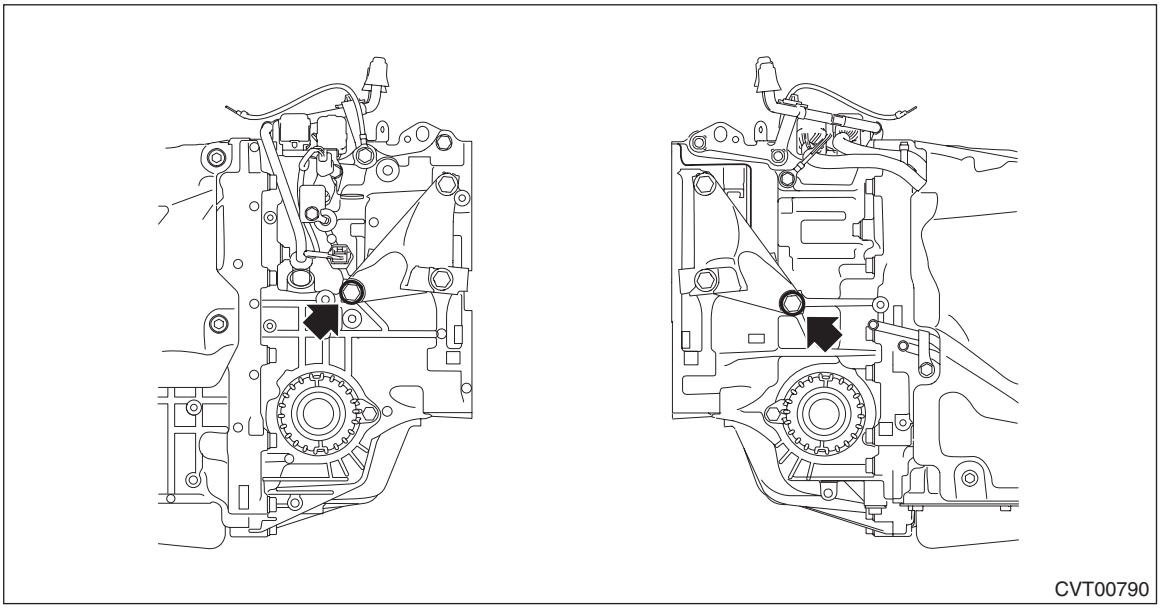
Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)



9) Secure the transmission rear crossmember to the vehicle body.

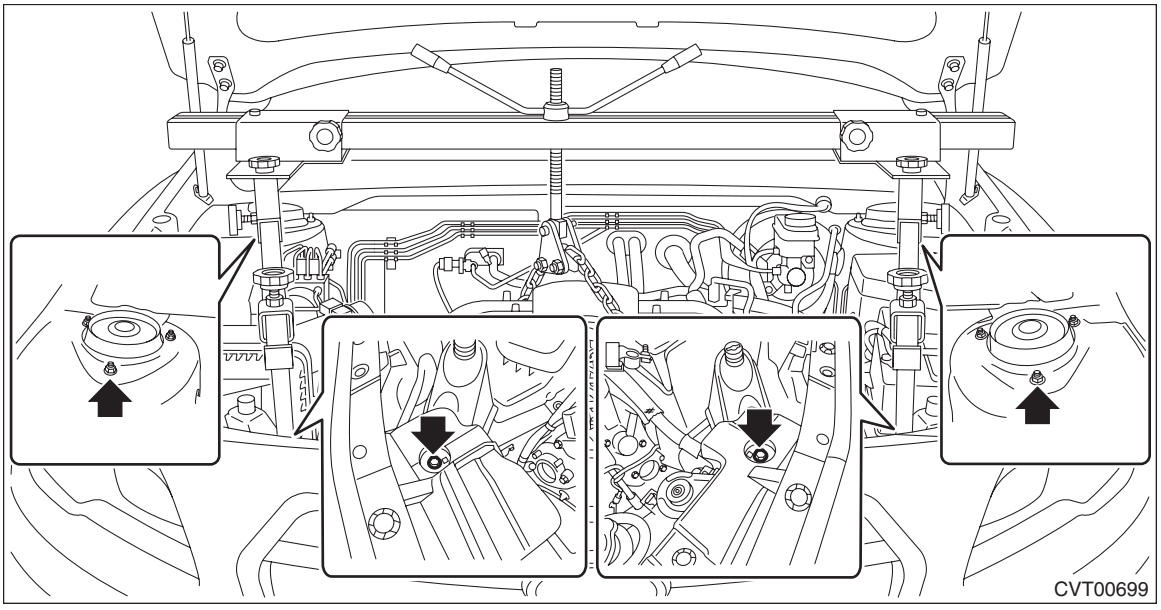
Tightening torque:
T1: 35 N·m (3.6 kgf-m, 25.8 ft-lb)
T2: 75 N·m (7.6 kgf-m, 55.3 ft-lb)

10) Remove the transmission jack.
11) Lower the vehicle.
12) Remove the ST (ENGINE HANGER).
13) Install the three engine mounting bolts (upper side).

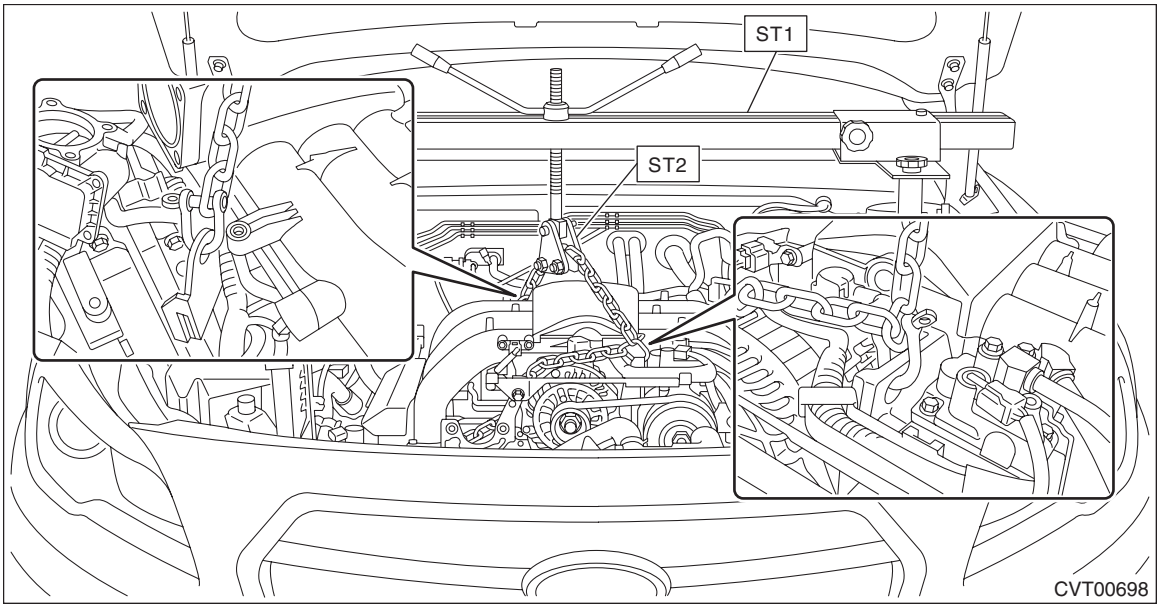


Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

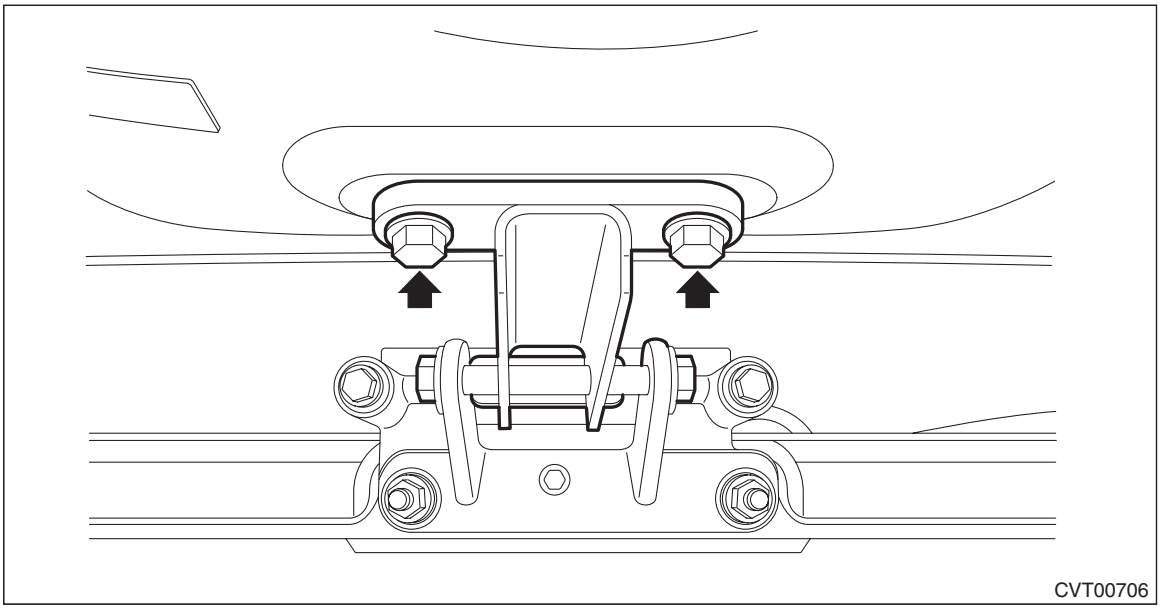
14) Install the left and right transmission mounting brackets.



NOTE:
- Install to the left side of vehicle first because the engine inclines to the left.
- Temporarily tighten the bolt arrowed in the figure.

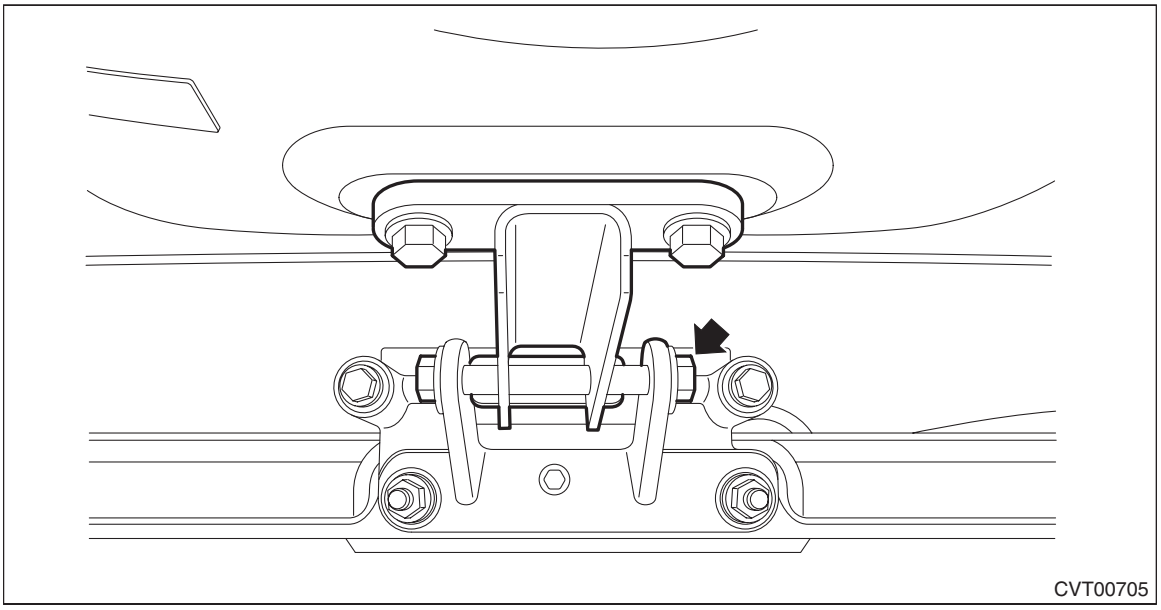


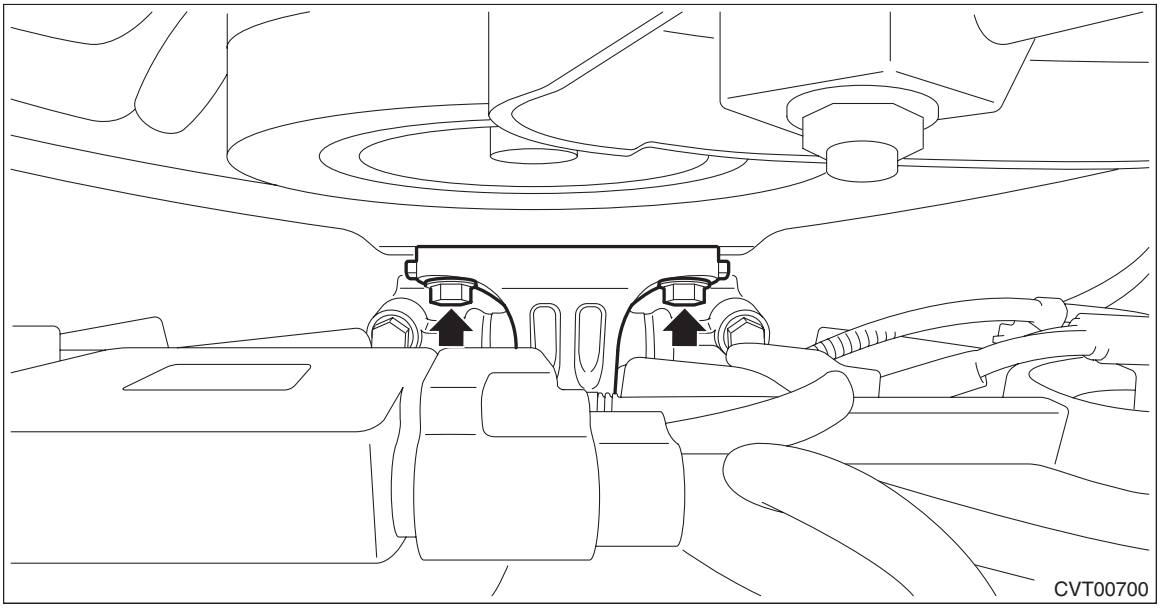
Tightening torque:
75 N·m (7.6 kgf-m, 55.3 ft-lb)



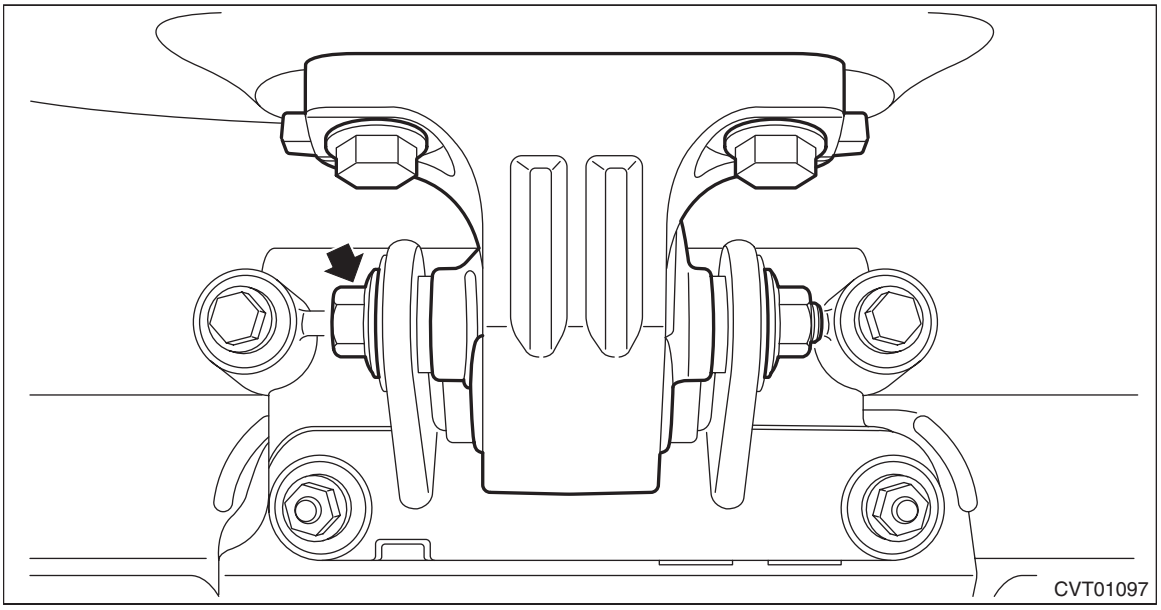
15) Set the ST1 and ST2 to the vehicle body and lift up the engine unit slightly.
ST1 99099AJ000 ENGINE HANGER
ST2 99099AJ010 CHAIN BALANCER

CAUTION:
- **Set so that the chain sling does not contact the engine parts.**
- **Install the M8 bolt at the locations shown in the figure, and place the front side arms of ST (ENGINE HANGER).**
- **Set the rear arms of ST (ENGINE HANGER) at the locations shown in the figure.**



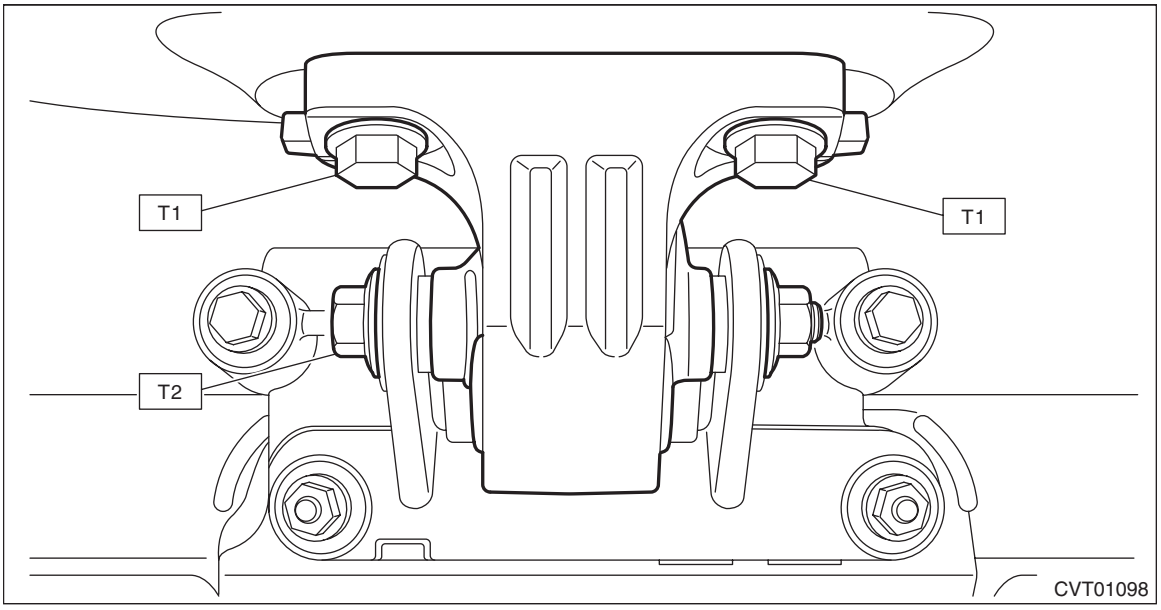


16) Remove the bolts from ST (SPECIAL TOOL H6).



17) Remove the bolt and nut to remove ST (SPECIAL TOOL H6).

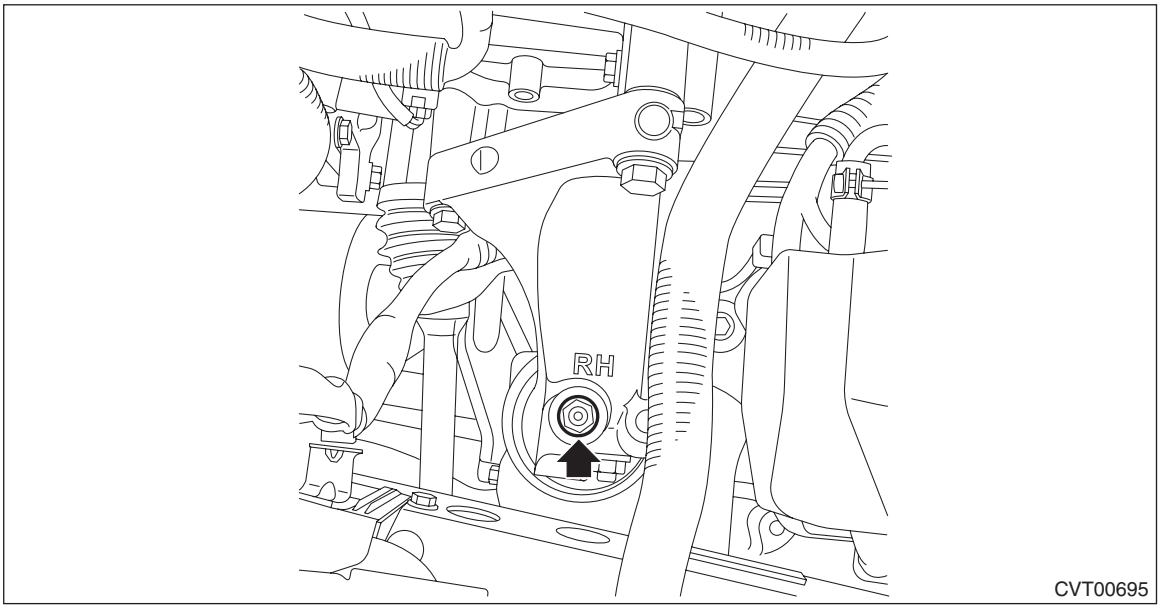
18) Temporarily attach the front cushion rubber with bolts.



19) Lift down the engine slightly and install the bolt and nut to the front cushion rubber.

20) Tighten the bolts and nuts of front cushion rubber.

NOTE:
Always start tightening from the bolts on the engine side.

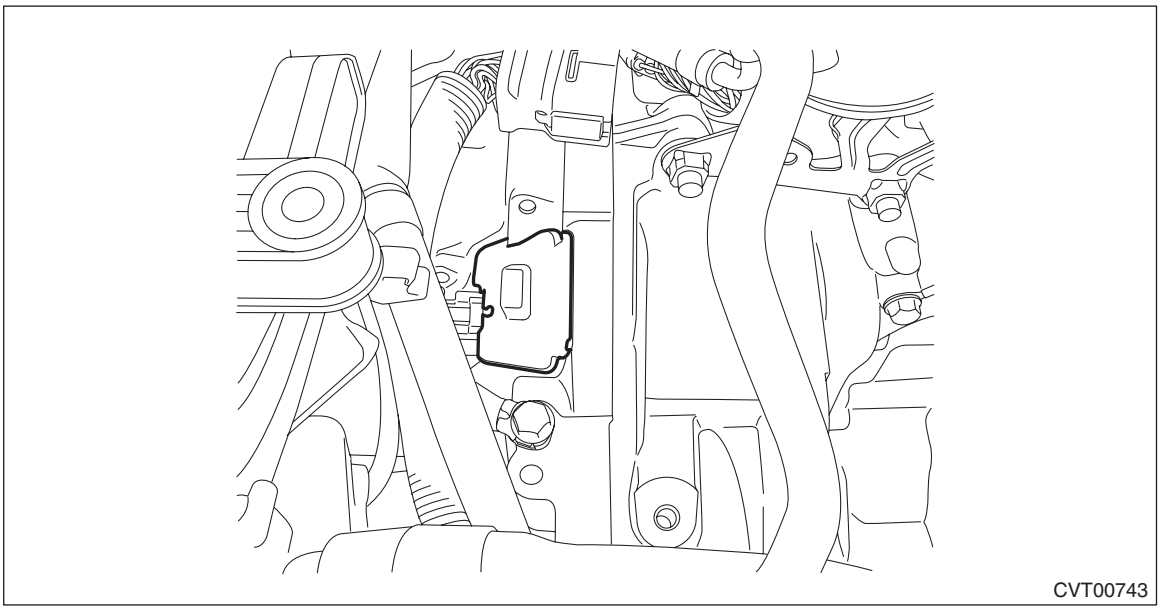


Tightening torque:
T1: 25 N·m (2.5 kgf-m, 18.4 ft-lb)
T2: 45 N·m (4.6 kgf-m, 33.2 ft-lb)

21) Remove the ST (ENGINE HANGER and CHAIN SLING).

CAUTION:
Be sure to remove the M8 bolt.
22) Install the nut to the transmission mounting bracket.

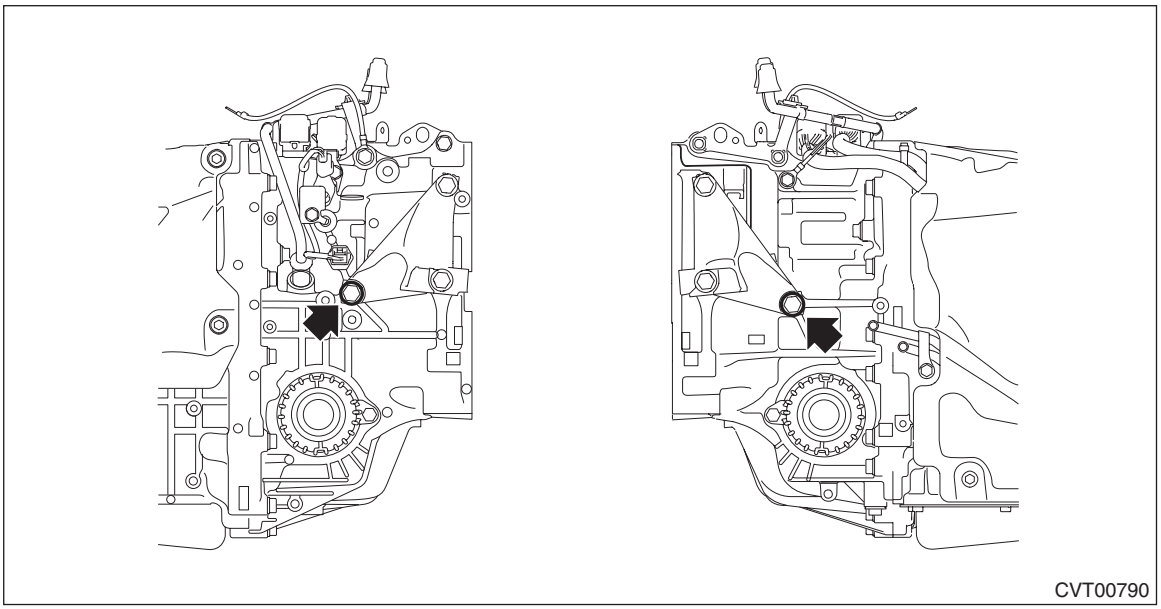
Tightening torque:
45 N·m (4.6 kgf-m, 33.2 ft-lb)



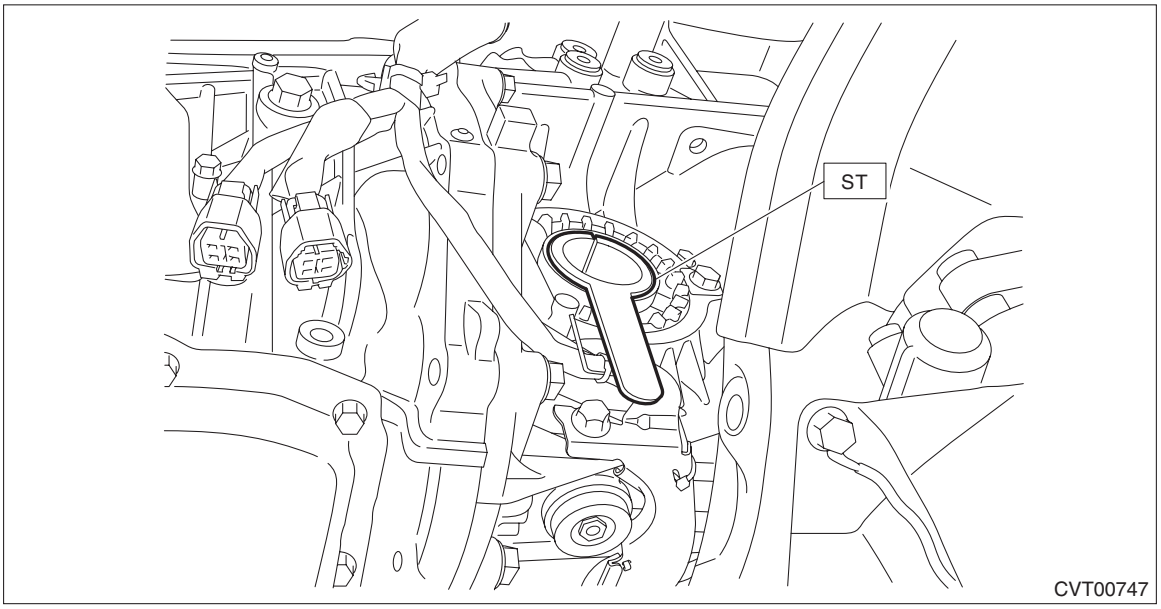
23) Remove the ST (STOPPER SET) from converter case.
24) Match the torque converter screw hole with drive plate hole to install the bolt.

CAUTION:
- **Do not drop the mounting bolt in the converter housing.**
- **Do not damage the mounting bolt.**

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)
25) Install the remaining three bolts by rotating the crank pulley a little at a time in the same direction as engine revolution.



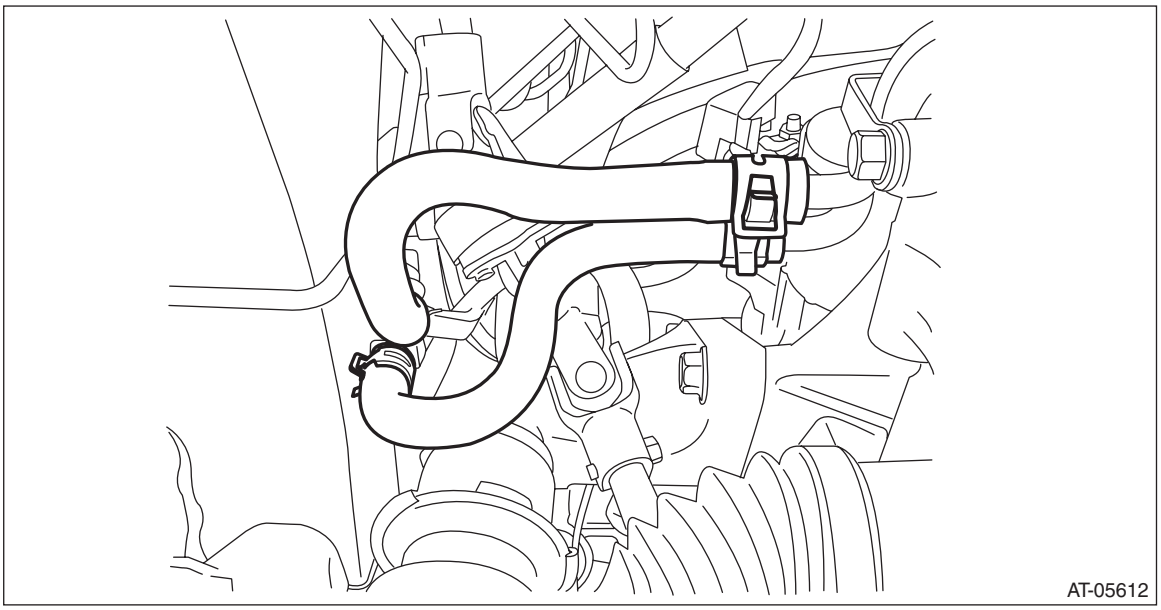
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)
26) Install the service hole plug.



27) Install the starter. <Ref. to SC(H6DO)-9, INSTALLATION, Starter.>
28) Lift up the vehicle.

29) Tighten the single mounting bolt of transmission mounting bracket.

Tightening torque:
75 N·m (7.6 kgf-m, 55.3 ft-lb)



30) Set the ST to side retainer.
ST 28399SA010 OIL SEAL PROTECTOR

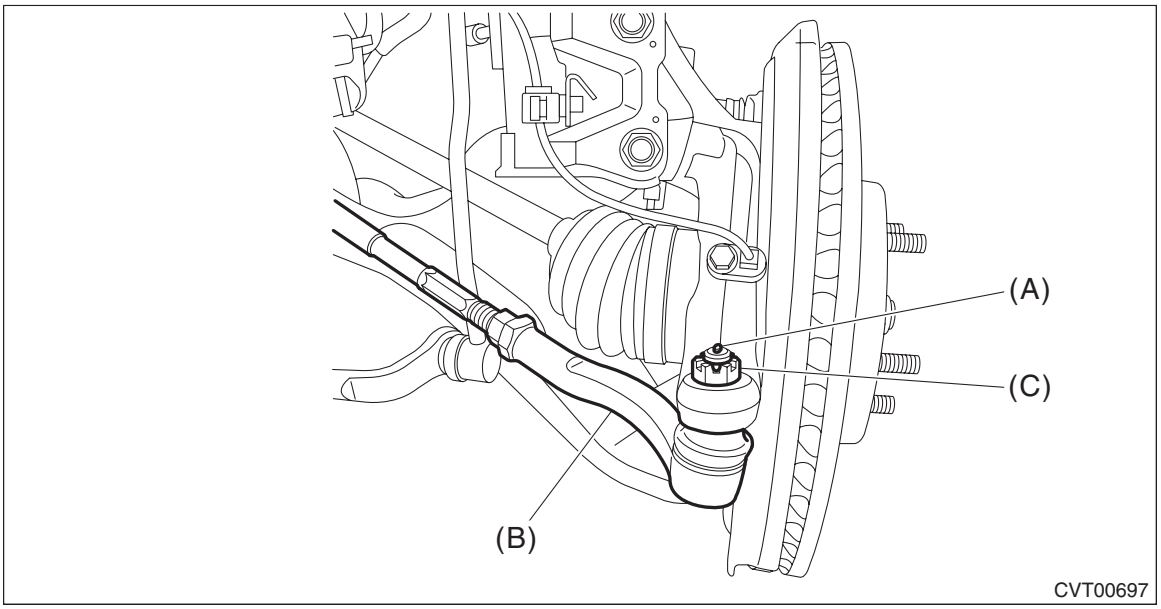
31) Replace the circlip of the drive shaft with a new part.
32) Insert the front drive shaft spline section into transmission and remove the ST (OIL SEAL PROTECTOR).
33) Insert the drive shaft into the transmission securely by pressing the housing from outside of the vehicle.
34) Install the CVTF CVT inlet hose and CVTF CVT outlet hose.

NOTE:
Use new CVTF CVT inlet hose and CVTF CVT outlet hose.

35) Insert the ball joint into housing and secure with bolt.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

CAUTION:
- **Do not apply grease to the tapered portion of ball stud.**
- **Before tightening, make sure the lower side of housing and stepped section of ball joint are in contact.**

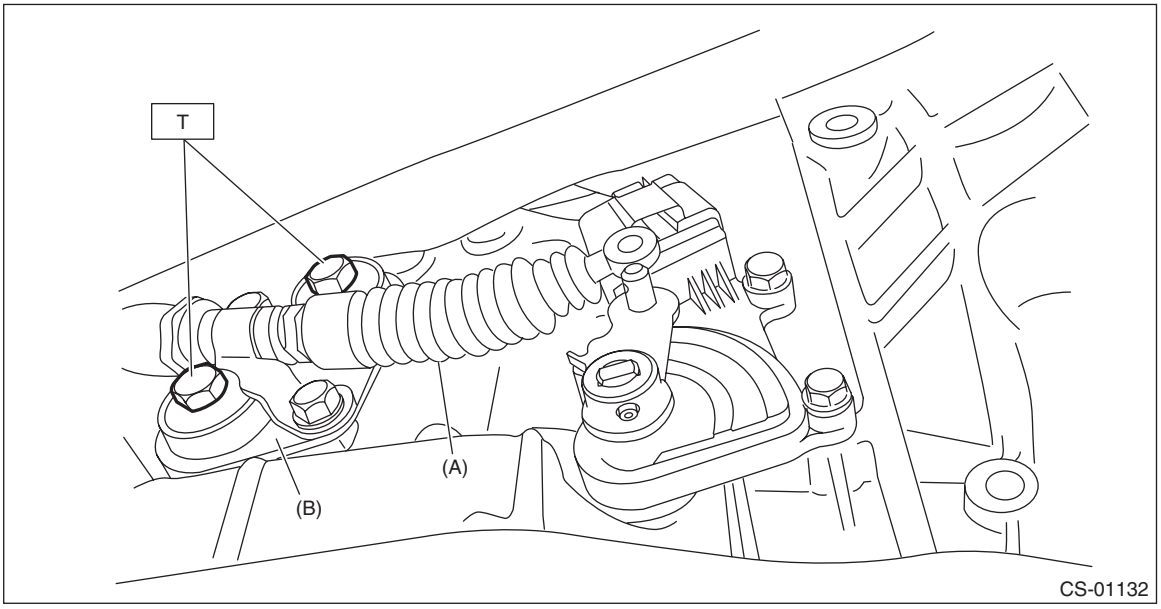


36) Install the stabilizer link.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)
37) Connect the tie-rod end and knuckle arm, and attach the castle nut.

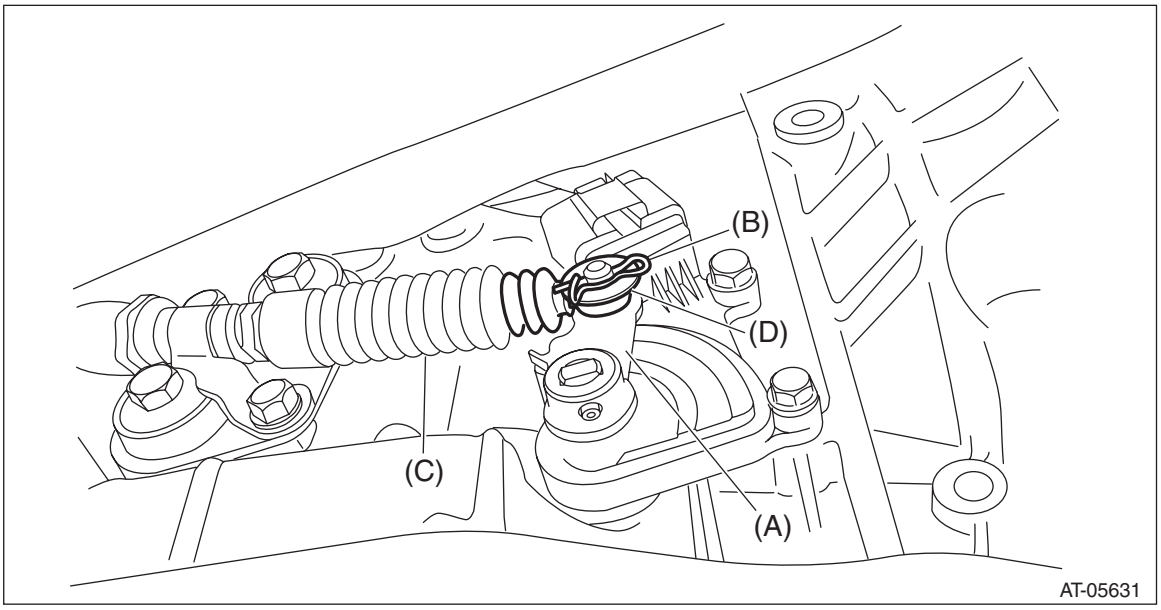
Tightening torque:
27 N·m (2.75 kgf-m, 19.9 ft-lb)

CAUTION:
When connecting, do not hit the cap at the bottom of tie-rod end with hammer.



38) After tightening the castle nut to the specified tightening torque, tighten it further within 60° until the cotter pin hole is aligned with slot in the nut. Fit the cotter pin into the nut, and then bend the pin to lock.

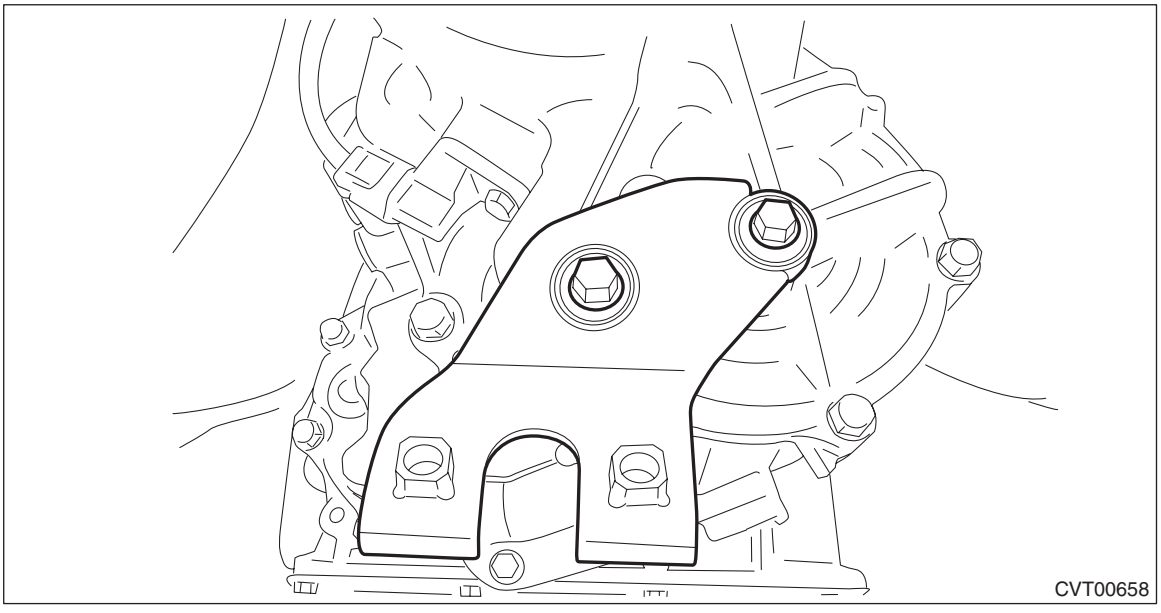
(A) Cotter pin
(B) Tie-rod end
(C) Castle nut



39) Install the propeller shaft. <Ref. to DS-12, INSTALLATION, Propeller Shaft.>
40) Install the universal joint. <Ref. to PS-15, INSTALLATION, Universal Joint.>
41) Install the plate assembly to transmission.

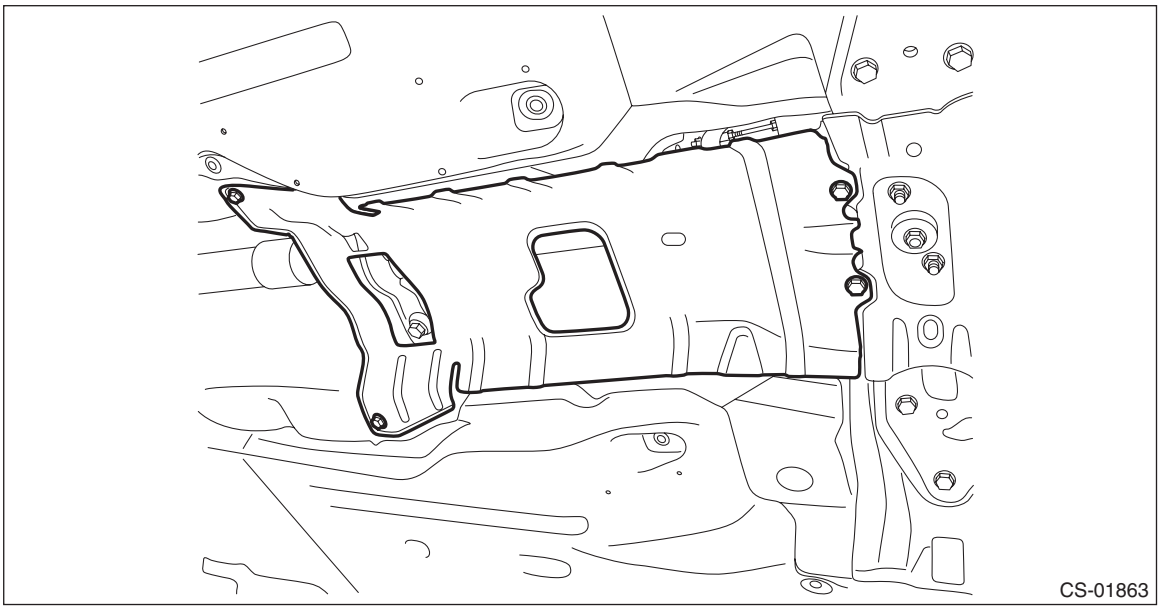
Tightening torque:
T: 25 N·m (2.5 kgf-m, 18.4 ft-lb)

(A) Select cable
(B) Plate ASSY



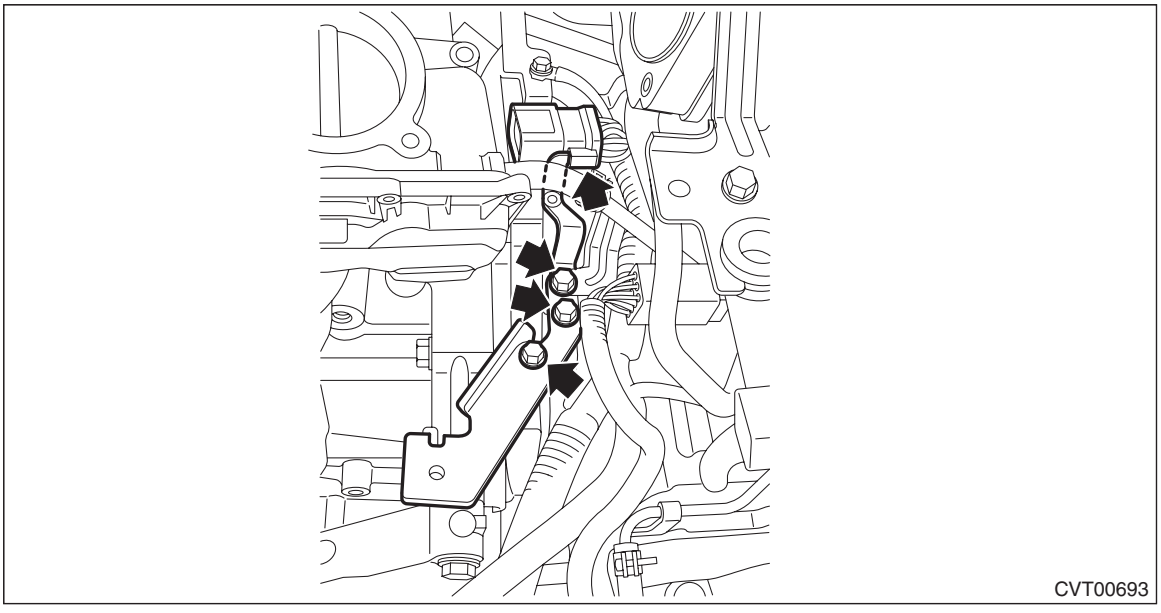
42) Install the washer and snap pin to the shifter arm.

(A) Shifter arm
(B) Snap pin
(C) Select cable
(D) Washer



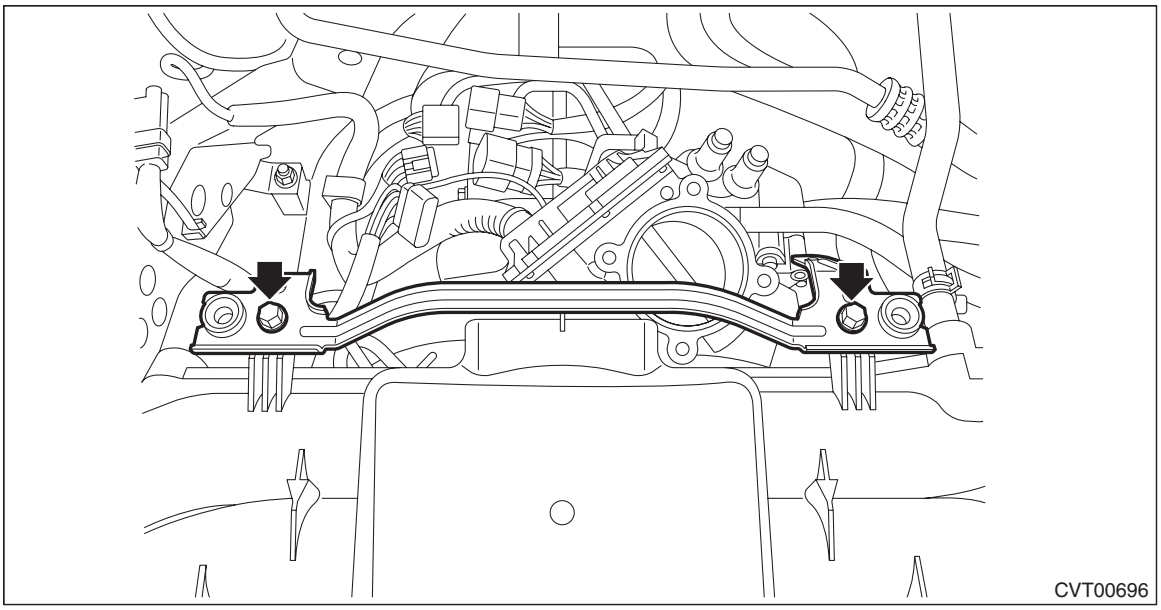
43) Install the exhaust hanger bracket.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)



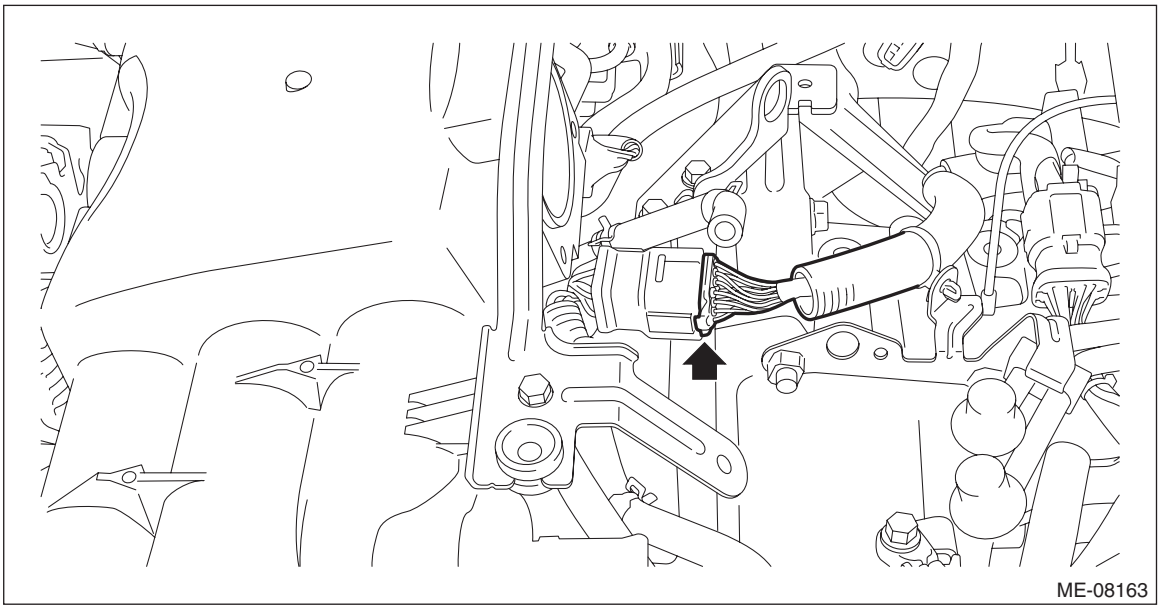
44) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

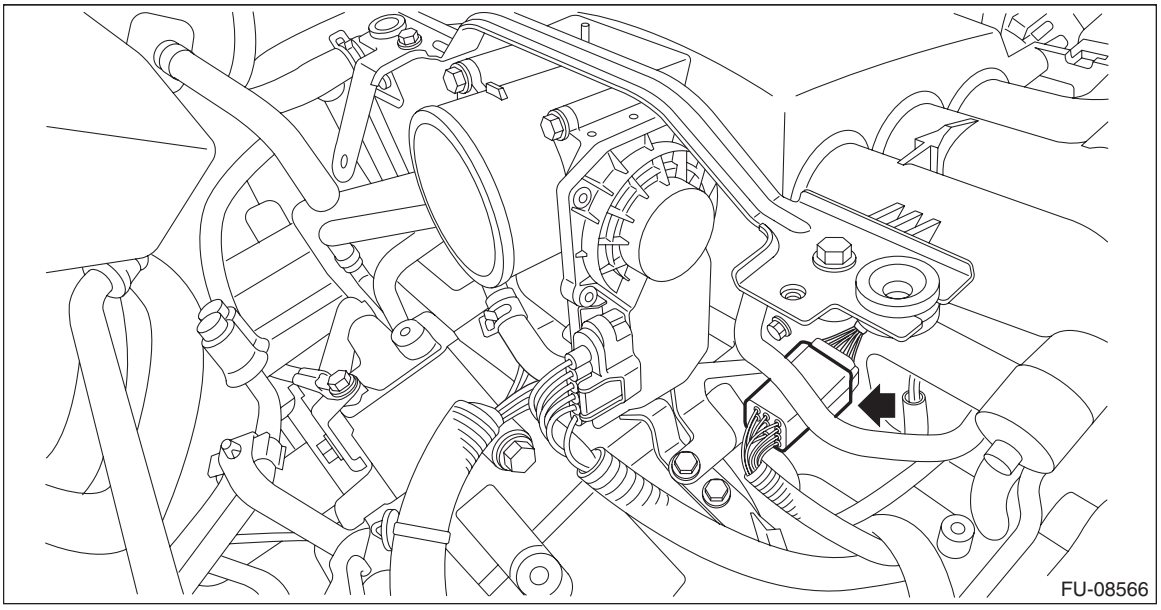


45) Install the front exhaust pipe. <Ref. to EX(H6DO)-8, INSTALLATION, Front Exhaust Pipe.>
46) Install the front under cover. <Ref. to EI-28, INSTALLATION, Front Under Cover.>
47) Lower the vehicle.
48) Remove the ST (HANGER) and install the engine rear hanger.

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)

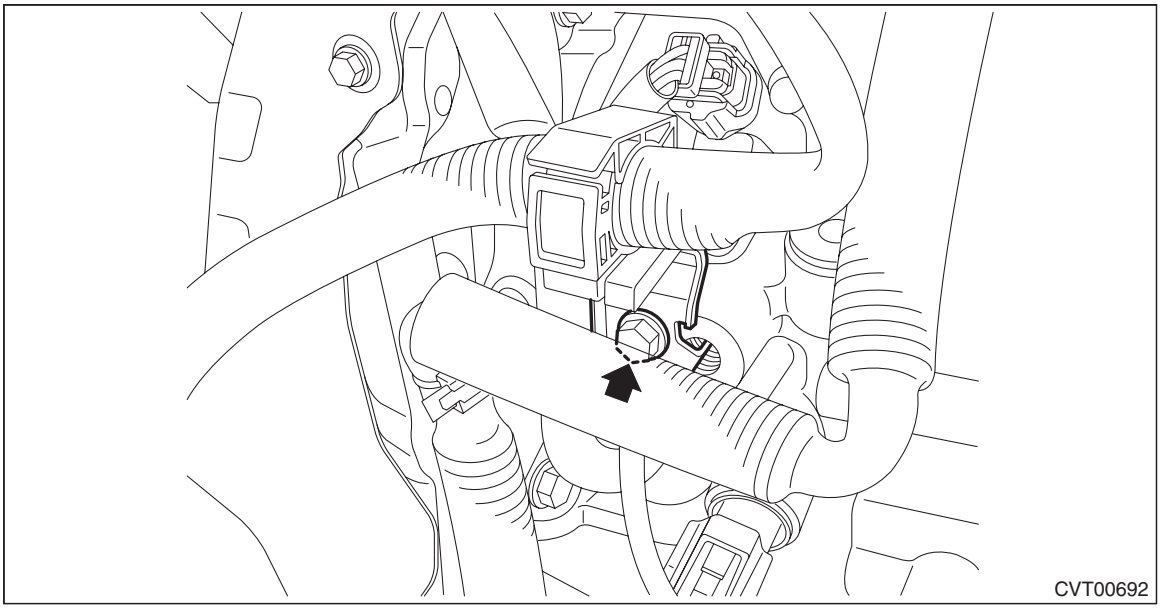


49) Install the collector cover bracket.

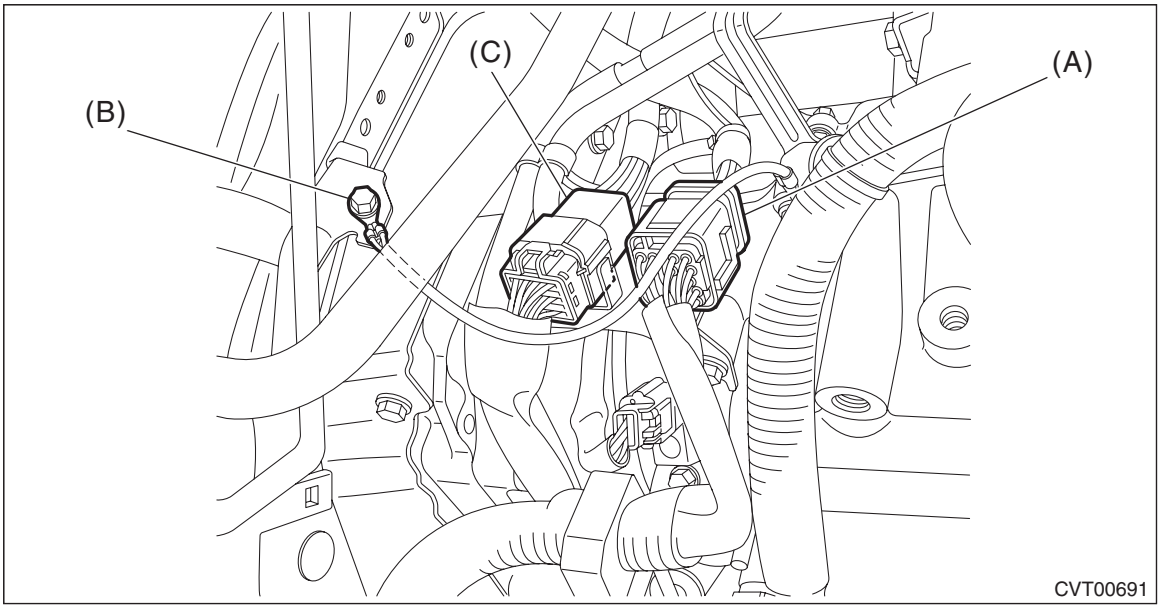


Tightening torque:
6.5 N·m (0.7 kgf-m, 4.8 ft-lb)

50) Connect the oxygen sensor harness connector.



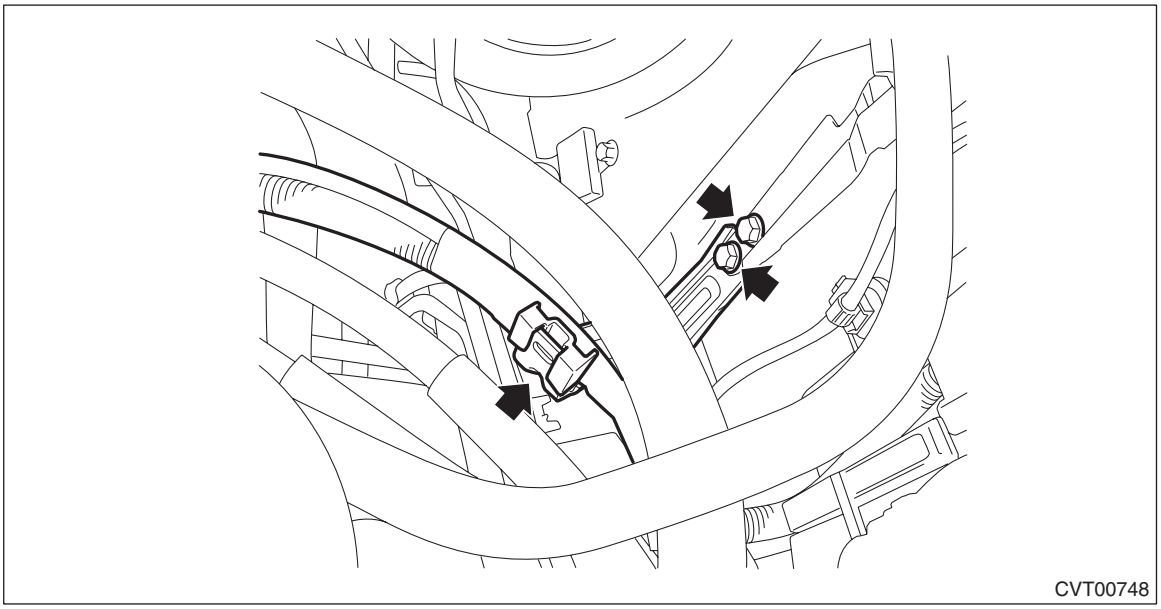
51) Install the throttle body. <Ref. to FU(H6DO)-20, INSTALLATION, Throttle Body.>
52) Connect the engine harness connector.



53) Install the harness stay.

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)

54) Connect the following harness connectors.
- Transmission harness connectors
- Transmission radio ground terminal
- Inhibitor harness connector



Tightening torque:
13 N·m (1.3 kgf-m, 9.6 ft-lb)

(A) Transmission harness connectors
(B) Transmission radio ground terminal
(C) Inhibitor harness connector

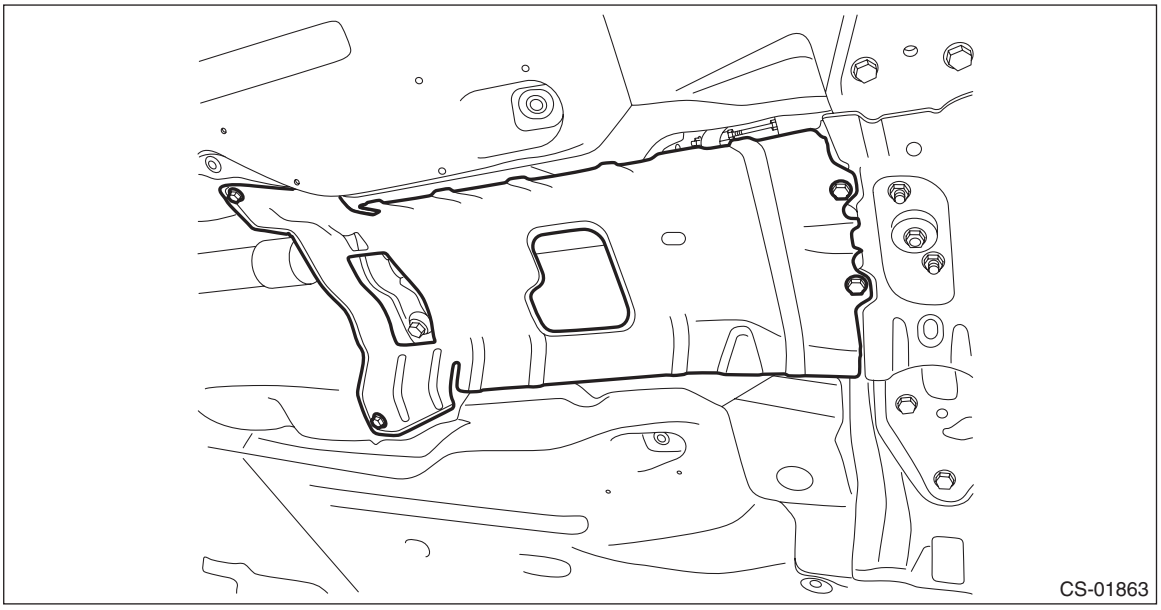
55) Install the battery cable bracket, and install the battery cable clip to the bracket.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

56) Install the air intake boot. <Ref. to IN(H6DO)-11, INSTALLATION, Air Intake Boot.>
57) Install the air intake duct. <Ref. to IN(H6DO)-12, INSTALLATION, Air Intake Duct.>
58) Install the front tires.
59) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
60) Refill differential gear oil to adjust the differential gear oil amount. <Ref. to CVT(TR690)-43, Differential Gear Oil.>
61) Refill CVTF to adjust the CVTF amount. <Ref. to CVT(TR690)-38, CVTF.>
62) Perform the variator chain break-in. <Ref. to CVT(TR690)-46, Variator Chain Break-in.>

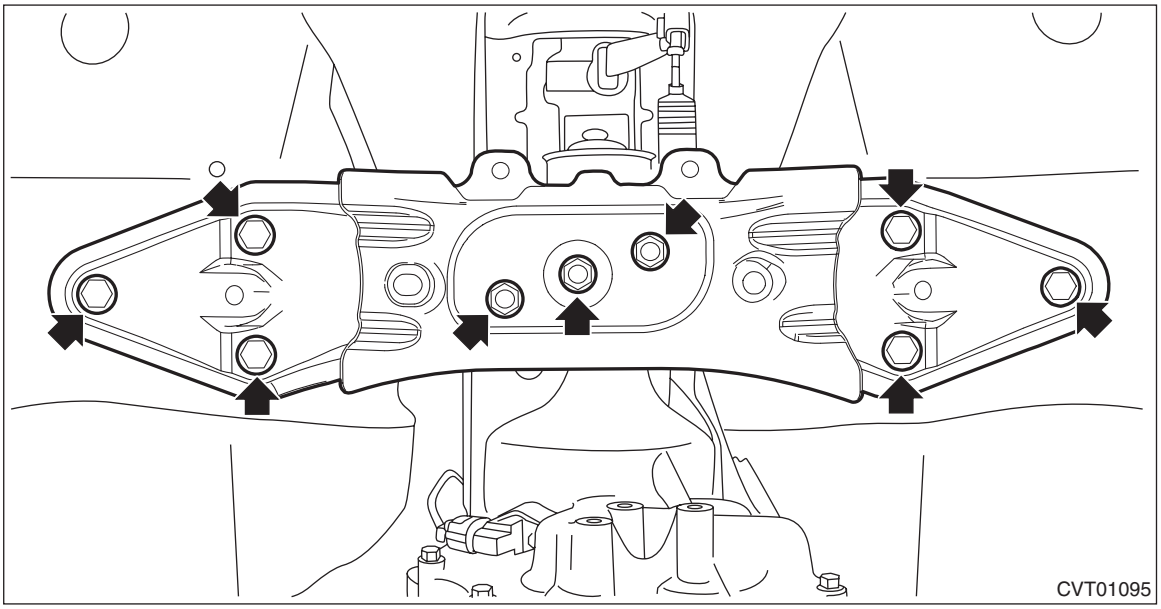
CAUTION:
Always execute the variator chain break-in after the replacement of the following.
- **Variator chain replacement**
- **Primary pulley and secondary pulley replacement**

63) Perform the clear operation for AT learning. <Ref. to CVT(diag)-27, Clear Memory Mode.>
64) Perform AT learning mode. <Ref. to CVT(diag)-34, Learning Control.>
65) Execute the rear differential inspection mode. <Ref. to DI-82, Rear Differential Inspection Mode.>



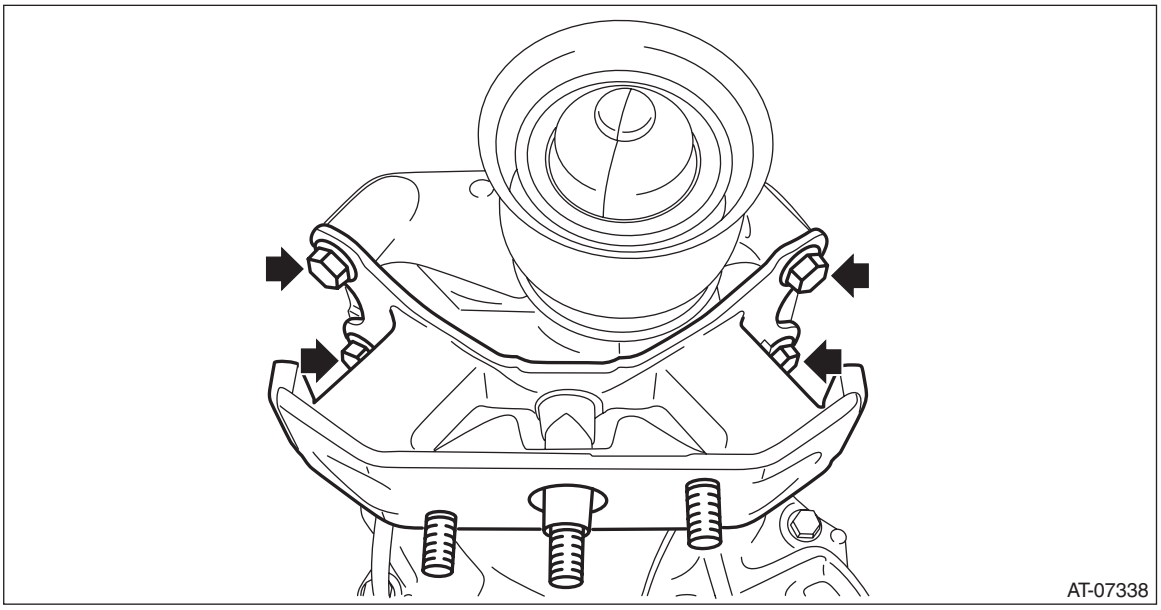
CAUTION:
Always execute the rear differential inspection mode after the replacement of the following.
- **Replacement of transmission assembly**
- **Replacement of front differential hypoid gear set**

66) Perform the road test to make sure there is no fault. <Ref. to CVT(TR690)-48, INSPECTION, Road Test.>



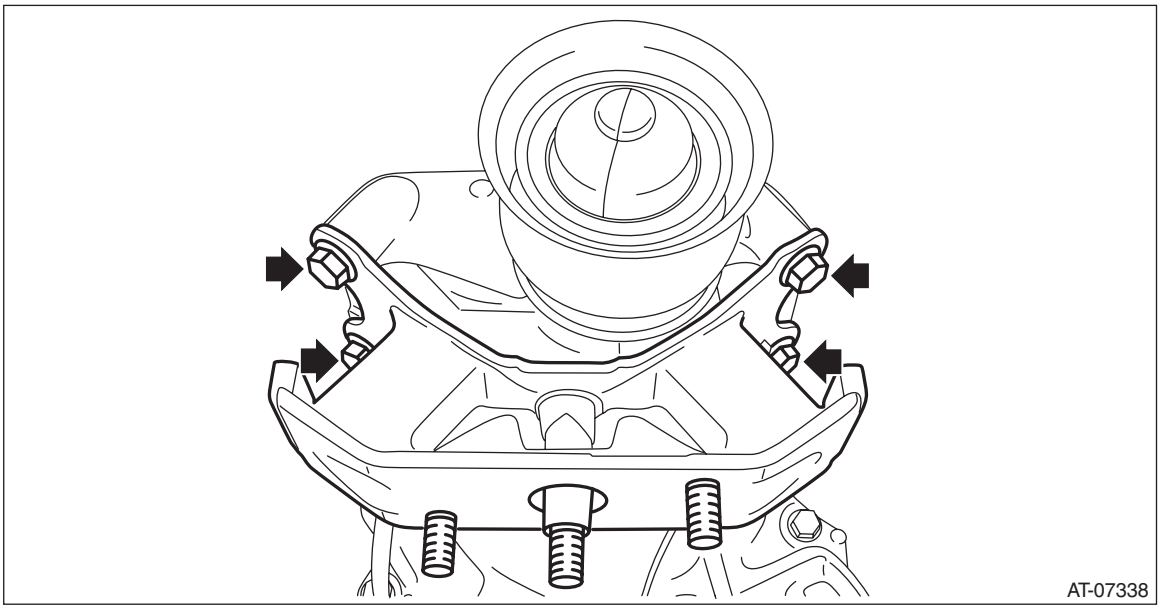
12.Transmission Mounting System

A: REMOVAL



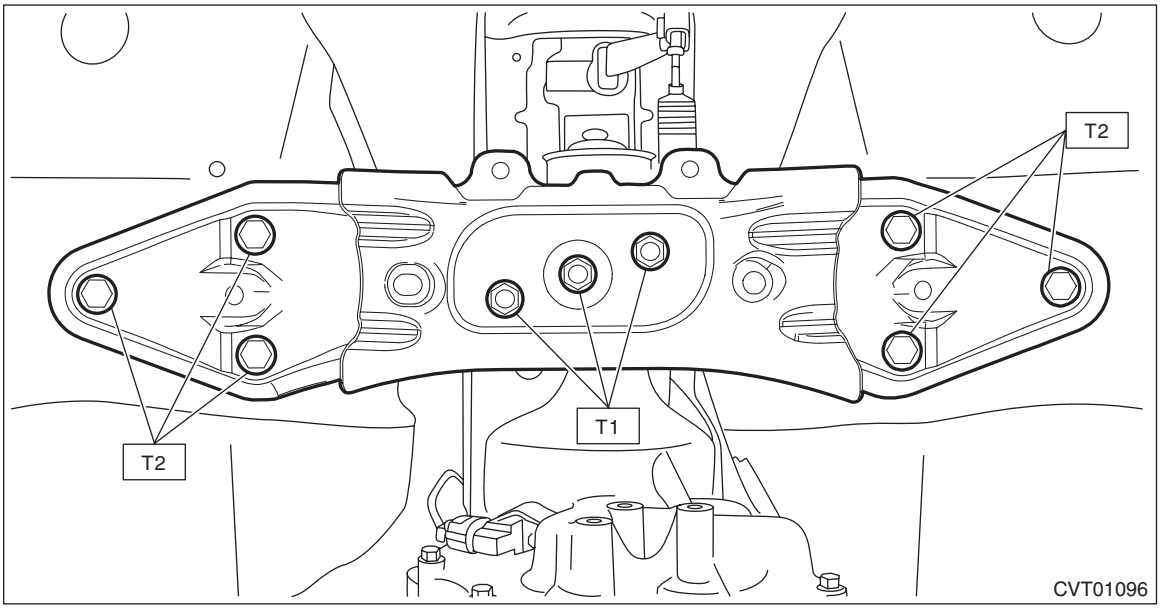
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle.
3) Remove the front exhaust pipe. <Ref. to EX(H6DO)-6, REMOVAL, Front Exhaust Pipe.>
4) Remove the center exhaust cover.

5) Set the transmission jack under the transmission. Make sure that the support plate of transmission jack does not touch the oil pan.
6) Remove the transmission rear crossmember.



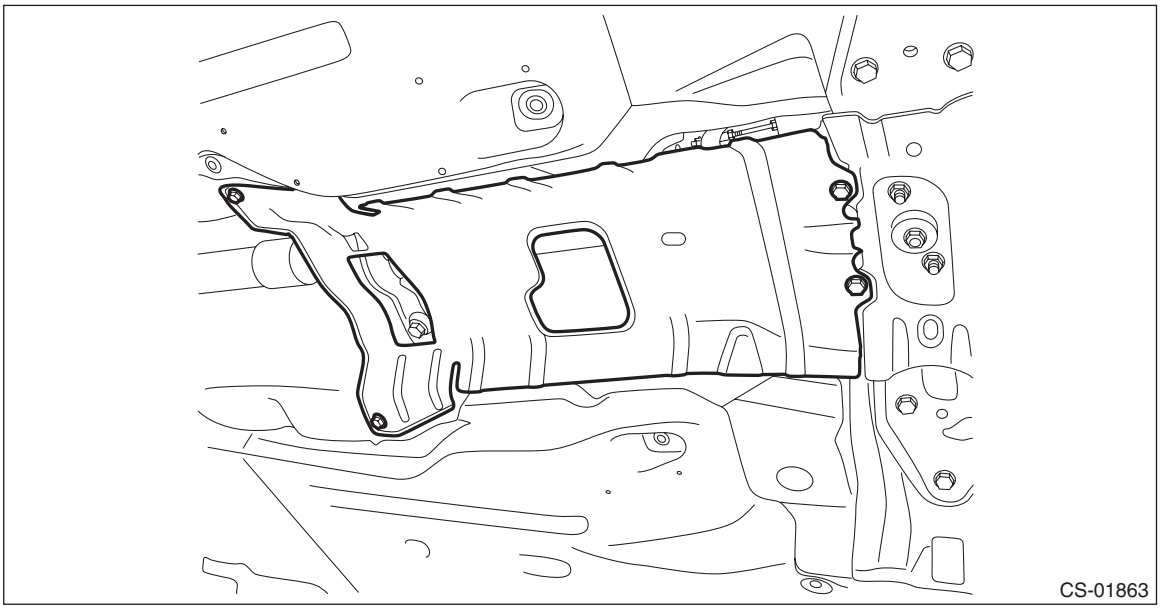
7) Remove the rear cushion rubber.

B: INSTALLATION



1) Install the rear cushion rubber on the transmission.

Tightening torque:
40 N·m (4.1 kgf-m, 29.5 ft-lb)



2) Install the transmission rear crossmember.

Tightening torque:
T1: 35 N·m (3.6 kgf-m, 25.8 ft-lb)
T2: 75 N·m (7.6 kgf-m, 55.3 ft-lb)

3) Remove the transmission jack.
4) Install the center exhaust cover.

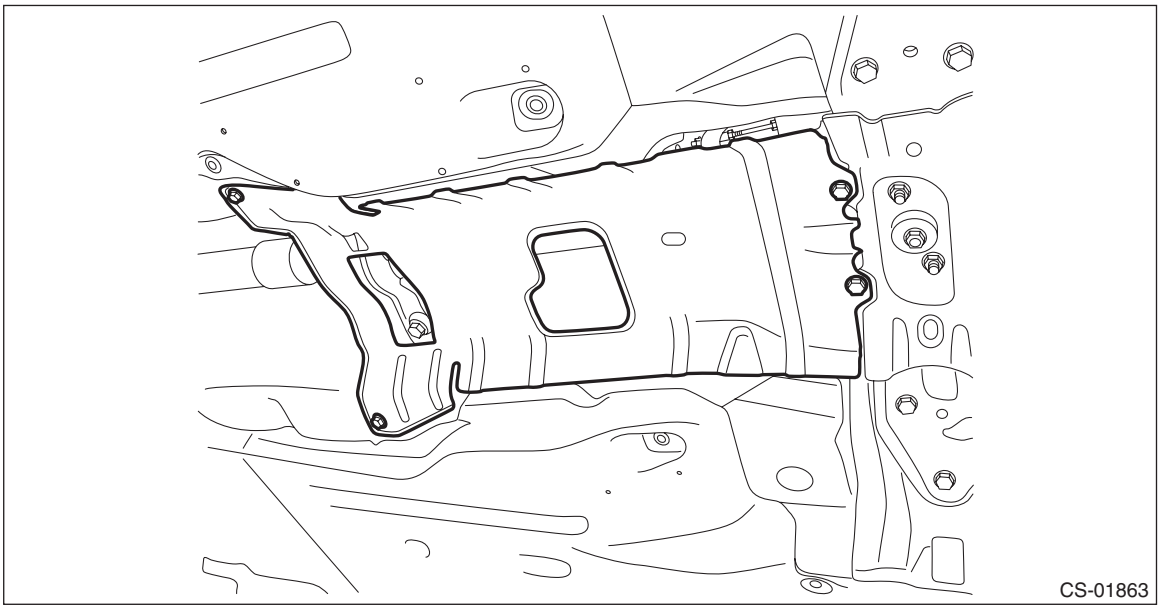
Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

5) Install the front exhaust pipe. <Ref. to EX(H6DO)-8, INSTALLATION, Front Exhaust Pipe.>
6) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

- Check the crossmember for bends or damage.
- Check that the cushion rubber is not stiff, cracked or otherwise damaged.

13.Extension Case Oil Seal



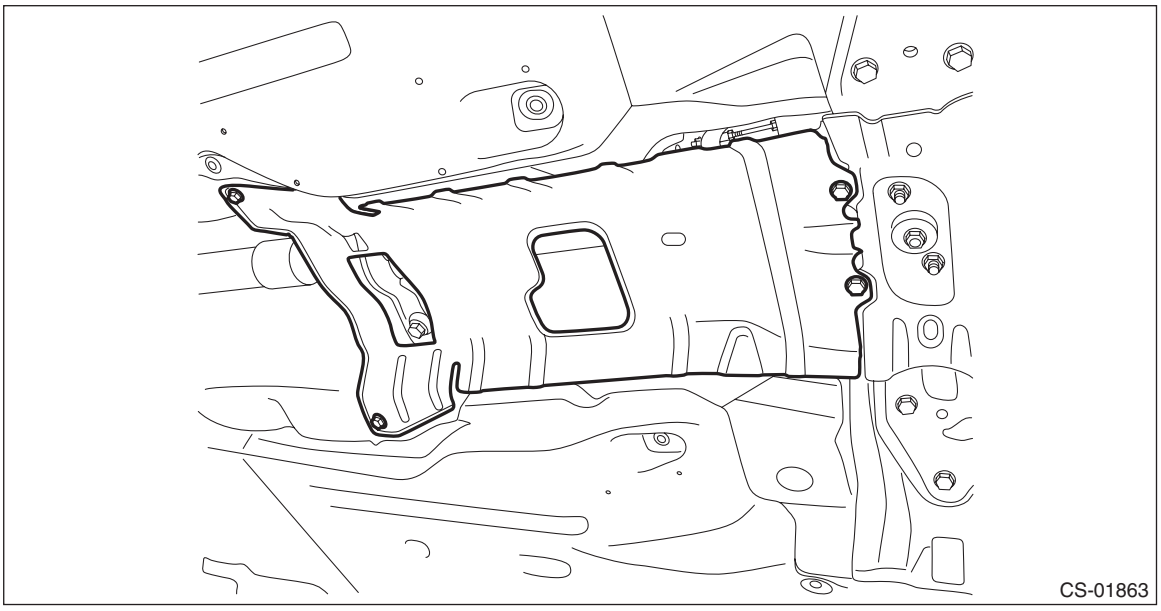
A: INSPECTION

Check for leakage of CVTF from the joint section of transmission and propeller shaft. If a leak is found, inspect the propeller shaft and replace the oil seal.

B: REPLACEMENT

CAUTION:
Immediately after the vehicle has been running or after idling for a long time, the differential gear oil will be hot. Be careful not to burn yourself.

1) Lift up the vehicle.
2) Clean the transmission exterior.
3) Remove the front exhaust pipe. <Ref. to EX(H6DO)-6, REMOVAL, Front Exhaust Pipe.>
4) Remove the center exhaust cover.



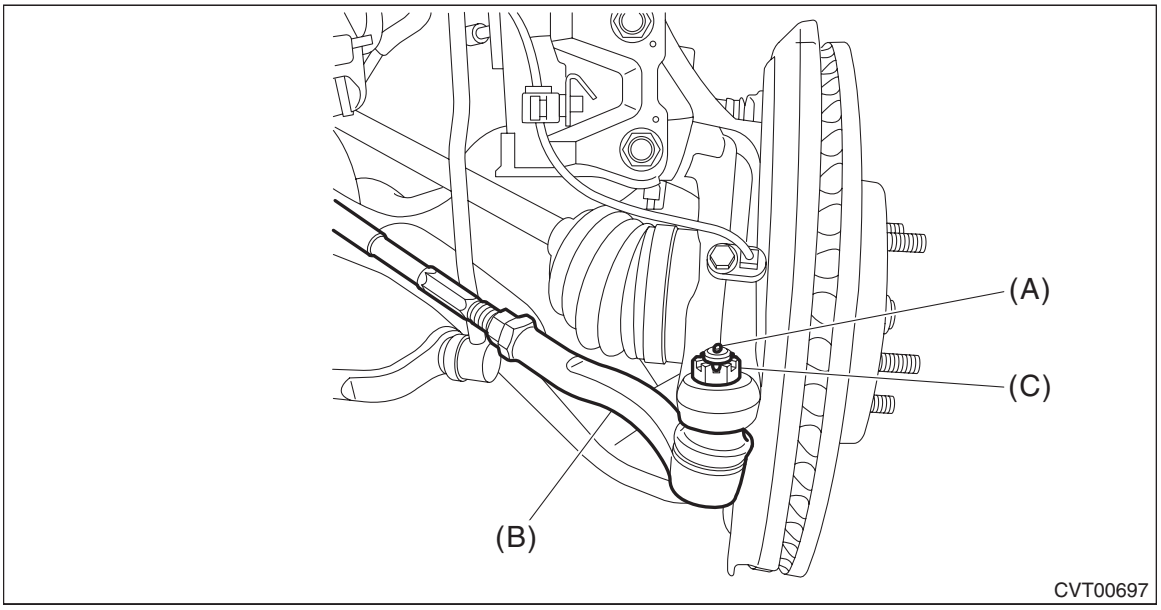
5) Remove the propeller shaft. <Ref. to DS-10, REMOVAL, Propeller Shaft.>
6) Using a screwdriver or ST, remove the oil seal trying not to damage the extension case.
ST 398527700 PULLER ASSY
7) Using the ST, install the oil seal.

NOTE:
Use a new oil seal.
ST 498057300 OIL SEAL DRIFT
8) Install the propeller shaft. <Ref. to DS-12, INSTALLATION, Propeller Shaft.>

9) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

10) Install the front exhaust pipe. <Ref. to EX(H6DO)-8, INSTALLATION, Front Exhaust Pipe.>
11) Adjust the CVTF level and check there is no leakage. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.>



14.Differential Side Retainer Oil Seal

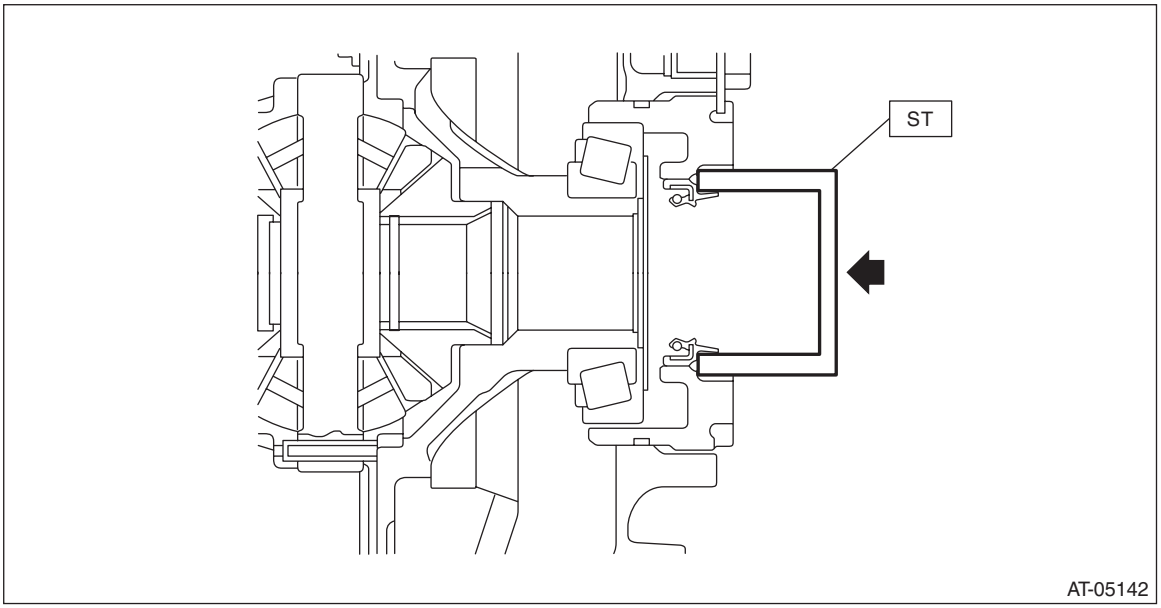
A: INSPECTION

Check for leakage of gear oil from differential side retainer oil seal part. If there is an oil leak, inspect the front drive shaft and replace the oil seal.

B: REPLACEMENT

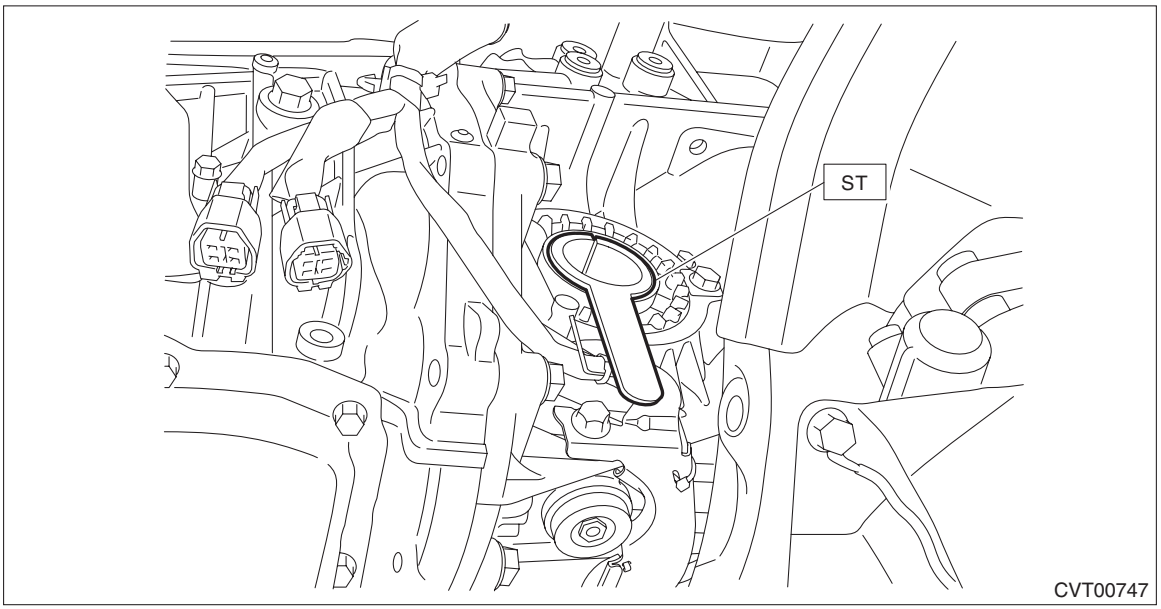
CAUTION:
• Immediately after the vehicle has been running or after idling for a long time, the differential gear oil will be hot. Be careful not to burn yourself.
• Be careful not to spill the differential gear oil on exhaust pipe to prevent it from emitting smoke or fire. If differential gear oil is spilled on the exhaust pipe, wipe it off completely.
1) Lift up the vehicle, and remove the front wheels.
2) After pulling off the cotter pin and removing the castle nut, use a puller to remove the tie-rod end from the knuckle arm.

(A) Cotter pin
(B) Tie-rod end
(C) Castle nut



3) Lift up the vehicle.
4) Remove the front under cover. <Ref. to EI-28, REMOVAL, Front Under Cover.>
5) Remove the front exhaust pipe. <Ref. to EX(H6DO)-6, REMOVAL, Front Exhaust Pipe.>
6) Drain differential gear oil. <Ref. to CVT(TR690)-44, REPLACEMENT, Differential Gear Oil.>
7) Tighten the differential gear oil drain plug.

NOTE:
Use a new gasket.



Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)
8) Remove the stabilizer link. <Ref. to FS-34, REMOVAL, Front Stabilizer.>
9) Disconnect the lower arm ball joint and housing.
10) Pull out the front drive shaft from transmission using a crowbar.
11) Holding the joint of front drive shaft from transmission side, pull out the drive shaft from transmission with care not to stretch the boot.
12) Remove the differential side retainer oil seal using driver wrapped with vinyl tape etc.

13) Using the ST, install the differential side retainer oil seal by lightly tapping with a hammer.
ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

NOTE:
- Apply differential gear oil to the lip surface, so that the oil seal lip is not deformed.
- Oil seal has an identification mark (R, L). When installing oil seals, do not confuse the left and right.

14) Set the ST to side retainer.
ST 28399SA010 OIL SEAL PROTECTOR

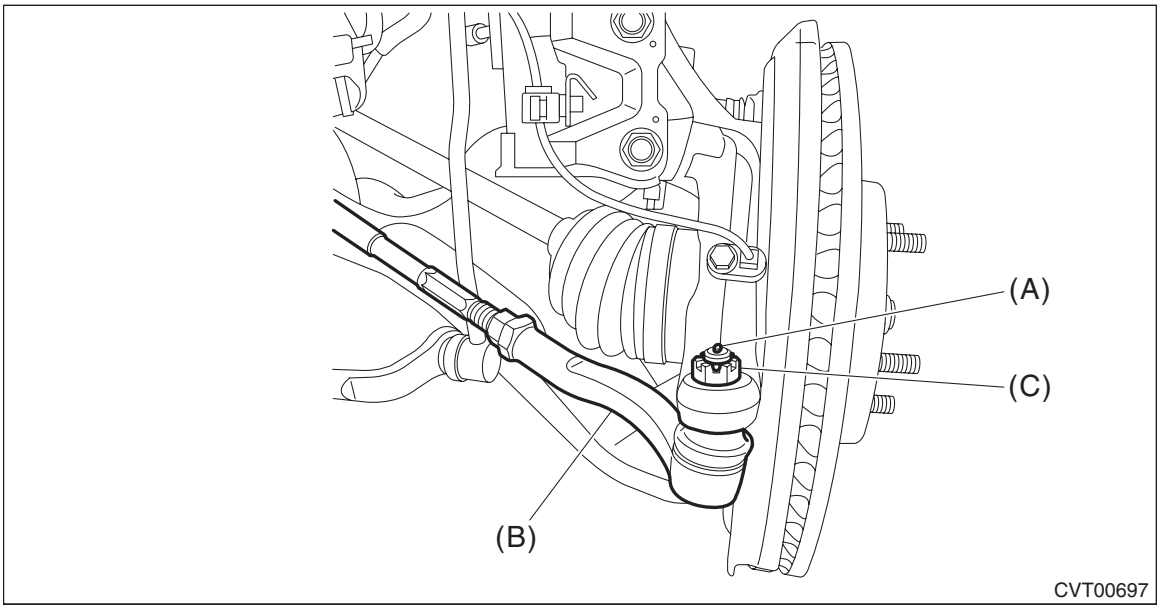
15) Replace the circlip of the drive shaft with a new part.
16) Insert the front drive shaft spline section into transmission and remove the ST (DIFFERENTIAL SIDE OIL SEAL INSTALLER).
17) Insert the drive shaft into the transmission securely by pressing the housing from outside of the vehicle.

18) Insert the ball joint into housing and secure with bolt.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

CAUTION:
- **Do not apply grease to the tapered portion of ball stud.**
- **Before tightening, make sure the lower side of housing and stepped section of ball joint are in contact.**

19) Install the stabilizer link.



Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)

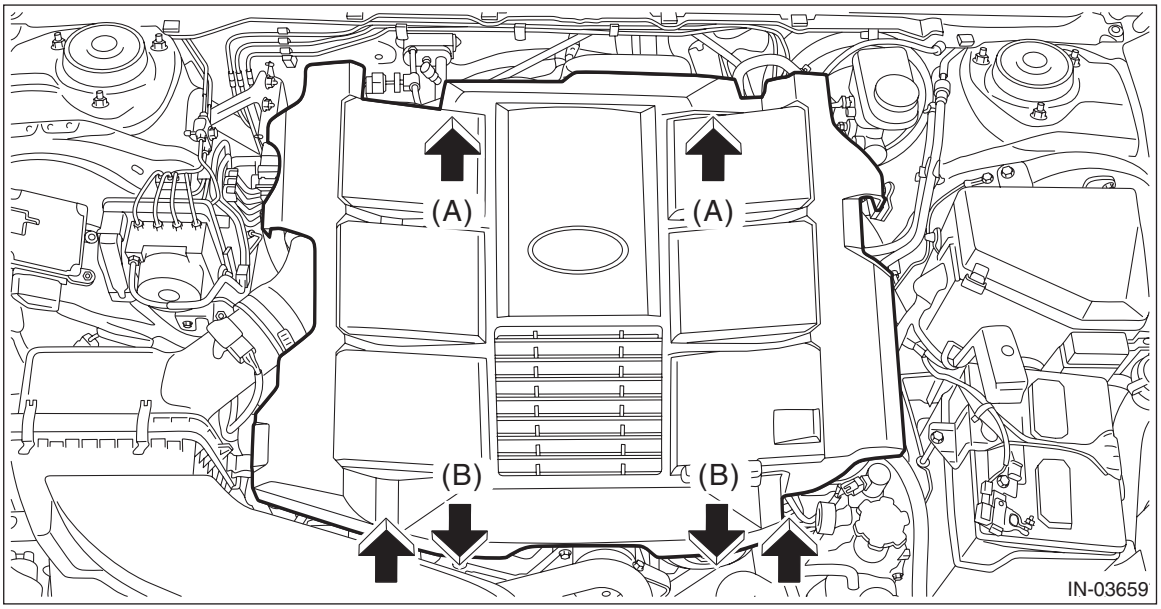
20) Install the front exhaust pipe. <Ref. to EX(H6DO)-8, INSTALLATION, Front Exhaust Pipe.>
21) Install the front under cover. <Ref. to EI-28, INSTALLATION, Front Under Cover.>
22) Lower the vehicle.
23) Connect the tie-rod end and knuckle arm, and attach the castle nut.

Tightening torque:
27 N·m (2.75 kgf-m, 19.9 ft-lb)

CAUTION:
When connecting, do not hit the cap at the bottom of tie-rod end with hammer.

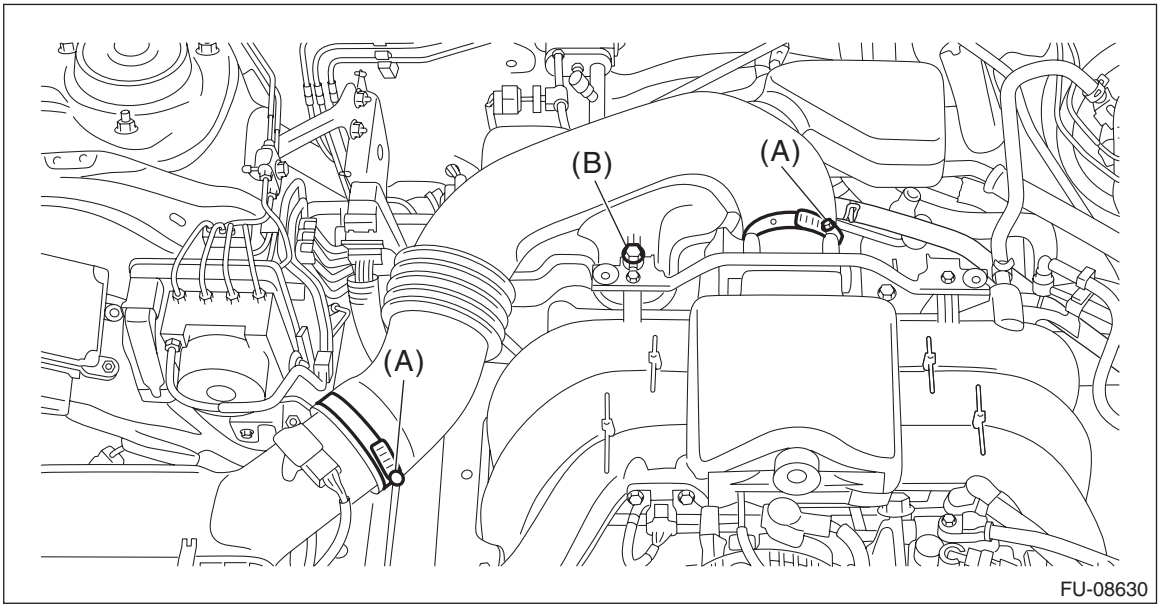
24) After tightening the castle nut to the specified tightening torque, tighten it further within 60° until the cotter pin hole is aligned with slot in the nut. Fit the cotter pin into the nut, and then bend the pin to lock.

(A) Cotter pin
(B) Tie-rod end
(C) Castle nut



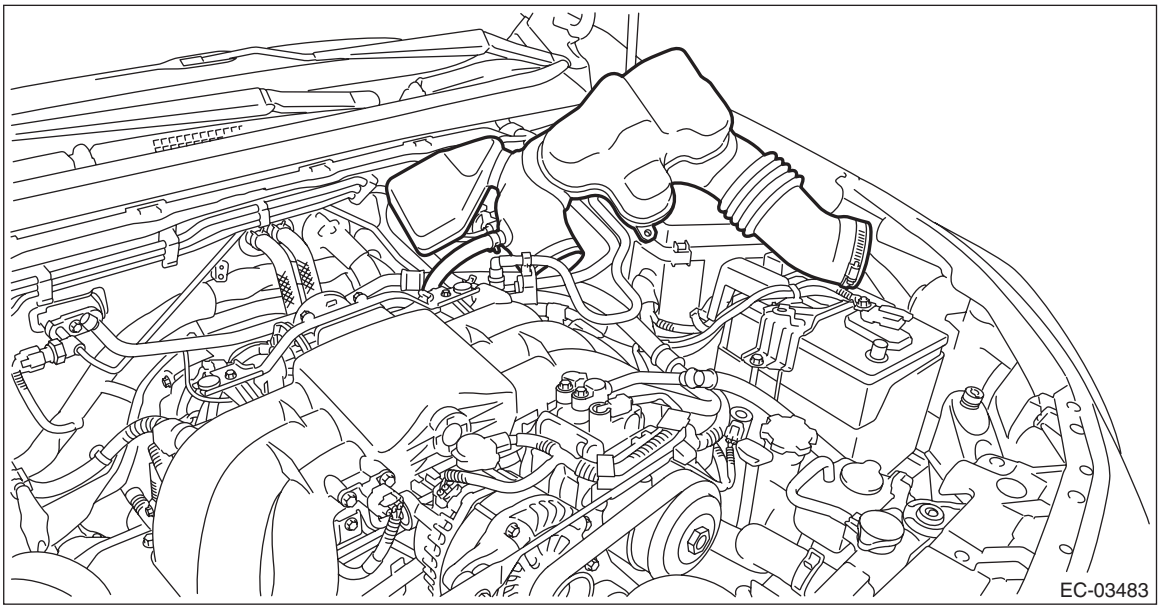
25) Refill differential gear oil from the charge pipe. <Ref. to CVT(TR690)-43, Differential Gear Oil.>
26) Adjust the level of differential gear oil. <Ref. to CVT(TR690)-43, ADJUSTMENT, Differential Gear Oil.>
27) Install the front tires.

15.Inhibitor Switch

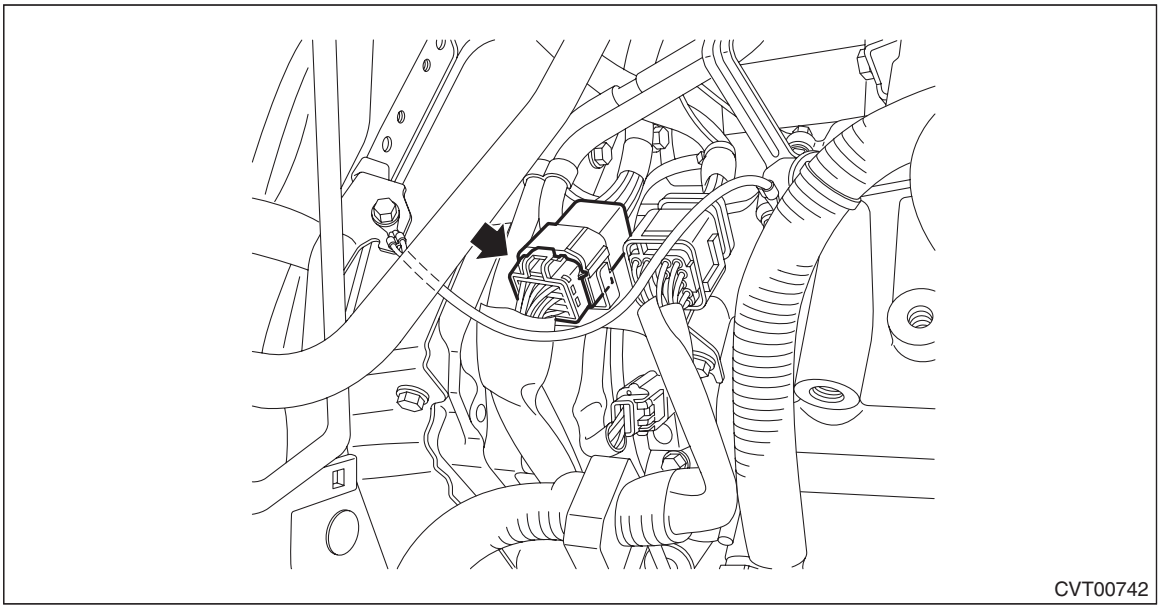


A: INSPECTION

When the driving condition or starter motor operation is improper, first check the shift linkage for improper operation. If the shift linkage is functioning properly, check the inhibitor switch.

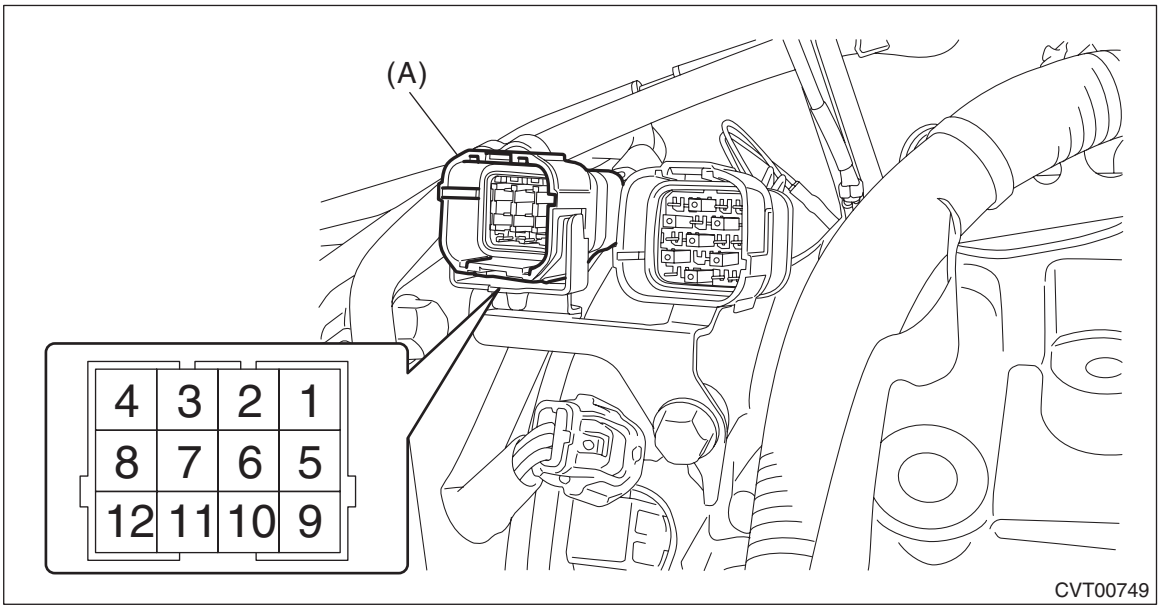


1) Remove the collector cover.
   (1) Carefully pull up the rear of collector cover at two positions (A).
   (2) Carefully pull up the front of collector cover at two positions (B) while moving it forward.



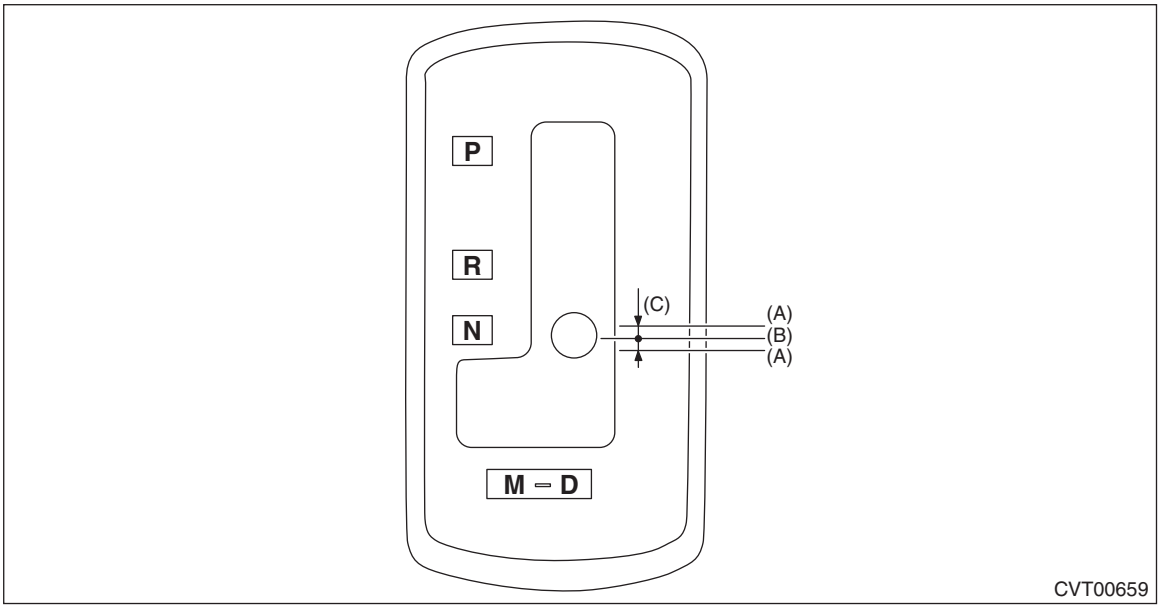
2) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Loosen the clamp (A) which connects the air intake boot.
4) Loosen the bolt (B) securing the air intake boot to the collector cover bracket.

5) Remove the air intake boot from the throttle body, and move the air intake boot to the left side wheel apron.



6) Disconnect the inhibitor harness connector.

7) Check for continuity in inhibitor switch circuit by shifting the select lever in “P”, “R”, “N” and “D” respectively.

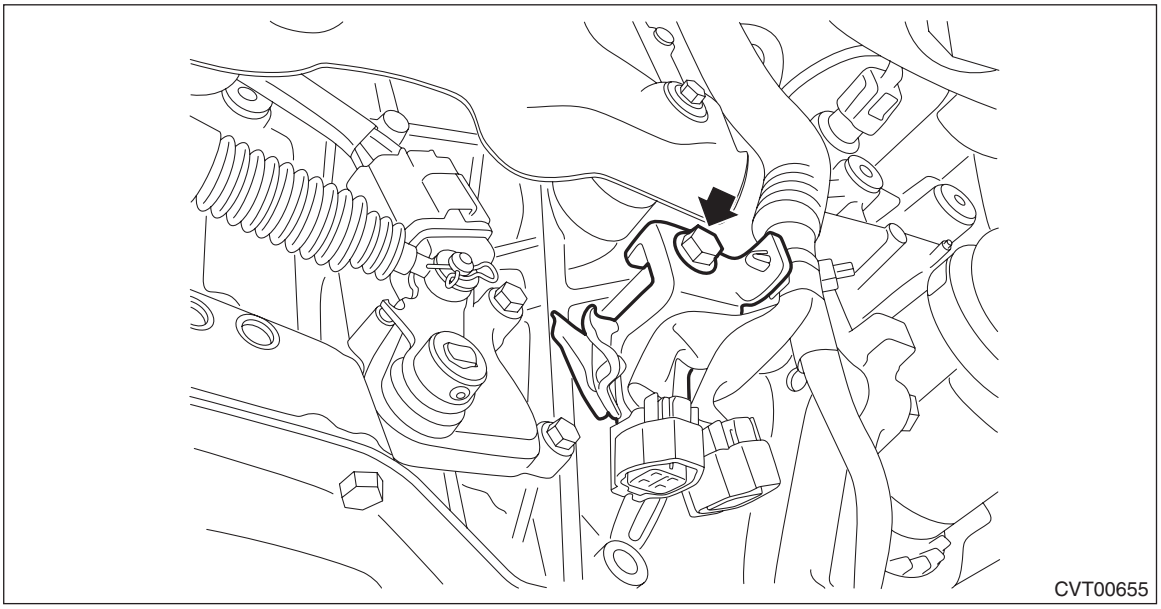


NOTE:
- Check that there is no continuity in the starter circuit when the select lever is in the “R” and “D” ranges.
- When inhibitor switch is normal, check there is no poor contact in vehicle side connector and no open circuit in harness.

	Range	Terminal No.
Signal sent to TCM	P	4 — 3
	R	4 — 2
	N	4 — 1
	D	4 — 8
Starter circuit	P/N	12 — 11
Back-up light circuit	R	10 — 9

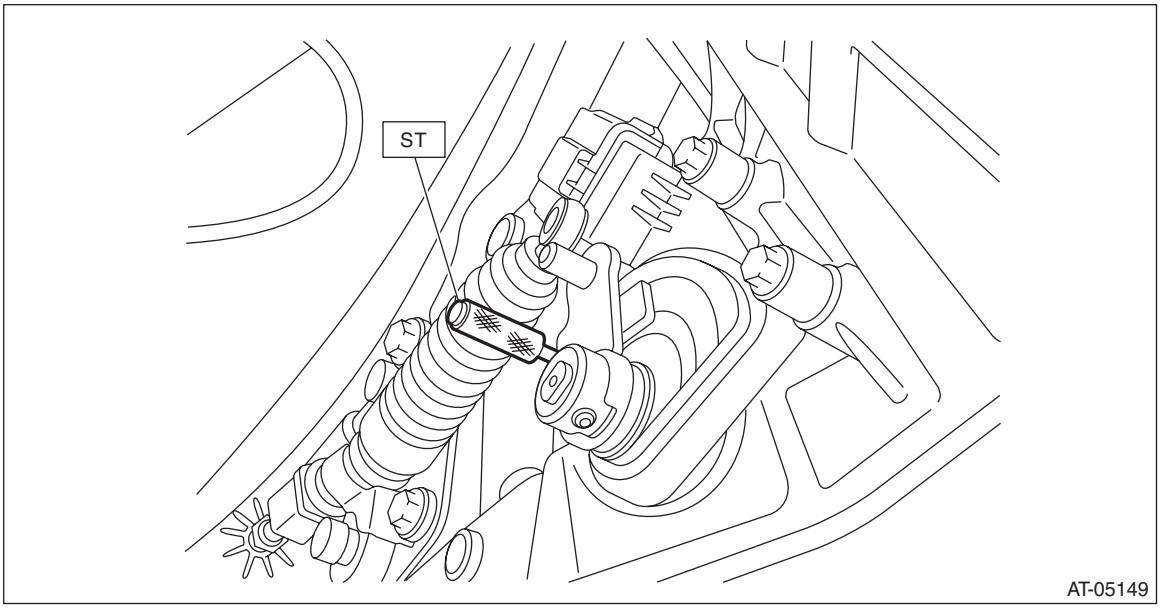
(A) Inhibitor harness connector

8) Check that there is continuity at equal points when the select lever is moved 1.5° in both directions from the “N” range.
If there is continuity in only one direction or in other points, adjust the inhibitor switch. <Ref. to CVT(TR690)-105, ADJUSTMENT, Inhibitor Switch.>



(A) Continuity does not exist.
(B) Continuity exists.
(C) 1.5°

9) Repeat the above inspection in other gear ranges. If there is fault, adjust the inhibitor switch and select cable. <Ref. to CVT(TR690)-105, ADJUSTMENT, Inhibitor Switch.> <Ref. to CS-46, ADJUSTMENT, Select Cable.>

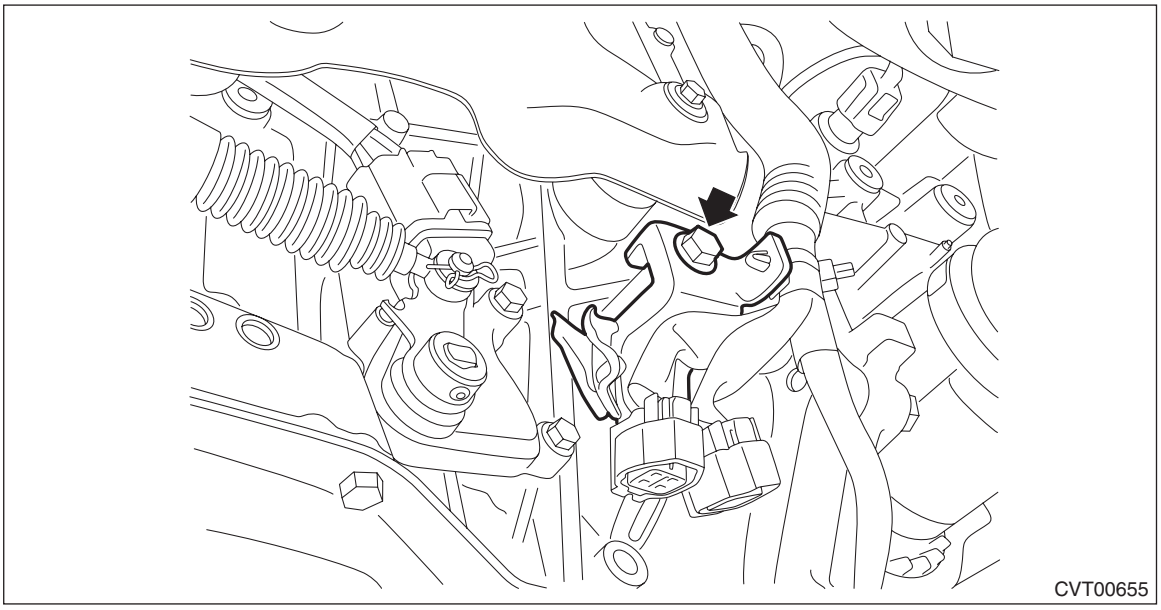


B: ADJUSTMENT

1) Shift the select lever to “N” range.
2) Remove the front exhaust pipe. <Ref. to EX(H6DO)-6, REMOVAL, Front Exhaust Pipe.>
3) Remove the harness stay from transmission.

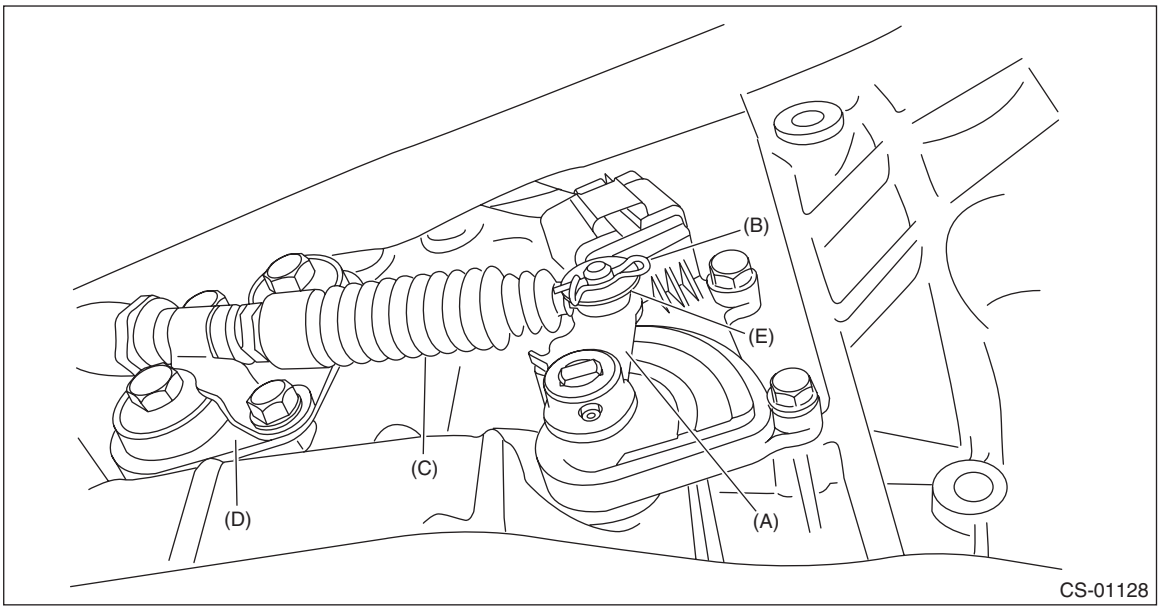
4) Loosen the two bolts holding the inhibitor switch.

5) Insert the ST vertically into the holes of the shifter arm and switch body.
ST 499267300 STOPPER PIN



6) Tighten the two bolts holding the inhibitor switch.

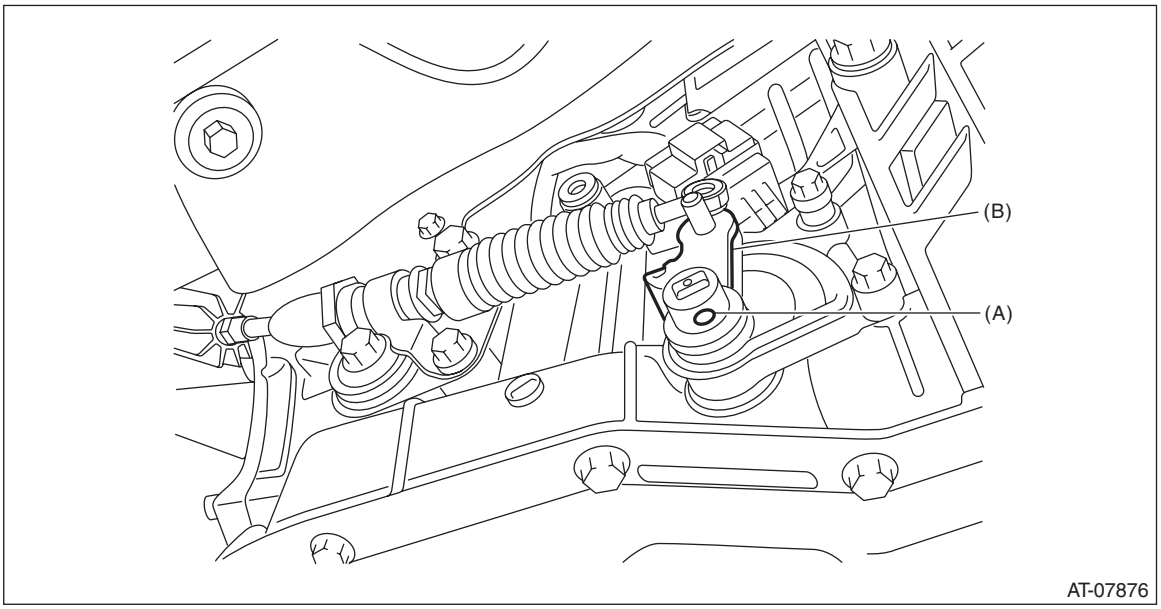
Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)



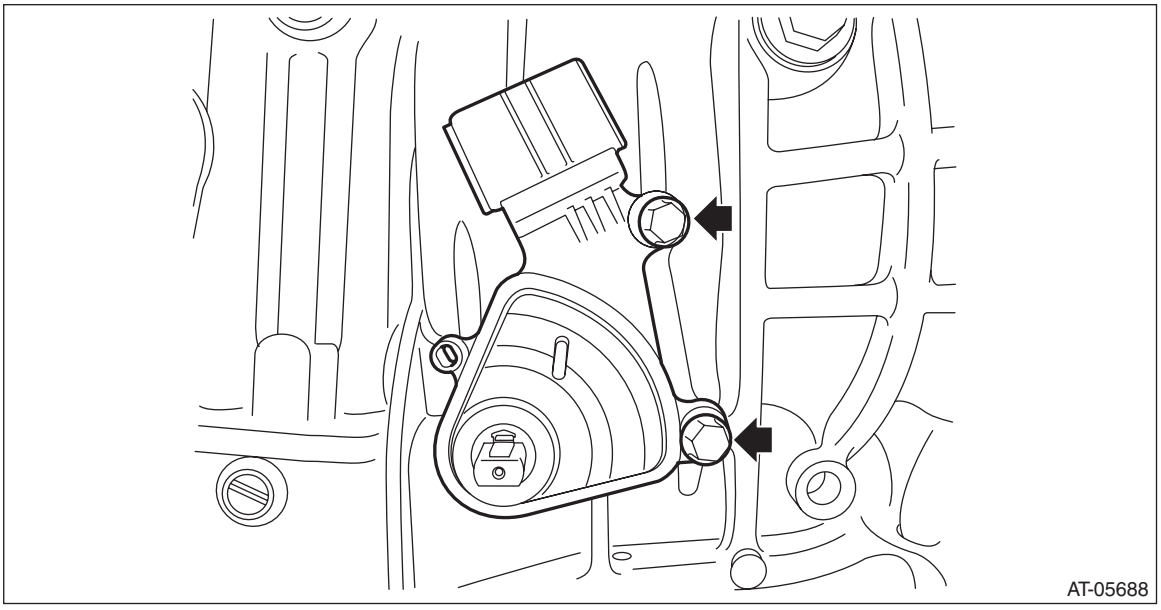
7) Repeat the inspection of the inhibitor switch. If the inhibitor switch is determined to be “faulty”, replace it.

C: REMOVAL

1) Shift the select lever to “N” range.
2) Remove the front exhaust pipe. <Ref. to EX(H6DO)-6, REMOVAL, Front Exhaust Pipe.>
3) Remove the harness stay from transmission.



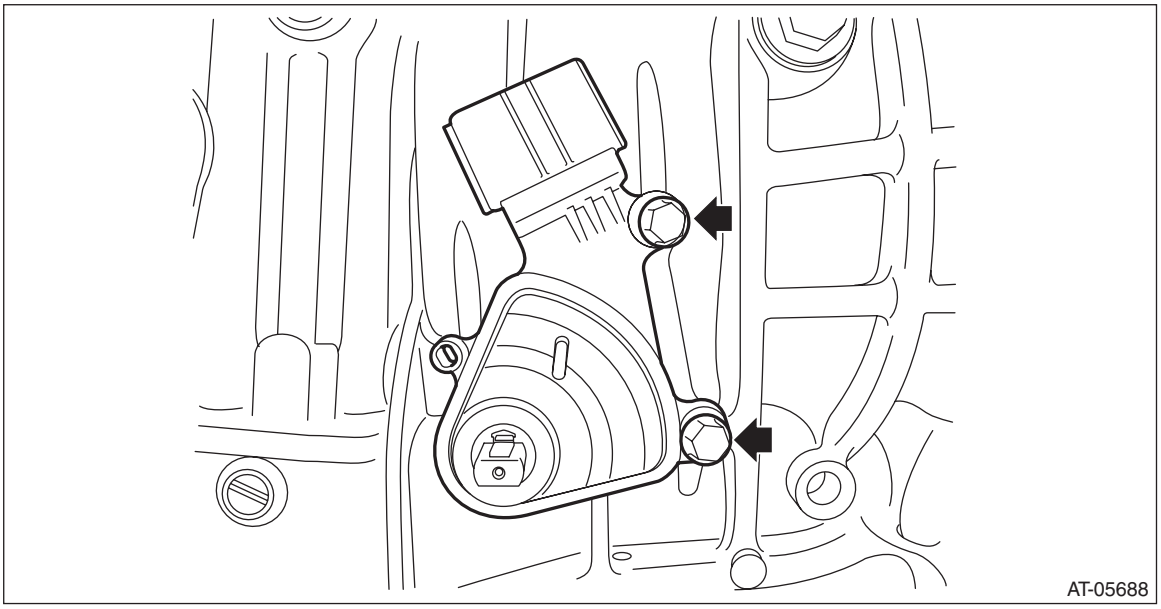
4) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Lift up the vehicle.
6) Remove the snap pin and washer from the shifter arm.



(A) Shifter arm
(B) Snap pin
(C) Select cable
(D) Plate ASSY
(E) Washer

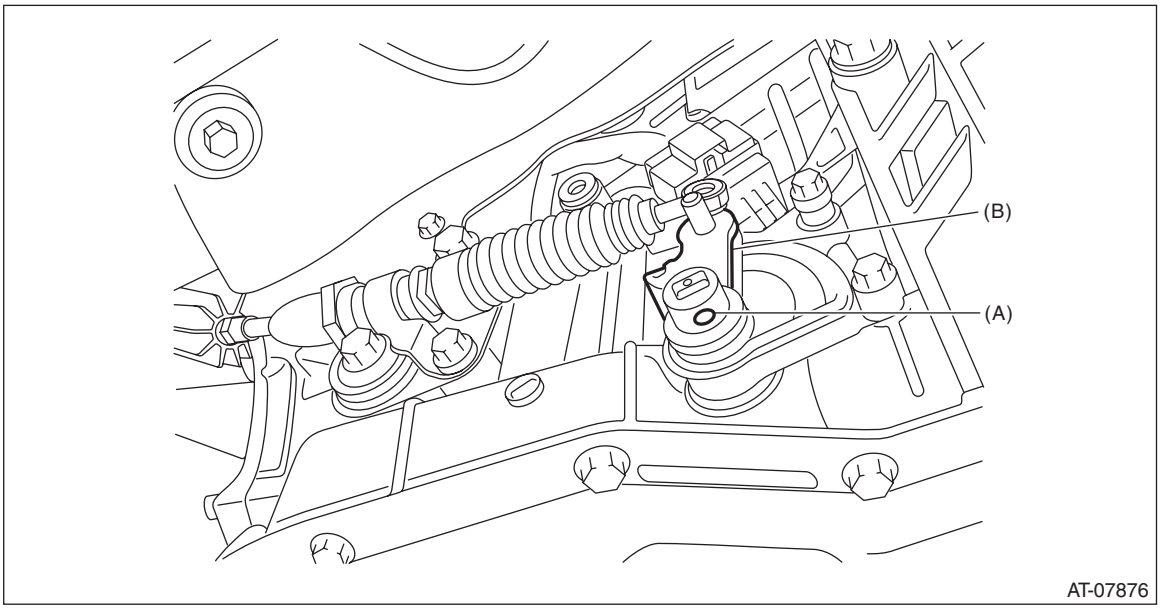
7) Using the ST, remove the spring pin and shifter arm.
ST 398791600 REMOVER

(A) Spring pin
(B) Shifter arm



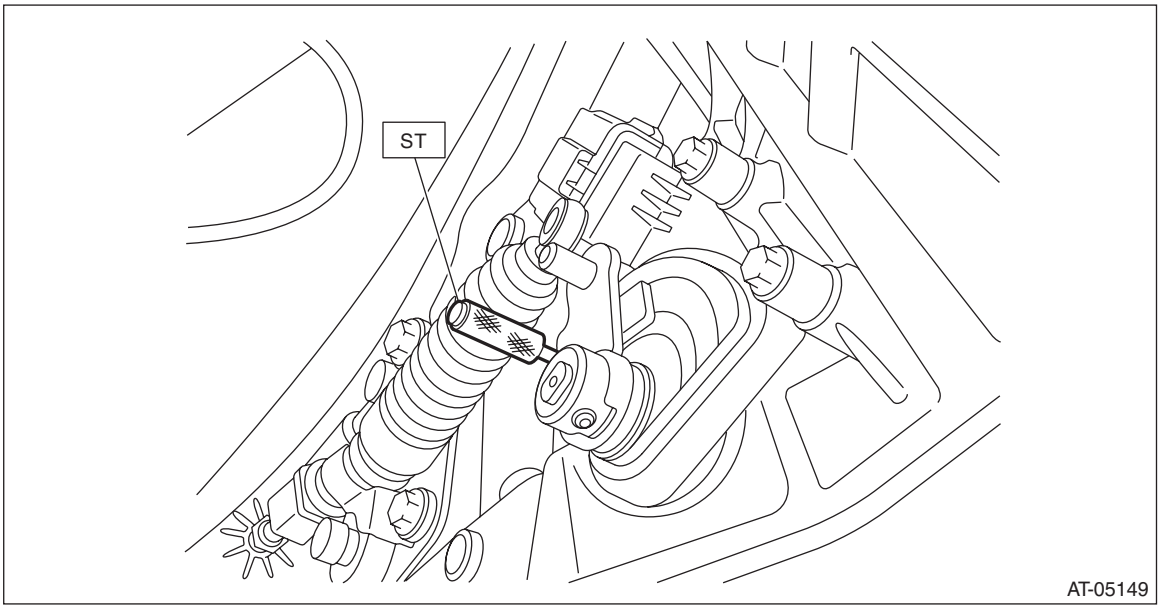
8) Remove the inhibitor harness connector from inhibitor switch.
9) Remove the two inhibitor switch securing bolts.

10) Remove the inhibitor switch from the transmission case.



D: INSTALLATION

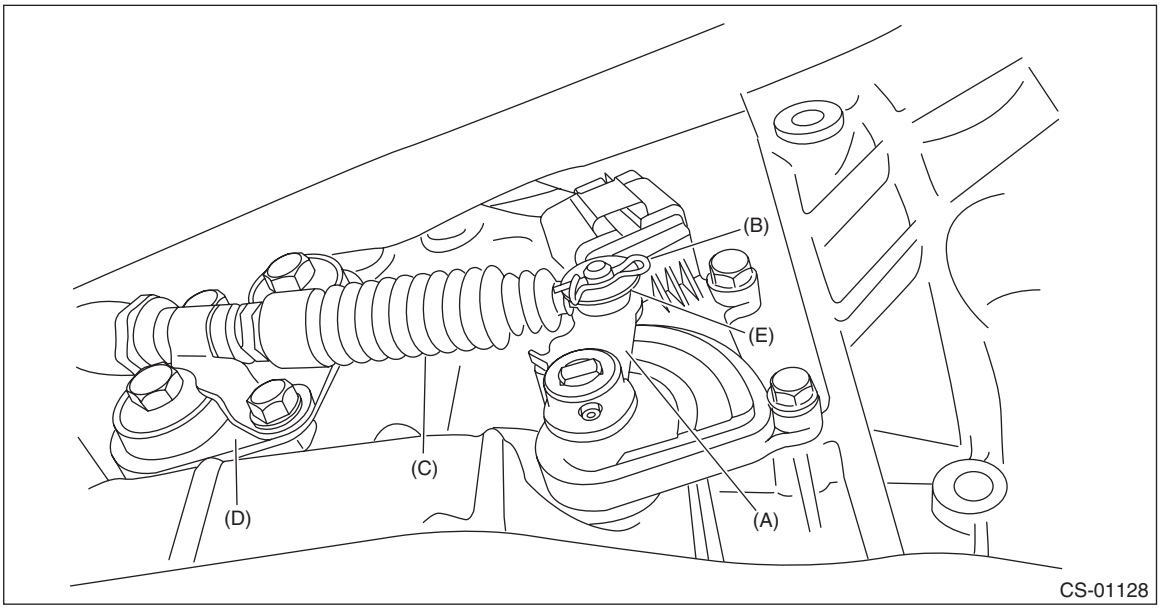
1) Install the inhibitor switch to the transmission case temporarily.



2) Connect the inhibitor harness connector to the inhibitor switch.
3) Install the shifter arm and fix with the spring pin.

NOTE:
Use new spring pin.

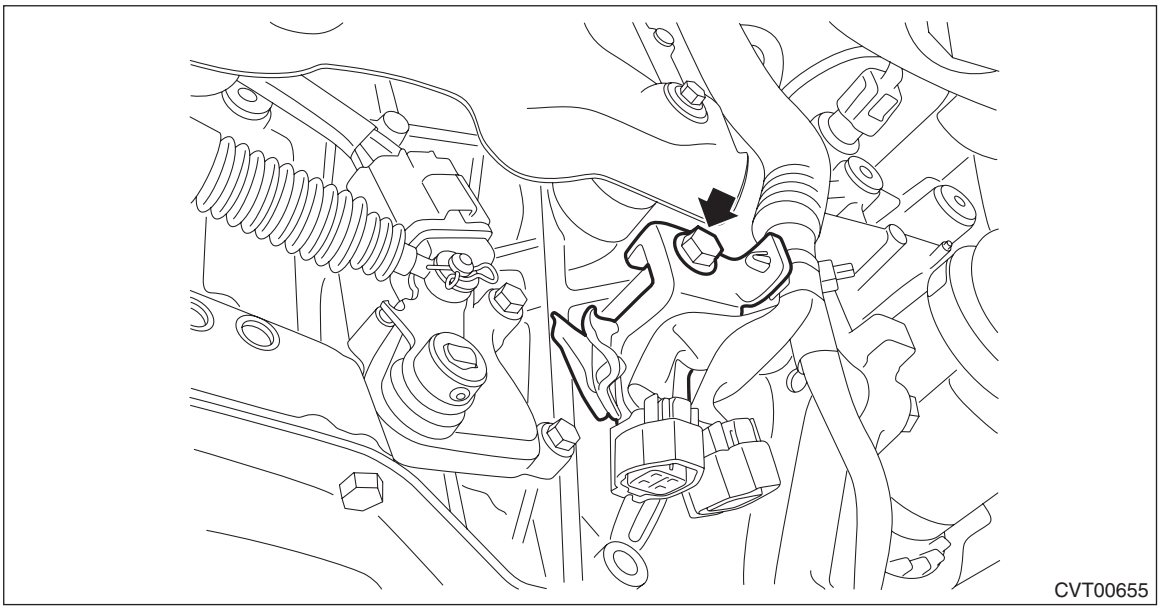
(A) Spring pin
(B) Shifter arm



4) Shift the shifter arm to “N” range.
5) Install the ST vertically in the cutout of shifter arm and the hole of switch body.
ST 499267300 STOPPER PIN

6) Tighten the two bolts holding the inhibitor switch.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)
7) Install the select cable to the shifter arm.

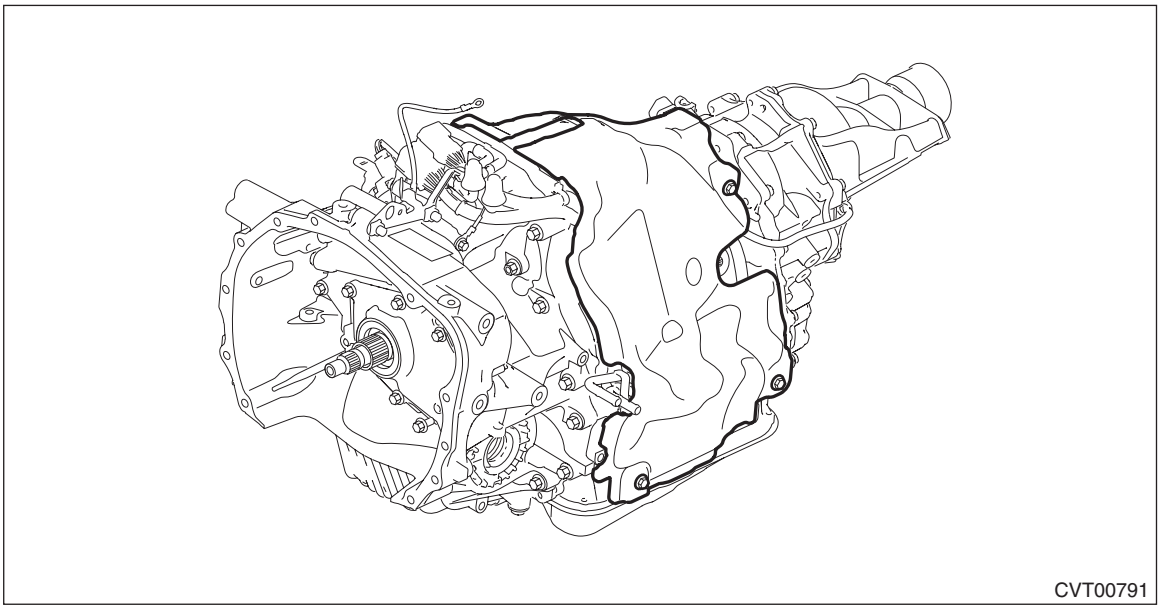


8) Install the washer and snap pin to the shifter arm.

(A) Shifter arm
(B) Snap pin
(C) Select cable
(D) Plate ASSY
(E) Washer

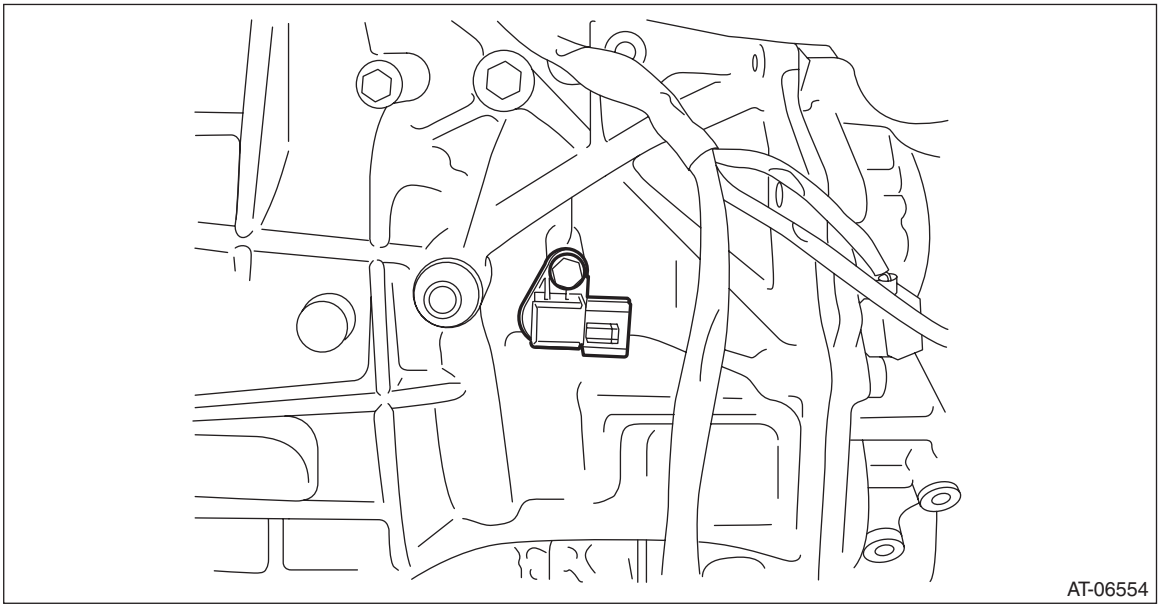
9) Install the harness stay.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



10) Install the front exhaust pipe. <Ref. to EX(H6DO)-8, INSTALLATION, Front Exhaust Pipe.>
11) Lower the vehicle.
12) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
13) Check the inhibitor switch. <Ref. to CVT(TR690)-102, INSPECTION, Inhibitor Switch.>

16.Secondary Speed Sensor



A: REMOVAL

CAUTION:
Be sure to prevent water or oil from contacting the connector terminal of secondary speed sensor. If adhesion occurs, replace with a new part.

1) Remove the transmission from the vehicle. <Ref. to CVT(TR690)-58, REMOVAL, Automatic Transmission Assembly.>
2) Remove the transmission cover on the transmission upper side.

3) Remove the secondary speed sensor harness connector.
4) Remove the secondary speed sensor.

B: INSTALLATION

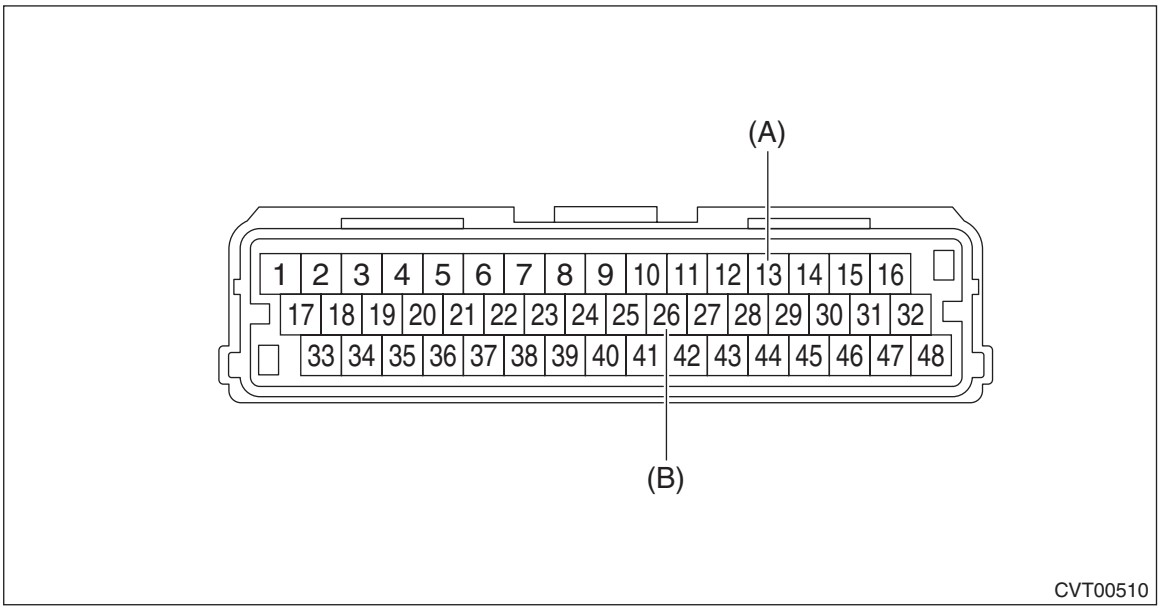
CAUTION:
Be sure to prevent water or oil from contacting the connector terminal of secondary speed sensor. If adhesion occurs, replace with a new part.

1) Install the secondary speed sensor.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)

2) Connect the harness connector.
3) Install the transmission cover.

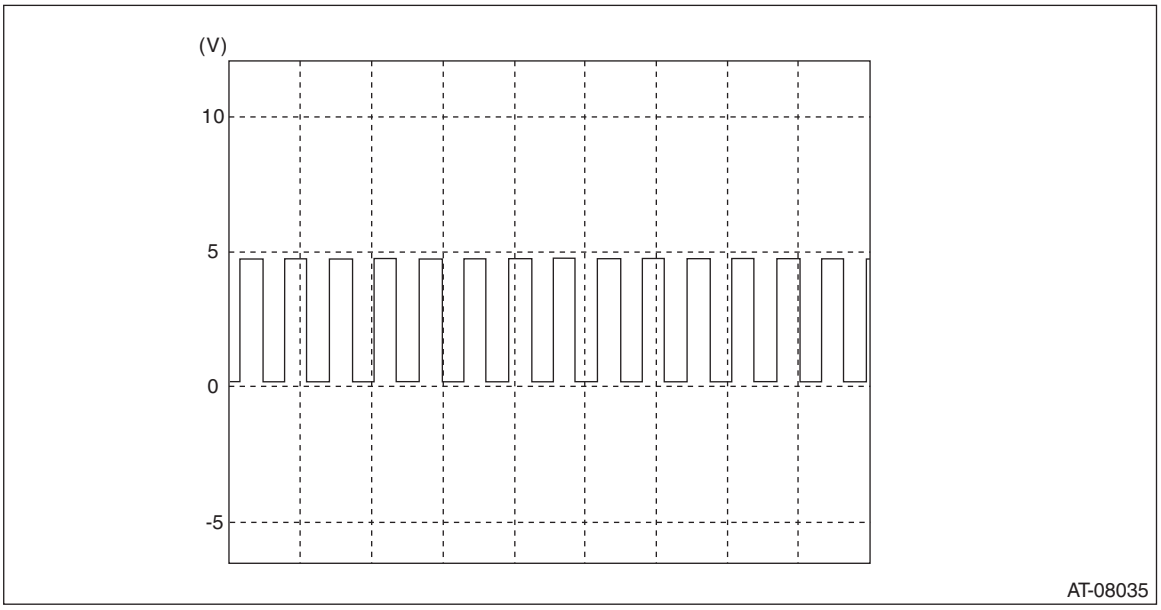


Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)

4) Install the transmission assembly. <Ref. to CVT(TR690)-75, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

1) Remove the bulkhead harness connector from TCM. <Ref. to CVT(TR690)-141, REMOVAL, Transmission Control Module (TCM).>
2) Set the ST between the TCM and bulkhead harness.
ST 18460AA040 CHECK BOARD
3) Set the probe of oscilloscope to the check board connector.

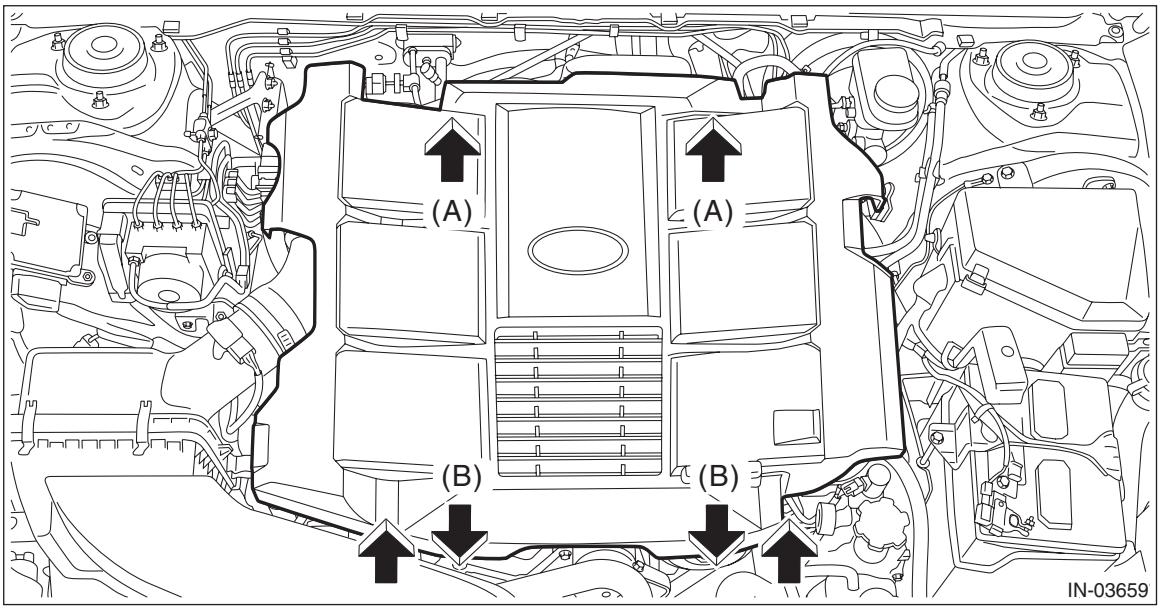


Terminals:
No. 13 (+) — No. 26 (–)

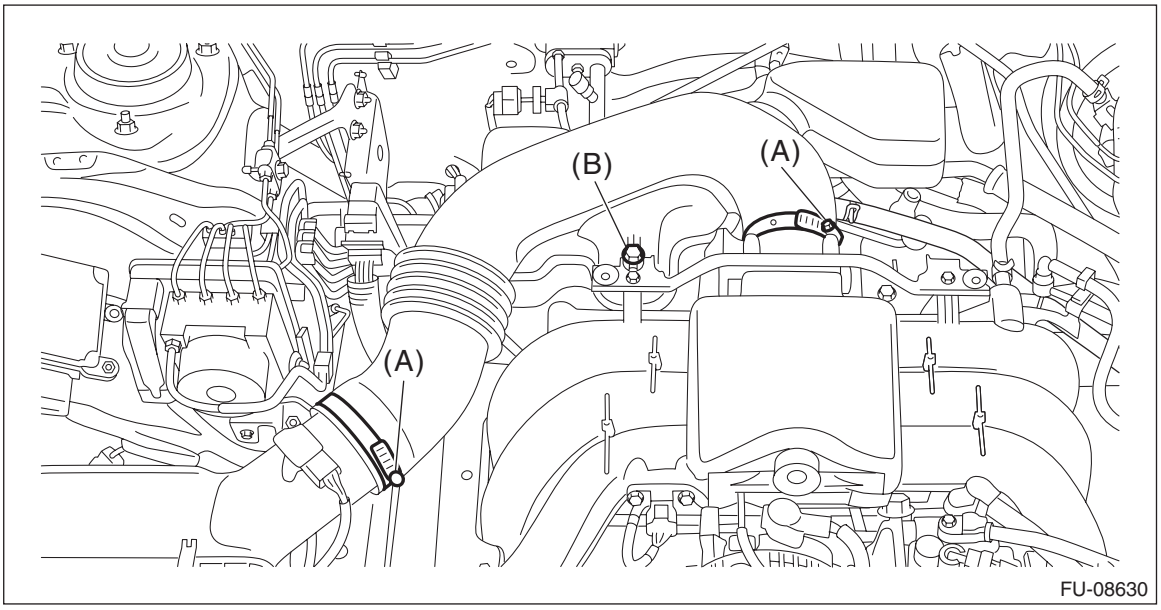
(A) + probe
(B) – probe

4) Start and warm up the engine.
5) Check the waveform of secondary speed sensor with engine idling.

NOTE:
The waveform cycle changes as the speed changes.

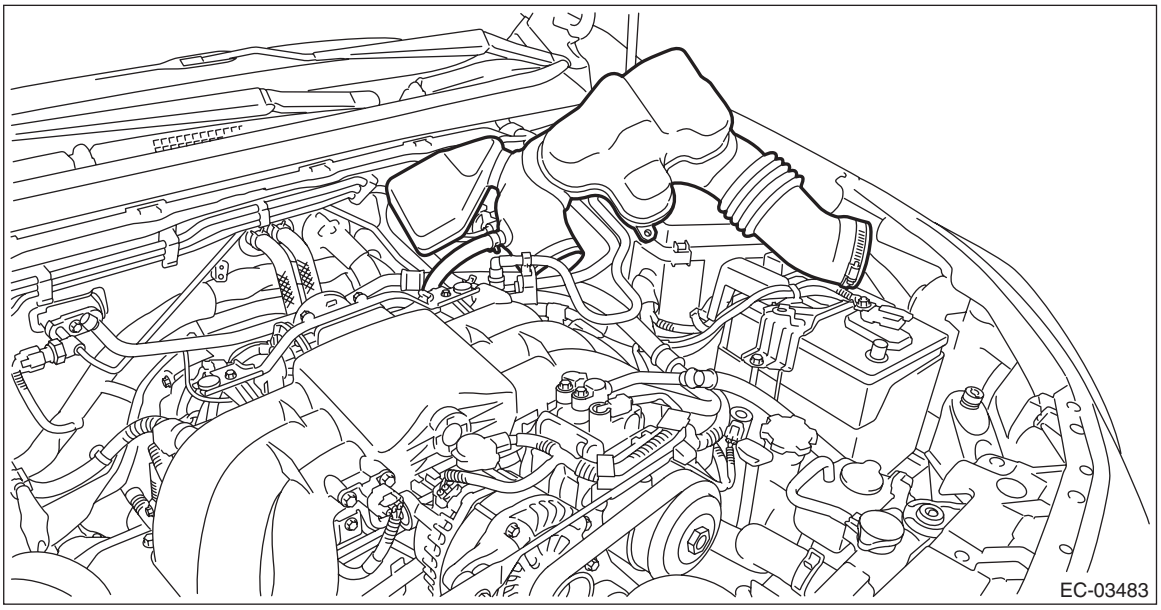


17.Primary Speed Sensor

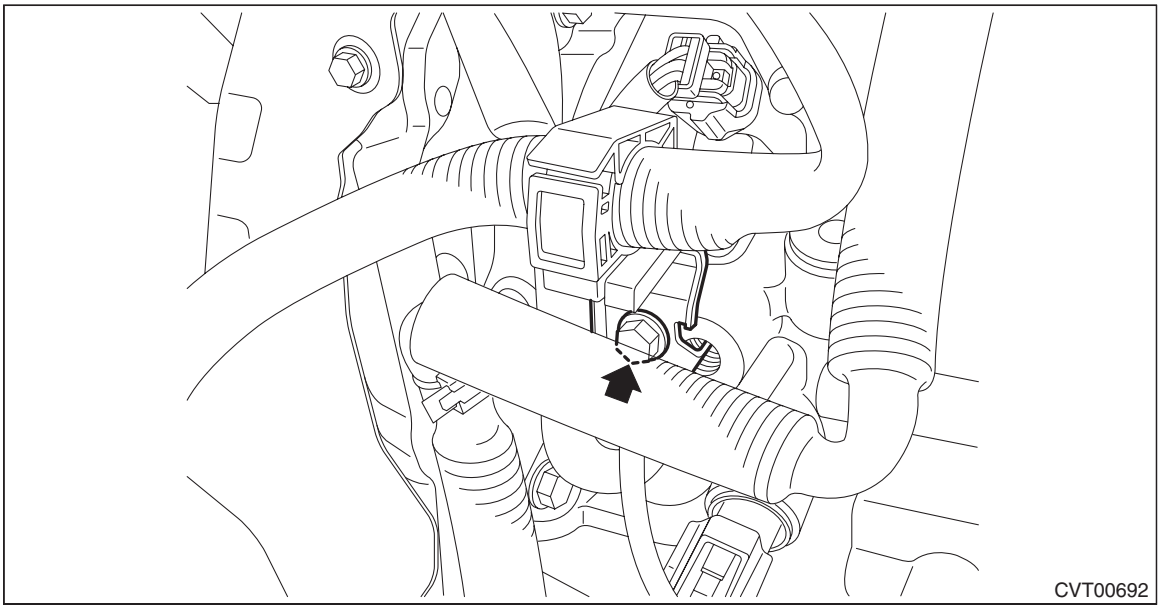


A: REMOVAL

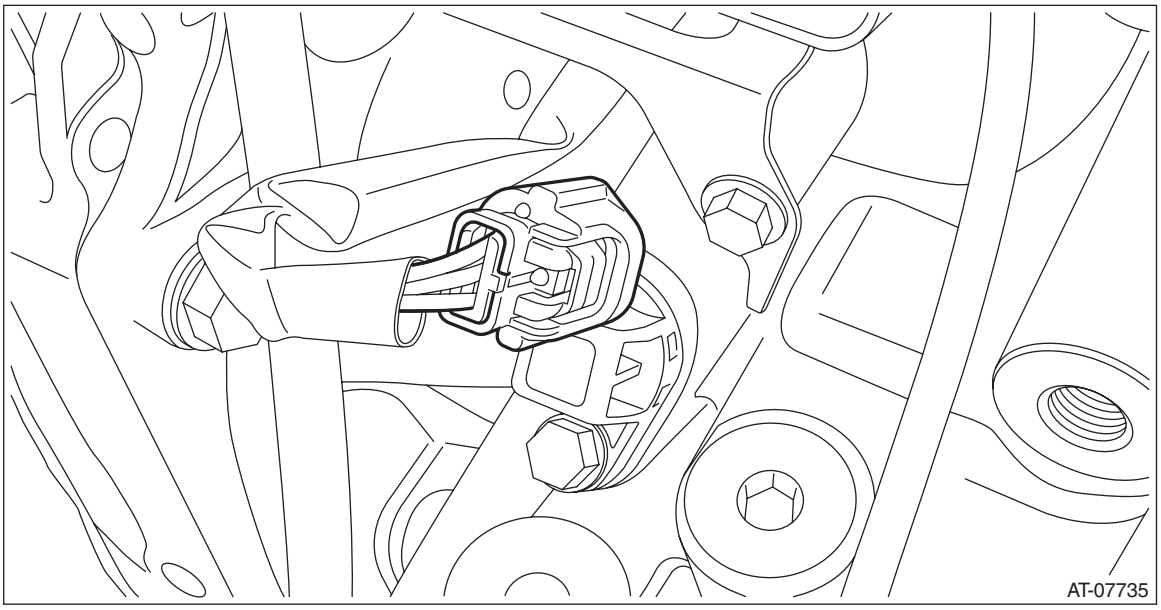
CAUTION:
Be sure to prevent water or oil from contacting the connector terminal of primary speed sensor. If adhesion occurs, replace with a new part.



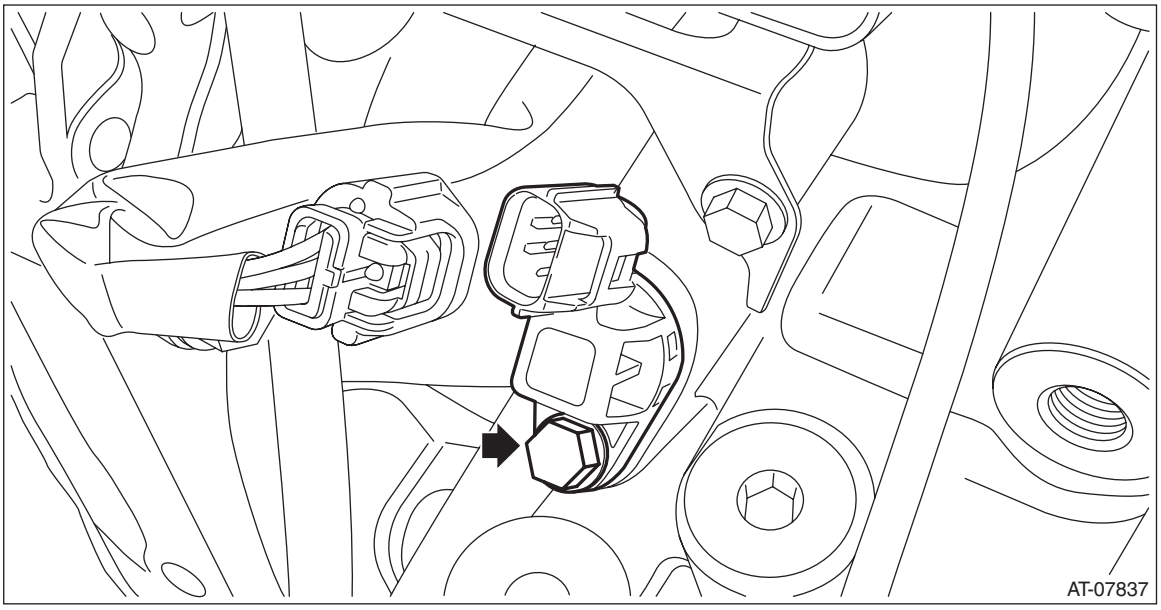
1) Remove the collector cover.
   (1) Carefully pull up the rear of collector cover at two positions (A).
   (2) Carefully pull up the front of collector cover at two positions (B) while moving it forward.



2) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Loosen the clamp (A) which connects the air intake boot assembly.
4) Loosen the bolt (B) which secures the air intake boot assembly to the collector cover bracket.



5) Remove the air intake boot from the throttle body, and move the air intake boot to the left side wheel apron.



6) Clean the transmission exterior.
7) Remove the harness stay from the transmission.

8) Remove the primary speed sensor harness connector.

9) Remove the primary speed sensor.

B: INSTALLATION

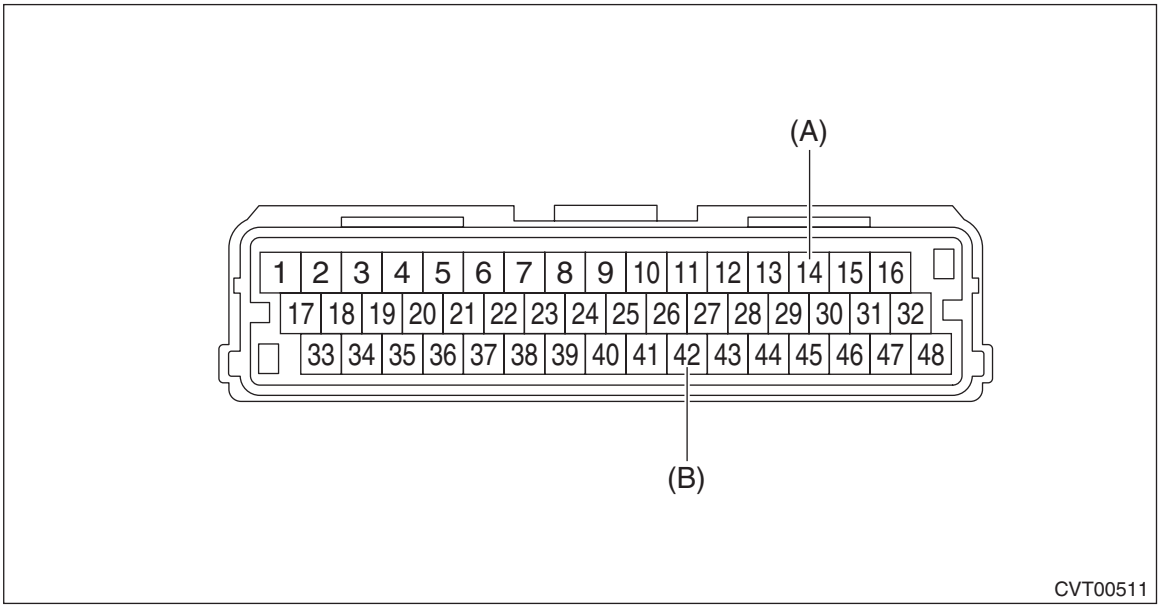
CAUTION:
Be sure to prevent water or oil from contacting the connector terminal of primary speed sensor. If adhesion occurs, replace with a new part.

1) Install the primary speed sensor.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)

2) Connect the harness connector.
3) Install the harness stay.

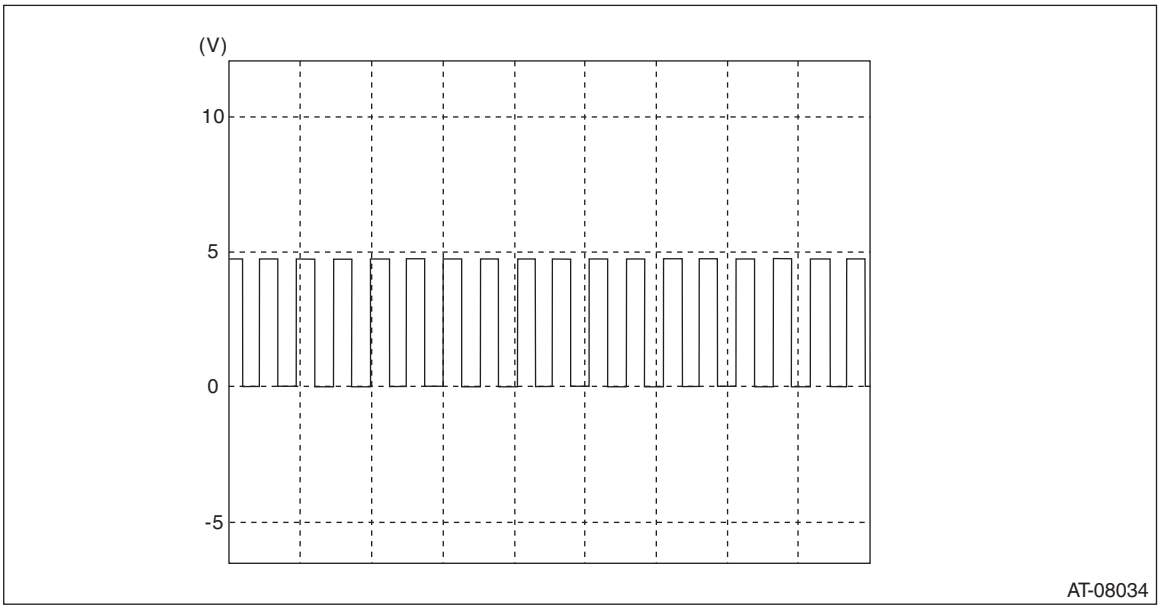


Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)

4) Install the air intake boot. <Ref. to IN(H6DO)-11, INSTALLATION, Air Intake Boot.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
6) Install the collector cover.

C: INSPECTION

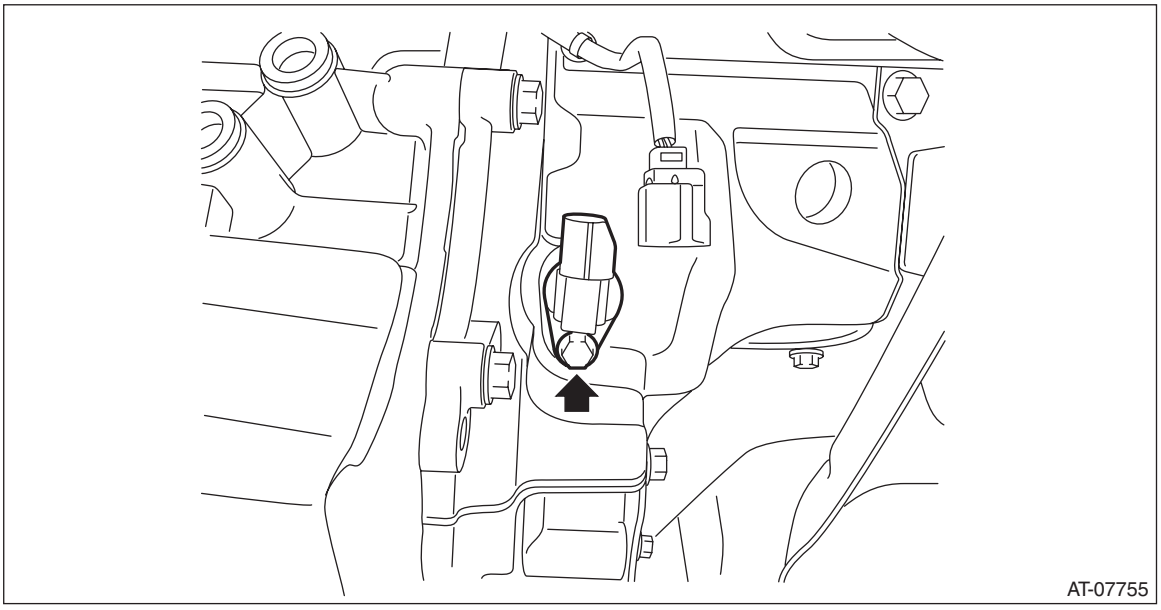
1) Remove the bulkhead harness connector from TCM. <Ref. to CVT(TR690)-141, REMOVAL, Transmission Control Module (TCM).>
2) Set the ST between the TCM and bulkhead harness.
ST 18460AA040 CHECK BOARD
3) Set the probe of oscilloscope to the check board connector.



Terminals:
No. 14 (+) — No. 42 (–)

(A) + probe
(B) – probe

4) Start and warm up the engine.
5) Check the waveform of primary speed sensor with engine idling.



NOTE:
The waveform cycle changes as the speed changes.

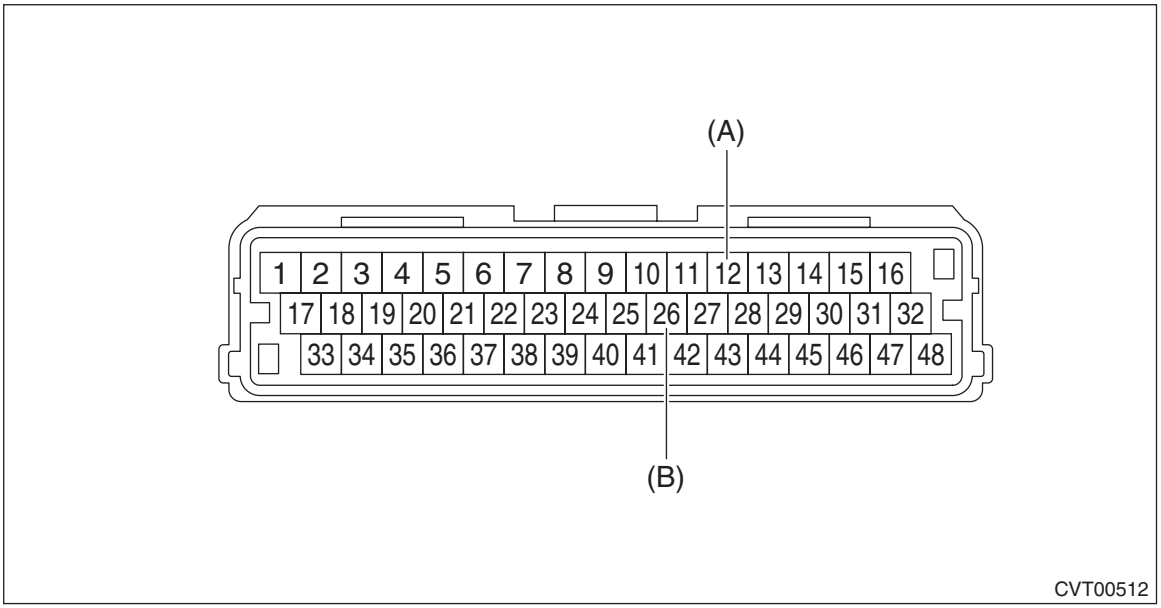
18.Front Wheel Speed Sensor

A: REMOVAL

CAUTION:
• Be sure to prevent water or oil from contacting the connector terminal of front wheel speed sensor. If adhesion occurs, replace with a new part.
• When removing front wheel speed sensor, CVTF may let out. If CVTF has leaked, adjust the CVTF level after installing the front wheel speed sensor.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle.
3) Clean the transmission exterior.
4) Remove the front wheel speed sensor harness connector.
5) Remove the front wheel speed sensor.

B: INSTALLATION

CAUTION:
• Be sure to prevent water or oil from contacting the connector terminal of front wheel speed sensor. If adhesion occurs, replace with a new part.
• After installing the front wheel speed sensor, adjust the CVTF level.
1) Install the front wheel speed sensor.

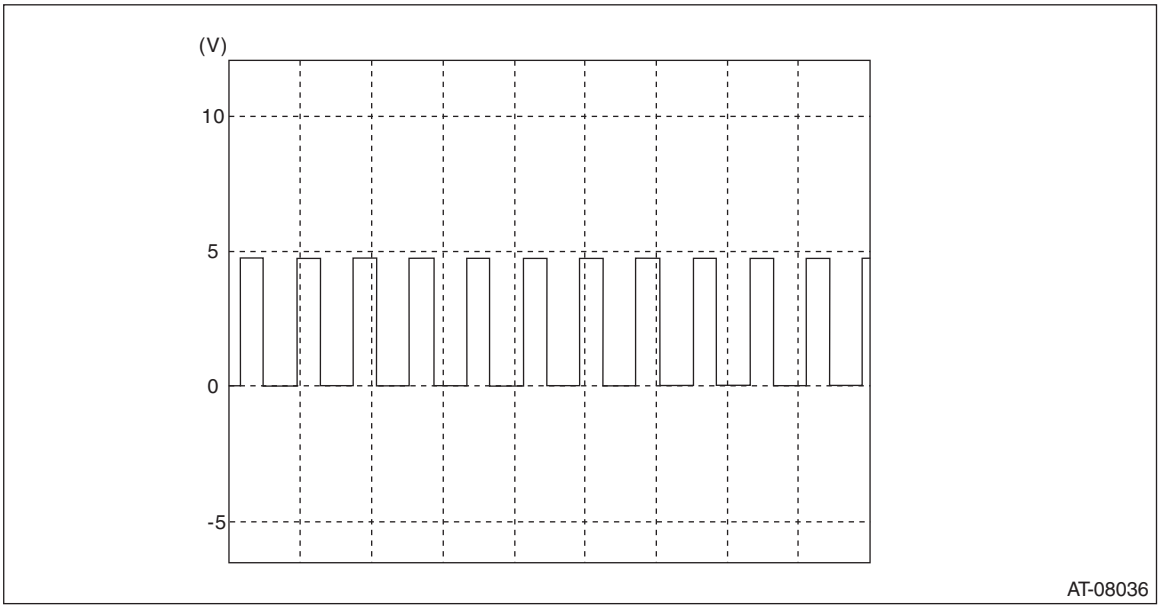


NOTE:
• Use new O-rings.
• Apply CVTF to the O-rings.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)
2) Connect the harness connector.
3) Lower the vehicle.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Remove the bulkhead harness connector from TCM. <Ref. to CVT(TR690)-141, REMOVAL, Transmission Control Module (TCM).>
2) Set the ST between the TCM and bulkhead harness.
ST 18460AA040 CHECK BOARD
3) Set the probe of oscilloscope to the check board connector.

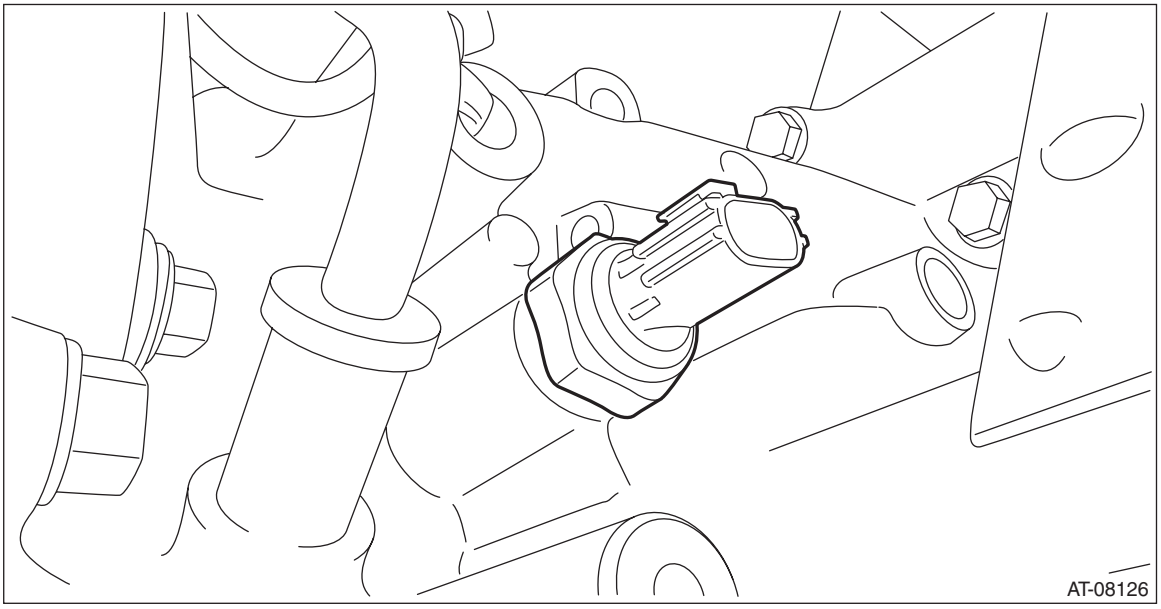


Terminals:
No. 12 (+) — No. 26 (–)

(A) + probe
(B) – probe

4) Lift up the vehicle and raise the vehicle speed up to 20 km/h (12 MPH).
5) Check the waveform of front wheel speed sensor when vehicle speed is at 20 km/h (12 MPH).

NOTE:
The waveform cycle changes as the speed changes.



19.Secondary Pressure Sensor

A: REMOVAL

CAUTION:
• Be sure to prevent water or oil from contacting the connector terminal of secondary pressure sensor. If adhesion occurs, replace with a new part.
• When removing secondary pressure sensor, CVTF may let out. If CVTF has leaked, adjust the CVTF level after installing the secondary pressure sensor.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle.
3) Clean the transmission exterior.
4) Remove the secondary pressure sensor harness connector.
5) Remove the secondary pressure sensor.

NOTE:
Use Ko-ken 3/8 12-point 27 mm (manufacturer product No. 3305M-27) deep socket.

B: INSTALLATION

CAUTION:
• Be sure to prevent water or oil from contacting the connector terminal of secondary pressure sensor. If adhesion occurs, replace with a new part.
• After installing the secondary pressure sensor, adjust the CVTF level.
1) Install the secondary pressure sensor.

NOTE:
• Use new O-rings.

Tightening torque:
39 N·m (4.0 kgf-m, 28.8 ft-lb)
2) Connect the harness connector.
3) Lower the vehicle.
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

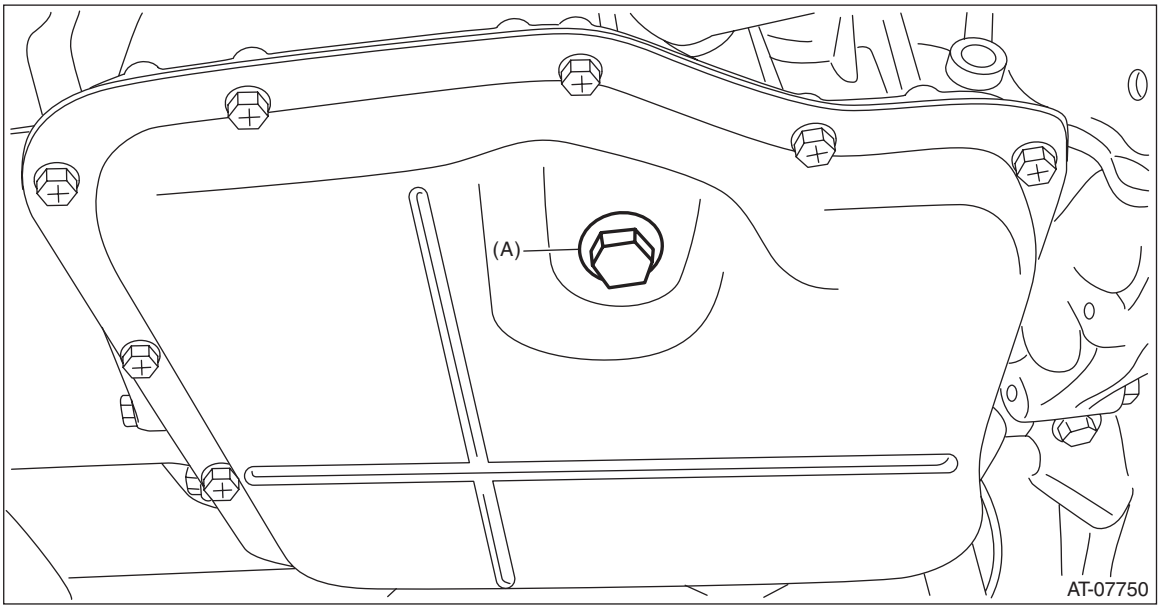
Tightening torque:
39 N·m (4.0 kgf-m, 28.8 ft-lb)

C: INSPECTION

1) Start and warm up the engine.
2) Shift the select lever to “P” or “N” range.
3) Depress the brake pedal and hold it.
4) Check “secondary pressure sensor voltage” by using Subaru Select Monitor while the engine is idling. <Ref. to CVT(diag)-19, OPERATION, Subaru Select Monitor.>

Specification:
Approx. 0.8 V

5) Check “secondary pressure sensor voltage” by using Subaru Select Monitor while the engine is stopped and the ignition switch is turned on. <Ref. to CVT(diag)-19, OPERATION, Subaru Select Monitor.>



Specification:
Approx. 0.5 V

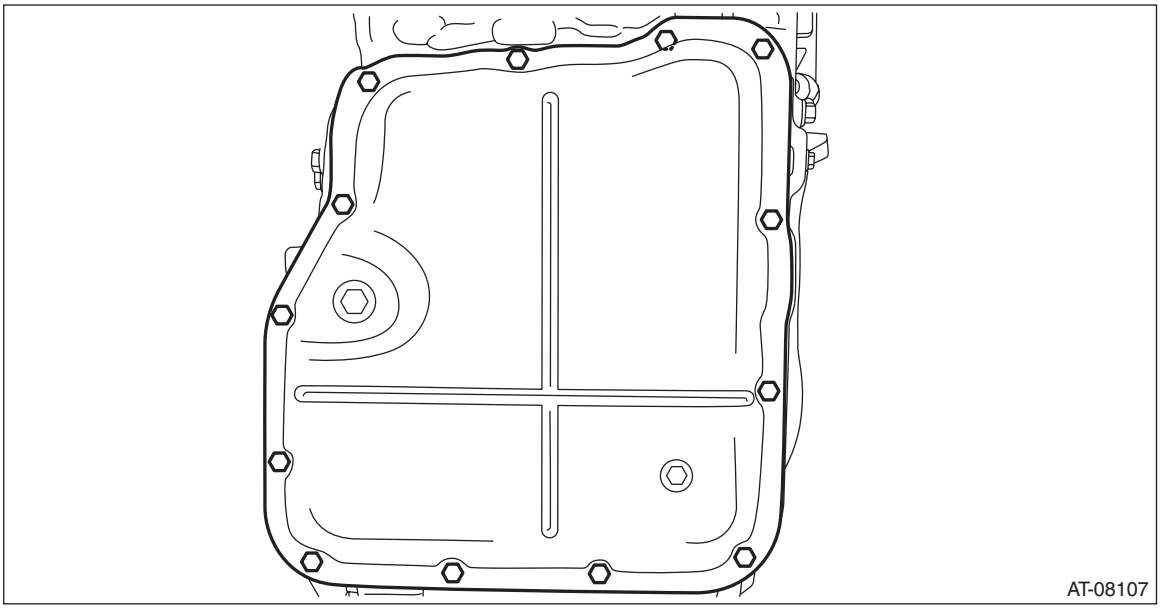
20.Control Valve Body

A: REMOVAL

CAUTION:
• Directly after the vehicle has been running or the engine has been idling for a long time, the CVTF is hot. Be careful not to burn yourself.
• Be careful not to spill CVTF on the exhaust pipe to prevent it from emitting smoke or causing a fire. If the CVTF adheres, wipe it off completely.

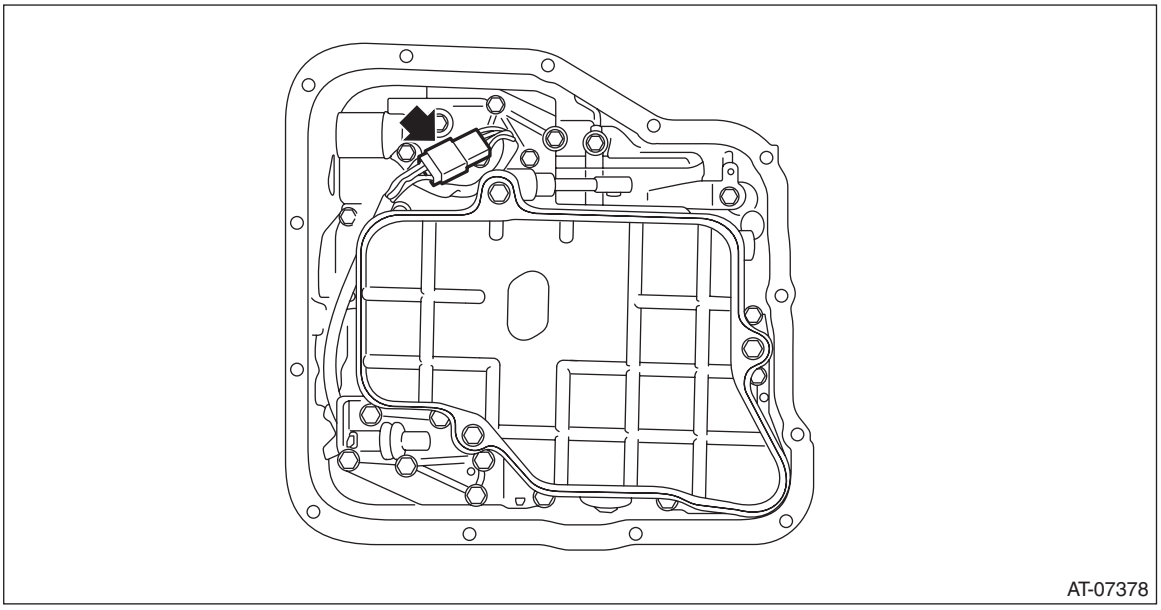
NOTE:
The control valve body is replaced as an assembly only, because it is a non-disassembly part.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle.
3) Clean the transmission exterior.
4) Remove the CVTF drain plug to drain CVTF.

(A) CVTF drain plug



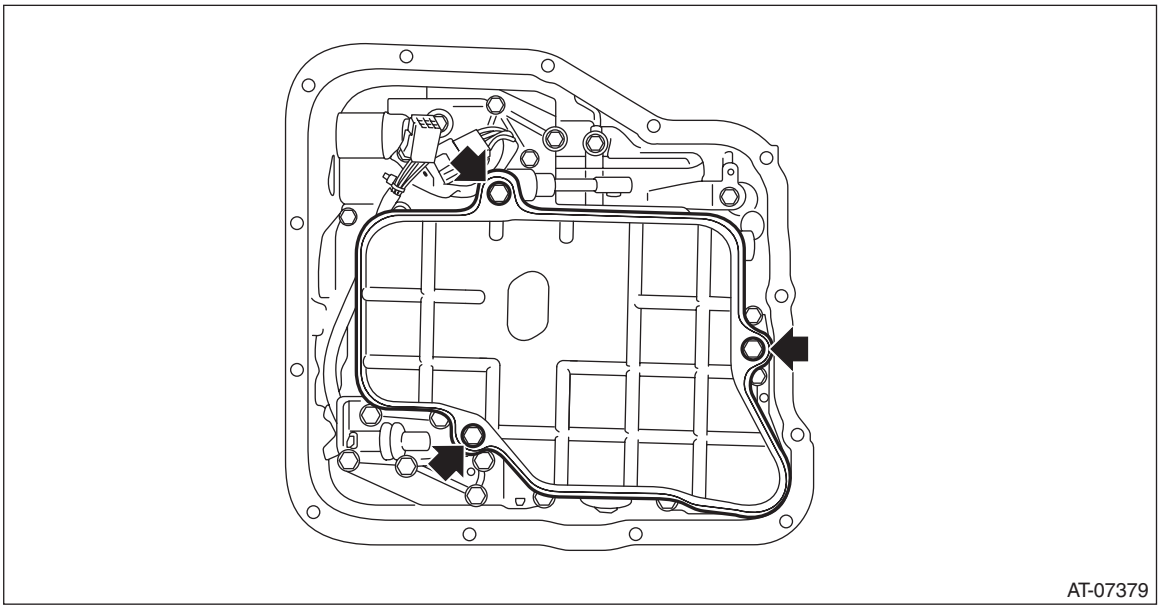
5) Install the CVTF drain plug.

NOTE:
Use a new gasket.



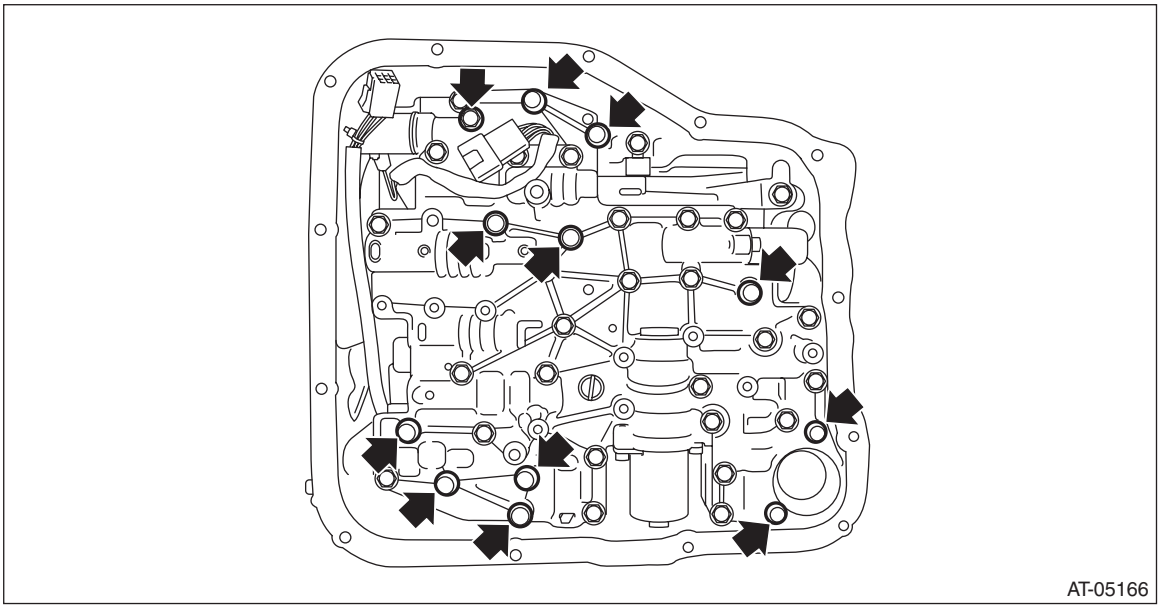
Tightening torque:
39.2 N·m (4.0 kgf-m, 28.9 ft-lb)

6) Remove the oil pan.

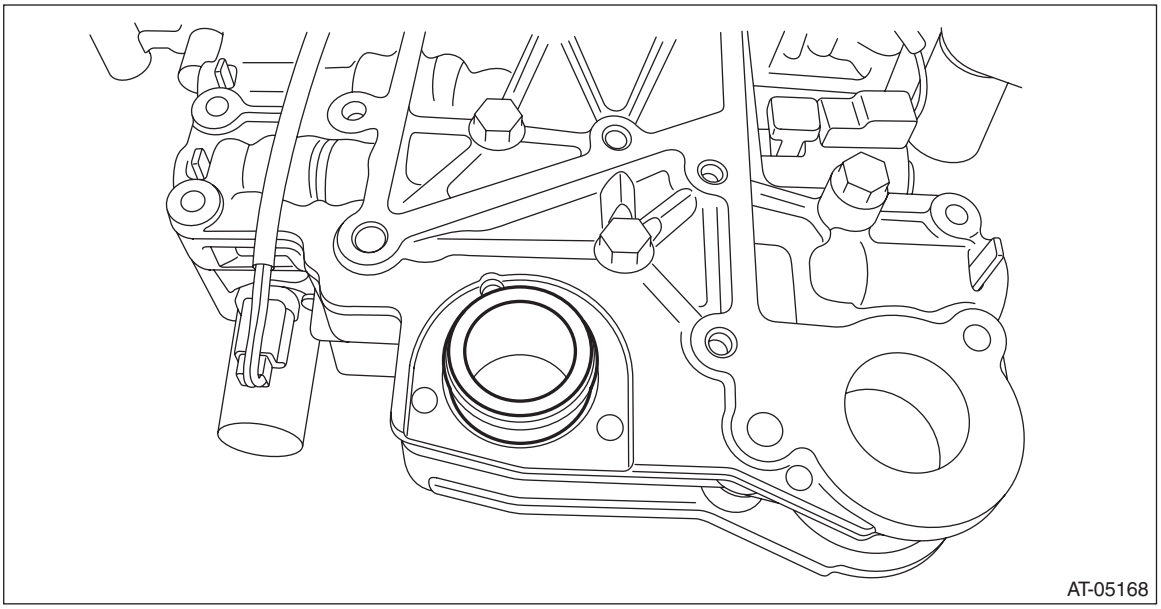


CAUTION:
Be careful not to allow foreign matter such as dust or dirt to enter the oil pan.

7) Remove the magnet.
8) Disconnect the control valve harness connector.

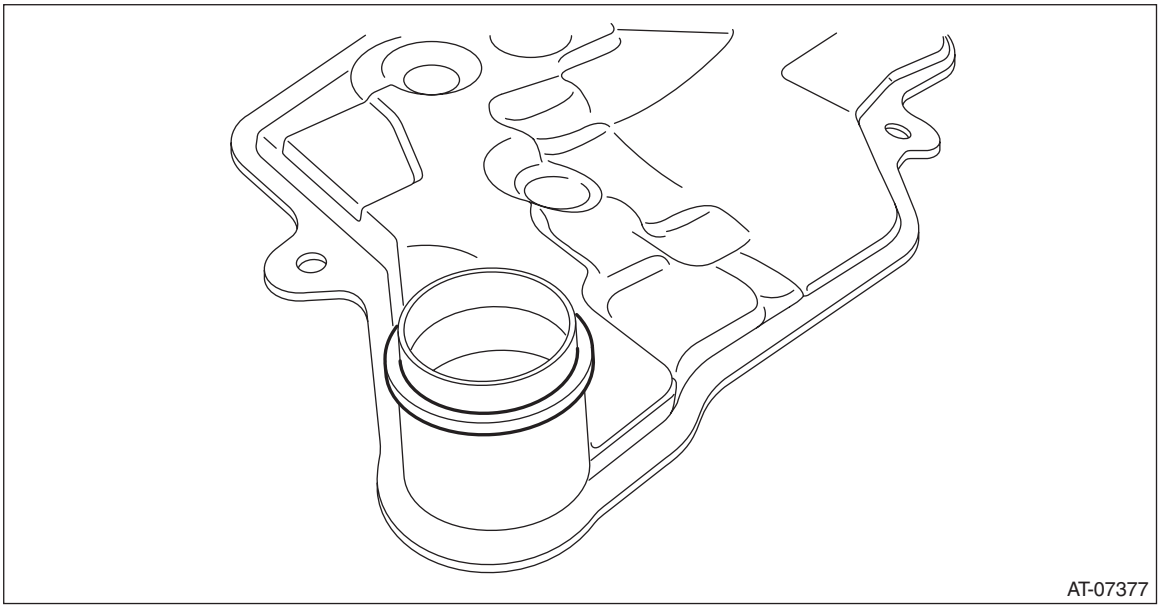


9) Remove the oil strainer.

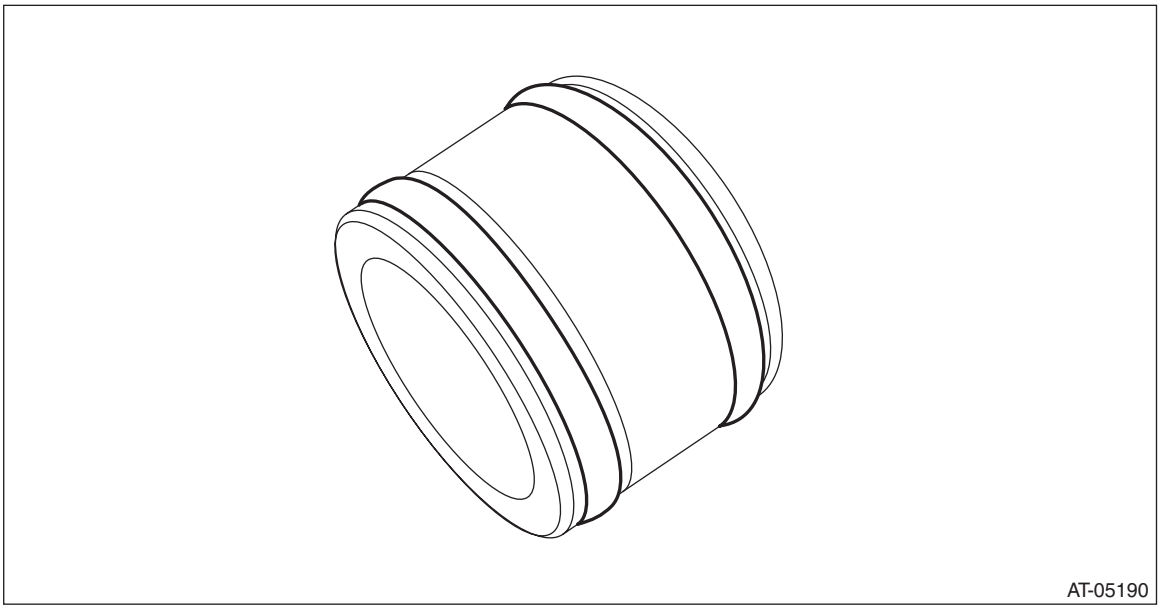


10) Remove the control valve body.

CAUTION:
Do not let the manual valve drop off.

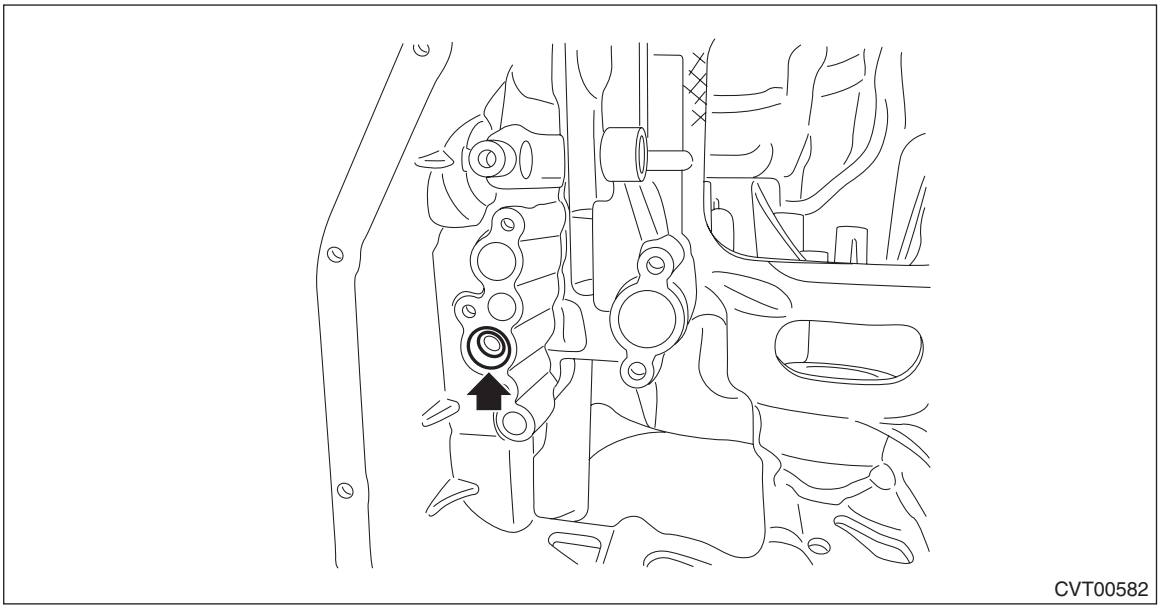


11) Remove the pressure pipe.



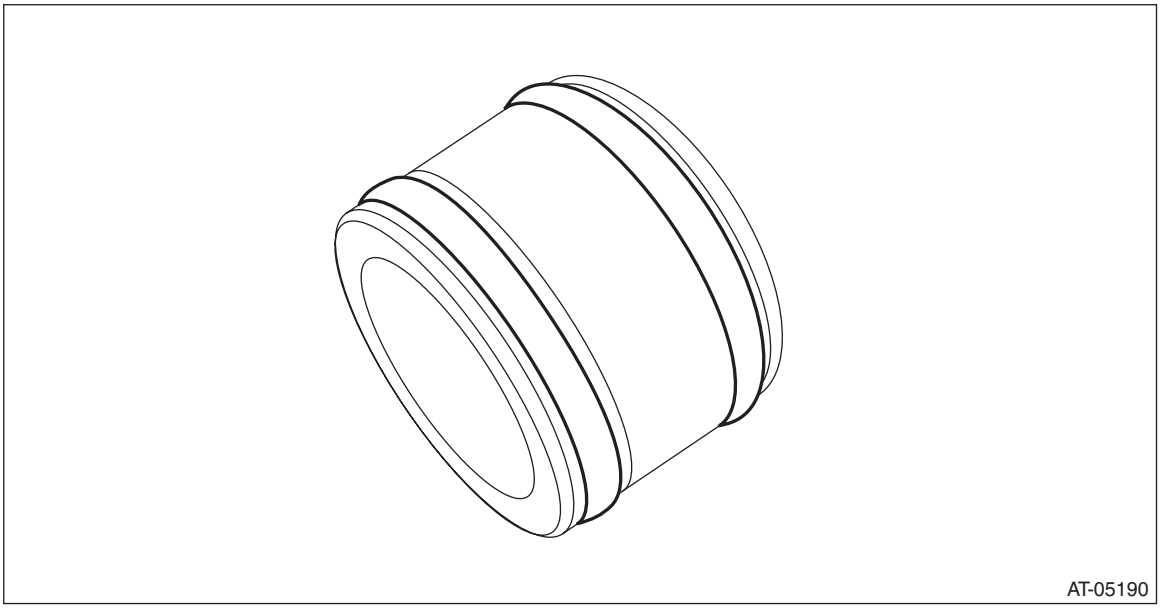
NOTE:
It may be located in transmission case side.

12) Remove the O-ring from oil strainer.



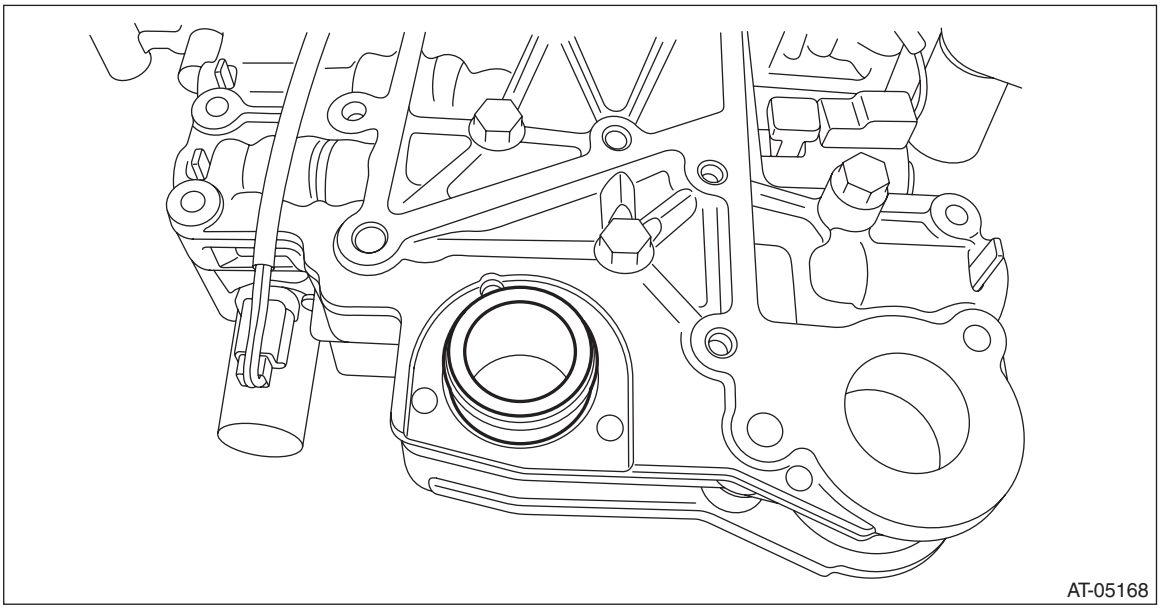
13) Remove the O-ring from pressure pipe.

B: INSTALLATION



1) Clean the mating surface of oil pan and transmission case.
2) Make sure that the CVTF filter is installed to the transmission case.

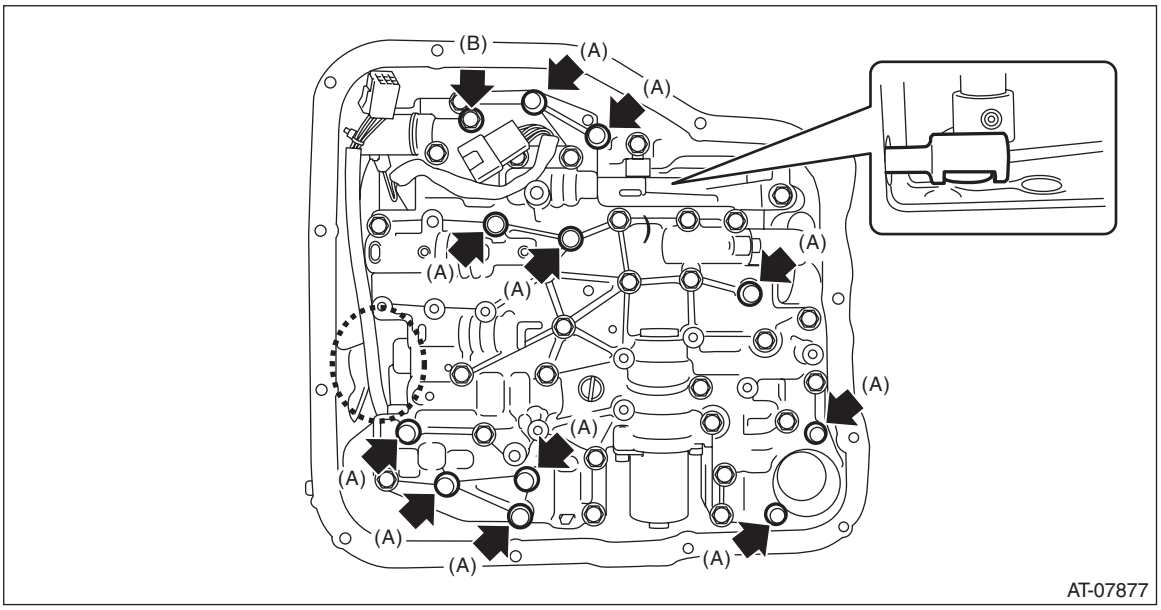
NOTE:
Make sure that the CVTF filter does not protrude from the transmission case.



3) Check the control valve body for dust and other foreign matter.
4) Install the O-ring to the pressure pipe.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

5) Install the pressure pipe.

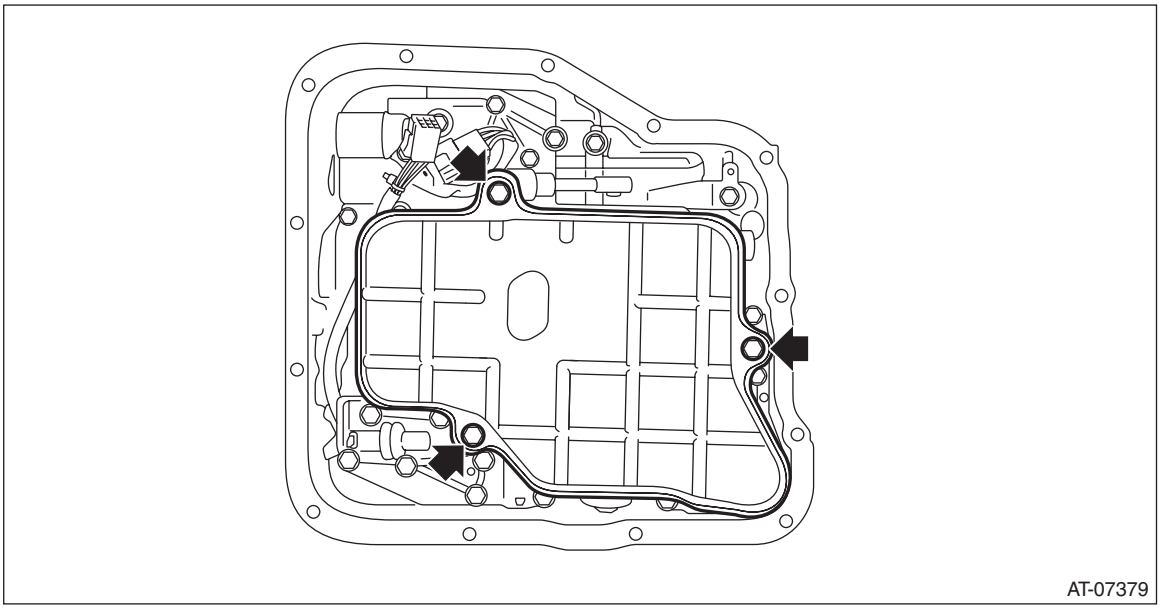


6) Install the control valve body to the transmission.

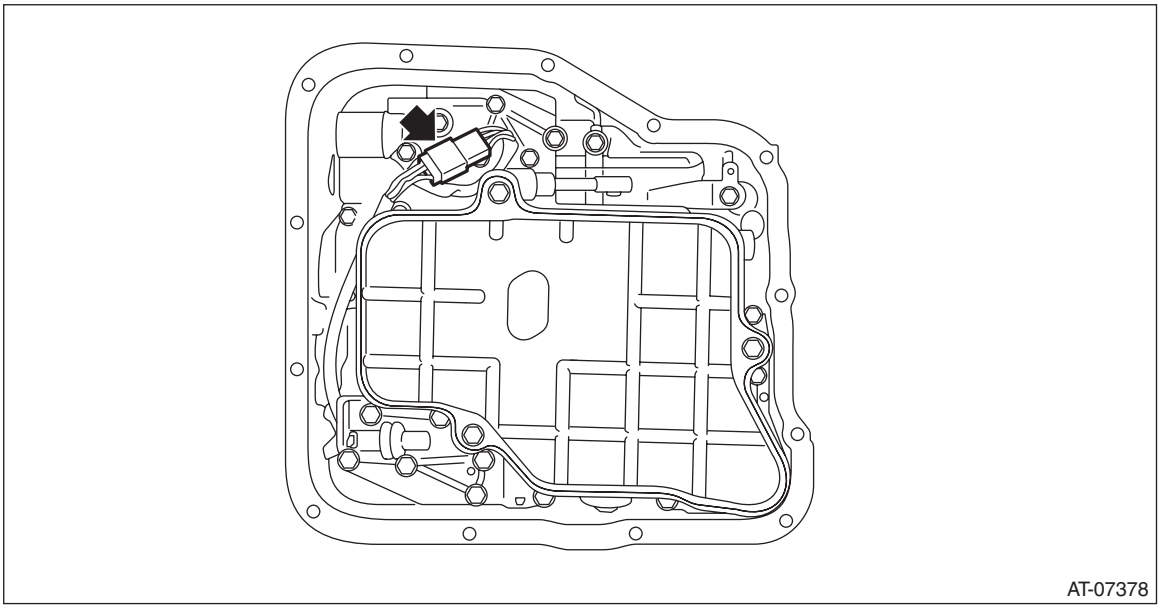
CAUTION:
- **Beware of the transmission harness getting caught in between.**
- **Do not impact or bend the transmission harness because it has the oil temperature sensor inside.**

NOTE:
- Engage the manual valve to the manual plate.
- Lead the transmission harness through from the point indicated by dashed line in the figure.

Tightening torque:
9 N·m (0.9 kgf-m, 6.6 ft-lb)



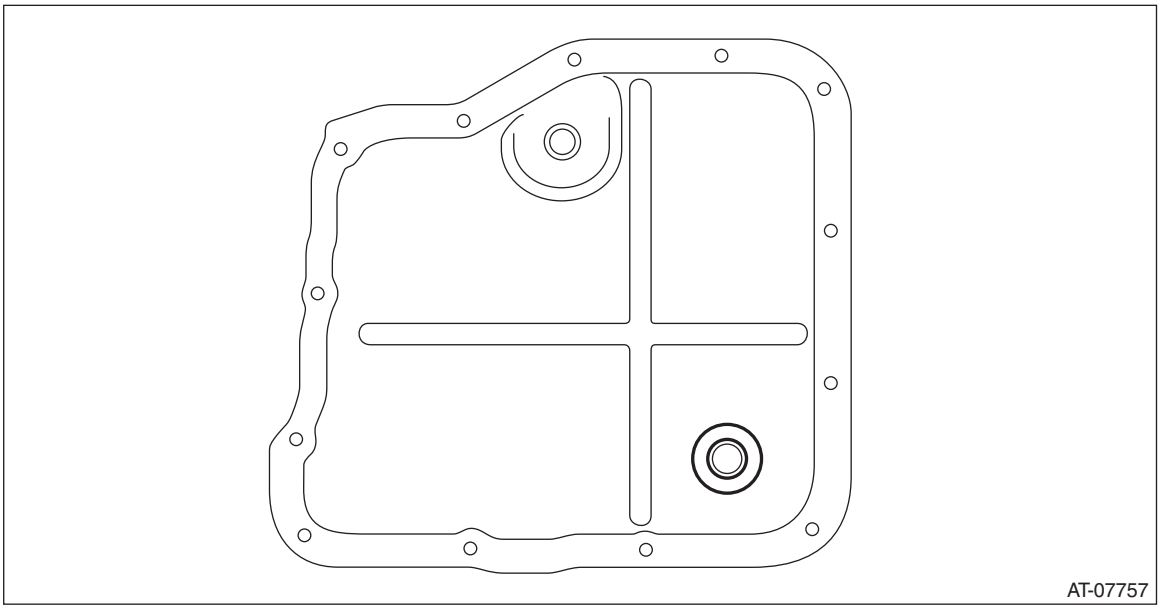
(A) Short bolt (11 pcs)
(B) Long bolt (1 pcs)



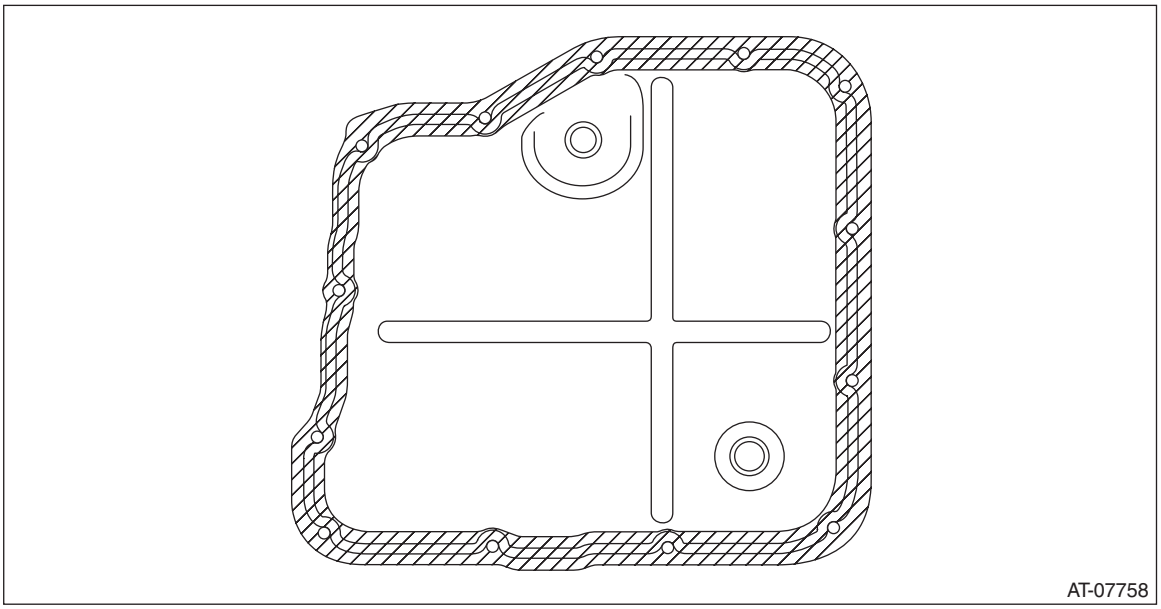
7) Install the O-ring to oil strainer and install the oil strainer.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.
- Let the transmission harness run between control valve body and oil strainer.

Tightening torque:
9 N·m (0.9 kgf-m, 6.6 ft-lb)



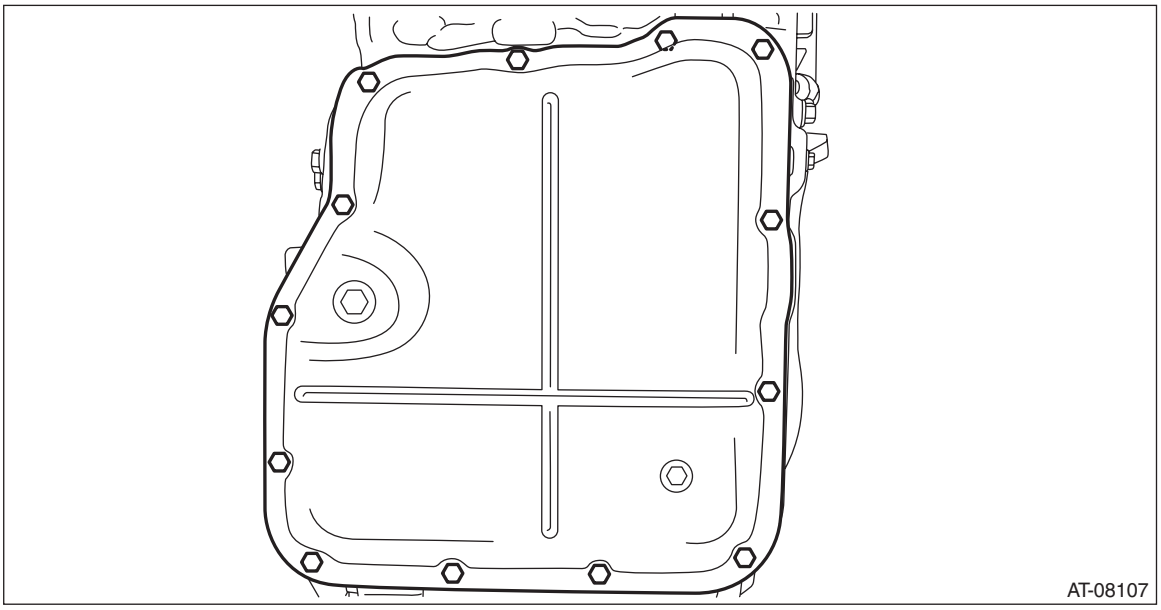
8) Connect the control valve harness connector.



9) Clean the magnet.

10) Attach the magnet at the specified position of the oil pan.

11) Apply liquid gasket all around the oil pan mating surface seamlessly.

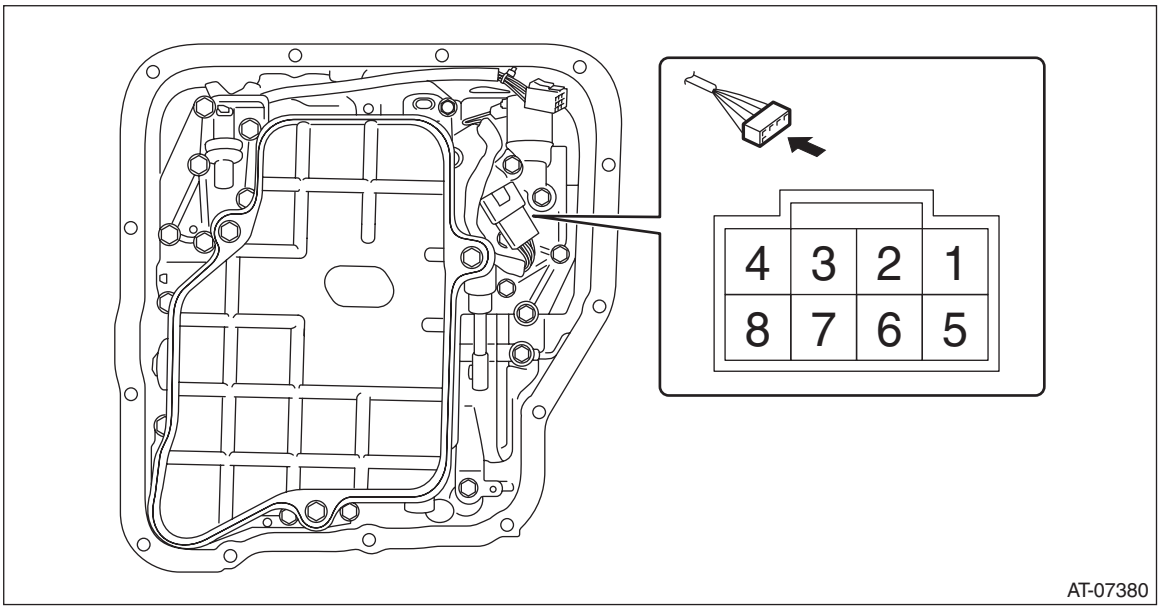


Liquid gasket:
THREE BOND 1217B (Part No. K0877YA020) or equivalent

12) Install the oil pan by equally tightening the bolts.

CAUTION:
Beware of the transmission harness getting caught in between.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)

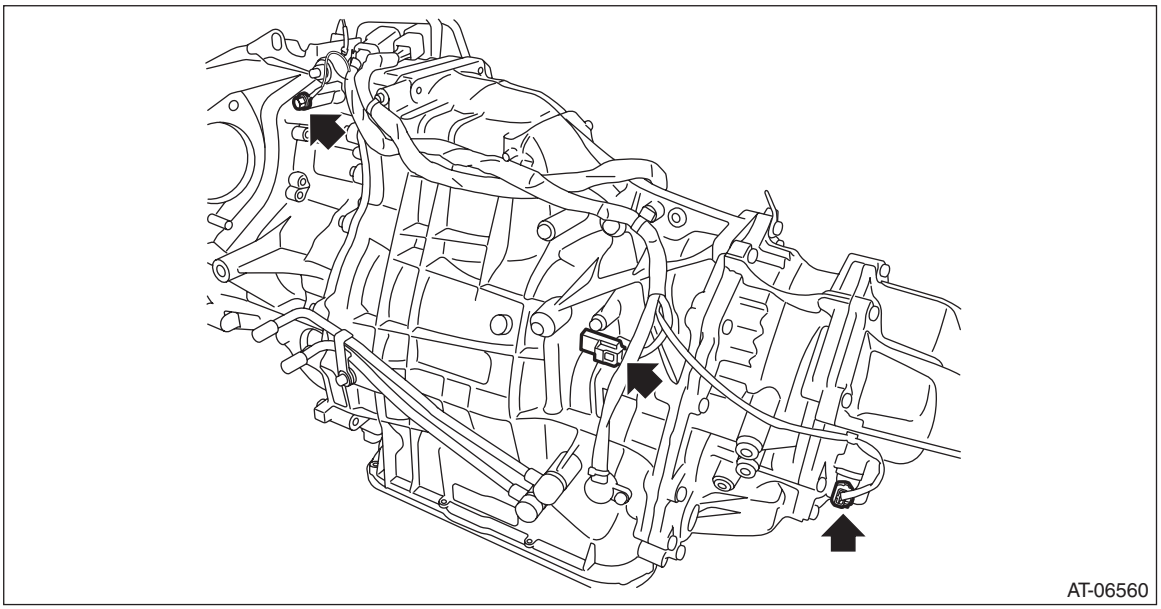


13) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
14) Fill with CVTF. <Ref. to CVT(TR690)-40, REPLACEMENT, CVTF.>
15) Adjust the CVTF level. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.>
16) Perform the operation of AT learning mode. <Ref. to CVT(diag)-34, Learning Control.>

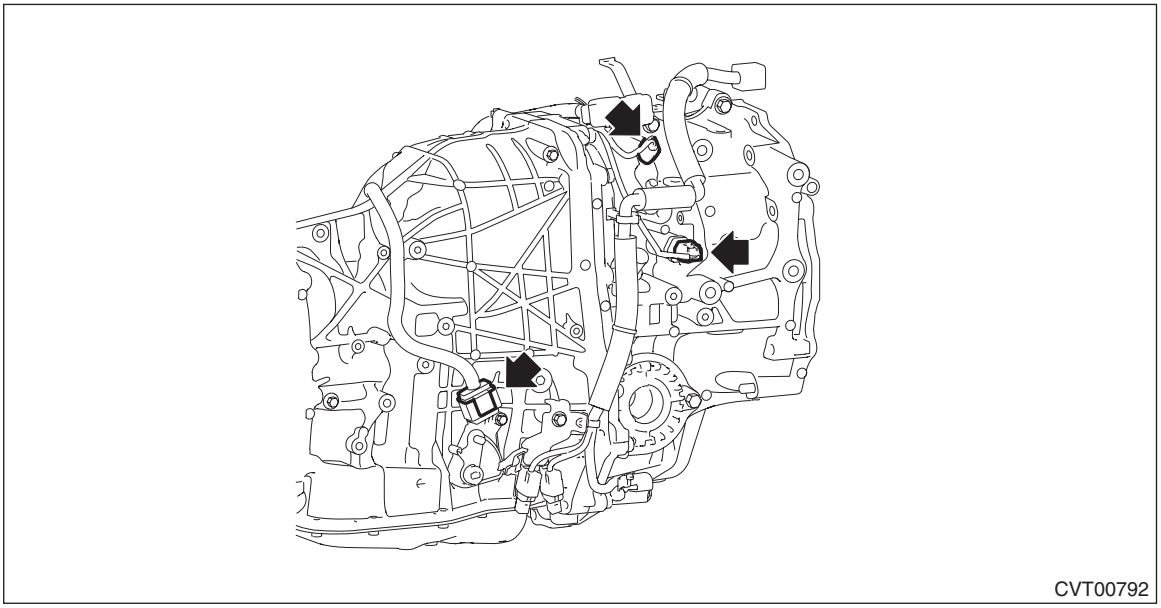
C: INSPECTION

- Check each part for damage or dust.
- Check oil strainer for clogging.
- Measure the resistance of each solenoid.

NOTE:
Measurement should be performed at a temperature of 20°C (68°F).

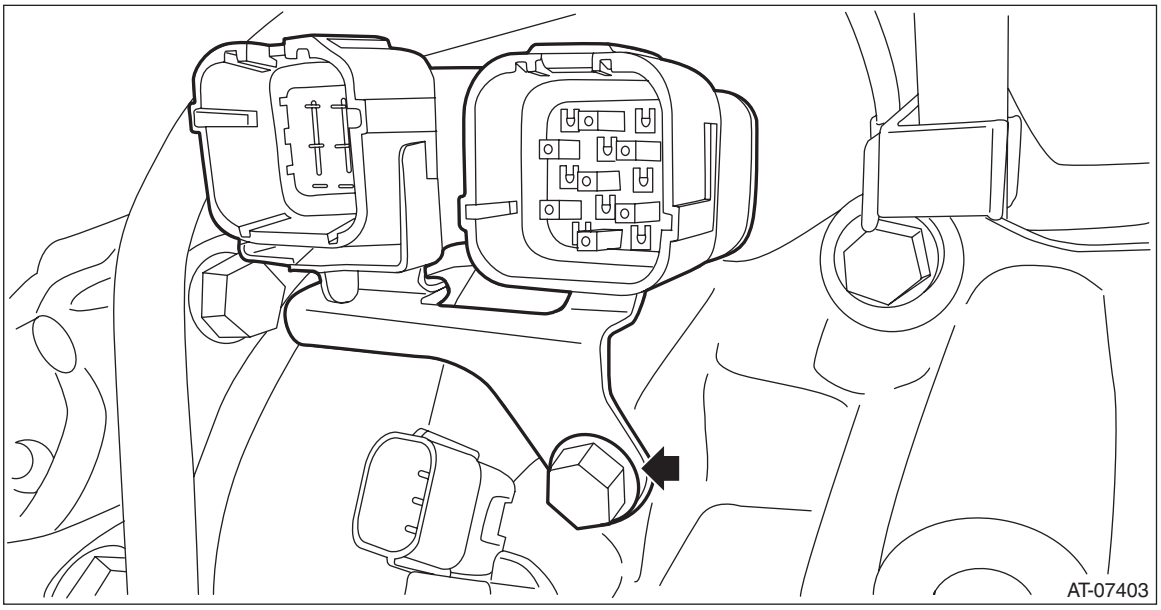


Solenoid	Terminal No.	Standard (Ω)
Secondary solenoid	No. 1 — control valve body	Approx. 6.6 Ω
Lock-up duty solenoid	No. 2 — control valve body	Approx. 12 Ω
F&R solenoid	No. 3 — control valve body	Approx. 5.3 Ω
Lock-up ON/OFF solenoid	No. 5 — control valve body	Approx. 16 Ω
Primary DOWN solenoid	No. 6 — control valve body	Approx. 12 Ω
Primary UP solenoid	No. 7 — control valve body	Approx. 12 Ω
AWD solenoid	No. 8 — control valve body	Approx. 3.2 Ω

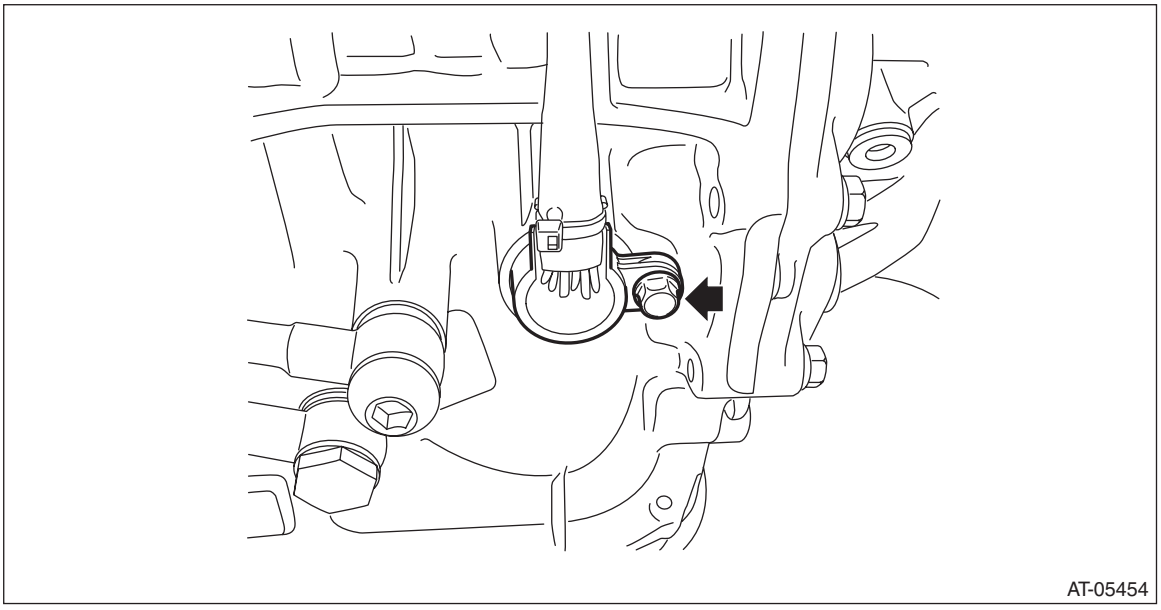


21.Transmission Harness

A: REMOVAL



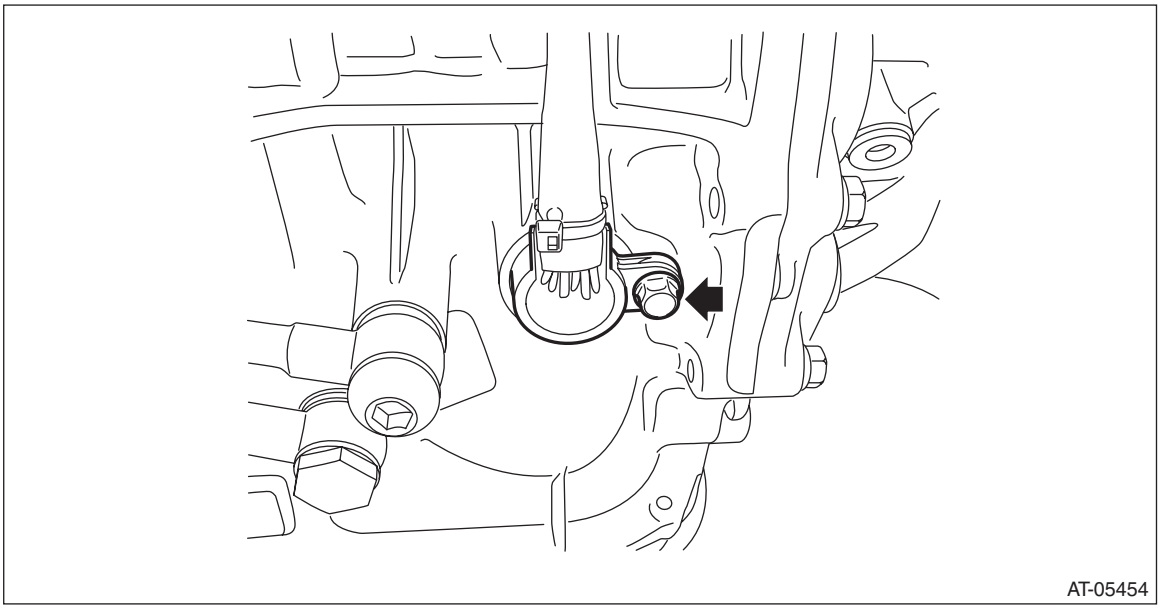
1) Remove the transmission from the vehicle. <Ref. to CVT(TR690)-58, REMOVAL, Automatic Transmission Assembly.>
2) Prepare for overhaul. <Ref. to CVT(TR690)-156, Preparation for Overhaul.>
3) Remove the transmission harness ground terminal and remove the harness connectors from front wheel speed sensor and secondary speed sensor.



4) Remove the harness connectors from inhibitor switch, primary speed sensor and secondary pressure sensor.

5) Remove the transmission harness stay.

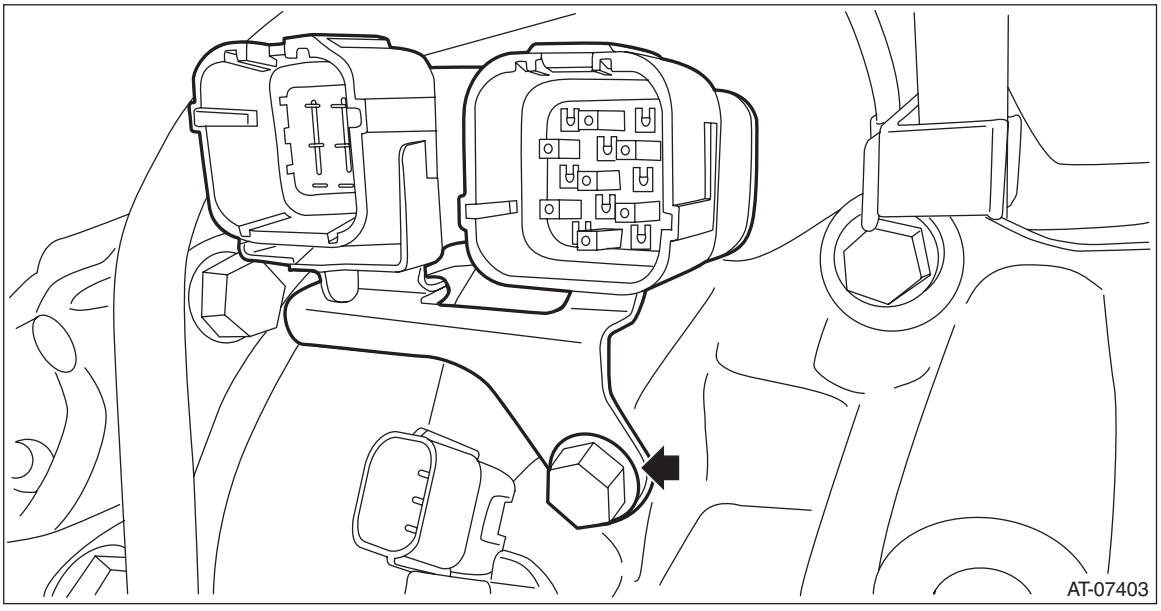
6) Remove transmission harness connector and inhibitor harness connector from harness stay.
7) Remove the control valve body. <Ref. to CVT(TR690)-123, REMOVAL, Control Valve Body.>
8) Remove the mounting bolt to pull out the bushing of transmission harness from transmission case round hole.



9) Remove the harness clip from transmission assembly.

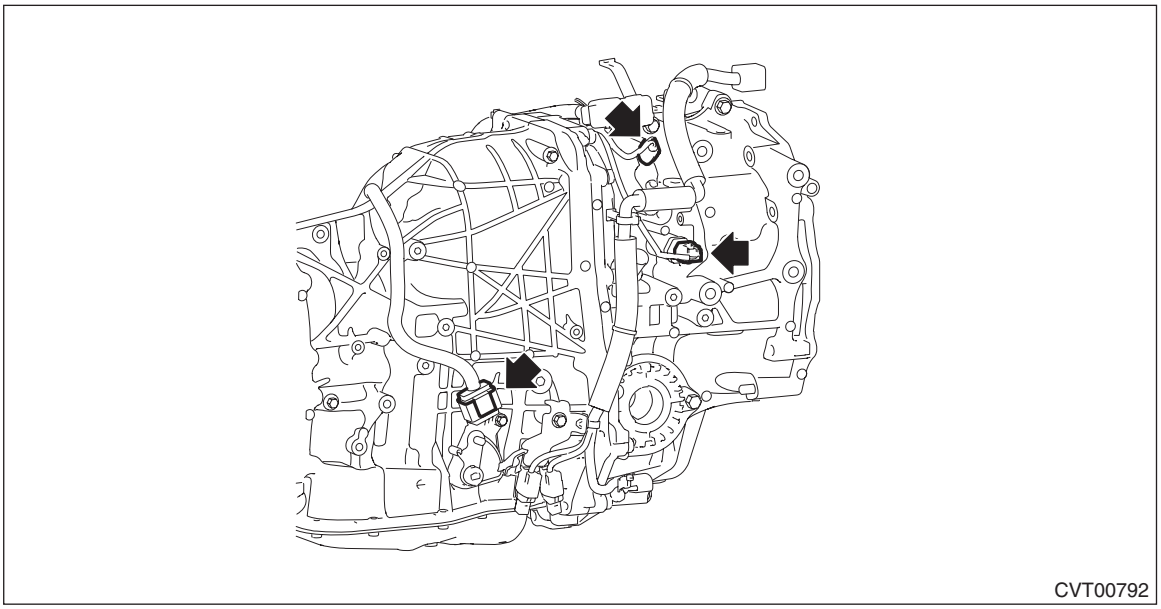
B: INSTALLATION

1) Install the harness clip to the transmission assembly.
2) Insert the transmission harness bushing into the round hole on the transmission case and install the bolt.

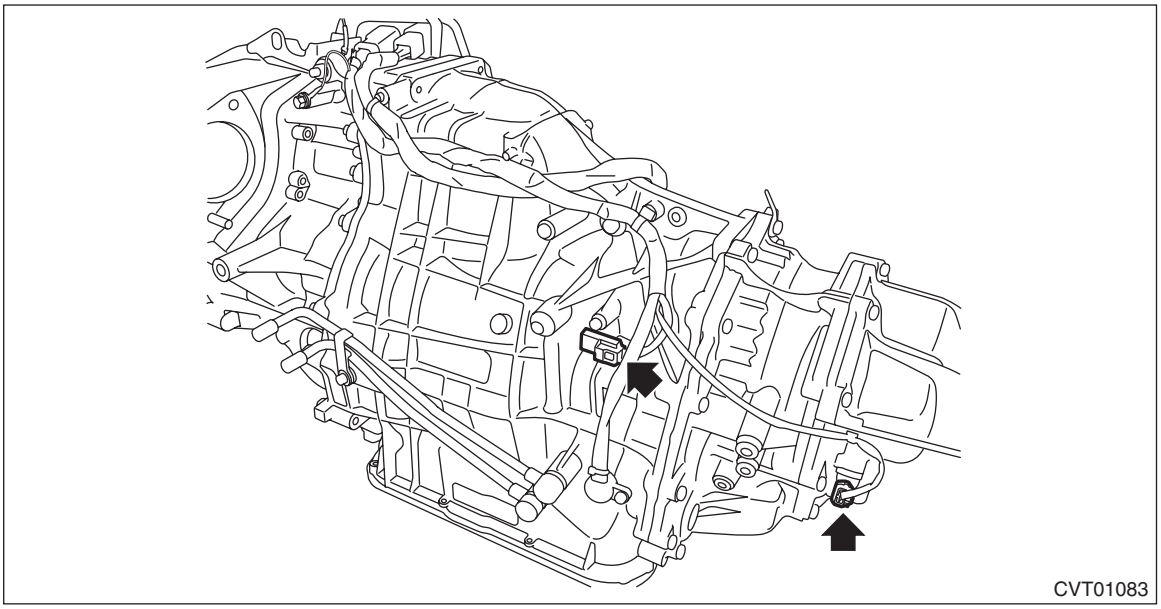


NOTE:
- Use new O-rings.
- Do not impact or bend the transmission harness because it has the oil temperature sensor inside.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)



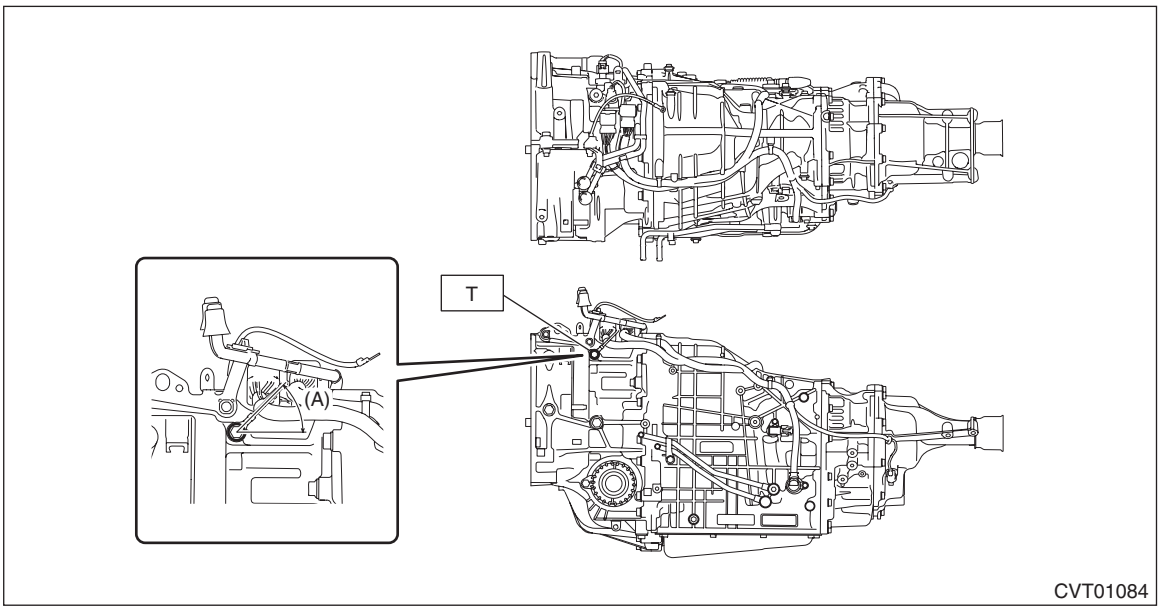
3) Install the control valve body. <Ref. to CVT(TR690)-127, INSTALLATION, Control Valve Body.>
4) Install the transmission harness connector and inhibitor harness connector to the harness stay.
5) Install the transmission harness stay.



Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)

6) Connect the harness connectors to the inhibitor switch, primary speed sensor and secondary pressure sensor.

CVT00792



7) Connect the harness connectors to the front wheel speed sensor and secondary speed sensor.

CVT01083

8) Install the transmission ground terminal.

NOTE:
Install the transmission ground terminal at an approximately 45° angle (A).

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)

9) Install the transmission cover.

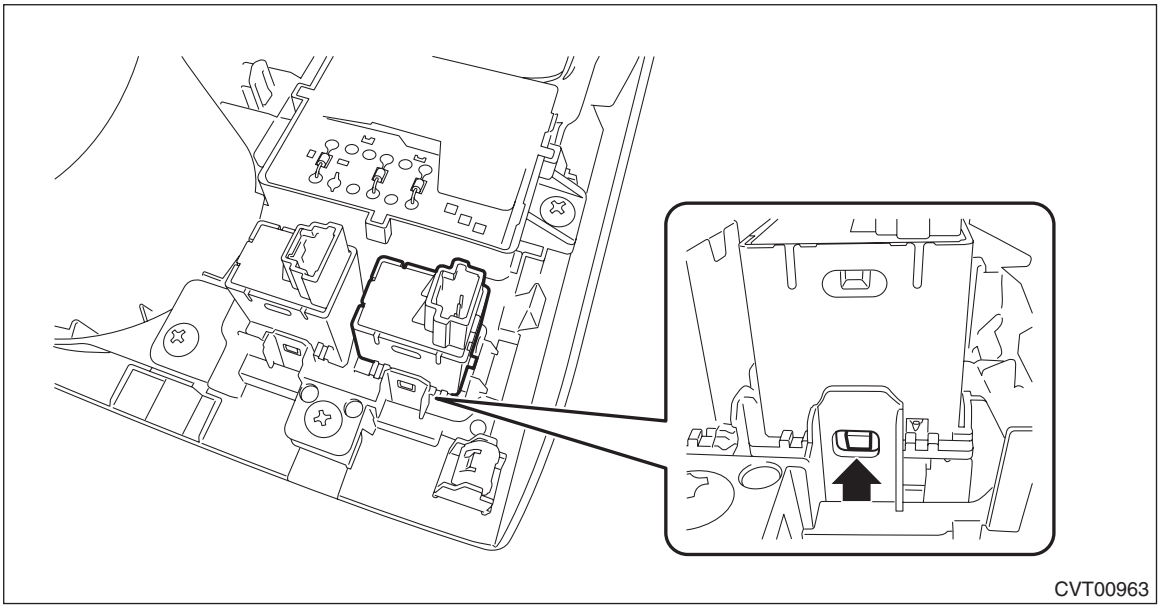
Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)

10) Install the transmission assembly. <Ref. to CVT(TR690)-75, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

1) Visually check the harness and connector for damage or crack.
2) Check the harness terminal for rust, disconnection or poor contact.
3) Check the continuity between harness terminals and oil temperature sensor.

NOTE:
Refer to WIRING SECTION for transmission harness terminal and oil temperature sensor terminal. <Ref. to WI-184, WIRING DIAGRAM, CVT Control System.>



Harness continuity standard:
Less than 1 Ω

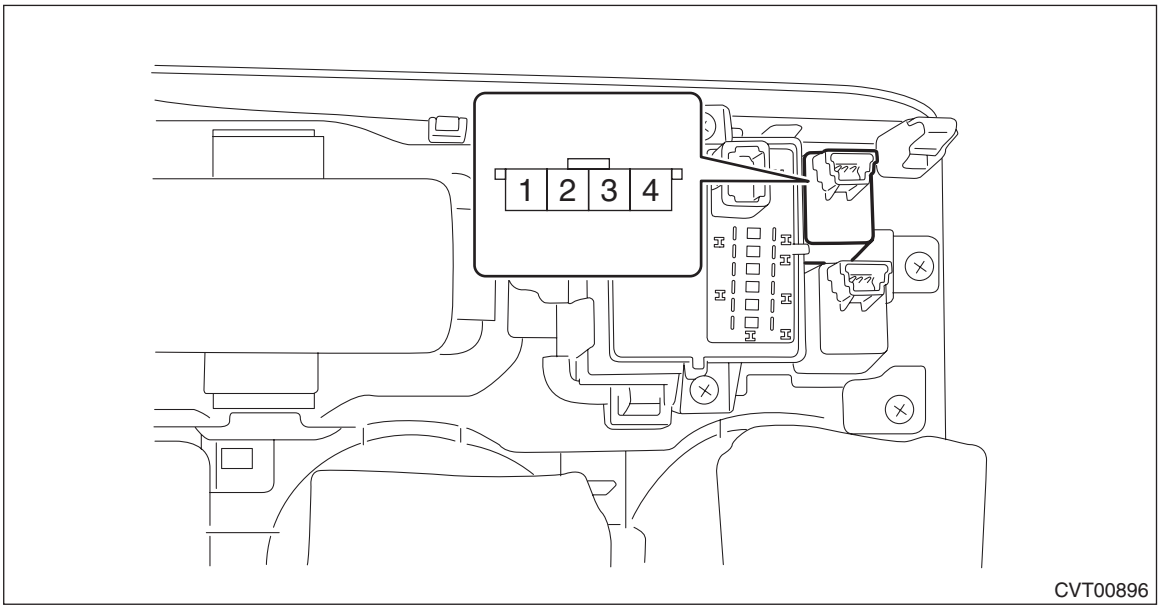
Oil temperature sensor standard:
Approx. 2.6 kΩ (at 20°C)

22.X MODE Switch

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover - shift lever. <Ref. to EI-80, REMOVAL, Console Box.>
3) Remove the X mode switch from the cover - shift lever.

B: INSTALLATION



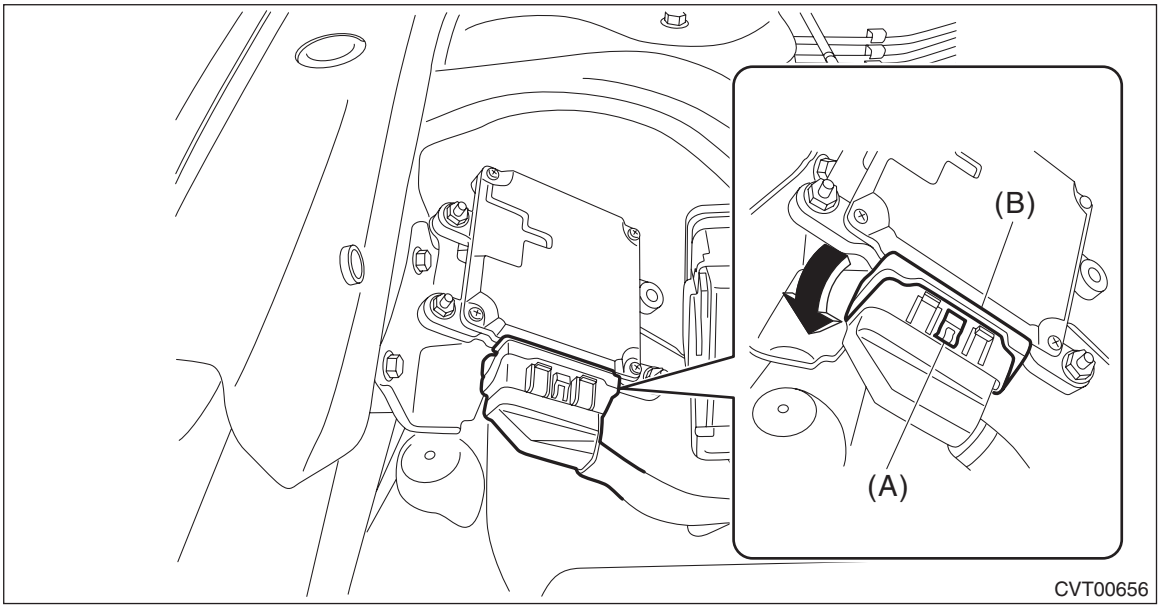
1) Install X mode switch to the cover - shift lever.
2) Install the cover - shift lever. <Ref. to EI-82, INSTALLATION, Console Box.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1. CHECK SWITCH UNIT

Measure the resistance between connector terminals of the X mode switch.

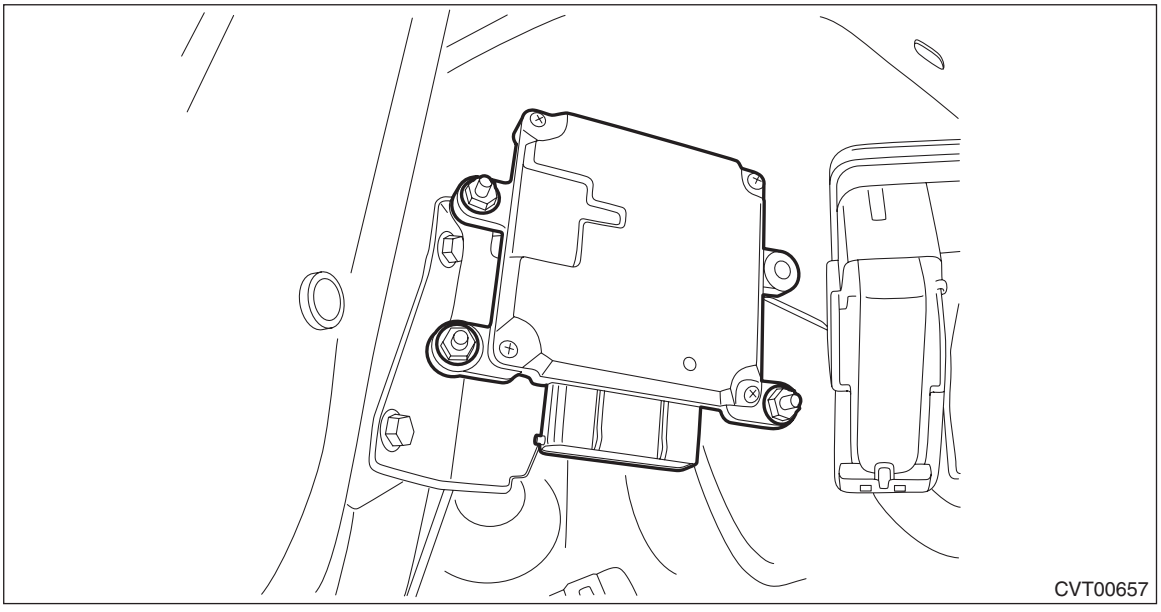
	Terminal No.	Standard
OFF (when measured without operating the switch)	No. 1 — No. 4	1 MΩ or more
ON (when measured with the switch held down)		Less than 1 Ω



2. CHECK X MODE SYSTEM

Refer to “CVT (TR580)” section for X mode system inspection. <Ref. to CVT(TR580)-160, CHECK X MODE SYSTEM, INSPECTION, X MODE Switch.>

23.Transmission Control Module (TCM)

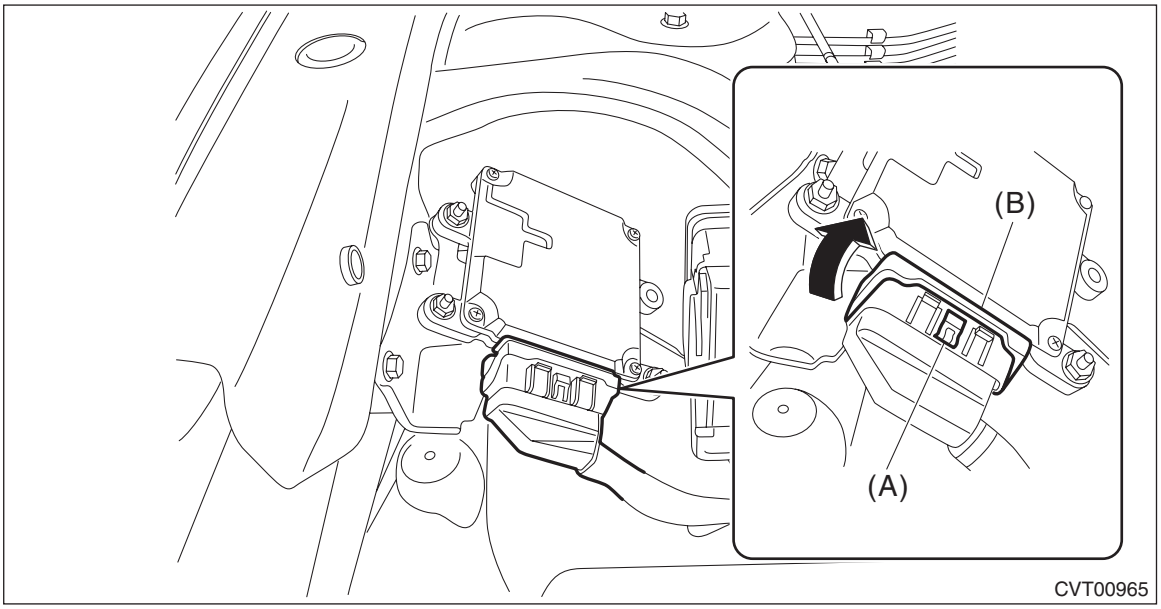


A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the air cleaner case. <Ref. to IN(H6DO)-8, REMOVAL, Air Cleaner Case.>
3) Move the lock lever in the arrow direction while pressing the lock button, and disconnect the connector.

(A) Lock button
(B) Lock lever

4) Remove the TCM.



B: INSTALLATION

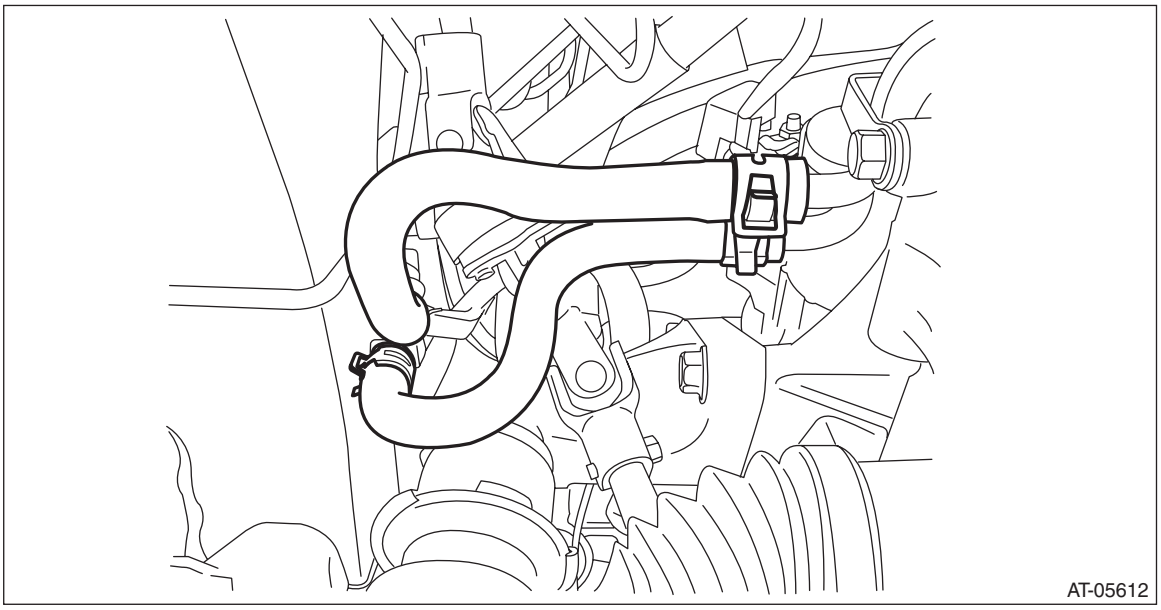
1) Install the TCM.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the harness connector to TCM.

NOTE:
- Install the connector in the reverse order of removal.
- Move the lock lever in the arrow direction, and confirm that a clicking sound is heard.

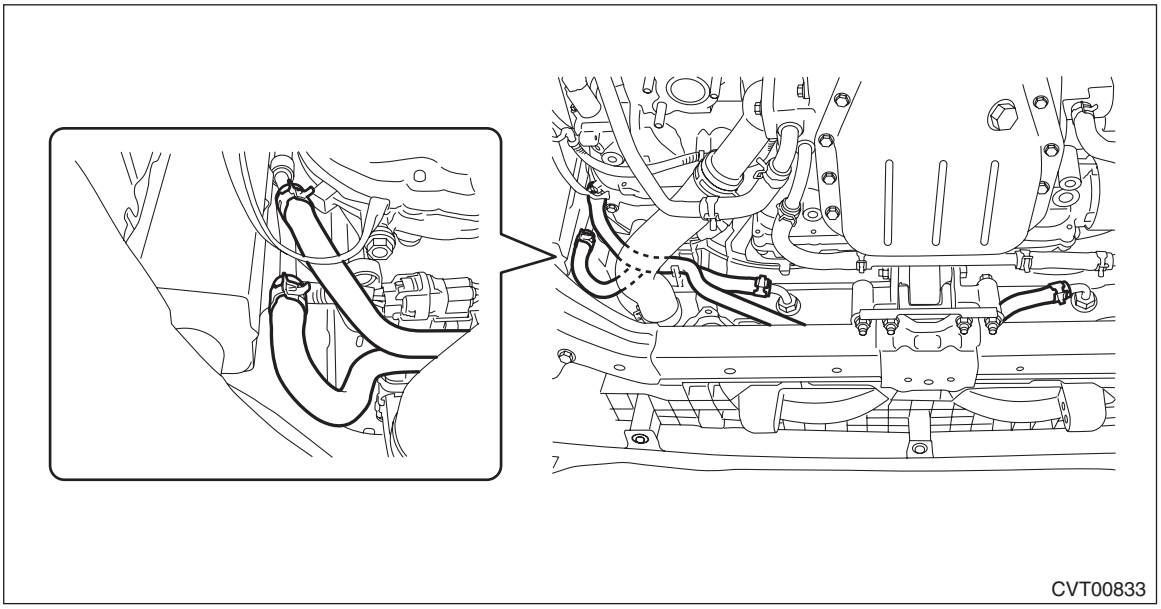
(A) Lock button
(B) Lock lever



3) Install the air cleaner case. <Ref. to IN(H6DO)-9, INSTALLATION, Air Cleaner Case.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Perform the operation of AT learning mode. <Ref. to CVT(diag)-34, Learning Control.>

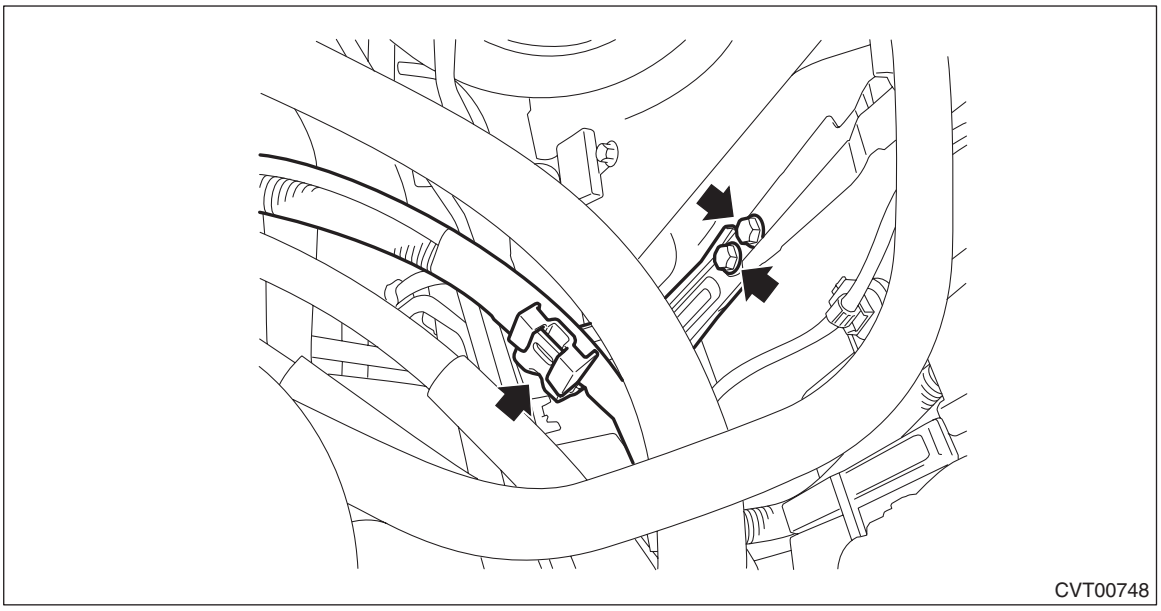
24.CVTF Cooler Pipe and Hose

A: REMOVAL



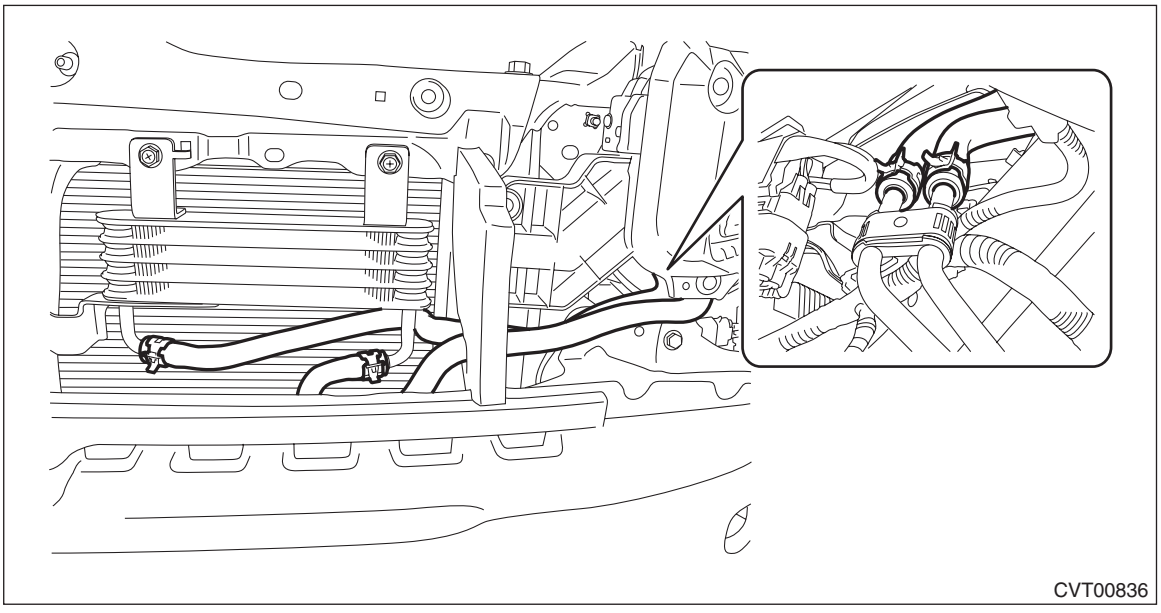
CAUTION:
• Immediately after the vehicle has been running or after idling for a long time, the CVTF will be hot. Be careful not to burn yourself.
• If the CVTF is spilt over exhaust pipe, wipe it off with cloth to avoid emitting smoke or causing a fire.
• When removing the CVTF cooler pipe assembly on vehicle side, be careful not to bend the A/C pipe.

1) Lift up the vehicle.
2) Remove the front exhaust pipe. <Ref. to EX(H6DO)-6, REMOVAL, Front Exhaust Pipe.>
3) Remove the CVTF CVT inlet hose and CVTF CVT outlet hose.

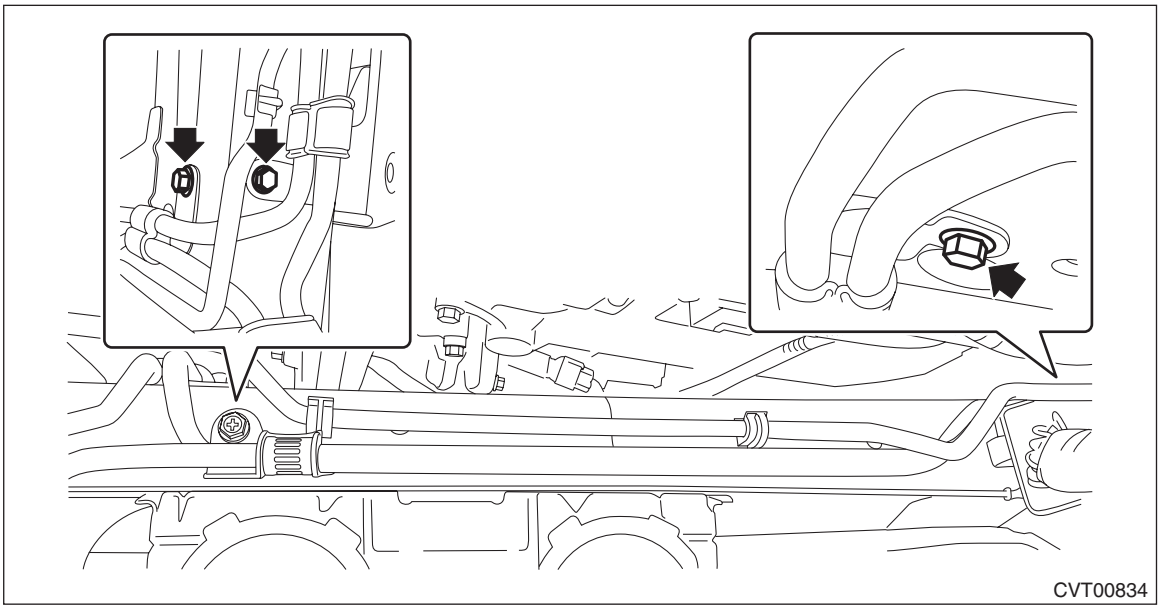


4) Remove the CVTF radiator inlet hose and CVTF radiator outlet hose on radiator side.

CAUTION:
Do not use a screwdriver or other pointed tools.

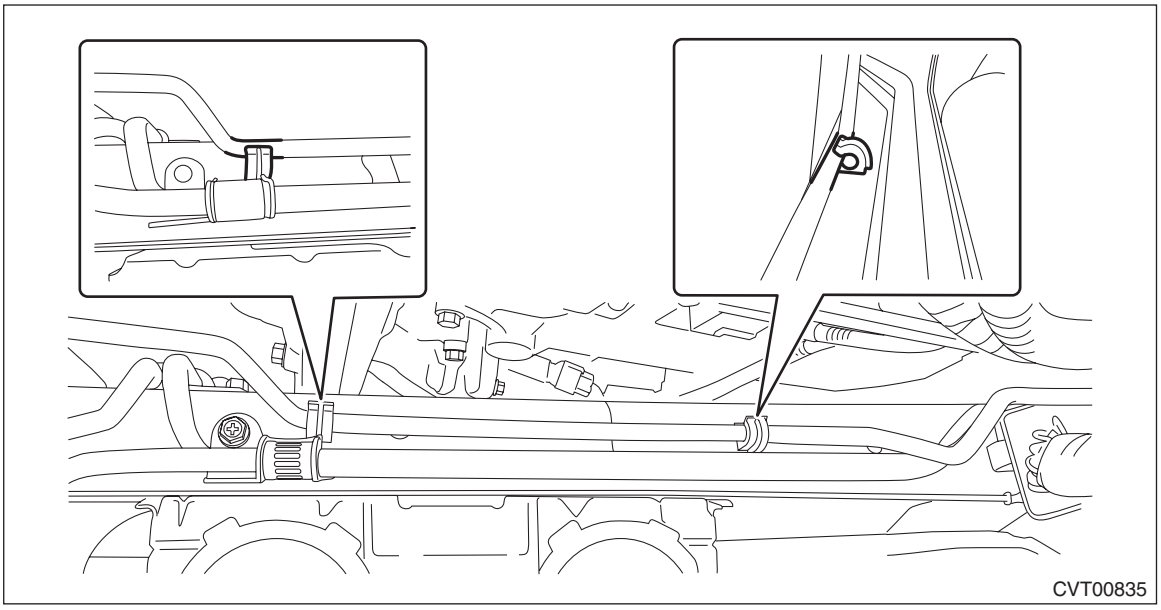


5) Lower the vehicle.



6) Remove the battery and battery box. <Ref. to SC(H6DO)-51, REMOVAL, Battery.>
7) Remove the engine coolant reservoir tank. <Ref. to CO(H6DO)-45, REMOVAL, Reservoir Tank.>
8) Remove the battery cable clip from the bracket, and remove the battery cable bracket.

CVT00748

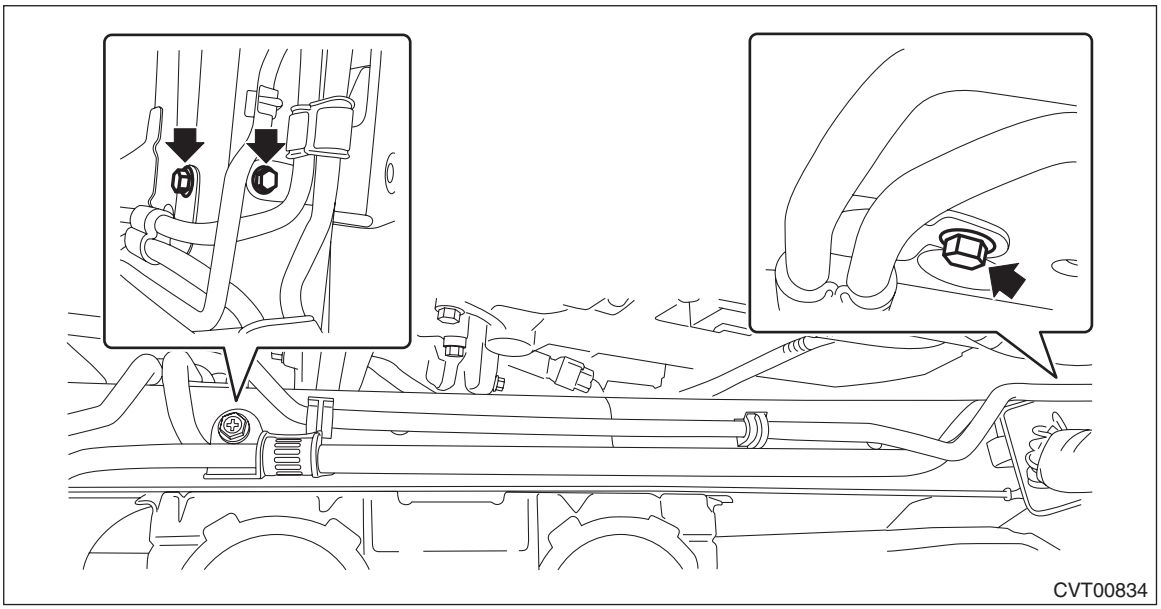


9) Remove the front bumper. (OUTBACK model) <Ref. to EI-34, REMOVAL, Front Bumper.>
10) Remove the headlight assembly LH. (OUTBACK model) <Ref. to LI-27, REMOVAL, Headlight Assembly.>
11) Remove the CVTF cooler (air cool) inlet hose and the CVTF cooler (air cool) outlet hose. (OUTBACK model)

CVT00836

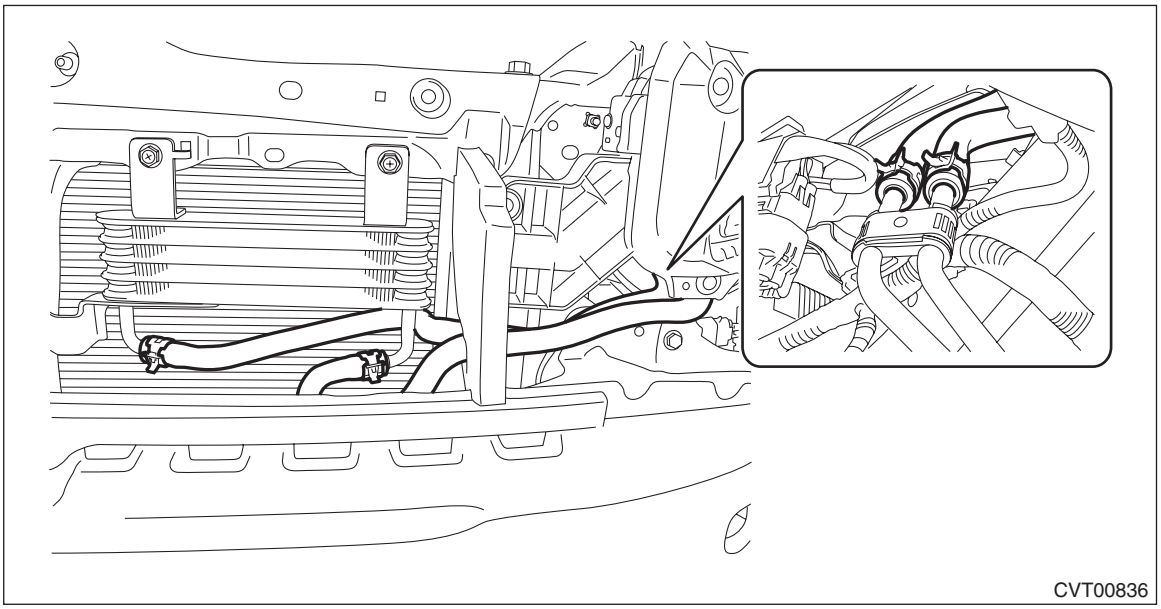
12) Remove the CVTF cooler pipe assembly mounting bolt.

13) Detach the A/C pipe from clip.



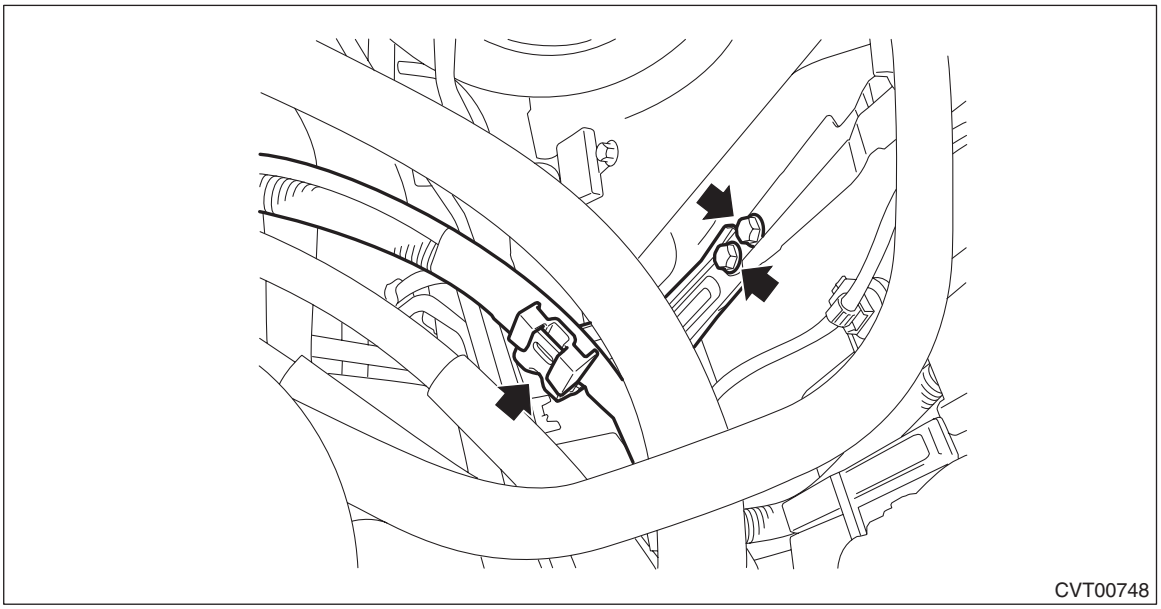
14) Remove the CVTF cooler pipe assembly.

B: INSTALLATION



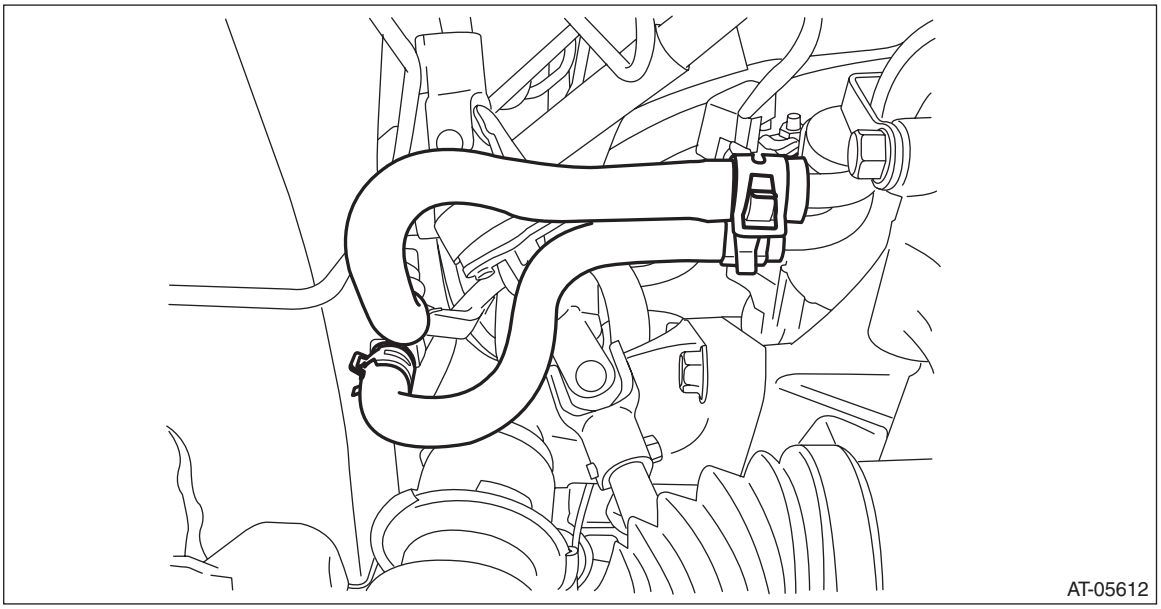
CAUTION:
When installing the CVTF cooler pipe assembly on vehicle side, be careful not to bend the A/C pipe.
1) Install the CVTF cooler pipe assembly to vehicle.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



2) Install the A/C pipe to clip.
3) Install the CVTF cooler (air cool) inlet hose and the CVTF cooler (air cool) outlet hose. (OUTBACK model)

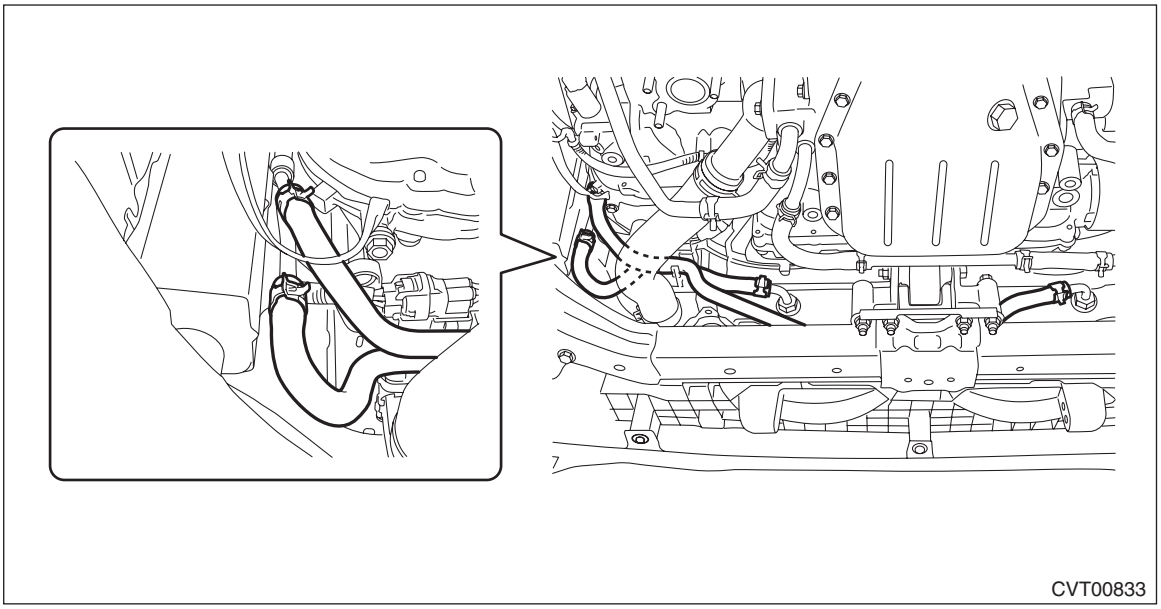
NOTE:
Use new CVTF cooler (air cool) inlet hose and the CVTF cooler (air cool) outlet hose.



4) Install the headlight assembly LH. (OUTBACK model) <Ref. to LI-28, INSTALLATION, Headlight Assembly.>
5) Install the front bumper. (OUTBACK model) <Ref. to EI-38, INSTALLATION, Front Bumper.>
6) Install the battery cable bracket, and install the battery cable clip to the bracket.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

CVT00748



7) Lift up the vehicle.
8) Install the CVTF CVT inlet hose and CVTF CVT outlet hose.

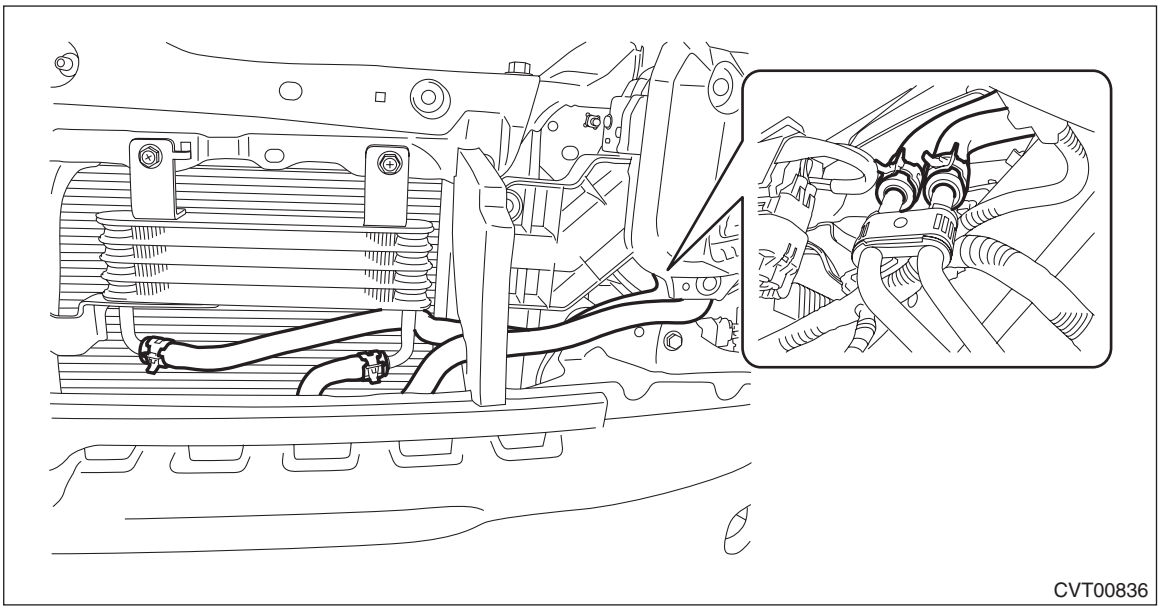
NOTE:
Use new CVTF CVT inlet hose and CVTF CVT outlet hose.

AT-05612

9) Install the CVTF radiator inlet hose and CVTF radiator outlet hose on radiator side.

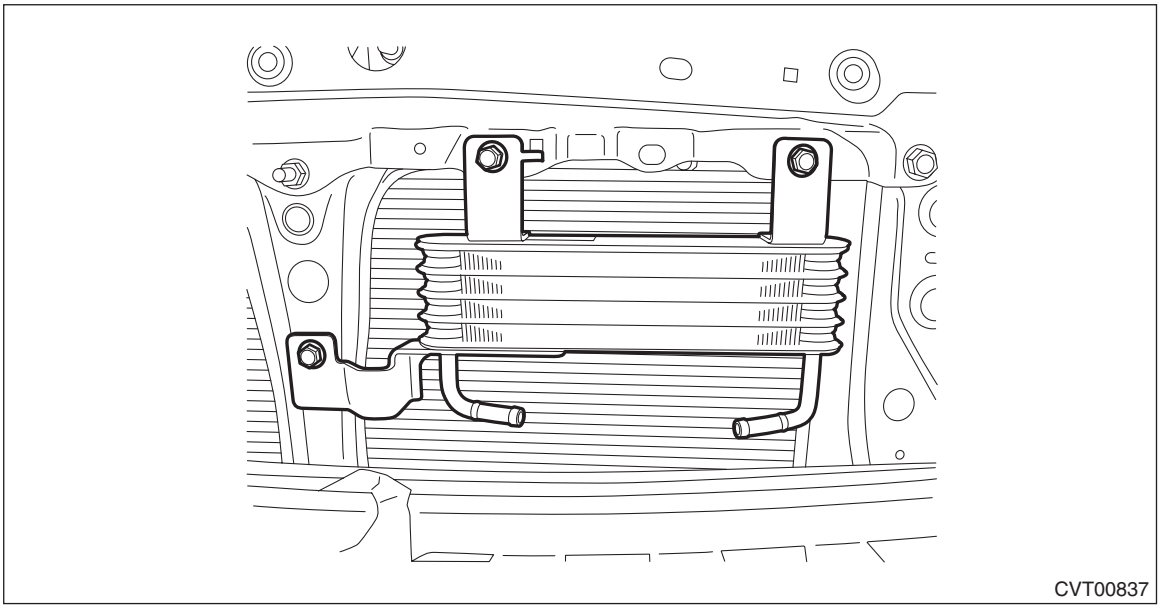
NOTE:
Use new CVTF radiator inlet hose and CVTF radiator outlet hose.

10) Install the front exhaust pipe. <Ref. to EX(H6DO)-8, INSTALLATION, Front Exhaust Pipe.>
11) Lower the vehicle.
12) Install the engine coolant reservoir tank. <Ref. to CO(H6DO)-45, INSTALLATION, Reservoir Tank.>
13) Install the battery and battery box. <Ref. to SC(H6DO)-52, INSTALLATION, Battery.>
14) Adjust the CVTF level and check there is no leakage. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.>



C: INSPECTION

Repair or replace any faulty hoses, pipes, and clamps found in the inspection below.
- Check for CVTF leaks in joints at the transmission, radiator, CVTF cooler (air cool), pipes, and hoses.
- Check the clamp for deformation.
- Lightly bend the hose and check for cracks in the surface or other damages.
- Pinch the hose with your fingers and check for poor elasticity. Also check for poor elasticity in the parts where the clamp was installed by pressing with your fingernail.
- Check for peeling, cracks, and deformation at the tip of the hose.



25.CVTF Cooler (Air Cooling)

A: REMOVAL

1) Remove the battery. <Ref. to SC(H6DO)-51, REMOVAL, Battery.>
2) Remove the front bumper. <Ref. to EI-34, REMOVAL, Front Bumper.>
3) Remove the headlight assembly LH. <Ref. to LI-27, REMOVAL, Headlight Assembly.>
4) Remove the CVTF cooler (air cool) inlet hose and the CVTF cooler (air cool) outlet hose.

CVT00836

5) Remove the CVTF cooler (air cool).

CVT00837

B: INSTALLATION

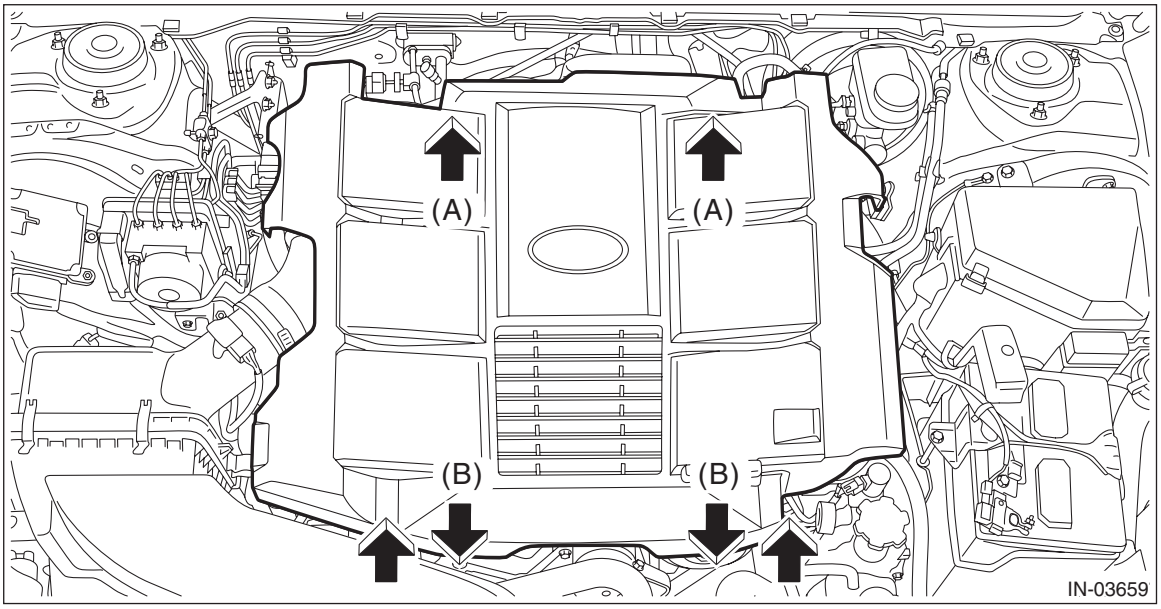
1) Install the CVTF cooler (air cool).

Tightening torque:
12 N·m (1.2 kgf-m, 8.9 ft-lb)

2) Install the CVTF cooler (air cool) inlet hose and the CVTF cooler (air cool) outlet hose.

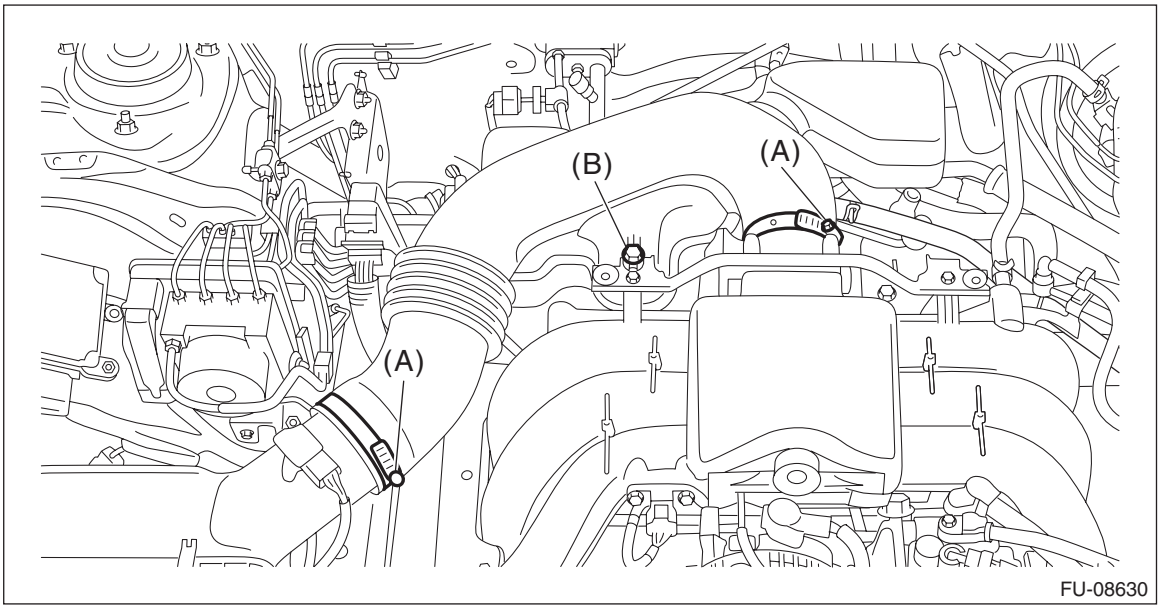
NOTE:
Use new CVTF cooler (air cool) inlet hose and the CVTF cooler (air cool) outlet hose.

3) Install the headlight assembly LH. <Ref. to LI-28, INSTALLATION, Headlight Assembly.>
4) Install the front bumper. <Ref. to EI-38, INSTALLATION, Front Bumper.>
5) Install the battery. <Ref. to SC(H6DO)-52, INSTALLATION, Battery.>



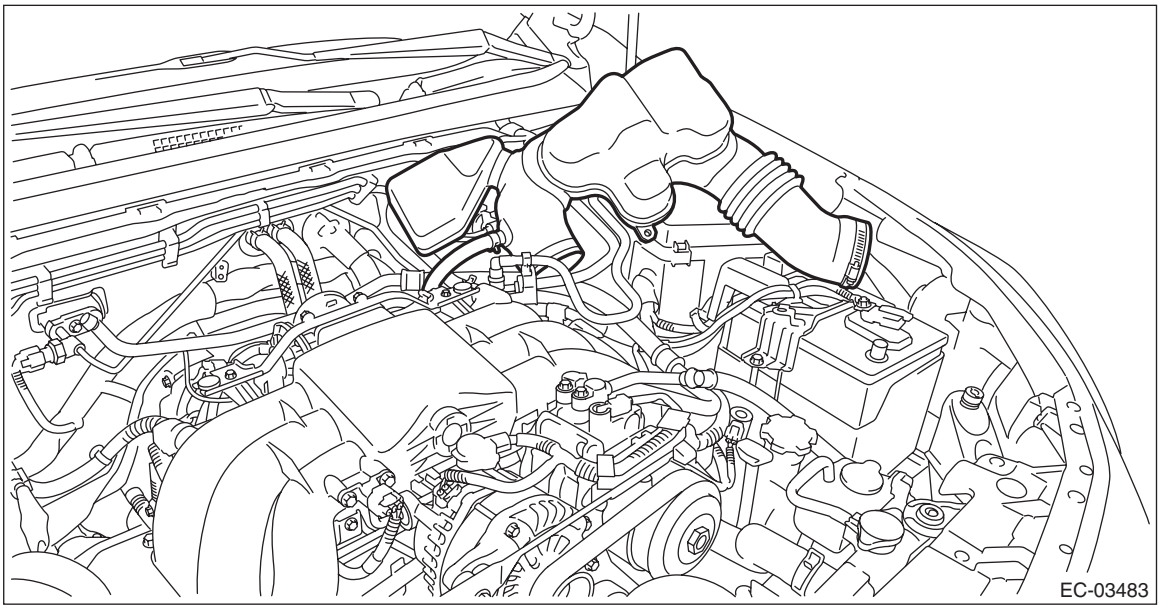
C: INSPECTION

Check that the CVTF cooler (air cool) has no deformation, cracks or other damages.

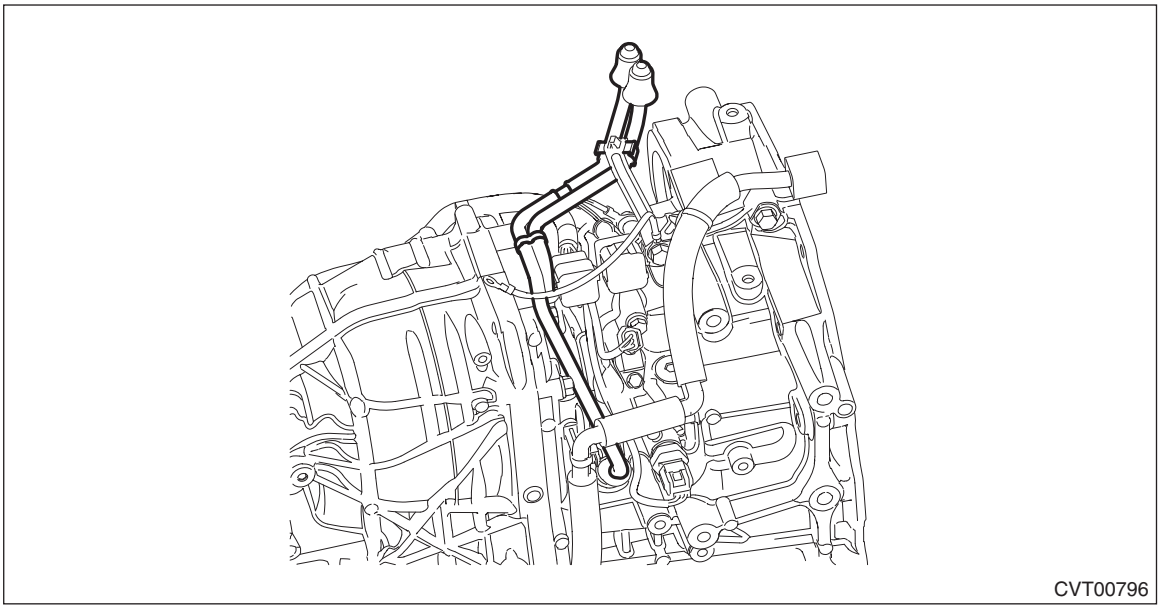


26.Air Breather Hose

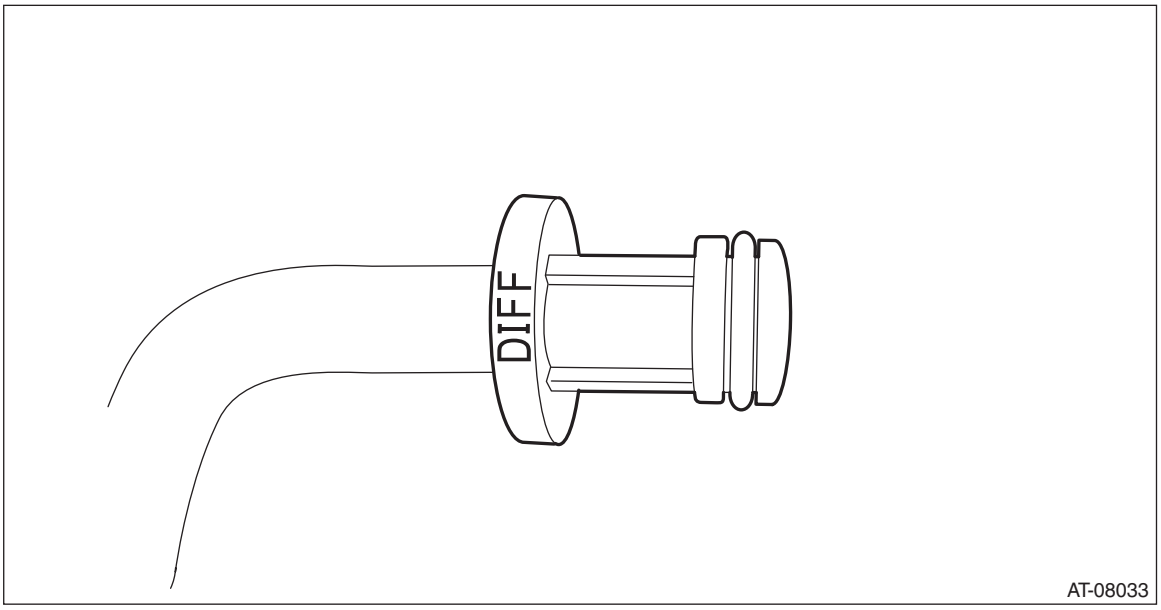
A: REMOVAL



1) Remove the collector cover.
   (1) Carefully pull up the rear of collector cover at two positions (A).
   (2) Carefully pull up the front of collector cover at two positions (B) while moving it forward.



2) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Loosen the clamp (A) which connects the air intake boot.
4) Loosen the bolt (B) securing the air intake boot to the collector cover bracket.



5) Remove the air intake boot from the throttle body, and move the air intake boot to the left side wheel apron.

6) Remove the two air breather hoses.

7) Remove the oil cap.

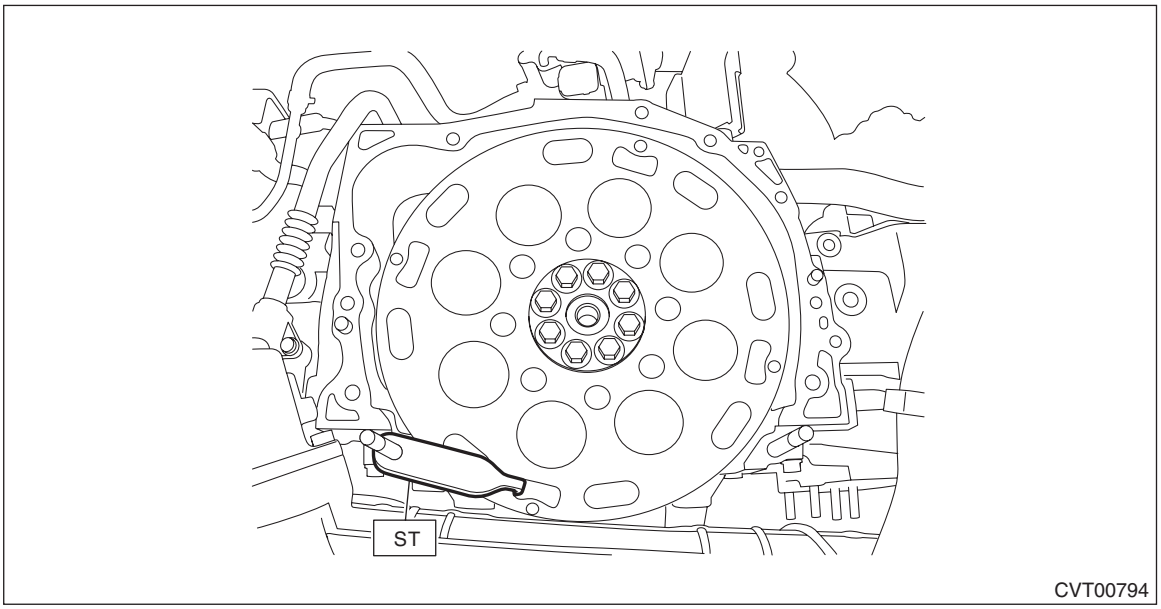
B: INSTALLATION

1) Install the oil cap.

NOTE:
Use new O-rings.

2) Install the two air breather hoses.
3) Install the air intake boot. <Ref. to IN(H6DO)-11, INSTALLATION, Air Intake Boot.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Install the collector cover.

C: INSPECTION



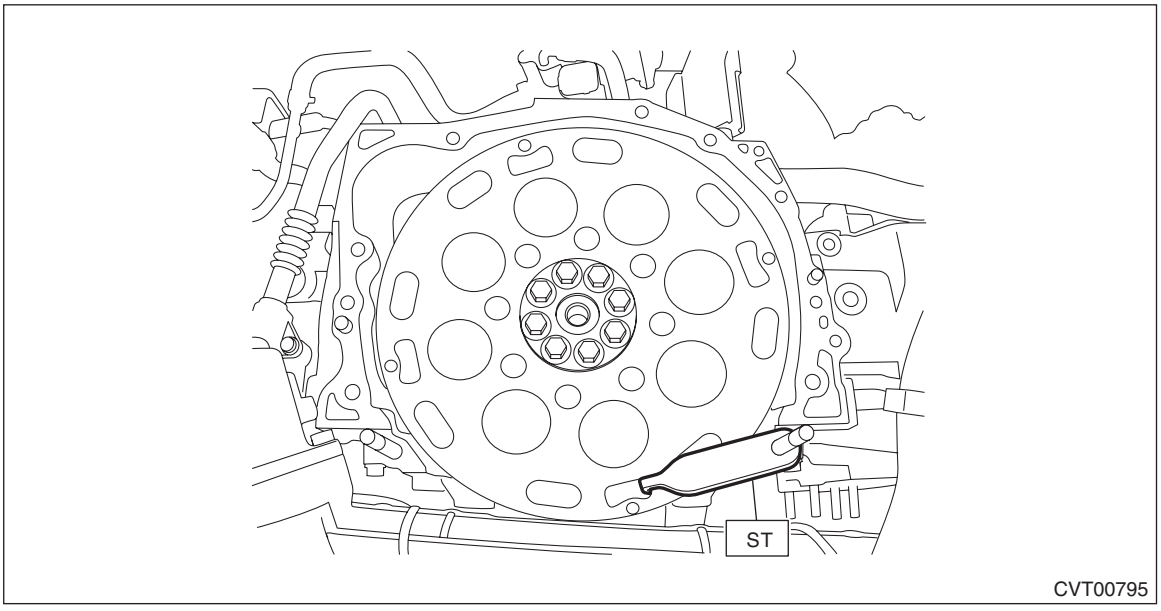
- Check the hose for peeling, crack or clogging.
- Check the oil cap is not cracked or clogged.
- Check O-ring of oil cap is not damaged.

27.Drive Plate

A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-58, REMOVAL, Automatic Transmission Assembly.>
2) Set the ST.

NOTE:
Set the ST to the drive plate referring to the illustration.
ST 498497300 CRANKSHAFT STOPPER



3) Remove the drive plate and reinforcement drive plate.

B: INSTALLATION

1) Temporarily install the drive plate and reinforcement drive plate.
2) Set the ST.

NOTE:
Set the ST to the drive plate referring to the illustration.
ST 498497300 CRANKSHAFT STOPPER

3) Tighten the drive plate mounting bolt in two stages.

NOTE:
Fix the engine unit.

(1) Tighten the drive plate mounting bolt.

Tightening torque:
10 N·m (1.0 kgf-m, 7.4 ft-lb)

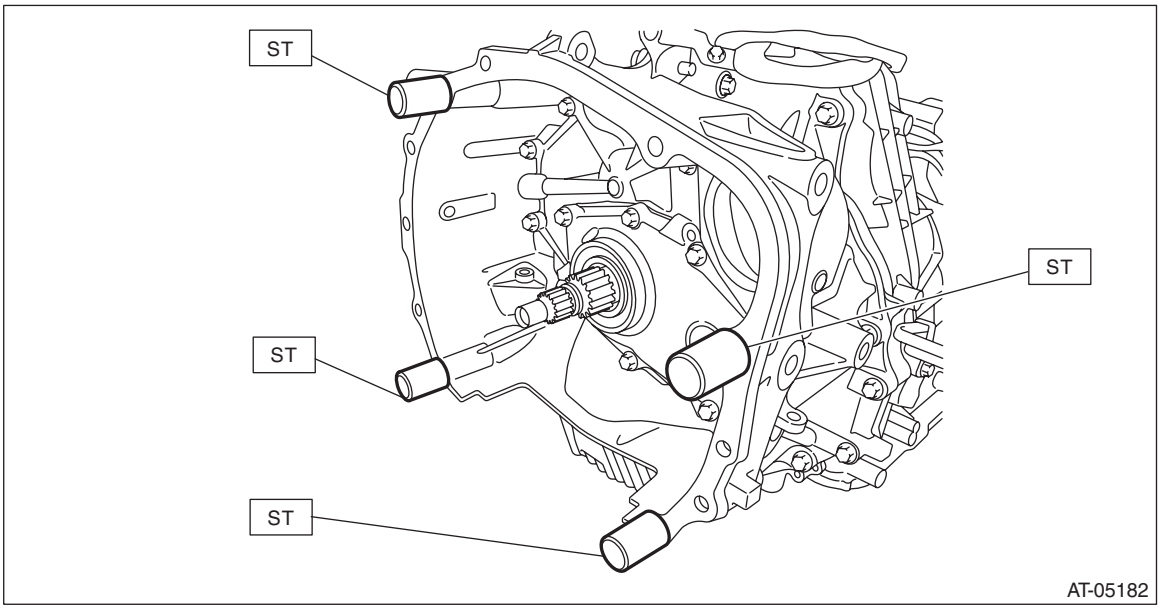
(2) While checking the tightening angle with the angle gauge, tighten the drive plate mounting bolts to the specified angle.

Tightening angle:
41° — 45°

4) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-75, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

Check the drive cable for damage.

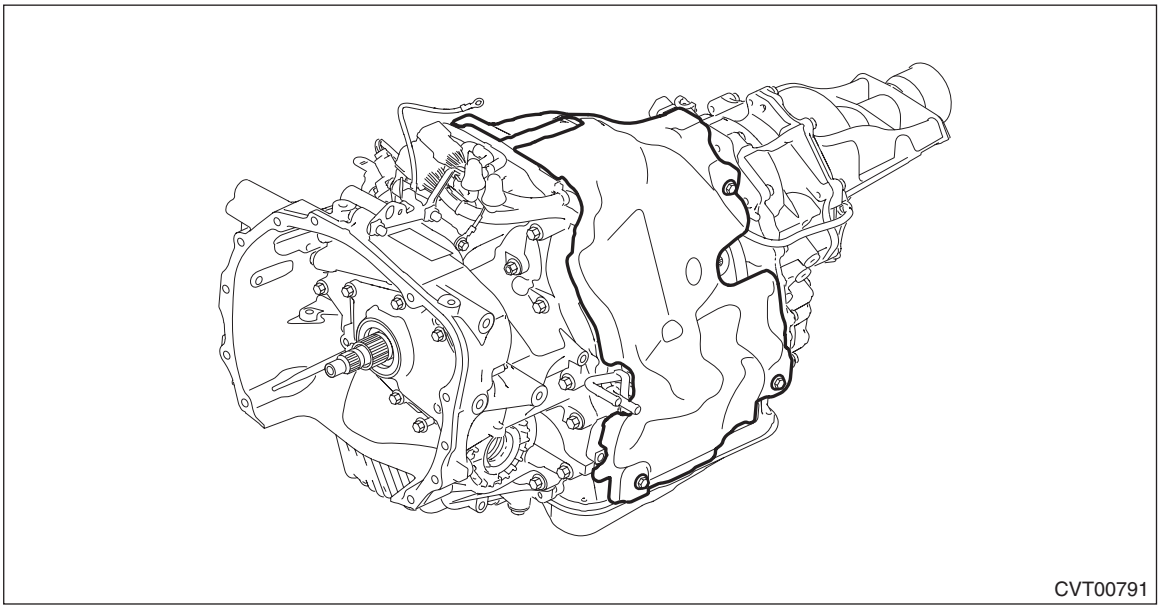


28.Preparation for Overhaul

A: GENERAL DESCRIPTION

Before disassembling and assembling the transmission, follow the following procedures to prepare.

B: PROCEDURE

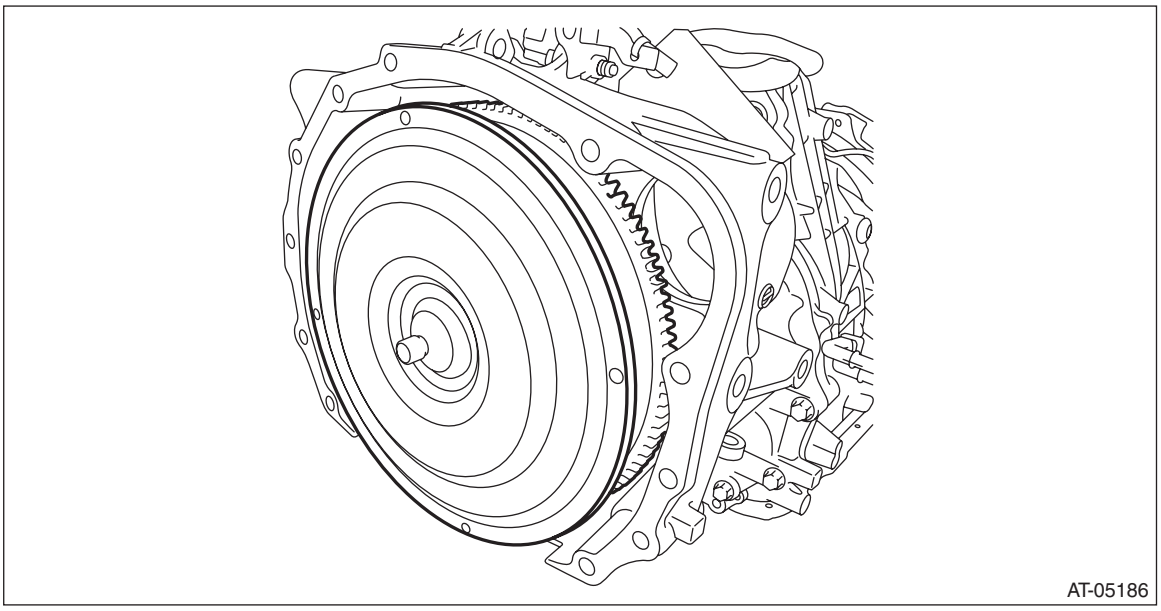


1) Clean the transmission exterior.
2) Remove the torque converter assembly. <Ref. to CVT(TR690)-157, REMOVAL, Torque Converter Assembly.>
3) Attach the ST on the transmission.
ST 18632AA000 STAND ASSY

4) Remove the transmission cover on the transmission upper side.

NOTE:
Install using the following tightening torque.

Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)



5) Place the transmission assembly on end.

29.Torque Converter Assembly

A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-58, REMOVAL, Automatic Transmission Assembly.>
2) Pull out the torque converter assembly horizontally.

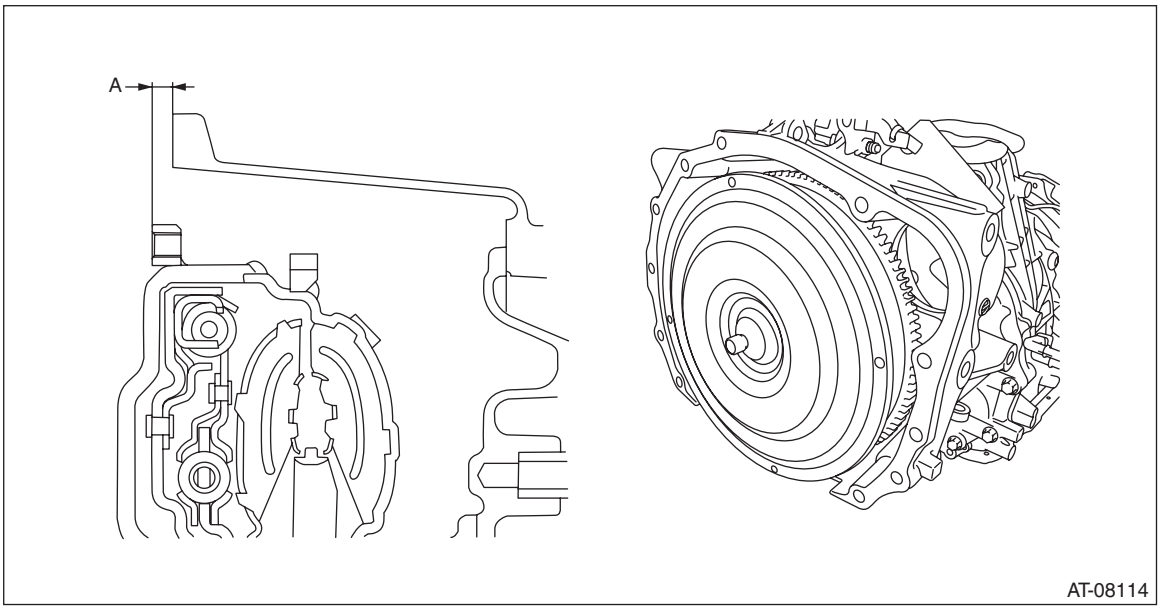
CAUTION:
Do not scratch the inside of engaging parts.

3) Remove the O-ring from the front reduction drive gear.

B: INSTALLATION

1) Install the O-ring to front reduction drive gear.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.



2) While holding the torque converter assembly by hand, carefully install it into the torque converter case.

NOTE:
- Apply CVTF to the oil seal lip.
- Do not damage the oil seal and O-ring.

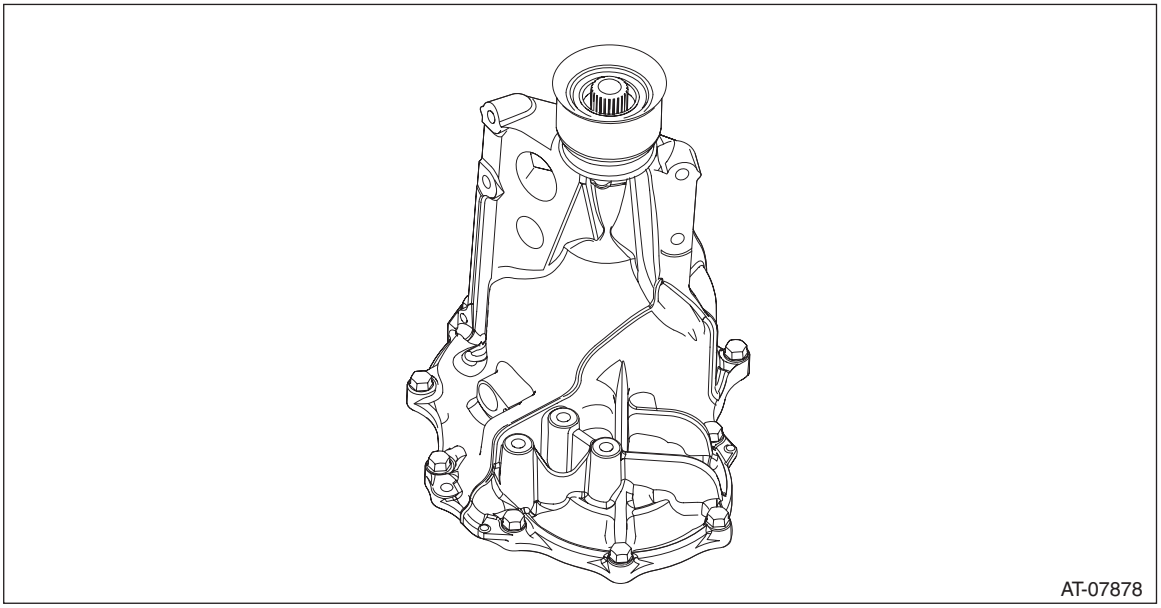
3) Engage the splines while gently rotating the torque converter assembly by hand, and securely insert the assembly.

4) Measure depth “A”, from converter case end surface to drive plate contacting surface.

Standard (reference):
6.8 mm (0.268 in) or less

5) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-75, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

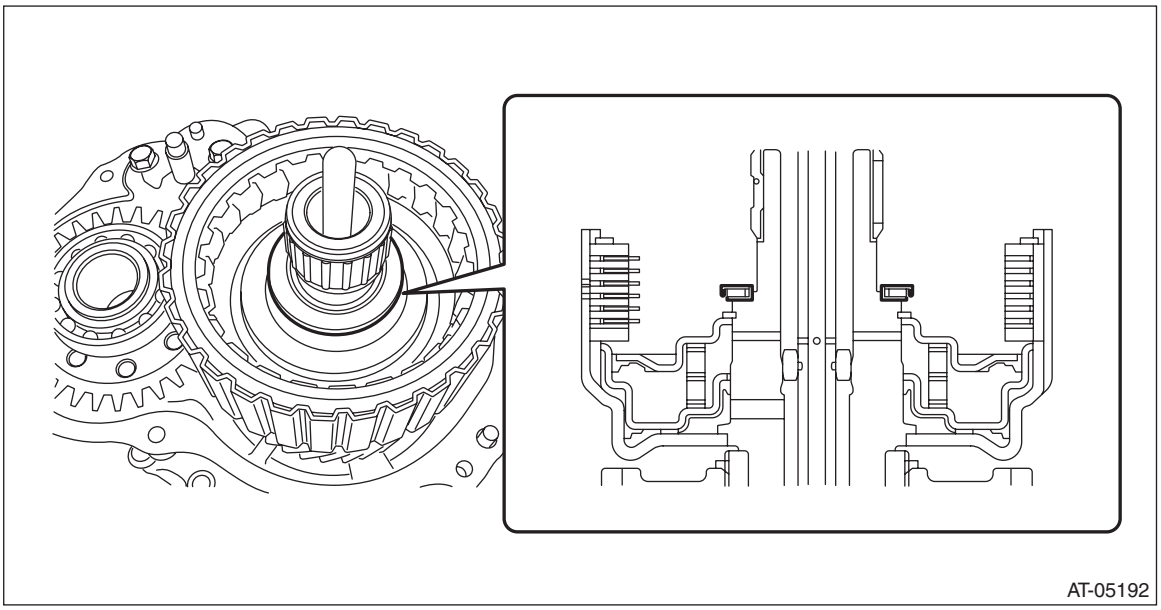


- Check the protrusion of torque converter center (front boss) is not deformed or damaged.
- Check the ring gear and exterior for break or damage.

30.Extension Case

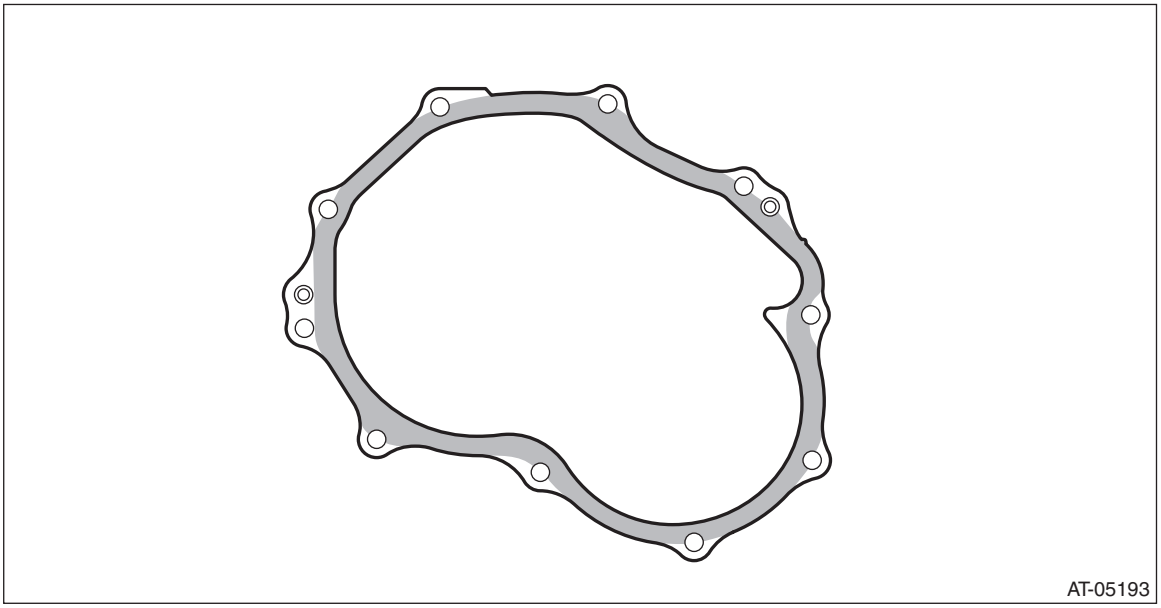
A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-58, REMOVAL, Automatic Transmission Assembly.>
2) Remove the front wheel speed sensor. <Ref. to CVT(TR690)-119, REMOVAL, Front Wheel Speed Sensor.>
3) Remove the harness clip, and remove the extension case.



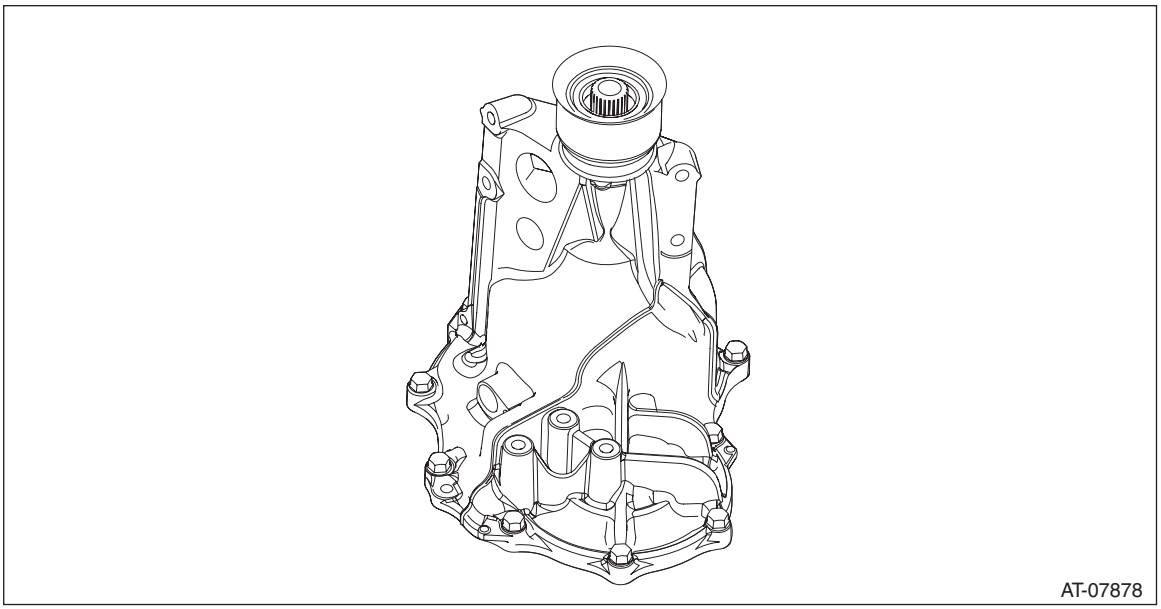
NOTE:
The total number of extension case mounting bolts is 10.

B: INSTALLATION



1) Clean the mating surface of the extension case and intermediate case.
2) Select the thrust needle bearing. <Ref. to CVT(TR690)-165, ADJUSTMENT, Rear Drive Shaft.>
3) Select the shim for transfer reduction driven gear. <Ref. to CVT(TR690)-182, ADJUSTMENT, Transfer Reduction Driven Gear.>
4) Install the selected thrust needle bearing to transfer clutch assembly.

NOTE:
Install the thrust needle bearing in the correct direction.



5) Attach the selected shim to transfer reduction driven gear assembly.
6) Apply liquid gasket to extension case seamlessly.

Liquid gasket:
THREE BOND 1215B or equivalent

7) Install the extension case.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

8) Install the front wheel speed sensor. <Ref. to CVT(TR690)-119, INSTALLATION, Front Wheel Speed Sensor.>
9) Install the transmission assembly. <Ref. to CVT(TR690)-75, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

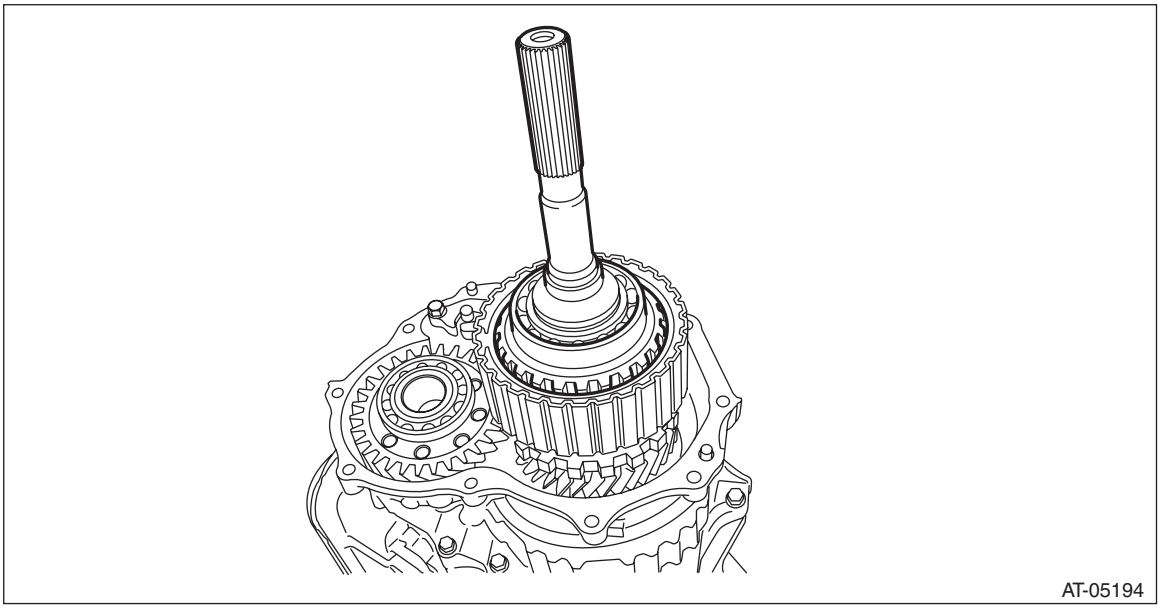
1) Remove the dust cover from extension case.
2) Remove the extension case oil seal from the extension case.

D: ASSEMBLY

1) Press-fit the dust cover into extension case.
2) Install the extension case oil seal to extension case.
ST 498057300 INSTALLER

E: INSPECTION

- Check there is no leak of CVTF from the joint between extension case and intermediate case.
- Check there is no damage or cracks on the extension case.

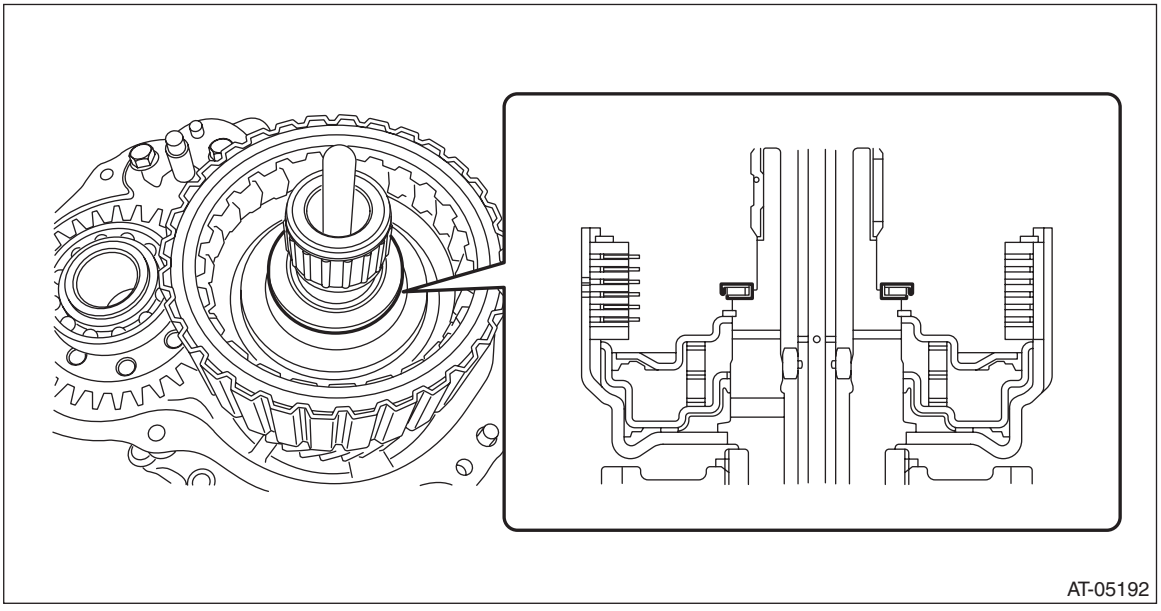


F: ADJUSTMENT

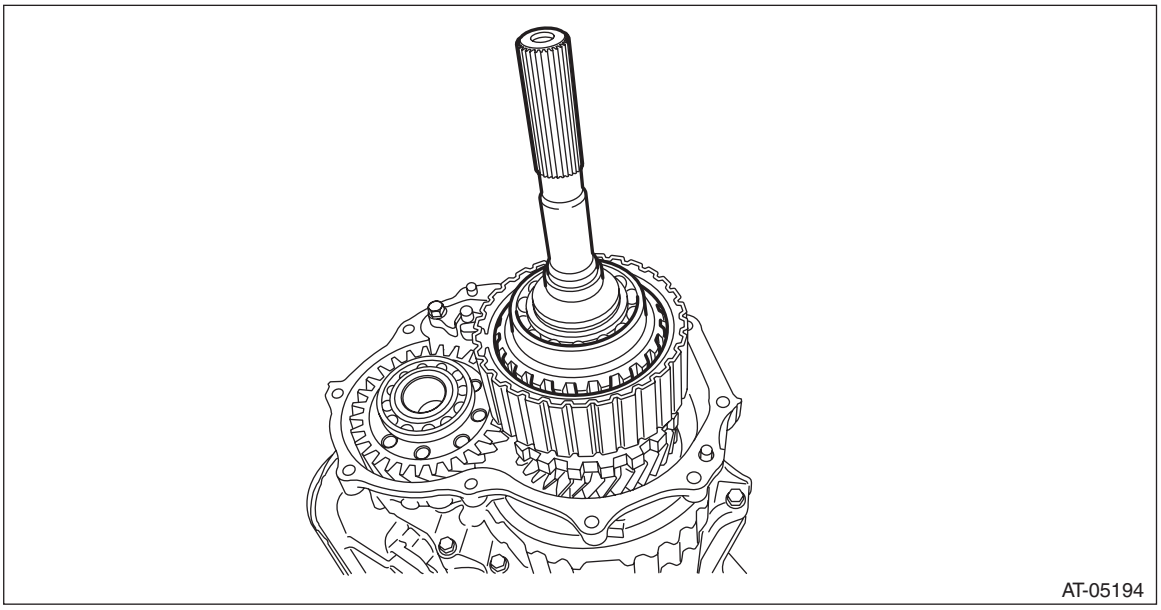
NOTE:
When replacing the extension case, select the shims for rear drive shaft thrust needle bearing and transfer reduction driven gear. <Ref. to CVT(TR690)-165, ADJUSTMENT, Rear Drive Shaft.> <Ref. to CVT(TR690)-182, ADJUSTMENT, Transfer Reduction Driven Gear.>

31.Rear Drive Shaft

A: REMOVAL



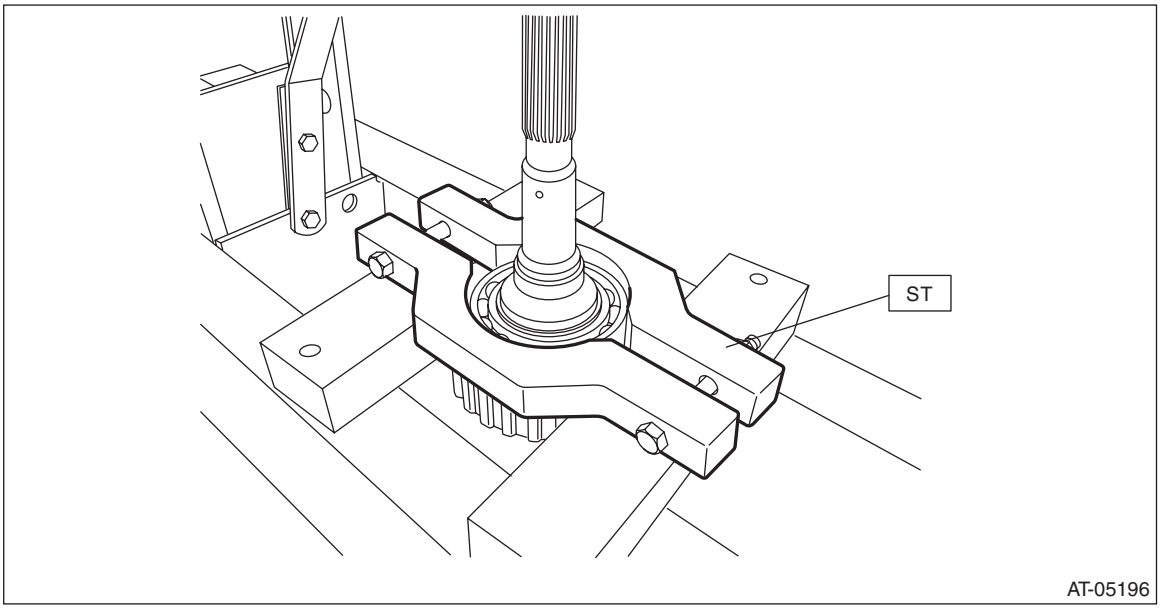
1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-58, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case. <Ref. to CVT(TR690)-159, REMOVAL, Extension Case.>
3) Remove the rear drive shaft.



B: INSTALLATION

1) Select the thrust needle bearing. <Ref. to CVT(TR690)-165, ADJUSTMENT, Rear Drive Shaft.>
2) Install the selected thrust needle bearing to transfer clutch assembly.

NOTE:
Install the thrust needle bearing in the correct direction.

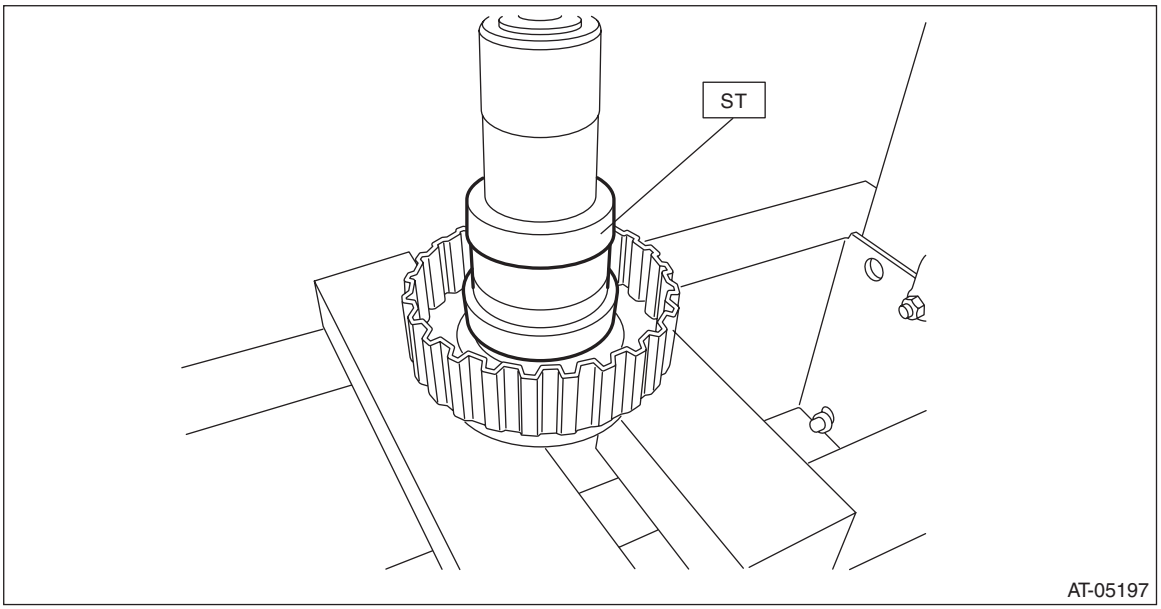


3) Install the rear drive shaft.

4) Install the extension case. <Ref. to CVT(TR690)-160, INSTALLATION, Extension Case.>
5) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-75, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1) Remove the ball bearing using ST.
ST 498077600 REMOVER

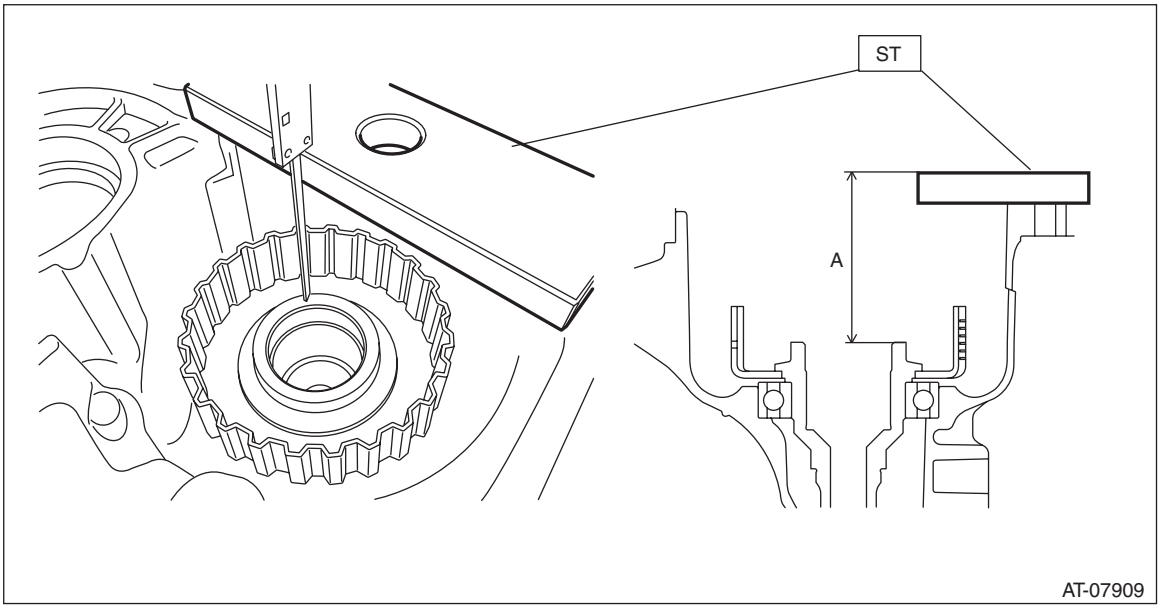


D: ASSEMBLY

1) Using the ST, install the ball bearing.

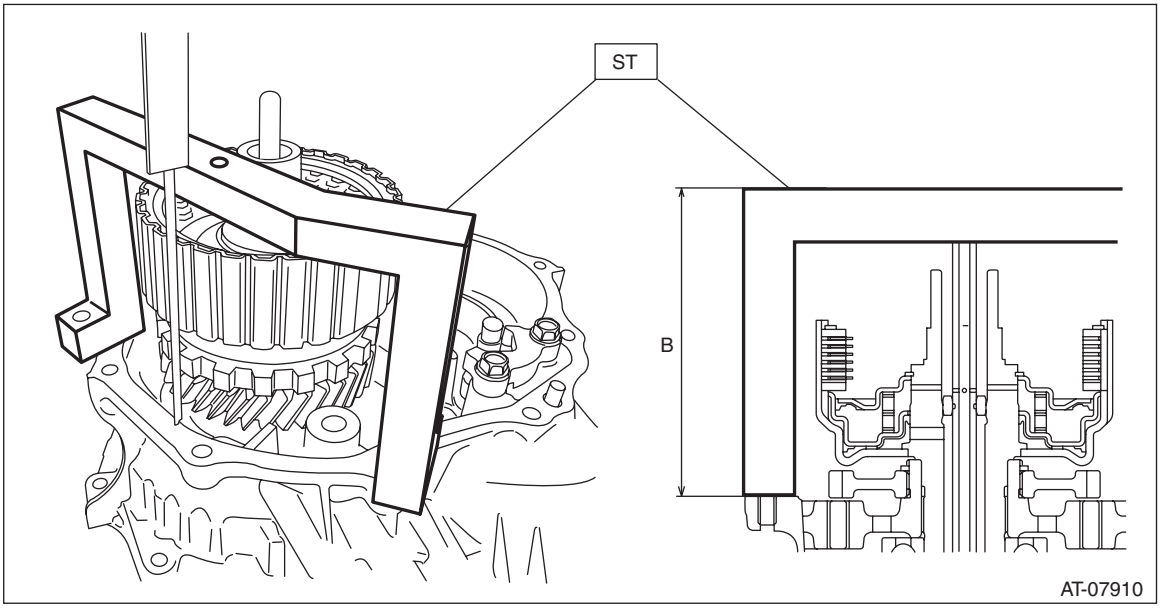
NOTE:
- Use a new ball bearing.
- Apply CVTF to press-fitting surface of ball bearing.

ST 399513600 INSTALLER



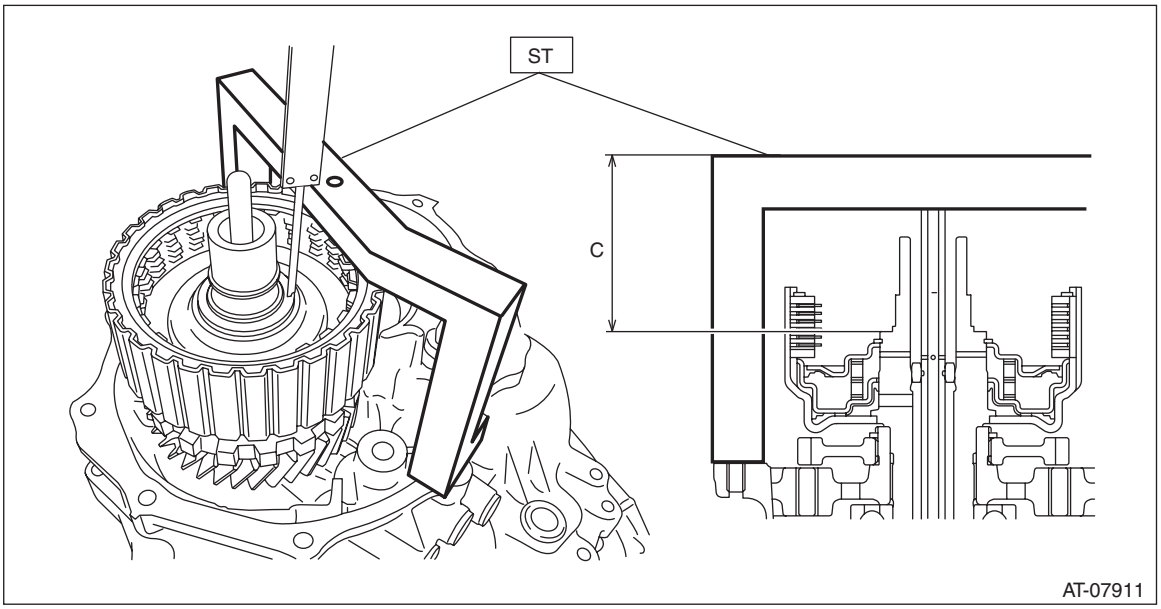
E: INSPECTION

- Check each part for crack, damage or dust.
- Check the ball bearing for smooth rotation.
- Check the ball bearing for excessive looseness.



F: ADJUSTMENT

NOTE:
When replacing the rear drive shaft or bearing, select the thrust needle bearing.
1) Using the ST, measure the distance “A” from ST end face to rear drive shaft thrust needle bearing catch surface.
ST 398643600 GAUGE

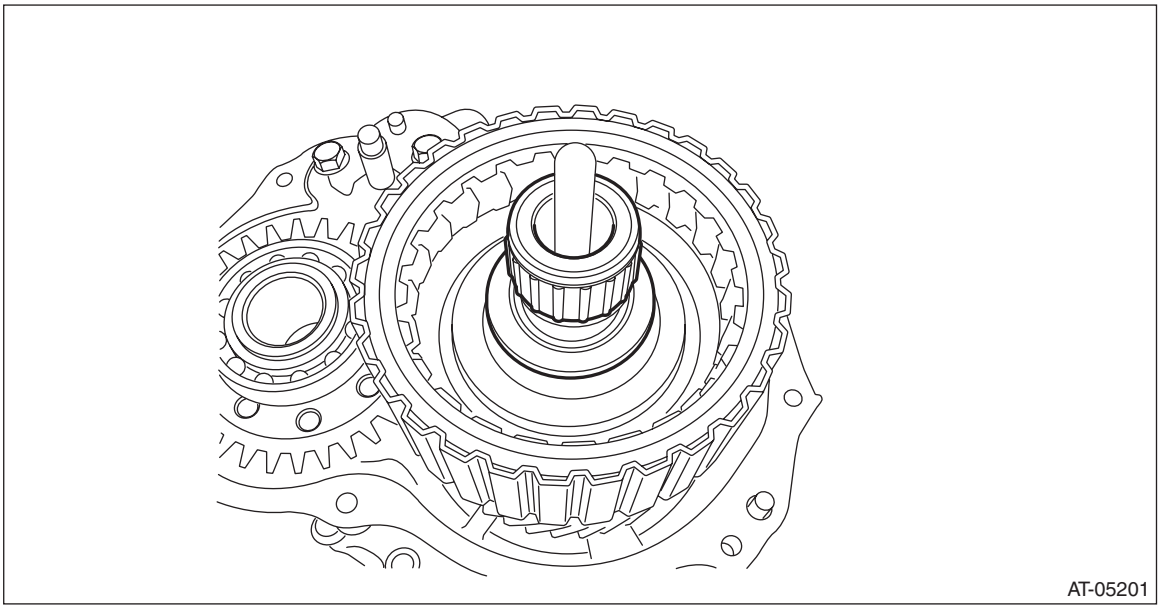


2) Using the ST, measure the height “B” from the intermediate case mating surface to the ST end face.

NOTE:
Place the measurement tool at the dent on ST upper side to measure.
ST 499737100 PULLER SET

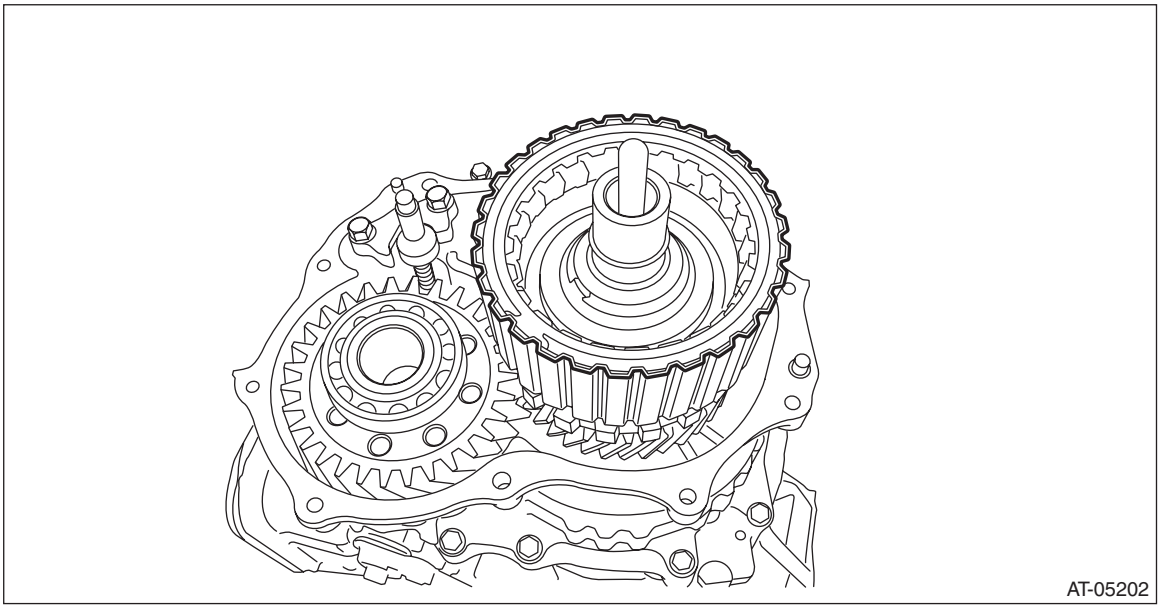
3) Using the ST, measure the height “C” from ST end face to transfer clutch assembly thrust needle bearing catch surface.

NOTE:
Place the measurement tool at the dent on ST upper side to measure.
ST 499737100 PULLER SET



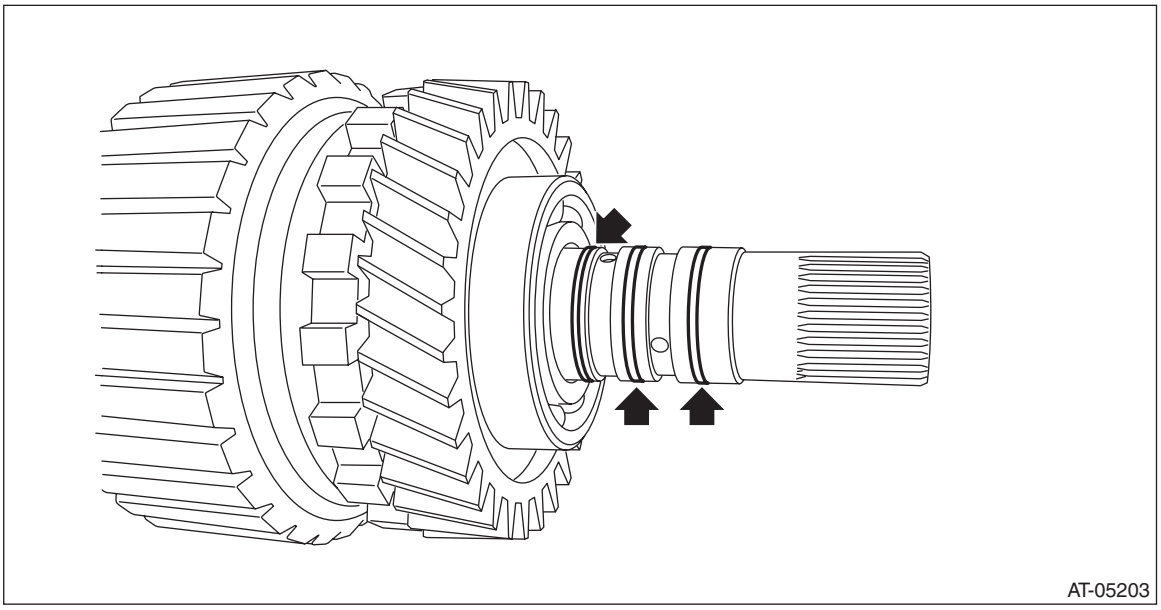
4) Obtain the thickness of thrust bearing using the following formula to select the thrust bearing.
T mm = (A – 15) – (B – C) – (0.05 — 0.25)
[T in = (A – 0.591) – (B – C) – (0.002 — 0.01)]
T: Thrust bearing thickness
A: Height from the ST end face to the rear drive shaft thrust needle bearing catch surface
B: Height from the mating surface of the intermediate case to the ST end face
C: Height from the ST end face to the transfer clutch assembly thrust needle bearing catch surface
15 mm (0.591 in): Thickness of ST
0.05 — 0.25 mm (0.002 — 0.01 in): Clearance

Thrust bearing	
Part No.	Thickness mm (in)
806536020	3.8 (0.15)
806535030	4.0 (0.157)
806535040	4.2 (0.165)
806535050	4.4 (0.173)
806535060	4.6 (0.181)
806535070	4.8 (0.189)
806535090	5.0 (0.197)



32.Transfer Clutch

A: REMOVAL

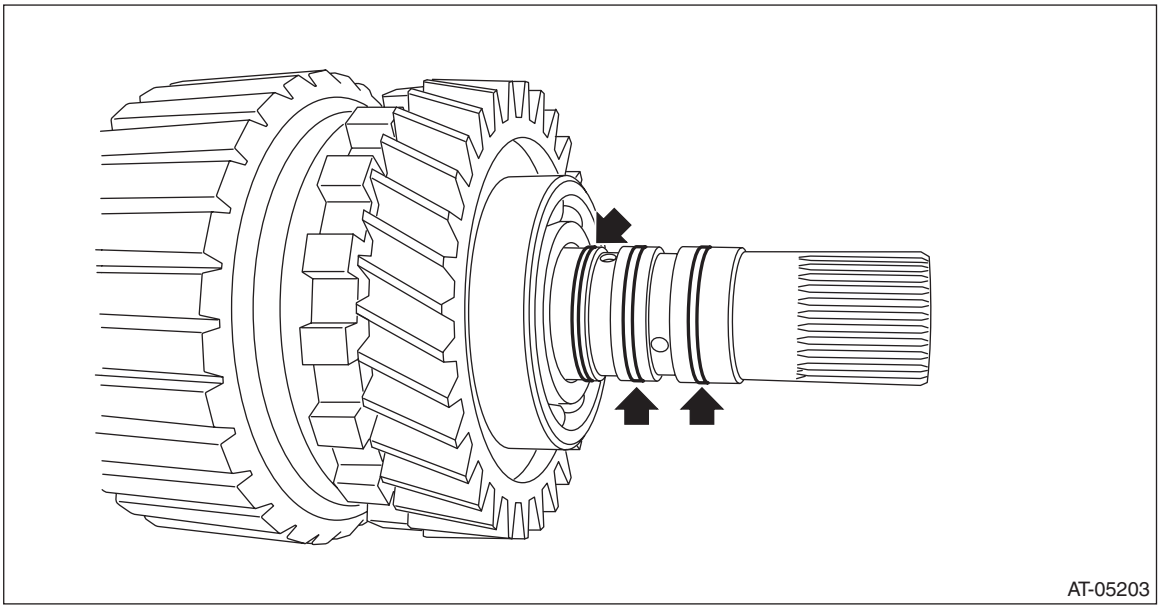


1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-58, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case. <Ref. to CVT(TR690)-159, REMOVAL, Extension Case.>
3) Remove the rear drive shaft. <Ref. to CVT(TR690)-162, REMOVAL, Rear Drive Shaft.>
4) Remove the thrust needle bearing and needle bearing.

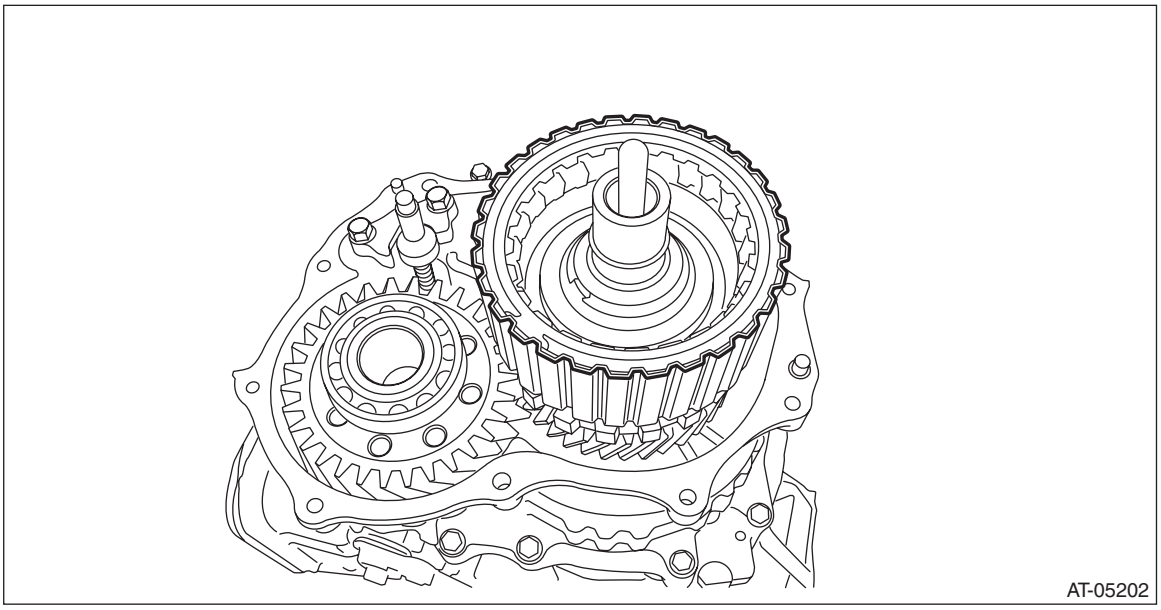
AT-05201

5) Remove the transfer clutch assembly.

AT-05202



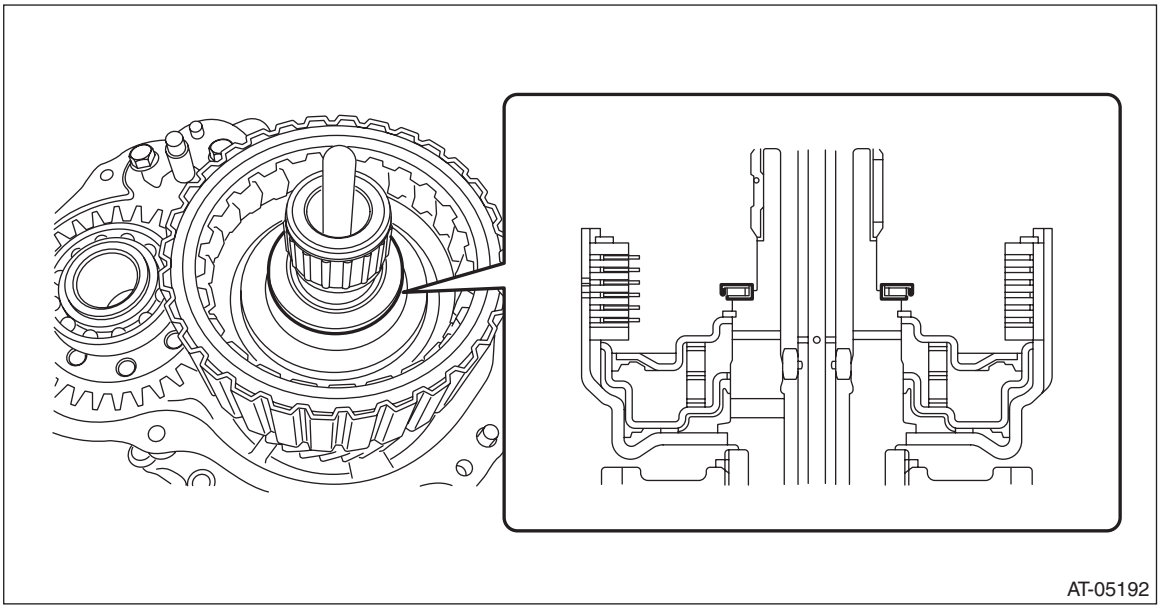
6) Remove the seal ring from transfer clutch assembly.



B: INSTALLATION

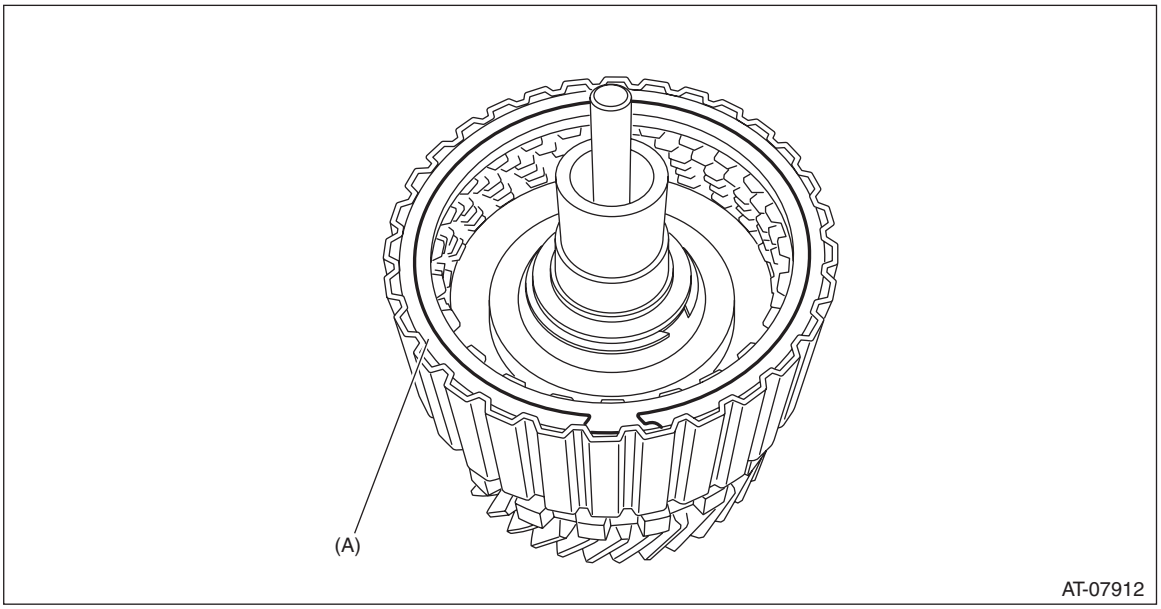
1) Apply CVTF to the seal ring and attach it to the seal ring groove of transfer clutch assembly.

NOTE:
- Use new seal rings.
- When installing the seal rings, do not expand the seal rings too much.



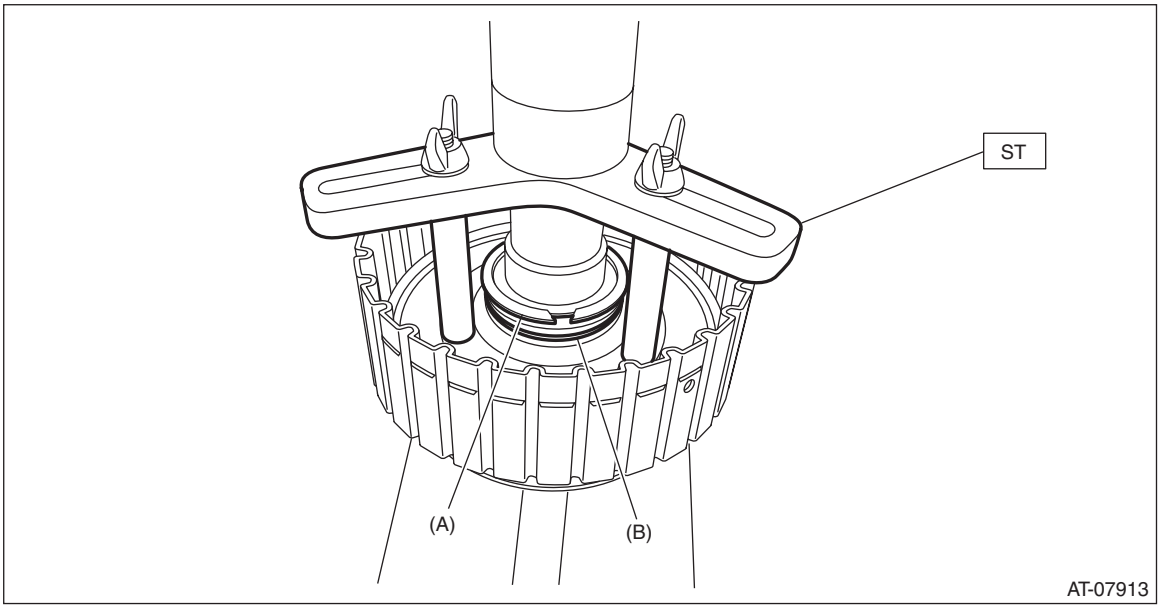
2) Install the transfer clutch assembly.

3) Select the thrust needle bearing. <Ref. to CVT(TR690)-165, ADJUSTMENT, Rear Drive Shaft.>
4) Install the selected thrust needle bearing and needle bearing to transfer clutch assembly.



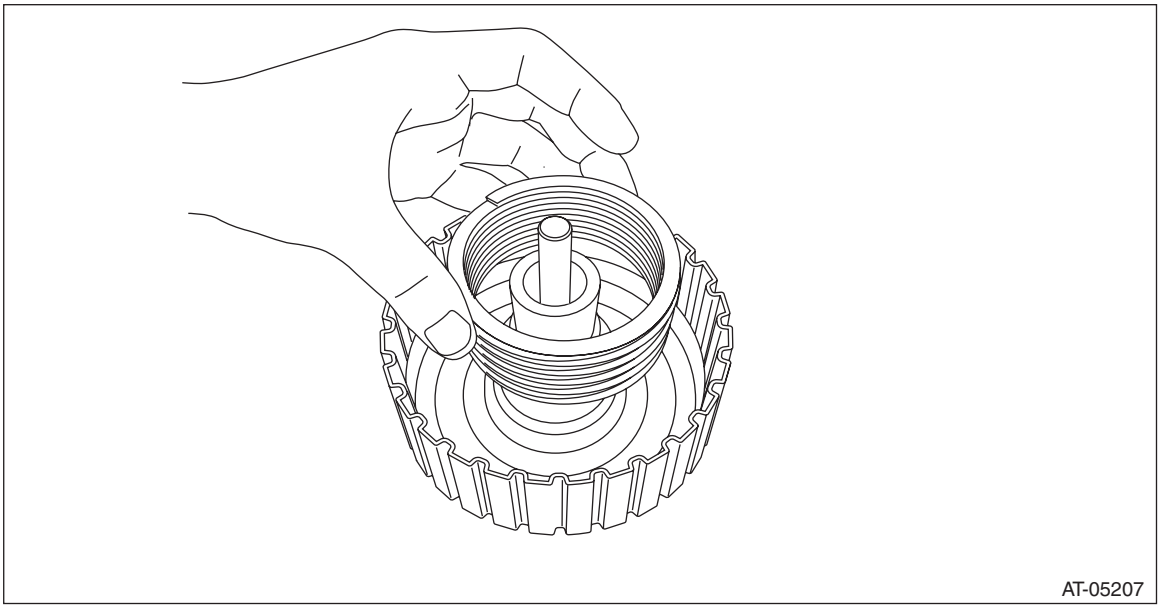
NOTE:
Install the thrust needle bearing in the correct direction.

5) Install the rear drive shaft. <Ref. to CVT(TR690)-162, Rear Drive Shaft.>
6) Install the extension case. <Ref. to CVT(TR690)-160, INSTALLATION, Extension Case.>
7) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-75, INSTALLATION, Automatic Transmission Assembly.>



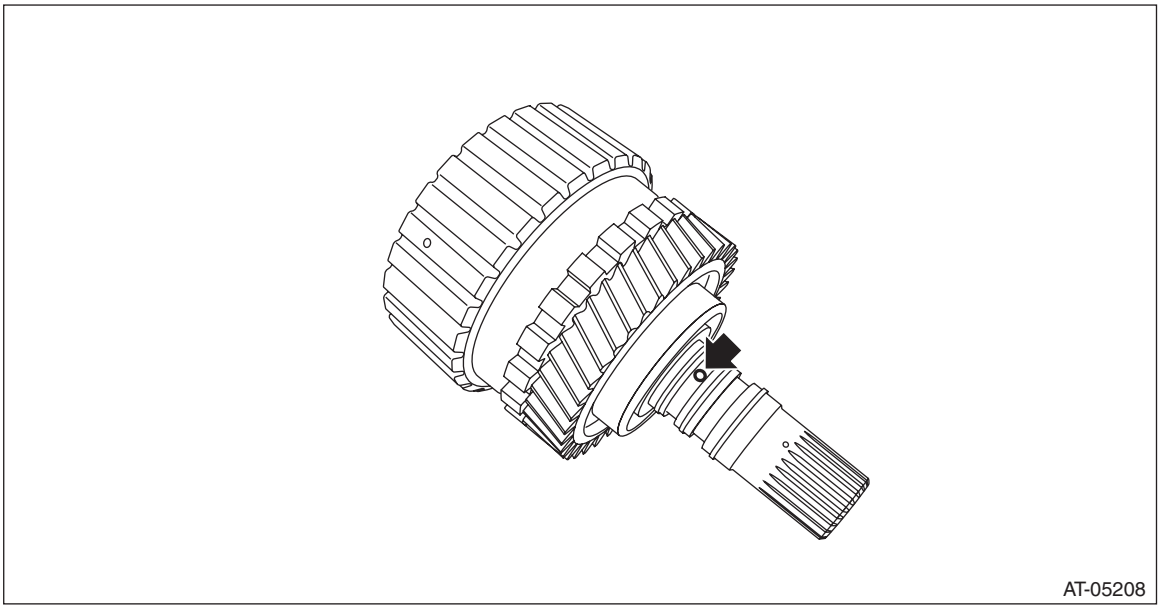
C: DISASSEMBLY

1) Remove the snap ring, and then remove the retaining plate, drive plate and driven plate.



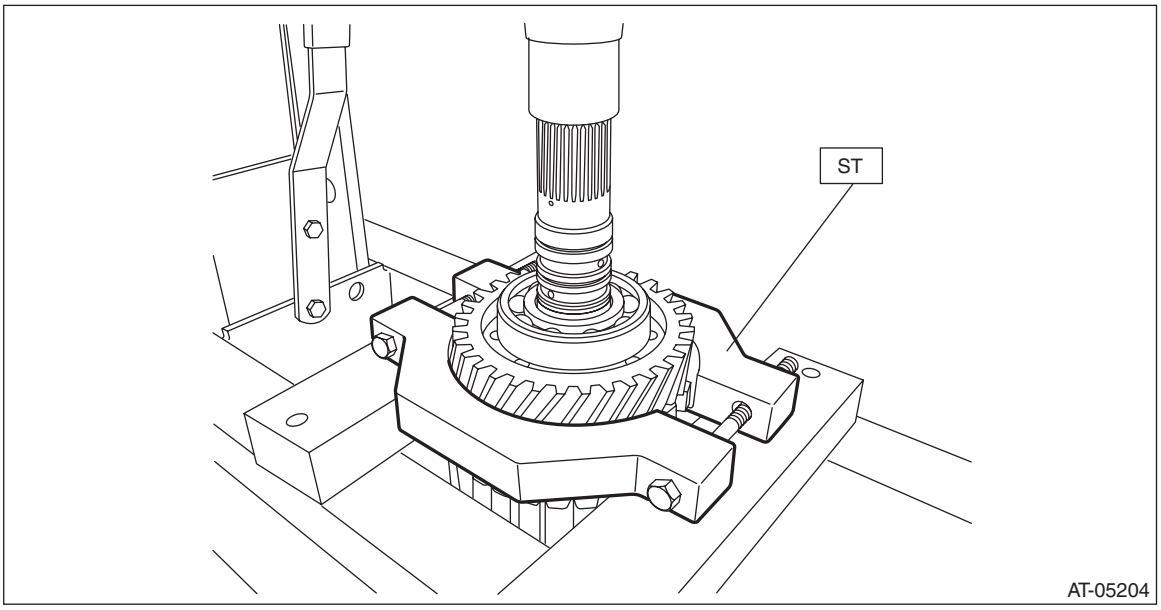
(A) Snap ring

2) Using the ST, remove the snap ring.
ST 18762AA001 COMPRESSOR SPECIAL TOOL



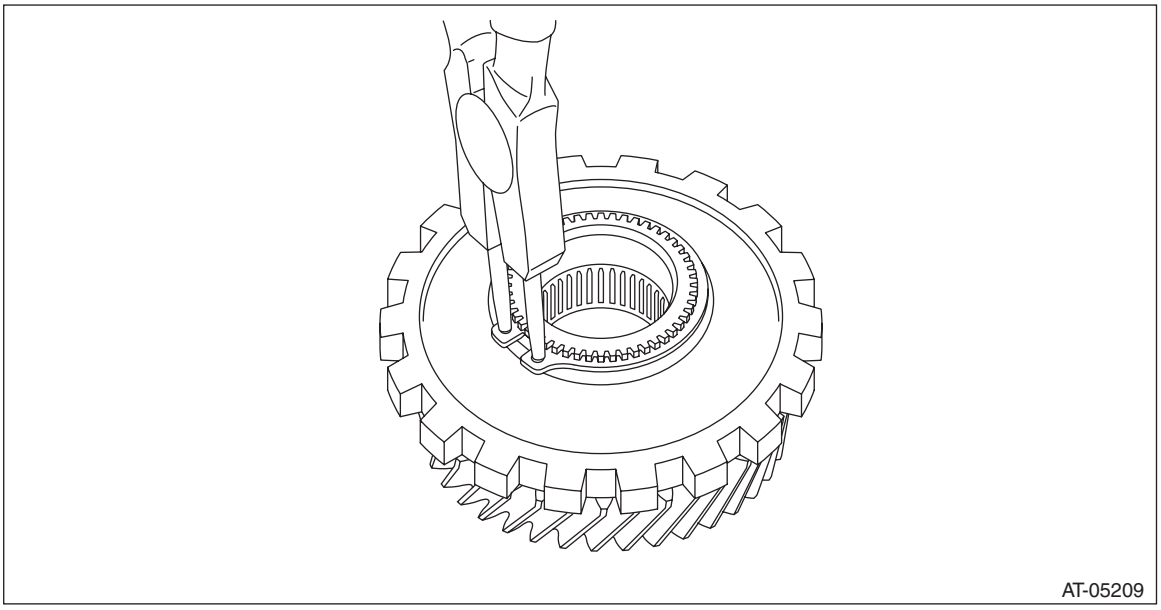
(A) Snap ring
(B) Transfer clutch piston seal

3) Remove the transfer clutch piston seal.
4) Remove the return spring.

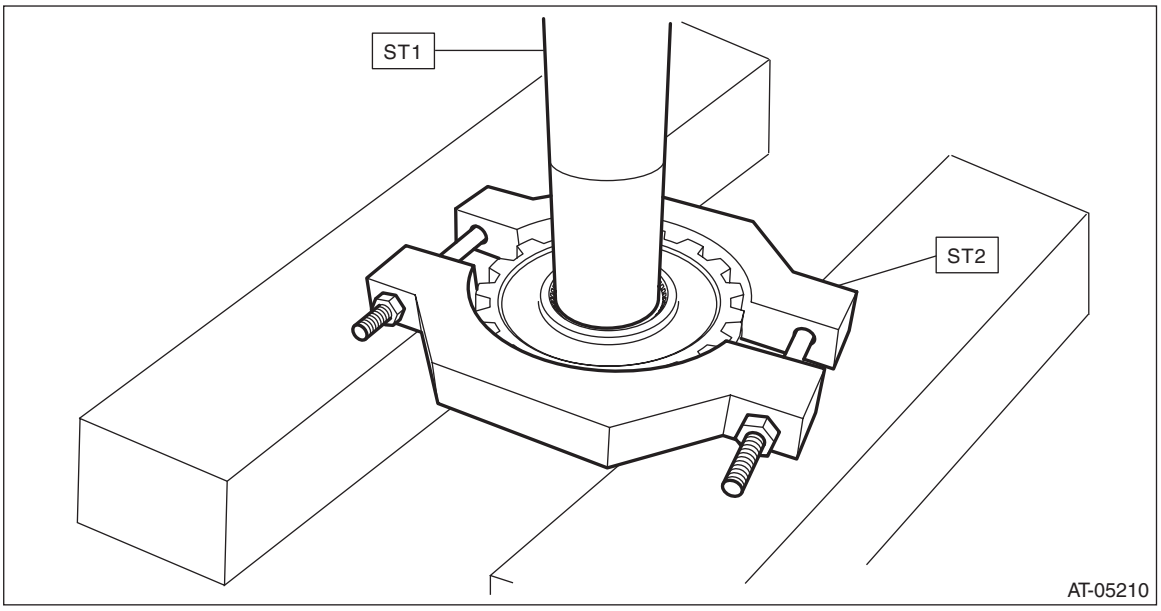


5) Remove the transfer clutch piston by blowing compressed air through transfer clutch assembly hole.

NOTE:
Block the hole opposite to the one to be blown with compressed air by your finger.

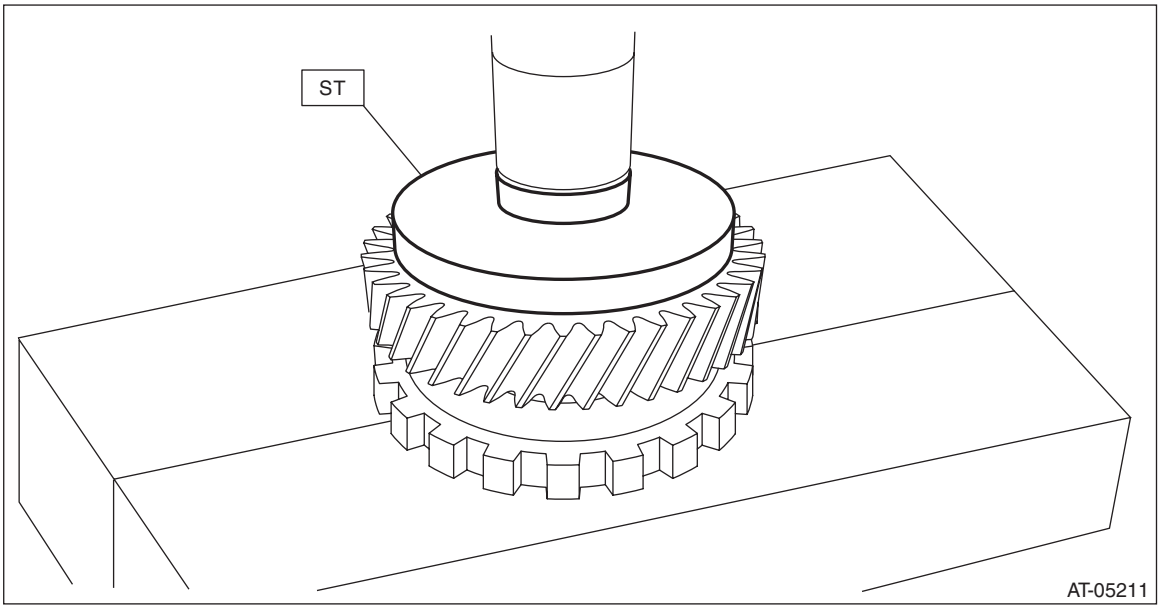


6) Using ST, remove transfer drive gear, parking gear and ball bearing.
ST 18767AA000 BEARING REMOVER

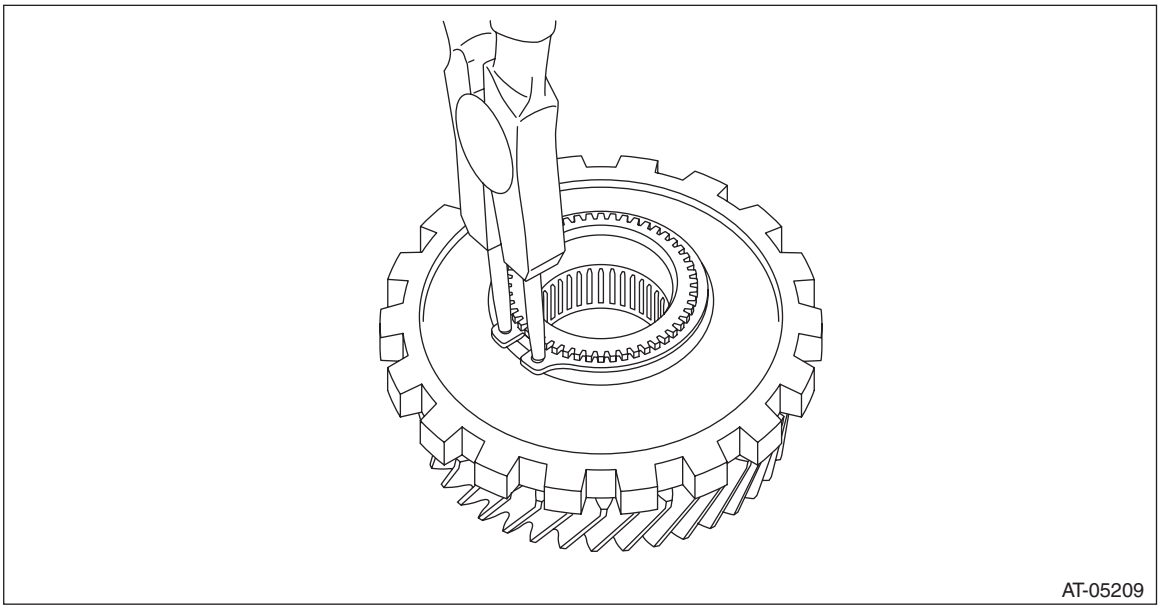


NOTE:
Let the ST sit on the parking gear.

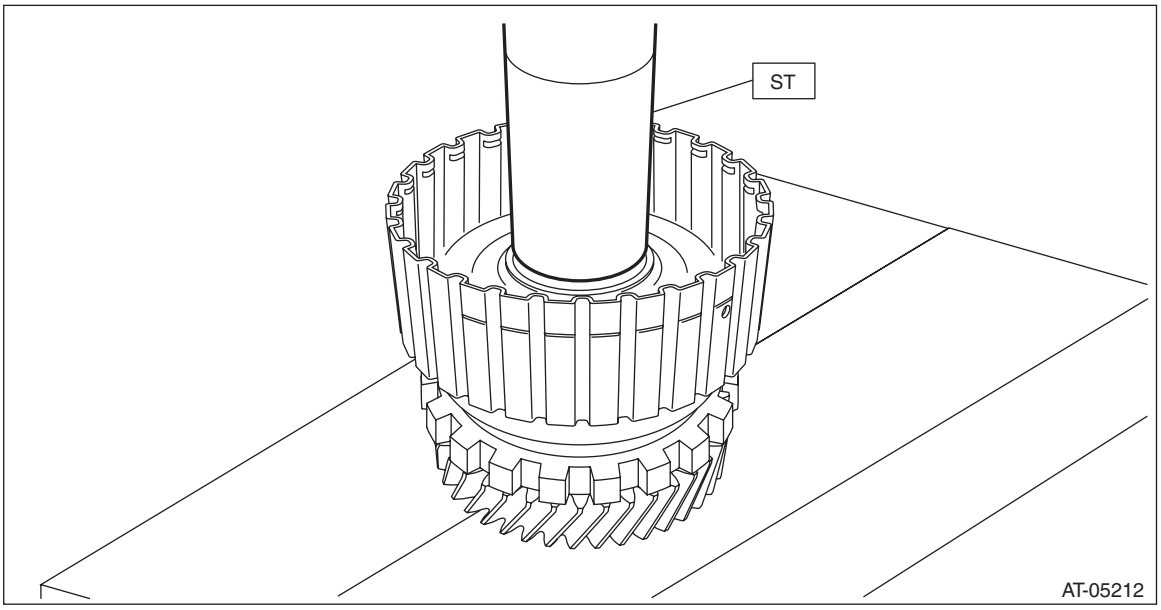
7) Remove the snap ring from transfer reduction drive gear.



8) Using the ST, remove the parking gear from transfer reduction drive gear.
ST1 499277100 BUSHING 1-2 INSTALLER
ST2 18767AA000 BEARING REMOVER

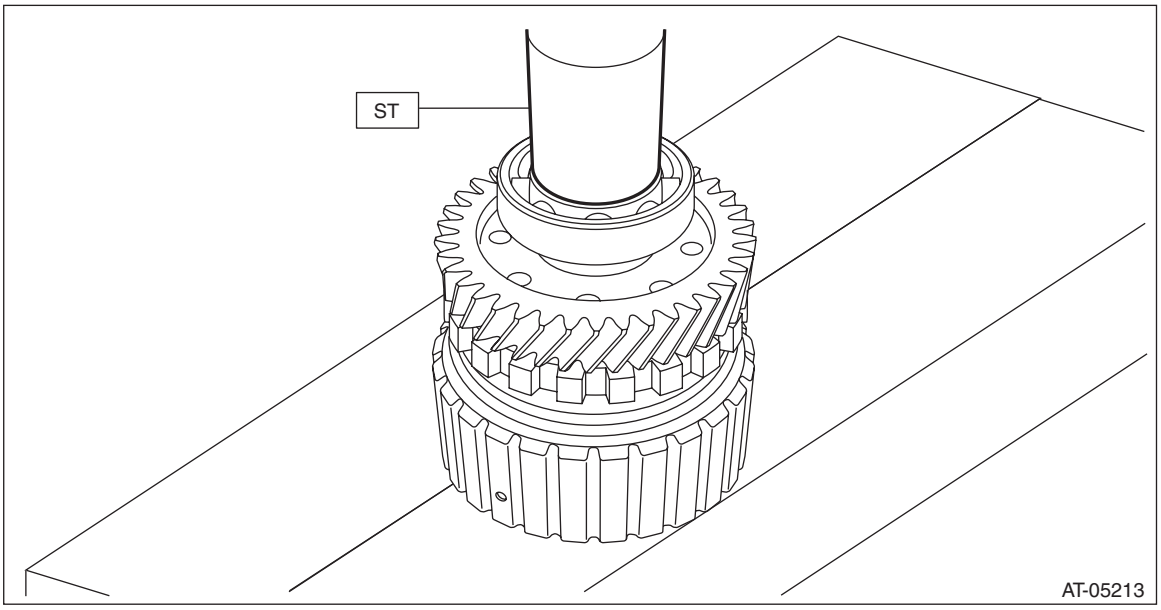


D: ASSEMBLY



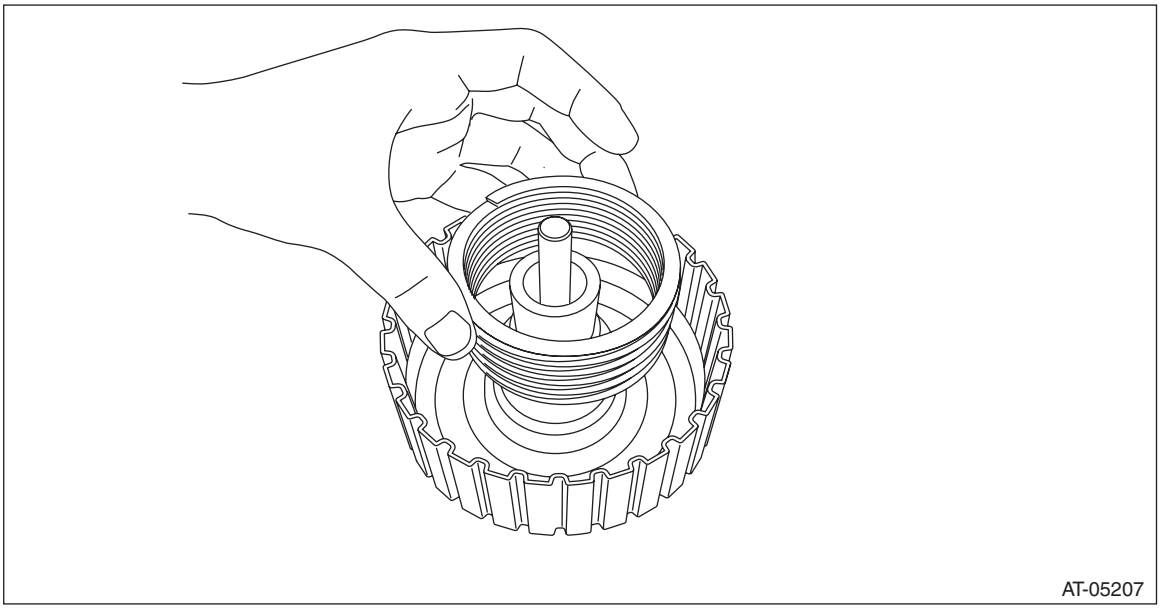
1) Using the ST, install the parking gear to transfer reduction drive gear.
ST 398177700 INSTALLER

2) Install the snap ring to transfer reduction drive gear.

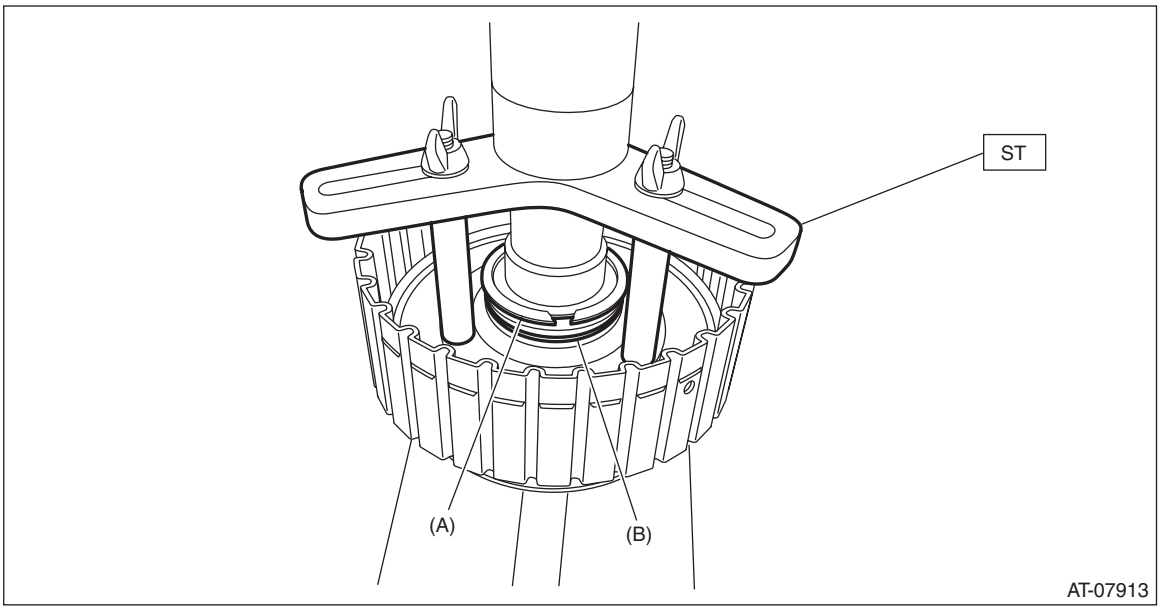


3) Using the ST, install the transfer reduction drive gear to transfer reduction drive gear shaft.
ST 499277100 BUSHING 1-2 INSTALLER

4) Using the ST, install the ball bearing.



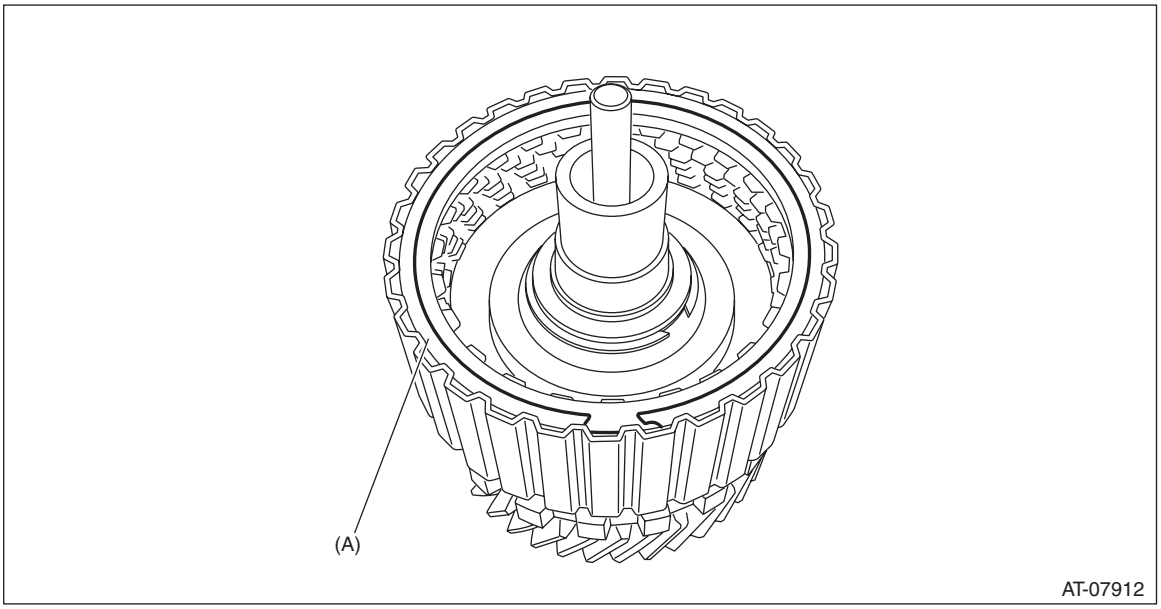
NOTE:
Use a new ball bearing.
ST 499277100 BUSHING 1-2 INSTALLER



5) Attach the transfer clutch piston to the reduction drive gear shaft.

NOTE:
Apply CVTF to the transfer clutch piston lip.

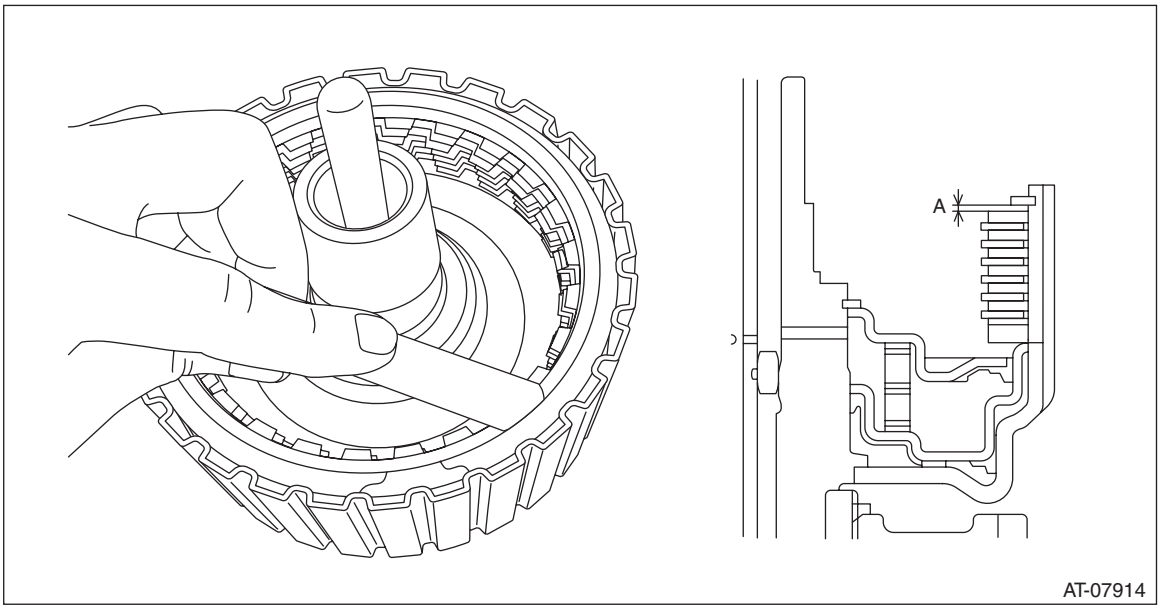
6) Install the return spring.



7) Install the transfer clutch piston seal.
8) Using the ST, install the snap ring.
ST 18762AA001 COMPRESSOR SPECIAL TOOL

(A) Snap ring
(B) Transfer clutch piston seal

9) Install the pressure plate, driven plate, drive plate and snap ring.



(A) Snap ring

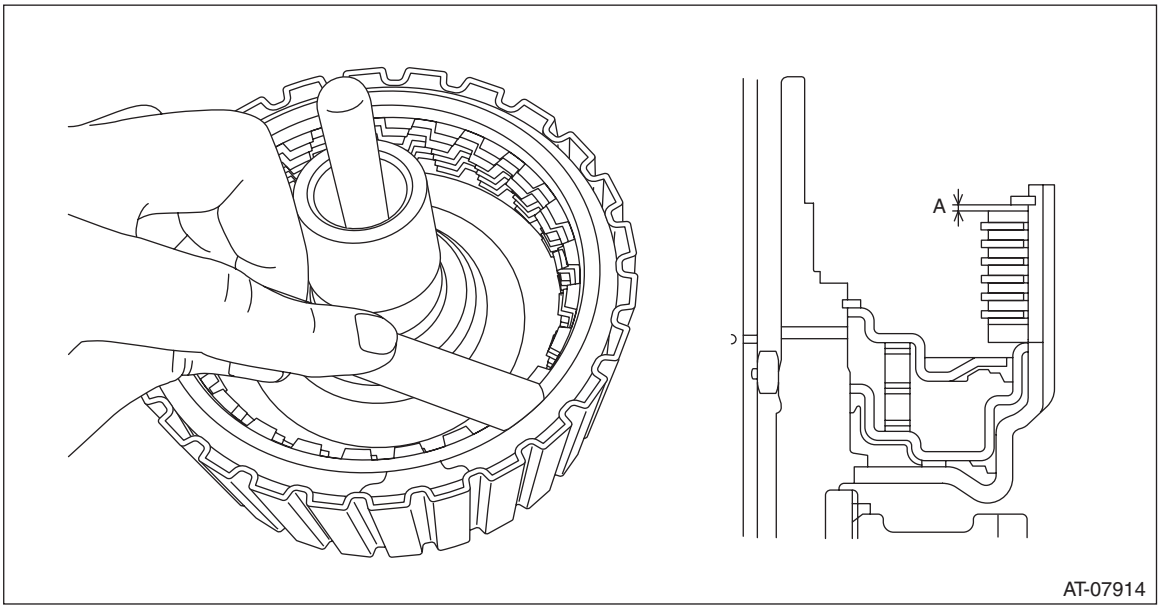
10) Before measuring clearance “A”, place same thickness shims on both sides to prevent the retaining plate from tilting.
11) When clearance “A” exceeds the limit for use, replace the drive plate and driven plate as a set, and select and adjust the pressure plate within the initial specified value.

Initial standard:
0.7 — 1.1 mm (0.028 — 0.043 in)

Limit thickness:
1.6 mm (0.063 in)

Pressure plate	
Part No.	Thickness mm (in)
31593AA151	3.3 (0.130)
31593AA161	3.7 (0.146)

12) Check the clearance between the snap ring and retaining plate. <Ref. to CVT(TR690)-178, INSPECTION, Transfer Clutch.>



E: INSPECTION

- Inspect the drive plate facing for wear and damage.
- Driven plate for discoloration (burned color)
- Make sure the snap ring is not worn and the return spring has no permanent distortion, damage, or deformation.
- Check the lip seal for damage.
- Inspect the extension end play, and adjust it to within the standard value. <Ref. to CVT(TR690)-178, ADJUSTMENT, Transfer Clutch.>

1) Before measuring clearance “A” between snap ring and retaining plate, place same thickness shims on both sides to prevent the retaining plate from tilting.
2) When clearance “A” exceeds the limit for use, replace the drive plate and driven plate as a set, and select the pressure plate within the initial specified value.

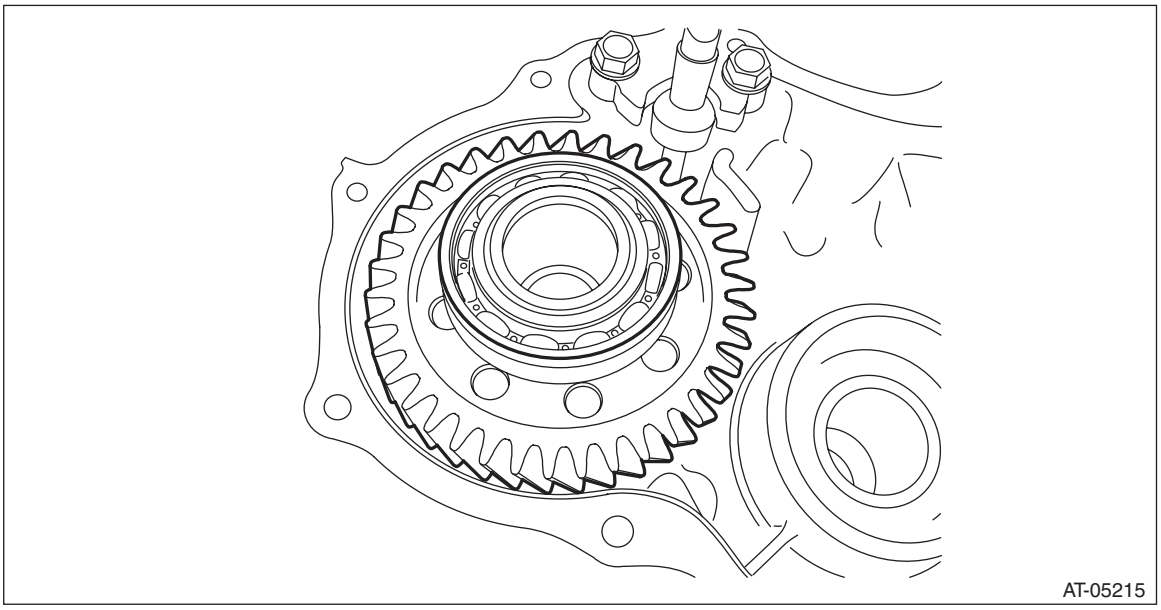
Initial standard:
0.7 — 1.1 mm (0.028 — 0.043 in)

Limit thickness:
1.6 mm (0.063 in)

3) Check for tight corner braking phenomenon when the vehicle is moved forward with the steering fully turned. If tight corner braking occurs, perform the following procedures.

NOTE:
Turn OFF the X mode switch and perform inspection.

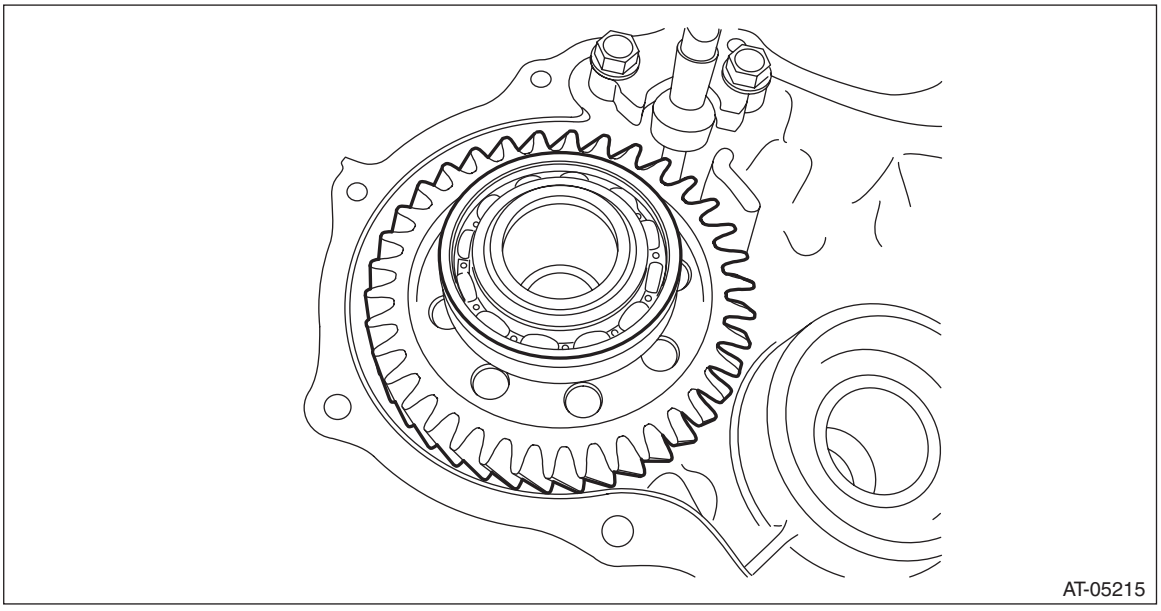
(1) With the steering wheel held at fully turned position, drive the vehicle in “D” range and with vehicle speed at approx. 5 km/h (3 MPH) in both clockwise and counterclockwise directions for approx. ten times each, while repeating acceleration and braking intermittently.
(2) If the tight corner braking phenomenon still persists, drive the vehicle again in a circle for several laps.



F: ADJUSTMENT

NOTE:
Refer to the Rear Drive Shaft. <Ref. to CVT(TR690)-165, ADJUSTMENT, Rear Drive Shaft.>

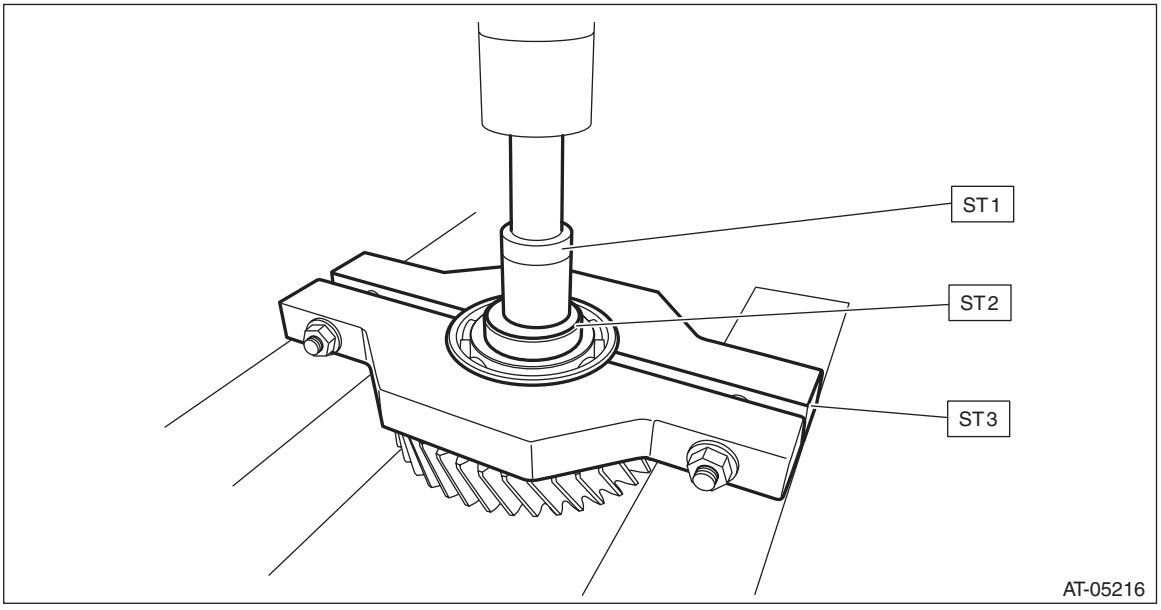
33.Transfer Reduction Driven Gear



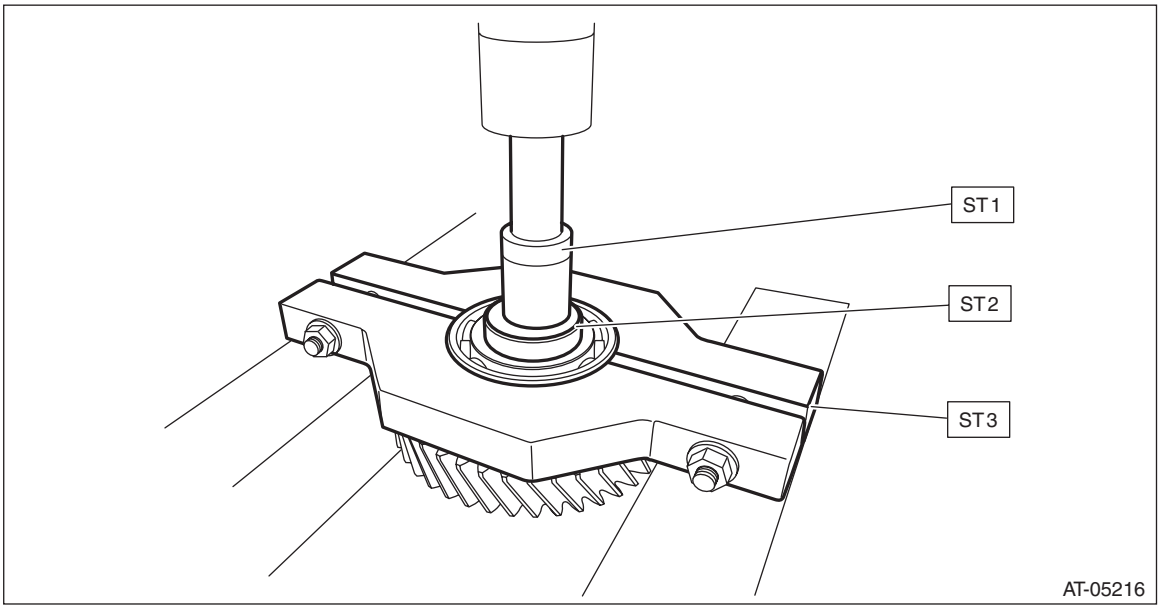
A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-58, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case. <Ref. to CVT(TR690)-159, REMOVAL, Extension Case.>
3) Remove the rear drive shaft. <Ref. to CVT(TR690)-162, REMOVAL, Rear Drive Shaft.>
4) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-167, REMOVAL, Transfer Clutch.>
5) Remove the transfer reduction driven gear assembly.

B: INSTALLATION



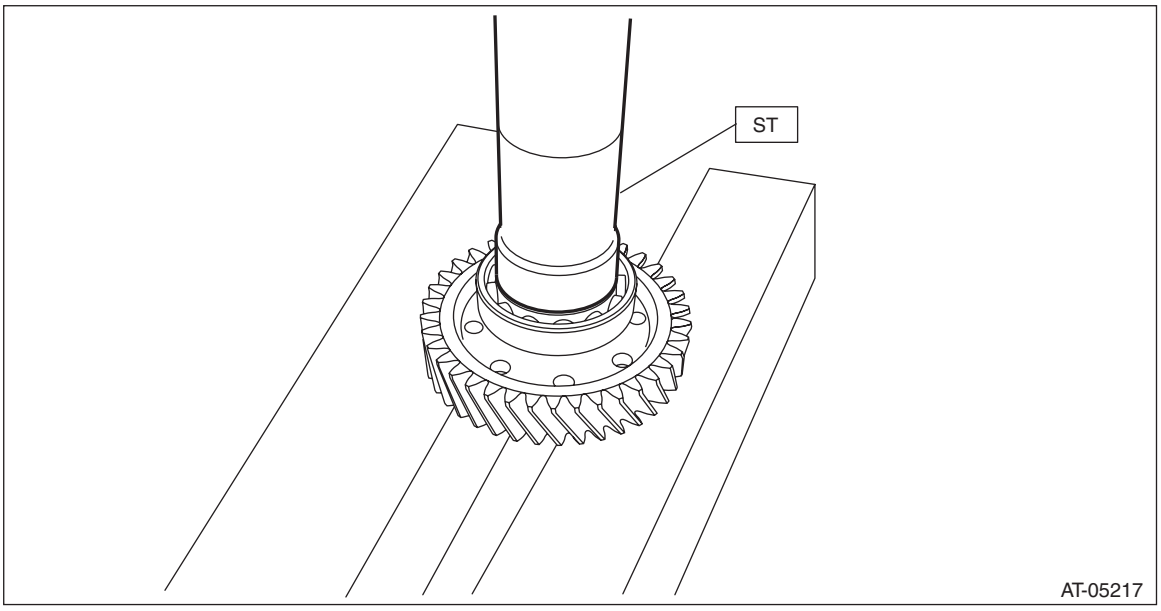
1) Install the reduction driven gear assembly.



2) Select shims. <Ref. to CVT(TR690)-182, ADJUSTMENT, Transfer Reduction Driven Gear.>
3) Install the transfer clutch assembly. <Ref. to CVT(TR690)-168, INSTALLATION, Transfer Clutch.>
4) Install the rear drive shaft. <Ref. to CVT(TR690)-162, INSTALLATION, Rear Drive Shaft.>
5) Mount the selected shim onto ball bearing.
6) Install the extension case. <Ref. to CVT(TR690)-160, INSTALLATION, Extension Case.>
7) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-75, INSTALLATION, Automatic Transmission Assembly.>

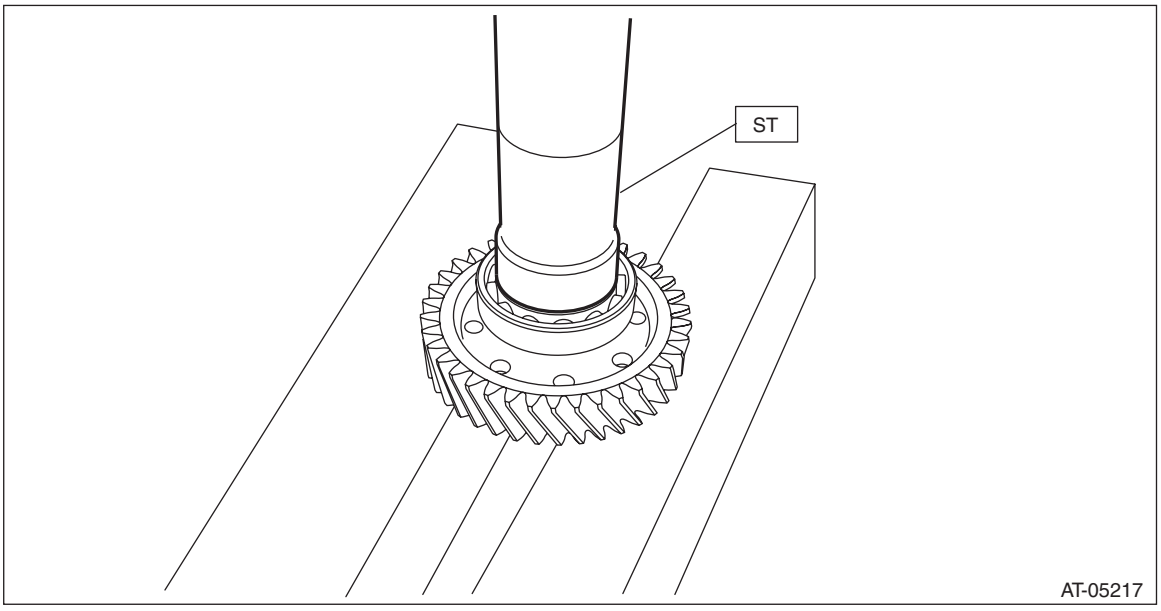
C: DISASSEMBLY

1) Using the ST, remove the ball bearing (large) from transfer reduction driven gear.
ST1 899864100 REMOVER
ST2 398497701 SEAT
ST3 498077600 REMOVER



2) Using the ST, remove the ball bearing (small) from transfer reduction driven gear.
ST1 899864100 REMOVER
ST2 398497701 SEAT
ST3 18720AA000 REMOVER

D: ASSEMBLY

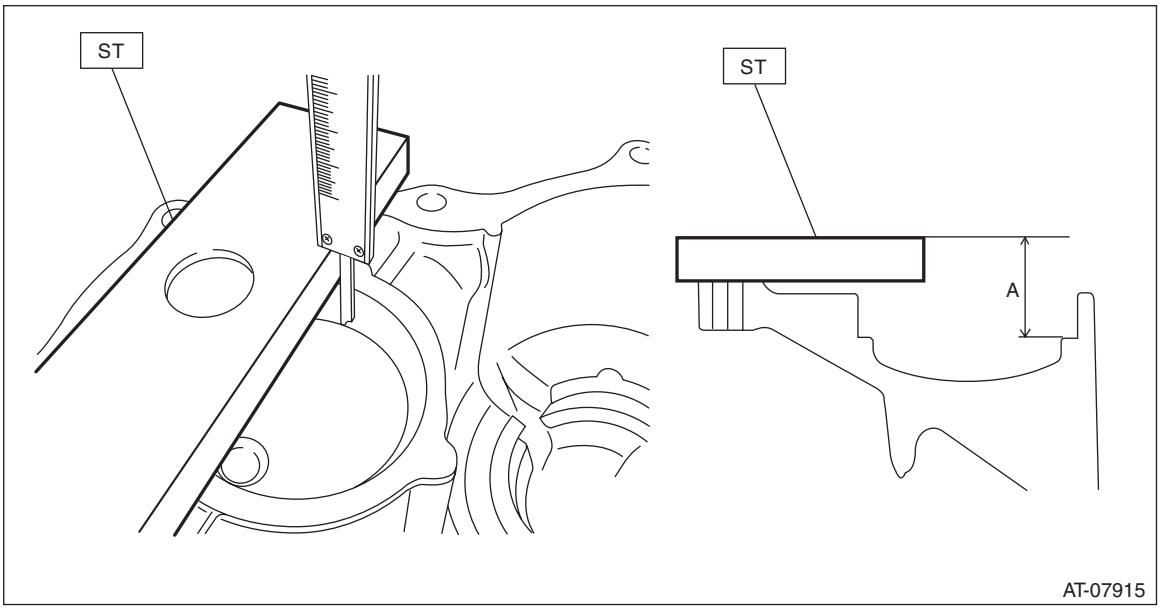


1) Install the new ball bearing (large) to reduction driven gear using the ST.
ST 499277100 BUSHING 1-2 INSTALLER

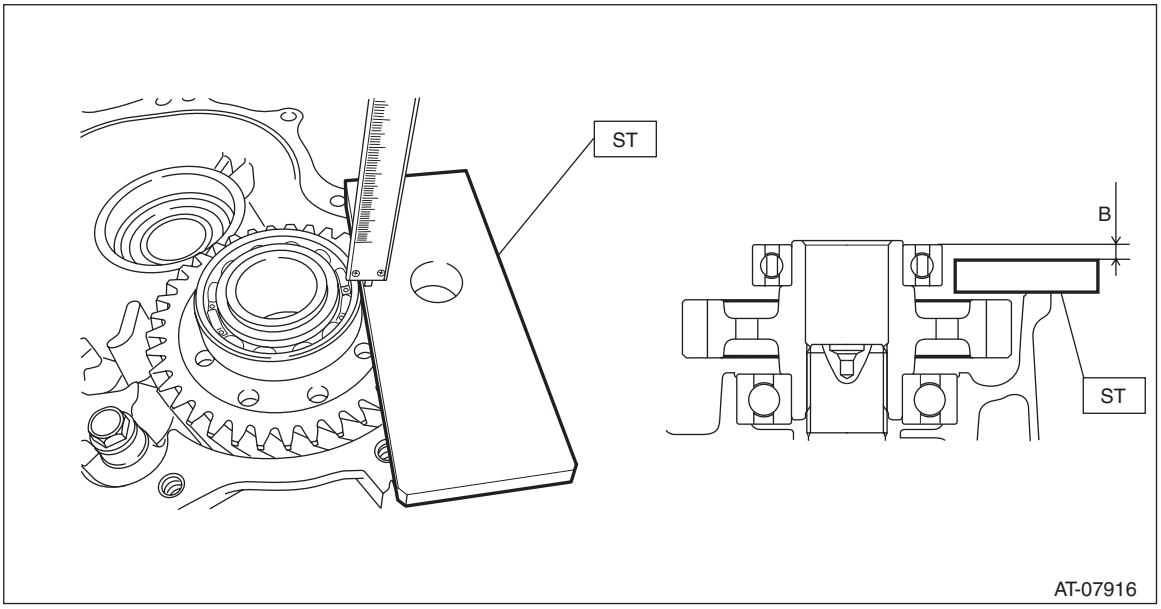
NOTE:
- Use a new ball bearing.
- Install to the splines inside transfer reduction driven gear shaft.

2) Install the new ball bearing (small) to reduction driven gear.

NOTE:
Use a new ball bearing.
ST 499277100 BUSHING 1-2 INSTALLER



E: INSPECTION

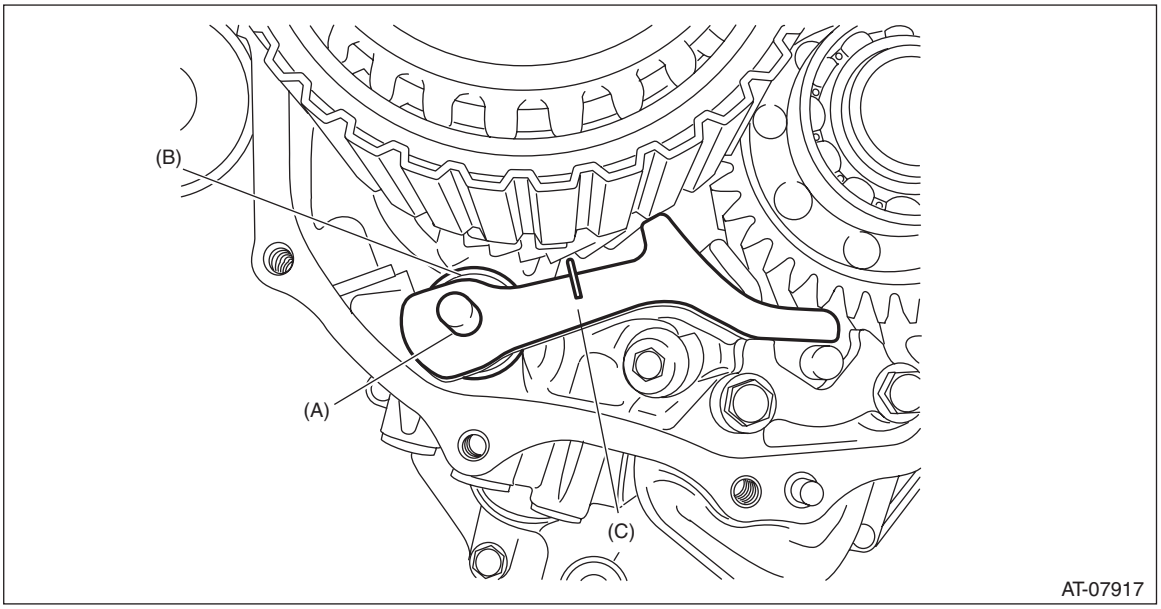


- Check the ball bearing for smooth rotation.
- Check the ball bearing for excessive looseness.
- Make sure the gear is not broken or damaged.

F: ADJUSTMENT

1) Measure depth “A” from the ST upper face to the ball bearing catch surface.
ST 398643600 GAUGE

2) Measure height “B” from the ST to the end of the ball bearing outer ring.
ST 398643600 GAUGE



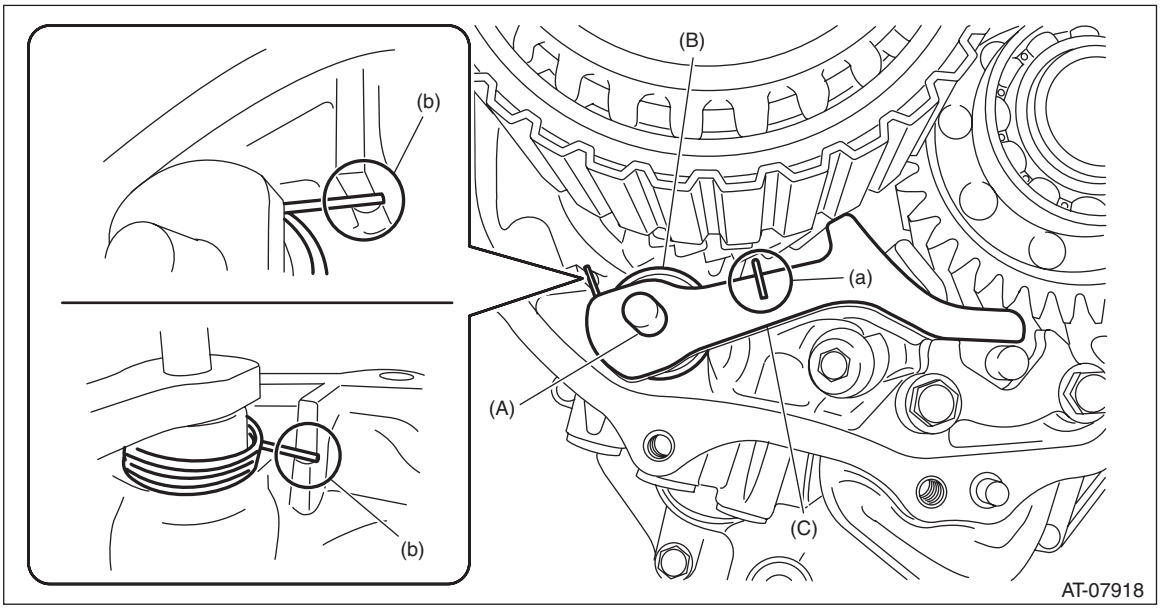
3) Obtain the thickness of shim using the following formula to select none to two shims.
T mm = (A – 15) – (B + 15) – (0.05 — 0.25)
[T in = (A – 0.591) – (B + 0.591) – (0.002 — 0.01)]
T: Shim thickness
A: Depth from the ST upper face to the ball bearing catch surface
B: Height from the ST to the end of the ball bearing outer ring
15 mm (0.591 in): Thickness of ST
0.05 — 0.25 mm (0.002 — 0.01 in): Clearance

Shim	
Part No.	Thickness mm (in)
31288AA190	0.2 (0.008)
31288AA200	0.3 (0.012)
31288AA210	0.5 (0.02)

34.Parking Pawl

A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-58, REMOVAL, Automatic Transmission Assembly.>
2) Shift the range select lever to “N” range.
3) Remove the extension case. <Ref. to CVT(TR690)-159, REMOVAL, Extension Case.>
4) Remove the parking pawl shaft, return spring and parking pawl.



(A) Parking pawl shaft
(B) Return spring
(C) Parking pawl

B: INSTALLATION

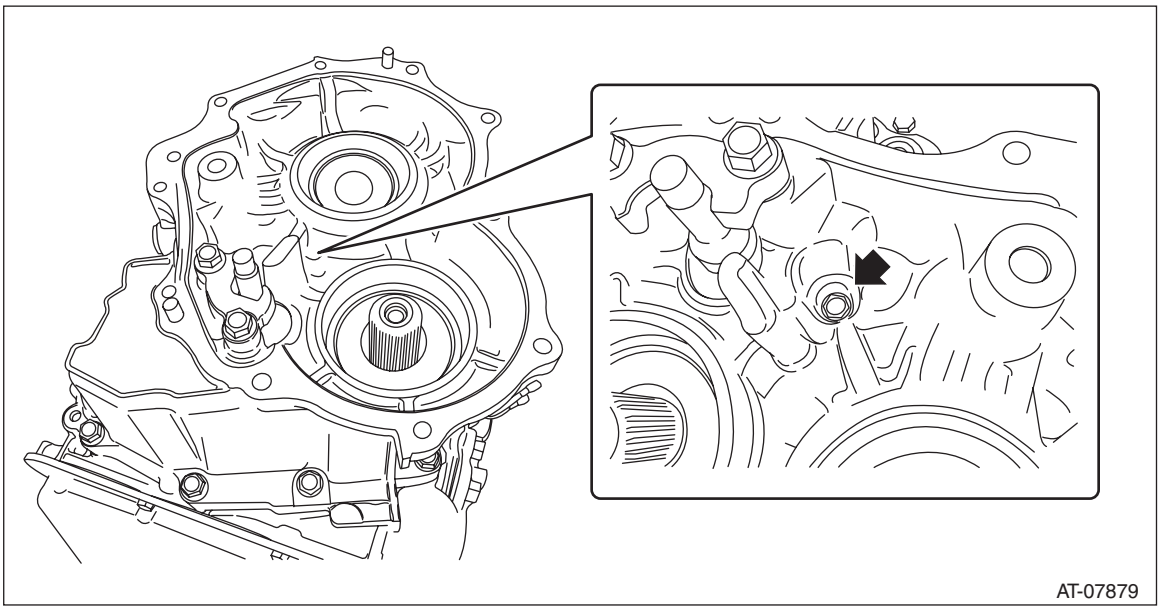
1) Set the range select lever to the “N” range.
2) Install the parking pawl shaft, return spring and parking pawl.

NOTE:
Make sure that the end of return spring sticks out of parking pawl as shown in (a). Make sure that the other end contacts the rib of intermediate case as shown in (b).

(A) Parking pawl shaft
(B) Return spring
(C) Parking pawl

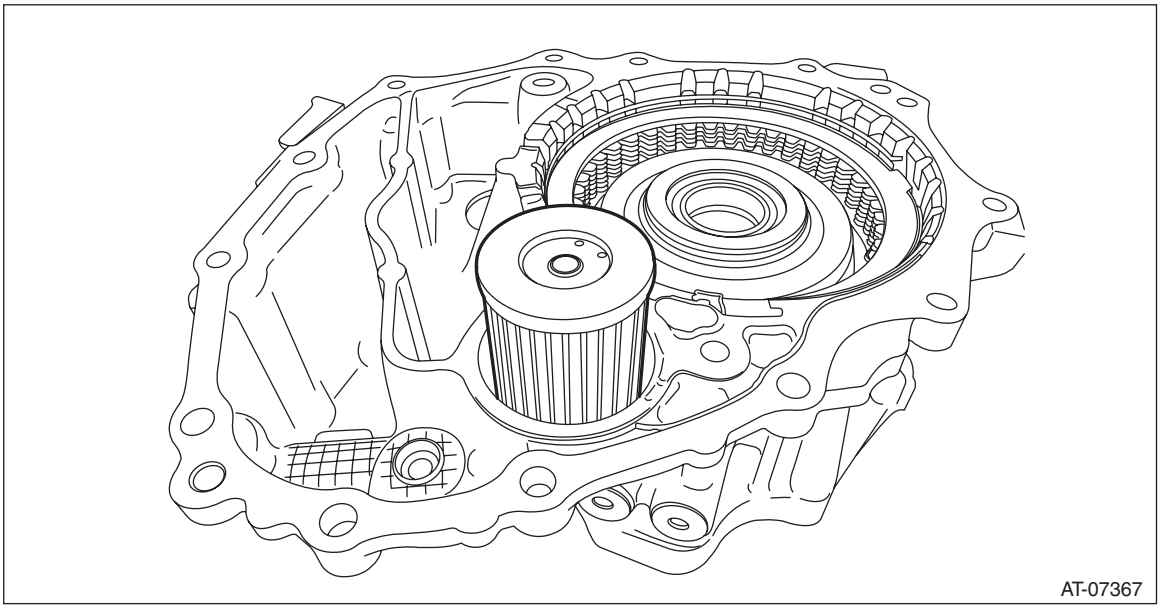
3) Install the extension case. <Ref. to CVT(TR690)-160, INSTALLATION, Extension Case.>
4) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-75, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION



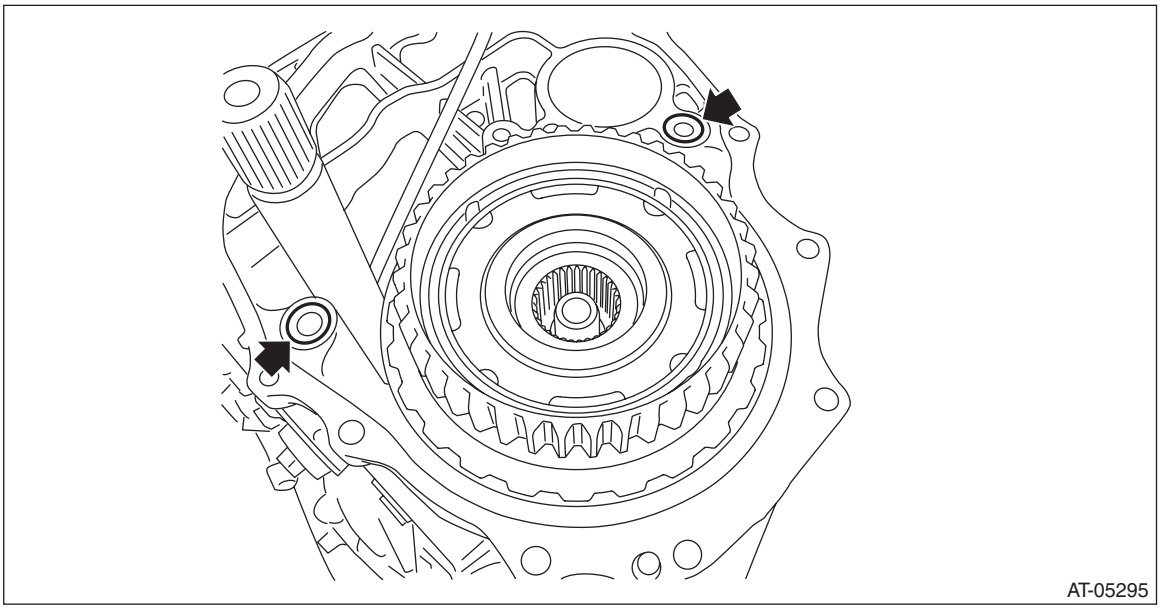
- Check the parking pawl for breakage or damage.
- Check the return spring for fatigue.

35.Intermediate Case



A: REMOVAL

1) Remove the transmission assembly from vehicle body. <Ref. to CVT(TR690)-58, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case. <Ref. to CVT(TR690)-159, REMOVAL, Extension Case.>
3) Remove the parking pawl. <Ref. to CVT(TR690)-183, REMOVAL, Parking Pawl.>
4) Remove the rear drive shaft. <Ref. to CVT(TR690)-162, REMOVAL, Rear Drive Shaft.>
5) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-167, REMOVAL, Transfer Clutch.>
6) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-179, REMOVAL, Transfer Reduction Driven Gear.>
7) Remove the intermediate case.

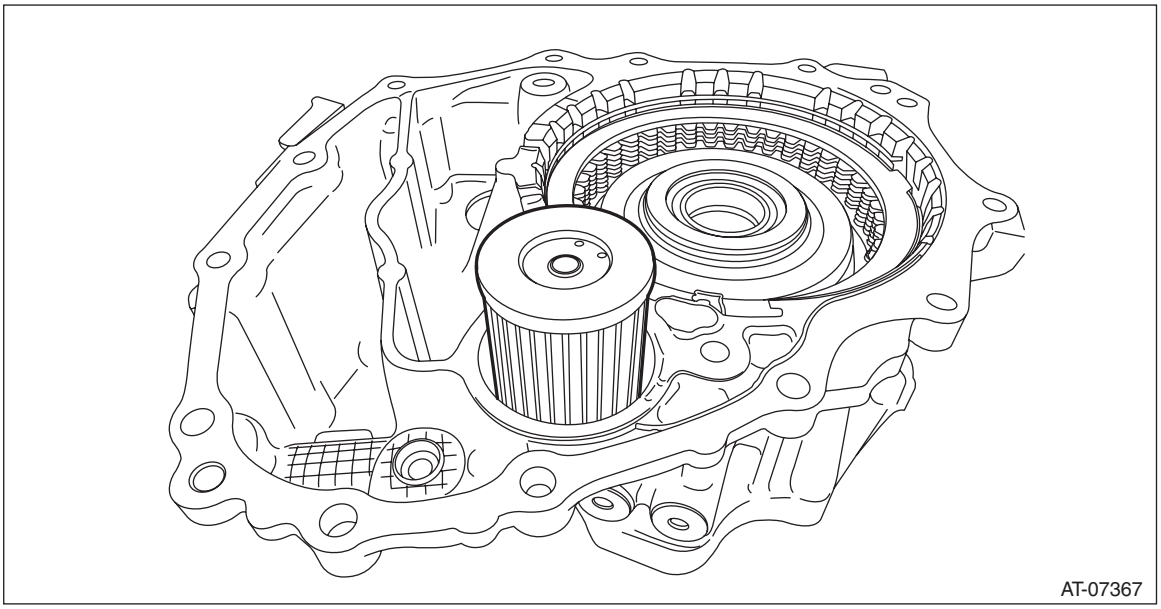


NOTE:
- The total number of intermediate case mounting bolts is 14.
- Inside the transmission is a single bolt (arrowed).

AT-07879

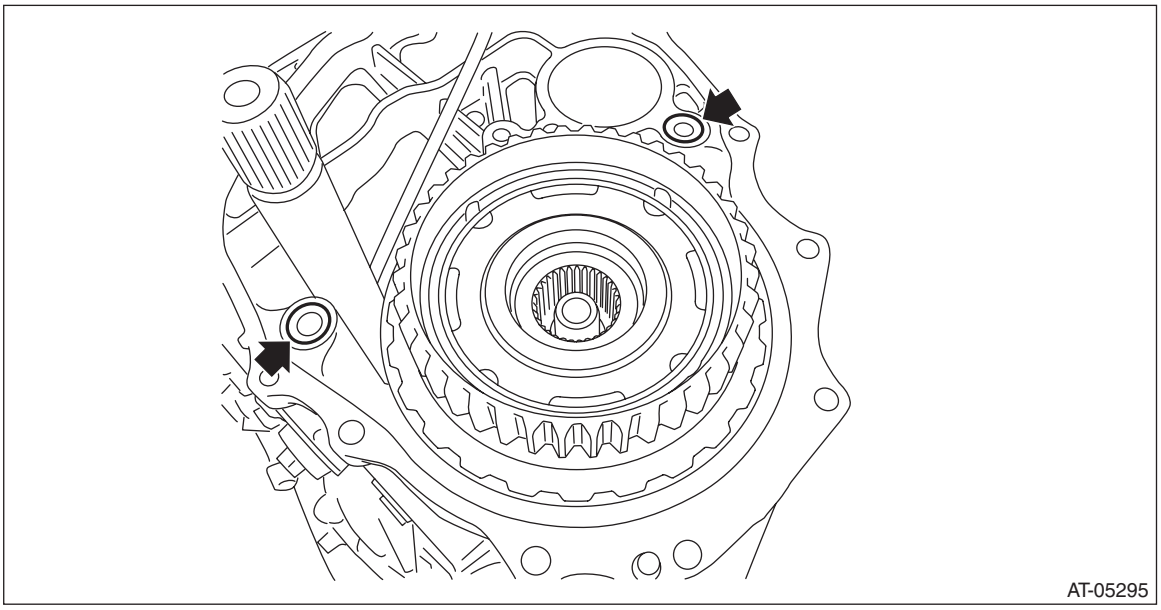
8) Remove the CVTF filter.

AT-07367



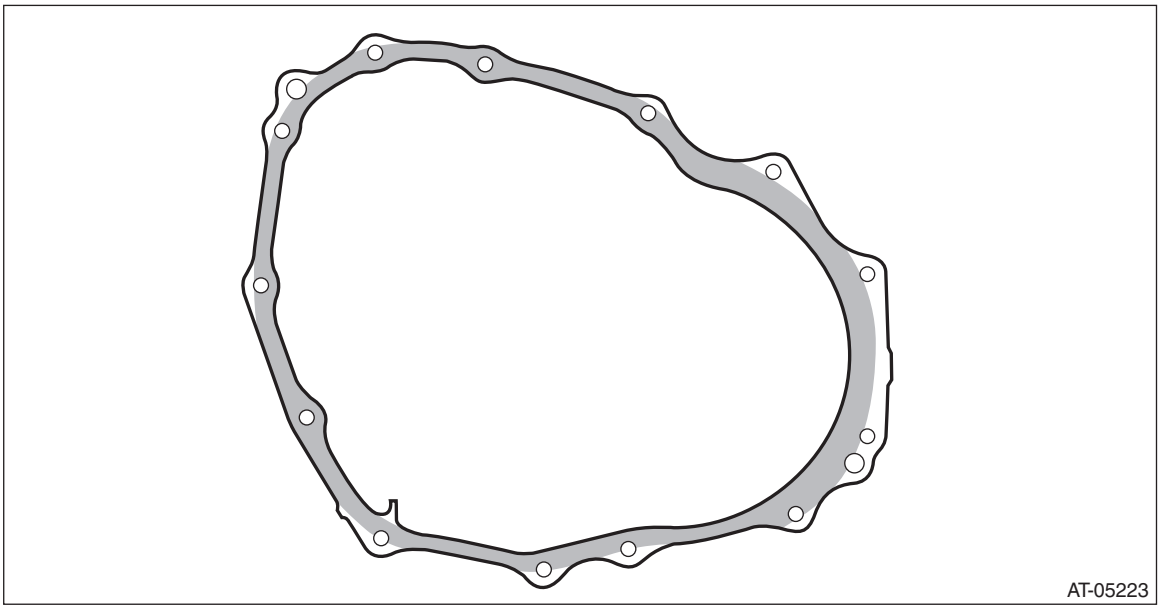
9) Remove the O-ring from the transmission case.

B: INSTALLATION



1) Clean the mating surface of intermediate case and transmission case.
2) Face the O-ring side of the CVTF filter to the intermediate case side, and install the CVTF filter.

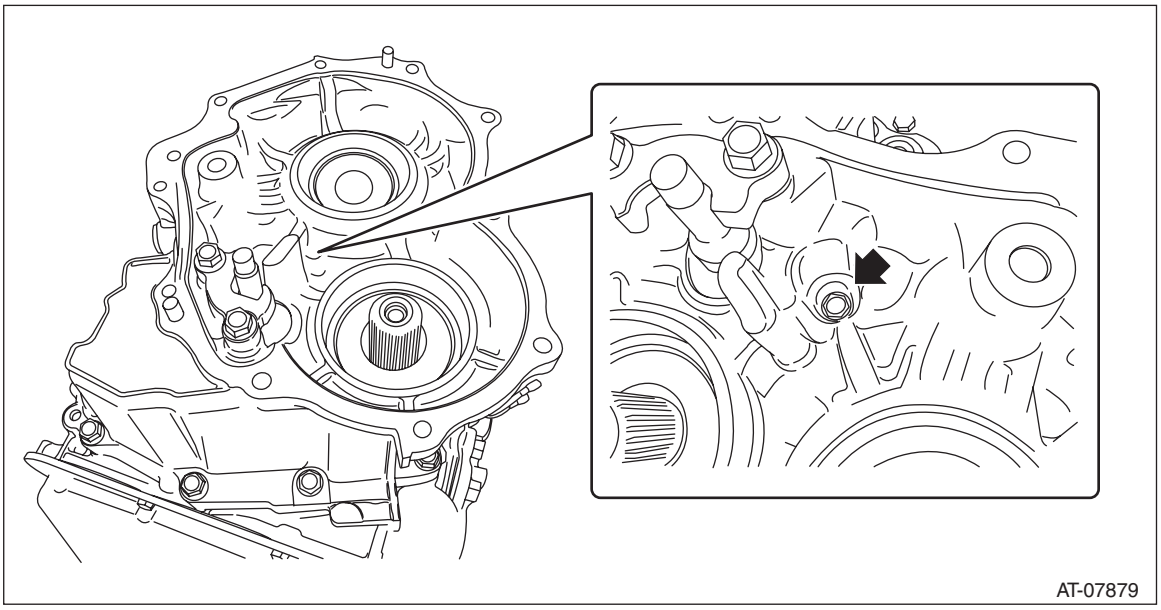
NOTE:
Apply CVTF to the O-rings.



3) Install the O-ring to the transmission case.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

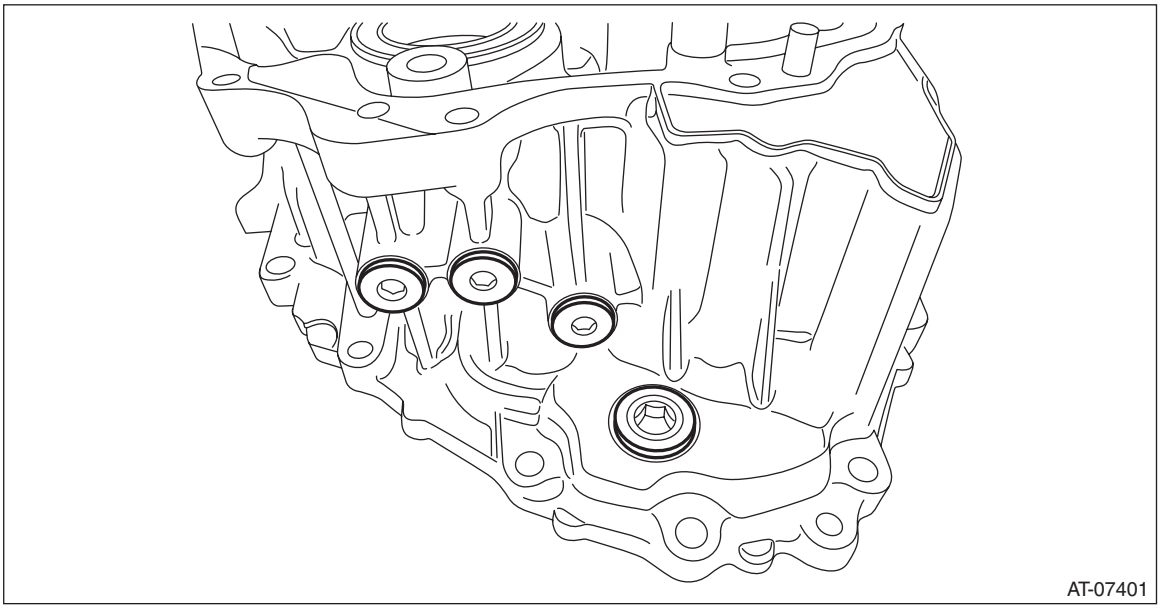
4) Apply liquid gasket to intermediate case seamlessly.



Liquid gasket:
THREE BOND 1215B or equivalent

5) Install the intermediate case and the transmission hanger to the transmission case.

NOTE:
Make sure to install the arrowed bolt.

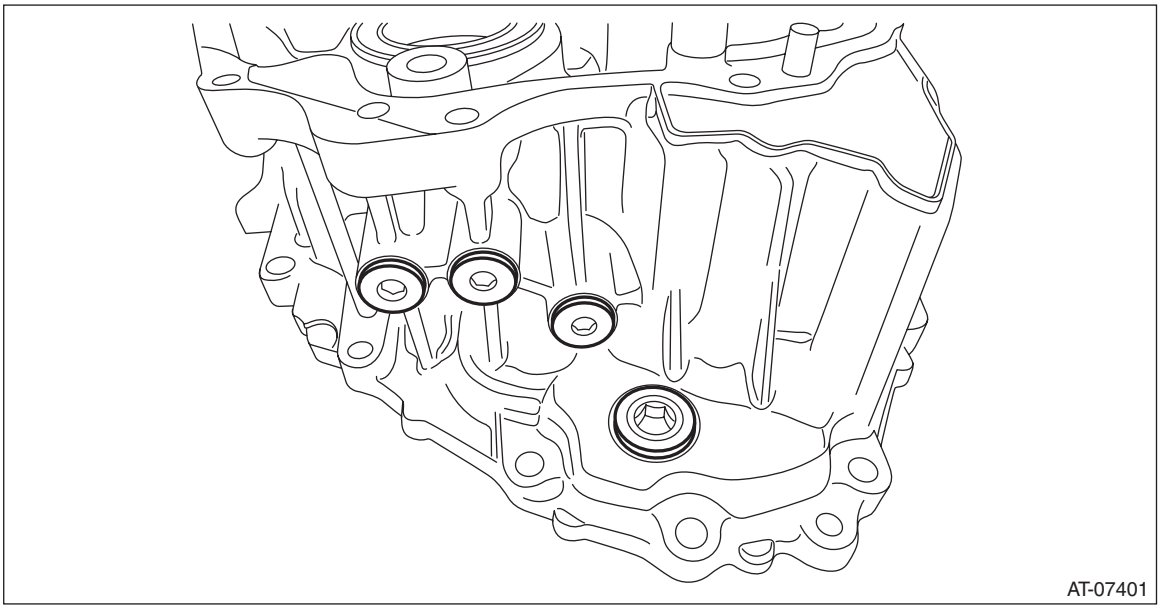


Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

6) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-179, INSTALLATION, Transfer Reduction Driven Gear.>
7) Install the transfer clutch assembly. <Ref. to CVT(TR690)-168, INSTALLATION, Transfer Clutch.>
8) Install the rear drive shaft. <Ref. to CVT(TR690)-162, INSTALLATION, Rear Drive Shaft.>
9) Install the parking pawl. <Ref. to CVT(TR690)-184, INSTALLATION, Parking Pawl.>
10) Install the extension case. <Ref. to CVT(TR690)-160, INSTALLATION, Extension Case.>
11) Install the transmission to vehicle. <Ref. to CVT(TR690)-75, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1) Remove the parking support.
2) Remove the CVTF filler plug.
3) Remove all plugs from intermediate case.



4) Remove the reverse brake assembly. <Ref. to CVT(TR690)-191, DISASSEMBLY, Reverse Brake Assembly.>

D: ASSEMBLY

1) Install the reverse brake. <Ref. to CVT(TR690)-194, ASSEMBLY, Reverse Brake Assembly.>
2) install all plugs to intermediate case.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

NOTE:
Use new O-rings.

3) Install the parking support.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)
4) Install the CVTF filler plug.

NOTE:
Replace the gasket of CVTF filler plug with a new part after installing the transmission assembly to vehicle and adjusting CVTF fluid.

E: INSPECTION

- Check the intermediate case for fissures, cracks or damage.
- Check for leakage of CVTF from the connections between intermediate case and transmission case, and between intermediate case and extension case.

36.CVTF Filter

A: REMOVAL

NOTE:
• Although CVTF filter is a maintenance-free part, replace it if a large quantity of wear debris and metal particles are found in CVTF and CVTF filter.
• For removal of CVTF filter, refer to “Intermediate Case”. <Ref. to CVT(TR690)-185, REMOVAL, Intermediate Case.>

B: INSTALLATION

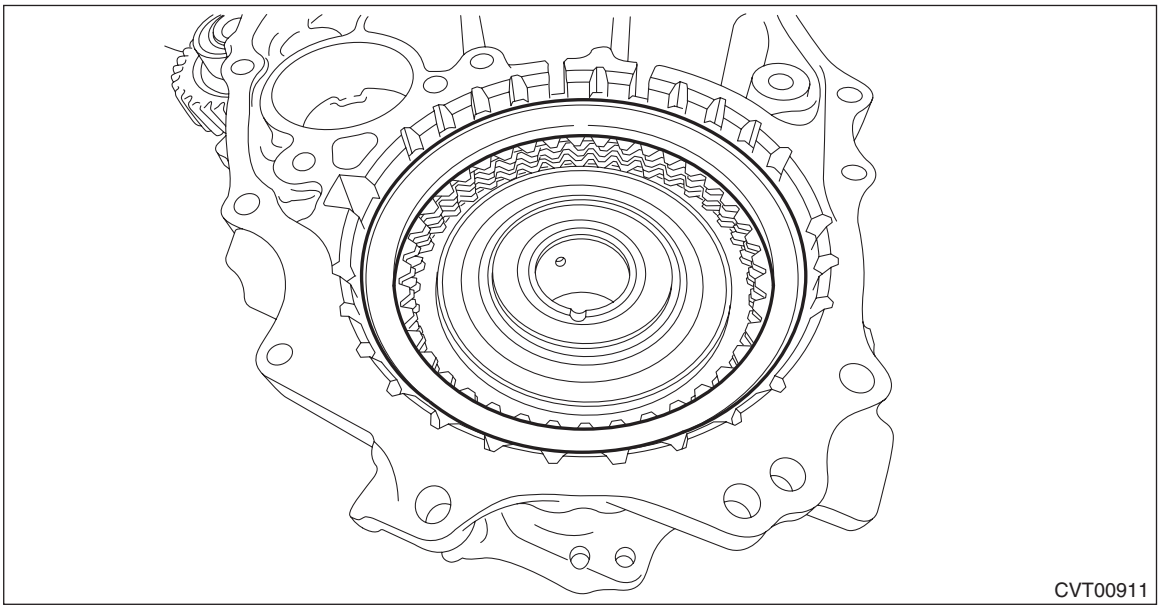
NOTE:
For installation of CVTF filter, refer to “Intermediate Case”. <Ref. to CVT(TR690)-186, INSTALLATION, Intermediate Case.>

C: INSPECTION

- Check if a large quantity of wear debris or metal particles are in CVTF and CVTF filter.
- Check for broken part or damaged O-ring.

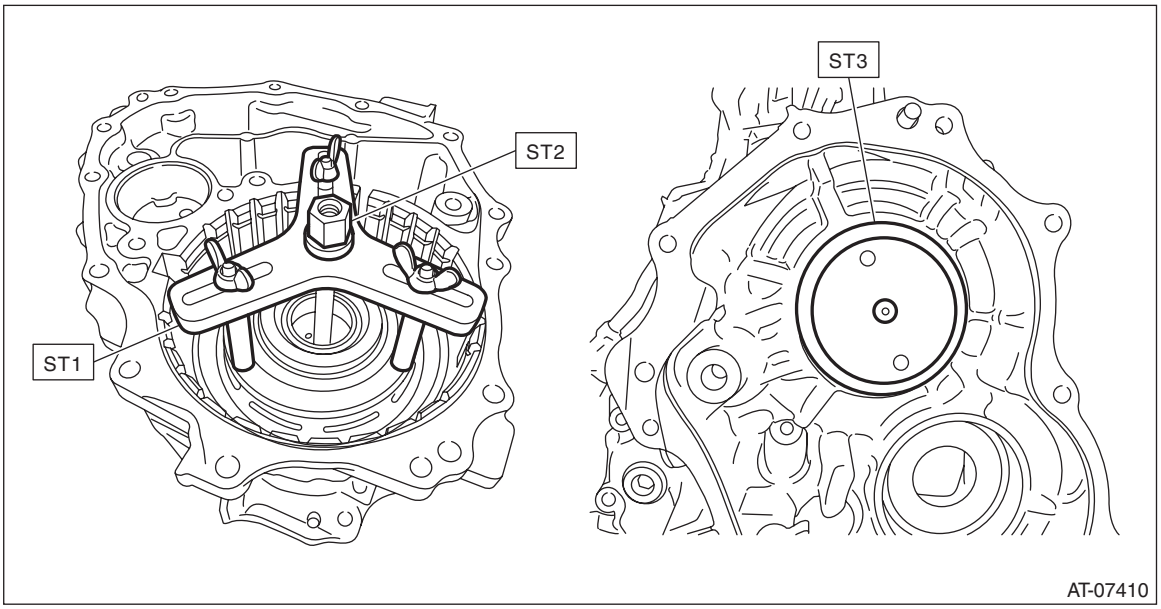
37.Reverse Brake Assembly

A: REMOVAL



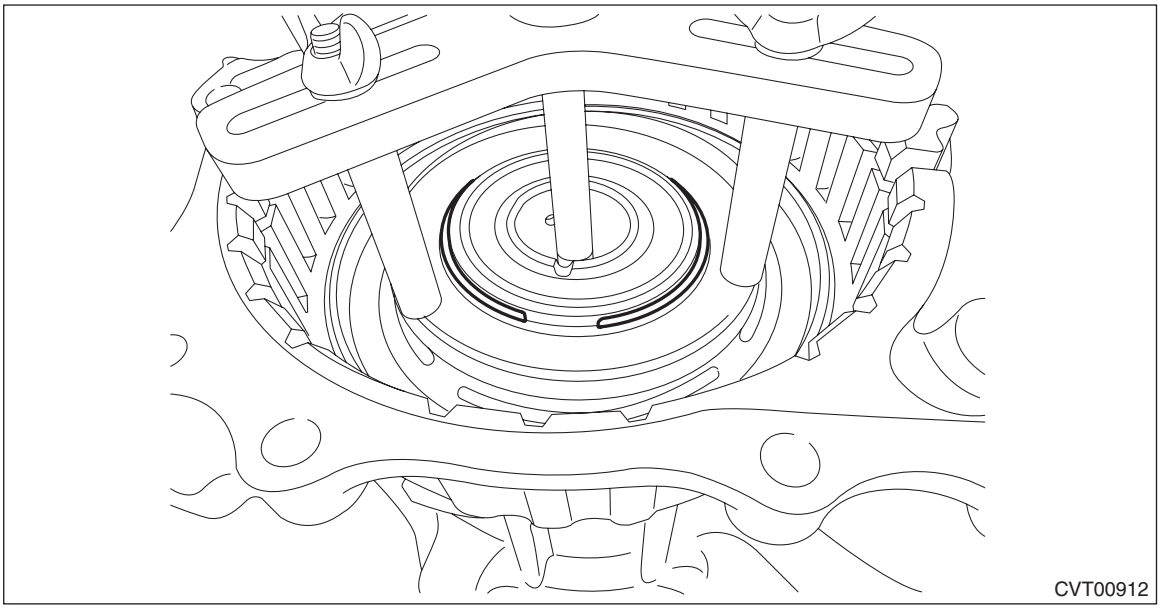
NOTE:
For removal of reverse brake assembly, refer to “Intermediate Case”. <Ref. to CVT(TR690)-185, REMOVAL, Intermediate Case.>

B: INSTALLATION

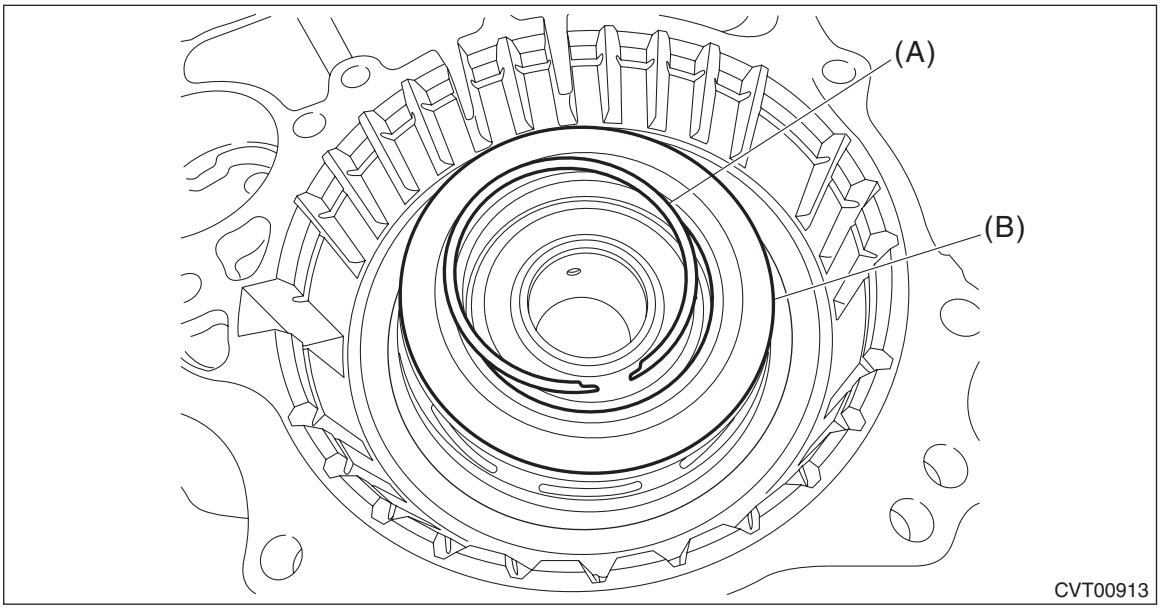


NOTE:
For installation of reverse brake assembly, refer to “Intermediate Case”. <Ref. to CVT(TR690)-186, INSTALLATION, Intermediate Case.>

C: DISASSEMBLY

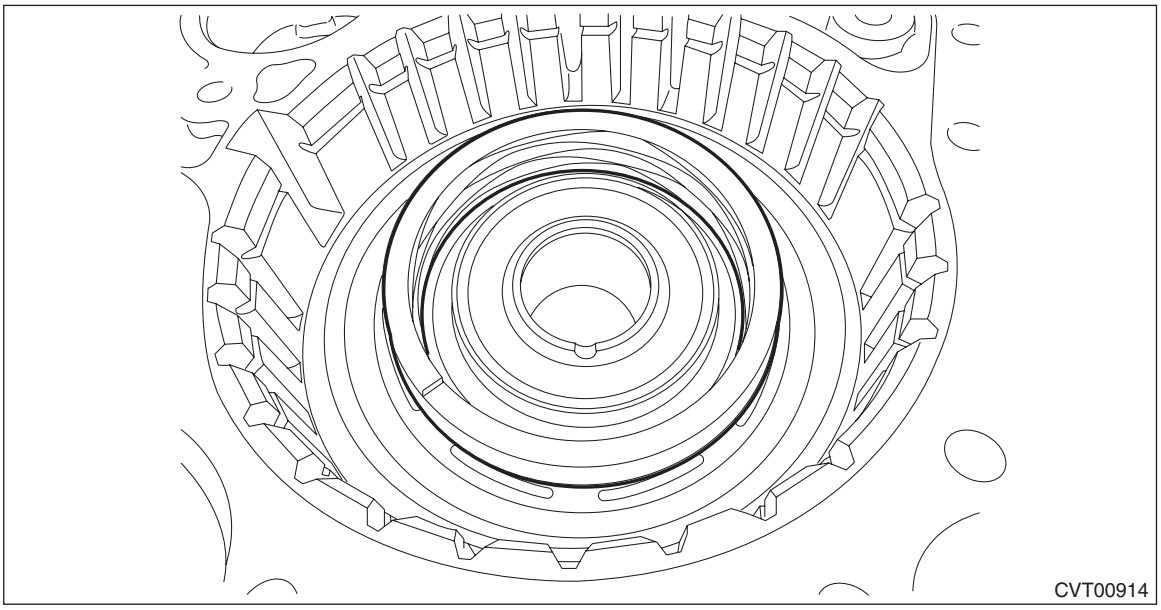


1) Remove the snap ring.
2) Remove the retaining plate, drive plate, driven plate and dish plate.

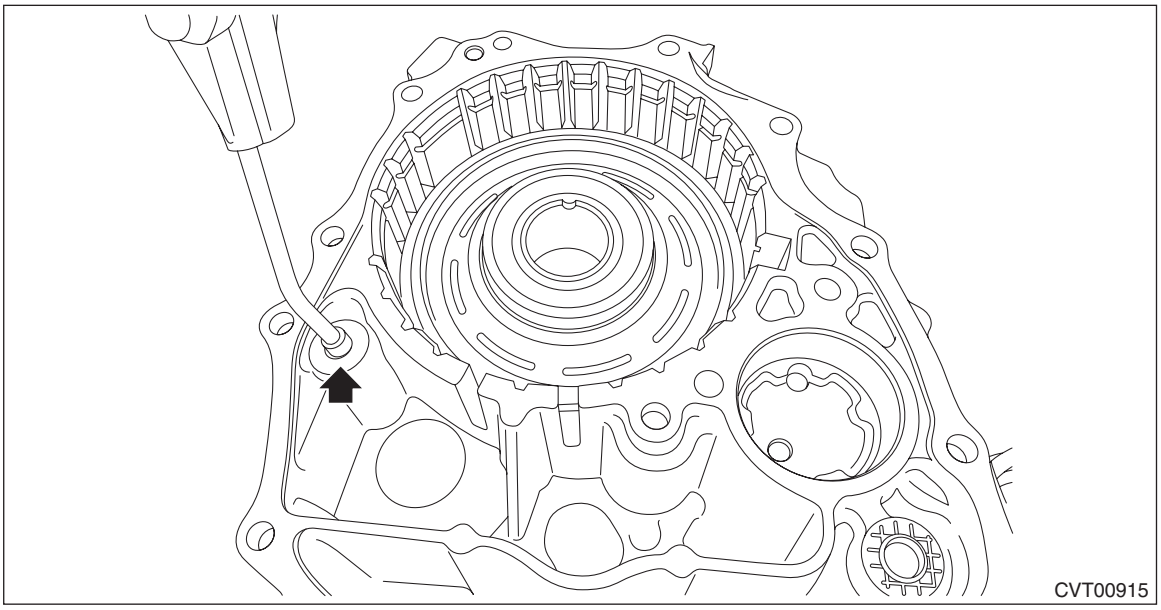


3) Set the ST1, ST2 and ST3 to intermediate case.
ST1 18762AA001 COMPRESSOR SPECIAL TOOL
ST2 18763AA000 COMPRESSOR SHAFT
ST3 18765AA000 COMPRESSOR SUPPORT

4) Compress the return spring using the set ST to remove the snap ring.

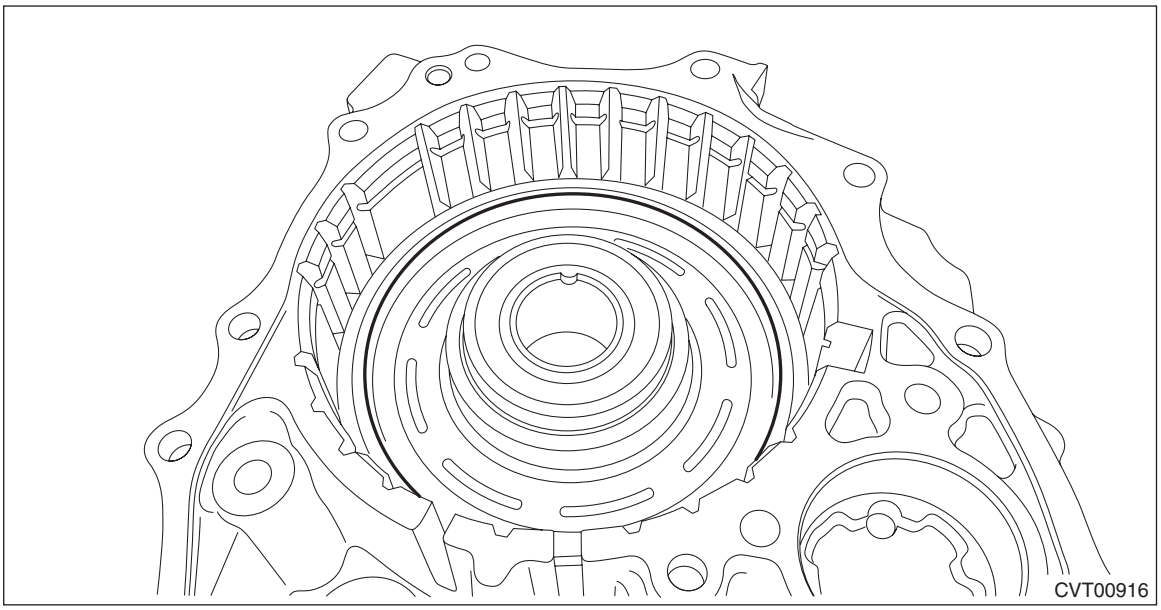


5) Using the ST, remove the snap ring and spring retainer.

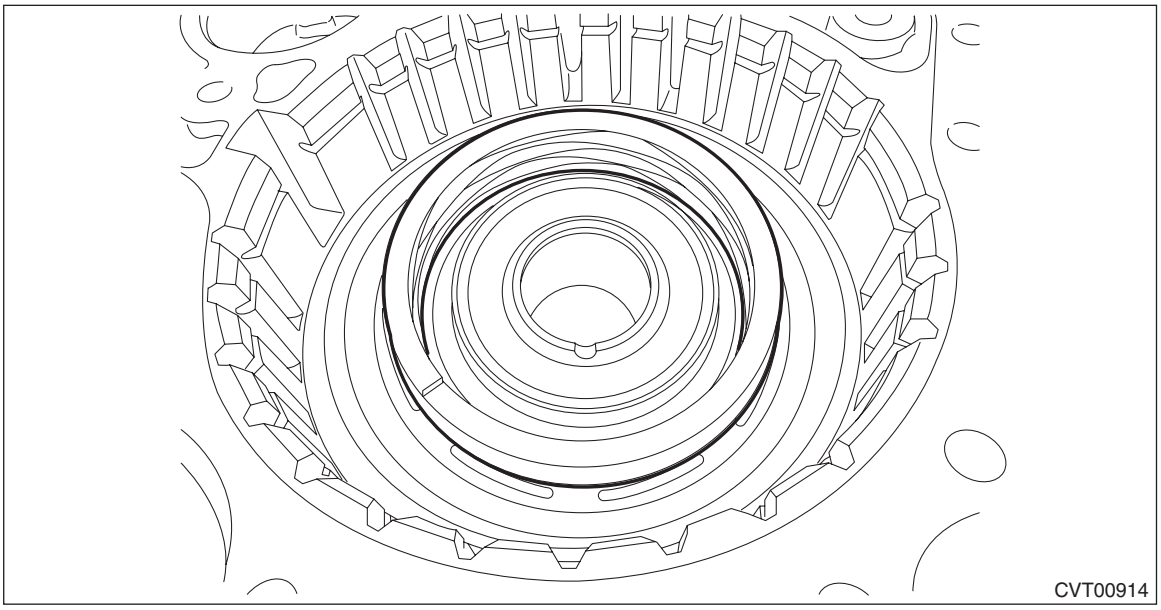


(A) Snap ring
(B) Spring retainer

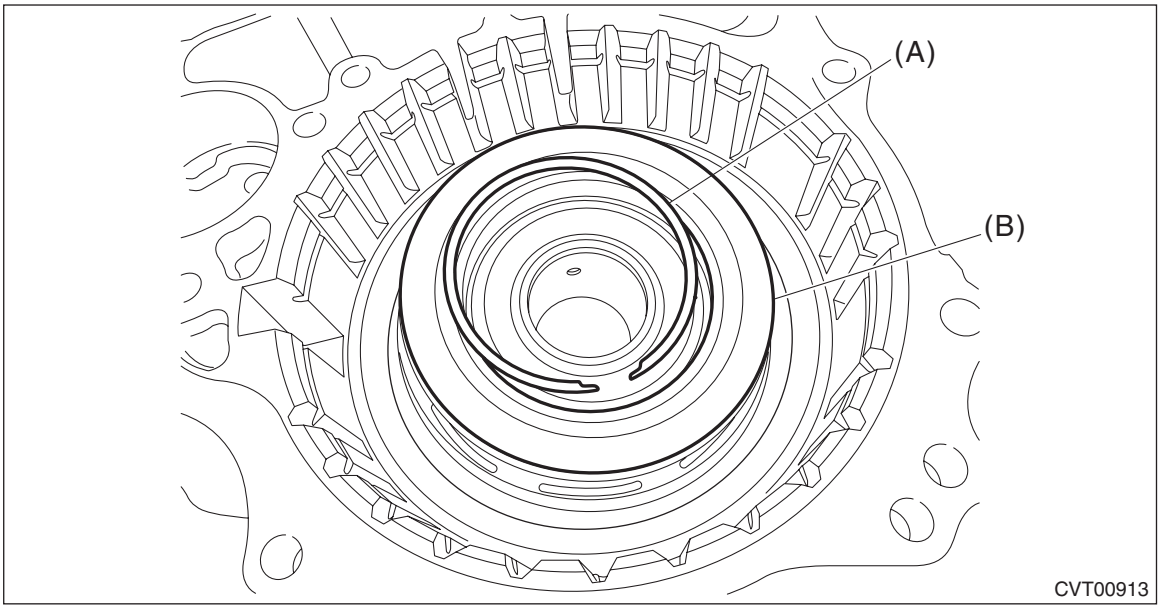
6) Remove the return spring.



7) Remove the reverse brake piston by blowing compressed air intermittently from intermediate case hole.

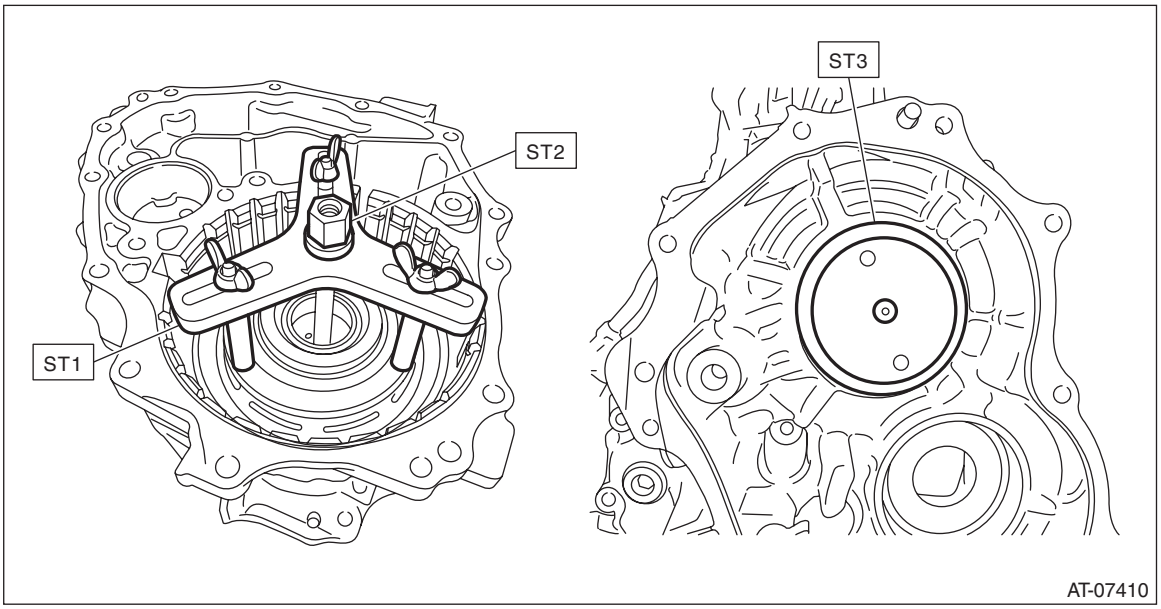


D: ASSEMBLY

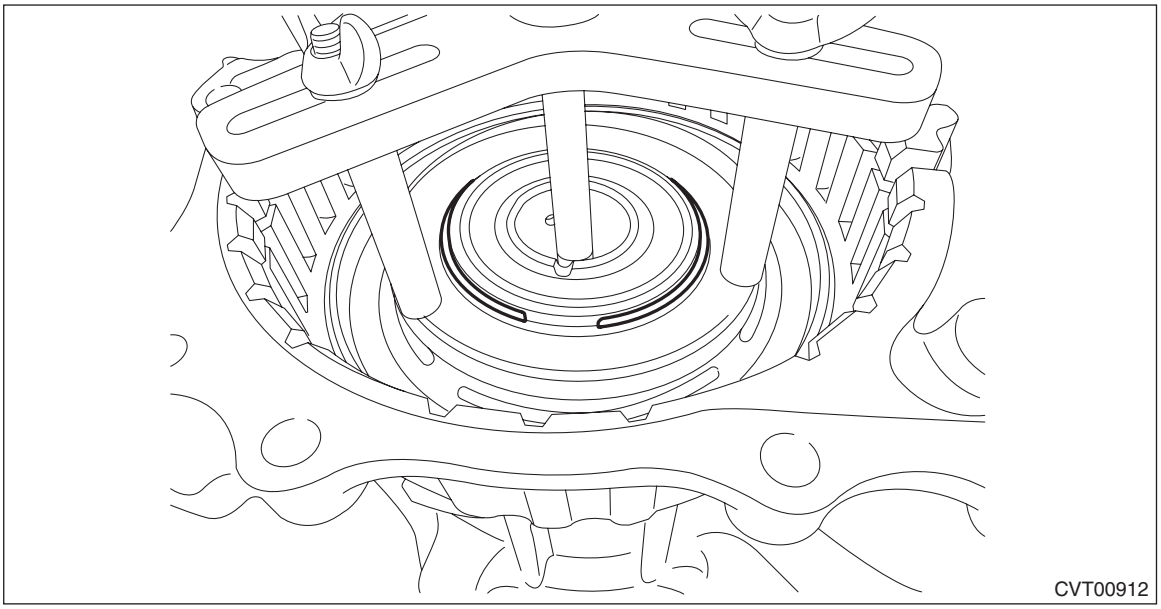


1) Apply CVTF to the seal of reverse brake piston and install it to intermediate case.

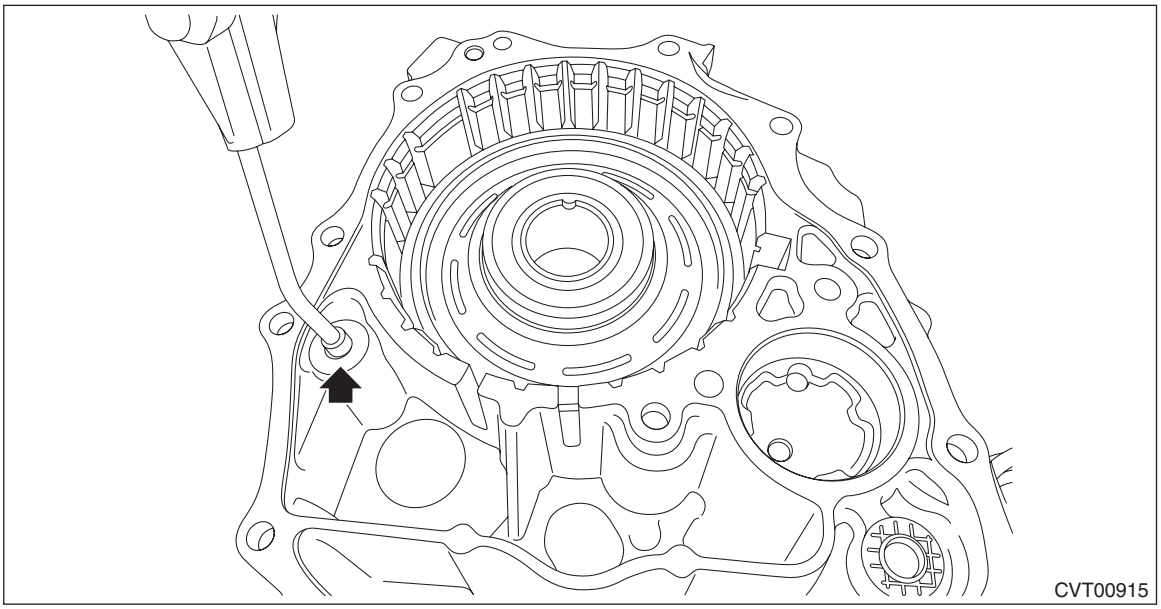
2) Install the return spring.



3) Set the spring retainer and snap ring.



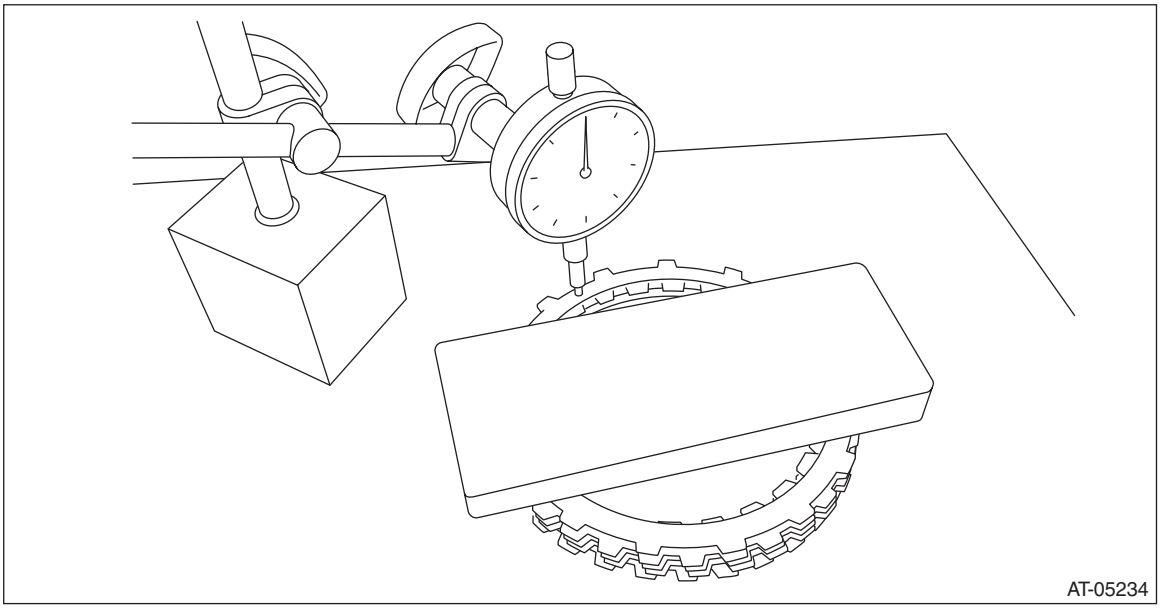
(A) Snap ring
(B) Spring retainer



4) Set the ST1, ST2 and ST3 to intermediate case.
ST1 18762AA001 COMPRESSOR SPECIAL TOOL
ST2 18763AA000 COMPRESSOR SHAFT
ST3 18765AA000 COMPRESSOR SUPPORT

5) Compress the return spring using the ST attached, and install the snap ring.

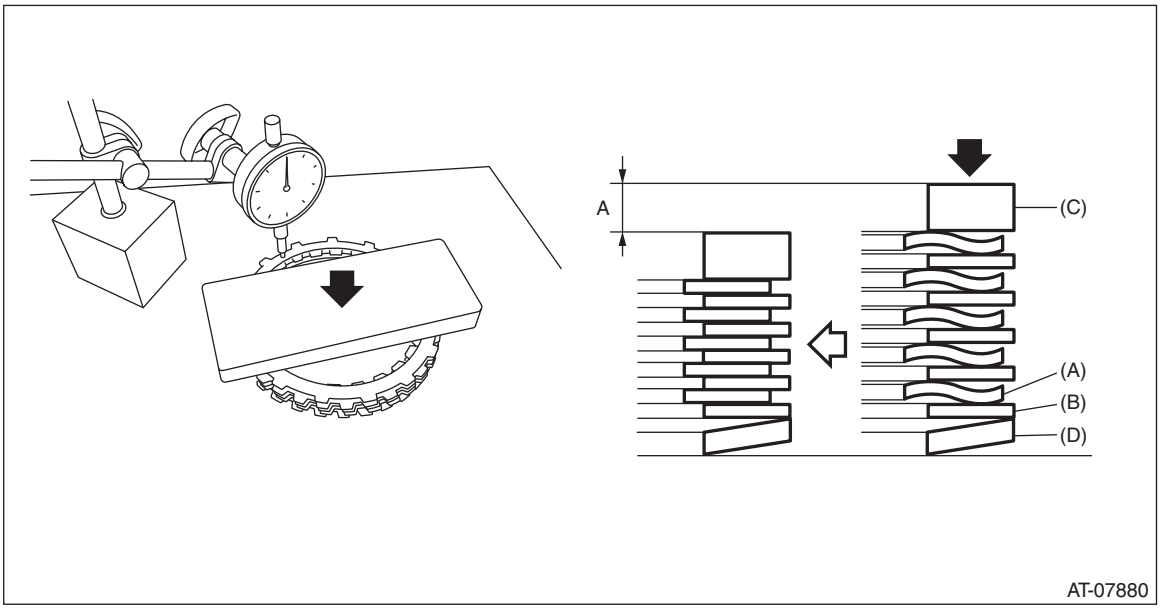
6) Check the operation of reverse brake piston by blowing compressed air intermittently from intermediate case hole.



7) Place the dish plate, driven plate, drive plate and retaining plate neatly in this order on surface table.
8) Set the dial gauge to retaining plate, and read its scale.

NOTE:
The value, which is read in the gauge at this time, is zero point.

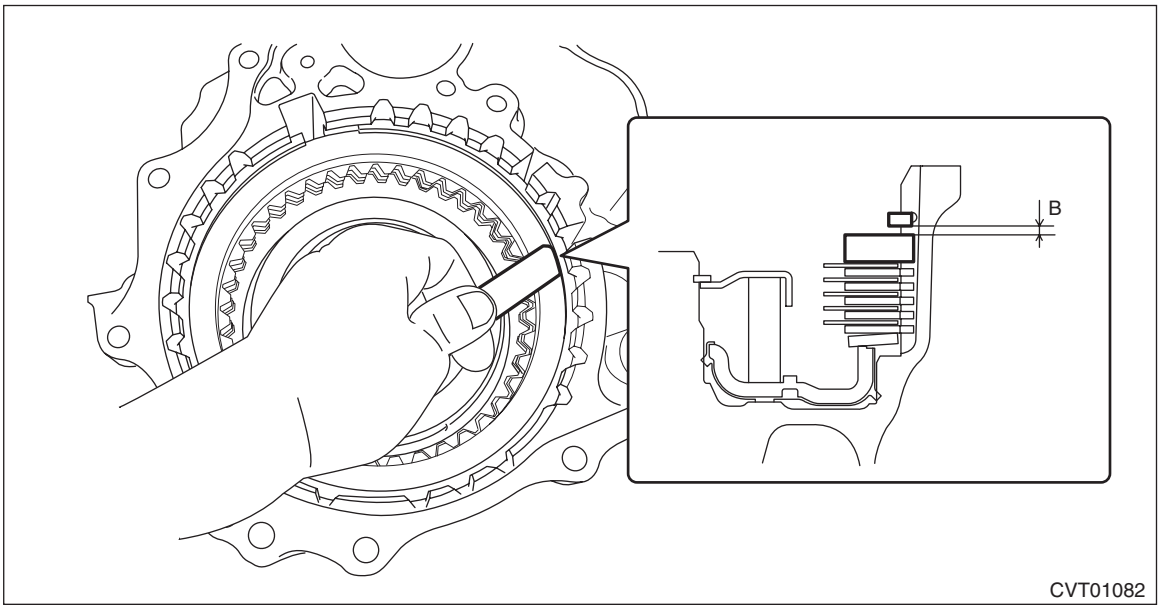
9) Scale and record the weight “Z” of a flat board which will be put on retaining plate.



NOTE:
- Use a stiff board which does not bend against load as a flat board to be put on retaining plate.
- Use a flat board weighing less than 84 N (8.6 kgf, 18.9 lb).

10) Put the flat board on retaining plate.

11) Using the following formula, read the push/pull gauge, and calculate “N”.
N = 84 N (8.6 kgf, 18.9 lb) – Z
84 N (8.6 kgf, 18.9 lb) : Load applied to clutch plate
Z: Flat board weight
12) Press the center of retaining plate by applying a force of “N” or more using push/pull gauge, and then measure and record the compression amount “A”.



NOTE:
Measure at four points with a 90° interval and calculate the average.

(A) Drive plate
(B) Driven plate
(C) Retaining plate
(D) Dish plate

13) Install the dish plate, drive plate, driven plate, retaining plate and snap ring to intermediate case.

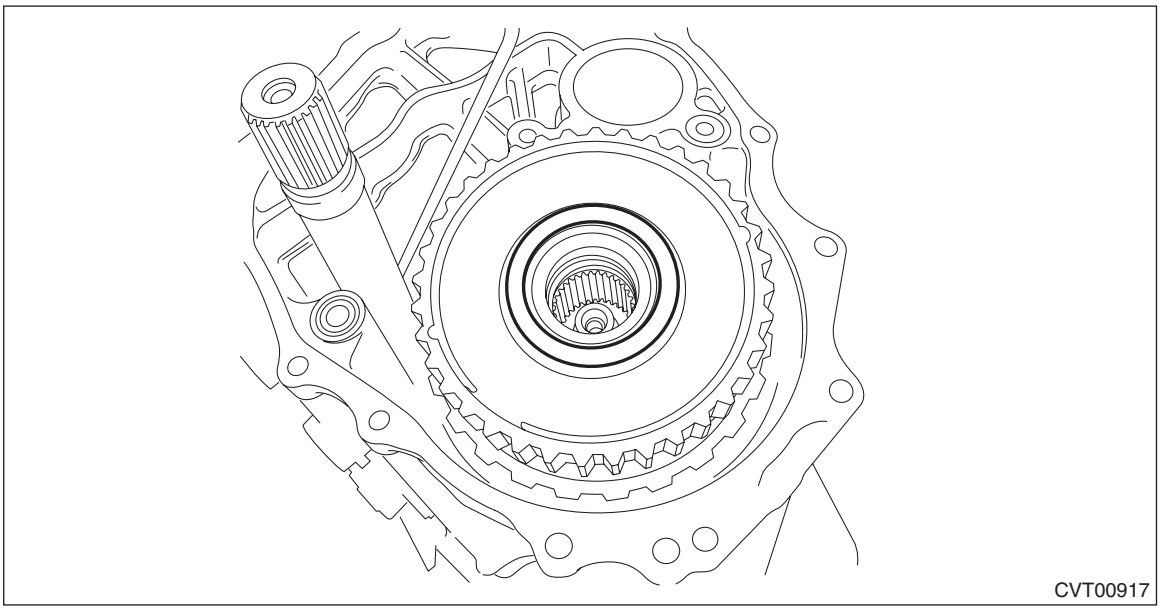
NOTE:
Install the dish plate in the correct direction.
14) Measure and record the clearance “B” between the retaining plate and snap ring.

15) Piston stroke calculation
Calculate with A and B dimensions recorded before. If it exceeds the limit, replace with a new drive plate and adjust within the initial standard value.
S mm (in) = A + B
S: Piston stroke
A: Compression amount of drive plate and dish plate
B: Clearance between retaining plate and snap ring

Initial standard:
2.88 — 3.18 mm (0.113 — 0.125 in)

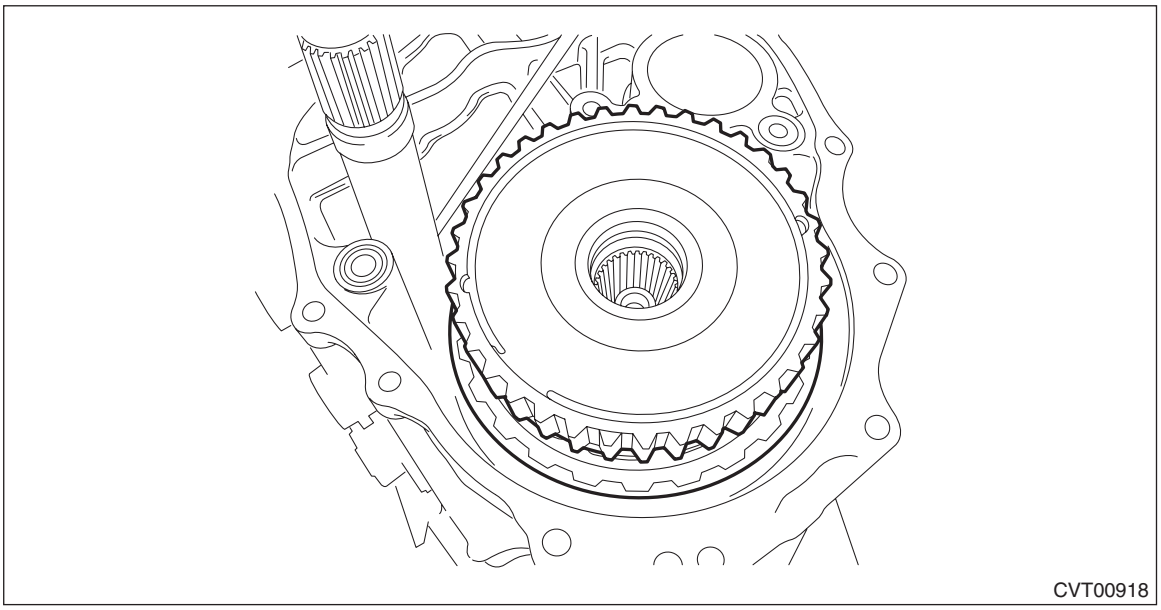
Limit thickness:
3.38 mm (0.133 in)

Retaining plate	
Part No.	Thickness mm (in)
31567AB920	5.6 (0.220)
31567AB930	5.8 (0.228)
31567AB940	6.0 (0.236)
31567AB950	6.2 (0.244)



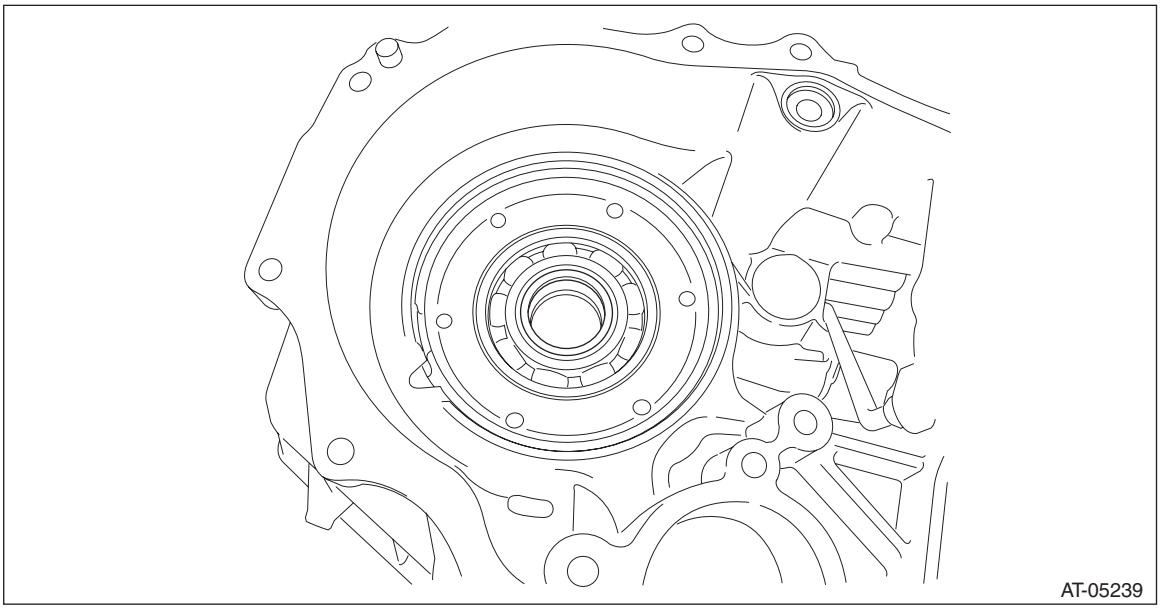
E: INSPECTION

- Inspect the drive plate facing for wear and damage.
- Check the driven plate for discoloration (burnt color).
- Check for worn snap ring, fatigue or damaged return spring or deformed spring retainer.
- Make sure the clearance between retaining plate and snap ring of reverse brake is within the limit. If it exceeds the limit, replace with a new drive plate and select and adjust the retaining plate within the initial standard value. <Ref. to CVT(TR690)-194, ASSEMBLY, Reverse Brake Assembly.>



38.Forward Clutch Assembly

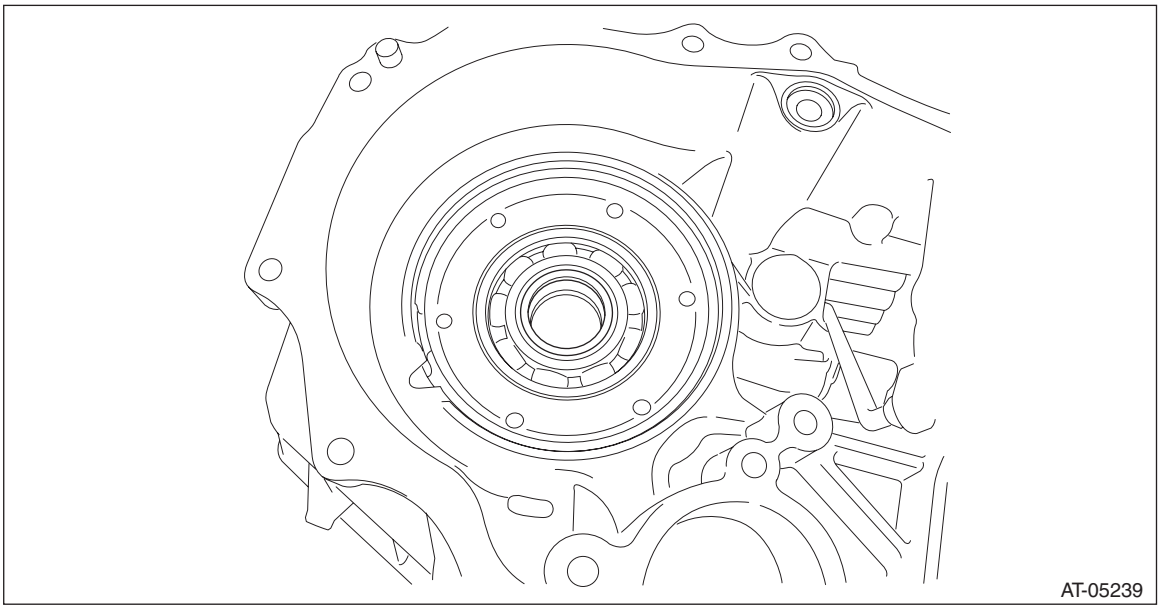
A: REMOVAL



1) Remove the transmission from the vehicle. <Ref. to CVT(TR690)-58, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case. <Ref. to CVT(TR690)-159, REMOVAL, Extension Case.>
3) Remove the rear drive shaft. <Ref. to CVT(TR690)-162, REMOVAL, Rear Drive Shaft.>
4) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-167, REMOVAL, Transfer Clutch.>
5) Remove the transfer reduction driven gear. <Ref. to CVT(TR690)-179, REMOVAL, Transfer Reduction Driven Gear.>
6) Remove the intermediate case. <Ref. to CVT(TR690)-185, REMOVAL, Intermediate Case.>
7) Remove the thrust needle bearing.

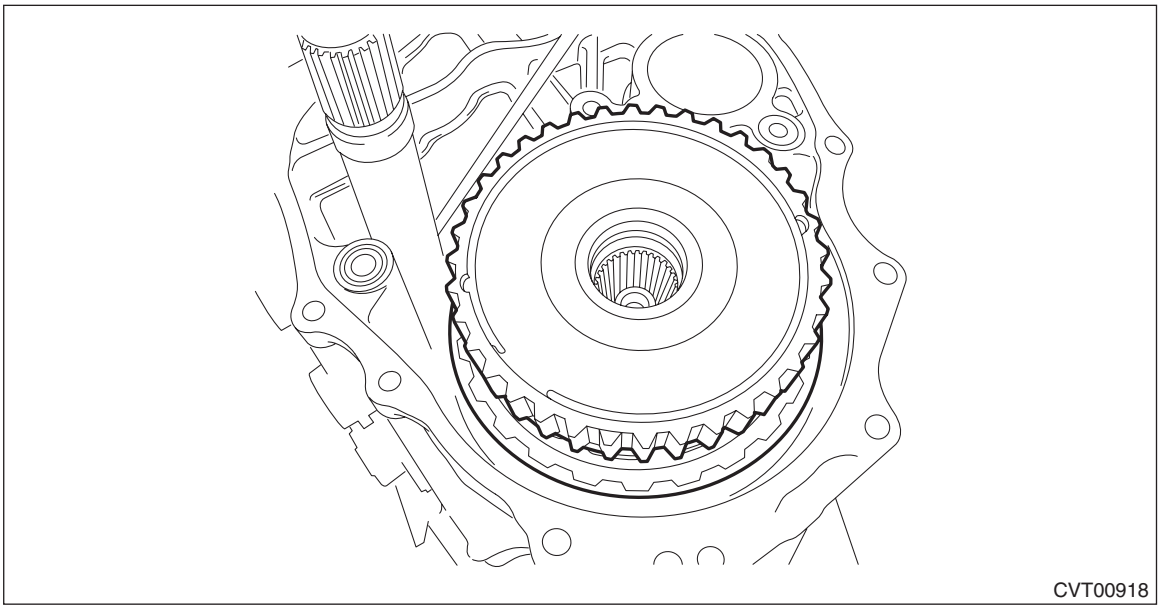
CVT00917

8) Remove the forward clutch assembly.



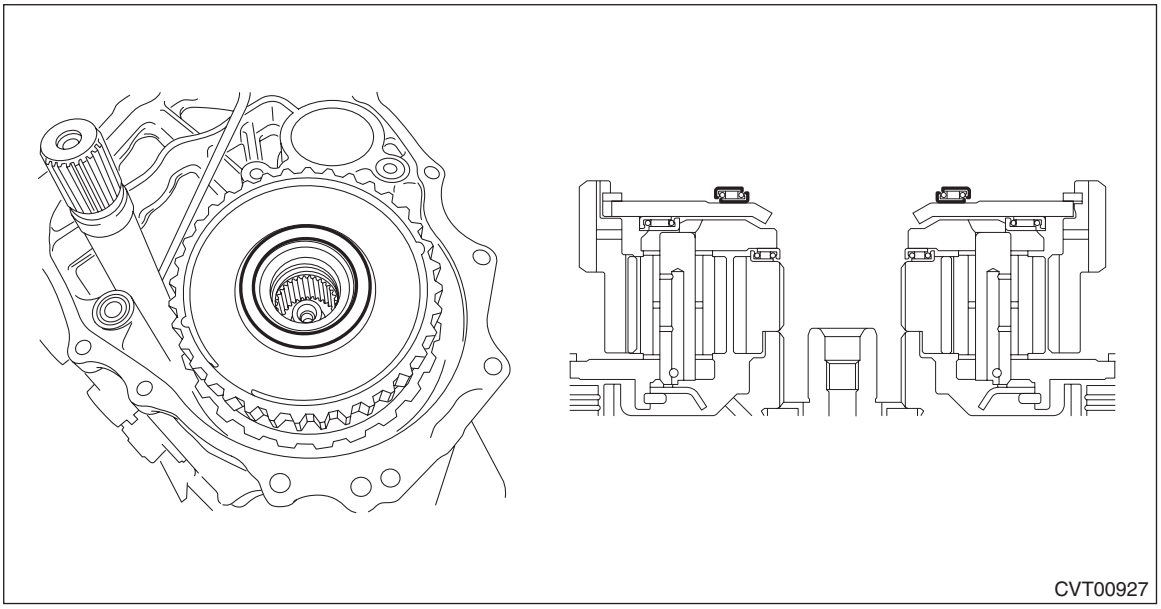
CVT00918

9) Remove the washer.



B: INSTALLATION

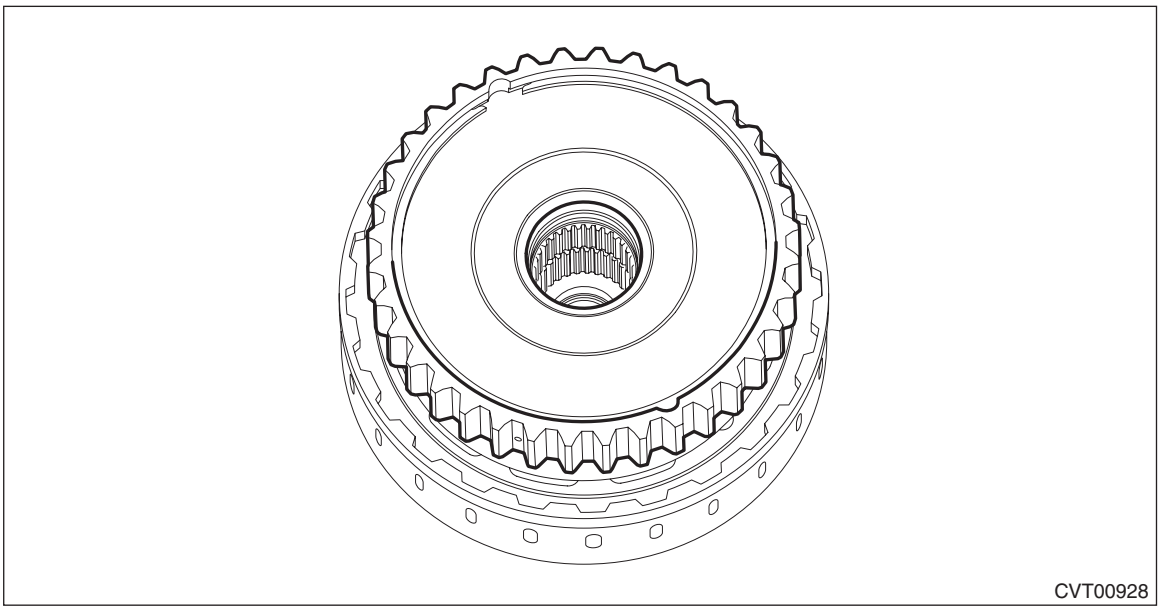
1) Select a washer. <Ref. to CVT(TR690)-227, ADJUSTMENT, Forward Clutch Assembly.>
2) Install the selected washer.



3) Install the forward clutch assembly.

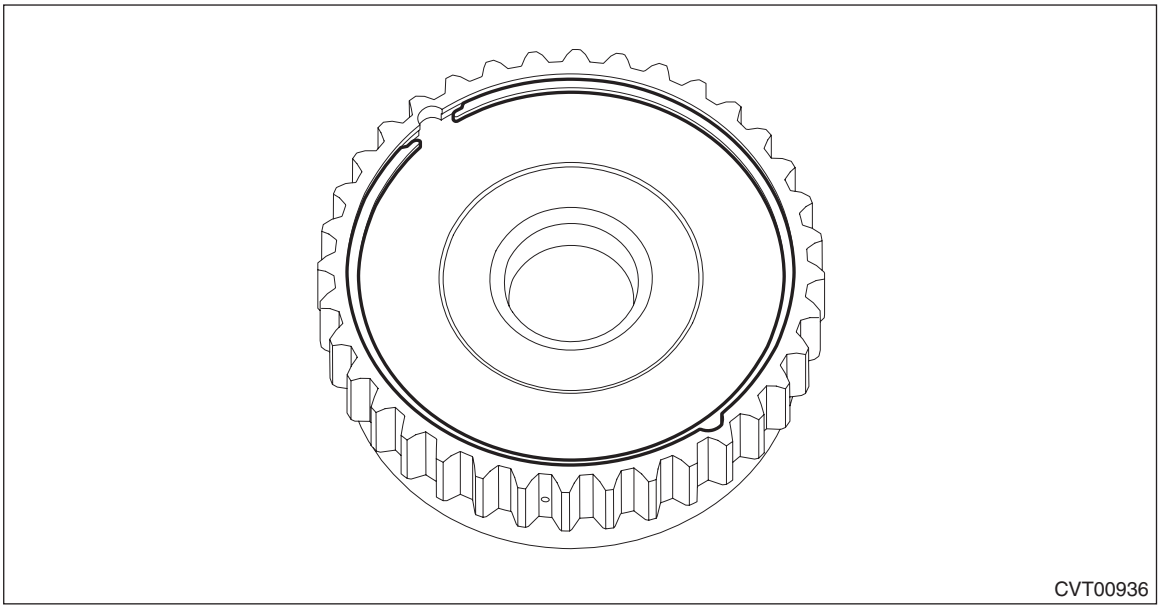
CVT00918

4) Install the thrust needle bearing.



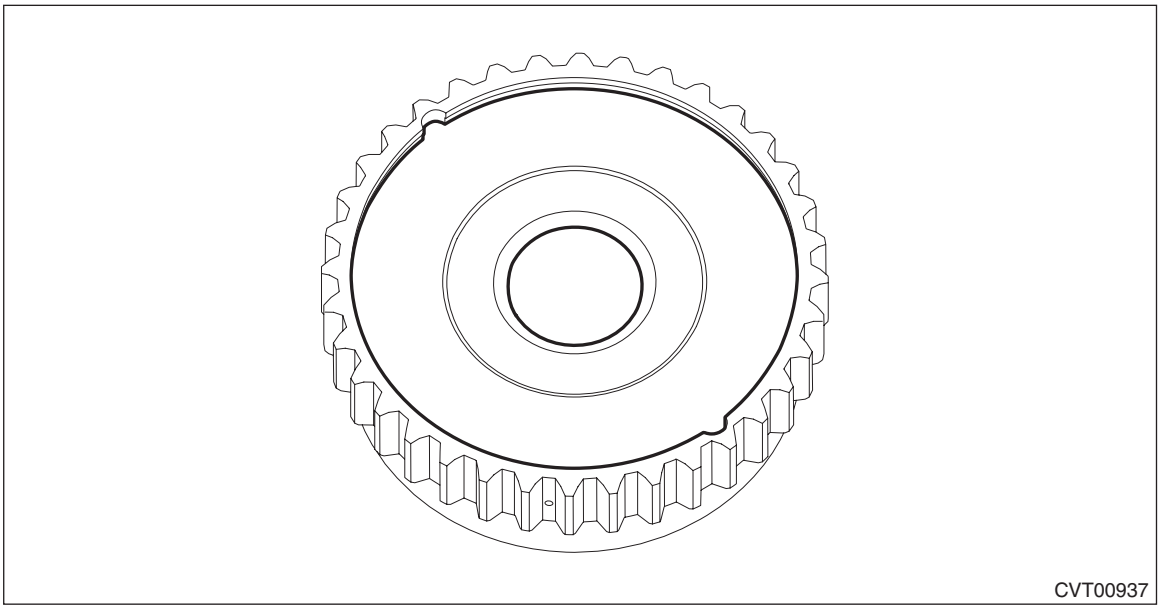
NOTE:
Install the thrust needle bearing in the correct direction.

CVT00927



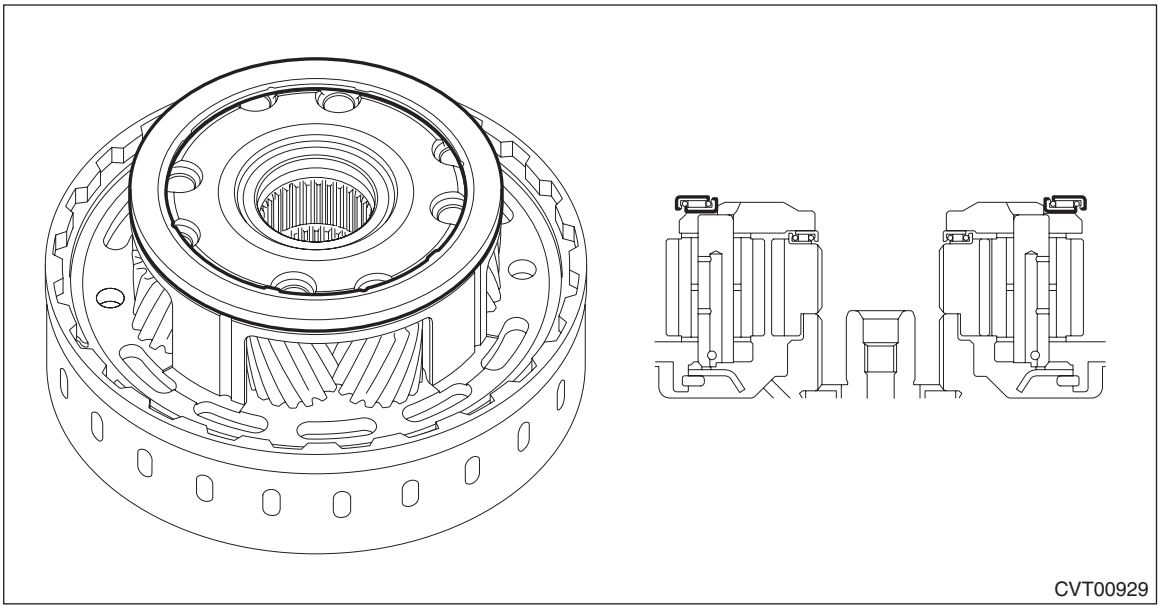
5) Install the intermediate case. <Ref. to CVT(TR690)-186, INSTALLATION, Intermediate Case.>
6) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-179, INSTALLATION, Transfer Reduction Driven Gear.>
7) Install the transfer clutch assembly. <Ref. to CVT(TR690)-168, INSTALLATION, Transfer Clutch.>
8) Install the rear drive shaft. <Ref. to CVT(TR690)-162, INSTALLATION, Rear Drive Shaft.>
9) Install the extension case. <Ref. to CVT(TR690)-160, INSTALLATION, Extension Case.>
10) Install the transmission to vehicle. <Ref. to CVT(TR690)-75, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY



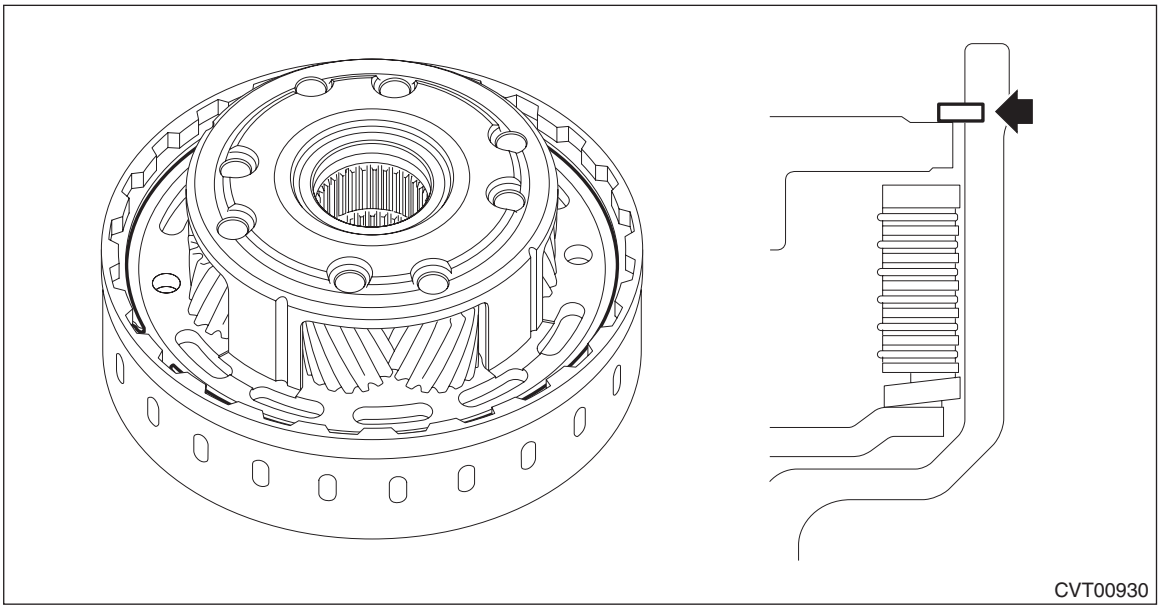
1) Remove the internal gear assembly.

CVT00928



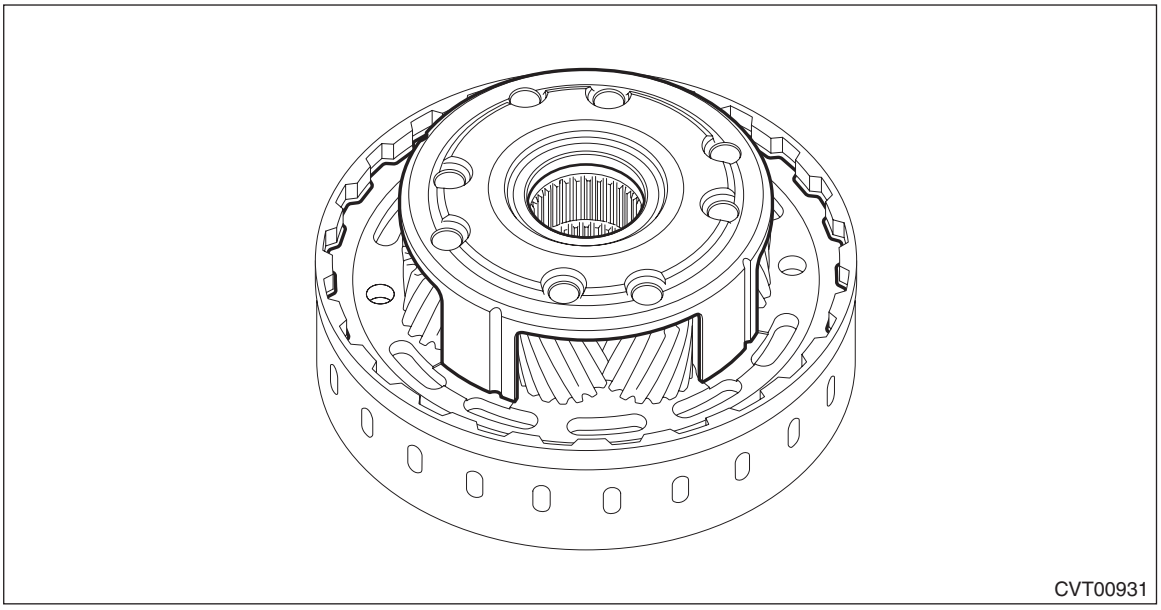
2) Remove the snap ring from the internal gear assembly.

CVT00936



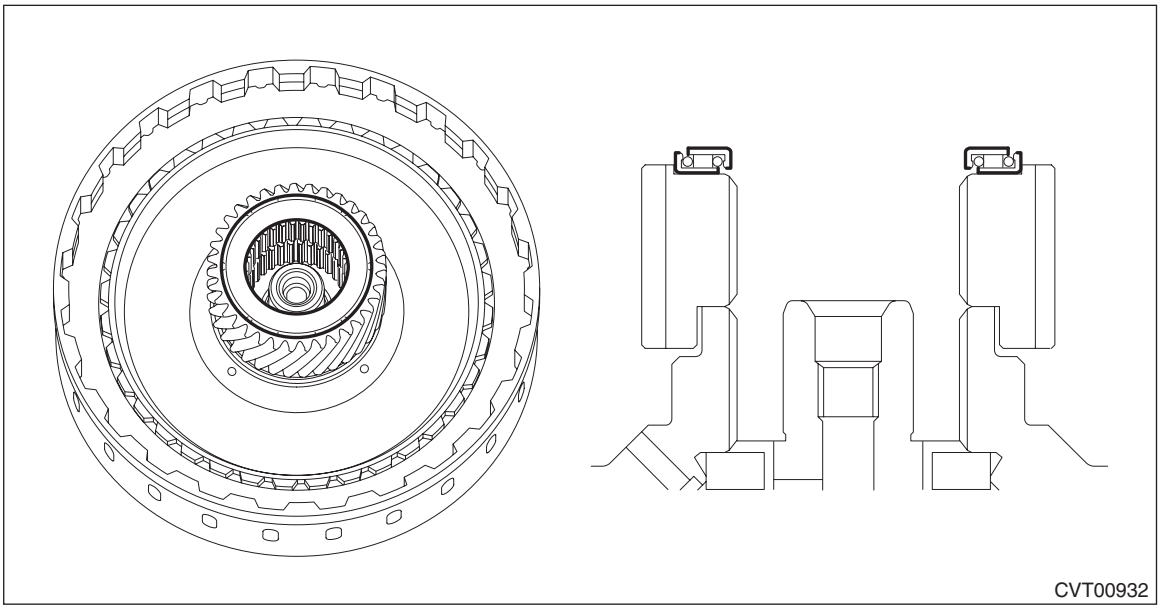
3) Remove the thrust gear plate.

CVT00937

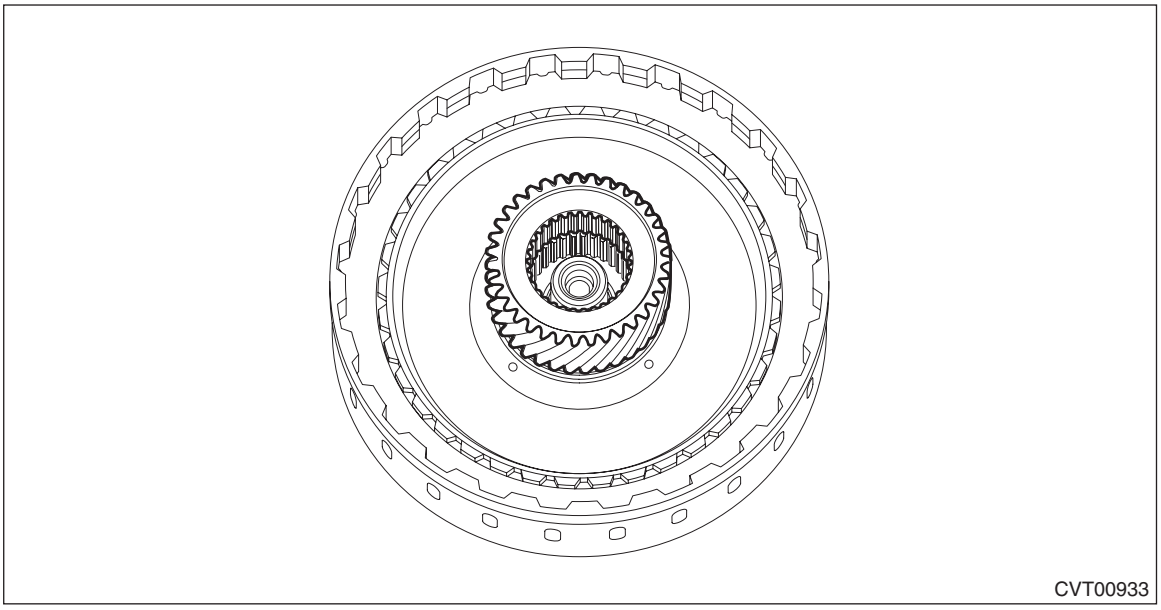


4) Remove the thrust needle bearing.

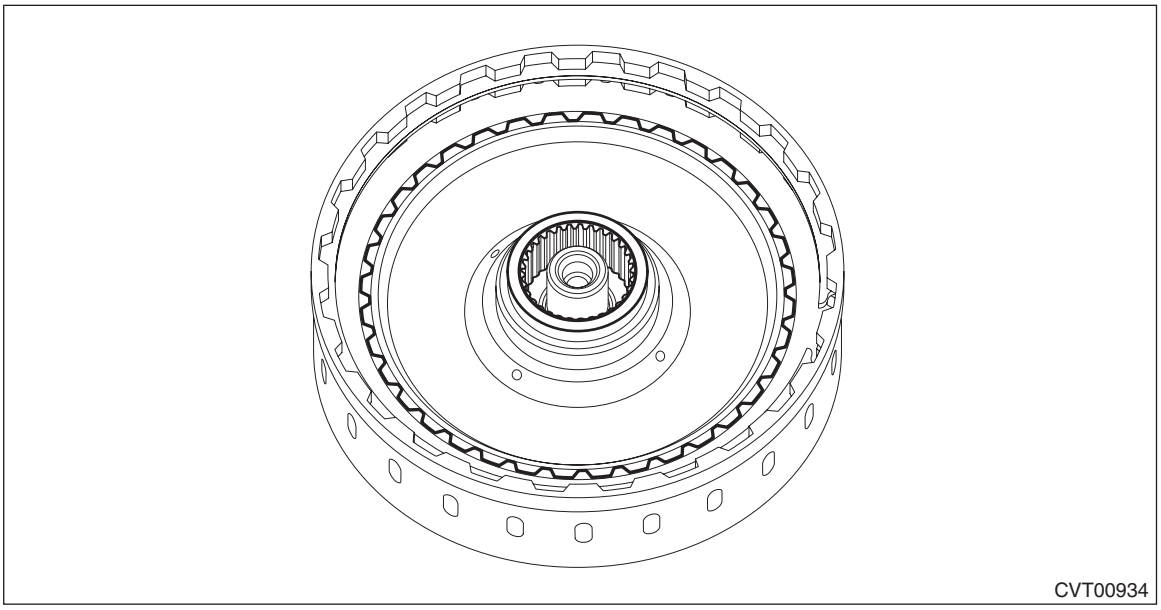
CVT00929



5) Remove the snap ring.

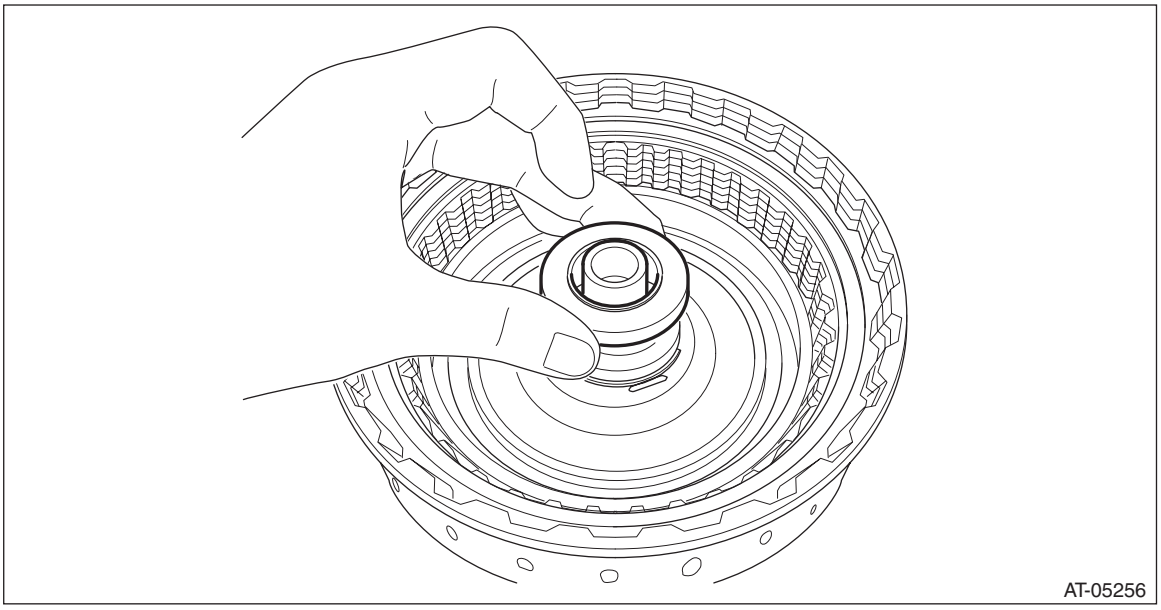


6) Remove the planetary carrier assembly.



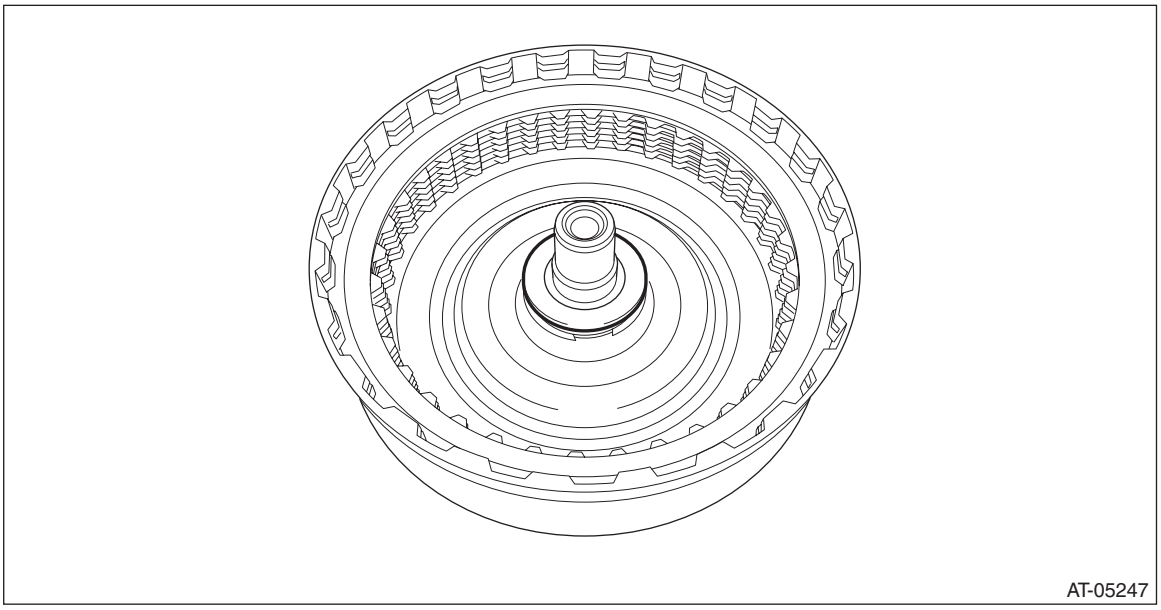
7) Remove the thrust needle bearing.

CVT00932

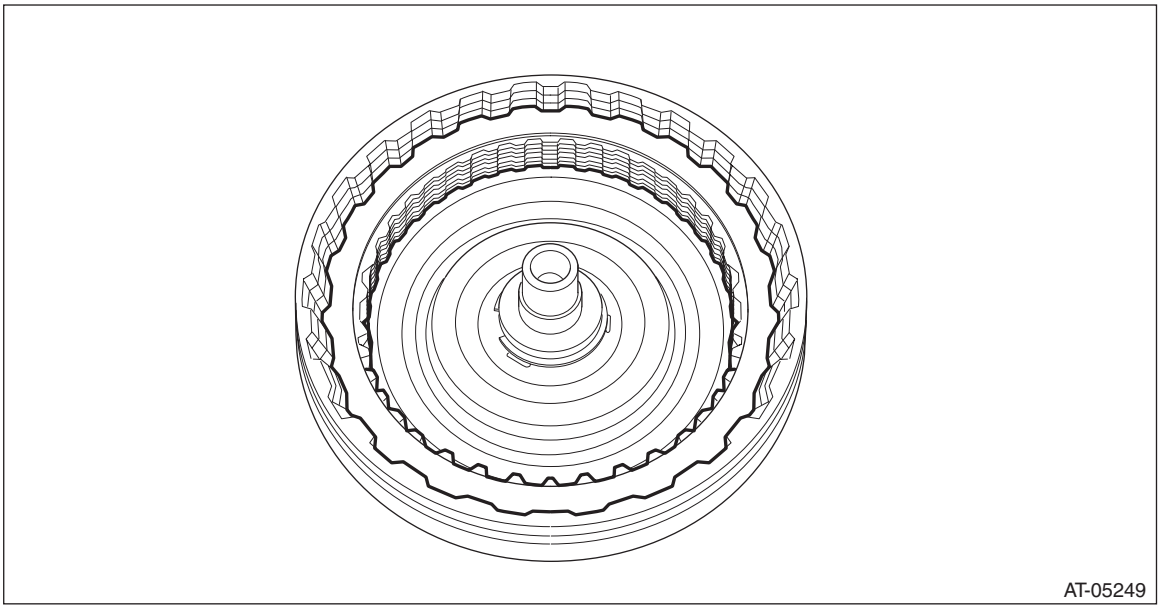


8) Remove the sun gear.

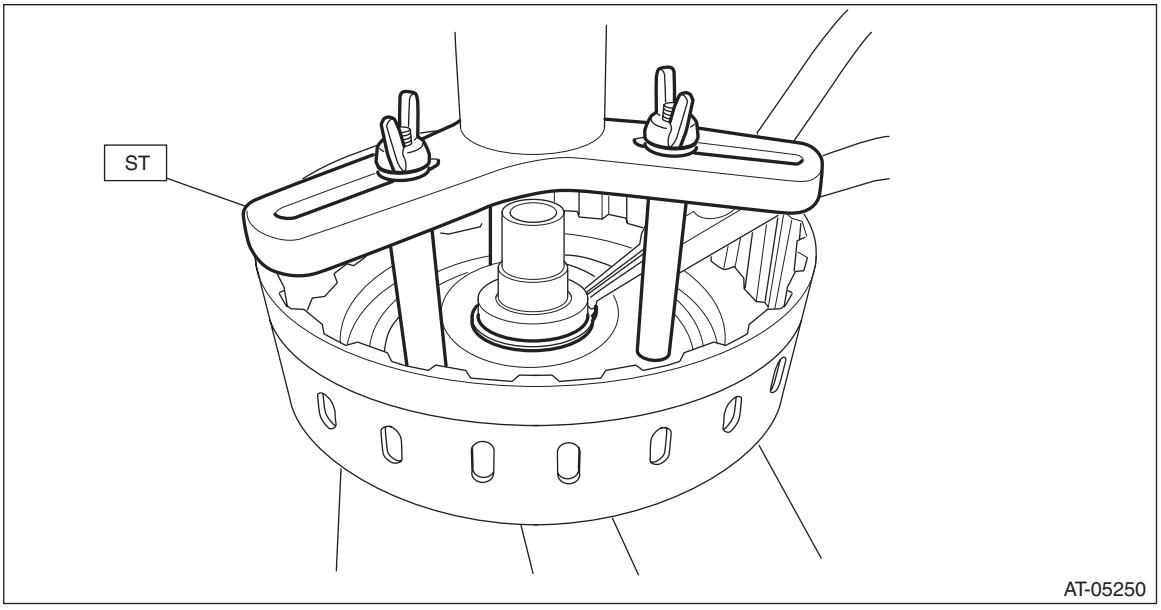
CVT00933



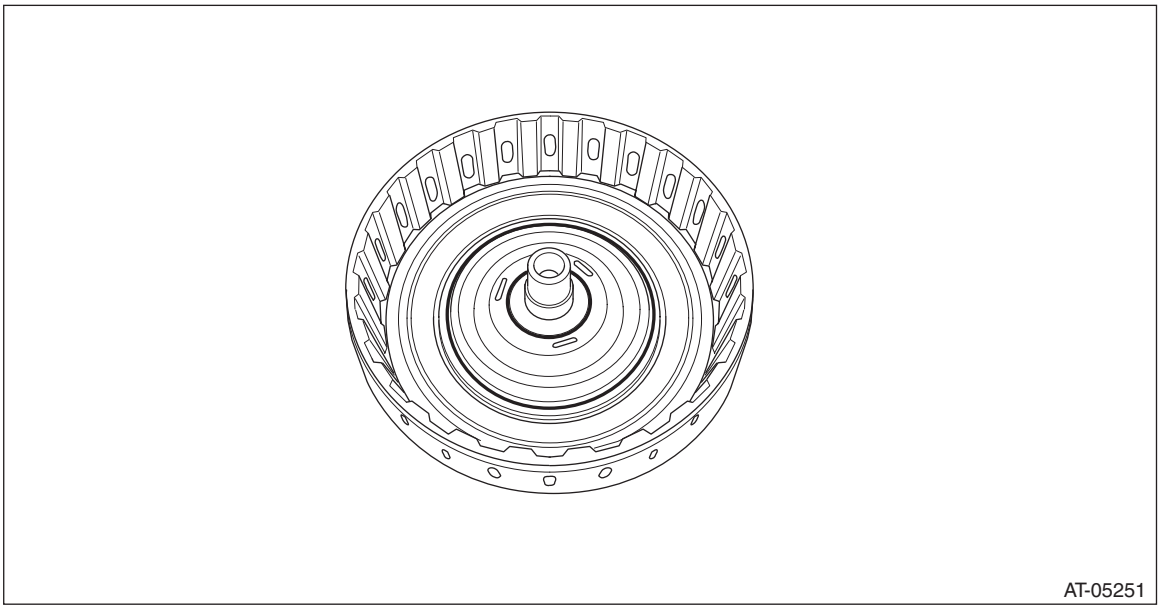
9) Remove the forward clutch hub.



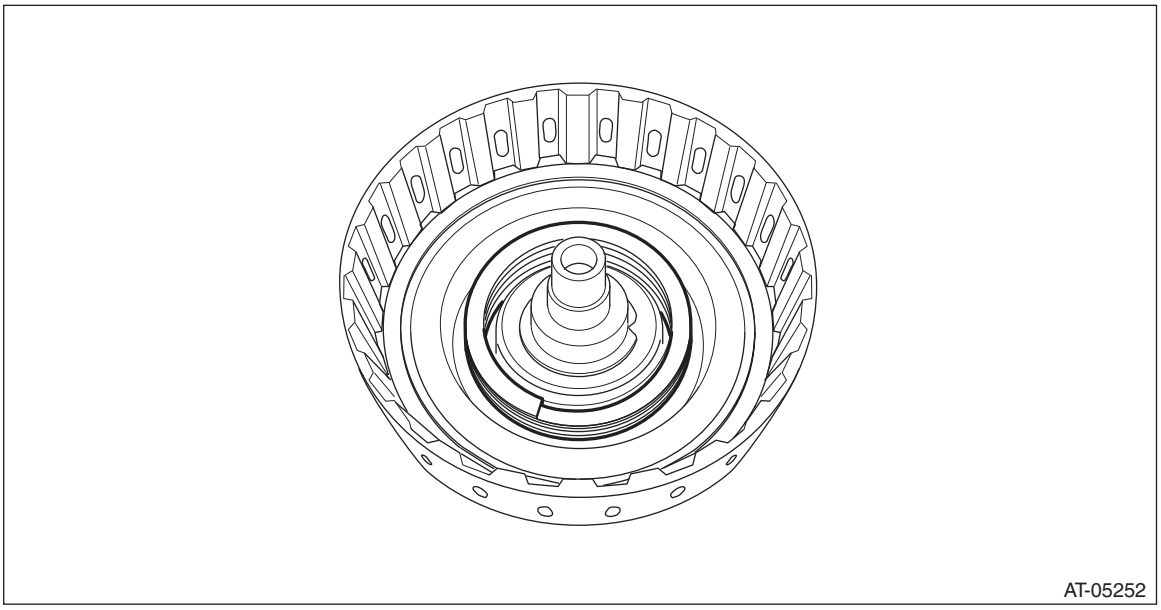
10) Remove the washer.



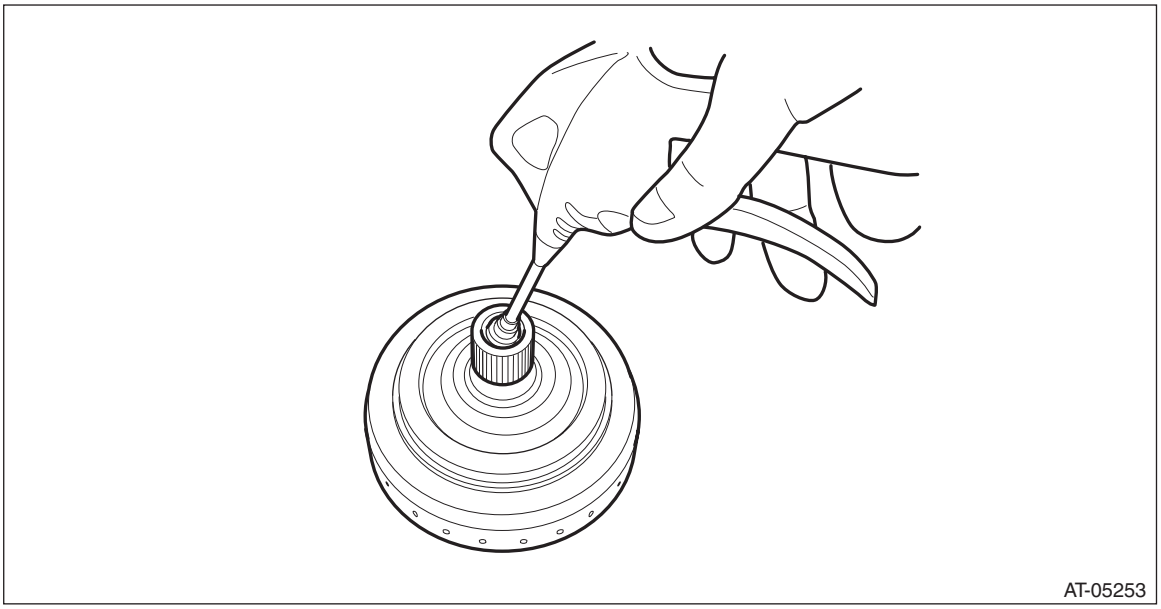
11) Remove the thrust needle bearing.



12) Remove the retaining plate, drive plate, driven plate and dish plate.

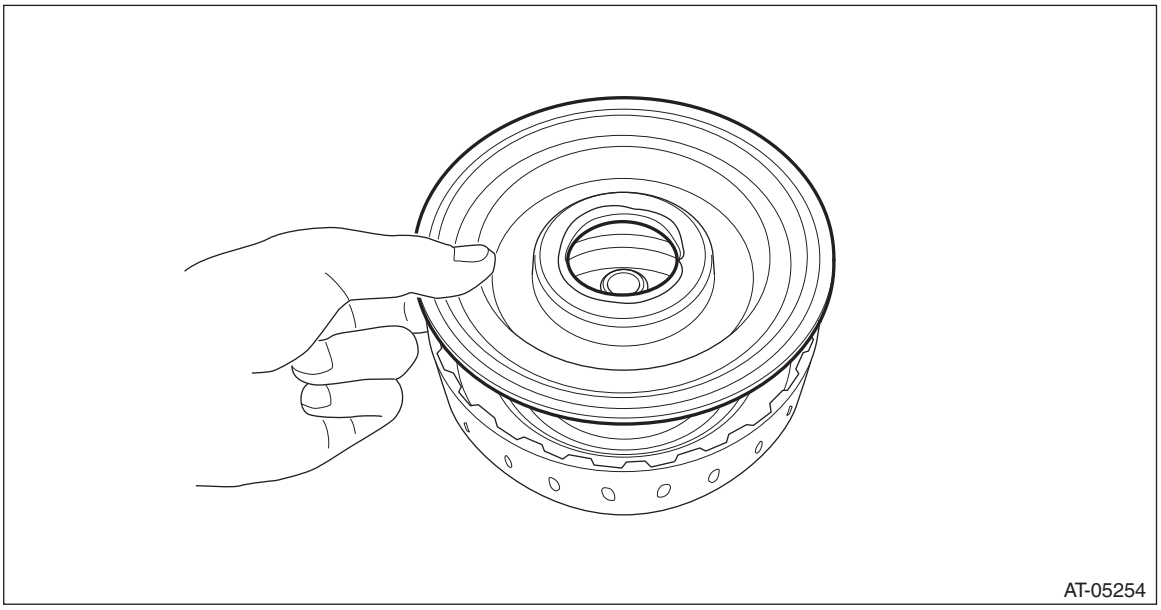


13) Using the ST, remove the snap ring.
ST 18762AA001 COMPRESSOR SPECIAL TOOL

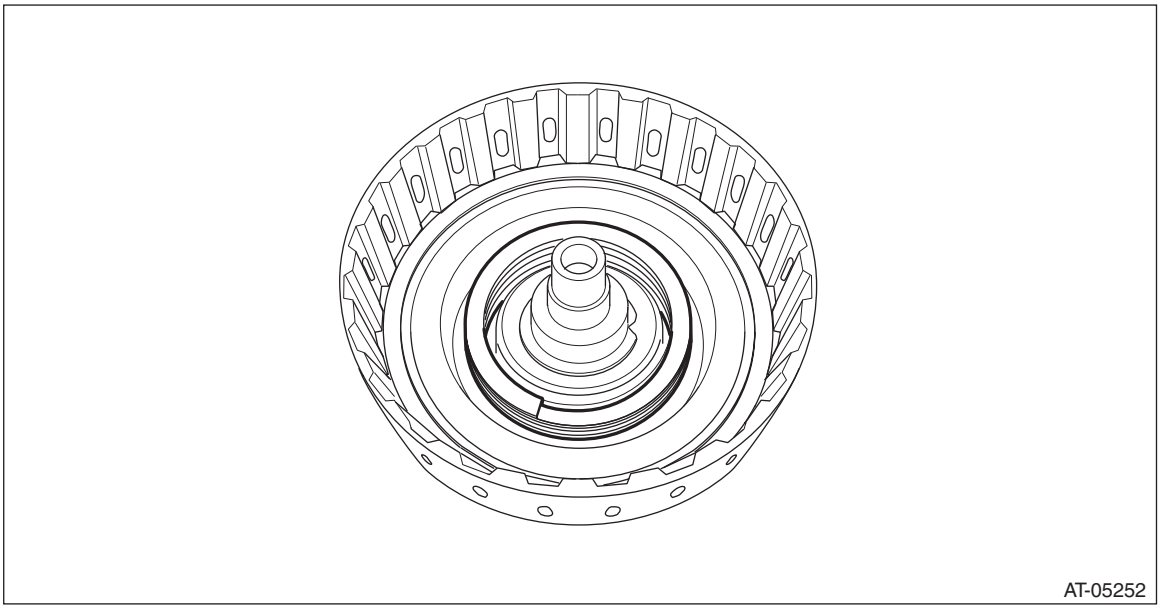


14) Remove the forward clutch piston seal.

15) Remove the return spring.



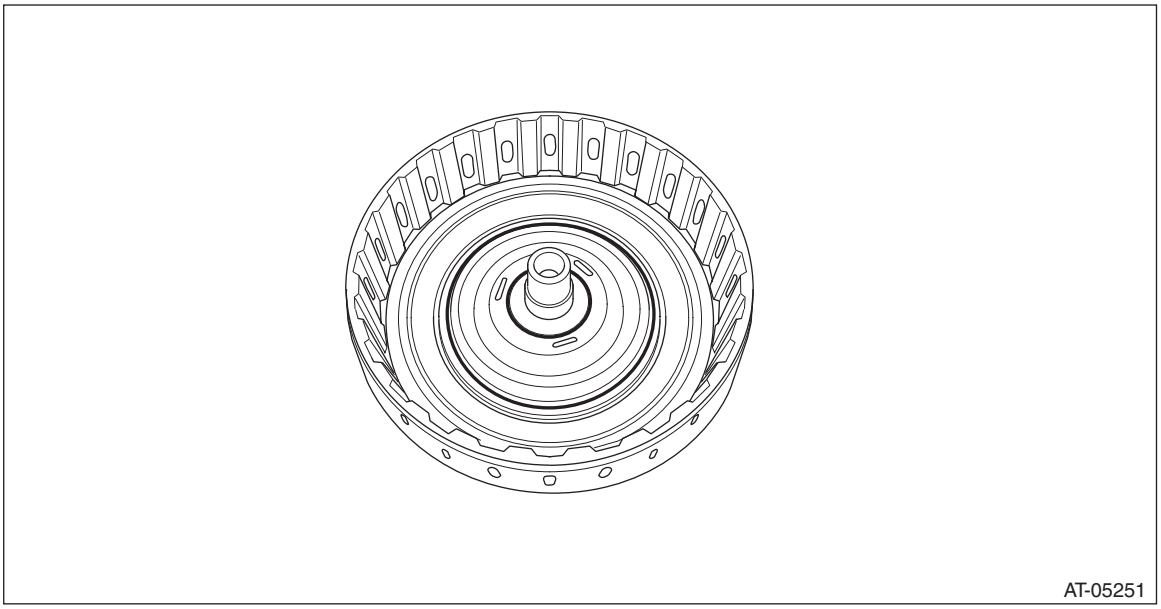
16) Remove the forward clutch piston by blowing compressed air intermittently from the end of forward clutch drum.



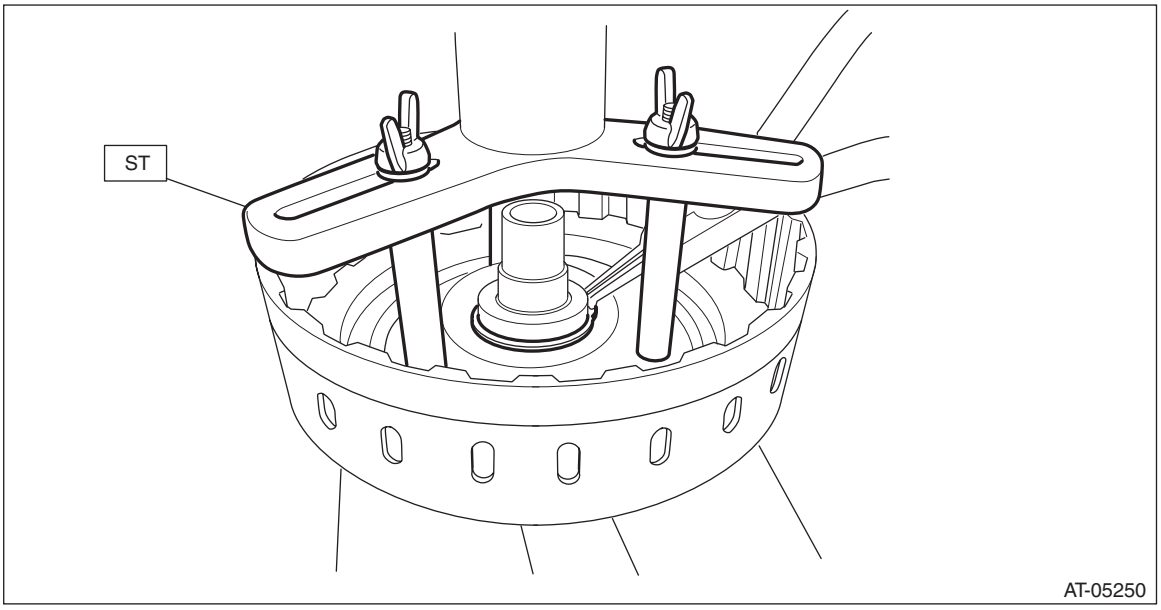
D: ASSEMBLY

1) Install the forward clutch piston to forward clutch drum.

NOTE:
- Apply CVTF to the seal of forward clutch piston.
- Insert it all the way to the end.

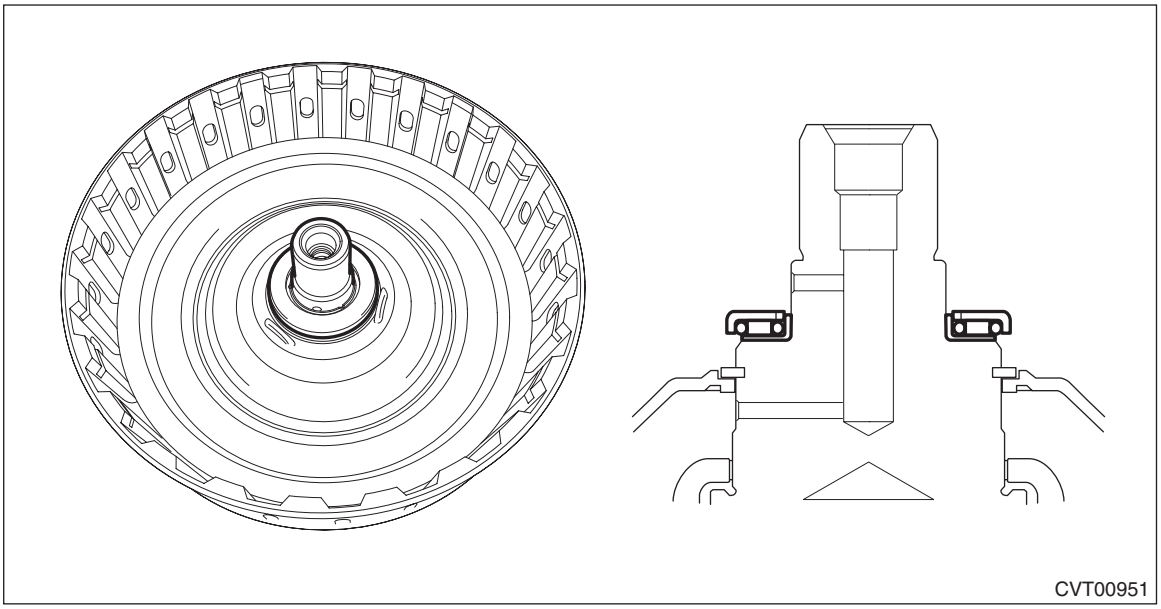


2) Install the return spring.

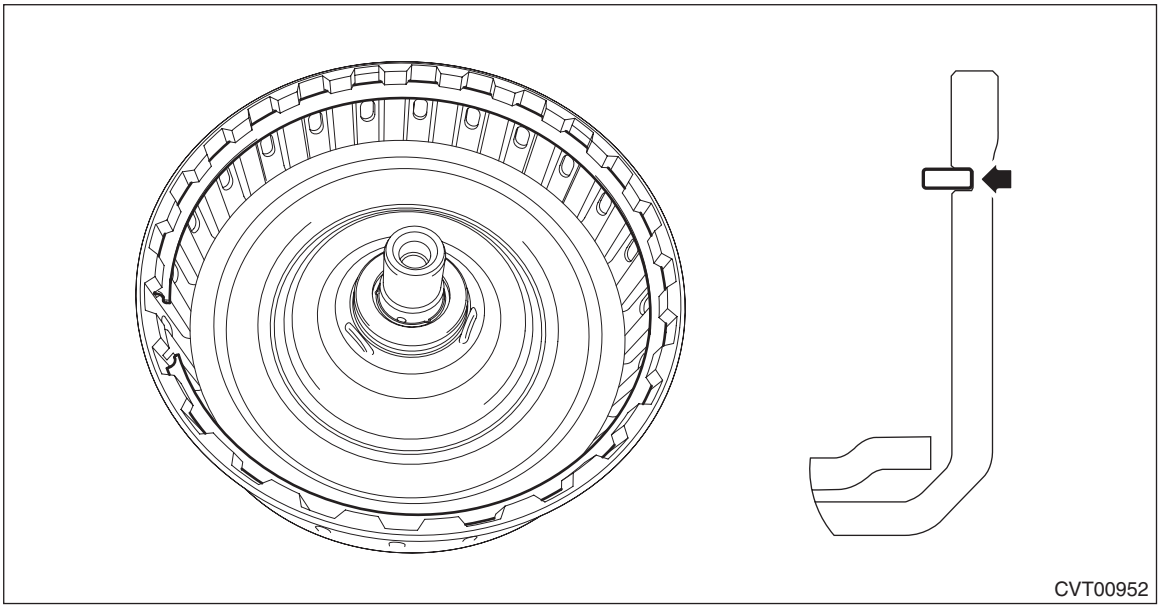


3) Install the forward clutch piston seal.

NOTE:
Apply CVTF to the sealing area of forward clutch piston seal.



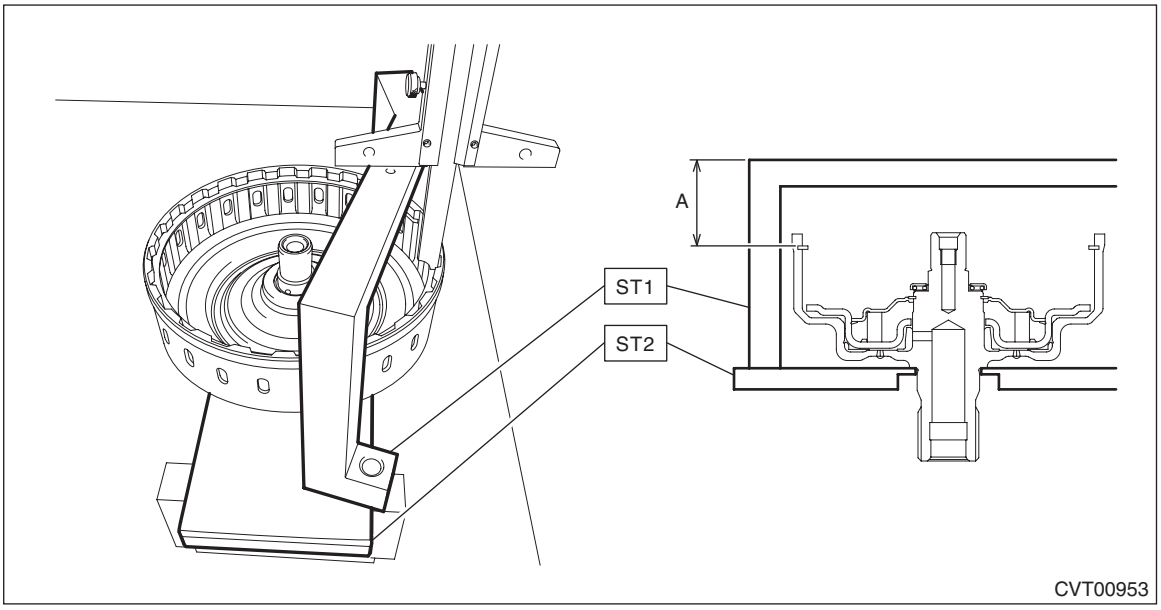
4) Compress the return spring using the ST to install the snap ring.
ST 18762AA001 COMPRESSOR SPECIAL TOOL



5) Install the thrust needle bearing.

NOTE:
Install the thrust needle bearing in the correct direction.

CVT00951

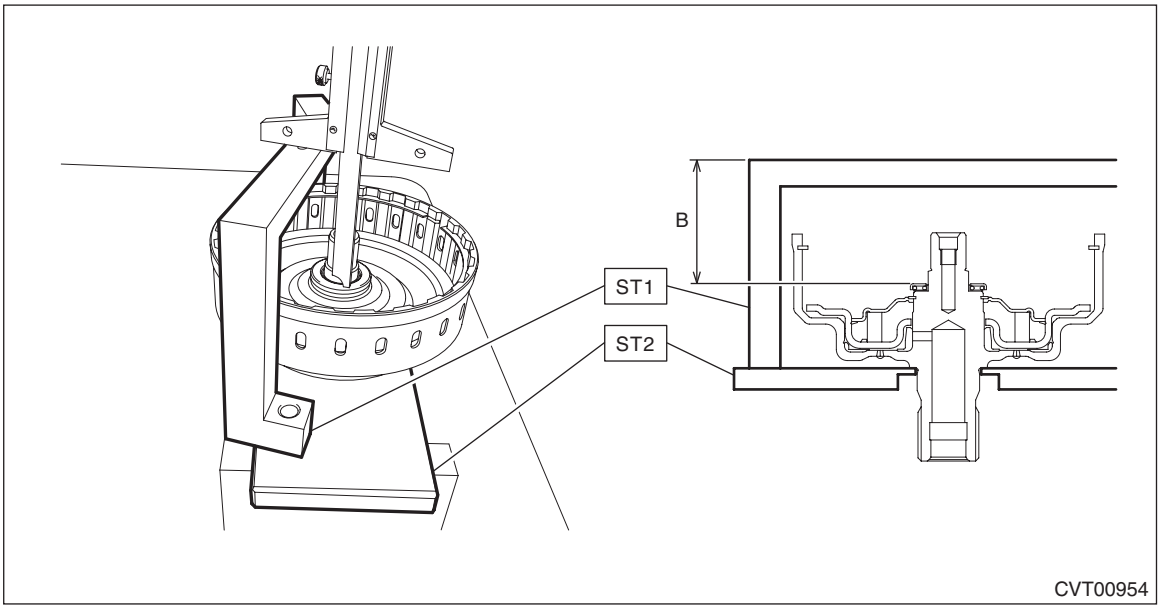


6) Install the snap ring.

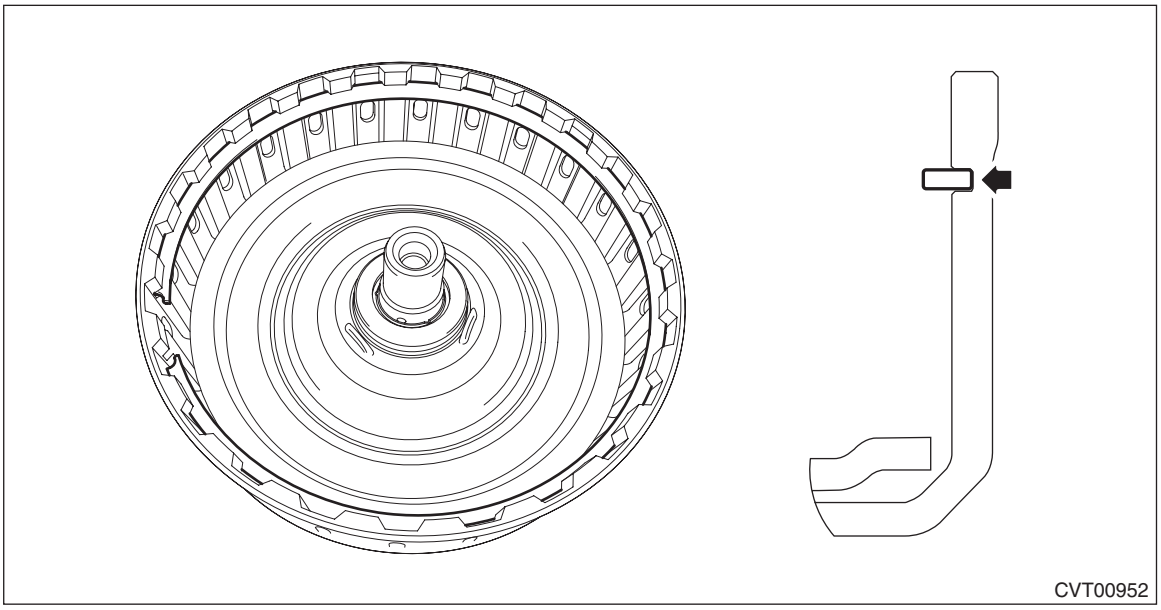
CVT00952

7) Measure the height “A” from the ST end surface to the snap ring of forward clutch drum using the ST on the surface plate.

NOTE:
- Measure while lifting the snap ring.
- Place the measurement tool at the dent on ST upper side to measure.



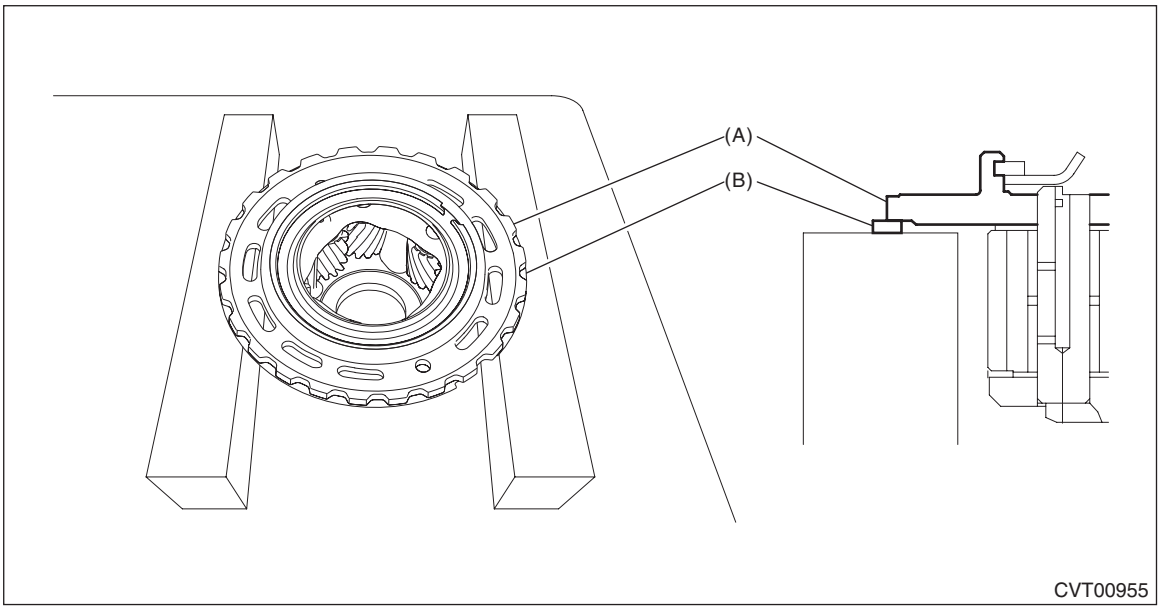
ST1 499737100 PULLER SET
ST2 499575600 GAUGE



8) Measure height “B” from the ST end surface to the thrust needle bearing using the ST.

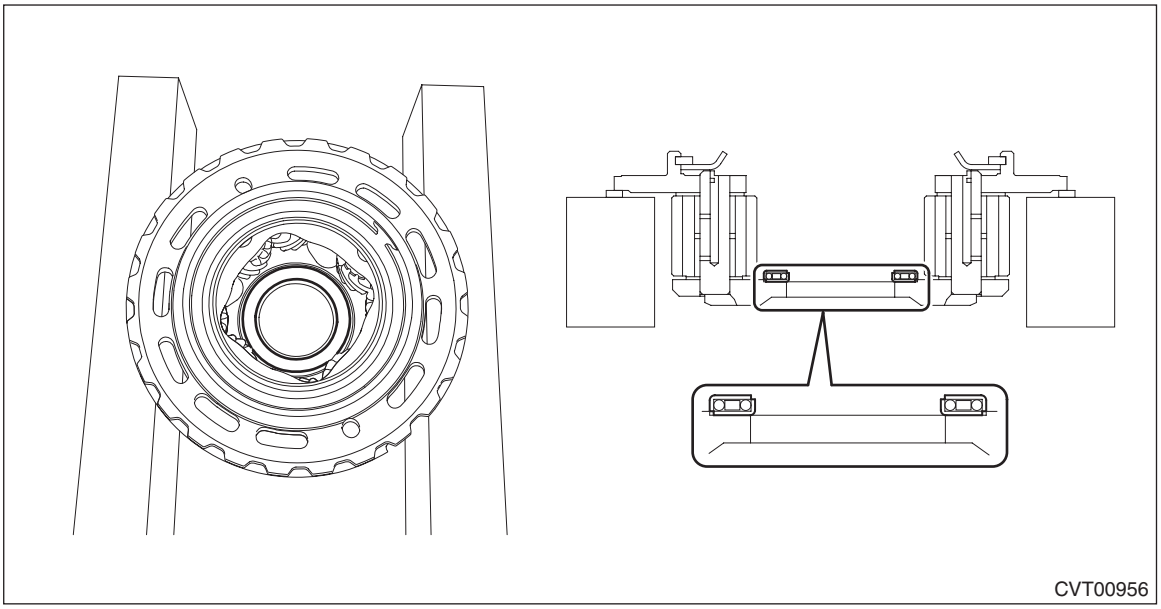
NOTE:
Place the measurement tool at the dent on ST upper side to measure.

ST1 499737100 PULLER SET
ST2 499575600 GAUGE



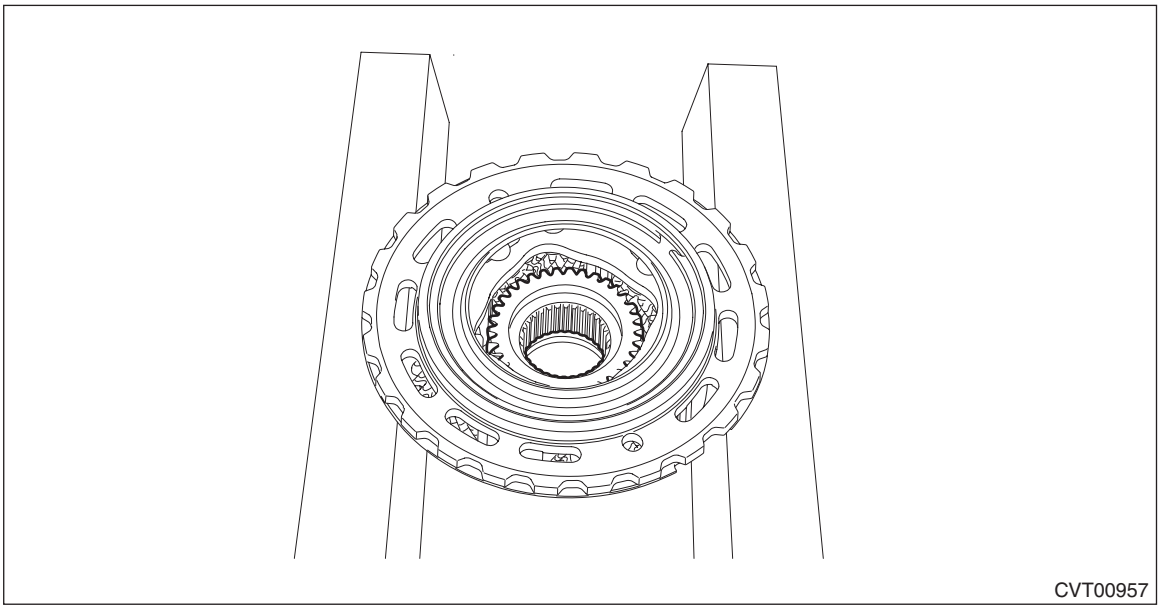
9) Remove the snap ring.

10) Place flat boards on the surface plate, and place the snap ring and then planetary carrier assembly overlapping neatly.



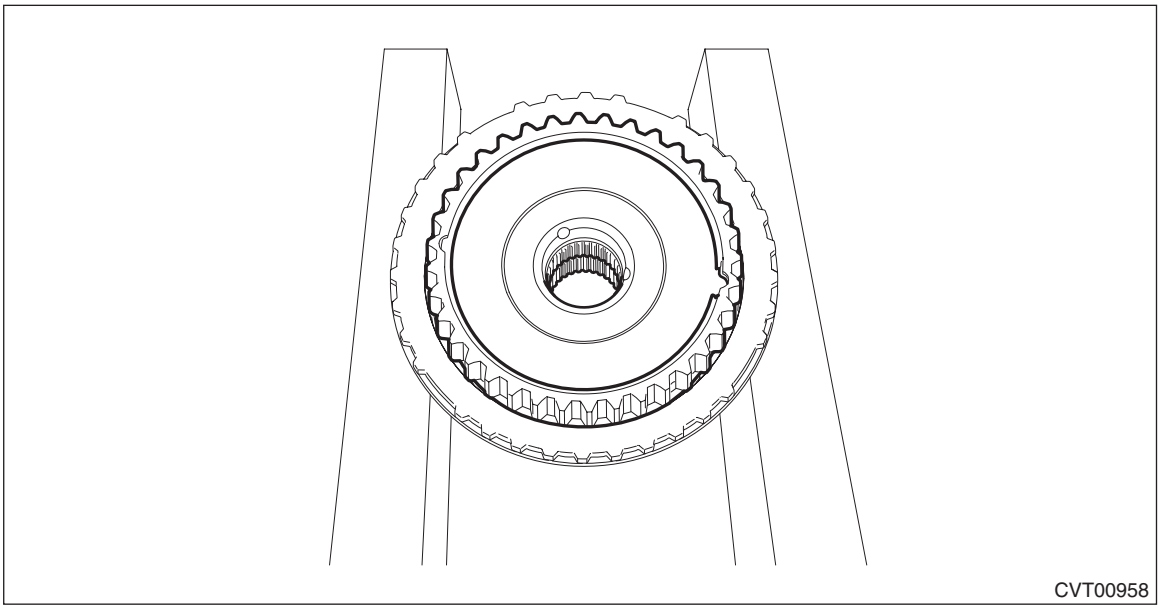
NOTE:
Carefully place them so that the most outer finished surface of planetary carrier assembly overlaps the snap ring.

(A) Planetary carrier ASSY
(B) Snap ring



11) Install the thrust needle bearing.

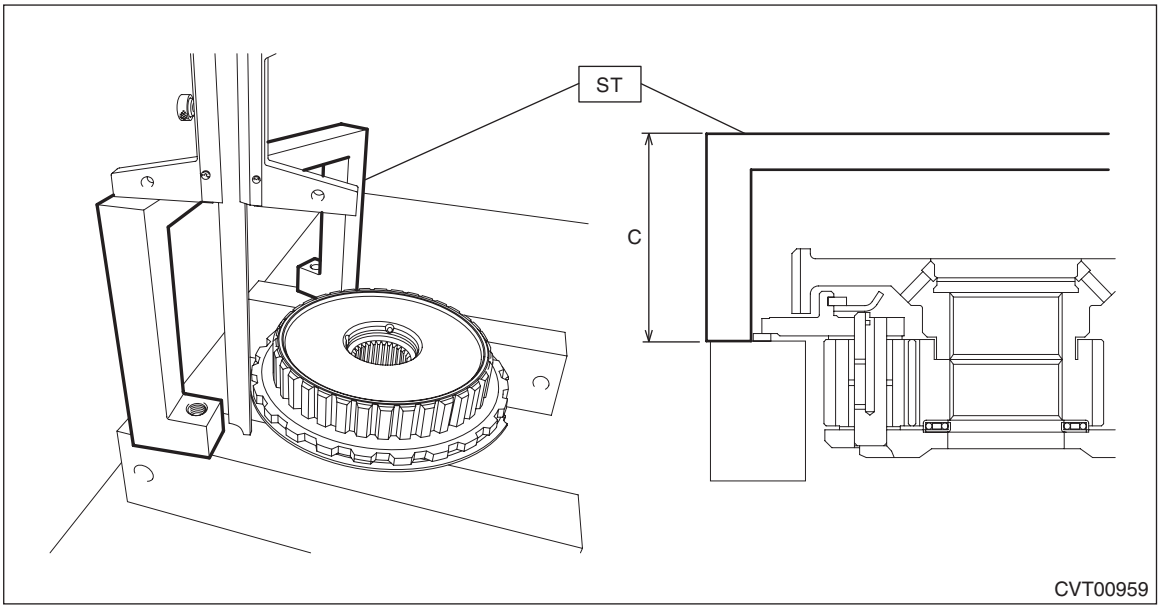
NOTE:
Make sure to install in the right direction.



CVT00956

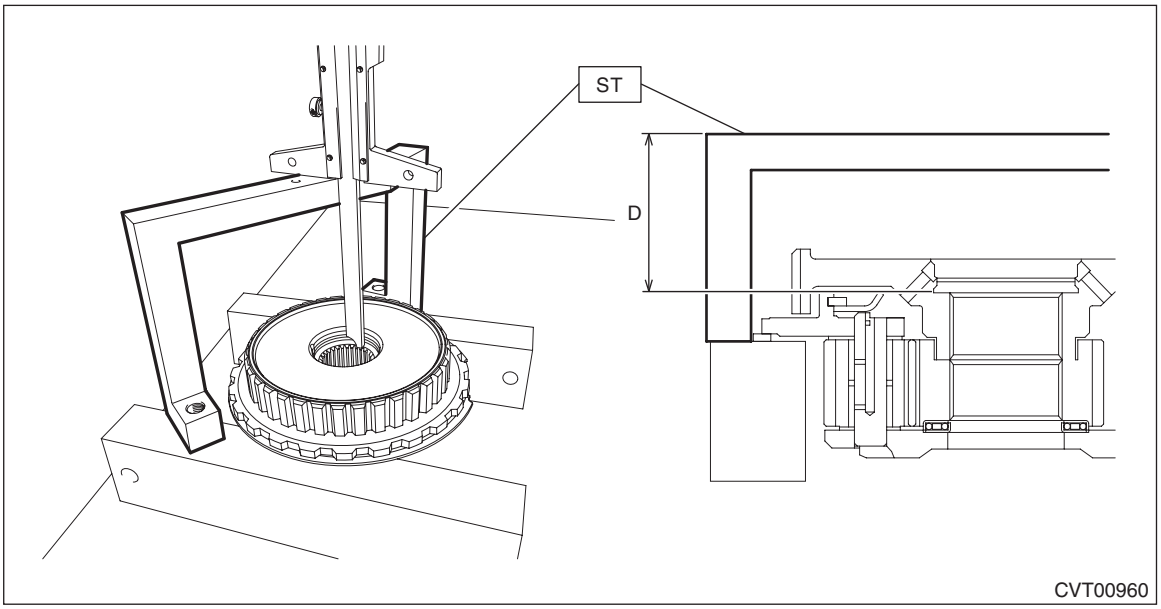
12) Install the sun gear.

NOTE:
Make sure to install in the right direction.



CVT00957

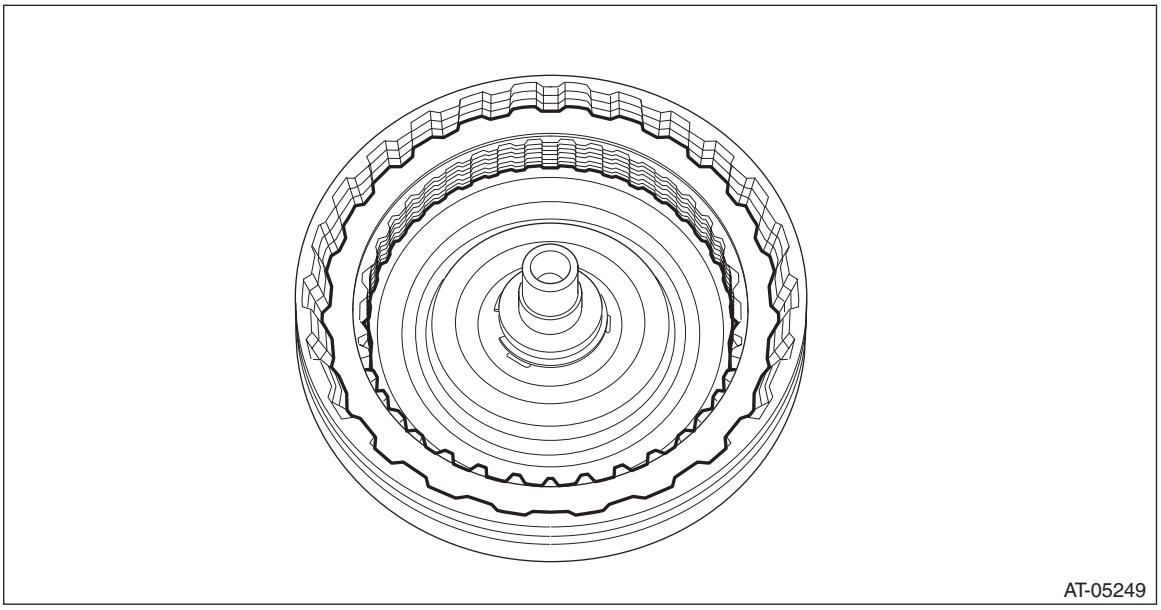
13) Install the forward clutch hub.



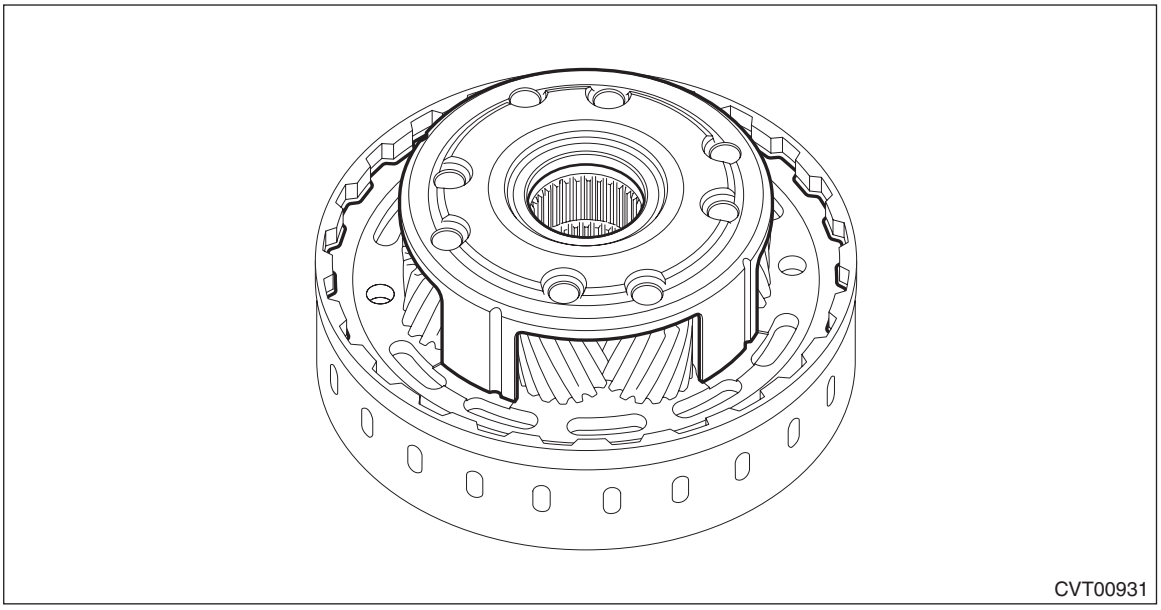
14) Using the ST, measure the height “C” from the ST end surface to the flat board with the snap ring placed on.

NOTE:
Place the measurement tool at the dent on ST upper side to measure.
ST 499737100 PULLER SET

15) Using the ST, measure the height “D” from the ST end surface to the washer catch surface of the forward clutch hub.

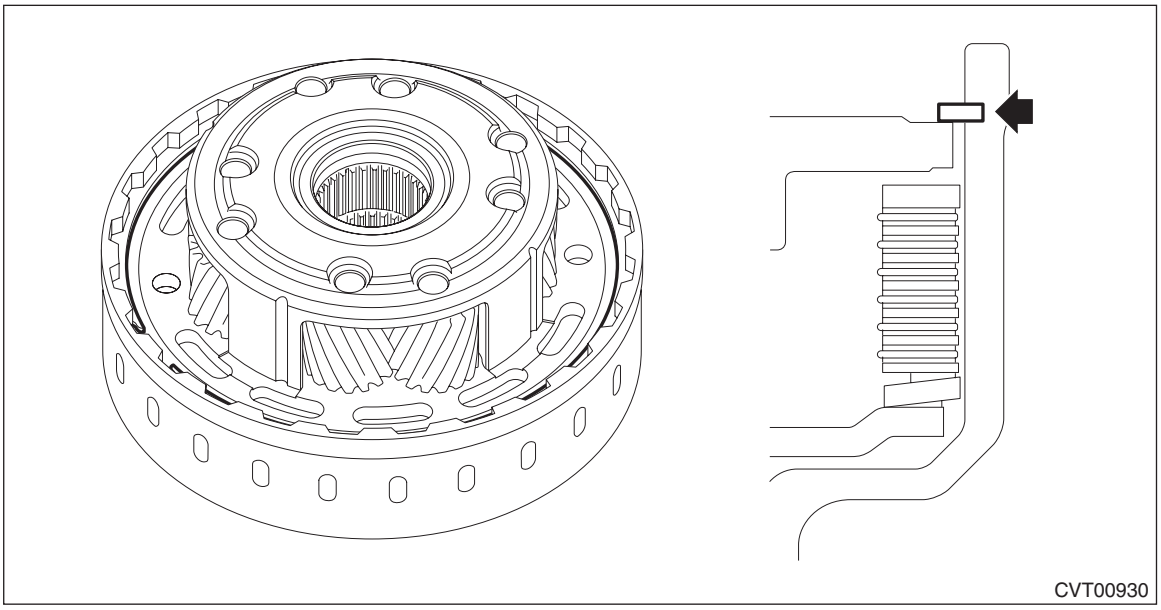


NOTE:
Place the measurement tool at the dent on ST upper side to measure.
ST 499737100 PULLER SET

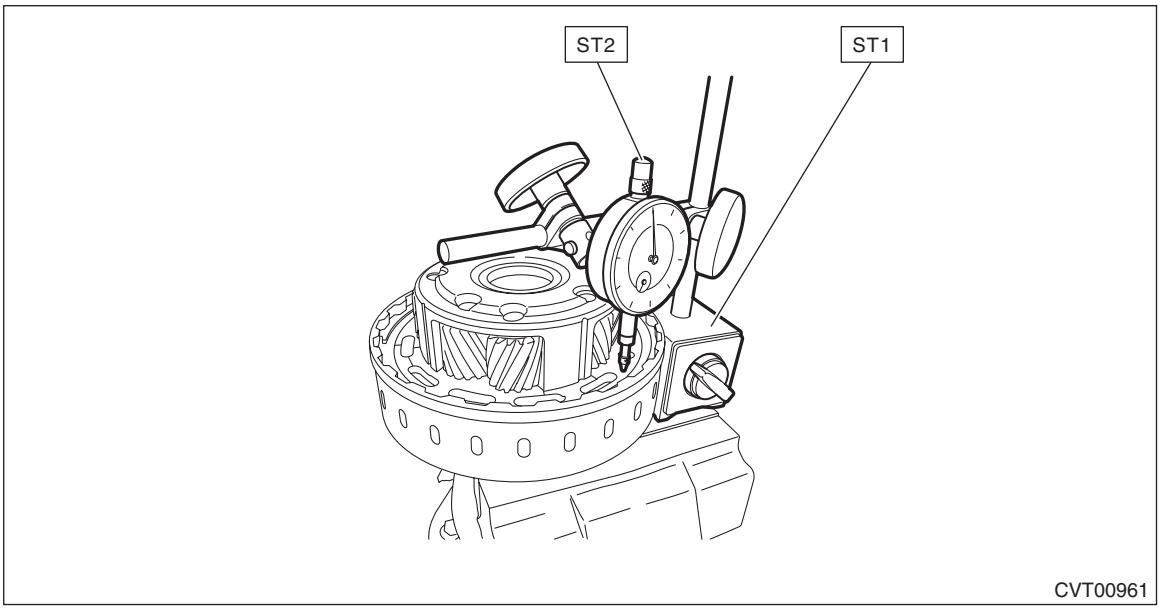


16) Obtain the thickness of washer using the values measured from step 7) to step 15).
Calculation formula:
T mm = (B – A) – (C – D) – (0.0 — 0.20)
[T in = (B – A) – (C – D) – (0.0 — 0.008)]
T: Washer thickness
A: Height from the ST end surface to the snap ring of the forward clutch drum
B: Height from the ST end surface to the thrust needle bearing
C: Height from the ST end surface to the flat board with the snap ring placed on
D: Height from the ST end surface to the washer catch surface of the forward clutch hub
0.0 — 0.20 mm (0.0 — 0.008 in): Clearance
17) Select the washer to meet the value “T” obtained from step 16).

Washer	
Part No.	Thickness mm (in)
31598AA090	4.7 (0.185)
31598AA100	4.8 (0.189)
31598AA110	4.9 (0.193)
31598AA060	5.0 (0.197)
31598AA120	5.1 (0.201)
31598AA130	5.2 (0.205)
31598AA140	5.3 (0.209)

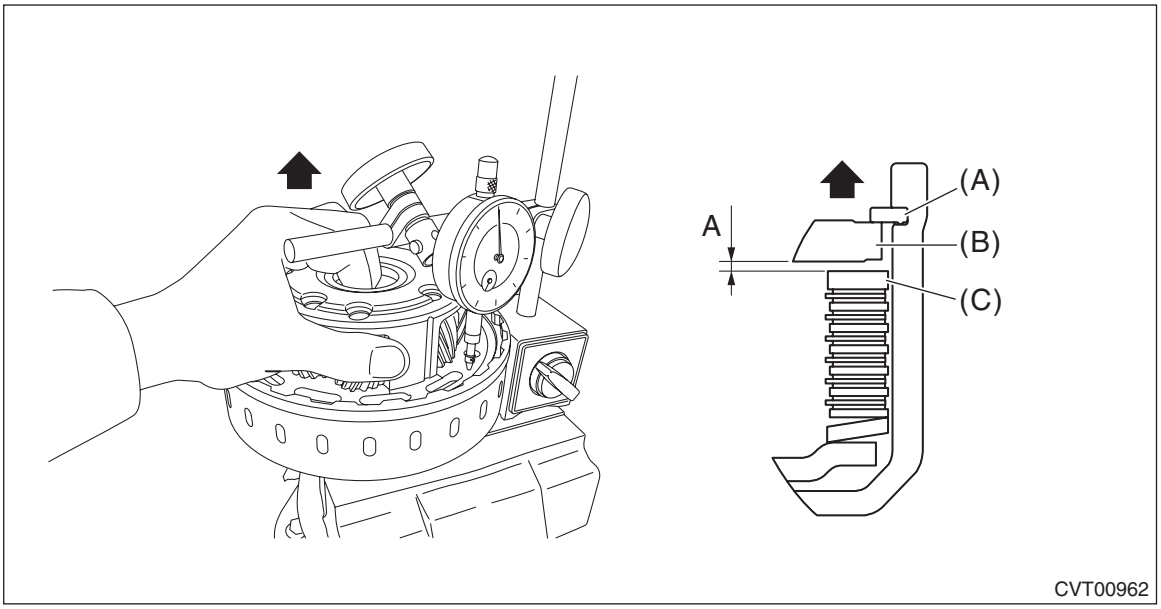


18) Install the dish plate, drive plate, driven plate and retaining plate.



19) Install the planetary carrier assembly.

20) Install the snap ring.



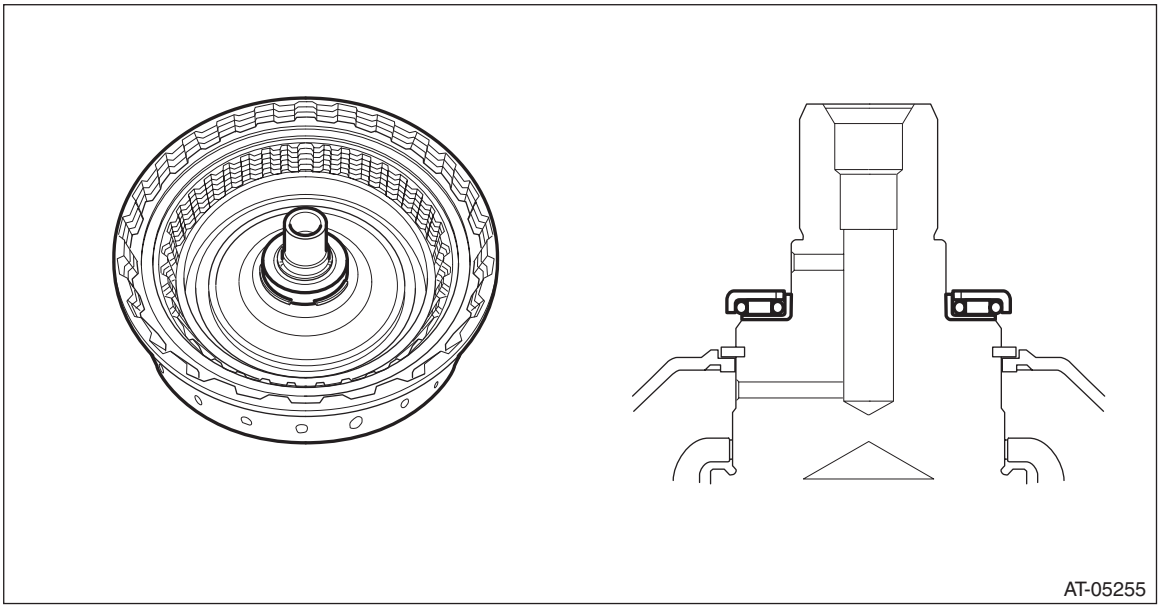
21) Hold the forward clutch drum on a vise, and set the ST.
ST1 498247001 MAGNET BASE
ST2 498247100 DIAL GAUGE

22) Lift the planetary carrier assembly, and read the value “A” indicated on the dial gauge.

NOTE:
Measure at four points with a 90° interval and calculate the average.

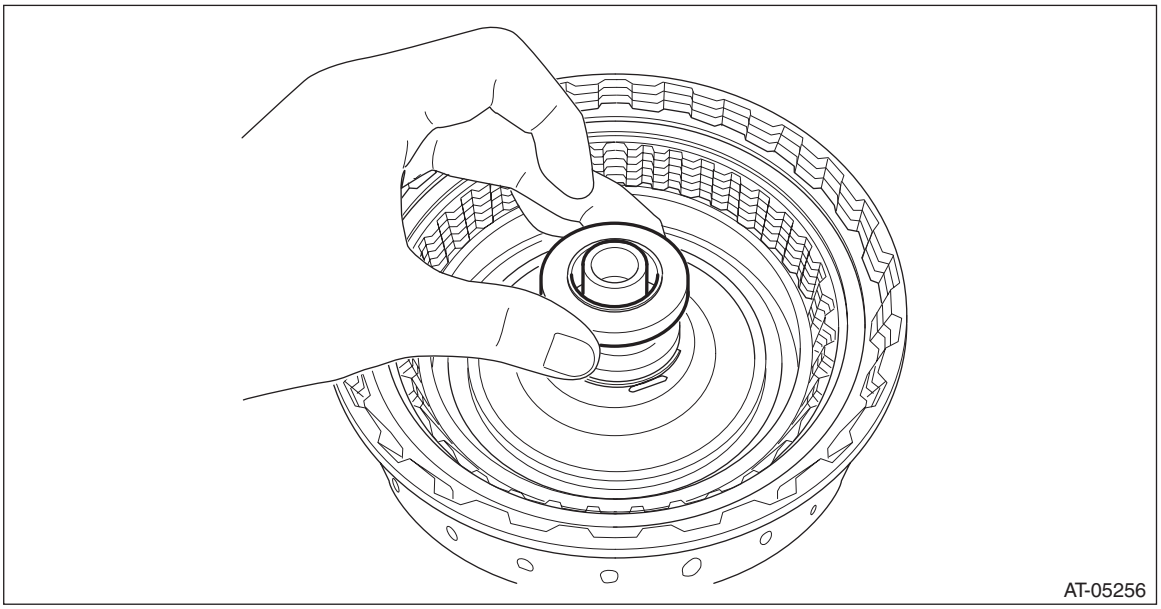
(A) Snap ring
(B) Planetary carrier ASSY
(C) Retaining plate

23) If the value “A” obtained from step 22) exceeds the limit for use, replace the drive plate and driven plate with new parts and select the retaining plate within the initial standard value.



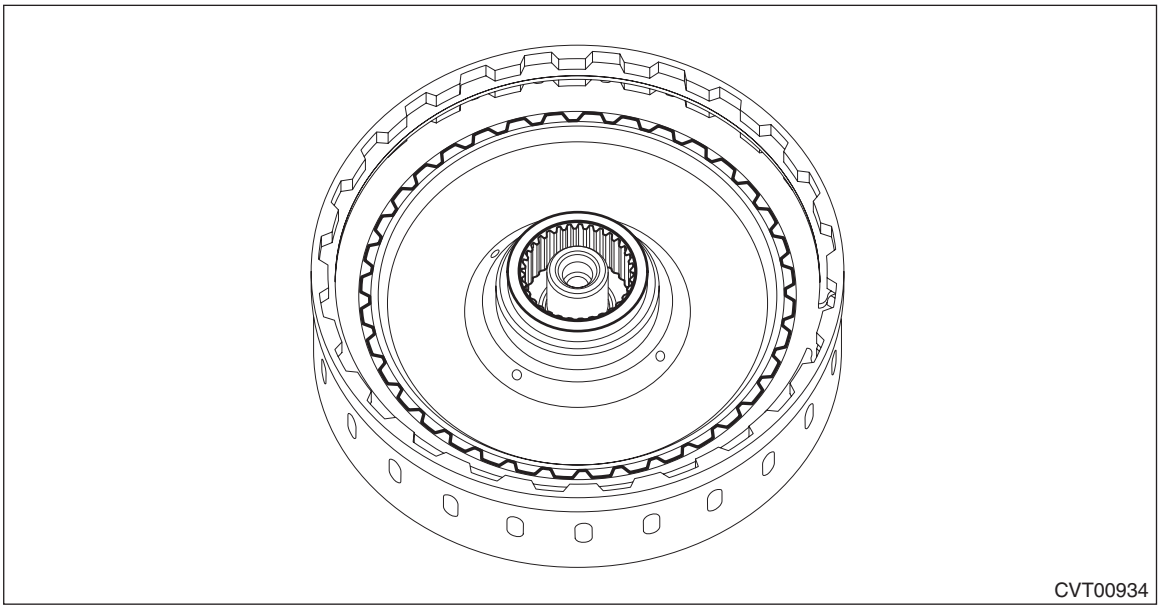
Initial standard:
1.2 — 1.6 mm (0.047 — 0.063 in)

Limit thickness:
2.4 mm (0.09 in)

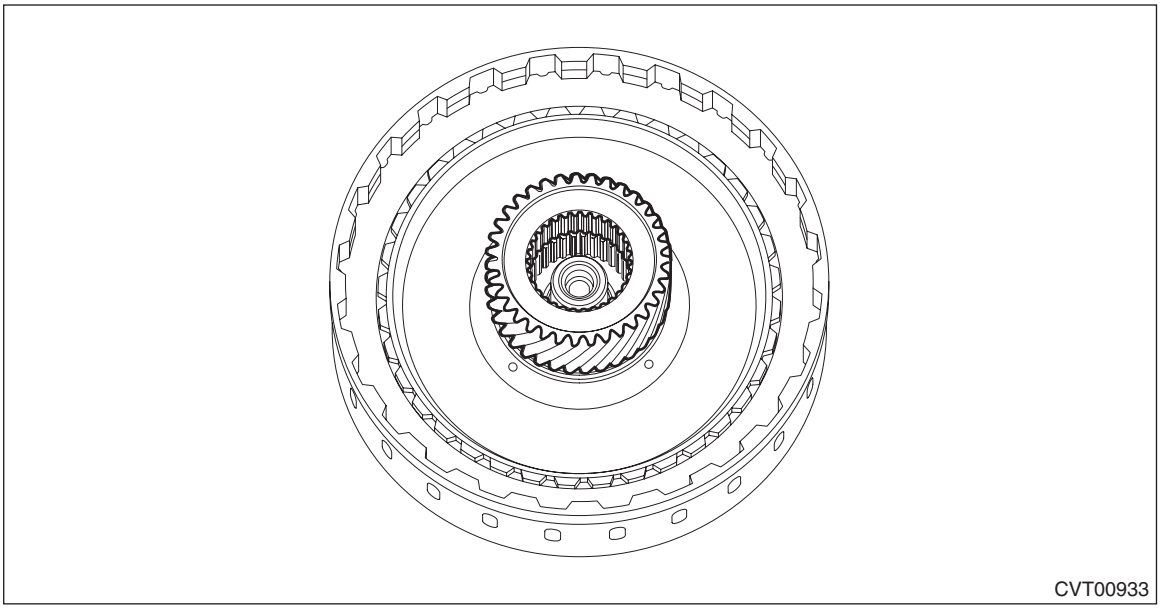


Retaining plate	
Part No.	Thickness mm (in)
31567AB890	2.0 (0.079)
31567AB900	2.2 (0.087)
31567AB910	2.4 (0.094)
31567AB640	2.6 (0.102)

24) Remove the snap ring and the planetary carrier assembly.
25) Replace with the retaining plate selected in step 23) to install.
26) Install the thrust needle bearing.

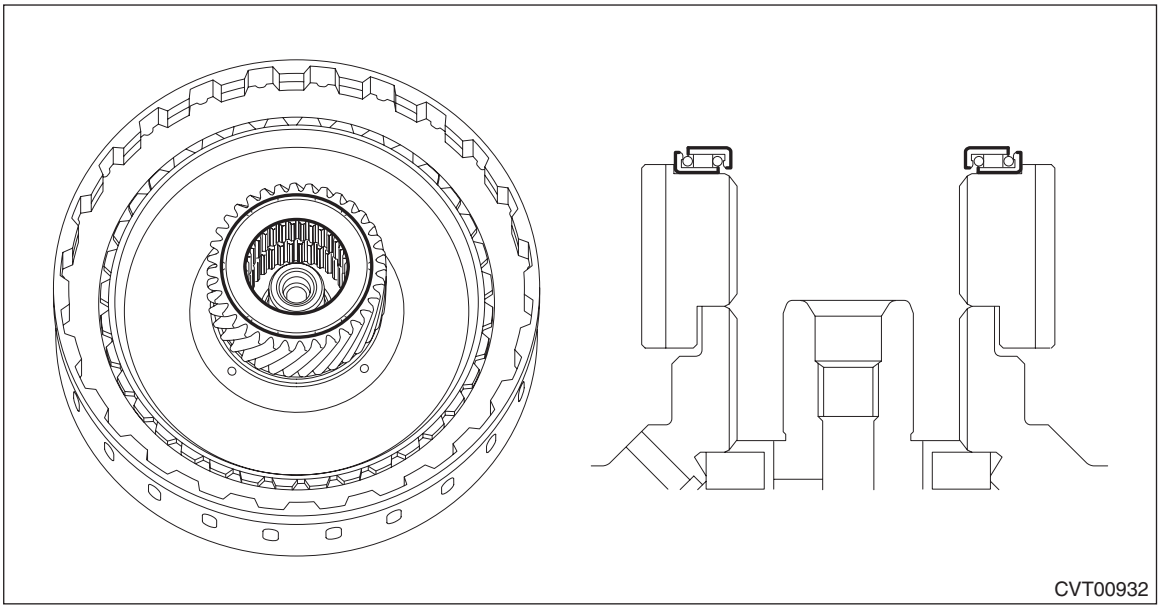


NOTE:
Install the thrust needle bearing in the correct direction.



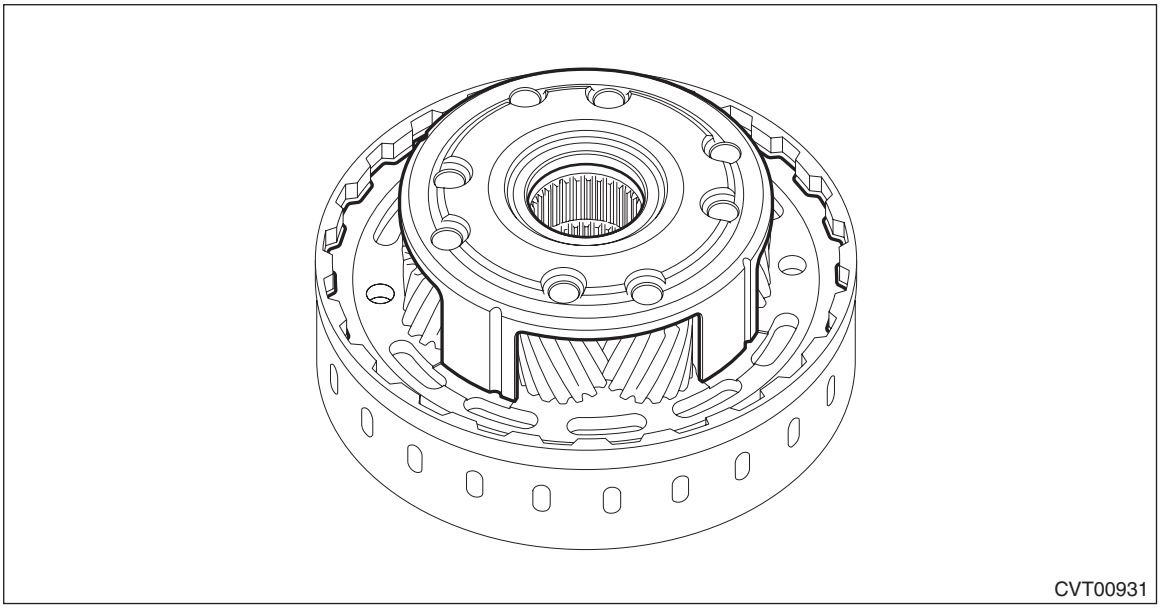
27) Install the washer selected in step 17).

28) Install the forward clutch hub.



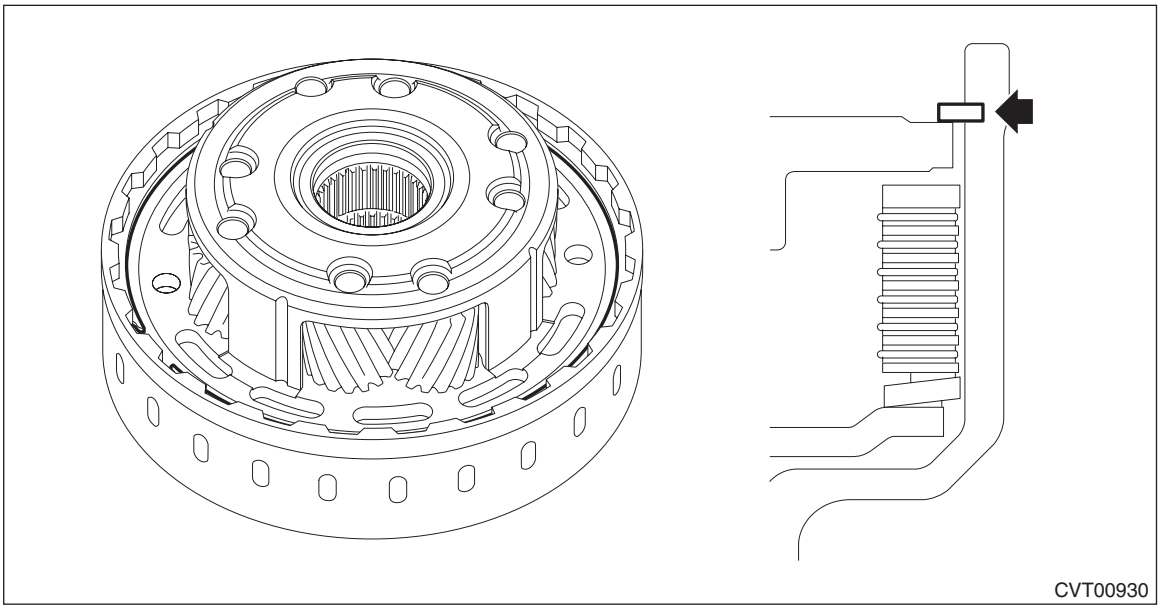
CVT00934

29) Install the sun gear.



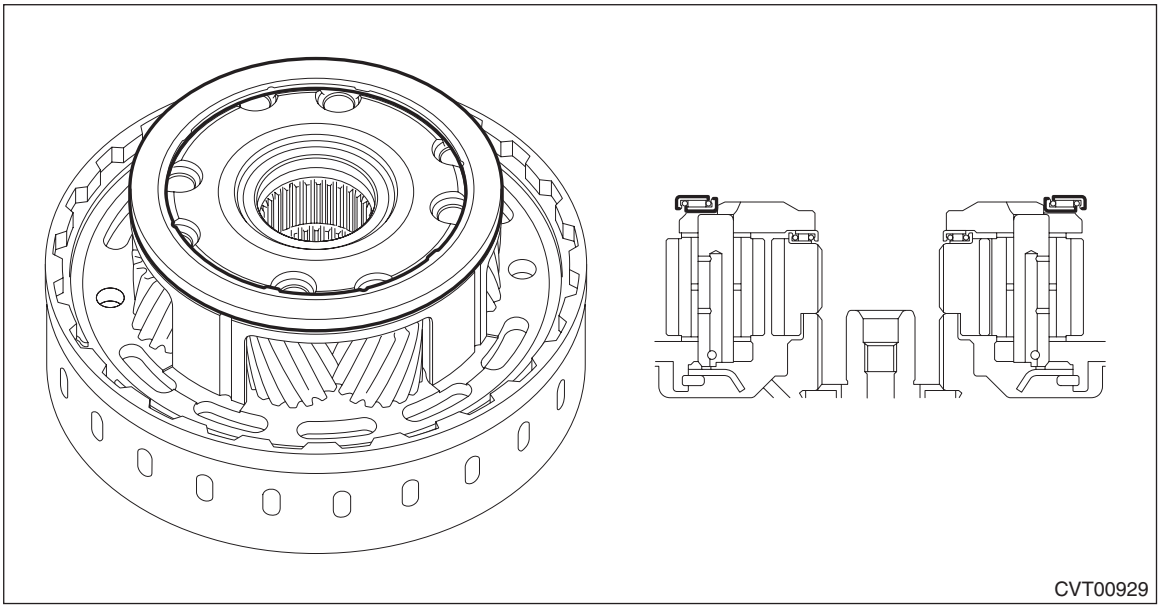
CVT00933

30) Install the thrust needle bearing.

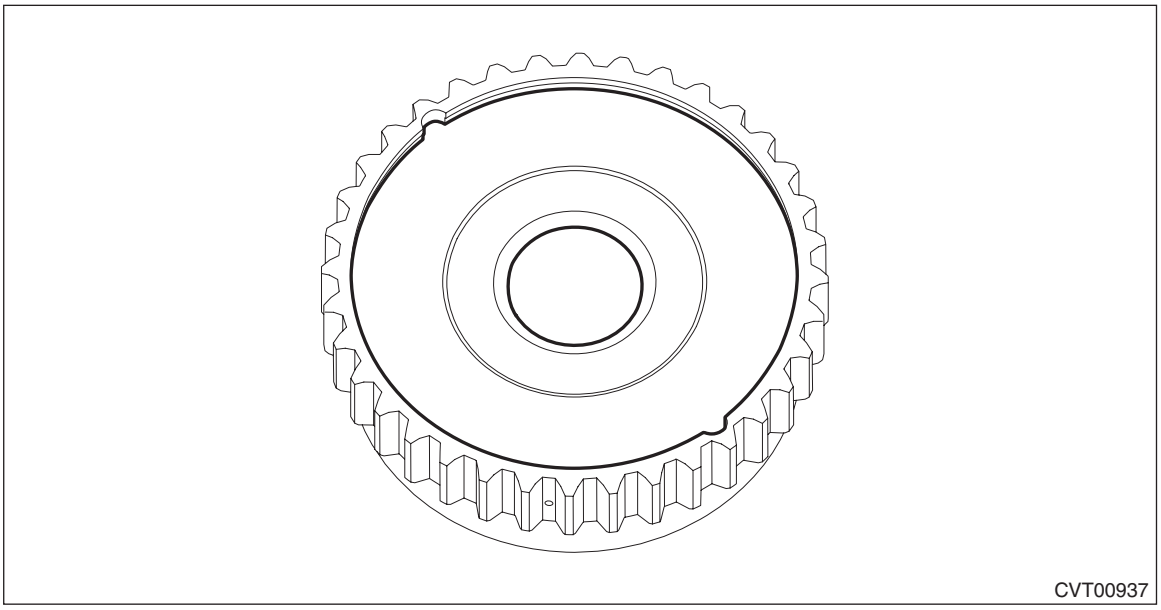


NOTE:
Install the thrust needle bearing in the correct direction.

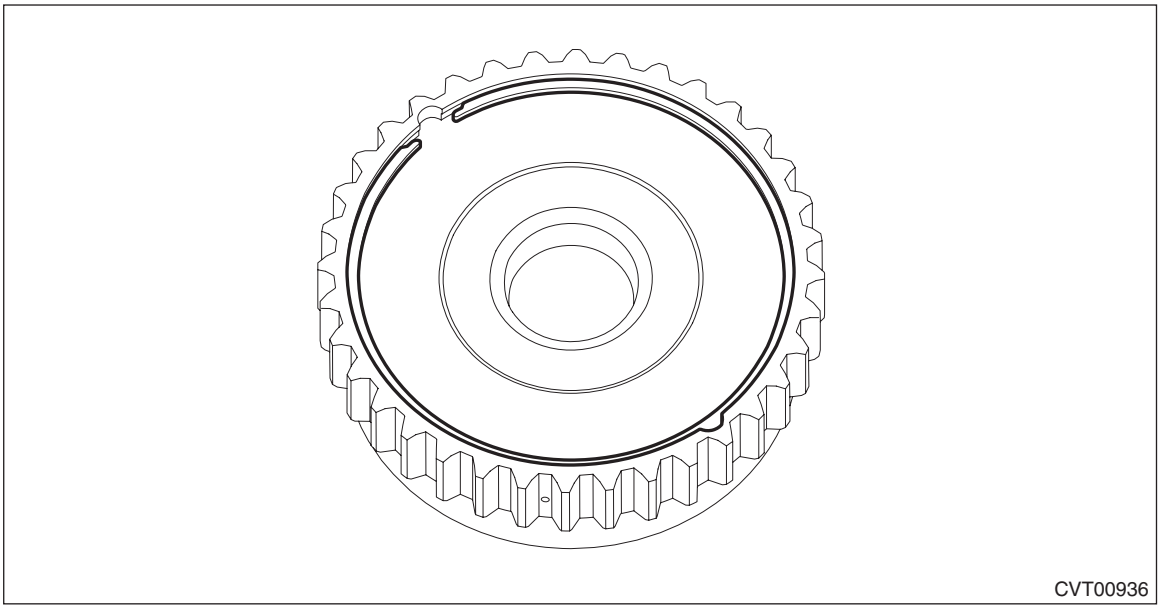
31) Install the planetary carrier assembly.



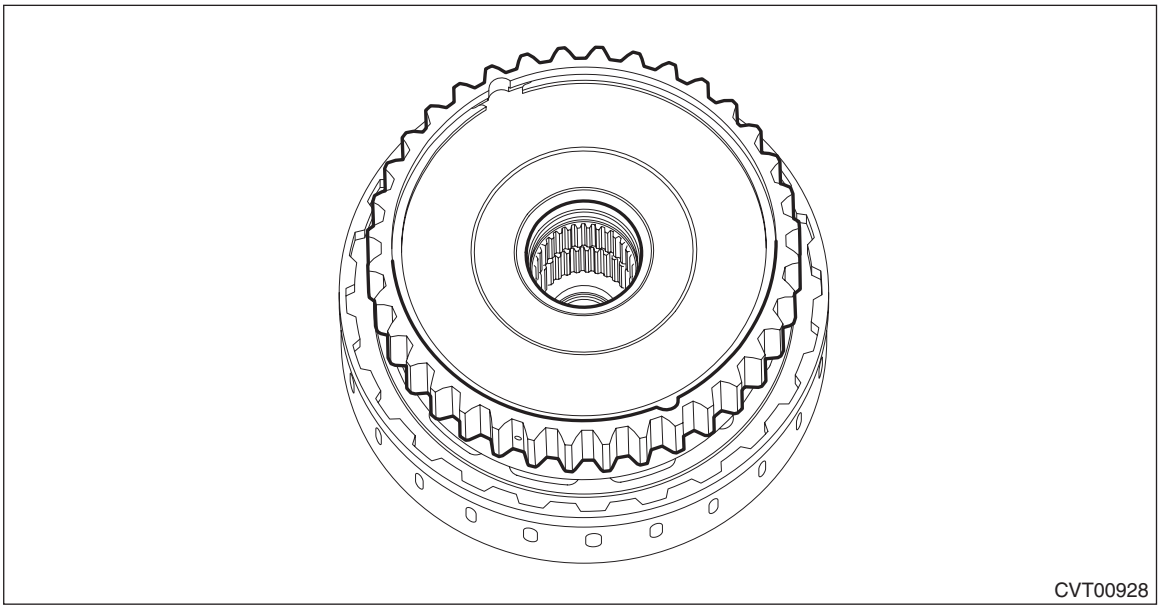
32) Install the snap ring.



33) Install the thrust needle bearing.



NOTE:
Install the thrust needle bearing in the correct direction.



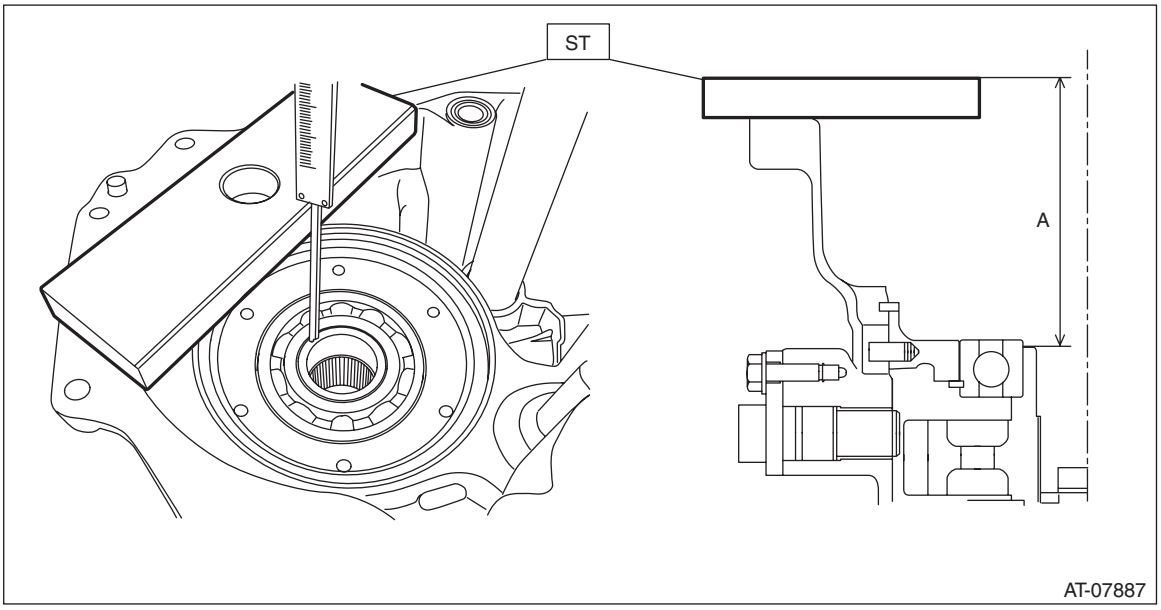
34) Install the thrust gear plate to the internal gear.

CVT00937

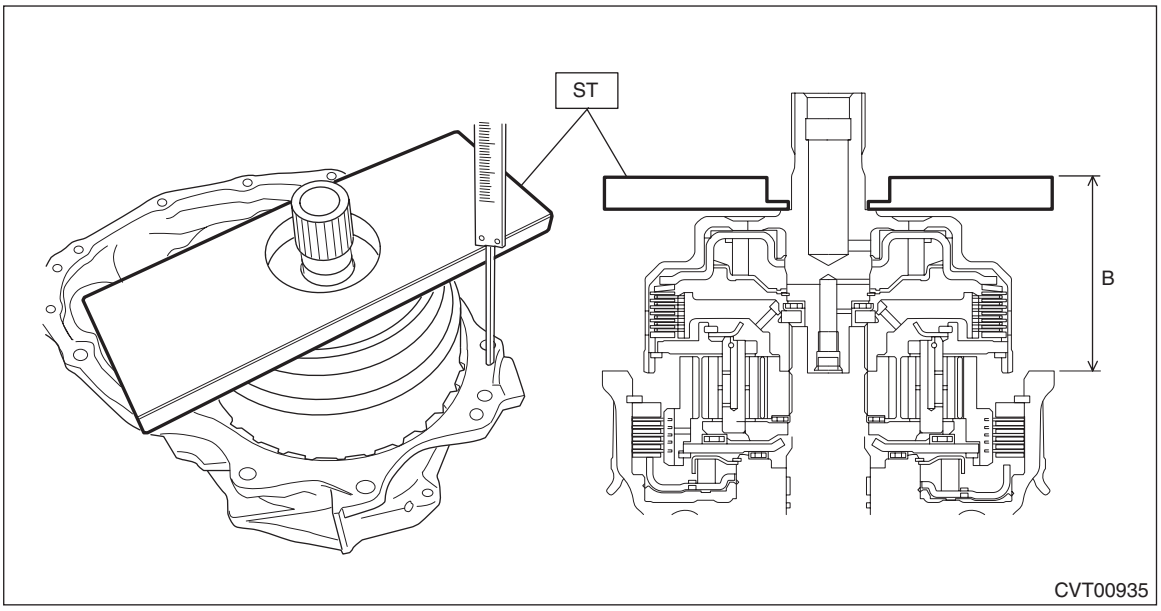
35) Install the snap ring.

CVT00936

36) Install the internal gear assembly.



E: INSPECTION

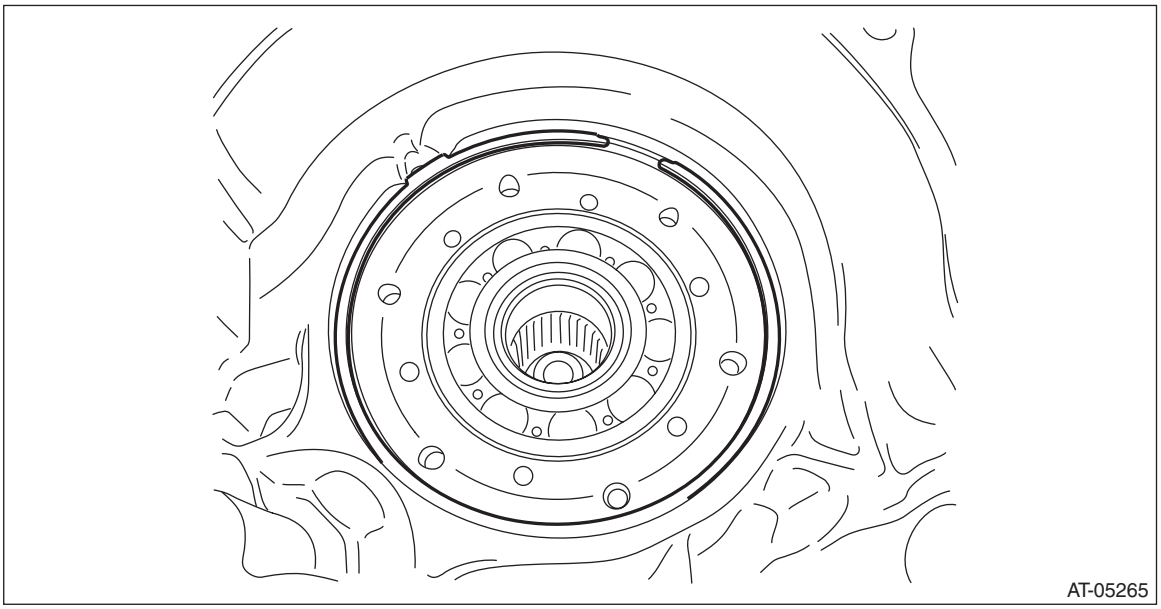


- Check the forward clutch drum, internal gear, sun gear and forward clutch piston lip for wear or damage.
- Inspect the drive plate facing for wear and damage.
- Check the driven plate for discoloration (burnt color).
- Check for worn snap ring, fatigue or damaged return spring or deformed spring retainer.
- Make sure the clearance between the retaining plate of forward clutch and the planetary carrier assembly is within the limit. If it exceeds the standard, replace the forward clutch assembly. <Ref. to CVT(TR690)-211, ASSEMBLY, Forward Clutch Assembly.>

F: ADJUSTMENT

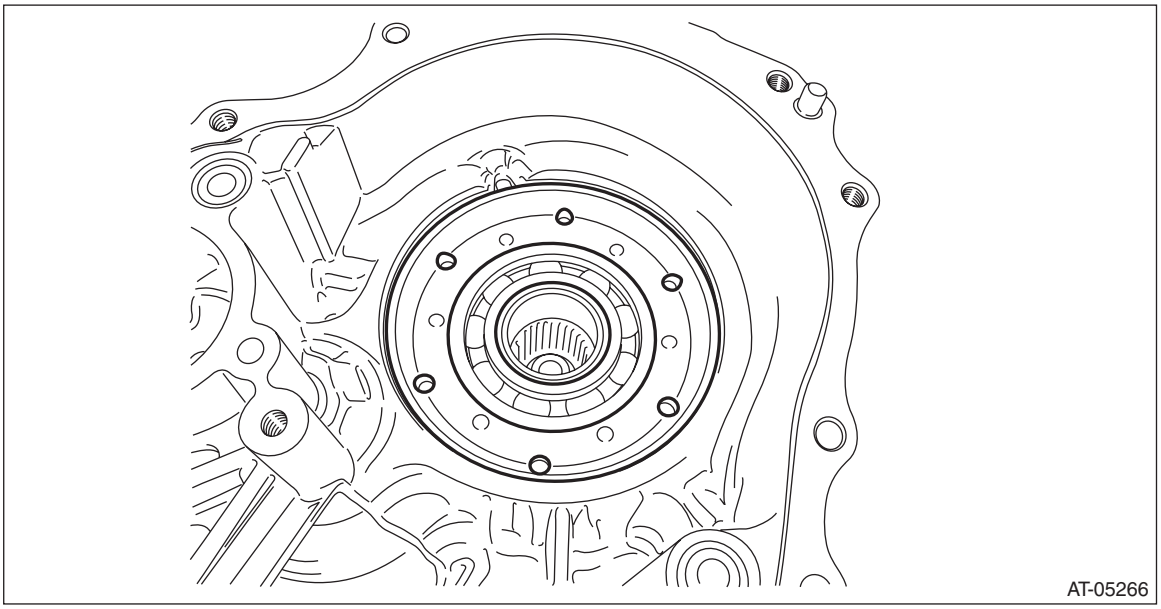
1) Measure depth “A” from the ST upper face to the washer catch surface.
ST 398643600 GAUGE

2) Install the forward clutch assembly to intermediate case.
3) Setting the ST, measure height “B” from the ST upper side to the intermediate case mating surface.
ST 499575600 GAUGE



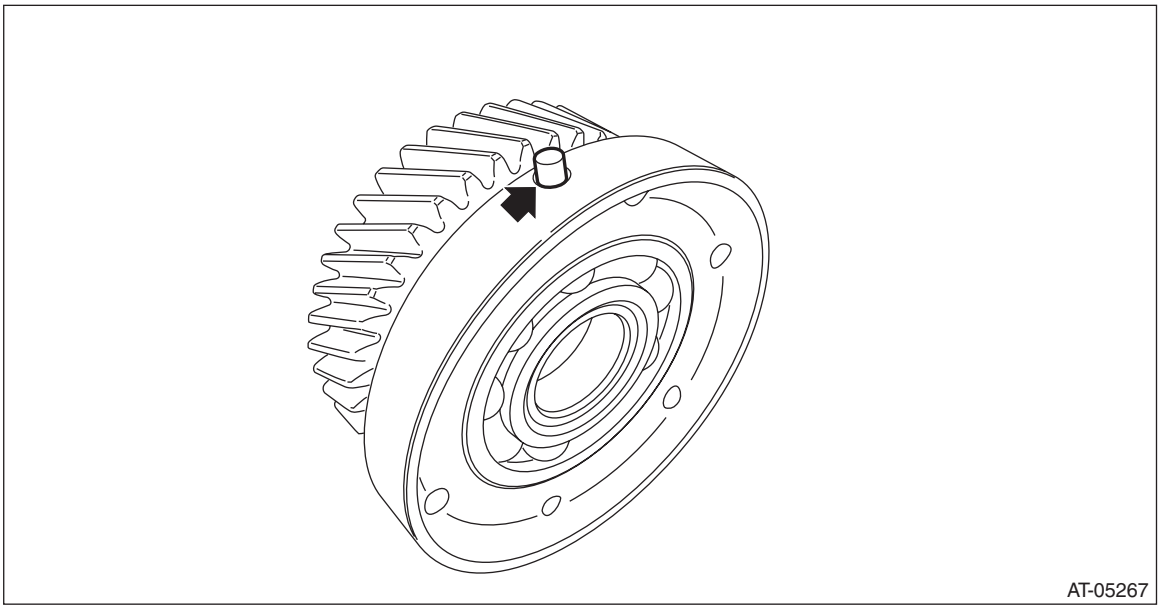
4) Obtain the thickness of washer using the following formula.
Calculation formula:
T (mm) = (A – 15) – (B – 15) – (0.75 — 0.95)
[T (in) = (A – 0.591) – (B – 0.591) – (0.030 — 0.037)]
T: Washer thickness
A: Depth from the ST upper face to the washer catch surface
B: Height from the upper surface of the ST to the mating surface of the intermediate case
15 mm (0.591 in): Thickness of ST
0.75 — 0.95 mm (0.030 — 0.037 in): Clearance
5) Select the washer to meet the value “T” obtained from step 4).

Washer	
Part No.	Washer thickness mm (in)
803034044	0.8 (0.031)
803034045	0.9 (0.035)
803034040	1.0 (0.039)
803034046	1.1 (0.043)
803034041	1.2 (0.047)
803034047	1.3 (0.051)
803034042	1.4 (0.055)
803034048	1.5 (0.059)
803034043	1.6 (0.063)



39.Reduction Driven Gear

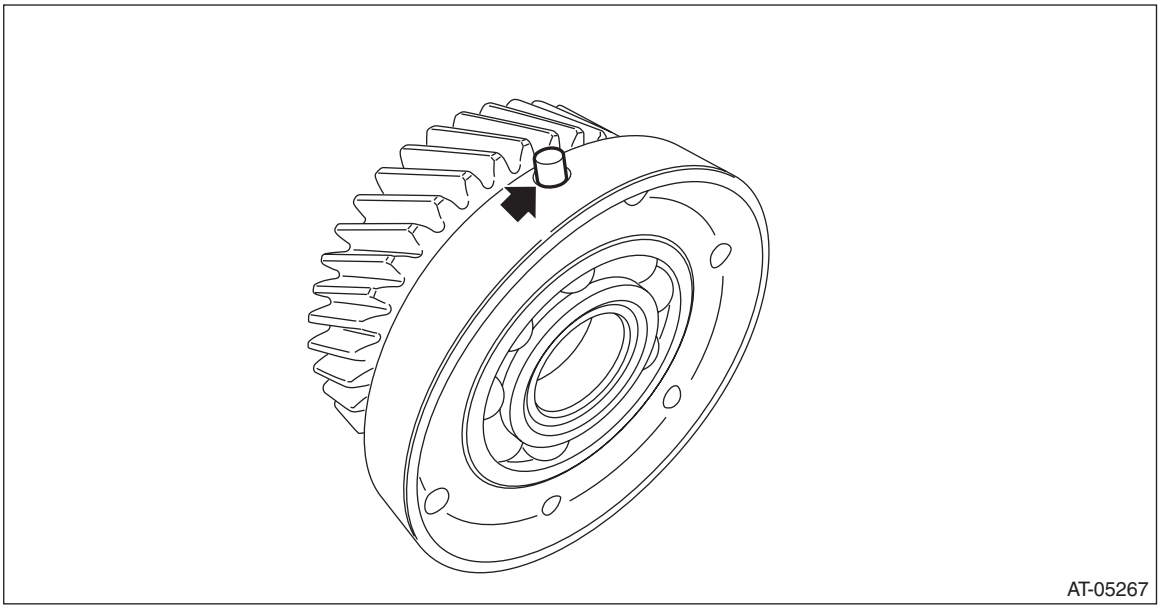
A: REMOVAL



1) Remove the transmission from the vehicle. <Ref. to CVT(TR690)-58, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case. <Ref. to CVT(TR690)-159, REMOVAL, Extension Case.>
3) Remove the rear drive shaft. <Ref. to CVT(TR690)-162, REMOVAL, Rear Drive Shaft.>
4) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-167, REMOVAL, Transfer Clutch.>
5) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-179, REMOVAL, Transfer Reduction Driven Gear.>
6) Remove the intermediate case. <Ref. to CVT(TR690)-185, REMOVAL, Intermediate Case.>
7) Remove the forward clutch assembly. <Ref. to CVT(TR690)-200, REMOVAL, Forward Clutch Assembly.>
8) Remove the snap ring.

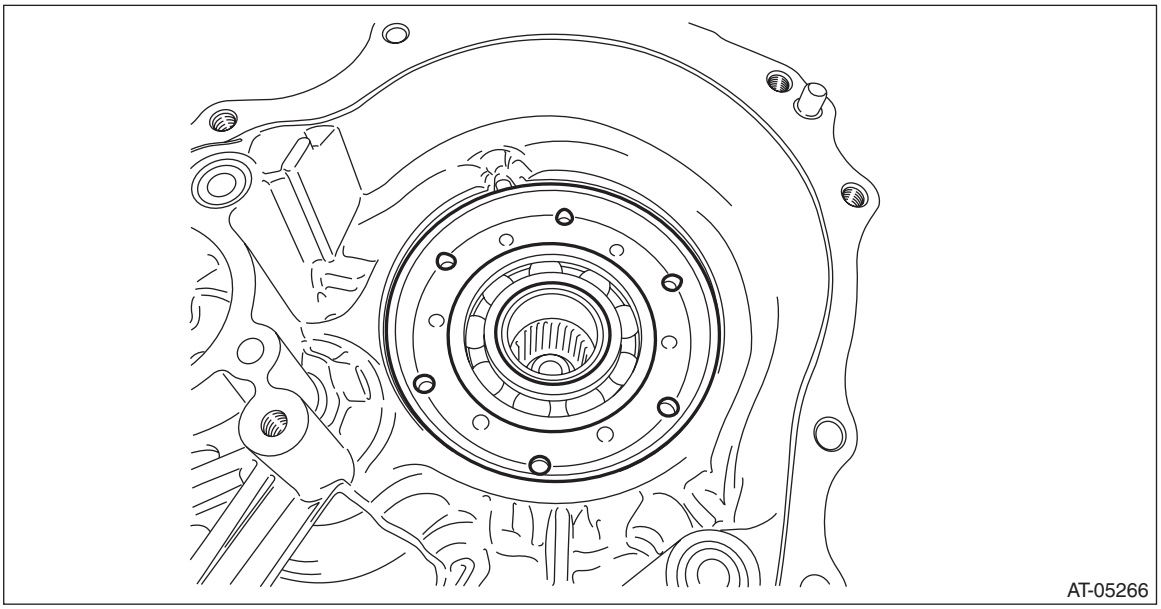
AT-05265

9) Remove the reduction driven gear assembly.



AT-05266

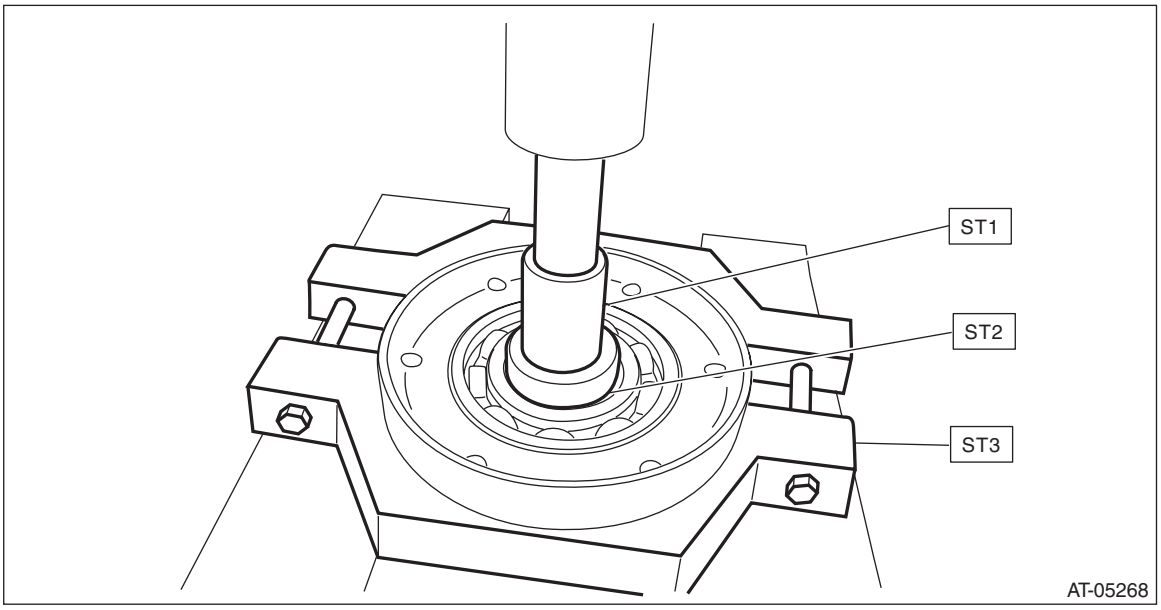
10) Remove the straight pin.



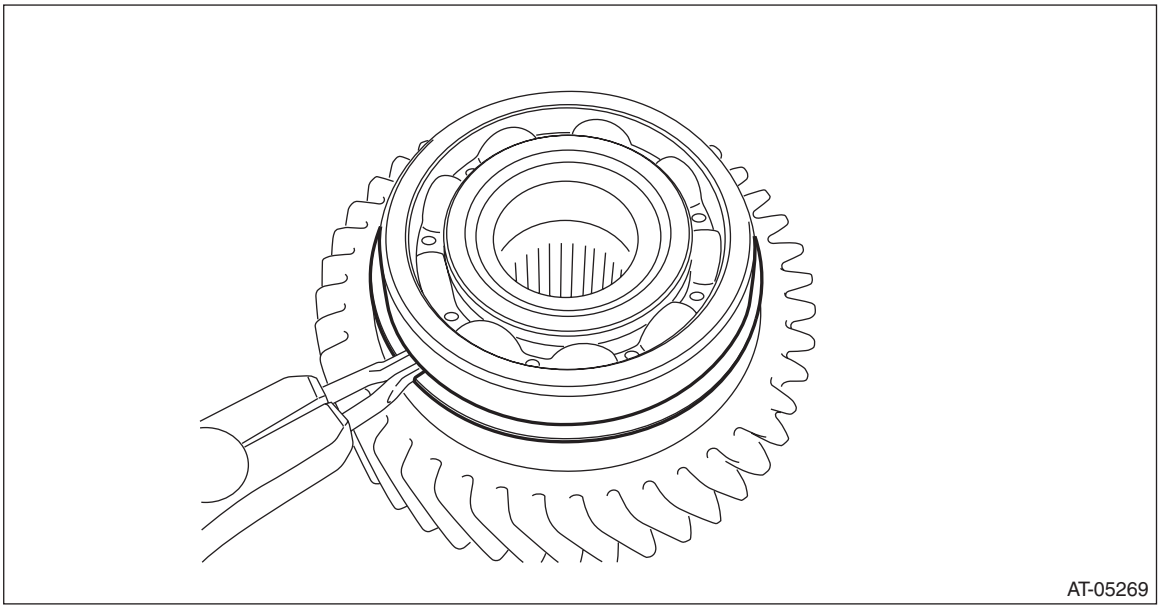
B: INSTALLATION

1) Install the straight pin to reduction driven gear assembly.

2) Fit the straight pin portion to the recess portion of transmission case and install the reduction driven gear and install the snap ring.

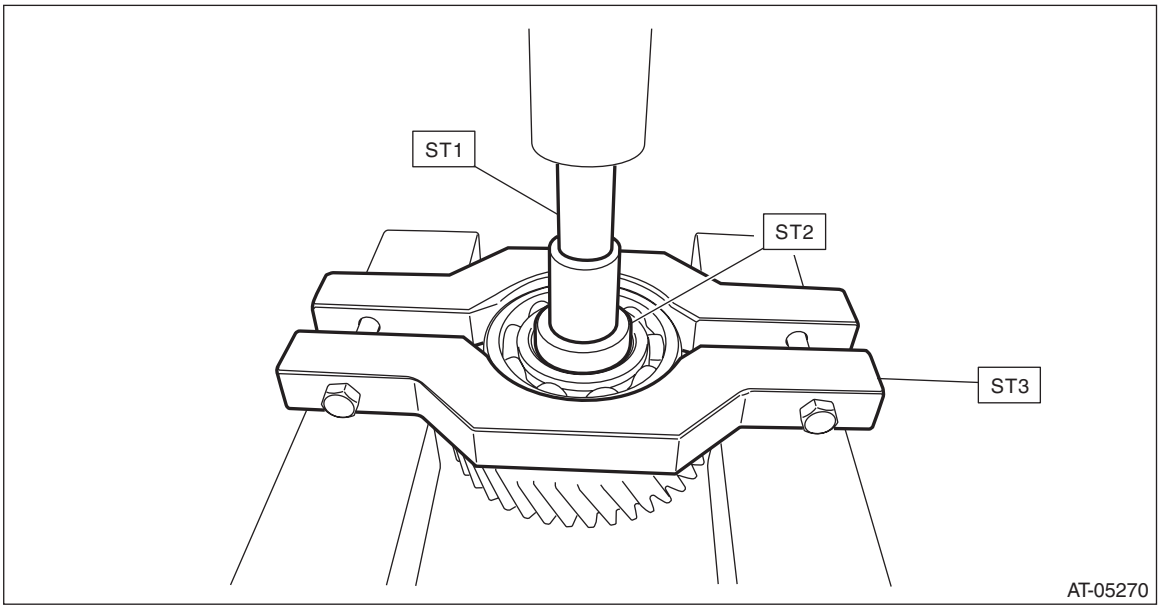


3) Select the snap ring. <Ref. to CVT(TR690)-235, ADJUSTMENT, Reduction Driven Gear.>
4) Replace with the selected snap ring.



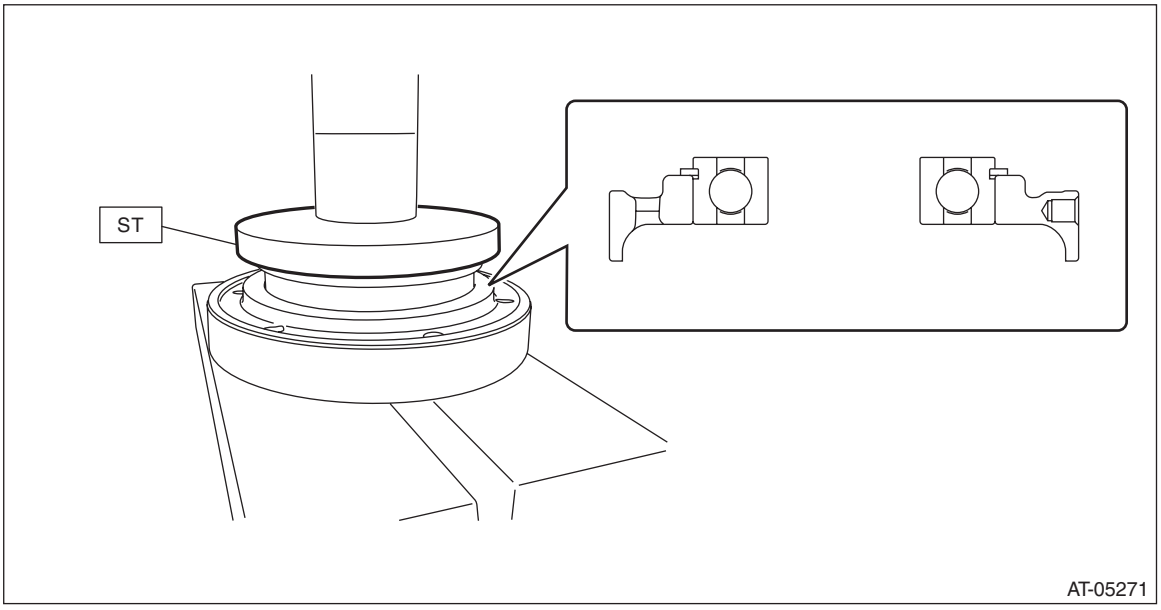
NOTE:
If the clearance measured in step 3) is within standard, the snap ring replacement is not necessary.
5) Install the forward clutch assembly. <Ref. to CVT(TR690)-201, INSTALLATION, Forward Clutch Assembly.>
6) Install the intermediate case. <Ref. to CVT(TR690)-186, INSTALLATION, Intermediate Case.>
7) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-179, INSTALLATION, Transfer Reduction Driven Gear.>
8) Install the transfer clutch assembly. <Ref. to CVT(TR690)-168, INSTALLATION, Transfer Clutch.>
9) Install the rear drive shaft. <Ref. to CVT(TR690)-162, INSTALLATION, Rear Drive Shaft.>
10) Install the extension case. <Ref. to CVT(TR690)-160, INSTALLATION, Extension Case.>
11) Install the transmission to vehicle. <Ref. to CVT(TR690)-75, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

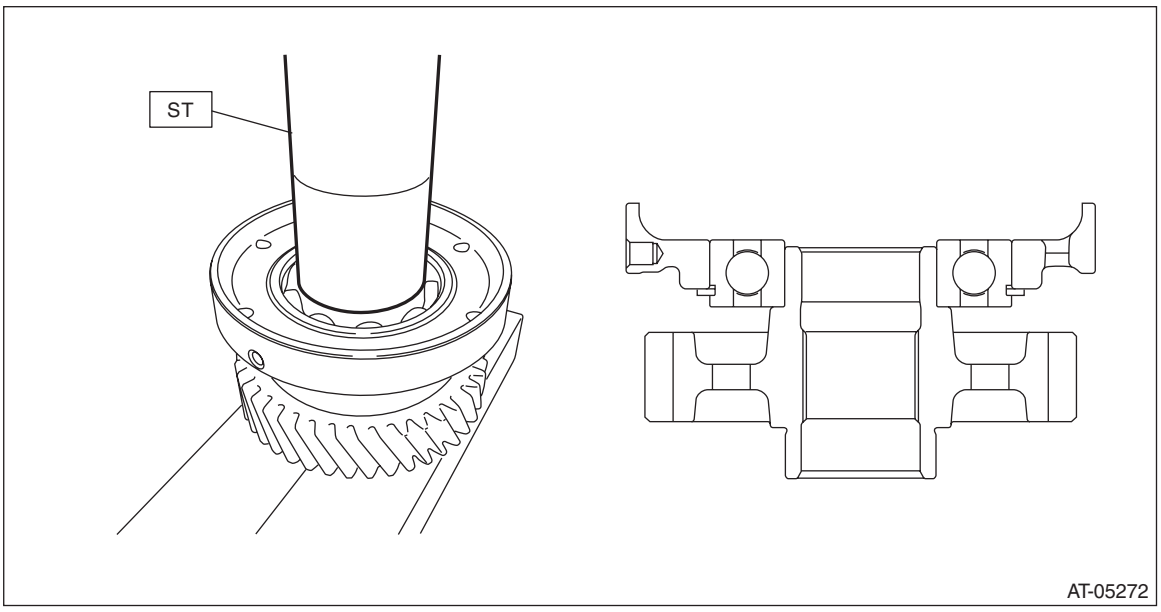


1) Remove the bearing retainer using ST1, ST2 and ST3.
ST1 899864100 REMOVER
ST2 398497701 SEAT
ST3 18767AA000 BEARING REMOVER

2) Remove the snap ring.



3) Remove the ball bearing using ST1, ST2 and ST3.
ST1 899864100 REMOVER
ST2 398497701 SEAT
ST3 498077600 REMOVER

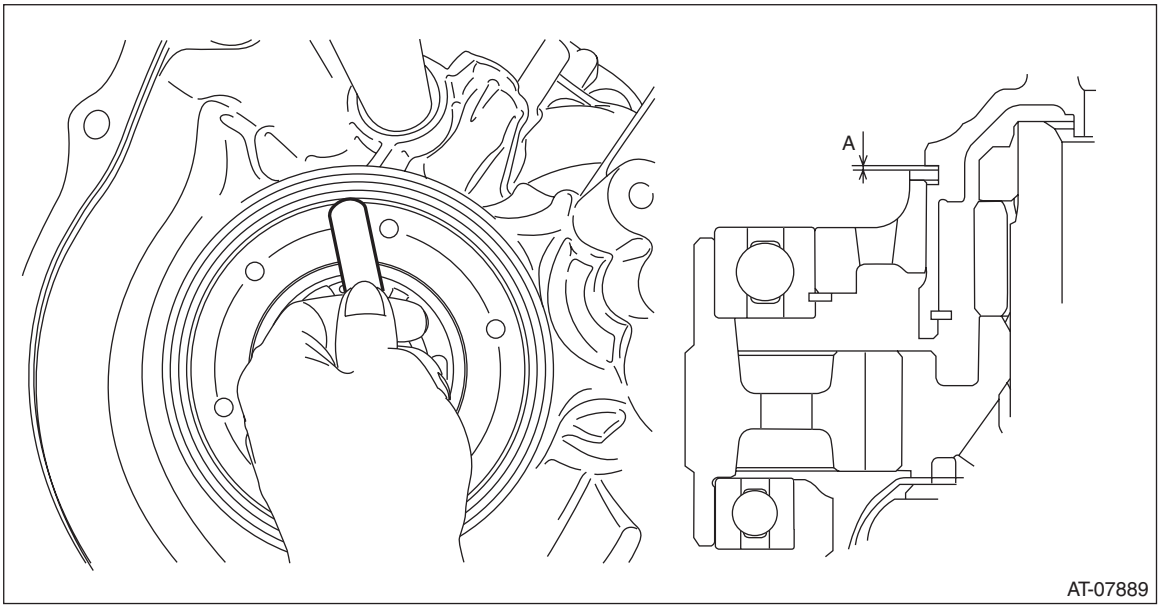


D: ASSEMBLY

1) Using the ST, install the ball bearing to bearing retainer.
ST 398177700 INSTALLER

NOTE:
- Use a new ball bearing.
- Make sure to install the ball bearing in the right direction.
- Apply CVTF to the press-fitting area.

2) Using the ST, install the reduction driven gear.
ST 499277200 INSTALLER



E: INSPECTION

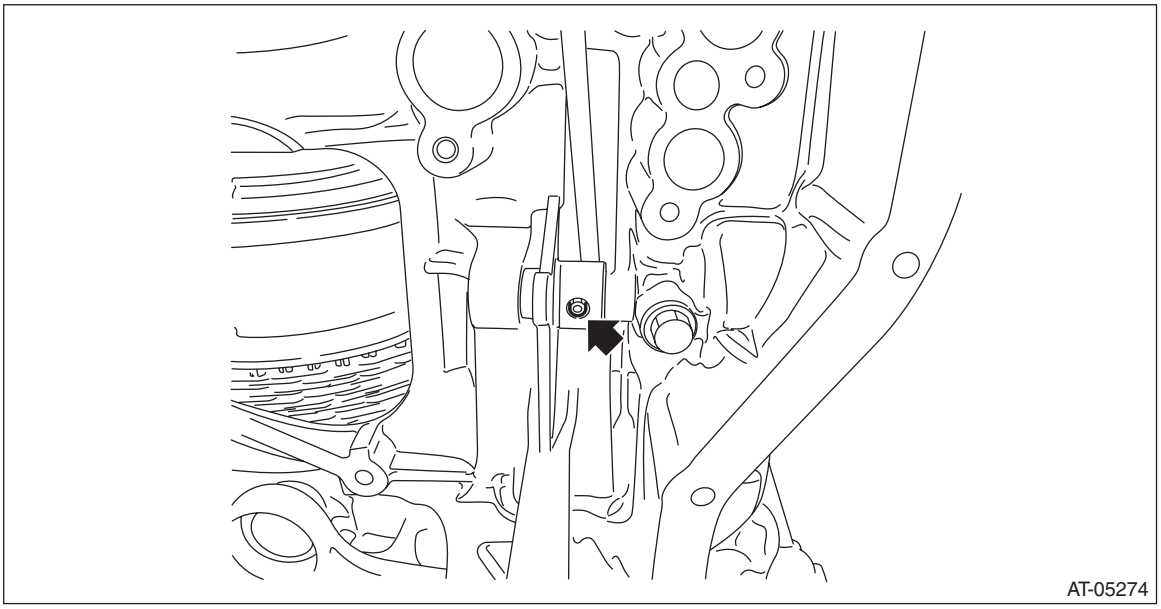
- Check the ball bearing for smooth rotation.
- Check the ball bearing for excessive looseness.
- Check the reduction driven gear for breakage or damage.
- Check the clearance between snap ring and transmission case and replace the snap ring as necessary.

F: ADJUSTMENT

1) Measure clearance “A” between snap ring and transmission case.

Specification:
0.05 — 0.25 mm (0.002 — 0.01 in)

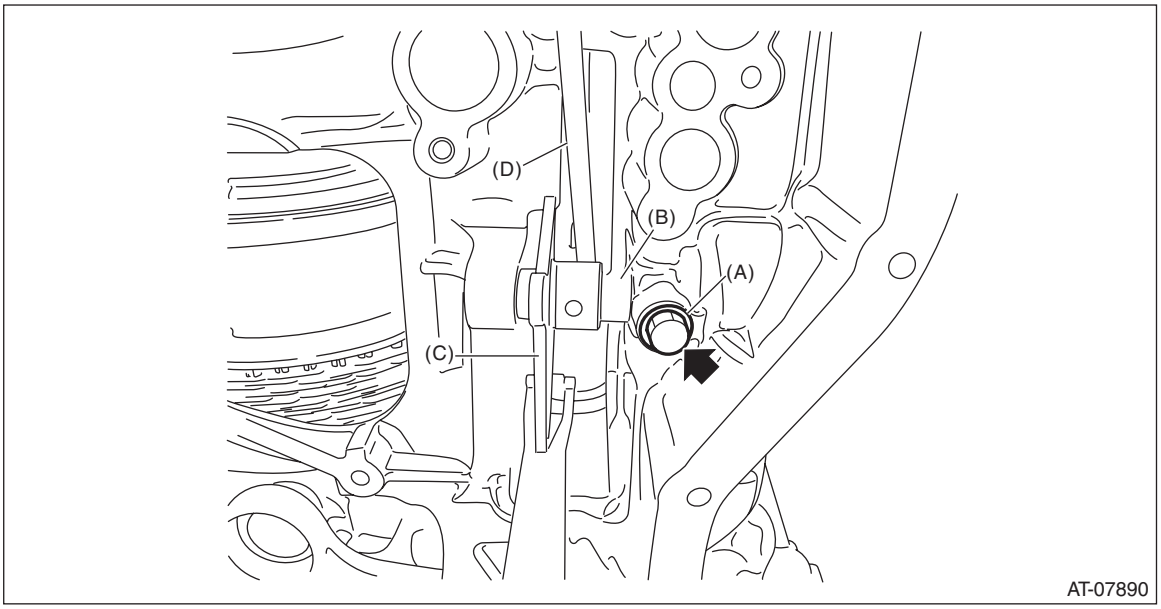
2) If clearance “A” is out of standard, select the snap ring within standard.



Snap ring	
Part No.	Thickness mm (in)
805100460	2.0 (0.079)
805100461	2.1 (0.083)
805100462	2.2 (0.087)
805100463	2.3 (0.091)
805100464	2.4 (0.094)

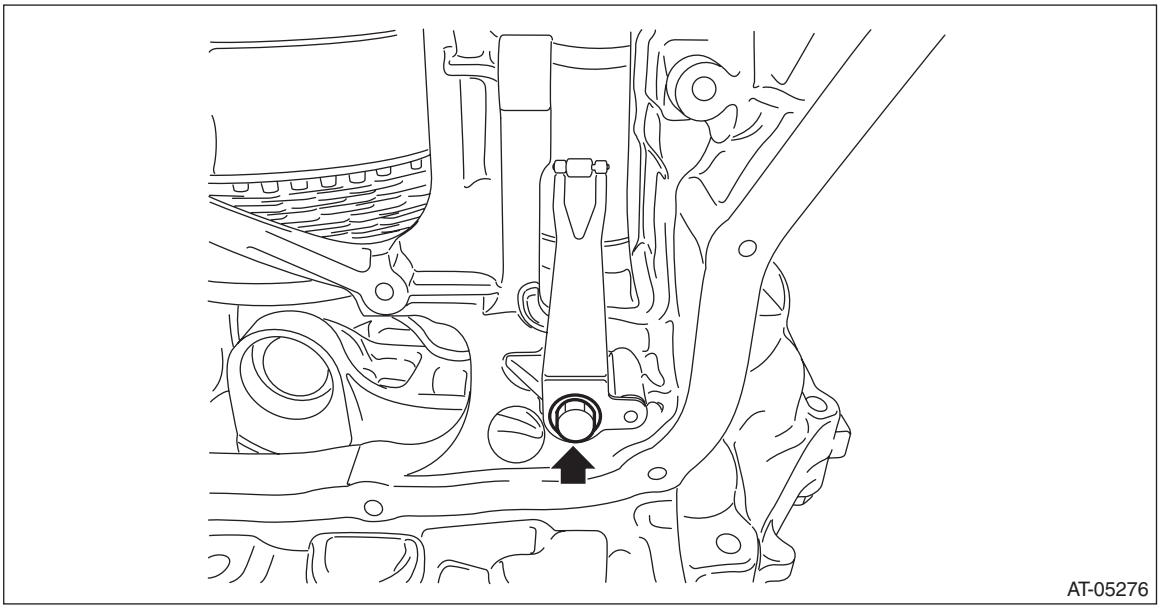
40.Transmission Control Device

A: REMOVAL



1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-58, REMOVAL, Automatic Transmission Assembly.>
2) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-123, REMOVAL, Control Valve Body.>
3) Remove the inhibitor switch. <Ref. to CVT(TR690)-106, REMOVAL, Inhibitor Switch.>
4) Remove the spring pin.

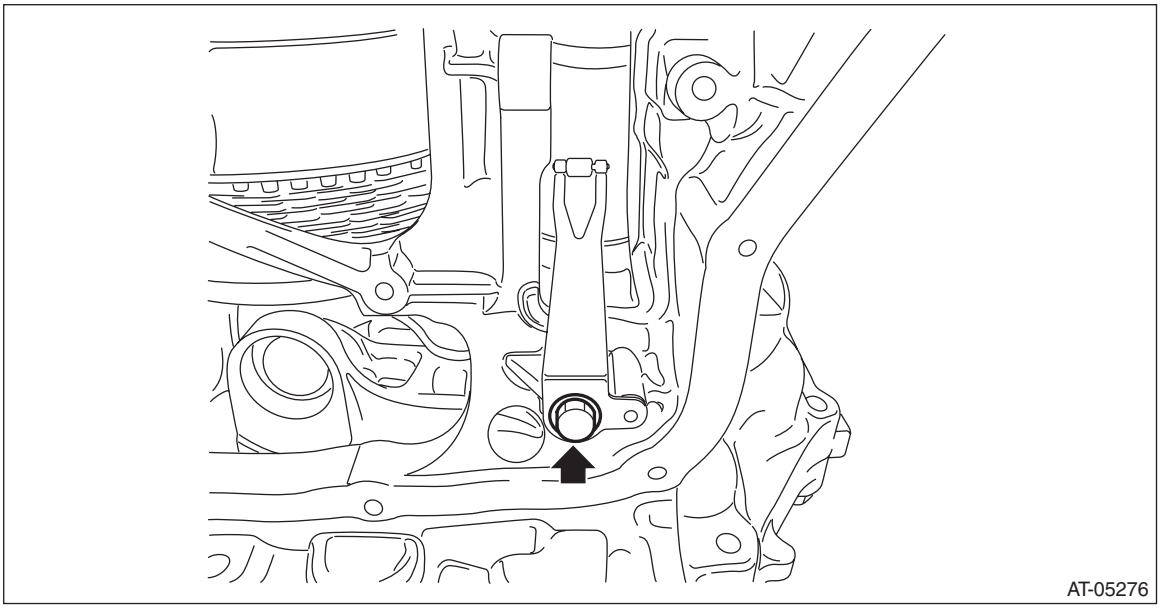
NOTE:
Prevent the spring pin from dropping in the transmission using paper towel etc.



5) Remove the bolt and remove the range select lever, manual plate and parking rod.

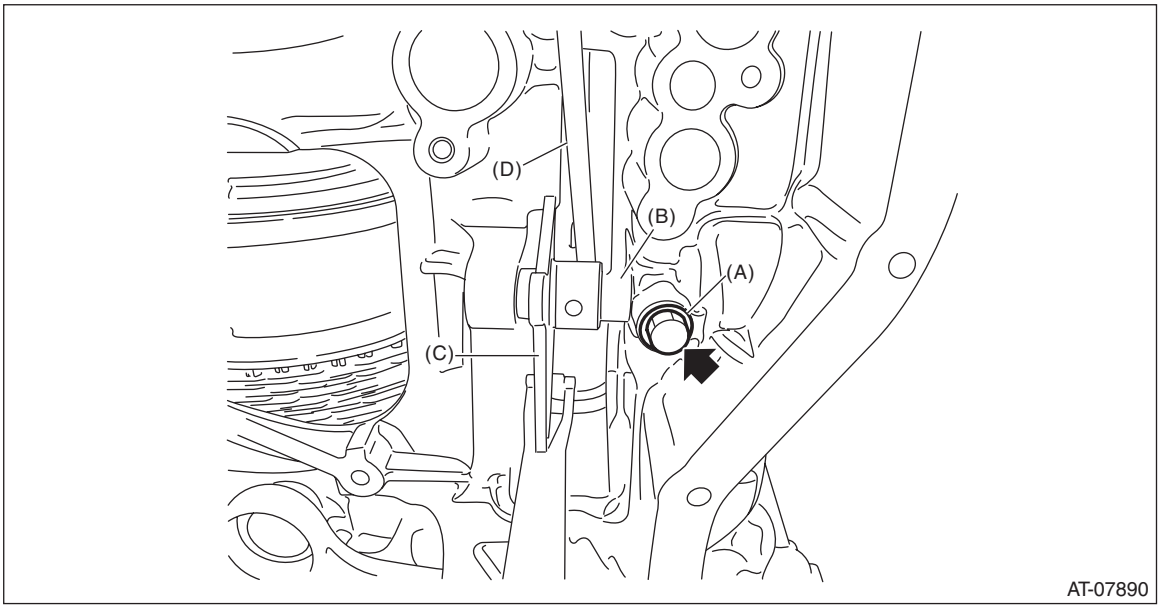
NOTE:
Do not damage the lip of oil seal press-fitted in the case.

(A) Bolt
(B) Range select lever
(C) Manual plate
(D) Parking rod



6) Remove the detent spring.

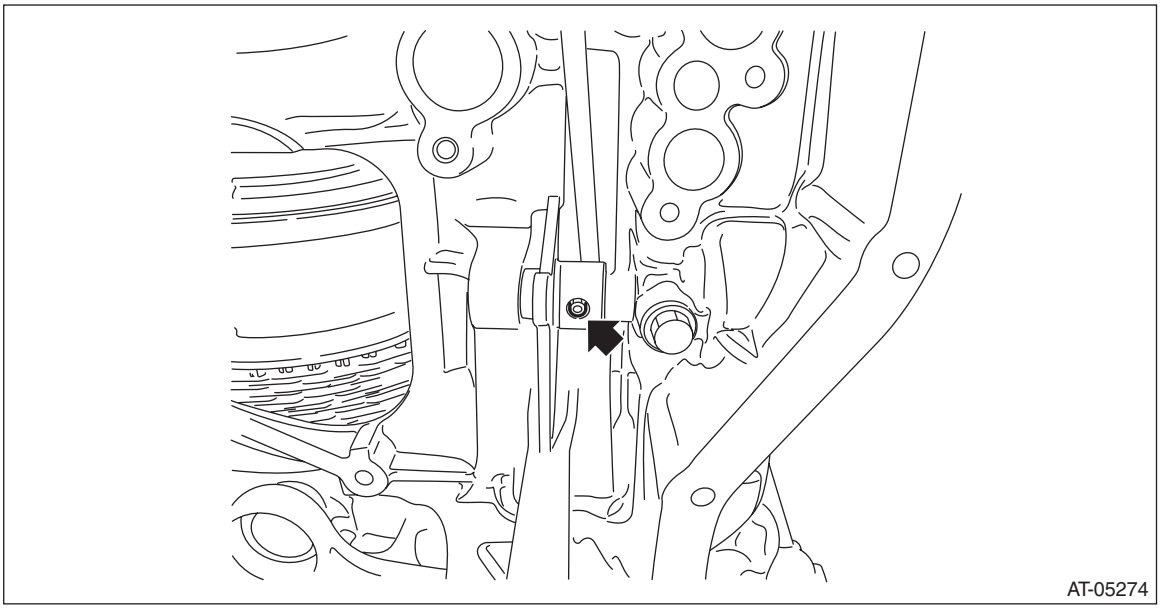
B: INSTALLATION



1) Install the detent spring to the transmission case.

Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)

2) Install the manual plate, parking rod, range select lever and bolt.



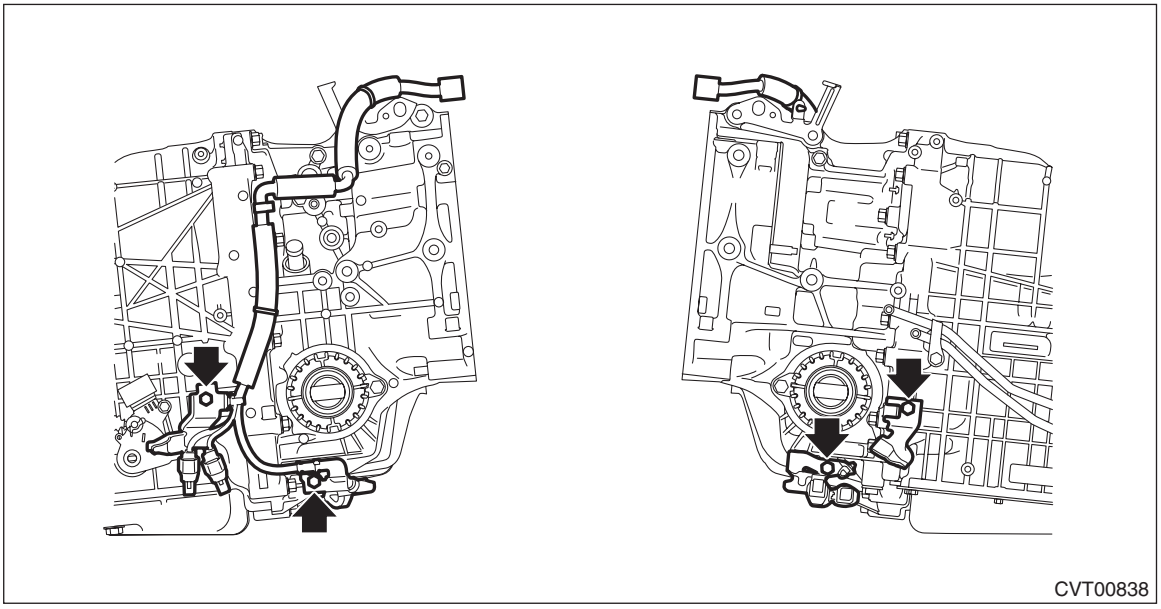
Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)

(A) Bolt
(B) Range select lever
(C) Manual plate
(D) Parking rod

3) Install the spring pin.

NOTE:
Use new spring pin.

4) Install the inhibitor switch. <Ref. to CVT(TR690)-102, Inhibitor Switch.>
5) Adjust the inhibitor switch. <Ref. to CVT(TR690)-102, Inhibitor Switch.>
6) Install the control valve body and oil pan. <Ref. to CVT(TR690)-127, INSTALLATION, Control Valve Body.>
7) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-75, INSTALLATION, Automatic Transmission Assembly.>

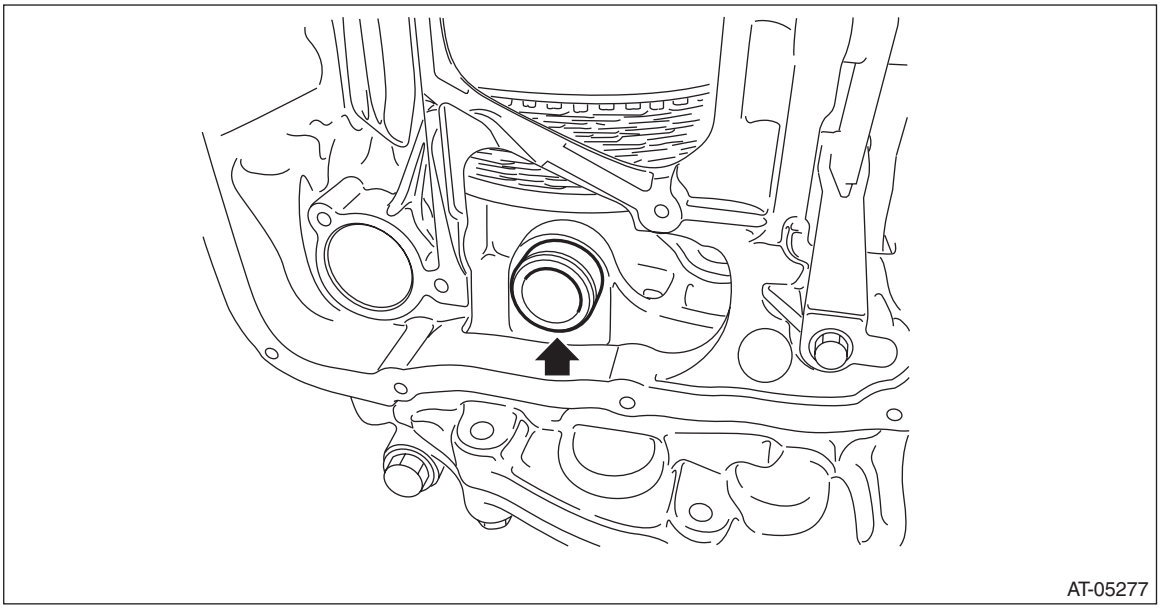


C: INSPECTION

Make sure that the manual lever and detent spring are not worn or otherwise damaged.

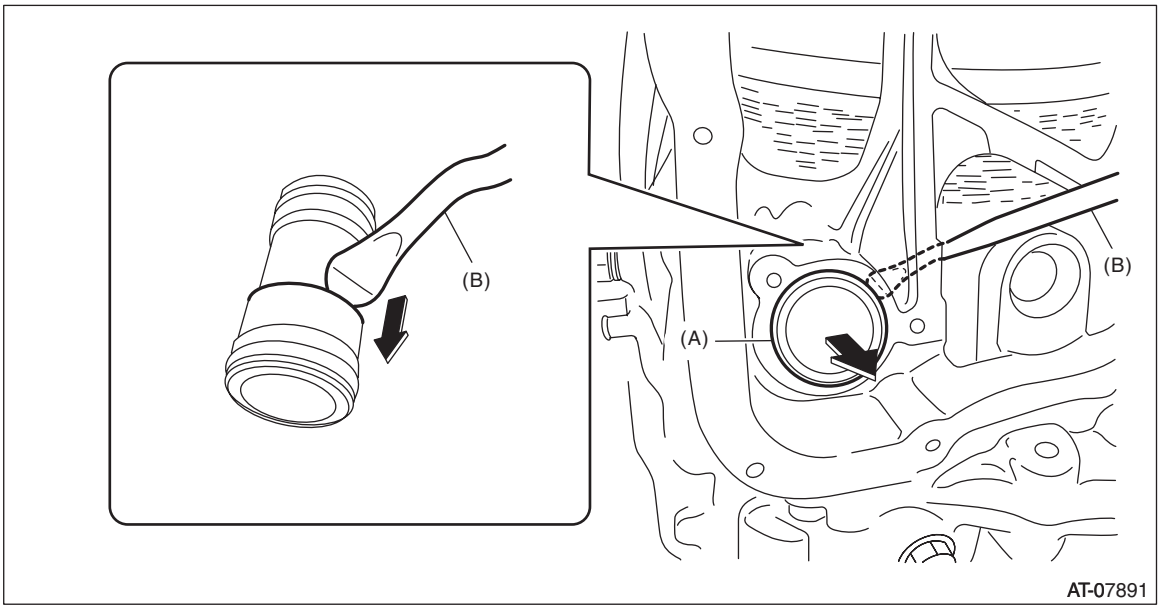
41.Transmission Case

A: REMOVAL



1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-58, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-151, REMOVAL, Air Breather Hose.>
3) Remove the transmission harness. <Ref. to CVT(TR690)-134, REMOVAL, Transmission Harness.>
4) Remove the secondary speed sensor. <Ref. to CVT(TR690)-111, REMOVAL, Secondary Speed Sensor.>
5) Remove the oxygen sensor harness and harness bracket.

6) Remove the inhibitor switch. <Ref. to CVT(TR690)-106, REMOVAL, Inhibitor Switch.>
7) Remove the extension case. <Ref. to CVT(TR690)-159, REMOVAL, Extension Case.>
8) Remove the rear drive shaft. <Ref. to CVT(TR690)-162, REMOVAL, Rear Drive Shaft.>
9) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-167, REMOVAL, Transfer Clutch.>
10) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-179, REMOVAL, Transfer Reduction Driven Gear.>
11) Remove the intermediate case. <Ref. to CVT(TR690)-185, REMOVAL, Intermediate Case.>
12) Remove the forward clutch assembly. <Ref. to CVT(TR690)-200, REMOVAL, Forward Clutch Assembly.>
13) Remove the reduction driven gear. <Ref. to CVT(TR690)-229, REMOVAL, Reduction Driven Gear.>

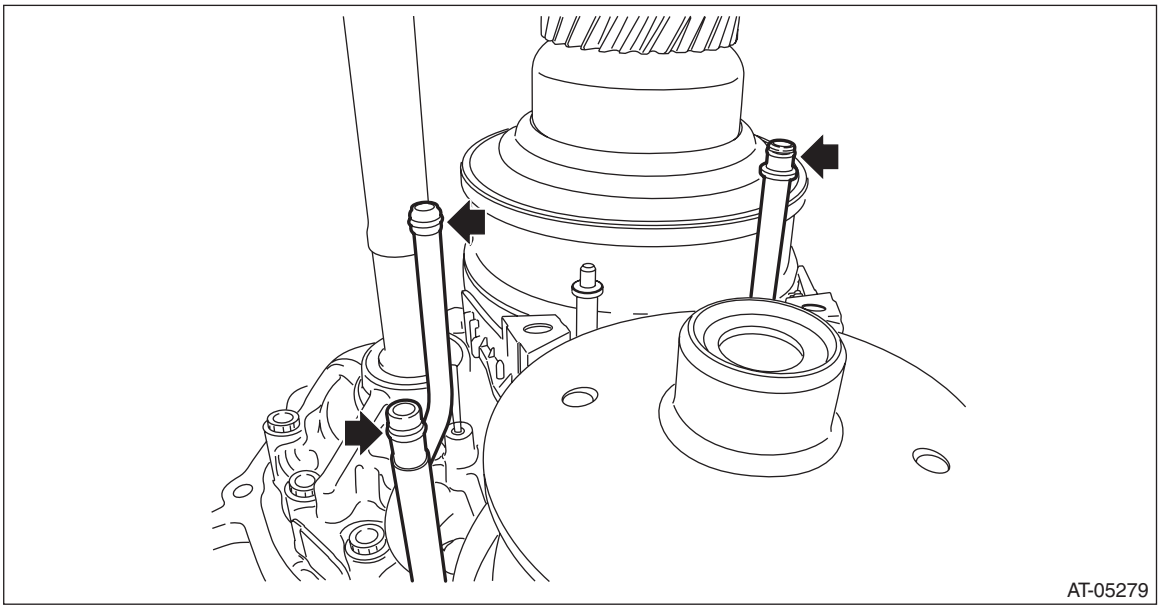


14) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-123, REMOVAL, Control Valve Body.>

NOTE:
When removing the control valve body, also remove the pressure pipe if it is attached on the case.

15) Remove the CVTF pipe using a tire lever etc.

NOTE:
Remove by hooking the stepped portion of CVTF pipe with a tire lever etc.

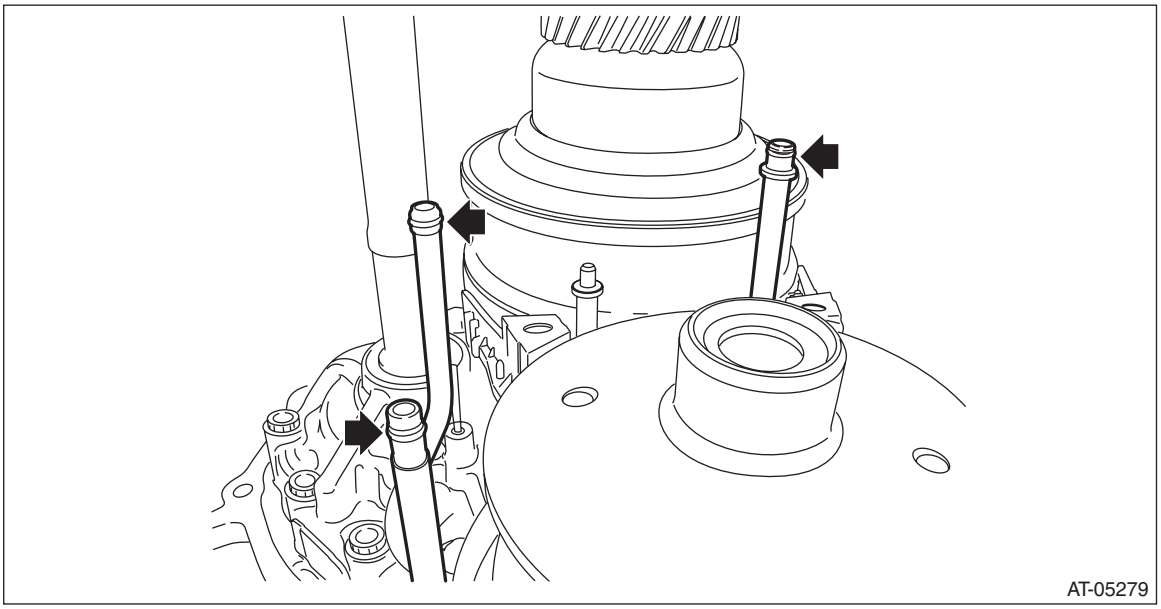


(A) CVTF pipe
(B) Tire lever

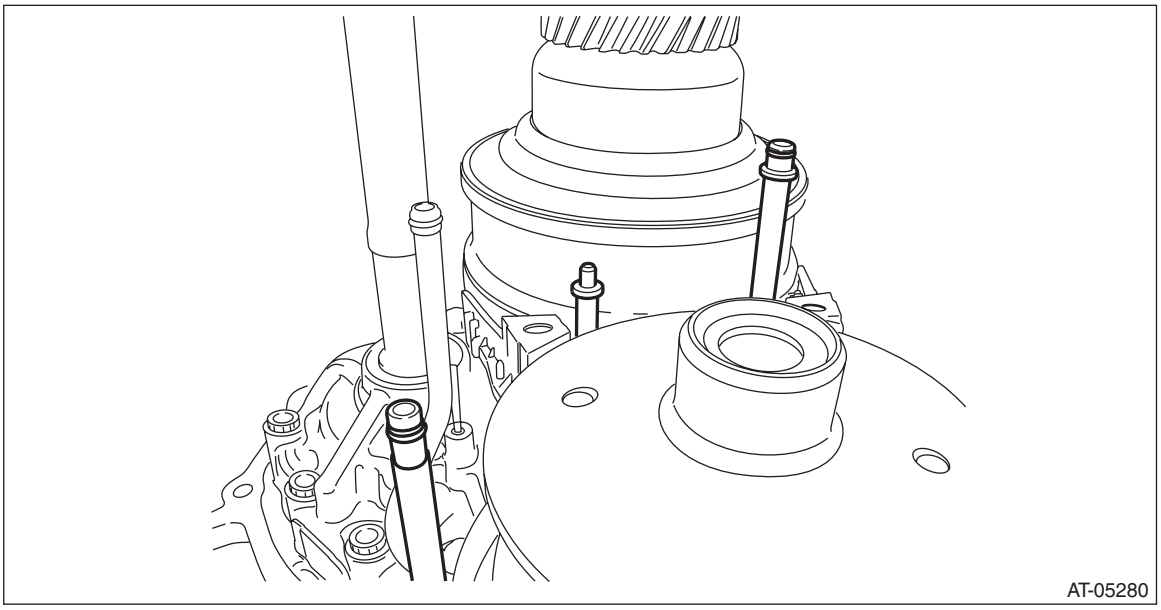
16) Remove the transmission case.

NOTE:
The total number of transmission case mounting bolts is 15.

17) Remove the O-ring of lubrication pipe.



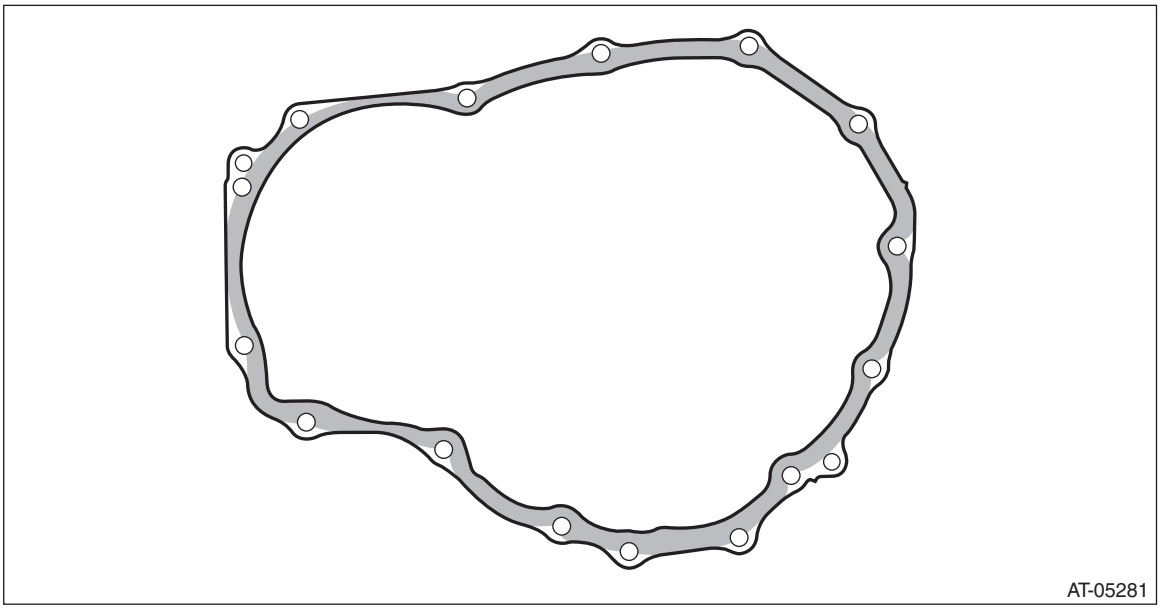
18) Remove the control device system. <Ref. to CVT(TR690)-236, REMOVAL, Transmission Control Device.>



B: INSTALLATION

1) Clean the mating surface of transmission case and converter case.
2) Install the control device system. <Ref. to CVT(TR690)-238, INSTALLATION, Transmission Control Device.>
3) Install the O-ring to the lubrication pipe.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.



4) Make sure the lubrication pipe and support rod are in vertical position.

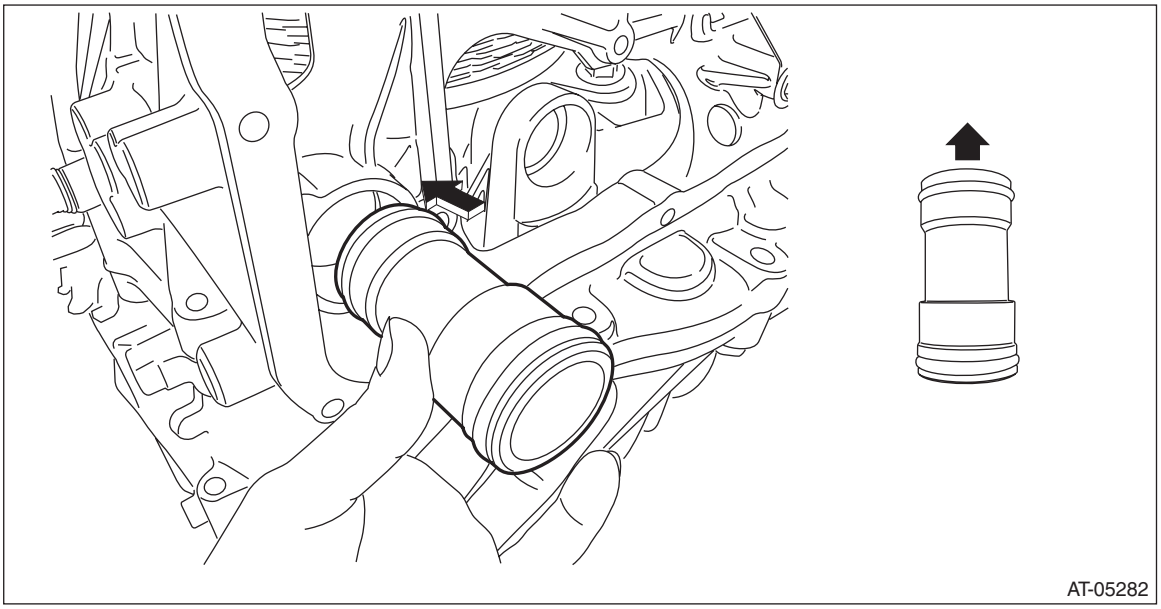
5) Apply liquid gasket seamlessly to the mating surface of transmission case.

Liquid gasket:
THREE BOND 1215B or equivalent

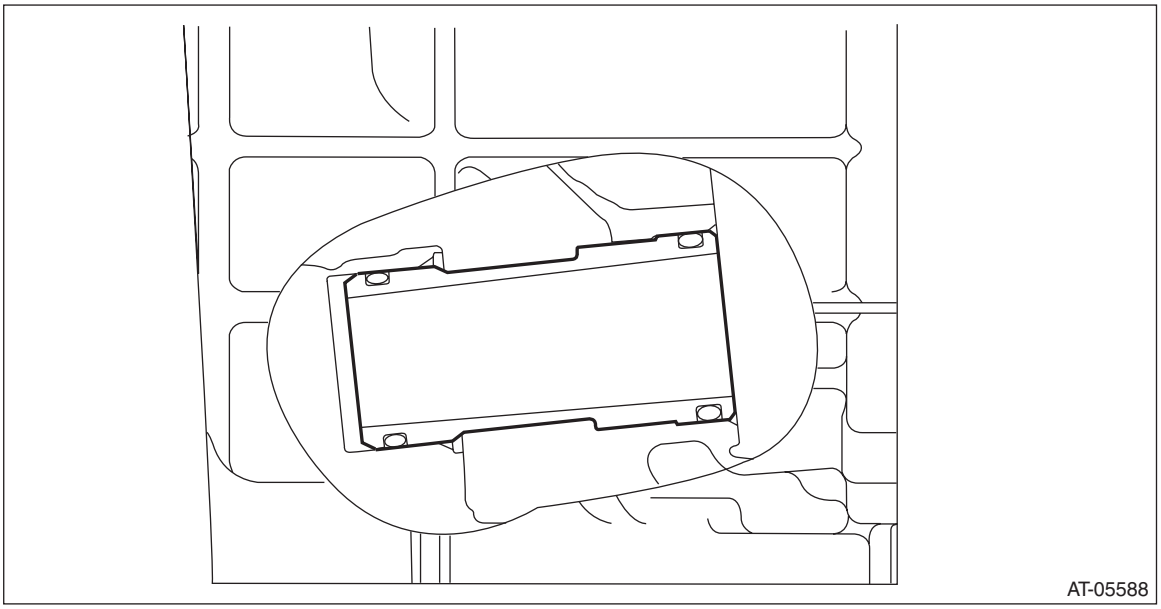
6) Install the transmission case.

CAUTION:
If the transmission case gets in contact with the lubrication pipe and support rod, do not install the transmission case forcibly.

NOTE:
• Install while checking the lubrication pipe and support rod is being inserted properly into transmission case.
• If installing the transmission is difficult, check if the lubrication pipe and support rod are bent.
• The total number of transmission case mounting bolts is 15.



Tightening torque:
41 N·m (4.2 kgf-m, 30.2 ft-lb)

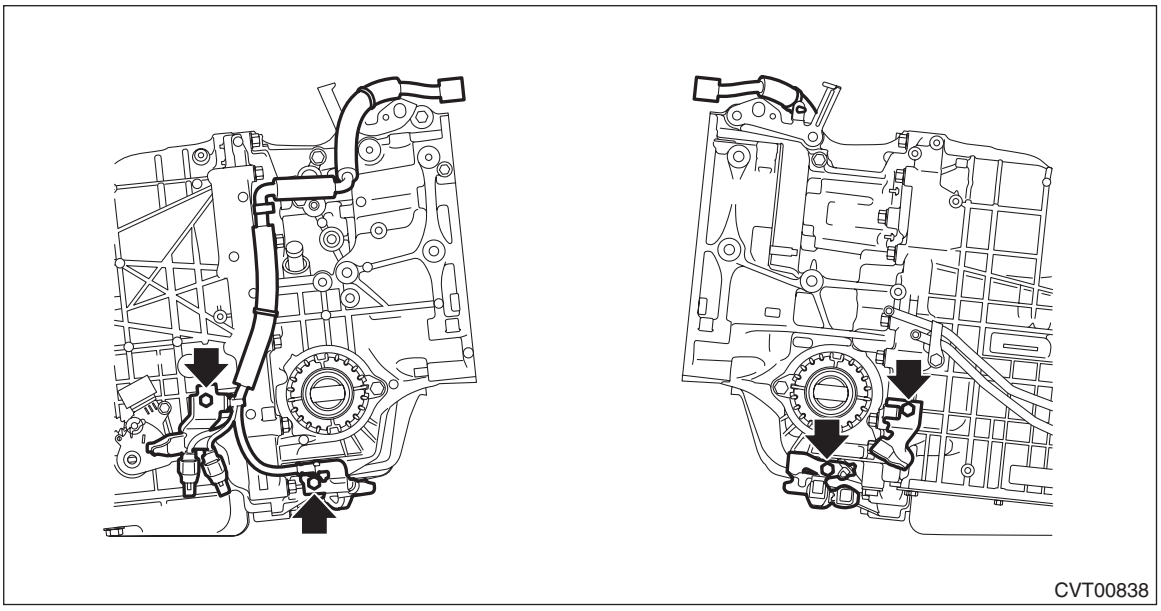


7) Install the O-ring to CVTF pipe.

NOTE:
Use new O-rings.

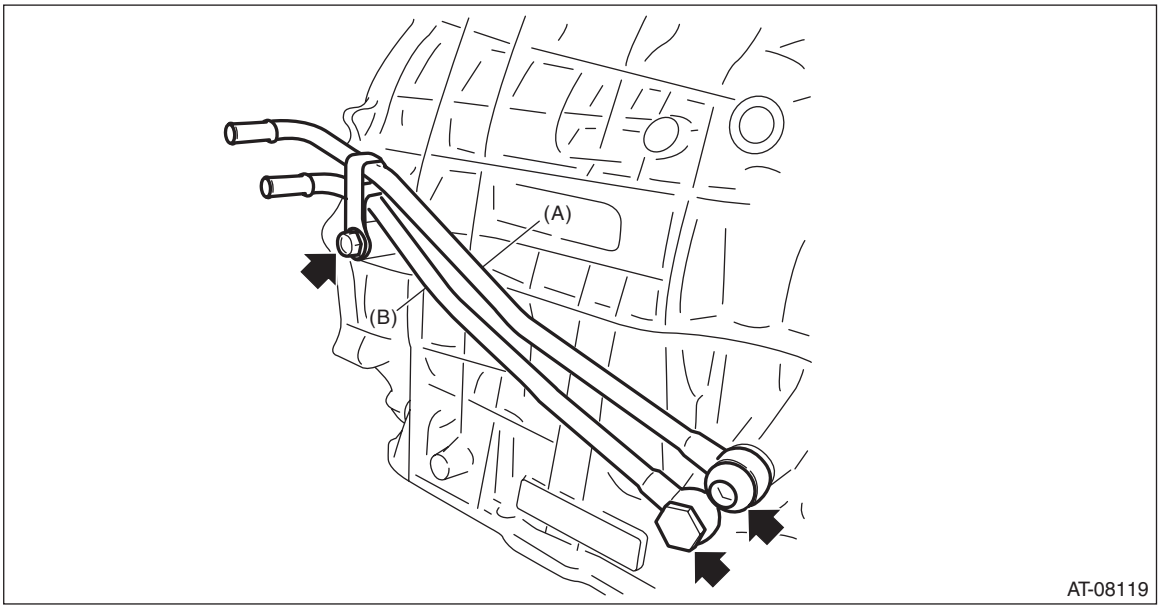
8) The smaller opening of CVTF pipe should be inserted to transmission.

NOTE:
After installing, make sure the CVTF pipe does not stick out of transmission case.



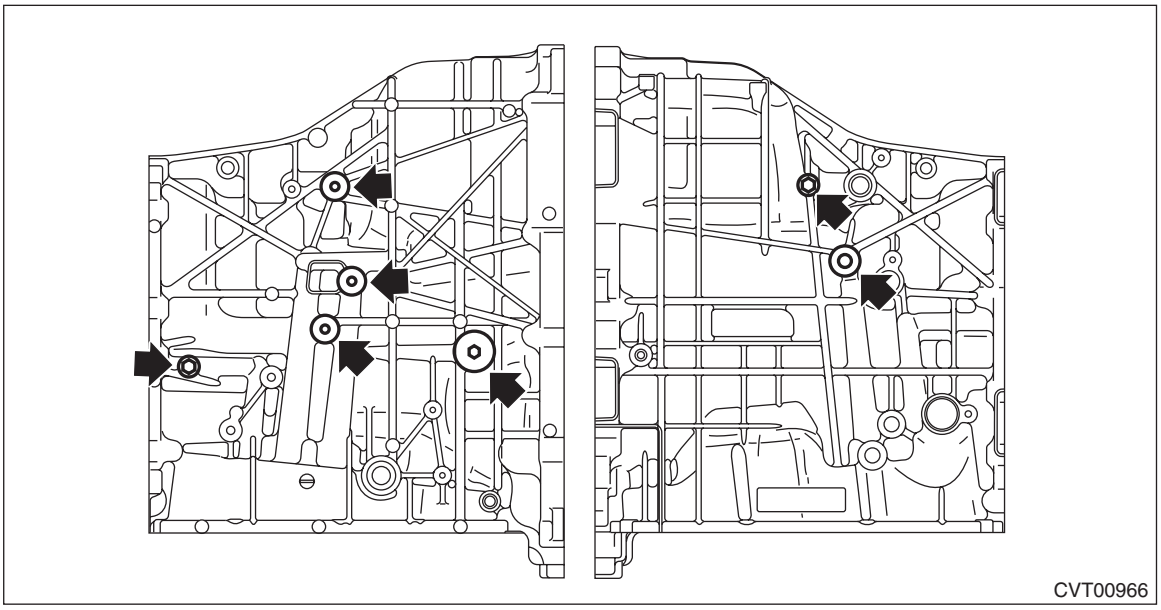
9) Install the reduction driven gear. <Ref. to CVT(TR690)-230, INSTALLATION, Reduction Driven Gear.>
10) Install the forward clutch assembly. <Ref. to CVT(TR690)-201, INSTALLATION, Forward Clutch Assembly.>
11) Install the intermediate case. <Ref. to CVT(TR690)-186, INSTALLATION, Intermediate Case.>
12) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-179, INSTALLATION, Transfer Reduction Driven Gear.>
13) Install the transfer clutch assembly. <Ref. to CVT(TR690)-168, INSTALLATION, Transfer Clutch.>
14) Install the rear drive shaft. <Ref. to CVT(TR690)-162, INSTALLATION, Rear Drive Shaft.>
15) Install the extension case. <Ref. to CVT(TR690)-160, INSTALLATION, Extension Case.>
16) Install the inhibitor switch. <Ref. to CVT(TR690)-108, INSTALLATION, Inhibitor Switch.>

17) Install the oxygen sensor harness and harness bracket.



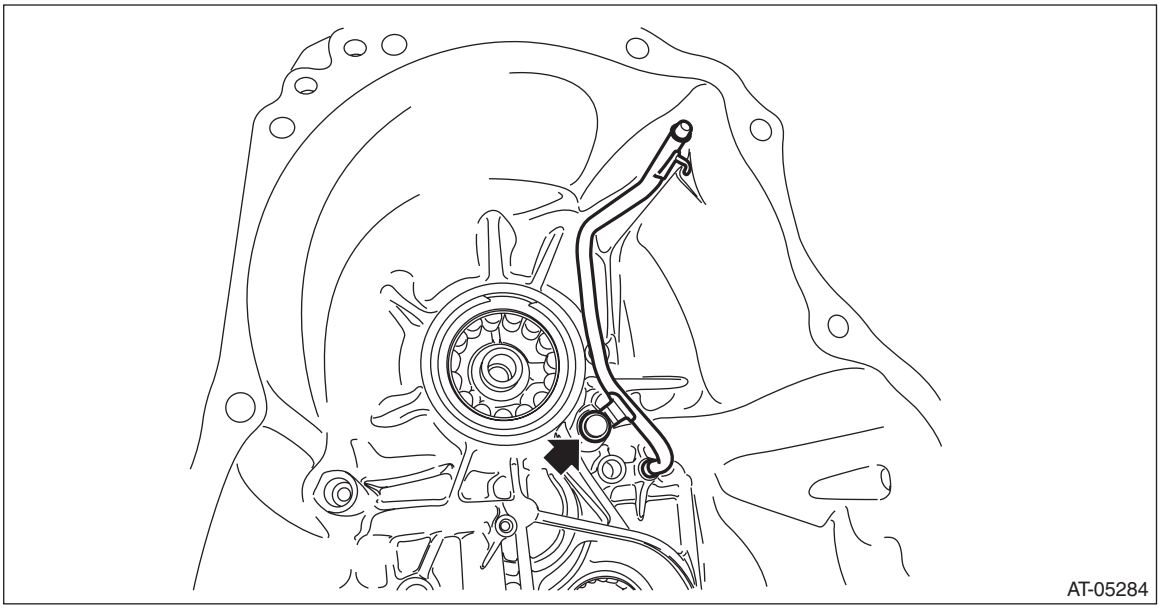
Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

18) Install the secondary speed sensor. <Ref. to CVT(TR690)-112, INSTALLATION, Secondary Speed Sensor.>
19) Install the transmission harness. <Ref. to CVT(TR690)-136, INSTALLATION, Transmission Harness.>
20) Install the control valve body and oil pan. <Ref. to CVT(TR690)-127, INSTALLATION, Control Valve Body.>
21) Install the air breather hose. <Ref. to CVT(TR690)-153, INSTALLATION, Air Breather Hose.>
22) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-75, INSTALLATION, Automatic Transmission Assembly.>

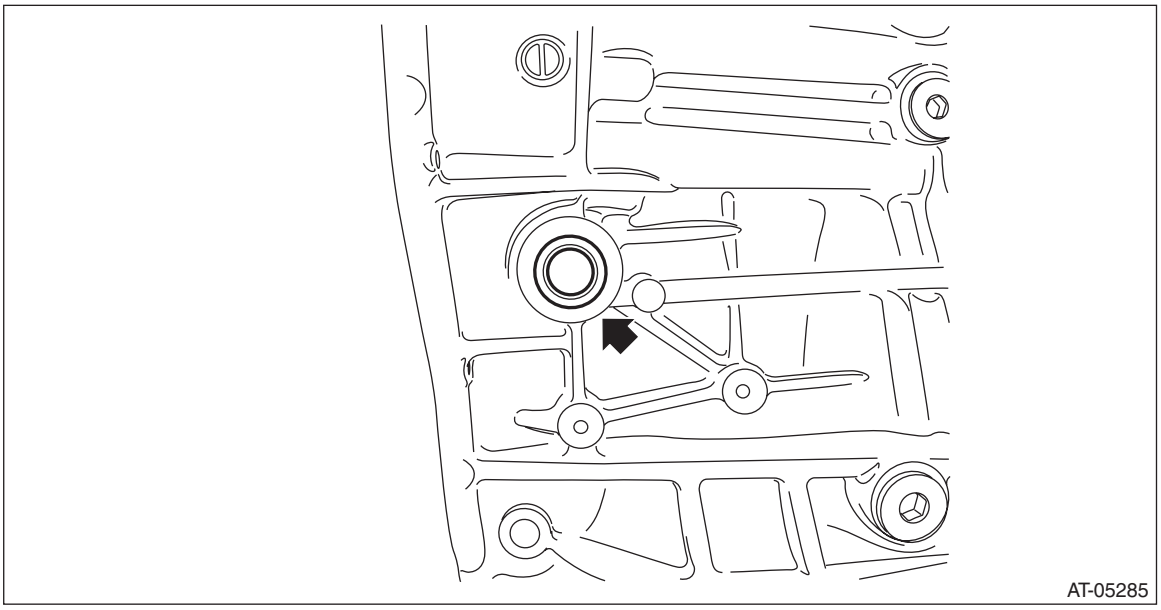


C: DISASSEMBLY

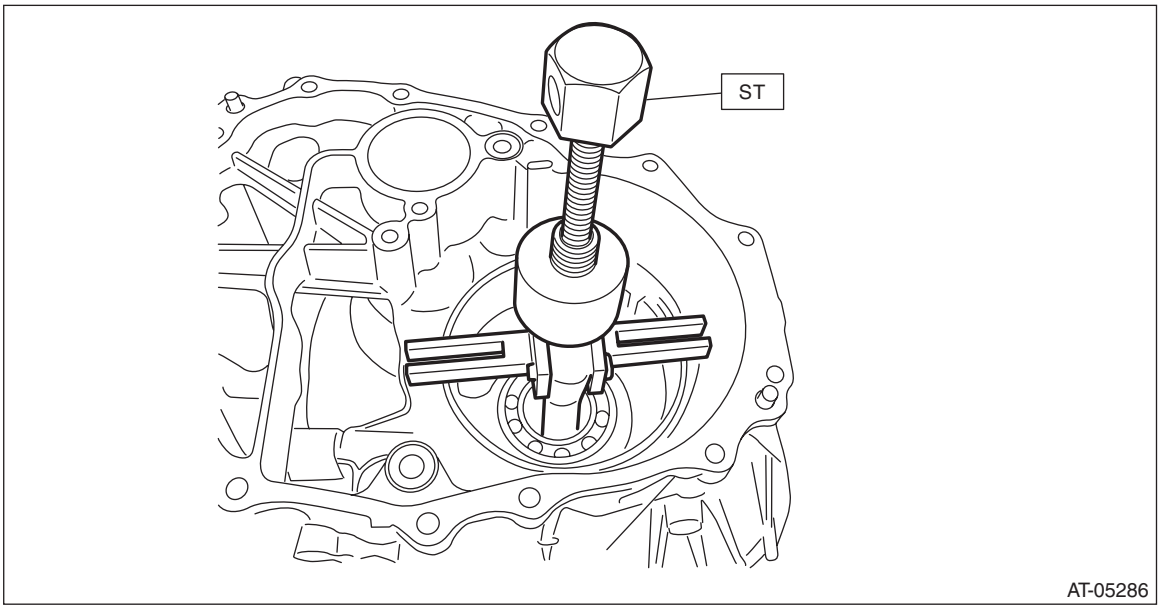
1) Remove the CVTF inlet pipe and CVTF outlet pipe.



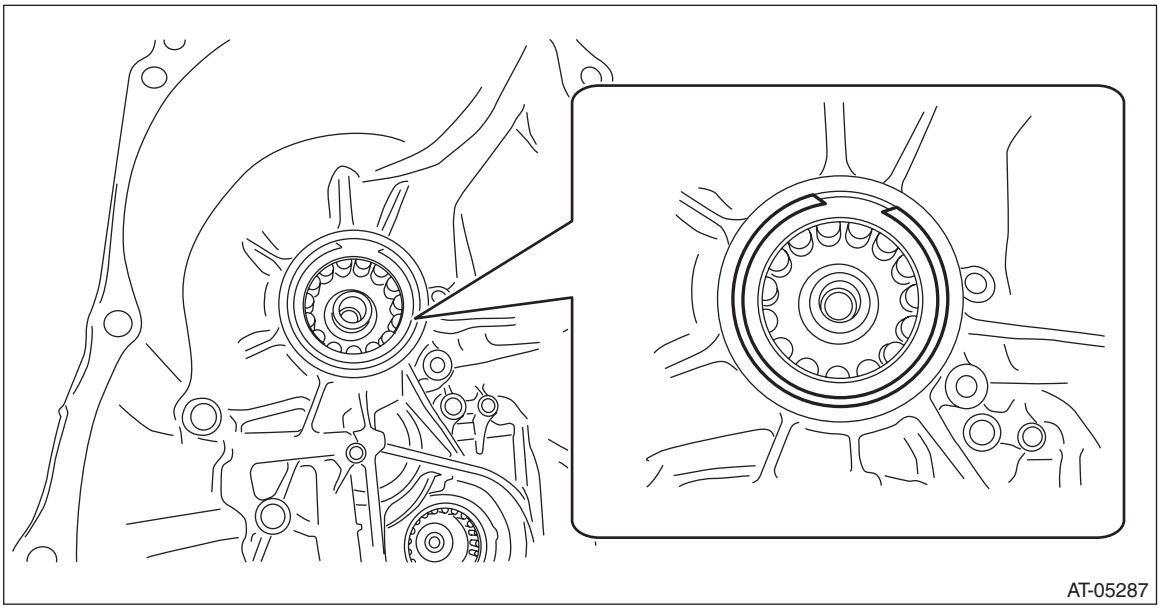
(A) CVTF outlet pipe
(B) CVTF inlet pipe



2) Remove all plugs from the transmission case.

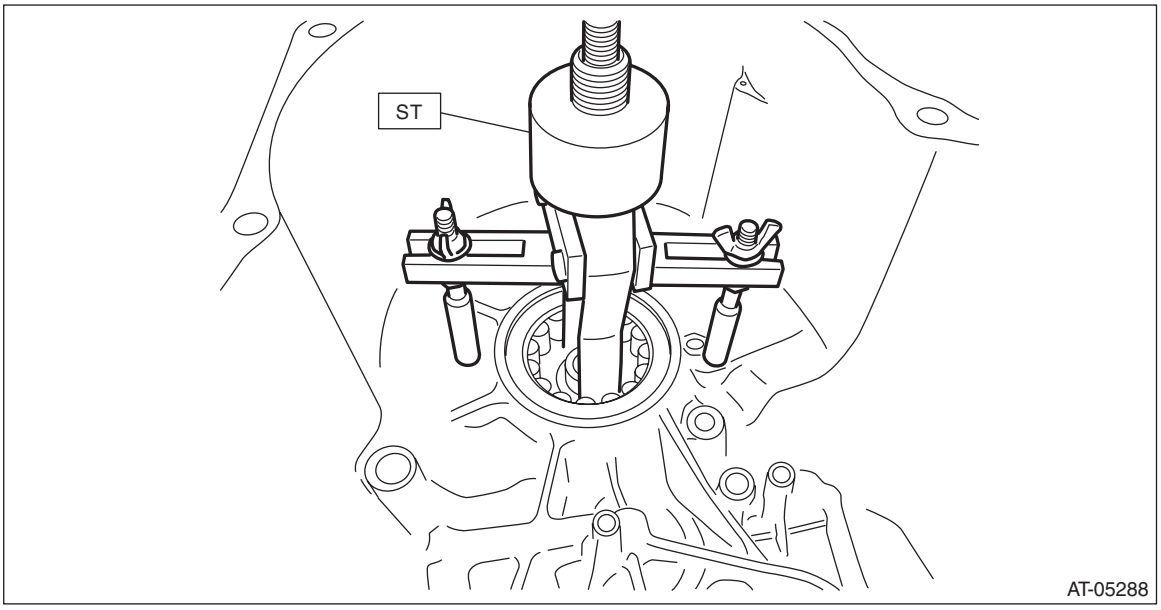


3) Remove the lubrication pipe.

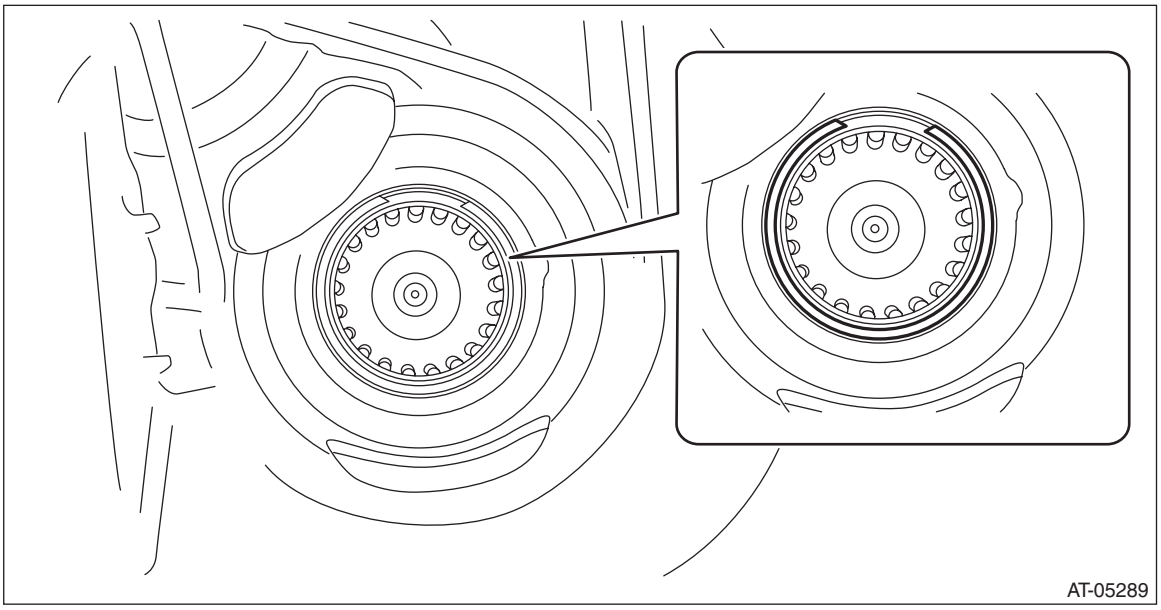


4) Remove the oil seal using a screwdriver wrapped with cloth etc.

5) Remove the ball bearing from reduction driven gear using ST.
ST 398527700 PULLER ASSY

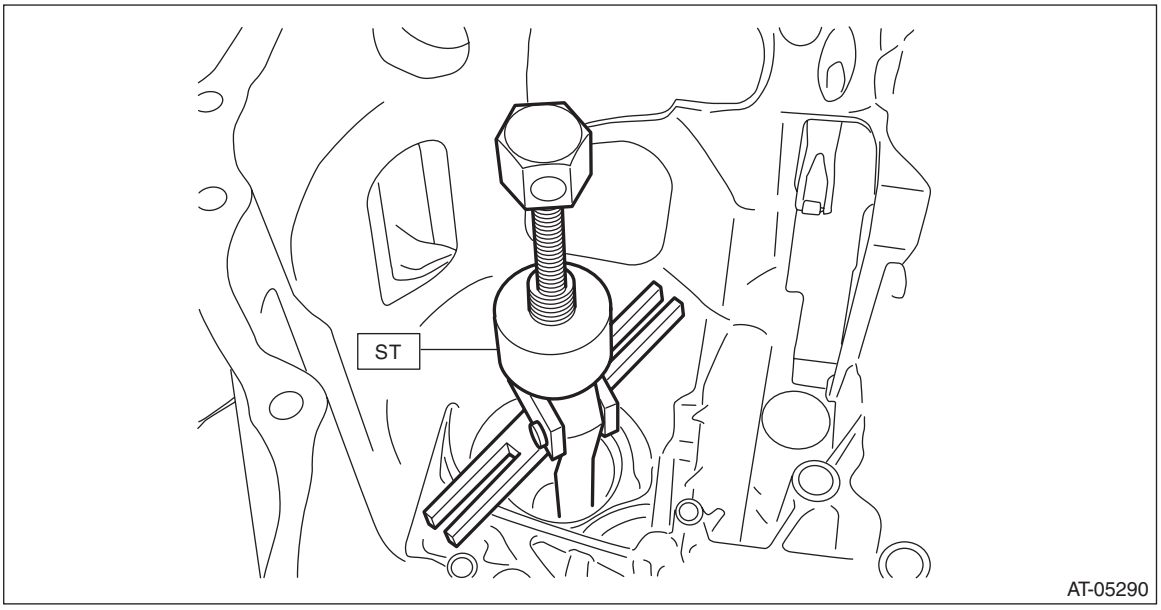


6) Remove the snap ring on primary pulley side.

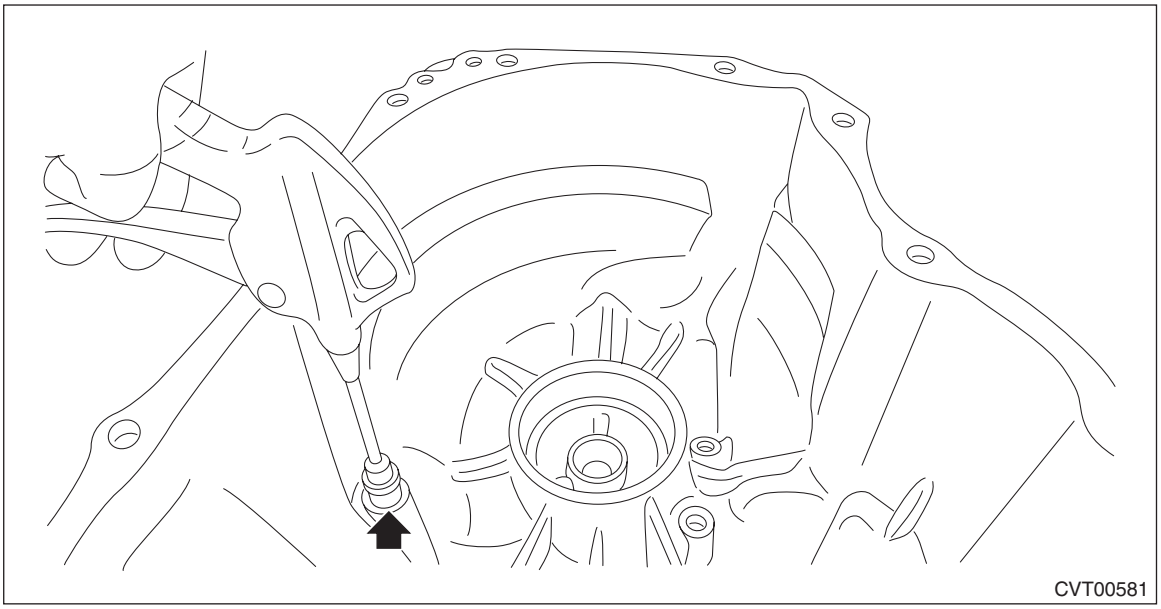


7) Using the ST, remove the roller bearing on primary pulley side.

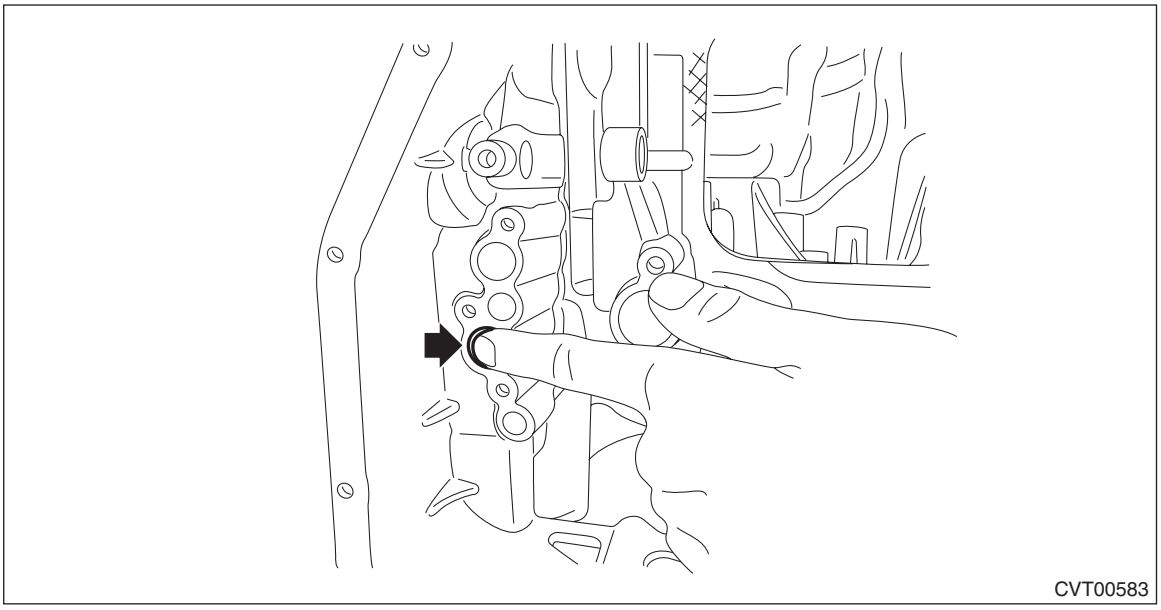
NOTE:
Warm up the bearing area of transmission case using a drier or heat gun.
ST 398527700 PULLER ASSY



8) Remove the snap ring on secondary pulley side.



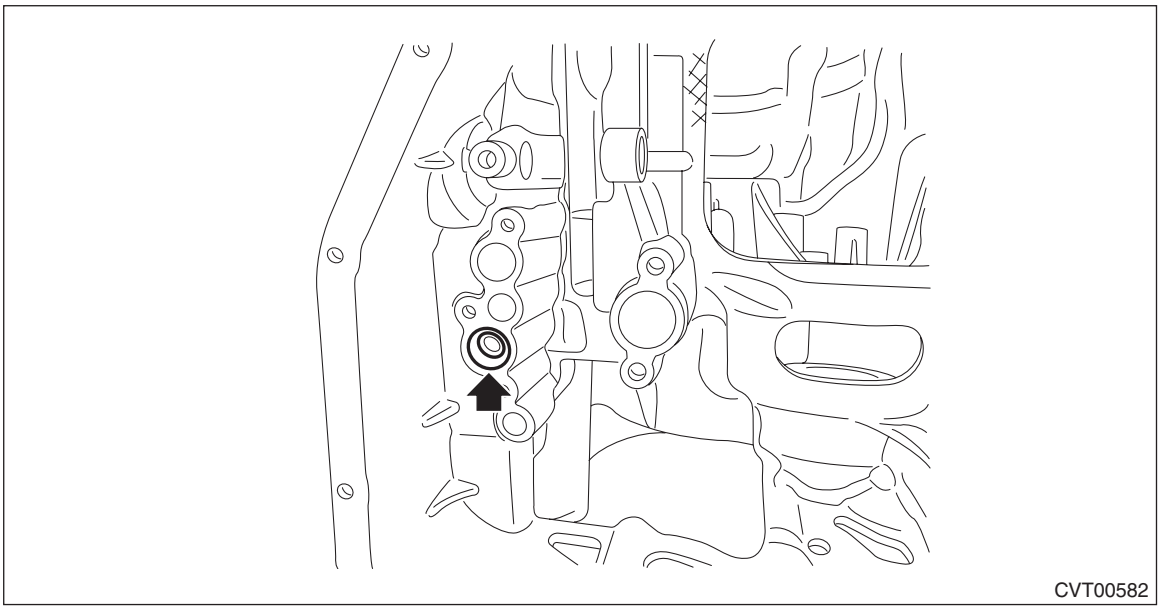
9) Using the ST, remove the roller bearing on secondary pulley side.



NOTE:
Warm up the bearing area of transmission case using a drier or heat gun.
ST 398527700 PULLER ASSY

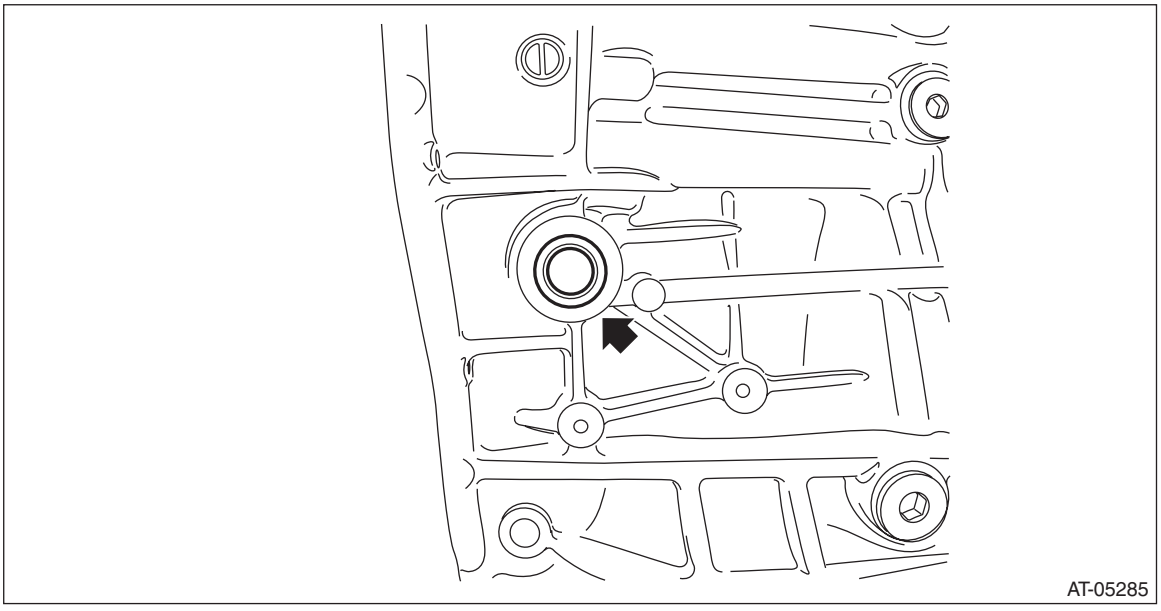
10) Remove the CVTF filter by blowing compressed air through the transmission case hole.

NOTE:
Hold the CVTF filter with a finger to prevent compressed air from leaking.



CVT00581

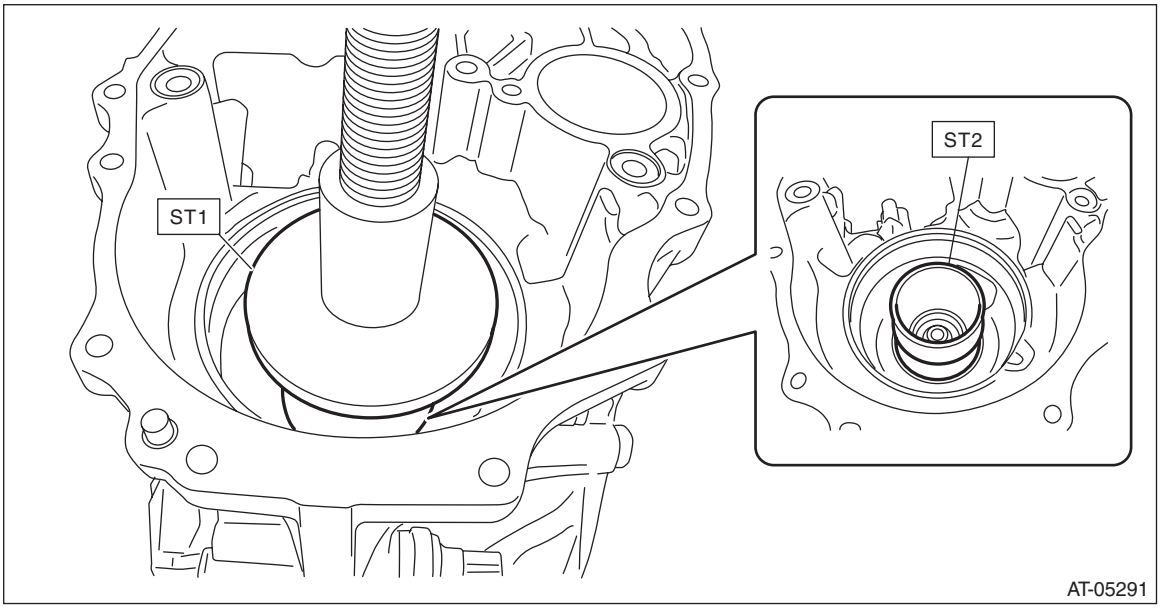
CVT00583



D: ASSEMBLY

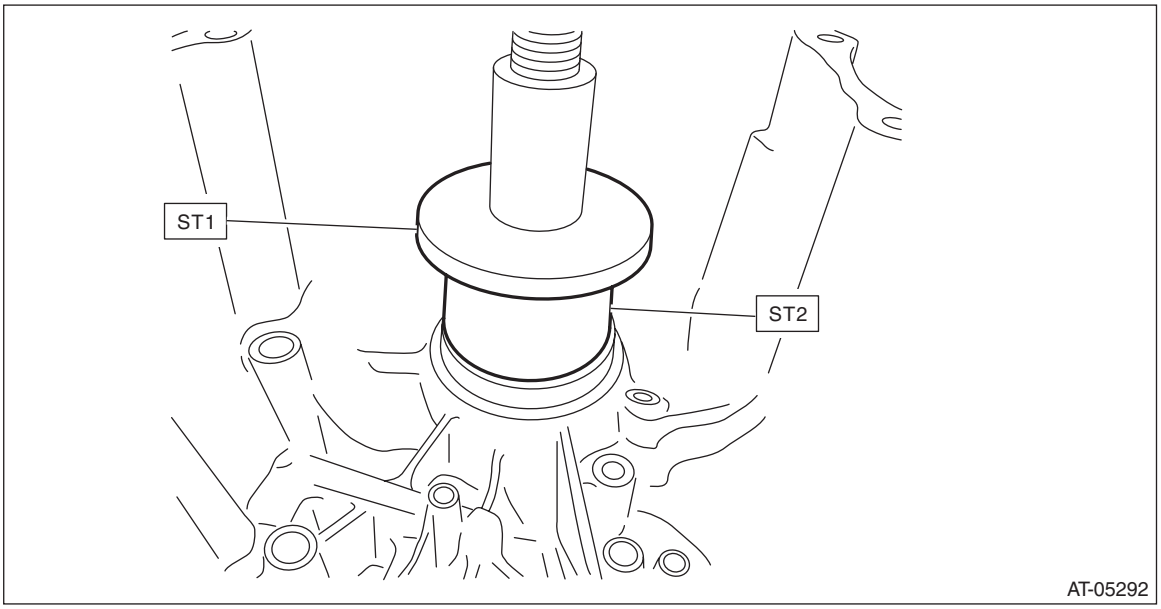
1) Install the CVTF filter.

NOTE:
- Use a new CVTF filter.
- Apply CVTF to the CVTF filter.
- Make sure that the CVTF filter does not protrude from the transmission case.



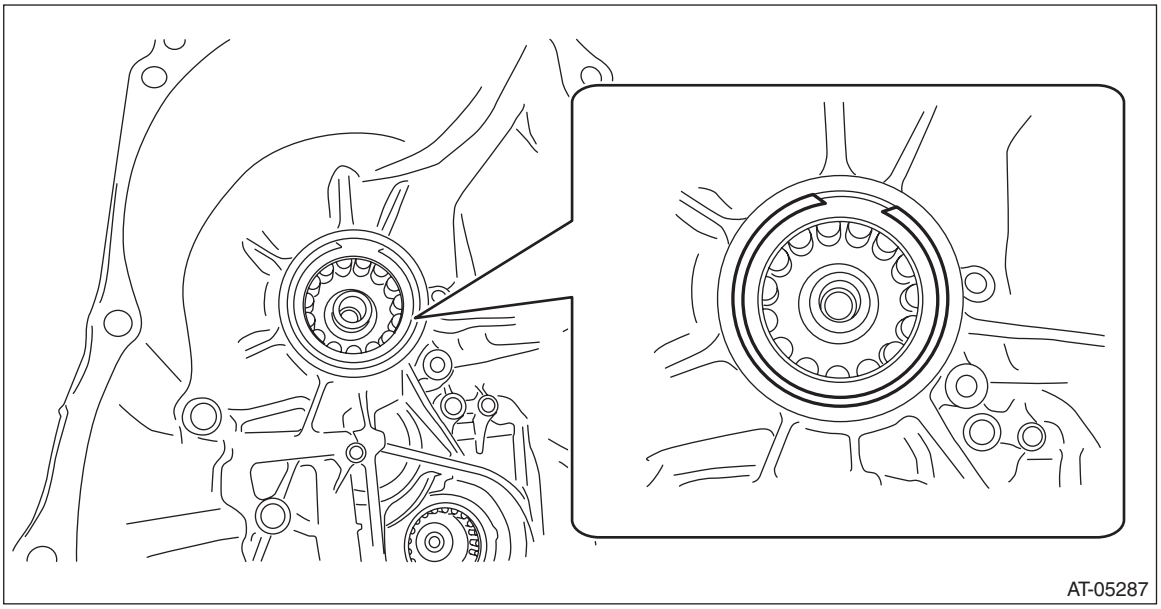
2) Using the ST, install the oil seal.
ST 18657AA000 INSTALLER

3) Using ST1 and ST2, install the ball bearing on the reduction gear side.



NOTE:
Use a new ball bearing.
ST1 398177700 INSTALLER
ST2 499755602 PRESS SNAP RING

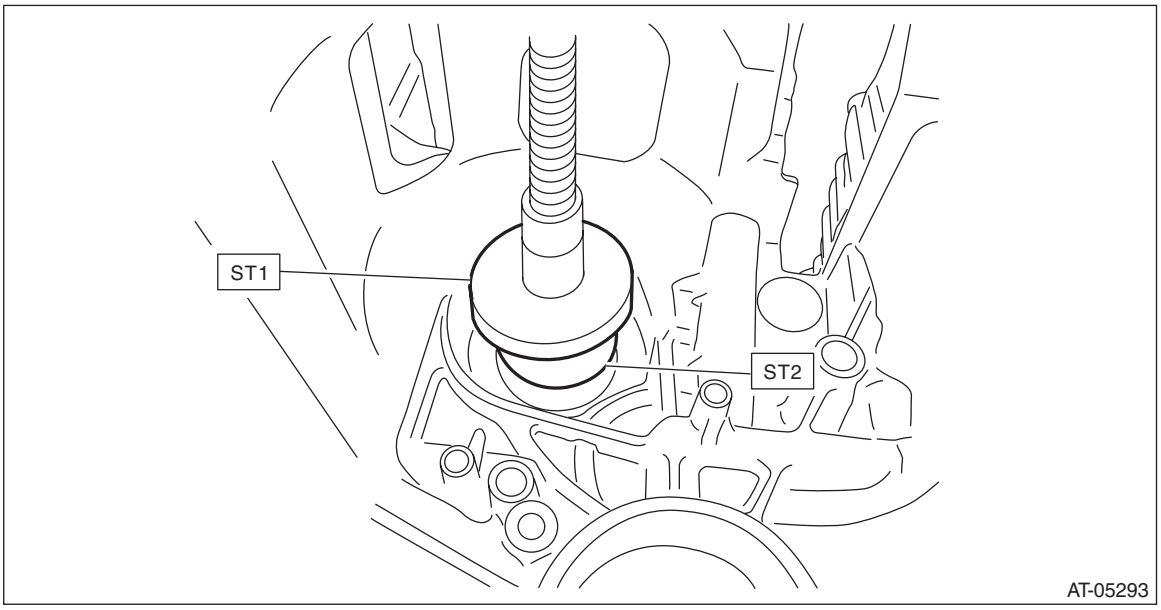
4) Using ST1 and ST2, install the roller bearing on primary pulley side.



NOTE:
- Use a new roller bearing.
- Make adjustment so that the press gets in contact with the center of ST2.

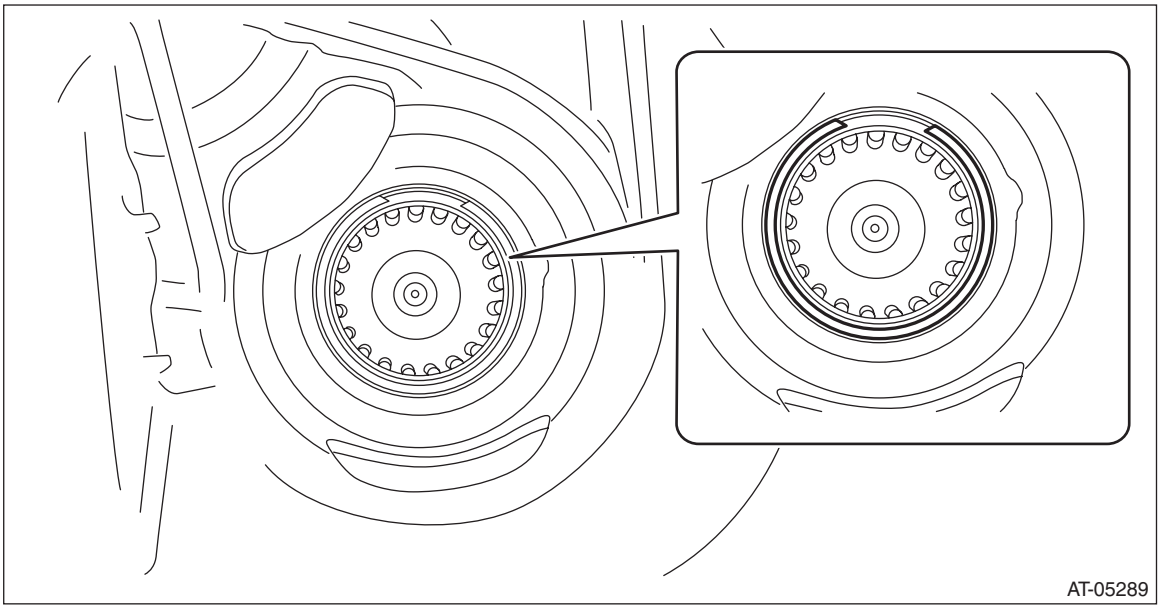
ST1 398177700 INSTALLER
ST2 20299AG010 PRESS SNAP RING

5) Install the snap ring on primary pulley side.



NOTE:
Use new snap rings.

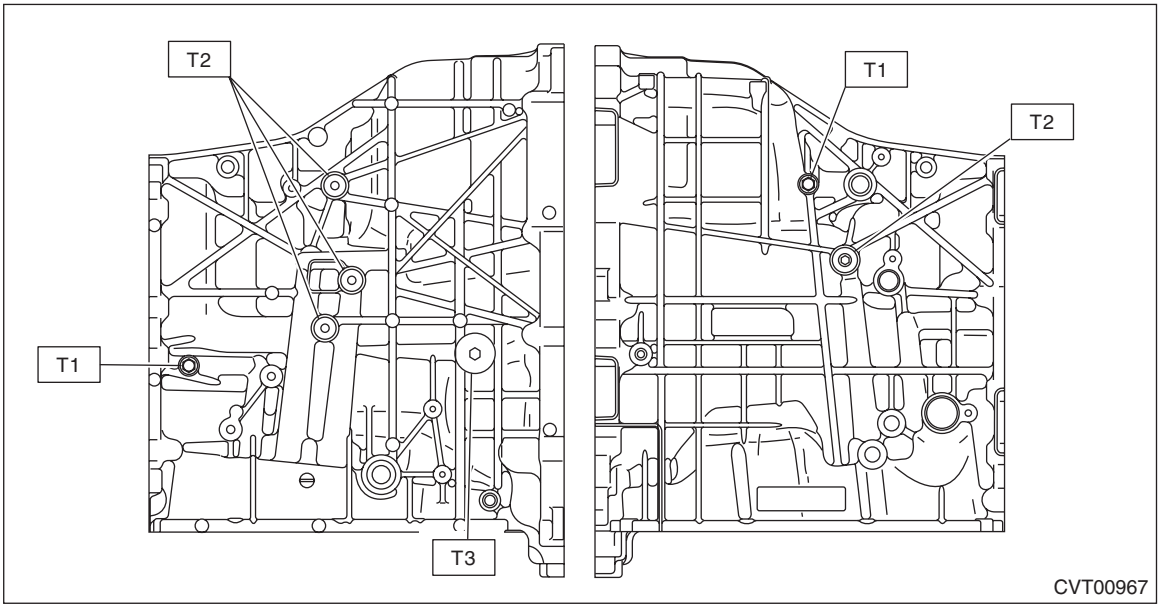
6) Using ST1 and ST2, install the roller bearing on secondary pulley side.



NOTE:
- Use a new roller bearing.
- Make adjustment so that the press gets in contact with the center of ST2.

ST1 398177700 INSTALLER
ST2 499755602 PRESS SNAP RING

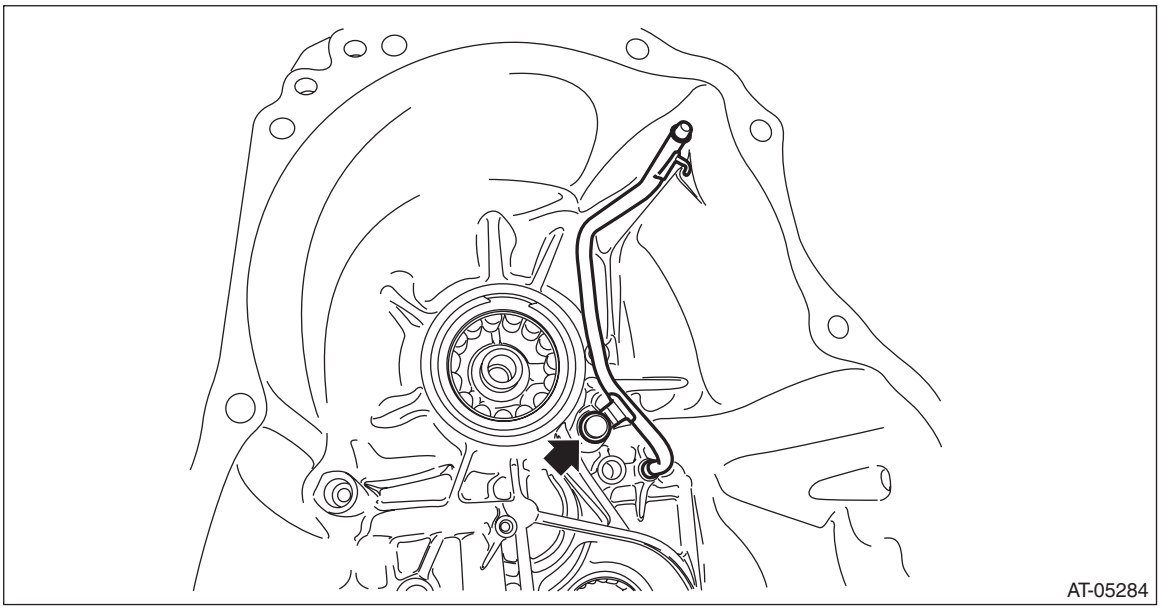
7) Install the snap ring on secondary pulley side.



NOTE:
Use new snap rings.

8) Install all plugs.

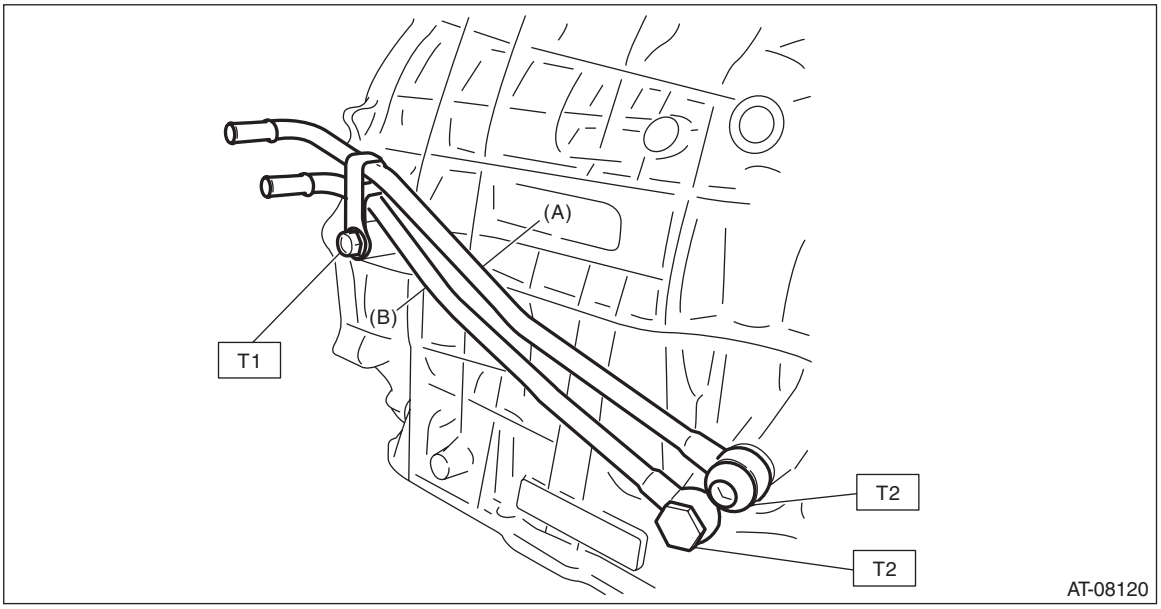
NOTE:
Use new gaskets and O-rings.



Tightening torque:
T1: 13 N·m (1.3 kgf-m, 9.6 ft-lb)
T2: 25 N·m (2.5 kgf-m, 18.4 ft-lb)
T3: 35 N·m (3.5 kgf-m, 25.8 ft-lb)

9) Install the lubrication pipe and O-ring.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.



Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)

10) Install the CVTF inlet pipe and CVTF outlet pipe.

NOTE:
Use a new gasket.

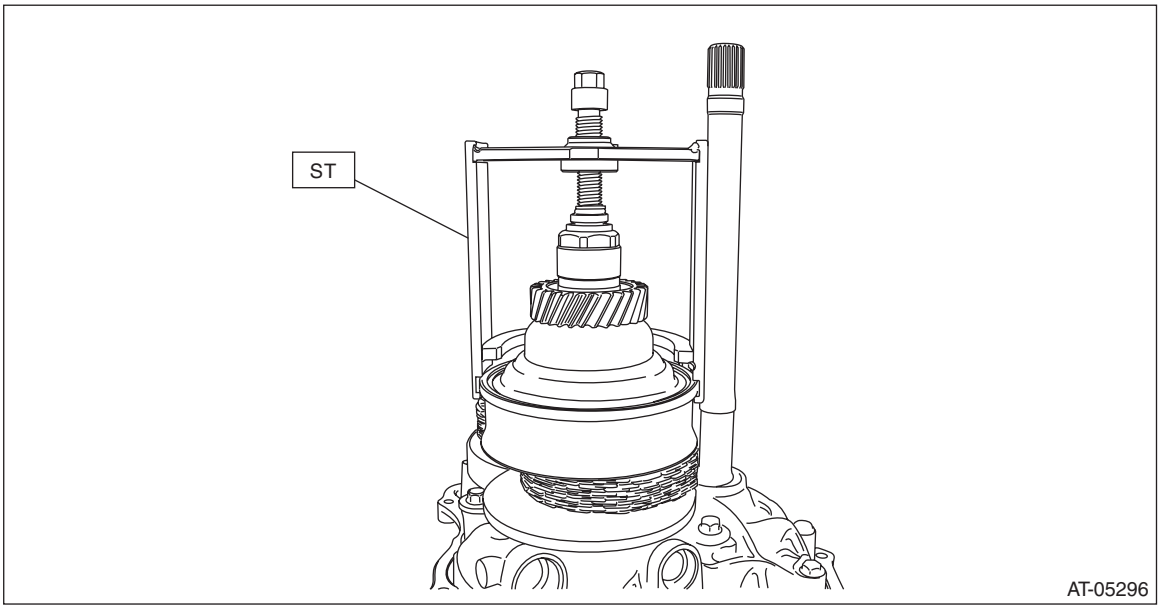
Tightening torque:
T1: 16 N·m (1.6 kgf-m, 11.8 ft-lb)
T2: 40 N·m (4.1 kgf-m, 29.5 ft-lb)

(A) CVTF outlet pipe
(B) CVTF inlet pipe

E: INSPECTION

- Check the transmission case for damage.
- Check for leakage of CVTF from the connection between converter case and transmission case.
- Check for leakage of CVTF from the connection between intermediate case and transmission case.
- Check the lubrication pipe for bend or damage.
- Check the bearing for smooth operation.
- Check the bearing for seizure or wear.

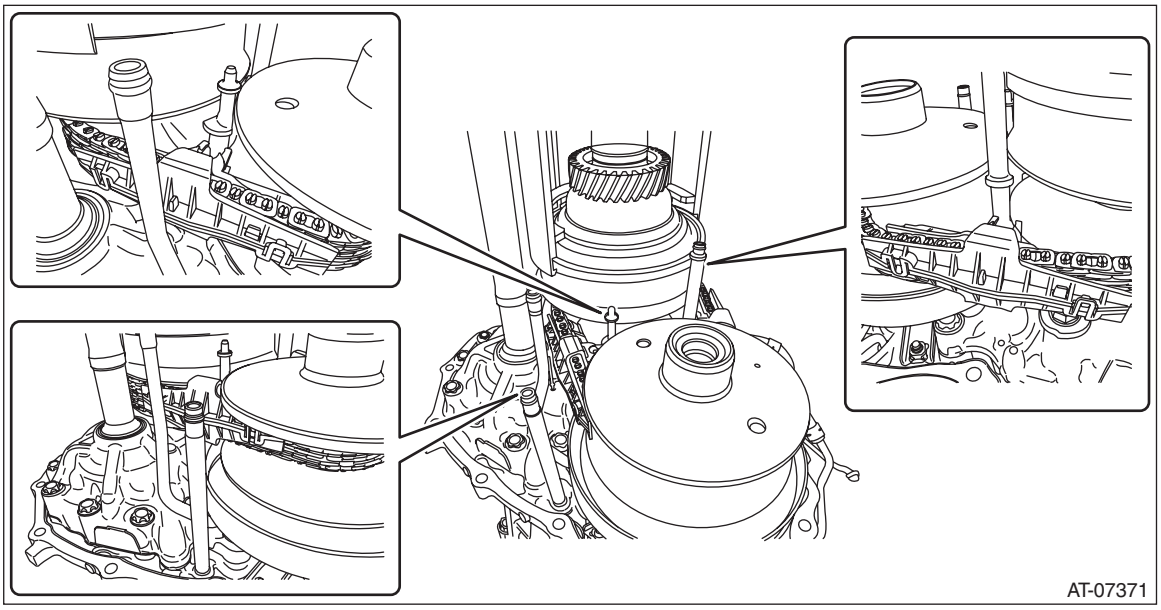
F: ADJUSTMENT



NOTE:
When replacing the transmission case with a new part, perform the following check and adjustment for the selection.

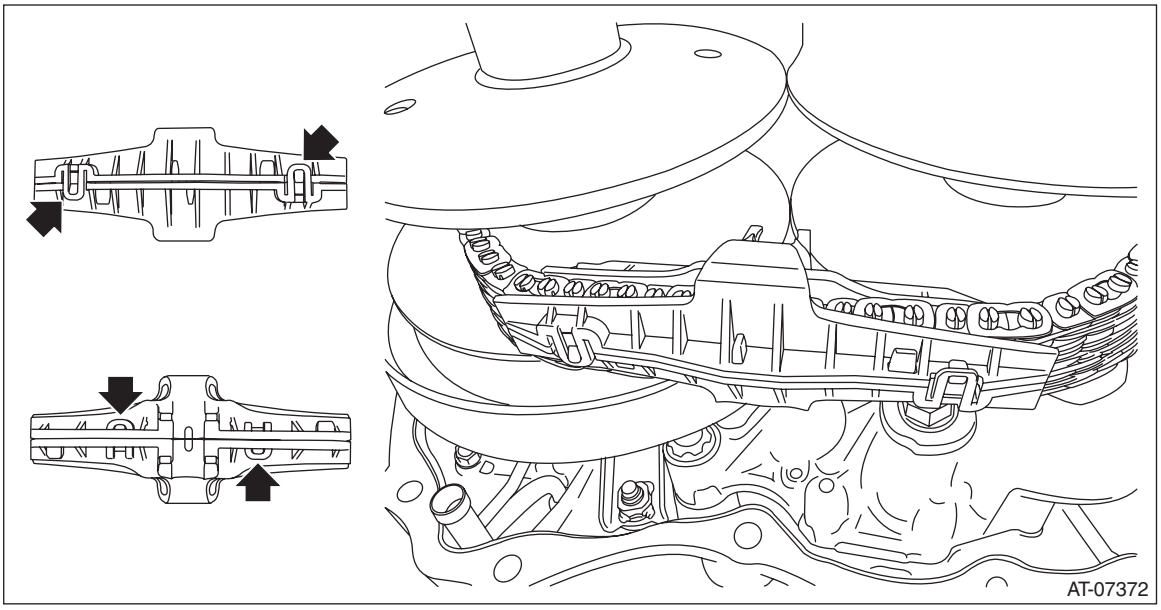
- Select the thrust bearing for the forward clutch assembly. <Ref. to CVT(TR690)-227, ADJUSTMENT, Forward Clutch Assembly.>
- Select the snap ring for the reduction gear. <Ref. to CVT(TR690)-235, ADJUSTMENT, Reduction Driven Gear.>

42.Primary Pulley and Secondary Pulley

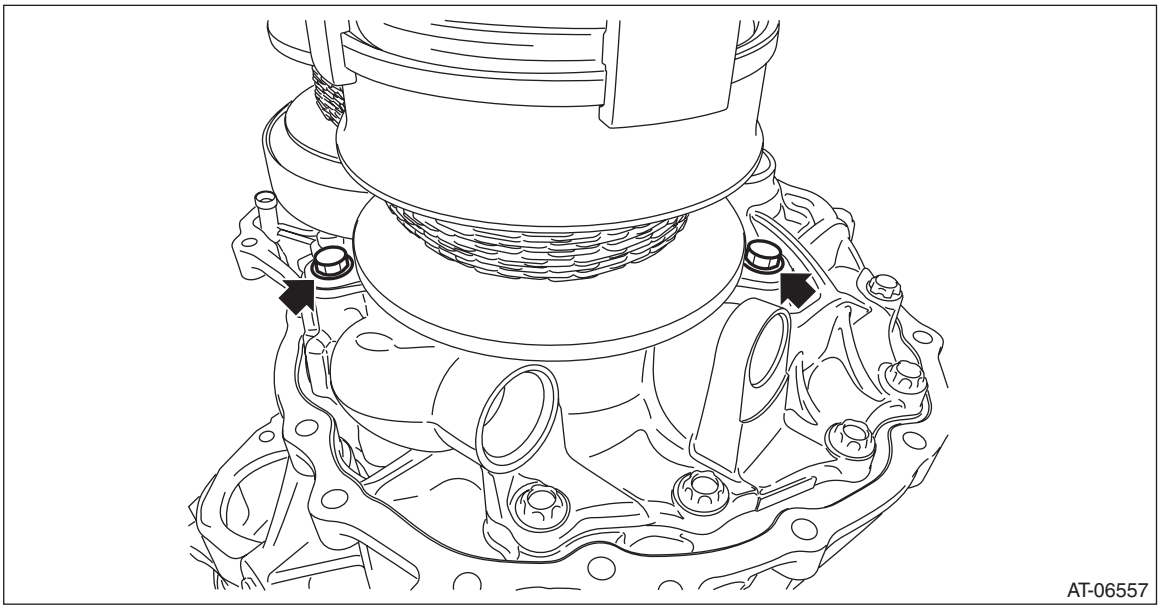


A: REMOVAL

NOTE:
Always replace primary pulley and secondary pulley as an assembly because they are non-disassembled parts.
1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-58, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-151, REMOVAL, Air Breather Hose.>
3) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-123, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR690)-134, REMOVAL, Transmission Harness.>
5) Remove the extension case. <Ref. to CVT(TR690)-159, REMOVAL, Extension Case.>
6) Remove the rear drive shaft. <Ref. to CVT(TR690)-162, REMOVAL, Rear Drive Shaft.>
7) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-167, REMOVAL, Transfer Clutch.>
8) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-179, REMOVAL, Transfer Reduction Driven Gear.>
9) Remove the intermediate case. <Ref. to CVT(TR690)-185, REMOVAL, Intermediate Case.>
10) Remove the forward clutch assembly. <Ref. to CVT(TR690)-200, REMOVAL, Forward Clutch Assembly.>
11) Remove the transmission case. <Ref. to CVT(TR690)-240, REMOVAL, Transmission Case.>
12) Set the ST to the secondary pulley, and expand the V groove of pulley until the variator chain gets completely loose.
ST 18769AA000 EXPANDER PULLEY

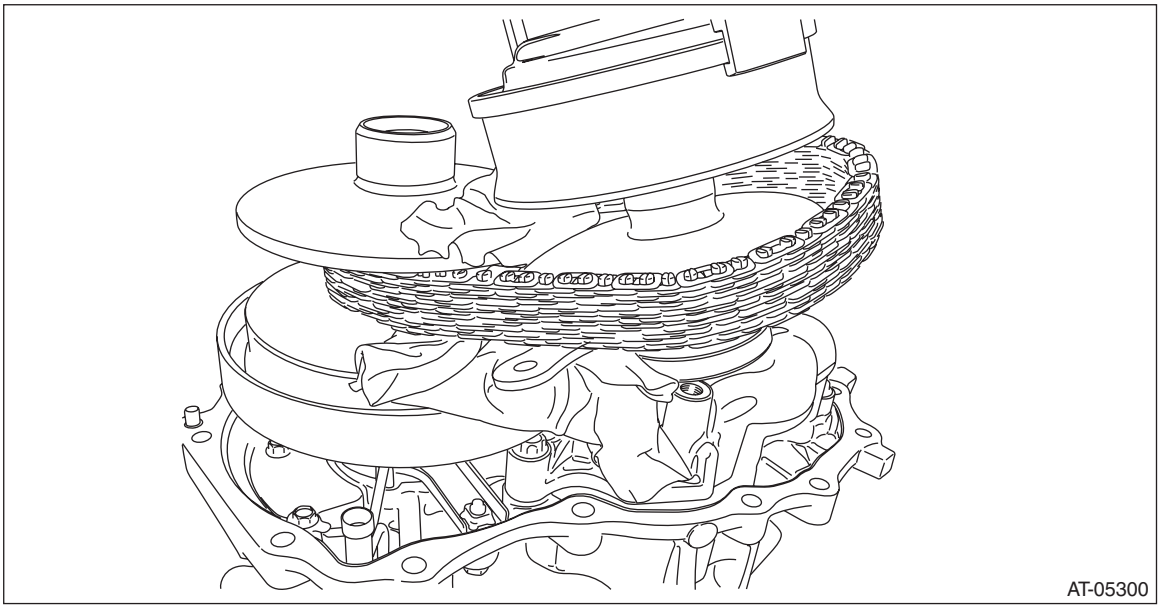


13) Remove the chain guide from lubrication pipe and support rod.

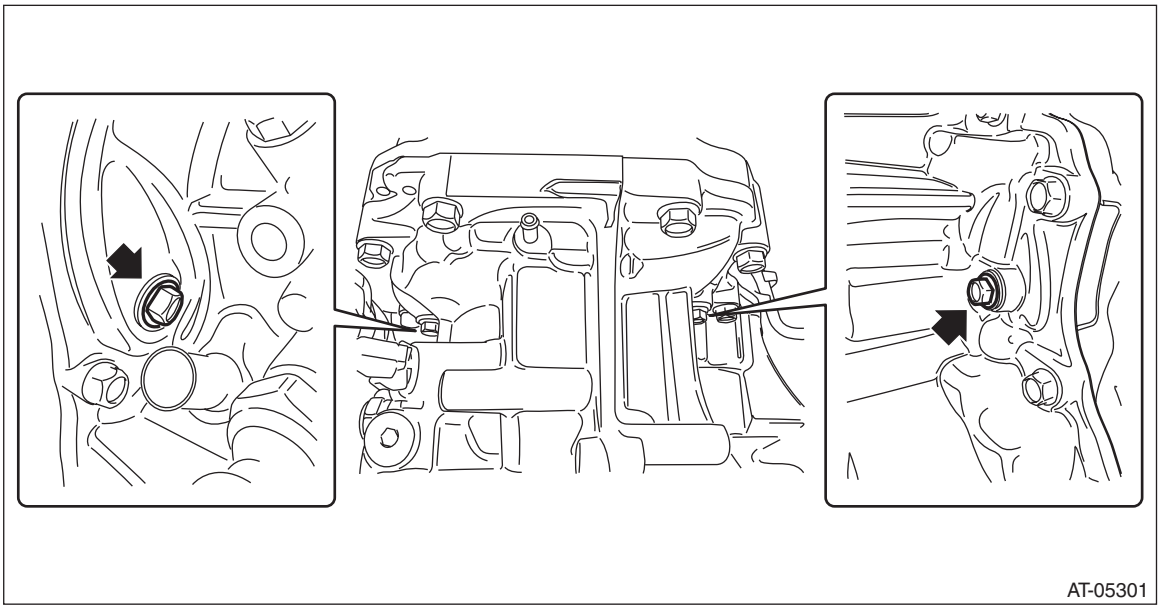


14) Remove the lubrication pipe and support rod.

15) Detach the four claws to remove the two chain guides.

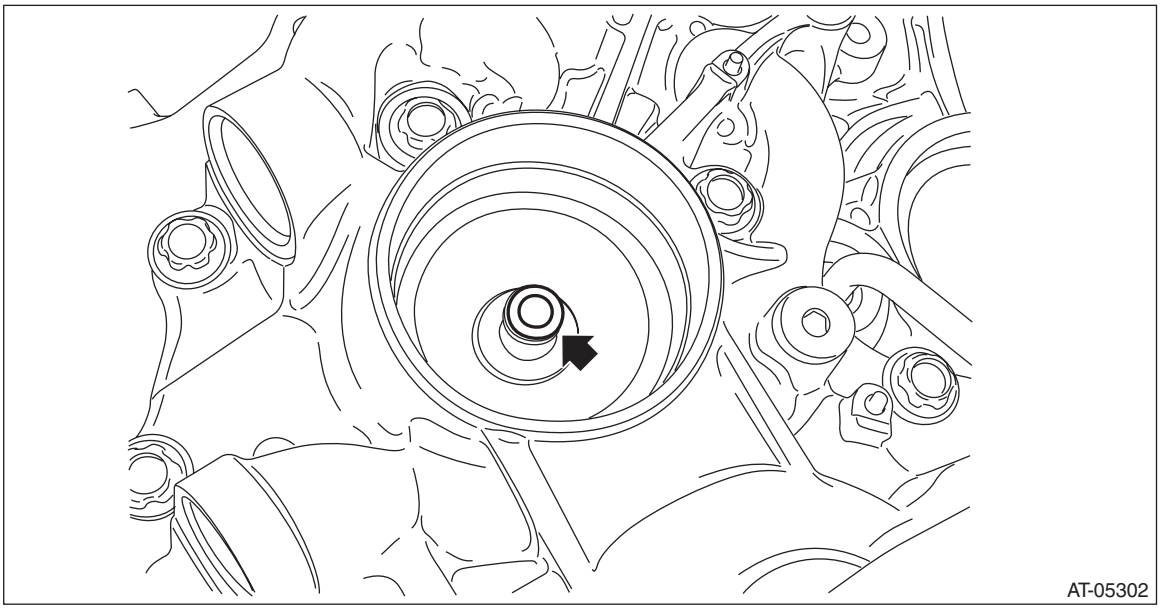


16) Remove the secondary pulley mounting bolt.

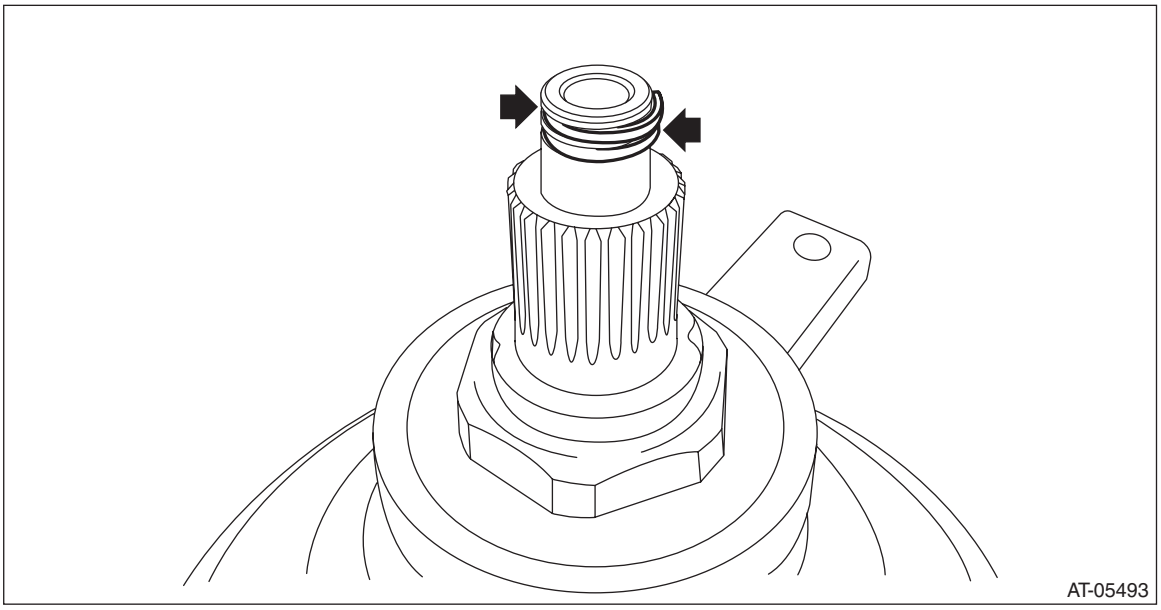


17) Remove the secondary pulley from drive pinion retainer and intersect the V groove of secondary pulley and V groove of primary pulley. Remove the variator chain from secondary pulley and remove the secondary pulley.

CAUTION:
Cover the V grooves of secondary pulley and primary pulley with cloth to protect the both pulleys and variator chain from scratching.

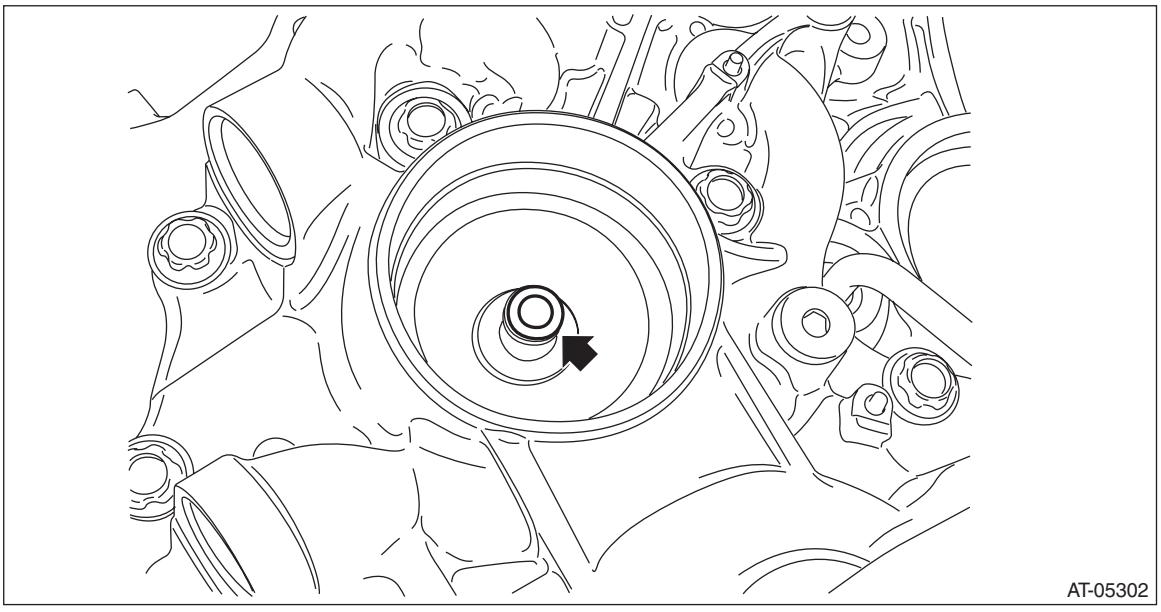


18) Remove the variator chain from primary pulley.



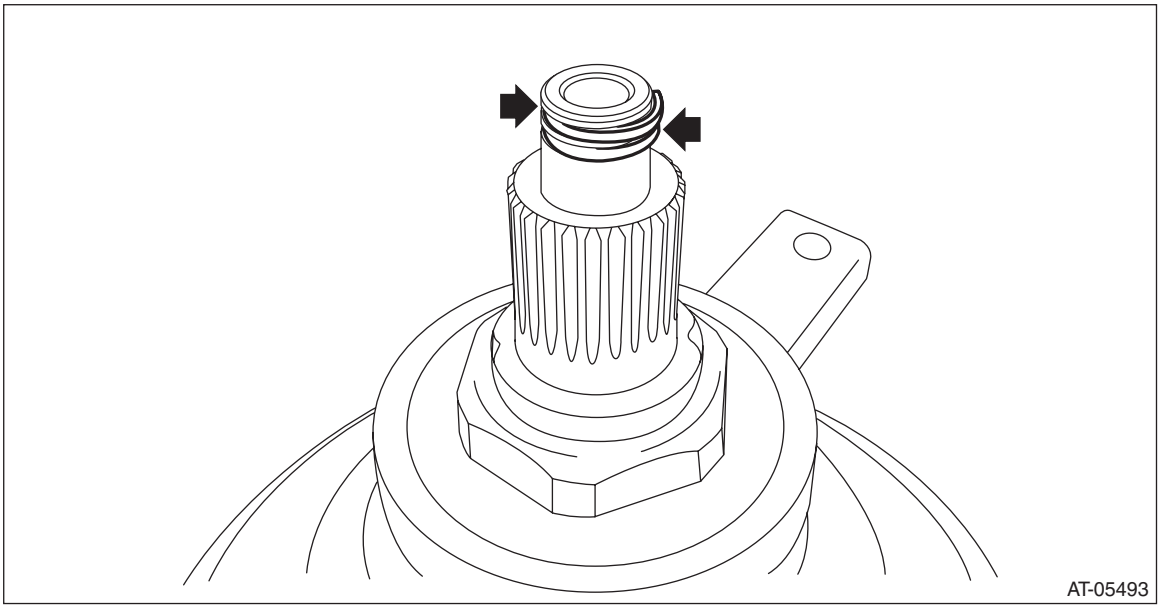
19) Remove the primary pulley mounting bolt.

20) Remove the primary pulley.
21) Remove the two seal rings from drive pinion retainer.



22) Remove the two seal rings from primary pulley.

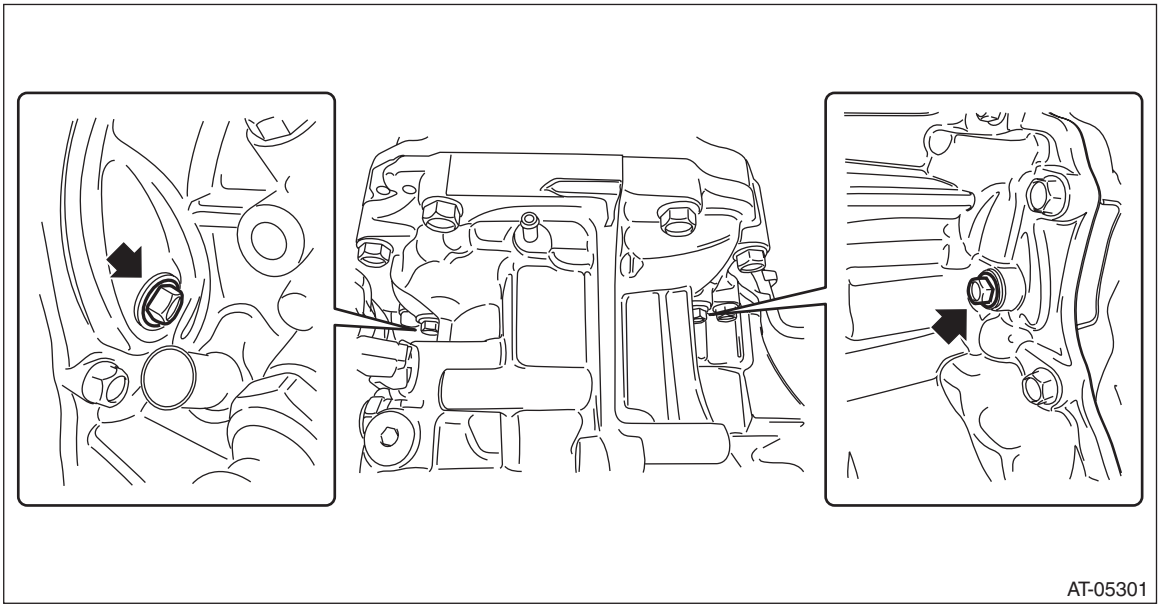
B: INSTALLATION



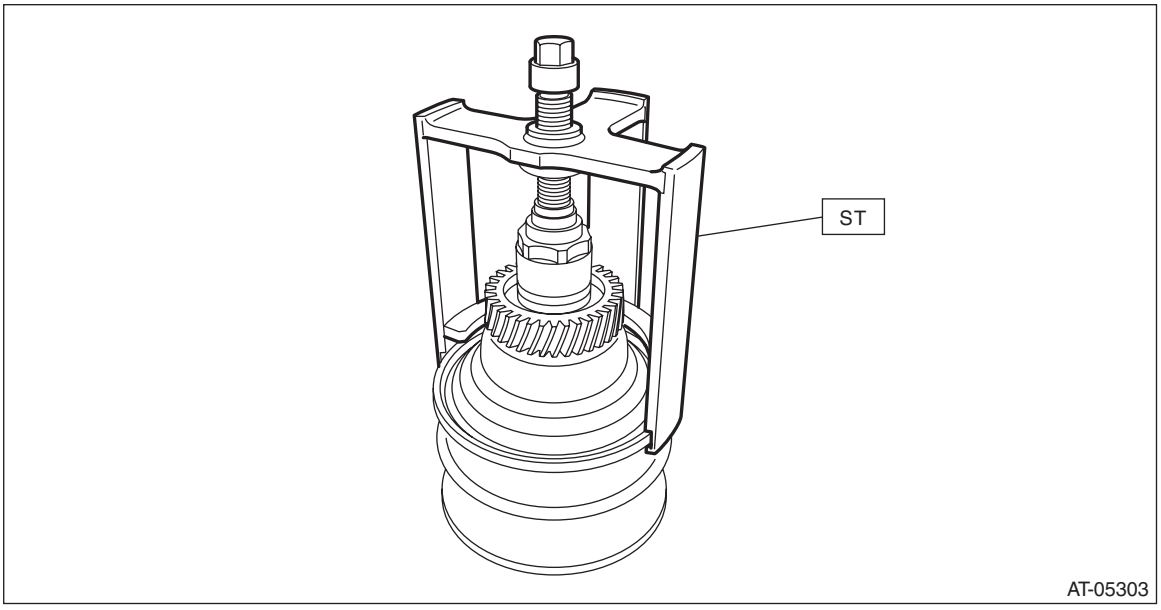
1) Select shims for pulley alignment. <Ref. to CVT(TR690)-267, ADJUSTMENT, Primary Pulley and Secondary Pulley.>
2) Install the two seal rings to drive pinion retainer.

NOTE:
- Use new seal rings.
- Apply CVTF to the seal rings.
- When installing the seal rings, do not expand the seal rings too much.

3) Install the selected shims to the primary pulley bearing catch surface.
4) Install the two seal rings to primary pulley.



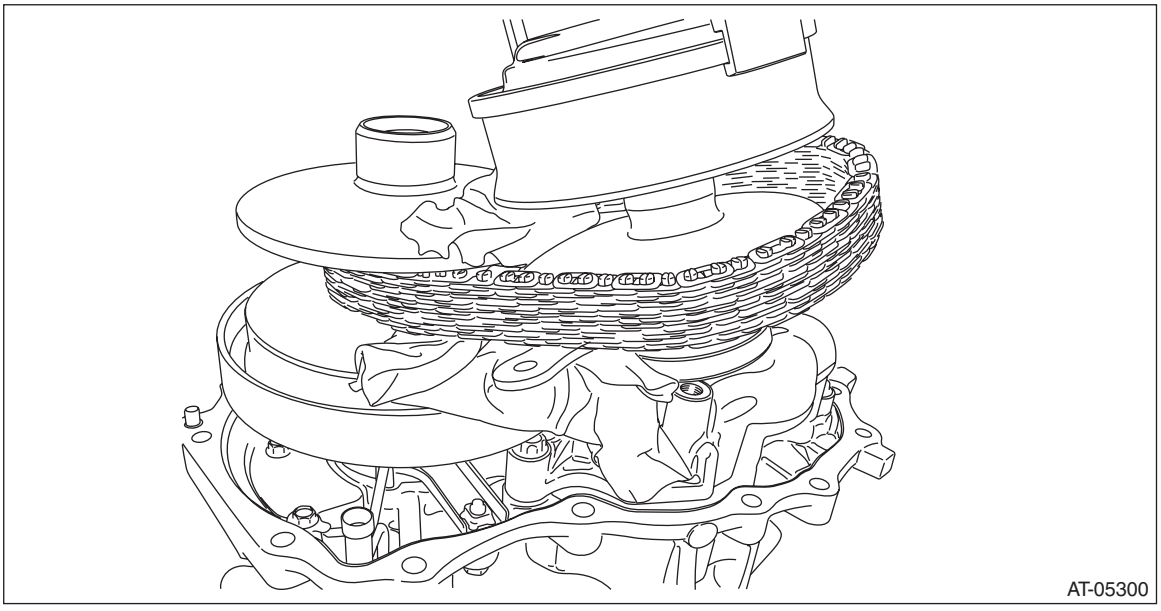
NOTE:
- Use new seal rings.
- Apply CVTF to the seal rings.



5) Install the primary pulley and adjust the position of bolt holes of primary bearing retainer and converter case to tighten the primary pulley bolt.

NOTE:
Use a new seal washer.

Tightening torque:
21 N·m (2.1 kgf-m, 15.5 ft-lb)

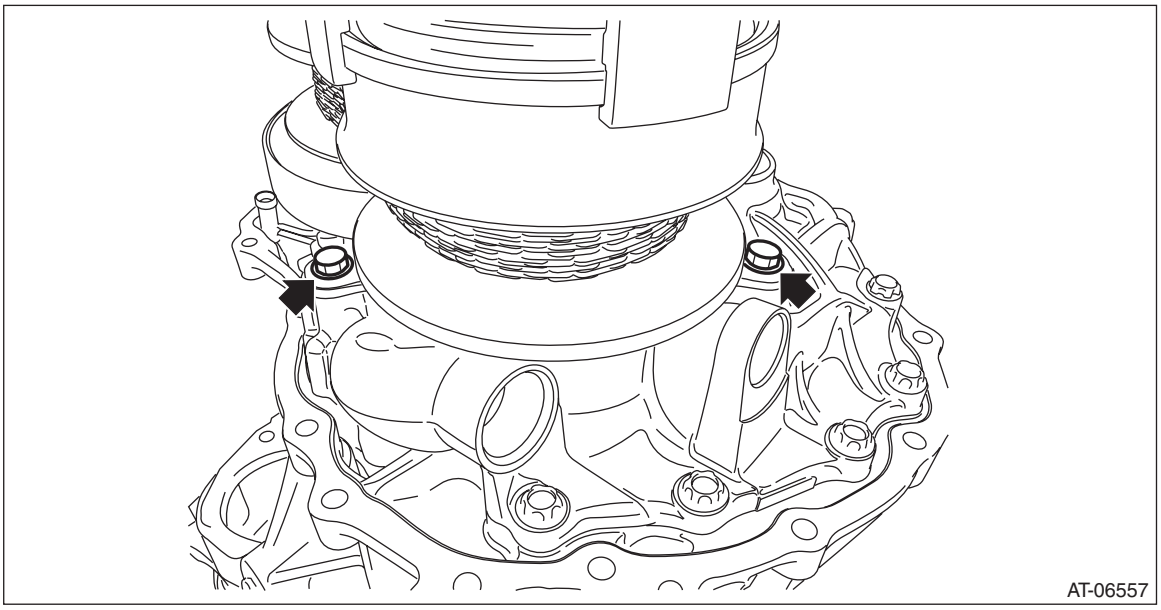


6) Set the ST to secondary pulley and expand the V groove of pulley.
ST 18769AA000 EXPANDER PULLEY

7) Place the variator chain on the primary pulley groove and attach the secondary pulley and variator chain together to the drive pinion retainer.

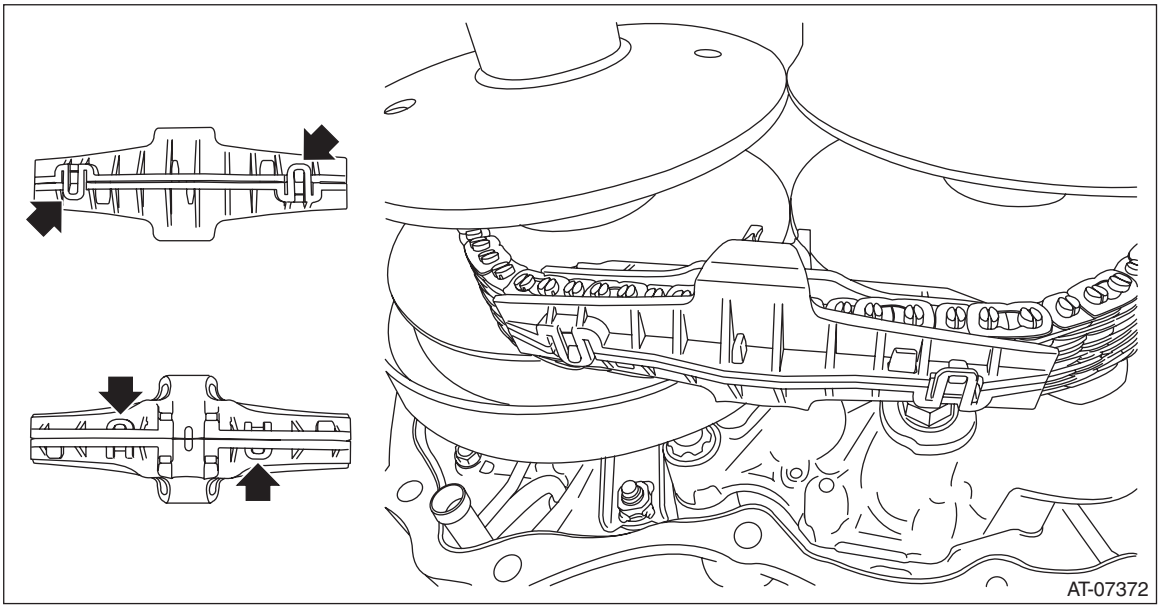
CAUTION:
Cover the V grooves of primary pulley and secondary pulley with cloth to protect the both pulleys and variator chain from scratching.

(1) Place the variator chain on primary pulley.
(2) Intersect the V groove of primary pulley and the V groove of secondary pulley and install the secondary pulley while placing the variator chain on secondary pulley.



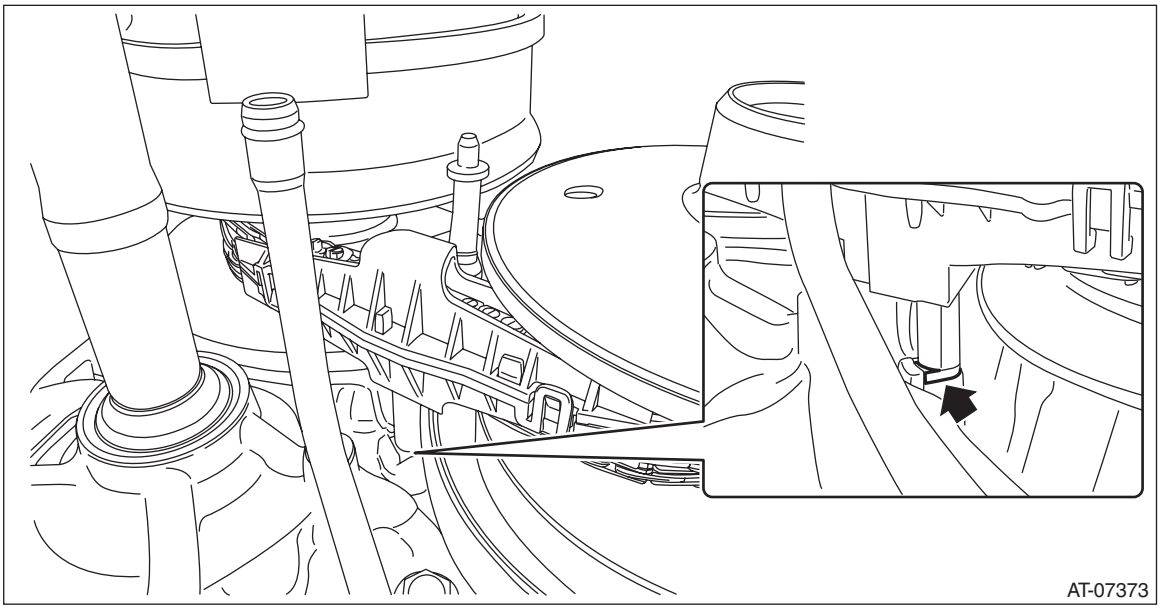
(3) While aligning the bolt hole of secondary bearing retainer and the bolt hole of driving pinion retainer, install the secondary pulley to drive pinion retainer.

8) Install the secondary pulley bolt.

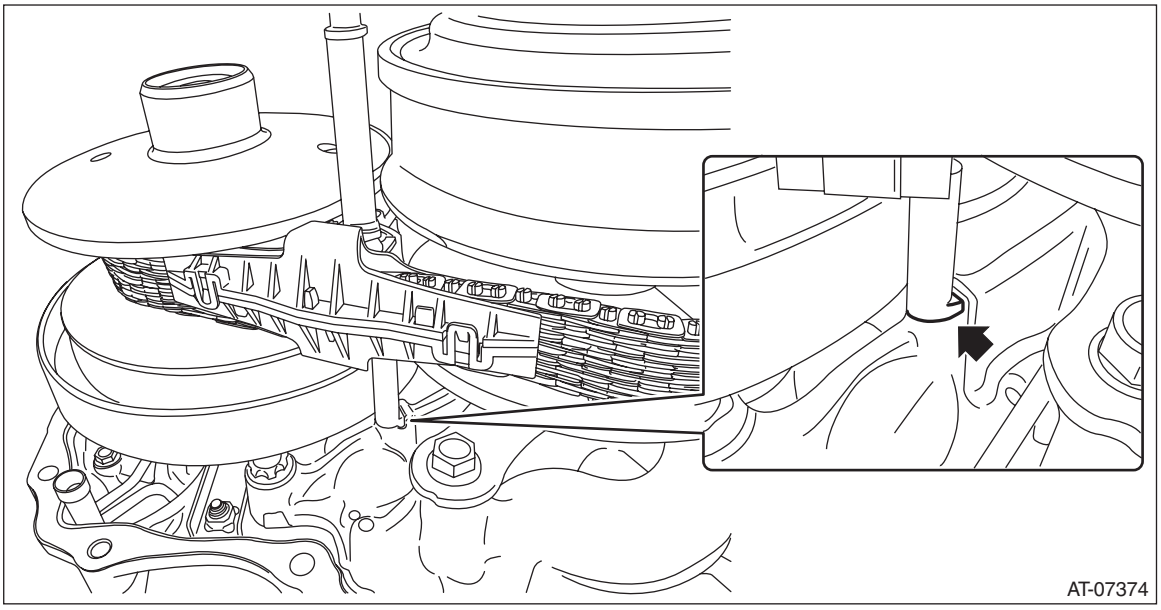


NOTE:
Apply CVTF to the bolt.

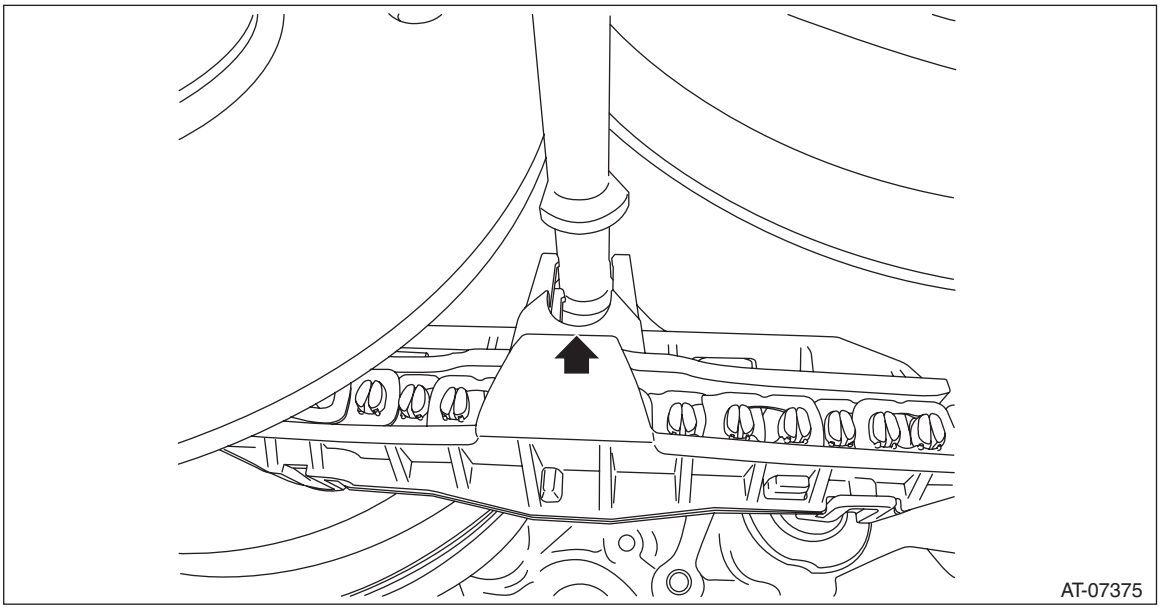
Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)



9) Install the chain guide.

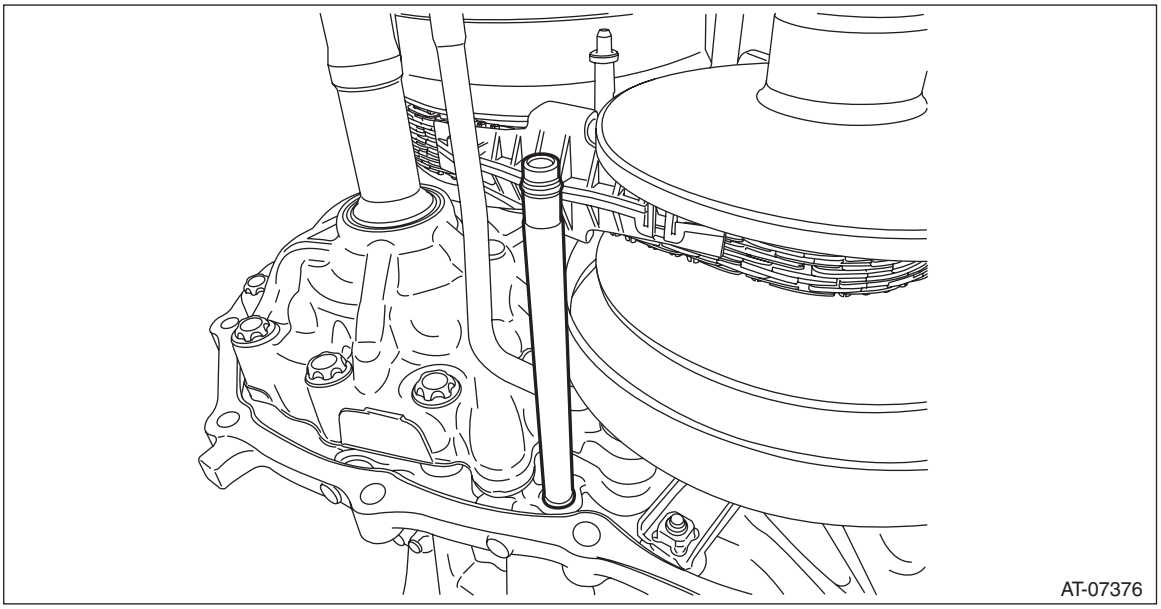


NOTE:
Install it with two claws facing outward and with two claws facing inward.



10) Engage the cutout portions of support rod and drive pinion retainer and install the support rod.

11) Engage the cutout portions of lubrication pipe and drive pinion retainer and install the lubrication pipe.



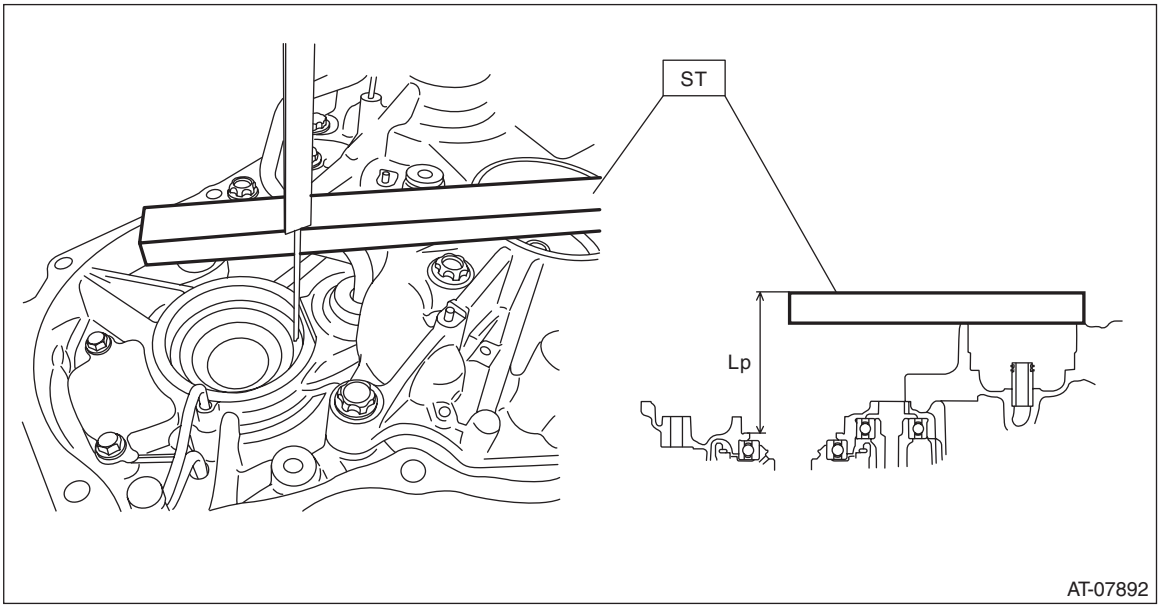
12) Install the chain guide so that the lubrication pipe and support rod run through between the protrusions of each chain guide. Then remove the ST (EXPANDER PULLEY).

13) Install the O-ring to the lubrication pipe.

NOTE:
Use new O-rings.

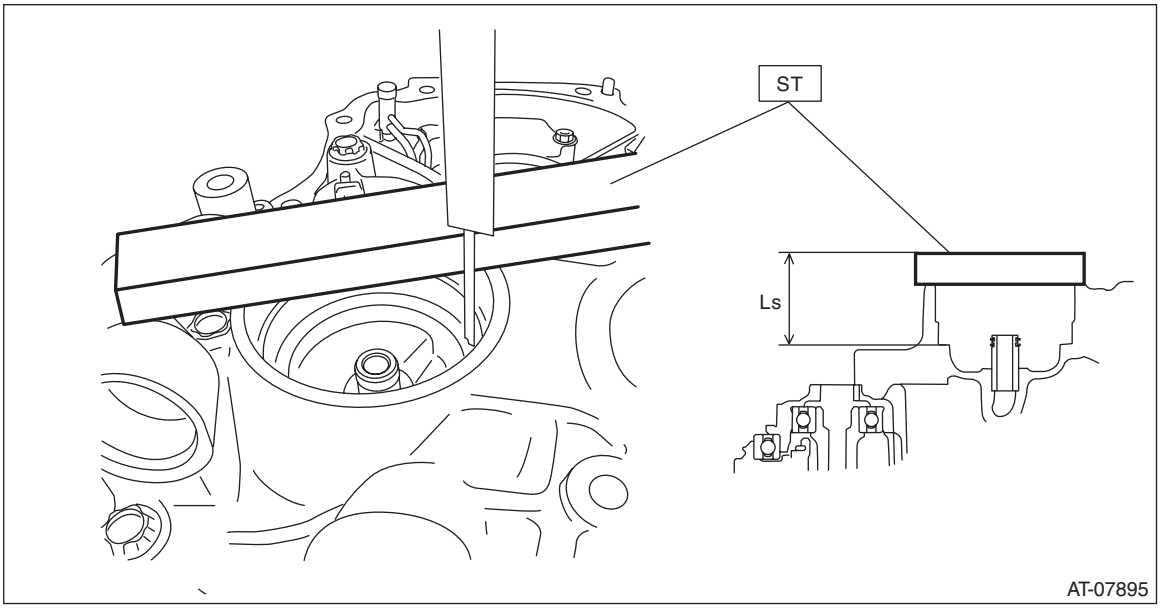
14) Install the lubrication pipe.

15) Install the transmission case. <Ref. to CVT(TR690)-242, INSTALLATION, Transmission Case.>
16) Install the forward clutch assembly. <Ref. to CVT(TR690)-201, INSTALLATION, Forward Clutch Assembly.>
17) Install the intermediate case. <Ref. to CVT(TR690)-186, INSTALLATION, Intermediate Case.>
18) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-179, INSTALLATION, Transfer Reduction Driven Gear.>
19) Install the transfer clutch assembly. <Ref. to CVT(TR690)-168, INSTALLATION, Transfer Clutch.>
20) Install the rear drive shaft. <Ref. to CVT(TR690)-162, INSTALLATION, Rear Drive Shaft.>
21) Install the extension case. <Ref. to CVT(TR690)-160, INSTALLATION, Extension Case.>
22) Install the transmission harness. <Ref. to CVT(TR690)-136, INSTALLATION, Transmission Harness.>
23) Install the control valve body and oil pan. <Ref. to CVT(TR690)-127, INSTALLATION, Control Valve Body.>
24) Install the air breather hose. <Ref. to CVT(TR690)-153, INSTALLATION, Air Breather Hose.>
25) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-75, INSTALLATION, Automatic Transmission Assembly.>



C: INSPECTION

- Check the surface of primary and secondary pulley cones for damage or wear.
- Check the primary and secondary pulley for damage.
- Check the bearing for seizure or wear.
- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.



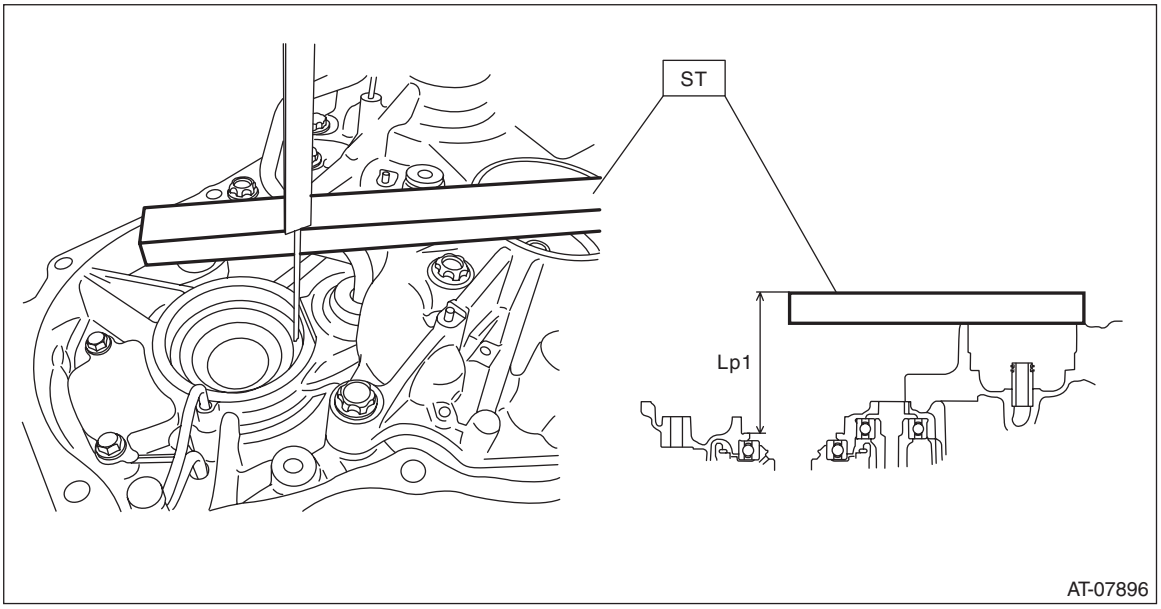
D: ADJUSTMENT

1. PROCEDURE IN REPLACEMENT OF PRIMARY AND SECONDARY PULLEY, OR IN REPLACEMENT OF PRIMARY PULLEY, SECONDARY PULLEY AND VARIATOR CHAIN

1) Measure depth “Lp” from the ST upper face to the primary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE

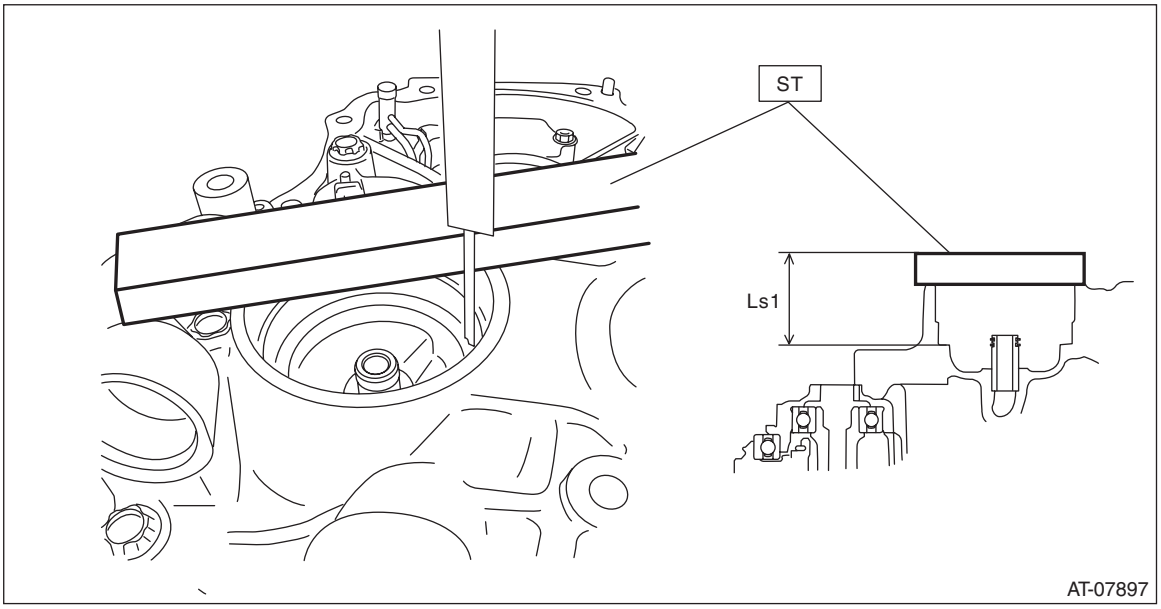
2) Measure height “Ls” from the drive pinion retainer upper face to the secondary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE

3) Calculate the following formula.
Calculation formula:
T (mm) = B + (Lp – Ls) + 31.601 – A
[T (in) = B + (Lp – Ls) + 1.224 – A]
T: Pulley alignment
A: Specified primary pulley dimension
B: Specified secondary pulley dimension
Lp: Depth from the ST upper face to the primary pulley bearing catch surface
Ls: Depth from the ST upper face to the secondary pulley bearing catch surface
31.601 mm (1.224 in): Constant



Pulley alignment T mm (in)	Shim thickness mm (in)
0.050 — 0.150 (0.002 — 0.006)	0.1 (0.004)
0.151 — 0.250 (0.006 — 0.01)	0.2 (0.008)
0.251 — 0.350 (0.01 — 0.014)	0.3 (0.012)
0.351 — 0.450 (0.014 — 0.018)	0.4 (0.016)
0.451 — 0.550 (0.018 — 0.022)	0.5 (0.020)
0.551 — 0.650 (0.022 — 0.026)	0.6 (0.024)
0.651 — 0.750 (0.026 — 0.030)	0.7 (0.028)
0.751 — 0.850 (0.030 — 0.033)	0.8 (0.031)
0.851 — 0.950 (0.033 — 0.037)	0.9 (0.035)

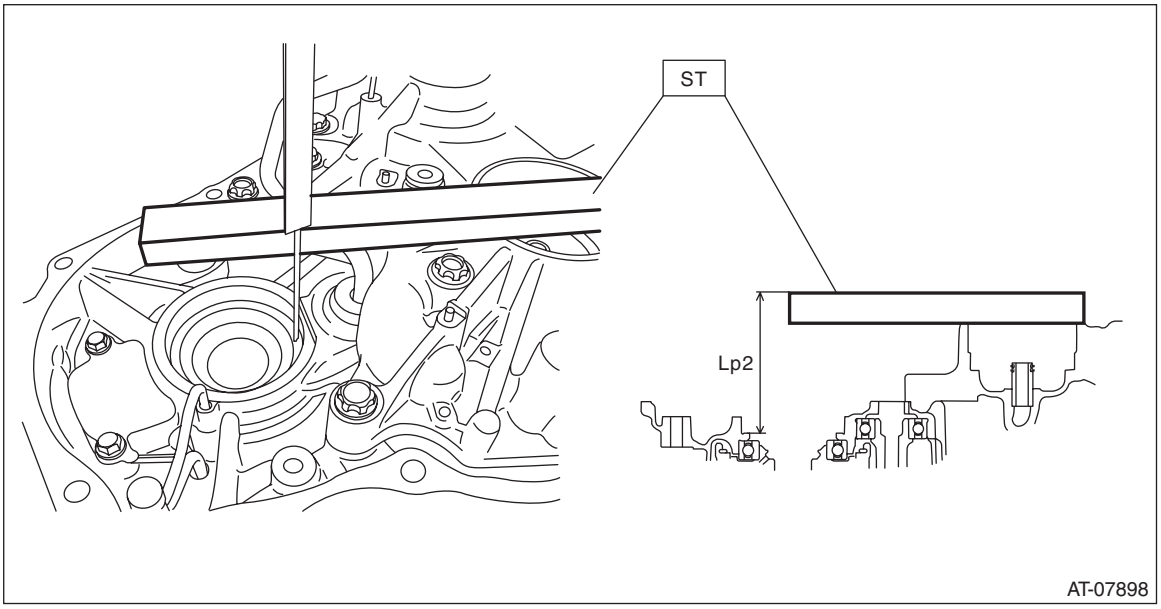
4) Select one to two shims so that the total thickness meets the value obtained from step 3).



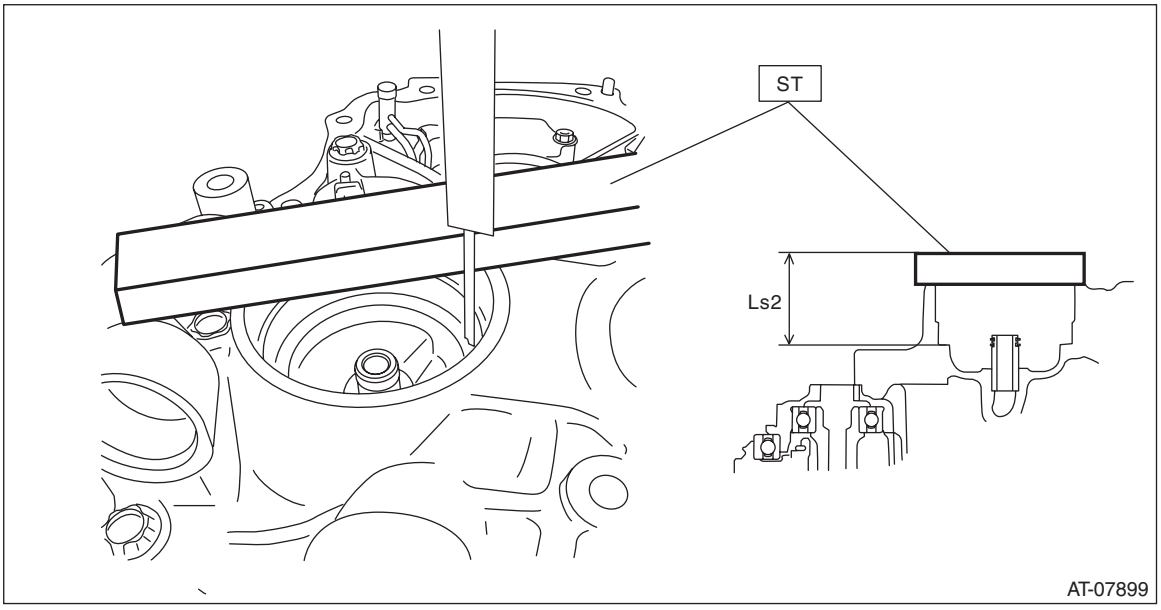
Part No.	Shim thickness mm (in)
32451AA000	0.1 (0.004)
32451AA010	0.2 (0.008)
32451AA020	0.3 (0.012)
32451AA030	0.4 (0.016)
32451AA040	0.5 (0.020)

2. PROCEDURE WHEN REPLACING ONLY DRIVE PINION RETAINER OR CONVERTER CASE

1) Clean the mating surface of current drive pinion retainer and converter case.
2) Measure and record the shim thickness that is attached on the current converter case.
3) Using the current drive pinion retainer, measure depth “Lp1” from the ST upper face to the primary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE



4) Using the current drive pinion retainer or current converter case, measure depth “Ls1” from the ST upper face to the secondary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE



5) Calculate the “LD1” using the following formula and record it.
Calculation formula:
LD1 mm (in) = Lp1 – Ls1
LD1: Height from the primary pulley bearing catch surface to the secondary pulley bearing catch surface
Lp1: Depth from the ST upper face to the primary pulley bearing catch surface
Ls1: Depth from the ST upper face to the secondary pulley bearing catch surface

6) Using the new drive pinion retainer or new converter case, measure depth “Lp2” from the ST upper face to the primary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE

7) Using the new drive pinion retainer or new converter case, measure depth “Ls2” from the ST upper face to the secondary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE

8) Calculate the “LD2” using the following formula and record it.
Calculation formula:
LD2 mm (in) = Lp2 – Ls2
LD2: Height from the primary pulley bearing catch surface to the secondary pulley bearing catch surface
Lp2: Depth from the ST upper face to the primary pulley bearing catch surface
Ls2: Depth from the ST upper face to the secondary pulley bearing catch surface

9) Calculate the recorded values of “LD1” and “LD2” to obtain the positive number to select the shims.
Calculation formula: T1 mm (in) = LD1 – LD2 or T2 mm (in) = LD2 – LD1
T1, T2: Difference between new drive pinion retainer or new converter case and current drive pinion retainer or current converter case
LD1: Calculated value of current drive pinion retainer or current converter case
LD2: Calculated value of new drive pinion retainer or new converter case

Difference of the case (T1) mm (in)	Shim selection procedure
0 — 0.020 (0 — 0.00078)	Select new shim of same thickness with the shim that is used on primary pulley side of the current converter case.
0.021 — 0.070 (0.000827 — 0.00275)	Select new shim of same thickness with the shim that is used on primary pulley side of the current converter case.
0.071 — 0.125 (0.00279 — 0.00492)	Select the shim 0.1 mm thinner than the shim that is used on primary pulley side of the current converter case.
0.126 — 0.170 (0.00496 — 0.00669)	Select the shim 0.1 mm thinner than the shim that is used on primary pulley side of the current converter case.
0.171 — 0.230 (0.00673 — 0.00905)	Select the shim 0.2 mm thinner than the shim that is used on primary pulley side of the current converter case.
0.231 — 0.250 (0.00909 — 0.00984)	Select the shim 0.3 mm thinner than the shim that is used on primary pulley side of the current converter case.
0.251 — 0.300 (0.00988 — 0.01181)	Select the shim 0.3 mm thinner than the shim that is used on primary pulley side of the current converter case.

Difference of the case (T2) mm (in)	Shim selection procedure
0 — 0.020 (0 — 0.00078)	Select new shim of same thickness with the shim that is used on primary pulley side of the current converter case.
0.021 — 0.080 (0.000827 — 0.00315)	Select new shim of same thickness with the shim that is used on primary pulley side of the current converter case.
0.081 — 0.100 (0.00318 — 0.00393)	Select the shim 0.1 mm thicker than the shim that is used on primary pulley side of the current converter case.
0.101 — 0.120 (0.00397 — 0.00472)	Select the shim 0.1 mm thicker than the shim that is used on primary pulley side of the current converter case.
0.121 — 0.180 (0.00476 — 0.00708)	Select the shim 0.1 mm thicker than the shim that is used on primary pulley side of the current converter case.
0.181 — 0.220 (0.00712 — 0.00866)	Select the shim 0.2 mm thicker than the shim that is used on primary pulley side of the current converter case.
0.221 — 0.280 (0.00870 — 0.01102)	Select the shim 0.2 mm thicker than the shim that is used on primary pulley side of the current converter case.
0.281 — 0.300 (0.01106 — 0.01181)	Select the shim 0.3 mm thicker than the shim that is used on primary pulley side of the current converter case.

Part No.	Shim thickness mm (in)
32451AA000	0.1 (0.004)
32451AA010	0.2 (0.008)
32451AA020	0.3 (0.012)
32451AA030	0.4 (0.016)
32451AA040	0.5 (0.020)

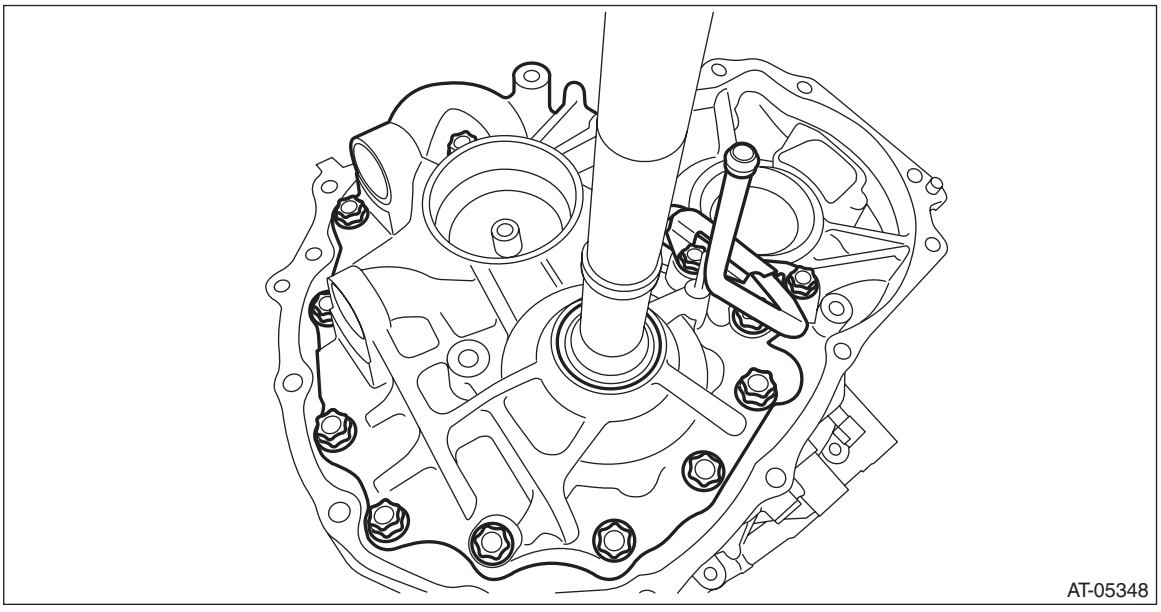
43.Variator Chain

A: REMOVAL

For removal of variator chain, refer to “Primary Pulley and Secondary Pulley”. <Ref. to CVT(TR690)-257, REMOVAL, Primary Pulley and Secondary Pulley.>

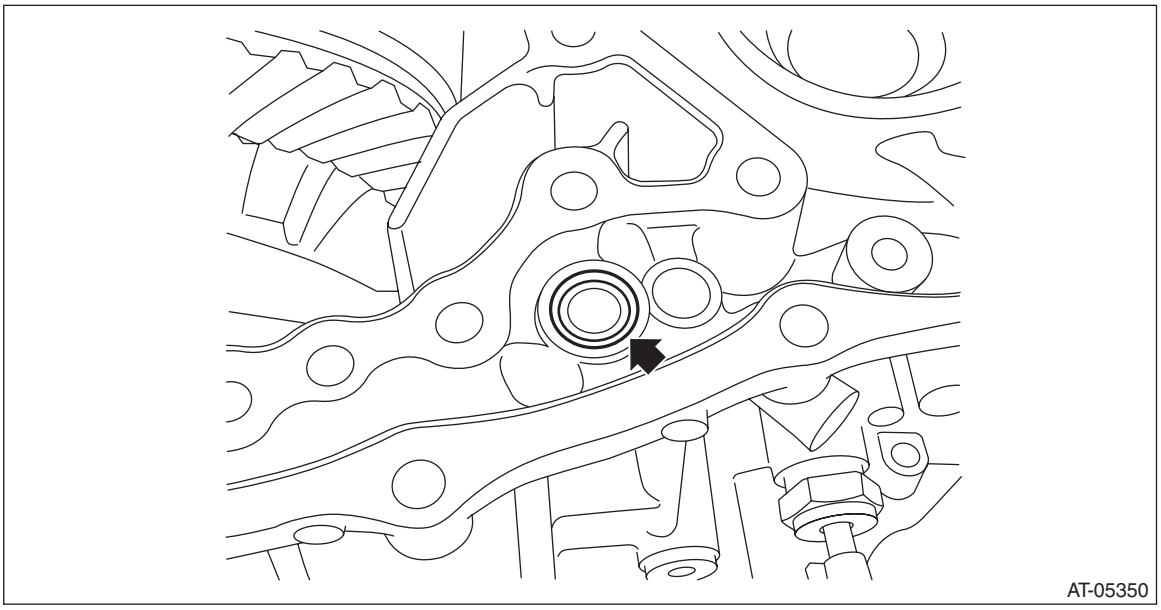
B: INSTALLATION

For installation of variator chain, refer to “Primary Pulley and Secondary Pulley”. <Ref. to CVT(TR690)-261, INSTALLATION, Primary Pulley and Secondary Pulley.>



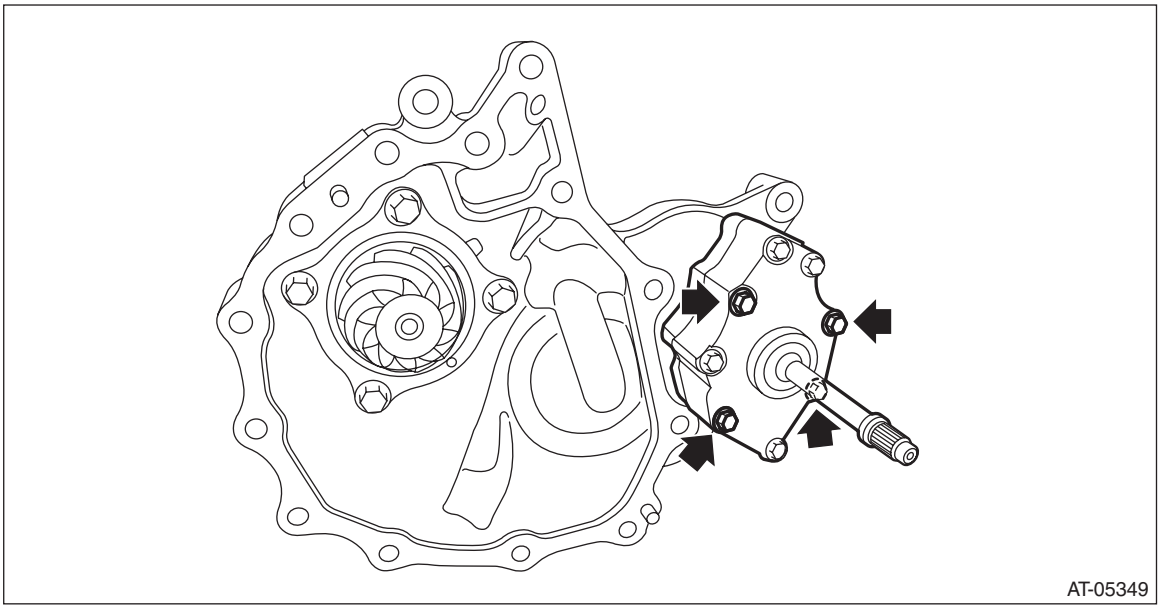
C: INSPECTION

Check the variator chain for damage and wear.

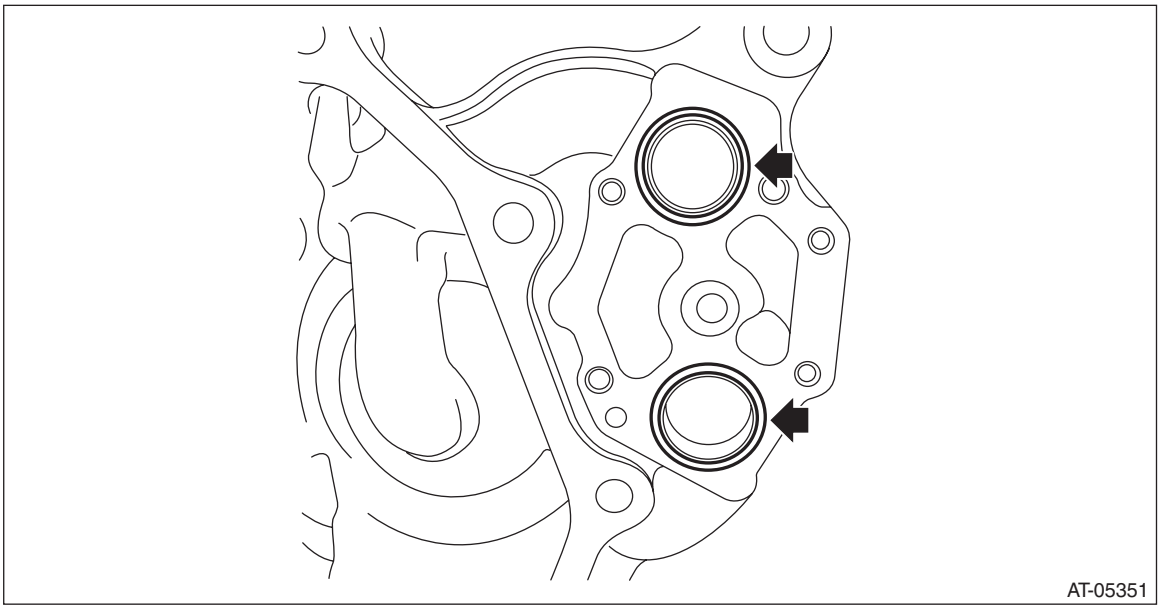


44.Drive Pinion Shaft Assembly

A: REMOVAL

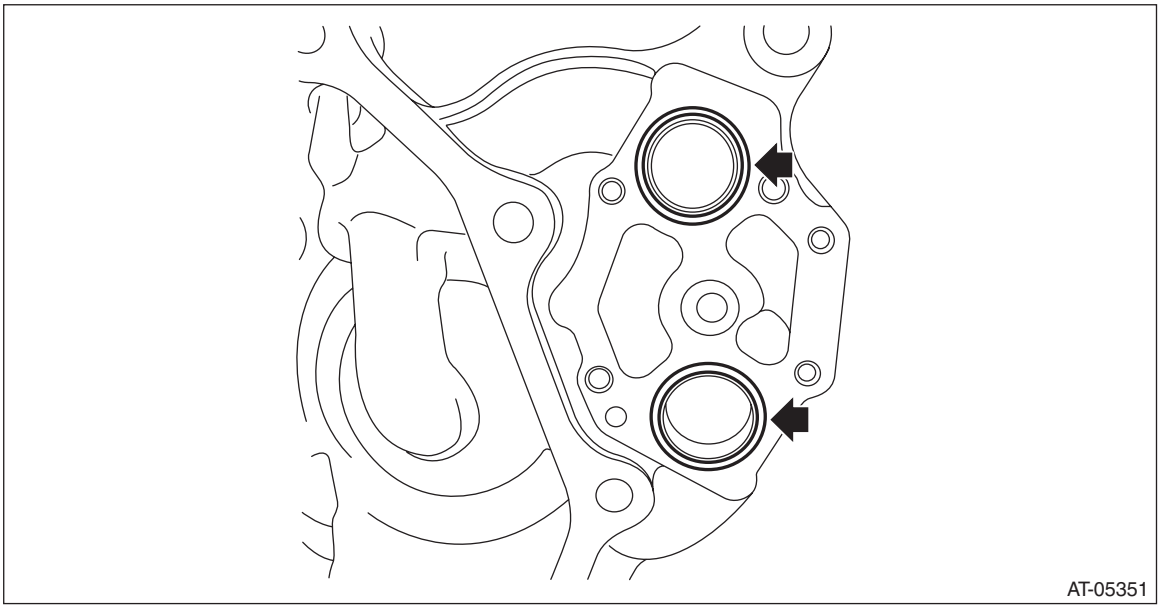


1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-58, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-151, REMOVAL, Air Breather Hose.>
3) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-123, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR690)-134, REMOVAL, Transmission Harness.>
5) Remove the extension case. <Ref. to CVT(TR690)-159, REMOVAL, Extension Case.>
6) Remove the rear drive shaft. <Ref. to CVT(TR690)-162, REMOVAL, Rear Drive Shaft.>
7) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-167, REMOVAL, Transfer Clutch.>
8) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-179, REMOVAL, Transfer Reduction Driven Gear.>
9) Remove the intermediate case. <Ref. to CVT(TR690)-185, REMOVAL, Intermediate Case.>
10) Remove the forward clutch assembly. <Ref. to CVT(TR690)-200, REMOVAL, Forward Clutch Assembly.>
11) Remove the transmission case. <Ref. to CVT(TR690)-240, REMOVAL, Transmission Case.>
12) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-257, REMOVAL, Primary Pulley and Secondary Pulley.>
13) Using the ST, remove the drive pinion retainer and lubrication pipe.
ST 18270KA020 SOCKET (E20)



14) Remove the O-rings.

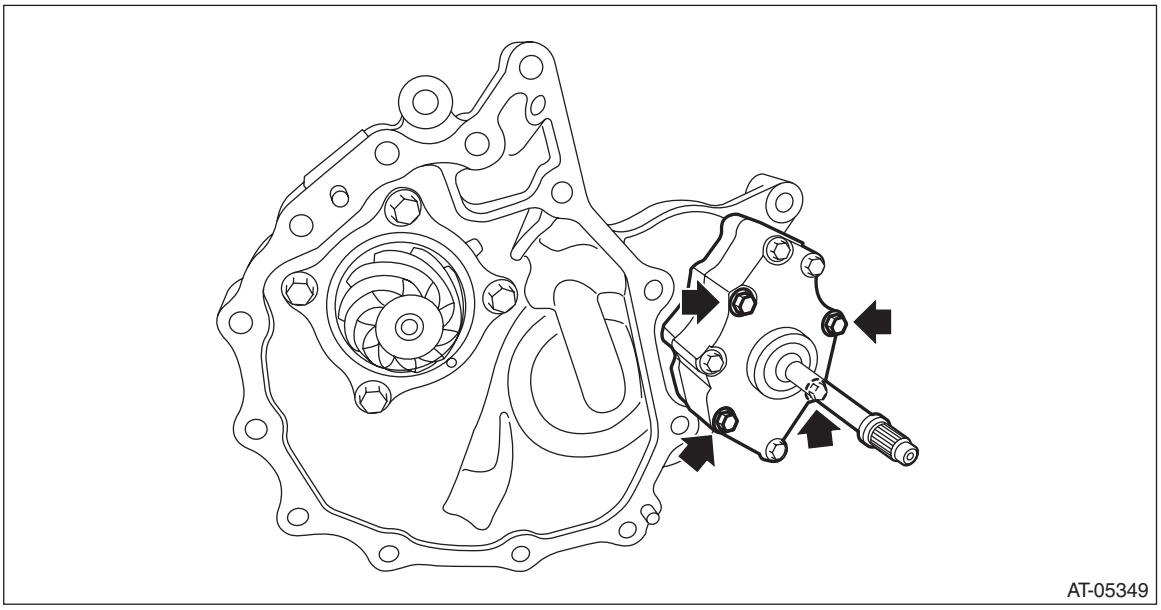
15) Remove the oil pump and the plate.



16) Remove the O-rings.

B: INSTALLATION

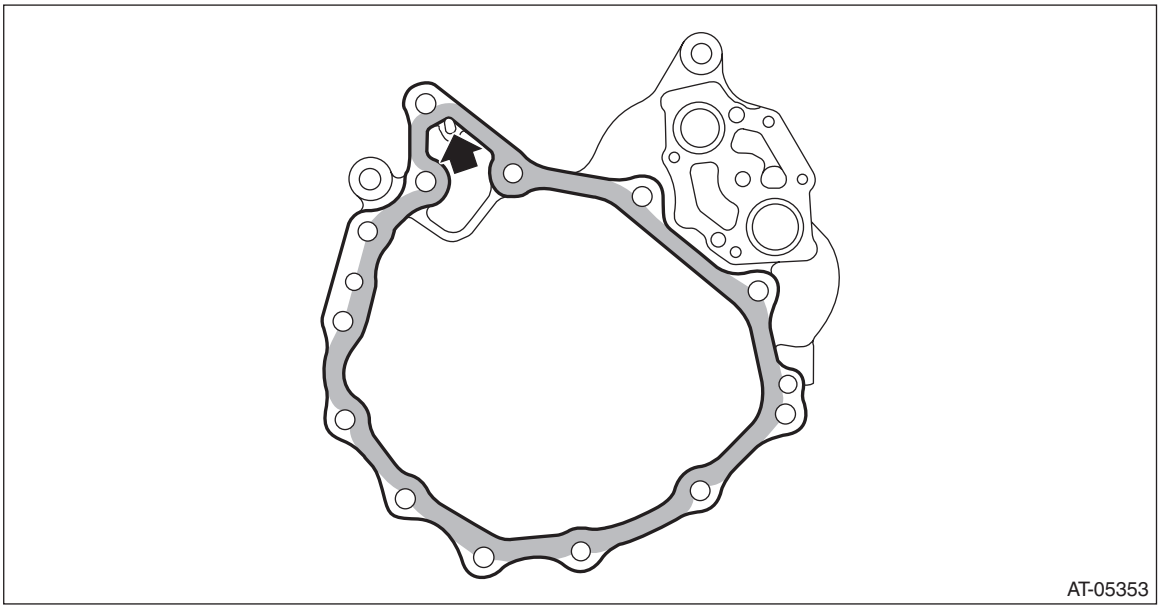
1) Clean the mating surface of drive pinion retainer and converter case.
2) Adjust the backlash and tooth contact between drive pinion shaft assembly and the front differential side gear. <Ref. to CVT(TR690)-287, ADJUSTMENT, Drive Pinion Shaft Assembly.>
3) Install the O-ring for oil pump to drive pinion retainer.



NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

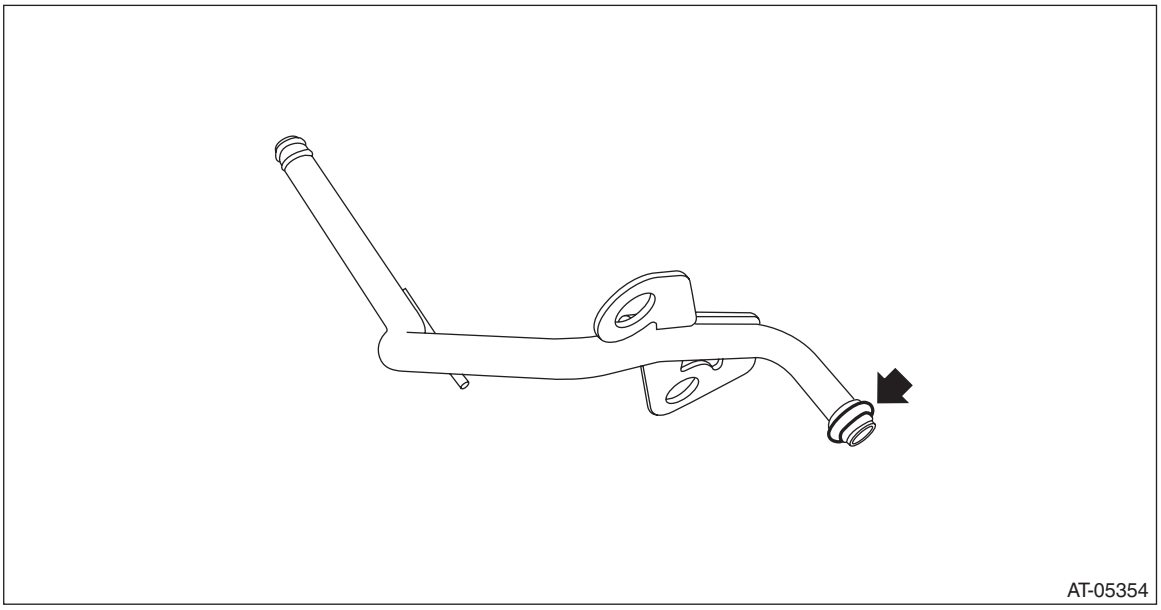
4) Install the plate and the oil pump.

NOTE:
Apply CVTF to the bolt.



Tightening torque:
8.5 N·m (0.9 kgf-m, 6.3 ft-lb)

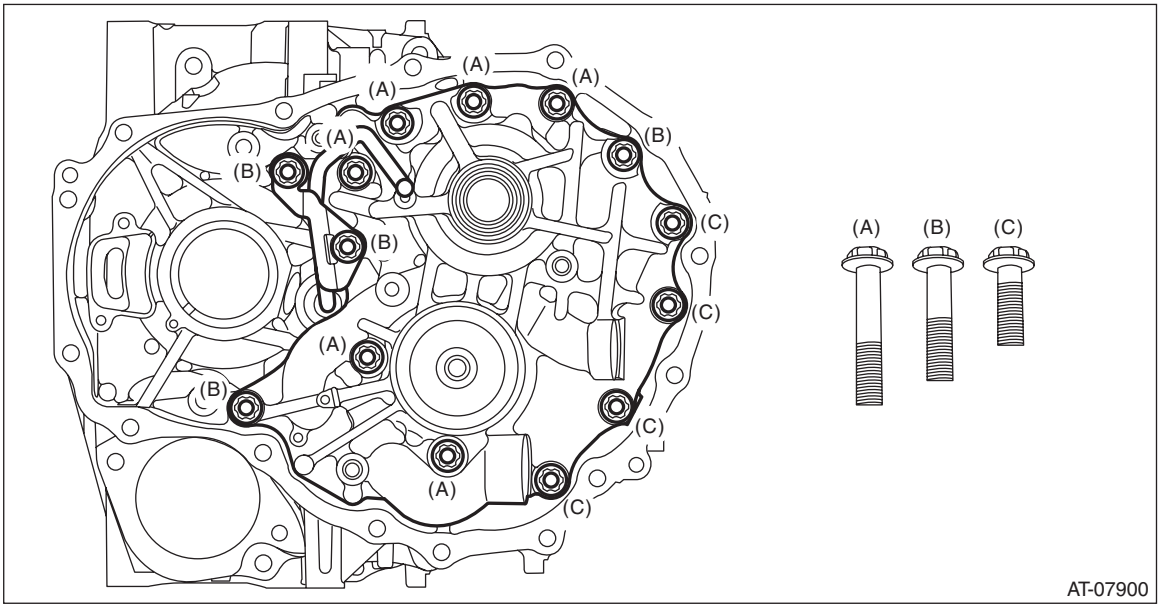
5) Apply liquid gasket seamlessly to the mating surface of drive pinion retainer.



NOTE:
Be careful not to block the arrowed hole when applying liquid gasket.

Liquid gasket:
THREE BOND 1215B or equivalent

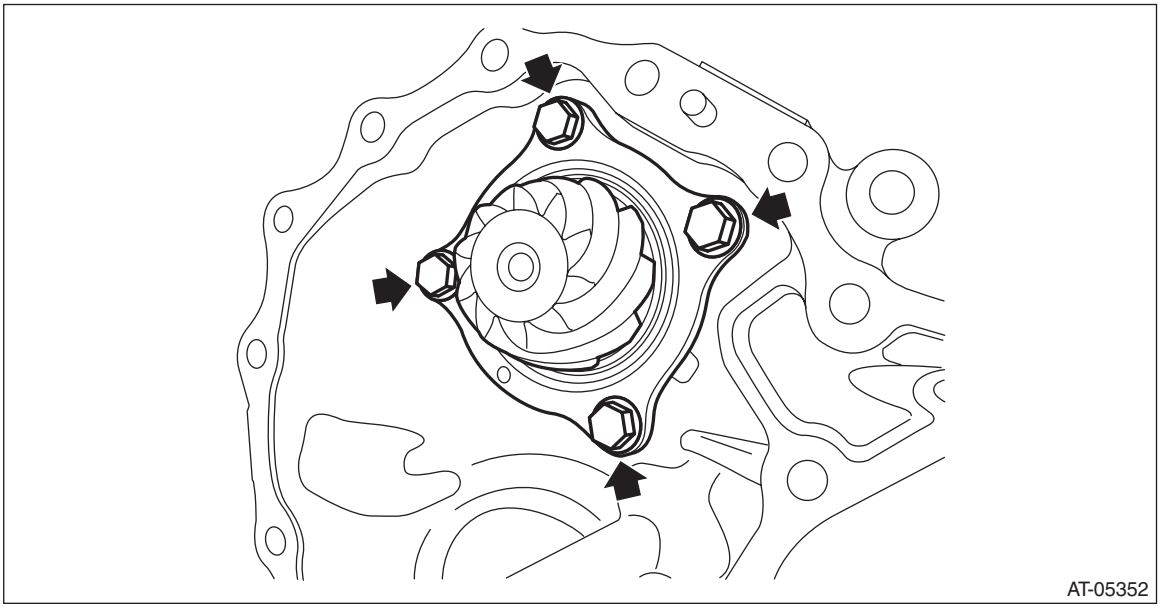
6) Install the O-ring to the lubrication pipe.



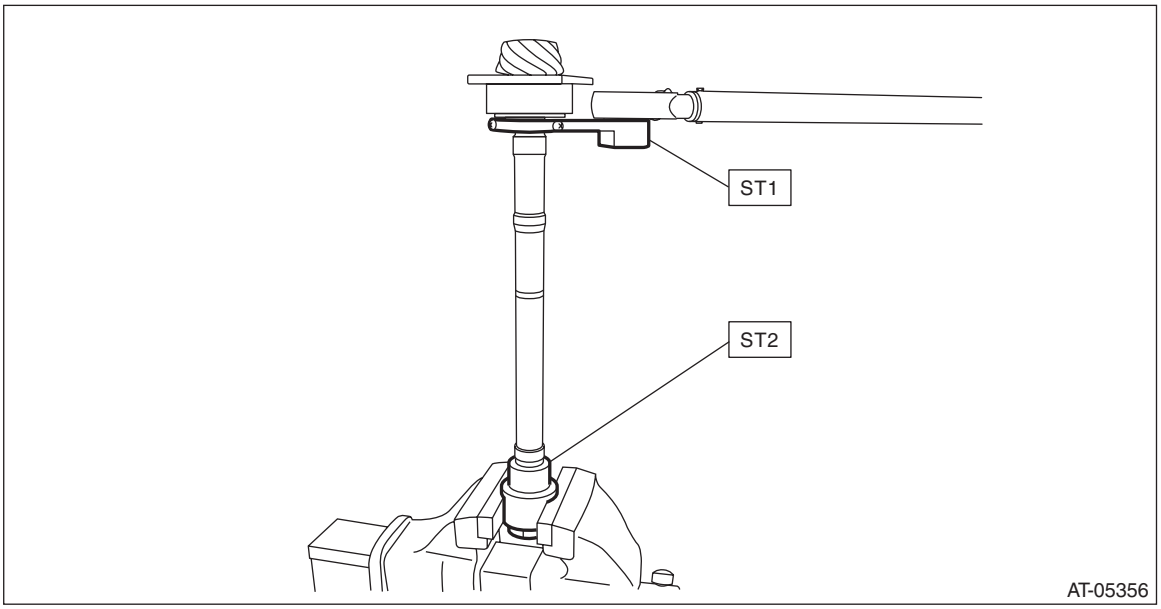
NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

7) Install the drive pinion retainer and lubrication pipe to converter case and tighten the bolt using the ST.
ST 18270KA020 SOCKET (E20)

NOTE:
Do not confuse the three different-length bolts when installing.

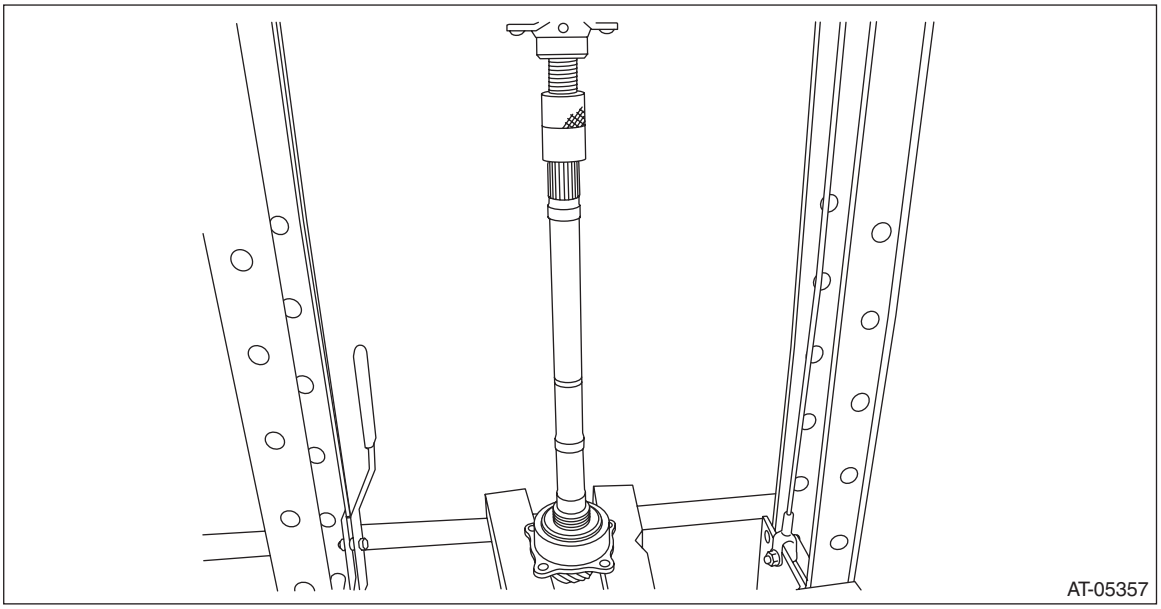


Tightening torque:
43 N·m (4.4 kgf-m, 31.7 ft-lb)

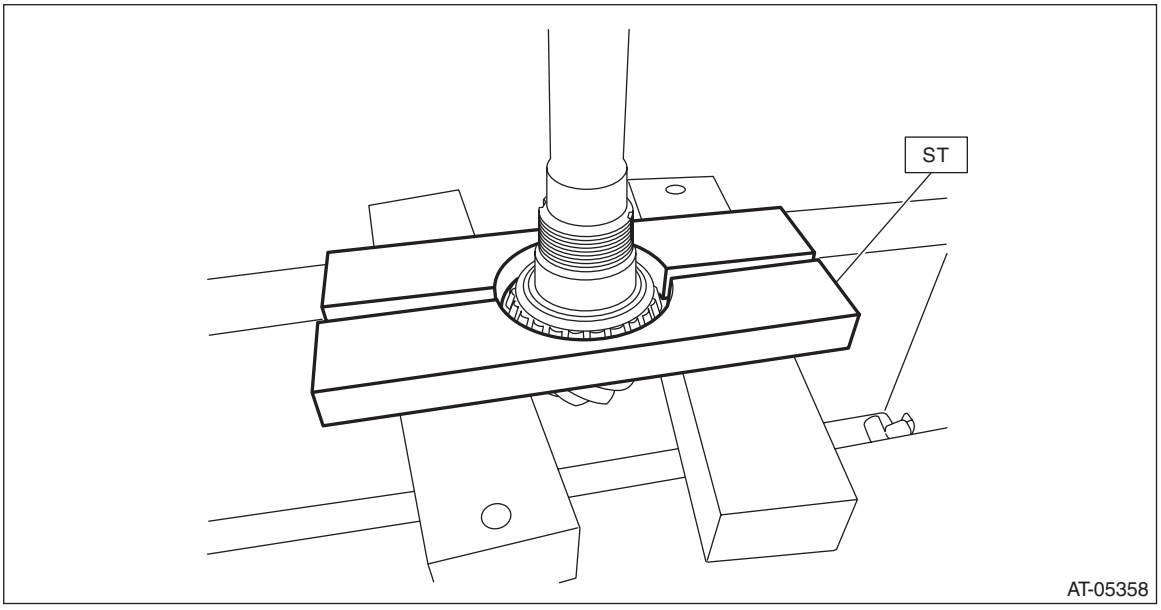


8) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-261, INSTALLATION, Primary Pulley and Secondary Pulley.>
9) Install the transmission case. <Ref. to CVT(TR690)-242, INSTALLATION, Transmission Case.>
10) Install the forward clutch assembly. <Ref. to CVT(TR690)-201, INSTALLATION, Forward Clutch Assembly.>
11) Install the intermediate case. <Ref. to CVT(TR690)-186, INSTALLATION, Intermediate Case.>
12) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-179, INSTALLATION, Transfer Reduction Driven Gear.>
13) Install the transfer clutch assembly. <Ref. to CVT(TR690)-168, INSTALLATION, Transfer Clutch.>
14) Install the rear drive shaft. <Ref. to CVT(TR690)-162, INSTALLATION, Rear Drive Shaft.>
15) Install the extension case. <Ref. to CVT(TR690)-160, INSTALLATION, Extension Case.>
16) Install the transmission harness. <Ref. to CVT(TR690)-136, INSTALLATION, Transmission Harness.>
17) Install the oil pan and control valve body. <Ref. to CVT(TR690)-127, INSTALLATION, Control Valve Body.>
18) Install the air breather hose. <Ref. to CVT(TR690)-153, INSTALLATION, Air Breather Hose.>
19) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-75, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

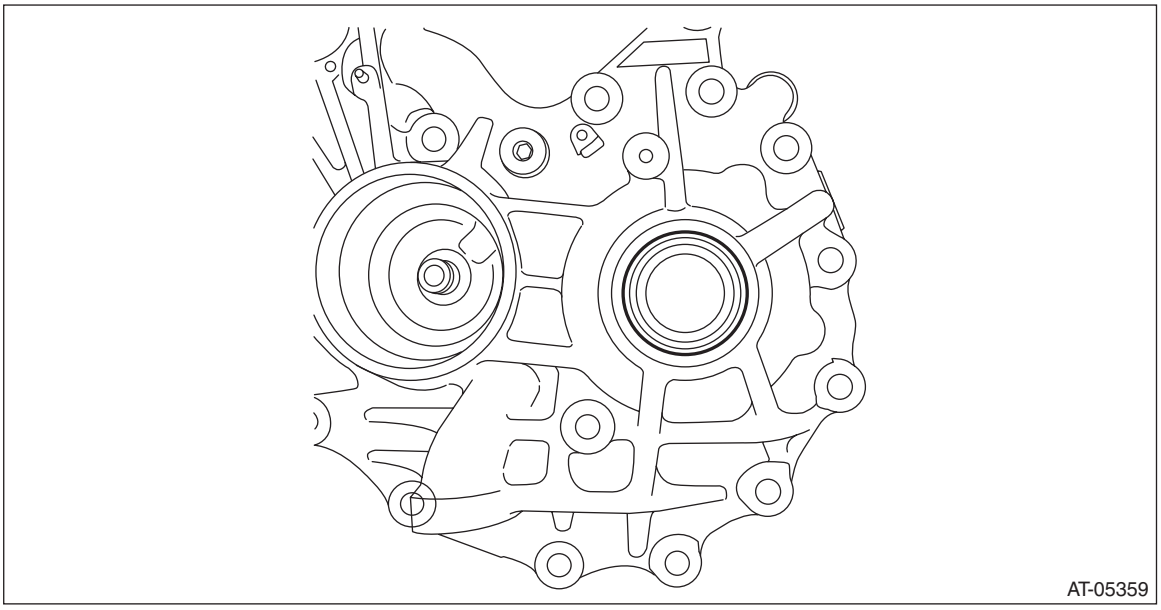


1) Remove the drive pinion assembly.



2) Flatten the tab of the lock nut.
3) Using ST1 and ST2, fix at the spline portion of drive pinion shaft to remove the lock nut.
ST1 18621AA000 WRENCH
ST2 18667AA010 HOLDER

4) Remove the taper roller bearing and outer race from drive pinion shaft.



5) Remove the inner bearing inner race from the drive pinion shaft using ST.
ST 498077000 REMOVER

6) Remove the two oil seals using a screwdriver wrapped with cloth, etc.

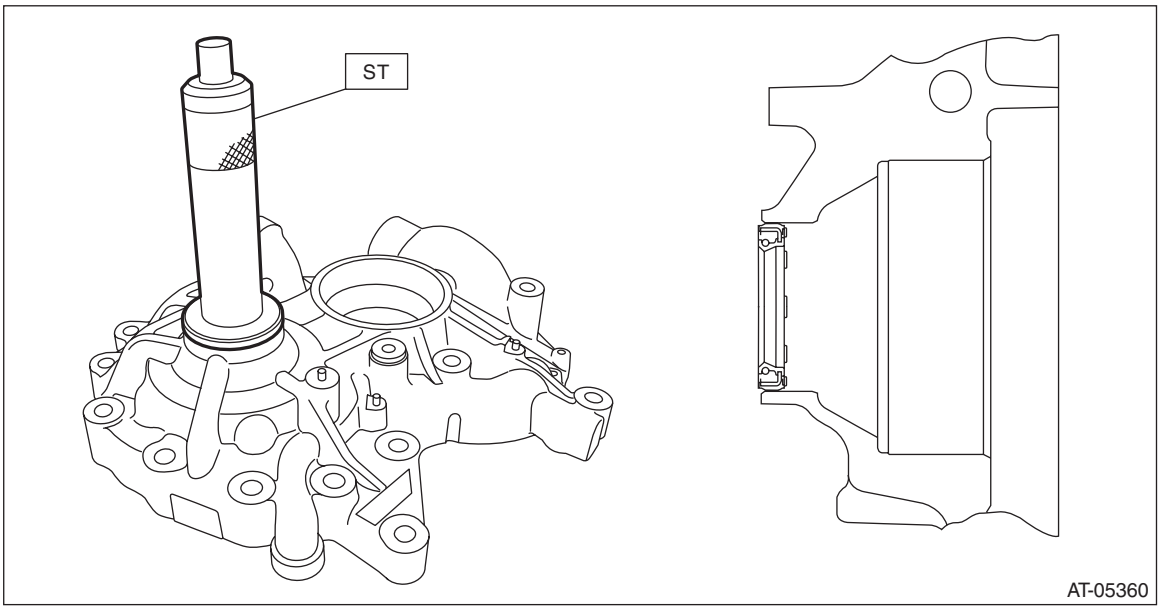
CAUTION:
Do not damage the fitting surface of drive pinion bearing.

7) Remove the plug from drive pinion retainer.

D: ASSEMBLY

1) Install the O-ring to plug and install the plug to drive pinion retainer.

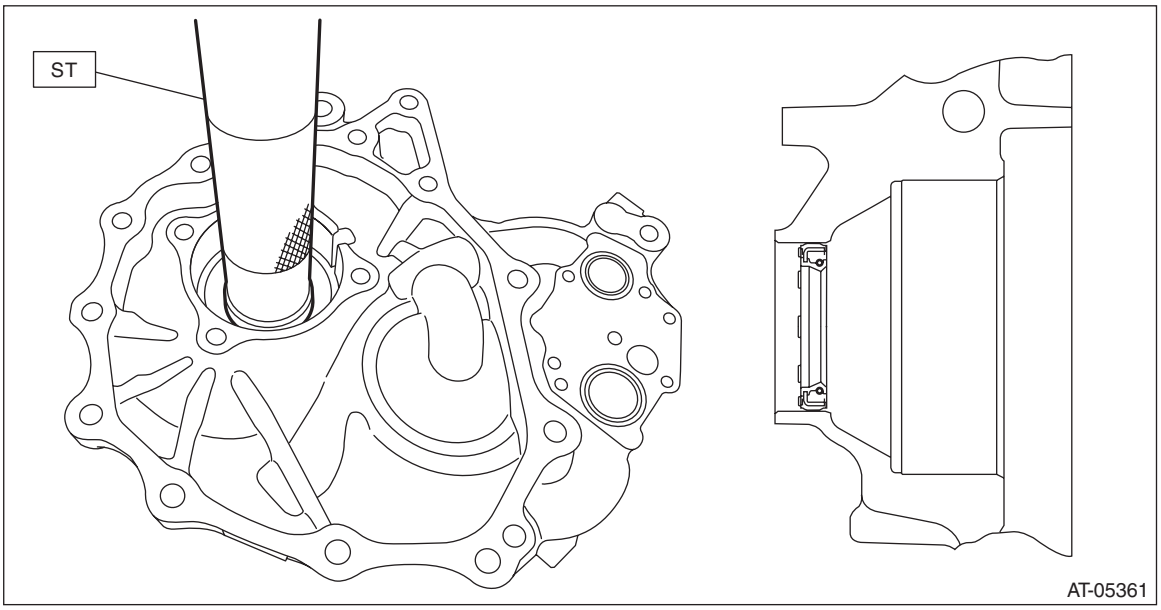
NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.



Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

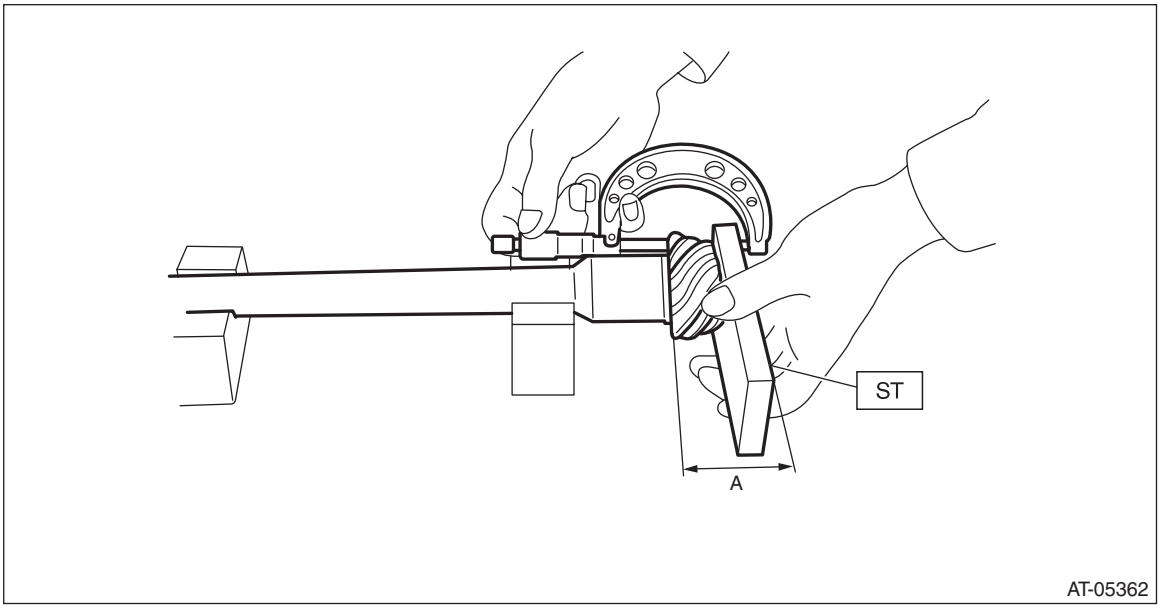
2) Using the ST, install the oil seal to drive pinion retainer.

NOTE:
- Apply CVTF to the oil seal press-fitting surface and lip.
- Install the oil seal in the correct direction.

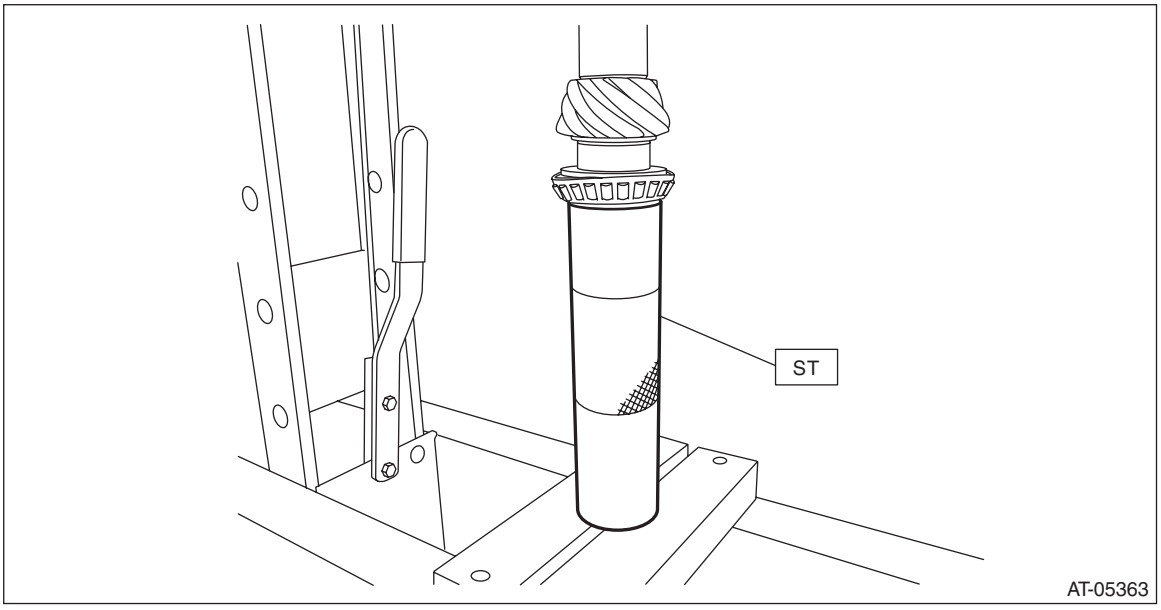


Pulley side

ST 18657AA020 OIL SEAL INSTALLER

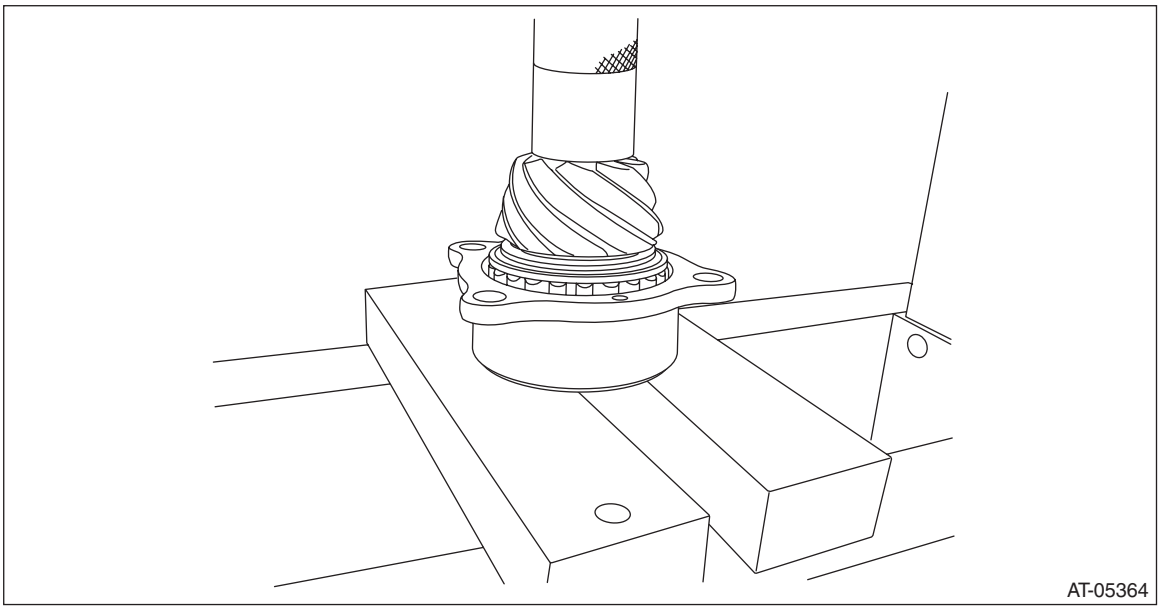


Front differential side



ST 499277100 INSTALLER

3) Measure the dimension “A” of drive pinion shaft.
ST 398643600 GAUGE



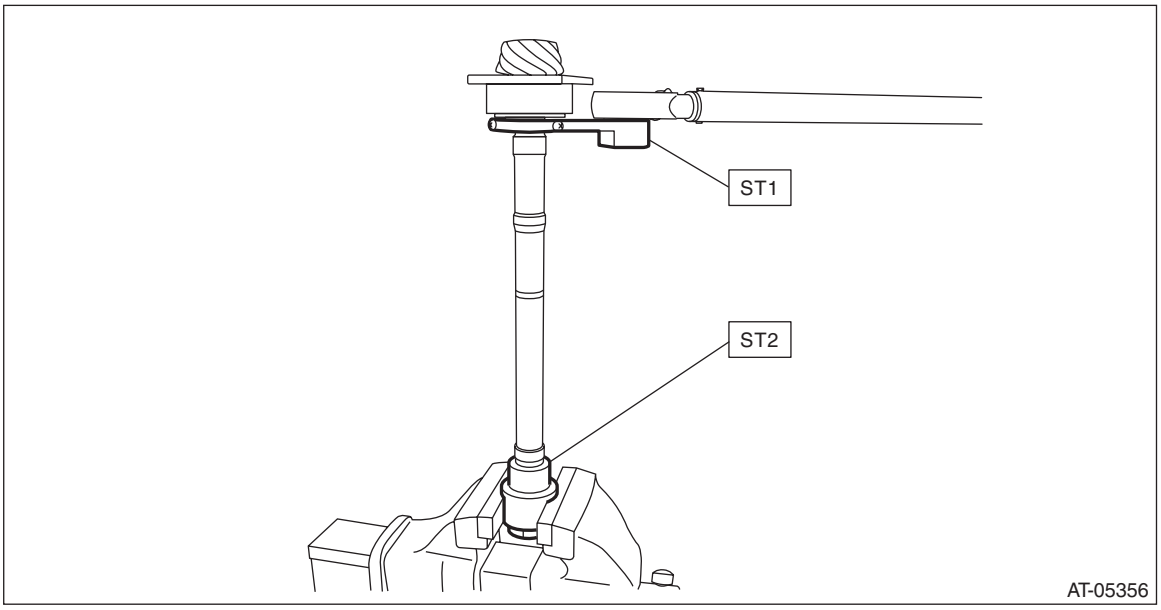
4) Press-fit the new taper roller bearing front side inner race using the ST.
ST 499277200 INSTALLER

5) Press-fit the new taper roller bearing rear side inner race and outer race together.

CAUTION:
Damage may result if too much force is applied to the roller bearing.

NOTE:
Press in to a position where the bearing rotates smoothly without play.

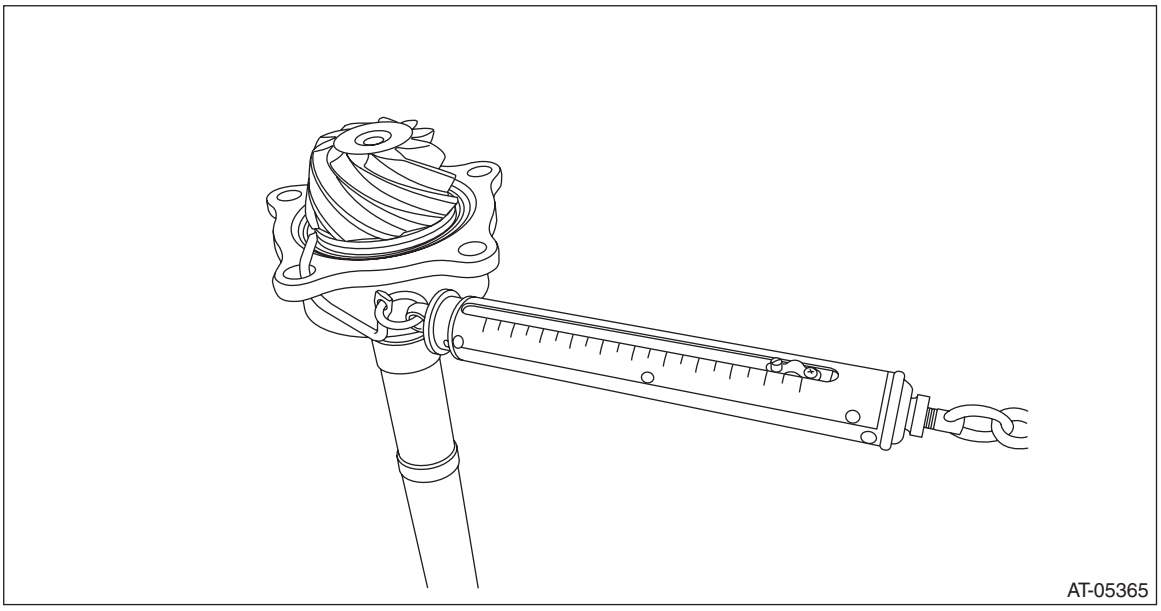
6) Tighten a new lock nut using the ST.
Using the following formula, calculate the torque for a torque wrench.
T2 = L2/(L1 + L2) × T1
T1: 130 N·m (13.3 kgf-m, 95.9 ft-lb)
L1: ST1 length 0.1 m (3.94 in)
L2: Torque wrench length m (in)



[Required torque setting]

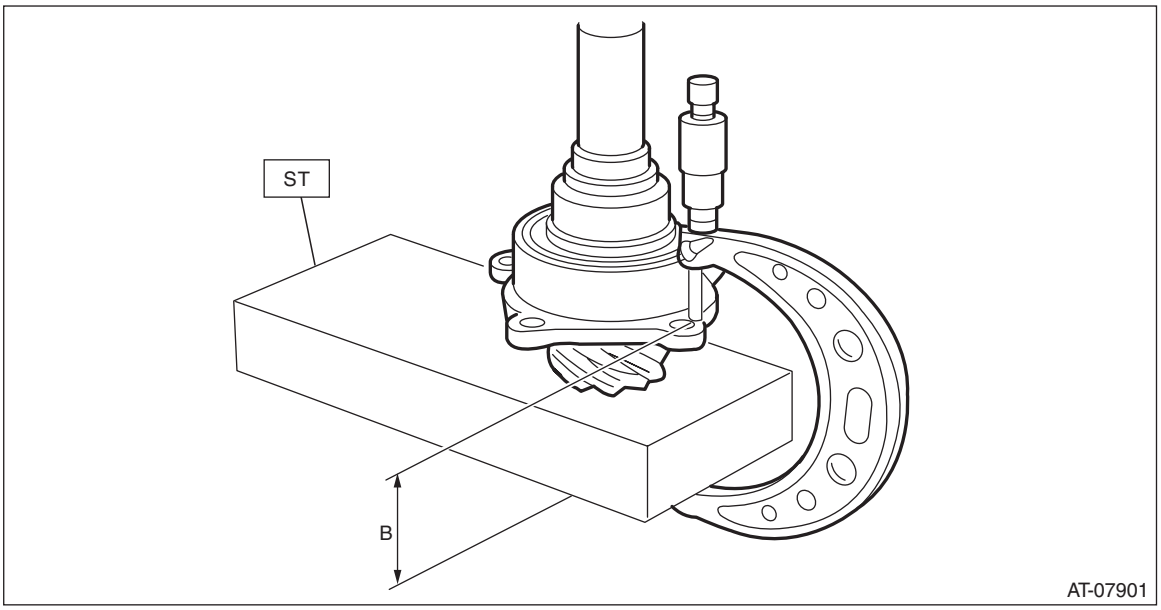
T2: Tightening torque: N·m (kgf-m, ft-lb)
Example:

Torque wrench length m (in)	Tightening torque N·m (kgf-m, ft-lb)
0.4 (15.75)	104 (10.6, 76.7)
0.45 (17.72)	106 (10.8, 78.2)
0.5 (19.69)	108 (11.0, 79.7)
0.55 (21.65)	110 (11.2, 81.1)



ST1 18621AA000 WRENCH
ST2 18667AA010 HOLDER

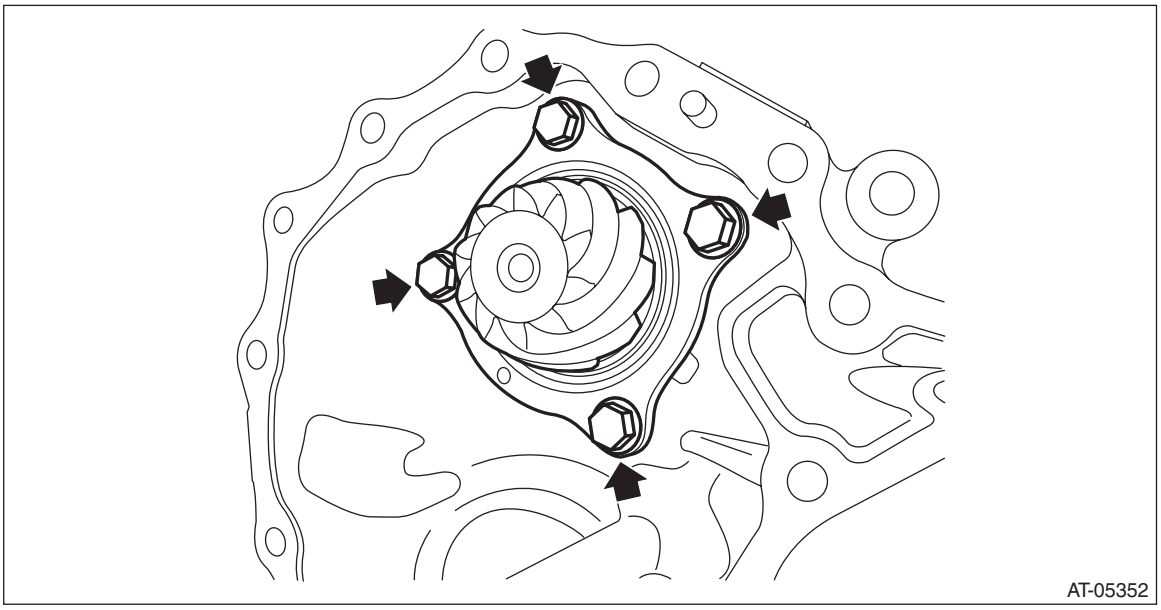
NOTE:
Tighten the lock nut while directly aligning ST1 and torque wrench.



7) Apply differential gear oil to roller of bearing and rotate the bearing several times.
8) Measure the starting torque of the bearing. Make sure the starting torque is within the specified range. If the torque is not within specified range, replace the roller bearing.

Starting torque:
16.3 — 42.7 N (1.7 — 4.4 kgf, 4.4 — 9.6 lbf)

9) Crimp the lock nut in 2 locations.
10) Measure the dimension “B” of the drive pinion shaft.
ST 398643600 GAUGE



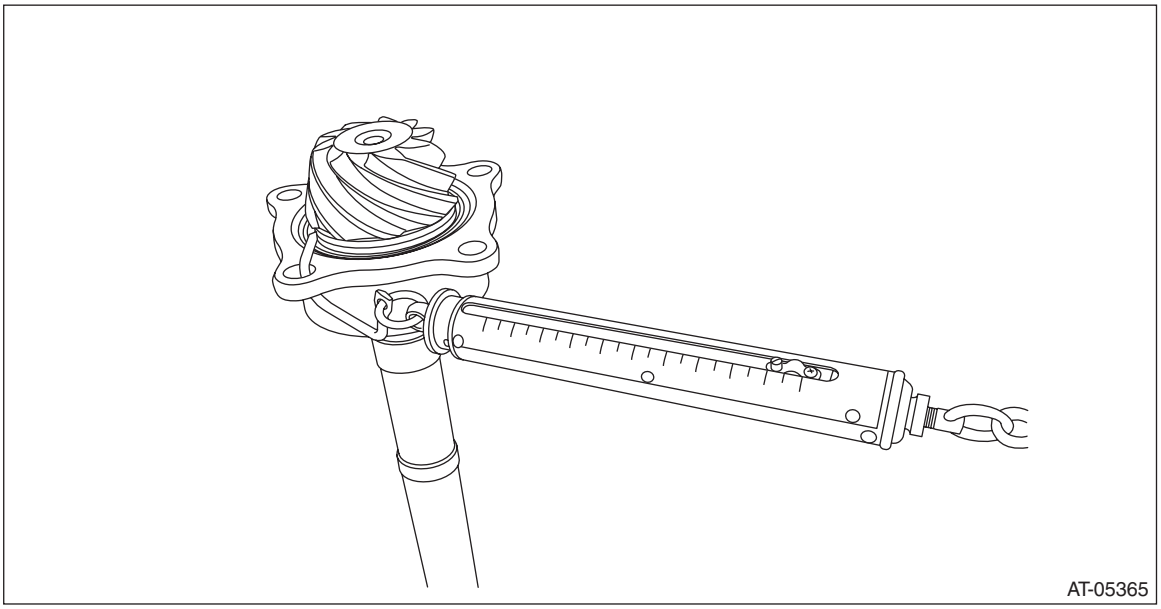
11) Obtain thickness “t” mm (in) of the drive pinion shim.
$t = 6.55 \pm 0.1225 - (B - A)$
12) Select three or less shims from following table.

Drive pinion shim	
Part No.	Thickness mm (in)
31451AA050	0.150 (0.0059)
31451AA060	0.175 (0.0069)
31451AA070	0.200 (0.0079)
31451AA080	0.225 (0.0089)
31451AA090	0.250 (0.0098)
31451AA100	0.275 (0.0108)
31451AA240	0.300 (0.0118)

13) Install the shims selected for drive pinion retainer and drive pinion shaft assembly.

NOTE:
Be careful not to bend the shim.

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)

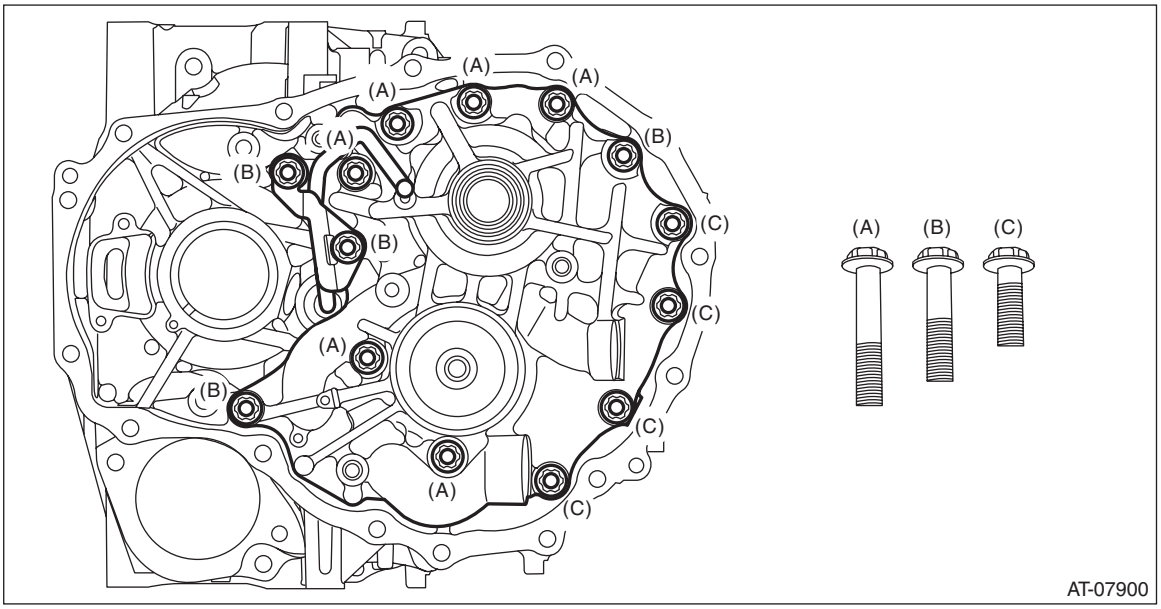


E: INSPECTION

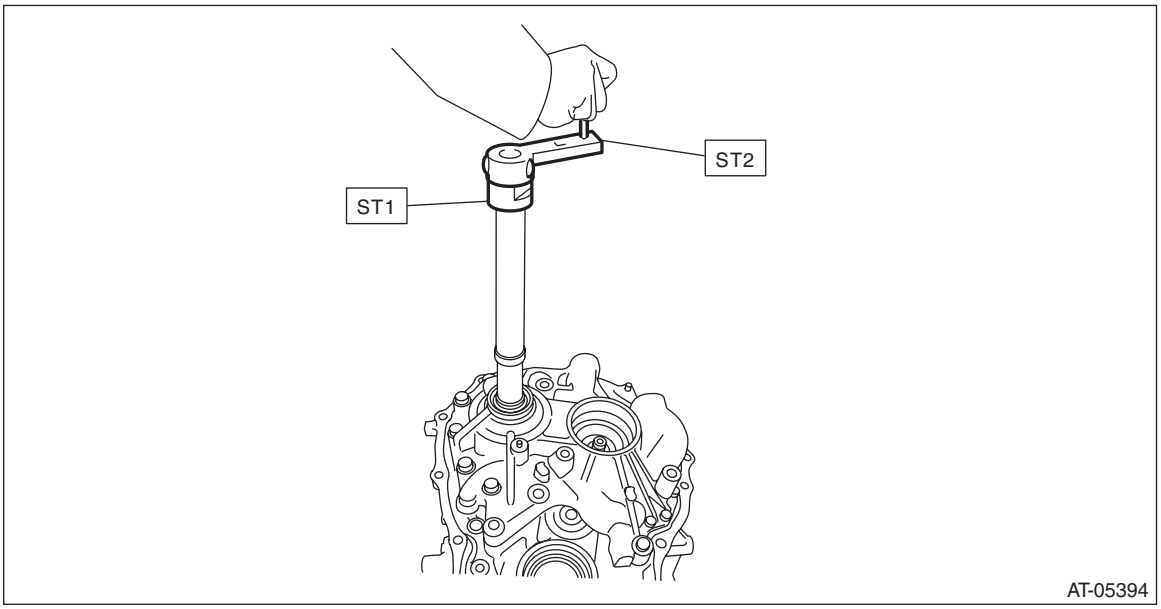
- Make sure that all component parts are free of scratches, holes and other faults.
- Check the tooth contact. <Ref. to CVT(TR690)-287, ADJUSTMENT, Drive Pinion Shaft Assembly.>
- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.
- Check the bearing preload of drive pinion shaft.

CAUTION:
Before measuring, apply differential gear oil to roller of bearing and rotate the bearing several times.

Starting torque:
16.3 — 42.7 N (1.7 — 4.4 kgf, 4.4 — 9.6 lbf)



F: ADJUSTMENT

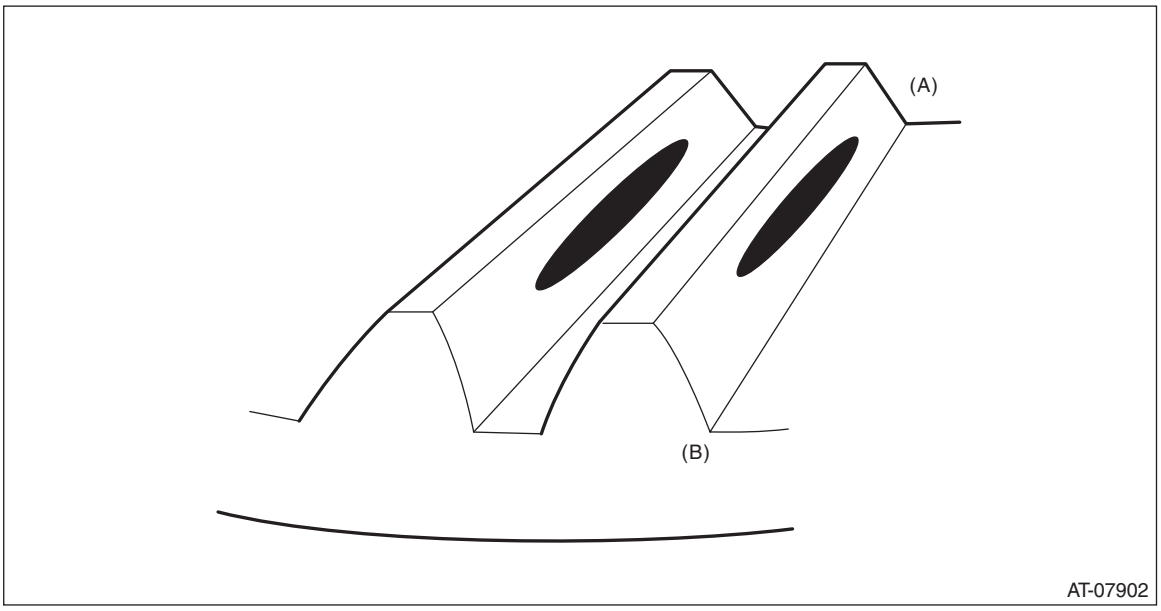


1) Remove the liquid gasket from the mating surface completely.
2) Using the ST, install the drive pinion retainer to converter case.
ST 18270KA020 SOCKET (E20)

NOTE:
Do not confuse the three different-length bolts when installing.

Tightening torque:
43 N·m (4.4 kgf-m, 31.7 ft-lb)

3) Rotate the drive pinion several times using ST1 and ST2.
ST1 18667AA010 HOLDER
ST2 499787700 WRENCH

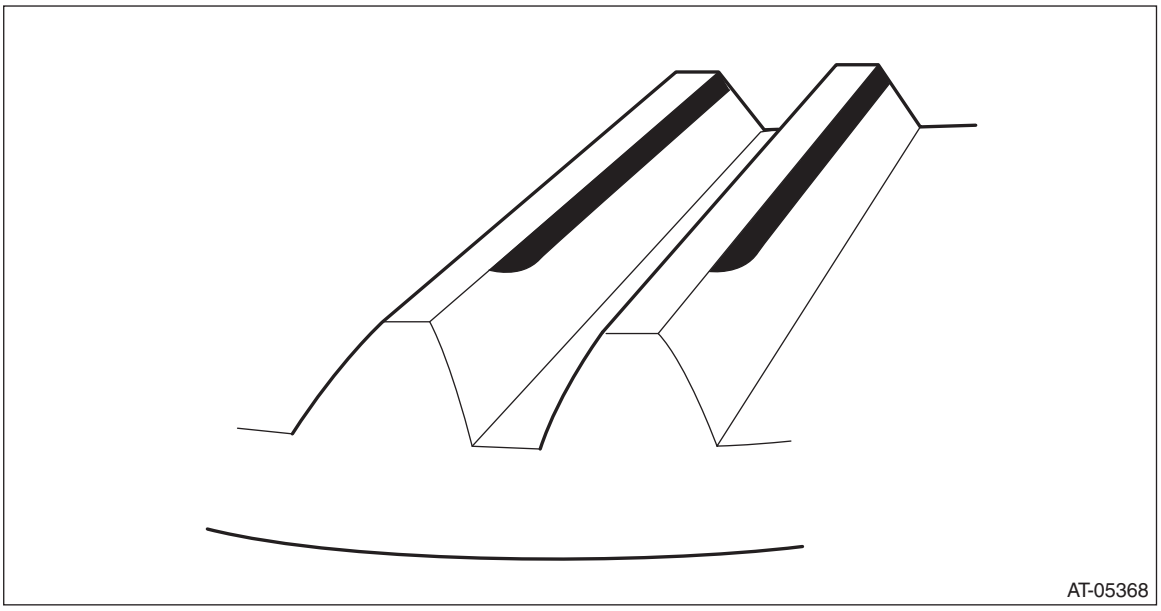


4) Adjust the drive pinion and hypoid driven gear backlash. <Ref. to CVT(TR690)-309, ADJUSTMENT, Front Differential Assembly.>
5) Using the ST, remove the drive pinion retainer from converter case.
ST 18270KA020 SOCKET (E20)
6) Apply lead-free red dye evenly on the both sides of three to four teeth of the hypoid driven gear. Then install the drive pinion retainer and rotate the drive pinion in both directions several times. Remove the drive pinion retainer and check the tooth contact pattern.
If the teeth contact is inappropriate, adjust the backlash or thickness of the shim. <Ref. to CVT(TR690)-309, ADJUSTMENT, Front Differential Assembly.>

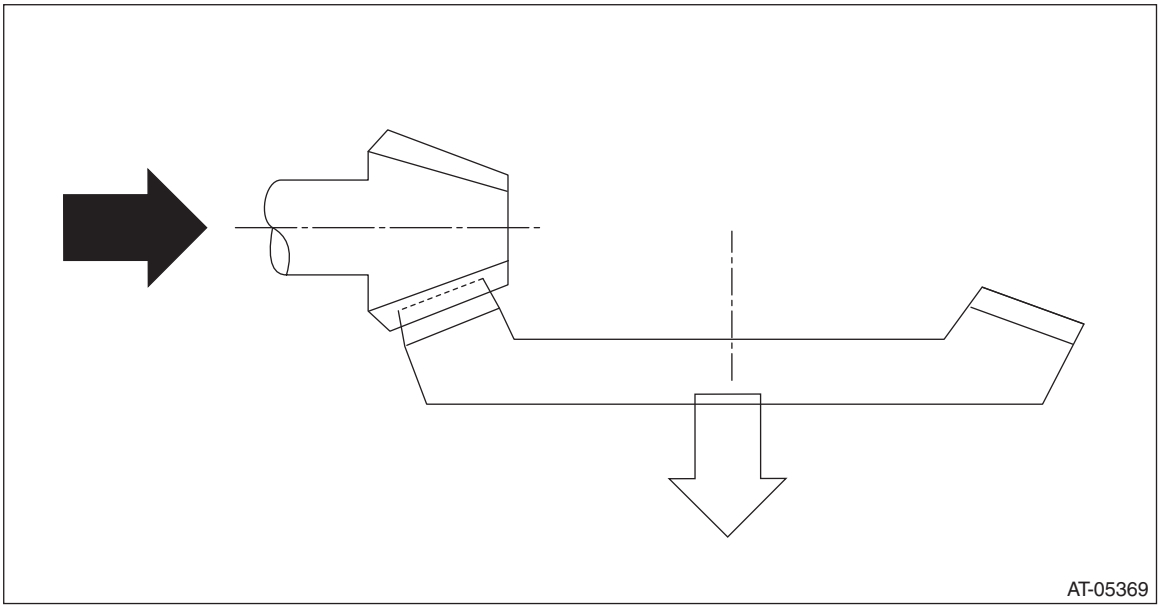
NOTE:
After correction, wipe off the lead-free red dye.

- Correct tooth contact

Check item: Tooth contact surface is slightly shifted toward the toe side under a no-load condition. (When driving, it moves towards the heel side.)



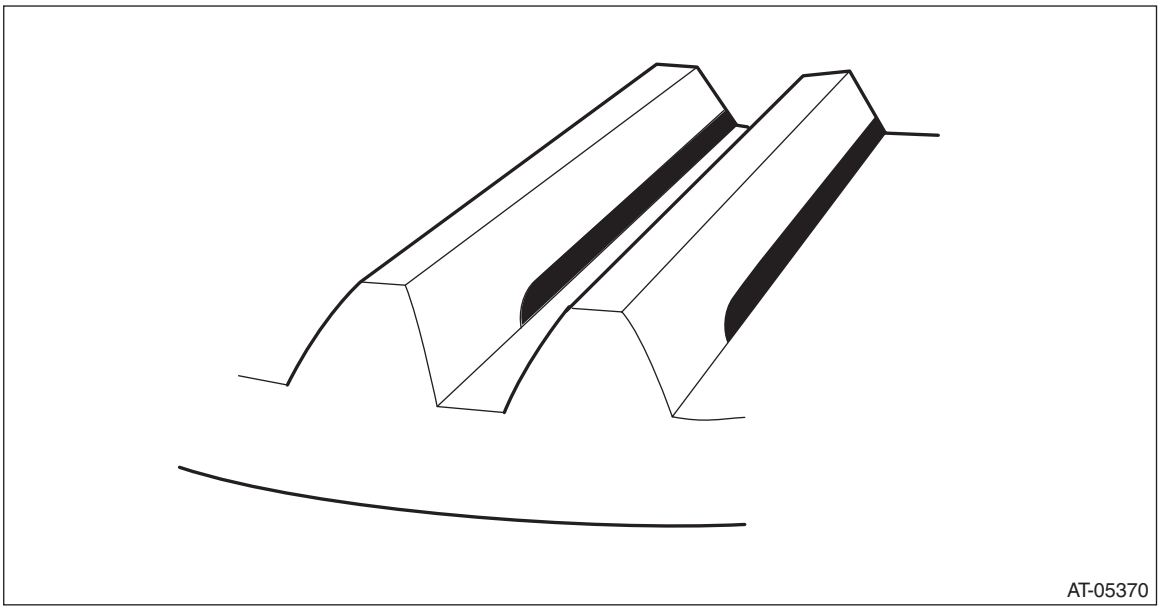
(A) Toe side
(B) Heel side



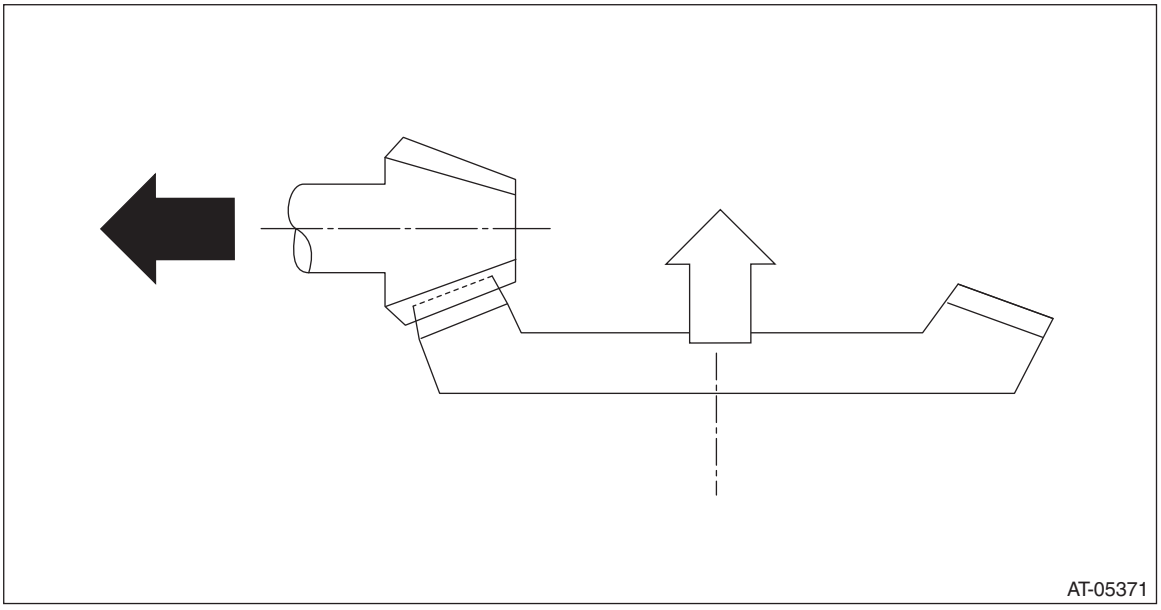
- Face contact

Check item: Backlash is too large.

Contact pattern



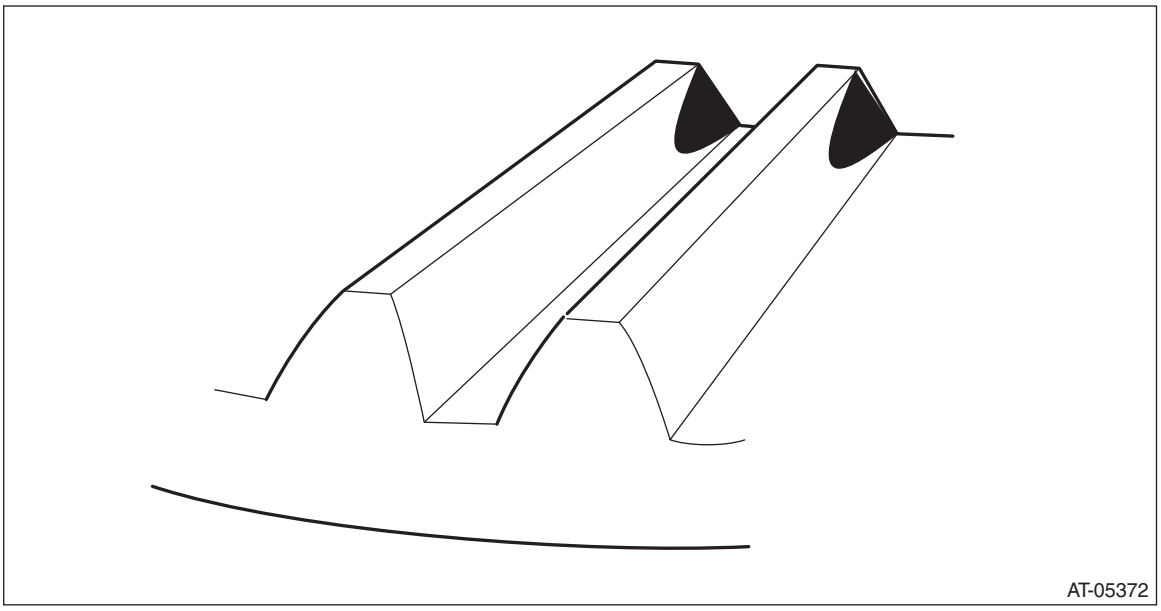
Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.



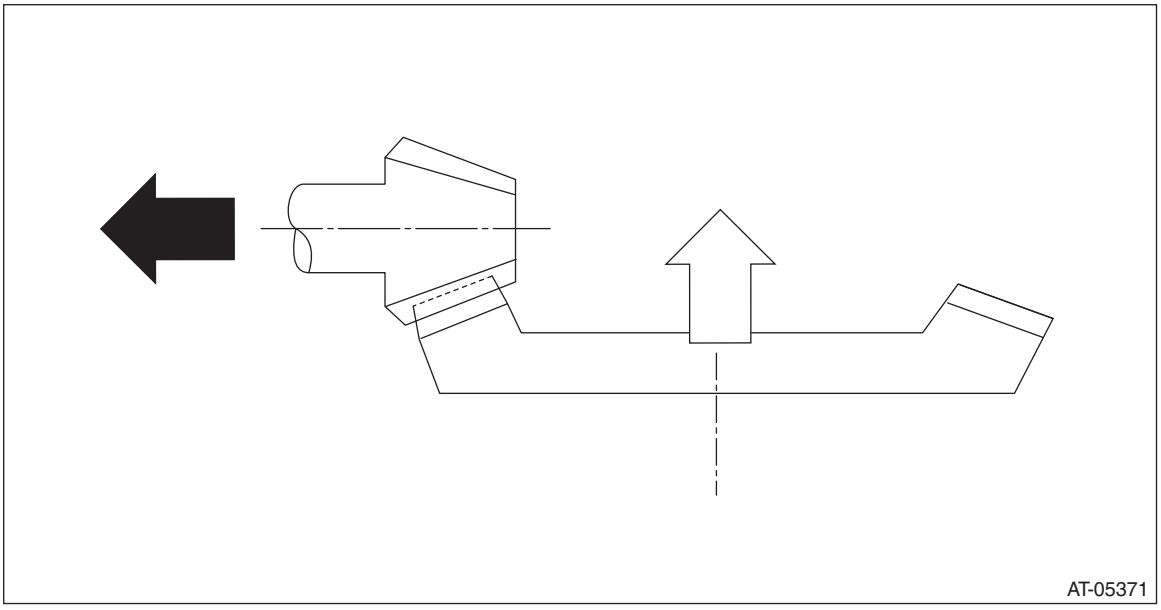
- Flank contact

Check item: Backlash is too small.

Contact pattern



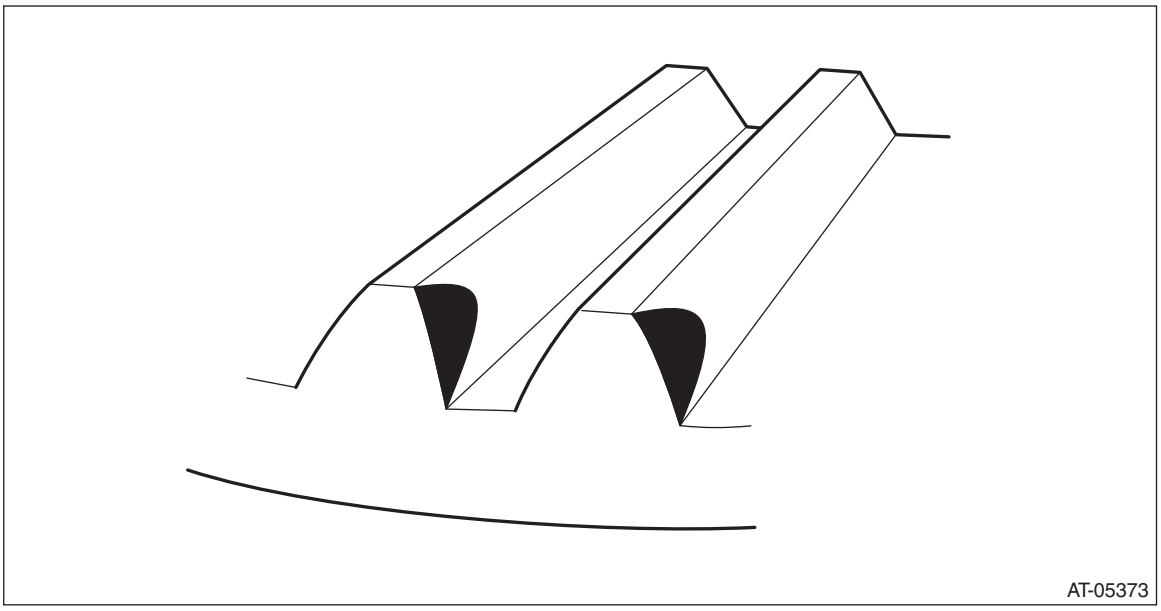
Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear.



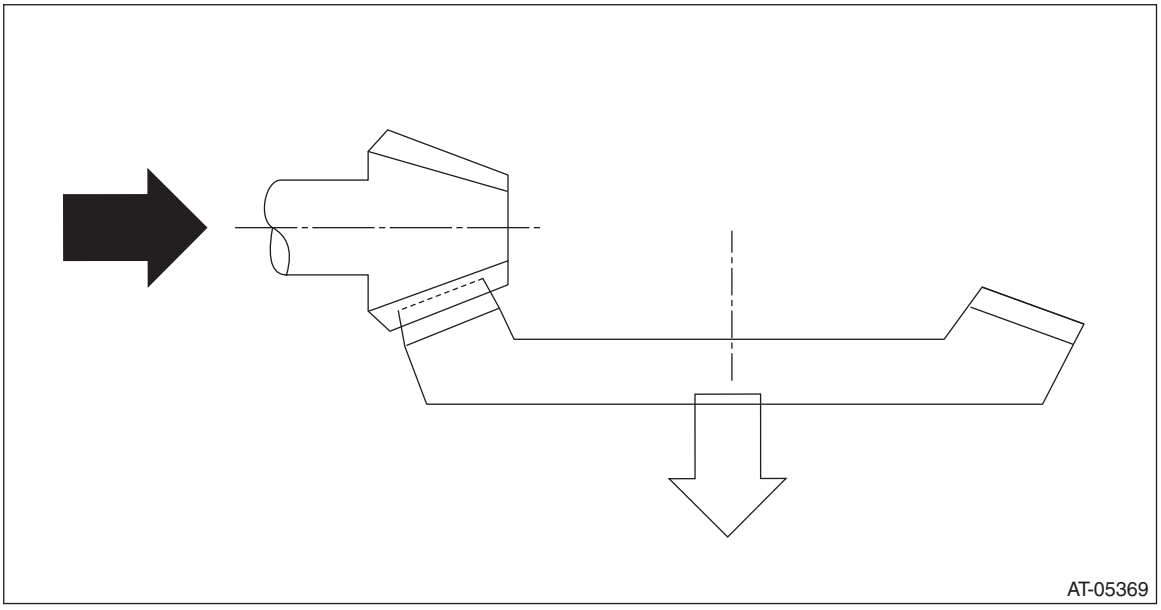
- Toe contact (inside contact)

Check item: Teeth contact area is too small.

Contact pattern



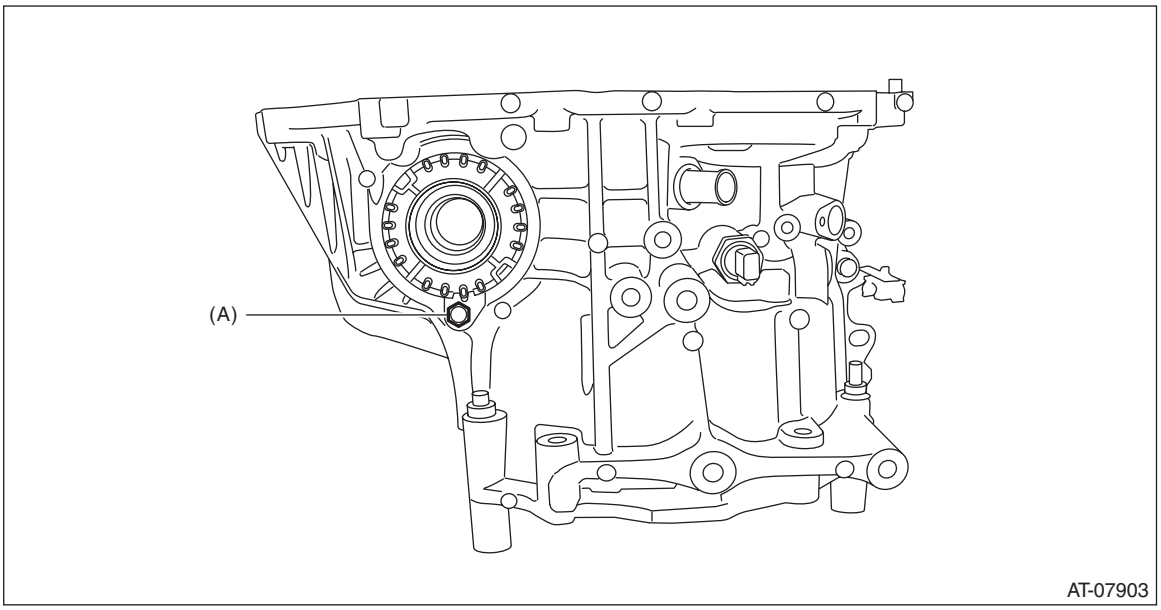
Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear side.



- Heel contact (outside end contact)

Check item: Teeth contact area is too small.

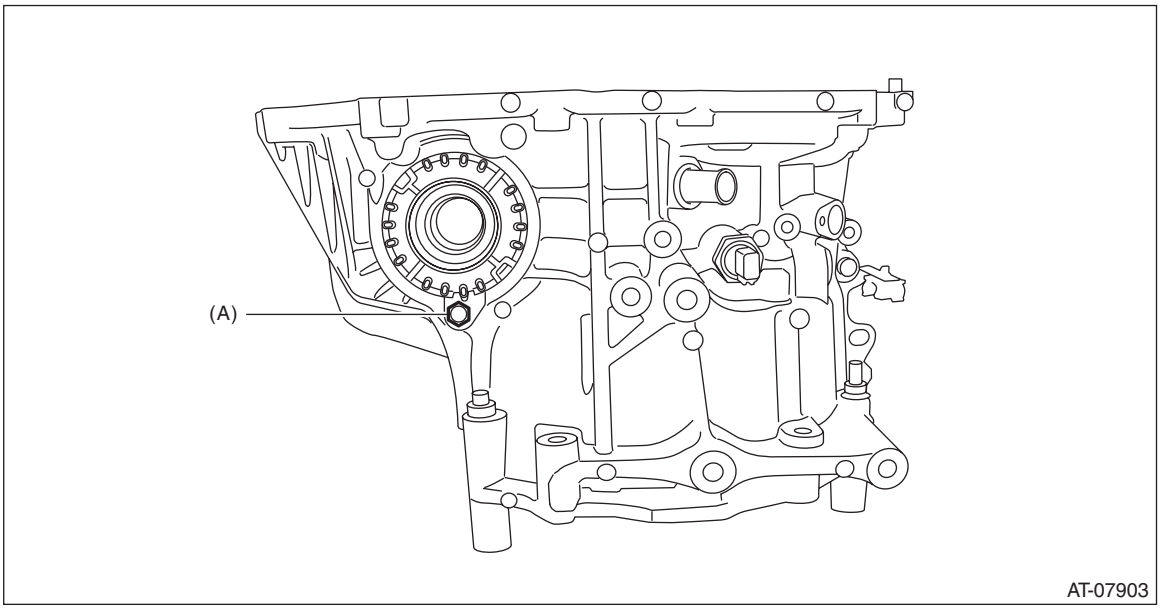
Contact pattern



Corrective action: Increase the thickness of the pinion height adjusting washer according to the procedures for moving the drive pinion closer to the hypoid driven gear.

7) If tooth contact is correct, mark the differential side retainer position and loosen. After fitting a new O-ring and oil seal, screw in the differential side retainer to the marked position.
8) Tighten the lock plate with specified torque.

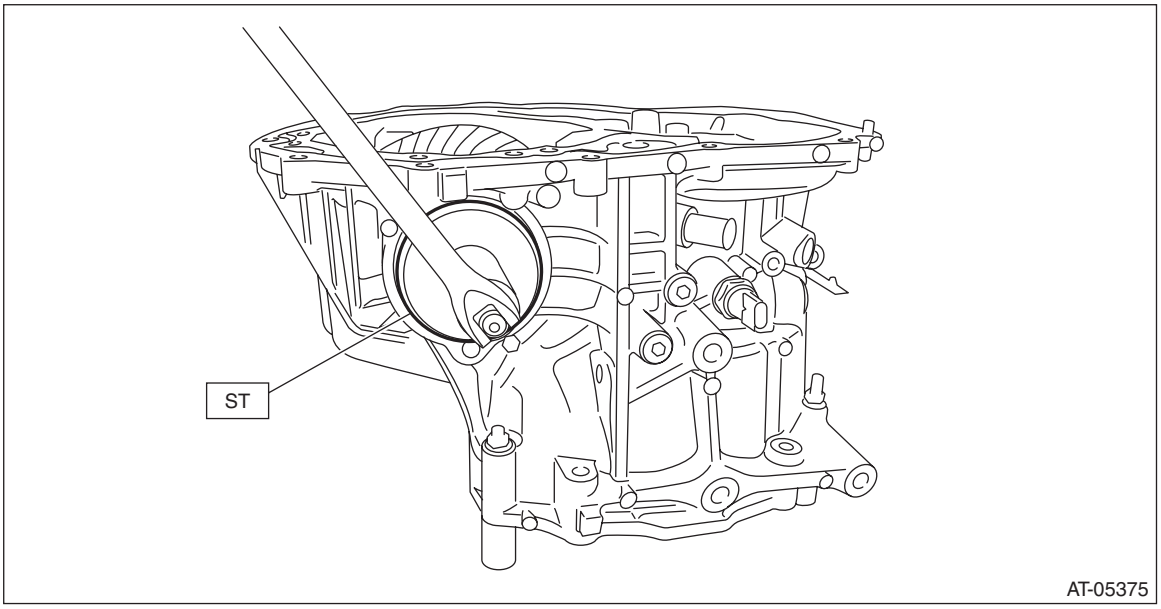
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



(A) Lock plate

45.Front Differential Assembly

A: REMOVAL

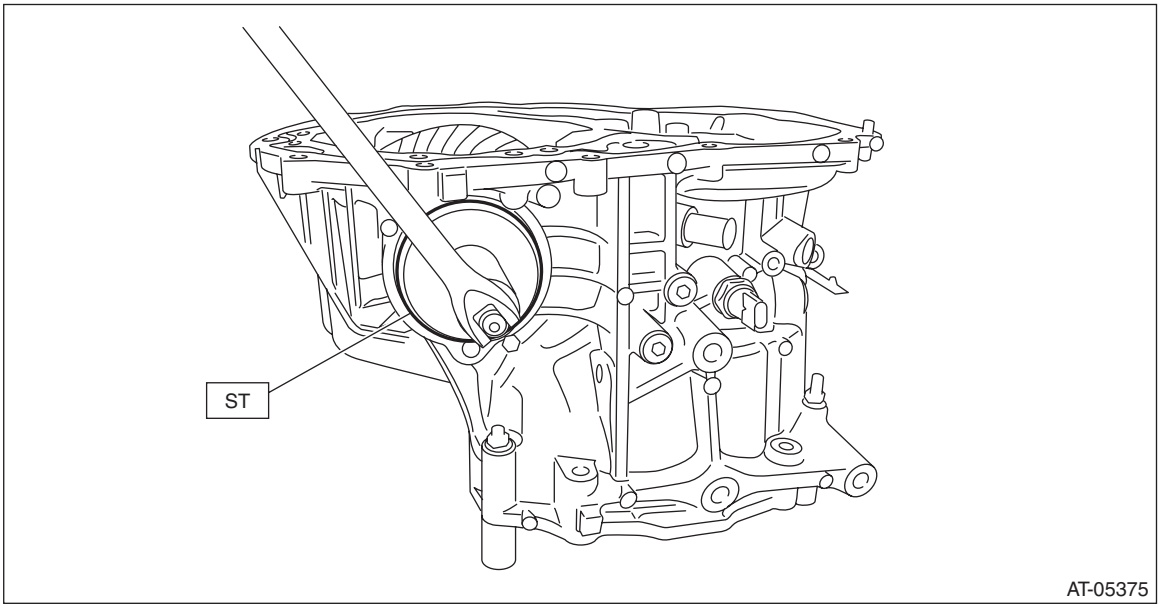


1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-58, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-151, REMOVAL, Air Breather Hose.>
3) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-123, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR690)-134, REMOVAL, Transmission Harness.>
5) Remove the extension case. <Ref. to CVT(TR690)-159, REMOVAL, Extension Case.>
6) Remove the rear drive shaft. <Ref. to CVT(TR690)-162, REMOVAL, Rear Drive Shaft.>
7) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-167, REMOVAL, Transfer Clutch.>
8) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-179, REMOVAL, Transfer Reduction Driven Gear.>
9) Remove the intermediate case. <Ref. to CVT(TR690)-185, REMOVAL, Intermediate Case.>
10) Remove the forward clutch assembly. <Ref. to CVT(TR690)-200, REMOVAL, Forward Clutch Assembly.>
11) Remove the transmission case. <Ref. to CVT(TR690)-240, REMOVAL, Transmission Case.>
12) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-257, REMOVAL, Primary Pulley and Secondary Pulley.>
13) Remove the drive pinion shaft assembly. <Ref. to CVT(TR690)-273, REMOVAL, Drive Pinion Shaft Assembly.>
14) Remove the lock plates on both sides.

(A) Lock plate

15) Remove the differential side retainers using ST.
ST 18658AA020 WRENCH COMPL RETAINER

NOTE:
• Support the differential case assembly by hand to avoid damaging the retainer mounting hole of the converter case.
• When keeping the retainers aside, use labels etc. to avoid confusing the left and right.



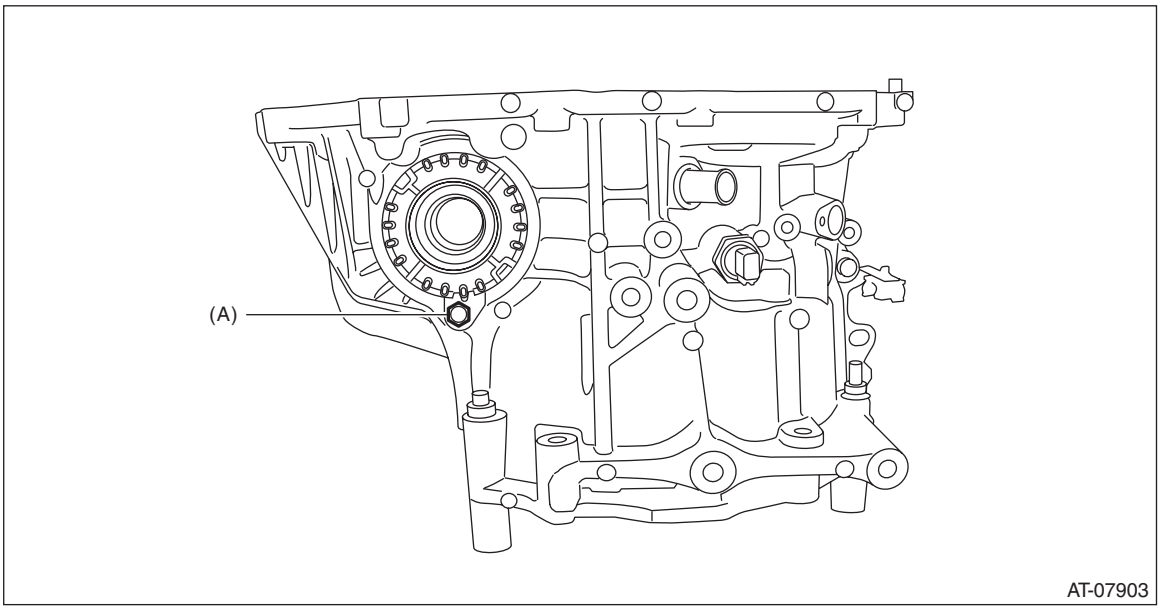
16) Remove the front differential assembly while being careful not to damage the attachment part of the retainer.
17) Remove the oil seals and O-rings from both differential side retainers. <Ref. to CVT(TR690)-300, SIDE RETAINER, DISASSEMBLY, Front Differential Assembly.>

B: INSTALLATION

1) Install the front differential assembly to the converter case.

NOTE:
Be careful not to damage the inside of the case (especially the mating surface of the differential side retainers).
2) Temporarily install the differential side retainers using ST.
ST 18658AA020 WRENCH COMPL RETAINER

3) Adjust the backlash of the front differential. <Ref. to CVT(TR690)-309, ADJUSTMENT, Front Differential Assembly.>



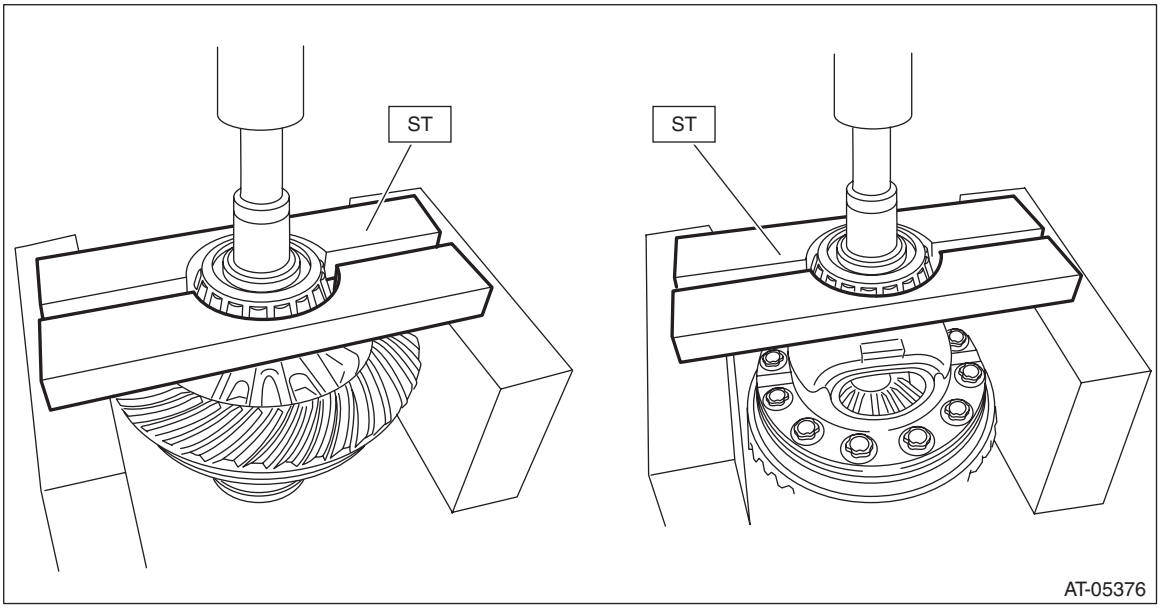
4) Inspect and adjust the tooth contact. <Ref. to CVT(TR690)-287, ADJUSTMENT, Drive Pinion Shaft Assembly.>
5) Remove the differential side retainers and install the O-rings and oil seals. <Ref. to CVT(TR690)-307, SIDE RETAINER, ASSEMBLY, Front Differential Assembly.>

NOTE:
- Record how many turns were needed to remove.
- Use new O-rings and oil seals.

6) Install the differential side retainers using ST.

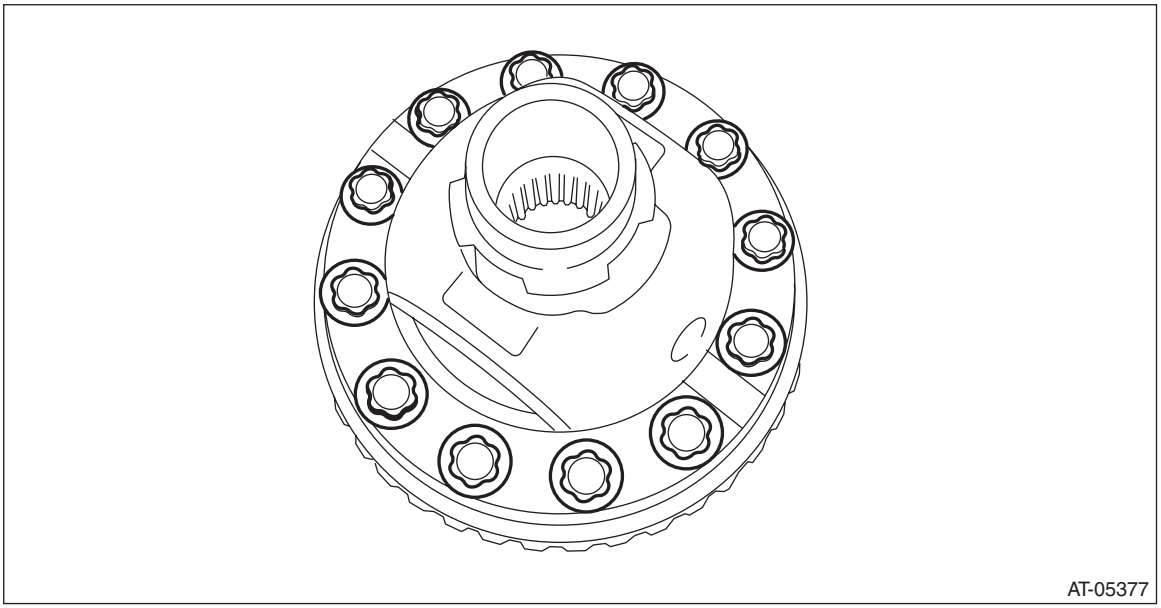
NOTE:
When attaching, turn the differential side retainer by the same number of turns it took to remove, and align the marks.
ST 18658AA020 WRENCH COMPL RETAINER
7) Install the lock plate.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



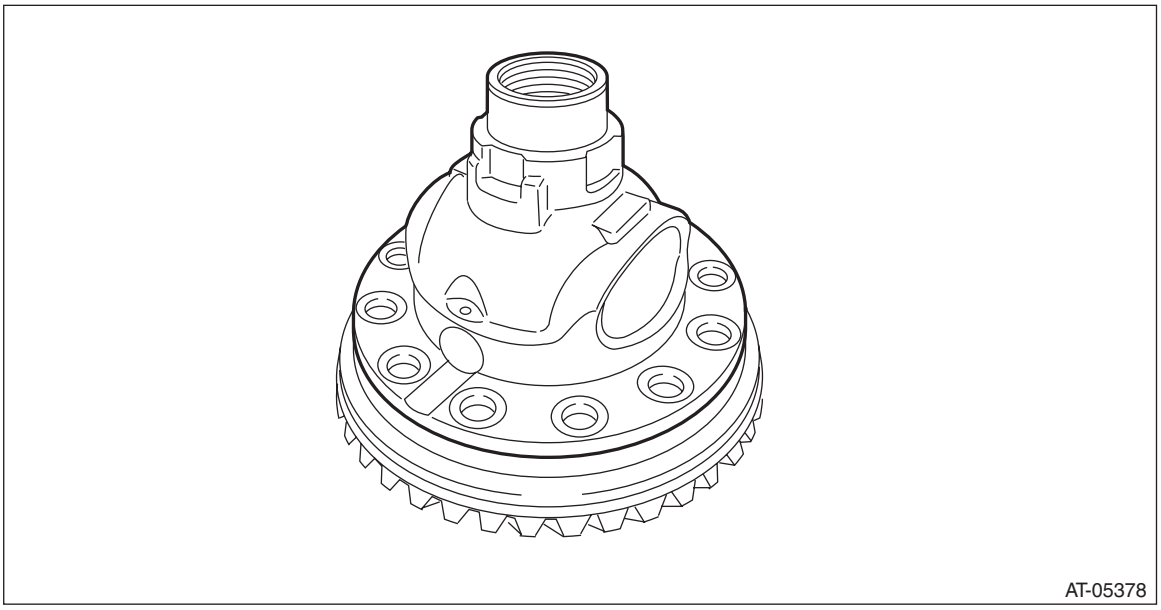
(A) Lock plate

8) Install the drive pinion shaft assembly. <Ref. to CVT(TR690)-275, INSTALLATION, Drive Pinion Shaft Assembly.>
9) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-261, INSTALLATION, Primary Pulley and Secondary Pulley.>
10) Install the transmission case. <Ref. to CVT(TR690)-242, INSTALLATION, Transmission Case.>
11) Install the forward clutch assembly. <Ref. to CVT(TR690)-201, INSTALLATION, Forward Clutch Assembly.>
12) Install the intermediate case. <Ref. to CVT(TR690)-186, INSTALLATION, Intermediate Case.>
13) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-179, INSTALLATION, Transfer Reduction Driven Gear.>
14) Install the transfer clutch assembly. <Ref. to CVT(TR690)-168, INSTALLATION, Transfer Clutch.>
15) Install the rear drive shaft. <Ref. to CVT(TR690)-162, INSTALLATION, Rear Drive Shaft.>
16) Install the extension case. <Ref. to CVT(TR690)-160, INSTALLATION, Extension Case.>
17) Install the transmission harness. <Ref. to CVT(TR690)-136, INSTALLATION, Transmission Harness.>
18) Install the control valve body and oil pan. <Ref. to CVT(TR690)-127, INSTALLATION, Control Valve Body.>
19) Install the air breather hose. <Ref. to CVT(TR690)-153, INSTALLATION, Air Breather Hose.>
20) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-75, INSTALLATION, Automatic Transmission Assembly.>

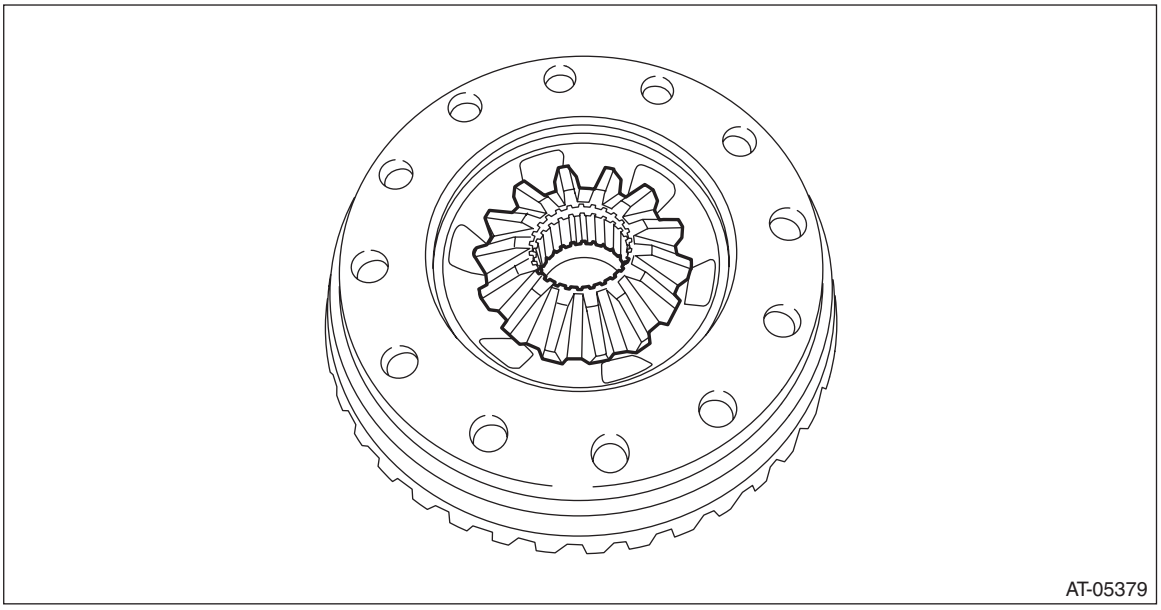


C: DISASSEMBLY

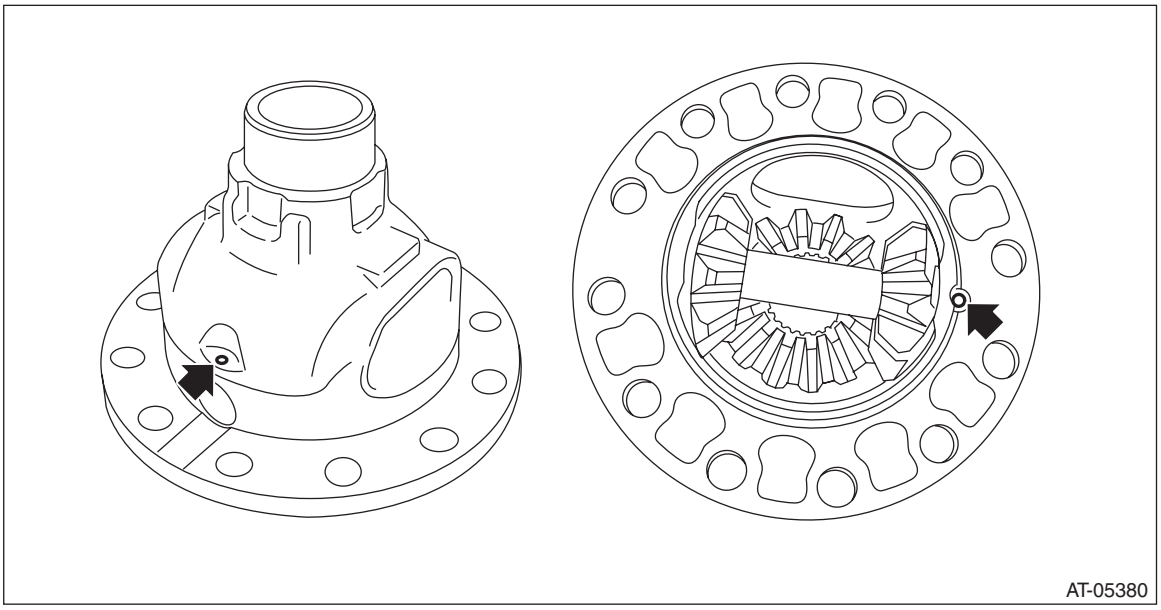
1. DIFFERENTIAL CASE ASSEMBLY



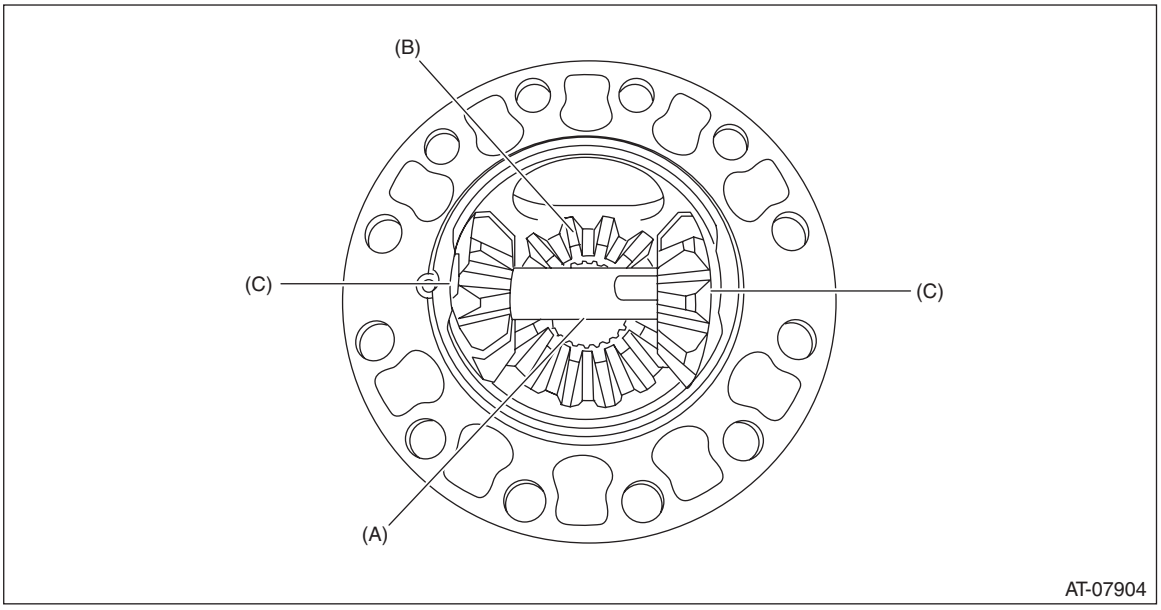
1) Remove the taper roller bearing using the ST.
ST 498077000 REMOVER



2) Remove the hypoid driven gear mounting bolt using the ST.
ST 18270KA020 SOCKET (E20)

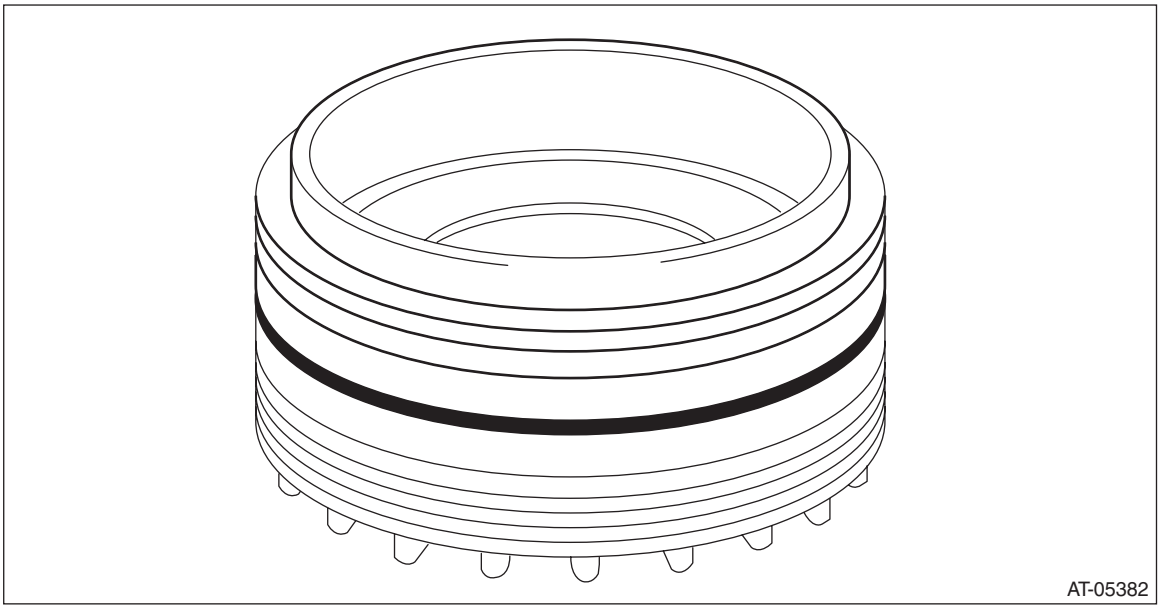


3) Remove the differential case (LH).

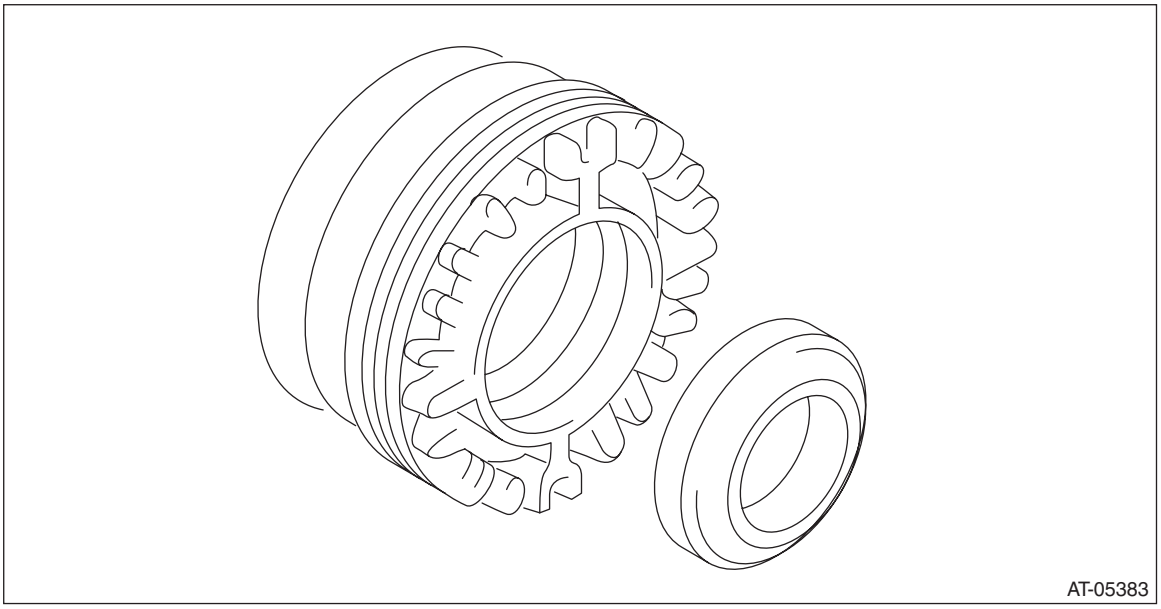


4) Remove the differential bevel gear and washer from differential case.

5) Remove the straight pin.

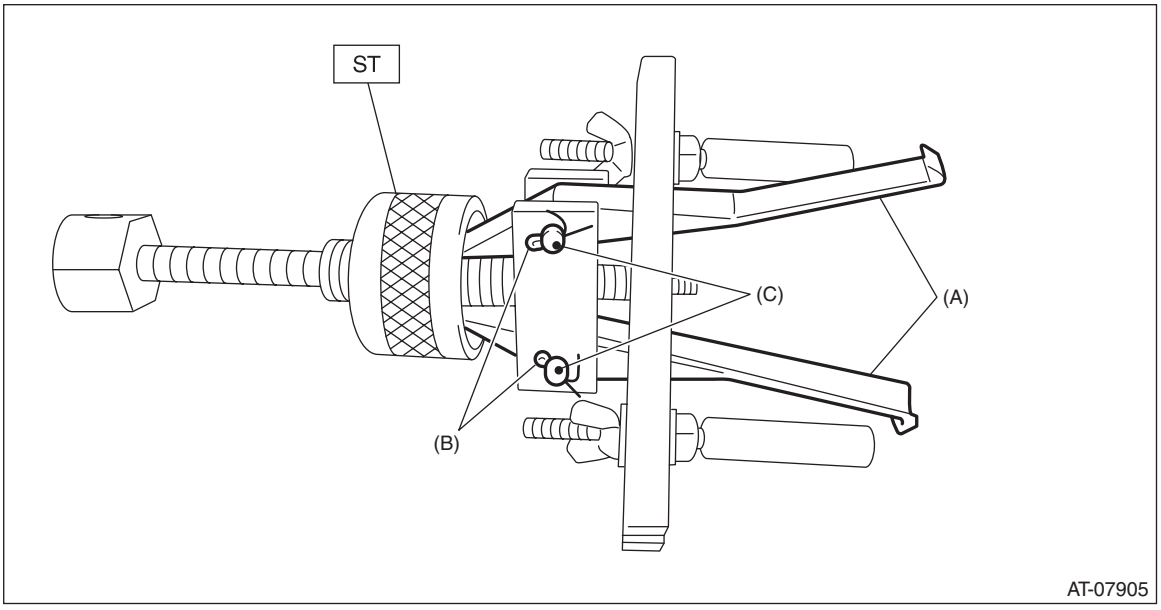


6) Remove the pinion shaft, then remove the differential bevel gear, washer and differential bevel pinion.



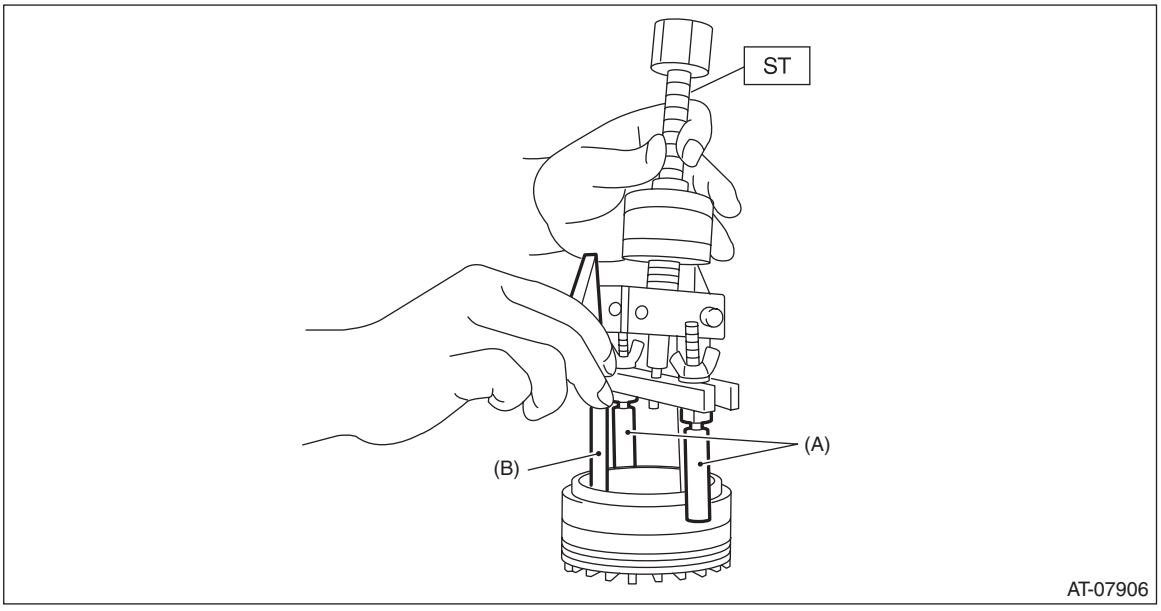
(A) Pinion shaft
(B) Differential bevel gear
(C) Differential bevel pinion

2. SIDE RETAINER



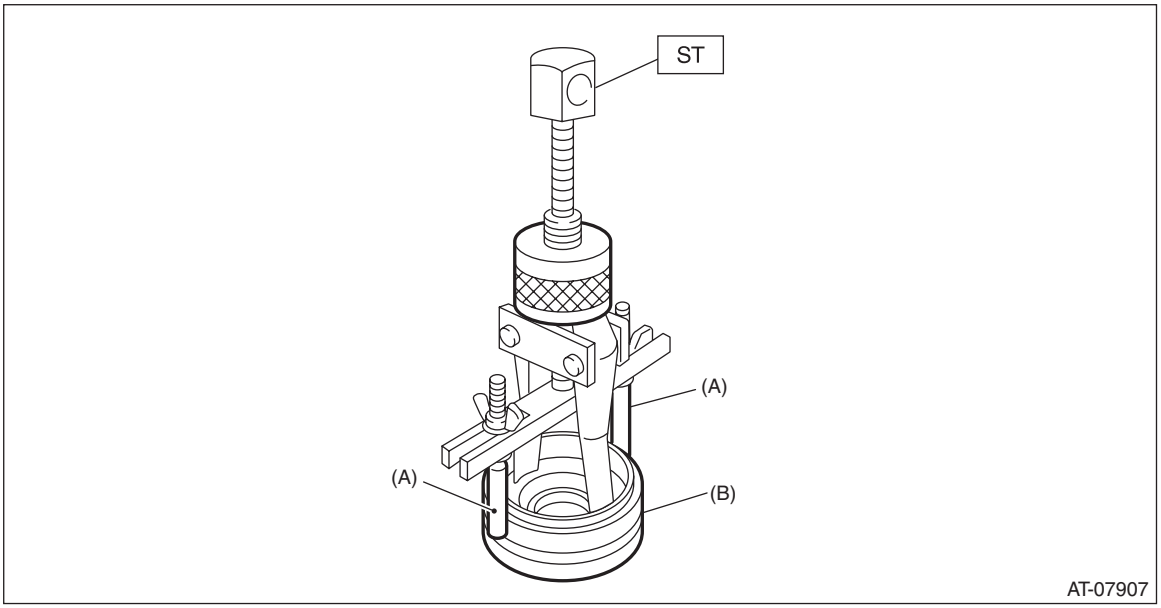
NOTE:
After adjusting the drive pinion backlash and tooth contact, replace the oil seal and O-ring with new parts.
1) Remove the O-rings.

2) Remove the oil seal.



3) Remove the SPLIT PIN (ST), and then remove the claw.
ST 398527700 PULLER ASSY

(A) Claw
(B) Split pin
(C) Pin

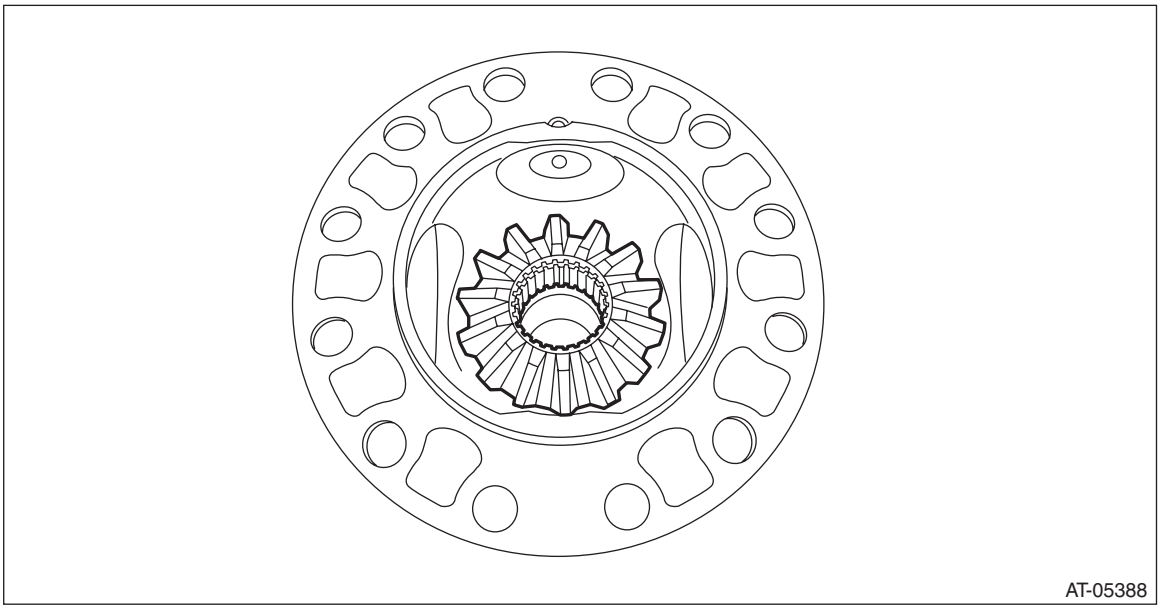


4) Attach two claws to the outer race, and set the ST to side retainer.
ST 398527700 PULLER ASSY

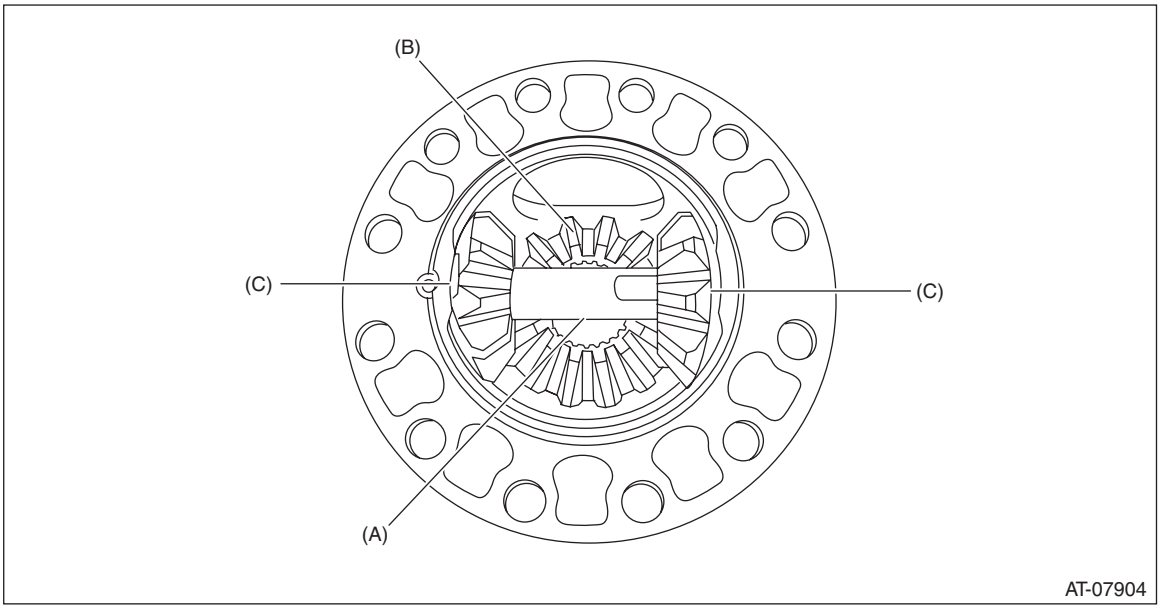
(A) Shaft
(B) Claw

5) Restore the removed claws to original position, and install the pin and split pin.
6) Hold the shaft of ST to avoid removing from side retainer, and then remove the bearing outer race.
ST 398527700 PULLER ASSY

NOTE:
Replace the bearing inner and outer races as a single unit.



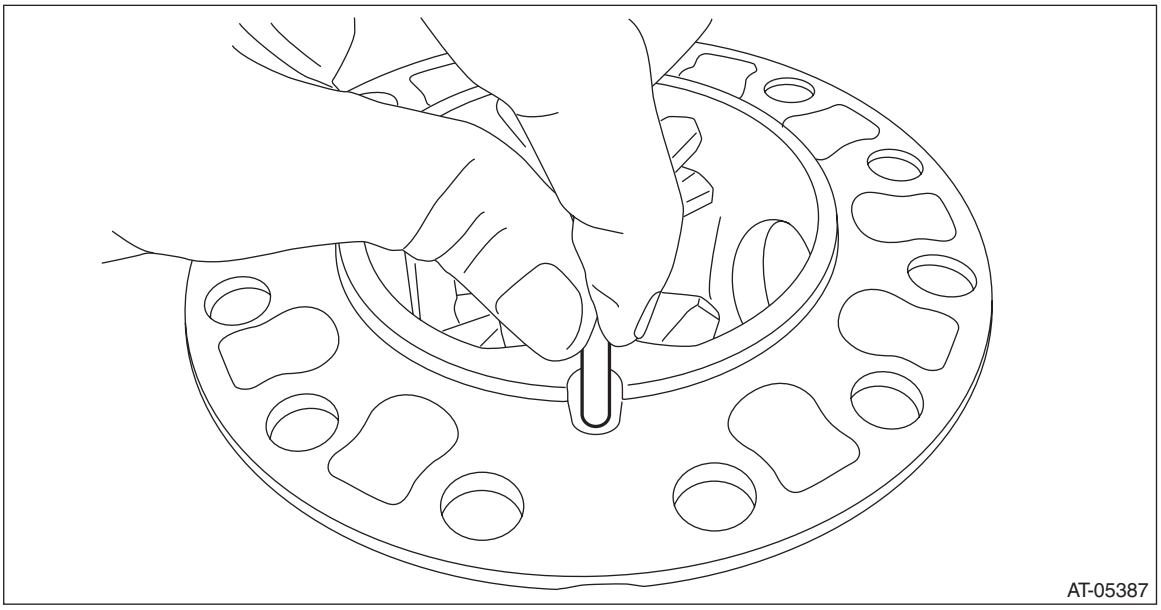
(A) Shaft
(B) Side retainer



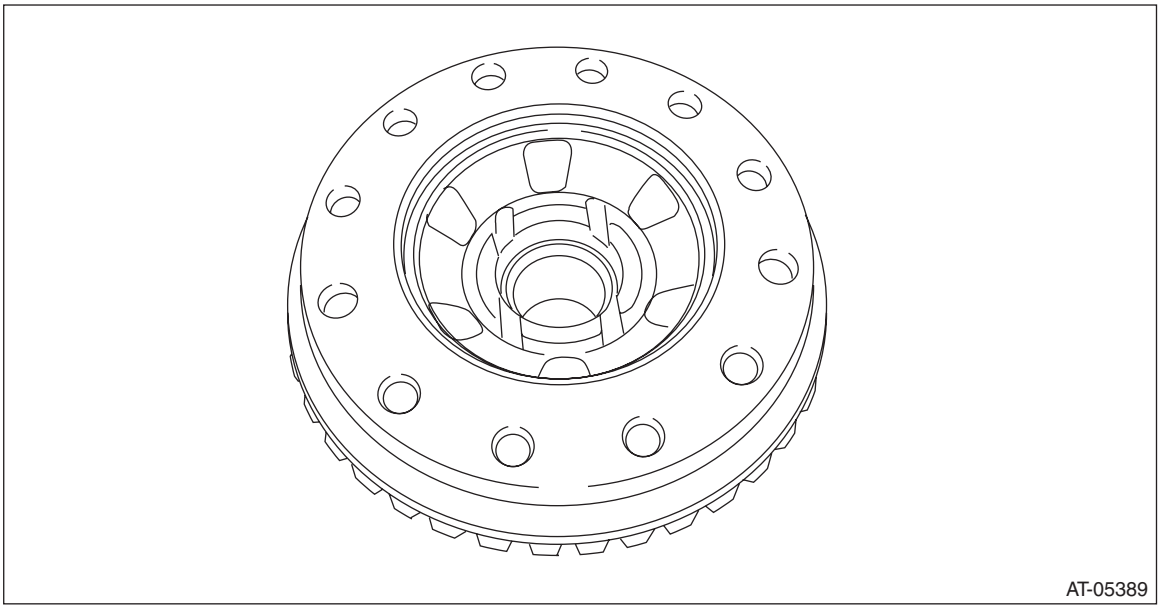
D: ASSEMBLY

1. DIFFERENTIAL CASE ASSEMBLY

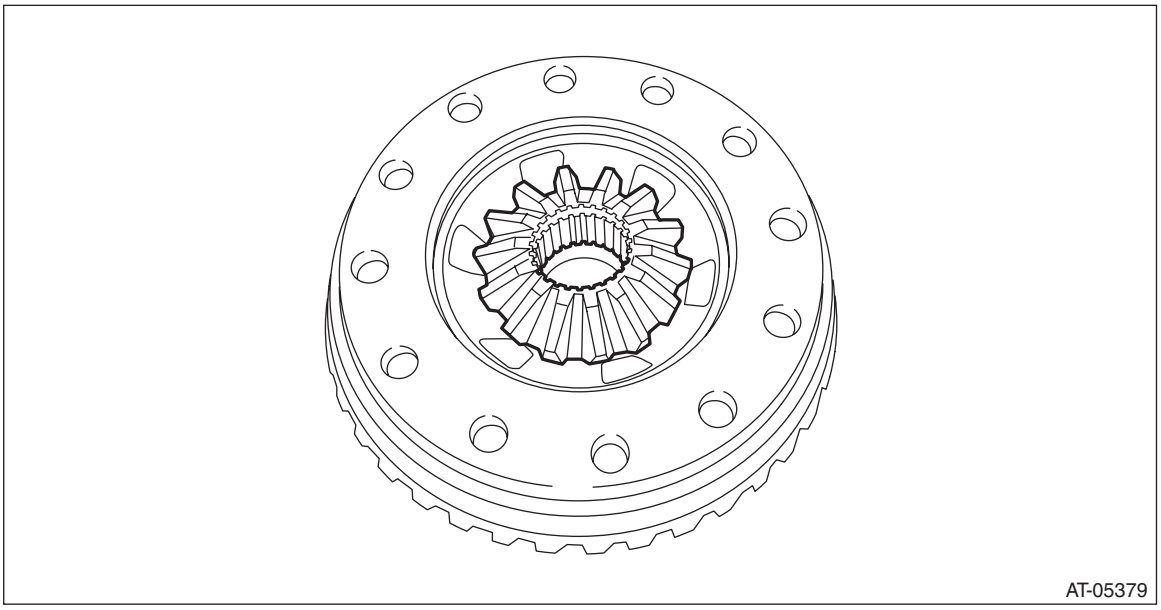
1) Install the washer and differential bevel gear into differential case (LH).



2) Install the differential bevel gear pinions into differential case (LH) and install the pinion shaft.

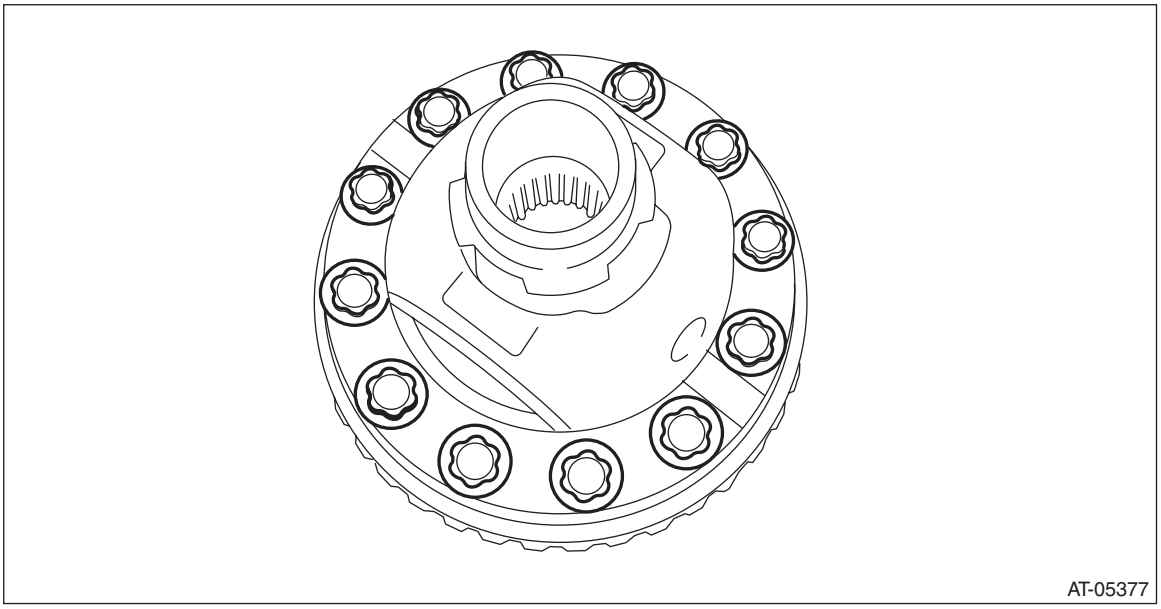


(A) Pinion shaft
(B) Differential bevel gear
(C) Differential bevel pinion



3) Install the straight pin.

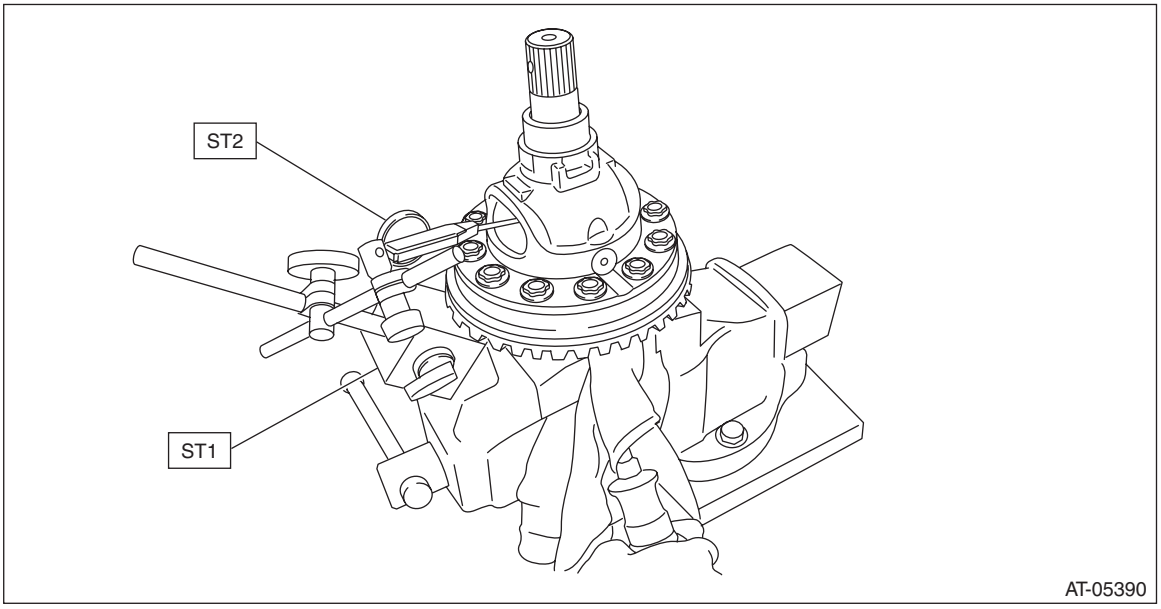
4) Install the differential case (RH) to hypoid driven gear and secure with vise.



5) Install the washer and differential bevel gear to the differential case (RH).

6) Using the ST, install the hypoid driven gear by tightening the installation bolt.
ST 18270KA020 SOCKET (E20)

Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)

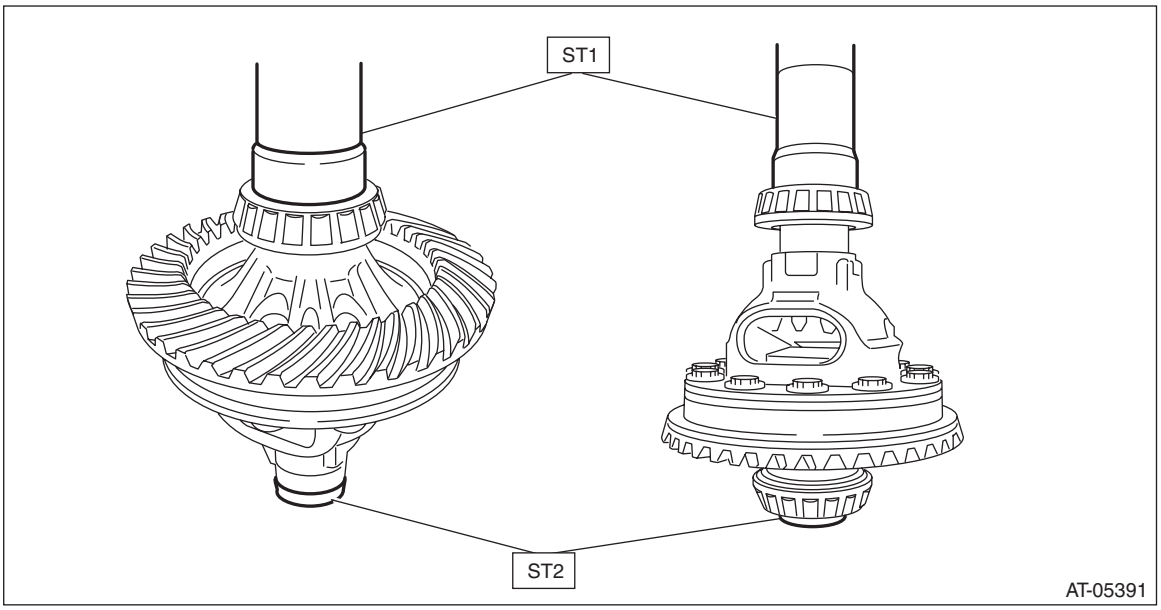


7) While checking the tightening angle with the angle gauge, further tighten the hypoid driven gear mounting bolts.

Tightening angle:
45°±2°

8) Measurement of backlash (selection of washer)
(1) Install the SUBARU genuine axle shaft to differential case.
Part No. 38415AA070 Axle shaft
(2) Measure the gear backlash using ST1 and ST2, and then insert the ST2 through the window of differential case.
ST1 498247001 MAGNET BASE
ST2 498247100 DIAL GAUGE

NOTE:
• Measure the backlash by applying a differential bevel pinion tooth between two differential bevel gear teeth.
• When measuring, fix the differential bevel pinion in place with a screwdriver covered with cloth, or a similar tool.

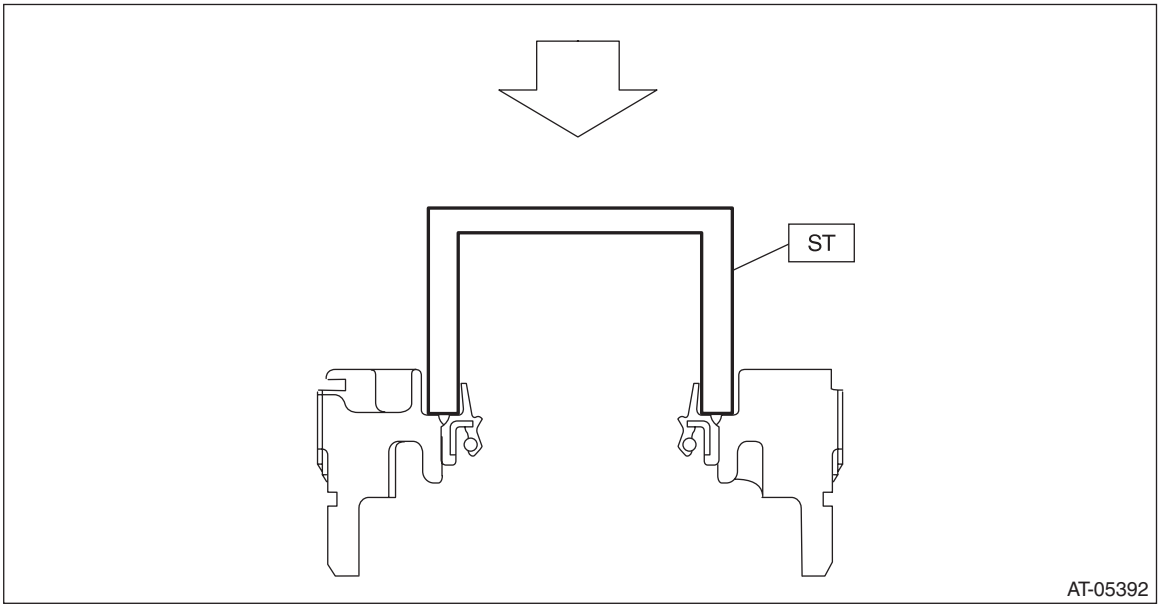


Specification:
0.13 — 0.18 mm (0.0051 — 0.0071 in)

(3) If the backlash is not within specification, select a washer from the table below and replace.

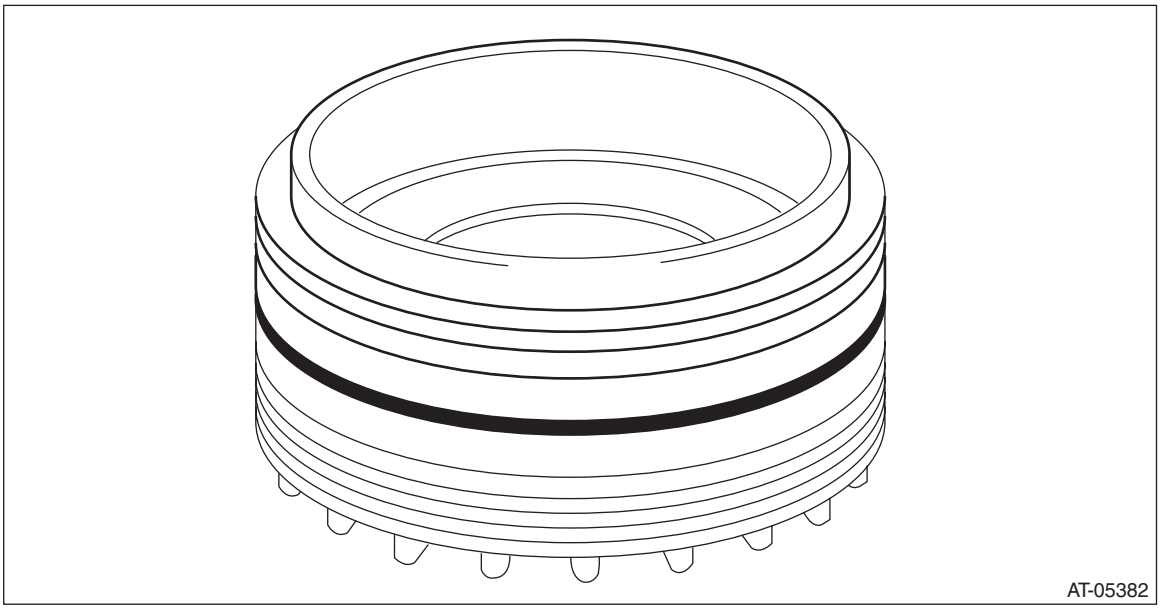
Washer	
Part No.	Thickness mm (in)
803038021	0.95 (0.037)
803038022	1.00 (0.039)
803038023	1.05 (0.041)

9) Using the ST, install the left and right taper roller bearings.
ST1 499277100 BUSHING 1-2 INSTALLER
ST2 398497701 SEAT



2. SIDE RETAINER

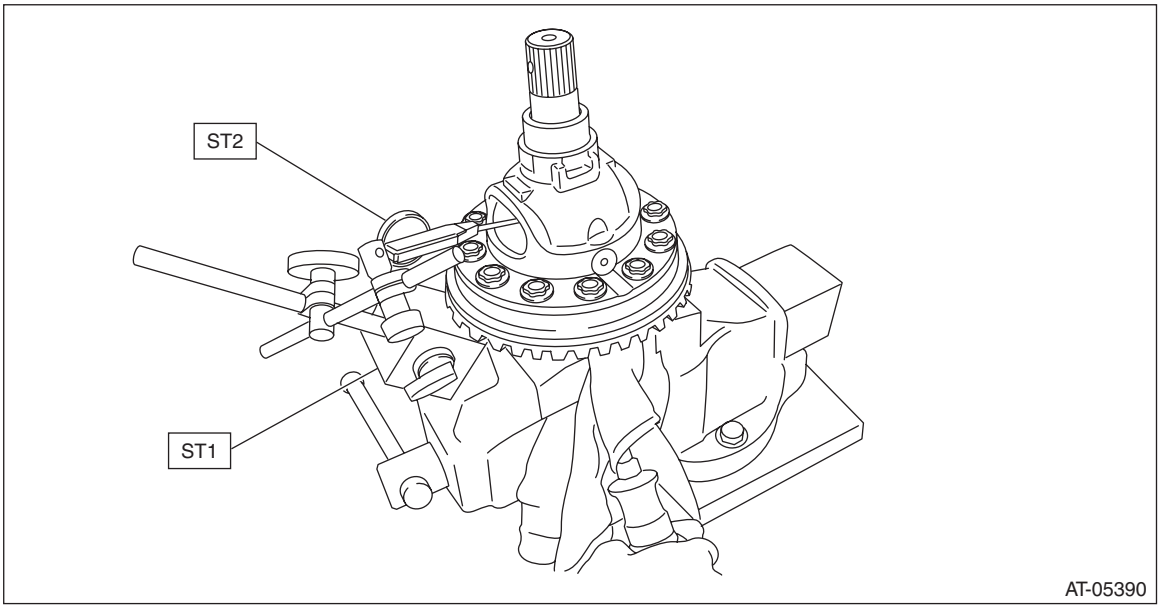
NOTE:
After adjusting the backlash and tooth contact, replace the oil seal and O-ring of side retainer with new parts.
1) Press-fit the bearing outer race to side retainer.
2) Using the ST, install the oil seal.



NOTE:
- Use a new oil seal.
- Apply differential oil to the oil seal lip.
- Oil seal has an identification mark (R, L). When installing oil seals, do not confuse the left and right.

ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

3) Install the O-rings.

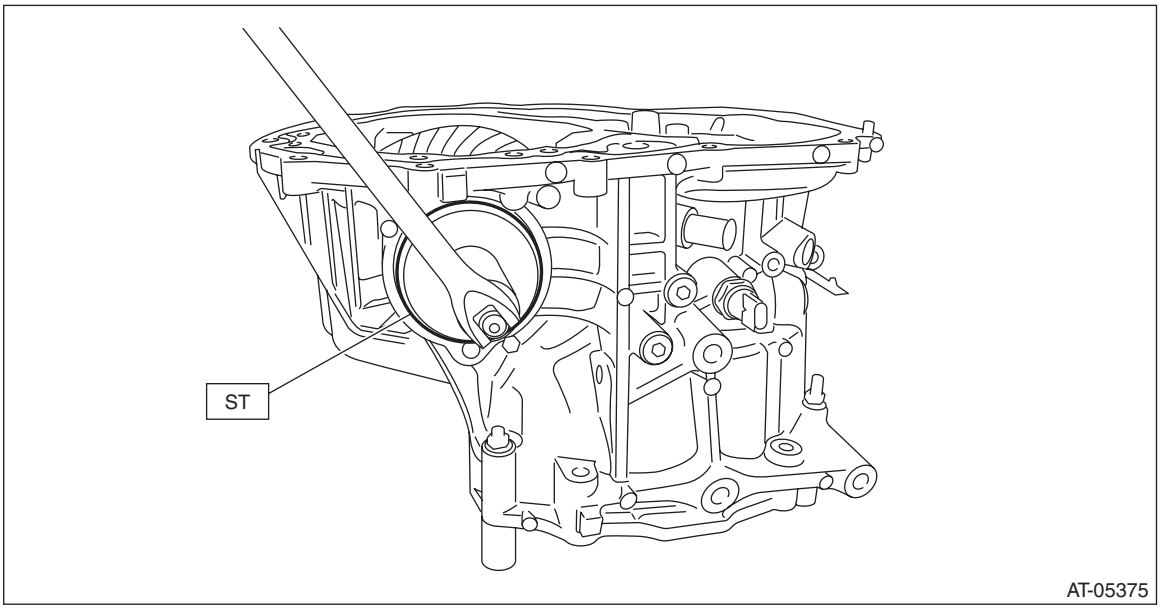


NOTE:
- Use new O-rings.
- Apply gear oil to O-ring.

E: INSPECTION

- Check each component for scratches, damage or other faults.
- Inspect the backlash of the pinion gear.

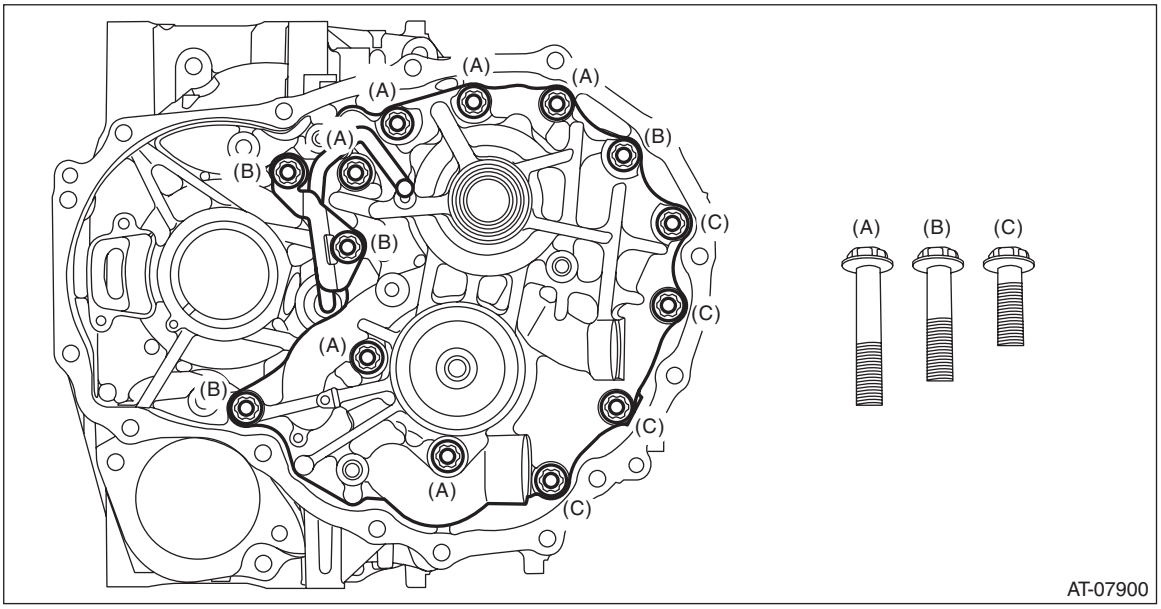
Specification:
0.13 — 0.18 mm (0.0051 — 0.0071 in)



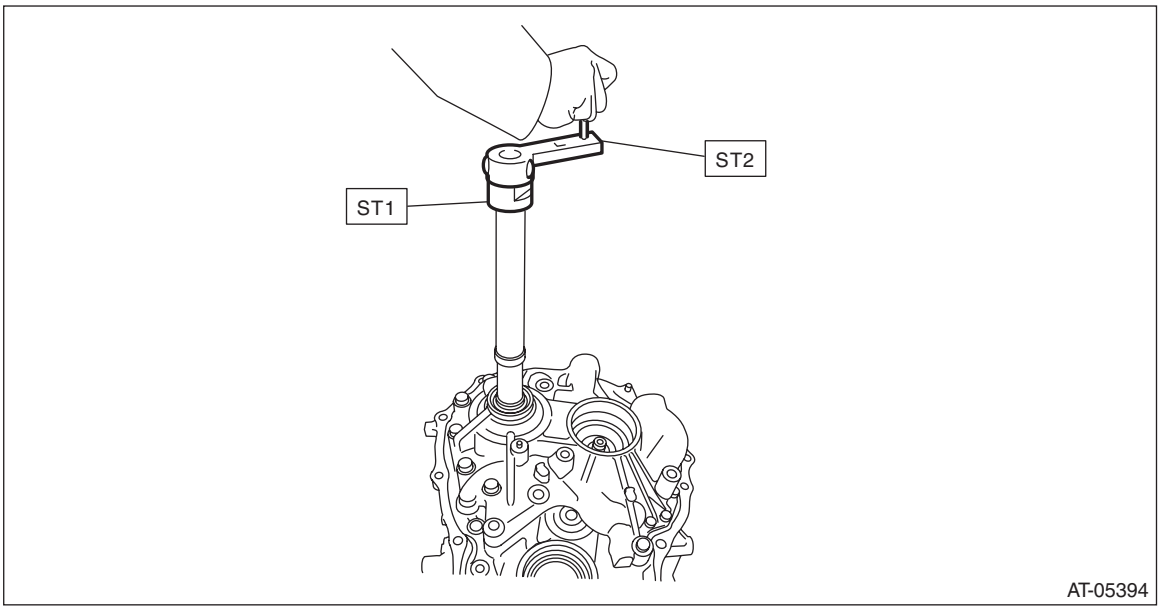
- Measure the hypoid gear backlash, and then adjust it to be within specification. <Ref. to CVT(TR690)-309, ADJUSTMENT, Front Differential Assembly.>

F: ADJUSTMENT

1) Using the ST, screw-in the retainer until resistance is felt.

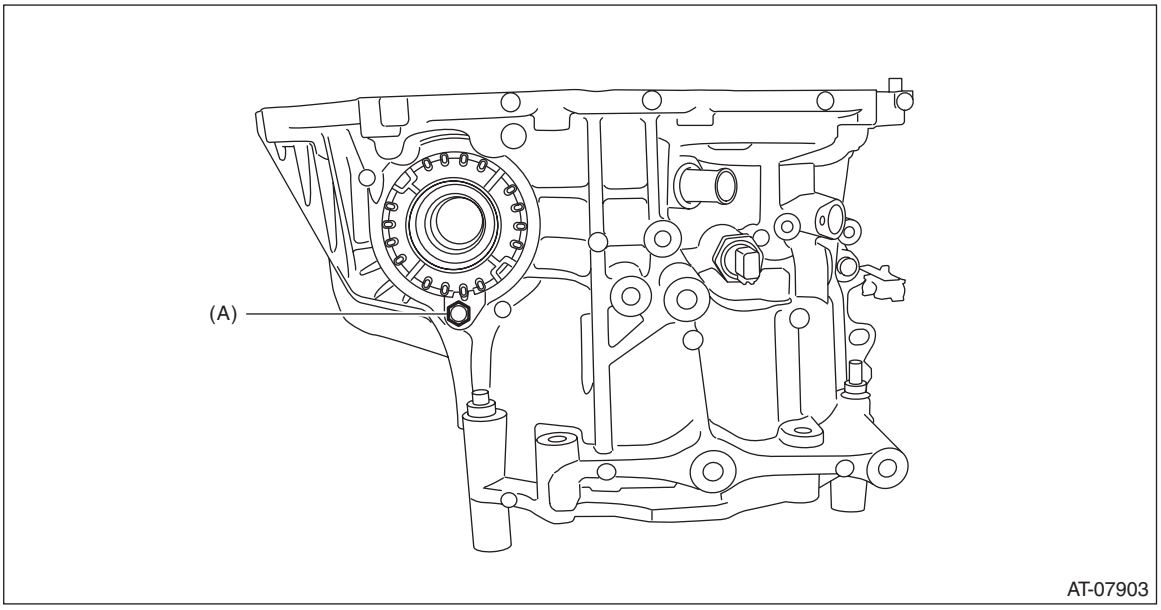


NOTE:
RH side should be screwed-in more than LH side.
ST 18658AA020 WRENCH COMPL RETAINER



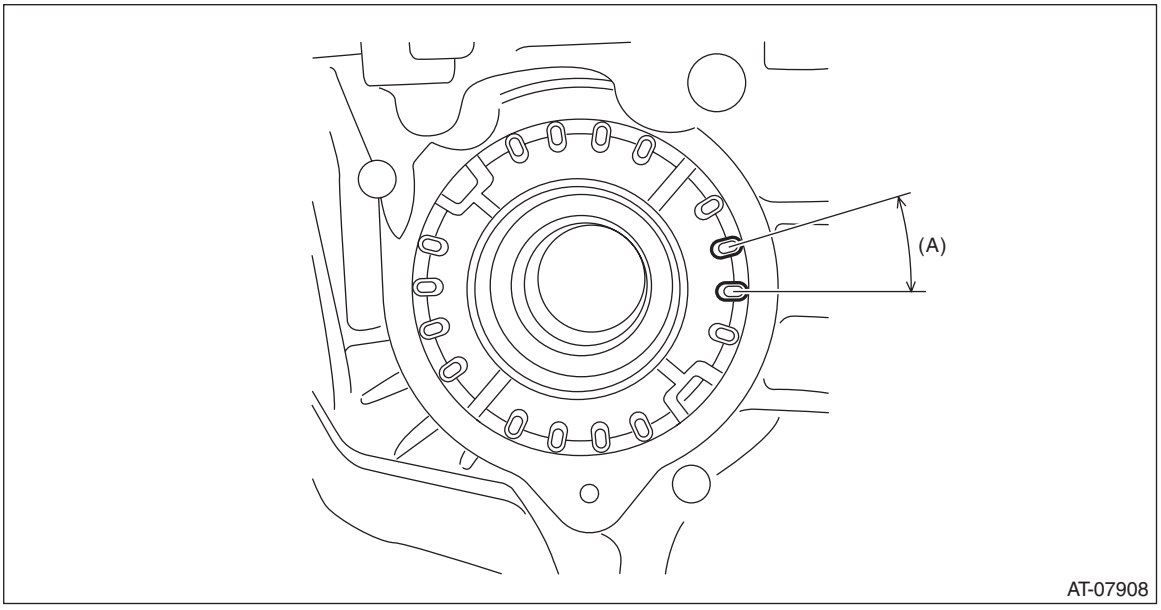
2) Remove the remaining liquid gasket from the mating surface completely.
3) Using the ST, install the drive pinion assembly to converter case.
ST 18270KA020 SOCKET (E20)

NOTE:
Do not confuse the three different-length bolts when installing.

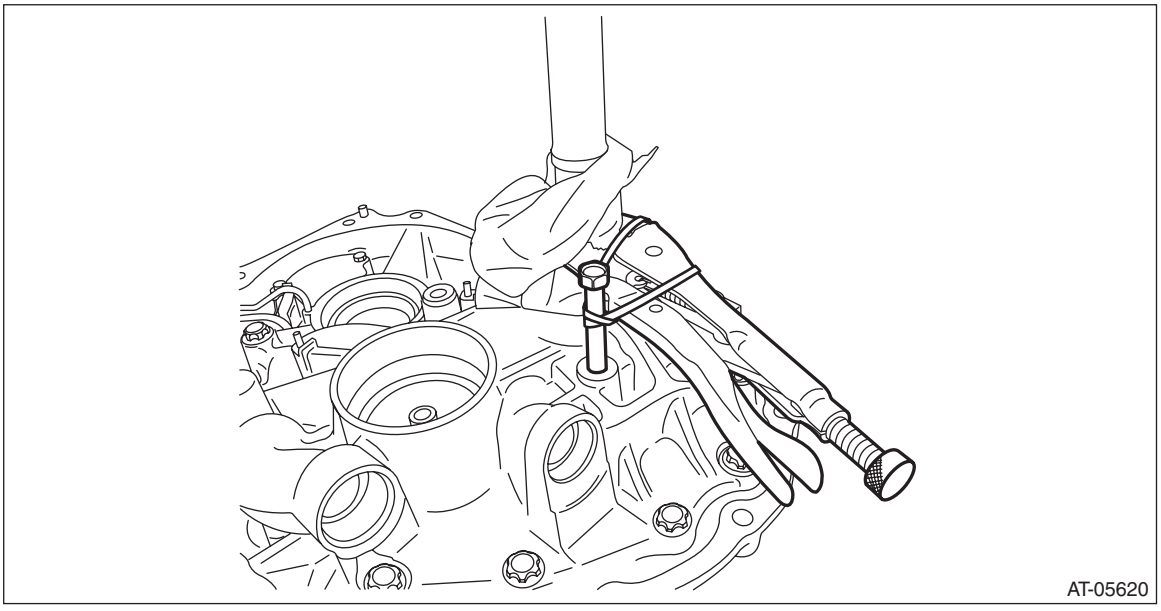


Tightening torque:
43 N·m (4.4 kgf-m, 31.7 ft-lb)

4) Rotate the drive pinion shaft ten times or more using ST1 and ST2.
ST1 18667AA010 HOLDER
ST2 499787700 WRENCH

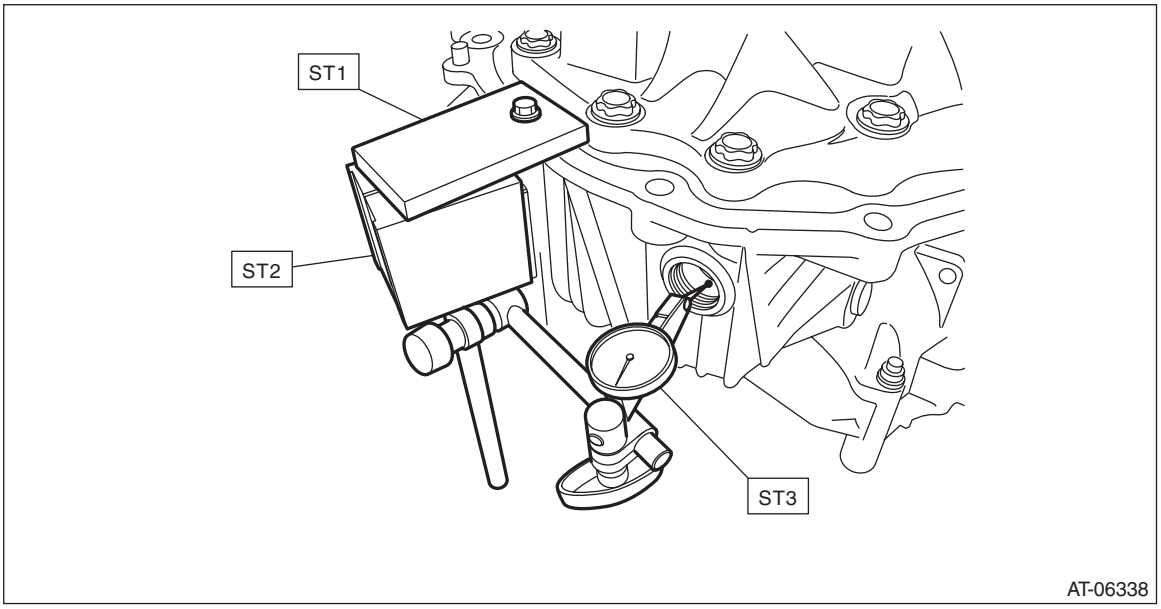


5) While rotating the pinion shaft, tighten the retainer LH and loosen the retainer RH until the shaft can't be turned anymore. The backlash is “zero” when the pinion shaft comes to the point where it doesn't rotate.
6) After the “zero” state is established, loosen the retainer LH by 3 notches and secure it with the lock plate. Loosen the retainer RH and retighten until it stops. Rotate the drive pinion 2 or 3 times. Tighten the retainer RH further 1-3/4 notches. This sets the preload. Finally, secure the retainer with its lock plate.



(A) Lock plate

NOTE:
Turning the retainer by every one tooth changes the backlash approx. 0.05 mm (0.0020 in).



(A) 1 tooth

7) Insert the two SUBARU genuine axle shafts into differential case.
Part No. 38415AA070 Axle shaft
8) Wrap the drive shaft pinion shaft with cloth and pinch with vise pliers. Install the installation bolt into the bolt hole of secondary pulley and secure the bolt and vise pliers using a band or wire.
Make sure the drive pinion shaft does not move.

9) Check the backlash is within specification using ST1, ST2 and ST3.
ST1 498255400 PLATE
ST2 498247001 MAGNET BASE
ST3 498247100 DIAL GAUGE

Backlash:
0.13 — 0.18 mm (0.005 — 0.007 in)

10) Adjust the teeth contact of the front differential and drive shaft. <Ref. to CVT(TR690)-287, ADJUSTMENT, Drive Pinion Shaft Assembly.>

46.Oil Pump

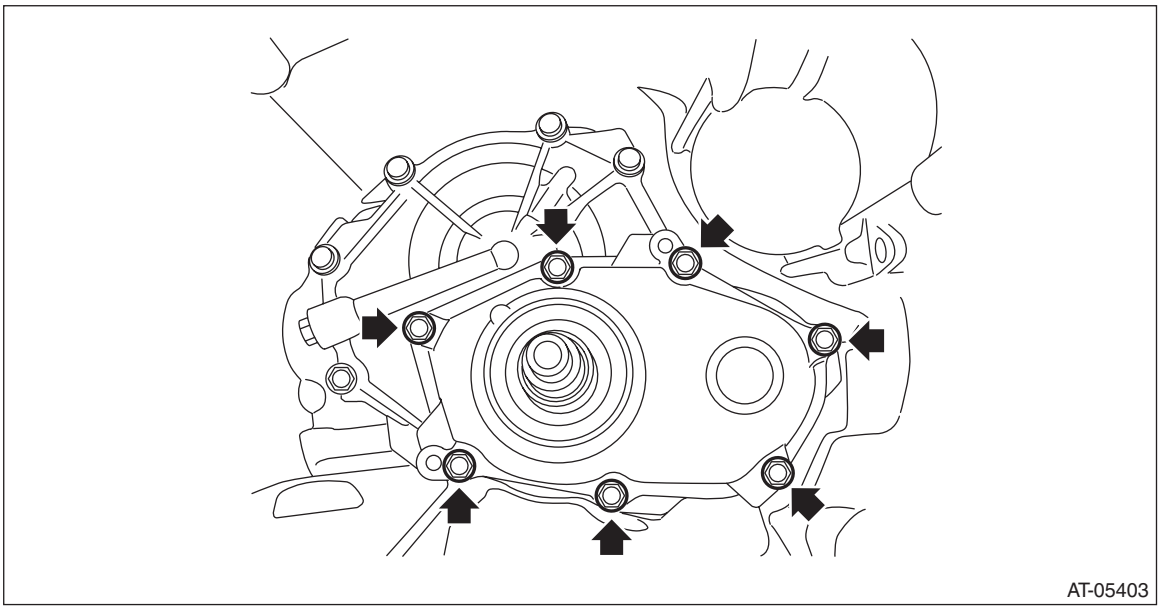
A: REMOVAL

NOTE:
Refer to “Drive Pinion Shaft” for removal procedures. <Ref. to CVT(TR690)-273, REMOVAL, Drive Pinion Shaft Assembly.>

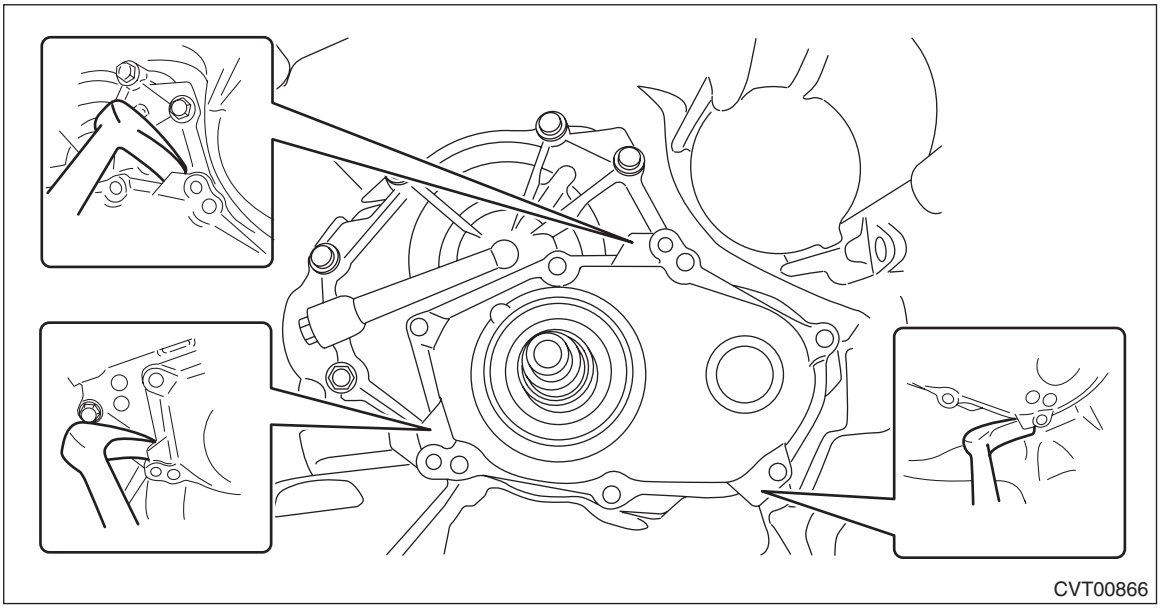
B: INSTALLATION

NOTE:
Refer to “Drive Pinion Shaft” for installation procedures. <Ref. to CVT(TR690)-275, INSTALLATION, Drive Pinion Shaft Assembly.>

C: INSPECTION

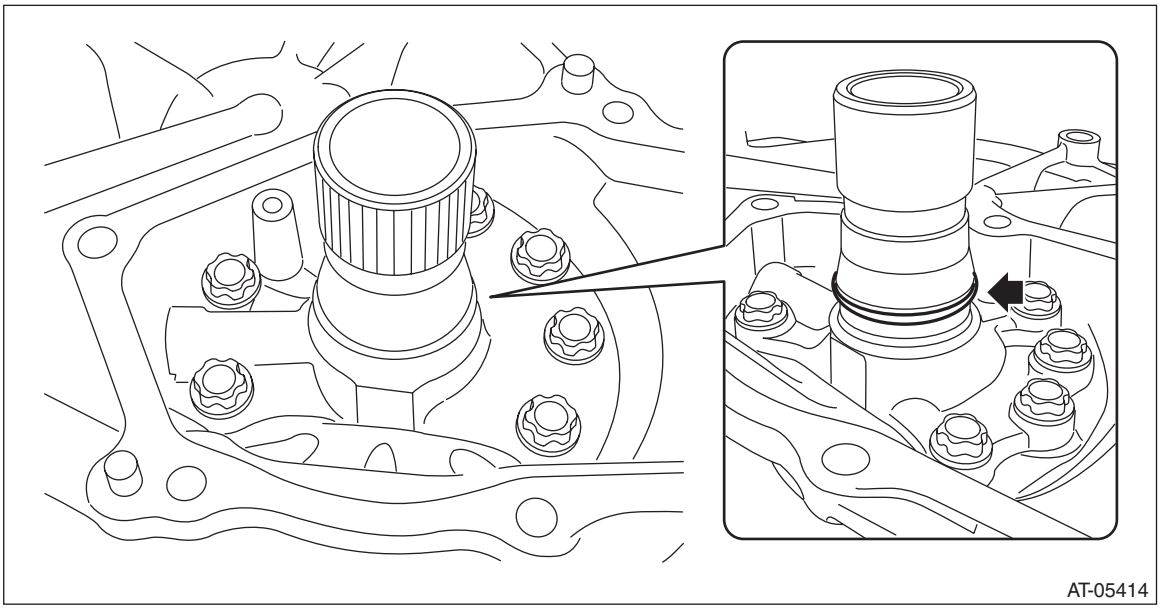


Check the following items.
- Check the oil pump for damage and wear.
- Rotate the oil pump by hand, and check that it rotates smoothly.



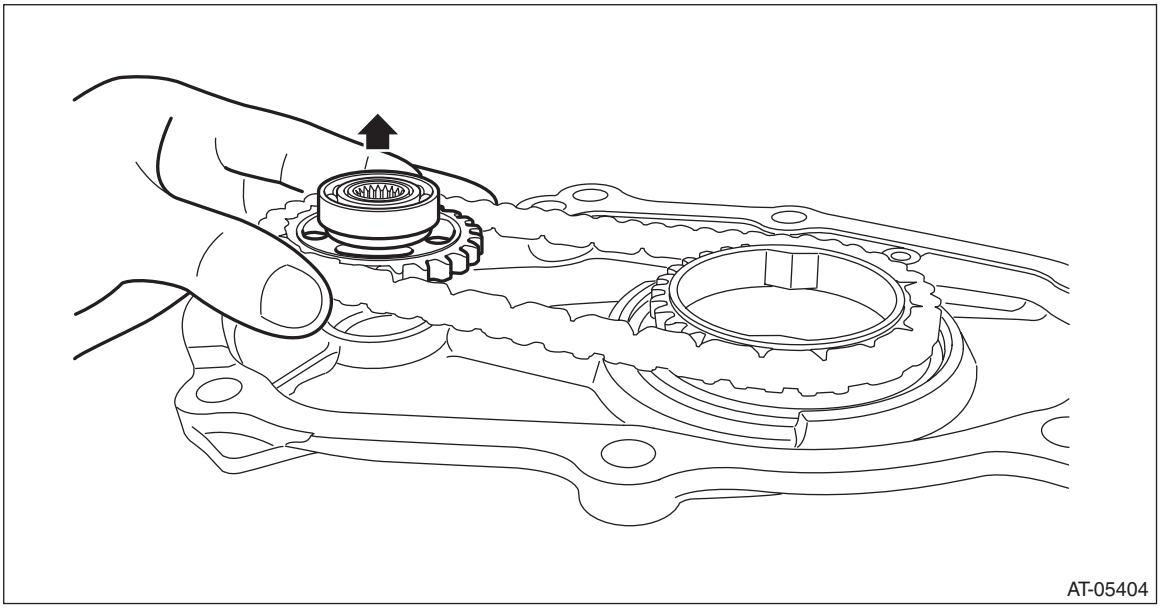
1) Measure the secondary pressure. <Ref. to CVT(TR690)-51, INSPECTION, Secondary Pressure (Line Pressure) Test.>
2) Remove the oil pan and oil strainer. <Ref. to CVT(TR690)-123, REMOVAL, Control Valve Body.>
3) Check oil strainer for clogging.
When oil strainer has no clogging, replace the oil pump.

47.Oil Pump Chain

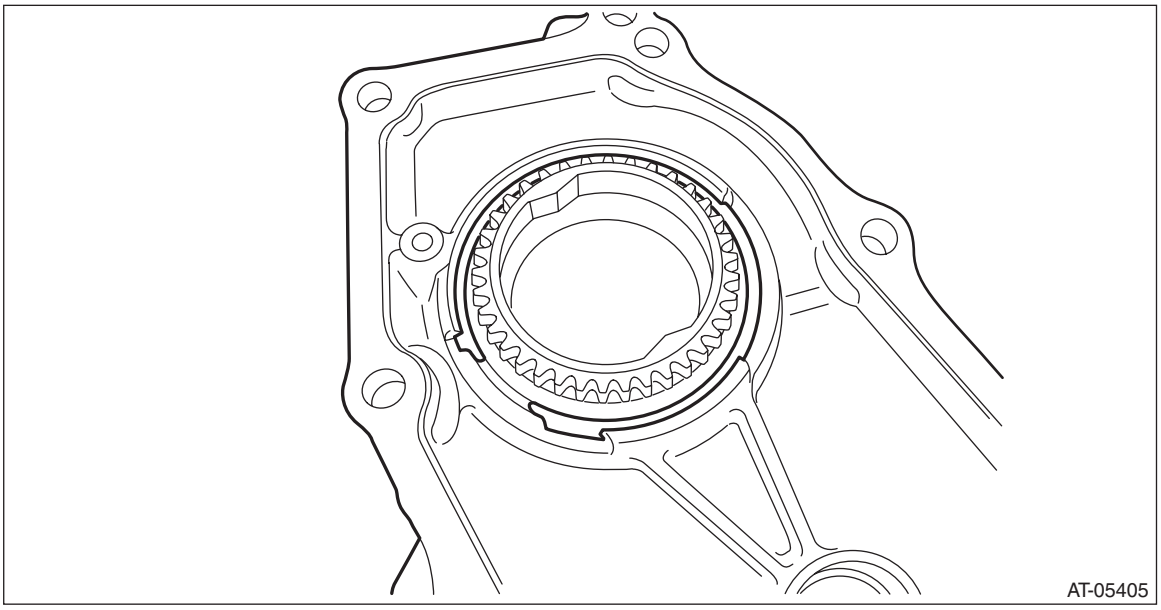


A: REMOVAL

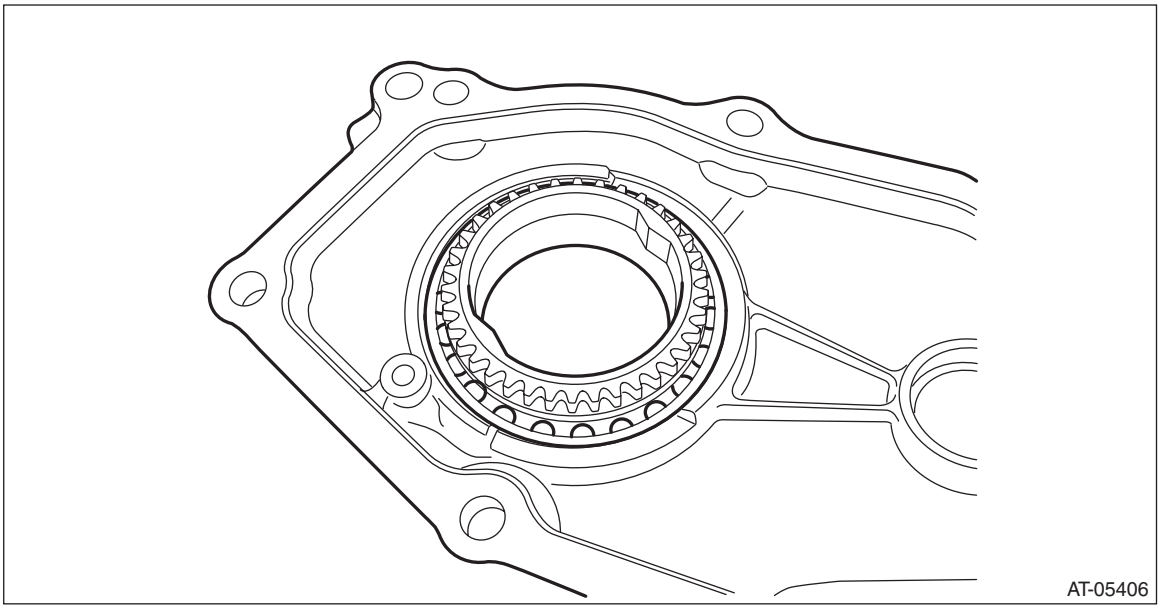
1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-58, REMOVAL, Automatic Transmission Assembly.>
2) Remove the torque converter assembly. <Ref. to CVT(TR690)-157, REMOVAL, Torque Converter Assembly.>
3) Remove the oil pump chain cover.



4) Remove the seal ring from center support COMPL.

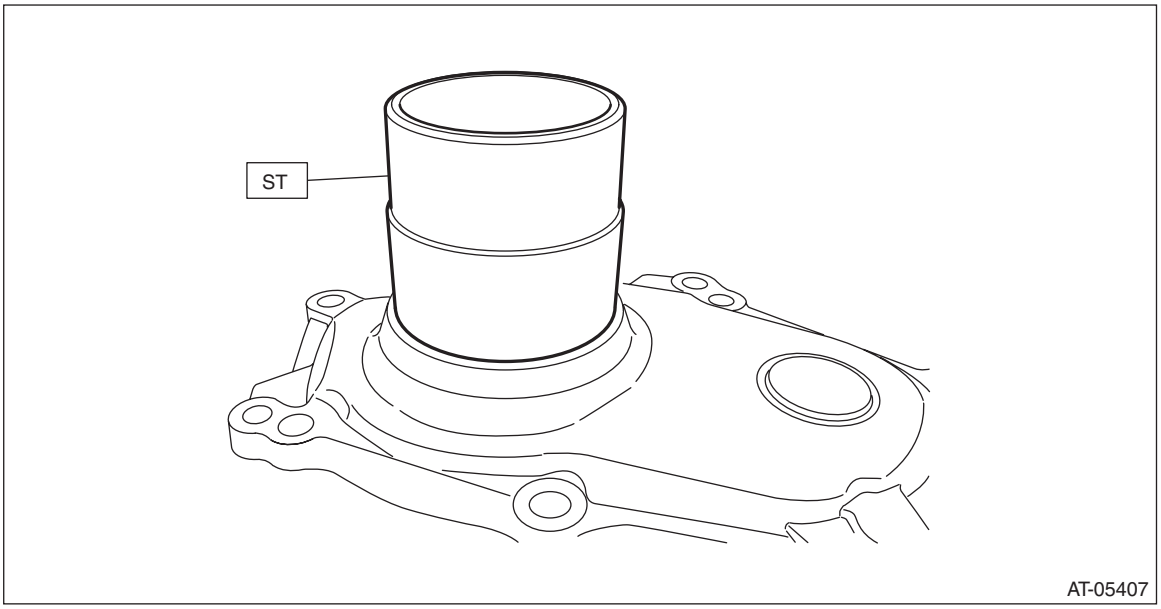


5) Remove the driven sprocket from oil pump chain cover to remove the oil pump chain.

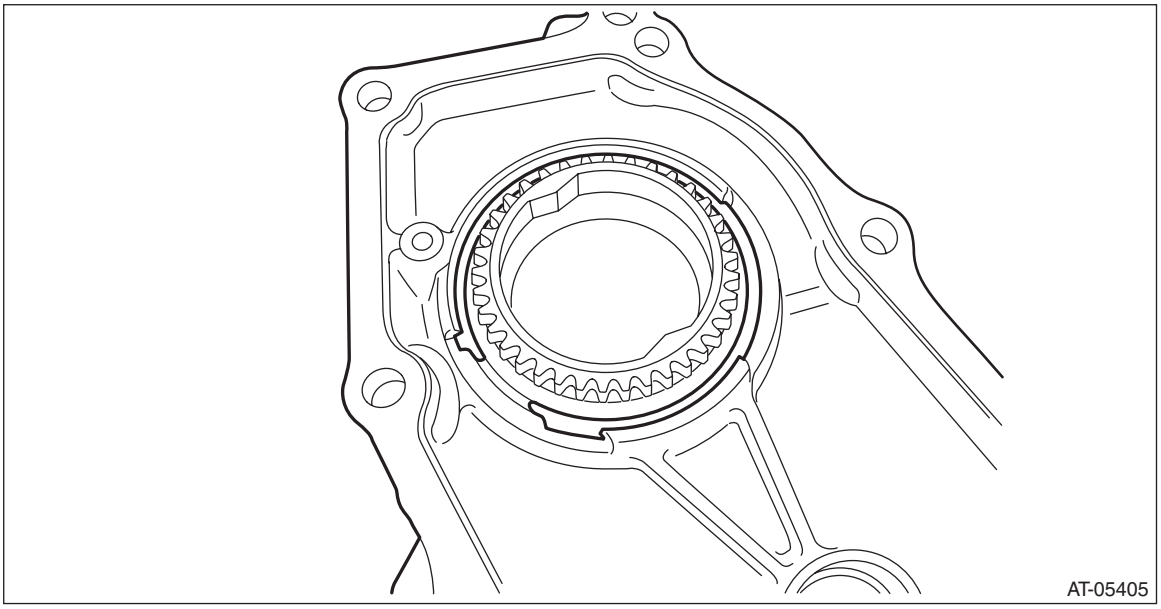


NOTE:
The driven sprocket is replaced as an assembly only, because it is a non-disassembly part.

6) Remove the snap ring.



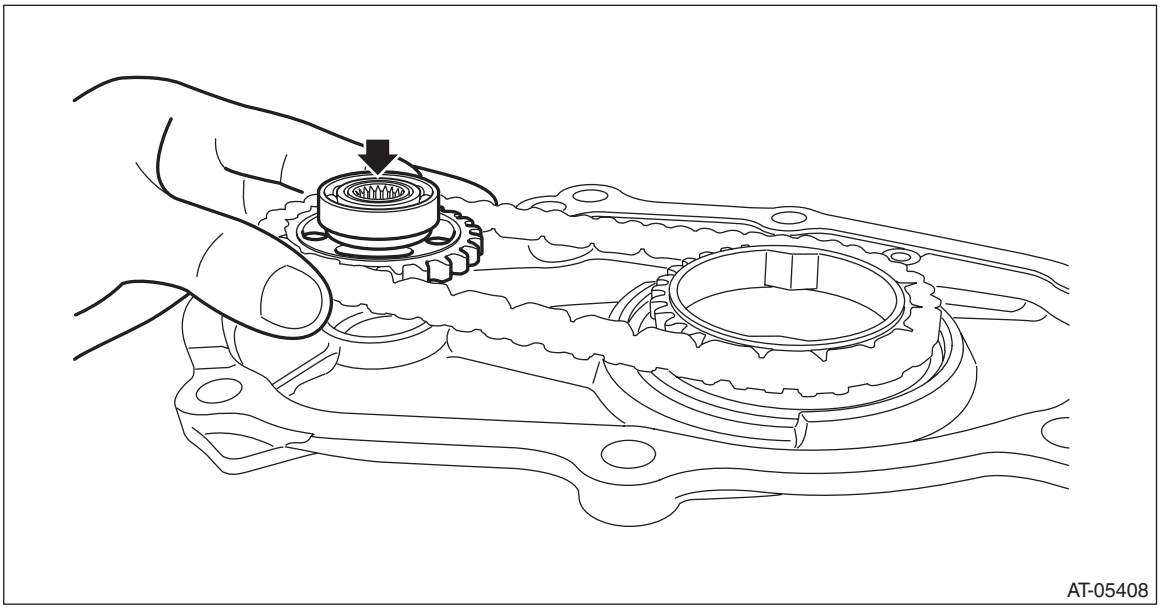
7) Remove the drive sprocket.



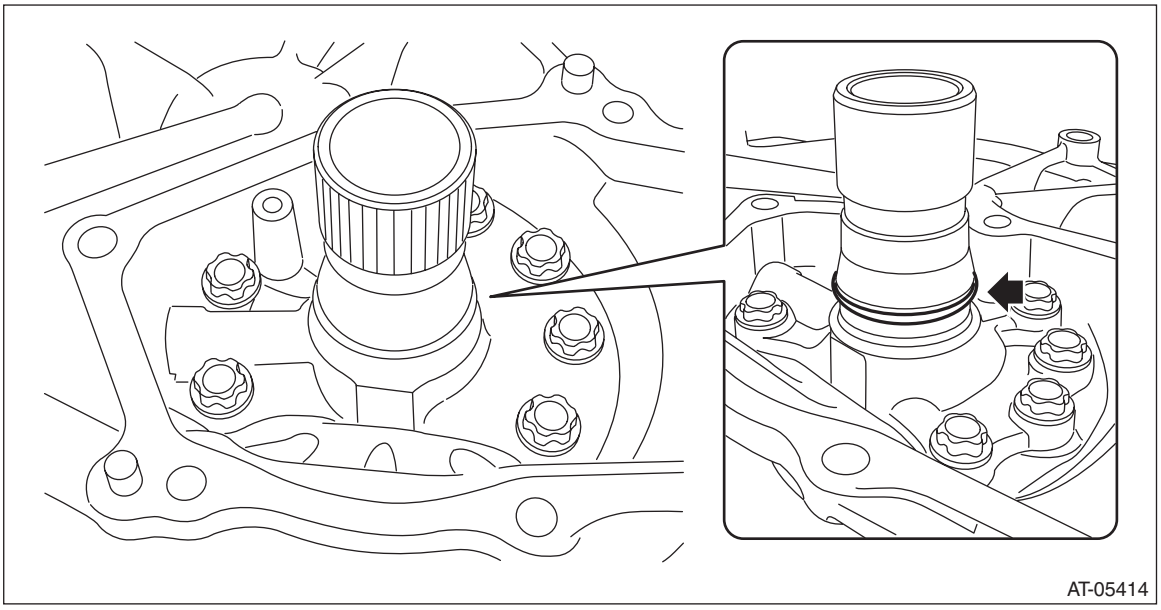
8) Remove the oil seal from the oil pump chain cover.

B: INSTALLATION

1) Clean the mating surface of oil pump chain cover and converter case cover.
2) Using the ST, install the oil seal.
ST 499755602 PRESS SNAP RING



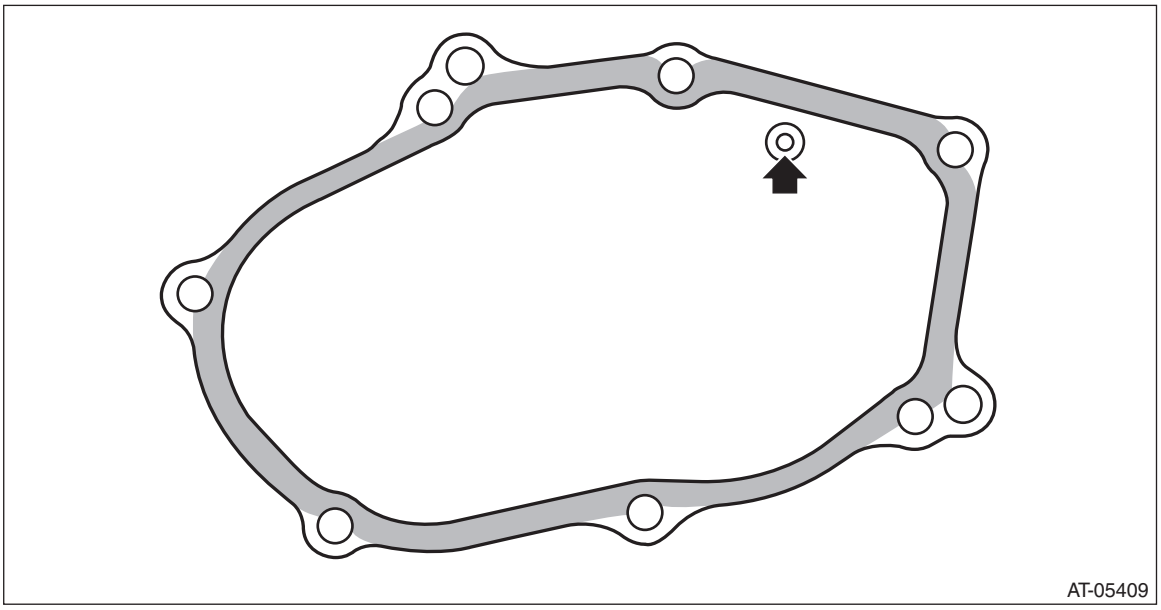
3) Install the drive sprocket and install the snap ring.



4) Place the oil pump chain on drive sprocket.

5) Place the oil pump chain on driven sprocket and install the driven sprocket to oil pump chain cover.

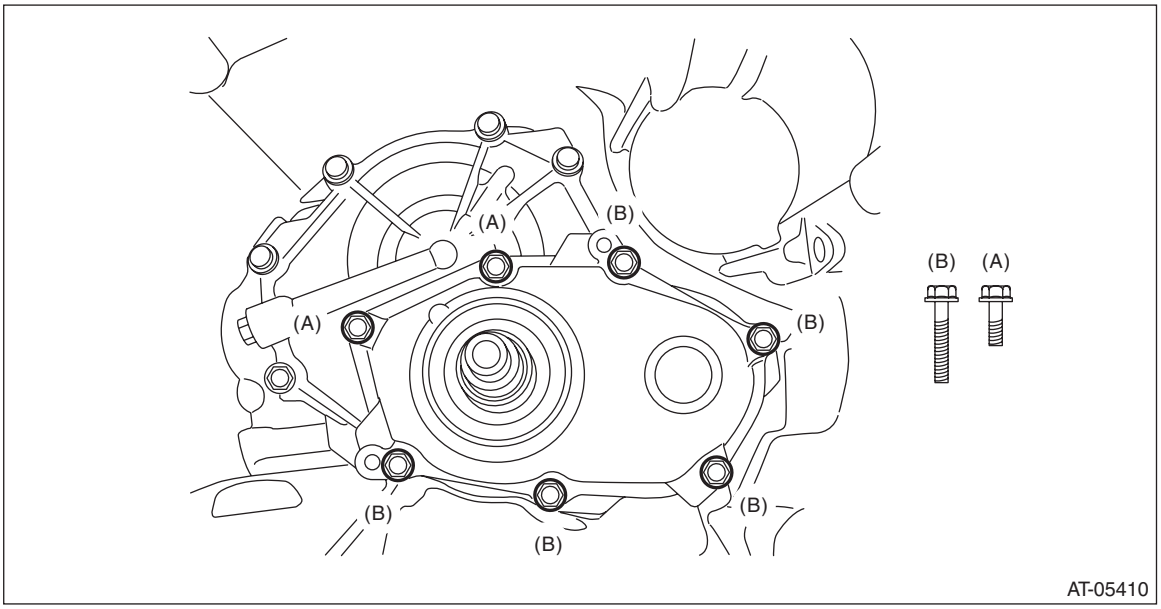
6) Install the seal ring to center support COMPL.



NOTE:
- Use new seal rings.
- Apply CVTF to the seal rings.

7) Apply liquid gasket seamlessly to the mating surface of oil pump chain cover.

CAUTION:
Do not apply liquid gasket at the arrowed hole.

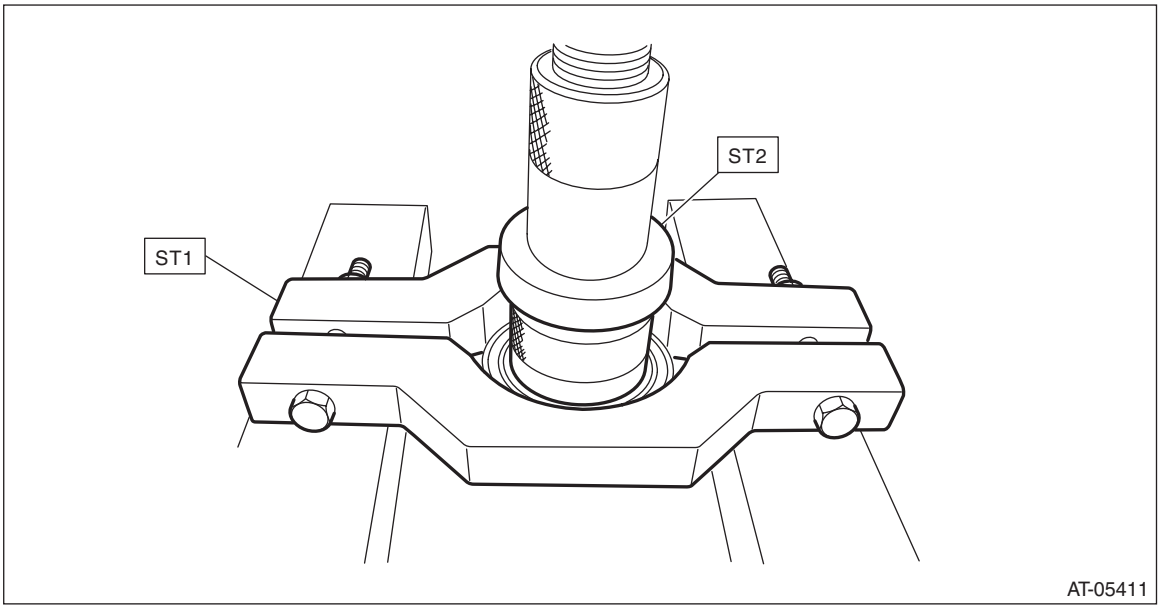


Liquid gasket:
THREE BOND 1215B or equivalent

8) Install the oil pump chain cover.

NOTE:
There are two types of bolt.

Tightening torque:
24 N·m (2.4 kgf-m, 17.7 ft-lb)

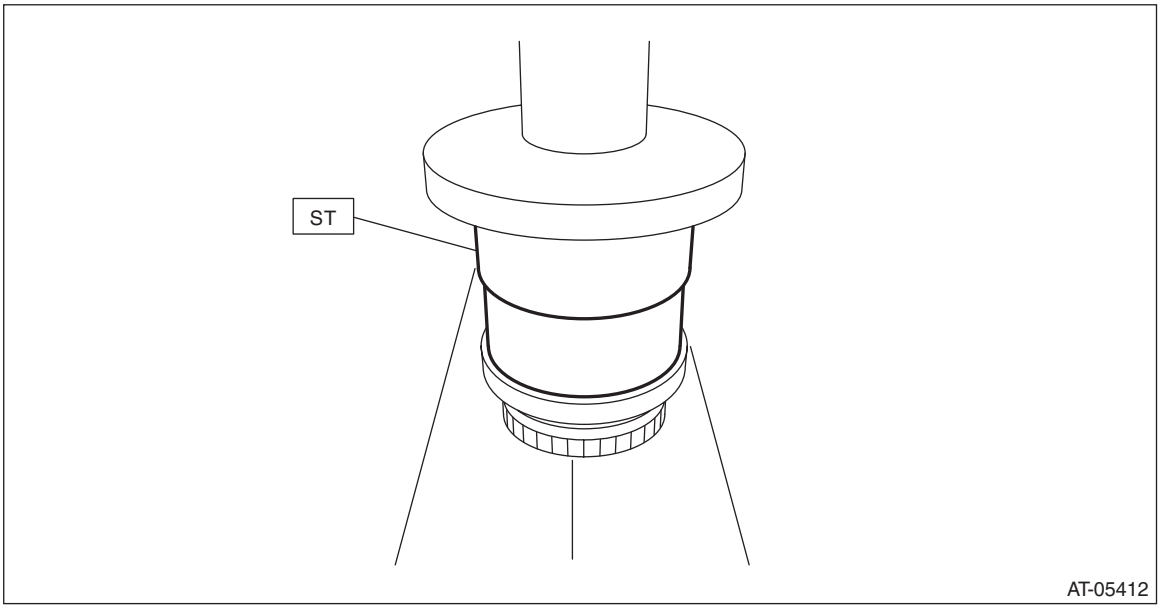


9) Install the torque converter assembly. <Ref. to CVT(TR690)-157, INSTALLATION, Torque Converter Assembly.>
10) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-75, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1. DRIVE SPROCKET

1) Remove the ball bearing using ST.
ST1 498077600 REMOVER
ST2 399513600 INSTALLER

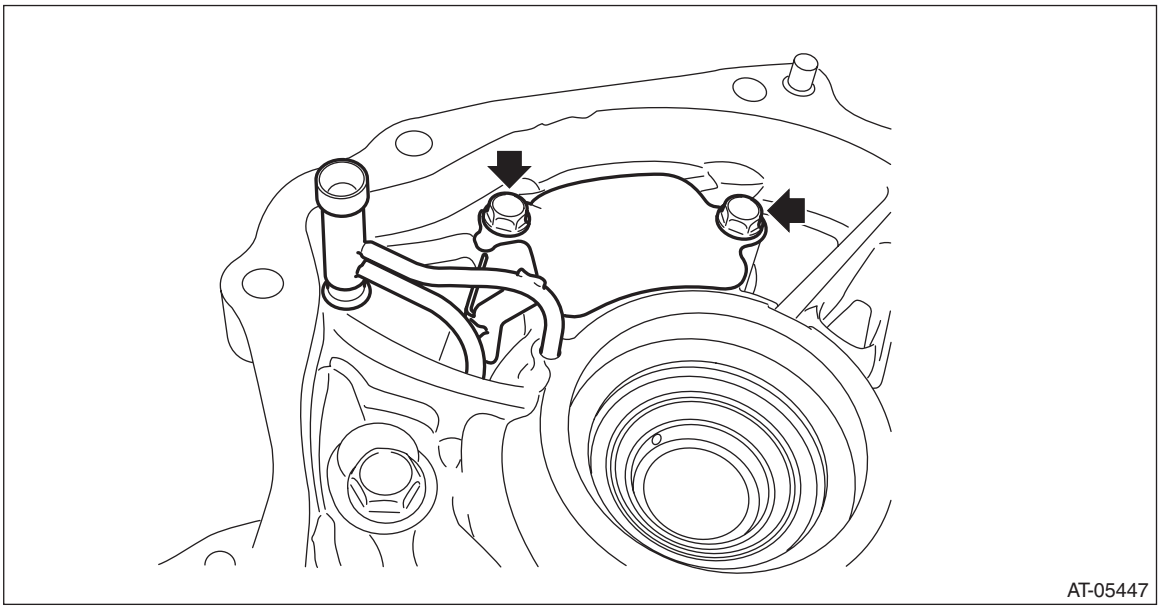


D: ASSEMBLY

1. DRIVE SPROCKET

1) Using the ST, install the ball bearing.

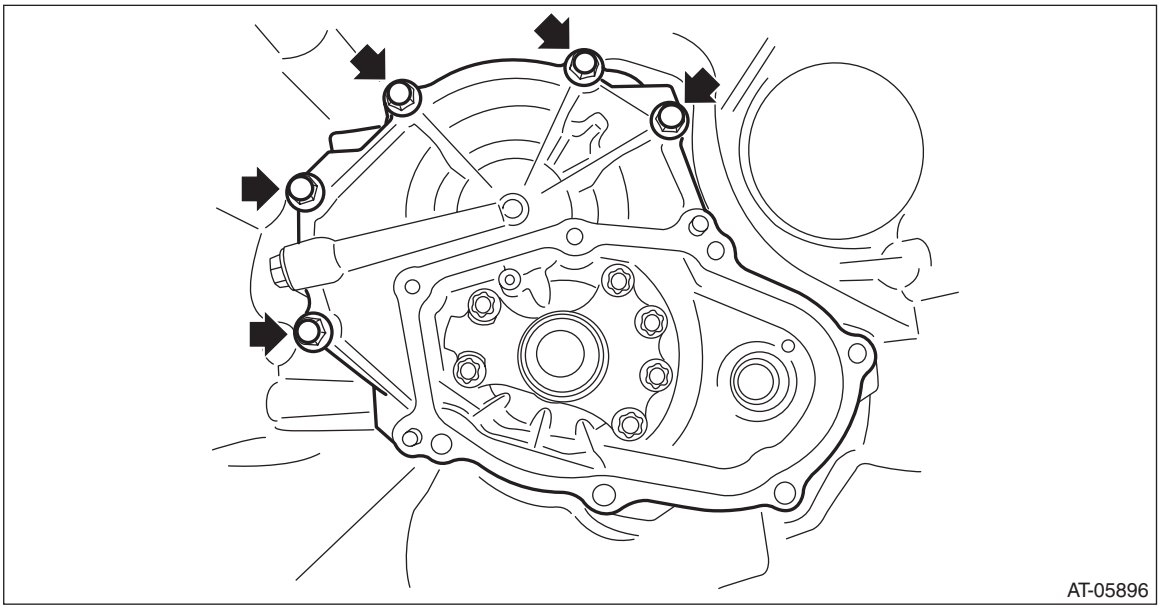
NOTE:
Use a new ball bearing.
ST 499755602 PRESS SNAP RING



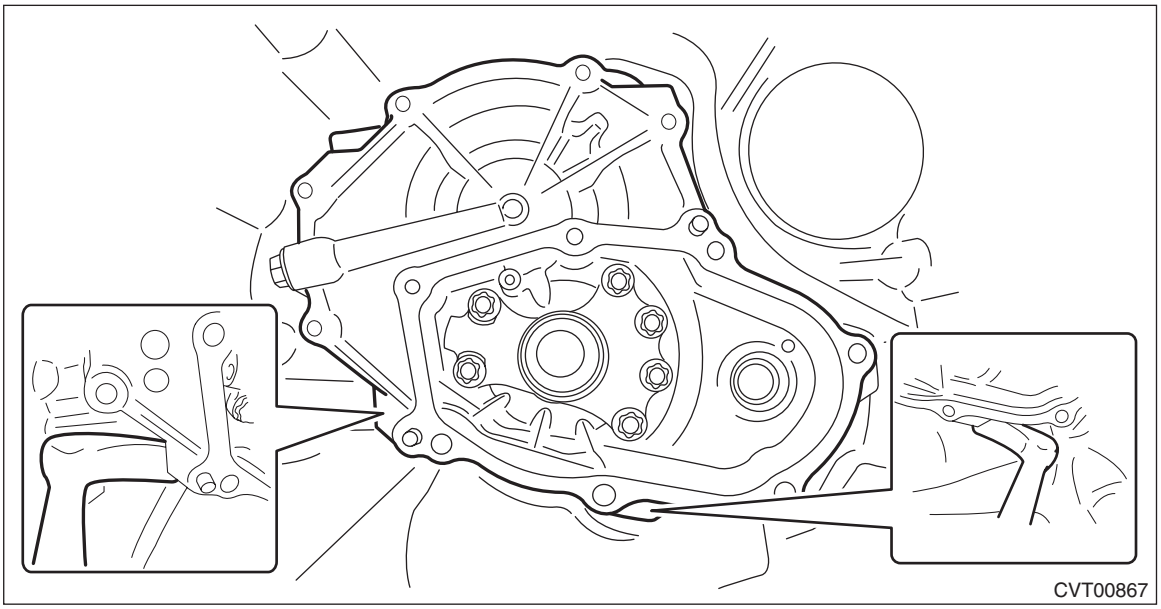
E: INSPECTION

- Check the oil pump chain for damage.
- Replace if gear teeth are broken, damaged, sharpen or excessively worn.
- Check the bearing for seizure or wear.
- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.
- Check the oil pump chain cover for damage.
- Check for leakage of CVTF from the mating surface of oil pump chain cover.
- Check the oil seal for damage.

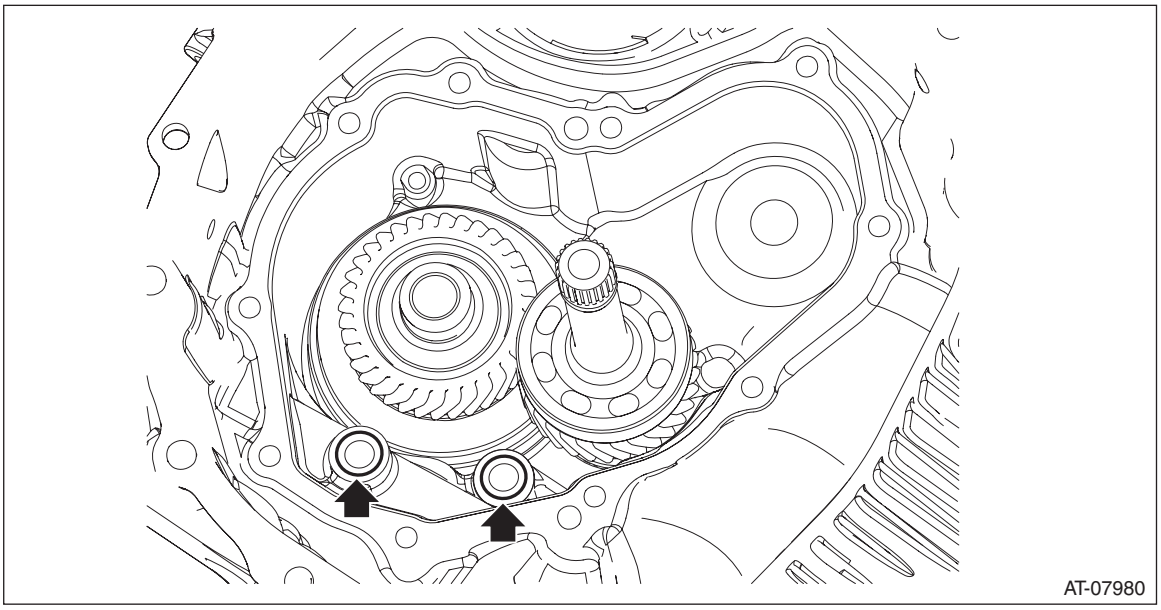
48.Converter Case Cover



A: REMOVAL

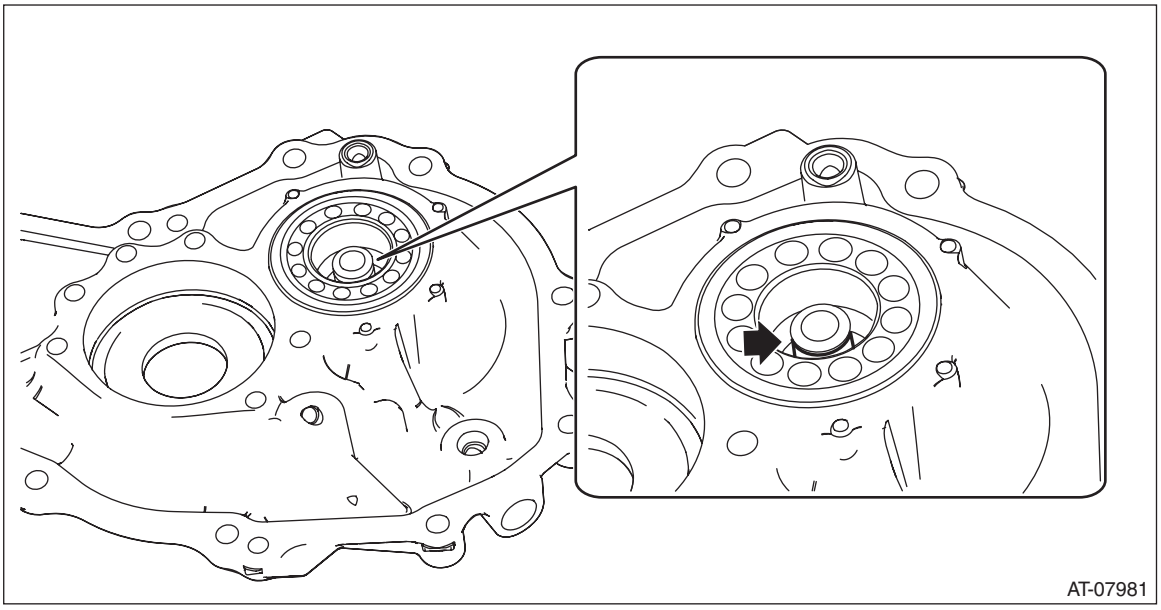


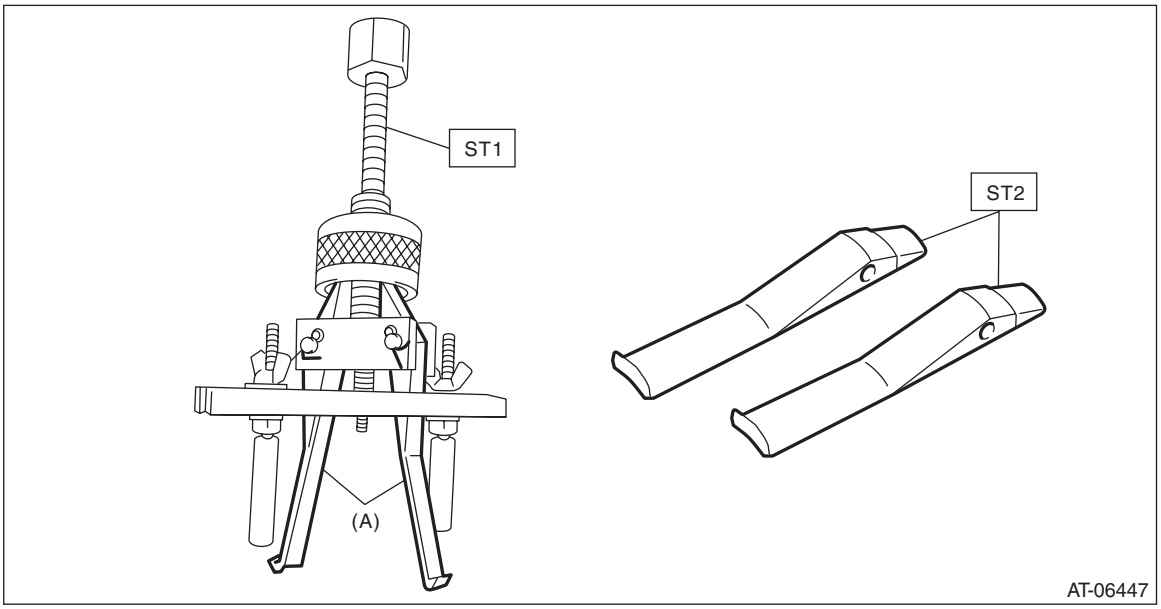
1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-58, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-151, REMOVAL, Air Breather Hose.>
3) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-123, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR690)-134, REMOVAL, Transmission Harness.>
5) Remove the extension case. <Ref. to CVT(TR690)-159, REMOVAL, Extension Case.>
6) Remove the rear drive shaft. <Ref. to CVT(TR690)-162, REMOVAL, Rear Drive Shaft.>
7) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-167, REMOVAL, Transfer Clutch.>
8) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-179, REMOVAL, Transfer Reduction Driven Gear.>
9) Remove the intermediate case. <Ref. to CVT(TR690)-185, REMOVAL, Intermediate Case.>
10) Remove the forward clutch assembly. <Ref. to CVT(TR690)-200, REMOVAL, Forward Clutch Assembly.>
11) Remove the transmission case. <Ref. to CVT(TR690)-240, REMOVAL, Transmission Case.>
12) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-257, REMOVAL, Primary Pulley and Secondary Pulley.>
13) Remove the drive pinion shaft assembly. <Ref. to CVT(TR690)-273, REMOVAL, Drive Pinion Shaft Assembly.>
14) Remove the oil stopper plate and lubrication pipe.



15) Flip over the converter case.
16) Remove the oil pump chain cover and the oil pump chain. <Ref. to CVT(TR690)-314, REMOVAL, Oil Pump Chain.>

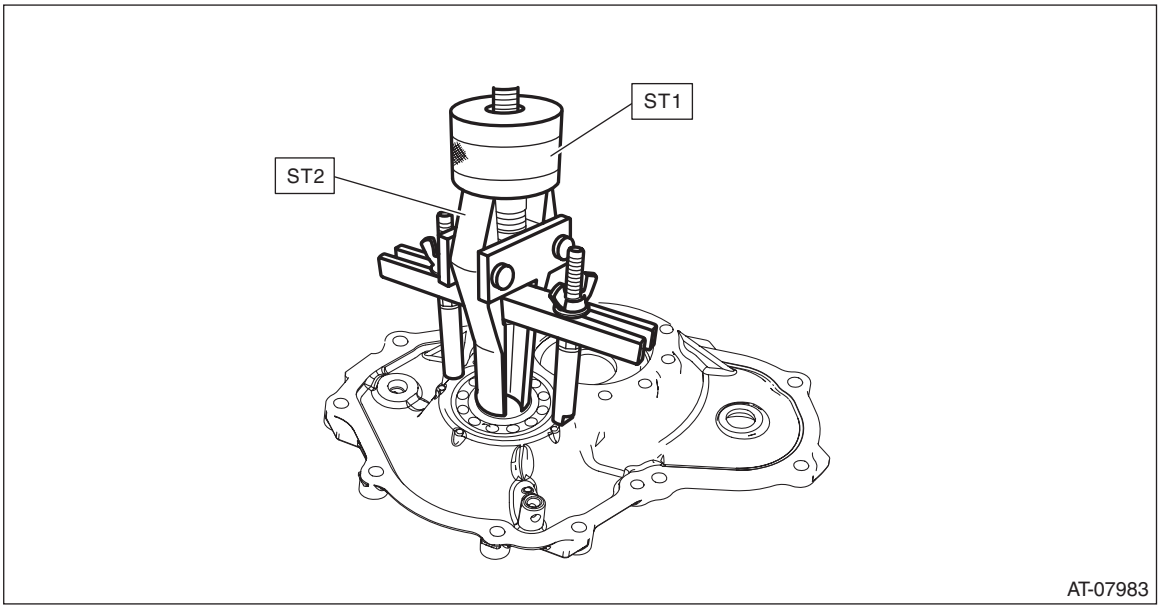
17) Remove the converter case cover.





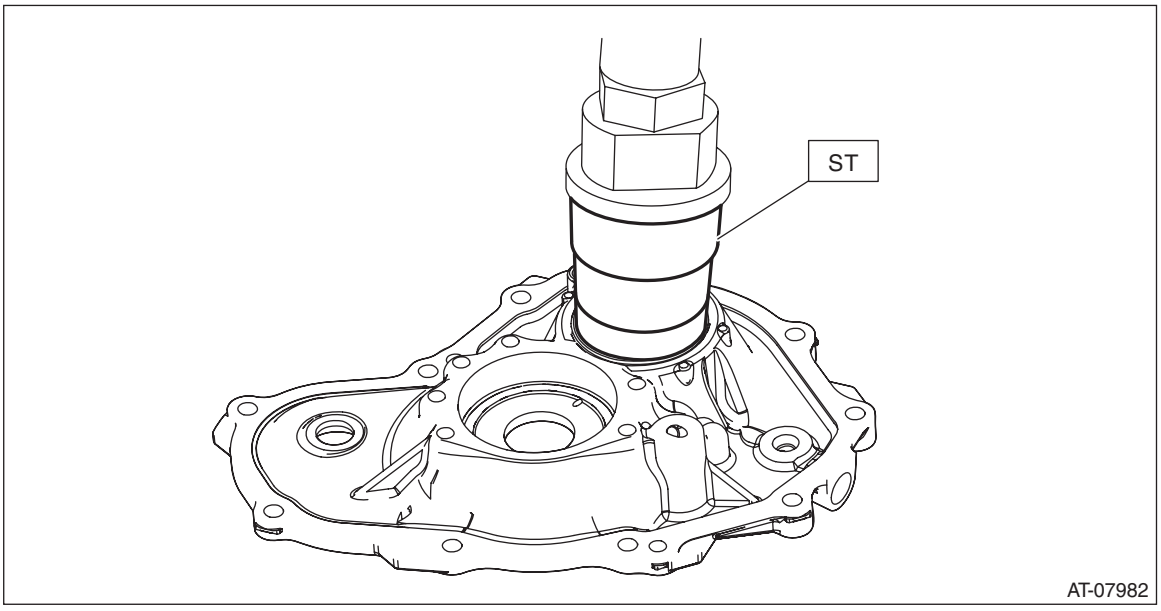
18) Remove the O-rings.

19) Remove the seal ring from converter case cover.



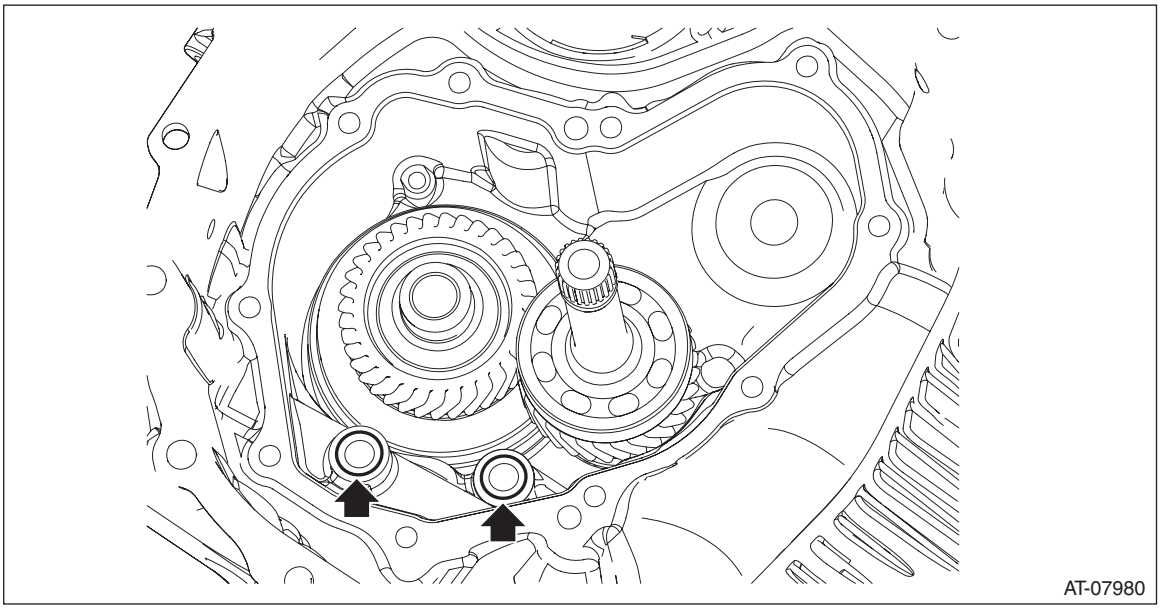
20) Using the ST, remove the ball bearing from the converter case cover.
(1) Remove the claw of ST1, and attach the claw of ST2.
ST1 398527700 PULLER ASSY
ST2 18760AA000 CLAW

(A) Claw



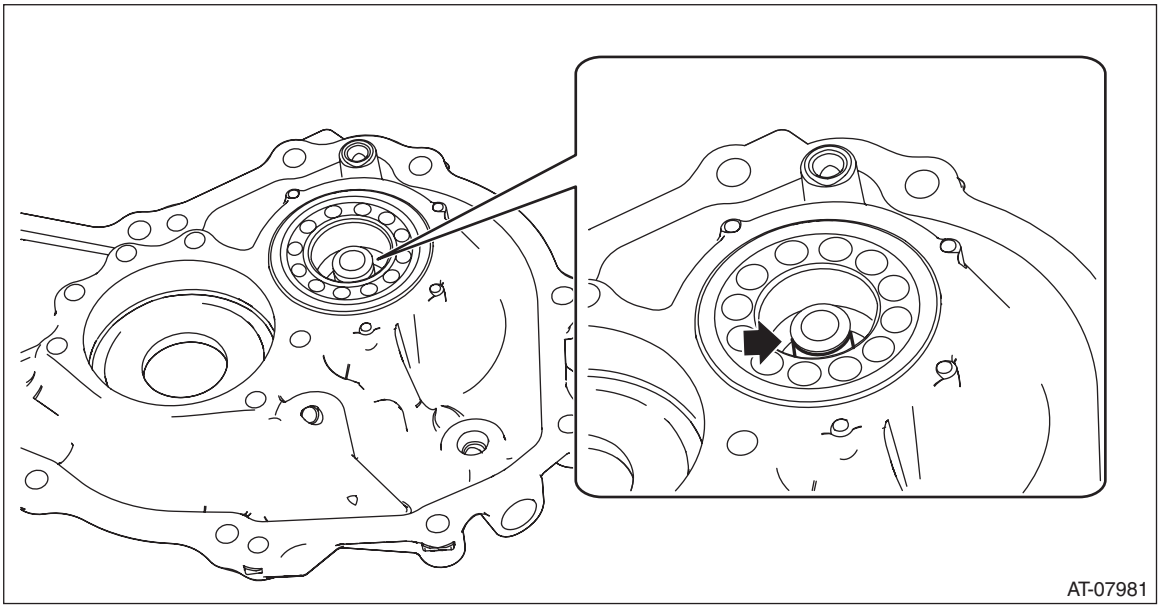
(2) Using the ST, remove the ball bearing from the converter case cover.
ST1 398527700 PULLER ASSY
ST2 18760AA000 CLAW

B: INSTALLATION



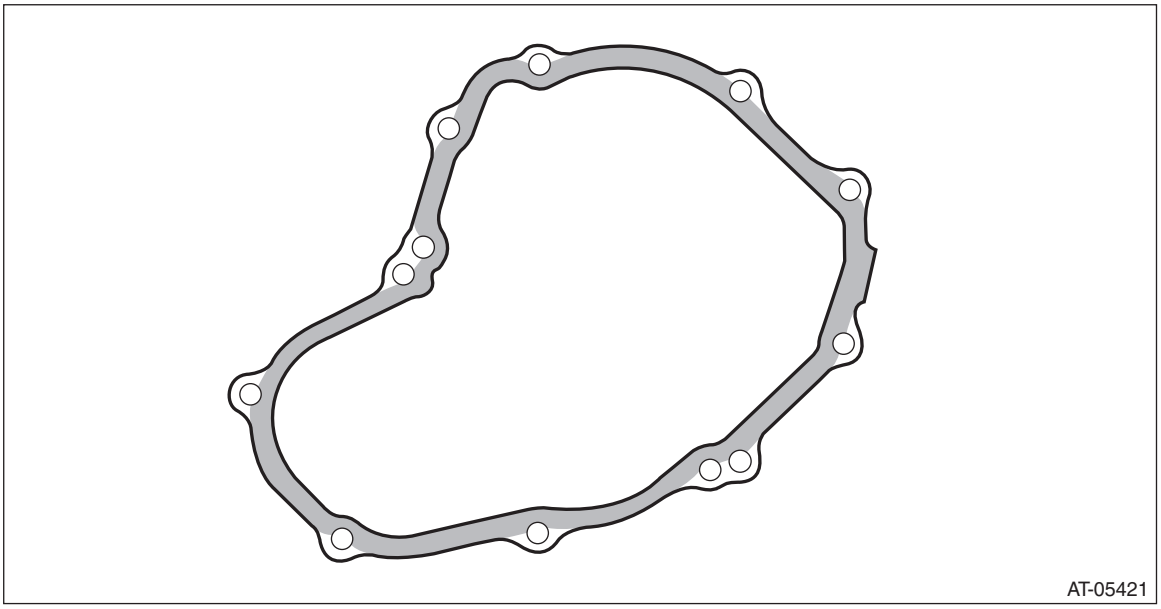
1) Clean the mating surface of converter case cover and converter case.
2) Adjust the shims of front reduction drive gear and front reduction driven gear. <Ref. to CVT(TR690)-338, ADJUSTMENT, Front Reduction Drive Gear.> <Ref. to CVT(TR690)-346, ADJUSTMENT, Front Reduction Driven Gear.>
3) Apply CVTF to the selected shims and install on the bearing catch surface of the front reduction driven gear.
4) Using the ST, install the ball bearing to the converter case cover.

NOTE:
Use a new ball bearing.
ST 499755602 PRESS SNAP RING



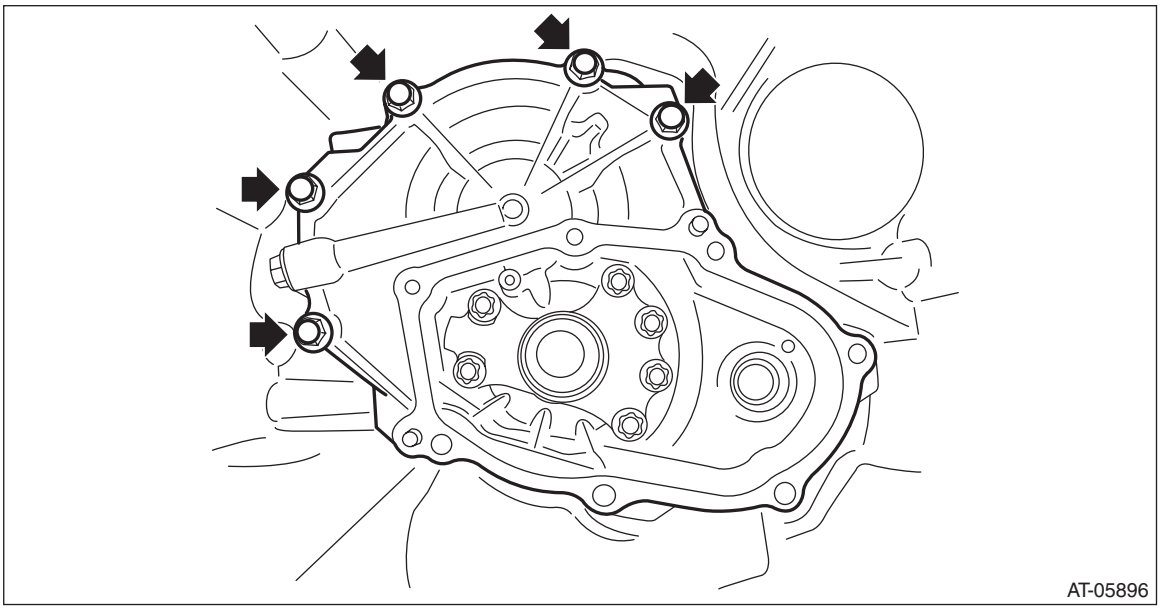
5) Install the O-rings.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.



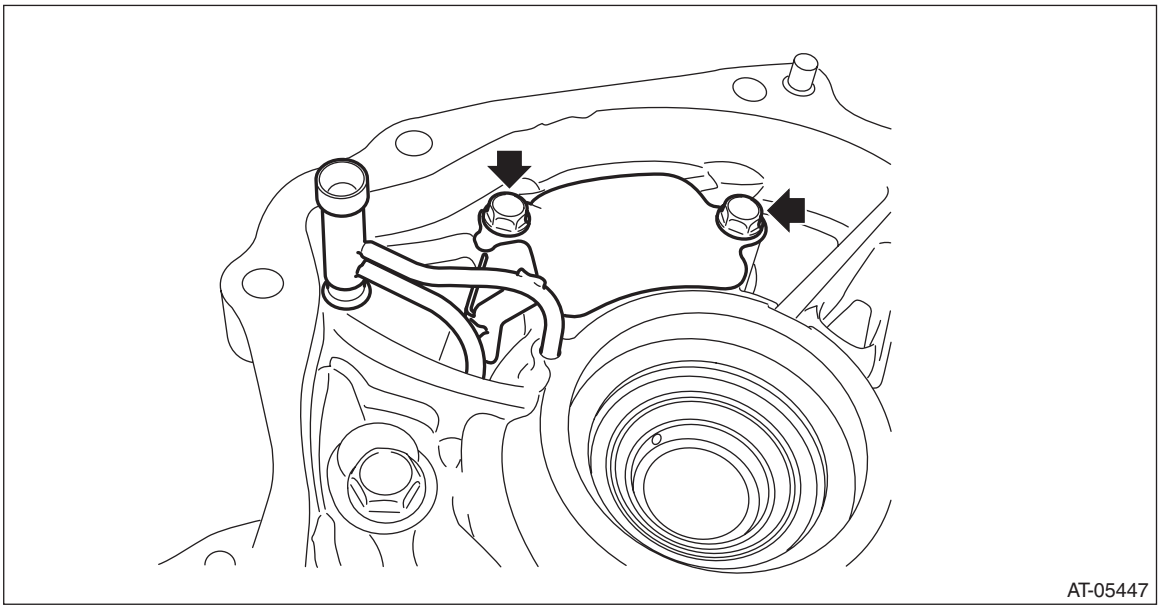
6) Apply CVTF to the selected shims and install on the bearing catch surface of the front reduction drive gear.
7) Install the seal ring to converter case cover.

NOTE:
- Use new seal rings.
- When installing the seal rings, do not expand the seal rings too much.



8) Apply liquid gasket seamlessly to the mating surface of converter case cover.

Liquid gasket:
THREE BOND 1215B or equivalent

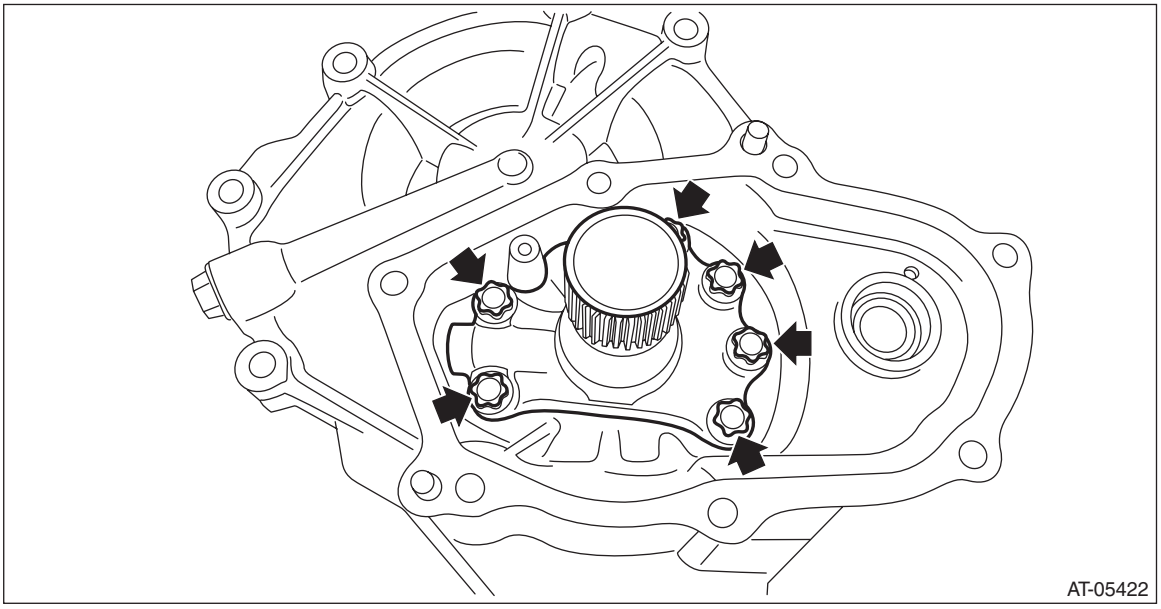


9) Install the converter case cover.

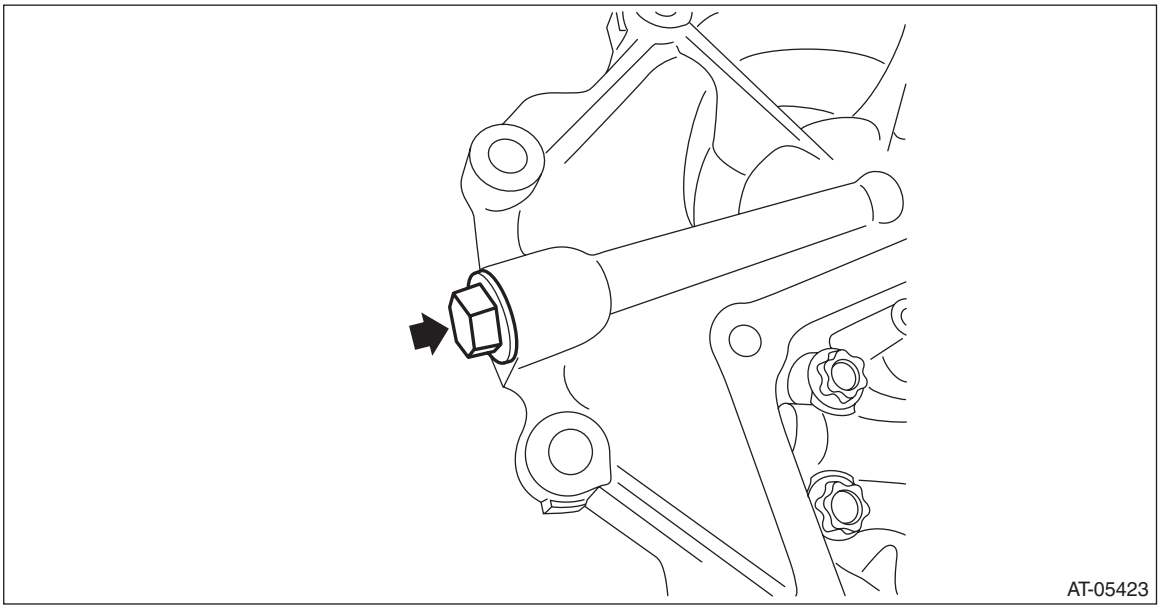
Tightening torque:
24 N·m (2.4 kgf-m, 17.7 ft-lb)

10) Install the oil pump chain cover and the oil pump chain. <Ref. to CVT(TR690)-317, INSTALLATION, Oil Pump Chain.>
11) Flip over the converter case cover.
12) Install the oil stopper plate and lubrication pipe.

Tightening torque:
9 N·m (0.9 kgf-m, 6.6 ft-lb)



13) Install the drive pinion shaft assembly. <Ref. to CVT(TR690)-275, INSTALLATION, Drive Pinion Shaft Assembly.>
14) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-261, INSTALLATION, Primary Pulley and Secondary Pulley.>
15) Install the transmission case. <Ref. to CVT(TR690)-242, INSTALLATION, Transmission Case.>
16) Install the forward clutch assembly. <Ref. to CVT(TR690)-201, INSTALLATION, Forward Clutch Assembly.>
17) Install the intermediate case. <Ref. to CVT(TR690)-186, INSTALLATION, Intermediate Case.>

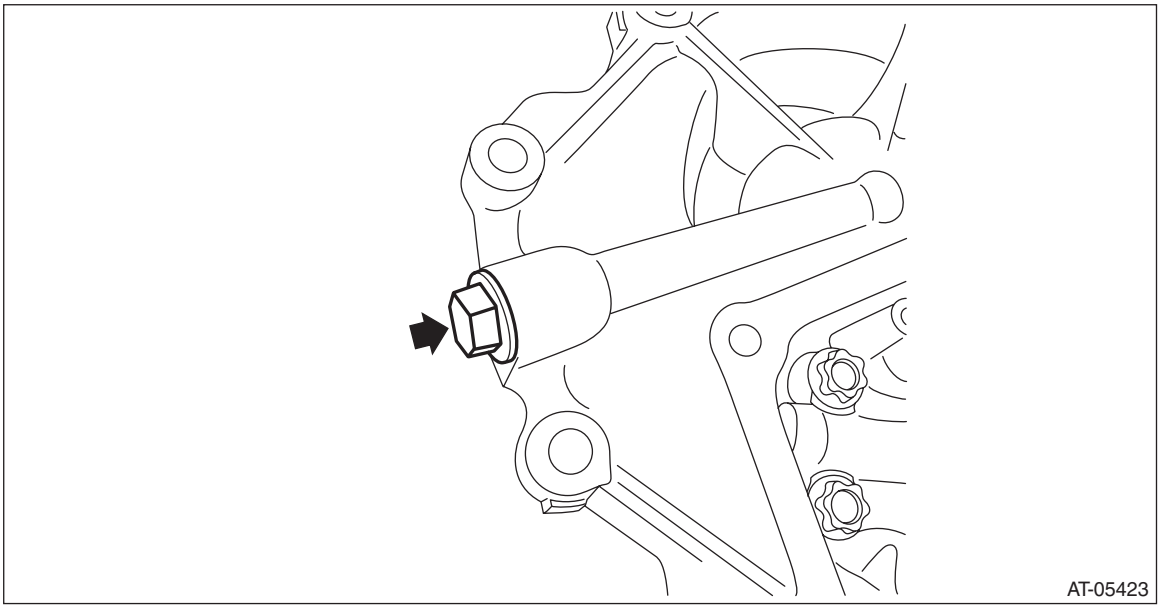


18) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-179, INSTALLATION, Transfer Reduction Driven Gear.>
19) Install the transfer clutch assembly. <Ref. to CVT(TR690)-168, INSTALLATION, Transfer Clutch.>
20) Install the rear drive shaft. <Ref. to CVT(TR690)-162, INSTALLATION, Rear Drive Shaft.>
21) Install the extension case. <Ref. to CVT(TR690)-160, INSTALLATION, Extension Case.>
22) Install the transmission harness. <Ref. to CVT(TR690)-136, INSTALLATION, Transmission Harness.>
23) Install the control valve body and oil pan. <Ref. to CVT(TR690)-127, INSTALLATION, Control Valve Body.>
24) Install the air breather hose. <Ref. to CVT(TR690)-153, INSTALLATION, Air Breather Hose.>
25) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-75, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

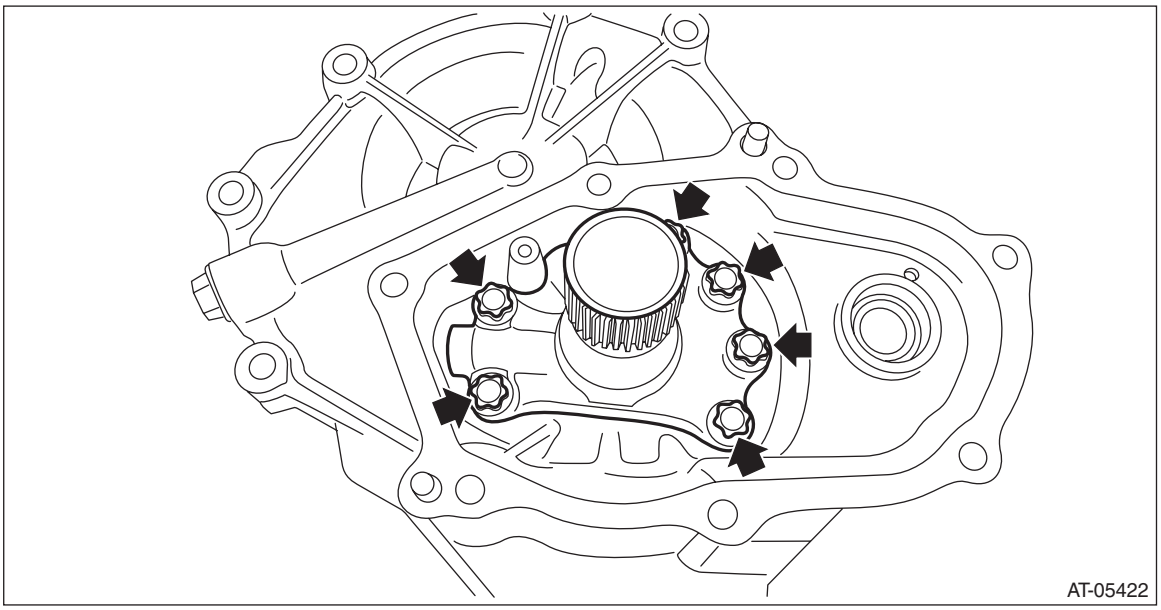
1) Using ST, remove the center support COMPL.
ST 18270KA010 SOCKET (E16)

2) Remove the plug and O-ring.



D: ASSEMBLY

1) Install the plugs.



NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) Using ST, install the center support COMPL.
ST 18270KA010 SOCKET (E16)

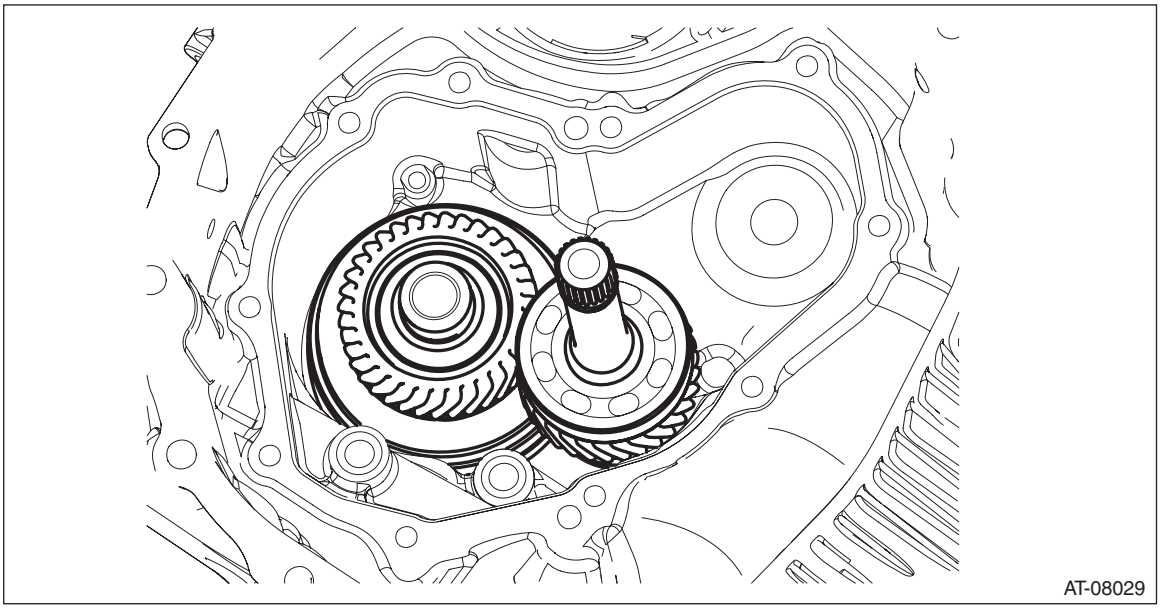
Tightening torque:
21.5 N·m (2.2 kgf-m, 15.9 ft-lb)

E: INSPECTION

- Check for leakage of CVTF from the connection between converter case and converter case cover.
- Check there is no damage or cracks on the converter case cover.

F: ADJUSTMENT

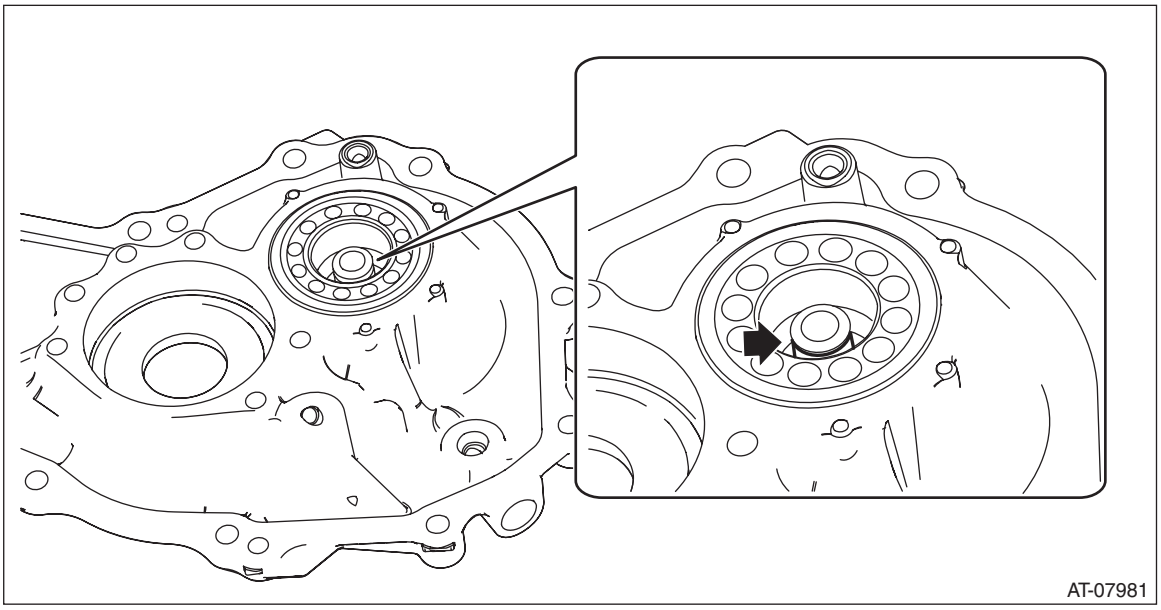
When replacing the converter case cover, select the following shims.



- Select the shim for front reduction drive gear. <Ref. to CVT(TR690)-338, ADJUSTMENT, Front Reduction Drive Gear.>
- Select the shim for front reduction driven gear. <Ref. to CVT(TR690)-346, ADJUSTMENT, Front Reduction Driven Gear.>

49.Front Reduction Drive Gear

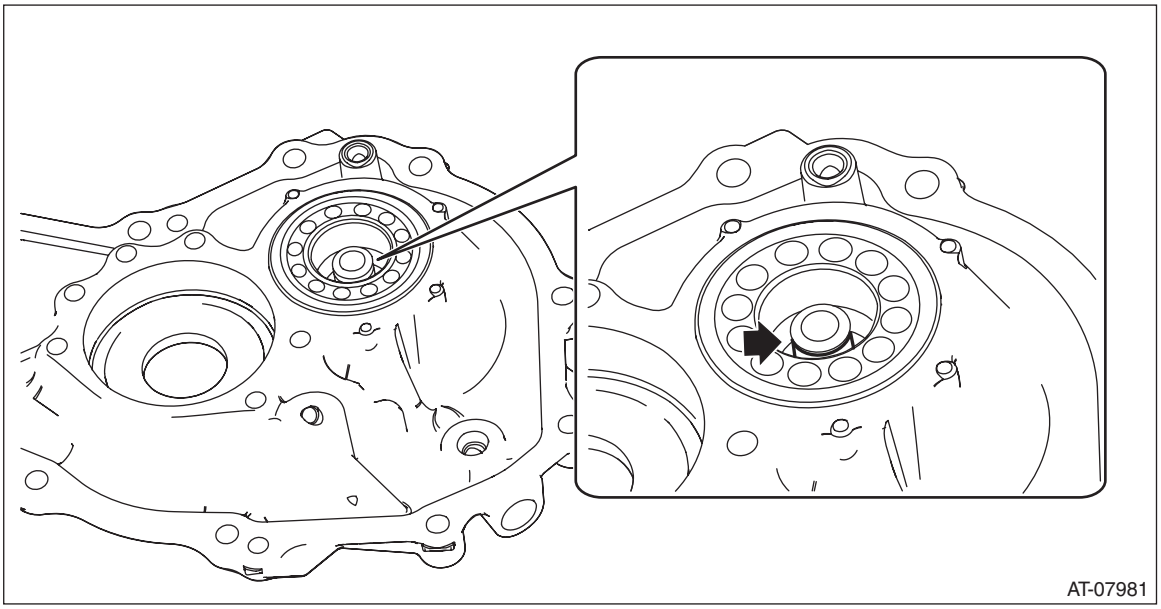
A: REMOVAL



1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-58, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-151, REMOVAL, Air Breather Hose.>
3) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-123, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR690)-134, REMOVAL, Transmission Harness.>
5) Remove the primary speed sensor. <Ref. to CVT(TR690)-114, REMOVAL, Primary Speed Sensor.>
6) Remove the extension case. <Ref. to CVT(TR690)-159, REMOVAL, Extension Case.>
7) Remove the rear drive shaft. <Ref. to CVT(TR690)-162, REMOVAL, Rear Drive Shaft.>
8) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-167, REMOVAL, Transfer Clutch.>
9) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-179, REMOVAL, Transfer Reduction Driven Gear.>
10) Remove the intermediate case. <Ref. to CVT(TR690)-185, REMOVAL, Intermediate Case.>
11) Remove the forward clutch assembly. <Ref. to CVT(TR690)-200, REMOVAL, Forward Clutch Assembly.>
12) Remove the transmission case. <Ref. to CVT(TR690)-240, REMOVAL, Transmission Case.>
13) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-257, REMOVAL, Primary Pulley and Secondary Pulley.>
14) Remove the drive pinion shaft assembly. <Ref. to CVT(TR690)-273, REMOVAL, Drive Pinion Shaft Assembly.>
15) Remove the converter case cover. <Ref. to CVT(TR690)-322, REMOVAL, Converter Case Cover.>
16) Remove the front reduction drive gear and front reduction driven gear together.

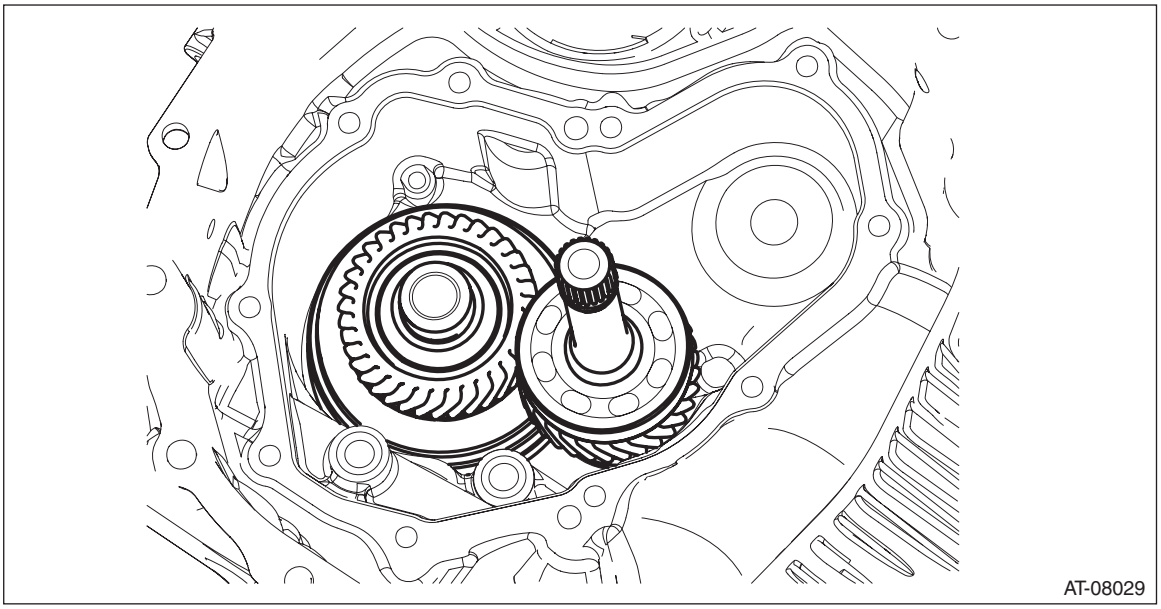
NOTE:
Remove the front reduction driven shaft while holding it.

17) Remove the shims of the front reduction driven gear from the converter case.



18) Remove the seal rings.

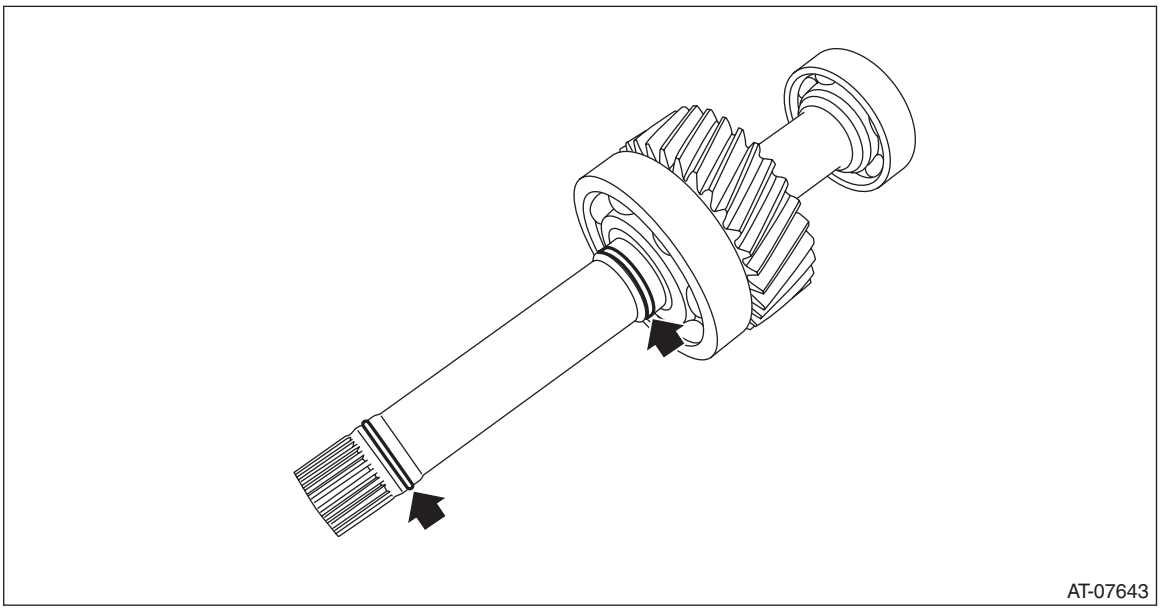
B: INSTALLATION



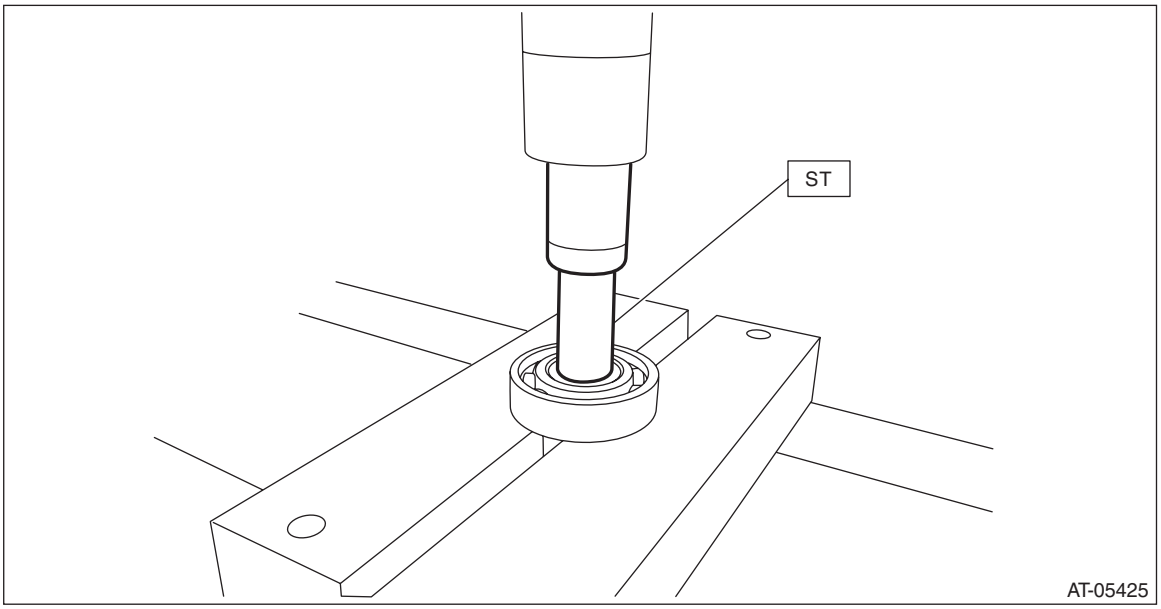
1) Clean the mating surface of converter case cover and converter case.
2) Select the shim for front reduction drive gear. <Ref. to CVT(TR690)-338, ADJUSTMENT, Front Reduction Drive Gear.>
3) Apply CVTF to the shims and install on the bearing catch surface of the front reduction driven gear.
4) Install the seal ring to converter case cover.

NOTE:
- Use new seal rings.
- When installing the seal rings, do not expand the seal rings too much.

5) Install the front reduction drive gear and front reduction driven gear together.

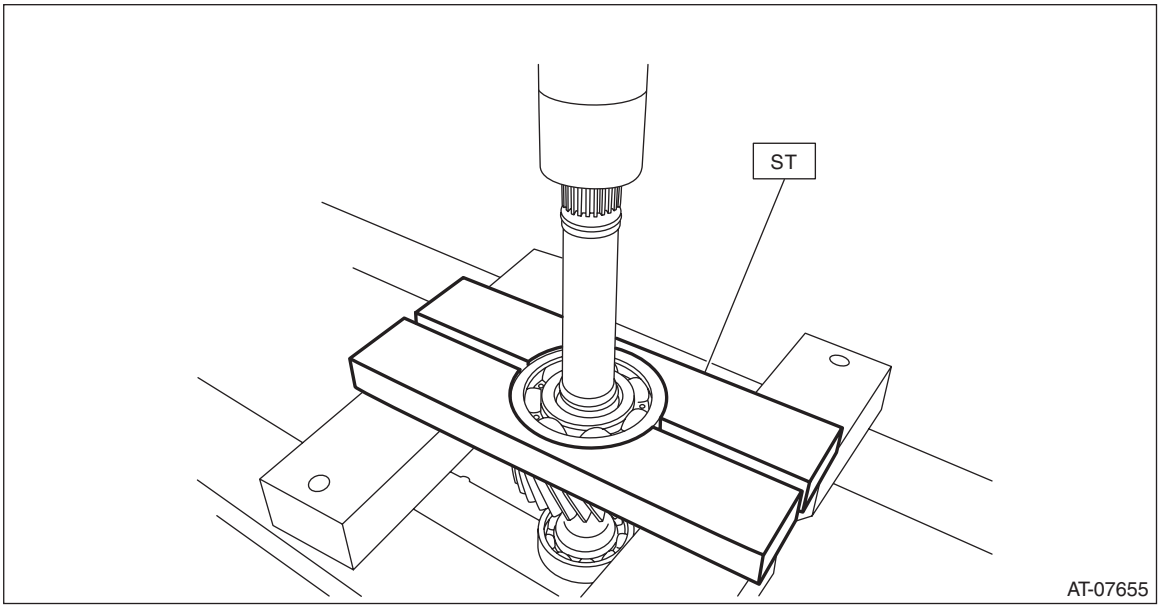


CAUTION:
Be careful not to detach the spline of input clutch and the spline of front reduction driven shaft.



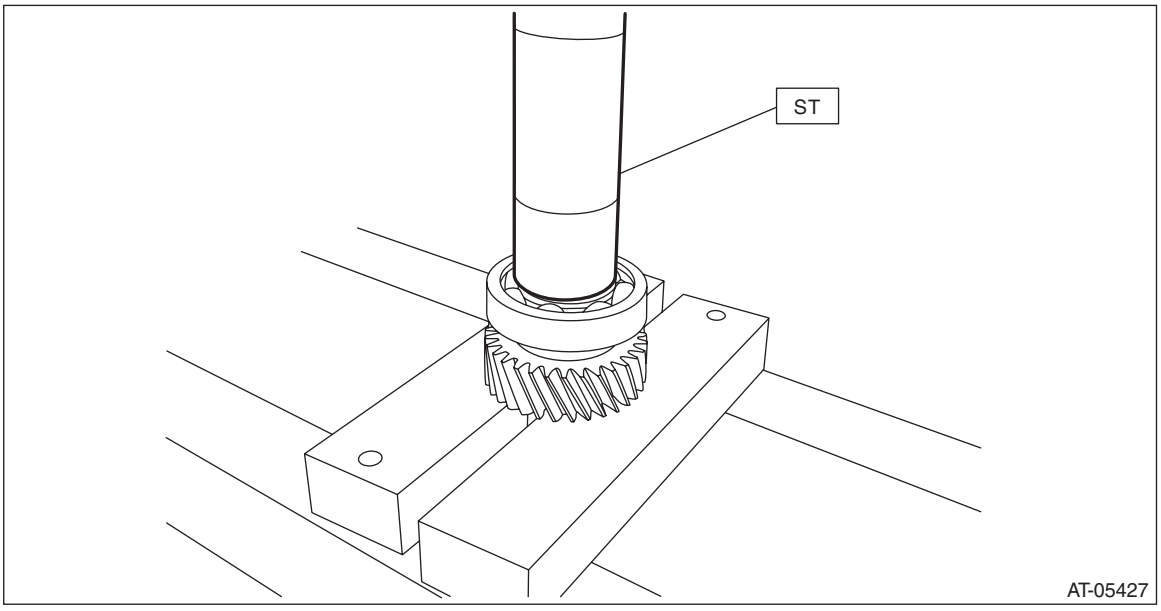
6) Install the converter case cover. <Ref. to CVT(TR690)-326, INSTALLATION, Converter Case Cover.>
7) Install the drive pinion shaft assembly. <Ref. to CVT(TR690)-275, INSTALLATION, Drive Pinion Shaft Assembly.>
8) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-261, INSTALLATION, Primary Pulley and Secondary Pulley.>
9) Install the transmission case. <Ref. to CVT(TR690)-242, INSTALLATION, Transmission Case.>
10) Install the forward clutch assembly. <Ref. to CVT(TR690)-201, INSTALLATION, Forward Clutch Assembly.>
11) Install the intermediate case. <Ref. to CVT(TR690)-186, INSTALLATION, Intermediate Case.>
12) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-179, INSTALLATION, Transfer Reduction Driven Gear.>
13) Install the transfer clutch assembly. <Ref. to CVT(TR690)-168, INSTALLATION, Transfer Clutch.>
14) Install the rear drive shaft. <Ref. to CVT(TR690)-162, INSTALLATION, Rear Drive Shaft.>
15) Install the extension case. <Ref. to CVT(TR690)-160, INSTALLATION, Extension Case.>
16) Install the primary speed sensor. <Ref. to CVT(TR690)-117, INSTALLATION, Primary Speed Sensor.>
17) Install the transmission harness. <Ref. to CVT(TR690)-136, INSTALLATION, Transmission Harness.>
18) Install the control valve body and oil pan. <Ref. to CVT(TR690)-127, INSTALLATION, Control Valve Body.>
19) Install the air breather hose. <Ref. to CVT(TR690)-153, INSTALLATION, Air Breather Hose.>
20) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-75, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY



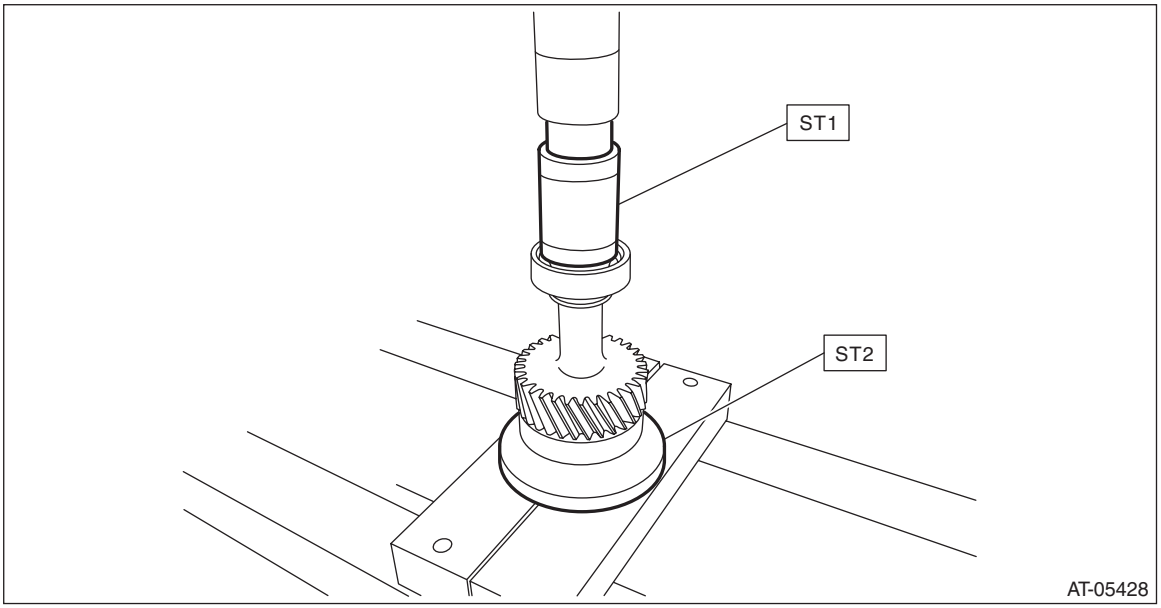
1) Remove the seal ring and O-ring.

2) Using the ST, remove the ball bearing from front reduction drive gear.
ST 899864100 REMOVER



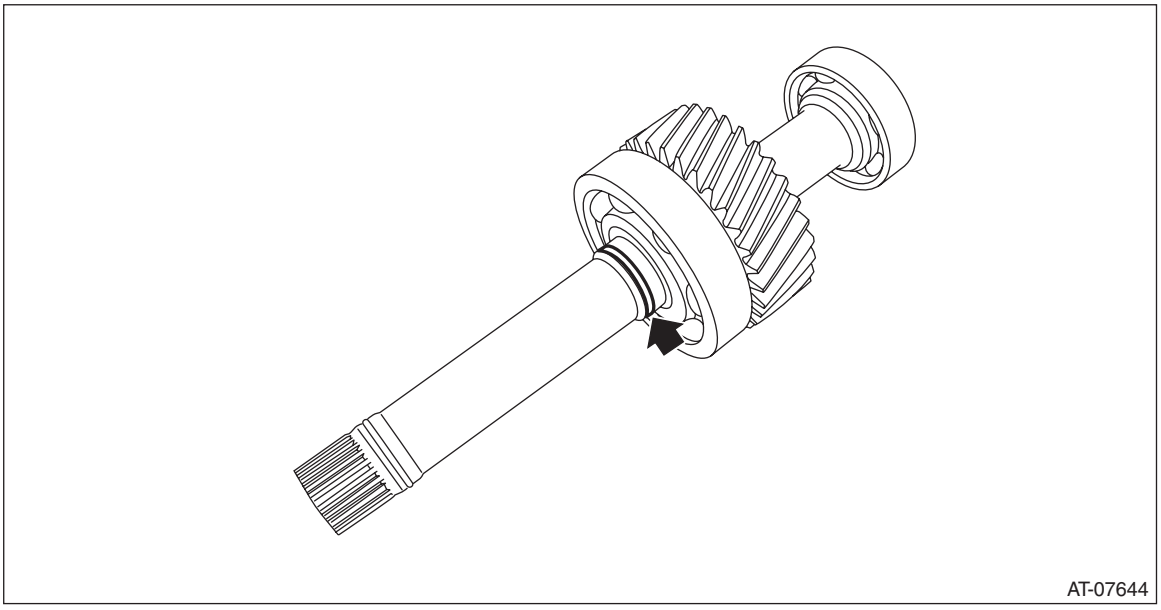
3) Using the ST, remove the ball bearing from front reduction drive gear.
ST 498077000 REMOVER

D: ASSEMBLY



1) Using the ST, install the ball bearing to front reduction drive gear.

NOTE:
Use a new ball bearing.
ST 18651AA000 INSTALLER

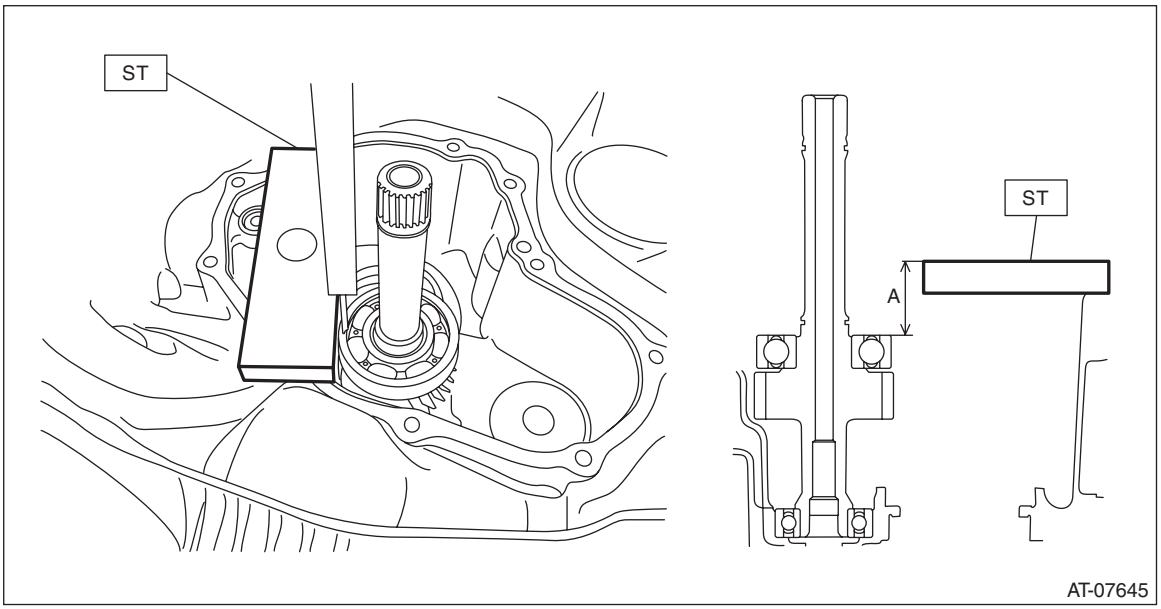


2) Using ST1 and ST2, install the ball bearing to front reduction drive gear.

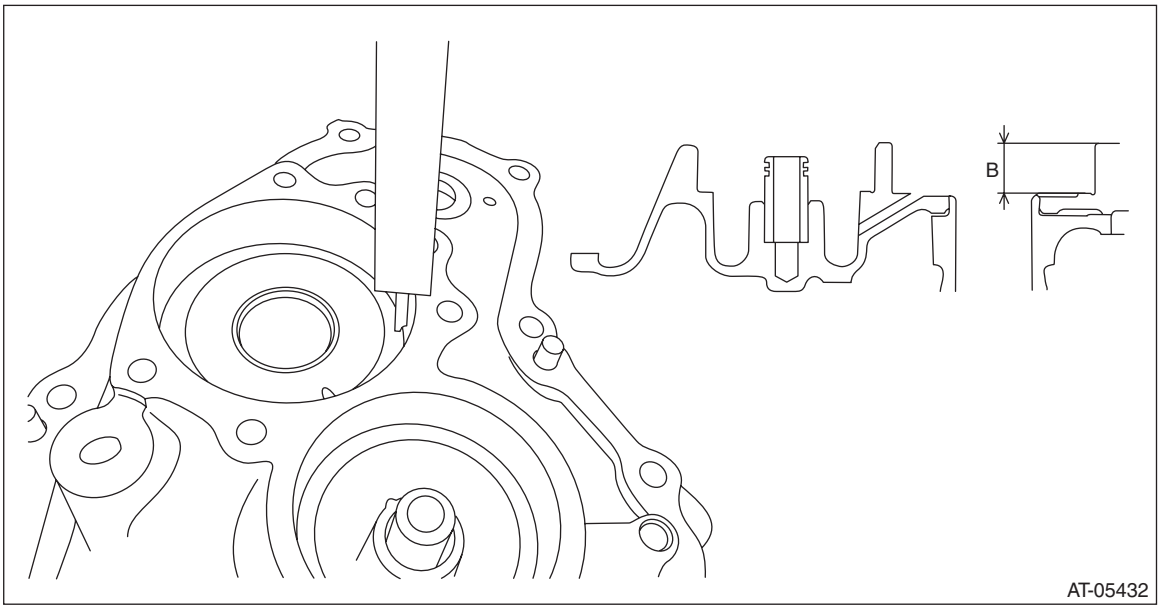
NOTE:
Use a new ball bearing.
ST1 499757002 PRESS SNAP RING
ST2 398177700 INSTALLER

3) Install the seal rings.

NOTE:
- Use new seal rings.
- When installing the seal rings, do not expand the seal rings too much.
- Install the O-ring when installing the torque converter assembly.

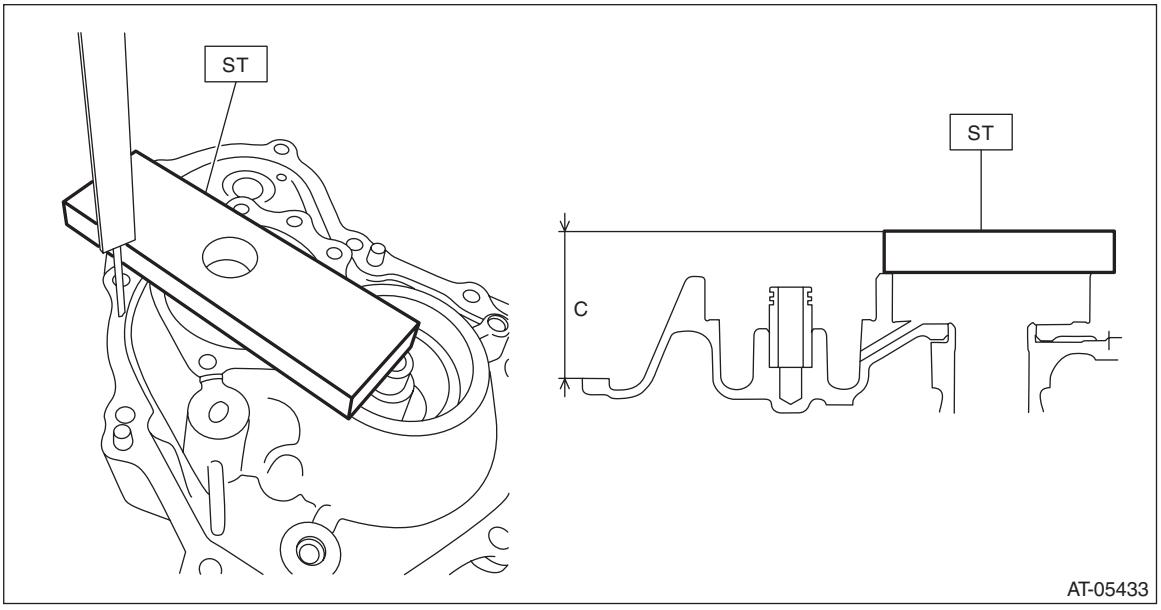


E: INSPECTION



- Replace if its tooth surfaces are broken, damaged or excessively worn.
- Check the bearing for seizure or wear.
- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.

F: ADJUSTMENT



1) Measure height “A” from the ST upper face to the bearing end face using the ST.
ST 398643600 GAUGE

2) Measure depth “B” from the converter case cover upper face to the bearing catch surface.

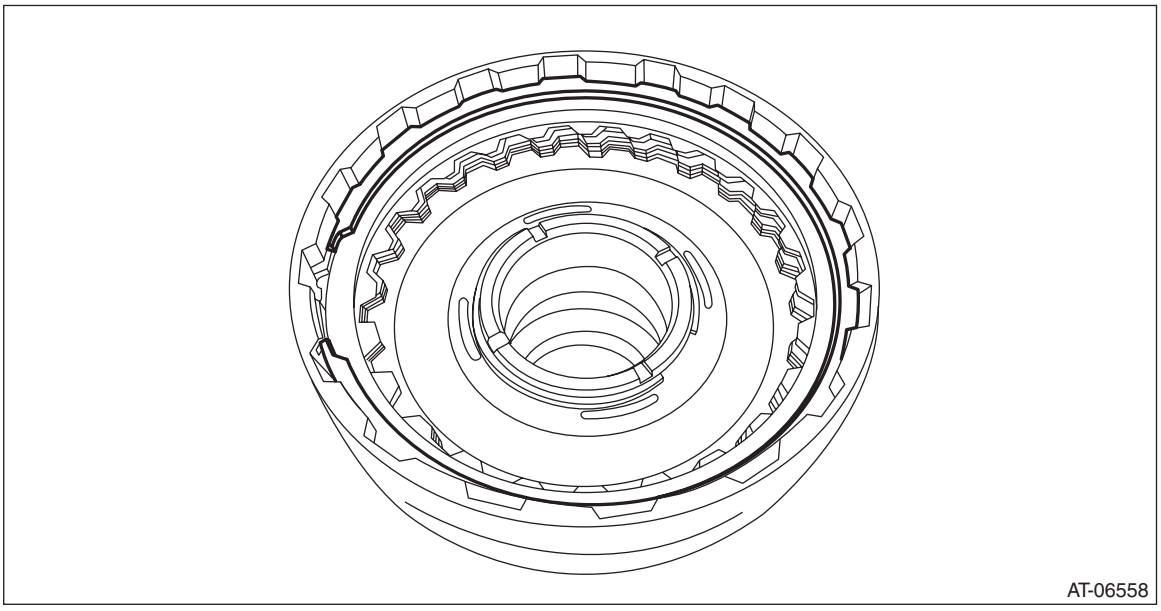
3) Using the ST, measure height “C” from the ST upper face to the converter case cover mating surface.
ST 398643600 GAUGE

4) Using the following formula, calculate clearance “T” to select shims.
Calculation formula:
T mm = (A – 15) – ((C – 15) – B)
[T in = (A – 0.591) – ((C – 0.591) – B)]
T: Clearance
A: Depth from the ST upper face to the bearing end surface
B: Depth from the converter case cover upper face to the bearing catch surface
C: Height from the ST upper face to the converter case cover mating surface
15 mm (0.591 in): Thickness of ST

Clearance “T” mm (in)	Thickness of shim mm (in)	Part No.
1.070 — 1.174 (0.042 — 0.045)	1.0 (0.039)	31288AA160
1.175 — 1.274 (0.046 — 0.049)	1.1 (0.043)	31288AA170
1.275 — 1.374 (0.050 — 0.053)	1.2 (0.047)	31288AA180
1.375 — 1.474 (0.054 — 0.057)	1.3 (0.051)	31288AA220
1.475 — 1.580 (0.058 — 0.062)	1.4 (0.055)	31288AA230

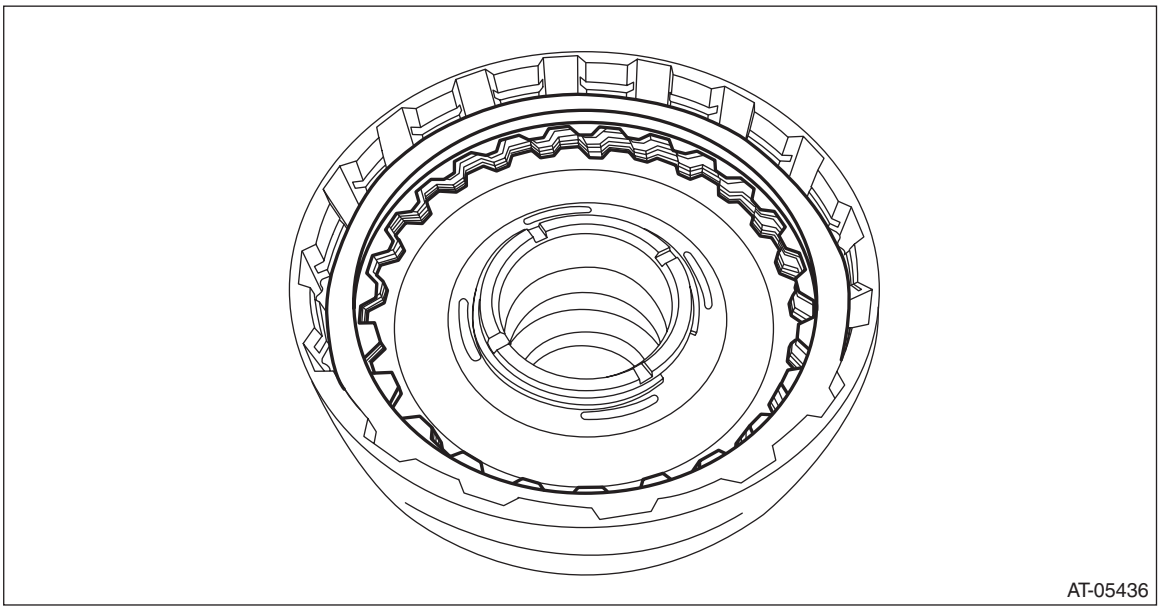
50.Front Reduction Driven Gear

A: REMOVAL



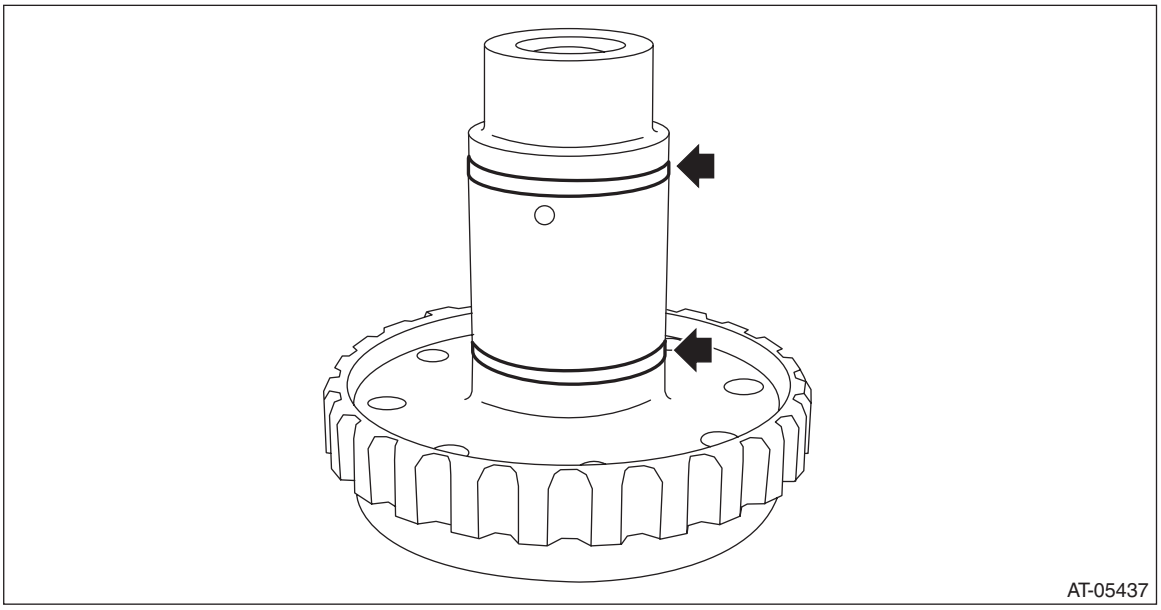
NOTE:
For removal of front reduction driven gear, refer to the “Front Reduction Drive Gear”. <Ref. to CVT(TR690)-332, REMOVAL, Front Reduction Drive Gear.>

B: INSTALLATION

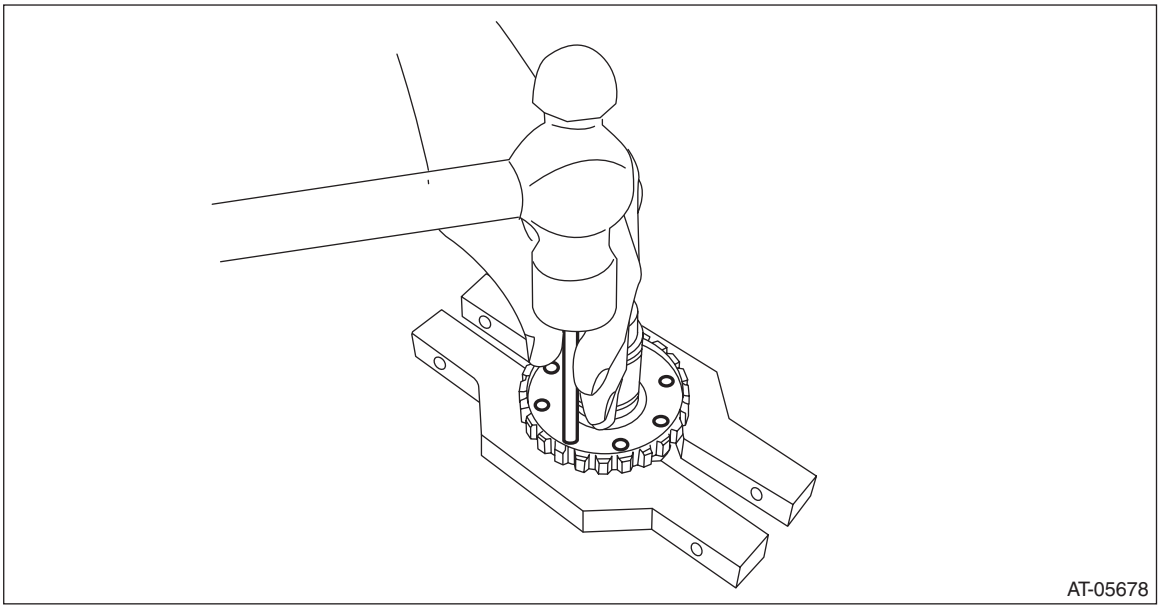


NOTE:
For installation of front reduction driven gear, refer to the “Front Reduction Drive Gear”. <Ref. to CVT(TR690)-333, INSTALLATION, Front Reduction Drive Gear.>

C: DISASSEMBLY



1) Remove the front reduction driven shaft from the front reduction driven gear.
2) Remove the snap ring.



3) Remove the retaining plate, drive plate, driven plate and dish plate.

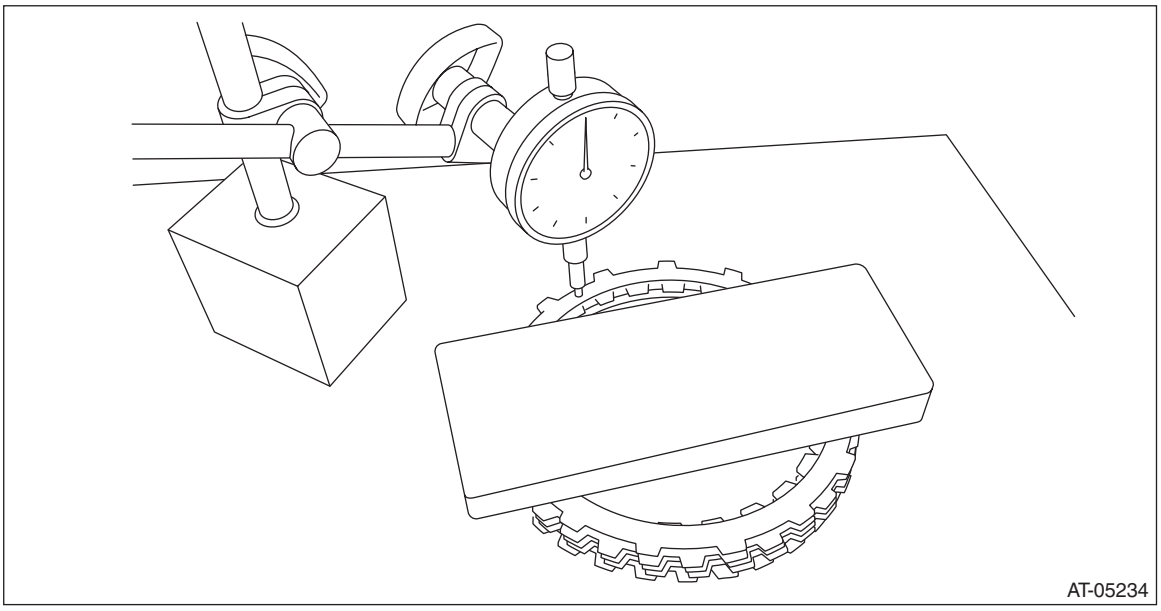
4) Remove the seal ring from front reduction driven shaft.

5) Remove the ball bearing, while tapping the entire circumference around the ball bearing outer race a little at a time through the front reduction driven shaft hole using the round bar with diameter of 7 mm (0.28 in).

D: ASSEMBLY

1) Place the dish plate, driven plate, drive plate and retaining plate neatly in this order on surface table.

NOTE:
Make sure of the direction of dish plate.

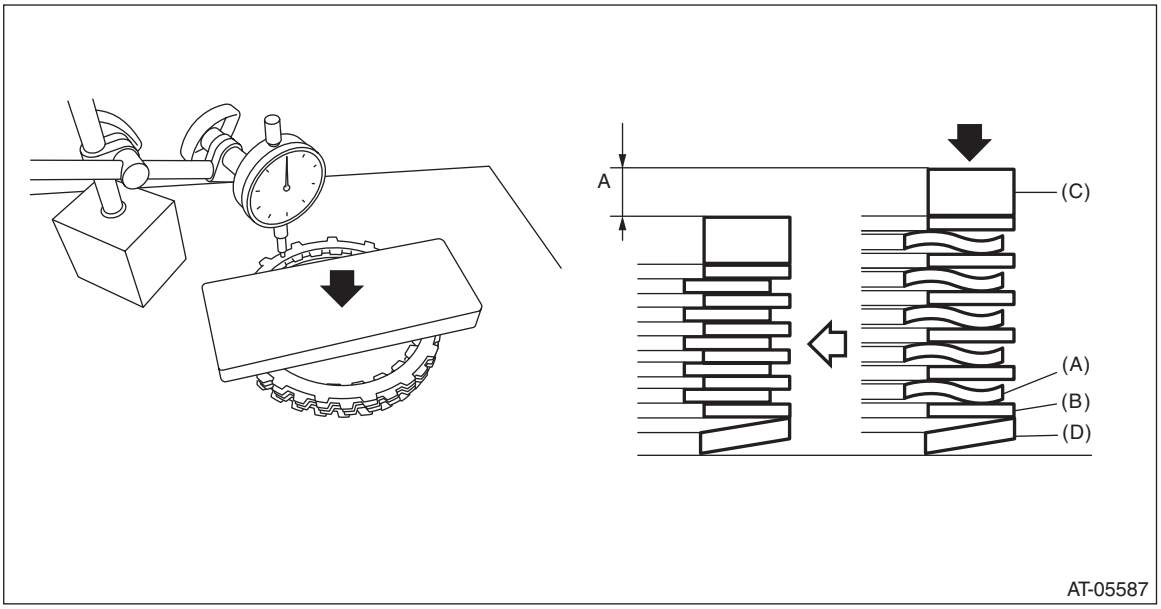


2) Set the dial gauge to retaining plate, and read its scale.

NOTE:
The value, which is read in the gauge at this time, is zero point.

3) Scale and record the weight “Z” of a flat board which will be put on retaining plate.

NOTE:
- Use a stiff board which does not bend against load as a flat board to be put on retaining plate.
- Use a flat board weighing less than 130 N (13.3 kgf, 29.2 lb).

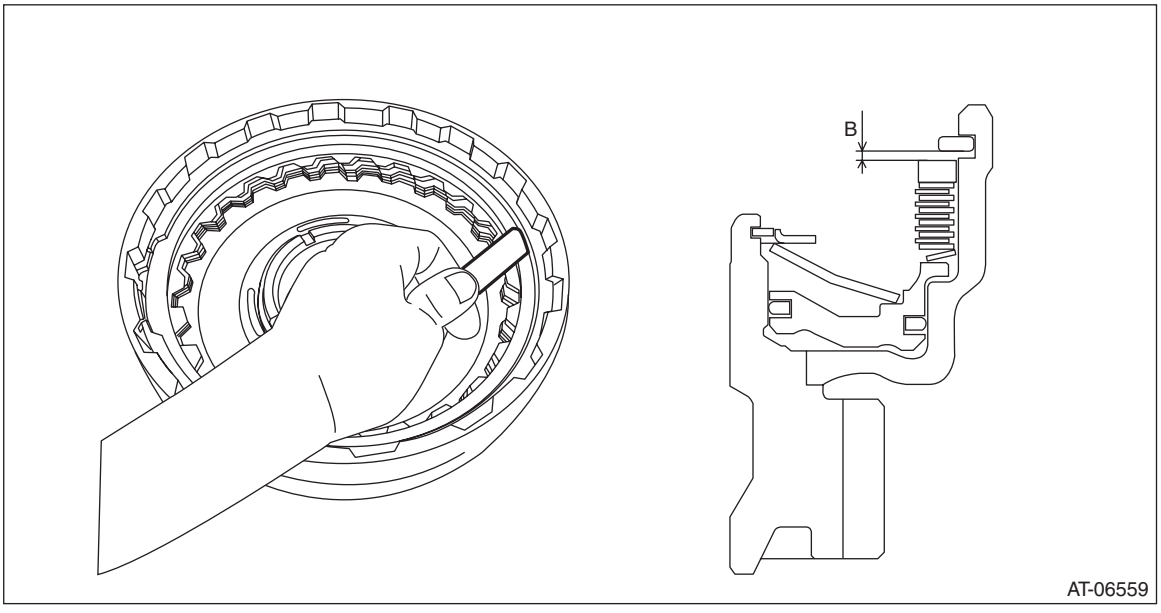


4) Put the flat board on retaining plate.

5) Using the following formula, calculate load “N”, a force of pressing with push/pull gauge.
N = 130N (13.3 kgf, 29.2 lb) – Z
130 N (13.3 kgf, 29.2 lb) : Load applied to clutch plate
Z: Flat board weight

6) Press the center of retaining plate by applying a force of “N” using push/pull gauge, and then measure and record the compression amount “A”.

NOTE:
Measure at four points with a 90° interval and calculate the average.



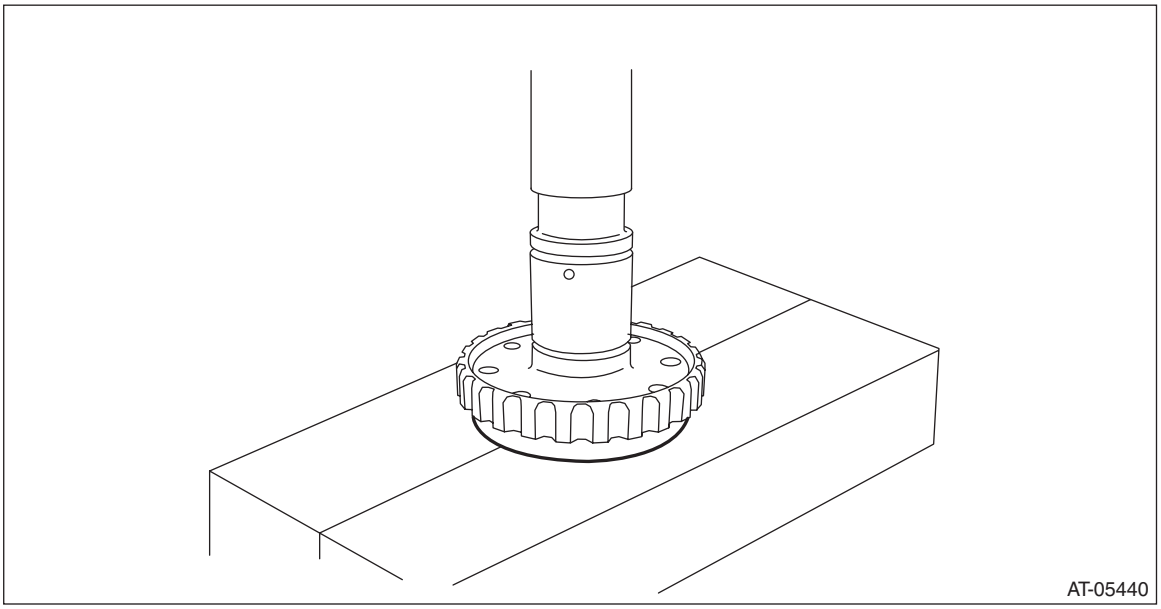
(A) Drive plate
(B) Driven plate
(C) Retaining plate
(D) Dish plate

7) Install the dish plate, driven plate, drive plate, retaining plate and snap ring.

NOTE:
Make sure of the direction of dish plate.

8) Measure and record the clearance “B” between the retaining plate and snap ring.

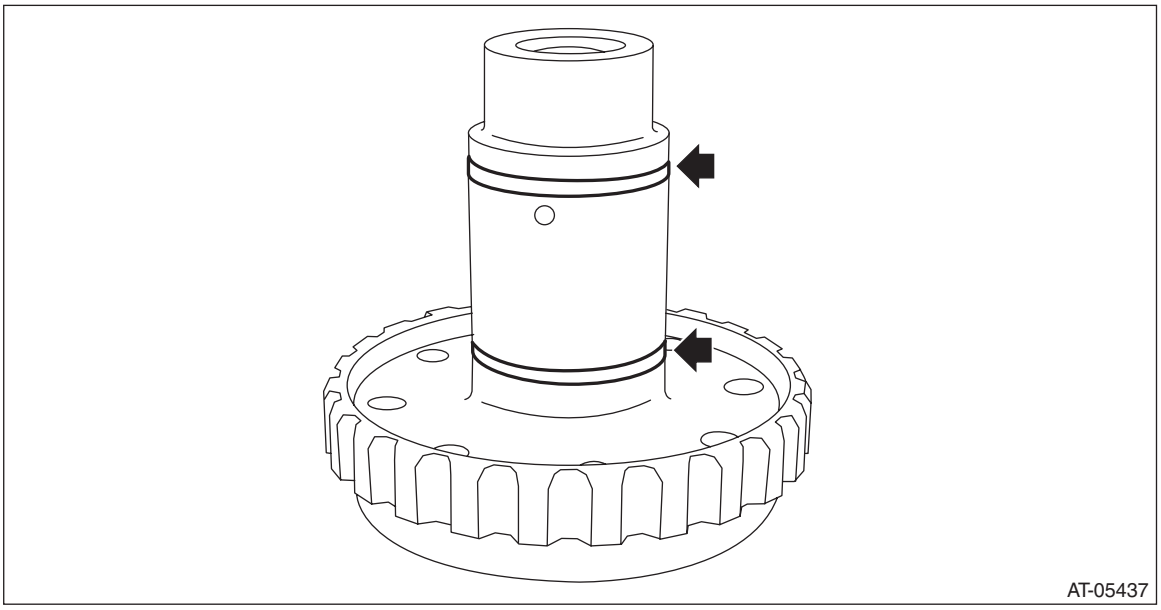
NOTE:
Before measuring, press down the whole circumference of retaining plate using your finger.



9) Piston stroke calculation
Calculate with A and B dimensions recorded before.
If out of standard, replace with a new drive plate and adjust it within standard.
S mm (in) = A + B
S: Piston stroke
A: Compression amount of drive plate and dish plate
B: Clearance between retaining plate and snap ring

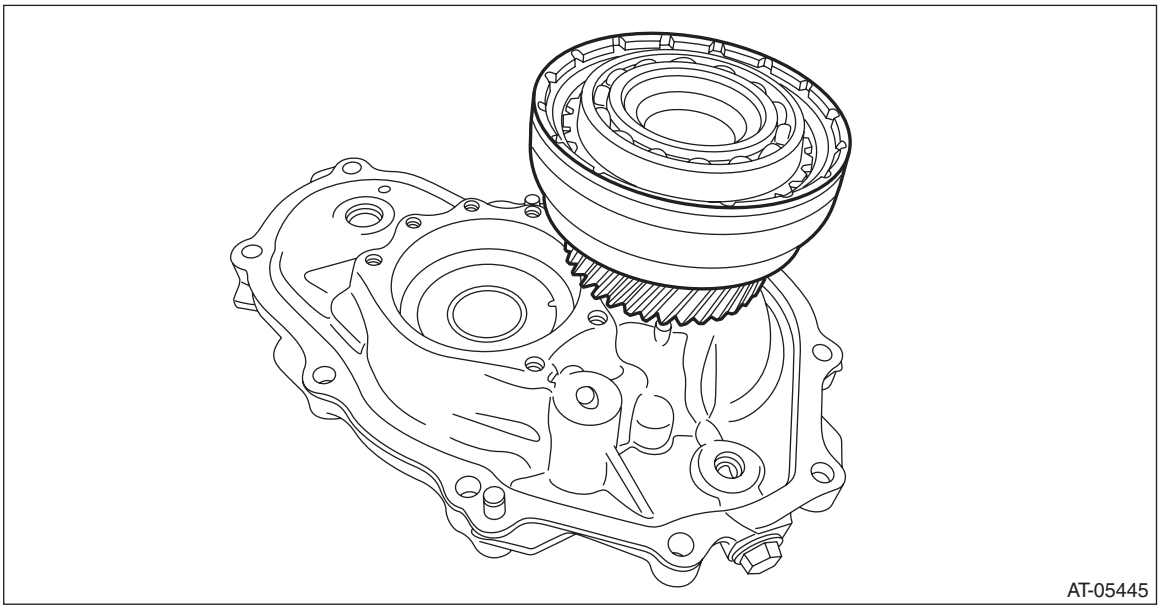
Specification:
2.4 — 2.8 mm (0.094 — 0.11 in)

Retaining plate	
Part No.	Thickness mm (in)
31667AB430	3.1 (0.122)
31667AB440	3.3 (0.130)
31667AB450	3.5 (0.138)



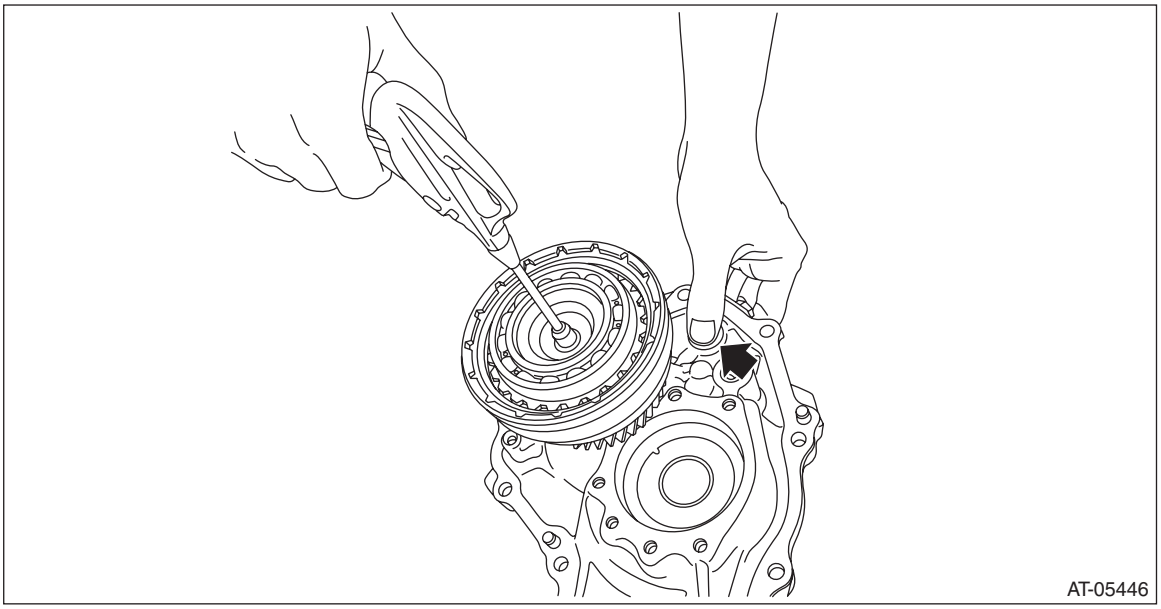
10) Press-fit the ball bearing into front driven shaft.

NOTE:
Use a new ball bearing.



11) Install the seal ring to the front driven shaft.

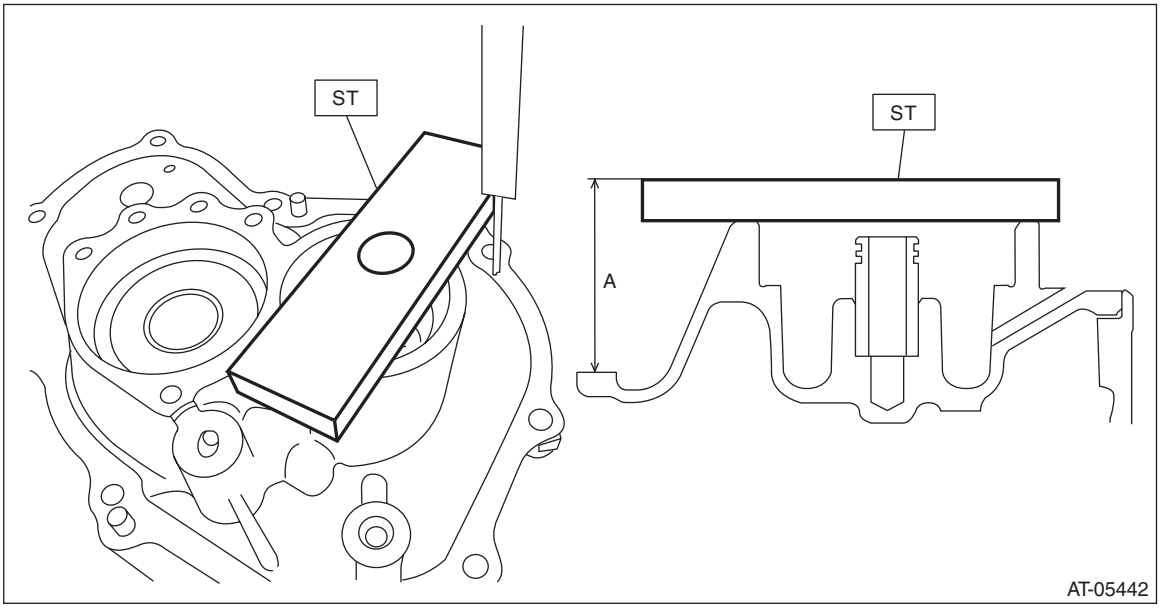
NOTE:
- Install a new seal ring.
- Apply CVTF to the seal rings.



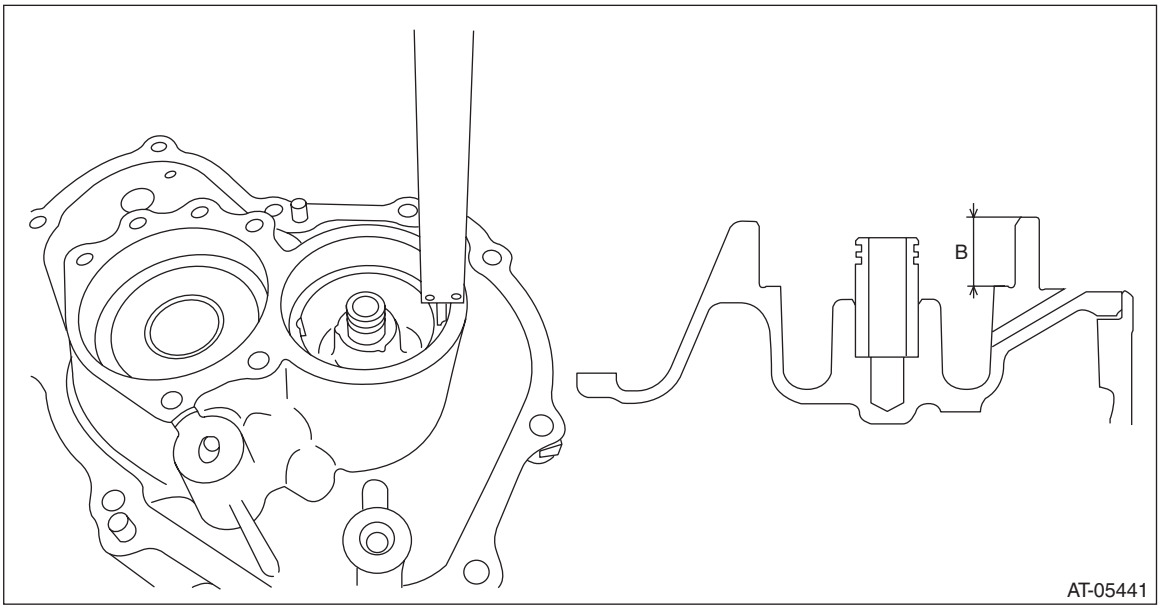
12) Install the front reduction driven shaft to the front reduction driven gear.
13) Install the front reduction driven gear assembly to converter case cover.

14) Apply compressed air intermittently to check the piston operation.

NOTE:
Hold the arrowed area with a finger.



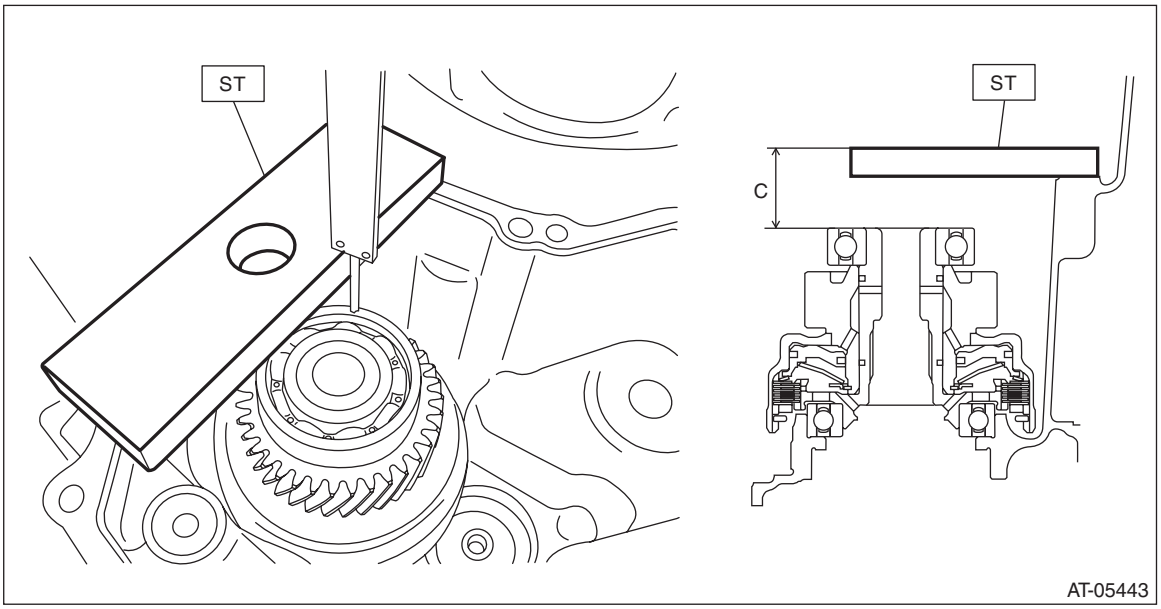
E: INSPECTION



- Check the drive plate for wear and damage.
- Check the driven plate for discoloration (burnt color).
- Check for worn snap ring, fatigue or damaged return spring or deformed piston retainer.
- Replace if its tooth surfaces are broken, damaged or excessively worn.
- Check the bearing for seizure or wear.
- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.

F: ADJUSTMENT

1) If the ball bearing is attached, remove the bearing and shims. <Ref. to CVT(TR690)-322, REMOVAL, Converter Case Cover.>
2) Using the ST, measure height “A” from the ST upper face to the mating surface of the case.
ST 398643600 GAUGE



3) Measure depth “B” from the converter case cover upper face to the bearing catch surface.

4) Install the ball bearing to the reduction driven gear.

NOTE:
Use a new ball bearing.

5) Measure depth “C” from the ST upper face to the bearing end face using the ST.
ST 398643600 GAUGE

6) Calculate clearance “T” using the following formula.
Formula: T mm = (C – 15) – ((A – 15) – B)
[T in = (C – 0.591) – ((A – 0.591) – B)]
T: Clearance
A: Height from the ST upper face to the converter case mating surface
B: Depth from the converter case cover upper face to the bearing catch surface
C: Depth from the ST upper face to the bearing end face
15 mm (0.591 in): Thickness of ST

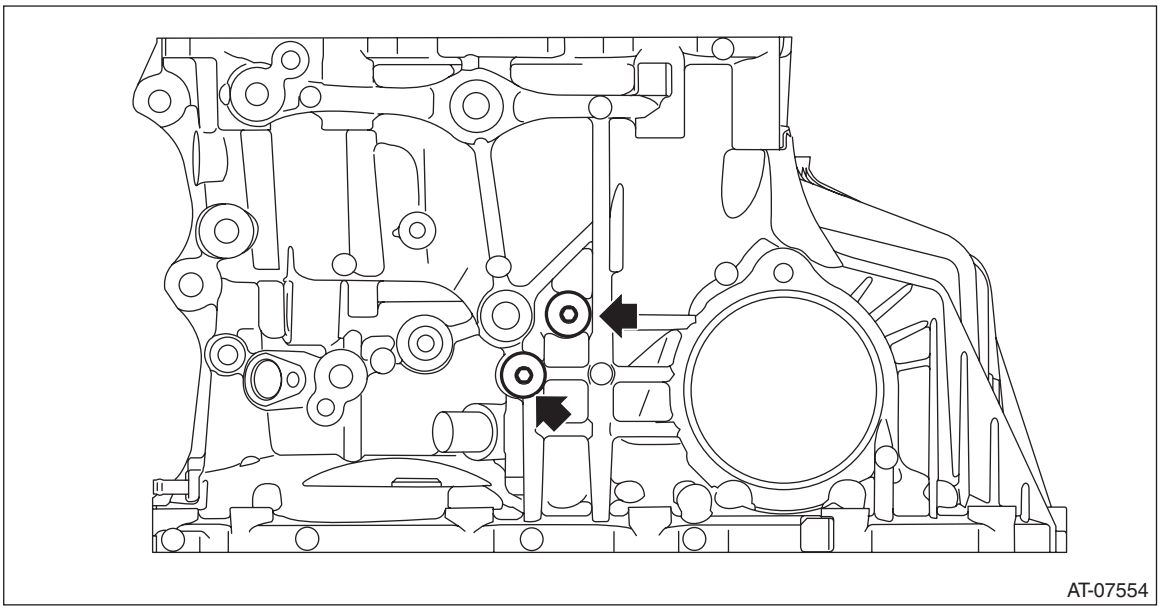
Clearance “T” mm (in)	Thickness of shim mm (in)
0.470 — 0.569 (0.019 — 0.021)	0.4 (0.016)
0.570 — 0.669 (0.022 — 0.025)	0.5 (0.020)
0.670 — 0.769 (0.026 — 0.029)	0.6 (0.024)
0.770 — 0.869 (0.030 — 0.033)	0.7 (0.028)
0.870 — 0.980 (0.034 — 0.039)	0.8 (0.031)

7) Select one to two shims so that the total thickness meets the value obtained from above.

Part No.	Thickness of shim mm (in)
31288AA130	0.2 (0.008)
31288AA140	0.3 (0.012)
31288AA150	0.5 (0.020)

51.Converter Case

A: REMOVAL



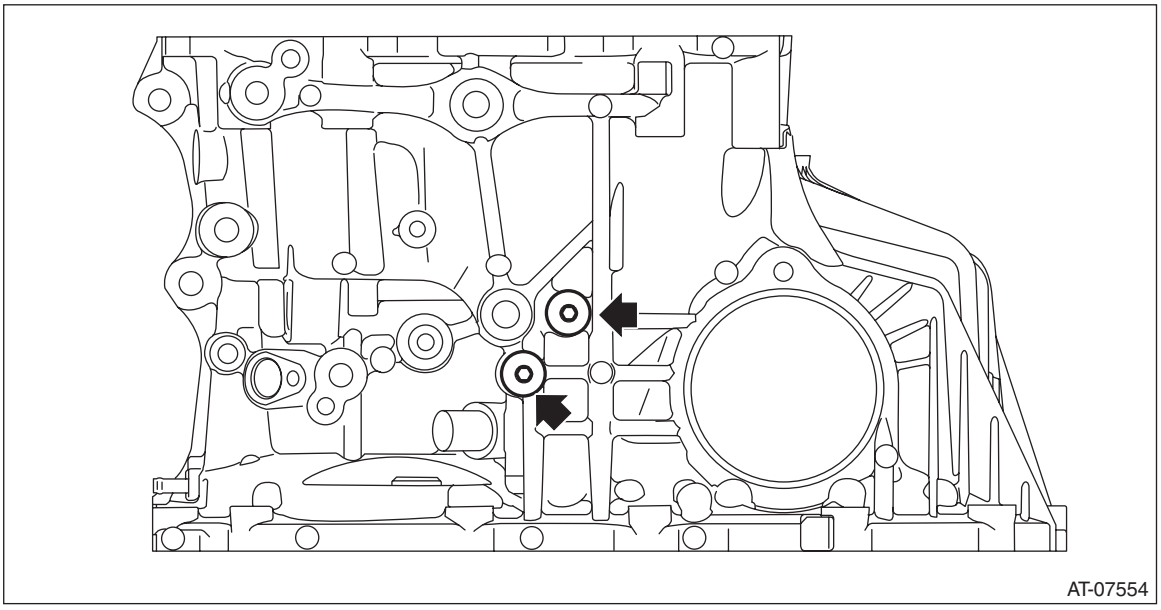
1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-58, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-151, REMOVAL, Air Breather Hose.>
3) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-123, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR690)-134, REMOVAL, Transmission Harness.>
5) Remove the secondary pressure sensor. <Ref. to CVT(TR690)-121, REMOVAL, Secondary Pressure Sensor.>
6) Remove the primary speed sensor. <Ref. to CVT(TR690)-114, REMOVAL, Primary Speed Sensor.>
7) Remove the extension case. <Ref. to CVT(TR690)-159, REMOVAL, Extension Case.>
8) Remove the rear drive shaft. <Ref. to CVT(TR690)-162, REMOVAL, Rear Drive Shaft.>
9) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-167, REMOVAL, Transfer Clutch.>
10) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-179, REMOVAL, Transfer Reduction Driven Gear.>
11) Remove the intermediate case. <Ref. to CVT(TR690)-185, REMOVAL, Intermediate Case.>
12) Remove the forward clutch assembly. <Ref. to CVT(TR690)-200, REMOVAL, Forward Clutch Assembly.>
13) Remove the transmission case. <Ref. to CVT(TR690)-240, REMOVAL, Transmission Case.>
14) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-257, REMOVAL, Primary Pulley and Secondary Pulley.>
15) Remove the drive pinion shaft assembly. <Ref. to CVT(TR690)-273, REMOVAL, Drive Pinion Shaft Assembly.>
16) Remove the front differential assembly. <Ref. to CVT(TR690)-294, REMOVAL, Front Differential Assembly.>
17) Remove the converter case cover. <Ref. to CVT(TR690)-322, REMOVAL, Converter Case Cover.>
18) Remove the front reduction drive gear and front reduction driven gear. <Ref. to CVT(TR690)-332, REMOVAL, Front Reduction Drive Gear.>

B: INSTALLATION

1) Install the front reduction drive gear and front reduction driven gear. <Ref. to CVT(TR690)-333, INSTALLATION, Front Reduction Drive Gear.>
2) Install the converter case cover. <Ref. to CVT(TR690)-326, INSTALLATION, Converter Case Cover.>
3) Install the front differential assembly. <Ref. to CVT(TR690)-295, INSTALLATION, Front Differential Assembly.>
4) Install the drive pinion shaft assembly. <Ref. to CVT(TR690)-275, INSTALLATION, Drive Pinion Shaft Assembly.>
5) Install the primary pulley, secondary pulley and steel chain. <Ref. to CVT(TR690)-261, INSTALLATION, Primary Pulley and Secondary Pulley.>
6) Install the transmission case. <Ref. to CVT(TR690)-240, REMOVAL, Transmission Case.>
7) Install the forward clutch assembly. <Ref. to CVT(TR690)-201, INSTALLATION, Forward Clutch Assembly.>
8) Install the intermediate case. <Ref. to CVT(TR690)-186, INSTALLATION, Intermediate Case.>
9) Install the transfer reduction driven gear. <Ref. to CVT(TR690)-179, INSTALLATION, Transfer Reduction Driven Gear.>
10) Install the transfer clutch assembly. <Ref. to CVT(TR690)-168, INSTALLATION, Transfer Clutch.>
11) Install the rear drive shaft. <Ref. to CVT(TR690)-162, INSTALLATION, Rear Drive Shaft.>
12) Install the extension case. <Ref. to CVT(TR690)-160, INSTALLATION, Extension Case.>
13) Install the primary speed sensor. <Ref. to CVT(TR690)-117, INSTALLATION, Primary Speed Sensor.>
14) Install the secondary pressure sensor. <Ref. to CVT(TR690)-121, INSTALLATION, Secondary Pressure Sensor.>
15) Install the transmission harness. <Ref. to CVT(TR690)-136, INSTALLATION, Transmission Harness.>
16) Install the control valve body and oil pan. <Ref. to CVT(TR690)-127, INSTALLATION, Control Valve Body.>
17) Install the air breather hose. <Ref. to CVT(TR690)-153, INSTALLATION, Air Breather Hose.>
18) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-75, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1) Remove the transmission hanger and transmission radio ground cord, if mounted.
2) Remove the oil drain plug and overflow drain plug. <Ref. to CVT(TR690)-44, REPLACEMENT, Differential Gear Oil.>
3) Remove all plugs.



D: ASSEMBLY

1) Install the oil drain plug and overflow drain plug.

NOTE:
Overflow plug of differential gear oil is temporarily attached.
2) Install all plugs.

NOTE:
Use new O-rings.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

3) Install the transmission hanger and transmission radio ground cord.

Tightening torque:
41 N·m (4.2 kgf-m, 30.2 ft-lb)

E: INSPECTION

- Check for leakage of CVTF from the connection between converter case and transmission case.
- Check there is no damage or cracks on the converter case.

F: ADJUSTMENT

When replacing the converter case, select the following shims.
- Select the shim for front reduction drive gear. <Ref. to CVT(TR690)-338, ADJUSTMENT, Front Reduction Drive Gear.>
- Select the shim for front reduction driven gear. <Ref. to CVT(TR690)-346, ADJUSTMENT, Front Reduction Driven Gear.>
- Select shims for primary pulley. <Ref. to CVT(TR690)-267, ADJUSTMENT, Primary Pulley and Secondary Pulley.>

52.Diagnostics with Phenomenon

A: INSPECTION

Symptoms	Faulty parts
Stall speed is low after warming-up, with select lever in “D” or “R” range.	Engine control system
Vehicle does not move despite engine speed rising up, with select lever in “D” or “R” range.	• Engine control system • Select cable • CVTF • Secondary pressure circuit • Pulley, gear and variator chain • Forward/reverse changeover section • TCM • Control valve body • Inhibitor switch
Vehicle does not move by engine stall, with select lever in “D” or “R” range.	• Parking mechanism • Select cable • Bearing • Forward/reverse changeover section
Excessive shock occurs at starting, with select lever in “D” or “R” range.	• Secondary pressure circuit • Pulley, gear and variator chain
Acceleration speed from standstill is insufficient, with select lever in “D” or “R” range.	• Control valve body • Forward/reverse changeover section
Engine speed suddenly rises up during driving, with select lever in “D” or “R” range.	• Control valve body • Secondary pressure circuit • Primary pressure circuit
Vibration occurs during driving, with select lever in “D” or “R” range.	• Secondary pressure circuit • Primary pressure circuit • Forward/reverse changeover section • Pulley and variator chain • Torque converter assembly • Hydraulic pressure circuit to torque converter • Control valve body
Sudden braking occurs during driving, with select lever in “D” or “R” range.	• Secondary pressure circuit • Primary pressure circuit • Control valve body
During deceleration, lockup clutch does not disengage until just before halting, with select lever in “D” or “R” range.	• Control valve body • Torque converter assembly
Engine stalls with vehicle at a standstill, with select lever in “D” or “R” range.	• Engine control system • Control valve body
Excessive lockup shock occurs during driving, with select lever in “D” range.	Control valve body
Slipping occurs at lockup, or lockup does not occur during driving, with select lever in “D” range.	• Control valve body • Lockup hydraulic line • Torque converter assembly
Excessive shift shock occurs when shifting the select lever from “N” range to “D” range, or from “N” range to “R” range.	• Inhibitor switch • Control valve body • Forward/reverse changeover section
Vehicle does not keep at standstill with select lever in “P” range, or parking cannot be released when shifting from “P” range to another range.	• Select cable • Parking mechanism
Select lever does not shift smoothly.	• Select cable • Inhibitor switch • Detent spring • Manual plate

A: PROCEDURE

	Step	Check	Yes	No
1	**CHECK PRE-INSPECTION.** 1) Ask the customer when and how the trouble occurred using the interview check list. <Ref. to CVT(diag)-4, Check List for Interview.> 2) Before performing diagnostics, check the following items which might affect CVT problems. • General inspection <Ref. to CVT(diag)-5, INSPECTION, General Description.> • Disconnection of harness connector • Visual check for harness damage • Oil leakage • Stall speed test <Ref. to CVT(TR580)-50, Stall Test.> <Ref. to CVT(TR690)-49, Stall Test.> • Secondary pressure test <Ref. to CVT(TR580)-53, Secondary Pressure (Line Pressure) Test.> <Ref. to CVT(TR690)-51, Secondary Pressure (Line Pressure) Test.> • Transfer clutch pressure test <Ref. to CVT(TR580)-56, Transfer Clutch Pressure Test.> <Ref. to CVT(TR690)-54, Transfer Clutch Pressure Test.> • Time lag test <Ref. to CVT(TR580)-52, Time Lag Test.> <Ref. to CVT(TR690)-50, Time Lag Test.> • Road test <Ref. to CVT(TR580)-49, Road Test.> <Ref. to CVT(TR690)-48, Road Test.> • Inhibitor switch <Ref. to CVT(TR580)-108, Inhibitor Switch.> <Ref. to CVT(TR690)-102, Inhibitor Switch.>	Is the item that is thought to influence the CVT problem working properly?	Go to step **2**.	Repair the items which may be affecting the CVT trouble.
2	**CHECK AT OIL TEMP LIGHT.** Turn the ignition switch to ON and wait for at least 2 seconds.	Does the AT OIL TEMP light illuminate?	Go to step **3**.	Check the AT OIL TEMP light.
3	**CHECK AT OIL TEMP LIGHT.** Start the engine and wait for 2 seconds or more.	Does the AT OIL TEMP light blink?	Go to step **4**.	Go to step **5**.
4	**CHECK DTC DISPLAY.** Read the DTC. NOTE: If the communication function of Subaru Select Monitor cannot be executed normally, check the communication circuit. <Ref. to CVT(diag)-42, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Diagnostic Procedure for Subaru Select Monitor Communication.>	Is DTC displayed on Subaru Select Monitor?	Record the DTC, time stamp and freeze frame data. Go to step **6**. NOTE: • For the time stamp, refer to LAN section. <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.> • Depending on DTCs, time stamp may not be stored.	Go to step **5**.

	Step	Check	Yes	No
5	**PERFORM GENERAL DIAGNOSTICS.** 1) Inspect using “Diagnostic Procedure without Diagnostic Trouble Code (DTC)”. <Ref. to CVT(diag)-185, Diagnostic Procedure without Diagnostic Trouble Code (DTC).> 2) Inspect using “Diagnostics with Phenomenon”. <Ref. to CVT(diag)-186, Diagnostics with Phenomenon.> 3) Perform the Inspection Mode. <Ref. to CVT(diag)-28, Inspection Mode.> 4) Read the DTC.	Is DTC displayed on Subaru Select Monitor?	Go to step **6**.	Finish the diagnosis.
6	**PERFORM DIAGNOSIS.** 1) Inspect by referring to “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to CVT(diag)-50, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> NOTE: For the DTC table, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to CVT(diag)-45, List of Diagnostic Trouble Code (DTC).> 2) Repair the trouble cause. 3) Perform the Clear Memory Mode. 4) Perform the Inspection Mode. <Ref. to CVT(diag)-28, Inspection Mode.> 5) Read the DTC.	Is DTC displayed on Subaru Select Monitor?	Inspect by referring to “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to CVT(diag)-50, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Check the following items when a problem has occurred.

NOTE:
Use copies of this page for interviewing customers.

Customer's name			
Date of purchase			
Date of repair			
Transmission model	Transmission	V.I.N.	
Odometer reading	km (miles)		
Frequency	❑ Continuous ❑ Intermittent (times/day)		
Weather	❑ Fine ❑ Cloudy ❑ Rainy ❑ Snowy ❑ Other ( )		
Place	❑ Highland ❑ Suburbs ❑ Inner city ❑ Uphill ❑ Downhill ❑ Rough road ❑ Other ( )		
Ambient air temperature	❑ Hot ❑ Warm ❑ Cool ❑ Cold		
Vehicle speed	km/h (MPH)		
AT OIL TEMP light	❑ Blinks continuously	❑ Does not blink	
Select lever position	❑ P ❑ R ❑ N ❑ D ❑ Manual mode		
Driving condition	❑ Not affected ❑ At racing ❑ While decelerating	❑ At starting ❑ While accelerating ❑ While turning (❑ RH/❑ LH)	❑ While idling ❑ When cruising (Vehicle speed km/h) ❑ Immediately after starting the engine
Manual mode	❑ ON ❑ OFF		
Symptoms	❑ Vehicle does not move (❑ Any position ❑ Particular position)		
	❑ Vehicle does not move (no load racing condition as in N range)		
	❑ Vehicle does not move (engine speed does not increase, felt as stall condition)		
	❑ Noise or vibration (Describe concretely:)		
	❑ Shock felt at N → D selection (seconds after shifting, when engine cold or after warm-up)		
	❑ Shock felt at N → R selection (seconds after shifting, when engine cold or after warm-up)		
	❑ Shifting is wrong (Describe concretely:)		
	❑ Shock or judder during driving		
	❑ Fails to accelerate.		
	❑ Engine speed increases abruptly during driving		
	❑ Shock or judder during standing start		
	❑ Select lever does not move		
	❑ Other ( )		

3. General Description

A: CAUTION

1) The airbag system wiring harness is routed near the TCM.

CAUTION:
• All the airbag system wiring harnesses and connectors are colored yellow. Do not use an electric test equipment to check these circuits.
• Be careful not to damage the airbag system wiring harness when performing diagnostics or servicing the TCM.

2) When measuring the voltage or resistance of individual sensor or all electrical control modules, use a tapered pin with a diameter of 0.6 mm (0.024 in) or less and touch it to the tip of terminal. Never insert the tapered pin into the terminal because it deforms inside which may lead to malfunction.

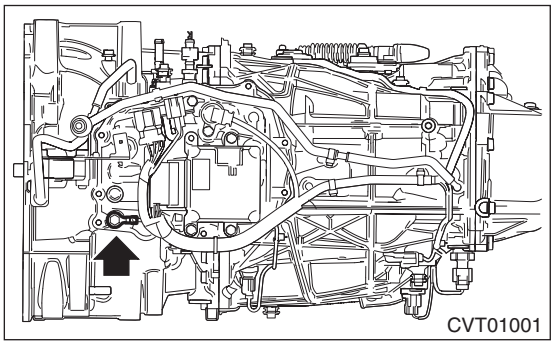
CAUTION:
If a pin (or similar) was inserted in TCM connector, replace the TCM connector.

3) The TCM connector is waterproof. When measuring the TCM connector terminal voltage, or the resistance between the terminals, use the ST.
ST 18460AA040 CHECK BOARD

B: INSPECTION

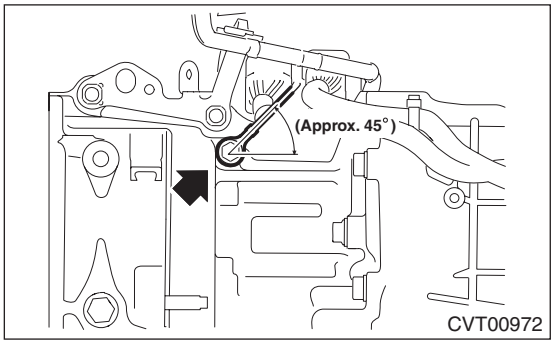
1. BATTERY

Check the battery. <Ref. to SC(H4DO)-60, INSPECTION, Battery.> <Ref. to SC(H6DO)-53, INSPECTION, Battery.>



Standard voltage: 12 V or more

Specific gravity: 1.260 or more



2. TRANSMISSION GROUND

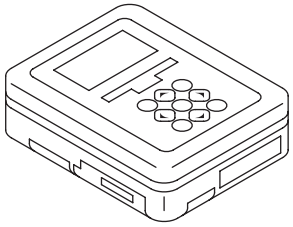
Make sure that the ground terminal bolt is tightened securely.

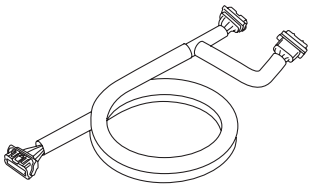
Tightening torque:
ENGINE TYPE FB
14 N·m (1.4 kgf-m, 10.3 ft-lb)

CVT01001

ENGINE TYPE EZ
16 N·m (1.6 kgf-m, 11.8 ft-lb)

CVT00972





3. OPERATION OF SELECT LEVER

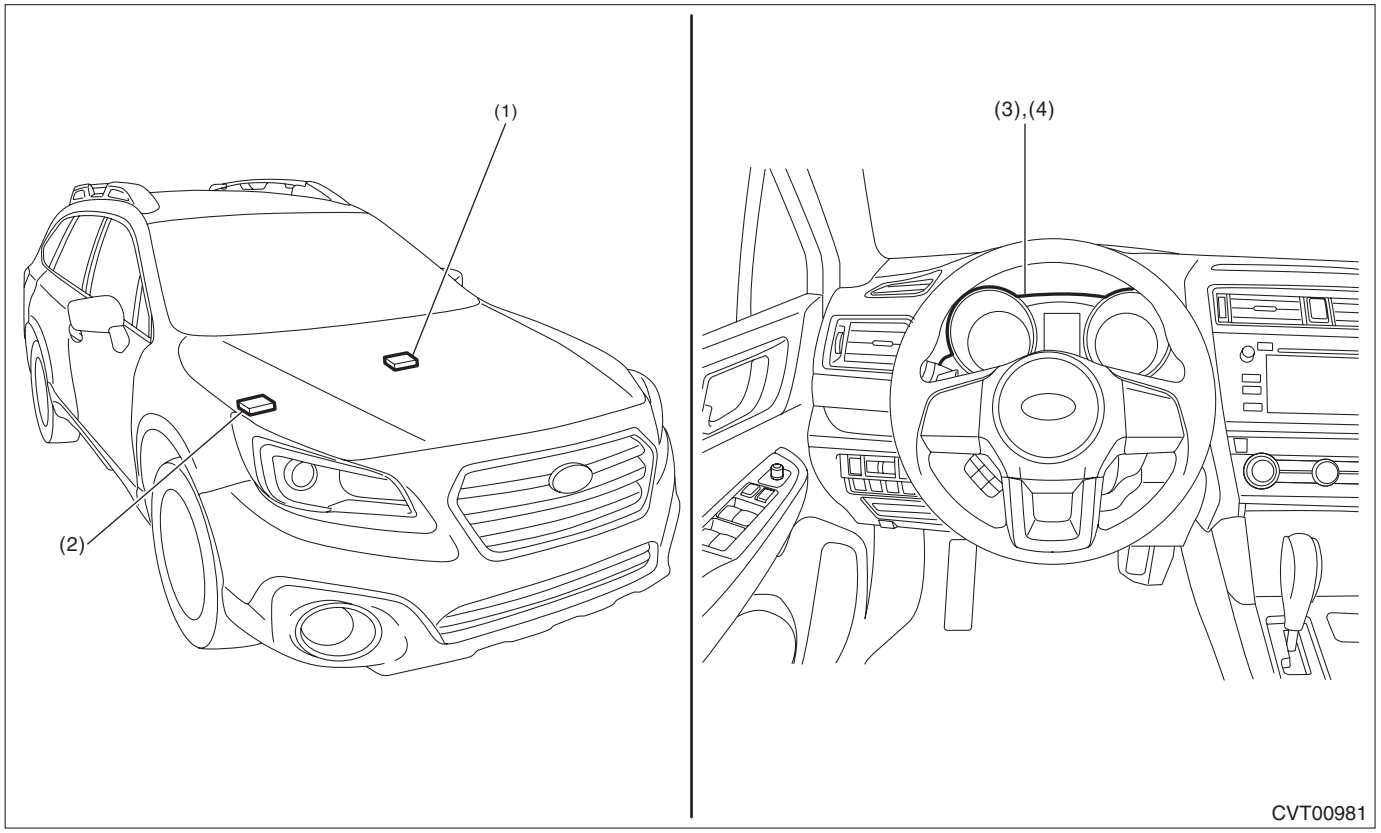
Make sure there is no noise, dragging or contact pattern in each select lever range.

WARNING:
Stop the engine while checking operation of the select lever.

C: PREPARATION TOOL

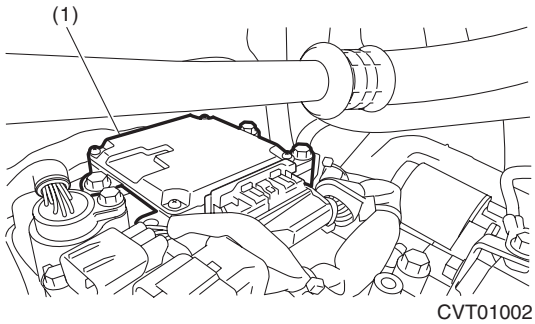
1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.
 ST18460AA040	18460AA040	CHECK BOARD	Used for measuring the TCM terminal voltage.

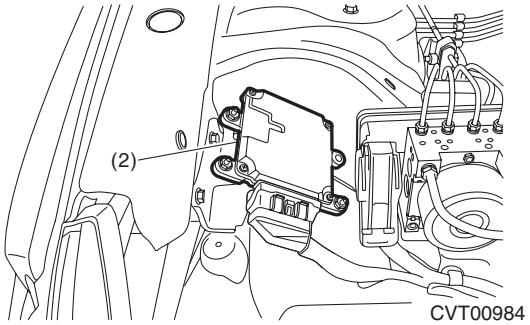


2. GENERAL TOOL

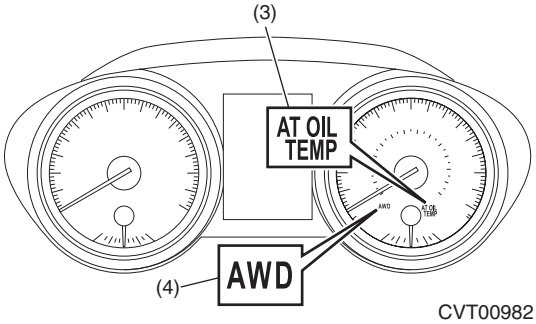
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for measuring the sensor.



4. Electrical Component Location

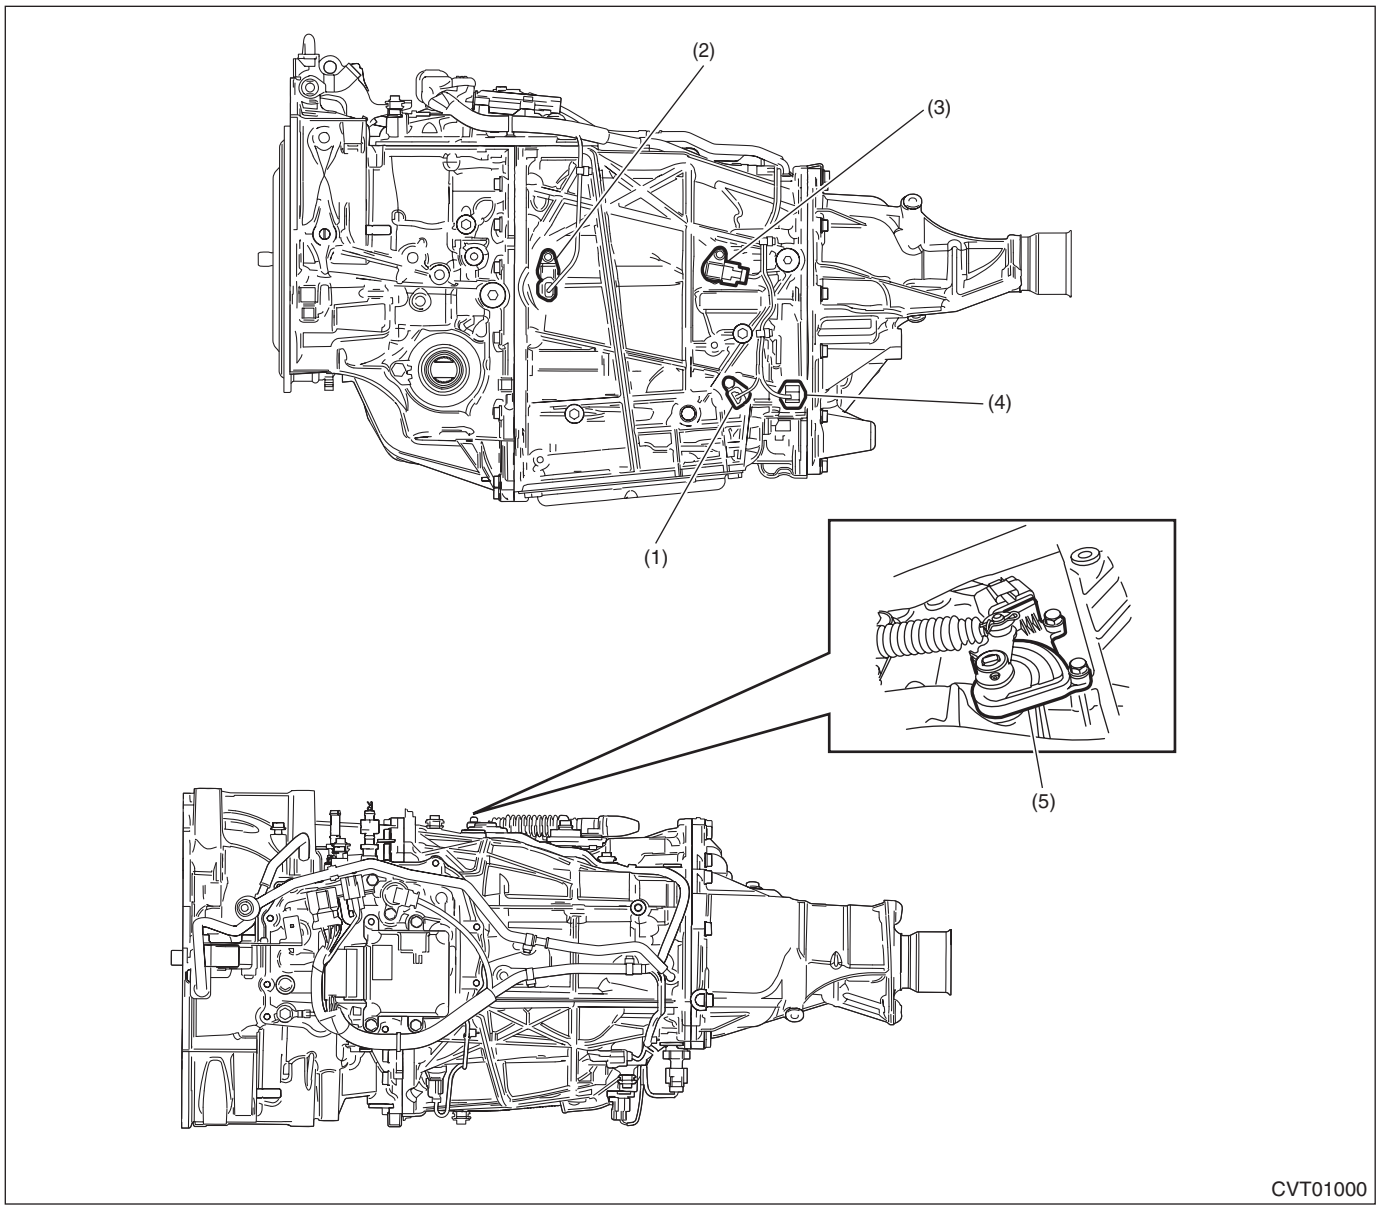


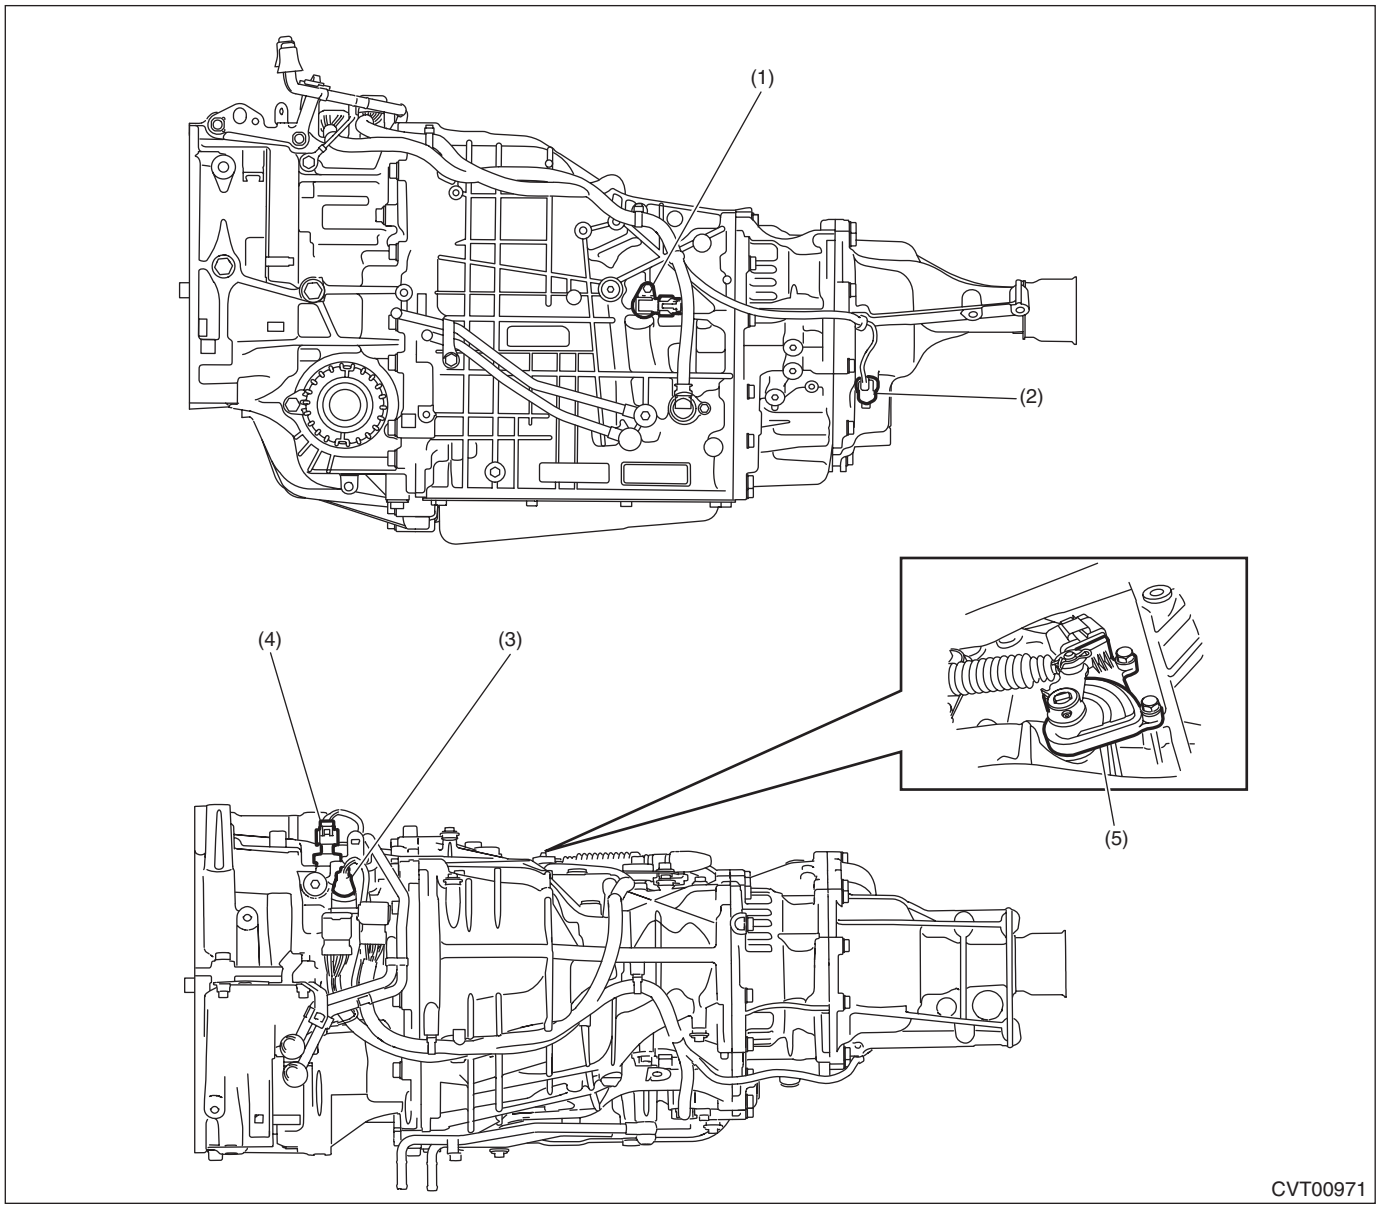
A: LOCATION



1. CONTROL MODULE

(1) TCM (engine type FB)
(2) TCM (engine type EZ)
(3) AT OIL TEMP light
(4) AWD light

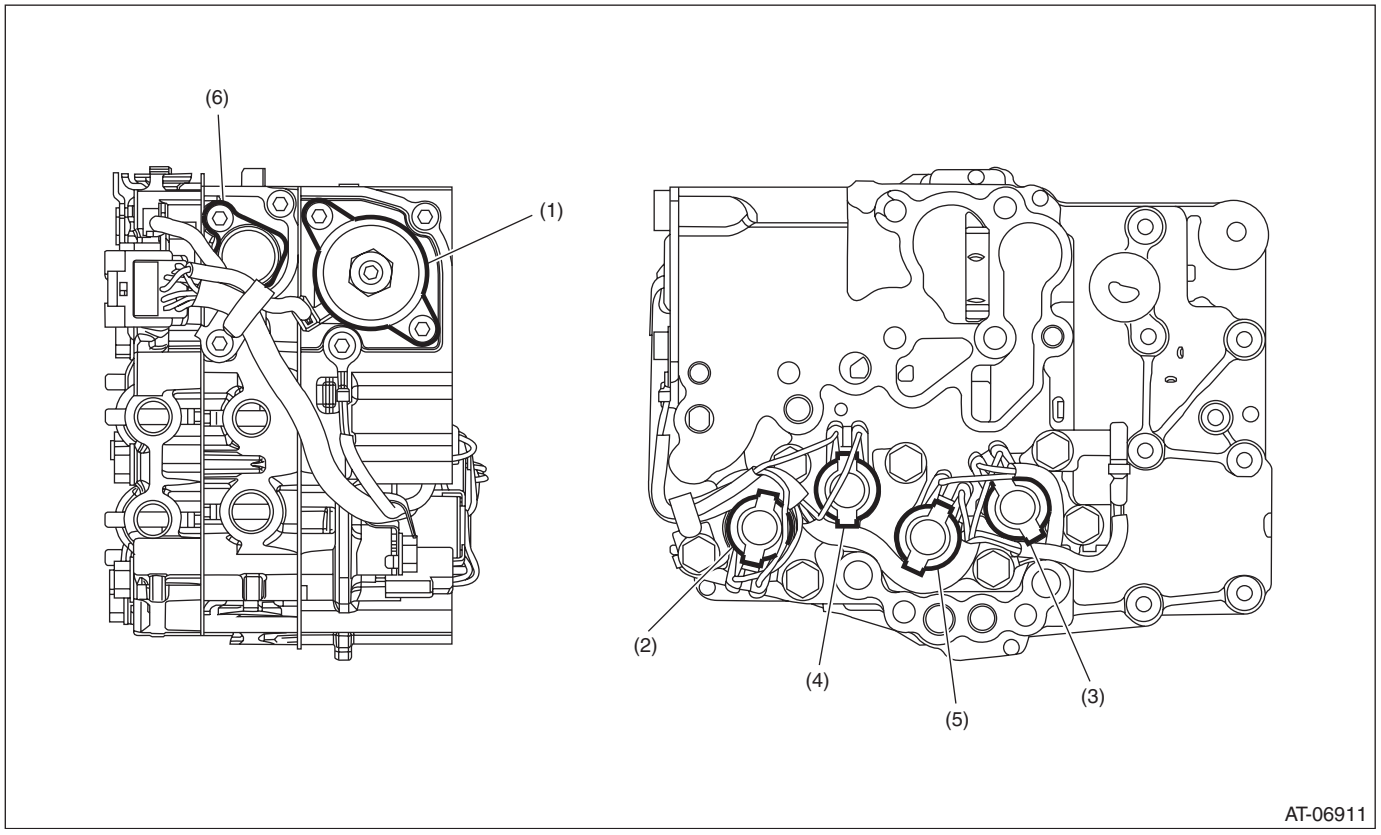




2. SENSOR

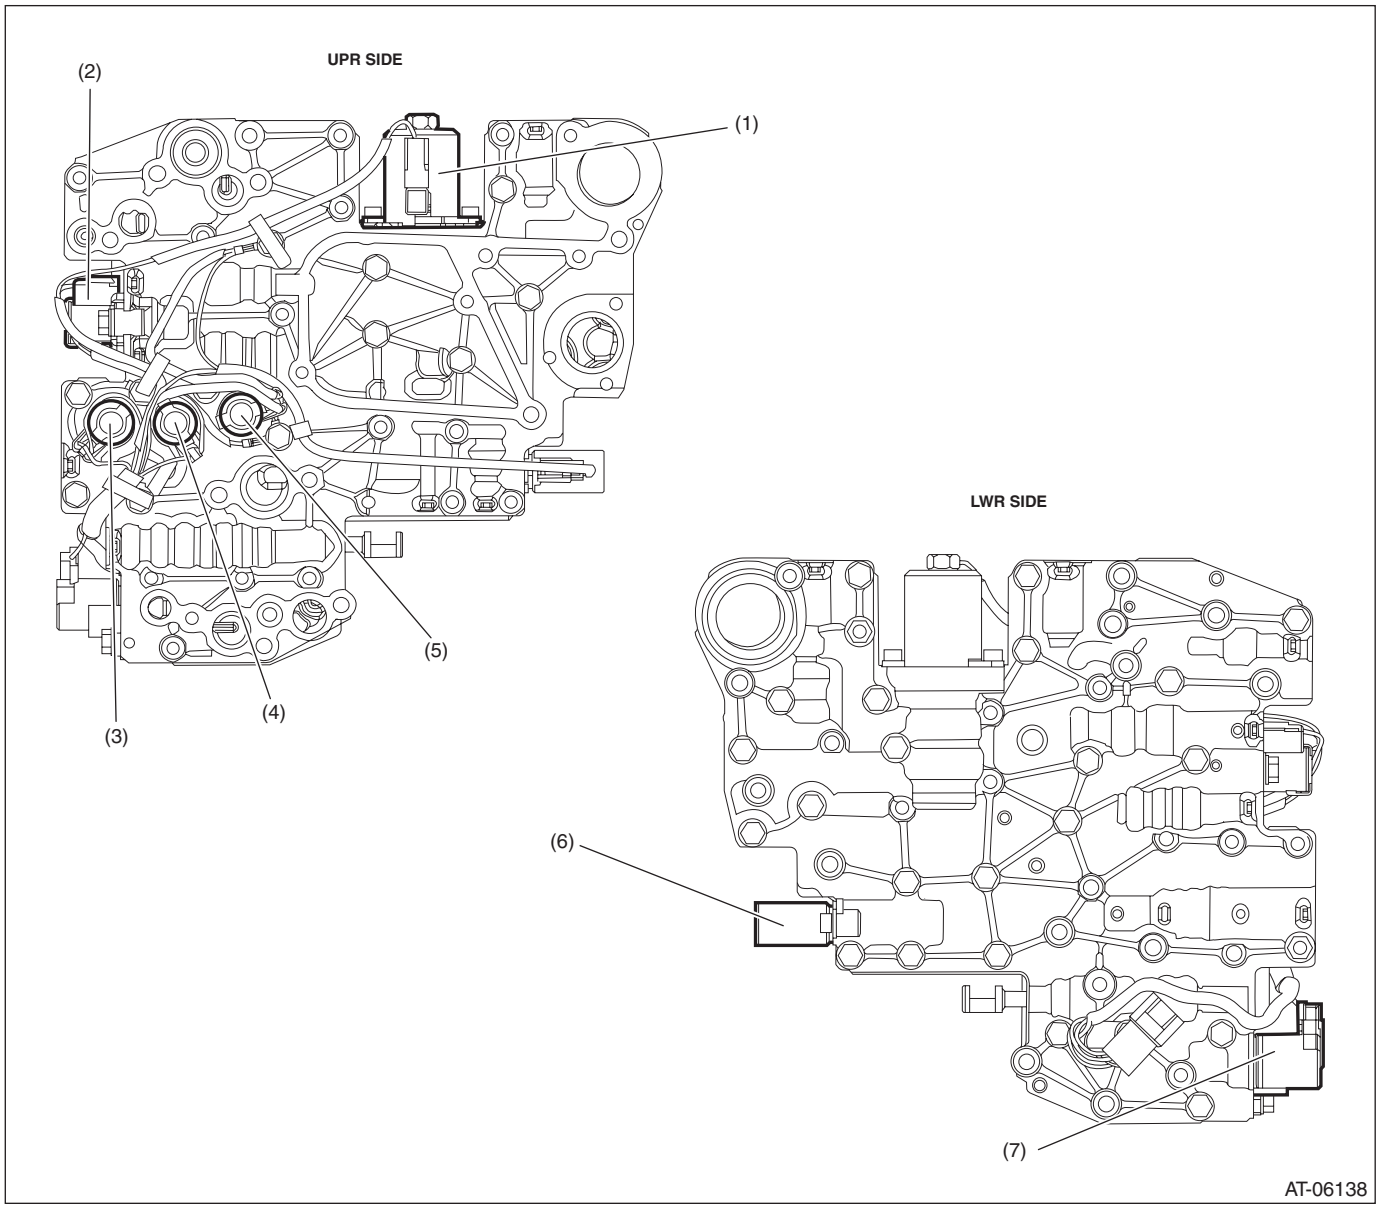
- ENGINE TYPE FB

(1) Secondary speed sensor
(2) Turbine speed sensor
(3) Primary speed sensor
(4) Secondary pressure sensor
(5) Inhibitor switch



- ENGINE TYPE EZ

(1) Secondary speed sensor
(2) Front wheel speed sensor
(3) Primary speed sensor
(4) Secondary pressure sensor
(5) Inhibitor switch

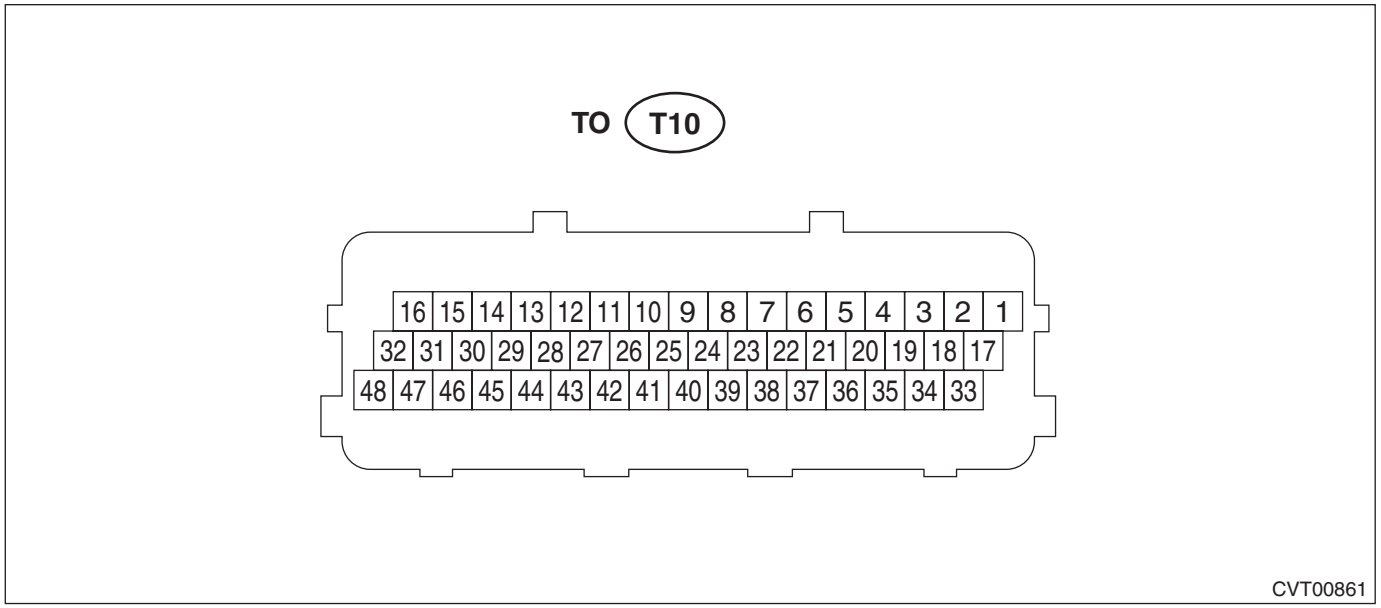


3. SOLENOID

- ENGINE TYPE FB

(1) Secondary solenoid
(2) AWD solenoid
(3) Lock-up duty solenoid
(4) Primary DOWN solenoid
(5) Primary UP solenoid
(6) F&R solenoid

- ENGINE TYPE EZ

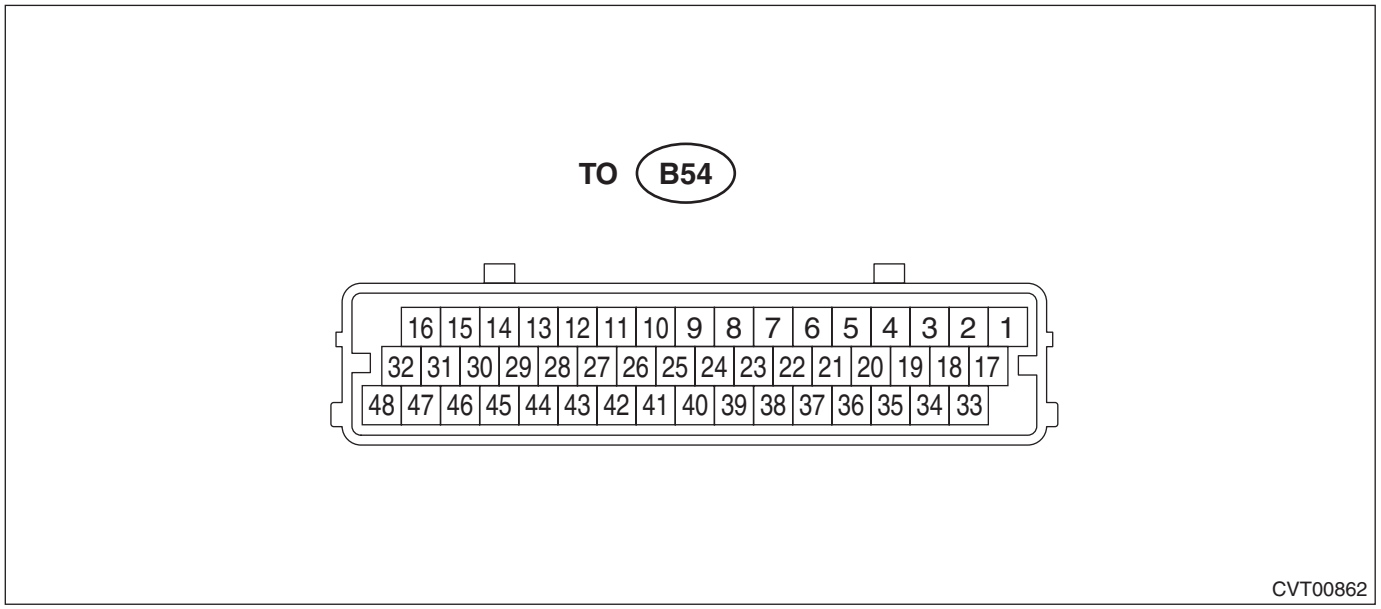


(1) Secondary solenoid
(2) AWD solenoid
(3) Lock-up duty solenoid
(4) Primary DOWN solenoid
(5) Primary UP solenoid
(6) F&R solenoid
(7) Lock-up ON/OFF solenoid

5. Transmission Control Module (TCM) I/O Signal

A: ELECTRICAL SPECIFICATION

- ENGINE TYPE FB



NOTE:
Measure after warming up.

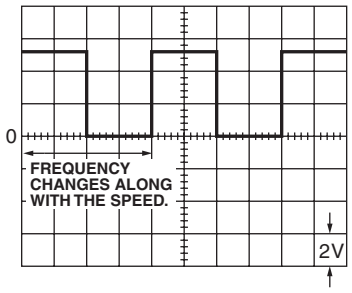
Item	Terminal No.	Measuring condition	Measurement value	Resistance between terminal and chassis ground	Remarks
Backup power supply	34	—	10 — 13 V	—	
Ignition power supply	41	—	10 — 13 V	—	
Main power supply	8	—	10 — 13 V	—	
Main power supply	24	—	10 — 13 V	—	
Main power supply	40	—	10 — 13 V	—	
Manual mode switch	20	Manual mode switch ON	Less than 1 V	—	
		Manual mode switch OFF	8 V or more	—	
Manual mode UP switch	19	Manual mode UP switch ON	Less than 1 V	—	
		Manual mode UP switch OFF	8 V or more	—	
Manual mode DOWN switch	18	Manual mode DOWN switch ON	Less than 1 V	—	
		Manual mode DOWN switch OFF	8 V or more	—	
Stop light switch	29	Stop light switch ON	8 V or more	—	
		Stop light switch OFF	Less than 1 V	—	
P range switch	38	P range	Less than 1 V	—	
		Except for P range	8 V or more	—	
R range switch	37	R range	Less than 1 V	—	
		Except for R range	8 V or more	—	
N range switch	36	N range	Less than 1 V	—	
		Except for N range	8 V or more	—	
D range switch	35	D range	Less than 1 V	—	
		Except for D range	8 V or more	—	

Item	Terminal No.	Measuring condition	Measurement value	Resistance between terminal and chassis ground	Remarks
ATF temperature sensor	6	ATF temperature at 20°C (68°F)	Approx. 2.5 V	Approx. 2.5 kΩ	
		ATF temperature at 80°C (176°F)	Approx. 0.7 V	Approx. 330 Ω	
ATF temperature sensor GND	1	Always	Approx. 0 V	—	
Secondary pressure sensor power supply output	33	Ignition switch ON	5 V	—	
Secondary pressure sensor	5	Ignition switch ON, engine OFF	Approx. 0.5 V (0 MPa)	—	Value increases with increase of engine load. (0.5 — 4.5 V)
		Ignition switch ON, engine ON	Approx. 1.0 V (1.0 MPa)	—	
Secondary pressure sensor GND	2	Always	Approx. 0 V	—	
Primary speed sensor	14	While driving	0 or 5 V	—	Refer to the waveform (sensor)
Secondary speed sensor	13	While driving	0 or 5 V	—	Refer to the waveform (sensor)
Turbine speed sensor	12	Engine ON, “P” or “N” range	0 or 5 V	—	Refer to the waveform (sensor)
F&R solenoid	16	Engine ON	Refer to the waveform (solenoid (1))	Approx. 4 — 6 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
Secondary solenoid	32	Engine ON	Refer to the waveform (solenoid (2))	Approx. 5 — 7 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
Primary UP solenoid	47	Engine ON, while UP shifting	Refer to the waveform (solenoid (3))	Approx. 10 — 13.5 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
Primary DOWN solenoid	30	Engine ON, while DOWN shifting	Refer to the waveform (solenoid (4))	Approx. 10 — 13.5 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
Lock-up duty solenoid	15	Lock-up ON	Refer to the waveform (solenoid (5))	Approx. 10 — 13.5 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
AWD solenoid	48	Engine ON, “P” or “N” range	Refer to the waveform (solenoid (6))	Approx. 2 — 4.5 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
		Engine ON, “D” range, brake ON	Refer to the waveform (solenoid (7))		
CAN communication line (+)	43	—	—	—	

Item	Terminal No.	Measuring condition	Measurement value	Resistance between terminal and chassis ground	Remarks
CAN communication line (–)	44	—	—	—	
GND	26	Always	Approx. 0 V	—	
GND	42	Always	Approx. 0 V	—	

- ENGINE TYPE EZ

NOTE:
Measure after warming up.



Item	Terminal No.	Measuring condition	Measurement value	Resistance between terminal and chassis ground	Remarks
Backup power supply	34	—	10 — 13 V	—	
Ignition power supply	41	—	10 — 13 V	—	
Main power supply	8	—	10 — 13 V	—	
Main power supply	24	—	10 — 13 V	—	
Main power supply	40	—	10 — 13 V	—	
Manual mode switch	20	Manual mode switch ON	Less than 1 V	—	
		Manual mode switch OFF	8 V or more	—	
Manual mode UP switch	19	Manual mode UP switch ON	Less than 1 V	—	
		Manual mode UP switch OFF	8 V or more	—	
Manual mode DOWN switch	18	Manual mode DOWN switch ON	Less than 1 V	—	
		Manual mode DOWN switch OFF	8 V or more	—	
Stop light switch	29	Stop light switch ON	8 V or more	—	
		Stop light switch OFF	Less than 1 V	—	
P range switch	38	P range	Less than 1 V	—	
		Except for P range	8 V or more	—	
R range switch	37	R range	Less than 1 V	—	
		Except for R range	8 V or more	—	

Item	Terminal No.	Measuring condition	Measurement value	Resistance between terminal and chassis ground	Remarks
N range switch	36	N range	Less than 1 V	—	
		Except for N range	8 V or more	—	
D range switch	35	D range	Less than 1 V	—	
		Except for D range	8 V or more	—	
ATF temperature sensor	6	ATF temperature at 20°C (68°F)	Approx. 2.6 V	Approx. 2.6 kΩ	
		ATF temperature at 80°C (176°F)	Approx. 0.7 V	Approx. 370 Ω	
ATF temperature sensor GND	1	Always	Approx. 0 V	—	
Secondary pressure sensor power supply output	33	Ignition switch ON	5 V	—	
Secondary pressure sensor	5	Ignition switch ON, engine OFF	Approx. 0.5 V (0 MPa)	—	Value increases with increase of engine load. (0.5 — 4.5 V)
		Ignition switch ON, engine ON	Approx. 1.0 V (1.0 MPa)	—	
Secondary pressure sensor GND	2	Always	Approx. 0 V	—	
Primary speed sensor	14	While driving	0 or 5 V	—	Refer to the waveform (sensor)
Secondary speed sensor	13	While driving	0 or 5 V	—	Refer to the waveform (sensor)
Front wheel speed sensor	12	Engine ON, “P” or “N” range	0 or 5 V	—	Refer to the waveform (sensor)
F&R solenoid	16	Engine ON	Refer to the waveform (solenoid (1))	Approx. 4 — 6 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
Secondary solenoid	32	Engine ON	Refer to the waveform (solenoid (2))	Approx. 5 — 7 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
Primary UP solenoid	47	Engine ON, while UP shifting	Refer to the waveform (solenoid (3))	Approx. 10 — 13.5 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
Primary DOWN solenoid	30	Engine ON, while DOWN shifting	Refer to the waveform (solenoid (4))	Approx. 10 — 13.5 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
Lock-up duty solenoid	15	Lock-up ON	Refer to the waveform (solenoid (5))	Approx. 10 — 13.5 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.

Item	Terminal No.	Measuring condition	Measurement value	Resistance between terminal and chassis ground	Remarks
AWD solenoid	48	Engine ON, “P” or “N” range	Refer to the waveform (solenoid (6))	Approx. 2 — 4.5 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
		Engine ON, “D” range, brake ON	Refer to the waveform (solenoid (7))		
Lock-up ON/OFF solenoid	31	With lock-up OFF	Less than 1 V	Approx. 13 — 18.5 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
		Lock-up ON	Battery voltage or higher		
CAN communication line (+)	43	—	—	—	
CAN communication line (–)	44	—	—	—	
GND	26	Always	Approx. 0 V	—	
GND	42	Always	Approx. 0 V	—

6. Subaru Select Monitor

A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

2. READ CURRENT DATA

For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

- ENGINE TYPE FB

Display	Contents	Unit of measure
Engine Speed	Engine speed signal transmitted from the ECM. Calculated from crankshaft position sensor signals. TCM input value.	rpm
Turbine Speed	Turbine rotation speed calculated by the TCM using signals from the turbine speed sensor.	rpm
Accel opening angle	Accelerator pedal opening angle transmitted from the ECM. Value calculated from the accelerator pedal position sensor output. TCM input value.	%
Front Wheel Speed	Front wheel speed calculated from the secondary axis rotation speed.	km/h or MPH
ATF Temp.	Value calculated from the ATF temperature sensor output value. ATF temperature of the control valve section.	°C or °F
Lock Up Duty Ratio	Lock-up duty solenoid control duty ratio. TCM output value.	%
Transfer Duty Ratio	Transfer duty solenoid control duty ratio. TCM output value.	%
Actual Gear Ratio	Current gear ratio (rotation ratio of the pulley) calculated from the primary pulley axis rotation speed and the secondary pulley axis rotation speed.	—
Primary Rev Speed	Primary pulley rotation speed calculated by the TCM using signals from the primary speed sensor.	rpm
Secondary Rev Speed	Secondary pulley rotation speed calculated by the TCM using signals from the secondary speed sensor.	rpm
Stop light SW	Stop light SW signal. Set to ON when the brake pedal is depressed. TCM input value.	ON or OFF
Secondary Set Current	Value of the indicator current for controlling the secondary solenoid calculated by the TCM.	mA
Secondary Actual Current	Actual current value of the secondary solenoid. TCM output value.	mA
F&R Linear Solenoid Set Current	Value of the indicator current for controlling the F&R linear solenoid calculated by the TCM.	mA
F&R Linear Solenoid Actual Current	Actual current value of the F&R linear solenoid. TCM output value.	mA
ECU ACC	Battery voltage. TCM input value.	V
Primary UP Duty	Primary UP solenoid control duty ratio. TCM output value.	%
Primary DOWN Duty	Primary DOWN solenoid control duty ratio. TCM output value.	%
P Range	Inhibitor SW signal. Set to ON when the select lever is in P range. TCM input value.	ON or OFF
R Range Signal	Inhibitor SW signal. Set to ON when the select lever is in R range. TCM input value.	ON or OFF
N Range	Inhibitor SW signal. Set to ON when the select lever is in N range. TCM input value.	ON or OFF
D Range Signal	Inhibitor SW signal. Set to ON when the select lever is in D range. TCM input value.	ON or OFF
X Mode	ON/OFF status of the X mode received from the engine. TCM input value.	ON or OFF
Shift step in Manu. mode	Gear shift position in manual mode or in multi-stage shifting mode. TCM output value.	—

Display	Contents	Unit of measure
Tiptronic Mode Switch	Manual mode SW signal. Set to ON when the select lever is in the manual shift gate. TCM input value.	ON or OFF
Up Switch	Status of the paddle shift up SW. Set to ON when the plus (+) side of the steering wheel paddle shift is pulled. TCM input value.	ON or OFF
Down Switch	Status of the paddle shift down SW. Set to ON when the minus (–) side of the steering wheel paddle shift is pulled. TCM input value.	ON or OFF
secondary pressure sensor voltage.	Voltage value after an analog/digital conversion is done inside the TCM using the signal input from the secondary pressure sensor. TCM input value.	V
ATF Temp sensor voltage.	Sensor voltage value input from the ATF temperature sensor to the TCM. TCM input value.	V
Diagnosis Lamp	Transmission failure detection status. Set to ON when a failure is detected. AT oil temperature warning light blinks at 2 Hz. TCM output value.	ON or OFF
ATF Temperature Lamp	ATF high temperature detection status. Set to ON when high temperature is detected. AT oil temperature warning light illuminates. TCM output value.	ON or OFF
AT learning	AT initial learning completion status. AT oil temperature warning light blinks at 4 Hz when the learning is not completed. TCM output value.	Completed or Not Completed
Ignition SW ON Count	Number of times the ignition is turned ON since the vehicle was manufactured.	times
Count	Shows whether the elapsed time counter after turning ON the ignition switch is synchronized with the integrated unit (master unit) or an original counter. “Common” means the integrated unit, and “Originally” means that the original counter is used.	—
Time Count	Shows the elapsed time after turning ON the ignition.	ms
Actual Secondary Pressure	Pressure value applied to the secondary pulley cylinder (line pressure) detected by the secondary pressure sensor.	MPa
System Voltage	Power supply voltage supplied to the backup power supply (≈ battery voltage).	V

- ENGINE TYPE EZ

Display	Contents	Unit of measure
Engine Speed	Engine speed signal transmitted from the ECM. Calculated from crankshaft position sensor signals. TCM input value.	rpm
Turbine Speed	Turbine rotation speed which is based on the primary pulley rotation speed calculated by the TCM using signals from the primary speed sensor, and is accelerated by the reduction gear ratio.	rpm
Accel opening angle	Accelerator pedal opening angle transmitted from the ECM. Value calculated from the accelerator pedal position sensor output. TCM input value.	%
Front Wheel Speed	Front wheel speed calculated from the forward/reverse clutch output axis rotation speed.	km/h or MPH
ATF Temp.	Value calculated from the ATF temperature sensor output value. ATF temperature of the oil pan section.	°C or °F
Lock Up Duty Ratio	Lock-up duty solenoid control duty ratio. TCM output value.	%
Lock-Up ON/OFF Solenoid	Lock-up ON/OFF solenoid drive signal. Set to ON at a lockup condition. TCM output value.	ON or OFF
Transfer Duty Ratio	Transfer duty solenoid control duty ratio. TCM output value.	%
Actual Gear Ratio	Current gear ratio (rotation ratio of the pulley) calculated from the primary pulley axis rotation speed and the secondary pulley axis rotation speed.	—
Primary Rev Speed	Primary pulley rotation speed calculated by the TCM using signals from the primary speed sensor.	rpm
Secondary Rev Speed	Secondary pulley rotation speed calculated by the TCM using signals from the secondary speed sensor.	rpm
Front Wheel Speed	Front wheel rotation speed calculated from the forward/reverse clutch output axis rotation speed.	rpm
Stop light SW	Stop light SW signal. Set to ON when the brake pedal is depressed. TCM input value.	ON or OFF
Secondary Set Current	Value of the indicator current for controlling the secondary solenoid calculated by the TCM.	mA
Secondary Actual Current	Actual current value of the secondary solenoid. TCM output value.	mA
F&R Linear Solenoid Set Current	Value of the indicator current for controlling the F&R linear solenoid calculated by the TCM.	mA
F&R Linear Solenoid Actual Current	Actual current value of the F&R linear solenoid. TCM output value.	mA
ECU ACC	Battery voltage. TCM input value.	V
Primary UP Duty	Primary UP solenoid control duty ratio. TCM output value.	%
Primary DOWN Duty	Primary DOWN solenoid control duty ratio. TCM output value.	%
P Range	Inhibitor SW signal. Set to ON when the select lever is in P range. TCM input value.	ON or OFF
R Range Signal	Inhibitor SW signal. Set to ON when the select lever is in R range. TCM input value.	ON or OFF
N Range	Inhibitor SW signal. Set to ON when the select lever is in N range. TCM input value.	ON or OFF
D Range Signal	Inhibitor SW signal. Set to ON when the select lever is in D range. TCM input value.	ON or OFF
X Mode	ON/OFF status of the X mode received from the engine. TCM input value.	ON or OFF
Shift step in Manu. mode	Gear shift position in manual mode or in multi-stage shifting mode. TCM output value.	—
Tiptronic Mode Switch	Manual mode SW signal. Set to ON when the select lever is in the manual shift gate. TCM input value.	ON or OFF
Up Switch	Status of the paddle shift up SW. Set to ON when the plus (+) side of the steering wheel paddle shift is pulled. TCM input value.	ON or OFF

Display	Contents	Unit of measure
Down Switch	Status of the paddle shift down SW. Set to ON when the minus (–) side of the steering wheel paddle shift is pulled. TCM input value.	ON or OFF
secondary pressure sensor voltage.	Voltage value after an analog/digital conversion is done inside the TCM using the signal input from the secondary pressure sensor. TCM input value.	V
ATF Temp sensor voltage.	Sensor voltage value input from the ATF temperature sensor to the TCM. TCM input value.	V
Diagnosis Lamp	Transmission failure detection status. Set to ON when a failure is detected. AT oil temperature warning light blinks at 2 Hz. TCM output value.	ON or OFF
ATF Temperature Lamp	ATF high temperature detection status. Set to ON when high temperature is detected. AT oil temperature warning light illuminates. TCM output value.	ON or OFF
AT learning	AT initial learning completion status. AT oil temperature warning light blinks at 4 Hz when the learning is not completed. TCM output value.	Completed or Not Completed
Ignition SW ON Count	Number of times the ignition is turned ON since the vehicle was manufactured.	times
Count	Shows whether the elapsed time counter after turning ON the ignition switch is synchronized with the integrated unit (master unit) or an original counter. “Common” means the integrated unit, and “Originally” means that the original counter is used.	—
Time Count	Shows the elapsed time after turning ON the ignition.	ms
Actual Secondary Pressure	Pressure value applied to the secondary pulley cylinder (line pressure) detected by the secondary pressure sensor.	MPa
System Voltage	Power supply voltage supplied to the backup power supply (≈ battery voltage).	V

secondary pressure sensor voltage.	Voltage value after an analog/digital conversion is done inside the TCM using the signal input from the secondary pressure sensor. TCM input value.	V
ATF Temp sensor voltage.	Sensor voltage value input from the ATF temperature sensor to the TCM. TCM input value.	V
Diagnosis Lamp	Transmission failure detection status. Set to ON when a failure is detected. AT oil temperature warning light blinks at 2 Hz. TCM output value.	ON or OFF
ATF Temperature Lamp	ATF high temperature detection status. Set to ON when high temperature is detected. AT oil temperature warning light illuminates. TCM output value.	ON or OFF
Ignition SW ON Count	Number of times the ignition is turned ON since the vehicle was manufactured.	times
Count	Shows whether the elapsed time counter after turning ON the ignition switch is synchronized with the integrated unit (master unit) or an original counter. “Common” means the integrated unit, and “Originally” means that the original counter is used.	—
Time Count	Shows the elapsed time after turning ON the ignition.	ms
Actual Secondary Pressure	Pressure value applied to the secondary pulley cylinder (line pressure) detected by the secondary pressure sensor.	MPa
System Voltage	Power supply voltage supplied to the backup power supply (≈ battery voltage).	V

- ENGINE TYPE EZ

Display	Contents	Unit of measure
Engine Speed	Engine speed signal transmitted from the ECM. Calculated from crankshaft position sensor signals. TCM input value.	rpm
Turbine Speed	Turbine rotation speed which is based on the primary pulley rotation speed calculated by the TCM using signals from the primary speed sensor, and is accelerated by the reduction gear ratio.	rpm
Accel opening angle	Accelerator pedal opening angle transmitted from the ECM. Value calculated from the accelerator pedal position sensor output. TCM input value.	%
Front Wheel Speed	Front wheel speed calculated from the forward/reverse clutch output axis rotation speed.	km/h or MPH
ATF Temp.	Value calculated from the ATF temperature sensor output value. ATF temperature of the oil pan section.	°C or °F
Lock Up Duty Ratio	Lock-up duty solenoid control duty ratio. TCM output value.	%
Lock-Up ON/OFF Solenoid	Lock-up ON/OFF solenoid drive signal. Set to ON at a lockup condition. TCM output value.	ON or OFF
Transfer Duty Ratio	Transfer duty solenoid control duty ratio. TCM output value.	%
Actual Gear Ratio	Current gear ratio (rotation ratio of the pulley) calculated from the primary pulley axis rotation speed and the secondary pulley axis rotation speed.	—
Primary Rev Speed	Primary pulley rotation speed calculated by the TCM using signals from the primary speed sensor.	rpm
Secondary Rev Speed	Secondary pulley rotation speed calculated by the TCM using signals from the secondary speed sensor.	rpm
Front Wheel Speed	Front wheel rotation speed calculated from the forward/reverse clutch output axis rotation speed.	rpm
Stop light SW	Stop light SW signal. Set to ON when the brake pedal is depressed. TCM input value.	ON or OFF
Secondary Set Current	Value of the indicator current for controlling the secondary solenoid calculated by the TCM.	mA
Secondary Actual Current	Actual current value of the secondary solenoid. TCM output value.	mA
F&R Linear Solenoid Set Current	Value of the indicator current for controlling the F&R linear solenoid calculated by the TCM.	mA
F&R Linear Solenoid Actual Current	Actual current value of the F&R linear solenoid. TCM output value.	mA
ECU ACC	Battery voltage. TCM input value.	V
Primary UP Duty	Primary UP solenoid control duty ratio. TCM output value.	%
Primary DOWN Duty	Primary DOWN solenoid control duty ratio. TCM output value.	%
P Range	Inhibitor SW signal. Set to ON when the select lever is in P range. TCM input value.	ON or OFF
R Range Signal	Inhibitor SW signal. Set to ON when the select lever is in R range. TCM input value.	ON or OFF
N Range	Inhibitor SW signal. Set to ON when the select lever is in N range. TCM input value.	ON or OFF
D Range Signal	Inhibitor SW signal. Set to ON when the select lever is in D range. TCM input value.	ON or OFF
Shift step in Manu. mode	Gear shift position in manual mode or in multi-stage shifting mode. TCM output value.	—
Tiptronic Mode Switch	Manual mode SW signal. Set to ON when the select lever is in the manual shift gate. TCM input value.	ON or OFF
Up Switch	Status of the paddle shift up SW. Set to ON when the plus (+) side of the steering wheel paddle shift is pulled. TCM input value.	ON or OFF
Down Switch	Status of the paddle shift down SW. Set to ON when the minus (–) side of the steering wheel paddle shift is pulled. TCM input value.	ON or OFF

Display	Contents	Unit of measure
secondary pressure sensor voltage.	Voltage value after an analog/digital conversion is done inside the TCM using the signal input from the secondary pressure sensor. TCM input value.	V
ATF Temp sensor voltage.	Sensor voltage value input from the ATF temperature sensor to the TCM. TCM input value.	V
Diagnosis Lamp	Transmission failure detection status. Set to ON when a failure is detected. AT oil temperature warning light blinks at 2 Hz. TCM output value.	ON or OFF
ATF Temperature Lamp	ATF high temperature detection status. Set to ON when high temperature is detected. AT oil temperature warning light illuminates. TCM output value.	ON or OFF
Ignition SW ON Count	Number of times the ignition is turned ON since the vehicle was manufactured.	times
Count	Shows whether the elapsed time counter after turning ON the ignition switch is synchronized with the integrated unit (master unit) or an original counter. “Common” means the integrated unit, and “Originally” means that the original counter is used.	—
Time Count	Shows the elapsed time after turning ON the ignition.	ms
Actual Secondary Pressure	Pressure value applied to the secondary pulley cylinder (line pressure) detected by the secondary pressure sensor.	MPa
System Voltage	Power supply voltage supplied to the backup power supply (≈ battery voltage).	V

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

- For details concerning the work procedure, refer to the “PC application help for Subaru Select Monitor”.
- For details concerning DTC, refer to List of Diagnostic Trouble Code (DTC). <Ref. to CVT(diag)-45, List of Diagnostic Trouble Code (DTC).>

8. Clear Memory Mode

A: OPERATION

For details concerning the work procedure, refer to the “PC application help for Subaru Select Monitor”.

CAUTION:
- **If the AT learning value is cleared, learned control memory is cleared.**
- **If the AT learning value is cleared, perform learning. <Ref. to CVT(diag)-34, Learning Control.>**

9. Inspection Mode

A: PROCEDURE

<Ref. to CVT(TR580)-49, Road Test.> <Ref. to CVT(TR690)-48, Road Test.>

10.Drive Cycle

A: PROCEDURE

It is possible to complete diagnosis of the DTC by performing the indicated drive cycle. After the repair for the DTC, perform a necessary drive cycle and make sure the function recovers and the DTC is recorded.

1. PREPARATION FOR DRIVE CYCLE

1) Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2) After performing the diagnostics and Clear Memory Mode, check that no DTC remains. <Ref. to CVT(diag)-27, Clear Memory Mode.>

NOTE:
Perform the drive cycle after warming up the engine except when the ATF temperature at engine start is specified.

2. DRIVE CYCLE A

DTC	Item	Condition
P0601	Internal Control Module Memory Checksum Error	Perform the drive cycle A twice.
P0604	Internal Control Module Random Access Memory (RAM) Error	Perform the drive cycle A twice.
P062F	Internal Control Module EEPROM Error	Perform the drive cycle A twice.
P0712	Transmission Fluid Temperature Sensor Circuit Low Input	—
P0776	Pressure Control Solenoid "B" Performance/Stuck Off	Perform the drive cycle D, then the drive cycle A, and perform the drive cycle D again.
P0842	Secondary Oil Pressure Sensor Circuit (Low)	—
P0843	Secondary Oil Pressure Sensor Circuit (High)	—
P0890	AT Self-Shut Relay Diagnosis (Low)	—
P0962	Secondary Solenoid Circuit (Low)	—
P0963	Secondary Solenoid Circuit (High)	—
P0966	Forward & Reverse Solenoid Circuit (Low)	—
P0967	Forward & Reverse Linear Solenoid Circuit (High)	—
P160A	Random Access Memory (RAM) Error	Perform the drive cycle A twice.
P2530	Ignition Switch Run Position Circuit	—
P2763	Lock-Up Duty Solenoid Circuit (High)	Perform the drive cycle A, then perform the drive cycle C.

Diagnostic procedure:
1) Start the engine.
2) Depress the brake pedal and move the select lever to each range at an interval of five seconds.

NOTE:
Move the select lever in the following order: “P” → “R” → “N” → “D” → “N” → “R” → “P”.

3. DRIVE CYCLE B

DTC	Item	Condition
P0711	ATF Temp. Sensor Circuit Range/Performance	Perform the drive cycle B twice.

Diagnostic procedure:
1) Start the engine under condition that ATF temperature is at 20°C (68°F) or below.
2) Drive in any driving pattern for 20 minutes. (Include driving at a constant legal speed (for 20 seconds) at least once.)

NOTE:
Repeat two or more driving cycles in this driving pattern.

4. DRIVE CYCLE C

DTC	Item	Condition
P0500	Vehicle Speed Sensor “A”	—
P0716	Torque Converter Turbine Speed	—
P0717	Input/Turbine Speed Sensor "A" Circuit No Signal	—
P0720	Output Speed Sensor Circuit	—
P0721	Output Shaft Speed Sensor Circuit Range/Performance	—
P0970	Transfer Solenoid Circuit (Low)	—
P0971	Transfer Solenoid Circuit (High)	—
P0973	Primary Solenoid System A Circuit (Low)	—
P0974	Primary Solenoid System A Circuit (High)	—
P0976	Primary Solenoid System B Circuit (Low)	—
P0977	Primary Solenoid System B Circuit (High)	—
P2158	Vehicle Speed Sensor "B"	—
P2746	Primary Pulley Revolution Speed Sensor Circuit	—
P2747	Intermediate Shaft Speed Sensor "B" Circuit No Signal	—
P2750	Sec. Pulley Revolution Speed Sensor Circuit	—
P2751	Intermediate Shaft Speed Sensor "C" Circuit No Signal	—
P2763	Lock-Up Duty Solenoid Circuit (High)	Perform the drive cycle A, then perform the drive cycle C.
P2764	Lock-Up Duty Solenoid Circuit (Low)	—
P2769	Lock-Up On/Off Solenoid Circuit (Low)	—
P2770	Lock-Up On/Off Solenoid Circuit (High)	—

Diagnostic procedure:
1) Start the engine.
2) Accelerate slowly to a legal speed, and then decelerate slowly to a stop.

5. DRIVE CYCLE D

DTC	Item	Condition
P0713	Transmission Fluid Temperature Sensor Circuit High Input	—
P0730	Gearshift Control Performance Abnormal	—
P0746	Pressure Control Solenoid "A" Performance/Stuck Off	Perform the drive cycle D twice.
P0747	Pressure Control Solenoid "A" Stuck On	Perform the drive cycle D twice.
P0751	Shift Solenoid "A" Performance/Stuck Off	Perform the drive cycle D twice.
P0752	Shift Solenoid "A" Stuck On	Perform the drive cycle D twice.
P0756	Shift Solenoid "B" Performance/Stuck Off	Perform the drive cycle D twice.
P0757	Shift Solenoid "B" Stuck On	Perform the drive cycle D twice.
P0776	Pressure Control Solenoid "B" Performance/Stuck Off	Perform the drive cycle D, then the drive cycle A, and perform the drive cycle D again.
P0841	Secondary Oil Pressure Sensor Performance	—
P0961	Pressure Control Solenoid "A" Control Circuit Range/Performance	—
P0965	Forward & Reverse Solenoid Function	—
P2757	Torque Converter Clutch Pressure Control Solenoid Control Circuit Performance/Stuck Off	Perform the drive cycle D twice.
P2758	Torque Converter Clutch Pressure Control Solenoid Control Circuit Stuck On	Perform the drive cycle D twice.

Diagnostic procedure:
1) Start the engine.
2) Drive in any driving pattern for 20 minutes. (Include driving at a constant legal speed (for 20 seconds) at least once.)

6. DRIVE CYCLE E

DTC	Item	Condition
P0801	Reverse Inhibit Control Circuit	—
U0073	Control Module Communication Bus Off	—
U0100	Lost Communication With ECM/PCM “A”	—
U0122	Lost Communication With Vehicle Dynamics Control Module	—
U0140	Lost Communication With Body Control Module	—
U0155	Lost Communication With Instrument Panel Cluster (IPC) Control Module	—
U0164	Lost Communication With HVAC Control Module	—
U0401	Invalid Data Received From ECM/PCM “A”	—
U0416	Invalid Data Received From Vehicle Dynamics Control Module	—
U0422	Invalid Data Received From Body Control Module	—
U0423	Invalid Data Received From Instrument Panel Cluster Control Module	—
U0424	Invalid Data Received From HVAC Control Module	—
U1235	Lost Communication With EyeSight	—
U1433	Invalid Data Received From EyeSight	—

Diagnostic procedure:
1) Start the engine.

7. DRIVE CYCLE F

DTC	Item	Condition
P0705	Transmission Range Sensor Circuit (PRNDL Input)	—

Diagnostic procedure:
1) Start the engine.
2) Depress the brake pedal and move the select lever to each range at an interval of five seconds.

NOTE:
Move the select lever in the following order: “P” → “R” → “N” → “D”.
3) Maintain the engine speed to 2,000 rpm for five seconds or more.

8. DRIVE CYCLE G

DTC	Item	Condition
P0708	AT Range Switch Not Inputted	—

Diagnostic procedure:
1) Start the engine.
2) Drive for three seconds at 16 km/h (10 MPH).

NOTE:
Drive in “D” range and “R” range.

9. DRIVE CYCLE H

DTC	Item	Condition
P0719	Brake Switch Circuit Low	—
P0724	Brake Switch Circuit High	—
P0951	Manual Switch	—

Diagnostic procedure:
1) Start the engine.
2) Operate the stop light switch or the manual mode switch.

NOTE:
Drive in “D” range and “R” range.
3) Read the data of the stop light switch or the manual mode switch using the Subaru Select Monitor. Or measure the terminal voltage.

11.System Operation Check Mode

A: OPERATION

CAUTION:
- **Make sure that the system operation check mode is performed when the engine is not running.**
- **After executing the system operation check mode, execute the Clear Memory Mode.**

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Transmission Control System».
3) On «Transmission Control System» display, select «Work Support».
4) On «Work Support» display, select «System Operation Check Mode».

NOTE:
For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

Item	SSM display
Activating the actuator ON/OFF	F&R Clutch Solenoid
	Secondary Solenoid
	Primary Down Solenoid
	Primary Up Solenoid
	AWD Solenoid
	Lock-Up Duty Solenoid
	Lock-up ON/OFF Solenoid

12.Learning Control

A: GENERAL DESCRIPTION

- Follow the messages displayed on the Subaru Select Monitor when working.
- When the following work is performed, perform learning work for the transmission.

Replacement of TCM/Replacement or disassembly of transmission assembly/Replacement of control valve body/Clearing AT leaning value is executed.

B: PROCEDURE

1. PREPARATION FOR LEARNING

1) Warm up or cool down until the ATF temperature displayed on the Subaru Select Monitor is 40 — 65°C (104 — 149°F).
2) After stopping the vehicle, shift the select lever to “P” range.
3) Apply the electronic parking brake.
4) Lift up the vehicle.

CAUTION:
While working, be sure to keep the lower edge of the tires 30 cm or more above the ground as vehicle will vibrate.
5) Connect the Subaru Select Monitor to data link connector.
6) Turn the ignition switch to ON.
7) Turn off all switches causing an electrical load, such as headlights, A/C, seat heater and rear defogger, etc.

2. SIMPLE LEARNING

NOTE:
Simple learning is performed with the vehicle lifted, without actually running the vehicle.

CAUTION:
Do not turn the power of the Subaru Select Monitor OFF during work, and do not disconnect the data link connector.
1) Select «Work Support» in the «Transmission Diagnosis» display screen of the Subaru Select Monitor.
2) Select «Compulsory learning mode» in the «Work Support» screen of Subaru Select Monitor.
3) Follow the messages displayed on the Subaru Select Monitor screen when working.

NOTE:
During AT learning in progress, AT OIL TEMP light in the combination meter starts flashing at 2 Hz and the learning operation starts. When the AT OIL TEMP light which was flashing at 2 Hz goes off, the following message is displayed on the screen.

4) When «AT learning normally ended.» is displayed, simple AT learning is completed.

NOTE:
- If communication error occurs during learning, retry the “AT learning mode” from the beginning.
- If the message «Execute AT learning again after fixing troubles of the vehicle» appears during learning, select [OK] and display the DTC list. After repairing the locations indicated by the DTC, start the “AT learning mode” over from the beginning.
- When communication error occurs during learning, select lever does not shift occasionally. If select lever does not shift, turn the ignition switch to OFF before operating the select lever.
- If the message «AT learning ended abnormally.» is displayed, start the “AT learning mode” over from the beginning.

Display	Main causes for abnormal termination
AT learning ended abnormally.	• Fault is detected during AT learning. • The accelerator pedal is depressed during AT learning. • An unspecified operation was performed during AT learning • ATF temperature becomes out of specification during AT learning. • Battery voltage is low. • Malfunction indicator light illuminates. • Electric parking brake not applied strongly enough • Brake pedal is not fully depressed. • Abnormal idle speed increase, etc.

- For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

13.AT OIL TEMP Warning Light Display

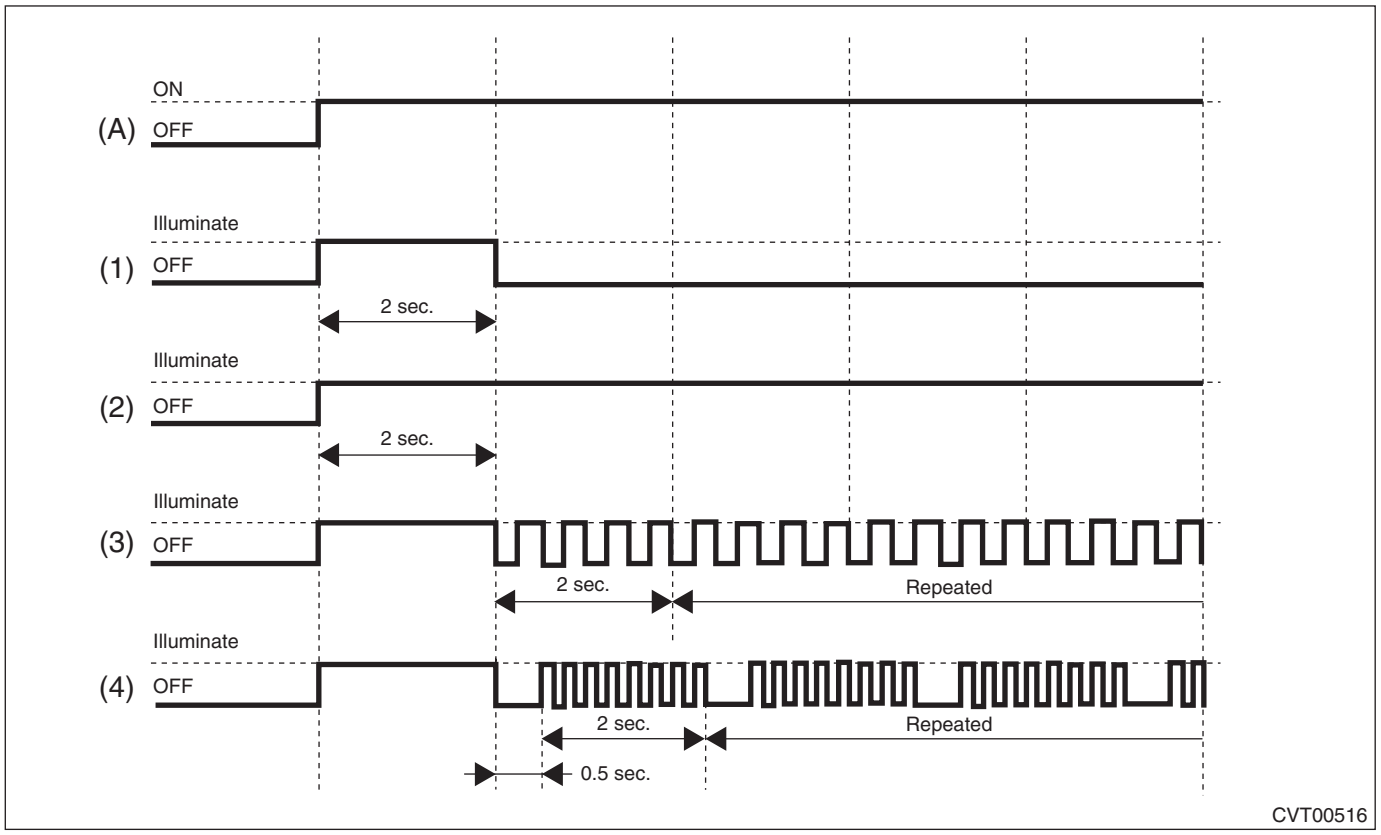
A: OPERATION

The AT OIL TEMP light illuminates or blinks, when the ATF temperature is high and malfunction occurs in CVT.

- At normal condition

After turning the ignition switch to ON, illuminates for 2 seconds then goes off.

- When ATF temperature is high



AT OIL TEMP light illuminates when the ATF temperature is abnormally high with the ignition switch ON.

- When malfunction is detected

AT OIL TEMP light blinks at 2 Hz when the TCM detects the malfunction of CVT with the ignition switch ON. In this case, inspect using “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to CVT(diag)-50, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

- When AT learning is not finished

AT OIL TEMP light repeats “Blinking at 4 Hz → Turning OFF” when the AT learning is not completed with the ignition switch ON. In this case, perform the “Learning”. (During AT learning, the light blinks at 2 Hz or illuminates.) <Ref. to CVT(diag)-34, Learning Control.>

(A) Ignition switch condition

(1) At normal condition
(2) When ATF temperature is high
(3) When malfunction is detected
(4) When AT learning is not finished

If the AT OIL TEMP light does not illuminate, or illumination patterns are not as above, check the AT OIL TEMP light circuit. <Ref. to CVT(diag)-37, INSPECTION, AT OIL TEMP Warning Light Display.>

B: INSPECTION

DIAGNOSIS:

- CAN communication is lost with the combination meter.
- Combination meter malfunction
- TCM is in special control mode.
- AT learning is not finished.

TROUBLE SYMPTOM:

- When the ignition switch is turned to ON, the AT OIL TEMP light does not illuminate.
- AT OIL TEMP light remains lit after engine start.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Is DTC U0155 or U0423 displayed?	Perform the self-diagnosis of combination meter.	Go to step **2**.
2	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Are DTCs other than U0155 and U0423 displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK COMBINATION METER.** Read DTC of combination meter.	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK AT OIL TEMP LIGHT.** Turn the ignition switch to ON.	Does AT OIL TEMP light illuminate and then go off in 2 seconds?	Go to step **5**.	Perform the self-diagnosis of combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>
5	**CHECK AT OIL TEMP LIGHT.** Start the engine.	Does the AT OIL TEMP light go off?	Current condition is normal. Go back to Basic Diagnostic Procedure. <Ref. to CVT(diag)-2, Basic Diagnostic Procedure.>	Go to step **6**.
6	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **7**.
7	**CHECK TCM.** Read the data of «ATF Temperature Lamp» using the Subaru Select Monitor.	Is “ON” displayed?	Go to step **8**.	Perform the self-diagnosis of combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>
8	**CHECK TCM.** Read the data of «ATF Temp.» using the Subaru Select Monitor.	Is the display 125°C or more?	Go to step **9**.	Replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).> <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>

	Step	Check	Yes	No
9	**CHECK ATF TEMPERATURE.** Check the real fluid temperature from the transmission case surface temperature.	Does it clearly differ from the «ATF Temp.» displayed on Subaru Select Monitor?	Perform the diagnosis according to DTC P0712. If there is no problem, perform the diagnosis according to DTC P0713.	When ATF temperature can be judged as actually high, perform the diagnosis again after the ATF temperature lowers.

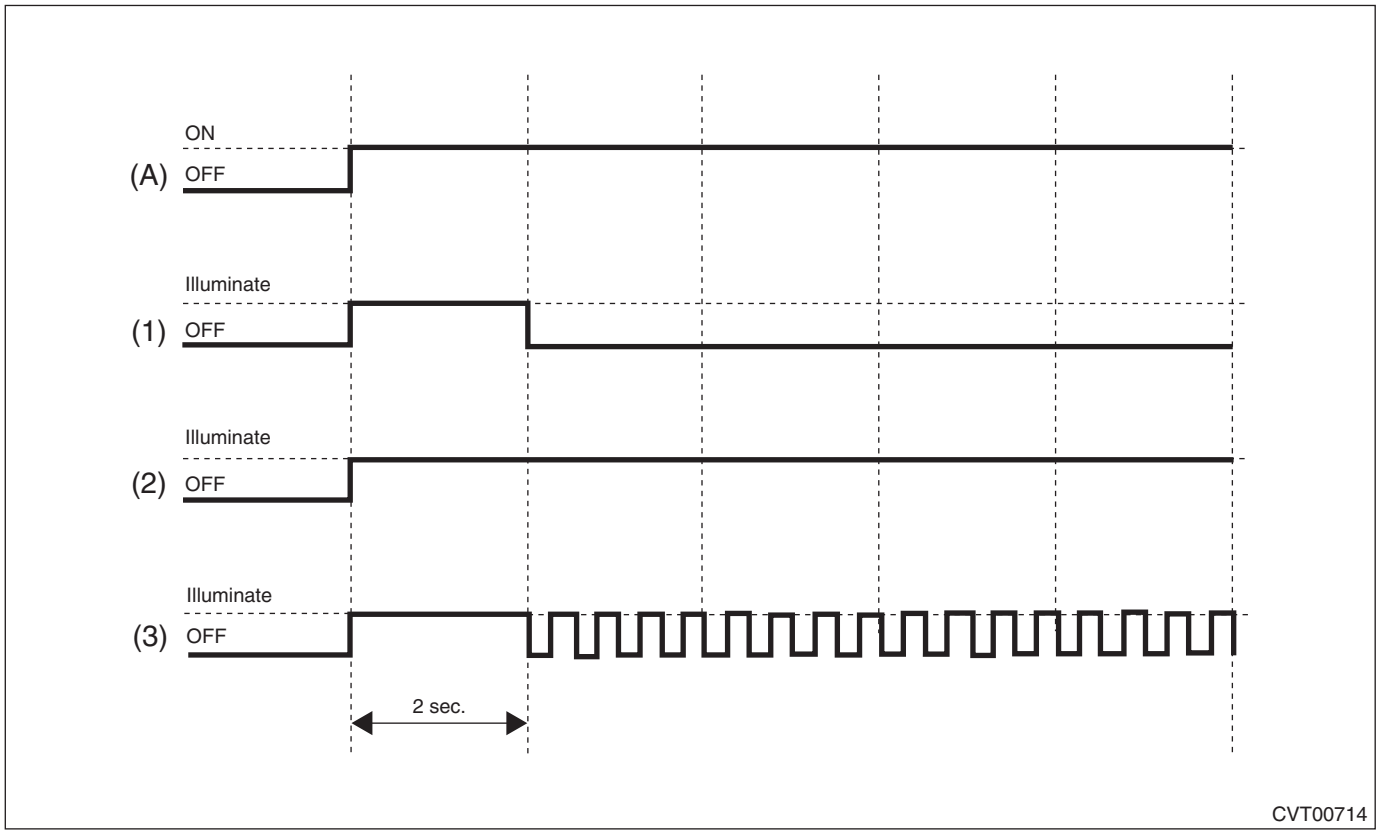
14.AWD Warning Light Display

A: OPERATION

AWD light illuminates or blinks, when the AWD is in special control condition and AWD has malfunction.

- At normal condition

After turning the ignition switch to ON, illuminates for 2 seconds then goes off.



- When FF mode is selected

AWD light illuminates when the AWD ON/OFF switching function is set to “FF mode” with the ignition switch ON.

- When malfunction is detected

AWD light blinks at 2 Hz when any of the following malfunctions are detected with the ignition switch ON.

1. When tire with different diameter is installed, or air pressure of any of four wheels is excessively low.
2. When “Rear differential inspection mode” is judged as NG <Ref. to DI-82, Rear Differential Inspection Mode.>

(A) Ignition switch condition

(1) At normal condition (2) When FF mode is selected (3) When malfunction is detected

If the AWD light does not illuminate, or illumination patterns are not as above, check the AWD light circuit. <Ref. to CVT(diag)-40, INSPECTION, AWD Warning Light Display.>

B: INSPECTION

DIAGNOSIS:
- CAN communication is lost with the combination meter.
- Combination meter malfunction
- TCM is in AWD special control mode.

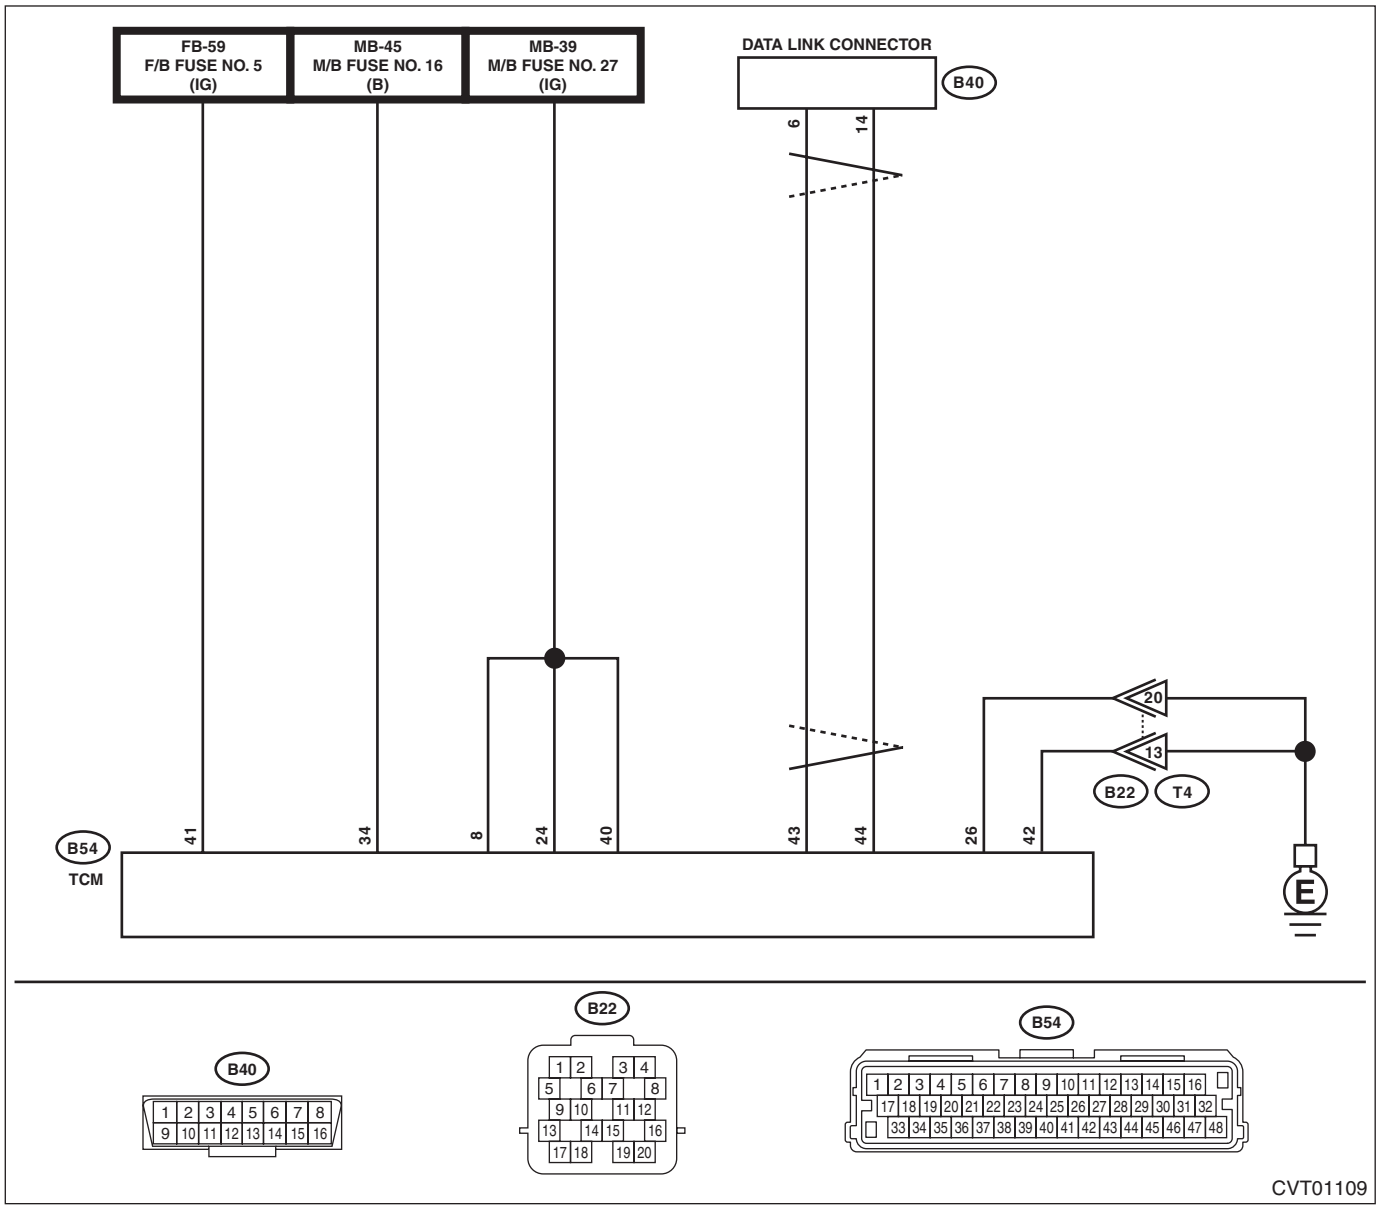
TROUBLE SYMPTOM:
- When the ignition switch is turned to ON, the AWD light does not illuminate.
- AWD light remains lit after engine start.
- AWD light is blinking immediately after engine start.

	Step	Check	Yes	No
1	**CHECK TCM.** Check the DTC relating the TCM using the Subaru Select Monitor.	Is DTC U0155 or U0423 displayed?	Perform the self-diagnosis of combination meter.	Go to step **2**.
2	**CHECK TCM.** Check the DTC relating the TCM using the Subaru Select Monitor.	Are DTCs other than U0155 and U0423 displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK COMBINATION METER.** Check the DTC of combination meter.	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK AWD LIGHT.** Turn the ignition switch to ON.	Does AWD light illuminate and then go off in 2 seconds?	Go to step **5**.	Perform the self-diagnosis of combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>
5	**CHECK AWD LIGHT.** Start the engine.	Does the AWD light go off?	Current condition is normal. Go back to Basic Diagnostic Procedure. <Ref. to CVT(diag)-2, Basic Diagnostic Procedure.>	Go to step **6**.
6	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **7**.
7	**CHECK AWD LIGHT.** Check the display of AWD light after engine start.	Is AWD light illuminating?	Go to step **9**.	Go to step **8**.
8	**CHECK AWD LIGHT.** Check the display of AWD light after engine start.	Is AWD light blinking at 2 Hz?	Go to step **10**.	Go to step **11**.
9	**CHECK AWD ON/OFF SWITCHING FUNCTION.** Using the Subaru Select Monitor, select the «AWD ON/OFF switching mode» in «Maintenance mode» from «Work Support», and check the current mode. <Ref. to CVT(TR580)-48, AWD ON/OFF Switching Mode.>	Is the message «At present, the vehicle is in AWD. Switch to FF?» displayed?	Go to step **11**.	If the message «At present, the vehicle is in FF. Switch to AWD?» is displayed, select “OK”, and switch to AWD mode.

	Step	Check	Yes	No
10	**CHECK REAR DIFFERENTIAL.** Using the Subaru Select Monitor, select «Rear differential inspection mode» in «Maintenance mode» from «Work Support», and check. <Ref. to DI-82, Rear Differential Inspection Mode.>	Does AWD light go off after inspection is finished normally?	Current condition is normal. Go back to Basic Diagnostic Procedure. <Ref. to CVT(diag)-2, Basic Diagnostic Procedure.>	Go to step **11**.
11	**CHECK COMBINATION METER.** Perform the self-diagnosis of combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is there any trouble with the combination meter?	Repair the combination meter.	Replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).> <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>

15.Diagnostic Procedure for Subaru Select Monitor Communication

A: COMMUNICATION FOR INITIALIZING IMPOSSIBLE



DIAGNOSIS:
Defective harness connector
TROUBLE SYMPTOM:
Subaru Select Monitor communication failure
WIRING DIAGRAM:
- ENGINE TYPE FB

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

• ENGINE TYPE EZ

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK IGNITION SWITCH.**	Is the ignition switch ON?	Go to step **2**.	Turn the ignition switch to ON, and select the transmission mode using the Subaru Select Monitor.
2	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 11 V or more?	Go to step **3**.	Charge or replace the battery.
3	**CHECK BATTERY TERMINAL.**	Is there poor contact at battery terminal?	Repair or tighten the battery terminal.	Go to step **4**.
4	**CHECK INSTALLATION OF TCM CONNECTOR.** Turn the ignition switch to OFF.	Is the TCM connector inserted into the TCM until the clamp locks?	Go to step **5**.	Insert the TCM connector to TCM.

	Step	Check	Yes	No
5	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-79, List of Diagnostic Trouble Code (DTC).>	Go to step **6**.
6	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to ON. 2) Check whether communication to transmission system can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Check DTC of TCM. <Ref. to CVT(diag)-26, Read Diagnostic Trouble Code (DTC).>	Go to step **7**.
7	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. (Engine OFF) 2) Measure the ignition power supply voltage between TCM connector and chassis ground. ***Connector & terminal*** ***ENGINE TYPE FB*** ***(T10) No. 8 (+) — Chassis ground (–):*** ***(T10) No. 24 (+) — Chassis ground (–):*** ***(T10) No. 34 (+) — Chassis ground (–):*** ***(T10) No. 40 (+) — Chassis ground (–):*** ***(T10) No. 41 (+) — Chassis ground (–):*** ***ENGINE TYPE EZ*** ***(B54) No. 8 (+) — Chassis ground (–):*** ***(B54) No. 24 (+) — Chassis ground (–):*** ***(B54) No. 34 (+) — Chassis ground (–):*** ***(B54) No. 40 (+) — Chassis ground (–):*** ***(B54) No. 41 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **8**.	Repair the open circuit of harness between TCM and battery.
8	**CHECK HARNESS CONNECTOR BETWEEN TCM AND CHASSIS GROUND.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from TCM. 3) Measure the resistance of harness between TCM connector and chassis ground. ***Connector & terminal*** ***ENGINE TYPE FB*** ***(T10) No. 26 — Chassis ground:*** ***(T10) No. 42 — Chassis ground:*** ***ENGINE TYPE EZ*** ***(B54) No. 26 — Chassis ground:*** ***(B54) No. 42 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **9**.	Repair the open circuit of the TCM ground circuit and poor contact of connector.
9	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact of control module power supply, ground circuit and data link connector?	Repair the connector.	Replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).> <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>

16.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Reference
P0500	Vehicle Speed Sensor “A”	Wheel speed data from VDC CM&H/U is abnormal.	<Ref. to CVT(diag)-50, DTC P0500 VEHICLE SPEED SENSOR “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0601	Internal Control Module Memory Checksum Error	TCM ROM is faulty.	<Ref. to CVT(diag)-50, DTC P0601 INTERNAL CONTROL MODULE MEMORY CHECKSUM ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0604	Internal Control Module Random Access Memory (RAM) Error	TCM RAM is faulty.	<Ref. to CVT(diag)-51, DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P062F	Internal Control Module EEPROM Error	TCM EEPROM is faulty.	<Ref. to CVT(diag)-51, DTC P062F INTERNAL CONTROL MODULE EEPROM ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0705	Transmission Range Sensor Circuit (PRNDL Input)	Inhibitor switch malfunction or short circuit	<Ref. to CVT(diag)-52, DTC P0705 TRANSMISSION RANGE SENSOR CIRCUIT (PRNDL INPUT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0708	AT Range Switch Not Inputted	Inhibitor switch malfunction or open circuit	<Ref. to CVT(diag)-55, DTC P0708 AT RANGE SWITCH NOT INPUTTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0711	ATF Temp. Sensor Circuit Range/Performance	ATF temperature sensor is faulty or input signal circuit is faulty.	<Ref. to CVT(diag)-58, DTC P0711 ATF TEMP. SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0712	Transmission Fluid Temperature Sensor Circuit Low Input	ATF temperature sensor is faulty or input signal circuit is shorted.	<Ref. to CVT(diag)-59, DTC P0712 TRANSMISSION FLUID TEMPERATURE SENSOR CIRCUIT LOW INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0713	Transmission Fluid Temperature Sensor Circuit High Input	ATF temperature sensor is faulty or input signal circuit is open or shorted.	<Ref. to CVT(diag)-61, DTC P0713 TRANSMISSION FLUID TEMPERATURE SENSOR CIRCUIT HIGH INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0716	Torque Converter Turbine Speed	Turbine speed sensor is faulty or input signal circuit is open or shorted.	<Ref. to CVT(diag)-64, DTC P0716 TORQUE CONVERTER TURBINE SPEED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0717	Input/Turbine Speed Sensor "A" Circuit No Signal	Turbine speed sensor signal no input	<Ref. to CVT(diag)-65, DTC P0717 INPUT/TURBINE SPEED SENSOR "A" CIRCUIT NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0719	Brake Switch Circuit Low	Brake switch is faulty or input signal circuit is open or shorted.	<Ref. to CVT(diag)-67, DTC P0719 BRAKE SWITCH CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0720	Output Speed Sensor Circuit	Front wheel speed sensor is faulty or input signal circuit is open or shorted.	<Ref. to CVT(diag)-69, DTC P0720 OUTPUT SPEED SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0721	Output Shaft Speed Sensor Circuit Range/Performance	Front wheel speed sensor characteristics is abnormal.	<Ref. to CVT(diag)-71, DTC P0721 OUTPUT SHAFT SPEED SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Reference
P0724	Brake Switch Circuit High	Brake switch is faulty or input signal circuit is shorted.	<Ref. to CVT(diag)-72, DTC P0724 BRAKE SWITCH CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0730	Gearshift Control Performance Abnormal	Primary speed sensor, secondary speed sensor, control valve, or chain is faulty.	<Ref. to CVT(diag)-74, DTC P0730 GEARSHIFT CONTROL PERFORMANCE ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0746	Pressure Control Solenoid "A" Performance/ Stuck Off	Secondary solenoid is faulty, hydraulic circuit is stuck in low pressure side.	<Ref. to CVT(diag)-76, DTC P0746 PRESSURE CONTROL SOLENOID "A" PERFORMANCE/STUCK OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0747	Pressure Control Solenoid "A" Stuck On	Secondary solenoid is faulty, hydraulic circuit is stuck in high pressure side.	<Ref. to CVT(diag)-80, DTC P0747 PRESSURE CONTROL SOLENOID "A" STUCK ON, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0751	Shift Solenoid "A" Performance/Stuck Off	Primary UP solenoid is faulty, hydraulic circuit is stuck in low pressure side.	<Ref. to CVT(diag)-84, DTC P0751 SHIFT SOLENOID "A" PERFORMANCE/STUCK OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0752	Shift Solenoid "A" Stuck On	Primary UP solenoid is faulty, hydraulic circuit is stuck in high pressure side.	<Ref. to CVT(diag)-88, DTC P0752 SHIFT SOLENOID "A" STUCK ON, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0756	Shift Solenoid "B" Performance/Stuck Off	Primary DOWN solenoid is faulty, hydraulic circuit is stuck in low pressure side.	<Ref. to CVT(diag)-92, DTC P0756 SHIFT SOLENOID "B" PERFORMANCE/STUCK OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0757	Shift Solenoid "B" Stuck On	Primary DOWN solenoid is faulty, hydraulic circuit is stuck in high pressure side.	<Ref. to CVT(diag)-96, DTC P0757 SHIFT SOLENOID "B" STUCK ON, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0776	Pressure Control Solenoid "B" Performance/ Stuck Off	F&R solenoid is faulty, hydraulic circuit is stuck in low pressure side.	<Ref. to CVT(diag)-100, DTC P0776 PRESSURE CONTROL SOLENOID "B" PERFORMANCE/STUCK OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0801	Reverse Inhibit Control Circuit	Shift lock solenoid is faulty or output signal circuit is open or shorted.	<Ref. to CVT(diag)-103, DTC P0801 REVERSE INHIBIT CONTROL CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0841	Secondary Oil Pressure Sensor Performance	Secondary pressure sensor or control valve is faulty	<Ref. to CVT(diag)-104, DTC P0841 SECONDARY OIL PRESSURE SENSOR PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0842	Secondary Oil Pressure Sensor Circuit (Low)	Secondary pressure sensor is faulty or input signal circuit is open or shorted.	<Ref. to CVT(diag)-111, DTC P0842 SECONDARY OIL PRESSURE SENSOR CIRCUIT (LOW), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0843	Secondary Oil Pressure Sensor Circuit (High)	Secondary pressure sensor is faulty or input signal circuit is shorted.	<Ref. to CVT(diag)-114, DTC P0843 SECONDARY OIL PRESSURE SENSOR CIRCUIT (HIGH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0890	AT Self-Shut Relay Diagnosis (Low)	Self-shut relay is faulty or input signal circuit is open or shorted.	<Ref. to CVT(diag)-116, DTC P0890 AT SELF-SHUT RELAY DIAGNOSIS (LOW), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0951	Manual Switch	Manual mode switch is faulty or input signal circuit is open or shorted.	<Ref. to CVT(diag)-117, DTC P0951 MANUAL SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Reference
P0961	Pressure Control Solenoid "A" Control Circuit Range/Performance	Characteristics of secondary solenoid is abnormal.	<Ref. to CVT(diag)-119, DTC P0961 PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0962	Secondary Solenoid Circuit (Low)	Secondary solenoid is faulty or output signal circuit is shorted.	<Ref. to CVT(diag)-122, DTC P0962 SECONDARY SOLENOID CIRCUIT (LOW), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0963	Secondary Solenoid Circuit (High)	Secondary solenoid is faulty or output signal circuit is open or shorted.	<Ref. to CVT(diag)-125, DTC P0963 SECONDARY SOLENOID CIRCUIT (HIGH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0965	Forward & Reverse Solenoid Function	F&R solenoid, forward clutch or control valve is faulty.	<Ref. to CVT(diag)-128, DTC P0965 FORWARD & REVERSE SOLENOID FUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0966	Forward & Reverse Solenoid Circuit (Low)	F&R solenoid is faulty or output signal circuit is shorted.	<Ref. to CVT(diag)-131, DTC P0966 FORWARD & REVERSE SOLENOID CIRCUIT (LOW), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0967	Forward & Reverse Linear Solenoid Circuit (High)	F&R solenoid is faulty or output signal circuit is open or shorted.	<Ref. to CVT(diag)-134, DTC P0967 FORWARD & REVERSE LINEAR SOLENOID CIRCUIT (HIGH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0970	Transfer Solenoid Circuit (Low)	AWD solenoid is faulty or output signal circuit is shorted.	<Ref. to CVT(diag)-137, DTC P0970 TRANSFER SOLENOID CIRCUIT (LOW), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0971	Transfer Solenoid Circuit (High)	AWD solenoid is faulty or output signal circuit is open or shorted.	<Ref. to CVT(diag)-140, DTC P0971 TRANSFER SOLENOID CIRCUIT (HIGH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0973	Primary Solenoid System A Circuit (Low)	Primary UP solenoid is faulty or output signal circuit is shorted.	<Ref. to CVT(diag)-143, DTC P0973 PRIMARY SOLENOID SYSTEM A CIRCUIT (LOW), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0974	Primary Solenoid System A Circuit (High)	Primary UP solenoid is faulty or output signal circuit is open or shorted.	<Ref. to CVT(diag)-146, DTC P0974 PRIMARY SOLENOID SYSTEM A CIRCUIT (HIGH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0976	Primary Solenoid System B Circuit (Low)	Primary DOWN solenoid is faulty or output signal circuit is shorted.	<Ref. to CVT(diag)-149, DTC P0976 PRIMARY SOLENOID SYSTEM B CIRCUIT (LOW), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0977	Primary Solenoid System B Circuit (High)	Primary DOWN solenoid is faulty or output signal circuit is open or shorted.	<Ref. to CVT(diag)-152, DTC P0977 PRIMARY SOLENOID SYSTEM B CIRCUIT (HIGH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P160A	Random Access Memory (RAM) Error	TCM RAM is faulty.	<Ref. to CVT(diag)-155, DTC P160A RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P2158	Vehicle Speed Sensor "B"	Wheel speed data from VDC CM&H/U is abnormal.	<Ref. to CVT(diag)-155, DTC P2158 VEHICLE SPEED SENSOR "B", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Reference

P2746	Primary Pulley Revolution Speed Sensor Circuit	Primary speed sensor is faulty or input signal circuit is open or shorted.	<Ref. to CVT(diag)-158, DTC P2746 PRIMARY PULLEY REVOLUTION SPEED SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P2747	Intermediate Shaft Speed Sensor "B" Circuit No Signal	Primary speed sensor signal no input	<Ref. to CVT(diag)-159, DTC P2747 INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P2750	Sec. Pulley Revolution Speed Sensor Circuit	Secondary speed sensor is faulty or input signal circuit is open or shorted.	<Ref. to CVT(diag)-162, DTC P2750 SEC. PULLEY REVOLUTION SPEED SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P2751	Intermediate Shaft Speed Sensor "C" Circuit No Signal	Secondary speed sensor signal no input	<Ref. to CVT(diag)-163, DTC P2751 INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P2757	Torque Converter Clutch Pressure Control Solenoid Control Circuit Performance/Stuck Off	Lock-up duty solenoid is faulty, hydraulic circuit is stuck in low pressure side.	<Ref. to CVT(diag)-166, DTC P2757 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT PERFORMANCE/STUCK OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P2758	Torque Converter Clutch Pressure Control Solenoid Control Circuit Stuck On	Lock-up duty solenoid is faulty, hydraulic circuit is stuck in high pressure side.	<Ref. to CVT(diag)-170, DTC P2758 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT STUCK ON, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P2763	Lock-Up Duty Solenoid Circuit (High)	Lock-up duty solenoid is faulty or output signal circuit is open or shorted.	<Ref. to CVT(diag)-174, DTC P2763 LOCK-UP DUTY SOLENOID CIRCUIT (HIGH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P2764	Lock-Up Duty Solenoid Circuit (Low)	Lock-up duty solenoid is faulty or output signal circuit is shorted.	<Ref. to CVT(diag)-177, DTC P2764 LOCK-UP DUTY SOLENOID CIRCUIT (LOW), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P2769	Lock-Up On/Off Solenoid Circuit (Low)	Lock-up ON/OFF solenoid is faulty or output signal circuit is shorted.	<Ref. to CVT(diag)-180, DTC P2769 LOCK-UP ON/OFF SOLENOID CIRCUIT (LOW), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P2770	Lock-Up On/Off Solenoid Circuit (High)	Lock-up ON/OFF solenoid is faulty or output signal circuit is open or shorted.	<Ref. to CVT(diag)-182, DTC P2770 LOCK-UP ON/OFF SOLENOID CIRCUIT (HIGH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0073	Control Module Communication Bus Off	CAN bus is shorted or communication error.	<Ref. to CVT(diag)-183, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0100	Lost Communication With ECM/PCM “A”	Detected that the engine data has not yet arrived.	<Ref. to CVT(diag)-183, DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Reference
U0122	Lost Communication With Vehicle Dynamics Control Module	Detected that the VDC data has not yet arrived.	<Ref. to CVT(diag)-183, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0140	Lost Communication With Body Control Module	Detected that the body integrated unit data has not yet arrived.	<Ref. to CVT(diag)-183, DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0155	Lost Communication With Instrument Panel Cluster (IPC) Control Module	Detected that the meter data has not yet arrived.	<Ref. to CVT(diag)-183, DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0164	Lost Communication With HVAC Control Module	Detected that the air conditioner data has not yet arrived.	<Ref. to CVT(diag)-183, DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0401	Invalid Data Received From ECM/PCM “A”	Detected abnormality of the engine data.	<Ref. to CVT(diag)-183, DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0416	Invalid Data Received From Vehicle Dynamics Control Module	Detected abnormality of the VDC data.	<Ref. to CVT(diag)-183, DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0422	Invalid Data Received From Body Control Module	Detected abnormality of the body integrated unit data.	<Ref. to CVT(diag)-184, DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0423	Invalid Data Received From Instrument Panel Cluster Control Module	Detected abnormality of the meter data.	<Ref. to CVT(diag)-184, DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0424	Invalid Data Received From HVAC Control Module	Detected abnormality of the air conditioner data.	<Ref. to CVT(diag)-184, DTC U0424 INVALID DATA RECEIVED FROM HVAC CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1235	Lost Communication With EyeSight	Detected that the EyeSight data has not yet arrived.	<Ref. to CVT(diag)-184, DTC U1235 LOST COMMUNICATION WITH EyeSight, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1433	Invalid Data Received From EyeSight	Detected abnormality of the EyeSight data.	<Ref. to CVT(diag)-184, DTC U1433 INVALID DATA RECEIVED FROM EyeSight, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

17.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC P0500 VEHICLE SPEED SENSOR “A”

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-5, DTC P0500 VEHICLE SPEED SENSOR “A”, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

VDC does not operate.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of VDC system using the Subaru Select Monitor.	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Repair the poor contact of connector and harness between VDCCM&H/U and wheel speed sensor.

B: DTC P0601 INTERNAL CONTROL MODULE MEMORY CHECKSUM ERROR

DTC DETECTING CONDITION:

- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-6, DTC P0601 INTERNAL CONTROL MODULE MEMORY CHECKSUM ERROR, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

TCM ROM malfunction

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Perform the Clear Memory Mode using the Subaru Select Monitor. <Ref. to CVT(diag)-27, Clear Memory Mode.> 2) Read the DTC.	Is DTC P0601 displayed?	Replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).> <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>	Current condition is normal. Check for interference from noise, etc.

C: DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR

DTC DETECTING CONDITION:

- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-7, DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

TCM RAM malfunction

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Perform the Clear Memory Mode using the Subaru Select Monitor. <Ref. to CVT(diag)-27, Clear Memory Mode.> 2) Read the DTC.	Is DTC P0604 displayed?	Replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).> <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>	Current condition is normal. Check for interference from noise, etc.

D: DTC P062F INTERNAL CONTROL MODULE EEPROM ERROR

DTC DETECTING CONDITION:

- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-8, DTC P062F INTERNAL CONTROL MODULE EEPROM ERROR, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

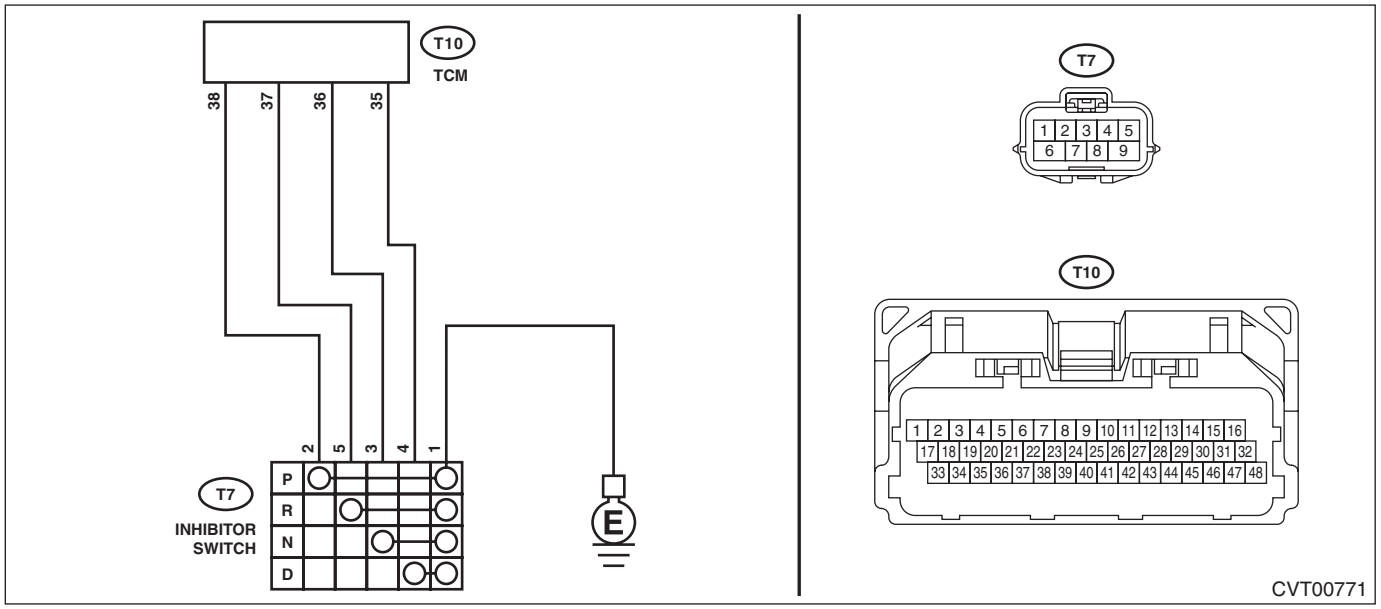
TCM EEPROM malfunction

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Perform the Clear Memory Mode using the Subaru Select Monitor. <Ref. to CVT(diag)-27, Clear Memory Mode.> 2) Read the DTC.	Is DTC P062F displayed?	Replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).> <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>	Current condition is normal. Check for interference from noise, etc.

E: DTC P0705 TRANSMISSION RANGE SENSOR CIRCUIT (PRNDL INPUT)

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-9, DTC P0705 TRANSMISSION RANGE SENSOR CIRCUIT (PRNDL INPUT), Diagnostic Trouble Code (DTC) Detecting Criteria.>



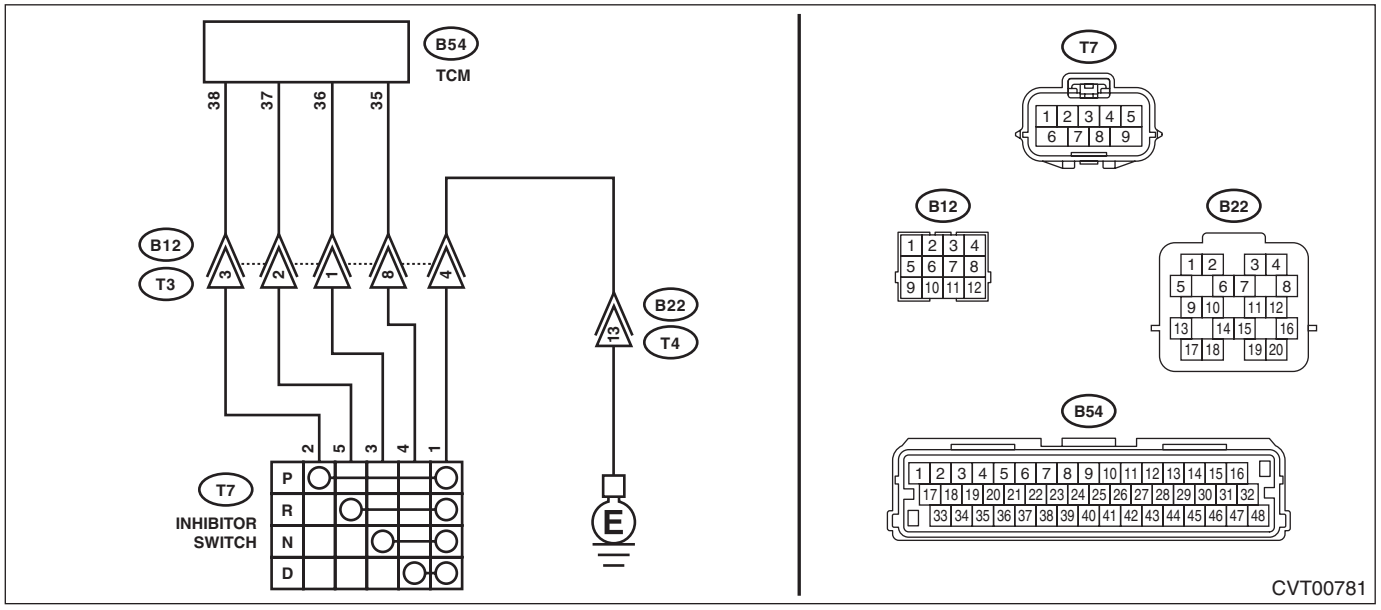
TROUBLE SYMPTOM:

- Shift characteristics are erroneous.
- The range position of the select lever and the position of shift indicator display do not match.

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to ON. 2) Move the select lever to each range, and read the data of «P range», «R Range Signal», «N range» and «D Range Signal» using the Subaru Select Monitor.	Is display “OFF” for the range other than corresponding range?	Go to step **4**.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector of TCM and inhibitor switch. 3) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 38 — Chassis ground:*** ***(T10) No. 37 — Chassis ground:*** ***(T10) No. 36 — Chassis ground:*** ***(T10) No. 35 — Chassis ground:***	Is each resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit of transmission harness.

	Step	Check	Yes	No
3	**CHECK INHIBITOR SWITCH.** Move the select lever to each range, and measure the resistance between inhibitor switch connector terminals. ***Connector & terminal*** ***(T7) No. 2 — (T7) No. 1:*** ***(T7) No. 5 — (T7) No. 1:*** ***(T7) No. 3 — (T7) No. 1:*** ***(T7) No. 4 — (T7) No. 1:***	Is the resistance other than corresponding range 1 MΩ or more?	Go to step **4**.	Replace the inhibitor switch. <Ref. to CVT(TR580)-108, Inhibitor Switch.>
4	**CHECK FOR POOR CONTACT.**	Is there poor contact between TCM, inhibitor switch, transmission ground?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).>

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

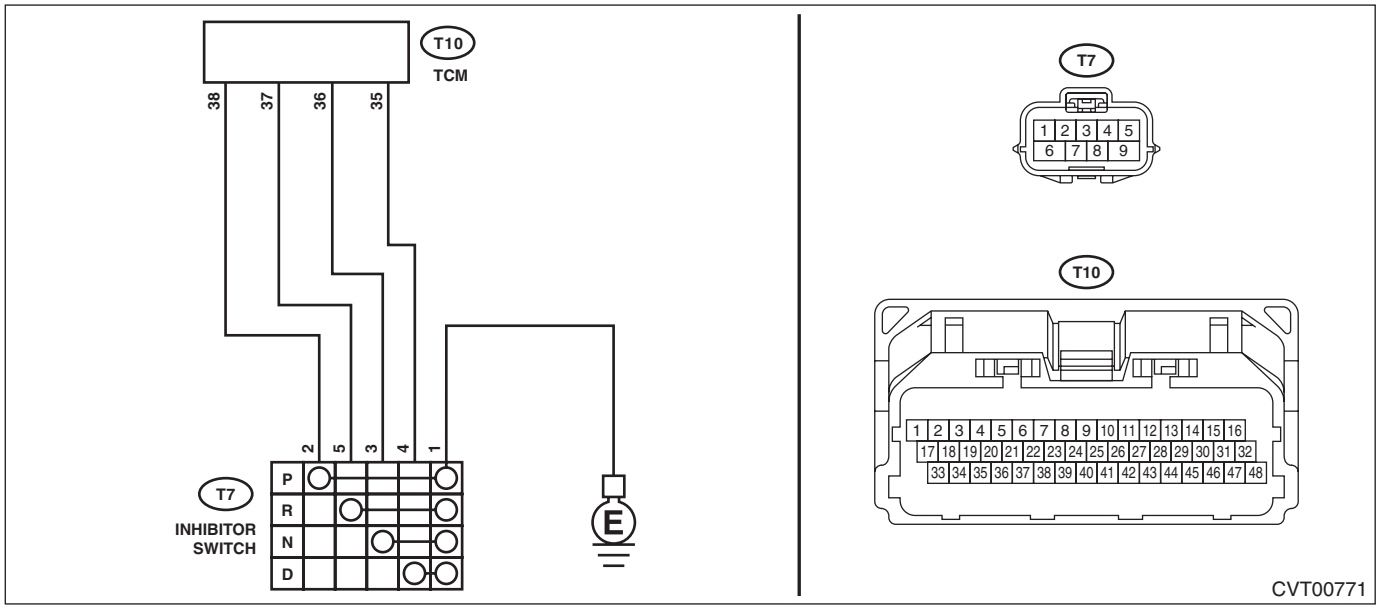
	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to ON. 2) Move the select lever to each range, and read the data of «P range», «R Range Signal», «N range» and «D Range Signal» using the Subaru Select Monitor.	Is display “OFF” for the range other than corresponding range?	Go to step **5**.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 38 — Chassis ground:*** ***(B54) No. 37 — Chassis ground:*** ***(B54) No. 36 — Chassis ground:*** ***(B54) No. 35 — Chassis ground:***	Is each resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit of body harness.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Disconnect the inhibitor switch connector. 2) Measure the resistance between transmission connector and chassis ground. ***Connector & terminal*** ***(T3) No. 3 — Chassis ground:*** ***(T3) No. 2 — Chassis ground:*** ***(T3) No. 1 — Chassis ground:*** ***(T3) No. 8 — Chassis ground:***	Is each resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of transmission harness.
4	**CHECK INHIBITOR SWITCH.** Move the select lever to each range, and measure the resistance between inhibitor switch connector terminals. ***Connector & terminal*** ***(T7) No. 2 — (T7) No. 1:*** ***(T7) No. 5 — (T7) No. 1:*** ***(T7) No. 3 — (T7) No. 1:*** ***(T7) No. 4 — (T7) No. 1:***	Is the resistance other than corresponding range 1 MΩ or more?	Go to step **5**.	Replace the inhibitor switch. <Ref. to CVT(TR690)-102, Inhibitor Switch.>
5	**CHECK FOR POOR CONTACT.**	Is there poor contact between TCM, inhibitor switch, transmission ground?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>

F: DTC P0708 AT RANGE SWITCH NOT INPUTTED

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-10, DTC P0708 AT RANGE SWITCH NOT INPUTTED, Diagnostic Trouble Code (DTC) Detecting Criteria.>



TROUBLE SYMPTOM:

- Shift characteristics are erroneous.
- The range position of the select lever and the position of shift indicator display do not match.

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to ON. 2) Move the select lever to each range, and read the data of «P range», «R Range Signal», «N range» and «D Range Signal» using the Subaru Select Monitor.	Is the display of the corresponding range “ON”?	Go to step **6**.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector of TCM and inhibitor switch. 3) Measure the resistance of the harness between TCM connector and inhibitor switch connector. ***Connector & terminal*** ***(T10) No. 38 — (T7) No. 2:*** ***(T10) No. 37 — (T7) No. 5:*** ***(T10) No. 36 — (T7) No. 3:*** ***(T10) No. 35 — (T7) No. 4:***	Is each resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of transmission harness.
3	**CHECK HARNESS.** Measure the resistance of harness between inhibitor switch connector and transmission ground. ***Connector & terminal*** ***(T7) No. 1 — Transmission ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK INHIBITOR SWITCH.** Move the select lever to each range, and measure the resistance between inhibitor switch connector terminals. ***Connector & terminal*** ***(T7) No. 2 — (T7) No. 1:*** ***(T7) No. 5 — (T7) No. 1:*** ***(T7) No. 3 — (T7) No. 1:*** ***(T7) No. 4 — (T7) No. 1:***	Is the resistance of the corresponding range less than 1 MΩ?	Go to step **5**.	Replace the inhibitor switch. <Ref. to CVT(TR580)-108, Inhibitor Switch.>
5	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between inhibitor switch connector and chassis ground. ***Connector & terminal*** ***(T7) No. 2 (+) — Chassis ground (–):*** ***(T7) No. 5 (+) — Chassis ground (–):*** ***(T7) No. 3 (+) — Chassis ground (–):*** ***(T7) No. 4 (+) — Chassis ground (–):***	Is each voltage less than 1 V?	Go to step **6**.	Repair the harness which outputs 1 V or more.
6	**CHECK FOR POOR CONTACT.**	Is there poor contact between TCM, inhibitor switch, transmission ground?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).>

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to ON. 2) Move the select lever to each range, and read the data of «P range», «R Range Signal», «N range» and «D Range Signal» using the Subaru Select Monitor.	Is the display of the corresponding range “ON”?	Go to step **7**.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance of harness between TCM connector and transmission connector. ***Connector & terminal*** ***(B54) No. 38 — (B12) No. 3:*** ***(B54) No. 37 — (B12) No. 2:*** ***(B54) No. 36 — (B12) No. 1:*** ***(B54) No. 35 — (B12) No. 8:***	Is each resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of body harness.
3	**CHECK HARNESS.** Measure the resistance of harness between inhibitor switch connector and transmission ground. ***Connector & terminal*** ***(T7) No. 1 — Transmission ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness.
4	**CHECK HARNESS.** 1) Disconnect the inhibitor switch connector. 2) Measure the resistance between transmission connector and inhibitor switch connector. ***Connector & terminal*** ***(T3) No. 3 — (T7) No. 2:*** ***(T3) No. 2 — (T7) No. 5:*** ***(T3) No. 1 — (T7) No. 3:*** ***(T3) No. 8 — (T7) No. 4:***	Is each resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of transmission harness.
5	**CHECK INHIBITOR SWITCH.** Move the select lever to each range, and measure the resistance between inhibitor switch connector terminals. ***Connector & terminal*** ***(T7) No. 2 — (T7) No. 1:*** ***(T7) No. 5 — (T7) No. 1:*** ***(T7) No. 3 — (T7) No. 1:*** ***(T7) No. 4 — (T7) No. 1:***	Is the resistance of the corresponding range less than 1 MΩ?	Go to step **6**.	Replace the inhibitor switch. <Ref. to CVT(TR690)-102, Inhibitor Switch.>
6	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between each connector and chassis ground. ***Connector & terminal*** ***Transmission connector (B12 side)*** ***(B12) No. 3 (+) — Chassis ground (–):*** ***(B12) No. 2 (+) — Chassis ground (–):*** ***(B12) No. 1 (+) — Chassis ground (–):*** ***(B12) No. 8 (+) — Chassis ground (–):*** ***Transmission connector (T7 side)*** ***(T7) No. 2 (+) — Chassis ground (–):*** ***(T7) No. 5 (+) — Chassis ground (–):*** ***(T7) No. 3 (+) — Chassis ground (–):*** ***(T7) No. 4 (+) — Chassis ground (–):***	Is each voltage less than 1 V?	Go to step **7**.	Repair the harness which outputs 1 V or more.
7	**CHECK FOR POOR CONTACT.**	Is there poor contact between TCM, inhibitor switch, transmission ground?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>

G: DTC P0711 ATF TEMP. SENSOR CIRCUIT RANGE/PERFORMANCE

DTC DETECTING CONDITION:

- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-11, DTC P0711 ATF TEMP. SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

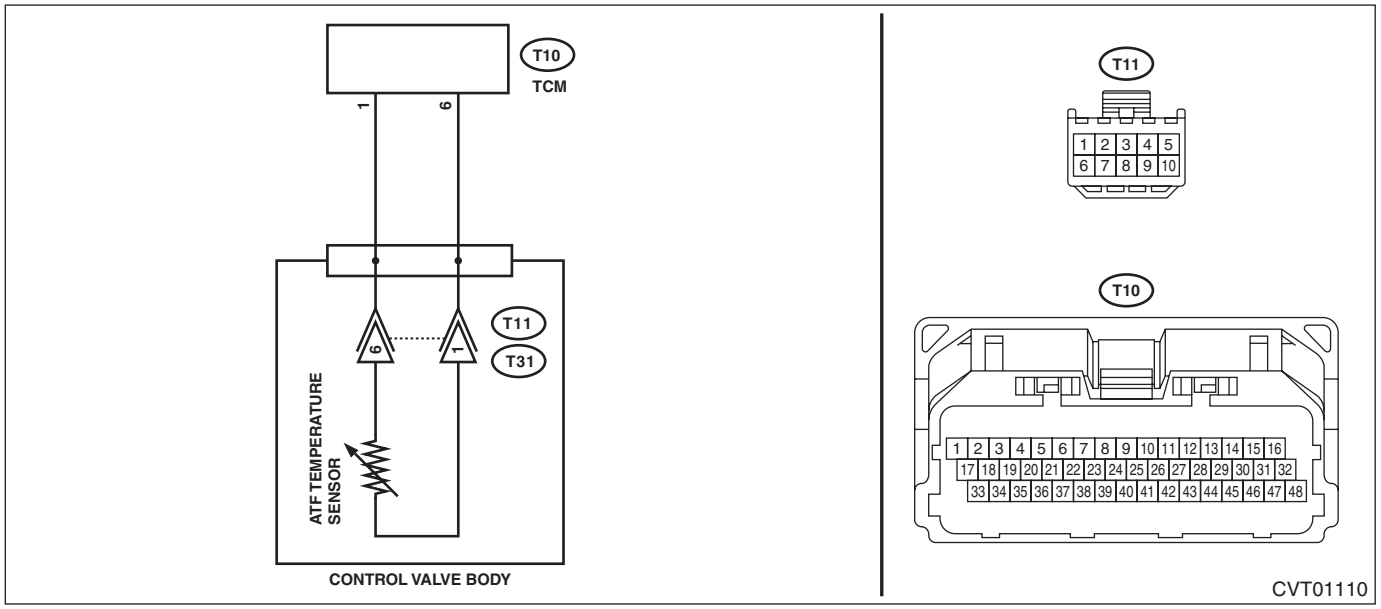
- Excessive shift shock
- Shift characteristics malfunction

NOTE:
For the diagnostic procedure, perform the diagnosis according to DTC P0712 and P0713. <Ref. to CVT(diag)-59, DTC P0712 TRANSMISSION FLUID TEMPERATURE SENSOR CIRCUIT LOW INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CVT(diag)-61, DTC P0713 TRANSMISSION FLUID TEMPERATURE SENSOR CIRCUIT HIGH INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

H: DTC P0712 TRANSMISSION FLUID TEMPERATURE SENSOR CIRCUIT LOW INPUT

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-13, DTC P0712 TRANSMISSION FLUID TEMPERATURE SENSOR CIRCUIT LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>



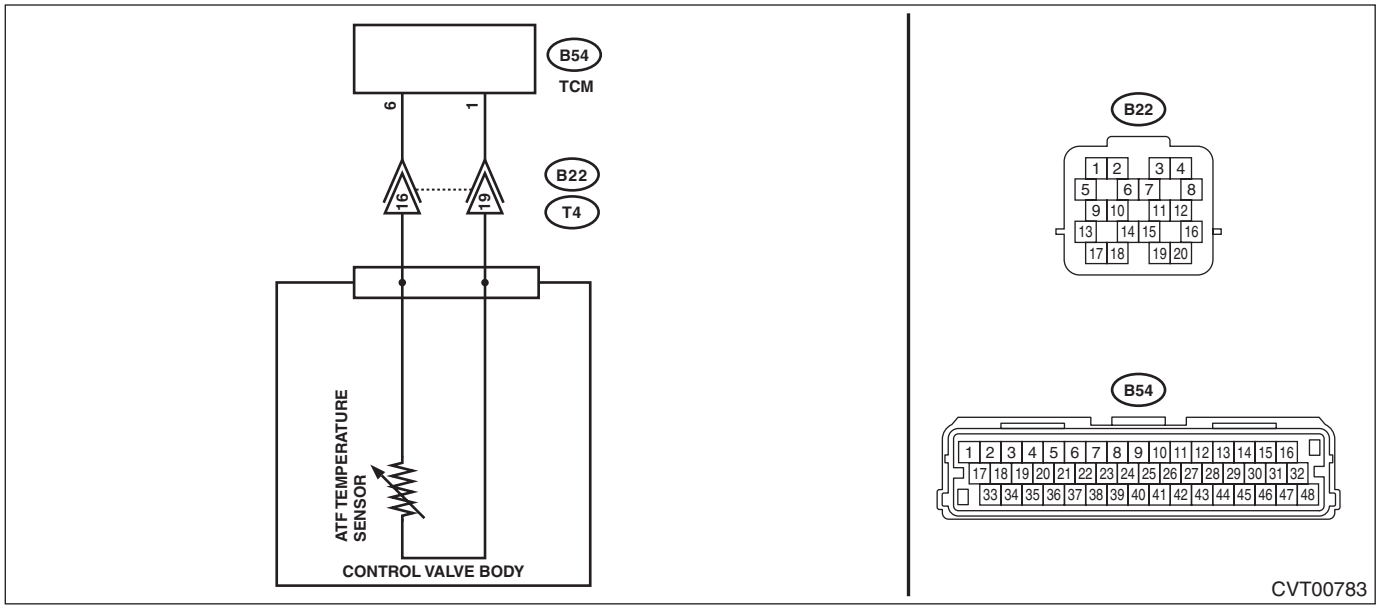
TROUBLE SYMPTOM:

- Excessive shift shock
- Shift characteristics malfunction

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance of harness between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 1 — Chassis ground:*** ***(T10) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Go to step **2**.
2	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission valve cover. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **3**.
3	**CHECK ATF TEMPERATURE SENSOR.** Measure the resistance between TCM connectors. ***Connector & terminal*** ***(T10) No. 1 — No. 6:***	Is resistance as follows? Fluid temperature 0°C → Approx. 6.0 kΩ Fluid temperature 20°C → Approx. 2.5 kΩ Fluid temperature 80°C → Approx. 330 Ω	Replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).>	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>

2. ENGINE TYPE EZ

WIRING DIAGRAM:

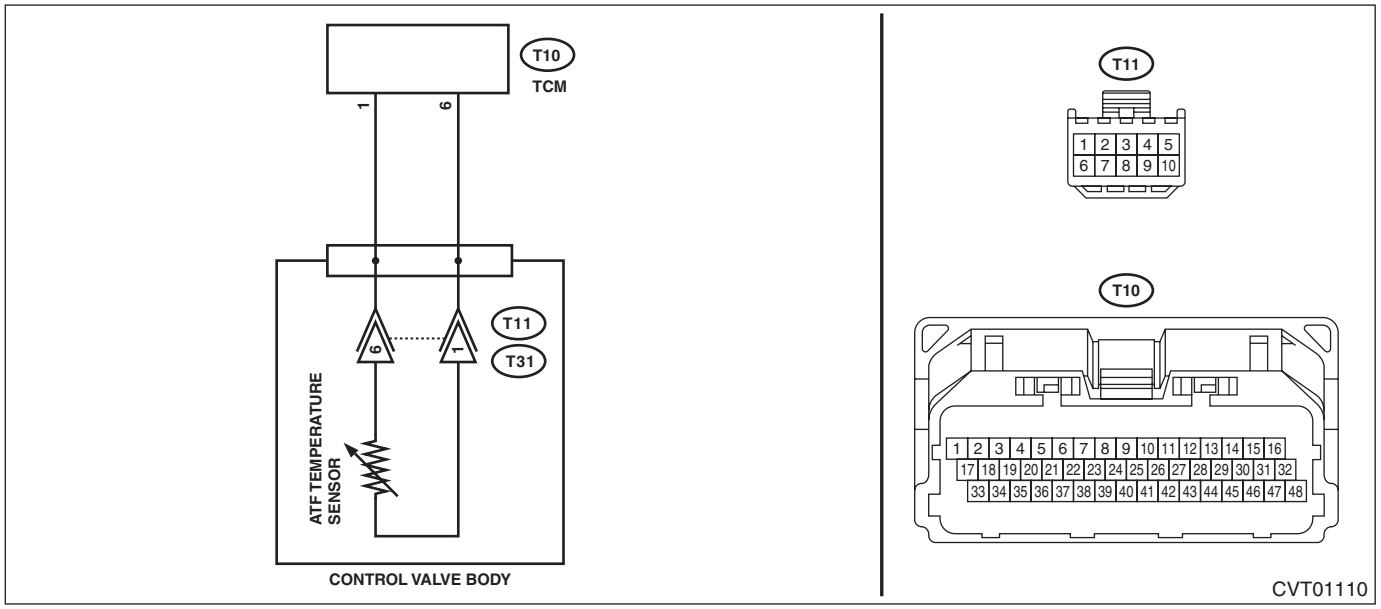
CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance of harness between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 1 — Chassis ground:*** ***(B54) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Go to step **2**.
2	**CHECK HARNESS.** 1) Disconnect the transmission connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 16 — Transmission body:*** ***(T4) No. 19 — Transmission body:***	Is the resistance 1 MΩ or more?	Repair the short circuit of body harness.	Go to step **3**.
3	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **4**.
4	**CHECK ATF TEMPERATURE SENSOR.** Measure the resistance between transmission connector terminals. ***Connector & terminal*** ***(T4) No. 16 — No. 19:***	Is resistance as follows? Fluid temperature 0°C → Approx. 6.2 kΩ Fluid temperature 20°C → Approx. 2.6 kΩ Fluid temperature 80°C → Approx. 370 Ω	Replace the TCM. <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>	Replace the control valve body. <Ref. to CVT(TR690)-123, Control Valve Body.>

I: DTC P0713 TRANSMISSION FLUID TEMPERATURE SENSOR CIRCUIT HIGH INPUT

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-14, DTC P0713 TRANSMISSION FLUID TEMPERATURE SENSOR CIRCUIT HIGH INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>



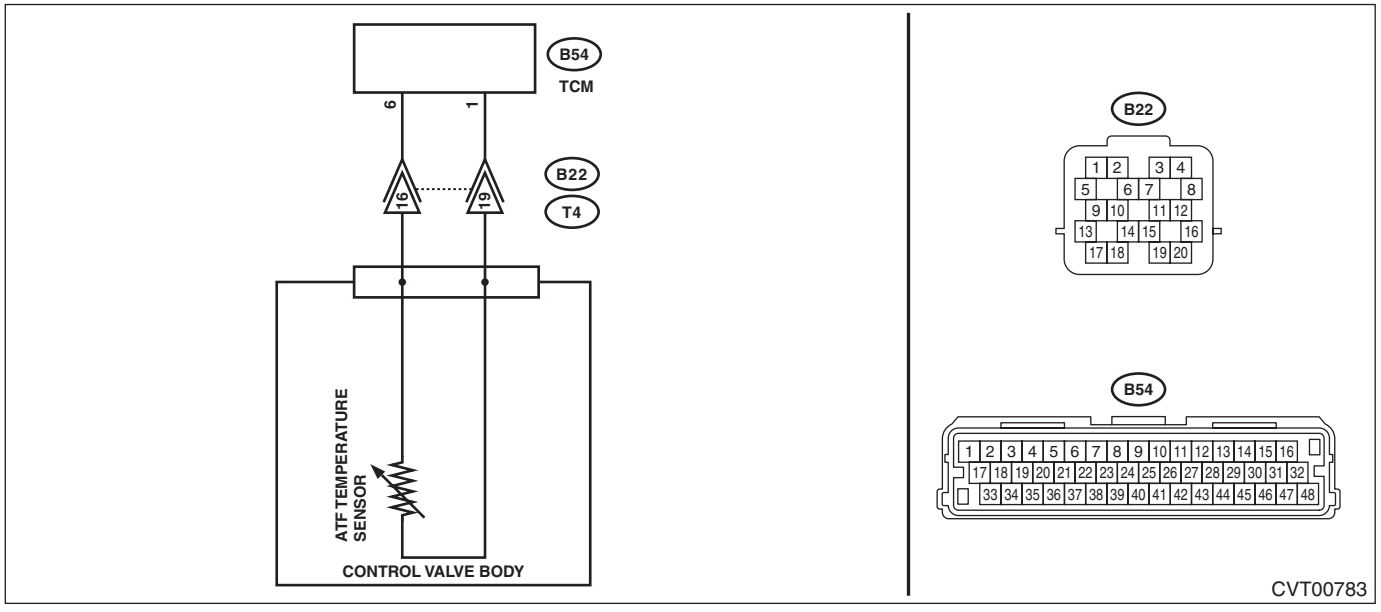
TROUBLE SYMPTOM:

- Excessive shift shock
- Shift characteristics malfunction

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connectors. ***Connector & terminal*** ***(T10) No. 6 (+) — (T10) No. 1 (–):***	Is the voltage 5 V or more?	Repair the short circuit of harness.	Go to step **2**.
2	**CHECK ATF TEMPERATURE SENSOR.** 1) Disconnect the TCM connector. 2) Measure the resistance between TCM connector terminals. ***Connector & terminal*** ***(T10) No. 1 — No. 6:***	Is the resistance 1 MΩ or more?	Repair the open circuit of transmission harness.	Go to step **3**.
3	**CHECK ATF TEMPERATURE SENSOR.** 1) Connect the connector to TCM. 2) Start the engine. 3) Warm up until the ATF temperature exceeds 50°C (122°F). 4) Turn the ignition switch to OFF. 5) Disconnect the TCM connector. 6) Measure the resistance between TCM connector terminals. ***Connector & terminal*** ***(T10) No. 1 — No. 6:***	Is the resistance 650 — 990 Ω?	Go to step **4**.	Go to step **6**.

	Step	Check	Yes	No
4	**CHECK ATF TEMPERATURE SENSOR.** Measure the resistance between TCM connector terminals. ***Connector & terminal*** ***(T10) No. 1 — No. 6:***	Does the resistance value increase gradually while the ATF temperature decreases?	Go to step **5**.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>
5	**CHECK INPUT SIGNAL FOR TCM.** 1) Connect the connector to TCM. 2) Turn the ignition switch to ON. (Do not start engine.) 3) Read the data of «ATF Temp.» using the Subaru Select Monitor.	Does the ATF temperature gradually decrease?	Check for poor contact of the ATF temperature sensor and TCM connector harness, and repair the defective part.	Go to step **6**.
6	**CHECK FOR POOR CONTACT.**	Is there poor contact of ATF temperature sensor circuit?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).>

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connectors. ***Connector & terminal*** ***(B54) No. 6 (+) — (B54) No. 1 (–):***	Is the voltage 5 V or more?	Repair the short circuit of harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 6 — (B22) No. 16:*** ***(B54) No. 1 — (B22) No. 19:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of body harness.
3	**CHECK ATF TEMPERATURE SENSOR.** Measure the resistance between transmission connector terminals. ***Connector & terminal*** ***(T4) No. 16 — No. 19:***	Is the resistance 1 MΩ or more?	Repair the open circuit of transmission harness.	Go to step **4**.
4	**CHECK ATF TEMPERATURE SENSOR.** 1) Connect the connectors to TCM and transmission. 2) Start the engine. 3) Warm up until the ATF temperature exceeds 50°C (122°F). 4) Turn the ignition switch to OFF. 5) Disconnect the transmission connector. 6) Measure the resistance between transmission connector terminals. ***Connector & terminal*** ***(T4) No. 16 — No. 19:***	Is the resistance 730 — 1120 Ω?	Go to step **5**.	Go to step **7**.
5	**CHECK ATF TEMPERATURE SENSOR.** Measure the resistance between transmission connector terminals. ***Connector & terminal*** ***(T4) No. 16 — No. 19:***	Does the resistance value increase gradually while the ATF temperature decreases?	Go to step **6**.	Replace the control valve body. <Ref. to CVT(TR690)-123, Control Valve Body.>
6	**CHECK INPUT SIGNAL FOR TCM.** 1) Connect the connector to transmission. 2) Turn the ignition switch to ON. (Do not start engine.) 3) Read the data of «ATF Temp.» using the Subaru Select Monitor.	Does the ATF temperature gradually decrease?	Check for poor contact of the ATF temperature sensor and transmission connector harness, and repair the defective part.	Go to step **7**.
7	**CHECK FOR POOR CONTACT.**	Is there poor contact of ATF temperature sensor circuit?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>

J: DTC P0716 TORQUE CONVERTER TURBINE SPEED

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-15, DTC P0716 TORQUE CONVERTER TURBINE SPEED, Diagnostic Trouble Code (DTC) Detecting Criteria.>

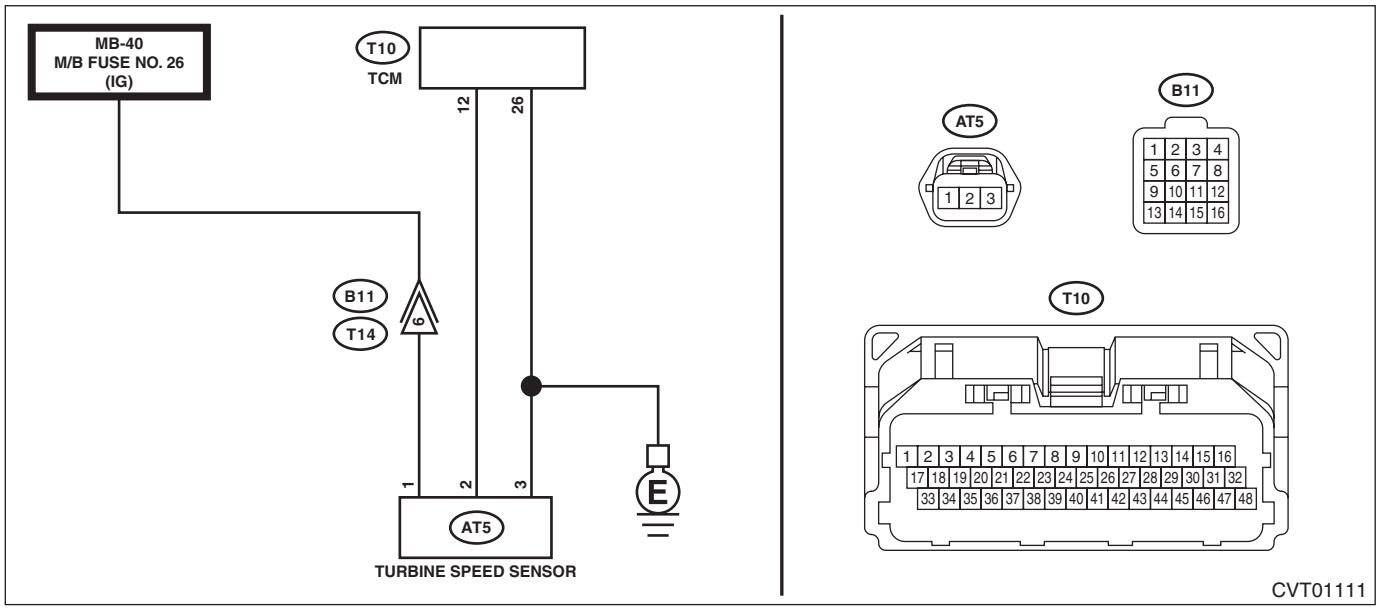
TROUBLE SYMPTOM:

- No lock-up occurs.
- Shock occurs when selecting shift position.
- Shift control malfunction

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0716, is DTC U0122 or U0416 displayed?	Perform the diagnosis according to DTCs other than P0716.	Perform the diagnosis according to DTC P0717. <Ref. to CVT(diag)-65, DTC P0717 INPUT/TURBINE SPEED SENSOR "A" CIRCUIT NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

K: DTC P0717 INPUT/TURBINE SPEED SENSOR "A" CIRCUIT NO SIGNAL

DTC DETECTING CONDITION:



- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-16, DTC P0717 INPUT/TURBINE SPEED SENSOR "A" CIRCUIT NO SIGNAL, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Standing start problems
- Shock occurs when engaging the lockup clutch.
- Shock occurs when selecting shift position.

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

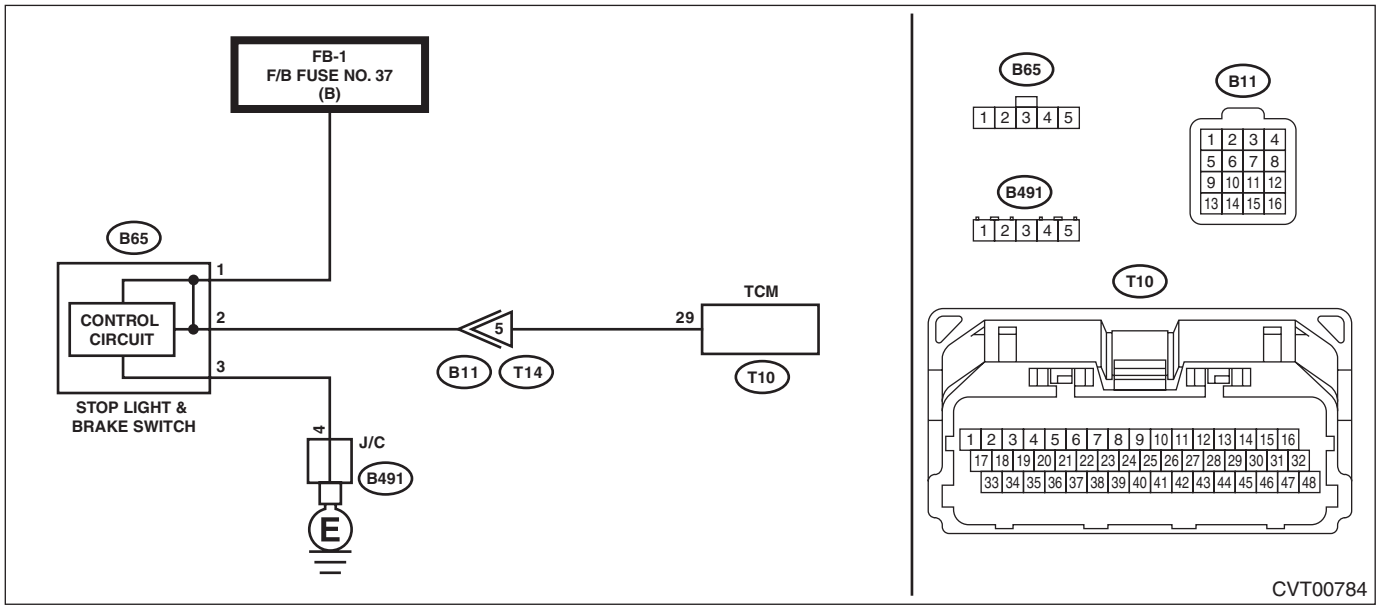
Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the M/B fuse No. 26.	Is the fuse OK?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and turbine speed sensor connector. 3) Measure the resistance between TCM connector and turbine speed sensor connector. ***Connector & terminal*** ***(T10) No. 12 — (AT5) No. 2:*** ***(T10) No. 26 — (AT5) No. 3:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.
3	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 12 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of harness.

	Step	Check	Yes	No
4	**CHECK TRANSMISSION HARNESS.** 1) Install the fuse. 2) Connect the TCM connector. 3) Disconnect the transmission connector. 4) Turn the ignition switch to ON. 5) Measure the voltage between transmission connector terminals. ***Connector & terminal*** ***(B11) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **5**.	Repair the open circuit of harness or poor contact of connector.
5	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to OFF. 2) Connect all connectors. 3) Lift up the vehicle. 4) Start the engine. 5) Read the data of «Turbine Revolution Speed» using the Subaru Select Monitor.	Does the value of «Turbine Revolution Speed» change according to the engine speed?	Current condition is normal. Repair the poor contacts of harnesses of turbine speed sensor and transmission connector.	Go to step **6**.
6	**CHECK TRANSMISSION HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Disconnect the turbine speed sensor connector. 4) Measure the resistance between transmission connector and turbine speed sensor connector. ***Connector & terminal*** ***(T14) No. 6 — (AT5) No. 1:***	Is the resistance less than 1 Ω?	Replace the turbine speed sensor. <Ref. to CVT(TR580)-118, Turbine Speed Sensor.>	Replace the transmission harness.

L: DTC P0719 BRAKE SWITCH CIRCUIT LOW

DTC DETECTING CONDITION:

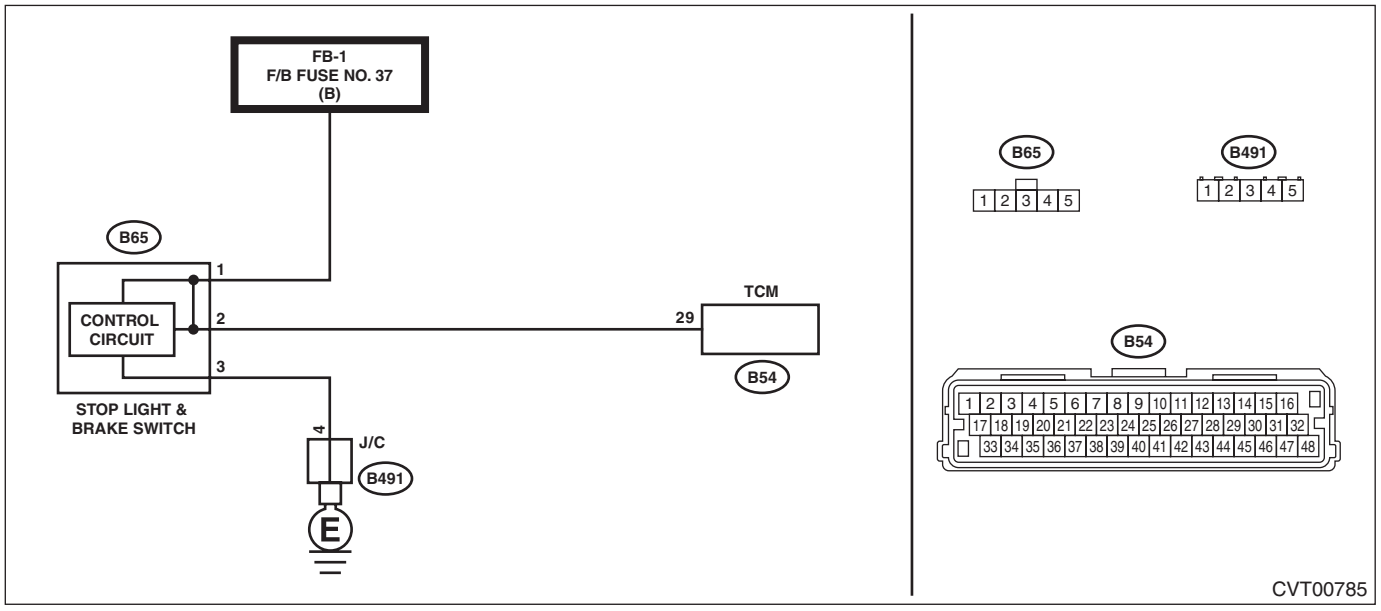
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-17, DTC P0719 BRAKE SWITCH CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>



TROUBLE SYMPTOM:

Gear is not shifted down when climbing a hill or driving down a hill.

WIRING DIAGRAM:



- ENGINE TYPE FB

Stop light system <Ref. to WI-438, Stop Light System.>

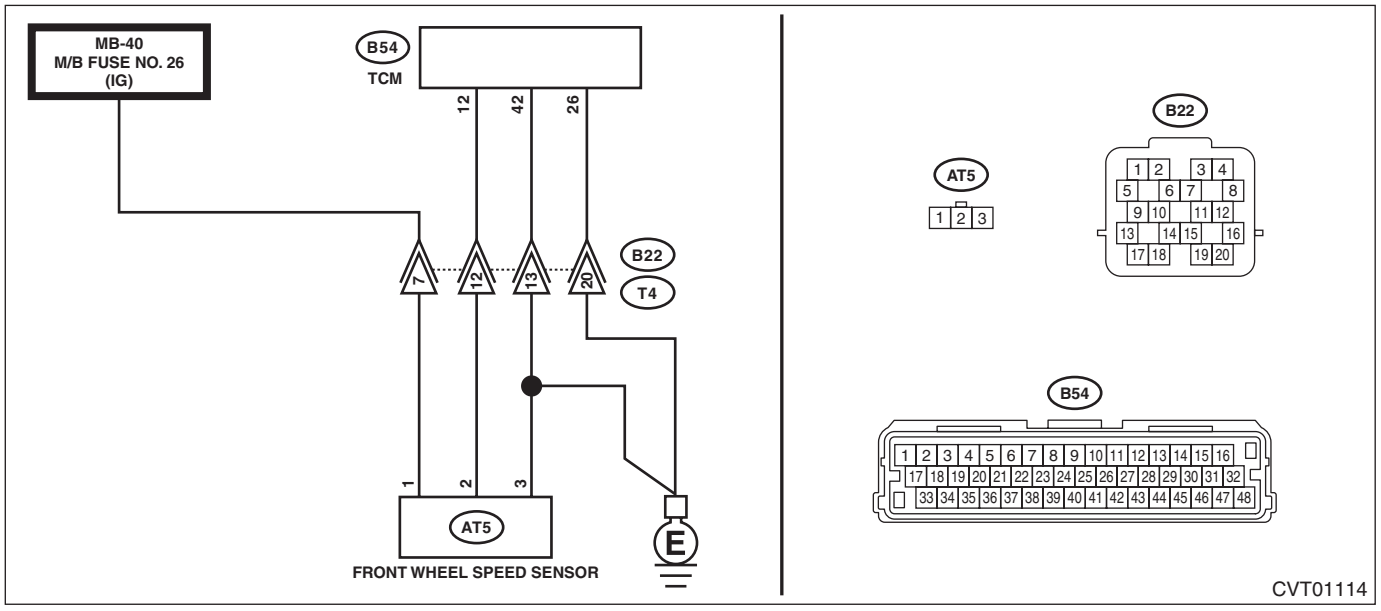
- ENGINE TYPE EZ

Stop light system <Ref. to WI-438, Stop Light System.>

	Step	Check	Yes	No
1	**CHECK FUSE (NO. 37).** 1) Turn the ignition switch to OFF. 2) Remove the fuse (No. 37).	Is the fuse (No. 37) blown out?	Replace the fuse (No. 37). If the new fuse (No. 37) has blown out easily, repair the short circuit of harness between fuse (No. 37) and stop light switch.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and stop light switch connector. 3) Measure the resistance between TCM connector and stop light switch connector. ***Connector & terminal*** ***ENGINE TYPE FB*** ***(T10) No. 29 — (B65) No. 2:*** ***ENGINE TYPE EZ*** ***(B54) No. 29 — (B65) No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.
3	**CHECK HARNESS.** Measure the resistance between TCM connector and fuse (No. 37). ***Connector & terminal*** ***(B65) No. 1 — fuse (No. 37):***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness.
4	**CHECK INPUT SIGNAL FOR TCM.** 1) Install the fuse (No. 37). 2) Connect the TCM and stop light switch connector. 3) Depress the brake pedal. 4) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***ENGINE TYPE FB*** ***(T10) No. 29 (+) — Chassis ground (–):*** ***ENGINE TYPE EZ*** ***(B54) No. 29 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Replace the stop light switch. <Ref. to BR-68, Stop Light Switch.>
5	**CHECK INPUT SIGNAL FOR TCM.** With brake pedal depressed, read the data of «Stop Light Switch» using Subaru Select Monitor.	Is “ON” displayed?	Current condition is normal. Check for poor contact in connectors or harnesses, and repair the defective part.	Go to step **6**.
6	**CHECK FOR POOR CONTACT.**	Is there poor contact of input signal of stop light switch?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).> <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>

M: DTC P0720 OUTPUT SPEED SENSOR CIRCUIT

DTC DETECTING CONDITION:



- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-18, DTC P0720 OUTPUT SPEED SENSOR CIRCUIT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Shock occurs when selecting shift position.
- Shift control malfunction

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the M/B fuse No. 26.	Is the fuse OK?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 12 — (B22) No. 12:*** ***(B54) No. 26 — (B22) No. 20:*** ***(B54) No. 42 — (B22) No. 13:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.
3	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 12 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of harness.

	Step	Check	Yes	No
4	**CHECK TRANSMISSION HARNESS.** 1) Install the fuse. 2) Connect the TCM connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between transmission connector terminals. ***Connector & terminal*** ***(B22) No. 7 (+) — Chassis ground (–):***	Is the voltage approx. 10 — 13 V?	Go to step **5**.	Repair the poor contact of harness or connector.
5	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to OFF. 2) Connect the transmission connector. 3) Lift up the vehicle. 4) Start the engine. 5) Slowly increase the speed to 30 km/h (19 MPH). 6) Read the data of «Front Wheel Speed» using Subaru Select Monitor.	Does the value of «Front Wheel Speed» change according to the engine speed?	Current condition is normal. Repair the poor contacts of harnesses of front wheel speed sensor and transmission connector.	Go to step **6**.
6	**CHECK TRANSMISSION HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Disconnect the front wheel speed sensor connector. 4) Measure the resistance between transmission connector and front wheel speed sensor connector. ***Connector & terminal*** ***(T4) No. 7 — (AT5) No. 1:*** ***(T4) No. 12 — (AT5) No. 2:*** ***(T4) No. 13 — (AT5) No. 3:*** ***(T4) No. 20 — (AT5) No. 3:***	Is the resistance less than 1 Ω?	Replace the front wheel speed sensor. <Ref. to CVT(TR690)-119, Front Wheel Speed Sensor.>	Replace the transmission harness.

N: DTC P0721 OUTPUT SHAFT SPEED SENSOR CIRCUIT RANGE/PERFORMANCE

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-19, DTC P0721 OUTPUT SHAFT SPEED SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

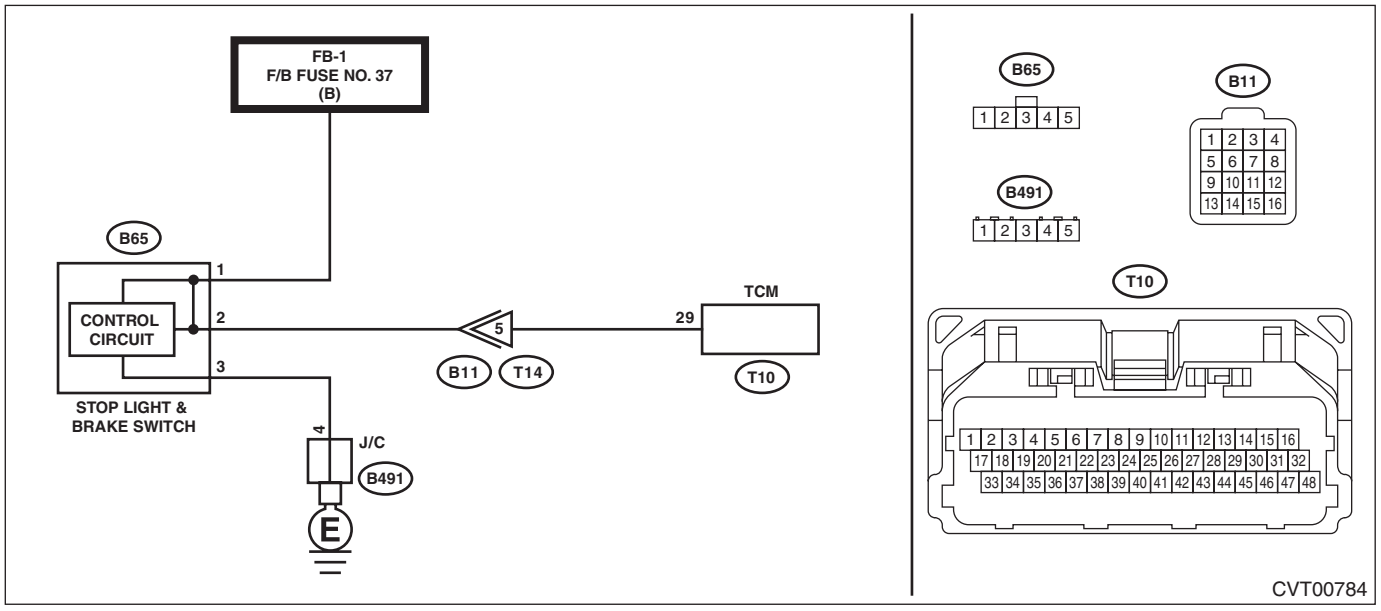
- Acceleration is poor during standing start.
- No lock-up occurs.
- The engine stalls when the vehicle is stopped.
- Shift control malfunction

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0721, is DTC P0500 displayed?	Perform the diagnosis according to DTCs other than P0721.	Perform the diagnosis according to DTC P0720. <Ref. to CVT(diag)-69, DTC P0720 OUTPUT SPEED SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

O: DTC P0724 BRAKE SWITCH CIRCUIT HIGH

DTC DETECTING CONDITION:

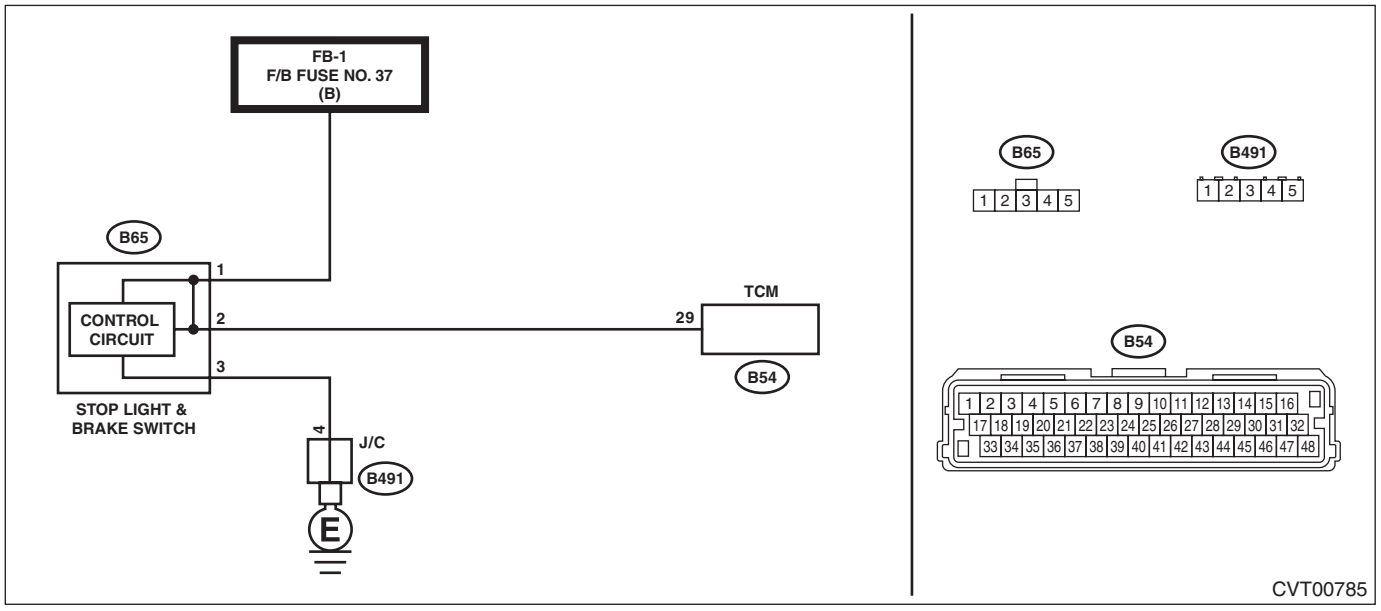
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-20, DTC P0724 BRAKE SWITCH CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>



TROUBLE SYMPTOM:

Gear is not shifted down when climbing a hill or driving down a hill.

WIRING DIAGRAM:



- ENGINE TYPE FB

Stop light system <Ref. to WI-438, Stop Light System.>

- ENGINE TYPE EZ

Stop light system <Ref. to WI-438, Stop Light System.>

	Step	Check	Yes	No
1	**CHECK STOP LIGHT SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the stop light switch connector. 3) Measure the resistance between stop light switch connectors. ***Connector & terminal*** ***(B65) No. 1 — No. 2:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Replace the stop light switch. <Ref. to BR-68, Stop Light Switch.>
2	**CHECK HARNESS.** 1) Disconnect the TCM connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***ENGINE TYPE FB*** ***(T10) No. 29 (+) — Chassis ground (–):*** ***ENGINE TYPE EZ*** ***(B54) No. 29 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the short circuit of harness.	Go to step **3**.
3	**CHECK INPUT SIGNAL FOR TCM.** 1) Connect the TCM and stop light switch connector. 2) Turn the ignition switch to ON. 3) Read the data of «Stop Light Switch» using Subaru Select Monitor.	Is “OFF” displayed?	Current condition is normal. Check for poor contact in connectors or harnesses, and repair the defective part.	Go to step **4**.
4	**CHECK FOR POOR CONTACT.**	Is there poor contact of input signal of stop light switch?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).> <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>

P: DTC P0730 GEARSHIFT CONTROL PERFORMANCE ABNORMAL

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-21, DTC P0730 GEARSHIFT CONTROL PERFORMANCE ABNORMAL, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Acceleration is poor during standing start.
- Shift control malfunction
- Engine speed increases abruptly.

1. ENGINE TYPE FB

	Step	Check	Yes	No
1	**CHECK TRANSMISSION FLUID.** Check the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **2**.	Adjust the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>
2	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR580)-43, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **3**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR580)-43, CONDITION CHECK, CVTF.>
3	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Shift the select lever to “P” range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **4**.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-104, DTC P0841 SECONDARY OIL PRESSURE SENSOR PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
4	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 1.5 — 2.6?	Go to step **5**.	Go to step **6**.
5	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep the constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 0.5 — 0.9?	Go to step **6**.	Replace the transmission assembly. <Ref. to CVT(TR580)-65, Automatic Transmission Assembly.>
6	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the “Inspection Mode”. <Ref. to CVT(diag)-28, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0730 displayed?	Replace the transmission assembly. <Ref. to CVT(TR580)-65, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

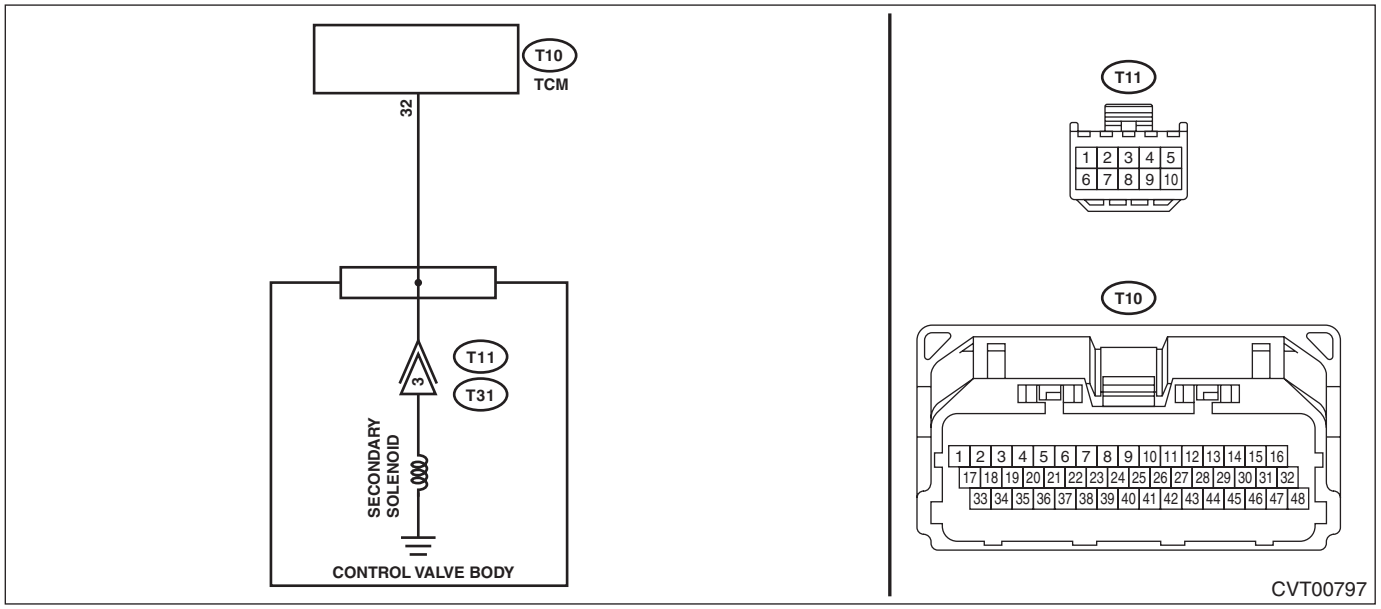
2. ENGINE TYPE EZ

	Step	Check	Yes	No
1	**CHECK TRANSMISSION FLUID.** Check the amount of ATF. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **2**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.>
2	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **3**.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>
3	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Shift the select lever to "P" range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **4**.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-104, DTC P0841 SECONDARY OIL PRESSURE SENSOR PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
4	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 2.0 — 2.4?	Go to step **5**.	Go to step **6**.
5	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep the constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 0.5 — 0.8?	Go to step **6**.	Replace the transmission assembly. <Ref. to CVT(TR690)-58, Automatic Transmission Assembly.>
6	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-28, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0730 displayed?	Replace the transmission assembly. <Ref. to CVT(TR690)-58, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

Q: DTC P0746 PRESSURE CONTROL SOLENOID "A" PERFORMANCE/STUCK OFF

DTC DETECTING CONDITION:

- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-22, DTC P0746 PRESSURE CONTROL SOLENOID "A" PERFORMANCE/STUCK OFF, Diagnostic Trouble Code (DTC) Detecting Criteria.>



TROUBLE SYMPTOM:

- Shift control malfunction
- CVT chain slippage

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0746, is any of the DTCs P0842, P0843, P0962 and P0963 displayed?	Perform the diagnosis according to DTCs other than P0746.	Go to step **2**.
2	**CHECK SECONDARY SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the secondary solenoid. <Ref. to CVT(diag)-33, System Operation Check Mode.>	Does the indication of 0 → 500 mA appear repeatedly during forced operation, and does operating sound emit during indicating 500 mA?	Go to step **5**.	Go to step **3**.
3	**CHECK SECONDARY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 32 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the harness for continuity.	Is the harness normal? (Is it free from defects such as open circuit, power supply-output short or GND-output short circuit, or poor contact?)	Go to step **7**.	Repair the harness.

	Step	Check	Yes	No
5	**CHECK TRANSMISSION FLUID.** 1) Connect the TCM connector. 2) Check the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR580)-43, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **7**.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR580)-43, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Shift the select lever to "P" range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Keep the engine speed at 3,000 rpm. 2) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» higher than step 7 value? Does the value change according to the engine speed, within the range of 1.5 — 2.5 MPa?	Go to step **9**.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>
9	**CHECK TCM INPUT SIGNAL (STALL TEST).** 1) Apply the parking brake. 2) Set the select lever to "D" range. 3) Depress the brake pedal firmly. 4) Slowly open the accelerator fully, and stabilize the engine speed. 5) Read the data of «Actual secondary pressure» using Subaru Select Monitor. **CAUTION:** **Do not perform a stall test for over 5 seconds at a time.**	Is the «Actual secondary pressure» higher than step 8 value? Does the value change according to the engine speed, within the range of 4.5 — 6.0 MPa?	Go to step **10**.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-28, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0746 displayed?	Perform the secondary pressure test. <Ref. to CVT(TR580)-53, Secondary Pressure (Line Pressure) Test.>	Current condition is normal. It is possible that temporary poor contact occurs.

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

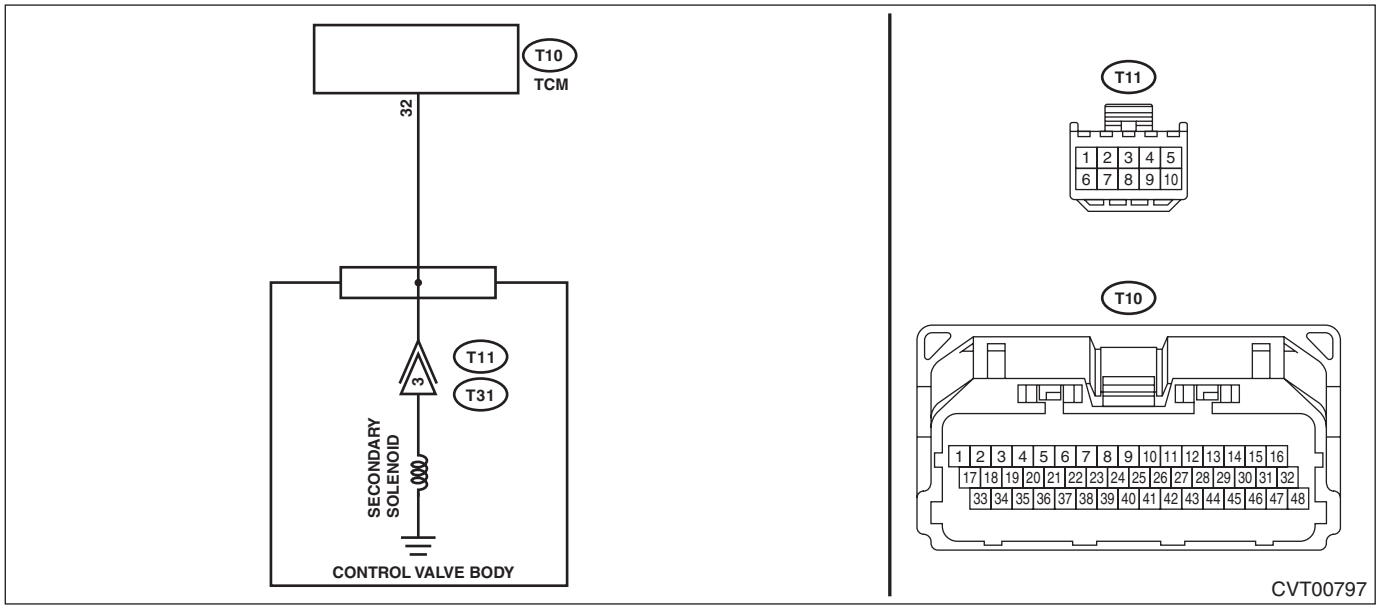
Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0746, is any of the DTCs P0842, P0843, P0962 and P0963 displayed?	Perform the diagnosis according to DTCs other than P0746.	Go to step **2**.
2	**CHECK SECONDARY SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the secondary solenoid. <Ref. to CVT(diag)-33, System Operation Check Mode.>	Does the indication of 0 → 500 mA appear repeatedly during forced operation, and does operating sound emit during indicating 500 mA?	Go to step **5**.	Go to step **3**.
3	**CHECK SECONDARY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the harness for continuity.	Is the harness normal? (Is it free from defects such as open circuit, power supply-output short or GND-output short circuit, or poor contact?)	Go to step **7**.	Repair the harness.
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.>

	Step	Check	Yes	No
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **7**.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Shift the select lever to "P" range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the control valve body. <Ref. to CVT(TR690)-123, Control Valve Body.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Keep the engine speed at 3,000 rpm. 2) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» higher than step 7 value? Does the value change according to the engine speed, within the range of 1.5 — 2.5 MPa?	Go to step **9**.	Replace the control valve body. <Ref. to CVT(TR690)-123, Control Valve Body.>
9	**CHECK TCM INPUT SIGNAL (STALL TEST).** 1) Apply the parking brake. 2) Set the select lever to "D" range. 3) Depress the brake pedal firmly. 4) Slowly open the accelerator fully, and stabilize the engine speed. 5) Read the data of «Actual secondary pressure» using Subaru Select Monitor. **CAUTION:** **Do not perform a stall test for over 5 seconds at a time.**	Is the «Actual secondary pressure» higher than step 8 value? Does the value change according to the engine speed, within the range of 4.5 — 6.0 MPa?	Go to step **10**.	Replace the control valve body. <Ref. to CVT(TR690)-123, Control Valve Body.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-28, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0746 displayed?	Perform the secondary pressure test. <Ref. to CVT(TR690)-51, Secondary Pressure (Line Pressure) Test.>	Current condition is normal. It is possible that temporary poor contact occurs.

R: DTC P0747 PRESSURE CONTROL SOLENOID "A" STUCK ON

DTC DETECTING CONDITION:

- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-25, DTC P0747 PRESSURE CONTROL SOLENOID "A" STUCK ON, Diagnostic Trouble Code (DTC) Detecting Criteria.>



TROUBLE SYMPTOM:

- Acceleration is poor during standing start.
- Shift control malfunction

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0747, is any of the DTCs P0842, P0843, P0962 and P0963 displayed?	Perform the diagnosis according to DTCs other than P0747.	Go to step **2**.
2	**CHECK SECONDARY SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the secondary solenoid. <Ref. to CVT(diag)-33, System Operation Check Mode.>	Does the indication of 0 → 500 mA appear repeatedly during forced operation, and does operating sound emit during indicating 500 mA?	Go to step **5**.	Go to step **3**.
3	**CHECK SECONDARY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 32 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the harness for continuity.	Is the harness normal? (Is it free from defects such as open circuit, power supply-output short or GND-output short circuit, or poor contact?)	Go to step **7**.	Repair the harness.

	Step	Check	Yes	No
5	**CHECK TRANSMISSION FLUID.** 1) Connect the TCM connector. 2) Check the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR580)-43, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **7**.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR580)-43, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Shift the select lever to "P" range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Keep the engine speed at 3,000 rpm. 2) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» higher than step 7 value? Does the value change according to the engine speed, within the range of 1.5 — 2.5 MPa?	Go to step **9**.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>
9	**CHECK TCM INPUT SIGNAL (STALL TEST).** 1) Apply the parking brake. 2) Set the select lever to "D" range. 3) Depress the brake pedal firmly. 4) Slowly open the accelerator fully, and stabilize the engine speed. 5) Read the data of «Actual secondary pressure» using Subaru Select Monitor. **CAUTION:** **Do not perform a stall test for over 5 seconds at a time.**	Is the «Actual secondary pressure» higher than step 8 value? Does the value change according to the engine speed, within the range of 4.5 — 6.0 MPa?	Go to step **10**.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-28, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0747 displayed?	Perform the secondary pressure test. <Ref. to CVT(TR580)-53, Secondary Pressure (Line Pressure) Test.>	Current condition is normal. It is possible that temporary poor contact occurs.

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

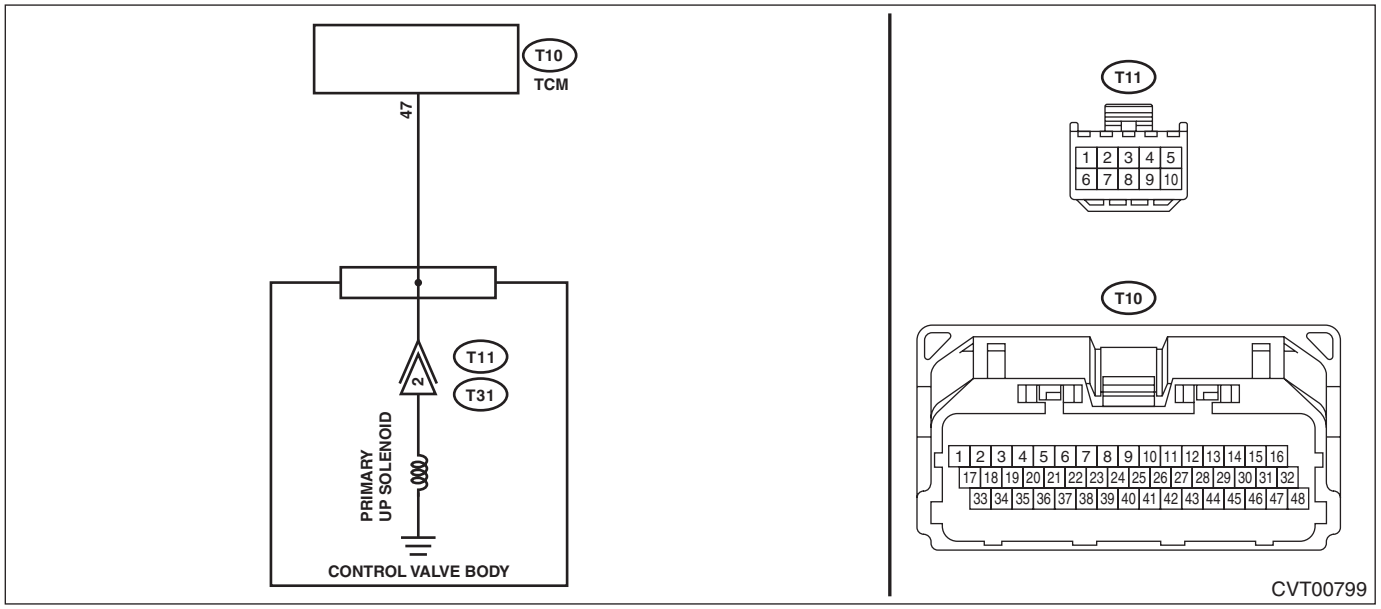
Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0747, is any of the DTCs P0842, P0843, P0962 and P0963 displayed?	Perform the diagnosis according to DTCs other than P0747.	Go to step **2**.
2	**CHECK SECONDARY SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the secondary solenoid. <Ref. to CVT(diag)-33, System Operation Check Mode.>	Does the indication of 0 → 500 mA appear repeatedly during forced operation, and does operating sound emit during indicating 500 mA?	Go to step **5**.	Go to step **3**.
3	**CHECK SECONDARY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the harness for continuity.	Is the harness normal? (Is it free from defects such as open circuit, power supply-output short or GND-output short circuit, or poor contact?)	Go to step **7**.	Repair the harness.
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.>

	Step	Check	Yes	No
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **7**.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Shift the select lever to "P" range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the control valve body. <Ref. to CVT(TR690)-123, Control Valve Body.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Keep the engine speed at 3,000 rpm. 2) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» higher than step 7 value? Does the value change according to the engine speed, within the range of 1.5 — 2.5 MPa?	Go to step **9**.	Replace the control valve body. <Ref. to CVT(TR690)-123, Control Valve Body.>
9	**CHECK TCM INPUT SIGNAL (STALL TEST).** 1) Apply the parking brake. 2) Set the select lever to "D" range. 3) Depress the brake pedal firmly. 4) Slowly open the accelerator fully, and stabilize the engine speed. 5) Read the data of «Actual secondary pressure» using Subaru Select Monitor. **CAUTION:** **Do not perform a stall test for over 5 seconds at a time.**	Is the «Actual secondary pressure» higher than step 8 value? Does the value change according to the engine speed, within the range of 4.5 — 6.0 MPa?	Go to step **10**.	Replace the control valve body. <Ref. to CVT(TR690)-123, Control Valve Body.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-28, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0747 displayed?	Perform the secondary pressure test. <Ref. to CVT(TR690)-51, Secondary Pressure (Line Pressure) Test.>	Current condition is normal. It is possible that temporary poor contact occurs.

S: DTC P0751 SHIFT SOLENOID "A" PERFORMANCE/STUCK OFF

DTC DETECTING CONDITION:

- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-28, DTC P0751 SHIFT SOLENOID "A" PERFORMANCE/ STUCK OFF, Diagnostic Trouble Code (DTC) Detecting Criteria.>



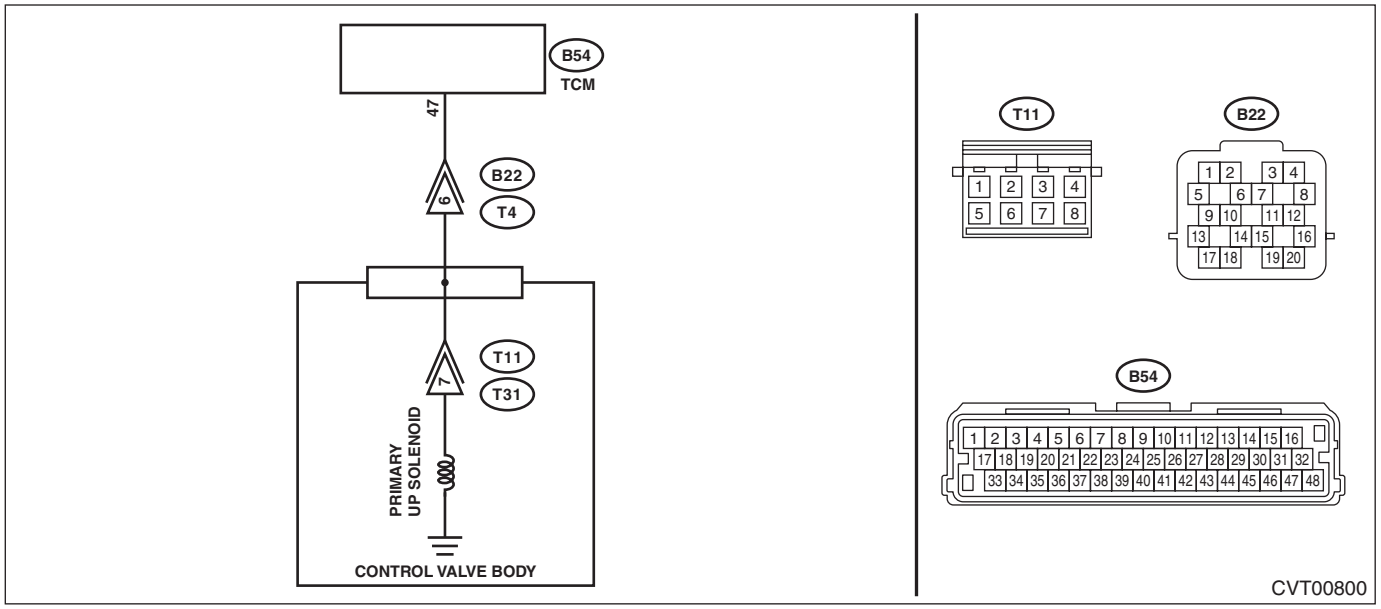
TROUBLE SYMPTOM:

- Shift control malfunction
- Engine speed increases abruptly.

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0751, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0751.	Go to step **2**.
2	**CHECK PRIMARY UP SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the primary UP solenoid. <Ref. to CVT(diag)-33, System Operation Check Mode.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK PRIMARY UP SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 47 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the harness for continuity.	Is the harness normal? (Is it free from defects such as open circuit, power supply-output short or GND-output short circuit, or poor contact?)	Go to step **7**.	Repair the harness.

	Step	Check	Yes	No
5	**CHECK TRANSMISSION FLUID.** 1) Connect the TCM connector. 2) Check the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR580)-43, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **7**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR580)-43, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Shift the select lever to “P” range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the transmission assembly. <Ref. to CVT(TR580)-65, Automatic Transmission Assembly.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 1.5 — 2.6?	Go to step **9**.	Replace the transmission assembly. <Ref. to CVT(TR580)-65, Automatic Transmission Assembly.>
9	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep the constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 0.5 — 0.9?	Go to step **10**.	Replace the transmission assembly. <Ref. to CVT(TR580)-65, Automatic Transmission Assembly.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the “Inspection Mode”. <Ref. to CVT(diag)-28, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0751 displayed?	Replace the transmission assembly. <Ref. to CVT(TR580)-65, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

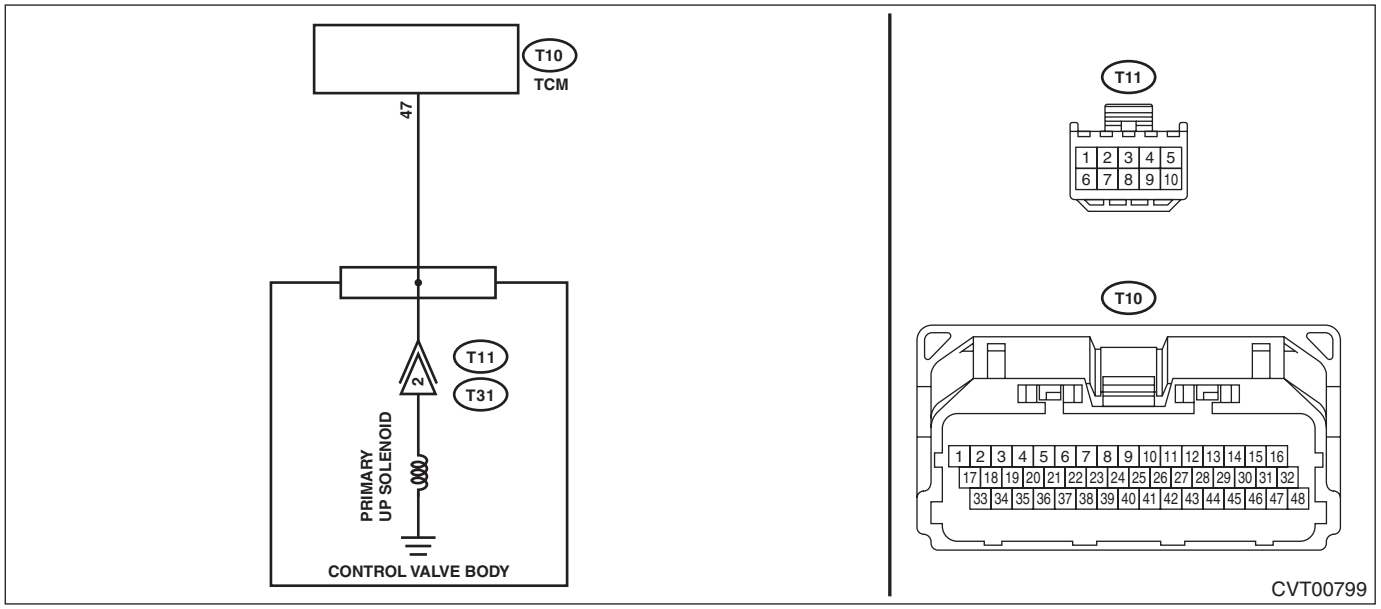
Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0751, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0751.	Go to step **2**.
2	**CHECK PRIMARY UP SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the primary UP solenoid. <Ref. to CVT(diag)-33, System Operation Check Mode.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK PRIMARY UP SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 6 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the harness for continuity.	Is the harness normal? (Is it free from defects such as open circuit, power supply-output short or GND-output short circuit, or poor contact?)	Go to step **7**.	Repair the harness.
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.>

	Step	Check	Yes	No
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **7**.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Shift the select lever to "P" range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the transmission assembly. <Ref. to CVT(TR690)-58, Automatic Transmission Assembly.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 2.0 — 2.4?	Go to step **9**.	Replace the transmission assembly. <Ref. to CVT(TR690)-58, Automatic Transmission Assembly.>
9	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep the constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 0.5 — 0.8?	Go to step **10**.	Replace the transmission assembly. <Ref. to CVT(TR690)-58, Automatic Transmission Assembly.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-28, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0751 displayed?	Replace the transmission assembly. <Ref. to CVT(TR690)-58, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

T: DTC P0752 SHIFT SOLENOID "A" STUCK ON

DTC DETECTING CONDITION:

- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-30, DTC P0752 SHIFT SOLENOID "A" STUCK ON, Diagnostic Trouble Code (DTC) Detecting Criteria.>



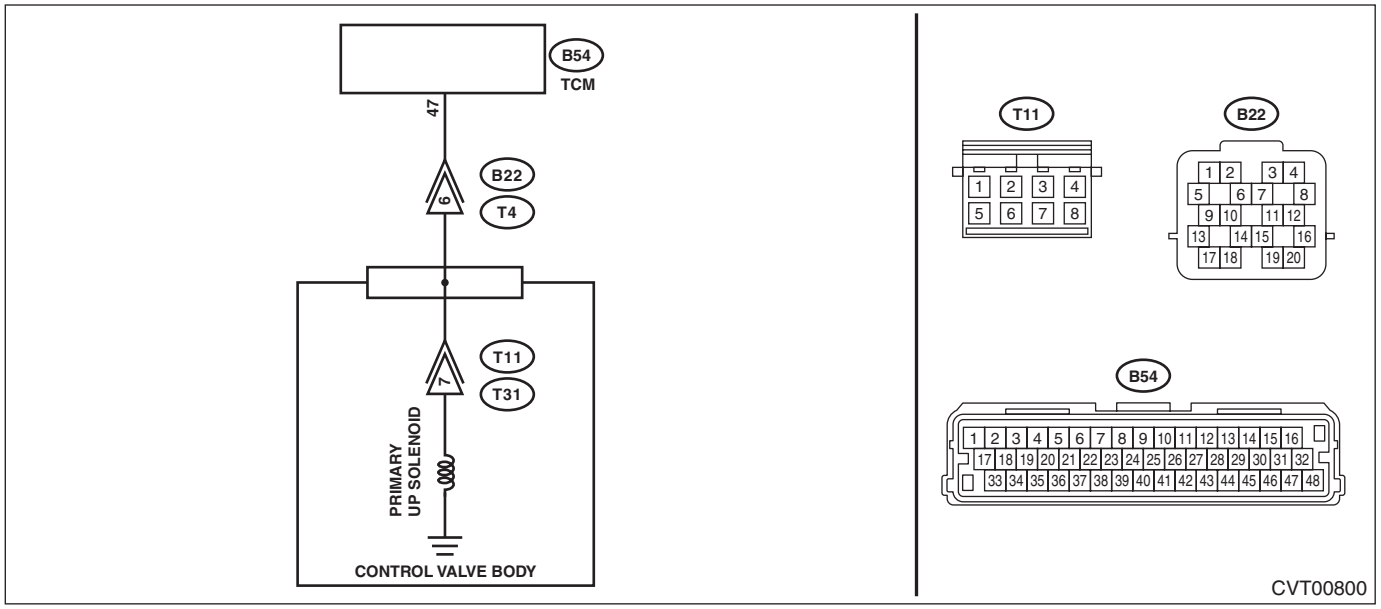
TROUBLE SYMPTOM:

- Acceleration is poor during standing start.
- Shift control malfunction

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0752, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0752.	Go to step **2**.
2	**CHECK PRIMARY UP SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the primary UP solenoid. <Ref. to CVT(diag)-33, System Operation Check Mode.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK PRIMARY UP SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 47 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the harness for continuity.	Is the harness normal? (Is it free from defects such as open circuit, power supply-output short or GND-output short circuit, or poor contact?)	Go to step **7**.	Repair the harness.

	Step	Check	Yes	No
5	**CHECK TRANSMISSION FLUID.** 1) Connect the TCM connector. 2) Check the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR580)-43, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **7**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR580)-43, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Shift the select lever to “P” range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the transmission assembly. <Ref. to CVT(TR580)-65, Automatic Transmission Assembly.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 1.5 — 2.6?	Go to step **9**.	Replace the transmission assembly. <Ref. to CVT(TR580)-65, Automatic Transmission Assembly.>
9	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep the constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 0.5 — 0.9?	Go to step **10**.	Replace the transmission assembly. <Ref. to CVT(TR580)-65, Automatic Transmission Assembly.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the “Inspection Mode”. <Ref. to CVT(diag)-28, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0752 displayed?	Replace the transmission assembly. <Ref. to CVT(TR580)-65, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

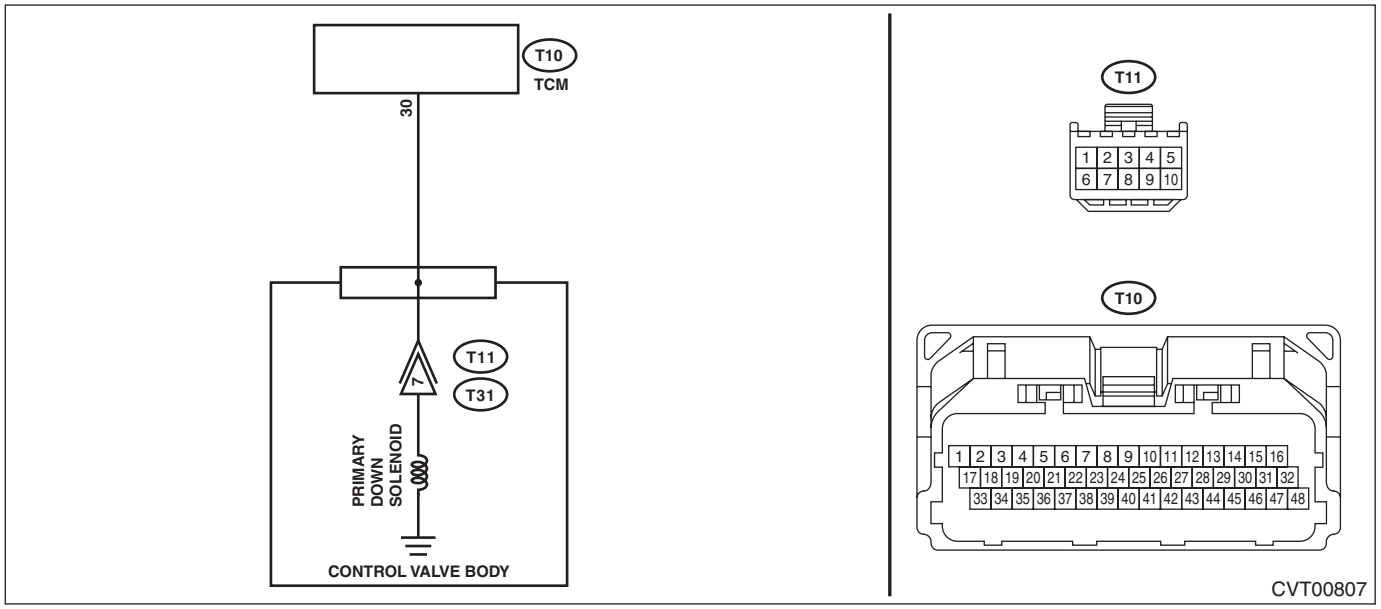
Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0752, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0752.	Go to step **2**.
2	**CHECK PRIMARY UP SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the primary UP solenoid. <Ref. to CVT(diag)-33, System Operation Check Mode.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK PRIMARY UP SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 6 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the harness for continuity.	Is the harness normal? (Is it free from defects such as open circuit, power supply-output short or GND-output short circuit, or poor contact?)	Go to step **7**.	Repair the harness.
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.>

	Step	Check	Yes	No
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **7**.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Shift the select lever to "P" range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the transmission assembly. <Ref. to CVT(TR690)-58, Automatic Transmission Assembly.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 2.0 — 2.4?	Go to step **9**.	Replace the transmission assembly. <Ref. to CVT(TR690)-58, Automatic Transmission Assembly.>
9	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep the constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 0.5 — 0.8?	Go to step **10**.	Replace the transmission assembly. <Ref. to CVT(TR690)-58, Automatic Transmission Assembly.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-28, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0752 displayed?	Replace the transmission assembly. <Ref. to CVT(TR690)-58, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

U: DTC P0756 SHIFT SOLENOID "B" PERFORMANCE/STUCK OFF

DTC DETECTING CONDITION:

- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-31, DTC P0756 SHIFT SOLENOID "B" PERFORMANCE/ STUCK OFF, Diagnostic Trouble Code (DTC) Detecting Criteria.>



TROUBLE SYMPTOM:

- Acceleration is poor during standing start.
- Shift control malfunction

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0756, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0756.	Go to step **2**.
2	**CHECK PRIMARY DOWN SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the primary DOWN solenoid. <Ref. to CVT(diag)-33, System Operation Check Mode.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK PRIMARY DOWN SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 30 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the harness for continuity.	Is the harness normal? (Is it free from defects such as open circuit, power supply-output short or GND-output short circuit, or poor contact?)	Go to step **7**.	Repair the harness.

	Step	Check	Yes	No
5	**CHECK TRANSMISSION FLUID.** 1) Connect the TCM connector. 2) Check the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR580)-43, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **7**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR580)-43, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Shift the select lever to “P” range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the transmission assembly. <Ref. to CVT(TR580)-65, Automatic Transmission Assembly.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 1.5 — 2.6?	Go to step **9**.	Replace the transmission assembly. <Ref. to CVT(TR580)-65, Automatic Transmission Assembly.>
9	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep the constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 0.5 — 0.9?	Go to step **10**.	Replace the transmission assembly. <Ref. to CVT(TR580)-65, Automatic Transmission Assembly.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the “Inspection Mode”. <Ref. to CVT(diag)-28, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0756 displayed?	Replace the transmission assembly. <Ref. to CVT(TR580)-65, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

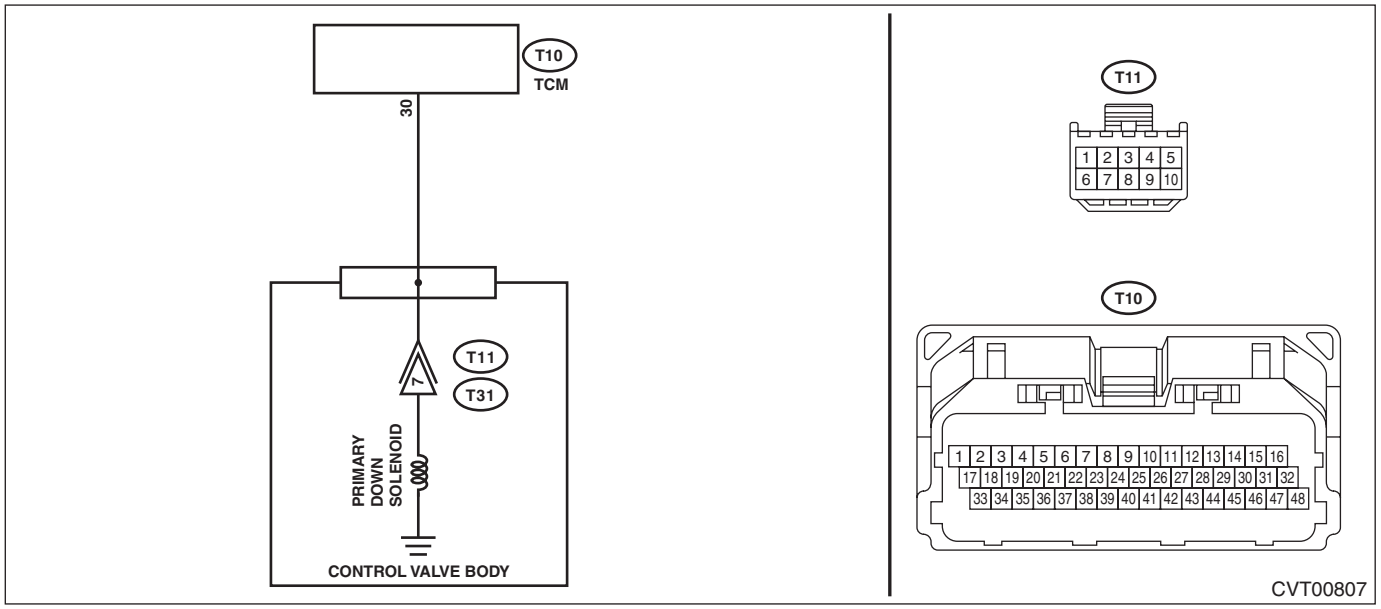
Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0756, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0756.	Go to step **2**.
2	**CHECK PRIMARY DOWN SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the primary DOWN solenoid. <Ref. to CVT(diag)-33, System Operation Check Mode.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK PRIMARY DOWN SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 1 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the harness for continuity.	Is the harness normal? (Is it free from defects such as open circuit, power supply-output short or GND-output short circuit, or poor contact?)	Go to step **7**.	Repair the harness.
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.>

	Step	Check	Yes	No
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **7**.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Shift the select lever to "P" range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the transmission assembly. <Ref. to CVT(TR690)-58, Automatic Transmission Assembly.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 2.0 — 2.4?	Go to step **9**.	Replace the transmission assembly. <Ref. to CVT(TR690)-58, Automatic Transmission Assembly.>
9	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep the constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 0.5 — 0.8?	Go to step **10**.	Replace the transmission assembly. <Ref. to CVT(TR690)-58, Automatic Transmission Assembly.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-28, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0756 displayed?	Replace the transmission assembly. <Ref. to CVT(TR690)-58, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

V: DTC P0757 SHIFT SOLENOID "B" STUCK ON

DTC DETECTING CONDITION:

- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-33, DTC P0757 SHIFT SOLENOID "B" STUCK ON, Diagnostic Trouble Code (DTC) Detecting Criteria.>



TROUBLE SYMPTOM:

- Vibration occurs at shift change.
- Shift control malfunction

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0757, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0757.	Go to step **2**.
2	**CHECK PRIMARY DOWN SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the primary DOWN solenoid. <Ref. to CVT(diag)-33, System Operation Check Mode.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK PRIMARY DOWN SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 30 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the harness for continuity.	Is the harness normal? (Is it free from defects such as open circuit, power supply-output short or GND-output short circuit, or poor contact?)	Go to step **7**.	Repair the harness.

	Step	Check	Yes	No
5	**CHECK TRANSMISSION FLUID.** 1) Connect the TCM connector. 2) Check the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR580)-43, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **7**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR580)-43, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Shift the select lever to “P” range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the transmission assembly. <Ref. to CVT(TR580)-65, Automatic Transmission Assembly.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 1.5 — 2.6?	Go to step **9**.	Replace the transmission assembly. <Ref. to CVT(TR580)-65, Automatic Transmission Assembly.>
9	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep the constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 0.5 — 0.9?	Go to step **10**.	Replace the transmission assembly. <Ref. to CVT(TR580)-65, Automatic Transmission Assembly.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the “Inspection Mode”. <Ref. to CVT(diag)-28, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0757 displayed?	Replace the transmission assembly. <Ref. to CVT(TR580)-65, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

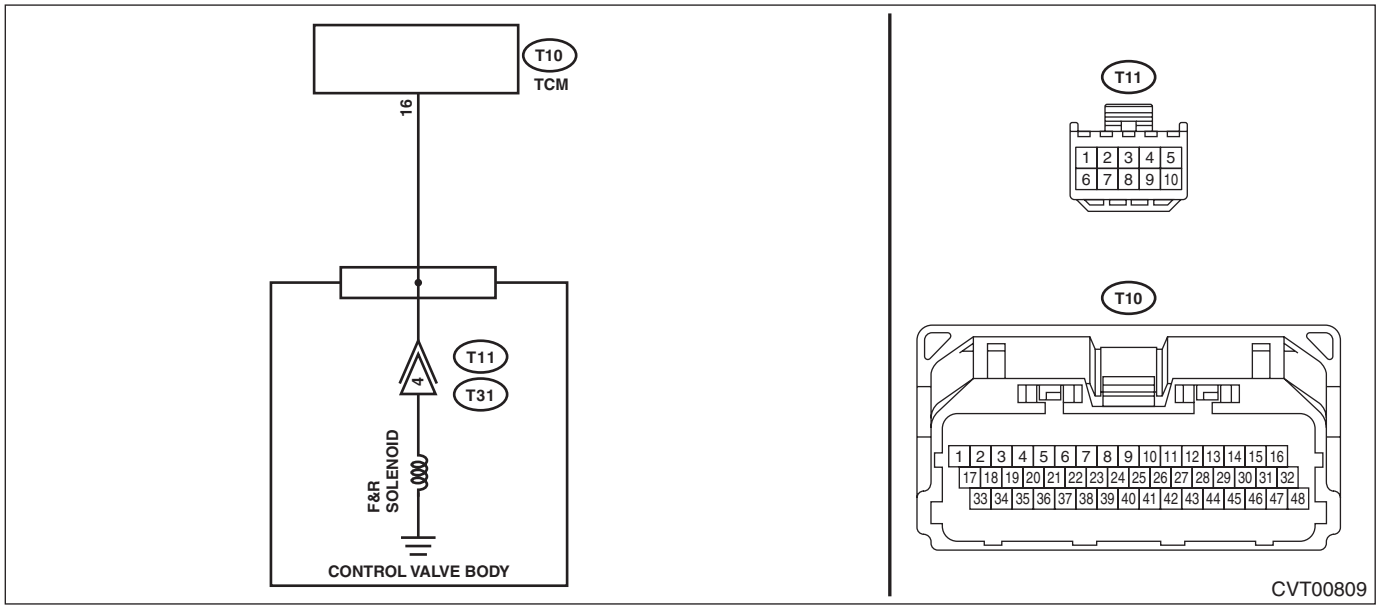
Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0757, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0757.	Go to step **2**.
2	**CHECK PRIMARY DOWN SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the primary DOWN solenoid. <Ref. to CVT(diag)-33, System Operation Check Mode.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK PRIMARY DOWN SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 1 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the harness for continuity.	Is the harness normal? (Is it free from defects such as open circuit, power supply-output short or GND-output short circuit, or poor contact?)	Go to step **7**.	Repair the harness.
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.>

	Step	Check	Yes	No
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **7**.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Shift the select lever to "P" range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the transmission assembly. <Ref. to CVT(TR690)-58, Automatic Transmission Assembly.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 2.0 — 2.4?	Go to step **9**.	Replace the transmission assembly. <Ref. to CVT(TR690)-58, Automatic Transmission Assembly.>
9	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep the constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 0.5 — 0.8?	Go to step **10**.	Replace the transmission assembly. <Ref. to CVT(TR690)-58, Automatic Transmission Assembly.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-28, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0757 displayed?	Replace the transmission assembly. <Ref. to CVT(TR690)-58, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

W: DTC P0776 PRESSURE CONTROL SOLENOID "B" PERFORMANCE/STUCK OFF

DTC DETECTING CONDITION:

- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-35, DTC P0776 PRESSURE CONTROL SOLENOID "B" PERFORMANCE/STUCK OFF, Diagnostic Trouble Code (DTC) Detecting Criteria.>



TROUBLE SYMPTOM:

- Engine speed increases abruptly, and can not accelerate.
- Excessive slippage is felt.

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0776, is any of the DTC P0717, P0966, P0967 or P2747 displayed?	Perform the diagnosis according to DTCs other than P0776.	Go to step **2**.
2	**CHECK F&R SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the F&R solenoid. <Ref. to CVT(diag)-33, System Operation Check Mode.>	Does the indication of 0 → 500 mA appear repeatedly during forced operation, and does operating sound emit during indicating 500 mA?	Go to step **5**.	Go to step **3**.
3	**CHECK F&R SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 16 — Transmission body:***	Is the resistance approx. 4 — 6 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the harness for continuity.	Is the harness normal? (Is it free from defects such as open circuit, power supply-output short or GND-output short circuit, or poor contact?)	Go to step **7**.	Repair the harness.

	Step	Check	Yes	No
5	**CHECK TRANSMISSION FLUID.** 1) Connect the TCM connector. 2) Check the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR580)-43, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **7**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR580)-43, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Start the engine. 2) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 3) Shift the select lever to “P” range. 4) Stabilize the engine speed at idle. 5) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-104, DTC P0841 SECONDARY OIL PRESSURE SENSOR PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
8	**STALL TEST.** Perform the stall test. <Ref. to CVT(TR580)-50, Stall Test.>	Is the stall test normal?	Go to step **9**.	Replace the transmission assembly if the stall speed is higher than the standard value of the stall test. <Ref. to CVT(TR580)-65, Automatic Transmission Assembly.>
9	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the “Inspection Mode”. <Ref. to CVT(diag)-28, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0776 displayed?	Replace the transmission assembly. <Ref. to CVT(TR580)-65, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0776, is any of the DTCs P0720, P0966, P0967, P1706 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0776.	Go to step **2**.
2	**CHECK F&R SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the F&R solenoid. <Ref. to CVT(diag)-33, System Operation Check Mode.>	Does the indication of 0 → 500 mA appear repeatedly during forced operation, and does operating sound emit during indicating 500 mA?	Go to step **5**.	Go to step **3**.
3	**CHECK F&R SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 9 — Transmission body:***	Is the resistance approx. 4 — 6 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the harness for continuity.	Is the harness normal? (Is it free from defects such as open circuit, power supply-output short or GND-output short circuit, or poor contact?)	Go to step **7**.	Repair the harness.
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.>

	Step	Check	Yes	No
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **7**.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Start the engine. 2) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 3) Shift the select lever to "P" range. 4) Stabilize the engine speed at idle. 5) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-104, DTC P0841 SECONDARY OIL PRESSURE SENSOR PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
8	**STALL TEST.** Perform the stall test. <Ref. to CVT(TR690)-49, Stall Test.>	Is the stall test normal?	Go to step **9**.	Replace the transmission assembly if the stall speed is higher than the standard value of the stall test. <Ref. to CVT(TR690)-58, Automatic Transmission Assembly.>
9	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-28, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0776 displayed?	Replace the transmission assembly. <Ref. to CVT(TR690)-58, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

X: DTC P0801 REVERSE INHIBIT CONTROL CIRCUIT

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-37, DTC P0801 REVERSE INHIBIT CONTROL CIRCUIT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

NOTE:
For diagnostic procedures, refer to "BODY CONTROL SYSTEM (DIAGNOSTICS)". <Ref. to BC(diag)-46, DTC B1016 SHIFT LOCK CIRCUIT FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

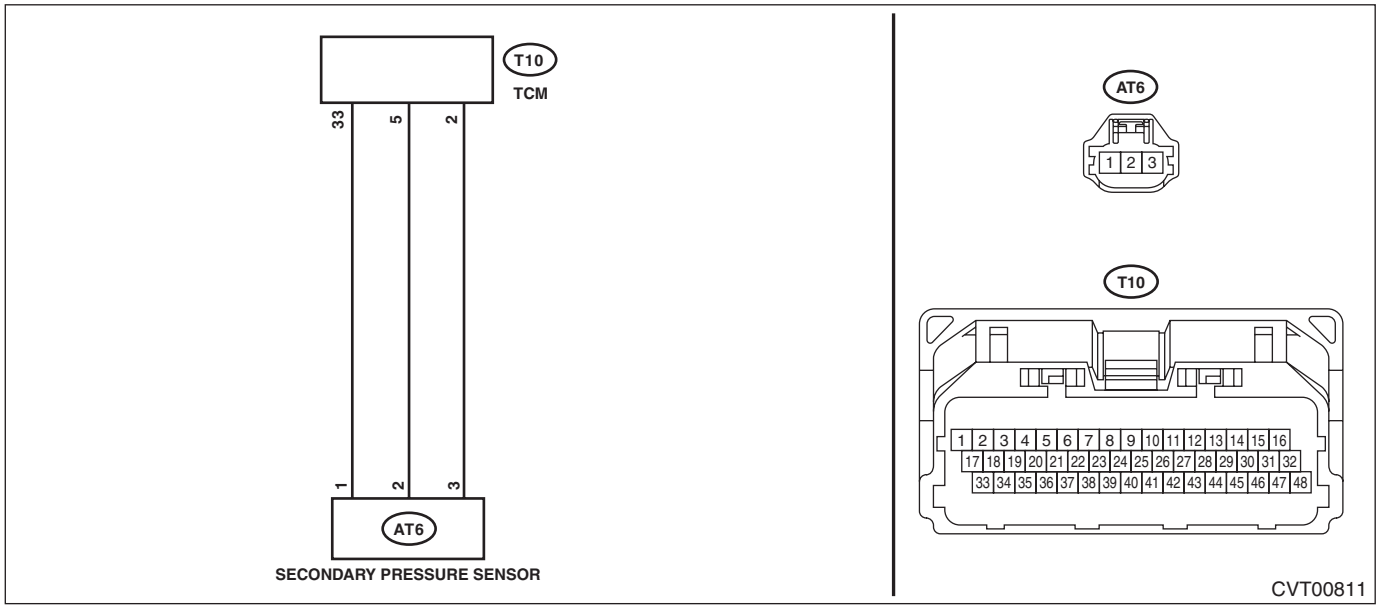
Y: DTC P0841 SECONDARY OIL PRESSURE SENSOR PERFORMANCE

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-38, DTC P0841 SECONDARY OIL PRESSURE SENSOR PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Acceleration is poor during standing start.
- Shift control malfunction
- Engine speed increases abruptly.



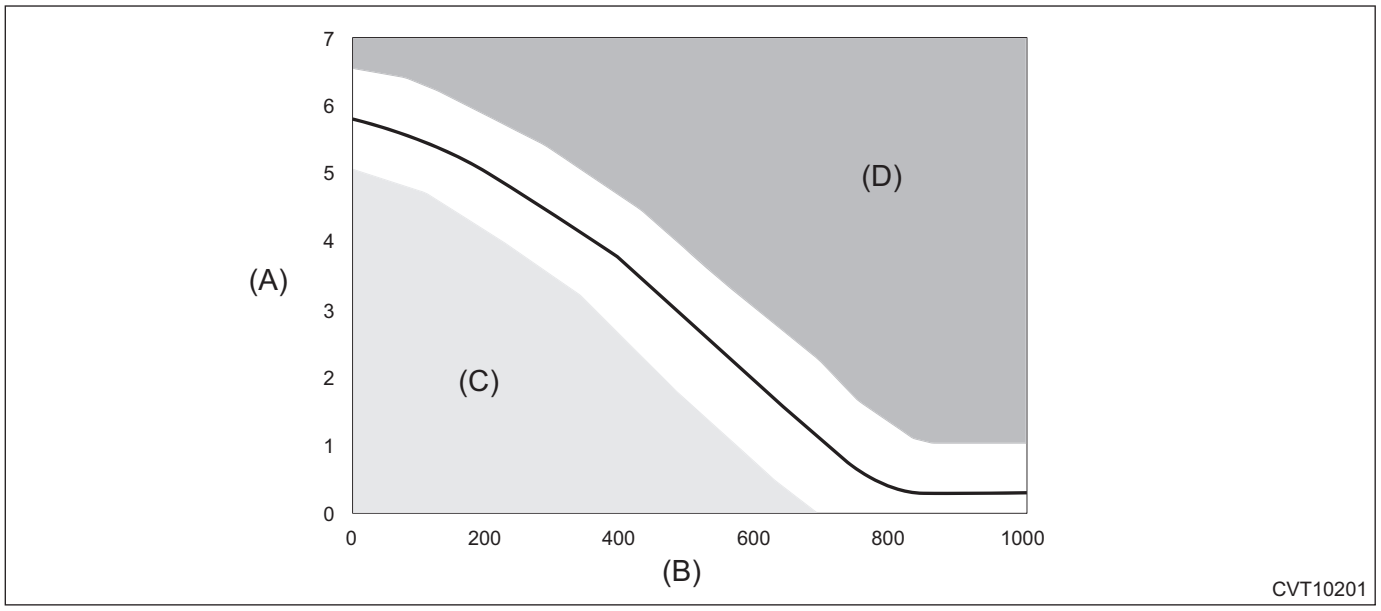
CAUTION:

- **Before performing diagnosis, record the freeze frame data.**
- **Use the check board when measuring the TCM terminal voltage and resistance.**

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



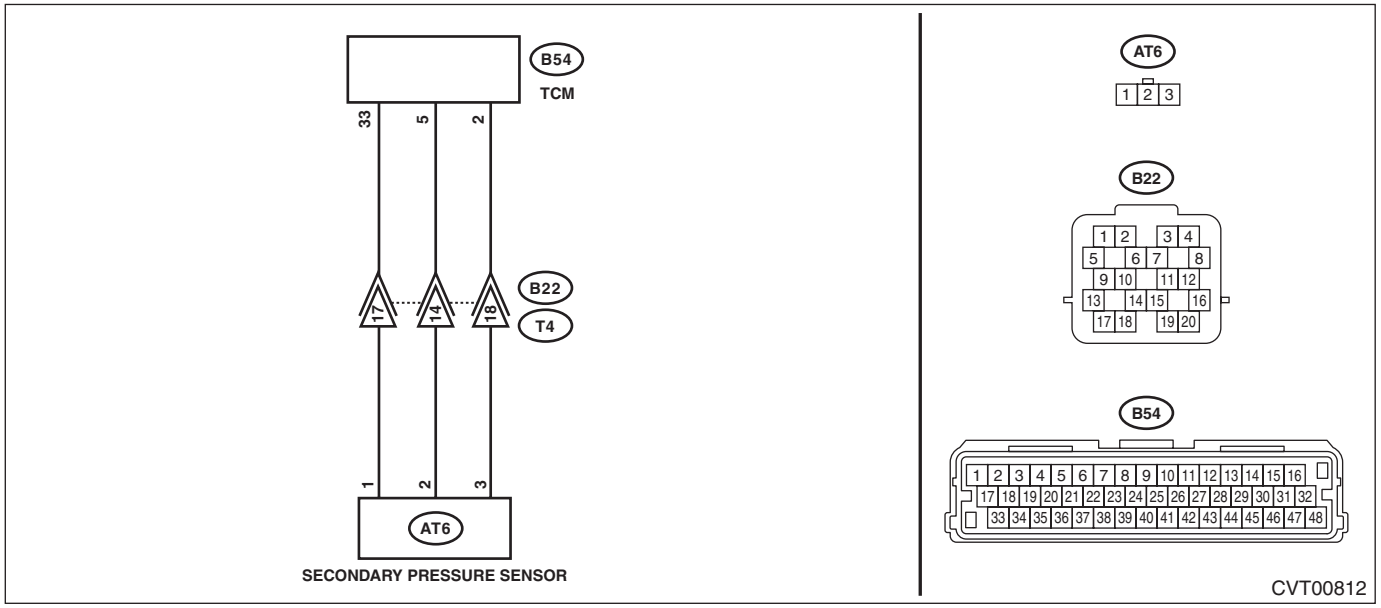
Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Are DTCs other than P0841 displayed?	Perform the diagnosis according to DTC. After the diagnosis, start the engine, and drive for 20 minutes in any driving pattern. (Include driving at a constant legal speed (for 20 seconds) at least once.) Read the DTC, and if P0841 alone is detected, Go to step **2**.	Go to step **2**.
2	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to ON. 2) Read the data of «secondary pressure sensor voltage» using Subaru Select Monitor. (While shaking the secondary pressure sensor harness)	Is the value of «secondary pressure sensor voltage» 0.39 — 0.61 V?	Go to step **10**.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector of TCM and secondary pressure sensor. 3) Measure the resistance between TCM connector and secondary pressure sensor connector. ***Connector & terminal*** ***(T10) No. 2 — (AT6) No. 3:*** ***(T10) No. 5 — (AT6) No. 2:*** ***(T10) No. 33 — (AT6) No. 1:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness.
4	**CHECK HARNESS.** Measure the resistance between TCM connectors. ***Connector & terminal*** ***(T10) No. 2 — (T10) No. 33:*** ***(T10) No. 5 — (T10) No. 2:*** ***(T10) No. 33 — (T10) No. 5:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit of harness.
5	**CHECK HARNESS.** Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 2 — Transmission body:*** ***(T10) No. 5 — Transmission body:*** ***(T10) No. 33 — Transmission body:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair the short circuit of harness.
6	**CHECK POWER SUPPLY FOR SECONDARY PRESSURE SENSOR.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connectors. ***Connector & terminal*** ***(T10) No. 33 (+) — (T10) No. 2 (–):***	Is the voltage 4.6 — 5.4 V?	Go to step **7**.	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).>
7	**CHECK POWER SUPPLY FOR SECONDARY PRESSURE SENSOR.** 1) Turn the ignition switch to OFF. 2) Connect the secondary pressure sensor connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between TCM connectors. ***Connector & terminal*** ***(T10) No. 33 (+) — (T10) No. 2 (–):***	Is the voltage 4.6 — 5.4 V?	Go to step **8**.	Replace the secondary pressure sensor. <Ref. to CVT(TR580)-133, Secondary Pressure Sensor.>
8	**CHECK SECONDARY PRESSURE SENSOR OUTPUT.** Measure the voltage between TCM connectors. ***Connector & terminal*** ***(T10) No. 5 (+) — (T10) No. 2 (–):***	Is the voltage 0.39 — 0.61 V?	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).>	Go to step **9**.
9	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector of TCM and secondary pressure sensor. 3) Check the TCM connector (T10) and the secondary pressure sensor connector (AT6).	Is there any fault in the TCM connector or the secondary pressure connector?	Repair the connector, or replace harness.	Go to step **10**.

	Step	Check	Yes	No
10	**CHECK TRANSMISSION FLUID.** 1) Connect all connectors. 2) Check the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **11**.	Adjust the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.> Go to step **11**.
11	**CHECK INPUT SIGNAL FOR TCM.** 1) Perform the Clear Memory Mode. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal and move the select lever to each range at an interval of five seconds. NOTE: Move the select lever in the following order: “P” → “R” → “N” → “D” → “N” → “R” → “P”. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **12**.	Replace the secondary pressure sensor. <Ref. to CVT(TR580)-133, Secondary Pressure Sensor.>
12	**CHECK INPUT SIGNAL FOR TCM.** 1) Shift the select lever to “P” range. 2) Keep the engine speed at 3,000 rpm. 3) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 1.5 — 2.5 MPa? And is the difference of the actual oil pressure 0.2 MPa or more compared with the value measured in step 11?	Go to step **13**.	Replace the secondary pressure sensor. <Ref. to CVT(TR580)-133, Secondary Pressure Sensor.>
13	**CHECK FREEZE FRAME DATA.** 1) Turn the ignition switch to OFF. 2) Check the recorded freeze frame data.	Was the detected symptom low-voltage malfunction? <Ref. to CVT(diag)-107, CLASSIFICATION OF SYMPTOM USING FREEZE FRAME DATA, DTC P0841 SECONDARY OIL PRESSURE SENSOR PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Replace the transmission assembly. <Ref. to CVT(TR580)-65, Automatic Transmission Assembly.>	Go to step **14**.
14	**CHECK TCM INPUT SIGNAL (STALL TEST).** 1) Lift up the vehicle. 2) Start the engine. 3) Apply the parking brake. 4) Set the select lever to “D” range. 5) Depress the brake pedal firmly. 6) Slowly open the accelerator fully, and stabilize the engine speed. 7) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 4.5 — 6.0 MPa?	Replace the transmission assembly. <Ref. to CVT(TR580)-65, Automatic Transmission Assembly.>	Go to step **15**.
15	**CHECK TCM INPUT SIGNAL (STALL TEST).** Check the «Actual Secondary Pressure» in step 14.	Is the «Actual secondary pressure» 4.5 MPa or less?	Replace the transmission assembly. <Ref. to CVT(TR580)-65, Automatic Transmission Assembly.>	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>

2. CLASSIFICATION OF SYMPTOM USING FREEZE FRAME DATA

Apply the values of «Actual Secondary Pressure» and «Secondary Actual Current» recorded in the freeze frame data onto the graph shown in the following figure, and judge if either low-voltage malfunction or high-voltage malfunction occurs.



(A) Actual secondary pressure (MPa)
(B) Secondary actual current (mA)
(C) Low-voltage malfunction
(D) High-voltage malfunction

NOTE:
Symptom that the DTC P0841 illuminates can be classified into 2 patterns.
- Low-voltage malfunction: detected due to insufficient oil pressure
- High-voltage malfunction: detected due to excessive oil pressure

3. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Are DTCs other than P0841 displayed?	Perform the diagnosis according to DTC. After the diagnosis, start the engine, and drive for 20 minutes in any driving pattern. (Include driving at a constant legal speed (for 20 seconds) at least once.) Read the DTC, and if P0841 alone is detected, Go to step **2**.	Go to step **2**.
2	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to ON. 2) Read the data of «secondary pressure sensor voltage» using Subaru Select Monitor. (While shaking the secondary pressure sensor harness)	Is the value of «secondary pressure sensor voltage» 0.39 — 0.61 V?	Go to step **10**.	Go to step **3**.
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector of TCM and secondary pressure sensor. 3) Measure the resistance between TCM connector and secondary pressure sensor connector. ***Connector & terminal*** ***(B54) No. 2 — (AT6) No. 3:*** ***(B54) No. 5 — (AT6) No. 2:*** ***(B54) No. 33 — (AT6) No. 1:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness.
4	**CHECK HARNESS.** Measure the resistance between TCM connectors. ***Connector & terminal*** ***(B54) No. 2 — (B54) No. 33:*** ***(B54) No. 5 — (B54) No. 2:*** ***(B54) No. 33 — (B54) No. 5:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit of harness.
5	**CHECK HARNESS.** Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(B54) No. 2 — Transmission body:*** ***(B54) No. 5 — Transmission body:*** ***(B54) No. 33 — Transmission body:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair the short circuit of harness.
6	**CHECK POWER SUPPLY FOR SECONDARY PRESSURE SENSOR.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connectors. ***Connector & terminal*** ***(B54) No. 33 (+) — (B54) No. 2 (–):***	Is the voltage 4.6 — 5.4 V?	Go to step **7**.	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>

	Step	Check	Yes	No
7	**CHECK POWER SUPPLY FOR SECONDARY PRESSURE SENSOR.** 1) Turn the ignition switch to OFF. 2) Connect the secondary pressure sensor connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between TCM connectors. ***Connector & terminal*** ***(B54) No. 33 (+) — (B54) No. 2 (–):***	Is the voltage 4.6 — 5.4 V?	Go to step **8**.	Replace the secondary pressure sensor. <Ref. to CVT(TR690)-121, Secondary Pressure Sensor.>
8	**CHECK SECONDARY PRESSURE SENSOR OUTPUT.** Measure the voltage between TCM connectors. ***Connector & terminal*** ***(B54) No. 5 (+) — (B54) No. 2 (–):***	Is the voltage 0.39 — 0.61 V?	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>	Go to step **9**.
9	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector of TCM and secondary pressure sensor. 3) Check the TCM connector (B54) and the secondary pressure sensor connector (AT6).	Is there any fault in the TCM connector or the secondary pressure connector?	Repair the connector, or replace harness.	Go to step **10**.
10	**CHECK TRANSMISSION FLUID.** 1) Connect all connectors. 2) Check the amount of ATF. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **11**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.> Go to step **11**.
11	**CHECK INPUT SIGNAL FOR TCM.** 1) Perform the Clear Memory Mode. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal and move the select lever to each range at an interval of five seconds. NOTE: Move the select lever in the following order: “P” → “R” → “N” → “D” → “N” → “R” → “P”. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **12**.	Replace the secondary pressure sensor. <Ref. to CVT(TR690)-121, Secondary Pressure Sensor.>
12	**CHECK INPUT SIGNAL FOR TCM.** 1) Shift the select lever to “P” range. 2) Keep the engine speed at 3,000 rpm. 3) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 1.5 — 2.5 MPa? And is the difference of the actual oil pressure 0.2 MPa or more compared with the value measured in step 11?	Go to step **13**.	Replace the secondary pressure sensor. <Ref. to CVT(TR690)-121, Secondary Pressure Sensor.>

	Step	Check	Yes	No
13	**CHECK FREEZE FRAME DATA.** 1) Turn the ignition switch to OFF. 2) Check the recorded freeze frame data.	Was the detected symptom low-voltage malfunction? <Ref. to CVT(diag)-110, CLASSIFICATION OF SYMPTOM USING FREEZE FRAME DATA, DTC P0841 SECONDARY OIL PRESSURE SENSOR PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Replace the transmission assembly. <Ref. to CVT(TR690)-58, Automatic Transmission Assembly.>	Go to step **14**.
14	**CHECK TCM INPUT SIGNAL (STALL TEST).** 1) Lift up the vehicle. 2) Start the engine. 3) Apply the parking brake. 4) Set the select lever to “D” range. 5) Depress the brake pedal firmly. 6) Slowly open the accelerator fully, and stabilize the engine speed. 7) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 4.5 — 6.0 MPa?	Replace the transmission assembly. <Ref. to CVT(TR690)-58, Automatic Transmission Assembly.>	Go to step **15**.
15	**CHECK TCM INPUT SIGNAL (STALL TEST).** Check the «Actual Secondary Pressure» in step 14.	Is the «Actual secondary pressure» 4.5 MPa or less?	Replace the transmission assembly. <Ref. to CVT(TR690)-58, Automatic Transmission Assembly.>	Replace the control valve body. <Ref. to CVT(TR690)-123, Control Valve Body.>

4. CLASSIFICATION OF SYMPTOM USING FREEZE FRAME DATA

Apply the values of «Actual Secondary Pressure» and «Secondary Actual Current» recorded in the freeze frame data onto the graph shown in the following figure, and judge if either low-voltage malfunction or high-voltage malfunction occurs.

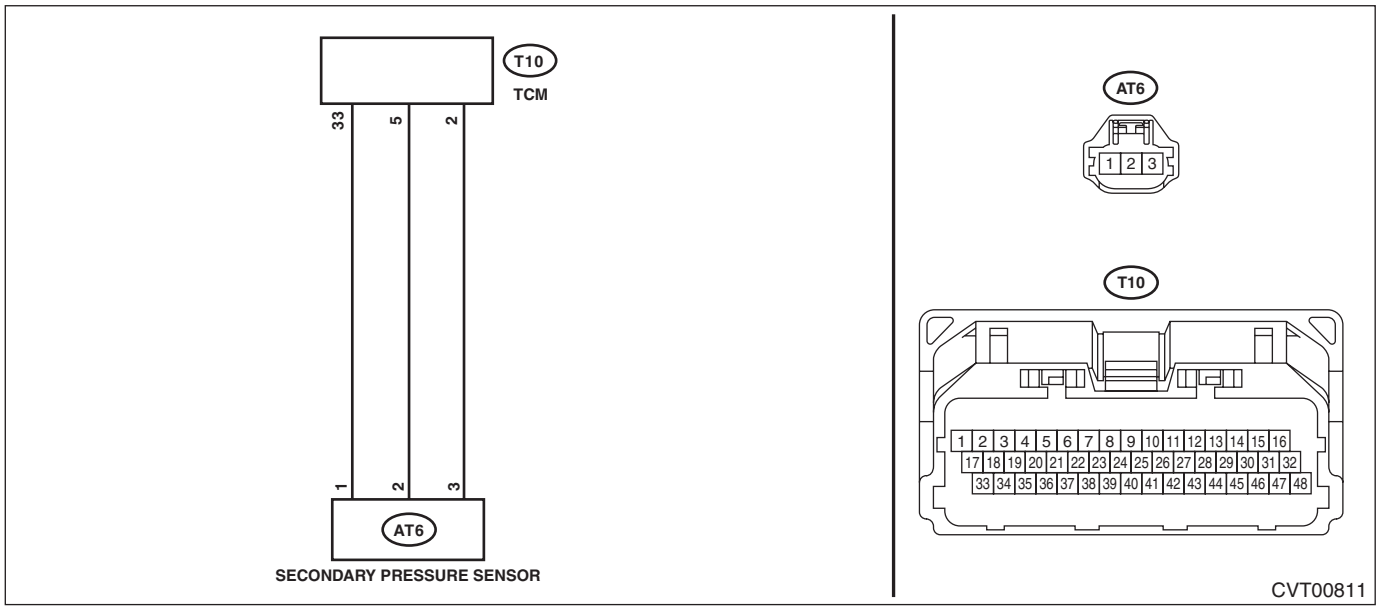
(A) Actual secondary pressure (MPa)
(B) Secondary actual current (mA)
(C) Low-voltage malfunction
(D) High-voltage malfunction

NOTE:
Symptom that the DTC P0841 illuminates can be classified into 2 patterns.
- Low-voltage malfunction: detected due to insufficient oil pressure
- High-voltage malfunction: detected due to excessive oil pressure

Z: DTC P0842 SECONDARY OIL PRESSURE SENSOR CIRCUIT (LOW)

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-39, DTC P0842 SECONDARY OIL PRESSURE SENSOR CIRCUIT (LOW), Diagnostic Trouble Code (DTC) Detecting Criteria.>



TROUBLE SYMPTOM:

Shift characteristics malfunction

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) Start the engine. 2) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 3) Depress the brake pedal, and shift the select lever to “D” range. 4) Shift the select lever to “P” range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector of TCM and secondary pressure sensor. 3) Measure the resistance between TCM connector and secondary pressure sensor connector. ***Connector & terminal*** ***(T10) No. 2 — (AT6) No. 3:*** ***(T10) No. 5 — (AT6) No. 2:*** ***(T10) No. 33 — (AT6) No. 1:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.
3	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 5 — Chassis ground:*** ***(T10) No. 33 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of harness.

	Step	Check	Yes	No
4	**CHECK SENSOR POWER SUPPLY.** 1) Connect the TCM connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between secondary pressure sensor connector terminals. ***Connector & terminal*** ***(AT6) No. 1 (+) — (AT6) No. 3 (–):***	Is the voltage 4.5 V or more?	Replace the secondary pressure sensor. <Ref. to CVT(TR580)-133, Secondary Pressure Sensor.>	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).>

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

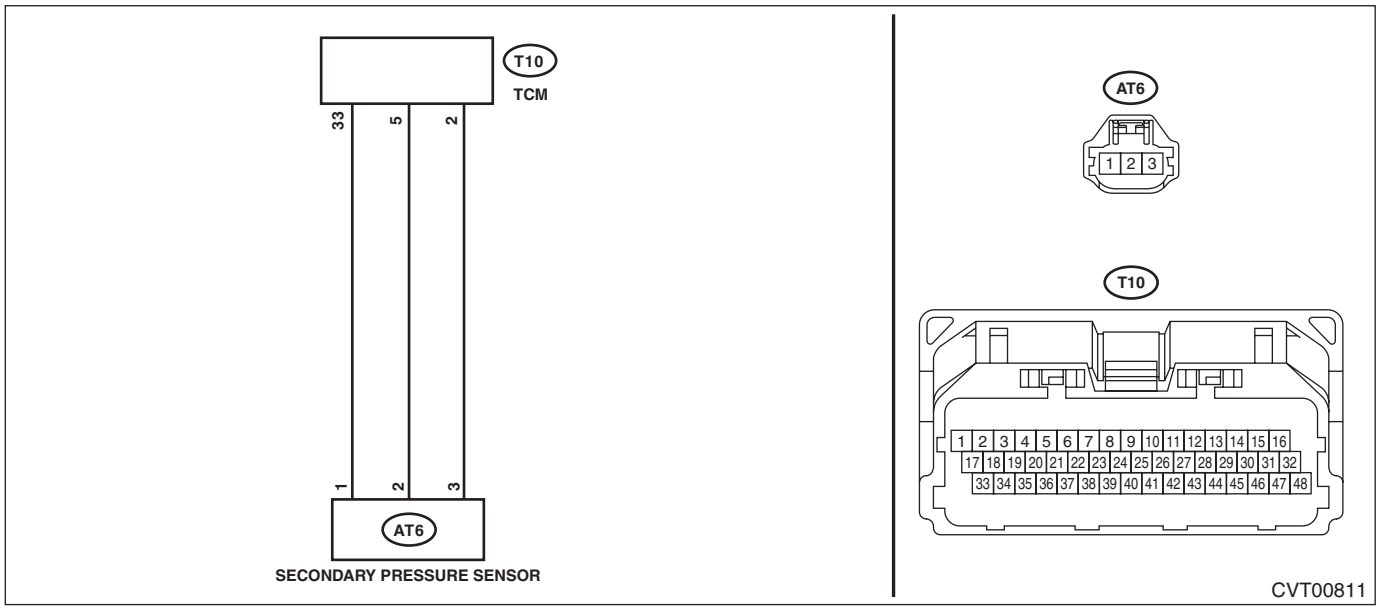
	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) Start the engine. 2) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 3) Shift the select lever to “P” range. 4) Stabilize the engine speed at idle. 5) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 2 — (B22) No. 18:*** ***(B54) No. 5 — (B22) No. 14:*** ***(B54) No. 33 — (B22) No. 17:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.
3	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 5 — Chassis ground:*** ***(B54) No. 33 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of harness.

	Step	Check	Yes	No
4	**CHECK TRANSMISSION HARNESS.** 1) Disconnect the secondary pressure sensor connector. 2) Measure the resistance between transmission connector and secondary pressure sensor connector. ***Connector & terminal*** ***(T4) No. 14 — (AT6) No. 2:*** ***(T4) No. 17 — (AT6) No. 1:*** ***(T4) No. 18 — (AT6) No. 3:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of harness.
5	**CHECK TRANSMISSION HARNESS.** Measure the resistance between transmission connector and chassis ground. ***Connector & terminal*** ***(T4) No. 14 — Chassis ground:*** ***(T4) No. 17 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair the short circuit of harness.
6	**CHECK SENSOR POWER SUPPLY.** 1) Connect the connectors of TCM and transmission. 2) Turn the ignition switch to ON. 3) Measure the voltage between secondary pressure sensor connector terminals. ***Connector & terminal*** ***(AT6) No. 1 (+) — (AT6) No. 3 (–):***	Is the voltage 4.5 V or more?	Replace the secondary pressure sensor. <Ref. to CVT(TR690)-121, Secondary Pressure Sensor.>	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>

AA:DTC P0843 SECONDARY OIL PRESSURE SENSOR CIRCUIT (HIGH)

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-40, DTC P0843 SECONDARY OIL PRESSURE SENSOR CIRCUIT (HIGH), Diagnostic Trouble Code (DTC) Detecting Criteria.>



TROUBLE SYMPTOM:

Shift characteristics malfunction

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) Start the engine. 2) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 3) Depress the brake pedal, and shift the select lever to “D” range. 4) Shift the select lever to “P” range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector of TCM and secondary pressure sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 5 (+) — Chassis ground (–):*** ***(T10) No. 33 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between TCM connector terminals. ***Connector & terminal*** ***(T10) No. 5 — (T10) No. 33:***	Is the resistance less than 1 Ω?	Repair the short circuit of harness.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK SENSOR POWER SUPPLY.** 1) Connect the TCM connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between secondary pressure sensor connector terminals. ***Connector & terminal*** ***(AT6) No. 1 (+) — (AT6) No. 3 (–):***	Is the voltage 4.5 V or more?	Replace the secondary pressure sensor. <Ref. to CVT(TR580)-133, Secondary Pressure Sensor.>	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).>

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) Start the engine. 2) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 3) Shift the select lever to “P” range. 4) Stabilize the engine speed at idle. 5) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Turn the ignition switch to ON. 4) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 5 (+) — Chassis ground (–):*** ***(B54) No. 33 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between TCM connector terminals. ***Connector & terminal*** ***(B54) No. 5 — (B54) No. 33:***	Is the resistance less than 1 Ω?	Repair the short circuit of harness.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK TRANSMISSION HARNESS.** 1) Disconnect the secondary pressure sensor connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and chassis ground. ***Connector & terminal*** ***(T4) No. 14 (+) — Chassis ground (–):*** ***(T4) No. 17 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **5**.	Repair the short circuit of harness.
5	**CHECK TRANSMISSION HARNESS.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between transmission connector terminals. ***Connector & terminal*** ***(T4) No. 14 — (T4) No. 17:***	Is the resistance less than 1 Ω?	Repair the short circuit of harness.	Go to step **6**.
6	**CHECK SENSOR POWER SUPPLY.** 1) Connect the connectors of TCM and transmission. 2) Turn the ignition switch to ON. 3) Measure the voltage between secondary pressure sensor connector terminals. ***Connector & terminal*** ***(AT6) No. 1 (+) — (AT6) No. 3 (–):***	Is the voltage 4.5 V or more?	Replace the secondary pressure sensor. <Ref. to CVT(TR690)-121, Secondary Pressure Sensor.>	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>

AB:DTC P0890 AT SELF-SHUT RELAY DIAGNOSIS (LOW)

DTC DETECTING CONDITION:

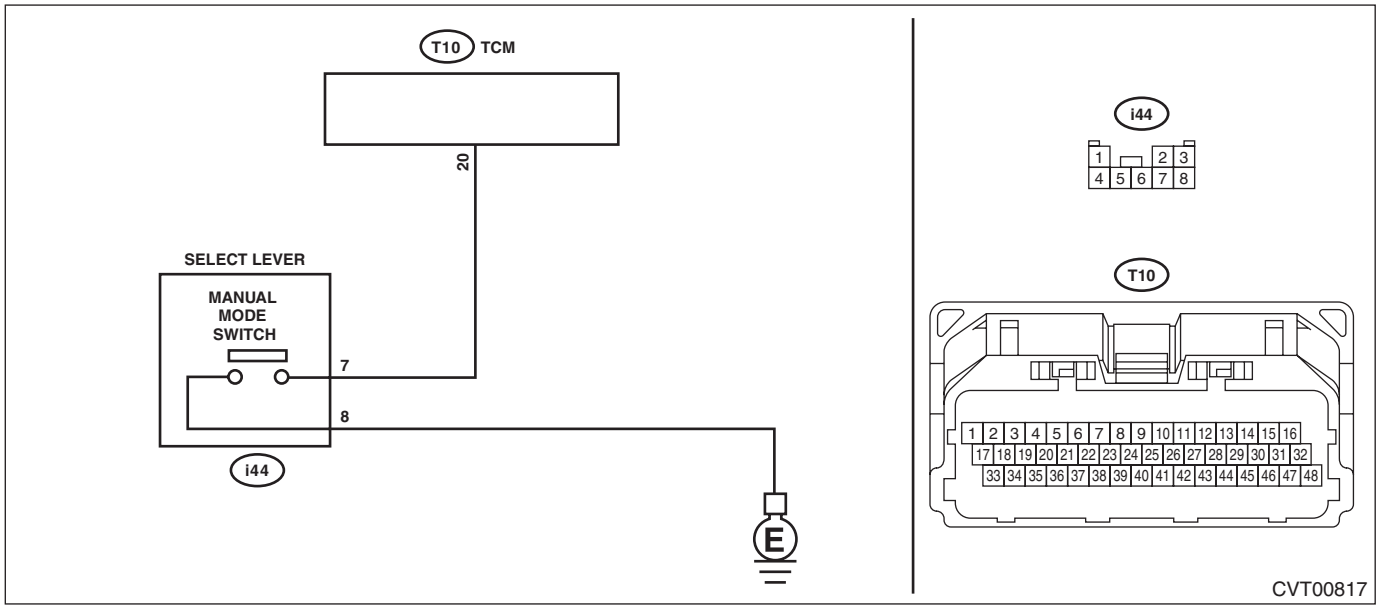
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-41, DTC P0890 AT SELF-SHUT RELAY DIAGNOSIS (LOW), Diagnostic Trouble Code (DTC) Detecting Criteria.>

NOTE:
Refer to “ENGINE (DIAGNOSTICS)” for diagnostic procedure. <Ref. to EN(H4DO)(diag)-278, DTC P0685 ECM/PCM POWER RELAY CONTROL CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to EN(H6DO)(diag)-322, DTC P0685 ECM/PCM POWER RELAY CONTROL CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AC:DTC P0951 MANUAL SWITCH

DTC DETECTING CONDITION:

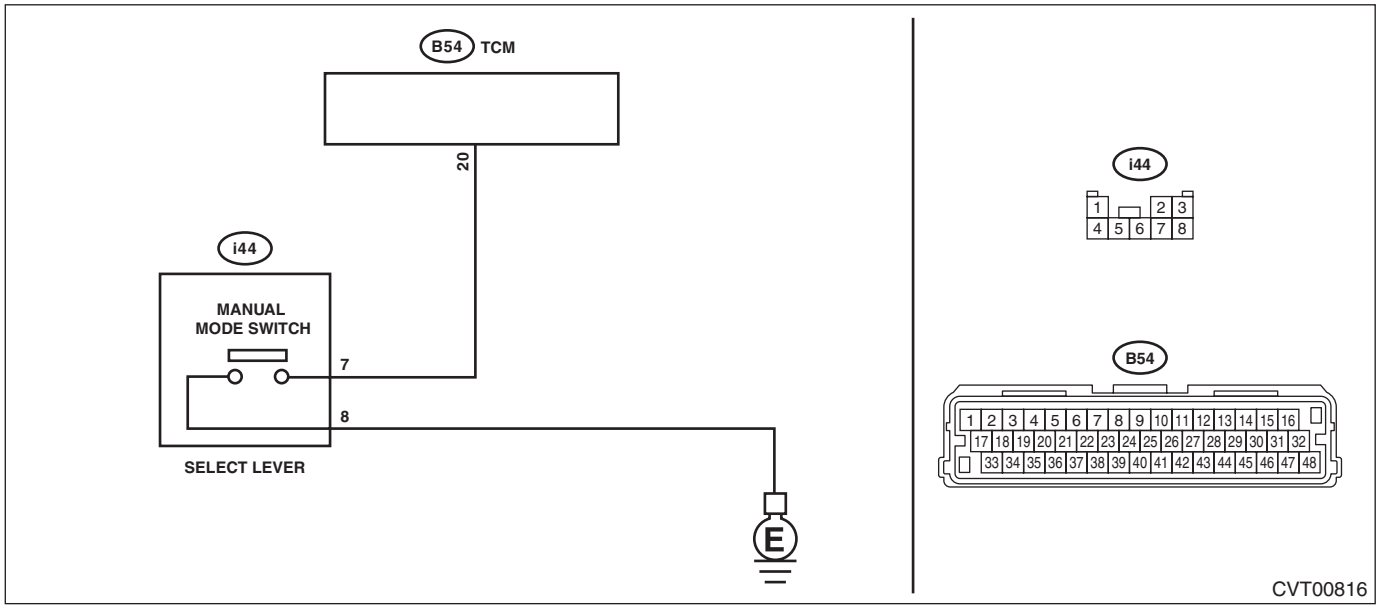
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-42, DTC P0951 MANUAL SWITCH, Diagnostic Trouble Code (DTC) Detecting Criteria.>



TROUBLE SYMPTOM:

Manual mode can not be set.

WIRING DIAGRAM:



- ENGINE TYPE FB

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

- ENGINE TYPE EZ

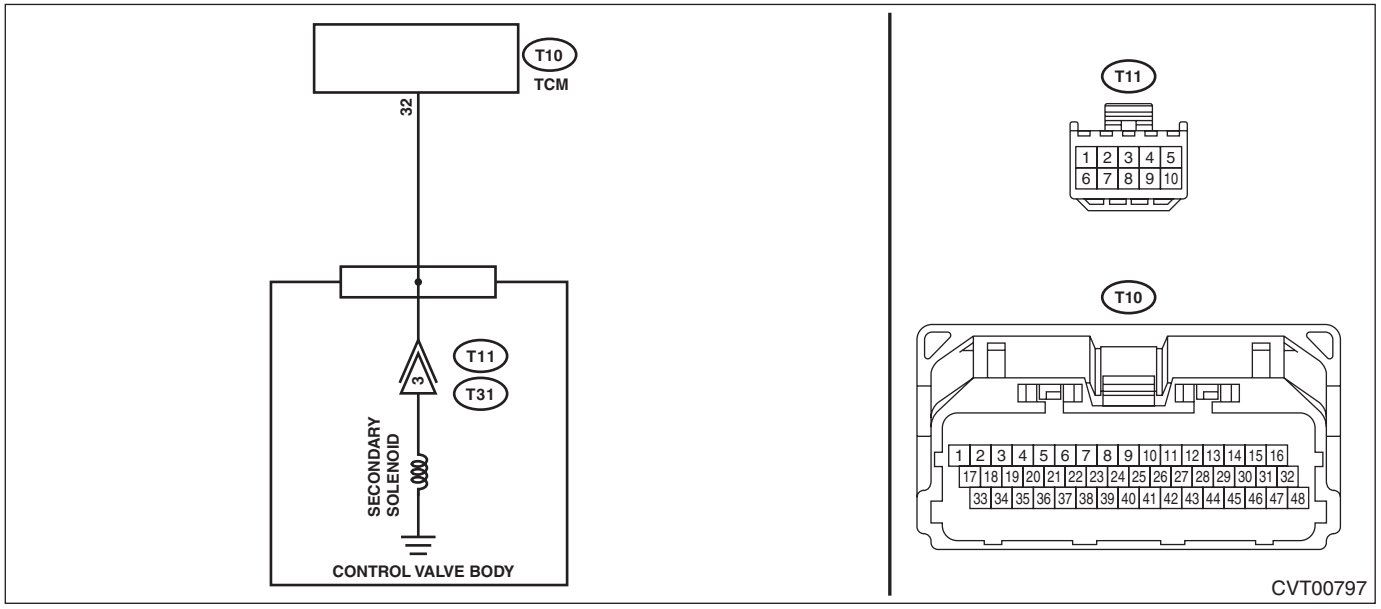
NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the manual mode switch connector. 3) Measure the resistance between manual mode switch connector and chassis ground. ***Connector & terminal*** ***(i44) No. 8 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK MANUAL MODE SWITCH.** Measure the resistance between manual mode switch terminals. ***Connector & terminal*** ***(i44) No. 7 — No. 8:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the select lever assembly. <Ref. to CS-26, Select Lever.>
3	**CHECK MANUAL MODE SWITCH.** 1) Shift the select lever to manual mode. 2) Measure the resistance between manual mode switch terminals. ***Connector & terminal*** ***(i44) No. 7 — No. 8:***	Is the resistance less than 1 Ω?	Go to step **4**.	Replace the select lever assembly. <Ref. to CS-26, Select Lever.>
4	**CHECK HARNESS.** 1) Disconnect the TCM connector. 2) Measure the resistance between TCM connector and manual mode switch connector. ***Connector & terminal*** ***ENGINE TYPE FB*** ***(T10) No. 20 — (i44) No. 7:*** ***ENGINE TYPE EZ*** ***(B54) No. 20 — (i44) No. 7:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of harness or poor contact of connector.
5	**CHECK HARNESS.** Measure the resistance between manual mode switch connector and chassis ground. ***Connector & terminal*** ***(i44) No. 7 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair the short circuit of harness.
6	**CHECK INPUT SIGNAL FOR TCM.** 1) Connect the TCM and manual mode switch connector. 2) Turn the ignition switch to ON. 3) Set the select lever to “D” range. 4) Read the data of «Tiptronic Mode Switch» using Subaru Select Monitor.	Does the value of «Tiptronic Mode Switch» change to “ON” with select lever in manual mode, and “OFF” with select lever in other than manual mode?	Current condition is normal.	Go to step **7**.
7	**CHECK FOR POOR CONTACT.**	Is there poor contact of the manual mode switch circuit?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).> <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>

AD:DTC P0961 PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT RANGE/PERFORMANCE

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-43, DTC P0961 PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>



TROUBLE SYMPTOM:

- Acceleration is poor during standing start.
- Shift control malfunction
- Engine speed increases abruptly.

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0961, is DTC P0962 or P0963 displayed?	Perform the diagnosis according to DTCs other than P0961.	Go to step **2**.
2	**CHECK SECONDARY SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the secondary solenoid. <Ref. to CVT(diag)-33, System Operation Check Mode.>	Does the indication change as 300 → 500 → 700 mA during forced operation, and does «Sec. Sol. Actual Current» synchronize with «Sec. Sol. Set Current»?	Go to step **3**.	Go to step **4**.
3	**CHECK FOR POOR CONTACT.** Check for poor contact of harness and connector between TCM and secondary solenoid.	Is there poor contact?	Repair the poor contact of harness and connector.	Recheck the poor contact of harness and connector. Replace the TCM if no fault is found. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).>

	Step	Check	Yes	No
4	**CHECK SECONDARY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 32 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>	Repair or replace the harness.

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

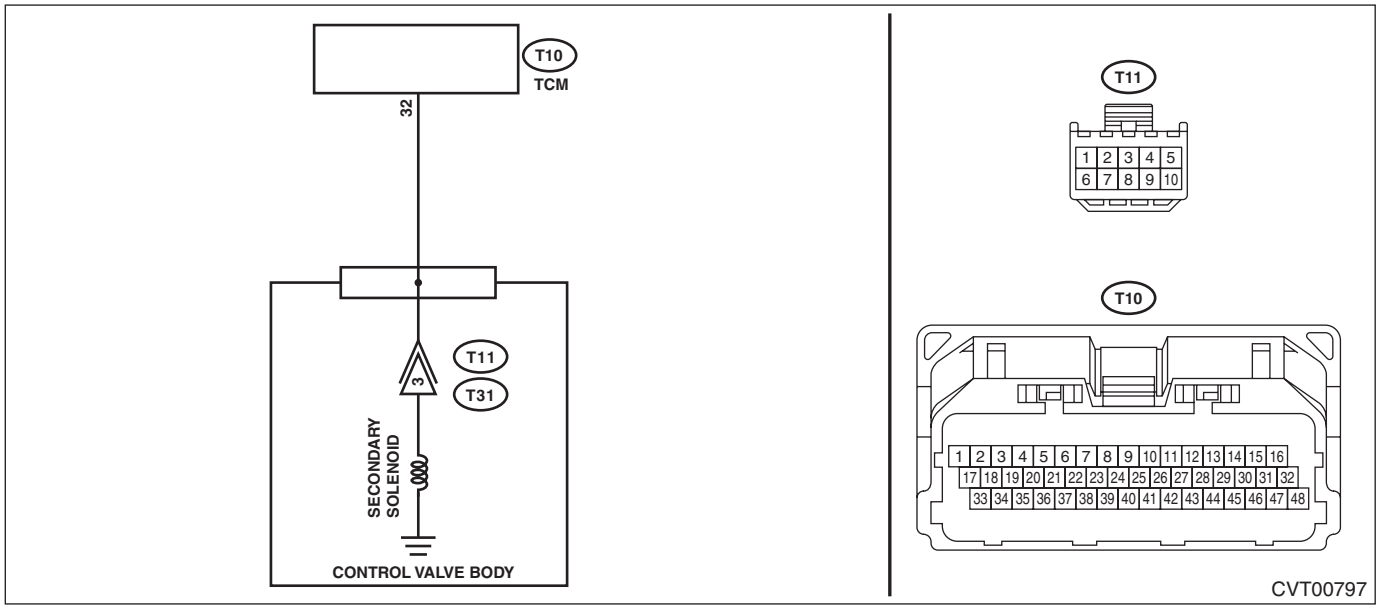
	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0961, is DTC P0962 or P0963 displayed?	Perform the diagnosis according to DTCs other than P0961.	Go to step **2**.
2	**CHECK SECONDARY SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the secondary solenoid. <Ref. to CVT(diag)-33, System Operation Check Mode.>	Does the indication change as 300 → 500 → 700 mA during forced operation, and does «Sec. Sol. Actual Current» synchronize with «Sec. Sol. Set Current»?	Go to step **3**.	Go to step **4**.
3	**CHECK FOR POOR CONTACT.** Check for poor contact of harness and connector between TCM and secondary solenoid.	Is there poor contact?	Repair the poor contact of harness and connector.	Recheck the poor contact of harness and connector. Replace the TCM if no fault is found. <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>

	Step	Check	Yes	No
4	**CHECK SECONDARY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Replace the control valve body. <Ref. to CVT(TR690)-123, Control Valve Body.>	Repair or replace the harness.

AE:DTC P0962 SECONDARY SOLENOID CIRCUIT (LOW)

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-44, DTC P0962 SECONDARY SOLENOID CIRCUIT (LOW), Diagnostic Trouble Code (DTC) Detecting Criteria.>



TROUBLE SYMPTOM:

- Engine speed increases abruptly, and can not start.
- Engine speed increases abruptly during driving.

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at "N" range. 2) Read the data of «Sec. Sol. Set Current» and «Sec. Sol. Actual Current» using Subaru Select Monitor.	Does the value of «Sec. Sol. Set Current» and «Sec. Sol. Actual Current» almost correspond?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Remove the transmission valve cover. 4) Disconnect the control valve body connector. 5) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 32 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit of harness.

	Step	Check	Yes	No
3	**CHECK SECONDARY SOLENOID.** 1) Connect the connector for control valve body. 2) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 32 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

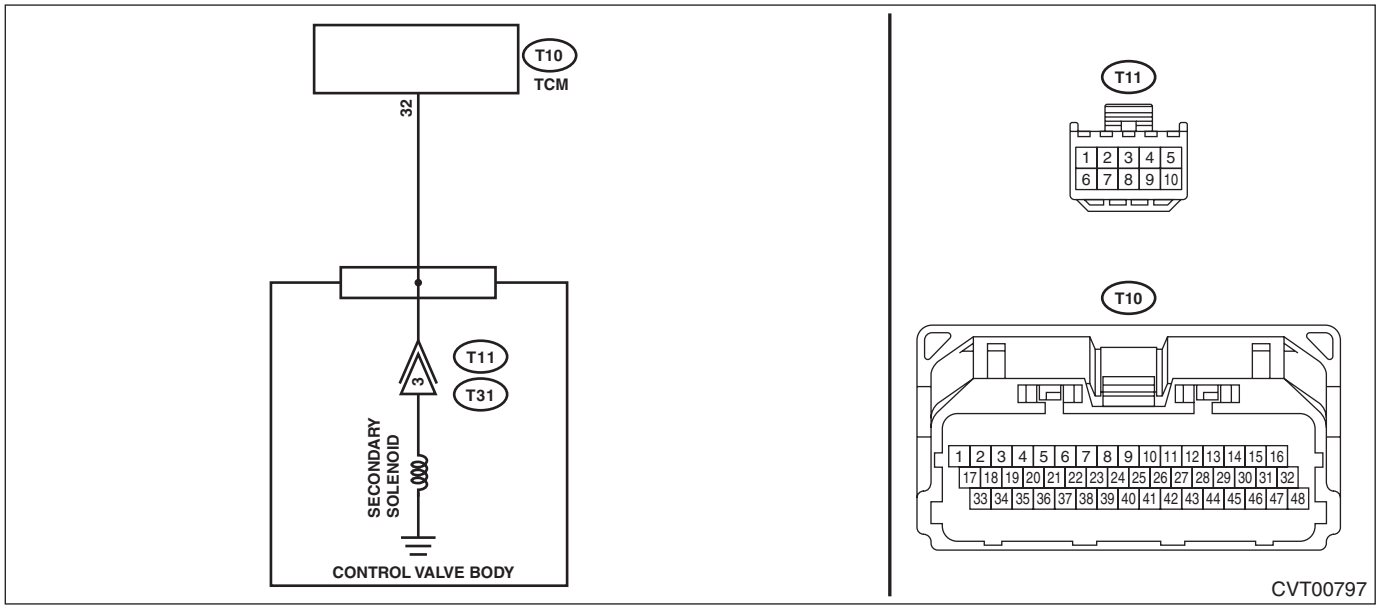
	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at “N” range. 2) Read the data of «Sec. Sol. Set Current» and «Sec. Sol. Actual Current» using Subaru Select Monitor.	Does the value of «Sec. Sol. Set Current» and «Sec. Sol. Actual Current» almost correspond?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 32 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit of harness.

	Step	Check	Yes	No
3	**CHECK SECONDARY SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-123, Control Valve Body.>	Replace the transmission harness.

AF:DTC P0963 SECONDARY SOLENOID CIRCUIT (HIGH)

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-45, DTC P0963 SECONDARY SOLENOID CIRCUIT (HIGH), Diagnostic Trouble Code (DTC) Detecting Criteria.>



TROUBLE SYMPTOM:

- Engine speed increases abruptly, and can not start.
- Engine speed increases abruptly during driving.

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at "N" range. 2) Read the data of «Sec. Sol. Set Current» and «Sec. Sol. Actual Current» using Subaru Select Monitor.	Does the value of «Sec. Sol. Set Current» and «Sec. Sol. Actual Current» almost correspond?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Remove the transmission valve cover. 4) Disconnect the control valve body connector. 5) Measure the resistance between TCM connector and control valve body connector. ***Connector & terminal*** ***(T10) No. 32 — (T11) No. 3:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 32 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **4**.	Repair the short circuit of harness.

	Step	Check	Yes	No
4	**CHECK SECONDARY SOLENOID.** 1) Connect the connector for control valve body. 2) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 32 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).>	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

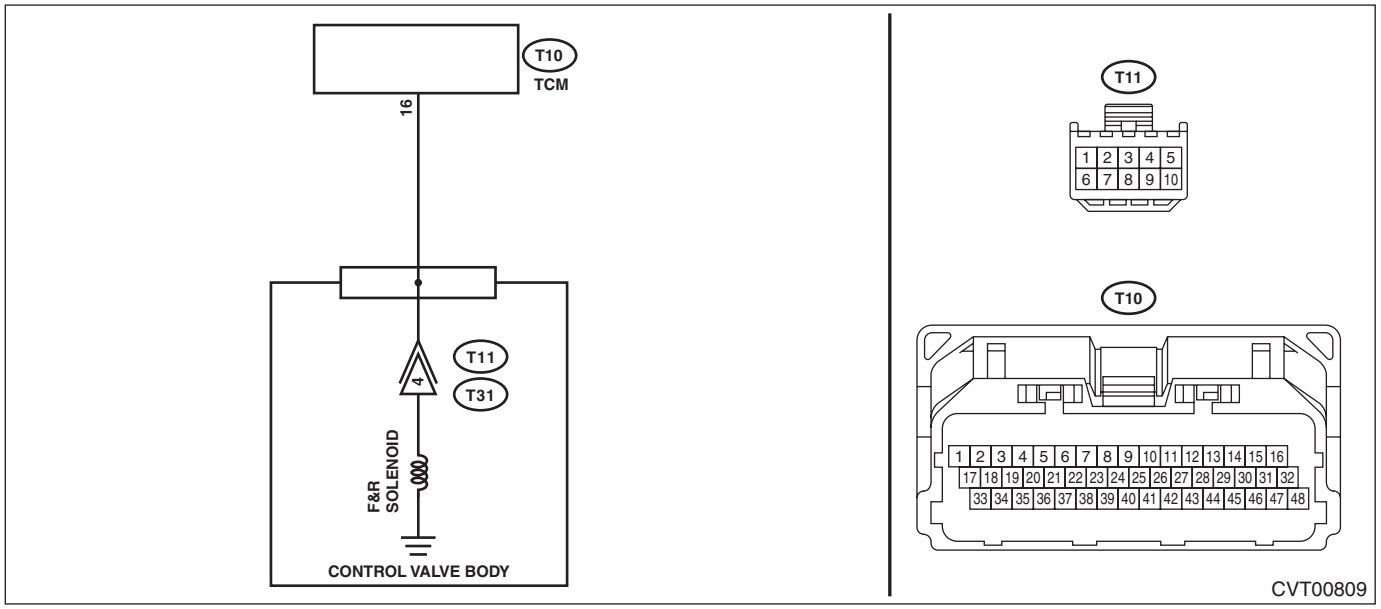
	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at “N” range. 2) Read the data of «Sec. Sol. Set Current» and «Sec. Sol. Actual Current» using Subaru Select Monitor.	Does the value of «Sec. Sol. Set Current» and «Sec. Sol. Actual Current» almost correspond?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 32 — (B22) No. 5:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 32 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **4**.	Repair the short circuit of harness.
4	**CHECK SECONDARY SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **6**.
6	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 (+) — Transmission body (–):***	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR690)-123, Control Valve Body.>	Replace the transmission harness.

AG:DTC P0965 FORWARD & REVERSE SOLENOID FUNCTION

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-46, DTC P0965 FORWARD & REVERSE SOLENOID FUNCTION, Diagnostic Trouble Code (DTC) Detecting Criteria.>



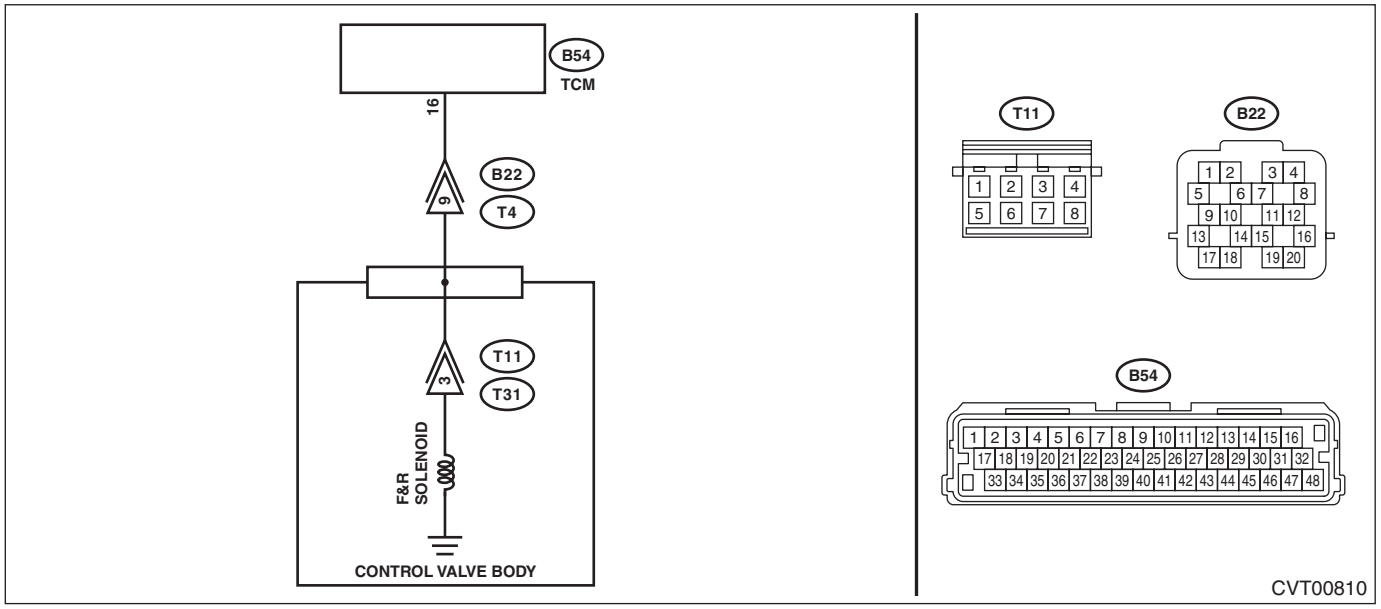
TROUBLE SYMPTOM:

- Engine speed increases abruptly, and can not accelerate.
- Excessive slippage is felt.

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0965, is any of the DTC P0717, P0966, P0967 or P2747 displayed?	Perform the diagnosis according to DTCs other than P0965.	Go to step **2**.
2	**CHECK F&R SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the F&R solenoid. <Ref. to CVT(diag)-33, System Operation Check Mode.>	Does the indication change as 300 → 500 → 700 mA during forced operation, and does «F&R Linear Solenoid Actual Current» synchronize with «F&R Linear Solenoid Set Current»?	Go to step **3**.	Go to step **4**.
3	**CHECK FOR POOR CONTACT.** Check for poor contact of harness and connector between TCM and F&R solenoid.	Is there poor contact?	Repair the poor contact of harness and connector.	Recheck the poor contact of harness and connector. Replace the TCM if no fault is found. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).>

	Step	Check	Yes	No
4	**CHECK F&R SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 16 — Transmission body:***	Is the resistance approx. 4 — 6 Ω? (when cold)	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>	Repair or replace the harness.

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

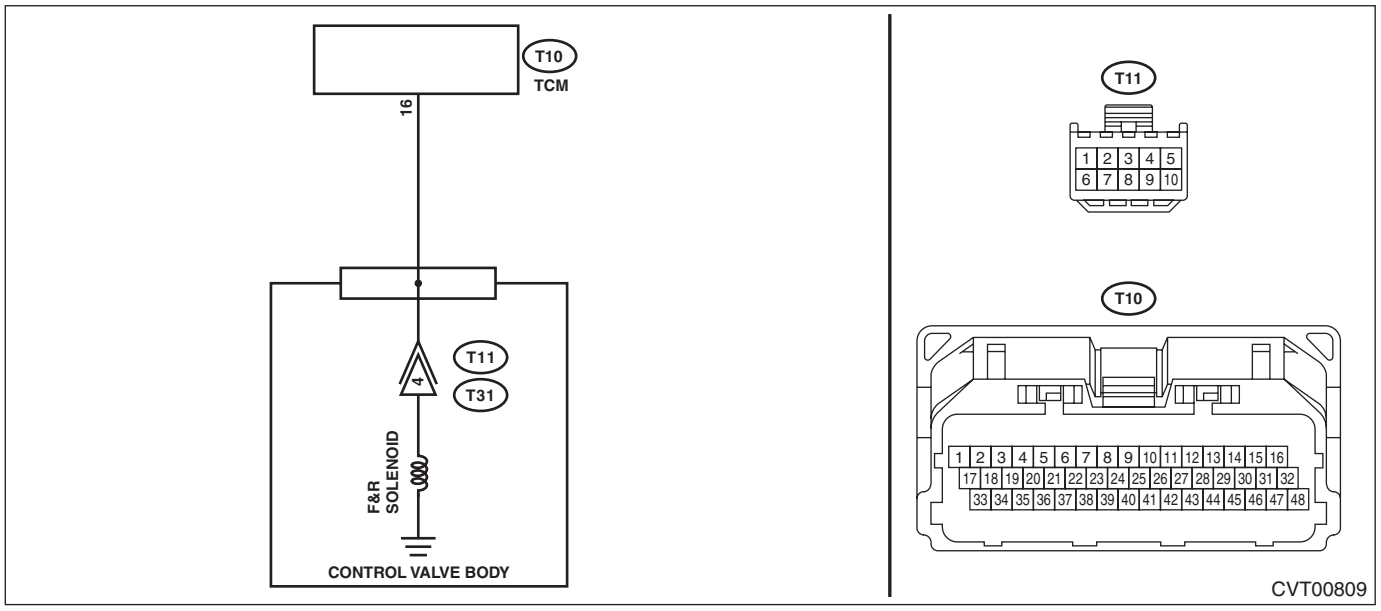
	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0965, is any of the DTCs P0720, P0966, P0967, P1706 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0965.	Go to step **2**.
2	**CHECK F&R SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the F&R solenoid. <Ref. to CVT(diag)-33, System Operation Check Mode.>	Does the indication change as 300 → 500 → 700 mA during forced operation, and does «F&R Linear Solenoid Actual Current» synchronize with «F&R Linear Solenoid Set Current»?	Go to step **3**.	Go to step **4**.
3	**CHECK FOR POOR CONTACT.** Check for poor contact of harness and connector between TCM and F&R solenoid.	Is there poor contact?	Repair the poor contact of harness and connector.	Recheck the poor contact of harness and connector. Replace the TCM if no fault is found. <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>

	Step	Check	Yes	No
4	**CHECK F&R SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 9 — Transmission body:***	Is the resistance approx. 4 — 6 Ω? (when cold)	Replace the control valve body. <Ref. to CVT(TR690)-123, Control Valve Body.>	Repair or replace the harness.

AH:DTC P0966 FORWARD & REVERSE SOLENOID CIRCUIT (LOW)

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-47, DTC P0966 FORWARD & REVERSE SOLENOID CIRCUIT (LOW), Diagnostic Trouble Code (DTC) Detecting Criteria.>



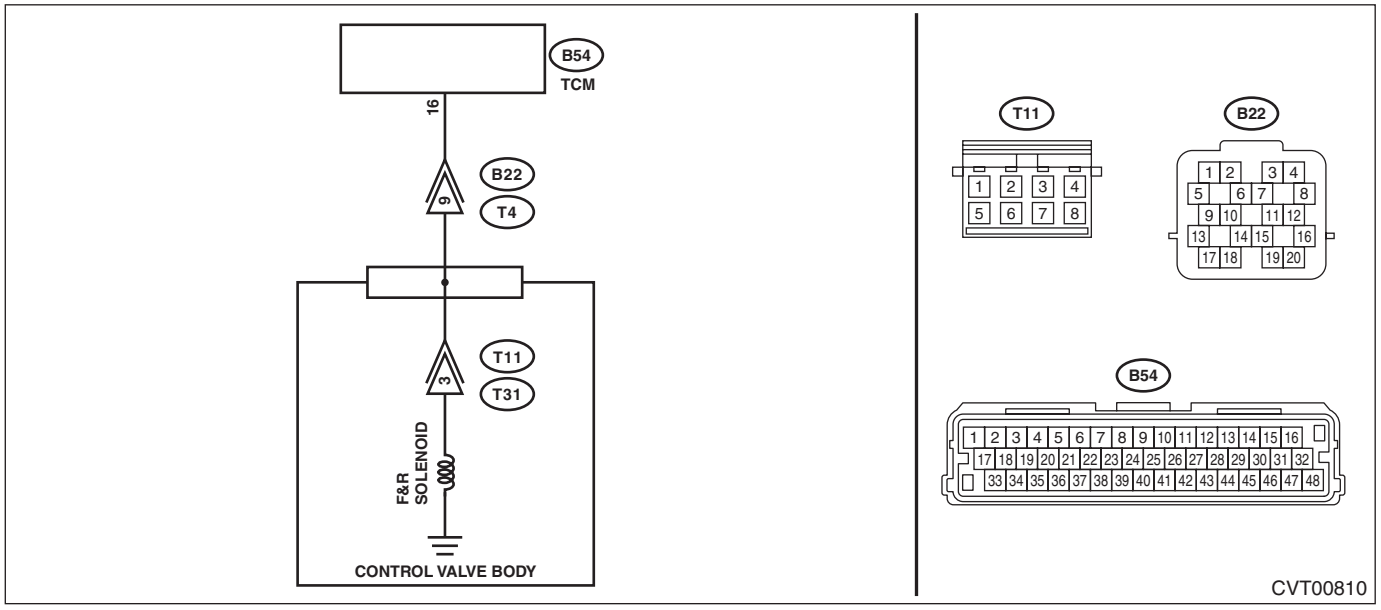
TROUBLE SYMPTOM:

Excessive shift shock

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at "D" range. 2) Read the data of «F&R Linear Solenoid Set Current» and «F&R Linear Solenoid Actual Current» using Subaru Select Monitor.	Does the value of «F&R Linear Solenoid Set Current» and «F&R Linear Solenoid Actual Current» almost correspond?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Remove the transmission valve cover. 4) Disconnect the control valve body connector. 5) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 16 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit of harness.

	Step	Check	Yes	No
3	**CHECK F&R SOLENOID.** 1) Connect the connector for control valve body. 2) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 16 — Transmission body:***	Is the resistance approx. 4 — 6 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

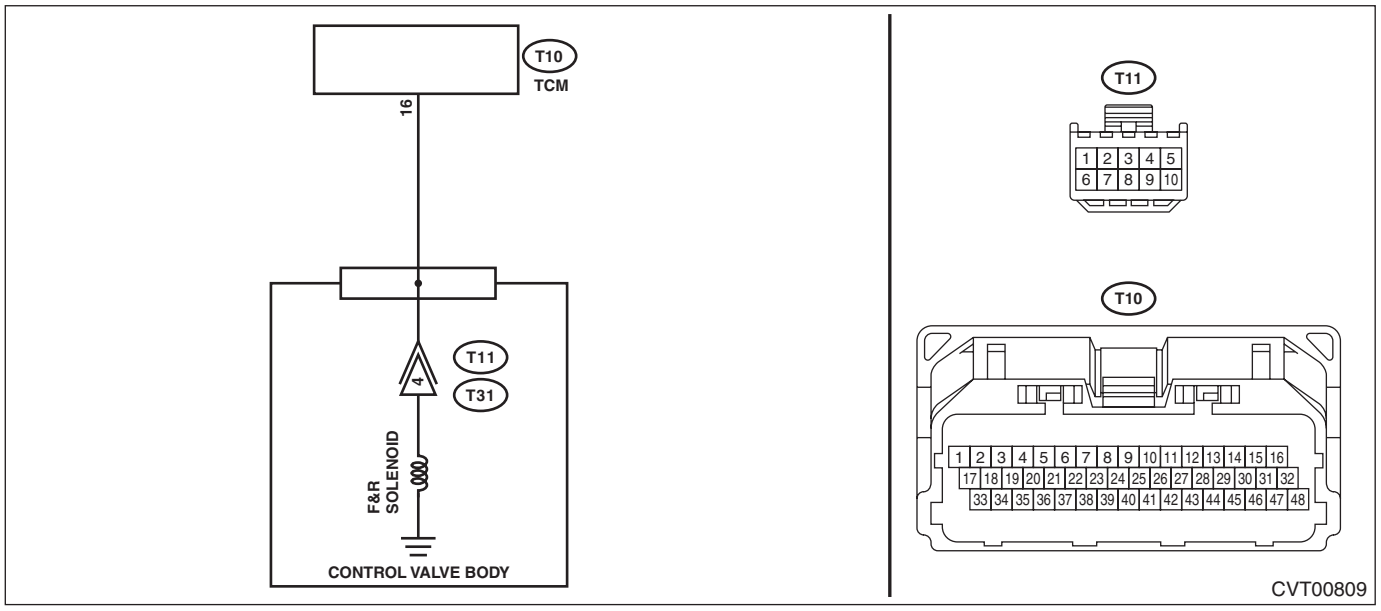
	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at “D” range. 2) Read the data of «F&R Linear Solenoid Set Current» and «F&R Linear Solenoid Actual Current» using Subaru Select Monitor.	Does the value of «F&R Linear Solenoid Set Current» and «F&R Linear Solenoid Actual Current» almost correspond?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 16 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit of harness.

	Step	Check	Yes	No
3	**CHECK F&R SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 9 — Transmission body:***	Is the resistance approx. 4 — 6 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 9 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-123, Control Valve Body.>	Replace the transmission harness.

AI: DTC P0967 FORWARD & REVERSE LINEAR SOLENOID CIRCUIT (HIGH)

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-48, DTC P0967 FORWARD & REVERSE LINEAR SOLENOID CIRCUIT (HIGH), Diagnostic Trouble Code (DTC) Detecting Criteria.>



TROUBLE SYMPTOM:

Engine speed increases abruptly, and can not start.

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at "D" range. 2) Read the data of «F&R Linear Solenoid Set Current» and «F&R Linear Solenoid Actual Current» using Subaru Select Monitor.	Does the value of «F&R Linear Solenoid Set Current» and «F&R Linear Solenoid Actual Current» almost correspond?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Remove the transmission valve cover. 4) Disconnect the control valve body connector. 5) Measure the resistance between TCM connector and control valve body connector. ***Connector & terminal*** ***(T10) No. 16 — (T11) No. 4:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 16 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **4**.	Repair the short circuit of harness.

	Step	Check	Yes	No
4	**CHECK F&R SOLENOID.** 1) Connect the connector for control valve body. 2) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 16 — Transmission body:***	Is the resistance approx. 4 — 6 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).>	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

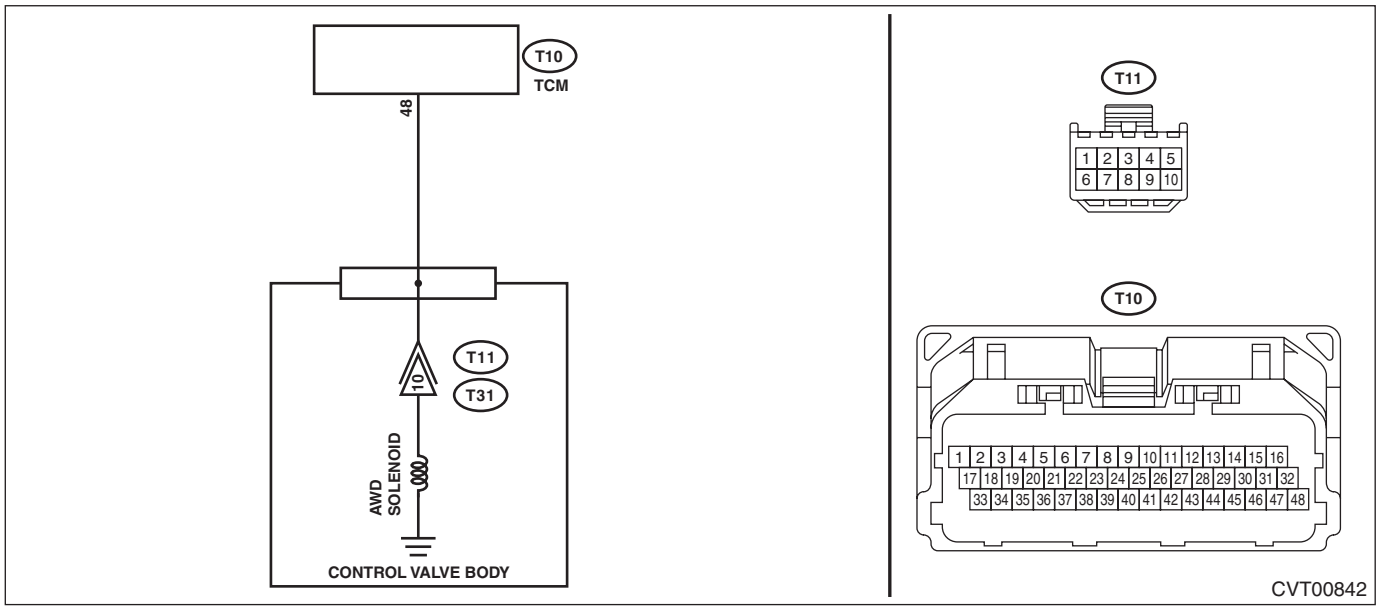
	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at “D” range. 2) Read the data of «F&R Linear Solenoid Set Current» and «F&R Linear Solenoid Actual Current» using Subaru Select Monitor.	Does the value of «F&R Linear Solenoid Set Current» and «F&R Linear Solenoid Actual Current» almost correspond?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 16 — (B22) No. 9:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 16 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **4**.	Repair the short circuit of harness.
4	**CHECK F&R SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 9 — Transmission body:***	Is the resistance approx. 4 — 6 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **6**.
6	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 9 (+) — Transmission body (–):***	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR690)-123, Control Valve Body.>	Replace the transmission harness.

AJ:DTC P0970 TRANSFER SOLENOID CIRCUIT (LOW)

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-49, DTC P0970 TRANSFER SOLENOID CIRCUIT (LOW), Diagnostic Trouble Code (DTC) Detecting Criteria.>



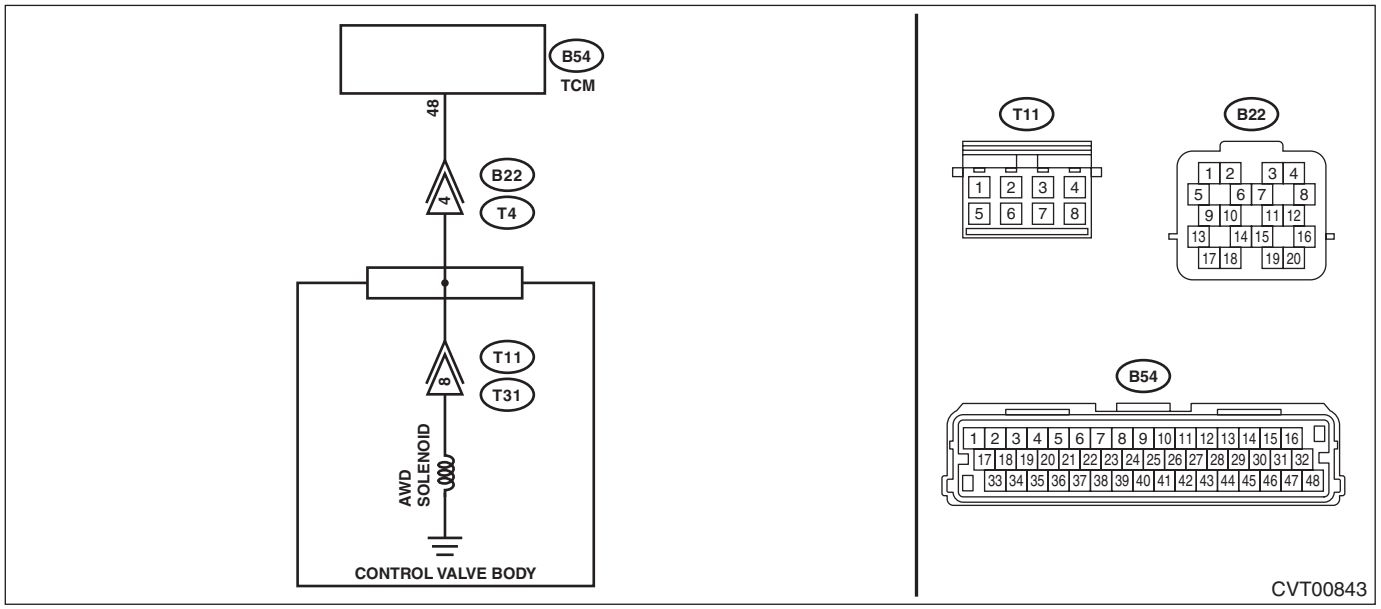
TROUBLE SYMPTOM:

Drivability getting worse.

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Remove the transmission valve cover. 4) Disconnect the control valve body connector. 5) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 48 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK AWD SOLENOID.** 1) Connect the connector for control valve body. 2) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 48 — Transmission body:***	Is the resistance approx. 2 — 4.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS INSIDE TRANSMISSION.** Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

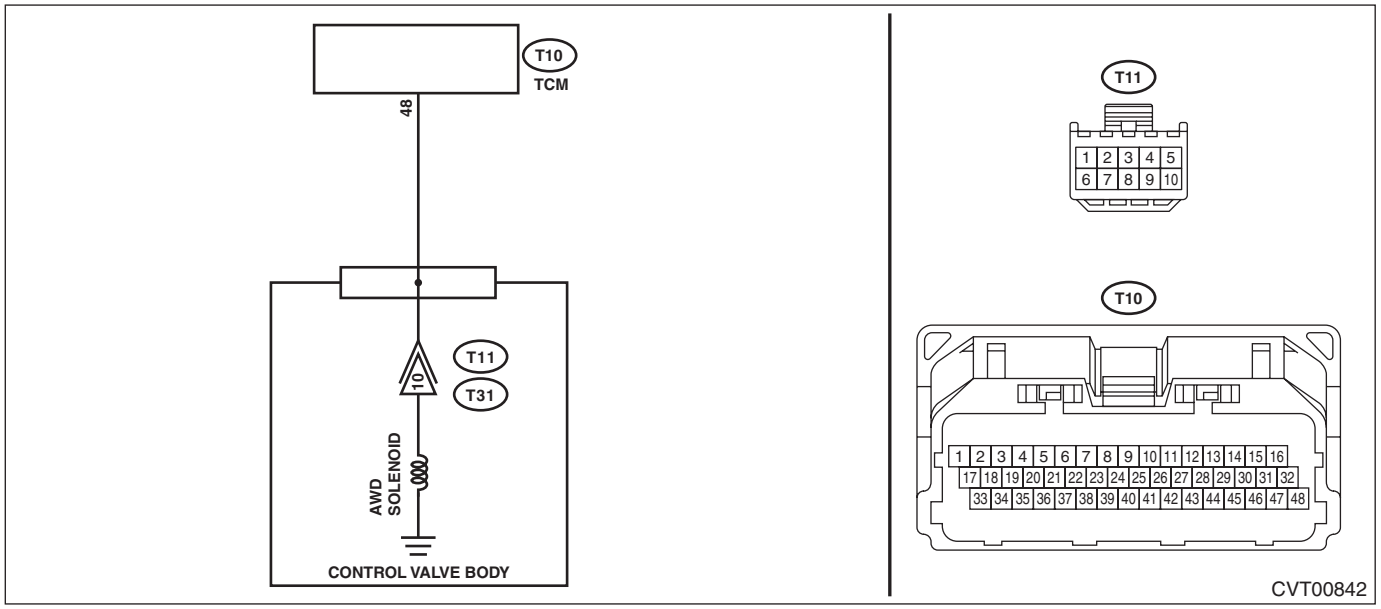
	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 48 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK AWD SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 4 — Transmission body:***	Is the resistance approx. 2 — 4.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>	Go to step **3**.
3	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 4 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-123, Control Valve Body.>	Replace the transmission harness.

AK:DTC P0971 TRANSFER SOLENOID CIRCUIT (HIGH)

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-50, DTC P0971 TRANSFER SOLENOID CIRCUIT (HIGH), Diagnostic Trouble Code (DTC) Detecting Criteria.>



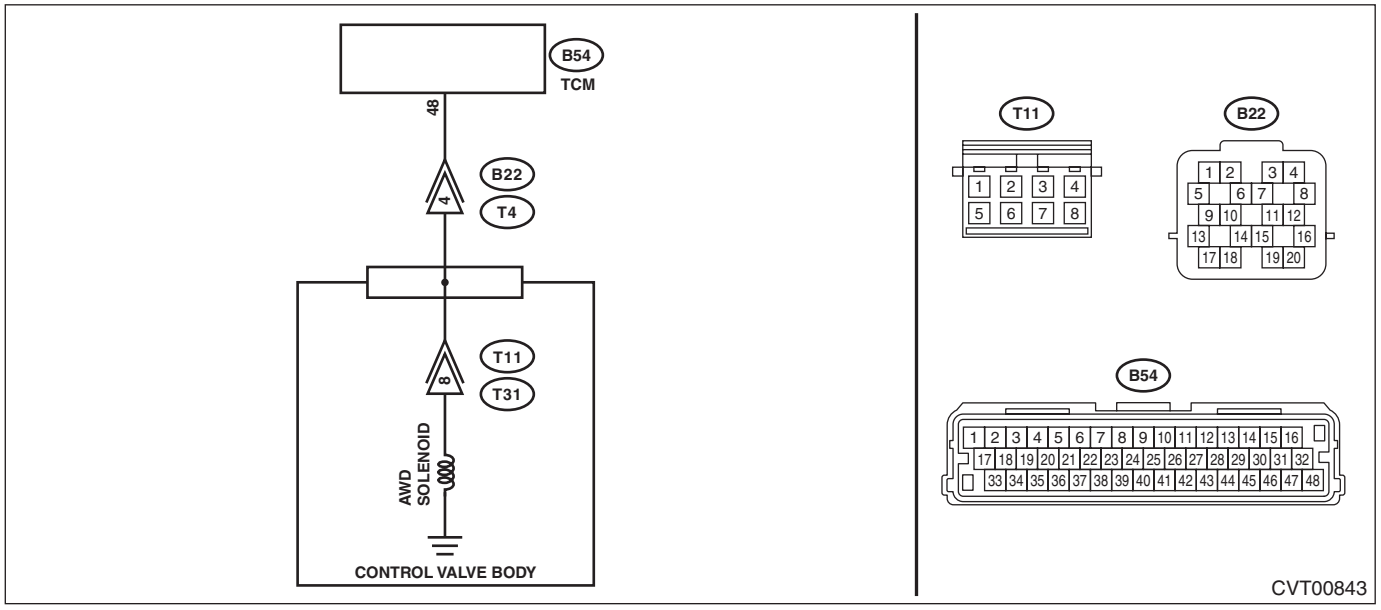
TROUBLE SYMPTOM:

- Tight corner braking phenomenon occurs.
- Drivability getting worse.

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Remove the transmission valve cover. 4) Disconnect the control valve body connector. 5) Measure the resistance between TCM connector and control valve body connector. ***Connector & terminal*** ***(T10) No. 48 — (T11) No. 10:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 48 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.

	Step	Check	Yes	No
3	**CHECK AWD SOLENOID.** 1) Connect the connector for control valve body. 2) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 48 — Transmission body:***	Is the resistance approx. 2 — 4.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

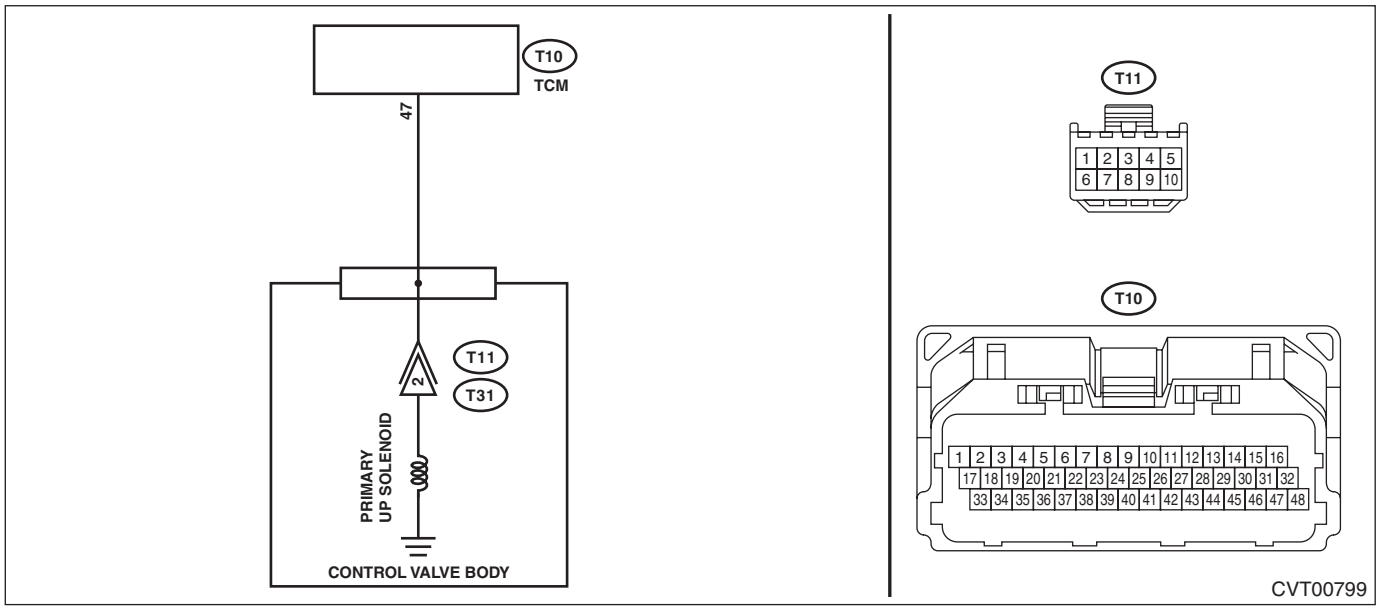
	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 48 — (B22) No. 4:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 48 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.

	Step	Check	Yes	No
3	**CHECK AWD SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 4 — Transmission body:***	Is the resistance approx. 2 — 4.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 4 (+) — Transmission body (–):***	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR690)-123, Control Valve Body.>	Replace the transmission harness.

AL:DTC P0973 PRIMARY SOLENOID SYSTEM A CIRCUIT (LOW)

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-51, DTC P0973 PRIMARY SOLENOID SYSTEM A CIRCUIT (LOW), Diagnostic Trouble Code (DTC) Detecting Criteria.>



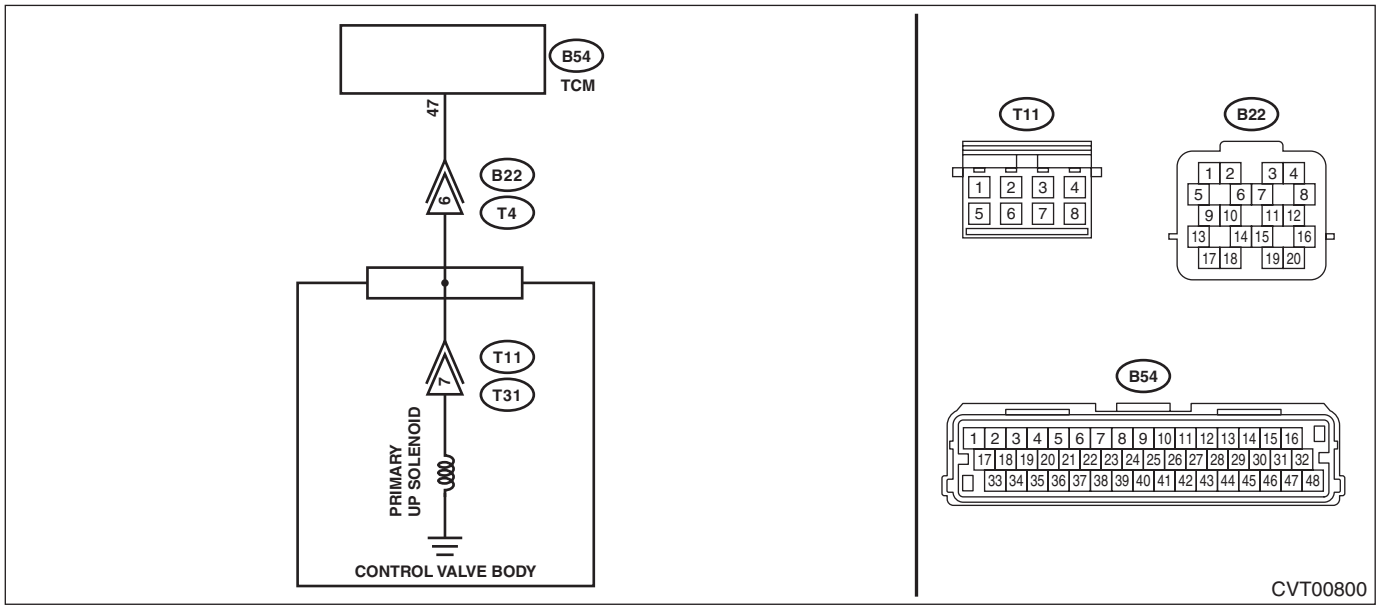
TROUBLE SYMPTOM:

Gear is not changed. (No up-shift)

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Remove the transmission valve cover. 4) Disconnect the control valve body connector. 5) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 47 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK PRIMARY UP SOLENOID.** 1) Connect the connector for control valve body. 2) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 47 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS INSIDE TRANSMISSION.** Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Replace the control valve body. <Ref. to CVT(TR690)-123, Control Valve Body.>

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

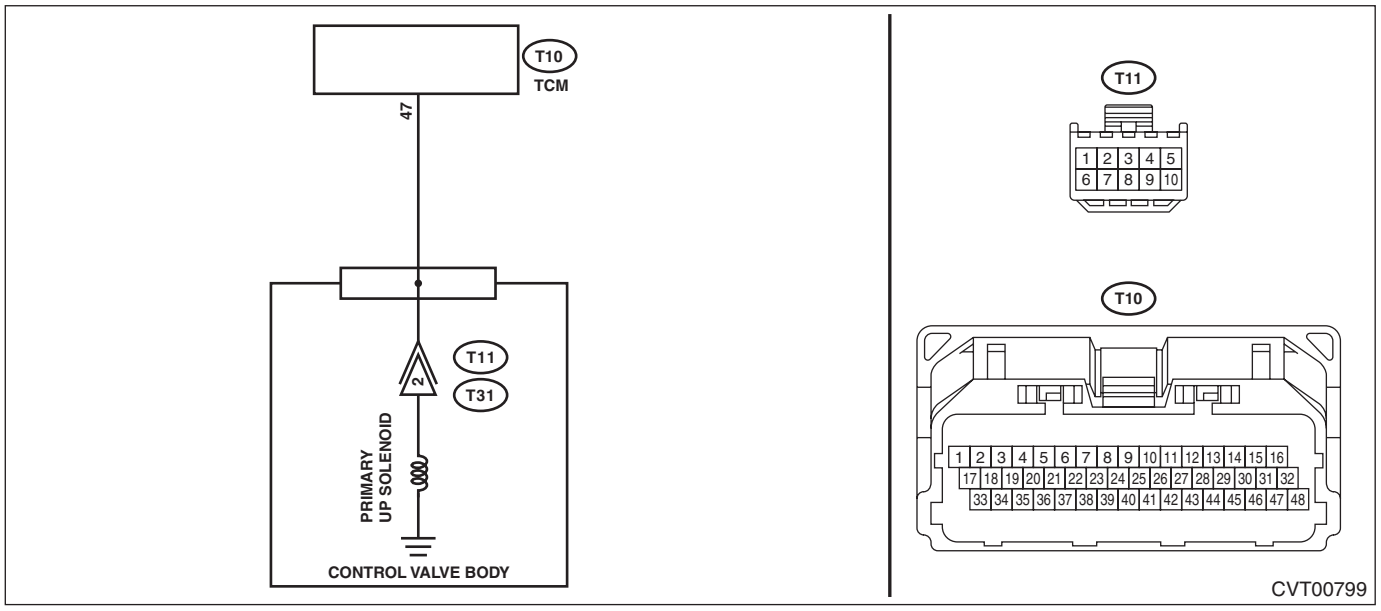
	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 47 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK PRIMARY UP SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 6 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>	Go to step **3**.
3	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 6 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-123, Control Valve Body.>	Replace the transmission harness.

AM:DTC P0974 PRIMARY SOLENOID SYSTEM A CIRCUIT (HIGH)

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-52, DTC P0974 PRIMARY SOLENOID SYSTEM A CIRCUIT (HIGH), Diagnostic Trouble Code (DTC) Detecting Criteria.>



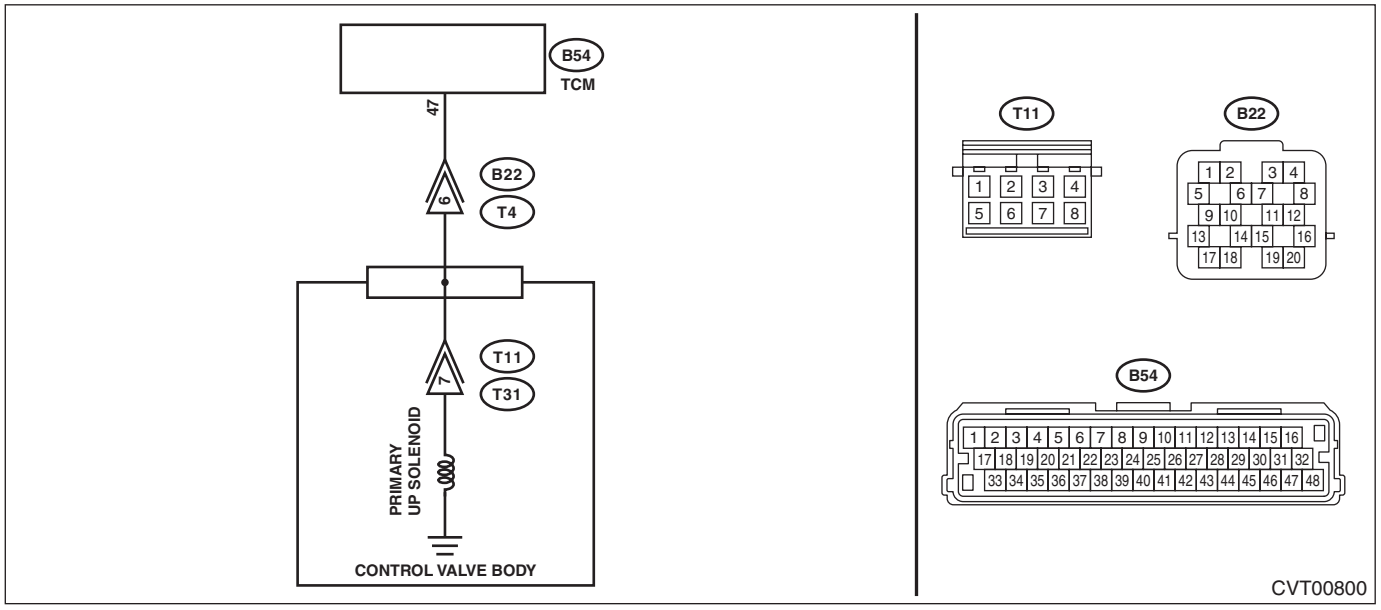
TROUBLE SYMPTOM:

Gear is not changed. (No up-shift)

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Remove the transmission valve cover. 4) Disconnect the control valve body connector. 5) Measure the resistance between TCM connector and control valve body connector. ***Connector & terminal*** ***(T10) No. 47 — (T11) No. 2:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 47 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.

	Step	Check	Yes	No
3	**CHECK PRIMARY UP SOLENOID.** 1) Connect the connector for control valve body. 2) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 47 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

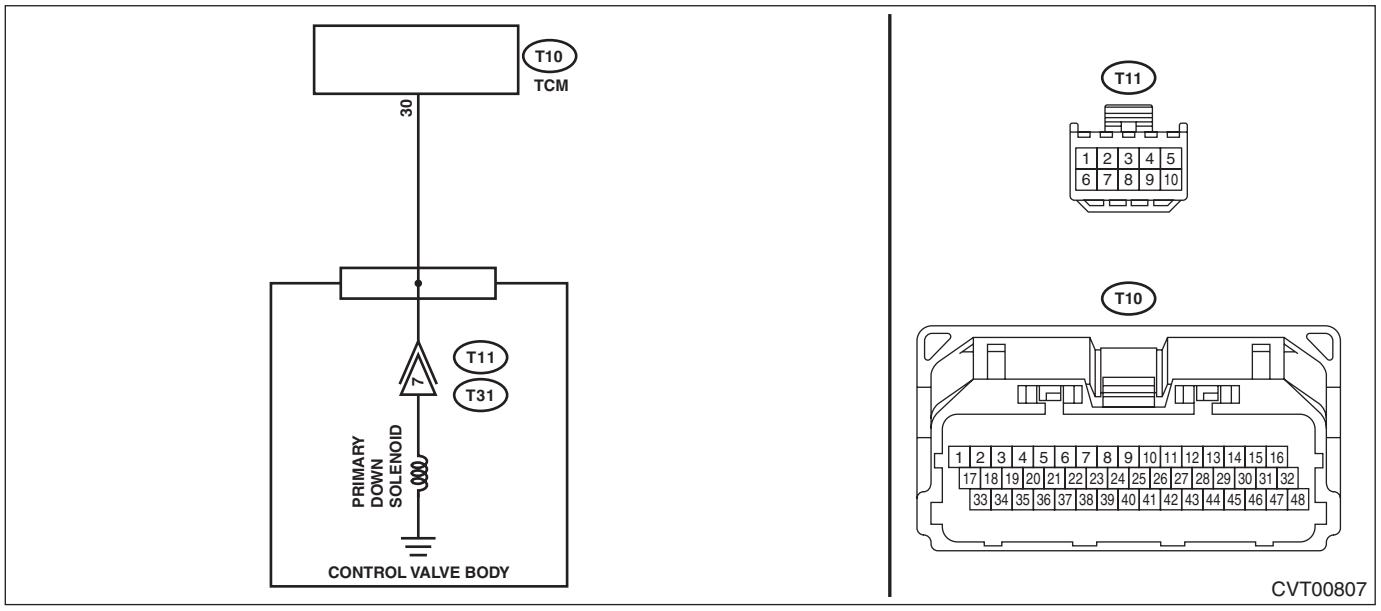
	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 47 — (B22) No. 6:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 47 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.

	Step	Check	Yes	No
3	**CHECK PRIMARY UP SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 6 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 6 (+) — Transmission body (–):***	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR690)-123, Control Valve Body.>	Replace the transmission harness.

AN:DTC P0976 PRIMARY SOLENOID SYSTEM B CIRCUIT (LOW)

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-53, DTC P0976 PRIMARY SOLENOID SYSTEM B CIRCUIT (LOW), Diagnostic Trouble Code (DTC) Detecting Criteria.>



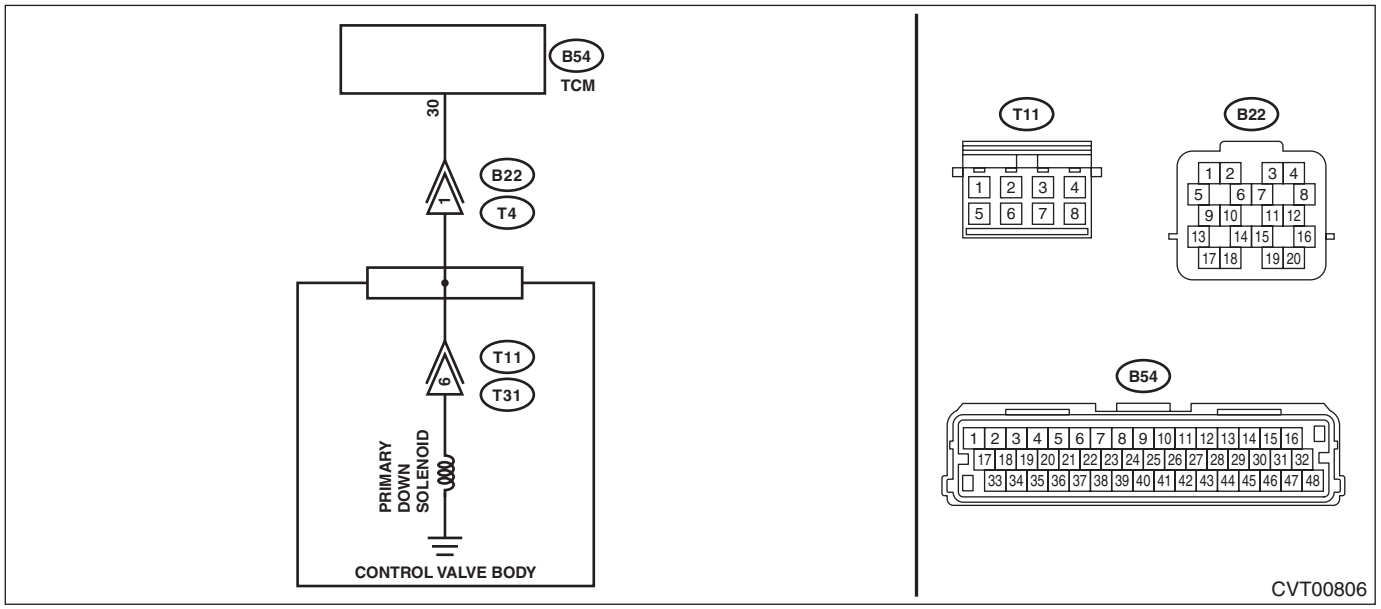
TROUBLE SYMPTOM:

Gear is not changed. (No down-shift)

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Remove the transmission valve cover. 4) Disconnect the control valve body connector. 5) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 30 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK PRIMARY DOWN SOLENOID.** 1) Connect the connector for control valve body. 2) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 30 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS INSIDE TRANSMISSION.** Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

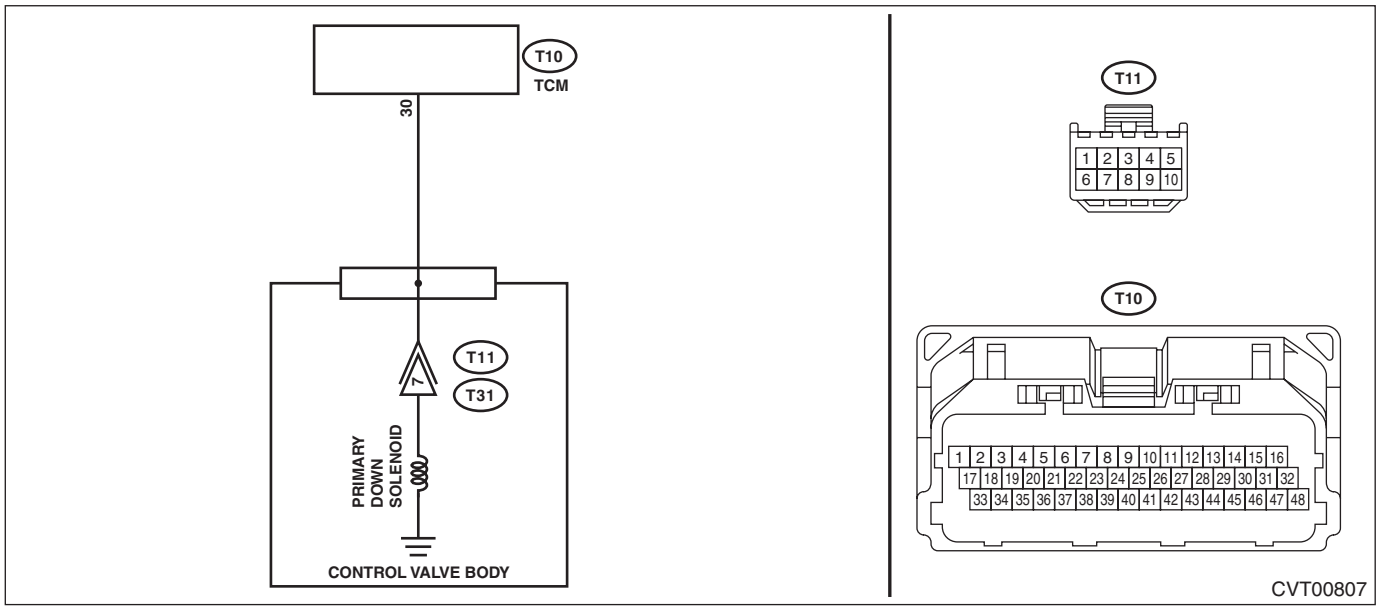
	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 30 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK PRIMARY DOWN SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 1 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>	Go to step **3**.
3	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 1 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-123, Control Valve Body.>	Replace the transmission harness.

AO:DTC P0977 PRIMARY SOLENOID SYSTEM B CIRCUIT (HIGH)

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-54, DTC P0977 PRIMARY SOLENOID SYSTEM B CIRCUIT (HIGH), Diagnostic Trouble Code (DTC) Detecting Criteria.>



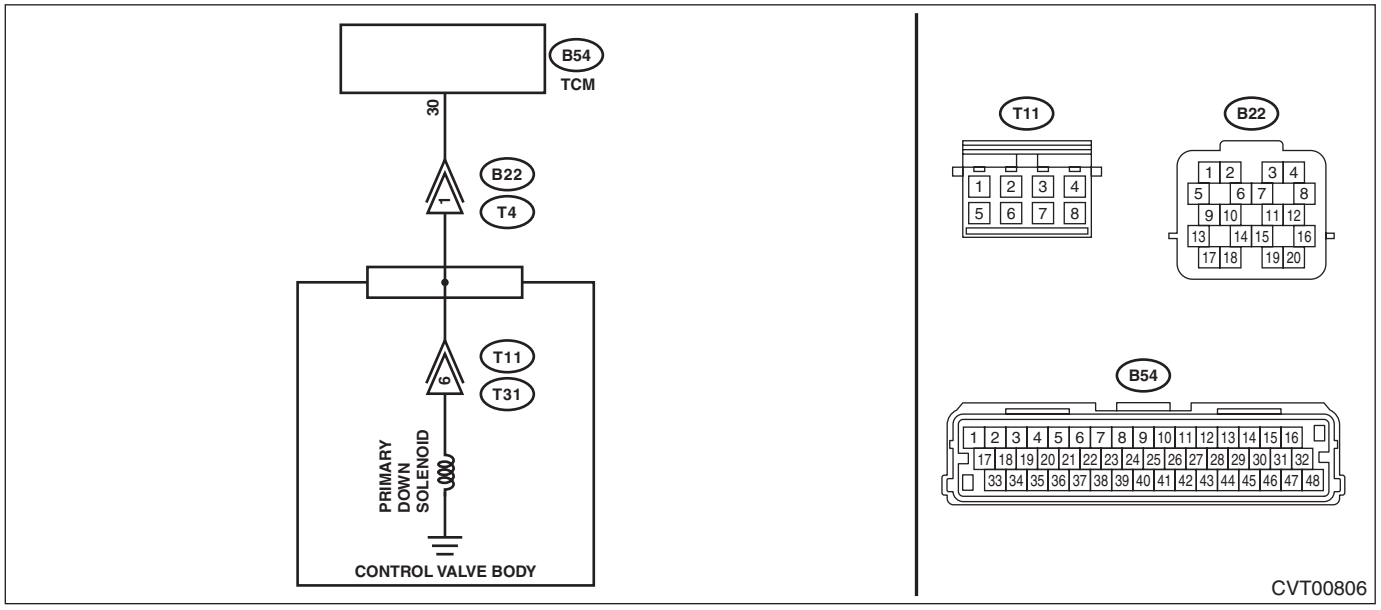
TROUBLE SYMPTOM:

Gear is not changed. (No down-shift)

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Remove the transmission valve cover. 4) Disconnect the control valve body connector. 5) Measure the resistance between TCM connector and control valve body connector. ***Connector & terminal*** ***(T10) No. 30 — (T11) No. 7:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 30 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.

	Step	Check	Yes	No
3	**CHECK PRIMARY DOWN SOLENOID.** 1) Connect the connector for control valve body. 2) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 30 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 30 — (B22) No. 1:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 30 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.

	Step	Check	Yes	No
3	**CHECK PRIMARY DOWN SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 1 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 1 (+) — Transmission body (–):***	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR690)-123, Control Valve Body.>	Replace the transmission harness.

AP:DTC P160A RANDOM ACCESS MEMORY (RAM) ERROR

DTC DETECTING CONDITION:

- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-55, DTC P160A RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

TCM RAM malfunction

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Perform the Clear Memory Mode using the Subaru Select Monitor. <Ref. to CVT(diag)-27, Clear Memory Mode.> 2) Read the DTC.	Is DTC P160A displayed?	Replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).> <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>	Current condition is normal. Check for interference from noise, etc.

AQ:DTC P2158 VEHICLE SPEED SENSOR "B"

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-56, DTC P2158 VEHICLE SPEED SENSOR "B", Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

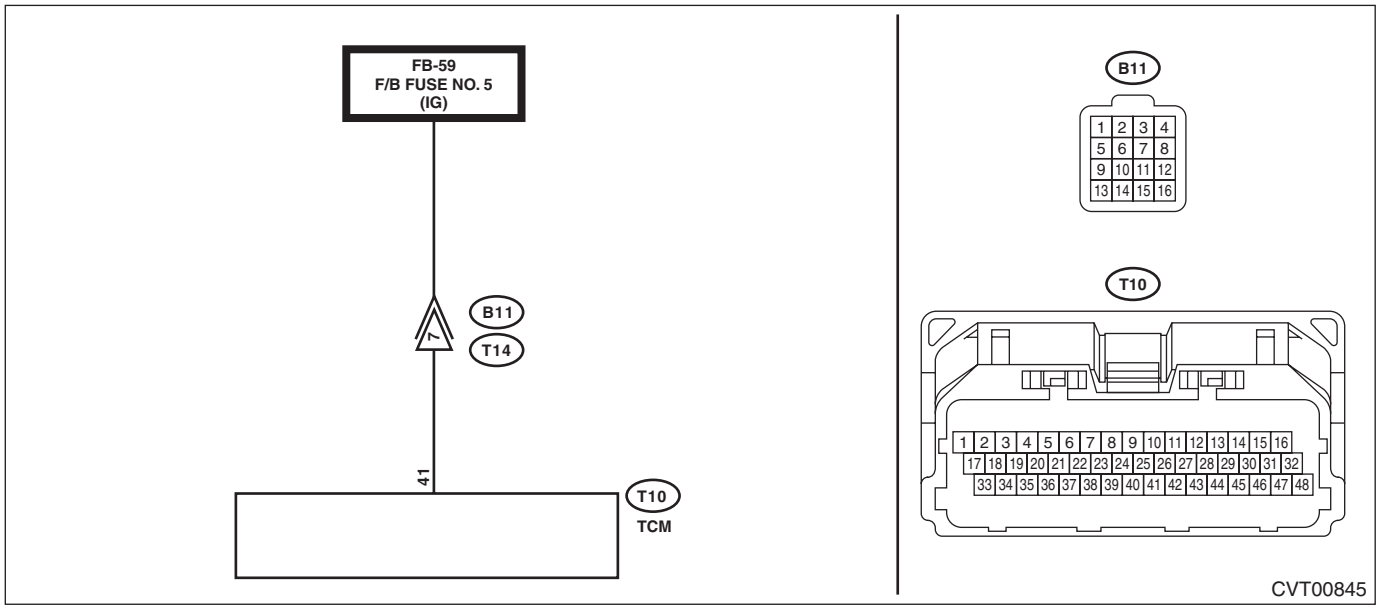
VDC does not operate.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of VDC system using the Subaru Select Monitor.	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Repair the poor contact of connector and harness between VDCCM&H/U and wheel speed sensor.

AR:DTC P2530 IGNITION SWITCH RUN POSITION CIRCUIT

DTC DETECTING CONDITION:

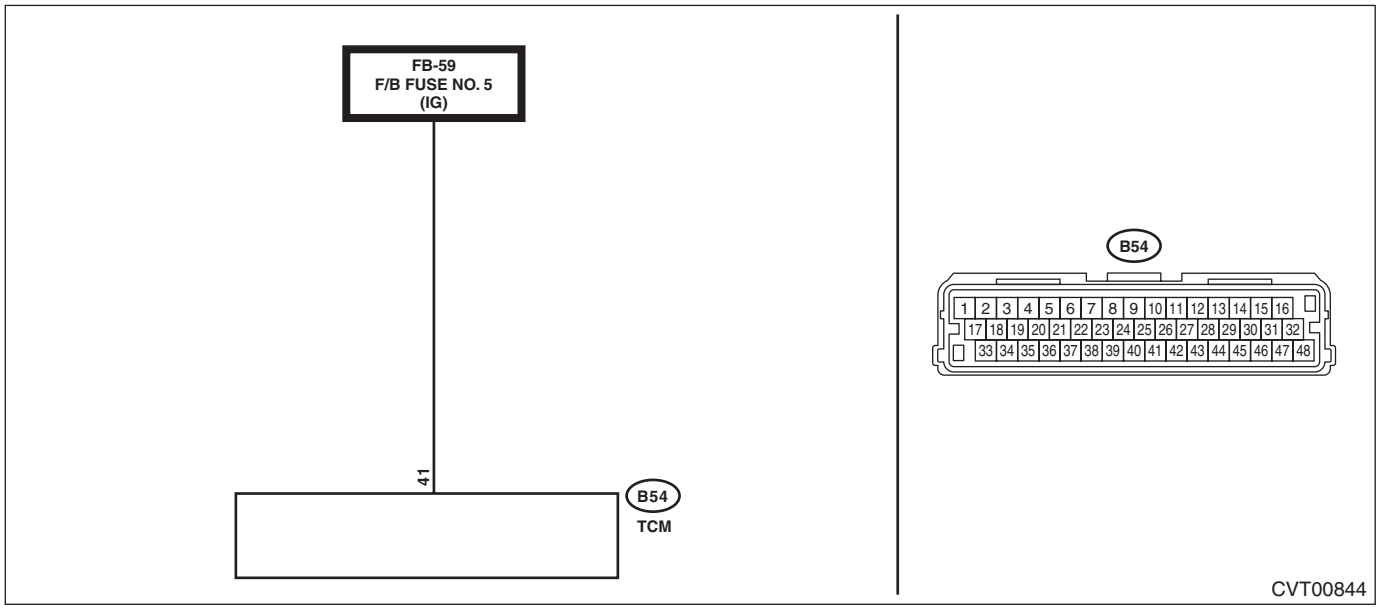
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-57, DTC P2530 IGNITION SWITCH RUN POSITION CIRCUIT, Diagnostic Trouble Code (DTC) Detecting Criteria.>



TROUBLE SYMPTOM:

Faulty TCM operation

WIRING DIAGRAM:



- ENGINE TYPE FB

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

- ENGINE TYPE EZ

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK CONNECTOR.** Check the installing condition of TCM connector.	Is the TCM connector installed properly?	Go to step **2**.	Install the TCM connector.

	Step	Check	Yes	No
2	**CHECK INPUT VOLTAGE OF TCM.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. (While wiggling the harness) ***Connector & terminal*** ***ENGINE TYPE FB*** ***(T10) No. 41 (+) — Chassis ground (–):*** ***ENGINE TYPE EZ*** ***(B54) No. 41 (+) — Chassis ground (–):***	Is the voltage 8 V or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, the following items may be the cause of fault. • Open circuit or short circuit to ground of harness between TCM connector and ignition switch connector (IG relay 1 connector for model with push button start) • Poor contact of ignition switch connector (IG relay 1 connector for model with push button start) • Poor contact of ignition switch (IG relay 1 for model with push button start)	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit or short circuit to ground of harness between TCM connector and ignition switch connector (IG relay 1 connector for model with push button start) • Poor contact of ignition switch connector (IG relay 1 connector for model with push button start) • Poor contact of ignition switch (IG relay 1 for model with push button start)

AS:DTC P2746 PRIMARY PULLEY REVOLUTION SPEED SENSOR CIRCUIT

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-58, DTC P2746 PRIMARY PULLEY REVOLUTION SPEED SENSOR CIRCUIT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Standing start problems
- Shock occurs when engaging the lockup clutch.
- Shock occurs when selecting shift position.

1. ENGINE TYPE FB

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P2746, is DTC P2747 or P2751 displayed?	Perform the diagnosis according to DTCs other than P2746.	Perform the diagnosis according to DTC P2747. <Ref. to CVT(diag)-159, DTC P2747 INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

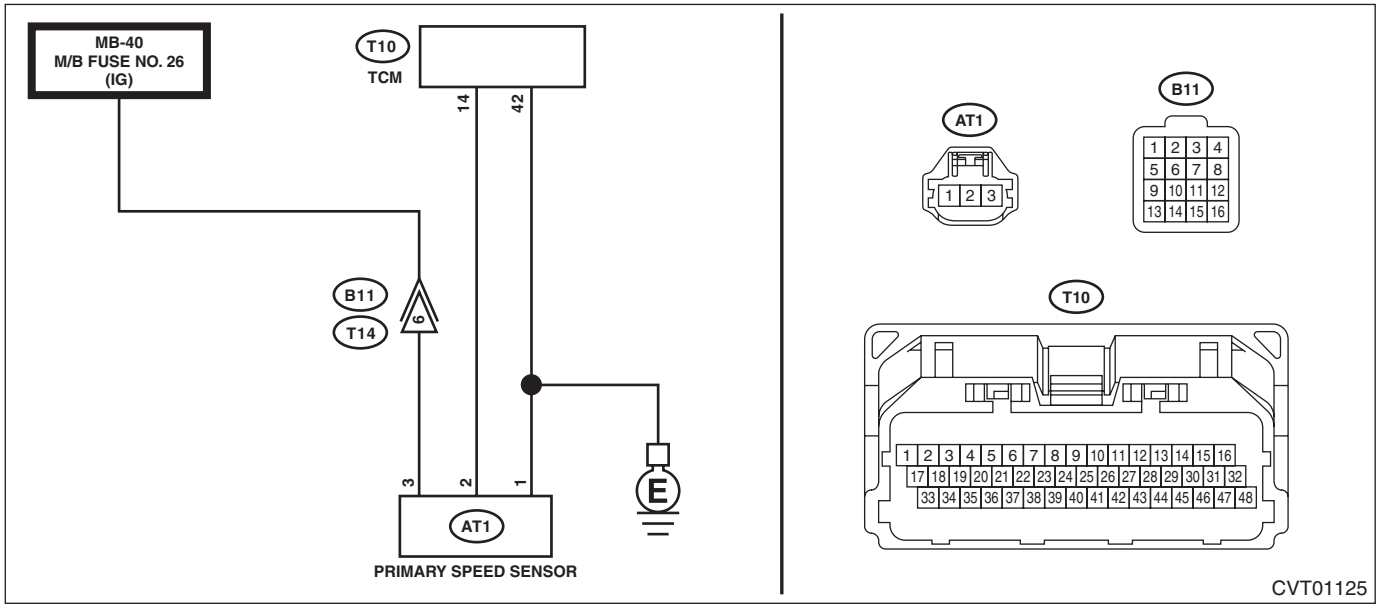
2. ENGINE TYPE EZ

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P2746, is any of the DTCs P2747, U0100 and U0401 displayed?	Perform the diagnosis according to DTCs other than P2746.	Perform the diagnosis according to DTC P2747. <Ref. to CVT(diag)-159, DTC P2747 INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AT:DTC P2747 INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT NO SIGNAL

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-60, DTC P2747 INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT NO SIGNAL, Diagnostic Trouble Code (DTC) Detecting Criteria.>



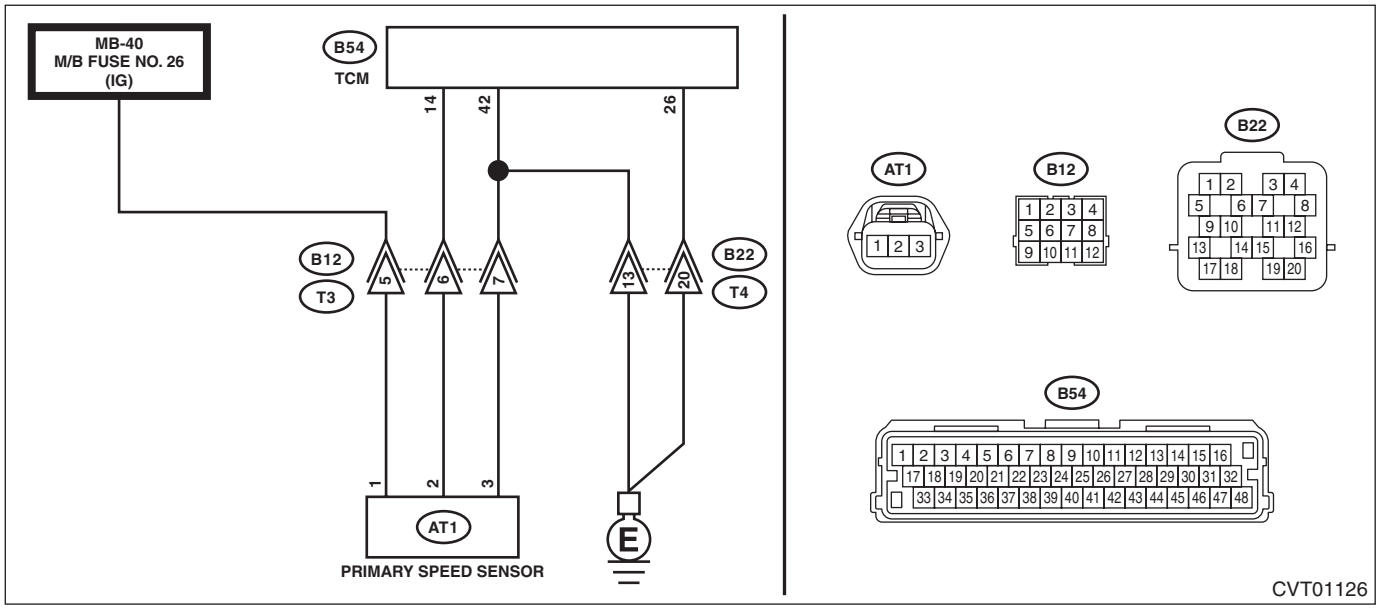
TROUBLE SYMPTOM:

- Standing start problems
- Shock occurs when engaging the lockup clutch.
- Shock occurs when selecting shift position.

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the M/B fuse No. 26.	Is the fuse OK?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector of TCM and primary speed sensor. 3) Measure the resistance between TCM connector and primary speed sensor connector. ***Connector & terminal*** ***(T10) No. 14 — (AT1) No. 2:*** ***(T10) No. 42 — (AT1) No. 1:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.
3	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 14 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of harness.

	Step	Check	Yes	No
4	**CHECK TRANSMISSION HARNESS.** 1) Install the fuse. 2) Connect the TCM connector. 3) Disconnect the transmission connector. 4) Turn the ignition switch to ON. 5) Measure the voltage between transmission connector terminals. ***Connector & terminal*** ***(B11) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **5**.	Repair the open circuit of harness or poor contact of connector.
5	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to OFF. 2) Connect all connectors. 3) Lift up the vehicle. 4) Start the engine. 5) Set the select lever to “D” range. 6) Read the data of «Primary Pulley Speed» using Subaru Select Monitor.	Does the value of «Primary Pulley Speed» change according to those of «Turbine Revolution Speed»?	Current condition is normal. Repair the poor contacts of harnesses of primary speed sensor and transmission connector.	Go to step **6**.
6	**CHECK TRANSMISSION HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Disconnect the primary speed sensor connector. 4) Measure the resistance between transmission connector and primary speed sensor connector. ***Connector & terminal*** ***(T14) No. 6 — (AT1) No. 3:***	Is the resistance less than 1 Ω?	Replace the primary speed sensor. <Ref. to CVT(TR580)-128, Primary Speed Sensor.>	Replace the transmission harness.

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the M/B fuse No. 26.	Is the fuse OK?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.

	Step	Check	Yes	No
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 26 — (B22) No. 20:*** ***(B54) No. 42 — (B22) No. 13:*** ***(B54) No. 14 — (B12) No. 6:*** ***(B54) No. 42 — (B12) No. 7:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.
3	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 14 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of harness.
4	**CHECK TRANSMISSION HARNESS.** 1) Install the fuse. 2) Connect the TCM connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between transmission connector terminals. ***Connector & terminal*** ***(B12) No. 5 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **5**.	Repair the open circuit of harness or poor contact of connector.
5	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to OFF. 2) Connect the transmission connector. 3) Lift up the vehicle. 4) Start the engine. 5) Set the select lever to “D” range. 6) Read the data of «Primary Pulley Speed» using Subaru Select Monitor.	Does the value of «Primary Pulley Speed» change according to those of «Turbine Revolution Speed»?	Current condition is normal. Repair the poor contacts of harnesses of primary speed sensor and transmission connector.	Go to step **6**.
6	**CHECK TRANSMISSION HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Disconnect the primary speed sensor connector. 4) Measure the resistance between transmission connector and primary speed sensor connector. ***Connector & terminal*** ***(T3) No. 5 — (AT1) No. 1:*** ***(T3) No. 6 — (AT1) No. 2:*** ***(T3) No. 7 — (AT1) No. 3:***	Is the resistance less than 1 Ω?	Replace the primary speed sensor. <Ref. to CVT(TR690)-114, Primary Speed Sensor.>	Replace the transmission harness.

AU:DTC P2750 SEC. PULLEY REVOLUTION SPEED SENSOR CIRCUIT

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-61, DTC P2750 SEC. PULLEY REVOLUTION SPEED SENSOR CIRCUIT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Shifting shock is felt.
- Acceleration is poor during standing start.
- Shift control malfunction

1. ENGINE TYPE FB

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P2750, is any of the DTC P2751, U0122 or U0416 displayed?	Perform the diagnosis according to DTCs other than P2750.	Perform the diagnosis according to DTC P2751. <Ref. to CVT(diag)-163, DTC P2751 INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

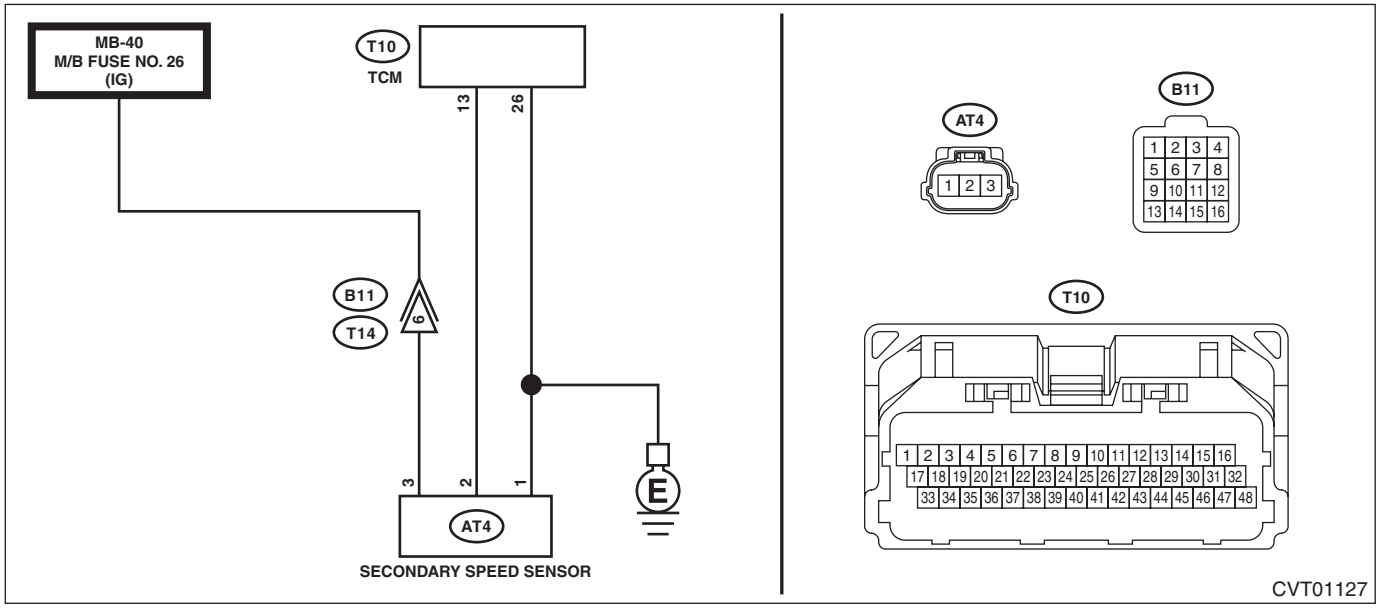
2. ENGINE TYPE EZ

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P2750, is DTC P2747 or P2751 displayed?	Perform the diagnosis according to DTCs other than P2750.	Perform the diagnosis according to DTC P2751. <Ref. to CVT(diag)-163, DTC P2751 INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AV:DTC P2751 INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT NO SIGNAL

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-63, DTC P2751 INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT NO SIGNAL, Diagnostic Trouble Code (DTC) Detecting Criteria.>



TROUBLE SYMPTOM:

- Shifting shock is felt.
- Acceleration is poor during standing start.
- Shift control malfunction

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the M/B fuse No. 26.	Is the fuse OK?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector of TCM and secondary speed sensor. 3) Measure the resistance between TCM connector and secondary speed sensor connector. ***Connector & terminal*** ***(T10) No. 13 — (AT4) No. 2:*** ***(T10) No. 26 — (AT4) No. 1:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.
3	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 13 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of harness.

	Step	Check	Yes	No
4	**CHECK TRANSMISSION HARNESS.** 1) Install the fuse. 2) Connect the TCM connector. 3) Disconnect the transmission connector. 4) Turn the ignition switch to ON. 5) Measure the voltage between transmission connector terminals. ***Connector & terminal*** ***(B11) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **5**.	Repair the open circuit of harness or poor contact of connector.
5	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to OFF. 2) Connect all connectors. 3) Lift up the vehicle. 4) Start the engine. 5) Set the select lever to “D” range. 6) Read the data of «Secondary Pulley Speed» using Subaru Select Monitor.	Does the value of «Secondary Pulley Speed» change according to those of «Front Wheel Speed»?	Current condition is normal. Repair the poor contacts of harnesses of secondary speed sensor and transmission connector.	Go to step **6**.
6	**CHECK TRANSMISSION HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Disconnect the secondary speed sensor connector. 4) Measure the resistance between transmission connector and secondary speed sensor connector. ***Connector & terminal*** ***(T14) No. 6 — (AT4) No. 3:***	Is the resistance less than 1 Ω?	Replace the secondary speed sensor. <Ref. to CVT(TR580)-123, Secondary Speed Sensor.>	Replace the transmission harness.

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

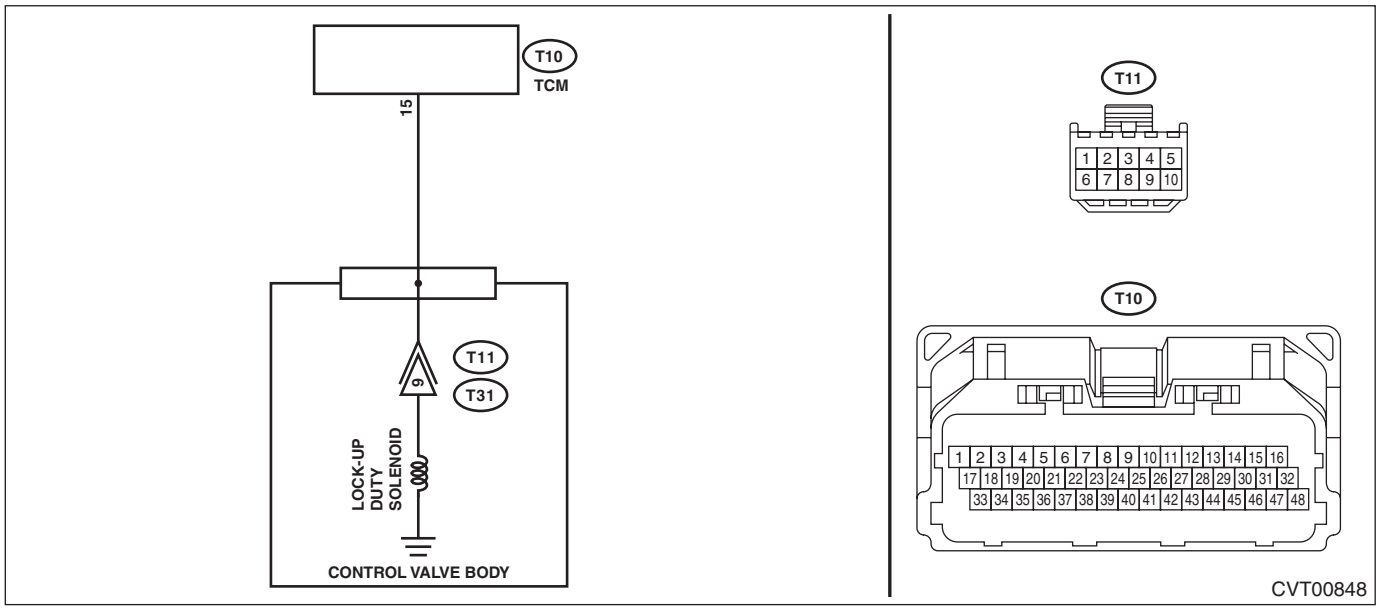
	Step	Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the M/B fuse No. 26.	Is the fuse OK?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.

	Step	Check	Yes	No
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 13 — (B22) No. 10:*** ***(B54) No. 26 — (B22) No. 20:*** ***(B54) No. 42 — (B22) No. 13:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.
3	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 13 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of harness.
4	**CHECK TRANSMISSION HARNESS.** 1) Install the fuse. 2) Connect the TCM connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between transmission connector terminals. ***Connector & terminal*** ***(B22) No. 11 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **5**.	Repair the open circuit of harness or poor contact of connector.
5	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to OFF. 2) Connect the transmission connector. 3) Lift up the vehicle. 4) Start the engine. 5) Set the select lever to “D” range. 6) Read the data of «Secondary Pulley Speed» using Subaru Select Monitor.	Does the value of «Secondary Pulley Speed» change according to those of «Front Wheel Speed»?	Current condition is normal. Repair the poor contacts of harnesses of secondary speed sensor and transmission connector.	Go to step **6**.
6	**CHECK TRANSMISSION HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Disconnect the secondary speed sensor connector. 4) Measure the resistance between transmission connector and secondary speed sensor connector. ***Connector & terminal*** ***(T4) No. 10 — (AT4) No. 2:*** ***(T4) No. 11 — (AT4) No. 3:*** ***(T4) No. 13 — (AT4) No. 1:*** ***(T4) No. 20 — (AT4) No. 1:***	Is the resistance less than 1 Ω?	Replace the secondary speed sensor. <Ref. to CVT(TR690)-111, Secondary Speed Sensor.>	Replace the transmission harness.

AW:DTC P2757 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT PERFORMANCE/STUCK OFF

DTC DETECTING CONDITION:

- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-64, DTC P2757 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT PERFORMANCE/STUCK OFF, Diagnostic Trouble Code (DTC) Detecting Criteria.>



TROUBLE SYMPTOM:

No lock-up occurs.

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P2757, is any of the DTC P0717, P2763, P2764, U0100 or U0401 displayed?	Perform the diagnosis according to DTCs other than P2757.	Go to step **2**.
2	**CHECK LOCK-UP DUTY SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the lock-up duty solenoid. <Ref. to CVT(diag)-33, System Operation Check Mode.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK LOCK-UP DUTY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 15 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the harness for continuity.	Is the harness normal? (Is it free from defects such as open circuit, power supply-output short or GND-output short circuit, or poor contact?)	Go to step **7**.	Repair the harness.

	Step	Check	Yes	No
5	**CHECK TRANSMISSION FLUID.** 1) Connect the TCM connector. 2) Check the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR580)-43, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **7**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR580)-43, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Shift the select lever to “P” range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-104, DTC P0841 SECONDARY OIL PRESSURE SENSOR PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
8	**ACTUAL DRIVING CHECK FOR LOCK-UP CONDITION.** 1) Perform the Clear Memory Mode. <Ref. to CVT(diag)-27, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Start the engine. 4) Warm up until the ATF temperature exceeds 50°C. 5) Drive the vehicle for one minute or more while keeping such constant speed that «Lock Up Duty Ratio» is 70% or more, and «Front Wheel Speed» is 40 km/h (25 MPH) or more, which are displayed on the Subaru Select Monitor. 6) Turn the ignition switch to OFF. 7) Start the engine. 8) Perform the procedure in step 5) again. 9) Read the DTC using Subaru Select Monitor.	Does the AT OIL TEMP light blink and is DTC P2757 displayed?	Perform the secondary pressure test. <Ref. to CVT(TR580)-53, Secondary Pressure (Line Pressure) Test.> When DTC other than P2757 is displayed, perform the diagnosis corresponding to the DTC.	Current condition is normal. Check for poor contact of connector or harness.

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

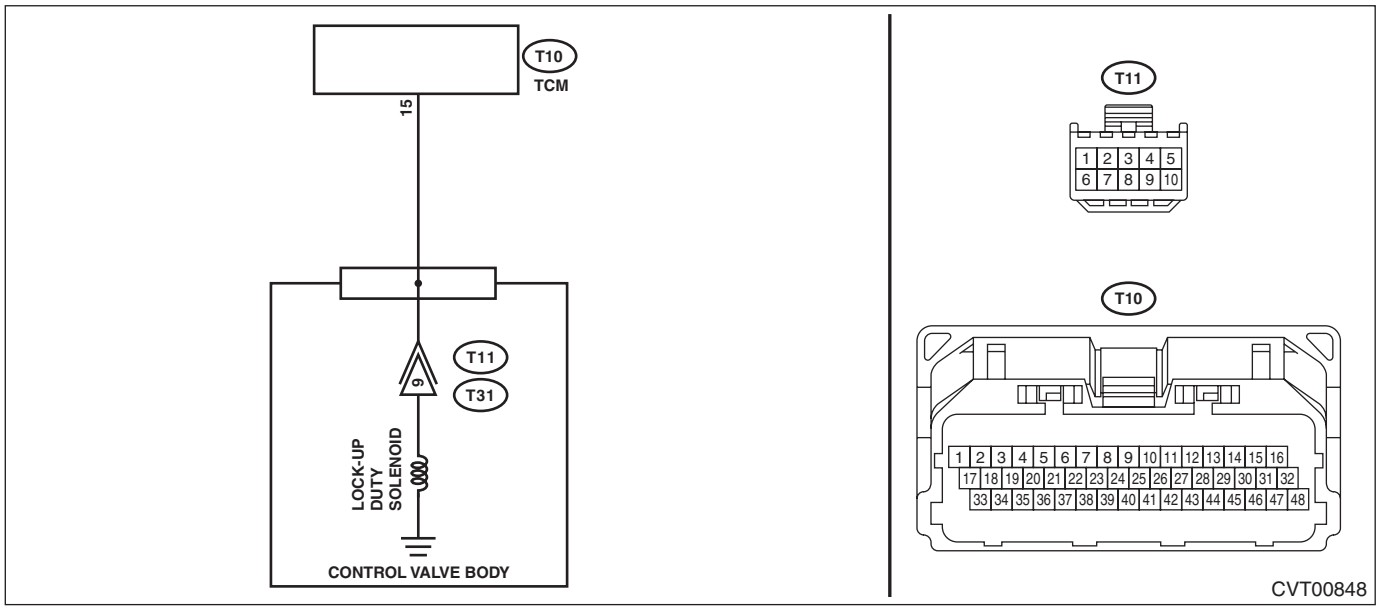
Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P2757, is any of the DTCs P2747, P2763, P2764, U0100 and U0401 displayed?	Perform the diagnosis according to DTCs other than P2757.	Go to step **2**.
2	**CHECK LOCK-UP DUTY SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the lock-up duty solenoid. <Ref. to CVT(diag)-33, System Operation Check Mode.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK LOCK-UP DUTY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 2 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the harness for continuity.	Is the harness normal? (Is it free from defects such as open circuit, power supply-output short or GND-output short circuit, or poor contact?)	Go to step **7**.	Repair the harness.
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.>

	Step	Check	Yes	No
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **7**.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Shift the select lever to "P" range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-104, DTC P0841 SECONDARY OIL PRESSURE SENSOR PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
8	**ACTUAL DRIVING CHECK FOR LOCK-UP CONDITION.** 1) Perform the Clear Memory Mode. <Ref. to CVT(diag)-27, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Start the engine. 4) Warm up until the ATF temperature exceeds 50°C. 5) Drive the vehicle for one minute or more while keeping such constant speed that «Lock Up Duty Ratio» is 70% or more, and «Front Wheel Speed» is 40 km/h (25 MPH) or more, which are displayed on the Subaru Select Monitor. 6) Turn the ignition switch to OFF. 7) Start the engine. 8) Perform the procedure in step 5) again. 9) Read the DTC using Subaru Select Monitor.	Does the AT OIL TEMP light blink and is DTC P2757 displayed?	Perform the secondary pressure test. <Ref. to CVT(TR690)-51, Secondary Pressure (Line Pressure) Test.> When DTC other than P2757 is displayed, perform the diagnosis corresponding to the DTC.	Current condition is normal. Check for poor contact of connector or harness.

AX:DTC P2758 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT STUCK ON

DTC DETECTING CONDITION:

- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-66, DTC P2758 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT STUCK ON, Diagnostic Trouble Code (DTC) Detecting Criteria.>



TROUBLE SYMPTOM:

The engine stalls when the vehicle is stopped.

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P2758, is any of the DTC P0717, P2763, P2764, U0100 or U0401 displayed?	Perform the diagnosis according to DTCs other than P2758.	Go to step **2**.
2	**CHECK LOCK-UP DUTY SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the lock-up duty solenoid. <Ref. to CVT(diag)-33, System Operation Check Mode.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK LOCK-UP DUTY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 15 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the harness for continuity.	Is the harness normal? (Is it free from defects such as open circuit, power supply-output short or GND-output short circuit, or poor contact?)	Go to step **7**.	Repair the harness.

	Step	Check	Yes	No
5	**CHECK TRANSMISSION FLUID.** 1) Connect the TCM connector. 2) Check the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR580)-39, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR580)-43, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **7**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR580)-43, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Shift the select lever to “P” range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-104, DTC P0841 SECONDARY OIL PRESSURE SENSOR PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
8	**ACTUAL DRIVING CHECK FOR LOCK-UP CONDITION.** 1) Perform the Clear Memory Mode. <Ref. to CVT(diag)-27, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Start the engine. 4) Warm up until the ATF temperature exceeds 50°C. 5) Drive the vehicle for one minute or more while keeping such constant speed that «Lock Up Duty Ratio» is 0%, and «Front Wheel Speed» is 5 km/h (3 MPH) or less, which are displayed on the Subaru Select Monitor. 6) Turn the ignition switch to OFF. 7) Start the engine. 8) Perform the procedure in step 5) again. 9) Read the DTC using Subaru Select Monitor.	Does the AT OIL TEMP light blink and is DTC P2758 displayed? Or does the engine stall?	Perform the secondary pressure test. <Ref. to CVT(TR580)-53, Secondary Pressure (Line Pressure) Test.> When DTC other than P2758 is displayed, perform the diagnosis according to the DTC.	Current condition is normal. Check for poor contact of connector or harness.

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

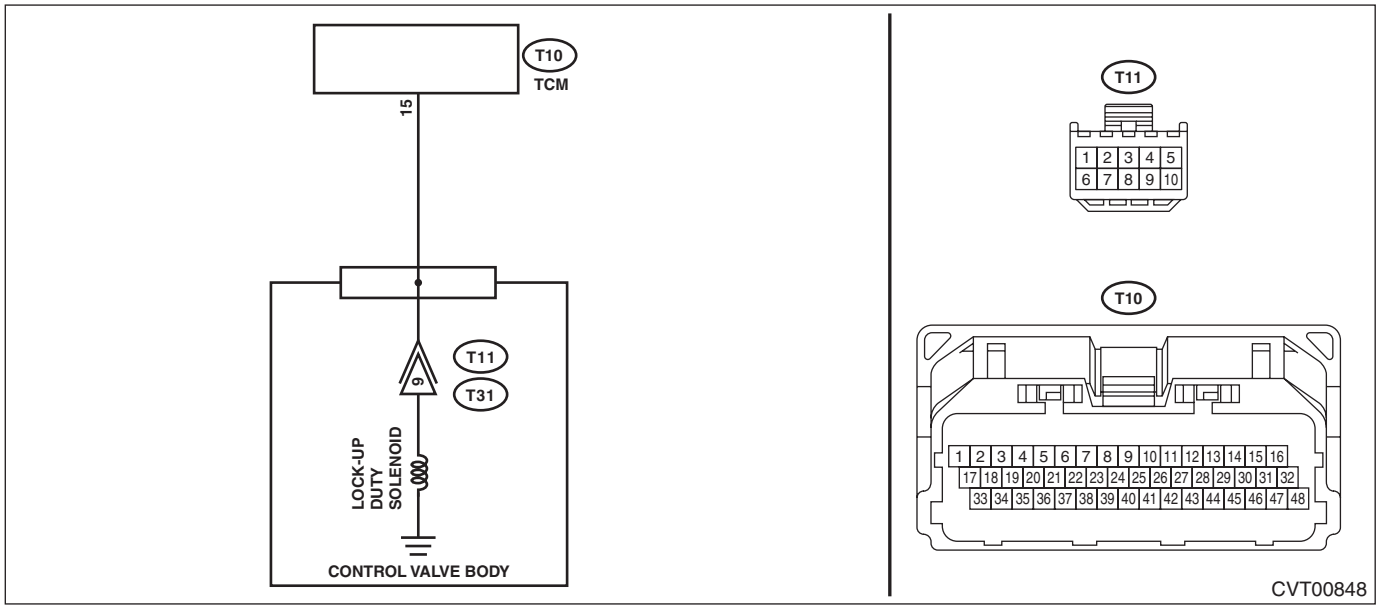
Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P2758, is any of the DTCs P2747, P2763, P2764, U0100 and U0401 displayed?	Perform the diagnosis according to DTCs other than P2758.	Go to step **2**.
2	**CHECK LOCK-UP DUTY SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the lock-up duty solenoid. <Ref. to CVT(diag)-33, System Operation Check Mode.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK LOCK-UP DUTY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 2 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the harness for continuity.	Is the harness normal? (Is it free from defects such as open circuit, power supply-output short or GND-output short circuit, or poor contact?)	Go to step **7**.	Repair the harness.
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-38, ADJUSTMENT, CVTF.>

	Step	Check	Yes	No
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **7**.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR690)-42, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Shift the select lever to "P" range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-104, DTC P0841 SECONDARY OIL PRESSURE SENSOR PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
8	**ACTUAL DRIVING CHECK FOR LOCK-UP CONDITION.** 1) Perform the Clear Memory Mode. <Ref. to CVT(diag)-27, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Start the engine. 4) Warm up until the ATF temperature exceeds 50°C. 5) Drive the vehicle for one minute or more while keeping such constant speed that «Lock Up Duty Ratio» is 0%, and «Front Wheel Speed» is 5 km/h (3 MPH) or less, which are displayed on the Subaru Select Monitor. 6) Turn the ignition switch to OFF. 7) Start the engine. 8) Perform the procedure in step 5) again. 9) Read the DTC using Subaru Select Monitor.	Does the AT OIL TEMP light blink and is DTC P2758 displayed? Or does the engine stall?	Perform the secondary pressure test. <Ref. to CVT(TR690)-51, Secondary Pressure (Line Pressure) Test.> When DTC other than P2758 is displayed, perform the diagnosis according to the DTC.	Current condition is normal. Check for poor contact of connector or harness.

AY:DTC P2763 LOCK-UP DUTY SOLENOID CIRCUIT (HIGH)

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-68, DTC P2763 LOCK-UP DUTY SOLENOID CIRCUIT (HIGH), Diagnostic Trouble Code (DTC) Detecting Criteria.>



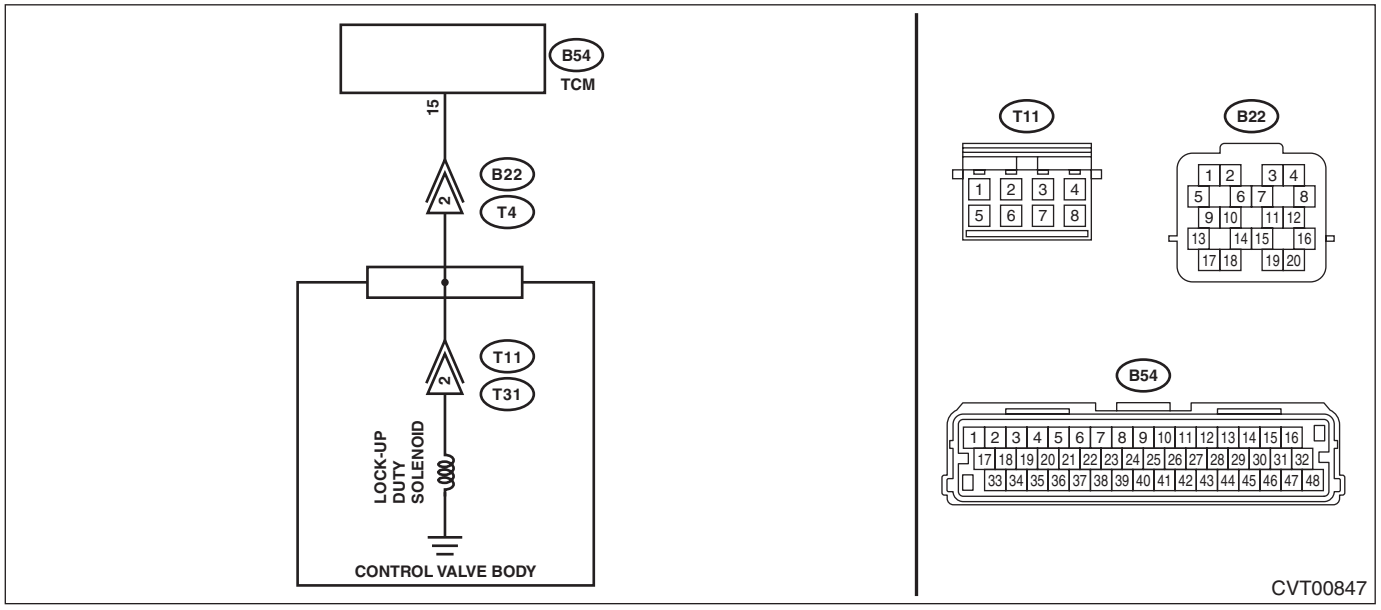
TROUBLE SYMPTOM:

- No lock-up occurs.
- Engine stalls.

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Remove the transmission valve cover. 4) Disconnect the control valve body connector. 5) Measure the resistance between TCM connector and control valve body connector. ***Connector & terminal*** ***(T10) No. 15 — (T11) No. 9:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 15 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.

	Step	Check	Yes	No
3	**CHECK LOCK-UP DUTY SOLENOID.** 1) Connect the connector for control valve body. 2) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 15 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Replace the control valve body. <Ref. to CVT(TR580)-138, Control Valve Body.>

2. ENGINE TYPE EZ

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

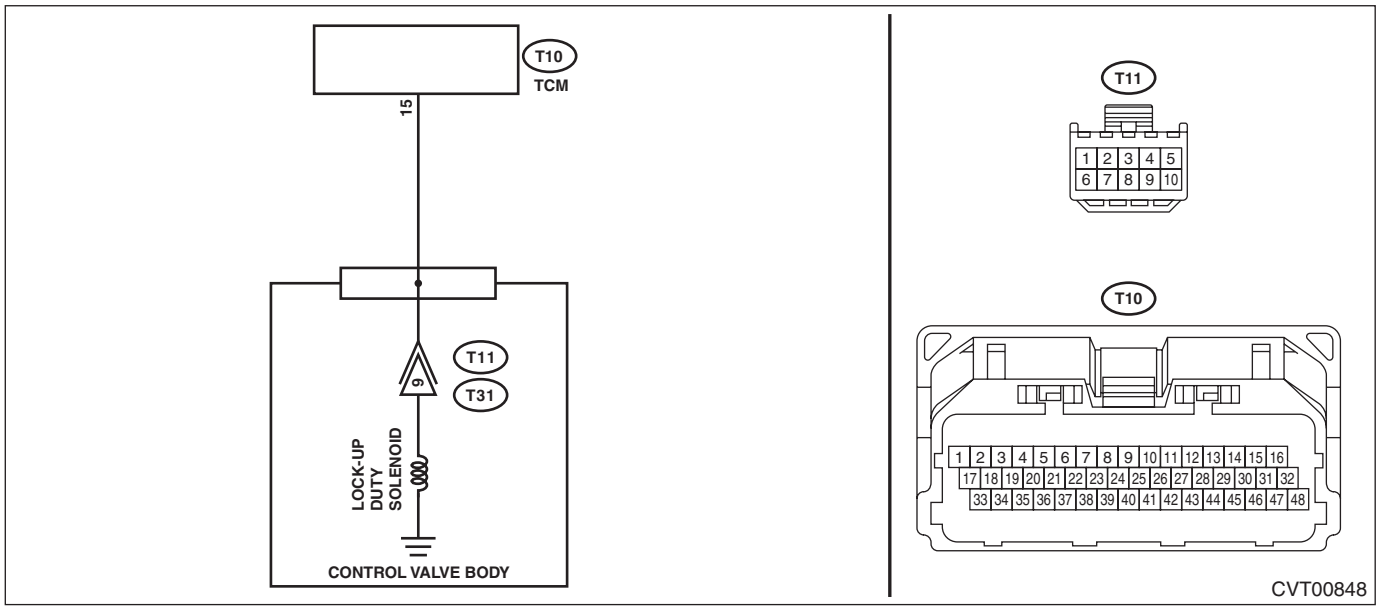
	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 15 — (B22) No. 2:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 15 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.

	Step	Check	Yes	No
3	**CHECK LOCK-UP DUTY SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 2 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 2 (+) — Transmission body (–):***	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR690)-123, Control Valve Body.>	Replace the transmission harness.

AZ:DTC P2764 LOCK-UP DUTY SOLENOID CIRCUIT (LOW)

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-69, DTC P2764 LOCK-UP DUTY SOLENOID CIRCUIT (LOW), Diagnostic Trouble Code (DTC) Detecting Criteria.>



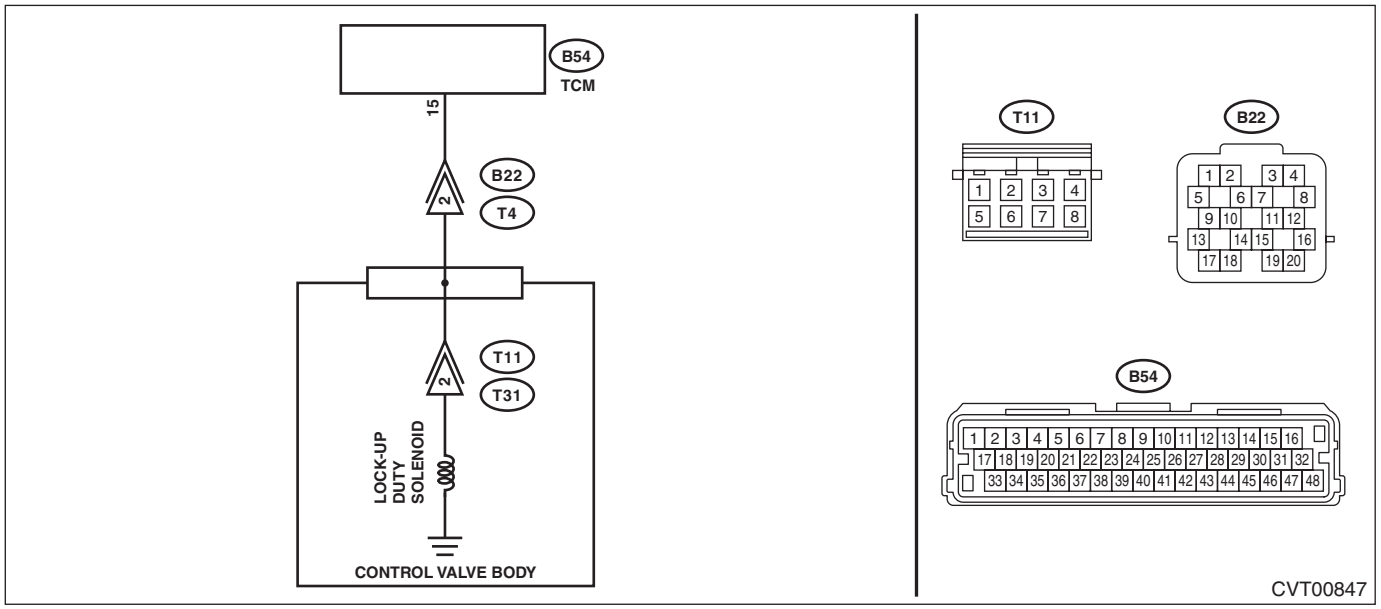
TROUBLE SYMPTOM:

No lock-up occurs.

1. ENGINE TYPE FB

WIRING DIAGRAM:

CVT control system <Ref. to WI-184, ENGINE TYPE FB, WIRING DIAGRAM, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Remove the transmission valve cover. 4) Disconnect the control valve body connector. 5) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(T10) No. 15 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK LOCK-UP DUTY SOLENOID.** 1) Connect the connector for control valve body. 2) Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(T10) No. 15 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS INSIDE TRANSMISSION.** Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Replace the control valve body. <Ref. to CVT(TR690)-123, Control Valve Body.>

2. ENGINE TYPE EZ

WIRING DIAGRAM:

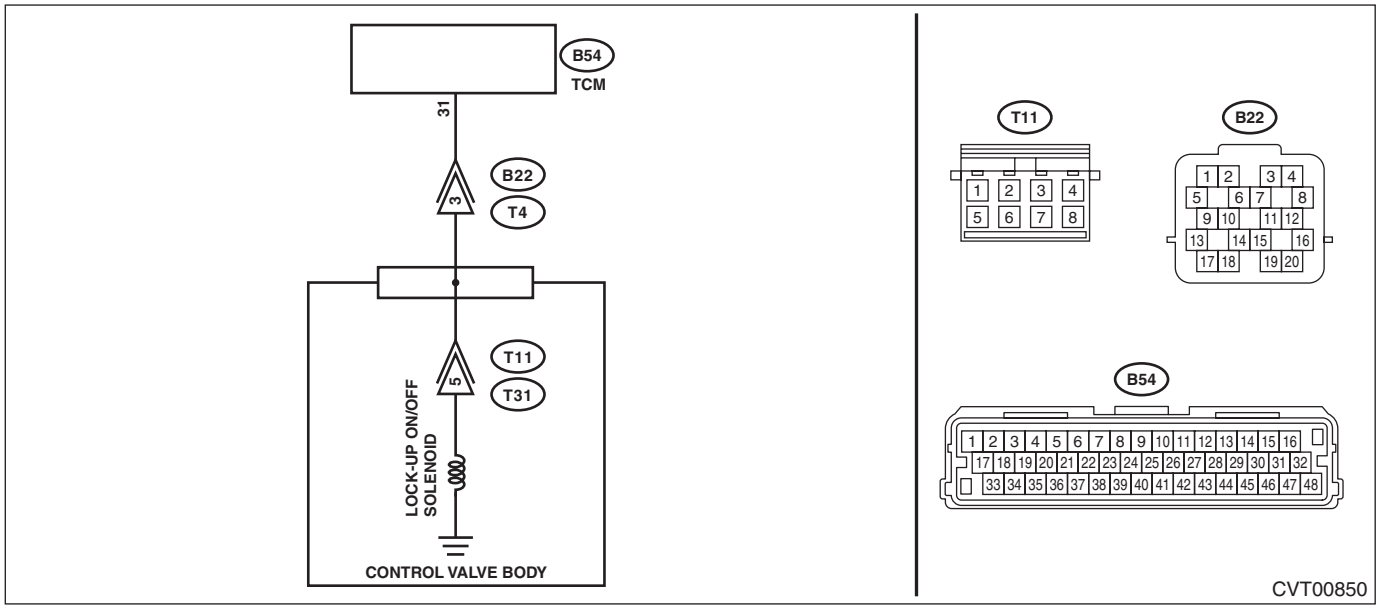
CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 15 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK LOCK-UP DUTY SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 2 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>	Go to step **3**.
3	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 2 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-123, Control Valve Body.>	Replace the transmission harness.

BA:DTC P2769 LOCK-UP ON/OFF SOLENOID CIRCUIT (LOW)

DTC DETECTING CONDITION:



- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-70, DTC P2769 LOCK-UP ON/OFF SOLENOID CIRCUIT (LOW), Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

No lock-up occurs.

WIRING DIAGRAM:

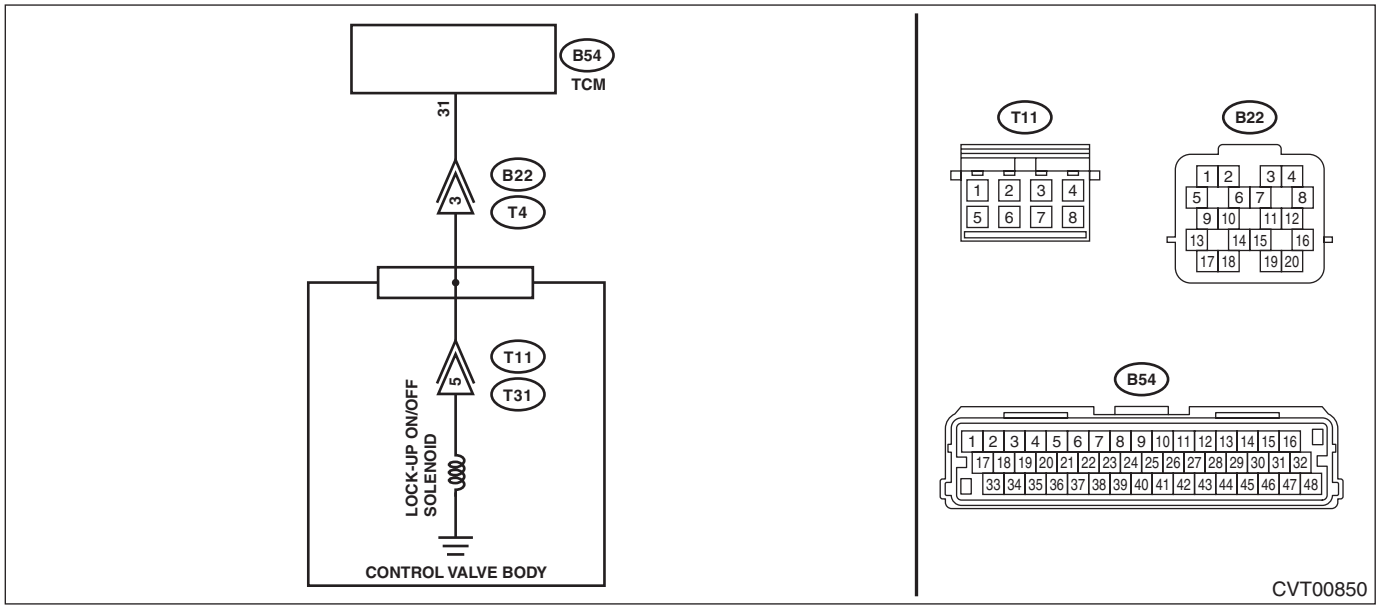
CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 31 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK LOCK UP ON/OFF SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 3 — Transmission body:***	Is the resistance approx. 13 — 18.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>	Go to step **3**.
3	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 3 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-123, Control Valve Body.>	Replace the transmission harness.

BB:DTC P2770 LOCK-UP ON/OFF SOLENOID CIRCUIT (HIGH)

DTC DETECTING CONDITION:



- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-71, DTC P2770 LOCK-UP ON/OFF SOLENOID CIRCUIT (HIGH), Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

No lock-up occurs.

WIRING DIAGRAM:

CVT control system <Ref. to WI-192, ENGINE TYPE EZ, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 31 — (B22) No. 3:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 31 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.
3	**CHECK LOCK UP ON/OFF SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 3 — Transmission body:***	Is the resistance approx. 13 — 18.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 3 (+) — Transmission body (–):***	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR690)-123, Control Valve Body.>	Replace the transmission harness.

18.Diagnostic Procedure without Diagnostic Trouble Code (DTC)

A: CHECK SHIFT INDICATOR

DIAGNOSIS:

- CAN communication is abnormal with the combination meter.
- Combination meter malfunction

TROUBLE SYMPTOM:

- Shift indicator does not display or remains displayed.
- Shift indicator display does not change.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Is DTC U0155 or U0423 displayed?	Perform the self-diagnosis of combination meter.	Go to step **2**.
2	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Are DTCs other than U0155 and U0423 displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK COMBINATION METER.** Read DTC of combination meter.	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK TCM.** 1) Operate the + side of the paddle shift switch. 2) Read the data of «Up Switch» using the Subaru Select Monitor.	Does it change between ON and OFF according to the operation?	Go to step **5**.	Check for poor contact between TCM and paddle shift UP switch, and repair the defective part.
5	**CHECK TCM.** 1) Operate the – side of the paddle shift switch. 2) Read the data of «Down Switch» using the Subaru Select Monitor.	Does it change between ON and OFF according to the operation?	Go to step **6**.	Check for poor contact between TCM and paddle shift down switch, and repair the defective part.
6	**CHECK TCM.** 1) Turn the ignition switch OFF, then turn it ON again. 2) Shift the select lever to manual mode. 3) Read the data of «Shift step in Manu. mode» using the Subaru Select Monitor.	Is “1” displayed?	Go to step **7**.	Perform the diagnosis according to DTC P0951. <Ref. to CVT(diag)-117, DTC P0951 MANUAL SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
7	**CHECK TCM.** 1) Shift up the select lever. 2) Read the data of «Shift step in Manu. mode» using the Subaru Select Monitor.	Is “2” displayed?	Currently, shift indicator is normal.	Replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).> <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>

19.Diagnostics with Phenomenon

A: INSPECTION

Symptoms	Faulty parts
Engine stalls when driving in “D” or “R” range, or selecting “N” → “D”, “N” → “R”.	• Control valve • Engine control system
While driving in “D” range, vibration occurs immediately before the stop or engine stalls.	• Control valve • Torque converter
Vehicle cannot shift while driving in “D” range.	• Control valve • TCM • Shift mechanism • Power supply system
Excessive shock when selecting “N” → “D”, and “N” → “R”.	• Control valve • TCM • F&R clutch pack • ATF deterioration or lack
Excessive shock at standing start in “D” range.	• Control valve • TCM • F&R clutch pack • ATF deterioration or lack
Engine speed increases abruptly during driving in “D” or “R” range.	• Control valve • Secondary pressure sensor • F&R clutch pack • ATF deterioration or lack
Vehicle can not start when depressing the accelerator pedal in “D” or “R” range, or acceleration is very poor. (without abrupt engine increase)	• Control valve • F&R clutch pack • Shift mechanism • Parking mechanism • Engine control system • Power supply system
Shift indicator in combination meter displays the position which differs from select lever position.	• Inhibitor switch • Select cable related • Combination meter
Manual mode enters even though the select lever and paddle shift switch is not operated.	• Manual mode switch • Paddle shift switch • Select lever • TCM
Engine speed increases abruptly in “D” or “R” range, vehicle can not start.	• F&R clutch pack • Select cable related
Manual mode can not be set	• Select lever • TCM

U0424	Invalid Data Received From HVAC Control Module	<Ref. to GD(CVT)-82, DTC U0424 INVALID DATA RECEIVED FROM HVAC CONTROL MODULE, Diagnostic Trouble Code (DTC) Detecting Criteria.>
U1235	Lost Communication With EyeSight	<Ref. to GD(CVT)-83, DTC U1235 LOST COMMUNICATION WITH EyeSight, Diagnostic Trouble Code (DTC) Detecting Criteria.>
U1433	Invalid Data Received From EyeSight	<Ref. to GD(CVT)-84, DTC U1433 INVALID DATA RECEIVED FROM EyeSight, Diagnostic Trouble Code (DTC) Detecting Criteria.>

2. Diagnostic Trouble Code (DTC) Detecting Criteria

A: DTC P0500 VEHICLE SPEED SENSOR “A”

1. OUTLINE OF DIAGNOSIS

- Judge the malfunction of VDC wheel speed sensor.
- Judge as NG when the wheel speed sensor normal status signal from VDC is cleared.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10.9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from Vehicle Dynamics Control Module NOTE: The VDC controller detects malfunction if one of the speed sensors does not output a signal and the other vehicle speed sensor output signal is above 7.46 MPH.	ON

Time Needed for Diagnosis: 2.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

B: DTC P0601 INTERNAL CONTROL MODULE MEMORY CHECKSUM ERROR

1. OUTLINE OF DIAGNOSIS

- Judge the malfunction in ROM area of the TCM.
- Judge as NG when the consistency in the ROM area is lost.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Checksum (ROM)	Error

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

C: DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR

1. OUTLINE OF DIAGNOSIS

- Judge the malfunction in RAM area of the TCM.
- Judge as NG if an attempt to write to RAM area failed.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Writing-check (RAM) NOTE: This check is carried out about the RAM only used for CAN communication.	Error

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

D: DTC P062F INTERNAL CONTROL MODULE EEPROM ERROR

1. OUTLINE OF DIAGNOSIS

Diagnosis 1
- Judge the malfunction in EEPROM area of the TCM.
- Judge as NG if an attempt to write to EEPROM area failed.

Diagnosis 2
- Judge the malfunction in EEPROM area of the TCM.
- Judge as malfunction when the consistency in the EEPROM area is lost.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
12 V battery system voltage	≥ 9 V
Diagnosis 2	
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Writing-check (EEPROM)	Error
Diagnosis 2	
Checksum (EEPROM)	Error

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

E: DTC P0705 TRANSMISSION RANGE SENSOR CIRCUIT (PRNDL INPUT)

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of Range Switch.
- Judge as NG if more than one input of Range Switch are detected.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1500 rpm

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Two or more transmission range switches ON NOTE: “Transmission range switch ON” is defined as transmission range switch input voltage < 1.7 V.	True

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

F: DTC P0708 AT RANGE SWITCH NOT INPUTTED

• ENGINE TYPE FB

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of Range Switch.
- Judge as NG if there is no input from all Range Switches.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Vehicle speed (calculated from secondary pulley shaft speed)	≥ 6 MPH

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
All transmission range switches OFF NOTE: "Transmission range switch OFF" is defined as Transmission range switch input voltage ≥ 3.4 V	True

Time Needed for Diagnosis: 3 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• ENGINE TYPE EZ

4. OUTLINE OF DIAGNOSIS

- Detect the malfunction of Range Switch.
- Judge as NG if there is no input from all Range Switches.

5. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Vehicle speed (calculated from actual output shaft speed)	≥ 6 MPH

6. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
All transmission range switches OFF NOTE: "Transmission range switch OFF" is defined as transmission range switch input voltage ≥ 3.4 V.	True

Time Needed for Diagnosis: 3 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

G: DTC P0711 ATF TEMP. SENSOR CIRCUIT RANGE/PERFORMANCE

• ENGINE TYPE FB

1. OUTLINE OF DIAGNOSIS

Diagnosis 1
- Judge the malfunction of oil temperature sensor characteristics (stuck to low temperature side).
- Judge as NG if the amount of oil temperature change since ignition ON is equal to or below the predetermined value.

Diagnosis 2
- Judge the malfunction of oil temperature sensor characteristics (stuck to high temperature side).
- Judge as NG when the difference of engine coolant temperature and CVT oil temperature exceeds the predetermined value both when starting engine and when driving.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
12 V battery system voltage	≥ 10 V
Engine speed (The timer is held when the following conditions are not satisfied.)	> 600 rpm
Transmission range	Drive
Vehicle speed (calculated from secondary pulley shaft speed)	≥ 21.9 MPH
Diagnosis 2	
12 V battery system voltage	≥ 10 V
Engine coolant temperature at the end of the previous drive cycle – Engine coolant temperature at engine start	≥ 40 degC

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Absolute change of measured Transmission fluid temperature sensor input voltage	≤ 0.049 V
Transmission fluid temperature	< 20 degC
Diagnosis 2	
Transmission fluid temperature – Engine coolant temperature at engine start	> 46 degC

Time Needed for Diagnosis:
- **Diagnosis 1:** 600 s
- **Diagnosis 2:** 300 s

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

• ENGINE TYPE EZ

4. OUTLINE OF DIAGNOSIS

Diagnosis 1
- Judge the malfunction of oil temperature sensor characteristics (stuck to low temperature side).
- Judge as NG if the amount of oil temperature change since ignition ON is equal to or below the predetermined value.

Diagnosis 2
- Judge the malfunction of oil temperature sensor characteristics (stuck to high temperature side).
- Judge as NG when the difference of engine coolant temperature and CVT oil temperature exceeds the predetermined value both when starting engine and when driving.

5. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
12 V battery system voltage	≥ 10 V
Engine speed (The timer is held when the following conditions are not satisfied.)	> 600 rpm
Transmission range	Drive
Vehicle speed (calculated from actual output shaft speed)	≥ 21.9 MPH
Diagnosis 2	
12 V battery system voltage	≥ 10 V
Engine coolant temperature at the end of the previous drive cycle – Engine coolant temperature at engine start	≥ 40 degC

6. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Absolute change of measured Transmission fluid temperature sensor input voltage	≤ 0.049 V
Transmission fluid temperature	< 20 degC
Diagnosis 2	
Transmission fluid temperature – Engine coolant temperature at engine start	> 46 degC

Time Needed for Diagnosis:
- **Diagnosis 1:** 600 s
- **Diagnosis 2:** 300 s

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

H: DTC P0712 TRANSMISSION FLUID TEMPERATURE SENSOR CIRCUIT LOW INPUT

• ENGINE TYPE FB

1. OUTLINE OF DIAGNOSIS

- Detect the ground short circuit of oil temperature sensor.
- Judge as NG if the detected voltage of oil temperature sensor is lower than the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured Transmission fluid temperature sensor input voltage (Transmission fluid temperature)	< 0.117 V (> 146 degC)

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• ENGINE TYPE EZ

4. OUTLINE OF DIAGNOSIS

- Detect the ground short circuit of oil temperature sensor.
- Judge as NG if the detected voltage of oil temperature sensor is lower than the predetermined value.

5. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V

6. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured Transmission fluid temperature sensor input voltage (Transmission fluid temperature)	< 0.132 V (> 150 degC)

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

I: DTC P0713 TRANSMISSION FLUID TEMPERATURE SENSOR CIRCUIT HIGH INPUT

• ENGINE TYPE FB

1. OUTLINE OF DIAGNOSIS

- Detect short circuit to power supply or open circuit of the oil temperature sensor 5 V system.
- Judge as NG if the detected voltage of oil temperature sensor is higher than the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
Vehicle speed (calculated from secondary pulley speed)	≥ 6.3 MPH
Above condition satisfied for	≥ 50 s

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured Transmission fluid temperature sensor input voltage (Transmission fluid temperature)	> 4.507 V (< – 52 degC)

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• ENGINE TYPE EZ

4. OUTLINE OF DIAGNOSIS

- Detect short circuit to power supply or open circuit of the oil temperature sensor 5 V system.
- Judge as NG if the detected voltage of oil temperature sensor is higher than the predetermined value.

5. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
Vehicle speed (calculated from output shaft speed)	≥ 6.3 MPH
Above condition satisfied for	≥ 50 s

6. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured Transmission fluid temperature sensor input voltage (Transmission fluid temperature)	> 4.502 V (< – 53 degC)

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

J: DTC P0716 TORQUE CONVERTER TURBINE SPEED

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of turbine speed sensor signal characteristics.
- Judge as NG if the turbine speed against the engine speed is outside the possible range considering the hardware capabilities.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Measured turbine shaft speed	≥ 50 rpm

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Engine Speed – Measured turbine shaft speed	> Table 1 rpm

Table 1

Measured turbine shaft speed (rpm)	0	500	1000	1500	2000	2500	3000	3500
Engine Speed – Measured turbine shaft speed (rpm)	3700	3227	2755	2282	1856	1519	1213	956

Measured turbine shaft speed (rpm)	4000	4500	5000	5500	6000	6500	7000
Engine Speed – Measured turbine shaft speed (rpm)	786	713	651	601	569	544	520

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

K: DTC P0717 INPUT/TURBINE SPEED SENSOR "A" CIRCUIT NO SIGNAL

1. OUTLINE OF DIAGNOSIS

- Detect the no input signal from the turbine speed sensor.
- Judge as NG if there is no input signal from the turbine speed sensor, while the primary speed sensor on the same shaft has the input signal with the forward/reverse clutch engaged.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Engine speed	≥ 400 rpm
Transmission range	Drive or Reverse
Measured primary pulley shaft speed	≥ 500 rpm

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured turbine shaft speed	0 rpm

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

L: DTC P0719 BRAKE SWITCH CIRCUIT LOW

1. OUTLINE OF DIAGNOSIS

- Detect no input from the brake signal.
- Judge as NG if a predetermined number of deceleration occurs while the cruise control is set to OFF and the brake is OFF.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Cruise control	OFF
Malfunctions listed on the right column are not detected:	P0717, P0720

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Number of times that vehicle speed changes from 30 km/h to 1 km/h while the brake SW is OFF	> 10 count

M: DTC P0720 OUTPUT SPEED SENSOR CIRCUIT

1. OUTLINE OF DIAGNOSIS

- Detect the no input signal from the front wheel speed sensor.
- Judge as NG if there is no output from the front wheel speed sensor while the forward/reverse clutch is engaged and the wheel speed from VDC is equal to or higher than the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Vehicle speed (from vehicle dynamics control module)	≥ 3 MPH
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured front output shaft speed	0 rpm

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

N: DTC P0721 OUTPUT SHAFT SPEED SENSOR CIRCUIT RANGE/PERFORMANCE

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of front wheel speed sensor characteristics.
- Judge as NG when the deviation between vehicle speed from VDC and front wheel speed sensor becomes equal to or larger than the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Vehicle speed (from vehicle dynamics control module)	≥ 12 MPH

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
|Vehicle speed (calculated from front output shaft speed) – Vehicle speed (from vehicle dynamics control module)|	> 10 MPH

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

O: DTC P0724 BRAKE SWITCH CIRCUIT HIGH

1. OUTLINE OF DIAGNOSIS

- Detect the brake signal stuck to ON.
- Judge as NG if a predetermined number of acceleration occurs while the cruise control is set to OFF and the brake is ON.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Cruise control	OFF
Malfunctions listed on the right column are not detected:	P0717, P0720

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Number of times that vehicle speed changes from 1 km/h to 30 km/h while the brake SW is ON	> 10 count

P: DTC P0730 GEARSHIFT CONTROL PERFORMANCE ABNORMAL

1. OUTLINE OF DIAGNOSIS

- Detect the abnormality in transmission gear ratio control function.
- Judge as NG if a discrepancy between the transmission target gear ratio (as internal data) and the actual gear ratio becomes the specified value or more. (Compare the value of "Gear Ratio Target × Secondary pulley speed ≈ Target primary speed equivalent value" with the value of primary pulley speed sensor.)

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Engine speed	≥ 500 rpm
Transmission range	Drive

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
|Target primary pulley shaft speed – Measured primary pulley shaft speed|	≥ 600 rpm
(Commanded duty of shift up pressure control solenoid valve	≥ 90%
or	
Commanded duty of shift down pressure control solenoid valve)	≥ 90%

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Q: DTC P0746 PRESSURE CONTROL SOLENOID "A" PERFORMANCE/STUCK OFF

• ENGINE TYPE FB

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction of transmission line pressure solenoid and hydraulic circuit (stuck to low pressure side).
• Judge as NG if “Target line pressure — Actual line pressure” becomes the predetermined value or more, while the actual line pressure is equal to or more than the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Measured line pressure control solenoid valve current	≤ 0.78 A

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured line pressure	< Map1 kPa

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

S: DTC P0751 SHIFT SOLENOID "A" PERFORMANCE/STUCK OFF

• ENGINE TYPE FB

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction of shift-up fluid pressure control solenoid characteristics and hydraulic circuit characteristics (stuck to low pressure side).
• Judge as NG if the amount of gear rate change per second is equal to or larger than the predetermined value, even though the up-shift command is issued.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Commanded duty of shift down pressure control solenoid	0%
Actual pulley ratio *	> 1.5 and < 2.549

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Actual pulley ratio change for 1 second	> – 0.08
Commanded duty of shift up pressure control solenoid	≥ 90%

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

• ENGINE TYPE EZ

4. OUTLINE OF DIAGNOSIS

• Detect the malfunction of shift-up fluid pressure control solenoid characteristics and hydraulic circuit characteristics (stuck to low pressure side).
• Judge as NG if the amount of gear rate change per second is equal to or larger than the predetermined value, even though the up-shift command is issued.

5. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Commanded duty of shift down pressure control solenoid	0%
Actual pulley ratio *	> 1.5 and < 2.348

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

6. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Actual pulley ratio change for 1 second	> – 0.08
Commanded duty of shift up pressure control solenoid	≥ 90%

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

T: DTC P0752 SHIFT SOLENOID "A" STUCK ON

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction of shift-up fluid pressure control solenoid and hydraulic circuit characteristics (stuck to high pressure side).
• Judge as NG if the amount of gear rate change per second is within the predetermined value, even though the down-shift command is issued.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Commanded duty of shift up pressure control solenoid	0%
Actual pulley ratio *	< 0.5

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Actual pulley ratio change for 1 second	> – 0.08 and < 0.08
Commanded duty of shift down pressure control solenoid	> 80%

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

U: DTC P0756 SHIFT SOLENOID "B" PERFORMANCE/STUCK OFF

• ENGINE TYPE FB

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction of shift-down fluid pressure control solenoid characteristics and hydraulic circuit characteristics (stuck to low pressure side).
• Judge as NG if the amount of gear rate change per second is within the predetermined value, even though the down-shift command is issued.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Commanded duty of shift up pressure control solenoid	0%
Actual pulley ratio *	≥ 0.406 and ≤ 2.549

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Actual pulley ratio change for 1 second	> – 0.08 and < 0.08
Commanded duty of shift down pressure control solenoid	> 80%

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

• ENGINE TYPE EZ

4. OUTLINE OF DIAGNOSIS

• Detect the malfunction of shift-down fluid pressure control solenoid characteristics and hydraulic circuit characteristics (stuck to low pressure side).
• Judge as NG if the amount of gear rate change per second is within the predetermined value, even though the down-shift command is issued.

5. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Commanded duty of shift up pressure control solenoid	0%
Actual pulley ratio *	≥ 0.363 and ≤ 2.348

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

6. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Actual pulley ratio change for 1 second	> – 0.08 and < 0.08
Commanded duty of shift down pressure control solenoid	> 80%

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

V: DTC P0757 SHIFT SOLENOID "B" STUCK ON

• ENGINE TYPE FB

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction of shift-down fluid pressure control solenoid characteristics and hydraulic circuit characteristics (stuck to high pressure side).
• Judge as NG if the amount of gear rate change per second is equal to or larger than the predetermined value, even though the up-shift command is issued.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Commanded duty of shift down pressure control solenoid	0%
Actual pulley ratio *	≥ 0.406 and ≤ 2.549

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Actual pulley ratio change for 1 second	> 0.04
Commanded duty of shift up pressure control solenoid	> 50%

Time Needed for Diagnosis: 1 s × 10 times
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

• ENGINE TYPE EZ

4. OUTLINE OF DIAGNOSIS

• Detect the malfunction of shift-down fluid pressure control solenoid characteristics and hydraulic circuit characteristics (stuck to high pressure side).
• Judge as NG if the amount of gear rate change per second is equal to or larger than the predetermined value, even though the up-shift command is issued.

5. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Commanded duty of shift down pressure control solenoid	0%
Actual pulley ratio *	≥ 0.363 and ≤ 2.348

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

6. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Actual pulley ratio change for 1 second	> 0.04
Commanded duty of shift up pressure control solenoid	> 50%

Time Needed for Diagnosis: 1 s × 10 times
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

W: DTC P0776 PRESSURE CONTROL SOLENOID "B" PERFORMANCE/STUCK OFF

• ENGINE TYPE FB

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction of transmission forward/reverse clutch pressure solenoid and hydraulic circuit characteristics (stuck to low pressure side).
• Judge as NG if the value calculated by “turbine speed – primary pulley speed” becomes the predetermined value or more, even though the forward/reverse clutch is engaged.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
12 V battery system voltage	≥ 10 V
Transmission range	Drive
Measured turbine shaft speed	≥ 100 rpm
Measured primary pulley shaft speed	≥ 100 rpm
Vehicle speed (from vehicle dynamics control module)	≥ 6 MPH
Commanded forward & reverse clutch pressure control solenoid current	< 0.9 A
Engine speed	≥ 500 rpm
Diagnosis 2	
12 V battery system voltage	≥ 10 V
Transmission range	Drive
Measured primary pulley shaft speed	< 100 rpm
Vehicle speed (from vehicle dynamics control module)	< 6 MPH
Commanded forward & reverse clutch pressure control solenoid current	< 0.9 A
Accelerator pedal position (from ECM)	> 6%
Engine speed	≥ 500 rpm

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
|Measured turbine shaft speed – Measured primary pulley shaft speed|	> Table 1 rpm
Diagnosis 2	
Measured turbine shaft speed	> 2000 rpm

Table 1

Vehicle speed (MPH)	0	13	25	38	50	63	75
|Measured turbine shaft speed – Measured primary pulley shaft speed|(rpm)	150	100	100	100	100	100	100

Vehicle speed (MPH)	88	100	113	125	138	150	159
|Measured turbine shaft speed – Measured primary pulley shaft speed|(rpm)	100	100	100	100	100	100	100

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

• ENGINE TYPE EZ

4. OUTLINE OF DIAGNOSIS

• Detect the malfunction of transmission forward/reverse clutch pressure solenoid and hydraulic circuit characteristics (stuck to low pressure side).
• Judge as NG if the value calculated by "output speed – secondary pulley speed" becomes the predetermined value or more, even though the forward/reverse clutch is engaged.

5. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
12 V battery system voltage	≥ 10 V
Transmission range	Drive
Measured secondary pulley shaft speed	≥ 100 rpm
Measured front output shaft speed	≥ 100 rpm
Vehicle speed (from vehicle dynamics control module)	≥ 6 MPH
Commanded forward & reverse clutch pressure control solenoid current	< 0.9 A
Engine speed	≥ 500 rpm
Diagnosis 2	
12 V battery system voltage	≥ 10 V
Transmission range	Drive
Measured front output shaft speed	< 100 rpm
Vehicle speed (from vehicle dynamics control module)	< 6 MPH
Commanded forward & reverse clutch pressure control solenoid current	< 0.9 A
Accelerator pedal position (from ECM)	> 6%
Engine speed	≥ 500 rpm

6. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
|Measured front output shaft speed – Measured secondary pulley shaft speed /1.322|	> Table 2 rpm
Diagnosis 2	
Measured secondary pulley shaft speed	> 600 rpm

Table 2

Vehicle speed (MPH)	0	13	25	38	50	63	75
|Measured front output shaft speed – Measured secondary pulley shaft speed|(rpm)	150	100	100	100	100	100	100

Vehicle speed (MPH)	88	100	113	125	138	150	159
|Measured front output shaft speed – Measured secondary pulley shaft speed|(rpm)	100	100	100	100	100	100	100

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

X: DTC P0801 REVERSE INHIBIT CONTROL CIRCUIT

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of shift lock solenoid or circuit.
- Judge as NG if abnormal signal from the integrated unit is received, when bus off is not detected and there is no trouble in CAN between the integrated unit.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Malfunctions listed on the right column are not detected:	U0073 U0140, U0422

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Shift lock solenoid system circuit abnormal (received from BIU)	ON

Time Needed for Diagnosis: 1 second

Y: DTC P0841 SECONDARY OIL PRESSURE SENSOR PERFORMANCE

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of transmission fluid pressure control function.
- Judge as NG if a discrepancy between the target secondary oil pressure (as internal data) and the detected value of the secondary oil pressure sensor becomes the specified value or more.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Engine speed	≥ Table 1 rpm

Table 1

Target line pressure (kPa)	0	500	1000	1500	2000	3000	4000	5000	6000
Engine speed (rpm)	400	600	965	1180	1370	1670	1930	2150	2340

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
|Target line pressure – Measured line pressure|	≥ 500 kPa

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Z: DTC P0842 SECONDARY OIL PRESSURE SENSOR CIRCUIT (LOW)

1. OUTLINE OF DIAGNOSIS

- Detect the ground short circuit of the transmission line pressure sensor.
- Judge as NG if the detected voltage of transmission line pressure sensor is lower than the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured line pressure sensor input voltage (Line pressure)	< 0.195 V (< – 574 kPa)

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AA:DTC P0843 SECONDARY OIL PRESSURE SENSOR CIRCUIT (HIGH)

1. OUTLINE OF DIAGNOSIS

- Detect short circuit to power supply or open circuit of the transmission line pressure sensor 5 V system.
- Judge as NG if the detected voltage of the transmission line pressure sensor is higher than the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured line pressure sensor input voltage (Line pressure)	> 4.883 V (> 8200 kPa)

Time Needed for Diagnosis: 1.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AB:DTC P0890 AT SELF-SHUT RELAY DIAGNOSIS (LOW)

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of transmission fluid pressure solenoid drive power supply relay circuit.
- Judge as NG if the transmission fluid pressure solenoid drive power supply voltage is lower than the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
Ignition state	Run or Crank

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured TCM input voltage which is supplied from 12 V battery system through the TCM Power Relay	< 2 V

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AC:DTC P0951 MANUAL SWITCH

1. OUTLINE OF DIAGNOSIS

- Detect the GND-output short (ground-fault) in manual SW circuit.
- Judge as NG if the manual SW is ON in P, R or N range.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Malfunctions listed on the right column are not detected:	P0705, P0708

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Manual SW status in other than D range	ON

Time Needed for Diagnosis: 5 s

AD:DTC P0961 PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT RANGE/PERFORMANCE

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of transmission line pressure solenoid drive circuit.
- Judge as NG when the deviation between target current and actual current of the transmission line pressure solenoid becomes equal to or larger than the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
| Target line pressure control solenoid valve current – Measured line pressure control solenoid valve current |	> 0.2 A

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AE:DTC P0962 SECONDARY SOLENOID CIRCUIT (LOW)

1. OUTLINE OF DIAGNOSIS

Diagnosis 1
- Detect the ground short of the transmission line pressure solenoid drive circuit.
- Judge as NG if the transmission line pressure solenoid drive current is higher than the predetermined value.

Diagnosis 2
- Detect the ground short of the transmission line pressure solenoid drive circuit.
- Judge as NG if an overcurrent is detected more than 10 times in the transmission line pressure solenoid drive circuit.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
12 V battery system voltage	≥ 9 V
Commanded line pressure control solenoid valve current	≥ 0.1 A
Diagnosis 2	
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Measured line pressure control solenoid valve current	≥ 1.1 A
Diagnosis 2	
Signal of malfunction from solenoid driver IC	ON
As defined by:	
Measured line pressure control solenoid valve current ≥ 1.2 A	

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AF:DTC P0963 SECONDARY SOLENOID CIRCUIT (HIGH)

1. OUTLINE OF DIAGNOSIS

- Detect short circuit to power supply or open circuit of the transmission line pressure solenoid drive circuit.
- Judge as NG if the transmission line pressure solenoid drive current is lower than the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
Commanded line pressure control solenoid valve current	≥ 0.2 A

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured line pressure control solenoid valve current	< 0.1 A

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AG:DTC P0965 FORWARD & REVERSE SOLENOID FUNCTION

1. OUTLINE OF DIAGNOSIS

Diagnosis 1
• Detect the malfunction of transmission forward/reverse clutch pressure solenoid drive circuit characteristics.
• Judge as NG when the deviation between set current and actual current of the transmission forward/reverse clutch pressure solenoid drive circuit becomes equal to or larger than the predetermined value.
Diagnosis 2
• Detect the malfunction of transmission forward/reverse clutch pressure solenoid drive circuit characteristics.
• Judge as NG when the transmission forward/reverse clutch pressure solenoid drive current is within the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
12 V battery system voltage	≥ 9 V
Diagnosis 2	
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
|Target forward & reverse clutch pressure control solenoid current – Measured forward & reverse clutch pressure control solenoid circuit|	> 0.2 A
Diagnosis 2	
Measured forward & reverse clutch pressure control solenoid current	> 1.08 A and ≤ 1.6 A

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AH:DTC P0966 FORWARD & REVERSE SOLENOID CIRCUIT (LOW)

1. OUTLINE OF DIAGNOSIS

- Detect the GND-output short in transmission forward/reverse clutch pressure solenoid circuit.
- Judge as NG if an overcurrent is detected more than 10 times in the transmission forward/reverse clutch pressure solenoid drive circuit.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured forward & reverse clutch pressure control solenoid current ≥ 1.6 A	ON

Time Needed for Diagnosis: 0.02 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AI: DTC P0967 FORWARD & REVERSE LINEAR SOLENOID CIRCUIT (HIGH)

1. OUTLINE OF DIAGNOSIS

• Detect open circuit or power supply-output short circuit in the transmission forward/reverse clutch pressure solenoid circuit.
• Judge as NG if the transmission forward/reverse clutch pressure solenoid drive current is lower than the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
Target forward & reverse clutch pressure control solenoid current	≥ 0.3 A

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured forward & reverse clutch pressure control solenoid current < 0.0059 A	ON

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AJ:DTC P0970 TRANSFER SOLENOID CIRCUIT (LOW)

1. OUTLINE OF DIAGNOSIS

- Detect the GND-output short in transfer solenoid circuit.
- Judge as NG if a ground short circuit is detected more than 10 times via the detection circuit for the transfer solenoid drive circuit.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Target duty cycle	0%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Malfunction signal from solenoid driver IC	≥ 10 count

Time Needed for Diagnosis: Immediately

AK:DTC P0971 TRANSFER SOLENOID CIRCUIT (HIGH)

1. OUTLINE OF DIAGNOSIS

- Detect open circuit or power supply-output short circuit in the transfer solenoid circuit.
- Judge as NG if an open circuit or a short circuit to ground is detected more than 10 times via the detection circuit in the transfer solenoid drive circuit.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Target duty cycle	100%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Malfunction signal from solenoid driver IC	≥ 10 count

Time Needed for Diagnosis: Immediately

AL:DTC P0973 PRIMARY SOLENOID SYSTEM A CIRCUIT (LOW)

1. OUTLINE OF DIAGNOSIS

- Detect the ground short of the shift-up fluid pressure control solenoid drive circuit.
- Judge as NG if a ground short circuit is detected more than 10 times in the shift-up fluid pressure control solenoid drive circuit.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
Commanded duty of shift up pressure control solenoid	100%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured shift up pressure control solenoid voltage ≤ 0.8 V	ON

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AM:DTC P0974 PRIMARY SOLENOID SYSTEM A CIRCUIT (HIGH)

1. OUTLINE OF DIAGNOSIS

• Detect short circuit to power supply or open circuit of the shift-up fluid pressure control solenoid drive circuit.
• Judge as NG if an open circuit or a power-supply short circuit is detected more than 10 times in the shift-up fluid pressure control solenoid drive circuit.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
Commanded duty of shift up pressure control solenoid	0%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured shift up pressure control solenoid voltage ≥ 2.5 V	ON

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AN:DTC P0976 PRIMARY SOLENOID SYSTEM B CIRCUIT (LOW)

1. OUTLINE OF DIAGNOSIS

- Detect the ground short of the shift-down fluid pressure control solenoid drive circuit.
- Judge as NG if a ground short circuit is detected more than 10 times in the shift-down fluid pressure control solenoid drive circuit.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
Commanded duty of shift down pressure control solenoid	100%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured shift down pressure control solenoid voltage ≤ 0.8 V	ON

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AO:DTC P0977 PRIMARY SOLENOID SYSTEM B CIRCUIT (HIGH)

1. OUTLINE OF DIAGNOSIS

• Detect short circuit to power supply or open circuit of the shift-down fluid pressure control solenoid drive circuit.
• Judge as NG if an open circuit or a power-supply short circuit is detected more than 10 times in the shift-down fluid pressure control solenoid drive circuit.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
Commanded duty of shift down pressure control solenoid	0%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured shift down pressure control solenoid voltage ≥ 2.5 V	ON

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AP:DTC P160A RANDOM ACCESS MEMORY (RAM) ERROR

1. OUTLINE OF DIAGNOSIS

- Judge the malfunction in RAM area of the TCM.
- Judge as NG if an attempt to write to RAM area failed.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Writing-check (RAM) NOTE: This check is carried out about the RAM used except for CAN communication.	Error

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

AQ:DTC P2158 VEHICLE SPEED SENSOR "B"

1. OUTLINE OF DIAGNOSIS

- Judge the malfunction of VDC wheel speed sensor.
- Judge as NG when the wheel speed sensor normal status signal from VDC is cleared.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10.9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from Vehicle Dynamics Control Module NOTE: The VDC controller detects malfunction if one of the speed sensors does not output a signal and the other vehicle speed sensor output signal is above 7.46 MPH.	ON

Time Needed for Diagnosis: 2.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AR:DTC P2530 IGNITION SWITCH RUN POSITION CIRCUIT

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of ignition SW circuit.
- Judge as NG if the ignition SW signals are lost 5 times or more even though the engine is ON.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10.9 V
Engine speed	≥ 500 rpm

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Count of temporarily discontinuous input of ignition switch	≥ 5 count

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AS:DTC P2746 PRIMARY PULLEY REVOLUTION SPEED SENSOR CIRCUIT

• ENGINE TYPE FB

1. OUTLINE OF DIAGNOSIS

Diagnosis 1
- Detect the malfunction of primary speed sensor signal characteristics.
- Judge as NG if the primary speed, compared with the speeds of other parts, is outside the possible range considering the hardware capabilities.

Diagnosis 2
- Detect the malfunction of primary speed sensor signal characteristics.
- Judge as NG if the primary speed exceeds the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
12 V battery system voltage	≥ 9 V
Transmission range	Drive or Reverse
(Measured turbine shaft speed / Measured secondary pulley shaft speed)	≥ 0.4 and ≤ 2.55
Diagnosis 2	
12 V battery system voltage	≥ 9 V
Transmission range	Drive or Reverse
(Measured turbine shaft speed / Measured secondary pulley shaft speed)	≥ 0.4 and ≤ 2.55

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
(Measured primary pulley shaft speed / Measured secondary pulley shaft speed)	< 0.36 or > 2.80
Diagnosis 2	
Measured primary pulley shaft speed	> 7140 rpm

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• ENGINE TYPE EZ

4. OUTLINE OF DIAGNOSIS

• Detect the malfunction of primary speed sensor signal characteristics.
• Judge as NG if the turbine speed, compared with the engine speed, is outside the possible range considering the hardware capabilities.

5. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	≥ 50 rpm

6. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Engine speed – Measured primary pulley shaft speed	> Table 1 rpm

Table 1

Measured primary pulley shaft speed (rpm)	0	500	1000	1500	2000	2500	3000	3500
Engine speed – Measured primary pulley shaft speed (rpm)	3700	3227	2755	2282	1856	1519	1213	956

Measured primary pulley shaft speed (rpm)	4000	4500	5000	5500	6000	6500	7000
Engine speed – Measured primary pulley shaft speed (rpm)	786	713	651	601	569	544	520

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AT:DTC P2747 INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT NO SIGNAL

• ENGINE TYPE FB

1. OUTLINE OF DIAGNOSIS

• Detect the no input signal from the primary speed sensor.
• Judge as NG if there is no input signal from the primary pulley speed sensor, while the secondary pulley speed sensor has the input signal although the primary and secondary pulleys are interlocked via the chain.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
Measured secondary pulley shaft speed	≥ 500 rpm

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured primary pulley shaft speed	0 rpm

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• ENGINE TYPE EZ

4. OUTLINE OF DIAGNOSIS

• Detect the no input signal from the primary speed sensor.
• Judge as NG if there is no input signal from the primary pulley speed sensor, while the secondary pulley speed sensor has the input signal although the primary and secondary pulleys are interlocked via the chain.

5. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Engine speed	≥ 400 rpm
Measured secondary pulley shaft speed	≥ 500 rpm

6. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured primary pulley shaft speed	0 rpm

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AU:DTC P2750 SEC. PULLEY REVOLUTION SPEED SENSOR CIRCUIT

• ENGINE TYPE FB

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of the secondary speed sensor characteristics.
- Judge as NG if the deviation of vehicle speed between VDC and the secondary speed sensor becomes the predetermined value or more.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Vehicle speed (from vehicle dynamics control module)	≥ 5 MPH

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
|Vehicle speed (calculated from secondary pulley shaft speed) – Vehicle speed (from vehicle dynamics control module)|	> 10 MPH

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• ENGINE TYPE EZ

4. OUTLINE OF DIAGNOSIS

Diagnosis 1
- Detect the malfunction of secondary speed sensor signal characteristics.
- Judge as NG if the secondary speed, compared with the primary speed, is outside the possible range considering the hardware capabilities.

Diagnosis 2
- Detect the malfunction of secondary speed sensor signal characteristics.
- Judge as NG if the secondary speed exceeds the predetermined value.

5. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
12 V battery system voltage	≥ 9 V
Transmission range	Drive or Reverse
(Measured primary pulley shaft speed /Measured front output shaft speed)	≥ 0.36 and ≤ 2.34
Diagnosis 2	
12 V battery system voltage	≥ 9 V
Transmission range	Drive or Reverse
(Measured primary pulley shaft speed /Measured front output shaft speed)	≥ 0.36 and ≤ 2.34

6. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
(Measured primary pulley shaft speed / Measured secondary pulley shaft speed)	< 0.33 or > 2.58
Diagnosis 2	
Measured secondary pulley shaft speed	> 13500 rpm

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AV:DTC P2751 INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT NO SIGNAL

1. OUTLINE OF DIAGNOSIS

- Detect the no input signal from the secondary speed sensor.
- Judge as NG if there is no input signal from the secondary pulley speed sensor, while the primary pulley speed sensor has the input signal although the primary and secondary pulleys are interlocked via the chain.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
Transmission range	Drive or Reverse
Measured primary pulley shaft speed	≥ 1000 rpm

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured secondary pulley shaft speed	0 rpm

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AW:DTC P2757 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT PERFORMANCE/STUCK OFF

• ENGINE TYPE FB

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction of lock-up fluid pressure control solenoid, and hydraulic circuit, or drive circuit characteristics (stuck to low pressure side).
• Judge as NG if the deviation between engine speed and turbine speed is the predetermined value or more, even though the lock-up request has been sent.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Transmission range	Drive
Commanded duty of torque converter clutch pressure control solenoid	≥ 95%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
|Engine speed – Measured turbine shaft speed|	> Table1 rpm

Table 1

Measured turbine shaft speed (rpm)	0	500	1000	1500	2000	2500	3000	3500
|Engine speed – Measured turbine shaft speed|(rpm)	200	200	200	200	200	200	200	200

Measured turbine shaft speed (rpm)	4000	4500	5000	5500	6000	6500	7000
|Engine speed – Measured turbine shaft speed|(rpm)	200	200	200	200	200	200	200

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

• ENGINE TYPE EZ

4. OUTLINE OF DIAGNOSIS

• Detect the malfunction of lock-up fluid pressure control solenoid, and hydraulic circuit, or drive circuit characteristics (stuck to low pressure side).
• Judge as NG if the deviation between engine speed and primary pulley speed becomes equal to or larger than the predetermined value, even though the lock-up command is issued.

5. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Transmission range	Drive
Commanded duty of torque converter clutch pressure control solenoid	≥ 95%

6. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
|Engine speed – Measured primary pulley shaft speed|	> Table 2 rpm

Table 2

Measured primary pulley shaft speed (rpm)	0	500	1000	1500	2000	2500	3000	3500
|Engine speed – Measured primary pulley shaft speed|(rpm)	200	200	200	200	200	200	200	200

Measured primary pulley shaft speed (rpm)	4000	4500	5000	5500	6000	6500	7000
|Engine speed – Measured primary pulley shaft speed|(rpm)	200	200	200	200	200	200	200

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

AX:DTC P2758 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT STUCK ON

• ENGINE TYPE FB

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction of lock-up fluid pressure control solenoid, and hydraulic circuit, or drive circuit characteristics (stuck to high pressure side).
• Judge as NG if the deviation between engine speed and turbine speed is the predetermined value or less, even though the lock-up disengagement request has been sent.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Transmission range	Drive
Engine torque	> Table 1 N·m
Commanded duty of torque converter clutch pressure control solenoid	≤ 0%

Table 1

Engine coolant temperature (degC)	– 40	– 20	0	20	40	60	80	100
Engine torque (N·m)	80	80	80	80	80	50	50	50

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
|Engine speed – Measured turbine shaft speed|	< Table 2 rpm

Table2

Measured turbine shaft speed	0	500	1000	1500	2000	2500	3000	3500
|Engine speed – Measured turbine shaft speed|(rpm)	0	0	50	50	50	50	50	50

Measured turbine shaft speed	4000	4500	5000	5500	6000	6500	7000
|Engine speed – Measured turbine shaft speed|(rpm)	50	50	50	50	50	50	50

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

• ENGINE TYPE EZ

4. OUTLINE OF DIAGNOSIS

• Detect the malfunction of lock-up fluid pressure control solenoid, and hydraulic circuit, or drive circuit characteristics (stuck to high pressure side).
• Judge as NG if the deviation between engine speed and primary speed is the predetermined value or less, even though the lock-up disengagement request has been sent.

5. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Transmission range	Drive
Engine torque	> Table 3 N·m
Commanded duty of torque converter clutch pressure control solenoid	≤ 0%

Table 3

Engine coolant temperature (degC)	– 40	– 20	0	20	40	60	80	100
Engine torque (N·m)	80	80	80	80	80	50	50	50

6. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
|Engine speed – Measured primary pulley shaft speed|	< Table 4 rpm

Table 4

Measured primary pulley shaft speed (rpm)	0	500	1000	1500	2000	2500	3000	3500
|Engine speed – Measured primary pulley shaft speed|(rpm)	0	0	50	50	50	50	50	50

Measured primary pulley shaft speed (rpm)	4000	4500	5000	5500	6000	6500	7000
|Engine speed – Measured primary pulley shaft speed|(rpm)	50	50	50	50	50	50	50

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

AY:DTC P2763 LOCK-UP DUTY SOLENOID CIRCUIT (HIGH)

1. OUTLINE OF DIAGNOSIS

• Detect short circuit to power supply or open circuit of the lock-up clutch pressure control solenoid drive circuit.
• Judge as NG if an open circuit or a power-supply short circuit is detected more than 10 times in the lock-up clutch pressure control solenoid drive circuit.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
Commanded duty of torque converter clutch pressure control solenoid	0%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC	ON
As defined by:	
Measured torque converter clutch pressure control solenoid voltage ≥ 2.5 V	

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AZ:DTC P2764 LOCK-UP DUTY SOLENOID CIRCUIT (LOW)

1. OUTLINE OF DIAGNOSIS

- Detect the ground short of the lock-up clutch pressure control solenoid drive circuit.
- Judge as NG if a ground short circuit is detected more than 10 times in the lock-up clutch pressure control solenoid drive circuit.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
Commanded duty of torque converter clutch pressure control solenoid	100%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured torque converter clutch pressure control solenoid voltage ≤ 0.8 V	ON

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BA:DTC P2769 LOCK-UP ON/OFF SOLENOID CIRCUIT (LOW)

1. OUTLINE OF DIAGNOSIS

- Detect the ground short of the lock-up clutch ON/OFF solenoid drive circuit.
- Judge as NG if a ground short circuit is detected more than 10 times in the lock-up clutch ON/OFF solenoid drive circuit.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
Torque converter clutch circuit control solenoid output command	ON

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured torque converter clutch circuit control solenoid voltage ≤ 0.8 V	ON

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BB:DTC P2770 LOCK-UP ON/OFF SOLENOID CIRCUIT (HIGH)

1. OUTLINE OF DIAGNOSIS

- Detect open circuit or short circuit to ground in the lock-up clutch ON/OFF solenoid drive circuit.
- Judge as NG if an open circuit or a short circuit to power supply is detected more than 10 times in the lock-up clutch ON/OFF solenoid drive circuit.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
Torque converter clutch circuit control solenoid output command	OFF

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC	ON
As defined by:	
Measured torque converter clutch circuit control solenoid voltage ≥ 2.5 V	

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BC:DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

• ENGINE TYPE FB

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure has occurred.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Measured turbine shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	Bus off

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• ENGINE TYPE EZ

4. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure has occurred.

5. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

6. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	Bus off

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BD:DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A"

• ENGINE TYPE FB

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the ECM.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Measured turbine shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from ECM	Lost

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• ENGINE TYPE EZ

4. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the ECM.

5. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

6. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from ECM	Lost

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BE:DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

• ENGINE TYPE FB

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the VDC CM.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Measured turbine shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from Vehicle Dynamics Control Module	Lost

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• ENGINE TYPE EZ

4. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the VDC CM.

5. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

6. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from Vehicle Dynamics Control Module	Lost

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BF:DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the body integrated unit.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Turbine shaft speed or D range switch	> 0 rpm ON

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from BIU	Lost

Time Needed for Diagnosis: 2 seconds

BG:DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the combination meter.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Turbine shaft speed	> 0 rpm
or	
D range switch	ON

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from meter	Lost

Time Needed for Diagnosis: 2 seconds

BH:DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the A/C control panel.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Turbine shaft speed or D range switch	> 0 rpm ON

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from A/C control panel	Lost

Time Needed for Diagnosis: 2 seconds

BI: DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A"

• ENGINE TYPE FB

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from ECM is not normal.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Measured turbine shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from ECM	Did not change

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• ENGINE TYPE EZ

4. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from ECM is not normal.

5. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

6. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from ECM	Did not change

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BJ:DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

• ENGINE TYPE FB

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from VDC CM is not normal.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Measured turbine shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from Vehicle Dynamics Control Module	Did not change

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• ENGINE TYPE EZ

4. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from VDC CM is not normal.

5. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

6. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from Vehicle Dynamics Control Module	Did not change

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BK:DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from the body integrated unit is not normal.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Turbine shaft speed or D range switch	> 0 rpm ON

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from BIU	Freeze

Time Needed for Diagnosis: 2 seconds

BL:DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from the combination meter is not normal.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Turbine shaft speed or D range switch	> 0 rpm ON

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from meter	Freeze

Time Needed for Diagnosis: 2 seconds

BM:DTC U0424 INVALID DATA RECEIVED FROM HVAC CONTROL MODULE

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from the A/C control panel is not normal.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Turbine shaft speed or D range switch	> 0 rpm ON

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from A/C control panel	Freeze

Time Needed for Diagnosis: 2 seconds

BN:DTC U1235 LOST COMMUNICATION WITH EyeSight

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the stereo camera.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Turbine shaft speed or D range switch	> 0 rpm ON

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from stereo camera	Lost

Time Needed for Diagnosis: 2 seconds

BO:DTC U1433 INVALID DATA RECEIVED FROM EyeSight

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from the stereo camera is not normal.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Turbine shaft speed or D range switch	> 0 rpm ON

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from stereo camera	Freeze

Time Needed for Diagnosis: 2 seconds

MANUAL TRANSMISSION AND DIFFERENTIAL

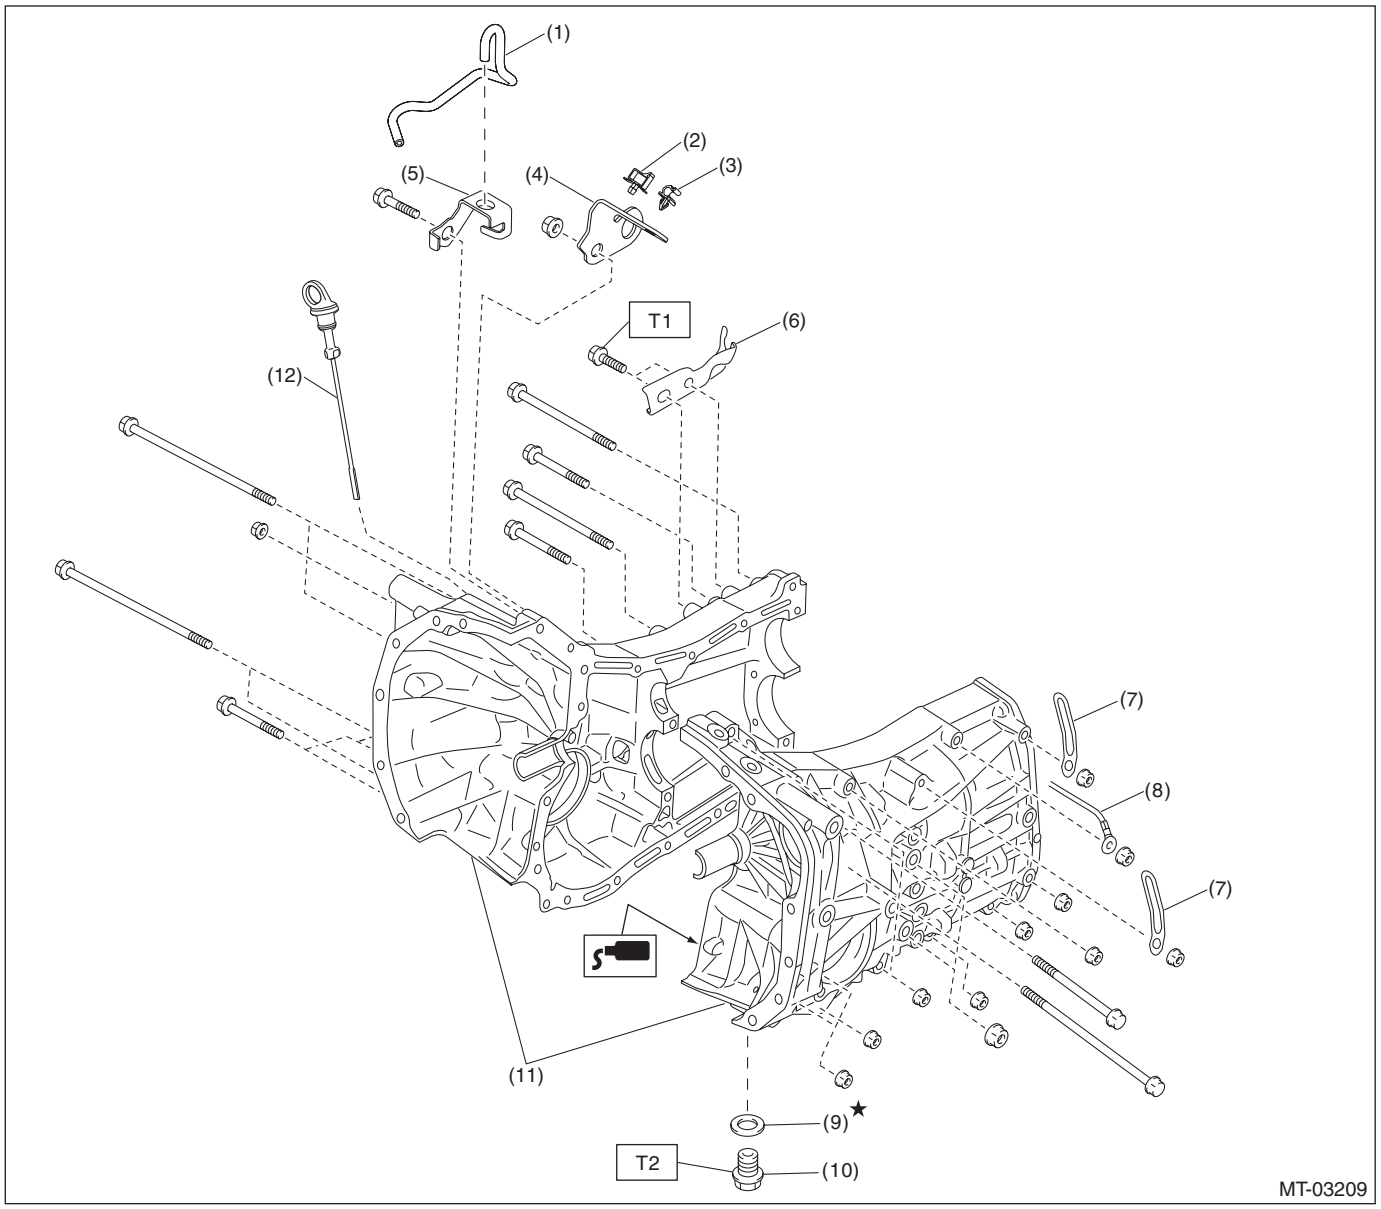
1. General Description

A: SPECIFICATION

1. MANUAL TRANSMISSION AND DIFFERENTIAL

Model			Except for OUTBACK	OUTBACK
Type			6-forward speeds and 1-reverse (all stage with synchromesh)	
Transmission gear ratio		1st	3.545	
		2nd	1.888	
		3rd	1.296	
		4th	1.029	
		5th	0.825	
		6th	0.738	
		Reverse	3.636	
Front reduction gear	Final	Type of gear	Hypoid	
		Gear ratio	4.111	4.444
Rear reduction gear	Transfer	Type of gear	Helical	
		Gear ratio	1.000	
	Final	Type of gear	Hypoid	
		Gear ratio	4.111	4.444
Front differential	Type and number of gear		Straight bevel gear (bevel pinion: 2, bevel gear: 2)	
Center differential	Type and number of gear		Straight bevel gear (bevel pinion: 2, bevel gear: 2, viscous coupling)	
Transmission gear oil capacity		Single-range model	3.3 L (3.5 US qt, 2.9 Imp qt)	

2. TRANSMISSION GEAR OIL



CAUTION:
If an alternative transmission gear oil is used, you may not have expected functionality and performance.

Recommended oil:
SUBARU GEAR OIL EXTRA MT

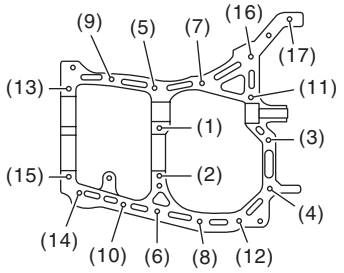
Alternative:
GL-5 (75W-90)

B: COMPONENT

1. TRANSMISSION CASE

(1)	Air breather hose	(7)	Harness clip
(2)	Clamp	(8)	Transmission radio ground cord
(3)	Hose clamp	(9)	Gasket
(4)	Harness bracket	(10)	Drain plug
(5)	Air breather hose bracket	(11)	Transmission case ASSY
(6)	Select bracket	(12)	Oil level gauge

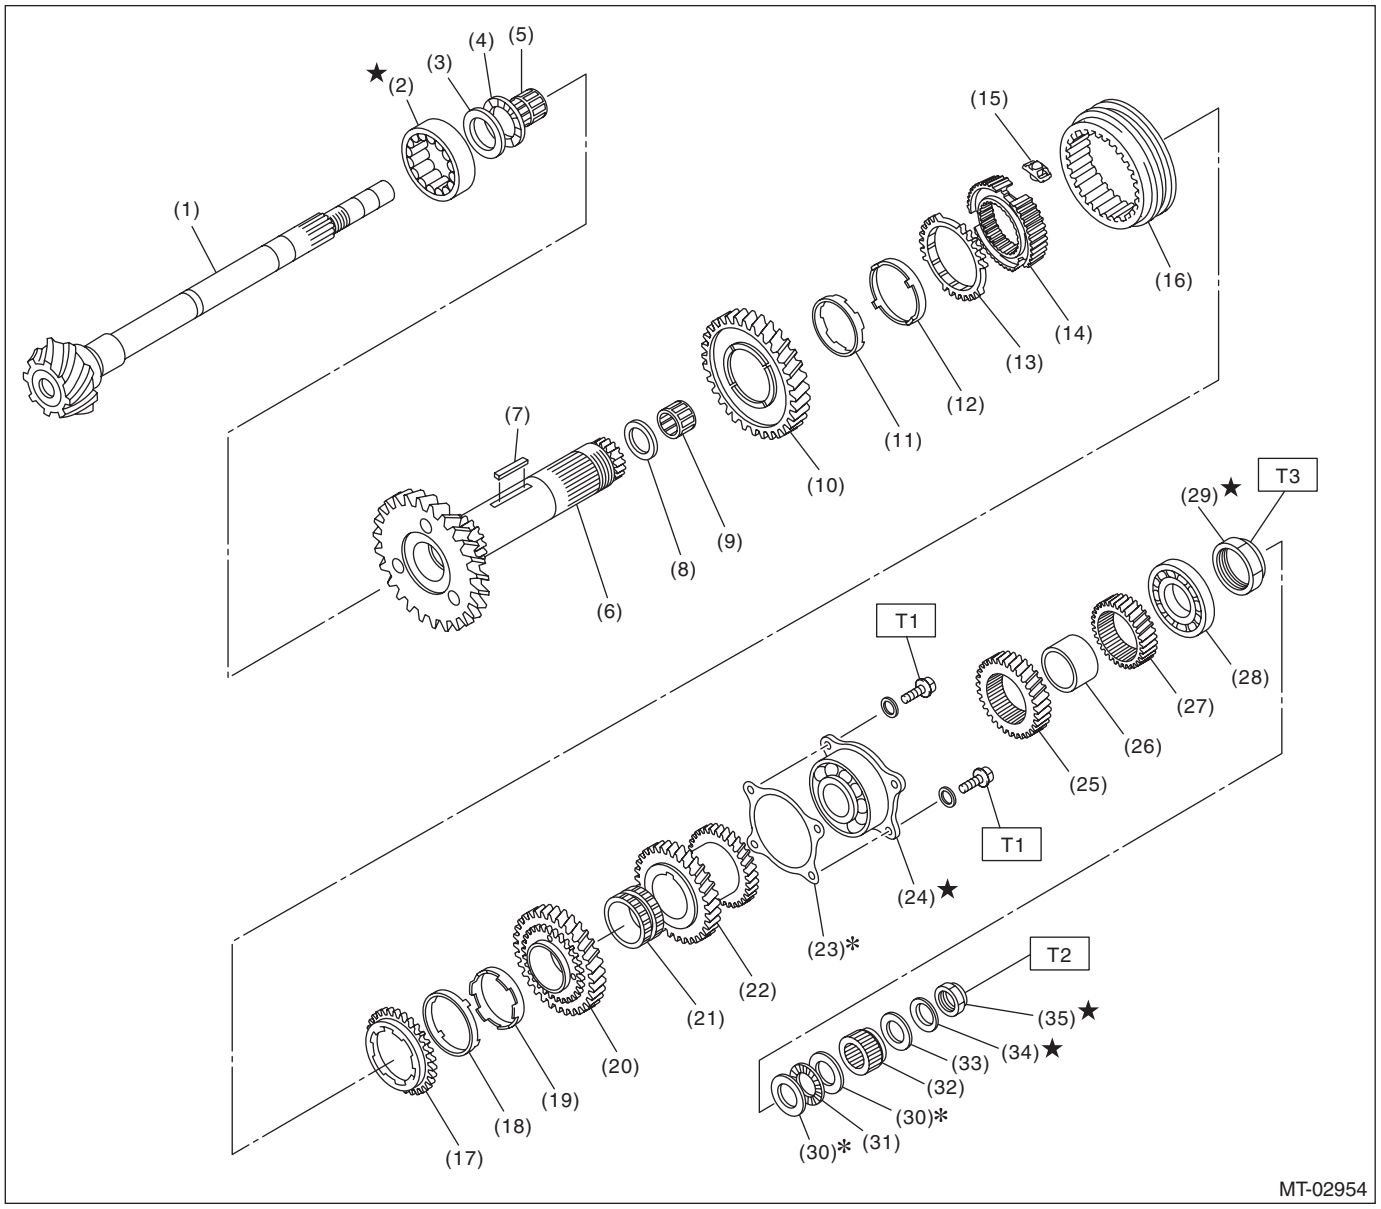
Tightening torque: N·m (kgf-m, ft-lb)



T1: 18 (1.8, 13.3)

T2: 44 (4.5, 32.5) (aluminum gasket, silver)

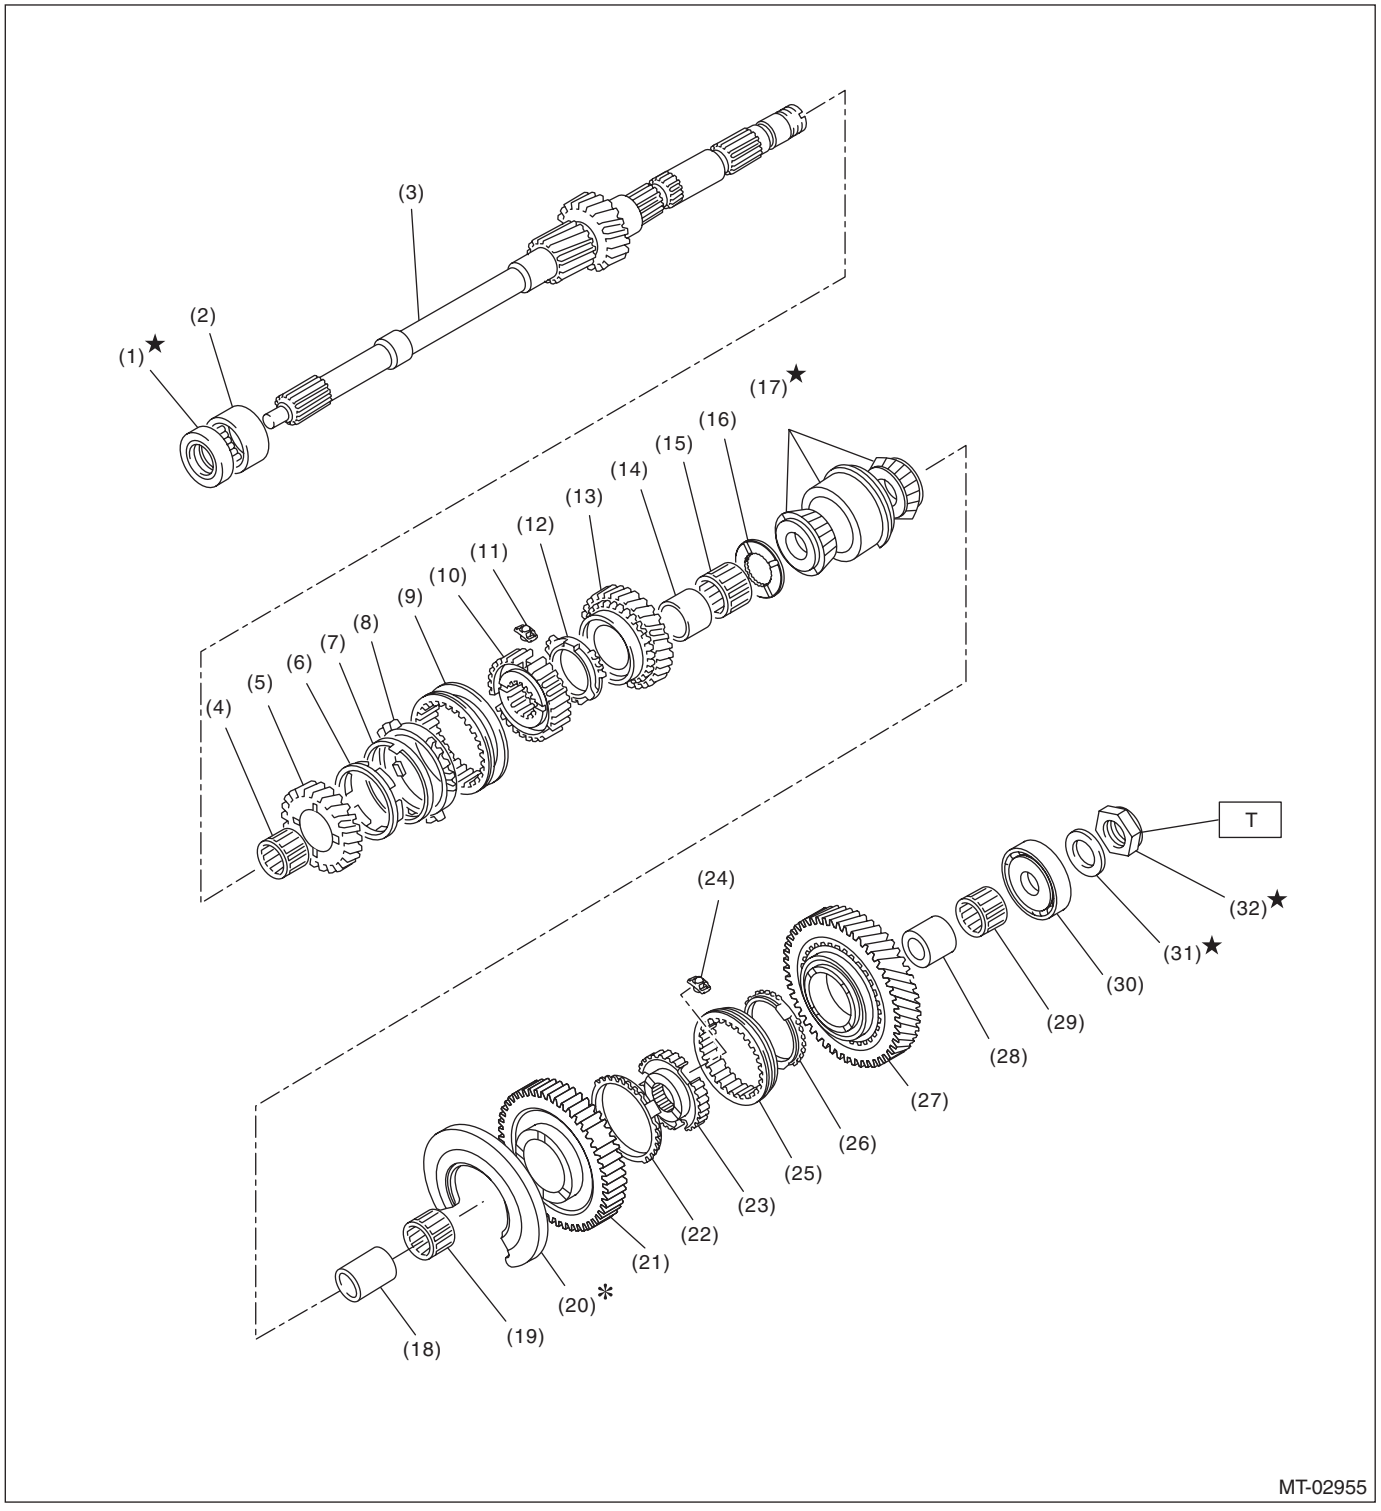
70 (7.1, 51.6) (copper gasket, brown)



70 (7.1, 51.6) (metal gasket, black)

Transmission case tightening torque

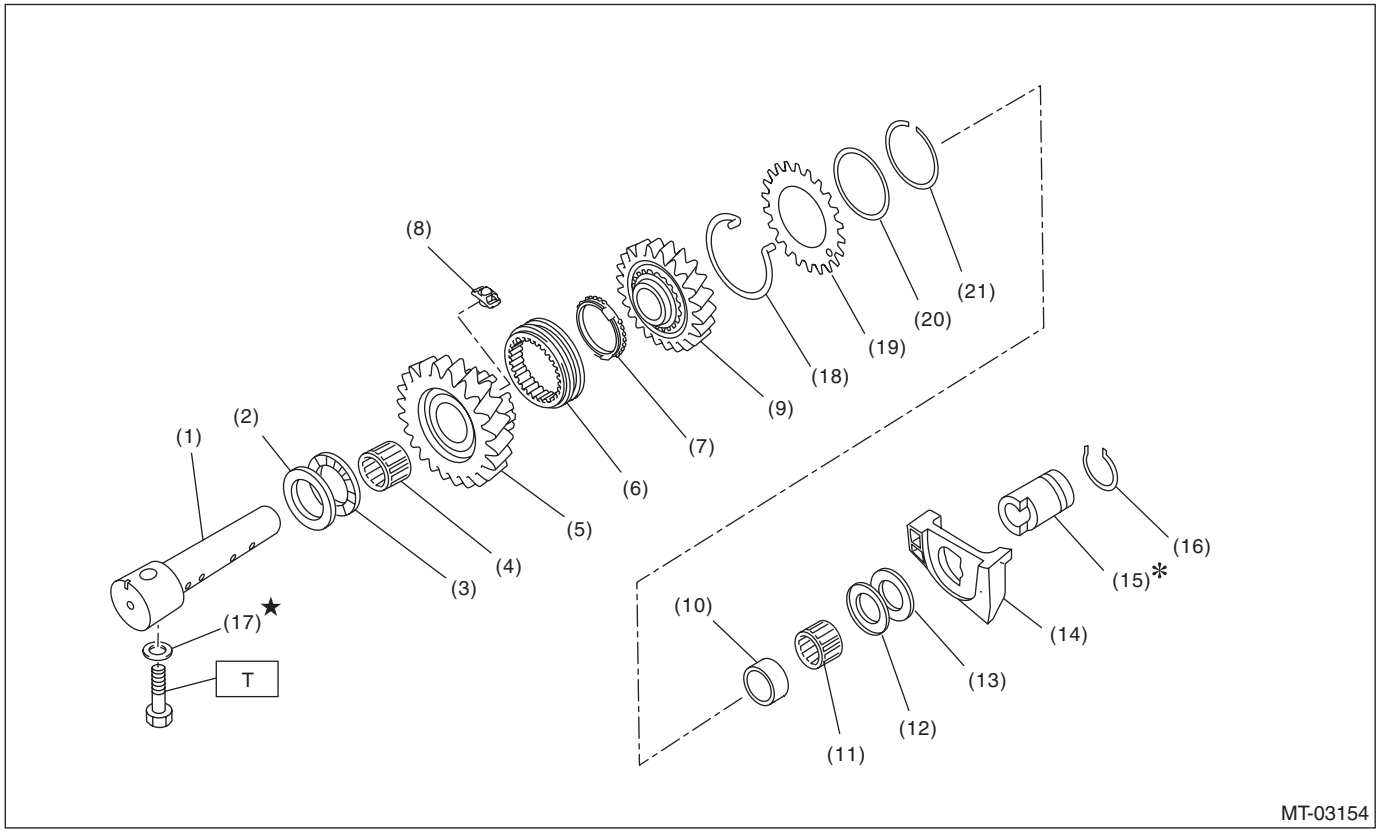
Bolt No.	Bolt size mm	Tightening torque: N·m (kgf-m, ft-lb)
(5) — (15)	8	25 (2.5, 18.4)
(1) — (4) (16), (17)	10	40 (4.1, 29.5)



2. DRIVE PINION SHAFT ASSEMBLY

(1) Drive pinion shaft
(2) Roller bearing
(3) Washer
(4) Thrust bearing
(5) Needle bearing
(6) Driven shaft
(7) Key
(8) Drive pinion collar
(9) Needle bearing
(10) 1st driven gear
(11) 1st inner baulk ring
(12) 1st synchro cone
(13) 1st outer baulk ring
(14) 1st-2nd synchronizer hub
(15) 1st-2nd shifting insert
(16) 1st-2nd coupling sleeve
(17) 2nd outer baulk ring
(18) 2nd synchro cone
(19) 2nd inner baulk ring
(20) 2nd driven gear
(21) 2nd driven gear bushing
(22) 3rd-4th driven gear
(23) Drive pinion shim
(24) Double ball bearing
(25) 5th driven gear
(26) Drive pinion spacer
(27) 6th driven gear
(28) Ball bearing
(29) Lock nut
(30) Adjusting washer
(31) Thrust bearing
(32) Differential bevel gear sleeve
(33) Washer
(34) Lock washer
(35) Lock nut

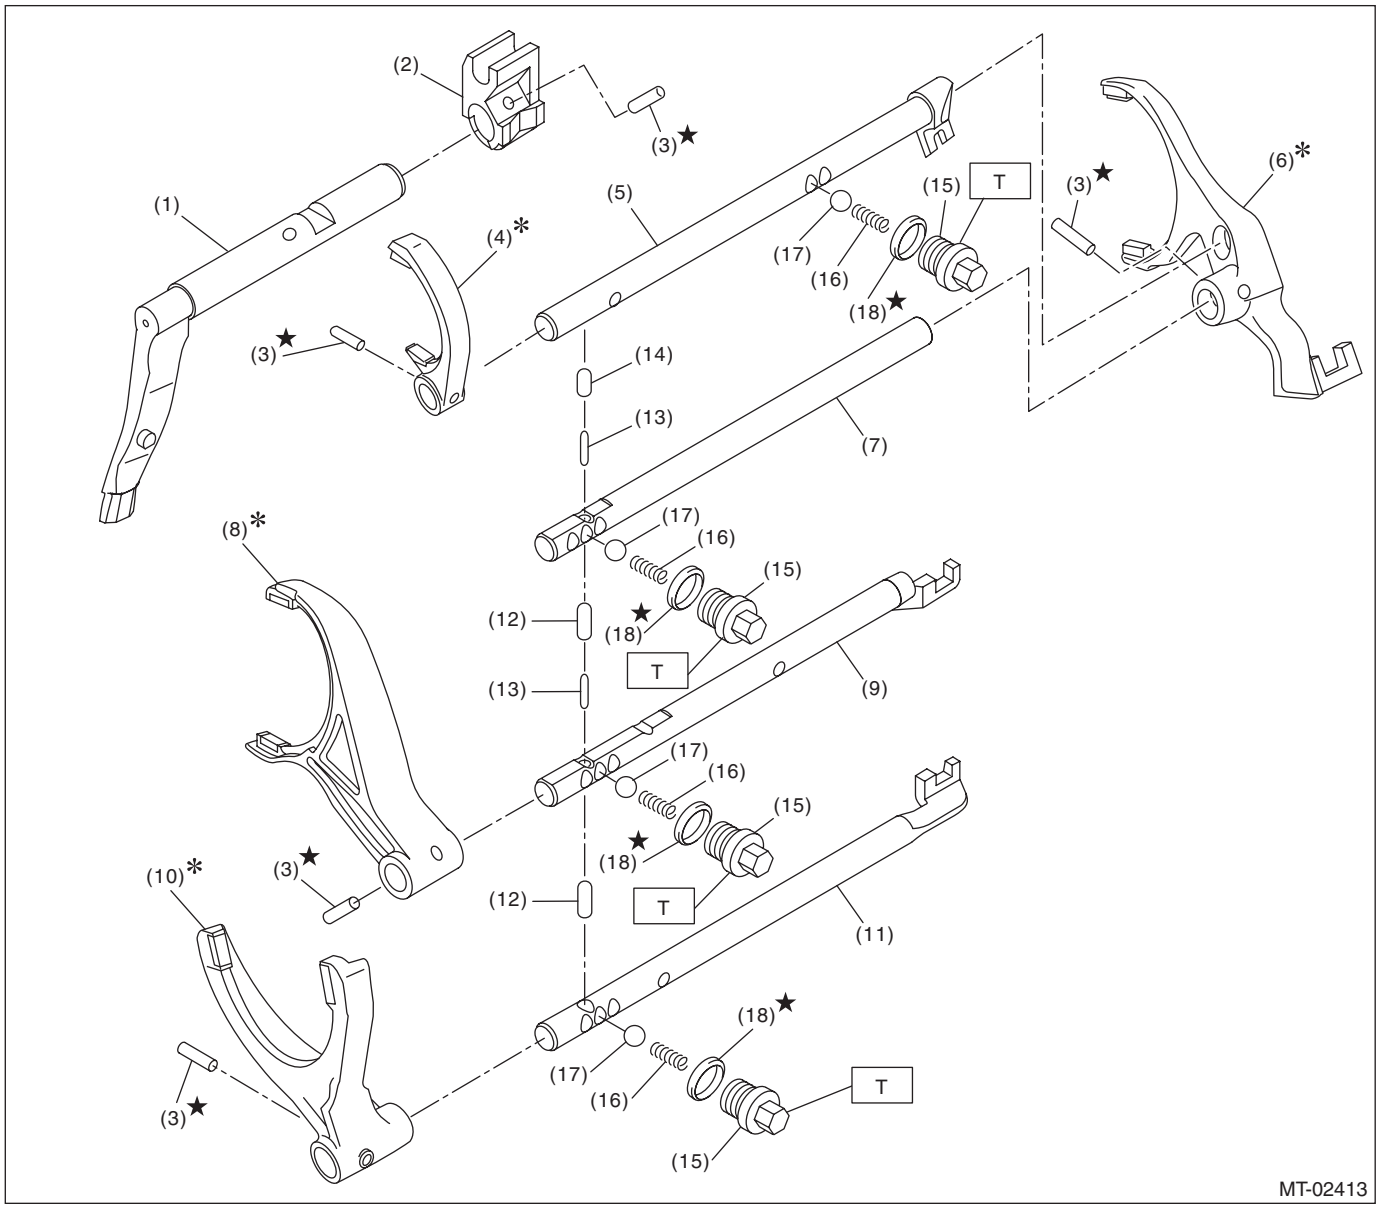
Tightening torque: N·m (kgf-m, ft-lb)
T1: 30 (3.1, 22.1)
T2: 126 (12.8, 92.9)
T3: 440 (44.9, 324.5)



3. MAIN SHAFT ASSY

(1) Oil seal
(2) Needle bearing
(3) Main shaft
(4) Needle bearing
(5) 3rd drive gear
(6) 3rd inner baulk ring
(7) 3rd synchro cone
(8) 3rd outer baulk ring
(9) 3rd-4th coupling sleeve
(10) 3rd-4th synchronizer hub
(11) 3rd-4th shifting insert
(12) 4th baulk ring
(13) 4th drive gear
(14) 4th needle bearing race
(15) Needle bearing
(16) 4th gear thrust washer
(17) Double taper roller bearing
(18) 5th needle bearing race
(19) Needle bearing
(20) Main shaft rear plate
(21) 5th drive gear
(22) 5th baulk ring
(23) 5th-6th synchronizer hub
(24) 5th-6th shifting insert
(25) 5th-6th coupling sleeve
(26) 6th baulk ring
(27) 6th drive gear
(28) 6th needle bearing race
(29) Needle bearing
(30) Ball bearing
(31) Lock washer
(32) Lock nut

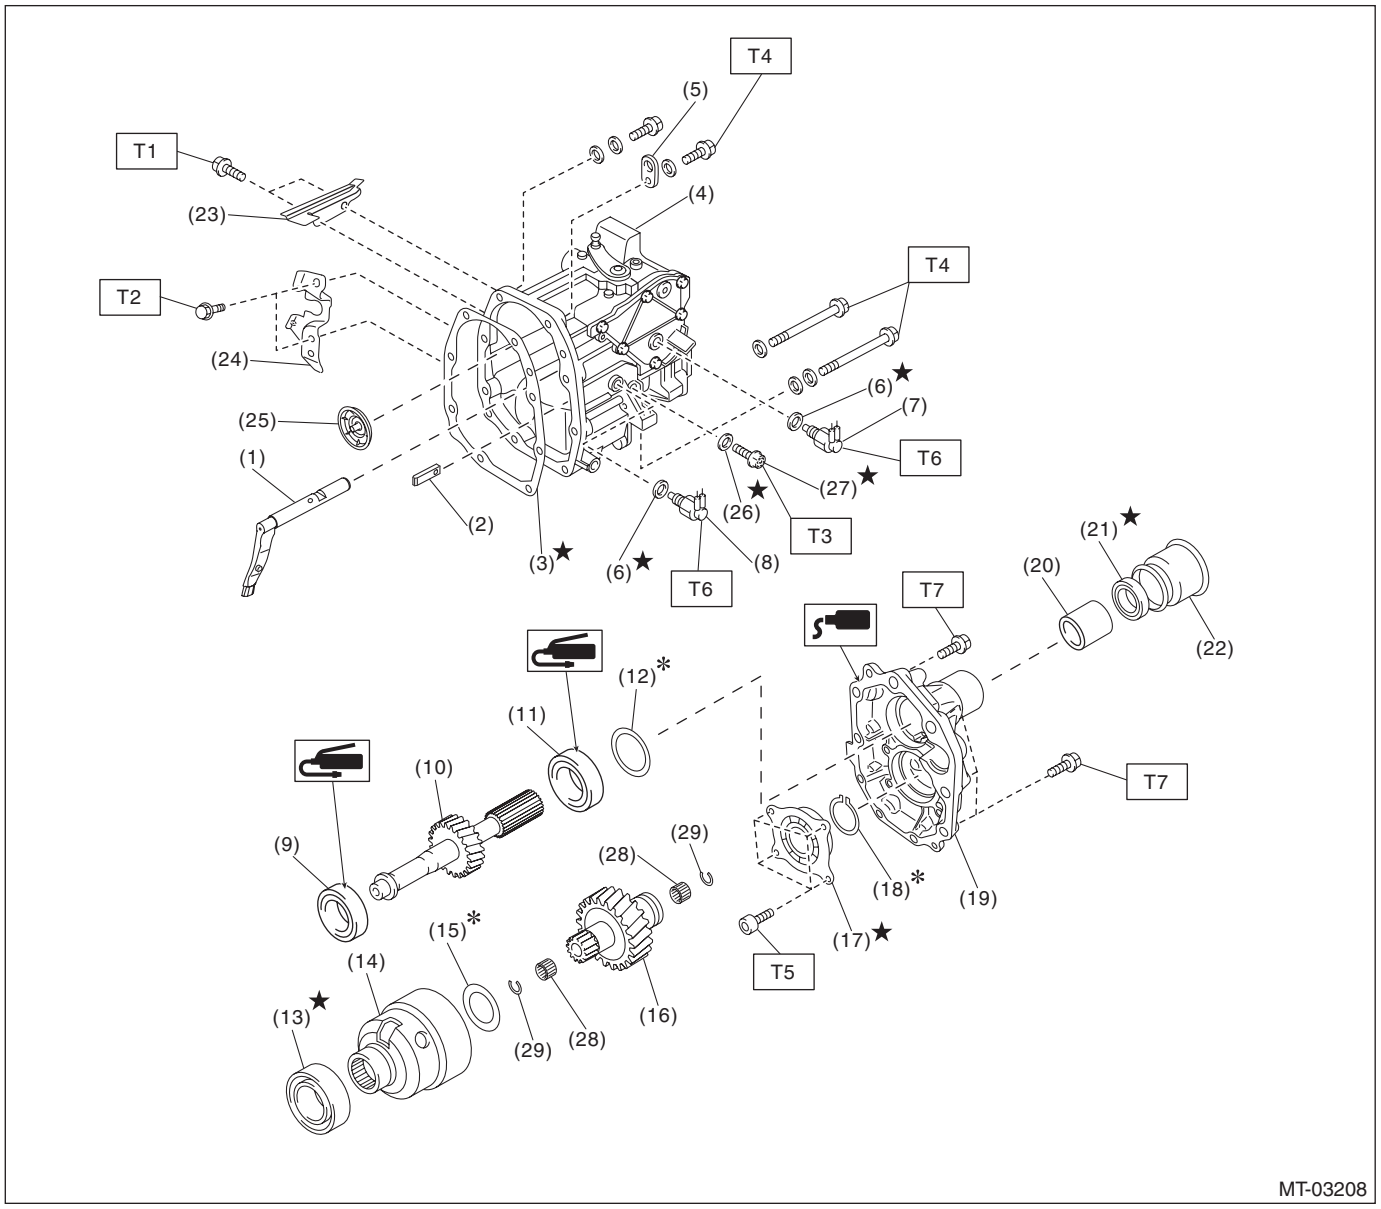
Tightening torque: N·m (kgf-m, ft-lb)
T: 160 (16.3, 118.0)



4. REVERSE IDLER GEAR ASSY

(1) Reverse idler gear shaft
(2) Reverse idler gear washer
(3) Thrust bearing
(4) Needle bearing
(5) Reverse idler gear No. 2
(6) Reverse coupling sleeve
(7) Reverse baulk ring
(8) Reverse shifting insert
(9) Reverse idler gear
(10) Reverse idler gear collar
(11) Needle bearing
(12) Thrust bearing
(13) Idler gear washer
(14) Oil case guide
(15) Reverse idler gear bushing
(16) Snap ring
(17) Gasket
(18) Reverse idler spring
(19) Reverse idler sub gear
(20) Friction plate
(21) Snap ring

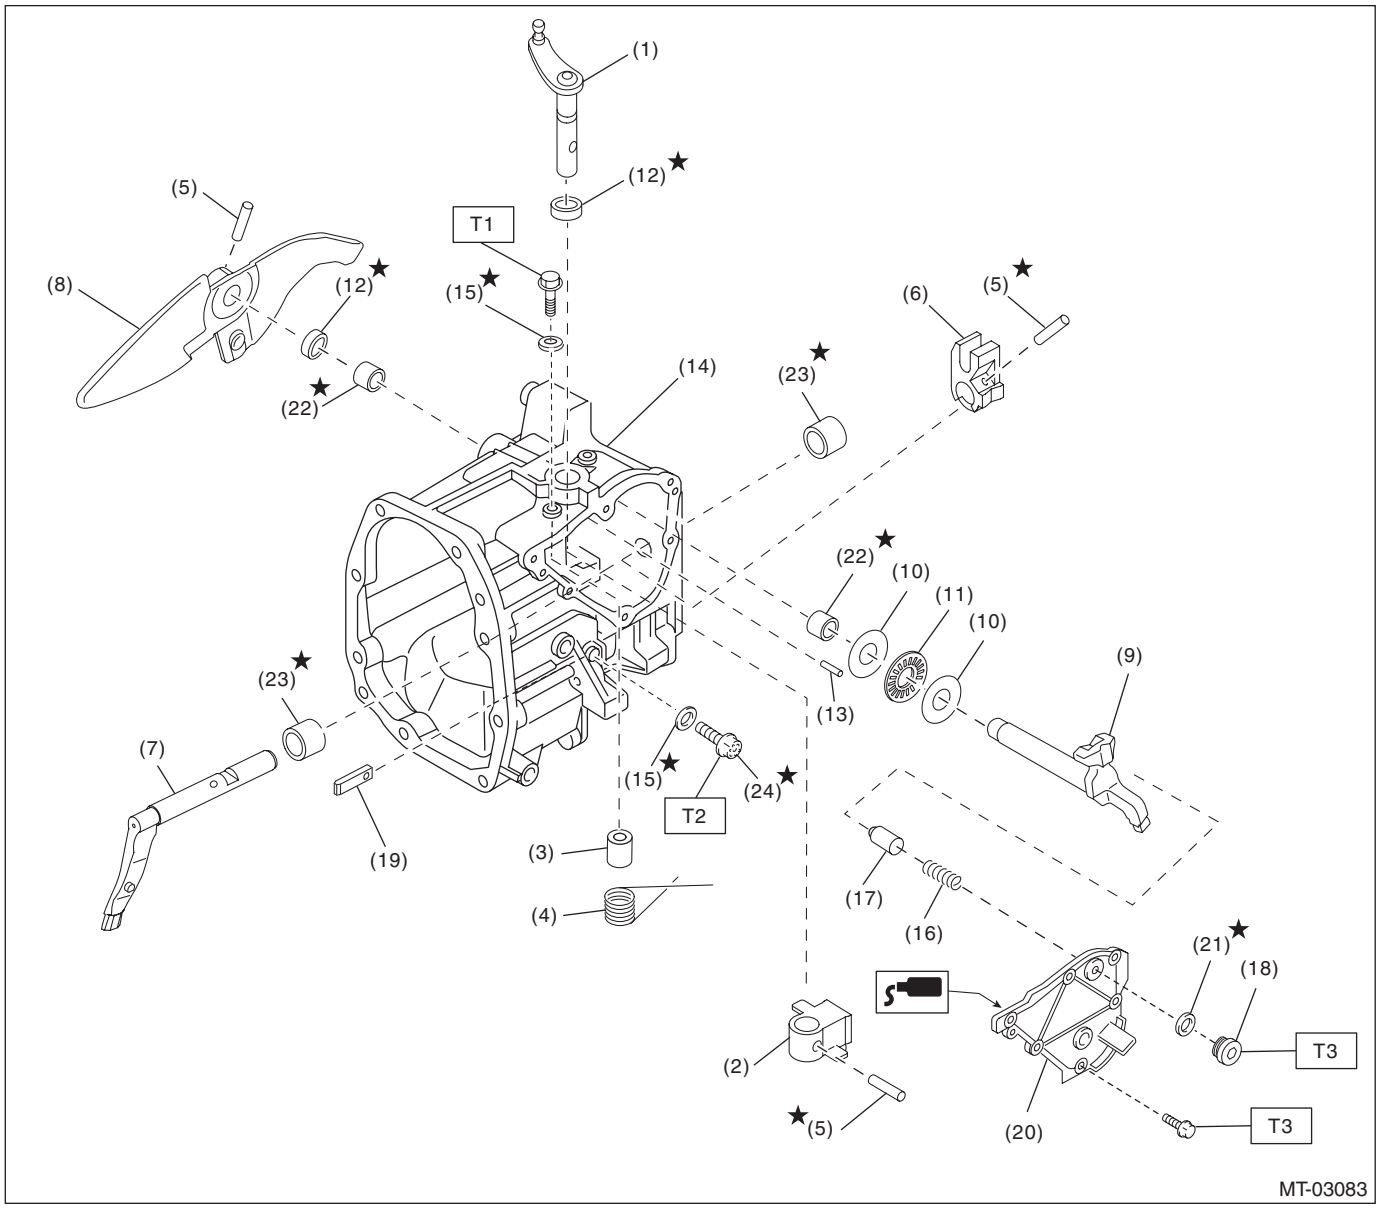
Tightening torque: N·m (kgf-m, ft-lb)
T: 25 (2.5, 18.4)



5. SHIFTER FORK AND SHIFTER ROD

(1) Shifter arm
(2) Selector arm
(3) Straight pin
(4) Reverse shifter fork
(5) Reverse fork rod
(6) 5th-6th shifter fork
(7) 5th-6th fork rod
(8) 3rd-4th shifter fork
(9) 3rd-4th fork rod
(10) 1st-2nd shifter fork
(11) 1st-2nd fork rod
(12) Interlock plunger
(13) Interlock plunger
(14) Interlock plunger
(15) Checking ball plug
(16) Checking ball spring
(17) Check ball
(18) Gasket

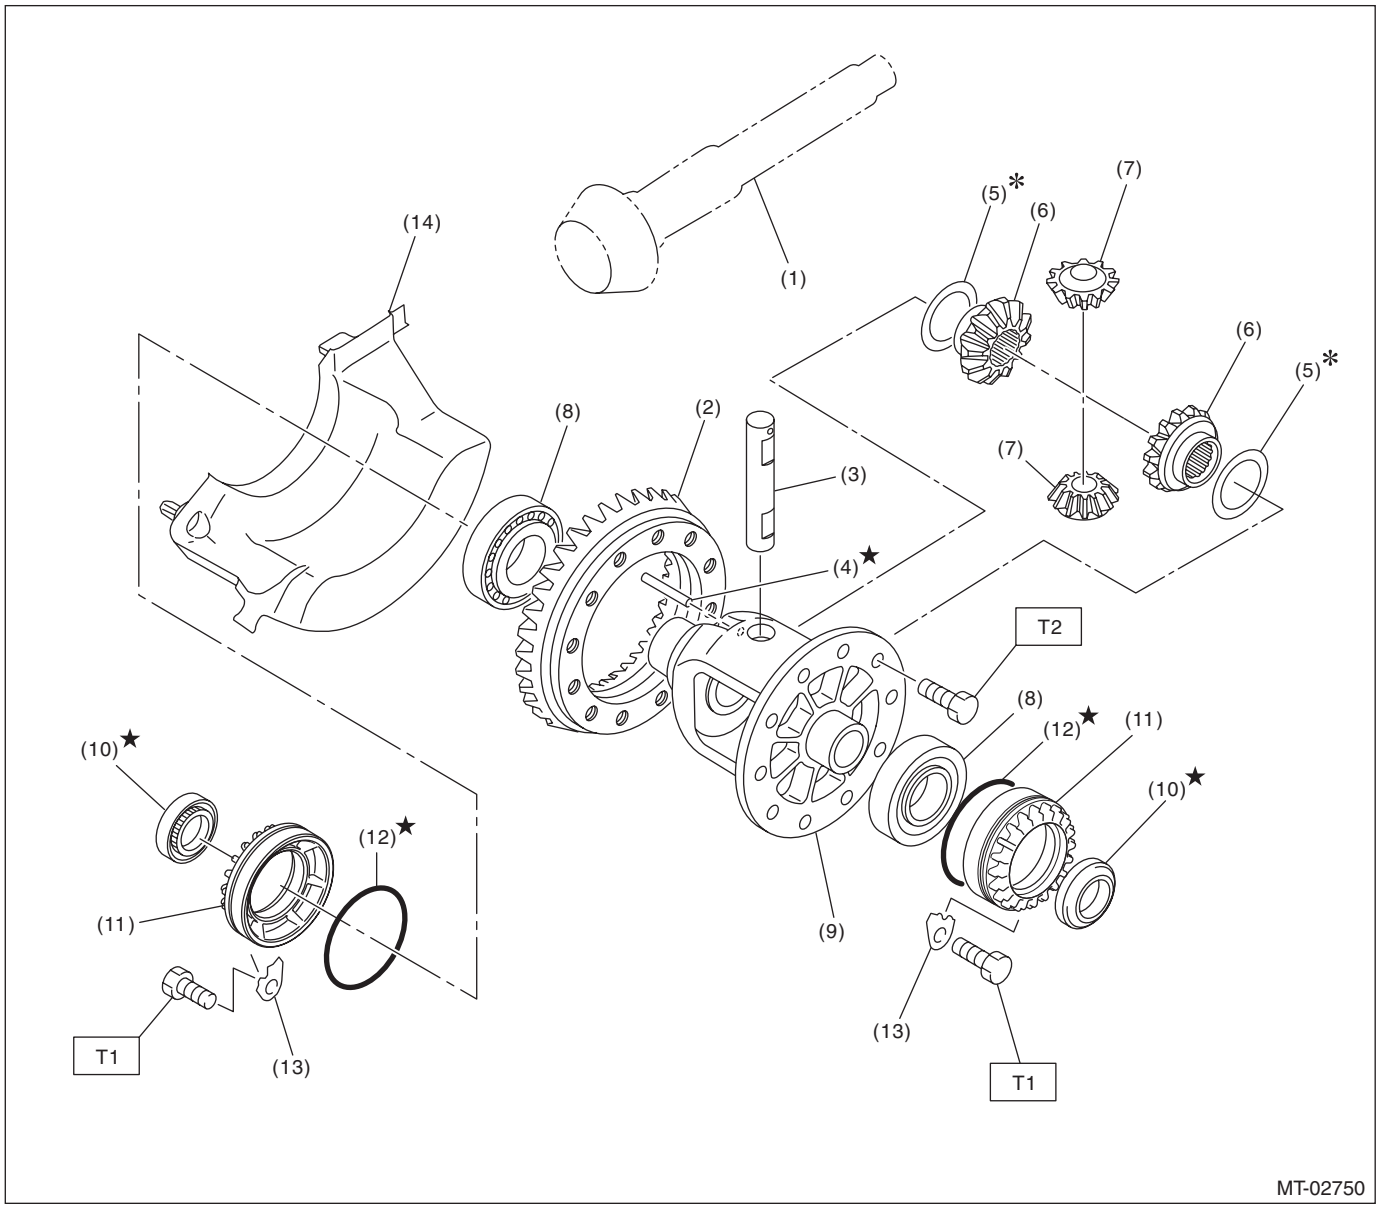
Tightening torque: N·m (kgf-m, ft-lb)
T: 20 (2.0, 14.8)



6. TRANSFER CASE AND EXTENSION

(1) Shifter arm
(2) Interlock plate
(3) Gasket
(4) Transfer case
(5) Transmission hanger
(6) Gasket
(7) Neutral position switch
(8) Back-up light switch
(9) Taper roller bearing (transfer case side)
(10) Transfer driven gear
(11) Taper roller bearing (extension case side)
(12) Adjusting washer
(13) Ball bearing
(14) Center differential
(15) Adjusting washer
(16) Transfer drive gear
(17) Ball bearing
(18) Snap ring
(19) Extension case
(20) Bushing
(21) Oil seal
(22) Dust cover
(23) Dust cover (OUTBACK model)
(24) Shift bracket
(25) Oil guide
(26) Gasket
(27) Precoat bolt
(28) Needle bearing
(29) Snap ring

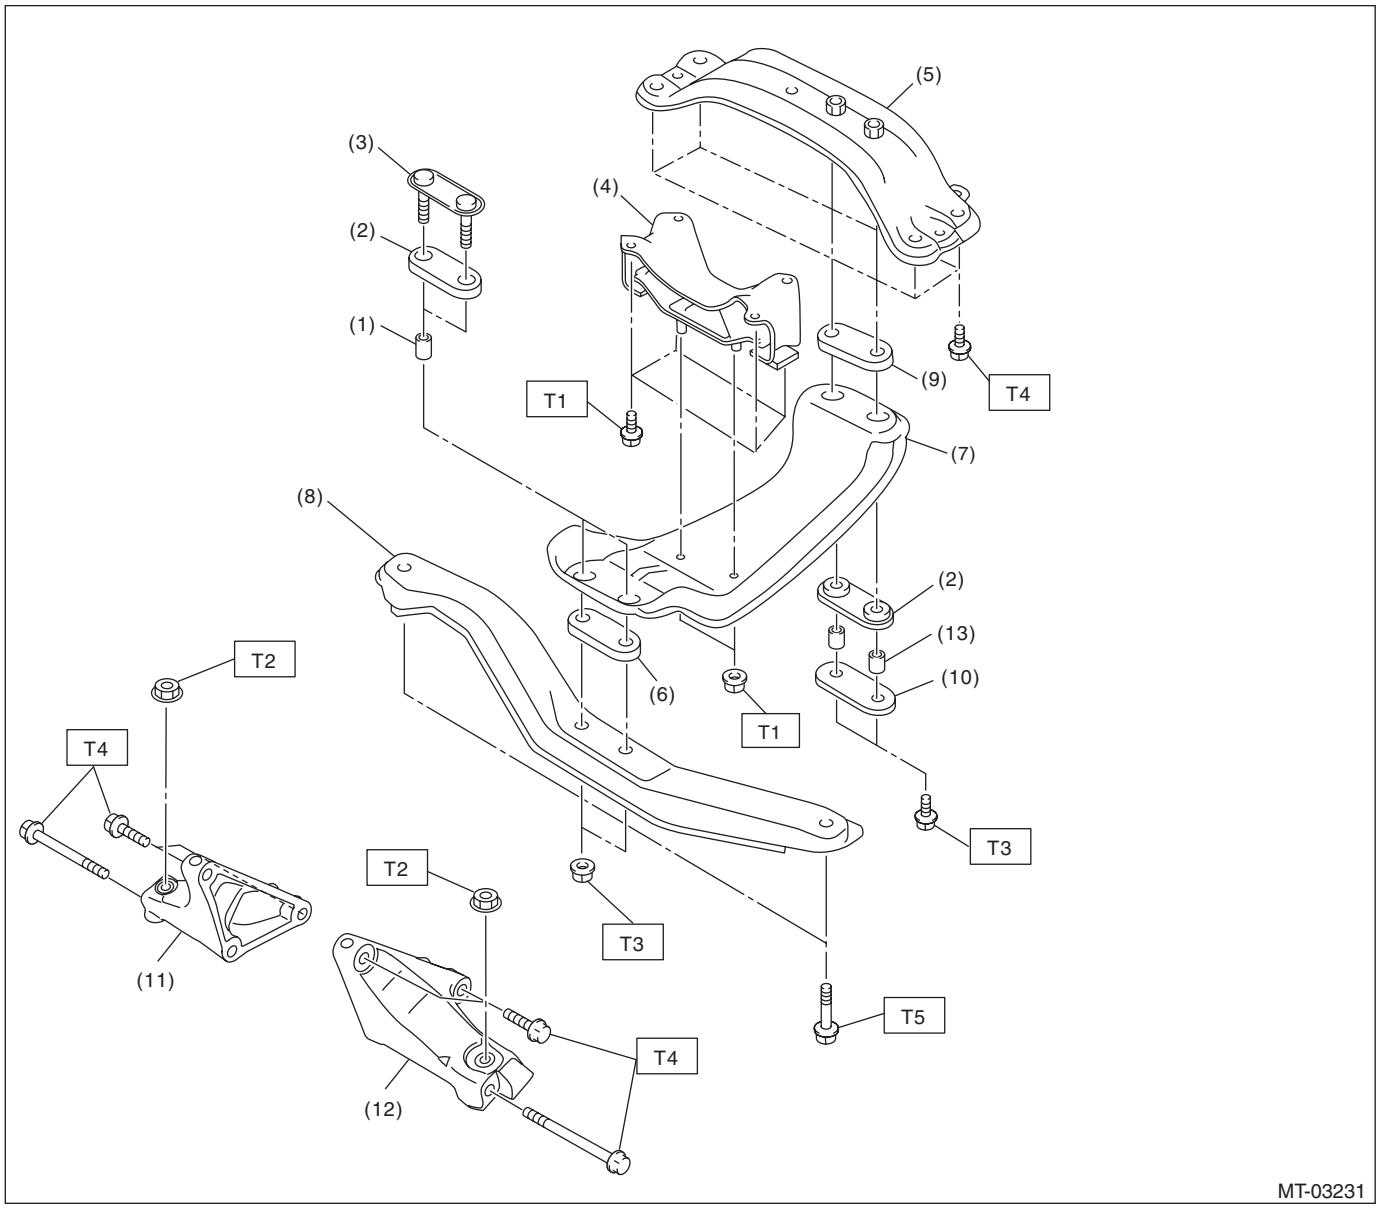
Tightening torque: N·m (kgf-m, ft-lb)
T1: 15 (1.5, 11.1)
T2: 18 (1.8, 13.3)
T3: 20 (2.0, 14.8)
T4: 24.5 (2.5, 18.1)
T5: 26 (2.7, 19.2)
T6: 32.3 (3.3, 23.8)
T7: 40 (4.1, 29.5)



7. SHIFT LINK ASSEMBLY

(1) Selector lever COMPL
(2) Selector arm No. 2
(3) Shifter arm collar
(4) Neutral set spring
(5) Straight pin
(6) Selector arm
(7) Shifter arm
(8) Shift lever COMPL
(9) Shifter arm No. 2
(10) Washer
(11) Thrust bearing
(12) Oil seal
(13) Straight pin
(14) Transfer case
(15) Gasket
(16) Checking ball spring
(17) Plunger
(18) Seal bolt
(19) Interlock plate
(20) Transmission cover
(21) Seal ring
(22) Needle bearing
(23) Roller bearing
(24) Precoat bolt

Tightening torque: N·m (kgf-m, ft-lb)
T1: 6.4 (0.7, 4.7)
T2: 20 (2.0, 14.8)
T3: 25 (2.5, 18.4)



8. FRONT DIFFERENTIAL

(1) Drive pinion shaft
(2) Hypoid driven gear
(3) Pinion shaft
(4) Straight pin
(5) Adjusting washer
(6) Differential bevel gear
(7) Differential bevel pinion
(8) Taper roller bearing
(9) Differential case
(10) Oil seal
(11) Differential side retainer
(12) O-ring
(13) Retainer lock plate
(14) Front oil guide

Tightening torque: N·m (kgf-m, ft-lb)
T1: 25 (2.5, 18.4)
T2: 62 (6.3, 45.7)

9. TRANSMISSION MOUNTING

(1) Spacer
(2) Lower cushion rubber
(3) Front plate
(4) Transmission cushion rubber
(5) Rear crossmember
(6) Upper cushion rubber
(7) Center crossmember
(8) Front crossmember
(9) Rear cushion rubber
(10) Rear plate
(11) Transmission main mounting bracket (RH)
(12) Transmission main mounting bracket (LH)
(13) Spacer

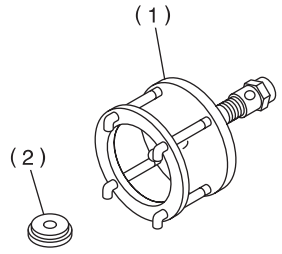
Tightening torque: N·m (kgf-m, ft-lb)
T1: 35 (3.6, 25.8)
T2: 45 (4.6, 33.2)
T3: 70 (7.1, 51.6)
T4: 75 (7.6, 55.3)
T5: 140 (14.3, 103.3)

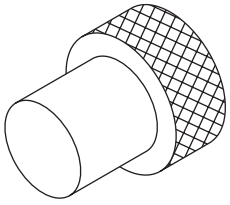
C: CAUTION

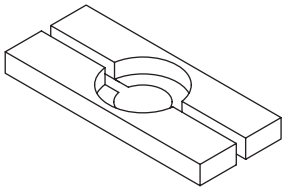
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- When disassembling the case and other light alloy parts, disassemble by using a plastic hammer. Do not pry apart with screwdrivers or other tools.
- Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine transmission gear oil, grease or equivalent. Do not mix gear oil, grease, etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Apply transmission gear oil onto sliding or revolving surfaces before installation.
- Replace deformed or damaged snap rings with new parts.
- Before installing O-rings or oil seals, apply sufficient amount of transmission gear oil to avoid damage and deformation.
- Be careful not to incorrectly install or fail to install O-rings, snap rings and other such parts.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or cloth between the part and the vise.
- Avoid damaging the mating surface of the case.
- Before applying liquid gasket, completely remove and clean the old liquid gasket.
- Be careful of handling the oil seal, O-ring and gasket. If the contact surface of them is damaged, oil leakage may occur.
- When pressing-in the oil seal, make sure that the oil seal lip portion and outer surface are not damaged or tilted.
- When replacing the taper roller bearing, replace the outer race and inner race as a set.
- When replacing the hypoid gear, replace the hypoid driven gear and drive pinion shaft as a set.
- Replace the bolts if the seating surface or the thread surface is excessively rusted.

D: PREPARATION TOOL

1. SPECIAL TOOL







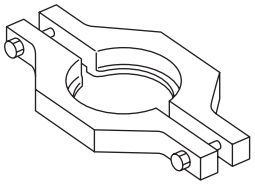


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
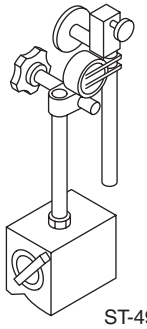
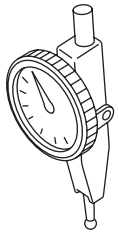
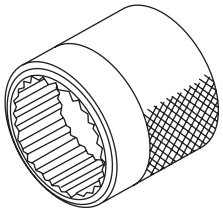
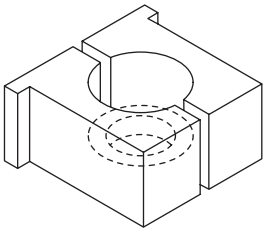
 ST-899524100	899524100	PULLER SET	Used for removing the front differential taper roller bearing. (1) Puller (2) Cap
 ST-399780104	399780104	WEIGHT	Used for adjusting preload on the front differential taper roller bearing.
 ST-498077000	498077000	REMOVER	• Used for removing the roller bearing and washer of the drive pinion shaft. • Used for removing the taper roller bearing of transfer driven gear.
 ST-498077600	498077600	CENTER DIFFERENTIAL BEARING REMOVER	Used for removing the ball bearing of the center differential.









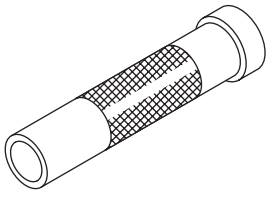


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
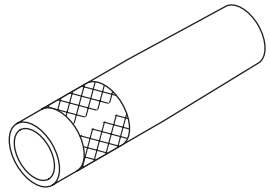
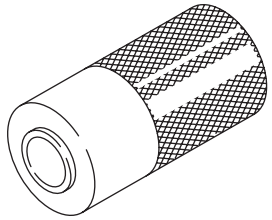
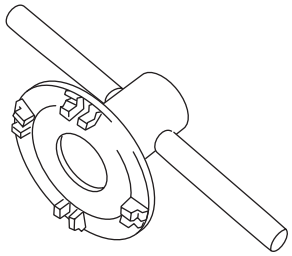
 ST-498247001	498247001	MAGNET BASE	• Used for measuring the backlash of differential bevel pinion gear and hypoid driven gear. • Used together with DIAL GAUGE (498247100).
 ST-498247100	498247100	DIAL GAUGE	• Used for measuring the backlash of differential bevel pinion gear and hypoid driven gear. • Used together with MAGNET BASE (498247001).
 ST18667AA020	18667AA020	HOLDER	• Used for removing and installing the drive pinion shaft lock nut. • Used for measuring the backlash of hypoid driven gear. • Used for adjusting preload on the front differential taper roller bearing.
 ST-498937000	498937000	TRANSMISSION HOLDER	Used for removing and installing the main shaft lock nut.
 ST-499277100	499277100	BUSHING 1-2 INSTALLER	• Used for installing the drive pinion shaft washer. • Used for installing the outer race of the front differential taper roller bearing.







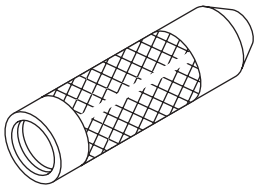


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
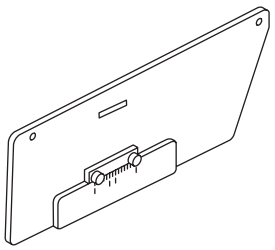
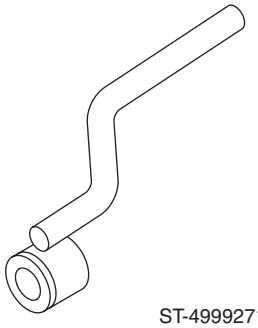
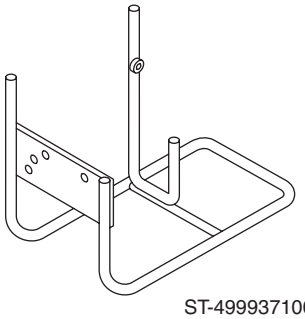
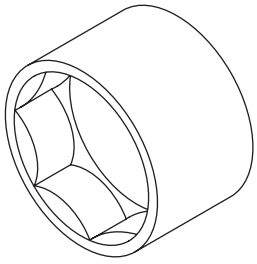
 ST-499277200	499277200	INSTALLER	• Used for installing the 3rd-4th driven gear, 5th driven gear and 6th driven gear. • Used for installing the drive pinion shaft washer.
 ST-927640000	927640000	INSTALLER	Used for installing the taper roller bearing (transfer case side) of transfer driven gear.
 ST18630AA010	18630AA010	WRENCH COMPL RETAINER	• Used for removing and installing the differential side retainer. • Used for adjusting preload on the front differential taper roller bearing. • WRENCH COMPL RETAINER (18630AA020) can also be used.
 ST18722AA000	18722AA000	REMOVER	Used for removing the 5th drive gear and 6th drive gear.
 ST-499877000	499877000	RACE 4-5 INSTALLER	• Used for installing the 4th, 5th and 6th drive gear needle bearing races and the main shaft double taper roller bearings. • Used together with REMOVER (899714110).









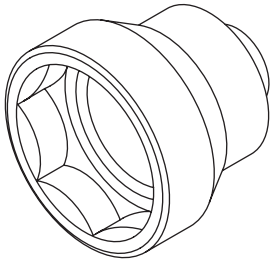


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
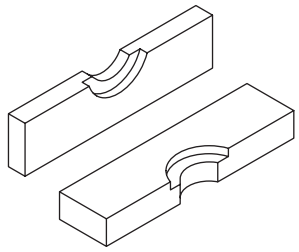
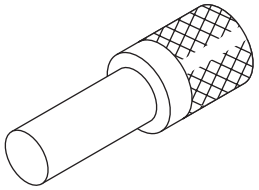
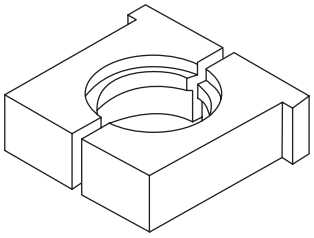
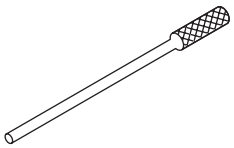
 ST-499917500	499917500	DRIVE PINION GAUGE ASSY	Used for adjusting the drive pinion shaft shim.
 ST-499927100	499927100	HANDLE	• Used for measuring the backlash of hypoid driven gear. • Used for adjusting preload on the front differential taper roller bearing.
 ST-499937100	499937100	TRANSMISSION STAND	Used for disassembling and assembling the transmission.
 ST-499987003	499987003	SOCKET WRENCH (35)	Used for removing and installing the main shaft lock nut.
 ST-499987300	499987300	SOCKET WRENCH (50)	Used for removing and installing the driven shaft lock nut.









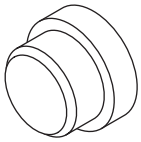


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
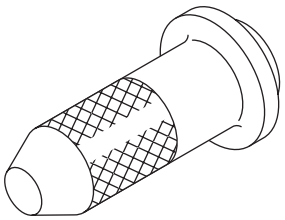
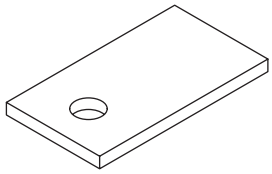
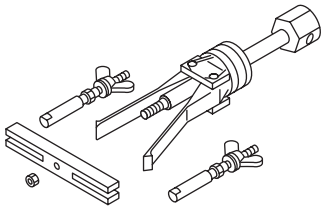
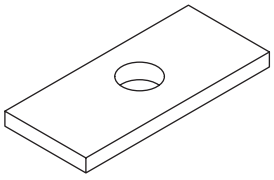
 ST-899714110	899714110	REMOVER	Used for removing and installing the parts of main shaft and driven shaft.
 ST-899864100	899864100	REMOVER	• Used for removing the parts of the main shaft. • Used for removing the transfer driven gear taper roller bearing (transfer case side) and for installing it (extension case side). • Used for removing the ball bearing of transfer drive gear. • Used for installing the roller bearing of the transfer case.
 ST18680AA020	18680AA020	HOLDER	• Used for removing and installing the drive pinion shaft lock nut. • Used for removing and installing the driven shaft lock nut.
 ST-899904100	899904100	STRAIGHT PIN REMOVER	Used for removing and installing the straight pin.
 ST-398497701	398497701	ADAPTER	• Used for installing the front differential taper roller bearing. • Used together with BUSHING 1-2 INSTALLER (499277100).









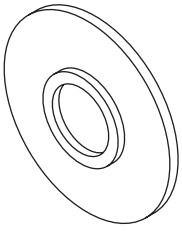


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
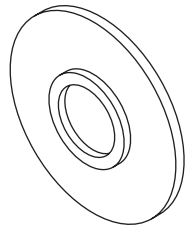
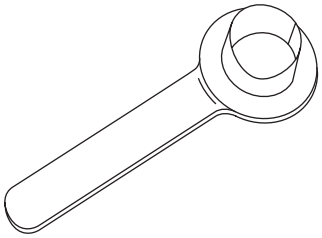
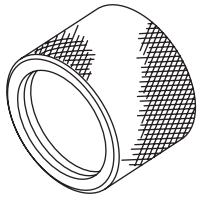
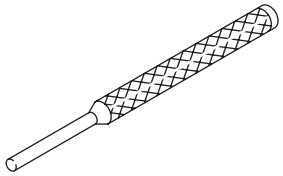
 ST-498057300	498057300	INSTALLER	Used for installing the oil seal of extension case.
 ST-498255400	498255400	PLATE	Used for measuring the backlash of hypoid driven gear.
 ST-398527700	398527700	PULLER ASSY	• Used for removing the oil seal of extension case. • Used for removing the outer race of the front differential taper roller bearing. • Used for removing the oil seal of front differential side retainer.
 ST-398643600	398643600	GAUGE	Used for adjusting the extension end play.
 ST-398177700	398177700	INSTALLER	• Used for installing the ball bearing of the transfer drive gear. • Used for installing the 4th drive gear needle bearing race.









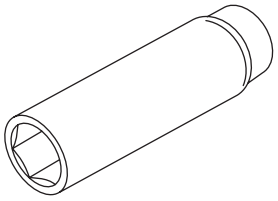


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
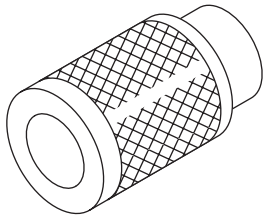
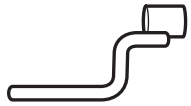
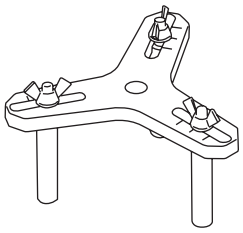
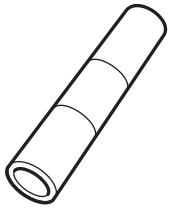
 ST-498175500	498175500	INSTALLER	Used for installing the taper roller bearing of transfer driven gear (extension case side).
 ST28399SA010	28399SA010	OIL SEAL PROTECTOR	Used for protecting the oil seal from damage when inserting the front drive shaft.
 ST18675AA000	18675AA000	DIFFERENTIAL SIDE OIL SEAL INSTALLER	Used for installing the oil seal of front differential side retainer.
 ST-398791700	398791700	SPRING PIN REMOVER 2	Used for removing and installing the straight pin.
 ST18662AA010	18662AA010	SOCKET (27)	• Used for removing and installing the drive pinion shaft lock nut. • Used for measuring the starting torque of the drive pinion shaft.









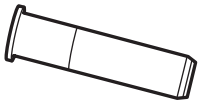


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
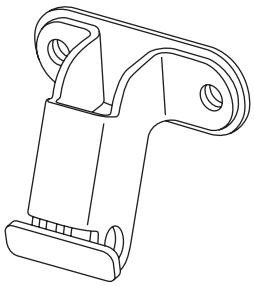
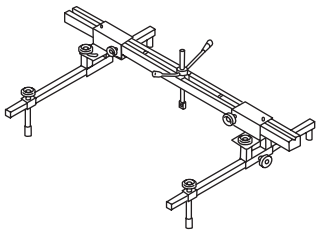
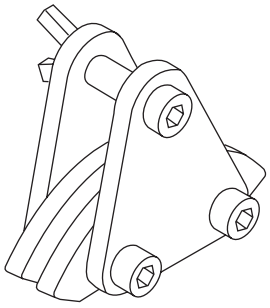
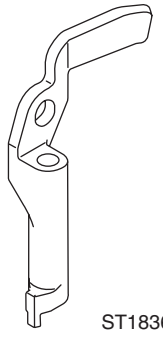
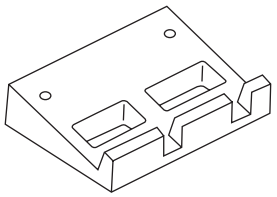
 ST-899754112	899754112	PRESS	• Used for removing driven shaft parts. • Used to install the main shaft ball bearing.
 ST18631AA000	18631AA000	HANDLE	Used for installing transfer case assembly and extension case assembly.
 ST18762AA001	18762AA001	COMPRESSOR SPECIAL TOOL	• Used for removing the 1st driven gear. • COMPRESSOR SPECIAL TOOL (18762AA000) can also be used.
 ST18654AA000	18654AA000	INSTALLER	Used for installing the 2nd driven gear bushing.
 ST18657AA000	18657AA000	INSTALLER	Used for installing the transfer case oil seal.

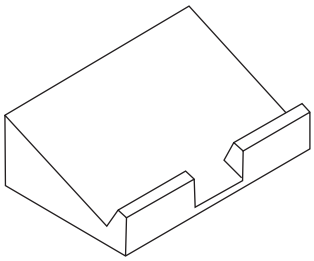


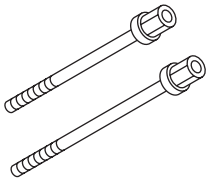












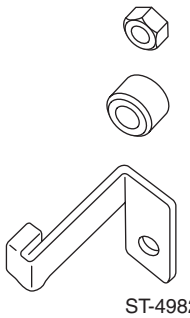


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
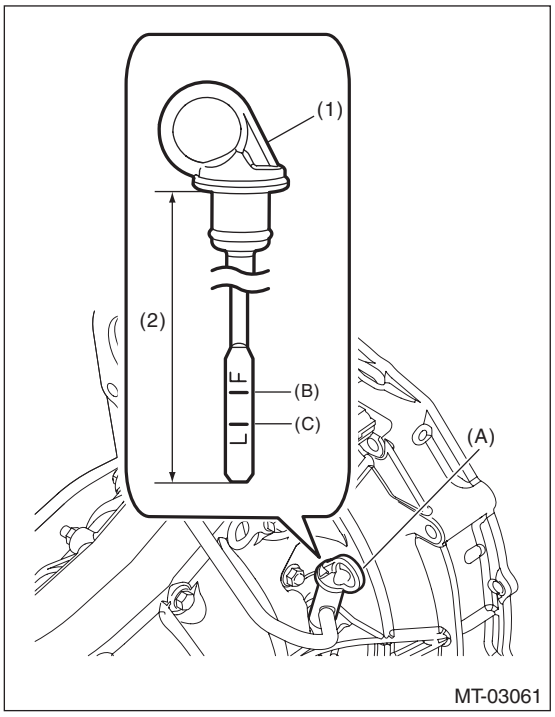
 ST41099AJ130	41099AJ130	SPECIAL TOOL FB	Used for removing and installing transmission.
 ST99099AJ000	99099AJ000	ENGINE HANGER	• Used for removing and installing transmission. • Used together with CHAIN BALANCER (99099AJ010) and sling chain (general tool).
 ST99099AJ010	99099AJ010	CHAIN BALANCER	• Used for removing and installing transmission. (Weight of 350 kg (772 lb) is supported) • Used together with ENGINE HANGER (99099AJ000) and sling chain (general tool). • Used to hang the engine while balancing it with the sling chain inserted in this tool.
 ST18360AA040	18360AA040 (Newly adopted tool)	HANGER	Used for removing and installing transmission assembly.
 ST18363AA050	18363AA050 (Newly adopted tool)	BOLT	Used for removing and installing transmission assembly.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-498267200	498267200	CYLINDER HEAD TABLE	Used for removing and installing the roller bearing of the transfer case.
 ST-498267300	498267300	CYLINDER HEAD TABLE	Used for removing and installing the roller bearing of the transfer case.
 ST18763AA000	18763AA000	COMPRESSOR SHAFT	Used for removing and installing the needle bearing of the transfer case.
 ST-498277200	498277200	STOPPER SET	• Used for installing the needle bearing of the transfer case. • Use only the spacer.

2. GENERAL TOOL



TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance.
TORX® bit T70	Used for removing and installing the drain plug.
Spring pin remover	Used for removing and installing the straight pin. (3 — 3.3 mm)
Socket driver (TORX® 45 size, tamper resistant type)	Used for removing and installing interlock plate.
Sling chain	Used for removing and installing transmission. • Length: 0.8 — 1 m (2.6 — 3.3 ft) • Load capacity: 1.2 t (2,646 lb) or more • Diameter: 6 mm (0.24 in) or 6.3 mm (0.25 in) • Chain external width: 23.5 mm (0.93 in) or less • Chain internal width: 8.5 mm (0.33 in) or more
Screw shackle	Used for removing and installing transmission. • Load capacity: 250 kg (551 lb) or more • Use two pieces.

2. Transmission Gear Oil

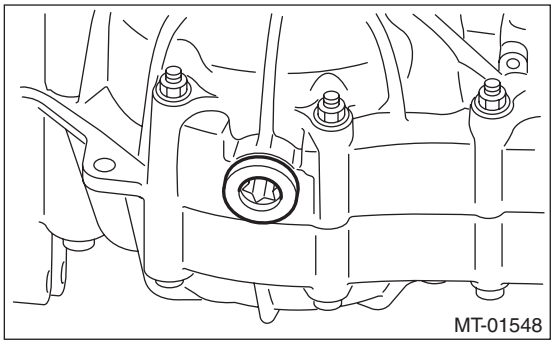
A: INSPECTION

1) Park the vehicle on a level surface.
2) Turn the ignition switch to OFF, and wait until the engine cools.
3) Remove the oil level gauge and wipe it clean.
4) Reinsert the oil level gauge all the way. Be sure that the oil level gauge is correctly inserted in the proper direction.
5) Pull out the oil level gauge again, and check the oil level. If it is below the lower level, check for oil leakage and add transmission gear oil through the oil level gauge hole to bring the level up to the upper level.

CAUTION:
The length of the oil level gauge varies depending on models and destinations. Make sure to use the appropriate oil level gauge.

(A) Oil level gauge
(B) Upper level
(C) Lower level

(1) Gray
(2) 215.8 mm (8.5 in)



B: REPLACEMENT

1) Pull out the oil level gauge.
2) Lift up the vehicle.
3) Using the TORX® bit T70, remove the drain plug, and drain the transmission gear oil completely.

CAUTION:
• Immediately after the vehicle has been running or after idling for a long time, the gear oil will be hot. Be careful not to receive burns.
• Be careful not to spill the gear oil on the exhaust pipe, to prevent emission of smoke or causing a fire. If gear oil is spilt, wipe it off completely.
4) Attach the drain plug using TORX® bit T70.

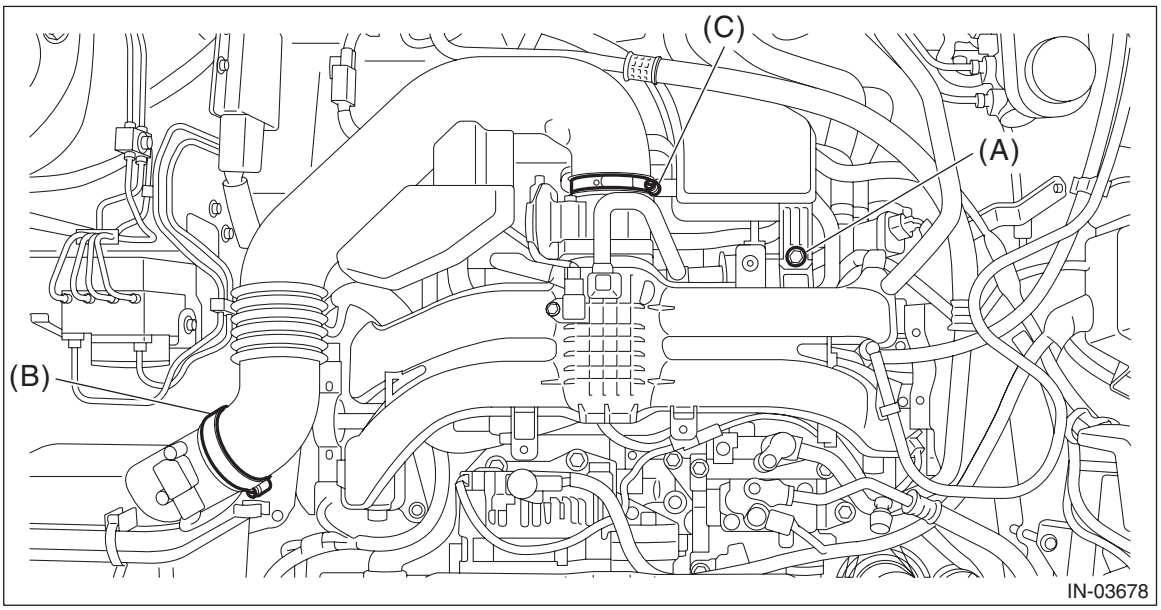
NOTE:
- Install the drain plug after draining transmission gear oil.
- Use a new gasket.

Tightening torque:
44 N·m (4.5 kgf-m, 32.5 ft-lb) (aluminum gasket, silver)
70 N·m (7.1 kgf-m, 51.6 ft-lb) (copper gasket, brown)
70 N·m (7.1 kgf-m, 51.6 ft-lb) (metal gasket, black)

5) Lower the vehicle.
6) Fill with transmission gear oil through the oil level gauge hole.

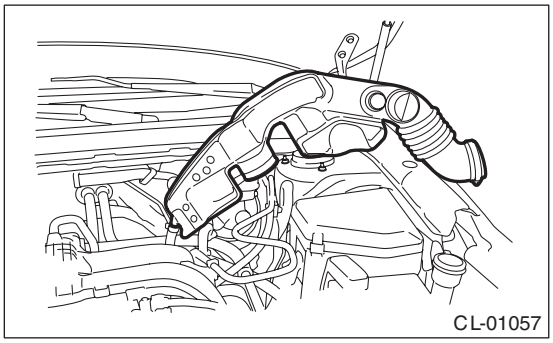
CAUTION:
If an alternative gear oil is used, you may not have expected functionality and performance.

Recommended gear oil:
SUBARU GEAR OIL EXTRA MT



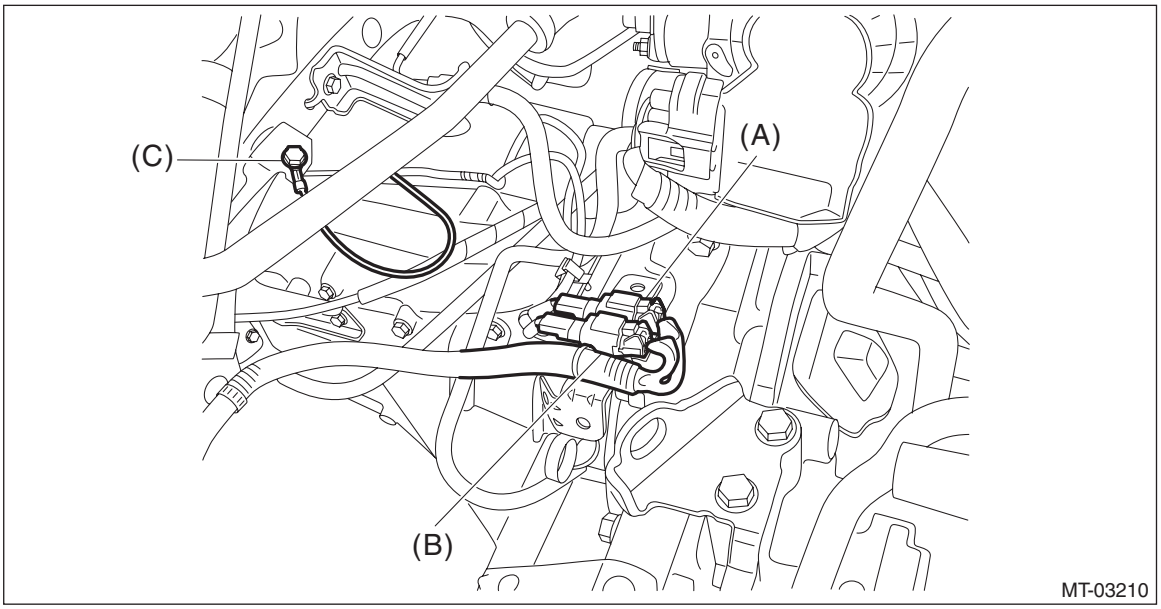
Alternative:
GL-5 (75W-90)

Gear oil capacity:
3.3 L (3.5 US qt, 2.9 Imp qt)
7) Check the transmission gear oil amount, and confirm that it is within the specification.



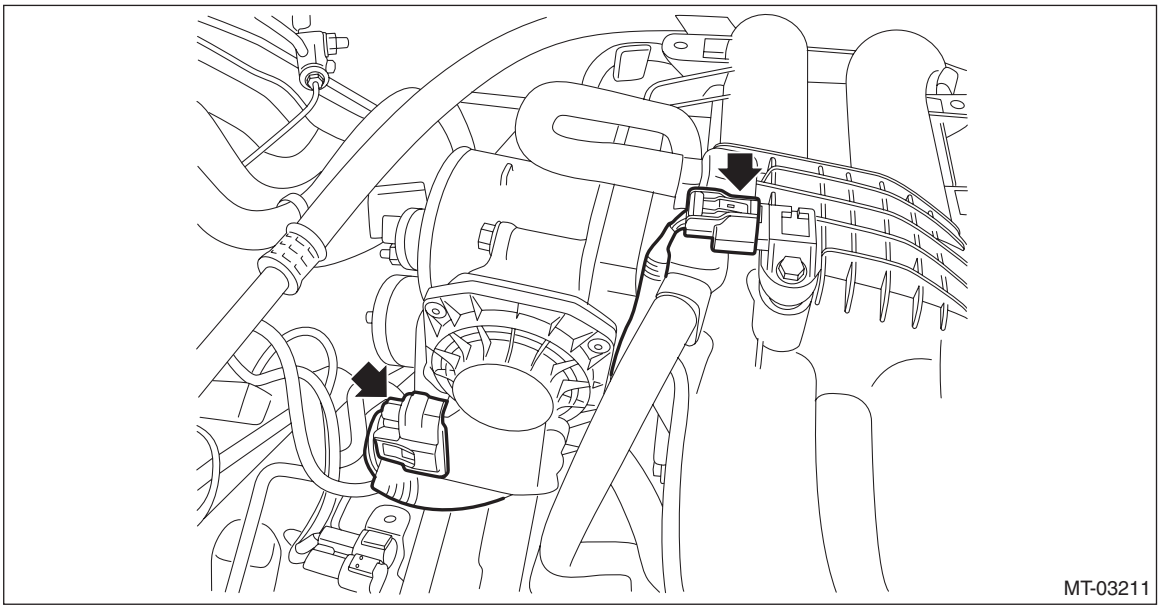
3. Manual Transmission Assembly

A: REMOVAL

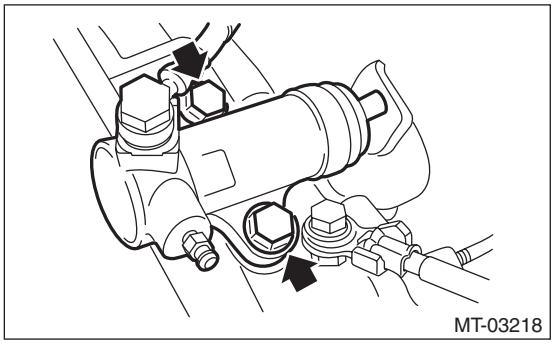


1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the air intake duct. <Ref. to IN(H4DO)-12, REMOVAL, Air Intake Duct.>
3) Remove the clip (A) from the air intake boot.
4) Loosen the clamp (B) connecting the air intake boot and air cleaner case (rear).
5) Loosen the clamp (C) which connects the air intake boot and throttle body.

6) Remove the air intake boot from the throttle body, and move it to the left side wheel apron.

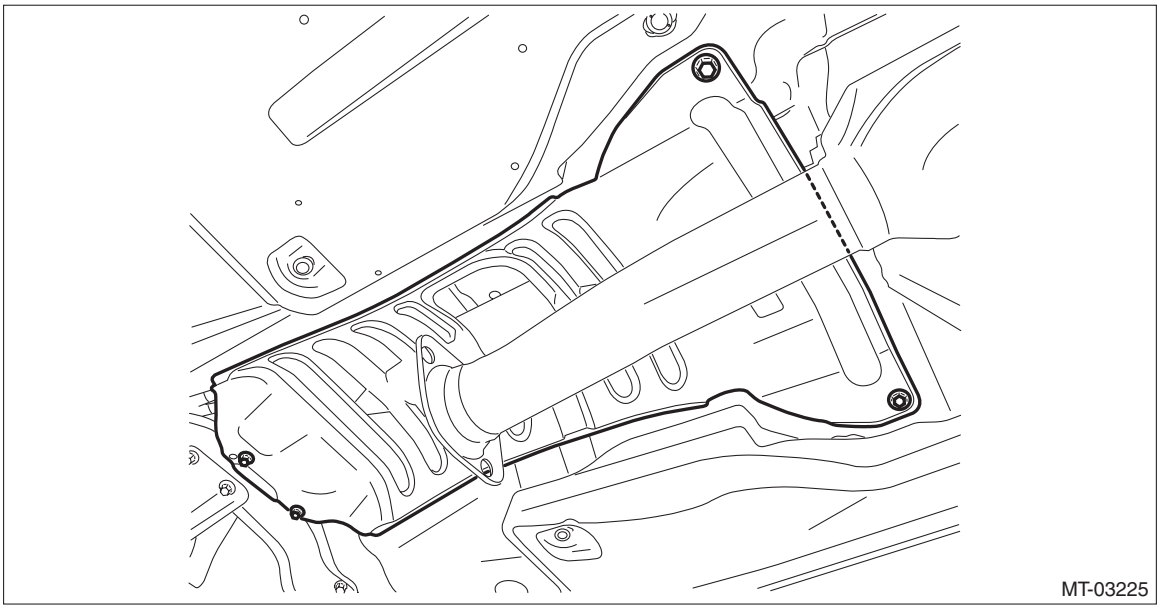


7) Disconnect the back-up light switch and the neutral position switch connectors, then remove the transmission radio ground cord terminal.

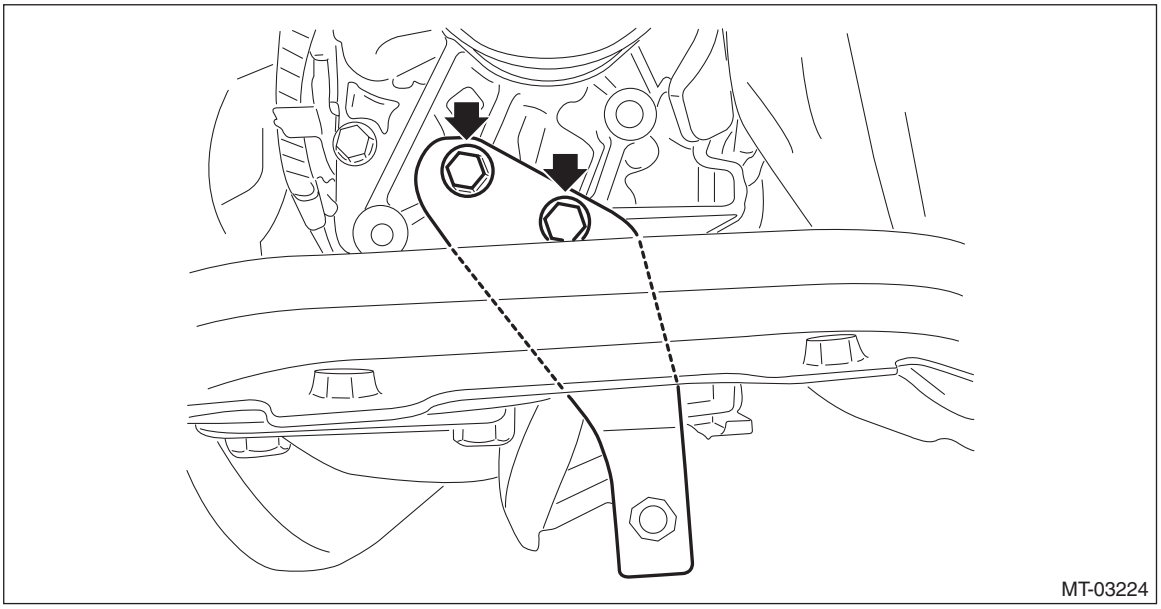


(A) Neutral position switch connector (brown)
(B) Back-up light switch connector (gray)
(C) Transmission radio ground cord terminal

8) Disconnect the throttle position sensor harness connector and manifold pressure sensor harness connector.

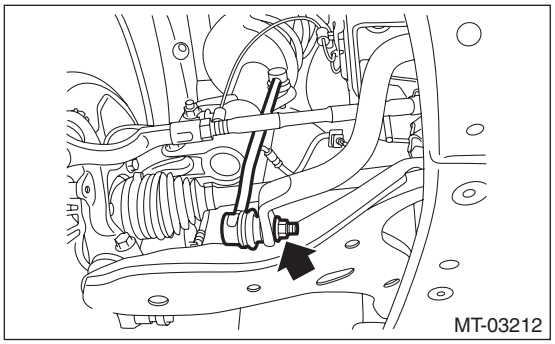


9) Remove the starter. <Ref. to SC(H4DO)-7, REMOVAL, Starter.>

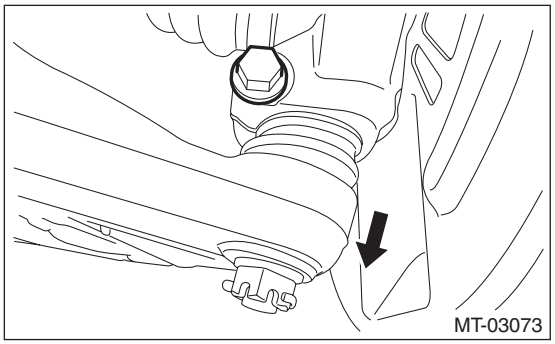


10) Remove the operating cylinder and suspend on a wire.

11) Remove the front wheels.
12) Lift up the vehicle.
13) Remove the front under cover. <Ref. to EI-28, REMOVAL, Front Under Cover.>
14) Remove the center exhaust pipe (rear). <Ref. to EX(H4DO)-12, REMOVAL, Center Exhaust Pipe.>
15) Drain transmission gear oil completely. <Ref. to 6MT-27, REPLACEMENT, Transmission Gear Oil.>
16) Remove the center exhaust cover.

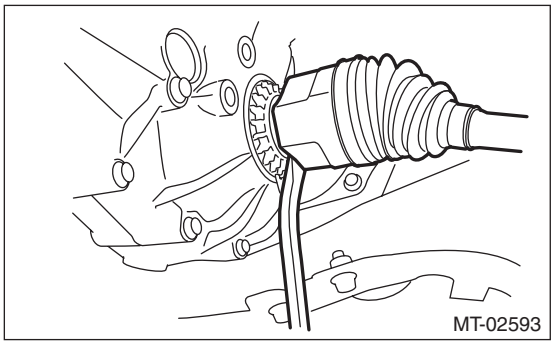


17) Remove the hanger bracket.



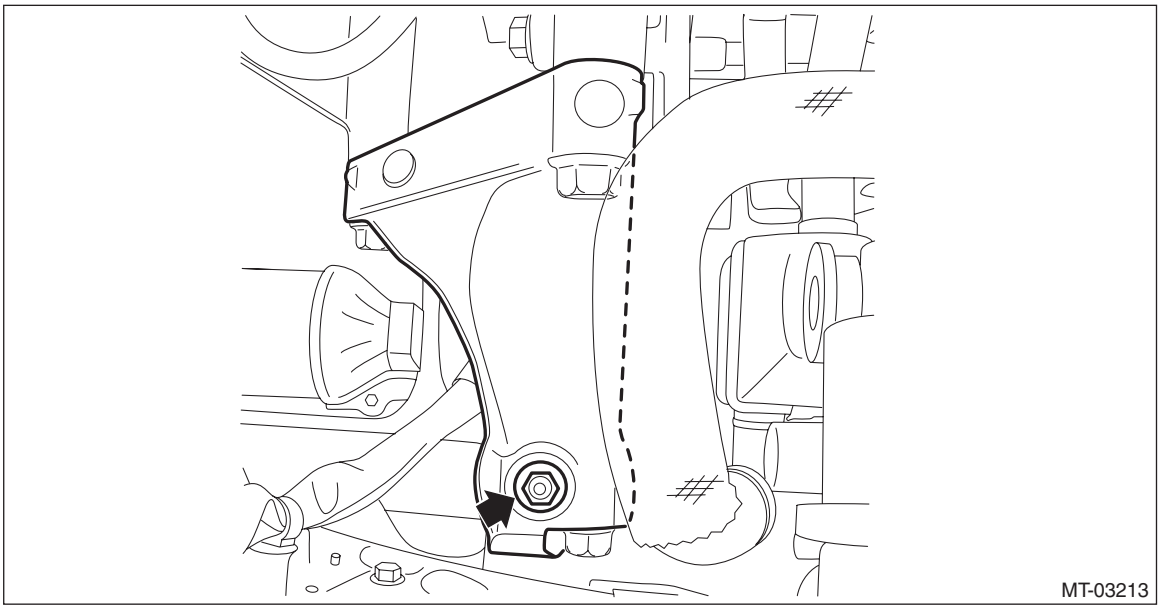
18) Remove the universal joint of the steering shaft. <Ref. to PS-14, REMOVAL, Universal Joint.>
19) Remove the propeller shaft. <Ref. to DS-10, REMOVAL, Propeller Shaft.>
20) Remove the MT gear shift cable and MT gear select cable from MT gear shift lever. <Ref. to CS-56, REMOVAL, MT Gear Shift Lever.>

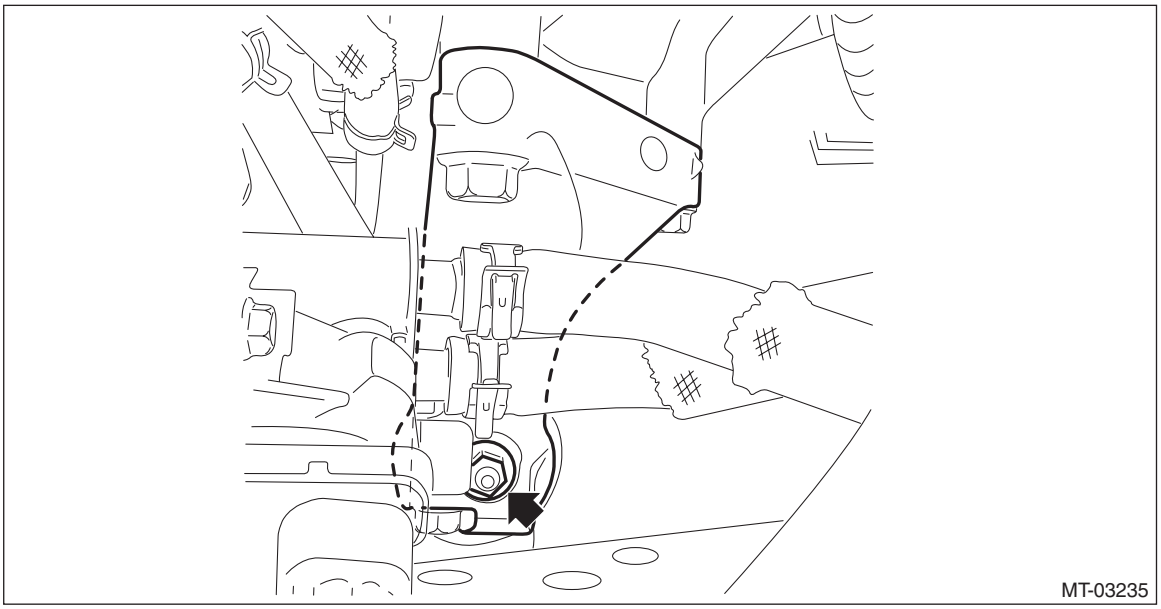
CAUTION:
- **Do not bend MT gear shift cable and MT gear select cable at a sharp angle.**
- **Disconnect the MT gear shift cable and MT gear select cable at the MT gear shift lever side.**
- **Always use new MT gear select cable if the cable is removed from selector lever COMPL of transmission side.**



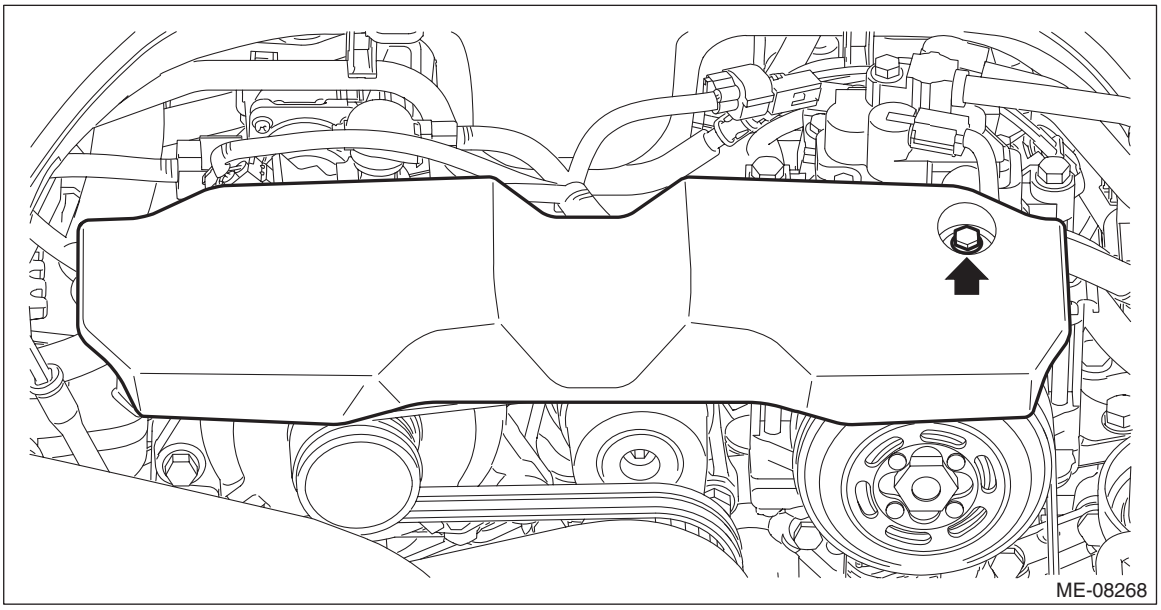
21) Disconnect the stabilizer link.

22) Remove the bolt securing the ball joint of the front arm to the housing, then separate the front arms and the housing.



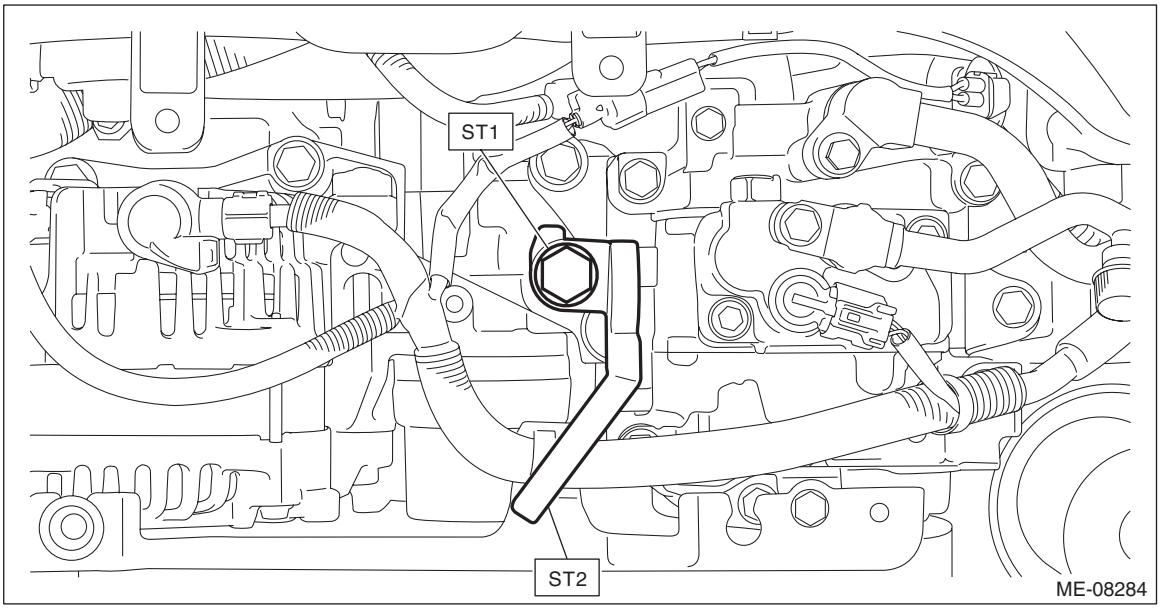


23) Using a crowbar, separate the left and right front drive shafts.



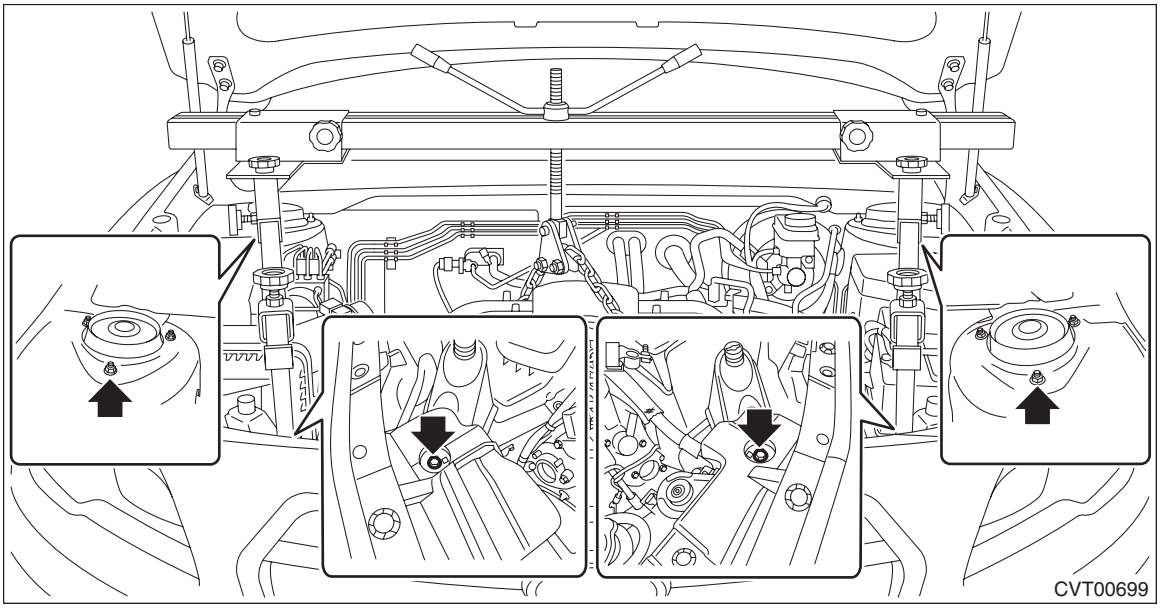
24) Lower the vehicle.

25) Remove the nuts connecting the engine mounting and the transmission main mounting bracket.

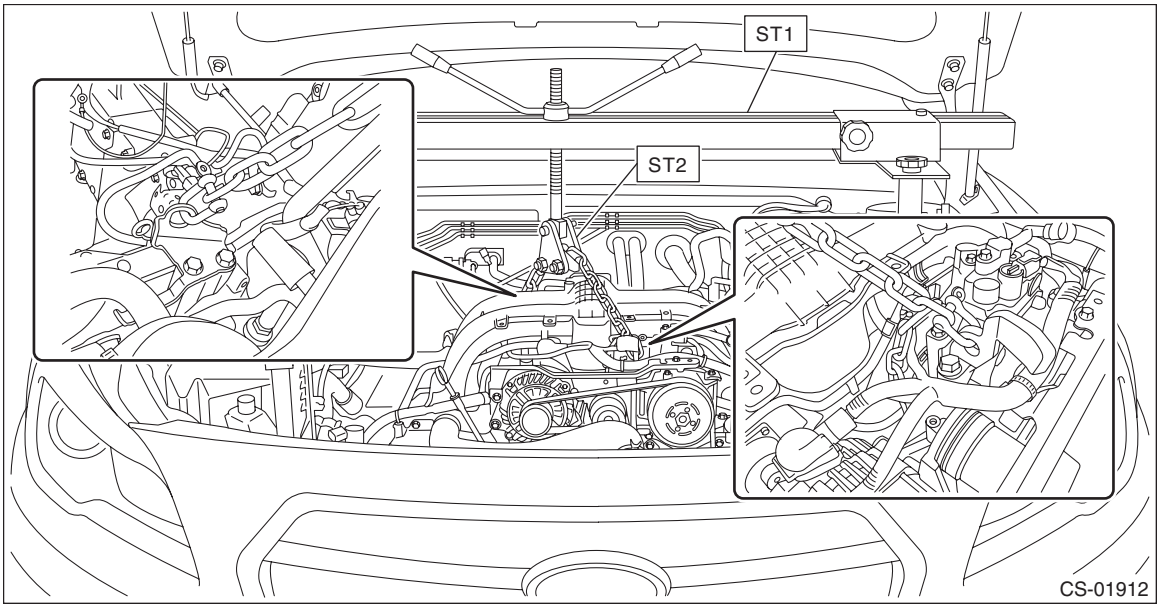


26) Remove the V-belt covers.

27) Using the ST1, install the ST2 to the engine unit.
ST1 18363AA050 BOLT
ST2 18360AA040 HANGER

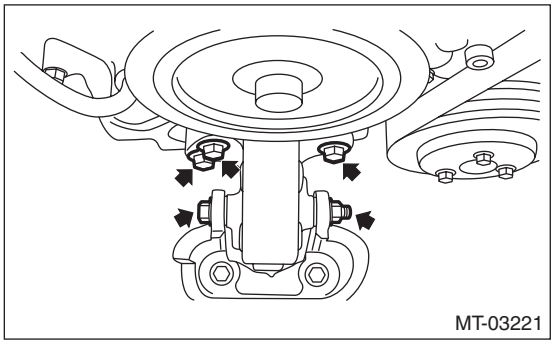


Tightening torque:
43 N·m (4.4 kgf-m, 31.7 ft-lb)

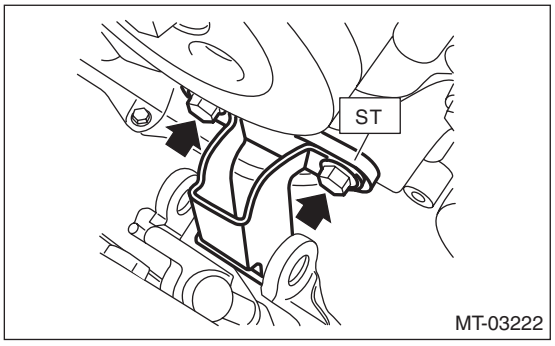


28) Set the ST1 and ST2 to vehicle.

CAUTION:
- **Set the chain sling so that it does not contact the engine parts.**
- **Install a bolt of ϕ8 mm (0.3 in) at the locations shown in the figure, and place the front side arms of ST (ENGINE HANGER).**
- **Set the rear arms of ST (ENGINE HANGER) at the locations shown in the figure.**



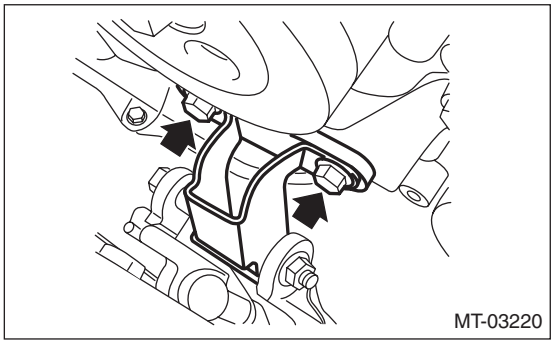
ST1 99099AJ000 ENGINE HANGER
ST2 99099AJ010 CHAIN BALANCER



29) Lift the engine slightly and remove the bolts of front cushion rubber.

30) Remove the nut and bolt of the front cushion rubber, then remove the front cushion rubber.

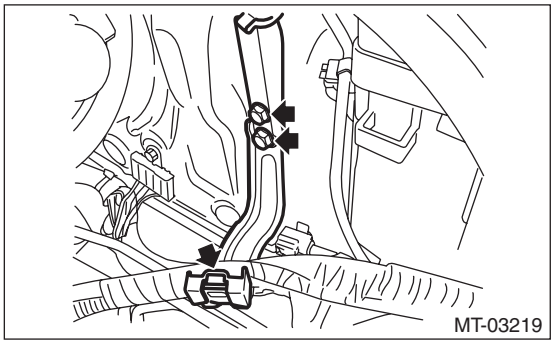
31) Temporarily attach ST by using two bolts.
ST 41099AJ130 SPECIAL TOOL FB



32) Lift up the engine unit high enough to install the bolt and nut to vehicle.

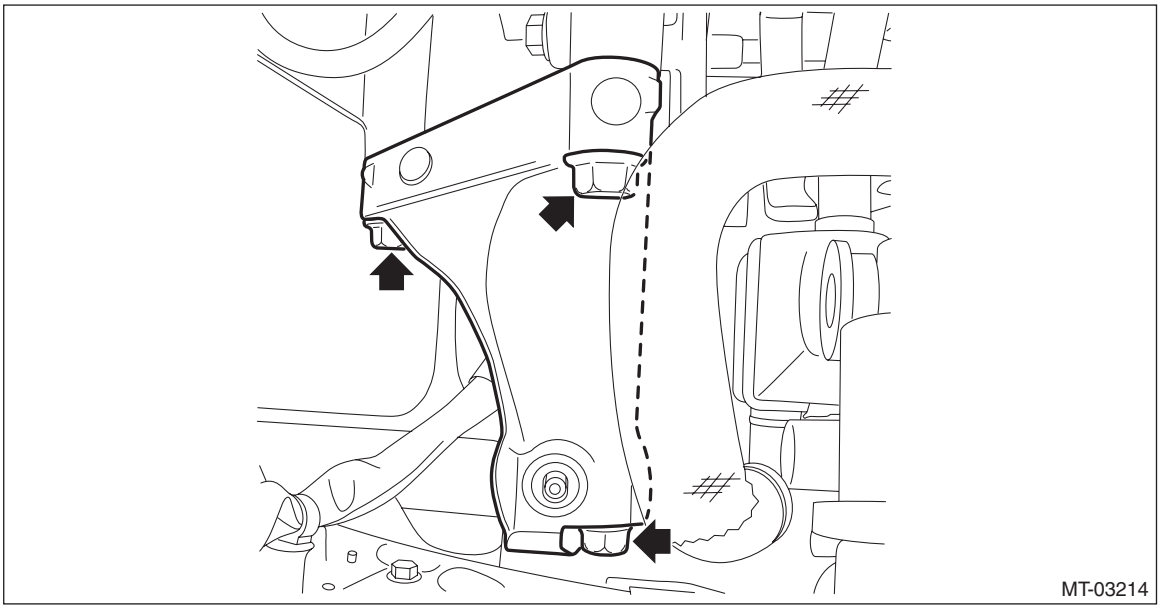
CAUTION:
- **Do not lift up higher than enough level to install the ST to avoid damage to the hoses and pipes inside the engine room.**
- **Do not tighten the bolts and nuts excessively, or the engine mounting bracket may be deformed.**

NOTE:
If it is difficult to pull out the stud bolt from transmission main mounting bracket, shake the engine unit slightly while lifting up.



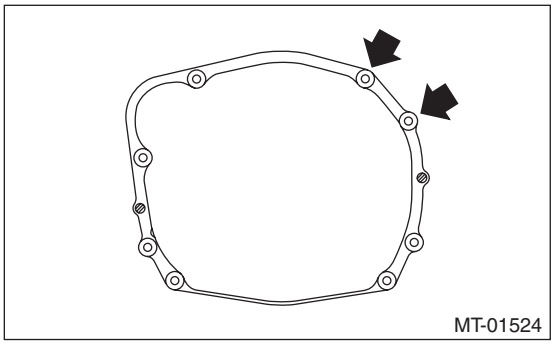
33) Tighten the mounting bolts on the engine side.

Tightening torque:
25 N·m (2.6 kgf-m, 18.4 ft-lb)



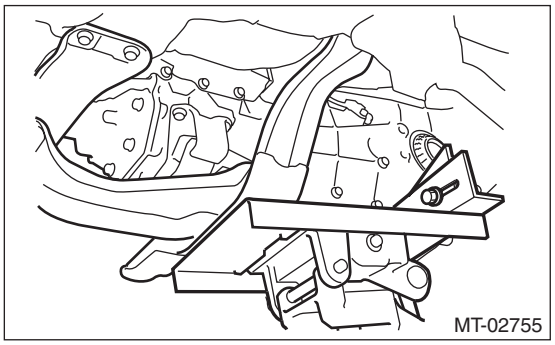
34) Remove the ST (ENGINE HANGER).

35) Separate the battery cable clip to remove the bracket.

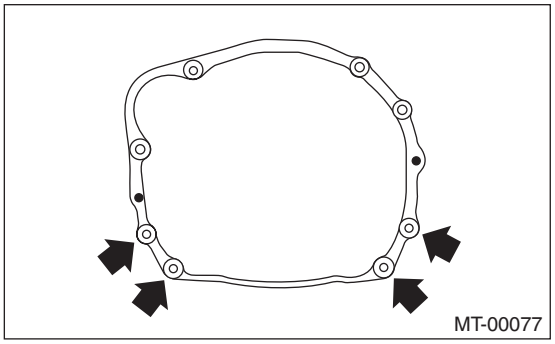


36) Remove the transmission main mounting bracket.

NOTE:
First, remove the transmission main mounting bracket on the right side of vehicle, and then tilt the engine unit to remove the left transmission main mounting bracket.

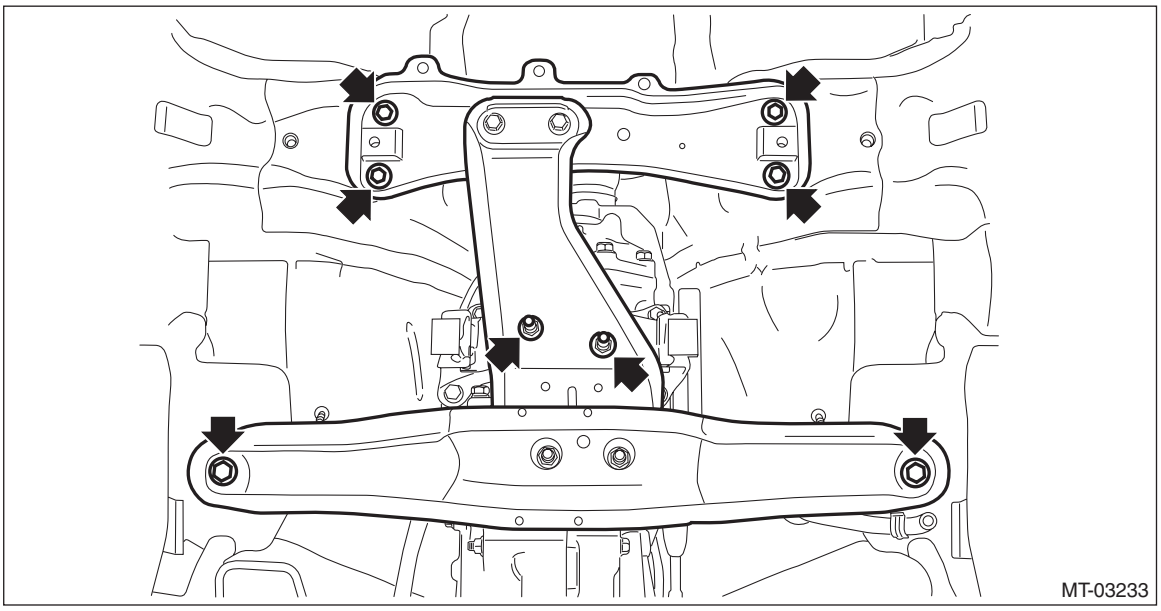


37) Remove the two mounting bolts on the upper side of the transmission.



38) Set the ST (ENGINE HANGER) again to loosen the chain sling.
39) Lift up the vehicle.

40) Place the transmission jack under the transmission.



CAUTION:
Always support the transmission case with a transmission jack.

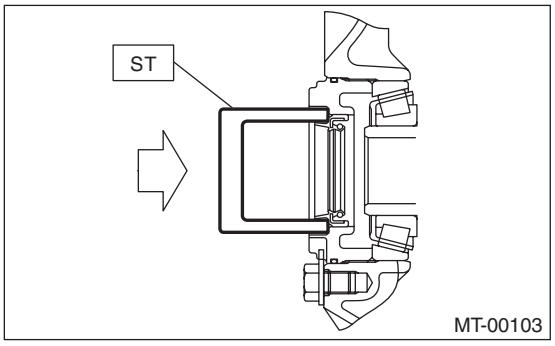
41) Remove the bolts and nuts which hold lower side of transmission to engine.

42) Remove the front crossmember and the rear crossmember.

43) Lower the transmission rear end (dust cover rear end).

CAUTION:
When lowering the transmission rear end, be careful not to let the converter case and steering mechanical parts contact each other.

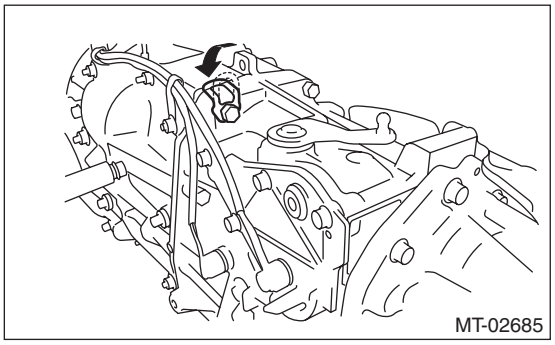
NOTE:
Lower the transmission rear end by approx. 80 mm (3.1 in) (reference).
44) Remove the transmission assembly.



NOTE:
- Move the transmission jack towards the rear until the main shaft is withdrawn from the clutch disc.
- Remove it while moving the transmission jack up and down so that the engine and transmission remain directly aligned.

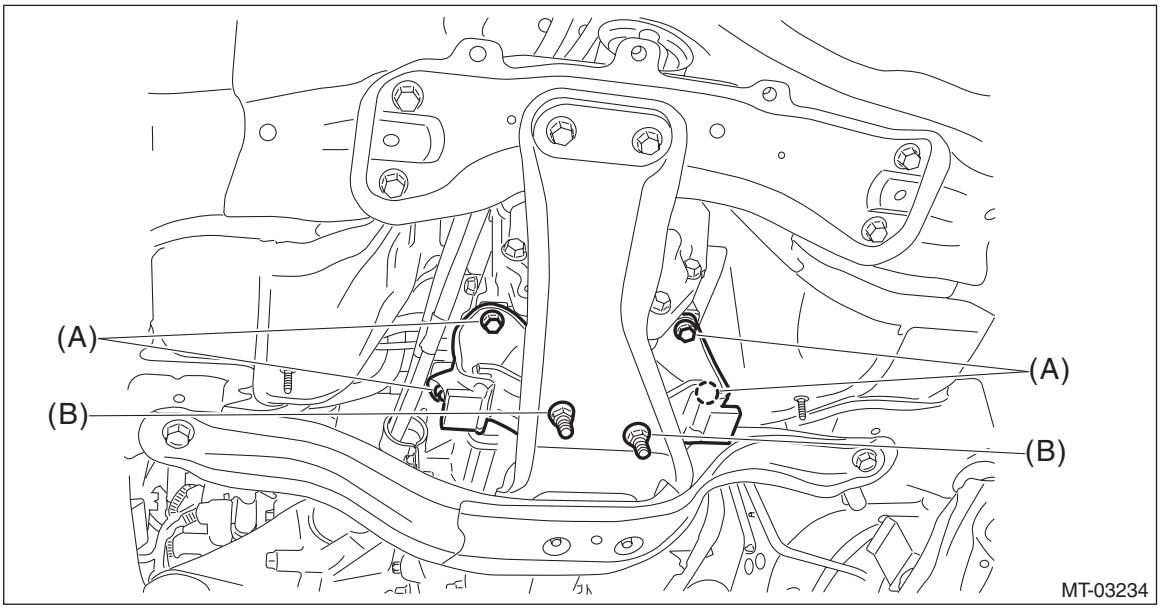
45) Remove the transmission cushion rubber.

B: INSTALLATION



1) Replace the oil seal of the differential side retainer. <Ref. to 6MT-53, REPLACEMENT, Differential Side Retainer Oil Seal.>

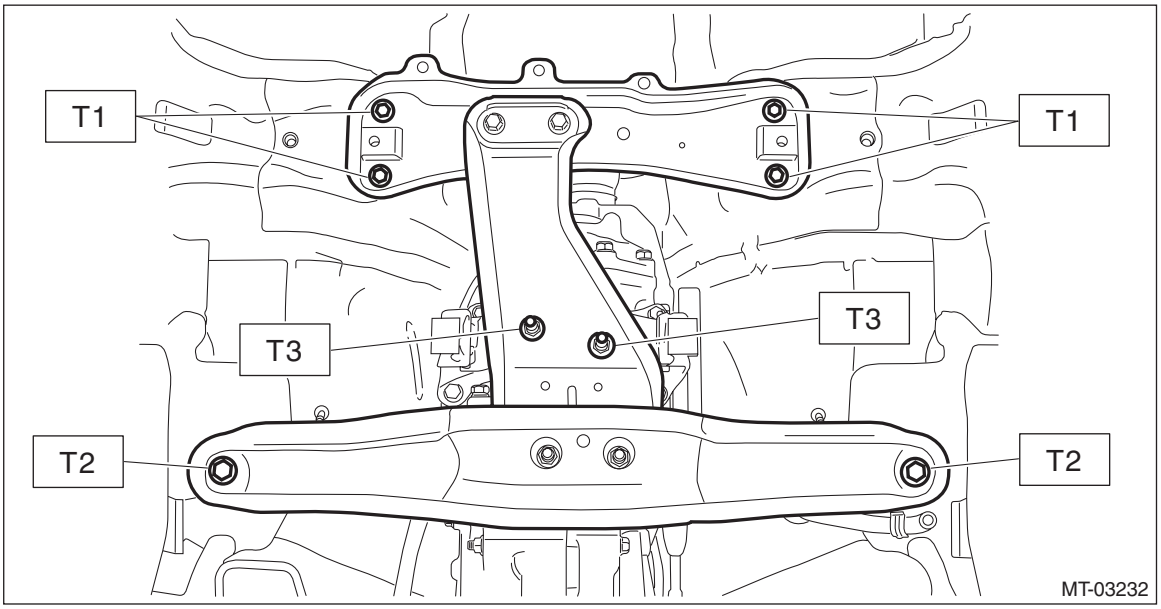
NOTE:
Be sure to replace the oil seal of the differential side retainer after removing the front drive shaft.
ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER



2) Tap the transmission hanger in the rear side of transmission with a rubber hammer to bend it until full contact is obtained.

CAUTION:
Do not apply excessive load or impact to the transmission case.

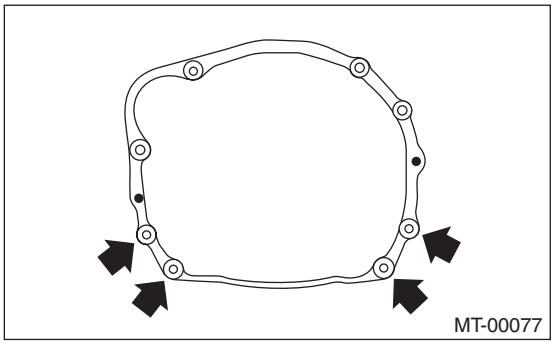
3) Install the transmission cushion rubber to the transmission assembly, and tighten bolt (A).
4) Install the transmission cushion rubber to the center crossmember, and temporarily tighten the nut (B).



Tightening torque:
Bolt (A)
35 N·m (3.6 kgf-m, 25.8 ft-lb)

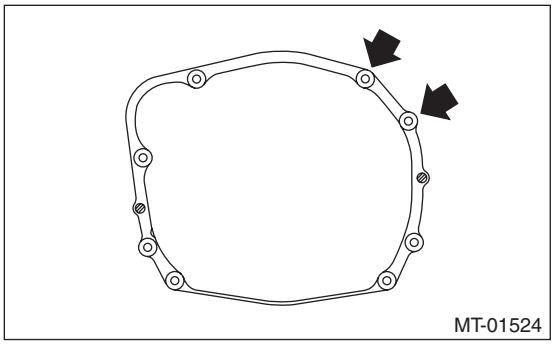
5) Install the transmission onto the engine.
(1) Lift up the transmission gradually using a transmission jack.
(2) Engage at the spline section.

NOTE:
Be careful not to hit the main shaft against the clutch housing cover.
6) Tighten the mounting bolts for front crossmember and rear crossmember.
7) Tighten the transmission cushion rubber mounting nut.



Tightening torque:
T1: 75 N·m (7.6 kgf-m, 55.3 ft-lb)
T2: 140 N·m (14.3 kgf-m, 103.3 ft-lb)
T3: 35 N·m (3.6 kgf-m, 25.8 ft-lb)

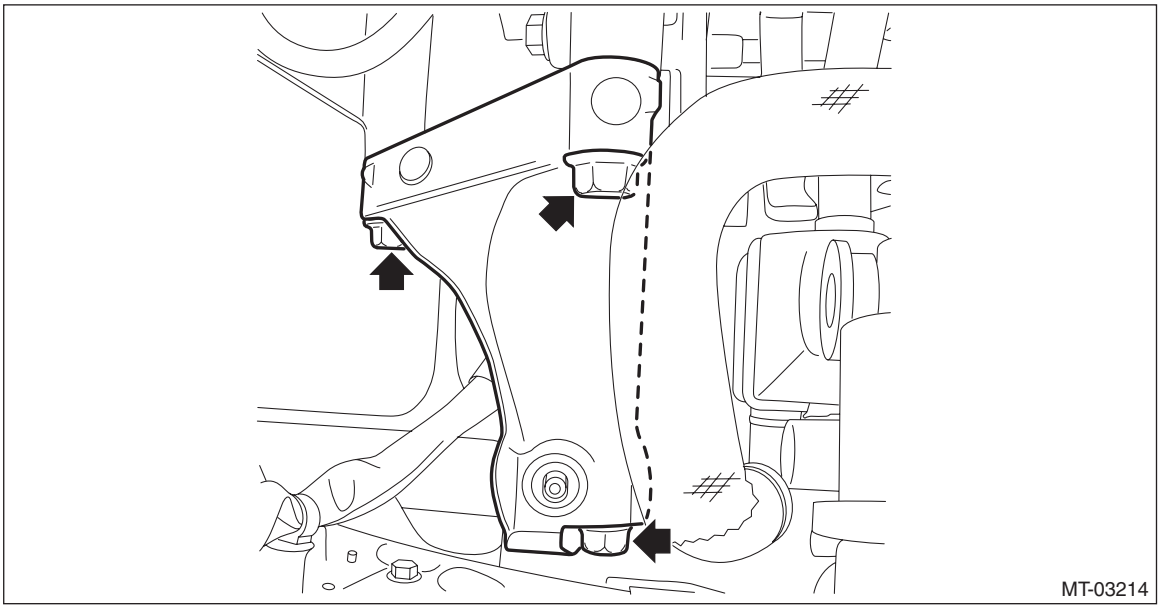
8) Take out the transmission jack.



9) Tighten the bolts and nuts which hold the lower side of transmission to the engine.

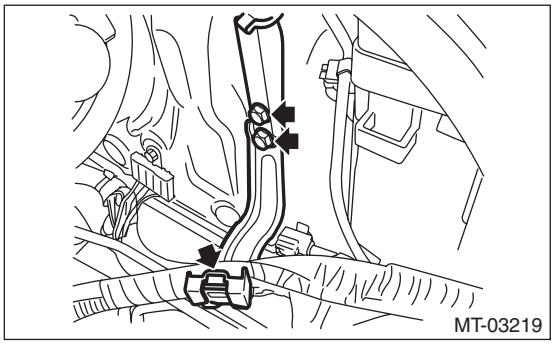
Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

10) Lower the vehicle.
11) Remove the ST (ENGINE HANGER).
12) Install the two mounting bolts on the upper side of the transmission.



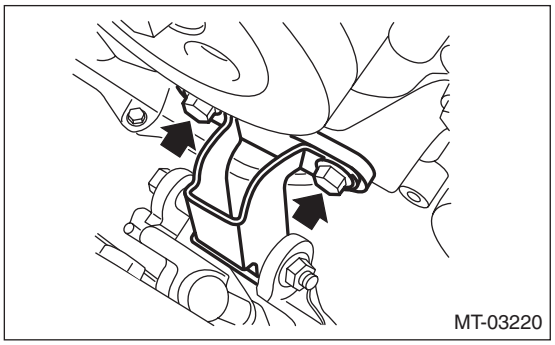
Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

13) Install the transmission main mounting bracket.

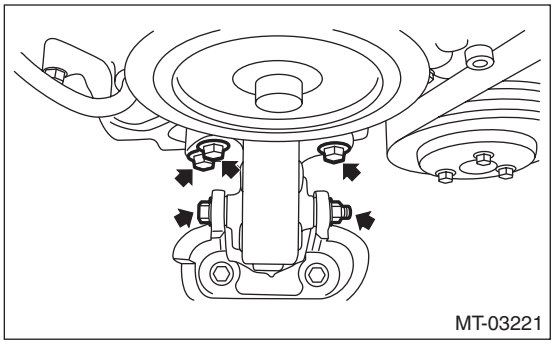


NOTE:
Incline the engine, and install the transmission main mounting bracket for the left side of the vehicle first.

Tightening torque:
75 N·m (7.6 kgf-m, 55.3 ft-lb)

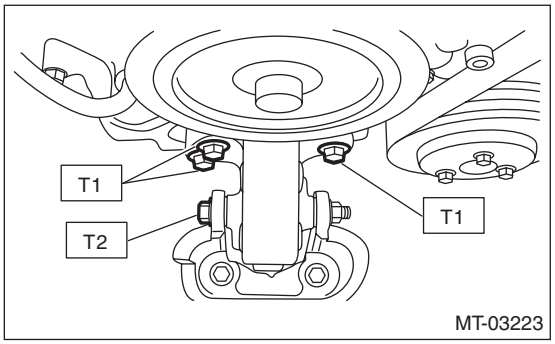


14) Install the battery cable bracket, and install the battery cable clip to the bracket.



Tightening torque:
7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

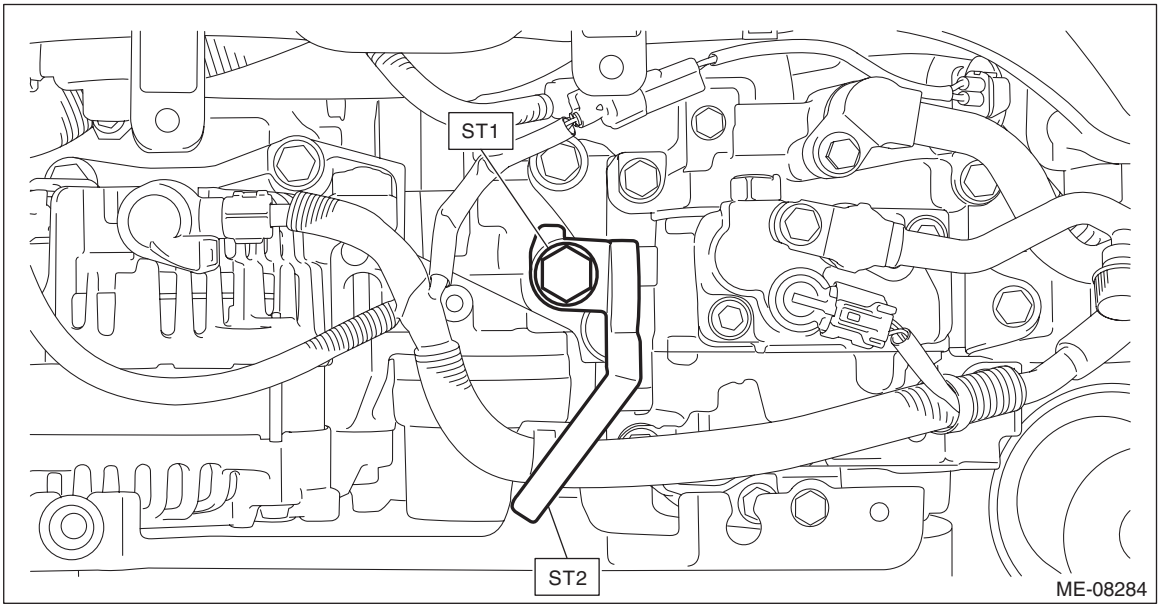
15) Attach the ST (ENGINE HANGER) again.
16) Remove the bolts from ST (SPECIAL TOOL FB).



17) Remove the bolt and nut to remove ST (SPECIAL TOOL FB).
18) Temporarily attach the front cushion rubber with bolts and nuts.

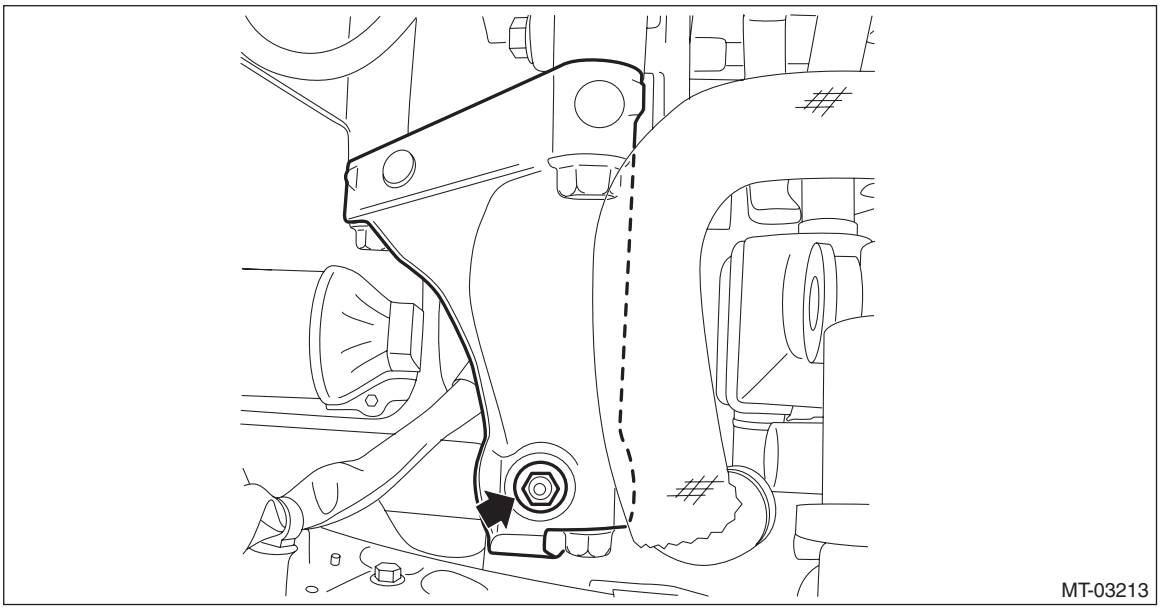
19) Tighten the bolts and nuts of front cushion rubber.

NOTE:
Always start tightening from the bolts on the engine side.

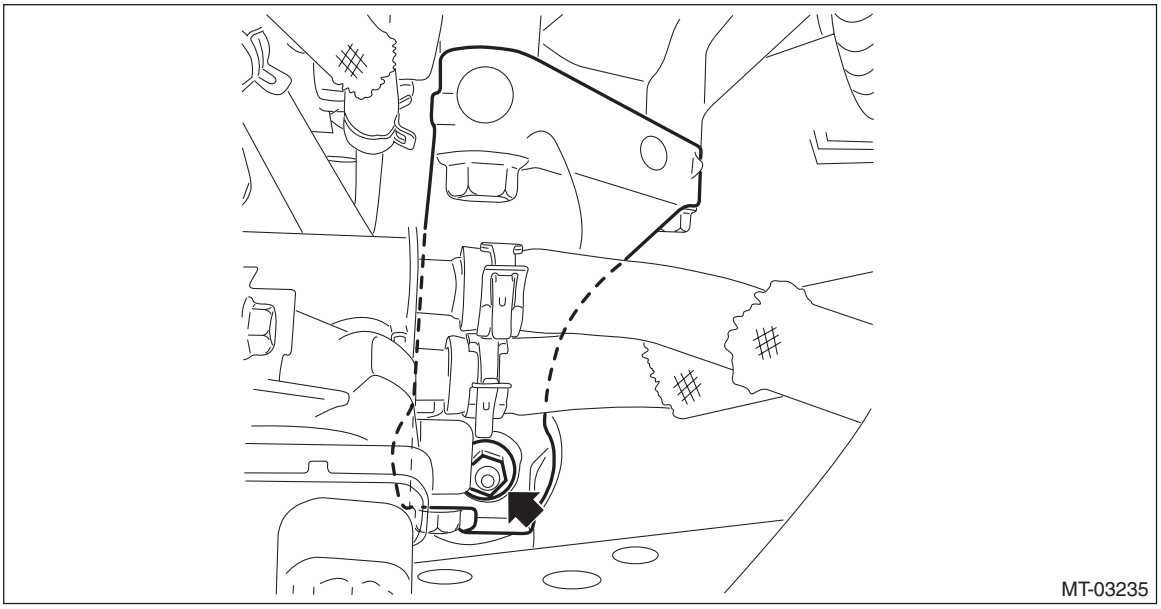


Tightening torque:
T1: 25 N·m (2.5 kgf-m, 18.4 ft-lb)
T2: 45 N·m (4.6 kgf-m, 33.2 ft-lb)

20) Remove the ST (ENGINE HANGER).

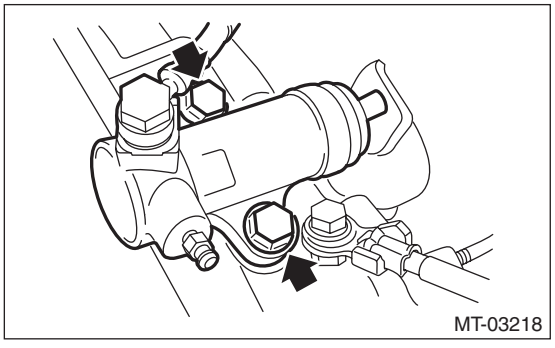


CAUTION:
Be sure to remove the M8 bolt.

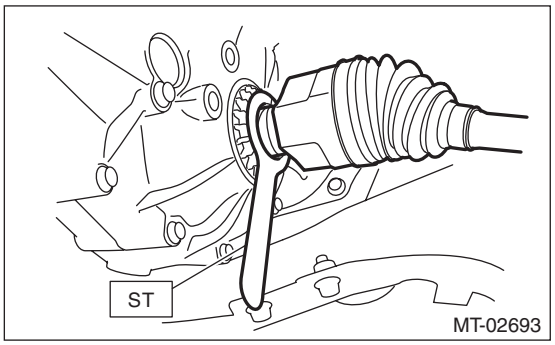


21) Remove the ST1 and ST2 from the engine unit.
ST1 18363AA050 BOLT
ST2 18360AA040 HANGER

22) Tighten the nuts connecting the engine mount and the transmission main mounting bracket.

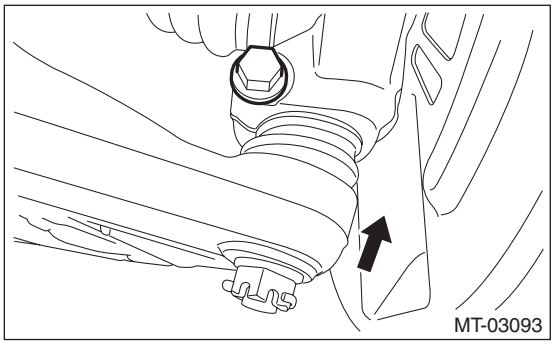


Tightening torque:
45 N·m (4.6 kgf-m, 33.2 ft-lb)

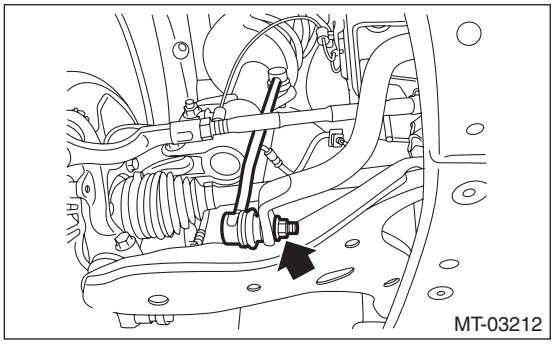


23) Install the starter. <Ref. to SC(H4DO)-9, INSTALLATION, Starter.>
24) Install the operating cylinder.

Tightening torque:
37 N·m (3.8 kgf-m, 27.3 ft-lb)



25) Lift up the vehicle.
26) Install the universal joint of the steering shaft. <Ref. to PS-15, INSTALLATION, Universal Joint.>
27) Install the ST to the transmission, and then install the front drive shaft.
ST 28399SA010 OIL SEAL PROTECTOR

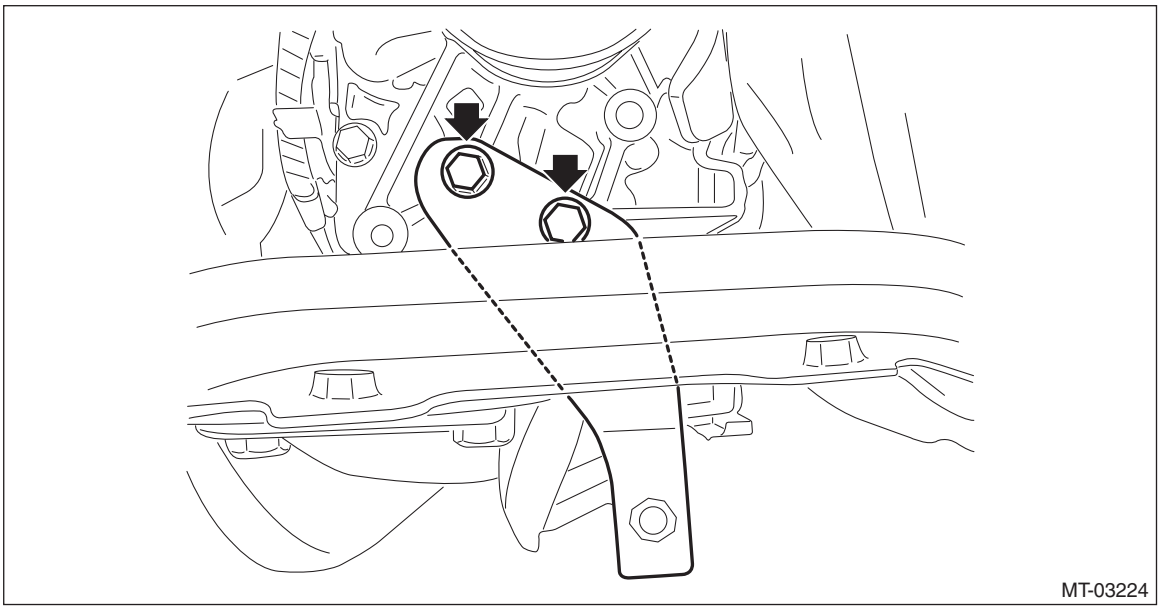


28) Insert the front arm ball joint and tighten the mounting bolt.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

29) Install the stabilizer link.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)

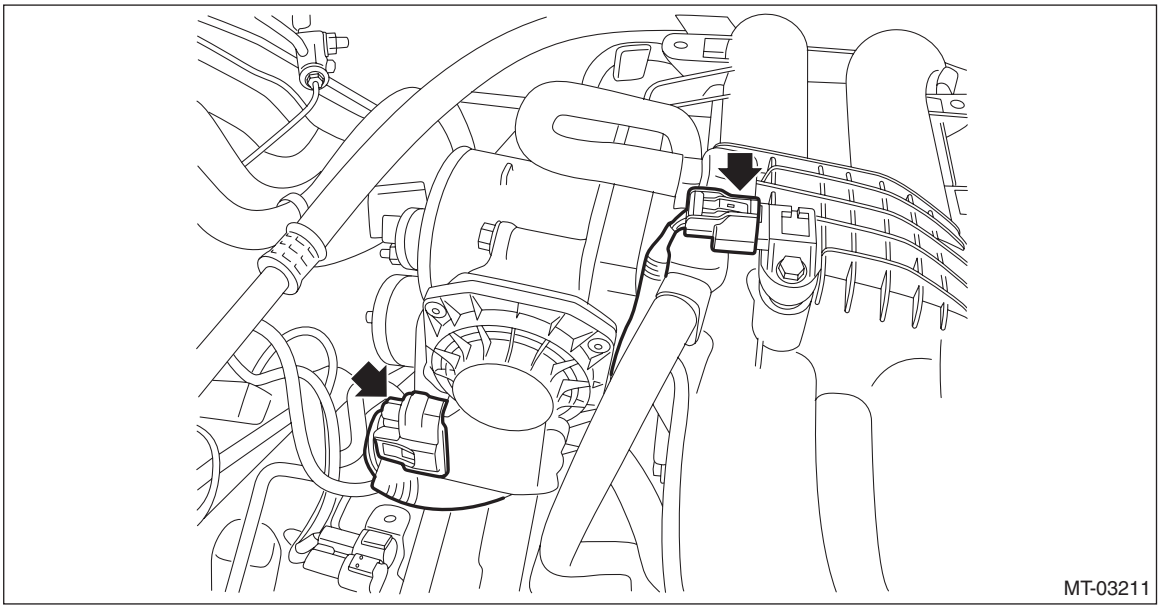


30) Install the MT gear shift cable and MT gear select cable to MT gear shift lever. <Ref. to CS-59, INSTALLATION, MT Gear Shift Lever.>

CAUTION:
- **Do not bend MT gear shift cable and MT gear select cable at a sharp angle.**
- **Always use new MT gear select cable if the cable is removed from selector lever COMPL of transmission side.**

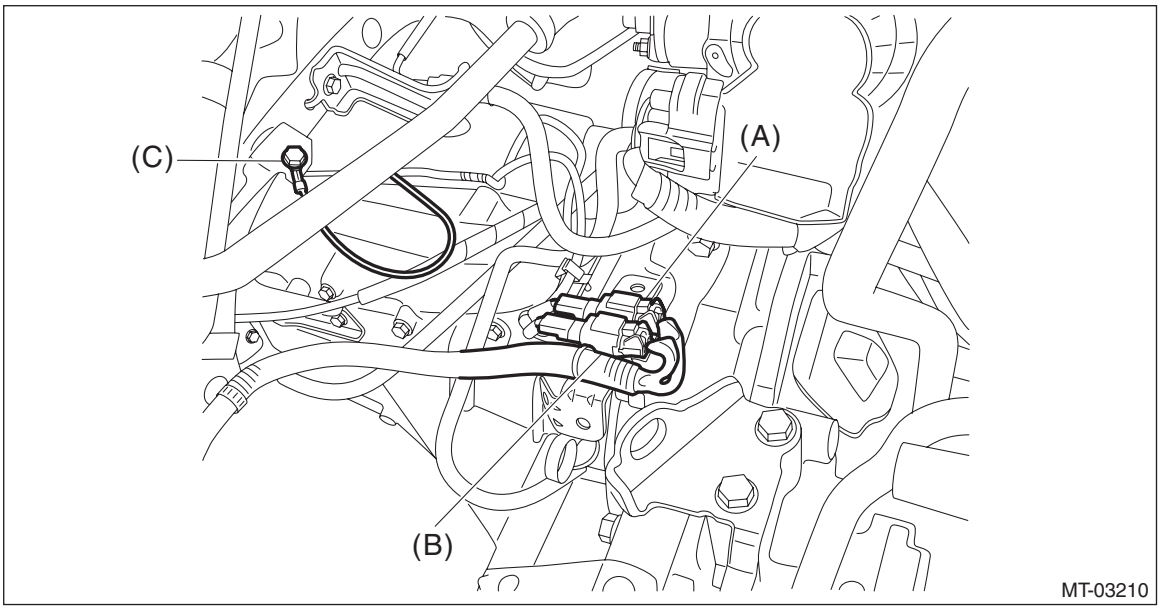
31) Install the propeller shaft. <Ref. to DS-12, INSTALLATION, Propeller Shaft.>

32) Install the hanger bracket.



Tightening torque:
23 N·m (2.3 kgf-m, 17.0 ft-lb)

33) Install the center exhaust cover.



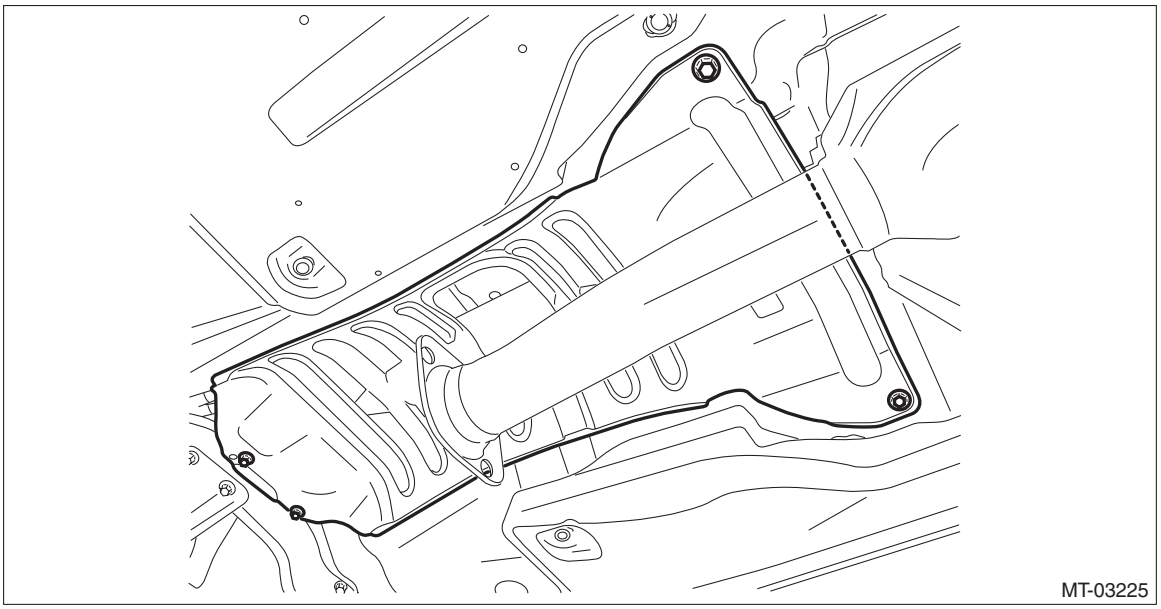
Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

34) Install the center exhaust pipe (rear). <Ref. to EX(H4DO)-13, INSTALLATION, Center Exhaust Pipe.>
35) Install the front under cover. <Ref. to EI-28, INSTALLATION, Front Under Cover.>
36) Lower the vehicle.
37) Connect the throttle position sensor harness connector and manifold pressure sensor harness connector.

38) Connect the back-up light switch and the neutral position switch connectors, then install the transmission radio ground cord terminal.

Tightening torque:
13 N·m (1.3 kgf-m, 9.6 ft-lb)

(A) Neutral position switch connector (brown)
(B) Back-up light switch connector (gray)
(C) Transmission radio ground cord terminal

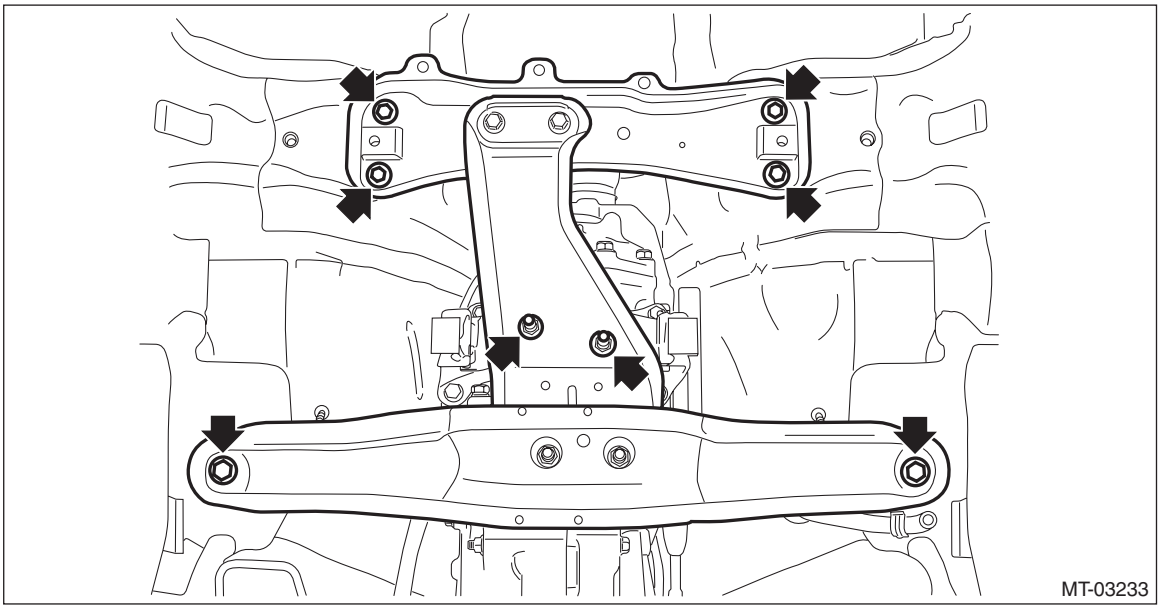


39) Pour in transmission gear oil and check the oil level. <Ref. to 6MT-26, Transmission Gear Oil.>
40) Install the air intake boot assembly. <Ref. to IN(H4DO)-10, INSTALLATION, Air Intake Boot.>
41) Install the air intake duct. <Ref. to IN(H4DO)-12, INSTALLATION, Air Intake Duct.>
42) Install the front tires.
43) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

4. Transmission Mounting System

A: REMOVAL

1. CROSSMEMBER AND CUSHION RUBBER



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle.
3) Remove the front under cover. <Ref. to EI-28, REMOVAL, Front Under Cover.>
4) Remove the center exhaust pipe (rear). <Ref. to EX(H4DO)-12, REMOVAL, Center Exhaust Pipe.>
5) Remove the center exhaust cover.

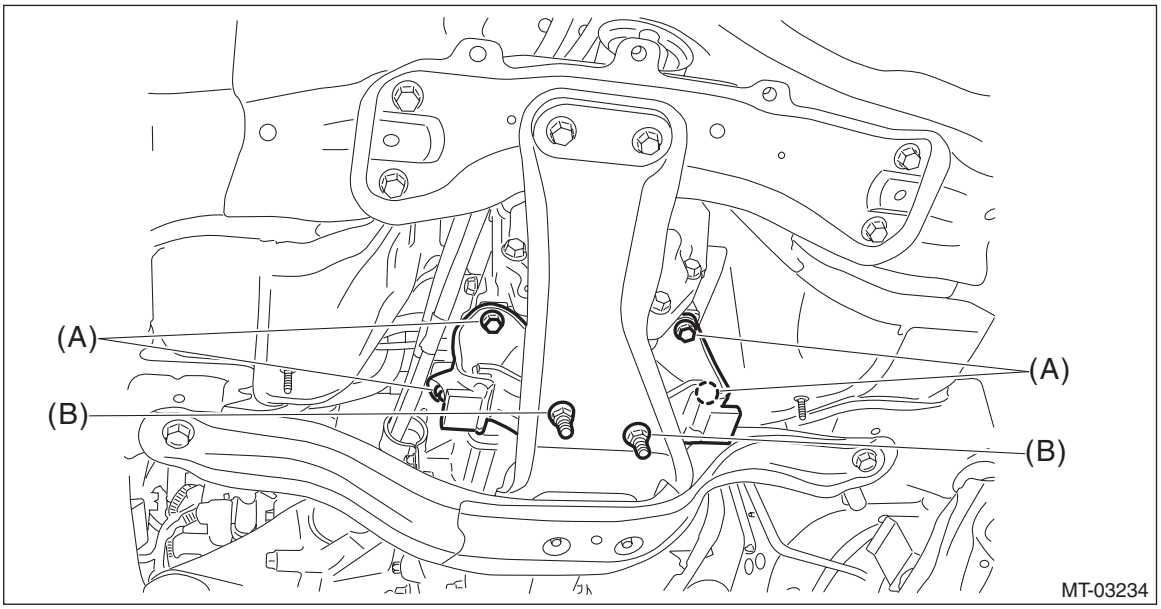
MT-03225

6) Set the transmission jack.

CAUTION:
Always support the transmission case with a transmission jack.

7) Remove the front crossmember and the rear crossmember.

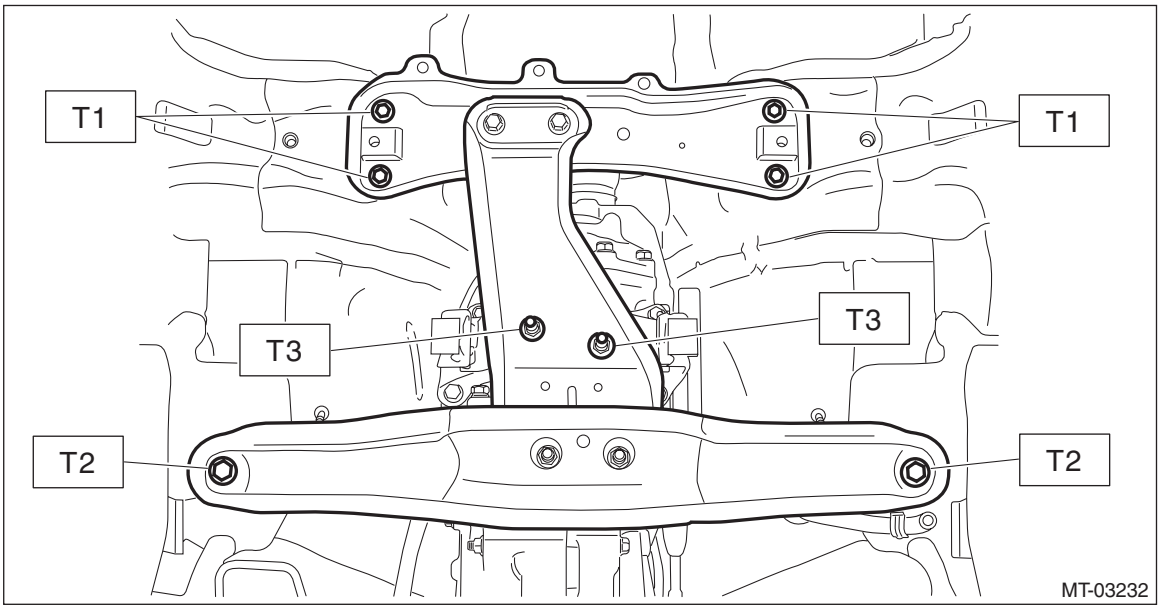
MT-03233



8) Remove the transmission cushion rubber.

B: INSTALLATION

1. CROSSMEMBER AND CUSHION RUBBER



1) Install the transmission cushion rubber to the transmission, and tighten the bolt (A).
2) Install the transmission cushion rubber to the center crossmember, and temporarily tighten the nut (B).

Tightening torque:
Bolt (A)
35 N·m (3.6 kgf-m, 25.8 ft-lb)

3) Install the front crossmember and rear crossmember.
4) Tighten the transmission cushion rubber mounting nut.

Tightening torque:
T1: 75 N·m (7.6 kgf-m, 55.3 ft-lb)
T2: 140 N·m (14.3 kgf-m, 103.3 ft-lb)
T3: 35 N·m (3.6 kgf-m, 25.8 ft-lb)

5) Remove the transmission jack.

6) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

7) Install the center exhaust pipe (rear). <Ref. to EX(H4DO)-13, INSTALLATION, Center Exhaust Pipe.>
8) Install the front under cover. <Ref. to EI-28, INSTALLATION, Front Under Cover.>
9) Lower the vehicle.
10) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

Check the following; repair or replace the faulty parts.

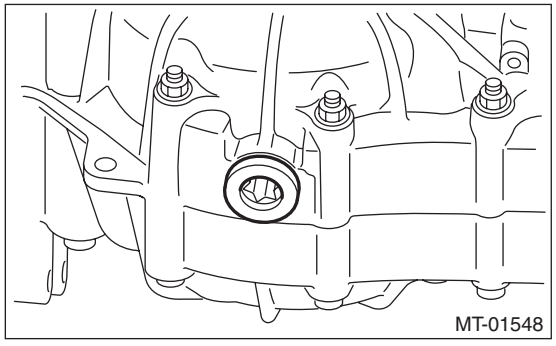
1. CROSSMEMBER AND CUSHION RUBBER

Check the crossmember for bending or damage. Check that the cushion rubber does not have hardening, cracks or other damages.

5. Oil Seal

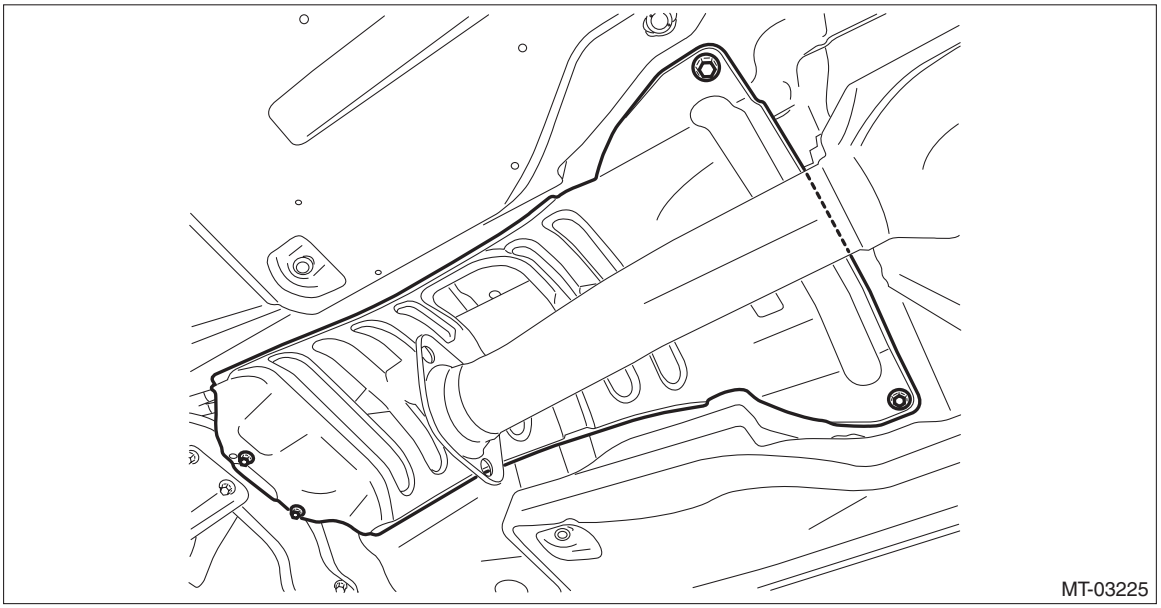
A: INSPECTION

Check for leakage of transmission gear oil from the oil seal. If there is oil leakage, replace the oil seal with the new part and check the propeller shaft.



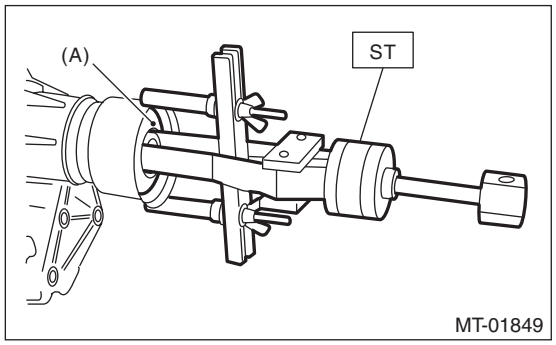
B: REPLACEMENT

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle.
3) Remove the front under cover. <Ref. to EI-28, REMOVAL, Front Under Cover.>
4) Clean the transmission exterior.
5) Using the TORX® bit T70, remove the drain plug, and drain the transmission gear oil completely.



CAUTION:
• Immediately after the vehicle has been running or after idling for a long time, the gear oil will be hot. Be careful not to receive burns.
• Be careful not to spill the gear oil on the exhaust pipe, to prevent emission of smoke or causing a fire. If gear oil is spilled, wipe it off completely.
6) Tighten the drain plug using TORX® bit T70.

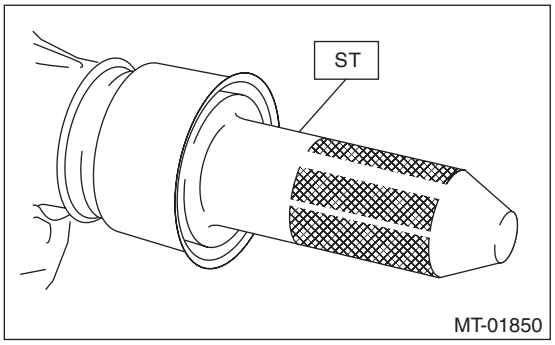
NOTE:
Use a new gasket.



Tightening torque:
44 N·m (4.5 kgf-m, 32.5 ft-lb) (aluminum gasket, silver)
70 N·m (7.1 kgf-m, 51.6 ft-lb) (copper gasket, brown)
70 N·m (7.1 kgf-m, 51.6 ft-lb) (metal gasket, black)

7) Remove the center exhaust pipe (rear). <Ref. to EX(H4DO)-12, REMOVAL, Center Exhaust Pipe.>
8) Remove the center exhaust cover.

9) Remove the propeller shaft. <Ref. to DS-10, REMOVAL, Propeller Shaft.>
10) Using the ST, remove the oil seal.
ST 398527700 PULLER ASSY



(A) Oil seal

11) Using the ST, install the oil seal.

NOTE:
- When grease is not applied to the oil seal lips, apply the transmission gear oil to the oil seal lips.
- Use a new oil seal.

ST 498057300 INSTALLER

12) Install the propeller shaft. <Ref. to DS-12, INSTALLATION, Propeller Shaft.>
13) Install the center exhaust cover.

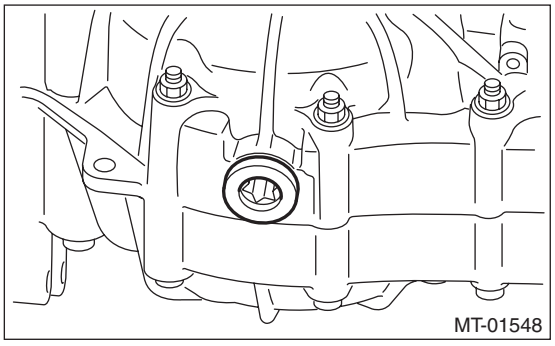
Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

14) Install the center exhaust pipe (rear). <Ref. to EX(H4DO)-13, INSTALLATION, Center Exhaust Pipe.>
15) Install the front under cover. <Ref. to EI-28, INSTALLATION, Front Under Cover.>
16) Lower the vehicle.
17) Pour in transmission gear oil and check the oil level. <Ref. to 6MT-26, Transmission Gear Oil.>
18) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

6. Differential Side Retainer Oil Seal

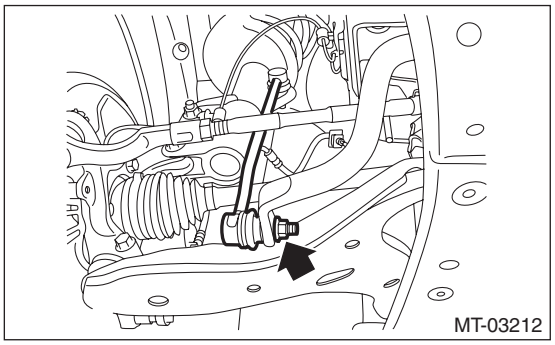
A: INSPECTION

Check the oil seal of the differential side retainer for transmission gear oil leakage. If there is oil leakage, replace the oil seal with the new part and check the drive shaft.



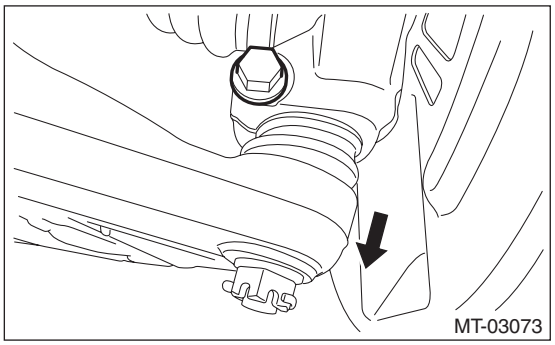
B: REPLACEMENT

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle.
3) Remove the front under cover. <Ref. to EI-28, REMOVAL, Front Under Cover.>
4) Using the TORX® bit T70, remove the drain plug, and drain the transmission gear oil completely.

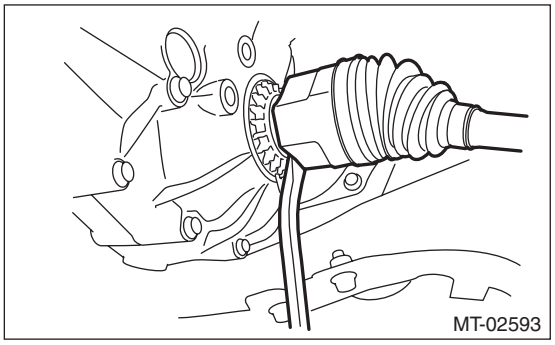


CAUTION:
• Immediately after the vehicle has been running or after idling for a long time, the gear oil will be hot. Be careful not to receive burns.
• Be careful not to spill the gear oil on the exhaust pipe, to prevent emission of smoke or causing a fire. If gear oil is spilled, wipe it off completely.
5) Tighten the drain plug using TORX® bit T70.

NOTE:
Use a new gasket.



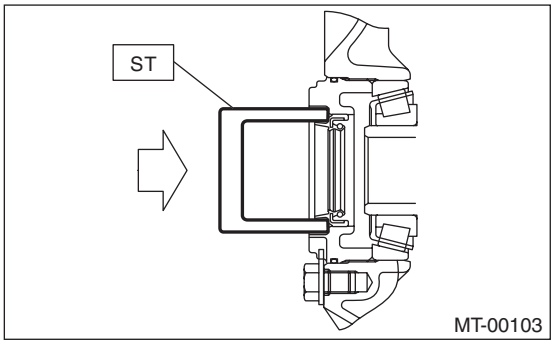
Tightening torque:
44 N·m (4.5 kgf-m, 32.5 ft-lb) (aluminum gasket, silver)
70 N·m (7.1 kgf-m, 51.6 ft-lb) (copper gasket, brown)
70 N·m (7.1 kgf-m, 51.6 ft-lb) (metal gasket, black)



6) Remove the center exhaust pipe (rear). <Ref. to EX(H4DO)-12, REMOVAL, Center Exhaust Pipe.>
7) Disconnect the stabilizer link.

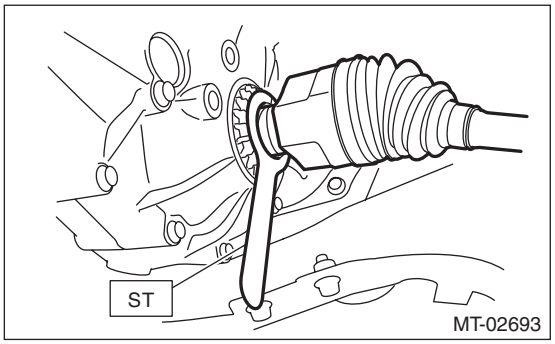
8) Remove the bolt securing the ball joint of the front arm to the housing, then separate the front arms and the housing.

9) Using a crowbar, separate the left and right front drive shafts.



10) Remove the oil seal of the differential side retainer.

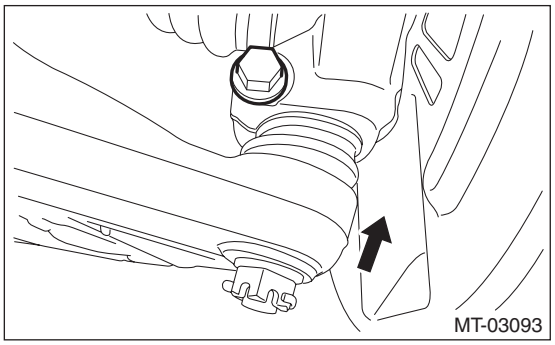
NOTE:
• Be sure to replace the oil seal of the differential side retainer after removing the front drive shaft from the transmission.
• Use the ST 398527700 PULLER ASSY to remove the oil seal. If removing the oil seal with a flat tip screwdriver, be careful not to scratch the differential side retainer.



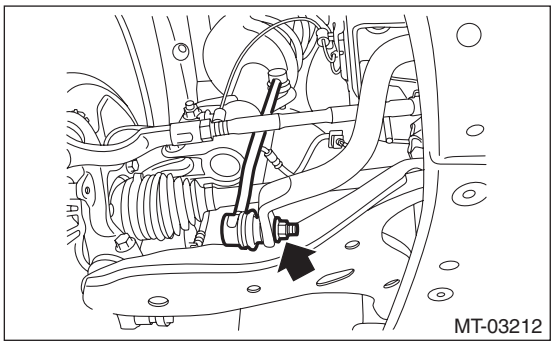
11) Using the ST, install the oil seal of the differential side retainer by lightly tapping with a plastic hammer.

NOTE:
• Apply transmission gear oil to the oil seal lips, and install the oil seal while being careful not to deform the lip.
• Check the identification marks (L, R) during installation not to mix up the oil seal RH and LH.
• Use a new oil seal.

ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER



12) Install the ST to the transmission, and then install the front drive shaft.
ST 28399SA010 OIL SEAL PROTECTOR

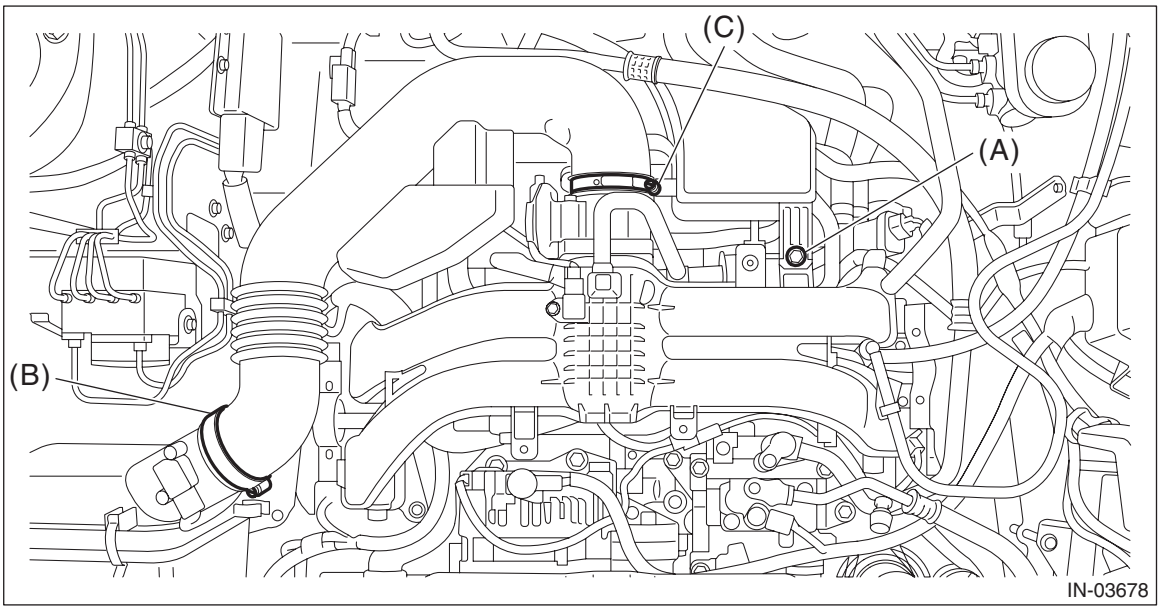


13) Insert the front arm ball joint and tighten the mounting bolt.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

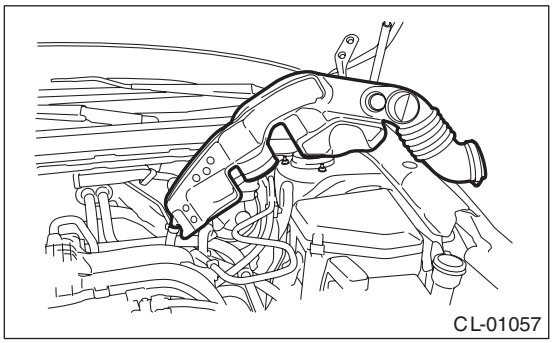
14) Install the stabilizer link.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)



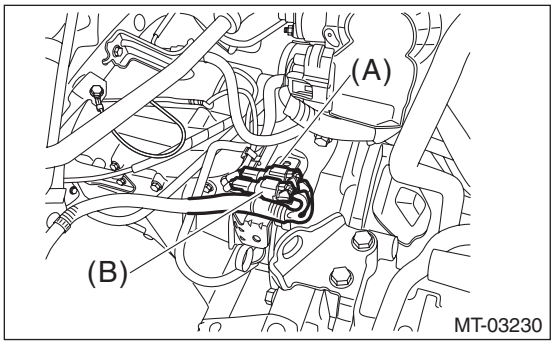
15) Install the center exhaust pipe (rear). <Ref. to EX(H4DO)-13, INSTALLATION, Center Exhaust Pipe.>
16) Install the front under cover. <Ref. to EI-28, INSTALLATION, Front Under Cover.>
17) Lower the vehicle.
18) Pour in transmission gear oil and check the oil level. <Ref. to 6MT-26, Transmission Gear Oil.>
19) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

7. Switches and Harness



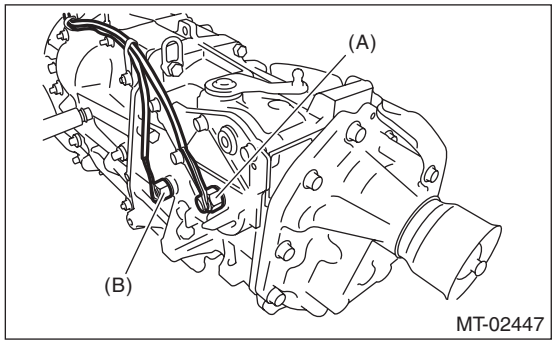
A: REMOVAL

1. BACK-UP LIGHT AND NEUTRAL POSITION SWITCH



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the clip (A) from the air intake boot.
3) Loosen the clamp (B) connecting the air intake boot and air cleaner case (rear).
4) Loosen the clamp (C) which connects the air intake boot and throttle body.

5) Remove the air intake boot from the throttle body, and move it to the left side wheel apron.



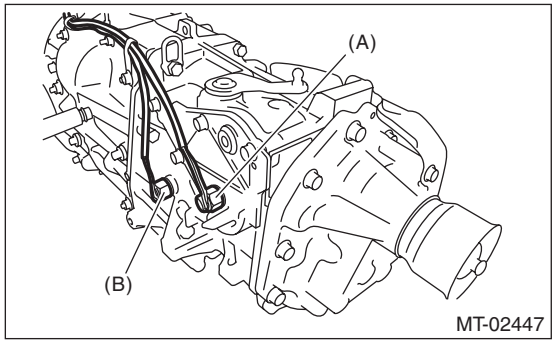
6) Disconnect the connector back-up light switch & neutral position switch.

(A) Neutral position switch connector (brown)
(B) Back-up light switch connector (gray)

7) Lift up the vehicle.

8) Remove the back-up light switch & neutral position switch with the harness.

(A) Neutral position switch
(B) Back-up light switch



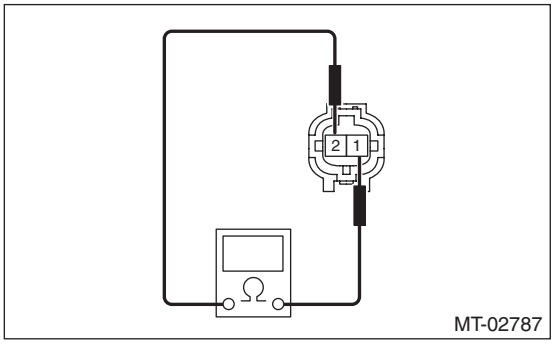
B: INSTALLATION

1. BACK-UP LIGHT AND NEUTRAL POSITION SWITCH

1) Install the back-up light switch & neutral position switch with the harness.

NOTE:
Use a new gasket.

Tightening torque:
32.3 N·m (3.3 kgf-m, 23.8 ft-lb)



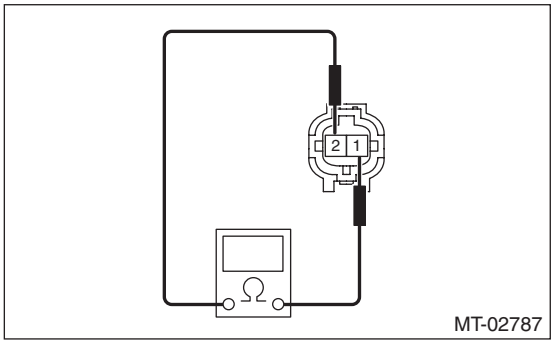
(A) Neutral position switch
(B) Back-up light switch

2) Lower the vehicle.
3) Connect the connectors of back-up light switch & neutral position switch.
4) Install the air intake boot assembly. <Ref. to IN(H4DO)-10, INSTALLATION, Air Intake Boot.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1. BACK-UP LIGHT SWITCH

1) Turn the ignition switch to OFF.
2) Disconnect the back light switch connector.
3) Measure the resistance between the back-up light switch terminals.

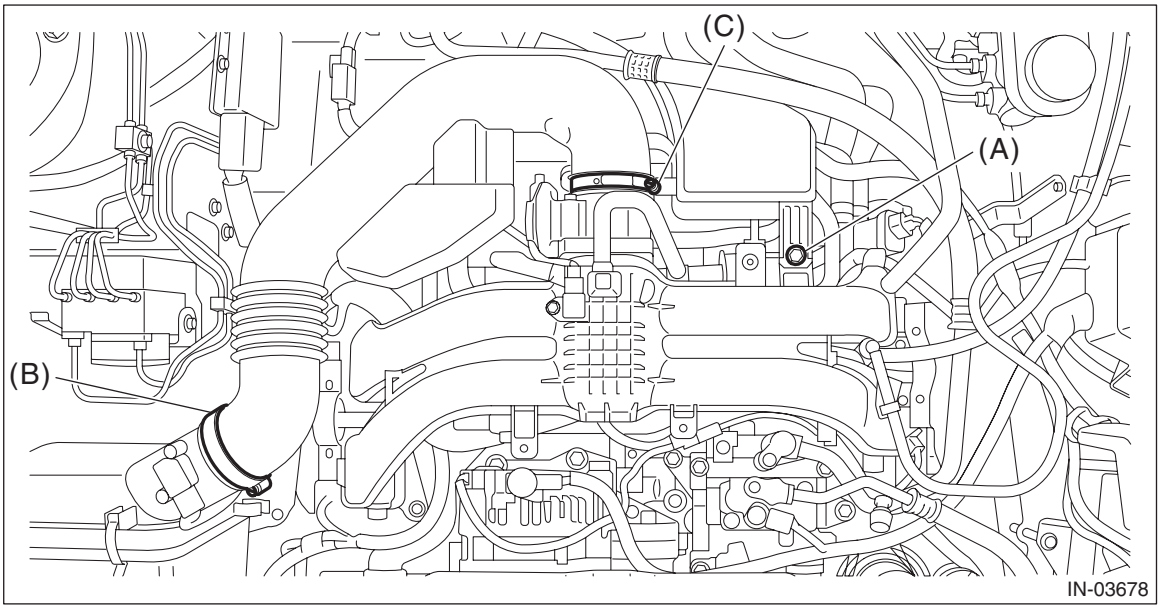


Gear shift position	Terminal No.	Specified resistance
Reverse position	1 and 2	Less than 1 Ω
Other positions		1 MΩ or more

4) Replace faulty parts.

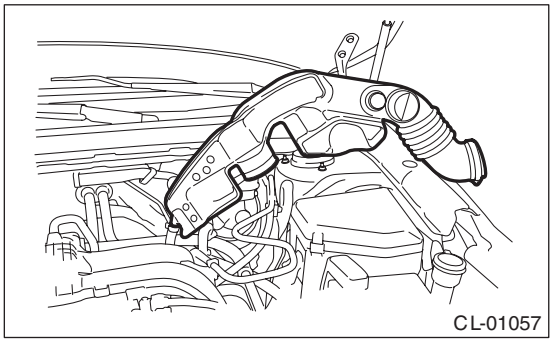
2. NEUTRAL POSITION SWITCH

1) Turn the ignition switch to OFF.
2) Disconnect the connector of neutral position switch.
3) Measure the resistance between neutral position switch terminals.



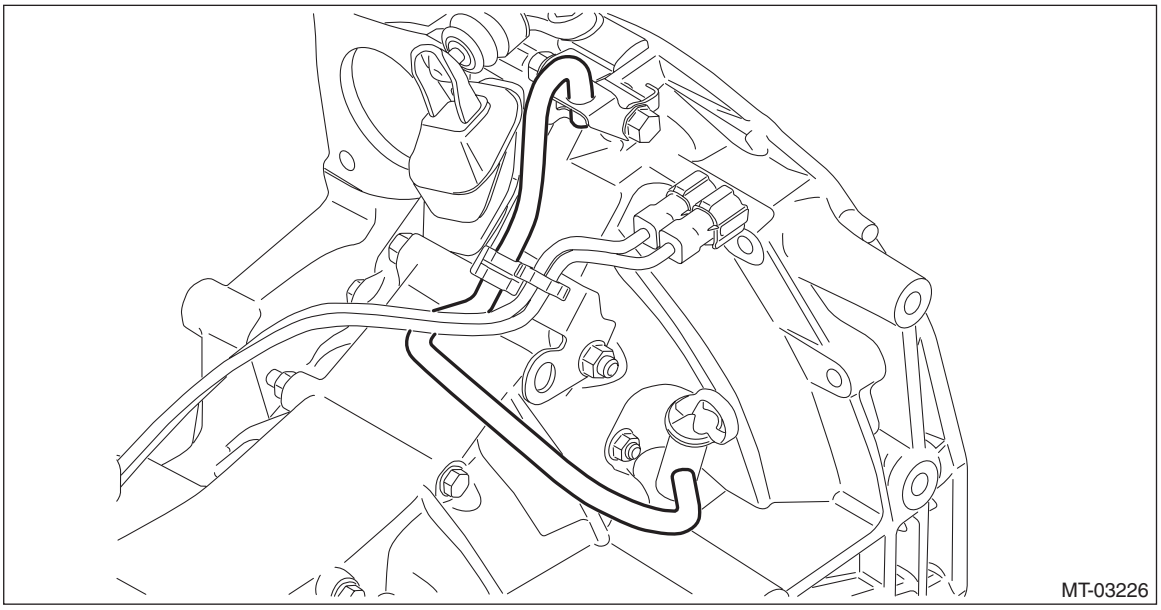
Gear shift position	Terminal No.	Specified resistance
Neutral position	1 and 2	Less than 1 Ω
Other positions		1 MΩ or more

4) Replace faulty parts.



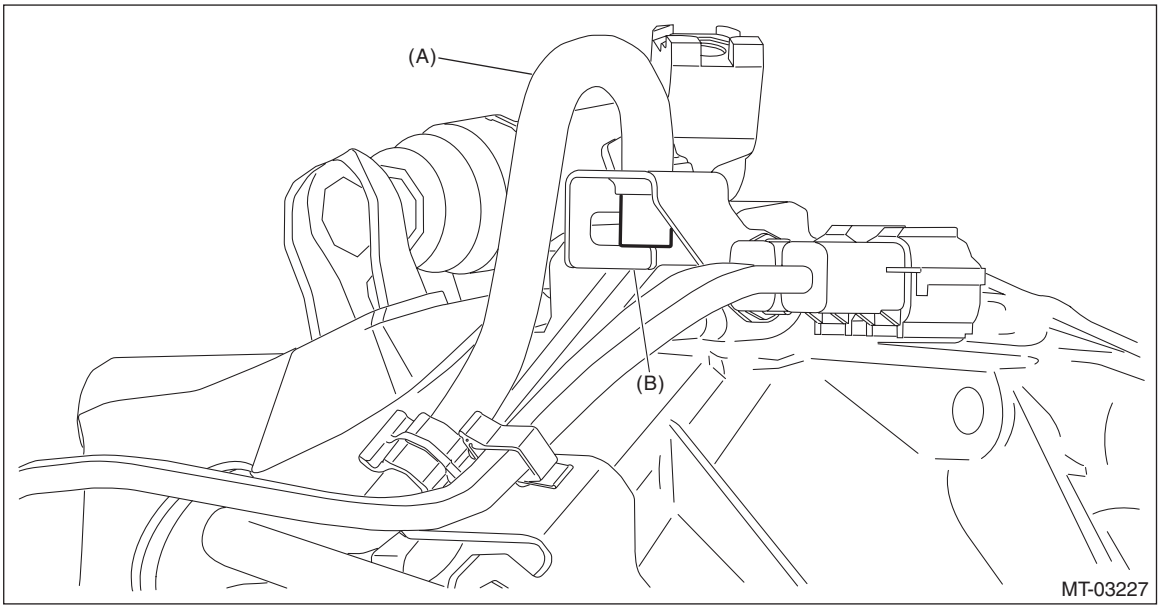
8. Air Breather Hose

A: REMOVAL



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the clip (A) from the air intake boot.
3) Loosen the clamp (B) connecting the air intake boot and air cleaner case (rear).
4) Loosen the clamp (C) which connects the air intake boot and throttle body.

5) Remove the air intake boot from the throttle body, and move it to the left side wheel apron.



6) Remove the air breather hose.

B: INSTALLATION

1) Install the air breather hose.

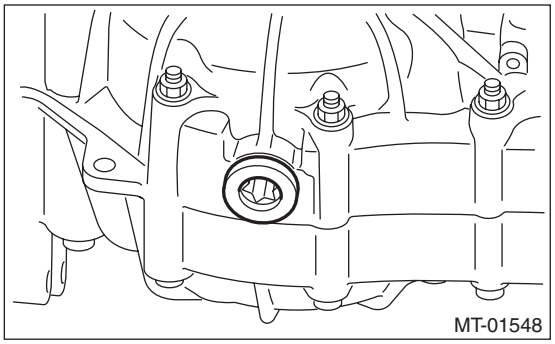
NOTE:
- When installing the air breather hose, pay attention to the positions of the two markings on the hose and make sure the markings come to the same position as when removed.
- Securely insert the air breather hose until the hose end contacts the catch of the pitching stopper bracket.

(A) Air breather hose (B) Catch

2) Install the air intake boot assembly. <Ref. to IN(H4DO)-10, INSTALLATION, Air Intake Boot.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

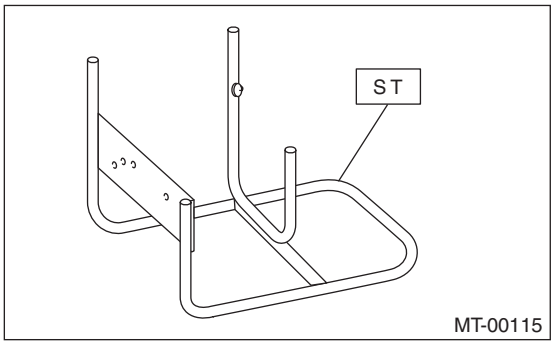
C: INSPECTION

Check the hose for peeling, crack or clogging.



9. Preparation for Overhaul

A: PROCEDURE

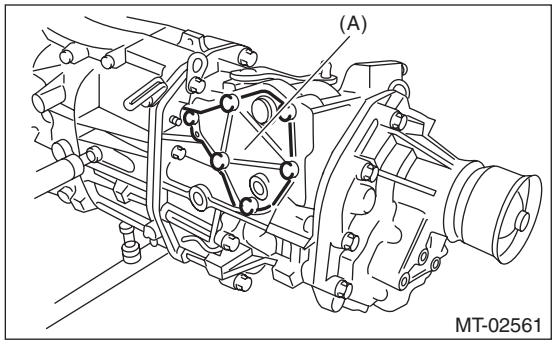


1) Clean oil, grease, dirt and dust from the transmission.
2) When transmission gear oil remains in the transmission, using the TORX® bit T70, remove the transmission gear oil drain plug, and drain the transmission gear oil completely.
3) Tighten the drain plug using TORX® bit T70.

NOTE:
Use a new gasket.

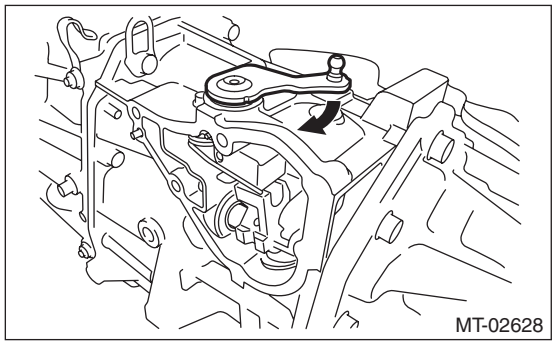
Tightening torque:
44 N·m (4.5 kgf-m, 32.5 ft-lb) (aluminum gasket, silver)
70 N·m (7.1 kgf-m, 51.6 ft-lb) (copper gasket, brown)
70 N·m (7.1 kgf-m, 51.6 ft-lb) (metal gasket, black)

4) Attach the transmission to the ST.
ST 499937100 TRANSMISSION STAND



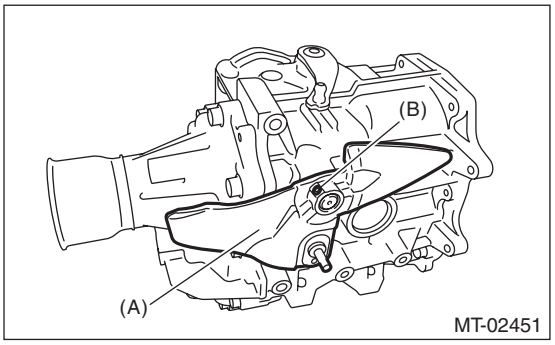
5) Apply transmission gear oil to rotating parts before assembly.
6) All disassembled parts, if to be reused, should be reinstalled in the original positions and directions.
7) Gaskets, lock washers and lock nuts must be replaced with new ones.
8) Apply liquid gasket to the specified areas to prevent leakage.

10. Transfer Case and Extension Case Assembly



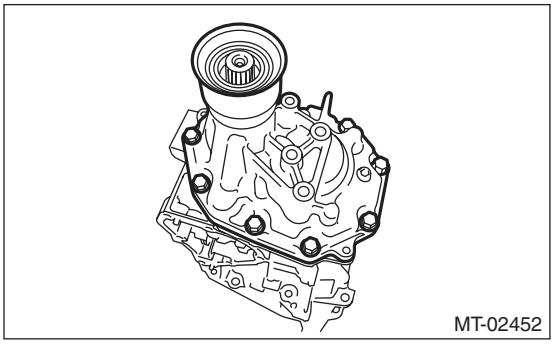
A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT-28, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and the neutral position switch. <Ref. to 6MT-56, REMOVAL, Switches and Harness.>
3) Remove the transfer case together with the extension case assembly.
(1) Remove the transmission cover.

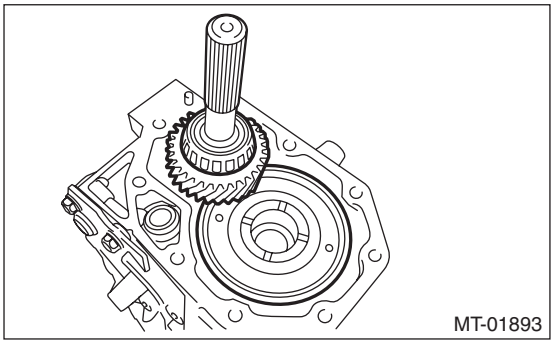


(A) Transmission cover

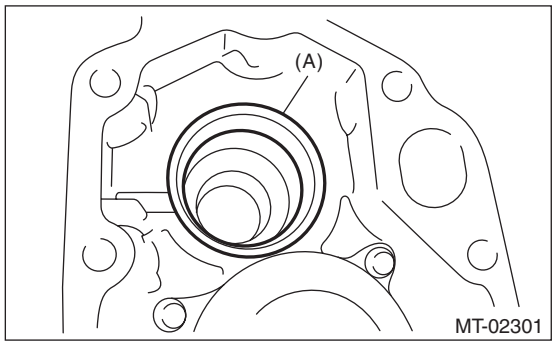
(2) Set and hold the selector lever COMPL to the 1st-2nd side, and remove the transfer case and extension case assembly as a unit.



4) Use the ST to push out the spring pin, and remove the shift lever COMPL.
ST 398791700 SPRING PIN REMOVER 2



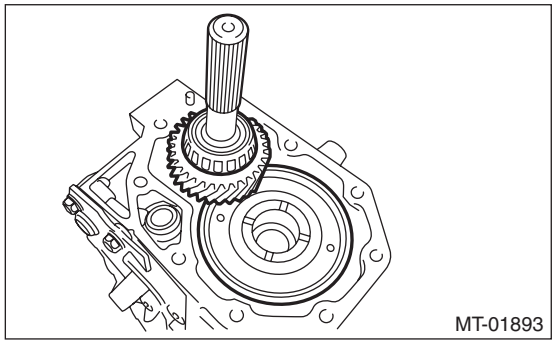
(A) Shift lever COMPL
(B) Straight pin



5) Remove the extension case assembly.

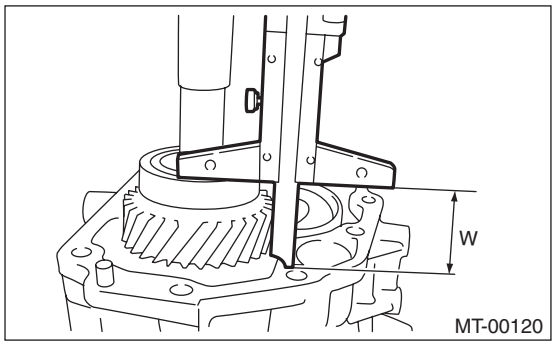
6) Remove the transfer driven gear and center differential as a unit.

7) Remove the taper roller bearing (extension case side) outer race and the adjusting washer.



(A) Taper roller bearing (extension case side) outer race

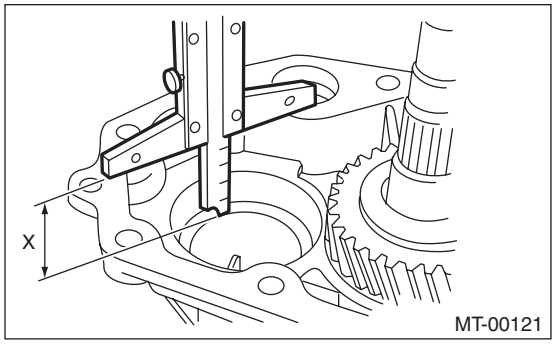
B: INSTALLATION



1) Clean the mating surfaces of the transmission case, transfer case and extension case.
2) Apply a coat of grease to the taper roller bearing (transfer case side) of transfer driven gear and the roller rolling surface of the taper roller bearing (extension case side).

Grease:
NICHIMOLY N-130 or equivalent

3) Install the center differential and the transfer driven gear.

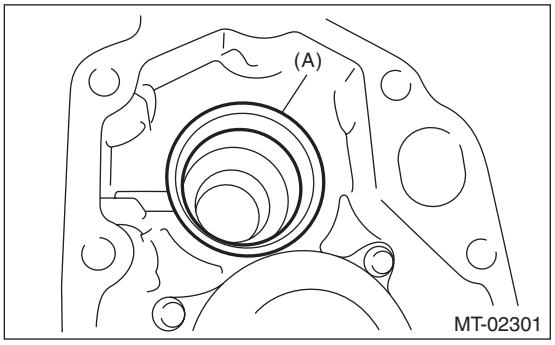


4) Install the taper roller bearing (extension case side) outer race to the transfer driven gear.
5) While pressing the taper roller bearing (extension case side) outer race horizontally, rotate the transfer driven gear for ten turns.
6) Measure the height "W" between transfer case and taper roller bearing (transfer case side) on the transfer driven gear.

7) Measure the depth "X" of taper roller bearing insertion part of the extension case.

NOTE:
Measure while the taper roller bearing (extension case side) outer race and the adjusting washer are removed.

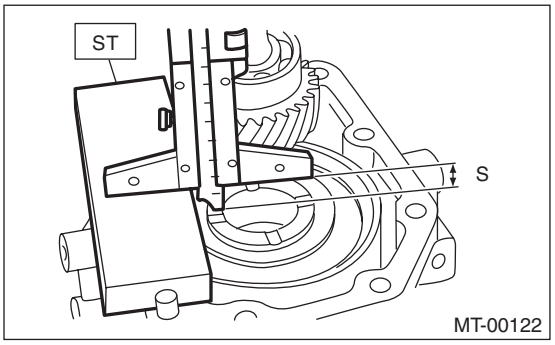
8) Calculate the adjusting washer thickness "t" using the following calculation.
t = X – W + (0.15 — 0.2 mm (0.006 — 0.008 in))
X: Depth of taper roller bearing insertion part of extension case
W: Height between transfer case and taper roller bearing (transfer case side) on transfer driven gear
0.15 — 0.20 mm (0.006 — 0.008 in): Amount of standard protrusion



9) Select the adjusting washer with the nearest value in the following table.

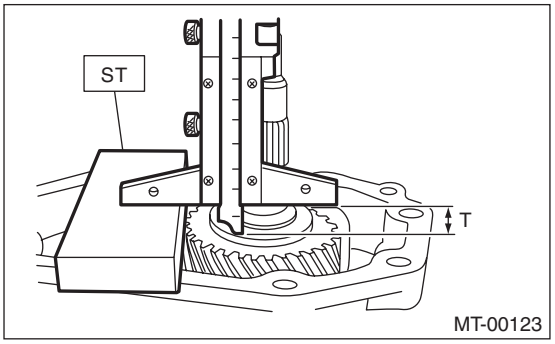
NOTE:
Be sure that it is always within the preload.

Preload of taper roller bearing (extension case side) (amount of standard protrusion):
0.15 — 0.20 mm (0.006 — 0.008 in)



Adjusting washer (50 × 61 × t)	
Part No.	Thickness mm (in)
803050060	0.50 (0.0197)
803050061	0.55 (0.0217)
803050062	0.60 (0.0236)
803050063	0.65 (0.0256)
803050064	0.70 (0.0276)
803050065	0.75 (0.0295)
803050066	0.80 (0.0315)
803050067	0.85 (0.0335)
803050068	0.90 (0.0354)
803050069	0.95 (0.0374)
803050070	1.00 (0.0394)
803050071	1.05 (0.0413)
803050072	1.10 (0.0433)
803050073	1.15 (0.0453)
803050074	1.20 (0.0472)
803050075	1.25 (0.0492)
803050076	1.30 (0.0512)
803050077	1.35 (0.0531)
803050078	1.40 (0.0551)
803050079	1.45 (0.0571)

10) Install the selected adjusting washer and taper roller bearing (extension case side) outer race.

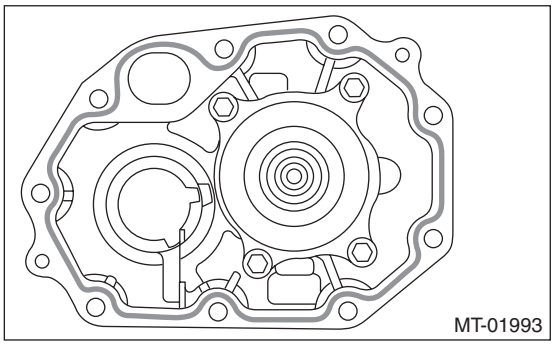


(A) Taper roller bearing (extension case side) outer race

11) Measure the depth “S” between the transfer case + ST and the center differential.
ST 398643600 GAUGE

12) Measure the height “T” between the extension case + ST and the transfer drive gear.
ST 398643600 GAUGE

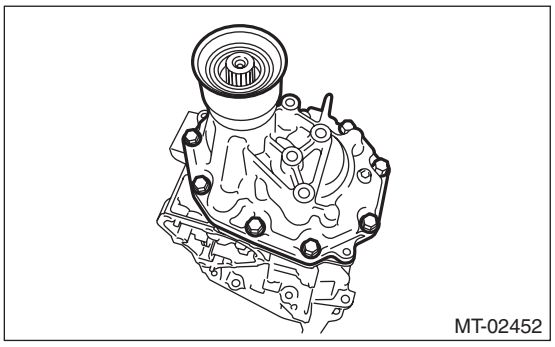
13) Calculate the adjusting washer thickness “U” using the following calculation.
U = S + T – 30 mm (1.18 in) – (0.15 — 0.35 mm (0.0059 — 0.0138 in))
S: Depth between the transfer case + ST and the center differential
T: Depth between the extension case + ST and the transfer drive gear
30 mm (1.18 in): Thickness of ST (× 2 pieces)
0.15 — 0.35 mm (0.0059 — 0.0138 in): Clearance



14) Select a suitable adjusting washer in the following table.

Clearance:
0.15 — 0.35 mm (0.0059 — 0.0138 in)

Adjusting washer	
Part No.	Thickness mm (in)
803036050	0.9 (0.035)
803036054	1.0 (0.039)
803036051	1.1 (0.043)
803036055	1.2 (0.047)
803036052	1.3 (0.051)
803036056	1.4 (0.055)
803036053	1.5 (0.059)
803036057	1.6 (0.063)
803036058	1.7 (0.067)
803036080	1.8 (0.071)
803036081	1.9 (0.075)

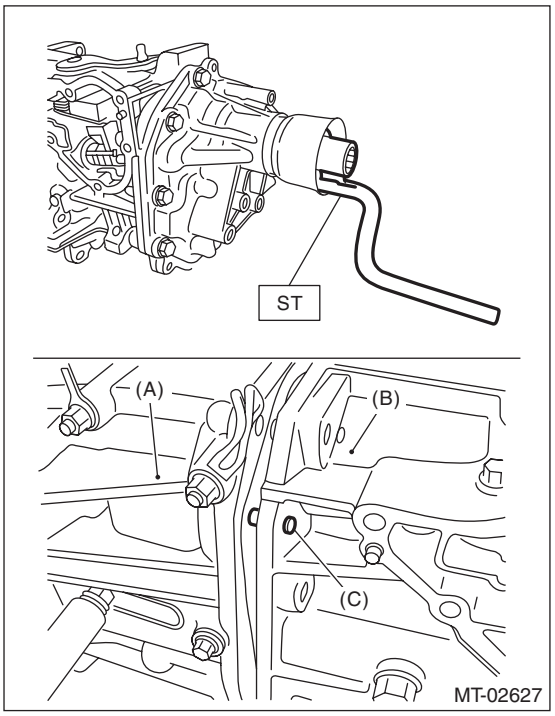


15) Install the adjusting washer to center differential.
16) Apply liquid gasket seamlessly.

Liquid gasket:
THREE BOND 1215B or equivalent

MT-01993

17) Install the extension case assembly.

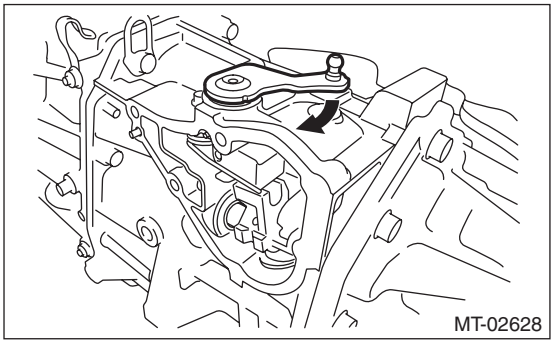


Tightening torque:
40 N·m (4.1 kgf-m, 29.5 ft-lb)

MT-02452

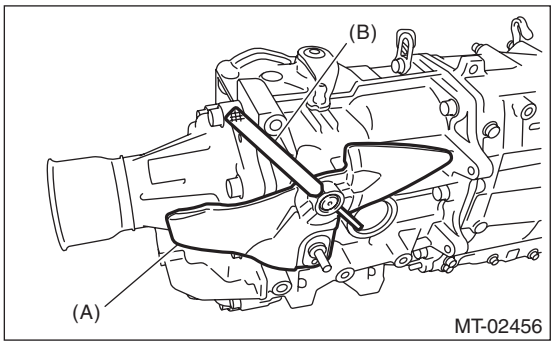
18) Temporarily install the gasket to the transmission case side.

NOTE:
Use a new gasket.



19) Install the transfer case together with the extension case assembly.
(1) While moving the HANDLE to align the spline position, press in the transfer case assembly until the knock pin comes slightly out of transfer case.
ST 18631AA000 HANDLE

MT-02627

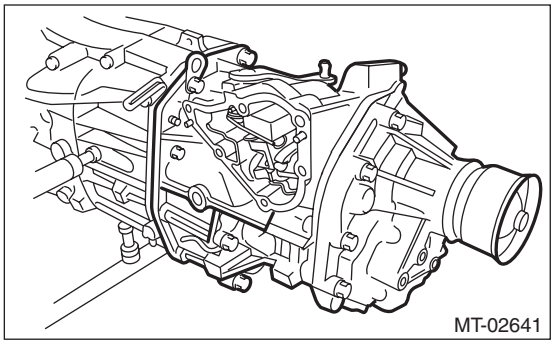


(A) Transmission case
(B) Transfer case
(C) Knock pin

(2) Set and hold the selector lever COMPL to the 1st-2nd side, and install the transfer case assembly so that the shifter arm edge and fork rod does not contact.

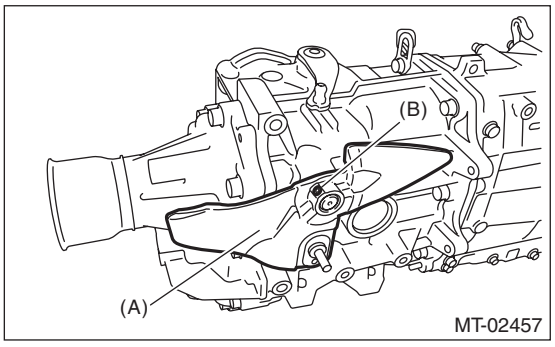
MT-02628

20) Temporarily install the transfer case assembly.



21) Install the shift lever COMPL, then insert the remover or similar tool instead of straight pin.

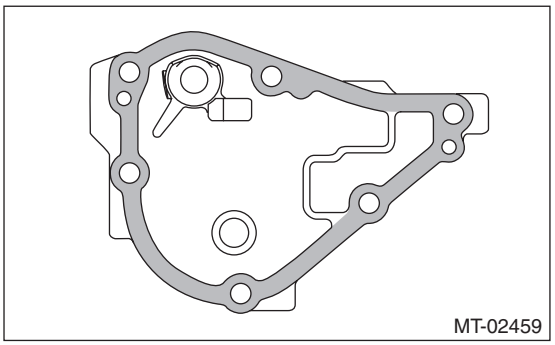
(A) Shift lever COMPL
(B) Remover



22) Operate the selector arm and remover to confirm the correct shifting into each gear is possible.
23) Install the transfer case assembly.

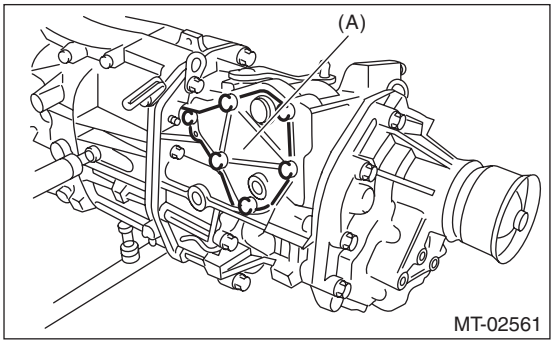
Tightening torque:
24.5 N·m (2.5 kgf-m, 18.1 ft-lb)

24) Install the shift lever COMPL and secure it with the straight pin.



NOTE:
Use a new straight pin.

(A) Shift lever COMPL
(B) Straight pin



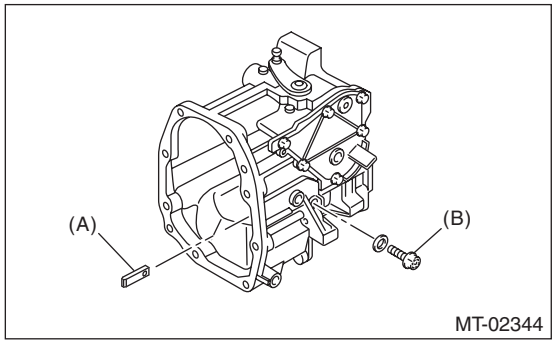
25) Apply liquid gasket seamlessly.

Liquid gasket:
THREE BOND 1215B or equivalent

26) Install the transmission cover.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

(A) Transmission cover



27) Install the back-up light switch and the neutral switch. <Ref. to 6MT-57, BACK-UP LIGHT AND NEUTRAL POSITION SWITCH, INSTALLATION, Switches and Harness.>
28) Install the manual transmission assembly to the vehicle. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

1. TRANSFER CASE

1) Remove the interlock plate.

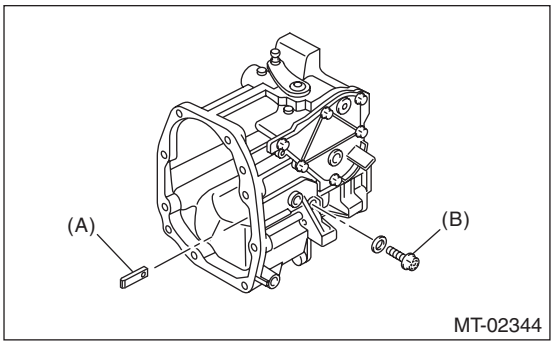
NOTE:
Do not remove the precoat bolt (B) if the parts are assembled as a transmission assembly.

(A) Interlock plate
(B) Precoat bolt

2) Remove the shift link assembly. <Ref. to 6MT-74, REMOVAL, Shift Link Assembly.>

2. EXTENSION CASE

1) Remove the transfer drive gear assembly. <Ref. to 6MT-68, REMOVAL, Transfer Drive Gear.>
2) Remove the oil seal from the extension case. <Ref. to 6MT-50, REPLACEMENT, Oil Seal.>
3) Remove the dust cover.



D: ASSEMBLY

1. TRANSFER CASE

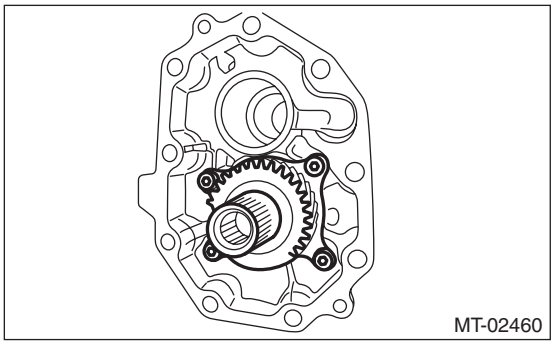
1) Install the shift link assembly to the transfer case. <Ref. to 6MT-77, INSTALLATION, Shift Link Assembly.>
2) Install the interlock plate.

NOTE:
- Use a new bolt and gasket.
- Clean the bolt threads before installing the interlock plate.

Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)

(A) Interlock plate
(B) Precoat bolt

2. EXTENSION CASE

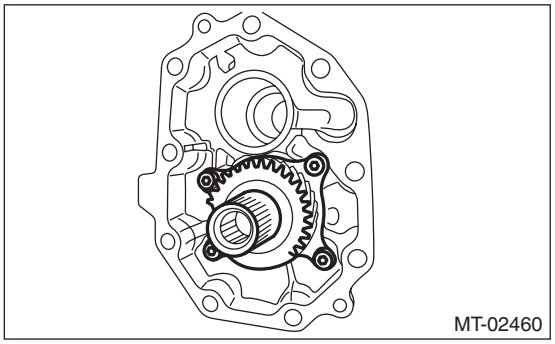


1) Using the ST, install the oil seal to the extension case. <Ref. to 6MT-50, REPLACEMENT, Oil Seal.>

NOTE:
Use a new oil seal.
2) Install the dust cover.
3) Install the transfer drive gear to the extension case. <Ref. to 6MT-68, INSTALLATION, Transfer Drive Gear.>

11.Transfer Drive Gear

A: REMOVAL

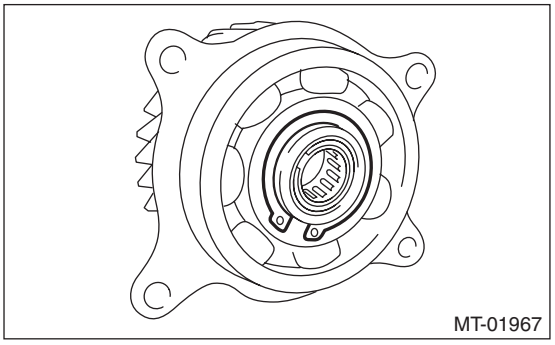


1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT-28, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and the neutral position switch. <Ref. to 6MT-56, REMOVAL, Switches and Harness.>
3) Remove the transfer case together with the extension case assembly. <Ref. to 6MT-62, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the extension case assembly.
5) Remove the transfer driven gear. <Ref. to 6MT-70, REMOVAL, Transfer Driven Gear.>
6) Remove the transfer drive gear.

MT-02460

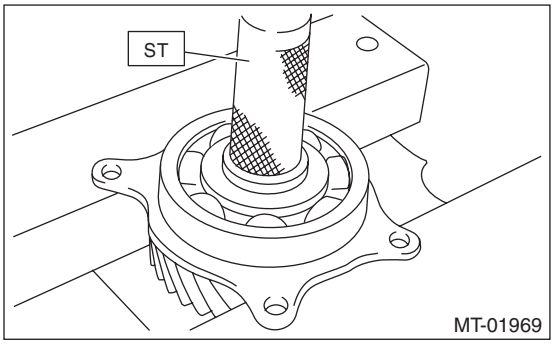
B: INSTALLATION

1) Install the transfer drive gear.



Tightening torque:
26 N·m (2.7 kgf-m, 19.2 ft-lb)

MT-02460



2) Install the transfer driven gear. <Ref. to 6MT-70, INSTALLATION, Transfer Driven Gear.>
3) Select the adjusting washer. <Ref. to 6MT-63, INSTALLATION, Transfer Case and Extension Case Assembly.>
4) Install the extension case assembly. <Ref. to 6MT-63, INSTALLATION, Transfer Case and Extension Case Assembly.>
5) Install the transfer case and the extension case assembly. <Ref. to 6MT-63, INSTALLATION, Transfer Case and Extension Case Assembly.>
6) Install the back-up light switch and the neutral position switch. <Ref. to 6MT-57, INSTALLATION, Switches and Harness.>
7) Install the manual transmission assembly to the vehicle. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>

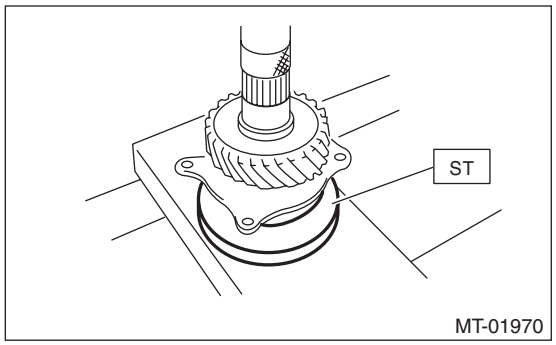
C: DISASSEMBLY

1) Remove the snap ring.

MT-01967

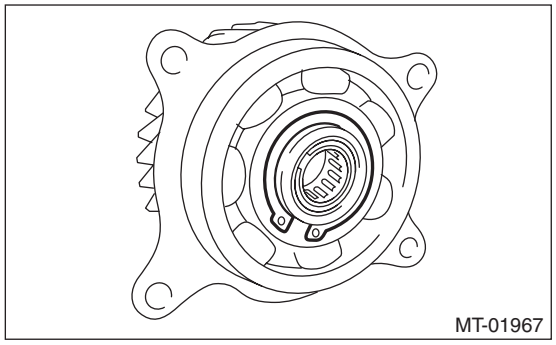
2) Remove the ball bearing.
ST 899864110 REMOVER

MT-01969



3) Remove the snap ring from transfer drive gear, and remove the needle bearing.

D: ASSEMBLY

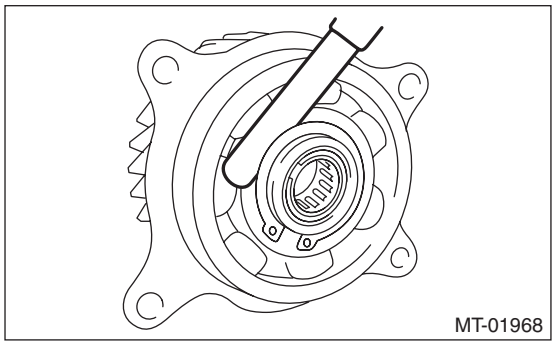


1) Install the needle bearing and snap ring to the transfer drive gear.
2) Set the ST to the ball bearing inner race, then install the transfer drive gear.

CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

NOTE:
Use a new ball bearing.
ST 398177700 INSTALLER

3) Install the snap ring.



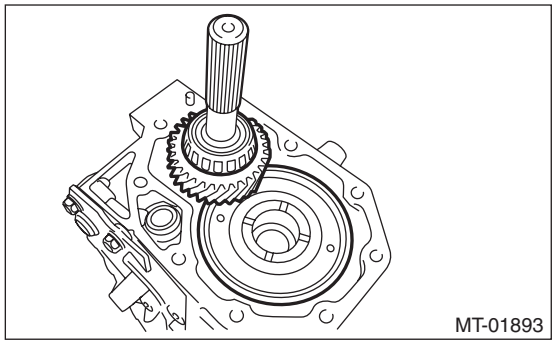
4) Inspect the clearance between the snap ring and the ball bearing. <Ref. to 6MT-69, INSPECTION, Transfer Drive Gear.>

E: INSPECTION

1) Ball bearing
Replace the ball bearing in following cases.
- In case of broken or rusty ball bearings
- In case of worn or damaged ball bearings
- When the ball bearings fail to turn smoothly or emit noise in rotation after transmission gear oil has been applied.

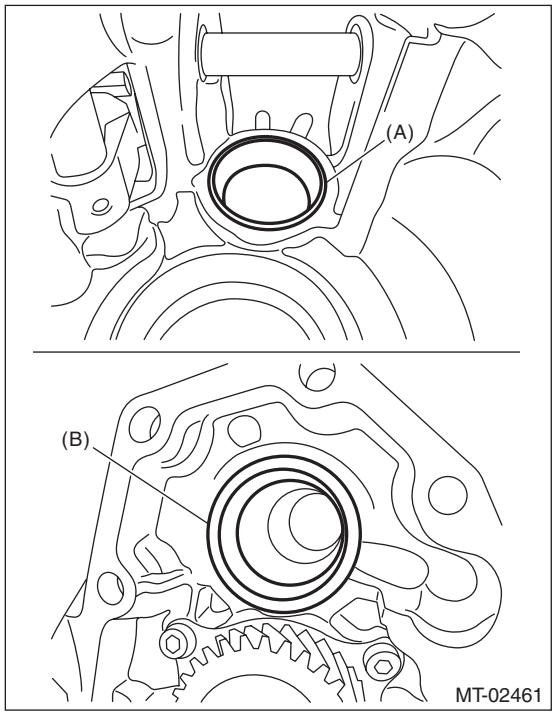
2) Transfer drive gear
If the tooth face of transfer drive gear and the shaft are excessively broken or damaged, replace the transfer drive gear.
3) Measure the clearance between snap ring and inner race of ball bearing with a thickness gauge.

Clearance:
0.01 — 0.15 mm (0.0004 — 0.0059 in)



If the measurement is not within specification, select a suitable snap ring and replace it.

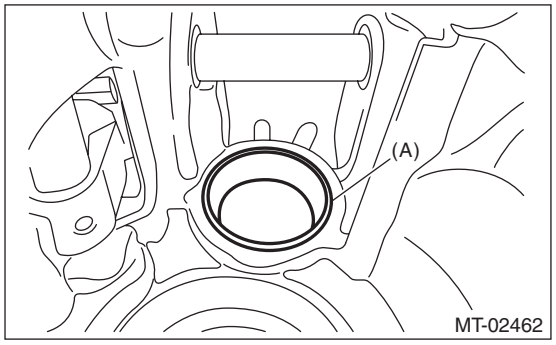
Snap ring (outer-30)	
Part No.	Thickness mm (in)
805030041	1.53 (0.0602)
805030042	1.65 (0.0650)
805030043	1.77 (0.0697)



12.Transfer Driven Gear

A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT-28, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and the neutral position switch. <Ref. to 6MT-56, REMOVAL, Switches and Harness.>
3) Remove the transfer case together with the extension case assembly. <Ref. to 6MT-62, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the extension case assembly.
5) Remove the transfer driven gear and center differential as a unit.

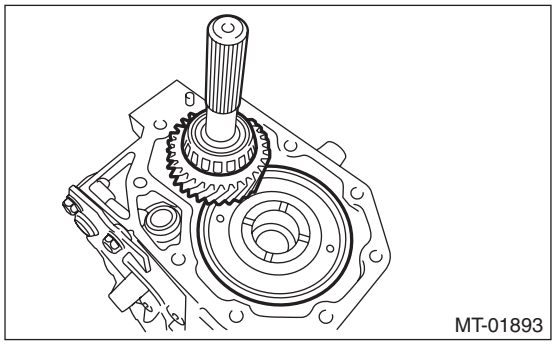


6) Remove the taper roller bearing outer race.

(A) Taper roller bearing (transfer case side) outer race
(B) Taper roller bearing (extension case side) outer race

B: INSTALLATION

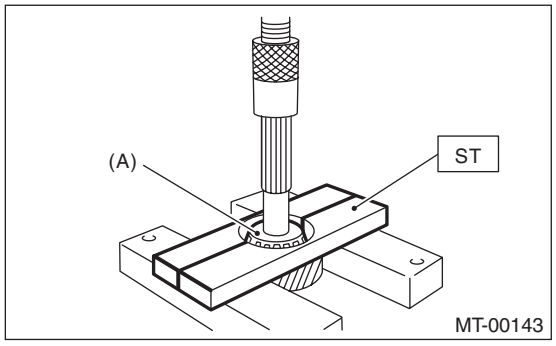
1) Install the taper roller bearing (transfer case side) outer race.



(A) Taper roller bearing (transfer case side) outer race

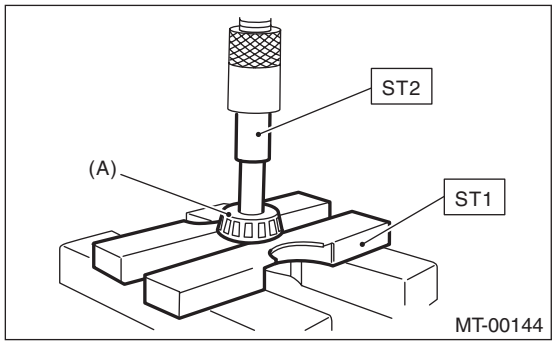
2) Apply a coat of grease to the taper roller bearing (transfer case side) of transfer driven gear and the roller rolling surface of the taper roller bearing (extension case side).

Grease:
NICHIMOLY N-130 or equivalent



3) Install the transfer driven gear and center differential as a unit.

4) Select the adjusting washer. <Ref. to 6MT-63, INSTALLATION, Transfer Case and Extension Case Assembly.>
5) Install the selected adjusting washer and taper roller bearing (extension case side) outer race to the extension case.
6) Install the transfer case and the extension case assembly. <Ref. to 6MT-63, INSTALLATION, Transfer Case and Extension Case Assembly.>
7) Install the back-up light switch and the neutral position switch. <Ref. to 6MT-57, INSTALLATION, Switches and Harness.>
8) Install the manual transmission assembly to the vehicle. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>



C: DISASSEMBLY

1) Using the ST, remove the taper roller bearing (extension case side).
ST 498077000 REMOVER

(A) Taper roller bearing (extension case side)

2) Using ST1 and ST2, remove the taper roller bearing (transfer case side).

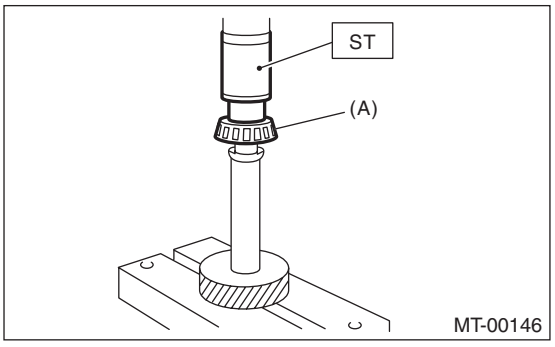
ST2 899864100 REMOVER



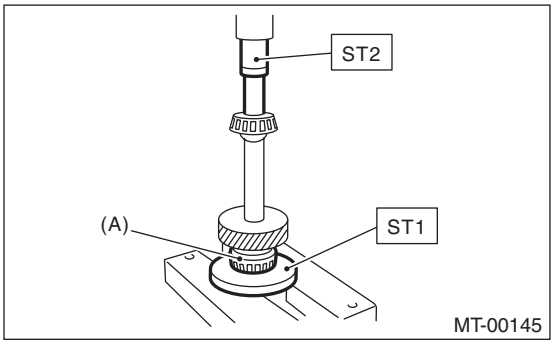
(A) Taper roller bearing (transfer case side)

D: ASSEMBLY

1) Using the ST, install the taper roller bearing (transfer case side).

CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

NOTE:
Be careful when handling because the taper roller bearing and the outer race are used as a set.
ST 927640000 INSTALLER



(A) Taper roller bearing (transfer case side)

2) Using the ST, install the taper roller bearing (extension case side).

CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

NOTE:
Be careful when handling because the taper roller bearing and the outer race are used as a set.
ST1 498175500 INSTALLER
ST2 899864100 REMOVER

(A) Taper roller bearing (extension case side)

E: INSPECTION

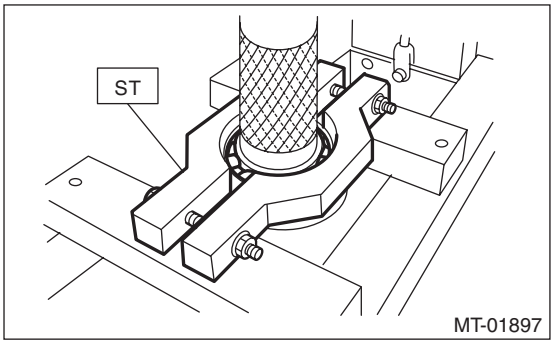
1) Taper roller bearing
Replace the taper roller bearing in the following cases.
- In case of broken or rusty taper roller bearings
- In case of worn or damaged taper roller bearings
- When the taper roller bearings fail to turn smoothly or emit noise in rotation after transmission gear oil has been applied.

2) Transfer driven gear
If the tooth face of transfer driven gear and the shaft are excessively broken or damaged, replace the transfer driven gear.

13.Center Differential

A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT-28, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and the neutral position switch. <Ref. to 6MT-56, REMOVAL, Switches and Harness.>
3) Remove the transfer case together with the extension case assembly. <Ref. to 6MT-62, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the extension case assembly. <Ref. to 6MT-62, REMOVAL, Transfer Case and Extension Case Assembly.>
5) Remove the center differential and transfer driven gear as a unit. <Ref. to 6MT-70, REMOVAL, Transfer Driven Gear.>



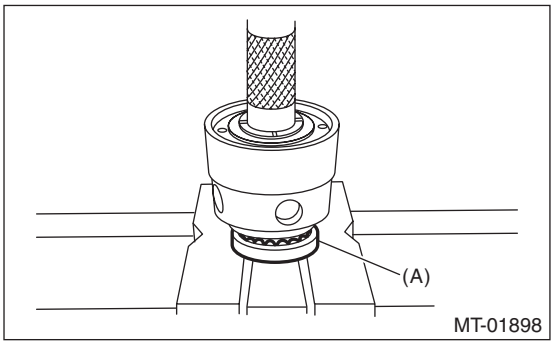
B: INSTALLATION

1) Install the center differential and transfer driven gear into the transfer case as a unit. <Ref. to 6MT-70, INSTALLATION, Transfer Driven Gear.>
2) Select the adjusting washer. <Ref. to 6MT-63, INSTALLATION, Transfer Case and Extension Case Assembly.>
3) Install the transfer driven gear. <Ref. to 6MT-70, INSTALLATION, Transfer Driven Gear.>
4) Install the extension case assembly. <Ref. to 6MT-63, INSTALLATION, Transfer Case and Extension Case Assembly.>
5) Install the transfer case together with the extension case assembly. <Ref. to 6MT-63, INSTALLATION, Transfer Case and Extension Case Assembly.>
6) Install the back-up light switch and the neutral position switch. <Ref. to 6MT-57, INSTALLATION, Switches and Harness.>
7) Install the manual transmission assembly to the vehicle. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

Remove the ball bearing using ST.

NOTE:
Center differential is a non-disassembled part which should not be disassembled.
ST 498077600 CENTER DIFFERENTIAL BEARING REMOVER



D: ASSEMBLY

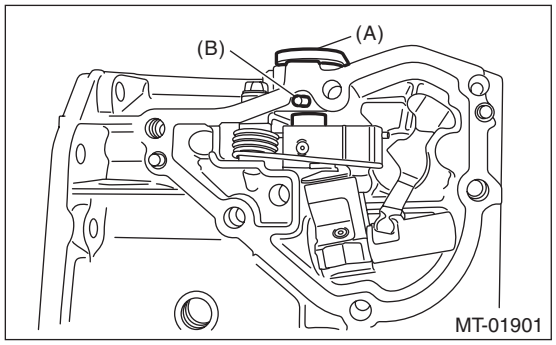
Install the ball bearings.

CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

NOTE:
Use a new ball bearing.

(A) Ball bearing

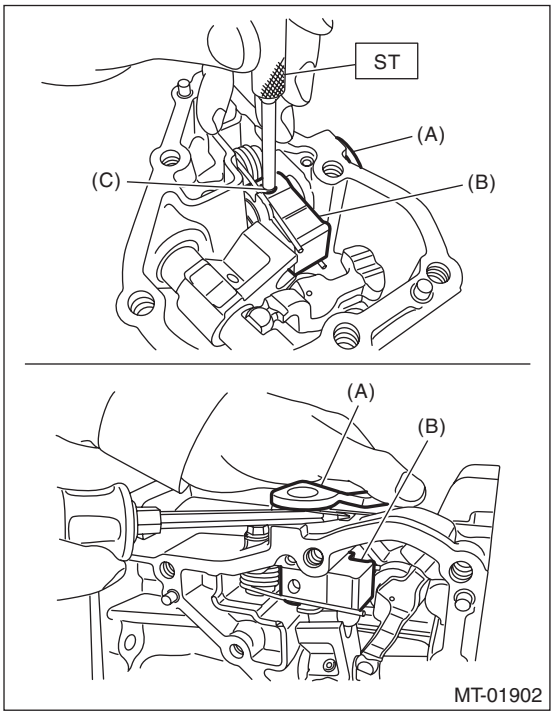
E: INSPECTION



1) Ball bearing
Replace the ball bearing in following cases.
- In case of broken or rusty ball bearings
- In case of worn or damaged ball bearings
- When the ball bearings fail to turn smoothly or emit noise in rotation after transmission gear oil has been applied.
- When the ball bearing has other defects.

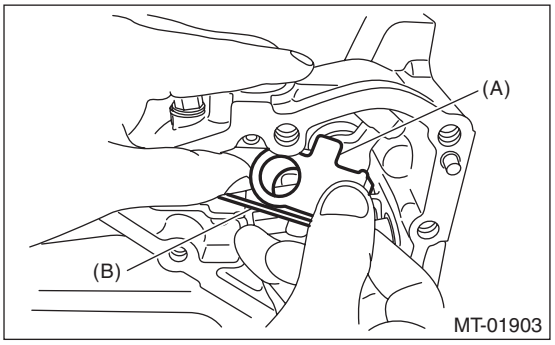
2) Center differential
If there is wear or damage, replace the center differential case assembly.

14.Shift Link Assembly



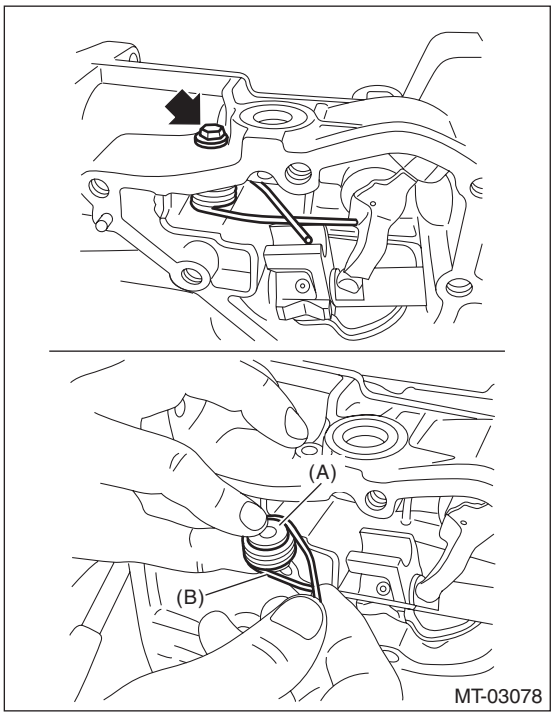
A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT-28, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and the neutral position switch. <Ref. to 6MT-56, REMOVAL, Switches and Harness.>
3) Remove the transfer case together with the extension case assembly. <Ref. to 6MT-62, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the extension case assembly. <Ref. to 6MT-62, REMOVAL, Transfer Case and Extension Case Assembly.>
5) Remove the center differential and transfer driven gear as a unit. <Ref. to 6MT-70, REMOVAL, Transfer Driven Gear.>
6) Pull out the straight pin.



(A) Selector lever COMPL
(B) Straight pin

7) Use the ST to remove the straight pin, and remove the selector lever COMPL.
ST 398791700 SPRING PIN REMOVER 2



(A) Selector lever COMPL

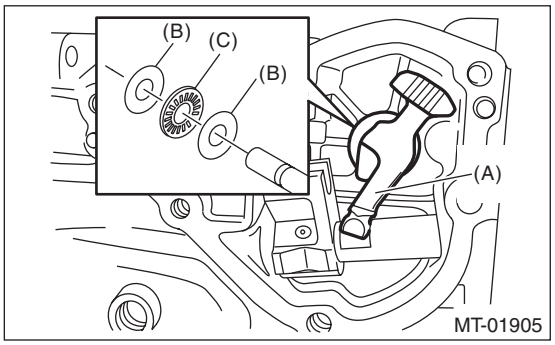
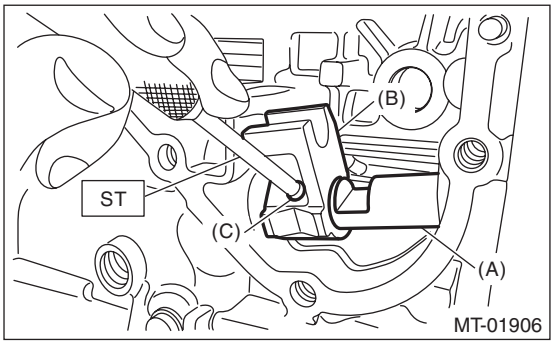
(C) Straight pin

8) Remove the selector arm No. 2.



(A) Selector arm No. 2
(B) Neutral set spring

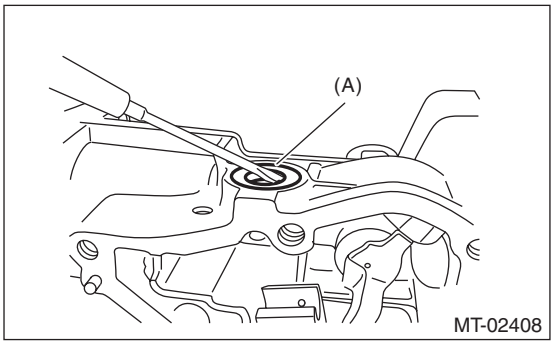
9) Remove the bolts and remove the shifter arm collar and neutral set spring.



(A) Shifter arm collar
(B) Neutral set spring

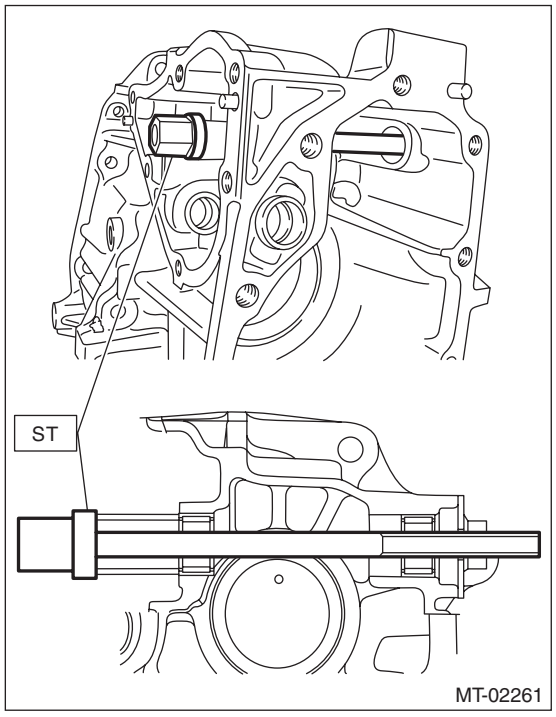
10) Remove the shifter arm No. 2, washers and thrust bearing.

(A) Shifter arm No. 2
(B) Washer
(C) Thrust bearing

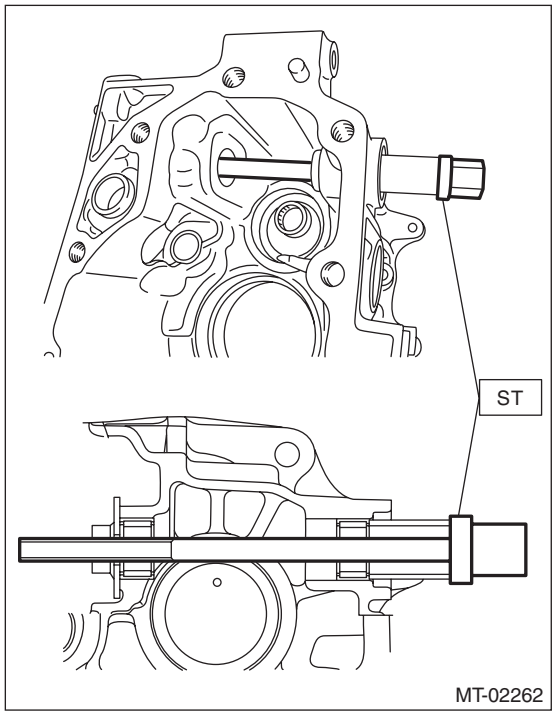


11) Use the ST to remove the straight pin, and remove the shifter arm and selector arm.
ST 398791700 SPRING PIN REMOVER 2

(A) Shifter arm
(B) Selector arm
(C) Straight pin



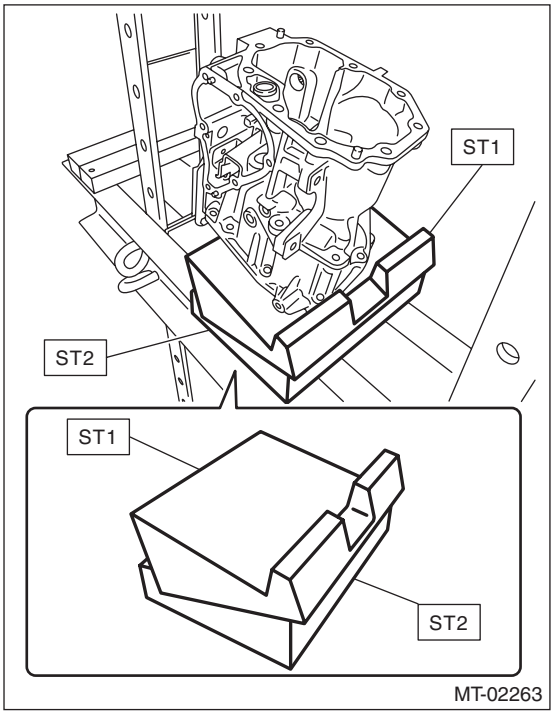
12) Remove the oil seal using a screwdriver wrapped with tape, etc.

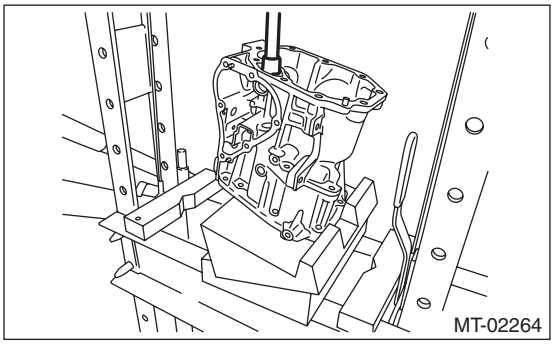


NOTE:
The illustration shows the oil seal of selector lever COMPL. Perform the same procedures for removing the shifter arm No. 2.

(A) Oil seal

13) Remove the needle bearing by using a tube with the diameter of 20 mm (0.79 in) or 21 mm (0.83 in) and the ST.
ST 18763AA000 COMPRESSOR SHAFT

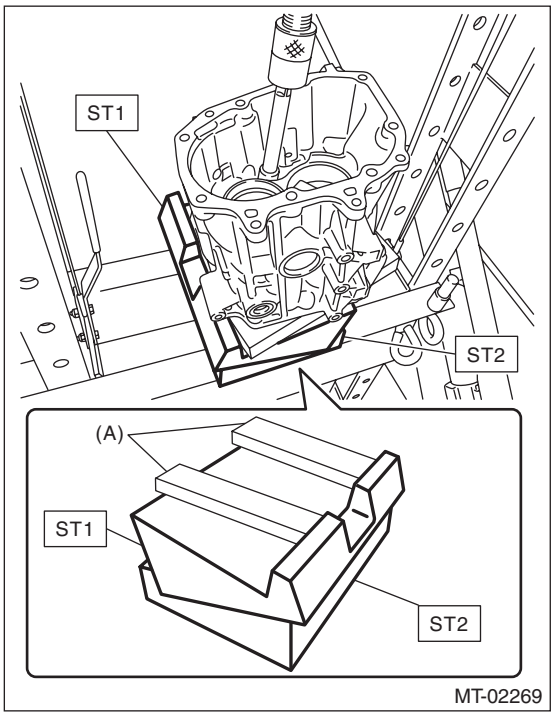




14) Set ST1, ST2 and transfer case to a press.

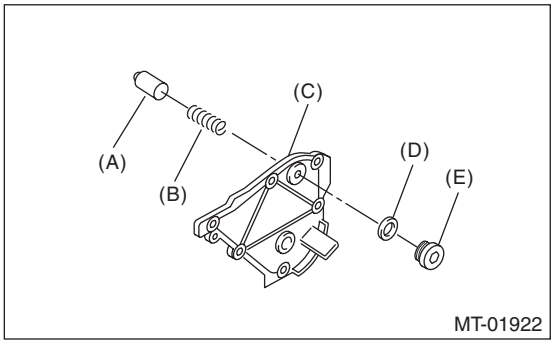
NOTE:
- Set the ST2 under ST1.
- Set the transfer case so that the hole for shifter arm is positioned vertically.

ST1 498267300 CYLINDER HEAD TABLE
ST2 498267200 CYLINDER HEAD TABLE



15) Remove the roller bearing by using a round bar with the diameter of 22 mm (0.87 in) or 23 mm (0.91 in).

16) Flip over the transfer case, and set an iron plate between transfer case and ST.

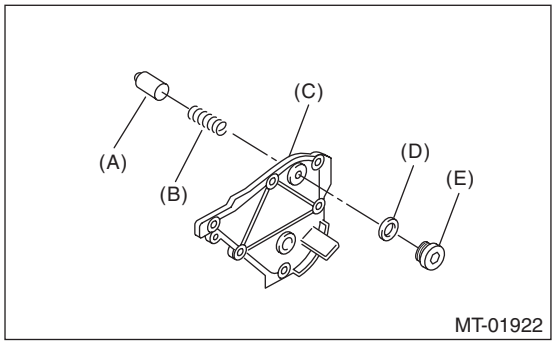


NOTE:
- Insert the iron plate which is thicker than the exposed length of the transfer case knock pin between the ST and transfer case.
- Set the iron plate so that the transfer case knock pin does not ride on the iron plate.

17) Remove the roller bearing by using a tube with the diameter of 22 mm (0.87 in) or 23 mm (0.91 in).

(A) Iron plate

18) Remove the plunger and the check ball spring.



(A) Plunger
(B) Checking ball spring
(C) Transmission cover
(D) Seal ring
(E) Seal bolt

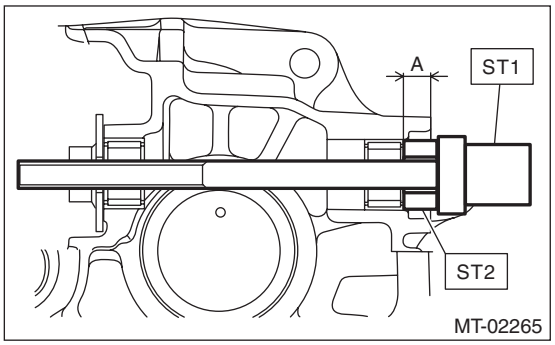
B: INSTALLATION

1) Clean the mating surface of the transmission cover and transfer case.
2) Install the plunger and the check ball spring.

NOTE:
Use new seal rings.

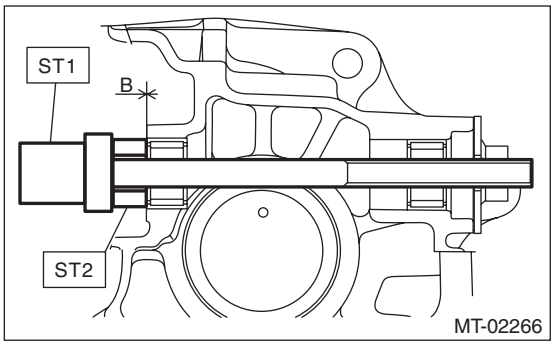
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

(A) Plunger
(B) Checking ball spring
(C) Transmission cover
(D) Seal ring
(E) Seal bolt



3) Using the ST, install the needle bearing.

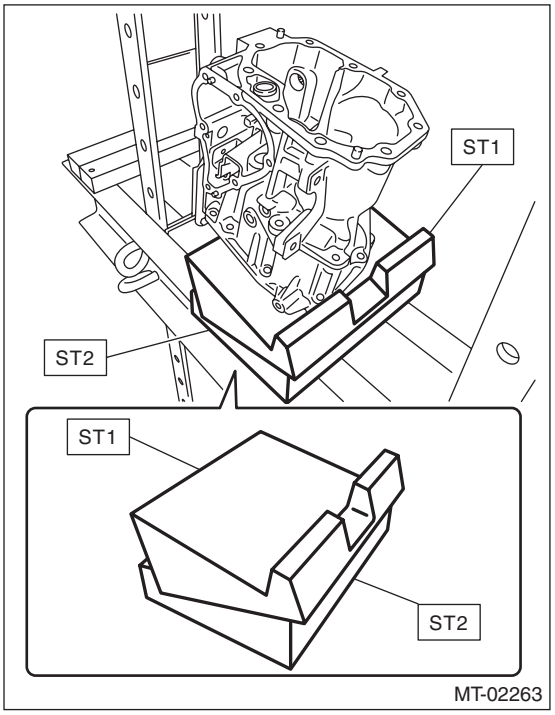
NOTE:
- Use a new needle bearing.
- If the press-fit depth exceeds the service limit, replace with a new needle bearing.



ST1 18763AA000 COMPRESSOR SHAFT
ST2 498277200 STOPPER SET

Press-fit depth of needle bearing:

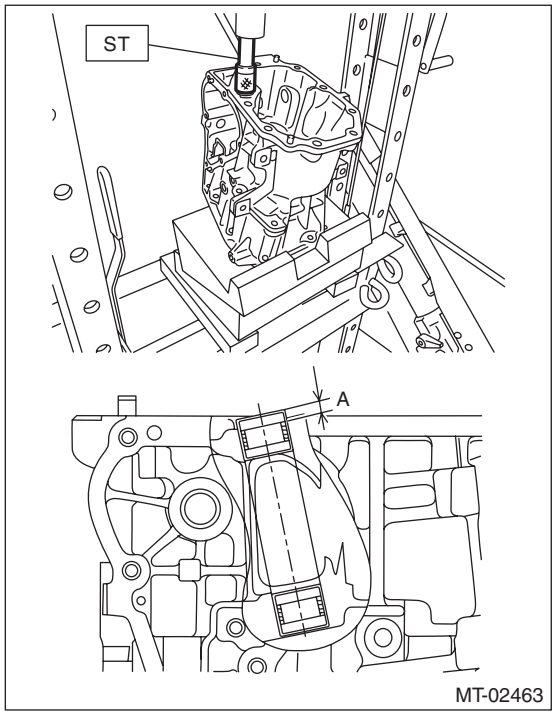
A: 8.5±0.2 mm (0.33±0.01 in) from the end of transfer case



B: 0.2±0.2 mm (0.01±0.01 in) from the end of transfer case

4) Set ST1, ST2 and transfer case to a press.

NOTE:
- Set the ST2 under ST1.
- Set the transfer case so that the hole for shifter arm is positioned vertically.

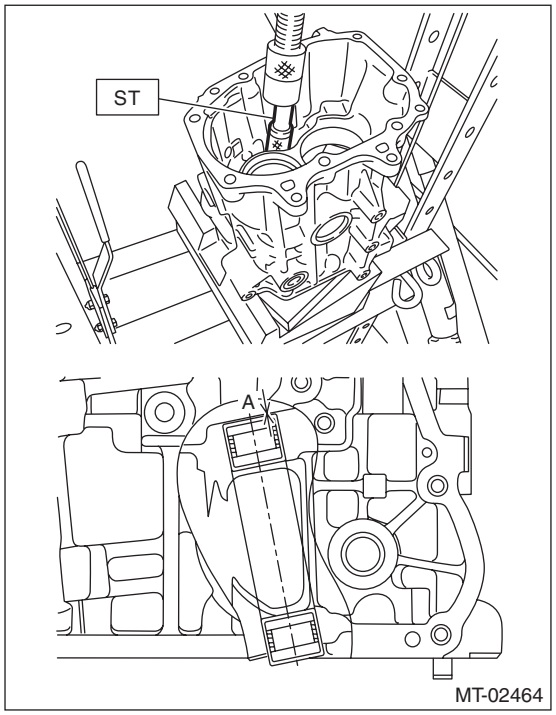


ST1 498267300 CYLINDER HEAD TABLE
ST2 498267200 CYLINDER HEAD TABLE

5) Using the ST, install the roller bearing.

NOTE:
• Use a new roller bearing.
• Gradually perform the press-fit operation while measuring the press-fit depth.
• If the press-fit depth exceeds the service limit, replace with a new bearing.
ST 899864100 REMOVER

Press-fit depth of roller bearing:
A: 5.1±0.2 mm (0.20±0.01 in) from the finished surface of transfer case



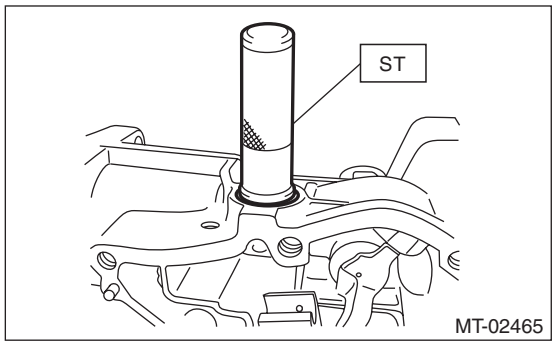
6) Flip over the transfer case, and set an iron plate between transfer case and ST.

NOTE:
• Insert the iron plate which is thicker than the exposed length of the transfer case knock pin between the ST and transfer case.
• Set the parts while taking care that the transfer case knock pin and the roller bearing do not ride over the iron plate.

7) Using the ST, install the roller bearing.

NOTE:
• Use a new roller bearing.
• Gradually perform the press-fit operation while measuring the press-fit depth.
• If the press-fit depth exceeds the service limit, replace with a new bearing.
ST 899864100 REMOVER

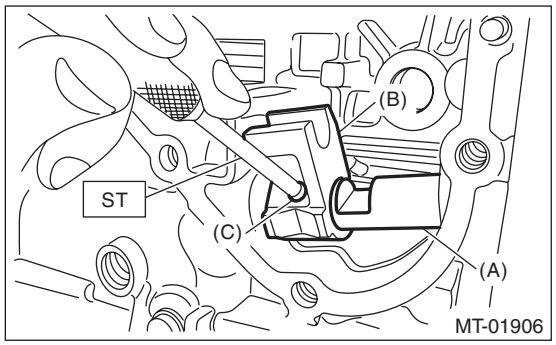
Press-fit depth of roller bearing:
A: 0±0.2 mm (0±0.01 in) from the end of transfer case



8) Using the ST, install the oil seal.

NOTE:
- Use a new oil seal.
- The illustration shows the oil seal of selector lever COMPL. Perform the same procedures for installing the shifter arm No. 2.
- Apply transmission gear oil to the oil seal lips.

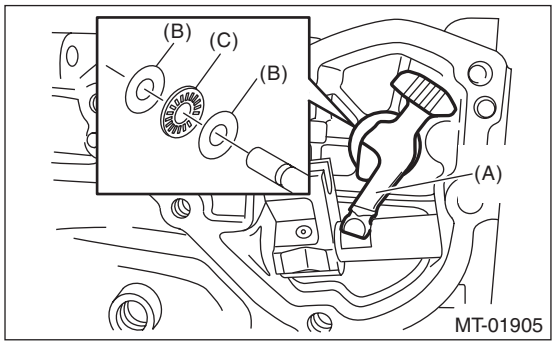
ST 18657AA000 INSTALLER



Press-fit depth of oil seal:
1±0.2 mm (0.04±0.01 in) from the end of transfer case

9) Insert the shifter arm and fix with a straight pin.

NOTE:
Use a new straight pin.

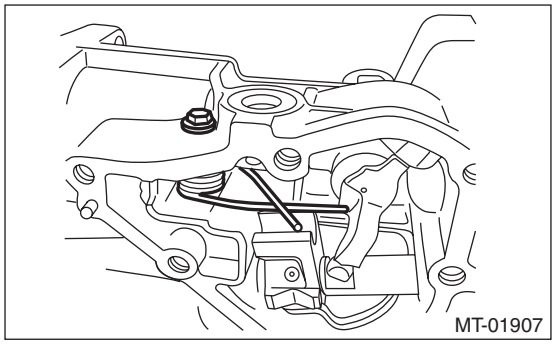


ST 398791700 SPRING PIN REMOVER 2

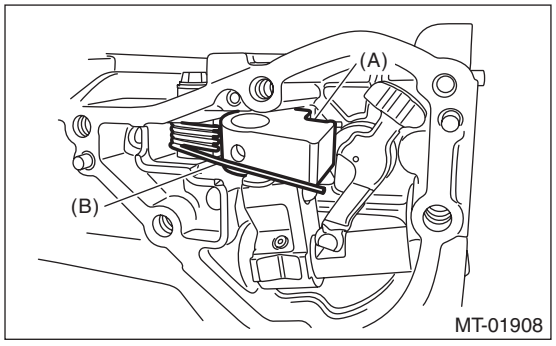
(A) Shifter arm
(B) Selector arm
(C) Straight pin

10) Install the shifter arm No. 2, washers and thrust bearing.

CAUTION:
Be careful not to damage the oil seal.



(A) Shifter arm No. 2
(B) Washer
(C) Thrust bearing

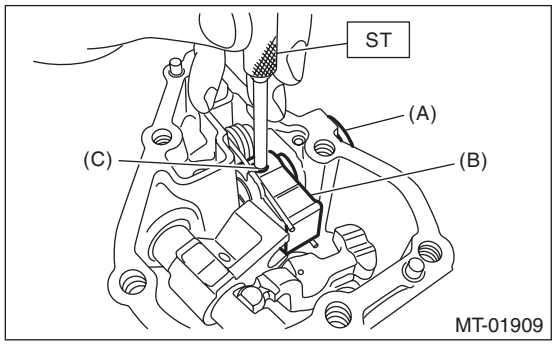


11) Install the shifter arm collar and neutral set spring.

NOTE:
Use a new gasket.

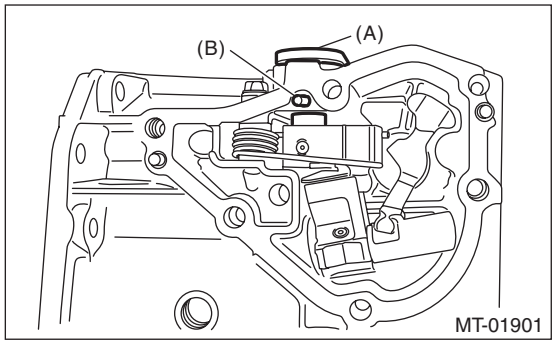
Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

12) Install the selector arm No. 2.



(A) Selector arm No. 2
(B) Neutral set spring

13) Insert the selector lever COMPL and fix with a straight pin.



CAUTION:
Be careful not to damage the oil seal.

NOTE:
Use a new straight pin.

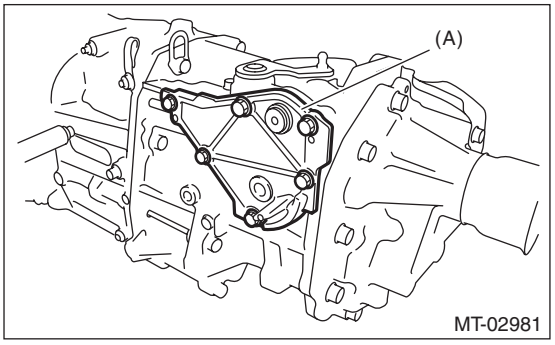
15) Install the center differential and transfer driven gear as a unit.
16) Install the extension case assembly to the transfer case. <Ref. to 6MT-63, INSTALLATION, Transfer Case and Extension Case Assembly.>
17) Install the transfer case and the extension case assembly. <Ref. to 6MT-63, INSTALLATION, Transfer Case and Extension Case Assembly.>

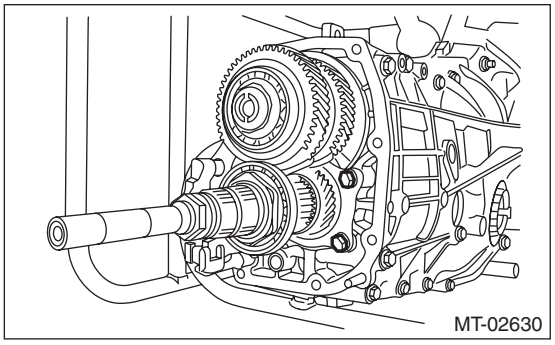


18) Apply liquid gasket seamlessly.

Liquid gasket:
THREE BOND 1215B or equivalent

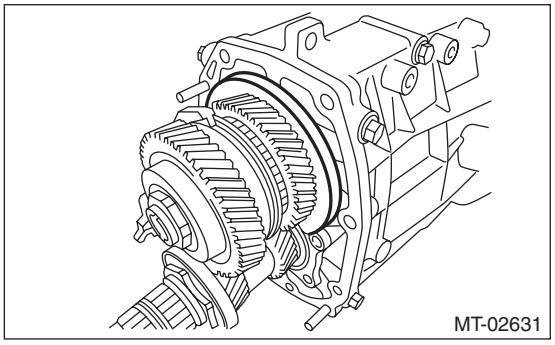
19) Install the transmission cover.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



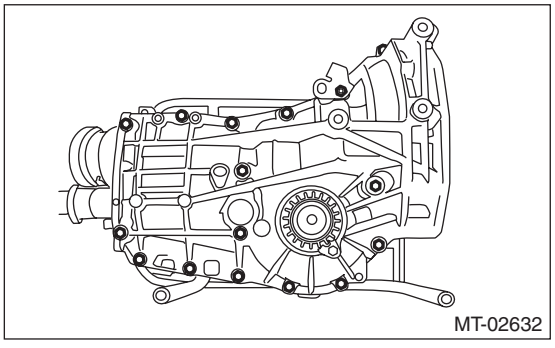
(A) Transmission cover

20) Install the back-up light switch and the neutral position switch. <Ref. to 6MT-57, INSTALLATION, Switches and Harness.>
21) Install the manual transmission assembly to the vehicle. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>



15.Transmission Case

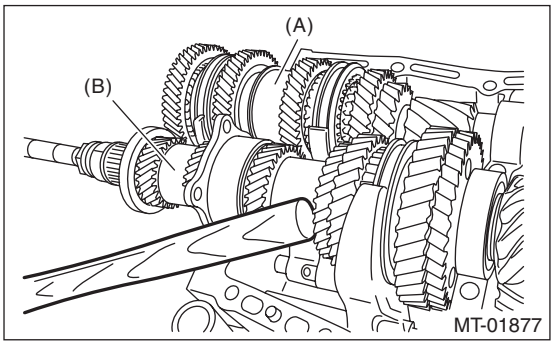
A: REMOVAL



1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT-28, REMOVAL, Manual Transmission Assembly.>
2) Remove the clutch release lever and the release bearing. <Ref. to CL-14, REMOVAL, Release Bearing and Lever.>
3) Remove the transfer case together with the extension case assembly. <Ref. to 6MT-62, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the bearing mounting bolt.

MT-02630

5) Remove the main shaft rear plate.

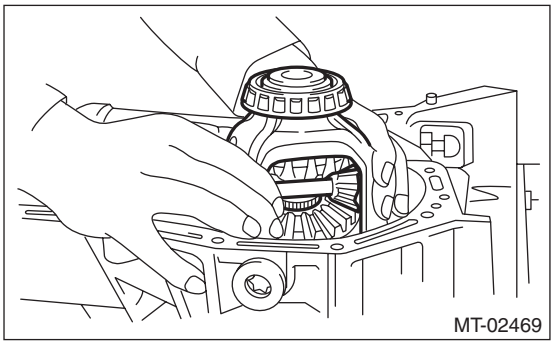


MT-02631

6) Remove the bolts and nuts, and separate the transmission case into the right and left cases.

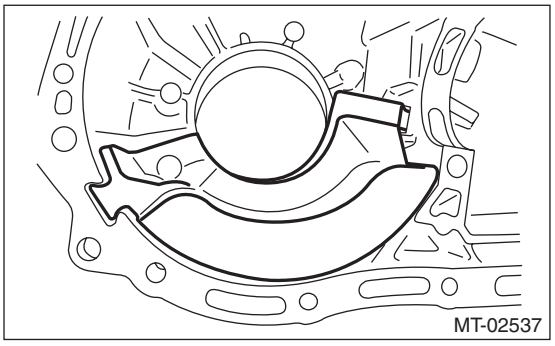
MT-02632

7) Remove the drive pinion shaft assembly.



NOTE:
Use a hammer handle, etc. to remove if too tight.

MT-01877



(A) Main shaft ASSY
(B) Drive pinion shaft ASSY

8) Remove the main shaft assembly.
9) Remove the front differential assembly.

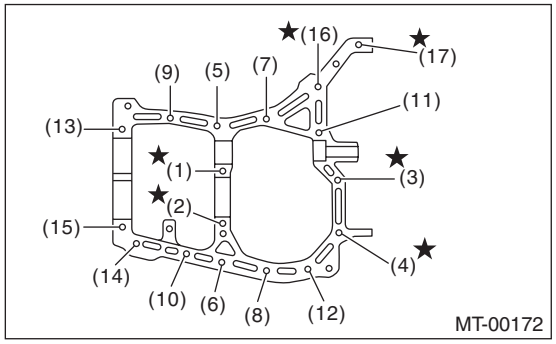
MT-02469

10) Remove the differential side retainers and taper roller bearing outer races on the left and right sides. <Ref. to 6MT-106, REMOVAL, Front Differential Assembly.>

NOTE:
Do not confuse the right and left taper roller bearing outer races.
11) Remove the reverse idler gear. <Ref. to 6MT-118, REMOVAL, Reverse Idler Gear.>
12) Remove the shifter fork and rod. <Ref. to 6MT-125, REMOVAL, Shifter Fork and Rod.>
13) Remove the front oil guide.

MT-02537

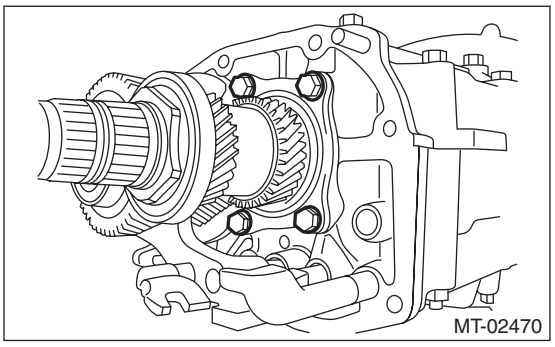
B: INSTALLATION



1) Wipe off grease, oil and dust on the mating surfaces of transmission cases with cleaning solvent.
2) Install the shifter fork and rod. <Ref. to 6MT-126, INSTALLATION, Shifter Fork and Rod.>
3) Install the reverse idler gear. <Ref. to 6MT-119, INSTALLATION, Reverse Idler Gear.>
4) Select the drive pinion shim. <Ref. to 6MT-95, INSTALLATION, Drive Pinion Shaft Assembly.>
5) Install the taper roller bearing outer race to the transmission case LH side, and install the differential side retainer with the O-ring removed.
6) Install the front differential assembly.
7) Install the main shaft assembly.

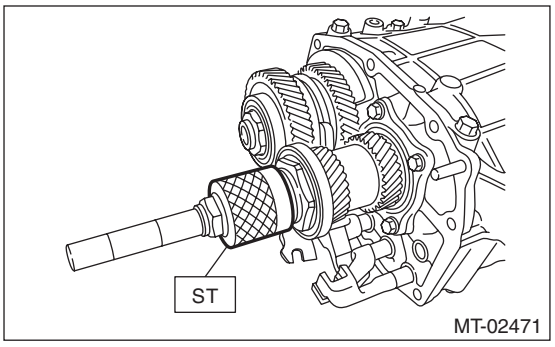
NOTE:
Align to install the needle bearing knock pin hole to the transmission case knock pin.
8) Install the selected drive pinion shims and drive pinion shaft assembly.

NOTE:
Install the transmission case knock pin into the roller bearing knock pin hole.
9) Tighten the left and right side of the transmission case with the17 mounting bolts.



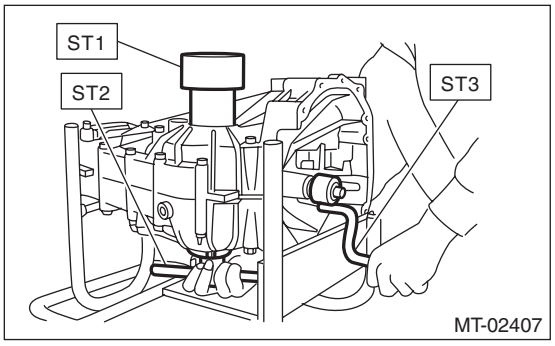
NOTE:
• Insert bolts (11) and (16) from the LH side of the transmission case.
• Match the cases together so that the drive pinion shims are not caught between the cases.

Tightening torque:
8 mm bolt
25 N·m (2.5 kgf-m, 18.4 ft-lb)
★ ***10 mm bolt***
40 N·m (4.1 kgf-m, 29.5 ft-lb)



10) Install the taper roller bearing outer race to the RH side of the transmission case.
11) Tighten the bearing mounting bolts.

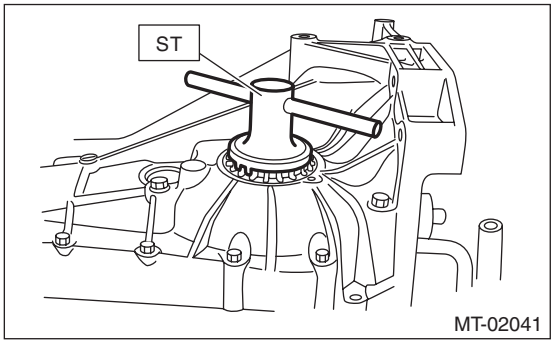
Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)



12) Perform backlash adjustment of the hypoid driven gear and preload adjustment of the taper roller bearing.
(1) Attach the ST on drive pinion shaft assembly.
ST 18667AA020 HOLDER

(2) Place the transmission case with the LH side facing downward, and put ST1 on the taper roller bearing outer race.

(3) Screw in the differential side retainer from the bottom into left case using ST2. Fit the ST3 on the main shaft of the transmission. Shift the gear into 4th or 5th, and turn the shaft several times. Screw in the differential side retainer while rotating the ST3 until a slight resistance is felt on ST2.
This is the contact point of the hypoid driven gear and the drive pinion shaft. Repeat the above sequence several times to ensure the contact point.

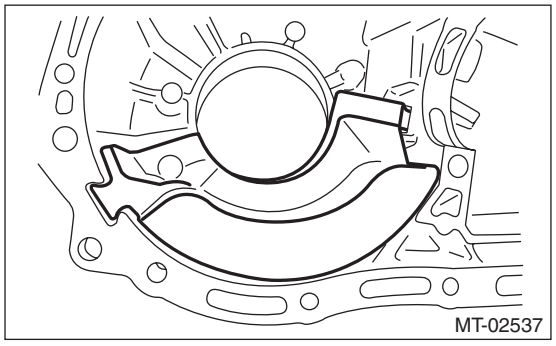


ST1 399780104 WEIGHT
ST2 18630AA010 WRENCH COMPL RETAINER
ST3 499927100 HANDLE

(4) Remove the WEIGHT, and screw in the differential side retainer without the O-ring into the RH side of the transmission case, and stop at the point where a slight resistance is felt.

NOTE:
In this condition, the backlash between hypoid driven gear and drive pinion shaft is zero.

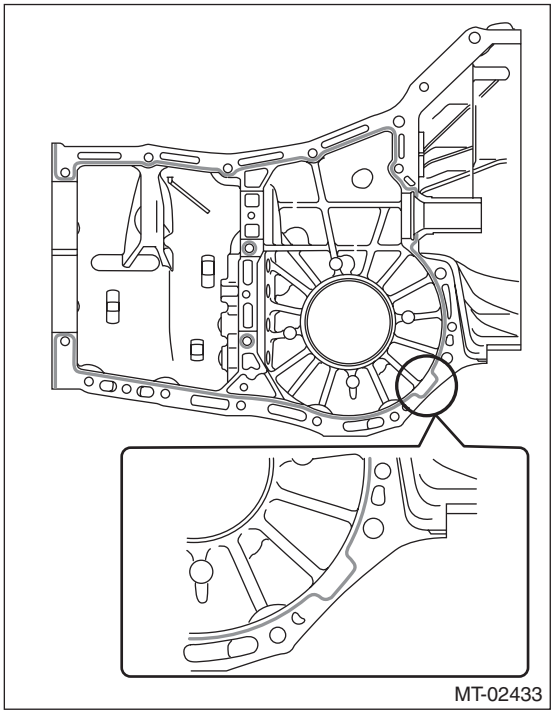
ST 18630AA010 WRENCH COMPL RETAINER



(5) Loosen the differential side retainer on the LH side of the transmission case by 3 notches, and turn the differential side retainer on the RH side of the transmission case by 3 notches in order to apply backlash.
(6) Screw in the differential side retainer of the RH side of the transmission case additionally by 1 notch in order to apply preload on taper roller bearing.
(7) Tighten temporarily both the retainer lock plates LH and RH, and put marks on both the differential side retainer and retainer lock plate for later readjustment.

NOTE:
When it is difficult to attach the retainer lock plate, turn over the retainer lock plate and attach.

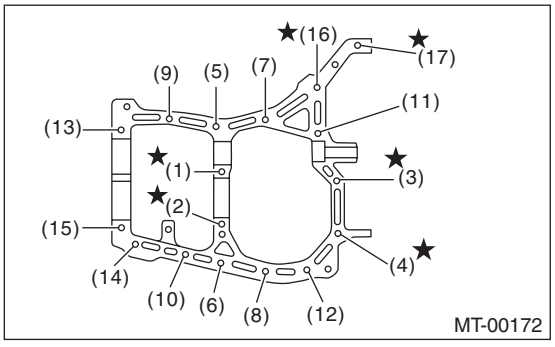
(8) Turn the transmission main shaft several times while tapping around the differential side retainer lightly with a plastic hammer.



13) Inspect and adjust backlash and tooth contact of the hypoid driven gear. <Ref. to 6MT-112, INSPECTION, Front Differential Assembly.>
14) Separate the transmission case into left and right parts. <Ref. to 6MT-82, REMOVAL, Transmission Case.>
15) Check each shifter fork. <Ref. to 6MT-128, INSPECTION, Shifter Fork and Rod.>
16) Select a main shaft rear plate. <Ref. to 6MT-94, ADJUSTMENT, Main Shaft Assembly.>
17) Install the front oil guide.

NOTE:
Fit in all the way.

18) Apply liquid gasket, then join the right side and left side of the case together.

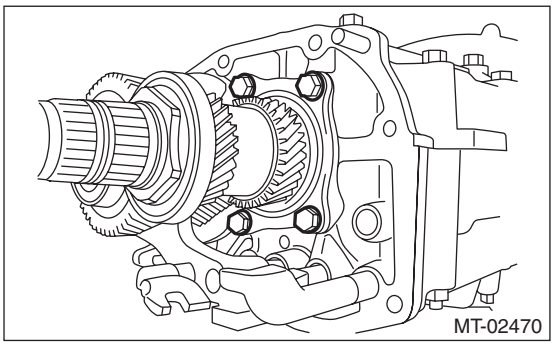


Liquid gasket:
THREE BOND 1215B or equivalent

MT-02433

19) Tighten 17 bolts with brackets and clips as shown in the figure.

NOTE:
• Insert bolts (11) and (16) from the LH side of the transmission case.
• Match the cases together so that the drive pinion shims are not caught between the cases.

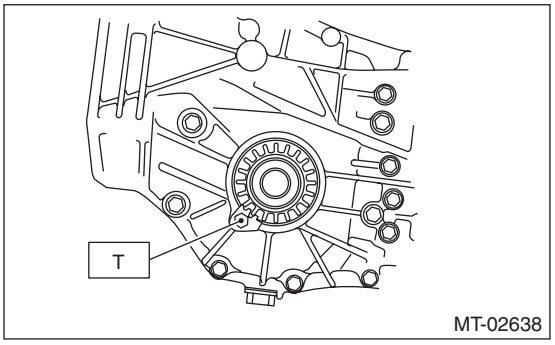


Tightening torque:
8 mm bolt
25 N·m (2.5 kgf-m, 18.4 ft-lb)
★ 10 mm bolt
40 N·m (4.1 kgf-m, 29.5 ft-lb)

MT-00172

20) Tighten the bearing mounting bolts.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)



MT-02470

21) Remove the retainer lock plate, and loosen the differential side retainer until the groove of the O-ring appears. Fit the O-ring into the groove and tighten the differential side retainer into the position where it was not loosened.

NOTE:
• When loosening the differential side retainer, record the number of the turns made.
• Perform this for both left and right differential side retainers.
• Use new O-rings.
• Apply transmission gear oil to O-ring.

22) Install the retainer lock plate.

Tightening torque:
T: 25 N·m (2.5 kgf-m, 18.4 ft-lb)

MT-02638

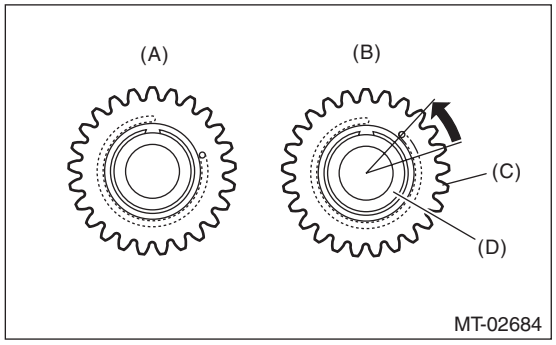
23) Install the transfer case together with the extension case assembly. <Ref. to 6MT-63, INSTALLATION, Transfer Case and Extension Case Assembly.>
24) Install the clutch release lever and release bearing. <Ref. to CL-14, INSTALLATION, Release Bearing and Lever.>
25) Install the manual transmission assembly to the vehicle. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

Check the transmission case for cracks, damage, or oil leaks.

16.Main Shaft Assembly

A: REMOVAL

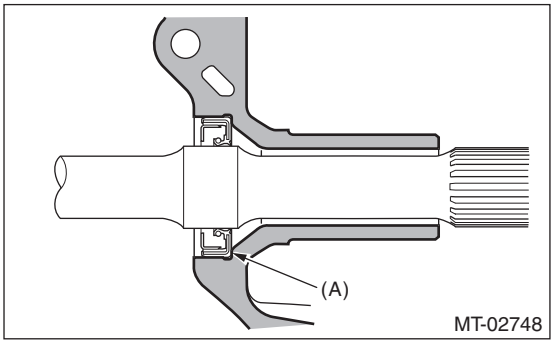


1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT-28, REMOVAL, Manual Transmission Assembly.>
2) Remove the transfer case together with the extension case assembly. <Ref. to 6MT-62, REMOVAL, Transfer Case and Extension Case Assembly.>
3) Remove the transmission case. <Ref. to 6MT-82, REMOVAL, Transmission Case.>
4) Remove the drive pinion shaft assembly. <Ref. to 6MT-95, REMOVAL, Drive Pinion Shaft Assembly.>
5) Remove the main shaft assembly.

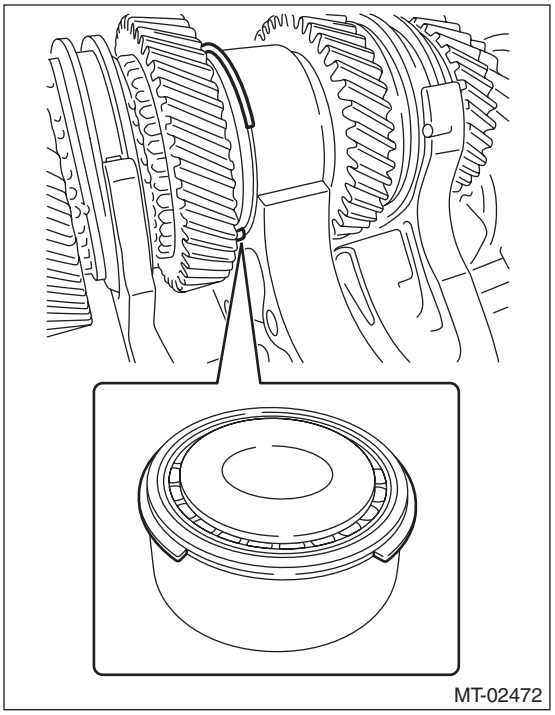
B: INSTALLATION

1) Attach the needle bearing and oil seal to the front of the main shaft assembly.

NOTE:
• Wrap the clutch splined section with vinyl tape to prevent damage to the oil seal.
• Apply NICHIMOLY N-130 or the equivalent to the lip of the oil seal.
• Use a new oil seal.



2) Rotate the reverse idler sub gear by two teeth from free status in the direction of the arrow to make it engage with the reverse gear of the main shaft and install the main shaft assembly.
(1) When the reverse idler sub gear is at free status, put alignment marks on reverse idler sub gear and reverse idler gear.
(2) Rotate the alignment mark on the reverse idler sub gear side in the arrow direction by two teeth, and secure it with a wire.

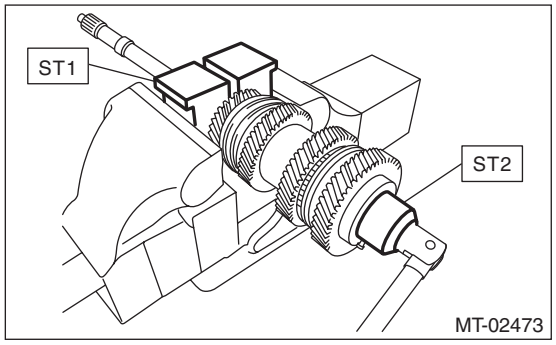


(A) Free status
(B) Set status
(C) Reverse idler sub gear
(D) Reverse idler gear

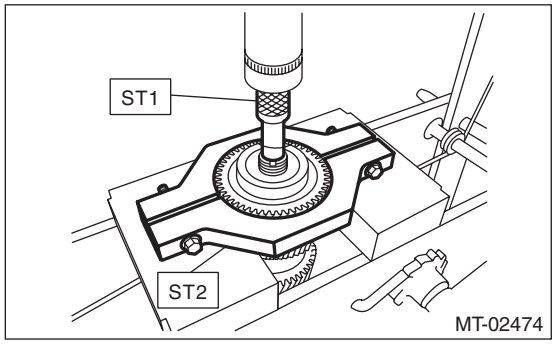
3) Fit the transmission case knock pin to the knock pin hole of the needle bearing outer race and install the main shaft assembly.

NOTE:
• Align the end face of the seal with surface (A) when installing the oil seal.

• Face the cutout portion of the snap ring for the double taper roller bearing to the drive pinion shaft assembly.



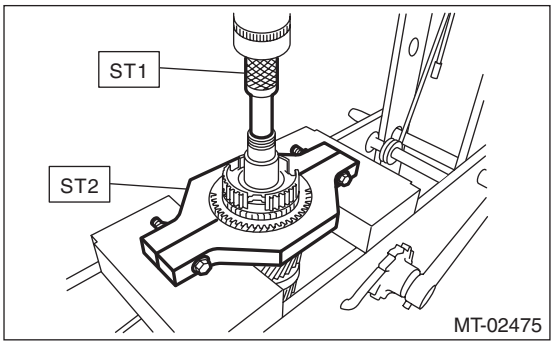
4) After installing the main shaft, check that the reverse idler gear and reverse idler sub gear are aligned two teeth away and remove the wire.
5) Install the drive pinion shaft assembly. <Ref. to 6MT-95, INSTALLATION, Drive Pinion Shaft Assembly.>
6) Check each shifter fork. <Ref. to 6MT-128, INSPECTION, Shifter Fork and Rod.>
7) Select a main shaft rear plate. <Ref. to 6MT-94, ADJUSTMENT, Main Shaft Assembly.>
8) Install the transmission case. <Ref. to 6MT-83, INSTALLATION, Transmission Case.>



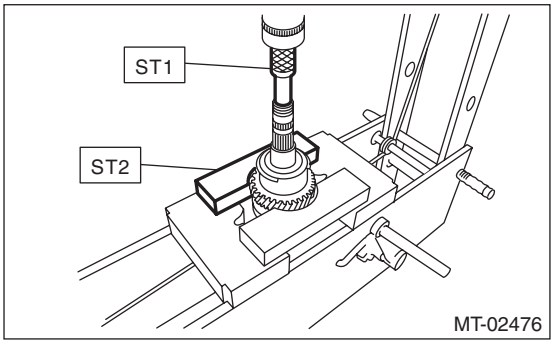
9) Install the transfer case together with the extension case assembly. <Ref. to 6MT-63, INSTALLATION, Transfer Case and Extension Case Assembly.>
10) Install the manual transmission assembly to the vehicle. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

NOTE:
When replacing the coupling sleeve and synchronizer hub, replace them as a set. Because these must engage at the specified point, avoid disassembly as much as possible. If it is necessary to disassemble, mark the engaging points on the splines beforehand.
1) Put vinyl tape around the main shaft splines and pull out the oil seal and needle bearing by hand to prevent the oil seal from being damaged.
2) Flatten the tab of the lock nut.
3) Remove the lock nut and lock washer using ST1 and ST2.
ST1 498937000 TRANSMISSION HOLDER
ST2 499987003 SOCKET WRENCH (35)



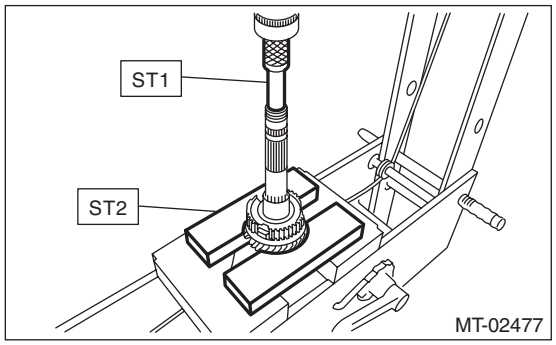
4) Remove the 6th drive gear and ball bearing using the ST1, ST2 and a press.
ST1 899864100 REMOVER
ST2 18722AA010 REMOVER



5) Remove the needle bearing, 6th baulk ring, 5th-6th shifting insert and 5th-6th coupling sleeve.

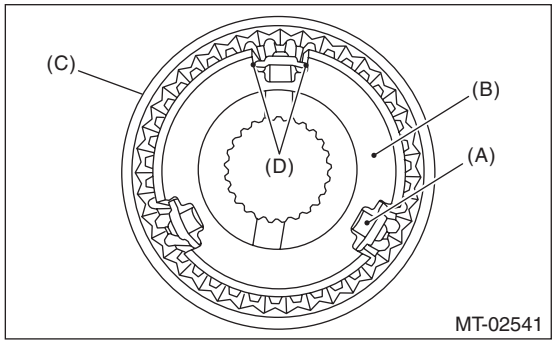
CAUTION:
When removing the 5th-6th coupling sleeve, be careful not to lose the 5th-6th shifting insert.

6) Remove the 5th drive gear, 6th needle bearing race, 5th baulk ring, 5th-6th synchronizer hub and needle bearing using the ST1, ST2 and a press.
ST1 899864100 REMOVER
ST2 18722AA010 REMOVER



7) Shift the 3rd-4th coupling sleeve to the 3rd side.
8) Remove the 4th drive gear, 4th gear adjusting washer, double taper roller bearing and 5th needle bearing race using the ST1, ST2 and a press.
ST1 899864100 REMOVER
ST2 899714110 REMOVER

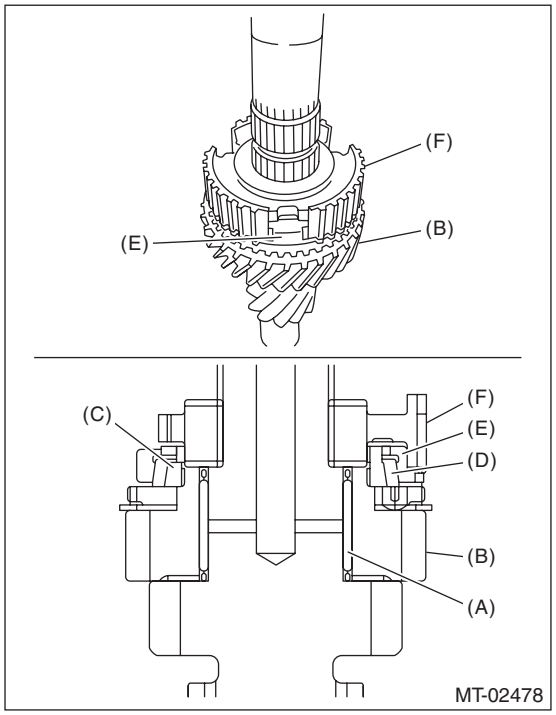
9) Remove the 4th baulk ring, needle bearing, 3rd-4th shifting insert and 3rd-4th coupling sleeve.



CAUTION:
When removing the 3rd-4th coupling sleeve, be careful not to lose the 3rd-4th shifting insert.

10) Remove the 3rd drive gear, 4th needle bearing race, 3rd-4th synchronizer hub, 3rd inner baulk ring, 3rd synchro cone, 3rd outer baulk ring and needle bearing using the ST1, ST2 and a press.
ST1 899864100 REMOVER
ST2 899714110 REMOVER

D: ASSEMBLY

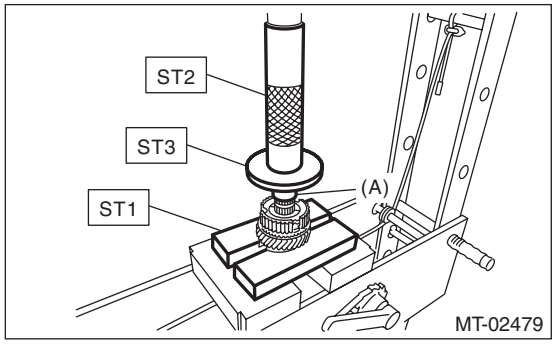


NOTE:
• Match the alignment marks, and install the coupling sleeve and then install the shifting insert.
• Make sure that there is no large clearance at both sides of the shifting insert after assembly.

(A) Shifting insert
(B) Synchronizer hub
(C) Coupling sleeve
(D) There is no large clearance at this part.

1) Install the needle bearing, 3rd drive gear, 3rd outer baulk ring, 3rd synchro cone, 3rd inner baulk ring and 3rd-4th synchronizer hub.

NOTE:
• Install the 3rd-4th synchronizer hub in the correct direction.
• Align the protrusion of the outer baulk ring into the groove of the 3rd-4th synchronizer hub.



(A) 3rd needle bearing
(B) 3rd drive gear
(C) 3rd inner baulk ring
(D) 3rd synchro cone
(E) 3rd outer baulk ring
(F) 3rd-4th synchronizer hub

2) Install the 4th needle bearing race using ST1, ST2, ST3 and a press.

CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

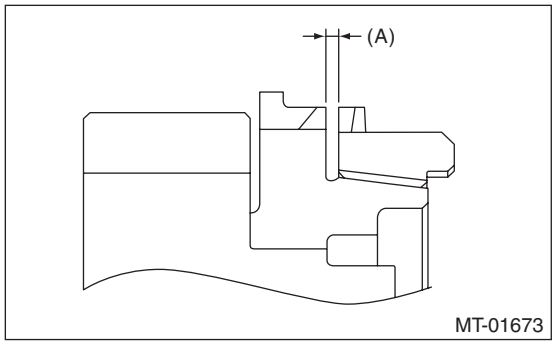
ST2 499987003 SOCKET WRENCH (35)

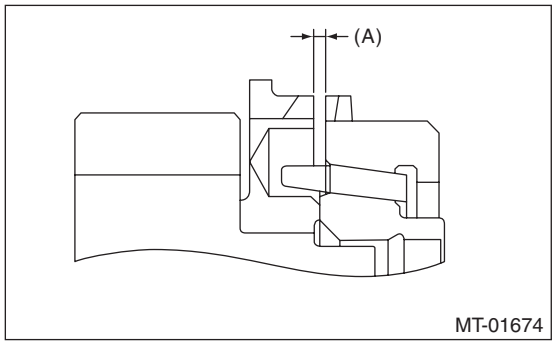
17) Crimp the lock nut at two locations so that the dimension (B) becomes 23.3 mm (0.92 in) or less.

CAUTION:
When crimping the lock nut, be careful not to crack it.



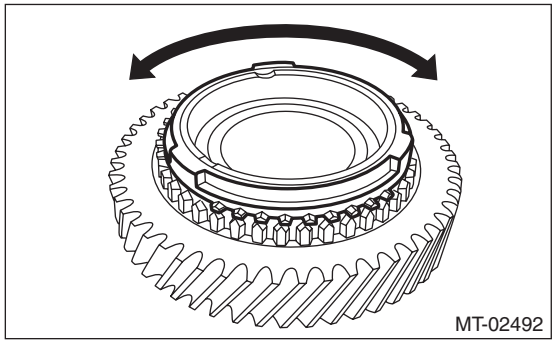
(A) Lock nut
(B) Outer dimension after crimping

E: INSPECTION

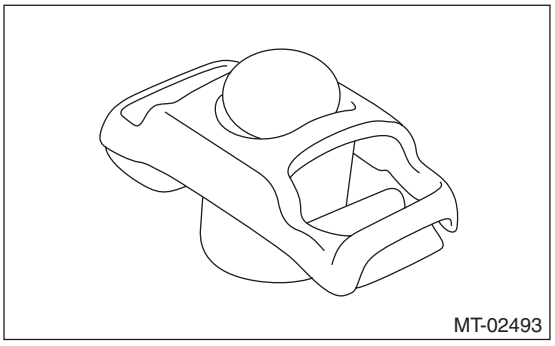


Disassembled parts should be washed with cleaning solvent first, then inspected carefully.
1) Bearing
Replace the bearings in the following cases.
• When the bearing balls, outer races and inner races are broken or rusty.
• When the bearing is worn.
• When the bearings fail to turn smoothly or emit noise in rotation after transmission gear oil has been applied.
• When bearing has other defects.
2) Bushing (each gear)
Replace the bushing in following cases.
• When the sliding surface is damaged or abnormally worn.
• When the inner wall is abnormally worn.
3) Gear
Replace gears in the following cases.
• Replace the gear with new part if its tooth surfaces are broken, damaged or excessively worn.
• Correct or replace if the cone that contacts the baulk ring is rough or damaged.
• Repair or replace if the inner surface or end face is damaged.

4) Baulk ring, synchro cone
Replace the baulk ring and synchro cone in the following cases.
• When the inner surface or end face is damaged.
• When the baulk ring inner surface is abnormally or partially worn down.
• When the contact surface of the baulk ring insert section is cracked or abnormally worn.
• If the gap between the end faces of the baulk ring and the gear splined part is excessively small, check the clearance (A) while pressing the ring against the cone.



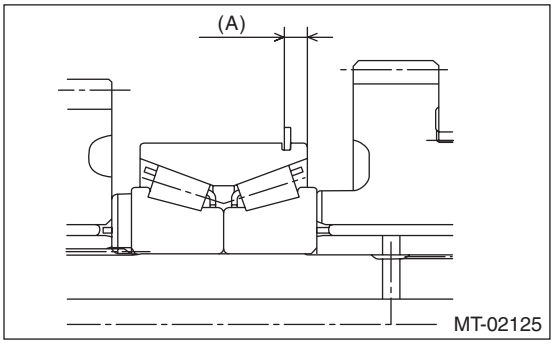
Clearance (A):
0.5 mm (0.020 in) or more
Single cone



Double cone

• Apply transmission gear oil to the cone of the gear and while press-fitting the baulk ring, check there is no rotation in the circumferential direction.

5) Coupling sleeve and synchronizer hub
• Check the slipping condition of the coupling sleeve.
• Check the splines on the coupling sleeve and synchronizer hub for wear.
6) Shifting insert
Replace the shifting insert if there is deformation, excessive wear on the ball section or any defectiveness.



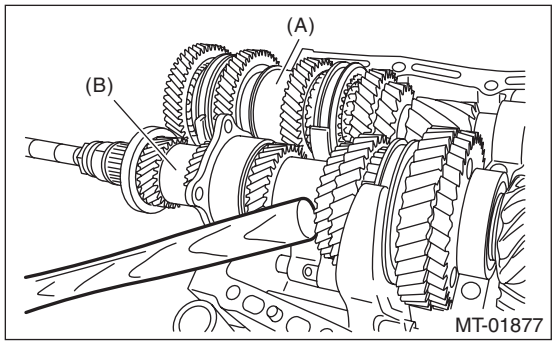
7) Oil seal
Replace the oil seal if the lip is deformed, hardened, worn or defective in any way.
8) Gearshift mechanism
Repair or replace the gearshift mechanism if excessively worn, bent or defective in any way.

F: ADJUSTMENT

Selection of main shaft rear plate:
Measure the protrusion amount (A) of bearing from transmission main case surface, and select a suitable plate in the following table.

NOTE:
Before measuring, tap the end of main shaft with a plastic hammer lightly in order to make the clearance zero between the main case surface and moving flange of bearing.

Dimension (A) mm (in)	Part No.	Mark
4.00 — 4.13 (0.1575 — 0.1626)	32294AA041	1
3.87 — 4.00 (0.1524 — 0.1575)	32294AA051	2

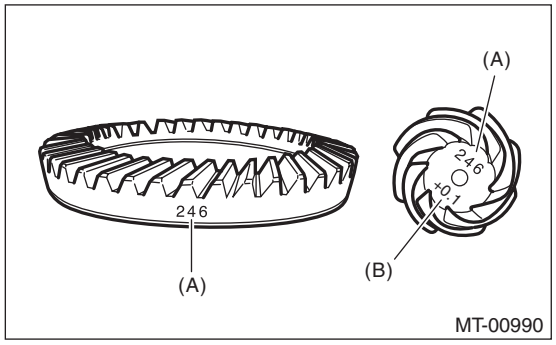


17.Drive Pinion Shaft Assembly

A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT-28, REMOVAL, Manual Transmission Assembly.>
2) Remove the transfer case together with the extension case assembly. <Ref. to 6MT-62, REMOVAL, Transfer Case and Extension Case Assembly.>
3) Remove the transmission case. <Ref. to 6MT-82, REMOVAL, Transmission Case.>
4) Remove the drive pinion shaft assembly.

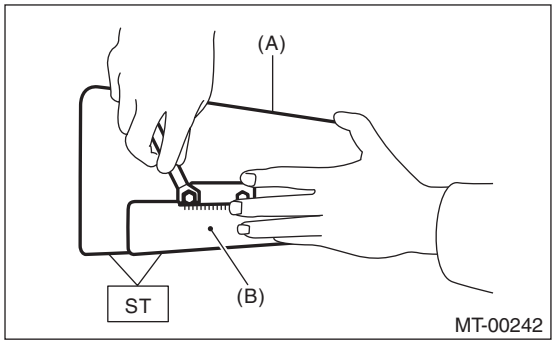
NOTE:
Use a hammer handle, etc. to remove if too tight.



(A) Main shaft ASSY
(B) Drive pinion shaft ASSY

5) Remove the main shaft assembly.

B: INSTALLATION

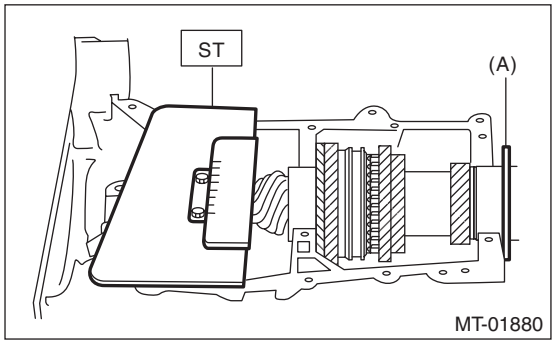


1) Remove the front differential assembly.
2) Hypoid gear set match mark/No.: The number (A) on top of the drive pinion, and the number on the hypoid driven gear are set numbers for the two gears. Use a pair having the same numbers.
The figure (B) below shows a number for shim adjustment. If no number is shown, the value is zero.

(A) Set number
(B) Number for shim adjustment

3) Place the drive pinion shaft assembly on transmission main case RH without shim and tighten the bearing mounting bolts.
4) Perform the adjustment of ST.
(1) Loosen the two bolts and adjust so that the scale indicates 0.5 correctly when the plate end and the scale end are on the same level.

ST 499917500 DRIVE PINION GAUGE ASSY



(A) Plate
(B) Scale

(2) Tighten the two bolts.
5) Position the ST by inserting the knock pin of ST into the knock hole of transmission case.

ST 499917500 DRIVE PINION GAUGE ASSY

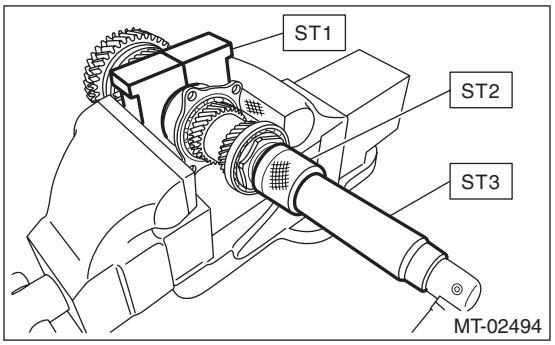
6) Slide the drive pinion gauge scale with finger tip and read the value at the point where it matches with the end face of drive pinion.

ST 499917500 DRIVE PINION GAUGE ASSY

(A) Adjust the clearance to zero without drive pinion shims.

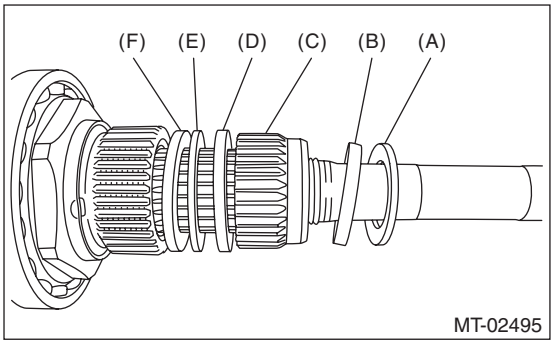
7) The thickness of drive pinion shims shall be determined by adding the value indicated on drive pinion to the value indicated on the ST. (Add if the number on drive pinion is prefixed by +, and subtract if the number is prefixed by –.)

8) Select one to three drive pinion shims in the following table for the value determined as described above, and take the drive pinion shim(s) whose thickness is closest to the said value.



NOTE:
Install the drive pinion shim(s) with its slit facing the shifter fork & rod side.

Drive pinion shim	
Part No.	Thickness mm (in)
32295AA031	0.150 (0.0059)
32295AA041	0.175 (0.0069)
32295AA051	0.200 (0.0079)
32295AA061	0.225 (0.0089)
32295AA071	0.250 (0.0098)
32295AA081	0.275 (0.0108)
32295AA091	0.300 (0.0118)
32295AA101	0.500 (0.0197)



9) Install the front differential assembly. <Ref. to 6MT-107, INSTALLATION, Front Differential Assembly.>
10) Fit the transmission case knock pin to the knock pin hole of the roller bearing and install the drive pinion shaft assembly.
11) Install the main shaft assembly. <Ref. to 6MT-86, INSTALLATION, Main Shaft Assembly.>
12) Check each shifter fork. <Ref. to 6MT-128, INSPECTION, Shifter Fork and Rod.>
13) Install the transmission case. <Ref. to 6MT-83, INSTALLATION, Transmission Case.>
14) Install the transfer case together with the extension case assembly. <Ref. to 6MT-63, INSTALLATION, Transfer Case and Extension Case Assembly.>
15) Install the manual transmission assembly to the vehicle. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

NOTE:
• Attach a cloth to the end of driven shaft (on the frictional side of the thrust needle bearing) to prevent damage during disassembly or reassembly.
• When replacing the coupling sleeve and synchronizer hub, replace them as a set. Because these must engage at the specified point, avoid disassembly as much as possible. If it is necessary to disassemble, mark the engaging points on the splines beforehand.
1) Flatten the tab of the lock nut.
2) Remove the lock nut using ST1, ST2 and ST3.

(A) Washer

18) Install the thrust bearing and needle bearing and install the driven shaft assembly.

19) Install the drive pinion collar, needle bearing, adjusting washer No. 2, thrust bearing, adjusting washer No. 1 and differential bevel gear sleeve in this order.

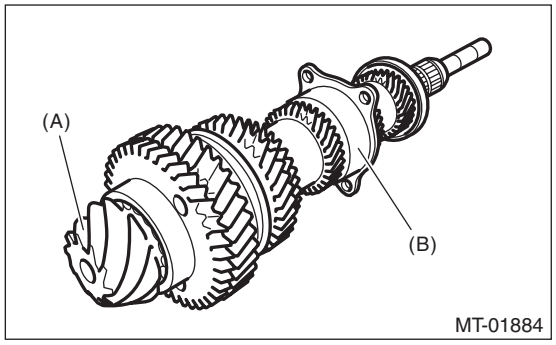
(A) Driven shaft
(B) Drive pinion shaft
(C) Drive pinion collar
(D) Needle bearing (25 × 30 × 20)
(E) Adjusting washer No. 2 (25 × 36 × t)
(F) Thrust bearing (25 × 36 × 2)
(G) Adjusting washer No. 1 (25 × 36 × t)
(H) Differential bevel gear sleeve

20) Adjust the thrust bearing preload. <Ref. to 6MT-104, THRUST BEARING PRELOAD, ADJUSTMENT, Drive Pinion Shaft Assembly.>

E: INSPECTION

Disassembled parts should be washed with cleaning solvent first, then inspected carefully.

1) Bearing



Replace the bearings in the following cases.

• When the bearing balls, outer races and inner races are broken or rusty.

• When the bearing is worn.

• When the bearings fail to turn smoothly or emit noise in rotation after transmission gear oil has been applied.

• The double ball bearing of the drive pinion shaft should be checked for smooth rotation before the drive pinion assembly is disassembled. In this case, because a preload is working on the bearing, its rotation feels like it is slightly dragging unlike other bearings.

(A) Drive pinion shaft
(B) Double ball bearing

• When bearing has other defects.

2) Bushing (each gear)

Replace the bushing in following cases.

• When the sliding surface is damaged or abnormally worn.

• When the inner wall is abnormally worn.

3) Gear

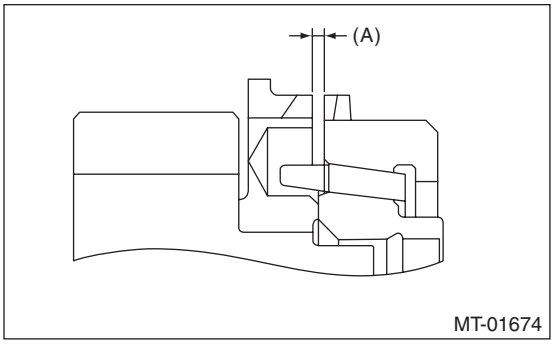
Replace gears in the following cases.

• Replace the gear with new part if its tooth surfaces are broken, damaged or excessively worn.

• Correct or replace if the cone that contacts the baulk ring is rough or damaged.

• Correct or replace if the inner surface or end face is damaged.

4) Baulk ring, synchro cone



Replace the baulk ring and synchro cone in the following cases.

• When the inner surface and end face are damaged.

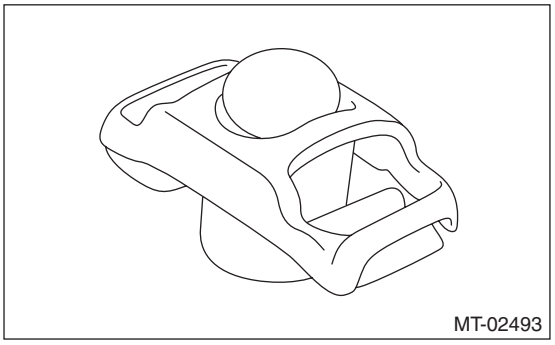
• When the baulk ring inner surface is abnormally or partially worn down.

• If the gap between the end faces of the baulk ring and the gear splined part is excessively small, check the clearance (A) while pressing the ring against the cone.

Clearance (A):
0.5 mm (0.020 in) or more

• When the contact surface of the baulk ring insert section is damaged or abnormally worn.

• Apply transmission gear oil to the cone of the gear and while press-fitting the baulk ring, check there is no rotation in the circumferential direction.

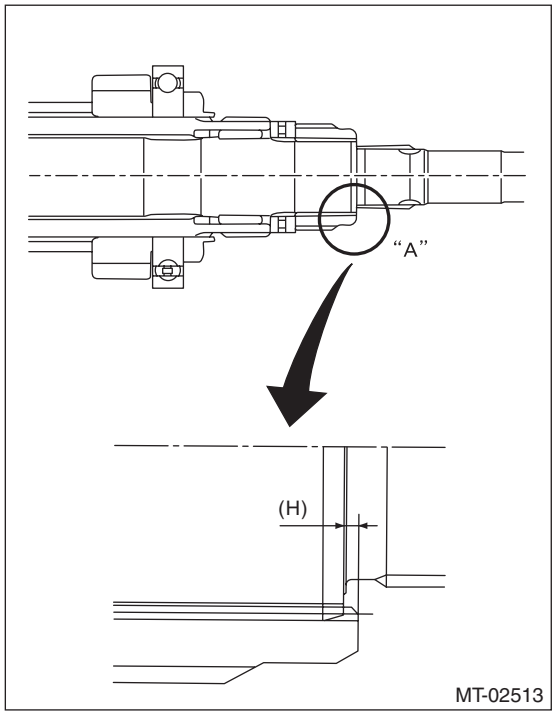


5) Coupling sleeve and synchronizer hub

• Check the slipping condition of the coupling sleeve.

• Check the splines on the coupling sleeve and synchronizer hub for wear.

6) Shifting insert

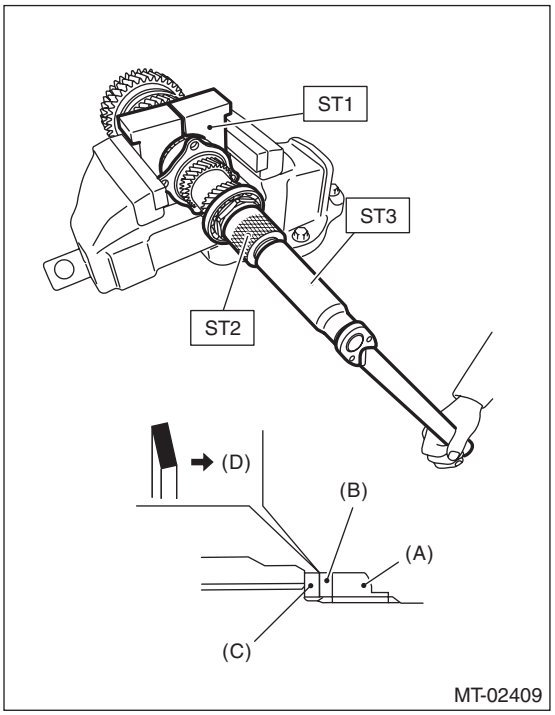


Replace the shifting insert if there is deformation, excessive wear on the ball section or any defectiveness.

F: ADJUSTMENT

1. THRUST BEARING PRELOAD

1) Select a suitable adjusting washer No. 1 so that dimension (H) will be zero in a visual check. Position the washer (20 × 31 × 4) and lock washer (20 × 31 × 2.3) and attach the lock nut (20 × 11).

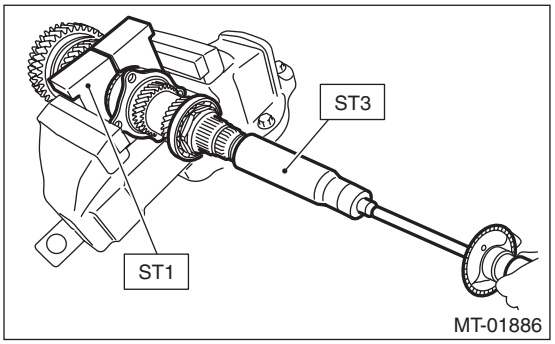


2) Install the lock nut with ST1, ST2 and ST3.

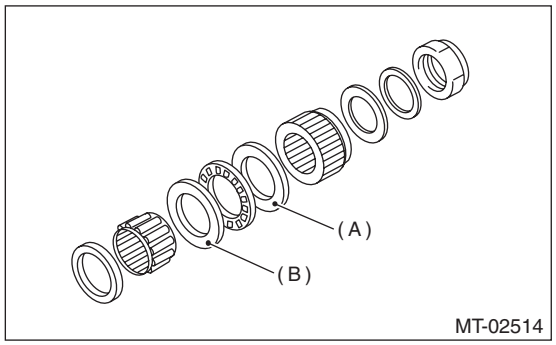
NOTE:
- Use new lock nuts and lock washers.
- Install the lock washer in the correct direction.

Tightening torque:
126 N·m (12.8 kgf-m, 92.9 ft-lb)

ST1 18680AA020 HOLDER
ST2 18667AA020 HOLDER
ST3 18662AA010 SOCKET (27)



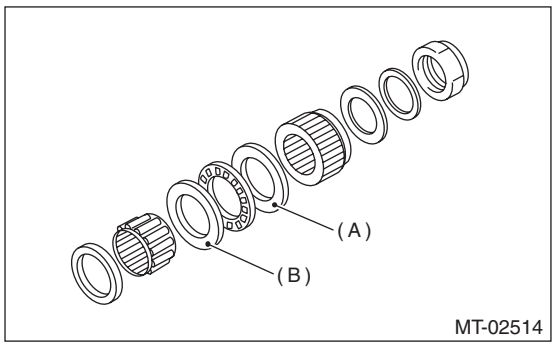
(A) Lock nut
(B) Lock washer
(C) Washer
(D) Lock nut side



3) After removing the ST2 used in step 2), measure the starting torque using torque driver.

Starting torque:
0.3 — 0.8 N·m
(0.03 — 0.08 kgf-m, 0.2 — 0.6 ft-lb)

ST1 18680AA020 HOLDER
ST3 18662AA010 SOCKET (27)

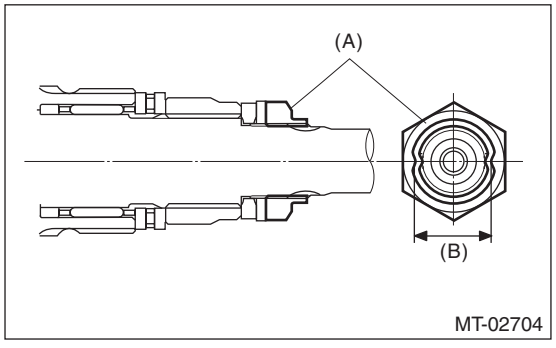


4) If the starting torque is not within the specified limit, select new adjusting washer No. 1 and recheck starting torque.

(A) Adjusting washer No. 1
(B) Adjusting washer No. 2

Adjusting washer No. 1	
Part No.	Thickness mm (in)
803025071	2.925 (0.1152)
803025072	2.950 (0.1161)
803025073	2.975 (0.1171)
803025074	3.000 (0.1181)
803025075	3.025 (0.1191)
803025076	3.050 (0.1201)
803025077	3.075 (0.1211)

5) If the specified starting torque cannot be obtained by the selection of adjusting washer No. 1, select adjusting washer No. 2 from the list below. Repeat steps 1) through 4) to adjust starting torque.



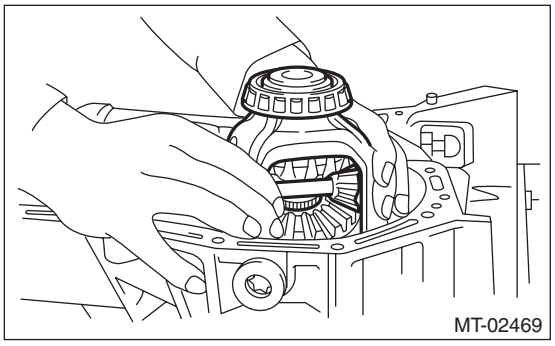
(A) Adjusting washer No. 1
(B) Adjusting washer No. 2

Starting torque	Dimension H	Adjusting washer No. 2
Low	Small	Select thicker one.
High	Large	Select thinner one.

Adjusting washer No. 2	
Part No.	Thickness mm (in)
803025070	2.850 (0.1122)
803025074	3.000 (0.1181)
803025078	3.150 (0.1240)

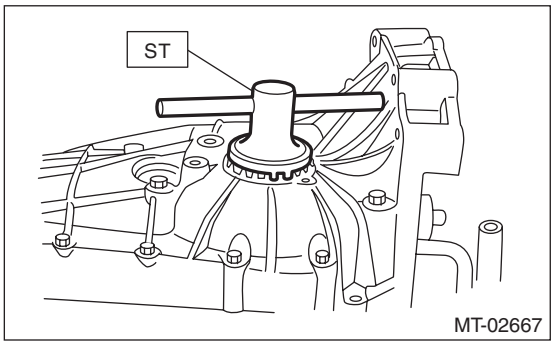
6) Recheck that the starting torque is within the specified range, and crimp the lock nut at two locations so that the dimension (B) becomes 20.1 mm (0.79 in) or less.

CAUTION:
When crimping the lock nut, be careful not to crack it.



(A) Lock nut
(B) Outer dimension after crimping

18.Front Differential Assembly



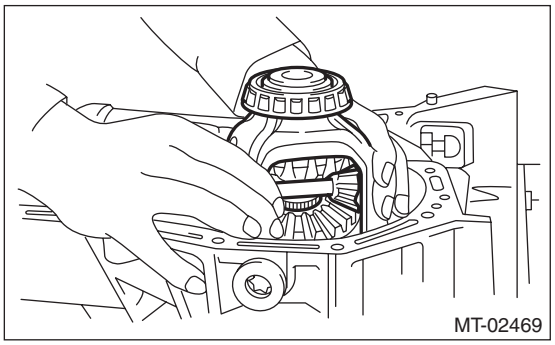
A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT-28, REMOVAL, Manual Transmission Assembly.>
2) Remove the transfer case together with the extension case assembly. <Ref. to 6MT-62, REMOVAL, Transfer Case and Extension Case Assembly.>
3) Remove the transmission case. <Ref. to 6MT-82, REMOVAL, Transmission Case.>
4) Remove the drive pinion shaft assembly. <Ref. to 6MT-95, REMOVAL, Drive Pinion Shaft Assembly.>
5) Remove the main shaft assembly. <Ref. to 6MT-86, REMOVAL, Main Shaft Assembly.>
6) Remove the front differential assembly.

NOTE:
- Do not confuse the right and left taper roller bearing outer races.
- Be careful not to damage the oil seal of differential side retainer.

MT-02469

7) Remove the differential side retainers using ST.
ST 18630AA010 WRENCH COMPL RETAINER



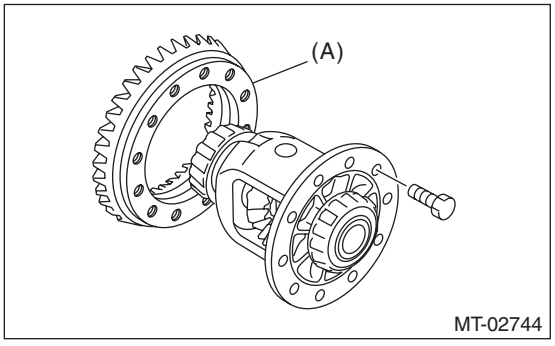
MT-02667

8) Remove the taper roller bearing outer race from the transmission case.
ST 398527700 PULLER ASSY

B: INSTALLATION

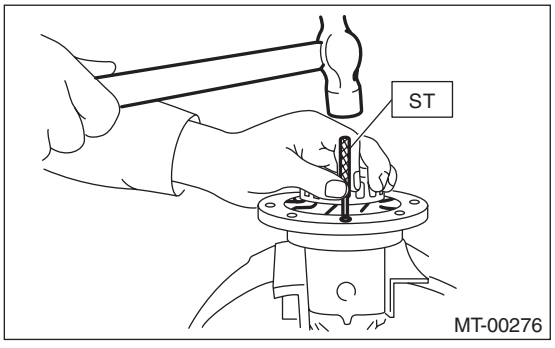
1) Install the differential side retainers using ST.
ST 18630AA010 WRENCH COMPL RETAINER
2) Install the taper roller bearing outer race to the transmission case.
3) Install the front differential assembly.

CAUTION:
Make sure the oil seal lip is not folded.



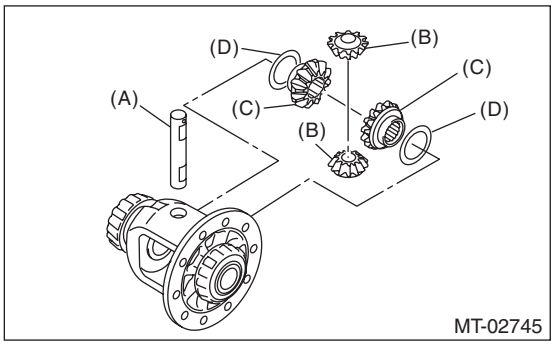
4) Install the main shaft assembly. <Ref. to 6MT-86, INSTALLATION, Main Shaft Assembly.>
5) Install the drive pinion shaft assembly. <Ref. to 6MT-95, INSTALLATION, Drive Pinion Shaft Assembly.>
6) Install the transmission case. <Ref. to 6MT-83, INSTALLATION, Transmission Case.>
7) Install the transfer case together with the extension case assembly. <Ref. to 6MT-63, INSTALLATION, Transfer Case and Extension Case Assembly.>
8) Install the manual transmission assembly to the vehicle. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY



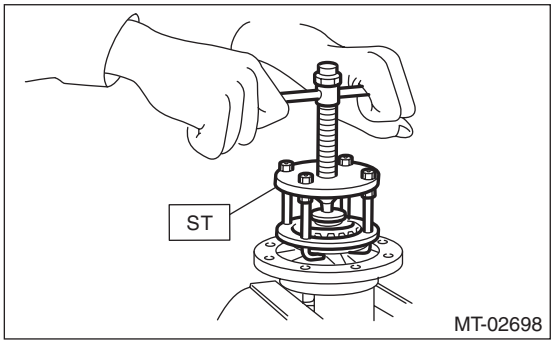
1. DIFFERENTIAL CASE ASSEMBLY

1) Loosen the twelve bolts and remove hypoid driven gear.

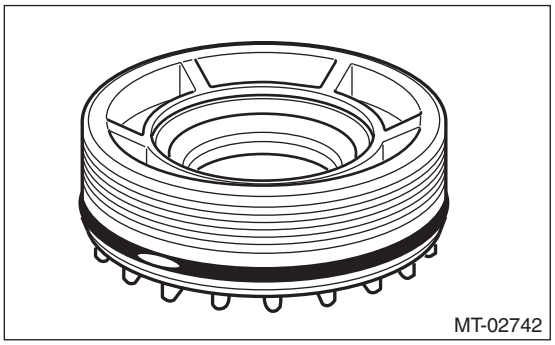


(A) Hypoid driven gear

2) Drive out the straight pin from differential assembly toward hypoid driven gear side.
ST 899904100 STRAIGHT PIN REMOVER

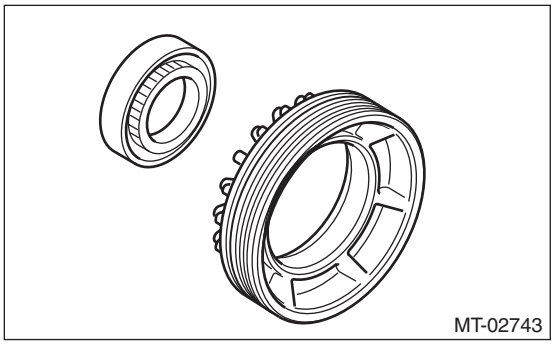


3) Pull out the pinion shaft, and remove the differential bevel pinion, differential bevel gear and adjusting washer.



(A) Pinion shaft
(B) Differential bevel pinion
(C) Differential bevel gear
(D) Adjusting washer

4) Using the ST, remove the taper roller bearing.
ST 899524100 PULLER SET

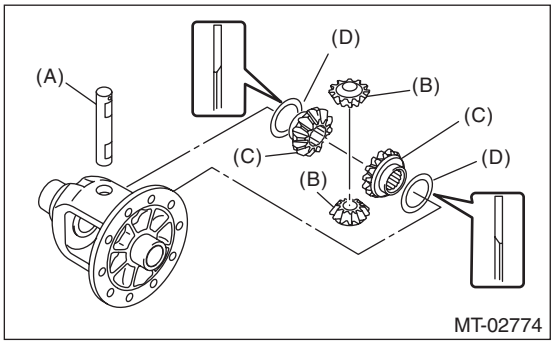


2. DIFFERENTIAL SIDE RETAINER

1) Remove the O-rings.

2) Remove the oil seal.

NOTE:
Remove using the flat tip screwdriver.

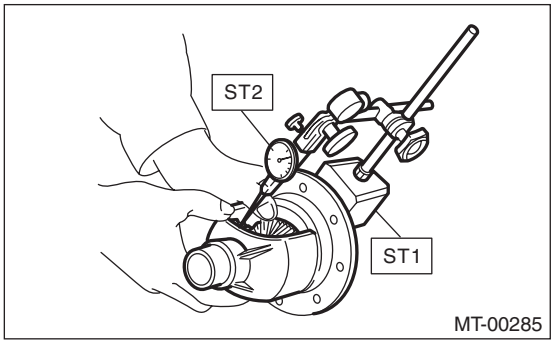


D: ASSEMBLY

1. DIFFERENTIAL CASE ASSEMBLY

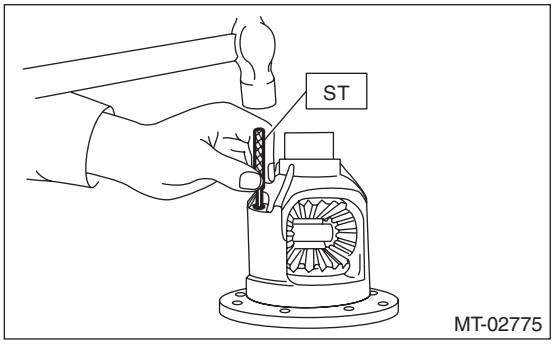
1) Install the differential bevel gear and differential bevel pinion together with adjusting washer, and insert the pinion shaft.

NOTE:
Face the chamfered side of adjusting washer toward differential bevel gear.



(A) Pinion shaft
(B) Differential bevel pinion
(C) Differential bevel gear
(D) Adjusting washer

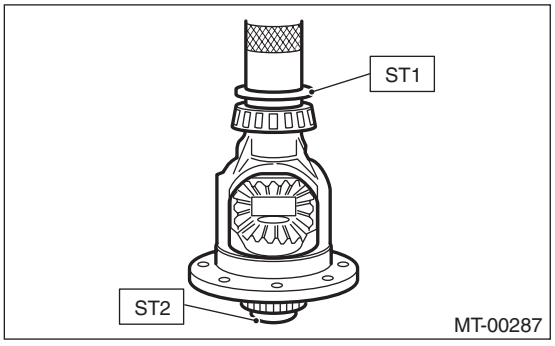
2) Measure the backlash between the differential bevel gear and differential bevel pinion. Adjust the backlash if not within specified limit. <Ref. to 6MT-113, DIFFERENTIAL BEVEL PINION GEAR BACKLASH, INSPECTION, Front Differential Assembly.>



NOTE:
Be sure the differential bevel pinion gear teeth contact adjacent gear teeth during measurement.

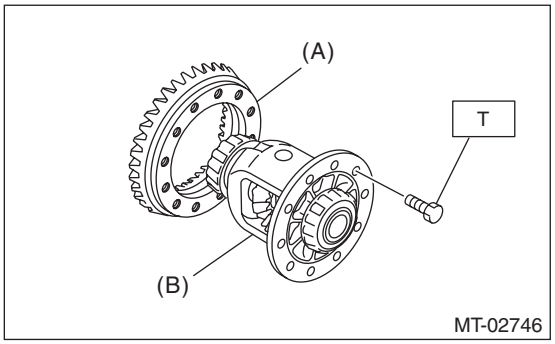
Standard backlash
0.13 — 0.18 mm (0.0051 — 0.0071 in)
ST1 498247001 MAGNET BASE
ST2 498247100 DIAL GAUGE

3) Align the pinion shaft pin hole with the differential case pin hole, and drive the straight pin into the holes from the hypoid driven gear side using the ST.



NOTE:
Use a new straight pin. After driving the straight pin, crimp the area around the hole in order to prevent the straight pin from coming out.
ST 899904100 STRAIGHT PIN REMOVER

4) Install the taper roller bearing.

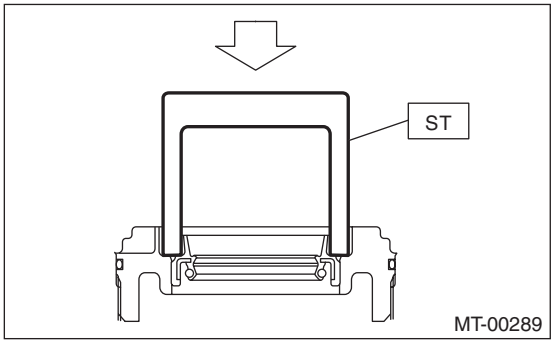


CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

NOTE:
Be careful when handling because the taper roller bearing and the outer race are used as a set.
ST1 499277100 BUSHING 1-2 INSTALLER
ST2 398497701 ADAPTER

5) Install the hypoid driven gear using twelve bolts.

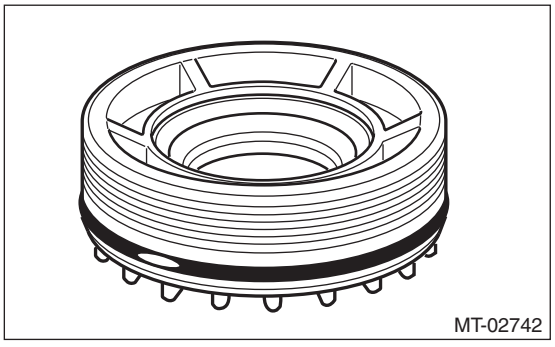
Tightening torque:
T: 62 N·m (6.3 kgf-m, 45.7 ft-lb)



(A) Hypoid driven gear
(B) Differential case

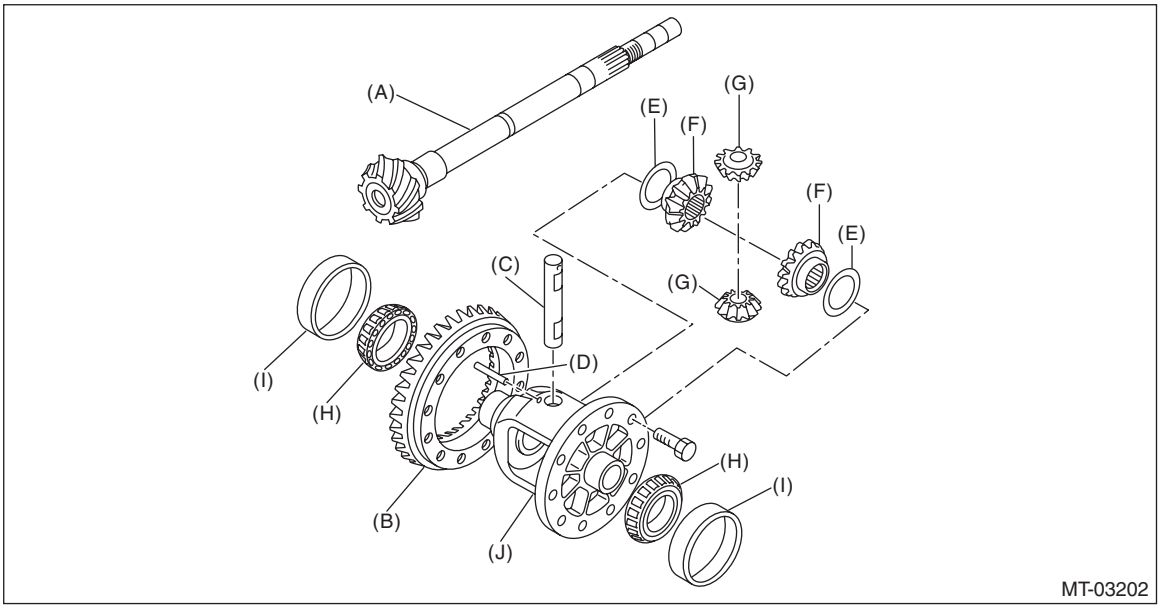
2. DIFFERENTIAL SIDE RETAINER

1) Using the ST, install the oil seal by lightly tapping with a plastic hammer.



NOTE:
- Use a new oil seal.
- Apply transmission gear oil to the oil seal lips, and install the oil seal while being careful not to deform the lip.
- Check the identification marks (L, R), and attach the oil seals RH and LH.

ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER



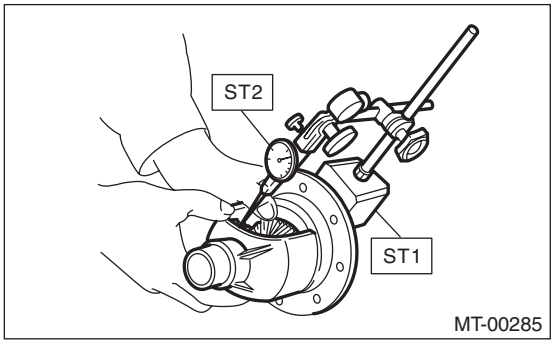
2) Install the O-rings.

NOTE:
- Use new O-rings.
- Apply transmission gear oil to O-ring.
- Do not stretch or damage the O-ring.
- Install the O-ring after hypoid driven gear backlash adjustment and completion of tooth contact inspection.

E: INSPECTION

Repair or replace the differential gear in the following cases:
- When the hypoid driven gear and drive pinion shaft tooth surfaces are damaged, excessively worn, or seized.
- When the roller bearing on the drive pinion shaft has a worn or damaged roller path.
- When there is damage, wear or seizure of the differential bevel pinion, differential bevel gear, adjusting washer, pinion shaft or straight pin.
- When the differential case sliding surfaces are worn or damaged.

(A) Drive pinion shaft
(B) Hypoid driven gear
(C) Pinion shaft
(D) Straight pin
(E) Adjusting washer
(F) Differential bevel gear
(G) Differential bevel pinion
(H) Taper roller bearing inner race
(I) Taper roller bearing outer race
(J) Differential case



1. DIFFERENTIAL BEVEL PINION GEAR BACKLASH

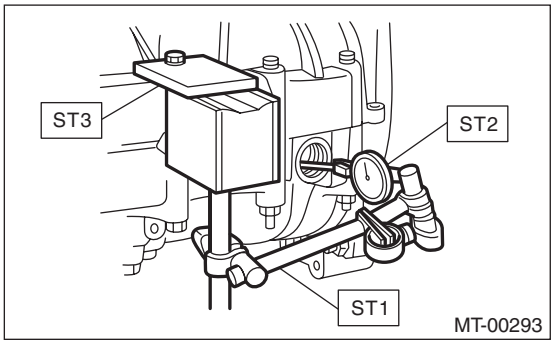
Measure the backlash between the differential bevel gear and differential bevel pinion. Adjust the backlash if not within specified limit. <Ref. to 6MT-114, ADJUSTMENT, Front Differential Assembly.>

Standard backlash

0.13 — 0.18 mm (0.0051 — 0.0071 in)

ST1 498247001 MAGNET BASE
ST2 498247100 DIAL GAUGE

2. HYPOID DRIVEN GEAR BACKLASH

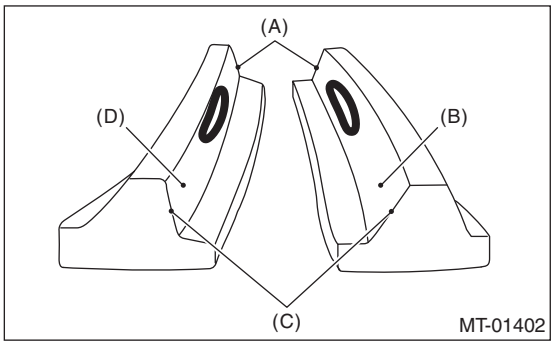


1) Set the ST1, ST2 and ST3. Insert the dial gauge probe through drain plug hole so that the probe comes in contact with the tooth surface on the right corner, and check the backlash.
ST1 498247001 MAGNET BASE
ST2 498247100 DIAL GAUGE
ST3 498255400 PLATE
2) Install SUBARU genuine axle shafts to both sides, rotate in the inversion direction so that the gauge contacts the tooth surface, and read the dial gauge.

NOTE:
If the backlash is outside the specified range, adjust it by turning the differential side retainers on the left and right side.

Backlash

0.13 — 0.18 mm (0.0051 — 0.0071 in)



Part No. 38415AA100 Axle shaft

3. TOOTH CONTACT OF HYPOID DRIVEN GEAR

Check tooth contact of hypoid driven gear as follows: Apply a thin uniform coat of red lead on both teeth surfaces on 3 or 4 teeth of the hypoid gear. Move the hypoid driven gear back and forth by turning the transmission main shaft until a definite contact pattern is developed on the hypoid driven gear, and judge whether face contact is correct. When the contact pattern is not correct, adjust. <Ref. to 6MT-114, ADJUSTMENT, Front Differential Assembly.>

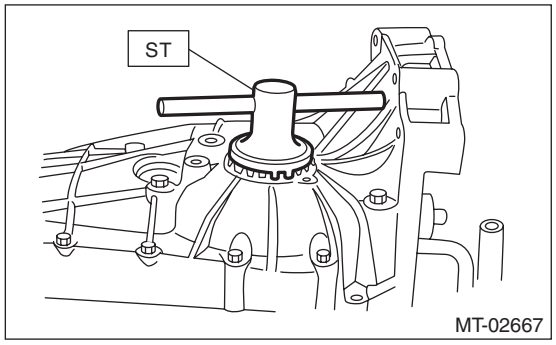
- Tooth contact is correct.

(A) Toe
(B) Coast side
(C) Heel
(D) Drive side

F: ADJUSTMENT

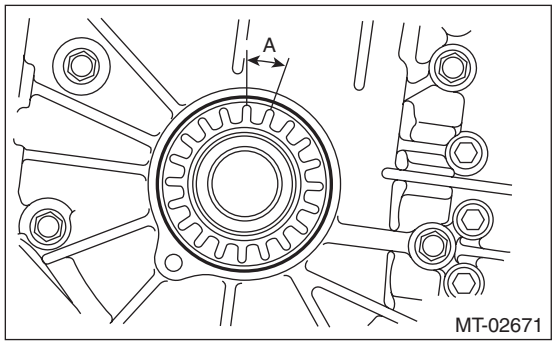
1. DIFFERENTIAL BEVEL PINION GEAR BACKLASH

1) Disassemble the front differential assembly. <Ref. to 6MT-107, DISASSEMBLY, Front Differential Assembly.>
2) Select the adjusting washer from the table and install.



Adjusting washer	
Part No.	Thickness mm (in)
803038021	0.925 — 0.950 (0.0364 — 0.0374)
803038022	0.975 — 1.000 (0.0384 — 0.0394)
803038023	1.025 — 1.050 (0.0404 — 0.0413)

3) Adjust until the standard value is obtained.

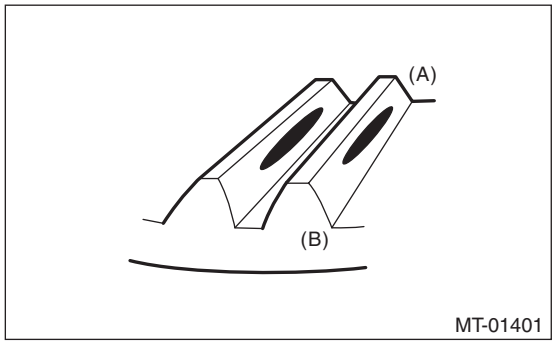


Backlash:
Standard
0.13 — 0.18 mm (0.0051 — 0.0071 in)

2. HYPOID DRIVEN GEAR BACKLASH

Adjust the backlash by turning the differential side retainers on the left and right side.
ST 18630AA010 WRENCH COMPL RETAINER

NOTE:
Each time the differential side retainer rotates by one notch (A), the backlash changes by 0.05 mm (0.0020 in).

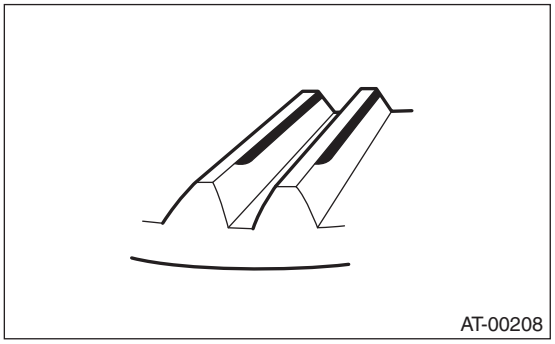


3. TOOTH CONTACT OF HYPOID DRIVEN GEAR

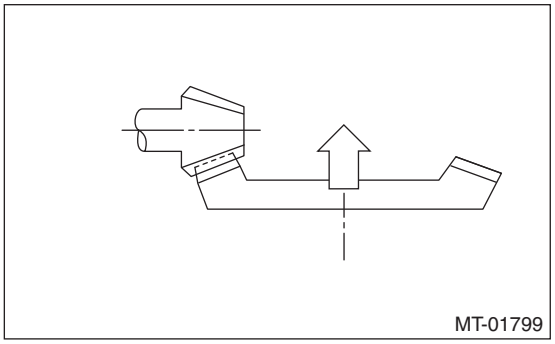
1) Adjust until correct teeth contact is obtained.
2) Check tooth contact, and perform the adjustment as follows.

- Correct tooth contact

Check item: Tooth contact surface is slightly shifted toward the toe side under a no-load condition. (When driving, it moves towards the heel side.)



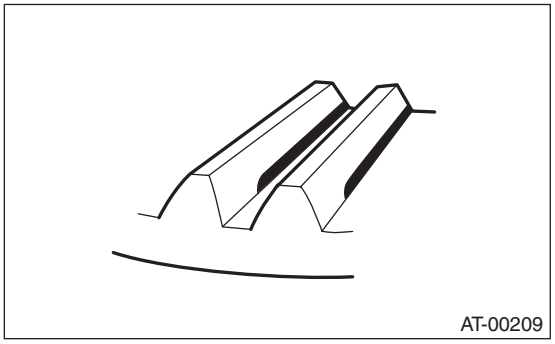
(A) Toe side
(B) Heel side



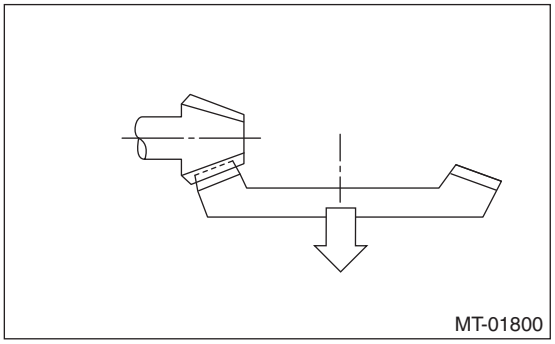
- Face contact

Check item: Backlash is too large.

Contact pattern



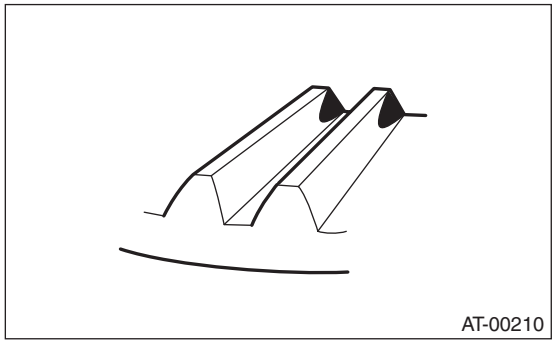
Corrective action: Tighten the differential side retainer to move the hypoid driven gear closer to the drive pinion shaft.



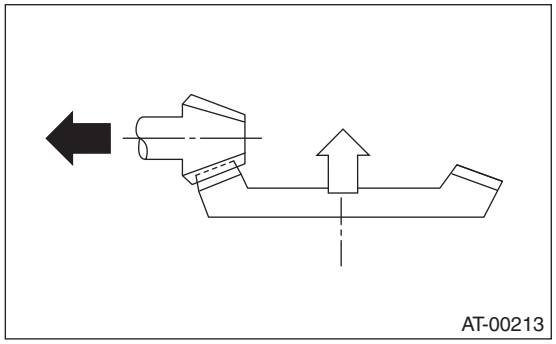
- Flank contact

Check item: Backlash is too small.

Contact pattern



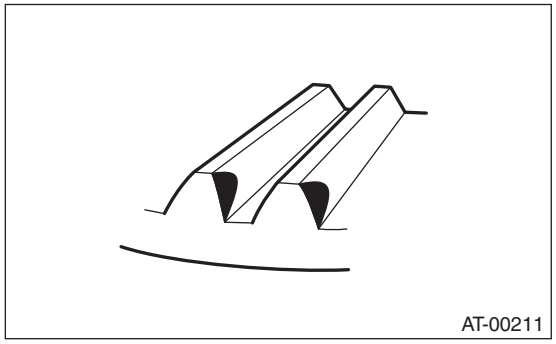
Corrective action: Loosen the differential side retainer to move the hypoid driven gear away from the drive pinion shaft.



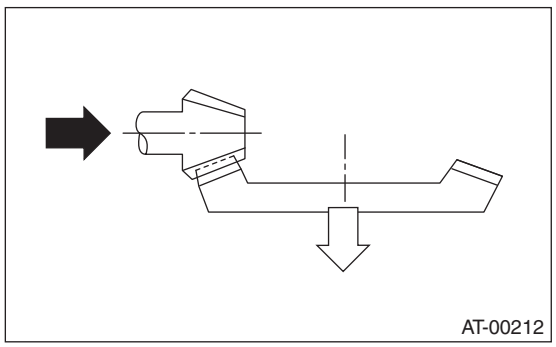
- Toe contact (inside contact)

Check item: Teeth contact area is too small.

Contact pattern



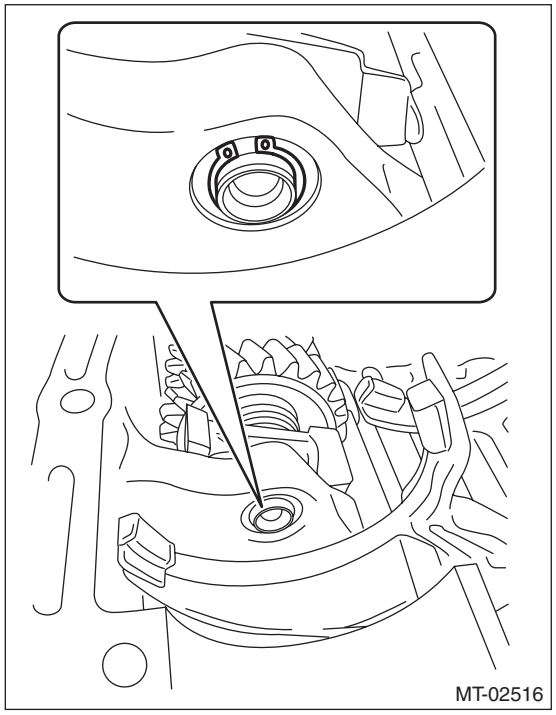
Corrective action: Increase the thickness of drive pinion shim and tighten the differential side retainer to move the hypoid driven gear closer to the drive pinion shaft according to the procedure for bringing drive pinion shaft away from hypoid driven gear.



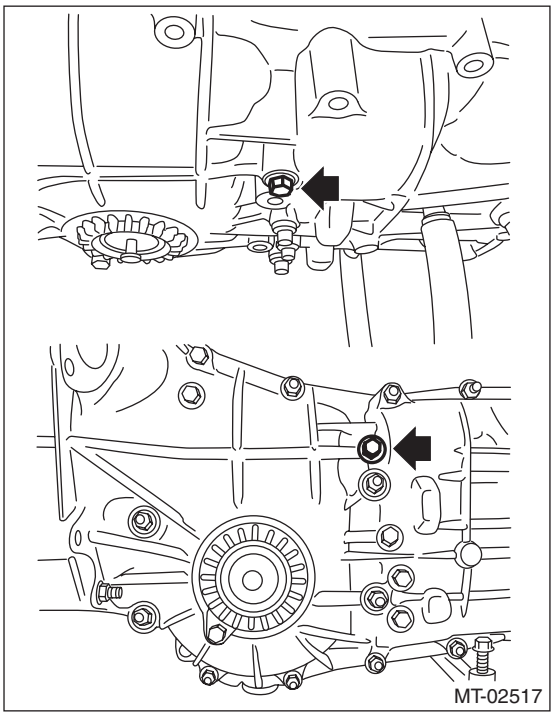
- Heel contact (outside end contact)

Check item: Teeth contact area is too small.

Contact pattern



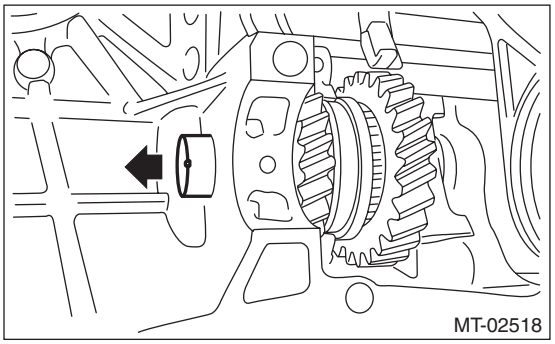
Corrective action: Reduce thickness of the drive pinion shim according to the procedures for moving the drive pinion shaft closer to driven gear. Also loosen the differential side retainer to move the hypoid driven gear away from the drive pinion shaft.



19.Reverse Idler Gear

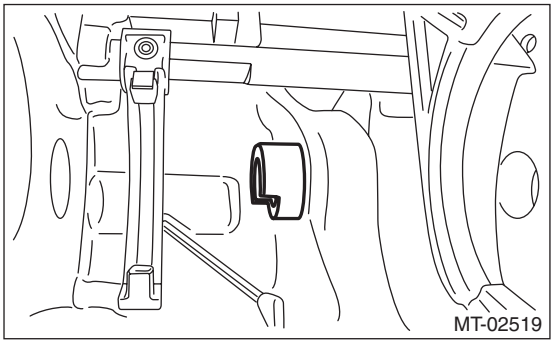
A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT-28, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and the neutral position switch. <Ref. to 6MT-56, REMOVAL, Switches and Harness.>
3) Remove the transfer case together with the extension case assembly. <Ref. to 6MT-62, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the transmission case. <Ref. to 6MT-82, REMOVAL, Transmission Case.>
5) Remove the drive pinion shaft assembly. <Ref. to 6MT-95, REMOVAL, Drive Pinion Shaft Assembly.>
6) Remove the main shaft assembly. <Ref. to 6MT-86, REMOVAL, Main Shaft Assembly.>
7) Remove the front differential assembly. <Ref. to 6MT-106, REMOVAL, Front Differential Assembly.>
8) Shift into 4th.
9) Remove the snap ring.



MT-02516

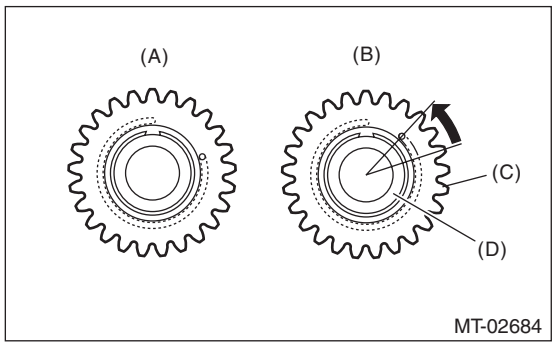
10) Remove the reverse idler gear shaft securing bolt.



MT-02517

11) Remove the reverse idler gear shaft by pushing it out.

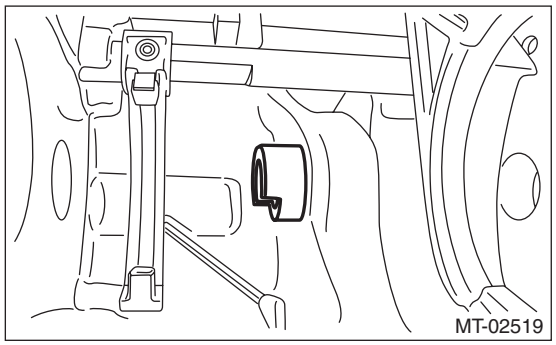
NOTE:
Support the reverse idler gear assembly with hands to avoid collapsing.



MT-02518

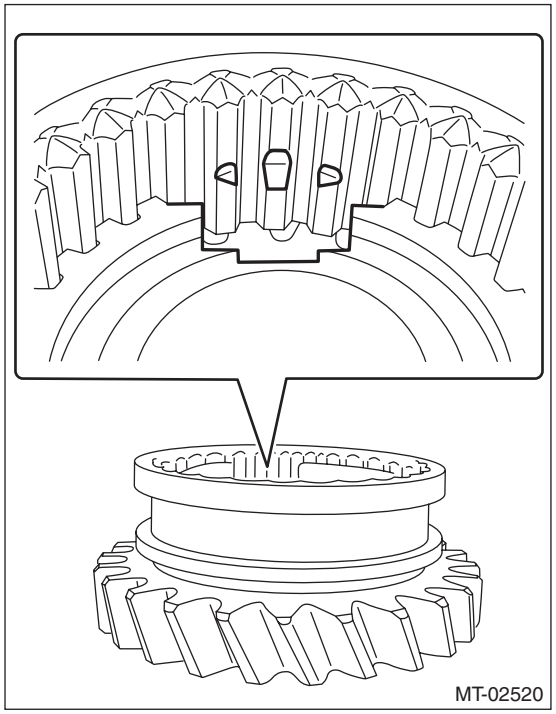
12) Remove the reverse idler gear.
13) Remove the reverse idler gear bushing.

MT-02519



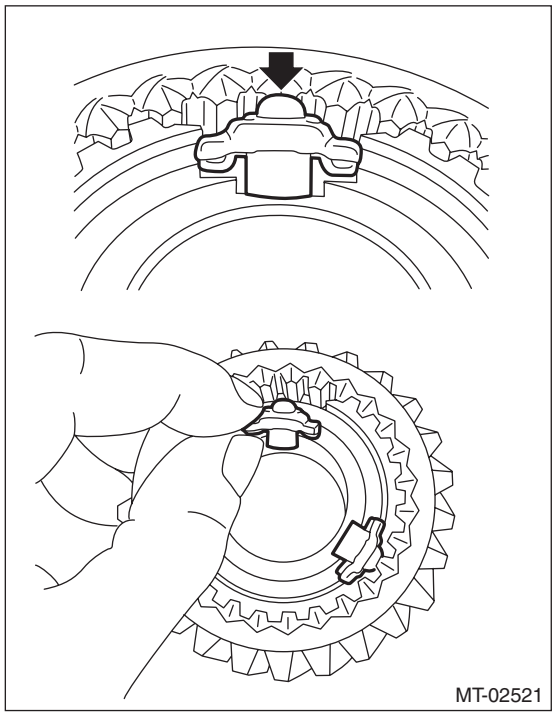
B: INSTALLATION

NOTE:
Rotate the reverse idler sub gear by two teeth from free status in the direction of the arrow to make it engage with the reverse gear of the main shaft and install the main shaft assembly.



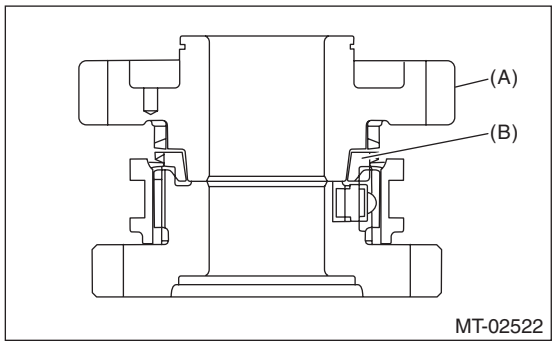
(A) Free status
(B) Set status
(C) Reverse idler sub gear
(D) Reverse idler gear

1) Install the reverse idler gear bushing with the cutout portion of the reverse idler gear bushing facing the front of the transmission.



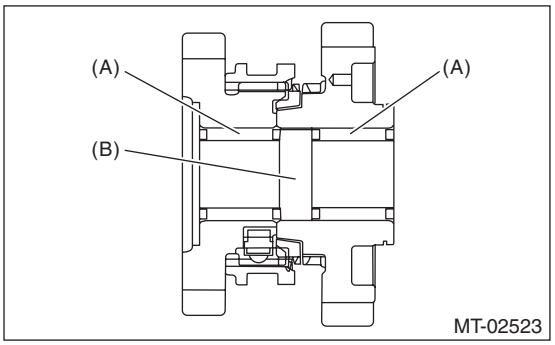
2) Assembling reverse idler gear assembly
(1) Install the reverse coupling sleeve to the reverse idler gear No. 2.

NOTE:
• Install the reverse coupling sleeve in the correct direction.
• Make sure that the oval-shaped cutout portion inside the reverse coupling sleeve matches the center of the reverse idler gear No. 2 groove.



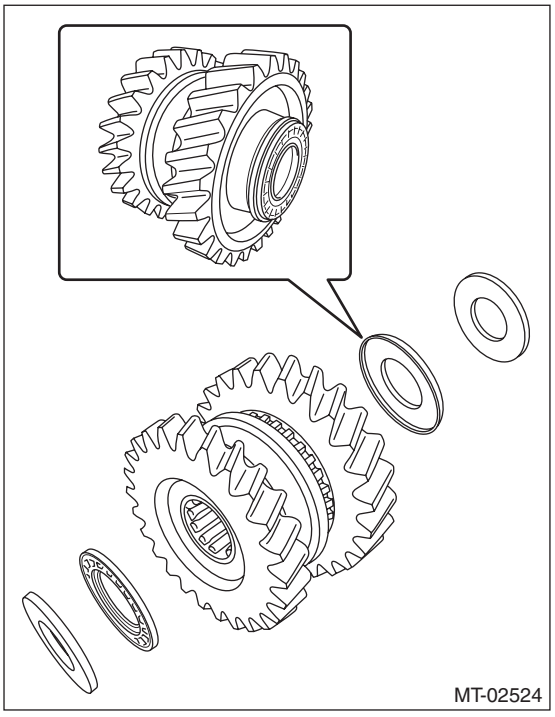
(2) Install the reverse shifting insert.

NOTE:
Press in the ball part to install.



(3) Install the reverse baulk ring and reverse idler gear.

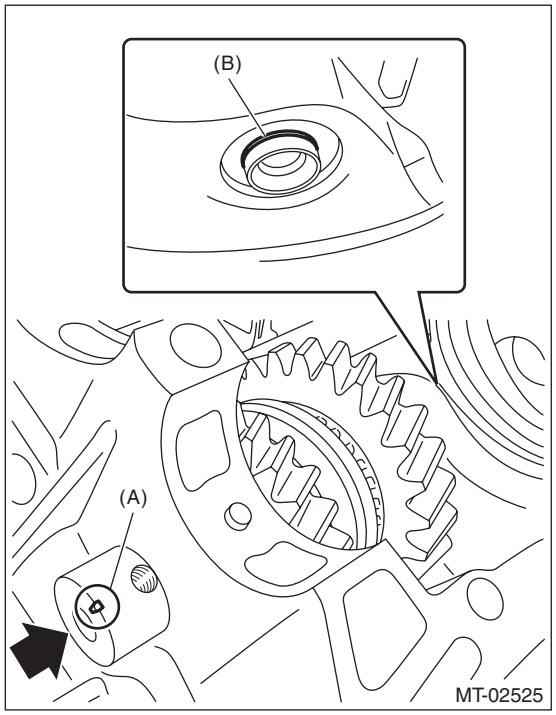
(A) Reverse idler gear
(B) Reverse baulk ring



(4) Install the needle bearing and reverse idler gear collar.

(A) Needle bearing
(B) Reverse idler gear collar

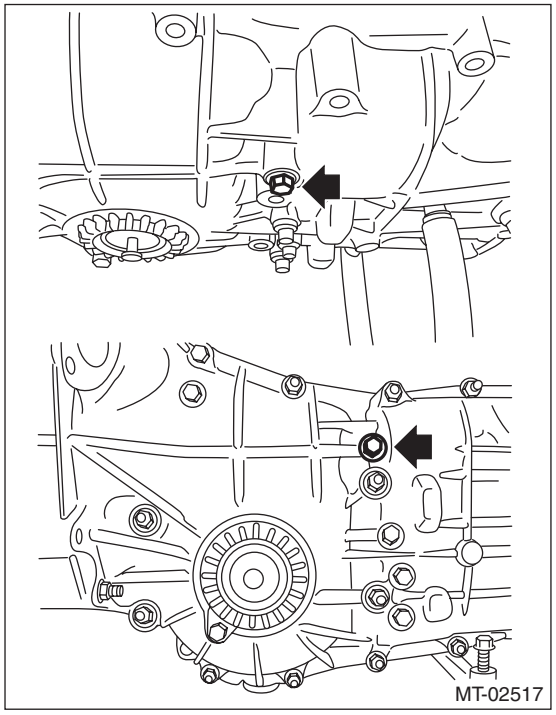
(5) Install the thrust bearing and reverse idler gear washer.



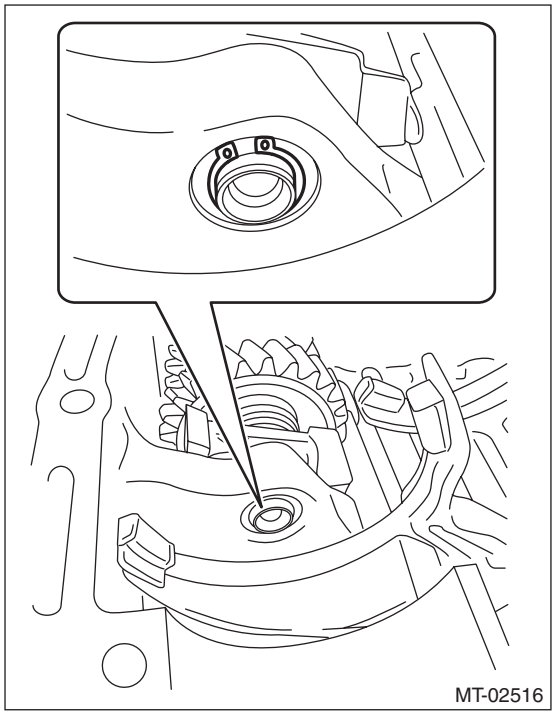
NOTE:
Install the thrust bearing in the correct direction.

3) Install the assembled reverse idler gear assembly to the transmission case and hold it with hands.

4) Install the reverse idler gear shaft.



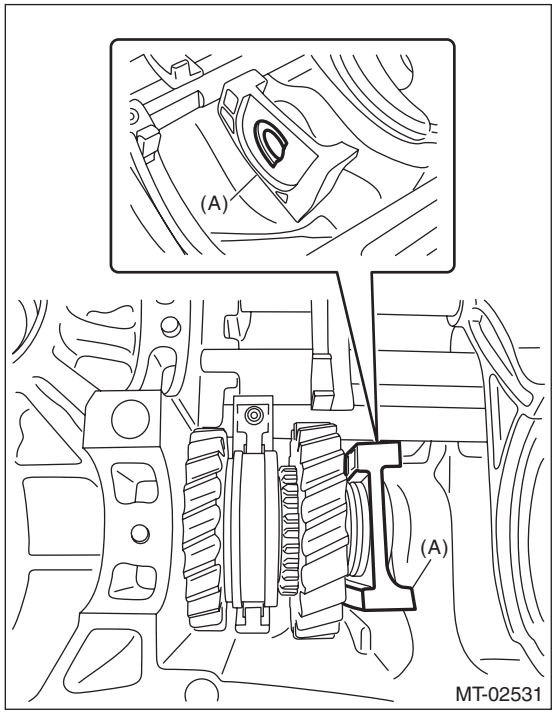
NOTE:
• Install with the cutout portion of the reverse idler gear shaft facing the RH side of the transmission case.
• Make sure that the groove of the reverse idler gear shaft comes out of the reverse idler gear bushing.



(A) Cutout portion of the reverse idler gear shaft
(B) Snap ring installation groove

5) Install the reverse idler gear shaft securing bolt.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

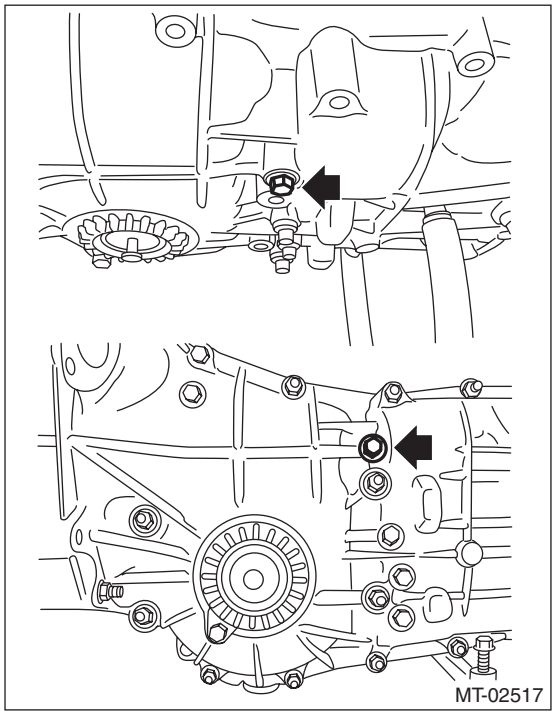


6) Install the snap ring.

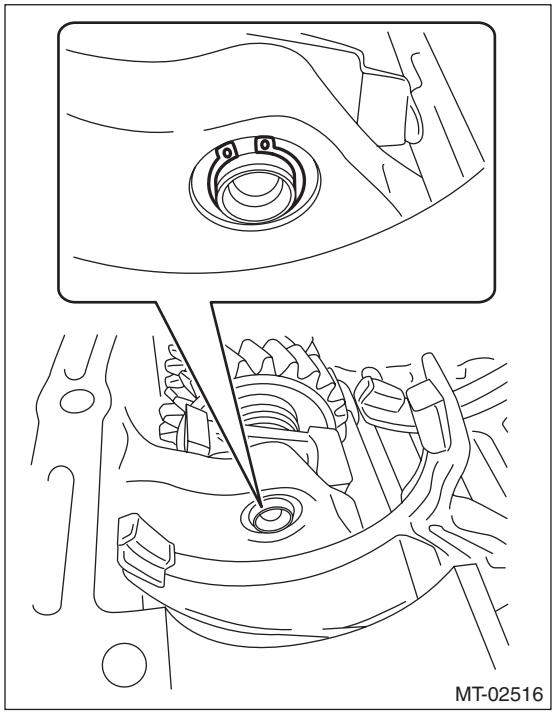
7) Select the reverse idler gear bushing. <Ref. to 6MT-124, ADJUSTMENT, Reverse Idler Gear.>
8) Remove the reverse idler gear assembly and replace with the selected bushing. <Ref. to 6MT-118, REMOVAL, Reverse Idler Gear.>

9) Install the reverse idler gear assembly, oil case guide and reverse idler gear shaft.

NOTE:
• Install with the cutout portion of the reverse idler gear shaft facing the RH side of the transmission case.
• Make sure that the groove of the reverse idler gear shaft comes out of the reverse idler gear bushing.
• Insert the cutout portion of the reverse idler gear bushing into the oil case guide.



(A) Oil case guide

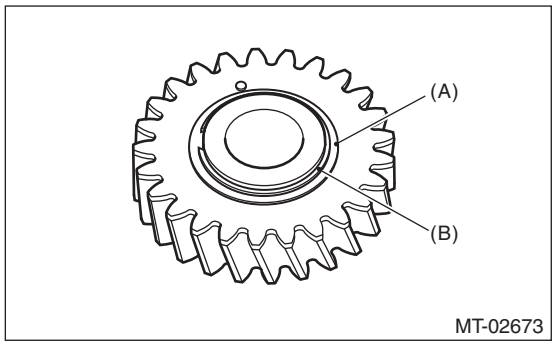


10) Install the reverse idler gear shaft securing bolt.

NOTE:
Use a new gasket.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

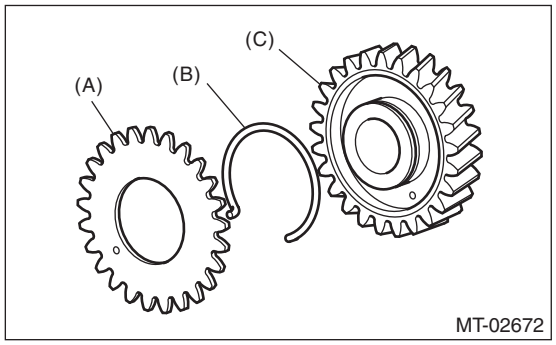
11) Install the snap ring.



12) Check the reverse shifter fork. <Ref. to 6MT-128, INSPECTION, Shifter Fork and Rod.>
13) Install the front differential assembly. <Ref. to 6MT-107, INSTALLATION, Front Differential Assembly.>

14) Install the main shaft assembly. <Ref. to 6MT-86, INSTALLATION, Main Shaft Assembly.>
15) Install the drive pinion shaft assembly. <Ref. to 6MT-95, INSTALLATION, Drive Pinion Shaft Assembly.>
16) Install the transmission case. <Ref. to 6MT-83, INSTALLATION, Transmission Case.>
17) Install the transfer case together with the extension case assembly. <Ref. to 6MT-63, INSTALLATION, Transfer Case and Extension Case Assembly.>
18) Install the back-up light switch and the neutral position switch. <Ref. to 6MT-57, INSTALLATION, Switches and Harness.>
19) Install the manual transmission assembly to the vehicle. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

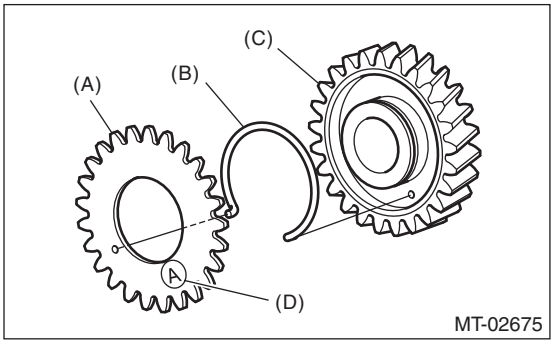


1. REVERSE IDLER GEAR ASSY

1) Remove the snap ring and friction plate.

(A) Friction plate
(B) Snap ring

2) Remove the reverse idler sub gear and reverse idler spring.

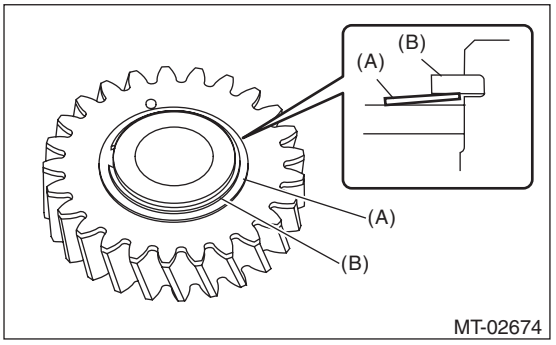


(A) Reverse idler sub gear
(B) Reverse idler spring
(C) Reverse idler gear

D: ASSEMBLY

1. REVERSE IDLER GEAR ASSY

1) Attach the reverse idler sub gear and reverse idler spring.

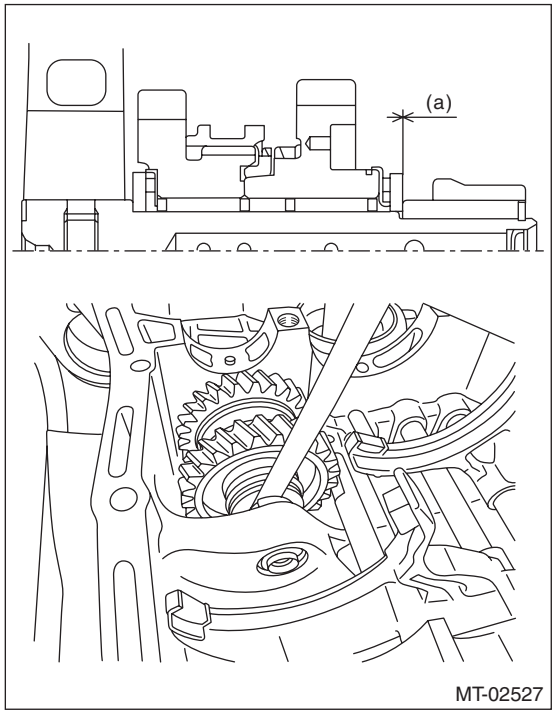


NOTE:
Point the stamp (marking A) towards the outside, and install the reverse idler sub gear.

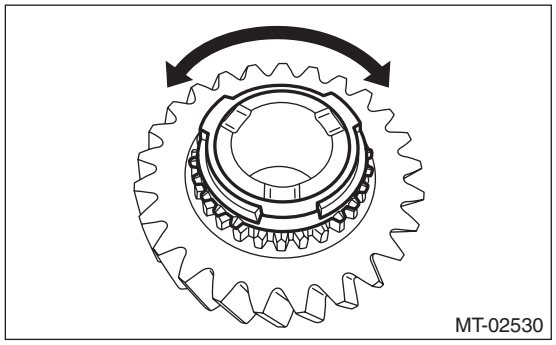
(A) Reverse idler sub gear
(B) Reverse idler spring
(C) Reverse idler gear
(D) Stamp (marking A)

2) Install the friction plate and snap ring.

NOTE:
Make sure the friction plate is installed in the proper direction.



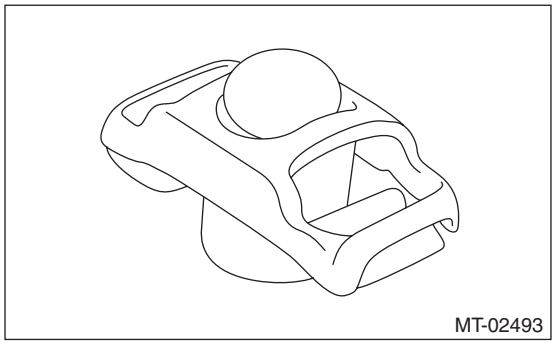
(A) Friction plate
(B) Snap ring



E: INSPECTION

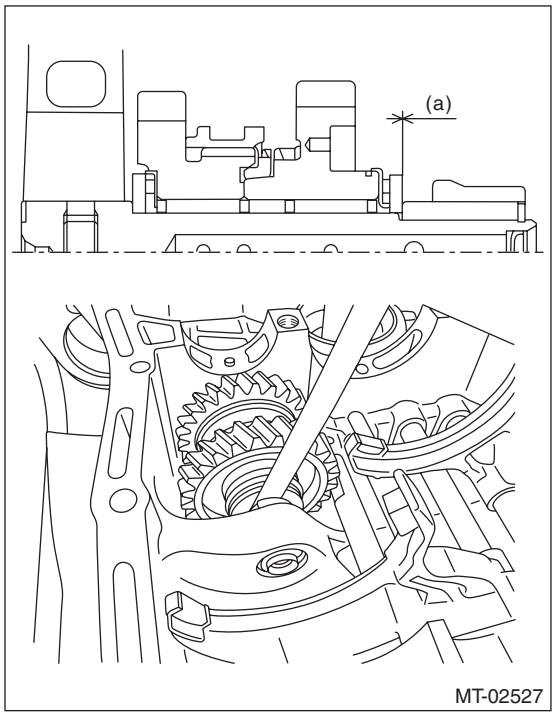
1) Check the clearance between the reverse idler gear bushing and reverse idler gear washer. If the value is out of specification, select the appropriate reverse idler gear bushing and adjust.

Clearance (a):
0.1 — 0.3 mm (0.004 — 0.012 in)



2) Check the reverse idler gear and reverse idler gear shaft for damage. Replace if it is damaged.
3) Apply transmission gear oil to the cone of the gear and while press-fitting the baulk ring, check there is no rotation in the circumferential direction.

4) Coupling sleeve and synchronizer hub
• Check the slipping condition of the coupling sleeve.
• Check the splines on the coupling sleeve and reverse idler gear for wear.

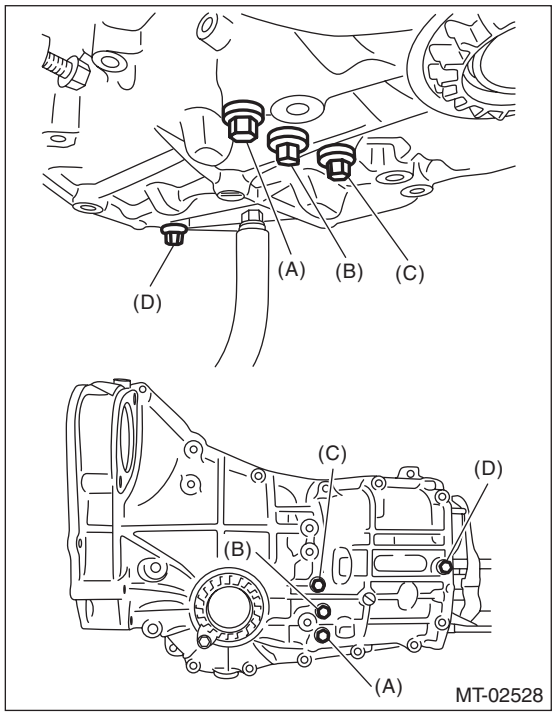


5) Shifting insert
Replace the shifting insert if there is deformation, excessive wear on the ball section or any defectiveness.

F: ADJUSTMENT

1) Select the appropriate reverse idler gear bushing from the table below, and adjust until the clearance between the reverse idler gear and reverse idler gear washer is within specification.

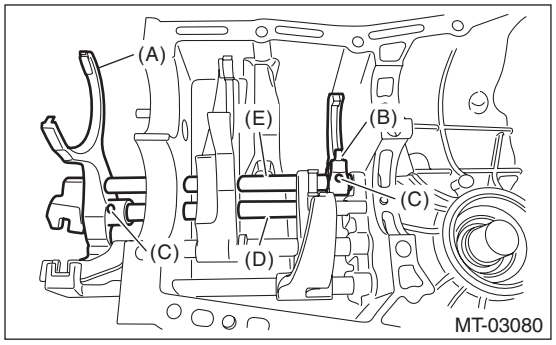
Clearance (a):
0.1 — 0.3 mm (0.004 — 0.012 in)



Reverse idler gear bushing		
Part No.	Length mm (in)	Groove for identification
32289AA080	27.75 (1.093)	None
32289AA090	27.90 (1.098)	1
32289AA100	28.05 (1.104)	2
32289AA110	28.20 (1.110)	3
32289AA120	28.35 (1.116)	4

20.Shifter Fork and Rod

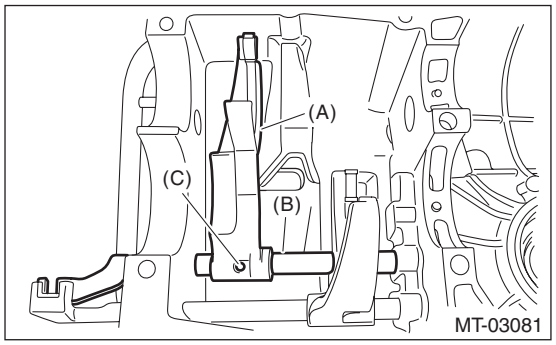
A: REMOVAL



1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT-28, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and the neutral position switch. <Ref. to 6MT-56, REMOVAL, Switches and Harness.>
3) Remove the transfer case together with the extension case assembly. <Ref. to 6MT-62, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the transmission case. <Ref. to 6MT-82, REMOVAL, Transmission Case.>
5) Remove the drive pinion shaft assembly. <Ref. to 6MT-95, REMOVAL, Drive Pinion Shaft Assembly.>
6) Remove the main shaft assembly. <Ref. to 6MT-86, REMOVAL, Main Shaft Assembly.>
7) Remove the front differential assembly. <Ref. to 6MT-106, REMOVAL, Front Differential Assembly.>
8) Remove the reverse idler gear assembly. <Ref. to 6MT-118, REMOVAL, Reverse Idler Gear.>
9) Remove the check ball plugs, check ball springs and check balls.

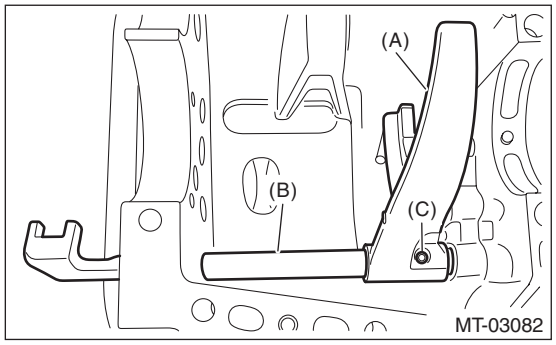
(A) 1st-2nd
(B) 3rd-4th
(C) 5th-6th
(D) Rev.

10) Use the ST to push out the straight pin of 5th-6th shifter fork and reverse shifter fork, and remove the 5th-6th shifter fork, reverse shifter fork, 5th-6th fork rod and reverse fork rod.



NOTE:
Tap out the reverse shifter fork straight pin, after setting the gear into reverse position. In the neutral position, removing is impossible because the clearance between transmission case is narrow.
ST 398791700 SPRING PIN REMOVER 2

(A) 5th-6th shifter fork
(B) Reverse shifter fork
(C) Straight pin
(D) 5th-6th fork rod
(E) Reverse fork rod

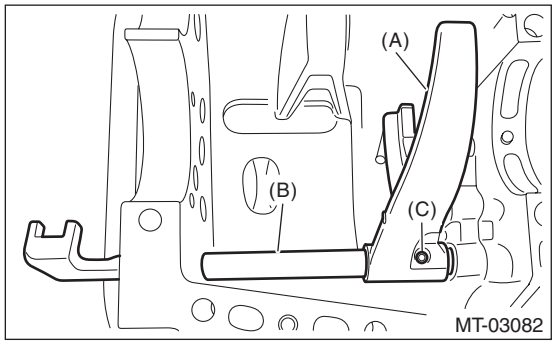


11) Drive out the straight pin by tapping with the ST, and remove the 3rd-4th shifter fork and 3rd-4th fork rod.

NOTE:
When removing the 3rd-4th fork rod, keep other fork rods in neutral.
ST 398791700 SPRING PIN REMOVER 2

(A) 3rd-4th shifter fork
(B) 3rd-4th fork rod
(C) Straight pin

12) Drive out the straight pin by tapping with the ST, and remove the 1st-2nd shifter fork and 1st-2nd fork rod.
ST 398791700 SPRING PIN REMOVER 2

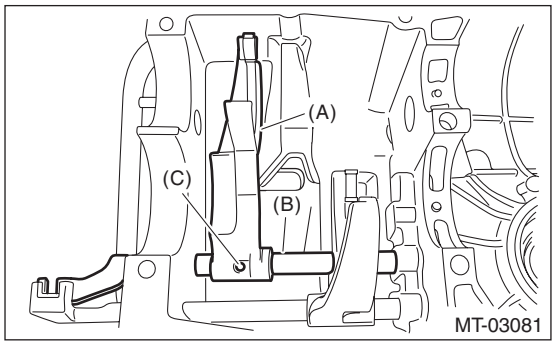


(A) 1st-2nd shifter fork
(B) 1st-2nd fork rod
(C) Straight pin

B: INSTALLATION

1) Install the 1st-2nd fork rod to the 1st-2nd shifter fork through the hole on the rear of the transmission case.
2) Align the holes on the 1st-2nd fork rod and 1st-2nd shifter fork, and drive the straight pin into these holes using the ST to fix.

NOTE:
Use a new straight pin.
ST 398791700 SPRING PIN REMOVER 2

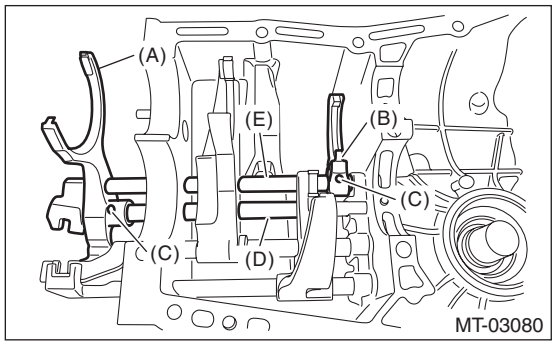


(A) 1st-2nd shifter fork
(B) 1st-2nd fork rod
(C) Straight pin

3) Install the 3rd-4th fork rod to the 3rd-4th shifter fork through the hole on the rear of the transmission case.
4) Align the holes on the 3rd-4th fork rod and 3rd-4th shifter fork, and drive the straight pin into these holes using the ST to fix.

NOTE:
- Use a new straight pin.
- Set other fork rods to neutral.
- Check that the positions of interlock plunger is correct.

ST 398791700 SPRING PIN REMOVER 2

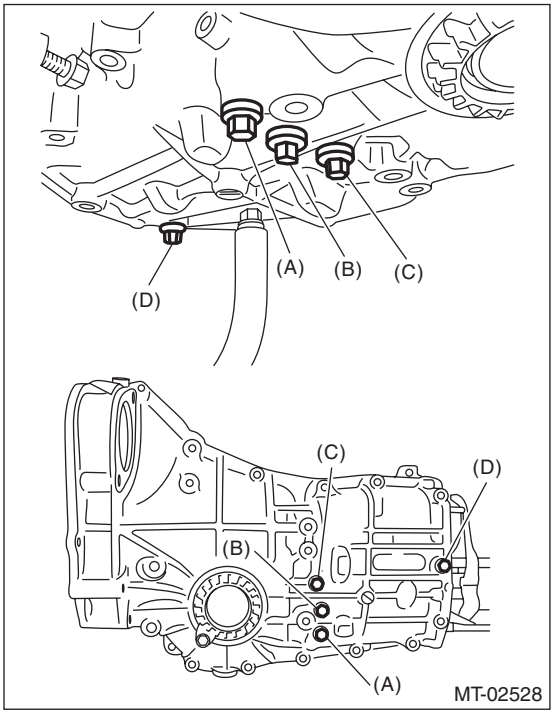


(A) 3rd-4th shifter fork
(B) 3rd-4th fork rod
(C) Straight pin

5) Install the 5th-6th fork rod into 5th-6th shifter fork, then insert through the hole on the rear of transmission case. Align the hole of the 5th-6th shifter fork with the hole on the transmission case, then insert the reverse fork rod to install the reverse shifter fork.

6) Align the holes on the 5th-6th fork rod and 5th-6th shifter fork and the holes on the reverse fork rod and reverse shifter fork, and drive the straight pin into these holes using the ST to fix.

NOTE:
- Use a new straight pin.
- Set other fork rods to neutral.
- Check that the positions of interlock plunger is correct.

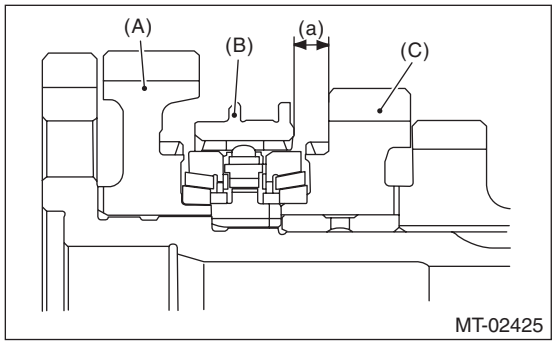


ST 398791700 SPRING PIN REMOVER 2

(A) 5th-6th shifter fork
(B) Reverse shifter fork
(C) Straight pin
(D) 5th-6th fork rod
(E) Reverse fork rod

7) Install the check ball plugs, check ball springs and check balls.

Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)



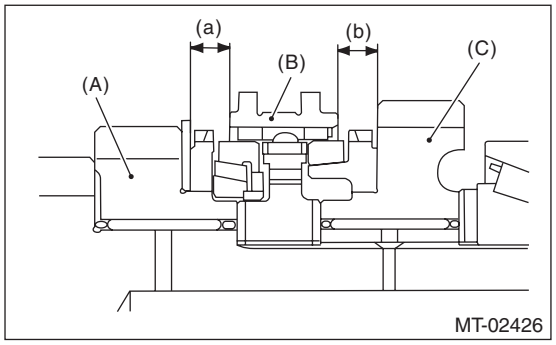
(A) 1st-2nd
(B) 3rd-4th
(C) 5th-6th
(D) Rev.

8) Install the reverse idler gear assembly. <Ref. to 6MT-119, INSTALLATION, Reverse Idler Gear.>
9) Install the front differential assembly. <Ref. to 6MT-107, INSTALLATION, Front Differential Assembly.>
10) Install the main shaft assembly. <Ref. to 6MT-86, INSTALLATION, Main Shaft Assembly.>
11) Install the drive pinion shaft assembly. <Ref. to 6MT-95, INSTALLATION, Drive Pinion Shaft Assembly.>
12) Install the transmission case. <Ref. to 6MT-83, INSTALLATION, Transmission Case.>
13) Install the transfer case together with the extension case assembly. <Ref. to 6MT-63, INSTALLATION, Transfer Case and Extension Case Assembly.>
14) Install the back-up light switch and the neutral position switch. <Ref. to 6MT-57, INSTALLATION, Switches and Harness.>
15) Install the manual transmission assembly to the vehicle. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

1) Check the fork and rod for damage. Replace if it is damaged.
2) Gearshift mechanism
Repair or replace the gearshift mechanism if excessively worn, bent or defective in any way.
3) Inspect the clearance between 2nd driven gear and coupling sleeve. If any clearance is not within specifications, replace the shifter fork as required.

Clearance (a):
7.4 — 7.8 mm (0.291 — 0.307 in)

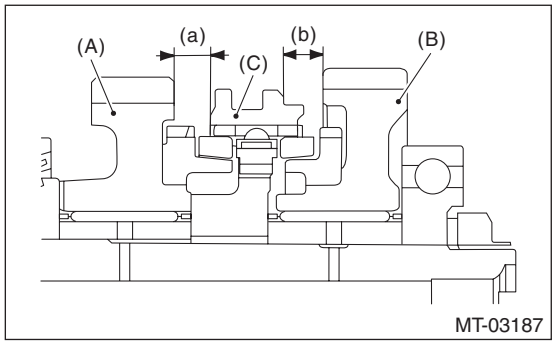


(A) 1st driven gear
(B) Coupling sleeve
(C) 2nd driven gear

1st-2nd shifter fork		
Part No.	Mark	Content
32804AA120	1	Approaches 2nd gear by 0.2 mm (0.008 in).
32804AA130	No mark	Standard
32804AA140	2	Approaches 1st gear by 0.2 mm (0.008 in).

4) Inspect the clearance between the 3rd, 4th drive gear and the coupling sleeve. If any clearance is not within specifications, replace the shifter fork as required.

Clearance (a), (b):
7.5 mm (0.295 in)

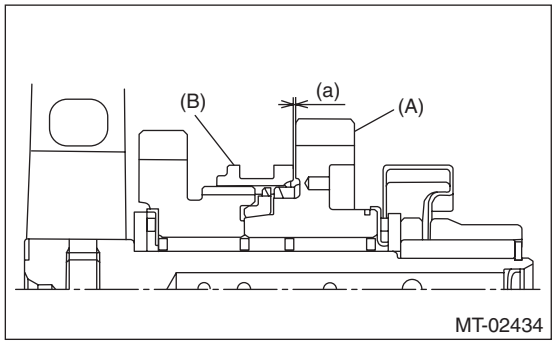


(A) 3rd drive gear
(B) Coupling sleeve
(C) 4th drive gear

3rd-4th shifter fork		
Part No.	Mark	Content
32810AA061	1	Approaches 4th gear by 0.2 mm (0.008 in).
32810AA071	No mark	Standard
32810AA101	3	Approaches 3rd gear by 0.2 mm (0.008 in).

5) Inspect the clearance between 5th, 6th drive gear and coupling sleeve. If any clearance is not within specifications, replace the shifter fork as required.

Clearance (a), (b):
7.5 mm (0.295 in)

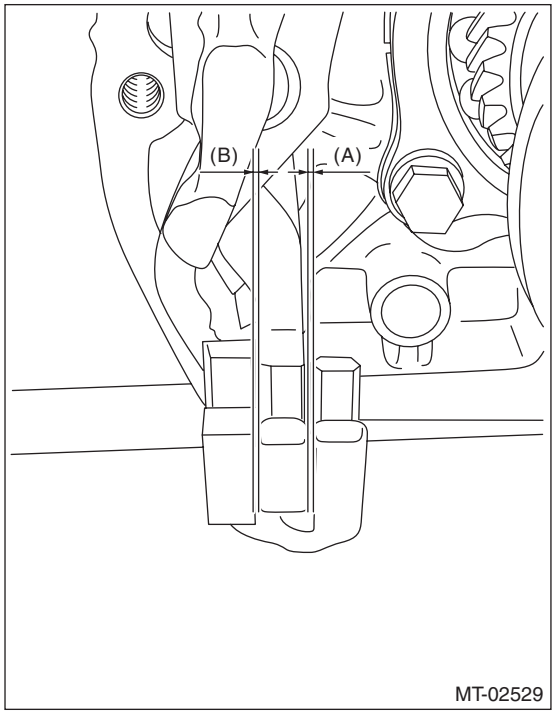


(A) 5th drive gear
(B) 6th drive gear
(C) Coupling sleeve

5th-6th shifter fork		
Part No.	Mark	Content
32940AA050	1	Approaches 5th gear by 0.2 mm (0.008 in).
32940AA060	No mark	Standard
32940AA070	2	Approaches 6th gear by 0.2 mm (0.008 in).

6) Check the clearance between the reverse idler gear and reverse coupling sleeve. If any clearance is not within specifications, replace the shifter fork as required.

Clearance (a):
0.50 mm (0.020 in) or less



(A) Reverse idler gear
(B) Reverse coupling sleeve

Reverse shifter fork		
Part No.	Mark	Content
32941AA070	2	Approaches reverse idler gear by 0.3 mm (0.012 in).
32941AA060	No mark	Standard
32941AA050	1	Approaches reverse idler gear No. 2 by 0.3 mm (0.012 in).

7) Inspect the rod end clearances (A) and (B). If any clearance is not within specifications, replace the rod or fork as required.

Clearance (A):
1st-2nd — 3rd-4th
0.1 — 0.9 mm (0.004 — 0.035 in)

Clearance (B):
3rd-4th — 5th-6th
0.2 — 1.0 mm (0.008 — 0.039 in)

21.General Diagnostic Table

A: INSPECTION

1. MANUAL TRANSMISSION

Symptoms	Possible cause	Corrective action
1. Gears are difficult to intermesh. NOTE: The cause for difficulty in shifting gears can be classified into two types: One is a defective gear shift system and the other is defective transmission. However, if the operation is heavy and engagement of the gears is difficult, a defective clutch disengagement may also be responsible. Check whether the clutch is correctly functioning, before checking the gear shift system and transmission.	(a) Worn, damaged or burred chamfer at internal spline of the sleeve	Replace.
	(b) Gear spline wear, damage, dents	Replace.
	(c) Worn or scratched bushings	Replace.
	(d) Incorrect contact or wear between baulk ring and gear cone	Repair or replace.
2. Gear slip-out • Gear slips out when coasting on rough road. • Gear slips out during acceleration.	(a) Loose engine mounting bolts	Tighten or replace.
	(b) Worn fork shifter or broken check ball spring	Replace.
	(c) Worn or damaged ball bearing	Replace.
	(d) Excessive clearance between splines of synchronizer hub and synchronizer sleeve	Replace.
	(e) Synchronizer hub tooth step wear	Replace.
	(f) Worn 1st driven gear and driven shaft	Replace.
	(g) Worn 2nd driven gear and bushing	Replace.
	(h) Worn 3rd drive gear and needle bearing	Replace.
	(i) Worn 4th drive gear and needle bearing	Replace.
	(j) Worn 5th drive gear and needle bearing	Replace.
	(k) Worn 6th drive gear and needle bearing	Replace.
	(l) Worn reverse idler gear and needle bearing	Replace.
3. Noise emitted from transmission NOTE: If a noise is heard when the vehicle is parked with its engine idling and if a noise ceases when the clutch is disengaged, it may be considered that the noise is coming from the transmission.	(a) Insufficient or improper lubrication	Lubricate with recommended oil or replace.
	(b) Worn or damaged gears and bearings NOTE: If the trouble is only wear of the gear teeth surfaces, only a high whirring noise will occur at high speeds, but if any part is broken, rhythmical clicking sounds will be heard even at low speeds.	Replace.

2. DIFFERENTIAL

Symptoms	Possible cause	Corrective action
1. Broken differential (case, gear, bearing, etc.) NOTE: Noise will occur, and eventually the differential will not be able to operate due to broken pieces obstructing the gear revolution.	(a) Insufficient or improper oil	Disassemble the differential and replace broken components. At the same time check other components for any trouble, and replace if necessary.
	(b) Use of vehicle under severe conditions such as excessive load or improper use of the clutch	Readjust the preload and backlash of the bearing, and the contact surface of gear.
	(c) Improper adjustment of taper roller bearing	Adjust.
	(d) Improper adjustment of the drive pinion and the hypoid driven gear	Adjust.
	(e) Excessive backlash of a vehicle under severe operating conditions due to worn differential side gear, washer or differential pinion	Add recommended oil to the specified level. Do not use vehicle under severe operating conditions.
	(f) Loose hypoid driven gear clamping bolts	Tighten.
2. Differential and hypoid gear noises Troubles of the differential and hypoid gear always appear as noise problems. Therefore noise is the first indication of trouble. However, noises from the engine, muffler, tire, exhaust gas, bearing, body, etc. are easily mistaken for the differential noise. Pay special attention to the hypoid gear noise because it is easily confused with other gear noises. There are the following four kinds of noises. • Gear noise when driving: If noise increases as the vehicle speed increases, it may be due to insufficient gear oil, incorrect gear engagement, damaged gears, etc. • Gear noise when coasting: Damaged gears due to misadjusted bearings and incorrect shim adjustment • Bearing noise when driving or coasting: Cracked, broken or damaged bearings • Noise mainly when turning: Noise from differential side gear, differential pinion or differential pinion shaft, etc.	(a) Insufficient oil	Replenish or replace with the specified amount of recommended oil.
	(b) Improper adjustment of hypoid driven gear and drive pinion	Check the tooth contact.
	(c) Worn teeth of hypoid driven gear and drive pinion	Replace as a set. Readjust the bearing preload.
	(d) Loose roller bearing	Readjust the backlash of the hypoid driven gear to drive pinion, and check the tooth contact.
	(e) Distorted hypoid driven gear or differential case	Replace.
	(f) Worn washer and differential pinion shaft	Replace.

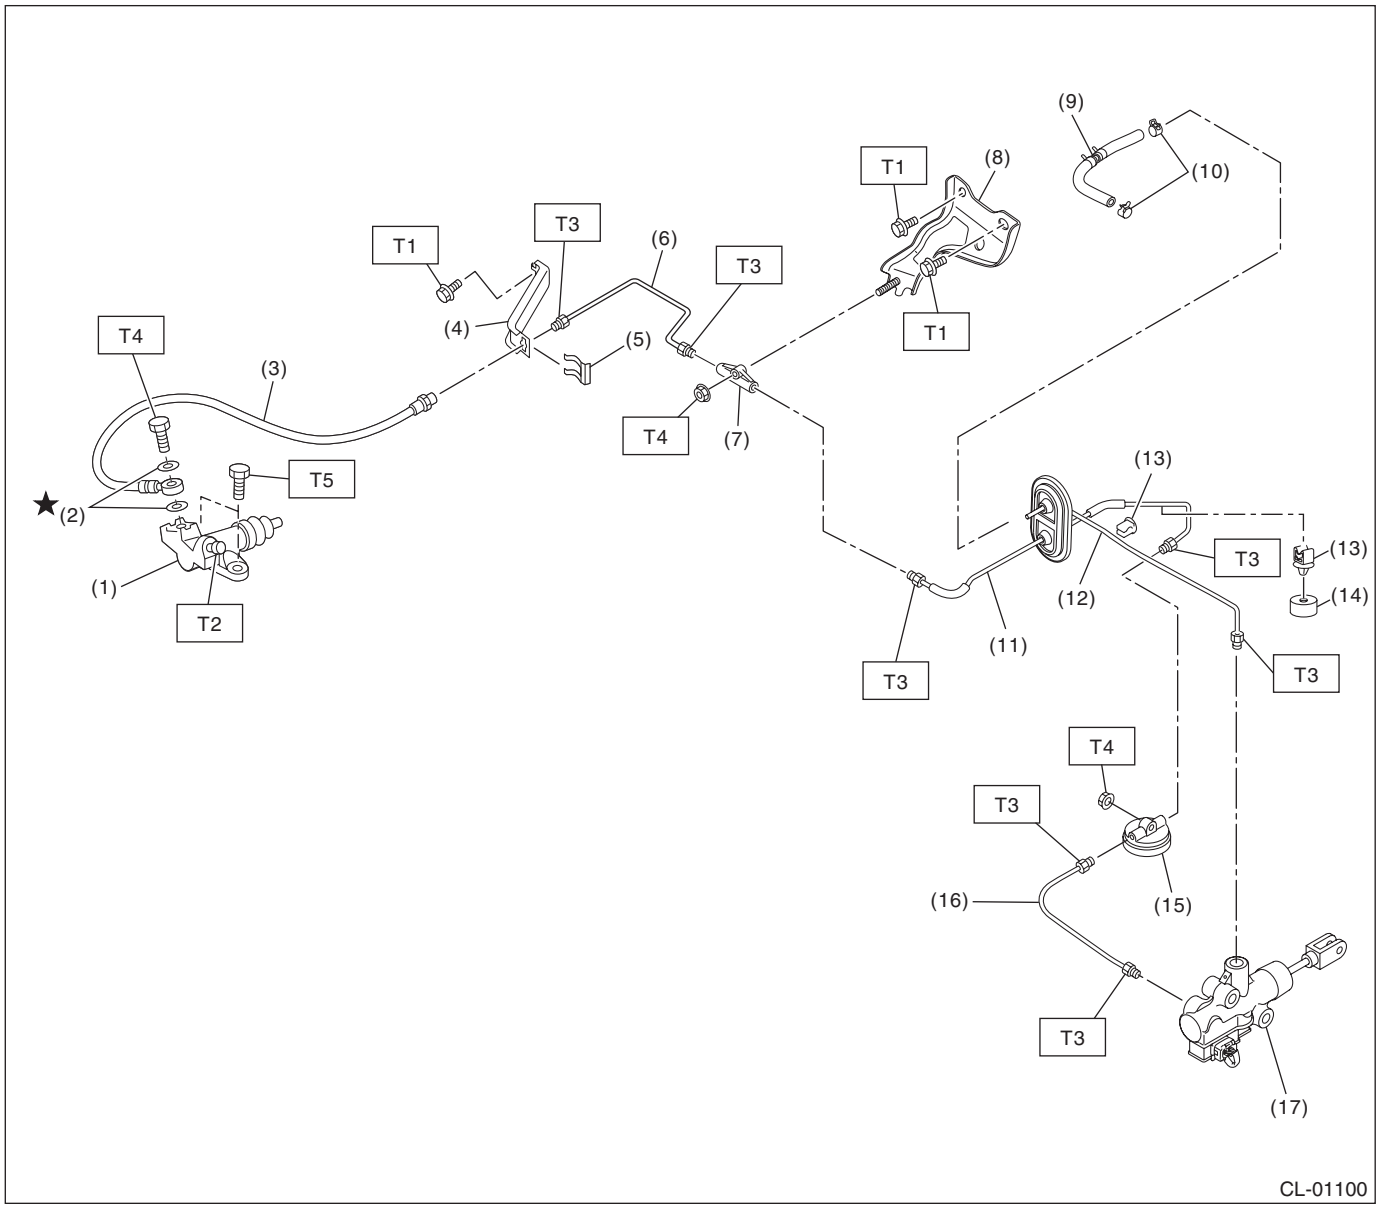
1. General Description

A: SPECIFICATION

Model			2.5 L non-turbo
Transmission type			6MT
Clutch cover	Type		Push type
	Diaphragm set load	N (kgf, lbf)	5,688 (580, 1,279)
Clutch disc	Facing material		Woven (non-asbestos)
	O.D. × I.D. × Thickness mm (in)	Flywheel side	230 × 155 × 3.2 (9.06 × 6.10 × 0.126)
		Clutch cover side	230 × 155 × 3.5 (9.06 × 6.10 × 0.138)
	Spline outer diameter	mm (in)	25.2 (0.992), (number of teeth: 24)
	Depth of rivet head mm (in)	Flywheel side	1.35 — 1.95 (0.053 — 0.077)
		Clutch cover side	1.65 — 2.25 (0.065 — 0.089)
		Limit of sinking	0.8 (0.031)
	Deflection limit	mm (in)	0.7 (0.028) at R = 110 (4.33)
Clutch release lever ratio			1.6
Release bearing			Grease-packed self-aligning
Clutch pedal	Full stroke	mm (in)	130 — 135 (5.12 — 5.31)
	Free play	mm (in)	4 — 11 (0.16 — 0.43)
Flywheel	Type		Flexible

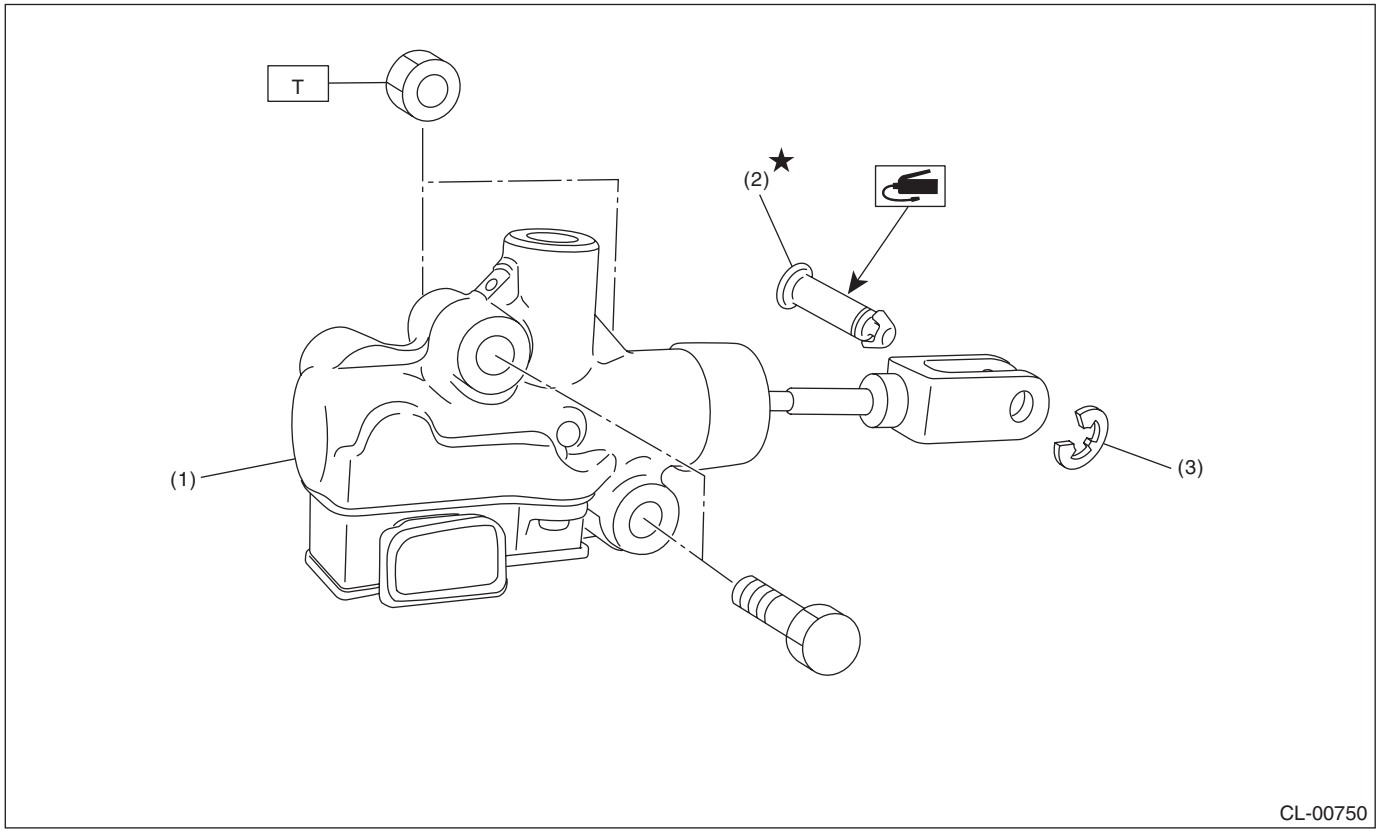
B: COMPONENT



1. CLUTCH ASSEMBLY

(1) Dust cover
(2) Lever spring
(3) Pivot
(4) Release lever
(5) Clip
(6) Release bearing
(7) Clutch cover
(8) Clutch disc
(9) Flexible flywheel

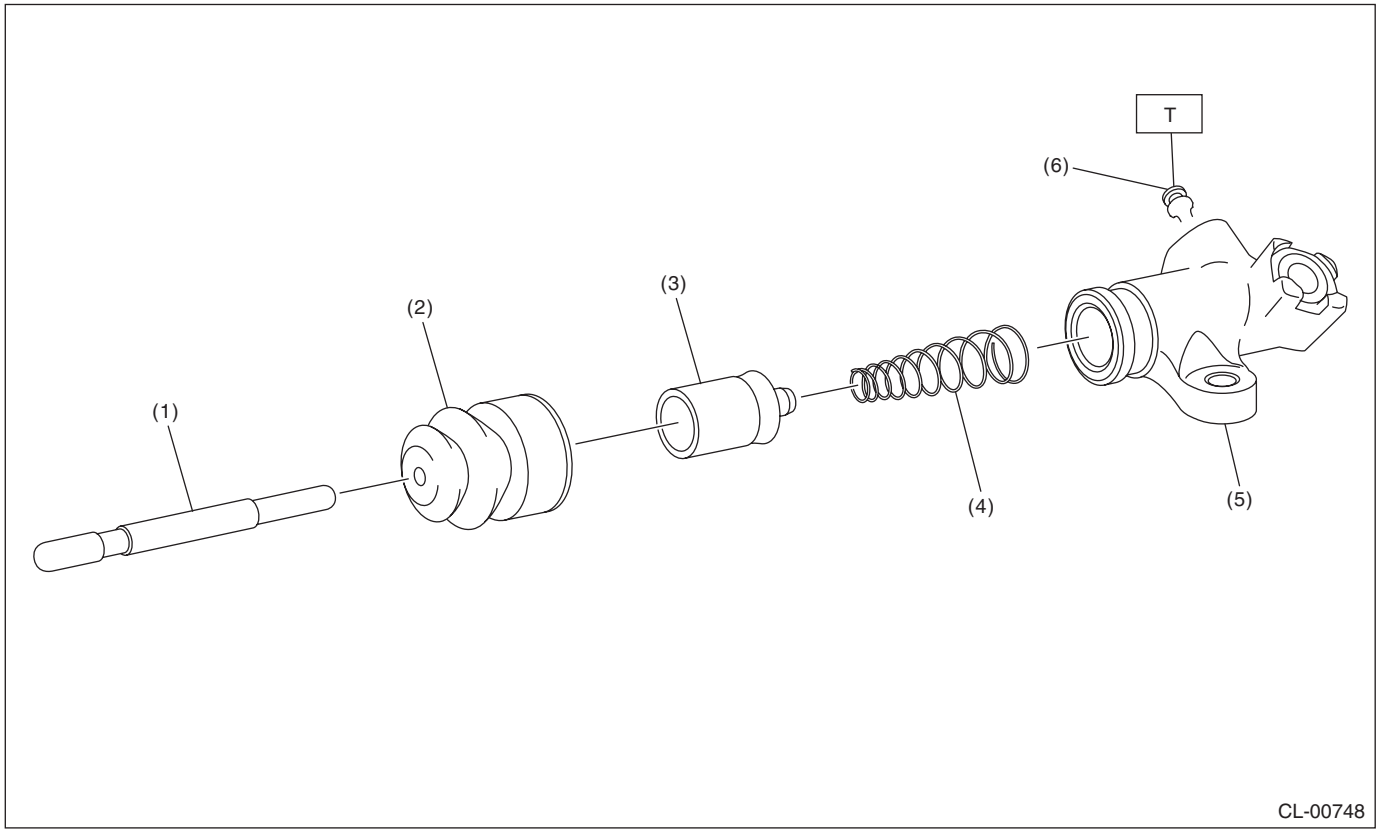
Tightening torque: N·m (kgf-m, ft-lb)
T1: 16 (1.6, 11.8)
T2: <Ref. to CL-13, INSTALLATION, Flywheel.>



2. CLUTCH PIPE AND HOSE

(1) Operating cylinder
(2) Washer
(3) Clutch hose
(4) Clutch hose bracket
(5) Clamp
(6) Clutch pipe
(7) Connector
(8) Connector bracket
(9) Reservoir tank hose
(10) Clamp
(11) Clutch pipe
(12) Clutch pipe
(13) Clamp
(14) Mass damper
(15) Clutch damper
(16) Clutch pipe
(17) Master cylinder ASSY

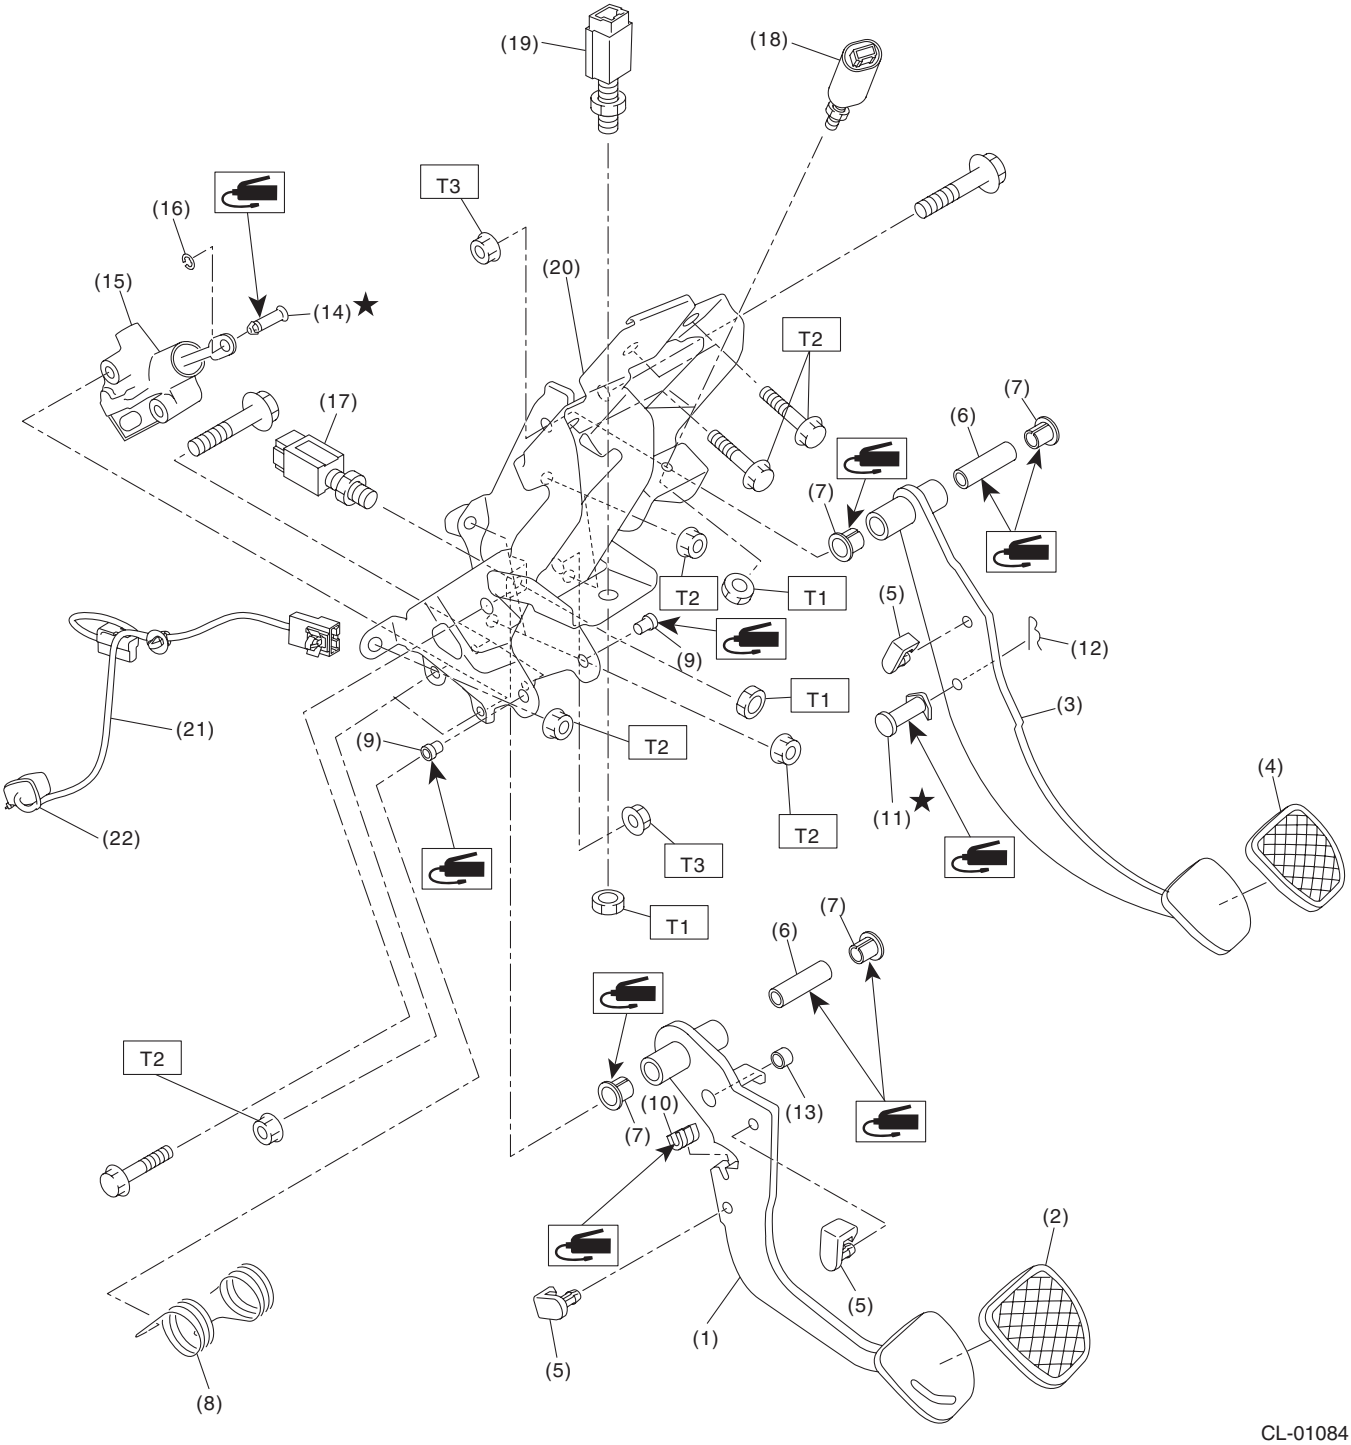
Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 7.8 (0.8, 5.8)
T3: 15 (1.5, 11.1)
T4: 18 (1.8, 13.3)
T5: 37 (3.8, 27.3)



3. MASTER CYLINDER

(1) Master cylinder ASSY
(2) Clevis pin
(3) Clip

Tightening torque: N·m (kgf-m, ft-lb)
T: 18 (1.8, 13.3)



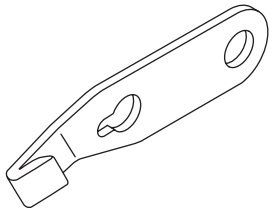
4. OPERATING CYLINDER

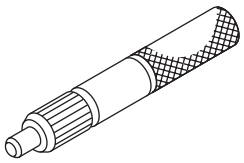
(1) Push rod
(2) Boot
(3) Piston
(4) Piston spring
(5) Operating cylinder
(6) Breather screw

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.8 (0.8, 5.8)

5. CLUTCH PEDAL ASSEMBLY

(1) Clutch pedal
(2) Clutch pedal pad
(3) Brake pedal
(4) Brake pedal pad
(5) Stopper
(6) Spacer
(7) Bushing
(8) Torsion spring
(9) Assist bushing
(10) Torsion spring bushing
(11) Clevis pin
(12) Snap pin
(13) Bushing A
(14) Clevis pin
(15) Master cylinder ASSY
(16) Clip
(17) Clutch start switch
(18) Stop light switch
(19) Clutch switch
(20) Pedal bracket
(21) Sensor harness
(22) Band





Tightening torque: N·m (kgf-m, ft-lb)
T1: 8 (0.8, 5.9)
T2: 18 (1.8, 13.3)
T3: 30 (3.1, 22.1)

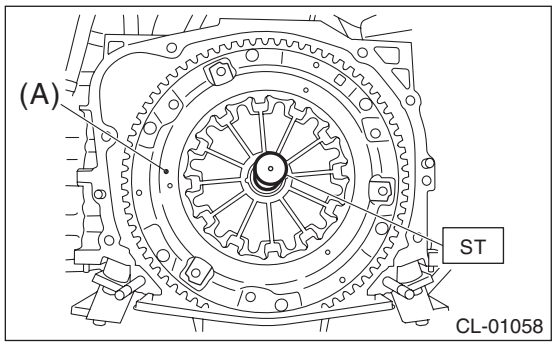
C: CAUTION

- Wear appropriate work clothing, including a cap, protective goggles and protective shoes when performing any work.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine fluid, grease etc. or equivalent. Do not mix fluid, grease, etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Apply grease onto sliding or revolving surfaces before installation.
- Before installing O-rings or snap rings, apply sufficient amount of fluid to avoid damage and deformation.
- Before securing a part in a vise, place cushioning material such as wood blocks, aluminum plate or cloth between the part and the vise.
- Keep fluid away from the vehicle body. If any fluid contacts the vehicle body, immediately flush the area with water.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-498497100	498497100	CRANKSHAFT STOPPER	Used for stopping rotation of the flywheel.
 ST-499747100	499747100	CLUTCH DISC GUIDE	Used for installing the clutch disc to the flywheel.



2. GENERAL TOOL

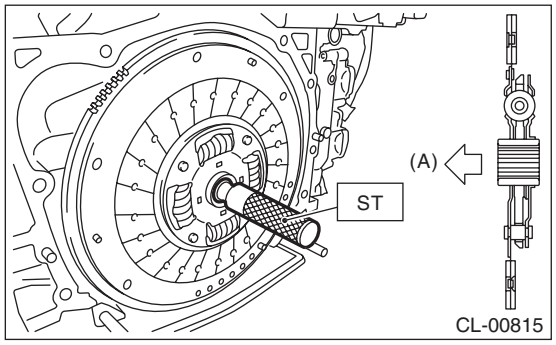
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Dial gauge	Used for measuring clutch disc run-out.
Depth gauge	Used for measuring clutch disc wear.
Angle gauge	Used for tightening the flywheel.

2. Clutch Disc and Cover

A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to 6MT-28, REMOVAL, Manual Transmission Assembly.>
2) Attach the ST on the flywheel.
ST 499747100 CLUTCH DISC GUIDE

(A) Clutch cover



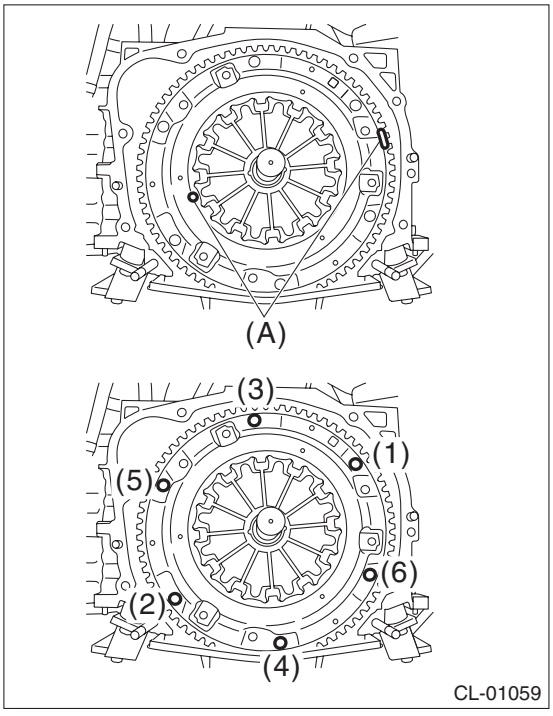
3) Remove the clutch cover and clutch disc.

NOTE:
• Take care not to allow oil to touch the clutch disc face.
• Do not disassemble the clutch cover or clutch disc.

B: INSTALLATION

1) Insert the ST into the clutch disc and attach to the flywheel by inserting the ST end into pilot bearing.

NOTE:
When installing the clutch disc, be careful to attach in the correct direction.
ST 499747100 CLUTCH DISC GUIDE



(A) Flywheel side

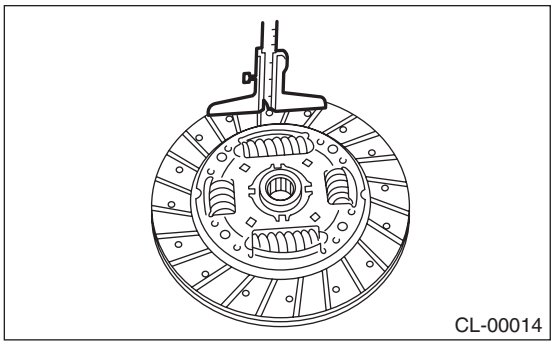
2) Install the clutch cover to the flywheel and tighten the bolts to the specified torque.

NOTE:
• When installing a clutch cover to the flywheel, position the clutch cover so that the spacing between the unbalance marks (paint mark) on the flywheel and clutch cover is 120° or more apart. (The unbalance mark indicates the direction of residual unbalance.)
• Temporarily tighten the bolts by hand. Each bolt should be tightened to the specified torque in a crisscross order.

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)

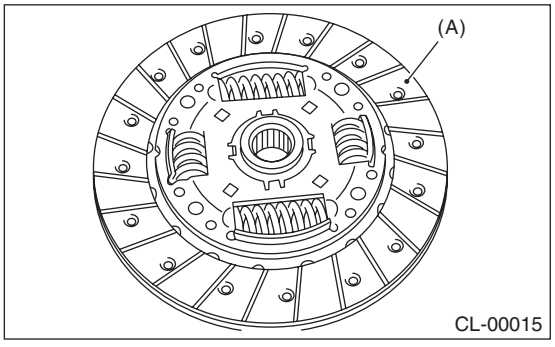
(A) Unbalance mark (paint)

3) Remove the ST.
4) Install the transmission assembly. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>



C: INSPECTION

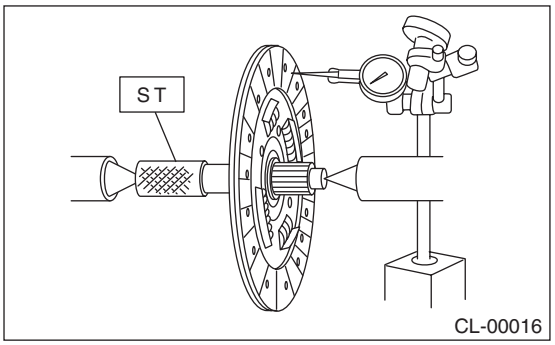
1. CLUTCH DISC



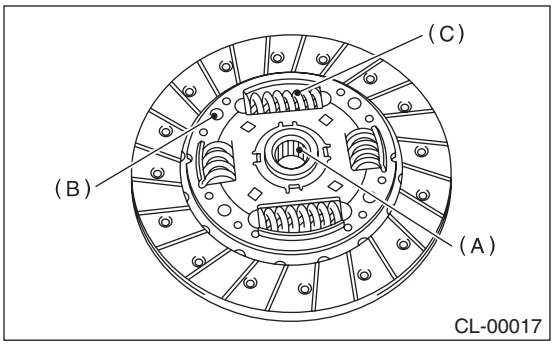
1) Facing wear
Measure the depth from the facing surface to the rivet head. Replace if the face is worn locally or worn down to less than the specified value.

Depth to rivet head:
Limit of sinking
0.8 mm (0.031 in)

NOTE:
Do not wash the clutch disc with any type of cleaning fluid.



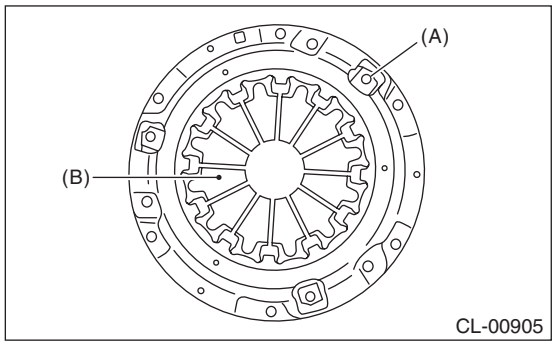
2) Hardened facing
Replace the clutch disc.
3) Oil soakage on facing
Replace the clutch disc and inspect the transmission front oil seal, transmission case mating surface, engine rear oil seal and other locations for oil leakage.



(A) Clutch facing

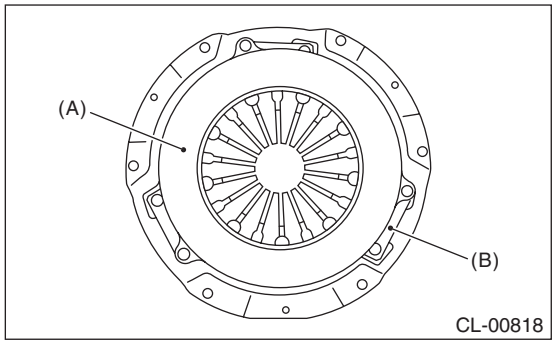
4) Deflection on facing
If deflection exceeds the specified value at the outer circumference of the facing, replace the clutch disc.

Limit for deflection:
0.7 mm (0.028 in) at R = 110 mm (4.33 in)
ST 499747100 CLUTCH DISC GUIDE



5) If there is spline wear, loose rivets, failed damper springs, etc., replace the clutch disc.

(A) Spline
(B) Rivet
(C) Damper spring

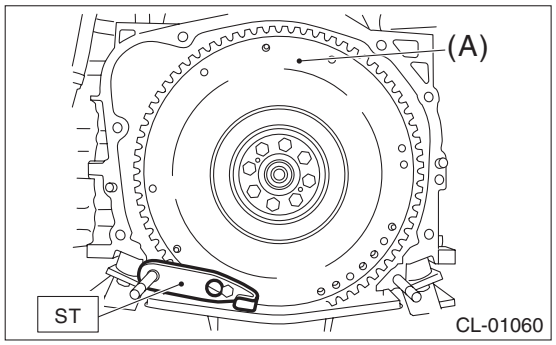


2. CLUTCH COVER

NOTE:
Visually check the following items without disassembling, and replace or repair if defective.
1) Loose thrust rivet
2) Damaged or worn bearing contact area at the center of diaphragm spring

(A) Thrust rivet
(B) Diaphragm spring

3) Damaged and worn disc contact surface of the pressure plate
4) Loose strap plate installation area
5) Worn diaphragm sliding area

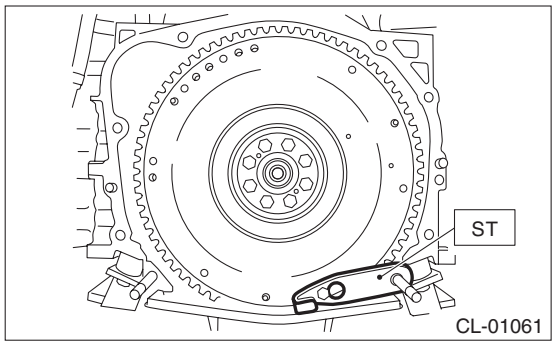


(A) Pressure plate
(B) Strap plate

3. Flywheel

A: REMOVAL

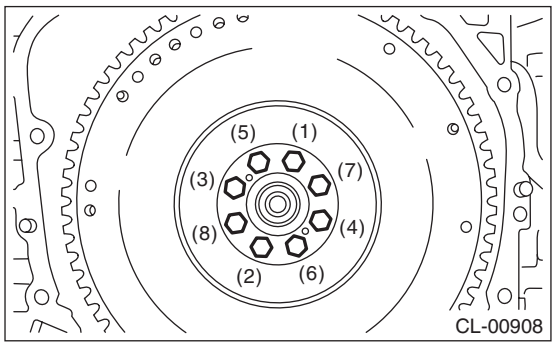
1) Remove the transmission assembly. <Ref. to 6MT-28, REMOVAL, Manual Transmission Assembly.>
2) Remove the clutch cover and clutch disc. <Ref. to CL-10, REMOVAL, Clutch Disc and Cover.>
3) Attach the ST.
ST 498497100 CRANKSHAFT STOPPER



(A) Flywheel

4) Remove the flywheel and crankshaft position sensor plate.

B: INSTALLATION

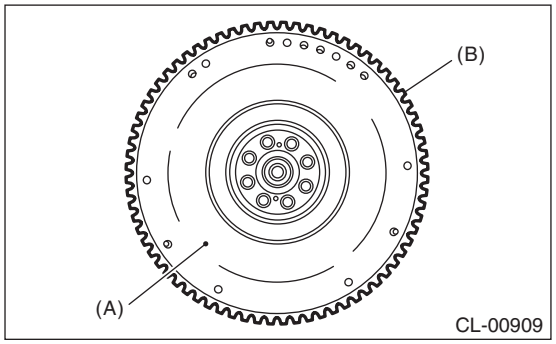


1) Temporarily tighten the crankshaft position sensor plate and flywheel.

NOTE:
Align the knock pin hole of the crankshaft position sensor plate to the knock pin of the crankshaft to secure the knock pin.
2) Attach the ST.
ST 498497100 CRANKSHAFT STOPPER

3) Tighten the flywheel mounting bolts in two stages.
(1) Tighten the flywheel attachment bolts.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)



(2) While checking the tightening angle with the angle gauge, further tighten the flywheel mounting bolts.

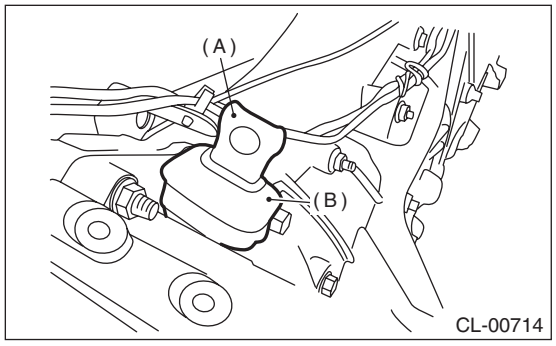
Tightening angle:
30° — 35°

4) Install the clutch disc and cover. <Ref. to CL-10, INSTALLATION, Clutch Disc and Cover.>
5) Install the transmission assembly. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

CAUTION:
Because the center bearing is grease-sealed and is a non-lubrication type, do not wash with gasoline or solvents.
1) If there is damage or defectiveness in the facing sliding surface or ring gear, replace the flywheel.

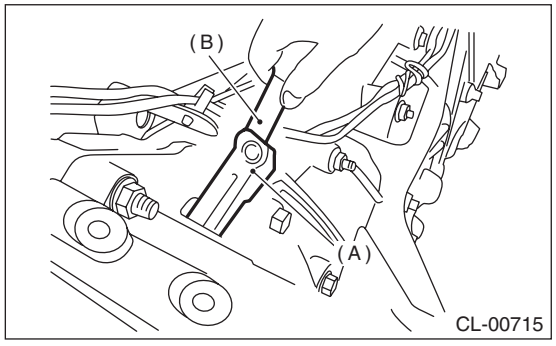
(A) Flywheel
(B) Ring gear



2) Smoothness of rotation
Rotate the ball bearing while applying pressure in the thrust direction.
3) If noise or excessive play is noted, replace the flywheel.

4. Release Bearing and Lever

A: REMOVAL



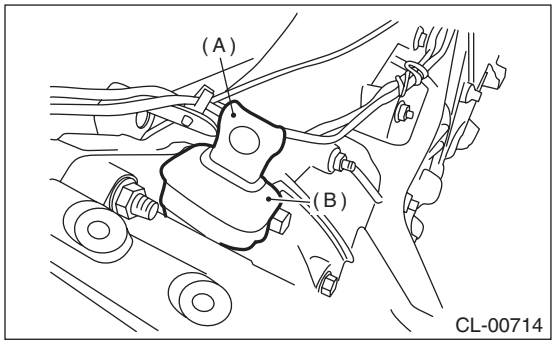
1) Remove the transmission assembly from the vehicle. <Ref. to 6MT-28, REMOVAL, Manual Transmission Assembly.>
2) Remove the two clips from the clutch release lever.

CAUTION:
Be careful not to deform the clips.
3) Remove the release bearing.
4) Remove the dust cover.

(A) Release lever
(B) Dust cover

5) Remove the lever spring from the pivot with a screwdriver by accessing it through the clutch housing release lever hole. Then remove the release lever.

(A) Release lever
(B) Screwdriver



B: INSTALLATION

NOTE:
Apply the specified grease to lubricate to the following points before installation.
- Contact surface of lever and pivot
- Contact surface of lever and bearing
- Transmission main shaft spline
- Contact surface of release bearing and transmission case

Grease
NICHIMOLY N-130 or equivalent

1) While pushing the release lever to the pivot and twisting it to both sides, fit the lever spring onto the raised portion of the pivot.

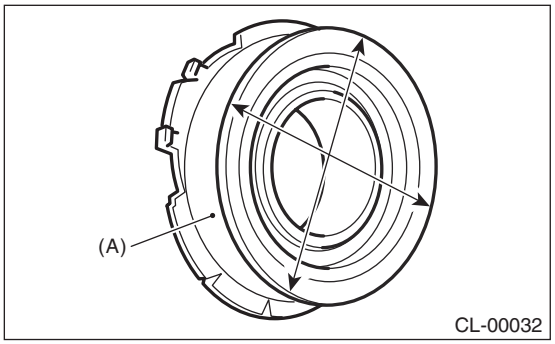
NOTE:
Observing from the main case hole, check that the lever spring is installed securely.
2) Install the release bearing and fasten it with two clips.
3) Install the dust cover.

(A) Release lever
(B) Dust cover

4) Check the bearing for smooth movement by operating the release lever.
5) Apply grease to the contact point of the release lever and operating cylinder.

Grease
NICHIMOLY N-130 or equivalent

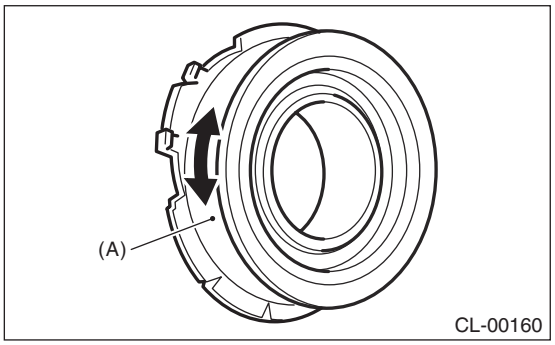
6) Install the transmission assembly. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>



C: INSPECTION

1. RELEASE BEARING

CAUTION:
Since this bearing is grease-sealed and is a non-lubrication type, do not wash with gasoline or any other solvent when servicing the clutch.

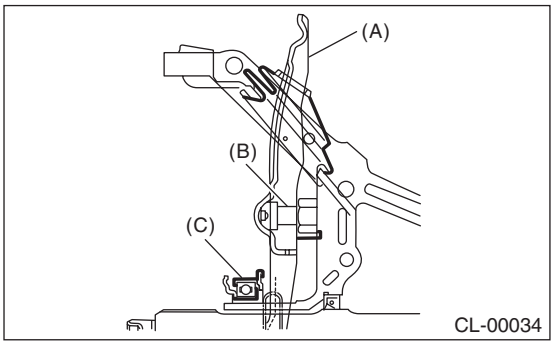


1) Check the bearing for smooth movement by applying force to the bearing in the radial direction.

Radial direction stroke:
1.6 mm (0.063 in)

(A) Bearing case

2) While applying force to the bearing in the rotational direction, check the bearing for smooth rotation.

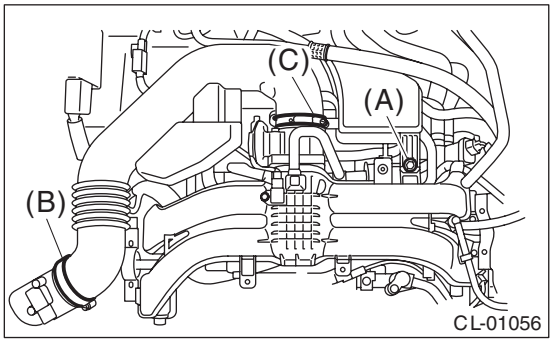


(A) Bearing case

3) Check for wear or damage at the bearing case surface in contact with the lever.

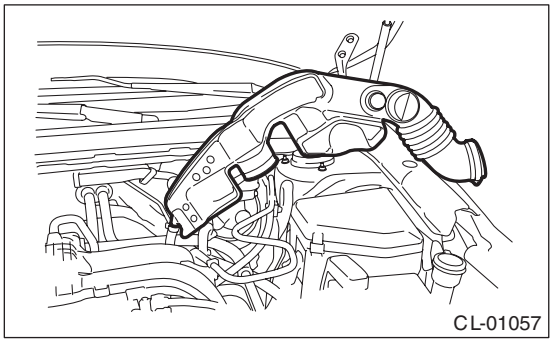
2. RELEASE LEVER

Check the pivot portion of the lever and the contact area with the release bearing case for wear.



(A) Release lever
(B) Pivot
(C) Release bearing

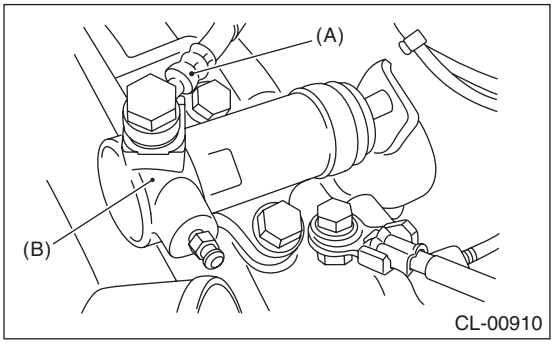
5. Operating Cylinder



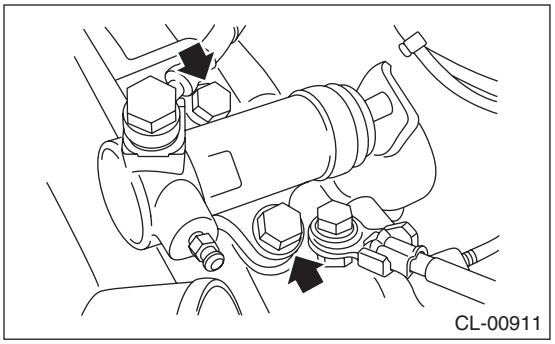
A: REMOVAL

CAUTION:
Clutch fluid spilled on the vehicle body will harm the paint surface; wash it off with water and wipe clean quickly if spilled.

1) Remove the clip (A) from the air intake boot.
2) Loosen the clamp (B) connecting the air intake boot and air cleaner case (rear).
3) Loosen the clamp (C) which connects the air intake boot and throttle body.



4) Remove the air intake boot from the throttle body, and move it to the left side wheel apron.

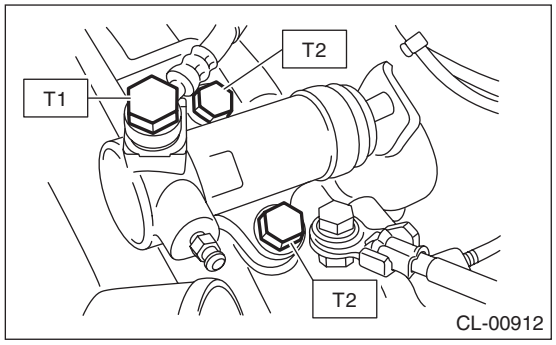


5) Disconnect the clutch hose from the operating cylinder.

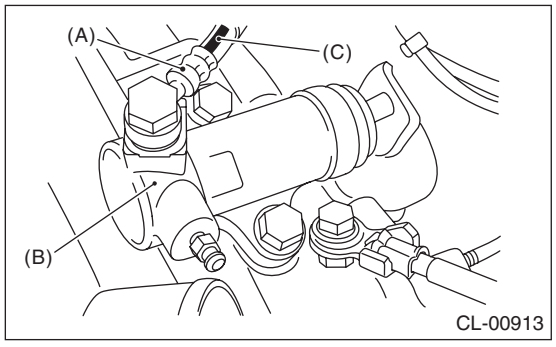
CAUTION:
Cover the hose joint to prevent the clutch fluid from flowing out.

(A) Clutch hose
(B) Operating cylinder

6) Remove the operating cylinder from the transmission.



B: INSTALLATION

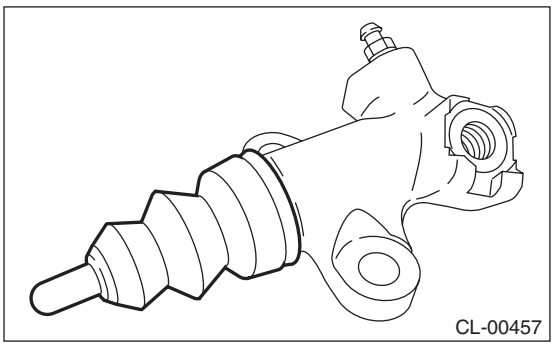


NOTE:
- Use a new gasket.
- Be sure to install the clutch hose with the mark side facing upward.
- Be careful not to twist the clutch hose during installation.
- Before installing the operating cylinder, apply grease to the contact point of the release lever and operating cylinder.

Grease
NICHIMOLY N-130 or equivalent

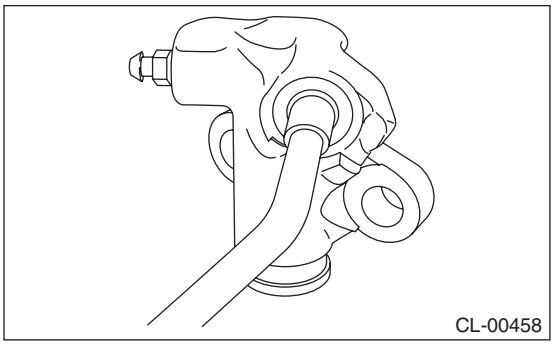
1) Install the operating cylinder to the transmission, and connect the clutch hose to the operating cylinder.

Tightening torque:
T1: 18 N·m (1.8 kgf-m, 13.3 ft-lb)
T2: 37 N·m (3.8 kgf-m, 27.3 ft-lb)



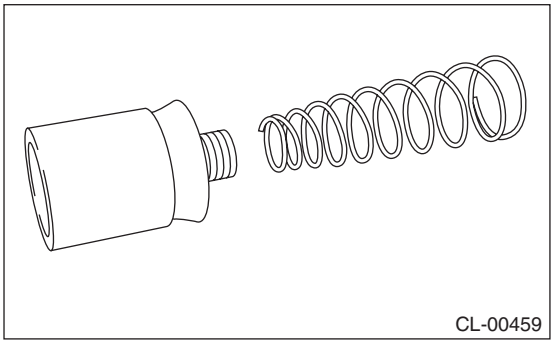
(A) Clutch hose
(B) Operating cylinder
(C) Mark

2) After bleeding air from the operating cylinder, ensure that the clutch operates properly. <Ref. to CL-26, PROCEDURE, Clutch Fluid Air Bleeding.>



C: DISASSEMBLY

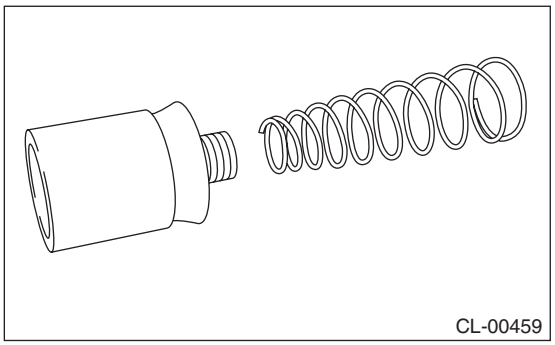
1) Remove the boot and push rod.



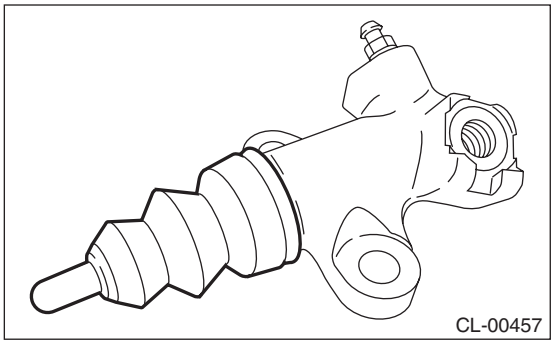
2) Apply compressed air through clutch hose attachment hole.

NOTE:
Face the piston hole down and place a piece of wood underneath to prevent the piston from popping out.

3) Separate the piston and piston spring.



D: ASSEMBLY

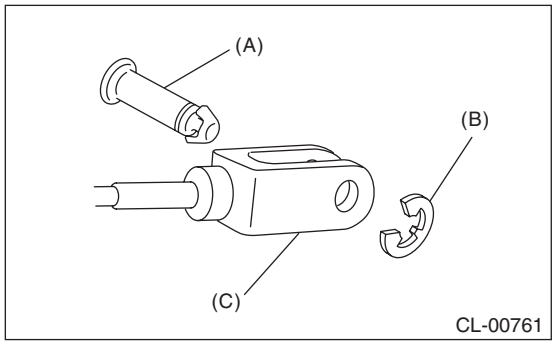


NOTE:
During assembly, apply hydraulic oil to all parts.

Recommended clutch fluid:
New FMVSS No. 116 DOT3 or DOT4

1) Install the piston spring onto the piston.

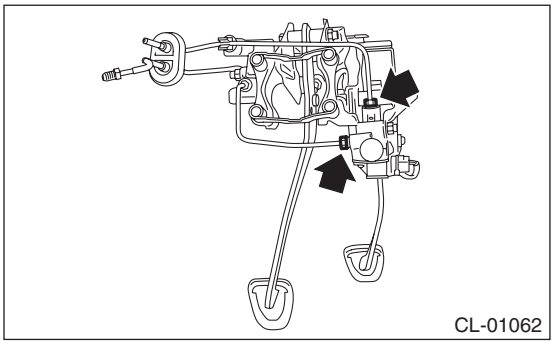
2) Insert piston into the operating cylinder.
3) Install push rod to the boot.
4) Install boot and push rod to the operating cylinder.



E: INSPECTION

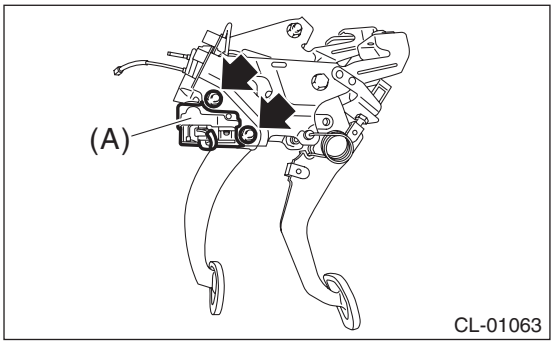
1) Check that the operating cylinder is not damaged. Replace the operating cylinder if it is damaged.
2) Check the clutch fluid leakage on the operating cylinder or the boot for damage. Replace the operating cylinder if clutch fluid leaks or boot damages are noted.

6. Master Cylinder



A: REMOVAL

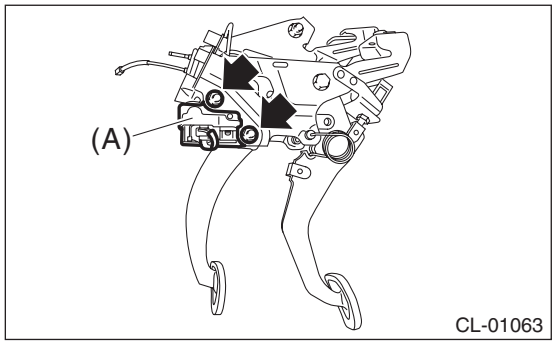
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Thoroughly drain the clutch fluid from the reservoir tank.
3) Remove the instrument panel lower cover. <Ref. to EI-74, REMOVAL, Instrument Panel Lower Cover.>
4) Remove the steering column. <Ref. to PS-19, REMOVAL, Steering Column.>
5) Remove the pedal assembly. <Ref. to CL-27, REMOVAL, Clutch Pedal.>
6) Remove the clip and clevis pin, and then remove the push rod of the master cylinder from clutch pedal.



(A) Clevis pin
(B) Clip
(C) Push rod

7) Disconnect the clutch stroke sensor connector.
8) Remove the clutch pipe from the master cylinder.

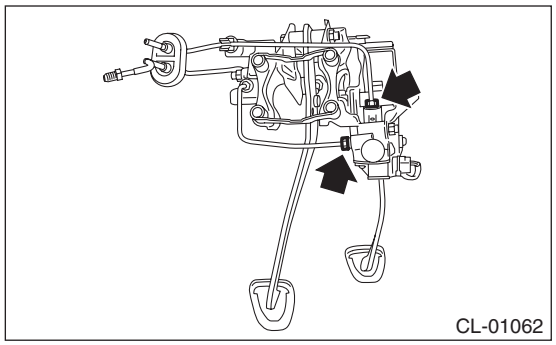
9) Remove the master cylinder from the pedal bracket.



(A) Master cylinder

B: INSTALLATION

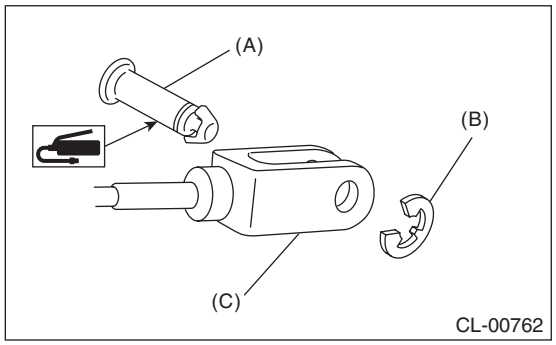
1) Install the master cylinder to the pedal assembly.



Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

(A) Master cylinder

2) Install the clutch pipe to the master cylinder.



Tightening torque:
15 N·m (1.5 kgf-m, 11.1 ft-lb)

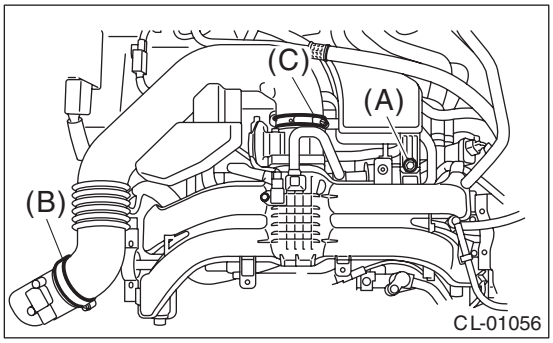
3) Connect the clutch stroke sensor connector.
4) Install the push rod of the master cylinder to the clutch pedal, and install the clevis pin and clip.

CAUTION:
Always use a new clevis pin.

NOTE:
Apply grease to the clevis pin.

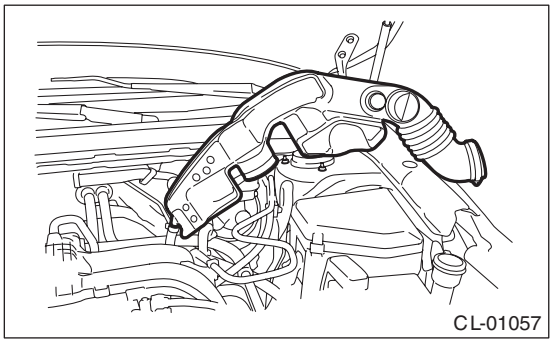
(A) Clevis pin
(B) Clip
(C) Push rod

5) Install the pedal assembly. <Ref. to CL-28, INSTALLATION, Clutch Pedal.>
6) Install the steering column. <Ref. to PS-21, INSTALLATION, Steering Column.>
7) Fill the recommended clutch fluid. <Ref. to CL-25, Clutch Fluid.>
8) After bleeding air from the clutch system, ensure that no fluid leaks and the clutch operates properly. <Ref. to CL-26, Clutch Fluid Air Bleeding.>
9) Install the instrument panel lower cover. <Ref. to EI-75, INSTALLATION, Instrument Panel Lower Cover.>
10) Connect the battery ground terminal. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



C: INSPECTION

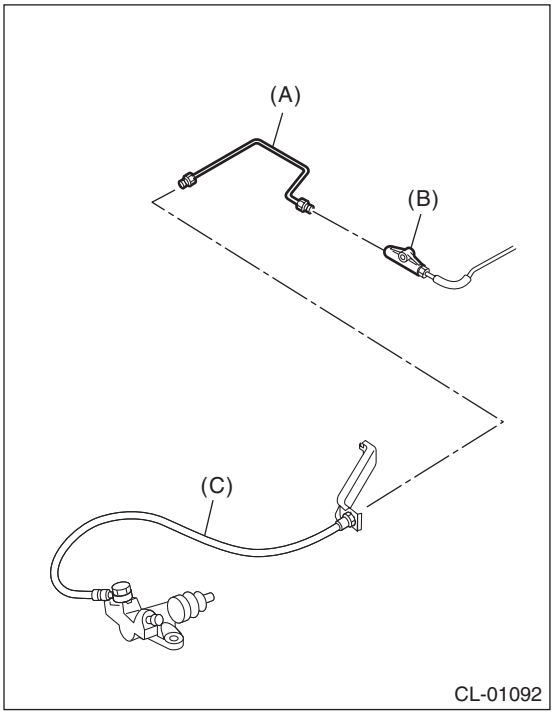
If any damage, deformation, wear, swelling, rust or other faults are found on the master cylinder assembly, reservoir tank, clutch damper, clutch pipe and clutch hose, replace the faulty part.



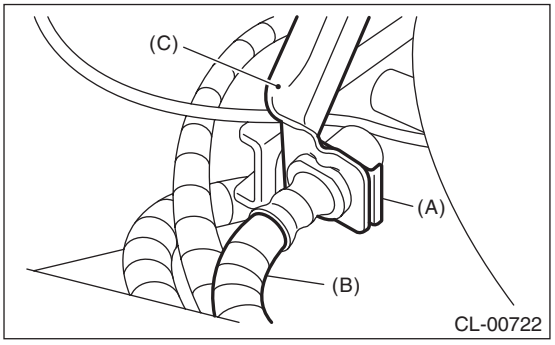
7. Clutch Pipe and Hose

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the clip (A) from the air intake boot.
3) Loosen the clamp (B) connecting the air intake boot and air cleaner case (rear).
4) Loosen the clamp (C) which connects the air intake boot and throttle body.



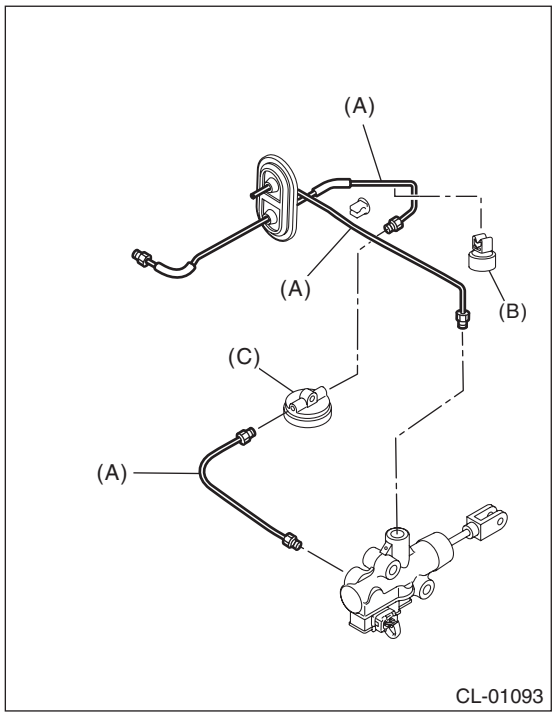
5) Remove the air intake boot from the throttle body, and move it to the left side wheel apron.



6) Thoroughly drain the clutch fluid from the reservoir tank.
7) Remove the clutch pipe from the clutch hose and connector.

CAUTION:
Be careful not to spill the clutch fluid. Clutch fluid spilled on the vehicle body will harm the paint surface; wash it off with water and wipe clean quickly if spilled.

(A) Clutch pipe
(B) Connector
(C) Clutch hose

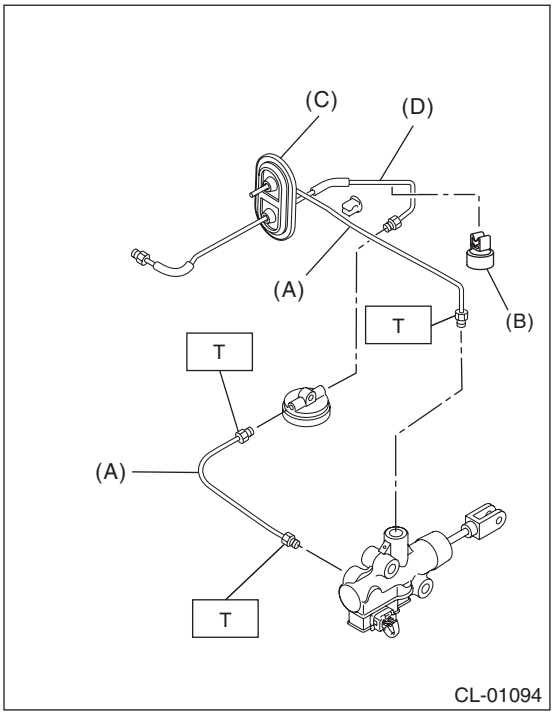


8) Remove the clamp, then remove the clutch hose from the clutch hose bracket.

(A) Clamp
(B) Clutch hose
(C) Clutch hose bracket

9) Remove the clutch hose from operating cylinder.
10) Remove the connector bracket.
11) Remove the reservoir tank hose from the clutch pipe.

12) Remove the instrument panel lower cover. <Ref. to EI-74, REMOVAL, Instrument Panel Lower Cover.>
13) Remove the steering column. <Ref. to PS-19, REMOVAL, Steering Column.>
14) Remove the pedal assembly. <Ref. to CL-27, REMOVAL, Clutch Pedal.>
15) Remove the clutch pipe from the mass damper, clutch damper, master cylinder and clutch pipe grommet.



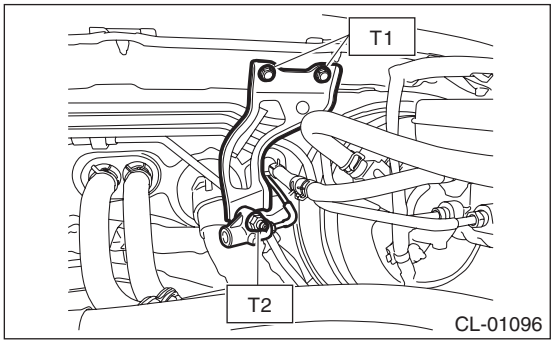
(A) Clutch pipe
(B) Mass damper
(C) Clutch damper

B: INSTALLATION

1) Install the clutch pipe to the mass damper, clutch damper, master cylinder and pipe grommet.

NOTE:
Temporarily tighten the clutch pipe (D) to the clutch damper.

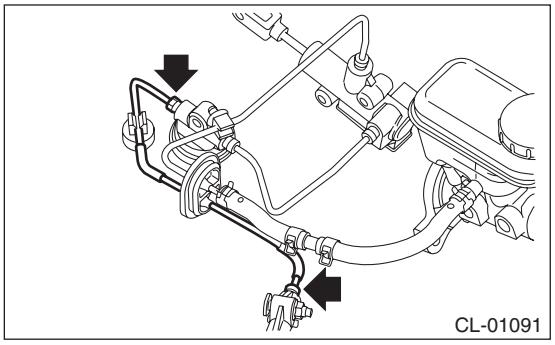
Tightening torque:
T: 15 N·m (1.5 kgf-m, 11.1 ft-lb)



(A) Clutch pipe
(B) Mass damper
(C) Clutch pipe grommet
(D) Clutch pipe

2) Install the pedal assembly. <Ref. to CL-28, INSTALLATION, Clutch Pedal.>
3) Install the reservoir tank hose to the clutch pipe.

CAUTION:
Be sure to install the reservoir tank hose with the marking side facing upward.



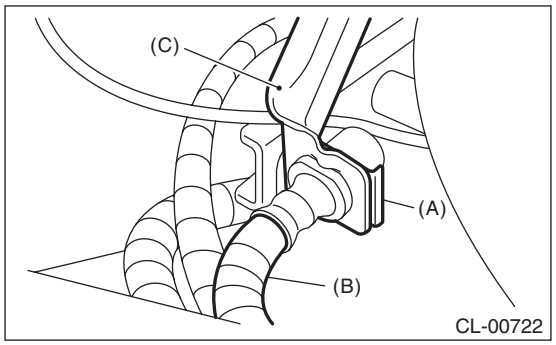
4) Engage the clutch pipe with the connector attached to the connector bracket.

Tightening torque:
T1: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
T2: 18 N·m (1.8 kgf-m, 13.3 ft-lb)

5) Tighten the clutch pipe.

Tightening torque:
15 N·m (1.5 kgf-m, 11.1 ft-lb)

6) Install the steering column. <Ref. to PS-21, INSTALLATION, Steering Column.>
7) Install the clutch hose to the operating cylinder.

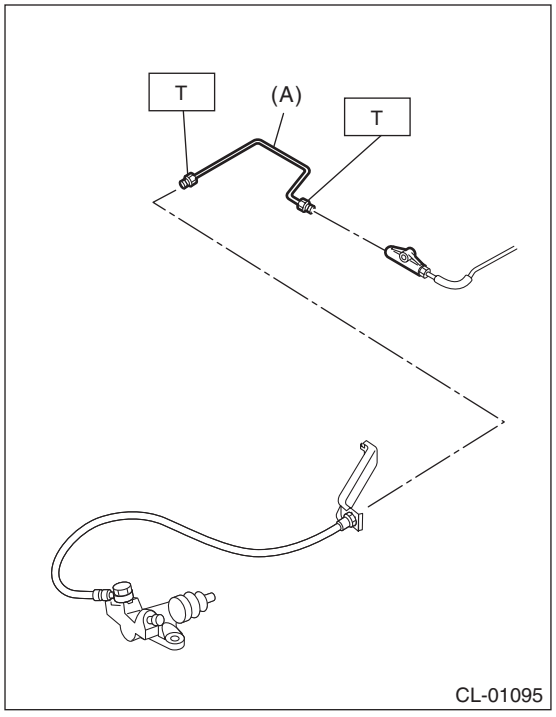


CAUTION:
Be sure to install the clutch hose with the marking side facing upward.

NOTE:
Use a new gasket.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

8) Install the clutch hose to the clutch hose bracket, and install the clamp.



CAUTION:
• Be sure to install the clutch hose with the marking side facing upward.
• Install the clutch hoses while making sure that there is no twisting.

(A) Clamp
(B) Clutch hose
(C) Clutch hose bracket

9) Install the clutch pipe to the clutch hose and connector.

Tightening torque:
T: 15 N·m (1.5 kgf-m, 11.1 ft-lb)

(A) Clutch pipe

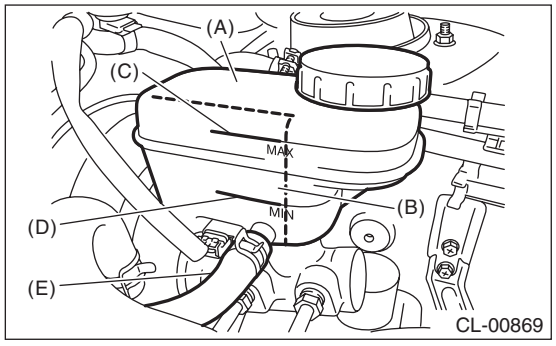
10) Fill the recommended clutch fluid. <Ref. to CL-25, Clutch Fluid.>
11) Bleed air from the clutch system, and ensure that no fluid leaks. <Ref. to CL-26, PROCEDURE, Clutch Fluid Air Bleeding.>

12) Install the instrument panel lower cover. <Ref. to EI-75, INSTALLATION, Instrument Panel Lower Cover.>
13) Install the air intake boot assembly. <Ref. to IN(H4DO)-10, INSTALLATION, Air Intake Boot.>

C: INSPECTION

Check the clutch pipe, reservoir tank hose and clutch hose for crack, breaks or damage. Check the joint for clutch fluid leakage. If crack, breakage, damage or leakage is found, repair or replace the faulty clutch pipe, reservoir tank hose or clutch hose.

8. Clutch Fluid



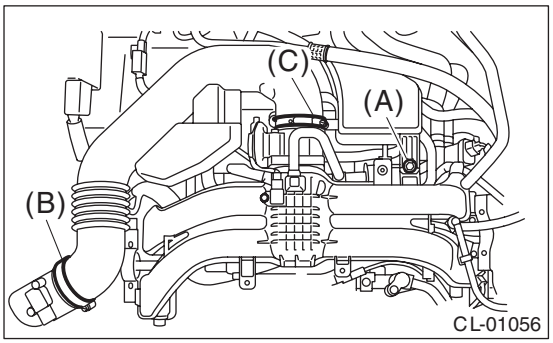
A: INSPECTION

CAUTION:
Be careful not to spill the brake fluid. Brake fluid spilled on the vehicle body will harm the paint surface; wash it off with water and wipe clean quickly if spilled.

1) Park the vehicle on a level surface.
2) Check the clutch fluid level using the scale on the outside of the reservoir tank. If the clutch fluid level is below “MIN”, fill the clutch fluid up to “MAX” level, and make sure that there is no leakage.

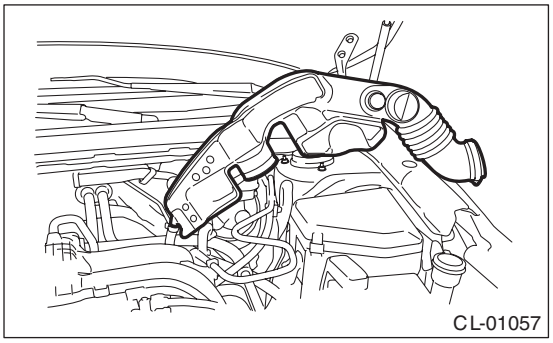
CAUTION:
This reservoir tank has the brake fluid chamber and the clutch fluid chamber. When checking the fluid level, always check the fluid from the clutch fluid chamber side where the reservoir tank hose is connected.

Recommended brake fluid:
New FMVSS No. 116 DOT3 or DOT4



(A) Reservoir tank
(B) Clutch fluid chamber
(C) MAX. level
(D) MIN. level
(E) Reservoir tank hose

B: REPLACEMENT



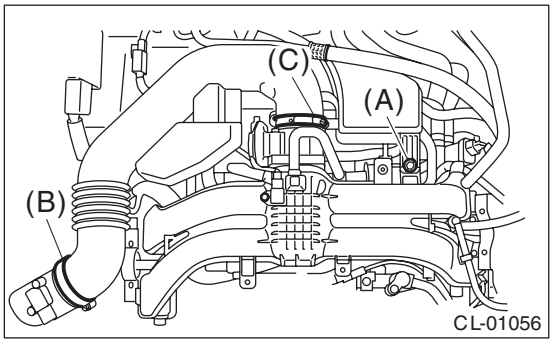
CAUTION:
• Be careful not to spill the brake fluid. Brake fluid spilled on the vehicle body will harm the paint surface; wash it off with water and wipe clean quickly if spilled.
• Use new FMVSS No. 116 DOT3 or DOT4.
• Cover the air breather with cloth to prevent clutch fluid from being splashed on surrounding parts when loosening the breather.
• Avoid mixing clutch fluid of different brands to prevent fluid performance from degrading.
• Be careful not to allow dirt or dust to enter the reservoir tank.

NOTE:
• During bleeding operation, keep the clutch reservoir tank filled with clutch fluid to prevent entry of air.
• Clutch pedal must be operated very slowly.
• Bleed air from the oil line with help of a co-worker.
• The required amount of clutch fluid is approximately 165 mL (5.6 US fl oz, 5.8 Imp fl oz) for total clutch system.

1) Remove the clip (A) from the air intake boot.
2) Loosen the clamp (B) connecting the air intake boot and air cleaner case (rear).
3) Loosen the clamp (C) which connects the air intake boot and throttle body.

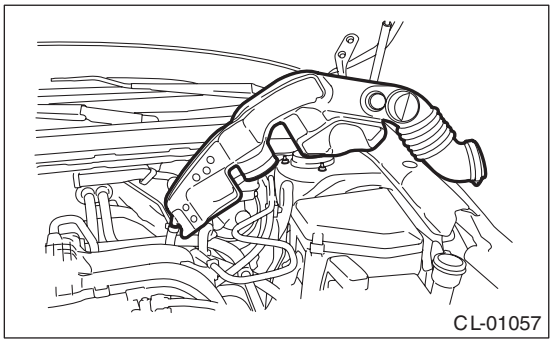
4) Remove the air intake boot from the throttle body, and move it to the left side wheel apron.

5) Thoroughly drain the clutch fluid from the reservoir tank.
6) Refill the reservoir tank with recommended clutch fluid.



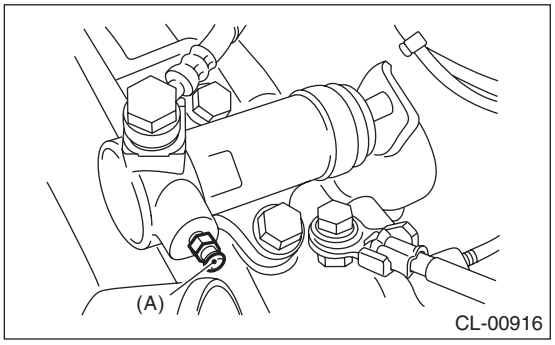
Recommended clutch fluid:
New FMVSS No. 116 DOT3 or DOT4

7) Bleed air from the clutch fluid. <Ref. to CL-26, Clutch Fluid Air Bleeding.>
8) Install the air intake boot assembly. <Ref. to IN(H4DO)-10, INSTALLATION, Air Intake Boot.>



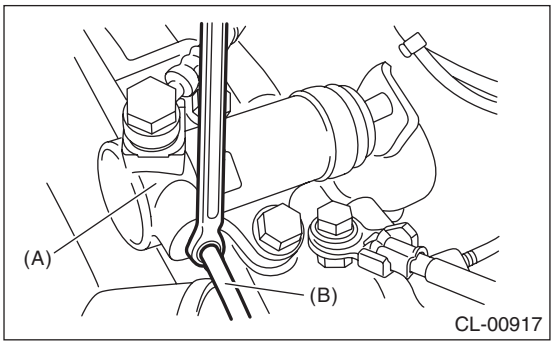
9. Clutch Fluid Air Bleeding

A: PROCEDURE



NOTE:
• Bleed air from the oil line with help of a co-worker.
• Be careful not to spill the brake fluid. Brake fluid spilled on the vehicle body will harm the paint surface; wash it off with water and wipe clean quickly if spilled.
1) Remove the clip (A) from the air intake boot.
2) Loosen the clamp (B) connecting the air intake boot and air cleaner case (rear).
3) Loosen the clamp (C) which connects the air intake boot and throttle body.

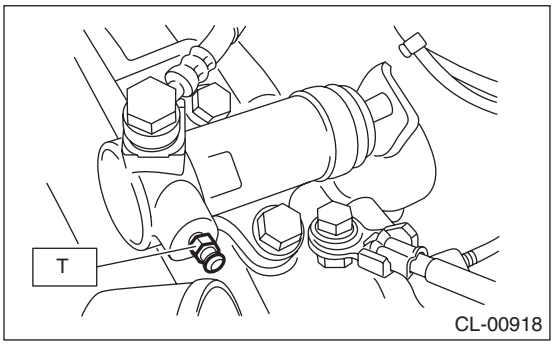
4) Remove the air intake boot from the throttle body, and move it to the left side wheel apron.



5) Fit one end of a vinyl tube into the air breather of the operating cylinder, and put the other end into a clutch fluid container.

(A) Air breather

6) Slowly depress the clutch pedal several times and keep it depressed. Open the air breather to discharge air together with the clutch fluid. Release the air breather for 1 or 2 seconds. Next, close the air breather, and slowly release the clutch pedal.

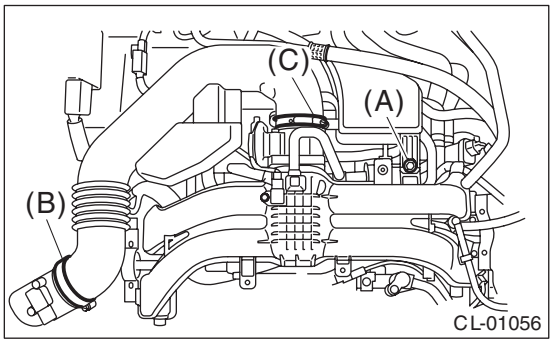


CAUTION:
Cover the air breather with cloth to prevent clutch fluid from being splashed on surrounding parts when loosening the breather.

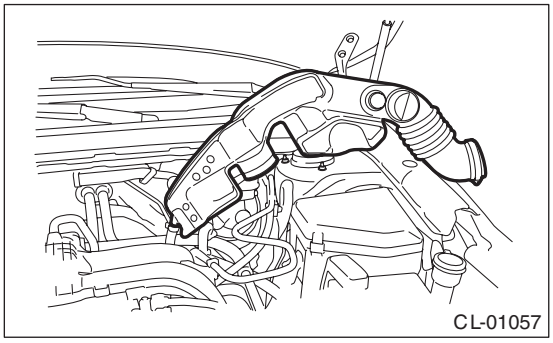
(A) Operating cylinder
(B) Vinyl tube

7) Repeat procedure 6), until there are no more air bubbles appearing from the air breather.
8) Tighten the air breather.

Tightening torque:
T: 7.8 N·m (0.8 kgf-m, 5.8 ft-lb)

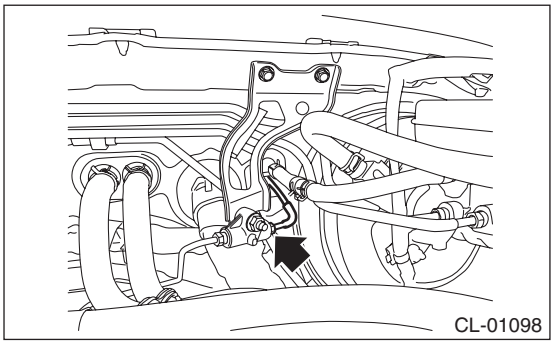


9) After stepping on the clutch pedal, make sure that there are no leaks evident in the entire clutch system.
10) After bleeding the air from clutch system, ensure that the clutch operates properly.
11) Install the air intake boot assembly. <Ref. to IN(H4DO)-10, INSTALLATION, Air Intake Boot.>

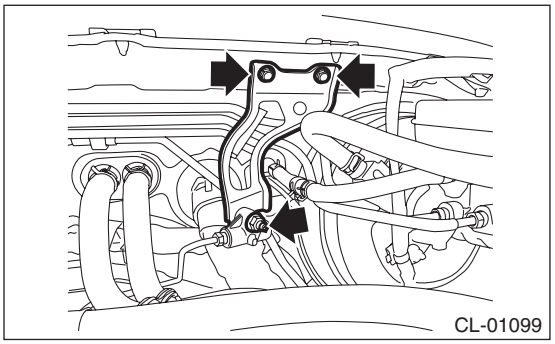


10.Clutch Pedal

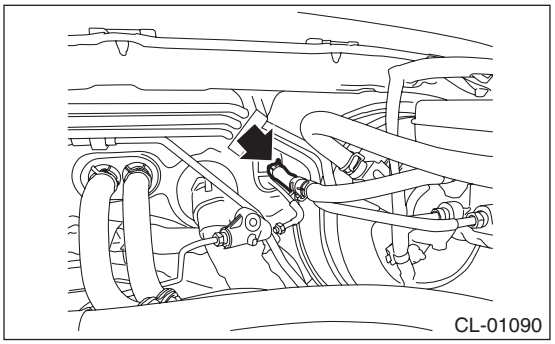
A: REMOVAL



1) Disconnect the ground terminal from battery sensor.
<Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the clip (A) from the air intake boot.
3) Loosen the clamp (B) connecting the air intake boot and air cleaner case (rear).
4) Loosen the clamp (C) which connects the air intake boot and throttle body.

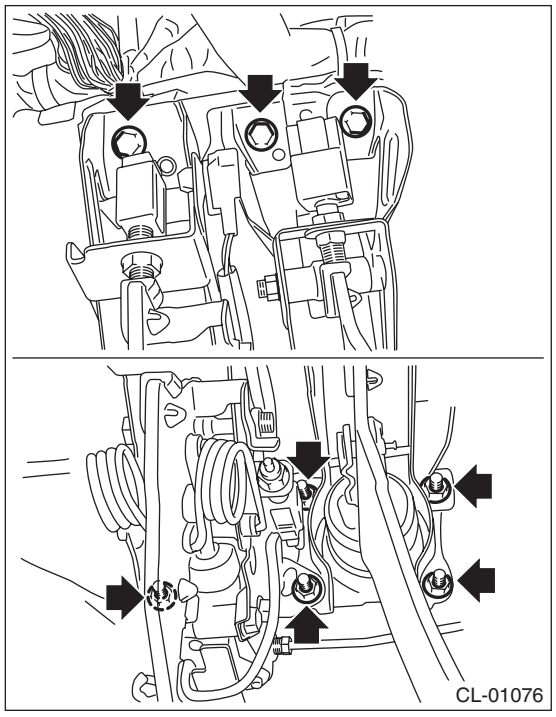


5) Remove the air intake boot from the throttle body, and move it to the left side wheel apron.



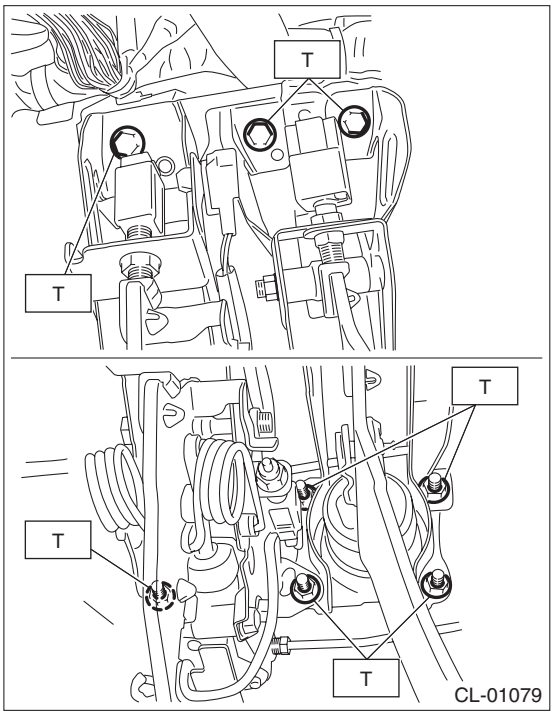
6) Drain the clutch fluid from the reservoir tank.
7) Disconnect the clutch pipe from the connector.

8) Remove the connector bracket.



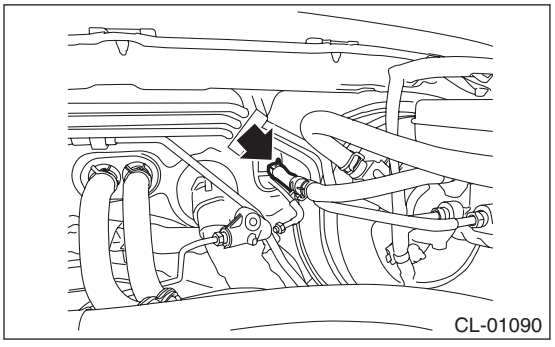
9) Disconnect the reservoir tank hose from the clutch pipe.

10) Remove the instrument panel lower cover. <Ref. to EI-74, REMOVAL, Instrument Panel Lower Cover.>
11) Remove the steering column. <Ref. to PS-19, REMOVAL, Steering Column.>
12) Disconnect the connector from the clutch switch and clutch start switch.
13) Disconnect the connector from the brake switch.
14) Remove the snap pin and clevis pin connecting the operating rod and brake pedal.
15) Remove the pedal assembly.



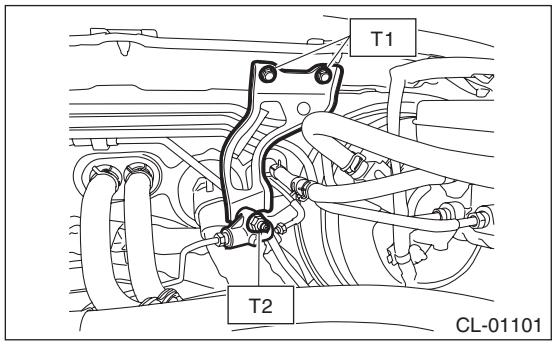
NOTE:
Place vinyl, etc. in order not to drop the clutch fluid to the floor carpet.

B: INSTALLATION



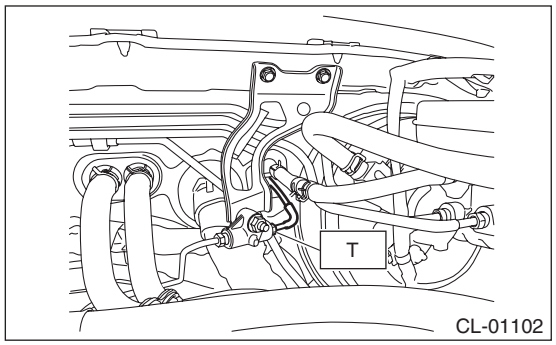
1) Install the pedal assembly.

Tightening torque:
T: 18 N·m (1.8 kgf-m, 13.3 ft-lb)



2) Install the snap pin and clevis pin connecting the operating rod and brake pedal.

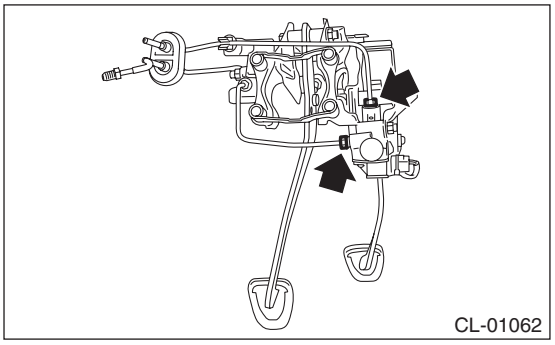
CAUTION:
Always use a new clevis pin.
3) Connect the connector to the brake switch.
4) Connect the connector to the clutch switch.
5) Install the steering column. <Ref. to PS-21, INSTALLATION, Steering Column.>
6) Connect the reservoir tank hose to the clutch pipe.



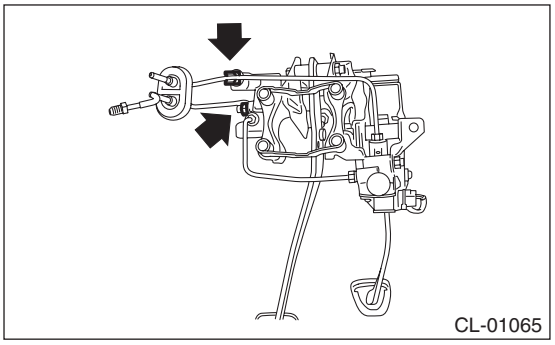
7) Install the connector bracket.

Tightening torque:
T1: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
T2: 18 N·m (1.8 kgf-m, 13.3 ft-lb)

8) Install the clutch pipe to the connector.

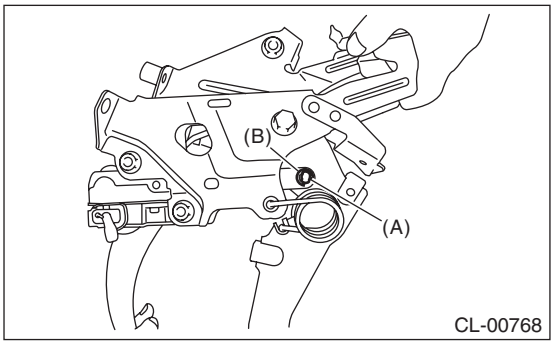


Tightening torque:
15 N·m (1.5 kgf-m, 11.1 ft-lb)



9) Fill the recommended clutch fluid. <Ref. to CL-25, Clutch Fluid.>
10) After bleeding air from the clutch system, ensure that no fluid leaks and the clutch operates properly. <Ref. to CL-26, PROCEDURE, Clutch Fluid Air Bleeding.>
11) Install the instrument panel lower cover. <Ref. to EI-75, INSTALLATION, Instrument Panel Lower Cover.>
12) Install the air intake boot assembly. <Ref. to IN(H4DO)-10, INSTALLATION, Air Intake Boot.>
13) Adjust the clutch pedal. <Ref. to CL-32, ADJUSTMENT, Clutch Pedal.>

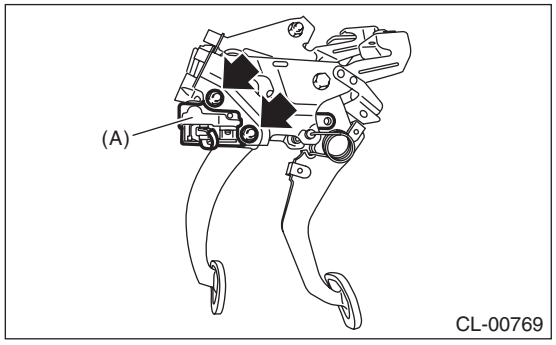
C: DISASSEMBLY



1) Disconnect the clutch pipe from the master cylinder.

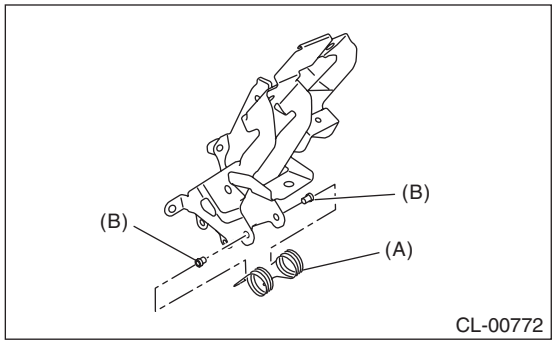
2) Remove the clutch damper mounting nut from the pedal assembly, and disconnect the clutch pipe from the clamp.

3) Remove the clutch switches.
4) Remove the clip and pull out the clevis pin.



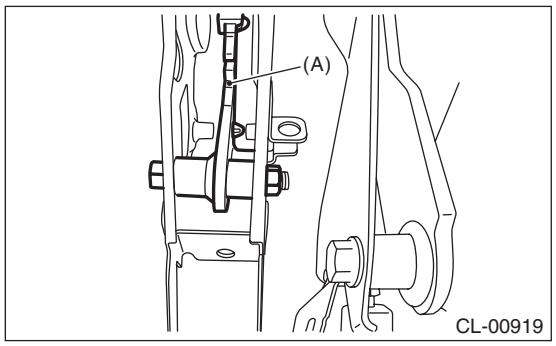
(A) Clevis pin
(B) Clip

5) Disconnect the connector from the clutch stroke sensor, and then remove the sensor harness.



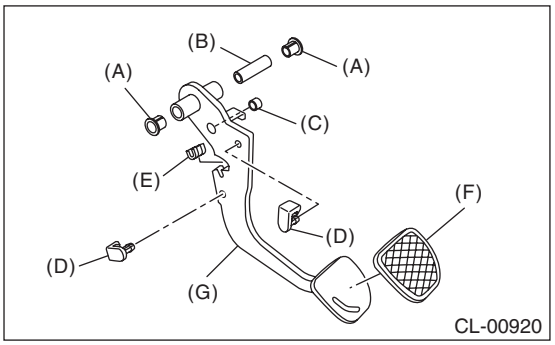
6) Remove the master cylinder from the pedal assembly.

NOTE:
Secure the push rod with a tape etc. to prevent it from falling off.



(A) Master cylinder

7) Remove the torsion spring and assist bushing from the pedal assembly.

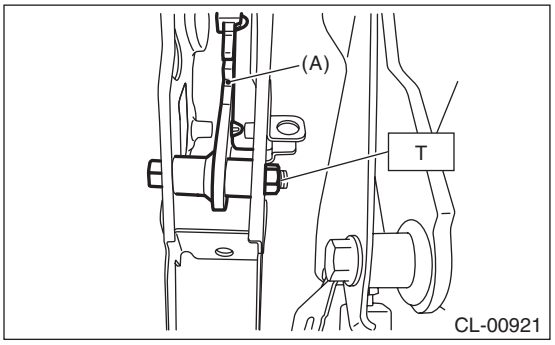


(A) Torsion spring
(B) Assist bushing

8) Remove the clutch pedal from the pedal bracket.

(A) Clutch pedal

9) Remove the bushing, spacer, bushing A, stopper, torsion spring bushing and clutch pedal pad from the clutch pedal.



(A) Bushing
(B) Spacer
(C) Bushing A
(D) Stopper
(E) Torsion spring bushing
(F) Clutch pedal pad
(G) Clutch pedal

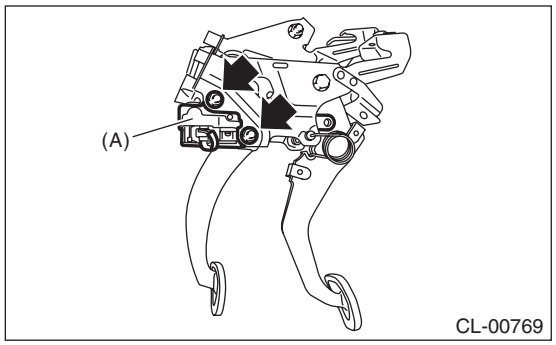
D: ASSEMBLY

1) Clean the holes in the sliding surface between the clutch pedal and pedal bushing, and apply grease.
2) Attach the pedal pad, stopper, bushing A, torsion spring bushing, spacer and bushing to the clutch pedal.

NOTE:
Before installing the spacer, clean the inside of the pedal bushings and apply grease.
3) Attach the clutch pedal to the pedal bracket.

Tightening torque:
T: 30 N·m (3.1 kgf-m, 22.1 ft-lb)

(A) Clutch pedal



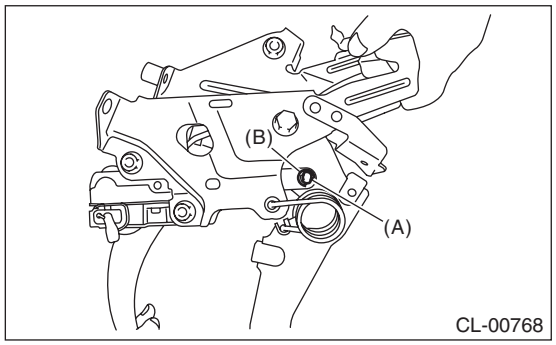
4) Install the assist bushing and torsion spring to the pedal assembly.

NOTE:
Before installing the torsion spring, apply grease to the assist bushing and torsion spring bushing.

5) Install the master cylinder to the pedal assembly.

NOTE:
Secure the push rod with a tape etc. to prevent it from falling off.

Tightening torque:
T: 18 N·m (1.8 kgf-m, 13.3 ft-lb)

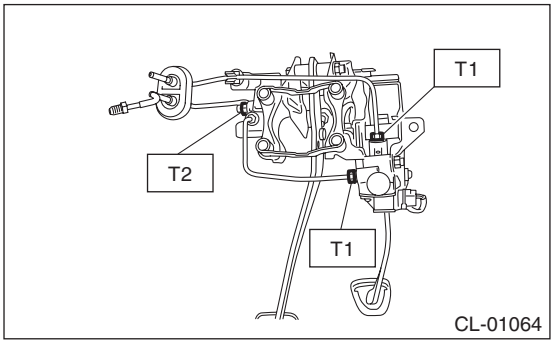


(A) Master cylinder

6) Secure the clevis pin with mounting clip.

CAUTION:
Always use a new clevis pin.

NOTE:
Before installing the clevis pin, apply grease.

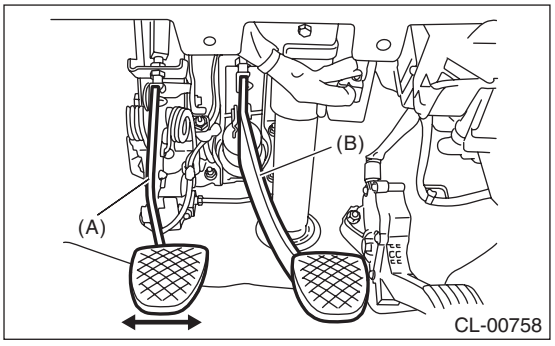


(A) Clevis pin
(B) Clip

7) Attach the sensor harness, and connect the connector to the clutch stroke sensor.
8) Install the clutch switch.

9) Install the clutch damper to the pedal assembly, and connect the clutch pipe to the master cylinder.

Tightening torque:
T1: 15 N·m (1.5 kgf-m, 11.1 ft-lb)
T2: 18 N·m (1.8 kgf-m, 13.3 ft-lb)



E: INSPECTION

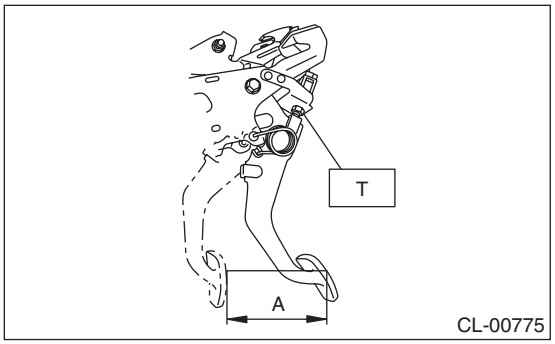
1. CLUTCH PEDAL

Move the clutch pedal in the lateral direction with a force of approximately 10 N (1 kgf, 2 lbf) to check that the clutch pedal deflection is within the service limit.

CAUTION:
If it exceeds the service limit, replace the clutch pedal assembly with a new part.

Deflection of the clutch pedal:
Service limit
4.0 mm (0.157 in) or less

(A) Clutch pedal
(B) Brake pedal

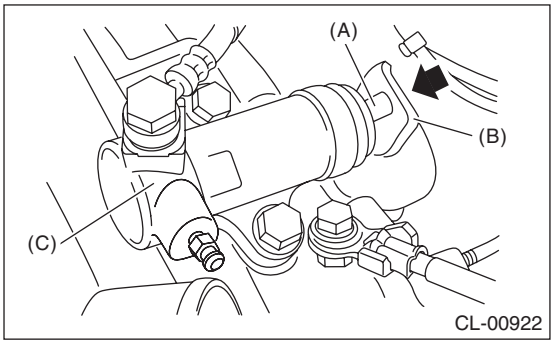


F: ADJUSTMENT

1) If the full stroke of the clutch pedal is not within the specified value, loosen the lock nuts of the clutch switch and adjust the full stroke of the clutch pedal with the clutch switch.

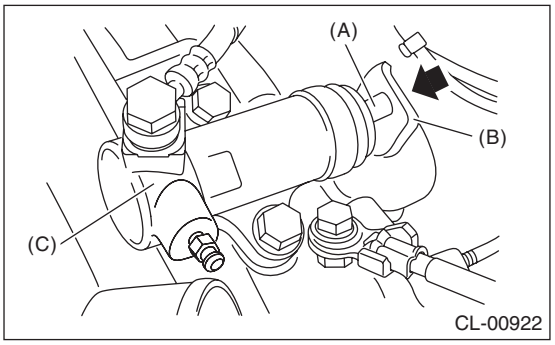
CAUTION:
When adjusting the full stroke of clutch pedal, do not turn the clutch switch.

Clutch pedal full stroke A:
130 — 135 mm (5.12 — 5.31 in)



Tightening torque:
T: 8 N·m (0.8 kgf-m, 5.9 ft-lb)

2) Depress and release the clutch pedal two or three times to ensure that the clutch pedal and release lever operate smoothly. If the clutch pedal and release lever do not operate smoothly, bleed air from the clutch hydraulic system. <Ref. to CL-26, Clutch Fluid Air Bleeding.>
3) Measure the clutch pedal full stroke length again to ensure that it is within specifications. If it is not within specifications, repeat adjustment procedures again from the beginning.



Clutch pedal full stroke:
130 — 135 mm (5.12 — 5.31 in)

4) Push the release lever until the operating cylinder push rod retracts. Make sure that the clutch fluid level in the reservoir tank increases. If the clutch fluid level increases, the hydraulic clutch is properly adjusted. If the clutch fluid level does not increase or the push rod does not retract, replace the master cylinder with a new part. <Ref. to CL-19, Master Cylinder.>

(A) Push rod
(B) Release lever
(C) Operating cylinder

5) Push the release lever until the operating cylinder push rod retracts. Check that the clutch fluid level in the reservoir tank increases.

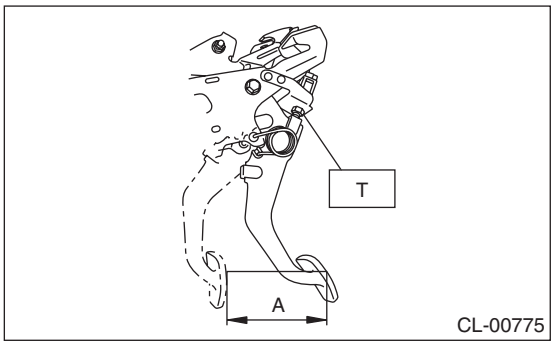
(A) Push rod
(B) Release lever
(C) Operating cylinder

6) If the clutch fluid level increases, hydraulic clutch play is correct.
7) If the clutch fluid level does not increase or push rod does not retract, readjust the clutch pedal.
8) Check the fluid level using the scale on the outside of the reservoir tank. <Ref. to CL-25, INSPECTION, Clutch Fluid.>

11.Clutch Switch

A: REMOVAL

1) Disconnect the ground terminal from battery sensor.
<Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the instrument panel lower cover. <Ref. to EI-74, REMOVAL, Instrument Panel Lower Cover.>
3) Disconnect the connector from the clutch switch.
4) Remove the clutch switches.



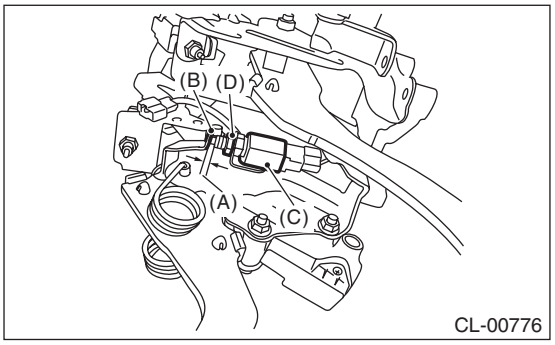
B: INSTALLATION

1. CLUTCH SWITCH

1) Move the clevis pin of push rod to left and right, retain it at the position where it moves smoothly, and measure the clutch pedal stroke.

Clutch pedal full stroke A:
130 — 135 mm (5.12 — 5.31 in)

Tightening torque:
T: 8 N·m (0.8 kgf-m, 5.9 ft-lb)



2) If the clutch pedal stroke is out of specification, adjust the stroke. <Ref. to CL-32, ADJUSTMENT, Clutch Pedal.>
3) Connect the connector to the clutch switch.

2. CLUTCH START SWITCH

1) Fully depress the clutch pedal and hold it.
2) Install so that gap (A) of the clutch pedal plate and clutch start switch is 2.9 mm (0.11 in), and tighten the lock nut.

Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)

(A) 2.9 mm (0.11 in)
(B) Clutch pedal plate
(C) Clutch start switch
(D) Lock nut

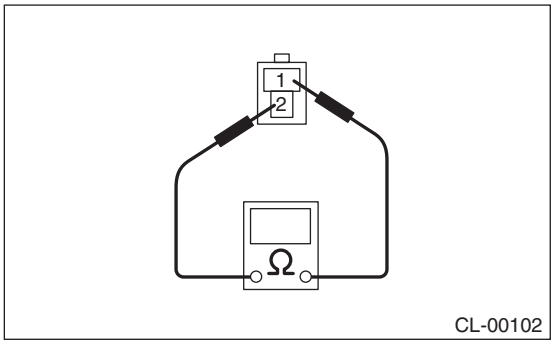
3) Connect the connector to the clutch start switch.
4) Make sure that engine does not start with clutch pedal not depressed.
5) Make sure that engine starts with clutch pedal fully depressed.

C: INSPECTION

1. CLUTCH START SWITCH

1) Perform the following inspections. If the clutch start switch does not operate normally, adjust the switch, and check it again. <Ref. to CL-35, ADJUSTMENT, Clutch Switch.>

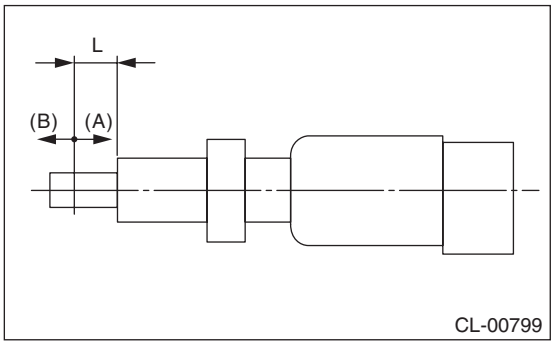
• Make sure that engine does not start with clutch pedal not depressed.



• Make sure that engine starts with clutch pedal fully depressed.

2) When the clutch start switch does not operate normally even if it is adjusted, check the clutch start switch for continuity.

(1) Remove the clutch start switch. <Ref. to CL-33, REMOVAL, Clutch Switch.>



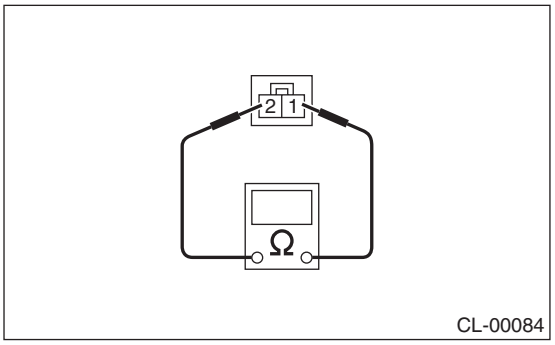
(2) Measure the resistance between terminal 1 and 2 of the switch. If the resistance is not at the standard value, replace the switch.

Condition	Terminal No.	Specified resistance
ON	No. 1 — No. 2	Less than 1 Ω
OFF	No. 1 — No. 2	1 MΩ or more

(3) Check that the switch is turned on and off in dimension L.

Dimension L:
4 — 5.5 mm (0.16 — 0.22 in)

(A) ON
(B) OFF



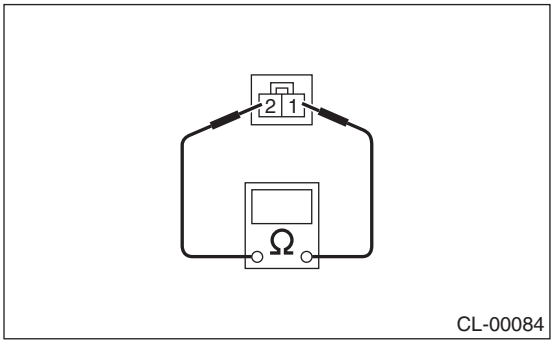
2. CLUTCH SWITCH

1) Check the clutch switch for continuity.

(1) Disconnect the connector of clutch switch.

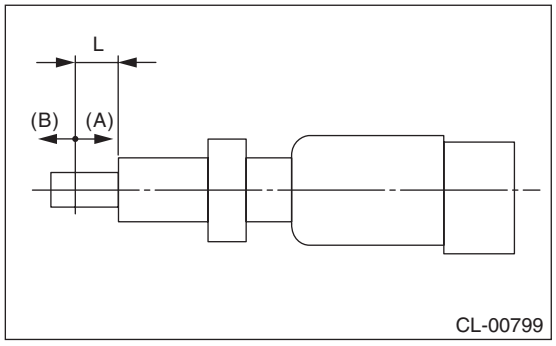
(2) Measure the resistance between terminal 1 and 2 of the switch. If the resistance is not within the specification, check the clutch stroke and installation condition, and check the clutch switch again.

Condition	Terminal No.	Specified resistance
When clutch pedal is depressed	No. 1 — No. 2	1 MΩ or more
When the clutch pedal is not depressed	No. 1 — No. 2	Less than 1 Ω



2) When the clutch switch does not operate normally even if the clutch stroke and installation condition are normal, check the clutch switch for continuity.

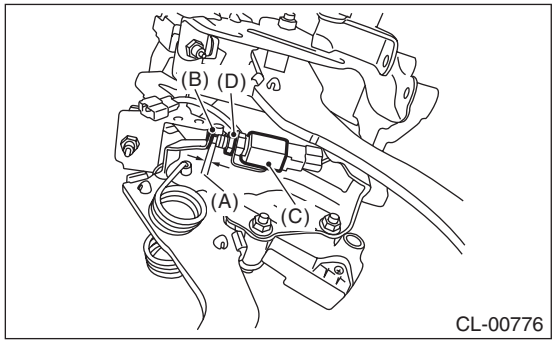
(1) Remove the clutch switches. <Ref. to CL-33, REMOVAL, Clutch Switch.>



(2) Measure the resistance between terminal 1 and 2 of the switch. If the resistance is not at the standard value, replace the switch.

Condition	Terminal No.	Specified resistance
ON	No. 1 — No. 2	Less than 1 Ω
OFF	No. 1 — No. 2	1 MΩ or more

(3) Check that the switch is turned on and off in dimension L.



Dimension L:
5 — 6.5 mm (0.2 — 0.26 in)

(A) ON
(B) OFF

D: ADJUSTMENT

1) Loosen the lock nut of the clutch start switch.
2) Fully depress the clutch pedal and hold it.
3) Adjust the gap (A) of the clutch pedal plate and the clutch start switch to be 2.9 mm (0.11 in).

(A) 2.9 mm (0.11 in)
(B) Clutch pedal plate
(C) Clutch start switch
(D) Lock nut

4) Tighten the lock nut.

Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)

12.General Diagnostic Table

A: INSPECTION

1. CLUTCH

Symptoms	Possible cause	Corrective action
1. Clutch slippage It is hard to perceive clutch slippage in the early stage, but pay attention to the following symptoms. • Engine speeds up when shifting. • High-speed driving is not possible; especially rapid acceleration is not possible and vehicle speed does not increase in proportion to the increase in engine speed. • Power drops particularly when ascending a slope, and there is a burning smell of the clutch plate. • Method of testing: Park the vehicle and fully apply the parking brake. Disengage the clutch and shift the transmission gear into the 1st. Gradually increase the engine speed while gradually allowing the clutch to engage. The clutch function is satisfactory if the engine stalls. However, the clutch is slipping if the vehicle does not move forward and the engine does not stall.	(a) Oil on the clutch face	Replace.
	(b) Worn clutch face	Replace.
	(c) Deteriorated diaphragm spring	Replace.
	(d) Warped pressure plate or flywheel	Repair or replace.
	(e) Defective release bearing holder	Repair or replace.
2. Clutch drags. As a symptom of this trouble, a harsh scratching noise occurs and control becomes difficult when shifting gears. The symptom becomes more apparent when shifting into the 1st gear. However, because most trouble of this sort is due to a defective synchronization mechanism, perform the following tests. • Method of testing: <Ref. to CL-37, DIAGNOSTIC DIAGRAM OF CLUTCH DRAG, INSPECTION, General Diagnostic Table.> The problem is caused by insufficient disengagement of the clutch if an abnormal noise occurs during this test.	(a) Worn or rusty clutch disc hub spline	Replace the clutch disc.
	(b) Excessive deflection of clutch disc face	Repair or replace.
	(c) Crankshaft pilot needle bearing sticking	Replace.
	(d) Cracked clutch disc face	Replace.
	(e) Stuck clutch disc (smeared by oil or water)	Replace.
3. Clutch chatters. Clutch chattering is an unpleasant vibration to the whole vehicle when the vehicle is just started with clutch partially engaged.	(a) Adhesion of oil on the clutch face	Replace the clutch disc.
	(b) Weak or broken damper spring	Replace the clutch disc.
	(c) Poor contact of the disc surface or excessively worn disc	Replace the faulty clutch disc.
	(d) Warped pressure plate or flywheel	Repair or replace.
	(e) Loose disc rivets	Replace the clutch disc.
	(f) Loose engine mounting	Retighten or replace mounting.
4. Noisy clutch Examine whether the noise is generated when the clutch is disengaged, engaged, or partially engaged.	(a) Broken, worn or insufficiently lubricated release bearing	Replace the release bearing.
	(b) Insufficient lubrication of the pilot bearing	Replace the pilot bearing.
	(c) Loose clutch disc hub	Replace the clutch disc.
	(d) Loose damper spring retainer	Replace the clutch disc.
	(e) Deteriorated or broken damper spring	Replace the clutch disc.

Symptoms	Possible cause	Corrective action
5. Clutch grabs suddenly. When starting the vehicle with the clutch partially engaged, the clutch engages suddenly and the vehicle jumps instead of making a smooth start.	(a) Grease or oil on facing	Replace the clutch disc.
	(b) Deteriorated cushioning spring	Replace the clutch disc.
	(c) Worn or rusted spline of clutch disc or main shaft	Take off rust, apply grease or replace clutch disc or main shaft.
	(d) Deteriorated or broken damper spring	Replace the clutch disc.
	(e) Loose engine mounting	Retighten or replace mounting.
	(f) Deteriorated diaphragm spring	Replace.

2. CLUTCH PEDAL

Symptoms	Corrective action
Insufficient clutch pedal free play	Adjust the free play of the pedal.
Excessively worn and damaged pedal shaft and/or bushing	Replace the bushing or shaft with a new part.

3. DIAGNOSTIC DIAGRAM OF CLUTCH DRAG

	Step	Check	Yes	No
1	**CHECK GEAR NOISE.** 1) Start the engine. 2) While idling the engine, step on the clutch pedal and quickly shift from neutral to reverse.	Is there any abnormal noise from the transmission gear?	Go to step **2**.	Clutch is normal.
2	**CHECK GEAR NOISE.** Depress the clutch pedal at idle and shift from neutral to reverse within 0.5 — 1.0 second.	Is there any abnormal noise from the transmission gear?	Go to step **3**.	Defective transmission or excessive clutch drag torque. Inspect pilot bearing, clutch disc, transmission and clutch disc hub spline.
3	**CHECK GEAR NOISE.** 1) Depress the clutch pedal at idle and shift from neutral to reverse within 0.5 — 1.0 second. 2) While stepping on the clutch pedal, shift from neutral to reverse, reverse to neutral several times.	Is there any abnormal noise from the transmission gear?	Inadequate clutch disengage. Inspect the clutch disc, clutch cover, clutch release, and clutch pedal free play.	Clutch and flywheel seizure. Inspect the clutch disc and the spline of the clutch disc hub.

CHASSIS SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

1. General Description

A: SPECIFICATION

1. FRONT

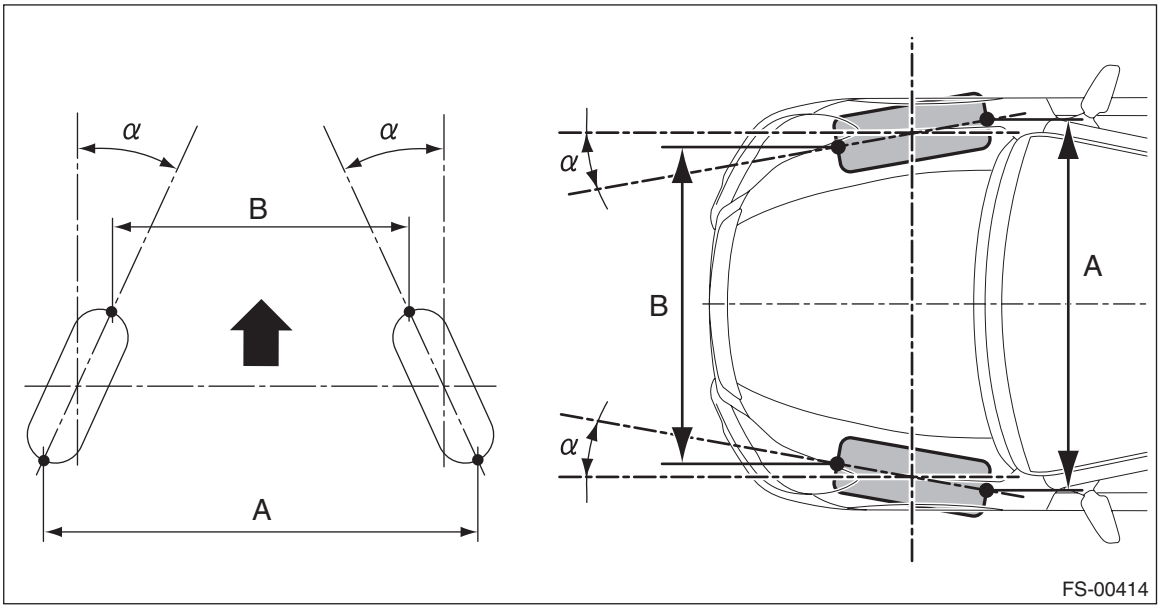
• Sedan model

Tire size		P225/55R17 P225/50R18
Wheel arch height (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$)) mm (in)		397 (15.63)
Camber (tolerance: ±0°45′ Differences between RH and LH: 45′ or less)		–0°15′
Caster (referential value)		5°50′
Steering angle (tolerance: ±1.5°)	Inner wheel	37.6°
	Outer wheel	32.8°
Toe-in mm (in)		0±3 (0.00±0.12) Toe angle (sum of both wheels): 0°00′±0°15′
Kingpin angle (referential value)		13°55′

• OUTBACK model

Tire size		P225/65R17 P225/60R18
Wheel arch height (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$)) mm (in)		467 (18.39)
Camber (tolerance: ±0°45′ Differences between RH and LH: 45′ or less)		0°00′
Caster (referential value)		5°00′
Steering angle (tolerance: ±1.5°)	Inner wheel	38.6°
	Outer wheel	33.8°
Toe-in mm (in)		0±3 (0.00±0.12) Toe angle (sum of both wheels): 0°00′±0°15′
Kingpin angle (referential value)		12°15′

2. REAR

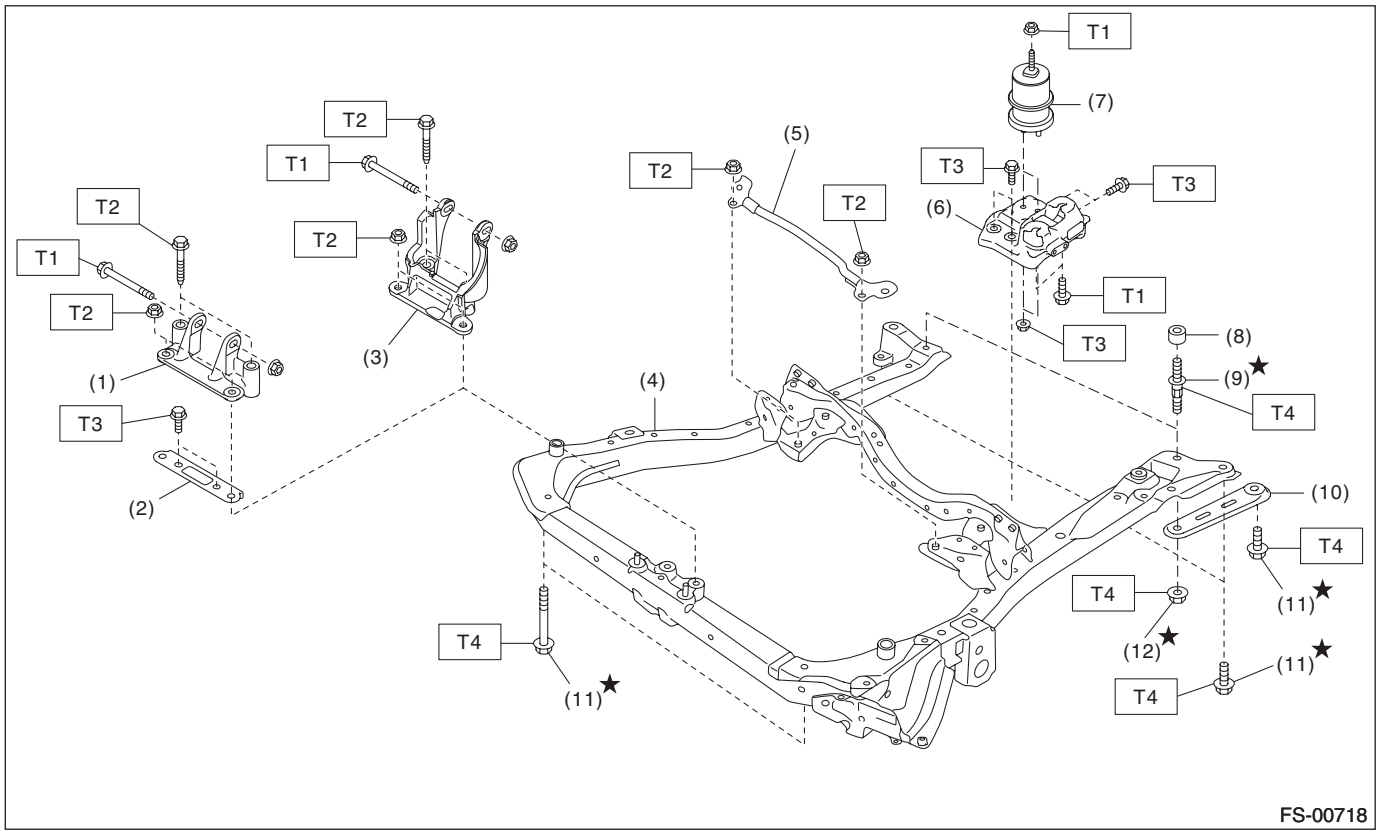


• Sedan model

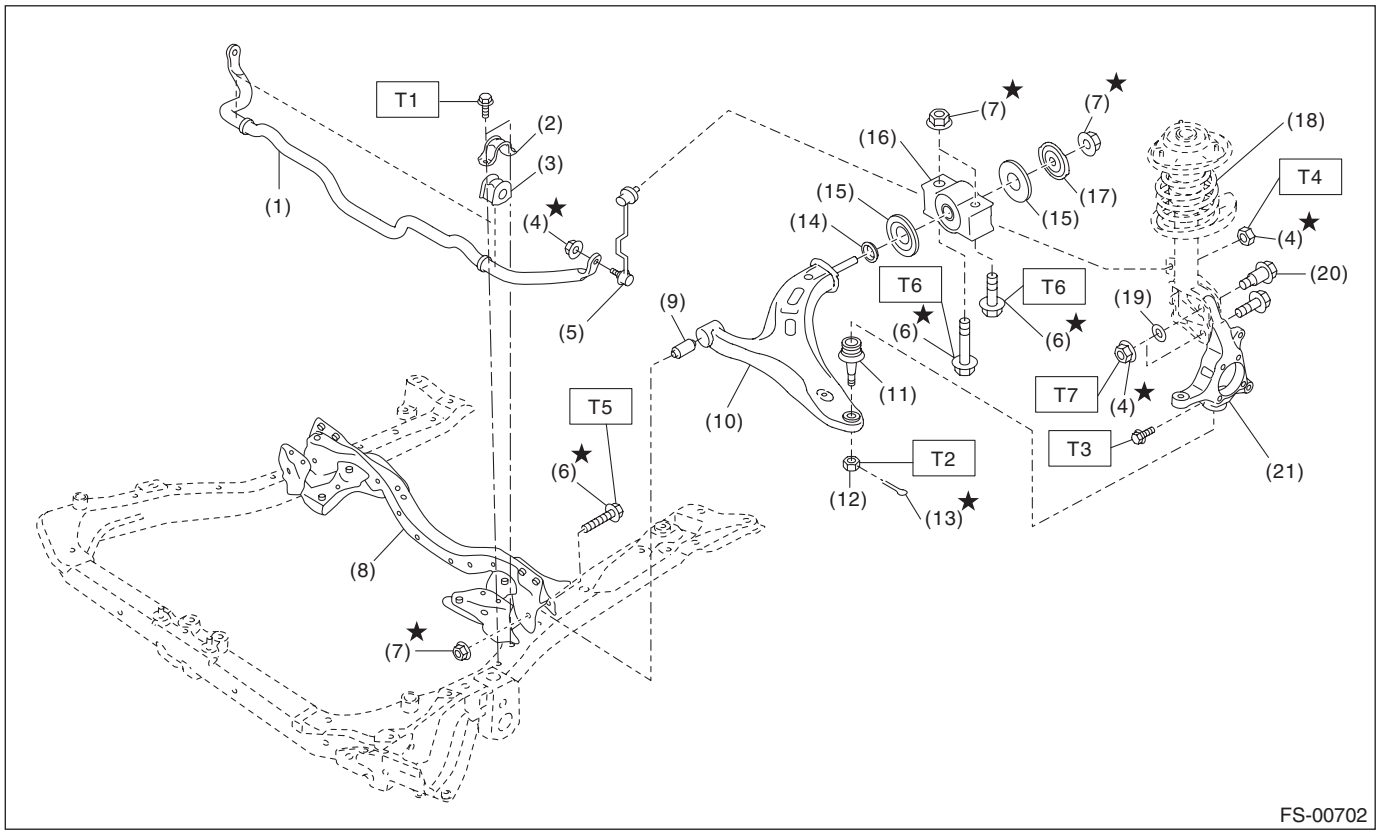
Tire size	P225/55R17 P225/50R18
Wheel arch height (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$)) mm (in)	381 (15.00)
Camber (tolerance: ±0°45′ Differences between RH and LH: 45′ or less)	–1°25′
Toe-in mm (in)	3±3 (0.12±0.12) Toe angle (sum of both wheels): 0°15′±0°15′
Thrust angle (tolerance: ±0°30′)	0°

• OUTBACK model

Tire size	P225/65R17 P225/60R18
Wheel arch height (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$)) mm (in)	467 (18.39)
Camber (tolerance: ±0°45′ Differences between RH and LH: 45′ or less)	–1°00′
Toe-in mm (in)	3±3 (0.12±0.12) Toe angle (sum of both wheels): 0°14′±0°14′
Thrust angle (tolerance: ±0°30′)	0°

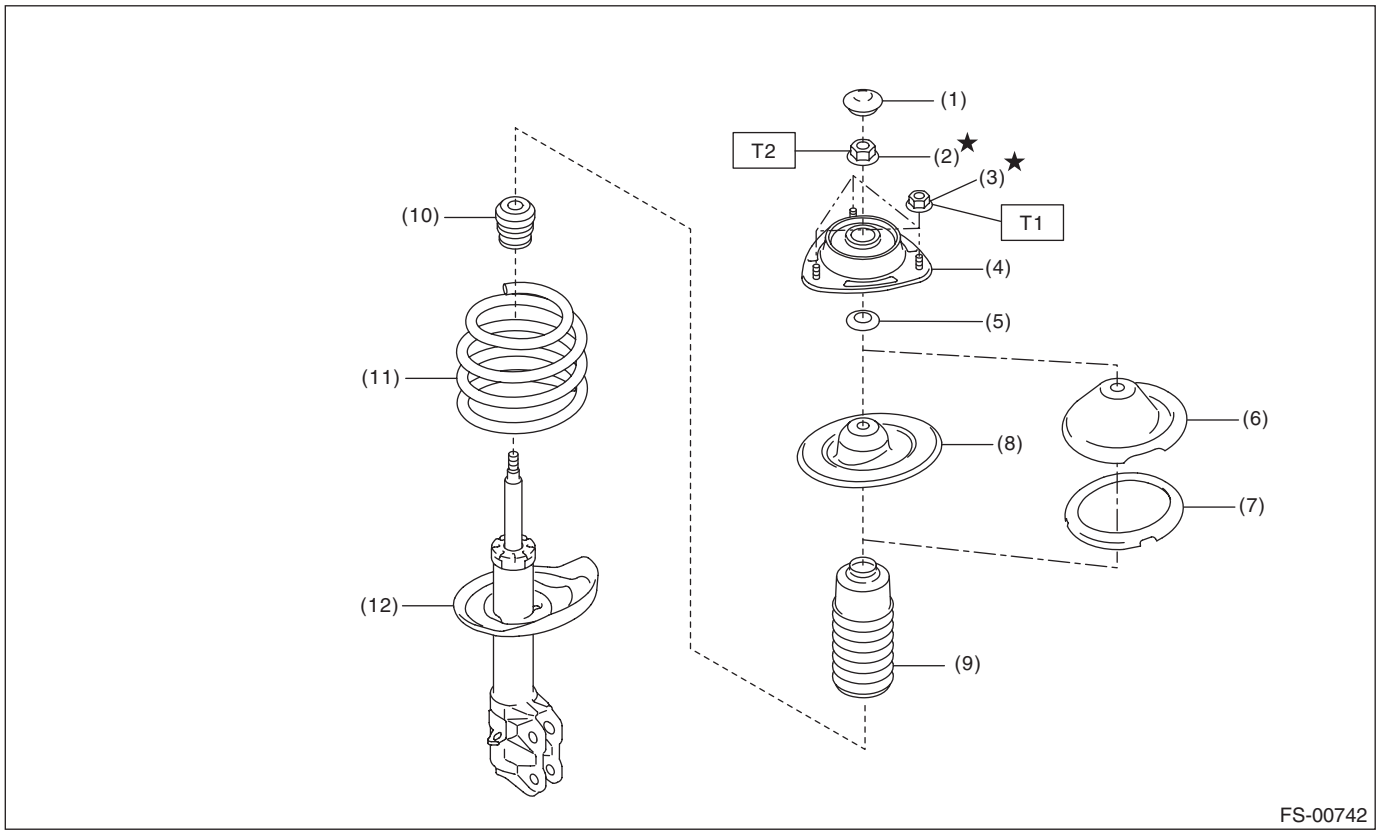


NOTE:
• Front toe-in, rear toe-in and front camber can be adjusted. Adjust if the value of toe-in or camber exceeds the tolerance range of the specification chart.
• Other items except for front toe-in, rear toe-in and front camber that are described in the specification chart cannot be adjusted.
• If other items exceed the tolerance range of the specification chart, check the suspension parts and connections for deformation. If defective, replace with new parts.



A – B = Positive: Toe-in, Negative: Toe-out

α = Individual toe angles



B: COMPONENT

(1)	Front mounting bracket (H6 model)	(7)	Main cushion rubber	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Bracket	(8)	Stopper (OUTBACK model only)	***T1: 45 (4.6, 33.2)***
(3)	Front mounting bracket (H4 model)	(9)	Stud bolt	***T2: 60 (6.1, 44.3)***
(4)	Cradle	(10)	Stiffener	***T3: 65 (6.6, 47.9)***
(5)	Crossmember support - front	(11)	Bolt	***T4: 90 (9.2, 66.4)***
(6)	Main mounting bracket	(12)	Self-locking nut	

(1)	Front stabilizer	(11)	Ball joint ASSY	(21)	Housing ASSY - front axle
(2)	Clamp - stabilizer bushing	(12)	Castle nut		
(3)	Bushing - stabilizer	(13)	Cotter pin	***Tightening torque: N·m (kgf-m, ft-lb)***	
(4)	Flange nut	(14)	Spacer - arm front	***T1: 25 (2.5, 18.4)***	
(5)	Stabilizer link ASSY	(15)	Stopper - rubber front	***T2: 39 (4.0, 28.8)***	
(6)	Flange bolt	(16)	Rear bushing ASSY	***T3: 50 (5.1, 36.9)***	
(7)	Self-locking nut	(17)	Plate - arm front	***T4: 60 (6.1, 44.3)***	
(8)	Cradle	(18)	Front strut ASSY	***T5: 95 (9.7, 70.1)***	
(9)	Front bushing	(19)	Adjusting washer	***T6: 140 (14.3, 103.3)***	
(10)	Front arm ASSY	(20)	Adjusting bolt	***T7: 155 (15.8, 114.3)***	

(1)	Dust seal - front strut	(7)	Rubber seat (OUTBACK model)
(2)	Self-locking nut	(8)	Spring seat - front strut UPR (sedan model)
(3)	Flange nut	(9)	Dust cover - front strut
(4)	Strut mount - front	(10)	Helper - front strut
(5)	Spacer - front strut	(11)	Coil spring - front
(6)	Spring seat - front strut UPR (OUTBACK model)	(12)	Strut COMPL - front

Tightening torque: N·m (kgf-m, ft-lb)

T1: 20 (2.0, 14.8)

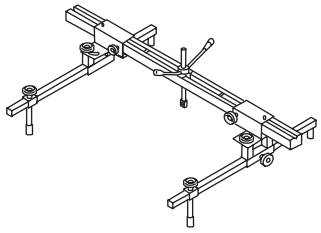
T2: 55 (5.6, 40.6)

C: CAUTION

- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- When disposing of strut COMPL - front, be sure to bleed the oil or gas out completely. Also, do not expose to flames or fire.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Do not secure a part in a vise directly. Place cushioning materials such as wood pieces, blocks, aluminum plates, or waste cloth between the part and the vise.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- When the suspension-related components have been removed or replaced, perform “VDC sensor mid-point setting mode” of the VDC. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- For parts which are not reusable, always use new parts. Other parts should be replaced with new parts as required.
- When handling oil or fuel, adhere to the following to prevent unexpected accident.
  – Be careful with fire.
  – Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.
  – Follow all government and local regulations concerning disposal of refuse when disposing.
- Be sure that the surface of brake disc or brake pad is free from grease or oil.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.

D: PREPARATION TOOL

1. SPECIAL TOOL



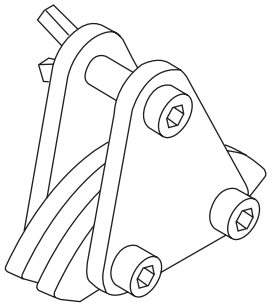


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
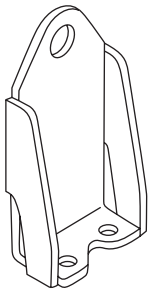
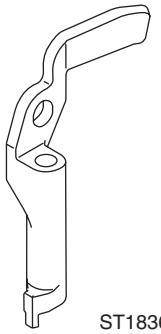
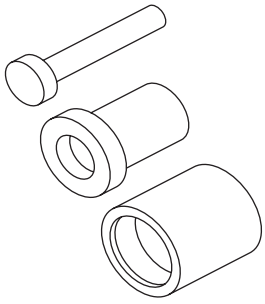
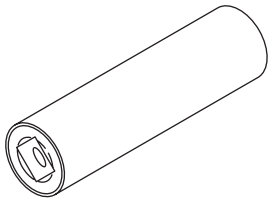
 ST99099AJ000	99099AJ000	ENGINE HANGER	• Used for hanging power unit. • Used together with CHAIN BALANCER (99099AJ010).
 ST99099AJ010	99099AJ010	CHAIN BALANCER	• Used for hanging power unit. • Used together with ENGINE HANGER (99099AJ000).









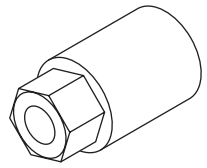


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18360AA020	18360AA020	HANGER	• Used for hanging power unit. • For H6 model.
 ST18360AA040	18360AA040 (Newly adopted tool)	HANGER	• Used for removing and installing the cradle. • Used together with BOLT (18363AA050).
 ST18363AA050	18363AA050 (Newly adopted tool)	BOLT	• Used for removing and installing the cradle. • Used together with HANGER (18360AA040).
 ST-927680000	927680000	INSTALLER & REMOVER SET	Used for replacing the bushing front - front arm of front arm assembly.
 ST20299AG020	20299AG020	STUD BOLT SOCKET	Used for removing and installing the stud bolt for front arm installing portion.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST20399AG000	20399AG000	STRUT MOUNT SOCKET	• Used for disassembling and assembling strut assembly and shock absorber assembly. • Used for checking center nut torque of strut assembly and shock absorber assembly.

2. GENERAL TOOL

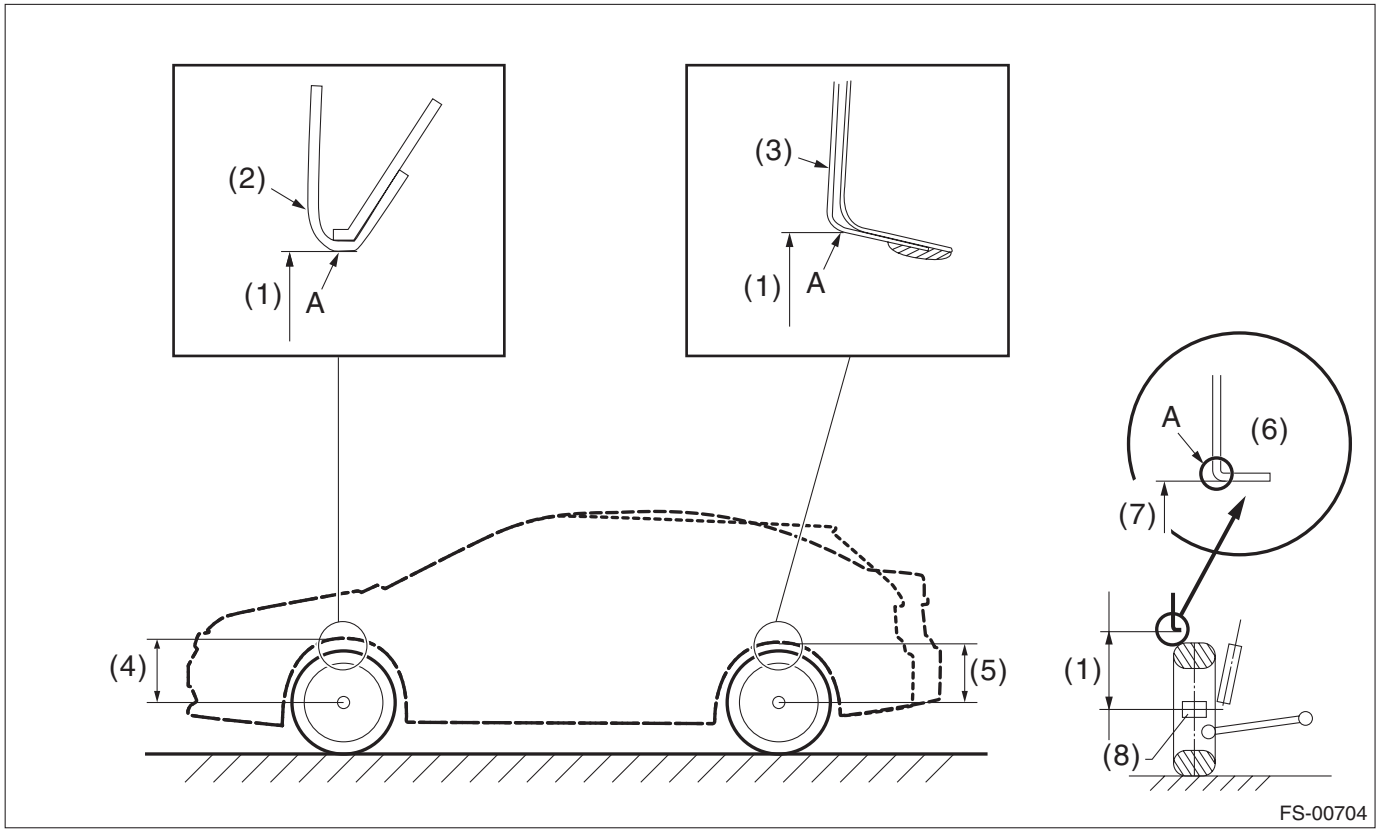
TOOL NAME	REMARKS
Alignment gauge	Used for measuring wheel alignment.
Alignment gauge adapter	Used for measuring wheel alignment.
Turning radius gauge	Used for measuring wheel alignment.
Toe-in gauge	Used for toe-in measurement.
Chain sling	• Used for hanging power unit. • Diameter: 6 mm (0.24 in) or 6.3 mm (0.25 in) • Length: 0.8 — 1 m (2.6 — 3.3 ft) • Chain inner width: 8.5 mm (0.33 in) or more • Chain external width: 23.5 mm (0.93 in) or less • Load capacity: 1.2 t (2646 lb) or more
Shackle	• Two units used for hanging power unit. • Attached to both end of chain sling and connected to engine hook. • Load capacity: 250 kg (551 lb) or more
Sling belt	• Used to remove and install the cradle. • Width: 35 — 40 mm (1.38 — 1.57 in) • Length: 2 m (6.6 ft) • Load capacity: 1 t (2205 lb) or more
Shackle	• Used to remove and install the cradle. • Load capacity: 500 kg (1103 lb) or more
Tie-rod ball joint puller	Used for disconnecting tie-rod end.
Dial gauge	Used for damper strut measurement.
Coil spring compressor	Used for disassembling and assembling strut assembly and shock absorber assembly.

2. Wheel Alignment

A: INSPECTION

Check the following items before performing the wheel alignment measurement.
- Tire inflation pressure
- Uneven wear of RH and LH tires, or difference of sizes
- Tire runout
- Excessive play and wear of ball joint
- Excessive play and wear of tie-rod end
- Excessive play of wheel bearing
- Right and left wheel base imbalance
- Deformation and excessive play of steering link
- Deformation and excessive play of suspension parts

Check, adjust and measure the wheel alignment in accordance with the following procedures.



1	Wheel arch height (front and rear wheels)	Inspection: <Ref. to FS-11, WHEEL ARCH HEIGHT, INSPECTION, Wheel Alignment.>
		↓
2	Camber (front and rear wheels)	Inspection: <Ref. to FS-12, CAMBER, INSPECTION, Wheel Alignment.> Adjustment: <Ref. to FS-14, FRONT CAMBER, ADJUSTMENT, Wheel Alignment.>
		↓
3	Caster (front wheel)	Inspection: <Ref. to FS-12, CASTER, INSPECTION, Wheel Alignment.>
		↓
4	Steering angle	Inspection: <Ref. to FS-13, FRONT WHEEL TOE-IN, INSPECTION, Wheel Alignment.> Adjustment: <Ref. to FS-16, STEERING ANGLE, ADJUSTMENT, Wheel Alignment.>
		↓
5	Front wheel toe-in	Inspection: <Ref. to FS-13, STEERING ANGLE, INSPECTION, Wheel Alignment.> Adjustment: <Ref. to FS-17, FRONT WHEEL TOE-IN, ADJUSTMENT, Wheel Alignment.>
		↓
6	Rear wheel toe-in	Inspection: <Ref. to FS-13, REAR WHEEL TOE-IN, INSPECTION, Wheel Alignment.> Adjustment: <Ref. to FS-18, REAR WHEEL TOE-IN, ADJUSTMENT, Wheel Alignment.>
		↓
7	Thrust angle	Inspection: <Ref. to FS-14, THRUST ANGLE, INSPECTION, Wheel Alignment.> Adjustment: <Ref. to FS-19, THRUST ANGLE, ADJUSTMENT, Wheel Alignment.>

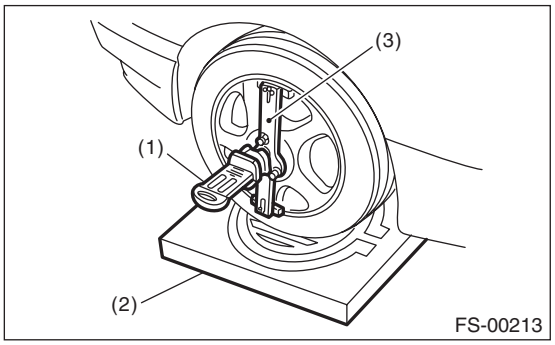
1. WHEEL ARCH HEIGHT

1) Park the vehicle on a level surface.
2) Empty the vehicle so that it is at “curb weight”.

NOTE:
Empty the trunk or luggage room, load the spare tire, jack and service tools, and fill up the fuel tank.

3) Set the steering wheel in a straight-ahead position, and stabilize the suspension by moving the vehicle in a straight line for 5 m (16 ft) or more.
4) Suspend a thread from the wheel arch (point “A” in the figure below) and affix at a position directly above the center of wheel.
5) Measure the distance between the point “A” and the center of wheel.

(1) Wheel arch height
(2) Front fender
(3) Rear quarter
(4) Front wheel arch height
(5) Rear wheel arch height
(6) Flange bend line
(7) Point of measurement
(8) End of spindle



Model	Tire size	Wheel arch height specification mm (in) (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$))	
		Front	Rear
Sedan model	P225/55R17 P225/50R18	397 (15.6)	381 (15)
OUTBACK model	P225/65R17 P225/60R18	467 (18.4)	467 (18.4)

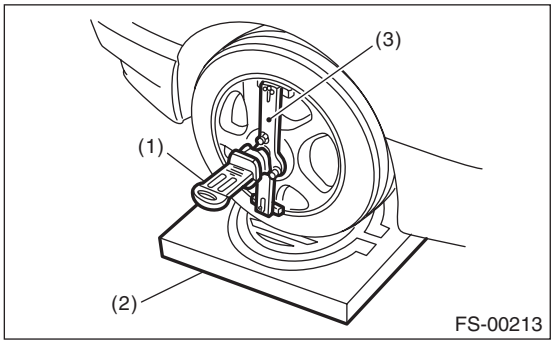
2. CAMBER

1) Place the front wheel on the turning radius gauge.

NOTE:
Make sure the ground contact surfaces of the front and rear wheels are at the same height.

2) Set the adapter into the center of wheel, and then set the wheel alignment gauge.

(1) Alignment gauge
(2) Turning radius gauge
(3) Adapter



3) Measure the camber angle in accordance with the operation manual for wheel alignment gauge.

Tire size		Camber (difference between RH and LH 45′ or less)	
		Front	Rear
Sedan model	P225/55R17 P225/50R18	–0°15′±0°45′	–1°25′±0°45′
OUTBACK model	P225/65R17 P225/60R18	0°00′±0°45′	–1°00′±0°45′

3. CASTER

1) Place the front wheel on the turning radius gauge. Make sure the ground contact surfaces of the front and rear wheels are at the same height.

2) Set the adapter into the center of wheel, and then set the wheel alignment gauge.

(1) Alignment gauge
(2) Turning radius gauge
(3) Adapter

3) Measure the caster angle in accordance with the operation manual for wheel alignment gauge.

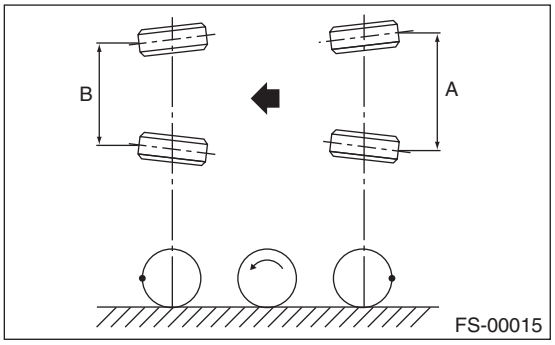
Tire size		Caster
Sedan model	P225/55R17 P225/50R18	5°50′
OUTBACK model	P225/65R17 P225/60R18	5°00′

4. STEERING ANGLE

1) Place the vehicle on turning radius gauge.
2) While depressing the brake pedal, turn the steering wheel fully to the left and right.
3) With the steering wheel held at each fully turned position, measure both the inner and outer wheel steering angles.

Model	Tire size	Inner wheel	Outer wheel
Sedan model	P225/55R17 P225/50R18	37.6°±1.5°	32.8°±1.5°
OUTBACK model	P225/65R17 P225/60R18	38.6°±1.5°	33.8°±1.5°

5. FRONT WHEEL TOE-IN



Toe-in: Inspection value
0±3 mm (0.00±0.12 in)

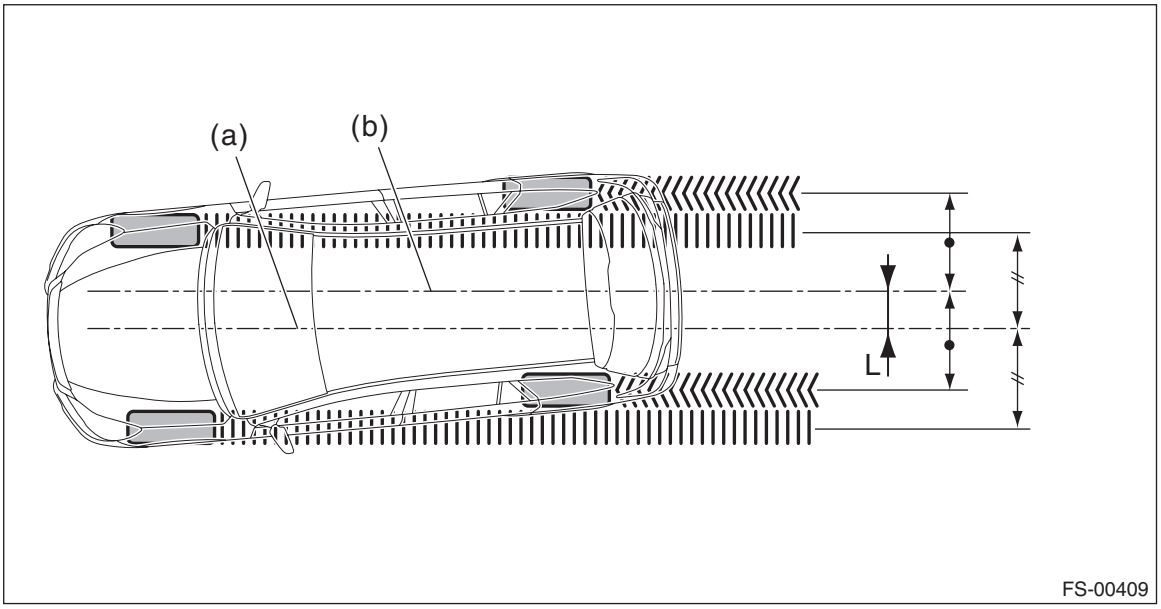
1) Set the toe-in gauge in the position at wheel axis center height behind the right and left front tires.
2) Place a mark at the center of both left and right tires, and measure distance “A” between the marks.
3) Move the vehicle forward to rotate the tires 180°.

NOTE:
Be sure to rotate the tires in the forward direction.

4) Measure the distance “B” between the left and right marks. Find toe-in using the following calculation:

A – B = Toe-in

6. REAR WHEEL TOE-IN



Refer to the FRONT WHEEL TOE-IN for rear toe-in inspection procedures. <Ref. to FS-13, STEERING ANGLE, INSPECTION, Wheel Alignment.>

Toe-in: Inspection value
3±3 mm (0.12±0.12 in)

7. THRUST ANGLE

1) Park the vehicle on a level surface.
2) Move the vehicle 3 — 4 meters (10 — 13 feet) straight forward.
3) Draw the center of loci for both the front and rear axles.
4) Measure distance “L” between the center lines of the axle loci.

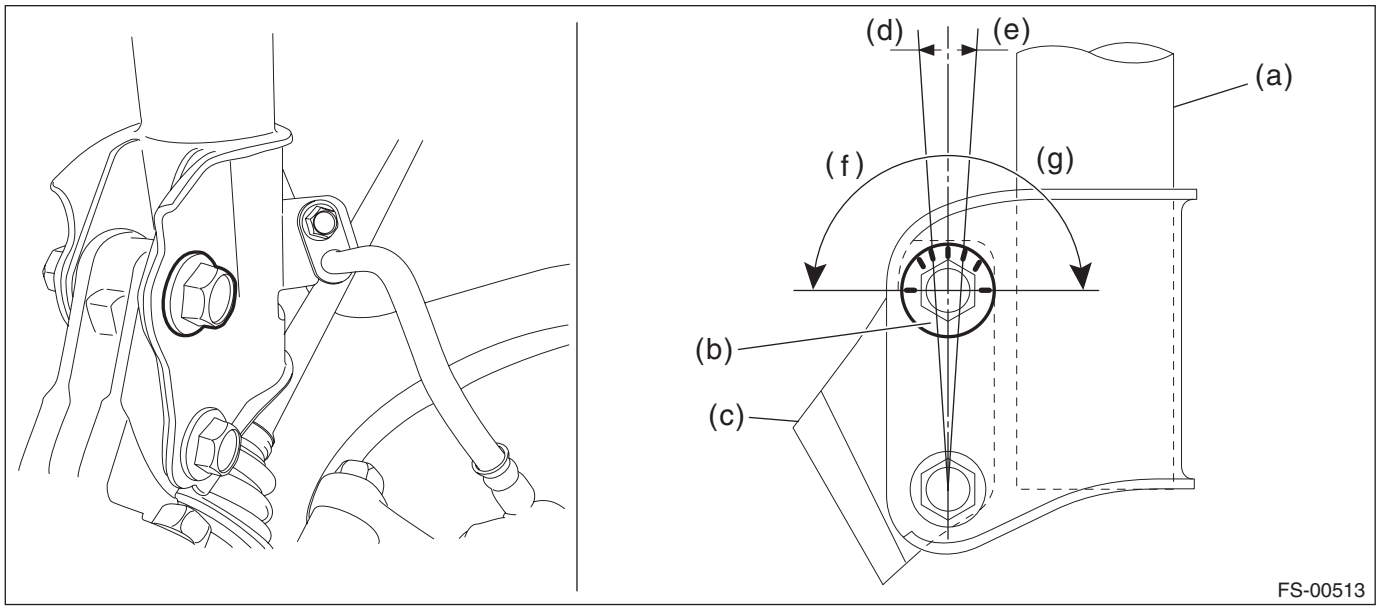
Thrust angle: Inspection value
0°±30′
Less than 30′ when “L” is 23 mm (0.9 in) or less

(a) Center line of loci (front axle) (b) Center line of loci (rear axle)

B: ADJUSTMENT

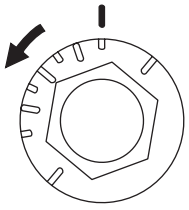
CAUTION:
When the wheel alignment has been adjusted, perform “VDC sensor midpoint setting mode” of the VDC. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

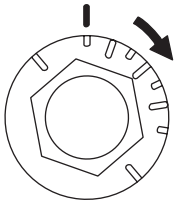
1. FRONT CAMBER



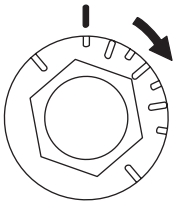
1) Adjust the camber angle to the following value.

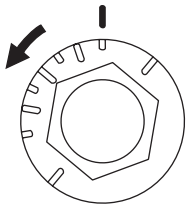
Tire size		Camber (difference between RH and LH 45′ or less)
Sedan model	P225/55R17 P225/50R18	–0°15′±0°30′
OUTBACK model	P225/65R17 P225/60R18	0°00′±0°30′





2) Loosen the two flange nuts while holding the strut bolts.





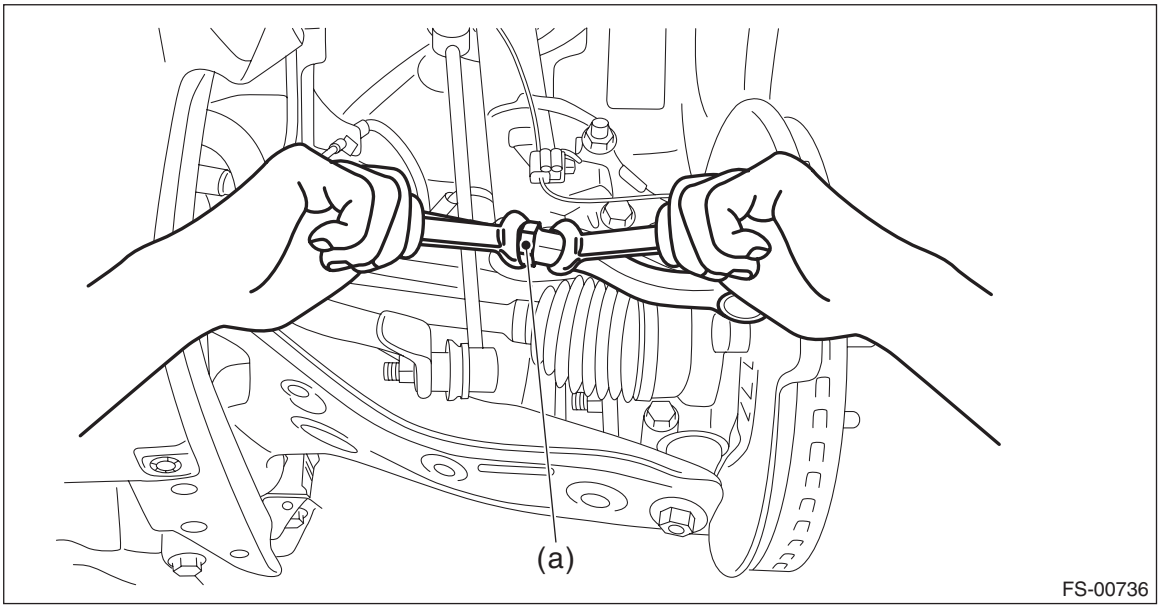
3) Turn the camber adjusting bolt so that the camber is set at specification.

NOTE:
Moving the adjusting bolt by one scale changes the camber by approximately 0°15′.

(a) Strut ASSY
(b) Adjusting bolt
(c) Housing ASSY - front axle
(d) Outer direction
(e) Inner direction
(f) Camber is increased.
(g) Camber is decreased.

To increase camber.	
Rotate the left side counterclockwise.	Rotate the right side clockwise.
 FS-00739	 FS-00740

To decrease camber.	
Rotate the left side clockwise.	Rotate the right side counterclockwise.
 FS-00740	 FS-00739



4) Tighten two new flange nuts.

Tightening torque:
155 N·m (15.8 kgf-m, 114.3 ft-lb)

NOTE:
While holding the adjusting bolt side, tighten the nut side.

2. STEERING ANGLE

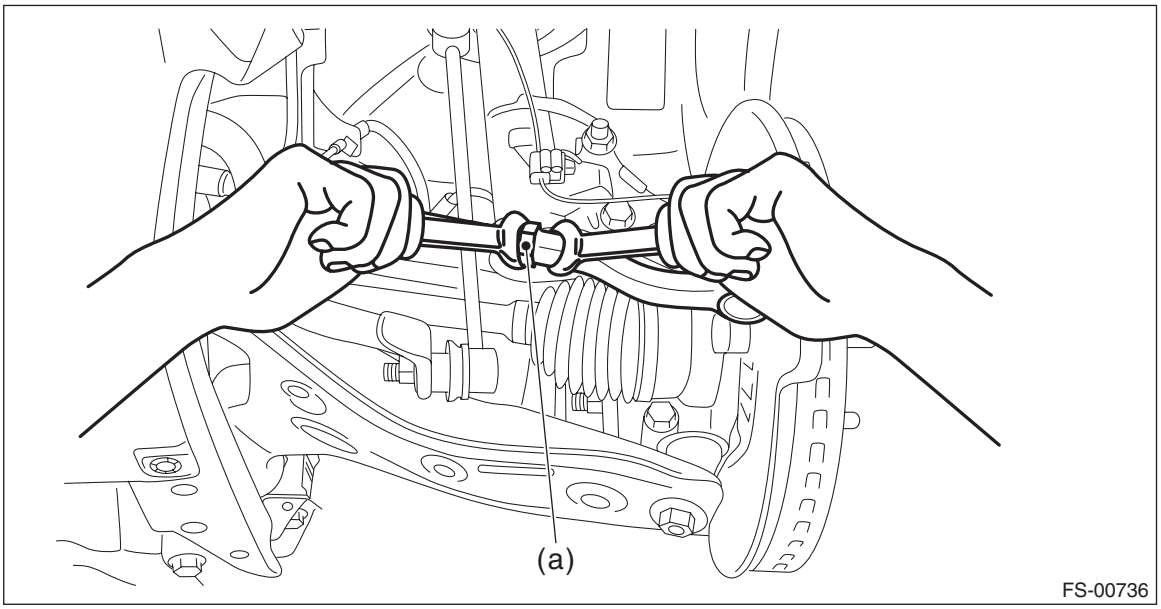
1) Adjust the steering angle of both inner and outer wheels.
(1) Loosen the steering tie-rod lock nut (a), and rotate the tie-rod.

(2) Turn the tie-rod to adjust the steering angle of both inner and outer wheels.
(3) Tighten the steering tie-rod lock nut (a).

Tightening torque:
85 N·m (8.7 kgf-m, 62.7 ft-lb)

NOTE:
Check and correct the tie-rod boot if twisted.
2) Check the toe-in. <Ref. to FS-13, STEERING ANGLE, INSPECTION, Wheel Alignment.>

3. FRONT WHEEL TOE-IN



When adjusting the toe-in, adjust it to the following value. <Ref. to FS-16, STEERING ANGLE, ADJUSTMENT, Wheel Alignment.>

Toe-in: Adjustment value
0±2 mm (0.00±0.08 in)

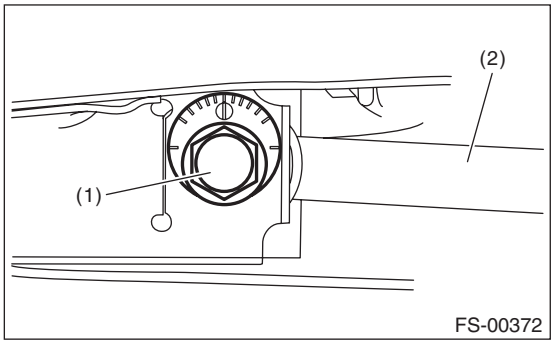
1) Check that the left and right wheel steering angles are within specification.
2) Loosen the left and right side steering tie-rod lock nuts (a).
3) Turn the left and right tie-rods by equal amounts until the toe-in is at the specification.

NOTE:
Both the left and right tie-rods are right-hand threaded. To increase toe-in, turn both tie-rods clockwise by equal amount (viewing from the inside of vehicle).

4) Tighten the steering tie-rod lock nut (a).

Tightening torque:
85 N·m (8.7 kgf-m, 62.7 ft-lb)

5) Check and correct the tie-rod boot if twisted.

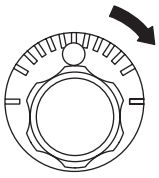


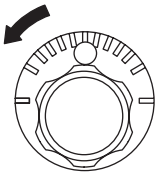
4. REAR WHEEL TOE-IN

When adjusting, adjust it to the following value.

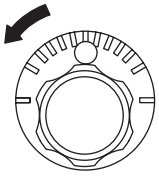
Toe-in: Adjustment value
3±2 mm (0.12±0.08 in)

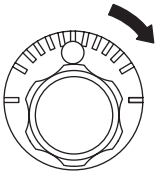
1) Loosen the self-locking nut after holding the bolt head section of lateral link assembly - front.





NOTE:
When loosening or tightening the adjusting bolt, hold the bolt head and turn the self-locking nut.





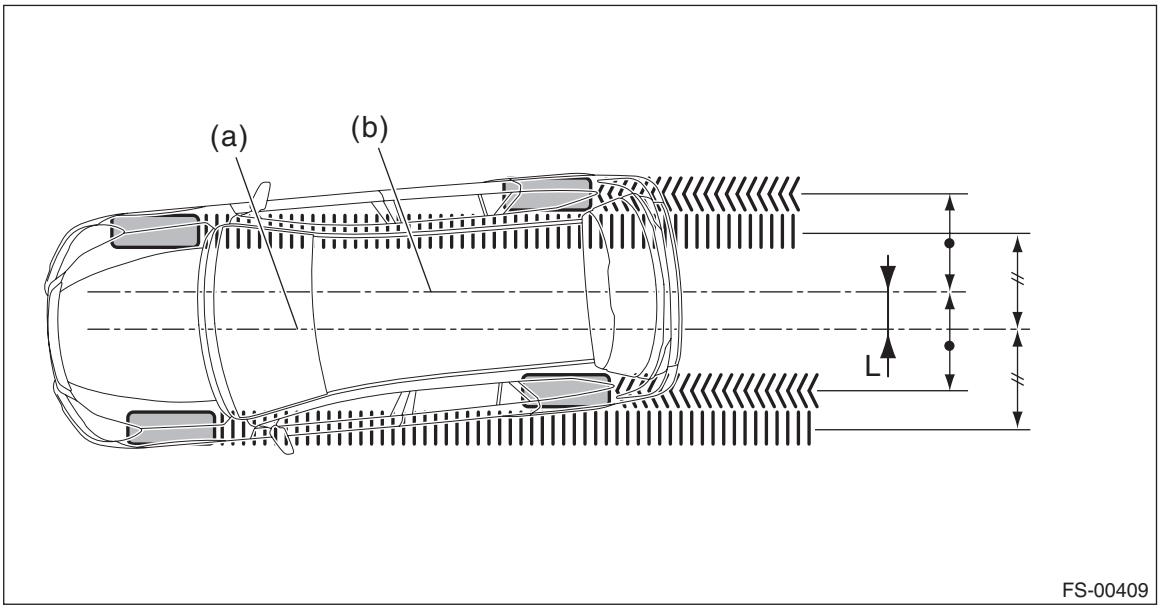
(1) Adjusting bolt
(2) Lateral link ASSY - front

2) Turn the adjusting bolt until toe-in is within the specification.

NOTE:
When the left and right wheels are adjusted for toe-in at the same time, the movement of one scale graduation changes toe-in by approx. 6.0 mm (0.24 in).

To increase toe-in.	
Rotate the left side clockwise.	Rotate the right side counterclockwise.
 FS-00018	 FS-00019

To decrease toe-in.	
Rotate the left side counterclockwise.	Rotate the right side clockwise.
 FS-00019	 FS-00018



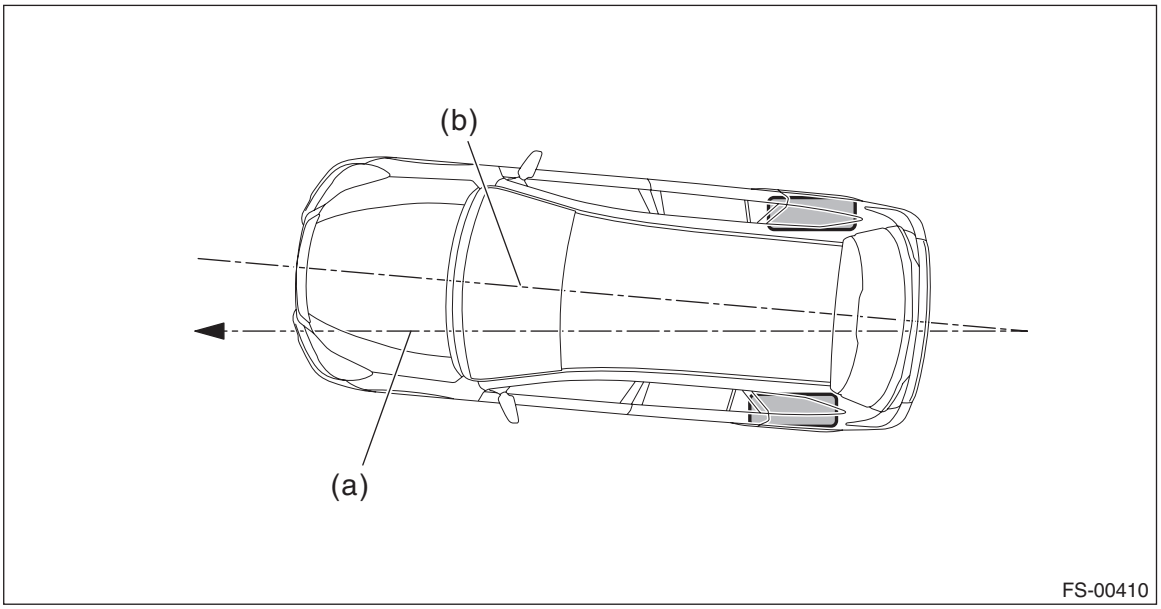
3) Attach and tighten a new self-locking nut.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

5. THRUST ANGLE

When adjusting, adjust it to the following value.

Thrust angle: Adjustment value
0°±20′
Less than 20′ when "L" is 15 mm (0.6 in) or less

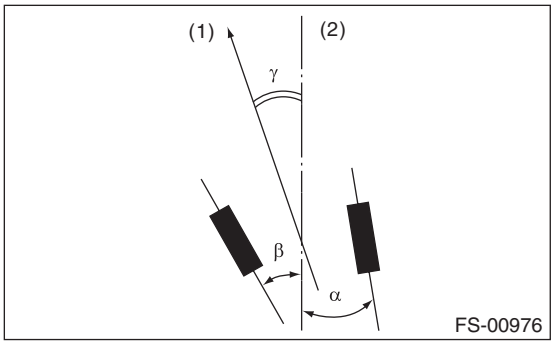


(a) Center line of loci (front axle) (b) Center line of loci (rear axle)

1) Make thrust angle adjustments by turning the toe-in adjusting bolts of the rear suspension equally in the same direction.
2) When one rear wheel is adjusted in a toe-in direction, adjust the other rear wheel equally in toe-out direction, in order to make the thrust angle adjustment.

3) When the left and right adjusting bolts are turned by one graduation, the thrust angle will change approx. 15′. (“L” is approx. 11 mm (0.43 in).)

NOTE:
Thrust angle is a mean value of left and right wheel toe angles in relation to the vehicle body center line. Vehicle is driven straight in the thrust angle direction while slanting in the oblique direction depending on the degree of the mean thrust angle.

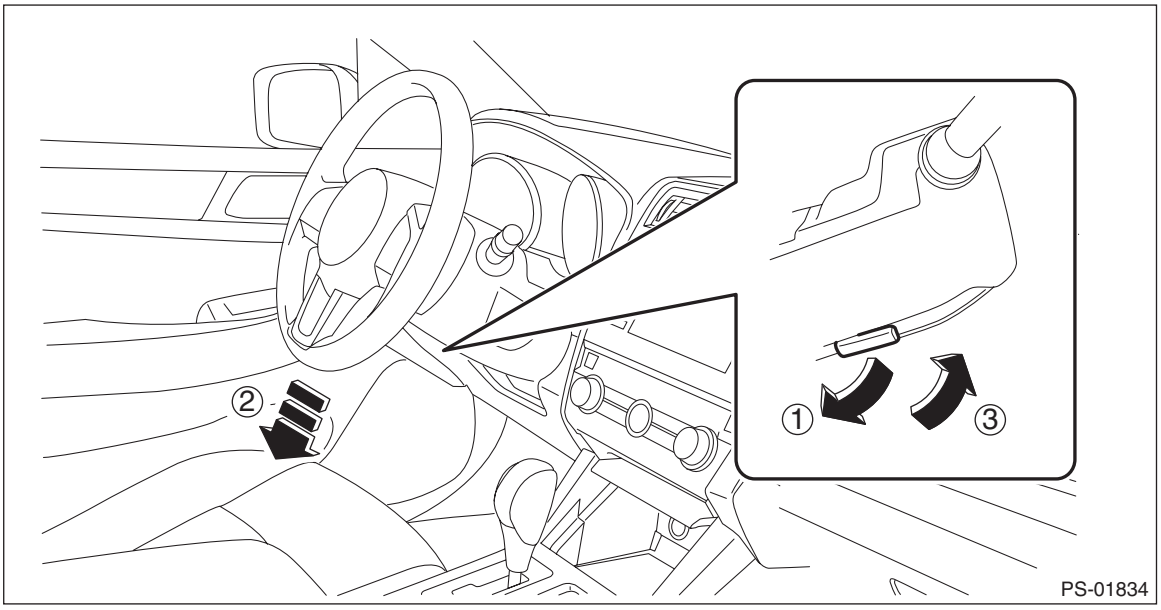


(a) Thrust angle (b) Body center line

Thrust angle:

$\gamma = (\alpha - \beta)/2$

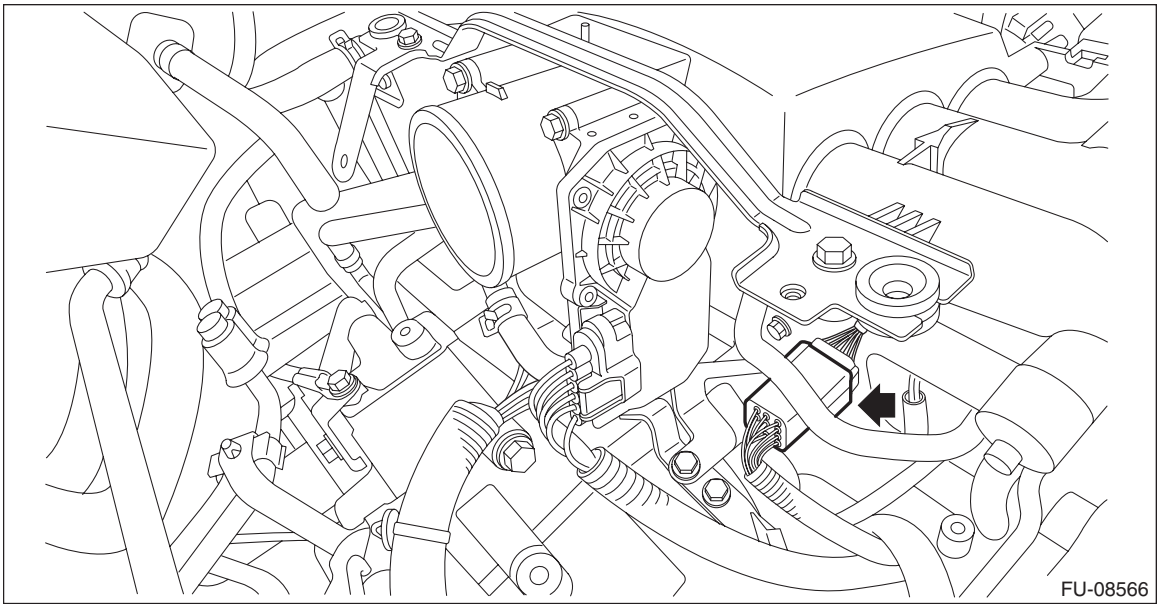
α: Rear RH wheel toe-in angle
β: Rear LH wheel toe-in angle
Substitute only the positive toe-in values from each wheel into α and β in the calculation.



(1) Front
(2) Body center line

3. Cradle

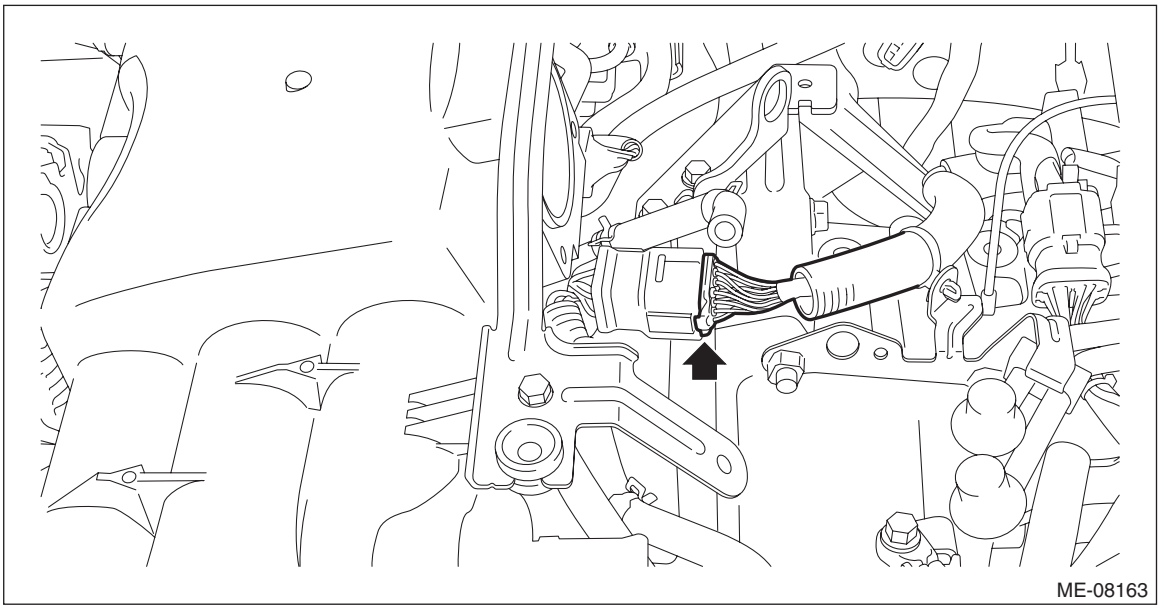
A: REMOVAL



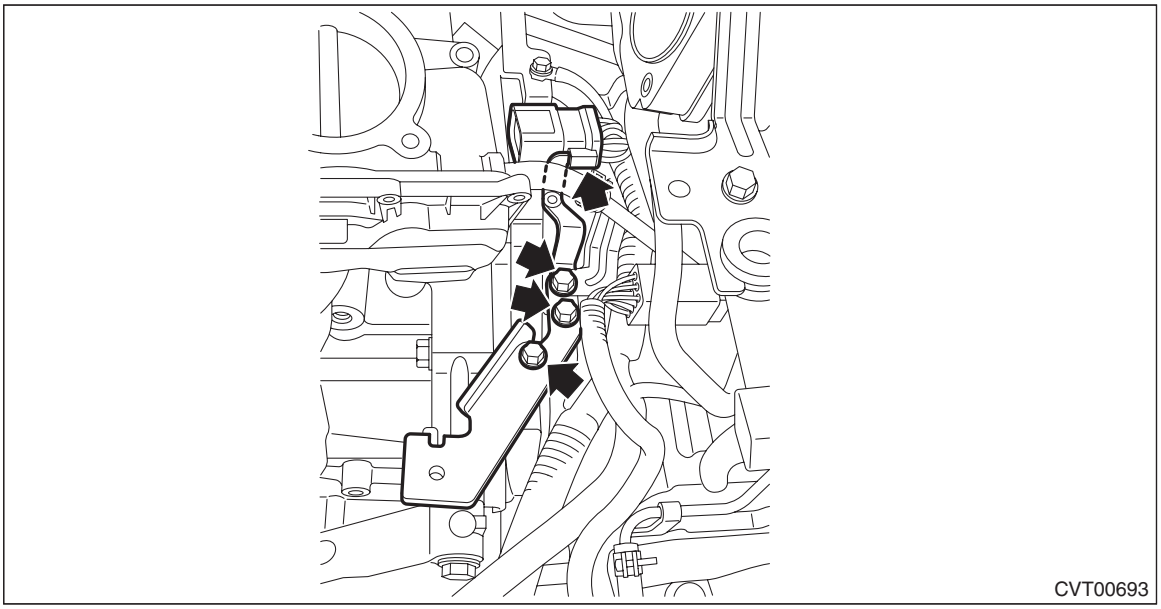
1) Lift up the vehicle, and then remove the front wheels.
2) Adjust the tilt position of the steering column to the neutral position and the telescopic position to the longest position.

CAUTION:
Always place the tilt lever to the lock position after the steering column is adjusted.

3) Remove the under cover - front. <Ref. to EI-28, REMOVAL, Front Under Cover.>
4) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Remove the air intake duct. <Ref. to IN(H4DO)-12, REMOVAL, Air Intake Duct.>
6) Remove the air intake boot assembly.
- H4 model: <Ref. to IN(H4DO)-10, REMOVAL, Air Intake Boot.>
- H6 model: <Ref. to IN(H6DO)-10, REMOVAL, Air Intake Boot.>

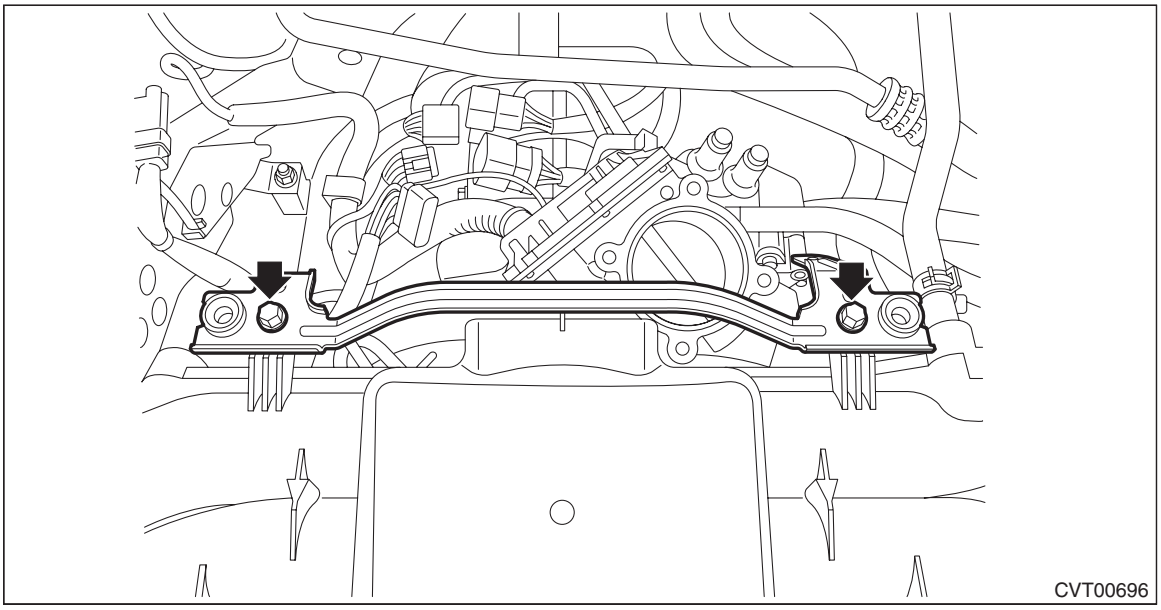


7) Fully open the front hood. <Ref. to RC-20, FRONT HOOD DAMPER STAY, NOTE, Repair Contents.>
8) Replace the engine hanger attached to the engine with ST. (H6 model)
   (1) Remove the engine harness connector.



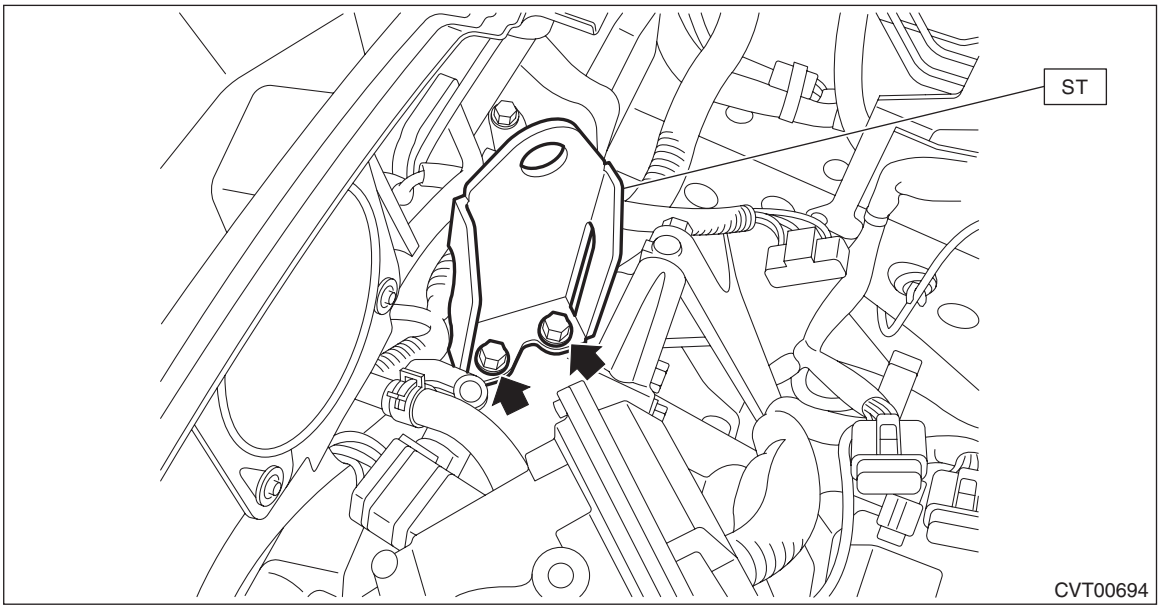
(2) Remove the throttle body from the intake manifold. <Ref. to FU(H6DO)-19, REMOVAL, Throttle Body.>

NOTE:
Do not disconnect the inlet and outlet hoses of engine coolant.



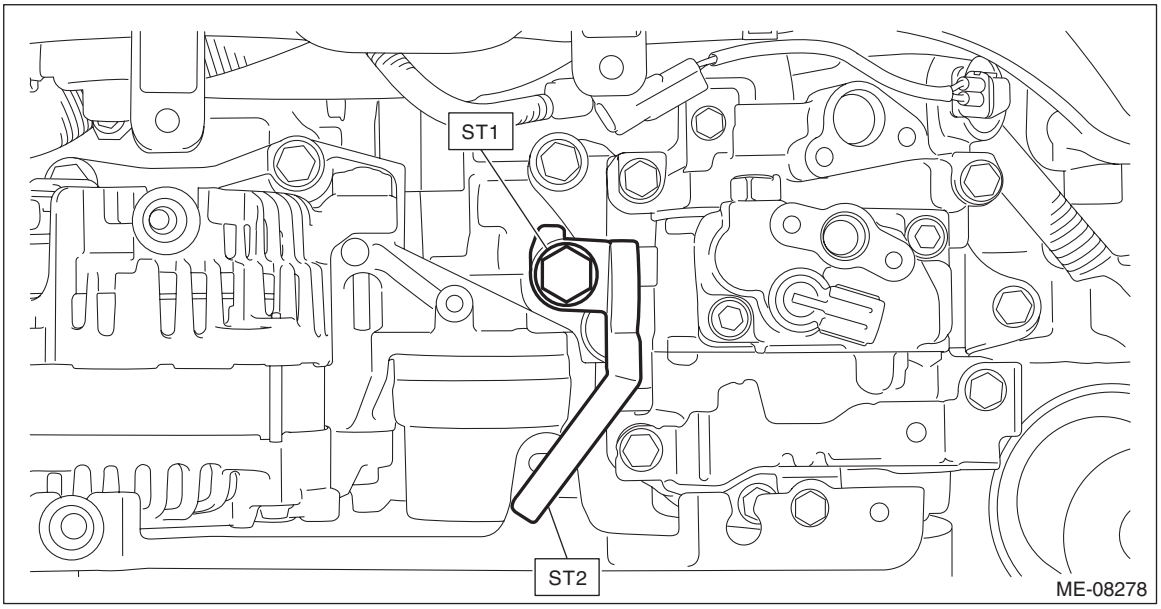
(3) Remove the engine harness connector.

(4) Remove the engine harness connector and the engine hanger - rear from the engine hanger - rear.



(5) Remove the collector cover bracket.

(6) Replace the engine hanger attached to the engine with ST.

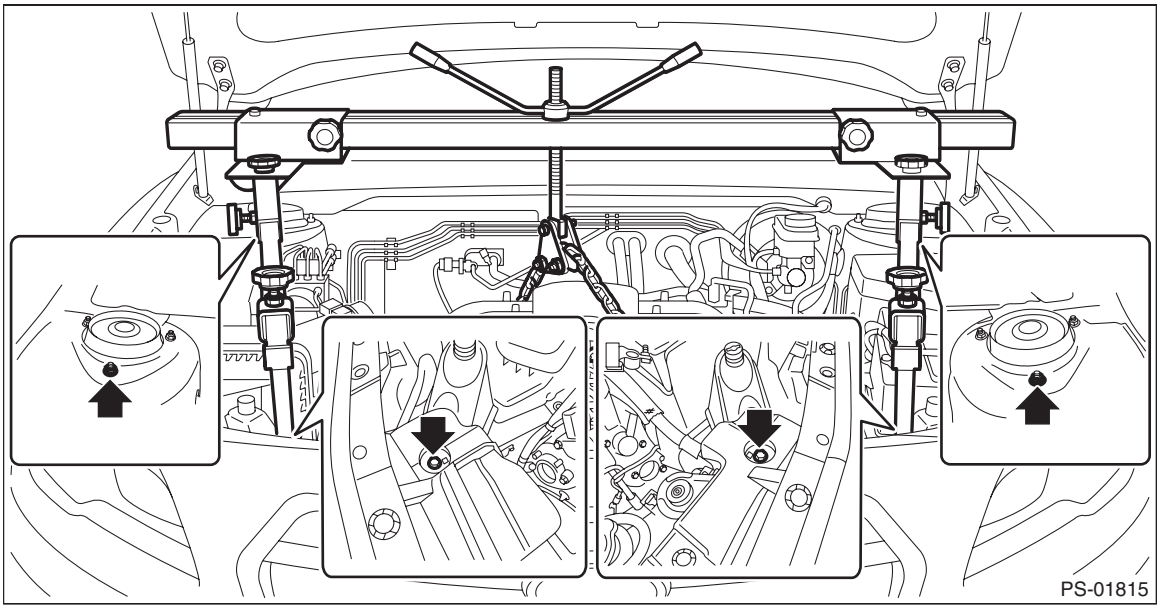


Preparation tool:
H6 model (ST): HANGER (18360AA020)

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)

9) Install the ST for the engine hanger to the engine front side. (H4 model)
(1) Remove the belt cover.
(2) Attach the ST.

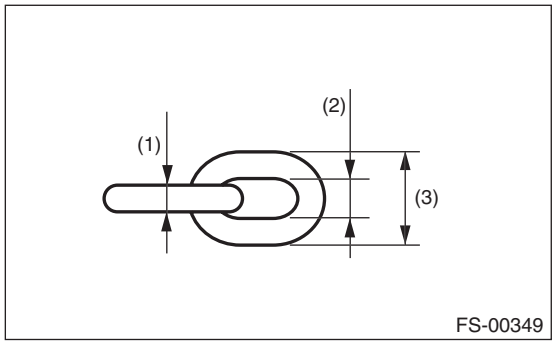
Preparation tool:
H4 model (ST1): BOLT (18363AA050)
H4 model (ST2): HANGER (18360AA040)



Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)

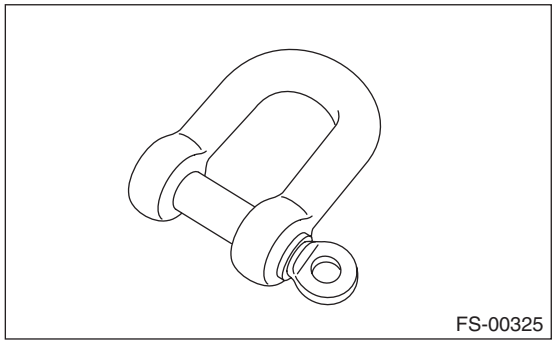
10) Suspend the engine using ST, chain sling, and shackle.
(1) Set the ST on the vehicle.

CAUTION:
• Install the M8 bolt at the locations shown in the figure, and place the front side arms of ST (ENGINE HANGER).
• Set the arms of ST (ENGINE HANGER) at the locations shown in the figure.



Preparation tool:
ST1: ENGINE HANGER (99099AJ000)
ST2: CHAIN BALANCER (99099AJ010)

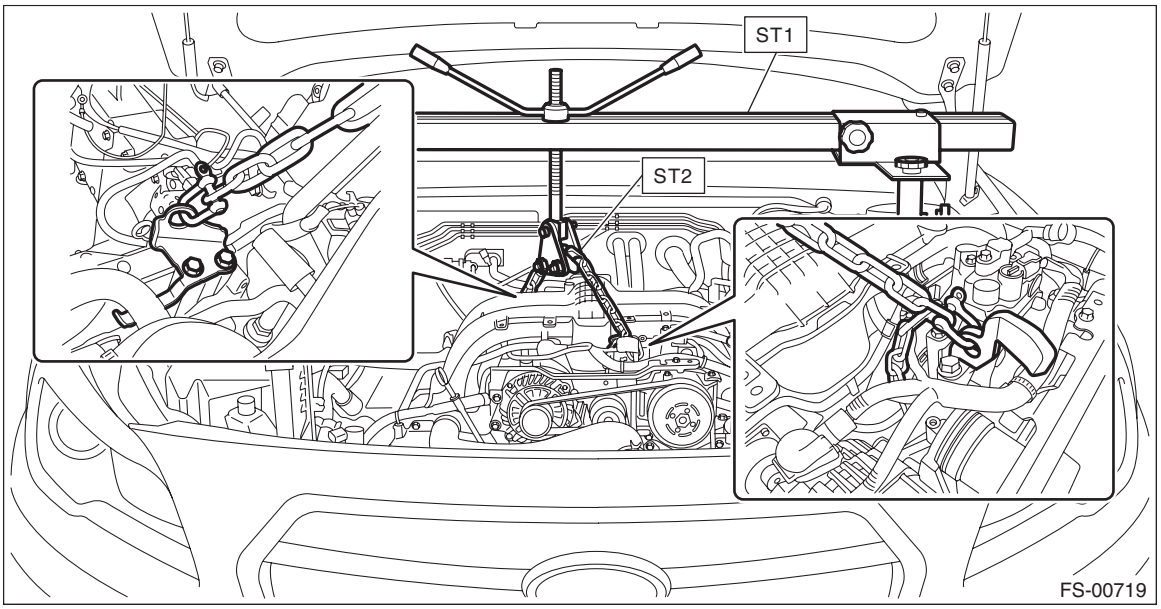
(2) Attach the shackle to the both ends of chain sling.



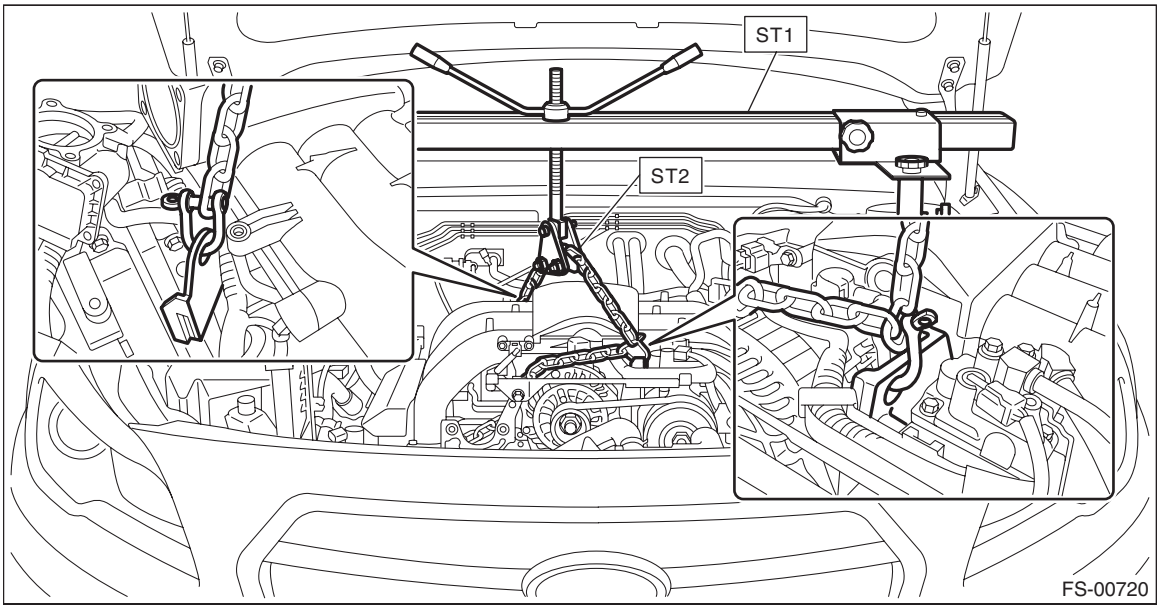
CAUTION:

- **Be sure to use chain slings that satisfy the following requirements:**
  - **Length: 0.8 — 1 m (2.6 — 3.3 ft)**
  - **Load capacity: 1.2 t (2646 lb) or more**
  - **Wire diameter: 6 mm (0.24 in) or 6.3 mm (0.25 in)**
  - **Internal width: 8.5 mm (0.33 in) or more**
  - **External width: 23.5 mm (0.93 in) or less**

(1) Wire diameter: 6 mm (0.24 in) or 6.3 mm (0.25 in)
(2) Internal width: 8.5 mm (0.33 in) or more
(3) External width: 23.5 mm (0.93 in) or less

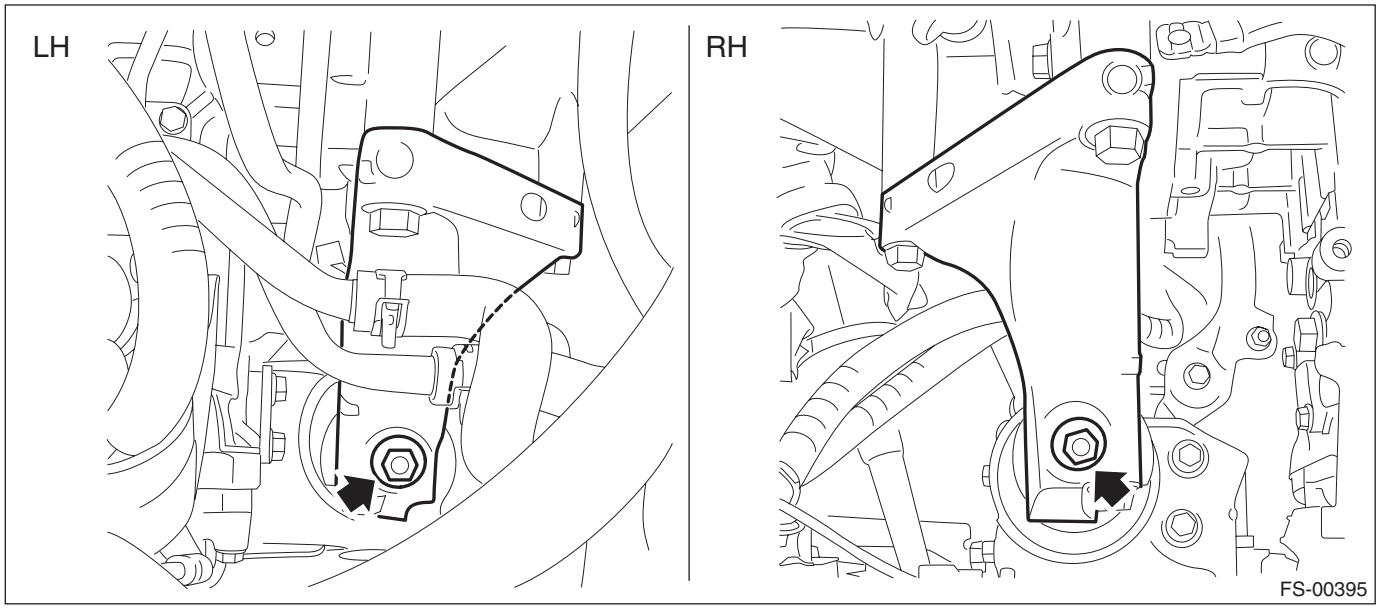


- **Use a shackle with the load capacity of 250 kg (551 lb) or more.**

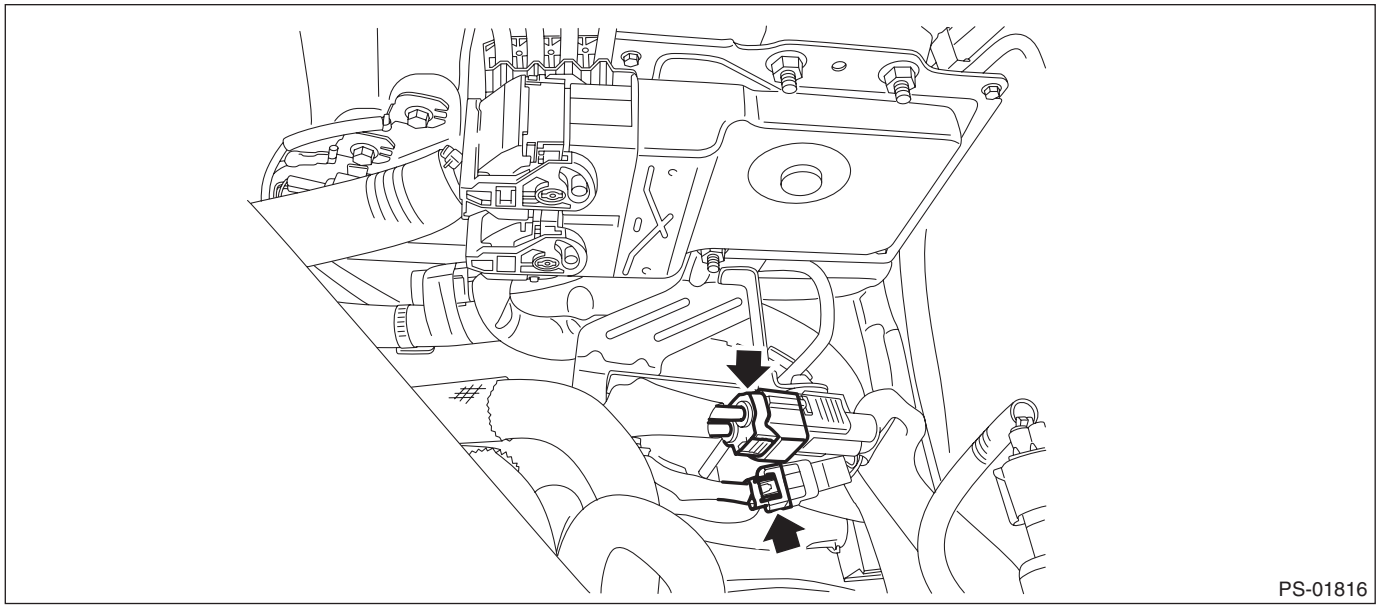


(3) Pass the chain sling through the CHAIN BALANCER and secure the both ends to the hooks on the engine.

CAUTION:
Set the chain sling so that it does not contact the engine parts.



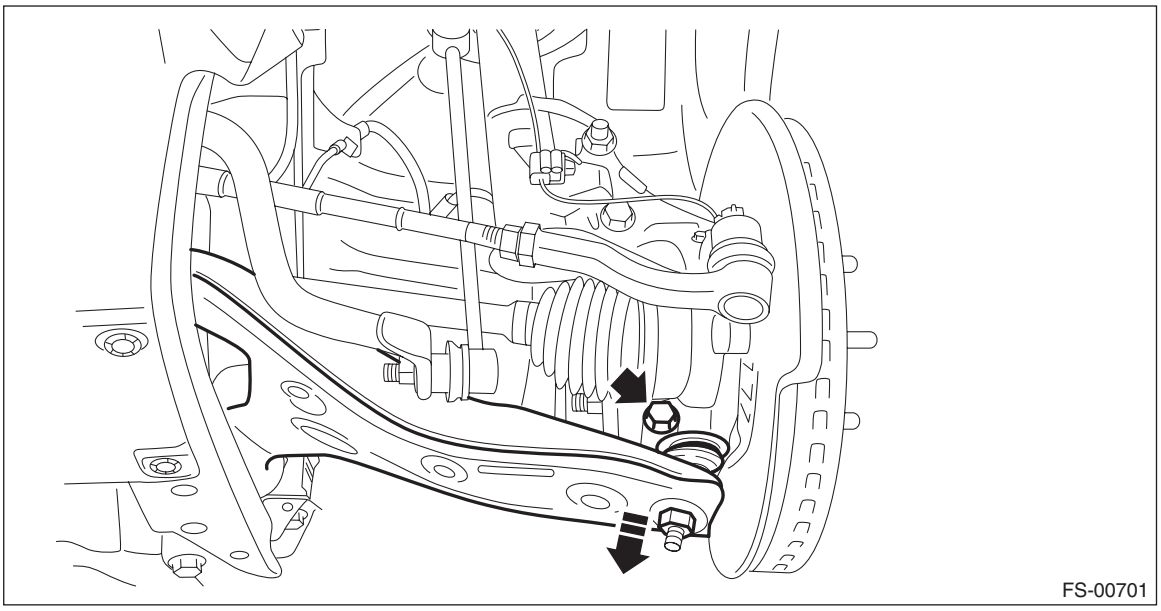
- H4 model



- H6 model

11) Remove the nuts connecting the main mount and the transmission mounting bracket.

12) Remove the power steering connector.

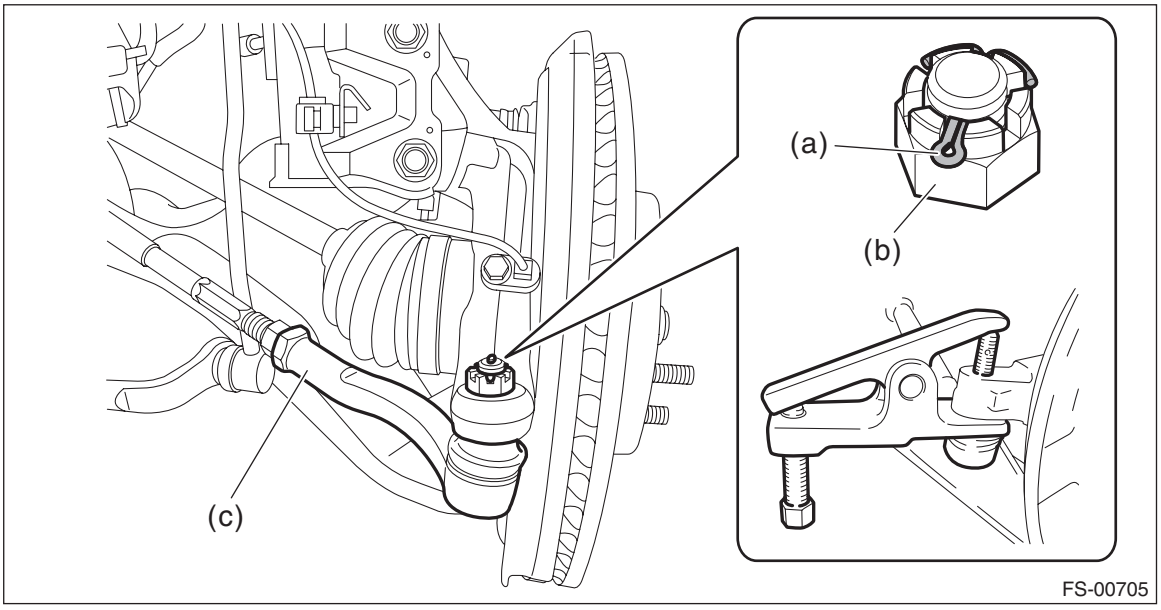


13) Remove the universal joint. <Ref. to PS-14, REMOVAL, Universal Joint.>

CAUTION:
To prevent damage to the universal joint and error of handling force, make sure to remove the universal joint.

14) Remove the front exhaust pipe.
- H4 model: <Ref. to EX(H4DO)-5, REMOVAL, Front Exhaust Pipe.>
- H6 model: <Ref. to EX(H6DO)-6, REMOVAL, Front Exhaust Pipe.>

15) Remove the stabilizer link assembly. <Ref. to PS-14, REMOVAL, Universal Joint.>

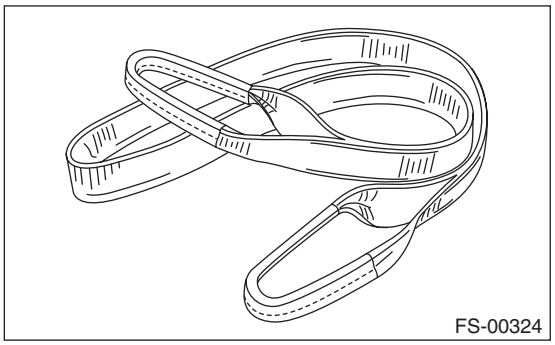


16) Disconnect the left and right front arms.
(1) Remove the nut, and pull out the bolt from the front lower arm.
(2) Remove the ball joint from the front lower arm.

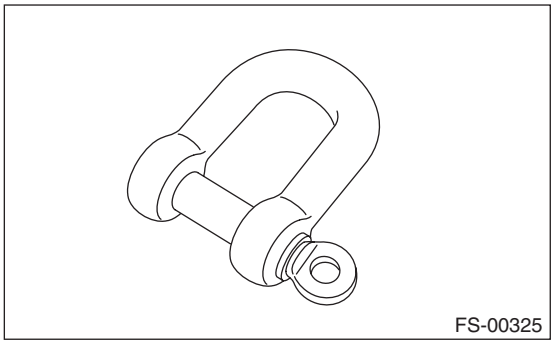
FS-00701

17) Disconnect the left and right tie-rod ends.
(1) Pull out the cotter pin (a).
(2) Remove the castle nut (b).
(3) Extract the tie-rod end (c) from the housing assembly - front axle.

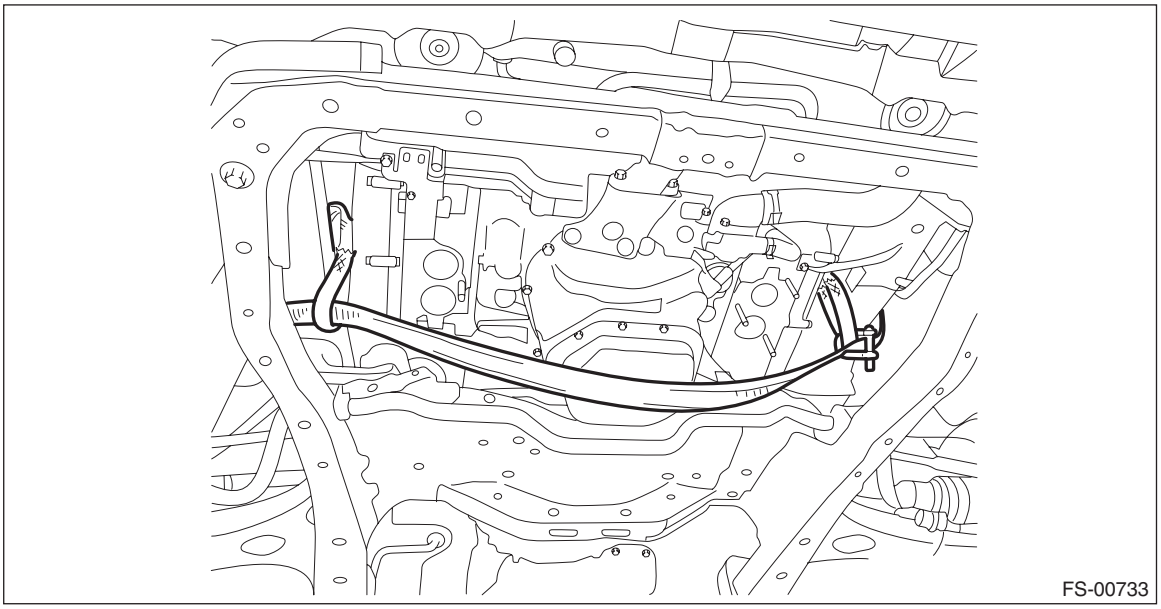
CAUTION:
Use a tool appropriate to the structure, and be careful not to damage the boot of the joint while removing. The boot may be damaged depending on the tool used.



Preparation tool:
Tie-rod ball joint puller



FS-00705

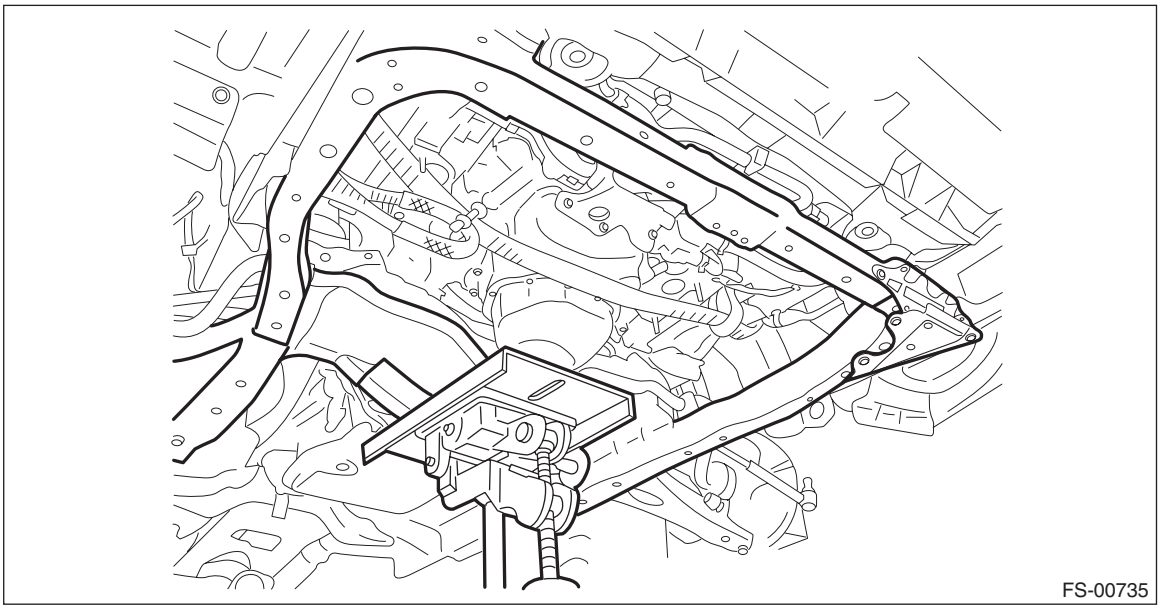


18) Attach the sling belt so that it wraps around the both frames using the shackle.

CAUTION:
- **Be sure to attach the sling belt to ensure safety in operation.**
- **Use a sling belt with the length of 2 m (6.6 ft), the width of 35 — 40 mm (1.38 — 1.57 in) and the load capacity of 1 t (2205 lb) or more.**

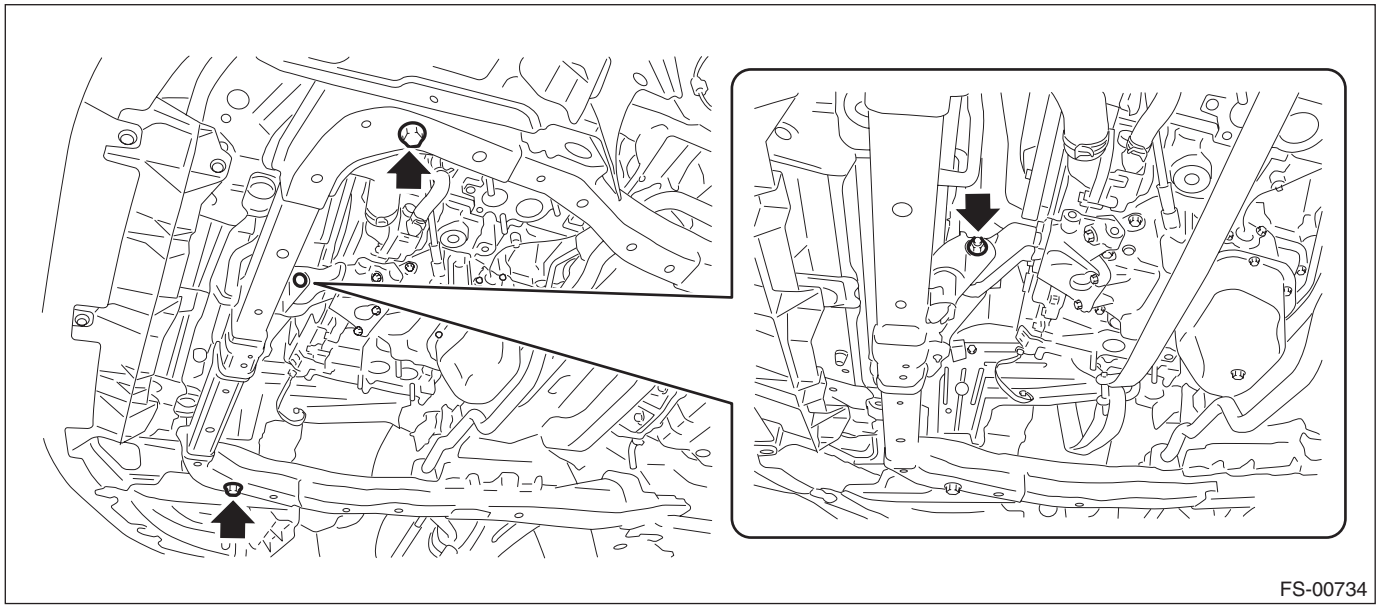
FS-00324

- **Use a shackle with the load capacity of 0.5 t (1103 lb) or more.**



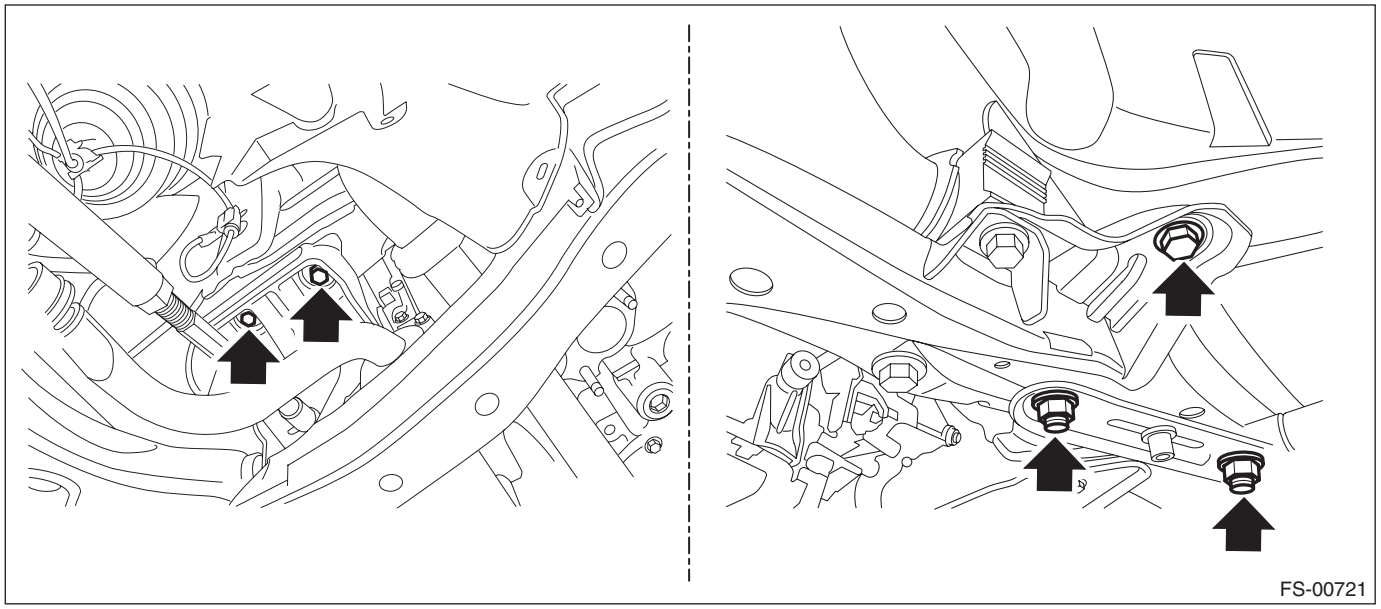
FS-00325

FS-00733



19) Remove the cradle from the vehicle.

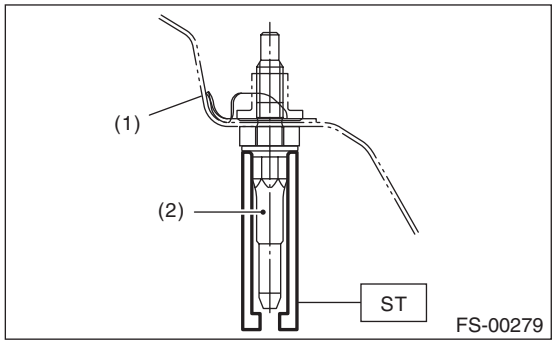
CAUTION:
The cradle is heavy. Remove it carefully by paying attention to the balance.



(1) Support the cradle with the transmission jack.

(2) Remove the bolt from the front cushion rubber, and remove the bolt securing the front of the cradle.

(3) Remove the left and right bolts and nuts.



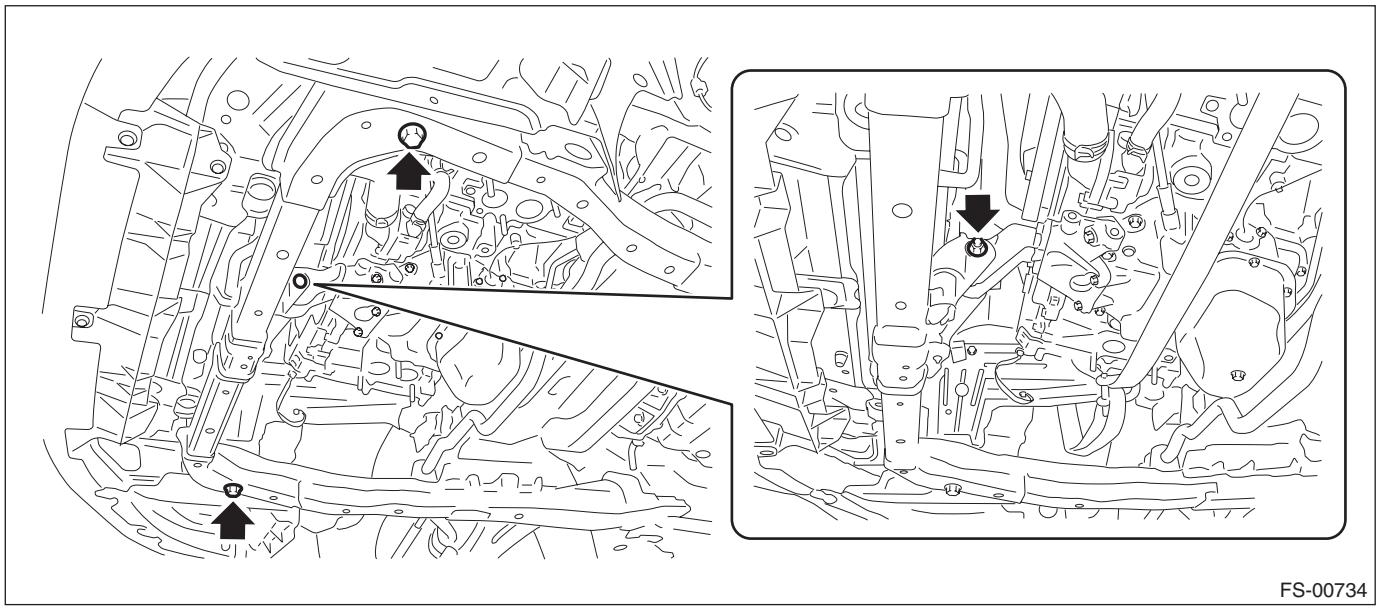
(4) Remove the cradle from the vehicle.

20) To remove the stud bolt, use the ST.

CAUTION:
Do not remove the stud bolt unless necessary. Always replace the parts with new parts when removed.

Preparation tool:
ST: STUD BOLT SOCKET (20299AG020)

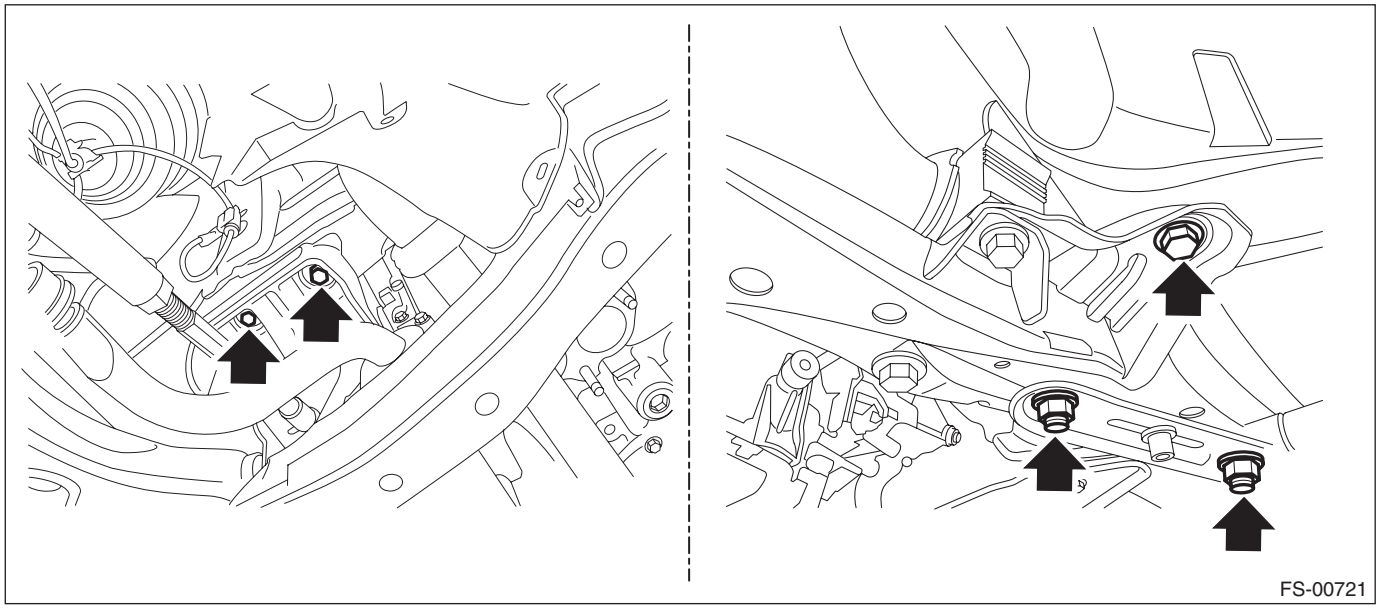
(1) Vehicle body
(2) Stud bolt



B: INSTALLATION

CAUTION:
Use a new bolt and self-locking nut. For parts which are not reusable, refer to "COMPONENT". <Ref. to FS-4, COMPONENT, General Description.>

1) Install the cradle to the vehicle body.
   (1) Raise the cradle with the transmission jack.



CAUTION:
The cradle is heavy. Raise it carefully by paying attention to the balance.
   (2) Install the bolt to the front cushion rubber and the bolt to the front of the cradle.

Tightening torque:
Front suspension-related parts: <Ref. to FS-4, COMPONENT, General Description.>

FS-00734

   (3) Install the left and right bolts and nuts.

Tightening torque:
Front suspension-related parts: <Ref. to FS-4, COMPONENT, General Description.>

FS-00721

2) Remove the shackle and sling belt.
3) Install the tie-rod end.

Tightening torque:
Steering gearbox-related parts: <Ref. to PS-4, STEERING GEARBOX, COMPONENT, General Description.>
4) Install the front arm.

Tightening torque:
Front suspension-related parts: <Ref. to FS-4, COMPONENT, General Description.>
5) Install the stabilizer link rod. <Ref. to PS-15, INSTALLATION, Universal Joint.>
6) Install the front exhaust pipe.
- H4 model: <Ref. to EX(H4DO)-7, INSTALLATION, Front Exhaust Pipe.>
- H6 model: <Ref. to EX(H6DO)-8, INSTALLATION, Front Exhaust Pipe.>

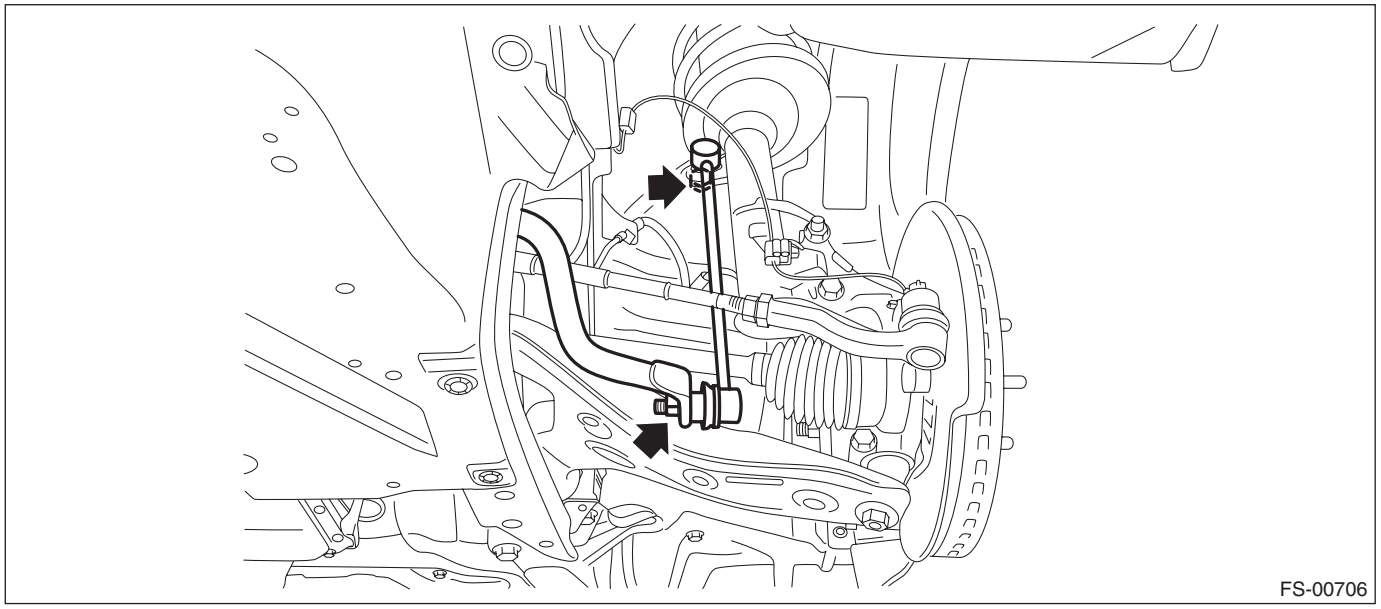
7) Install the power steering connector.
8) Install the nuts connecting the main mount and the transmission mounting bracket.

Tightening torque:
Front suspension-related parts: <Ref. to FS-4, COMPONENT, General Description.>
9) Remove the ST, chain sling and shackle.
10) Remove the ST for the engine hanger from the engine front side. (H4 model)
11) Replace the ST with the engine hanger attached to the engine. (H6 model)
12) Change the hood stay location to support the front hood at ordinary position.
13) Install the air intake boot assembly.
- H4 model: <Ref. to IN(H4DO)-10, INSTALLATION, Air Intake Boot.>
- H6 model: <Ref. to IN(H6DO)-11, INSTALLATION, Air Intake Boot.>

14) Install the air intake duct. <Ref. to IN(H4DO)-12, INSTALLATION, Air Intake Duct.>
15) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
16) Install the universal joint assembly - steering. <Ref. to PS-15, INSTALLATION, Universal Joint.>

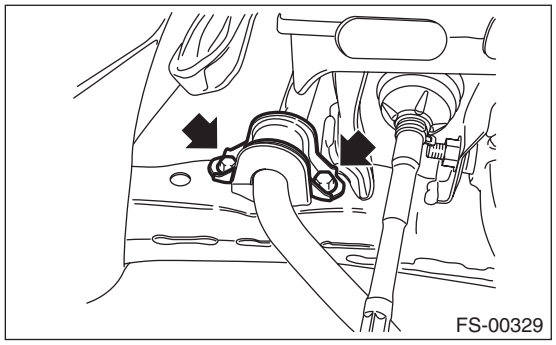
CAUTION:
• Always install the universal joint assembly - steering after installing the steering column to avoid damage to the universal joint assembly - steering.
• Be sure to follow the tightening order and tightening torque of the universal joint assembly - steering to avoid the steering effort from becoming heavy. After confirming that the steering column position is in the neutral position, tighten the universal joint assembly - steering.
• Always place the tilt lever to the lock position after the steering column is adjusted.

17) Install the under cover - front. <Ref. to EI-28, INSTALLATION, Front Under Cover.>
18) Install the front wheels.



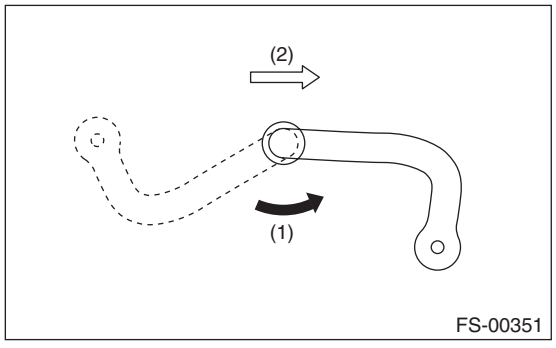
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)
19) Inspect the wheel alignment and adjust if necessary. <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform “VDC sensor midpoint setting mode” of the VDC. <Ref. to VDC-17, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
20) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-20, PROCEDURE, Auto Headlight Beam Leveler System.>



4. Front Stabilizer

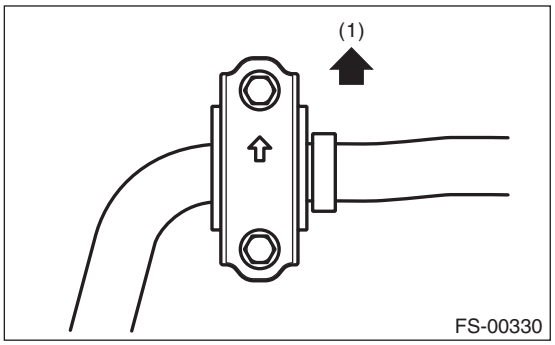
A: REMOVAL



1) Lift up the vehicle, and then remove the left and right front wheels.
2) Remove the front under cover. <Ref. to EI-28, REMOVAL, Front Under Cover.>
3) Remove the front stabilizer.
   (1) Remove the left and right stabilizer links.

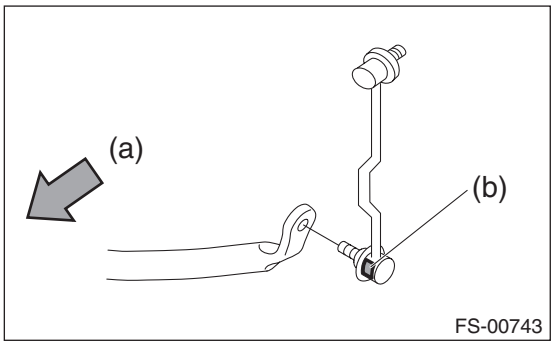
   (2) Remove the left and right stabilizer brackets.

   (3) Turn the front stabilizer by approximately 180° toward the front of the vehicle and pull out the front stabilizer from the right side of the vehicle.



(1) Turn toward the front of the vehicle.
(2) Front side of vehicle

B: INSTALLATION



1) Before installation, inspect the following items and replace any faulty part with a new one.
- Check the bushing for abnormal cracks, fatigue or damage.
- Check the stabilizer link for damage.

2) Install the front stabilizer.

CAUTION:
• Be careful not to let the dust boot of the stabilizer link turn over or fall off when installing. If a deformed dust boot is installed, the dust boot may be damaged.
• The stabilizer bracket has a set orientation. Install it with the arrow mark facing the front side (1) of the vehicle.

• The stabilizer link RH is different from LH. Therefore, make sure that the stabilizer link is installed correctly by checking the paint mark.

(a) Front side of vehicle (b) Identification paint

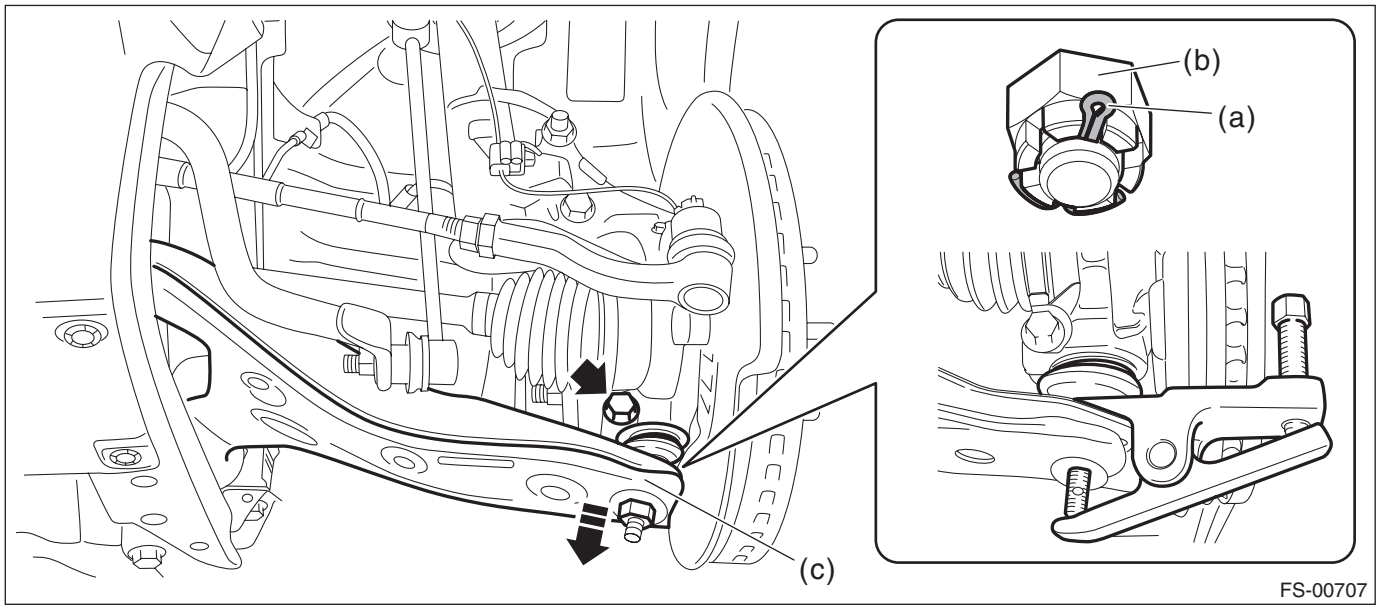
(1) Put the front stabilizer in from the right side of vehicle.
(2) Install the right and left stabilizer brackets.

Tightening torque:
Stabilizer bracket: 25 N·m (2.5 kgf-m, 18.4 ft-lb)
(3) Install the right and left stabilizer links.

Tightening torque:
Stabilizer link: 60 N·m (6.1 kgf-m, 44.3 ft-lb)

3) Install the front under cover. <Ref. to EI-28, INSTALLATION, Front Under Cover.>
4) Install the front wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)



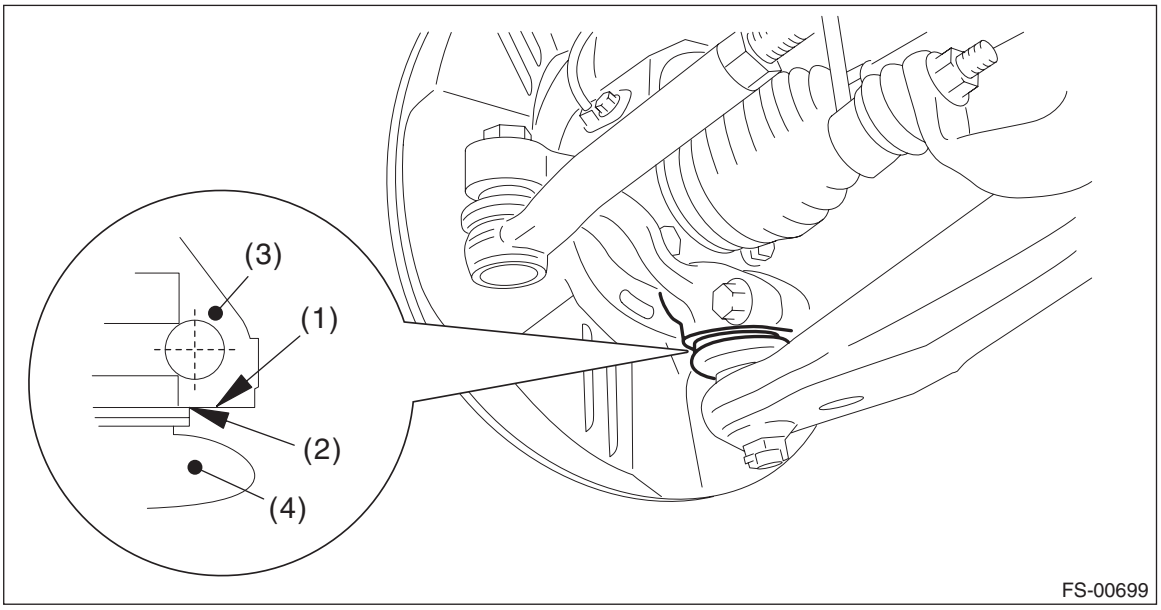
5. Front Ball Joint

A: REMOVAL

1) Lift up the vehicle, and then remove the front wheels.
2) Remove the ball joint.
   (1) Extract the cotter pin (a) from the ball stud.
   (2) Remove the castle nut (b).
   (3) Extract the ball stud from the front arm (c).
   (4) Remove the bolt securing the ball joint to the housing assembly - front axle.

CAUTION:
Use a tool appropriate to the structure, and be careful not to damage the boot of the joint while removing. The boot may be damaged depending on the tool used.

Preparation tool:
Tie-rod ball joint puller



(5) Extract the ball joint from the housing assembly - front axle.

B: INSTALLATION

1) Install the ball joint into the housing assembly - front axle.

CAUTION:
- **Do not apply grease to the tapered portion of ball stud.**
- **Before tightening, make sure the bottom surface of the housing assembly - front axle and the stepped section of ball joint are in contact.**

(1) Bottom surface of housing ASSY - front axle
(2) Raised section of ball joint
(3) Housing ASSY - front axle
(4) Ball joint boot

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

2) Install the ball joint into front arm.
   (1) Connect the ball joint to the front arm.

Tightening torque:
39 N·m (4.0 kgf-m, 28.8 ft-lb)

   (2) Tighten the castle nut further up to 60° until the hole in the ball stud is aligned with a slot in castle nut.
   (3) Insert a new cotter pin and bend it around the castle nut.

3) Install the front wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

C: INSPECTION

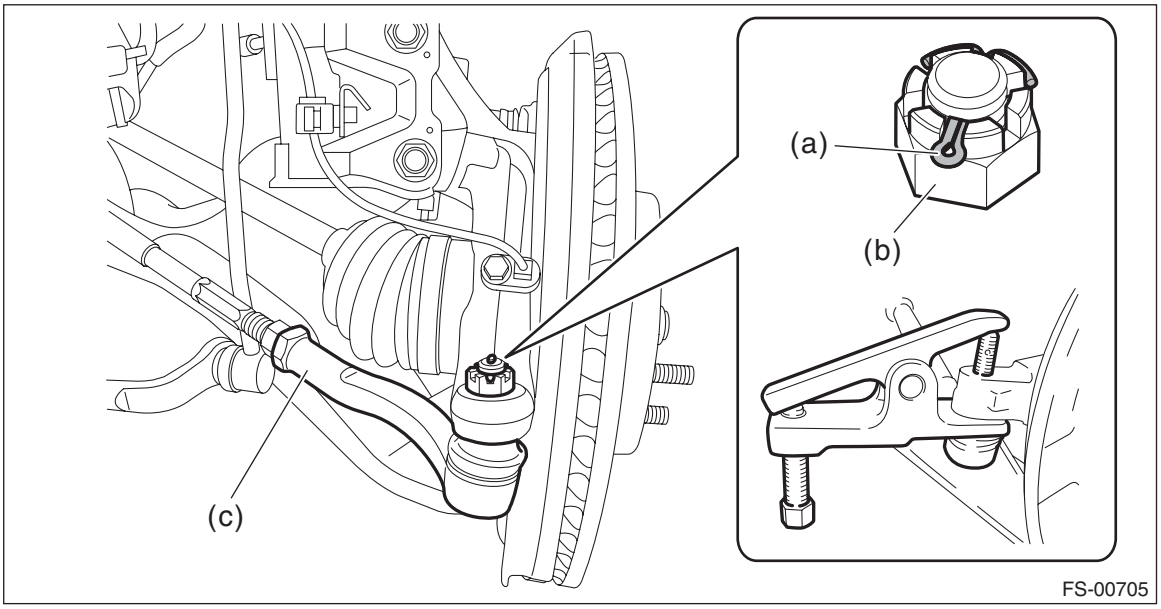
1) Check that there is no play by moving the upper and lower portions of front tire in an axial direction with the brake pedal depressed.

- **Play exists** → Replace the ball joint. <Ref. to FS-36, REMOVAL, Front Ball Joint.>

2) Check that there is no play by moving the upper and lower portions of front tire in an axial direction with the brake pedal released.

- **Play exists** → Check the hub unit bearing. <Ref. to DS-29, INSPECTION, Front Hub Unit Bearing.>

3) Replace the ball joint if the ball joint boot is damaged when visually inspecting the ball joint boot.

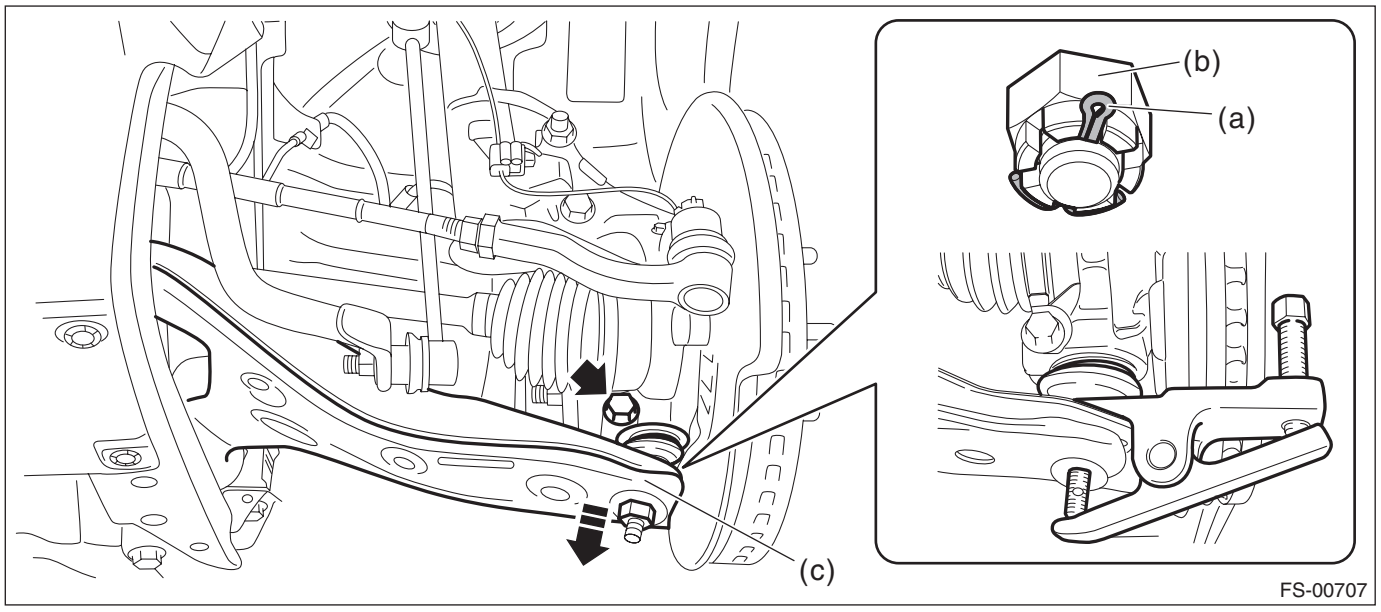


6. Front Arm

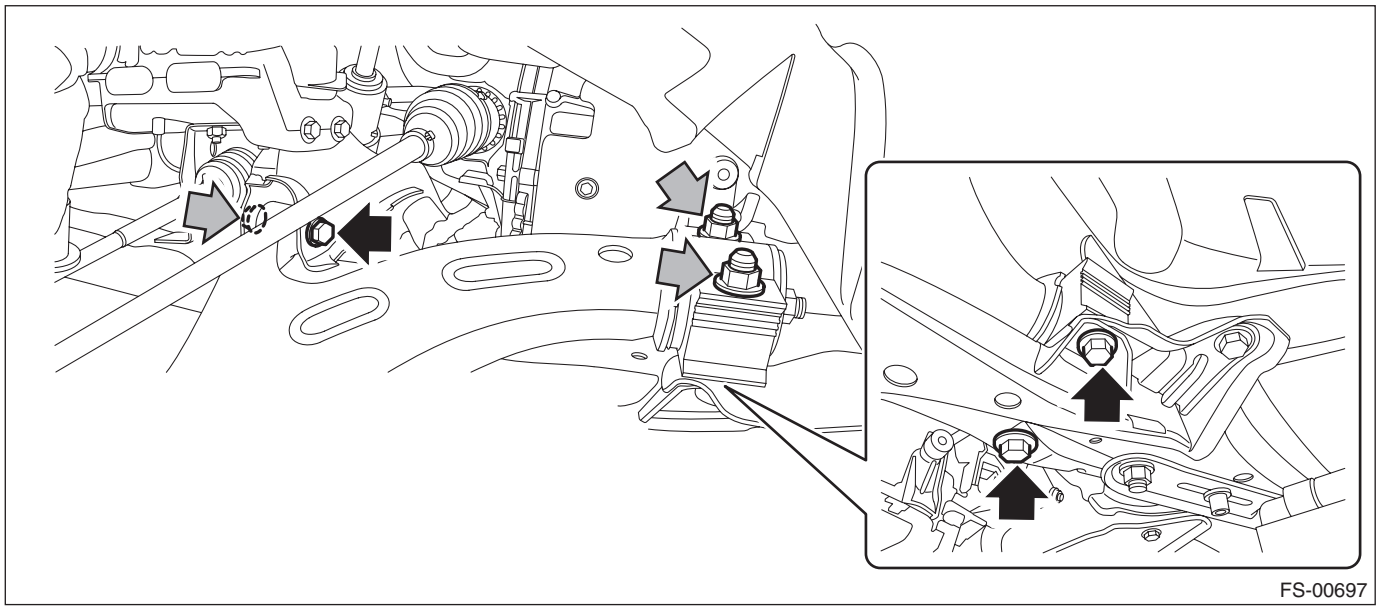
A: REMOVAL

1) Lift up the vehicle, and then remove the front wheels.
2) Remove the under cover - front. <Ref. to EI-28, REMOVAL, Front Under Cover.>
3) Disconnect the tie-rod end.
   (1) Pull out the cotter pin (a).
   (2) Remove the castle nut (b).
   (3) Extract the tie-rod end (c) from the housing assembly - front axle.

CAUTION:
Use a tool appropriate to the structure, and be careful not to damage the boot of the joint while removing. The boot may be damaged depending on the tool used.



Preparation tool:
Tie-rod ball joint puller

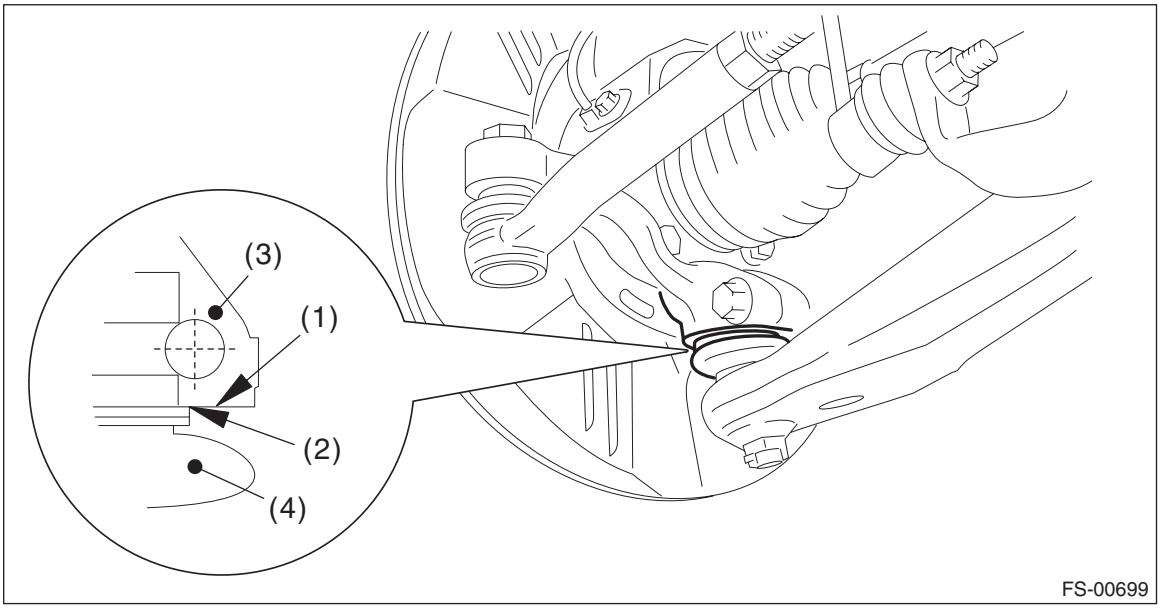


4) Remove the front arm.
   (1) Pull out the cotter pin (a).
   (2) Remove the castle nut (b) and bolt.
   (3) Extract the front arm (c) from the housing assembly - front axle.

CAUTION:
Use a tool appropriate to the structure, and be careful not to damage the boot of the joint while removing. The boot may be damaged depending on the tool used.

Preparation tool:
Tie-rod ball joint puller

(4) Remove the bolts, then remove the front arm.



B: INSTALLATION

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Check the front arm for damage or cracks, and replace if defective.
- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the boot on the ball joint for damage.

2) Using new self-locking nuts, temporary tighten the front arm.
3) Install the ball joint into the housing assembly - front axle.

CAUTION:
Before tightening, make sure the bottom surface of the housing assembly - front axle and the stepped section of ball joint are in contact.

(1) Bottom surface of housing ASSY - front axle
(3) Housing ASSY - front axle
(4) Ball joint boot
(2) Raised section of ball joint

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

4) Install the front wheels.

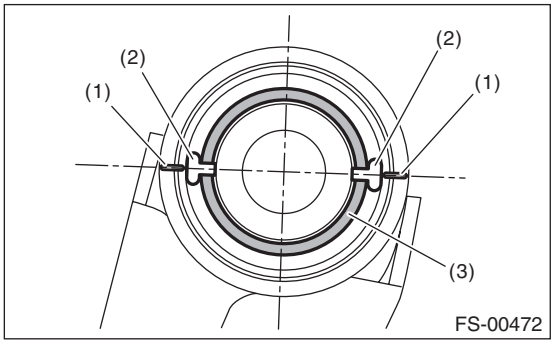
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

5) Unload the vehicle from lift, and tighten the bolt which secures the front arm to cradle with wheels in full contact with the ground and the vehicle at curb weight.

Tightening torque:
Front bushing side: 95 N·m (9.7 kgf-m, 70.1 ft-lb)
Rear bushing side: 140 N·m (14.3 kgf-m, 103.3 ft-lb)

6) Inspect the wheel alignment and adjust if necessary. <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-17, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

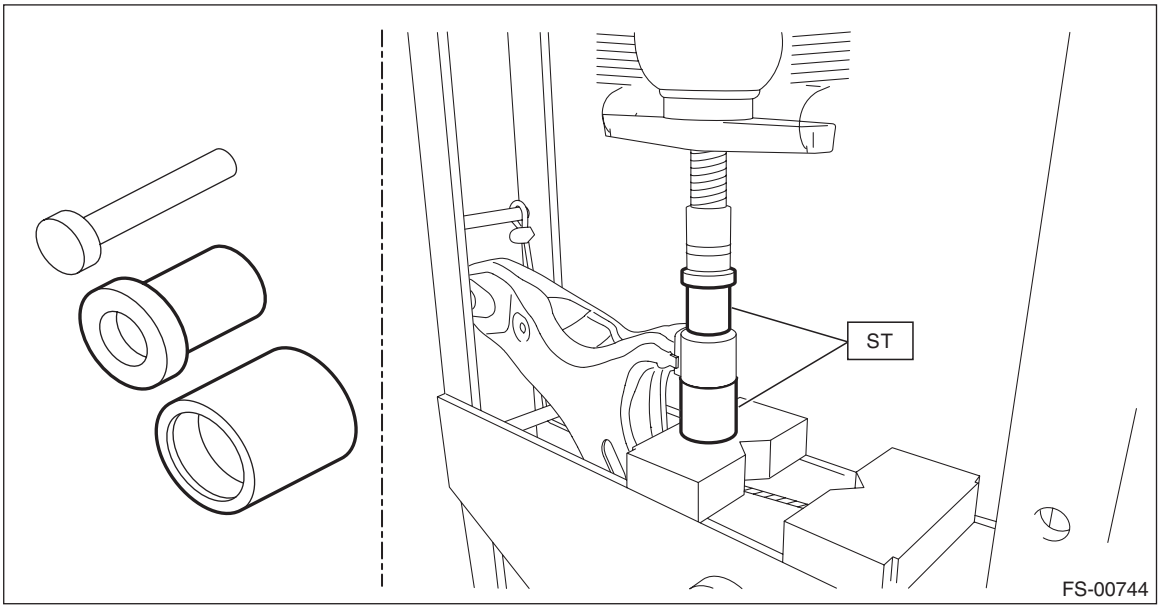


7) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-20, PROCEDURE, Auto Headlight Beam Leveler System.>

C: DISASSEMBLY

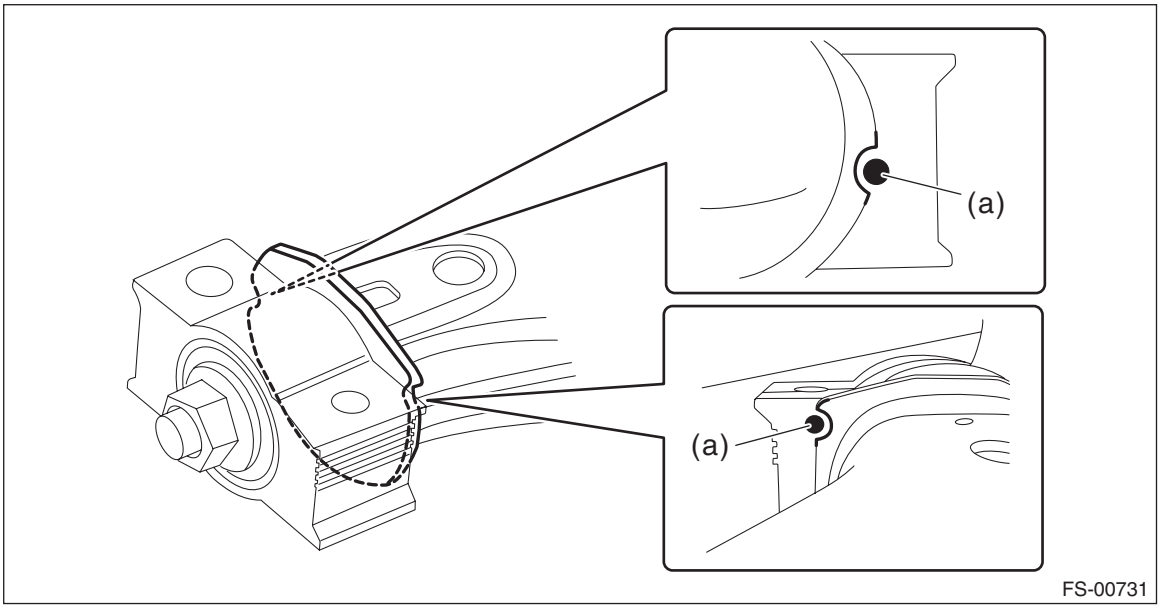
1. BUSHING FRONT - FRONT ARM

1) Put an alignment mark on the front arm assembly based on the split portion of the bushing intermediate plate of the busing front - front arm.



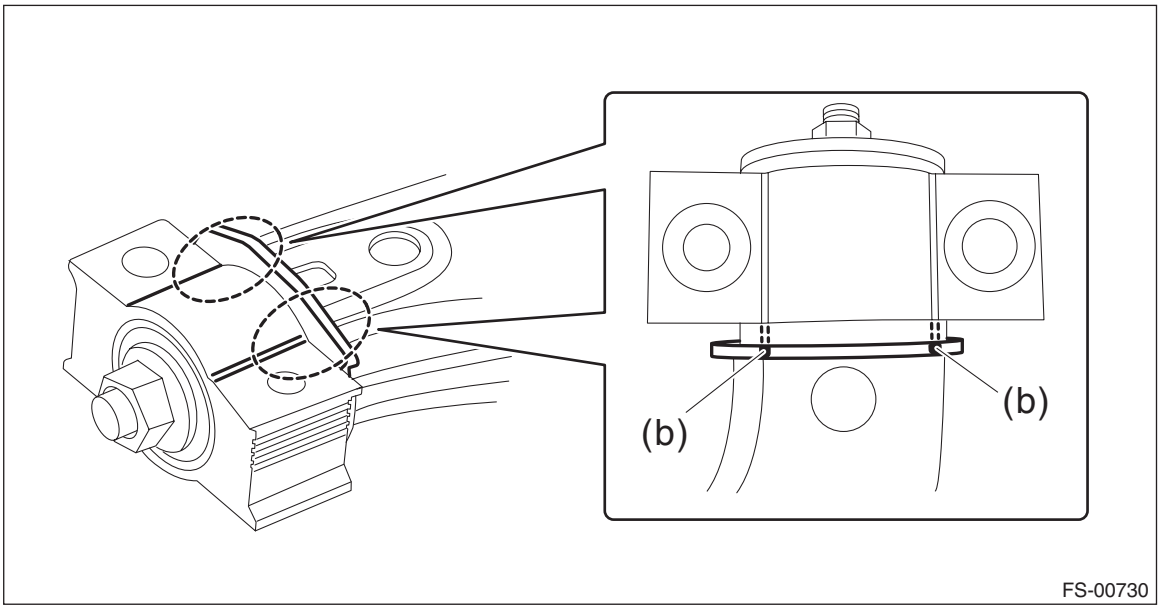
CAUTION:
Always put an alignment mark for aligning the position on bushing installation.

(1) Put an alignment mark.
(2) Gap of bushing intermediate plate
(3) Bushing intermediate plate

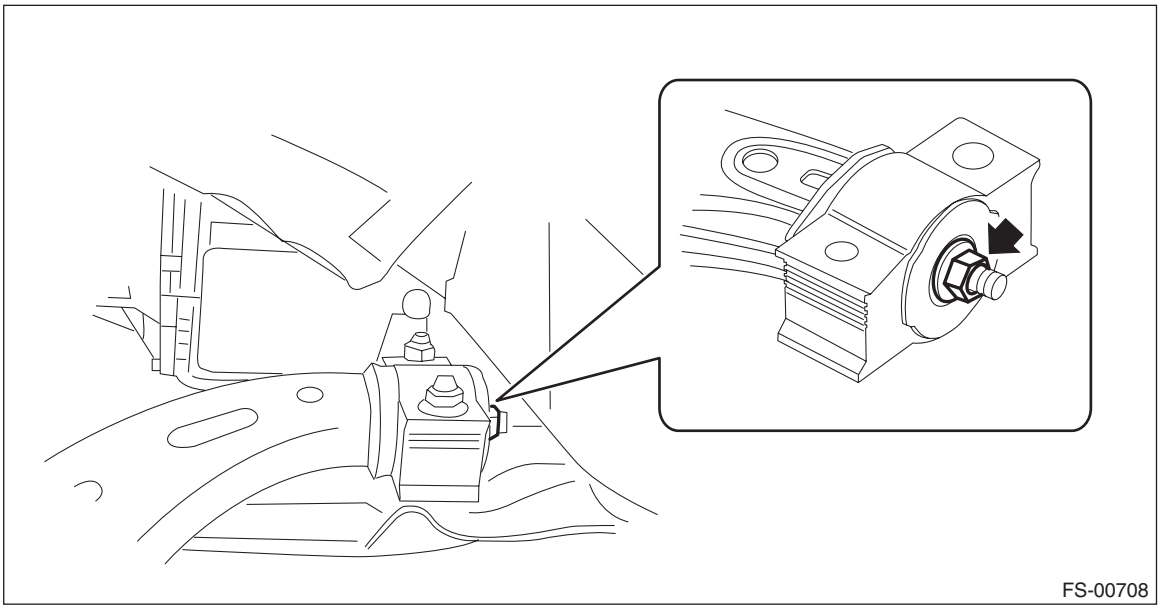


2) Using the ST and a press, remove the front bushing.

Preparation tool:
ST: INSTALLER & REMOVER SET (927680000)



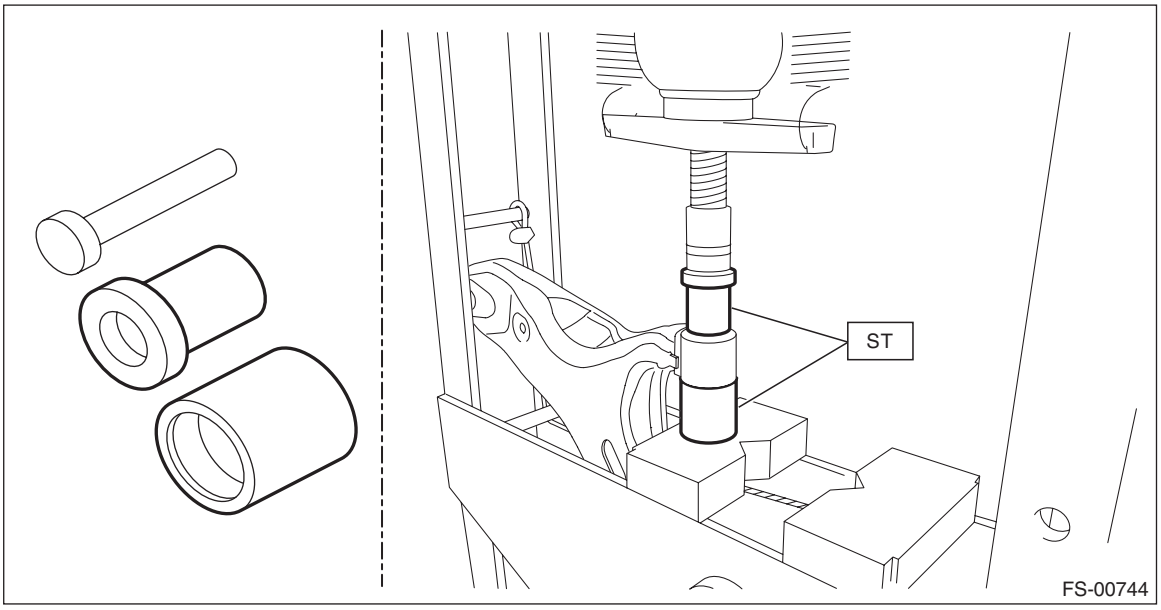
2. BUSHING REAR - FRONT ARM



1) Remove the rear bushing assembly.
(1) Put alignment marks on the front arm assembly and the bushing rear - front arm.
• Front arm assembly replacement: put an alignment mark (a) from the cutout portion of the front arm assembly to the bushing rear - front arm.

• Bushing rear - front arm replacement: put an alignment mark (b) on the front arm assembly located on an imaginary line extending from the rib portion of the bushing rear - front arm.

(2) Remove the self-locking nut, and then remove the rear bushing assembly.



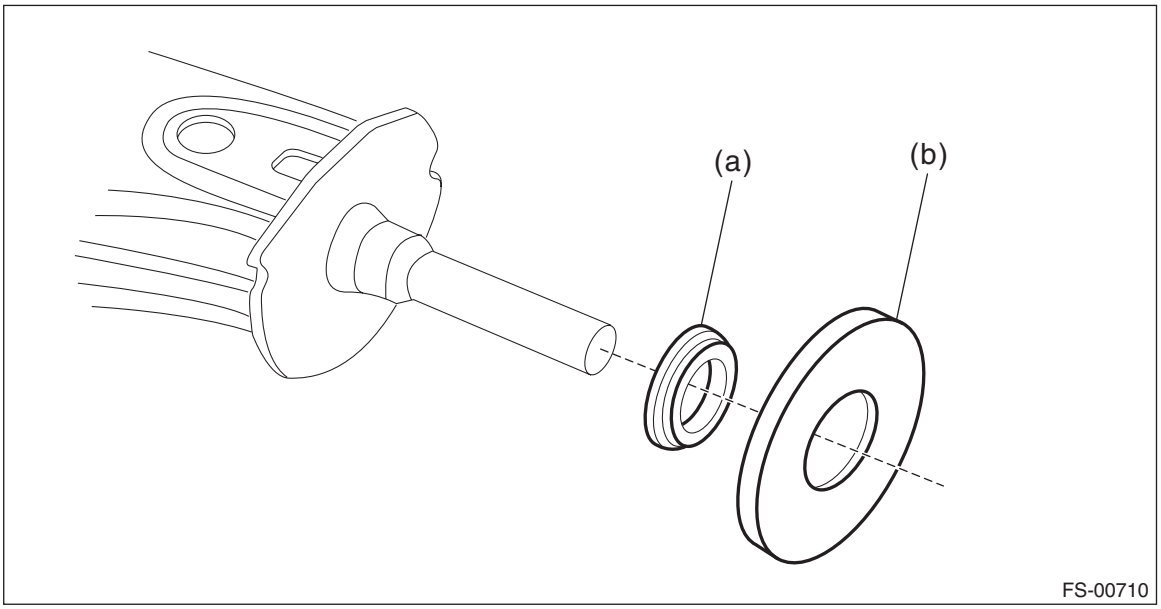
D: ASSEMBLY

1. BUSHING FRONT - FRONT ARM

1) Before assembly, inspect the following items and replace any faulty part with a new one.
- Check the front arm for damage or cracks, and replace if defective.
- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the boot on the ball joint for damage.

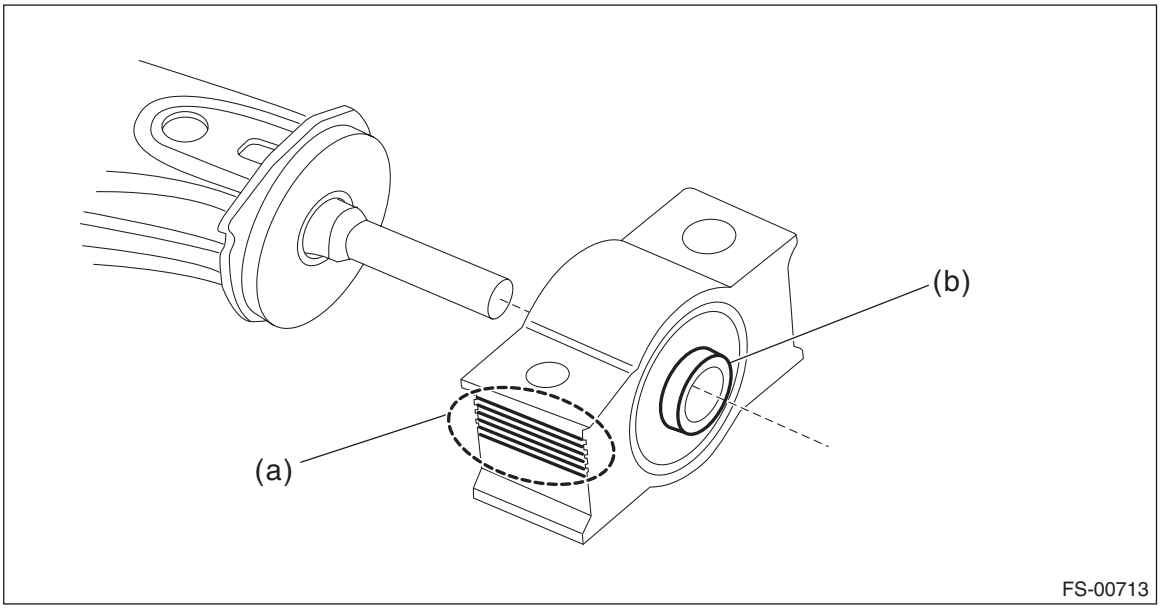
2) Align the gap of bushing intermediate plate for front bushing with the alignment mark of the front arm.
3) Using the ST and a press, install the front bushing.

Preparation tool:
ST: INSTALLER & REMOVER SET (927680000)



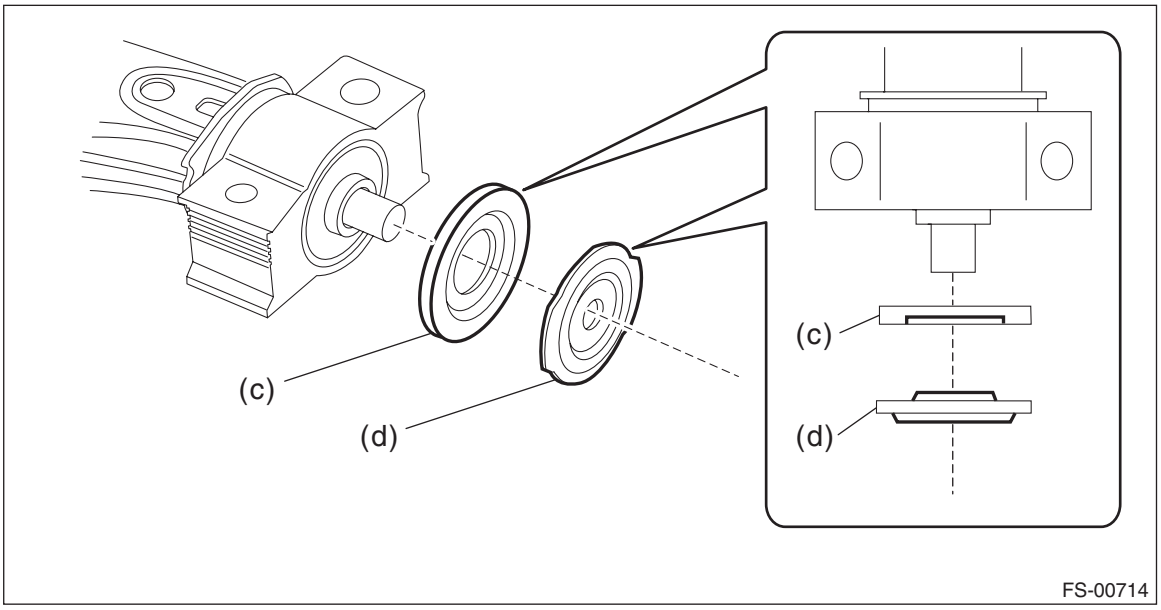
2. BUSHING REAR - FRONT ARM

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Check the front arm for damage or cracks, and replace if defective.
- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the dust cover on the ball joint for damage.



2) Install the rear bushing assembly to the bushing rear - front arm.

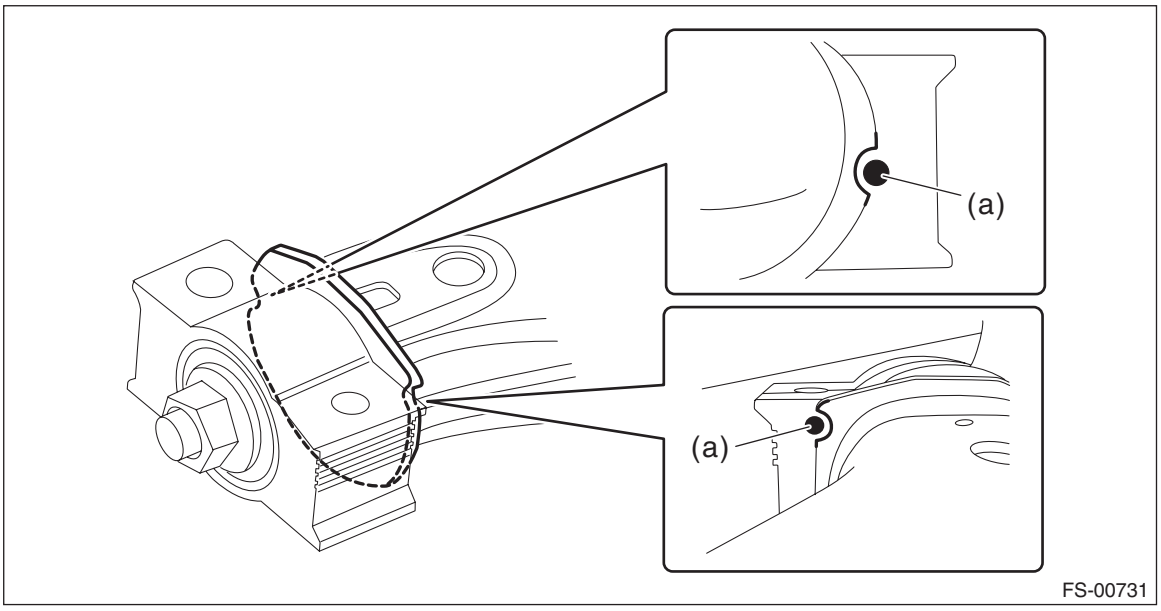
CAUTION:
Confirm the installing direction and install securely.



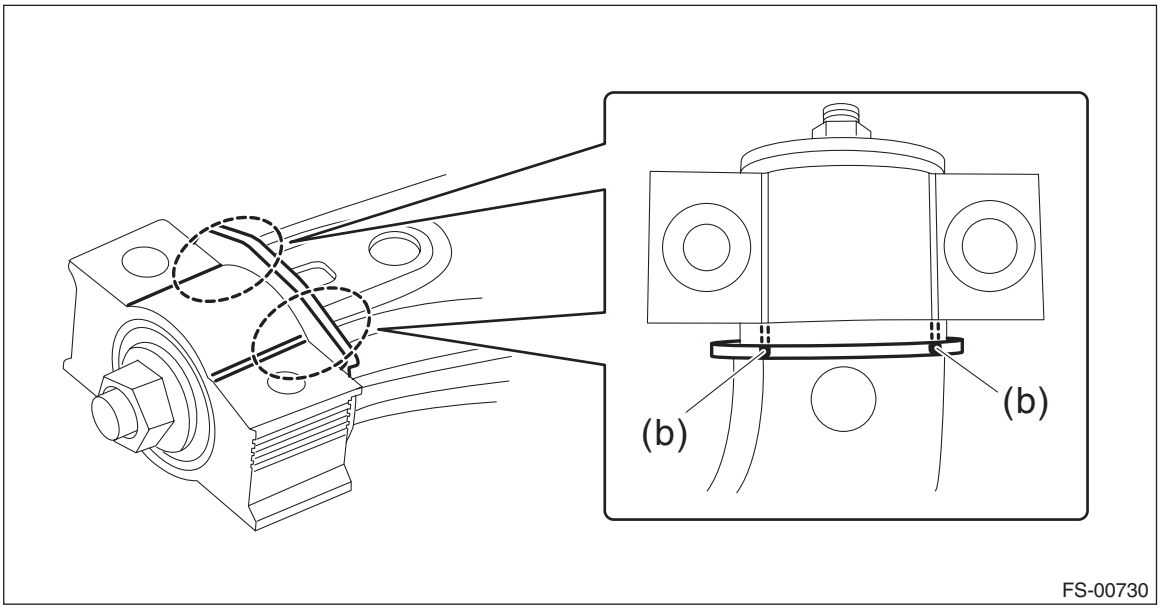
(1) Install the spacer - arm front (a) and the stopper - rubber front (b).

(2) Install the rear bushing assembly so that the rib (a) faces the upper side of the vehicle and the protrusion (b) faces the rear side of the vehicle.

(3) Install the plate - arm front (d) and the stopper - rubber front (c).



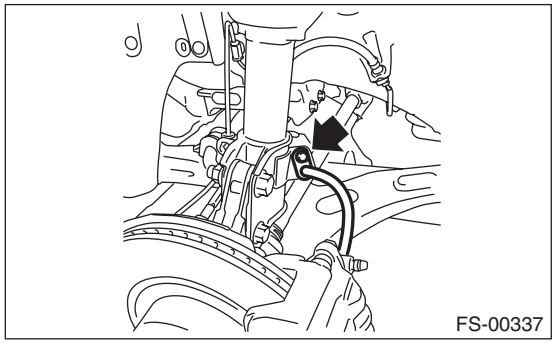
(4) Using new self-locking nuts, install the rear bushing assembly to the bushing rear - front arm by matching the alignment marks that have been marked when removing.



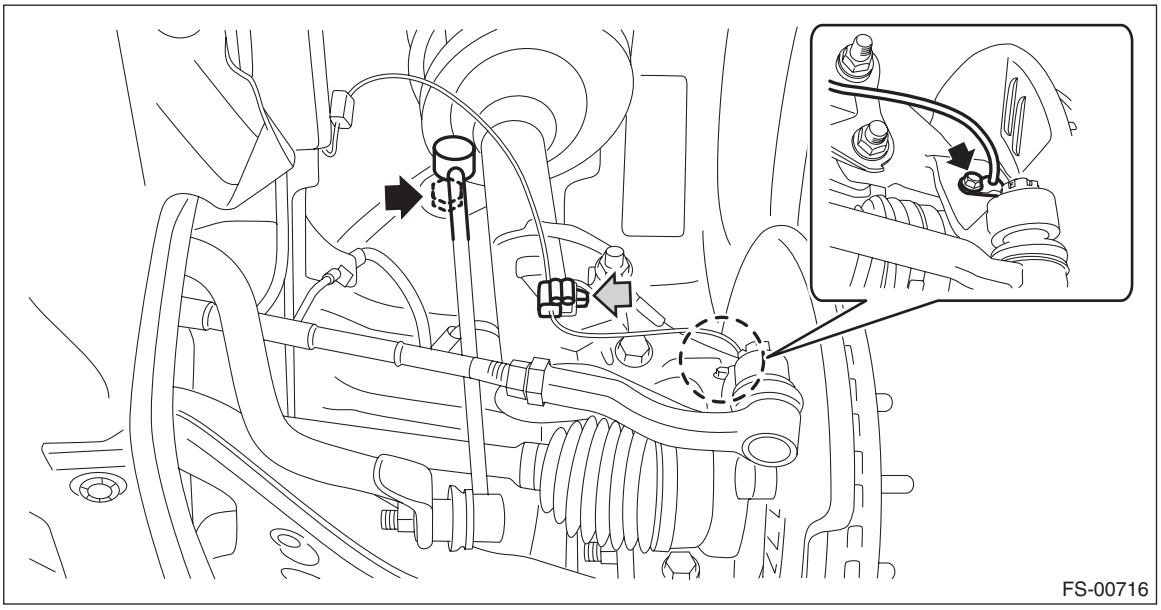
Tightening torque:

140 N·m (14.3 kgf-m, 103.3 ft-lb)

- Front arm assembly replacement: align the alignment mark (a) of the bushing rear - front arm with the cutout portion of the front arm assembly.



• Bushing rear - front arm replacement: align the alignment mark (b) on the front arm assembly with an imaginary line extending from the rib portion of the bushing rear - front arm.



7. Front Strut

A: REMOVAL

1) Lift up the vehicle, and then remove the front wheels.
2) Remove the front strut assembly.
   (1) Place an alignment mark on the camber adjusting bolt and strut.
   (2) Remove the brake hose bracket.

   (3) Remove the nut on the upper side of front stabilizer link and the ABS wheel speed sensor harness.

   (4) Remove the two bolts securing the housing assembly - front axle to the strut.

NOTE:
While holding the head of the adjusting bolt, loosen the flange nut.

(5) Remove the three nuts securing the strut mount - front to the body.

B: INSTALLATION

CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Check the bushing for abnormal cracks, fatigue or damage.**

1) Install the strut mount - front at the upper side of the strut to the body, and tighten it with new flange nuts.

Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)

2) Align alignment marks on the camber adjusting bolt and strut.
Using new self-locking nuts, install the strut to the housing assembly - front axle.

NOTE:
While holding the head of adjusting bolt, tighten the self-locking nut.

Tightening torque:
155 N·m (15.8 kgf-m, 114.3 ft-lb)

3) Install the ABS wheel speed sensor harness.

CAUTION:
During the installation, make sure that the marking of ABS wheel speed sensor harness does not twist.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

4) Install the nut to the upper side of stabilizer link.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)

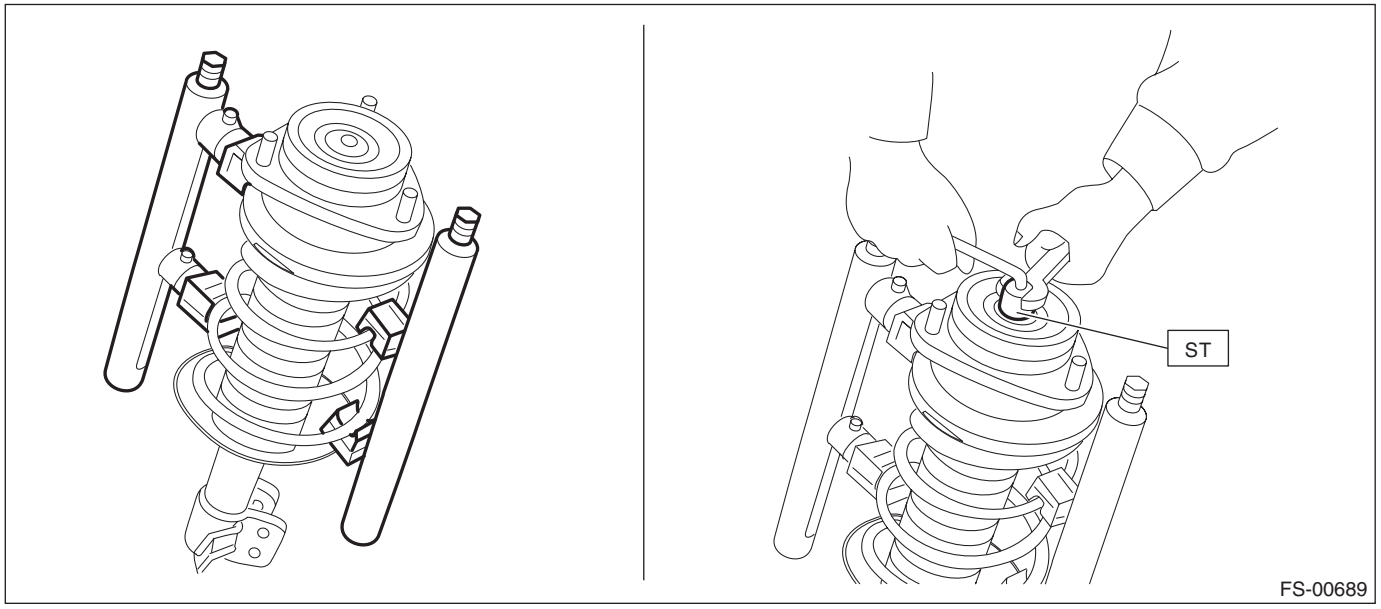
5) Install the brake hose bracket.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

6) Install the front wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

7) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>



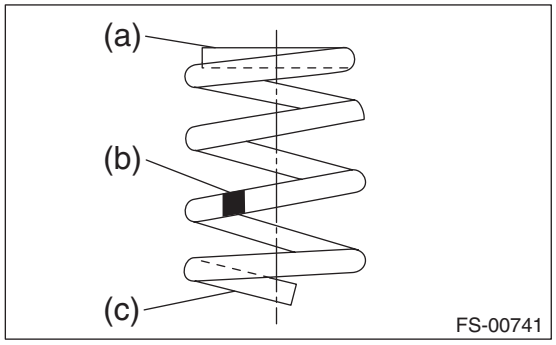
CAUTION:
When the wheel alignment has been adjusted, perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-17, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

8) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-20, PROCEDURE, Auto Headlight Beam Leveler System.>

C: DISASSEMBLY

1) Using a coil spring compressor, compress the coil spring.
2) Using a hexagon wrench to prevent strut rod from turning, remove the self-locking nut with ST.

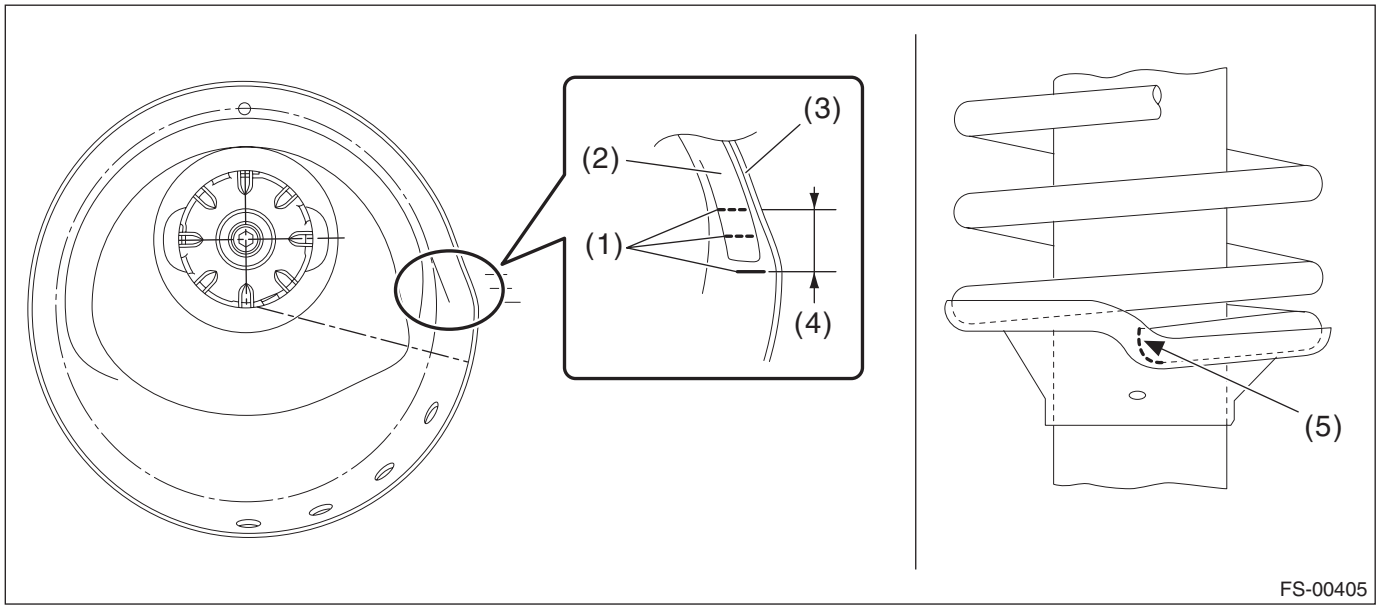
Preparation tool:
ST: STRUT MOUNT SOCKET (20399AG000)



3) Remove the strut mount - front, spacer - front strut, dust cover - front strut and spring seat - front strut UPR from the strut COMPL.
4) Gradually decrease the compression force of compressor, and remove the coil spring.
5) Remove the dust cover and helper.

D: ASSEMBLY

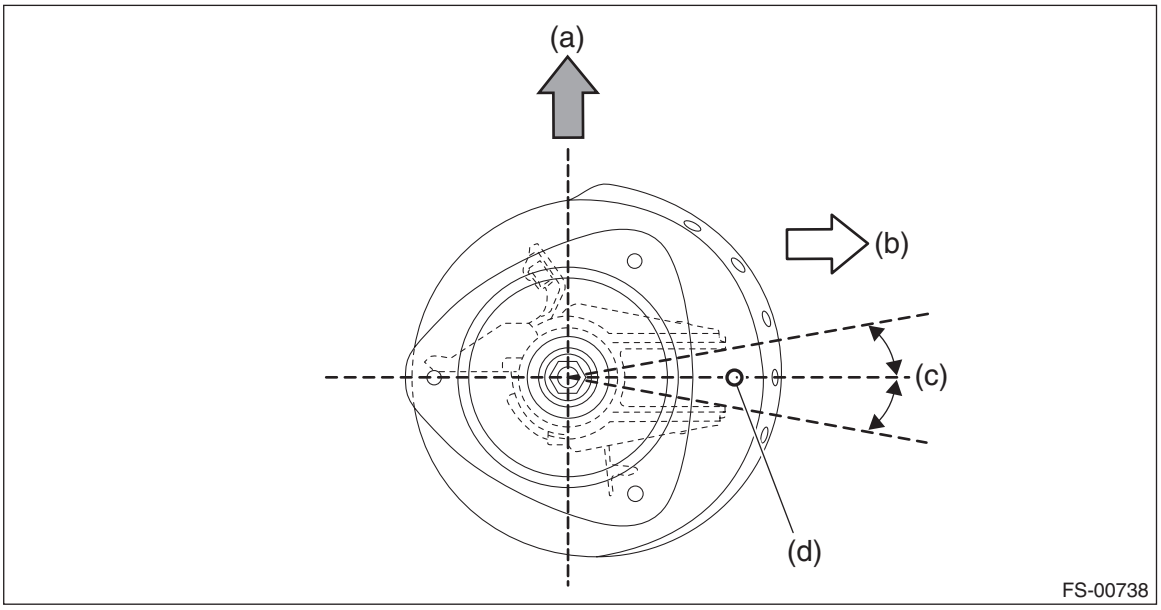
1) Before assembly, check each part. <Ref. to FS-54, INSPECTION, Front Strut.>
2) Using a coil spring compressor, compress the coil spring.



NOTE:
Make sure that the vertical install direction of the coil spring is as shown in the figure.

(a) Diameter is small (upper part)
(b) Identification paint
(c) Diameter is large (bottom part)

3) Set the coil spring correctly so that its end face seats well in the spring seat as shown in the figure.

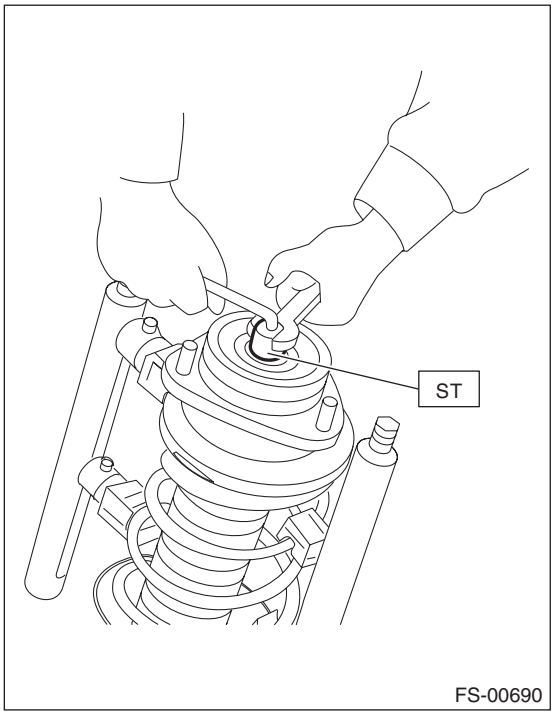


CAUTION:
Install the coil spring so that the end of spring is between the marks on the spring seat.

(1) Mark
(2) Spring
(3) Spring seat
(4) Install the spring within this area
(5) Coil spring end face

4) Install the dust cover and the helper - front strut to the piston rod.
5) Pull the piston rod fully upward, and install the spring seat and the dust cover - front strut.

NOTE:
Position the spring seat - front strut UPR as shown in the figure.



(a) Rear side of vehicle
(b) Outside of body
(c) 0°±10°
(d) Hole of spring seat - front strut UPR

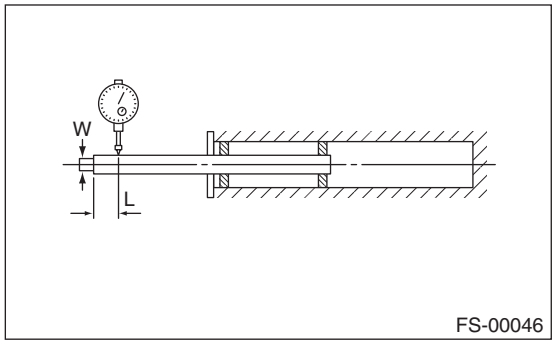
6) Install the spacer - front strut and the strut mount - front to the piston rod, and temporarily tighten a new self-locking nut.

7) Using a hexagon wrench to prevent strut rod from turning, tighten the new self-locking nut with ST.

CAUTION:
Make sure that the strut mount - front turns smoothly after tightening.

Preparation tool:
ST: STRUT MOUNT SOCKET (20399AG000)

Tightening torque:
55 N·m (5.6 kgf-m, 40.6 ft-lb)



8) Loosen the coil spring compressor carefully.

E: INSPECTION

Check the removed part for wear, damage and cracks, and then repair or replace it if defective.

1. STRUT COMPL - FRONT

1) Check for oil leaks.
2) Move the piston rod up and down to check that it operates smoothly without any hitch.
3) Check the piston rod for play as follows:
1. Fix the outer shell in place and fully extend the rod.
2. Set the dial gauge on the end of the rod L [10 mm (0.39 in)].
3. While applying a force of W [20 N (2 kgf, 4 lbf)] to the threaded part, read the dial gauge indication P_1.
4. Apply a force of 20 N (2 kgf, 4 lbf) from the opposite direction of “W”, and then read the dial gauge indication P_2.

Play limit ($P_1 + P_2$): 0.8 mm (0.031 in)
4) Replace the strut if faulty is found in the inspection or limit value is exceeded.

2. STRUT MOUNT - FRONT

Check the rubber part for deformation, cracks or deterioration, and then replace it with a new part if defective.

3. DUST COVER - INNER

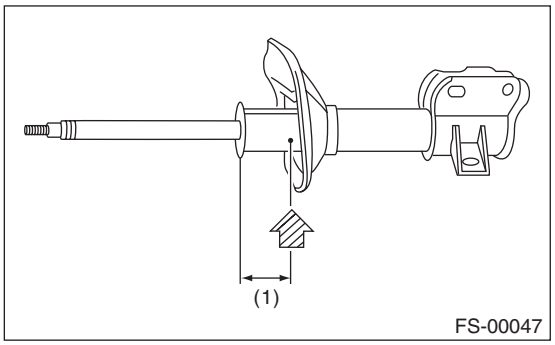
If cracks or damage are found, replace it with a new part.

4. COIL SPRING - FRONT

If a permanent strain is found, replace it with a new part.

5. HELPER - FRONT STRUT

If major cracks or damage are found, replace it with a new part.



6. DUST COVER - FRONT

If major cracks or damage are found, replace it with a new part.

F: DISPOSAL

CAUTION:
- **Before handling struts, be sure to wear goggles to protect eyes from gas, oil and cutting powder.**
- **Do not disassemble the strut damper or throw into flames.**
- **When discarding gas filled struts, drill holes in them to purge the gas.**

1) Place the strut on a level surface with the piston rod fully expanded.
2) Using a 2 — 3 mm (0.08 — 0.12 in) dia. drill, make holes in areas shown in the figure.

(1) 40 mm (1.57 in)

8. General Diagnostic Table

A: INSPECTION

1. IMPROPER VEHICLE POSTURE OR IMPROPER WHEEL ARCH HEIGHT

Possible cause	Corrective action
(1) Deformation or damage of suspension parts	Replace.
(2) Rough operation of strut COMPL or shock absorber COMPL	Replace.
(3) Improper installation of strut COMPL or shock absorber COMPL	Replace with appropriate parts.
(4) Installation of the wrong coil spring	Replace with appropriate parts.

2. POOR RIDE COMFORT

1) Large rebound shock.
2) Rocking of the vehicle continues too long after running over bump and hump.
3) Excessive shock in bumping.

Possible cause	Corrective action
(1) Damaged coil spring	Replace.
(2) Overinflation of tires	Adjust.
(3) Improper wheel arch height	Replace the coil springs with new parts.
(4) Defective operation of strut assembly or strut COMPL - front	Replace.
(5) Damage or deformation of strut mount - front or shock absorber mount	Replace.
(6) Unsuitable length (maximum or minimum) of strut assembly or shock absorber	Replace with appropriate parts.
(7) Abnormal deformation or loss of bushing	Replace.
(8) Deformation or damage of helper in strut assembly or strut COMPL - front	Replace.
(9) Oil leakage from the strut assembly or strut COMPL - front	Replace.

3. NOISE

Possible cause	Corrective action
(1) Wear or damage of strut assembly or strut COMPL - front component parts	Replace.
(2) Loosening of the suspension link installing bolt	Tighten to the specified torque.
(3) Abnormal deformation or loss of bushing	Replace.
(4) Unsuitable length (maximum or minimum) of strut assembly or strut COMPL - front	Replace with appropriate parts.
(5) Damaged coil spring	Replace.
(6) Wear or damage of the ball joint	Replace.
(7) Deformation of the clamp - stabilizer bushing	Replace.

REAR SUSPENSION

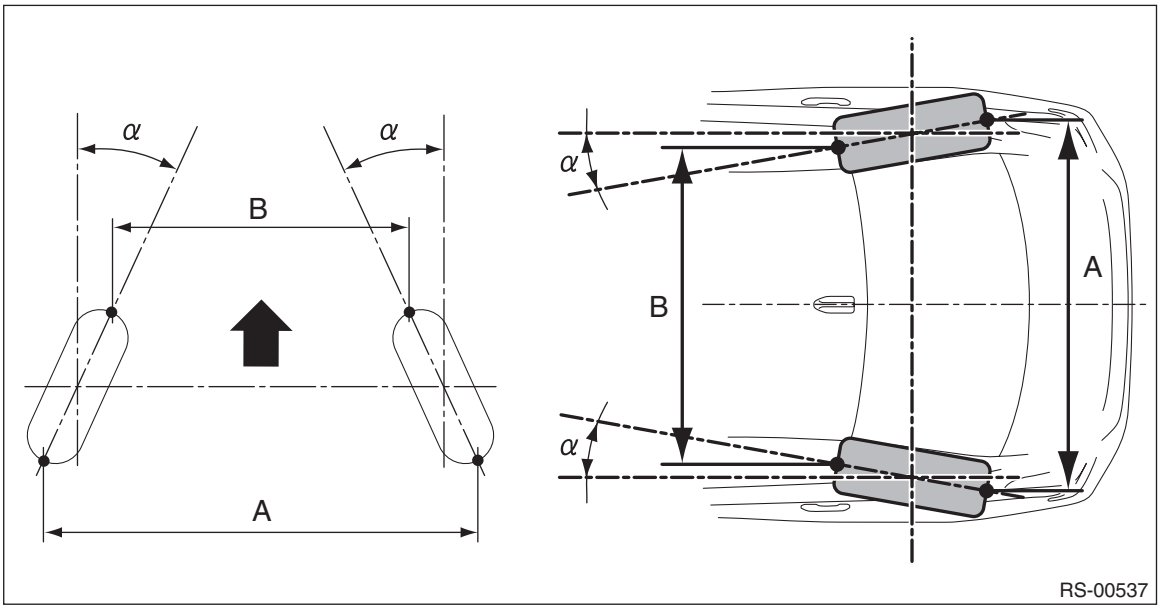
10.	General Diagnostic Table	32

1. General Description

A: SPECIFICATION



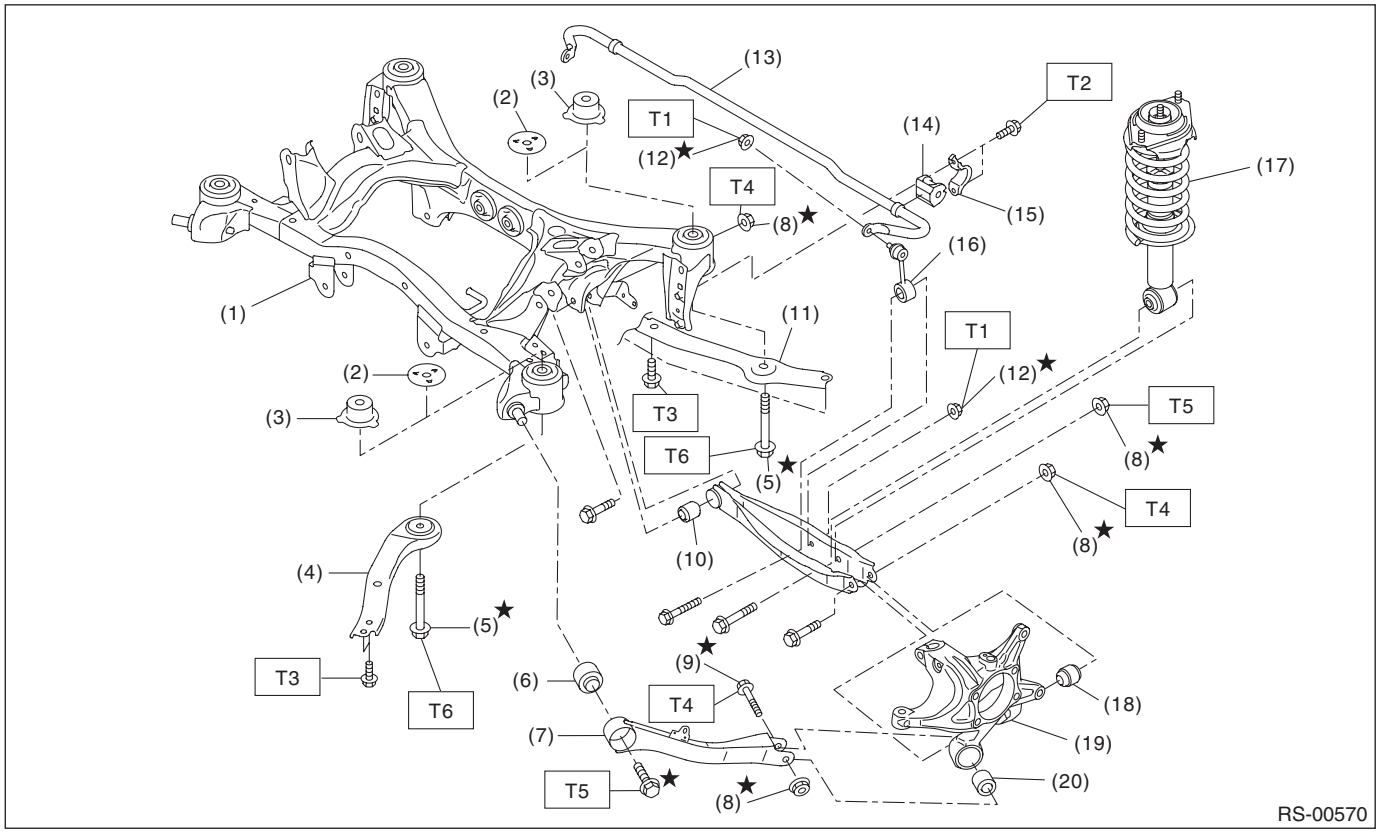
1. SEDAN MODEL

Tire size		P225/55R17 P225/50R18
Wheel arch height (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$))	mm (in)	381 (15.00)
Camber (tolerance: ±0°45′ Differences between RH and LH: 45′ or less)		–1°25′
Toe-in	mm (in)	IN 3±3 (IN 0.12±0.12)
		Toe angle (sum of both wheels): IN 0°15′±15′
Thrust angle (tolerance: 0°00′±30′)		0°00′

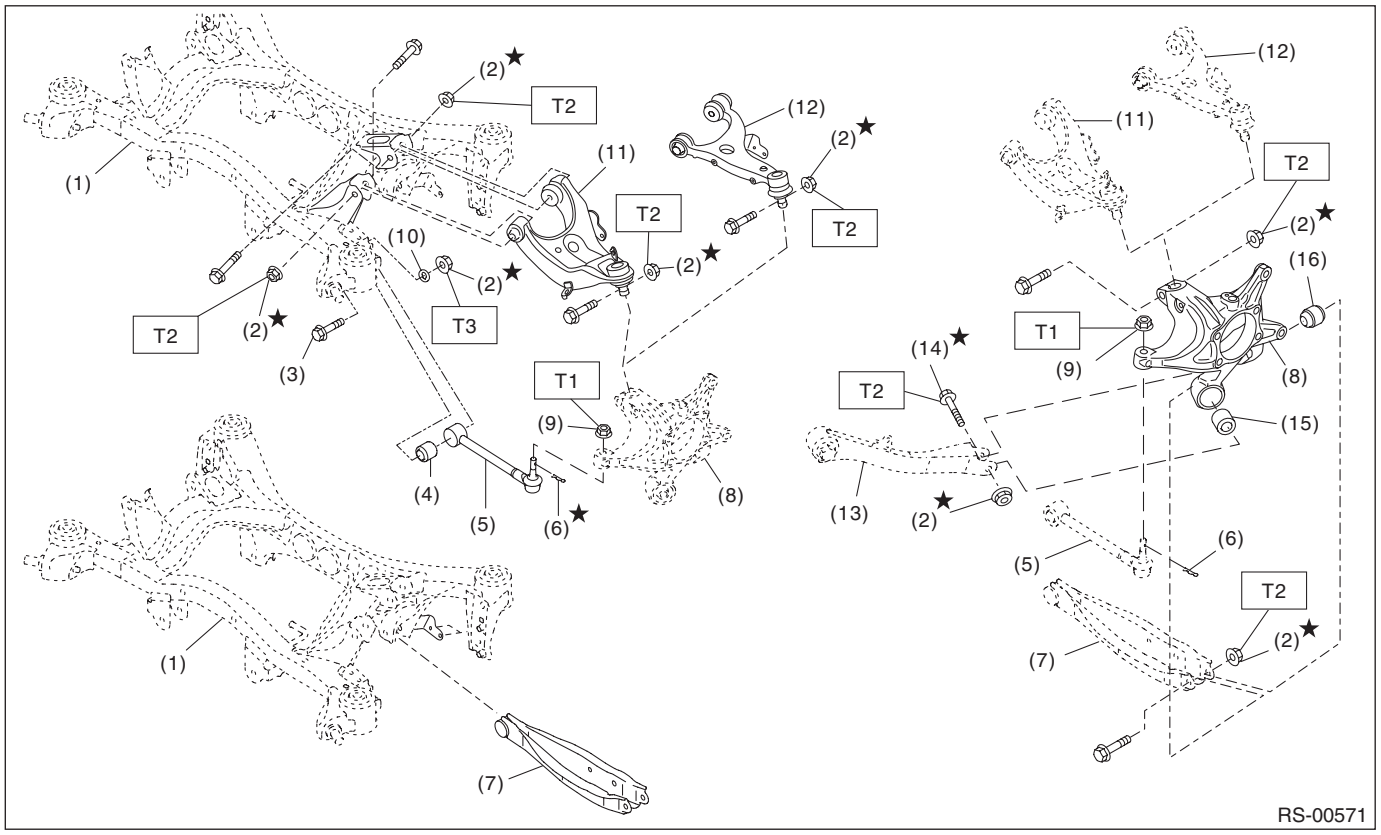
2. OUTBACK MODEL

Tire size		P225/65R17 P225/60R18
Wheel arch height (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$))	mm (in)	467 (18.39)
Camber (tolerance: ±0°45′ Differences between RH and LH: 45′ or less)		–1°00′
Toe-in	mm (in)	IN 3±3 (IN 0.12±0.12)
		Toe angle (sum of both wheels): IN 0°14′±14′
Thrust angle (tolerance: 0°00′±30′)		0°00′

NOTE:
• Front toe-in, rear toe-in and front camber can be adjusted. Adjust if the value of toe-in or camber exceeds the tolerance range of the specification chart.
• Other items except for front toe-in, rear toe-in and front camber that are described in the specification chart cannot be adjusted.
• If other items exceed the tolerance range of the specification chart, check the suspension parts and connections for deformation. If defective, replace with new parts.



A – B = Positive: Toe-in, Negative: Toe-out



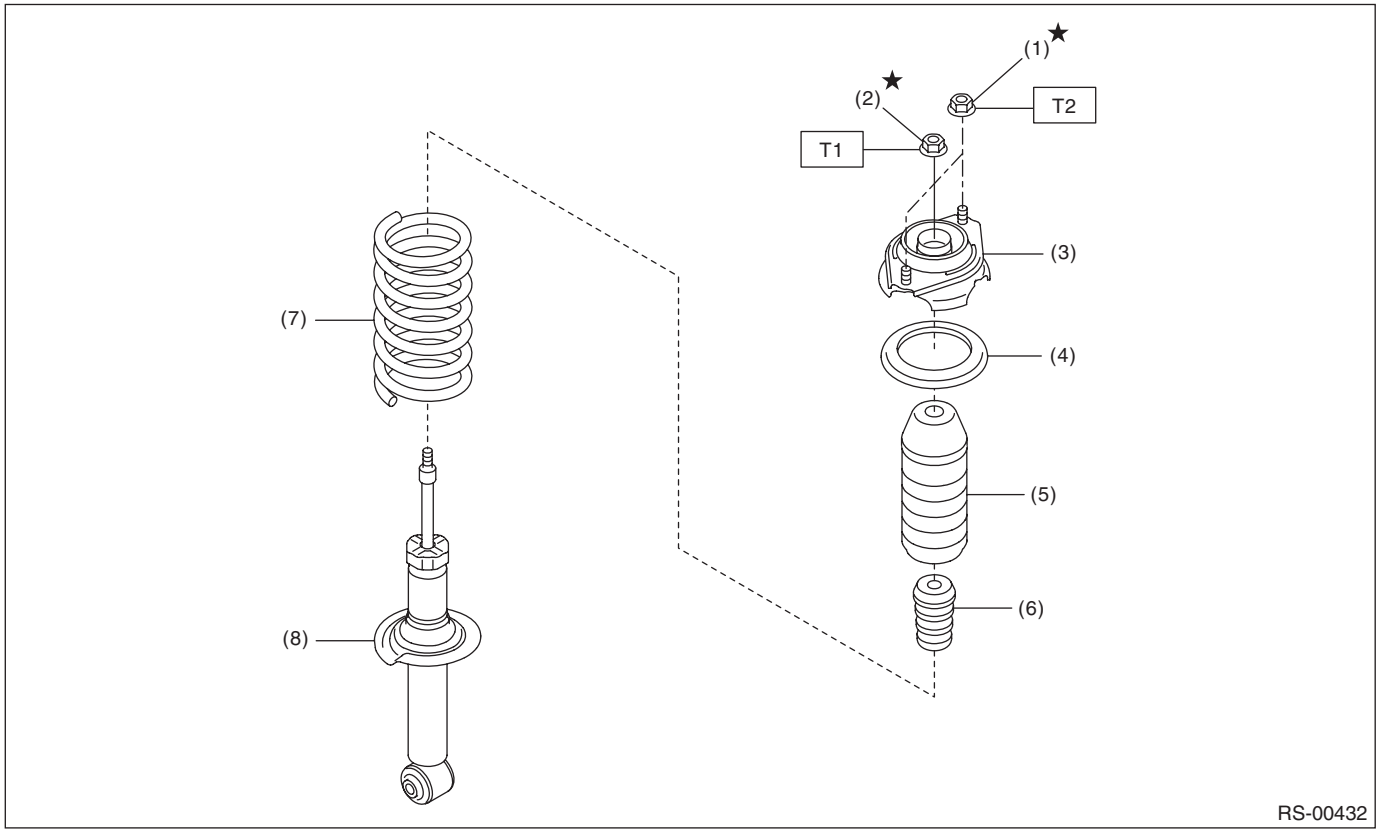
α = Individual toe angles

B: COMPONENT

1. REAR SUSPENSION

(1)	Rear sub frame ASSY	(11)	Support - sub frame	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Rear sub frame stopper upper (sedan model)	(12)	Flange nut	***T1: 33 (3.4, 24.3)***
(3)	Rear sub frame stopper upper (OUTBACK model)	(13)	Rear stabilizer	***T2: 38 (3.9, 28.0)***
(4)	Front sub frame support plate	(14)	Bushing - stabilizer	***T3: 70 (7.1, 51.6)***
(5)	Flange bolt A	(15)	Clamp - stabilizer bushing	***T4: 80 (8.2, 59.0)***
(6)	Bushing A - trailing link	(16)	Stabilizer link ASSY	***T5: 120 (12.2, 88.5)***
(7)	Trailing link	(17)	Rear shock absorber ASSY	***T6: 145 (14.8, 106.9)***
(8)	Self-locking nut	(18)	Bushing - rear axle housing	
(9)	Flange bolt B	(19)	Housing ASSY - rear axle	
(10)	Bushing C - lateral link rear	(20)	Bushing - trailing link	

(1)	Rear sub frame ASSY	(9)	Flange nut
(2)	Self-locking nut	(10)	Adjusting washer
(3)	Adjusting bolt	(11)	Rear upper arm ASSY (sedan model)
(4)	Bushing B - lateral link	(12)	Rear upper arm ASSY (OUTBACK model)
(5)	Lateral link ASSY - front	(13)	Trailing link
(6)	Snap pin	(14)	Flange bolt
(7)	Lateral link ASSY - rear	(15)	Bushing - rear trailing link
(8)	Housing ASSY - rear axle	(16)	Bushing - rear axle housing



Tightening torque: N·m (kgf-m, ft-lb)

T1: 60 (6.1, 44.3)

T2: 80 (8.2, 59.0)

T3: 120 (12.2, 88.5)

2. REAR SHOCK ABSORBER

(1)	Flange nut	(5)	Dust cover - rear shock
(2)	Self-locking nut	(6)	Helper - rear
(3)	Shock mount - rear	(7)	Coil spring - rear
(4)	Rubber seat - shock UPR	(8)	Shock absorber COMPL - rear

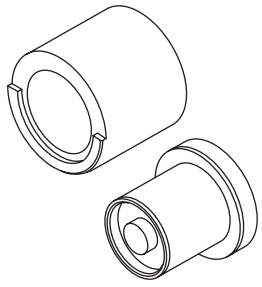
Tightening torque: N·m (kgf-m, ft-lb)
T1: 25 (2.5, 18.4)
T2: 30 (3.1, 22.1)

C: CAUTION

- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- When disposing of shock absorbers, be sure to bleed the oil or gas out completely. Also, do not expose to flames or fire.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Do not secure a part in a vise directly. Place cushioning materials such as wood blocks, aluminum plates, or waste cloth between the part and the vise.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- When the suspension-related components have been removed or replaced, perform “VDC sensor mid-point setting mode” of the VDC. <Ref. to VDC-17, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- For parts which are not reusable, always use new parts. Other parts should be replaced with new parts as required.
- When handling oil or fuel, adhere to the following to prevent unexpected accident.
  – Be careful with fire.
  – Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.
  – Follow all government and local regulations concerning disposal of refuse when disposing.
- Be sure that the surface of brake disc or brake pad is free from grease or oil.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.

D: PREPARATION TOOL

1. SPECIAL TOOL



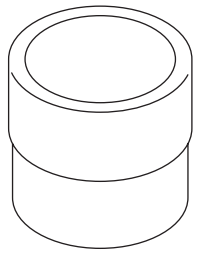


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
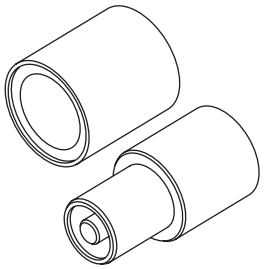
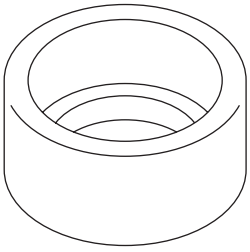
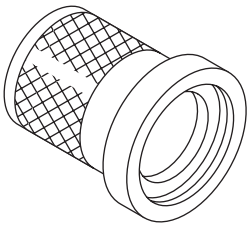
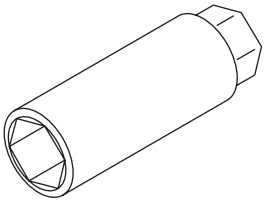
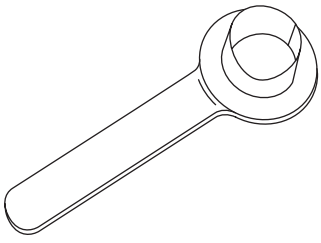
 ST20099AE000	20099AE000	INSTALLER & REMOVER	Used for replacing the bushing B - lateral link.
 ST-499755602	499755602	PRESS	Used for replacing the bushing - rear trailing link.

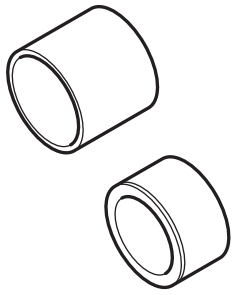












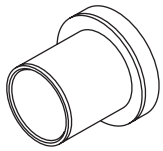


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST20099AE010	20099AE010	INSTALLER & REMOVER	Used for replacing the bushing C - lateral link rear.
 ST20299AG010	20299AG010	BASE	Used for replacing the rear trailing link bushing.
 ST-899874100	899874100	INSTALLER	Used for replacing the rear trailing link bushing.
 ST20399FG000	20399FG000	STRUT MOUNT SOCKET	• Used for removing and installing shock mount - rear. • Used for checking torque of shock mount center nut.
 ST28099PA090	28099PA090	OIL SEAL PROTECTOR	• Used for installing the rear drive shaft to the rear differential. • Used for oil seal protection.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST20099PA010	20099PA010	INSTALLER & REMOVER	• Used for replacing the bushing of the rear housing. • Used together with BUSHING REMOVER (20099FG000).
 ST20099FG000	20099FG000	BUSHING REMOVER	• Used for replacing the bushing of the rear housing. • Used together with base part of INSTALLER & REMOVER (20099PA010).

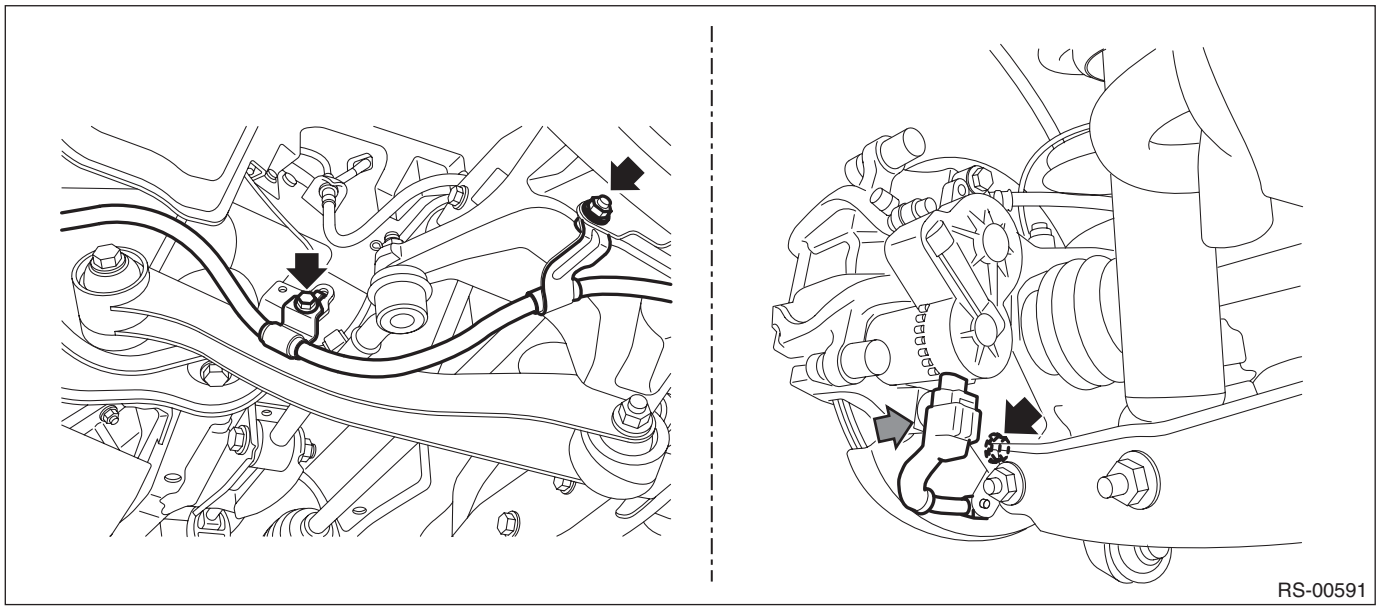
2. GENERAL TOOL

TOOL NAME	REMARKS
Alignment tester	Used for measuring wheel alignment.
Toe-in gauge	Used for toe-in measurement.
Jack	Used for removing and installing suspension.
Bearing puller	Used for removing bushings.
Tie-rod ball joint puller	Used for disconnecting the lateral link assembly - front.
Coil spring compressor	Used for disassembling and assembling strut assembly and shock absorber assembly.

2. Wheel Alignment

A: INSPECTION

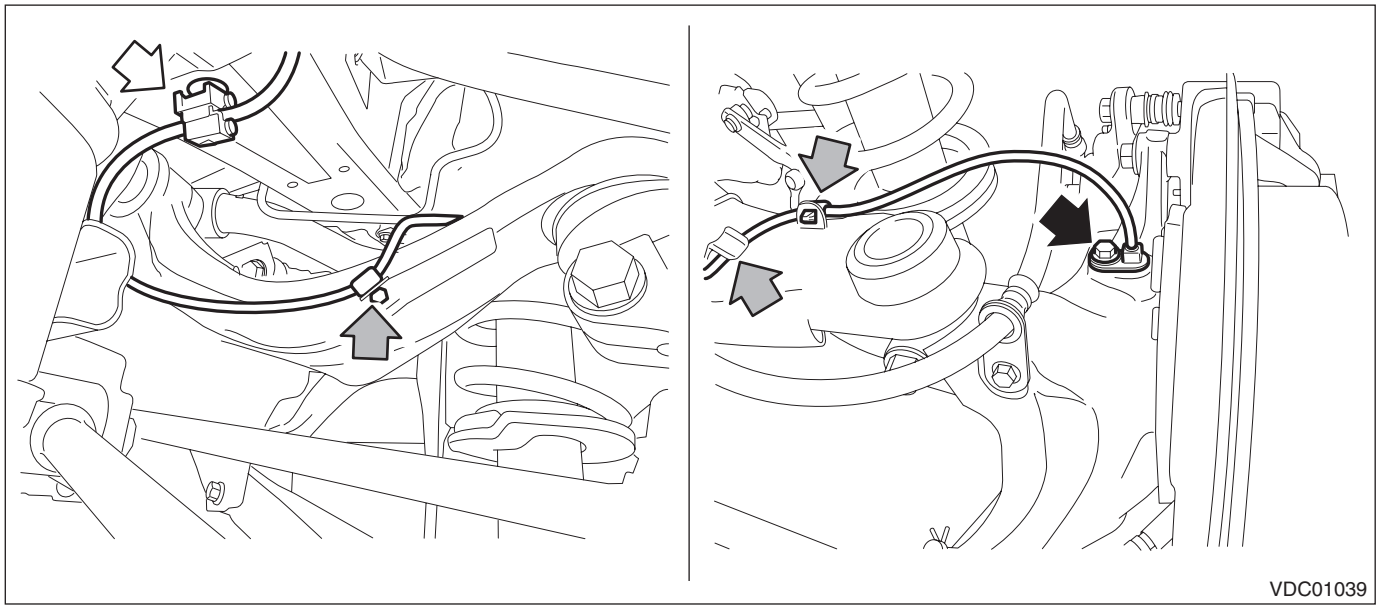
NOTE:
Measure and adjust the front and rear wheel alignment at a time. Refer to “Wheel Alignment” in FS section for measurement and adjustment of wheel alignment.



- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

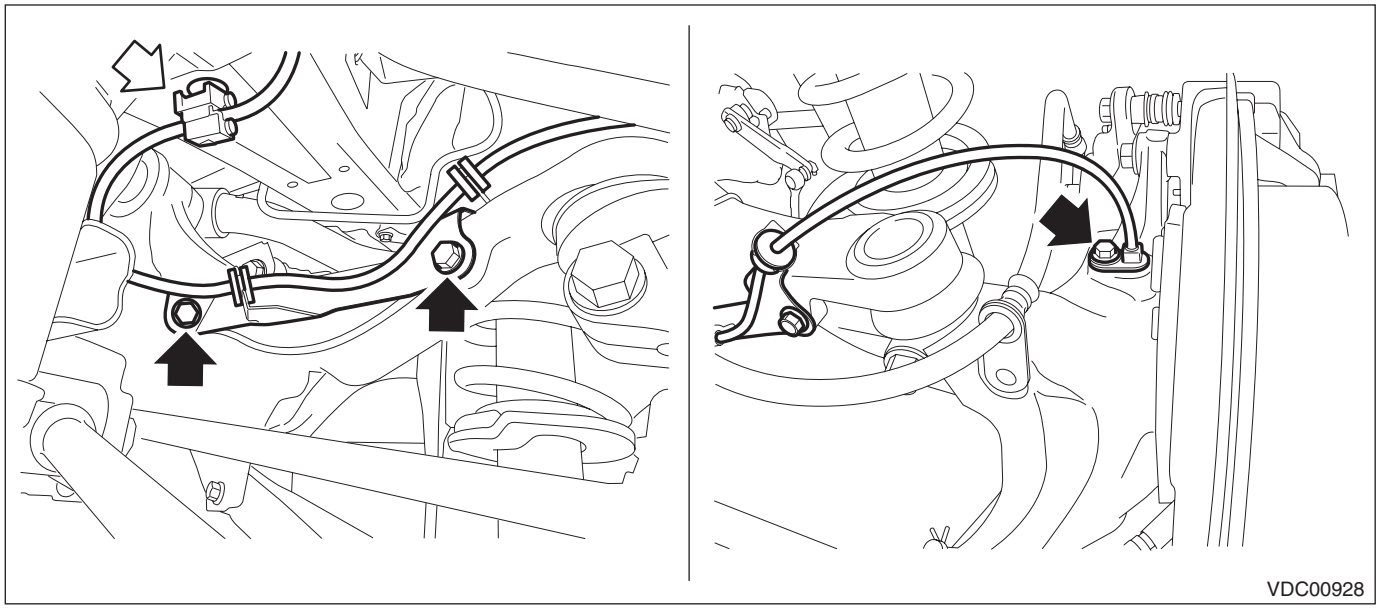
3. Rear Sub Frame

A: REMOVAL



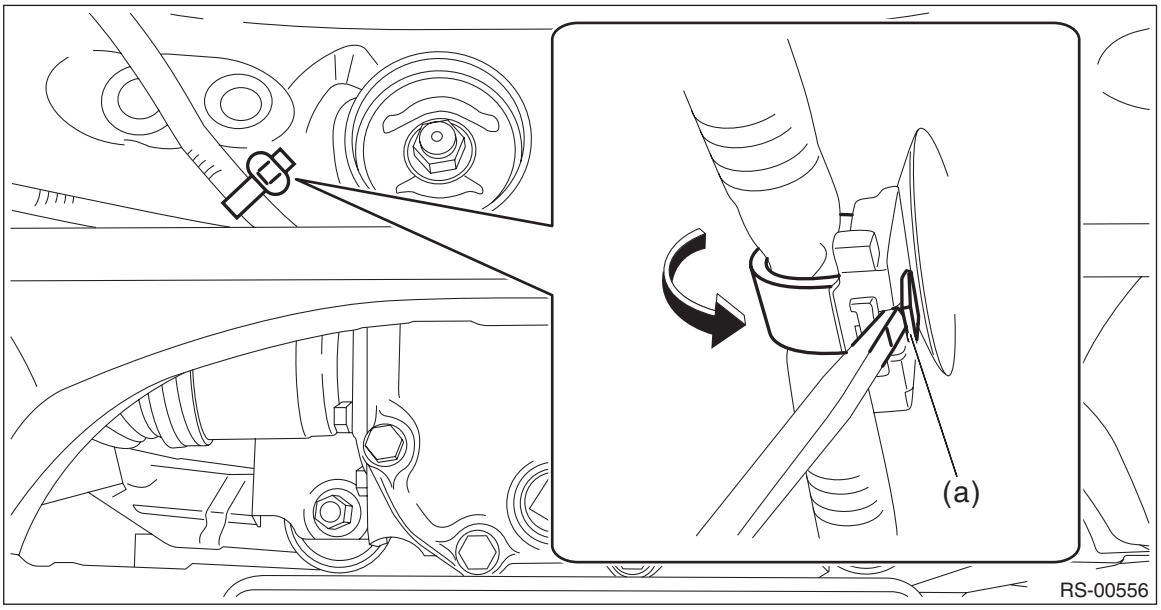
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the rear exhaust pipe.
- H4 engine model: <Ref. to EX(H4DO)-16, REMOVAL, Rear Exhaust Pipe.>
- H6 engine model: <Ref. to EX(H6DO)-12, REMOVAL, Rear Exhaust Pipe.>

4) Remove the propeller shaft assembly. <Ref. to DS-10, REMOVAL, Propeller Shaft.>
5) Remove the cable assembly - parking brake.



RS-00591

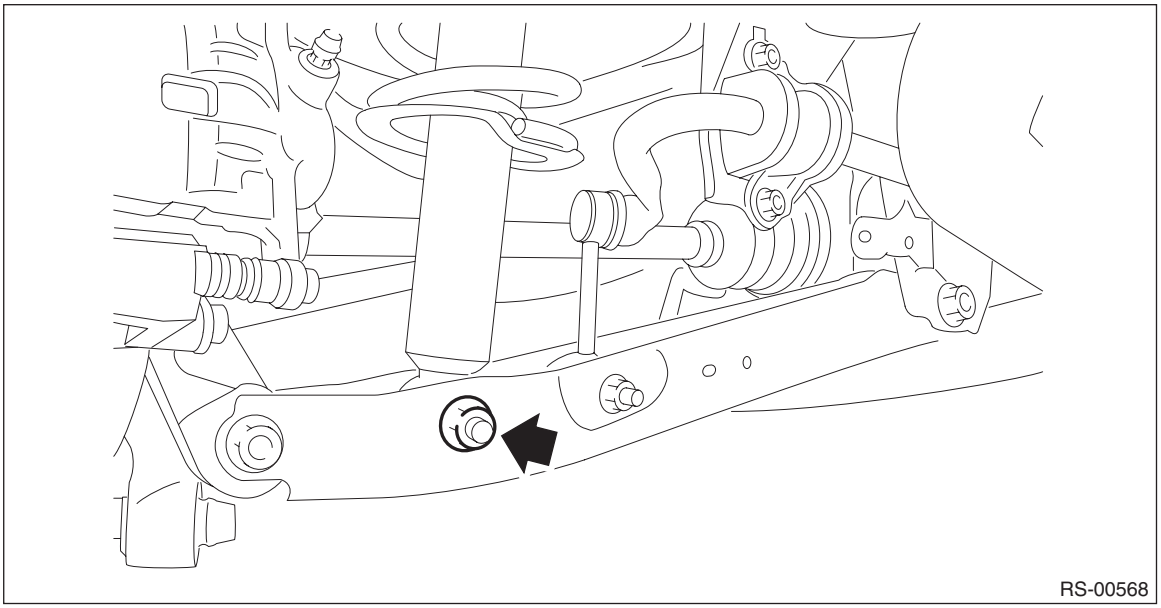
6) Remove the harness clamp and bolts, and remove the rear ABS wheel speed sensor from the housing assembly - rear axle.



CAUTION:
- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**
- **Leave the sensor harness clamp (white arrow) on the vehicle side.**
- **Sedan model**

VDC01039

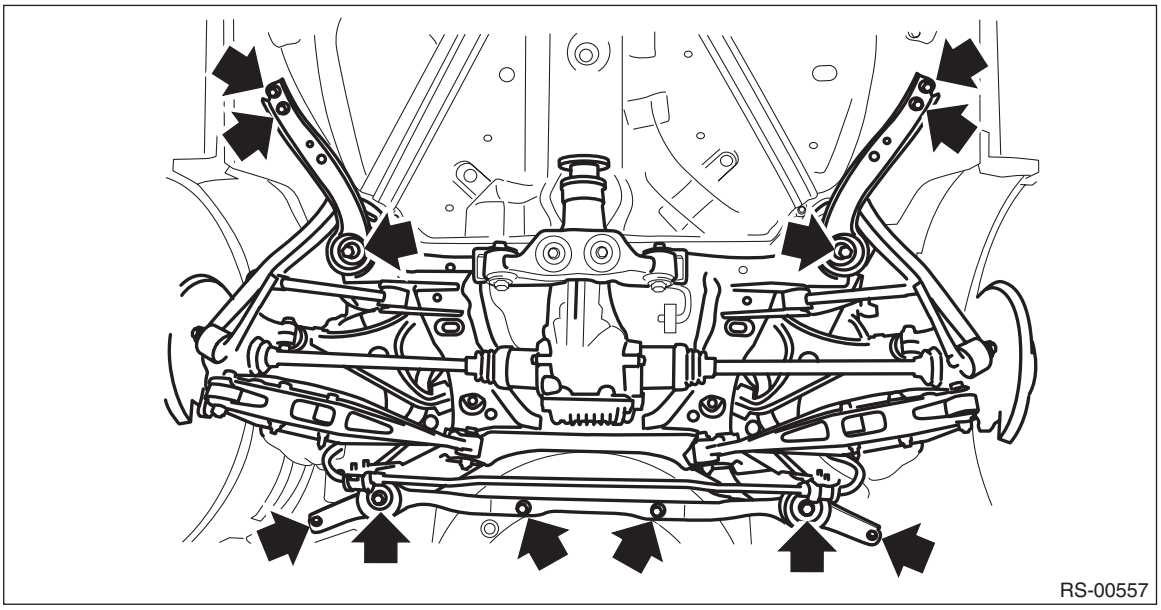
- **OUTBACK model**



7) Remove the disc brake assembly - rear. <Ref. to BR-37, REMOVAL, Rear Disc Brake Assembly.>
8) Remove the brake hose bracket and disc brake assembly - rear.
9) Remove the sub rear harness from the clamp.
   (1) Press in the clamp claw (a).
   (2) Remove the clamp band, and then remove the sub rear harness.

10) Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler) <Ref. to LI-80, REMOVAL, Rear Height Sensor.>
11) Remove the fuel tank protector.
- H4 engine model: <Ref. to FU(H4DO)-94, REMOVAL, Fuel Tank Protector.>
- H6 engine model: <Ref. to FU(H6DO)-99, REMOVAL, Fuel Tank Protector.>

12) Remove the rear sub frame assembly.
(1) Remove the bolts and nuts from the lower side of rear shock absorber COMPL - rear.



(2) Support the sub frame assembly using a transmission jack.

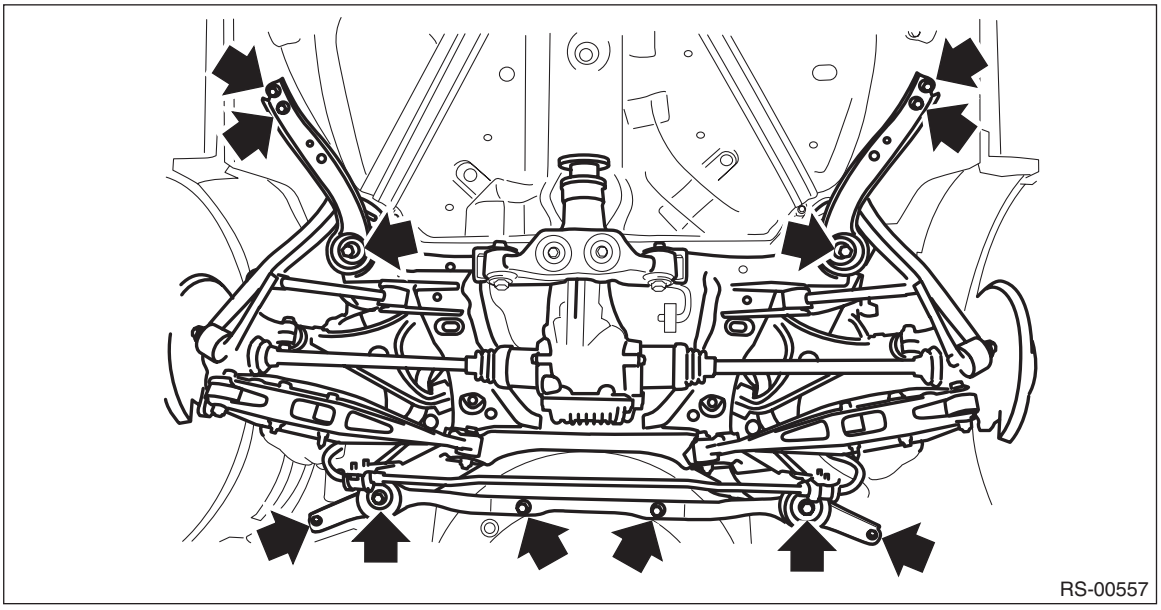
CAUTION:
The rear sub frame assembly is heavy. Make sure that it is horizontally-supported.

(3) Remove the bolt, and remove the left and right sub frame supports and the rear sub frame support.
(4) Remove the rear sub frame assembly.

CAUTION:
While checking there is no dragging of harness and wire, lower it slowly with a transmission jack.

13) As necessary, remove each part from the rear sub frame assembly.

B: INSTALLATION



CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**
- **During the installation, make sure that the marking of ABS wheel speed sensor harness does not twist.**

1) Check the removed parts for wear, damage and crack, and repair or replace them if faulty.
2) Install each part to the rear sub frame assembly.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to RS-4, COMPONENT, General Description.>

3) Install the rear sub frame assembly.
   (1) Lift the rear sub frame assembly using a transmission jack.
   (2) Install the right and left supports - sub frame and the rear support - sub frame, and install the rear sub frame assembly.

CAUTION:
- **The rear sub frame assembly is heavy. Make sure that it is horizontally-supported.**
- **While checking there is no dragging of harness and wire, raise it slowly with a transmission jack.**

RS-00557

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to RS-4, COMPONENT, General Description.>

4) Install the bolts and nuts to the lower side of rear shock absorber COMPL - rear.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

5) Install the fuel tank protector.
- H4 engine model: <Ref. to FU(H4DO)-94, INSTALLATION, Fuel Tank Protector.>
- H6 engine model: <Ref. to FU(H6DO)-99, INSTALLATION, Fuel Tank Protector.>

6) Install the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler)

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

7) Install the sub rear harness.
8) Install the brake hose bracket and the disc brake assembly - rear.

Tightening torque:
Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
Disc brake assembly - rear: 66 N·m (6.7 kgf-m, 48.7 ft-lb)
9) Install the cable assembly - parking brake.

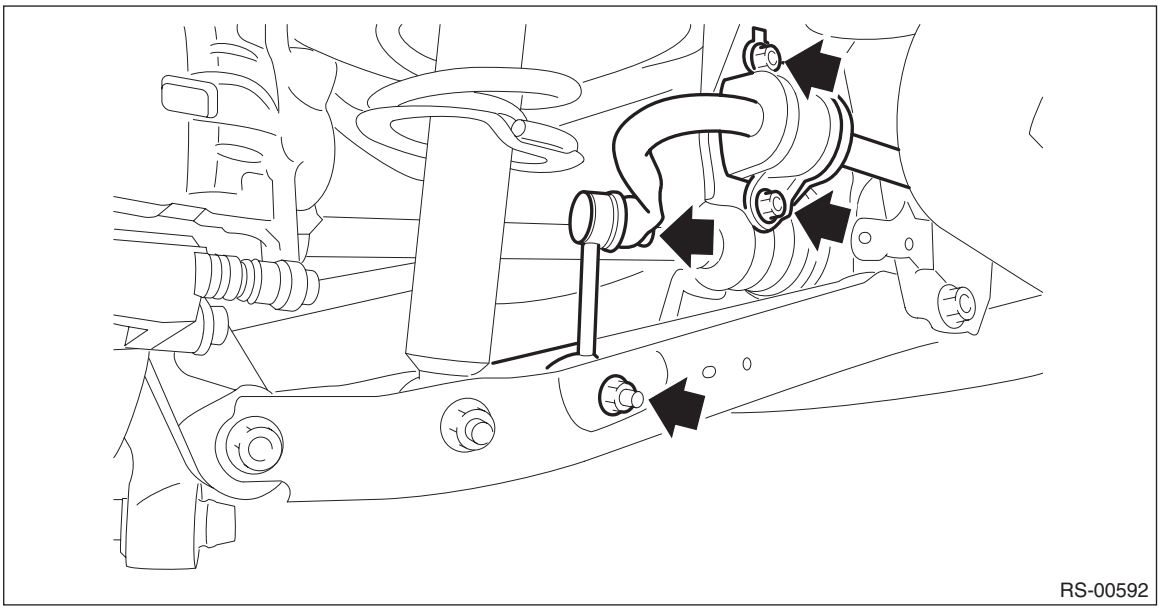
Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)
10) Install the rear ABS wheel speed sensor and the rear ABS wheel speed sensor bracket.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
11) Install the propeller shaft assembly. <Ref. to DS-12, INSTALLATION, Propeller Shaft.>
12) Install the rear exhaust pipe.
- H4 engine model: <Ref. to EX(H4DO)-17, INSTALLATION, Rear Exhaust Pipe.>
- H6 engine model: <Ref. to EX(H6DO)-13, INSTALLATION, Rear Exhaust Pipe.>

13) Install the rear wheels and lower the vehicle.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)
14) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

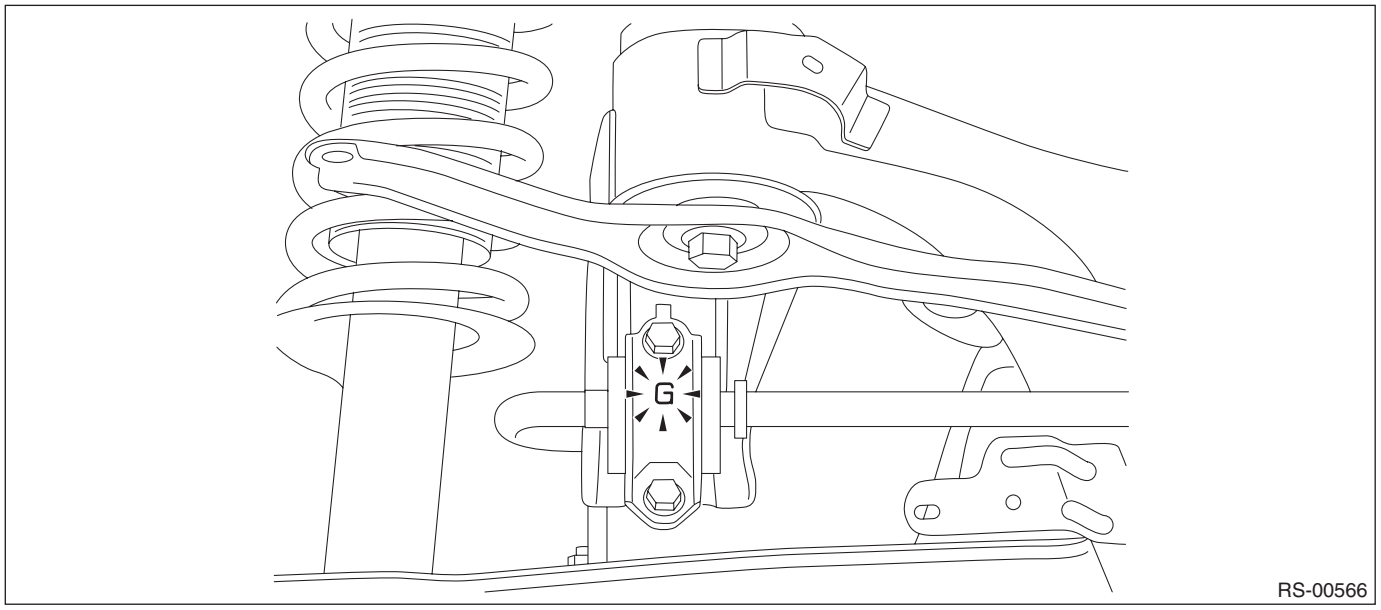
CAUTION:
When the wheel alignment has been adjusted, perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-17, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
15) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
16) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-20, PROCEDURE, Auto Headlight Beam Leveler System.>



C: INSPECTION

Check the removed parts for wear, damage and crack, and repair or replace them if faulty.

4. Rear Stabilizer



A: REMOVAL

1) Lift up the vehicle, and then remove the rear wheels.
2) Remove the rear stabilizer.
   (1) Remove the nut and disconnect the right and left stabilizer link assemblies.
   (2) Detach the right and left clamps - stabilizer bushing and remove the rear stabilizer.

B: INSTALLATION

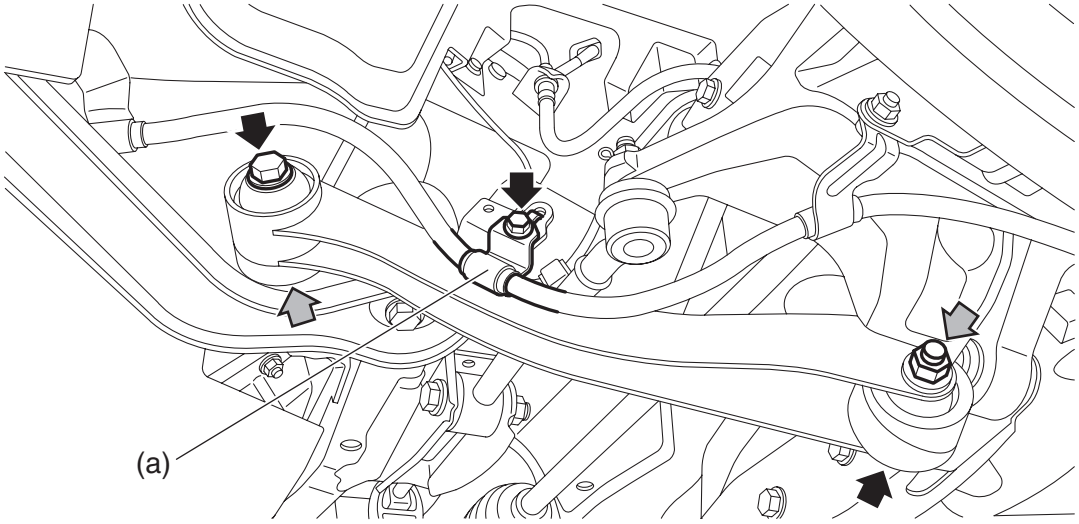
CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**
- **Install the clamp - stabilizer bushing with the "G" character facing upward.**

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Check the bushing for abnormal cracks, fatigue or damage.
- Check the stabilizer link assembly for damage.

2) Install the rear stabilizer.
   (1) Install the stabilizer link assembly.

Tightening torque:
Stabilizer link assembly: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
   (2) Install the clamp - stabilizer bushing.

Tightening torque:
Clamp - stabilizer bushing: 38 N·m (3.9 kgf-m, 28.0 ft-lb)



3) Install the rear wheels and lower the vehicle.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

5. Rear Trailing Link

A: REMOVAL

1) Lift up the vehicle, and then remove the rear wheels.
2) Remove the trailing link.
   (1) Remove the bolts, and remove the bracket - parking brake cable (a) from the trailing link.
   (2) Remove the bolts and nuts, and then remove the trailing link.

RS-00552

B: INSTALLATION

CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**

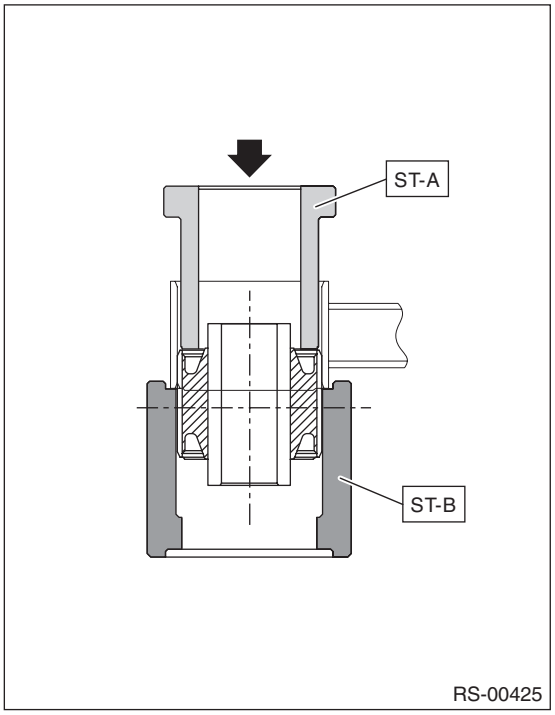
1) Install the trailing link.

Tightening torque:
Trailing link — rear sub frame assembly: 120 N·m (12.2 kgf-m, 88.5 ft-lb)
Trailing link — rear axle housing: 80 N·m (8.2 kgf-m, 59.0 ft-lb)

2) Install the bracket - parking brake cable.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

3) Install the rear wheels and lower the vehicle.



Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

C: DISASSEMBLY

1. BUSHING A - TRAILING LINK

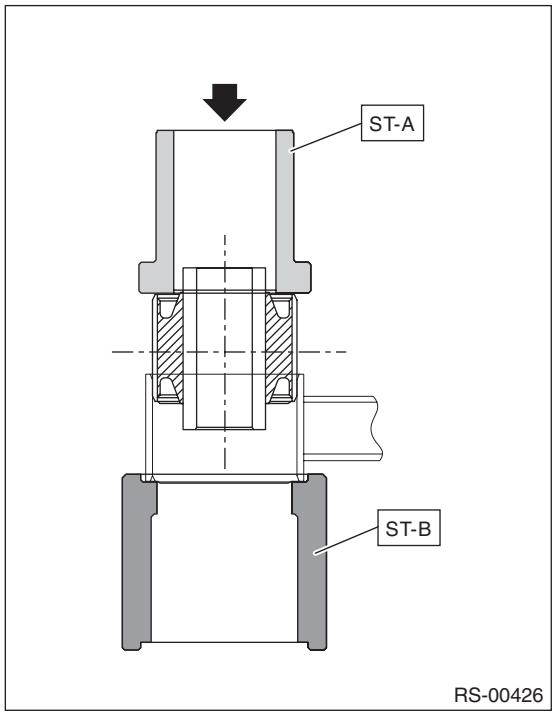
Using the ST, push out the bushing A - trailing link.

Preparation tool:
ST-A: INSTALLER (899874100)
ST-B: PRESS (499755602)

2. BUSHING - TRAILING LINK

For the removal procedure of bushing - trailing link, refer to “Rear Axle” in the “DRIVE SHAFT SYSTEM” section. <Ref. to RS-19, BUSHING - TRAILING LINK, DISASSEMBLY, Rear Trailing Link.>

D: ASSEMBLY



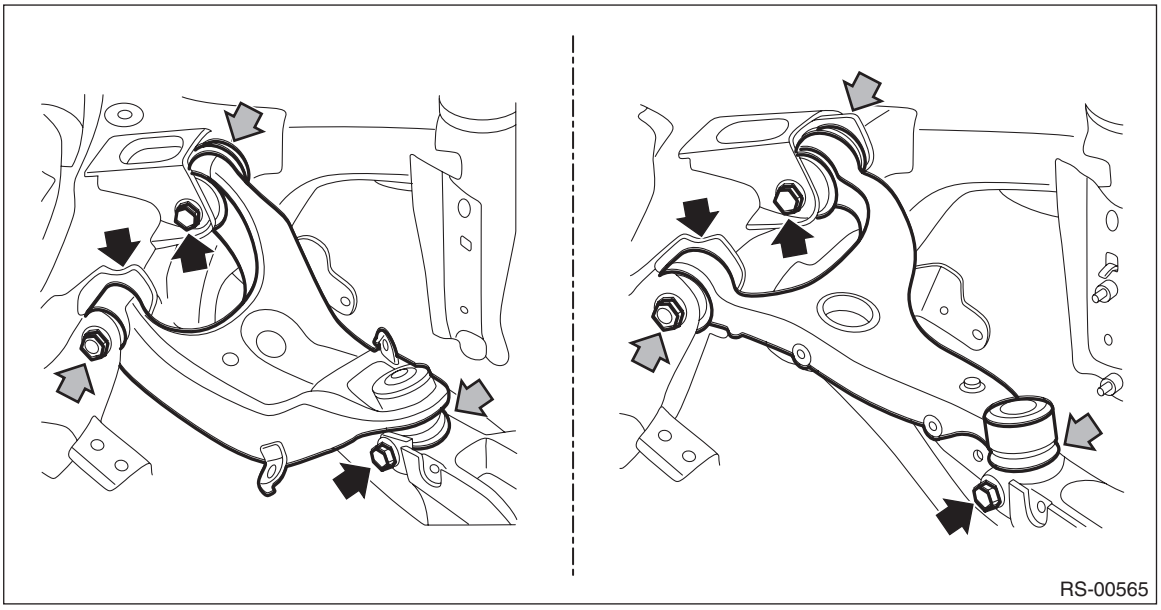
1. BUSHING A - TRAILING LINK

1) Before assembly, inspect the following items and replace any faulty part with a new one.
- Perform visual check for damage or bend on the trailing link.
- Visually check the bushing for abnormal cracks, fatigue or damage.

2) Using the ST-A and ST-B, press-fit the bushing.

CAUTION:
Make sure to press the bushing straight in.

Preparation tool:
ST-A: INSTALLER (899874100)
ST-B: PRESS (499755602)



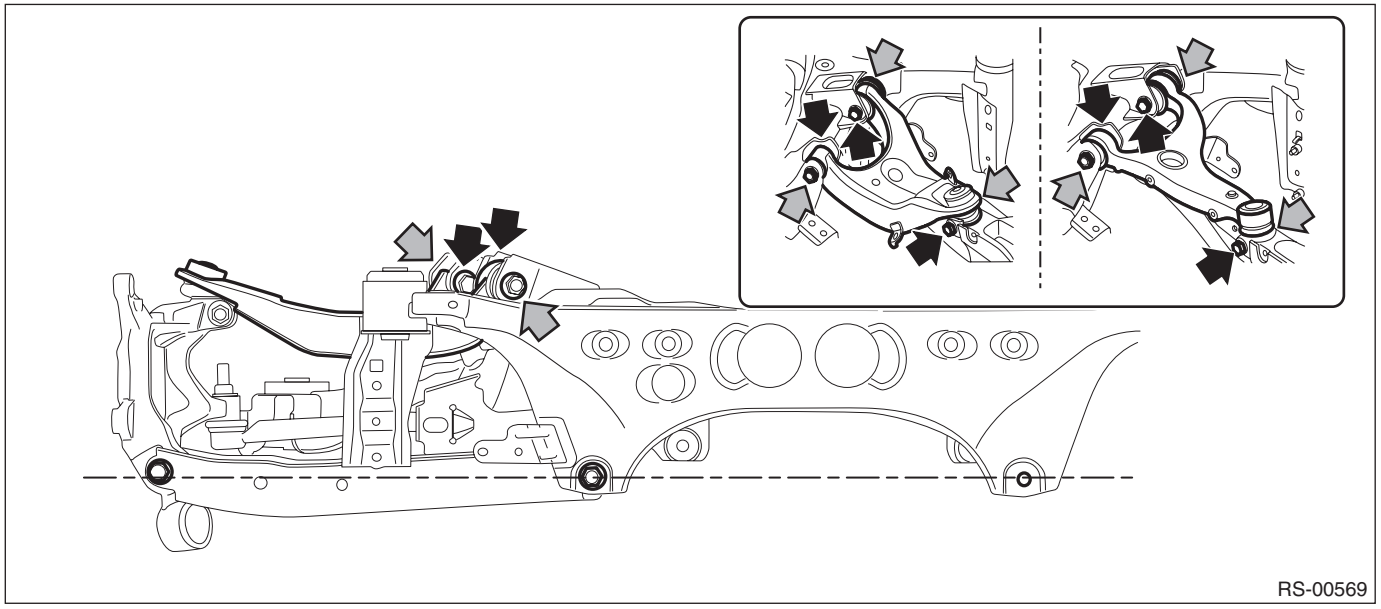
2. BUSHING - TRAILING LINK

For the installation procedure of bushing - trailing link, refer to “Rear Axle” in the “DRIVE SHAFT SYSTEM” section. <Ref. to DS-35, ASSEMBLY, Rear Axle.>

6. Upper Arm

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the rear sub frame assembly. <Ref. to RS-11, REMOVAL, Rear Sub Frame.>
4) Remove the bolts, then remove the rear upper arm assembly from the rear sub frame assembly.



B: INSTALLATION

CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing when the arm is positioned in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Visually check the upper arm assembly for damage and deformation.
- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the dust cover on the ball joint for abnormal cracks, fatigue or damage.

2) Install the upper arm assembly.
   (1) Make the installation sections of the rear lateral link assembly (the bolt on the housing assembly - rear axle side and the bolt on the rear sub frame assembly side) horizontal.
   (2) Install the upper arm assembly to the rear sub frame assembly.

Tightening torque:
Upper arm assembly — rear sub frame assembly: 80 N·m (8.2 kgf-m, 59.0 ft-lb)

3) Connect the upper arm assembly and the housing assembly - rear axle.

Tightening torque:
Upper arm assembly — housing assembly - rear axle: 80 N·m (8.2 kgf-m, 59.0 ft-lb)

4) Install the rear sub frame assembly. <Ref. to RS-14, INSTALLATION, Rear Sub Frame.>
5) Install the rear wheels and lower the vehicle.

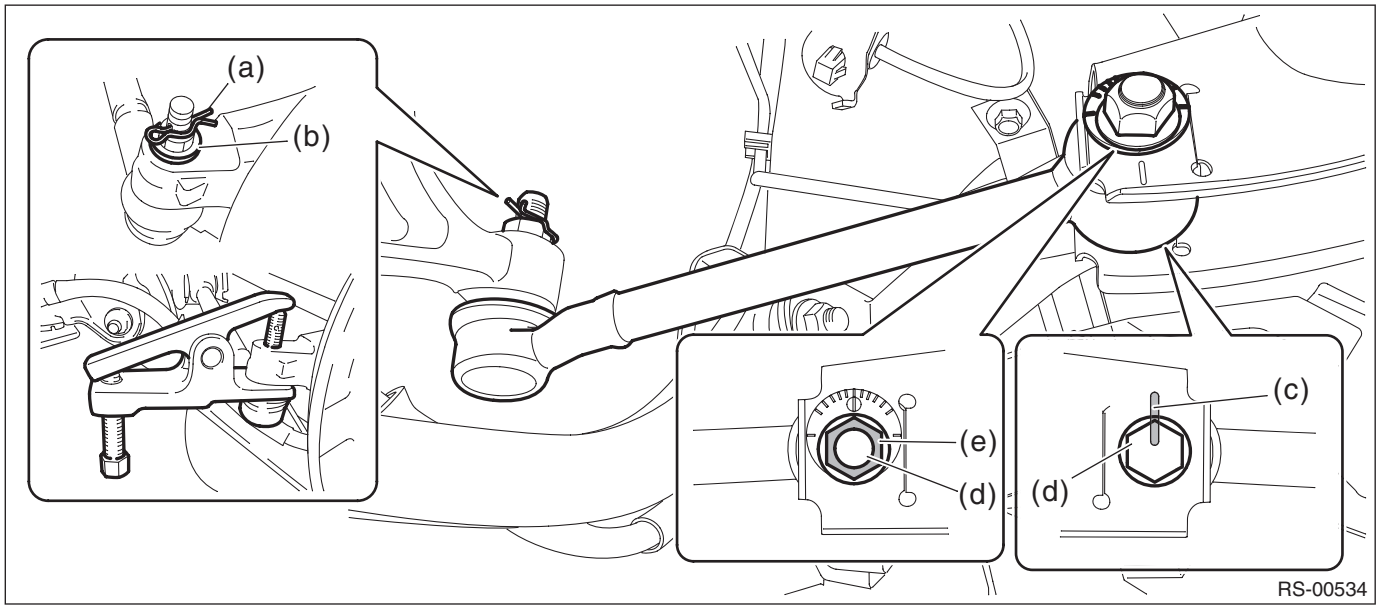
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

6) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-17, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
8) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-20, PROCEDURE, Auto Headlight Beam Leveler System.>

7. Front Lateral Link



A: REMOVAL

1) Lift up the vehicle, and then remove the rear wheels.
2) Remove the trailing link. <Ref. to RS-18, REMOVAL, Rear Trailing Link.>
3) Remove the lateral link assembly - front.
   (1) Remove the snap pin (a) and nut (b).
   (2) Remove the ball joint from the housing assembly - rear axle.

Preparation tool:
Tie-rod ball joint puller

   (3) Scribe alignment marks (c) on the adjusting bolt for lateral link assembly - front and on the rear sub frame assembly.
   (4) Remove the adjusting bolt (d), and remove the lateral link assembly - front.

CAUTION:
• When removing the adjusting bolt (d), make sure to fix the bolt head in place when loosening the nut (e).
• Use a suitable tool appropriate to the structure, and be careful not to damage the boot of the joint while removing. The boot may be damaged depending on the tool used.

B: INSTALLATION

CAUTION:
• For parts which are not reusable, always use new parts.
• Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Visually check the lateral link assembly - front for damage and deformation.
- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the dust cover on the ball joint for abnormal cracks, fatigue or damage.

2) Install the lateral link assembly - front.

CAUTION:
• When installing the adjusting bolt (d), make sure to fix the bolt head in place and tighten the nut side (e).
• Align alignment marks (c) on the adjusting bolt for lateral link assembly - front and on the rear sub frame assembly.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to RS-4, COMPONENT, General Description.>

3) Install the trailing link.

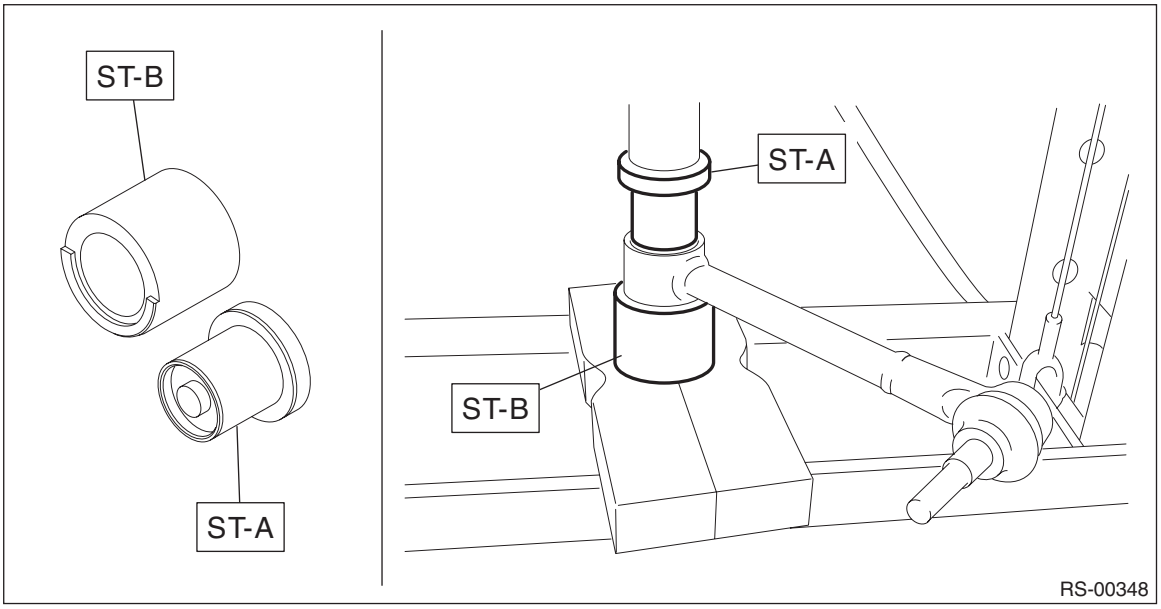
Tightening torque:
Trailing link — rear sub frame assembly: 120 N·m (12.2 kgf-m, 88.5 ft-lb)
Trailing link — rear axle housing: 80 N·m (8.2 kgf-m, 59.0 ft-lb)

4) Install the bolt and install the bracket - parking brake cable.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

5) Install the rear wheels and lower the vehicle.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)



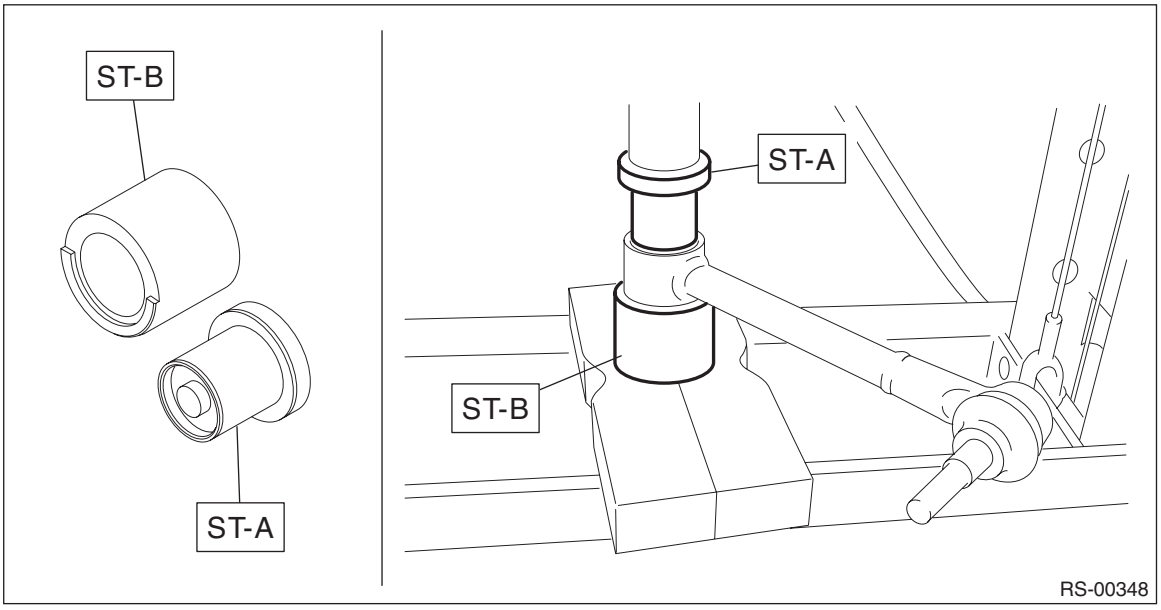
6) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-17, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: DISASSEMBLY

Using the ST, push out the bushing B - lateral link.

Preparation tool:
ST-A & ST-B: INSTALLER & REMOVER (20299AE000)

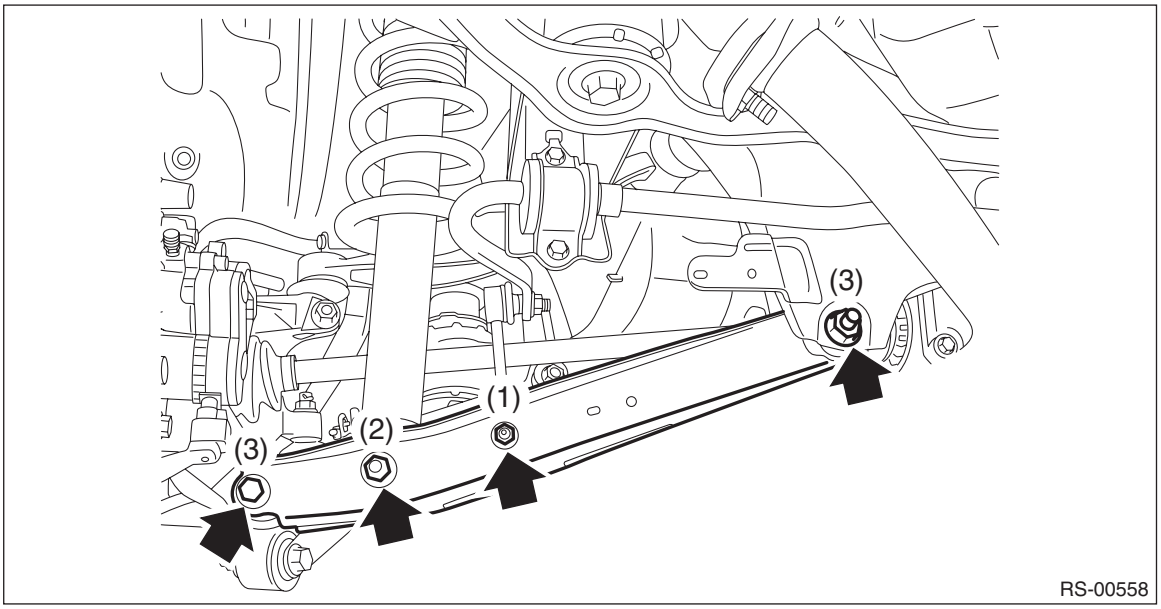


D: ASSEMBLY

1) Before assembly, inspect the following items and replace any faulty part with a new one.
- Visually check the lateral link assembly - front for damage and deformation.
- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the dust cover on the ball joint for damage.

2) Using the ST, press the bushing into place.

CAUTION:
Make sure to press the bushing straight in.



Preparation tool:
ST-A & ST-B: INSTALLER & REMOVER (20299AE000)

8. Rear Lateral Link

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler) <Ref. to LI-80, REMOVAL, Rear Height Sensor.>
4) Remove the lateral link assembly - rear.
   (1) Remove the nut and disconnect the rear stabilizer link assembly.
   (2) Remove the bolts and nuts, and remove the lower side of rear shock absorber assembly.
   (3) Remove the bolts and nuts, and remove the lateral link assembly - rear.

B: INSTALLATION

CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Visually check the lateral link assembly - rear for damage and deformation.
- Visually check the bushing for abnormal cracks, fatigue or damage.

2) Install the lateral link assembly - rear.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to RS-4, COMPONENT, General Description.>

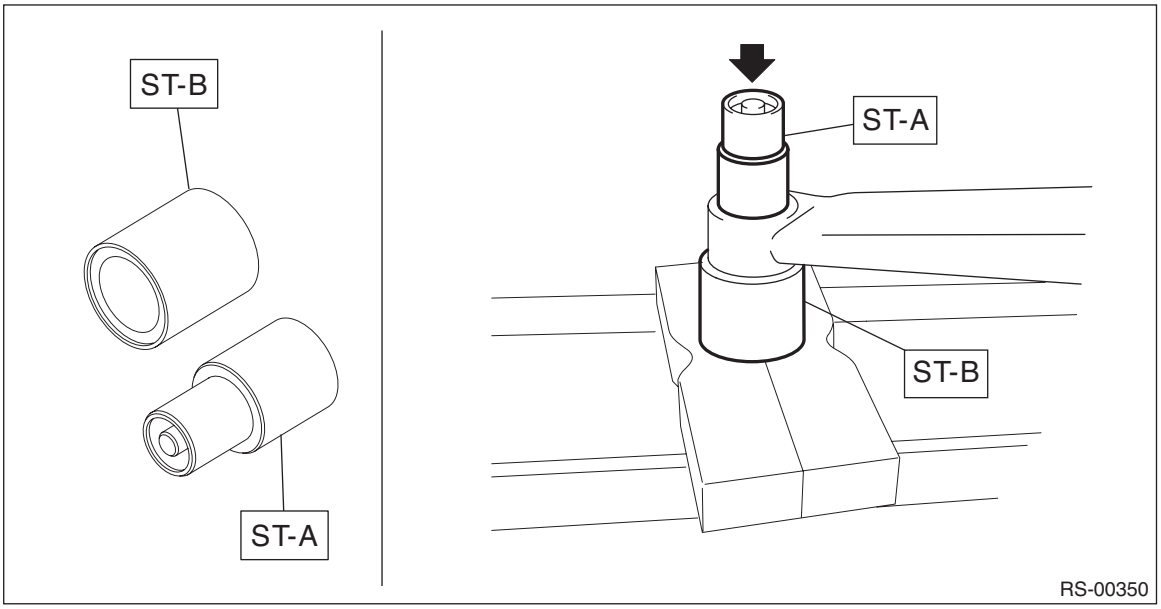
3) Install the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler)

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

4) Install the rear wheels and lower the vehicle.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
6) Inspect the wheel alignment and adjust if necessary. <Ref. to FS-10, INSPECTION, Wheel Alignment.>



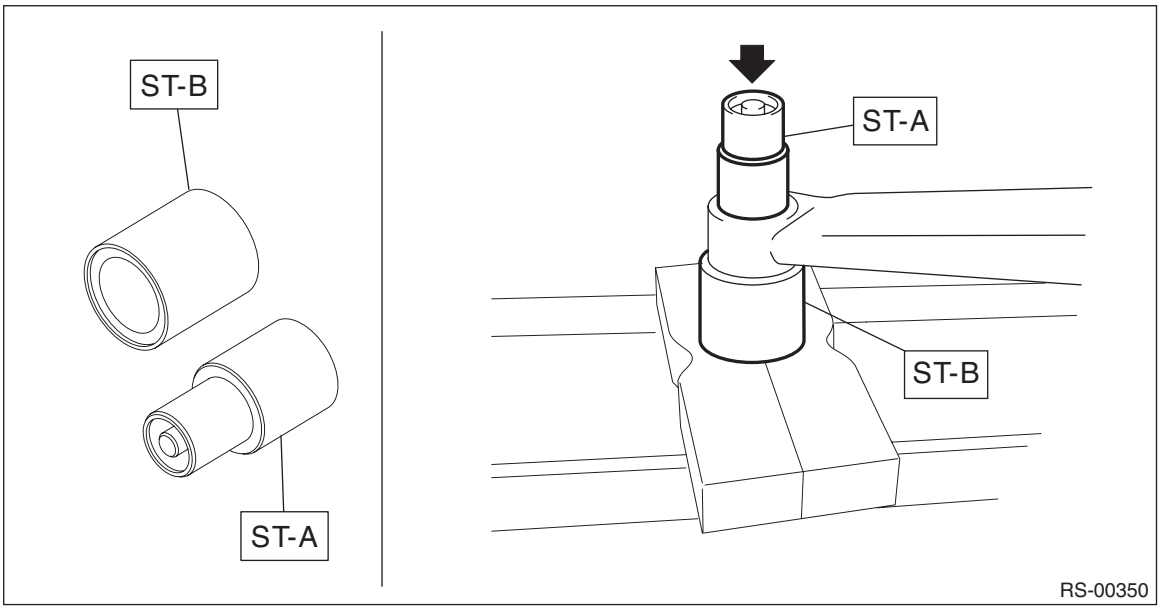
CAUTION:
When the wheel alignment has been adjusted, perform the 0 point setting mode for each sensor in the VDCCM&H/U. <Ref. to VDC-17, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

7) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-21, REINITIALIZATION, PROCEDURE, Auto Headlight Beam Leveler System.>

C: DISASSEMBLY

Using the ST, push out the bushing.

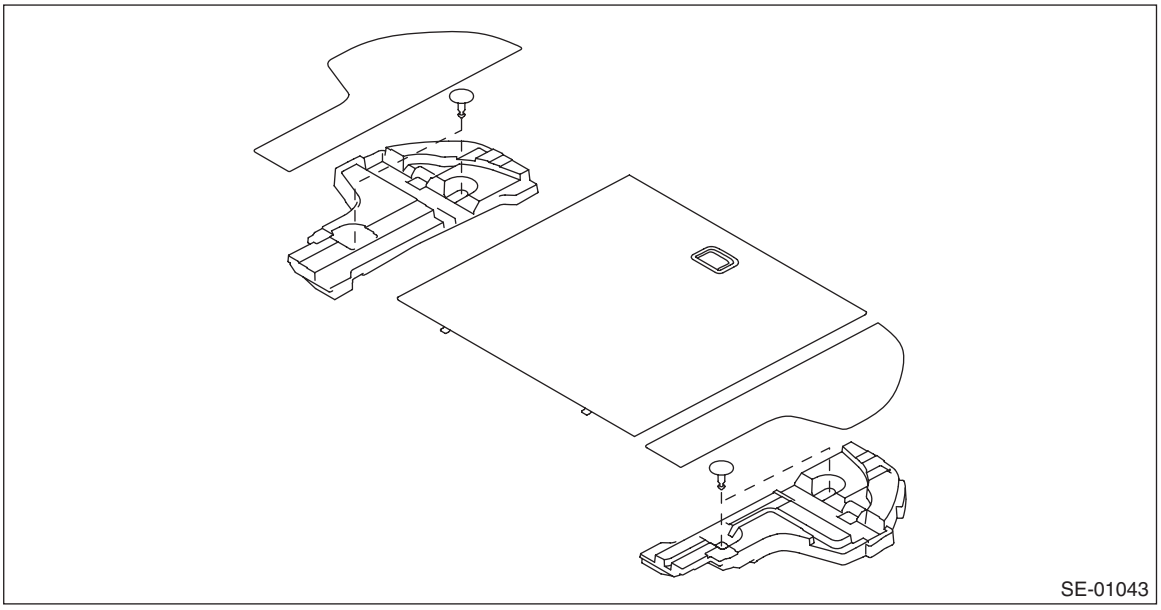
Preparation tool:
ST-A & ST-B: INSTALLER & REMOVER (20299AE010)



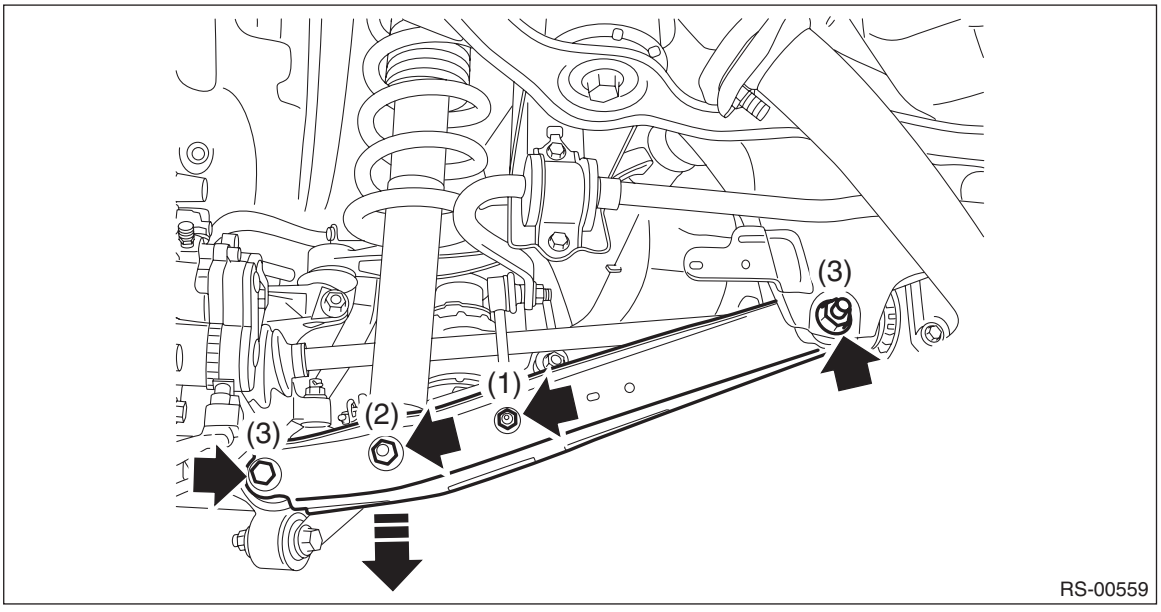
D: ASSEMBLY

1) Before assembly, inspect the following items and replace any faulty part with a new one.
- Visually check the lateral link assembly - rear for damage and deformation.
- Visually check the bushing for abnormal cracks, fatigue or damage.

2) Using the ST, press the bushing into place.



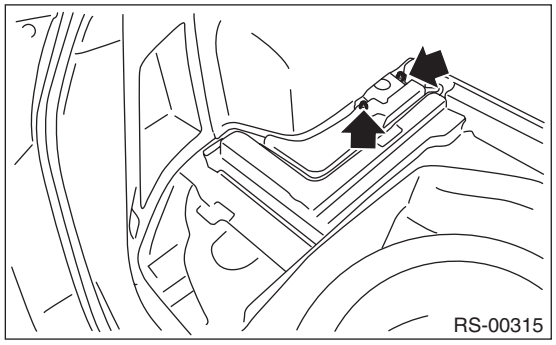
Preparation tool:
ST-A & ST-B: INSTALLER & REMOVER (20299AE010)



9. Rear Shock Absorber

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the trunk trim panel assembly - side (sedan model) or rear floor mat (OUTBACK model).
- Sedan model: <Ref. to EI-110, REMOVAL, Trunk Room Trim.>
- OUTBACK model: Remove the rear floor mat and the spacer - rear floor mat.



SE-01043

3) Lift up the vehicle, and then remove the rear wheels.
4) Remove the bolts and nuts, and lower the lateral link assembly - rear.
   (1) Remove the nut and disconnect the rear stabilizer link.
   (2) Remove the bolts from the lower side of rear shock absorber assembly.
   (3) Disconnect the lateral link assembly - rear.

RS-00559

5) Remove the nut of shock mount - rear.

6) Remove the rear shock absorber assembly.

B: INSTALLATION

CAUTION:
- **Be sure to use a new flange nut and self-locking nut.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**

1) Install each part in the reverse order of removal.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to RS-4, COMPONENT, General Description.>

2) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

3) Check the wheel alignment and adjust it if necessary. <Ref. to FS-10, INSPECTION, Wheel Alignment.>

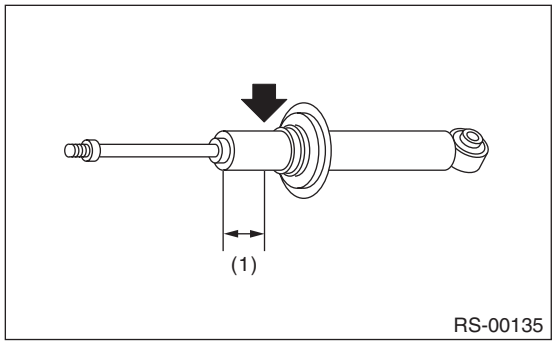
CAUTION:
When the wheel alignment has been adjusted, perform the 0 point setting mode for each sensor in the VDCCM&H/U. <Ref. to VDC-17, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: DISASSEMBLY

Refer to "Front Strut" for disassembly procedure. <Ref. to FS-50, DISASSEMBLY, Front Strut.>

D: ASSEMBLY

Refer to "Front Strut" for assembly procedures. <Ref. to FS-51, ASSEMBLY, Front Strut.>



E: INSPECTION

Refer to “Front Strut” for inspection procedures. <Ref. to FS-54, INSPECTION, Front Strut.>

F: DISPOSAL

CAUTION:
• Before handling the shock absorber, be sure to wear goggles to protect eyes from gas, oil and cutting powder.
• Do not disassemble the shock absorber or place it into a fire.
• Drill a hole into shock absorbers in case of discarding shock absorbers filled with gas.

1) Place the shock absorber on a level surface with the piston rod fully expanded.
2) Make a hole into the specified position 30 mm (1.18 in) deep using a drill with 2 — 3 mm (0.08 — 0.12 in) diameter.

(1) 40 mm (1.57 in)

10.General Diagnostic Table

A: INSPECTION

1. IMPROPER VEHICLE POSTURE OR IMPROPER WHEEL ARCH HEIGHT

Possible cause	Corrective action
(1) Permanent distortion or damaged coil spring	Replace.
(2) Rough operation of shock absorber COMPL	Replace.
(3) Installation of the wrong shock absorber assembly	Replace with proper parts.
(4) Installation of the wrong coil spring	Replace with proper parts.

2. POOR RIDE COMFORT

1) Large rebound shock
2) Rocking of the vehicle continues too long after running over bump and hump.
3) Excessive shock in bumping

Possible cause	Corrective action
(1) Damaged coil spring	Replace.
(2) Overinflation of tires	Adjust.
(3) Improper wheel arch height	Replace the coil springs with new parts.
(4) Defective operation of shock absorber assembly	Replace.
(5) Damage or deformation of shock mount - rear	Replace.
(6) Unsuitable length (maximum or minimum) of shock absorber assembly	Replace with appropriate parts.
(7) Deformation or loss of bushing	Replace.
(8) Deformation or damage of helper - rear in shock absorber	Replace.
(9) Oil leakage from the shock absorber COMPL	Replace.

3. NOISE

Possible cause	Corrective action
(1) Wear or damage of shock absorber assembly component parts	Replace.
(2) Loosening of the suspension link or arm installing bolt	Tighten to the specified torque.
(3) Deformation or loss of bushing	Replace.
(4) Unsuitable length (maximum or minimum) of shock absorber	Replace with appropriate parts.
(5) Damaged coil spring	Replace.
(6) Wear or damage of the ball joint	Replace.
(7) Deformation of the stabilizer clamp	Replace.

WHEEL AND TIRE SYSTEM

Page

1. General Description 2
2. Tire and Wheel 5
3. “T-type” Tire 7
4. Tire Pressure Monitoring System 8
5. General Diagnostic Table 11

1. General Description

A: SPECIFICATION

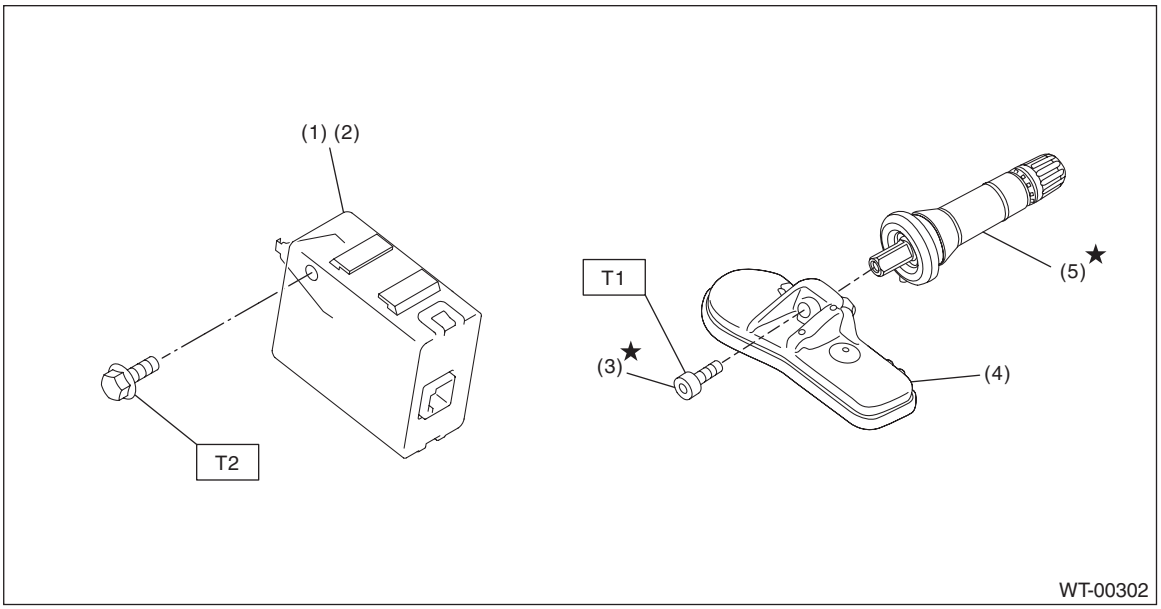
(1) Inset
(2) P.C.D.

- Sedan model

Tire size	Wheel size	Inset mm (in)	P.C.D. mm (in)	Tire inflation pressure kPa (kgf/cm^2, psi)	
				Front wheel	Rear wheel
225/50R18 95H	18 × 7$^1/_2$J	55 (2.17)	114.3 (4.50)	230 (2.3, 33)	220 (2.2, 32)
225/55R17 97V	17 × 7$^1/_2$J 17 × 7J	55 (2.17)		230 (2.3, 33)	220 (2.2, 32)
T155/70D17 110M	17 × 4T	40 (1.57)		420 (4.2, 60)	

- OUTBACK model

Tire size	Wheel size	Inset mm (in)	P.C.D. mm (in)	Tire inflation pressure kPa (kgf/cm^2, psi)	
				Front wheel	Rear wheel
225/60R18 100H	18 × 7J	55 (2.17)	114.3 (4.50)	240 (2.4, 35)	230 (2.3, 33)
225/65R17 102H	17 × 7J	55 (2.17)		240 (2.4, 35)	230 (2.3, 33)
T155/80R17 101M	17 × 4T	40 (1.57)		420 (4.2, 60)	



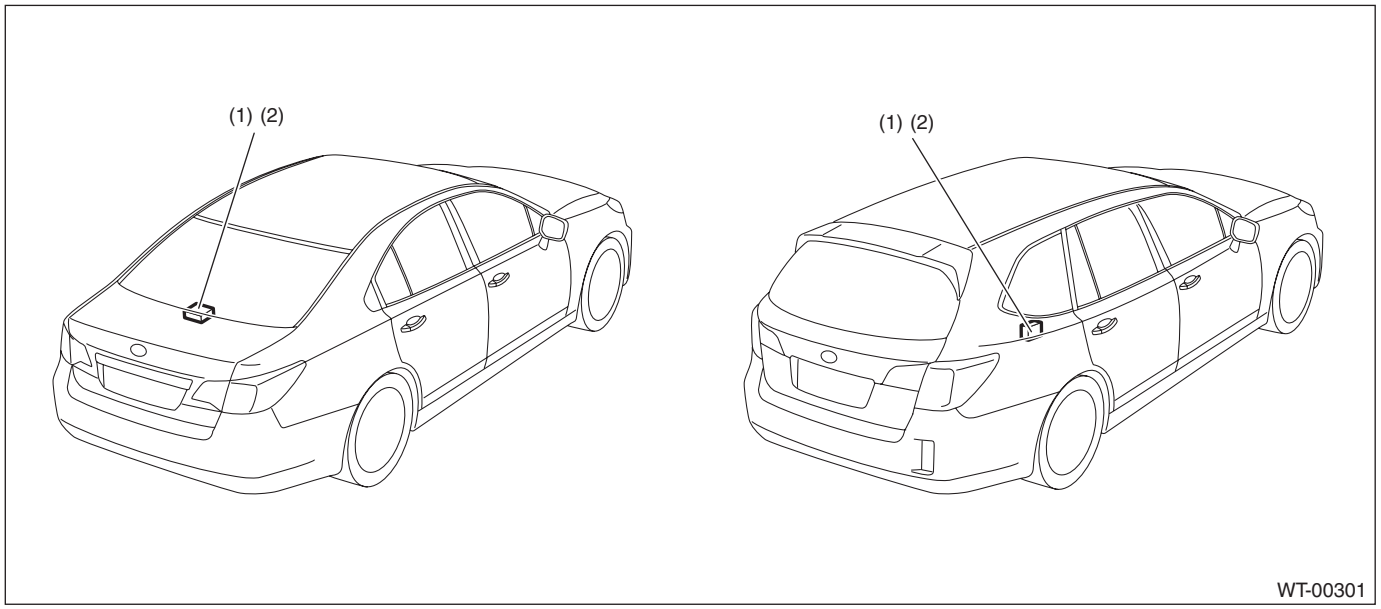
NOTE:
Size and inflation pressure of the standard equipment tire and spare tire for emergency are described on the “Tire inflation pressure” label attached to the body side of the driver’s door.

1. SERVICE DATA

Part	Axial runout	Radial runout
Steel wheel	1.5 mm (0.059 in)	
Aluminum wheel	1.0 mm (0.039 in)	

Wheel balancing	Standard	Service limit
Dynamic unbalance	5 g (0.18 oz) or less	

B: COMPONENT



(1) TPMS & keyless entry control module (model without keyless access with push button start system)
(2) TPMS CM (model with keyless access with push button start system)
(3) Screw
(4) Transmitter (snap in type)
(5) Valve

Tightening torque: N·m (kgf-m, ft-lb)

T1: 1.4 (0.1, 1.0)

T2: 7.5 (0.8, 5.5)

(1) TPMS & keyless entry control module (model without keyless access with push button start system)
(2) TPMS module ASSY (model with keyless access with push button start system)

C: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Air pressure gauge	Used for measuring tire air pressure.
Dial gauge	Used for measuring wheel runout.
Wheel balancer	Used for adjusting wheel balance.

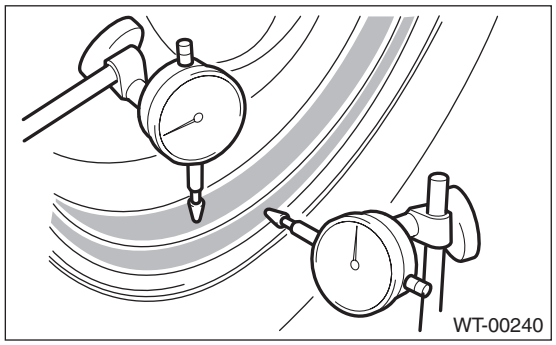
2. Tire and Wheel

A: REMOVAL

1) Lift up the vehicle.
2) Remove the wheel nut.
3) Remove the wheels.

CAUTION:
When removing the wheels, be careful not to damage the bolt - hub.

B: INSTALLATION



1) Install the wheels to vehicle.
2) Tighten the wheel nuts to the specified torque.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

C: INSPECTION

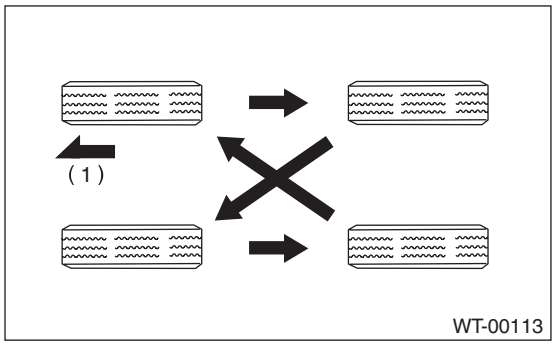
1. TIRE

CAUTION:
When replacing a tire, make sure to use tires of the same size, construction and load range as originally installed.
1) Tire size and tire inflation pressure check <Ref. to WT-2, SPECIFICATION, General Description.>
2) Cracks, damage and wear check
3) Tire runout check
(1) Lift up the vehicle.
(2) Slowly rotate the wheel to check rim “runout” using a dial gauge.

- Aluminum wheel

Service limit:
Axial and longitudinal runout: 1.0 mm (0.039 in)

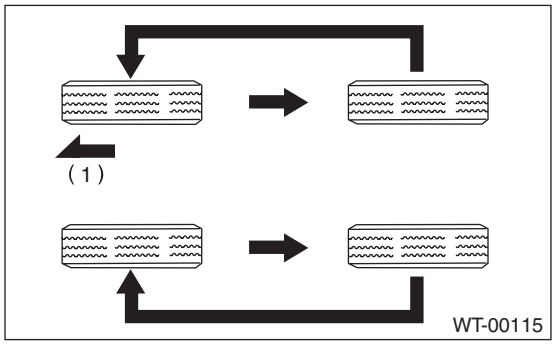
- Steel wheel



Service limit:
Axial and longitudinal runout: 1.5 mm (0.059 in)

(3) If the rim runout exceeds service limit, replace the wheel.

2. TIRE ROTATION

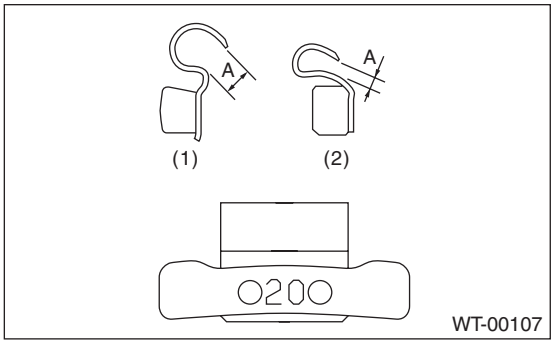


NOTE:
Rotate tires periodically (9,600 km/6,000 miles) in order to prolong life and to prevent uneven wear.
Rotate tires as shown in the figure depending on whether or not the direction of the tire rotation is specified.

- When the direction of tire rotation is not specified

(1) Front side of vehicle

- When the direction of tire rotation is specified



(1) Front side of vehicle

3. WHEEL BALANCING

1) Using the wheel balancer, measure wheel balance.
2) Adjust the wheel balancing.

NOTE:
• Unbalance after adjusting the wheel balancing should be 5 g (0.18 oz) or less.
• When using the adhesive type weight, degrease the surface where the adhesive type weight will be applied securely.
• After applying the adhesive type weight, apply a force to the weight and attain full adhesion.
• Using the knock-on type weight, check the size of the knock-on part.

(1) Knock-on type weight for aluminum wheel
(2) Knock-on type weight for steel wheel

Service limit A:
Knock-on type weight for steel wheel: 2.0 mm (0.079 in)
Knock-on type weight for aluminum wheel: 5.0 mm (0.197 in)

3. "T-type" Tire

A: NOTE

"T-type and temporary spare" tires for temporary use are prepared as a spare tire.

CAUTION:
- **"T-type and temporary spare" tires are only for temporary use. Replace with a conventional tire as soon as possible.**
- **Do not use tire chains for "T-type and temporary spare" tires. Because tire size is small, tire chains can not be installed and will damage the vehicle and tires.**
- **Do not drive at a speed greater than 80 km/h (50 MPH).**
- **Drive the vehicle as slowly as possible and avoid bumps on the road.**

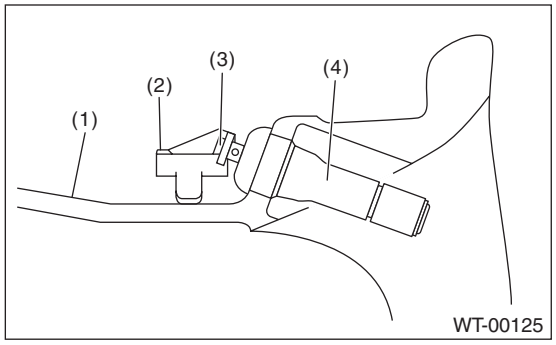
B: REPLACEMENT

Refer to "Tire and Wheel" for removal and installation of the "T-type and temporary spare" tires. <Ref. to WT-5, Tire and Wheel.>

C: INSPECTION

Refer to "Tire and Wheel" for inspection of the "T-type and temporary spare" tires. <Ref. to WT-5, TIRE, INSPECTION, Tire and Wheel.>

4. Tire Pressure Monitoring System



A: REMOVAL

1. TRANSMITTER (TIRE INFLATION PRESSURE SENSOR)

1) Remove the wheels from the vehicle. <Ref. to WT-5, REMOVAL, Tire and Wheel.>
2) Remove the tires from wheels.

CAUTION:
Use a tire changer when removing the tire from the wheel.
3) Loosen the screw to remove the transmitter from the valve stem.

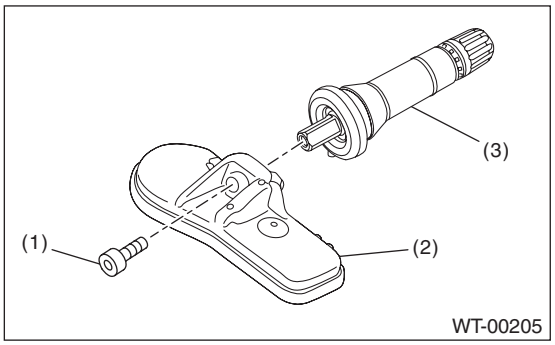
CAUTION:
Do not reuse the valve and screw.
Replace the valve and screw with a new part even when reusing transmitter.

(1) Wheel
(2) Transmitter
(3) Screw
(4) Valve

4) Remove the valve from the wheel.

2. TPMS & KEYLESS CONTROL MODULE

NOTE:
• TPMS control module for model without keyless access with push button start system is integrated with the keyless entry control module.
For removal procedures, refer to “SECURITY AND LOCKS” section. <Ref. to SL-79, REMOVAL, Keyless Entry Control Module.>
• Re-register the key and the transmitter ID when TPMS & keyless entry control module has been replaced.
  • Keyless transmitter re-registration: <Ref. to SL-85, REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Keyless Transmitter.>
  • Transmitter ID re-registration: <Ref. to TPM(diag)-15, Register Transmitter (ID).>



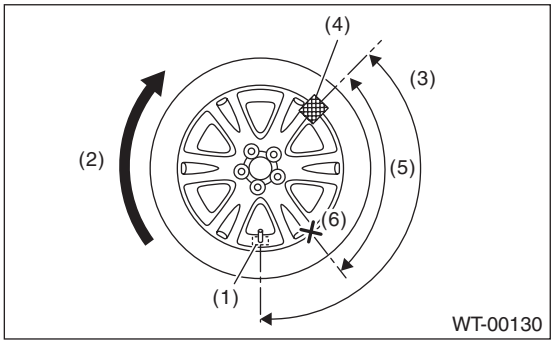
3. TPMS CM

NOTE:
• TPMS control module for model with keyless access with push button start system is installed in the same position as the keyless entry control module for model without keyless access with push button start system.
For removal procedures, refer to “SECURITY AND LOCKS” section. <Ref. to SL-79, REMOVAL, Keyless Entry Control Module.>
• Re-register the transmitter ID when the TPMS control module has been replaced. <Ref. to TPM(diag)-15, Register Transmitter (ID).>

B: INSTALLATION

1. TRANSMITTER (TIRE INFLATION PRESSURE SENSOR)

CAUTION:
Use the new transmitter assembly or replace the new valve and screw, when installing.
1) Replace the valve and screw with a new part when reusing transmitter.



(1) Screw
(2) Transmitter
(3) Valve

Tightening torque:
1.4 N·m (0.1 kgf-m, 1.0 ft-lb)
2) Install the transmitter to the wheel by aligning it with valve hole.

NOTE:
When using the jig that pulls the valve cap by hooking its neck part, use another short-type cap.
3) Install the tires to wheels.

CAUTION:
- **Use a tire changer when installing tire to wheel.**
- **To prevent damaging the transmitter, set the tire changer boom in the position as shown in the figure.**

(1) Transmitter
(2) Direction of turn table rotation
(3) 135°
(4) Tire changer boom
(5) 90°
(6) Starting point for fitting the bead to the rim

4) Install the wheels to vehicle. <Ref. to WT-5, INSTALLATION, Tire and Wheel.>
5) Register the transmitter ID to the TPMS & keyless control module. <Ref. to TPM(diag)-15, Register Transmitter (ID).>

2. TPMS & KEYLESS CONTROL MODULE

NOTE:
• TPMS control module for model without keyless access with push button start system is integrated with the keyless entry control module.
For removal procedures, refer to “SECURITY AND LOCKS” section. <Ref. to SL-79, REMOVAL, Keyless Entry Control Module.>
• Re-register the key and the transmitter ID when TPMS & keyless entry control module has been replaced.
  • Keyless transmitter re-registration: <Ref. to SL-85, REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Keyless Transmitter.>
  • Transmitter ID re-registration: <Ref. to TPM(diag)-15, Register Transmitter (ID).>

3. TPMS CM

NOTE:
• TPMS control module for model with keyless access with push button start system is installed in the same position as the keyless entry control module for model without keyless access with push button start system.
For removal procedures, refer to “SECURITY AND LOCKS” section. <Ref. to SL-79, REMOVAL, Keyless Entry Control Module.>
• Re-register the transmitter ID when the TPMS control module has been replaced. <Ref. to TPM(diag)-15, Register Transmitter (ID).>

C: ADJUSTMENT

Re-register the transmitter ID when transmitter has been replaced. <Ref. to TPM(diag)-15, Register Transmitter (ID).>

5. General Diagnostic Table

A: INSPECTION

Symptoms	Possible cause	Corrective action
Wheel is out of balance.	Improperly inflated tire	Adjust the tire pressure.
	Uneven wear	Check the tire referring to “Abnormal tire wear” in this table, carry out the procedure and replace the tire.
	Front wheel alignment	Check or adjust the front wheel alignment. • Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>
	Rear wheel alignment	Check or adjust the rear wheel alignment. • Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>
	Front strut	Check the front strut. <Ref. to FS-54, INSPECTION, Front Strut.>
	Rear shock absorber	Check the rear shock absorber. <Ref. to RS-31, INSPECTION, Rear Shock Absorber.>
	Housing assembly - front axle	Check the housing assembly - front axle. <Ref. to DS-29, INSPECTION, Front Hub Unit Bearing.>
	Hub unit COMPL - front axle	Check the hub unit COMPL - front axle. <Ref. to DS-29, INSPECTION, Front Hub Unit Bearing.>
	Hub unit COMPL - rear axle	Check the hub unit COMPL - rear axle. <Ref. to DS-41, INSPECTION, Rear Hub Unit Bearing.>
Vehicle is abnormally out of balance.	Improperly inflated tire	Adjust the tire pressure.
	Uneven wear	Check the tire referring to “Abnormal tire wear” in this table, carry out the procedure and replace the tire.
	Front stabilizer	Inspect the front stabilizer.
	Front wheel alignment	Check or adjust the front wheel alignment. • Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>
	Rear wheel alignment	Check or adjust the rear wheel alignment. • Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>
Abnormal wheel vibration	Improperly inflated tire	Adjust the tire pressure.
	Uneven wear	Check the tire referring to “Abnormal tire wear” in this table, carry out the procedure and replace the tire.
	Improper wheel balancing	Check the wheel balance. <Ref. to WT-6, WHEEL BALANCING, INSPECTION, Tire and Wheel.>
	Housing assembly - front axle	Check the housing assembly - front axle. <Ref. to DS-29, INSPECTION, Front Hub Unit Bearing.>
	Hub unit COMPL - front axle	Check the hub unit COMPL - front axle. <Ref. to DS-29, INSPECTION, Front Hub Unit Bearing.>
	Hub unit COMPL - rear axle	Check the hub unit COMPL - rear axle. <Ref. to DS-41, INSPECTION, Rear Hub Unit Bearing.>

Symptoms	Possible cause	Corrective action
Abnormal tire wear	Improperly inflated tire	Adjust the tire pressure.
	Improper wheel balancing	Check the wheel balance. <Ref. to WT-6, WHEEL BALANCING, INSPECTION, Tire and Wheel.>
	Front wheel alignment	Check or adjust the front wheel alignment. • Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>
	Rear wheel alignment	Check or adjust the rear wheel alignment. • Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

TPM(diag)

		Page
1.	Basic Diagnostic Procedure	2
2.	General Description	4
3.	Electrical Component Location	6
4.	Control Module I/O Signal	7
5.	Subaru Select Monitor	8
6.	Read Diagnostic Trouble Code (DTC)	12
7.	Clear Memory Mode	13
8.	Read Current Data	14
9.	Register Transmitter (ID)	15
10.	Inspection Mode	16
11.	Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern	17
12.	List of Diagnostic Trouble Code (DTC)	22
13.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	23
14.	General Diagnostic Table	33

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
Remove foreign matter (dust, water, oil, etc.) from the TPMS & keyless entry CM connector or TPMS CM connector during removal and installation.

NOTE:
To check harness for open or short circuits, shake the suspected trouble spot or connector.

	Step	Check	Yes	No
1	**CHECK PRE-INSPECTION.** 1) Check with the user regarding when the warning light lit or started blinking. 2) Before performing diagnostics, check all components which may adversely affect the tire pressure monitor system. <Ref. to TPM(diag)-5, INSPECTION, General Description.>	Is the component that might affect the tire pressure monitor system normal?	Go to step **2**.	Repair or replace each component.
2	**CHECK DTC.** Read the DTC of tire pressure monitoring. <Ref. to TPM(diag)-12, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed normally, check the communication circuit. <Ref. to TPM(diag)-9, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>	Is DTC displayed?	Go to step **4**.	Go to step **3**.
3	**PERFORM GENERAL DIAGNOSTICS.** 1) Perform the inspection by referring to “General Diagnostic Table”. <Ref. to TPM(diag)-33, General Diagnostic Table.> 2) Perform the Clear Memory Mode. <Ref. to TPM(diag)-13, OPERATION, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to TPM(diag)-16, Inspection Mode.> 4) Read the DTC. <Ref. to TPM(diag)-12, OPERATION, Read Diagnostic Trouble Code (DTC).> Check that the DTC is not displayed.	Does the tire pressure warning light illuminates for about 2 seconds and then foes off after turning on the ignition switch, and then go out?	Finish the diagnosis.	Check the tire inflation pressure warning light. <Ref. to TPM(diag)-17, Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern.>
4	**REPRODUCTION OF FAILURE.** 1) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes. 2) Read the DTC. <Ref. to TPM(diag)-12, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed as “Present fault”?	Go to step **5**.	When DTC is displayed as “Past faults”, the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, there may be temporary poor communication due to radio wave environment inside/outside the vehicle.

	Step	Check	Yes	No
5	**PERFORM DIAGNOSIS.** 1) Refer to “List of Diagnostic Trouble Code (DTC)”. 2) Correct the cause of trouble. 3) Perform the Clear Memory Mode. <Ref. to TPM(diag)-13, OPERATION, Clear Memory Mode.> 4) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes. 5) Read the DTC. <Ref. to TPM(diag)-12, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Repeat steps 1 to 4 until DTC is not shown.	Finish the diagnosis.

2. General Description

A: CAUTION

1. SRS AIRBAG SYSTEM

Airbag system wiring harness is routed near the TPM control module.

CAUTION:
- **Do not use electrical test equipment on any of the airbag system wiring harness circuits.**
- **Be careful not to damage the wiring harness of the airbag system, when servicing the TPMS & keyless entry CM or TPMS CM.**

2. TPMS & KEYLESS ENTRY CM OR TPMS CM

- If the transmitter is replaced, ID registration for the transmitter is required. <Ref. to TPM(diag)-15, OPERATION, Register Transmitter (ID).>
- When adjusting tire pressure indoors in winter, there is a big temperature difference between the indoor facilities and outside. Once the car is outside where the temperature is lower, the air pressure in the tires will drop, causing the tire pressure warning light to illuminate, even if the pressure in the tires was adjusted to standard values indoors. To avoid this, it is necessary to adjust the tire pressure to the high side in consideration of the difference in temperature between inside and outside according to the following table.
- 225/60R18, 225/65R17

Temperature °C (°F)	Indoor temperature	15.5 (60)		
	Ambient temperature	–1 (30)	–12 (10)	–23 (–10)
Air pressure kPa (psi)	Front	265 (38)	280 (40)	295 (42)
	Rear	250 (36)	265 (38)	280 (40)

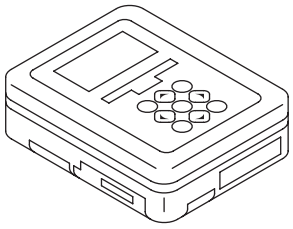
- 225/50R18, 225/55R17

Temperature °C (°F)	Indoor temperature	15.5 (60)		
	Ambient temperature	–1 (30)	–12 (10)	–23 (–10)
Air pressure kPa (psi)	Front	250 (36)	265 (38)	280 (40)
	Rear	240 (35)	255 (37)	270 (39)

B: INSPECTION

Before performing diagnosis, check the following item which might affect the quality of the tire pressure monitoring system.

1. TIRE



- Inspect that the tire pressure is within the specification while the tire is cool. (Refer to Tire Caution Label.)
- Check the tires for damage or the insertion of foreign matters.

2. BATTERY

Check the battery. <Ref. to SC(H4DO)-60, INSPECTION, Battery.> <Ref. to SC(H6DO)-53, INSPECTION, Battery.>

C: PREPARATION TOOL

1. SPECIAL TOOL

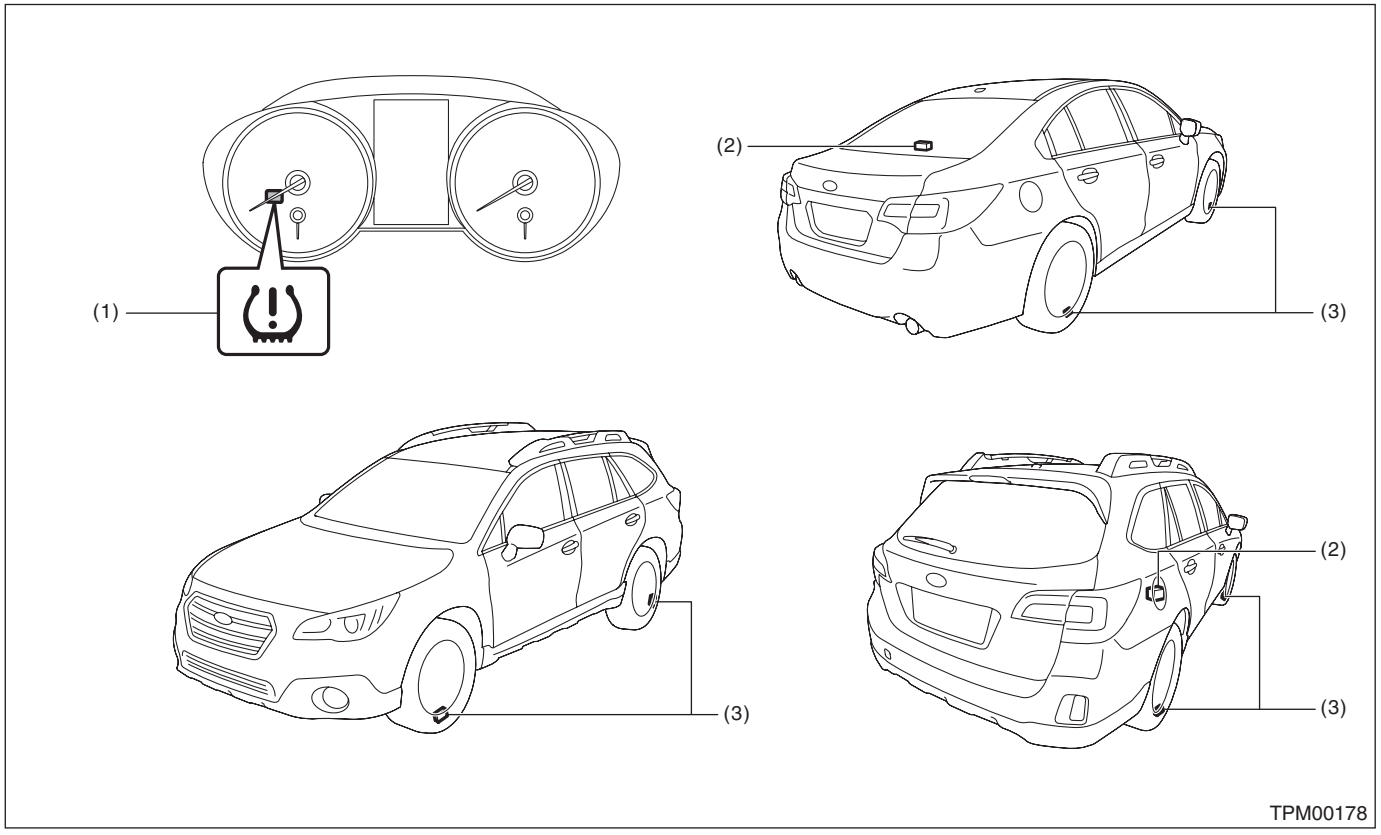


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
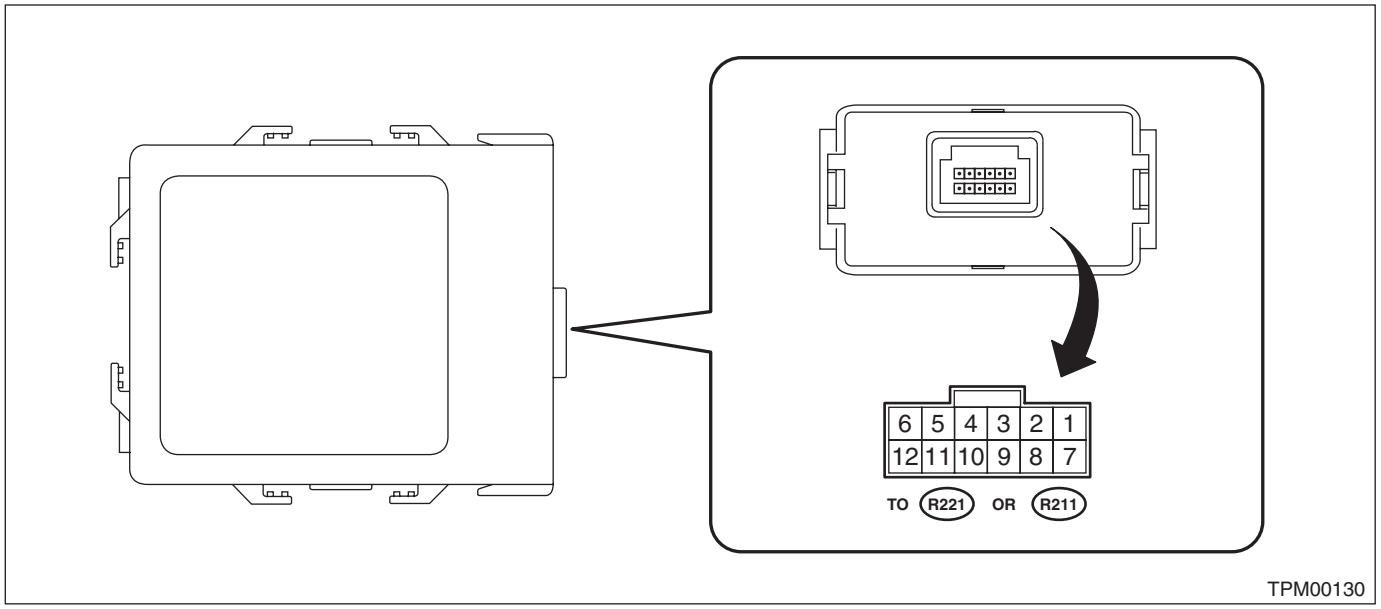
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Transmitter registration tool	Used to register the transmitter ID. Manufacturer: Kent-Moore Item number: J45295

3. Electrical Component Location

A: LOCATION



(1) Tire pressure warning light
(2) TPMS & keyless entry CM*1 or TPMS CM*2
(3) Snap-in type transmitter

*1: Without push button start
*2: With push button start

4. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

Terminal No.	Content	Measured value and measuring conditions	Remarks
1	—	—	—
2	—	—	—
3	—	—	—
4	Ignition power supply	10 — 13 V (when the ignition switch is ON)	—
5	GND	0 V (always)	—
6	Battery power supply	10 — 13 V (always)	Without push button start system
7	—	—	—
8	—	—	—
9	—	—	—
10	—	—	—
11	Body integrated unit communication line	—	—
12	—	—	—

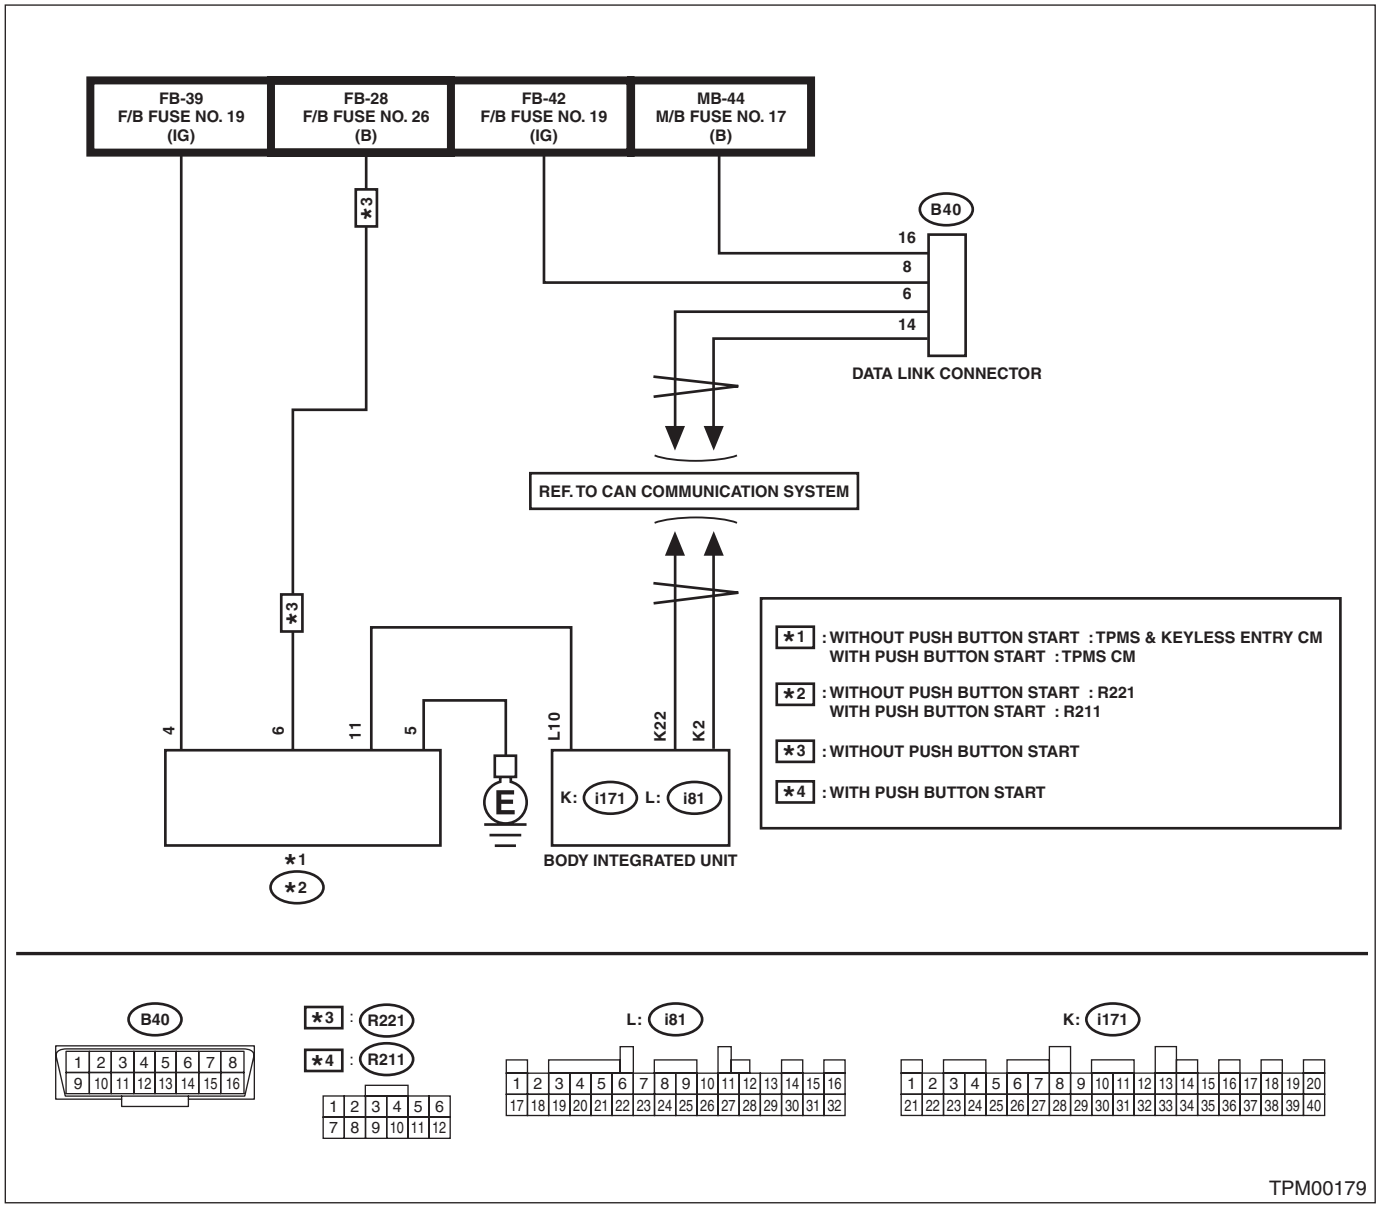
B: WIRING DIAGRAM

Refer to “Tire Pressure Monitoring System” in the wiring diagram. <Ref. to WI-448, WIRING DIAGRAM, Tire Pressure Monitoring System.>

5. Subaru Select Monitor

A: OPERATION

For the operation procedure, refer to the “PC application help for Subaru Select Monitor”.



NOTE:
If TPMS & keyless entry CM or TPMS CM and Subaru Select Monitor cannot communicate, check the communication circuit. <Ref. to TPM(diag)-9, INSPECTION, Subaru Select Monitor.>

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

DETECTING CONDITION:
Defective harness connector
TROUBLE SYMPTOM:
Communication is impossible between the TPMS & keyless entry CM or TPMS CM and the Subaru Select Monitor.
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Tire Pressure Monitoring System <Ref. to WI-448, WIRING DIAGRAM, Tire Pressure Monitoring System.>

Step		Check	Yes	No
1	**CHECK IGNITION SWITCH.**	Is the ignition switch ON?	Go to step **2**.	Turn the ignition switch to ON, and select TPM mode using Subaru Select Monitor.

	Step	Check	Yes	No
2	**CHECK BATTERY.** Check the battery voltage.	Is the voltage 11 V or more?	Go to step **3**.	Charge or replace the battery.
3	**CHECK BATTERY TERMINAL.** Check the battery terminal.	Is there poor contact at battery terminal?	Repair or tighten the battery terminal.	Go to step **4**.
4	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check whether communication to other systems can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Go to step **8**.	Go to step **5**.
5	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to OFF. 2) Disconnect the TPMS & keyless entry CM connector or TPMS CM connector. 3) Turn the ignition switch to ON. 4) Check whether communication to other systems can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-8, Tire Pressure Monitoring System.>	Go to step **6**.
6	**CHECK HARNESS CONNECTOR BETWEEN EACH CONTROL MODULE AND BODY INTEGRATED UNIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector of the TPMS & keyless entry CM or TPMS CM. 3) Measure the resistance between the body integrated unit and chassis ground. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair the harness and connector between each control module and body integrated unit.
7	**CHECK OUTPUT SIGNAL TO TPMS & KEYLESS ENTRY CM OR TPMS CM.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TPMS & keyless entry CM or TPMS CM and chassis ground. ***Connector & terminal*** ***(B40) No. 6 (+) — Chassis ground (–):*** ***(B40) No. 14 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **8**.	Repair the harness and connector between each control module and body integrated unit.
8	**CHECK HARNESS CONNECTOR BETWEEN TPMS & KEYLESS ENTRY CM OR TPMS CM AND BODY INTEGRATED UNIT.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between TPMS & keyless entry CM connector or TPMS CM connector and body integrated unit. ***Connector & terminal*** ***Without push button start*** ***(R221) No. 11 — (i81) No. 10:*** ***With push button start*** ***(R211) No. 11 — (i81) No. 10:***	Is the resistance less than 0.5 Ω?	Go to step **9**.	Repair the harness and connector between TPMS & keyless entry CM or TPMS CM and body integrated unit.
9	**CHECK TPMS & KEYLESS ENTRY CM CONNECTOR OR TPMS CM CONNECTOR.**	Is the connector inserted into the TPMS & keyless entry CM or TPMS CM until it locks?	Go to step **10**.	Insert the connector into the TPMS & keyless entry CM or TPMS CM.

	Step	Check	Yes	No
10	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. 2) Measure the ignition power supply voltage between TPMS & keyless entry CM connector or TPMS CM connector and chassis ground. ***Connector & terminal*** ***Without push button start*** ***(R221) No. 4 (+) — Chassis ground (–):*** ***With push button start*** ***(R211) No. 4 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **11**.	Repair open circuit of the harness between TPMS & keyless entry CM or TPMS CM and battery.
11	**CHECK HARNESS CONNECTOR BETWEEN TPMS & KEYLESS ENTRY CM OR TPMS CM AND CHASSIS GROUND.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the TPMS & keyless entry CM or TPMS CM. 3) Measure the resistance of harness between TPMS & keyless entry CM or TPMS CM and chassis ground. ***Connector & terminal*** ***Without push button start*** ***(R221) No. 5 — Chassis ground:*** ***With push button start*** ***(R211) No. 5 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Go to step **12**.	Repair open circuit of the harness of TPMS & keyless entry CM or TPMS CM.
12	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact in TPMS & keyless entry CM power supply or TPMS CM power supply, ground line and body integrated unit?	Repair the connector.	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-8, Tire Pressure Monitoring System.>

6. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Tire pressure monitor».
3) On «Tire pressure monitor diagnosis» display, select «Diagnostic Code(s) Display».

NOTE:
- For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.
- For details concerning DTCs, refer to List of Diagnostic Trouble Code (DTC). <Ref. to TPM(diag)-22, List of Diagnostic Trouble Code (DTC).>
- All DTCs detected will be displayed.
- If a particular DTC is not properly stored in memory (due to a voltage drop of the TPMS & keyless entry CM or TPMS CM power supply, etc.) when a problem occurs, a DTC suffixed with a question mark appears on the Subaru Select Monitor display. This shows it may be an unreliable reading.
- When DTC is not displayed, check the indicator circuit and communication circuit. <Ref. to TPM(diag)-17, Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern.>

7. Clear Memory Mode

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Tire pressure monitor».
3) On «Tire pressure monitor diagnosis» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

8. Read Current Data

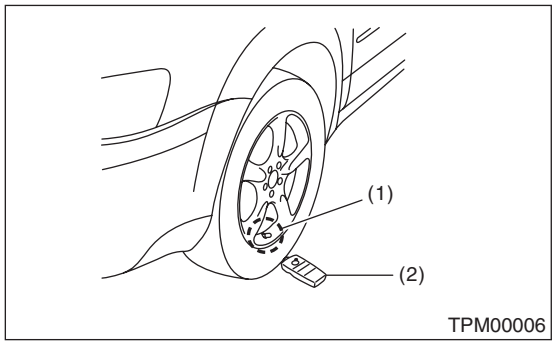
A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Tire pressure monitor».
3) On «Tire pressure monitor diagnosis» display, select «Current Data Display & Save».

NOTE:
For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

B: LIST

Display	Content	Reference value	Unit of measure
Tire 1 FN code	Status of transmitter	No data received after IGN ON: No data is received after IGN ON. LEARN: Transmitter ID was sent by the transmitter registration tool. LOW BAT: Battery voltage of the transmitter has been lowered. OFF: Transmitter is not functioning. (No data transmission) RE ME: When the tire pressure changed within the range of ±8.4 kPa. WAKE: When data transmission started from the stop status. NORMAL: Conditions other than the above.	km/h
Tire 2 FN code			—
Tire 3 FN code			—
Tire 4 FN code			—
Tire 1 air pressure	Value converted to tire pressure from data delivered from transmitter is displayed. (The figure may differ from the actual measured values.)	—	kPa
Tire 2 air pressure		—	kPa
Tire 3 air pressure		—	kPa
Tire 4 air pressure		—	kPa
Vehicle speed	Vehicle speed signal which is input in control module	0 — 255	km/h
Pressure warning	Threshold where tire pressure warning light illuminates	—	kPa
Return pressure	Threshold where tire pressure warning light goes out	—	kPa
Transmitter power supply		ON MODE/OFF	—
INDICATOR LAMP	Status of tire pressure warning light	ON/OFF	—
Registered ID 1		0 — 16777215	—
Registered ID 2		0 — 16777215	—
Registered ID 3		0 — 16777215	—
Registered ID 4		0 — 16777215	—
Latest reception ID		0 — 16777215	—
Reception ID one ahead		0 — 16777215	—
Before reception ID2		0 — 16777215	—
Before reception ID3		0 — 16777215	—



9. Register Transmitter (ID)

A: OPERATION

Perform the registration procedure of the transmitter in the following cases:
- Transmitter is replaced.
- TPMS & keyless entry CM or TPMS CM replaced.

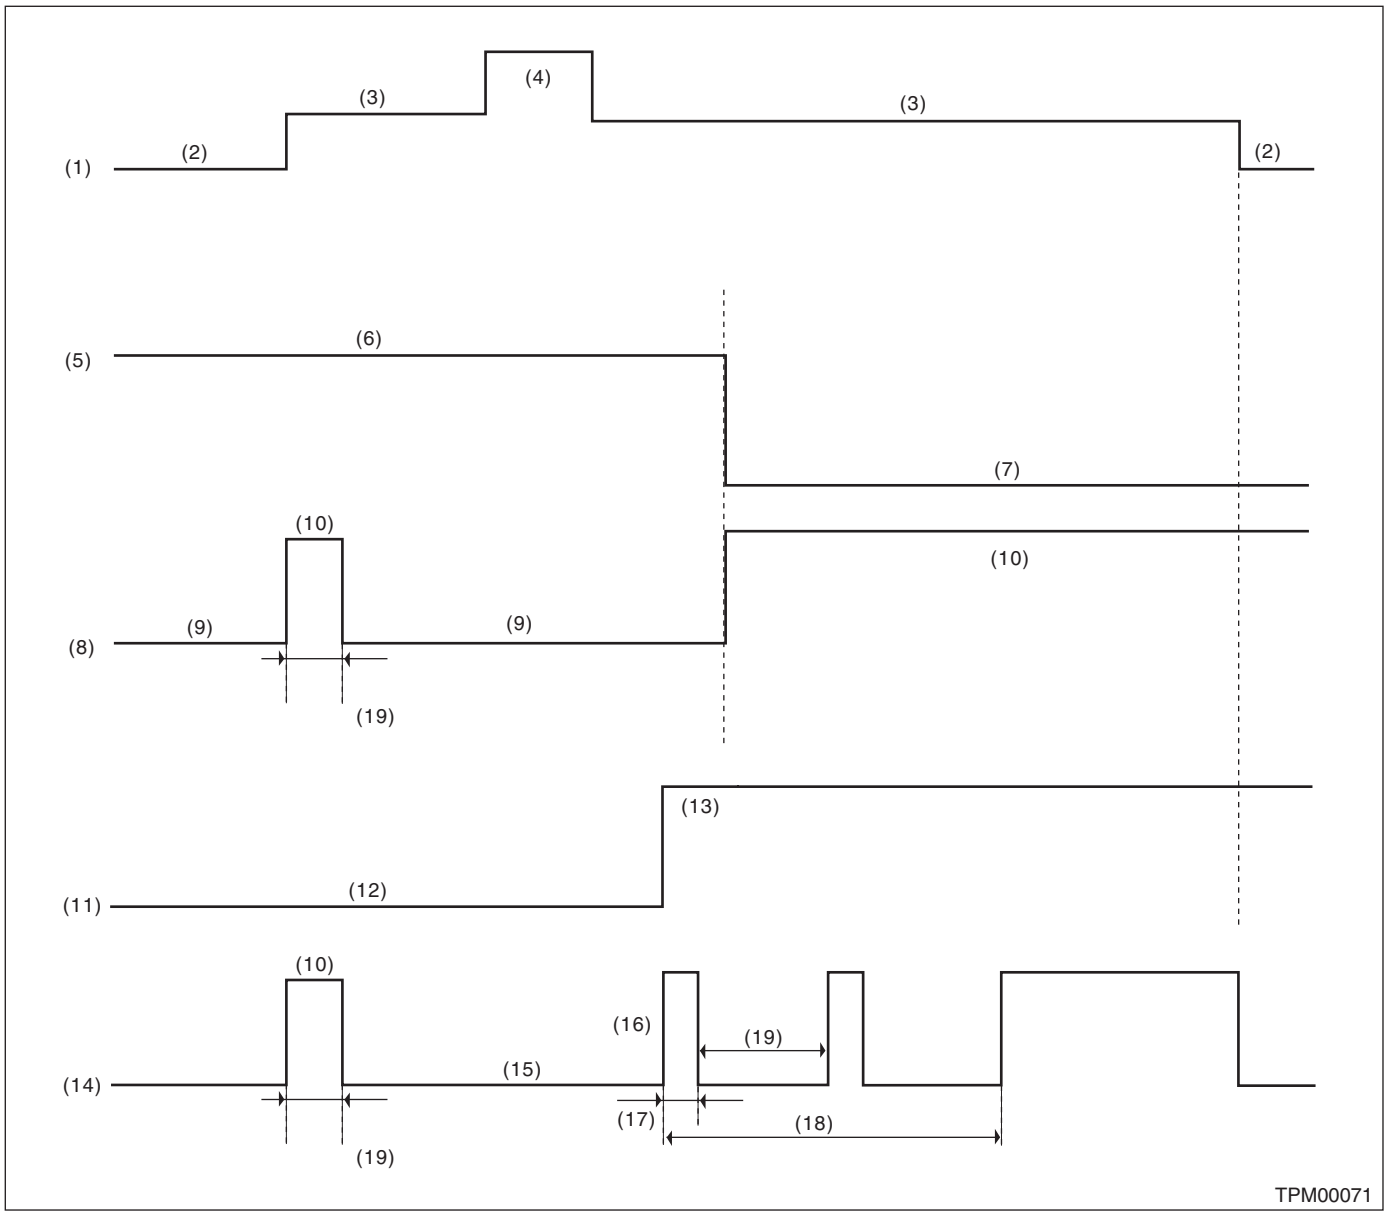
NOTE:
- If registration of the transmitter ID is not possible after two attempts, replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-8, Tire Pressure Monitoring System.>
- During the registration, turn the ignition switch to OFF and end the Subaru Select Monitor. Or if the registration is not performed for 5 minutes or more, the registration mode is cancelled.
- When rotating tires, there is no affect on the performance or functions of the tire pressure monitoring control module even if the transmitter (ID) is not registered, however, the tire position displayed on the Subaru Select Monitor will be incorrect.

1) Adjust all tire pressures to the specifications.
2) Connect Subaru Select Monitor and select the «Each System Check» on the «Main Menu».
3) On «System Selection Menu» display, select «Tire pressure monitor».
4) After the «Tire pressure monitor» is displayed, select «OK».
5) On «Tire pressure monitor diagnosis» display, select «Work Support».
6) «ID registration mode When execute Registered ID is deleted Continue?» is displayed, select [OK].
7) On «Work Support» display, select «Transmitter ID regist».
8) Contact the transmitter registration tool to the side wall area near the air valve on the front left tire, and press the switch. The transmitter ID is sent to the TPMS & keyless entry CM or TPMS CM. (At this time, the tire pressure warning light blinks to confirm that the registration has started.)

(1) Air valve (transmitter)
(2) Transmitter registration tool

NOTE:
- The registration order of transmitter ID is not specified.
- The transmitter registration tool is used by touching the side wall area near the transmitter.
- When registration of each tire is completed, «ID registration completed» is displayed on the Select Monitor screen.
- If registration procedure stop in the halfway (turning ignition switch to OFF, wrong registration order, etc), proceed from step 5).

9) When ID registration is completed, the tire pressure warning light remains lit for approximately 2 seconds, to end the registration. Switch the screen to «Current Data Display & Save» of Subaru Select Monitor. <Ref. to TPM(diag)-14, Read Current Data.>
10) Check the transmitter ID that was registered, then perform a driving test. <Ref. to TPM(diag)-16, Inspection Mode.>



10.Inspection Mode

A: PROCEDURE

Reproduce the malfunction occurrence condition as much as possible. Drive the vehicle at 40 km/h (25 MPH) or faster for at least ten minutes.

11. Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern

A: INSPECTION

(1) Ignition switch
(2) OFF
(3) ON
(4) Start
(5) Tire inflation pressure condition
(6) Meet the specification
(7) Less than standard value (For the pressure warning level, refer to “CURRENT DATA”.) <Ref. to TPM(diag)-14, LIST, Read Current Data.>
(8) Tire inflation pressure warning light (pressure condition)
(9) Light OFF
(10) Light ON
(11) System status
(12) Normal
(13) Malfunction
(14) Tire inflation pressure warning light (system condition)
(15) Light OFF
(16) Blink
(17) 1 second
(18) Blinks 25 times
(19) 2 seconds

1) When the tire pressure warning light does not illuminate in accordance with this illumination pattern, there must be an electrical malfunction.
2) If the tire pressure warning light does not go off, check the TPMS & keyless entry CM or TPMS CM/warning light circuit and the combination meter circuit. <Ref. to TPM(diag)-19, TIRE PRESSURE WARNING LIGHT DOES NOT COME OFF, Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern.>

NOTE:
If the problem is fixed while driving at approximately 40 km/h (25 MPH) after the tire pressure warning light blinks/lights, the warning light goes out and the tire pressure monitor system operates normally. (If there is a decrease in tire pressure, or a malfunction of the system, the malfunction history is displayed.)

B: TIRE PRESSURE WARNING LIGHT DOES NOT COME ON

DETECTING CONDITION:
Defective combination meter

TROUBLE SYMPTOM:
When the ignition switch is turned to ON, the tire pressure warning light does not turn on (for approx. 2 seconds).

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of tire pressure monitoring. <Ref. to TPM(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to TPM(diag)-22, List of Diagnostic Trouble Code (DTC).>	Replace the combination meter. <Ref. to IDI-11, REMOVAL, Combination Meter.>

C: TIRE PRESSURE WARNING LIGHT DOES NOT COME OFF

DETECTING CONDITION:

- Defective combination meter
- Tires pressure drop
- Transmitter ID not registered

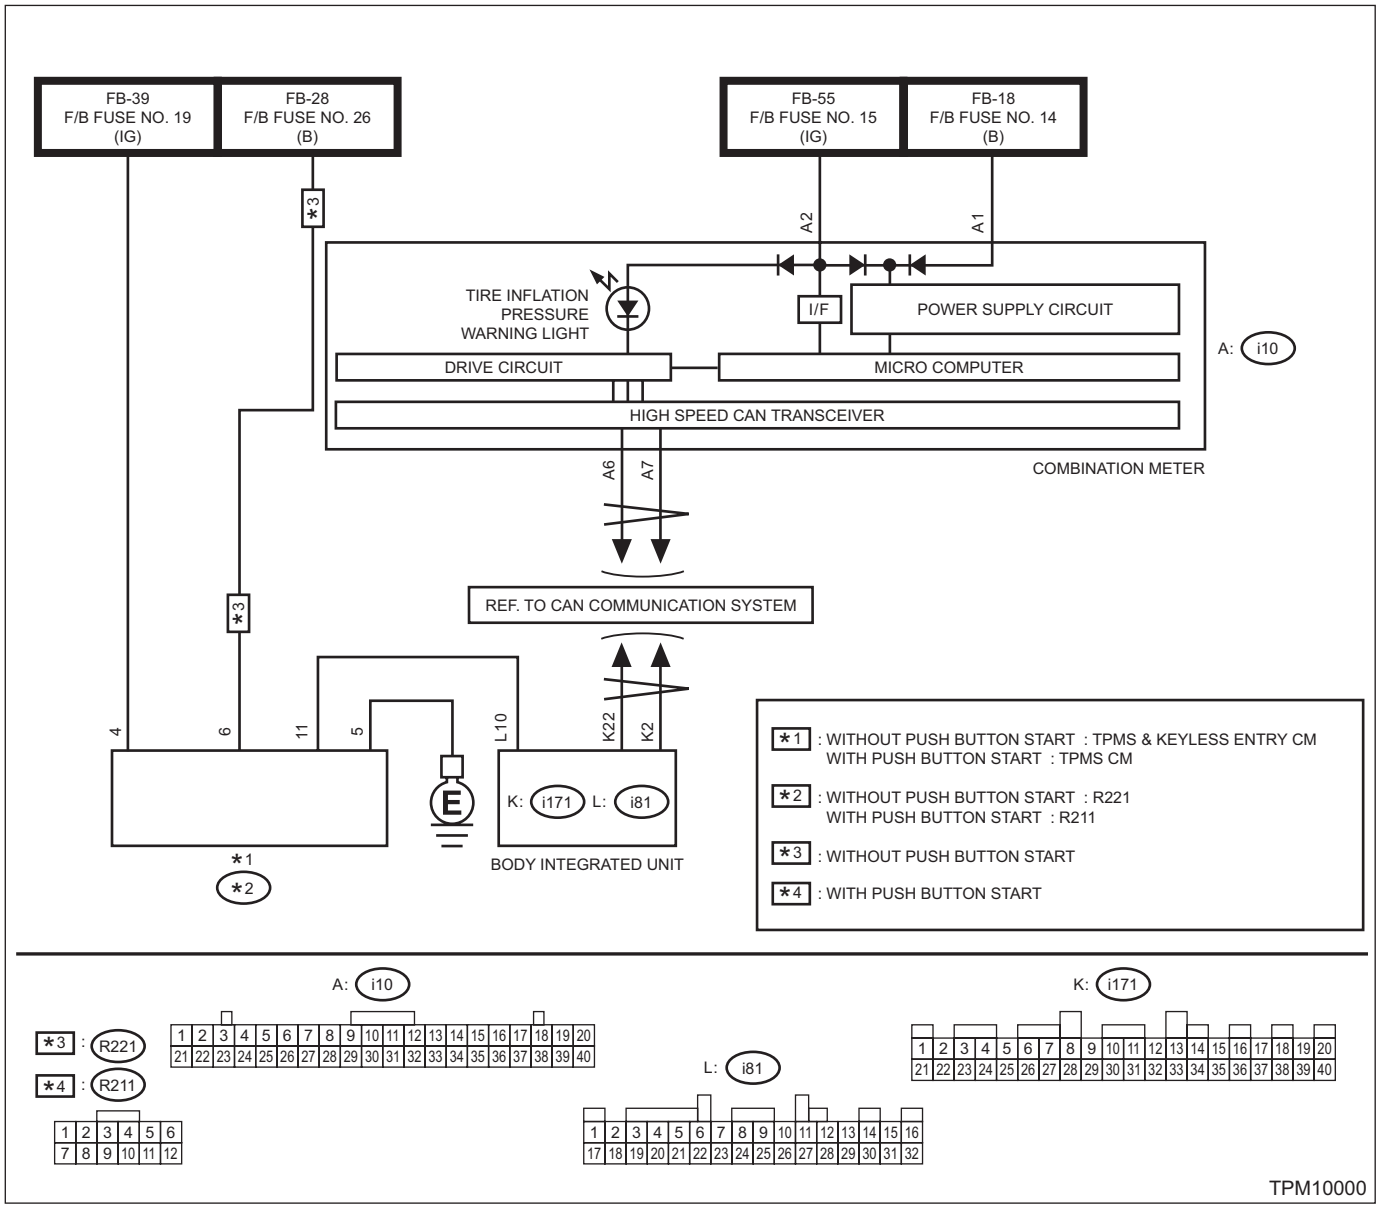
TROUBLE SYMPTOM:

Tire pressure warning light remains illuminating after engine starts.

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of tire pressure monitoring. <Ref. to TPM(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to TPM(diag)-22, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK TRANSMITTER (ID).** Confirm the current data display of the tire pressure monitoring. <Ref. to TPM(diag)-14, Read Current Data.>	Is the transmitter ID registered?	Go to step **3**.	Register the transmitter ID. <Ref. to TPM(diag)-15, OPERATION, Register Transmitter (ID).>
3	**CHECK TRANSMITTER DATA OUTPUT.** 1) Start the engine. 2) Confirm the current data display «INDICATOR LAMP» of the tire pressure monitoring. <Ref. to TPM(diag)-14, Read Current Data.>	Is “ON” displayed?	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-8, Tire Pressure Monitoring System.>	Replace the combination meter. <Ref. to IDI-11, REMOVAL, Combination Meter.>

D: TIRE PRESSURE WARNING LIGHT IS 25 TIMES BLINKING AND TURN ON

DETECTING CONDITION:



- Defective TPMS & keyless entry CM or TPMS CM
- Defective harness
- Transmitter is faulty.

TROUBLE SYMPTOM:

Every time the engine starts, tire pressure warning light blinks 25 times and then illuminates.

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Tire Pressure Monitoring System <Ref. to WI-448, WIRING DIAGRAM, Tire Pressure Monitoring System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of tire pressure monitoring. <Ref. to TPM(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to TPM(diag)-22, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK LAN COMMUNICATION.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Repair it according to the diagnosis for LAN system.	Go to step **3**.
3	**CHECK COMMUNICATION LINE.** Measure the resistance between TPMS & keyless entry CM connector or TPMS CM connector and body integrated unit connector. ***Connector & terminal*** ***Without push button start*** ***(R221) No. 11 — (i81) No. 10:*** ***With push button start*** ***(R211) No. 11 — (i81) No. 10:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair open circuit of the harness between TPMS & keyless entry CM connector or TPMS CM connector and body integrated unit connector.
4	**CHECK CONNECTOR.** Check each connector.	Is there poor contact or any other faults?	Repair the connector.	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-8, Tire Pressure Monitoring System.>

12.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Remarks
C2021	Tire 1 Air Pressure Decrease	<Ref. to TPM(diag)-23, DTC C2021 TIRE 1 AIR PRESSURE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2022	Tire 2 Air Pressure Decrease	<Ref. to TPM(diag)-23, DTC C2022 TIRE 2 AIR PRESSURE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2023	Tire 3 Air Pressure Decrease	<Ref. to TPM(diag)-23, DTC C2023 TIRE 3 AIR PRESSURE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2024	Tire 4 Air Pressure Decrease	<Ref. to TPM(diag)-23, DTC C2024 TIRE 4 AIR PRESSURE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2121	Transmitter 1 No Data	<Ref. to TPM(diag)-24, DTC C2121 TRANSMITTER 1 NO DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2122	Transmitter 2 No Data	<Ref. to TPM(diag)-24, DTC C2122 TRANSMITTER 2 NO DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2123	Transmitter 3 No Data	<Ref. to TPM(diag)-24, DTC C2123 TRANSMITTER 3 NO DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2124	Transmitter 4 No Data	<Ref. to TPM(diag)-24, DTC C2124 TRANSMITTER 4 NO DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2221	Transmitter 1 Pressure Data Abnormal	<Ref. to TPM(diag)-25, DTC C2221 TRANSMITTER 1 PRESSURE DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2222	Transmitter 2 Pressure Data Abnormal	<Ref. to TPM(diag)-25, DTC C2222 TRANSMITTER 2 PRESSURE DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2223	Transmitter 3 Pressure Data Abnormal	<Ref. to TPM(diag)-25, DTC C2223 TRANSMITTER 3 PRESSURE DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2224	Transmitter 4 Pressure Data Abnormal	<Ref. to TPM(diag)-26, DTC C2224 TRANSMITTER 4 PRESSURE DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2321	Transmitter 1 Function Code Abnormal	<Ref. to TPM(diag)-27, DTC C2321 TRANSMITTER 1 FUNCTION CODE ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2322	Transmitter 2 Function Code Abnormal	<Ref. to TPM(diag)-27, DTC C2322 TRANSMITTER 2 FUNCTION CODE ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2323	Transmitter 3 Function Code Abnormal	<Ref. to TPM(diag)-27, DTC C2323 TRANSMITTER 3 FUNCTION CODE ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2324	Transmitter 4 Function Code Abnormal	<Ref. to TPM(diag)-28, DTC C2324 TRANSMITTER 4 FUNCTION CODE ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2421	Transmitter 1 Battery Voltage Decrease	<Ref. to TPM(diag)-29, DTC C2421 TRANSMITTER 1 BATTERY VOLTAGE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2422	Transmitter 2 Battery Voltage Decrease	<Ref. to TPM(diag)-29, DTC C2422 TRANSMITTER 2 BATTERY VOLTAGE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2423	Transmitter 3 Battery Voltage Decrease	<Ref. to TPM(diag)-29, DTC C2423 TRANSMITTER 3 BATTERY VOLTAGE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2424	Transmitter 4 Battery Voltage Decrease	<Ref. to TPM(diag)-30, DTC C2424 TRANSMITTER 4 BATTERY VOLTAGE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2521	Vehicle Speed Is Abnormal	<Ref. to TPM(diag)-31, DTC C2521 VEHICLE SPEED IS ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

13.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC C2021 TIRE 1 AIR PRESSURE DECREASE

NOTE:
Refer to DTC C2024 for diagnostic procedure. <Ref. to TPM(diag)-23, DTC C2024 TIRE 4 AIR PRESSURE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

B: DTC C2022 TIRE 2 AIR PRESSURE DECREASE

NOTE:
Refer to DTC C2024 for diagnostic procedure. <Ref. to TPM(diag)-23, DTC C2024 TIRE 4 AIR PRESSURE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

C: DTC C2023 TIRE 3 AIR PRESSURE DECREASE

NOTE:
Refer to DTC C2024 for diagnostic procedure. <Ref. to TPM(diag)-23, DTC C2024 TIRE 4 AIR PRESSURE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

D: DTC C2024 TIRE 4 AIR PRESSURE DECREASE

DTC DETECTING CONDITION:
Inflation pressure of tires dropped below the specified value.

NOTE:
For the specifications, refer to “CURRENT DATA”. <Ref. to TPM(diag)-14, LIST, Read Current Data.>
TROUBLE SYMPTOM:
Tire pressure warning light illuminates.

	Step	Check	Yes	No
1	**CHECK TIRES.** Lift up the vehicle and check for damage in the tires.	Are there cracks or damage?	Replace the tire.	Go to step **2**.
2	**CHECK TIRES.** Check the tire air pressure.	Is the tire pressure in the specifications?	Go to step **3**.	Adjust the air pressure.
3	**CHECK TRANSMITTER DATA.** 1) Drive at 40 km/h (25 MPH) or more. 2) Confirm the current data «Tire 1 air pressure» «Tire 2 air pressure» «Tire 3 air pressure» «Tire 4 air pressure» of the tire pressure monitor. <Ref. to TPM(diag)-14, Read Current Data.>	Is there a transmitter with different display?	Replace the transmitter (tire pressure sensor) with different display. <Ref. to WT-8, Tire Pressure Monitoring System.>	Go to step **4**.
4	**PERFORM DRIVING TEST.** 1) Perform the Clear Memory Mode. <Ref. to TPM(diag)-13, OPERATION, Clear Memory Mode.> 2) Perform a driving test. <Ref. to TPM(diag)-16, PROCEDURE, Inspection Mode.> 3) Read the DTC of tire pressure monitoring. <Ref. to TPM(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-8, Tire Pressure Monitoring System.>	Even if the DTC is displayed, the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.

CAUTION:
When driving vehicle to perform driving test, there should be always 2 persons (driver and checker) to check.

E: DTC C2121 TRANSMITTER 1 NO DATA

NOTE:
Refer to DTC C2124 for diagnostic procedure. <Ref. to TPM(diag)-24, DTC C2124 TRANSMITTER 4 NO DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

F: DTC C2122 TRANSMITTER 2 NO DATA

NOTE:
Refer to DTC C2124 for diagnostic procedure. <Ref. to TPM(diag)-24, DTC C2124 TRANSMITTER 4 NO DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

G: DTC C2123 TRANSMITTER 3 NO DATA

NOTE:
Refer to DTC C2124 for diagnostic procedure. <Ref. to TPM(diag)-24, DTC C2124 TRANSMITTER 4 NO DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

H: DTC C2124 TRANSMITTER 4 NO DATA

DTC DETECTING CONDITION:
Detected when no data is received from each transmitter for 8 minutes or more at a vehicle speed of 40 km/h (25 MPH) or more. (Timer is not cleared when the vehicle speed becomes lower than 40 km/h halfway.)
TROUBLE SYMPTOM:
Tire pressure warning light blinks 25 times and then illuminates.

	Step	Check	Yes	No
1	**REPRODUCTION OF FAILURE.** 1) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes. 2) Read the DTC of tire pressure monitoring. <Ref. to TPM(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed as “Present fault”?	Go to step **2**.	When DTC is displayed as “Past faults”, the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, there may be temporary poor communication due to radio wave environment inside/outside the vehicle.
2	**START FRONT LEFT TRANSMITTER.** 1) Connect the Subaru Select Monitor and then turn the ignition switch to ON. 2) Select «Current Data Display & Save» of the tire pressure monitor. <Ref. to TPM(diag)-14, Read Current Data.> 3) Use the transmitter registration tool and transmit the ID from the front left transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step **3**.	Replace the front left transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
3	**CHECK FRONT LEFT TRANSMITTER ID.** Check the ID displayed as the latest ID and the ID registered as tire 1.	Are the two IDs same?	Go to step **4**.	Record «Latest reception ID» as the front left. Go to step **4**.
4	**START FRONT RIGHT TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the front right transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step **5**.	Replace the front right transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>

	Step	Check	Yes	No
5	**CHECK FRONT RIGHT TRANSMITTER ID.** Check the ID displayed as the latest ID and the ID registered as tire 2.	Are the two IDs same?	Go to step **6**.	Record «Latest reception ID» as the front right. Go to step **6**.
6	**START REAR RIGHT TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the rear right transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step **7**.	Replace the rear right transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
7	**CHECK REAR RIGHT TRANSMITTER ID.** Check the ID displayed as the latest ID and the ID registered as tire 3.	Are the two IDs same?	Go to step **8**.	Record «Latest reception ID» as the rear right. Go to step **8**.
8	**START REAR LEFT TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the rear left transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step **9**.	Replace the rear left transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
9	**CHECK REAR LEFT TRANSMITTER ID.** Check the ID displayed as the latest ID and the ID registered as tire 4.	Are the two IDs same?	Go to step **10**.	Record «Latest reception ID» as the rear left. Go to step **10**.
10	**CHECK MALFUNCTION TRANSMITTER.**	Is ID recorded by this procedure?	Go to step **11**.	Go to step **2**.
11	**CHECK MALFUNCTION TRANSMITTER.** Check the registered ID of the transmitter indicated by DTC.	Is there checked ID in the record?	Replace the transmitter of the recorded position. <Ref. to WT-8, Tire Pressure Monitoring System.>	Replace the transmitter showing the latest ID that is not included in the registered IDs. <Ref. to WT-8, Tire Pressure Monitoring System.>

CAUTION:
When driving vehicle to perform driving test, there should be always 2 persons (driver and checker) to check.

I: DTC C2221 TRANSMITTER 1 PRESSURE DATA ABNORMAL

NOTE:
Refer to DTC C2224 for diagnostic procedure. <Ref. to TPM(diag)-26, DTC C2224 TRANSMITTER 4 PRESSURE DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

J: DTC C2222 TRANSMITTER 2 PRESSURE DATA ABNORMAL

NOTE:
Refer to DTC C2224 for diagnostic procedure. <Ref. to TPM(diag)-26, DTC C2224 TRANSMITTER 4 PRESSURE DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

K: DTC C2223 TRANSMITTER 3 PRESSURE DATA ABNORMAL

NOTE:
Refer to DTC C2224 for diagnostic procedure. <Ref. to TPM(diag)-26, DTC C2224 TRANSMITTER 4 PRESSURE DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

L: DTC C2224 TRANSMITTER 4 PRESSURE DATA ABNORMAL

DTC DETECTING CONDITION:
Detected when error data is received from each transmitter at a vehicle speed of 40 km/h (25 MPH) or more.
- When comparing the data from each transmitter to the previous data, the change is large.
- The pressure exceeds what the transmitter can measure. (Excessive pressure)

TROUBLE SYMPTOM:
Tire pressure warning light blinks 25 times and then illuminates.

	Step	Check	Yes	No
1	**REPRODUCTION OF FAILURE.** 1) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes. 2) Read the DTC. <Ref. to TPM(diag)-12, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed as “Present fault”?	Go to step **2**.	When DTC is displayed as “Past faults”, the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, there may be temporary poor communication due to radio wave environment inside/outside the vehicle.
2	**START FRONT LEFT TRANSMITTER.** 1) Connect the Subaru Select Monitor and then turn the ignition switch to ON. 2) Select «Current Data Display & Save» of the tire pressure monitor. <Ref. to TPM(diag)-14, Read Current Data.> 3) Use the transmitter registration tool and transmit the ID from the front left transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step **3**.	Replace the front left transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
3	**CHECK FRONT LEFT TRANSMITTER ID.** Check the ID displayed as the latest ID and the ID registered as tire 1.	Are the two IDs same?	Go to step **4**.	Record «Latest reception ID» as the front left. Go to step **4**.
4	**START FRONT RIGHT TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the front right transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step **5**.	Replace the front right transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
5	**CHECK FRONT RIGHT TRANSMITTER ID.** Check the ID displayed as the latest ID and the ID registered as tire 2.	Are the two IDs same?	Go to step **6**.	Record «Latest reception ID» as the front right. Go to step **6**.
6	**START REAR RIGHT TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the rear right transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step **7**.	Replace the rear right transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
7	**CHECK REAR RIGHT TRANSMITTER ID.** Check the ID displayed as the latest ID and the ID registered as tire 3.	Are the two IDs same?	Go to step **8**.	Record «Latest reception ID» as the rear right. Go to step **8**.

	Step	Check	Yes	No
8	**START REAR LEFT TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the rear left transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step **9**.	Replace the rear left transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
9	**CHECK REAR LEFT TRANSMITTER ID.** Check the ID displayed as the latest ID and the ID registered as tire 4.	Are the two IDs same?	Go to step **10**.	Record «Latest reception ID» as the rear left. Go to step **10**.
10	**CHECK MALFUNCTION TRANSMITTER.**	Is ID recorded by this procedure?	Go to step **11**.	Go to step **2**.
11	**CHECK MALFUNCTION TRANSMITTER.** Check the registered ID of the transmitter indicated by DTC.	Is there checked ID in the record?	Replace the transmitter of the recorded position. <Ref. to WT-8, Tire Pressure Monitoring System.>	Replace the transmitter showing the latest ID that is not included in the registered IDs. <Ref. to WT-8, Tire Pressure Monitoring System.>

M: DTC C2321 TRANSMITTER 1 FUNCTION CODE ABNORMAL

NOTE:
Refer to DTC C2324 for diagnostic procedure. <Ref. to TPM(diag)-28, DTC C2324 TRANSMITTER 4 FUNCTION CODE ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

N: DTC C2322 TRANSMITTER 2 FUNCTION CODE ABNORMAL

NOTE:
Refer to DTC C2324 for diagnostic procedure. <Ref. to TPM(diag)-28, DTC C2324 TRANSMITTER 4 FUNCTION CODE ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

O: DTC C2323 TRANSMITTER 3 FUNCTION CODE ABNORMAL

NOTE:
Refer to DTC C2324 for diagnostic procedure. <Ref. to TPM(diag)-28, DTC C2324 TRANSMITTER 4 FUNCTION CODE ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

P: DTC C2324 TRANSMITTER 4 FUNCTION CODE ABNORMAL

Detected when error data is received from each transmitter at a vehicle speed of 40 km/h (25 MPH) or more.
DTC DETECTING CONDITION:
Unexpected function codes received from each transmitter.
TROUBLE SYMPTOM:
Tire pressure warning light blinks 25 times and then illuminates.

Step		Check	Yes	No
1	**REPRODUCTION OF FAILURE.** 1) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes. 2) Read the DTC. <Ref. to TPM(diag)-12, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed as “Present fault”?	Go to step **2**.	When DTC is displayed as “Past faults”, the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, there may be temporary poor communication due to radio wave environment inside/outside the vehicle.
2	**START FRONT LEFT TRANSMITTER.** 1) Connect the Subaru Select Monitor and then turn the ignition switch to ON. 2) Select «Current Data Display & Save» of the tire pressure monitor. <Ref. to TPM(diag)-14, Read Current Data.> 3) Use the transmitter registration tool and transmit the ID from the front left transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step **3**.	Replace the front left transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
3	**CHECK FRONT LEFT TRANSMITTER ID.** Check the ID displayed as the latest ID and the ID registered as tire 1.	Are the two IDs same?	Go to step **4**.	Record «Latest reception ID» as the front left. Go to step **4**.
4	**START FRONT RIGHT TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the front right transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step **5**.	Replace the front right transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
5	**CHECK FRONT RIGHT TRANSMITTER ID.** Check the ID displayed as the latest ID and the ID registered as tire 2.	Are the two IDs same?	Go to step **6**.	Record «Latest reception ID» as the front right. Go to step **6**.
6	**START REAR RIGHT TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the rear right transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step **7**.	Replace the rear right transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
7	**CHECK REAR RIGHT TRANSMITTER ID.** Check the ID displayed as the latest ID and the ID registered as tire 3.	Are the two IDs same?	Go to step **8**.	Record «Latest reception ID» as the rear right. Go to step **8**.

	Step	Check	Yes	No
8	**START REAR LEFT TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the rear left transmitter to check «Latest reception ID».	Is «Latest reception ID» updated?	Go to step **9**.	Replace the rear left transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
9	**CHECK REAR LEFT TRANSMITTER ID.** Check the ID displayed as the latest ID and the ID registered as tire 4.	Are the two IDs same?	Go to step **10**.	Record «Latest reception ID» as the rear left. Go to step **10**.
10	**CHECK MALFUNCTION TRANSMITTER.**	Is ID recorded by this procedure?	Go to step **11**.	Replace the transmitter indicated by diagnostics trouble code (DTC). <Ref. to WT-8, Tire Pressure Monitoring System.>
11	**CHECK MALFUNCTION TRANSMITTER.** Check the registered ID of the transmitter indicated by DTC.	Is there checked ID in the record?	Replace the transmitter of the recorded position. <Ref. to WT-8, Tire Pressure Monitoring System.>	Replace the transmitter indicated by diagnostics trouble code (DTC). <Ref. to WT-8, Tire Pressure Monitoring System.>

Q: DTC C2421 TRANSMITTER 1 BATTERY VOLTAGE DECREASE

NOTE:
Refer to DTC C2424 for diagnostic procedure. <Ref. to TPM(diag)-30, DTC C2424 TRANSMITTER 4 BATTERY VOLTAGE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

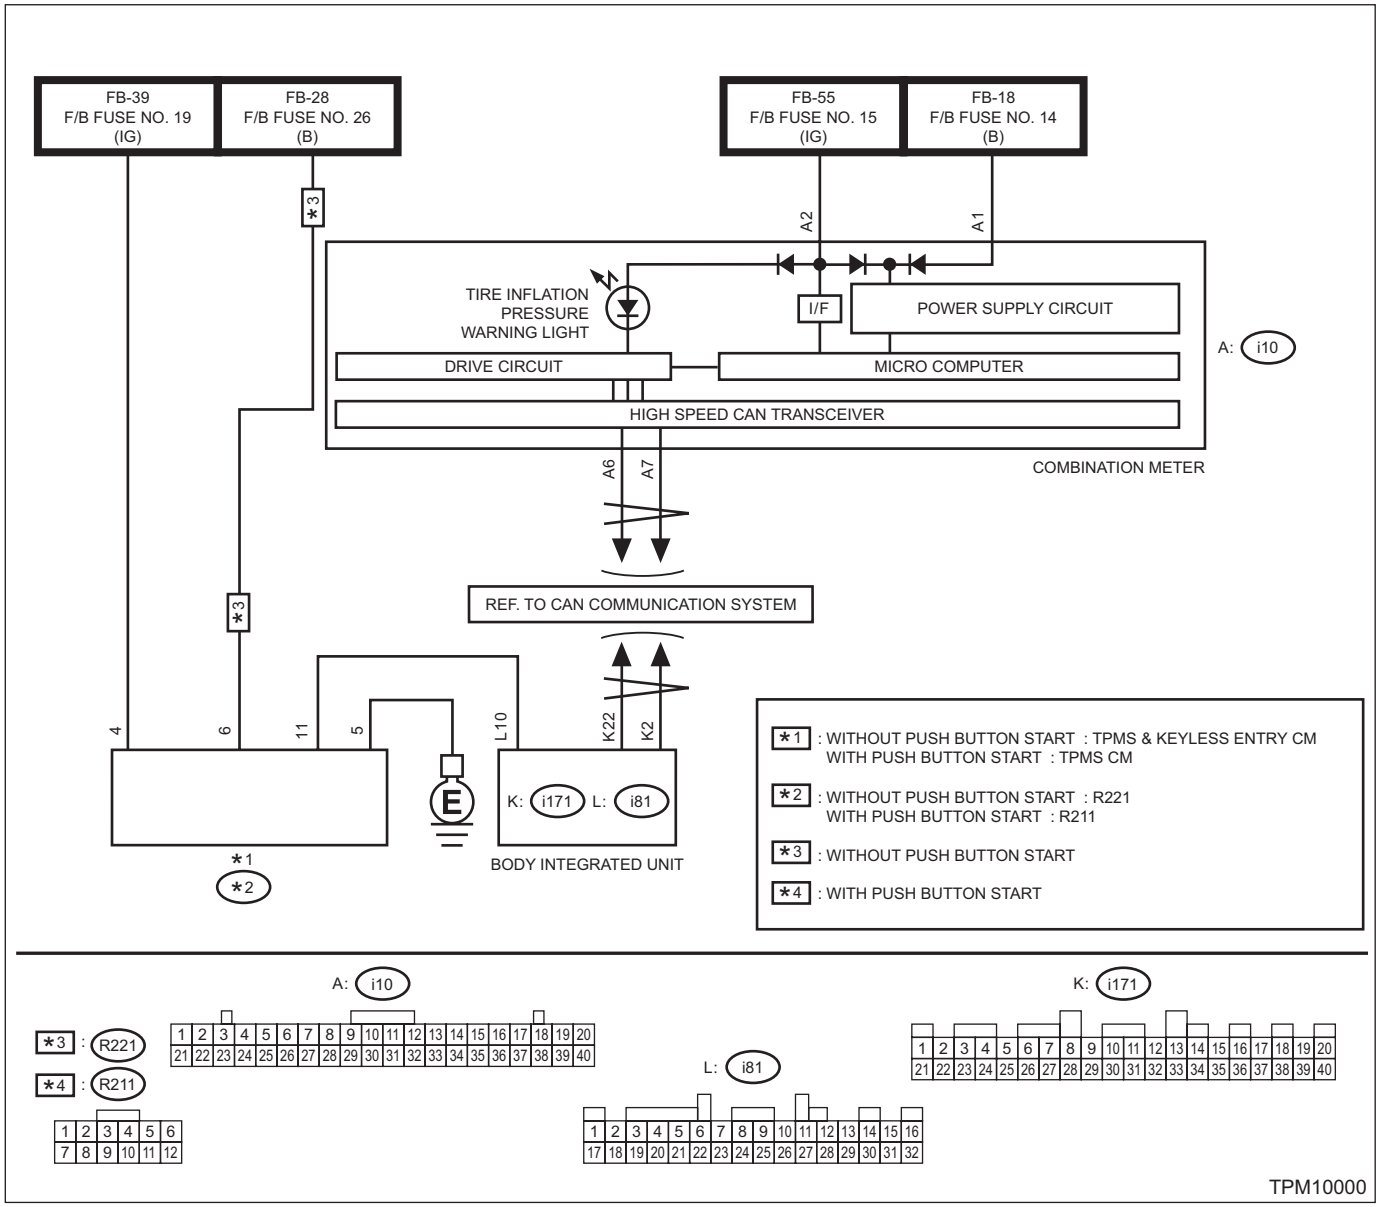
R: DTC C2422 TRANSMITTER 2 BATTERY VOLTAGE DECREASE

NOTE:
Refer to DTC C2424 for diagnostic procedure. <Ref. to TPM(diag)-30, DTC C2424 TRANSMITTER 4 BATTERY VOLTAGE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

S: DTC C2423 TRANSMITTER 3 BATTERY VOLTAGE DECREASE

NOTE:
Refer to DTC C2424 for diagnostic procedure. <Ref. to TPM(diag)-30, DTC C2424 TRANSMITTER 4 BATTERY VOLTAGE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

T: DTC C2424 TRANSMITTER 4 BATTERY VOLTAGE DECREASE



DTC DETECTING CONDITION:
Detected when power supply voltage failure signal is received from each transmitter.
TROUBLE SYMPTOM:
Tire pressure warning light blinks 25 times and then illuminates.

	Step	Check	Yes	No
1	**REPRODUCTION OF FAILURE.** 1) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes. 2) Read the DTC. <Ref. to TPM(diag)-12, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed as “Present fault”?	Go to step **2**.	When DTC is displayed as “Past faults”, the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, there may be temporary poor communication due to radio wave environment inside/outside the vehicle.
2	**CHECK TRANSMITTER.** 1) Replace all transmitters and register their IDs. <Ref. to TPM(diag)-15, OPERATION, Register Transmitter (ID).> 2) Perform the Clear Memory Mode. <Ref. to TPM(diag)-13, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to TPM(diag)-16, Inspection Mode.>	Is the fault eliminated?	Internal battery of the transmitter had worn out.	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-8, Tire Pressure Monitoring System.>

U: DTC C2521 VEHICLE SPEED IS ABNORMAL

DTC DETECTING CONDITION:
Detected when transmitter normal signal is received at a vehicle speed of less than 6 km/h (4 MPH).
TROUBLE SYMPTOM:
Tire pressure warning light blinks 25 times and then illuminates.
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Tire Pressure Monitoring System <Ref. to WI-448, WIRING DIAGRAM, Tire Pressure Monitoring System.>

	Step	Check	Yes	No
1	**CHECK LAN COMMUNICATION.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Repair it according to the diagnosis for LAN system.	Go to step **2**.
2	**CHECK HARNESS.** Measure the resistance between TPMS & keyless entry CM or TPMS CM and body integrated unit. ***Connector & terminal*** ***Without push button start*** ***(R221) No. 11 — (i81) No. 10:*** ***(R221) No. 5 — Chassis ground:*** ***With push button start*** ***(R211) No. 11 — (i81) No. 10:*** ***(R211) No. 5 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair the harness.
3	**CHECK CONNECTOR.** Check each connector.	Is there poor contact or any other faults?	Repair the connector.	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-8, Tire Pressure Monitoring System.>

14.General Diagnostic Table

A: INSPECTION

Symptoms		Faulty parts
Tire pressure warning light illuminates.	Tire pressure is reduced.	• Improper tire pressure adjustment • Punctured tire
Tire pressure warning light blinks 25 times and then illuminates.	Tire pressure monitoring system has malfunction.	• Air pressure sensor malfunction • Air pressure sensor is out of battery. • Defective TPMS & keyless entry CM or TPMS CM • Defective vehicle harness • Defective combination meter
Tire pressure is dropping but the warning light does not illuminate.	Tire pressure warning light does not illuminate.	• Air pressure sensor is faulty. • Defective TPMS & keyless entry CM or TPMS CM • Defective combination meter

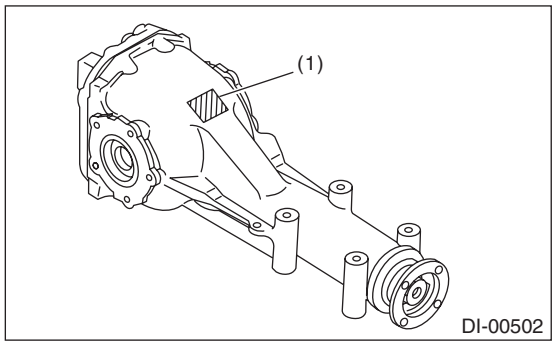
1. General Description

A: SPECIFICATION

1. REAR DIFFERENTIAL

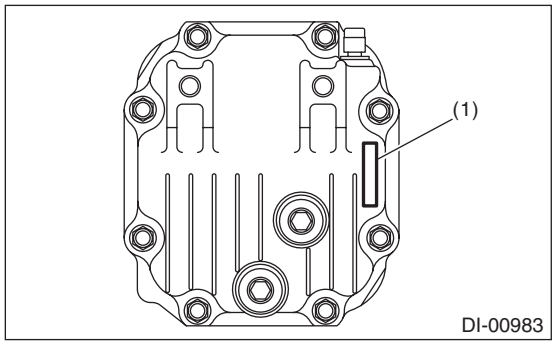
When replacing a rear differential assembly, select the correct one according to the following table.



NOTE:
• Using a different rear differential assembly will cause the drive train and tires to drag or emit abnormal noise.
• For option code, refer to “ID” section. <Ref. to ID-2, IDENTIFICATION, Identification.>

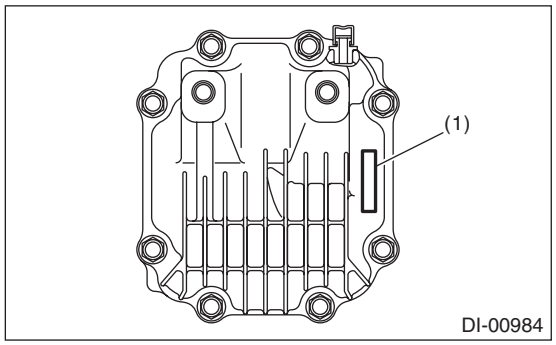
Model	Sedan			OUTBACK		
	2.5 L		3.6 L	2.5 L		3.6 L
	CVT	6MT	CVT	CVT	6MT	CVT
Rear differential type	VA1-type	T-type	VA2-type	VA1-type	T-type	VA2-type
Identification	Y2	B1	Y4	Y3	B4	Y4
LSD type	—					
Type of gear	Hypoid gear					
Gear ratio (number of gear teeth)	3.900 (39/10)	4.111 (37/9)	4.111 (37/9)	4.111 (37/9)	4.444 (40/9)	4.111 (37/9)
Oil capacity	0.8 L (0.8 US qt, 0.7 Imp qt)					
Rear differential gear oil	GL–5 (75W–90)					

2. IDENTIFICATION



Identification positions are shown in the following figures. For details concerning identification, refer to the “ID” section.

- T-type

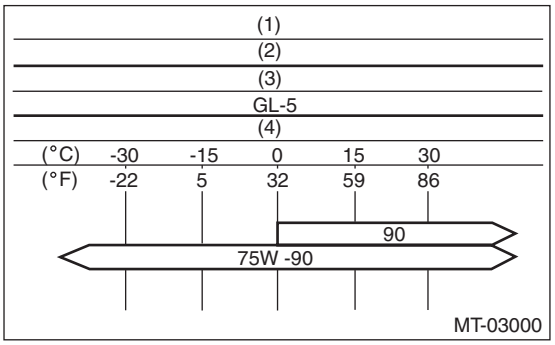


(1) Identification

- VA1-type

(1) Identification

- VA2-type

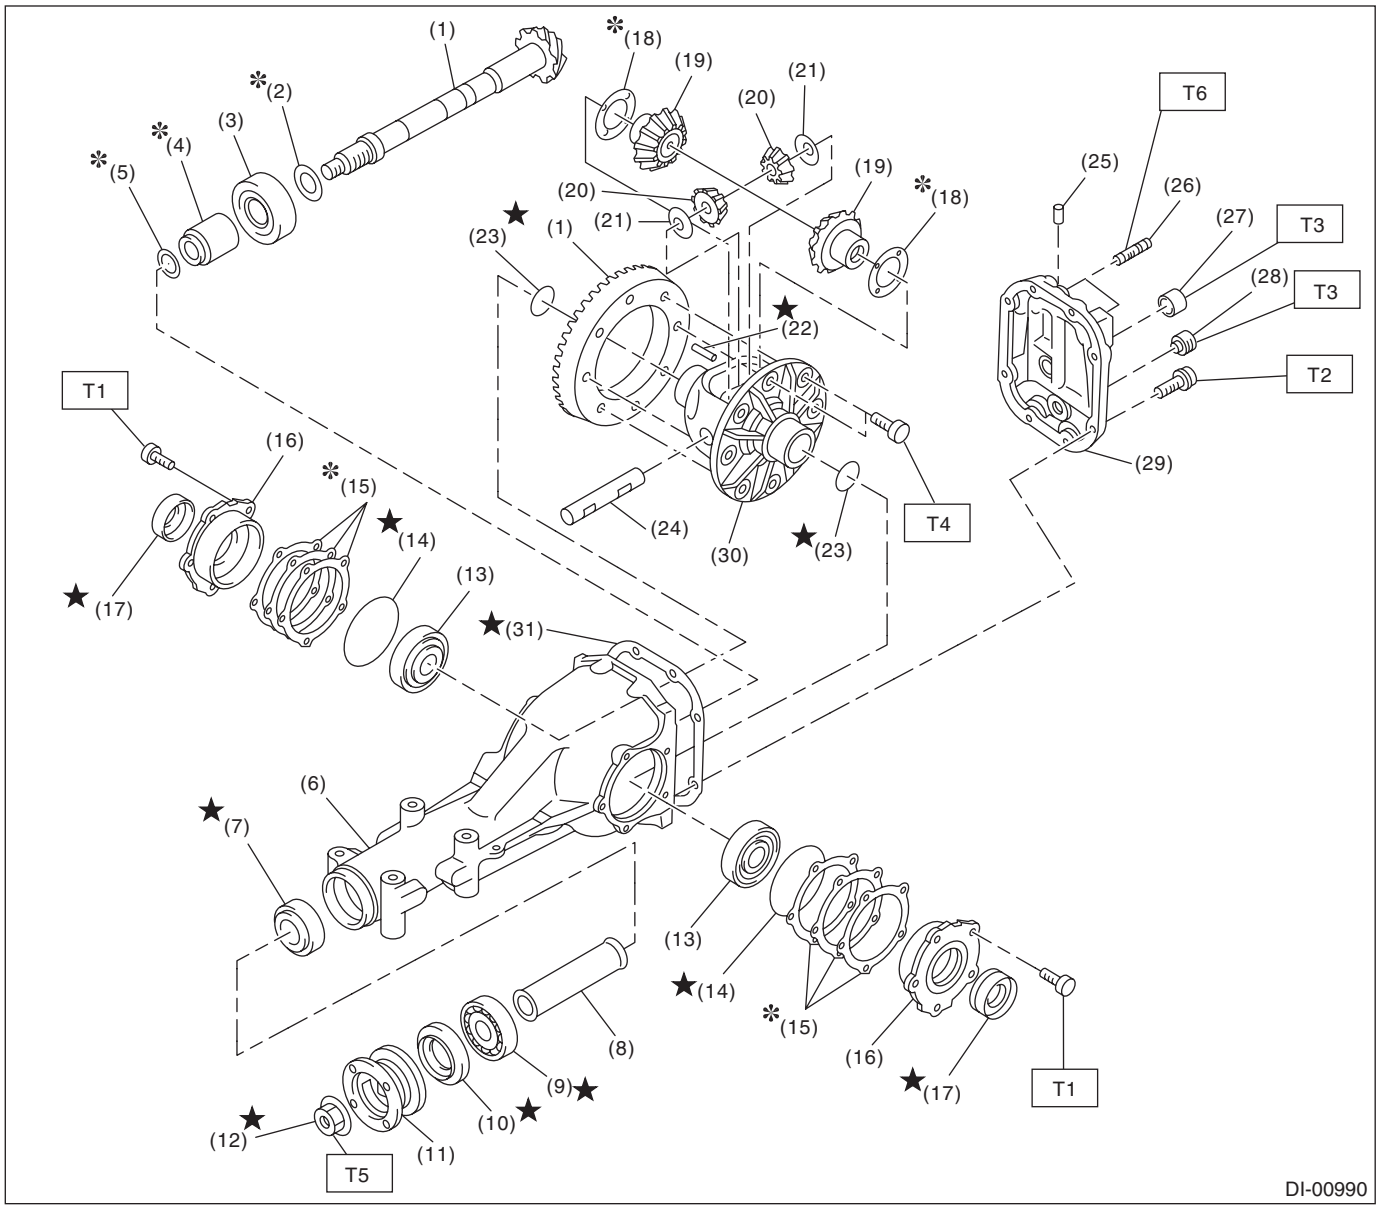


(1) Identification

3. REAR DIFFERENTIAL GEAR OIL

Recommended gear oil:
GL–5 (75W–90) or equivalent

CAUTION:
Each oil manufacturer has its base oil and additives. Thus, do not mix two or more brands.



(1) Item
(2) Rear differential gear oil
(3) API classification
(4) SAE viscosity No. and applicable temperature

4. SERVICE DATA

Drive pinion bearing preload (for new bearing)	Measured with spring measurement (measured from the companion flange bolt)	N (kgf, lbf)	T-type	18.1 — 38.8 (1.8 — 4.0, 4.1 — 8.7)
			VA1, VA2-type	12.7 — 32.2 (1.3 — 3.3, 2.9 — 7.2)
	Measured with torque wrench	N·m (kgf-m, ft-lb)	T-type	0.69 — 1.47 (0.07 — 0.15, 0.51 — 1.08)
			VA1, VA2-type	0.48 — 1.22 (0.05 — 0.12, 0.35 — 0.90)
Side gear backlash		mm (in)	T-type	0.10 — 0.20 (0.004 — 0.008)
			VA1-type	0.05 — 0.15 (0.002 — 0.006)
			VA2-type	0.13 — 0.18 (0.005 — 0.007)
Hypoid driven gear backlash		mm (in)	T-type	0.10 — 0.20 (0.004 — 0.008)
			VA1, VA2-type	0.10 — 0.15 (0.004 — 0.006)
Hypoid driven gear runout on its back surface		mm (in)	T-type	0.05 (0.002)
Total preload (measured from the companion flange bolt hole)		N (kgf, lbf)	T-type	20.7 — 54.4 (2.1 — 5.5, 4.7 — 12.2)
Companion flange mating surface runout		mm (in)		0.08 (0.003)
Companion flange runout on its inner side		mm (in)		0.08 (0.003)

(3)	Rear differential member plate	(7)	Self-locking nut	***T2: 70 (7.1, 51.6)***
(4)	Rear differential ASSY	(8)	Rear differential member plate (2.5 L OUTBACK model)	***T3: 110 (11.2, 81.1)***

C: CAUTION

- Wear appropriate work clothing, including a cap, protective goggles and protective shoes when performing any work.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine gear oil, grease or equivalent. Do not mix gear oil, grease, etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Apply gear oil onto sliding or revolving surfaces before installation.
- Before installing the O-ring or snap ring, apply a sufficient amount of gear oil to avoid damage and deformation.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or cloth between the part and the vise.
- Avoid damaging the mating surface of the case.

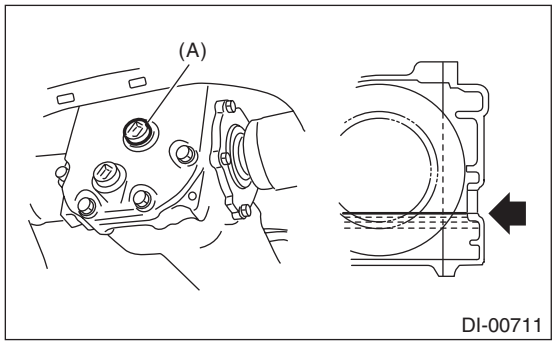
2. GENERAL TOOL

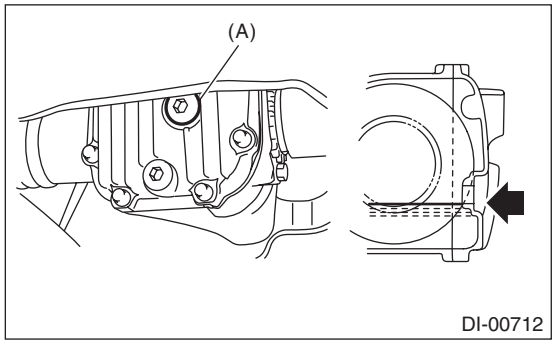
TOOL NAME	REMARKS
Transmission jack	Used for removing and installing the rear differential.
Puller	Used for removing the side bearing retainer.
Thickness gauge	Used for measuring clearance.
Hexagon wrench	Used for installing and removing the oil filler plug and oil drain plug.
Tire lever	Used for removing the rear drive shaft. (VA-type)
Angle gauge	Used for installing the hypoid driven gear. (VA-type)



2. Differential Gear Oil

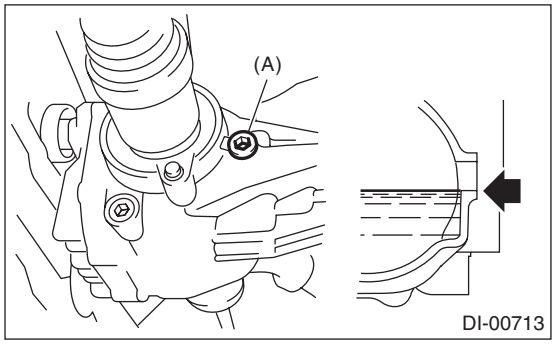
A: INSPECTION

1) Lift up the vehicle.
2) Remove the filler plug, and then check the gear oil. Replace the gear oil if it is contaminated, deteriorated or cloudy. <Ref. to DI-22, REPLACEMENT, Differential Gear Oil.>
3) Check that the gear oil level is within –5 mm (–0.2 in) from the bottom of the filler plug hole. If the level is low, make sure that there is no oil leakage and refill up to the bottom of filler plug hole.



NOTE:
On VA1-types at factory settings, the oil level may be within –14 mm (–0.6 in) from the bottom of the filler plug. This is at normal level, requiring no oil refill.

- T-type



(A) Filler plug

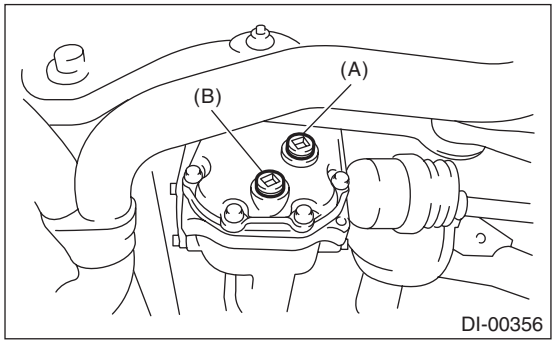
- VA1-type

(A) Filler plug

- VA2-type

(A) Filler plug

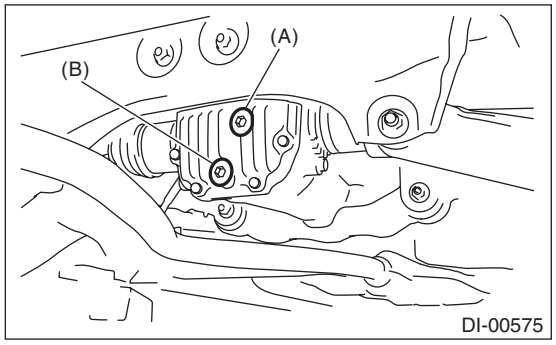
4) Install the filler plug.



NOTE:
- For the T-type, degrease the thread portion sufficiently and apply liquid gasket to the filler plug.

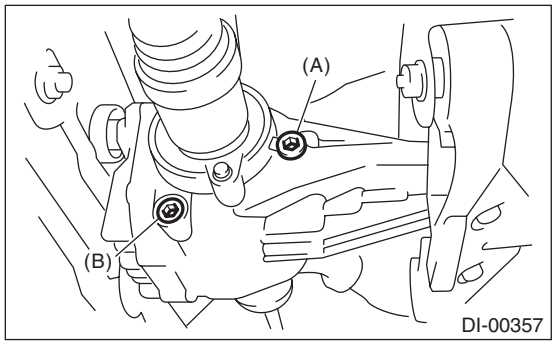
Liquid gasket:
THREE BOND 1105 (Part No. 004403010) or equivalent
- For VA type, use a new gasket.

Tightening torque:
T-type:
49 N·m (5.0 kgf-m, 36.1 ft-lb)
VA-type:
50 N·m (5.1 kgf-m, 36.9 ft-lb)



B: REPLACEMENT

CAUTION:
• Gear oil is extremely hot just after driving. Be wary of receiving burns.
• Be careful not to spill the differential gear oil on exhaust pipe. If gear oil is spilled, wipe it off completely.
1) Lift up the vehicle.
2) Remove the drain plug and filler plug, and drain the gear oil.
- T-type



(A) Filler plug
(B) Drain plug

- VA1-type

(A) Filler plug
(B) Drain plug

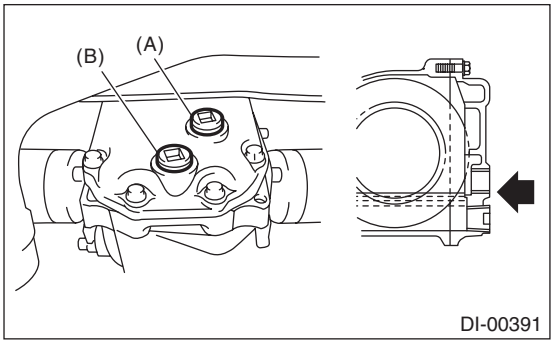
- VA2-type

(A) Filler plug
(B) Drain plug

3) Tighten the drain plug.

NOTE:
• For the T-type, degrease the thread portion sufficiently and apply liquid gasket to the drain plug.

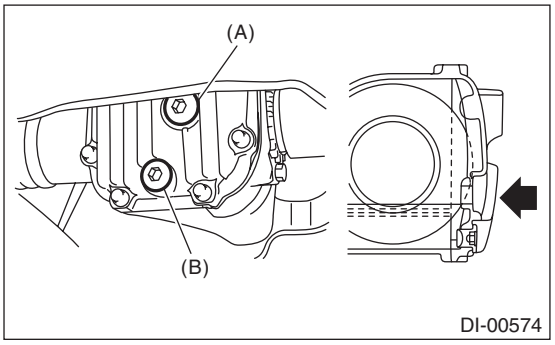
Liquid gasket:
THREE BOND 1105 (Part No. 004403010) or equivalent
• For VA type, use a new gasket.



Tightening torque:
T-type
49 N·m (5.0 kgf-m, 36.1 ft-lb)
VA-type:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

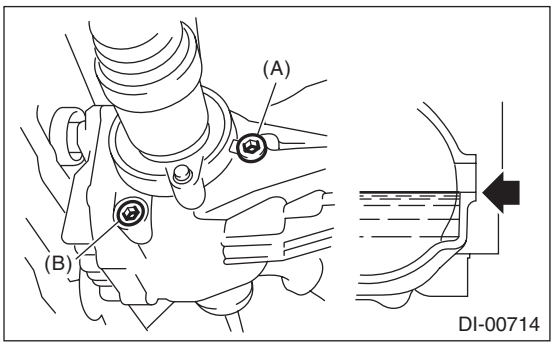
4) Fill the differential carrier with gear oil to the bottom of filler plug.

NOTE:
Carefully refill gear oil while watching the level. Excessive or insufficient oil must be avoided.



Recommended gear oil:
<Ref. to DI-2, SPECIFICATION, General Description.>

Oil capacity:
0.8 L (0.8 US qt, 0.7 Imp qt)
- T-type



(A) Filler plug
(B) Drain plug

- VA1-type

(A) Filler plug
(B) Drain plug

- VA2-type

(A) Filler plug
(B) Drain plug

5) Install the filler plug.

NOTE:
• For the T-type, degrease the thread portion sufficiently and apply liquid gasket to the filler plug.

Liquid gasket:
THREE BOND 1105 (Part No. 004403010) or equivalent
• For VA type, use a new gasket.

Tightening torque:
T-type:
49 N·m (5.0 kgf-m, 36.1 ft-lb)
VA-type:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

3. Front Differential Assembly

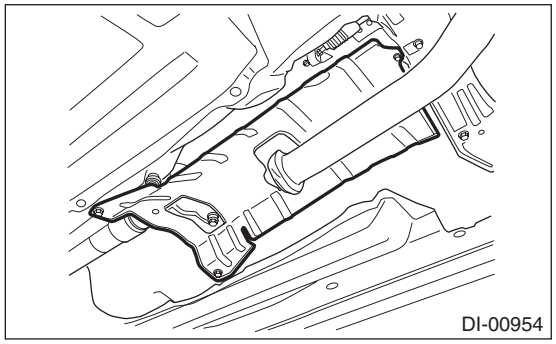
A: NOTE

1. CVT (TR580) MODEL

For front differential for the CVT (TR580) model, refer to the “CVT (TR580)” section. <Ref. to CVT(TR580)-350, Front Differential Assembly.>

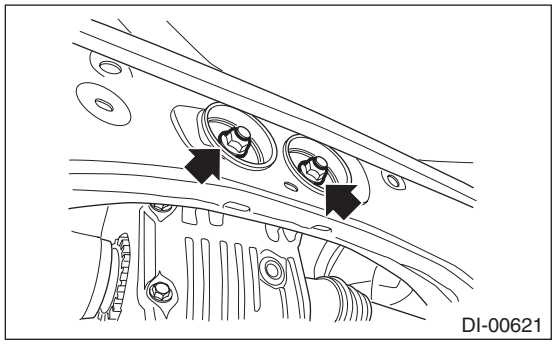
2. CVT (TR690) MODEL

For front differential for the CVT (TR690) model, refer to the “CVT (TR690)” section. <Ref. to CVT(TR690)-294, Front Differential Assembly.>



3. 6MT MODEL

For front differential for the 6MT model, refer to the “6MT” section. <Ref. to 6MT-106, Front Differential Assembly.>



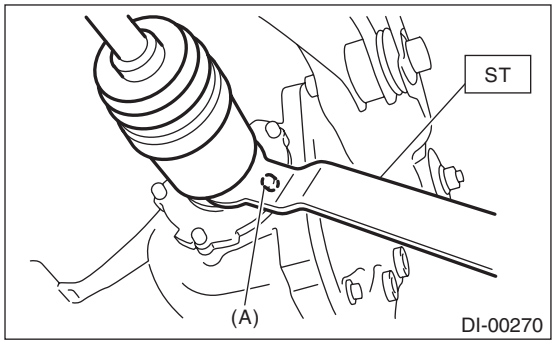
4. Rear Differential (T-type)

A: REMOVAL

1) Shift the select lever or gear shift lever to neutral.
2) Release the parking brake.
3) Disconnect the ground cable from battery.
4) Loosen the wheel nuts.
5) Lift up the vehicle.
6) Remove the rear wheels.
7) Drain differential gear oil. <Ref. to DI-22, REPLACEMENT, Differential Gear Oil.>
8) Remove the rear exhaust pipe.
• 2.5 L model
<Ref. to EX(H4DO)-16, REMOVAL, Rear Exhaust Pipe.>
• 3.6 L model
<Ref. to EX(H6DO)-12, REMOVAL, Rear Exhaust Pipe.>
9) Remove the heat shield cover.

DI-00954

10) Remove the propeller shaft. <Ref. to DS-10, REMOVAL, Propeller Shaft.>
11) Loosen the self-lock nuts which hold the rear differential to rear crossmember.



DI-00621

12) Remove the DOJ of rear drive shaft from rear differential using ST or tire lever.

NOTE:
• For the T-type, use the ST.
• For the VA-type, use the tire lever.
• When removing the DOJ from the rear differential, fit the tire lever or ST to the bolts as shown in the figure so as not to damage the side retainer.

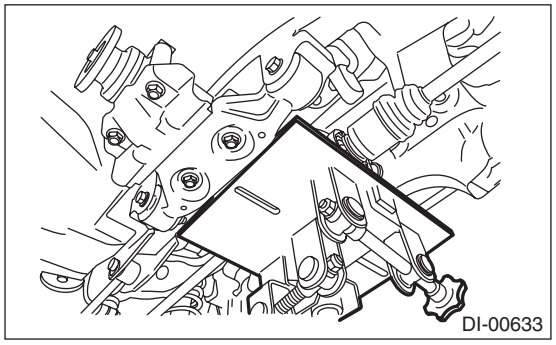
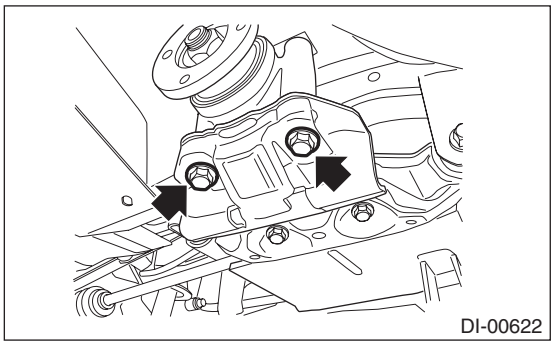
(A) Bolt

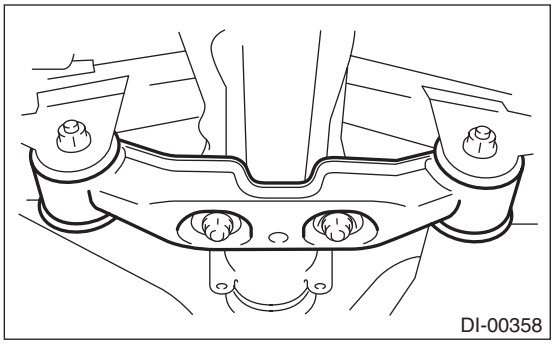


VA-type



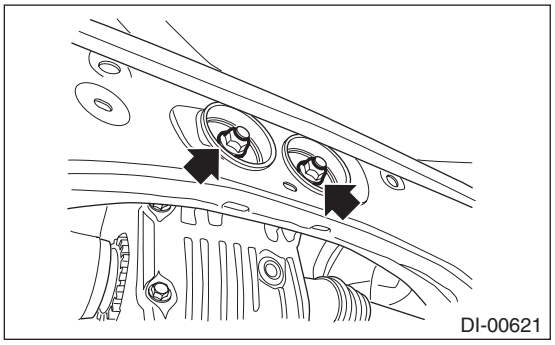
DI-00287

(A) Tire lever
(B) Bolt



13) Set the rear differential to transmission jack.

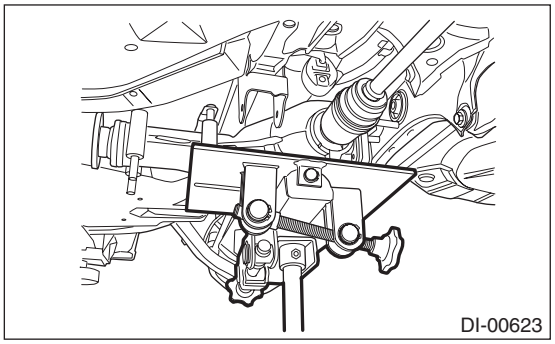
DI-00633



14) Remove the mass damper. (2.5 L OUTBACK model)

DI-00622

15) Remove the rear differential front member.

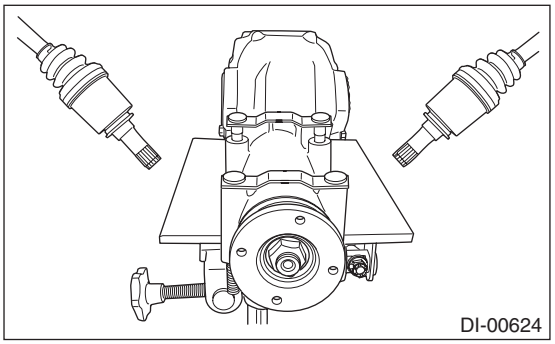


DI-00358

16) Remove the self-locking nuts which hold the rear differential to the crossmember.

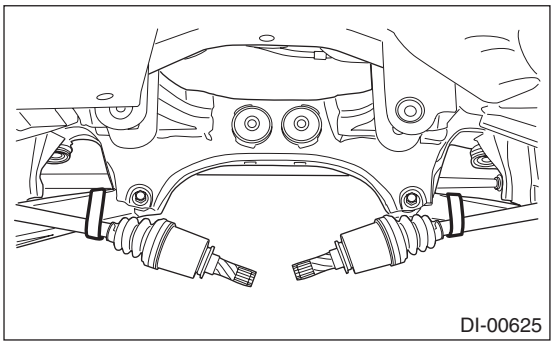
DI-00621

17) Pull out the rear differential stud bolt from rear crossmember bushing.



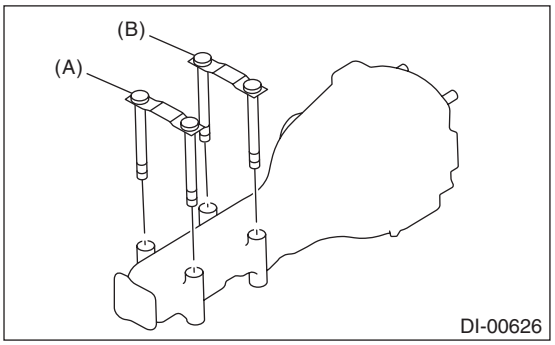
NOTE:
When removing the stud bolt from the rear crossmember bushing, carefully adjust the angle and location of transmission jack and jack stand, if necessary.

DI-00623



18) Lower the transmission jack.

19) Pull out the rear drive shaft from the rear differential.



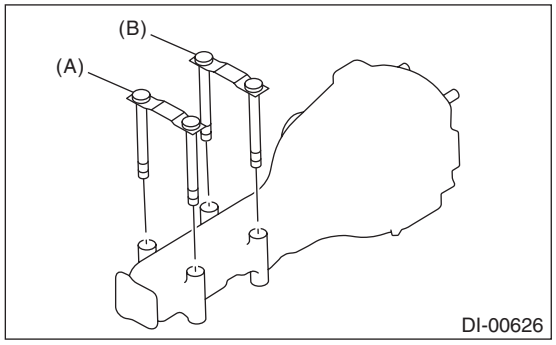
NOTE:
• If it is difficult to pull out the rear drive shaft from rear differential, use the ST for T-type and the tire lever for VA-type.
ST 28099PA100 DRIVE SHAFT REMOVER
• If a circlip is attached to the removed rear drive shaft for VA2-type, remove the differential case assembly and replace it with a new part.

DI-00624

20) Lower the transmission jack.
21) Secure the rear drive shaft to rear lateral link using wire.

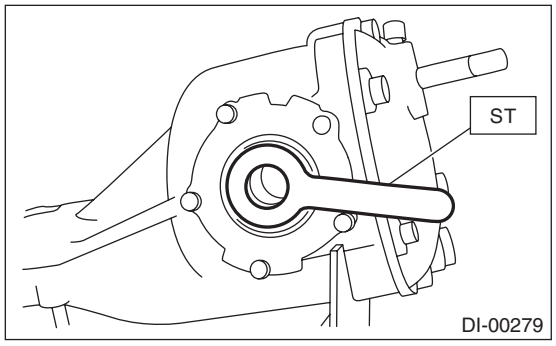
DI-00625

22) Remove the rear differential member plate from rear differential.



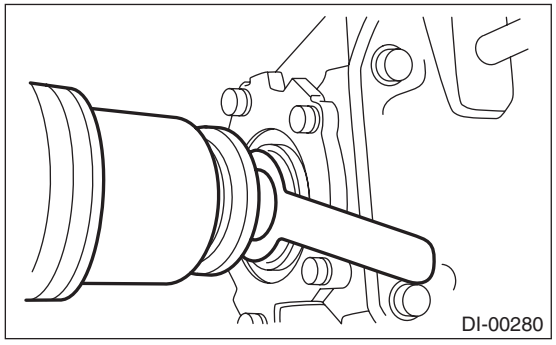
DI-00626

(A) Rear differential member plate (2.5 L OUTBACK model)
(B) Rear differential member plate



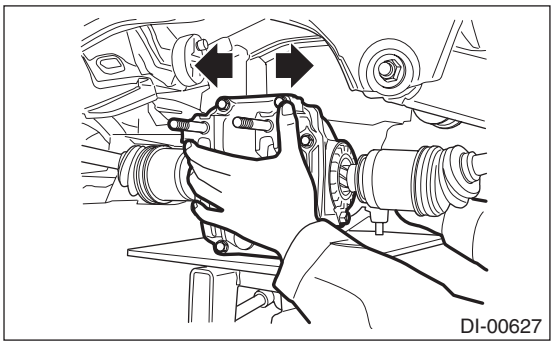
B: INSTALLATION

1) Attach the rear differential member plate to the rear differential.

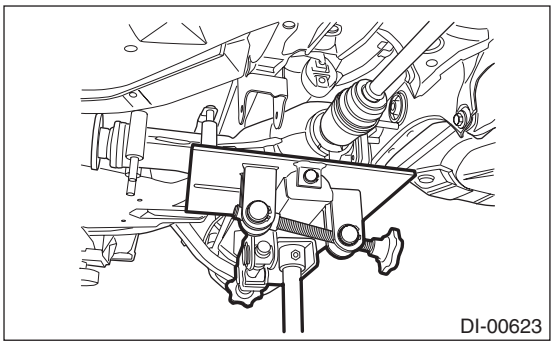


(A) Rear differential member plate (2.5 L OUTBACK model)
(B) Rear differential member plate

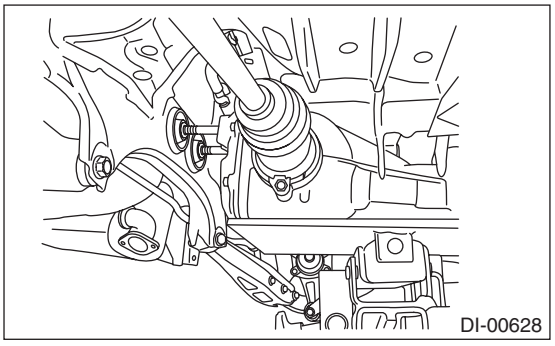
2) Set the rear differential to transmission jack.
3) Set the ST to the rear differential.
ST 28099PA090 OIL SEAL PROTECTOR



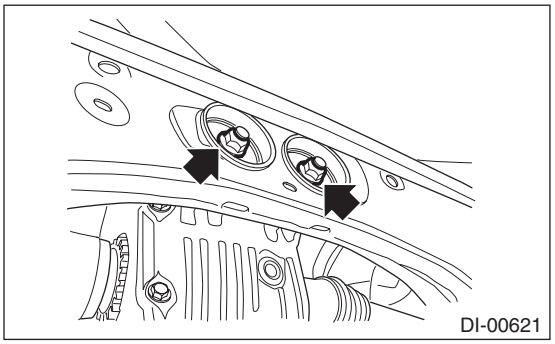
4) Insert the rear drive shaft until the spline portion of the rear drive shaft exceeds the side oil seal.



5) Remove ST from rear differential.

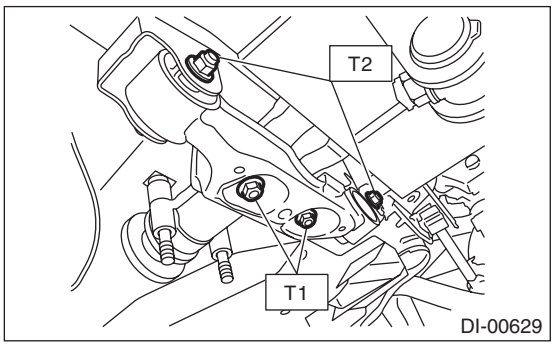


6) Push the rear differential from side to side to insert the DOJ into rear differential completely.

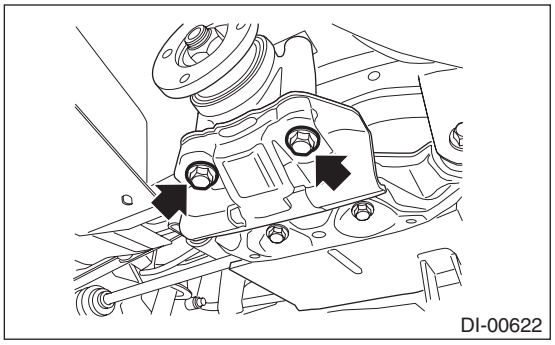


7) Adjust the transmission jack, if necessary, and insert the rear differential stud bolt into rear crossmember bushing properly.

8) After inserting the rear differential stud bolt into the rear crossmember bushing, lift up the transmission jack and align the rear differential to its attachment position.



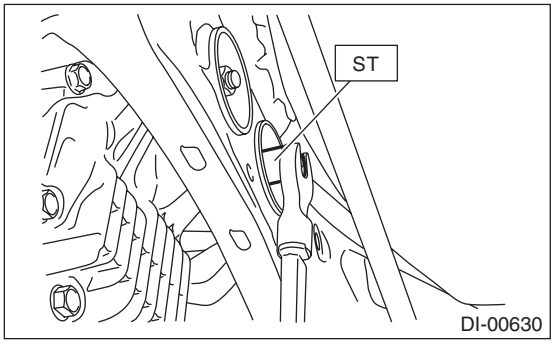
9) Tighten a new self-locking nut temporarily to rear crossmember.



10) Install the rear differential front member with a new self-locking nut.

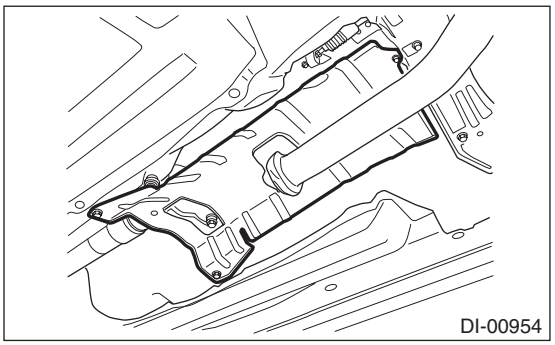
Tightening torque:
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 110 N·m (11.2 kgf-m, 81.1 ft-lb)

11) Install the mass damper with a new self-locking nut. (2.5 L OUTBACK model)



Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

12) Tighten the self-locking nut.

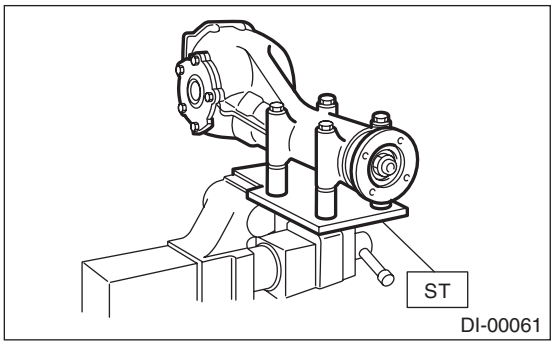


NOTE:
For models other than OUTBACK model, tighten the self-locking nut using the ST.
ST 41399YC000 SOCKET WRENCH (17)

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)

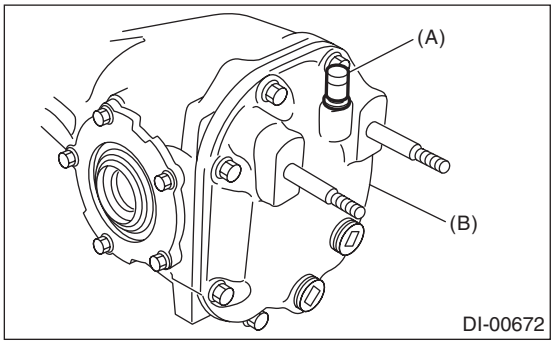
13) Remove the transmission jack.
14) Install the propeller shaft. <Ref. to DS-12, INSTALLATION, Propeller Shaft.>
15) Install the heat shield cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



16) Install the rear exhaust pipe.
• 2.5 L model
<Ref. to EX(H4DO)-17, INSTALLATION, Rear Exhaust Pipe.>
• 3.6 L model
<Ref. to EX(H6DO)-13, INSTALLATION, Rear Exhaust Pipe.>
17) Fill differential gear oil. <Ref. to DI-22, REPLACEMENT, Differential Gear Oil.>
18) Installing procedure hereafter is in the reverse order of removal.
19) Perform “Rear differential inspection mode” using the Subaru Select Monitor. (CVT model) <Ref. to DI-82, Rear Differential Inspection Mode.>

CAUTION:
Be sure to perform rear differential inspection mode when the following work has been performed.
• Replacement of rear differential
• Replacement of rear differential hypoid gear set
• Replacement of transmission assembly
• Replacement of front differential hypoid gear set

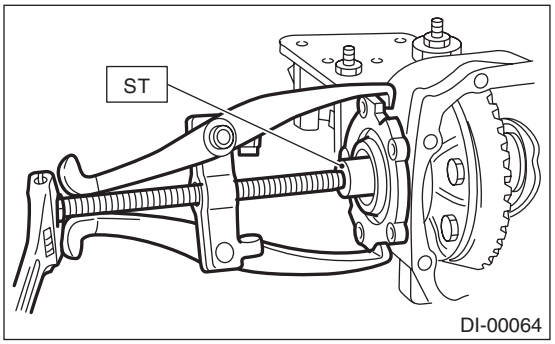


C: DISASSEMBLY

To detect the real cause of trouble, inspect the following items before disassembling.
• Tooth contact and backlash between hypoid driven gear and drive pinion
• Hypoid driven gear runout on its back surface
• Total preload of drive pinion
1) Set the ST on vise and install the differential assembly to ST.
ST 398217700 ATTACHMENT SET

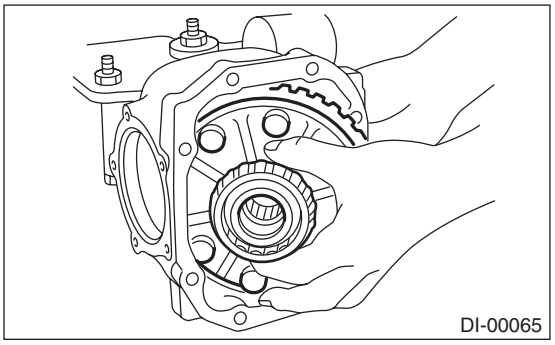
2) Remove the drain plug and filler plug.
3) Remove the air breather cap.

NOTE:
• Do not attempt to remove the air breather cap unless necessary.
• Whenever the air breather cap is removed, replace it with a new part.



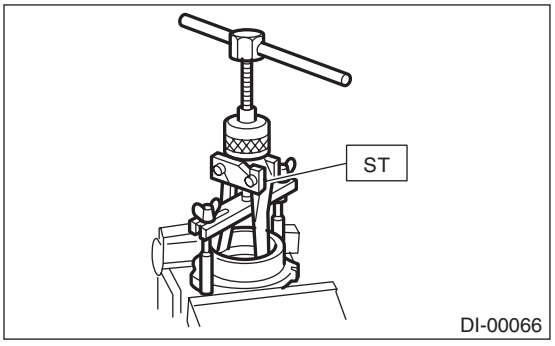
(A) Air breather cap
(B) Rear cover

4) Remove the bolts, and then remove the rear cover.



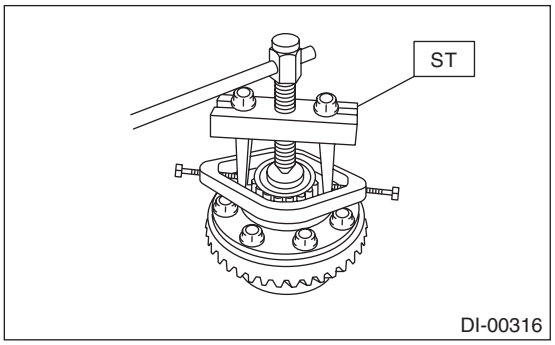
5) Remove the side retainer attachment bolts, set the ST to differential case, and extract the side retainers RH and LH with a puller.

NOTE:
• Side retainer shim of each side should be kept together with its mating retainer.
• Keep the side retainers separate by attaching tags or in similar ways to make it possible to identify RH and LH sides during reassembly.
ST 398457700 ATTACHMENT

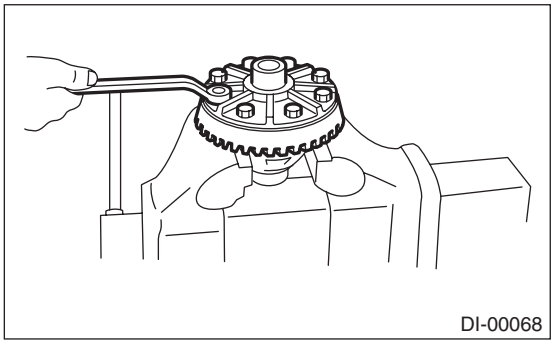


6) Pull out the differential case assembly from the differential carrier.

NOTE:
Be careful not to hit the teeth of hypoid driven gear against the differential carrier.



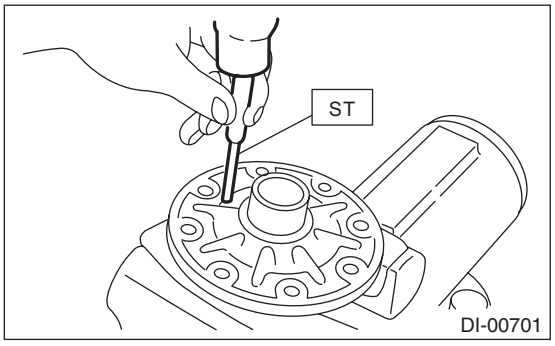
7) Remove the oil seal and O-ring from the side retainer.
8) When replacing the side bearing, remove the bearing race from the side retainer using ST.
ST 398527700 PULLER ASSY



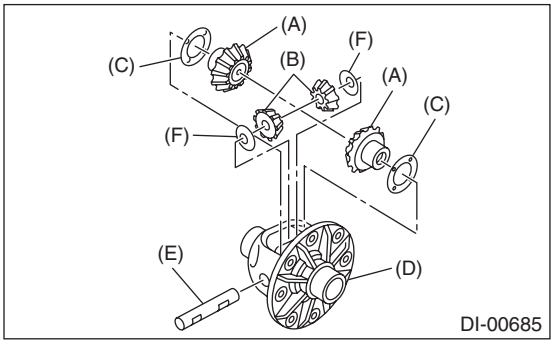
9) Using the ST, remove the bearing cone.

NOTE:
• Do not attempt to disassemble the parts unless necessary.
• Set the ST so that its claws catch the edge of the bearing cone.
• Never mix up the RH and LH bearing races and cones.

ST 18759AA000 PULLER ASSY



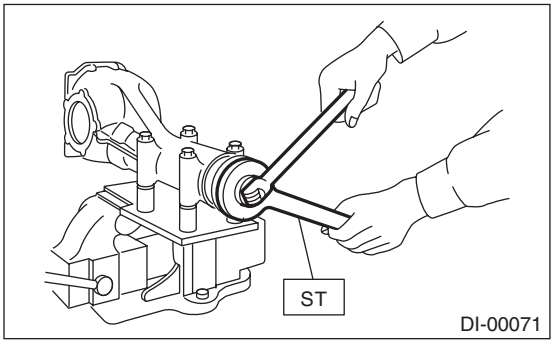
10) Remove the hypoid driven gear by loosening hypoid driven gear bolts.



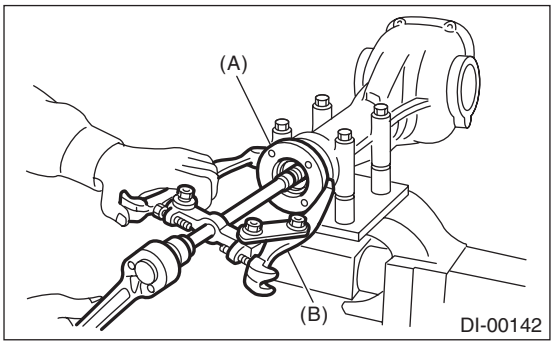
11) Remove the pinion shaft lock pin from hypoid driven gear side using ST.

ST 899904100 STRAIGHT PIN REMOVER

12) Draw out the pinion mate shaft, and remove pinion mate gears, pinion mate gear washers, side gears, and side gear thrust washers.



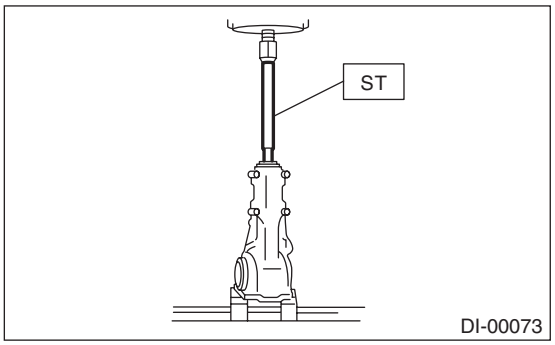
NOTE:
The gears and washers should be marked with RH or LH, front or rear, or kept separately.



(A) Side gear
(B) Pinion mate gear
(C) Side gear thrust washer
(D) Differential case
(E) Pinion mate shaft
(F) Pinion mate gear washer

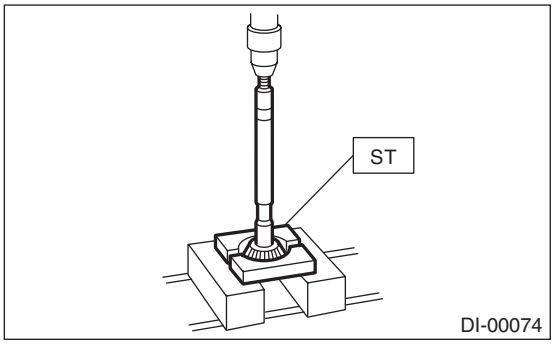
13) Remove the self-locking nut while securing the companion flange with ST.

ST 498427200 FLANGE WRENCH



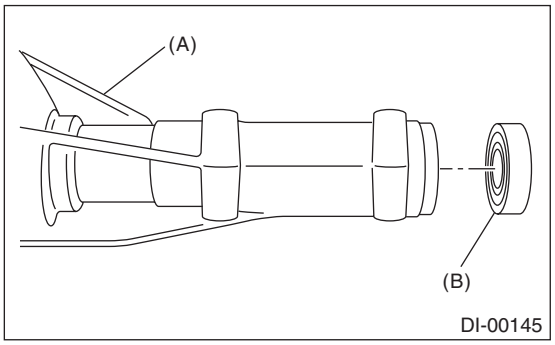
14) Extract the companion flange with a puller.

(A) Companion flange
(B) Puller



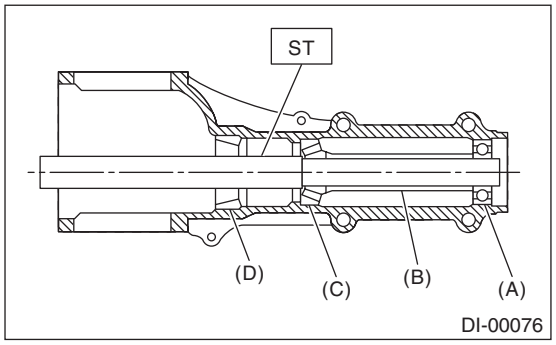
15) Press the end of drive pinion shaft using ST and remove the rear bearing cone, preload adjusting spacer and washer.

NOTE:
Hold the drive pinion so as not to drop it.
ST 398467700 DRIFT

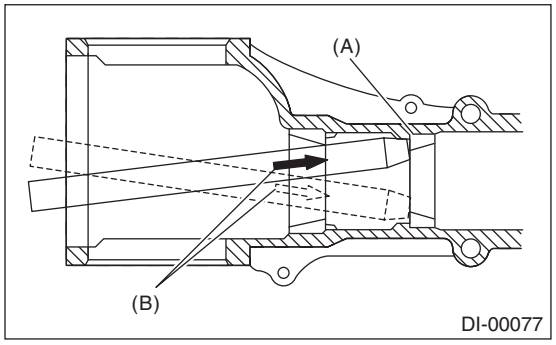


16) Remove the rear bearing cone from drive pinion by supporting the cone with ST.

NOTE:
Place the replacer so that its center-recessed side faces the bearing cone.
ST 398517700 REPLACER



17) Remove the front oil seal from differential carrier using ST.
ST 398527700 PULLER ASSY

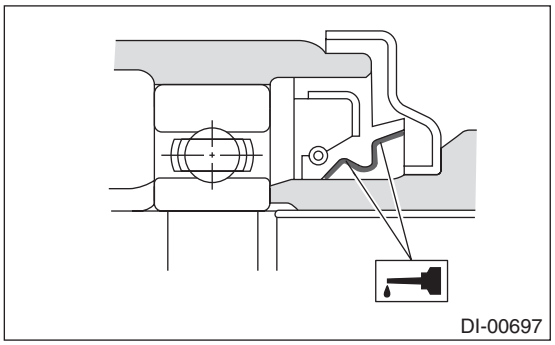


(A) Differential carrier
(B) Front oil seal

18) Remove the pilot bearing together with the front bearing cone and spacer using the ST.
ST 398467700 DRIFT

(A) Pilot bearing
(B) Spacer
(C) Front bearing
(D) Rear bearing race

19) When replacing the bearings, use a brass bar to tap out the front bearing race and rear bearing race in this order to remove them.

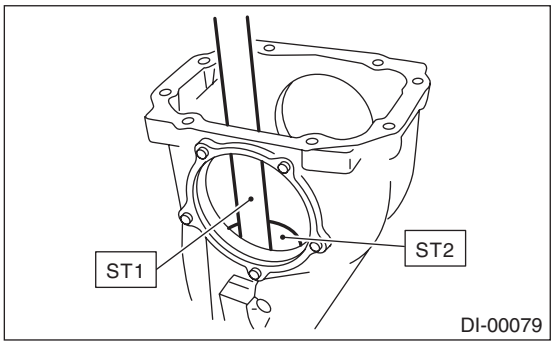


(A) 2 cutout portions along diagonal lines
(B) Tap alternately with brass bar.

D: ASSEMBLY

NOTE:
- Assemble in the reverse order of disassembly.
- Check and adjust each part during assembly.
- Keep the shims and washers in order, so that they are not improperly installed.
- Thoroughly clean the surfaces on which the shims, washers and bearings are to be installed.
- Apply differential gear oil when installing the bearings and thrust washers.
- Be careful not to mix up the RH and LH bearing races.
- Replace the gasket, oil seal and O-ring with a new part.
- Be careful not to mix up the oil seal RH and LH.

• Apply differential gear oil to the lips when installing the oil seal.



1) Adjusting preload for front and rear bearings

NOTE:
Adjust the bearing preload between front and rear bearings with preload adjusting spacer and washer. Pinion height adjusting washer is not affected by this adjustment. The adjustment must not be carried out with oil seal inserted.

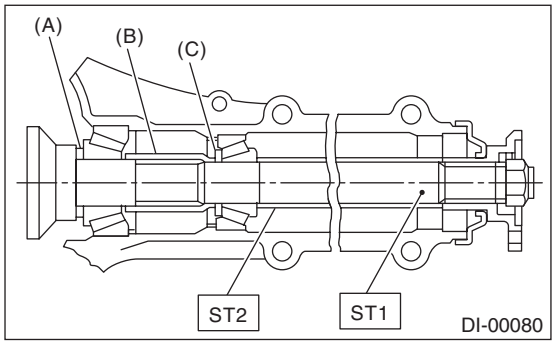
(1) Install the rear bearing race into the differential carrier using ST1 and ST2.

ST1 398477701 HANDLE
ST2 398477703 DRIFT 2

(2) Install the front bearing race to the differential carrier using ST1 and ST2.

NOTE:
Use a new front bearing race.

ST1 398477701 HANDLE
ST2 398477702 DRIFT



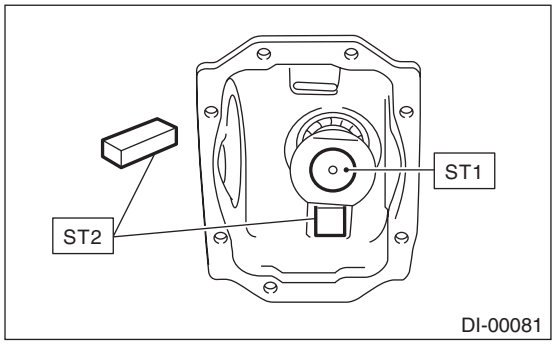
(3) Insert ST1 into the differential carrier with the pinion height adjusting washer and rear bearing cone fitted onto it.

NOTE:
• At this time, install a provisionally selected or previously used pinion height adjusting washer. Measure and record the thickness.
• If tooth contact (drive pinion, hypoid driven gear) is normal in the inspection before disassembling, verify that the washer is not deformed, and then reuse the used washer.

(4) Install the preload adjusting spacer and washer, front bearing cone, ST2, companion flange and self-locking nut.

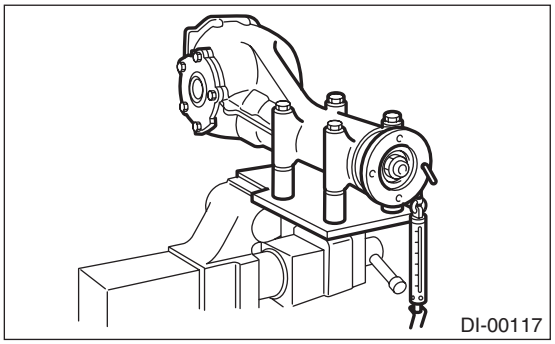
NOTE:
Use new front bearing cone.

ST1 398507702 DUMMY SHAFT
ST2 398507703 DUMMY COLLAR



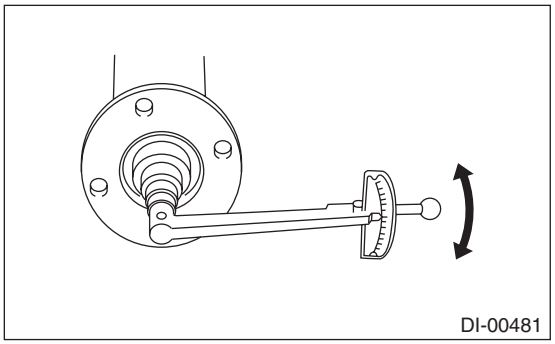
(A) Pinion height adjusting washer
(B) Preload adjusting spacer
(C) Preload adjusting washer

(5) Turn the ST1 by hand to smooth the bearing, and tighten the self-locking nut while measuring the initial load or initial torque with a spring scale or torque wrench. Select the preload adjusting washer and spacer so that the specified preload is obtained when nut is tightened to the specified torque.



NOTE:
• Measure the preload in direction of tangent to the flange.
• Be careful not to give excessive preload.
• When tightening the self-locking nut, lock ST1 with ST2 as shown in the figure.

ST1 398507702 DUMMY SHAFT
ST2 398507704 BLOCK



Tightening torque:
181.5 N·m (18.5 kgf-m, 133.9 ft-lb)

Initial load:

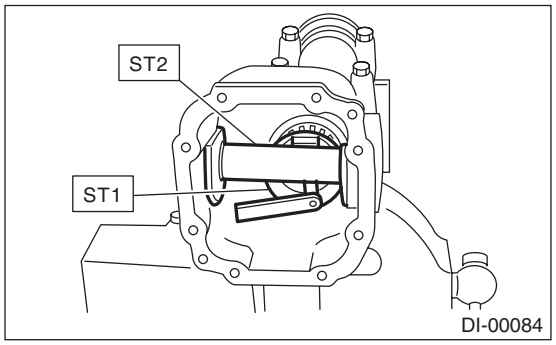
383805200	2.39 (0.0941)
383815200	2.37 (0.0933)
383825200	2.35 (0.0925)
383835200	2.33 (0.0917)
383845200	2.31 (0.0909)

Preload adjusting spacer	
Part No.	Length mm (in)
383695201	56.2 (2.213)
383695202	56.4 (2.220)
383695203	56.6 (2.228)
383695204	56.8 (2.236)
383695205	57.0 (2.244)
383695206	57.2 (2.252)

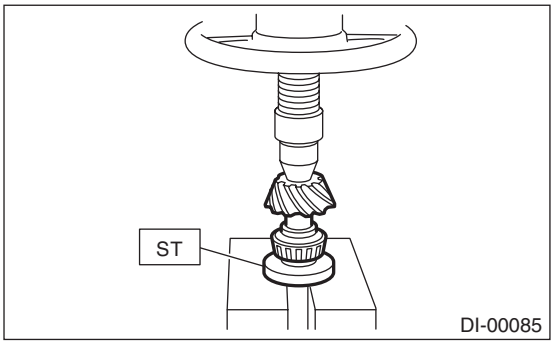


2) Adjusting drive pinion height:
Adjust the drive pinion height with pinion height adjusting washer installed between the rear bearing cone and the back of pinion gear.
(1) Attach the ST2.
ST1 398507702 DUMMY SHAFT
ST2 398507701 DIFFERENTIAL CARRIER GAUGE
ST3 398507703 DUMMY COLLAR

(A) Pinion height adjusting washer

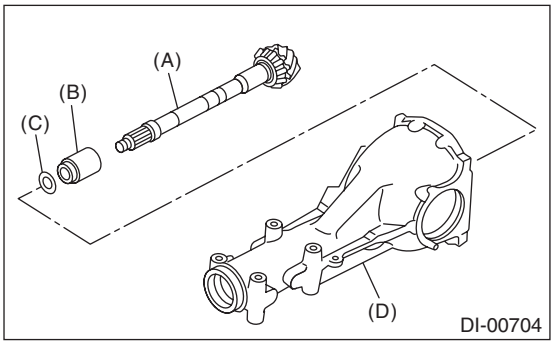
(2) Measure the clearance “N” between the end of ST2 and the end surface of ST1 by using a thickness gauge.

NOTE:
Make sure there is no clearance between the differential carrier and ST2.
ST1 398507702 DUMMY SHAFT
ST2 398507701 DIFFERENTIAL CARRIER GAUGE



(3) Obtain the thickness of pinion height adjusting washer to be inserted from the following formula, and replace the temporarily installed washer with this one.
T = To + N – (H × 0.01) – 0.20 mm (0.0079 in)

T	Thickness of pinion height adjusting washer mm (in)	
To	Thickness of washer temporarily inserted mm (in)	
N	Clearance of thickness gauge mm (in)	
H	Figure marked on drive pinion head	
Memo:		



(Example of calculation)
To = 3.39 mm (0.1335 in)
N = 0.24 mm (0.0094 in)
H = + 1
T = 3.39 mm (0.1335 in) + 0.24 mm (0.0094 in) – 0.01 mm (0.0004 in) – 0.20 mm (0.0079 in) = 3.42 mm (0.1346 in)
Result: Thickness = 3.42 mm (0.1346 in)
Therefore use washer 383605200.

Pinion height adjusting washer	
Part No.	Thickness mm (in)
383495200	3.09 (0.1217)

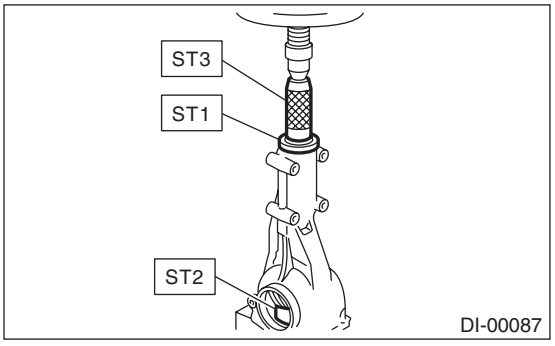
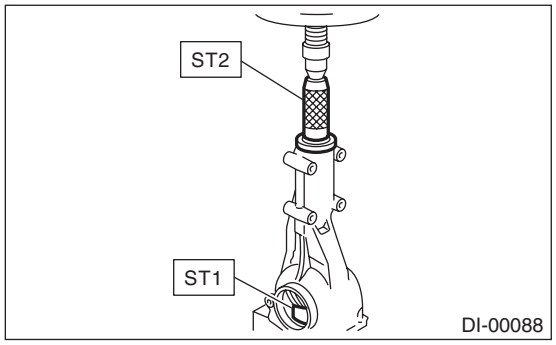
3) Install the selected pinion height adjusting washer on drive pinion, and press the rear bearing cone into position with ST.
ST 398177700 INSTALLER



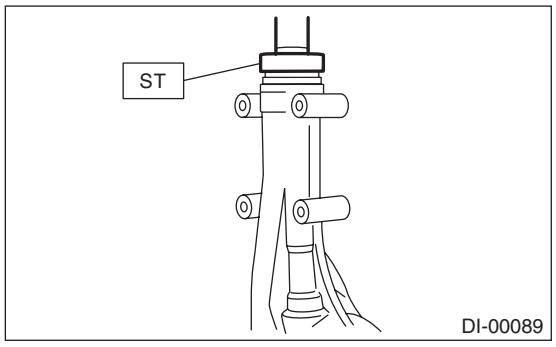
4) Insert the drive pinion into the differential carrier, and install the preselected preload adjusting spacer and washer.



(A) Drive pinion
(B) Preload adjusting spacer
(C) Preload adjusting washer
(D) Differential carrier

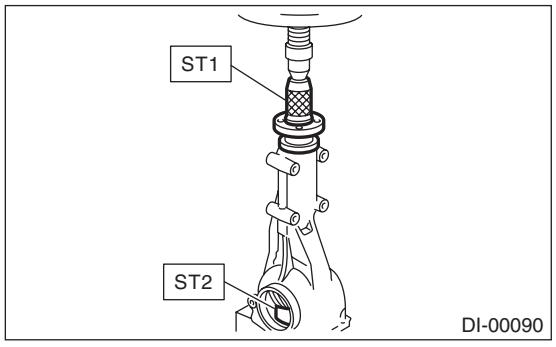
5) Press-fit the front bearing cone with ST1, ST2 and ST3.
ST1 398507703 DUMMY COLLAR
ST2 399780104 WEIGHT
ST3 899580100 INSTALLER

6) Insert the spacer, then press-fit the pilot bearing with ST1 and ST2.



NOTE:
Use a new pilot bearing.
ST1 399780104 WEIGHT
ST2 899580100 INSTALLER

7) Using the ST, install the oil seal.

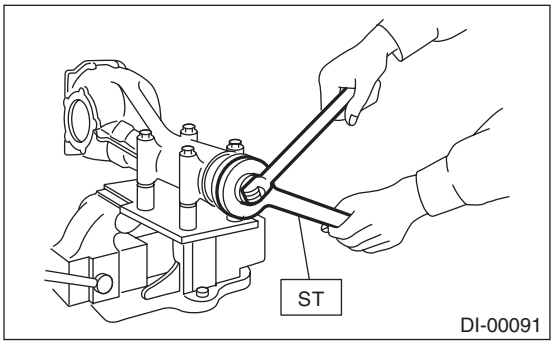


NOTE:
- Use a new oil seal.
- Press-fit until the oil seal end comes 1 mm (0.04 in) inward from end of carrier.
- Apply differential gear oil to the oil seal lips.

ST 498447120 INSTALLER

8) Press-fit the companion flange with ST1 and ST2.

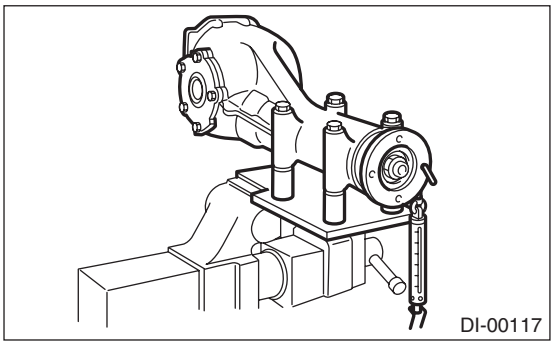
NOTE:
Be careful not to damage the bearing.
ST1 899874100 INSTALLER
ST2 399780104 WEIGHT



9) Apply seal material on the drive pinion shaft thread and new self-locking nut seat.

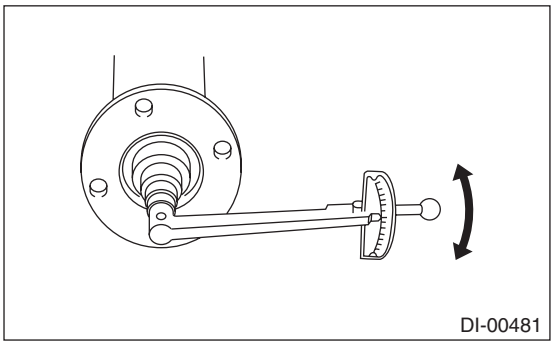
Seal material:
THREE BOND 1324 (Part No. 004403042) or equivalent

10) Attach the new self-locking nut and use the ST to fix the companion flange in place, then tighten the self-locking nut.



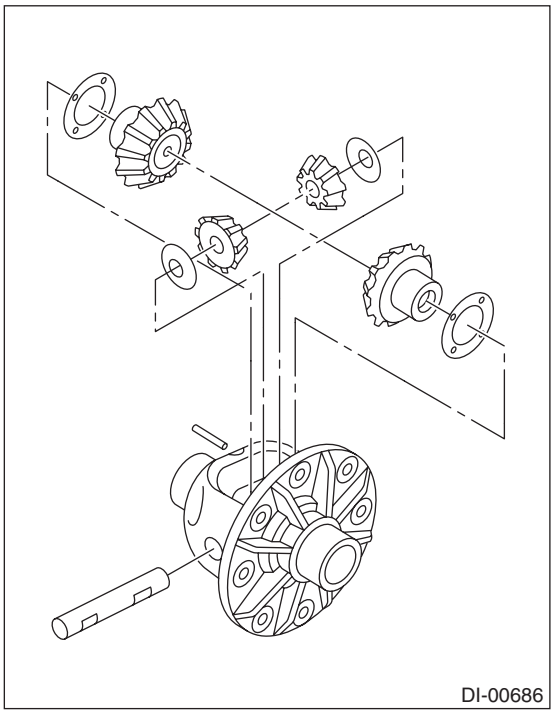
Tightening torque:
181.5 N·m (18.5 kgf-m, 133.9 ft-lb)

ST 498427200 FLANGE WRENCH

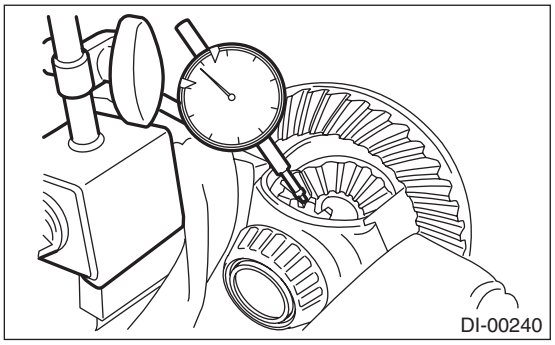


11) Check the initial torque or initial load.

Initial load:
18.1 — 38.8 N (1.8 — 4.0 kgf, 4.1 — 8.7 lbf)



Initial torque:
0.69 — 1.47 N·m (0.07 — 0.15 kgf-m, 0.51 — 1.08 ft-lb)



12) Assembling differential case
(1) Install the side gears and pinion mate gears, with their side gear thrust washers, pinion mate gear washer, and pinion mate shaft, into the differential case.

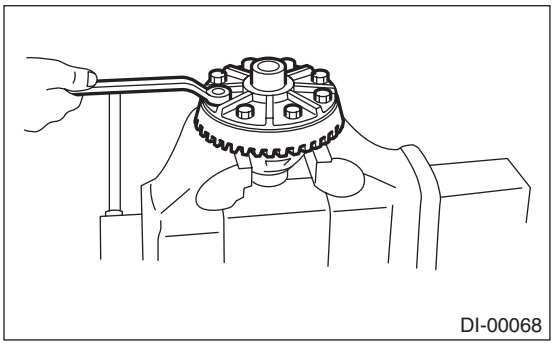
NOTE:
• Apply gear oil on both sides of the washer and on the pinion mate shaft before installing.
• Insert the pinion mate shaft into the differential case by aligning the pin holes.

(2) Measure the side gear backlash.

Side gear backlash:
0.10 — 0.20 mm (0.004 — 0.008 in)

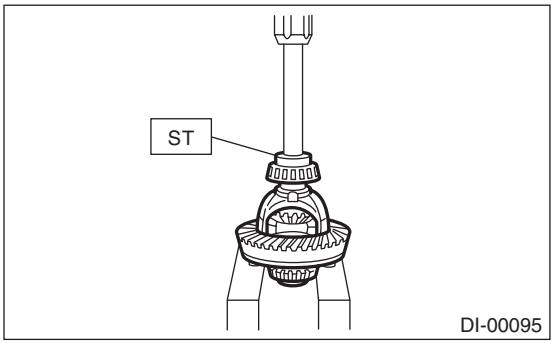
(3) Adjust the backlash as specified by selecting side gear thrust washer.

Side gear thrust washer	
Part No.	Thickness mm (in)
383445201	0.75 — 0.80 (0.0295 — 0.0315)
383445202	0.80 — 0.85 (0.0315 — 0.0335)
383445203	0.85 — 0.90 (0.0335 — 0.0354)



(4) Check the condition of rotation after applying oil to the gear tooth surfaces and washer surfaces.
(5) Drive the pinion shaft lock pin into the differential case.

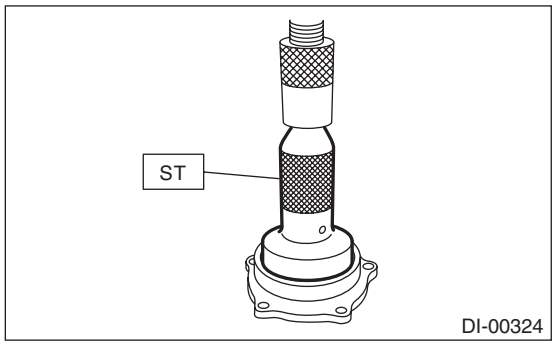
NOTE:
Use a new pinion shaft lock pin.
ST 899904100 STRAIGHT PIN REMOVER
13) Install the driven gear to the differential case.



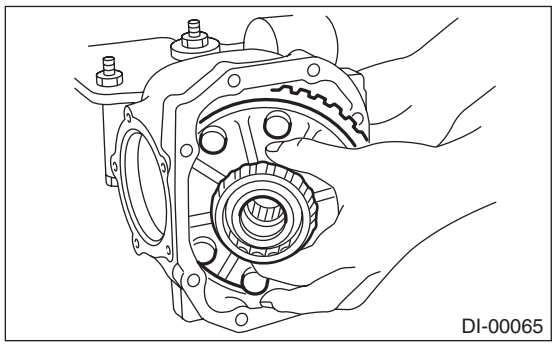
NOTE:
• Before installing bolts, apply seal material to bolt threads.

Seal material:
THREE BOND 1324 (Part No. 004403042) or equivalent
• Make sure there is no clearance between the differential case and driven gear.
• Tighten opposing bolts in order.

Tightening torque:
103 N·m (10.5 kgf-m, 76.0 ft-lb)



14) Using the ST, press-fit the side bearing to the differential case.
ST 398487700 DRIFT

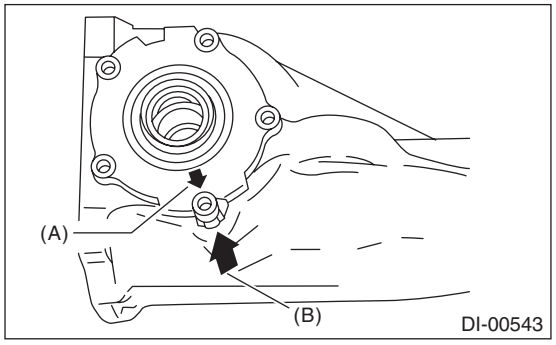


15) Using the ST, press-fit the side bearing outer race to the side retainer.

CAUTION:
Make sure that the bearing outer races and cones are properly assembled.
ST 398417700 DRIFT

16) Side retainer shim adjustment
(1) The hypoid driven gear backlash and side bearing preload can be adjusted by the side retainer shim thickness.
(2) Install the differential case assembly into differential carrier in the reverse order of disassembly.

NOTE:
Be careful not to hit the teeth of hypoid driven gear against the differential carrier.

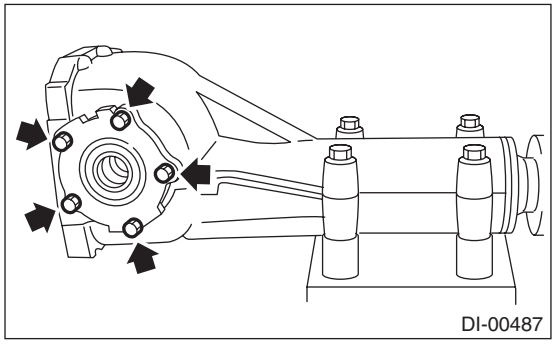


(3) Install the side retainer shim.

NOTE:
• Be careful not to mix up the side retainer shim RH and LH.
• Replace broken or corroded side retainer shims with a new part of the same thickness.

Side retainer shim	
Part No.	Thickness mm (in)
383475201	0.20 (0.0079)
383475202	0.25 (0.0098)
383475203	0.30 (0.0118)
383475204	0.40 (0.0157)
383475205	0.50 (0.0197)

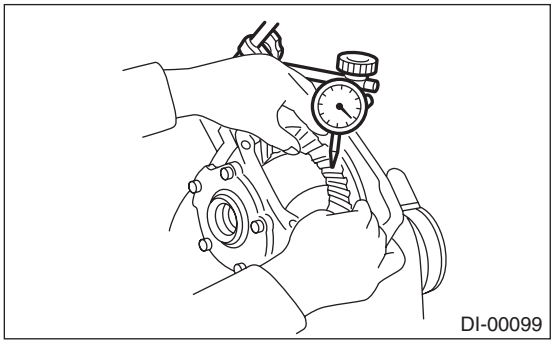
(4) Align the arrow mark on the differential carrier with the arrow mark on the side retainer when installing the side retainer.



NOTE:
Be careful that the side bearing outer race is not damaged by the bearing roller.

(A) Arrow mark (on the side retainer)
(B) Arrow mark (on the differential carrier)

(5) Tighten the side retainer bolts.

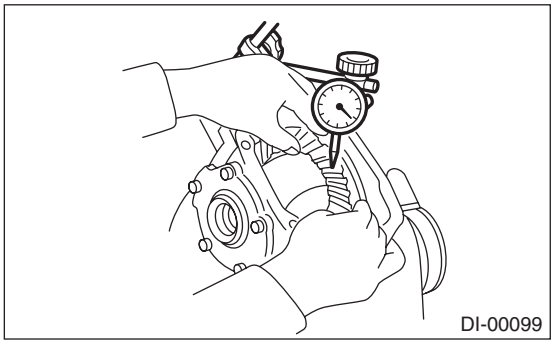


Tightening torque:
10.5 N·m (1.1 kgf-m, 7.7 ft-lb)

(6) Measure the hypoid driven gear to drive pinion backlash. Set the magnet base on differential carrier. Align the contact point of dial gauge with tooth face of hypoid driven gear, and move hypoid driven gear while holding drive pinion still. Read the value indicated on dial gauge. If the backlash is outside the standard range, adjust the side retainer shim by the following method.
• When backlash is less than 0.1 mm (0.004 in):
Reduce the thickness of shim on the back side of the hypoid driven gear and increase the thickness of shims on the teeth side of the hypoid driven gear.

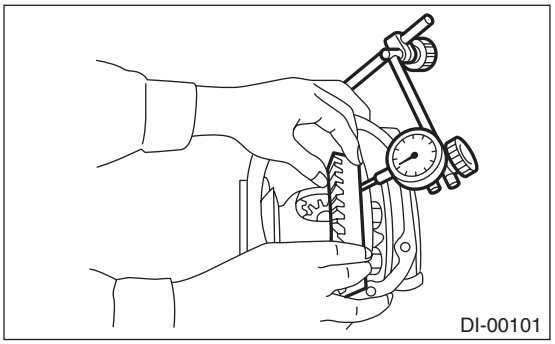
• When backlash exceeds 0.2 mm (0.008 in): Increase the thickness of shim on the back side of the hypoid driven gear and reduce the thickness of shims on the teeth side of the hypoid driven gear.

Backlash:
0.10 — 0.20 mm (0.004 — 0.008 in)



(7) Measure the total preload of the drive pinion. If the total preload is outside the specification range, adjust the thickness of side retainer shims, increasing/reducing both shims by an even amount at a time.

Total preload:
20.7 — 54.4 N (2.1 — 5.5 kgf, 4.7 — 12.2 lbf)



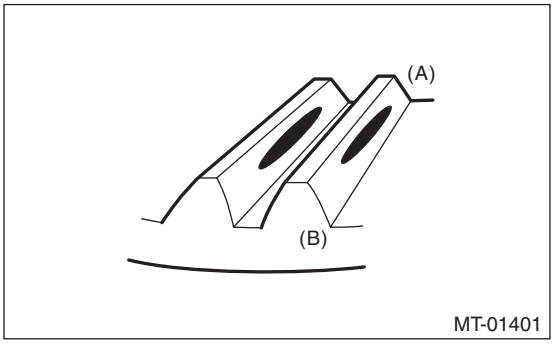
17) Recheck the hypoid driven gear to drive pinion backlash.

Backlash:
0.10 — 0.20 mm (0.004 — 0.008 in)

18) Check pinion and hypoid driven gears rotate smoothly and make sure of the hypoid driven gear runout on its back surface. If the hypoid driven gear runout on its back surface exceeds the specification, check for any foreign objects between the hypoid driven gear and differential case, and for any deformation of the differential case or hypoid driven gear.

Hypoid driven gear back surface runout:
0.05 mm (0.002 in)

19) Check and adjustment of the tooth contact of hypoid driven gear and drive pinion

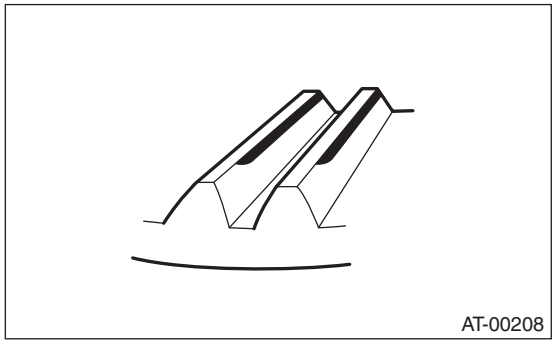


(1) Apply lead-free red dye evenly on the both sides of three to four teeth of the hypoid driven gear. Check the contact pattern after rotating the hypoid driven gear several revolutions back and forth until a definite contact pattern appears on the hypoid driven gear.

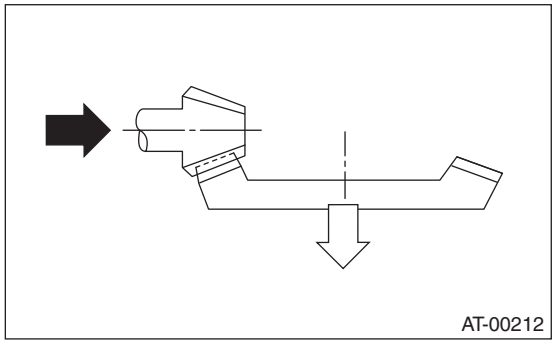
(2) When the contact pattern is not correct, readjust.

NOTE:
Be sure to wipe off the lead-free red dye completely after the adjustment is completed.

• Correct tooth contact



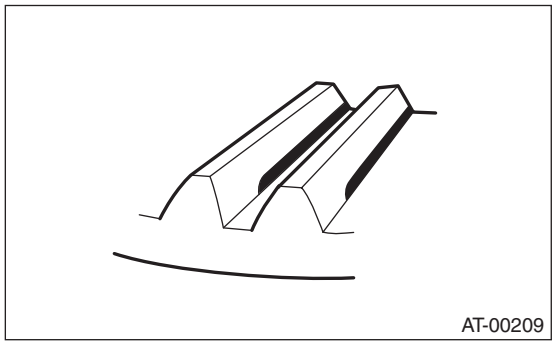
Check item: Tooth contact pattern is slightly shifted toward toe side under no-load rotation. (When driving, it moves towards the heel side.)



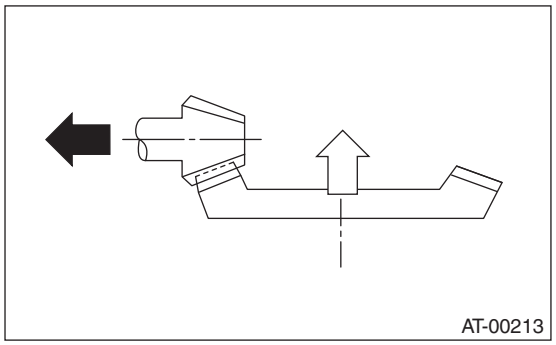
(A) Toe side
(B) Heel side

- Face contact

Check item: Backlash is too large.
Contact pattern

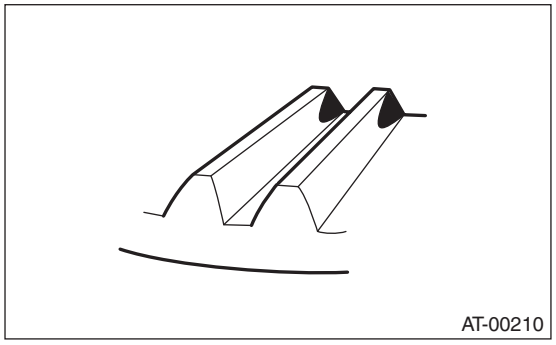


Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.

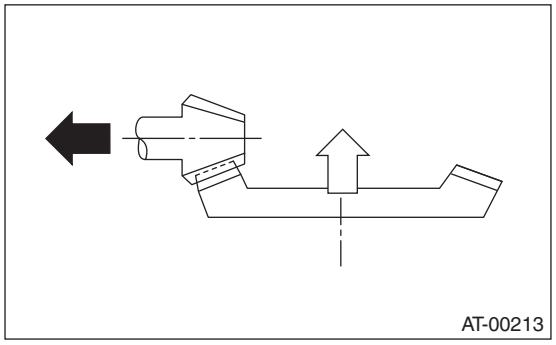


- Flank contact

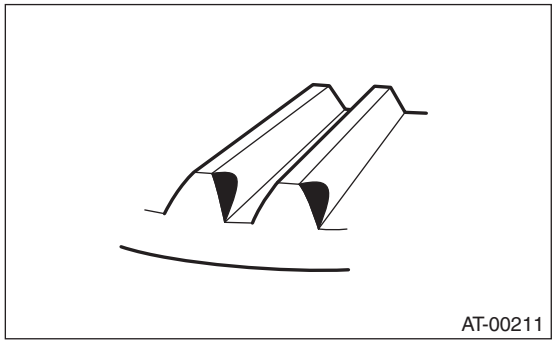
Check item: Backlash is too small.
Contact pattern



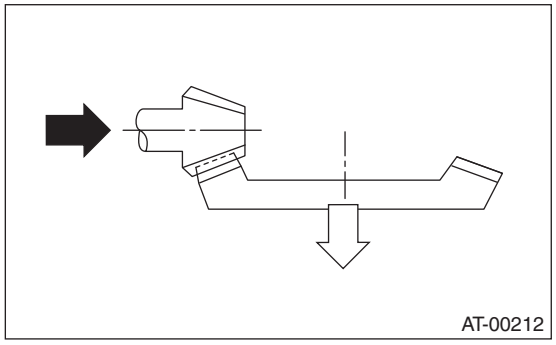
Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear.



- Toe contact (inside contact)

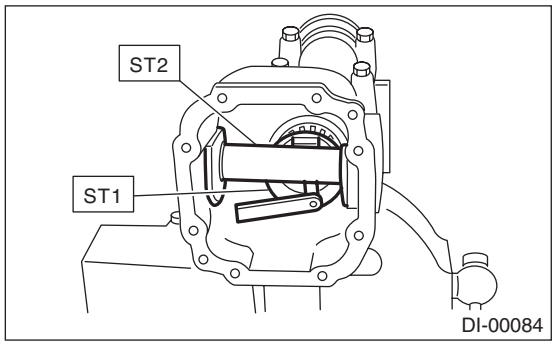


Check item: Teeth contact area is too small.
Contact pattern



Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear.

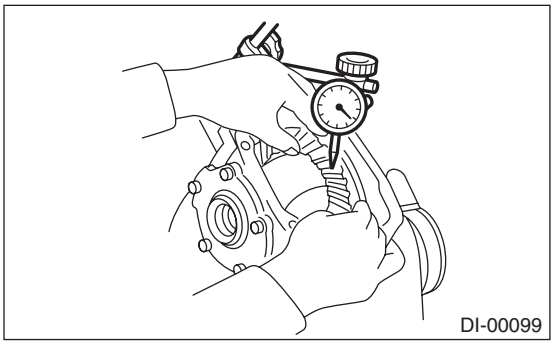
• Heel contact (outside end contact)
Check item: Teeth contact area is too small.
Contact pattern



Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.

20) If proper tooth contact is not obtained, readjust the drive pinion height by changing the RH and LH side retainer shims and the hypoid gear backlash.
(1) Drive pinion height

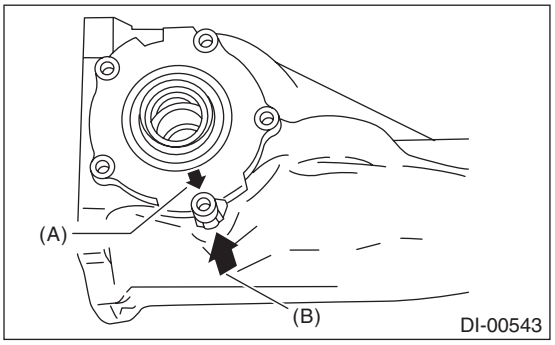
ST1 398507702 DUMMY SHAFT
ST2 398507701 DIFFERENTIAL CARRIER GAUGE



T = To + N – (H × 0.01) – 0.20 mm (0.0079 in)

T	Thickness of pinion height adjusting washer mm (in)	
To	Thickness of washer temporarily inserted mm (in)	
N	Clearance of thickness gauge mm (in)	
H	Figure marked on drive pinion head	
Memo:		

(2) Hypoid gear backlash

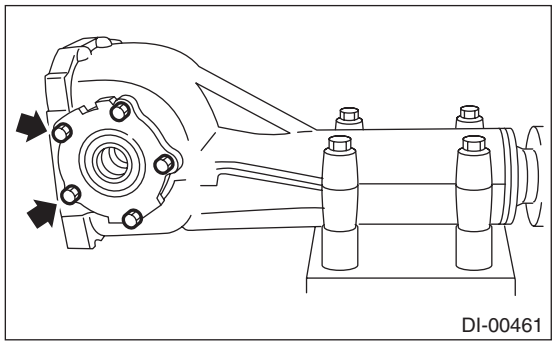


Backlash:
0.10 — 0.20 mm (0.004 — 0.008 in)

21) Remove the RH and LH side retainers.
22) Install the O-ring to left and right side retainers.

NOTE:
Use new O-rings.

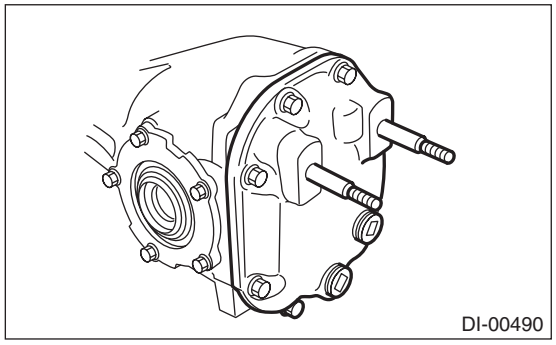
23) Install the oil seal to the side retainers on both sides. <Ref. to DI-76, REPLACEMENT, Rear Differential Side Oil Seal.>
24) Align the arrow mark on the differential carrier with the arrow mark on the side retainer when installing the side retainer.



(A) Arrow mark (on the side retainer)
(B) Arrow mark (on the differential carrier)

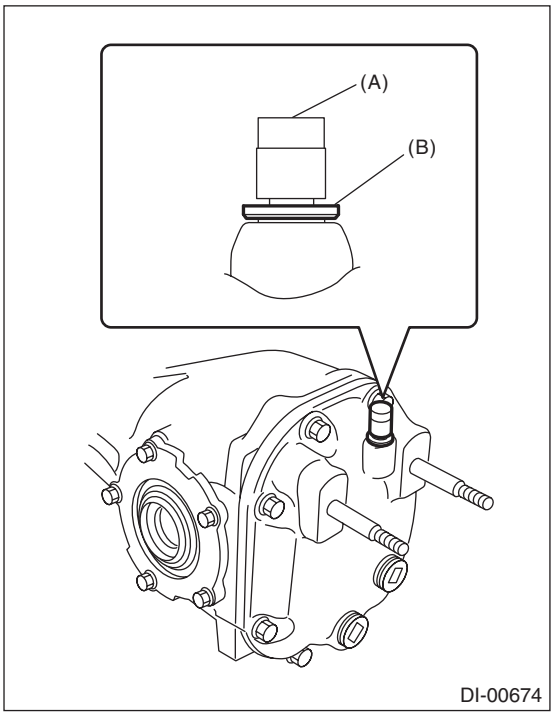
25) Apply liquid gasket to the bolts indicated by arrows, and tighten the bolts.

Liquid gasket:
THREE BOND 1110F or equivalent



Tightening torque:
10.5 N·m (1.1 kgf-m, 7.7 ft-lb)

26) Install the gasket and rear cover, and tighten the bolts to specified torque.



NOTE:
Use a new gasket.

Tightening torque:
29.5 N·m (3.0 kgf-m, 21.8 ft-lb)

27) Install the air breather cap.

NOTE:
When installing the air breather cap, do not tap section (A). Be sure to tap section (B) to install.

28) Install the drain plug.

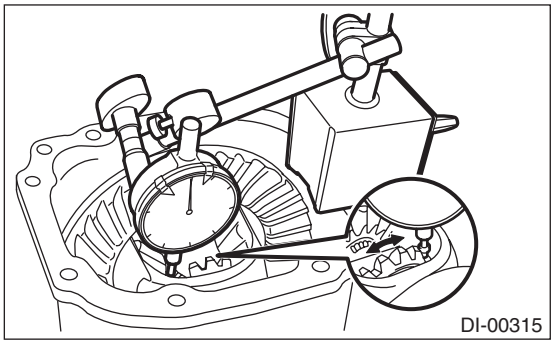
NOTE:
Apply liquid gasket to the drain plug.

Liquid gasket:
THREE BOND 1105 (Part No. 004403010) or equivalent

Tightening torque:
49 N·m (5.0 kgf-m, 36.1 ft-lb)

29) Install the filler plug.

NOTE:
After installing the rear differential assembly to the vehicle, fill the gear oil, then apply liquid gasket, and tighten to the specified torque. <Ref. to DI-22, REPLACEMENT, Differential Gear Oil.>

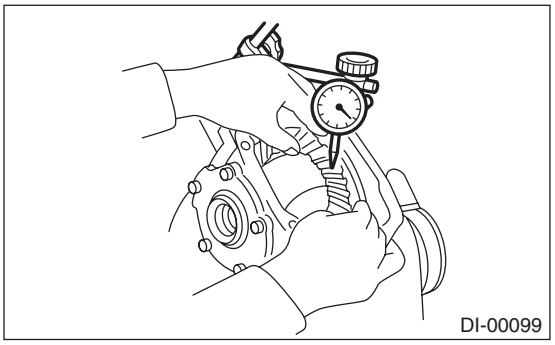


E: INSPECTION

Wash all the disassembled parts clean, and examine them for wear, damage and other defects. Repair or replace the defective parts as necessary.
1) Hypoid driven gear and drive pinion
• If there is evidently an abnormal tooth contact, find out the cause and adjust until the teeth contact correctly. Replace the gear if there is an excessive worn or an incapable adjustment.
• If crack, cutout or seizure is found, replace the parts as a set. Slight damage of some teeth can be corrected by oil stone or the like.
2) Side gear and pinion mate gear
• Replace if cracks, scoring or other defects are evident on the tooth surface.
• Replace if thrust washer contact surface is worn or scored. Slight damages of the surface can be corrected by oil stones or equivalent.
3) Bearing
Replace if seizure, peeling, wear, rust, dragging during rotation, noise or other defect is evident.
4) Thrust washer of the side gear and pinion mate gear
Replace if seized, flawed, abnormally worn or having other defects.
5) Oil seal
Replace if deformed or damaged, and at every disassembling.
6) Differential carrier
Replace if the bearing bores are worn or damaged.
7) Differential case
Replace if sliding surfaces are abnormally worn, burned, or cracked.
8) Companion flange
Replace if the oil seal lip contact surface shows cracking.

1. SIDE GEAR BACKLASH

Using a dial gauge, check the backlash of side gear.

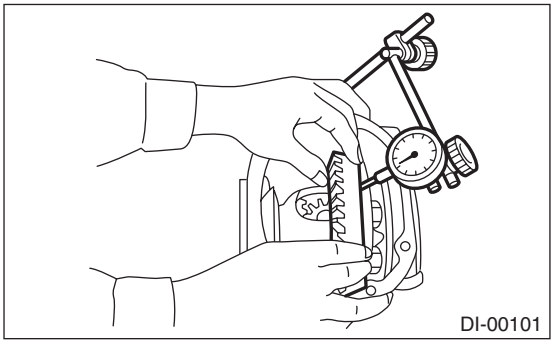


Side gear backlash:
0.10 — 0.20 mm (0.004 — 0.008 in)
If the side gear backlash is not within the specification, select the side gear thrust washer and adjust the side gear backlash as specified.

DI-00315

2. HYPOID DRIVEN GEAR BACKLASH

Using a dial gauge, check the backlash of hypoid driven gear.



Hypoid driven gear backlash:
0.10 — 0.20 mm (0.004 — 0.008 in)
If the hypoid driven gear backlash is outside the specification range, adjust the side bearing preload and repair if necessary.

DI-00099

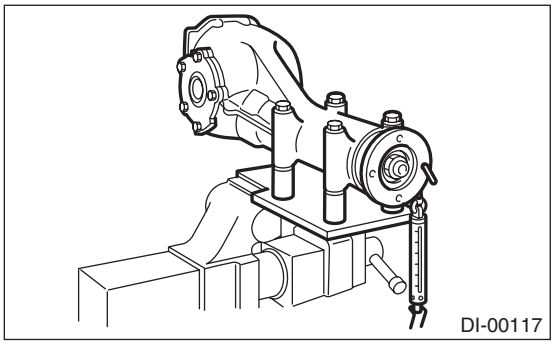
3. HYPOID DRIVEN GEAR RUNOUT ON ITS BACK SURFACE

Using a dial gauge, check the hypoid driven gear back surface runout.

Hypoid driven gear back surface runout:
0.05 mm (0.002 in)
If the hypoid driven gear runout on its back surface exceeds the limit, replace the hypoid driven gear.

DI-00101

4. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION

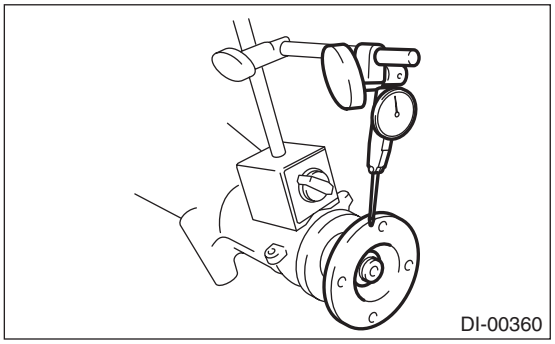


Inspect the tooth contact between the hypoid driven gear and drive pinion. <Ref. to DI-32, ASSEMBLY, Rear Differential (T-type).>

5. TOTAL PRELOAD

Using a spring scale, check the total preload.

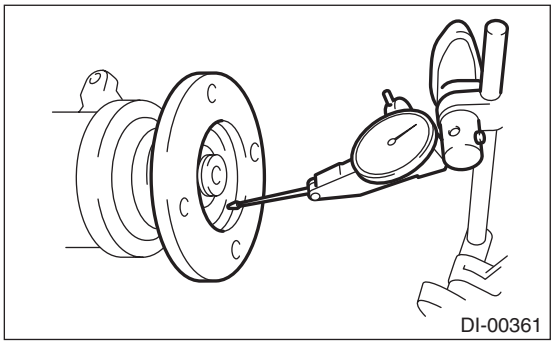
Total preload:
20.7 — 54.4 N (2.1 — 5.5 kgf, 4.7 — 12.2 lb)



If the total preload is not within the specification, adjust the side retainer shim.

DI-00117

6. COMPANION FLANGE



1) If rust or dirt is attached to the companion flange, remove them.
2) Set a dial gauge at a companion flange surface (mating surface of propeller shaft and companion flange), and then measure the companion flange runout.

Limit of runout:
0.08 mm (0.003 in)

DI-00360

3) Set the gauge inside of the companion flange, and measure the runout.

Limit of runout:
0.08 mm (0.003 in)

DI-00361

4) If either runout exceeds the limit, move the phase of companion flange and drive pinion 90° each, and find the point where the runout is within the limit.
5) If the runout exceeds the limit after changing the phase, replace the companion flange and recheck the runout.
6) If the runout exceeds the limit after replacing the companion flange, the drive pinion may be assembled incorrectly or bearing is faulty.

F: ADJUSTMENT

1. SIDE GEAR BACKLASH

Adjust the side gear backlash. <Ref. to DI-32, ASSEMBLY, Rear Differential (T-type).>

2. HYPOID DRIVEN GEAR BACKLASH

Adjust hypoid driven gear backlash. <Ref. to DI-32, ASSEMBLY, Rear Differential (T-type).>

3. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION

Adjust the tooth contact between hypoid driven gear and drive pinion gear. <Ref. to DI-32, ASSEMBLY, Rear Differential (T-type).>

4. TOTAL PRELOAD

Adjust the side retainer shim. <Ref. to DI-32, ASSEMBLY, Rear Differential (T-type).>

5. Rear Differential (VA-type)

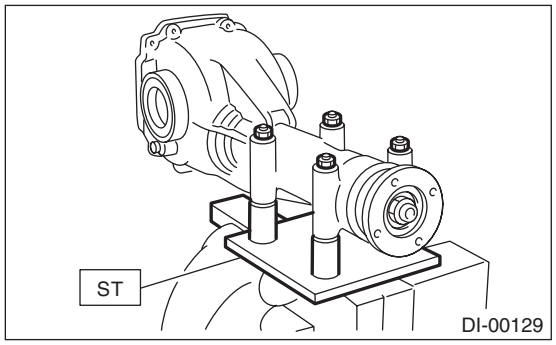
A: REMOVAL

The removal procedure for VA-type is included in “REMOVAL” for T-type. <Ref. to DI-26, REMOVAL, Rear Differential (T-type).>

B: INSTALLATION

The installation procedure for VA-type is included in “INSTALLATION” for T-type. <Ref. to DI-28, INSTALLATION, Rear Differential (T-type).>

C: DISASSEMBLY

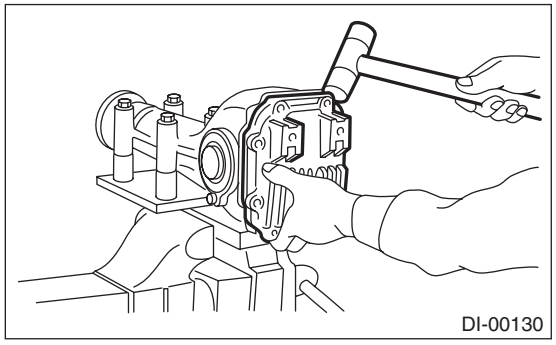


1. VA1-TYPE

To detect the real cause of trouble, inspect the following items before disassembling.

• Tooth contact and backlash between hypoid driven gear and drive pinion

1) Set the ST on vise and install the differential assembly to ST.

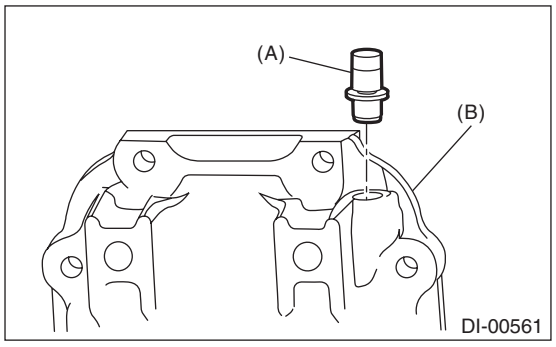


ST 398217700 ATTACHMENT SET

2) Remove the drain plug and filler plug.

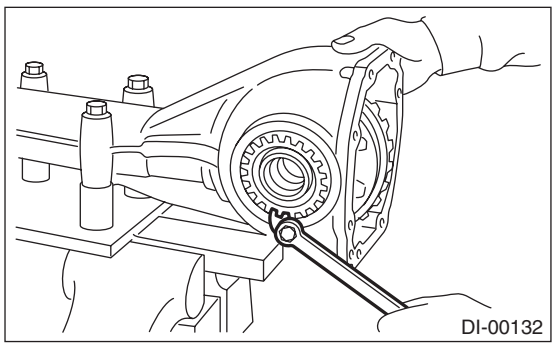
3) Remove the rear cover by removing retaining bolts.

NOTE:
Remove it by tapping with a plastic hammer.



4) Remove the air breather cap.

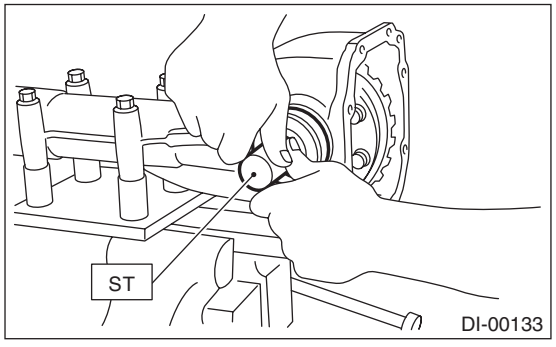
NOTE:



• Do not attempt to remove the air breather cap unless necessary.

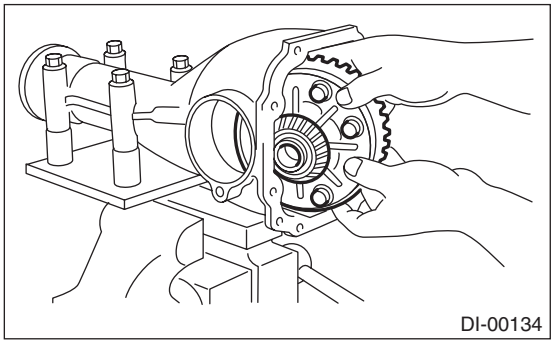
• Whenever the air breather cap is removed, replace it with a new part.

(A) Air breather cap
(B) Rear cover



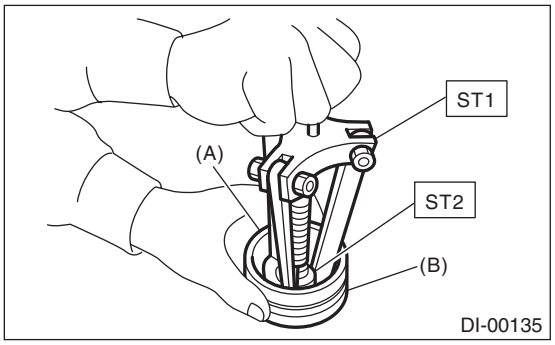
5) Remove the lock plate RH and LH.

6) Remove the side retainer RH and LH with ST.



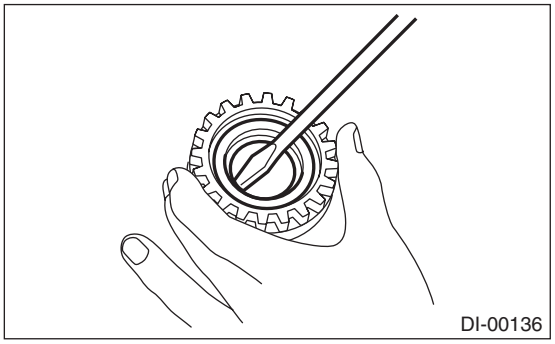
NOTE:
When keeping the retainers aside, use labels etc. to avoid confusing the left and right.

ST 18630AA010 WRENCH COMPL RETAINER



7) Pull out the differential case assembly from differential carrier.

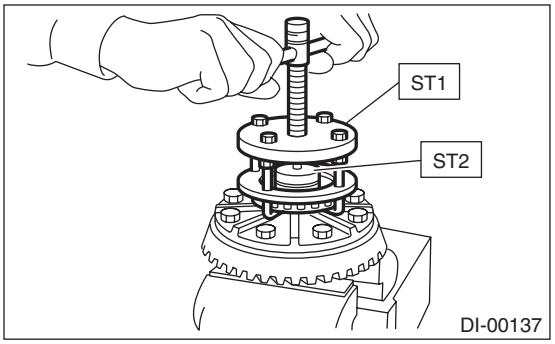
NOTE:
Be careful not to hit the teeth of hypoid driven gear against the differential carrier.



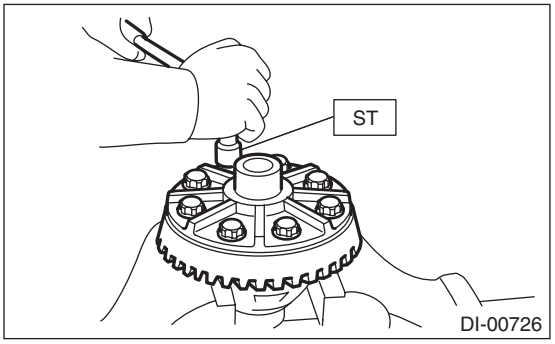
8) Remove the bearing race from side retainer RH and LH with ST1 and ST2.
ST1 499705401 PULLER ASSY
ST2 499705404 SEAT

(A) Bearing race
(B) Side retainer

9) Remove the oil seal from RH and LH side retainers.

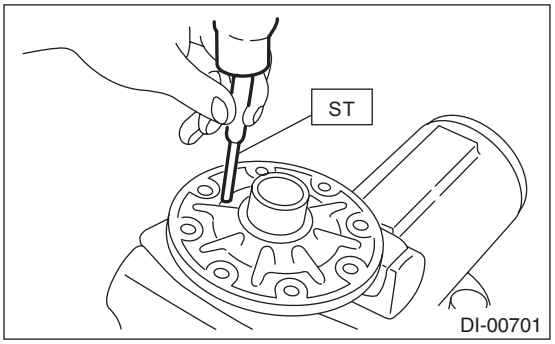


NOTE:
Perform this operation only when changing oil seal.



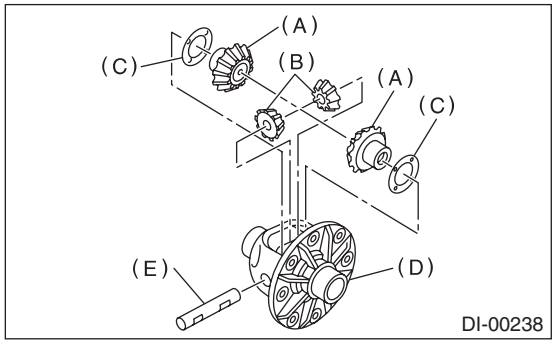
10) Remove the O-rings.

11) Extract the bearing cone with ST1 and ST2.

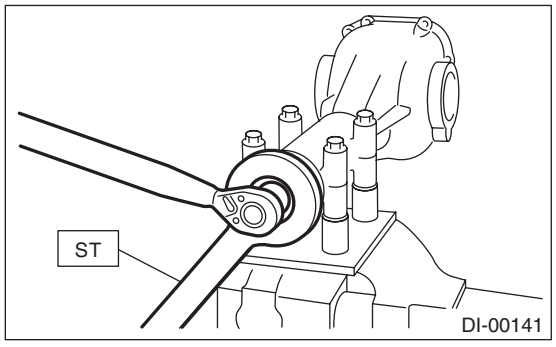


NOTE:
• Do not attempt to disassemble the parts unless necessary.
• Set the puller so that its claws catch the edge of the bearing cone.
• Store so that the right and left side bearing races and cones are not mixed together.
ST1 899524100 PULLER SET
ST2 399520105 SEAT

12) Using the ST, loosen the hypoid driven gear bolt and remove the hypoid driven gear.
ST 18270KA020 SOCKET (E20)

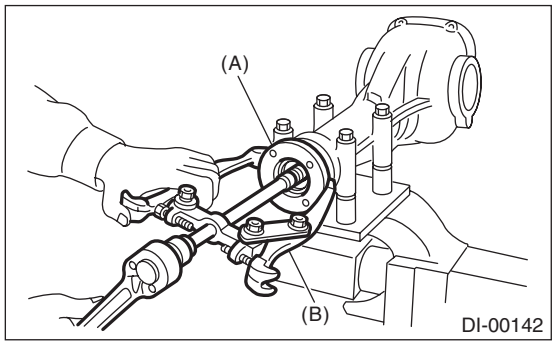


13) Remove the spring pin from hypoid driven gear side using ST.
ST 899904100 STRAIGHT PIN REMOVER



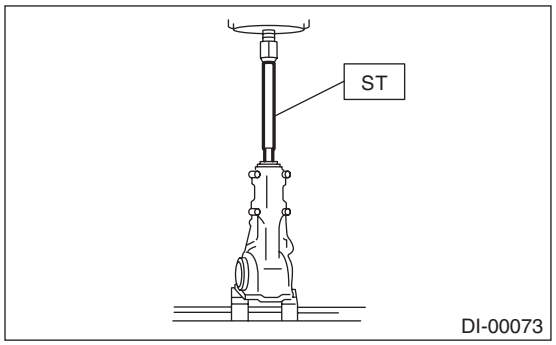
14) Draw out the pinion mate shaft and remove pinion mate gears, side gears and side gear thrust washers.

NOTE:
The gears and washers should be marked with RH or LH, front or rear, or kept separately.



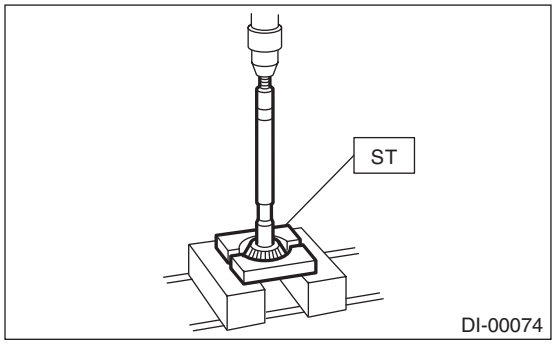
(A) Side gear
(B) Pinion mate gear
(C) Side gear thrust washer
(D) Differential case
(E) Pinion mate shaft

15) Remove the self-locking nut while securing the companion flange with ST.
ST 498427200 FLANGE WRENCH



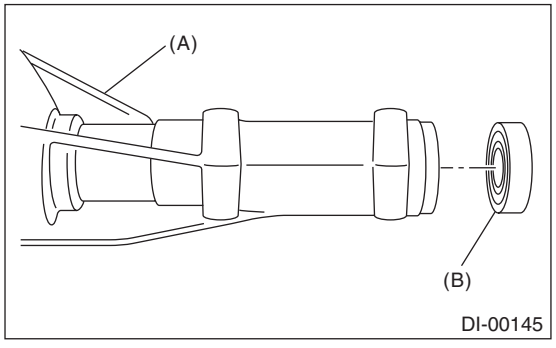
16) Extract the companion flange with a puller.

(A) Companion flange
(B) Puller



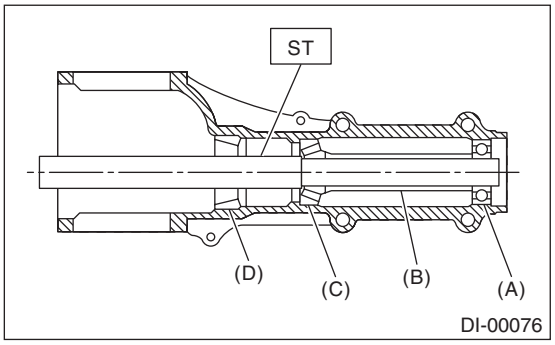
17) Press the end of drive pinion shaft using ST and remove the rear bearing cone, pinion height adjusting washer, preload adjusting spacer and washer.

NOTE:
Hold the drive pinion so as not to drop it.
ST 398467700 DRIFT

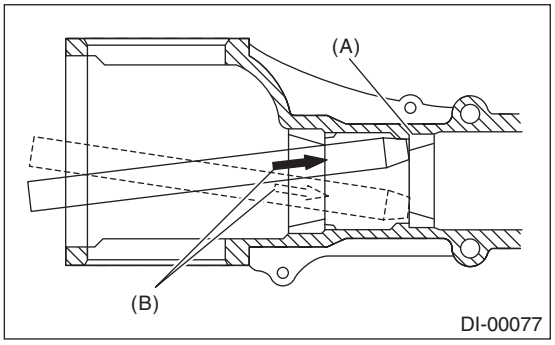


18) Remove the rear bearing cone from drive pinion by supporting the cone with ST.

NOTE:
Place the replacer so that its center-recessed side faces the bearing cone.
ST 498515500 REPLACER



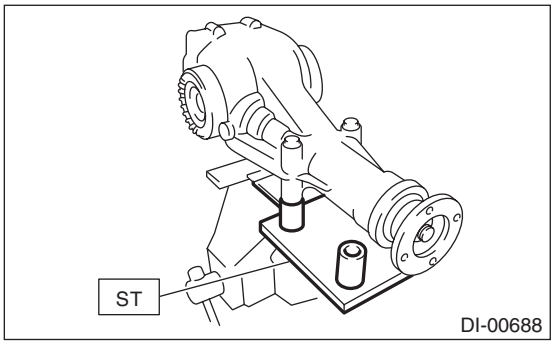
19) Remove the front oil seal from differential carrier using ST.
ST 398527700 PULLER ASSY



(A) Differential carrier
(B) Front oil seal

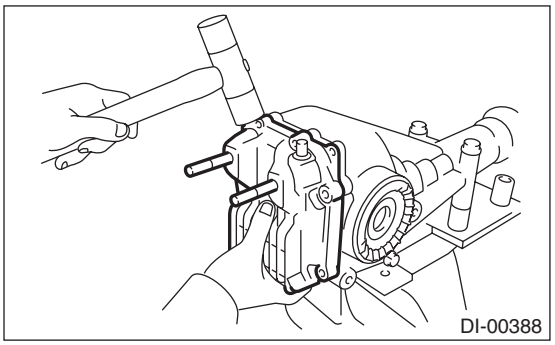
20) Remove the pilot bearing together with the front bearing cone and spacer using the ST.
ST 398467700 DRIFT

(A) Pilot bearing
(B) Spacer
(C) Front bearing
(D) Rear bearing race



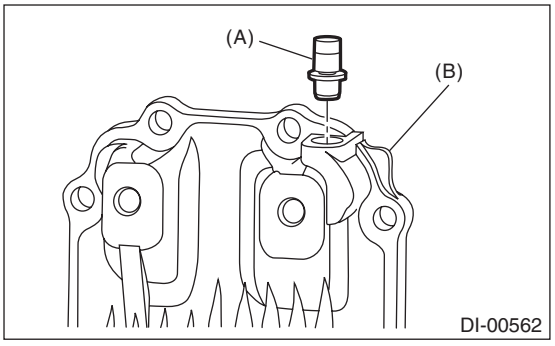
21) When replacing the bearings, tap out the front bearing race and rear bearing race in this order using a brass bar to remove them.

(A) 2 cutout portions along diagonal lines
(B) Tap alternately with brass bar.



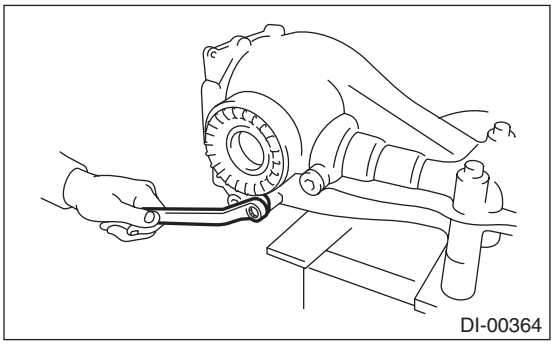
2. VA2-TYPE

To detect the real cause of trouble, inspect the following items before disassembling.
• Tooth contact and backlash between hypoid driven gear and drive pinion
1) Set the ST on vise and install the differential assembly to ST.
ST 398217700 ATTACHMENT SET



2) Remove the drain plug and filler plug.
3) Remove the rear cover by removing retaining bolts.

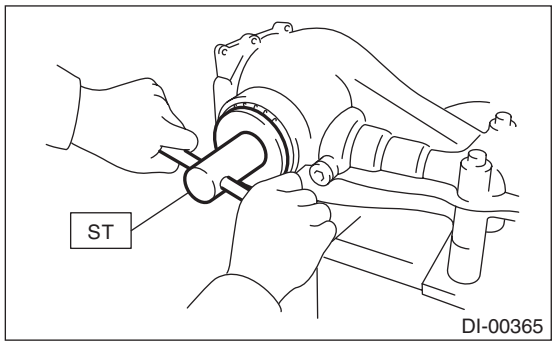
NOTE:
Remove it by tapping with a plastic hammer.



4) Remove the air breather cap.

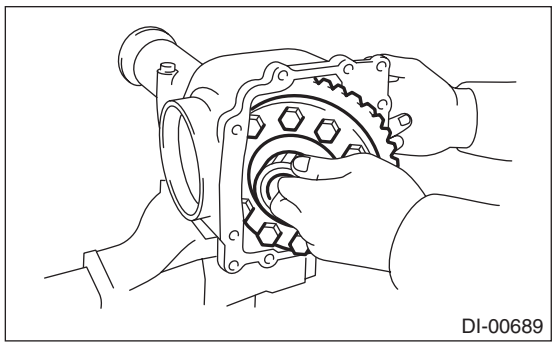
NOTE:
• Do not attempt to remove the air breather cap unless necessary.
• Whenever the air breather cap is removed, replace it with a new part.

(A) Air breather cap
(B) Rear cover



5) Remove the lock plate RH and LH.

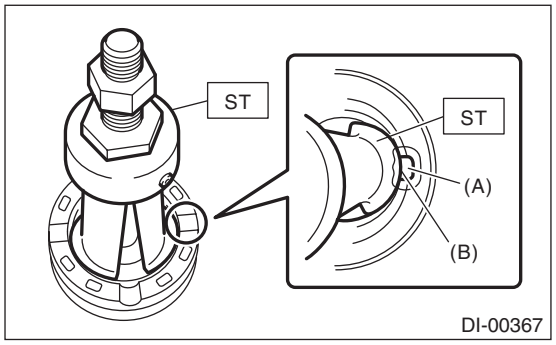
6) Remove the side retainer RH and LH with ST.



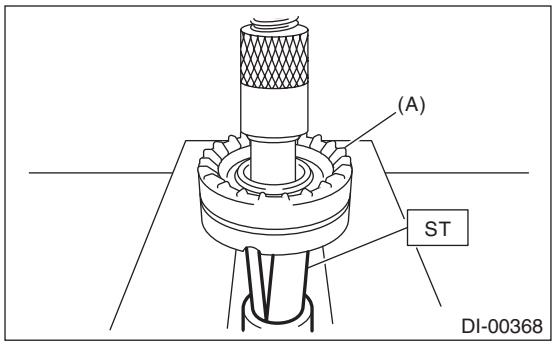
NOTE:
When keeping the retainers aside, use labels etc. to avoid confusing the left and right.

ST 18630AA010 WRENCH COMPL RETAINER

7) Pull out the differential case assembly from differential carrier.



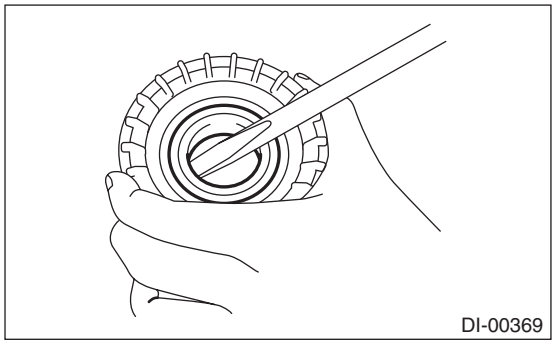
NOTE:
Be careful not to hit the teeth of hypoid driven gear against the differential carrier.



8) Remove the bearing race from side retainer RH and LH with ST and the press.

NOTE:
- Be sure to turn the bolt of the ST by hand.
- Set the puller so that its claws catch the groove of side retainer.

ST 18758AA000 PULLER

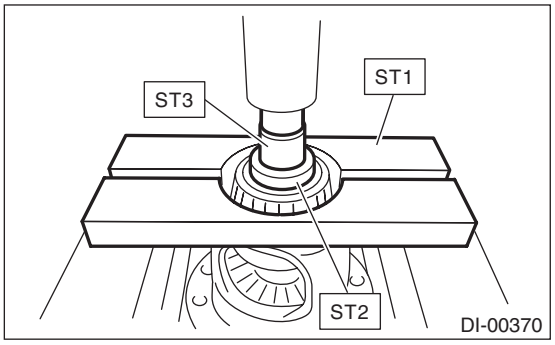


(A) Groove
(B) Claw

(A) Side retainer

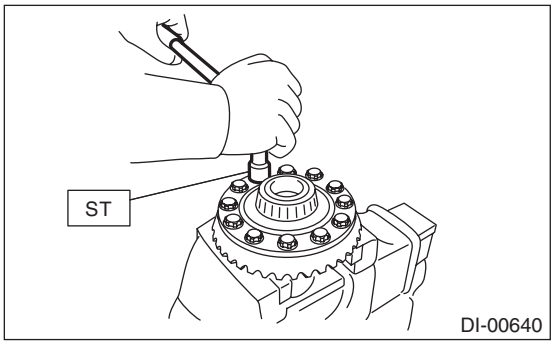
9) Remove the oil seal from RH and LH side retainers.

NOTE:
Perform this operation only when changing oil seal.



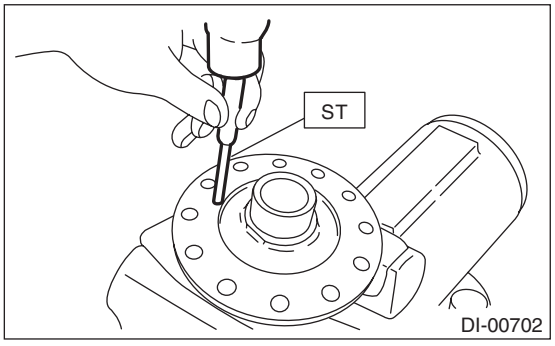
10) Remove the O-rings.

11) Extract the bearing cone with ST1, ST2 and ST3.



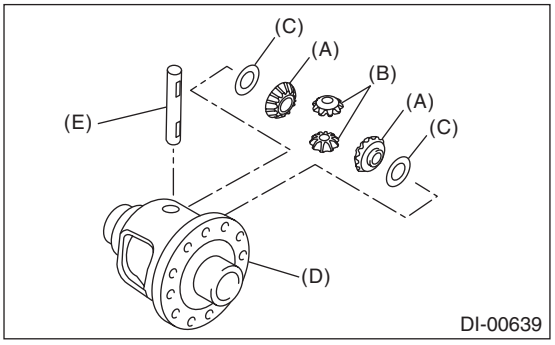
NOTE:
• Do not attempt to disassemble the parts unless necessary.
• Never mix up the RH and LH bearing races and cones.

ST1 498077000 REMOVER
ST2 399520105 SEAT
ST3 899864100 REMOVER



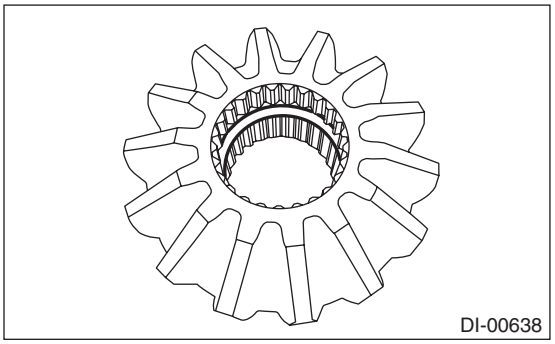
12) Using the ST, loosen the hypoid driven gear bolt and remove the hypoid driven gear.

ST 18270KA020 SOCKET (E20)



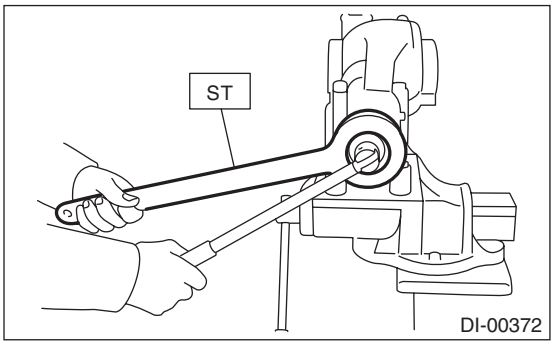
13) Remove the spring pin from hypoid driven gear side using ST.

ST 899904100 STRAIGHT PIN REMOVER



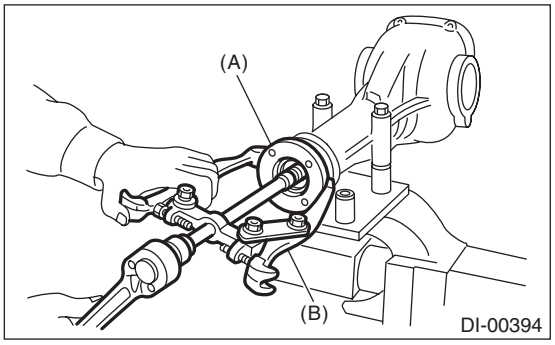
14) Draw out the pinion mate shaft and remove pinion mate gears, side gears and side gear thrust washers.

NOTE:
The gears and washers should be marked with RH or LH, front or rear, or kept separately.



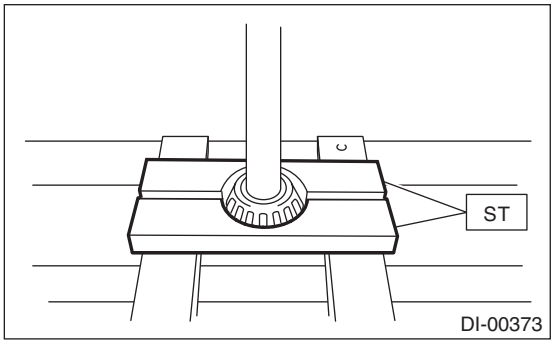
(A) Side gear
(B) Pinion mate gear
(C) Side gear thrust washer
(D) Differential case
(E) Pinion mate shaft

15) Remove the circlip from the side gear.

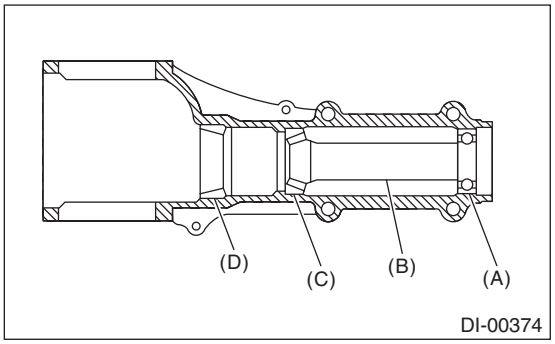


16) Remove the self-locking nut while securing the companion flange with ST.

ST 498427200 FLANGE WRENCH



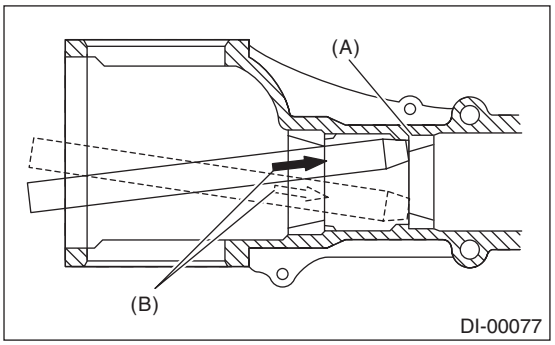
17) Extract the companion flange using a puller.



(A) Companion flange
(B) Puller

18) Remove the drive pinion shaft.
19) Remove the rear bearing cone from drive pinion by supporting the cone with ST.

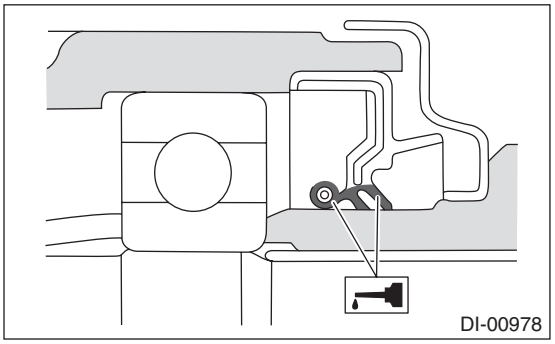
NOTE:
Place the replacer so that its center-recessed side faces the bearing cone.
ST 398517700 REPLACER



20) Remove the front oil seal from differential carrier using screwdriver.
21) Remove the pilot bearing, front bearing cone and spacer.

(A) Pilot bearing
(B) Spacer
(C) Front bearing
(D) Rear bearing race

22) When replacing the bearings, tap out the front bearing race and rear bearing race in this order using a brass bar to remove them.

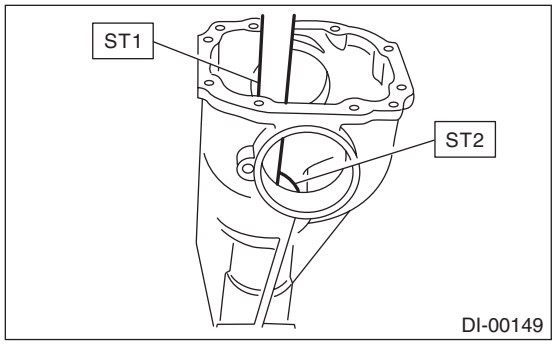


(A) 2 cutout portions along diagonal lines
(B) Tap alternately with brass bar.

D: ASSEMBLY

1. VA1-TYPE

NOTE:
- Assemble in the reverse order of disassembly.
- Check and adjust each part during assembly.
- Keep the shims and washers in order, so that they are not improperly installed.
- Thoroughly clean the surfaces on which the shims, washers and bearings are to be installed.
- Apply differential gear oil when installing the bearings and thrust washers.
- Be careful not to mix up the RH and LH bearing races.
- Replace the gasket, oil seal and O-ring with a new part.
- Be careful not to mix up the side oil seal RH and LH.
- Apply differential gear oil to the lips when installing the oil seal.



1) Adjusting preload for front and rear bearings

NOTE:
Adjust the bearing preload between front and rear bearings with preload adjusting spacer and washer. Pinion height adjusting washer is not affected by this adjustment. The adjustment must be carried out with oil seal removed.

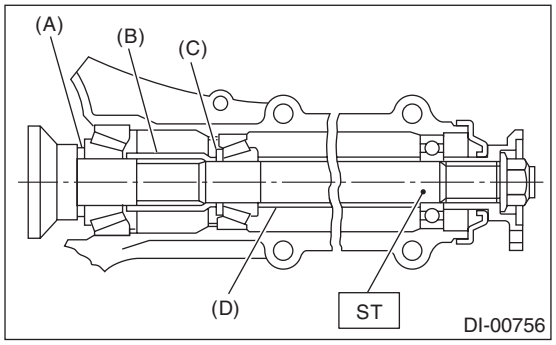
(1) Install the rear bearing race into the differential carrier using ST1 and ST2.

NOTE:
Use a new front bearing race.
ST1 398477701 HANDLE
ST2 398477702 DRIFT

(2) Install the front bearing race to the differential carrier using ST1 and ST2.
ST1 398477701 HANDLE
ST2 498447110 DRIFT

(3) Insert the front bearing cone.

NOTE:
Use new front bearing cone.



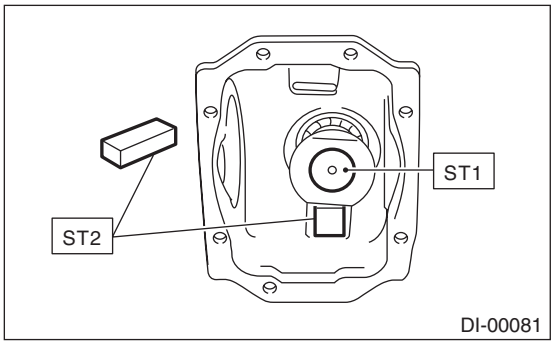
(4) Measure and record the thickness of pinion height adjusting washer.

NOTE:
• At this time, install a provisionally selected or previously used pinion height adjusting washer. Measure and record the thickness.
• If tooth contact (drive pinion and hypoid driven gear) is normal in the inspection before disassembling, verify that the washer is not deformed, and then reuse the used washer.

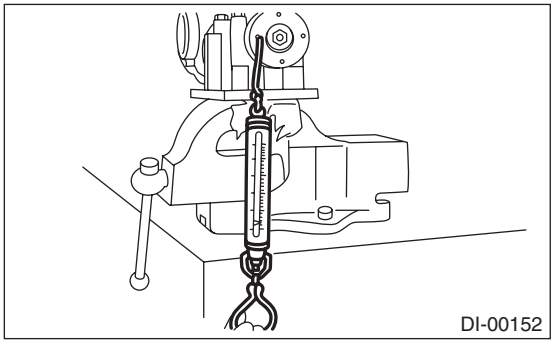
(5) Insert the ST (DUMMY SHAFT) into case with the pinion height adjusting washer and rear bearing cone fitted onto it.

(6) Install the preload adjusting spacer, washer, front bearing cone, spacer, pilot bearing, companion flange, and self-locking nut.

NOTE:
Use a new pilot bearing.
ST 498447150 DUMMY SHAFT
Part No. 32285AA000 Spacer

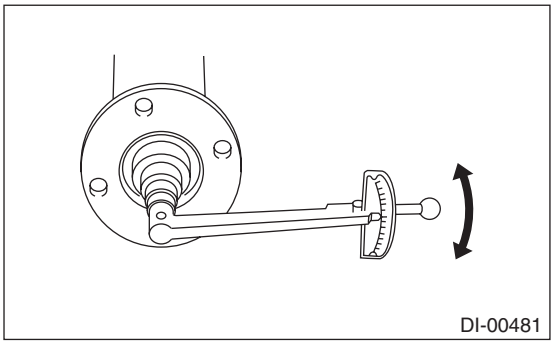


(A) Pinion height adjusting washer
(B) Preload adjusting spacer
(C) Preload adjusting washer
(D) Spacer (SUBARU genuine parts)



(7) Turn the ST by hand to slowly seat the bearing, and tighten the self-locking nut while measuring the initial load or initial torque with a spring scale or torque wrench. Select the preload adjusting washer and spacer so that the specified preload is obtained when nut is tightened to the specified torque.

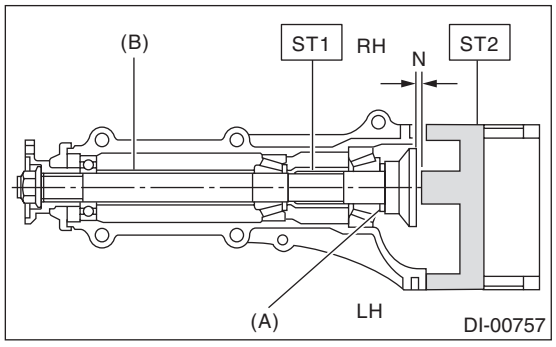
NOTE:
• Measure the preload in direction of tangent to the flange.
• Be careful not to give excessive preload.
• When tightening the self-locking nut, lock ST1 with ST2 as shown in the figure.
ST1 498447150 DUMMY SHAFT
ST2 398507704 BLOCK



Tightening torque:
191 N·m (19.5 kgf-m, 140.9 ft-lb)

Initial load:
12.7 — 32.2 N (1.3 — 3.3 kgf, 2.9 — 7.2 lbf)

Initial torque:
0.48 — 1.22 N·m (0.05 — 0.12 kgf-m, 0.35 — 0.90 ft-lb)



Preload adjusting washer

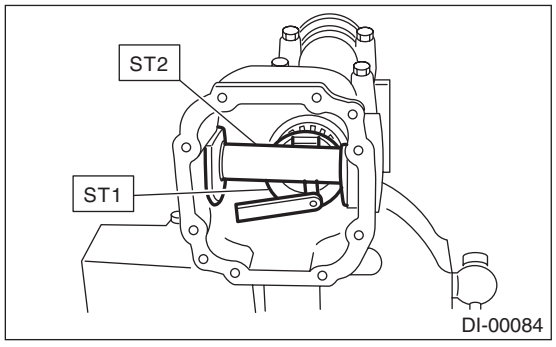
38336AA210	1.738 (0.0684)
38336AA100	1.750 (0.0689)
38336AA220	1.763 (0.0694)
38336AA110	1.775 (0.0699)

Preload adjusting spacer	
Part No.	Length mm (in)
32288AA040	52.3 (2.059)
32288AA050	52.5 (2.067)
31454AA100	52.6 (2.071)
32288AA060	52.7 (2.075)
31454AA110	52.8 (2.079)
32288AA070	52.9 (2.083)
31454AA120	53.0 (2.087)
32288AA080	53.1 (2.091)
32288AA090	53.3 (2.098)

2) Adjusting drive pinion height:
Adjust the drive pinion height with pinion height adjusting washer installed between the rear bearing cone and the back of pinion gear.

(1) Attach the ST2.

ST1 498447150 DUMMY SHAFT
ST2 498505501 DIFFERENTIAL CARRIER GAUGE
Part No. 32285AA000 Spacer



(A) Pinion height adjusting washer
(B) Spacer (SUBARU genuine parts)

(2) Measure the clearance “N” between the end of ST2 and the end surface of ST1 by using a thickness gauge.

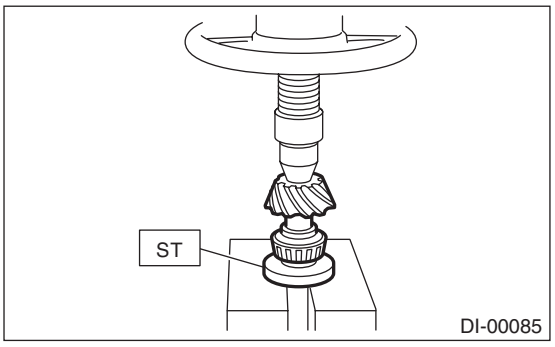
NOTE:
Make sure there is no clearance between the differential carrier and ST2.

ST1 498447150 DUMMY SHAFT
ST2 498505501 DIFFERENTIAL CARRIER GAUGE

(3) Obtain the thickness of pinion height adjusting washer to be inserted from the following formula, and replace the temporarily installed washer with this one.

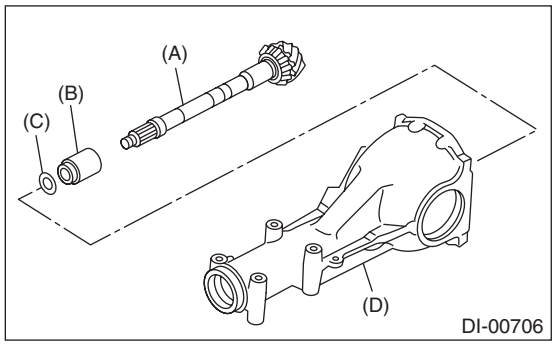
NOTE:
Adjust it using the 1 — 3 washers.

T = To + N – 0.05 mm (0.0020 in)



T	Thickness of pinion height adjusting washer mm (in)	
To	Thickness of washer temporarily inserted mm (in)	
N	Clearance of thickness gauge mm (in)	
Memo:		

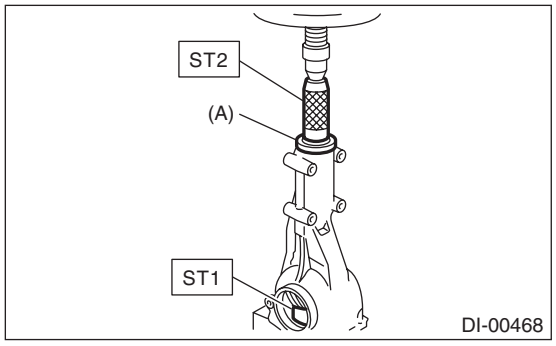
(Example of calculation)
To = 0.15 mm (0.0059 in)
N = 0.1 mm (0.0039 in)
T = 0.15 + 0.1 – 0.05 = 0.2 mm (0.0079 in)
Result: Thickness = 0.2 mm (0.0079 in)
Therefore use part number 32295AA220.



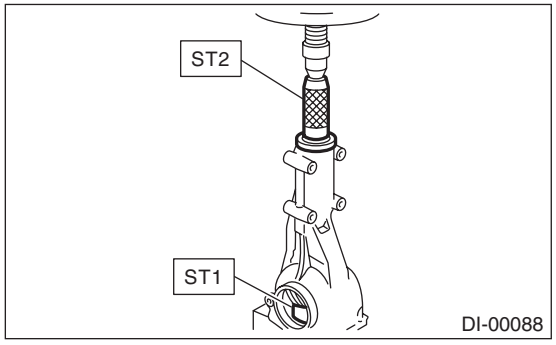
Pinion height adjusting washer	
Part No.	Thickness mm (in)
32295AA200	0.150 (0.0059)
32295AA210	0.175 (0.0069)
32295AA220	0.200 (0.0079)
32295AA230	0.225 (0.0089)
32295AA240	0.250 (0.0098)
32295AA250	0.275 (0.0108)

3) Install the selected pinion height adjusting washer on drive pinion, and press the rear bearing cone into position with ST.

ST 498175500 INSTALLER



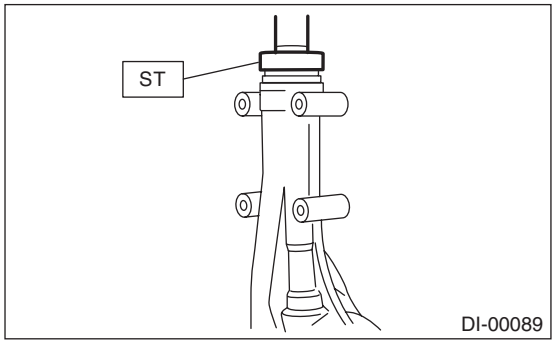
4) Insert the drive pinion into the differential carrier, and install the preselected preload adjusting spacer and washer.



(A) Drive pinion
(B) Preload adjusting spacer
(C) Preload adjusting washer
(D) Differential carrier

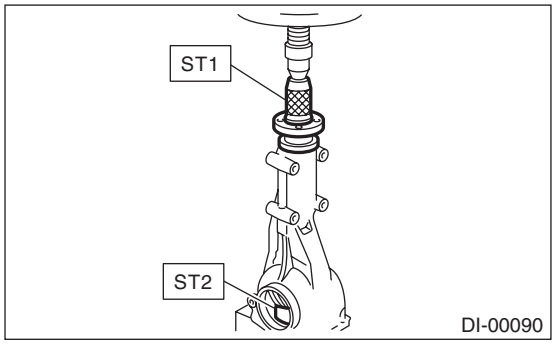
5) Press-fit the front bearing cone into the carrier with ST1, ST2 and the spacer.
ST1 399780104 WEIGHT
ST2 899580100 INSTALLER
Part No. 32285AA000 Spacer

(A) Spacer (SUBARU genuine parts)



6) Insert the spacer, then press-fit the pilot bearing with ST1 and ST2.
ST1 399780104 WEIGHT
ST2 899580100 INSTALLER

7) Using the ST, install the oil seal.

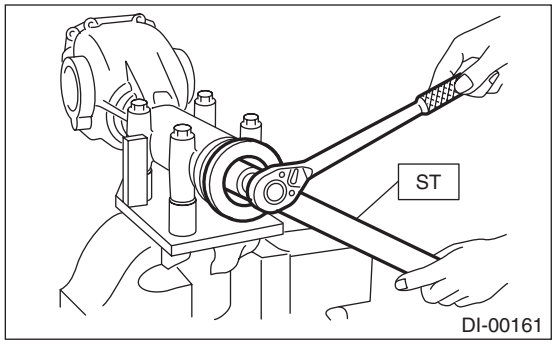


NOTE:
- Use a new oil seal.
- Press-fit until the oil seal end comes 1 mm (0.04 in) inward from end of carrier.
- Apply differential gear oil to the oil seal lips.

ST 498447120 INSTALLER

8) Press-fit the companion flange with ST1 and ST2.

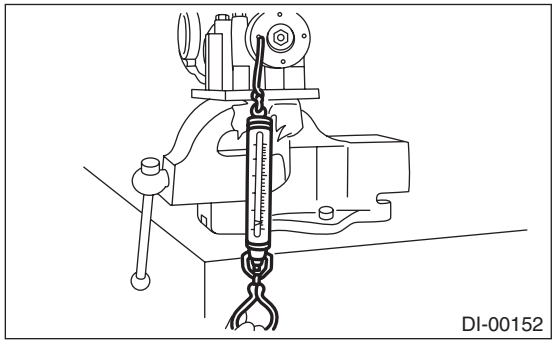
NOTE:
Be careful not to damage the pilot bearing.
ST1 899874100 INSTALLER
ST2 399780104 WEIGHT



9) Attach the self-locking nut and use the ST to fix the companion flange in place, then tighten the self-locking nut.

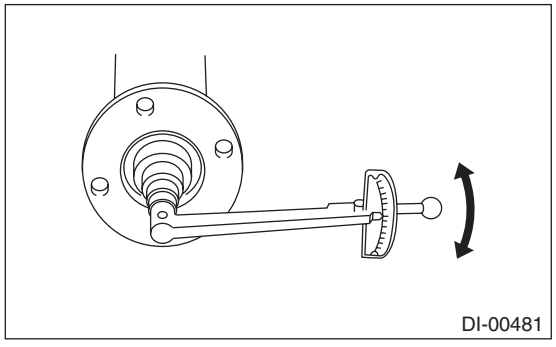
NOTE:
- Use a new self-locking nut.
- Before installing the self-locking nut, apply the seal material to the threads of the drive pinion shaft and to the seating surface of the self-locking nut.

Seal material:
THREE BOND 1324 (Part No. 004403042) or equivalent



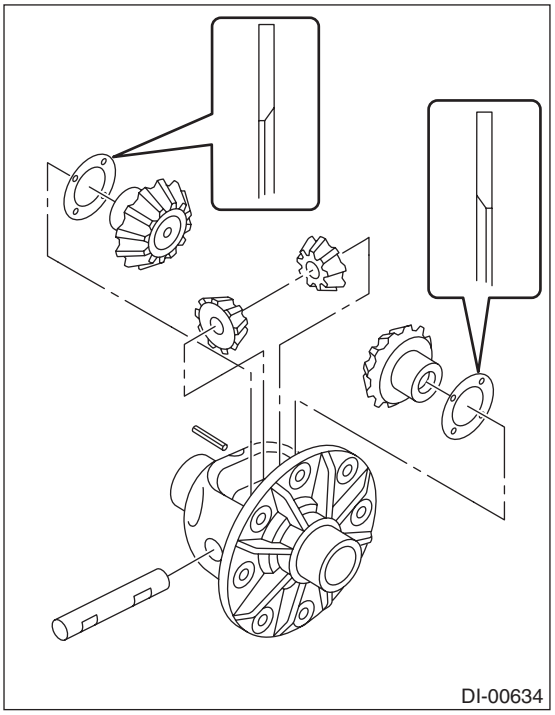
Tightening torque:
191 N·m (19.5 kgf-m, 140.9 ft-lb)

ST 498427200 FLANGE WRENCH

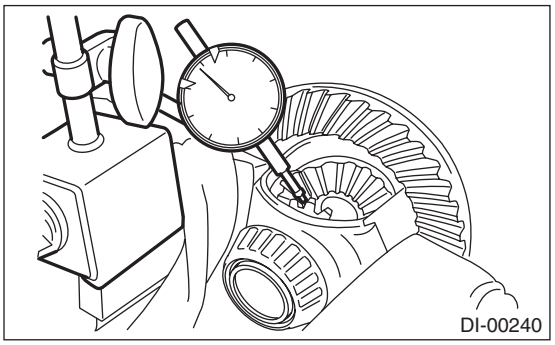


10) Check the initial torque or initial load.

Initial load:
12.7 — 32.2 N (1.3 — 3.3 kgf, 2.9 — 7.2 lbf)



Initial torque:
0.48 — 1.22 N·m (0.05 — 0.12 kgf-m, 0.35 — 0.90 ft-lb)



11) Assembling differential case
(1) Install the side gears and pinion mate gears, with their side gear thrust washers and pinion mate shaft, into the differential case.

NOTE:
- Apply gear oil on both sides of the washer and on the side gear shaft before installing.
- Insert the pinion mate shaft into the differential case by aligning the pin holes.
- The side gear thrust washer inner surface has a chamfered side. Install the washer with the chamfered side facing toward the side gear.

(2) Measure the side gear backlash.

Side gear backlash:
0.05 — 0.15 mm (0.002 — 0.006 in)

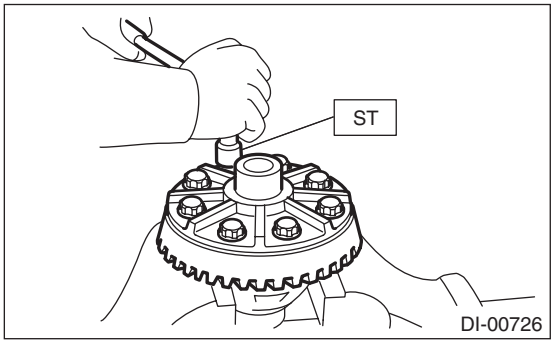
(3) Adjust the side gear backlash by selecting side gear thrust washer.

Side gear thrust washer	
Part No.	Thickness mm (in)
803135011	0.925 — 0.950 (0.0364 — 0.0374)
803135012	0.950 — 0.975 (0.0374 — 0.0384)
803135013	0.975 — 1.000 (0.0384 — 0.0394)
803135014	1.000 — 1.025 (0.0394 — 0.0404)
803135015	1.025 — 1.050 (0.0404 — 0.0413)

(4) Check the condition of rotation after applying oil to the gear tooth surfaces and washer surfaces.
(5) Drive the spring pin into the differential case.

NOTE:
Use new spring pin.

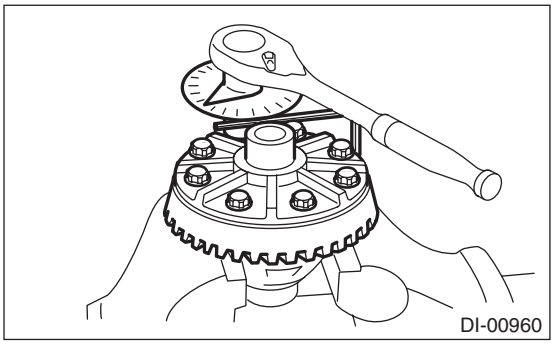
12) Install the hypoid driven gear to differential case.



NOTE:
• Before installing bolts, apply seal material to bolt threads.

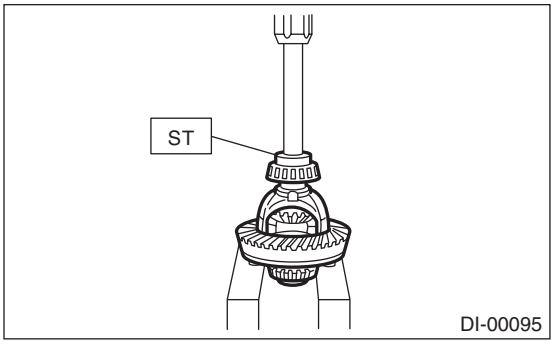
Seal material:
THREE BOND 1324 (Part No. 004403042) or equivalent

• Tighten opposing bolts in order.
(1) Tighten the hypoid driven gear mounting bolts to the specified torque using the ST.



ST 18270KA020 SOCKET (E20)

Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)

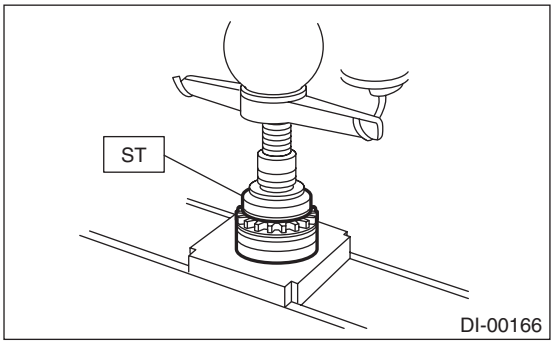


(2) While checking the tightening angle with the angle gauge, further tighten the hypoid driven gear mounting bolts.

Tightening angle:
35°±2°

13) Using the ST, press-fit the side bearing to the differential case.

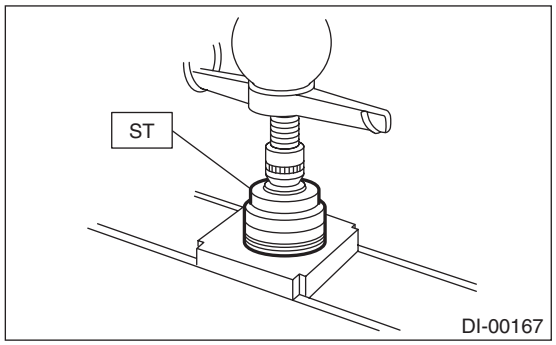
ST 498485400 DRIFT



14) Assemble the side retainer.
(1) Install the oil seal into side retainer RH and LH.

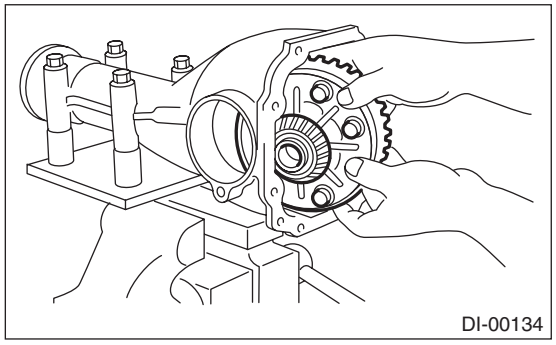
CAUTION:
Pay attention to the left and right of the oil seal.

NOTE:
• Use a new oil seal.
• Apply differential gear oil to the oil seal lip.



ST 498447100 INSTALLER

(2) Install the bearing race into side retainer RH and LH.

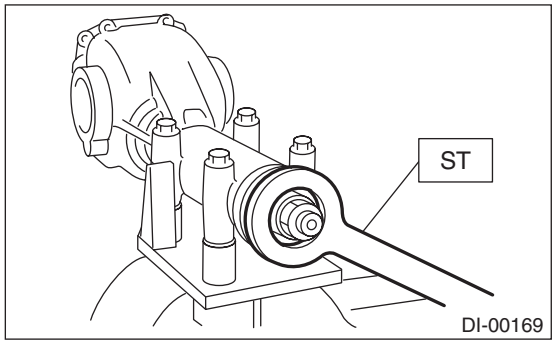


CAUTION:
Make sure that the bearing outer races and cones are properly assembled.

ST 398477702 DRIFT

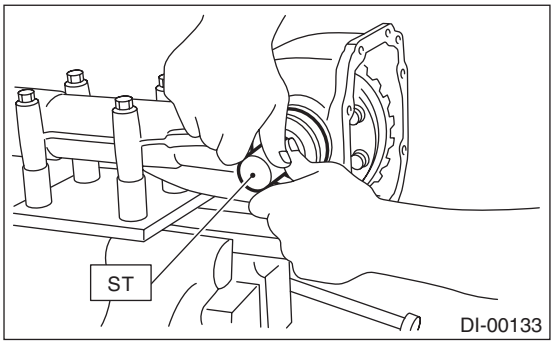
(3) Install the differential case assembly into differential carrier in the reverse order of disassembly.

NOTE:
Be careful not to hit the teeth of hypoid driven gear against the differential carrier.



(4) Temporally tighten the side retainers RH and LH in differential carrier to install.

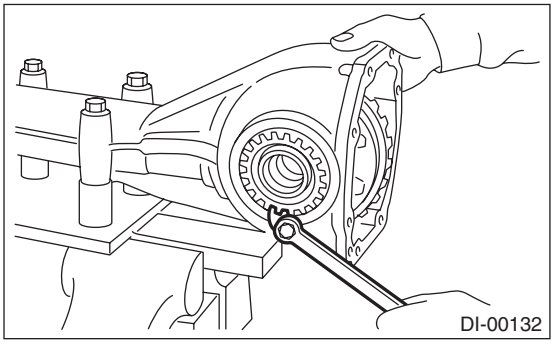
15) Perform the backlash adjustment between the hypoid driven gear and drive pinion, and preload adjustment of differential side bearing.



(1) Turn the drive pinion with ST for better fitting of differential side bearing.

ST 498427200 FLANGE WRENCH

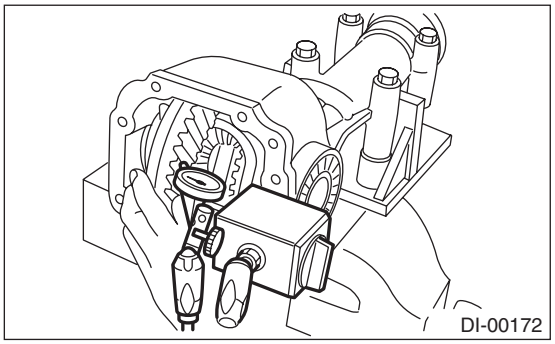
(2) Using the ST, tighten side retainer RH, and then tighten side retainer LH until there is no backlash.



ST 18630AA010 WRENCH COMPL RETAINER

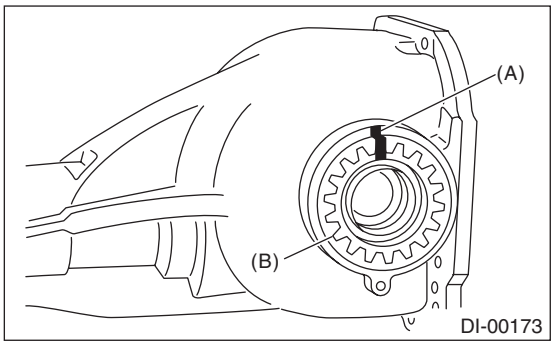
(3) Loosen the side retainer LH by approx. 1 and 1/2 teeth, and tighten the side retainer RH by approx. 2 teeth [amount that the side retainer LH is turned back (approx. 1 and 1/2 teeth) + approx. 1/2 teeth]. Difference between [amount that the side retainer LH is turned back (approx. 1 and 1/2 teeth)] and [amount that the side retainer RH is tightened (approx. 2 teeth)] gives preload.

(4) Temporarily tighten the lock plate.



NOTE:
Turn over the lock plate to shift the holder by 1/2 teeth.

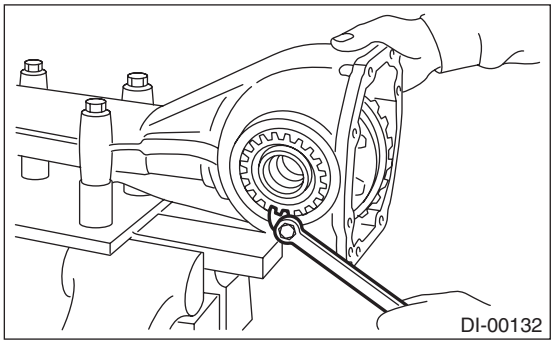
(5) Measure the hypoid driven gear-to-drive pinion backlash. Set the magnet base on differential carrier. Align the contact point of dial gauge with tooth face of hypoid driven gear, and move hypoid driven gear while holding drive pinion still. Read the value indicated on dial gauge.



NOTE:
If measured value of backlash is not within the specified range, repeat the procedures for pinion driven gear set backlash adjustment and the differential side bearing preload adjustment.

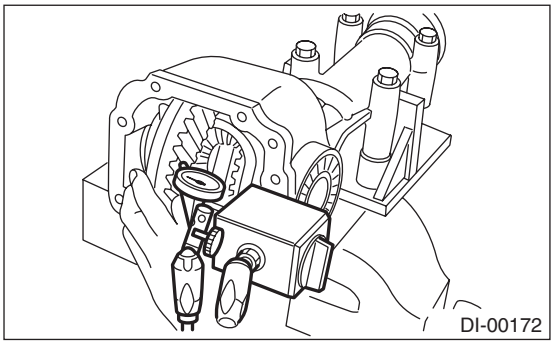
Backlash:
0.10 — 0.15 mm (0.004 — 0.006 in)

16) Put alignment marks on both the differential carrier and side retainer. Remove the side retainers one side at a time. After installing an O-ring and applying oil to the threaded portion, restore them to the original position.



NOTE:
Use new O-rings.

(A) Alignment mark
(B) Side retainer

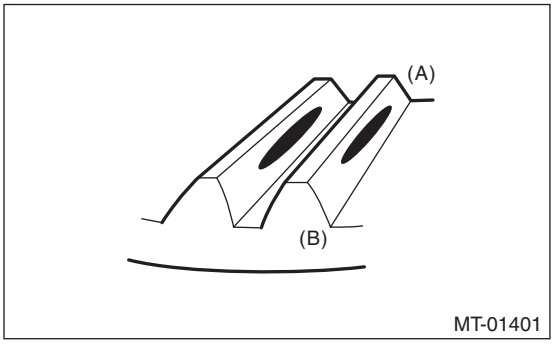


17) Install the lock plate, and tighten the bolts to the specified torque.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

18) Recheck the backlash between hypoid driven gear and drive pinion.

Backlash:
0.10 — 0.15 mm (0.004 — 0.006 in)

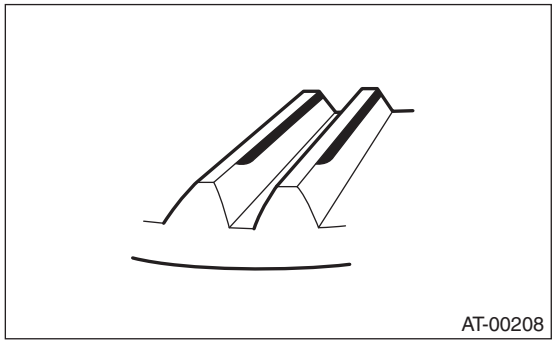


19) Checking and adjusting the tooth contact of hypoid driven gear
(1) Apply lead-free red dye evenly on the both sides of three to four teeth of the hypoid driven gear. Check the contact pattern after rotating the hypoid driven gear several revolutions back and forth until a definite contact pattern appears on the hypoid driven gear.
(2) When the contact pattern is not correct, readjust.

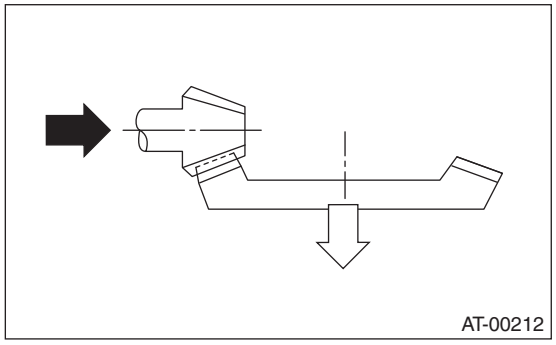
NOTE:
Be sure to wipe off the lead-free red dye completely after the adjustment is completed.

- Correct tooth contact

Check item: Tooth contact pattern is slightly shifted toward toe side under no-load rotation. (When driving, it moves towards the heel side.)



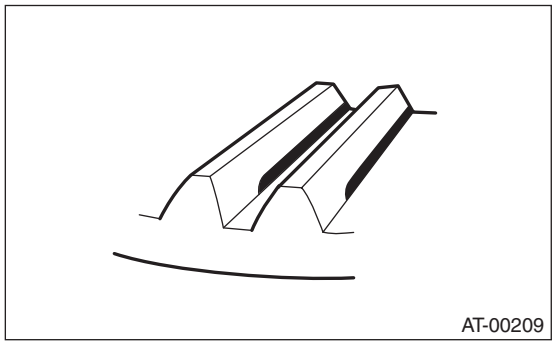
(A) Toe side
(B) Heel side



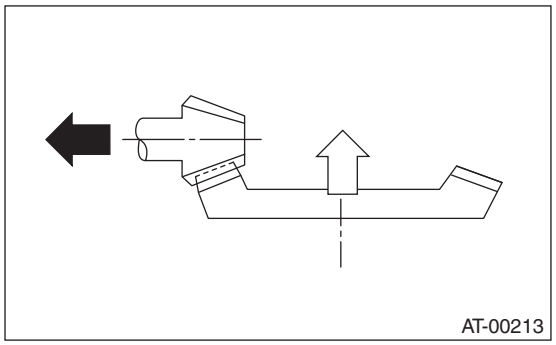
• Face contact

Check item: Backlash is too large.

Contact pattern



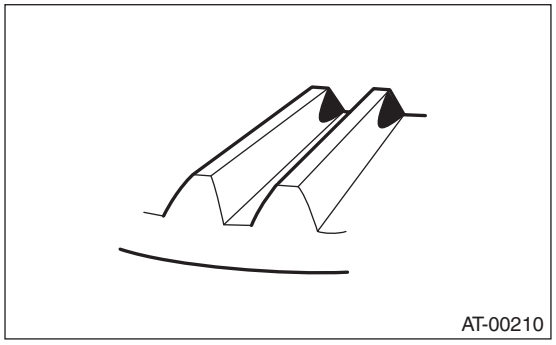
Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.



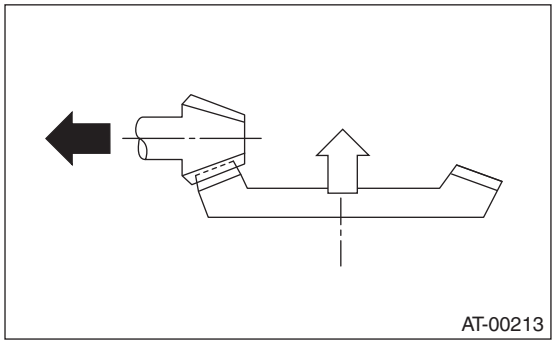
• Flank contact

Check item: Backlash is too small.

Contact pattern

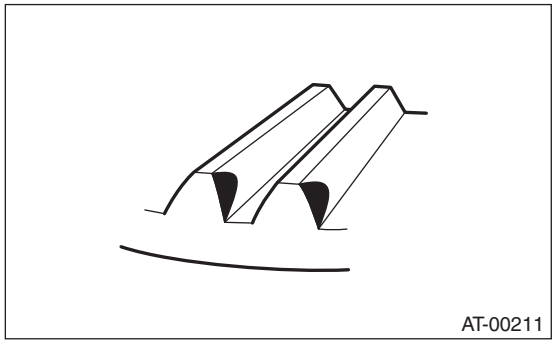


Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear.

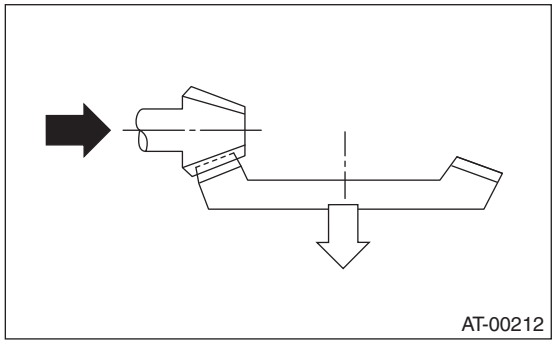


• Toe contact (inside contact)

Check item: Teeth contact area is too small.

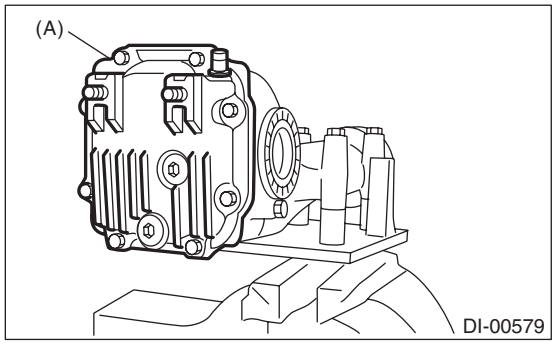


Contact pattern



Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear side.

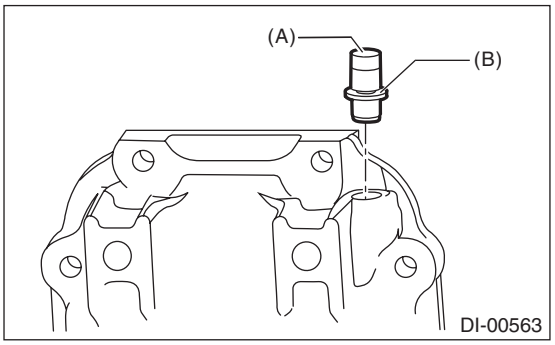
• Heel contact (outside end contact)
Check item: Teeth contact area is too small.
Contact pattern



Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.

20) If correct tooth contact is not obtained, readjust the drive pinion height and the differential side bearing preload (already mentioned) and the hypoid gear backlash.
21) Install the gasket and rear cover to the differential carrier, and tighten the bolts to specified torque.

NOTE:
Use a new gasket.



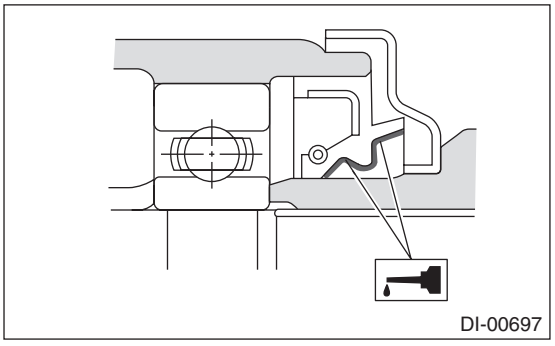
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

(A) Rear cover

22) Install the air breather cap.

NOTE:
When installing the air breather cap, do not tap section (A). Be sure to tap section (B) to install.

23) Install the drain plug.



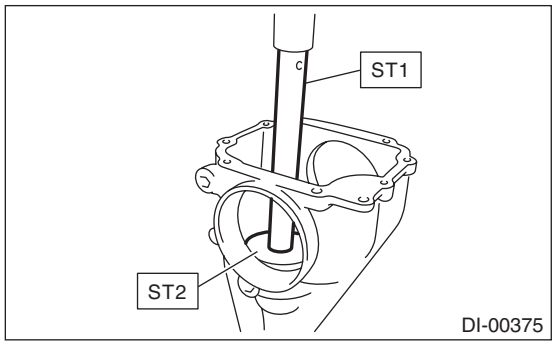
NOTE:
Use a new gasket.

Tightening torque:
50 N·m (5.1 kg-m, 36.9 ft-lb)
24) Install the filler plug.

NOTE:
After installing the rear differential assembly to the vehicle, fill the gear oil, then use a new gasket, and tighten to the specified torque. <Ref. to DI-22, REPLACEMENT, Differential Gear Oil.>

2. VA2-TYPE

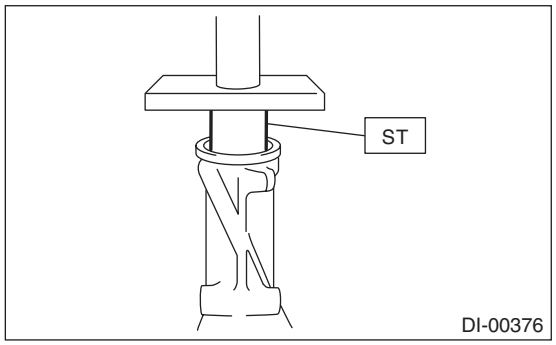
NOTE:
• Assemble in the reverse order of disassembly.
• Check and adjust each part during assembly.
• Keep the shims and washers in order, so that they are not improperly installed.
• Thoroughly clean the surfaces on which the shims, washers and bearings are to be installed.
• Apply differential gear oil when installing the bearings and thrust washers.
• Attach tags not to mix up the RH and LH bearing races.
• Replace the gasket, oil seal and O-ring with a new part.
• Apply differential gear oil to the lips when installing the oil seal.



1) Adjusting preload for front and rear bearings

NOTE:
Adjust the bearing preload between front and rear bearings with preload adjusting spacer and washer. Pinion height adjusting washer is not affected by this adjustment. The adjustment must not be carried out with oil seal inserted.

(1) Install the rear bearing race into the differential carrier using ST1 and ST2.



ST1 398477701 HANDLE
ST2 398477703 DRIFT 2

(2) Using the ST, press-fit the front bearing race to the differential carrier.

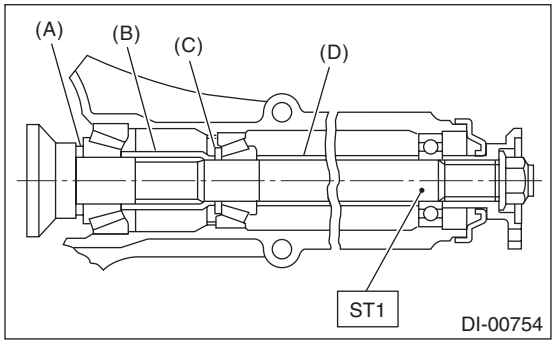
NOTE:
Use a new front bearing race.

ST 499277200 INSTALLER

(3) Insert the front bearing cone.

NOTE:
Use new front bearing cone.

(4) Measure and record the thickness of the pinion height adjusting washer.



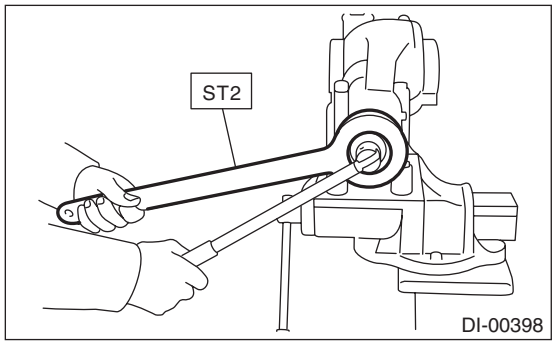
NOTE:
• At this time, install a provisionally selected or previously used pinion height adjusting washer.
• If tooth contact (drive pinion and hypoid driven gear) is normal in the inspection before disassembling, verify that the washer is not deformed, and then reuse the used washer.

(5) Insert the ST1 into carrier with the pinion height adjusting washer and rear bearing cone fitted onto it.

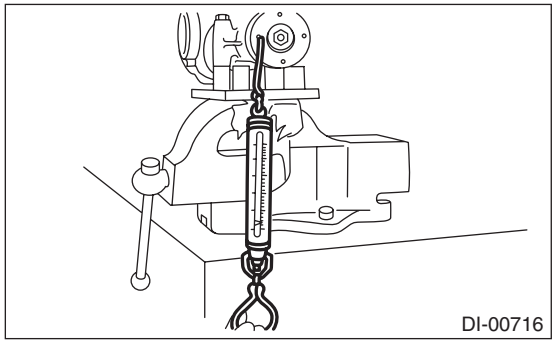
(6) Install the preload adjusting spacer, washer, front bearing cone, spacer, pilot bearing, companion flange, and self-locking nut.

NOTE:
Use a new pilot bearing.

ST1 18678AA000 DUMMY SHAFT

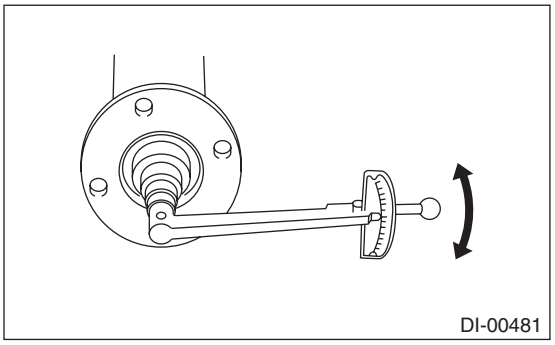


(A) Pinion height adjusting washer
(B) Preload adjusting spacer
(C) Preload adjusting washer
(D) Spacer



(7) Turn the ST1 by hand to smooth the bearing, and tighten the self-locking nut while measuring the initial load or initial torque with a spring scale or torque wrench. Select the preload adjusting washer and spacer so that the specified preload is obtained when nut is tightened to the specified torque.

NOTE:
• Measure the preload in direction of tangent to the flange.
• Be careful not to give excessive preload.
• When tightening the self-locking nut, lock companion flange with ST2 as shown in the figure.
ST1 18678AA000 DUMMY SHAFT
ST2 498427200 FLANGE WRENCH



Tightening torque:
191 N·m (19.5 kgf-m, 140.9 ft-lb)

Initial load:
12.7 — 32.2 N (1.3 — 3.3 kgf, 2.9 — 7.2 lbf)

Initial torque:
0.48 — 1.22 N·m (0.05 — 0.12 kgf-m, 0.35 — 0.90 ft-lb)

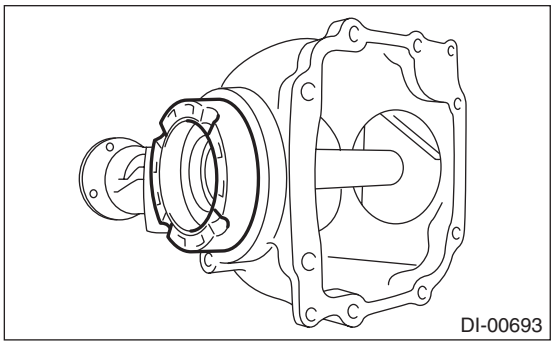
38336AA640	1.763 (0.0694)
38336AA650	1.775 (0.0699)

Preload adjusting spacer	
Part No.	Length mm (in)
31454AA250	51.05 (2.010)
31454AA260	51.25 (2.018)
31454AA270	51.35 (2.022)
31454AA280	51.45 (2.026)
31454AA290	51.55 (2.030)
31454AA300	51.65 (2.033)
31454AA310	51.75 (2.037)
31454AA320	51.85 (2.041)
31454AA330	52.05 (2.049)

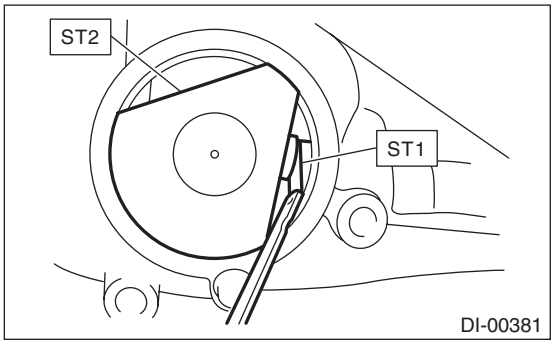
2) Adjusting drive pinion height:
Adjust the drive pinion height with pinion height adjusting washer installed between the rear bearing cone and the back of pinion gear.



(1) Attach the ST2.

ST1 18678AA000 DUMMY SHAFT
ST2 18831AA010 DIFFERENTIAL CARRIER GAUGE

(A) Pinion height adjusting washer



(2) Install the side retainer LH to the left side of the differential carrier in reverse direction.

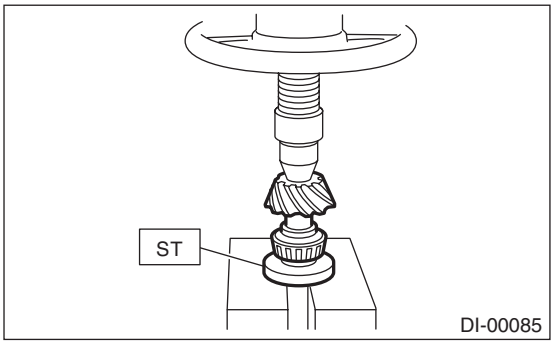
(3) Measure the clearance “N” between the end of ST2 and the end surface of ST1 by using a thickness gauge.

NOTE:
Make sure there is no clearance between the differential carrier and ST2.

ST1 18678AA000 DUMMY SHAFT
ST2 18831AA010 DIFFERENTIAL CARRIER GAUGE

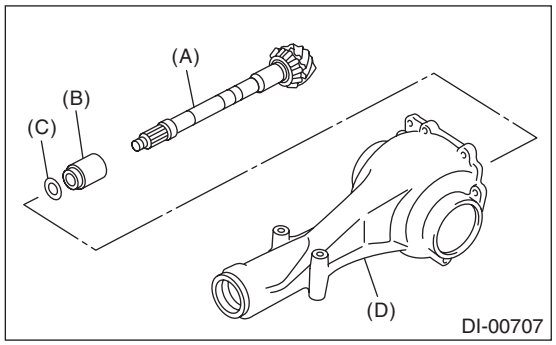
(4) Obtain the thickness of pinion height adjusting washer to be inserted from the following formula, and replace the temporarily installed washer with this one.

NOTE:
Adjust it using the 1 — 3 washers.
T = To + N – 0.05 mm (0.0020 in)



T	Thickness of pinion height adjusting washer mm (in)	
To	Thickness of washer temporarily inserted mm (in)	
N	Clearance of thickness gauge mm (in)	
Memo:		

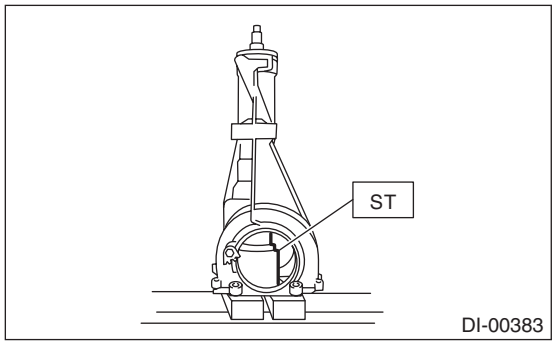
(Example of calculation)
To = 0.15 mm (0.0059 in)
N = 0.1 mm (0.0039 in)
T = 0.15 mm (0.0059 in) + 0.1 mm (0.0039 in) – 0.05 mm (0.0020 in) = 0.2 mm (0.0079 in)
Result: Thickness = 0.2 mm (0.0079 in)
Therefore use part number 32295AA370.



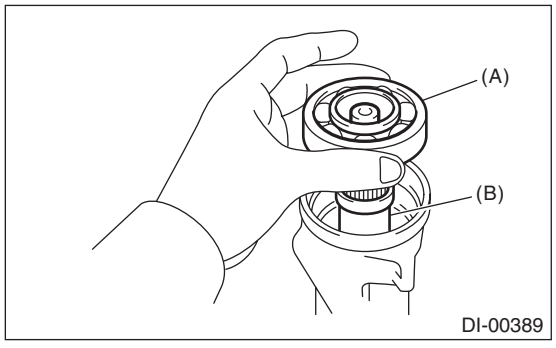
Pinion height adjusting washer	
Part No.	Thickness mm (in)
32295AA350	0.150 (0.0059)
32295AA360	0.175 (0.0069)
32295AA370	0.200 (0.0079)
32295AA380	0.225 (0.0089)
32295AA390	0.250 (0.0098)
32295AA400	0.275 (0.0108)

3) Install the selected pinion height adjusting washer on drive pinion, and press the rear bearing cone into position with ST.

ST 398177700 INSTALLER



4) Insert the drive pinion into the differential carrier, and install the preselected preload adjusting spacer and washer.

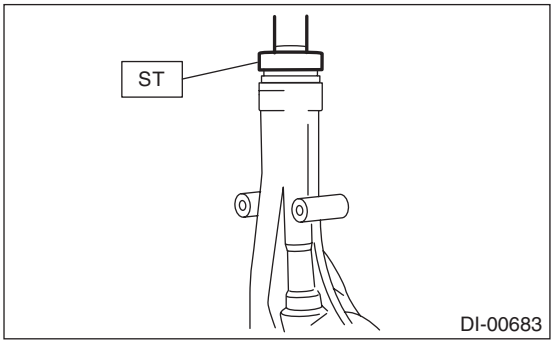


(A) Drive pinion
(B) Preload adjusting spacer
(C) Preload adjusting washer
(D) Differential carrier

5) Set ST and differential carrier to the press and install the front bearing cone.
ST 399780104 WEIGHT

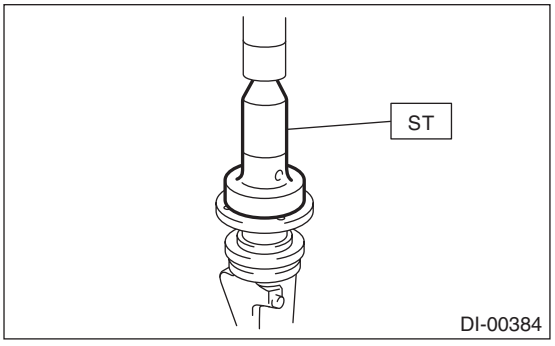
NOTE:
Set the carrier to the press until the companion flange is installed.

6) Insert the spacer, then install the pilot bearing.



(A) Pilot bearing
(B) Spacer

7) Using the ST, install the oil seal.

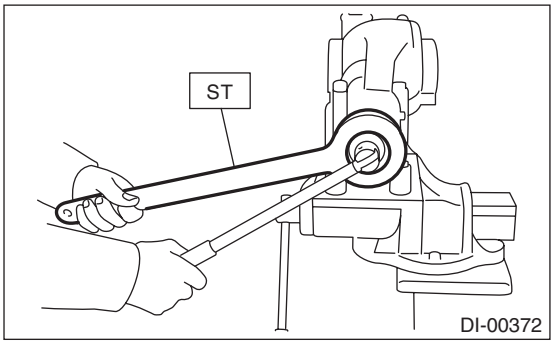


NOTE:
- Use a new oil seal.
- Press-fit until the oil seal end comes 1 mm (0.04 in) inward from end of carrier.
- Apply differential gear oil to the oil seal lips.

ST 499277200 INSTALLER

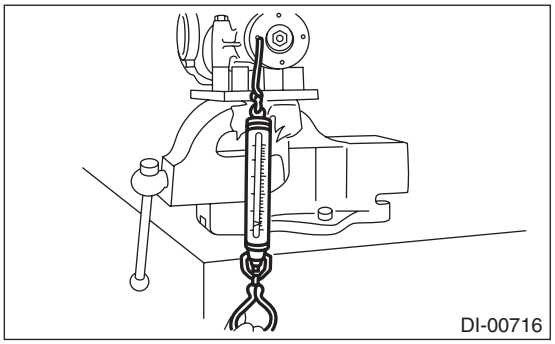
8) Press-fit the companion flange with ST.

NOTE:
Be careful not to damage the bearing.
ST 899874100 INSTALLER



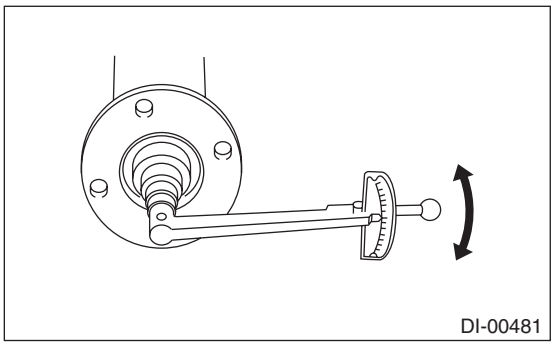
9) Apply seal material on the drive pinion shaft thread and new self-locking nut seat.

Seal material:
THREE BOND 1324 (Part No. 004403042) or equivalent

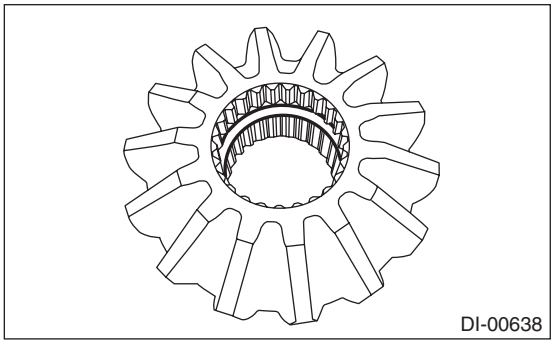


10) Install the self-locking nut while holding the companion flange with ST.

Tightening torque:
191 N·m (19.5 kgf-m, 140.9 ft-lb)
ST 498427200 FLANGE WRENCH

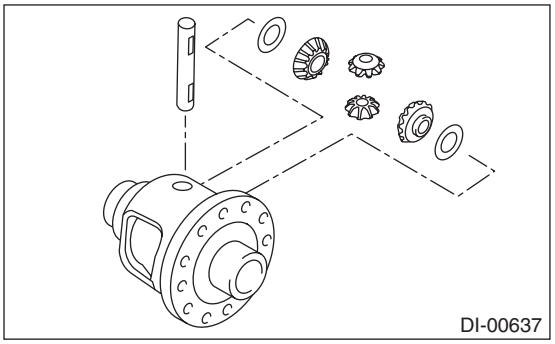


11) Check the initial torque or initial load.

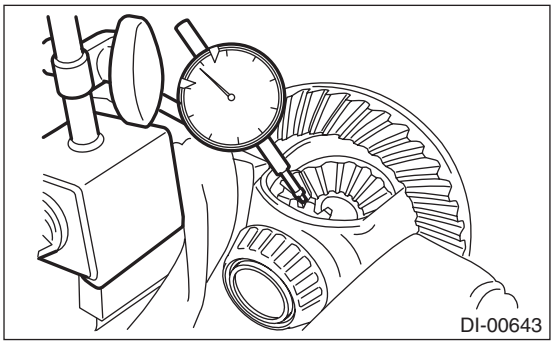


Initial load:
12.7 — 32.2 N (1.3 — 3.3 kgf, 2.9 — 7.2 lbf)

Initial torque:
0.48 — 1.22 N·m (0.05 — 0.12 kgf-m, 0.35 — 0.90 ft-lb)



12) Assembling differential case
(1) Attach the circlip to the side gear.



(2) Install the side gears and pinion mate gears, with their side gear thrust washers and pinion mate shaft, into the differential case.

NOTE:
• Apply gear oil on both sides of the washer and on the side gear shaft before installing.
• Insert the pinion mate shaft into the differential case by aligning the pin holes.

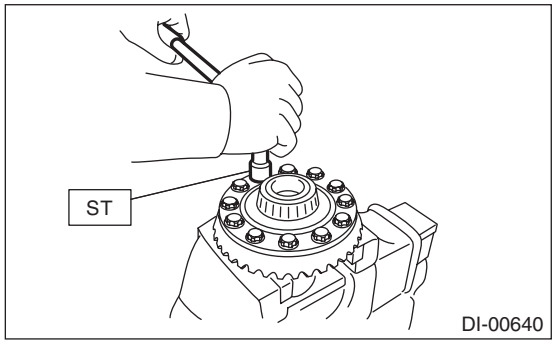
(3) Measure the side gear backlash.

Side gear backlash:
0.13 — 0.18 mm (0.005 — 0.007 in)

(4) Adjust the side gear backlash as specified by selecting side gear thrust washer.

Side gear thrust washer	
Part No.	Thickness mm (in)
803038021	0.950 (0.0374)
803038022	1.000 (0.0394)
803038023	1.050 (0.0413)

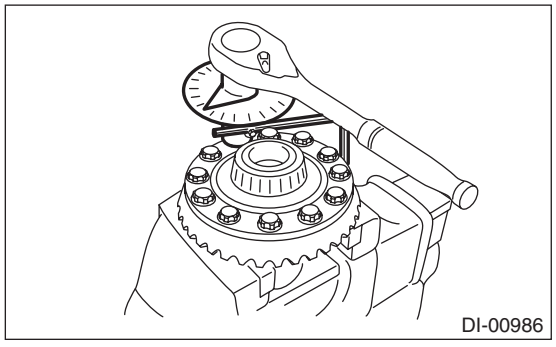
(5) Check the condition of rotation after applying oil to the gear tooth surfaces and washer surfaces.
(6) Attach the spring pin to the differential case.



NOTE:
Use new spring pin.

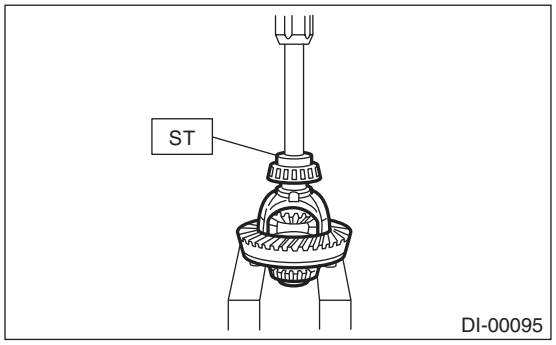
13) Install the hypoid driven gear to differential case.

NOTE:
• Set a cushioning such as wooden block, aluminum plate or shop cloth between vise and differential case if the side gear comes into contact with vise.
• Before installing bolts, apply seal material to bolt threads.



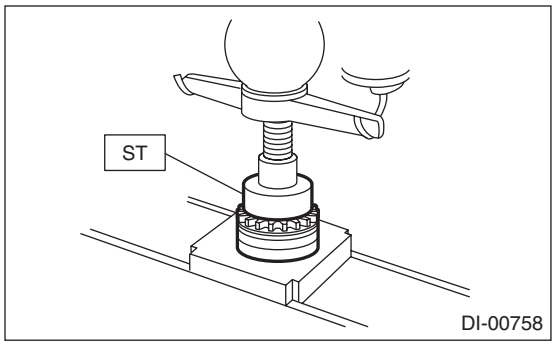
Seal material:
THREE BOND 1324 (Part No. 004403042) or equivalent
• Tighten opposing bolts in order.
(1) Tighten the hypoid driven gear mounting bolts to the specified torque using the ST.
ST 18270KA020 SOCKET (E20)

Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)

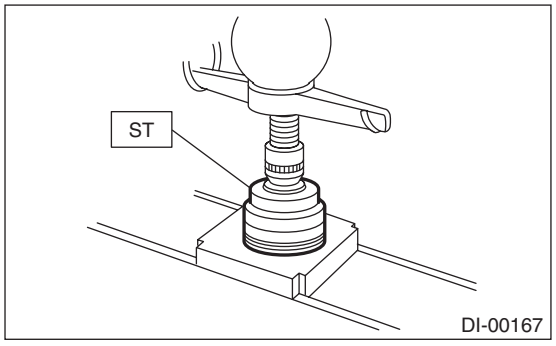


(2) While checking the tightening angle with the angle gauge, further tighten the hypoid driven gear mounting bolts.

Tightening angle:
33°±2°

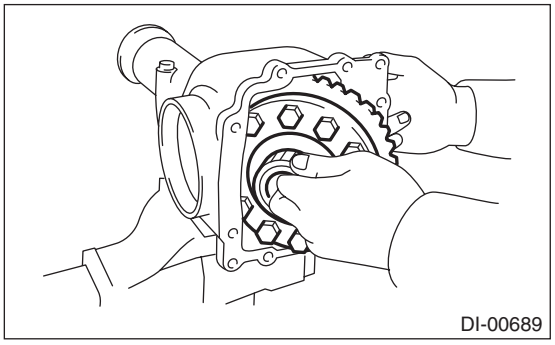


14) Using the ST, press-fit the side bearing to the differential case.
ST 398487700 DRIFT



15) Assemble the side retainer.
(1) Install the oil seal into side retainer RH and LH.

NOTE:
• Use a new oil seal.
• Apply differential gear oil to the oil seal lip.
ST 398437700 DRIFT

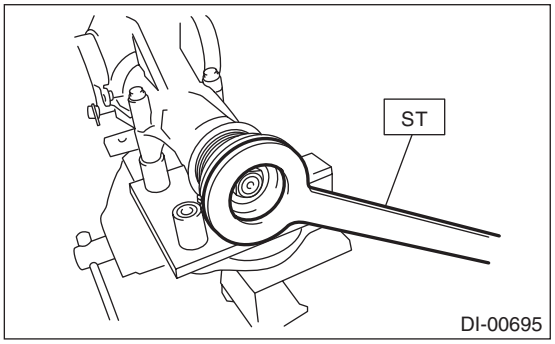


(2) Install the bearing race into side retainer RH and LH.

CAUTION:
Make sure that the bearing outer races and cones are properly assembled.
ST 398417700 DRIFT

(3) Install the differential case assembly into differential carrier in the reverse order of disassembly.

NOTE:
Be careful not to hit the teeth of hypoid driven gear against the differential carrier.

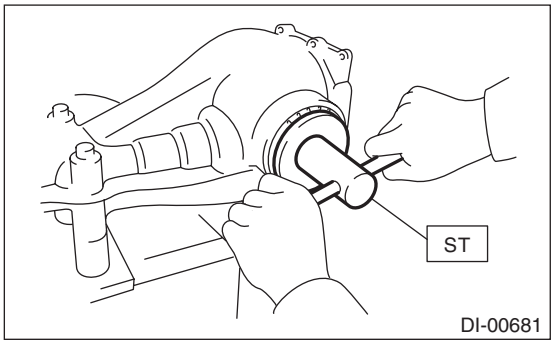


DI-00689

(4) Temporally tighten the side retainers RH and LH in differential carrier to install.

16) Perform the backlash adjustment between the hypoid driven gear and drive pinion, and side bearing preload adjustment.

(1) Turn the drive pinion with ST for better fitting of differential side bearing.

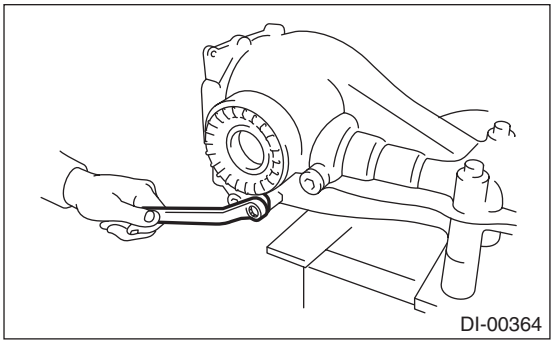


ST 498427200 FLANGE WRENCH

DI-00695

(2) Using the ST, tighten side retainer RH, and then tighten side retainer LH until there is no backlash.

ST 18630AA010 WRENCH COMPL RETAINER

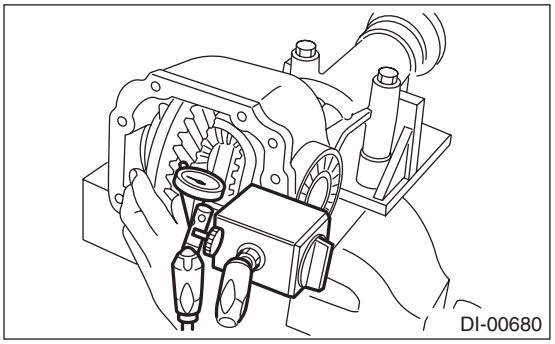


DI-00681

(3) Back off the side retainer LH by approx. 1 and 1/2 teeth, and tighten the side retainer RH by approx. 2 teeth [amount that the side retainer LH is turned back (approx. 1 and 1/2 teeth) + approx. 1/2 teeth].

NOTE:
Difference between [amount that the side retainer LH is turned back (approx. 1 and 1/2 teeth)] and [amount that the side retainer RH is tightened (approx. 2 teeth)] gives preload.

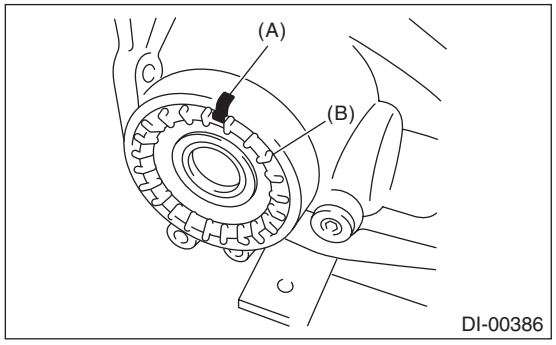
(4) Temporarily attach the lock plate.



NOTE:
Turn over the lock plate to shift the holder by 1/2 teeth.

DI-00364

(5) Measure the hypoid driven gear-to-drive pinion backlash. Set the magnet base on differential carrier. Align the contact point of dial gauge with tooth face of hypoid driven gear, and move hypoid driven gear while holding drive pinion still. Read the value indicated on dial gauge.

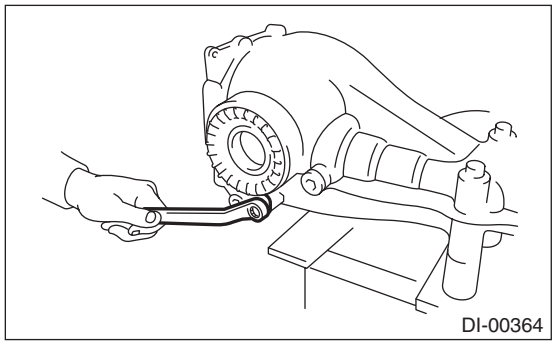


NOTE:
If measured value of backlash is not within the specified range, repeat the procedures for the backlash adjustment between hypoid driven gear and drive pinion, and the differential side bearing preload adjustment.

Backlash:
0.10 — 0.15 mm (0.004 — 0.006 in)

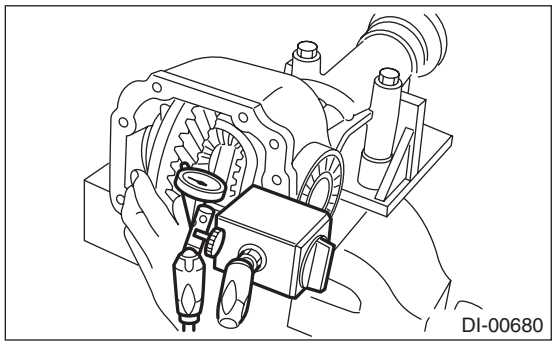
DI-00680

17) Put alignment marks on both the differential carrier and side retainer. Remove the side retainers one side at a time. After installing an O-ring and applying differential gear oil to the threaded portion, restore them to the original position.



NOTE:
Use new O-rings.

(A) Alignment mark
(B) Side retainer

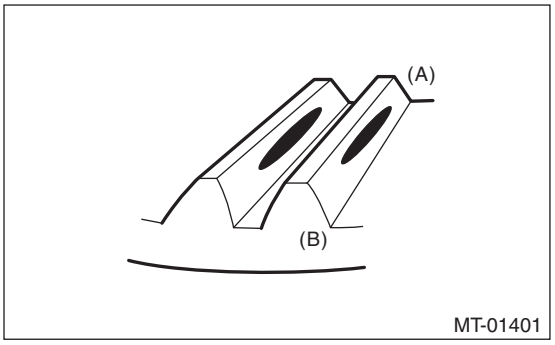


18) Tighten the bolt of lock plate to specified torque.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

19) Recheck the hypoid driven gear to pinion backlash.

Backlash:
0.10 — 0.15 mm (0.004 — 0.006 in)

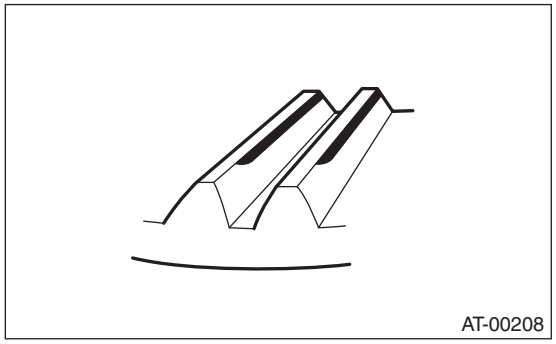


20) Checking and adjusting the tooth contact of hypoid driven gear
(1) Apply lead-free red dye evenly on the both sides of three to four teeth of the hypoid driven gear. Check the contact pattern after rotating the hypoid driven gear several revolutions back and forth until a definite contact pattern appears on the hypoid driven gear.
(2) When the contact pattern is not correct, readjust.

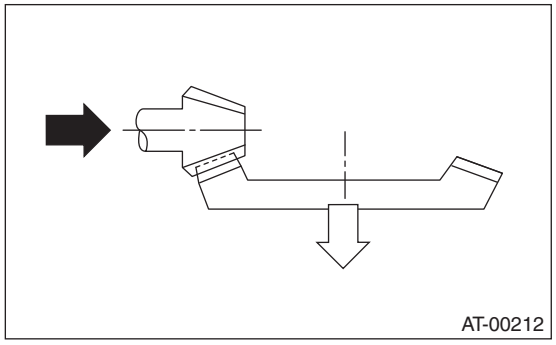
NOTE:
Be sure to wipe off the lead-free red dye completely after the adjustment is completed.

- Correct tooth contact

Check item: Tooth contact pattern is slightly shifted toward toe side under no-load rotation. (When driving, it moves towards the heel side.)



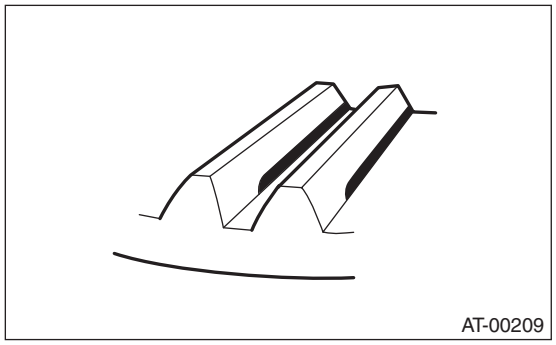
(A) Toe side
(B) Heel side



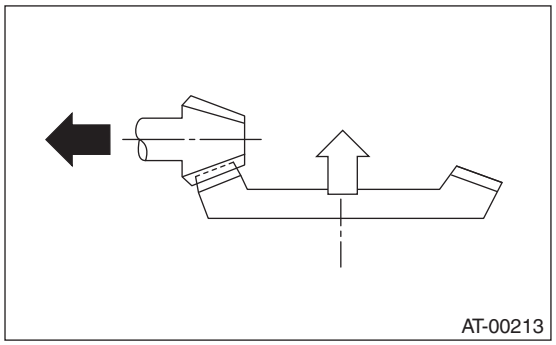
• Face contact

Check item: Backlash is too large.

Contact pattern



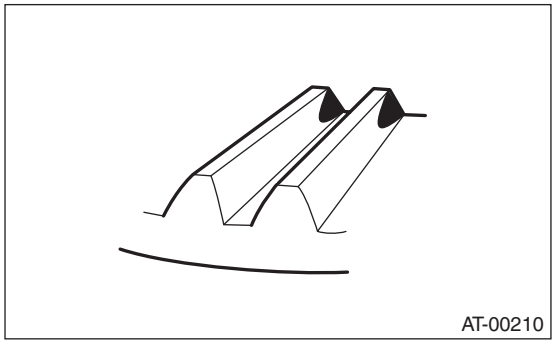
Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.



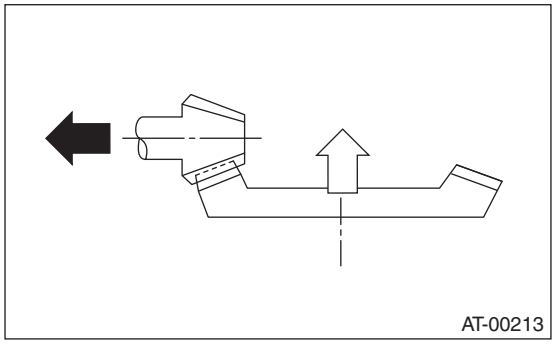
• Flank contact

Check item: Backlash is too small.

Contact pattern

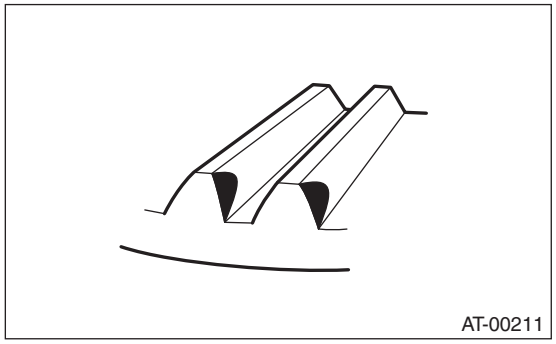


Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear.

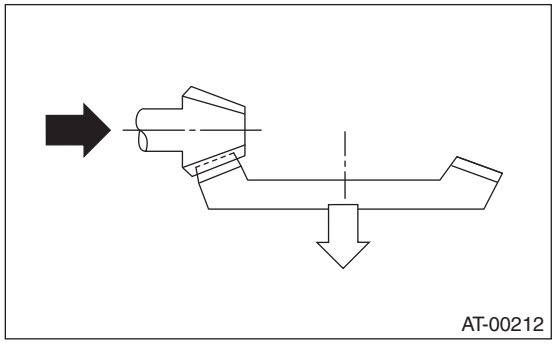


• Toe contact (inside contact)

Check item: Teeth contact area is too small.

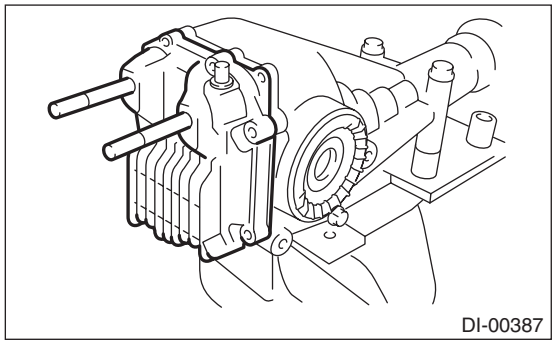


Contact pattern



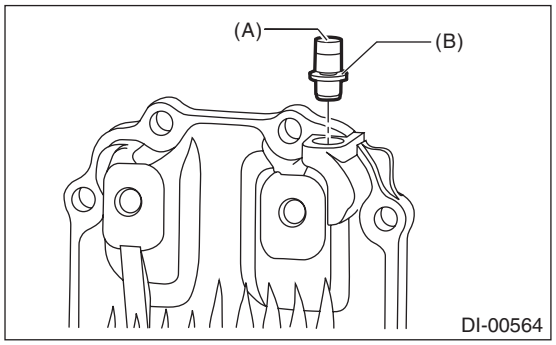
Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear.

• Heel contact (outside end contact)
Check item: Teeth contact area is too small.
Contact pattern



Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.

21) If correct tooth contact is not obtained, readjust the drive pinion height and the differential side bearing preload (already mentioned) and the hypoid gear backlash.
22) Install the gasket and rear cover to the differential carrier, and tighten the bolts to specified torque.



NOTE:
Use a new gasket.

Tightening torque:
34 N·m (3.5 kgf-m, 25.1 ft-lb)

23) Install the air breather cap.

NOTE:
When installing the air breather cap, do not tap section (A). Be sure to tap section (B) to install.

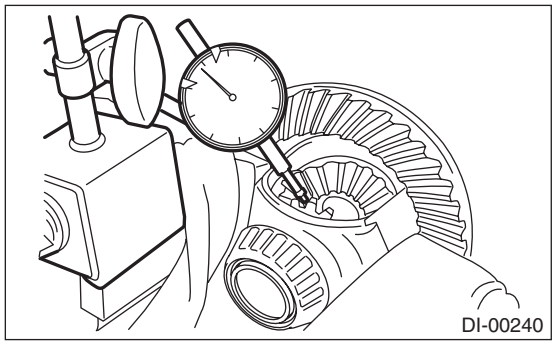
24) Install the drain plug.

NOTE:
Use a new gasket.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)
25) Install the filler plug.

NOTE:
After installing the rear differential assembly to the vehicle, fill the gear oil, then use a new gasket, and tighten to the specified torque. <Ref. to DI-22, REPLACEMENT, Differential Gear Oil.>

E: INSPECTION

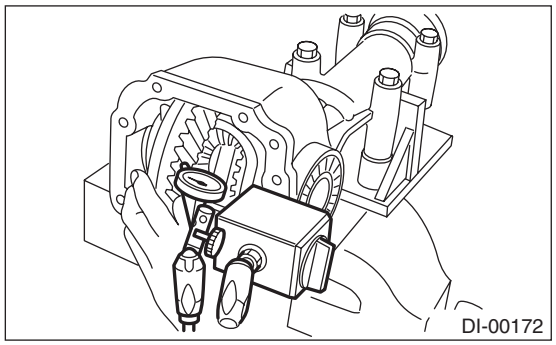


Wash all the disassembled parts clean, and examine them for wear, damage or other defects. Repair or replace the defective parts as necessary.
1) Hypoid driven gear and drive pinion
• If there is evidently an abnormal tooth contact, find out the cause and adjust until the teeth contact correctly. Replace the gear if there is an excessive worn or an incapable adjustment.
• If crack, cutout or seizure is found, replace the parts as a set. Slight damage of some teeth can be corrected by oil stone or the like.
2) Side gear and pinion mate gear
• Replace if cracks, scoring or other defects are evident on the tooth surface.
• Replace if thrust washer contact surface is worn or seized. Slight damages of the surface can be corrected by oil stones or equivalent.
3) Bearing
Replace if seizure, peeling, wear, rust, dragging during rotation, noise or other defect is evident.
4) Thrust washer of the side gear and pinion mate gear
Replace if seized, flawed, abnormally worn or having other defects.
5) Oil seal
Replace if deformed or damaged, and at every disassembling.

6) Differential carrier
Replace if the bearing bores are worn or damaged.
7) Differential case
Replace if its sliding surfaces are abnormally worn, burned, or cracked.
8) Companion flange
Replace if the oil seal lip contact surface shows cracking.

1. SIDE GEAR BACKLASH

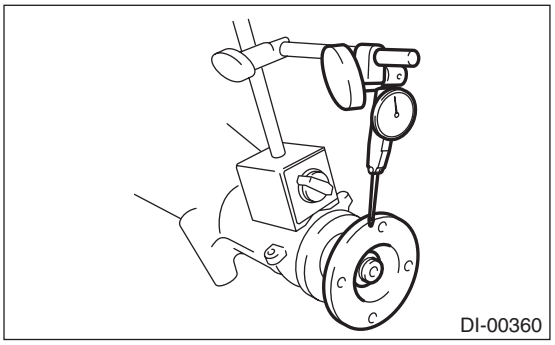
Using a dial gauge, check the backlash of side gear.



Side gear backlash:
VA1-type:
0.05 — 0.15 mm (0.002 — 0.006 in)
VA2-type:
0.13 — 0.18 mm (0.005 — 0.007 in)
If the side gear backlash is outside the specification range, select the side gear thrust washer and adjust the side gear backlash as specified.

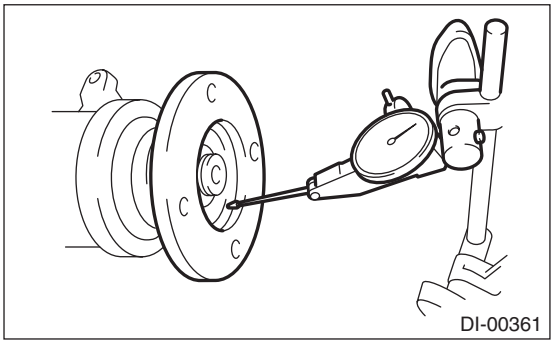
2. HYPOID DRIVEN GEAR BACKLASH

Using a dial gauge, check the backlash of hypoid driven gear.



Hypoid driven gear backlash:
0.10 — 0.15 mm (0.004 — 0.006 in)
If the hypoid driven gear backlash is outside the specification range, adjust the side bearing preload and repair if necessary.

3. COMPANION FLANGE



1) If rust or dirt is attached to the companion flange, remove them.
2) Set a dial gauge at a companion flange surface (mating surface of propeller shaft and companion flange), and then measure the companion flange runout.

Limit of runout:
0.08 mm (0.003 in)

3) Set the gauge inside of the companion flange, and measure the runout.

Limit of runout:
0.08 mm (0.003 in)

4) If either runout exceeds the limit, move the phase of companion flange and drive pinion 90° each, and find the point where the runout is within the limit.
5) If the runout exceeds the limit after changing the phase, replace the companion flange and recheck the runout.
6) If the runout exceeds the limit after replacing the companion flange, the drive pinion may be assembled incorrectly or bearing is faulty.

4. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION

Inspect the tooth contact between the hypoid driven gear and drive pinion. <Ref. to DI-51, ASSEMBLY, Rear Differential (VA-type).>

F: ADJUSTMENT

1. SIDE GEAR BACKLASH

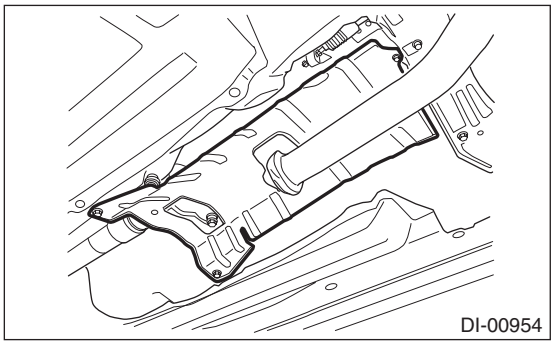
Adjust the side gear backlash. <Ref. to DI-51, ASSEMBLY, Rear Differential (VA-type).>

2. HYPOID DRIVEN GEAR BACKLASH

Adjust hypoid driven gear backlash. <Ref. to DI-51, ASSEMBLY, Rear Differential (VA-type).>

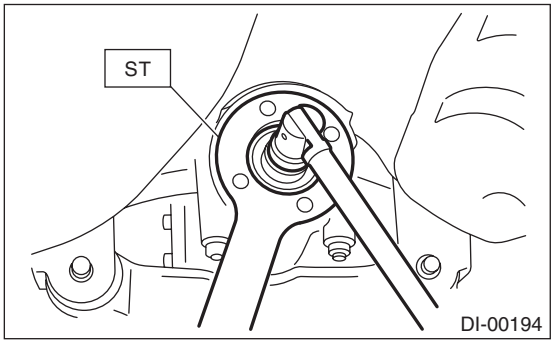
3. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION

Adjust the tooth contact between hypoid driven gear and drive pinion gear. <Ref. to DI-51, ASSEMBLY, Rear Differential (VA-type).>



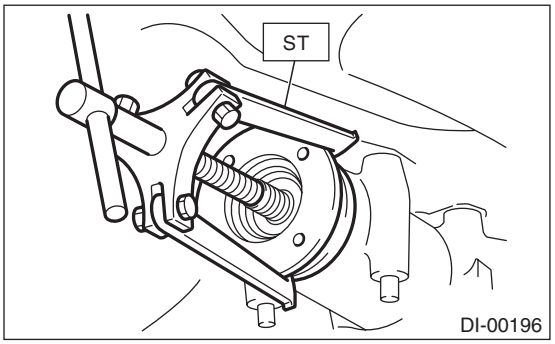
6. Rear Differential Front Oil Seal

A: INSPECTION

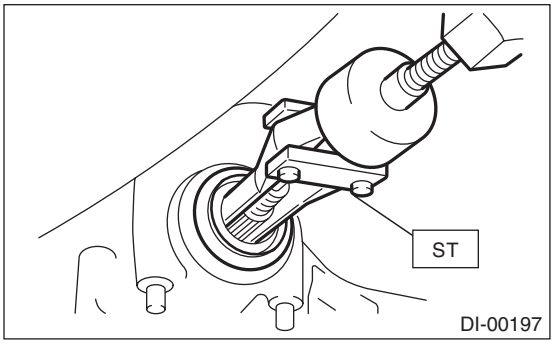


Check that there is no leakage from front oil seal portion. If there is any leakage replace the oil seal and inspect the propeller shaft.

B: REPLACEMENT

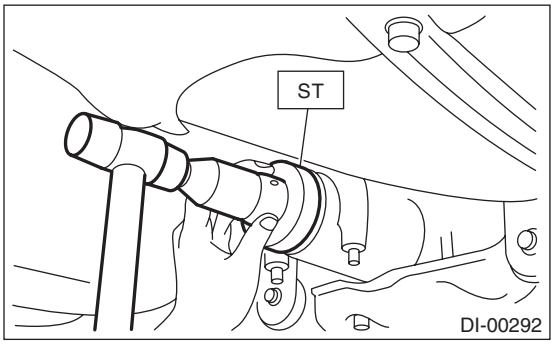


1) Shift the select lever or gear shift lever to neutral.
2) Release the parking brake.
3) Lift up the vehicle.
4) Drain differential gear oil. <Ref. to DI-22, REPLACEMENT, Differential Gear Oil.>
5) Remove the rear exhaust pipe.
• 2.5 L model
<Ref. to EX(H4DO)-16, REMOVAL, Rear Exhaust Pipe.>
• 3.6 L model
<Ref. to EX(H6DO)-12, REMOVAL, Rear Exhaust Pipe.>
6) Remove the heat shield cover.



7) Remove the propeller shaft. <Ref. to DS-10, REMOVAL, Propeller Shaft.>
8) Check the initial torque and write it down.
9) Remove the self-locking nut while holding the companion flange with ST.
ST 498427200 FLANGE WRENCH

10) Extract the companion flange using the ST.
ST 399703600 PULLER ASSY



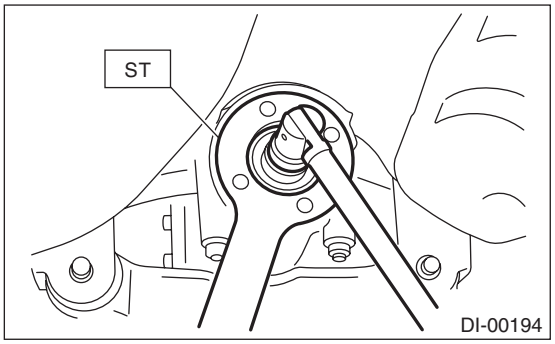
11) Remove the oil seal using ST or screwdriver.
ST 398527700 PULLER ASSY

12) Using the ST, install the oil seal.

NOTE:
• Use a new oil seal.
• Apply differential gear oil to the oil seal lips.
ST 498447120 INSTALLER

13) Install the companion flange.

NOTE:
Use a plastic hammer to install companion flange.



14) Tighten the self-locking nut to the specified torque so that the initial torque of companion flange becomes the same as that of before oil seal replacement.

NOTE:
- Use a new self-locking nut.
- Before installing the self-locking nut, apply the seal material to the threads of the drive pinion shaft and to the seating surface of the self-locking nut.

Seal material:
THREE BOND 1324 (Part No. 004403042) or equivalent

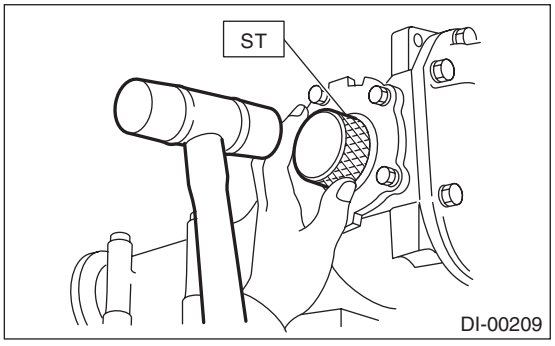
Tightening torque:
T-type
167 — 196 N·m (17.0 — 20.0 kgf-m, 123.2 — 144.6 ft-lb)
VA-type
162 — 220 N·m (16.5 — 22.5 kgf-m, 119.5 — 162.3 ft-lb)

ST 498427200 FLANGE WRENCH

15) Hereafter, perform assembly in the reverse order of disassembly.
16) Fill differential gear oil. <Ref. to DI-22, REPLACEMENT, Differential Gear Oil.>

7. Rear Differential Side Oil Seal

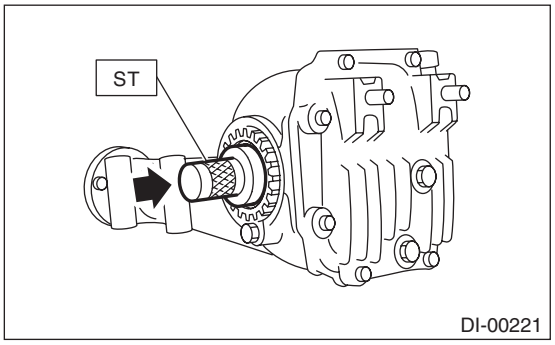
A: INSPECTION



Check that there is no oil leakage from the side oil seal. If there is any leakage, replace the oil seal.

B: REPLACEMENT

1) Remove the rear differential. <Ref. to DI-26, REMOVAL, Rear Differential (T-type).> <Ref. to DI-45, REMOVAL, Rear Differential (VA-type).>
2) Remove the rear differential side oil seal using a ST or screwdriver wrapped with vinyl tape to prevent the side retainer from scratching.
ST 398527700 PULLER ASSY
3) Using the ST, install the oil seal to the side retainer.

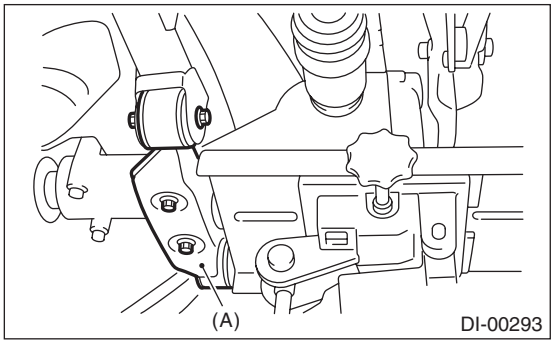


NOTE:
- Use a new oil seal.
- Apply differential gear oil to the oil seal lips.
- T-type and VA2-type

ST 398437700 DRIFT

- VA1-type

ST 498447100 INSTALLER

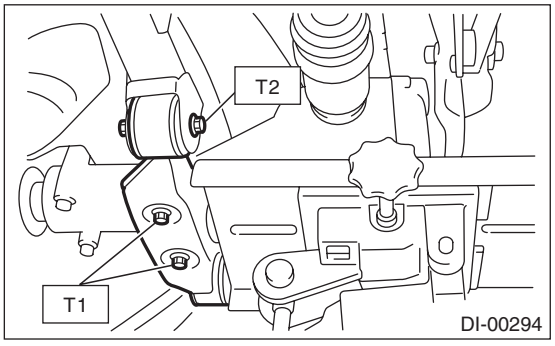


4) Install the rear differential. <Ref. to DI-28, INSTALLATION, Rear Differential (T-type).> <Ref. to DI-45, INSTALLATION, Rear Differential (VA-type).>

8. Rear Differential Front Member

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Lift up the vehicle.
3) Support the rear differential using transmission jack, and then remove the rear differential front member.



(A) Rear differential front member

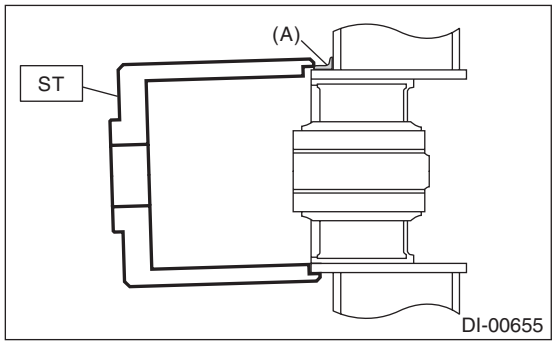
B: INSTALLATION

Install the rear differential front member with a new self-locking nut.

Tightening torque:
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 110 N·m (11.2 kgf-m, 81.1 ft-lb)

C: INSPECTION

1) Check the rear differential front member for damage, bend and corrosion.
If damage, bend or corrosion is excessive, replace the rear differential front member.
2) Check the bushings of rear differential front member for cracking, hardening and damage. If cracking, hardening or damage is excessive, replace rear differential front member.



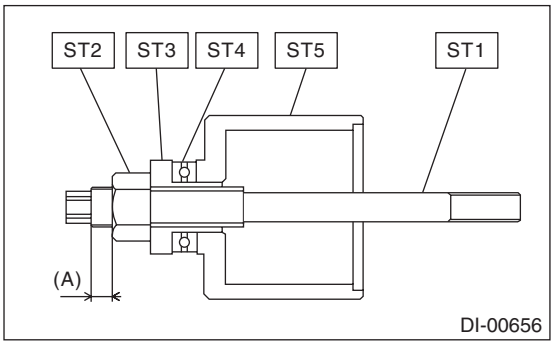
9. Rear Differential Mount Bushing

A: INSPECTION

Check the rear differential mount bushing for cracks, hardening or damage. If cracking, hardening or damage is excessive, replace rear differential mount bushing.

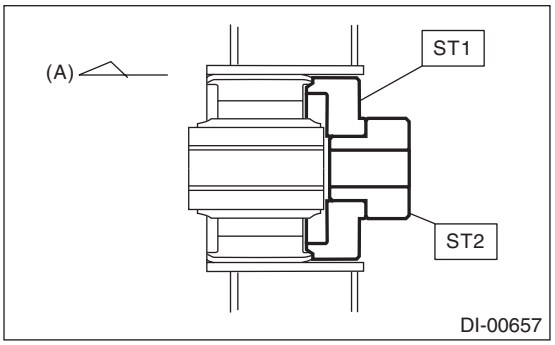
B: REPLACEMENT

CAUTION:
• If there was so much rust in the rear differential mount bushing, remove the rust before starting work.
• Apply the molybdenum grease on the square thread of the ST (shaft and nut) before use.
1) Remove the rear differential. <Ref. to DI-26, REMOVAL, Rear Differential (T-type).> <Ref. to DI-45, REMOVAL, Rear Differential (VA-type).>
2) Fit the ST to the periphery of the sub frame cylinder, and make sure that the ST does not contact with welded spots or spatters.
ST 41399FG010 SPECIAL TOOL A



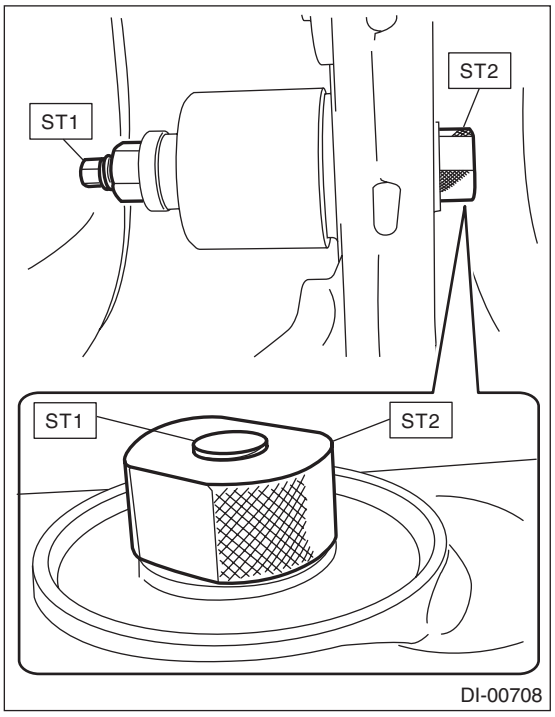
(A) Welded spot

3) If the ST contacts with welded spots or spatters, remove the excessive welds or spatters with sander or the equivalent so that the ST contacts the cylinder peripheral part.



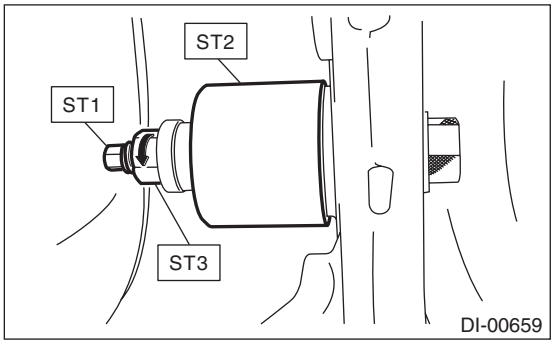
CAUTION:
Performing the operation with the ST contacting with welded spots or spatters may break the ST. Be sure to remove excessive welds or spatters before the operation.

4) Set ST1, ST2, ST3, ST4 and ST5 as shown in the figure.
ST1 41399FG091 SPECIAL TOOL SHAFT
ST2 41399FG070 SPECIAL TOOL NUT
ST3 41399FG050 SPECIAL TOOL SLEEVE
ST4 41399FG080 SPECIAL TOOL BEARING
ST5 41399FG010 SPECIAL TOOL A



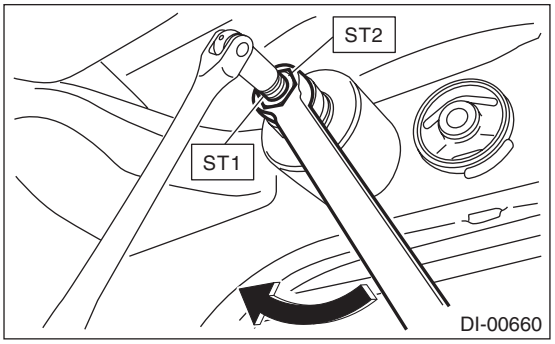
(A) 5 mm (0.2 in) or less

5) Fit and hold the ST1 and ST2 to the rear differential mount bushing from the rear side of vehicle.
ST1 41399FG031 SPECIAL TOOL C
ST2 41399FG061 SPECIAL TOOL RING



(A) Front side of vehicle

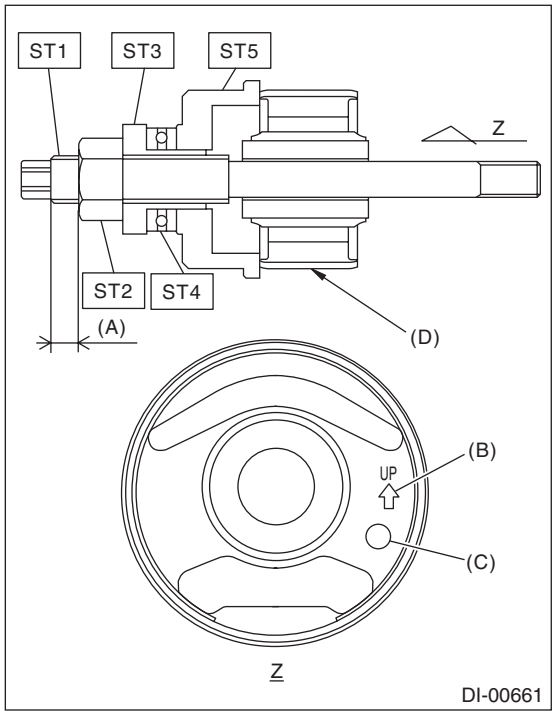
6) Insert the ST set in the step 4) through the rear differential mount bushing hole from the front side of vehicle, and screw in the ST1 by hand till the front end of ST1 comes out slightly from the rear end of ST2.
ST1 41399FG091 SPECIAL TOOL SHAFT
ST2 41399FG061 SPECIAL TOOL RING



7) Hold the ST1 to prevent it from rotating, and screw in the ST3 by hand till there is no loose fit on the ST2.

CAUTION:
When setting the ST to the vehicle, always make sure that the ST2 fits the periphery of the sub frame cylinder and is not tilted.
ST1 41399FG091 SPECIAL TOOL SHAFT
ST2 41399FG010 SPECIAL TOOL A
ST3 41399FG070 SPECIAL TOOL NUT

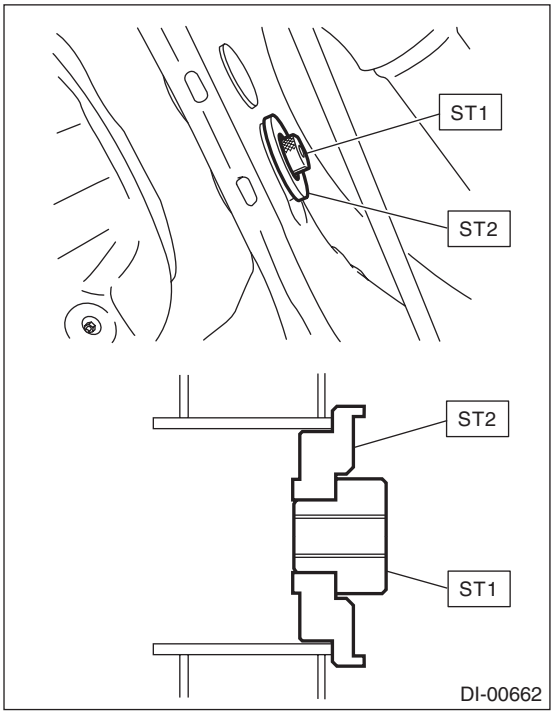
8) Hold the ST1 with a tool to prevent it from rotating, and screw in the ST2 to remove the rear differential mount bushing.



CAUTION:
• Rotation of ST1 will damage the screw at the rear end of rear differential mount bushing. Never rotate the ST1.
• If the ST starts to tilt while removing the rear differential mount bushing, stop the work and set the ST again.
ST1 41399FG091 SPECIAL TOOL SHAFT
ST2 41399FG070 SPECIAL TOOL NUT

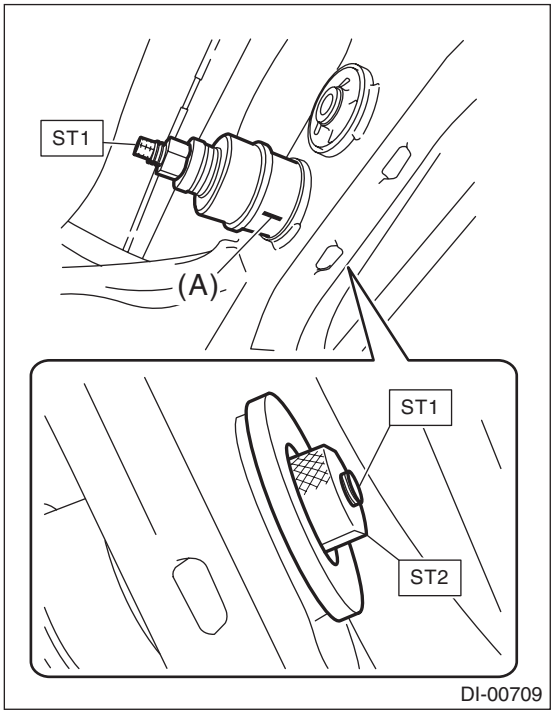
9) Set ST1, ST2, ST3, ST4, ST5 and rear differential mount bushing as shown in the figure.

NOTE:
- Set the ST2 nut near to the end of ST1 screw.
- Hold the rear differential mount bushing with the marked side facing toward the rear of the vehicle, and set the rear differential mount bushing to the ST so that the arrow mark faces upward.
- Mark the bottom end of rear differential mount bushing to identify the installing direction.



ST1 41399FG091 SPECIAL TOOL SHAFT
ST2 41399FG070 SPECIAL TOOL NUT
ST3 41399FG050 SPECIAL TOOL SLEEVE
ST4 41399FG080 SPECIAL TOOL BEARING
ST5 41399FG020 SPECIAL TOOL B

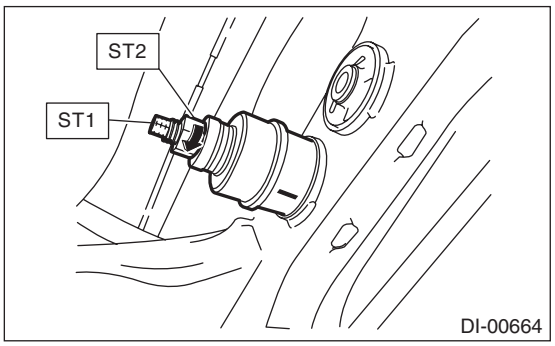
(A) 8 mm (0.31 in) or more
(B) Arrow mark
(C) Mark
(D) Marked position



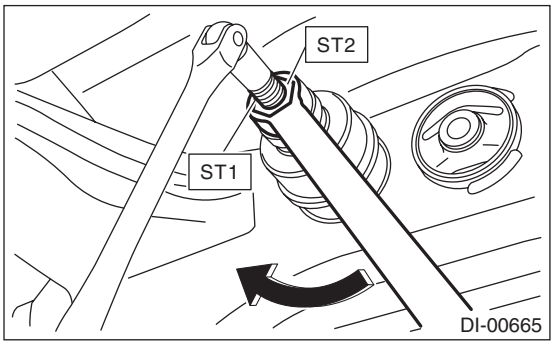
10) Attach ST1 to the ST2, and fit and hold the STs as a unit to the sub frame from the rear side of vehicle.

ST1 41399FG061 SPECIAL TOOL RING
ST2 41399FG041 SPECIAL TOOL D

11) Insert the ST and rear differential mount bushing set in the step 9) through the sub frame from the front side of vehicle, and screw in the ST1 by hand till the front end of ST1 comes out slightly from the rear end of ST2.

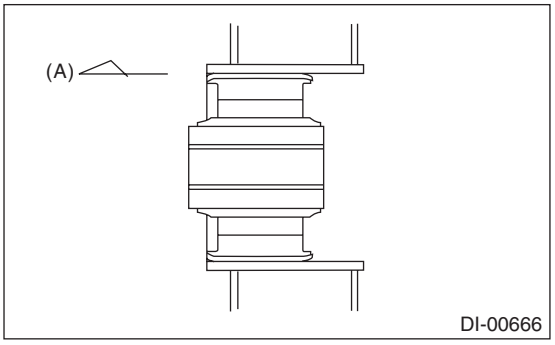


CAUTION:
Set the rear differential mount bushing with its mark facing the bottom end direction.
ST1 41399FG091 SPECIAL TOOL SHAFT
ST2 41399FG061 SPECIAL TOOL RING



(A) Mark

12) Hold the ST1 to prevent it from rotating, and screw in the ST2 by hand till there is no loose fit on the ST and the rear differential mount bushing.



CAUTION:
Make sure that the ST and rear differential mount bushing are not tilted.
ST1 41399FG091 SPECIAL TOOL SHAFT
ST2 41399FG070 SPECIAL TOOL NUT

13) Screw in the ST2 while holding the ST1 with a tool to prevent it from rotating, and press-fit the rear differential mount bushing to the front end of sub frame cylinder.
ST1 41399FG091 SPECIAL TOOL SHAFT
ST2 41399FG070 SPECIAL TOOL NUT

14) Make sure that the rear differential mount bushing is inserted to the front end of sub frame cylinder.

(A) Front side of vehicle

15) Install the rear differential. <Ref. to DI-28, INSTALLATION, Rear Differential (T-type).> <Ref. to DI-45, INSTALLATION, Rear Differential (VA-type).>

10.Rear Differential Inspection Mode

A: GENERAL DESCRIPTION

CAUTION:
Be sure to perform rear differential inspection mode.
- Follow the messages displayed on the Subaru Select Monitor when working.
- “Rear differential inspection mode” using the Subaru Select Monitor is available only for the CVT model.
- Perform rear differential inspection mode when the following work has been performed.

Transmission assembly replacement/Replacement of rear differential/Replacement of front differential hypoid gear set/Replacement of rear differential hypoid gear set

B: PROCEDURE

CAUTION:
Do not turn the power of the Subaru Select Monitor OFF during work, and do not disconnect the data link connector.
1) Shift the select lever to “P” range.
2) Apply the electronic parking brake.
3) Lift up the vehicle.

WARNING:
Lift up the vehicle until the tire bottom is 30 cm or more above the ground.
4) Connect the Subaru Select Monitor to data link connector.
5) Turn the ignition switch to ON. (For model with push button start, press the push button ignition switch twice without depressing brake pedal.)
6) Select «Work Support» in the «Transmission Control System» screen of Subaru Select Monitor.
7) Select «Maintenance mode» in the «Work Support» screen of Subaru Select Monitor.
8) Select «Rear differential inspection mode» in the «Maintenance mode» screen of the Subaru Select Monitor.
9) Follow the messages displayed on the Subaru Select Monitor screen when working.
10) The results of the rear differential inspection mode are displayed on the Subaru Select Monitor screen.
- When ended normally: “The rear differential has been replaced normally.”
- When ended abnormally: “A rear differential abnormality has been detected. Reinspect the items at the time of rear differential installation.”
- When interrupted: “Inspection is stopped. Restart this inspection mode from the beginning.”

11) After the message “Inspection has been completed. Set the ignition switch to OFF.” appears, the rear differential inspection mode completes.

NOTE:
• When the rear differential inspection mode is completed properly, the following warning lights may illuminate. But this is not a malfunction. If warning light illuminates, clear the memory.
VDC/ABS, engine, power steering, EyeSight
• For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.
• If the rear differential inspection mode does not end normally, repeat the mode until it ends normally.
• When the inspection mode does not end normally, the AWD warning light will start blinking at 2 Hz.
• When the rear differential inspection mode ends abnormally, the front differential and rear differential may be different from the specifications for the vehicle.
• When the rear differential inspection mode is interrupted, the following reasons are possible.

Message	Main reasons for abnormal termination
• “Inspection is stopped.” • “Inspection is stopped. Restart this inspection mode from the beginning.”	• TCM has detected a failure. • VDC has a failure. • Brake is applied after start during automatic running. • Too delayed operation to the instructions displayed on the Subaru Select Monitor.
“TCM incompatible. Rear differential inspection mode is stopped.”	The model does not support the rear differential inspection mode.
The TCM has detected a fault. Inspect following the manual.	TCM has detected a failure.

12) Perform “Function Check Sequence” for VDC. <Ref. to VDC(diag)-18, MAINTENANCE MODE, OPERATION, Subaru Select Monitor.> <Ref. to VDC-17, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

11.General Diagnostic Table

A: INSPECTION

Symptom or trouble	Possible cause	Remedy
1. Oil leakage	(1) Worn, scratched, or incorrectly seated front or side oil seal. Scored, battered or excessively worn sliding surface of companion flange.	Repair or replace.
	(2) Clogged or damaged air breather cap.	Clean, repair or replace.
	(3) Loose bolts on the side retainer, or incorrectly fitted O-ring.	Tighten the bolts to specified torque. Replace the O-ring.
	(4) Loose rear cover attachment bolts or damaged gasket.	Replace the gasket, and tighten the bolts to specified torque.
	(5) Loose filler plug or drain plug.	• Apply liquid gasket, and tighten to the specified torque. (T-type) • Replace the gasket, and tighten to the specified torque. (VA-type)
	(6) Wear, damage or incorrect fitting of drive shaft, side retainer or oil seal.	Repair or replace.
2. Seizure NOTE: Seized or damaged parts should be replaced, and also other parts should be thoroughly checked for any defect and should be repaired or replaced as required.	(1) Insufficient backlash for hypoid gear.	Readjust or replace.
	(2) Excessive preload for side, rear or front bearing.	Readjust or replace.
	(3) Insufficient or improper oil used.	Add recommended oil to the specified level.
3. Damage NOTE: Damaged parts should be replaced, and also other parts should be thoroughly checked for any defect and should be repaired or replaced as required.	(1) Improper backlash for hypoid gear.	Readjust or replace.
	(2) Insufficient or excessive preload for side, rear or front bearing.	Readjust or replace.
	(3) Excessive backlash for differential gear.	Replace gear or thrust washer.
	(4) Loose bolts and nuts such as hypoid driven gear bolt.	Retighten.
	(5) Damage due to overloading.	Replace.
4. Noises when starting or shifting gears NOTE: Noises may be caused by differential assembly, universal joint, wheel bearing, etc. Find out what is actually making noise before disassembling.	(1) Improper tooth contact of hypoid driven gear and drive pinion.	Readjust. (Drive pinion adjustment and backlash adjustment)
	(2) Excessive backlash for hypoid driven gear.	Replace the gear or the pinion height adjusting washer.
	(3) Excessive backlash for side gear.	Replace gear or thrust washer.
	(4) Insufficient preload for front or rear bearing.	Readjust.
	(5) Loose drive pinion nut.	Tighten to the specified torque.
	(6) Loose bolts and nuts such as side retainer attachment bolt.	Tighten to the specified torque.
5. Noises when cornering	(1) Damaged differential gear.	Replace.
	(2) Excessive wear or damage of thrust washer.	Replace.
	(3) Broken pinion mate shaft.	Replace.
	(4) Seized or damaged side bearing.	Replace.

Symptom or trouble	Possible cause	Remedy
6. Gear Noise NOTE: Since noises from engine, muffler, transmission, propeller shaft, wheel bearings, tires, and body are sometimes mistaken for noises from differential assembly, be careful in checking them. Inspection methods to locate noises include coasting, accelerating, cruising, and lifting-up all four wheels. Perform these inspections according to the condition of trouble. When listening to noises, shift the gear into four-wheel drive and fourth speed position, trying to pick up only differential noise.	(1) Improper tooth contact of hypoid driven gear and drive pinion.	Readjust or replace the hypoid gear set.
	(2) Improper backlash of the hypoid driven gear.	Readjust.
	(3) Scored or chipped teeth of hypoid gear.	Replace hypoid gear set.
	(4) Scuffed hypoid gear.	Replace hypoid gear set.
	(5) Improper preload for front or rear bearings.	Readjust.
	(6) Stuck, scored or chipped teeth of front or rear bearing.	Replace.
	(7) Stuck, scored or chipped teeth of side bearing.	Replace.
	(8) Vibrating differential gear.	Replace the differential gear.

1. General Description

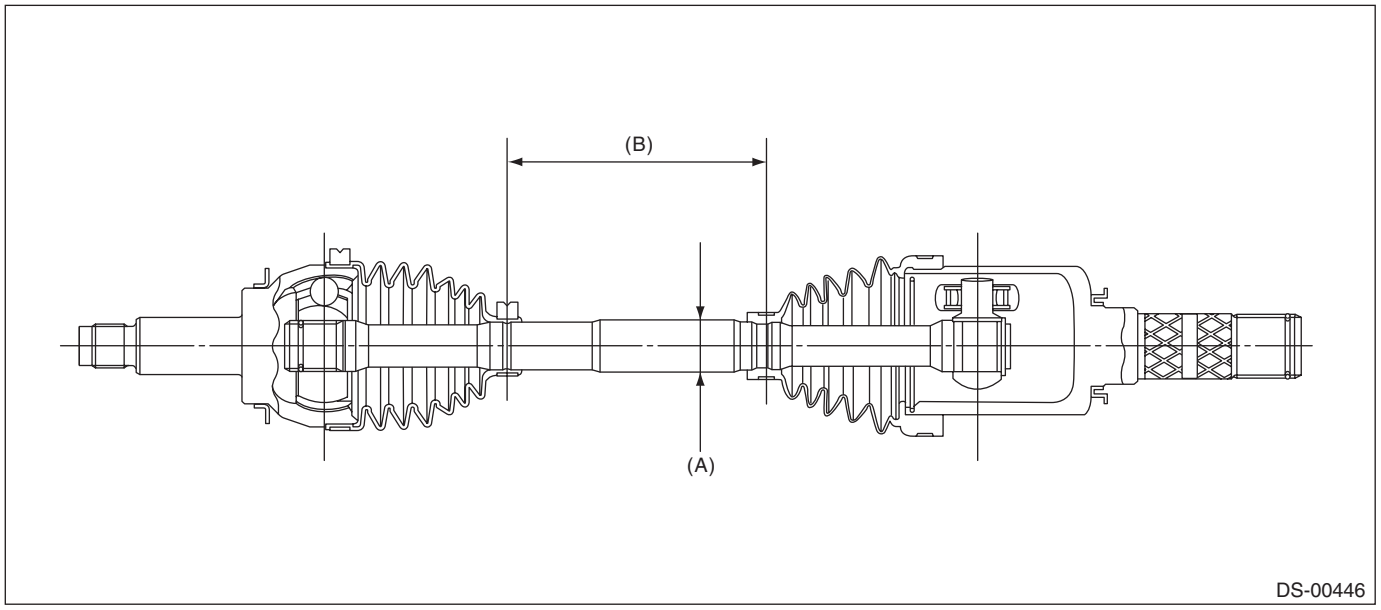
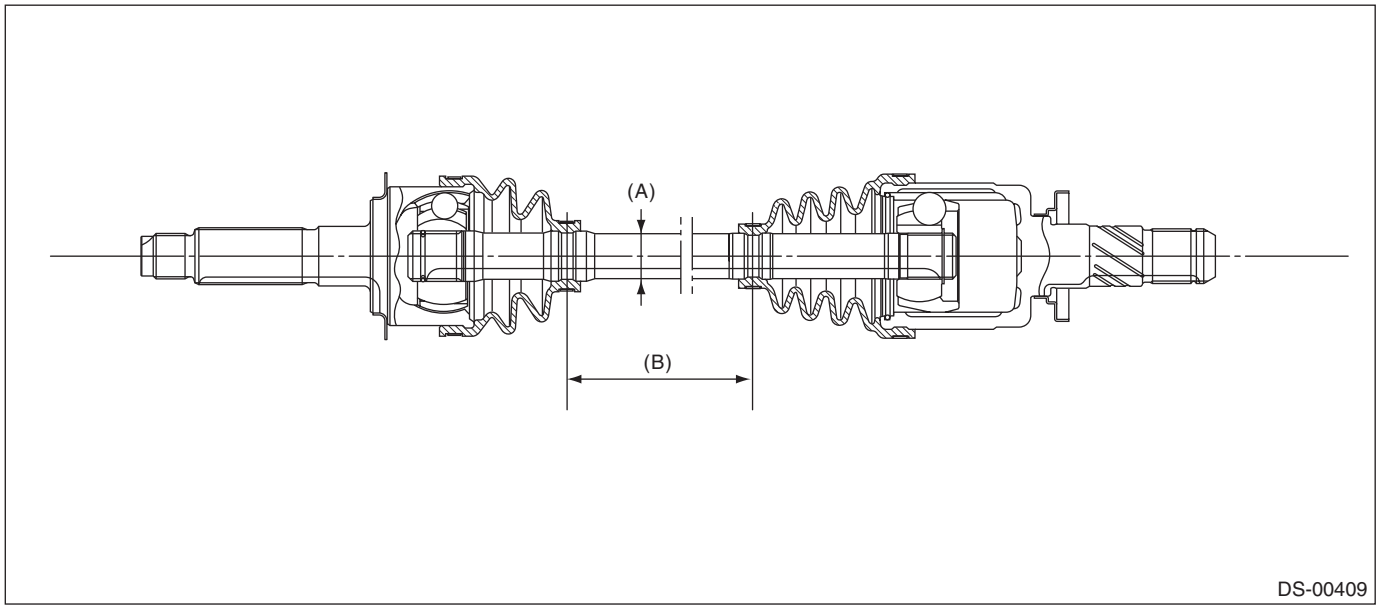
A: SPECIFICATION



1. PROPELLER SHAFT

Car line			All models
Propeller shaft type			EDJ
Front propeller shaft joint-to-joint length: L_1	mm (in)	CVT (TR580)	675.5 (26.59)
		CVT (TR690)	578 (22.76)
		6MT	735.5 (28.96)
Rear propeller shaft joint-to-joint length: L_2		mm (in)	828 (32.6)
Outer diameter of tube:	mm (in)	D_1	63.5 (2.500)
		D_2	57.5 (2.264)

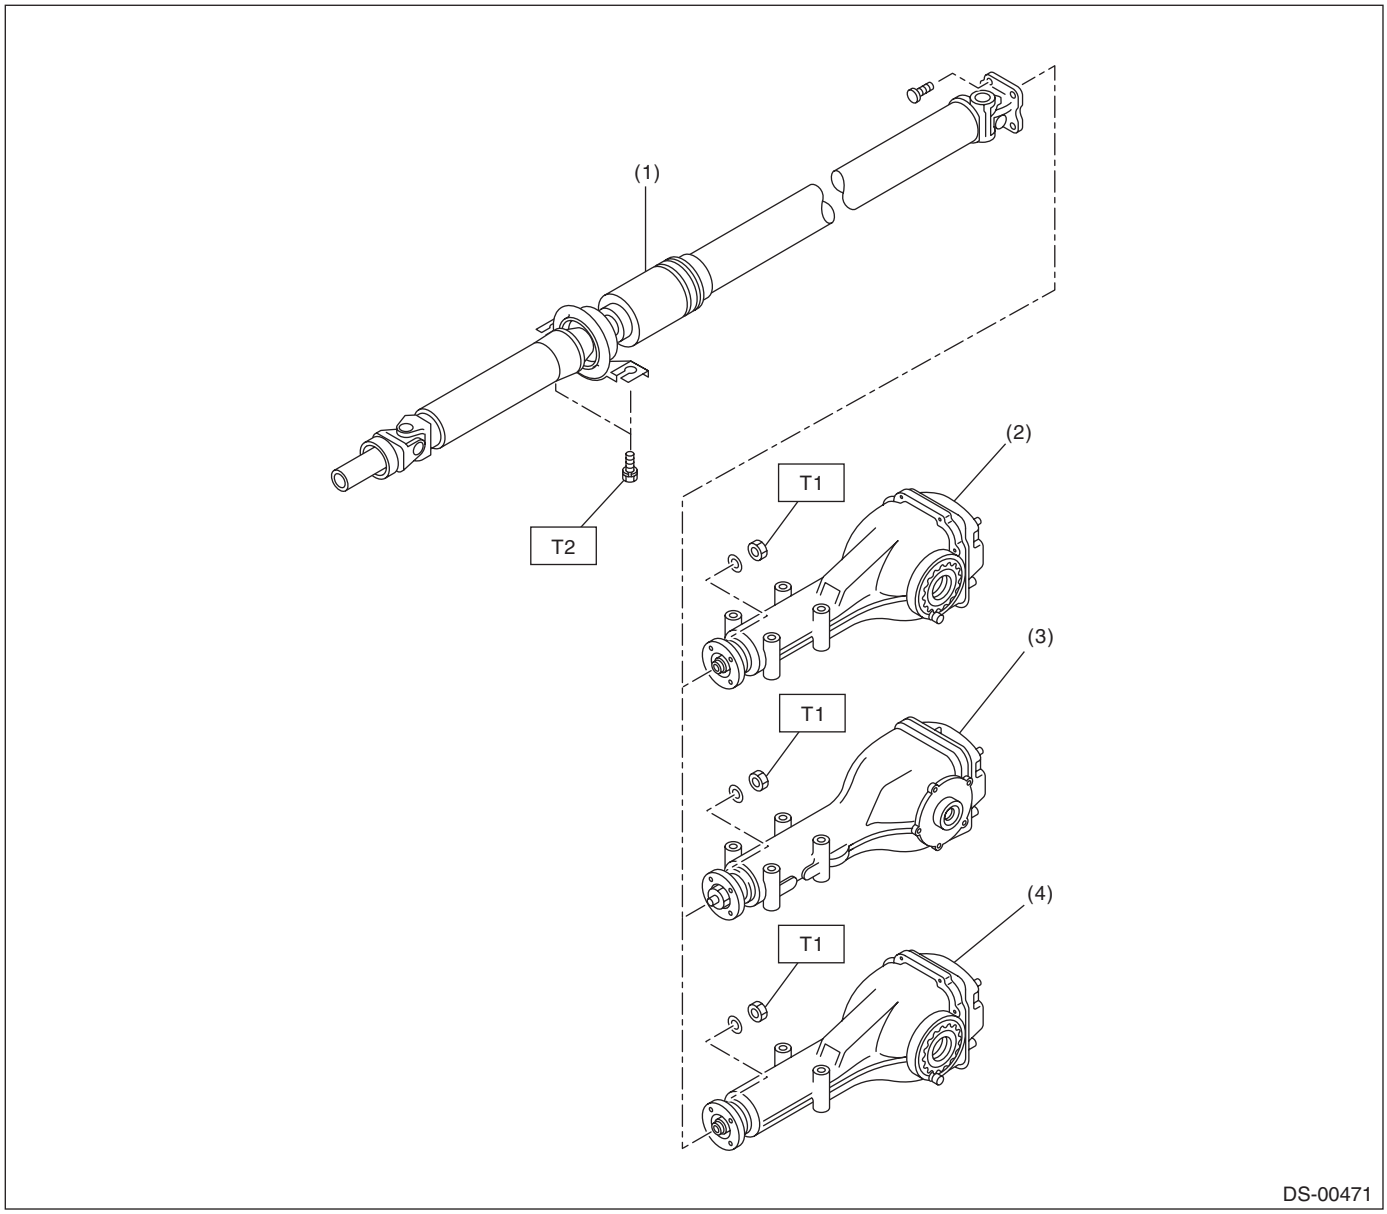
2. FRONT DRIVE SHAFT ASSEMBLY



Model	Type of drive shaft	Axle diameter ϕ mm (in)	Axle length mm (in)
2.5 L sedan model	EBJ + PTJ	22 (0.87)	381.2 (15.01)
Other than above	EBJ + PTJ	22 (0.87)	366.8 (14.44)

(A) Axle diameter (B) Axle length

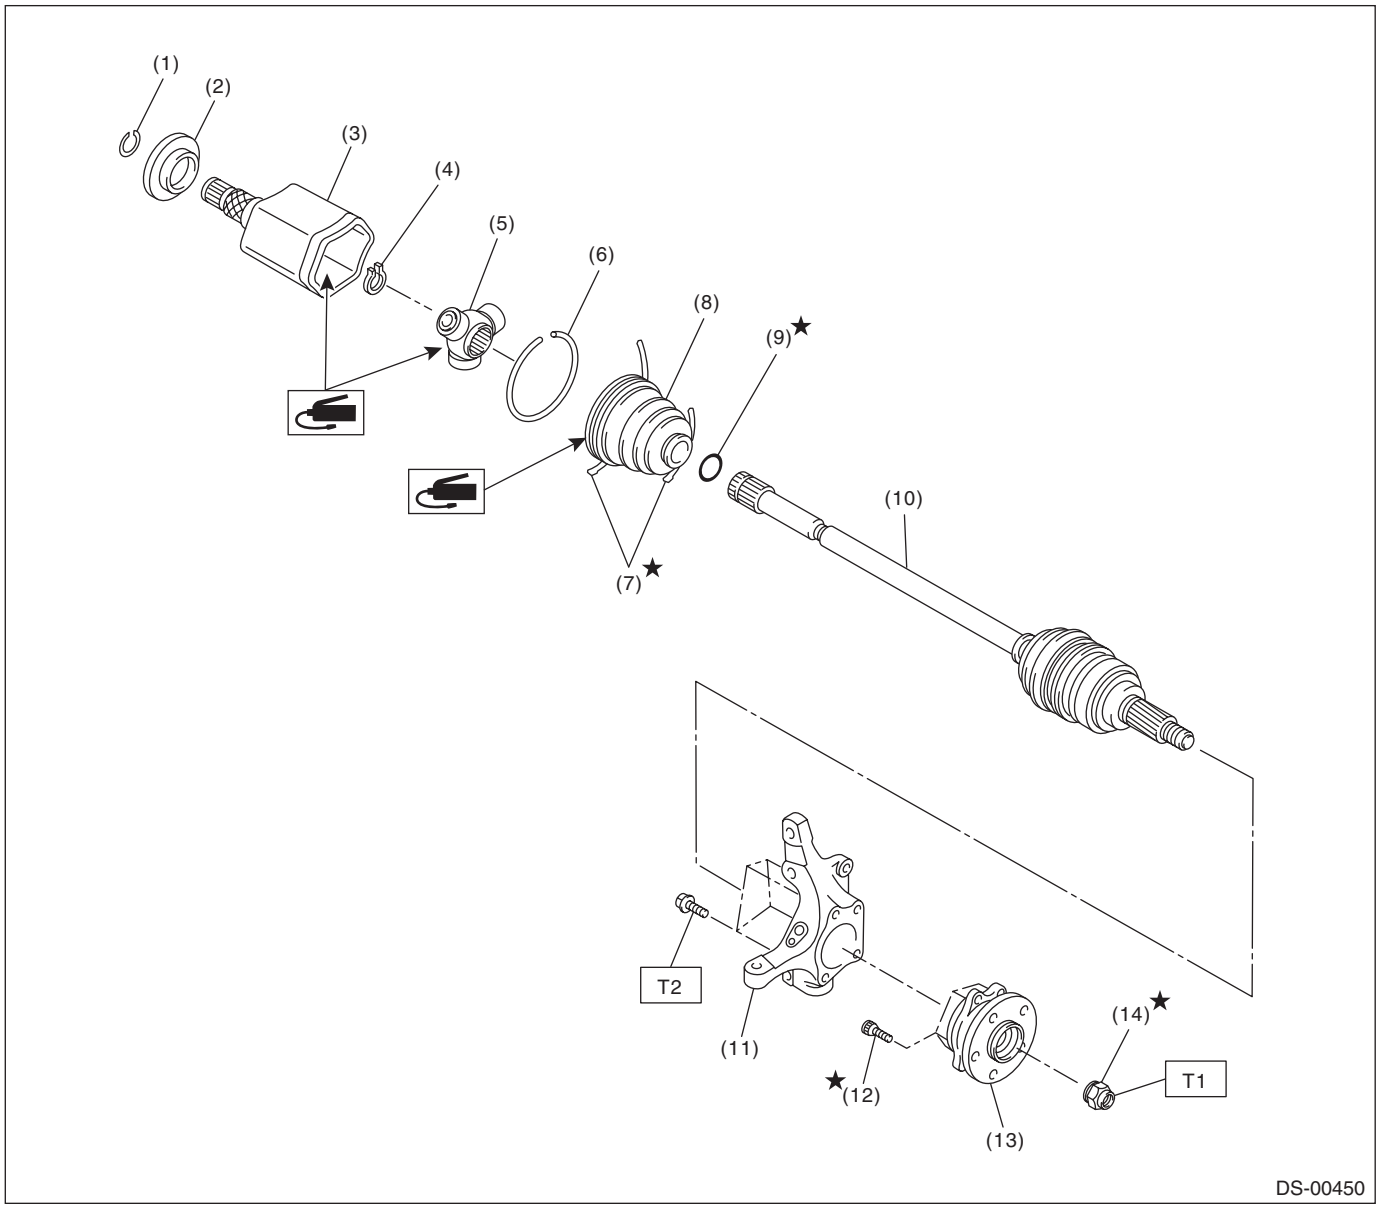
3. REAR DRIVE SHAFT ASSEMBLY



Model	Type of drive shaft	Axle diameter ϕ mm (in)	Axle length mm (in)
2.5 L CVT model	BJ + DOJ	22 (0.87)	420.8 (16.57)
Other than above	EBJ + DOJ	22 (0.87)	409.7 (16.13)

(A) Axle diameter (B) Axle length

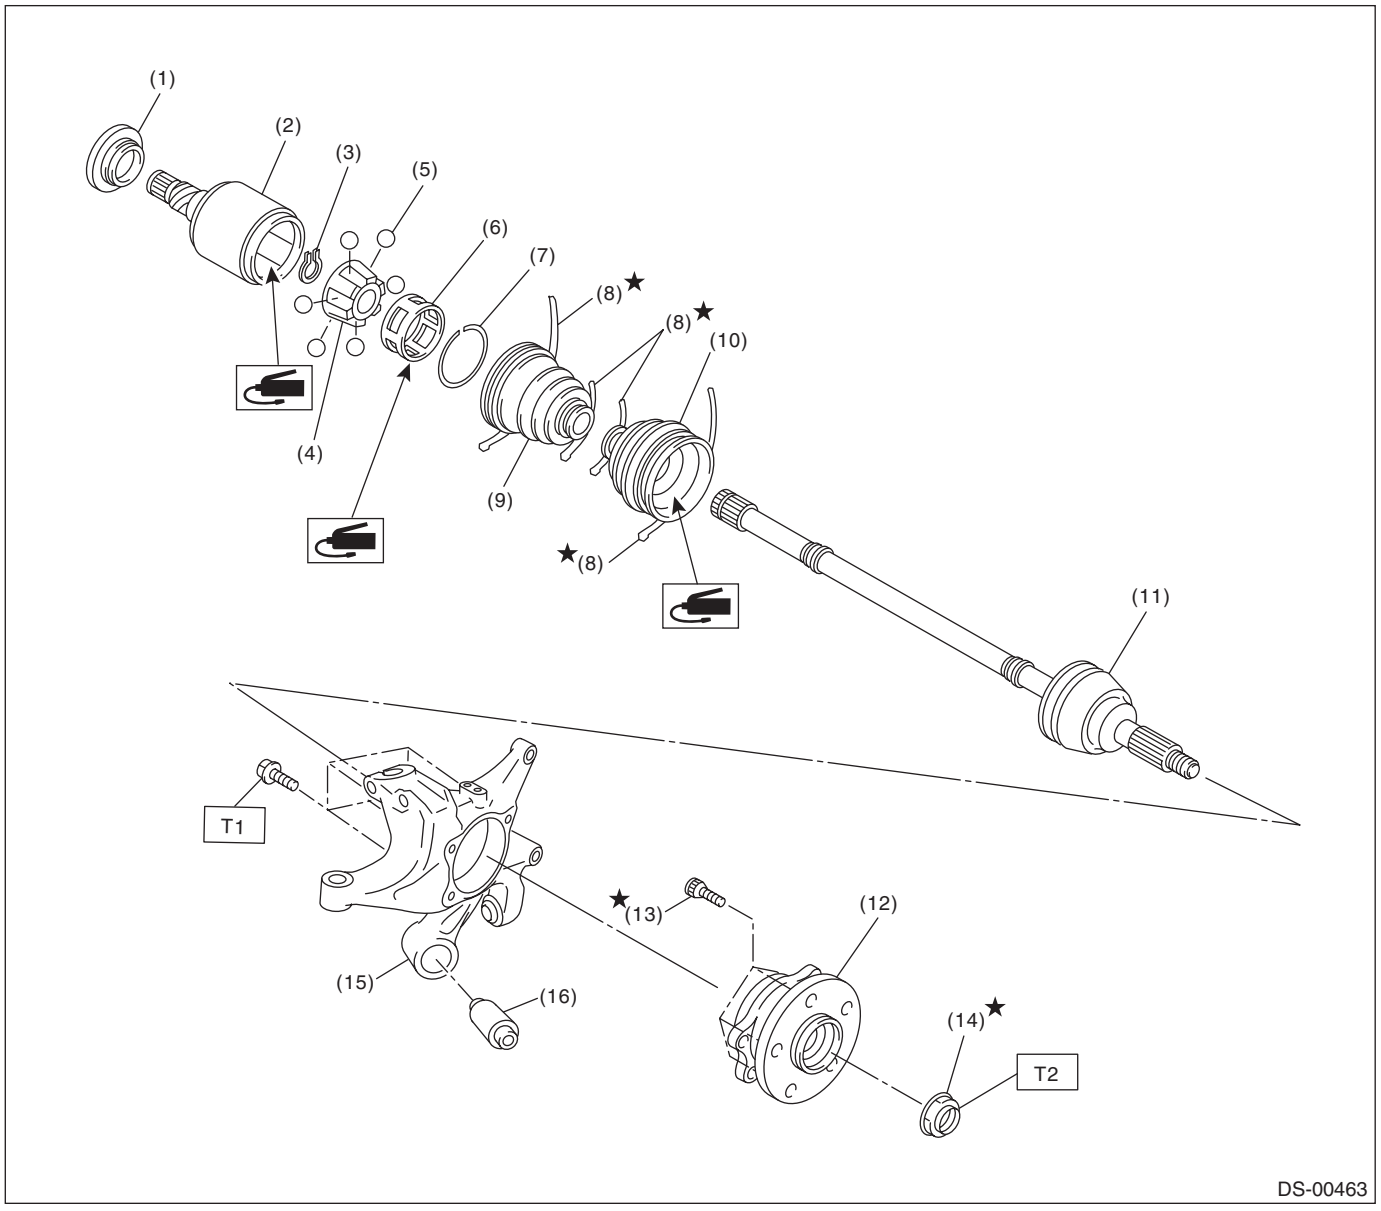
B: COMPONENT



1. PROPELLER SHAFT

(1) Propeller shaft
(2) Rear differential (VA1-type)
(3) Rear differential (T-type)
(4) Rear differential (VA2-type)

Tightening torque: N·m (kgf-m, ft-lb)
T1: 31 (3.2, 22.9)
T2: 52 (5.3, 38.4)



2. FRONT AXLE

(1) Circlip
(2) Baffle plate
(3) Outer race (PTJ)
(4) Snap ring
(5) Trunnion
(6) Snap ring
(7) Boot band
(8) Boot (PTJ)
(9) O-ring
(10) EBJ shaft ASSY
(11) Front axle housing
(12) Hub bolt
(13) Front hub unit bearing
(14) Axle nut

Tightening torque: N·m (kgf-m, ft-lb)
T1: 220 (22.4, 162.3)
T2: 65 (6.6, 47.9)

3. REAR AXLE

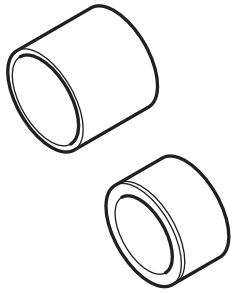
(1)	Baffle plate	(8)	Boot band	(15)	Rear axle housing
(2)	Outer race (DOJ)	(9)	Boot (DOJ)	(16)	Rear bushing
(3)	Snap ring	(10)	Boot (BJ) Boot (EBJ)		
(4)	Inner race	(11)	BJ shaft ASSY EBJ shaft ASSY	***Tightening torque: N·m (kgf-m, ft-lb)***	
(5)	Ball	(12)	Rear hub unit bearing	***T1: 65 (6.6, 47.9)***	
(6)	Cage	(13)	Hub bolt	***T2: 240 (24.47, 177.0)***	
(7)	Snap ring	(14)	Axle nut		

C: CAUTION

• When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
• Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
• When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
• Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
• Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
• Apply grease onto sliding or revolving surfaces before installation.
• Be sure that the surface of brake disc, brake pad or brake shoe is free from grease or oil.
• Do not secure a part in a vise directly. Place cushioning materials such as wood blocks, aluminum plates, or waste cloth between the part and the vise.
• When the suspension-related components have been removed or replaced, perform “VDC sensor mid-point setting mode” of the VDC. <Ref. to VDC-17, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

D: PREPARATION TOOL

1. SPECIAL TOOL



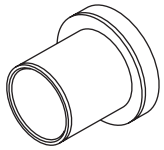


ILLUSTRATION	Part No.	DESCRIPTION	REMARKS
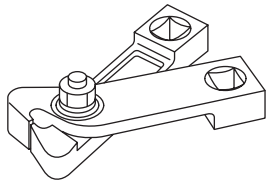
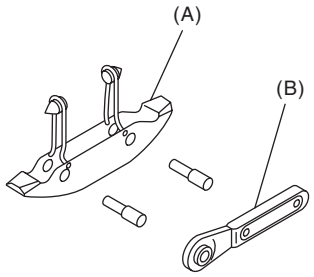
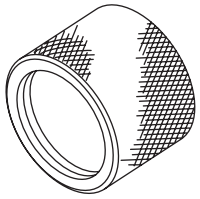
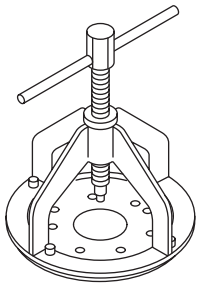
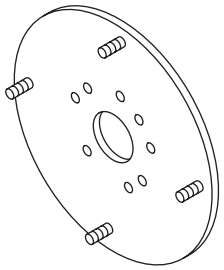
 ST20099PA010	20099PA010	INSTALLER & REMOVER	• Used for replacing the bushing - trailing link of the housing assembly - rear axle. • Used together with BUSHING REMOVER (20099FG000).
 ST20099FG000	20099FG000	BUSHING REMOVER	• Used for replacing the bushing - trailing link of the housing assembly - rear axle. • Used together with base part of INSTALLER & REMOVER (20099PA010).

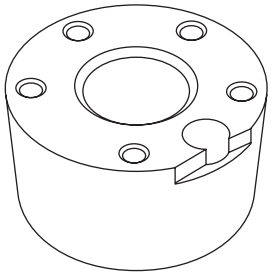


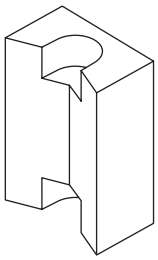


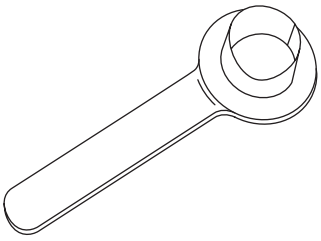












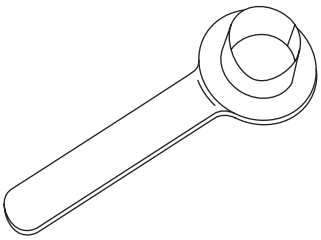


ILLUSTRATION	Part No.	DESCRIPTION	REMARKS
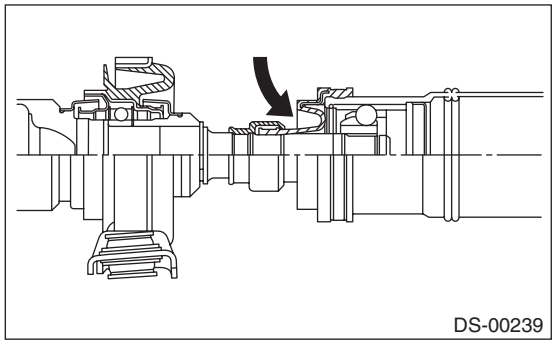
 ST28099AC000	28099AC000	BOOT BAND PLIERS	Used for tightening the band - boot. (for front drive shaft)
 ST-925091000	925091000	BAND TIGHTENING TOOL	Used for tightening the band - boot. (A) Jig for the band (B) Ratchet wrench
 ST18675AA000	18675AA000	DIFFERENTIAL SIDE OIL SEAL INSTALLER	Used for installing the differential side retainer oil seal.
 ST-926470000	926470000	AXLE SHAFT PULLER	• Used for removing the drive shaft. • Used together with AXLE SHAFT PULLER PLATE (28099PA110).
 ST28099PA110	28099PA110	AXLE SHAFT PULLER PLATE	• Used for removing the drive shaft. • Exchange with the plate of the AXLE SHAFT PULLER (926470000) to use.

ILLUSTRATION	Part No.	DESCRIPTION	REMARKS
 ST28099PA080	28099PA080	HUB STAND	Used for assembling the bolt - hub of the hub.
 ST28399AG000	28399AG000	HUB STAND	Used for extracting the bolt - hub.
 ST28399SA010	28399SA010	OIL SEAL PROTECTOR	• Used for installing front drive shaft into front differential. • For protecting the oil seal.
 ST28099PA090	28099PA090	OIL SEAL PROTECTOR	• Used for installing the rear drive shaft to the rear differential. • For protecting the oil seal.

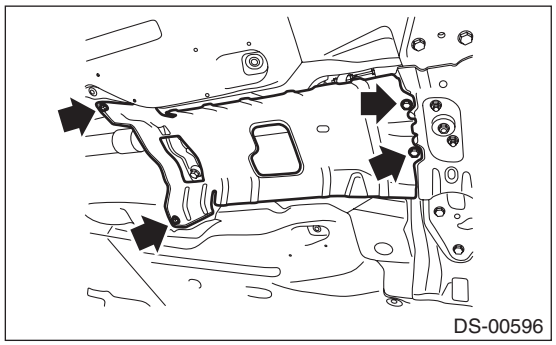


2. GENERAL TOOL

TOOL NAME	REMARKS
Tie-rod ball joint puller	Used for disconnecting joints.
Dial gauge	Used for inspecting the propeller shaft run-out.
Extension cap	Used for preventing leakage of gear oil or CVTF.
Crowbar	Used for extracting drive shaft.
Needle nose pliers	Used for tightening the band - boot of the rear drive shaft. • Snap-on 96BCP Or equivalent.

2. Propeller Shaft

A: REMOVAL

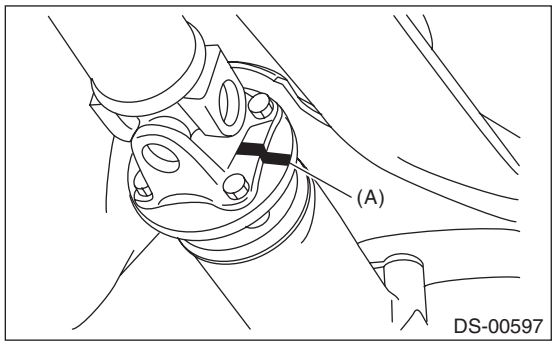


CAUTION:
- **Before removing propeller shaft, wrap metal parts with a cloth or rubber material.**
- **Do not disassemble the center EDJ of the propeller shaft.**
- **Before removing the propeller shaft, wrap the center joint part with a cloth, etc. If the joint is bent during removal, the rubber boot may be damaged due to interference with metal parts.**

DS-00239

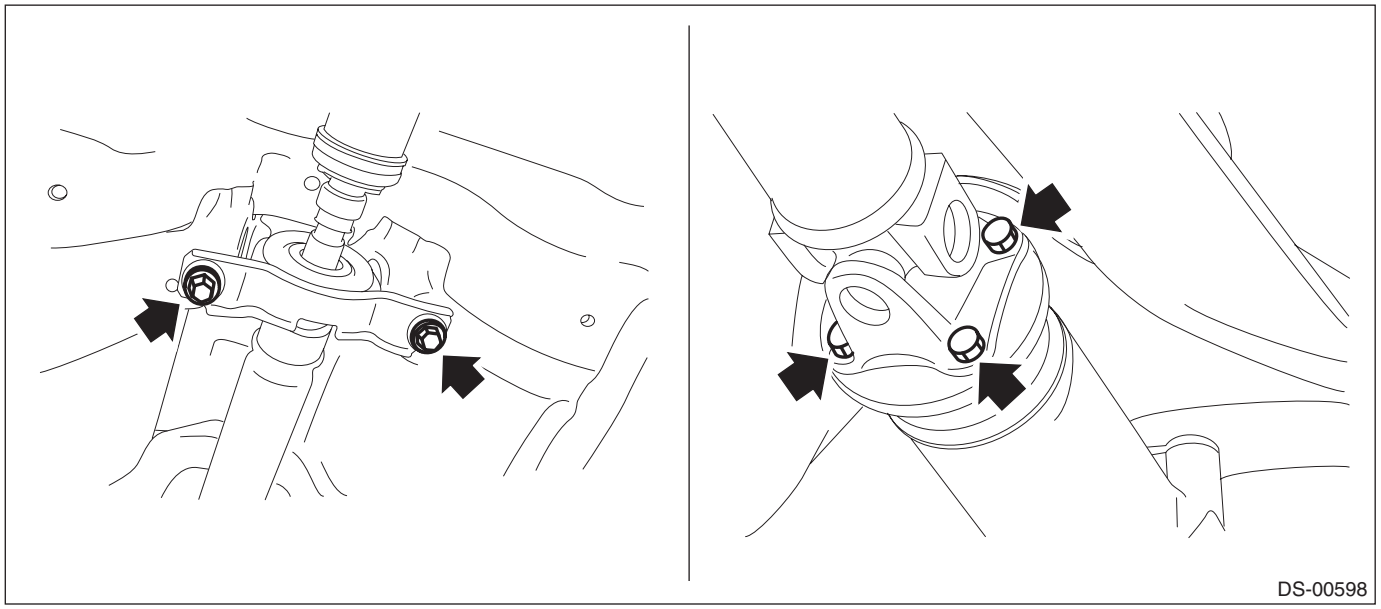
1) Shift the select lever or gear shift lever to neutral.
2) Release the parking brake.
3) Lift up the vehicle.
4) Remove the front exhaust pipe.
- 2.5 L model: <Ref. to EX(H4DO)-5, REMOVAL, Front Exhaust Pipe.>
- 3.6 L model: <Ref. to EX(H6DO)-6, REMOVAL, Front Exhaust Pipe.>

5) Remove the rear exhaust pipe.
- 2.5 L model: <Ref. to EX(H4DO)-16, REMOVAL, Rear Exhaust Pipe.>
- 3.6 L model: <Ref. to EX(H6DO)-12, REMOVAL, Rear Exhaust Pipe.>



6) Remove the bolts to remove the front heat shield cover.

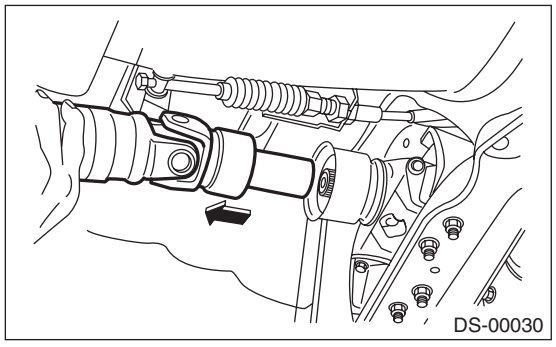
DS-00596



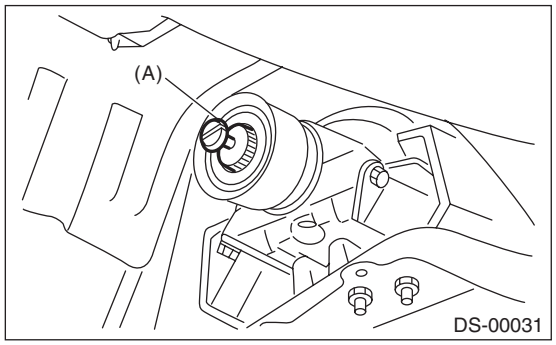
7) Remove the propeller shaft assembly.

CAUTION:
- **Do not disassemble the propeller shaft.**
- **Use a container to catch CVTF or oil flowing from propeller shaft.**
- **To prevent CVTF from leaking, install extension cap etc. to the transmission.**
- **Be careful not to damage oil seals and contact surface of the sleeve yoke.**

(1) Place alignment marks (A) on the flange yoke and rear differential.



(2) Remove the bolts and remove the propeller shaft from the rear differential.



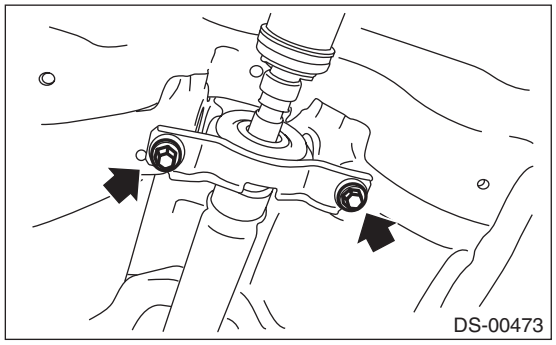
(3) Remove the end of propeller shaft from the transmission.

NOTE:
Use a container to catch oil flowing from propeller shaft.

(4) Install extension cap (A) to the transmission.

NOTE:
If extension cap (A) is not available, place vinyl bag over opening and fasten with string to prevent gear oil from leaking.

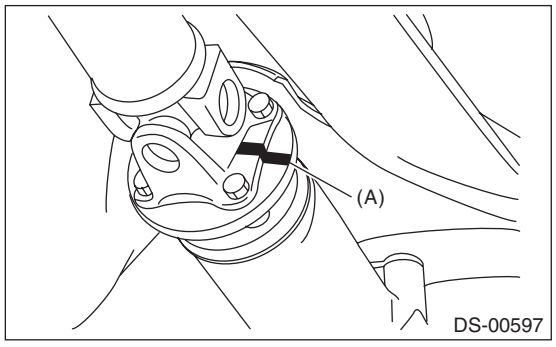
B: INSTALLATION



1) Before installation, check the following items, and replace the propeller shaft assembly as necessary.
- Dents or cracks on the tube surface
- Splines for deformation or abnormal wear
- Unsmooth joint operation or abnormal noise
- Center bearing for free play, noise or non-smooth operation.
- Oil seals for abnormal wear or damage
- Damaged center bearing

2) Apply fluid or gear oil to the oil seal lip and the propeller shaft.

Recommended fluid/gear oil:
<Ref. to RM-4, FLUID, RECOMMENDED MATERIALS, Recommended Materials.>



3) Insert the sleeve yoke into the transmission and attach center bearing to body.

Tightening torque:
52 N·m (5.3 kgf-m, 38.4 ft-lb)

4) Align the alignment marks (A), and connect the yoke flange and rear differential.

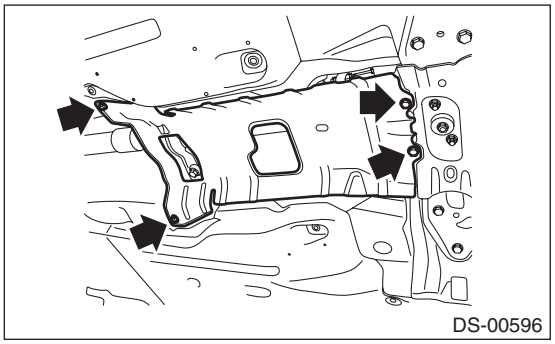
Tightening torque:
31 N·m (3.2 kgf-m, 22.9 ft-lb)

5) Check the propeller shaft with the propeller shaft installed to the vehicle. <Ref. to DS-13, INSPECTION, Propeller Shaft.>
6) Install the heat shield cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

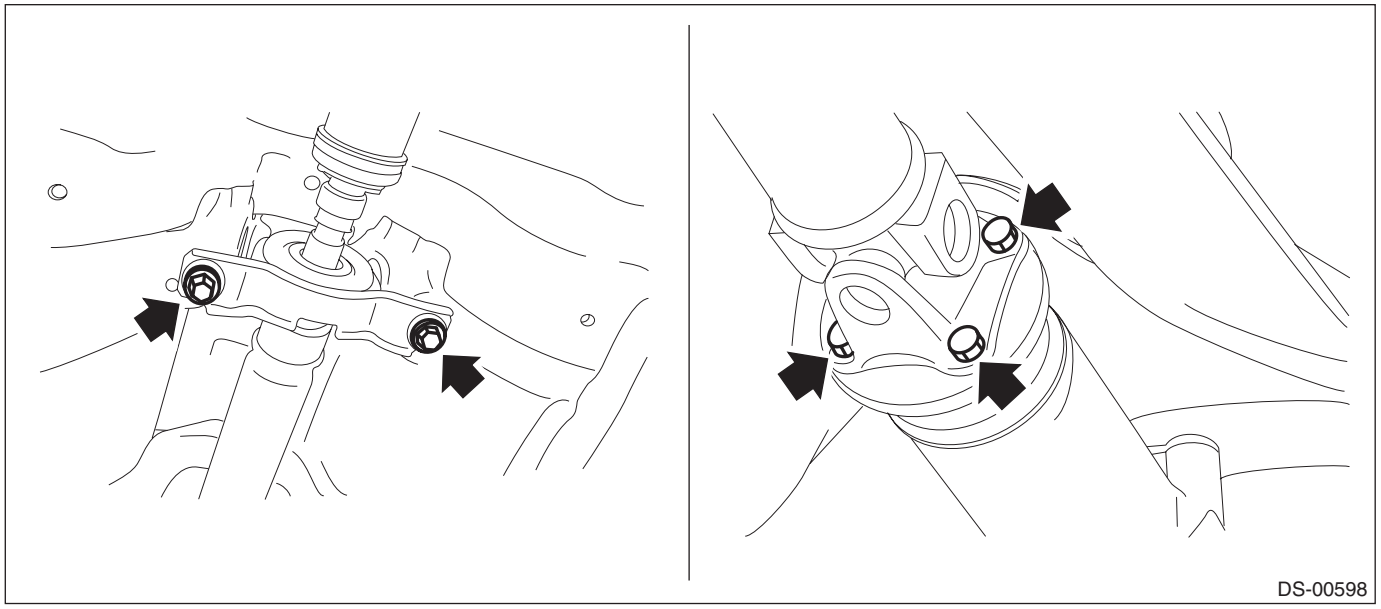
7) Install the rear exhaust pipe.
- 2.5 L model: <Ref. to EX(H4DO)-17, INSTALLATION, Rear Exhaust Pipe.>
- 3.6 L model: <Ref. to EX(H6DO)-13, INSTALLATION, Rear Exhaust Pipe.>

8) Install the front exhaust pipe.
- 2.5 L model: <Ref. to EX(H4DO)-7, INSTALLATION, Front Exhaust Pipe.>
- 3.6 L model: <Ref. to EX(H6DO)-8, INSTALLATION, Front Exhaust Pipe.>



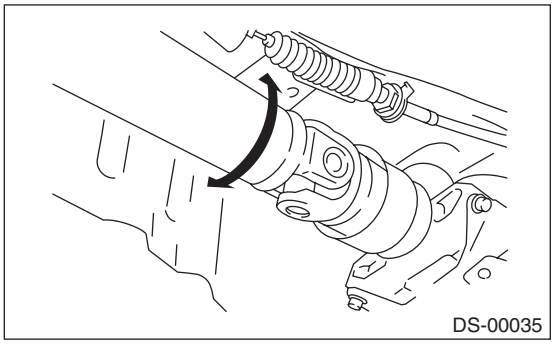
9) Install the under cover - front. <Ref. to EI-28, INSTALLATION, Front Under Cover.>
10) Lower the vehicle.

C: INSPECTION



Check the propeller shaft with the propeller shaft installed to the vehicle.
1) Shift the select lever or gear shift lever to neutral.
2) Release the parking brake.
3) Lift up the vehicle.
4) Remove the front exhaust pipe.
- 2.5 L model: <Ref. to EX(H4DO)-5, REMOVAL, Front Exhaust Pipe.>
- 3.6 L model: <Ref. to EX(H6DO)-6, REMOVAL, Front Exhaust Pipe.>

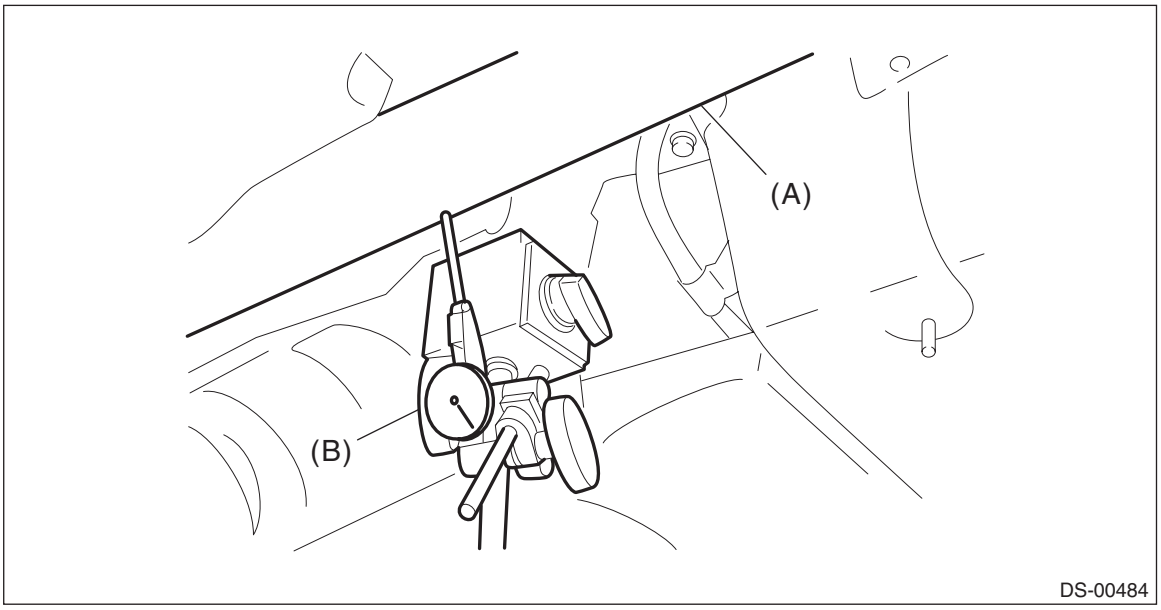
5) Remove the rear exhaust pipe.
- 2.5 L model: <Ref. to EX(H4DO)-16, REMOVAL, Rear Exhaust Pipe.>
- 3.6 L model: <Ref. to EX(H6DO)-12, REMOVAL, Rear Exhaust Pipe.>



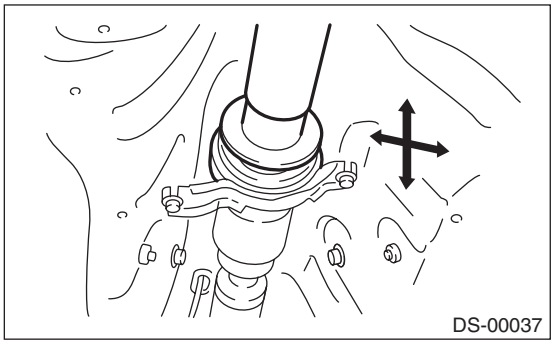
6) Remove the bolts to remove the front heat shield cover.

DS-00596

7) Check the propeller shaft mounting bolt for looseness.
   (1) Yoke flange mounting bolts which connect to the rear differential
   (2) Center bearing bracket mounting bolts



8) Check the spline and bearing for the propeller shaft.
   (1) Turn the propeller shaft by hand to check if abnormal free play exists at splines.
   (2) Also move yokes to check if abnormal free play exists at spiders and bearings.

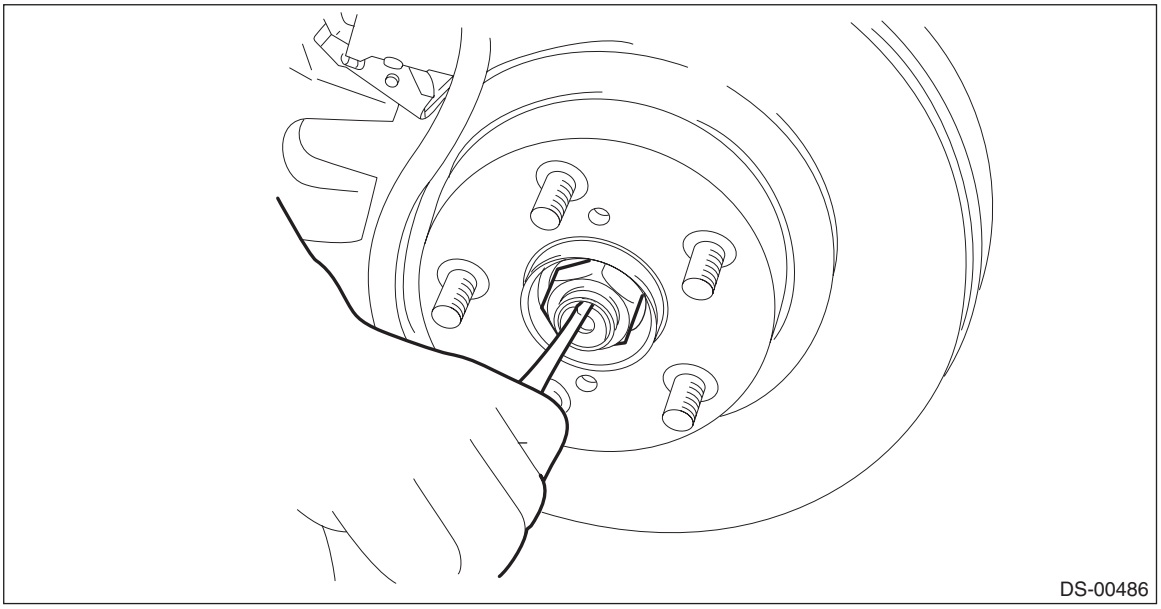


9) Measure the deflection of the propeller shaft.
(1) Set the dial gauge (B) with its indicator stem at the center of the propeller shaft (A).
(2) Turn the propeller shaft (A) slowly by hands to check for runout of the propeller shaft.

Runout:
Limit: 0.6 mm (0.024 in)

10) Check the center bearing for free play.
Move the propeller shaft near the center bearing up, down, left, right by hand, to check for any abnormal free play of the bearings.

11) Replace the propeller shaft assembly if faulty is found in the inspection.



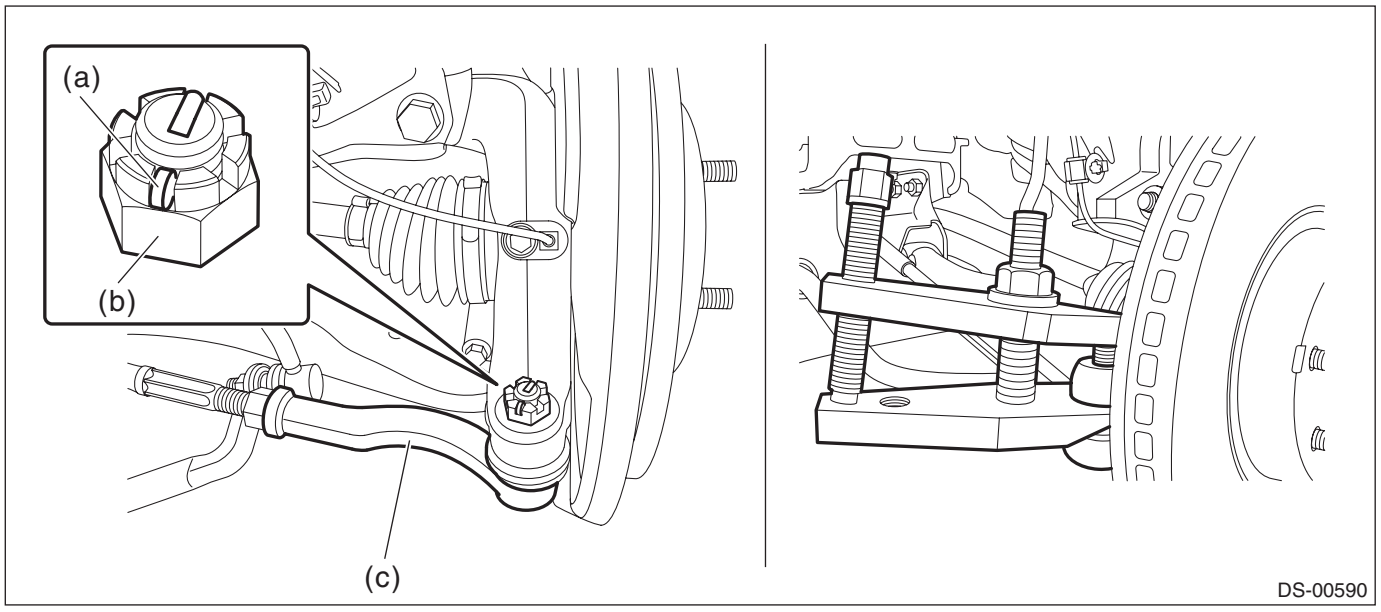
3. Front Axle

A: REMOVAL

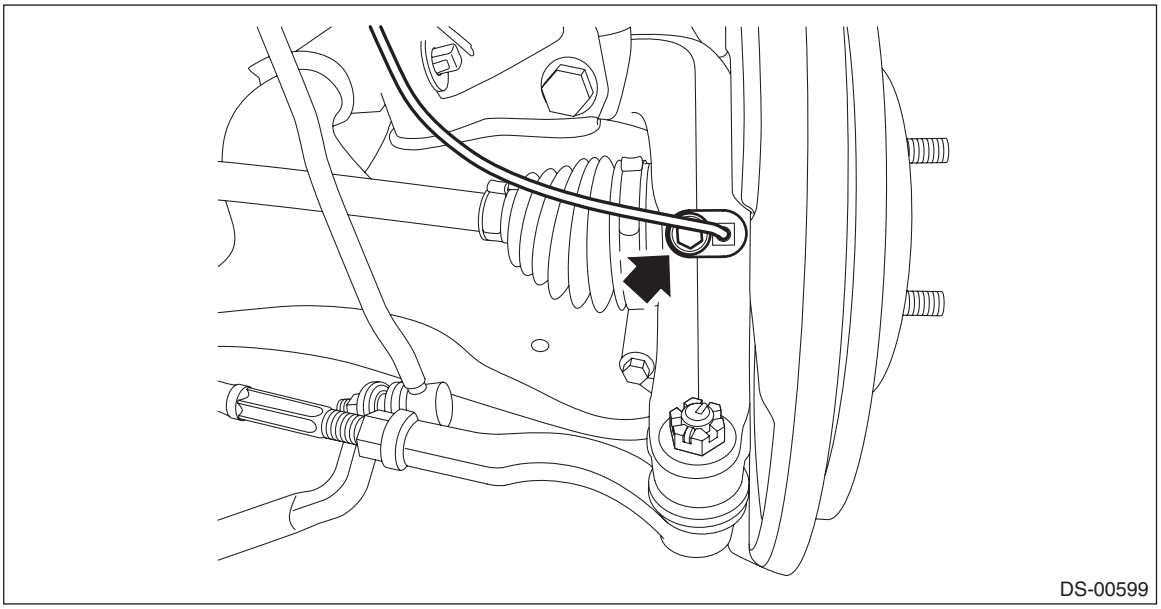
1) Lift up the vehicle, and then remove the front wheels.
2) Remove the nut - axle.

CAUTION:
Do not loosen the nut - axle while the front axle is loaded. Doing so may damage the hub unit COMPL.

(1) Lift the crimped section of the nut - axle.
(2) Remove the nut - axle using a socket wrench while depressing the brake pedal.

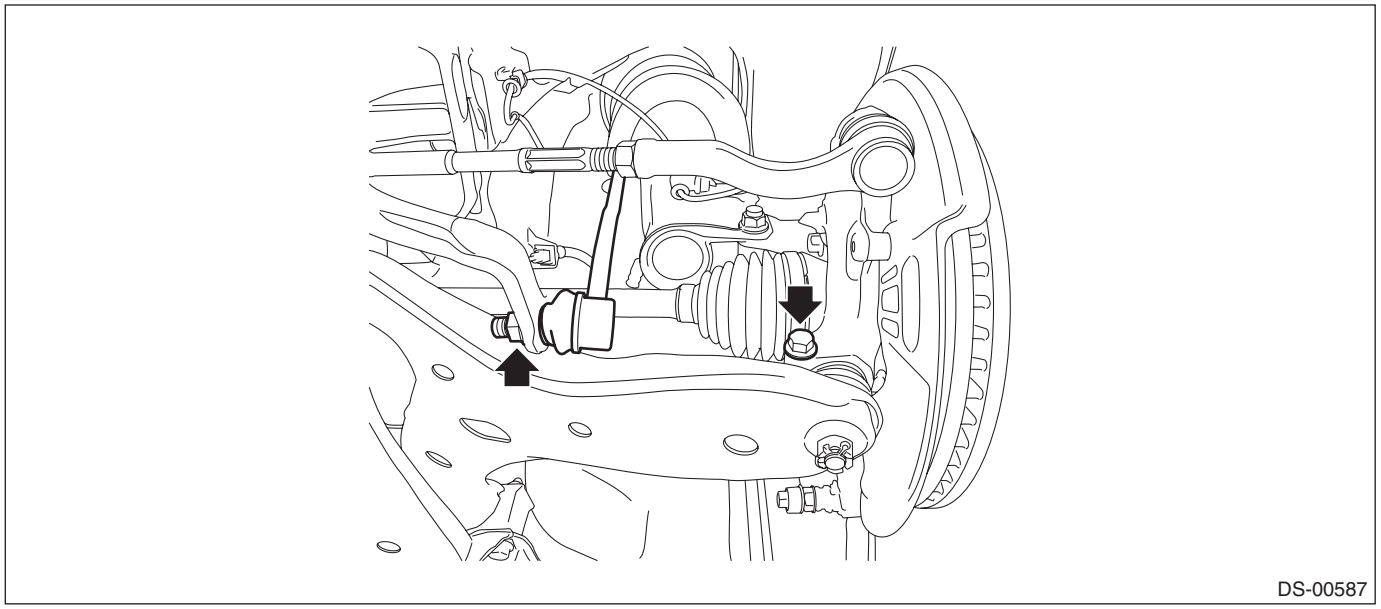


3) Remove the disc brake assembly. <Ref. to BR-22, REMOVAL, Front Disc Brake Assembly.>
4) Remove the disc rotor. <Ref. to BR-19, REMOVAL, Front Disc Rotor.>



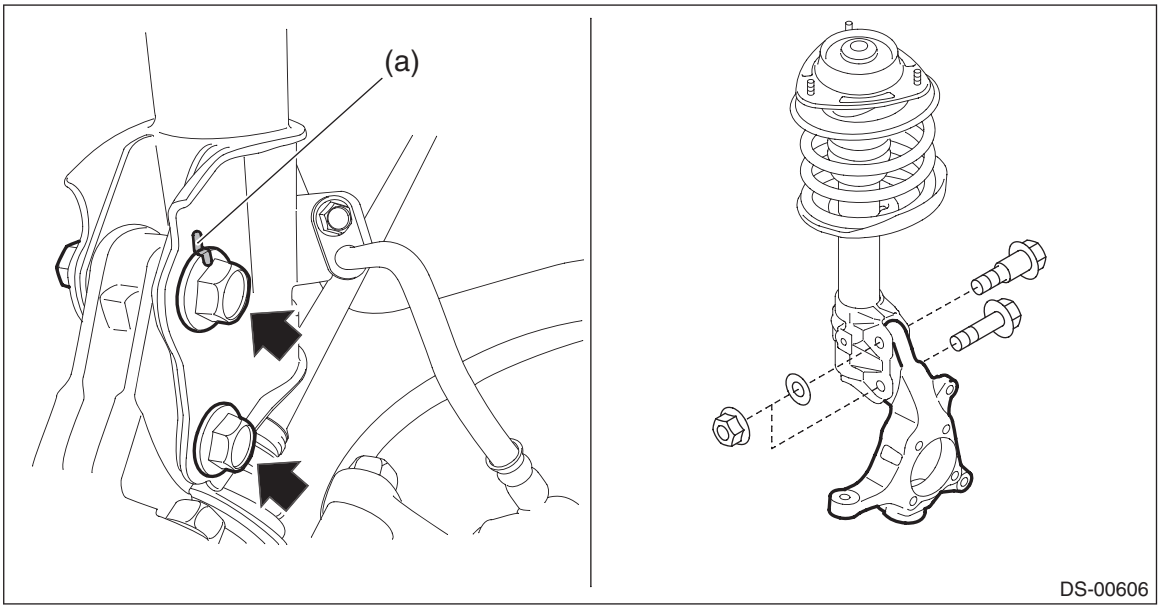
5) Disconnect the tie-rod end.
   (1) Pull out the cotter pin (a).
   (2) Remove the castle nut (b).
   (3) Using a tie-rod ball joint puller, remove the tie-rod end (c).

CAUTION:
Use a tool appropriate to the structure, and be careful not to damage the boot of the joint while removing. The boot may be damaged depending on the tool used.



Preparation tool:
Tie-rod ball joint puller

6) Remove the bolts, and remove the front ABS wheel speed sensor.



7) Remove the stabilizer link and ball joint.

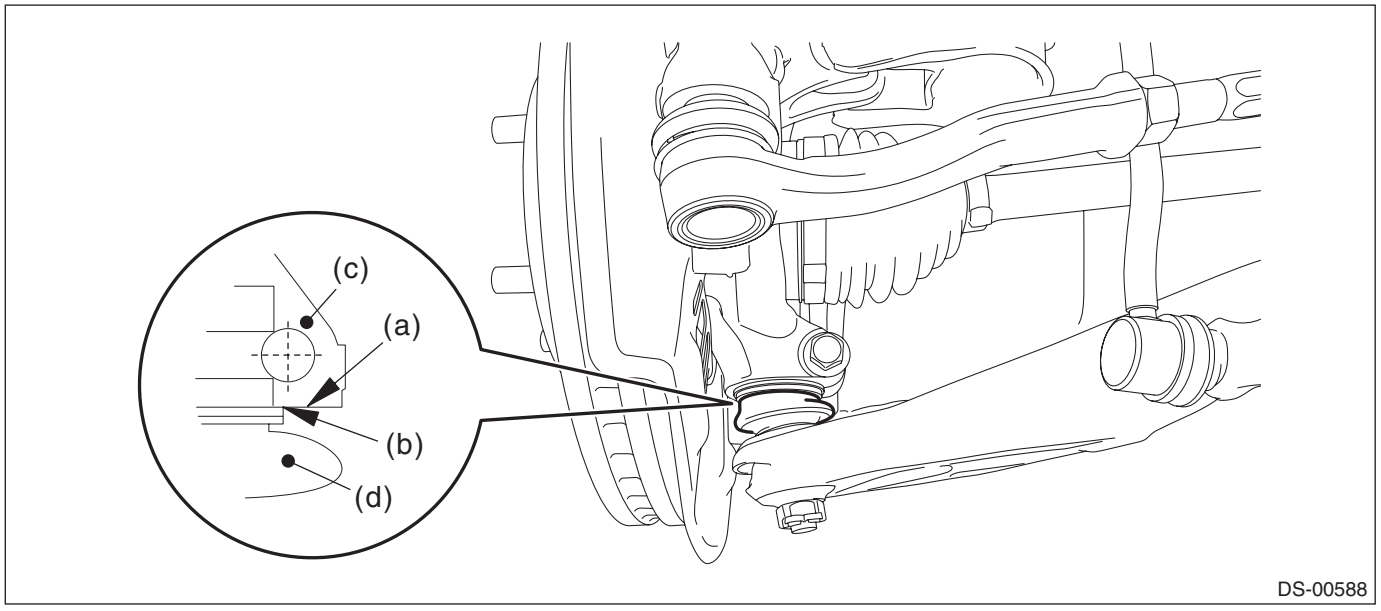
8) Remove the front drive shaft. <Ref. to DS-42, REMOVAL, Front Drive Shaft.>
9) Remove the housing assembly - front axle.

CAUTION:
- **Be careful of the weight of the housing assembly - front axle.**
- **Be careful not to damage the spline portion of the drive shaft.**

(1) Place an alignment mark (a) on the adjusting bolt and the strut assembly.
(2) Remove the adjusting bolts and flange bolts for the strut assembly, and then remove the housing assembly - front axle.

NOTE:
While holding the adjusting bolt side, tighten the nut side.
10) For removal of the hub unit COMPL - front axle, refer to “Front Hub Unit Bearing”. <Ref. to DS-23, REMOVAL, Front Hub Unit Bearing.>

B: INSTALLATION



1) Install the housing assembly - front axle to the strut assembly.
   (1) Align alignment marks on the camber adjusting bolt and strut.
   (2) While holding the bolt head of adjusting bolt, tighten the nut.

Tightening torque:
155 N·m (15.8 kgf-m, 114.3 ft-lb)

2) Install the front drive shaft assembly. <Ref. to DS-43, INSTALLATION, Front Drive Shaft.>
3) Install the ball joint assembly.

CAUTION:
• Before tightening, make sure the bottom surface of the housing assembly - front axle and the stepped section of ball joint are in contact.
• Be careful not to damage the boot of the joint.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

(a) Bottom surface of housing ASSY - front axle
(b) Raised section of ball joint
(c) Housing ASSY - front axle
(d) Ball joint ASSY

4) Install the front ABS wheel speed sensor.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

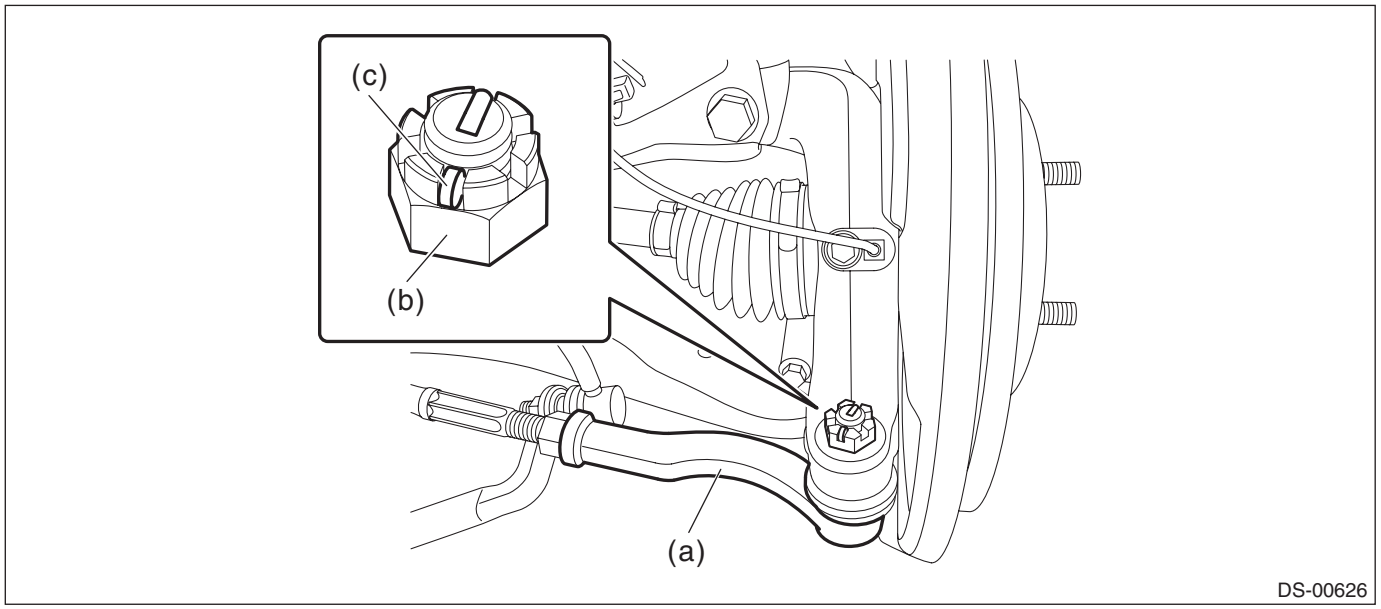
5) Install the disc rotor.
6) Install the disc brake assembly.

Tightening torque:
120 N·m (12.24 kgf-m, 88.5 ft-lb)

7) Install the brake hose bracket.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

8) Install the stabilizer link assembly.



Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)

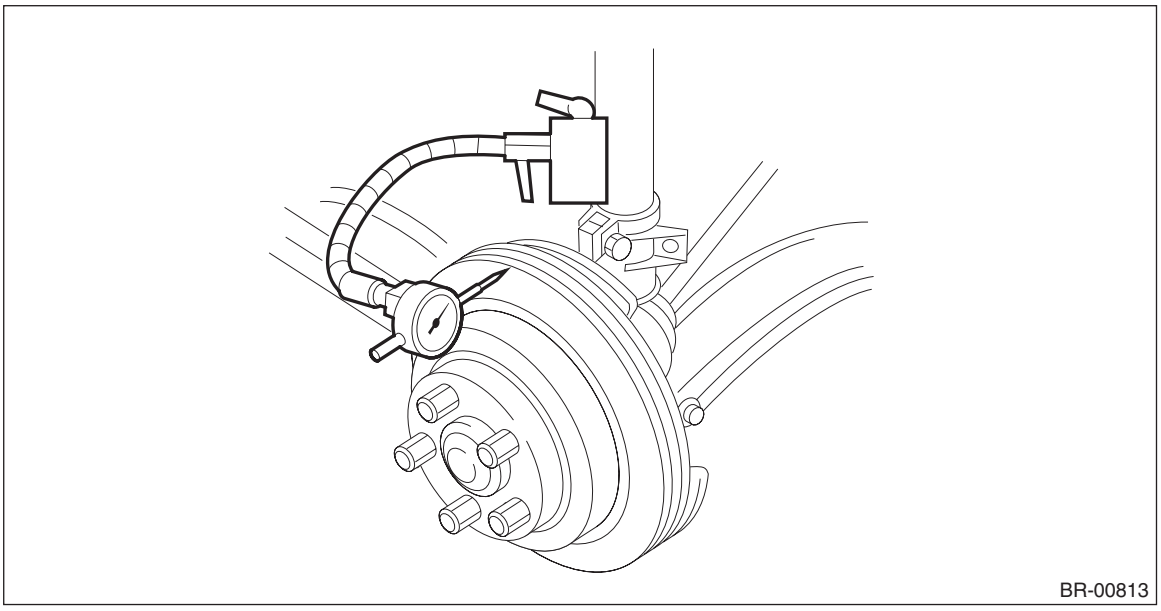
9) Connect the tie-rod ends.
(1) Connect the tie-rod ends (a) to the housing assembly - front axle.
(2) Tighten the castle nuts (b) to the specified torque.

CAUTION:
When connecting the tie-rod, do not hit the cap at bottom of tie-rod end with a hammer.

Tightening torque:
27 N·m (2.75 kgf-m, 19.9 ft-lb)

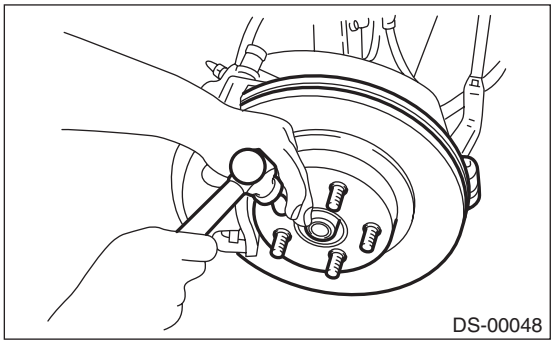
(3) Tighten the castle nut within the range of 60° so that the cotter pin hole and cutout portion of the castle nut are aligned.
(4) Insert the cotter pin (c), and bend the tip of the pin to fix it.

(a) Tie-rod end (b) Castle nut (c) Cotter pin



10) While depressing the brake pedal, tighten the nut - axle to the specified torque.

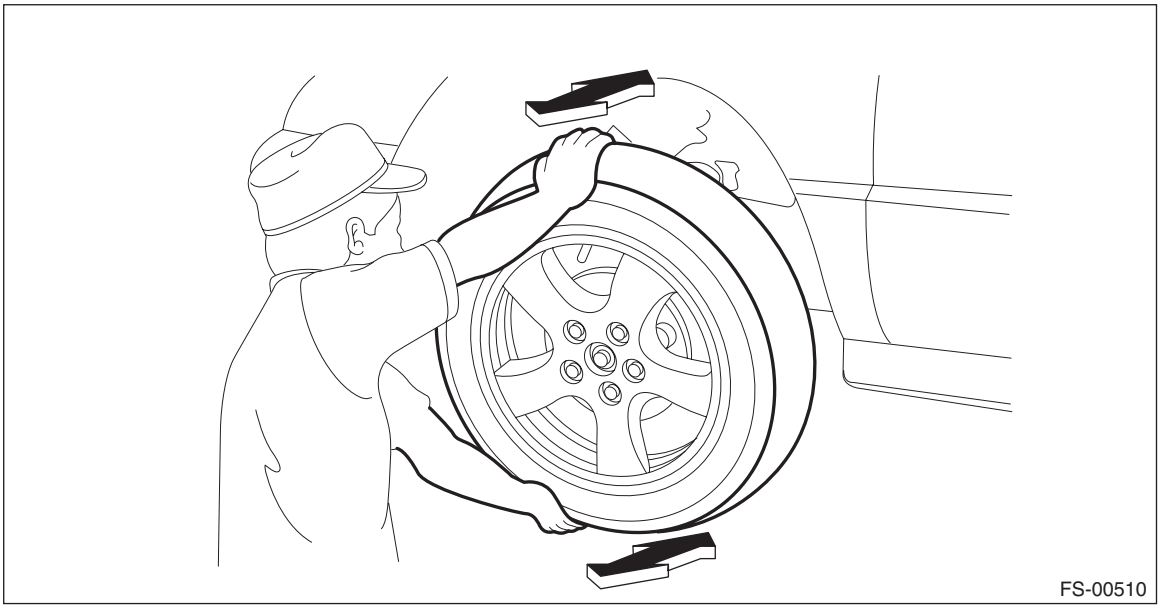
CAUTION:
Do not load the front axle before tightening the nut - axle. Doing so may damage the hub unit COMPL.



Tightening torque:
220 N·m (22.4 kgf-m, 162.3 ft-lb)

11) Inspect the lean of axis direction using a dial gauge. Replace the hub unit COMPL - front axle if the play exceeds the limit.

Service limit:
Maximum: 0.05 mm (0.0020 in)



12) After tightening the nut - axle, lock it securely.

13) Install the front wheels, and perform the following inspections.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

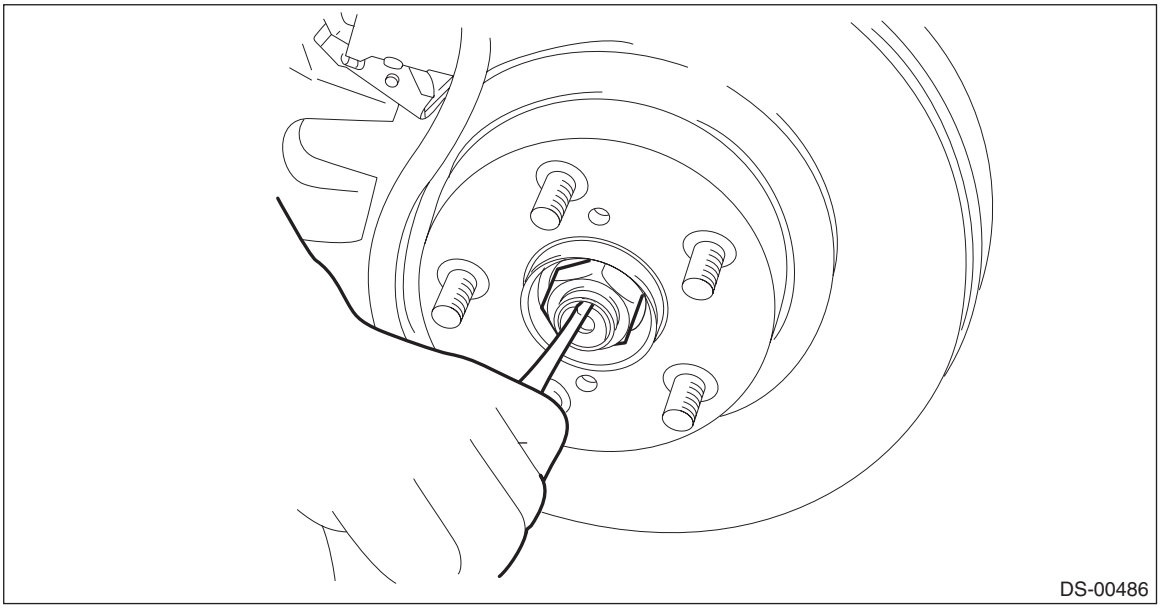
1. Check the wheels for smooth rotation.
2. Check that there is no play by moving the upper and lower portions of front tire in an axial direction with the brake pedal released.
   - **Play exists** → Check the hub unit COMPL - front axle. <Ref. to DS-29, INSPECTION, Front Hub Unit Bearing.>

3. Check that there is no play by moving the upper and lower portions of front tire in an axial direction with the brake pedal depressed.
   - **Play exists** → Replace the ball joint assembly. <Ref. to FS-36, REMOVAL, Front Ball Joint.>

14) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

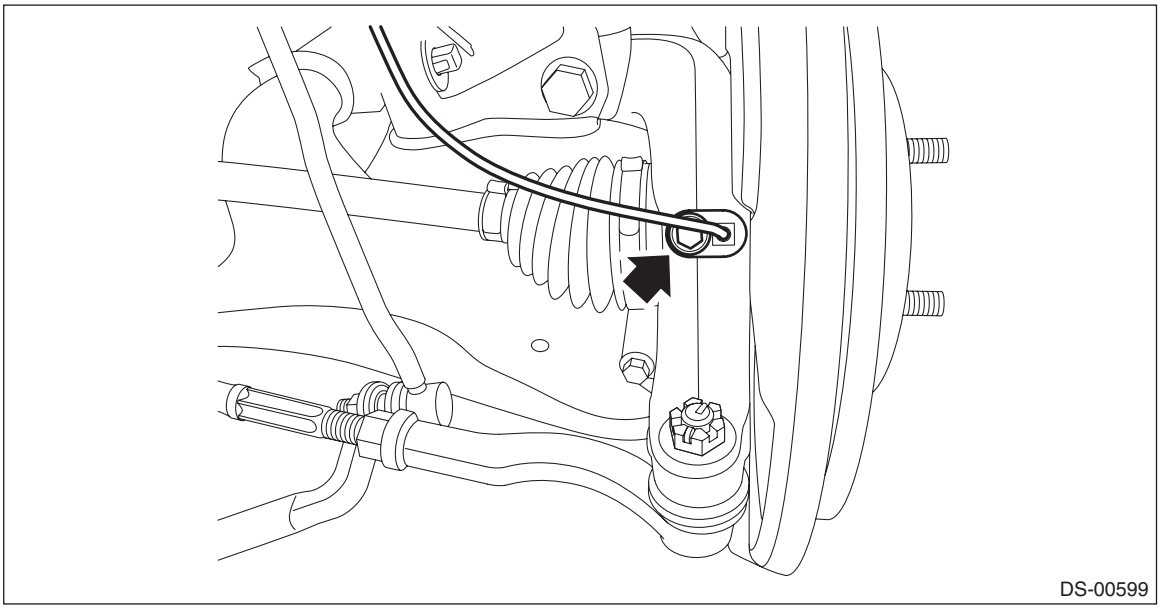
CAUTION:
When the wheel alignment has been adjusted, perform "VDC sensor midpoint setting mode". <Ref. to VDC-17, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

15) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-20, PROCEDURE, Auto Headlight Beam Leveler System.>



4. Front Hub Unit Bearing

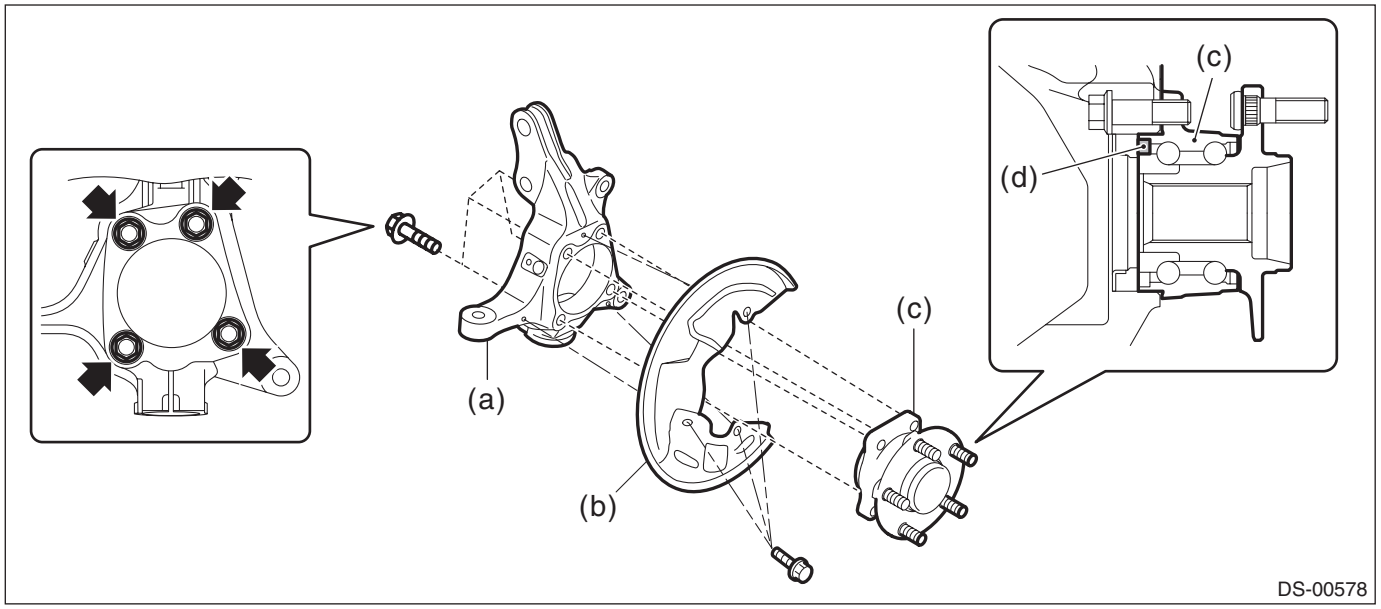
A: REMOVAL



1) Lift up the vehicle, and then remove the front wheels.
2) Remove the nut - axle.

CAUTION:
Do not loosen the nut - axle while the front axle is loaded. Doing so may damage the hub unit COMPL.

(1) Lift the crimped section of the nut - axle.
(2) Remove the nut - axle using a socket wrench while depressing the brake pedal.

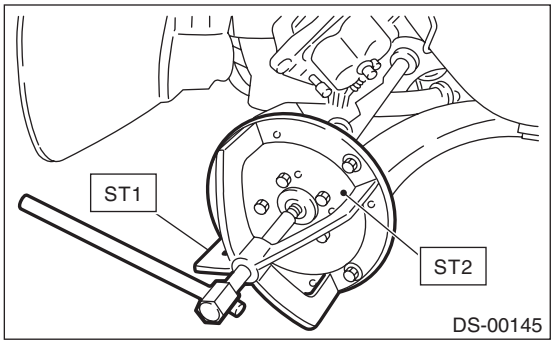


DS-00486

3) Remove the disc brake assembly. <Ref. to BR-22, REMOVAL, Front Disc Brake Assembly.>
4) Remove the disc rotor. <Ref. to BR-19, REMOVAL, Front Disc Rotor.>
5) Remove the bolts, and remove the front ABS wheel speed sensor.

DS-00599

6) Remove the hub unit COMPL - front axle.

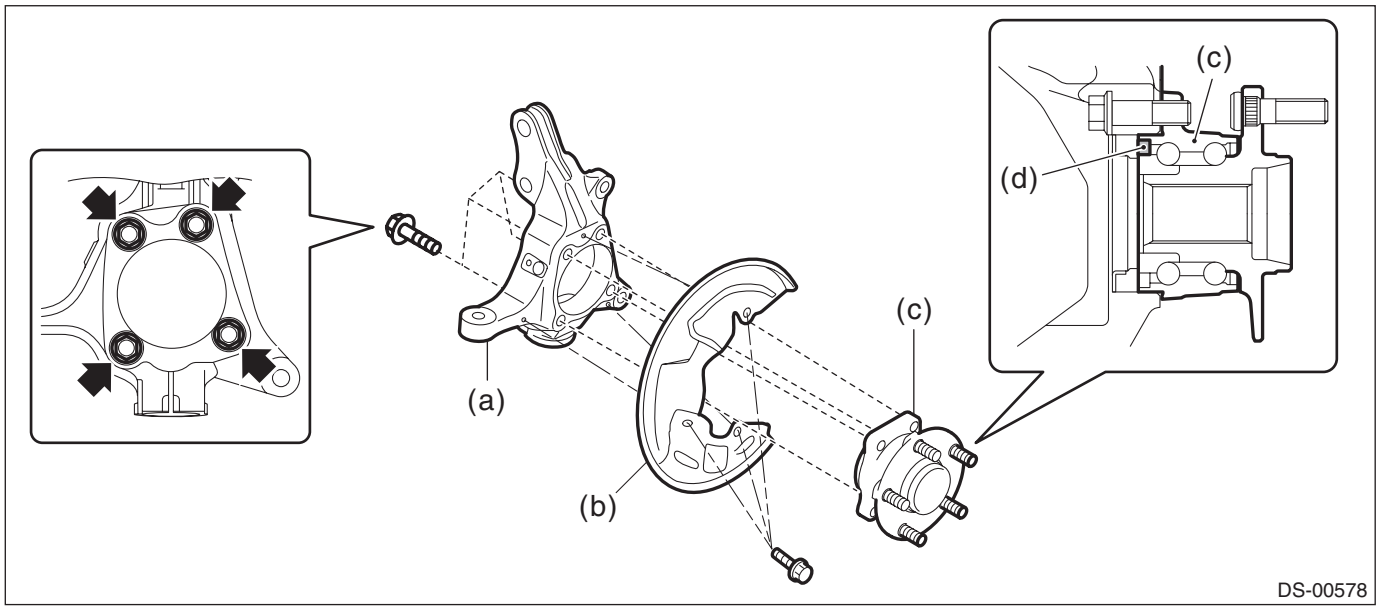


CAUTION:
- **Do not get closer the tool which charged magnetism to magnetic encoder.**
- **Be careful not to damage the magnetic encoder.**

(a) Housing ASSY - front axle
(b) Back plate - front brake
(c) Hub unit COMPL - front axle
(d) Magnetic encoder

NOTE:
If it is hard to remove, use the ST.

Preparation tool:
ST1: AXLE SHAFT PULLER (926470000)
ST2: AXLE SHAFT PULLER PLATE (28099PA110)



B: INSTALLATION

1) Tighten the back plate - front brake and the hub unit COMPL - front axle to the housing assembly - front axle with bolts.

CAUTION:
- **Do not get closer the tool which charged magnetism to magnetic encoder.**
- **Be careful not to damage the magnetic encoder.**

Tightening torque:
Back plate - front brake: 18 N·m (1.8 kgf-m, 13.3 ft-lb)
Hub unit COMPL - front axle: 65 N·m (6.6 kgf-m, 47.9 ft-lb)

(a) Housing ASSY - front axle
(b) Back plate - front brake
(c) Hub unit COMPL - front axle
(d) Magnetic encoder

2) Install the front drive shaft assembly.

CAUTION:
- **Do not hammer the drive shaft assembly when installing.**
- **Use new nut - axle.**
  (1) Insert the drive shaft assembly into the hub spline, and pull it into the specified position.
  (2) Tighten the new nut - axle temporarily.

3) Install the disc rotor to the hub unit COMPL - front axle.
4) Install the disc brake assembly to the housing assembly - front axle.

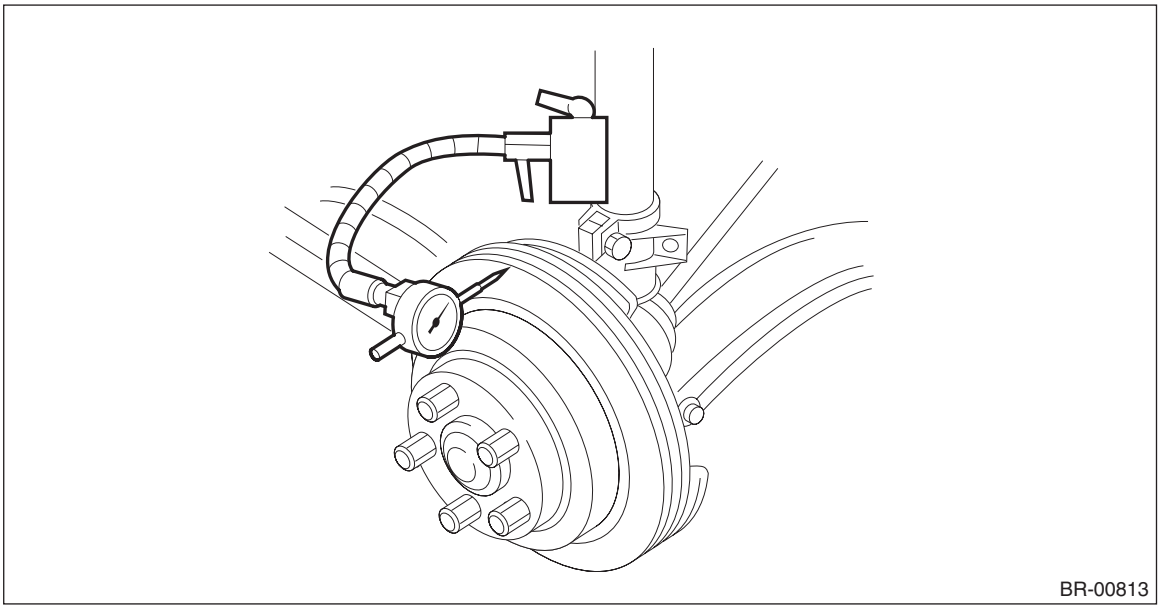
Tightening torque:
120 N·m (12.24 kgf-m, 88.5 ft-lb)

5) Install the brake hose bracket.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

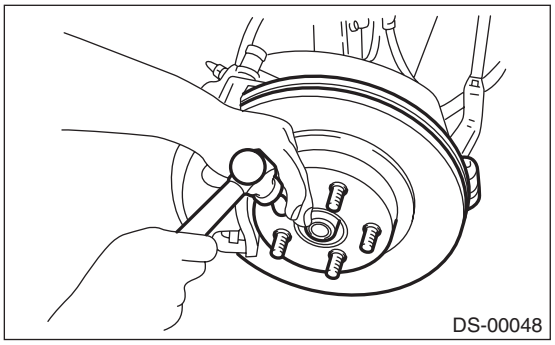
6) Install the front ABS wheel speed sensor.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



7) While depressing the brake pedal, tighten new nuts - axle to the specified torque.

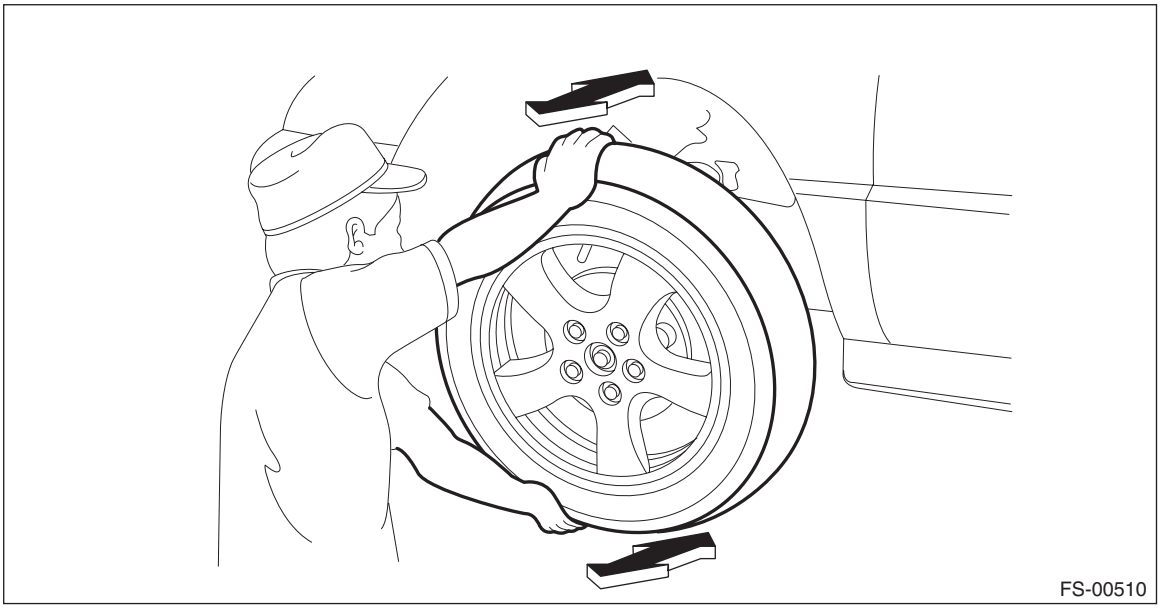
CAUTION:
Do not load the front axle before tightening the nut - axle. Doing so may damage the hub unit COMPL.



Tightening torque:
220 N·m (22.4 kgf-m, 162.3 ft-lb)

8) Inspect the lean of axis direction using a dial gauge. Replace the hub unit COMPL - front axle if the play exceeds the limit.

Service limit:
Maximum: 0.05 mm (0.0020 in)



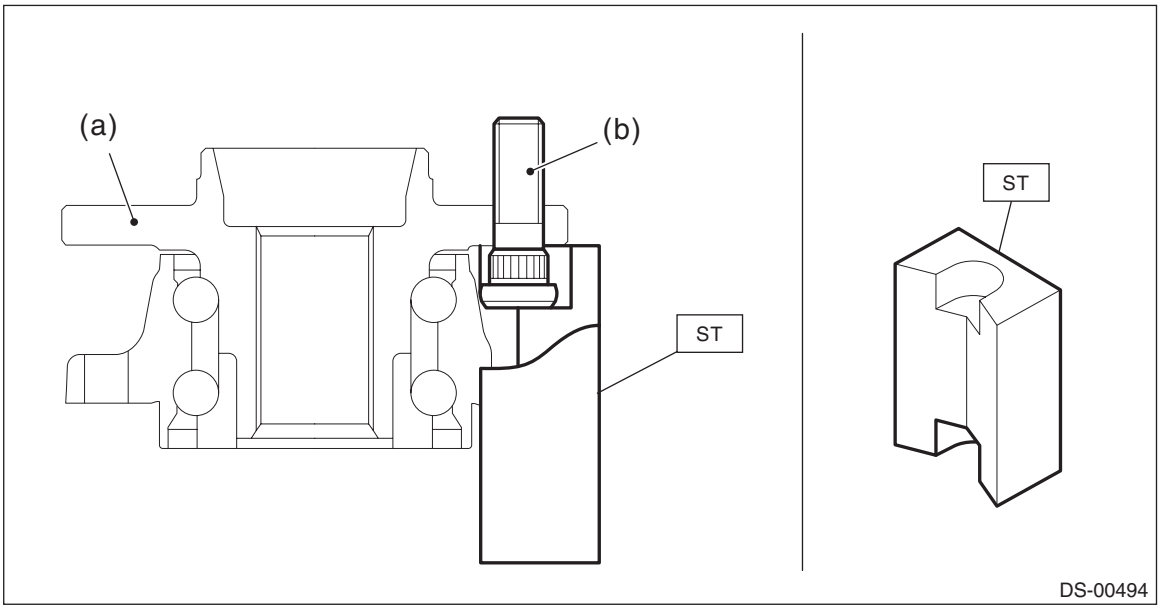
9) After tightening the nut - axle, lock it securely.

10) Install the front wheels, and perform the following inspections.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

1. Check the wheels for smooth rotation.
2. Check that there is no play by moving the upper and lower portions of front tire in an axial direction with the brake pedal released.
   - **Play exists** → Check the hub unit COMPL - front axle. <Ref. to DS-29, INSPECTION, Front Hub Unit Bearing.>

3. Check that there is no play by moving the upper and lower portions of front tire in an axial direction with the brake pedal depressed.
   - **Play exists** → Replace the ball joint assembly. <Ref. to FS-36, REMOVAL, Front Ball Joint.>



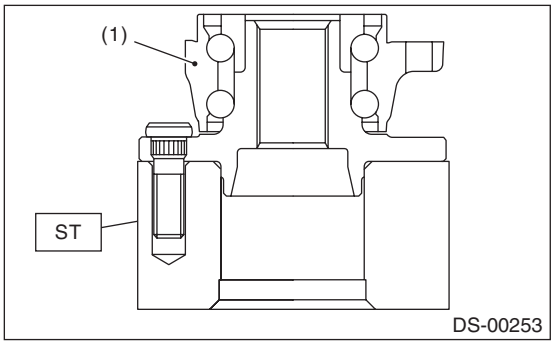
C: DISASSEMBLY

Using the ST or a hydraulic press, push out the bolt - hub (b) from the hub unit COMPL - front axle (a).

CAUTION:
- **Be careful not to hammer the bolts - hub. This may deform the hub unit COMPL.**
- **Do not reuse the bolt - hub.**

NOTE:
Since the hub unit COMPL can not be disassembled, only bolts - hub can be removed.

Preparation tool:
ST: HUB STAND (28399AG000)

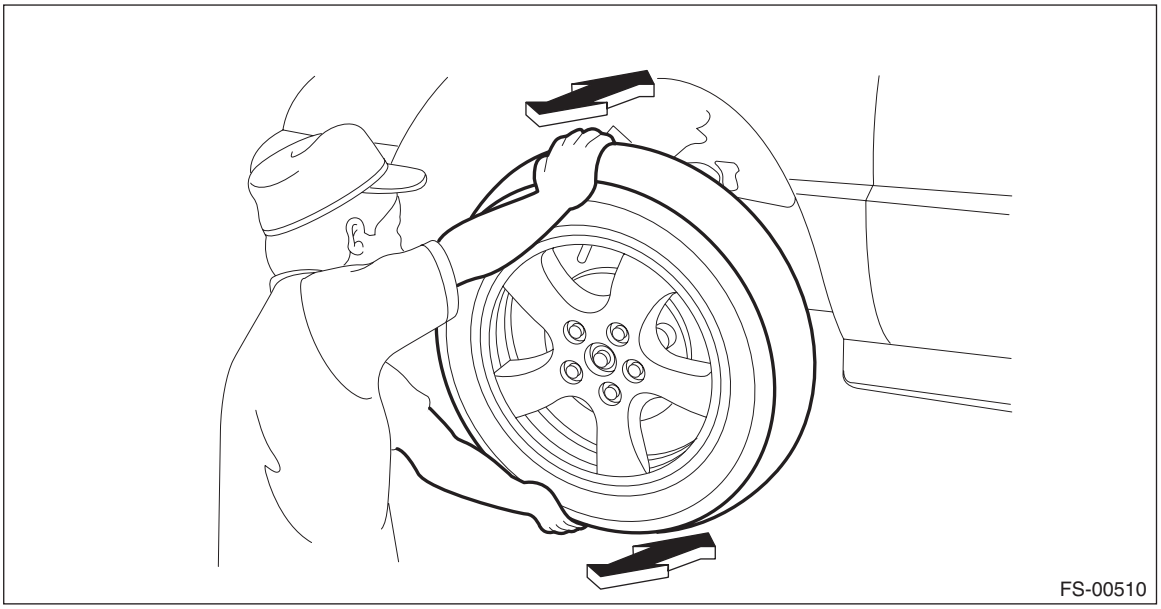


D: ASSEMBLY

1) Install the hub unit COMPL to the ST securely.

Preparation tool:
ST: HUB STAND (28099PA080)

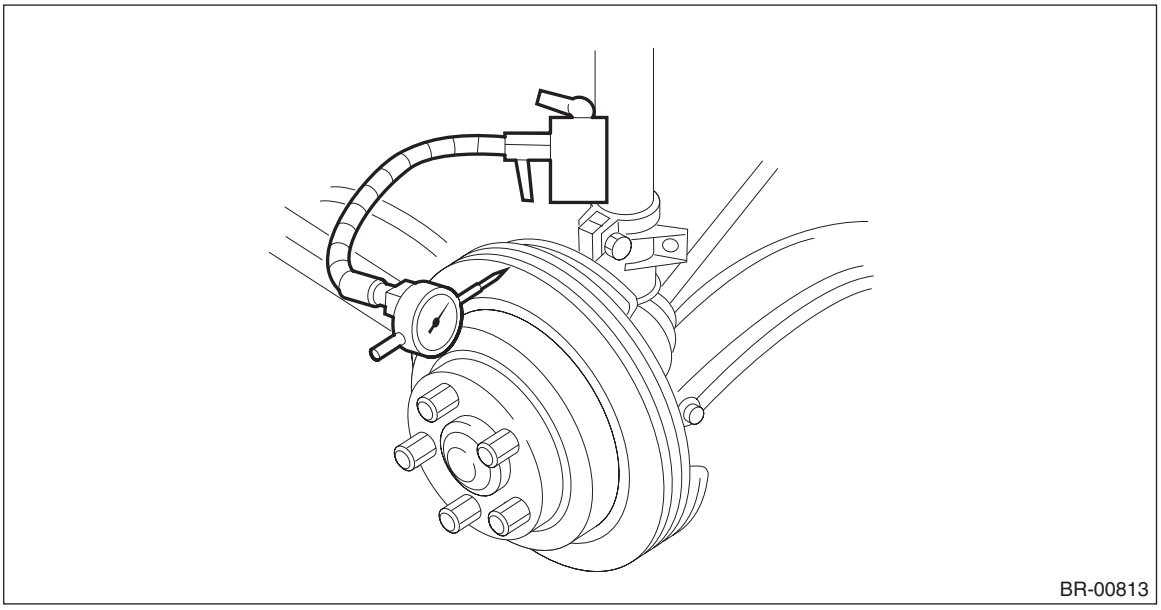
2) Using a press, press new bolts - hub until their seating surfaces contact the hub unit COMPL.



(1) Hub unit COMPL - front axle

NOTE:
Use the 12 mm (0.47 in) dia. holes in the HUB STAND to prevent bolts from tilting.

E: INSPECTION

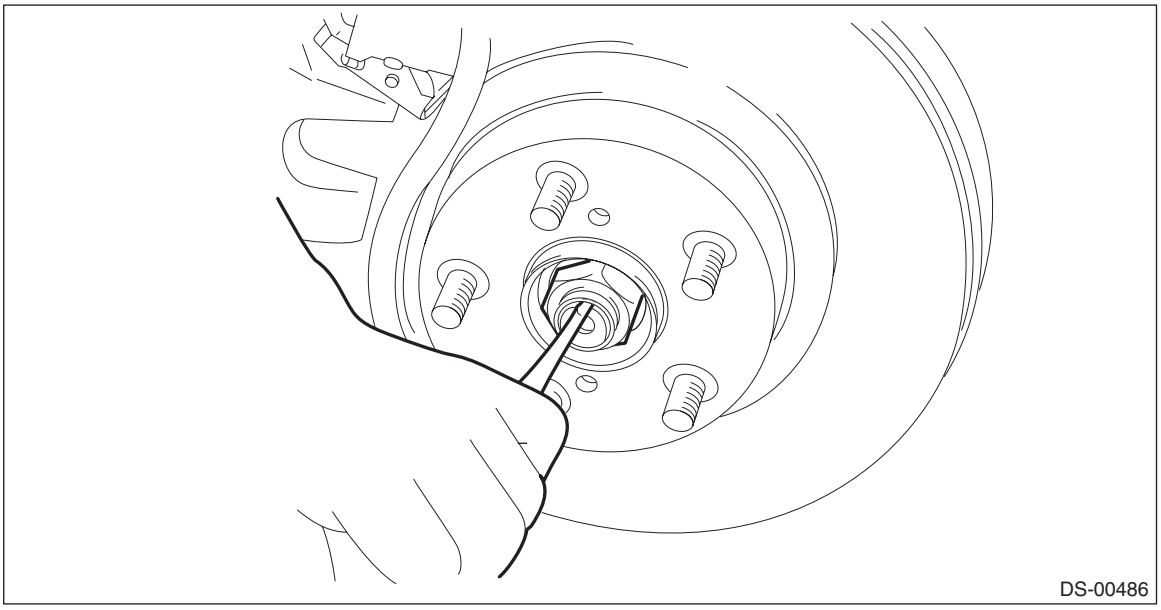


1) Moving the front tire up and down by hand, check there is no play in bearing, and check the wheel rotates smoothly.

CAUTION:
If there is any fault in the bearing, replace the hub unit COMPL.

2) Inspect the lean of axis direction using a dial gauge. Replace the hub unit COMPL if the play exceeds the limit.

Service limit:
Maximum: 0.05 mm (0.0020 in)

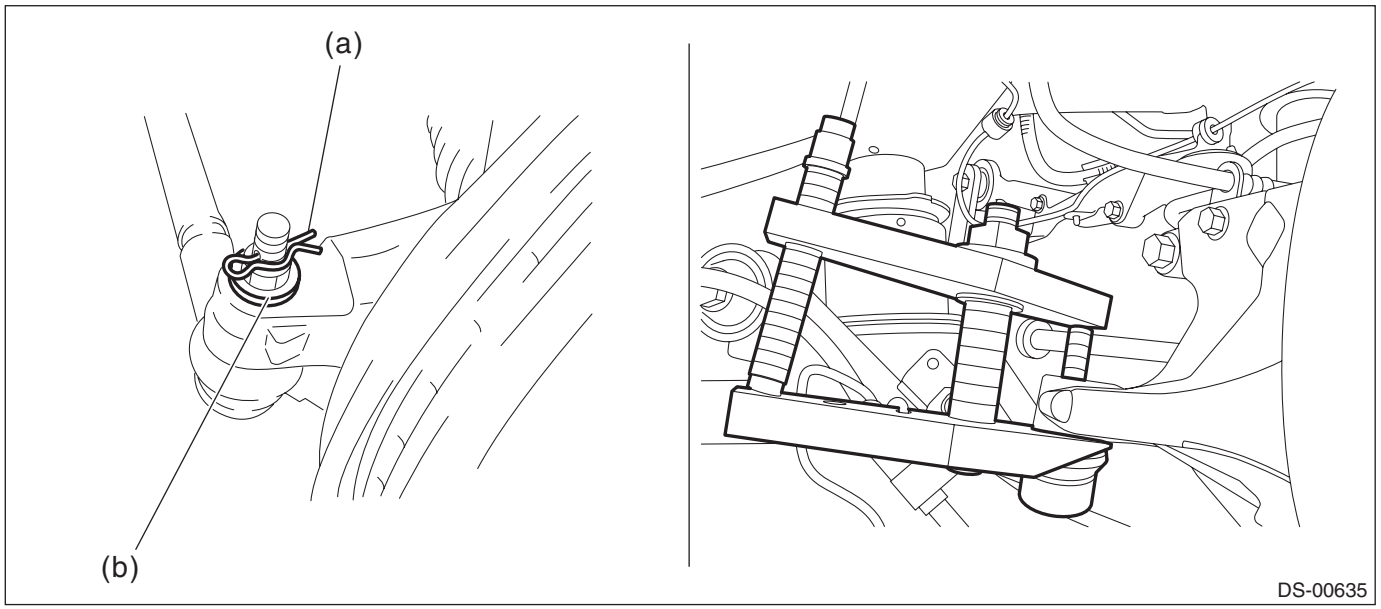


5. Rear Axle

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the nut - axle.

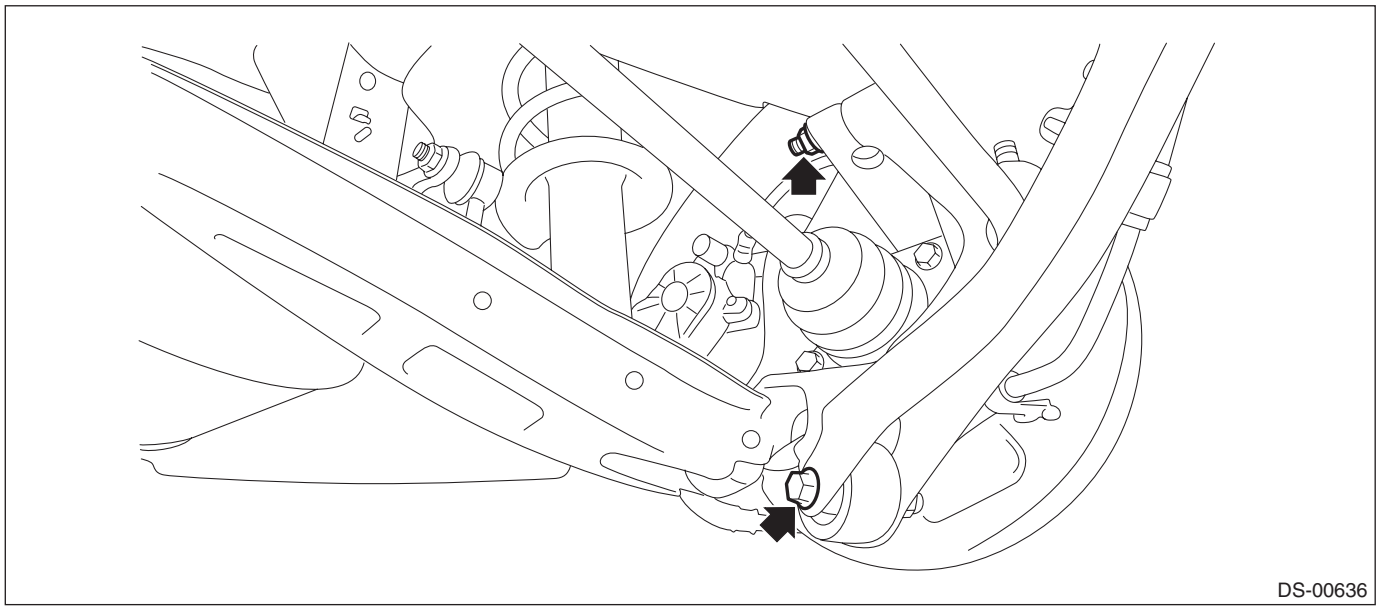
CAUTION:
Do not loosen the nut - axle while the rear axle is loaded. Doing so may damage the hub unit COMPL.
(1) Lift the crimped section of the nut - axle.
(2) Remove the nut - axle using a socket wrench while depressing the brake pedal.



4) Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler) <Ref. to LI-80, REMOVAL, Rear Height Sensor.>
5) Remove the lateral link assembly - rear. <Ref. to RS-26, REMOVAL, Rear Lateral Link.>
6) Remove the rear disc rotor. <Ref. to BR-33, REMOVAL, Rear Disc Rotor.>
7) Remove the rear drive shaft assembly. <Ref. to DS-52, REMOVAL, Rear Drive Shaft.>

8) Remove the lateral link assembly - front.
(1) Remove the snap pin (a) and nut (b).
(2) Remove the ball joint from the housing assembly - rear axle.

CAUTION:
Use a tool appropriate to the structure, and be careful not to damage the boot of the joint while removing. The boot may be damaged depending on the tool used.



Preparation tool:
Tie-rod ball joint puller

9) Remove the housing assembly - rear axle.

CAUTION:
- **Be careful of the weight of the housing assembly - rear axle.**
- **Be careful not to damage the spline portion of the drive shaft.**

(1) Remove the bolts, and disconnect the upper arm and trailing link.

(2) Remove the housing assembly - rear axle.
10) Refer to “Rear Hub Unit Bearing” for removal of the hub unit COMPL - rear axle. <Ref. to DS-36, REMOVAL, Rear Hub Unit Bearing.>

B: INSTALLATION

1) Temporarily tighten the housing assembly - rear axle to the upper arm assembly.
2) Install the rear drive shaft assembly. <Ref. to DS-56, INSTALLATION, Rear Drive Shaft.>

CAUTION:
Do not hammer the drive shaft assembly when installing.
(1) Insert the drive shaft assembly into the hub spline, and pull it into the specified position.
(2) Tighten the new nut - axle temporarily.

3) Tighten the rear shock absorber assembly, rear stabilizer link assembly and other links to the specified torque.

Tightening torque:
Rear suspension: <Ref. to RS-4, REAR SUSPENSION, COMPONENT, General Description.>
Rear shock absorber: <Ref. to RS-6, REAR SHOCK ABSORBER, COMPONENT, General Description.>

4) Install the rear disc rotor.
5) Install the disc brake assembly.

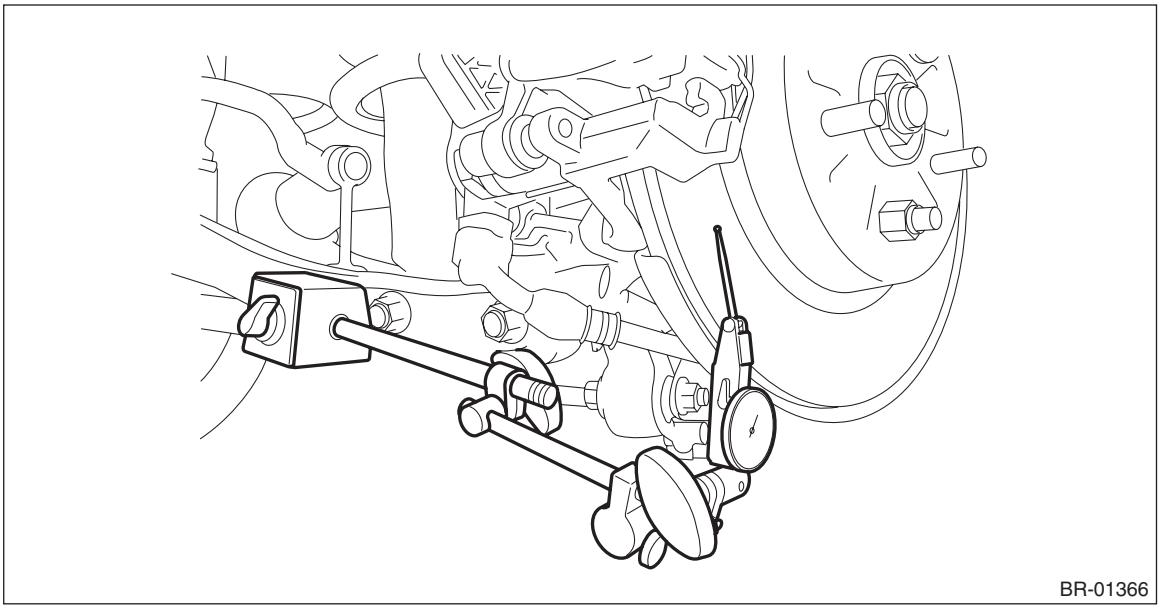
Tightening torque:
66 N·m (6.7 kgf-m, 48.7 ft-lb)

6) Install the brake hose bracket and rear ABS wheel speed sensor.

Tightening torque:
Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
Rear ABS wheel speed sensor: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

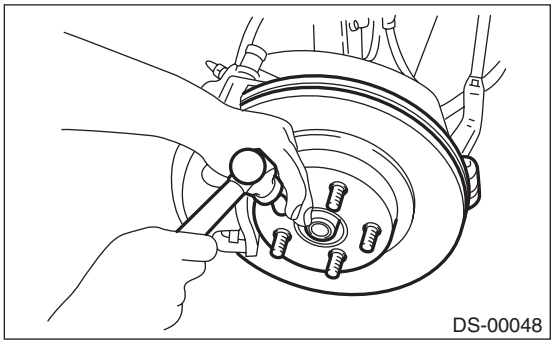
7) Install the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler)

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



8) While depressing the brake pedal, tighten new nuts - axle to the specified torque.

CAUTION:
Do not load the rear axle before tightening the nut - axle. Doing so may damage the hub unit COMPL.

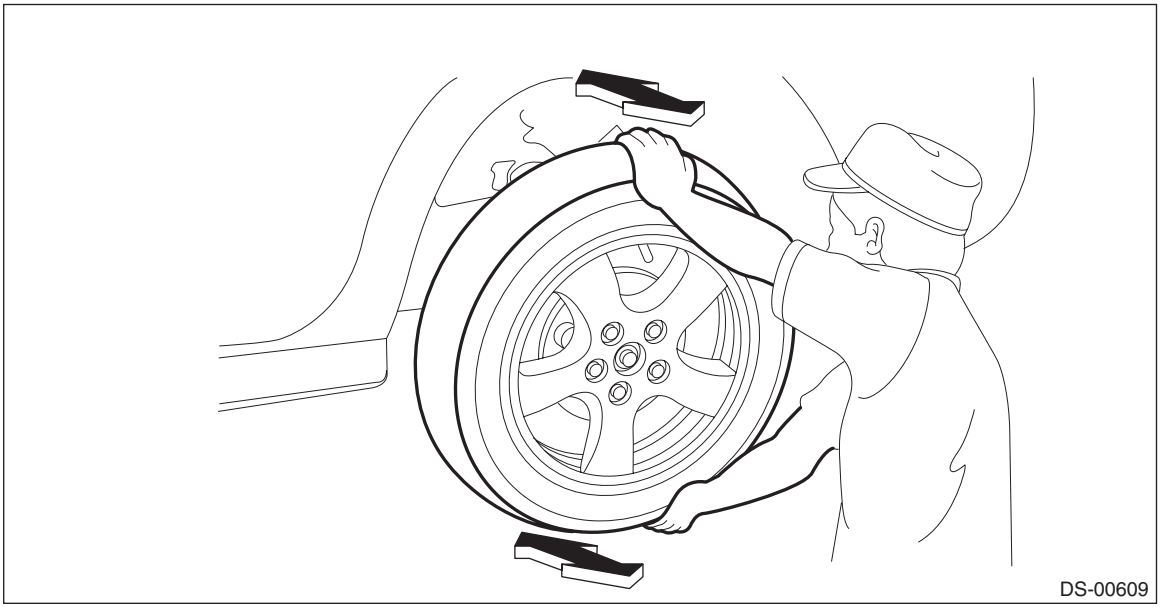


Tightening torque:
240 N·m (24.47 kgf-m, 177 ft-lb)

9) Inspect the lean of axis direction using a dial gauge. Replace the hub unit COMPL - rear axle if the play exceeds the limit.

Service limit:
Maximum: 0.05 mm (0.0020 in)

BR-01366



10) After tightening the nut - axle, lock it securely.

11) Install the rear wheels, and perform the following inspections.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

1. Check the wheels for smooth rotation.
2. Check that there is no play by moving the upper and lower portions of rear tire in an axial direction with the brake pedal released.

- **Play exists** → Check the hub unit COMPL - rear axle. <Ref. to DS-41, INSPECTION, Rear Hub Unit Bearing.>

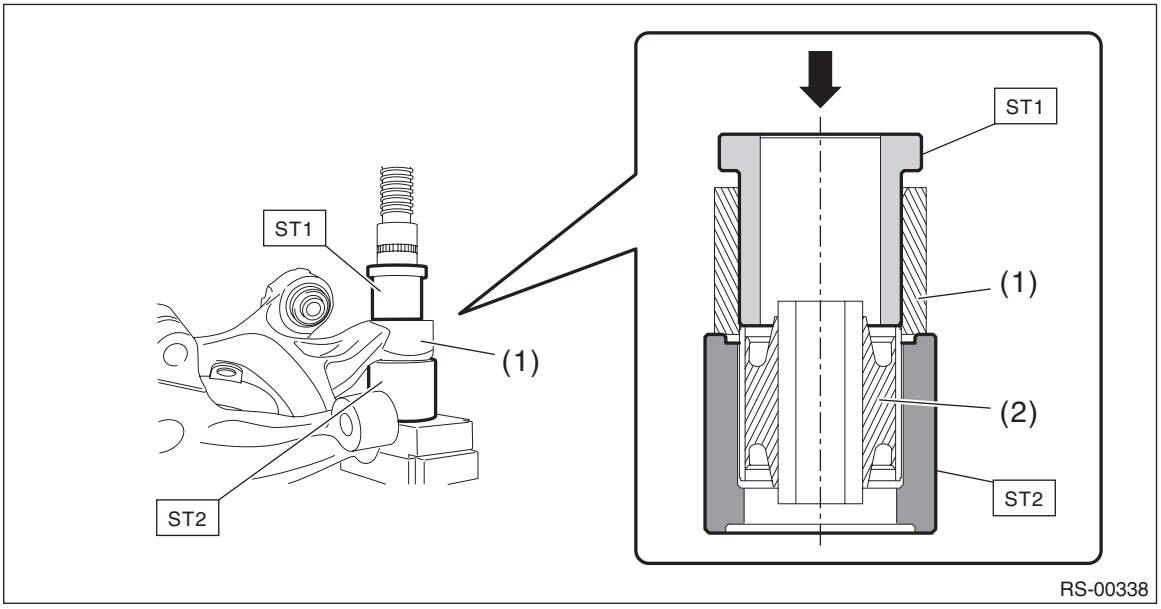
12) Inspect the wheel alignment and adjust if necessary.

- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-17, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

13) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-20, PROCEDURE, Auto Headlight Beam Leveler System.>

C: DISASSEMBLY



1. BUSHING - REAR AXLE HOUSING

Do not remove the housing assembly - rear axle because the bushing - rear axle housing cannot be replaced. If it is removed, replace the housing assembly - rear axle.

2. BUSHING - TRAILING LINK

1) Remove the housing assembly - rear axle. <Ref. to DS-30, REMOVAL, Rear Axle.>
2) Using the ST and a hydraulic press, push out the bushing.

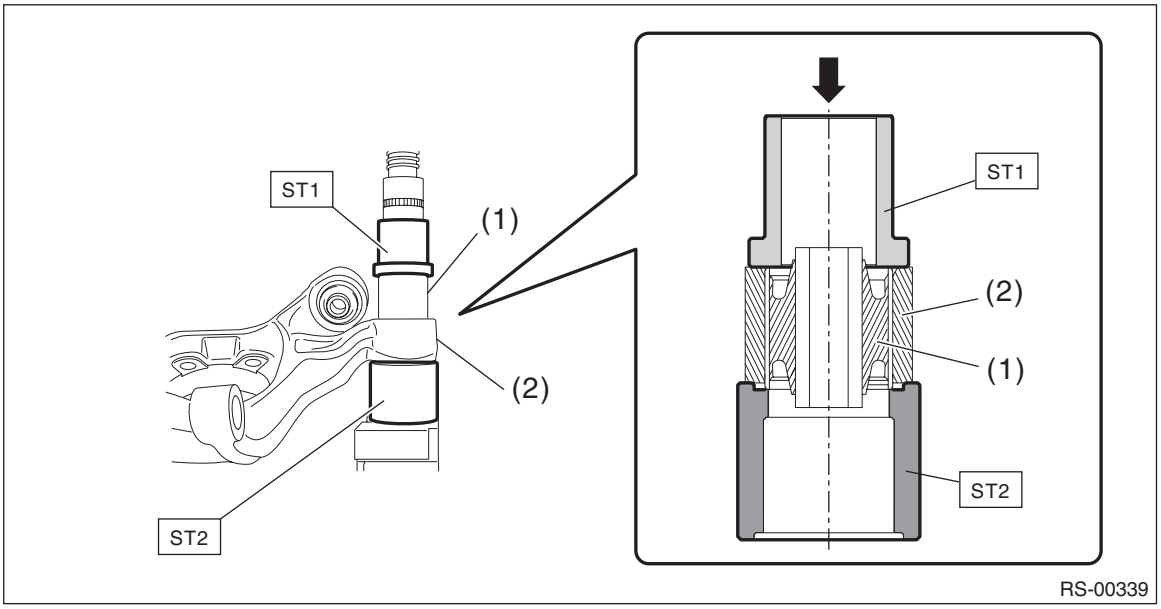
Preparation tool:
ST1: BUSHING REMOVER (20099FG000)
ST2: INSTALLER & REMOVER (BASE) (20099PA010)

(1) Housing ASSY - rear axle
(2) Bushing - trailing link

D: ASSEMBLY

1. BUSHING - REAR AXLE HOUSING

Do not remove the housing assembly - rear axle because the bushing - rear axle housing cannot be replaced. If it is removed, replace the housing assembly - rear axle.



2. BUSHING - TRAILING LINK

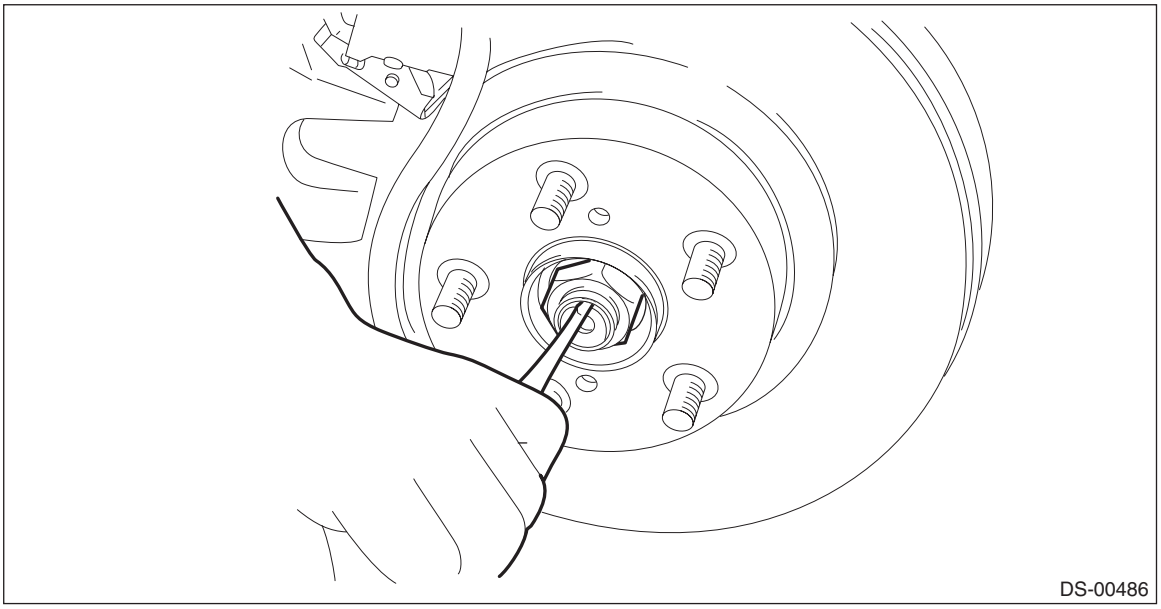
1) Before assembly, inspect the following items and replace any faulty part with a new one.
- Perform visual check for damage or bend on the trailing link.
- Visually check the bushing for abnormal cracks, fatigue or damage.

2) Press-fit the bushing using ST and the hydraulic press.

CAUTION:
Make sure to press the bushing straight in.

Preparation tool:
ST1: BUSHING REMOVER (20099FG000)
ST2: INSTALLER & REMOVER (BASE) (20099PA010)

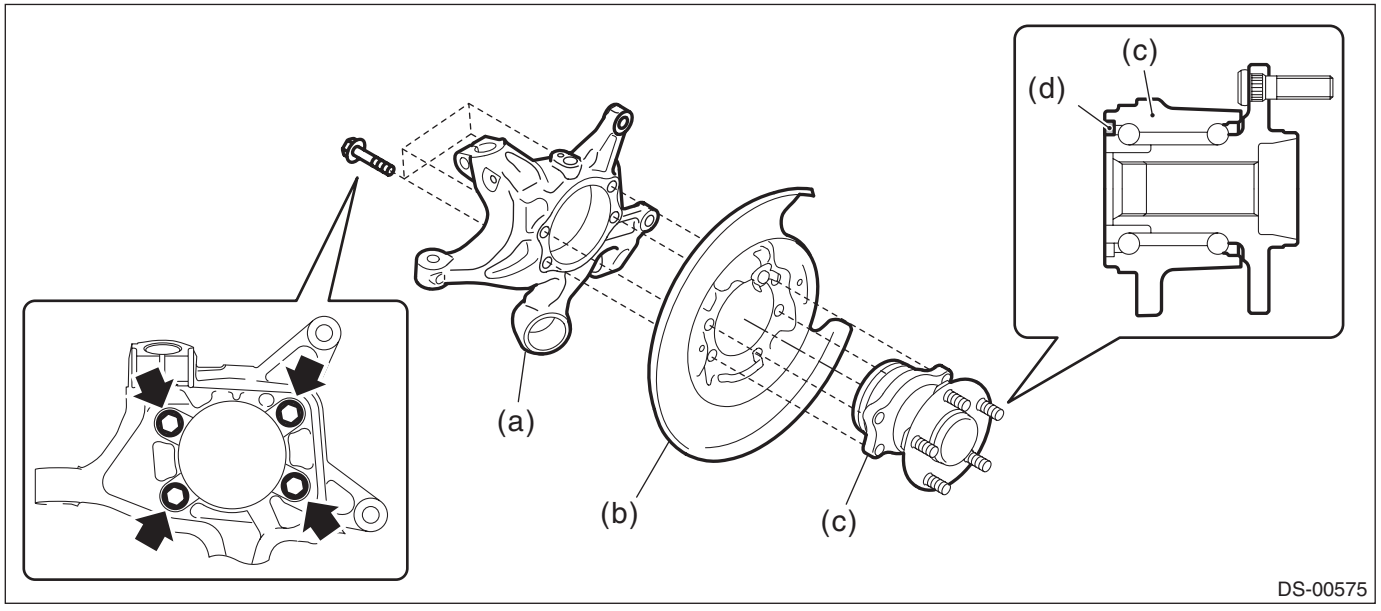
(1) Bushing
(2) Housing ASSY - rear axle



6. Rear Hub Unit Bearing

A: REMOVAL

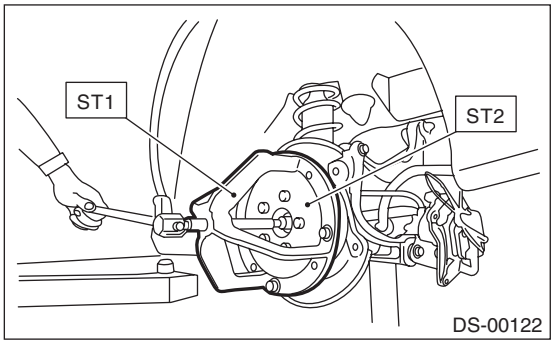
1) Lift up the vehicle, and then remove the rear wheels.
2) Remove the nut - axle.



CAUTION:
Do not loosen the nut - axle while the rear axle is loaded. Doing so may damage the hub unit COMPL.

(1) Lift the crimped section of the nut - axle.
(2) Remove the nut - axle using a socket wrench while depressing the brake pedal.

3) Remove the rear disc rotor. <Ref. to BR-33, REMOVAL, Rear Disc Rotor.>
4) Remove the hub unit COMPL - rear axle.

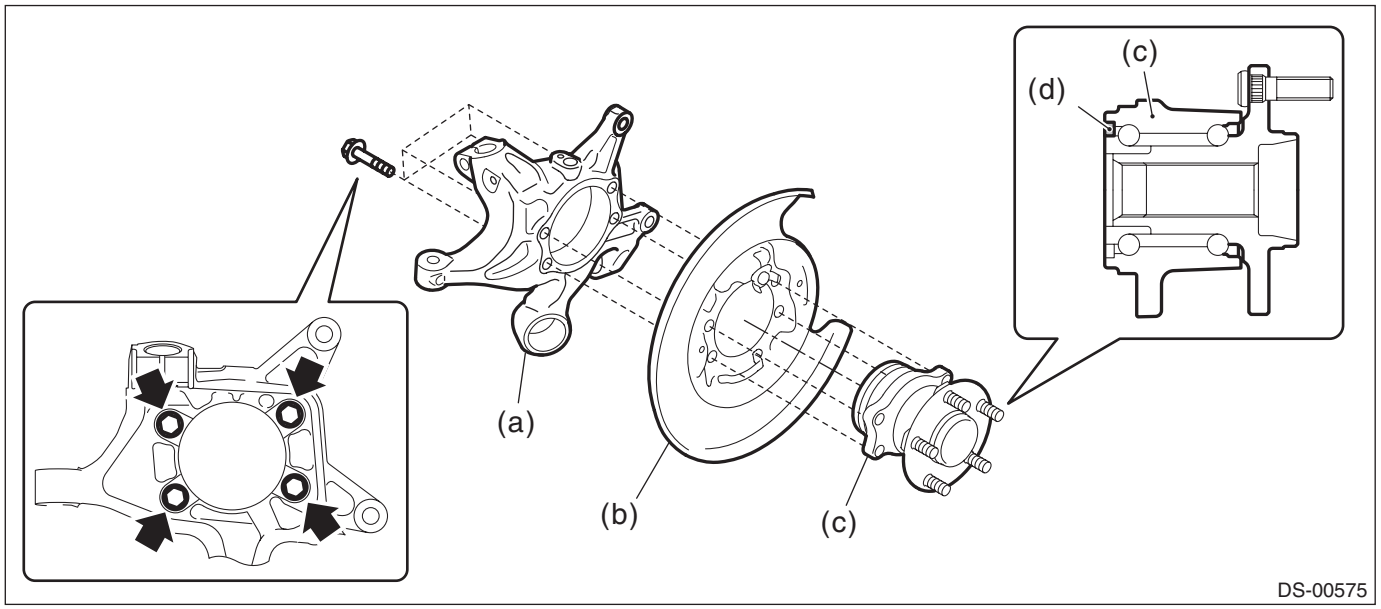


CAUTION:
- **Be careful not to damage the magnetic encoder.**
- **Do not get closer the tool which charged magnetism to magnetic encoder.**

(a) Housing ASSY - rear axle
(b) Back plate - rear brake
(c) Hub unit COMPL - rear axle
(d) Magnetic encoder

NOTE:
If it is hard to remove, use the ST.

Preparation tool:
ST1: AXLE SHAFT PULLER (926470000)
ST2: AXLE SHAFT PULLER PLATE (28099PA110)



B: INSTALLATION

1) Place the back plate - rear brake between the housing assembly - rear axle and the hub unit COMPL - rear axle, and tighten the bolt.

CAUTION:
- **Do not get closer the tool which charged magnetism to magnetic encoder.**
- **Be careful not to damage the magnetic encoder.**

Tightening torque:
65 N·m (6.6 kgf-m, 47.9 ft-lb)

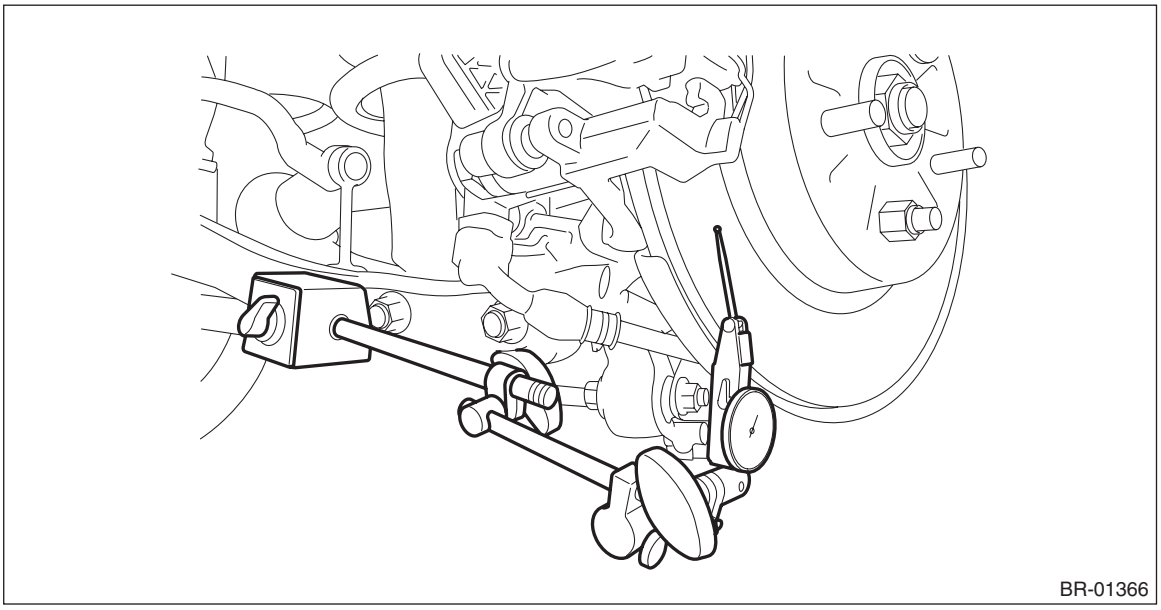
(a) Housing ASSY - rear axle
(b) Back plate - rear brake
(c) Hub unit COMPL - rear axle
(d) Magnetic encoder

2) Install the rear drive shaft assembly.

CAUTION:
Do not hammer the drive shaft assembly when installing.
(1) Insert the drive shaft assembly into the hub spline, and pull it into the specified position.
(2) Tighten the new nut - axle temporarily.
3) Install the disc rotor to the hub unit COMPL - rear axle.

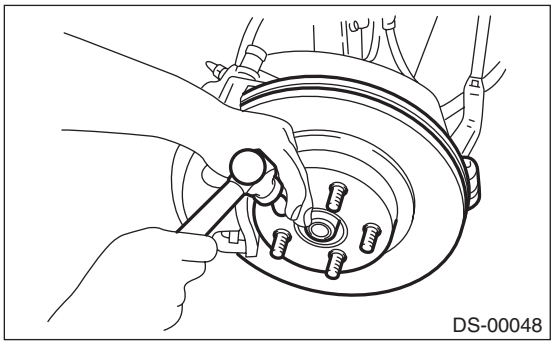
4) Install the caliper body assembly to the housing assembly - rear axle.

Tightening torque:
66 N·m (6.7 kgf-m, 48.7 ft-lb)
5) Install the brake hose bracket.



Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)
6) Install the rear ABS wheel speed sensor.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
7) While depressing the brake pedal, tighten new nuts - axle to the specified torque.

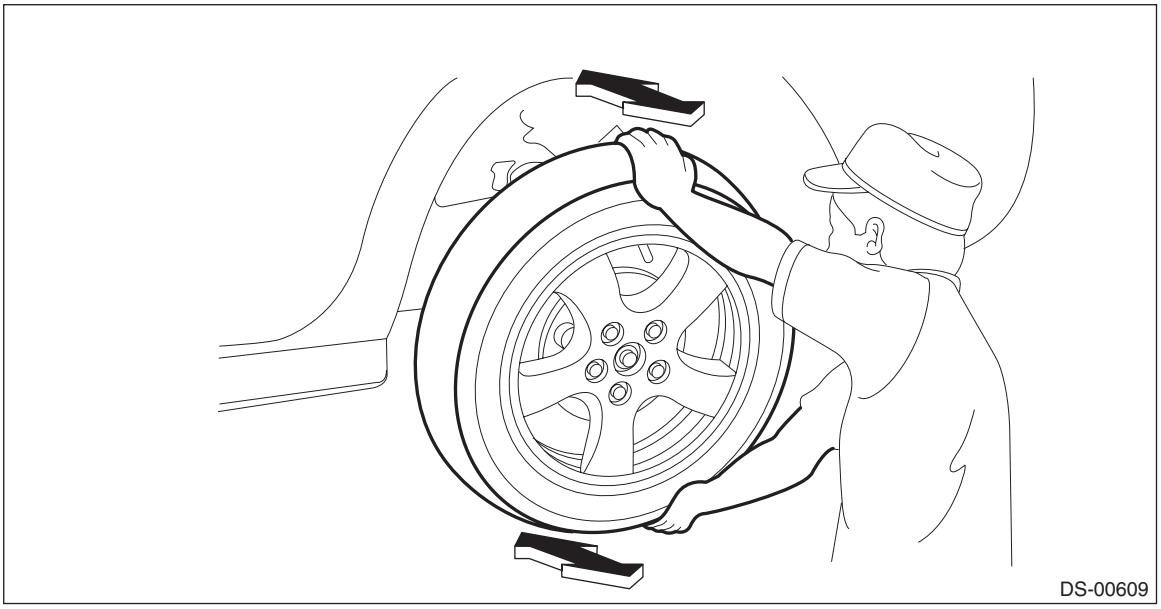


CAUTION:
Do not load the rear axle before tightening the nut - axle. Doing so may damage the hub unit COMPL.

Tightening torque:
240 N·m (24.47 kgf-m, 177 ft-lb)
8) Inspect the lean of axis direction using a dial gauge. Replace the hub unit COMPL - rear axle if the play exceeds the limit.

Service limit:
Maximum: 0.05 mm (0.0020 in)

BR-01366



9) After tightening the nut - axle, lock it securely.

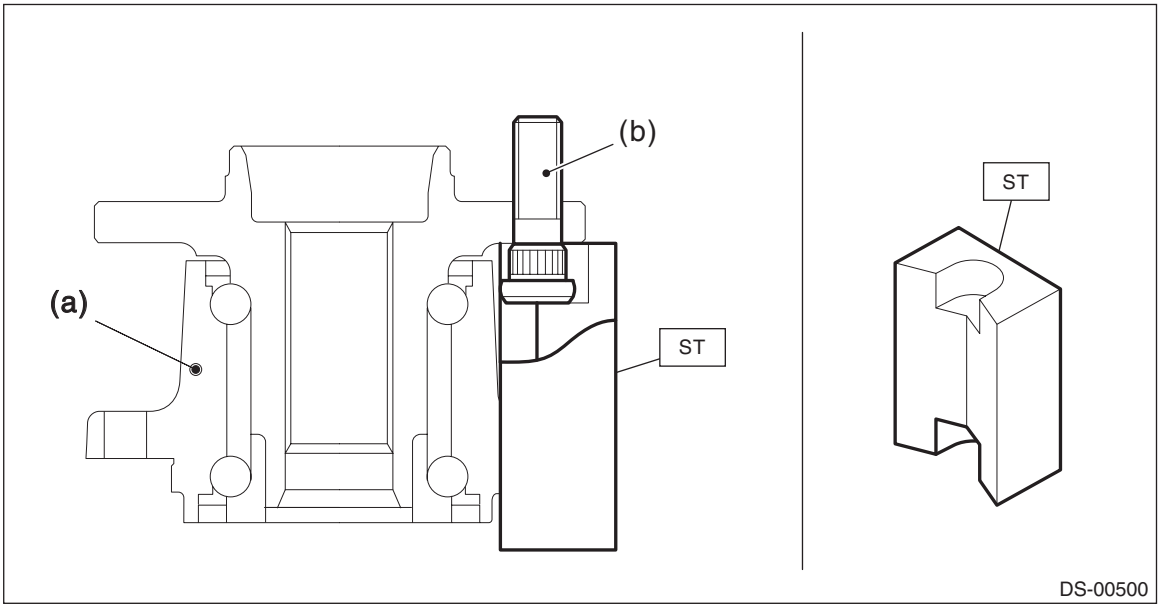
DS-00048

10) Install the rear wheels, and perform the following inspections.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)
1. Check the wheels for smooth rotation.

2. Check that there is no play by moving the upper and lower portions of rear tire in an axial direction with the brake pedal released.
   - **Play exists** → Check the hub unit COMPL - rear axle. <Ref. to DS-41, INSPECTION, Rear Hub Unit Bearing.>

DS-00609



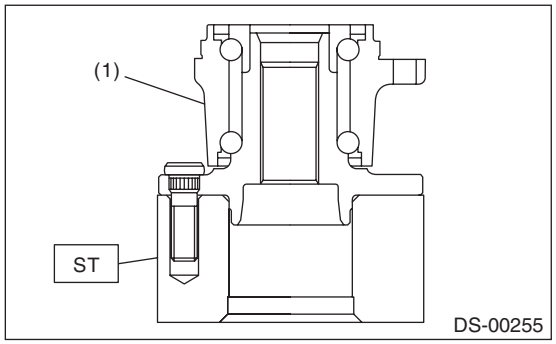
C: DISASSEMBLY

Using the ST or a hydraulic press, push out the bolt - hub (b) from the hub unit COMPL - rear axle (a).

CAUTION:
- **Be careful not to hammer the bolts - hub. This may deform the hub unit COMPL.**
- **Do not reuse the bolt - hub.**

NOTE:
Since the hub unit COMPL - rear axle cannot be disassembled, only bolts - hub can be removed.

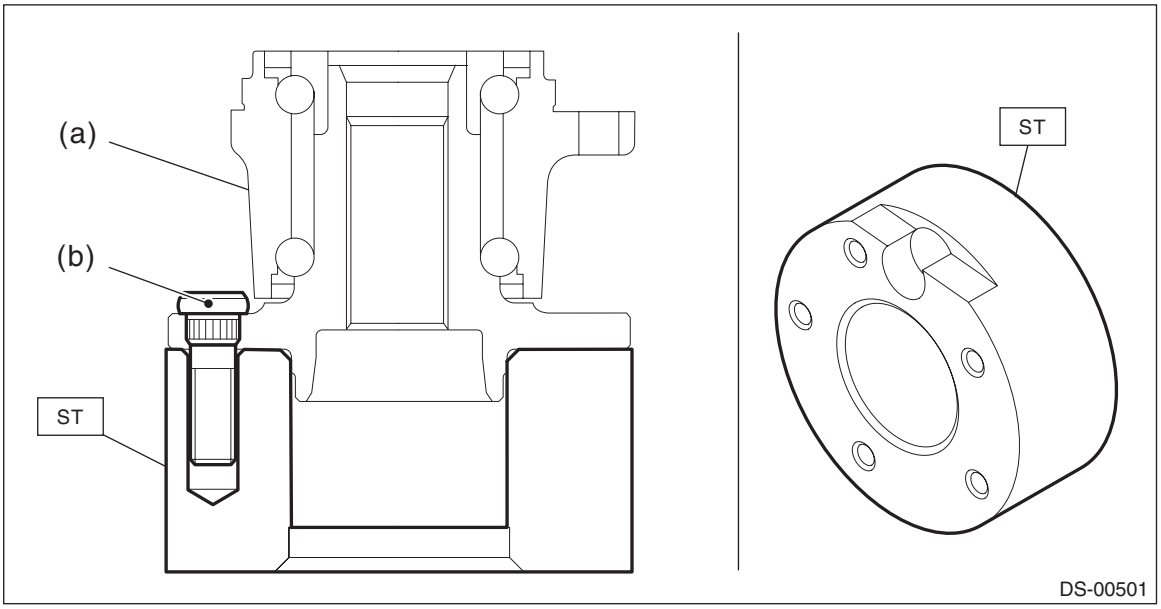
Preparation tool:
ST: HUB STAND (28399AG000)



DS-00500

D: ASSEMBLY

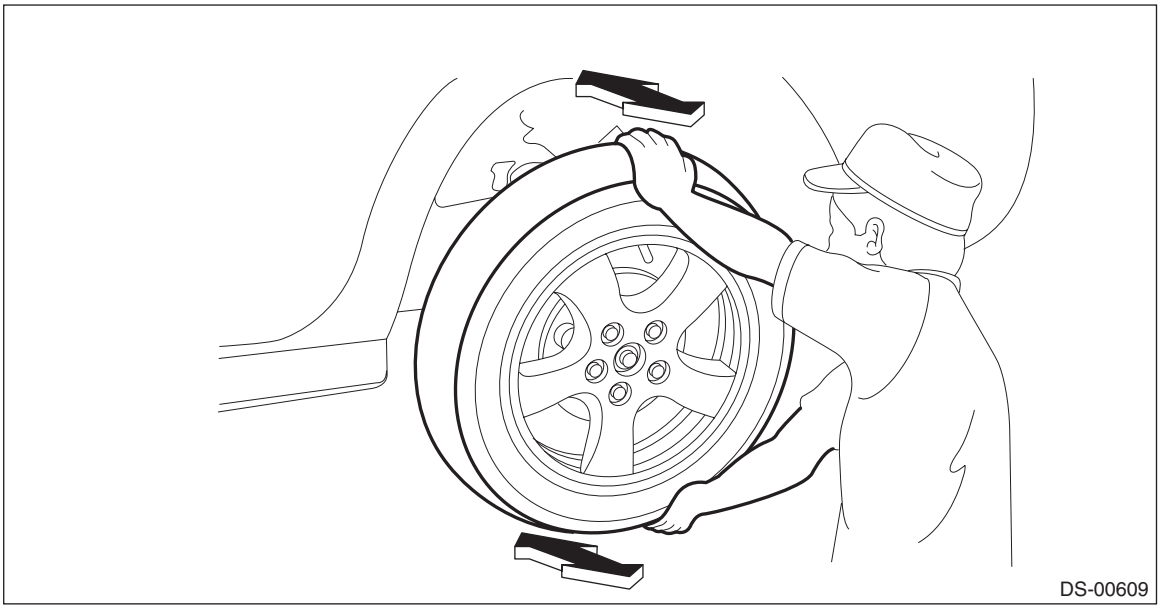
1) Install the hub unit COMPL - rear axle to the ST securely.



Preparation tool:
ST: HUB STAND (28099PA080)

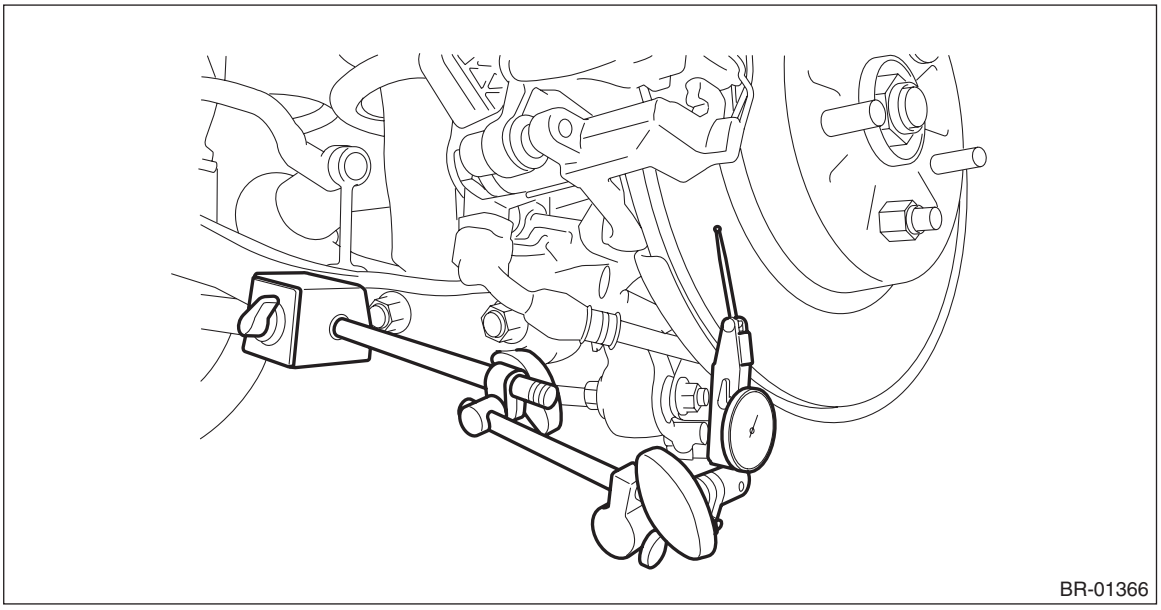
(1) Hub unit COMPL - rear axle

2) Using a press, press new bolts - hub (b) until their seating surfaces contact the hub unit COMPL - rear axle (a).



NOTE:
Use the 12 mm (0.47 in) dia. holes in the HUB STAND to prevent bolts from tilting.

E: INSPECTION

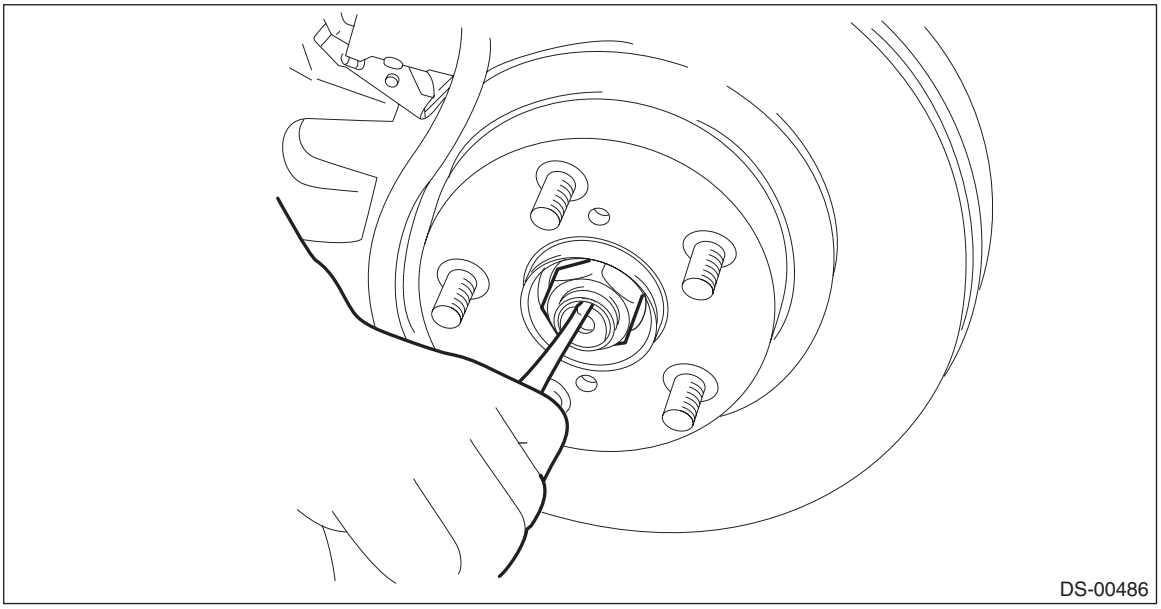


1) Moving the rear tire up and down by hand, check there is no backlash in bearing, and check the wheel rotates smoothly.

CAUTION:
If there is any fault in the bearing, replace the hub unit COMPL - rear axle.

2) Inspect the lean of axis direction using a dial gauge. Replace the hub unit COMPL - rear axle if the play exceeds the limit.

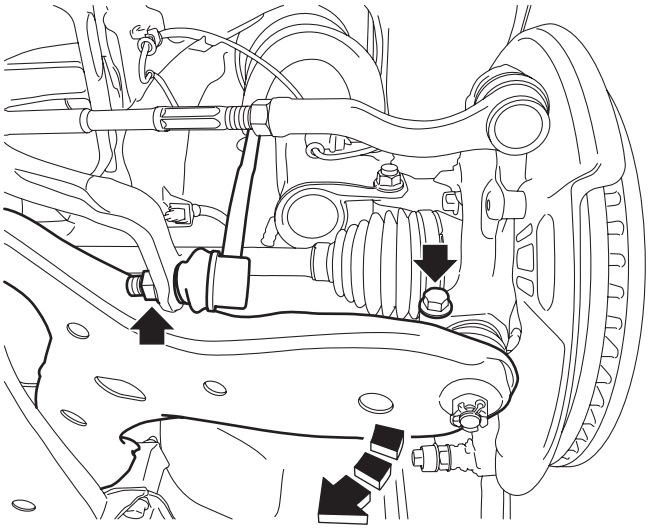
Service limit:
Maximum: 0.05 mm (0.0020 in)



7. Front Drive Shaft

A: REMOVAL

1) Lift up the vehicle, and then remove the front wheels.
2) Remove the nut - axle.

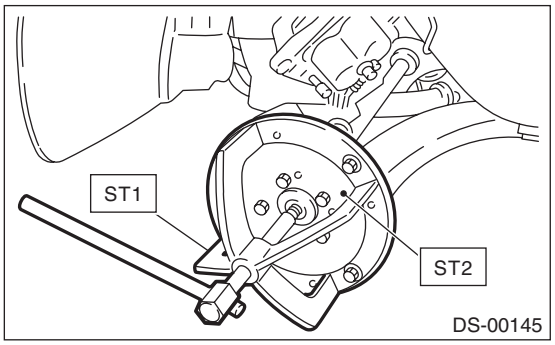


CAUTION:
Do not loosen the nut - axle while the front axle is loaded. Doing so may damage the hub unit COMPL.

(1) Lift the crimped section of the nut - axle.
(2) Remove the nut - axle using a socket wrench while depressing the brake pedal.

DS-00486

3) Drain the transmission gear oil. (MT model)
4) Drain differential gear oil. (CVT model)
5) Disconnect the ball joint assembly.



(1) Remove the nut and disconnect the front stabilizer link.
(2) Remove the bolts, disconnect the front arm ball joint, and lower the front arm assembly.

DS-00630

6) Remove the front drive shaft.
(1) Disconnect the housing assembly - front axle from the front drive shaft.

NOTE:
If it is hard to remove, use the ST.

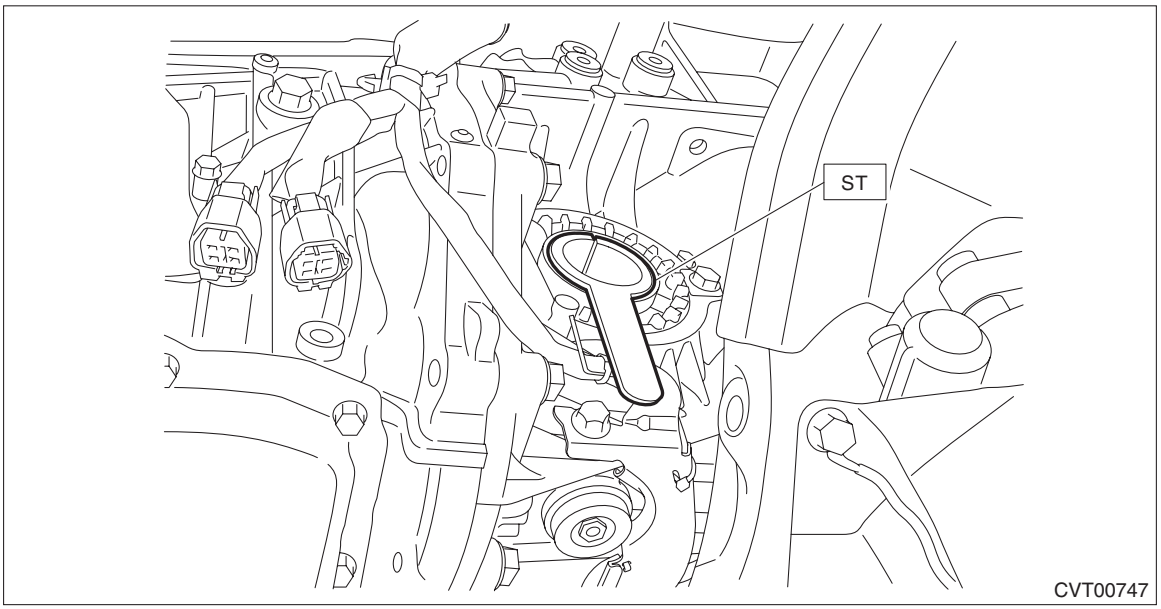
Preparation tool:
ST1: AXLE SHAFT PULLER (926470000)
ST2: AXLE SHAFT PULLER PLATE (28099PA110)

(2) Using a tire lever, remove the front drive shaft from transmission.

CAUTION:
Be careful not to allow the tire lever to damage holder area.

Preparation tool:
Tire lever

B: INSTALLATION

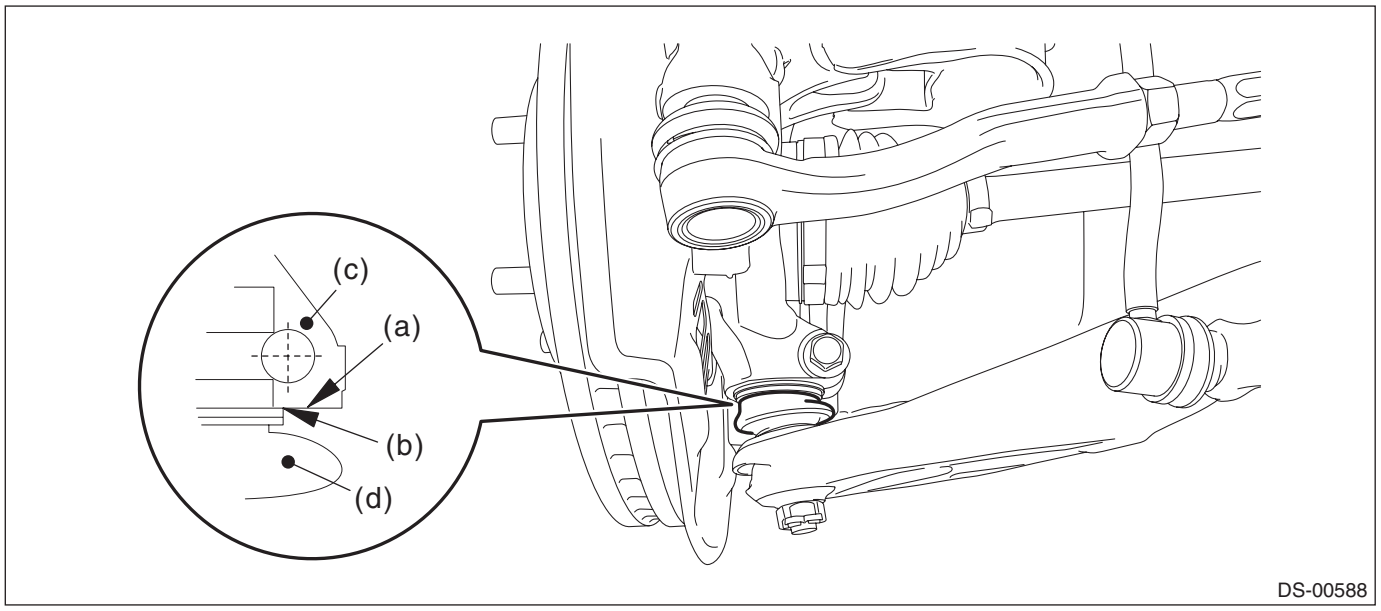


1) Before installation, check the drive shaft assembly. <Ref. to DS-51, INSPECTION, Front Drive Shaft.>
2) Replace the differential side retainer oil seal with a new part.
- MT model: <Ref. to 6MT-53, REPLACEMENT, Differential Side Retainer Oil Seal.>
- CVT model: <Ref. to CVT(TR690)-99, REPLACEMENT, Differential Side Retainer Oil Seal.> <Ref. to CVT(TR580)-104, REPLACEMENT, Differential Side Retainer Oil Seal.>

CAUTION:
After pulling out the drive shaft assembly, be sure to replace with a new oil seal.
3) Insert the drive shaft assembly into the hub spline, and pull it into the specified position.

CAUTION:
Do not hammer the drive shaft assembly when installing.
4) Tighten the new nut - axle temporarily.

5) Using the ST, install the front drive shaft assembly to the transmission.



Preparation tool:
ST: OIL SEAL PROTECTOR (28399SA010)

6) Install the ball joint assembly to the housing assembly - front axle.

CAUTION:
Before tightening, make sure the bottom surface of the housing assembly - front axle and the stepped section of ball joint are in contact.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

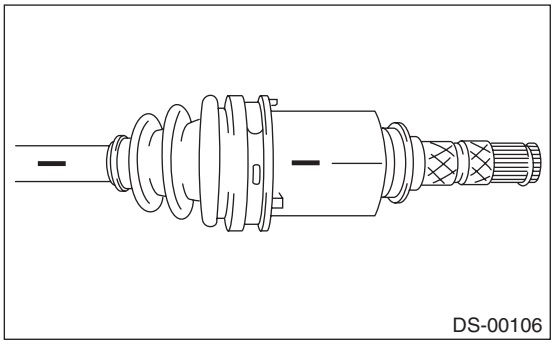
(a) Bottom surface of housing ASSY - front axle
(b) Raised section of ball joint
(c) Housing ASSY - front axle
(d) Ball joint

7) Install the stabilizer link.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)

8) While depressing the brake pedal, tighten new nuts - axle to the specified torque.

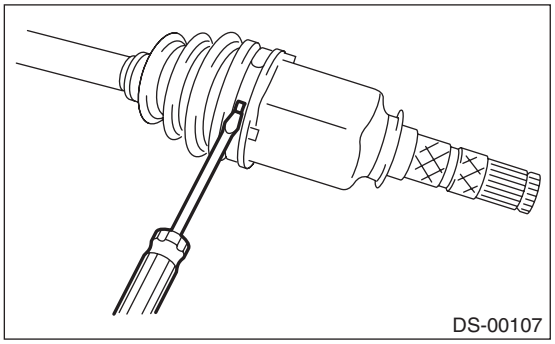
CAUTION:
Do not load the front axle before tightening the nut - axle. Doing so may damage the hub unit COMPL.



Tightening torque:
220 N·m (22.4 kgf-m, 162.3 ft-lb)
9) After tightening the nut - axle, lock it securely.
10) Fill transmission gear oil. (MT model)
11) Fill differential gear oil. (CVT model)
12) Install the front wheels.

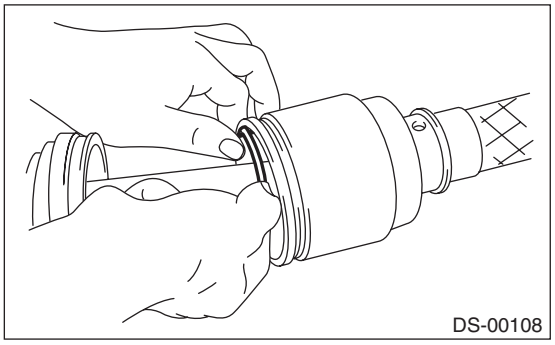
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)
13) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform "VDC sensor midpoint setting mode". <Ref. to VDC-17, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
14) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-20, PROCEDURE, Auto Headlight Beam Leveler System.>



C: DISASSEMBLY

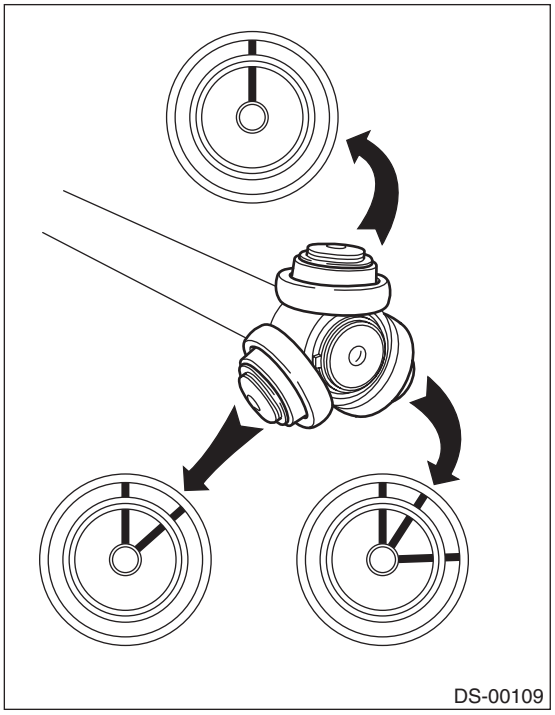
1) Place alignment marks on the shaft and outer race.



DS-00106

2) Remove the PTJ boot band and boot.

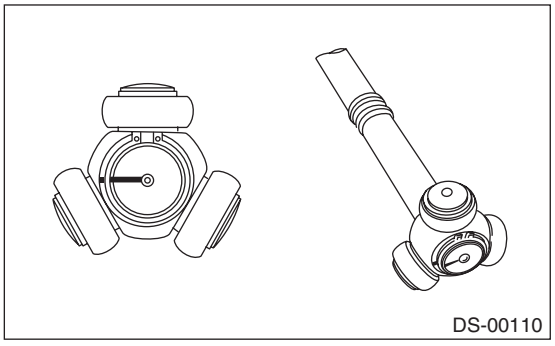
CAUTION:
Be careful not to damage the boot.



DS-00107

3) Remove the snap ring from PTJ outer race.

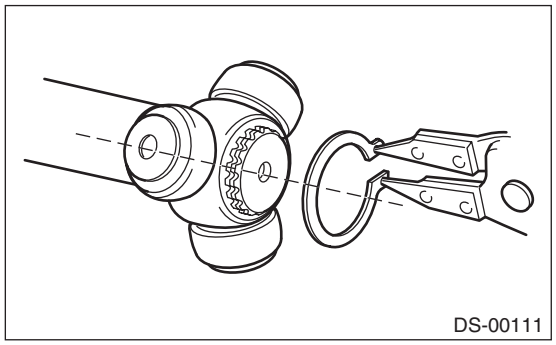
DS-00108



4) Remove the PTJ outer race from shaft assembly.
5) Wipe off grease.

CAUTION:
The grease is a special type of grease. Do not mix with other grease.
6) Place alignment marks on the roller kit and trunnion.

DS-00109



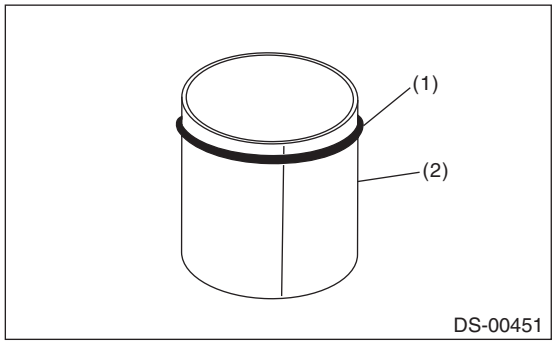
7) Remove the roller kit from trunnion.

CAUTION:
Be careful with the roller kit position.
8) Place alignment marks on the trunnion and shaft.

DS-00110

9) Remove the snap ring and trunnion.

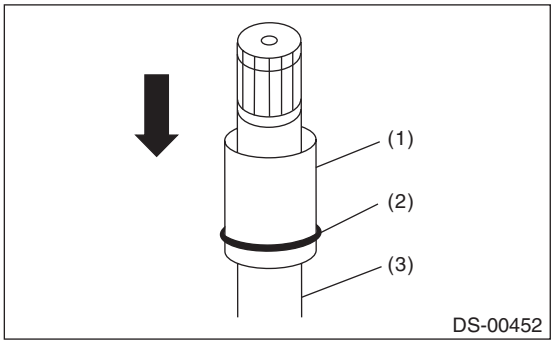
CAUTION:
Be sure to wrap shaft splines with vinyl tape to protect the boot from scratches.



10) Remove the PTJ boot.
11) Remove the O-ring from the groove of the shaft.

NOTE:
The EBJ is a non-disassembly part, so the axle disassembly stops here.

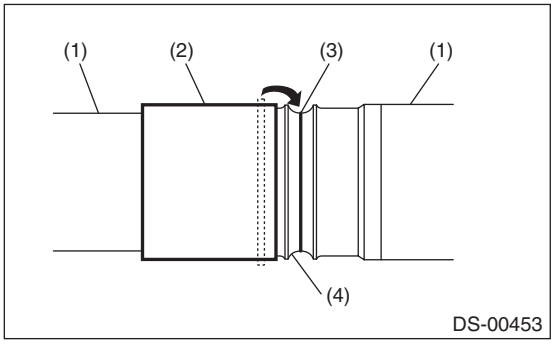
D: ASSEMBLY



1) Roll up a thick piece of paper to a size where the shaft can pass through, and affix with tape to form a cylinder.
2) Attach a new O-ring on this cylinder.

CAUTION:
- **Always use a new O-ring.**
- **Be careful that the O-ring does not become scratched and that there are no foreign objects attached to it.**
- **Make sure to install the O-ring so that it does not twist as much as possible.**
- **Do not stretch the O-ring to 30 mm (1.18 in) inner diameter or more.**

(1) O-ring
(2) Cylinder made with thick paper, etc.

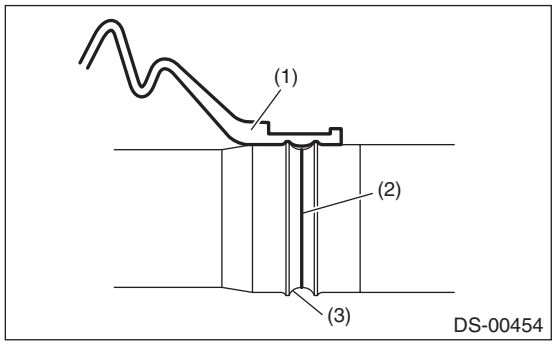


3) Pass the cylinder material onto the shaft, and slide in the direction of the shaft axis.

(1) Cylinder material
(2) O-ring
(3) Shaft

4) Clean the shaft boot groove, and wipe off the grease.
5) Slide the cylinder material near the shaft boot groove, and move the O-ring from the cylinder material onto the shaft boot groove.

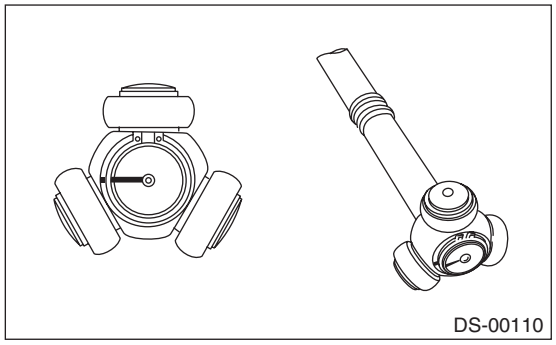
CAUTION:
- **Attach the O-ring to the shaft boot groove center.**
- **Be careful that the O-ring does not become scratched and that there are no foreign objects attached to it.**
- **Make sure to install the O-ring so that it does not twist as much as possible.**
- **With the O-ring attached, do not wash with kerosene, gasoline, etc.**



(1) Shaft
(2) Cylinder material
(3) O-ring
(4) Boot groove

6) Pass the PTJ small diameter boot band through the shaft.
7) Wrap vinyl tape around the splines of the shaft.

CAUTION:
To prevent damage to the boots, make sure to always wrap with vinyl tape for protection.



8) Install a new PTJ boot.

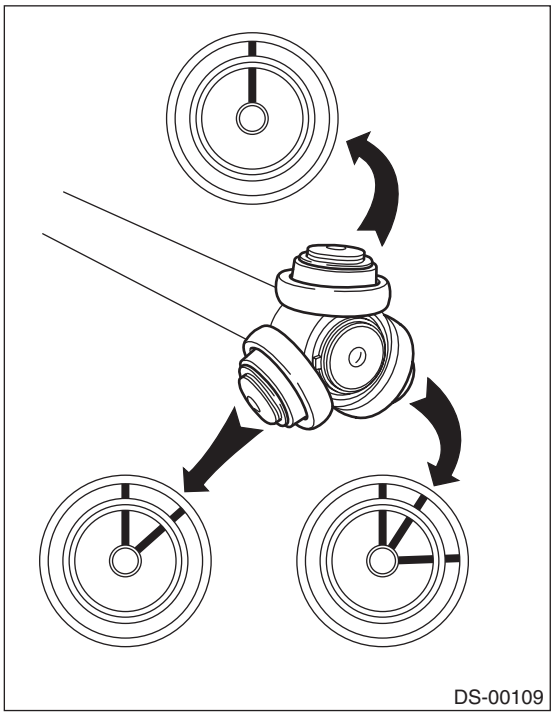
CAUTION:
Make sure to fit securely on the boot groove of the shaft.

(1) PTJ boot
(2) O-ring
(3) Boot groove

9) Match the alignment marks, and attach the trunnion onto the shaft.

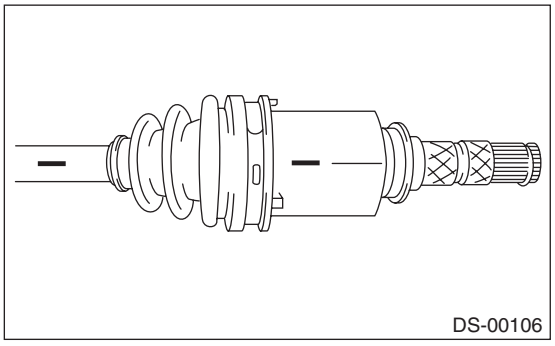
10) Attach the snap ring to the shaft.

CAUTION:
Confirm that the snap ring is completely fitted in the shaft groove.



11) Fill 100 to 110 g (3.53 to 3.88 oz) of specified grease into the interior of the PTJ outer race.

Grease:
NKG302



12) Apply a thin coat of specified grease to the roller kit and trunnion.

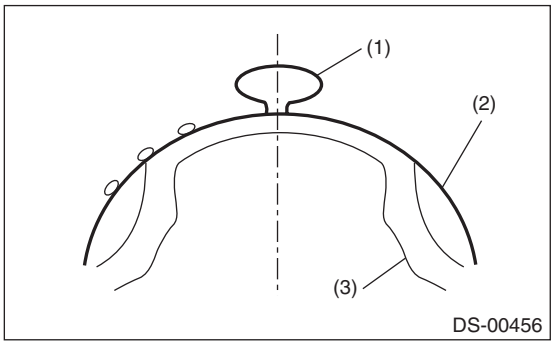
13) Match the alignment marks of the roller kit and trunnion, and attach the roller kit.

CAUTION:
Be careful with the roller kit position.

14) Match the alignment marks of the shaft and outer race, and attach the outer race.

15) Install the snap ring in the groove of the PTJ outer race.

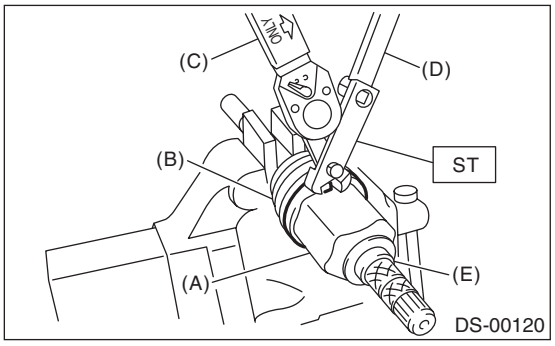
CAUTION:
Pull the shaft lightly and make sure that the snap ring is completely fitted in the groove.



16) Apply an even coat of the specified grease 30 to 40 g (1.06 to 1.41 oz) to the entire inner surface of boot.
17) Attach the PTJ boot taking care not to twist it.

CAUTION:
- **Clean the large end of PTJ boot and the boot groove well, and remove the grease and other substances.**
- **When installing the PTJ boot, position the outer race of the PTJ at center of the stroke.**

18) Set the new boot band at the specified position.



19) Tighten the boot bands using ST, torque wrench and socket flex handle.

CAUTION:
The large boot band is to be tightened so that the omega shaped part is at the position indicated in the figure below.

(1) Omega shaped part
(2) Boot band
(3) Outer race

Preparation tool:
ST: BOOT BAND PLIERS (28099AC000)

(A) Large boot band
(B) Boot
(C) Torque wrench
(D) Socket flex handle
(E) Outer race

Tightening torque:
Large boot band: 178 N·m (18.1 kgf-m, 131.3 ft-lb)
Small boot band: 145 N·m (14.8 kgf-m, 106.9 ft-lb)

20) Extend and retract the PTJ repeatedly so that grease is spread evenly.

E: INSPECTION

Check the removed parts for damage, wear, corrosion etc. If faulty, repair or replace.

- **PTJ (pillow tripod joint)**

Check for seizure, corrosion, damage, wear and excessive play.

- **EBJ (high-efficiency compact ball fixed joint)**

Check for seizure, corrosion, damage and excessive play.

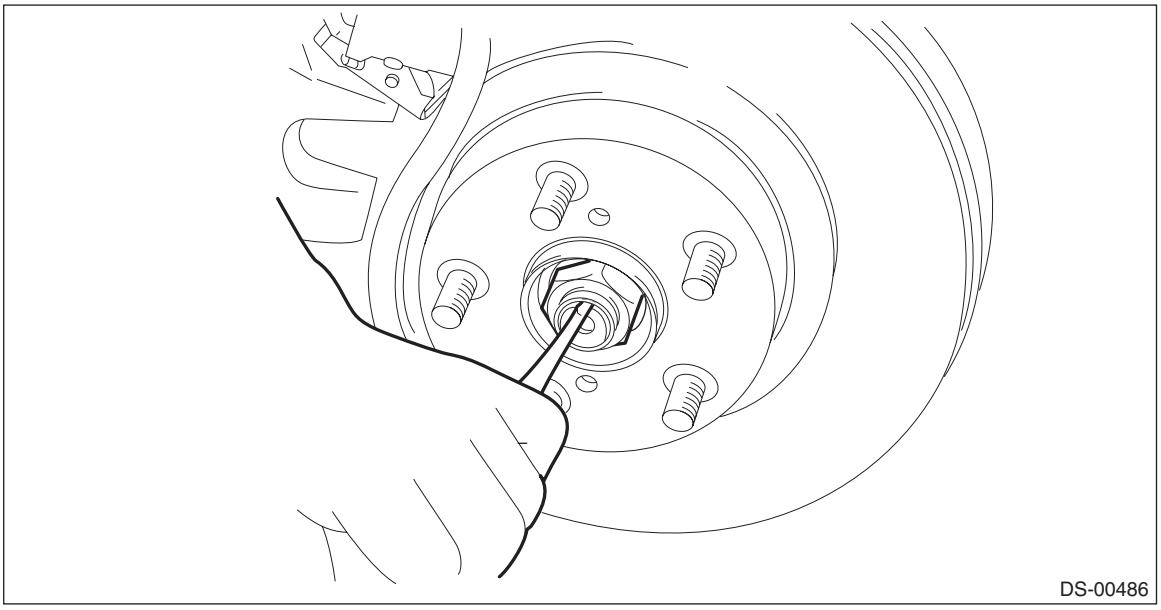
- **Shaft:**

Check for excessive bending, twisting, damage and wear.

- **Boot:**

Check for wear, warping, breakage and scratches.

- **Grease:**



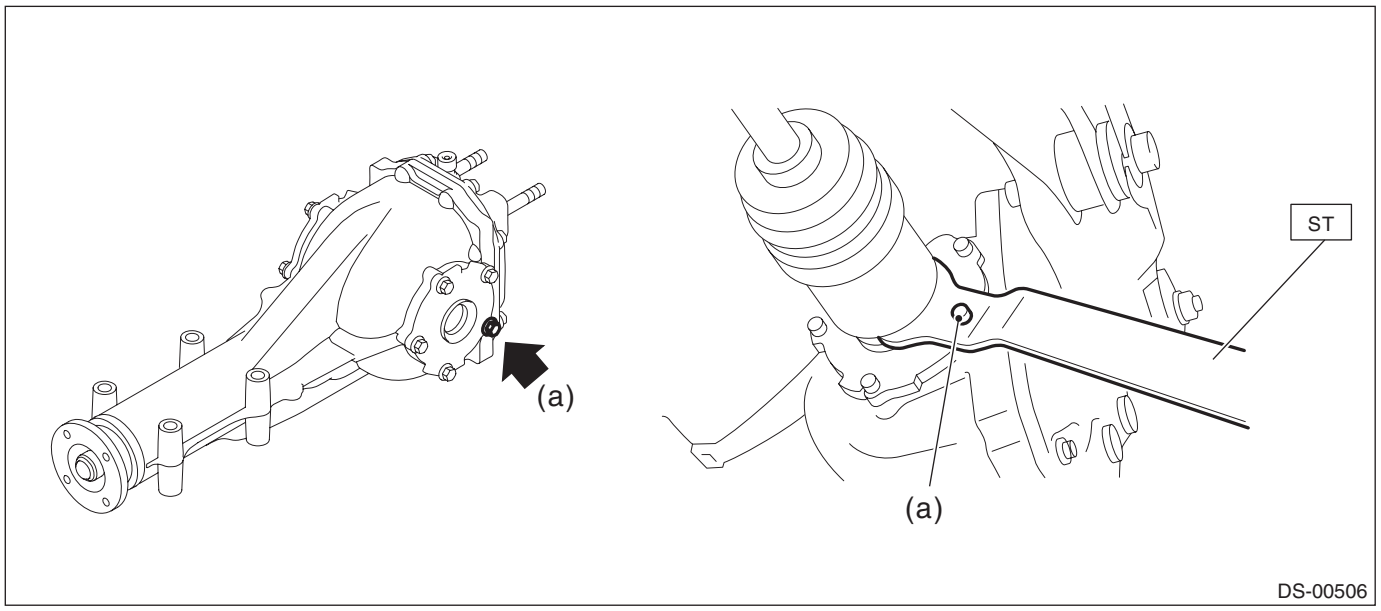
Check for discoloration and fluidity.

8. Rear Drive Shaft

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the nut - axle.

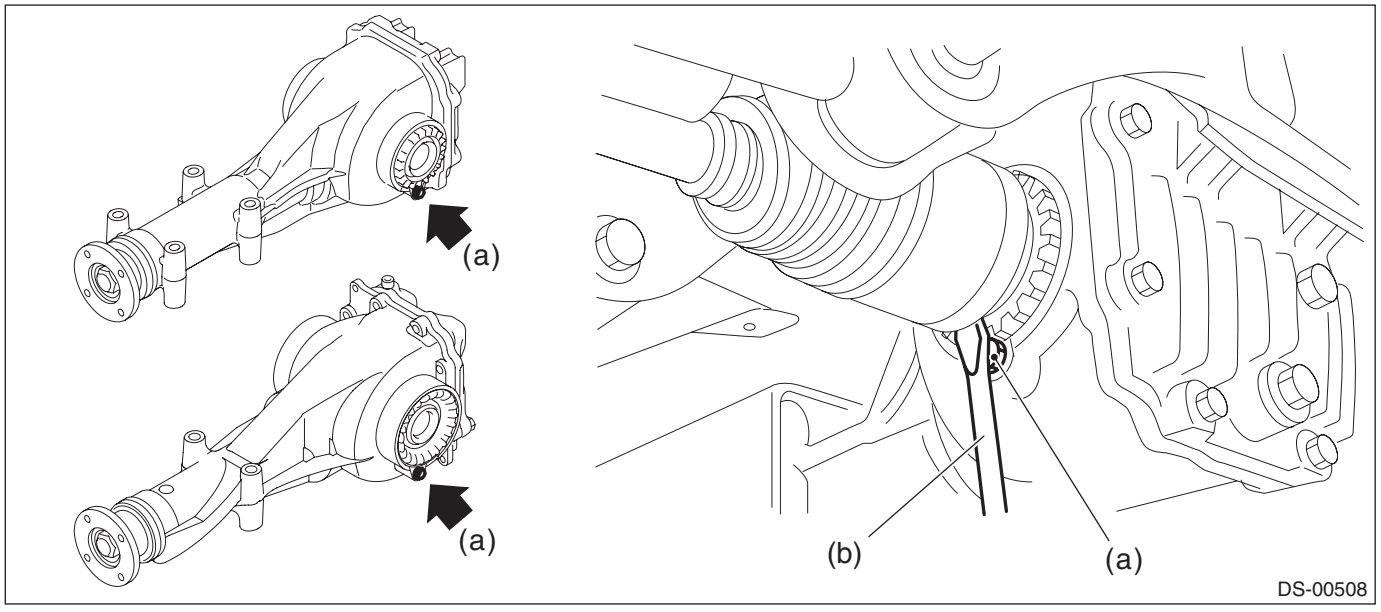
CAUTION:
Do not loosen the nut - axle while the rear axle is loaded. Doing so may damage the hub unit COMPL.
(1) Lift the crimped section of the nut - axle.
(2) Remove the nut - axle using a socket wrench while depressing the brake pedal.



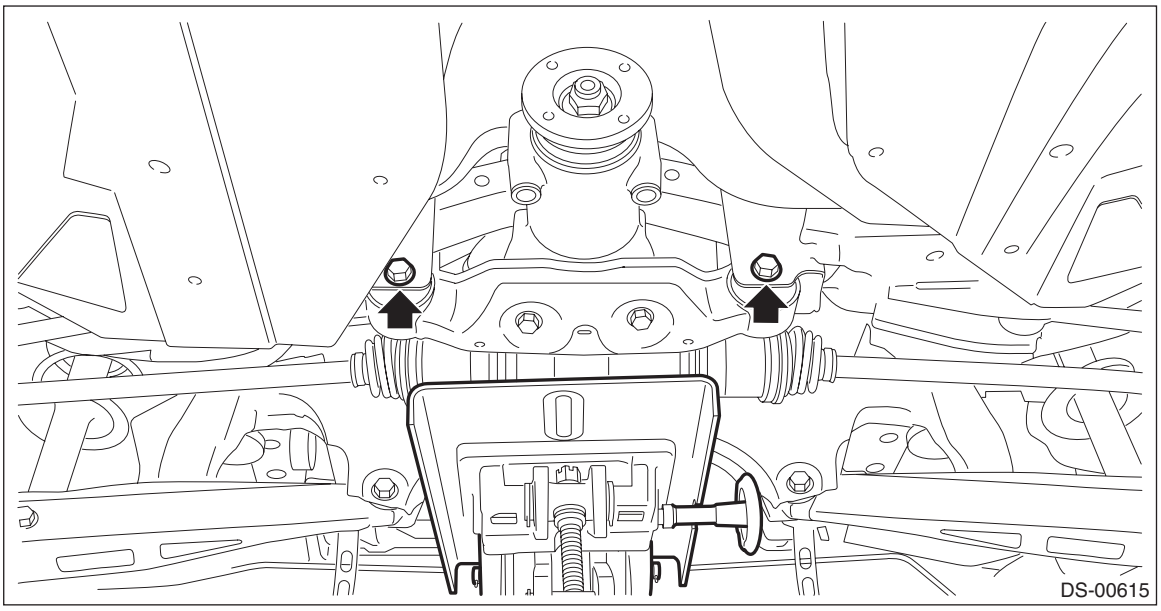
4) Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler) <Ref. to LI-80, REMOVAL, Rear Height Sensor.>
5) Drain differential gear oil.
6) Remove the propeller shaft. <Ref. to DS-10, REMOVAL, Propeller Shaft.>

7) Loosen the joint of rear differential assembly and rear drive shaft assembly.
- T type: Pull out the rear drive shaft assembly by fitting the ST to the bolt (a) as shown in the figure.

CAUTION:
Fit the ST to the bolts as shown in the figure to prevent damage of the side bearing retainer.

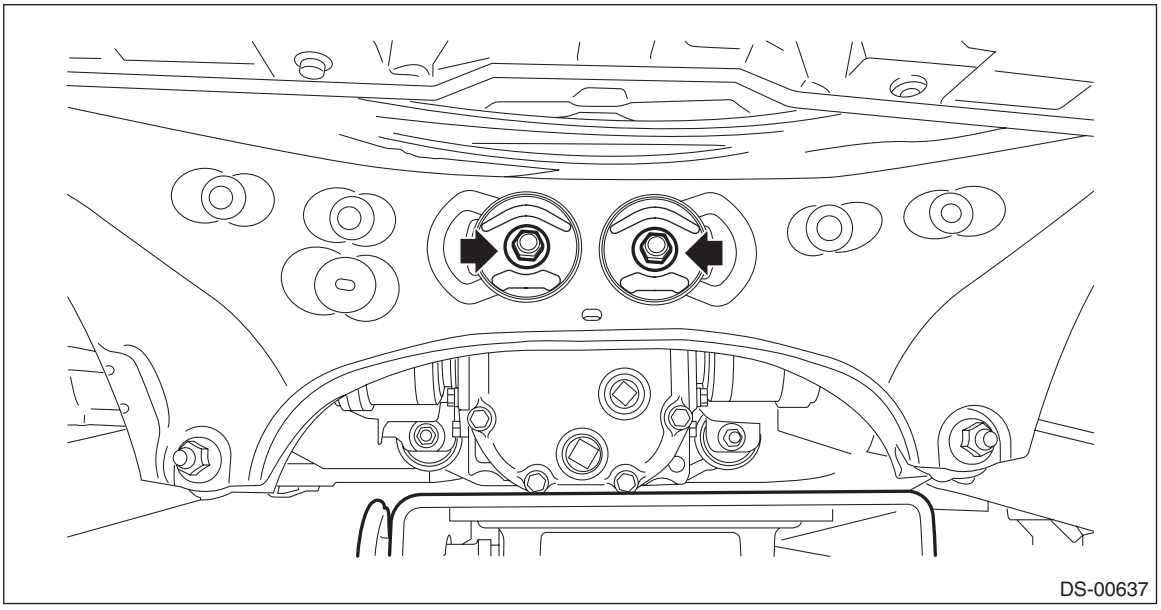


Preparation tool:
ST: DRIVE SHAFT REMOVER (28099PA100)



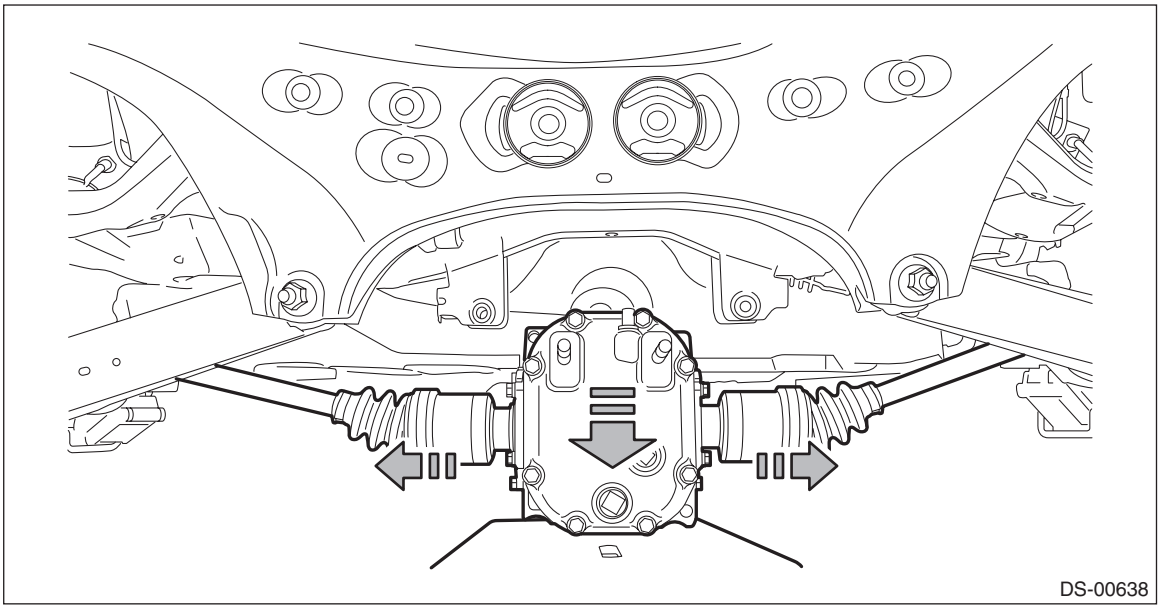
- VA type: Pull out the rear drive shaft assembly by fitting the tire lever (b) to the bolt (a) as shown in the figure.

CAUTION:
To prevent damage to the side bearing retainer, use by placing the tire lever against the bolt as shown in the figure.



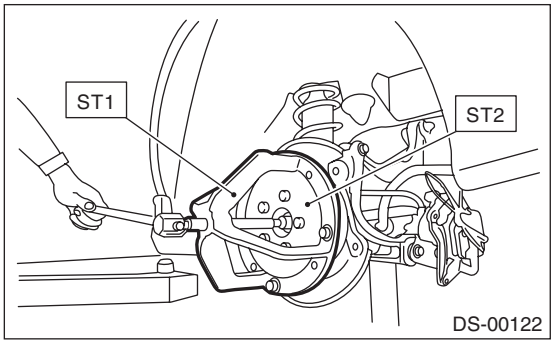
Preparation tool:
Tire lever

8) Remove the installation section of rear differential assembly.
(1) Support the rear differential assembly with a transmission jack.
(2) Remove the bolts which hold the rear differential front crossmember from the rear sub frame assembly.



(3) Remove the self-locking nuts which hold the rear differential to the rear sub frame assembly.

9) Completely pull out the rear drive shaft assembly while lowering the rear differential.

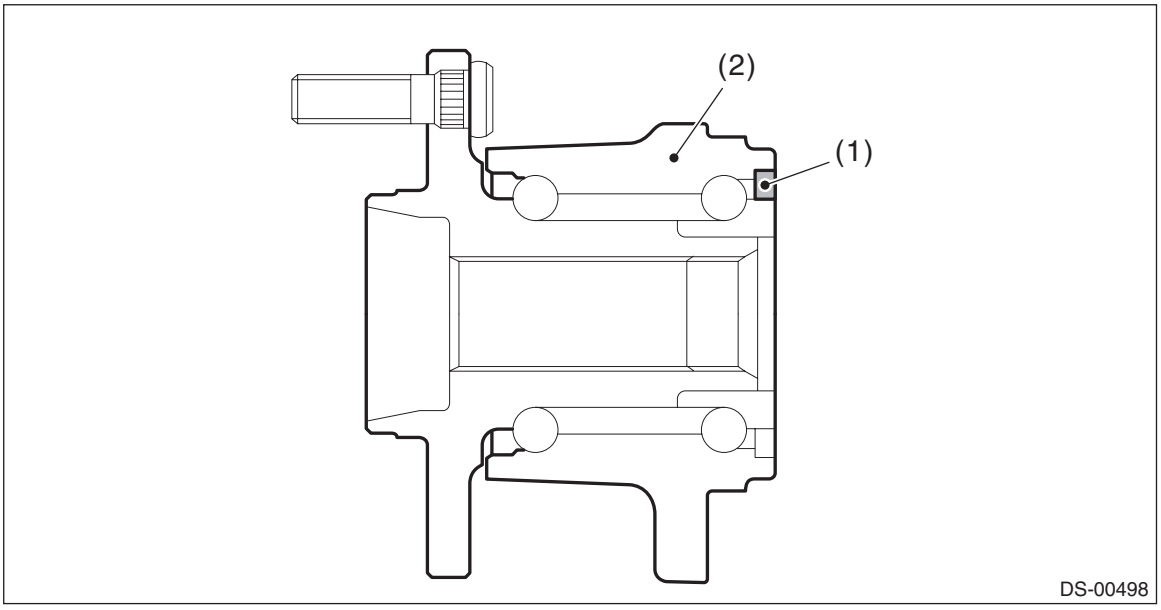


CAUTION:
Pay attention to avoid damaging the boot of drive shaft.

10) Remove the rear drive shaft assembly from the housing assembly - rear axle.

NOTE:
If it is hard to remove, use the ST.

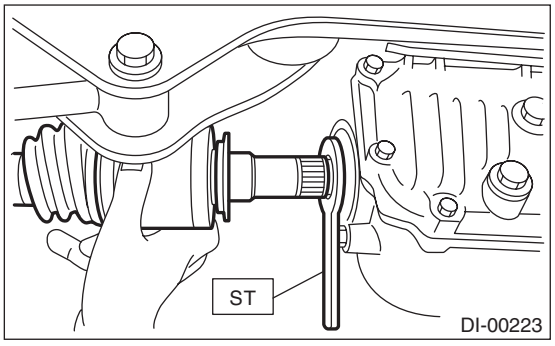
Preparation tool:
ST1: AXLE SHAFT PULLER (926470000)
ST2: AXLE SHAFT PULLER PLATE (28099PA110)



B: INSTALLATION

1) Replace the rear differential side oil seal. <Ref. to DI-76, REPLACEMENT, Rear Differential Side Oil Seal.>

NOTE:
After pulling out the drive shaft assembly, be sure to replace with a new oil seal.
2) Insert the drive shaft assembly into the rear hub spline, and pull it into the specified position.



CAUTION:
- **Be careful not to damage the magnetic encoder.**
- **Do not get closer the tool which charged magnetism to magnetic encoder.**
- **Do not hammer the drive shaft assembly when installing.**

(1) Magnetic encoder (2) Hub unit COMPL - rear axle

3) Temporarily tighten the nut - axle.
4) Using the ST, install the rear drive shaft assembly to the rear differential.

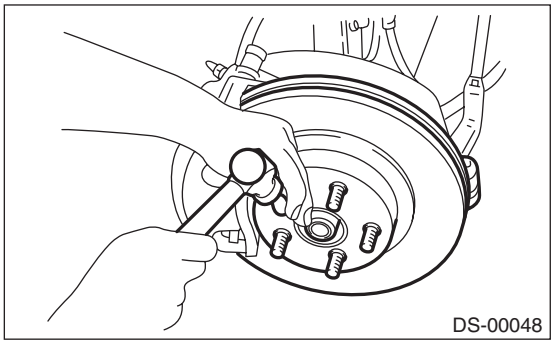
Preparation tool:
ST: OIL SEAL PROTECTOR (28099PA090)

5) Install the rear differential assembly to the rear sub frame assembly.

CAUTION:
Be sure to use a new self-locking nut.

Tightening torque:
Differential assembly — bushing - differential: 70 N·m (7.1 kgf-m, 51.6 ft-lb)
Differential assembly — rear sub frame assembly: 110 N·m (11.2 kgf-m, 81.1 ft-lb)

6) Install the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler)



Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

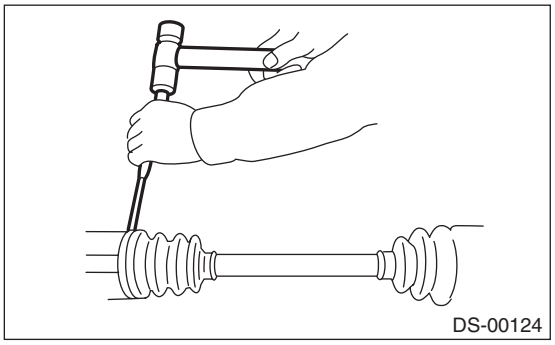
7) While pressing the brake pedal, tighten the new axle nuts to the specified torque.

CAUTION:
Do not load the rear axle before tightening the nut - axle. Doing so may damage the hub unit COMPL.

Tightening torque:
240 N·m (24.47 kgf-m, 177 ft-lb)

8) Lock the nut - axle securely.

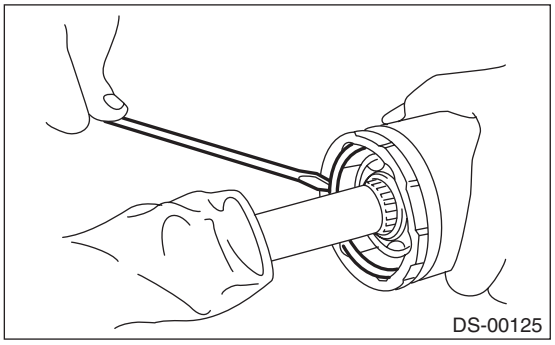
9) Fill differential gear oil.
10) Install the rear wheels.



Tightening torque:
240 N·m (24.47 kgf-m, 177 ft-lb)

11) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-20, PROCEDURE, Auto Headlight Beam Leveler System.>

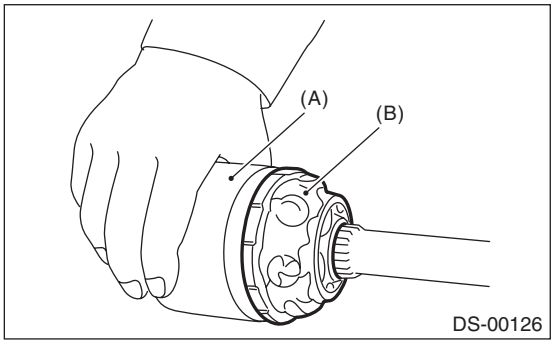
C: DISASSEMBLY



1) Using a flat tip screwdriver or pliers, loosen the boot band on the large end of DOJ boot.

CAUTION:
Be careful not to damage the boot.

2) Remove the boot band on the small end of DOJ boot in the same manner.
3) Remove the large end of DOJ boot from DOJ outer race.



4) Remove the round snap ring at the neck of DOJ outer race with a flat tip screwdriver.

5) Take out the DOJ outer race from the shaft assembly.
6) Wipe off the grease and take out the ball bearings.

CAUTION:
The grease is a special grease (grease for constant velocity joints). Do not mix with other greases.

NOTE:
Disassemble the parts taking care not to lose balls.

(A) Outer race
(B) Grease

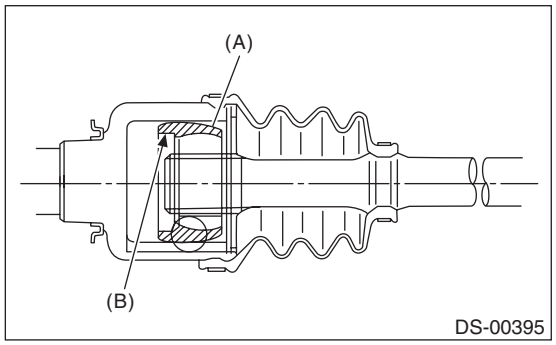
7) To remove the cage from inner race, turn the cage by a half pitch to the track groove of inner race and shift the cage.
8) Using pliers, remove the snap ring fixing the inner race to the shaft.
9) Take out the DOJ inner race.
10) Take off the DOJ cage from shaft and remove the DOJ boot.

CAUTION:
Wrap shaft splines with vinyl tape to protect the boot from scratches.
11) Remove the BJ boot or EBJ boot in the same procedure as the DOJ boot.

NOTE:
Further disassembly of the drive shaft is impossible because the BJ and EBJ cannot be disassembled.

D: ASSEMBLY

CAUTION:
Wrap shaft splines with vinyl tape to protect the boot from scratches.

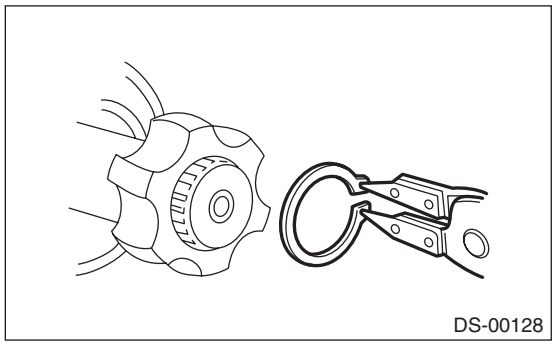


NOTE:
Use specified grease.

BJ, EBJ side:
NKG814

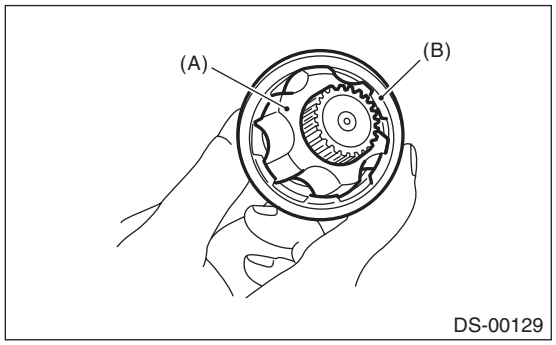
DOJ side:
NKG814

1) Install the BJ or EBJ boot in specified position, and fill it with 50 to 60 g (1.76 to 2.12 oz) of specified grease.
2) Place the DOJ boot at the center of shaft.
3) Insert the DOJ cage onto shaft.



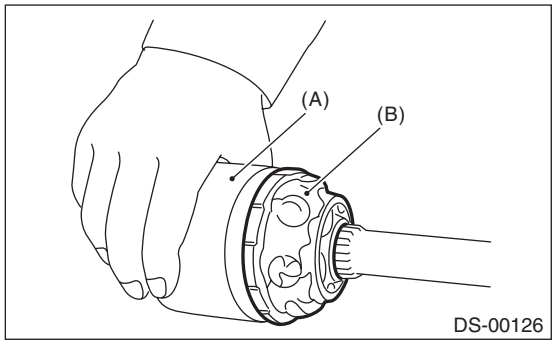
NOTE:
Insert the cage with the cutout portion facing the shaft end, since the cage has an orientation.

(A) Cage
(B) Cutout portion



4) Install the DOJ inner race on shaft and fix the snap ring in place with pliers.

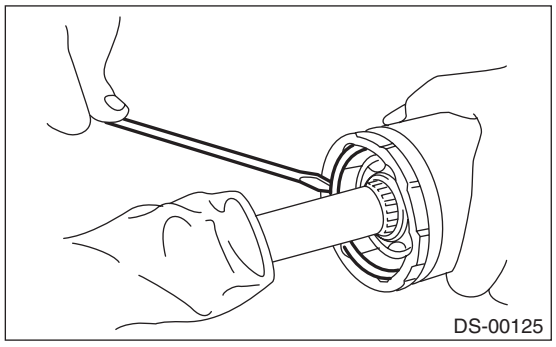
NOTE:
Confirm that the snap ring is completely fitted in the shaft groove.



5) Install the cage to inner race fixed upon shaft.

NOTE:
Fit the cage with the protruding section aligned with the track on the inner race, and turn by a half pitch.

(A) Inner race
(B) Cage



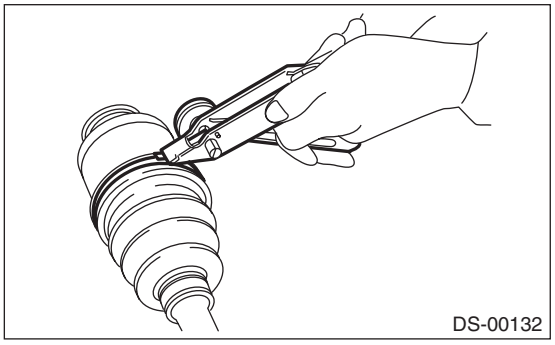
6) Fill 80 to 90 g (2.82 to 3.17 oz) of specified grease into the inner side of the DOJ outer race.
7) Apply a thin coat of specified grease to the cage pocket and ball.
8) Insert the ball bearings into the cage pocket.
9) Align the outer race track and ball positions, and place the shaft, inner race, cage and ball bearings in the original positions, and then fix outer race in place.

(A) Outer race
(B) Grease

10) Install the snap ring in the groove on the DOJ outer race.

NOTE:
- Assure that the balls, cage and inner race are completely fitted in the outer race of DOJ.
- Use care not to place the matched position of snap ring in the ball groove of outer race.
- Pull the shaft lightly and assure that the circlip is completely fitted in the groove.

11) Apply an even coat of the specified grease [20 to 30 g (0.71 to 1.06 oz)] to the entire inner surface of boot. Also apply grease to the shaft.

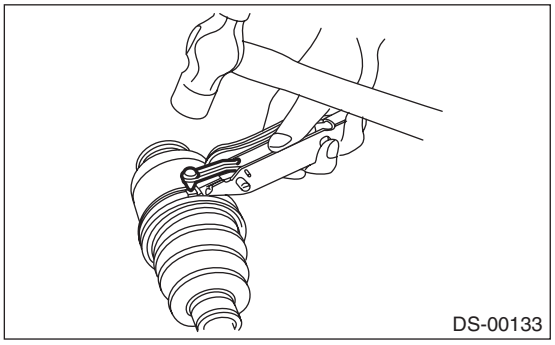


12) Install the DOJ boot taking care not to twist it.

NOTE:
• The inside of the large end of DOJ boot and the boot groove shall be cleaned so as to be free from grease and other substances.
• When installing the DOJ boot, position the outer race of DOJ at center of the stroke.
13) Put a new band through the clip and wind twice in the band groove of the boot.
14) Pinch the end of band with pliers. Hold the clip and tighten securely.

NOTE:
When tightening boot, use care so that the air within the boot is appropriate.
15) Tighten the band using the ST.

Preparation tool:
ST: BAND TIGHTENING TOOL (925091000)



NOTE:
Tighten the band until it cannot be moved by hand.

16) Tap the clip with the punch provided at the end of the ST.

Preparation tool:
ST: BAND TIGHTENING TOOL (925091000)

NOTE:
Tap to an extent that the boot underneath is not damaged.

17) Cut off the band with an allowance of about 10 mm (0.39 in) left from the clip and bend this allowance over the clip.

NOTE:
Be careful so that the end of the band is in close contact with clip.
18) Install the BJ boot or EBJ boot band in the same procedure as a DOJ boot.
19) Extend and retract the DOJ repeatedly to provide an equal coating of grease.

E: INSPECTION

Check the removed parts for damage, wear, corrosion etc. Repair or replace if defective.

- **DOJ (Double Offset Joint):**

Check for seizure, corrosion, damage, wear and excessive play.

- **EBJ (High-Efficiency Compact Ball Fixed Joint):**

Check for seizure, corrosion, damage, wear and excessive play.

- **BJ (Ball Fixed Joint):**

Check for seizure, corrosion, damage and excessive play.

- **Shaft:**

Check for excessive bending, twisting, damage and wear.

- **Boot:**

Check for wear, warping, breakage and scratches.

- **Grease:**

Check for discoloration and fluidity.

9. General Diagnostic Table

A: INSPECTION

NOTE:
Vibration while cruising may be caused by an unbalanced tire, improper tire inflation pressure, improper wheel alignment, etc.

Symptoms	Possible cause	Corrective action
Noise or vibration from propeller shaft	• Center bearing • Runout of propeller shaft • Loose or gap at connections	Inspect the propeller shaft. <Ref. to DS-13, INSPECTION, Propeller Shaft.>
Abnormal wheel vibration	Wheel is out of balance.	Check the wheel balance. <Ref. to WT-6, WHEEL BALANCING, INSPECTION, Tire and Wheel.>
	Front wheel alignment	Check the front wheel alignment. <Ref. to FS-10, INSPECTION, Wheel Alignment.>
	Rear wheel alignment	Check the rear wheel alignment. <Ref. to RS-10, INSPECTION, Wheel Alignment.>
	Front strut	Check the front strut. <Ref. to FS-54, INSPECTION, Front Strut.>
	Rear shock absorber	Check the rear shock absorber. <Ref. to RS-31, INSPECTION, Rear Shock Absorber.>
	Front drive shaft	Check the front drive shaft. <Ref. to DS-51, INSPECTION, Front Drive Shaft.>
	Rear drive shaft	Check the rear drive shaft. <Ref. to DS-62, INSPECTION, Rear Drive Shaft.>
	Hub unit COMPL - front axle	Check the hub unit COMPL - front axle. <Ref. to DS-29, INSPECTION, Front Hub Unit Bearing.>
	Hub unit COMPL - rear axle	Check the hub unit COMPL - rear axle. <Ref. to DS-41, INSPECTION, Rear Hub Unit Bearing.>
Noise from the underbody	Wheel is out of balance.	Check the wheel balance. <Ref. to WT-6, WHEEL BALANCING, INSPECTION, Tire and Wheel.>
	Front wheel alignment	Check the front wheel alignment. <Ref. to FS-10, INSPECTION, Wheel Alignment.>
	Rear wheel alignment	Check the rear wheel alignment. <Ref. to RS-10, INSPECTION, Wheel Alignment.>
	Front strut	Check the front strut. <Ref. to FS-54, INSPECTION, Front Strut.>
	Rear shock absorber	Check the rear shock absorber. <Ref. to RS-31, INSPECTION, Rear Shock Absorber.>

VEHICLE DYNAMICS CONTROL (VDC)

VDC

		Page
1.	General Description	2
2.	Relay and Fuse	7
3.	Vehicle Dynamics Control System	8
4.	VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)	9
5.	ABS Sequence Control	20

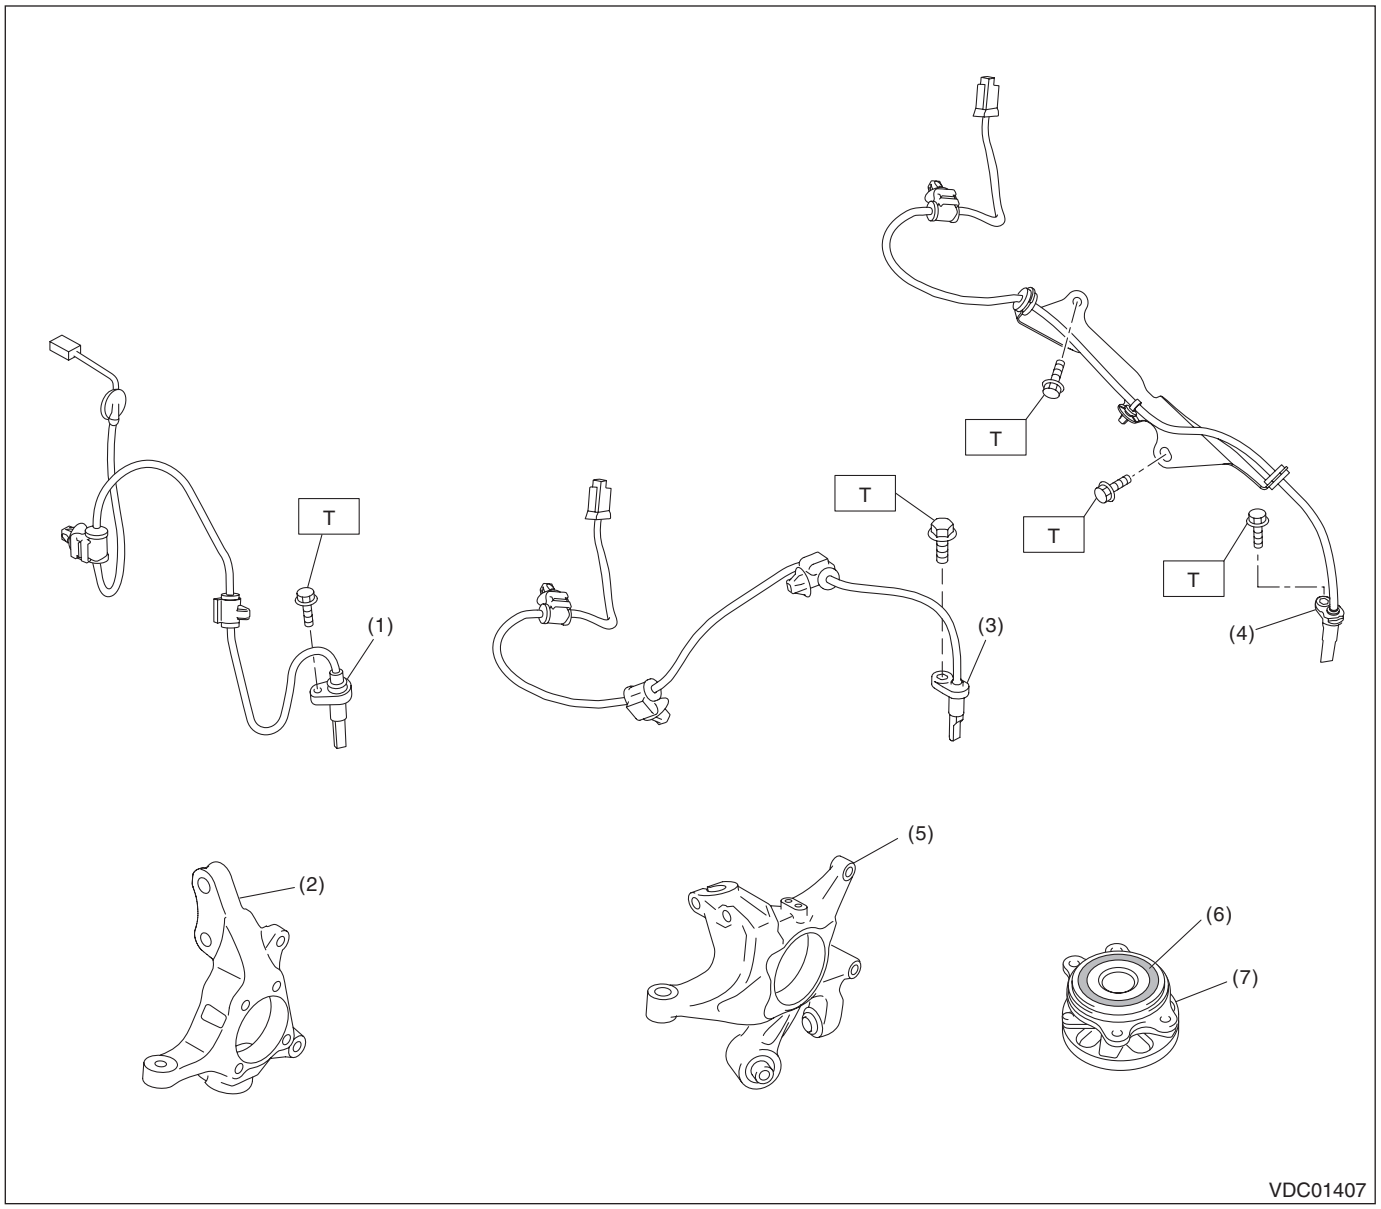
14.	VDC OFF Switch	38
15.	Hill Hold Switch	40

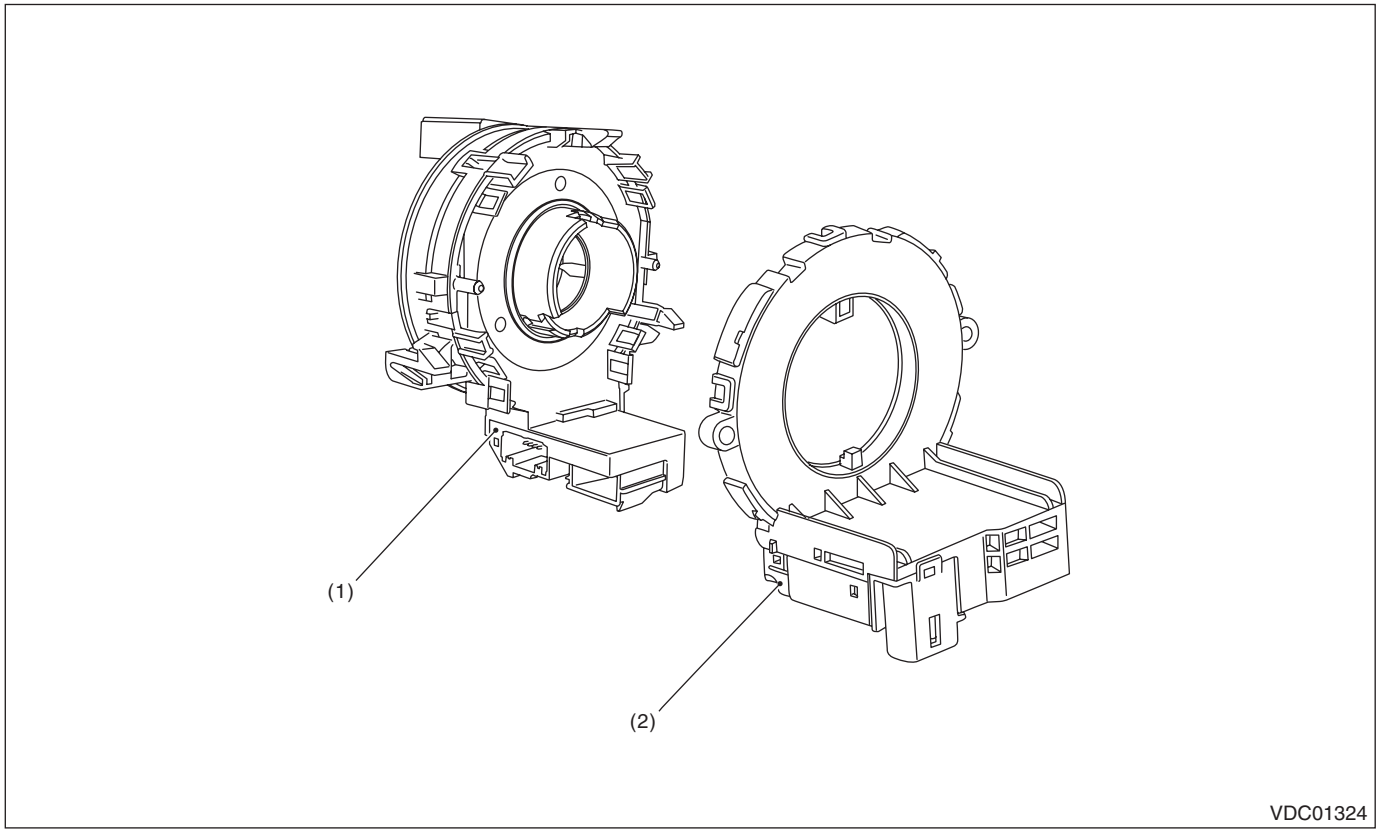


1. General Description

A: SPECIFICATION

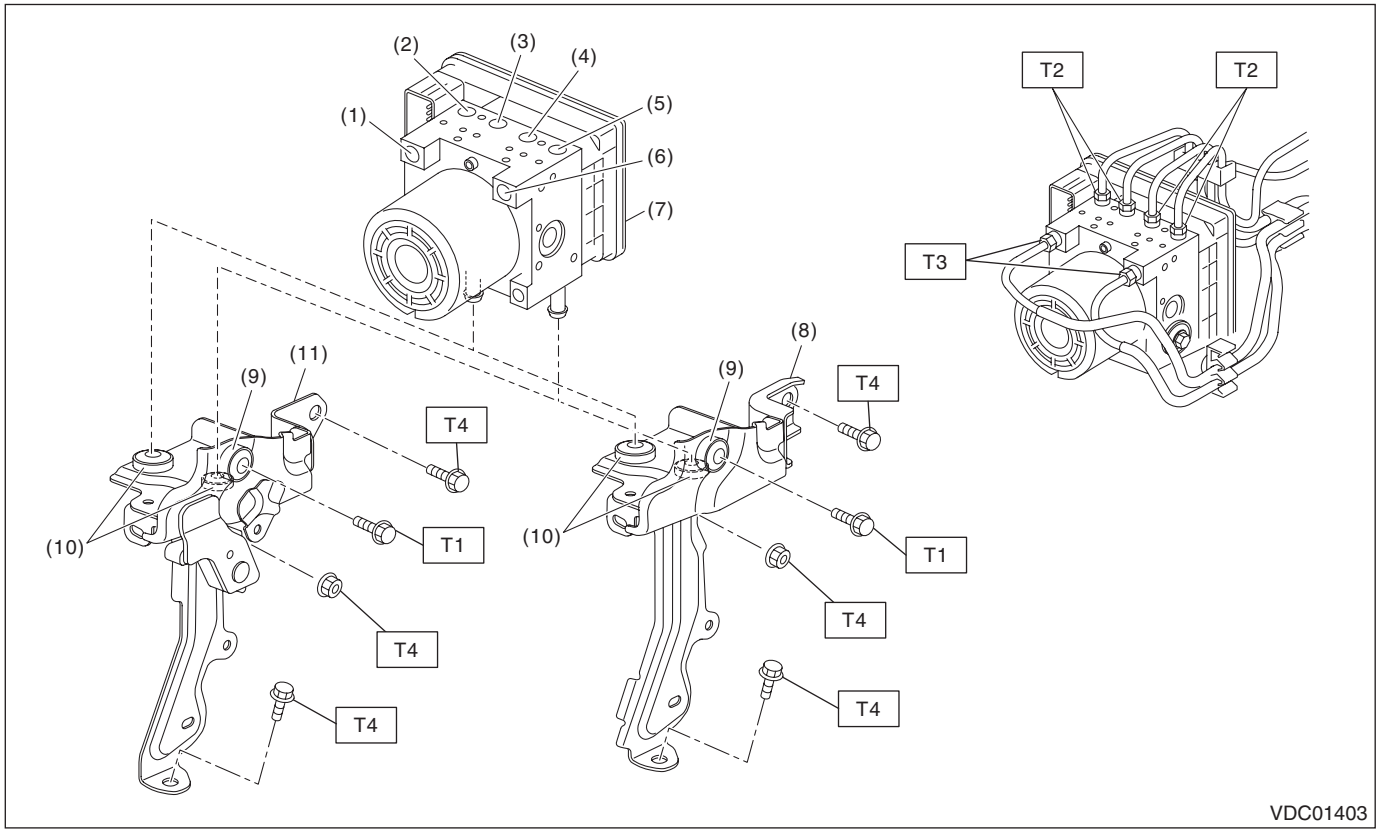
Item					Specification or identification
ABS wheel speed sensor	Gap between ABS wheel speed sensor and magnetic encoder (for reference)	Front			0.77 — 1.43 mm (0.030 — 0.056 in)
		Rear			0.44 — 1.76 mm (0.017 — 0.069 in)
	Identifications of harness (symbol)	Front			H1
		Rear	Sedan model	RH	H3
				LH	H4
			OUTBACK model	RH	H5
				LH	H6
VDCCM&H/U identification		Models without EyeSight			G1
		Models with EyeSight			G2

B: COMPONENT



1. ABS WHEEL SPEED SENSOR

(1) Front ABS wheel speed sensor
(2) Housing ASSY - front axle
(3) Rear ABS wheel speed sensor (sedan model)
(4) Rear ABS wheel speed sensor (OUTBACK model)
(5) Housing ASSY - rear axle
(6) Magnetic encoder
(7) Hub unit COMPL

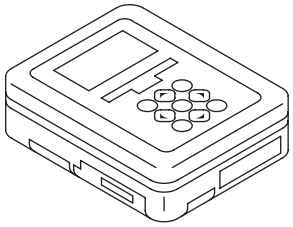


Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

2. STEERING ANGLE SENSOR

(1) Steering roll connector
(2) Steering angle sensor

3. VDC CONTROL MODULE AND HYDRAULIC CONTROL UNIT (VDCCM&H/U)



(1)	Secondary inlet	(7)	VDC control module and hydraulic control unit (VDCCM&H/U)	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Rear RH outlet	(8)	Bracket - hydraulic unit (model without EyeSight)	***T1: 7.5 (0.8, 5.5)***
(3)	Front LH outlet	(9)	Spacer	***T2: 15 (1.5, 11.1)***
(4)	Front RH outlet	(10)	Damper - hydraulic unit	***T3: 19 (1.9, 14.0)***
(5)	Rear LH outlet	(11)	Bracket - hydraulic unit (model with EyeSight)	***T4: 33 (3.4, 24.3)***
(6)	Primary inlet			

C: CAUTION

- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform “VDC sensor midpoint setting mode” of the VDC. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

D: PREPARATION TOOL

1. SPECIAL TOOL

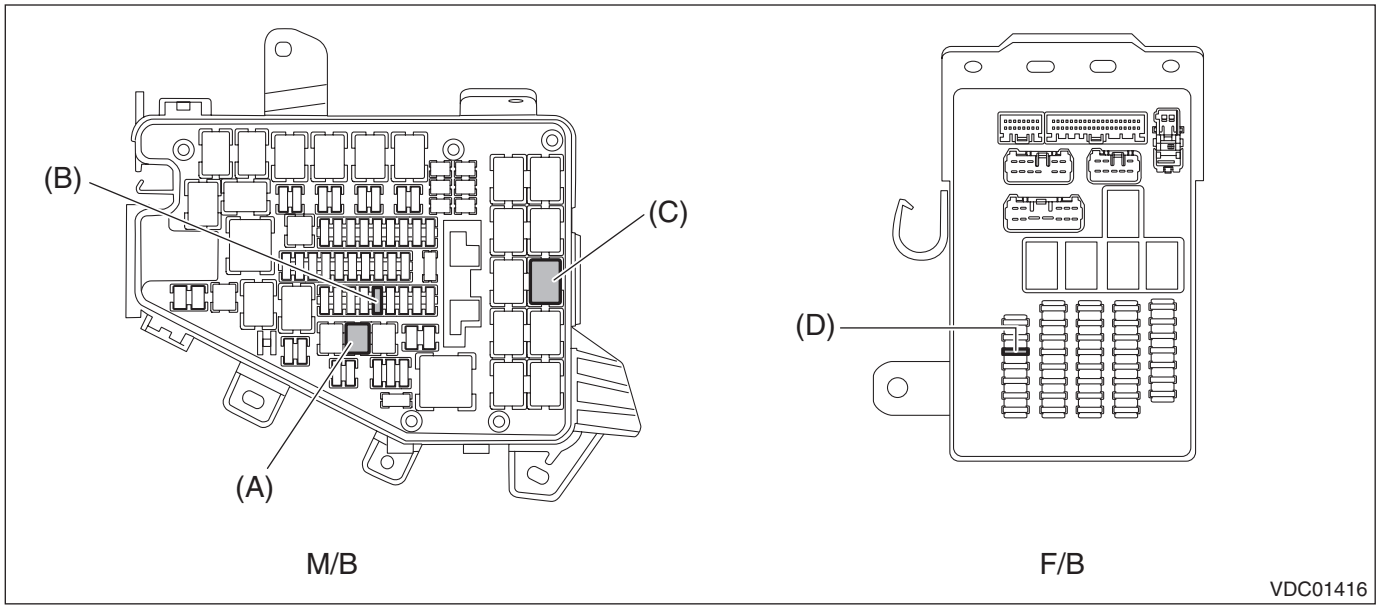


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for setting of each function and trouble-shooting for electrical system.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.
Pressure gauge	Used for measuring oil pressure.
Oscilloscope	Used for measuring the sensor.
Steering wheel puller	Used for removing the steering wheel.

2. Relay and Fuse

A: LOCATION

Main fuse box (M/B)	Fuse 40 A	(A)
	Fuse 30 A	(B)
	Brake relay	(C)
Fuse & relay box (F/B)	Fuse 7.5 A	(D)

NOTE:
For details concerning other fuses and relays, refer to the wiring diagram. <Ref. to WI-23, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

3. Vehicle Dynamics Control System

A: WIRING DIAGRAM

Refer to “Vehicle Dynamics Control System” in the wiring diagram. <Ref. to WI-455, WIRING DIAGRAM, Vehicle Dynamics Control System.>

B: ELECTRICAL SPECIFICATION

Refer to the Control Module I/O Signal of the “Vehicle Dynamics Control System (VDC) (DIAGNOSTICS)”. <Ref. to VDC(diag)-14, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

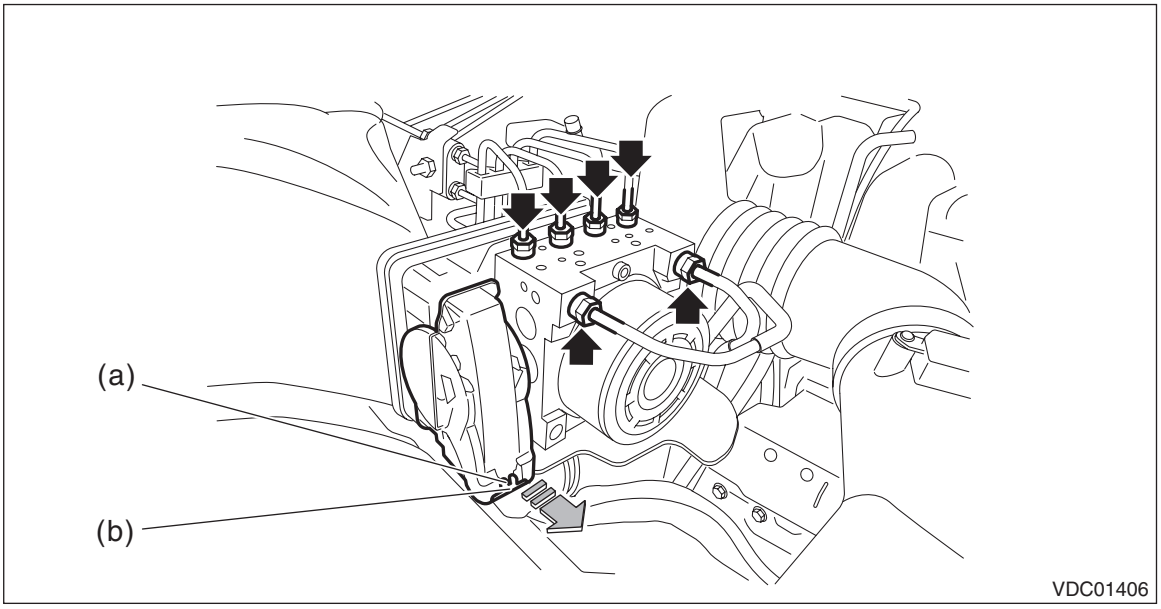
Refer to the “Vehicle Dynamics Control System (VDC) (DIAGNOSTICS)”. <Ref. to VDC(diag)-106, INSPECTION, General Diagnostic Table.>

D: NOTE

For operation procedures of each component of the vehicle dynamics control system, refer to the respective section.

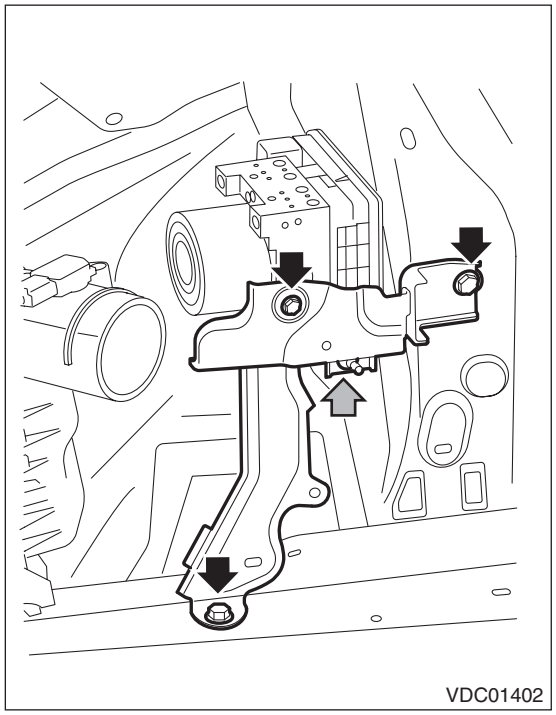
- VDC control module & hydraulic control unit (VDCCM&H/U): <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- Yaw rate & G sensor: <Ref. to VDC-27, Yaw Rate and G Sensor.>
- Steering angle sensor: <Ref. to VDC-28, Steering Angle Sensor.>
- Front ABS wheel speed sensor: <Ref. to VDC-31, Front ABS Wheel Speed Sensor.>
- Rear ABS wheel speed sensor: <Ref. to VDC-34, Rear ABS Wheel Speed Sensor.>
- Front magnetic encoder: <Ref. to VDC-36, Front Magnetic Encoder.>
- Rear magnetic encoder: <Ref. to VDC-37, Rear Magnetic Encoder.>
- VDC OFF switch: <Ref. to VDC-38, VDC OFF Switch.>
- Hill hold switch: <Ref. to VDC-40, Hill Hold Switch.>

4. VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)



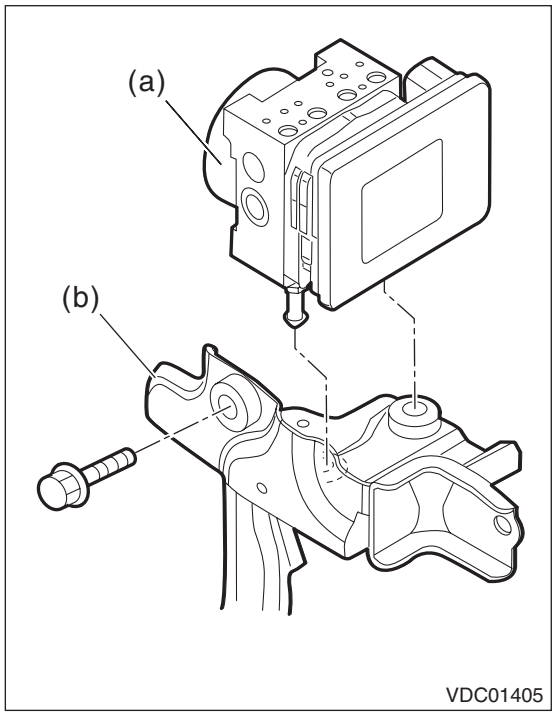
A: REMOVAL

CAUTION:
- **Avoid unnecessary removal of parts in order to prevent fluid leakage.**
- **When the VDCCM&H/U components are removed, be sure to perform the installation according to the installation procedures. <Ref. to VDC-11, INSTALLATION, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>**



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the air intake boot. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the VDC control module & hydraulic control unit (VDCCM&H/U).

CAUTION:
- **Do not pull on the harness when disconnecting the connector.**
- **Wrap the brake pipe with a vinyl bag so as not to spill the brake fluid on the painted surface of the vehicle body.**
- **If brake fluid is spilled on the painted surface of the vehicle body, wash it off immediately with water and wipe clean.**



(1) Remove any dirt from around the VDCCM&H/U.
(2) Pull up the lock lever (b) while pressing the lock button (a) and disconnect the VDCCM&H/U connector.
(3) Separate each brake pipe using a flare nut wrench.

(4) Remove the bolts and nuts, and remove the bracket - hydraulic unit and the VDCCM&H/U.

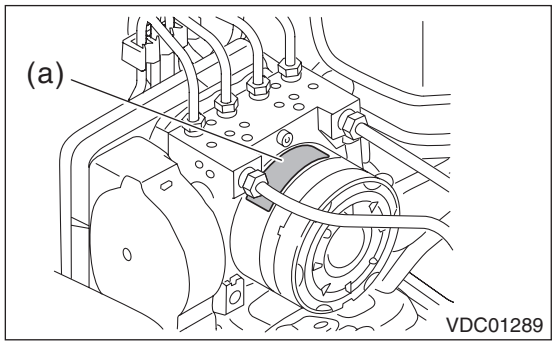
(5) Remove the bolts, and remove the VDCCM&H/U (a) from the bracket - hydraulic unit (b).

B: INSTALLATION

CAUTION:
• When installing the VDCCM&H/U to the bracket - hydraulic unit, make sure that there is no oil adhered to the bolts and the threads of VDCCM&H/U. If the oil is adhered, degrease it carefully before tightening.
• Connect the VDCCM&H/U connector securely.
1) Install the bracket - hydraulic unit and the VDCCM&H/U.
(1) Install the VDCCM&H/U to the bracket - hydraulic unit.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
(2) Attach the bracket - hydraulic unit.

Tightening torque:
33 N·m (3.4 kgf-m, 23.8 ft-lb)
(3) Connect the VDCCM&H/U connector.
(4) Install each brake pipe using a flare nut wrench.



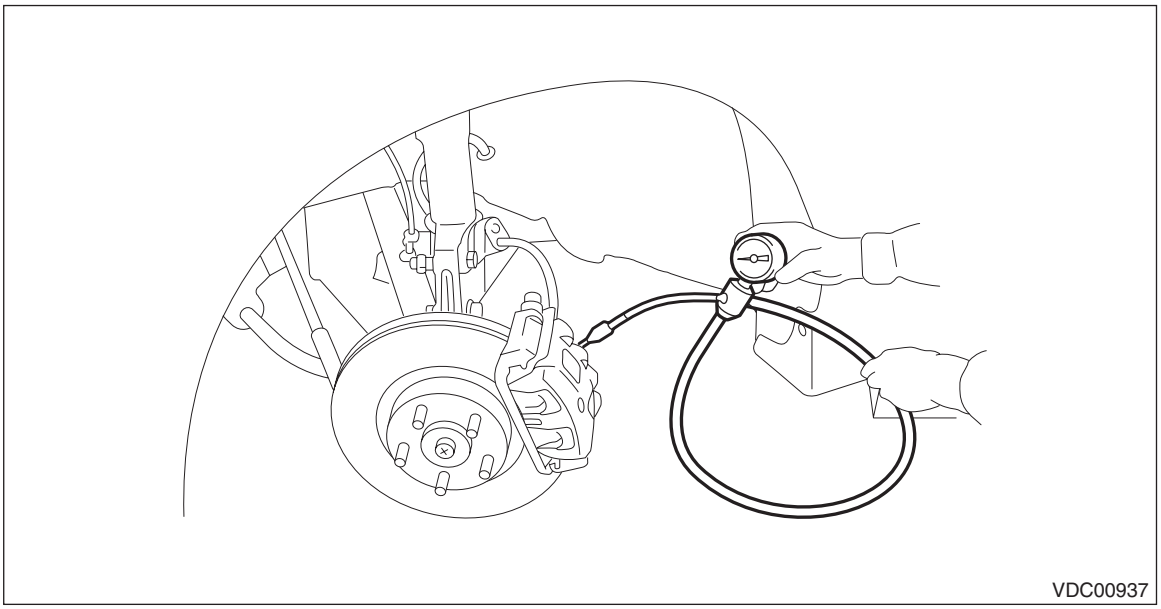
Tightening torque:
15 N·m (1.5 kgf-m, 11.1 ft-lb)
2) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Bleed air from the brake system. <Ref. to BR-56, Air Bleeding.>
4) Perform parameter confirmation, selection, and registration.

NOTE:
• When the VDCCM&H/U is replaced with a new part, be sure to perform the selection · registration operation.
• Be sure to use the Subaru Select Monitor for the selection and registration of parameter.
• When the VDCCM&H/U is replaced with a new part, the brake warning light illuminates or blinks. After performing parameter selection and registration, be sure to operate the electronic parking brake five times and check that the brake warning light goes off.
• When the registration has not been performed, the DTC code “Parameter” is detected together with the ABS/EBD/VDC warning light illumination.
(1) Check that the applied model and grade of the relevant vehicle are included. <Ref. to VDC-19, VDCCM PARAMETER CHECK, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
(2) On «Confirm on parameter» display, enter the applied model of the relevant vehicle and check if it is correct. If the information is not correct, perform parameter selection and registration. <Ref. to VDC(diag)-18, READ FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.>
5) Perform “VDC sensor midpoint setting mode”. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: INSPECTION

1) Check the identification (a) of the VDC control module & hydraulic control unit (VDCCM&H/U).

NOTE:
For the identification, refer to “SPECIFICATION” in “General Description”. <Ref. to VDC-2, SPECIFICATION, General Description.>



2) Check the condition of connection and settlement of connector, and correct or replace if defective.

1. CHECKING THE HYDRAULIC UNIT ABS OPERATION BY PRESSURE GAUGE

1) Lift up the vehicle, and then remove the wheel.
2) Remove the bleeder - screws from the front LH and front RH caliper bodies.
3) Connect two pressure gauges to front LH and front RH caliper bodies.

CAUTION:
- **Use a pressure gauge used exclusively for brake fluid measurement.**
- **Do not use the pressure gauge used for the measurement of transmission oil. Doing so will cause the piston seal to expand and deform.**

NOTE:
Wrap sealing tape around the pressure gauge.

4) Bleed air from the pressure gauges and the front LH and front RH caliper bodies.
5) Perform ABS sequence control. <Ref. to VDC-20, ABS Sequence Control.>

NOTE:
When the hydraulic unit begins to work, first the front LH side performs decompression, hold and compression, and then the front RH side performs decompression, hold and compression.
6) Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets the standard values. Depress the brake pedal and check that the kick-back is normal, and tightness is normal.

Inspection conditions	Front wheel	Rear wheel
Initial value	3,500 kPa (36 kgf/cm^2, 511 psi)	3,500 kPa (36 kgf/cm^2, 511 psi)
When depressurized	500 kPa (5 kgf/cm^2, 73 psi) or less	500 kPa (5 kgf/cm^2, 73 psi) or less
When pressurized	3,500 kPa (36 kgf/cm^2, 511 psi) or more	3,500 kPa (36 kgf/cm^2, 511 psi) or more

7) Remove the pressure gauge from the front LH and front RH caliper bodies.
8) Install the bleeder - screws of the front LH and front RH caliper bodies.
9) Remove the bleeder - screws from the rear LH and rear RH caliper bodies.
10) Connect two pressure gauges to rear LH and rear RH caliper bodies.
11) Bleed air from the pressure gauges and the rear LH and rear RH caliper bodies.
12) Perform ABS sequence control. <Ref. to VDC-20, ABS Sequence Control.>

NOTE:
When the hydraulic unit begins to work, first the rear LH side performs decompression, hold and compression, and then the rear RH side performs decompression, hold and compression.
13) Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets specification. Depress the brake pedal and check that the kick-back is normal, and tightness is normal.
14) Remove the pressure gauge from the rear LH and rear RH caliper bodies.
15) Install the bleeder - screws of the rear LH and rear RH caliper bodies.
16) Bleed air from the brake system. <Ref. to BR-56, Air Bleeding.>

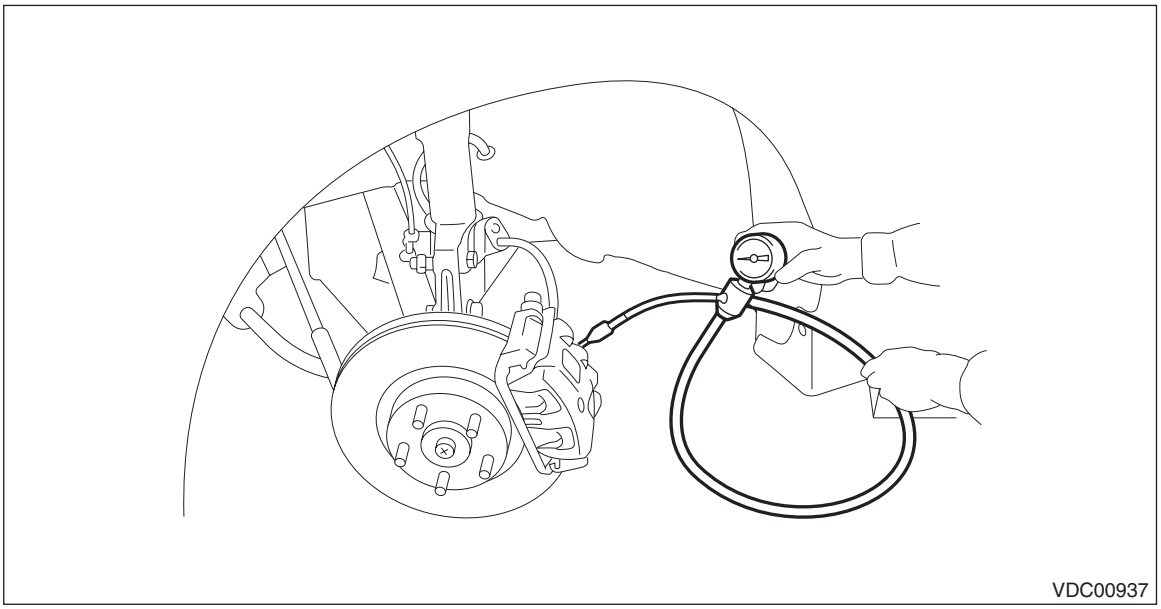
2. CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH THE BRAKE TESTER

1) Set wheels other than the one to measure on free rollers.
2) Prepare for the ABS sequence control operation. <Ref. to VDC-20, ABS Sequence Control.>
3) Set the front wheels or rear wheels on the brake tester and set the gear to neutral.
4) Operate the brake tester.

NOTE:
When any wheel speed reaches 10 km/h (6.2 MPH), the ABS sequence control stops and ABS operation is returned to the normal control mode.

5) Perform ABS sequence control. <Ref. to VDC-20, ABS Sequence Control.>
6) When the hydraulic unit begins to work, check the following work sequence.
   (1) The front LH wheel performs decompression, hold and compression in sequence, and subsequently the front RH wheel repeats the same cycle.
   (2) The rear RH wheel performs decompression, hold and compression in sequence, and subsequently the rear LH wheel repeats the same cycle.
7) Read values indicated on the brake tester and check if the fluctuation of the values between decompression and compression meets specification.

Inspection conditions	Front wheel	Rear wheel
Initial value	1,000 N (102 kgf, 225 lb)	1,000 N (102 kgf, 225 lb)
When depressurized	500 N (51 kgf, 112 lb) or less	500 N (51 kgf, 112 lb) or less
When pressurized	1,000 N (102 kgf, 225 lb) or more	1,000 N (102 kgf, 225 lb) or more



8) After the inspection, depress the brake pedal and check that it is not abnormally hard, and tightness is normal.

3. CHECKING THE HYDRAULIC UNIT VDC OPERATION USING A PRESSURE GAUGE

1) Lift up the vehicle, and then remove the wheel.
2) Remove the bleeder - screws from the front LH and front RH caliper bodies.
3) Connect two pressure gauges to front LH and front RH caliper bodies.

CAUTION:
- **Use a pressure gauge used exclusively for brake fluid measurement.**
- **Do not use a pressure gauge used for the measuring transmission oil pressure, as the piston seal may expand and deform.**

NOTE:
Wrap sealing tape around the pressure gauge.

4) Bleed air from the pressure gauge.
5) Perform VDC sequence control. <Ref. to VDC-23, VDC Sequence Control.>

NOTE:
When the hydraulic unit begins to work, first the front LH side performs compression, hold and decompression, and then the front RH side performs compression, hold and decompression.
6) Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets specification. Depress the brake pedal and check that it is not abnormally hard, and tightness is normal.

Inspection conditions	Front wheel	Rear wheel
When pressurized	3,000 kPa (31 kgf/cm^2, 441 psi) or more	3,000 kPa (31 kgf/cm^2, 441 psi) or more
When depressurized	500 kPa (5 kgf/cm^2, 73 psi) or less	500 kPa (5 kgf/cm^2, 73 psi) or less

7) Remove the pressure gauge from the front LH and front RH caliper bodies.
8) Install the bleeder - screws of the front LH and front RH caliper bodies.
9) Remove the bleeder - screws from the rear LH and rear RH caliper bodies.
10) Connect two pressure gauges to rear LH and rear RH caliper bodies.

11) Bleed air from the pressure gauges and the rear LH and rear RH caliper bodies.
12) Perform VDC sequence control. <Ref. to VDC-23, VDC Sequence Control.>

NOTE:
When the hydraulic unit begins to work, first the rear RH side performs compression, hold and decompression, and then the rear LH side performs compression, hold and decompression.
13) Read the values indicated on the pressure gauges and check if it is within specification. Depress the brake pedal and check that it is not abnormally hard, and tightness is normal.
14) Remove the pressure gauge from the rear LH and rear RH caliper bodies.
15) Install the bleeder - screws of the rear LH and rear RH caliper bodies.
16) Bleed air from the brake system. <Ref. to BR-56, Air Bleeding.>

4. CHECK HYDRAULIC UNIT VDC OPERATION WITH BRAKE TESTER

1) Set wheels other than the one to measure on free rollers.
2) Prepare to operate the VDC sequence control. <Ref. to VDC-23, VDC Sequence Control.>
3) Set the front wheels or rear wheels on the brake tester and set the gear to neutral.
4) Operate the brake tester.

NOTE:
When any wheel speed reaches 10 km/h (6.2 MPH), the VDC sequence control stops and VDC operation is returned to the normal control mode.
5) Perform VDC sequence control. <Ref. to VDC-23, VDC Sequence Control.>
6) When the hydraulic unit begins to work, check the following work sequence.
   (1) The front LH wheel performs compression, hold and decompression in sequence, and subsequently the front RH wheel repeats the same cycle.
   (2) The rear RH wheel performs compression, hold and decompression in sequence, and subsequently the rear LH wheel repeats the same cycle.
7) Read values indicated on the brake tester and check if the fluctuation of the values between decompression and compression meets specification.

Inspection conditions	Front wheel	Rear wheel
When pressurized	2,000 N (204 kgf, 450 lbf) or more	2,000 N (204 kgf, 450 lbf) or more
When depressurized	500 N (51 kgf, 112 lbf) or less	500 N (51 kgf, 112 lbf) or less

8) After the inspection, depress the brake pedal and check that it is not abnormally hard, and tightness is normal.

D: ADJUSTMENT

1. VDC SENSOR MIDPOINT SETTING MODE

After installing, replacing or adjusting the following parts, perform the VDC sensor midpoint setting mode.
- Steering angle sensor
- Steering wheel
- Suspension parts
- Wheel alignment
- VDCCM&H/U
- VDCCM&H/U bracket

1) Park the vehicle on a level surface, and set the steering wheel to the neutral position.
2) Connect the Subaru Select Monitor to data link connector.
   (1) Run the “PC application for Subaru Select Monitor”.
   (2) On «Main Menu» display, select «Each System Check».
   (3) On «System Selection Menu» display, select «Brake Control System».
   (4) When «ABS/VDC System» is displayed, select the [OK] button.
   (5) From «Current Data Display & Save», select «Steer Angle Sensor Op», «Longitudinal G Sensor» and «Lateral G sensor Output».
3) Check that the steering angle sensor output value is between –10 and 10 deg.
4) Check that output values for the longitudinal G sensor and lateral G sensor are -2 — 2 m/s^2.
5) From «Work Support», select «VSC(VDC) Centering Mode», and perform the setting according to the procedure displayed on the Subaru Select Monitor screen.
6) Drive the vehicle for 10 minutes, and check that there is no system malfunction or the warning light illumination while driving.
7) Make sure that the DTC is not stored.

E: MAINTENANCE MODE

1. BRAKE MAINTENANCE MODE

CAUTION:
- **Subaru Select Monitor is required for the brake maintenance mode.**
- **This function is used when inspecting and repairing the rear brake related parts.**
- **When the brake maintenance mode is started, other ECMs for EyeSight, etc. may record DTCs. Be sure to clear DTCs for other ECMs after the brake maintenance mode is completed.**
- **When the brake maintenance mode is completed, the electronic parking brake automatically operates. Check if any other works are not performed in advance. Sufficient safety consideration is required.**

NOTE:
- When the brake maintenance mode is performed, the brake warning light blinks, the brake operation light illuminates, and DTC: C1984 is stored. If the system returns from the brake maintenance mode to the normal mode, the brake warning light goes off, and DTC is cleared.
- During the brake maintenance mode, the electronic parking brake cannot be applied/released.

1) Starting the maintenance mode
   (1) Park the vehicle in a horizontal and safe place using wheel chocks.
   (2) After the ignition switch is turned to ON, release the electronic parking brake.
   (3) Connect the Subaru Select Monitor.
   (4) On «Main Menu» display, select «Each System Check».
   (5) On «System Selection Menu» display, select «Brake Control System».
   (6) On «Brake Control System» display, select «ABS/VDC System».
   (7) When «VDC/parking brake» is displayed, select the [OK] button.
   (8) On «Brake Control Diagnosis» display, select «Work Support».
   (9) On «Work Support» display, select «Brake Maintenance Mode».
   (10) Perform the maintenance mode according to the screen.

2) Ending the maintenance mode
   (1) Check that all rear brake parts are installed correctly.
   (2) Connect the battery ground terminal and turn the ignition switch to ON.
   (3) Connect the Subaru Select Monitor.
   (4) On «Main Menu» display, select «Each System Check».
   (5) On «System Selection Menu» display, select «Brake Control System».
   (6) On «Brake Control System» display, select «ABS/VDC System».
   (7) When «VDC/parking brake» is displayed, select the [OK] button.
   (8) On «Brake Control Diagnosis» display, select «Work Support».
   (9) On «Work Support» display, select «Brake Maintenance Mode».
   (10) End the maintenance mode according to the screen.

2. VDCCM PARAMETER READING

1) Connect the Subaru Select Monitor.
2) On «Main Menu» display, select «Each System Check».
3) On «System Selection Menu» display, select «Brake Control System».
4) On «Brake Control System» display, select «ABS/VDC System».
5) When «VDC/parking brake» is displayed, select the [OK] button.
6) On «Brake Control Diagnosis» display, select «Work Support».
7) On «Work Support» display, select «Maintenance at the time of ECM replacement».
8) Select «Reading of parameter: ECM to SSM».
9) Save and close the file.

3. VDCCM PARAMETER WRITING

1) Connect the Subaru Select Monitor.
2) On «Main Menu» display, select «Each System Check».
3) On «System Selection Menu» display, select «Brake Control System».
4) On «Brake Control System» display, select «ABS/VDC System».
5) When «VDC/parking brake» is displayed, select the [OK] button.
6) On «Brake Control Diagnosis» display, select «Work Support».
7) On «Work Support» display, select «Maintenance at the time of ECM replacement».
8) Select «Writing of parameter: SSM to ECM».
9) Open the file saved in the «Reading of parameter: ECM to SSM» procedure.
10) When the confirmation screen indicating the vehicle information appears, check that the correct applied model and grade are displayed and click the [OK] button.

4. VDCCM PARAMETER SELECTION

CAUTION:
- **Subaru Select Monitor is required for parameter selection.**
- **This function can be used for the replacement part of VDCCM&H/U.**

NOTE:
- When the VDCCM&H/U is replaced with a replacement part, be sure to perform the parameter selection/registration to the VDCCM&H/U using this function.
- To check the applied model, refer to the “Model number plate” attached to the vehicle. <Ref. to ID-2, IDENTIFICATION, Identification.>
- If you entered a wrong applied model, you can re-write it.
- When the registration has not been performed, the DTC code “Parameter” is detected together with the ABS/EBD/VDC warning light illumination.

1) Connect the Subaru Select Monitor.
2) On «Main Menu» display, select «Each System Check».
3) On «System Selection Menu» display, select «Brake Control System».
4) On «Brake Control System» display, select «ABS/VDC System».
5) When «VDC/parking brake» is displayed, select the [OK] button.
6) On «Brake Control Diagnosis» display, select «Work Support».
7) On «Work Support» display, select «Maintenance at the time of ECM replacement».

8) Select «Selection of Parameter».
9) Check the applied model and option code indicated on the “Model number plate”. <Ref. to ID-2, IDENTIFICATION, Identification.>
10) Enter the applied model of 7-digit alphanumeric characters and press the [Enter] key.
11) When the option code input screen appears after entering the applied model, enter the option code consisting of 4-digit alphanumeric characters, and press the [Enter] key. When the option code is 3 digits, add “0” (zero) in front and enter the code as 4 digits.
12) When the confirmation screen indicating the vehicle information appears, check that the correct applied model and grade are displayed and click the [OK] button.

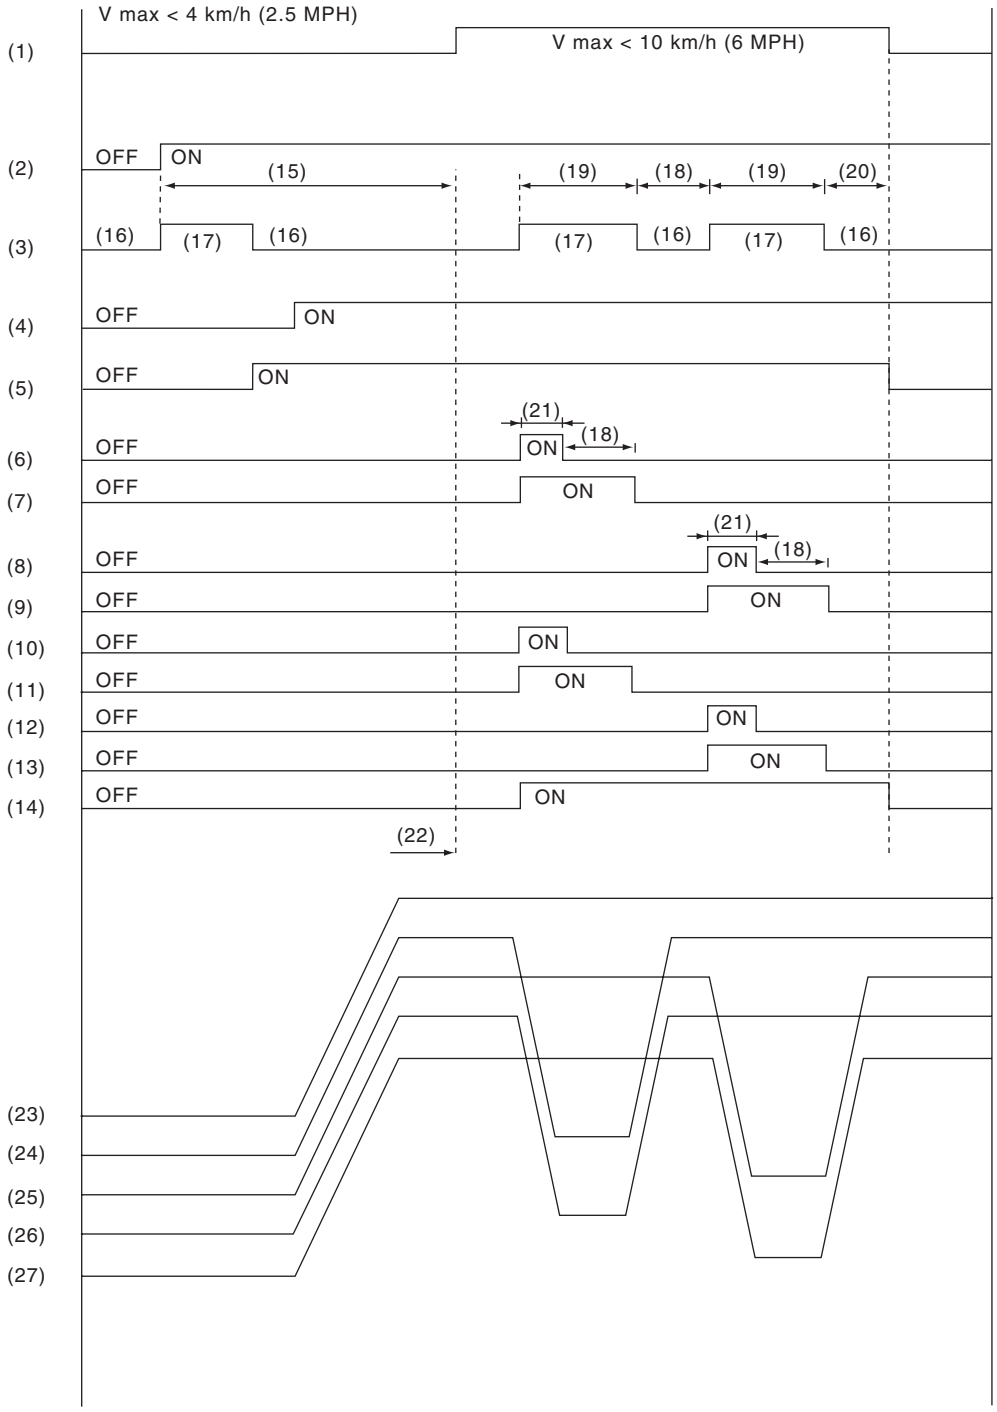
NOTE:
When the displayed applied model and grade are different from those of the vehicle, perform registration operations again after clicking the [OK] button.
13) Execute the Clear Memory Mode after parameter selection and registration operations because the DTC for “Parameter selection error” is memorized. <Ref. to VDC(diag)-24, Clear Memory Mode.>

5. VDCCM PARAMETER CHECK

NOTE:
The parameter data registered in the VDCCM is shown on the display.
1) Connect the Subaru Select Monitor.
2) On «Main Menu» display, select «Each System Check».
3) On «System Selection Menu» display, select «Brake Control System».
4) On «Brake Control System» display, select «ABS/VDC System».
5) When «VDC/parking brake» is displayed, select the [OK] button.
6) On «Brake Control Diagnosis» display, select «Work Support».
7) On «Work Support» display, select «Maintenance at the time of ECM replacement».
8) Select «Confirm on parameter».
9) On the «Confirm on parameter» display screen, check that the applied model and grade of the target vehicle are included, and click the [OK] button.
10) If the applied model and grade of the target vehicle are not included on the «Confirm on parameter» display screen, perform “parameter selection and registration”. <Ref. to VDC-18, VDCCM PARAMETER SELECTION, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

5. ABS Sequence Control

A: OPERATION



1) While the ABS sequence control is being performed, the operation of the hydraulic unit can be checked using the brake tester or pressure gauge after the hydraulic unit solenoid valve operation.
2) ABS sequence control can be started by the Subaru Select Monitor.

1. ABS SEQUENCE CONTROL WITH SUBARU SELECT MONITOR

NOTE:
In the event of any trouble, the ABS sequence control will not operate.
1) Connect the Subaru Select Monitor to data link connector.
   (1) Run the “PC application for Subaru Select Monitor”.
   (2) On «Main Menu» display, select «Each System Check».
   (3) On «System Selection Menu» display, select «Brake Control System».
   (4) When «ABS/VDC System» is displayed, select the [OK] button.
   (5) From «Work Support», select «ABS Sequence Control Mode».
2) Follow the procedures displayed in the Subaru Select Monitor to execute the following.
   (1) When using a brake tester, depress the brake pedal with a force of 100 N (10.2 kgf, 22.5 lbf).
   (2) When using a pressure gauge, press the brake pedal so that the pressure gauge indicates 3,500 kPa (36 kgf/cm^2, 511 psi).
3) The brake system being operated is displayed on the Subaru Select Monitor.

2. CONDITIONS FOR ABS SEQUENCE CONTROL

NOTE:
The control operation starts at point A.

VDC01433

(1) All wheel speed
(2) Ignition key
(3) ABS warning light
(4) Switch - stop light
(5) Valve relay
(6) Front LH decompression valve
(7) Front LH compression valve
(8) Front RH decompression valve
(9) Front RH compression valve
(10) Rear RH decompression valve
(11) Rear RH compression valve
(12) Rear LH decompression valve
(13) Rear LH compression valve
(14) Pump motor
(15) A few seconds
(16) Light OFF
(17) Light ON
(18) 1.0 seconds
(19) 1.4 seconds
(20) 0.6 seconds
(21) 0.4 seconds
(22) Point A
(23) Master cylinder pressure
(24) Front LH wheel cylinder pressure
(25) Front RH wheel cylinder pressure
(26) Rear RH wheel cylinder pressure
(27) Rear LH wheel cylinder pressure

B: SPECIFICATION

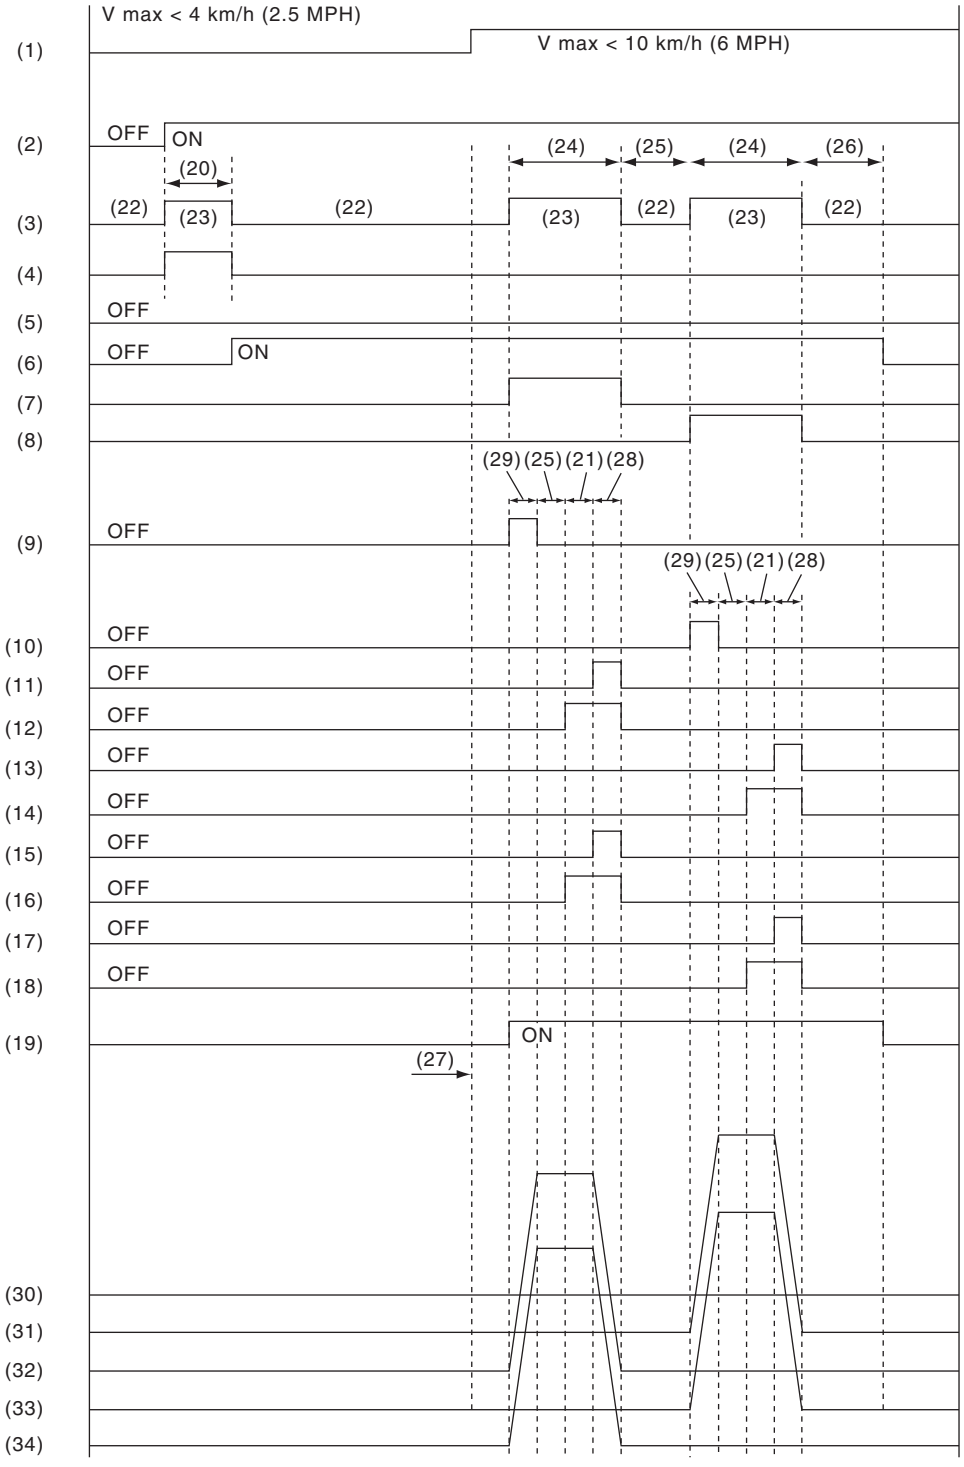
1. CONDITIONS FOR COMPLETION OF ABS SEQUENCE CONTROL

When the following conditions develop, the ABS sequence control stops and ABS operation is returned to the normal control mode.

- When the speed of at least one wheel reaches 10 km/h (6.2 MPH).
- When the brake pedal is released during ABS sequence control and the switch - stop light becomes OFF.
- After completion of ABS sequence control.
- When a malfunction is detected.

6. VDC Sequence Control

A: OPERATION



1) While the VDC sequence control is performed, the operation of the hydraulic unit can be checked using the brake tester or pressure gauge after the hydraulic unit solenoid valve is operated.
2) VDC sequence control can be started by Subaru Select Monitor.

1. VDC SEQUENCE CONTROL WITH SUBARU SELECT MONITOR

NOTE:
In the event of any trouble, sequence control will not operate.
1) Connect the Subaru Select Monitor to data link connector.
   (1) Run the “PC application for Subaru Select Monitor”.
   (2) On «Main Menu» display, select «Each System Check».
   (3) On «System Selection Menu» display, select «Brake Control System».
   (4) When «ABS/VDC System» is displayed, select the [OK] button.
   (5) Select the «Function Check Sequence» from «Work Support», and select «VDC Function Check Mode» when it appears.
2) Operate according to the procedures displayed in the Subaru Select Monitor.
3) The brake system being operated is displayed on the Subaru Select Monitor.

2. CONDITIONS FOR VDC SEQUENCE CONTROL

NOTE:
The control operation starts at point A.

VDC01434

(1) All wheel speed
(2) Ignition key
(3) ABS warning light
(4) VDC warning light
(5) Switch - stop light
(6) Valve relay
(7) VDC switching valve 1 front LH
(8) VDC switching valve 1 front RH
(9) VDC switching valve 2 front LH
(10) VDC switching valve 2 front RH
(11) Front LH decompression valve
(12) Front LH compression valve
(13) Front RH decompression valve
(14) Front RH compression valve
(15) Rear RH decompression valve
(16) Rear RH compression valve
(17) Rear LH decompression valve
(18) Rear LH compression valve
(19) Pump motor
(20) A few seconds
(21) 1.2 seconds
(22) Light OFF
(23) Light ON
(24) 3.4 seconds
(25) 1 second
(26) 1.6 seconds
(27) Point A
(28) 0.4 seconds
(29) 0.8 seconds
(30) Master cylinder pressure
(31) Front RH wheel cylinder pressure
(32) Front LH wheel cylinder pressure
(33) Rear LH wheel cylinder pressure
(34) Rear RH wheel cylinder pressure

B: SPECIFICATION

1. CONDITIONS FOR COMPLETION OF VDC SEQUENCE CONTROL

When the following conditions develop, the VDC sequence control stops and VDC operation is returned to the normal control mode.

- When the speed of at least one wheel reaches 10 km/h (6.2 MPH).
- After completion of VDC sequence control.
- When a malfunction is detected.

7. Brake Lamp Relay

A: REMOVAL

Remove the brake light relay from the main fuse box.

NOTE:
Refer to “LOCATION” of “Relay and Fuse”. <Ref. to VDC-7, LOCATION, Relay and Fuse.>

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

Refer to “INSPECTION” of “Relay and Fuse”. <Ref. to VDC-7, INSPECTION, Relay and Fuse.>

D: OPERATION

1. BRAKE LAMP LIGHTING OPERATION MODE BY SUBARU SELECT MONITOR

CAUTION:
For models with EyeSight, performing brake light relay compulsory operation may cause the EyeSight warning light to illuminate. If the brake light relay compulsory operation is performed, refer to “Basic Diagnostic Procedure” of “EyeSight (DIAGNOSTICS)” and check DTCs and then clear memory. <Ref. to ES(diag)-2, Basic Diagnostic Procedure.>

NOTE:
In the event of any trouble, brake lamp lighting operation mode will not function.
1) Connect the Subaru Select Monitor to data link connector.
   (1) Run the “PC application for Subaru Select Monitor”.
   (2) On «Main Menu» display, select «Each System Check».
   (3) On «System Selection Menu» display, select «Brake Control System».
   (4) When «ABS/VDC System» is displayed, select the [OK] button.
   (5) From «Work Support», select «Function Check Sequence».
   (6) From «Function Check Sequence», select «Brake Lamp Lighting Operation».
2) Operate according to the procedures displayed in the Subaru Select Monitor.

E: SPECIFICATION

1. CONDITIONS TO COMPLETE BRAKE LAMP LIGHTING OPERATION MODE

When the following conditions develop, the brake lamp lighting operation mode stops and the normal control mode is restored.
- When the speed of at least one wheel reaches 10 km/h (6.2 MPH).
- When brake lamp lighting operation mode ends.
- When a malfunction is detected.

8. Yaw Rate and G Sensor

A: NOTE

Yaw rate & longitudinal G and lateral G sensor are integrated with the VDC control module & hydraulic control unit (VDCCM&H/U).

B: INSPECTION

1. YAW RATE & LONGITUDINAL G AND LATERAL G SENSOR SIGNAL

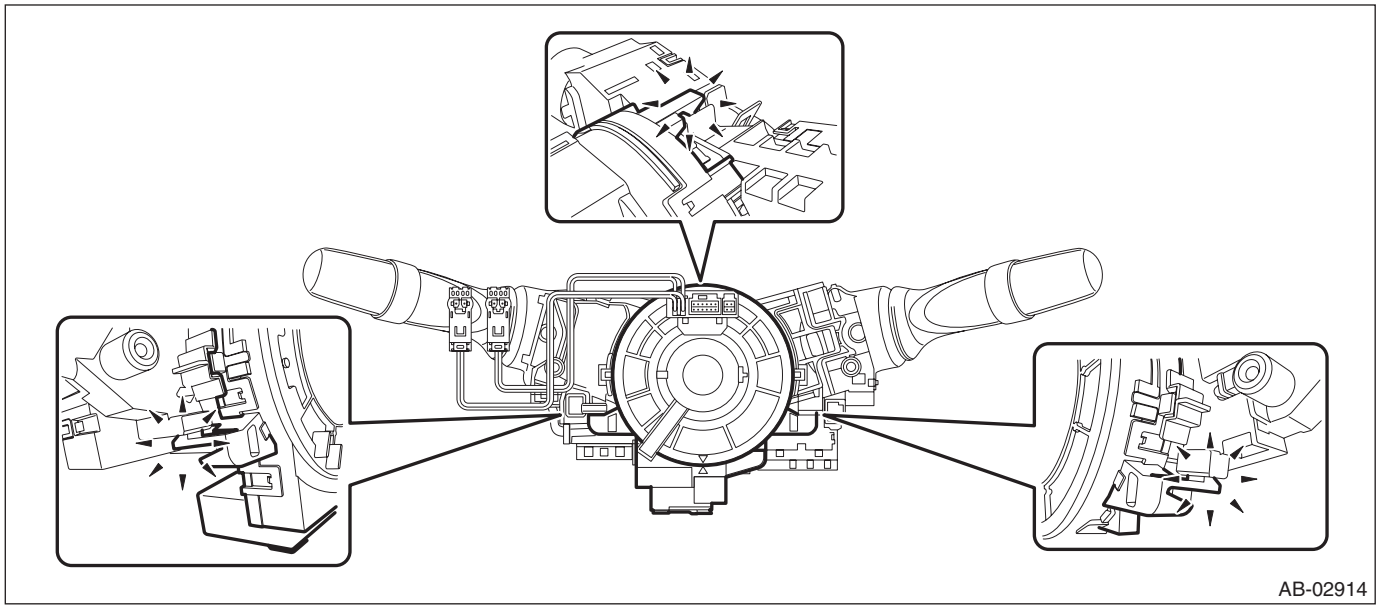
	Step	Check	Yes	No
1	**CHECK YAW RATE & G SENSOR.** 1) Check the installation condition of the VDC control module & hydraulic control module (VDCCM&H/U). 2) Select “Current Data Display & Save” on the Subaru Select Monitor. 3) Read the output of yaw rate & G sensor.	When the vehicle is placed horizontally, are the displayed values –1.5 — 1.5 m/s^2 for longitudinal G and lateral G sensor, and –4 — 4 deg/s for yaw rate sensor?	Go to step **2**.	Replace the VDC control module & hydraulic control unit (VDCCM&H/U).
2	**PERFORM DRIVING TEST.** Drive for approximately 10 minutes, and check that there is no system malfunction or the warning light illumination while driving.	Is there any abnormal movement or the warning light illumination while driving?	Perform the diagnosis according to DTCs for the VDC system. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	G sensor is normal.

9. Steering Angle Sensor

A: REMOVAL

CAUTION:
• If the steering wheel and steering angle sensor are removed, perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• Before performing service on the airbag module, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM" section. <Ref. to AB-10, CAUTION, General Description.>
• Always use the steering wheel puller for removal to avoid deforming the steering wheel.
• If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.

1) Position the front wheels straight ahead.
2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the driver's airbag module. <Ref. to AB-30, REMOVAL, Driver's Airbag Module.>
4) Remove the steering wheel. <Ref. to PS-9, REMOVAL, Steering Wheel.>
5) Remove the cover assembly - column.
   (1) Remove the clip, and remove the cover - column from the cover assembly - column UPR.
   (2) Release the screw and claw, and remove the cover assembly - column UPR and the cover assembly - column LWR.



6) Remove the steering roll connector.

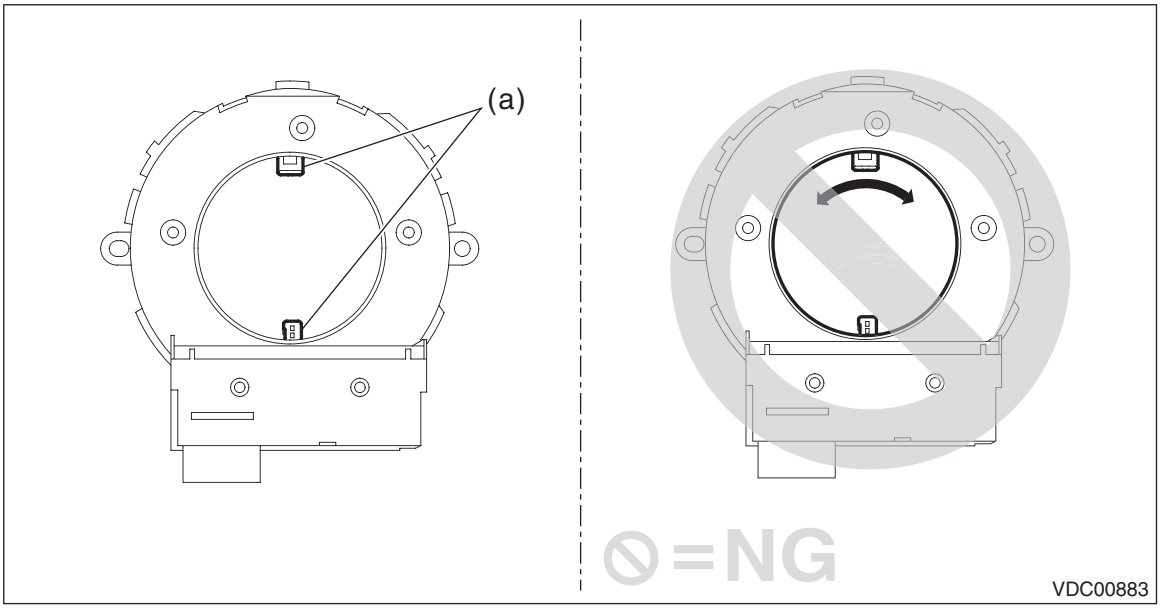
CAUTION:
Make sure that the steering roll connector is not turned from the original position.

   (1) Disconnect the connector under the steering roll connector.

(2) Release the claws and remove the steering roll connector.

7) Remove the steering angle sensor.

(1) Release the claws and remove the steering angle sensor (b) from the steering roll connector (a).



B: INSTALLATION

CAUTION:
• When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• Before performing service on the airbag module, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM" section. <Ref. to AB-10, CAUTION, General Description.>

1) Install the steering angle sensor.
   (1) Apply grease to the protrusion (a) of the new steering angle sensor.

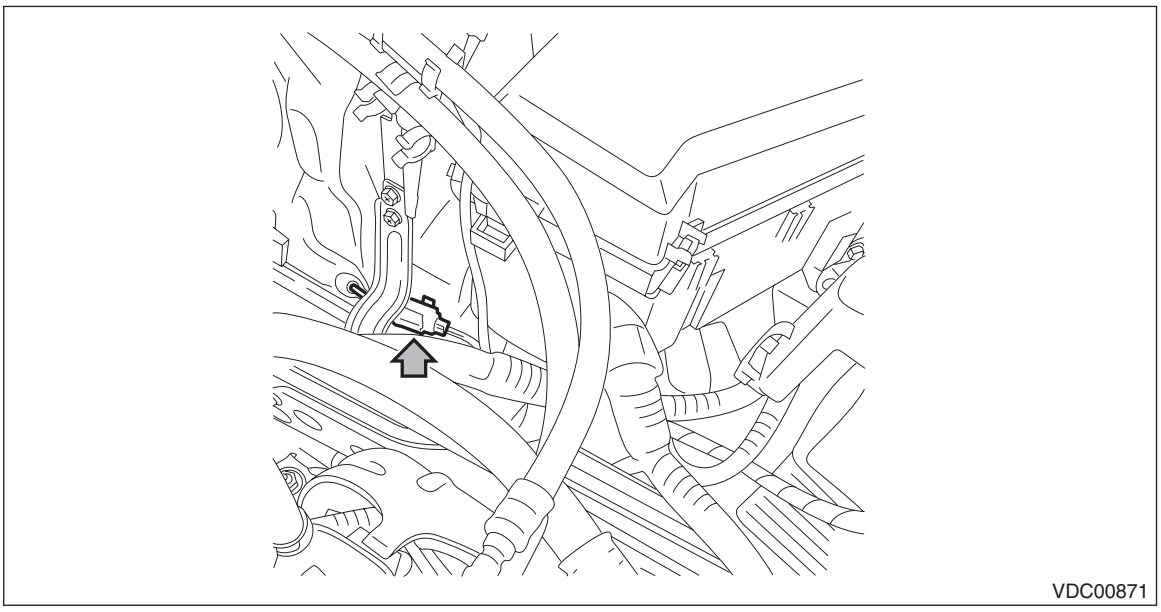
CAUTION:
Do not rotate the steering angle sensor protrusion.

   (2) Align the center of steering roll connector. <Ref. to AB-58, INSTALLATION, Roll Connector.>
   (3) Align the position of the protrusion and install the steering angle sensor to the steering roll connector.
2) Install the cover assembly - column.
3) Install the steering wheel.

Tightening torque:
Steering wheel: 39 N·m (4.0 kgf-m, 28.8 ft-lb)

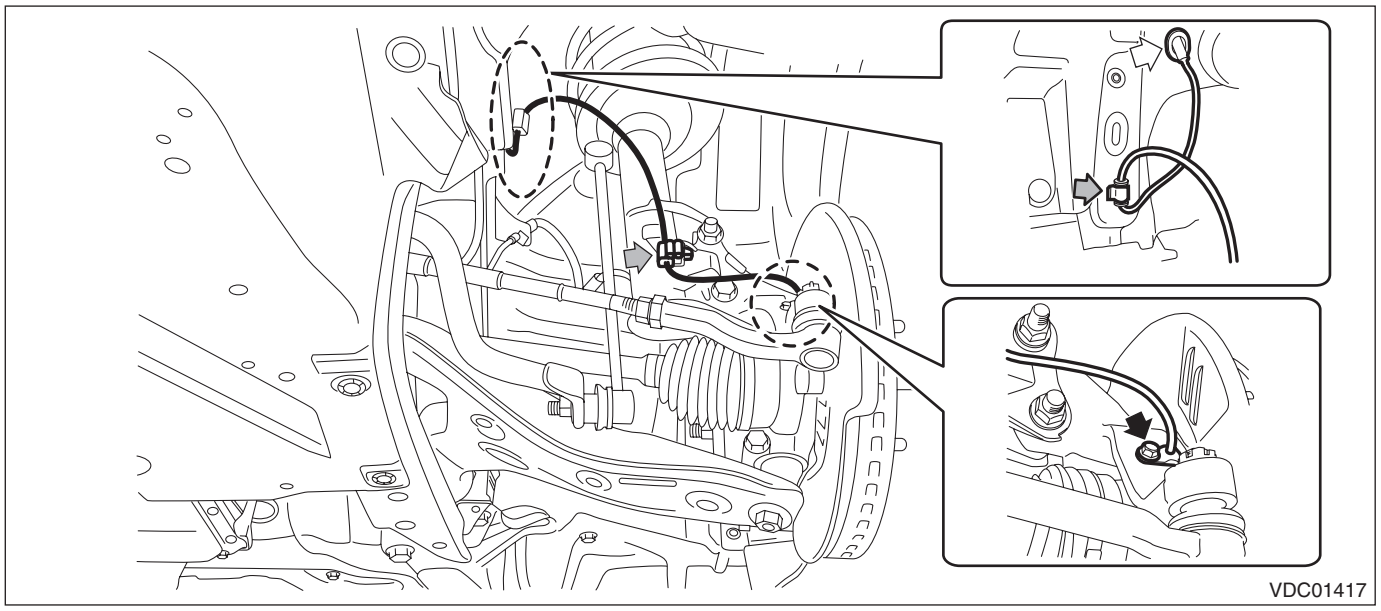
Clearance:
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)

4) Install the driver's airbag module. <Ref. to AB-31, INSTALLATION, Driver's Airbag Module.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
6) Perform the neutral position setting of the steering angle sensor. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>



10.Front ABS Wheel Speed Sensor

A: REMOVAL



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle, and then remove the front wheels.
3) Remove the front ABS wheel speed sensor.

CAUTION:
- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**
- **Leave the sensor harness clamp on the vehicle side.**

(1) Disconnect the connector of the front ABS wheel speed sensor in the engine compartment.

(2) Remove each harness clip and grommet.
(3) Remove the front ABS wheel speed sensor from the housing assembly - front axle.

B: INSTALLATION

CAUTION:
- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**

1) Install the front ABS wheel speed sensor.

Tightening torque:
Front ABS wheel speed sensor: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the front wheels.

Tightening torque:
Front wheel: 120 N·m (12.2 kgf-m, 88.5 ft-lb)

3) Lower the vehicle.

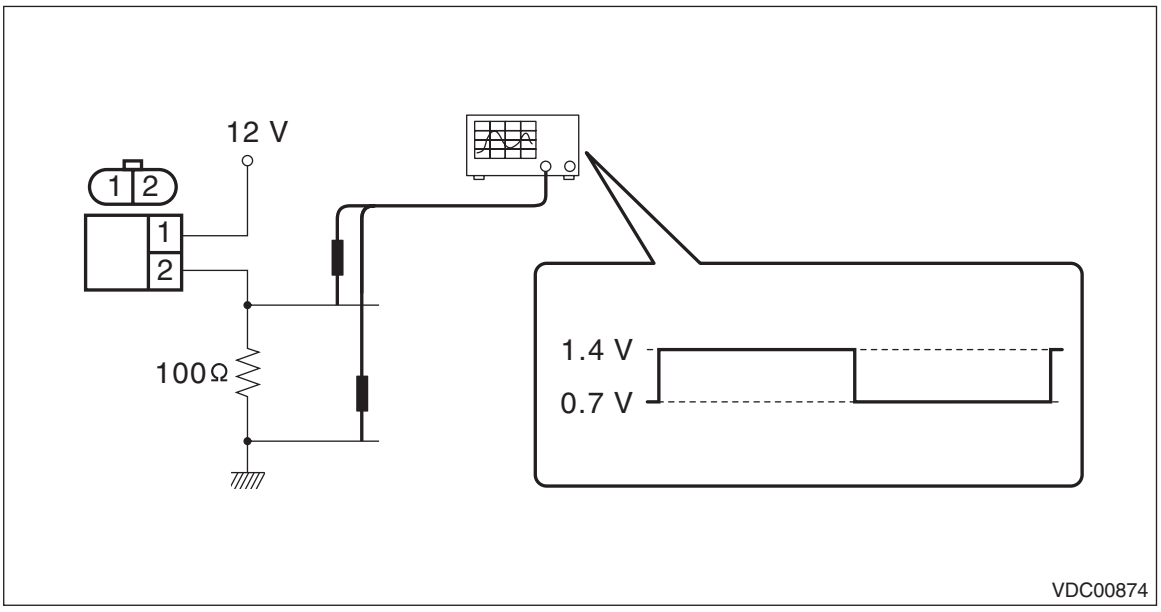
NOTE:
Check if the harness is not pulled and does not come in contact with the suspension or body while operating the steering.

4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1. CHECK WITH SUBARU SELECT MONITOR

1) Connect the Subaru Select Monitor to data link connector.
   (1) Run the “PC application for Subaru Select Monitor”.
   (2) On «Main Menu» display, select «Each System Check».
   (3) On «System Selection Menu» display, select «Brake Control System».
   (4) When «ABS/VDC System» is displayed, select the [OK] button.
   (5) From «Current Data Display & Save», select «FR Wheel Speed» and «FL Wheel Speed».



2) Check if the speed indicated on the display changes in the same manner as the speedometer reading during acceleration/deceleration when the steering wheel is in the straight-ahead position.

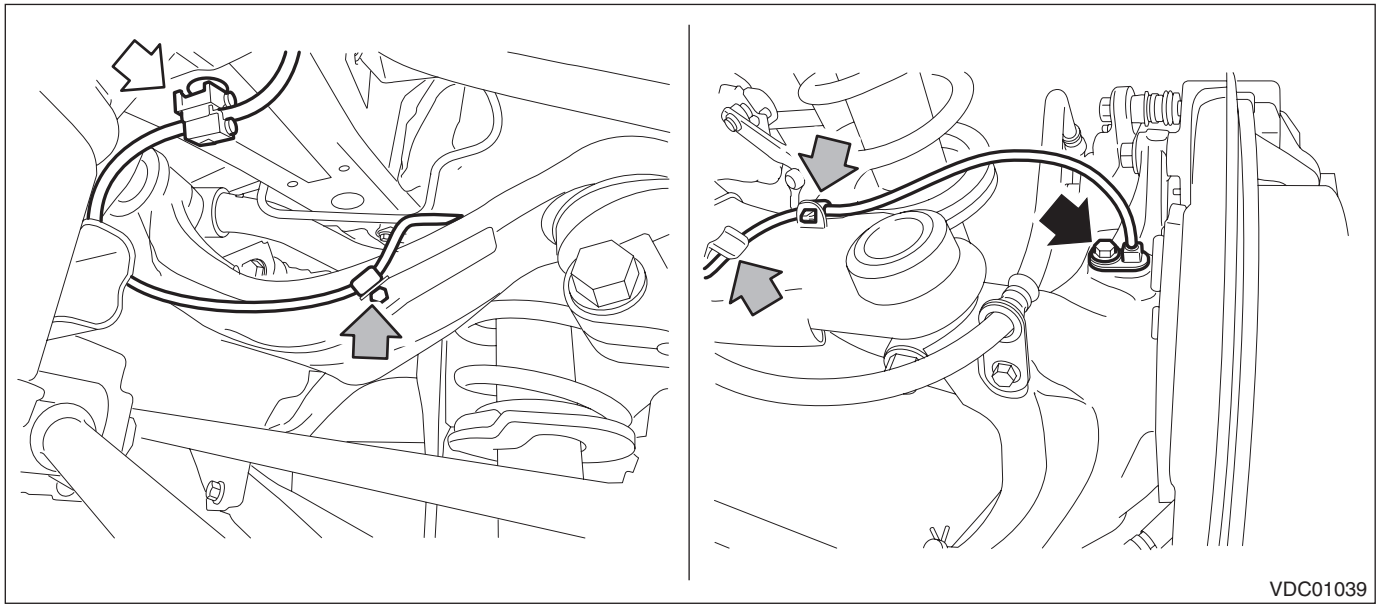
3) If the speed indicated on the display does not change in the inspection, check the ABS wheel speed sensor. <Ref. to VDC-33, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Front ABS Wheel Speed Sensor.>

2. CHECK ABS WHEEL SPEED SENSOR UNIT

1) Visually check the tip of the ABS wheel speed sensor for foreign particles or damage. If necessary, clean the tip or replace the ABS wheel speed sensor.
2) Disconnect the ABS wheel speed sensor connector.
3) Check the ABS wheel speed sensor cable for discontinuity. If defective, replace the ABS wheel speed sensor.
4) Connect a 12 V power supply to No. 1 terminal of ABS wheel speed sensor connector, then attach resistance to the No. 2 terminal. Rotate the wheel at about 2.75 km/h (2 MPH), and measure the voltage using an oscilloscope.

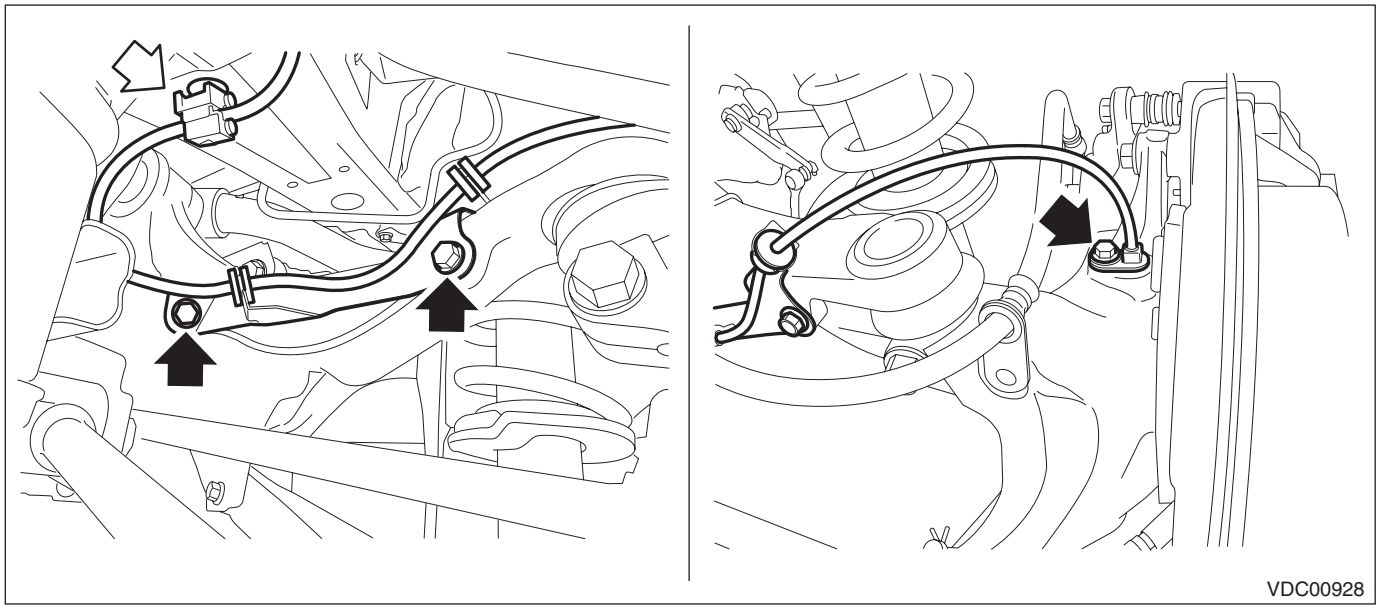
Standard value of output voltage:
0.7 — 1.4 V

5) Replace the ABS wheel speed sensor if the inspection result is not within the standard value.



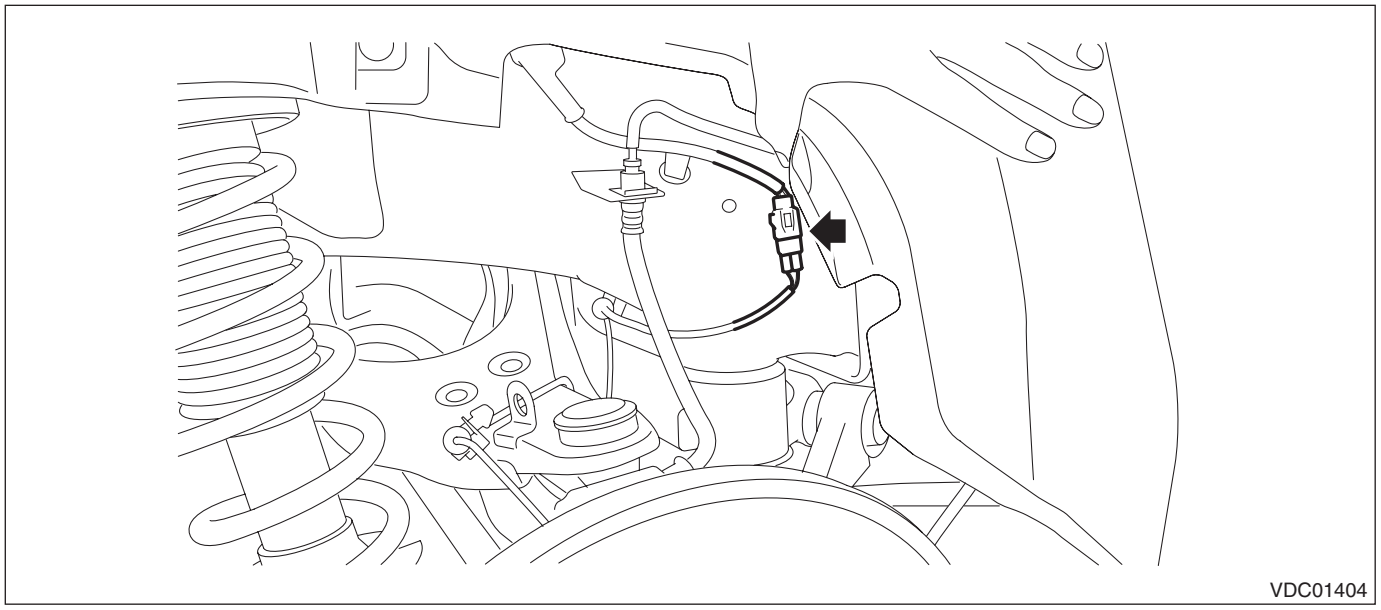
11.Rear ABS Wheel Speed Sensor

A: REMOVAL



1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the rear ABS wheel speed sensor.

CAUTION:
- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**
- **Leave the sensor harness clamp (white arrow) on the vehicle side.**



(1) Remove the harness clamp and bolts, and remove the rear ABS wheel speed sensor from the rear axle housing.
- Sedan model

VDC01039

- OUTBACK model

VDC00928

(2) Remove the clips and turn over the rear wheel housing.
(3) Disconnect the connector of the rear ABS wheel speed sensor.

B: INSTALLATION

CAUTION:
- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**

1) Install the rear ABS wheel speed sensor.

NOTE:
Check the identification (mark) on the harness to make sure there is no warpage. <Ref. to VDC-2, SPECIFICATION, General Description.>

Tightening torque:
Rear ABS wheel speed sensor: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
Rear ABS wheel speed sensor bracket (OUTBACK model only): 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Use the clip to install the rear wheel housing.
3) Install the rear wheels.

Tightening torque:
Rear wheel: 120 N·m (12.2 kgf-m, 88.5 ft-lb)

4) Lower the vehicle.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1. ABS WHEEL SPEED SENSOR

For inspection of rear ABS wheel speed sensor, refer to inspection of front ABS wheel speed sensor. <Ref. to VDC-33, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Front ABS Wheel Speed Sensor.>

12.Front Magnetic Encoder

A: REMOVAL

Refer to “Front Hub Unit Bearing” for removal, because the front magnetic encoder is integrated with the hub unit COMPL - front axle. <Ref. to DS-23, REMOVAL, Front Hub Unit Bearing.>

B: INSTALLATION

Refer to “Front Hub Unit Bearing” for installation, because the front magnetic encoder is integrated with the hub unit COMPL - front axle. <Ref. to DS-25, INSTALLATION, Front Hub Unit Bearing.>

C: INSPECTION

Visually check the magnetic encoder for any damage. If necessary, replace with a new hub unit COMPL - front axle.

NOTE:
Because the magnetic encoder is integrated with hub unit COMPL, replace the hub unit COMPL with a new part if there is any defect found on the magnetic encoder.

13.Rear Magnetic Encoder

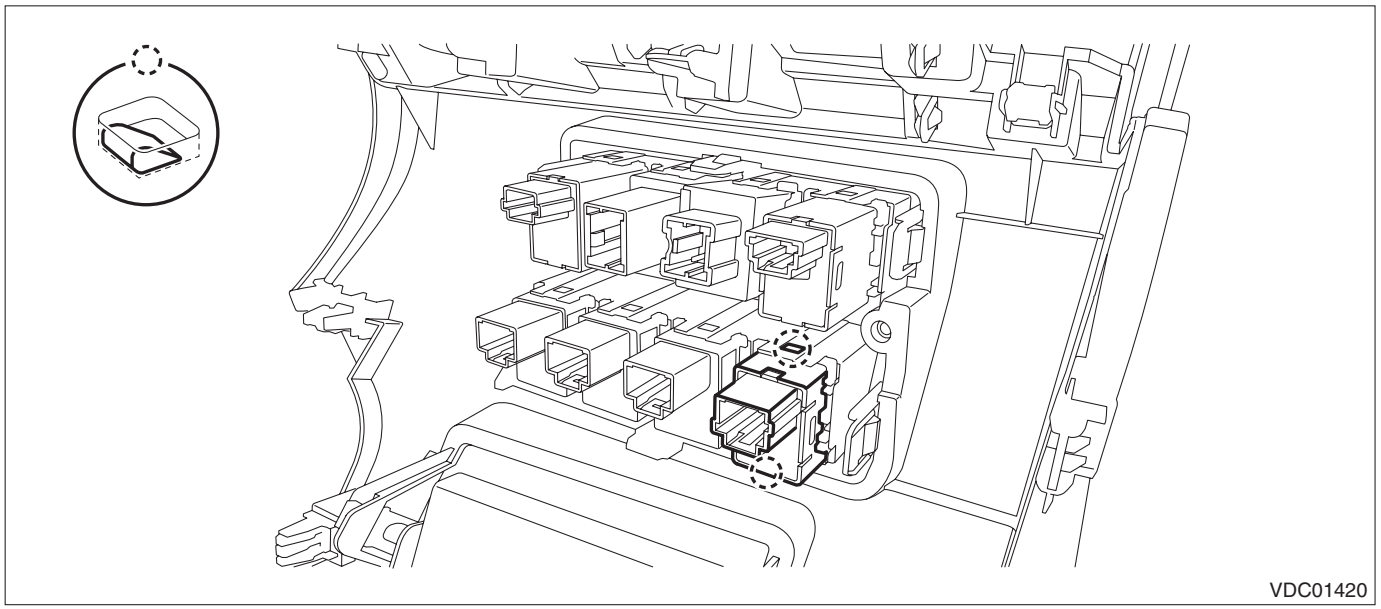
A: REMOVAL

Refer to “Rear Hub Unit Bearing” for removal, because the rear magnetic encoder is integrated with the hub unit COMPL - rear axle. <Ref. to DS-36, REMOVAL, Rear Hub Unit Bearing.>

B: INSTALLATION

Refer to “Rear Hub Unit Bearing” for installation, because the rear magnetic encoder is integrated with the hub unit COMPL - rear axle. <Ref. to DS-37, INSTALLATION, Rear Hub Unit Bearing.>

C: INSPECTION



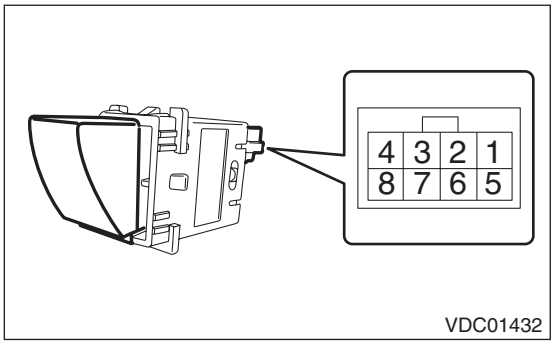
Visually check the magnetic encoder parts for any damage. If necessary, replace with a new hub unit COMPL - rear axle.

NOTE:
Because the magnetic encoder is integrated with hub unit COMPL, replace the hub unit COMPL with a new part if there is any defect found on the magnetic encoder.

14.VDC OFF Switch

A: REMOVAL

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-74, REMOVAL, Instrument Panel Lower Cover.>
3) Release the claws and remove the VDC OFF switch.



B: INSTALLATION

1) Install the VDC OFF switch.
2) Install the cover assembly - instrument panel LWR driver.
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

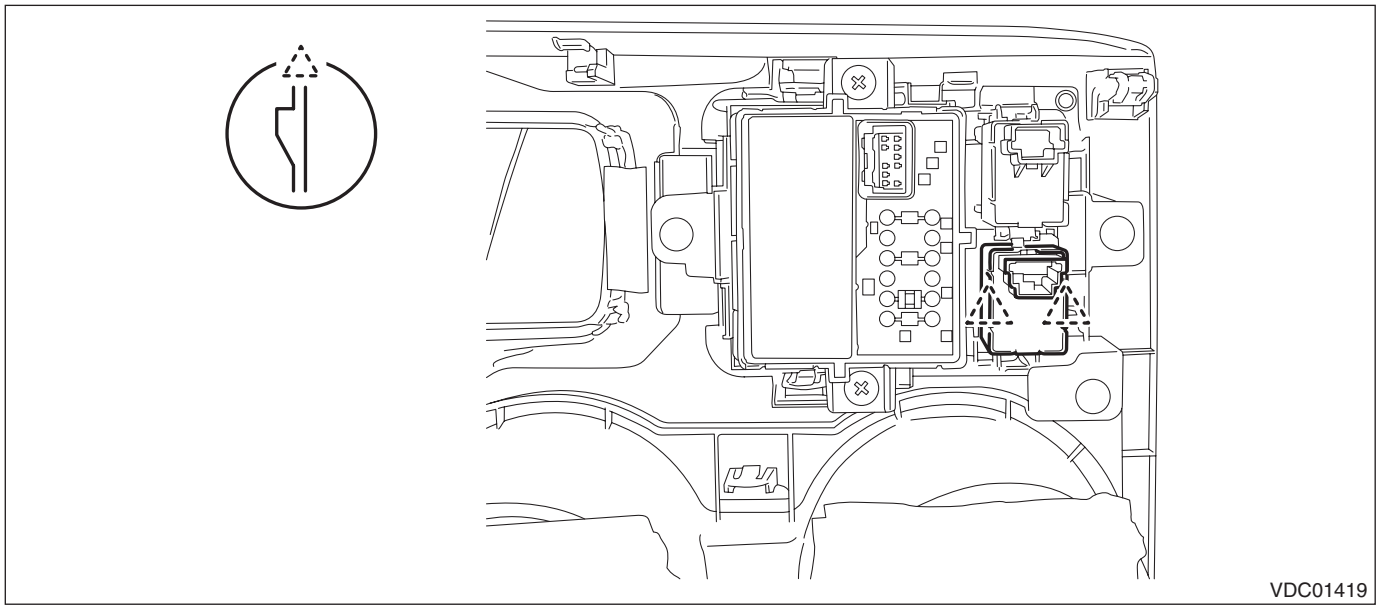
C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
6 — 8	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.



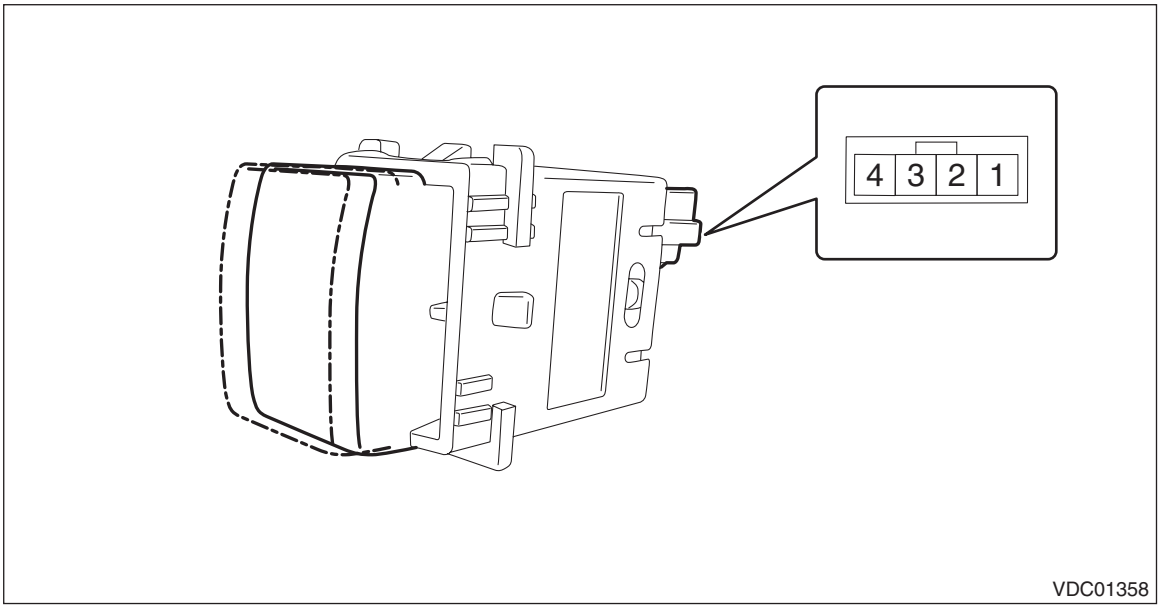
Terminal No.	Inspection conditions	Specification
4 (+) — 1 (–)	Apply battery voltage.	Light ON

3) Replace the VDC OFF switch if the inspection result is not within the standard value.

15.Hill Hold Switch

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - front. <Ref. to EI-80, REMOVAL, Console Box.>
3) Release the claws and remove the hill hold switch.



B: INSTALLATION

1) Install the hill hold switch.
2) Install the cover assembly - front. <Ref. to EI-82, INSTALLATION, Console Box.>
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 4	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
2 (+) — 3 (–)	Apply battery voltage.	Light ON

3) Replace the hill hold switch if the inspection result is not within the standard value.

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

VDC(diag)

		Page
1.	Basic Diagnostic Procedure	2
2.	Check List for Interview	4
3.	General Description	10
4.	Electrical Component Location	12
5.	Control Module I/O Signal	14
6.	Subaru Select Monitor	16
7.	Read Diagnostic Trouble Code (DTC)	22
8.	Inspection Mode	23
9.	Clear Memory Mode	24
10.	Warning Light Illumination Pattern	25
11.	List of Diagnostic Trouble Code (DTC)	37
12.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	41
13.	General Diagnostic Table	106

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
Remove foreign matter (dust, water, oil etc.) from the VDCCM&H/U connector during removal and installation.

NOTE:
- To check the harness for open or short circuits, shake problem spot or connector.
- Refer to “Check List for Interview”. <Ref. to VDC(diag)-4, Check List for Interview.>

	Step	Check	Yes	No
1	**CHECK PRE-INSPECTION.** 1) Ask the customer when and how the trouble occurred using the interview check list. <Ref. to VDC(diag)-4, Check List for Interview.> 2) Before performing diagnostics, check the component which might affect VDC or parking brake system problems. <Ref. to VDC(diag)-10, INSPECTION, General Description.>	Is the component that might influence the VDC or parking brake system problem normal?	Go to step **2**.	Repair or replace each component.
2	**CHECK INDICATION OF DTC.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Read the DTC using the Subaru Select Monitor. <Ref. to VDC(diag)-22, OPERATION, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to VDC(diag)-20, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>	Is DTC displayed on Subaru Select Monitor?	Record the DTC, time stamp and freeze frame data. Go to step **4**. NOTE: • For the time stamp, refer to LAN section. <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.> • Depending on DTCs, time stamp may not be stored.	Go to step **3**.
3	**PERFORM GENERAL DIAGNOSTICS.** 1) Perform the inspection by referring to “General Diagnostic Table”. <Ref. to VDC(diag)-106, INSPECTION, General Diagnostic Table.> 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, OPERATION, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-23, PROCEDURE, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-22, OPERATION, Read Diagnostic Trouble Code (DTC).> 5) Check that the DTC is not displayed.	Do the VDC warning light & VDC indicator light, VDC OFF indicator light and ABS warning light go off after starting the engine? Does the brake warning light go off with the electronic parking brake released?	Finish the diagnosis.	Check the combination meter circuit. <Ref. to VDC(diag)-29, ABS WARNING LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-30, VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-31, VDC OFF INDICATOR LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.>

	Step	Check	Yes	No
4	**PERFORM DIAGNOSIS.** 1) Refer to “List of Diagnostic Trouble Code (DTC)”. NOTE: For the DTC list, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to VDC(diag)-37, LIST, List of Diagnostic Trouble Code (DTC).> 2) Correct the cause of trouble. 3) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, OPERATION, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-23, PROCEDURE, Inspection Mode.> 5) Read the DTC. <Ref. to VDC(diag)-22, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Repeat step 4 until DTC is not shown.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Check the following item about the vehicle's state.

1. STATE OF ABS WARNING LIGHT

<table>
<tr><td>ABS warning light illuminates.</td><td colspan="3">❑ Always
❑ Sometimes
❑ Only once
❑ Does not illuminate
• When/How long does it illuminate?</td></tr>
<tr><td>Ignition key position</td><td colspan="3">❑ LOCK
❑ ACC
❑ ON (before starting engine)
❑ START
❑ ON (after starting engine, engine is running)
❑ ON (after starting engine, engine is at a standstill)</td></tr>
<tr><td rowspan="11">Timing</td><td colspan="3">❑ Immediately after turning the ignition switch to ON
❑ Immediately after turning the ignition switch to START</td></tr>
<tr><td rowspan="2">❑ While accelerating</td><td colspan="2">— km/h</td></tr>
<tr><td colspan="2">— MPH</td></tr>
<tr><td>❑ While driving at a constant speed</td><td>km/h</td><td>MPH</td></tr>
<tr><td rowspan="2">❑ While decelerating</td><td colspan="2">— km/h</td></tr>
<tr><td colspan="2">— MPH</td></tr>
<tr><td rowspan="2">❑ When turning to the right</td><td>Steering angle:</td><td>deg</td></tr>
<tr><td>Steering time:</td><td>Sec.</td></tr>
<tr><td rowspan="2">❑ When turning to the left</td><td>Steering angle:</td><td>deg</td></tr>
<tr><td>Steering time:</td><td>Sec.</td></tr>
<tr><td colspan="3">❑ When other electrical parts are operating</td></tr>
<tr><td colspan="3">• Part name:
• Operating condition:</td></tr>
</table>

2. STATE OF VDC WARNING LIGHT & VDC INDICATOR LIGHT

VDC warning light & VDC indicator light illuminates.	❑ Always ❑ Sometimes ❑ Only once ❑ Does not illuminate • When/How long does it illuminate?		
Ignition key position	❑ LOCK ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after starting engine, engine is running) ❑ ON (after starting engine, engine is at a standstill)		
Timing	❑ Immediately after turning the ignition switch to ON ❑ Immediately after turning the ignition switch to START		
	❑ While accelerating	—	km/h
		—	MPH
	❑ While driving at a constant speed	km/h	MPH
	❑ While decelerating	—	km/h
		—	MPH

3. General Description

A: CAUTION

1. SRS AIRBAG SYSTEM

Airbag system wiring harness is routed near the ABS wheel speed sensor and VDCCM&H/U.

CAUTION:
• Do not use electrical test equipment on wiring harness and connector circuits of the airbag system.
• Be careful not to damage the airbag system wiring harness when servicing the ABS wheel speed sensor and VDCCM&H/U.

B: INSPECTION

Before performing diagnosis, check the following items which might affect VDC problems.

1. BATTERY

Check the battery. <Ref. to SC(H4DO)-60, INSPECTION, Battery.> <Ref. to SC(H6DO)-53, INSPECTION, Battery.>

2. GROUND

Check the installation of the ground bolt for VDC.

3. BRAKE FLUID

1) Check the brake fluid level.
2) Check the brake fluid for leaks.

4. HYDRAULIC UNIT

Check the hydraulic unit.
• When using the brake tester <Ref. to VDC-14, CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH THE BRAKE TESTER, INSPECTION, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• When not using the brake tester <Ref. to VDC-12, CHECKING THE HYDRAULIC UNIT ABS OPERATION BY PRESSURE GAUGE, INSPECTION, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

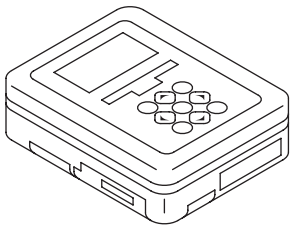
5. BRAKE DRAG

Check for brake drag.

6. BRAKE PAD AND ROTOR

Check the brake pad and rotor.
• Front <Ref. to BR-18, INSPECTION, Front Brake Pad.> <Ref. to BR-20, INSPECTION, Front Disc Rotor.>
• Rear <Ref. to BR-31, INSPECTION, Rear Brake Pad.> <Ref. to BR-34, INSPECTION, Rear Disc Rotor.>

7. PARKING BRAKE ASSEMBLY



Check the parking brake assembly. <Ref. to PB-3, COMPONENT, General Description.>

8. TIRE

Check the tire specifications, tire wear and air pressure. <Ref. to WT-2, SPECIFICATION, General Description.>

C: PREPARATION TOOL

1. SPECIAL TOOL

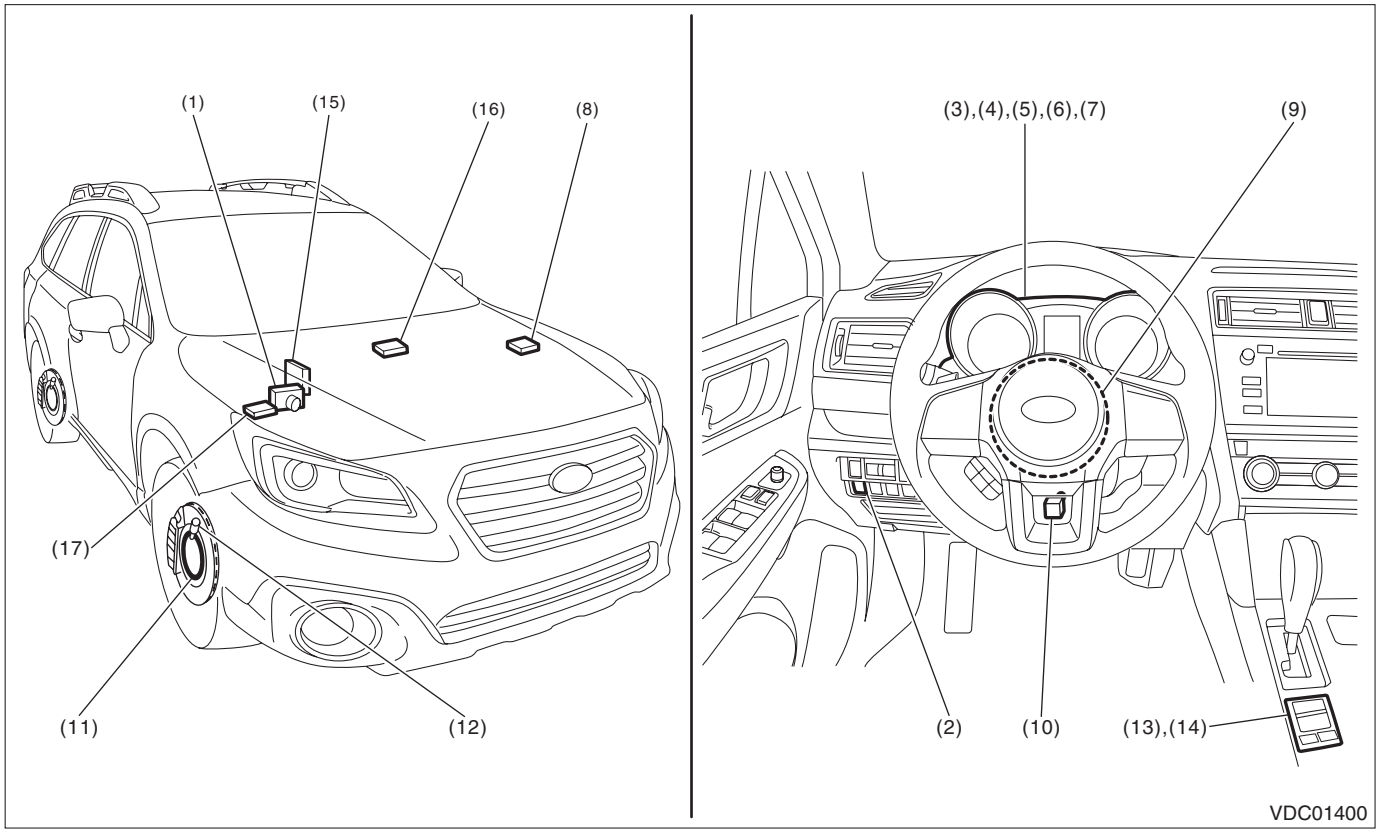


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
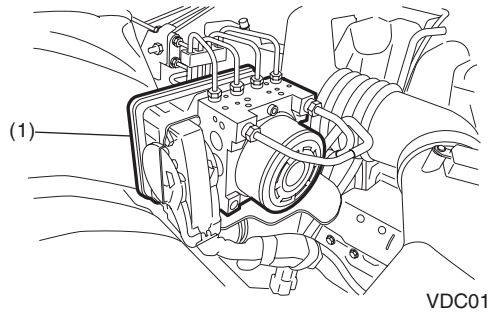
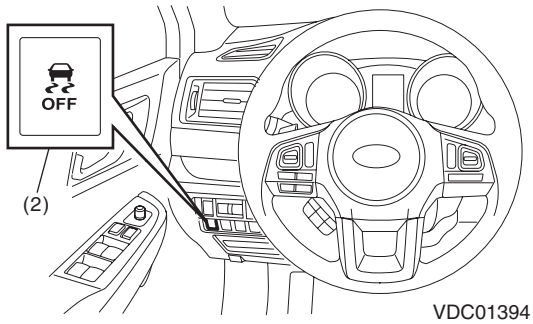
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.

2. GENERAL TOOL

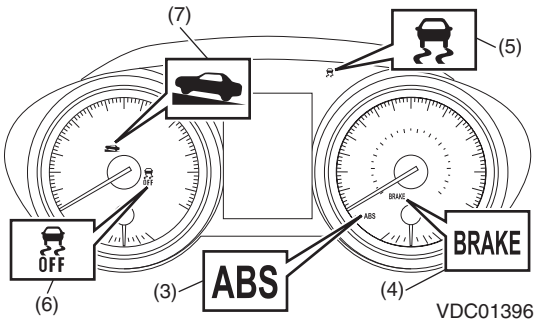


TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for measuring the sensor.

4. Electrical Component Location



A: LOCATION



(1)	VDC control module and hydraulic control unit (VDCCM&H/U)	(7)	Hill hold indicator light	(13)	Parking brake switch
(2)	VDC OFF switch	(8)	Brake light relay	(14)	Hill hold switch
(3)	ABS warning light	(9)	Steering angle sensor	(15)	Engine control module (ECM)
(4)	Brake warning light (EBD warning light)	(10)	Stop light and brake switch	(16)	Transmission control module (TCM) (engine type FB)
(5)	VDC warning light & VDC indicator light	(11)	Magnetic encoder	(17)	Transmission control module (TCM) (engine type EZ)
(6)	VDC OFF indicator light	(12)	ABS wheel speed sensor

VDC01399

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

NOTE:
- Terminal numbers in VDCCM&H/U connector (on the control module side) are shown in the figure.
- When the connector is removed from the VDCCM&H/U, the brake warning light (EBD warning light), ABS warning light, VDC warning light & VDC indicator light, VDC OFF indicator light, and the hill hold indicator light illuminate.

Content			Terminal No. (+) — (–)	Input/Output signal Measured value and measuring conditions
Power supply			5 — 46	10 — 15 V when the ignition switch is ON.
ABS wheel speed sensor	Front LH wheel	Power supply	41 — 46	0 — 18 V
		Signal	40	7 — 14 mA: Rectangle waveform
	Front RH wheel	Power supply	37 — 46	0 — 18 V
		Signal	36	7 — 14 mA: Rectangle waveform
	Rear LH wheel	Power supply	39 — 46	0 — 18 V
		Signal	38	7 — 14 mA: Rectangle waveform
	Rear RH wheel	Power supply	43 — 46	0 — 18 V
		Signal	42	7 — 14 mA: Rectangle waveform
Valve relay power supply			16 — 46	10 — 15 V when the ignition switch is ON.
Motor relay power supply			33 — 46	10 — 15 V when the ignition switch is ON.
Stop light switch			17 — 46	1.5 V or less when the stop light is OFF; otherwise, 10 — 15 V when the stop light is ON.
Brake light relay power supply			27 — 46	10 — 15 V when the ignition switch is ON.
Vehicle speed output signal			24	0 ←→ 12 V pulse
VDC OFF switch			1 — 46	1 Ω or less when the OFF switch is “ON”; 1 MΩ or more when the switch is “OFF”.
Parking brake switch			19	Pulse signal
Parking brake switch			20	Pulse signal
Parking brake switch			21	Pulse signal
Parking brake switch			26	Pulse signal
Rear brake caliper RH			34	Pulse signal
Rear brake caliper RH			35	Pulse signal
Rear brake caliper LH			44	Pulse signal
Rear brake caliper LH			45	Pulse signal
Hill hold switch			6 — 46	10 — 15 V when the hill hold switch is ON.
Parking brake indicator light			3 — 46	0 V when the light is on; 10 — 15 V when the light is off
Brake fluid level switch			8 — 46	10 — 15 V when the ignition switch is ON.
Clutch stroke sensor power supply			11 — 46	4.8 — 5.2 V
Clutch stroke sensor ground			15	—
Clutch stroke sensor signal			10	Pulse signal
CAN communication line (H)			12	Pulse signal
CAN communication line (L)			13	Pulse signal
Ground			46	—

B: WIRING DIAGRAM

Refer to “Vehicle Dynamics Control System” in the wiring diagram. <Ref. to WI-455, Vehicle Dynamics Control System.>

6. Subaru Select Monitor

A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

2. READ CURRENT DATA

For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

Display	Contents to be displayed	Unit of measure
Trip Count	Total number of ignition switch ON	times
Count	Counter	—
Time Count	Elapsed time after ignition switch ON	ms
FR Wheel Speed	Wheel speed detected by front ABS wheel speed sensor RH is displayed.	km/h or MPH
FL Wheel Speed	Wheel speed detected by front ABS wheel speed sensor LH is displayed.	km/h or MPH
RR Wheel Speed	Wheel speed detected by rear ABS wheel speed sensor RH is displayed.	km/h or MPH
RL Wheel Speed	Wheel speed detected by rear ABS wheel speed sensor LH is displayed.	km/h or MPH
Steering Angle Sensor	Steering angle detected by steering angle sensor is displayed.	deg
Yaw Rate Sensor	Angle of the vehicle detected by yaw rate sensor is displayed.	deg/s
Master Cylinder Pressure Sensor	Brake fluid pressure detected by pressure sensor is displayed.	bar
Longitudinal G Sensor	Vehicle longitudinal acceleration detected by longitudinal G sensor is displayed.	m/s^2
Lateral G Sensor	Vehicle lateral acceleration detected by lateral G sensor is displayed.	m/s^2
Voltage of IGN	Voltage supplied to VDCCM&H/U is displayed.	V
M. Relay monitor Voltage	Voltage applied to the motor relay is displayed.	V
FL wheel cylinder pressure sensor output	FL wheel cylinder brake fluid pressure detected by pressure sensor is displayed. (Model with EyeSight)	bar
FR wheel cylinder pressure sensor output	FR wheel cylinder brake fluid pressure detected by pressure sensor is displayed. (Model with EyeSight)	bar
Motor Relay Signal	Motor relay driving signal is displayed.	ON or OFF
Valve Relay Signal	Valve relay driving signal is displayed.	ON or OFF
EBD Warning Light	ON operation of the EBD warning light is displayed.	ON or OFF
ABS Warning Lamp	ON operation of the ABS warning light is displayed.	ON or OFF
VDC Warning Lamp	ON operation of the VDC warning light is displayed.	ON or OFF
EBD Control Flag	EBD operation condition is displayed.	ON or OFF
ABS Control Flag	ABS operation condition is displayed.	ON or OFF
TCS Control Flag	TCS operation condition is displayed.	ON or OFF
VDC Control Flag	VDC operation condition is displayed.	ON or OFF
E/G Torque Down Control Stop Flag	Engine control command signal is displayed.	1 or 0
Stop-lamp relay drive signal	Brake light relay driving signal is displayed.	ON or OFF
X Mode	The status of X mode is displayed. (Model with X mode)	ON or OFF
VDC-OFF Light	ON/OFF condition of VDC OFF indicator light is displayed.	ON or OFF
OFF SW Signal	Operation condition of VDC OFF switch is displayed.	ON or OFF
Brake Light Switch	Brake ON/OFF is displayed.	ON or OFF
Clutch switch	Clutch ON/OFF is displayed. (MT model)	ON or OFF
Reverse Signal	Reverse gear ON/OFF is displayed.	ON or OFF

Display	Contents to be displayed	Unit of measure
Clutch stroke sensor	Pedal stroke amount detected by the clutch stroke sensor is displayed. (MT model)	%
Incline	Incline of the vehicle is displayed.	%
Total Operation Number	Total number of the electronic parking brake operation is displayed.	times
Hill Hold Operation Number	Number of times that hill hold function activated at uphill parking is displayed.	times
Auto Operation Number	Number of times that an electronic parking brake operated automatically while using the adaptive cruise control is displayed.	times
Auto Cancel Number	Number of times that an automatic accelerator interlock cancel function operated at starting is displayed.	times
Parking Operation Number when driving	Number of the parking brake operation while driving is displayed.	times
Engine Torque	Engine torque is displayed.	N·m
Ambient Temp Sensor	Ambient temperature is displayed.	°C
Manual Parking Operation	Parking brake operation condition is displayed.	ON or OFF
Auto Parking Operation	Parking brake operation condition is displayed.	ON or OFF
Parking Operation when driving	Parking brake operation condition is displayed.	ON or OFF
Parking Cancel	Parking brake operation condition is displayed.	ON or OFF
Hill Hold Lamp	Hill hold indicator control condition is displayed.	ON or OFF
IGN	Input condition of ignition signal is displayed.	ON or OFF
Brake Warning Light	Brake warning light control condition is displayed.	ON or OFF
Parking System Warning Light	Control condition of electric parking brake warning light is displayed.	ON or OFF
Neutral Signal	Input condition of neutral signal is displayed.	ON or OFF
Engine idle flag	Engine speed condition is displayed.	ON or OFF
Door Signal	Input condition of door (4 locations) open/close signal is displayed.	ON or OFF
Driver Seat Belt Signal	Input condition of driver's seat belt buckle signal is displayed.	ON or OFF

3. FUNCTION CHECK

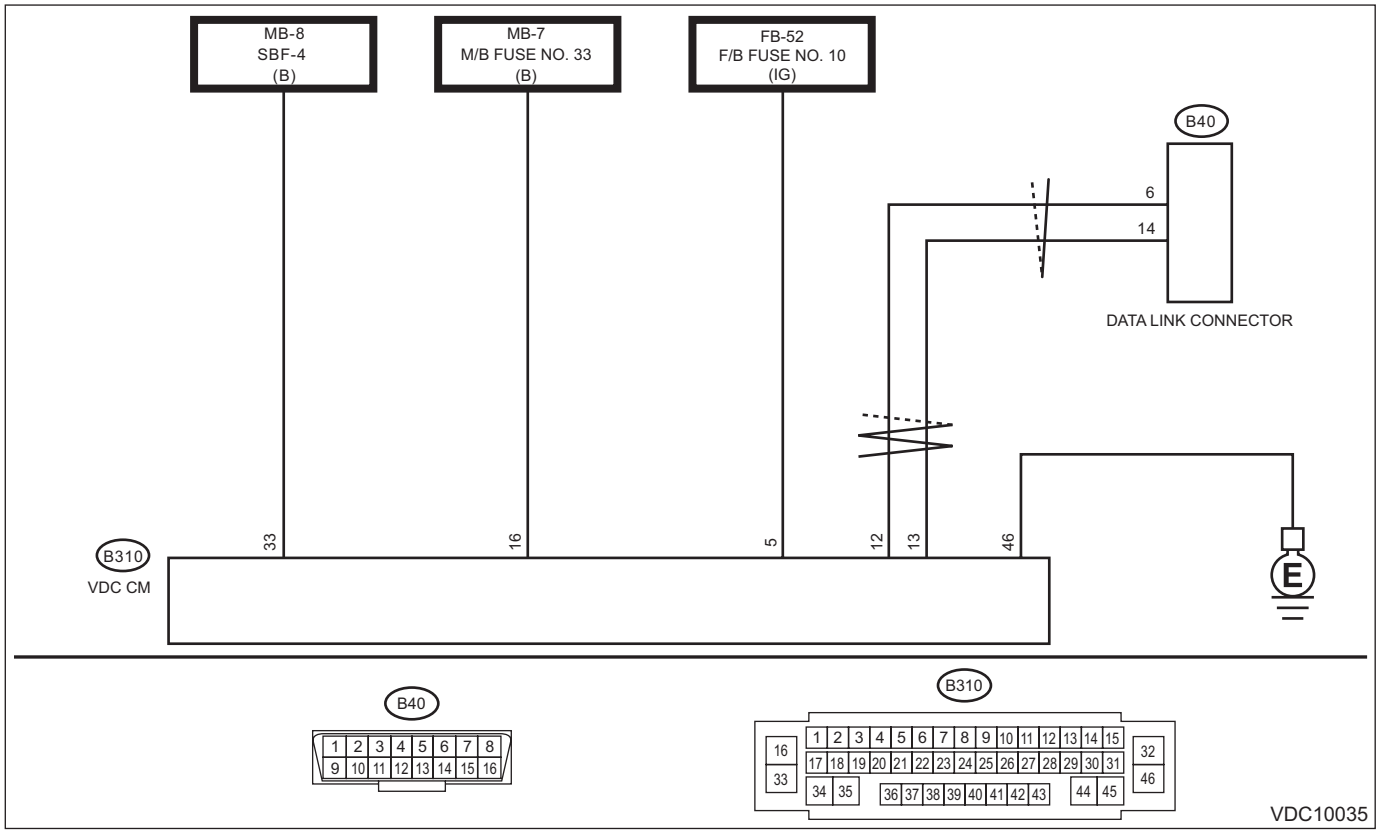
Display	Contents of display	Index No.
ABS Sequence Control Mode	Operate the valve and pump motor continuously to perform the ABS sequence control.	<Ref. to VDC-20, ABS Sequence Control.>
VDC Check Mode	Operate the valve and pump motor continuously to perform the VDC sequence control.	<Ref. to VDC-23, VDC Sequence Control.>
Brake Lamp Lighting Operation	Forcibly activate the brake light relay to illuminate the brake light.	<Ref. to VDC-26, BRAKE LAMP LIGHTING OPERATION MODE BY SUBARU SELECT MONITOR, OPERATION, Brake Lamp Relay.>
VSC(VDC) Centering Mode	Set the steering angle sensor neutral position, and the lateral G sensor and longitudinal G sensor "0" point.	<Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

4. MAINTENANCE MODE

Display	Contents of display	Index No.
Brake Maintenance Mode	Used when inspecting and repairing parts related to rear brake.	<Ref. to VDC-17, BRAKE MAINTENANCE MODE, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
Reading of parameter: ECM to SSM	Read VDCCM parameter data.	<Ref. to VDC-18, VDCCM PARAMETER READING, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
Writing of parameter: SSM to ECM	Write the parameter data to the VDCCM.	<Ref. to VDC-18, VDCCM PARAMETER WRITING, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
Select Parameter	Select and register parameters in the VDCCM.	<Ref. to VDC-18, VDCCM PARAMETER SELECTION, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
Confirm on parameter	Parameters registered in the VDCCM are displayed.	<Ref. to VDC-19, VDCCM PARAMETER CHECK, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

5. READ FREEZE FRAME DATA

NOTE:
- Freeze frame data stored at the time of trouble occurrence is shown on the display.
- Each time a trouble occurs, the latest information is stored in the freeze frame data in memory.



Display	Contents to be displayed	Unit of measure
Classification	Recorded trouble code is displayed.	—
Trip Count	Total number of ignition switch ON	times
Count	Counter	—
Time Count	Elapsed time after ignition switch ON	ms
FR Wheel Speed	Wheel speed detected by front ABS wheel speed sensor RH is displayed.	km/h or MPH
FL Wheel Speed	Wheel speed detected by front ABS wheel speed sensor LH is displayed.	km/h or MPH
RR Wheel Speed	Wheel speed detected by rear ABS wheel speed sensor RH is displayed.	km/h or MPH
RL Wheel Speed	Wheel speed detected by rear ABS wheel speed sensor LH is displayed.	km/h or MPH
Vehicle speed	Vehicle speed calculated by VDC control module is displayed.	km/h or MPH
Steering Angle Sensor	Steering angle detected by steering angle sensor is displayed.	deg
Yaw Rate Sensor	Angle of the vehicle detected by yaw rate sensor is displayed.	deg/s
Master Cylinder Pressure Sensor	Brake fluid pressure detected by pressure sensor is displayed.	bar
Longitudinal G Sensor	Vehicle longitudinal acceleration detected by longitudinal G sensor is displayed.	m/s^2
Lateral G Sensor	Vehicle lateral acceleration detected by lateral G sensor is displayed.	m/s^2
Voltage of IGN	Voltage supplied to VDC control module is displayed.	V
Acceleration Pedal Position	Accelerator pedal opening angle is displayed.	%
Engine Speed	Engine speed on malfunction occurrence is displayed.	rpm
FL wheel cylinder pressure sensor output	FL wheel cylinder brake fluid pressure detected by pressure sensor is displayed. (Model with EyeSight)	bar

Display	Contents to be displayed	Unit of measure
FR wheel cylinder pressure sensor output	FR wheel cylinder brake fluid pressure detected by pressure sensor is displayed. (Model with EyeSight)	bar
Steering angle flag	Whether the absolute angle of the steering angle sensor was determined is displayed.	Recognized or No recognition
EBD Control Flag	EBD control condition is displayed.	ON or OFF
ABS Control Flag	ABS control condition is displayed.	ON or OFF
TCS Control Flag	TCS control condition is displayed.	ON or OFF
VDC Control Flag	VDC control condition is displayed.	ON or OFF
E/G Torque Down Control Stop Flag	Engine control command signal is displayed.	1 or 0
Stop-lamp relay drive signal	Brake light relay driving signal is displayed.	ON or OFF
X Mode	The status of X mode is displayed. (Model with X mode)	ON or OFF
E/G torques up Control Stop Flag	Engine control command signal is displayed.	1 or 0
OFF Switch Detection	ON/OFF condition of the VDC operated by the driver is displayed.	ON or OFF
Brake Light Switch	Brake ON/OFF is displayed.	ON or OFF
Clutch switch	Clutch ON/OFF is displayed. (MT model)	ON or OFF
Reverse Signal	Reverse gear ON/OFF is displayed. (MT model)	ON or OFF
Clutch stroke sensor	Pedal stroke amount detected by the clutch stroke sensor is displayed. (MT model)	%
Clutch engagement point	Clutch stroke sensor engagement position is displayed. (MT model)	%
Engine Torque	Engine torque is displayed.	N·m
Ambient Temp Sensor	Ambient temperature is displayed.	°C
Manual Parking Operation	Parking brake operation condition is displayed.	ON or OFF
Auto Parking Operation	Parking brake operation condition is displayed.	ON or OFF
Parking Operation when driving	Parking brake operation condition is displayed.	ON or OFF
Parking Cancel	Parking brake operation condition is displayed.	ON or OFF
Hill Hold Lamp	Hill hold indicator control condition is displayed.	ON or OFF
IGN	Input condition of ignition signal is displayed.	ON or OFF
Neutral Signal	Input condition of neutral signal is displayed.	ON or OFF
Engine idle flag	Engine speed condition is displayed.	ON or OFF
Door Signal	Input condition of door (4 locations) open/close signal is displayed.	ON or OFF
Driver Seat Belt Signal	Input condition of driver's seat belt buckle signal is displayed.	ON or OFF

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

DETECTING CONDITION:
Defective harness connector
TROUBLE SYMPTOM:
Communication is impossible between VDC and Subaru Select Monitor.
WIRING DIAGRAM:
Vehicle dynamics control system <Ref. to WI-455, Vehicle Dynamics Control System.>

Step		Check	Yes	No
1	**CHECK IGNITION SWITCH.**	Is the ignition switch ON?	Go to step **2**.	Turn the ignition switch to ON, and select VDC mode using Subaru Select Monitor.
2	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 11 V or more?	Go to step **3**.	Charge or replace the battery.
3	**CHECK BATTERY TERMINAL.**	Is there poor contact at battery terminal?	Repair or tighten the battery terminal.	Go to step **4**.
4	**CHECK INSTALLATION OF VDCCM&H/U CONNECTOR.** Turn the ignition switch to OFF.	Is the VDCCM&H/U connector inserted into VDCCM&H/U until the clamp locks onto it?	Go to step **5**.	Insert VDCCM&H/U connector into VDCCM&H/U.
5	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-79, List of Diagnostic Trouble Code (DTC).>	Go to step **6**.

	Step	Check	Yes	No
6	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to ON. 2) Check whether communication to VDC system can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Check the DTC in VDC system. <Ref. to VDC(diag)-22, Read Diagnostic Trouble Code (DTC).>	Go to step **7**.
7	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. (Engine OFF) 2) Measure the ignition power supply voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 5 (+) — Chassis ground (–):*** ***(B310) No. 16 (+) — Chassis ground (–):*** ***(B310) No. 33 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **8**.	Repair open circuit in harness between VDCCM&H/U and battery.
8	**CHECK HARNESS CONNECTOR BETWEEN VDCCM&H/U AND CHASSIS GROUND.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Measure the resistance of harness between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 46 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **9**.	Repair the open circuit of VDCCM&H/U ground circuit and poor contact of connector.
9	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact of control module power supply, ground circuit and data link connector?	Repair the connector.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

- For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.
- For details concerning DTCs, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>

8. Inspection Mode

A: PROCEDURE

1. VDC SYSTEM

1) Delete the DTC.
2) Drive the vehicle at least ten minutes. (Reproduce nearly the same condition as occurred when the DTC was recorded.)

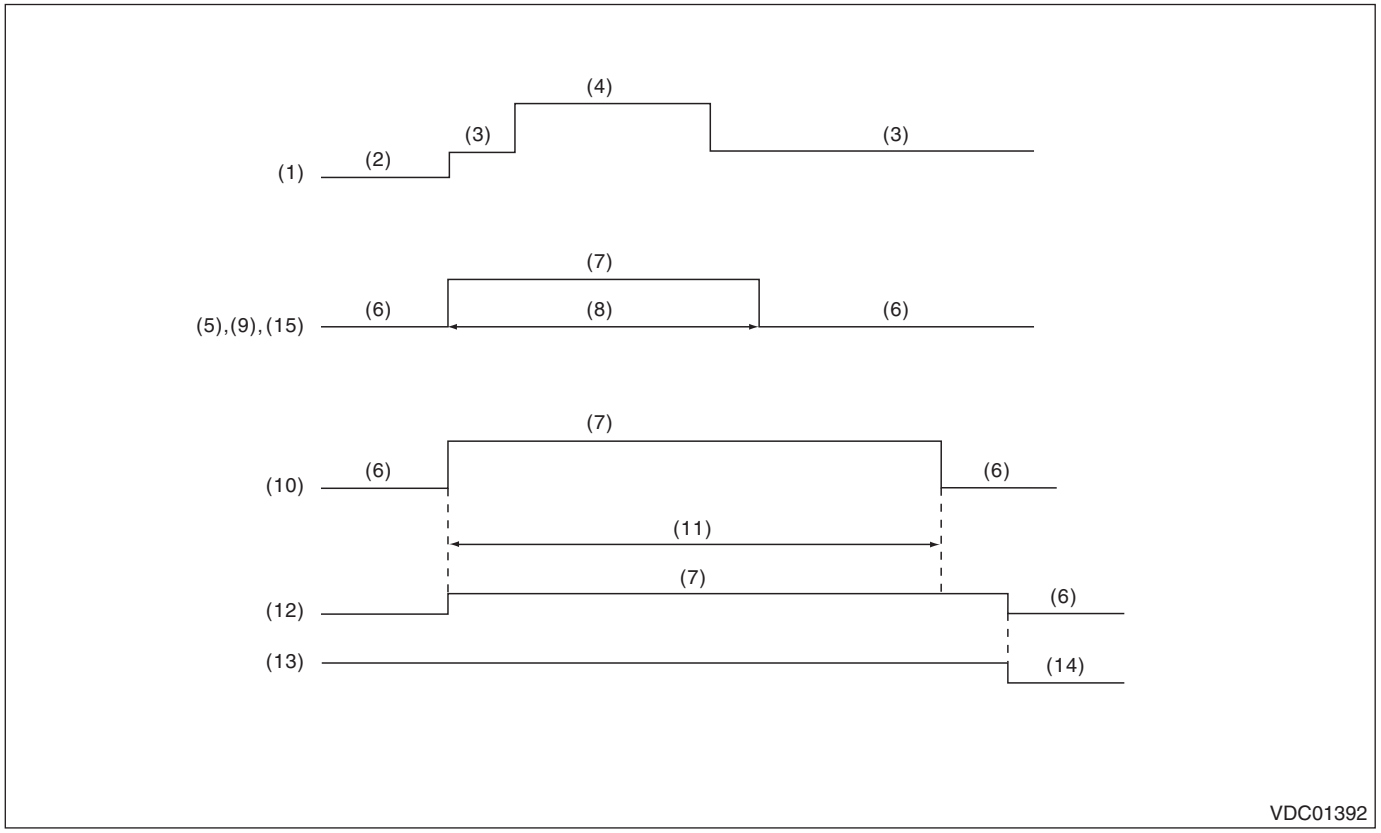
NOTE:
Make sure the vehicle is not dragged to one side under usual driving condition.

2. ELECTRONIC PARKING BRAKE SYSTEM

1) Start the engine, and operate and release the electronic parking brake a few times with the vehicle at a standstill.
2) Check if the warning light illuminates or blinks, or DTC is displayed.

NOTE:
If the DTC is displayed, perform the diagnosis using “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to VDC(diag)-41, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
3) Drive the vehicle at least 10 minutes, and operate and release the electronic parking brake a few times.

CAUTION:
Do not drive the vehicle with the warning light illuminated or blinked.



9. Clear Memory Mode

A: OPERATION

For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

10.Warning Light Illumination Pattern

A: INSPECTION

(1)	Ignition switch	(6)	Light OFF	(11)	2 seconds or more
(2)	OFF	(7)	Light ON	(12)	Brake warning light (EBD warning light)
(3)	ON	(8)	2 seconds	(13)	Parking brake
(4)	Engine start	(9)	VDC OFF indicator light	(14)	Released
(5)	ABS warning light	(10)	VDC warning light & VDC indicator light	(15)	Hill hold indicator light

NOTE:
The hill hold indicator light always illuminates when the hill hold is in the ON mode.

Warning Light Illumination Pattern

1) When warning lights or indicator lights do not illuminate in accordance with this illumination pattern, there must be an electrical malfunction.
2) When the warning lights or indicator lights remain constantly OFF, check the combination meter circuit. <Ref. to VDC(diag)-27, EBD WARNING LIGHT, ABS WARNING, VDC OFF INDICATOR LIGHT, VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT COME ON, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-28, HILL HOLD INDICATOR LIGHT DO NOT COME ON, Warning Light Illumination Pattern.>
3) When the ABS warning light, VDC OFF indicator light, VDC warning light & VDC indicator light, and hill hold indicator light do not go off, check the combination meter circuit or CAN communication circuit. <Ref. to VDC(diag)-29, ABS WARNING LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-31, VDC OFF INDICATOR LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-30, VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-33, HILL HOLD INDICATOR LIGHT DO NOT GO OFF, Warning Light Illumination Pattern.>

NOTE:
- Even when the ABS warning light and the VDC warning light & VDC indicator light do not go off in 2 seconds after illuminating, the ABS and VDC functions are normal if the warning lights go off while the vehicle is driven. However, while these lights are on, the functions with their warning lights illuminated do not operate.
- It may take several minutes before the VDC warning light & VDC indicator light goes off, if the vehicle is parked under low temperature for a specified time. This is not defective because it is resulted from low engine coolant temperature. Perform the Clear Memory Mode because DTC may be recorded at this time. <Ref. to VDC(diag)-24, Clear Memory Mode.>
- With the vehicle jack-up/lift-up or set on free rollers, when the wheels lock or spin after starting the engine, ABS warning light, and VDC warning light & VDC indicator light may illuminate because VDCCM&H/U detects the abnormal conditions from ABS wheel speed sensor or longitudinal G sensor. In this case, this is not a malfunction. Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.>
- When operation and release of the electronic parking brake is repeated excessively, the brake warning light blinks and the parking brake switch operation may not be accepted; this is not malfunction, however.

B: EBD WARNING LIGHT, ABS WARNING, VDC OFF INDICATOR LIGHT, VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT COME ON

DETECTING CONDITION:
Defective combination meter

TROUBLE SYMPTOM:
When the ignition switch is turned to ON (engine OFF), brake warning light (EBD warning light), ABS warning light, VDC OFF indicator light, and VDC warning light & VDC indicator light do not illuminate.

NOTE:
When pressing the VDC OFF switch for 30 seconds or more, the VDC OFF indicator light goes off and cannot operate any more. When turning the ignition switch from OFF to ON, the OFF operation enabled status is restored.

	Step	Check	Yes	No
1	**CHECK OTHER INDICATOR LIGHT.** Turn the ignition switch to ON.	Does other indicator light illuminate soon after “ON”?	Go to step **2**.	Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>
2	**CHECK VDCCM.** When the engine does not start, display the current data of VDCCM using Subaru Select Monitor.	Immediately after the ignition switch is turned to ON, is the «EBD Warning Light» ON?	Go to step **3**.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
3	**CHECK VDCCM.** When the engine does not start, display the current data of VDCCM using Subaru Select Monitor.	Immediately after the ignition switch is turned to ON, is the «ABS Warning Lamp» ON?	Go to step **4**.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
4	**CHECK VDCCM.** When the engine does not start, display the current data of VDCCM using Subaru Select Monitor.	Immediately after the ignition switch is turned to ON, is the «VDC Warning Lamp» ON?	Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: HILL HOLD INDICATOR LIGHT DO NOT COME ON

DETECTING CONDITION:
Defective combination meter

TROUBLE SYMPTOM:
When the ignition switch is turned to ON (engine OFF), the hill hold indicator light does not illuminate.

	Step	Check	Yes	No
1	**CHECK OTHER INDICATOR LIGHT.** Turn the ignition switch to ON. (Engine OFF)	Do other indicator lights illuminate?	Go to step **2**.	Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>
2	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-22, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-79, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is combination meter OK?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>

D: ABS WARNING LIGHT DOES NOT GO OFF

DETECTING CONDITION:

- Defective combination meter
- Defective engine
- Defective CAN communication

TROUBLE SYMPTOM:

When starting the engine, the ABS warning light is kept on.

	Step	Check	Yes	No
1	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-22, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK VDCCM.** Display the current data of VDCCM using Subaru Select Monitor.	Is the «ABS Warning Lamp» ON?	Go to step **3**.	Go to step **5**.
3	**CHECK WARNING LIGHT.** 1) Save the freeze frame data. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.>	Does the ABS warning light go off?	Normal Perform the Inspection Mode to check that the light does not turn ON again.	Go to step **4**.
4	**READ DTC.** Read the DTC after driving the vehicle at 40 km/h (25 MPH) or more.	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Go to step **5**.
5	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-79, List of Diagnostic Trouble Code (DTC).>	Go to step **6**.
6	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is combination meter OK?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-11, REMOVAL, Combination Meter.>

E: VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT GO OFF

DETECTING CONDITION:

- Defective combination meter
- Defective engine
- Defective CAN communication

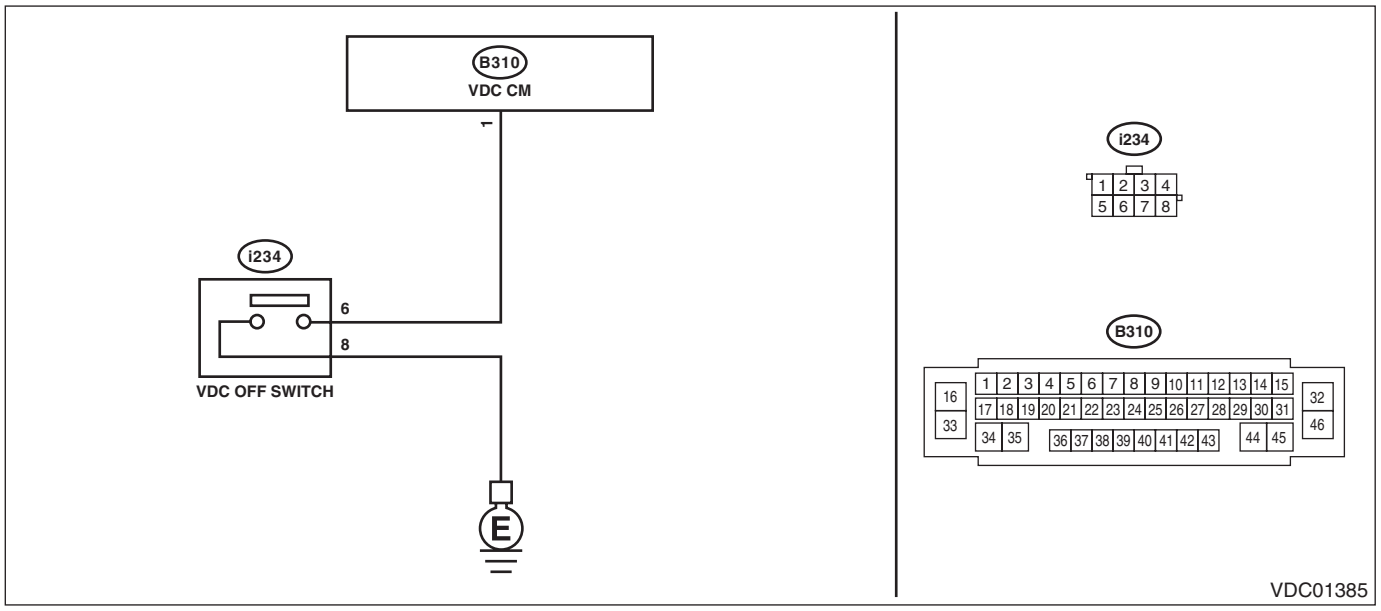
TROUBLE SYMPTOM:

When starting the engine, the VDC warning light & VDC indicator light remains lit.

	Step	Check	Yes	No
1	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-22, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK VDCCM.** Display the current data of VDCCM using Subaru Select Monitor.	Is the «VDC Warning Lamp» ON?	Go to step **3**.	Go to step **5**.
3	**CHECK WARNING LIGHT.** 1) Save the freeze frame data. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.>	Does the VDC warning light & VDC operation indicator light go off?	Normal Perform the Inspection Mode to check that the light does not turn ON again.	Go to step **4**.
4	**READ DTC.** Read the DTC after driving the vehicle at 40 km/h (25 MPH) or more.	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Go to step **5**.
5	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-79, List of Diagnostic Trouble Code (DTC).>	Go to step **6**.
6	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is combination meter OK?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-11, REMOVAL, Combination Meter.>

F: VDC OFF INDICATOR LIGHT DOES NOT GO OFF

DETECTING CONDITION:



- Defective combination meter
- Defective CAN communication
- VDC OFF switch is shorted.

TROUBLE SYMPTOM:

When starting the engine, VDC OFF indicator light is kept ON.

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Vehicle dynamics control system <Ref. to WI-455, Vehicle Dynamics Control System.>

	Step	Check	Yes	No
1	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-22, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK VDC OFF SWITCH.** Remove and check VDC OFF switch. <Ref. to VDC-38, VDC OFF Switch.>	Is the VDC OFF switch normal?	Go to step **3**.	Replace the VDC OFF switch.
3	**CHECK VDC OFF SWITCH CIRCUIT.** 1) Disconnect the connector from the VDCCM&H/U. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 1 — Chassis ground:***	Is the resistance less than 10 Ω?	Check the VDC OFF switch circuit.	Go to step **4**.
4	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-79, List of Diagnostic Trouble Code (DTC).>	Go to step **5**.

Step		Check	Yes	No
5	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is combination meter OK?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-11, REMOVAL, Combination Meter.>

G: HILL HOLD INDICATOR LIGHT DO NOT GO OFF

DETECTING CONDITION:

- Defective combination meter
- Defective CAN communication

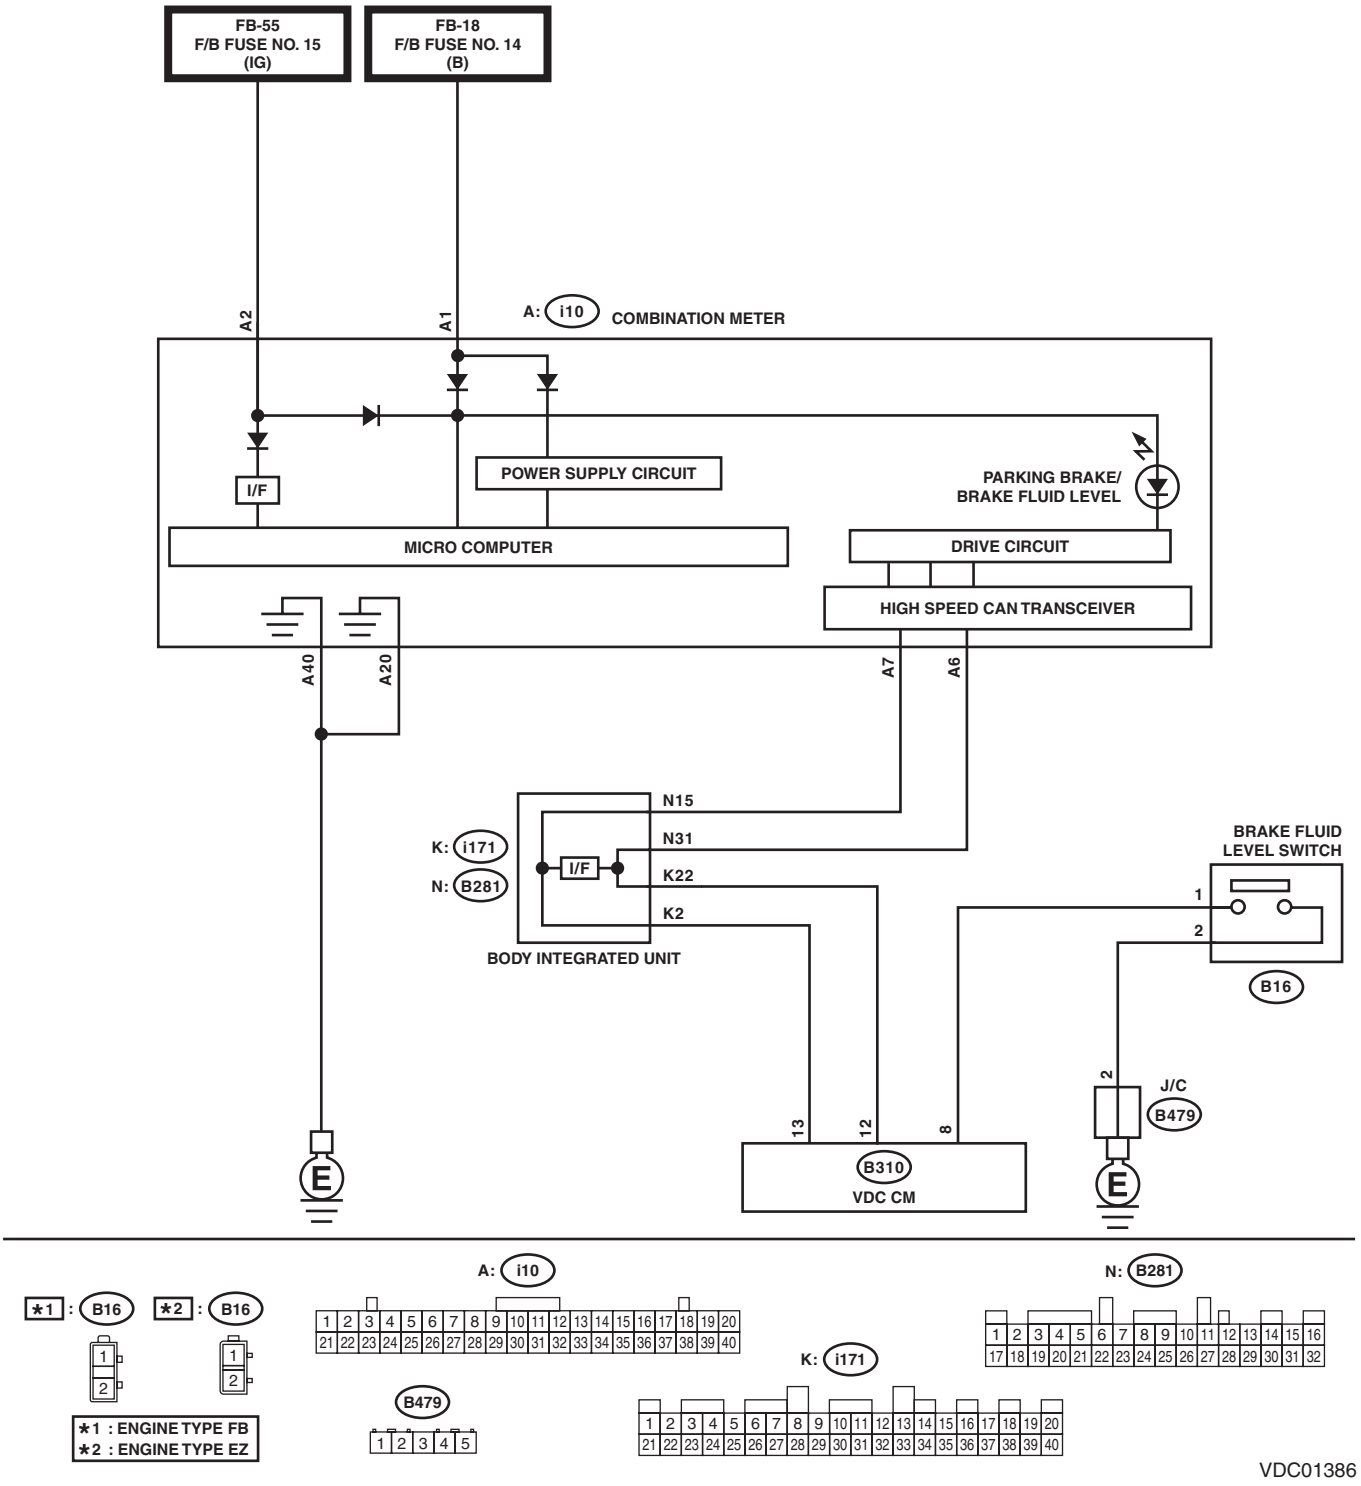
TROUBLE SYMPTOM:

When starting the engine, the hill hold indicator light remains lit.

	Step	Check	Yes	No
1	**CHECK HILL HOLD MODE.**	Is the hill hold switch ON?	Normal	Go to step **2**.
2	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-22, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK LAN SYSTEM.** Check the DTC in LAN system. <Ref. to LAN(diag)-29, Read Diagnostic Trouble Code (DTC).>	Is DTC of LAN system displayed?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-79, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK VDCCM.** Connect the Subaru Select Monitor, and display the current data of VDCCM with the engine started.	When the hill hold switch is not operated after starting the engine, is the «Hill hold lamp» ON?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **5**.
5	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is combination meter OK?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>

H: BRAKE WARNING LIGHT DOES NOT GO OFF

DETECTING CONDITION:



- Brake warning light circuit is shorted.
- Defective sensor/connector
- Defective CAN communication

TROUBLE SYMPTOM:

After starting the engine, the brake warning light remains lit though the electronic parking is released.

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Parking brake / brake fluid level warning light system <Ref. to WI-353, Parking Brake / Brake Fluid Level Warning Light System.>

	Step	Check	Yes	No
1	**CHECK INSTALLATION OF VDCCM&H/U CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Check that the VDCCM&H/U connector is inserted until it is locked by clamp.	Is the connector firmly inserted?	Go to step **2**.	Insert the VDCCM&H/U connector until it is locked by clamp.
2	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-22, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK BRAKE FLUID AMOUNT.** Check the amount of brake fluid in the reservoir tank of master cylinder.	Does the level of the brake fluid amount fall between the lines of “MAX” and “MIN”?	Go to step **4**.	Replenish brake fluid to the specified value.
4	**CHECK BRAKE FLUID LEVEL SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the level switch connector (B16) from master cylinder. 3) Measure the resistance of master cylinder terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Replace the master cylinder. <Ref. to BR-41, Master Cylinder.>
5	**CHECK GROUND SHORT OF HARNESS.** 1) Disconnect the connector from the combination meter. 2) Measure the resistance between combination meter connector and chassis ground. ***Connector & terminal*** ***(i10) No. 23 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair the harness connector between combination meter and brake fluid level switch.
6	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-79, List of Diagnostic Trouble Code (DTC).>	Go to step **7**.
7	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is combination meter OK?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>

11.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Reference
C1211	FR Wheel Speed Sensor System Wire Break/ Excessive Input	Open/high input of front ABS wheel speed sensor RH	<Ref. to VDC(diag)-41, DTC C1211 FR WHEEL SPEED SENSOR SYSTEM WIRE BREAK/EXCESSIVE INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1212	FR Wheel Speed Sensor System	Front ABS wheel speed sensor RH signal malfunction	<Ref. to VDC(diag)-44, DTC C1212 FR WHEEL SPEED SENSOR SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1221	FL Wheel Speed Sensor System Wire Break/ Excessive Input	Open/high input of front ABS wheel speed sensor LH	<Ref. to VDC(diag)-41, DTC C1221 FL WHEEL SPEED SENSOR SYSTEM WIRE BREAK/EXCESSIVE INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1222	FL Wheel Speed Sensor System	Front ABS wheel speed sensor LH signal malfunction	<Ref. to VDC(diag)-44, DTC C1222 FL WHEEL SPEED SENSOR SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1231	RR Wheel Speed Sensor System Wire Break/ Excessive Input	Open/high input of rear ABS wheel speed sensor RH	<Ref. to VDC(diag)-41, DTC C1231 RR WHEEL SPEED SENSOR SYSTEM WIRE BREAK/EXCESSIVE INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1232	RR Wheel Speed Sensor System	Rear ABS wheel speed sensor RH signal malfunction	<Ref. to VDC(diag)-44, DTC C1232 RR WHEEL SPEED SENSOR SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1241	RL Wheel Speed Sensor System Wire Break/ Excessive Input	Open/high input of rear ABS wheel speed sensor LH	<Ref. to VDC(diag)-42, DTC C1241 RL WHEEL SPEED SENSOR SYSTEM WIRE BREAK/EXCESSIVE INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1242	RL Wheel Speed Sensor System	Rear ABS wheel speed sensor LH signal malfunction	<Ref. to VDC(diag)-45, DTC C1242 RL WHEEL SPEED SENSOR SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1311	FR Inlet Solenoid Valve System	Front inlet solenoid valve RH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-47, DTC C1311 FR INLET SOLENOID VALVE SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1312	FR Outlet Solenoid Valve System	Front outlet solenoid valve RH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-47, DTC C1312 FR OUTLET SOLENOID VALVE SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1321	FL Inlet Solenoid Valve System	Front inlet solenoid valve LH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-47, DTC C1321 FL INLET SOLENOID VALVE SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1322	FL Outlet Solenoid Valve System	Front outlet solenoid valve LH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-47, DTC C1322 FL OUTLET SOLENOID VALVE SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1331	RR Inlet Solenoid Valve System	Rear inlet solenoid valve RH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-47, DTC C1331 RR INLET SOLENOID VALVE SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1332	RR Outlet Solenoid Valve System	Rear outlet solenoid valve RH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-47, DTC C1332 RR OUTLET SOLENOID VALVE SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1341	RL Inlet Solenoid Valve System	Rear inlet solenoid valve LH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-47, DTC C1341 RL INLET SOLENOID VALVE SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1342	RL Outlet Solenoid Valve System	Rear outlet solenoid valve LH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-47, DTC C1342 RL OUTLET SOLENOID VALVE SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Reference
C1351	Normal Opening Valve 1 Malfunction	Secondary cut valve malfunction in VDCCM&H/U	<Ref. to VDC(diag)-47, DTC C1351 NORMAL OPENING VALVE 1 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1352	Normal Opening Valve 2 Malfunction	Primary cut valve malfunction in VDCCM&H/U	<Ref. to VDC(diag)-48, DTC C1352 NORMAL OPENING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1361	Normal Closing Valve 1 Malfunction	Secondary suction valve malfunction in VDCCM&H/U	<Ref. to VDC(diag)-48, DTC C1361 NORMAL CLOSING VALVE 1 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1362	Normal Closing Valve 2 Malfunction	Primary suction valve malfunction in VDCCM&H/U	<Ref. to VDC(diag)-49, DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1411	ECU	VDC control module malfunction	<Ref. to VDC(diag)-51, DTC C1411 ECU, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1412	Parameter Selection Error	VDC control module parameter failure	<Ref. to VDC(diag)-53, DTC C1412 PARAMETER SELECTION ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1413	Power Supply Voltage Failure	Power voltage malfunction	<Ref. to VDC(diag)-54, DTC C1413 POWER SUPPLY VOLTAGE FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1422	VDC Interruption for Engine Convenience	VDC interrupted due to some reasons of the engine	<Ref. to VDC(diag)-56, DTC C1422 VDC INTERRUPTION FOR ENGINE CONVENIENCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1423	Different ECU Specifications	Different VDC control module specification	<Ref. to VDC(diag)-57, DTC C1423 DIFFERENT ECU SPECIFICATIONS, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1424	ECM Failure	Engine control module is faulty	<Ref. to VDC(diag)-59, DTC C1424 ECM FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1431	AT Abnormal	Transmission control module is faulty	<Ref. to VDC(diag)-60, DTC C1431 AT ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1511	Valve Relay	Defective valve relay	<Ref. to VDC(diag)-61, DTC C1511 VALVE RELAY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

12. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC C1211 FR WHEEL SPEED SENSOR SYSTEM WIRE BREAK/EXCESSIVE INPUT

NOTE:
For the diagnostic procedure, refer to “DTC C1241 RL WHEEL SPEED SENSOR SYSTEM WIRE BREAK/EXCESSIVE INPUT”. <Ref. to VDC(diag)-42, DTC C1241 RL WHEEL SPEED SENSOR SYSTEM WIRE BREAK/EXCESSIVE INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

B: DTC C1221 FL WHEEL SPEED SENSOR SYSTEM WIRE BREAK/EXCESSIVE INPUT

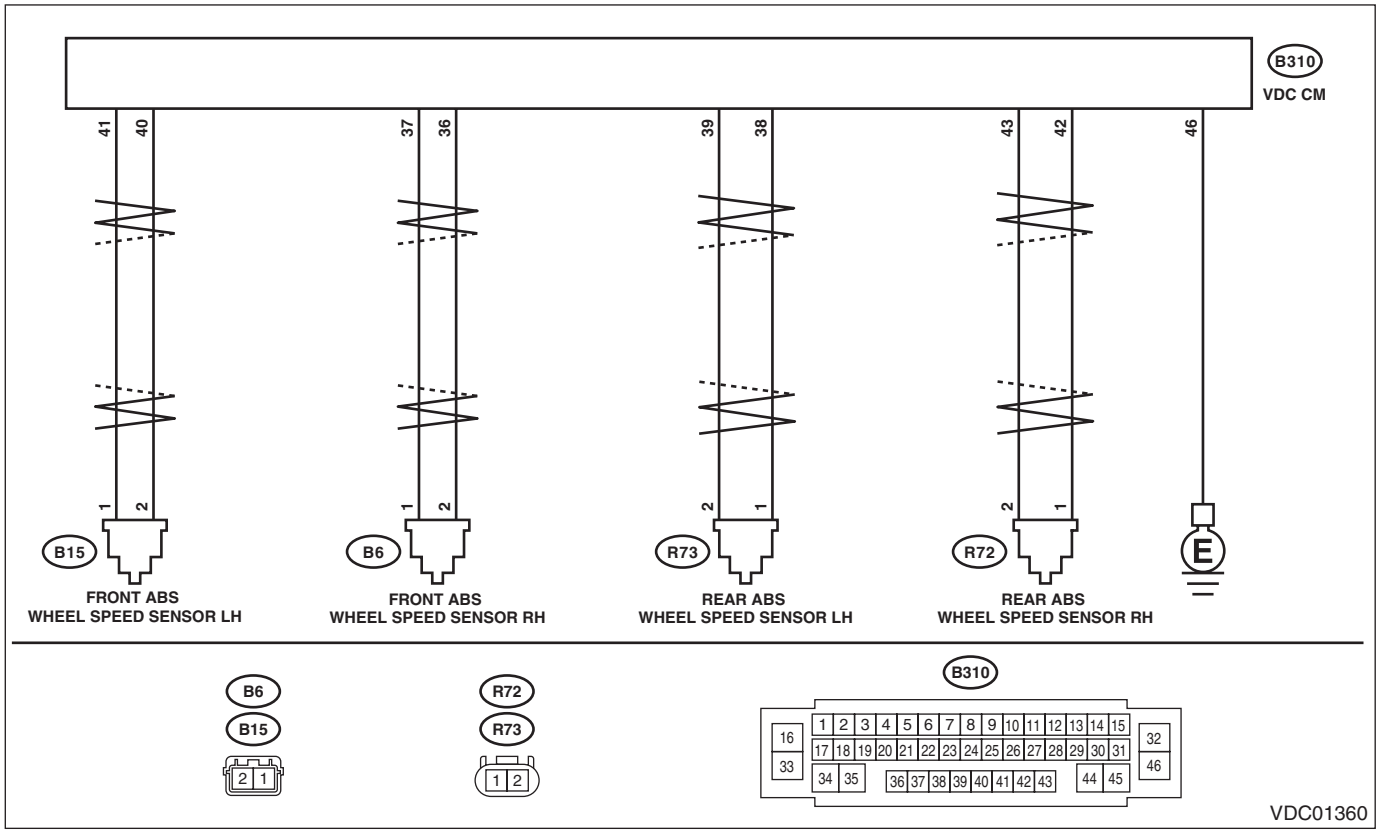
NOTE:
For the diagnostic procedure, refer to “DTC C1241 RL WHEEL SPEED SENSOR SYSTEM WIRE BREAK/EXCESSIVE INPUT”. <Ref. to VDC(diag)-42, DTC C1241 RL WHEEL SPEED SENSOR SYSTEM WIRE BREAK/EXCESSIVE INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

C: DTC C1231 RR WHEEL SPEED SENSOR SYSTEM WIRE BREAK/EXCESSIVE INPUT

NOTE:
For the diagnostic procedure, refer to “DTC C1241 RL WHEEL SPEED SENSOR SYSTEM WIRE BREAK/EXCESSIVE INPUT”. <Ref. to VDC(diag)-42, DTC C1241 RL WHEEL SPEED SENSOR SYSTEM WIRE BREAK/EXCESSIVE INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

D: DTC C1241 RL WHEEL SPEED SENSOR SYSTEM WIRE BREAK/EXCESSIVE INPUT

DTC DETECTING CONDITION:



Judge as malfunction when the current value of the wheel speed sensor is out of normal range for a predetermined time or more.

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Vehicle dynamics control system <Ref. to WI-455, Vehicle Dynamics Control System.>

Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTOR.** Check if there is poor contact between VDCCM&H/U and ABS wheel speed sensor.	Is there poor contact?	Repair the connector.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK HARNESS CONNECTOR BETWEEN VDCCM&H/U AND ABS WHEEL SPEED SENSOR.** 1) Disconnect the connector (B310) from the VDCCM&H/U. 2) Disconnect the connector from ABS wheel speed sensor. 3) Measure the resistance between VDCCM&H/U connector and ABS wheel speed sensor connector. ***Connector & terminal*** ***DTC C1211*** ***(B310) No. 37 — (B6) No. 1:*** ***(B310) No. 36 — (B6) No. 2:*** ***DTC C1221*** ***(B310) No. 41 — (B15) No. 1:*** ***(B310) No. 40 — (B15) No. 2:*** ***DTC C1231*** ***(B310) No. 42 — (R72) No. 1:*** ***(B310) No. 43 — (R72) No. 2:*** ***DTC C1241*** ***(B310) No. 38 — (R73) No. 1:*** ***(B310) No. 39 — (R73) No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the harness connector between VDCCM&H/U and ABS wheel speed sensor.
3	**CHECK GROUND SHORT OF HARNESS.** Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***DTC C1211*** ***(B310) No. 36 — Chassis ground:*** ***DTC C1221*** ***(B310) No. 40 — Chassis ground:*** ***DTC C1231*** ***(B310) No. 42 — Chassis ground:*** ***DTC C1241*** ***(B310) No. 38 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the harness connector between VDCCM&H/U and ABS wheel speed sensor.
4	**CHECK ABS WHEEL SPEED SENSOR POWER SUPPLY CIRCUIT.** 1) Connect the VDCCM&H/U connector. 2) Connect the ABS wheel speed sensor connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between ABS wheel speed sensor connector and chassis ground. ***Connector & terminal*** ***DTC C1211*** ***(B6) No. 1 (+) — Chassis ground (–):*** ***DTC C1221*** ***(B15) No. 1 (+) — Chassis ground (–):*** ***DTC C1231*** ***(R72) No. 2 (+) — Chassis ground (–):*** ***DTC C1241*** ***(R73) No. 2 (+) — Chassis ground (–):***	Is the voltage 5 — 16 V?	Go to step **6**.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK VDCCM&H/U POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the VDCCM&H/U connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between VDCCM&H/U connector terminals. ***Connector & terminal*** ***(B310) No. 5 (+) — (B310) No. 46 (–):*** ***(B310) No. 16 (+) — (B310) No. 46 (–):*** ***(B310) No. 33 (+) — (B310) No. 46 (–):***	Is the voltage 10 — 15 V?	Go to step **6**.	Check the generator, battery and VDCCM&H/U power supply circuit.
6	**CHECK ABS WHEEL SPEED SENSOR SIGNAL.** 1) Install the ABS wheel speed sensor. 2) Prepare an oscilloscope. 3) Check the ABS wheel speed sensor. <Ref. to VDC-33, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Front ABS Wheel Speed Sensor.>	Is the pattern the same waveform as shown in the figure?	Go to step **7**.	Replace the ABS wheel speed sensor. <Ref. to VDC-31, Front ABS Wheel Speed Sensor.>
7	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **8**.
8	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference.

E: DTC C1212 FR WHEEL SPEED SENSOR SYSTEM

NOTE:
For the diagnostic procedure, refer to “DTC C1242 RL WHEEL SPEED SENSOR SYSTEM”. <Ref. to VDC(diag)-45, DTC C1242 RL WHEEL SPEED SENSOR SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

F: DTC C1222 FL WHEEL SPEED SENSOR SYSTEM

NOTE:
For the diagnostic procedure, refer to “DTC C1242 RL WHEEL SPEED SENSOR SYSTEM”. <Ref. to VDC(diag)-45, DTC C1242 RL WHEEL SPEED SENSOR SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

G: DTC C1232 RR WHEEL SPEED SENSOR SYSTEM

NOTE:
For the diagnostic procedure, refer to “DTC C1242 RL WHEEL SPEED SENSOR SYSTEM”. <Ref. to VDC(diag)-45, DTC C1242 RL WHEEL SPEED SENSOR SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

H: DTC C1242 RL WHEEL SPEED SENSOR SYSTEM

DTC DETECTING CONDITION:

- A fault is detected if the time of decompression or hold exceeds the predetermined time.
- A fault is detected if noise of the wheel speed sensor signal is detected.
- A fault is detected if the wheel speed sensor signal is lost, or the wheel speed sensor signal continuously indicates significantly low speed by calculating the difference between maximum speed and minimum speed among the four wheels.
- A fault is detected if the wheel speed sensor signal continuously indicates excessively high or low speed.
- A fault is detected if the wheel speed sensor signal changes irregularly.
- A fault is detected if the wheel speed sensor signal drops cyclically.

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

	Step	Check	Yes	No
1	**CHECK OUTPUT OF ABS WHEEL SPEED SENSOR USING SUBARU SELECT MONITOR.** 1) Select “Current Data Display & Save” and “Freeze Frame Data display” on the Subaru Select Monitor. 2) Read the defective ABS wheel speed sensor output.	Does the speed indicated on the current data change in response to the speedometer reading during acceleration/deceleration when the steering wheel is in the straight-ahead position? In addition, are the wheel speeds of the freeze frame data for 4 wheels almost the same?	Go to step **2**.	Go to step **7**.
2	**CHECK POOR CONTACT OF CONNECTOR.** Turn the ignition switch to OFF.	Is there poor contact of connectors between VDCCM&H/U and ABS wheel speed sensor?	Repair the connector.	Go to step **3**.
3	**CHECK CAUSE OF SIGNAL NOISE.** Make sure the radio wave devices and electronic components are installed correctly.	Are the radio wave devices and electronic components installed correctly?	Go to step **4**.	Install the radio wave devices and electronic components properly.
4	**CHECK CAUSE OF SIGNAL NOISE.** Check if the noise sources (such as an antenna) are installed near the sensor harness.	Are noise sources installed?	Install the noise sources apart from sensor harness.	Go to step **5**.
5	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.
6	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference.
7	**CHECK INSTALLATION OF ABS WHEEL SPEED SENSOR.**	Is the ABS wheel speed sensor installation bolt tightened to 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)?	Go to step **8**.	Tighten the ABS wheel speed sensor installation bolts.

	Step	Check	Yes	No
8	**CHECK ABS WHEEL SPEED SENSOR SIGNAL.** 1) Install the ABS wheel speed sensor. 2) Prepare an oscilloscope. 3) Check the ABS wheel speed sensor. <Ref. to VDC-33, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Front ABS Wheel Speed Sensor.>	Does the oscilloscope indicate the waveform pattern like shown in the figure when the tire is slowly turned? Does the oscilloscope indication repeat the waveform pattern like shown in the figure when the tire is slowly turned in equal speed for one rotation or more?	Go to step **10**.	Go to step **9**.
9	**CHECK ABS WHEEL SPEED SENSOR OR MAGNETIC ENCODER.**	Are there foreign matter, breakage or damage at the tip of ABS wheel speed sensor or magnetic encoder?	Remove dirt thoroughly. Also replace the ABS wheel speed sensor or magnetic encoder as a unit with hub unit bearing if it is broken or damaged.	Go to step **10**.
10	**CHECK CAUSE OF SIGNAL NOISE.** Make sure the radio wave devices and electronic components are installed correctly.	Are the radio wave devices and electronic components installed correctly?	Go to step **11**.	Install the radio wave devices and electronic components properly.
11	**CHECK CAUSE OF SIGNAL NOISE.** Check if the noise sources (such as an antenna) are installed near the sensor harness.	Are noise sources installed?	Install the noise sources apart from sensor harness.	Go to step **12**.
12	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Go to step **13**.	Go to step **14**.
13	**CHECK FREEZE FRAME DATA OF ABS WHEEL SPEED SENSOR USING SUBARU SELECT MONITOR.** 1) Using the Subaru Select Monitor, select “Freeze Frame Data display”. 2) Read the ABS wheel speed sensor output.	Is the ABS wheel speed sensor output different compared with other wheels?	Replace the ABS wheel speed sensor which has a difference. <Ref. to VDC-31, Front ABS Wheel Speed Sensor.> <Ref. to VDC-34, Rear ABS Wheel Speed Sensor.>	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
14	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference. NOTE: Though the ABS warning light may remain on at this time, this is normal. Drive the vehicle at 40 km/h (25 MPH) or more in order to turn ABS warning light off. Be sure to drive the vehicle and check that the warning light goes off.

I: DTC C1311 FR INLET SOLENOID VALVE SYSTEM

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-49, DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

J: DTC C1312 FR OUTLET SOLENOID VALVE SYSTEM

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-49, DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

K: DTC C1321 FL INLET SOLENOID VALVE SYSTEM

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-49, DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

L: DTC C1322 FL OUTLET SOLENOID VALVE SYSTEM

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-49, DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

M: DTC C1331 RR INLET SOLENOID VALVE SYSTEM

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-49, DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

N: DTC C1332 RR OUTLET SOLENOID VALVE SYSTEM

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-49, DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

O: DTC C1341 RL INLET SOLENOID VALVE SYSTEM

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-49, DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

P: DTC C1342 RL OUTLET SOLENOID VALVE SYSTEM

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-49, DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Q: DTC C1351 NORMAL OPENING VALVE 1 MALFUNCTION

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-49, DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

R: DTC C1352 NORMAL OPENING VALVE 2 MALFUNCTION

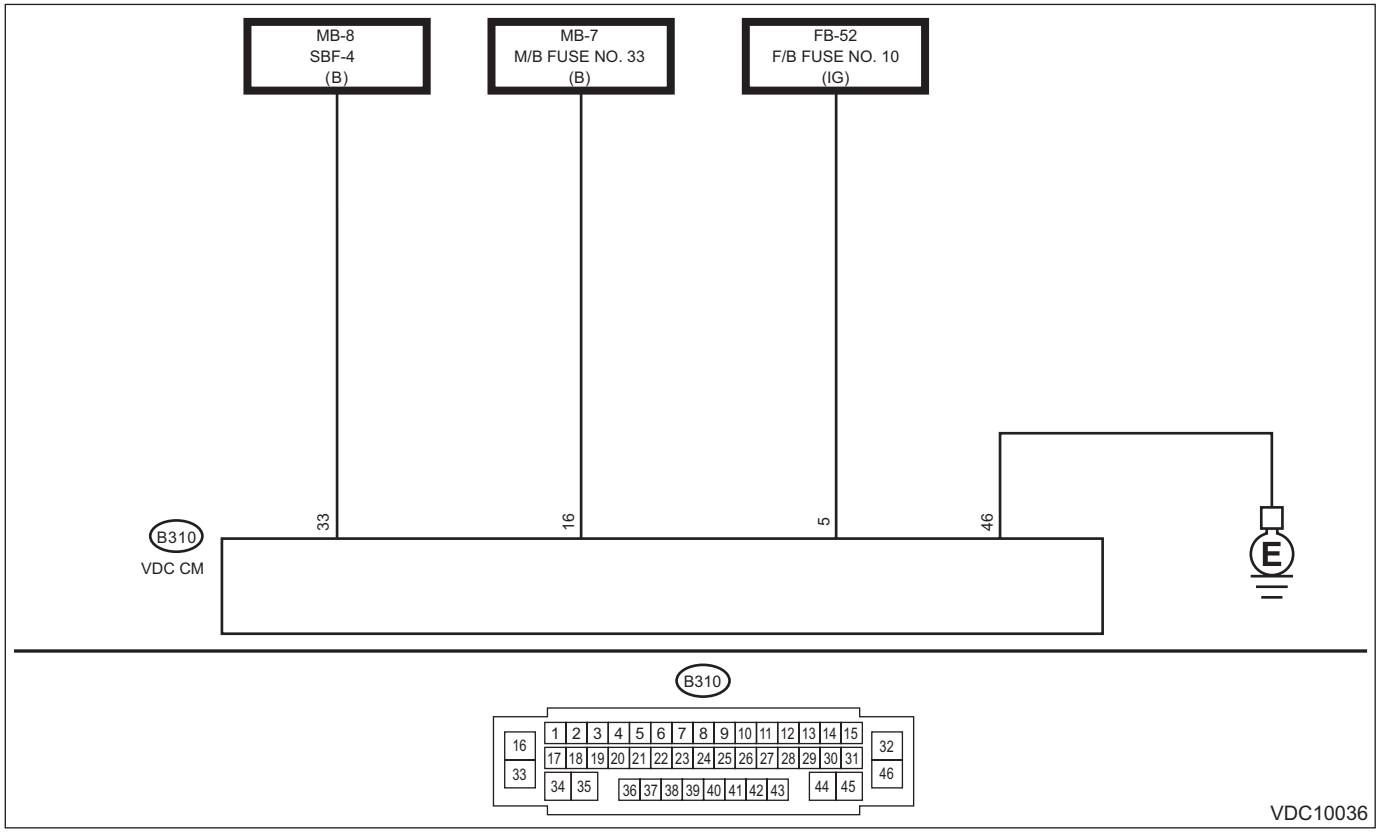
NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-49, DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

S: DTC C1361 NORMAL CLOSING VALVE 1 MALFUNCTION

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-49, DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

T: DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION

DTC DETECTING CONDITION:



A fault is detected if electrical malfunction judgment is generated for VDCH/U solenoid valve.

TROUBLE SYMPTOM:

- ABS does not operate.
- EBD does not operate.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

WIRING DIAGRAM:

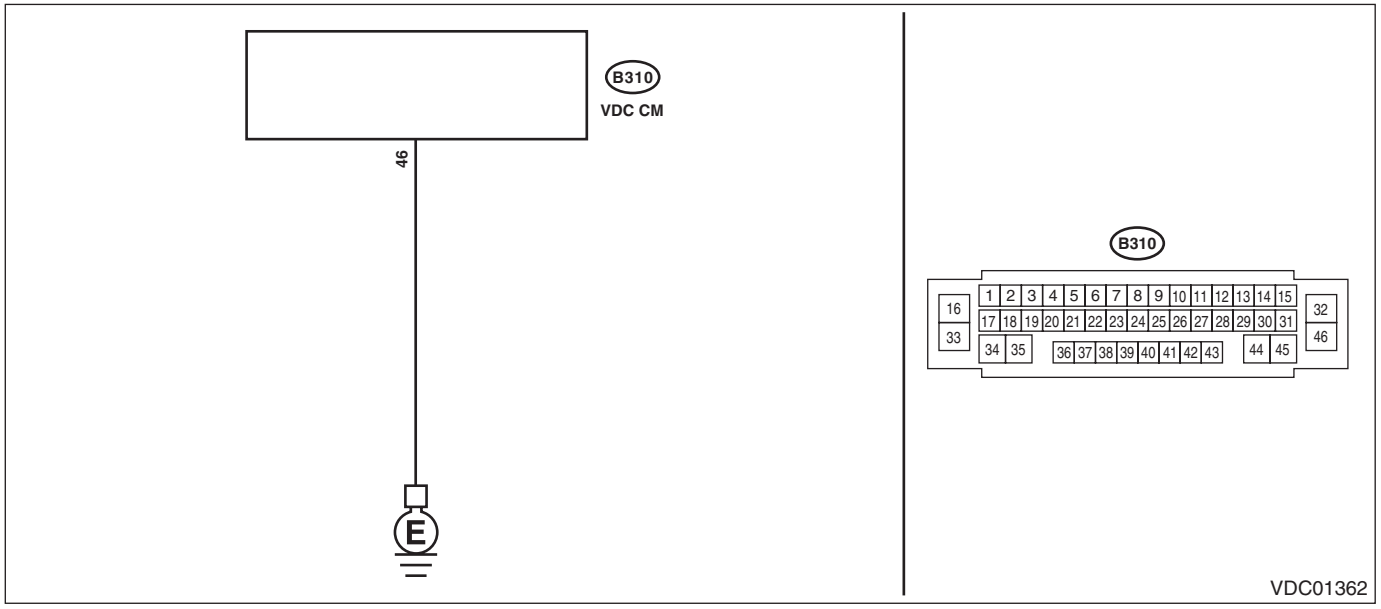
Vehicle dynamics control system <Ref. to WI-455, Vehicle Dynamics Control System.>

Step		Check	Yes	No
1	**CHECK VDCCM&H/U INPUT VOLTAGE.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Run the engine at idle. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 5 (+) — (B310) No. 46 (–):*** ***(B310) No. 16 (+) — (B310) No. 46 (–):*** ***(B310) No. 33 (+) — (B310) No. 46 (–):***	Is the voltage 10 — 15 V?	Go to step **2**.	Repair the power supply circuit.
2	**CHECK VDCCM&H/U GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 46 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair the VDCCM&H/U ground harness.

	Step	Check	Yes	No
3	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step **4**.
4	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **5**.
5	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

U: DTC C1411 ECU

DTC DETECTING CONDITION:



- Judge as malfunction when ECM internal malfunction is detected.
- This malfunction is stored if the fluid pressure request from the electronic parking brake does not operate.

TROUBLE SYMPTOM:

- ABS does not operate sometimes.
- EBD does not operate sometimes.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

WIRING DIAGRAM:

Vehicle dynamics control system <Ref. to WI-455, Vehicle Dynamics Control System.>

Step		Check	Yes	No
1	**CHECK VDCCM&H/U GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Measure the resistance between VDCCM&H/U and chassis ground. ***Connector & terminal*** ***(B310) No. 46 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **2**.	Repair the VDCCM&H/U ground harness.
2	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of the connector between the battery, ignition switch and VDCCM&H/U?	Repair the connector.	Go to step **3**.
3	**CHECK CAUSE OF SIGNAL NOISE.**	Are the radio wave devices and electronic components installed correctly?	Go to step **4**.	Install the radio wave devices and electronic components properly.
4	**CHECK CAUSE OF SIGNAL NOISE.**	Is there a noise source (such as an antenna) installed near the sensor harness and VDCCM?	Install the noise sources apart from sensor harness and VDCCM.	Go to step **5**.

Step		Check	Yes	No
5	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.
6	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

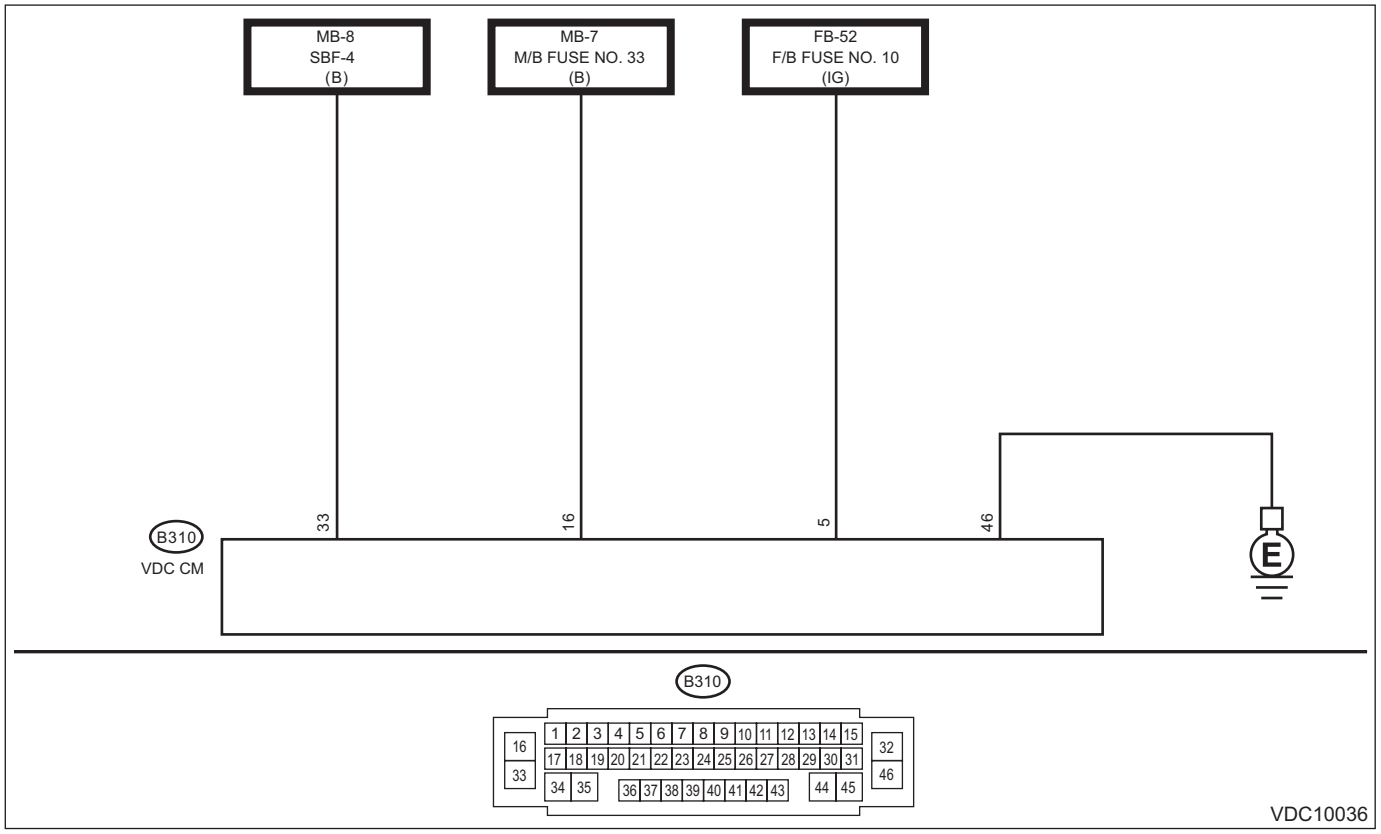
V: DTC C1412 PARAMETER SELECTION ERROR

DTC DETECTING CONDITION:

- A fault is detected if abnormal set value is found on the vehicle model that were given some parameters.
- A fault is detected if 0 point setting compensation of the sensor is not yet performed.

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)



NOTE:
When the VDCCM&H/U is replaced, this DTC may be stored.

	Step	Check	Yes	No
1	**CHECK VDCCM&H/U IDENTIFICATION SYMBOL.** Check the identification symbol attached on the H/U. <Ref. to VDC-2, SPECIFICATION, General Description.>	Is the identification symbol correct?	Go to step **2**.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
2	**CHECK PARAMETER SELECTED IN VDCCM.** <Ref. to VDC-19, VDCCM PARAMETER CHECK, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Does the parameter registered in the VDCCM match the relevant vehicle?	Go to step **3**.	Select and register the correct parameter. <Ref. to VDC(diag)-18, READ FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.>
3	**CHECK SPECIFICATIONS OF OTHER CONTROL MODULES.** Check the specifications of ECM and TCM.	Are the specifications of ECM and TCM the same as vehicle specification?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the ECM and TCM. <Ref. to FU(H4DO)-81, Engine Control Module (ECM).> <Ref. to FU(H6DO)-83, Engine Control Module (ECM).> <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).> <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>

W: DTC C1413 POWER SUPPLY VOLTAGE FAILURE

DTC DETECTING CONDITION:
A fault is detected if the power supply voltage is out of normal range for a predetermined time or more.
TROUBLE SYMPTOM:
- ABS does not operate.
- EBD may not operate.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

NOTE:
Warning lights go off if voltage returns.
WIRING DIAGRAM:
Vehicle dynamics control system <Ref. to WI-455, Vehicle Dynamics Control System.>

Step		Check	Yes	No
1	**CHECK GENERATOR.** 1) Start the engine. 2) Run the engine at idle after warming up. 3) Measure the voltage between generator terminal B and chassis ground. ***Terminals*** ***Generator terminal B (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2**.	Repair the generator.
2	**CHECK BATTERY TERMINAL.** Turn the ignition switch to OFF.	Are the positive and negative battery terminals installed tightly?	Go to step **3**.	Install the battery terminal correctly.

	Step	Check	Yes	No
3	**CHECK VDCCM&H/U INPUT VOLTAGE.** 1) Disconnect the connector from the VDCCM&H/U. 2) Run the engine at idle. 3) Operate devices such as headlights, air conditioner, rear defogger, etc. which produce an electrical load. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 5 (+) — (B310) No. 46 (–):*** ***(B310) No. 16 (+) — (B310) No. 46 (–):*** ***(B310) No. 33 (+) — (B310) No. 46 (–):***	Is the voltage 10 — 15 V?	Go to step **4**.	Repair the power supply circuit.
4	**CHECK VDCCM&H/U GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 46 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair the VDCCM&H/U ground harness circuit.
5	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step **6**.
6	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.
7	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

X: DTC C1422 VDC INTERRUPTION FOR ENGINE CONVENIENCE

DTC DETECTING CONDITION:
A fault is detected if engine control prohibition flag from ECM is received.
TROUBLE SYMPTOM:
- VDC does not operate.
- Hill hold does not function.

NOTE:
The warning light goes off if the engine control prohibition flag from ECM returns normally.

	Step	Check	Yes	No
1	**CHECK COOPERATION CONTROL FEASIBILITY OF ECM USING SUBARU SELECT MONITOR.** 1) Start the engine, and run the engine at idle approximately 5 minutes. 2) Connect Subaru Select Monitor, and select “Current Data Display & Save”. 3) Check the «E/G Torque Down Control Stop Flag» displayed on screen.	Does the «E/G Torque Down Control Stop Flag» indicate “1”?	Go to step **4**.	Go to step **2**.
2	**CHECK WARNING LIGHT.** Check whether the VDC warning light illuminates after driving for 1 minute or more at a speed of 10 km/h (6 MPH) or more.	Does the VDC warning light illuminate?	Go to step **3**.	VDC is normal. Perform the Clear Memory Mode. NOTE: DTC may be recorded if cranking is performed during driving.
3	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of ECM connector?	Repair the connector.	Go to step **4**.
4	**CHECK ECM.** Refer to the basic diagnostic procedure of ENGINE (DIAGNOSTICS).	Is ECM normal?	Go to step **5**.	Replace the ECM. <Ref. to FU(H4DO)-81, Engine Control Module (ECM).> <Ref. to FU(H6DO)-83, Engine Control Module (ECM).>
5	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.
6	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference.

Y: DTC C1423 DIFFERENT ECU SPECIFICATIONS

DTC DETECTING CONDITION:
A fault is detected if the vehicle type information obtained from ECM via communication is different from the parameter setting information.

TROUBLE SYMPTOM:
- ABS does not operate.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

NOTE:
When parameter selection for VDCCM is improper, this DTC may be memorized.

	Step	Check	Yes	No
1	**CHECK VDCCM&H/U IDENTIFICATION SYMBOL.** Check the identification symbol attached on the H/U. <Ref. to VDC-2, SPECIFICATION, General Description.>	Is the identification symbol correct?	Go to step **2**.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
2	**CHECK PARAMETER SELECTED IN VDCCM.** <Ref. to VDC-19, VDCCM PARAMETER CHECK, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Does the parameter registered in the VDCCM match the relevant vehicle?	CVT model: Go to step **3**. MT model: Go to step **5**.	Select and register the correct parameter. <Ref. to VDC(diag)-18, READ FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.>
3	**CHECK TCM SPECIFICATION.** Check the TCM specification.	Is the specification of TCM same as vehicle specification?	Go to step **4**.	Replace the TCM. <Ref. to CVT(TR580)-165, Transmission Control Module (TCM).> <Ref. to CVT(TR690)-141, Transmission Control Module (TCM).>
4	**CHECK CVT SYSTEM.** 1) Start the engine. 2) Check the DTC in CVT system.	Is DTC of CVT system displayed?	Perform the diagnosis according to DTC. <Ref. to CVT(diag)-45, List of Diagnostic Trouble Code (DTC).>	Go to step **5**.
5	**CHECK ECM SPECIFICATION.** Check the ECM specification.	Is the specification of ECM same as vehicle specification?	Go to step **6**.	Replace the ECM. <Ref. to FU(H4DO)-81, Engine Control Module (ECM).> <Ref. to FU(H6DO)-83, Engine Control Module (ECM).>

	Step	Check	Yes	No
6	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.
7	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference.

Z: DTC C1424 ECM FAILURE

DTC DETECTING CONDITION:

A fault is detected if malfunction judgment flag for the engine system is received from ECM for a predetermined time or more.

TROUBLE SYMPTOM:

- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

	Step	Check	Yes	No
1	**CHECK ECM.** 1) Start the engine. 2) Check DTC of ECM.	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to EN(H4DO)(diag)-105, List of Diagnostic Trouble Code (DTC).> <Ref. to EN(H6DO)(diag)-108, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **3**.
3	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference.

AA:DTC C1431 AT ABNORMAL

DTC DETECTING CONDITION:

A fault is detected if malfunction flag is received from TCM.

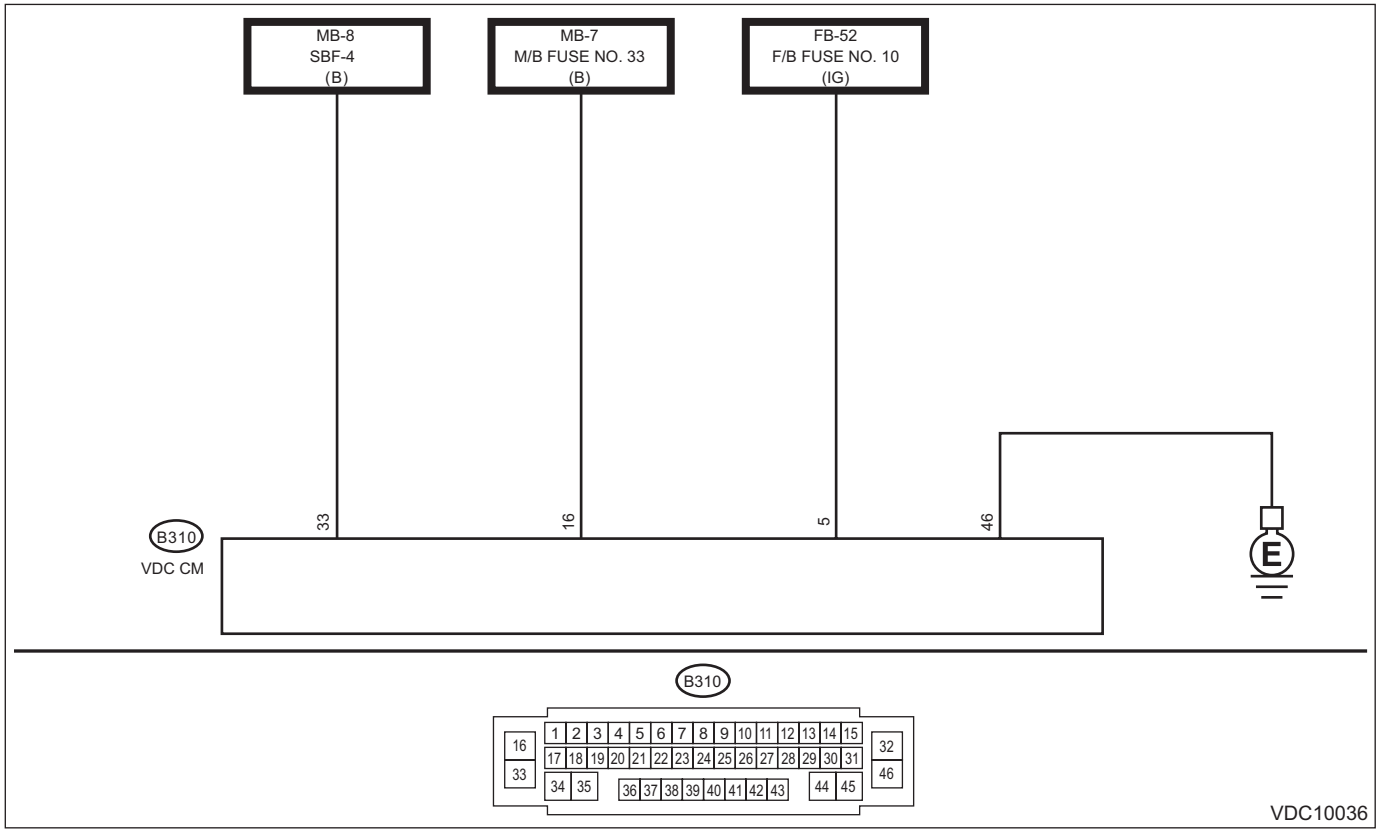
TROUBLE SYMPTOM:

- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

	Step	Check	Yes	No
1	**CHECK TCM.** 1) Start the engine. 2) Check DTC of TCM.	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to CVT(diag)-45, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) After turning the ignition switch to ON for approx. 10 seconds, turn it to OFF. 3) Turn the ignition switch to ON again. 4) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.> 6) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **3**.
3	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference.

AB:DTC C1511 VALVE RELAY

DTC DETECTING CONDITION:



A fault is detected if valve relay drive voltage failure is detected.

TROUBLE SYMPTOM:

- ABS does not operate.
- EBD does not operate.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

WIRING DIAGRAM:

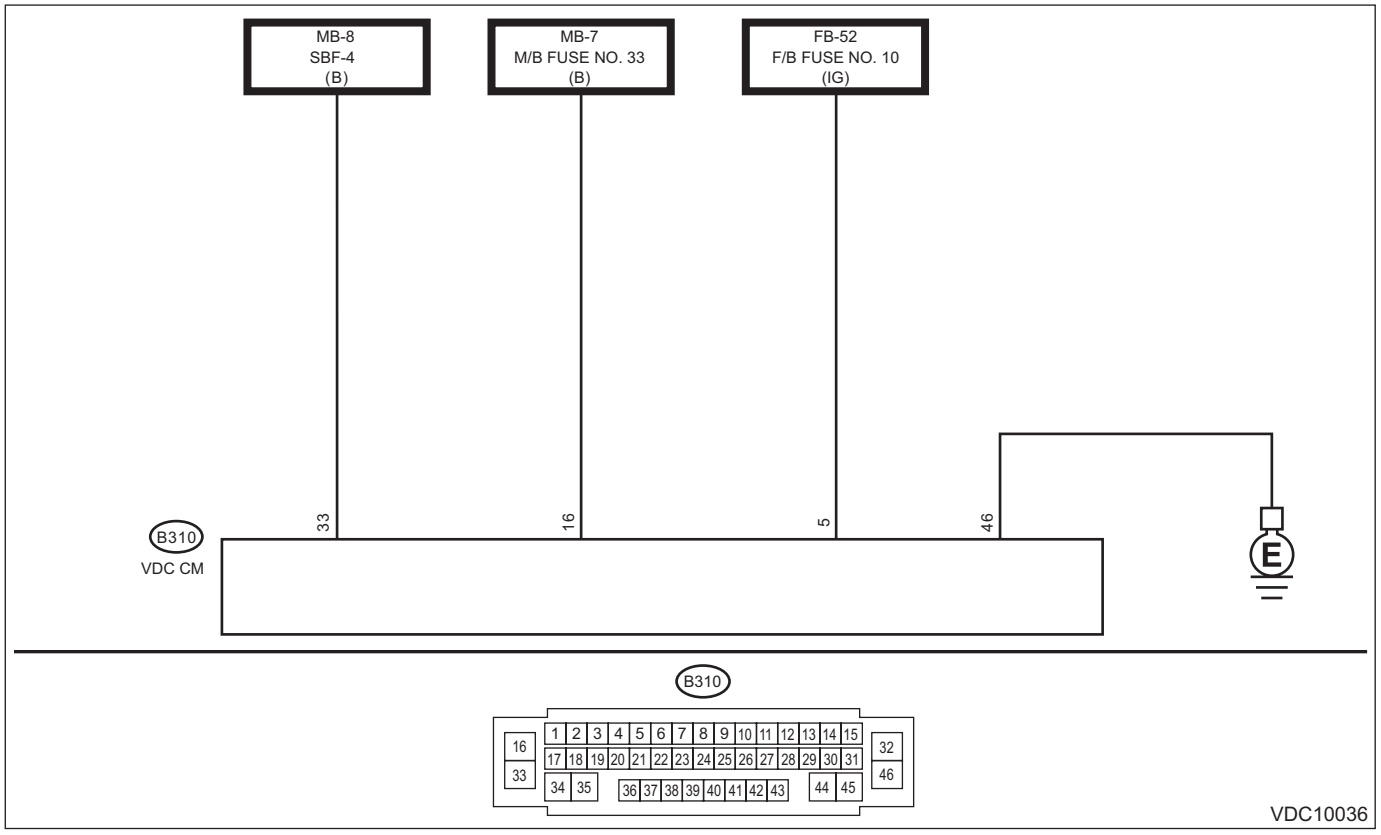
Vehicle dynamics control system <Ref. to WI-455, Vehicle Dynamics Control System.>

Step		Check	Yes	No
1	**CHECK VDCCM&H/U INPUT VOLTAGE.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Run the engine at idle. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 5 (+) — Chassis ground (–):*** ***(B310) No. 16 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2**.	Repair the power supply circuit.
2	**CHECK VDCCM&H/U INPUT VOLTAGE.** Calculate the voltage difference measured in step 1. A: (B310) No. 5 (+) — Chassis ground (–): B: (B310) No. 16 (+) — Chassis ground (–):	Is the voltage difference between A and B 2 V or more?	Repair the power supply circuit.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK VDCCM&H/U GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 46 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair the VDCCM&H/U ground harness.
4	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step **5**.
5	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.
6	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

AC:DTC C1521 MOTOR RELAY

DTC DETECTING CONDITION:



A fault is detected if the pump motor supply voltage becomes significantly low when the pump motor is not driven.

TROUBLE SYMPTOM:

- ABS does not operate sometimes.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

WIRING DIAGRAM:

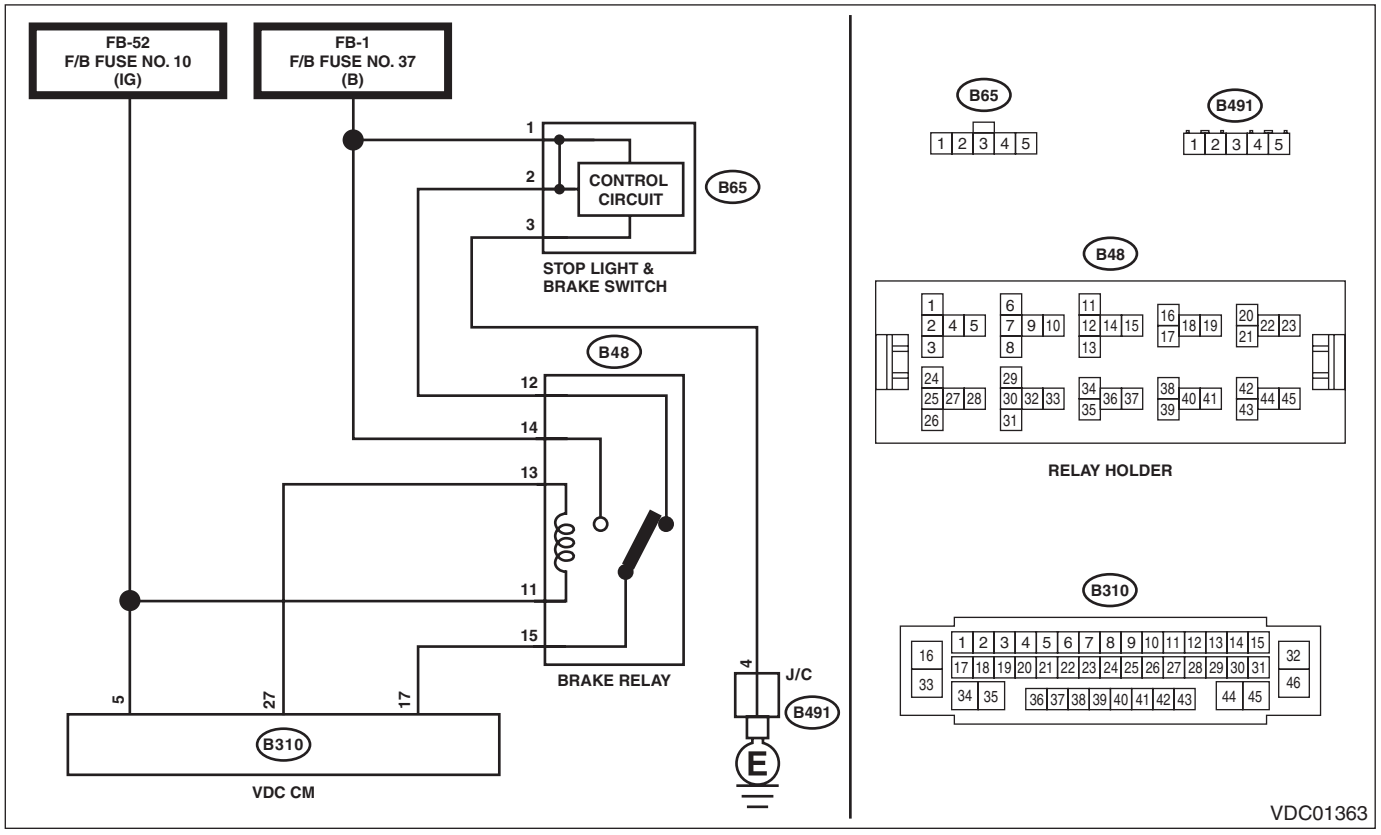
Vehicle dynamics control system <Ref. to WI-455, Vehicle Dynamics Control System.>

Step		Check	Yes	No
1	**CHECK VDCCM&H/U INPUT VOLTAGE.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Turn the ignition switch to ON. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 5 (+) — Chassis ground (–):*** ***(B310) No. 33 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2**.	Repair the VDCCM&H/U power supply circuit.
2	**CHECK VDCCM&H/U INPUT VOLTAGE.** Calculate the voltage difference measured in step 1. A: (B310) No. 5 (+) — Chassis ground (–): B: (B310) No. 33 (+) — Chassis ground (–):	Is the voltage difference between A and B 2 V or more?	Repair the power supply circuit.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK INSTALLATION OF VDCCM&H/U GROUND.**	Is the VDCCM&H/U ground terminal installation bolt installed correctly?	Go to step **4**.	Install the VDCCM&H/U ground terminal installation bolt correctly.
4	**CHECK VDCCM&H/U GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 46 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair the VDCCM&H/U ground harness.
5	**CHECK VDCCM&H/U MOTOR RELAY.** Measure the resistance between VDCCM&H/U terminals. ***Terminals*** ***No. 33 — No. 46:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
6	**CHECK POOR CONTACT OF CONNECTORS.** Turn the ignition switch to OFF.	Is there poor contact of connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step **7**.
7	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **8**.
8	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs. NOTE: Though the ABS warning light, and the VDC warning light & VDC indicator light may remain lit at this point, this is normal. Drive the vehicle at 40 km/h (25 MPH) or more in order to turn off the ABS warning light, and the VDC warning light & VDC indicator light. Be sure to drive the vehicle and check that the warning light goes off.

AD:DTC C1531 BLS OFF FAULT

DTC DETECTING CONDITION:



A fault is detected if stop light switch signal is OFF for a predetermined time or more with the pressure signal of the pressure sensor high.

TROUBLE SYMPTOM:

- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

WIRING DIAGRAM:

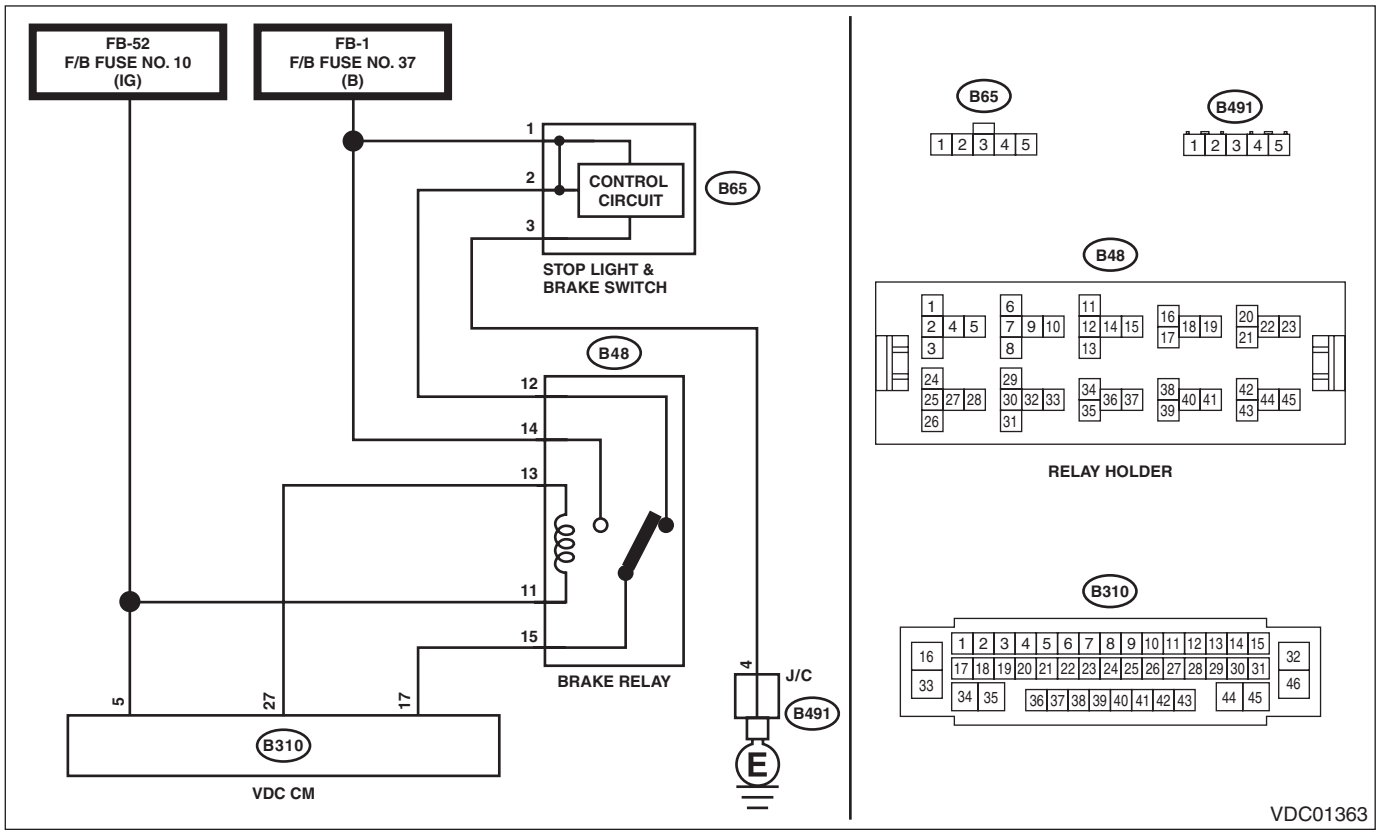
Vehicle dynamics control system <Ref. to WI-455, Vehicle Dynamics Control System.>

Step		Check	Yes	No
1	**CHECK STOP LIGHT.** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable from battery. 3) Remove the stop lights.	Are the stop lights OK?	Go to step **2**.	Replace the stop lights.
2	**CHECK STOP LIGHT SWITCH.** Check the stop light switch. <Ref. to BR-68, INSTALLATION, Stop Light Switch.>	Is the installation position of the stop light switch correct?	Go to step **3**.	Adjust the installation position of the stop light switch. <Ref. to BR-68, INSTALLATION, Stop Light Switch.>
3	**CHECK STOP LIGHT SWITCH.** 1) Disconnect the stop light switch connector. 2) Measure the resistance of stop light switch terminals. ***Connector & terminal (B65) No. 1 — No. 2:***	Is the resistance less than 1 Ω when the stop light switch is ON (when pedal is depressed)?	Go to step **4**.	Replace the stop light switch. <Ref. to BR-68, Stop Light Switch.>

	Step	Check	Yes	No
4	**CHECK BRAKE LIGHT RELAY.** Measure the resistance between brake light relay terminals. ***Connector & terminal*** ***(B48) No. 12 — No. 15:***	Is the resistance less than 1 Ω?	Go to step **5**.	Replace the brake light relay.
5	**CHECK VDCCM&H/U CONNECTOR.** Disconnect the connector from the VDCCM&H/U.	Is there poor contact or damage of the VDCCM&H/U connector?	Repair the VDCCM&H/U connector.	Go to step **6**.
6	**CHECK STOP LIGHT SWITCH CIRCUIT.** Measure the resistance of stop light switch circuit. ***Connector & terminal*** ***(B310) No. 17 — (B48) No. 15:*** ***(B65) No. 2 — (B48) No. 12:*** ***(B65) No. 1 — (F/B fuse) No. 37:***	Is the resistance less than 1 Ω?	Go to step **7**.	Repair the stop light switch circuit.
7	**CHECK STOP LIGHT SWITCH CIRCUIT.** 1) Connect all connectors. 2) Connect the ground cable to battery. 3) Turn the ignition switch to ON. 4) Measure the voltage between brake light relay and chassis ground. ***Connector & terminal*** ***(B48) No. 15 (+) — Chassis ground (–):***	Is the voltage 10 V or more when the stop light switch is ON (when pedal is depressed)?	Go to step **8**.	Repair the stop light switch circuit.
8	**CHECK VDCCM&H/U.** 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.> 3) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **9**.
9	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

AE:DTC C1532 BLS ON FAULT

DTC DETECTING CONDITION:



- A fault is detected if a change of the vehicle speed from high to low occurs for a predetermined number of times or more, while a change of the stop light switch from OFF to ON is not detected.
- A fault is detected if stop light switch ON status continues for long time while the vehicle speed is at the predetermined speed or higher.

TROUBLE SYMPTOM:

- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate sometimes. (Models with EyeSight)

NOTE:
If the pressure sensor is defective, this DTC may probably be stored in addition to pressure sensor malfunction.

WIRING DIAGRAM:
Vehicle dynamics control system <Ref. to WI-455, Vehicle Dynamics Control System.>

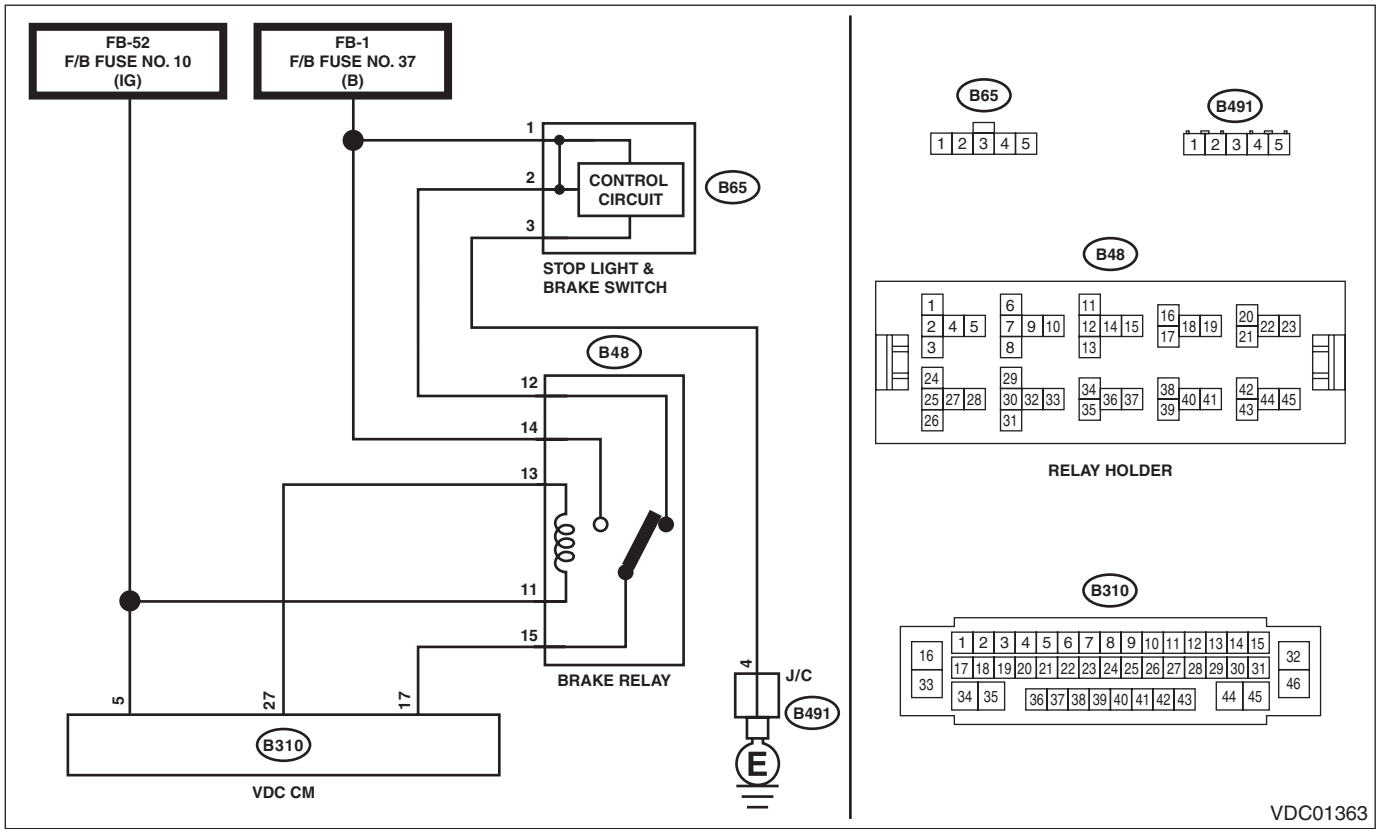
Step		Check	Yes	No
1	**INTERVIEW CUSTOMERS.** Make sure that the operation was performed in which accelerator pedal and brake pedal were depressed simultaneously (with depressing brake pedal with left foot).	Were the acceleration pedal and brake pedal depressed simultaneously?	System is normal. (DTC may be recorded if the brake pedal is always depressed while driving.)	Go to step **2**.
2	**CHECK BRAKE LIGHT RELAY.** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable from battery. 3) Measure the resistance between brake light relay terminals. ***Connector & terminal (B48) No. 14 — No. 15:***	Is the resistance less than 1 Ω?	Replace the brake light relay.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK VDCCM&H/U CONNECTOR.** Disconnect the connector from the VDCCM&H/U.	Is there poor contact or damage of the VDCCM&H/U connector?	Repair the VDCCM&H/U connector.	Go to step **4**.
4	**CHECK STOP LIGHT SWITCH CIRCUIT.** 1) Connect the ground cable to battery. 2) Turn the ignition switch to ON. 3) Measure the voltage between brake light relay and chassis ground. ***Connector & terminal*** ***(B48) No. 15 (+) — Chassis ground (–):***	Is the voltage 10 V or more when the stop light switch is OFF (when pedal is not depressed)?	Repair the stop light switch circuit.	Go to step **5**.
5	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.
6	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

AF:DTC C1571 BRAKE LAMP RELAY OFF MALFUNCTION

DTC DETECTING CONDITION:

A fault is detected if the brake light relay operation request were compared with the feedback signal and detected as follows:



- The feedback signal is OFF.
- The brake light relay operation request is ON.

TROUBLE SYMPTOM:

- EyeSight does not operate. (Models with EyeSight)
- Stop lights do not illuminate sometimes.

WIRING DIAGRAM:

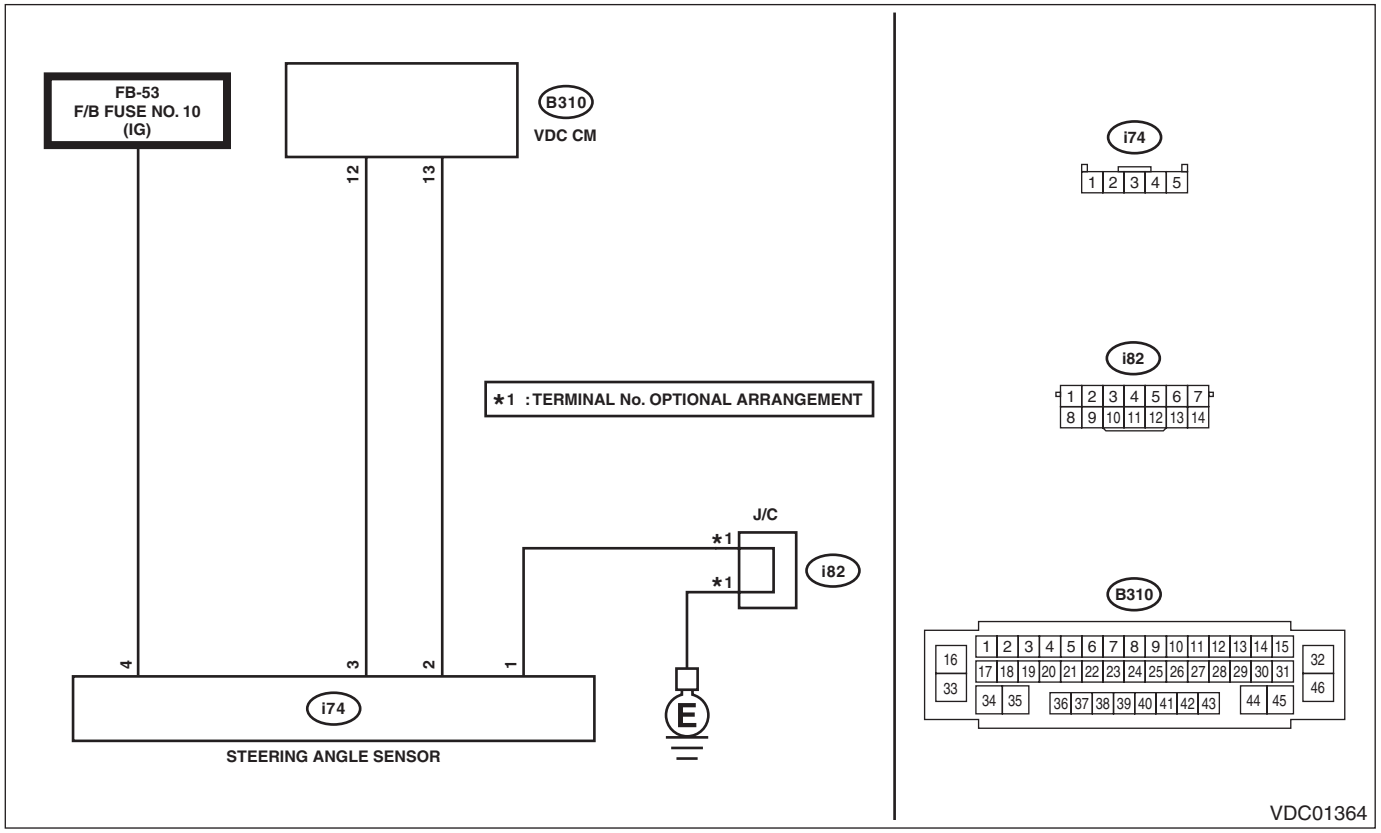
Vehicle dynamics control system <Ref. to WI-455, Vehicle Dynamics Control System.>

Step		Check	Yes	No
1	**CHECK DTC.** Check the DTC using Subaru Select Monitor.	Are any DTCs related to the stop light switch displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK BRAKE LIGHT RELAY.** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable from battery. 3) Remove the brake light relay. 4) Measure the resistance between brake light relay terminals (B48) No. 13 — (B48) No. 11 when the battery voltage is applied. ***Connector & terminal*** ***(B48) No. 14 — No. 15:***	Is the resistance less than 1 Ω?	Go to step **3**.	Replace the brake light relay.
3	**CHECK VDCCM&H/U CONNECTOR.** Disconnect the connector from the VDCCM&H/U.	Is there poor contact or damage of the VDCCM&H/U connector?	Repair the VDCCM&H/U connector.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK STOP LIGHT SWITCH CIRCUIT.** Measure the resistance between brake light relay and the fuse. ***Connector & terminal*** ***(B48) No. 14 — (F/B fuse) No. 37:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the stop light switch circuit.
5	**CHECK STOP LIGHT SWITCH CIRCUIT.** 1) Connect all connectors. 2) Connect the ground cable to battery. 3) Turn the ignition switch to ON. 4) Measure the voltage between brake light relay and chassis ground. ***Connector & terminal*** ***(B48) No. 14 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **6**.	Repair the stop light switch circuit.
6	**CHECK BRAKE LIGHT RELAY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Remove the brake light relay. 3) Turn the ignition switch to ON. 4) Measure the voltage between brake light relay and chassis ground. ***Connector & terminal*** ***(B48) No. 13 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the faulty brake light circuit.	Go to step **7**.
7	**CHECK VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Connect all connectors and relays. 3) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **8**.
8	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

AG:DTC C1711 STEERING ANGLE SENSOR ABNORMAL

DTC DETECTING CONDITION:



- A fault is detected if the sensor signal value is not correct.
- A fault is detected if the yaw rate sensor signal / lateral G sensor signal change while the sensor signal of steering angle sensor indicates a constant value.
- A fault is detected if the communication status of steering angle sensor is abnormal.

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Vehicle dynamics control system <Ref. to WI-455, Vehicle Dynamics Control System.>

Step		Check	Yes	No
1	**CHECK POWER SUPPLY FOR STEERING ANGLE SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from steering angle sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between steering angle sensor and chassis ground. ***Connector & terminal*** ***(i74) No. 4 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2**.	Repair the steering angle sensor power supply circuit.

	Step	Check	Yes	No
2	**CHECK GROUND CIRCUIT OF STEERING ANGLE SENSOR.** Measure the resistance between steering angle sensor and chassis ground. ***Connector & terminal*** ***(i74) No. 1 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair ground circuit in the steering angle sensor.
3	**CHECK STEERING ANGLE SENSOR HARNESS.** 1) Disconnect the connector from the VDCCM&H/U. 2) Measure the resistance between VDCCM&H/U and steering angel sensor. ***Connector & terminal*** ***(i74) No. 2 — (B310) No. 13:*** ***(i74) No. 3 — (B310) No. 12:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the harness between the steering angle sensor and VDCCM&H/U.
4	**CHECK GROUND SHORT CIRCUIT OF STEERING ANGLE SENSOR HARNESS.** Measure the resistance between steering angle sensor and chassis ground. ***Connector & terminal*** ***(i74) No. 2 — Chassis ground:*** ***(i74) No. 3 — Chassis ground:***	Is the resistance 10 Ω or more?	Go to step **5**.	Repair the harness between the steering angle sensor and VDCCM&H/U.
5	**CHECK STEERING WHEEL.** 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Check the steering wheel for deviation from center.	Is the deviation from the center of steering wheel less than 5°?	Go to step **6**.	Perform the centering adjustment of steering wheel, and perform the VDC sensor midpoint setting mode. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
6	**CHECK OUTPUT OF STEERING ANGLE SENSOR USING SUBARU SELECT MONITOR.** 1) Adjust steering wheel to the center position. 2) Connect Subaru Select Monitor, and select “Current Data Display & Save”. 3) Read the «Steering Angle Sensor» displayed on display.	Is the indicated reading of the steering angle sensor –10° — 10°?	Perform the VDC sensor midpoint setting mode. Go to step **7**. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Check the installation of the steering wheel and steering angle sensor.
7	**CHECK STEERING ANGLE SENSOR USING SUBARU SELECT MONITOR.** 1) Turn the ignition switch to OFF. 2) Connect all connectors. 3) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.> 5) Read the DTC.	Is the same DTC displayed?	Go to step **8**.	Go to step **9**.

	Step	Check	Yes	No
8	**CHECK VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Replace the steering angle sensor. <Ref. to VDC-28, Steering Angle Sensor.> 3) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.> 5) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **10**.
9	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.
10	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Original steering angle sensor malfunction

AH:DTC C1721 YAW RATE SENSOR ABNORMAL

DTC DETECTING CONDITION:

- A fault is detected if the sensor signal value is not correct.
- A fault is detected if the steering angle sensor signal / lateral G sensor signal change while the yaw rate sensor signal indicates a constant value.
- A fault is detected if the communication status of yaw rate sensor is abnormal.

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

	Step	Check	Yes	No
1	**INTERVIEW CUSTOMERS.** Check if the vehicle ran the road with banks or sandy surface (which does not mean a dirt road).	Did the vehicle run the road with banks or sandy surface (which does not mean a dirt road)?	VDCCM&H/U may record DTC when the vehicle ran the road with banks or sandy surface (which does not mean a dirt road).	Go to step **2**.
2	**CHECK INSTALLATION OF VDCCM&H/U.**	Is VDCCM&H/U installed properly without being tilted? Is the bracket deformation-free? Are the VDCCM&H/U installation bolts installed without missing or getting loose?	Go to step **3**.	Repair the defective part. Go to step **3**. • Install VDCCM&H/U properly. • Replace the bracket if faulty. • Tighten the VDCCM&H/U installation bolt. <Ref. to VDC-5, VDC CONTROL MODULE AND HYDRAULIC CONTROL UNIT (VDCCM&H/U), COMPONENT, General Description.>
3	**CHECK OUTPUT OF YAW RATE & G SENSOR WITH SUBARU SELECT MONITOR.** 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Select “Current Data Display & Save” on the Subaru Select Monitor. 4) Read the «Yaw Rate Sensor» displayed on display.	Is the reading indicated on monitor display –4 — 4 deg/s?	Go to step **4**.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
4	**CHECK OUTPUT OF STEERING ANGLE SENSOR WITH SUBARU SELECT MONITOR.** 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Select “Current Data Display & Save” on the Subaru Select Monitor. 4) Read the «Steering Angle Sensor» displayed on display.	Is the reading indicated on monitor display –10 — 10°?	Go to step **5**.	Perform the centering adjustment of steering wheel.

	Step	Check	Yes	No
5	**CHECK VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.
6	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference.

AI: DTC C1732 LATERAL G SENSOR ABNORMAL

DTC DETECTING CONDITION:

- A fault is detected if the sensor signal value is not correct.
- A fault is detected if the steering angle sensor signal / yaw rate sensor signal change while the lateral G sensor signal indicates a constant value.
- A fault is detected if the communication status of lateral G sensor is abnormal.

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

	Step	Check	Yes	No
1	**CHECK INSTALLATION OF VDCCM&H/U.**	Is VDCCM&H/U installed properly without being tilted? Is the bracket deformation-free? Are the VDCCM&H/U installation bolts installed without missing or getting loose?	Go to step **2**.	Repair the defective part. Go to step **2**. • Install VDCCM&H/U properly. • Replace the bracket if faulty. • Tighten the VDCCM&H/U installation bolt. <Ref. to VDC-5, VDC CONTROL MODULE AND HYDRAULIC CONTROL UNIT (VDCCM&H/U), COMPONENT, General Description.>
2	**CHECK OUTPUT OF STEERING ANGLE SENSOR USING SUBARU SELECT MONITOR.** 1) Park the vehicle straight on a level surface. 2) Connect Subaru Select Monitor, and select “Current Data Display & Save”. 3) Read the «Steering Angle Sensor» displayed on display.	Is the indicated reading of the steering angle sensor on the monitor display –10° — 10°?	Go to step **3**.	Check the installation of steering angle sensor.
3	**CHECK OUTPUT OF LATERAL G SENSOR AND LONGITUDINAL G SENSOR WITH SUBARU SELECT MONITOR.** 1) Park the vehicle straight on a level surface. 2) Connect Subaru Select Monitor, and select “Current Data Display & Save”. 3) Read the «Lateral G Sensor»«Longitudinal G Sensor» displayed on display.	Is the indicated reading of the lateral G sensor and longitudinal G sensor on the monitor display –2 — 2 m/s^2?	Go to step **4**.	Recheck from step 1, and if the problem is not solved, go to next. Go to step **7**.
4	**SET 0 POINT OF LATERAL G SENSOR AND LONGITUDINAL G SENSOR WITH SUBARU SELECT MONITOR.** 1) Select “Work Support” on Subaru Select Monitor. 2) Perform the VDC sensor midpoint setting mode. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Is 0 point setting successful?	Go to step **5**.	Recheck from step 1, and when the 0 point setting is not possible, replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

	Step	Check	Yes	No
5	**PERFORM DRIVING TEST.** <Ref. to VDC(diag)-23, Inspection Mode.>	Does the ABS warning light or VDC warning light illuminate during driving? Does ABS or VDC operate abnormally?	Recheck from step 1, and when the warning lights illuminate or improperly operate, replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.
6	**CHECK OUTPUT OF LATERAL G SENSOR AND LONGITUDINAL G SENSOR WITH SUBARU SELECT MONITOR.** 1) Park the vehicle on a level surface. 2) Connect Subaru Select Monitor, and select "Current Data Display & Save". 3) Read the «Lateral G Sensor»«Longitudinal G Sensor» displayed on display.	Is the indicated reading of the lateral G sensor and longitudinal G sensor on the monitor display –1.5 — 1.5 m/s^2?	It results from a temporary noise interference.	Recheck from step 1, and if the problem is not solved, replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
7	**CHECK OUTPUT OF LATERAL G SENSOR AND LONGITUDINAL G SENSOR WITH SUBARU SELECT MONITOR.** 1) Remove the VDCCM&H/U installation bolt and bracket. 2) Keep VDCCM&H/U in a horizontal position. 3) Connect Subaru Select Monitor, and select "Current Data Display & Save". 4) Read the «Lateral G Sensor»«Longitudinal G Sensor» displayed on display.	When the VDCCM&H/U is in a horizontal position, is the indicated reading of the lateral G sensor and longitudinal G sensor on the monitor display –1.5 — 1.5 m/s^2?	Check the bracket and brake pipe, and install VDCCM&H/U in a horizontal position to the vehicle.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

AJ:DTC C1733 LONGITUDINAL G SENSOR ABNORMAL

DTC DETECTING CONDITION:

- A fault is detected if the communication status of longitudinal G sensor is abnormal.
- A fault is detected if malfunction judgment is generated by self-diagnosis test of the longitudinal G sensor.
- A fault is detected if the longitudinal G sensor signal is out of normal range.
- A fault is detected if the longitudinal G sensor compensation value is out of normal range.

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

NOTE:
For the diagnostic procedure, refer to "DTC C1732 LATERAL G SENSOR ABNORMAL". <Ref. to VDC(diag)-76, DTC C1732 LATERAL G SENSOR ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AK:DTC C1741 PRESSURE SENSOR

DTC DETECTING CONDITION:

- A fault is detected if two fluid pressure signals in master cylinder are out of normal range.
- A fault is detected if the condition that supply voltage for the fluid pressure sensor is out of normal judgment range continues for predetermined time.
- A fault is detected if the communication status of fluid pressure sensor is abnormal.
- A fault is detected if the data of fluid pressure sensor is abnormal.
- A fault is detected if the offset value of fluid pressure sensor signal exceeds a predetermined judgment value.

TROUBLE SYMPTOM:

- VDC does not operate sometimes.
- The hill hold function may not be operable.

	Step	Check	Yes	No
1	**CHECK STOP LIGHT SWITCH CIRCUIT.** Check stop light switch open circuit.	Is the stop light switch circuit OK?	Go to step **2**.	Repair the stop light switch circuit. NOTE: If there is malfunction in the stop light circuit, DTC may be recorded in the memory.
2	**CHECK OUTPUT OF PRESSURE SENSOR WITH SUBARU SELECT MONITOR.** 1) Select “Current Data Display & Save” on the Subaru Select Monitor. <Ref. to VDC(diag)-16, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 2) Read the «Master Cylinder Pressure Sensor» displayed on display.	With the brake pedal released, is the displayed value 0 — 11 bar?	Go to step **3**.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
3	**CHECK OUTPUT OF PRESSURE SENSOR WITH SUBARU SELECT MONITOR.** 1) Select “Current Data Display & Save” on the Subaru Select Monitor. <Ref. to VDC(diag)-16, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 2) Read the «Master Cylinder Pressure Sensor» displayed on display.	When the brake pedal is operated, does the master cylinder pressure sensor output value on the display change in accordance with the brake pedal operation?	Go to step **4**.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
4	**CHECK VDCCM&H/U.** 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.> 3) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **5**.
5	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference.

AL:DTC C1742 W/C PRESSURE SENSOR

DTC DETECTING CONDITION:

- A fault is detected if the condition that supply voltage for the fluid pressure sensor is out of normal judgment range continues for predetermined time.
- A fault is detected if the communication status of fluid pressure sensor is abnormal.
- A fault is detected if the data of fluid pressure sensor is abnormal.
- A fault is detected if the offset value of fluid pressure sensor signal exceeds a predetermined judgment value.
- A fault is detected if a difference between fluid pressures for the wheels exceeds a predetermined judgment value.
- A fault is detected if master cylinder pressure and fluid pressures for the wheels exceed predetermined judgment values.

TROUBLE SYMPTOM:

EyeSight does not operate. (Models with EyeSight)

	Step	Check	Yes	No
1	**CHECK STOP LIGHT SWITCH CIRCUIT.**	Is the stop light switch circuit OK?	Go to step **2**.	Repair the stop light switch circuit.
2	**CHECK OUTPUT OF PRESSURE SENSOR WITH SUBARU SELECT MONITOR.** 1) Select “Current Data Display & Save” in Subaru Select Monitor. 2) Read the «FL wheel cylinder pressure sensor output» and «FR wheel cylinder pressure sensor output» displayed on the screen.	With the brake pedal released, is the displayed value 0 — 11 bar?	Go to step **3**.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
3	**CHECK OUTPUT OF PRESSURE SENSOR WITH SUBARU SELECT MONITOR.** 1) Select “Current Data Display & Save” in Subaru Select Monitor. 2) Read the «FL wheel cylinder pressure sensor output» and «FR wheel cylinder pressure sensor output» displayed on the screen.	When the brake pedal is operated, do the FL wheel cylinder output value and FR wheel cylinder output value displayed on the screen change in accordance with the brake pedal? In addition, is the difference between FR and FL wheel cylinder output values less than 10 bar?	Go to step **4**.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
4	**CHECK VDCCM&H/U.** 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **5**.
5	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

AM:DTC C1811 SYSTEM FAILURE

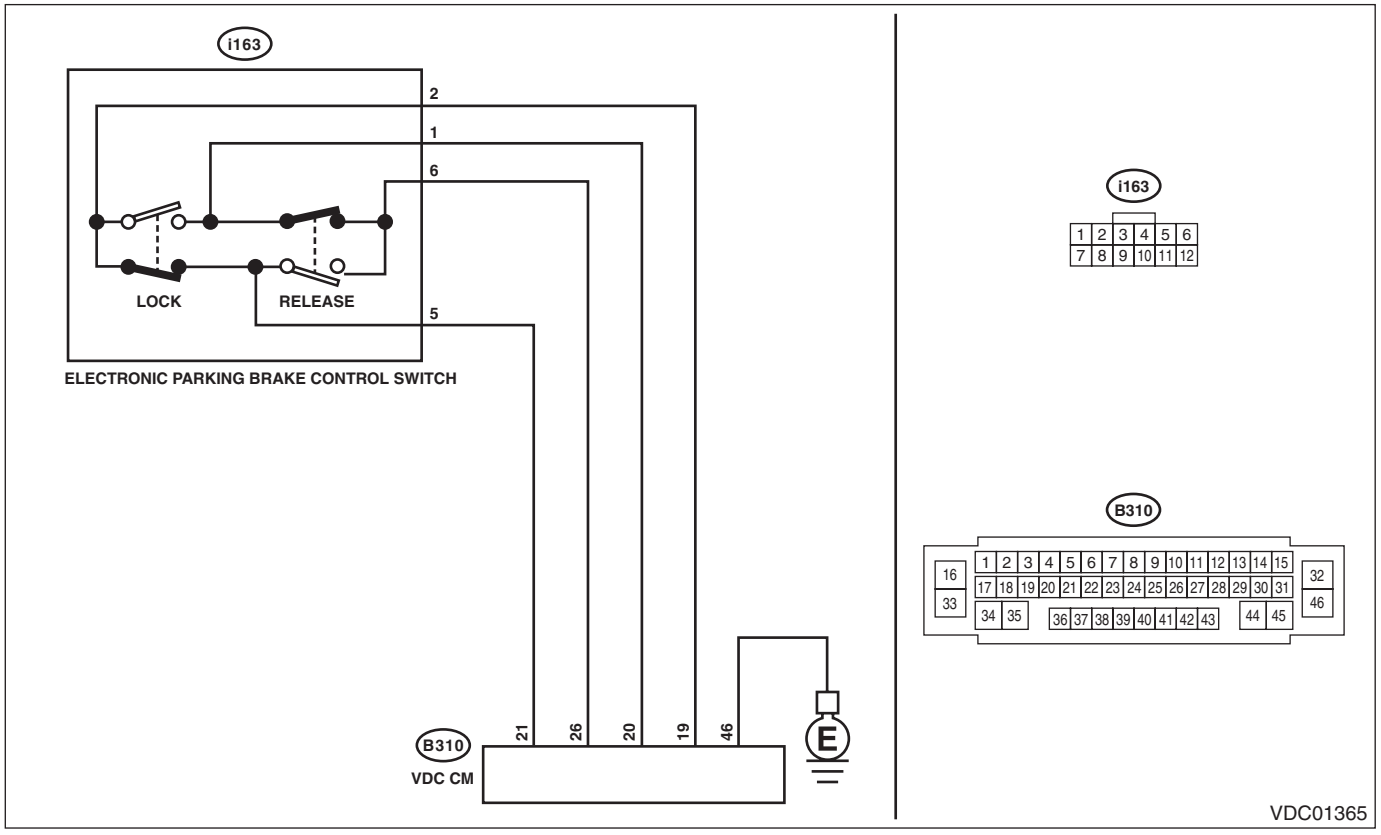
DTC DETECTING CONDITION:
A fault is detected if VDC control status continues for 15 seconds or more.
TROUBLE SYMPTOM:
- ABS does not operate.
- VDC does not operate.
- Hill hold does not function.
- EyeSight does not operate. (Models with EyeSight)

	Step	Check	Yes	No
1	**CHECK INSTALLATION OF VDCCM&H/U.**	Is VDCCM&H/U installed properly without being tilted? Is the bracket deformation-free? Are the VDCCM&H/U installation bolts installed without missing or getting loose?	Go to step **2**.	Repair the defective part. Go to step **2**. • Install VDCCM&H/U properly. • Replace the bracket if faulty. • Tighten the VDCCM&H/U installation bolt. <Ref. to VDC-5, VDC CONTROL MODULE AND HYDRAULIC CONTROL UNIT (VDCCM&H/U), COMPONENT, General Description.>
2	**CHECK STEERING WHEEL.** 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Check the steering wheel for deviation from center.	Is the deviation from the center of steering wheel less than 5°?	Go to step **3**.	Perform the centering adjustment of steering wheel, and perform the VDC sensor midpoint setting mode. Go to step **3**. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
3	**CHECK OUTPUT OF STEERING ANGLE SENSOR USING SUBARU SELECT MONITOR.** 1) Adjust steering wheel to the center position. 2) Connect Subaru Select Monitor, and select “Current Data Display & Save”. 3) Read the «Steering Angle Sensor» displayed on display.	Is the indicated reading of the steering angle sensor –10° — 10°?	Go to step **4**.	Check the installation of the steering wheel and steering angle sensor, and replace the parts if necessary.

	Step	Check	Yes	No
4	**CHECK OUTPUT OF SENSORS USING SUBARU SELECT MONITOR.** 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Connect Subaru Select Monitor, and select "Current Data Display & Save". 4) Read output of sensors displayed on display.	Are the indicated reading of sensor outputs following values? Lateral G sensor: –2 — 2 m/s^2 Longitudinal G sensor: –2 — 2 m/s^2 Yaw rate sensor: –4 — 4 deg/s	Go to step **5**.	Recheck from step 1, and if the problem is not solved, go to next. Go to step **8**.
5	**SET 0 POINT SETTING OF LONGITUDINAL G SENSOR USING SUBARU SELECT MONITOR.** 1) Select "Work Support" on Subaru Select Monitor. 2) Perform the VDC sensor midpoint setting mode. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Is 0 point setting successful?	Go to step **6**.	Recheck from step 1, and when the 0 point setting is not possible, replace the VDCCM&H/U and steering angle sensor. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> <Ref. to VDC-28, Steering Angle Sensor.>
6	**PERFORM DRIVING TEST.** <Ref. to VDC(diag)-23, Inspection Mode.>	Does the ABS warning light or VDC warning light illuminate during driving? Does ABS or VDC operate abnormally?	Recheck from step 1, and when the warning lights illuminate or improperly operate, replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.
7	**CHECK OUTPUT OF SENSORS USING SUBARU SELECT MONITOR.** 1) Park the vehicle on a level surface. 2) Connect Subaru Select Monitor, and select "Current Data Display & Save". 3) Read output of sensors displayed on display.	Are the indicated reading of sensor outputs following values? Lateral G sensor: –2 — 2 m/s^2 Longitudinal G sensor: –2 — 2 m/s^2 Yaw rate sensor: –4 — 4 deg/s	It results from a temporary noise interference.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
8	**CHECK OUTPUT OF SENSORS USING SUBARU SELECT MONITOR.** 1) Remove the VDCCM&H/U installation bolt and bracket. 2) Keep VDCCM&H/U in a horizontal position. 3) Connect Subaru Select Monitor, and select "Current Data Display & Save". 4) Read output of sensors displayed on display.	When VDCCM&H/U is in a horizontal position, are the indicated reading of sensor outputs following values? Lateral G sensor: –1.5 — 1.5 m/s^2 Longitudinal G sensor: –1.5 — 1.5 m/s^2 Yaw rate sensor: –4 — 4 deg/s	Check the bracket and brake pipe, and install VDCCM&H/U in a horizontal position to the vehicle.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

AN:DTC C1921 PARKING POSITION SWITCH

DTC DETECTING CONDITION:



- A fault is detected if the switch was positioned at lock or release continuously for 90 seconds while the vehicle is stopped.
- A fault is detected if an irregular switch condition continues for a predetermined period of time immediately after the switch position is changed. A fault is also detected if the switch condition is not confirmed afterwards.
- A fault is detected if the switch harness is open or shorted.

TROUBLE SYMPTOM:

Parking brake system does not operate.

WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Parking brake / brake fluid level warning light system <Ref. to WI-353, Parking Brake / Brake Fluid Level Warning Light System.>

	Step	Check	Yes	No
1	**CHECK OPERATION OF ELECTRONIC PARKING BRAKE.** Operate the parking brake switch.	Does the electronic parking brake operate properly?	Ask the customer whether the switch operation was performed normally. If it was normal, temporary poor contact is the cause.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from the VDCCM&H/U and parking brake switch. 3) Measure the resistance between VDCCM&H/U and parking brake switch connector. ***Connector & terminal*** ***(B310) No. 19 — (i163) No. 2:*** ***(B310) No. 20 — (i163) No. 1:*** ***(B310) No. 21 — (i163) No. 5:*** ***(B310) No. 26 — (i163) No. 6:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair harness and connector between VDCCM&H/U and parking brake switch connector.
3	**CHECK HARNESS.** Measure the resistance between the parking brake switch connector and chassis ground. ***Connector & terminal*** ***(i163) No. 2 — Chassis ground:*** ***(i163) No. 1 — Chassis ground:*** ***(i163) No. 5 — Chassis ground:*** ***(i163) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair ground short of harness between VDCCM&H/U and parking brake switch connector.
4	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between parking brake switch connector and chassis ground. ***Connector & terminal*** ***(i163) No. 2 (+) — Chassis ground (–):*** ***(i163) No. 1 (+) — Chassis ground (–):*** ***(i163) No. 5 (+) — Chassis ground (–):*** ***(i163) No. 6 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair short to power supply of harness between VDCCM&H/U and parking brake switch connector.
5	**CHECK PARKING BRAKE SWITCH.** Check the parking brake switch. <Ref. to PB-13, INSPECTION, Parking Brake Switch.>	Is the parking brake switch normal?	Go to step **6**.	Replace the parking brake switch. <Ref. to PB-13, Parking Brake Switch.>
6	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.
7	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

AO:DTC C1922 HILL HOLD SWITCH CIRCUIT

DTC DETECTING CONDITION:
A fault is detected if the hill hold switch is pressed and held for a long period of time.
TROUBLE SYMPTOM:
Hill hold function cannot be set.
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Parking brake / brake fluid level warning light system <Ref. to WI-353, Parking Brake / Brake Fluid Level Warning Light System.>

Step		Check	Yes	No
1	**CHECK HILL HOLD SWITCH POWER SUPPLY.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from hill hold switch. 3) Turn the ignition switch to ON. 4) Measure the voltage between hill hold switch connector and chassis ground. ***Connector & terminal*** ***(i156) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2**.	Repair the power supply circuit of hill hold switch.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Measure the resistance between VDCCM&H/U and hill hold switch connector. ***Connector & terminal*** ***(i156) No. 4 — (B310) No. 6:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair harness and connector between VDCCM&H/U and hill hold switch connector.
3	**CHECK HARNESS.** Measure the resistance between hill hold switch connector and chassis ground. ***Connector & terminal*** ***(i156) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair ground short of harness between VDCCM&H/U and hill hold switch connector.

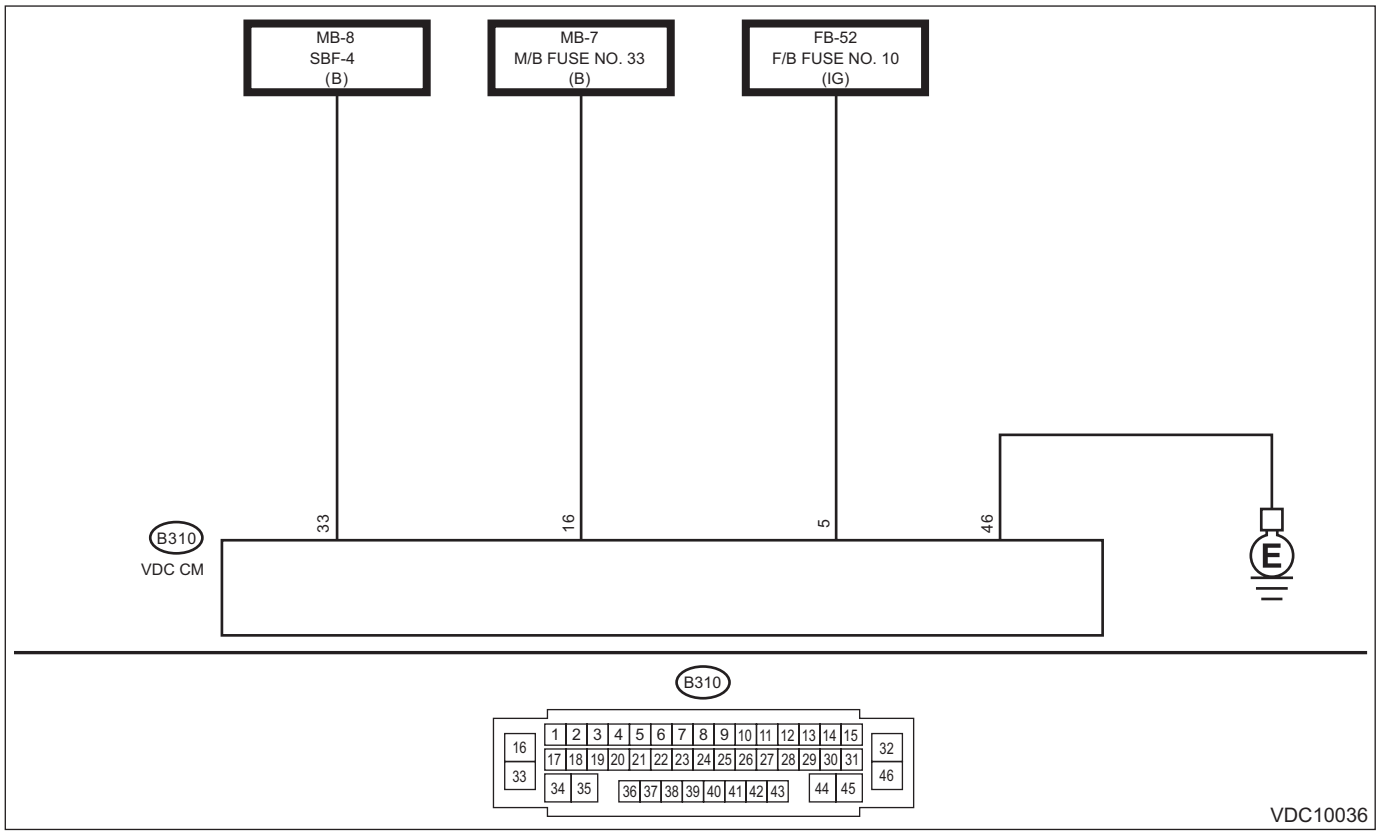
	Step	Check	Yes	No
4	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between hill hold switch connector and chassis ground. ***Connector & terminal*** ***(i156) No. 4 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair short to power supply of harness between VDCCM&H/U and hill hold switch connector.
5	**CHECK HILL HOLD SWITCH.** Check the hill hold switch. <Ref. to VDC-41, INSPECTION, Hill Hold Switch.>	Is the hill hold switch normal?	Go to step **6**.	Replace the hill hold switch. <Ref. to VDC-40, Hill Hold Switch.>
6	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.
7	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

AP:DTC C1935 IGNITION SWITCH CIRCUIT

DTC DETECTING CONDITION:
A fault is detected after a predetermined period of time, if the hardware IGN signal and CAN IGN signal were compared and did not match.

TROUBLE SYMPTOM:
Brake warning light illuminates.

WIRING DIAGRAM:
Parking brake / brake fluid level warning light system <Ref. to WI-353, Parking Brake / Brake Fluid Level Warning Light System.>

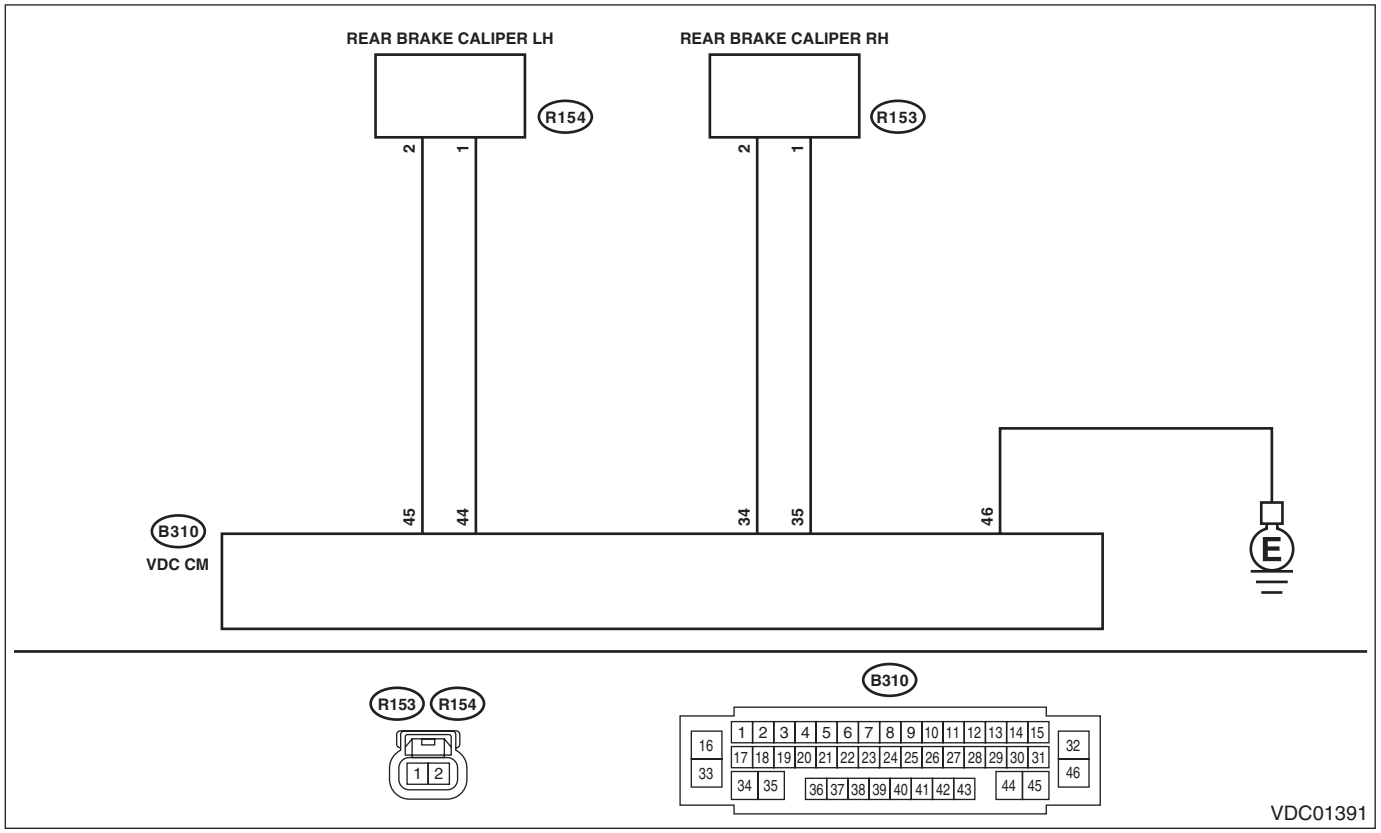


Step		Check	Yes	No
1	**CHECK VDCCM&H/U INPUT VOLTAGE.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Turn the ignition switch to ON. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 5 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2**.	Repair the power supply circuit.
2	**CHECK VDCCM&H/U GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 46 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair the VDCCM&H/U ground circuit.
3	**CHECK INPUT VOLTAGE OF BODY INTEGRATED UNIT.** 1) Select “Current Data Display & Save” for body control system on Subaru Select Monitor. <Ref. to BC(diag)-20, Read Current Data.> 2) Read the «Voltage of IGN» displayed on the screen.	Is the voltage 10 — 15 V?	Go to step **4**.	Perform the diagnosis for the body control system. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>
4	**CHECK LAN SYSTEM.** Check the DTC in LAN system. <Ref. to LAN(diag)-29, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC of LAN system displayed?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-79, List of Diagnostic Trouble Code (DTC).>	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of power supply circuit, ground circuit and VDCCM&H/U connector?	Repair the connector.	Go to step **6**.
6	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.
7	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

AQ:DTC C1942 POWER SUPPLY VOLTAGE FAILURE

DTC DETECTING CONDITION:
A fault is detected if low voltage is detected during the electronic parking brake operation.
TROUBLE SYMPTOM:
Parking brake system does not operate sometimes.
WIRING DIAGRAM:
Vehicle dynamics control system <Ref. to WI-455, Vehicle Dynamics Control System.>



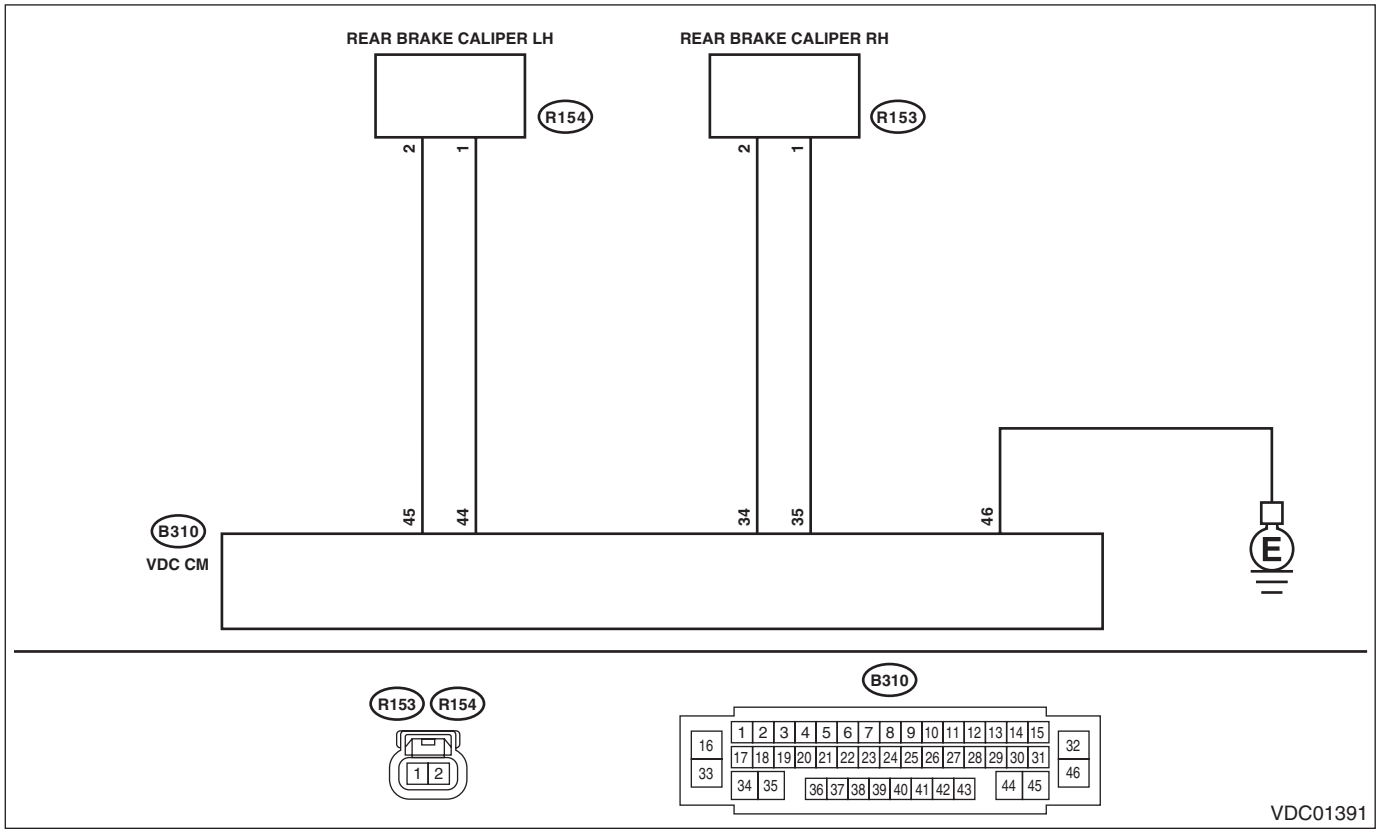
Step		Check	Yes	No
1	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Check the battery voltage.	Is the voltage 10 — 15 V?	Go to step **2**.	Charge or replace the battery.
2	**CHECK VDCCM&H/U GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 46 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair the VDCCM&H/U ground circuit.
3	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of power supply circuit, ground circuit and VDCCM&H/U connector?	Repair the connector.	Go to step **4**.
4	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **5**.

Step		Check	Yes	No
5	CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs. NOTE: This DTC may be stored if the electronic parking brake is operated during low battery voltage, cranking, or high electric load. Therefore, check the freeze frame data.

AR:DTC C1951 ACTUATOR(ABNORMAL)

DTC DETECTING CONDITION:
A fault is detected if the electronic parking brake operation status does not match the operation request.
TROUBLE SYMPTOM:
Parking brake system does not operate.
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Parking brake / brake fluid level warning light system <Ref. to WI-353, Parking Brake / Brake Fluid Level Warning Light System.>



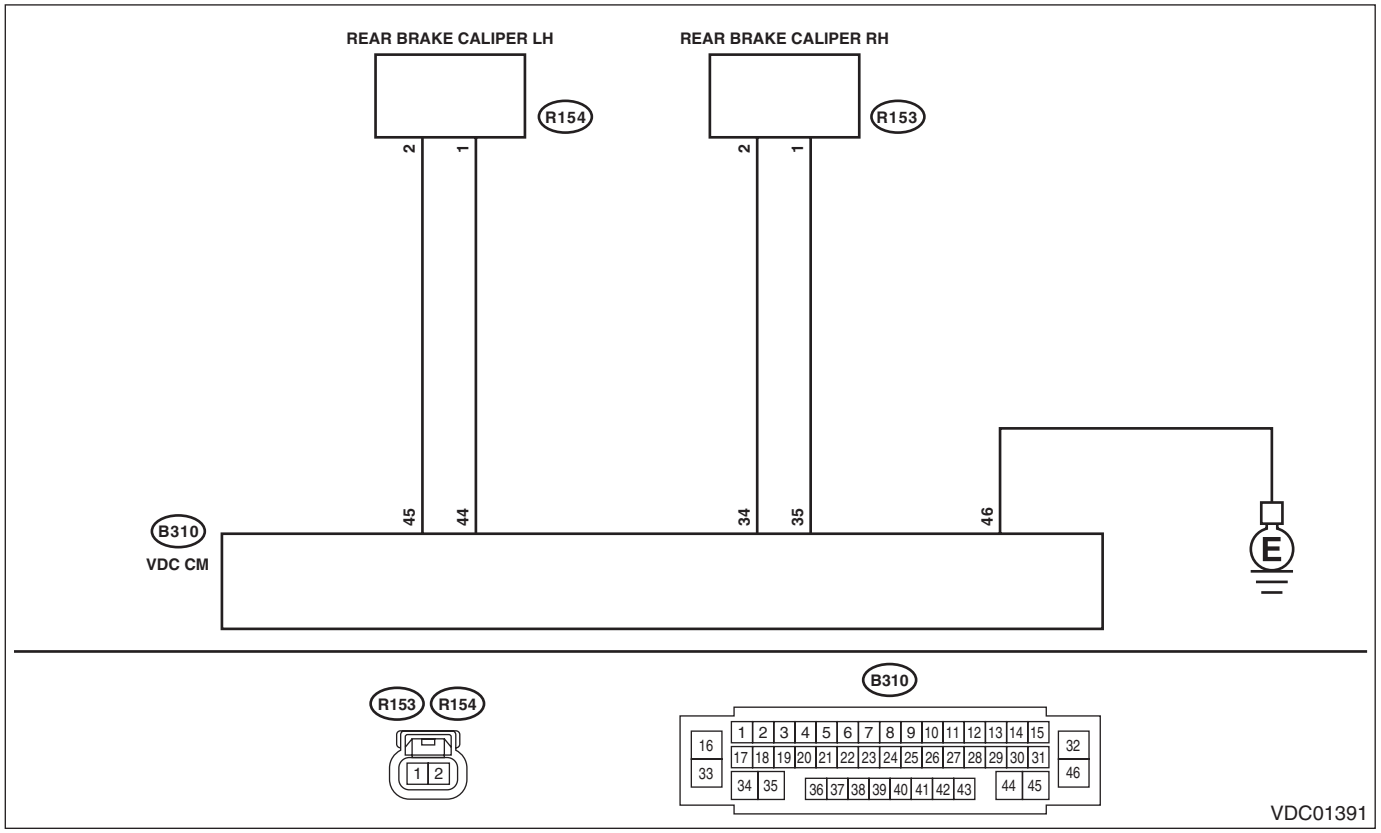
Step		Check	Yes	No
1	**CHECK BATTERY.** 1) Turn the ignition switch to ON. 2) Check the battery voltage.	Is the voltage 10 — 15 V?	Go to step **2**.	Charge or replace the battery. Check the generator circuit.
2	**CHECK VDCCM&H/U GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 46 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair the VDCCM&H/U ground circuit.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from rear brake caliper. 3) Measure the resistance between VDCCM&H/U and rear brake caliper connector. ***Connector & terminal*** ***(B310) No. 34 — (R153) No. 2:*** ***(B310) No. 35 — (R153) No. 1:*** ***(B310) No. 44 — (R154) No. 1:*** ***(B310) No. 45 — (R154) No. 2:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair harness and connector between VDCCM&H/U and rear brake caliper connector.
4	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of power supply circuit, ground circuit and VDCCM&H/U connector?	Repair the connector.	Go to step **5**.
5	**CHECK DRIVER'S DOOR SWITCH.** Check the driver's door switch. <Ref. to SL-21, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>	Is the driver's door switch normal?	Go to step **6**.	Repair the driver's door switch or circuit.
6	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 3) Set the hill hold function to ON.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.
7	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs. NOTE: This DTC may be stored, if the driver's door is opened while the electronic parking brake is operating. Therefore, check the freeze frame data.

AS:DTC C1954 RH ACTUATOR(ABNORMAL)

DTC DETECTING CONDITION:
A fault is detected if mechanical sticking or abnormal operation of the rear brake caliper RH is detected.
TROUBLE SYMPTOM:
Parking brake system does not operate.
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Parking brake / brake fluid level warning light system <Ref. to WI-353, Parking Brake / Brake Fluid Level Warning Light System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from the VDCCM&H/U and rear brake caliper RH. 3) Measure the resistance between VDCCM&H/U and rear brake caliper RH connector. ***Connector & terminal*** ***(B310) No. 34 — (R153) No. 2:*** ***(B310) No. 35 — (R153) No. 1:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair harness and connector between VDCCM&H/U and rear brake caliper RH connector.
2	**CHECK HARNESS.** Measure the resistance between the rear brake caliper RH connector and chassis ground. ***Connector & terminal*** ***(R153) No. 1 — Chassis ground:*** ***(R153) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair ground short of harness between VDCCM&H/U and rear brake caliper RH connector.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between the rear brake caliper RH connector and chassis ground. ***Connector & terminal*** ***(R153) No. 1 (+) — Chassis ground (–):*** ***(R153) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Repair short to power supply of harness between VDCCM&H/U and rear brake caliper RH connector.
4	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of power supply circuit, ground circuit and VDCCM&H/U connector?	Repair the connector.	Go to step **5**.
5	**CHECK REPEATABILITY.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.>	Is the same DTC displayed?	Replace the rear brake caliper RH. Go to step **6**.	Temporary poor contact occurs.
6	**CHECK VDCCM&H/U.** 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.
7	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Rear brake caliper RH is faulty.

AT:DTC C1955 LH ACTUATOR(ABNORMAL)

DTC DETECTING CONDITION:
A fault is detected if mechanical sticking or abnormal operation of the rear brake caliper LH is detected.
TROUBLE SYMPTOM:
Parking brake system does not operate.
WIRING DIAGRAM:

NOTE:
For the coupling connector, refer to “WIRING SYSTEM”.
Parking brake / brake fluid level warning light system <Ref. to WI-353, Parking Brake / Brake Fluid Level Warning Light System.>

Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from the VDCCM&H/U and rear brake caliper LH. 3) Measure the resistance between VDCCM&H/U and rear brake caliper LH connector. ***Connector & terminal*** ***(B310) No. 44 — (R154) No. 1:*** ***(B310) No. 45 — (R154) No. 2:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair harness and connector between VDCCM&H/U and rear brake caliper LH connector.
2	**CHECK HARNESS.** Measure the resistance between the rear brake caliper LH connector and chassis ground. ***Connector & terminal*** ***(R154) No. 2 — Chassis ground:*** ***(R154) No. 1 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair ground short of harness between VDCCM&H/U and rear brake caliper LH connector.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between the rear brake caliper LH connector and chassis ground. ***Connector & terminal*** ***(R154) No. 2 (+) — Chassis ground (–):*** ***(R154) No. 1 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Repair short to power supply of harness between VDCCM&H/U and rear brake caliper LH connector.
4	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of power supply circuit, ground circuit and VDCCM&H/U connector?	Repair the connector.	Go to step **5**.
5	**CHECK REPEATABILITY.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.>	Is the same DTC displayed?	Replace the rear brake caliper LH. Go to step **6**.	Temporary poor contact occurs.
6	**CHECK VDCCM&H/U.** 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.
7	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Rear brake caliper LH is faulty.

AU:DTC C1956 RH ACTUATOR CIRCUIT(ABNORMAL)

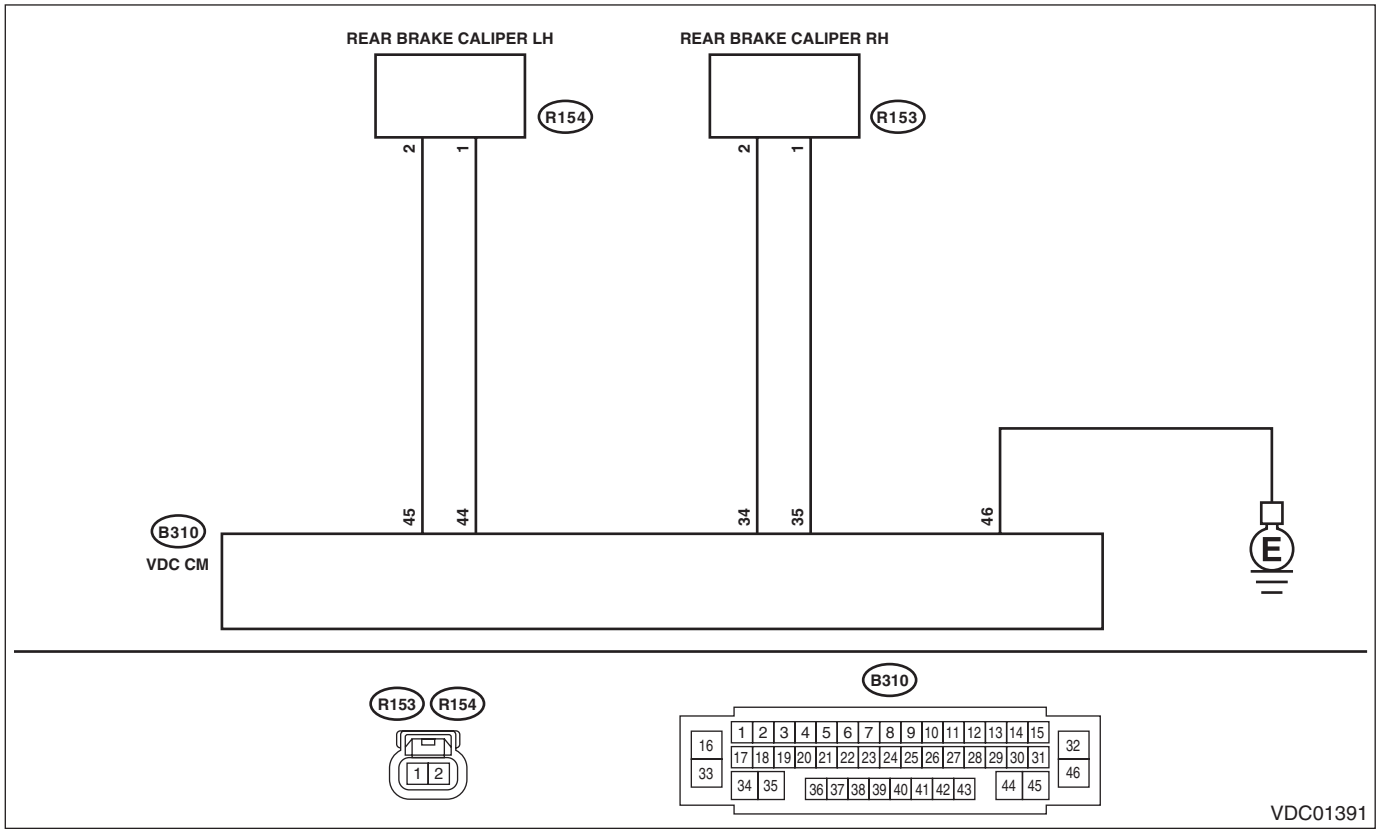
DTC DETECTING CONDITION:

- A fault is detected, if the motor control mismatch occurs during the motor operation.
- A fault is detected if the motor circuit or harness is open or shorted.

TROUBLE SYMPTOM:

Parking brake system does not operate.

NOTE:



This DTC may be stored when the rear brake caliper connector is disconnected regardless of the ignition switch condition (ON/OFF). Perform the Clear Memory Mode after diagnosis if a DTC is recorded. <Ref. to VDC(diag)-24, Clear Memory Mode.>

WIRING DIAGRAM:

NOTE:

For the coupling connector, refer to “WIRING SYSTEM”.

Parking brake / brake fluid level warning light system <Ref. to WI-353, Parking Brake / Brake Fluid Level Warning Light System.>

Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from the VDCCM&H/U and rear brake caliper RH. 3) Measure the resistance between VDCCM&H/U and rear brake caliper RH connector. ***Connector & terminal*** ***(B310) No. 34 — (R153) No. 2:*** ***(B310) No. 35 — (R153) No. 1:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair harness and connector between VDCCM&H/U and rear brake caliper RH connector.

	Step	Check	Yes	No
2	**CHECK HARNESS.** Measure the resistance between the rear brake caliper RH connector and chassis ground. ***Connector & terminal*** ***(R153) No. 1 — Chassis ground:*** ***(R153) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair ground short of harness between VDCCM&H/U and rear brake caliper RH connector.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between the rear brake caliper RH connector and chassis ground. ***Connector & terminal*** ***(R153) No. 1 (+) — Chassis ground (–):*** ***(R153) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Repair short to power supply of harness between VDCCM&H/U and rear brake caliper RH connector.
4	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of power supply circuit, ground circuit and VDCCM&H/U connector?	Repair the connector.	Go to step **5**.
5	**CHECK REAR BRAKE CALIPER.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from rear brake caliper RH. 3) Measure the resistance between rear brake caliper RH terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 100 Ω?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the rear brake caliper RH. <Ref. to BR-37, Rear Disc Brake Assembly.>

AV:DTC C1957 LH ACTUATOR CIRCUIT(ABNORMAL)

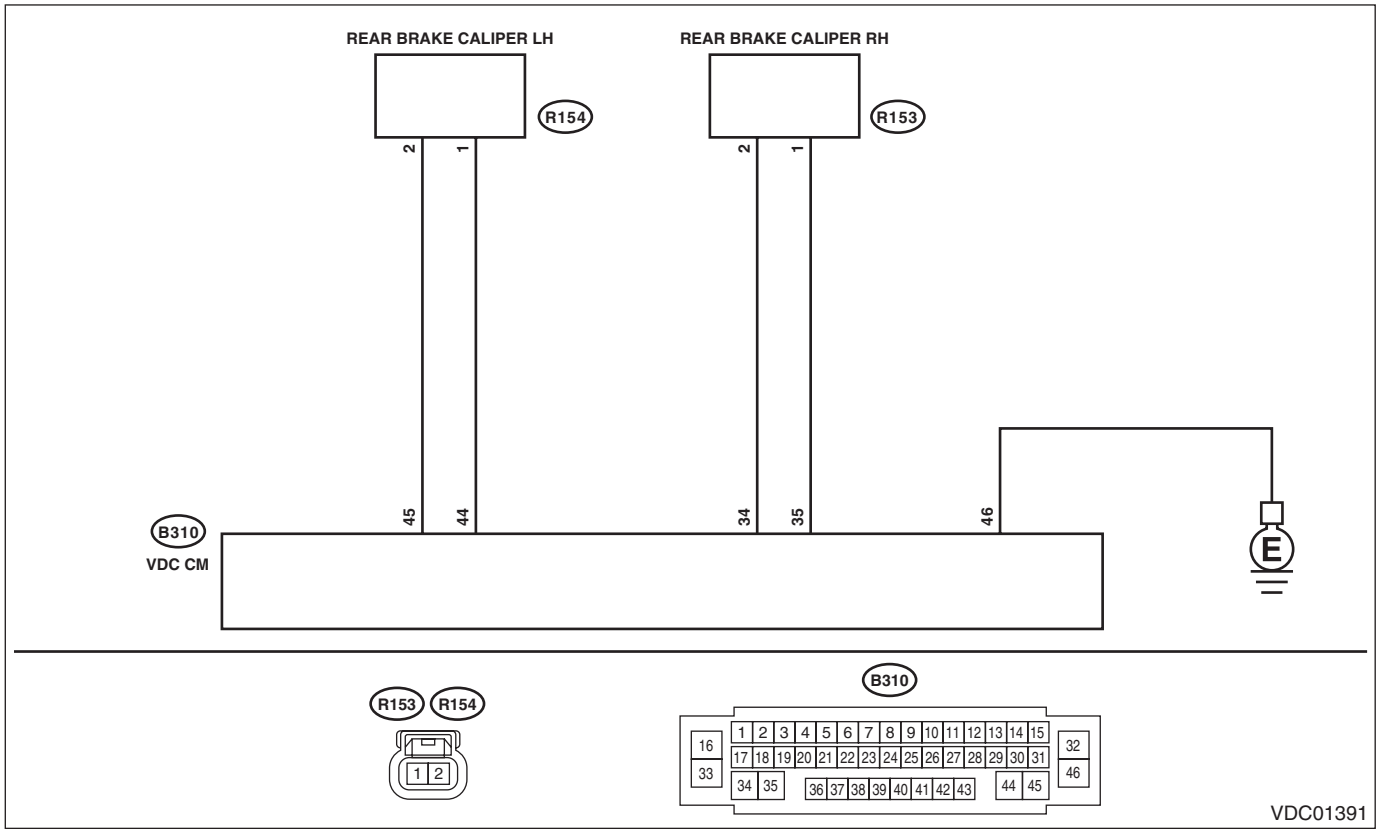
DTC DETECTING CONDITION:

- A fault is detected, if the motor control mismatch occurs during the motor operation.
- A fault is detected if the motor circuit or harness is open or shorted.

TROUBLE SYMPTOM:

Parking brake system does not operate.

NOTE:



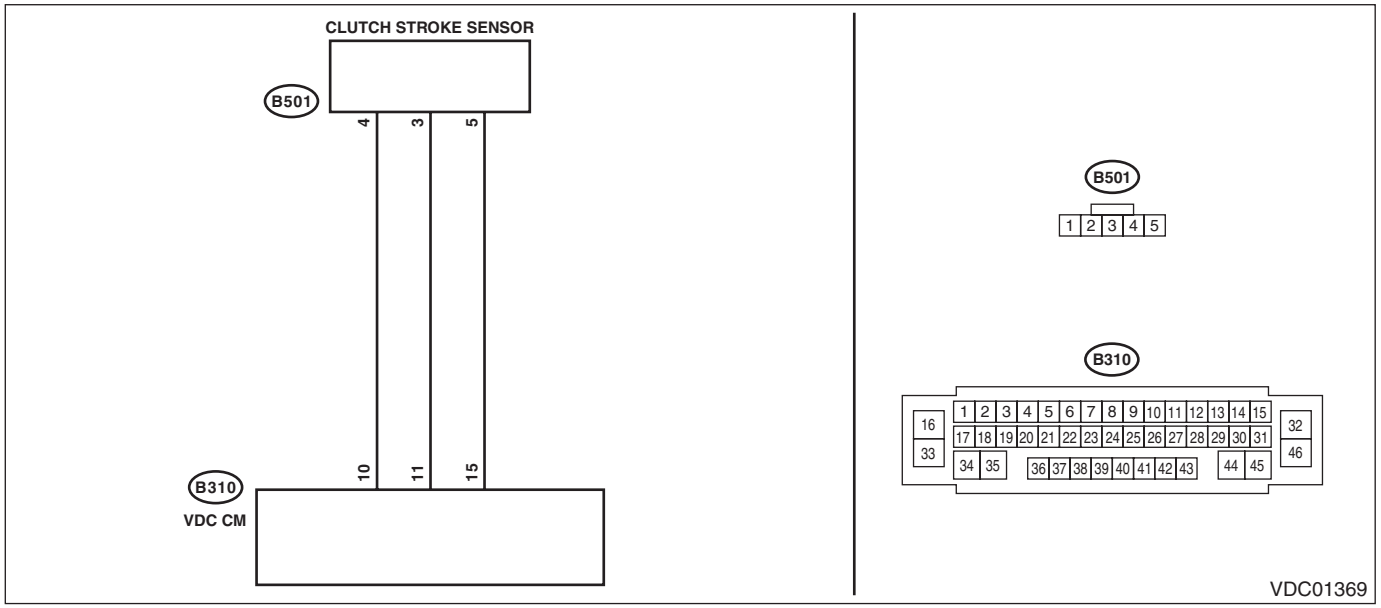
This DTC may be stored when the rear brake caliper connector is disconnected regardless of the ignition switch condition (ON/OFF). Perform the Clear Memory Mode after diagnosis if a DTC is recorded. <Ref. to VDC(diag)-24, Clear Memory Mode.>

WIRING DIAGRAM:

NOTE:

For the coupling connector, refer to “WIRING SYSTEM”.

Parking brake / brake fluid level warning light system <Ref. to WI-353, Parking Brake / Brake Fluid Level Warning Light System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from the VDCCM&H/U and rear brake caliper LH. 3) Measure the resistance between VDCCM&H/U and rear brake caliper LH connector. ***Connector & terminal*** ***(B310) No. 44 — (R154) No. 1:*** ***(B310) No. 45 — (R154) No. 2:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair harness and connector between VDCCM&H/U and rear brake caliper LH connector.

	Step	Check	Yes	No
2	**CHECK HARNESS.** Measure the resistance between the rear brake caliper LH connector and chassis ground. ***Connector & terminal*** ***(R154) No. 2 — Chassis ground:*** ***(R154) No. 1 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair ground short of harness between VDCCM&H/U and rear brake caliper LH connector.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between the rear brake caliper LH connector and chassis ground. ***Connector & terminal*** ***(R154) No. 2 (+) — Chassis ground (–):*** ***(R154) No. 1 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Repair short to power supply of harness between VDCCM&H/U and rear brake caliper LH connector.
4	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of power supply circuit, ground circuit and VDCCM&H/U connector?	Repair the connector.	Go to step **5**.
5	**CHECK REAR BRAKE CALIPER.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from rear brake caliper LH. 3) Measure the resistance between rear brake caliper LH terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 100 Ω?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the rear brake caliper LH. <Ref. to BR-37, Rear Disc Brake Assembly.>

AW:DTC C1971 FORCE SENSOR LINE (ABNORMAL)

DTC DETECTING CONDITION:
A fault is detected if electrical malfunction is detected for clutch stroke sensor.
TROUBLE SYMPTOM:
Parking brake system does not operate.
WIRING DIAGRAM:
Vehicle dynamics control system <Ref. to WI-455, Vehicle Dynamics Control System.>

Step		Check	Yes	No
1	**CHECK OUTPUT OF CLUTCH STROKE SENSOR USING SUBARU SELECT MONITOR.** 1) Select "Current Data Display & Save" on the Subaru Select Monitor. <Ref. to VDC(diag)-16, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 2) Read the «Clutch stroke sensor» displayed on the screen.	When the clutch pedal is operated, does the stroke sensor output value displayed on the screen change in accordance with the clutch pedal?	Go to step **7**.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from clutch stroke sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between clutch stroke sensor connector terminals. ***Connector & terminal*** ***(B501) No. 3 (+) — (B501) No. 5 (–):***	Is the voltage 4.5 V or more?	Go to step **3**.	Repair the power supply circuit of clutch stroke sensor.
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Measure the resistance of harness between clutch stroke sensor and VDCCM&H/U connector. ***Connector & terminal*** ***(B501) No. 3 — (B310) No. 11:*** ***(B501) No. 4 — (B310) No. 10:*** ***(B501) No. 5 — (B310) No. 15:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the harness and connector between clutch stroke sensor and VDCCM&H/U connector.

	Step	Check	Yes	No
4	**CHECK HARNESS.** Measure the resistance of harness between clutch stroke sensor and chassis ground. ***Connector & terminal*** ***(B501) No. 3 — Chassis ground:*** ***(B501) No. 4 — Chassis ground:*** ***(B501) No. 5 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the ground short of harness between clutch stroke sensor and VDCCM&H/U connector.
5	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between clutch stroke sensor and chassis ground. ***Connector & terminal*** ***(B501) No. 3 (+) — Chassis ground (–):*** ***(B501) No. 4 (+) — Chassis ground (–):*** ***(B501) No. 5 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **6**.	Repair short to power supply of harness between clutch stroke sensor and VDCCM&H/U connector.
6	**CHECK CLUTCH STROKE SENSOR OUTPUT.** 1) Connect all connectors. 2) Turn the ignition switch to ON. 3) Using an oscilloscope, check clutch stroke sensor output. ***Connector & terminal*** ***(B501) No. 4 (+) — Chassis ground (–):***	Is there any output?	Go to step **7**.	Replace the clutch stroke sensor.
7	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of connector between VDCCM&H/U and clutch stroke sensor?	Repair the connector.	Go to step **8**.
8	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **9**.
9	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

AX:DTC C1983 HIGH FREQUENCY OPERATION

DTC DETECTING CONDITION:

This malfunction is stored if the electronic parking brake is operated with high frequency in a short period of time.

TROUBLE SYMPTOM:

Parking brake system does not operate sometimes.

	Step	Check	Yes	No
1	**CHECK OUTPUT OF AMBIENT SENSOR USING SUBARU SELECT MONITOR.** 1) Select “Current Data Display & Save” in Subaru Select Monitor. <Ref. to VDC(diag)-16, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 2) Read the «Ambient Temp Sensor» displayed on the screen.	Is the ambient sensor output value displayed on the monitor within the range of ±10°C from the ambient temperature?	Go to step **2**.	Repair the ambient sensor circuit.
2	**CHECK VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Stop the vehicle for approximately one hour. 3) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **3**.
3	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs. NOTE: This DTC may be stored if the electronic parking brake is operated continuously.

AY:DTC C1984 BRAKE MAINTENANCE MODE

DTC DETECTING CONDITION:
This malfunction is stored when the brake maintenance mode is in progress.
TROUBLE SYMPTOM:
Parking brake system does not operate.

	Step	Check	Yes	No
1	**CHECK ELECTRONIC PARKING MODE.**	Is the brake maintenance mode in progress?	This DTC is stored when the brake maintenance mode is in progress. DTC will be cleared when the maintenance mode is finished by following the procedure.	Go to step **2**.
2	**CHECK OPERATION OF ELECTRONIC PARKING BRAKE.** 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 2) Apply the electronic parking brake several times.	Is DTC stored even though the electronic parking brake operates?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **3**.
3	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).> Perform the diagnosis from step 1 again, and if the same DTC is stored, replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

AZ:DTC C1985 FORBIDDEN STATE OF DYNAMIC ACTUATOR OPERATION

DTC DETECTING CONDITION:
This malfunction is stored if dynamic parking through the electronic parking brake actuator does not operate.
TROUBLE SYMPTOM:
Parking brake system does not operate.

	Step	Check	Yes	No
1	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).> NOTE: This DTC is stored for other malfunctions.	Go to step **2**.
2	**CHECK OPERATION OF ELECTRONIC PARKING BRAKE.** 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-24, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-23, Inspection Mode.>	Does it operate properly?	Currently normal.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

BA:DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

NOTE:

13.General Diagnostic Table

A: INSPECTION

Symptoms		Main probable cause	Other probable cause
Poor brake performance	Long braking/ stopping distance	• VDCCM&H/U • Brake pad • Aeration to brake line • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections	• Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Master cylinder • Brake caliper • Disc rotor • Brake pipe • Brake booster
	Wheel lock	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Incorrect wiring or piping connections	• Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Brake caliper • Brake pipe
	Brake drag	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Master cylinder • Brake caliper • Parking brake • Axle and wheels • Brake pedal play	• Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Brake pad • Brake pipe
	Long brake pedal stroke	• Aeration to brake line • Brake pedal play	• VDCCM&H/U • Master cylinder • Brake caliper • Brake pad • Brake pipe • Brake booster
	Vehicle vertical pitching	• VDCCM&H/U • Road surface (uneven) • Suspension play or fatigue (reduced damping) • Incorrect wiring or piping connections	• Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U.
Poor brake performance	Unstable or uneven braking	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Brake caliper • Brake pad • Road surface (uneven) • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections	• Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Master cylinder • Disc rotor • Brake pipe • Axle and wheels • Road with crowns or banks • Suspension play or fatigue (reduced damping)

Symptoms		Main probable cause	Other probable cause
Vibration or noise • When braking suddenly • When accelerating suddenly • While driving on a slippery road	Excessive brake pedal vibration	• Road surface (uneven) • Incorrect wiring or piping connections	• VDCCM&H/U • Brake booster • Suspension play or fatigue (reduced damping)
	Noise from VDCCM&H/U	• VDCCM&H/U (mount bushing) • Defective ABS wheel speed sensor or sensor gap • Brake pipe	• VDCCM&H/U • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U.
	Noise from the front side of vehicle	• VDCCM&H/U (mount bushing) • Defective ABS wheel speed sensor or sensor gap • Master cylinder • Brake caliper • Brake pad • Disc rotor • Brake pipe • Brake booster • Suspension play or fatigue (reduced damping)	• Axle and wheels • Tire specifications, tire wear and air pressures
	Noise from the rear side of vehicle	• Defective ABS wheel speed sensor or sensor gap • Brake caliper • Brake pad • Disc rotor • Parking brake • Brake pipe • Suspension play or fatigue (reduced damping)	• Axle and wheels • Tire specifications, tire wear and air pressures
Engine does not accelerate or goes into a stall when accelerating suddenly or driving on a slippery surface.		• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Master cylinder • Brake caliper • Parking brake • Incorrect wiring or piping	• Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Brake pad • Brake pipe

General Diagnostic Table

Symptoms		Main probable cause	Other probable cause
Poor change-direction-operation stability of TCS	Deviation to right or left direction	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Brake caliper • Brake pad • Wheel alignment • Road surface (uneven) • Road with crowns or banks • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections	• Disc rotor • Brake pipe • Axle and wheels • Suspension play or fatigue (reduced damping)
	Vehicle spin	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Brake pad • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections	• Brake caliper • Brake pipe
Steering wheel drag while driving		• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Incorrect wiring or piping connections • Power steering system	• Brake caliper • Brake pad • Disc rotor • Wheel alignment • Road surface (uneven) • Road with crowns or banks • Suspension play or fatigue (reduced damping) • Tire specifications, tire wear and air pressures
VDC operates while driving normally.		• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Wheel alignment • Road surface (uneven) • Road with crowns or banks • Suspension play or fatigue (reduced damping) • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections • Power steering system	

Symptoms		Main probable cause	Other probable cause
VDC OFF indicator light does not illuminate when the VDC OFF switch is depressed. NOTE: When pressing VDC OFF switch for 30 seconds or more, VDC OFF indicator light goes off and cannot operate any more. When turning the ignition switch from OFF to ON, the previous status is restored.		• Harness • Combination meter • VDC OFF switch	
Brake warning light illuminates.	Parking brake system does not operate.	• Defective parking brake switch • Defective VDCCM&H/U • Defective CAN communication	
	Hill hold function and accelerator interlocking release function do not operate.	• Defective hill hold switch • Faulty signal received from ECM • Faulty signal received from TCM • Faulty signal received from VDC control module • Defective parameter selection for VDCCM&H/U • No CAN signal received from ECM • No CAN signal received from TCM • No CAN signal received from body integrated unit • Defective clutch stroke sensor (MT model) • Defective longitudinal G sensor	
When the hill hold function is set to ON, drugging of brake may occur when the vehicle starts to move.		—	Driver's seat belt is not fastened.

1. General Description

A: SPECIFICATION

NOTE:
Refer to “PARKING BRAKE” for parking brake specifications. <Ref. to PB-2, SPECIFICATION, General Description.>

1. FRONT DISC BRAKE

Item		Specification		
Size		16-inch		17-inch
Type		Floating 2-POT piston type Ventilated disc		
Effective cylinder diameter	mm (in)	42.8 × 2 (1.685 × 2)		
Pad size (Length × Width × Thickness)	mm (in)	130.0 × 53.5 × 11.0 (5.118 × 2.106 × 0.433)		
Pad thickness	mm (in)	Standard	11 (0.43)	
		Limit	1.5 (0.059)	
Effective disc diameter	mm (in)	244 (4.61)		261 (10.28)
Rotor size (Thickness × O.D.)	mm (in)	28 × 294 (1.10 × 11.57)		30 × 316 (1.18 × 12.44)
Disc thickness	mm (in)	Standard	28 (1.10)	30 (1.18)
		Limit	26 (1.02)	28 (1.10)
Disc runout	mm (in)	Standard	—	
		Limit	0.05 (0.0020)	
Clearance adjustment		Automatic adjustment		

2. REAR DISC BRAKE

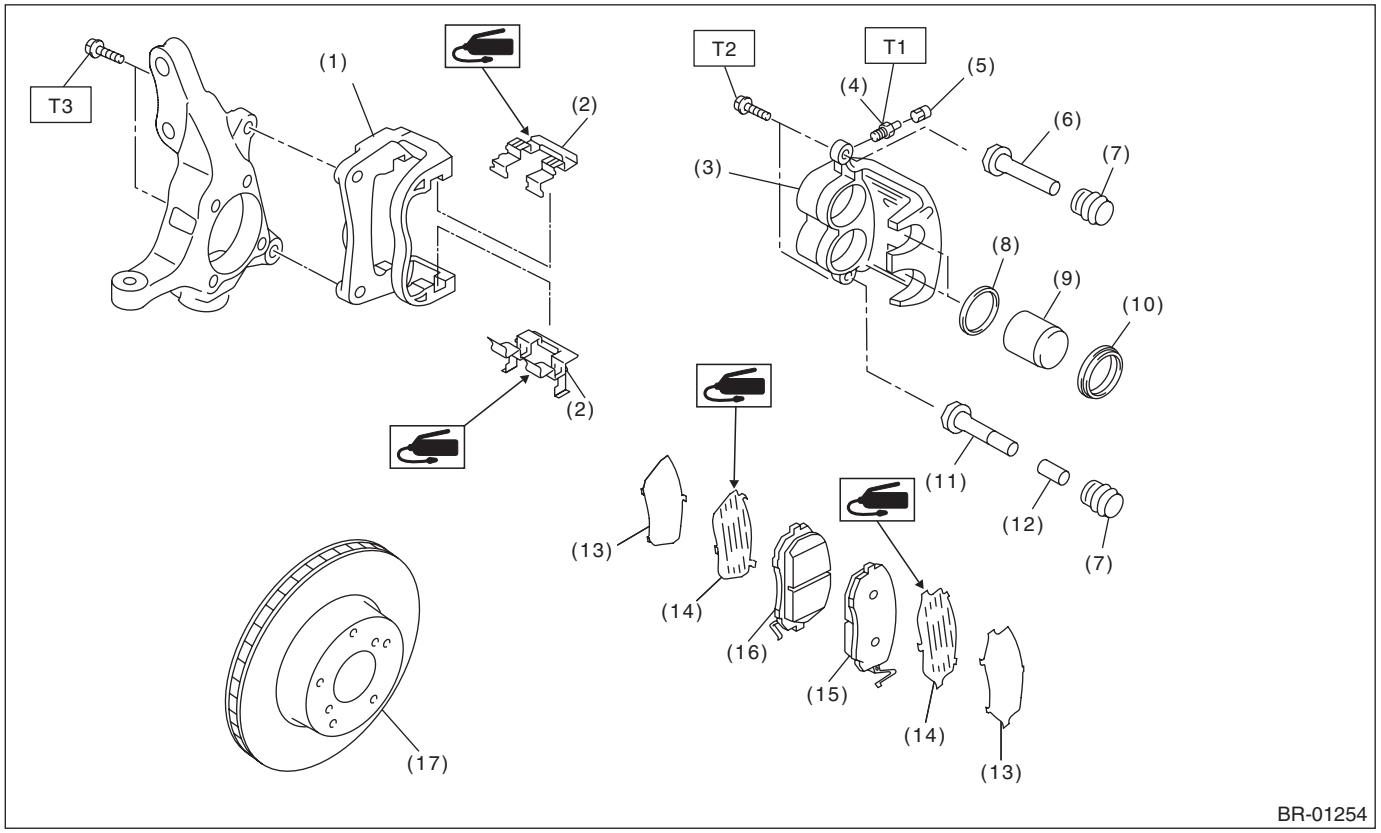
Item		Specification	
Size		17-inch	
Type		Floating 1-POT piston type (Caliper with electric parking) Ventilated disc	
Effective cylinder diameter	mm (in)	40.0 (1.57)	
Pad size (Length × Width × Thickness)	mm (in)	86.8 × 43.5 × 9.0 (3.42 × 1.71 × 0.354)	
Pad thickness	mm (in)	Standard	9.0 (0.354)
		Limit	1.5 (0.059)
Effective disc diameter	mm (in)	255 (10.44)	
Rotor size (Thickness × O.D.)	mm (in)	17 × 300 (0.67 × 11.81)	
Disc thickness	mm (in)	Standard	17 (0.67)
		Limit	15 (0.59)
Disc runout	mm (in)	Standard	—
		Limit	0.05 (0.0020)
Clearance adjustment		Automatic adjustment	

3. MASTER CYLINDER

Item	Specification
Type	Tandem
Effective diameter mm (in)	23.8 (15/16)
Reservoir type	Sealed type
Brake fluid reservoir capacity cm^3 (cu in)	240 (14.64)

4. BRAKE BOOSTER

Item		Specification	
Type		Vacuum suspended	
Effective diameter mm (in)		208 + 229 (8.19 + 9.02)	
Brake fluid pressure		Brake pedal force N (kgf, lbf)	Fluid pressure kPa (kgf/cm^2, psi)
When engine is stopped		147 (15, 33)	514 (5.24, 74.53)
		294 (30, 66)	1,551 (16, 225)
When engine is running and vacuum pressure is at 66.7 kPa (500 mmHg, 19.69 inHg)		147 (15, 33)	6,177 (63, 896)
		294 (30, 66)	11,273 (115, 1,635)

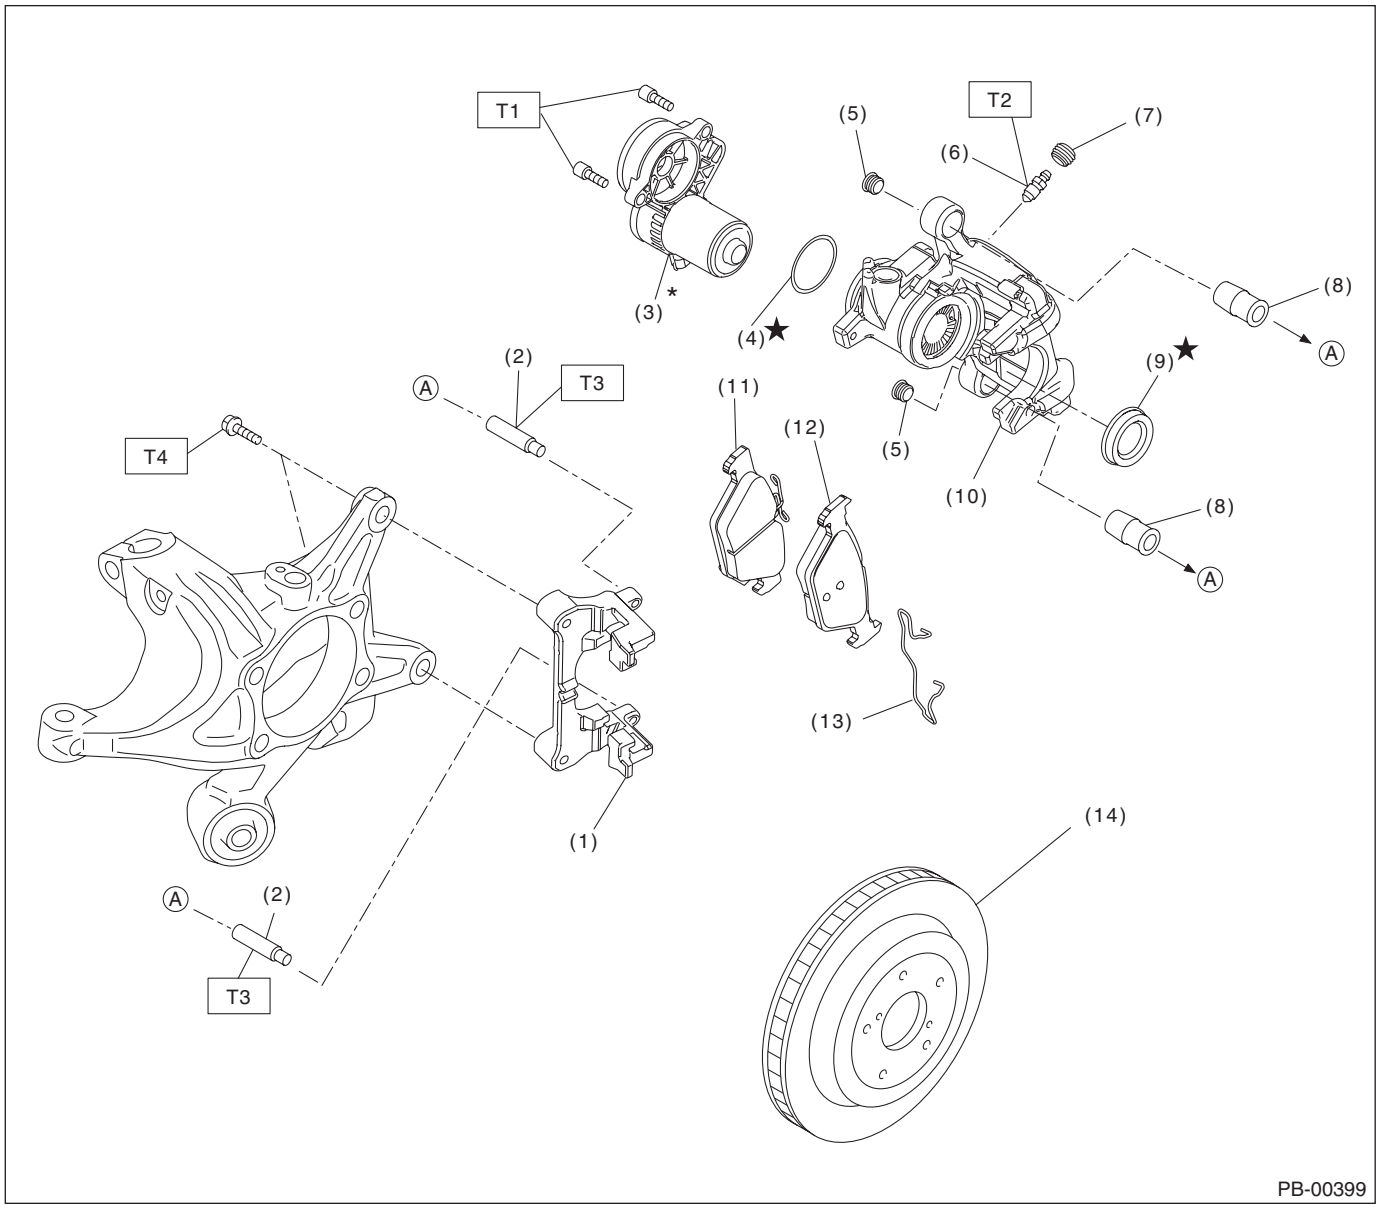


5. BRAKE LINE, BRAKE PEDAL AND BRAKE FLUID

CAUTION:
- **Avoid mixing brake fluid of different brands to prevent fluid performance from degrading.**
- **When filling with brake fluid, be careful not to allow any dust to enter the reservoir.**
- **Use new SUBARU genuine brake fluid when replacing or refilling the fluid.**

Item		Specification
Brake line		Dual circuit system
Brake pedal	Type	Suspended type
	Free play mm (in)	0.5 — 2.7 (0.020 — 0.11) [When pulling the brake pedal upward with a force of less than 10 N (1 kgf, 2 lbf)]
Brake fluid		FMVSS No. 116, DOT3, or DOT4

B: COMPONENT

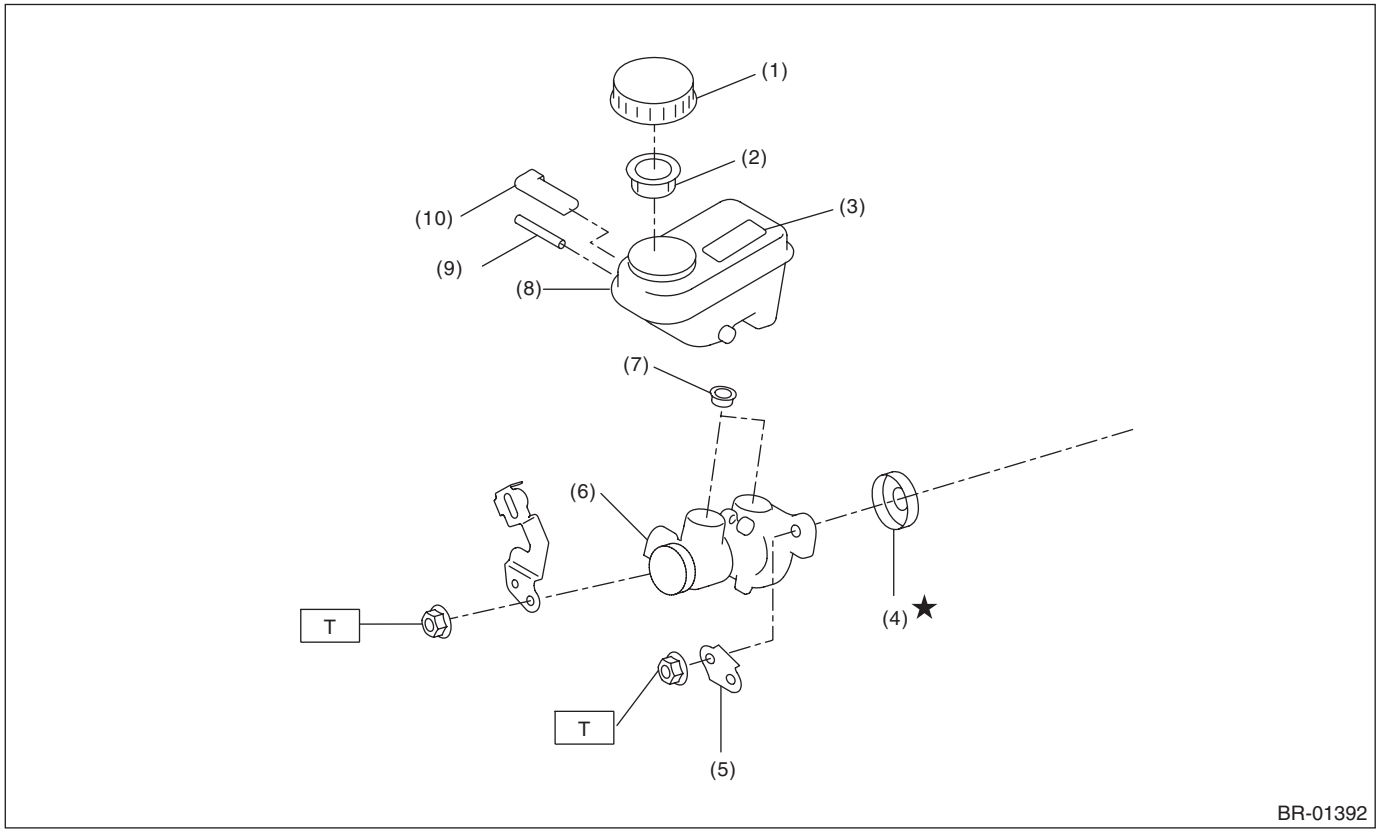


1. FRONT DISC BRAKE

(1) Support - front disc brake
(2) Pad clip - front brake
(3) Caliper body
(4) Bleeder - screw
(5) Cap - bleeder
(6) Guide pin - front brake (black)
(7) Pin boot
(8) Piston seal
(9) Piston - disc brake
(10) Piston boot
(11) Lock pin - front brake (silver)
(12) Lock pin - sleeve
(13) Shim - disc brake front outer
(14) Shim - disc brake front inner
(15) Pad - disc brake front outer
(16) Pad - disc brake front inner
(17) Disc rotor (ventilated type)

Tightening torque: N·m (kgf-m, ft-lb)
T1: 8 (0.8, 5.9)
T2: 27 (2.8, 20.3)
T3: 80 (8.2, 59.0)

2. REAR DISC BRAKE

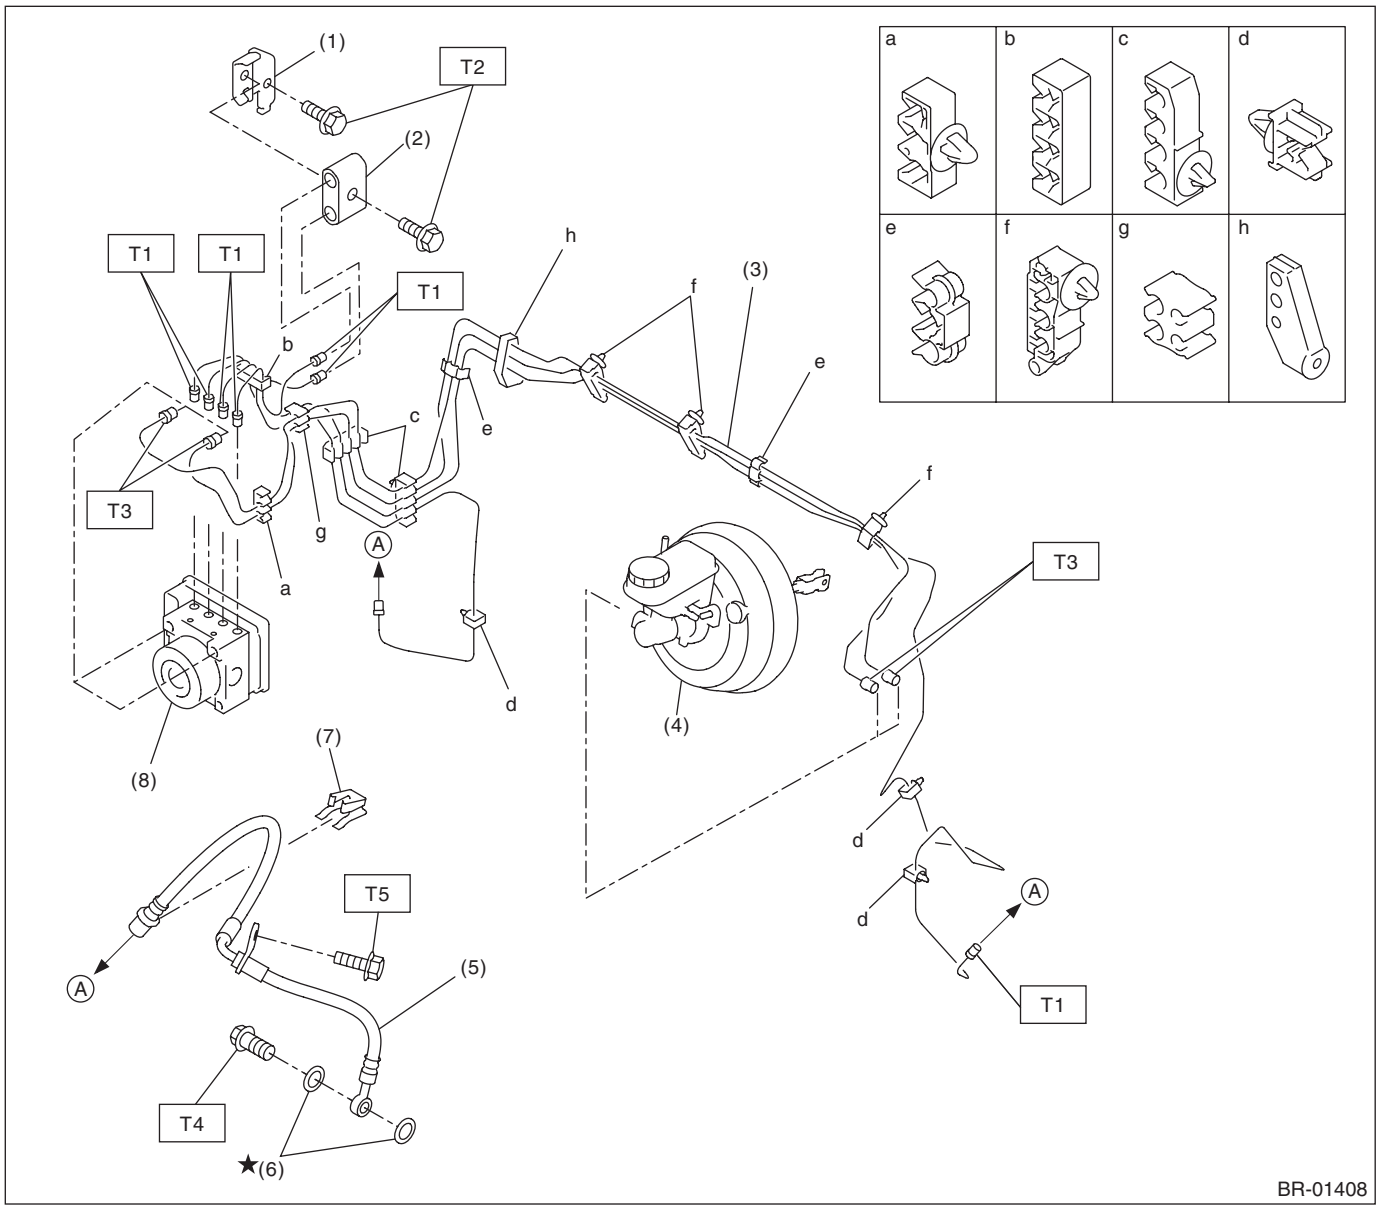


(1)	Support - rear disc brake	(8)	Pin boot	
(2)	Guide pin - rear brake	(9)	Piston boot	
(3)	Parking brake actuator ASSY	(10)	Caliper body	
(4)	O-ring	(11)	Pad - disc brake rear inner	
(5)	Cap	(12)	Pad - disc brake rear outer	
(6)	Bleeder - screw	(13)	Pad clip	
(7)	Cap - bleeder	(14)	Disc rotor (ventilated type)	

Tightening torque: N·m (kgf-m, ft-lb)	
T1:	*8 (0.8, 5.9)*
T2:	*17 (1.7, 12.5)*
T3:	*25 (2.5, 18.4)*
T4:	*66 (6.7, 48.7)*

*: The component cannot be reused when the emergency release of parking brake was performed or when the actuator has a malfunction.

3. MASTER CYLINDER

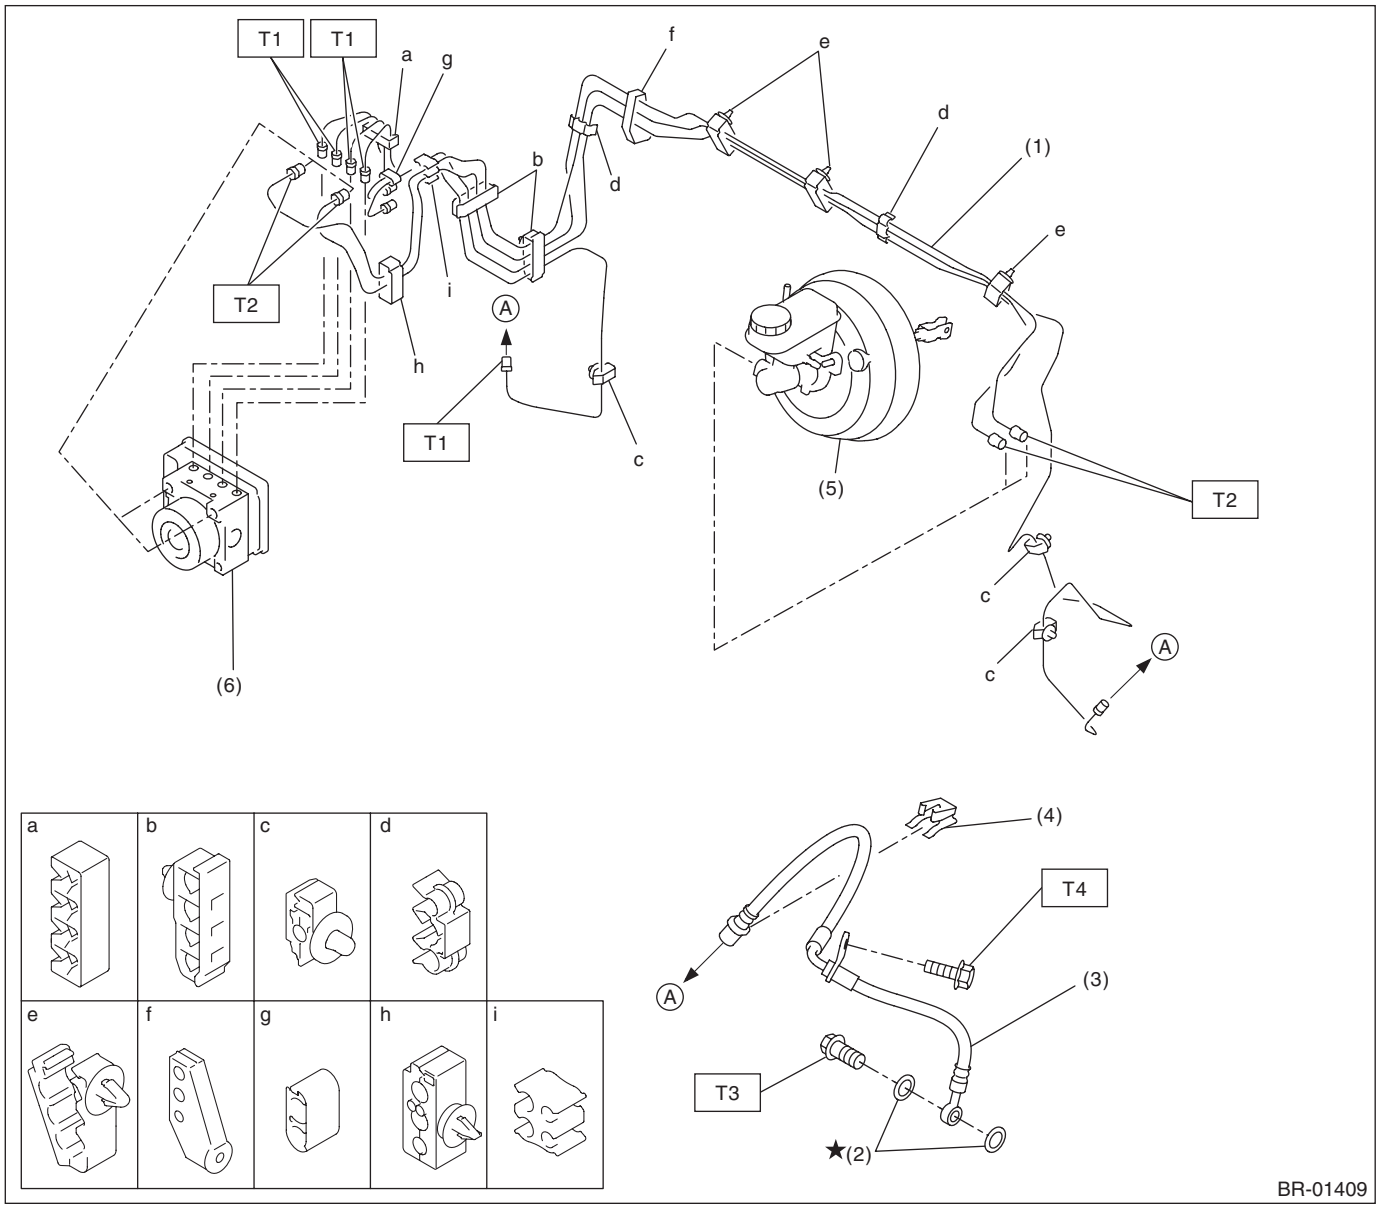


(1)	Cap - reservoir tank	(6)	Cylinder body ASSY
(2)	Filter - master cylinder	(7)	Seal
(3)	Caution label (model with caution label)	(8)	Reservoir tank
(4)	Seal sub ASSY	(9)	Pin
(5)	Bracket - master cylinder	(10)	Level - indicator

Tightening torque: N·m (kgf-m, ft-lb)
T: 13 (1.3, 9.6)

4. FRONT BRAKE PIPES AND HOSES

- Models without EyeSight



(1)	Bracket	(5)	Front brake hose RH/LH
(2)	Connector - two-way	(6)	Gasket
(3)	Front brake pipe ASSY	(7)	Clamp
(4)	Master cylinder ASSY	(8)	VDC control module and hydraulic control unit (VDCCM&H/U)

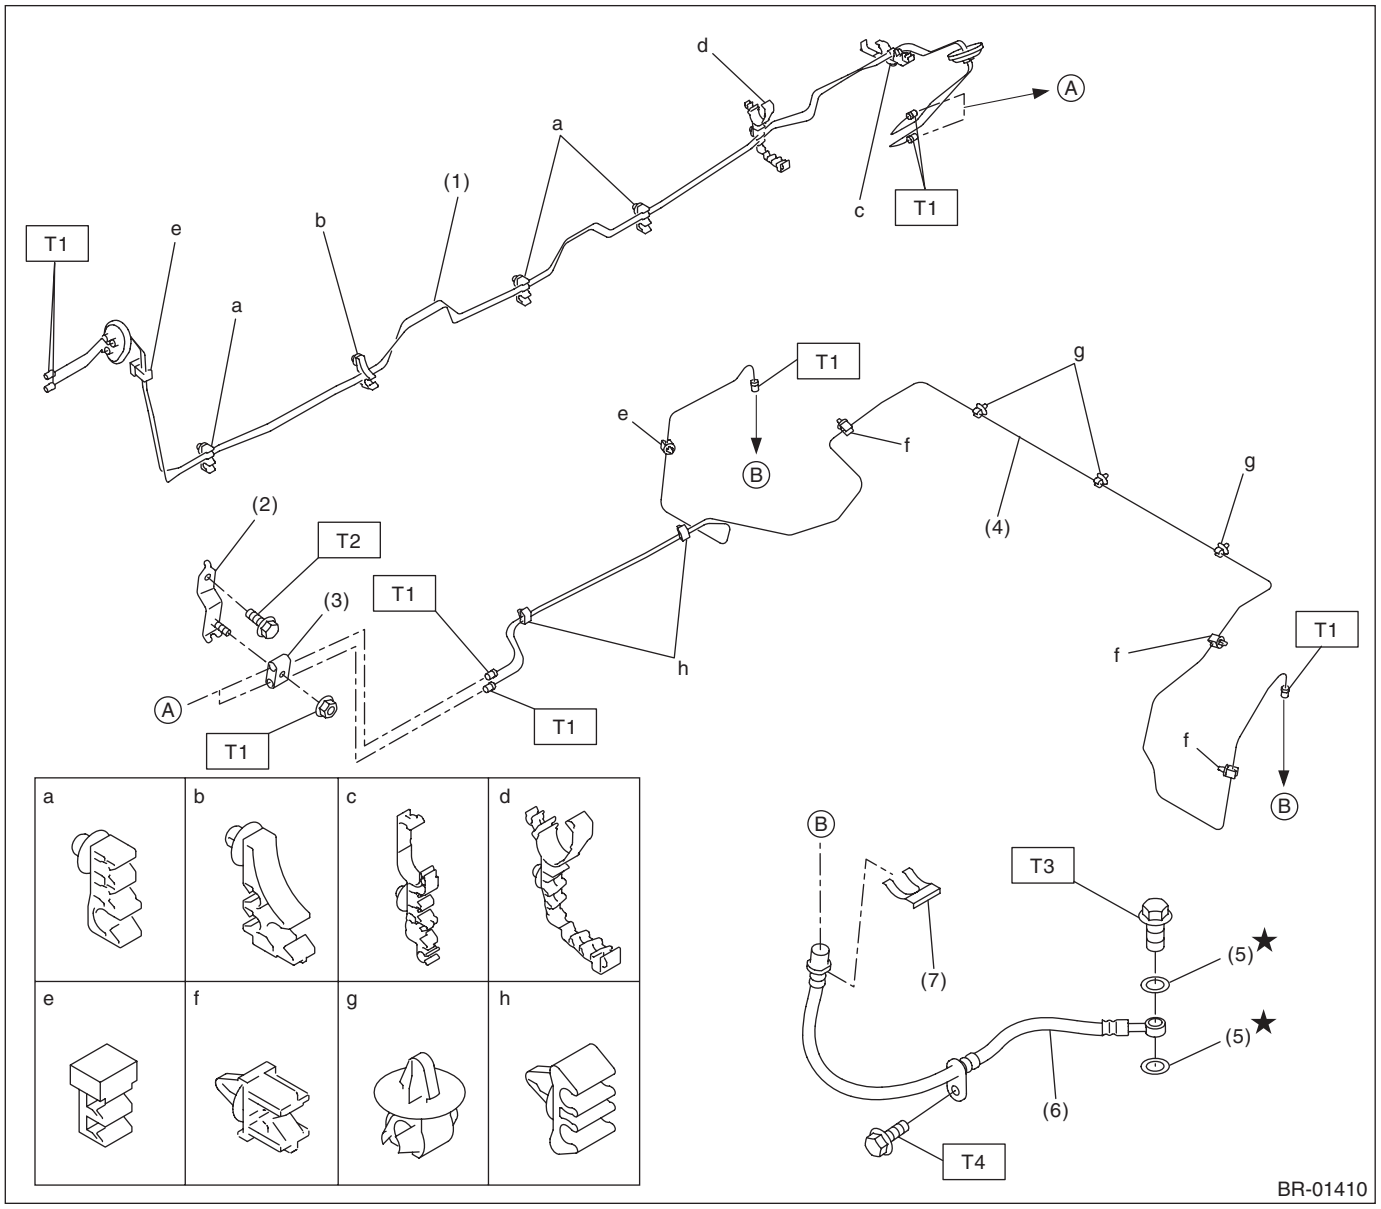
Tightening torque: N·m (kgf-m, ft-lb)

T1: 15 (1.5, 11.1)
T2: 18 (1.8, 13.3)
T3: 19 (1.9, 14.0)
T4: 26 (2.7, 19.2)
T5: 33 (3.4, 24.3)

- Models with EyeSight

(1)	Front brake pipe ASSY	(4)	Clamp
(2)	Gasket	(5)	Master cylinder ASSY
(3)	Front brake hose RH/LH	(6)	VDC control module and hydraulic control unit (VDCCM&H/U)

Tightening torque: N·m (kgf-m, ft-lb)

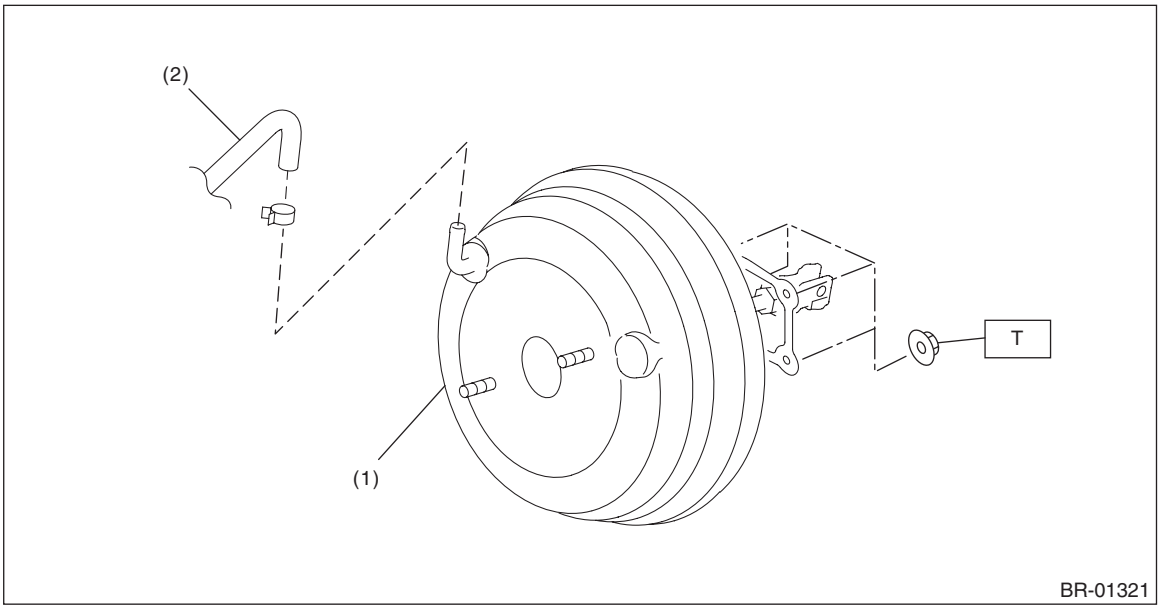


T1: 15 (1.5, 11.1)

T2: 19 (1.9, 14.0)

T3: 26 (2.7, 19.2)

T4: 33 (3.4, 24.3)

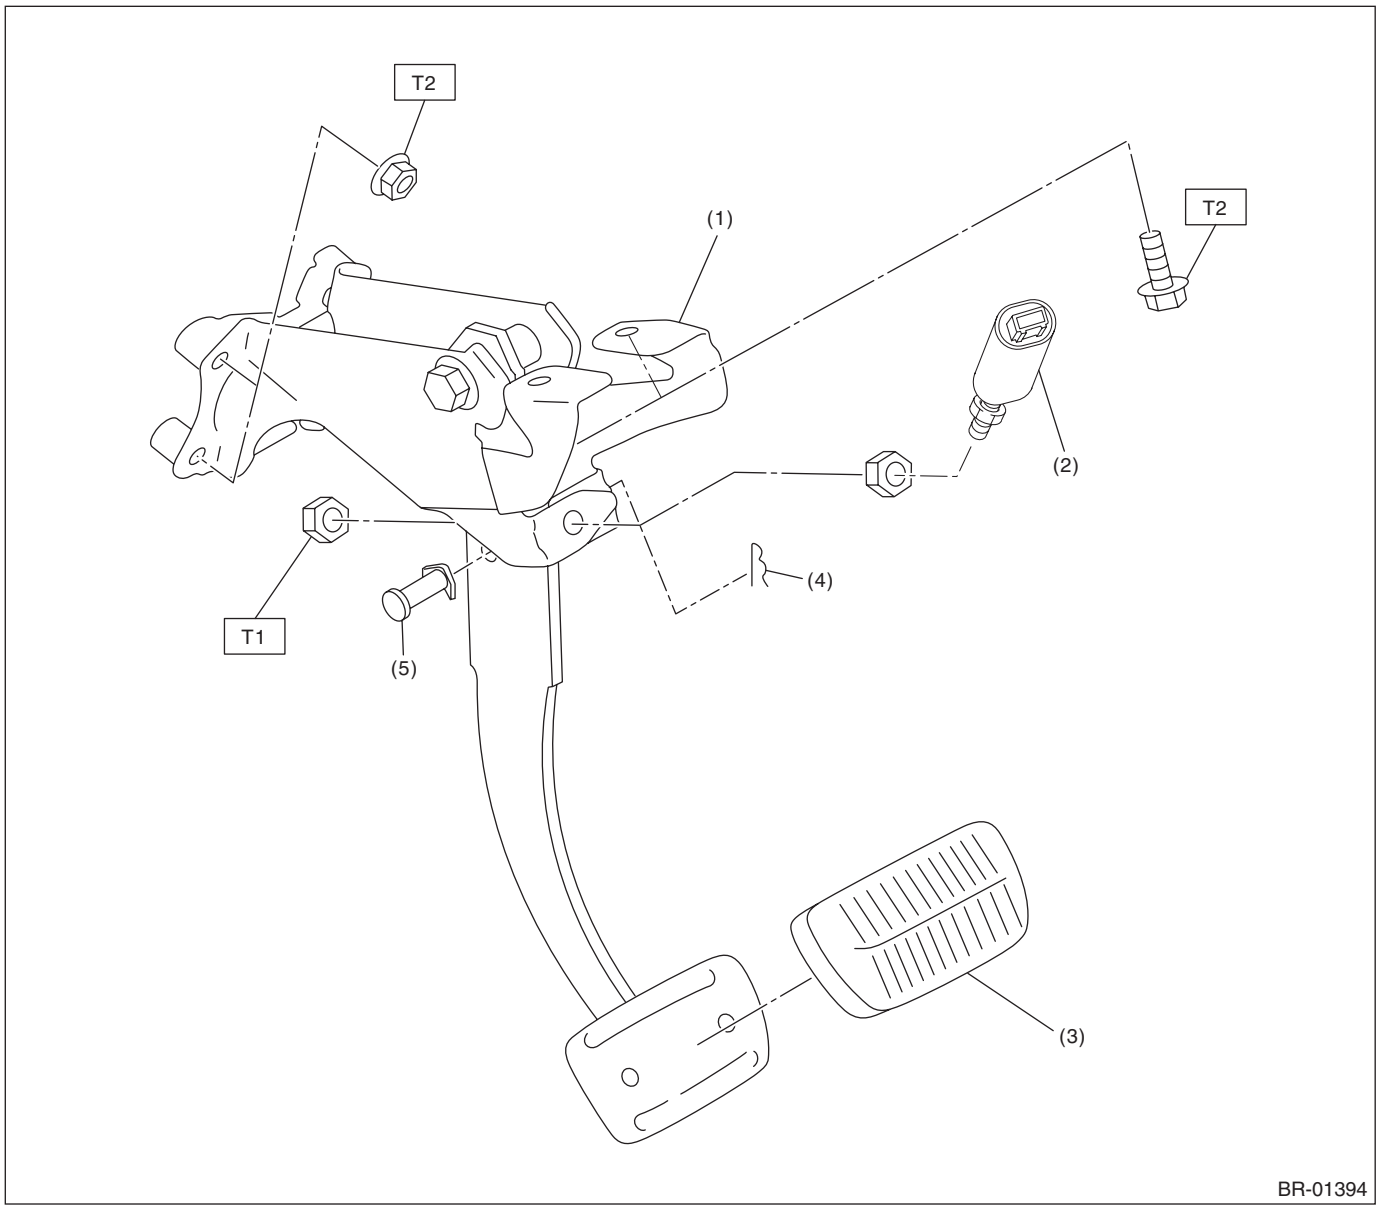


5. CENTER AND REAR BRAKE PIPES AND HOSES

(1) Center brake pipe ASSY
(2) Bracket
(3) Connector
(4) Rear brake pipe ASSY
(5) Gasket
(6) Rear brake hose RH/LH
(7) Clamp

Tightening torque: N·m (kgf-m, ft-lb)
T1: 15 (1.5, 11.1)
T2: 18 (1.8, 13.3)
T3: 26 (2.7, 19.2)
T4: 33 (3.4, 24.3)

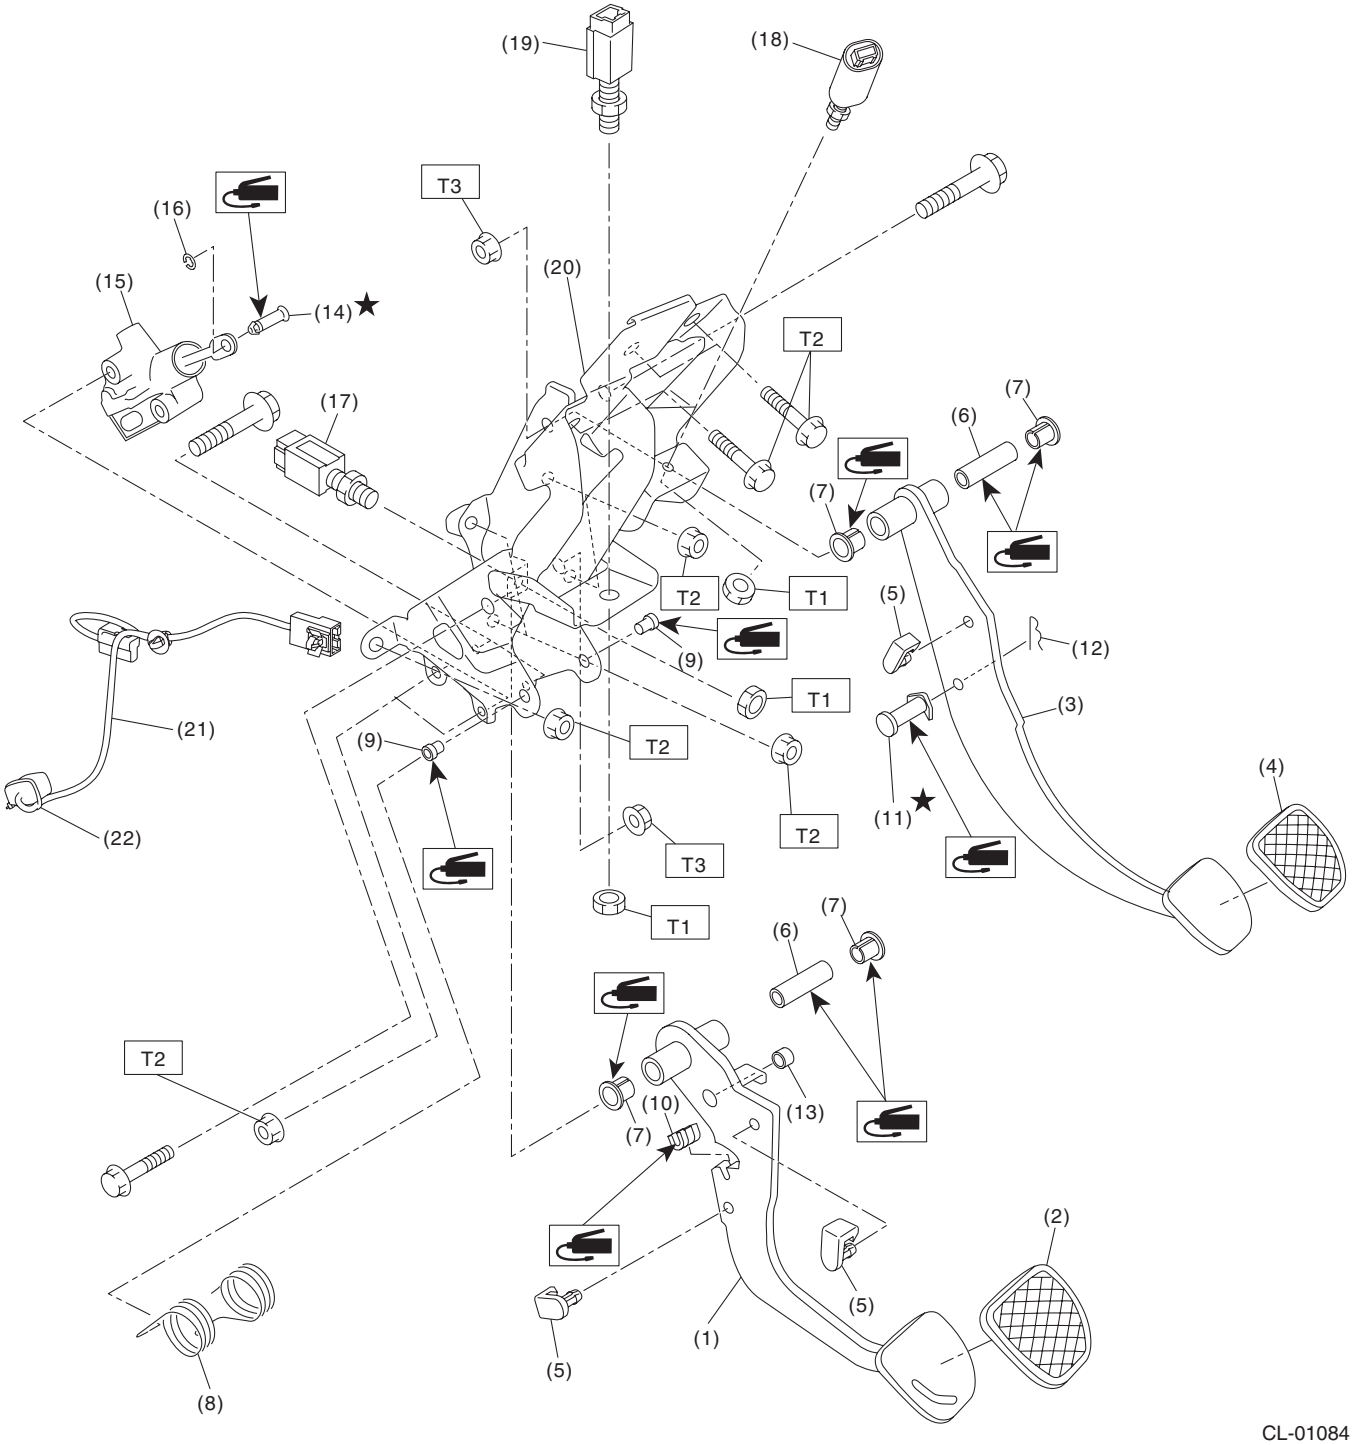
6. BRAKE BOOSTER



(1) Vacuum booster ASSY
(2) Vacuum hose

Tightening torque: N·m (kgf-m, ft-lb)
T: 18 (1.8, 13.3)

7. BRAKE PEDAL



- CVT model

(1)	Brake pedal ASSY	(4)	Snap pin
(2)	Stop light switch	(5)	Clevis pin
(3)	Brake pedal pad		

Tightening torque: N·m (kgf-m, ft-lb)
T1: 8 (0.8, 5.9)
T2: 18 (1.8, 13.3)

- MT model

T3: 30 (3.1, 22.1)

C: CAUTION

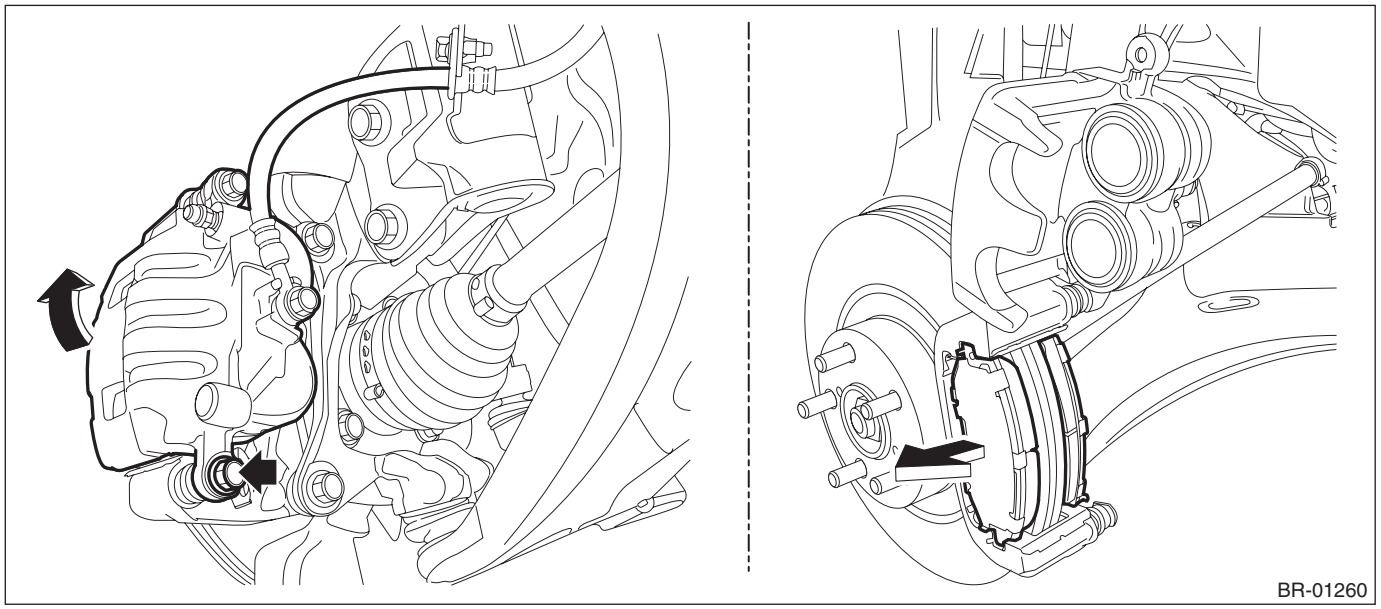
• When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
• When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
• Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
• Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
• Apply grease onto sliding or revolving surfaces before installation.
• Be sure that the surface of brake disc, brake pad or brake shoe is free from grease or oil.
• Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
• Do not secure a part in a vise directly. Place cushioning materials such as wood blocks, aluminum plates, or waste cloth between the part and the vise.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for setting of each function and trouble-shooting for electrical system.
 ST99099AL000	99099AL000 (Newly adopted tool)	PISTON BOOT INSTALLER	Used for installing the piston boot.

2. GENERAL TOOL

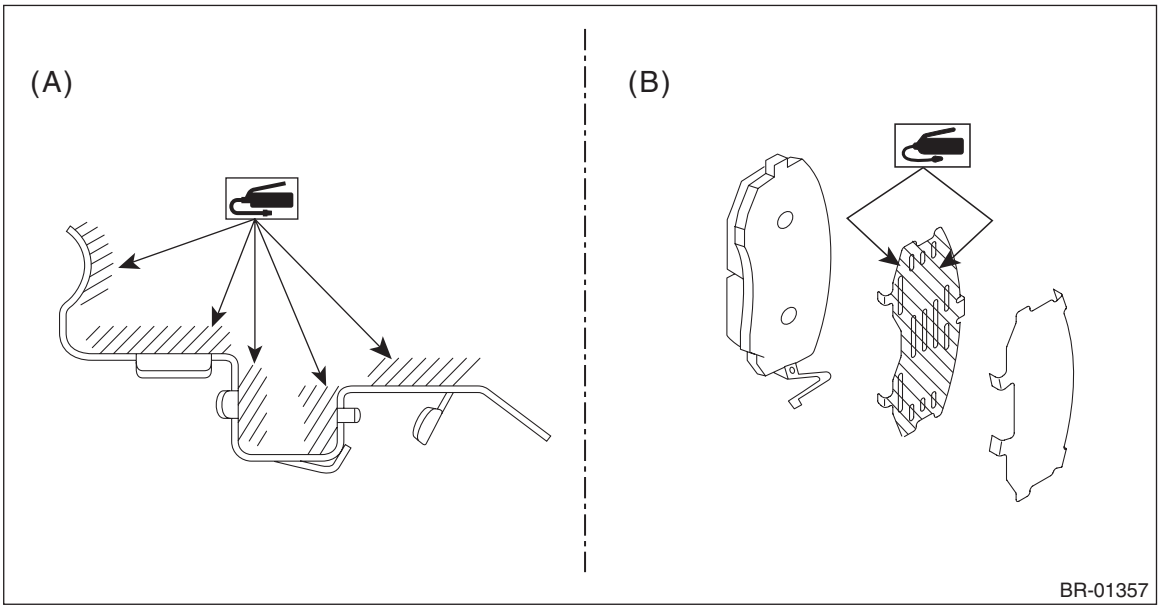


TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.
Pressure gauge	Used for measuring the operation and airtightness of the brake booster.
Vacuum gauge	Used for measuring the operation and airtightness of the brake booster.
Dial gauge	Used for measuring brake disc rotor run-out.
Cap	Used for brake hose installing portion of brake disc caliper.

2. Front Brake Pad

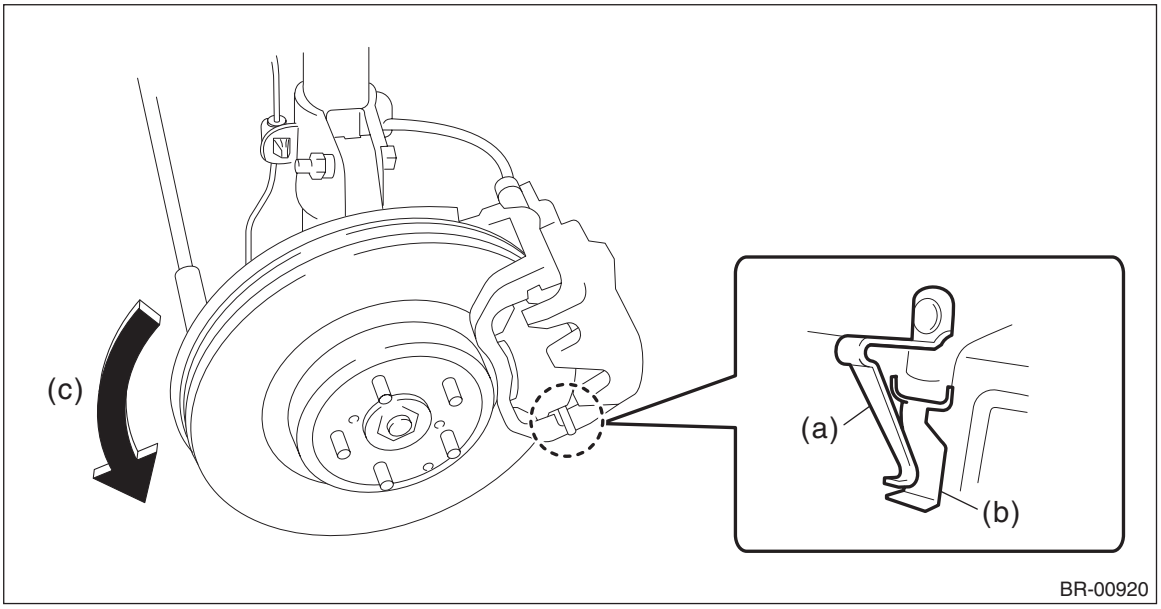
A: REMOVAL

1) Lift up the vehicle, and then remove the front wheels.
2) Remove the pad - disc brake front.
   (1) Remove the caliper bolt on the lower side.
   (2) Raise the caliper body assembly and remove the pad - disc brake front.



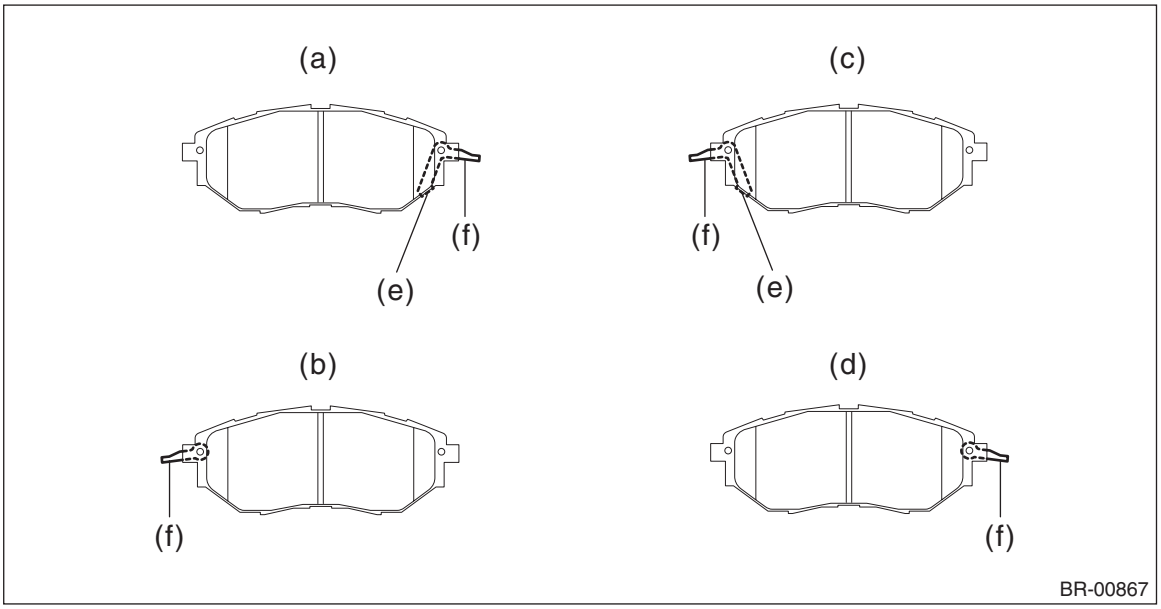
NOTE:
Do not disconnect the brake hose from the caliper body assembly.

B: INSTALLATION



NOTE:
Before installation, remove mud and foreign matter from the caliper body assembly and support - front disc brake.
1) Check the brake pad. <Ref. to BR-18, INSPECTION, Front Brake Pad.>
2) Apply a thin coat of grease to the pad clip, both sides of the shim - disc brake front inner and the shim mounting surface of the pad - disc brake front.

Grease:
Pad clip (A): An item contained in the pad kit or equivalent
Shim and pad (B): An item contained in the pad kit or Molykote AS880N



3) Install the pad - disc brake front.

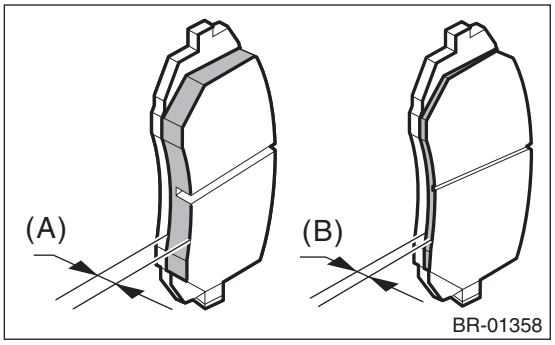
CAUTION:
• Be sure to install so that the pad return spring faces the input side of the direction of disc rotor rotation, as shown in the figure.
• Correctly install the pad return spring to the supporting surface of the pad clip as shown in the figure.
• If the pad return spring is deformed or damaged, replace the pad - disc brake front with a new part.

(a) Pad return spring
(b) Supporting surface of pad clip
(c) Disc rotor rotation direction

NOTE:
Install the pad indicator in proper direction.

(a) LH — IN
(b) LH — OUT
(c) RH — IN
(d) RH — OUT
(e) Pad indicator
(f) Pad return spring

4) Install the caliper body assembly.



Tightening torque:
27 N·m (2.8 kgf-m, 19.9 ft-lb)
5) Install the front wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

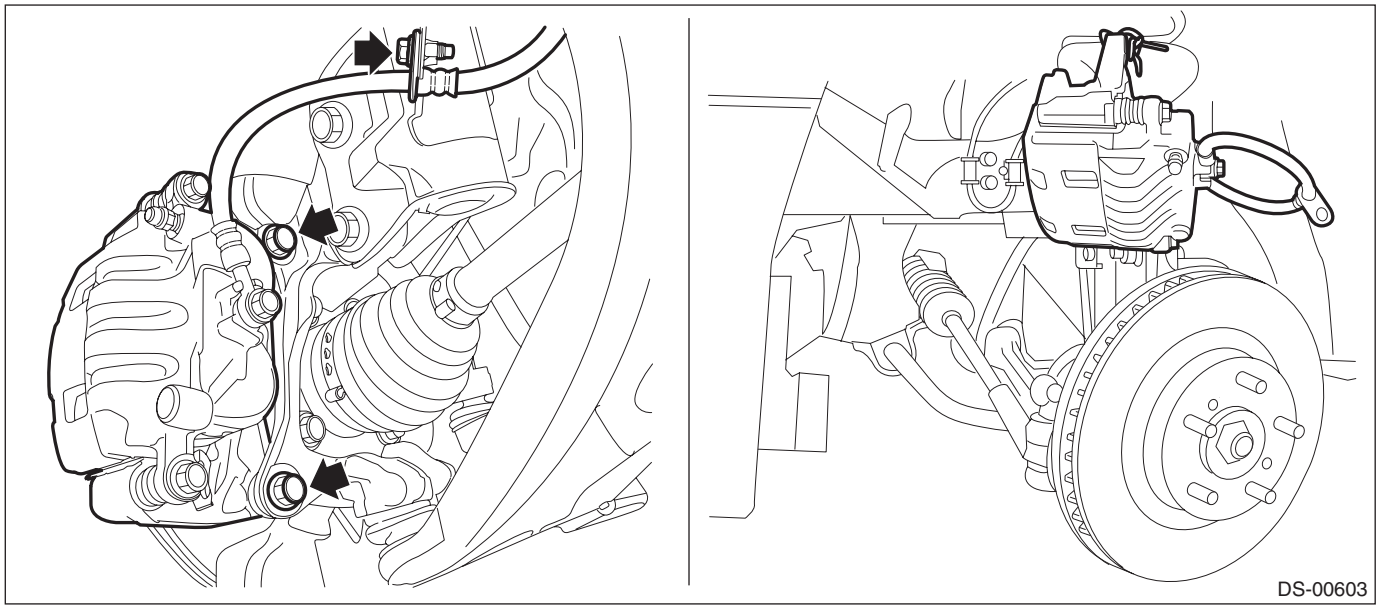
C: INSPECTION

1) Check the thickness (A) of the pad - disc brake front.

NOTE:
- Always replace the pads of both wheels and both sides as a set.
- Replace pad clips if they are twisted or worn.
- Replace the pad if there is oil or grease on it.
- Wear indicators are installed on the pad - disc brake front inner and the pad - disc brake front outer, and a squeaking sound is heard if the pad is worn to the limit.

	Standard (A)	Wear limit (B)
Pad thickness	11 mm (0.43 in)	1.5 mm (0.059 in)

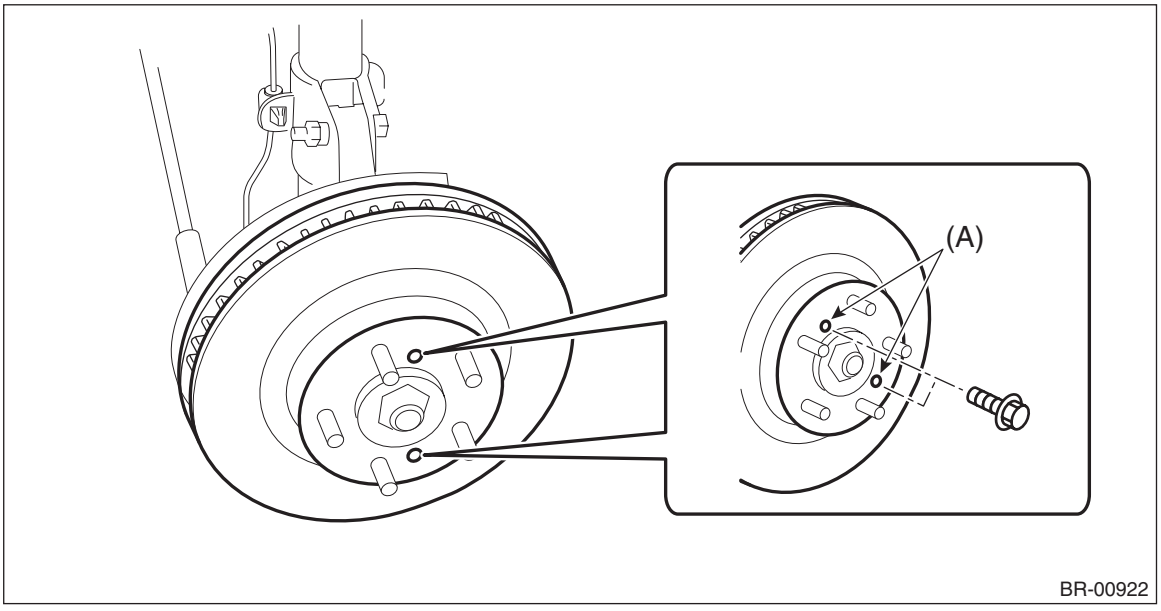
2) If the wear limit is exceeded in the inspection, replace the pad - disc brake front. <Ref. to BR-18, REPLACEMENT, Front Brake Pad.>



D: REPLACEMENT

1) Remove the pad - disc brake front. <Ref. to BR-15, REMOVAL, Front Brake Pad.>
2) Push back the piston - disc brake.
3) Install the pad - disc brake front. <Ref. to BR-16, INSTALLATION, Front Brake Pad.>

3. Front Disc Rotor



A: REMOVAL

1) Lift up the vehicle, and then remove the front wheels.
2) Remove the disc brake assembly.
   (1) Remove the brake hose bracket.
   (2) Remove the mounting bolt, and remove the disc brake assembly.
   (3) Prepare wiring harnesses etc. to be discarded, and suspend the disc brake assembly from the strut assembly.

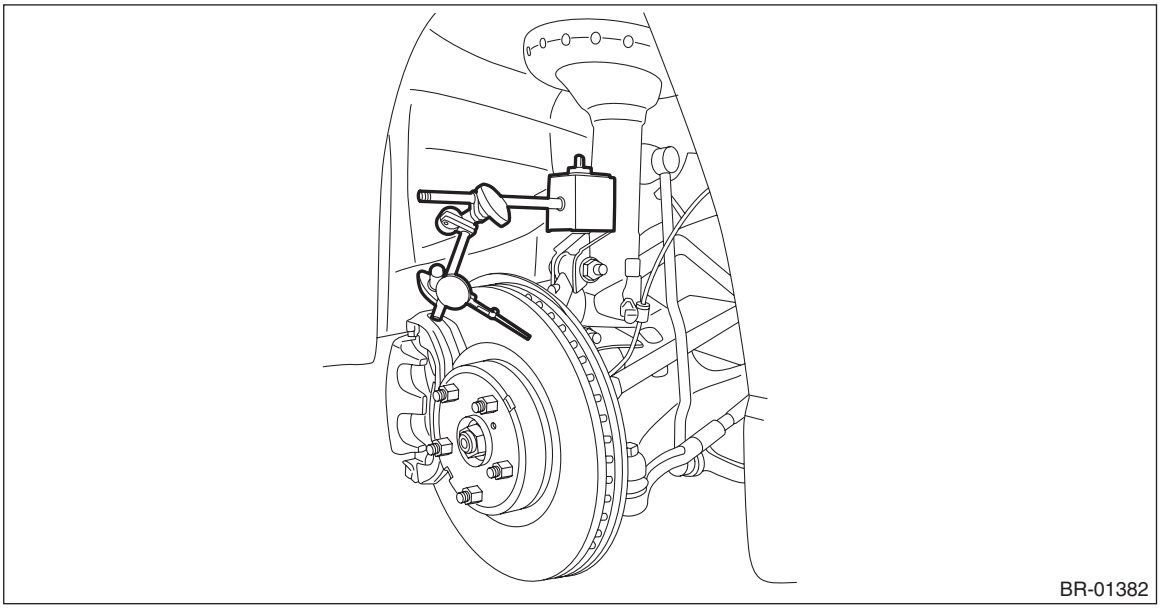
3) Remove the disc rotor.

NOTE:
When the disc rotor is difficult to be removed, screw in 8 mm (0.31 in) bolt to the threaded part of the disc rotor (A), and remove the disc rotor.

B: INSTALLATION

NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Check the front disc rotor. <Ref. to BR-20, INSPECTION, Front Disc Rotor.>
2) Install the disc rotor.
3) Install the disc brake assembly.

Tightening torque:
Mounting bolt: 120 N·m (12.2 kgf-m, 88.5 ft-lb)
Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
4) Install the front wheels.

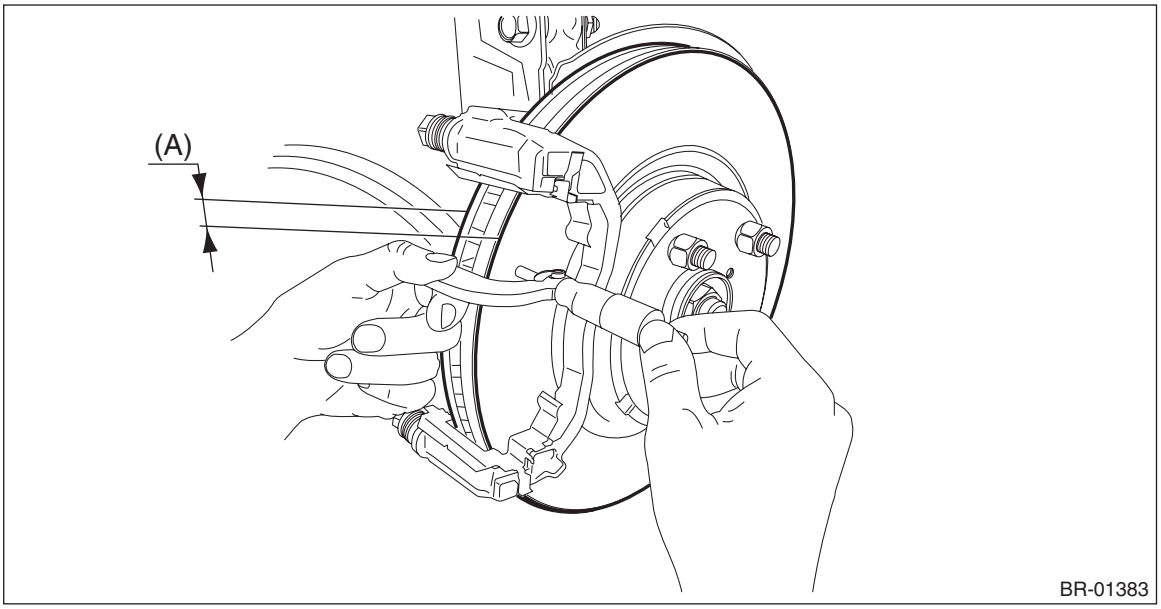


Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

C: INSPECTION

1. DISC ROTOR RUNOUT CHECK

1) Check the hub unit COMPL - front axle for free play and runout before the inspection of disc rotor runout limit. <Ref. to DS-29, INSPECTION, Front Hub Unit Bearing.>
2) Tighten the wheel nuts to secure disc rotor.
3) Set a dial gauge 10 mm (0.39 in) inward from the disc rotor outer circumference, and check the disc rotor runout while rotating the disc rotor.



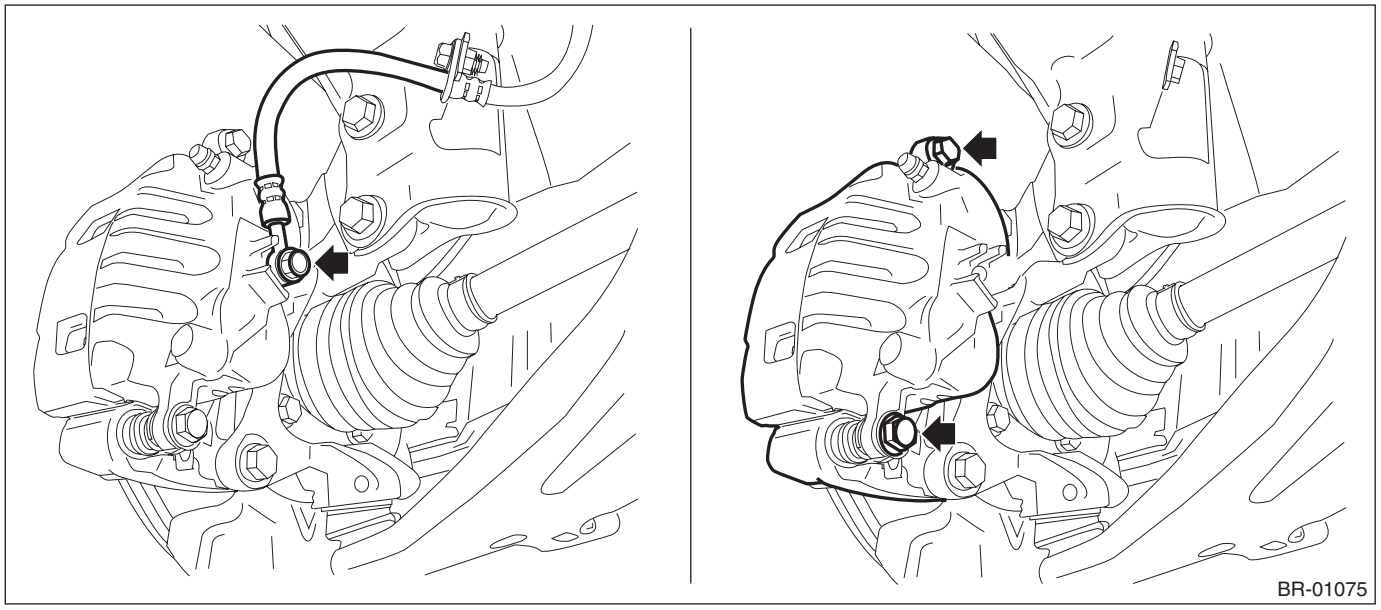
Disc rotor runout limit:
0.05 mm (0.0020 in)

4) If the disc rotor runout exceeds service limit, grind the disc rotor.
5) Check the disc rotor thickness after grinding. <Ref. to BR-21, DISC ROTOR THICKNESS CHECK, INSPECTION, Front Disc Rotor.>

2. DISC ROTOR THICKNESS CHECK

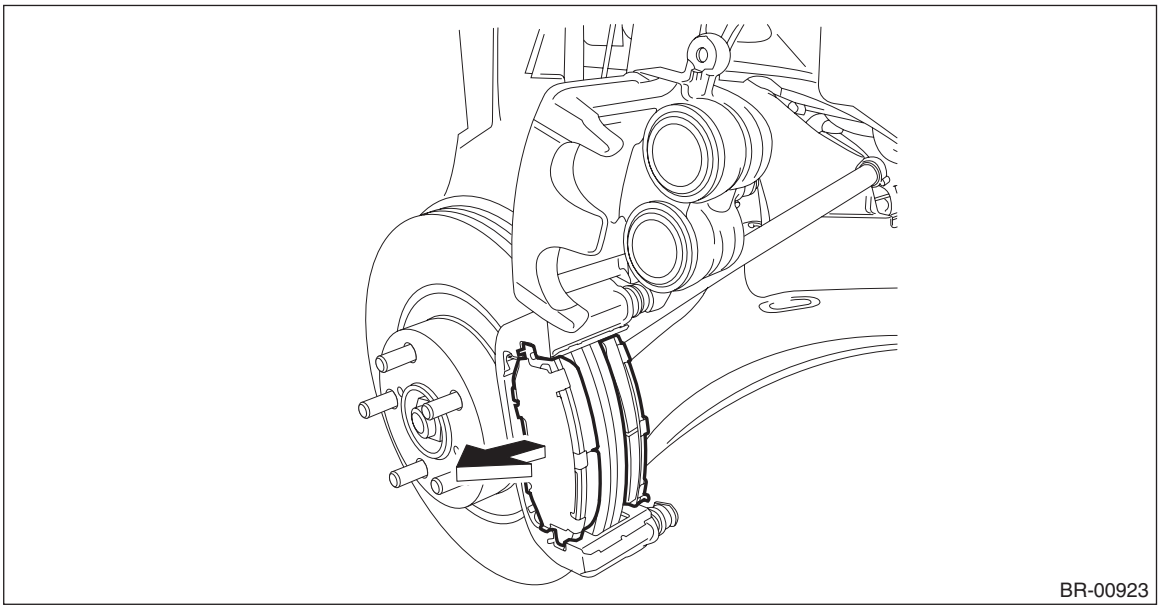
1) Set a micrometer 10 mm (0.39 in) inward from the disc rotor outer perimeter, and then measure the disc rotor thickness (A).

	Size	Standard	Wear limit	Disc rotor outer diameter
Disc rotor thickness (A)	16-inch	28 mm (1.10 in)	26 mm (1.02 in)	294 mm (11.57 in)
	17-inch	30 mm (1.18 in)	28 mm (1.10 in)	326 mm (12.83 in)



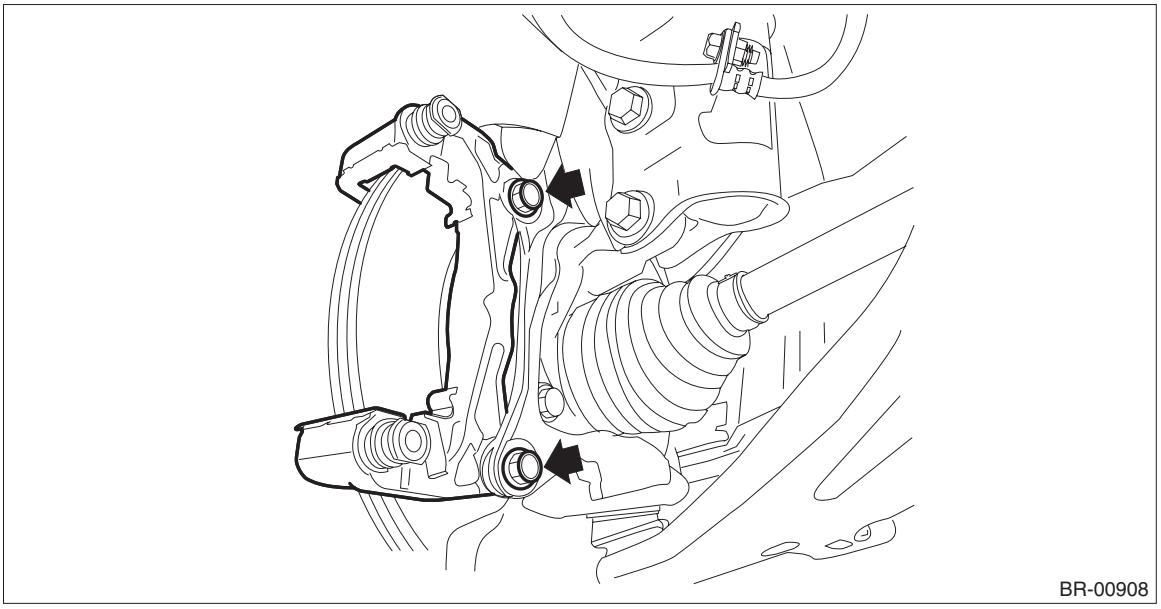
2) If the wear limit is exceeded in the inspection, replace the disc rotor.

4. Front Disc Brake Assembly



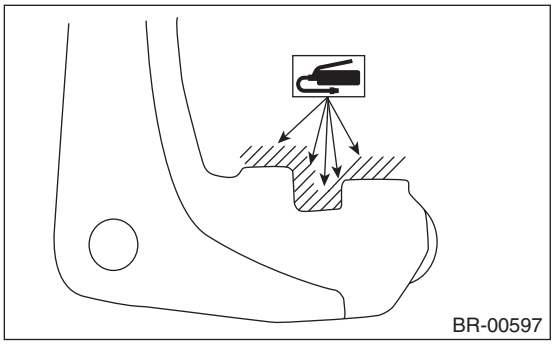
A: REMOVAL

1) Lift up the vehicle, and then remove the front wheels.
2) Remove the union bolt and the caliper bolt, and remove the caliper body assembly.



CAUTION:
• Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
• Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.

3) Remove the support - front disc brake.
(1) Remove the pad - disc brake front.

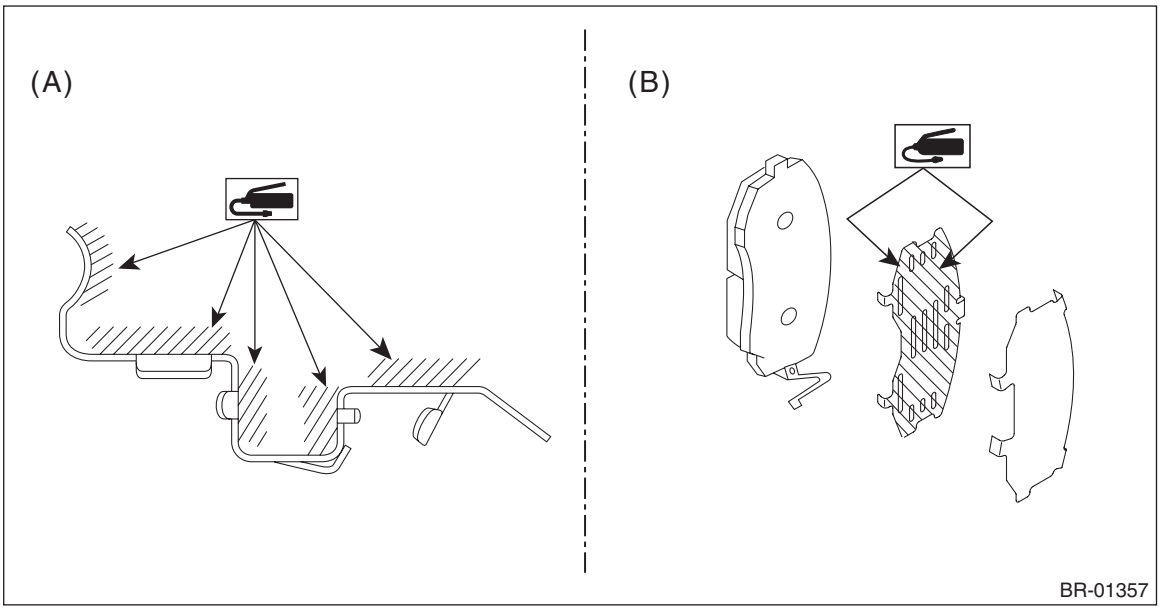


(2) Remove the mounting bolts, and then remove the support - front disc brake.

B: INSTALLATION

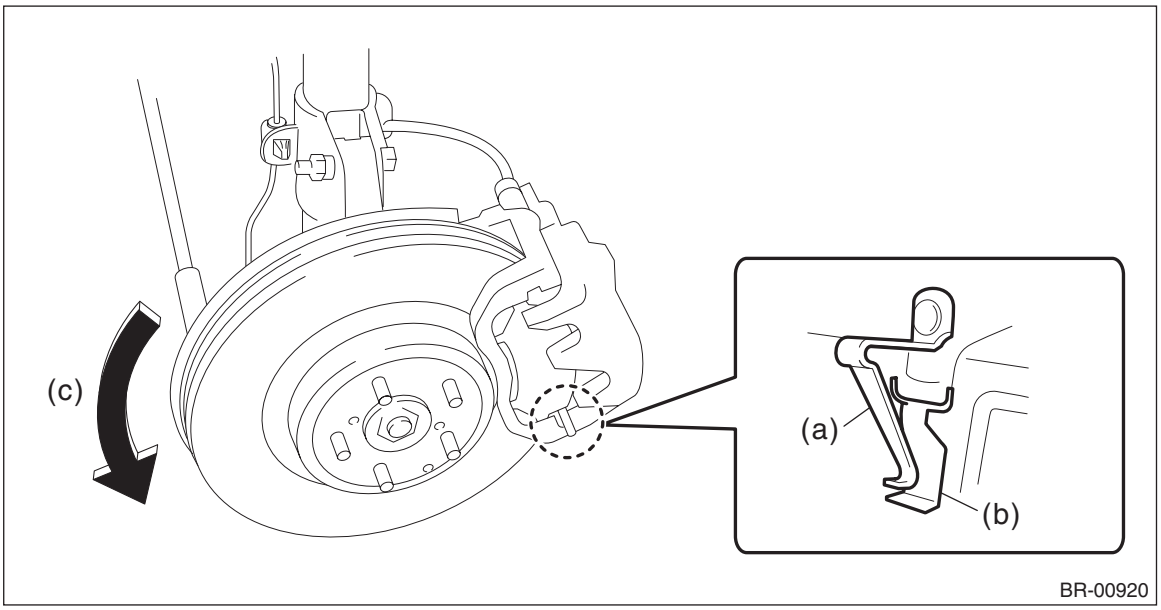
NOTE:
Before installation, remove mud and foreign matter from the caliper body assembly and support - front disc brake.
1) Check each part. <Ref. to BR-29, INSPECTION, Front Disc Brake Assembly.>
2) Apply a thin coat of grease to the support - front disc brake.

Grease:
Grease contained in the pad kit or equivalent



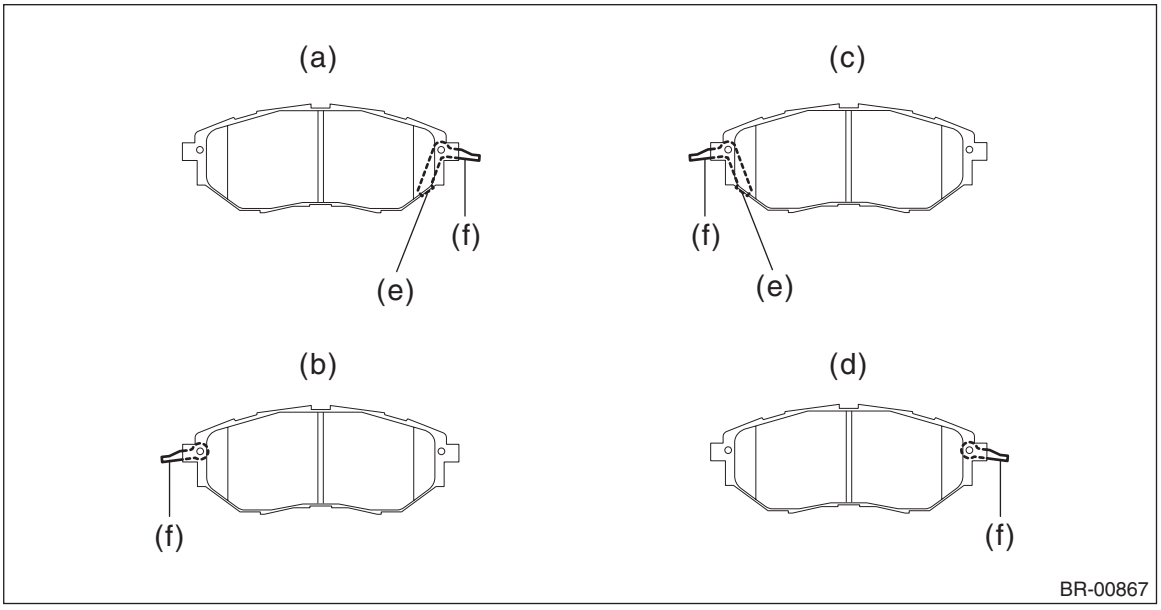
3) Install the support - front disc brake.

Tightening torque:
Mounting bolt: 120 N·m (12.2 kgf-m, 88.5 ft-lb)



4) Apply a thin coat of grease to the pad clip, both sides of the shim - disc brake front inner and the shim mounting surface of the pad - disc brake front.

Grease:
Pad clip (A): An item contained in the pad kit or equivalent
Shim and pad (B): An item contained in the pad kit or Molykote AS880N



5) Install the brake pad.

CAUTION:
• Be sure to install so that the pad return spring faces the input side of the direction of brake rotor rotation, as shown in the figure.
• Correctly install the pad return spring to the supporting surface of the pad clip as shown in the figure.
• If the pad return spring is deformed or damaged, replace the brake pad with a new part.

(a) Pad return spring (b) Supporting surface of pad clip (c) Direction of brake rotor rotation

NOTE:
Install the brake pad indicator in proper direction.

(a) LH — IN
(b) LH — OUT
(c) RH — IN
(d) RH — OUT
(e) Pad indicator
(f) Pad return spring

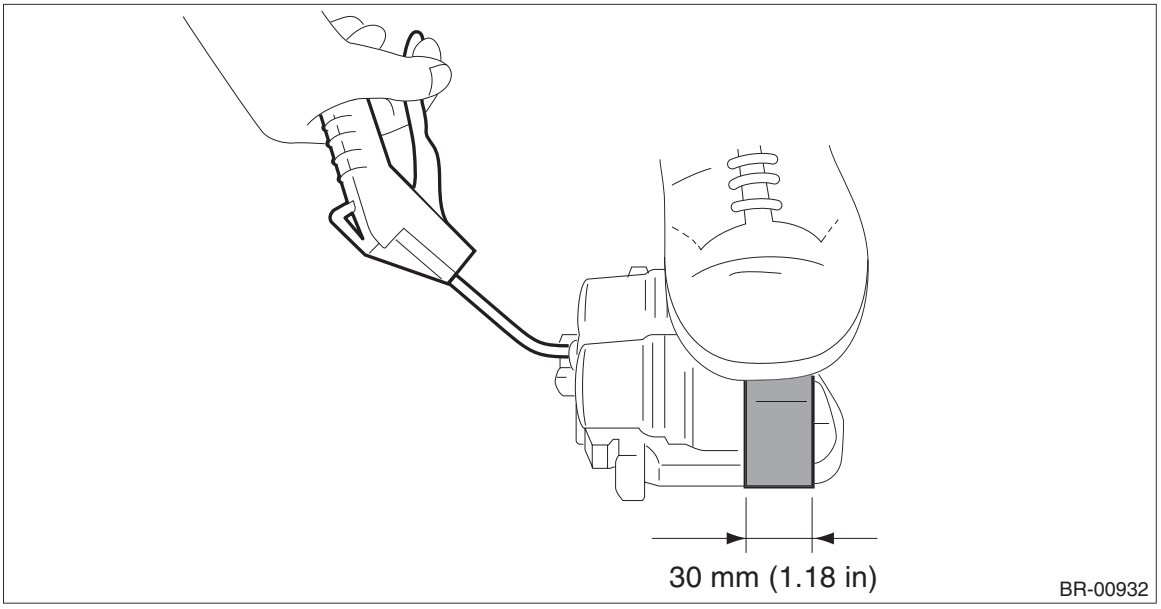
6) Install the caliper body assembly.

Tightening torque:
27 N·m (2.8 kgf-m, 19.9 ft-lb)

7) Connect the brake hose using a new brake hose gasket.

Tightening torque:
Union bolt: 26 N·m (2.7 kgf-m, 19.2 ft-lb)

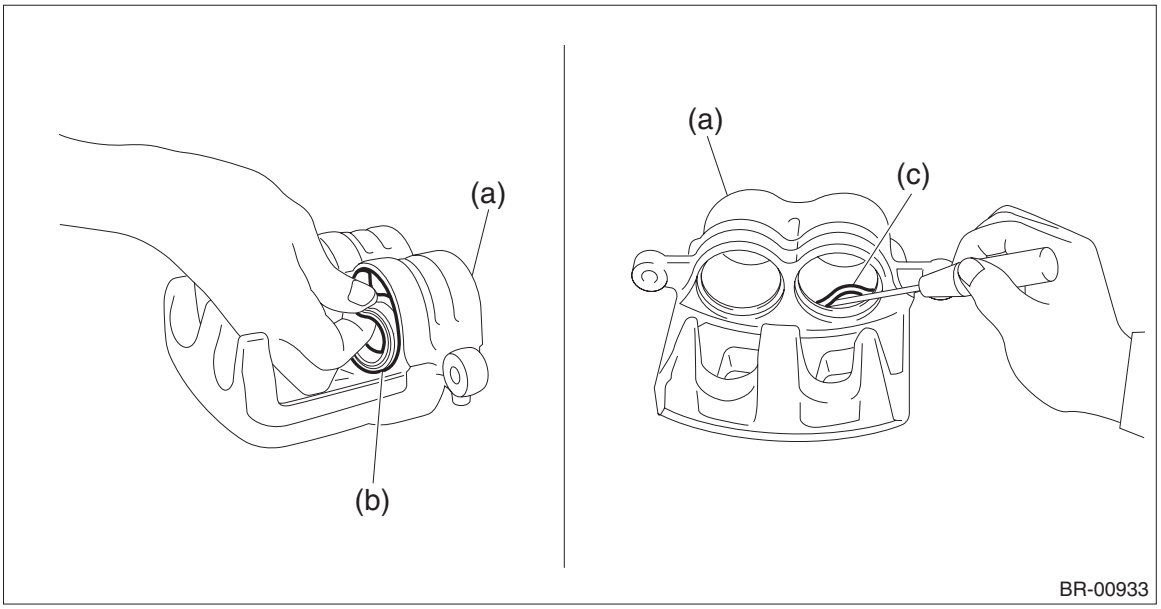
8) Bleed air from the brake system. <Ref. to BR-58, BRAKE LINE, PROCEDURE, Air Bleeding.>
9) Install the front wheels.



Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

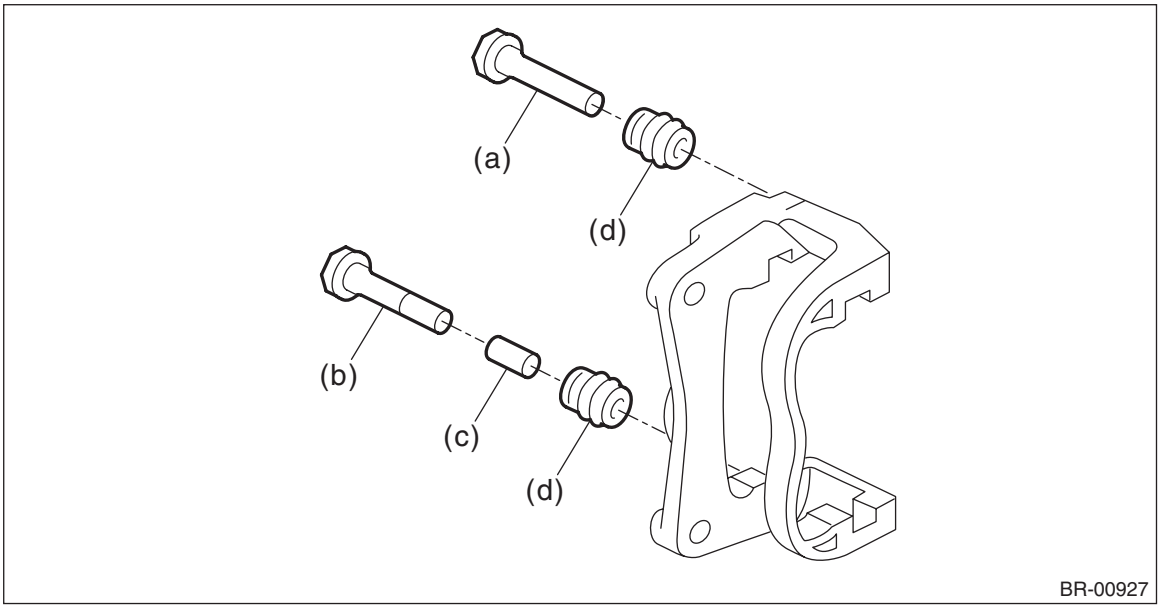
C: DISASSEMBLY

CAUTION:
Be careful not to allow foreign matter to enter the brake hose connector.



1) Remove mud and foreign matter from the caliper body assembly.
2) Remove the piston - disc brake.
   (1) Place a wooden block in the caliper body as shown in the figure to prevent the piston - disc brake from jumping out and being damaged.
   (2) Using an air gun, gradually apply compressed air via the brake hose installation hole to push out the piston - disc brake.

NOTE:
Instead of removing the pistons one by one, remove all pistons at once after adjusting the amount of protrusion evenly using a wooden block.



3) Remove the piston boot (b) and piston seal (c) from the caliper body cylinder (a).

CAUTION:
Do not damage the cylinder and piston seal groove.

4) Remove each part from support - front disc brake.

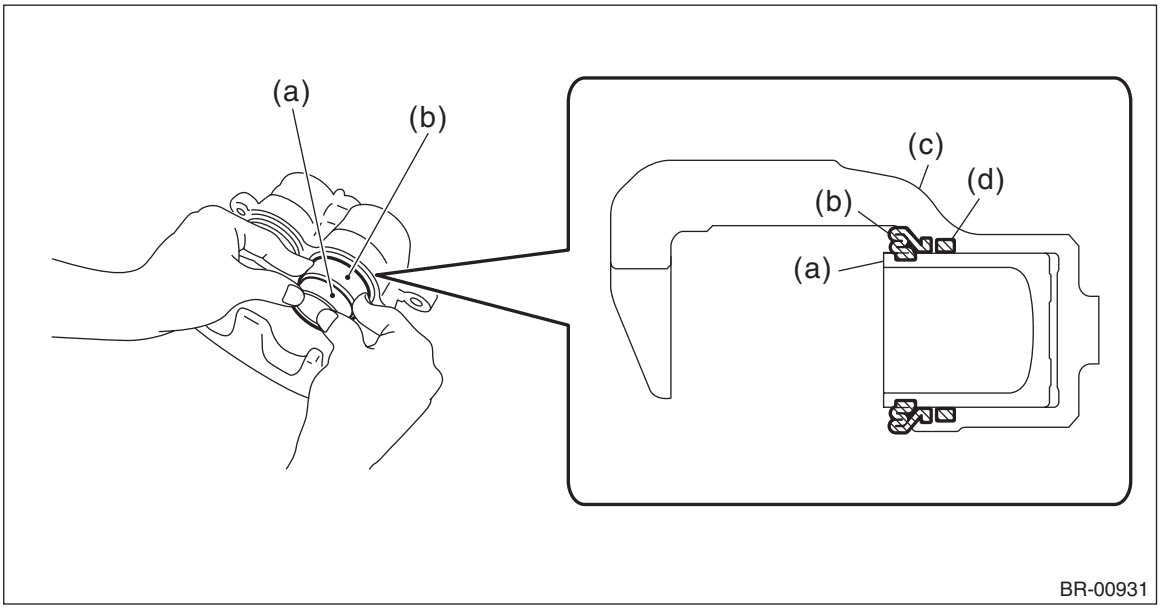
(a) Guide pin - front brake (black)
(b) Lock pin - front brake (silver)
(c) Lock pin - sleeve
(d) Pin boot

D: ASSEMBLY

1) Check each part. <Ref. to BR-29, INSPECTION, Front Disc Brake Assembly.>
2) Clean the inside of the caliper body using brake fluid.

Fluid:
FMVSS No. 116, DOT3 or DOT4

3) Install the piston seal and the piston - disc brake.
   (1) Apply a coat of brake fluid to piston seal and install the piston seal to the groove inside caliper body.
   (2) Apply a coat of brake fluid to the piston sliding part of caliper body and the entire outer surface of the piston - disc brake.

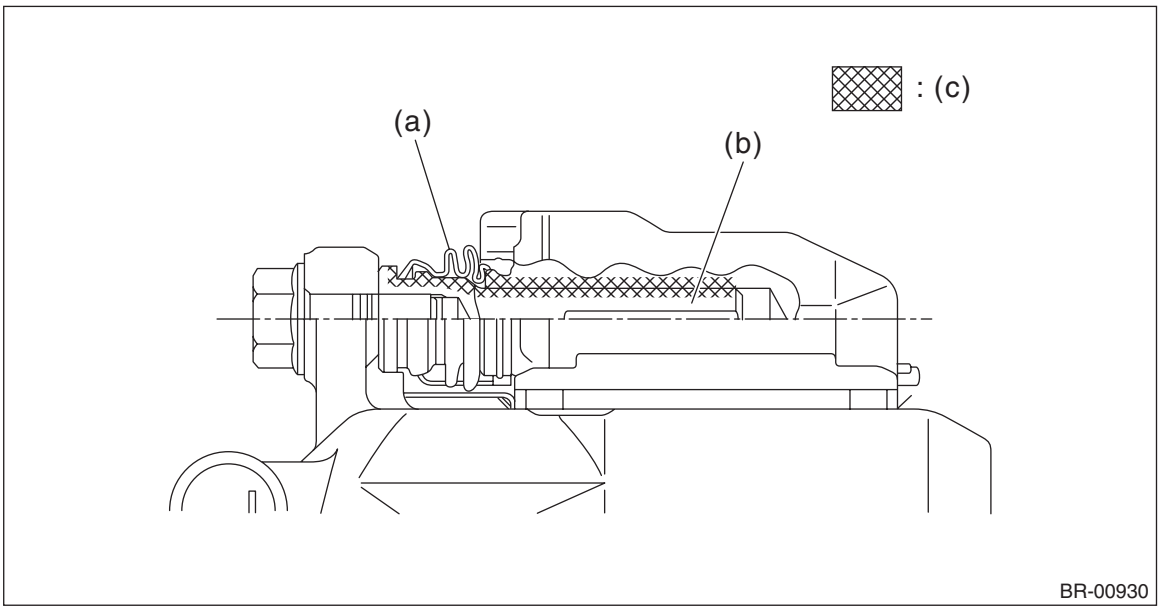


Fluid:
FMVSS No. 116, DOT3 or DOT4

   (3) Apply a coat of grease to the piston boot and fit to the groove on the ends of piston - disc brake.

Grease:
Grease contained in the pad kit or equivalent

   (4) Install the piston - disc brake to the caliper body.



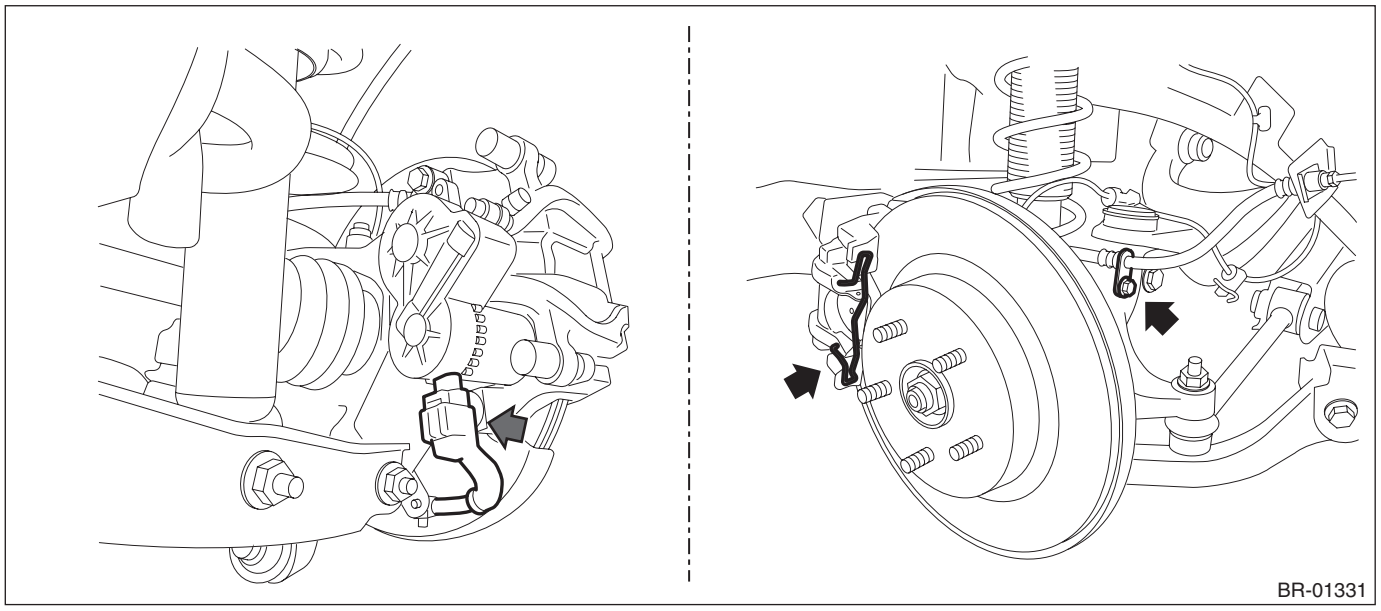
CAUTION:
Do not force the piston - disc brake into the sliding part of caliper body.

(a) Piston - disc brake
(b) Piston boot
(c) Caliper body assembly
(d) Piston seal

4) Apply grease contained in the piston seal kit to the lock pin - front brake, the outer surface of guide pin - front brake, the pin sliding part of the support - front disc brake, and the grooves of pin boot. (Except for STI model)
5) Install the pin boot to the lock pin - front brake and the guide pin - front brake, and insert them into the support - front disc brake.

CAUTION:
Insert the lock pin - front brake and guide pin - front brake into specified position, and make sure that they slide and seat properly.

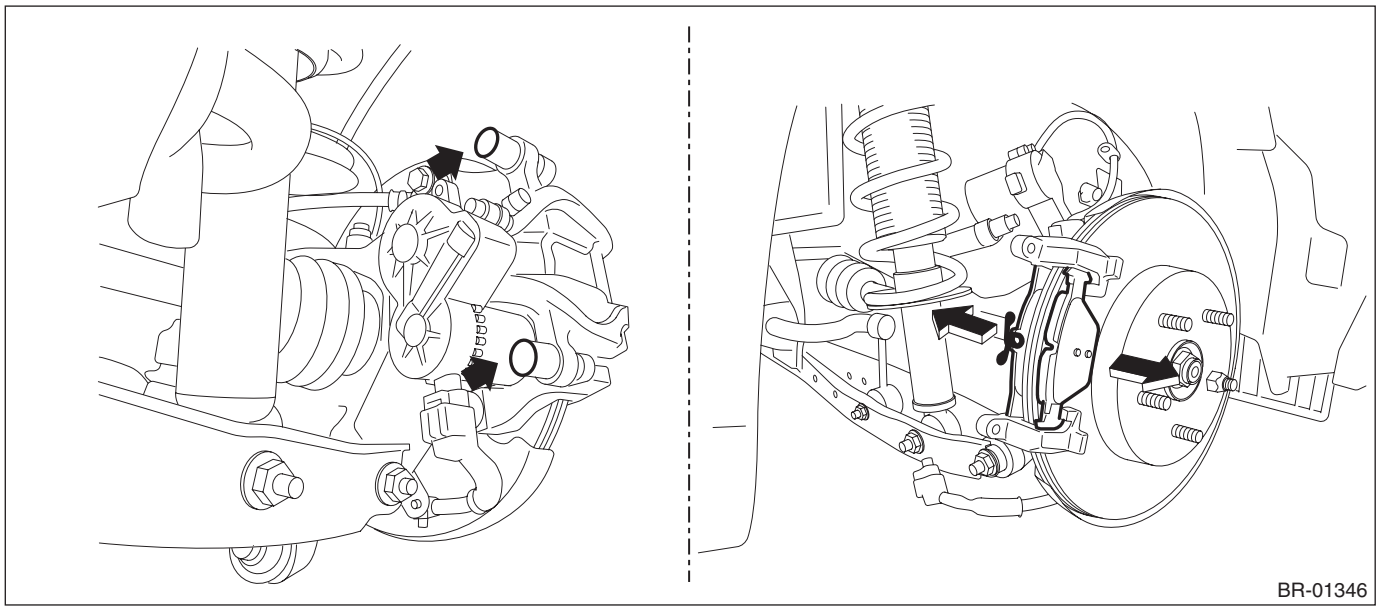
(a) Pin boot
(b) Lock pin - front brake or guide pin - front brake
(c) Grease applied area



E: INSPECTION

1) Check the piston sliding part of caliper body and the piston for uneven wear, damage or rust.
2) Check the rubber parts for damage or deterioration.
3) If faulty is found in the inspection, replace the relevant part.

5. Rear Brake Pad



A: REMOVAL

1) Release the parking brake.
2) Using the Subaru Select Monitor, go to the brake maintenance mode according to the display screen.
3) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Lift up the vehicle, and then remove the rear wheels.
5) Remove the pad - disc brake rear.
   (1) Disconnect the connector.
   (2) Remove the pad clip and the brake hose bracket.

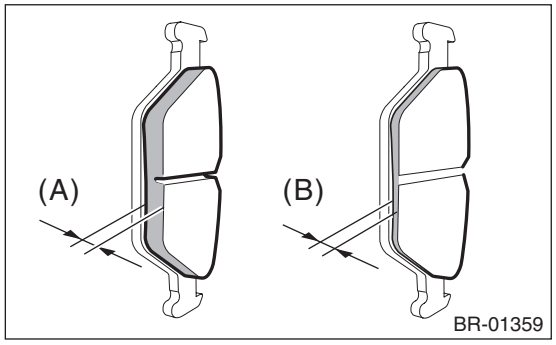
   (3) Remove the cap and the caliper bolt, and remove the caliper body assembly.
   (4) Remove the pad - disc brake rear.

Preparation tool:
Hexagon wrench: 7 mm (0.28 in)

B: INSTALLATION

NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Install the pad - disc brake rear.
2) Install the caliper body assembly.

Tightening torque:
Caliper bolt: 25 N·m (2.5 kgf-m, 18.4 ft-lb)
Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)



3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Using the Subaru Select Monitor, exit the brake maintenance mode according to the display screen.
5) After the operation is completed, apply and release the parking brake five times and ensure that the brake operates normally.
6) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

C: INSPECTION

1) Check the thickness of the pad - disc brake rear.

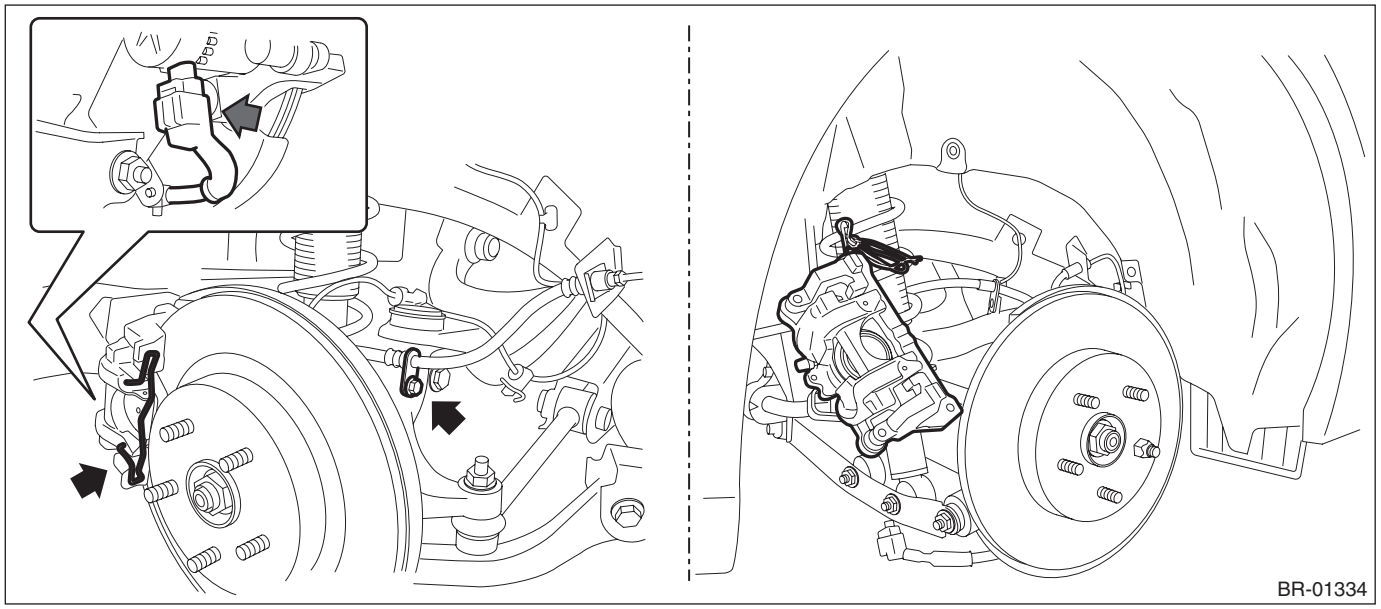
NOTE:
- Always replace the pads of both wheels and both sides as a set.
- Replace pad clips if they are twisted or worn.
- Replace the pad if there is oil or grease on it.
- Wear indicators are installed on the pad - disc brake rear inner, and a squeaking sound is heard if the pad is worn to the limit.

	Standard (A)	Wear limit (B)
Pad thickness	9.0 mm (0.354 in)	1.5 mm (0.059 in)

2) If the wear limit is exceeded in the inspection, replace the brake pad. <Ref. to BR-32, REPLACEMENT, Rear Brake Pad.>

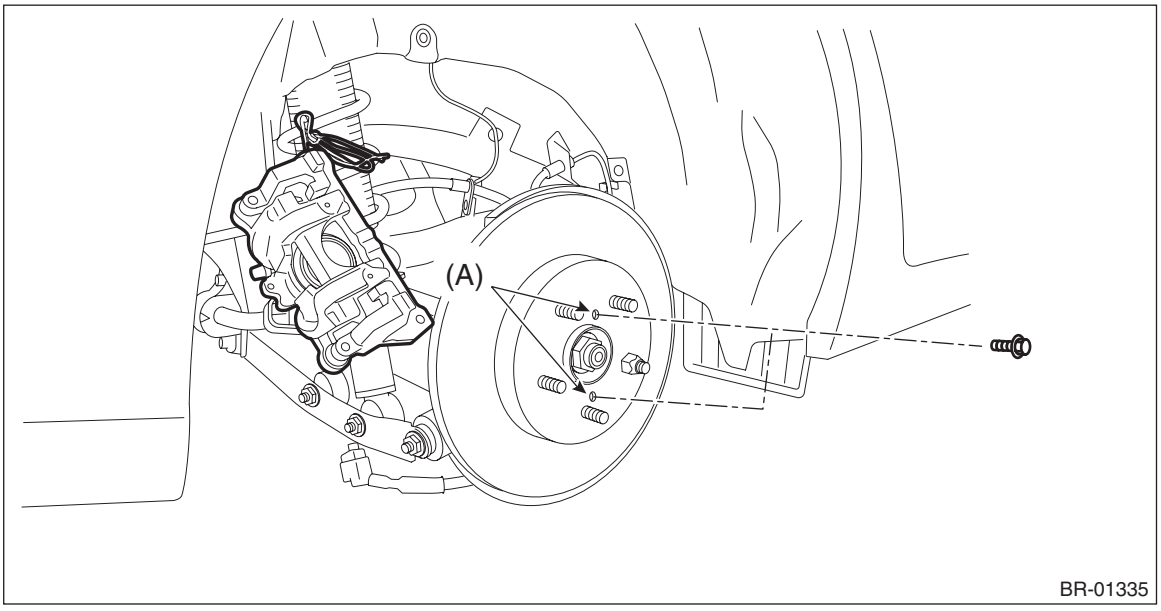
D: REPLACEMENT

1) Release the parking brake.
2) Using the Subaru Select Monitor, go to the brake maintenance mode according to the display screen.
3) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Remove the pad - disc brake rear. <Ref. to BR-30, REMOVAL, Rear Brake Pad.>
5) Push back the piston - disc brake.
6) Install the pad - disc brake rear. <Ref. to BR-31, INSTALLATION, Rear Brake Pad.>
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
8) Using the Subaru Select Monitor, exit the brake maintenance mode according to the display screen.
9) After the operation is completed, apply and release the parking brake five times and ensure that the brake operates normally.



NOTE:
Perform the following replacement procedure if the Subaru Select Monitor cannot be used.
1. Remove the disc brake assembly and the pad - disc brake rear.
2. Remove the bolt securing the lower side of the support - rear disc brake, loosen the upper side, and then raise the support - rear disc brake to secure.
3. Secure the disc brake assembly as shown in the figure, and push back the piston using the tool.

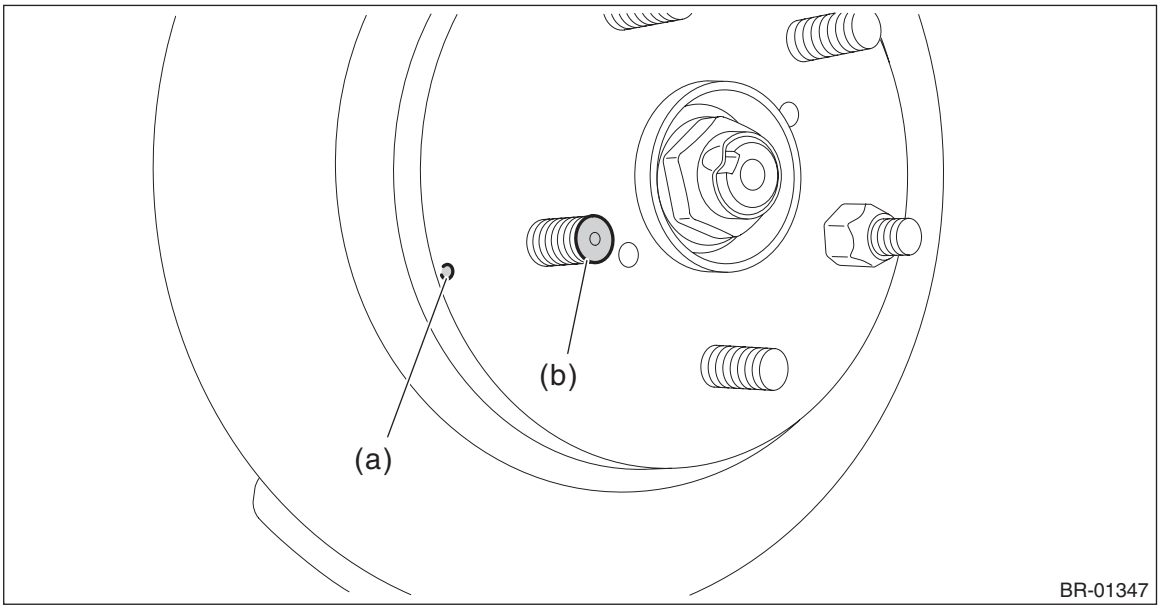
6. Rear Disc Rotor



A: REMOVAL

1) Release the parking brake.
2) Using the Subaru Select Monitor, go to the brake maintenance mode according to the display screen.
3) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Lift up the vehicle, and then remove the rear wheels.
5) Remove the disc brake assembly.
   (1) Remove the pad clip, the connector and the brake hose bracket.
   (2) Remove the mounting bolt, and remove the disc brake assembly.
   (3) Prepare wiring harnesses etc. to be discarded, and suspend the disc brake assembly from the shock absorber assembly.

6) Remove the disc rotor.



NOTE:
If the disc rotor is difficult to remove, proceed as follows.
When the disc rotor is difficult to be removed from the hub unit COMPL - rear axle, screw in 8 mm (0.31 in) bolt to the threaded part of the disc rotor (A), and remove the disc rotor.

B: INSTALLATION

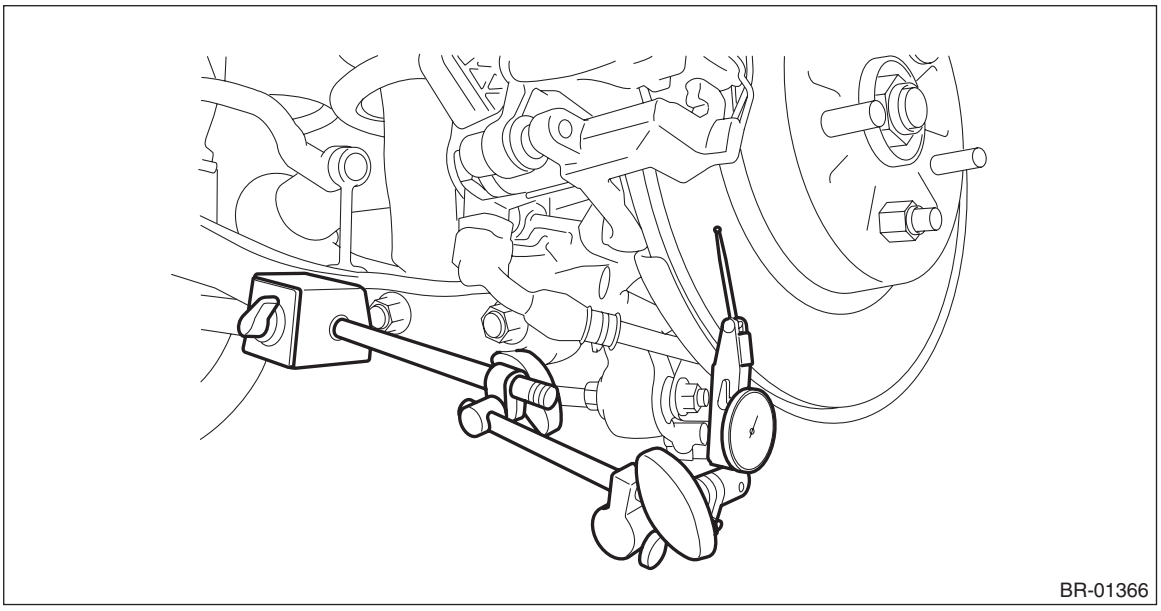
NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Check the rear disc rotor. <Ref. to BR-34, INSPECTION, Rear Disc Rotor.>
2) Install the rear disc rotor.

NOTE:
When installing the rear disc rotor, match the alignment mark (a) of the rear disc rotor and the alignment mark (b) of the bolt - hub.

3) Install the disc brake assembly.

Tightening torque:
Mounting bolt: 66 N·m (6.7 kgf-m, 48.7 ft-lb)
Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Using the Subaru Select Monitor, exit the brake maintenance mode according to the display screen.
6) After the operation is completed, apply and release the parking brake five times and ensure that the brake operates normally.
7) Install the rear wheels.

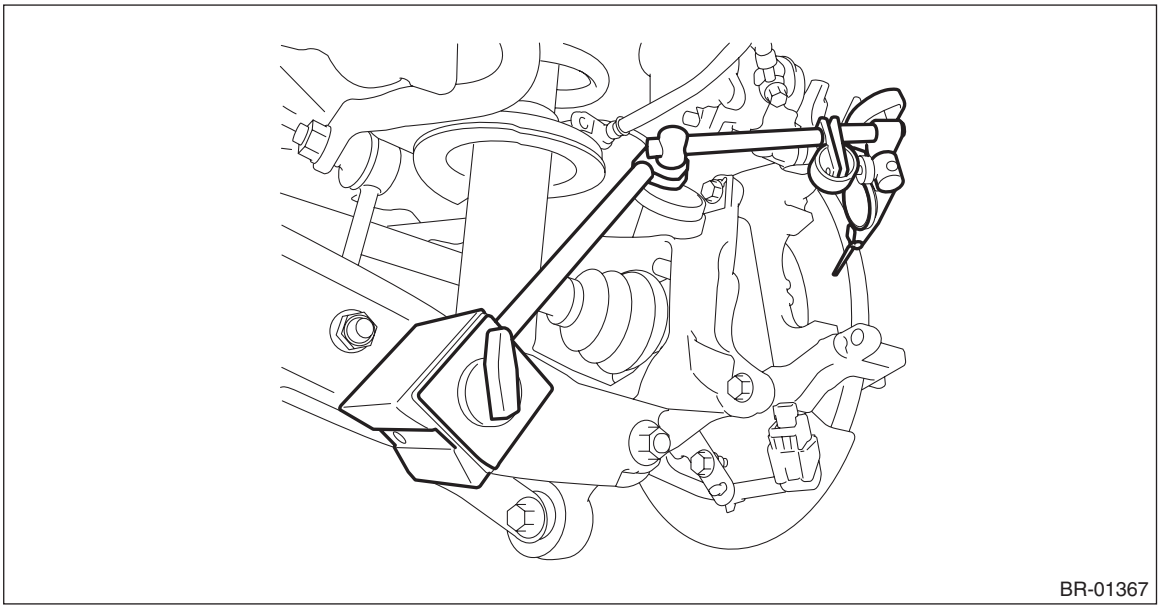
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)



C: INSPECTION

1. DISC ROTOR RUNOUT CHECK

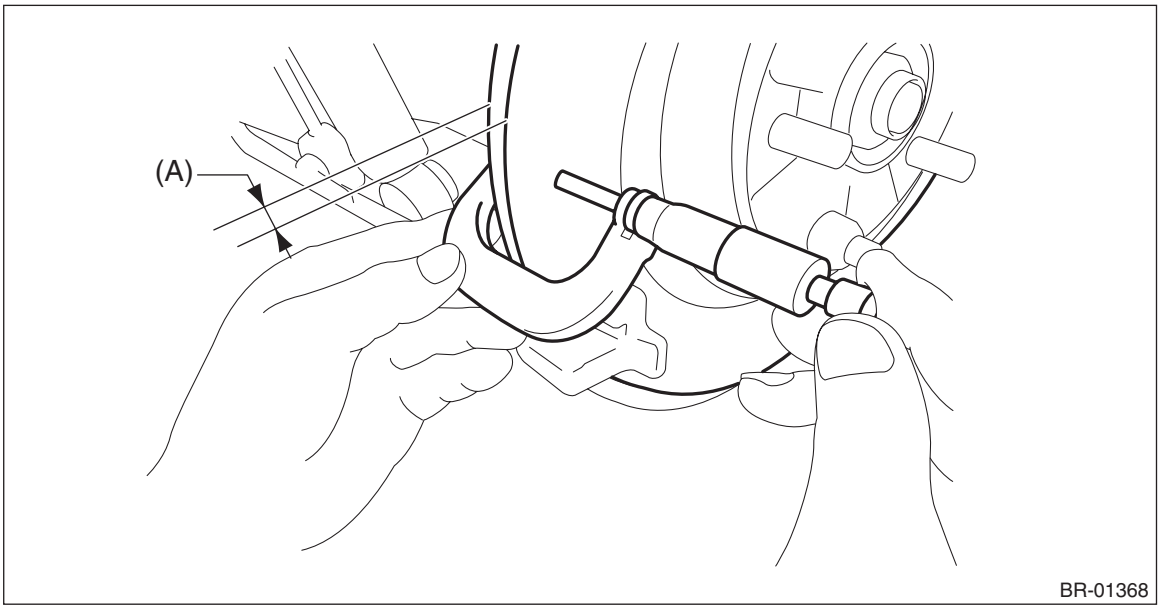
1) Check the hub unit COMPL - rear axle for free play and runout before the inspection of disc rotor runout limit. <Ref. to DS-41, INSPECTION, Rear Hub Unit Bearing.>
2) Check the disc rotor runout.
(1) Remove the caliper body assembly. <Ref. to BR-37, REMOVAL, Rear Disc Brake Assembly.>
(2) Secure the disc rotor by tightening the five wheel nuts.



(3) Set a dial gauge 10 mm (0.39 in) inward from the disc rotor outer circumference, and check the outer disc rotor runout while rotating the disc rotor.

Disc rotor runout limit:
0.05 mm (0.0020 in)

(4) Set a dial gauge 10 mm (0.39 in) inward from the disc rotor outer circumference, and check the inner disc rotor runout while rotating the disc rotor.



Disc rotor runout limit:
0.05 mm (0.0020 in)

3) If the disc rotor runout exceeds service limit, grind the disc rotor.
4) Check the disc rotor thickness after grinding. <Ref. to BR-36, DISC ROTOR THICKNESS CHECK, INSPECTION, Rear Disc Rotor.>

2. DISC ROTOR THICKNESS CHECK

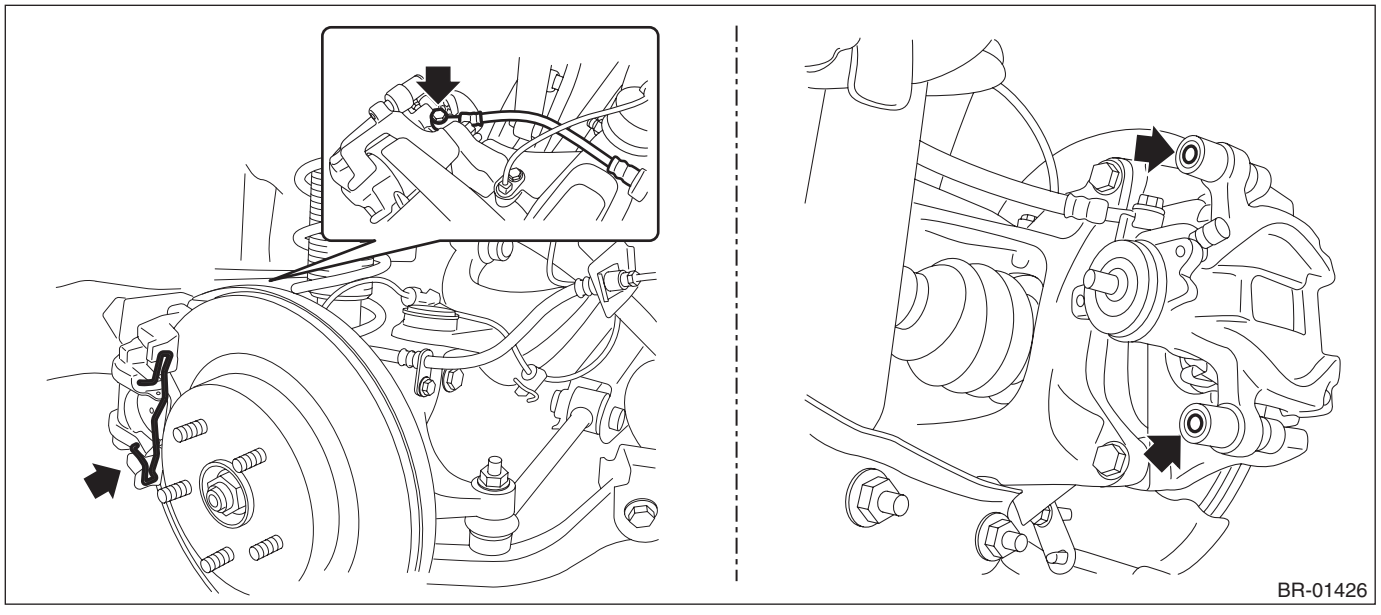
1) Remove the caliper body assembly. <Ref. to BR-37, REMOVAL, Rear Disc Brake Assembly.>
2) Set a micrometer 17 mm (0.67 in) inward from the disc rotor outer perimeter, and then measure the disc rotor thickness (A).

	Standard	Wear limit	Disc rotor outer diameter
Disc rotor thickness (A)	17 mm (0.67 in)	15 mm (0.59 in)	300 mm (11.81 in)

3) If the wear limit is exceeded in the inspection, replace the disc rotor.

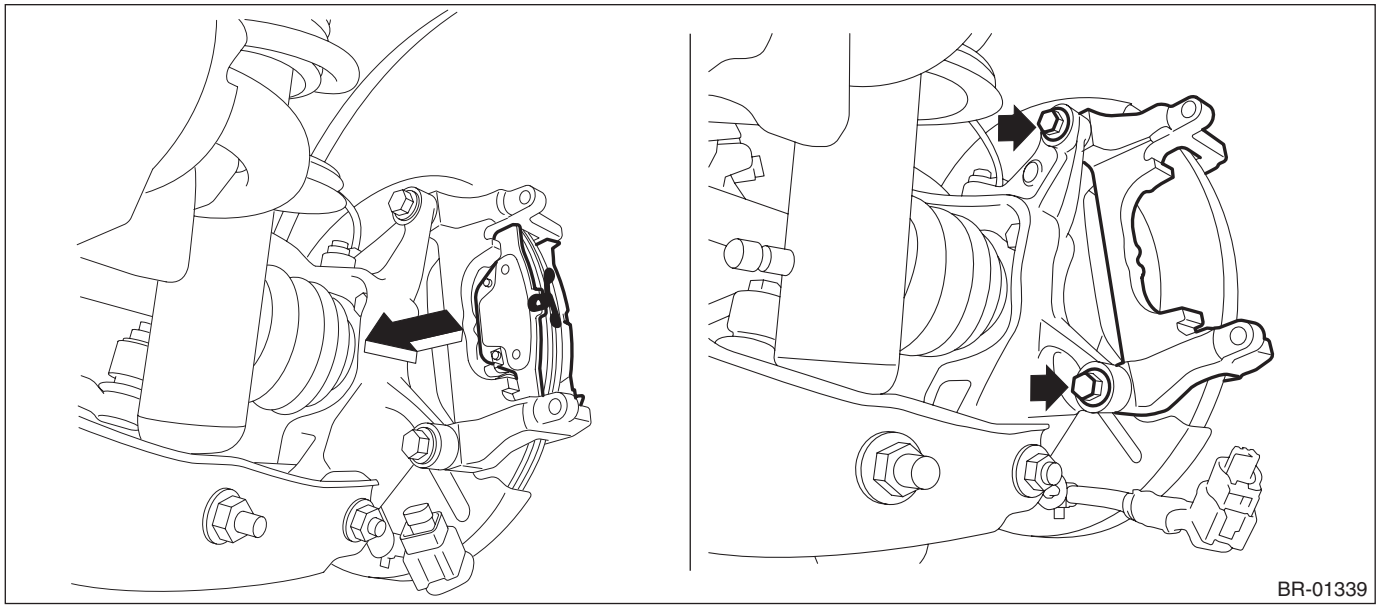
7. Rear Disc Brake Assembly

A: REMOVAL



CAUTION:
• Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
• Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.
• Do not remove the parking brake actuator assembly except when there are system malfunctions (such as emergency release of parking brake or abnormal actuator) or when the caliper is replaced. When the parking brake actuator assembly is reused, always replace the O-ring with a new part contained in the caliper body assembly.
1) Release the parking brake.
2) Using the Subaru Select Monitor, go to the brake maintenance mode according to the display screen.
3) Lift up the vehicle, and then remove the rear wheels.
4) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
5) Remove the parking brake actuator. <Ref. to PB-10, PARKING BRAKE ACTUATOR, REMOVAL, Parking Brake Actuator.>
6) Remove the caliper body assembly.

CAUTION:
• Do not detach the brake hose except when replacing the caliper body assembly.
• Install the plug bolt to the caliper body assembly when the brake hose is disconnected.
If air enters or fluid leaks by tilting, replace the caliper body assembly.
(1) Remove the union bolt, and then disconnect the brake hose.
(2) Install the fluid leakage protection plug to the caliper body.



Plug:
26642AL000: PLUG BOLT
26642AL010: PLUG GASKET

Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)
(3) Remove the pad clip.
(4) Remove the caliper bolts, and then remove the disc brake assembly.

Preparation tool:
Hexagon wrench: 7 mm (0.28 in)

BR-01426

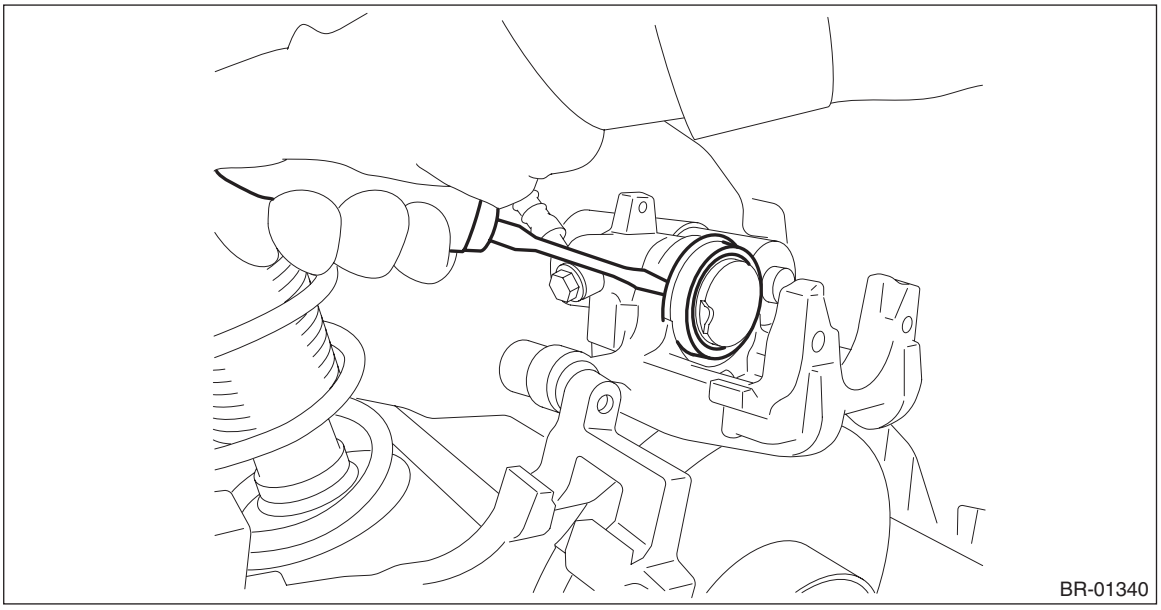
7) Remove the support - rear disc brake.
(1) Remove the pad - disc brake rear.
(2) Remove the mounting bolts, and then remove the support - rear disc brake.

B: INSTALLATION

NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Check each part. <Ref. to BR-40, INSPECTION, Rear Disc Brake Assembly.>
2) Install the support - rear disc brake to the housing assembly - rear axle.

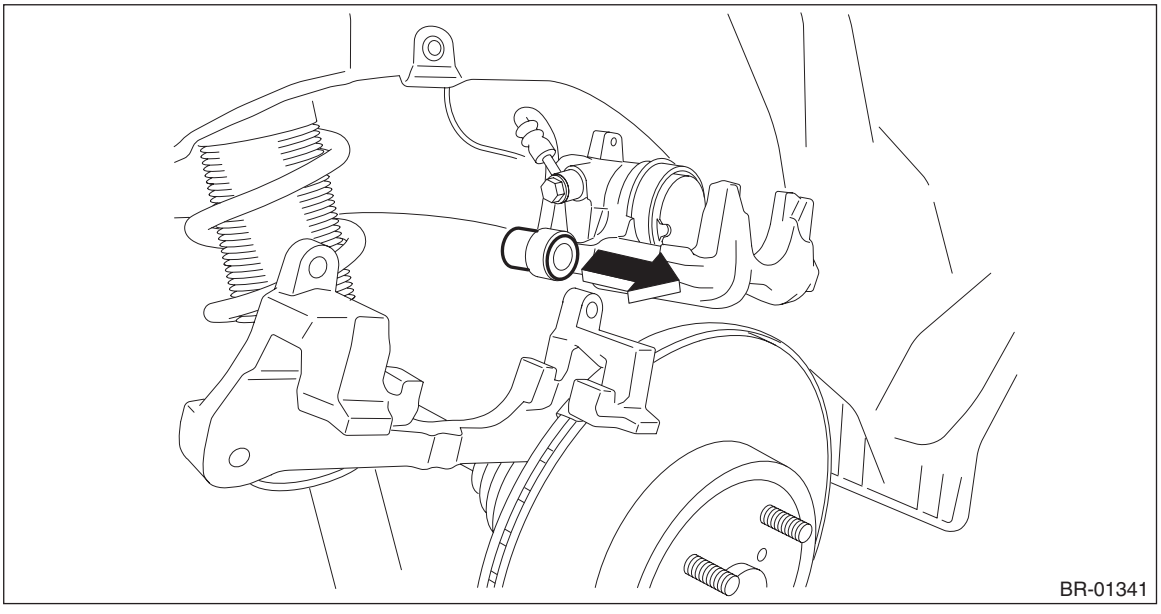
Tightening torque:
66 N·m (6.7 kgf-m, 48.7 ft-lb)
3) Install the caliper body assembly.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)
4) Connect the brake hose using a new brake hose gasket.



Tightening torque:
Union bolt: 26 N·m (2.7 kgf-m, 19.2 ft-lb)
5) Install the parking brake actuator. <Ref. to PB-12, PARKING BRAKE ACTUATOR, INSTALLATION, Parking Brake Actuator.>
6) Bleed air from the brake system. <Ref. to BR-58, BRAKE LINE, PROCEDURE, Air Bleeding.>
7) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
8) Using the Subaru Select Monitor, exit the brake maintenance mode according to the display screen.
9) After the operation is completed, apply and release the parking brake five times and ensure that the brake operates normally.
10) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

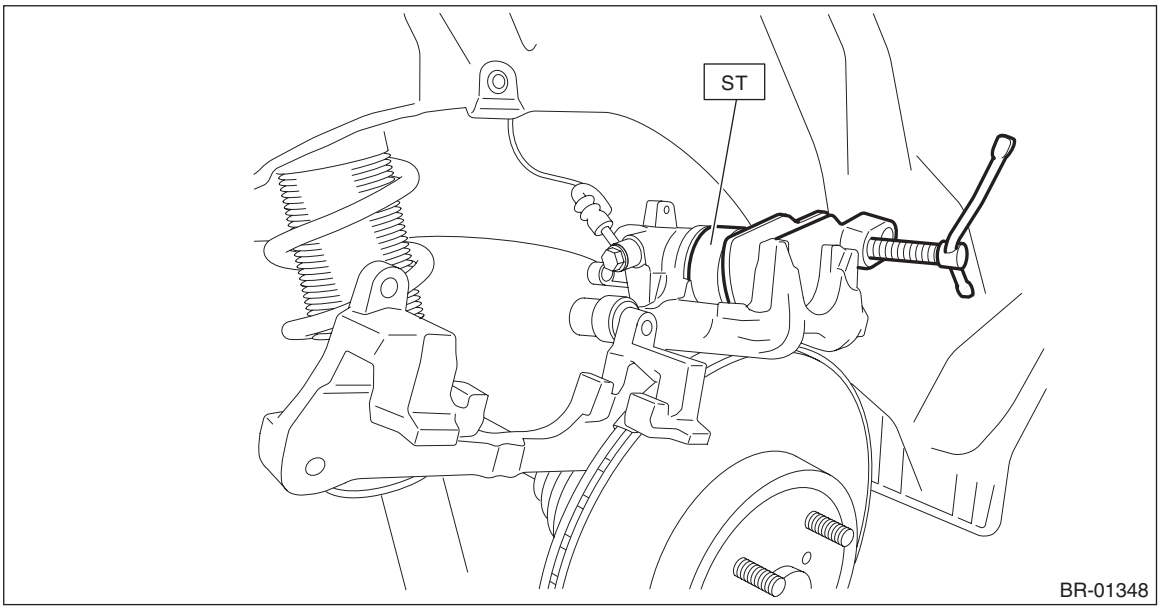


C: DISASSEMBLY

CAUTION:
- **The piston cannot be removed from the caliper body assembly.**
- **Do not remove the parking brake actuator assembly except when there are system malfunctions (such as emergency release of parking brake or abnormal actuator) or when the caliper is replaced. When the parking brake actuator assembly is reused, always replace the O-ring with a new part contained in the caliper body assembly.**

1) Remove mud and foreign matter from the caliper body assembly.
2) Remove the piston boot.

3) Remove the bushing from the support - rear disc brake.



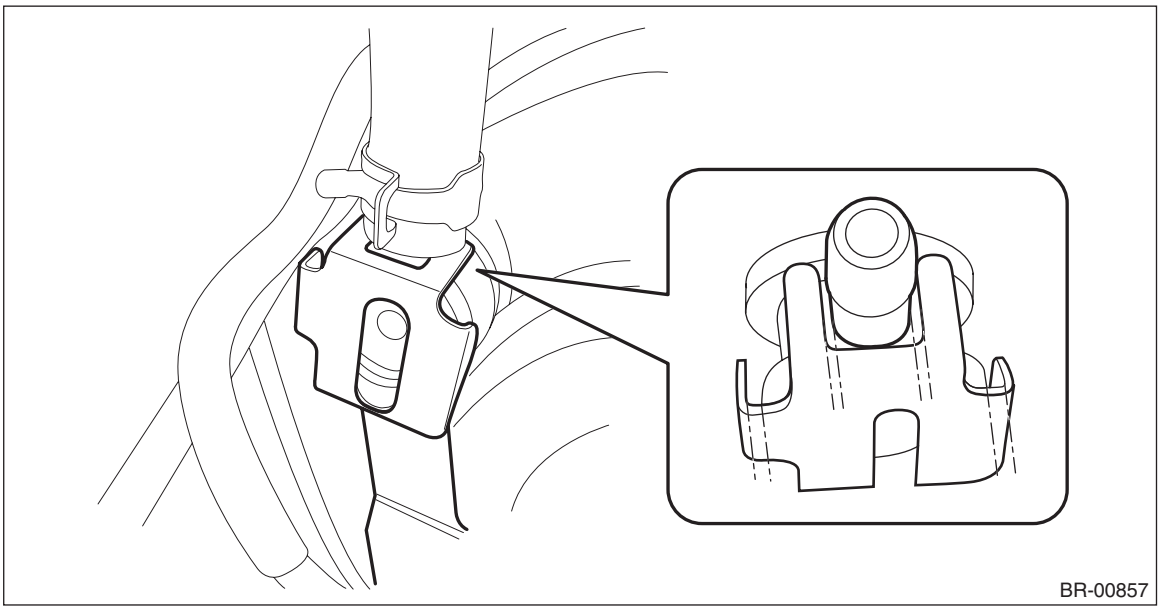
D: ASSEMBLY

NOTE:
If the brake hose is disconnected, air enters inside. Therefore, this operation should be performed on the vehicle without the brake hose disconnected.
1) Check each part. <Ref. to BR-40, INSPECTION, Rear Disc Brake Assembly.>
2) Install the bushing.
3) Using the ST, install the piston boot.

Preparation tool:
ST: PISTON BOOT INSTALLER (99099AL000)

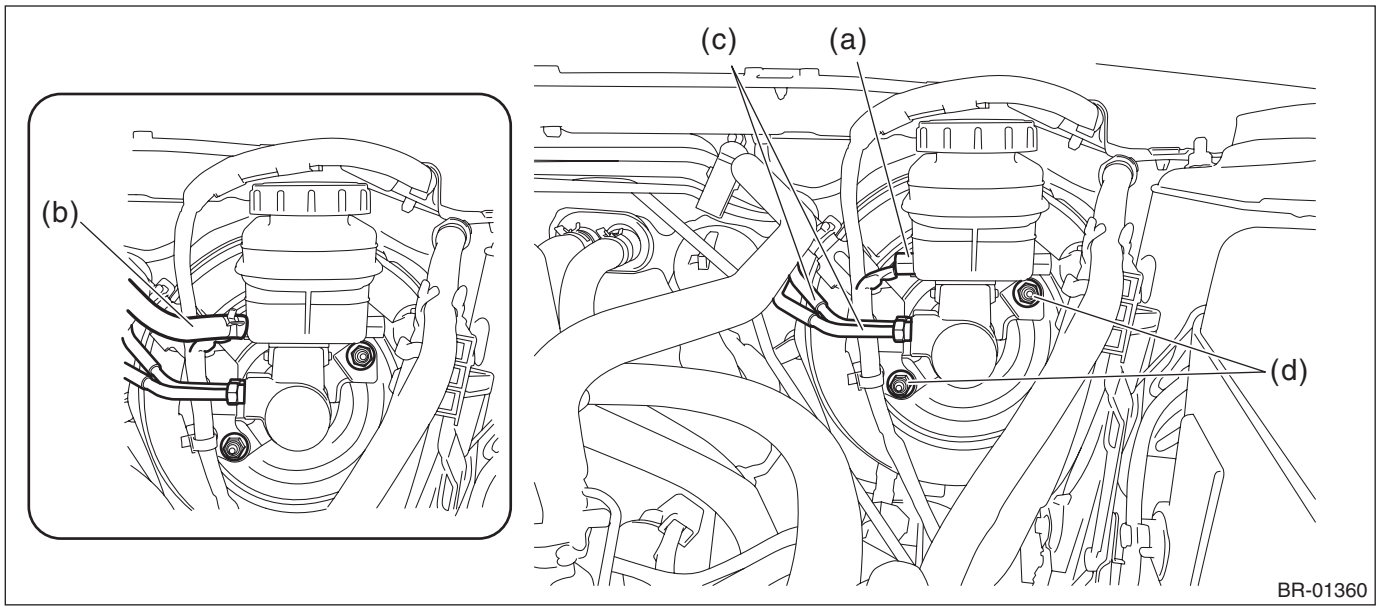
Grease:
Nippon Grease NIGLUBE RX-2

E: INSPECTION



1) Check the piston sliding part of caliper body and the piston - disc brake for uneven wear, damage or rust.
2) Check the rubber parts for damage or deterioration.
3) If faulty is found in the inspection, replace the relevant part.

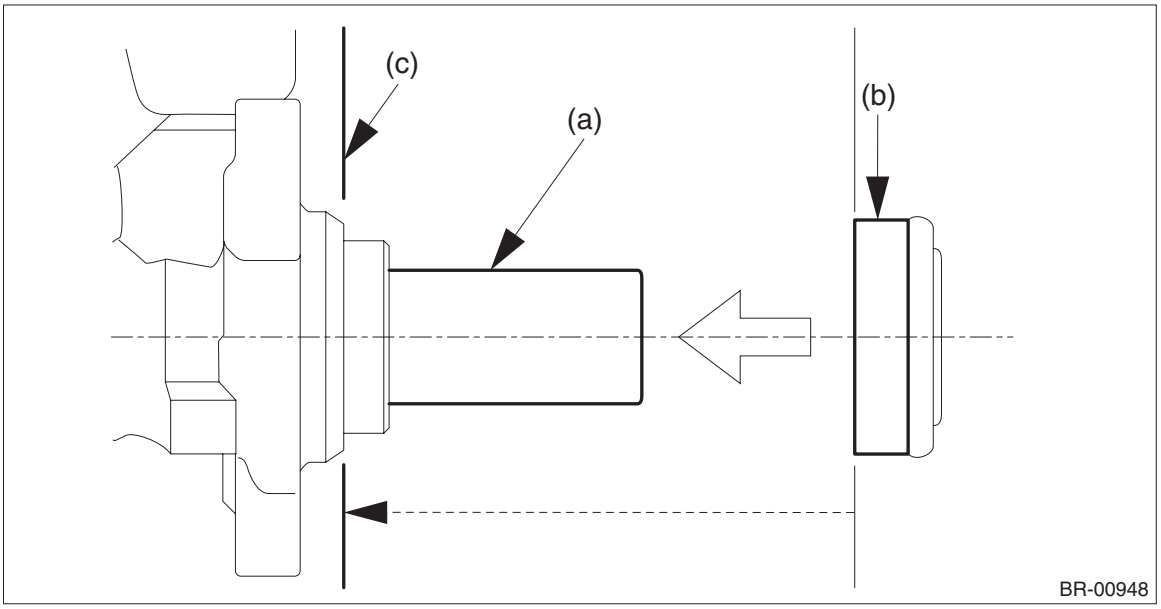
8. Master Cylinder



A: REMOVAL

CAUTION:
• Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
• Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.
• Since the master cylinder assembly cannot be disassembled, disassembly and cleaning are prohibited. When replacing, replace the master cylinder assembly.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Drain brake fluid from the reservoir tank completely.
3) Remove the master cylinder assembly.

CAUTION:
In order to prevent the contact of the bracket and check valve, be sure to loosen the master cylinder mounting nut while holding the bracket with hand. Otherwise it may deform the bracket.



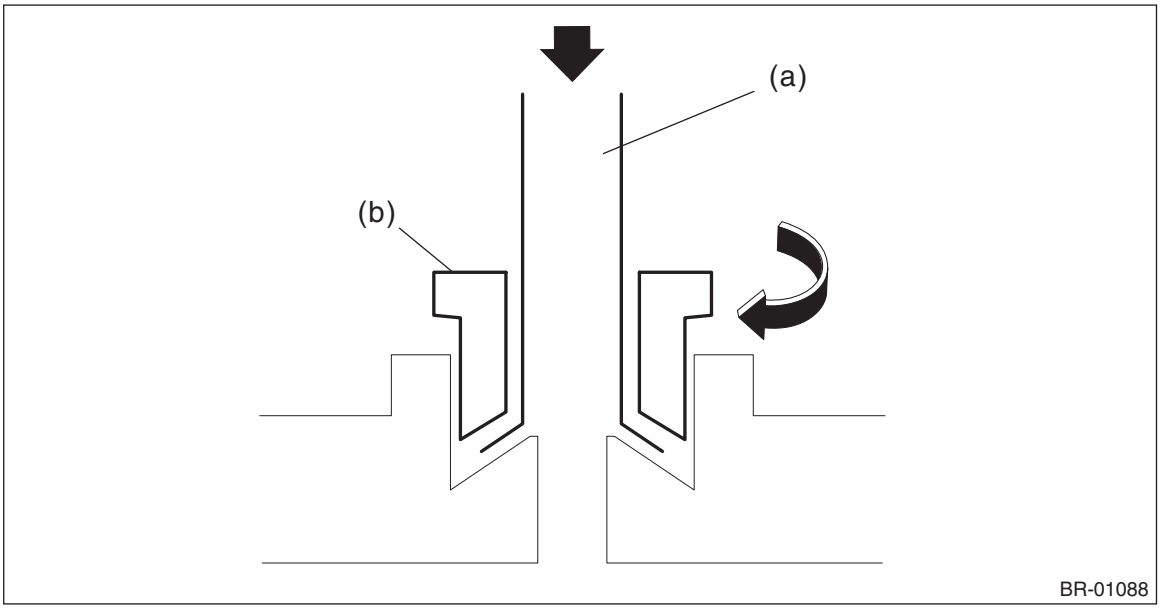
(1) Disconnect the fluid level gauge connector (a).
(2) Disconnect the clutch hose (b). (MT model)
(3) Disconnect the brake pipe (c).
(4) Remove the nut (d), and slowly remove the master cylinder from the brake booster.

B: INSTALLATION

1) Replace the seal sub assembly for the master cylinder assembly with a new part.

CAUTION:
Be careful not to install the seal sub assembly in the wrong location.

(a) Primary piston
(b) Seal sub ASSY
(c) Install the seal sub ASSY to this surface.



2) Install the master cylinder assembly.

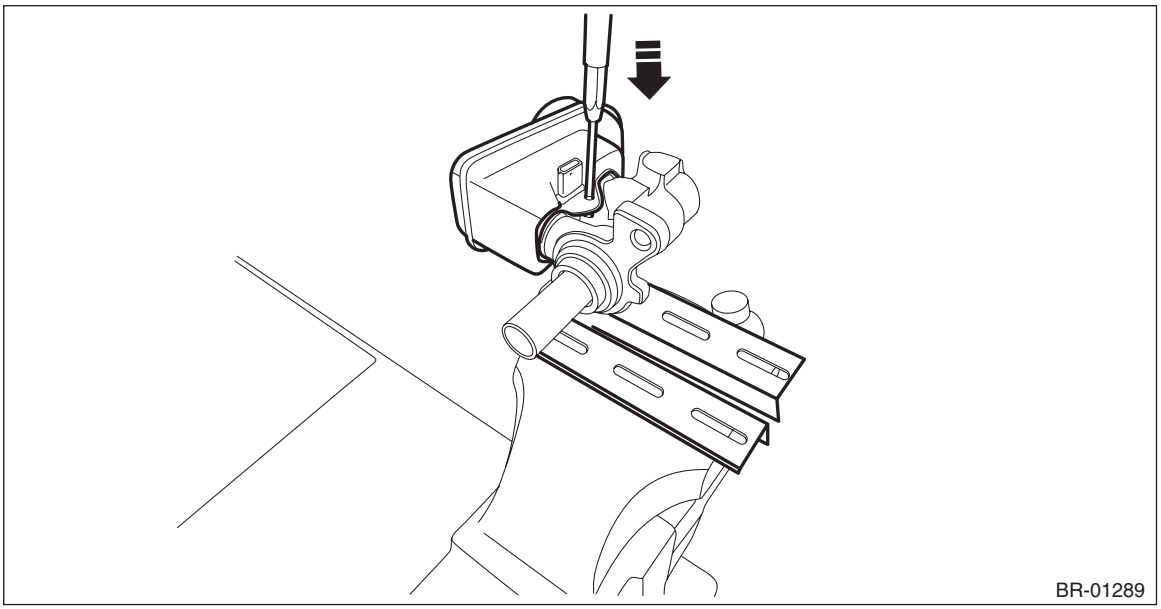
Tightening torque:
13 N·m (1.3 kgf-m, 9.6 ft-lb)

3) Turn and tighten the flare nut (b) by hand while pressing the brake pipe (a) toward the master cylinder assembly side.

CAUTION:
Be careful not to make scratches or other damage to the inside surface of the brake pipe flare.

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)

4) Bleed air from the brake system and clutch system (MT model). <Ref. to BR-56, PROCEDURE, Air Bleeding.>



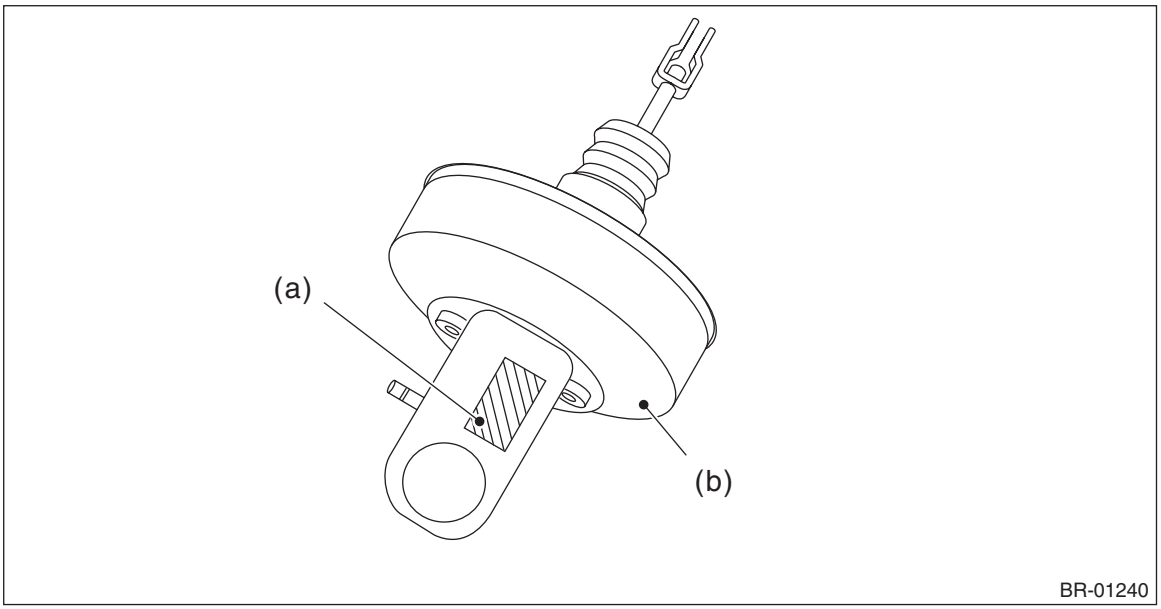
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: DISASSEMBLY

1) Remove the reservoir tank.

CAUTION:
Be careful not to tighten a vise excessively.

(1) Place the master cylinder assembly between aluminum plates and fix it on a vise.
(2) Drive out the pin using a punch and a hammer to remove the reservoir tank.



2) Remove the seal from the cylinder body assembly.

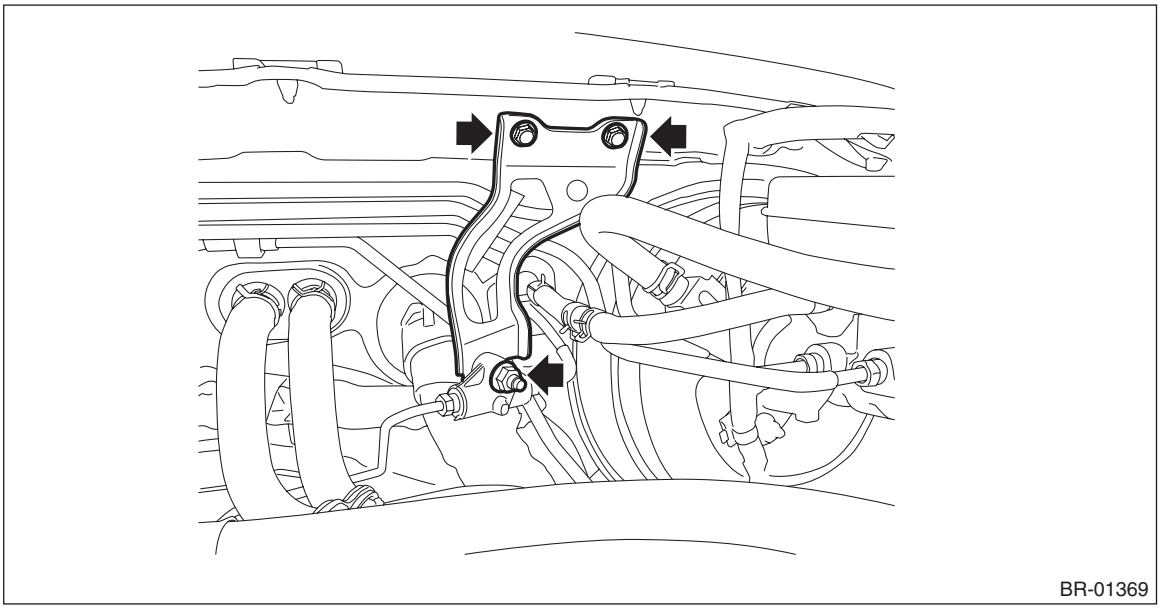
D: ASSEMBLY

CAUTION:
When replacing the reservoir tank, adhere the label to the position shown in the figure. (C0 model)

Label:
C0 model
Part No. 25080GA010

(a) Label (b) Brake booster

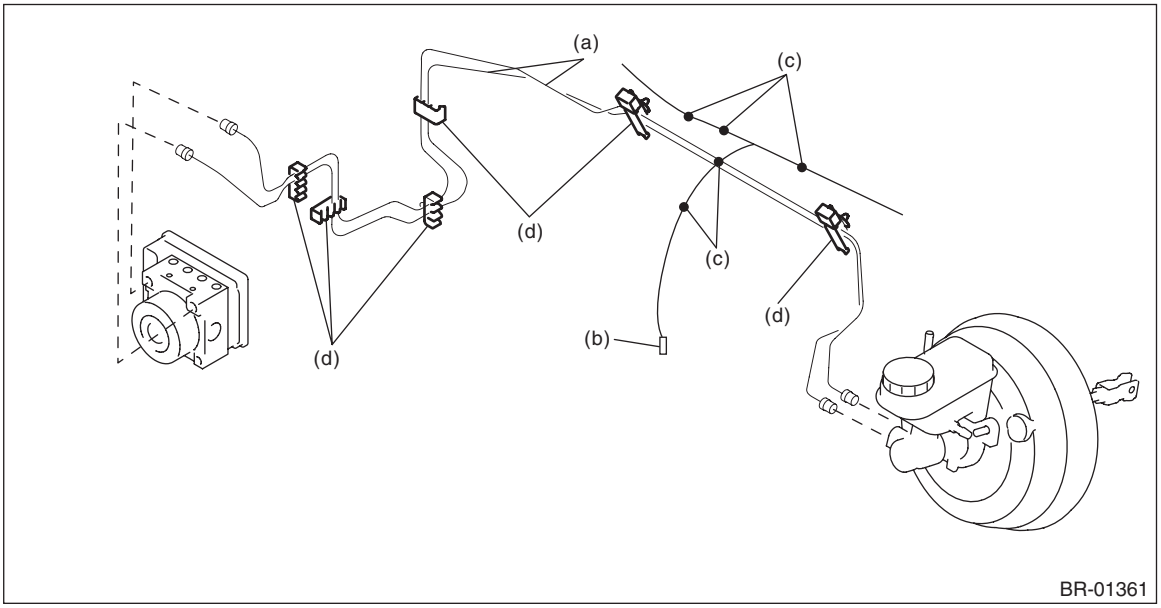
1) Install the seal to the cylinder body assembly.
2) Install the reservoir tank.



CAUTION:
Be careful not to tighten a vise excessively.
(1) Place the master cylinder assembly between aluminum plates and fix it on a vise.
(2) Drive the pin using a punch and a hammer to install the reservoir tank.

9. Brake Booster

A: REMOVAL

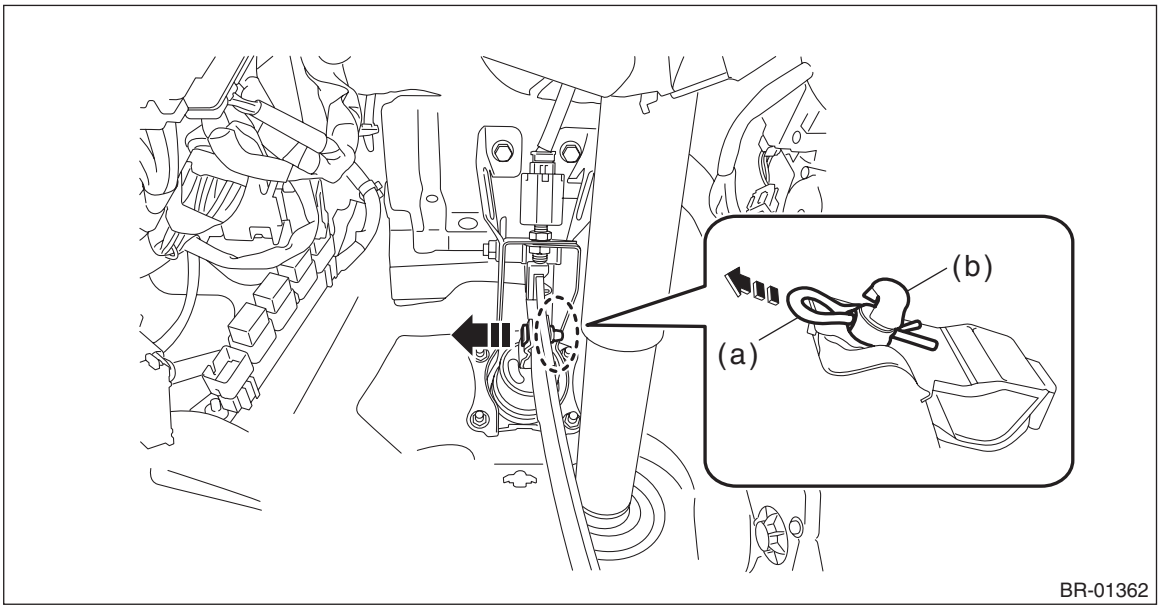


CAUTION:
Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the vacuum hose.
3) Remove the master cylinder assembly. <Ref. to BR-41, REMOVAL, Master Cylinder.>
4) Remove the bolts and nuts, and then remove the clutch bracket.

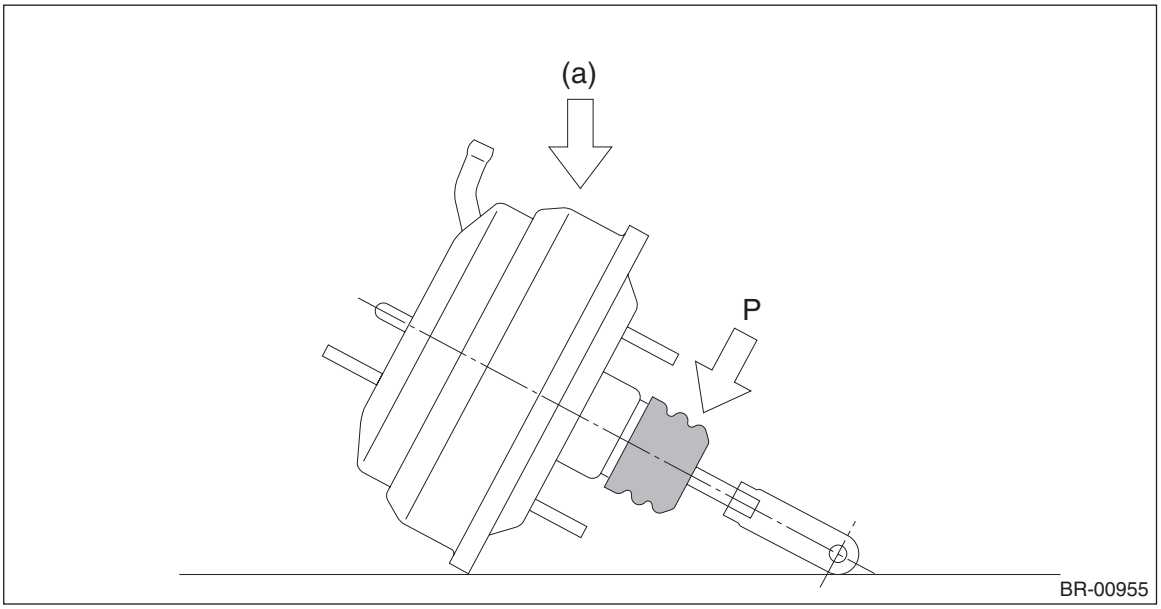
BR-01369

5) Remove the ECM and ECM bracket.
- H4 model: <Ref. to FU(H4DO)-81, REMOVAL, Engine Control Module (ECM).>
- H6 model: <Ref. to FU(H6DO)-83, REMOVAL, Engine Control Module (ECM).>



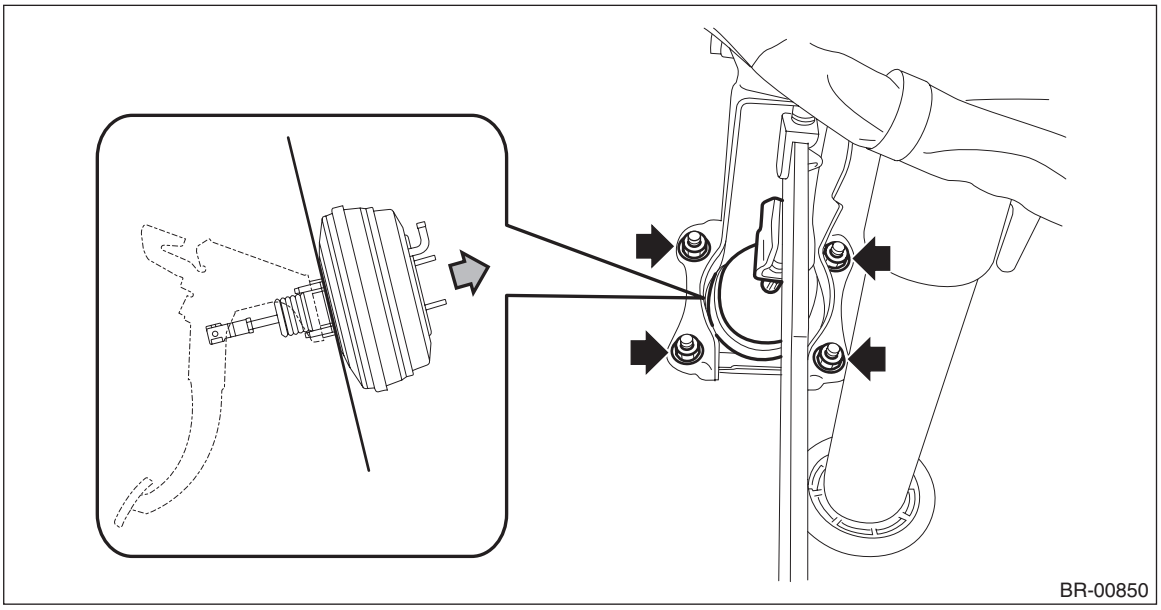
6) Remove the brake pipe assembly (a).
   (1) Disconnect the starter connector (b) and harness clip (c).
   (2) Remove the brake pipe assembly (a) from the pipe clip (d).

BR-01361



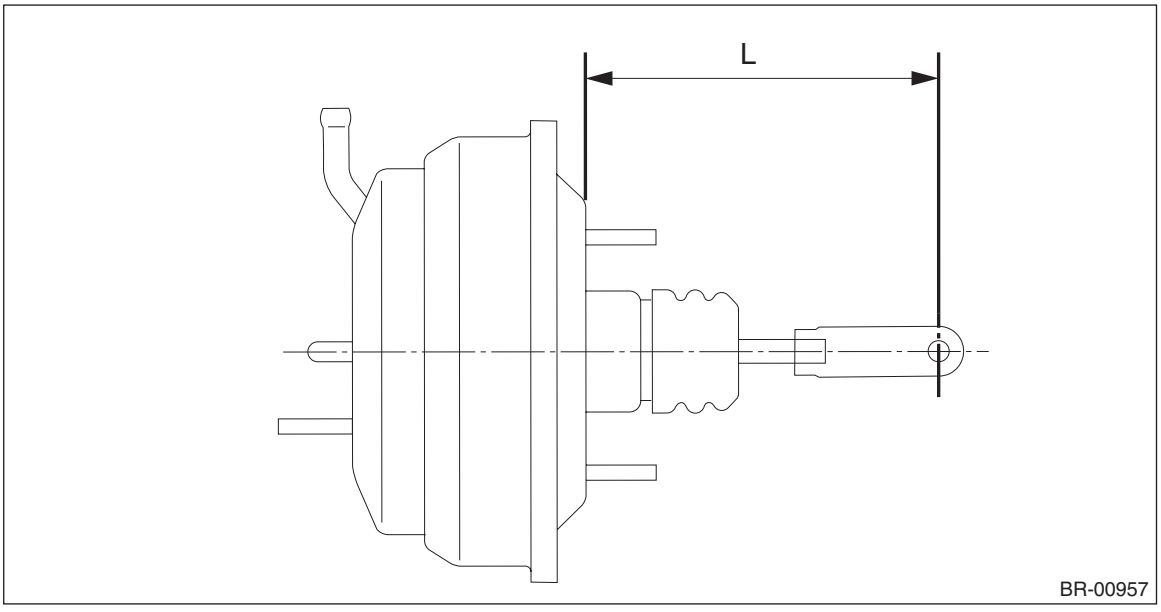
7) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-74, REMOVAL, Instrument Panel Lower Cover.>
8) Remove the panel - knee guard. <Ref. to PS-19, REMOVAL, Steering Column.>
9) Remove the column assembly - steering. <Ref. to PS-19, REMOVAL, Steering Column.>
10) Remove the snap pin (a) and clevis pin (b), and remove the operating rod from the brake pedal.

CAUTION:
• Be careful not to apply excessive force to the operating rod when handling the operating rod. The angle may change by ±3°, and it may result in damage to power piston cylinder.
• Do not change the push rod length.



11) Remove the vacuum booster assembly.

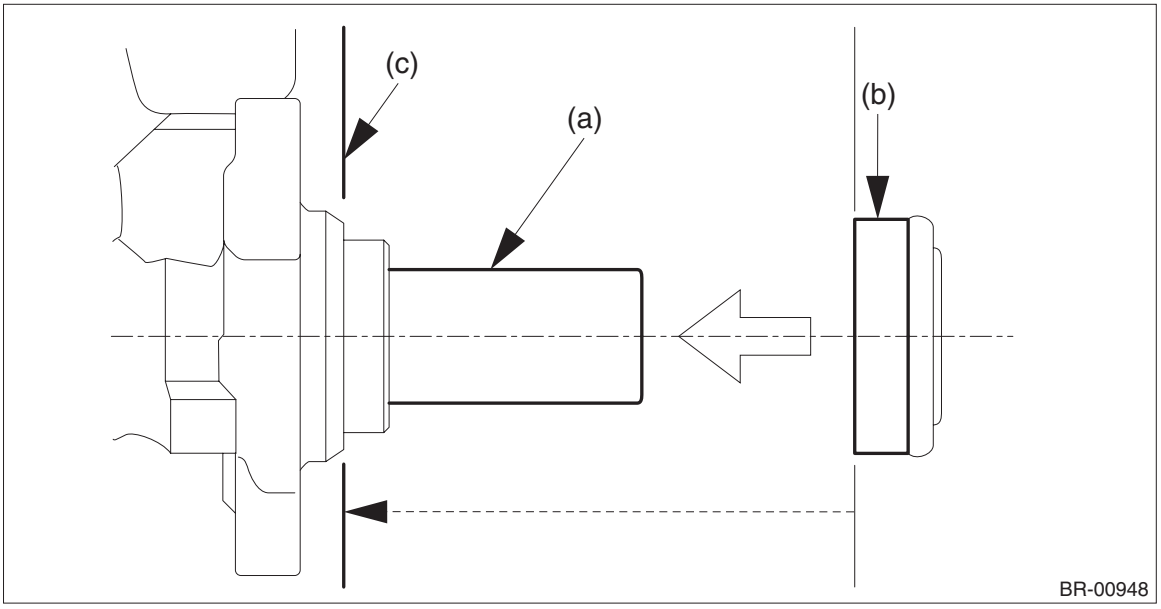
CAUTION:
• Do not disassemble the vacuum booster assembly.
• Make sure that the booster shell and vacuum pipe are not subject to strong impacts.
• Be careful not to drop the vacuum booster assembly. If the vacuum booster assembly is dropped accidentally, replace it.
• Be careful when placing the vacuum booster assembly on floor.
• If external force (a) is applied from above when the vacuum booster assembly is placed in this position, the resin portion as indicated by "P" may become damaged.



(1) Remove the nuts, and then remove the vacuum booster assembly.

B: INSTALLATION

1) Check and adjust the operating rod of the vacuum booster assembly.
   (1) Measure the length between the vacuum booster assembly mounting surface and clevis pin hole.
   (2) If it is not within the specification, loosen the lock nut, rotate the vacuum booster assembly operating rod to adjust the rod length.



Specification L:
136.3 mm (5.37 in)

2) Install the vacuum booster assembly.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

CAUTION:
• Apply grease to the snap pin to prevent the operating rod from wear.
• Replace the clevis pin with new parts, and apply thin coat of NIGTIGHT LYW No. 2 grease to the clevis pin.
• When installing the master cylinder assembly, replace the seal sub assembly with a new part, and install it to the vacuum booster assembly.

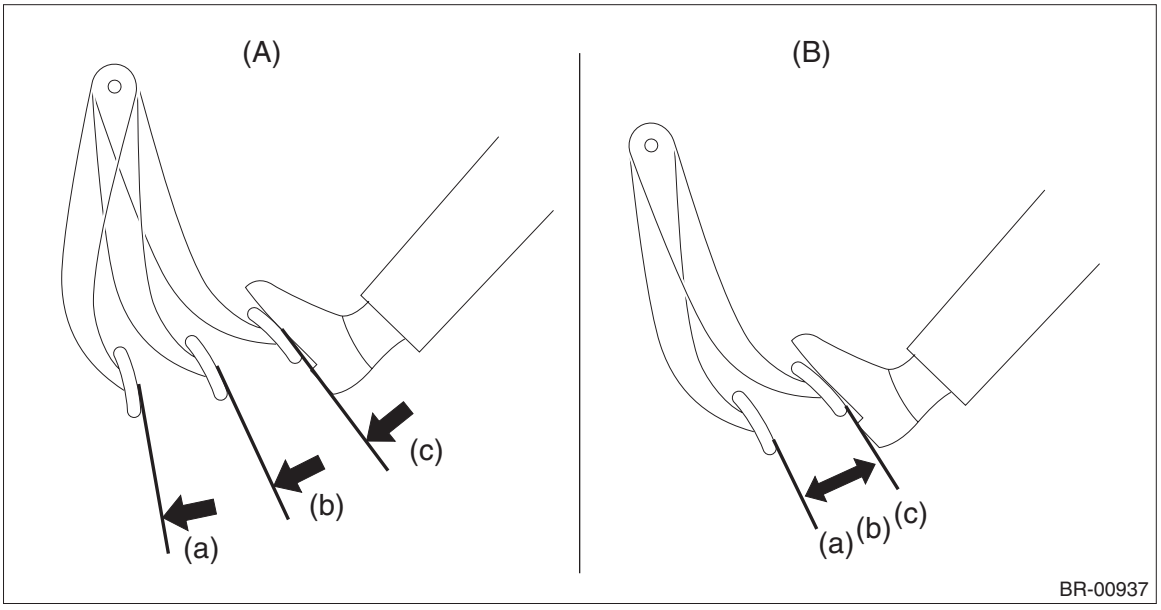
(a) Primary piston
(b) Seal sub ASSY
(c) Install the seal sub ASSY to this surface.

3) Install the column assembly - steering. <Ref. to PS-21, INSTALLATION, Steering Column.>
4) Install the panel - knee guard.

Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)
5) Install the cover assembly - instrument panel LWR driver.
6) Install the master cylinder assembly. <Ref. to BR-42, INSTALLATION, Master Cylinder.>
7) Install the clutch bracket.

Tightening torque:
Clutch bracket: <Ref. to CL-4, CLUTCH PIPE AND HOSE, COMPONENT, General Description.>
8) Charge refrigerant. <Ref. to AC-28, PROCEDURE, Refrigerant Charging Procedure.>
9) Bleed air from the brake system. <Ref. to BR-56, PROCEDURE, Air Bleeding.>
10) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
11) Perform a road test to make sure the brakes do not drag.

C: INSPECTION



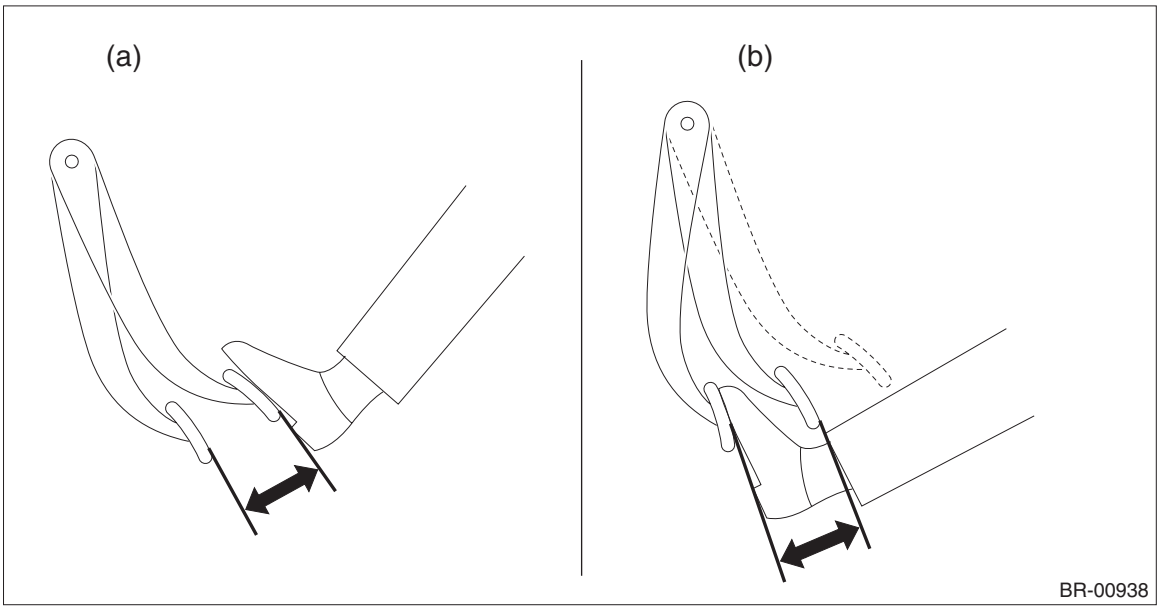
1. OPERATION CHECK WHEN NOT USING MEASURING DEVICES

CAUTION:
When checking operation, be sure to apply the parking brake securely.
When an operation check is performed with no measuring devices, a faulty part cannot be identified correctly. But it is possible to identify the outline of the defect by performing the check according to the following procedures.

- **Air tightness check**

1) Start the engine, and idle it for 1 to 2 minutes, then turn it OFF.
2) Depress the brake pedal several times applying the normal pedal force.

NOTE:
The pedal stroke should be the longest at the 1st depression, and it should become shorter at each successive depression.
3) If no change occurs in the pedal height when pressed, the vacuum booster assembly is faulty.



(A) Normal (B) Not OK

(a) 1st (b) 2nd (c) 3rd

NOTE:
- In case of defective operation, inspect the condition of the check valve and vacuum hose as well.
- Replace them if faulty, and perform the test again.
- If no improvement is observed, check precisely with gauges.

- **Check operation**

1) While the engine is OFF, depress the brake pedal several times applying the same pedal force, to check for a change in pedal height.

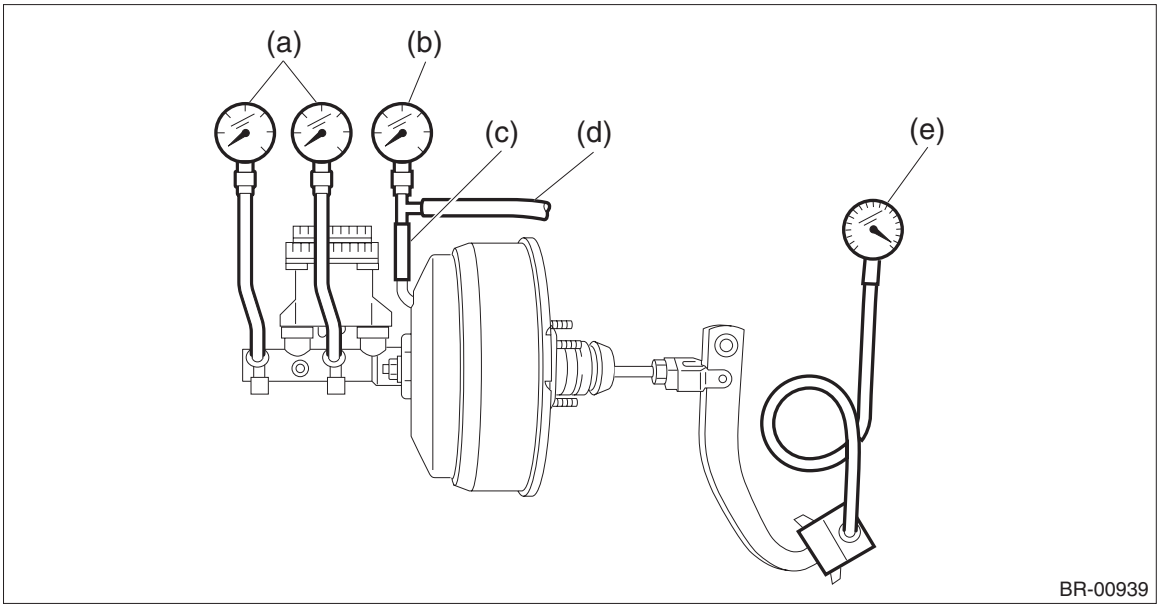
(a) When engine is stopped (b) When engine is started

2) With the brake pedal depressed, start the engine.
3) As the engine starts, the brake pedal should move slowly toward the floor. If the pedal height does not change, the vacuum booster assembly is faulty.

NOTE:
If a faulty part is detected after inspection, check precisely with measuring devices.

- **Loaded air tightness check**

Depress the brake pedal while the engine is running, and turn the engine to OFF while the pedal is depressed.
Keep the pedal depressed for 30 seconds. If the pedal height does not change, the function of vacuum booster assembly is normal. If the pedal height increases, it is faulty.

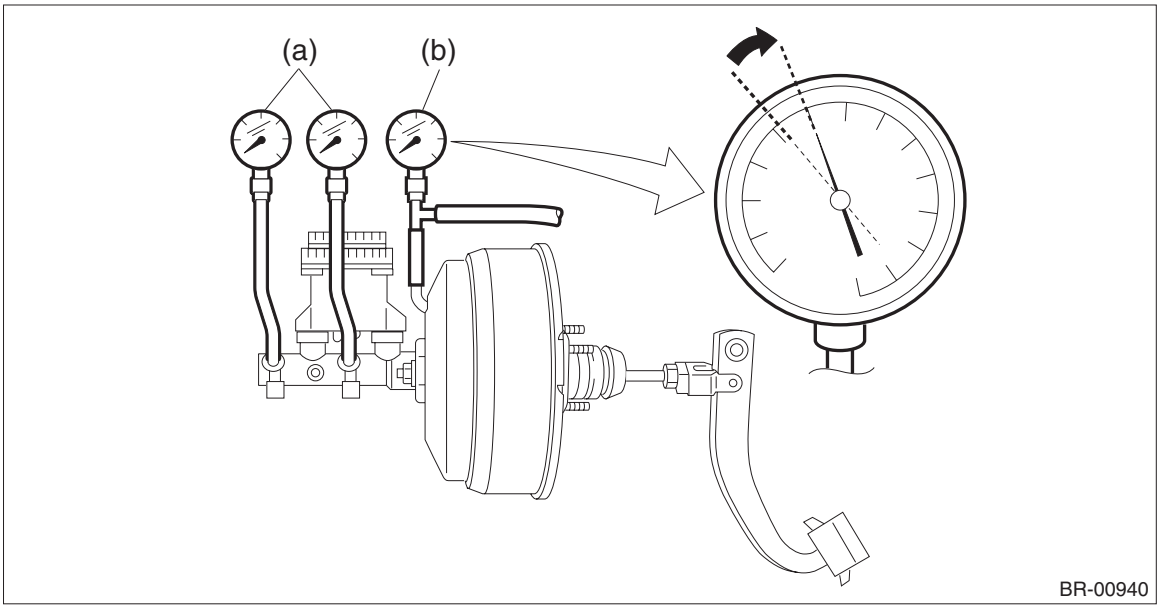


NOTE:
If a faulty part is detected after inspection, check precisely with measuring devices.

2. OPERATION CHECK WHEN USING MEASURING DEVICES

CAUTION:
When checking operation, be sure to apply the parking brake securely.

• Check with measuring devices



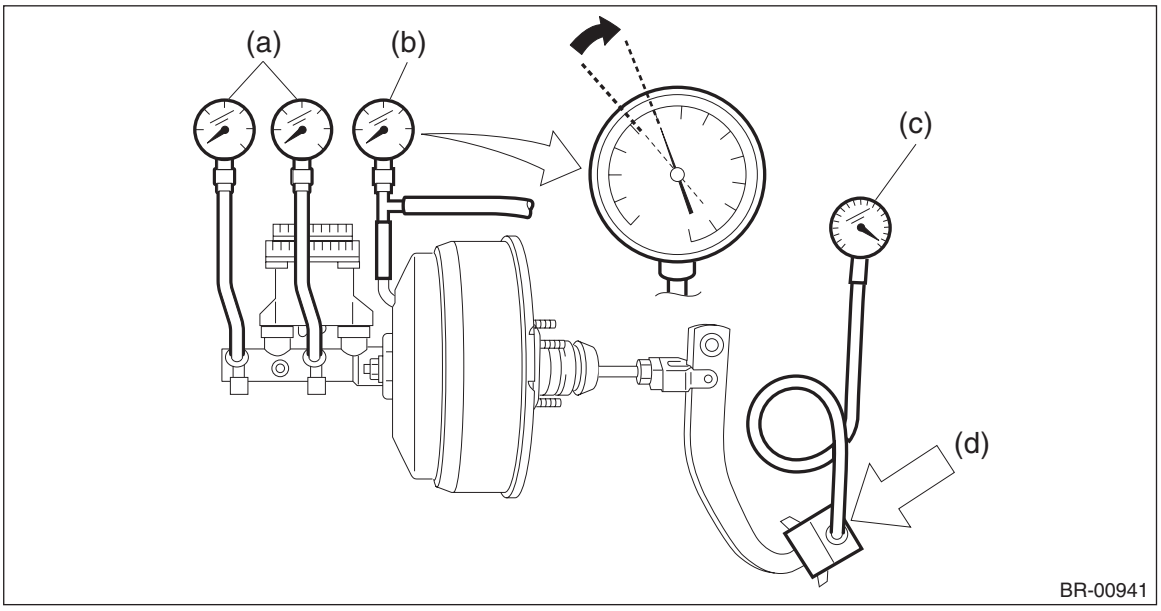
Connect a measuring device as shown in the figure. After bleeding air from the pressure gauge, perform each check.

(a) Pressure gauge
(b) Vacuum gauge
(c) Adapter hose
(d) Vacuum hose
(e) Pedal force gauge

• Air tightness check

1) Start the engine and keep it running at idle until vacuum pressure indicates 66.7 kPa (500 mmHg, 19.69 inHg) while the brake pedal is not depressed.

(a) Pressure gauge
(b) Vacuum gauge



2) Stop the engine and check the vacuum pressure.
If the value matches the following standard, the vacuum booster assembly function is normal.

Vacuum pressure: standard
The range of vacuum pressure drop within 15 seconds after stopping the engine is 3.3 kPa (25 mmHg, 0.98 inHg) or less.

If a faulty part is detected after inspection, it may results from one of the following causes.
- Check valve malfunction
- Leak from vacuum hose
- Leak from shell joint section or stud bolt welded section
- Damaged diaphragm
- Leak from valve body seal and bearing section
- Leak from plate and seal assembly section
- Leak from poppet valve assembly section

• Loaded air tightness check

1) Start the engine and depress the brake pedal with a pedal force of 196 N (20 kgf, 44 lbf).
2) Keep the engine running at idle and the pedal depressed until vacuum pressure of the vacuum gauge indicates 66.7 kPa (500 mmHg, 19.69 inHg).

(a) Pressure gauge
(b) Vacuum gauge
(c) Pedal force gauge
(d) Depressed

3) Stop the engine and check the vacuum gauge.
If the value matches the following standard, the vacuum booster function is normal.

Vacuum pressure: standard
The range of vacuum pressure drop within 15 seconds after stopping the engine is 3.3 kPa (25 mmHg, 0.98 inHg) or less.

If a faulty part is detected after inspection, refer to “AIR TIGHTNESS CHECK”.
<Ref. to BR-50, INSPECTION, Brake Booster.>
4) If the vacuum booster assembly is faulty, replace it with a new part.

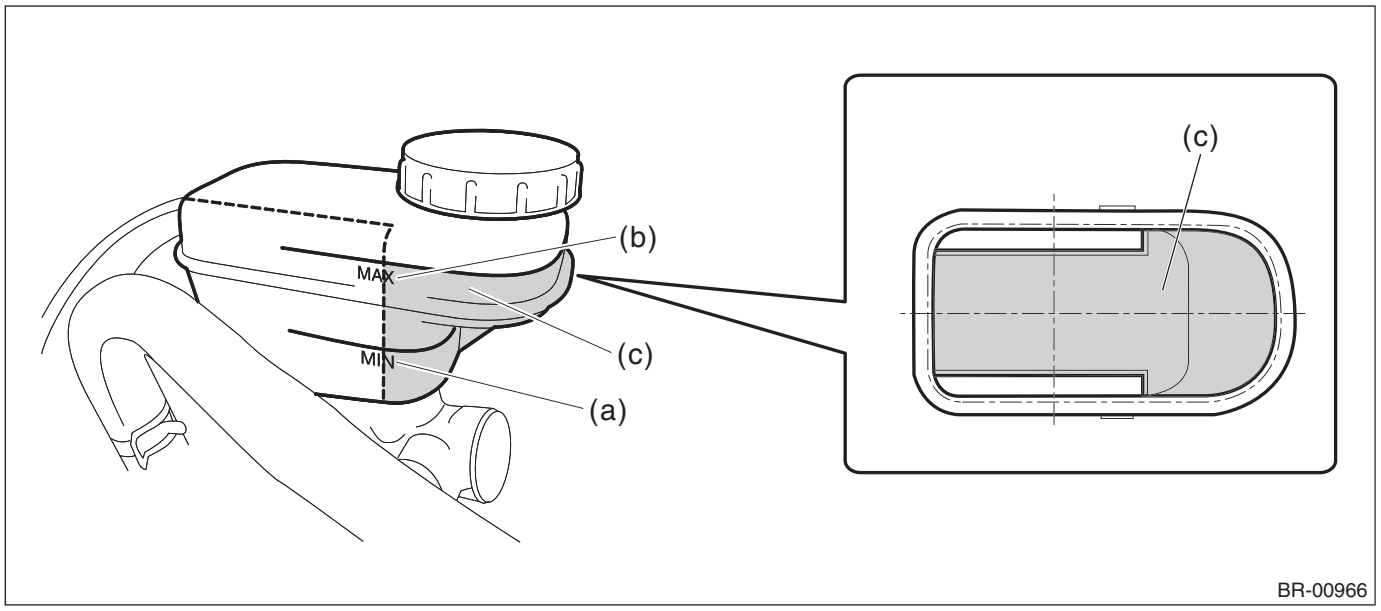
• Lack of boost action check

1) Turn the engine OFF, and set the value of the vacuum gauge to “0”.
2) Check the fluid pressure when the brake pedal is depressed. The pressure must be greater than the specification listed.

Brake pedal force: N (kgf, lbf)	147 (15, 33)	294 (30, 66)
Fluid pressure: kPa (kgf/cm^2, psi)	533 (5, 77)	1,551 (16, 225)

• Boosting action check

1) Set the vacuum gauge reading to 66.7 kPa (500 mmHg, 19.69 inHg) with the engine running.
2) Check the fluid pressure when the brake pedal is depressed. The pressure must be greater than the specification listed.



Brake pedal force: N (kgf, lbf)	147 (15, 33)	294 (30, 66)
Fluid pressure: kPa (kgf/cm^2, psi)	6,177 (63, 896)	11,273 (115, 1,635)

10.Brake Fluid

A: INSPECTION

1) Check that the amount of brake fluid is between the lines of “MIN” (a) and “MAX” (b) from a straight view or within 90° to the right and left forward.
If out of the specified range, refill with brake fluid (c) or drain it.
If the brake fluid level is close to “MIN”, check the brake pad for wear and refill with brake fluid.

CAUTION:
Always check the level using the specified direction because there is a partition in the reservoir tank.

2) Check the fluid for discoloration. If the fluid is extremely discolored, replace with the new fluid.

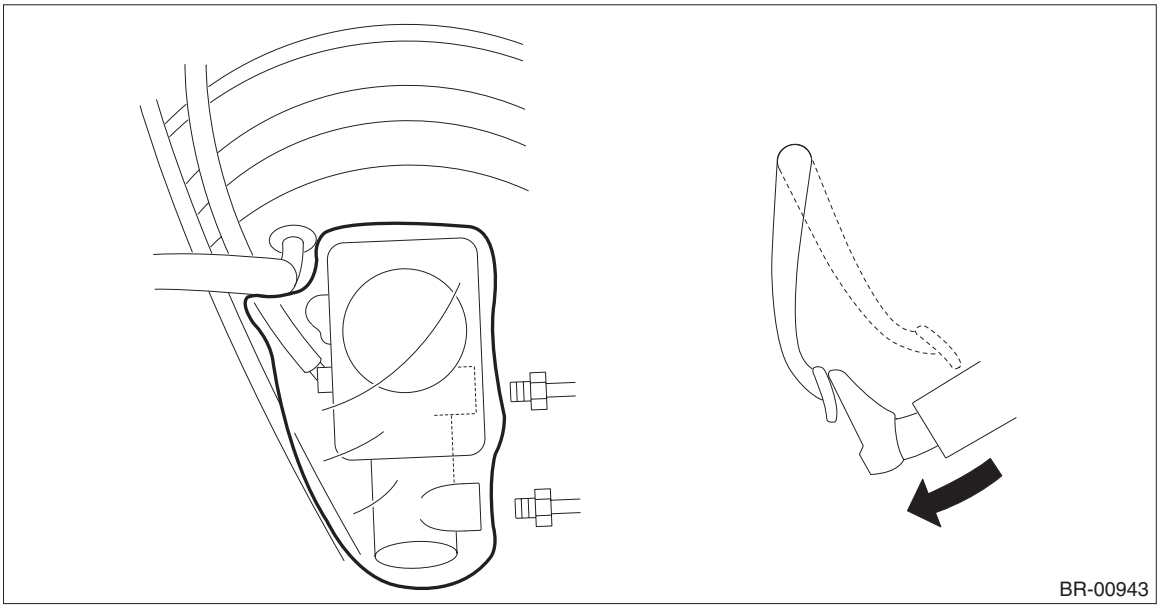
B: REPLACEMENT

CAUTION:
• Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
• Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.
• Avoid mixing brake fluid of different brands to prevent fluid performance from degrading.
• Be careful not to allow dirt or dust to enter the reservoir tank.

NOTE:
• During the operation, keep the reservoir tank filled with brake fluid to prevent entry of air.
• Operate the brake pedal slowly.
• For convenience and safety, perform the work with 2 people.
• The required amount of brake fluid is approximately 500 mL (16.9 US fl oz, 17.6 Imp fl oz) for the entire brake system.
1) Lift up the vehicle.
2) Remove all the wheels.
3) Drain brake fluid from the reservoir tank.
4) Refill the reservoir tank with recommended brake fluid.

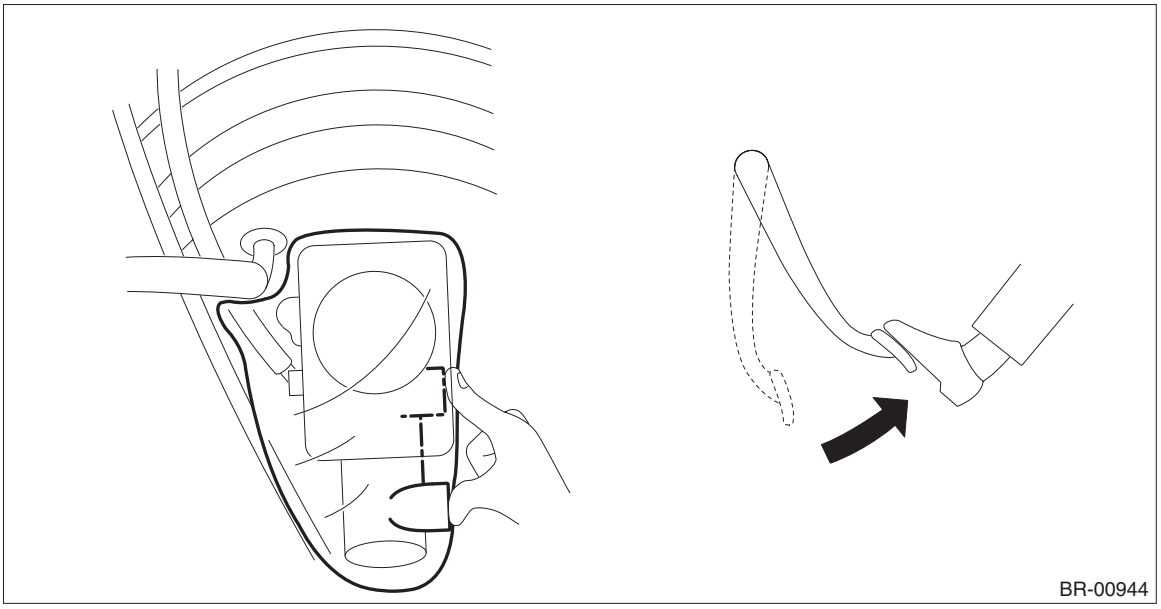
Recommended brake fluid:
FMVSS No. 116, DOT3, or DOT4
Perform the same procedure as for bleeding the brake line, until new brake fluid comes out from vinyl tube. <Ref. to BR-56, PROCEDURE, Air Bleeding.>

11.Air Bleeding



A: PROCEDURE

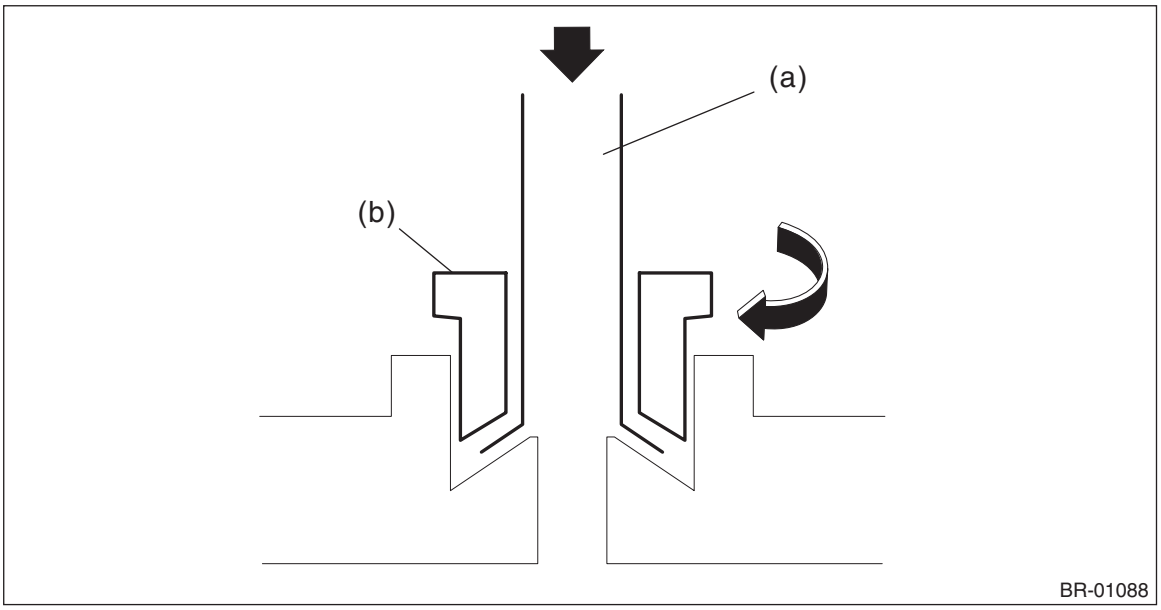
CAUTION:
• Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
• Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.
• Avoid mixing brake fluid of different brands to prevent fluid performance from degrading.
• Be careful not to allow dirt or dust to enter the reservoir tank.



1. MASTER CYLINDER

NOTE:
• When the master cylinder assembly is replaced or the reservoir tank is empty, bleed the brake master cylinder and the clutch master cylinder (MT model).
• If bleeding of the master cylinder assembly is not necessary, omit the following procedures, and perform bleeding of the brake line. <Ref. to BR-58, BRAKE LINE, PROCEDURE, Air Bleeding.>
1) Add the brake fluid to the reservoir tank of the master cylinder assembly.

NOTE:
• MT model: Add the brake fluid until it flows out from the clutch hose nipple.
• Except for MT model: Add the brake fluid up to the “MAX” level.
• While bleeding air, keep the reservoir tank filled with brake fluid at MIN level or higher to prevent entry of air.
2) Disconnect the brake line at primary and secondary sides.
3) Wrap the master cylinder assembly with a plastic bag.
4) Depress the brake pedal slowly and hold it.

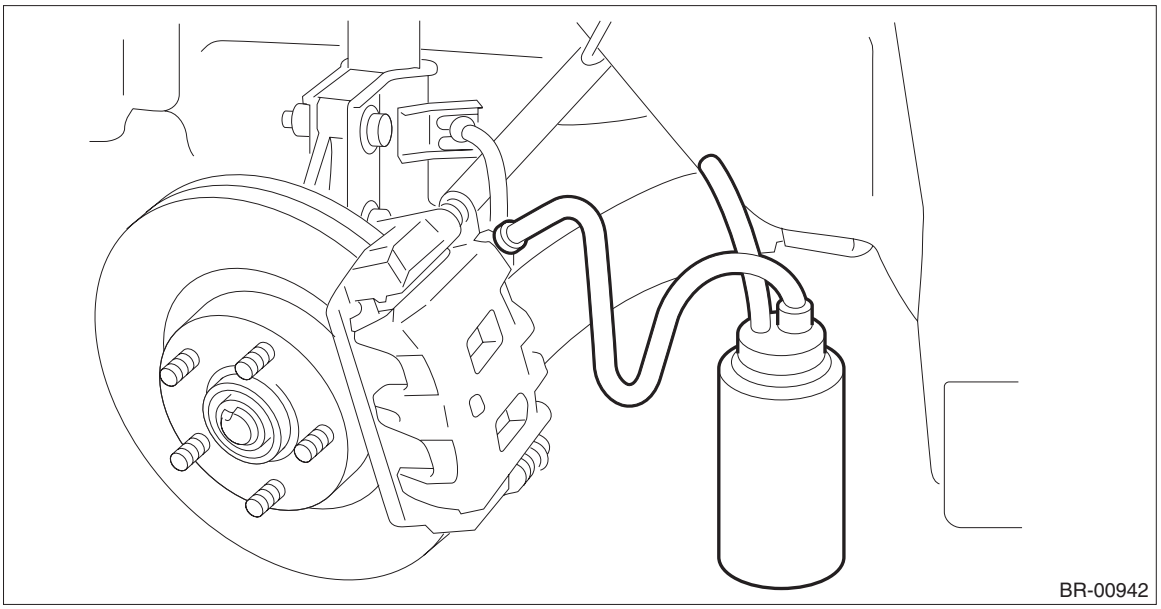


5) Plug the outlet plug with your finger, and then release the brake pedal.

6) Repeat the step 4) and 5) several times.
7) Remove the plastic bag.
8) Turn and tighten the flare nut (b) by hand while pressing the brake pipe (a) toward the master cylinder assembly side.

CAUTION:
Be careful not to make scratches or other damage to the inside surface of the brake pipe flare.

Tightening torque:
Brake pipe flare nut: 19 N·m (1.9 kgf-m, 14.0 ft-lb)

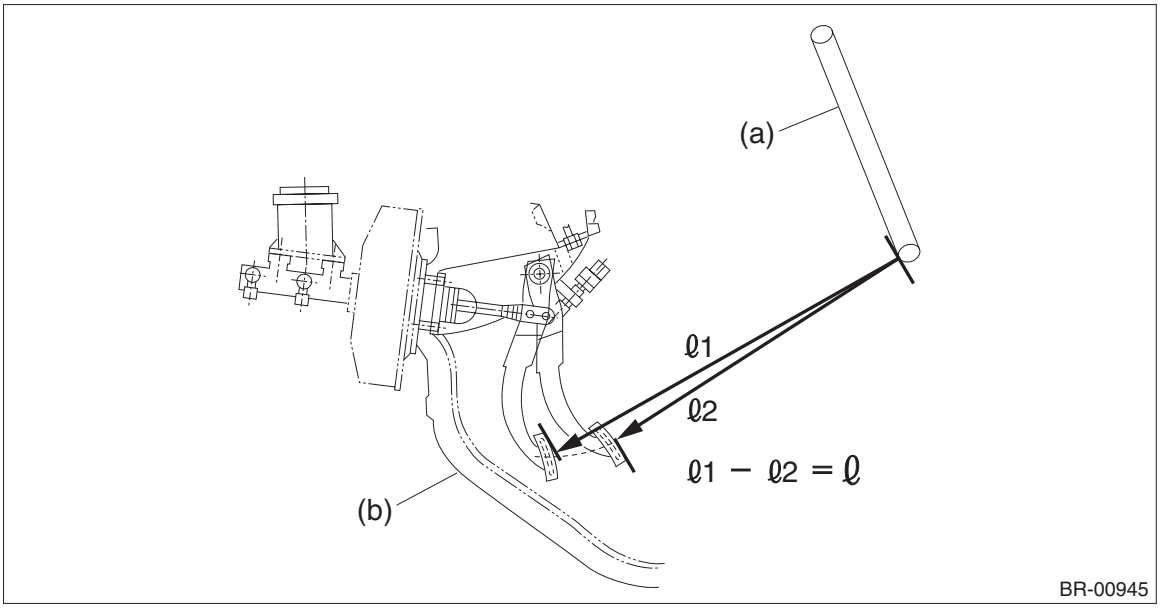


9) Bleed air from the brake line. <Ref. to BR-58, BRAKE LINE, PROCEDURE, Air Bleeding.>

2. BRAKE LINE

1) When the master cylinder assembly is replaced or the reservoir tank is empty, bleed the master cylinder assembly before bleeding the brake line. <Ref. to BR-56, MASTER CYLINDER, PROCEDURE, Air Bleeding.>
2) Fill the reservoir tank of the master cylinder assembly with brake fluid.

NOTE:
While bleeding air, keep the reservoir tank filled with brake fluid to prevent entry of air.
3) Attach one end of the vinyl tube to the bleeder - screw and the other end to the brake fluid container.



4) Depress the brake pedal several times, and hold it.
5) Loosen the bleeder - screw to drain brake fluid. Tighten the bleeder - screw quickly, and release the brake pedal.
6) Repeat the steps 4) to 5) until there are no more air bubbles in the vinyl tube.
7) Repeat the steps from 2) to 6) above to bleed air from each wheel.

NOTE:
Perform air bleed starting in the order from the farthest wheel cylinder from the master cylinder assembly.
8) Securely tighten the bleeder - screw.

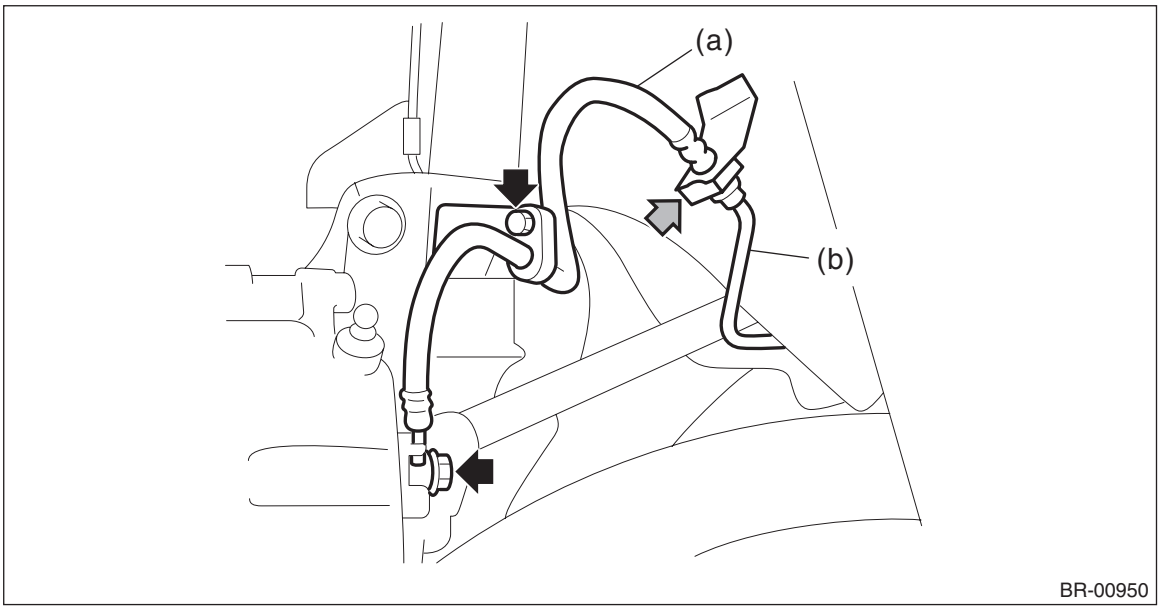
Tightening torque:
Front bleeder - screw: 8 N·m (0.8 kgf-m, 5.9 ft-lb)
Rear bleeder - screw: 17 N·m (1.7 kgf-m, 12.5 ft-lb)

9) Check that there are no brake fluid leaks in the entire brake system.
10) Check the pedal stroke.
(1) Warm up the engine until the engine speed stabilizes.
(2) Depress and hold the brake pedal with a force of 500 N (51 kgf, 112 lbf).
(3) Adjust the tilt position of the steering wheel to the lowest position.
(4) Measure the distance between brake pedal and steering wheel.
(5) Release the pedal, and measure the distance between pedal and steering wheel again.

(a) Steering wheel (b) Toe board

Specification of pedal stroke:
110 mm (4.33 in) or less when depressing the pedal with a force of 500 N (51 kgf, 112 lbf)
11) If the distance is more than specification, there is a possibility of air being caught in the brake line. Bleed the brake line of all air until the pedal stroke meets the specification.
12) Operate the hydraulic control unit in the sequence control mode. <Ref. to VDC-20, ABS Sequence Control.>
13) Check the pedal stroke again.
14) If the distance is more than specification, there is a possibility of air being caught in the hydraulic unit. Repeat above steps 2) to 9) until the pedal stroke meets the specification.
15) Fill the reservoir tank with brake fluid up to the “MAX” level.
16) Perform a road test and ensure that the brakes operate normally.

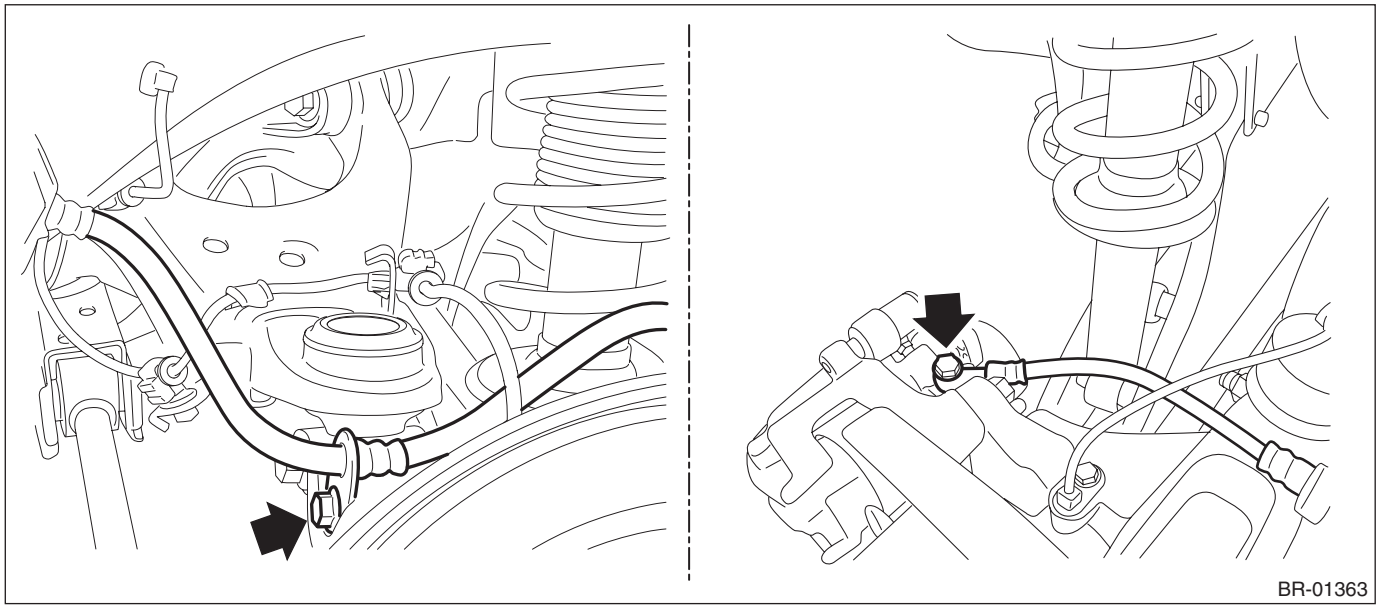
12.Brake Hose



A: REMOVAL

1. FRONT BRAKE HOSE

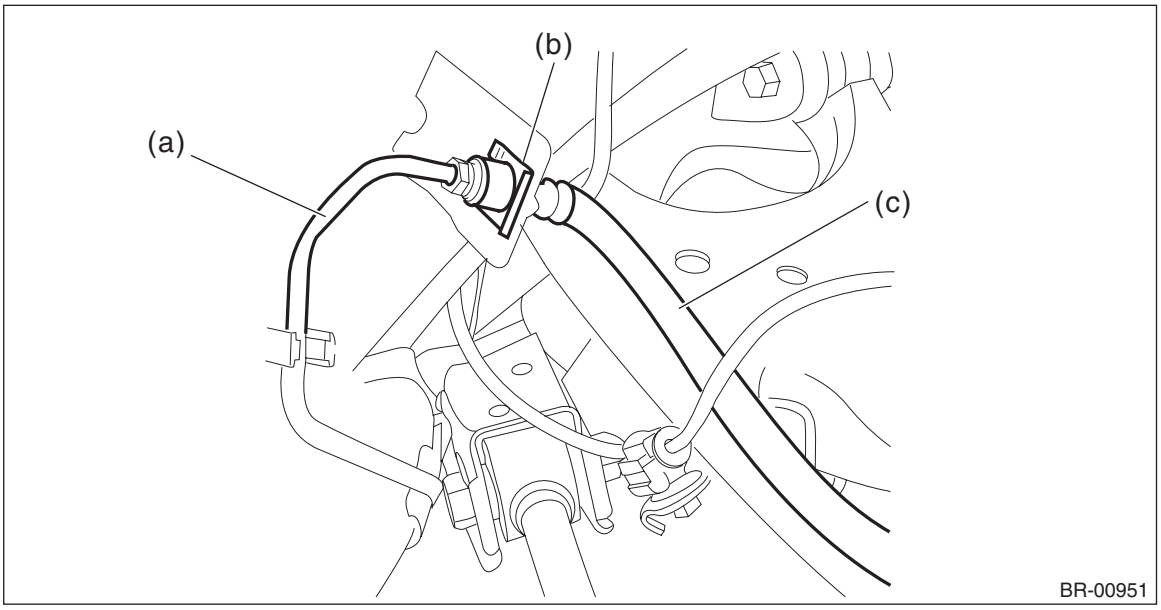
1) Disconnect the brake hose (a) and the brake pipe (b).



Tools used:
Flare nut wrench

2) Remove the clamp, strut mounting bolt and union bolt, and remove the front brake hose.

2. REAR BRAKE HOSE



1) Remove the brake hose bracket bolt and union bolt.

2) Disconnect the brake pipe (a).

Tools used:
Flare nut wrench

3) Remove the brake hose clamp (b), and remove the rear brake hose (c).

B: INSTALLATION

1. FRONT BRAKE HOSE

1) Secure the brake hose to the brake hose mount part of strut COMPL.

Tightening torque:
Brake hose: 33 N·m (3.4 kgf-m, 24.3 ft-lb)

2) Connect the brake hose to the caliper body assembly using a new gasket.

Tightening torque:
Union bolt: 26 N·m (2.7 kgf-m, 19.2 ft-lb)

3) Position the disc rotor in straight position and route the brake hose through the hole in the bracket on the wheel apron side.

CAUTION:
Do not twist the brake hose.

4) Connect the brake pipe and the hose, then temporarily tighten the flare nut.
5) Secure the brake hose to wheel apron bracket with clamp.
6) Tighten the flare nut to the specified torque.

Tightening torque:
Brake pipe flare nut: 15 N·m (1.5 kgf-m, 11.1 ft-lb)

7) Bleed air from the brake system. <Ref. to BR-56, PROCEDURE, Air Bleeding.>

2. REAR BRAKE HOSE

1) Route the brake hose through the hole of bracket, and lightly tighten the flare nut to connect brake pipe.
2) Insert the clamp to secure brake hose.

Tightening torque:
Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)

3) Install the brake hose to rear caliper body using a new gasket.

Tightening torque:
Union bolt: 26 N·m (2.7 kgf-m, 19.2 ft-lb)

4) Tighten the flare nut to the specified torque.

Tightening torque:
Brake pipe flare nut: 15 N·m (1.5 kgf-m, 11.1 ft-lb)

5) Bleed air from the brake system. <Ref. to BR-56, PROCEDURE, Air Bleeding.>

C: INSPECTION

Check the hose for crack, interference with other parts, damage, and fluid leakage on connecting sections. If any faulty is found, repair or replace the relevant part.

13.Brake Pipe

A: REMOVAL

CAUTION:
- **Be careful of the following items. Failure to do so may cause the airbag system malfunction.**
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
- **Be careful not to damage the airbag system wiring harness when servicing the center brake pipe.**
- **When removing the brake pipe, do not bend.**

NOTE:
The airbag system wiring harness is routed near the center brake pipe.

B: INSTALLATION

CAUTION:
- **Be careful of the following items. Failure to do so may cause the airbag system malfunction.**
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
- **Be careful not to damage the airbag system wiring harness when servicing the center brake pipe.**
- **When installing the brake pipe, do not bend.**
- **After installing the brake pipe and hose, perform air bleed.**
- **After installing the brake hoses, make sure that they do not contact the tires or suspension assembly, etc.**

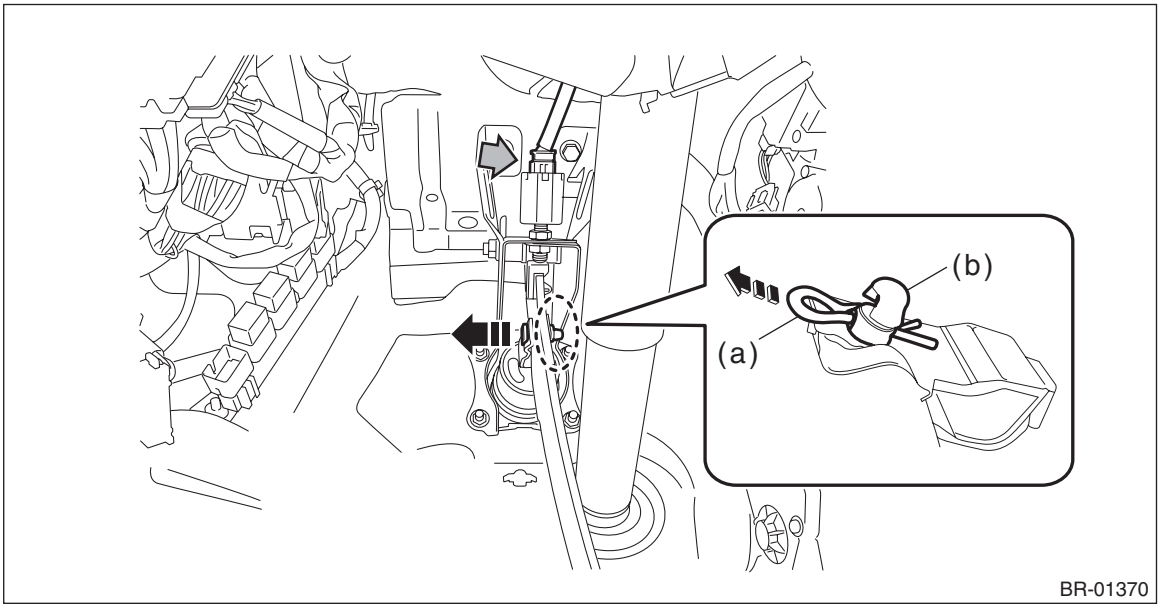
NOTE:
The airbag system wiring harness is routed near the center brake pipe.

Tightening torque:
Front brake pipes & hoses: <Ref. to BR-7, FRONT BRAKE PIPES AND HOSES, COMPONENT, General Description.>
Center & rear brake pipes and hoses: <Ref. to BR-9, CENTER AND REAR BRAKE PIPES AND HOSES, COMPONENT, General Description.>

C: INSPECTION

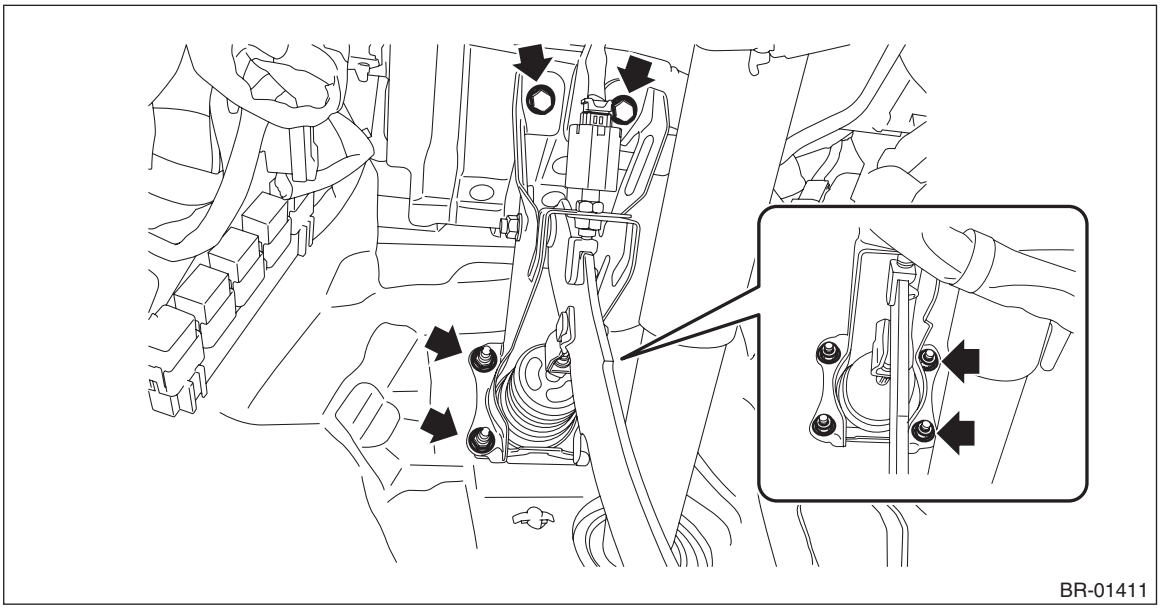
Check the pipe for crack and damage, and also check the connection for fluid leakage. If any faulty is found, repair or replace the relevant part.

NOTE:
Use a mirror when inspecting back sides and other locations which are hard to see.



14.Brake Pedal

A: REMOVAL



1. CVT MODEL

1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-74, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the panel - knee guard. <Ref. to PS-19, REMOVAL, Steering Column.>
4) Remove the column assembly - steering. <Ref. to PS-19, REMOVAL, Steering Column.>
5) Remove the brake pedal assembly.
   (1) Disconnect the stop light switch connector.
   (2) Remove the snap pin (a) and clevis pin (b), and remove the operating rod from the brake pedal.

CAUTION:
- **Be careful not to apply excessive force to the operating rod when handling the operating rod. The angle may change by ±3°, and it may result in damage to power piston cylinder.**
- **Do not change the push rod length.**

(3) Remove the bolt and nut, and then detach the brake pedal assembly.

2. MT MODEL

NOTE:
Brake pedal is integrated with the clutch pedal.
For removal procedures of the brake pedal, refer to Clutch section. <Ref. to CL-27, REMOVAL, Clutch Pedal.>

B: INSTALLATION

1. CVT MODEL

1) Install the brake pedal assembly.

CAUTION:
- **Apply grease to the snap pin to prevent the operating rod from wear.**
- **Replace the clevis pin with new parts, and apply thin coat of NIGTIGHT LYW No. 2 grease to the clevis pin.**

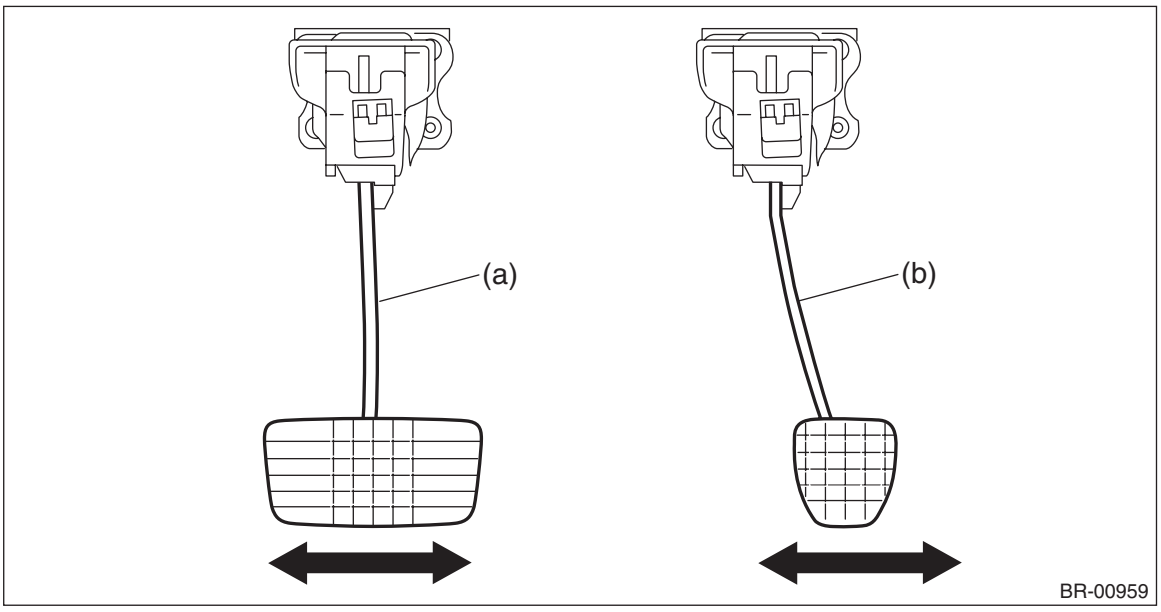
Tightening torque:
Brake pedal: 18 N·m (1.8 kgf-m, 13.3 ft-lb)

2) Install the column assembly - steering. <Ref. to PS-21, INSTALLATION, Steering Column.>
3) Install the panel - knee guard.

Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)

4) Install the cover assembly - instrument panel LWR driver.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
6) Check that the brake light operate properly.
7) Check the brake pedal after installation. <Ref. to BR-66, INSPECTION, Brake Pedal.>

2. MT MODEL



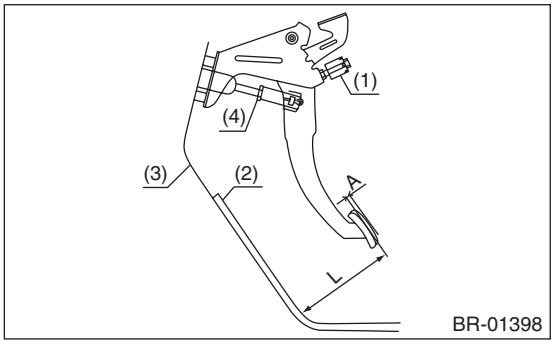
NOTE:
Brake pedal is integrated with the clutch pedal.
For installation procedure of the brake pedal, refer to Clutch section. <Ref. to CL-28, INSTALLATION, Clutch Pedal.>

C: INSPECTION

1) Move the pad - brake pedal in a horizontal direction with a force of approx. 10 N (1 kgf, 2 lbf), and check that the pedal deflection is in the range of specifications.

CAUTION:
If excessive deflection is noted, replace with a new bushing.

Deflection of brake pedal:
Wear limit: 5.0 mm (0.197 in) or less



(a) Brake pedal (CVT model) (b) Brake pedal (MT model)

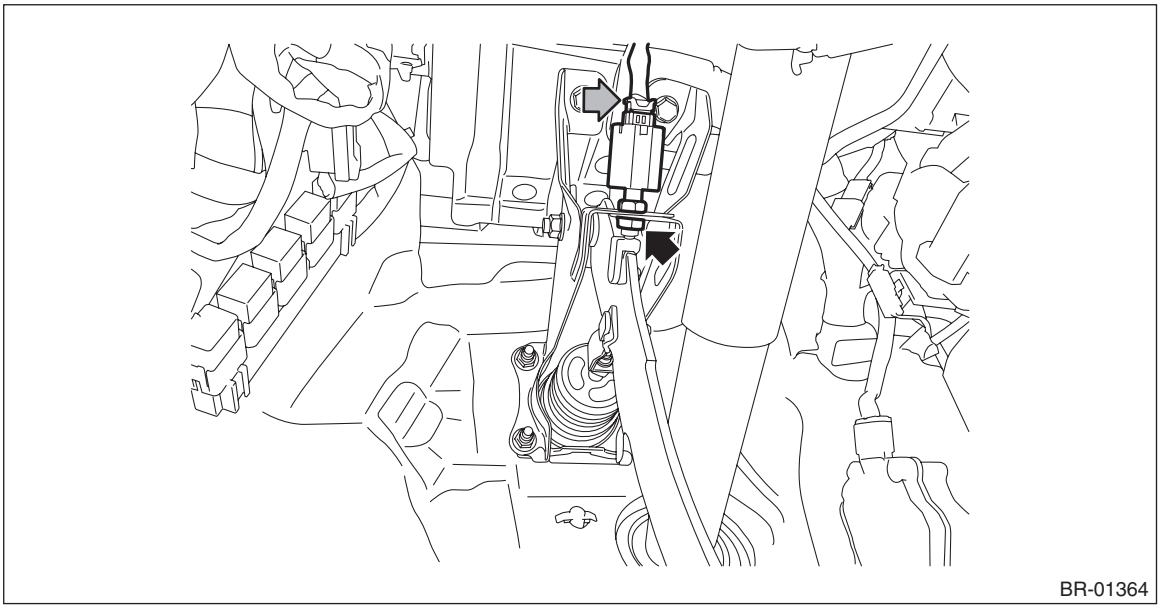
2) Check the position of the pedal pad.

Pedal height L:
140 — 150 mm (5.51 — 5.91 in)

Brake pedal free play A:
0.5 — 2.7 mm (0.020 — 0.11 in) [When pulling the brake pedal upward with a force of less than 10 N (1 kgf, 2 lbf).]

(1) Stop light switch
(2) Mat
(3) Toe board
(4) Brake booster operating rod

3) If it is not within the specification, loosen the lock nuts of vacuum booster operating rod, and rotate the rod to adjust the pedal height L within the specification.
4) Tighten the lock nut.



Tightening torque:
Operating lock nut: 22 N·m (2.2 kgf-m, 16.2 ft-lb)

NOTE:
Check the brake pedal height. When adjusting, also adjust the stop light switch.

15.Stop Light Switch

A: REMOVAL

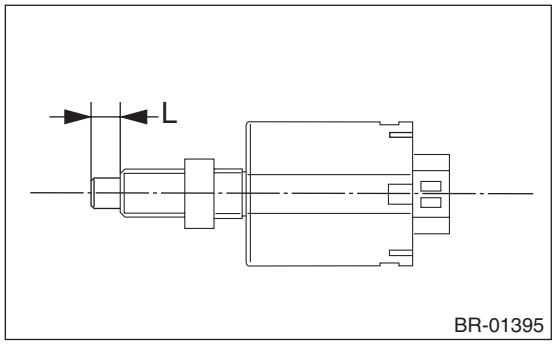
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-74, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the panel - knee guard. <Ref. to PS-19, REMOVAL, Steering Column.>
4) Remove the stop light switch.
   (1) Disconnect the stop light switch connector.
   (2) Remove the nut, and remove the stop light switch.

BR-01364

B: INSTALLATION

1) Install the stop light switch onto the bracket with screws and position it with the nut.
2) Adjust the stop light switch position, and then tighten the nut. <Ref. to BR-70, ADJUSTMENT, Stop Light Switch.>

Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)
3) Install the panel - knee guard.

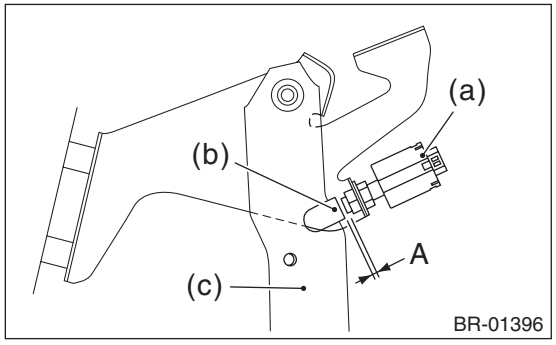


Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)
4) Install the cover assembly - instrument panel LWR driver.
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

C: INSPECTION

1. INSPECT THE SPECIFIED POSITION

1) If the stop light switch does not operate properly or if it is not secured at the specified position, replace with a new part.

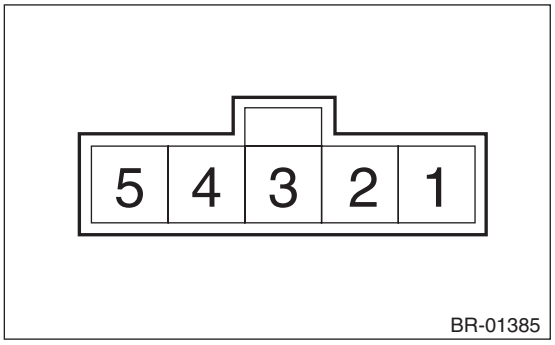


Specified position L:
6 mm ±0.5 mm (0.24 in ±0.02 in)

2) Measure the clearance between the threaded end of the stop light switch and the stopper.

CAUTION:
Be careful not to rotate the stop light switch.

Stop light switch clearance A:
0.8 — 1.1 mm (0.03 — 0.04 in)



(a) Stop light switch
(b) Stopper
(c) Brake pedal

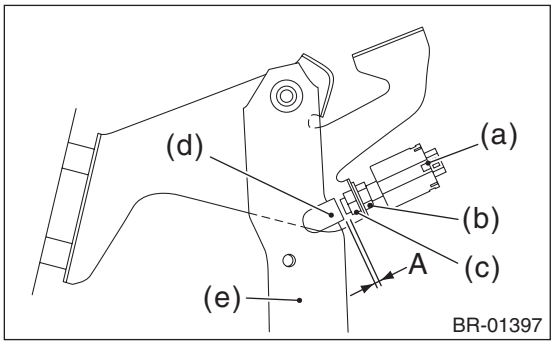
3) Adjust the position of the stop light switch if the inspection result is not within the standard value. <Ref. to BR-70, ADJUSTMENT, Stop Light Switch.>

2. INSPECT THE RESISTANCE

1) Check the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 2	When brake pedal is depressed	Less than 1 Ω
	When brake pedal is released	1 MΩ or more



2) Replace the stop light switch if the inspection result is not within the standard value.

D: ADJUSTMENT

1) Loosen the lock nut, and adjust the stop light switch position until the clearance (A) between the threaded end of the stop light switch and stopper becomes 1.1 mm (0.04 in). Then, tighten the lock nut.

Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)

2) Tighten the lock nut.

(a) Stop light switch
(b) Lock nut A
(c) Lock nut B
(d) Stopper
(e) Brake pedal

16.General Diagnostic Table

A: INSPECTION

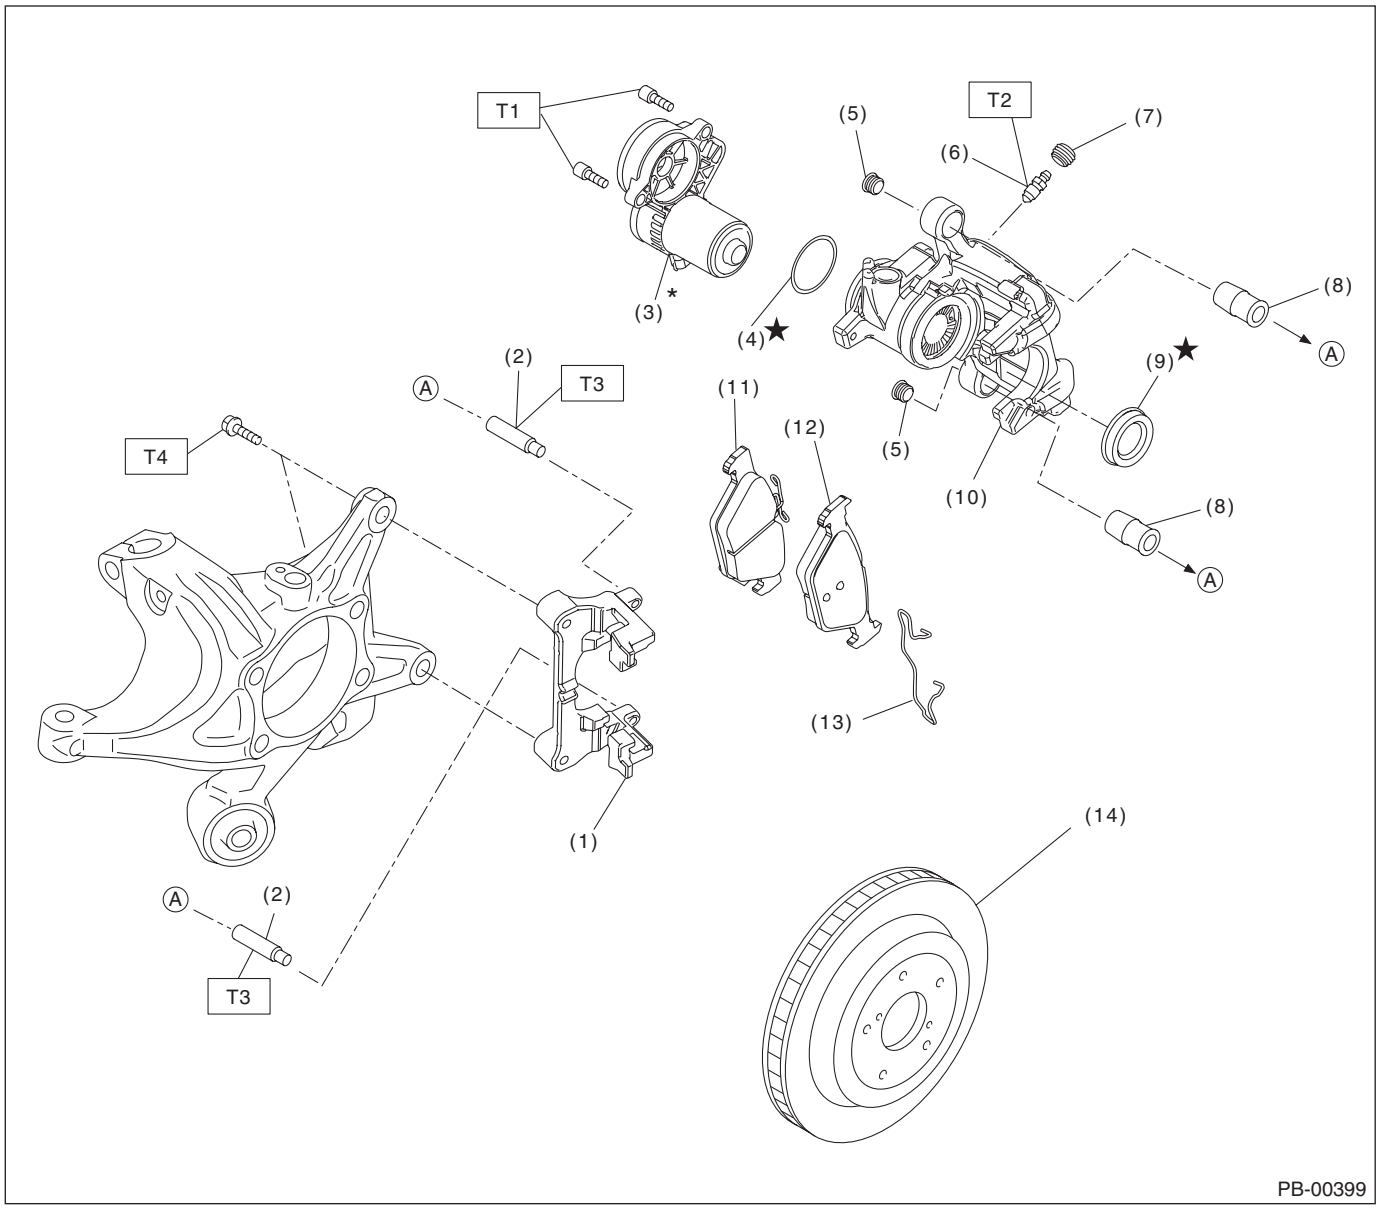
	Trouble and possible cause	Corrective action
1. Insufficient braking	(1) Fluid leakage from the hydraulic mechanism	Repair or replace. (cup, piston seal, piston boot, master cylinder piston kit, pipe or hose)
	(2) Entry of air into the hydraulic mechanism	Bleed air.
	(3) Wear, deteriorated surface material, water or fluid on pad	Replace and clean.
	(4) Improper operation of master cylinder assembly, disc caliper, vacuum booster assembly or check valve	Repair or replace.
2. Unstable or uneven braking	(1) Fluid on pad or rotor	Correct the cause of fluid leakage, and replace.
	(2) Rotor defective	Repair or replace the rotor.
	(3) Improper pad contact, deteriorated surface, deteriorated or worn pad material	Replace.
	(4) Deformed back plate	Repair or replace.
	(5) Overinflation of tires	Adjust the air pressure.
	(6) Defective wheel alignment	Adjust alignment.
	(7) Loose back plate or support installation bolt	Tighten to the specified torque.
	(8) Defective hub unit COMPL	Replace.
	(9) Defective hydraulic system	Replace the cylinder, brake pipe or hose.
	(10) Unstable performance of the parking brake	Check, adjust or replace the rear brake.
3. Excessive pedal stroke	(1) Entry of air into the hydraulic mechanism	Bleed air.
	(2) Excessive play in the master cylinder push rod	Adjust.
	(3) Fluid leakage from the hydraulic mechanism	Repair or replace. (cup, piston seal, piston boot, master cylinder piston kit, pipe or hose)
	(4) Improper pad contact or worn pad	Repair or replace.
4. Brake dragging or improper brake return	(1) Insufficient pedal play	Adjust play.
	(2) Improper master cylinder return	Clean or replace the cylinder.
	(3) Clogged hydraulic system	Replace.
	(4) Improper return of parking brake	Repair or replace.
	(5) Improper disc caliper operation	Repair or replace.
	(6) Faulty wheel bearing	Replace.
5. Brake noise (1) (creaking sound)	(1) Hardened or deteriorated brake pad	Replace the pad.
	(2) Worn brake pad	Replace the pad.
	(3) Loose back plate or support installation bolt	Tighten to the specified torque.
	(4) Loose hub unit COMPL	Tighten to the specified torque.
	(5) Dirty rotor	Clean the rotor, or clean and replace brake assembly.
6. Brake noise (2) (hissing sound)	(1) Worn brake pad	Replace the pad.
	(2) Improperly installed pad	Correct or replace the pad.
	(3) Loose or bent rotor	Retighten or replace.
7. Brake noise (3) (click sound)	Excessively worn pad or support	Replace the pad or the support.

PARKING BRAKE

PB

Page

1. General Description 2
2. Parking Brake System 6
3. Relay and Fuse 7
4. Parking Brake Actuator 8
5. Parking Brake Switch 13
6. Emergency Release of Electronic Parking Brake 14
7. General Diagnostic Table 17



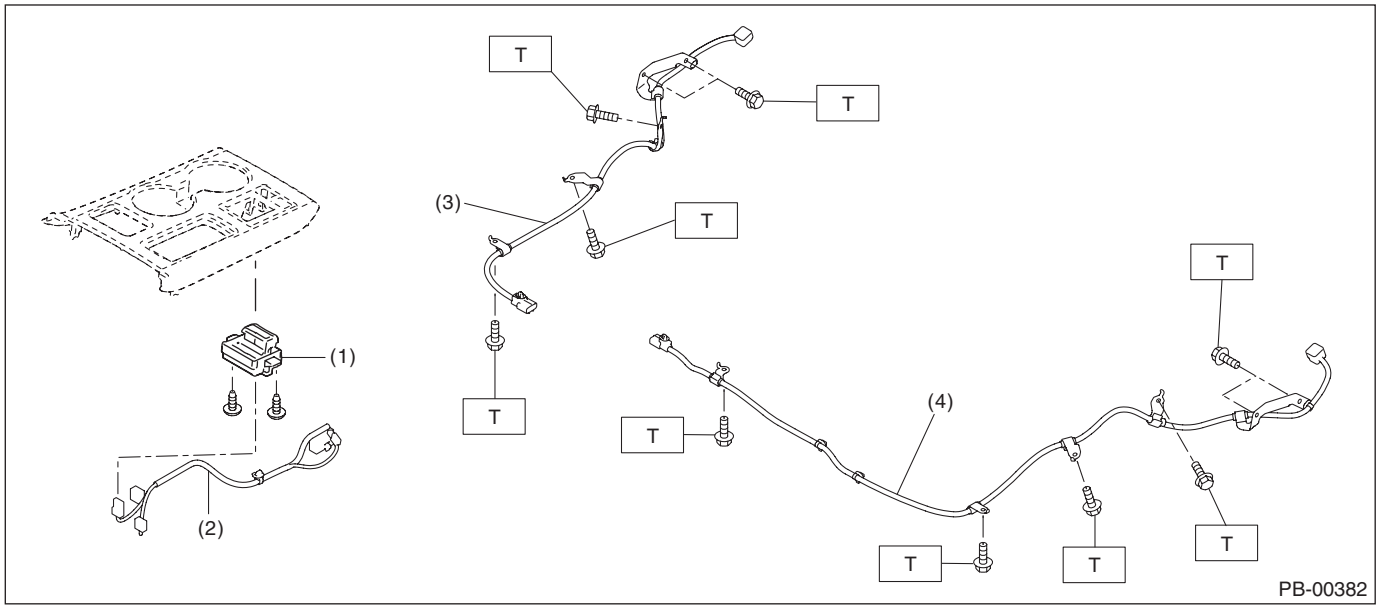
1. General Description

A: SPECIFICATION

Item	Specification
Type	Electric type
Clearance adjustment	Automatic adjusting
Operation method	Switch type

B: COMPONENT

1. PARKING BRAKE ACTUATOR

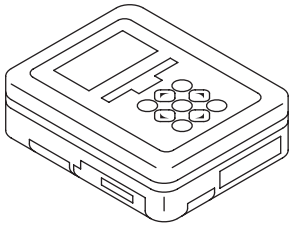


(1)	Support - rear disc brake	(8)	Pin boot
(2)	Guide pin - rear brake	(9)	Piston boot
(3)	Parking brake actuator ASSY	(10)	Caliper body
(4)	O-ring	(11)	Pad - disc brake rear inner
(5)	Cap	(12)	Pad - disc brake rear outer
(6)	Bleeder - screw	(13)	Pad clip
(7)	Cap - bleeder	(14)	Disc rotor (ventilated type)

Tightening torque: N·m (kgf-m, ft-lb)
T1: 8 (0.8, 5.9)
T2: 17 (1.7, 12.5)
T3: 25 (2.5, 18.4)
T4: 66 (6.7, 48.7)

*: The component cannot be reused when the emergency release of parking brake was performed or when the actuator has a malfunction.

2. ELECTRONIC PARKING BRAKE HARNESS



(1)	Switch ASSY - electronic parking brake	(3)	Electronic parking brake harness RH	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Console box harness	(4)	Electronic parking brake harness LH	***T: 18 (1.8, 13.3)***

C: CAUTION

- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Apply grease onto sliding or revolving surfaces before installation.
- Be sure that the surface of brake disc, brake pad or brake shoe is free from grease or oil.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for setting of each function and trouble-shooting for electrical system.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.

2. Parking Brake System

A: WIRING DIAGRAM

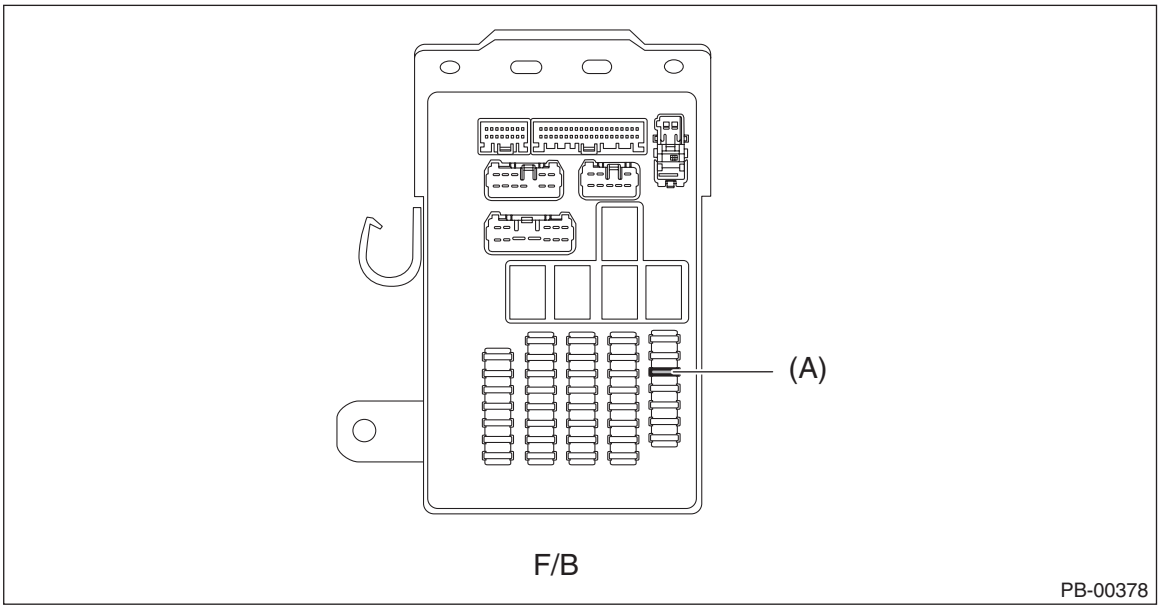
Refer to “Parking Brake / Brake Fluid Level Warning Light System” in the wiring diagram. <Ref. to WI-353, WIRING DIAGRAM, Parking Brake / Brake Fluid Level Warning Light System.>

B: ELECTRICAL SPECIFICATION

Refer to Control Module I/O Signal of “Vehicle Dynamics Control (VDC) (DIAGNOSTICS)”. <Ref. to VDC(diag)-14, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

Refer to Basic Diagnostic Procedure of “Vehicle Dynamics Control (VDC) (DIAGNOSTICS)”. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>



D: NOTE

For procedure of each component in the parking brake system, refer to the respective section.

- Parking brake actuator: <Ref. to PB-8, Parking Brake Actuator.>
- Parking brake switch: <Ref. to PB-13, Parking Brake Switch.>
- Emergency release of electronic parking brake: <Ref. to PB-14, Emergency Release of Electronic Parking Brake.>

3. Relay and Fuse

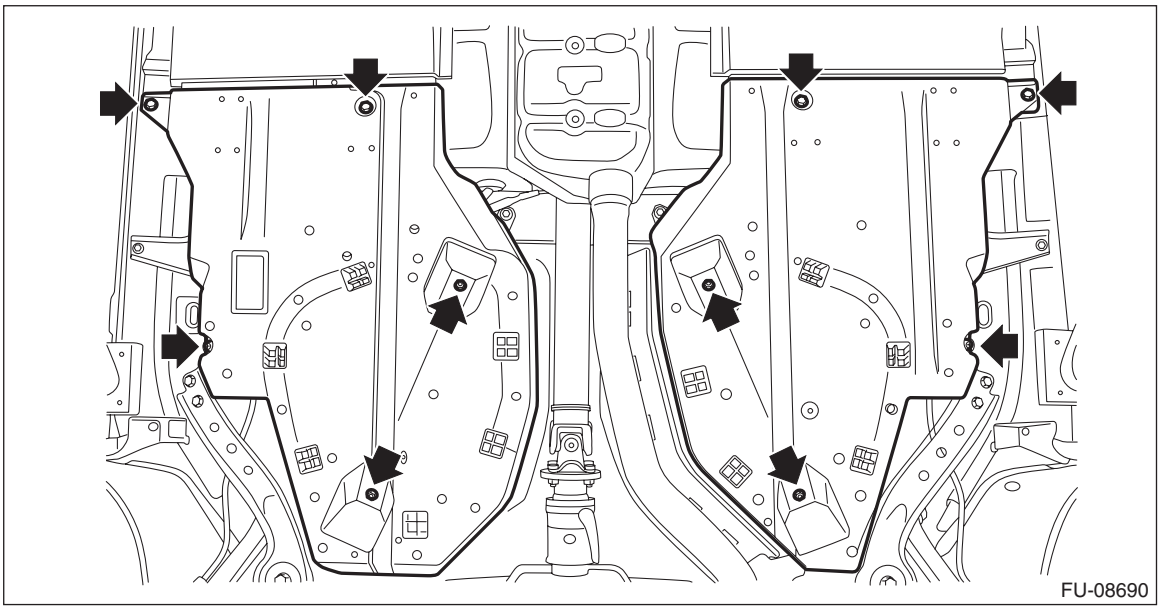
A: LOCATION

Relay & fuse box (F/B)	Fuse 7.5 A (EPB control switch)	(A)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-23, Power Supply Circuit.>

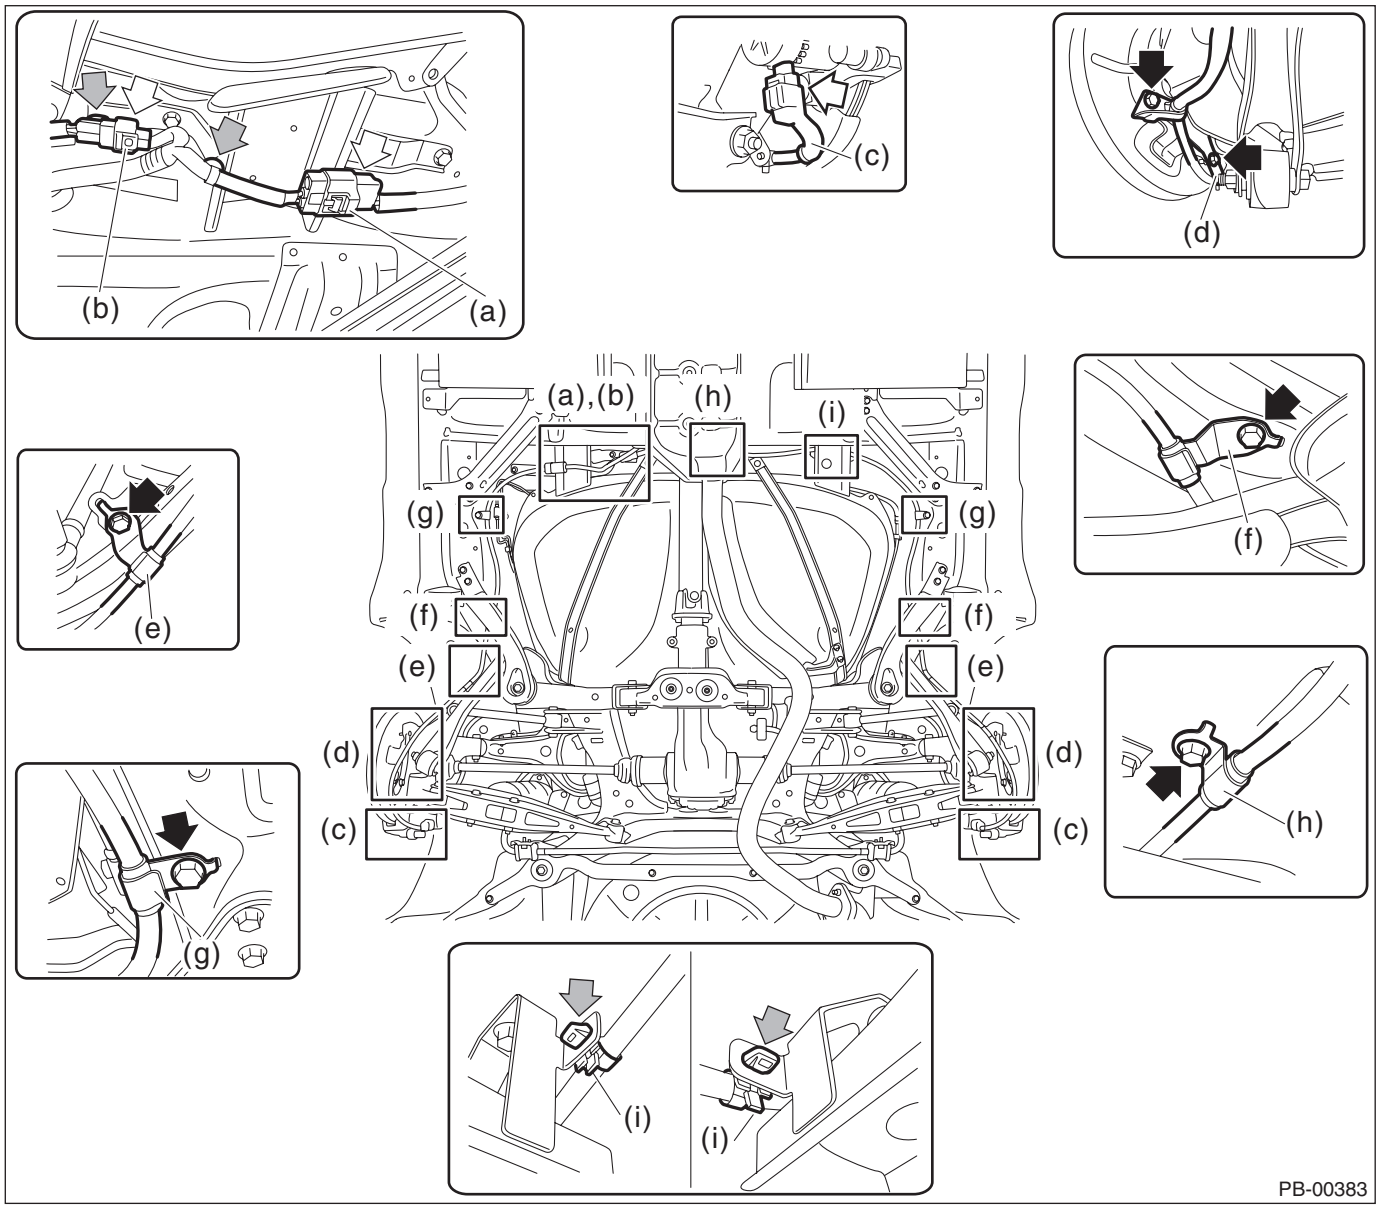
B: INSPECTION

1. CHECK FUSE



1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

4. Parking Brake Actuator



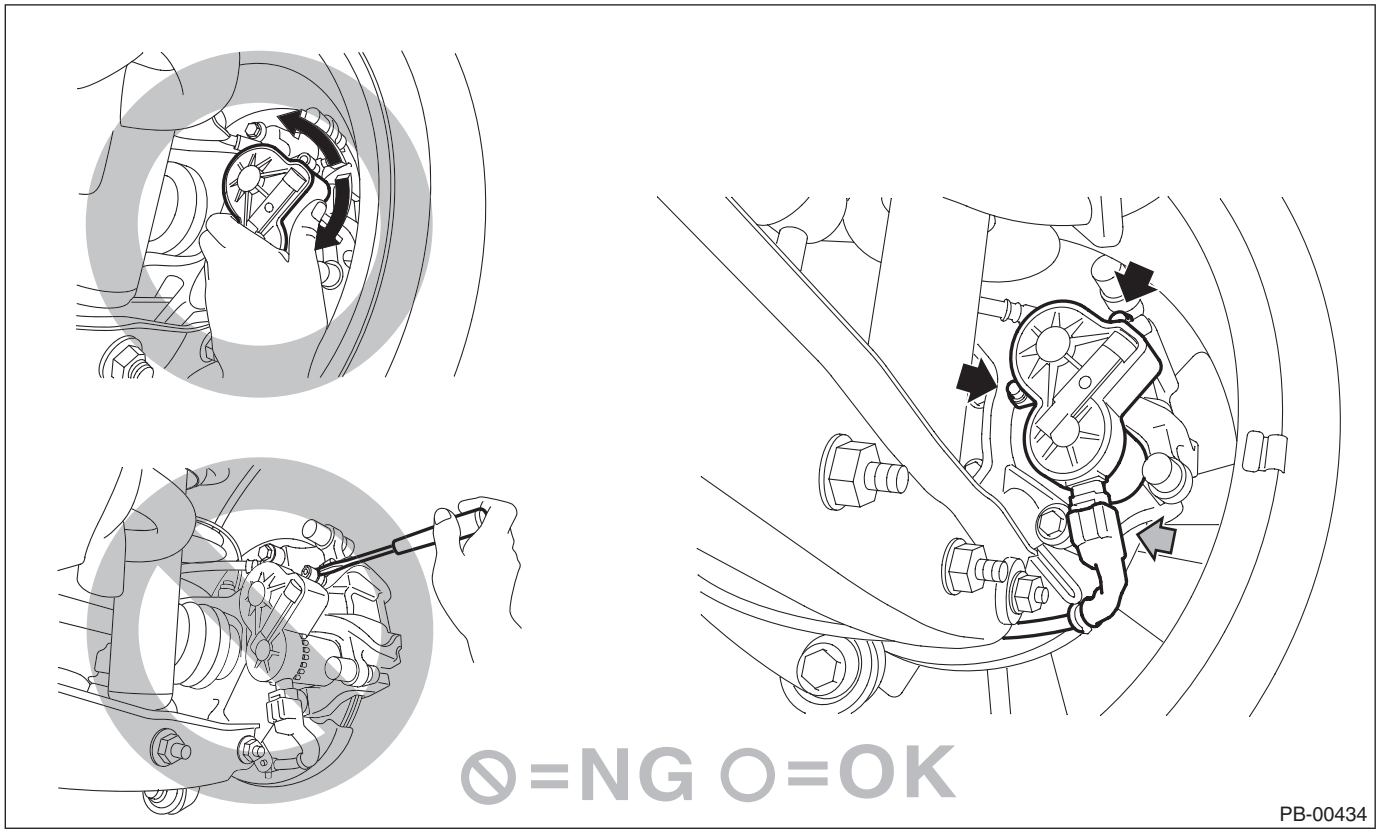
A: REMOVAL

1. PARKING BRAKE HARNESS

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the bolt and nuts and remove the fuel tank protector.

4) Remove the electronic parking brake harness.
   (1) Remove the connectors (a), (b) and (c), and the clip (i).
   (2) Remove the harness clamp (d) from the back plate - rear brake.
   (3) Remove the harness clamp (e) from the trailing link.
   (4) Remove the harness clamp (f) from the rear floor.
   (5) Remove the harness clamp (g) from the rear floor.
   (6) Remove the harness clamp (h) from the rear floor.

2. PARKING BRAKE ACTUATOR



CAUTION:
• Do not remove the parking brake actuator assembly except when there are system malfunctions (such as emergency release of parking brake or abnormal actuator) or when the caliper is replaced. When the parking brake actuator assembly is reused, always replace the O-ring with a new part contained in the caliper body assembly.
• Do not reuse the parking brake actuator assembly when the emergency release of parking brake was performed or when the actuator has a malfunction. Always replace with a new parking brake actuator assembly.

1) Release the parking brake.
2) Using the Subaru Select Monitor, go to the brake maintenance mode according to the display screen.
3) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Lift up the vehicle, and then remove the rear wheels.
5) Remove the parking brake actuator assembly.
   (1) Disconnect the connector.

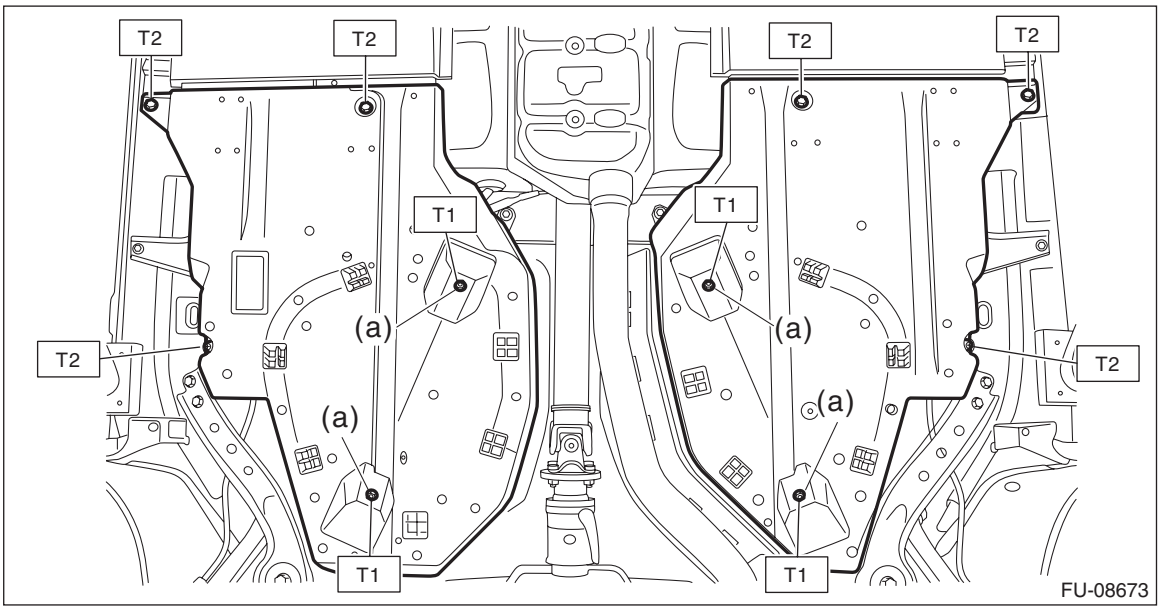
CAUTION:
• Be careful that no water and dust enter inside the connectors.
• When removing the parking brake actuator assembly, do not use any tools. Slide it upward and downward by hand to remove.

   (2) Remove the bolts, and remove the parking brake actuator assembly.

Preparation tool:
Hexagon wrench: 5 mm (0.2 in)

B: INSTALLATION

1. PARKING BRAKE HARNESS



1) Install the electronic parking brake harness.

Tightening torque:
Harness clamp: 18 N·m (1.8 kgf-m, 13.3 ft-lb)

2) Install the fuel tank protector.

NOTE:
Use a new self-locking nut (a).

Tightening torque:
T1: 9 N·m (0.9 kgf-m, 6.6 ft-lb)
T2: 18 N·m (1.8 kgf-m, 13.3 ft-lb)

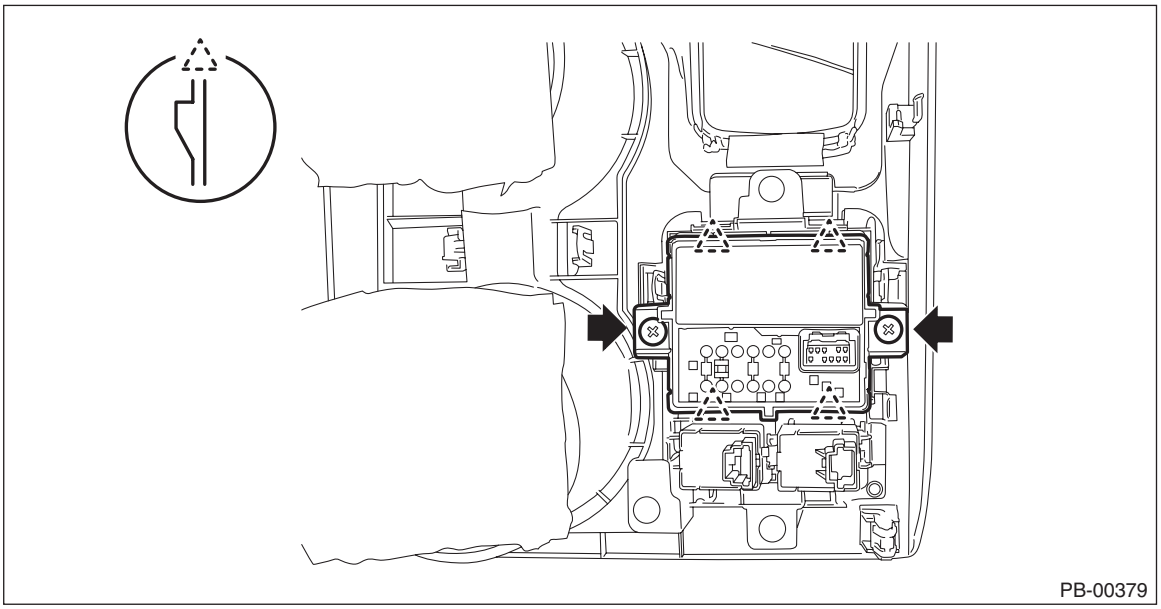
3) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
4) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

2. PARKING BRAKE ACTUATOR

CAUTION:
• Do not remove the parking brake actuator assembly except when there are system malfunctions (such as emergency release of parking brake or abnormal actuator) or when the caliper is replaced. When the parking brake actuator assembly is reused, always replace the O-ring with a new part contained in the caliper body assembly.
• Do not reuse the parking brake actuator assembly when the emergency release of parking brake was performed or when the actuator has a malfunction. Always replace with a new parking brake actuator assembly.
1) Install the parking brake actuator assembly.

Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)
2) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Using the Subaru Select Monitor, exit the brake maintenance mode according to the display screen.
4) After the operation is completed, apply and release the parking brake five times and ensure that the brake operates normally.
5) Install the rear wheels.



Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

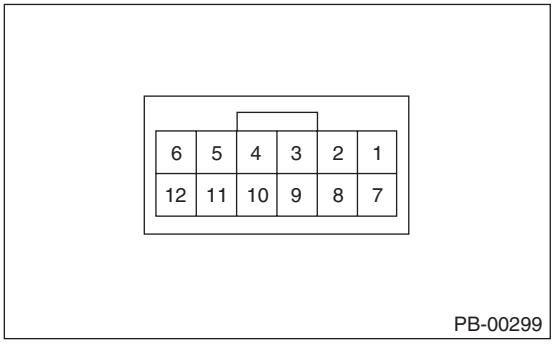
5. Parking Brake Switch

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

NOTE:
For CVT models, set the select lever to the “N” position before disconnecting the battery.
2) Remove the cover assembly - front. <Ref. to EI-80, REMOVAL, Console Box.>
3) Remove the screws to remove the switch assembly - electronic parking brake.

B: INSTALLATION



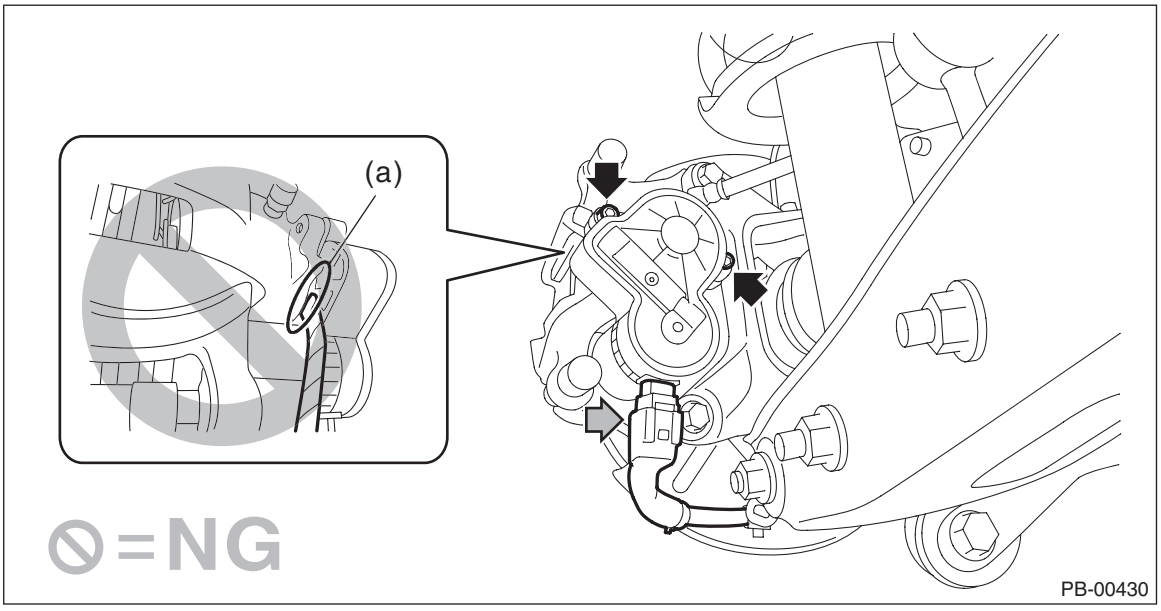
1) Install the switch assembly - electronic parking brake.
2) Install the cover assembly - front. <Ref. to EI-82, INSTALLATION, Console Box.>

C: INSPECTION

1. SWITCH ASSY - ELECTRONIC PARKING BRAKE

Check the resistance between connector terminals.

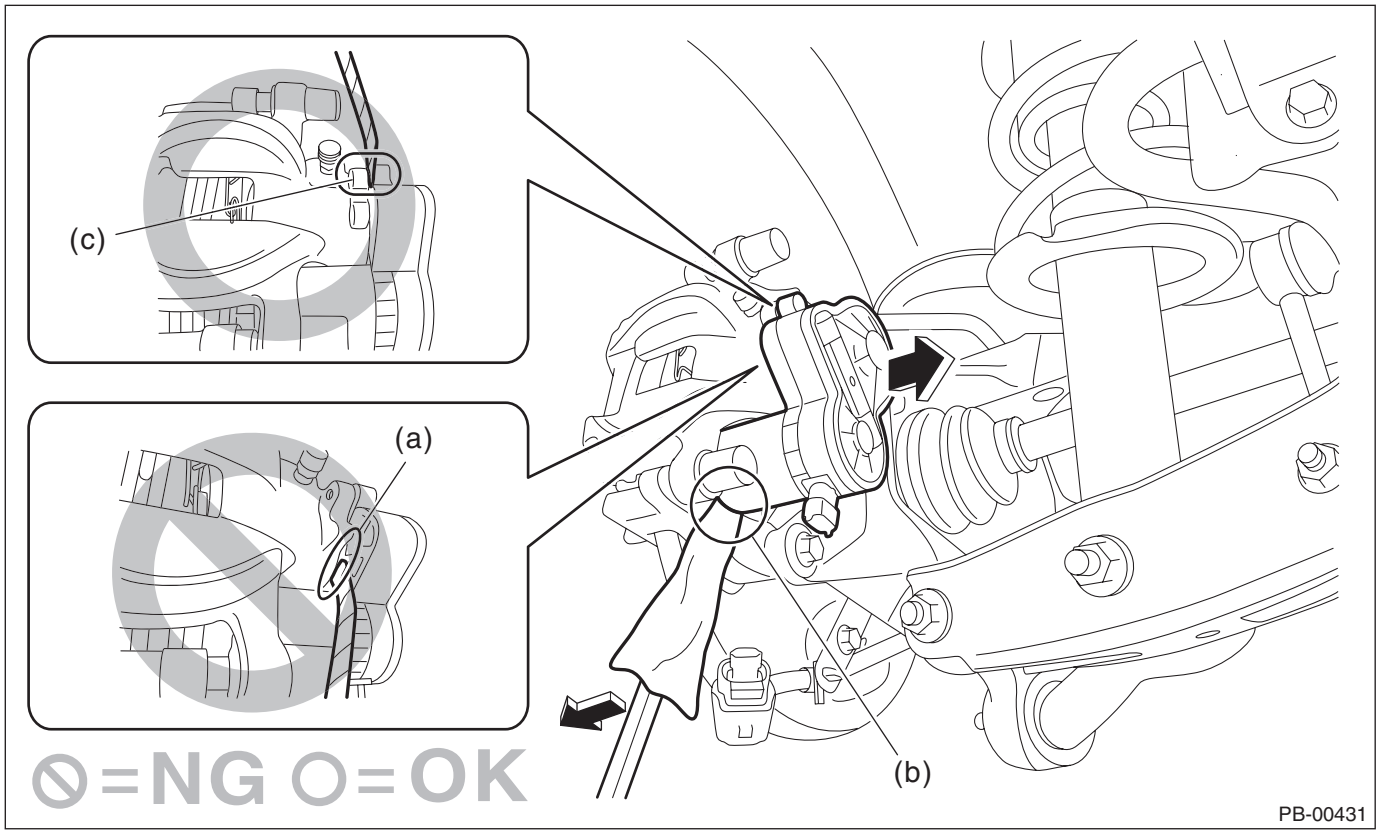
Switch position	Terminal No.	Standard
Press (Release)	6 and 2 6 and 5	Less than 1 Ω
Neutral	6 and 1 2 and 5	Less than 1 Ω
Pull (Lock)	6 and 1 6 and 2	Less than 1 Ω



NOTE:
Replace the switch if the inspection result is not within the standard value.

6. Emergency Release of Electronic Parking Brake

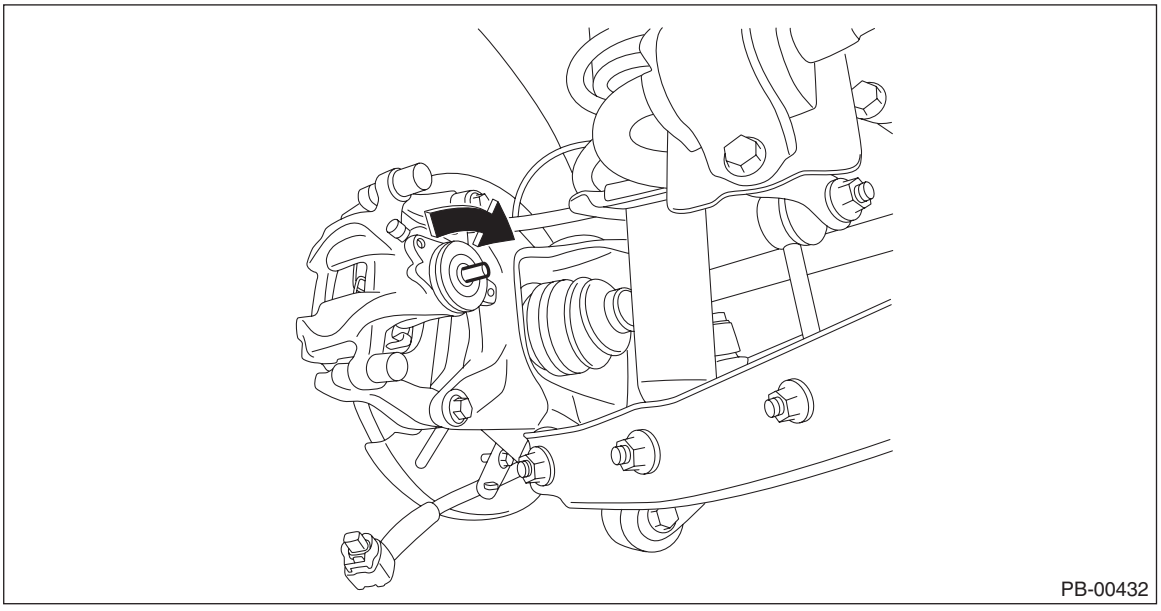
A: OPERATION



CAUTION:
• Perform this operation only when the parking brake must be released in emergency situation such as a system malfunction.
• When performing this procedure, be sure to fully confirm safety in the nearby area and park the vehicle on a horizontal ground.
• Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Set the wheel stoppers to front tires.
3) Jack-up the rear side of vehicle and support it with rigid racks.
4) Remove the rear wheels.
5) Remove the parking brake actuator assembly.

CAUTION:
• When removing the bolt, the parking brake actuator assembly turns due to reaction force generated by the motor. Be careful not to pinch your hand.
• Wrap the tip of a screwdriver with cloth in order not to damage the caliper body that will be reused.
• Do not insert a tool into the seal surface (a) on the parking brake actuator assembly.
• Always remove the parking brake actuator assembly while holding it by hand because the parking brake actuator assembly falls off during removal.
(1) Disconnect the connector and remove the bolt.

(2) Put a screwdriver between the parking brake actuator assembly and the support - rear disc brake (b).
(3) Push out the parking brake actuator assembly toward yourself.



(4) Insert a screwdriver into the gap (c) made by pushing the parking brake actuator assembly, and then remove it.

6) Turn the caliper body spindle bolt clockwise by approx. 1 rotation.

NOTE:
Turn both sides of LH and RH clockwise.

Preparation tool:
TORX® E12

7) Confirm that the parking brake lock is released and the disc rotor rotates.

8) Temporarily install the parking brake actuator assembly.

CAUTION:
• When the emergency release of parking brake was performed, replace the parking brake actuator assembly after the system trouble is resolved.
• Do not connect the actuator connector. It may be locked again due to continuity.
• If the vehicle needs to be moved, cover the actuator connector with vinyl tape to prevent foreign matter from entering, and secure it in an area where no interference occurs.

Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)

9) When the emergency release of parking brake was performed, be sure to perform the inspection related to the parking brake system.

NOTE:
For inspection, refer to Basic Diagnostic Procedure of “Vehicle Dynamics Control (VDC) (DIAGNOSTICS)”. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>

7. General Diagnostic Table

A: INSPECTION

Symptoms	Possible cause	Corrective action
Brake drag	Defective parking brake switch	Replace.
	Defective parking brake harness	Replace.
	Defective parking brake actuator	Replace.
	Loose parking brake actuator and support installation bolt	Tighten to the specified torque.
Noise from brake	Worn or hardened pad	Replace.
	Defective parking brake actuator	Replace.

PARKING BRAKE (DIAGNOSTICS)

PB(diag)

Page
1. General Description 2

1. General Description

A: PROCEDURE

The electronic parking brake system is integrated in VDC system. Refer to VDC (DIAGNOSTICS) for diagnostic procedure. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>

POWER ASSISTED SYSTEM (POWER STEERING)

PS

(3)	Tie-rod end	(12)	Stiffener
(4)	Clip - boot tie-rod	(13)	Sleeve
(5)	Boot - steering gearbox	(14)	Spring - gearbox
(6)	Band - boot	(15)	Adjusting screw
(7)	Tie-rod	(16)	Lock nut
(8)	Universal joint ASSY - steering	(17)	Steering gearbox ASSY
(9)	Castle nut	(18)	Guard

Tightening torque: N·m (kgf-m, ft-lb)

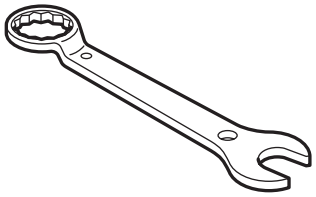
T1: 24 (2.4, 17.7)
T2: 27 (2.8, 19.9)
T3: 30 (3.1, 22.1)
T4: 45 (4.6, 33.2)
T5: 60 (6.1, 44.3)
T6: 85 (8.7, 62.7)
T7: 90 (9.2, 66.4)

C: CAUTION

• When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
• When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
• Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
• Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
• Do not secure a part in a vise directly. Place cushioning materials such as wood blocks, aluminum plates, or waste cloth between the part and the vise.
• When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform “VDC sensor midpoint setting mode” of the VDC. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• Always remove the universal joint before removing, installing or loosening the following parts to avoid damage to the universal joint. Also, to avoid steering effort from being heavy while driving, make sure that the following parts are firmly engaged before assembling the universal joint and the steering column tilt position is set in neutral.
  – Gearbox assembly
  – Column assembly
  – Cradle
  – Engine mounting bracket
  – Beam COMPL - steering

D: PREPARATION TOOL

1. SPECIAL TOOL



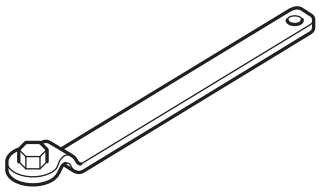


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
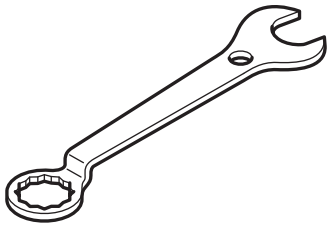
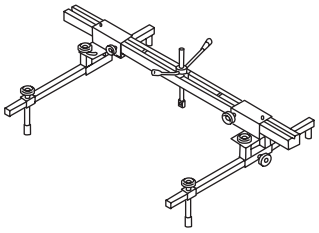
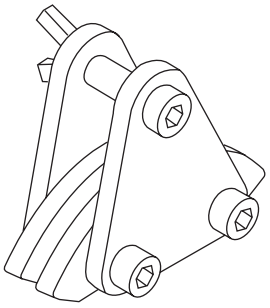
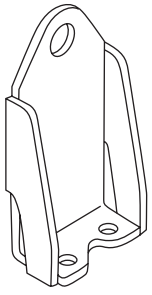
 ST34099PA100	34099PA100	SPANNER	Used when measuring the rotational resistance of gearbox assembly.
 ST34199AJ040	34199AJ040	SPECIAL TOOL EPS	• Used for adjusting the backlash of gearbox. (Adjusting screw side) • Used together with SPECIAL TOOL EPS (34199AJ030).









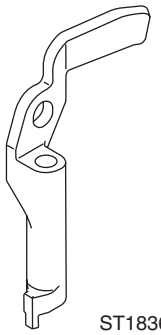


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST34199AJ030	34199AJ030	SPECIAL TOOL EPS	• Used for adjusting the backlash of gearbox. (Lock nut side) • Used together with SPECIAL TOOL EPS (34199AJ040).
 ST99099AJ000	99099AJ000	ENGINE HANGER	• Used for hanging power unit. • Used together with CHAIN BALANCER (99099AJ010).
 ST99099AJ010	99099AJ010	CHAIN BALANCER	• Used for hanging power unit. • Used together with ENGINE HANGER (99099AJ000).
 ST18360AA020	18360AA020	HANGER	• Used for hanging power unit. • For H6 model.
 ST18360AA040	18360AA040 (Newly adopted tool)	HANGER	• Used for removing and installing the cradle. • Used together with BOLT (18363AA050).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18363AA050	18363AA050 (Newly adopted tool)	BOLT	• Used for removing and installing the cradle. • Used together with HANGER (18360AA040).

2. GENERAL TOOL

TOOL NAME	REMARKS
Steering wheel puller	Used for removing the steering wheel.
Circuit tester	Used for measuring voltage and resistance.
Chain sling	• Used for hanging power unit. • Diameter: 6 mm (0.24 in) or 6.3 mm (0.25 in) • Length: 0.8 — 1 m (2.6 — 3.3 ft) • Chain inner width: 8.5 mm (0.33 in) or more • Chain external width: 23.5 mm (0.93 in) or less • Load capacity: 1.2 t (2646 lb) or more
Shackle	• Two units used for hanging power unit. • Attached to both end of chain sling and connected to engine hook. • Load capacity: 250 kg (551 lb) or more
Sling belt	• Used to remove and install the cradle. • Width: 35 — 40 mm (1.38 — 1.57 in) • Length: 2 m (6.6 ft) • Load capacity: 1 t (2205 lb) or more
Shackle	• Used to remove and install the cradle. • Load capacity: 500 kg (1103 lb) or more

2. Power Steering System

A: WIRING DIAGRAM

Refer to “Electric Power Steering System” in the wiring diagram. <Ref. to WI-199, WIRING DIAGRAM, Electric Power Steering System.>

B: ELECTRICAL SPECIFICATION

Refer to Control Module I/O Signal of “POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)”. <Ref. to PS(diag)-9, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

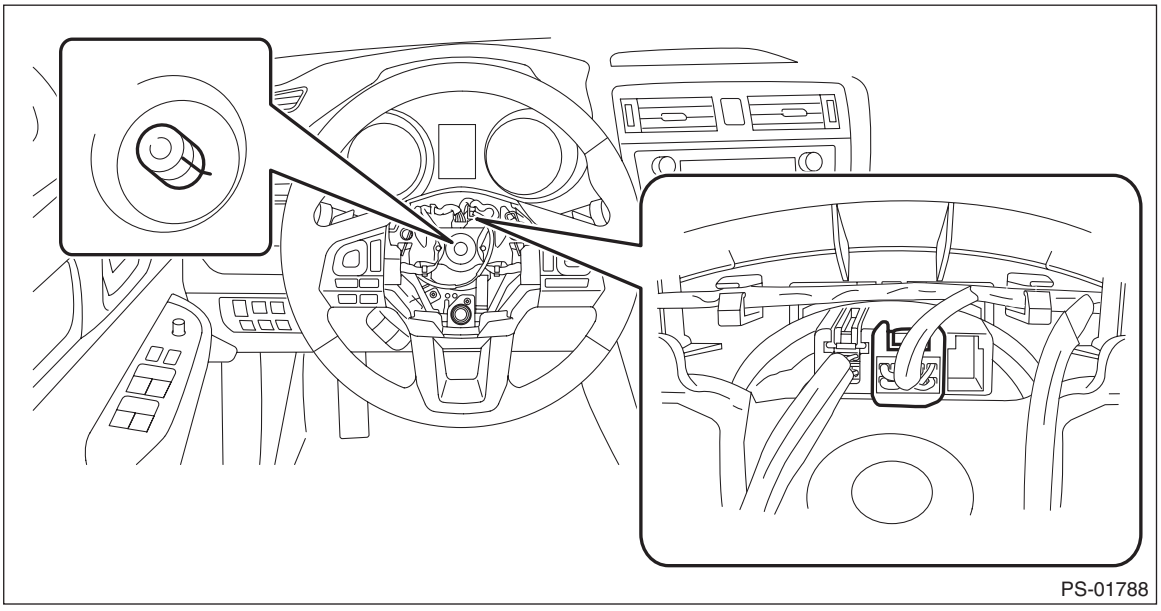
C: INSPECTION

Refer to “POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)”. <Ref. to PS(diag)-2, Basic Diagnostic Procedure.>

D: NOTE

For procedure of each component in the power steering system, refer to the respective section.

- Steering wheel: <Ref. to PS-9, Steering Wheel.>
- Universal joint assembly - steering: <Ref. to PS-14, Universal Joint.>
- Steering column: <Ref. to PS-19, Steering Column.>
- Electric power steering gearbox: <Ref. to PS-24, Electric Power Steering Gearbox.>
- Power steering control module (with built-in gearbox): <Ref. to PS-36, Power Steering Control Module.>



3. Steering Wheel

A: REMOVAL

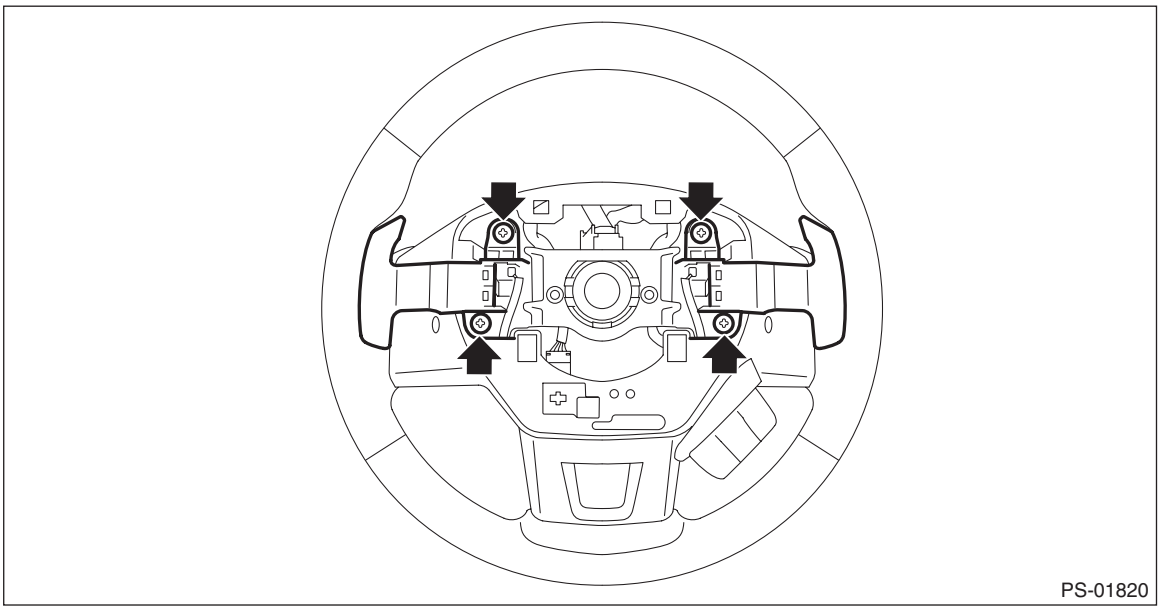
CAUTION:
Before performing service on the airbag module, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM" section. <Ref. to AB-10, CAUTION, General Description.>
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Set the tire to the straight-ahead position.
3) Remove the driver's airbag module. <Ref. to AB-30, REMOVAL, Driver's Airbag Module.>
4) Remove the steering wheel.

CAUTION:
- **Always use the steering wheel puller for removal to avoid deforming the steering wheel.**
- **If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.**

Preparation tool:
Steering wheel puller
(1) Disconnect the connector and remove the nut.
(2) Put alignment marks and remove the steering wheel.

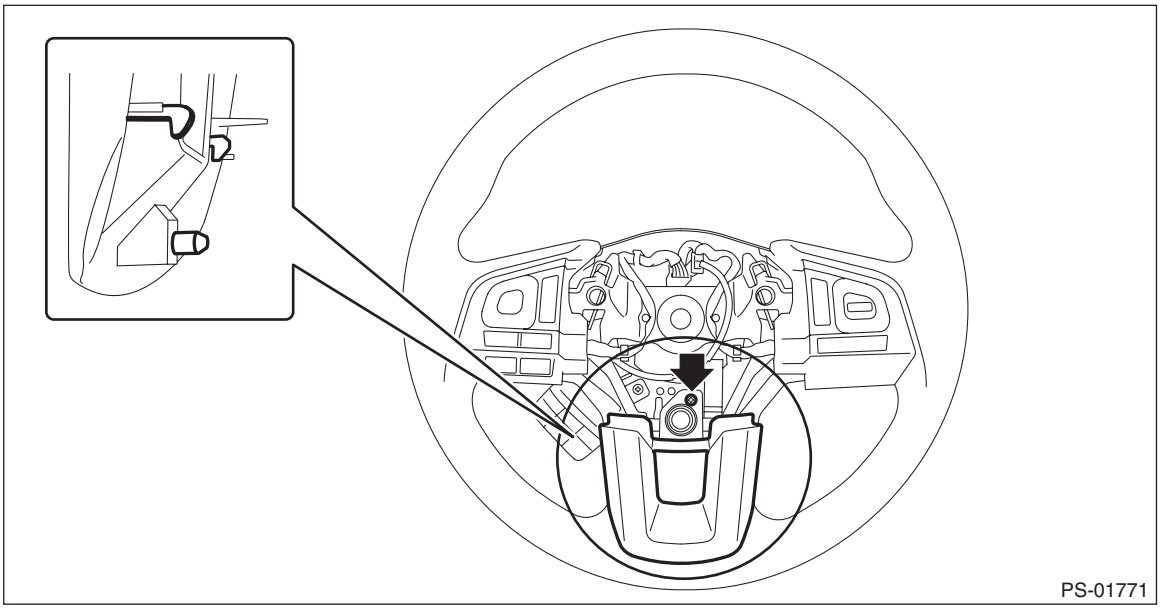
PS-01788

B: INSTALLATION



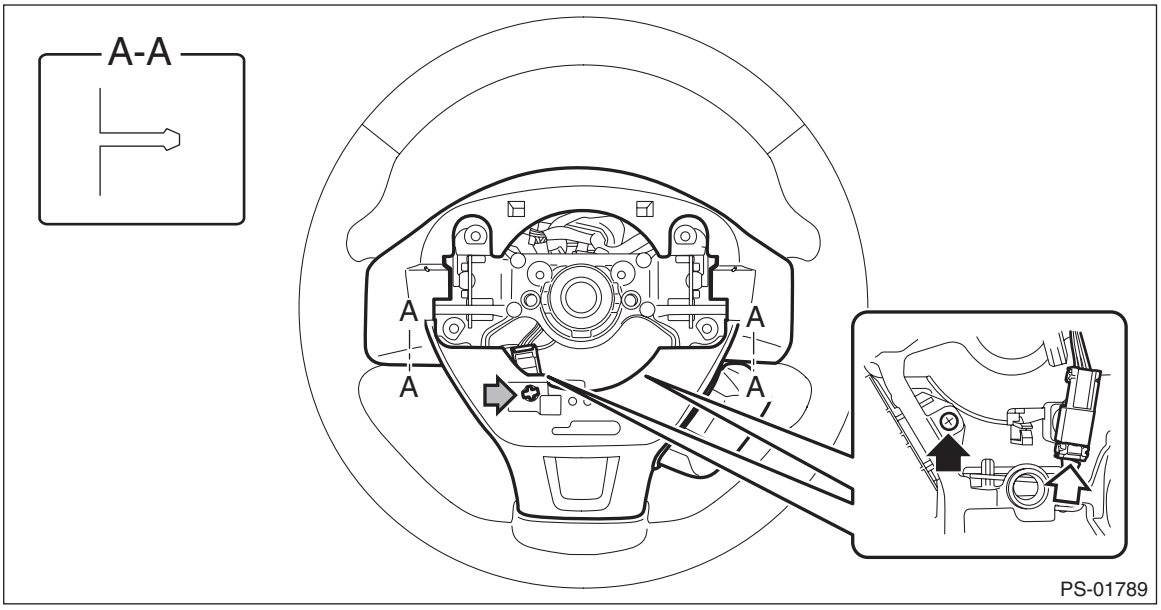
CAUTION:
• Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-10, CAUTION, General Description.>
• If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.
• If the steering wheel and steering angle sensor are removed, perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
1) Align the center position of the roll connector. <Ref. to AB-60, ADJUSTMENT, Roll Connector.>
2) Install the steering wheel.

Tightening torque:
Steering wheel: 39 N·m (4.0 kgf-m, 28.8 ft-lb)

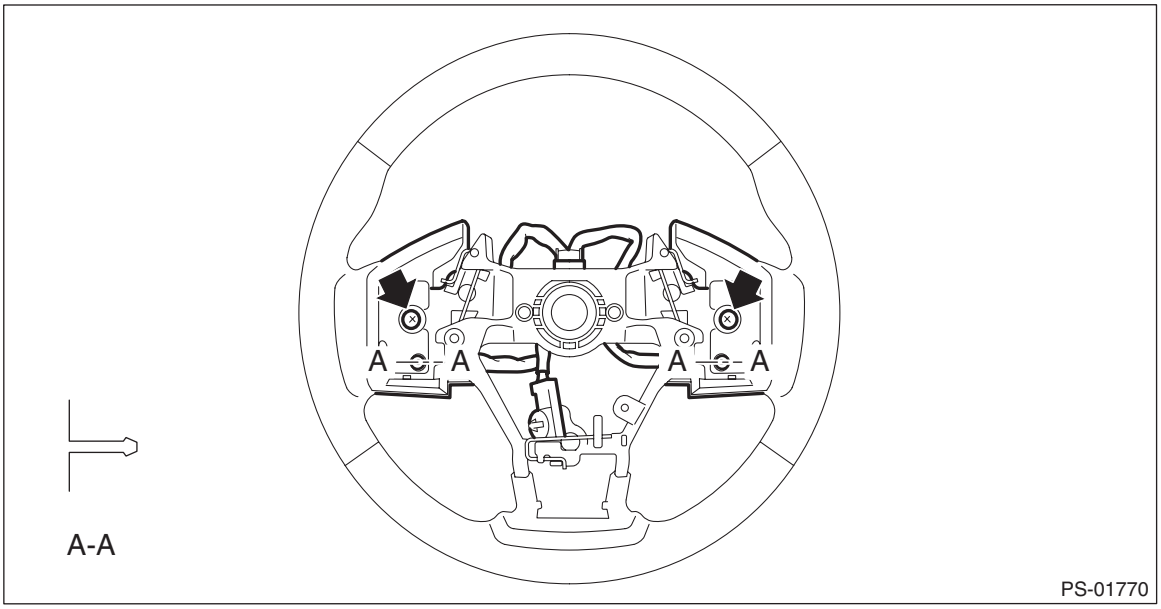


Clearance:
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)
3) Install the driver's airbag module. <Ref. to AB-31, INSTALLATION, Driver's Airbag Module.>
4) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>

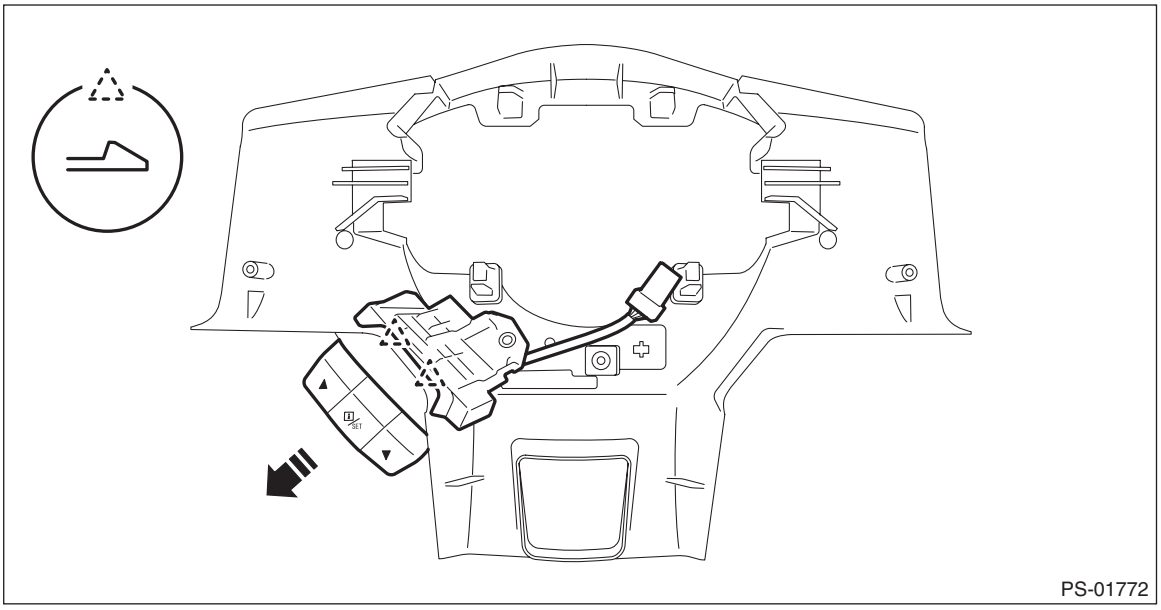
C: DISASSEMBLY



1) Remove the screw, disconnect the connector and remove the paddle shift switch. (Model with paddle shift)



2) Release the claws and remove the screws, then detach the cover - spoke.



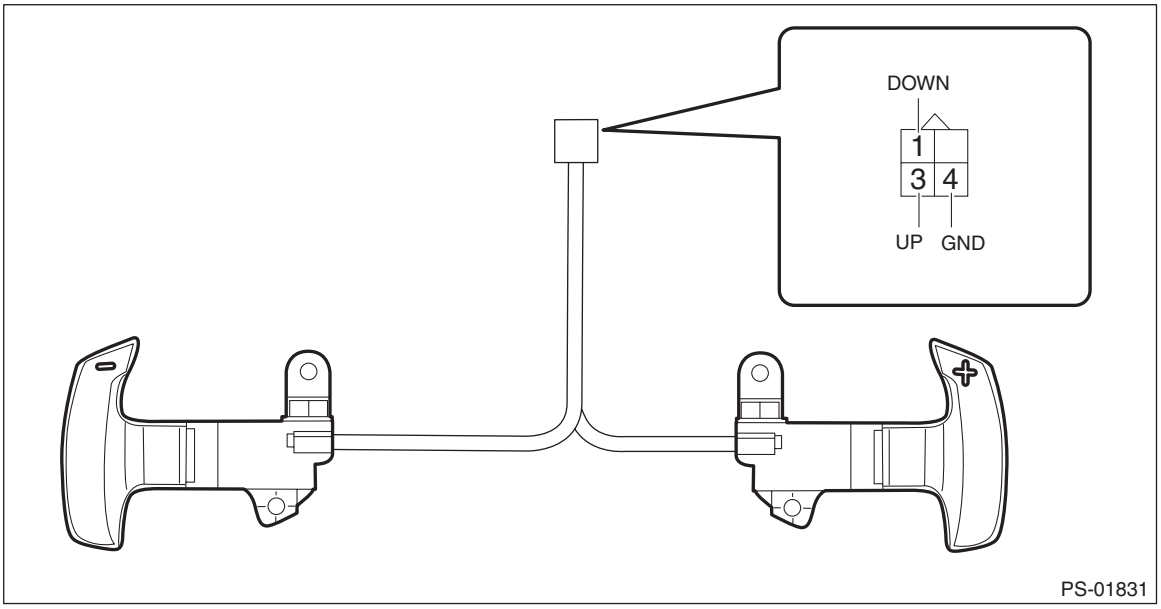
3) Remove connector and screw, and remove the cover - steering wheel LWR.

4) Release the claws and remove the screws, then detach the satellite switch.

5) Release the claws, and then remove the MID switch.

D: ASSEMBLY

CAUTION:
Securely install the switch. Improper insertion of the pin or claw of the switch may cause improper installation.



1) Install the MID switch.
2) Install the satellite switch.
3) Install the cover - steering wheel LWR.
4) Install the paddle shift switch. (Model with paddle shift)

E: INSPECTION

1. PADDLE SHIFT SWITCH

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

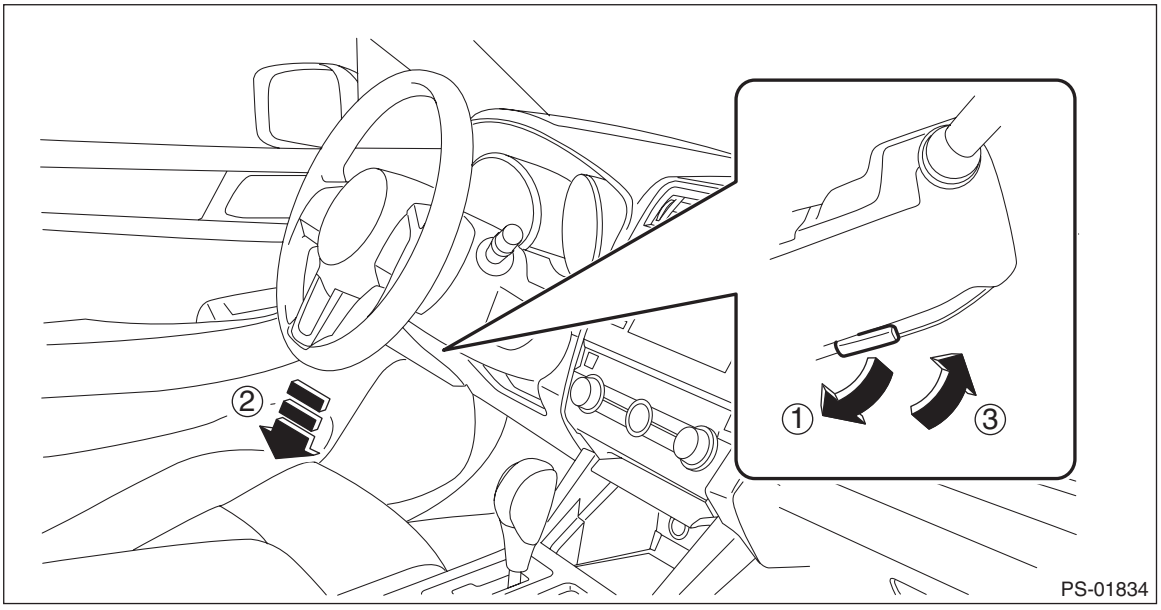
Terminal No.	Inspection conditions	Standard
3 — 4	Operate the + side of paddle shift assembly and hold it.	Less than 10 Ω
1 — 4	Operate the – side of paddle shift assembly and hold it.	Less than 10 Ω
1 — 4 3 — 4	Do not operate the paddle shift assembly.	Is the resistance 1 MΩ or more?

2) Replace the paddle shift switch if the inspection result is not within the standard value.

2. SATELLITE SWITCH ASSEMBLY

Refer to “Steering Satellite Switch” of “ENTERTAINMENT” section. <Ref. to ET-31, INSPECTION, Steering Satellite Switch.>

3. SWITCH ASSEMBLY - STEERING

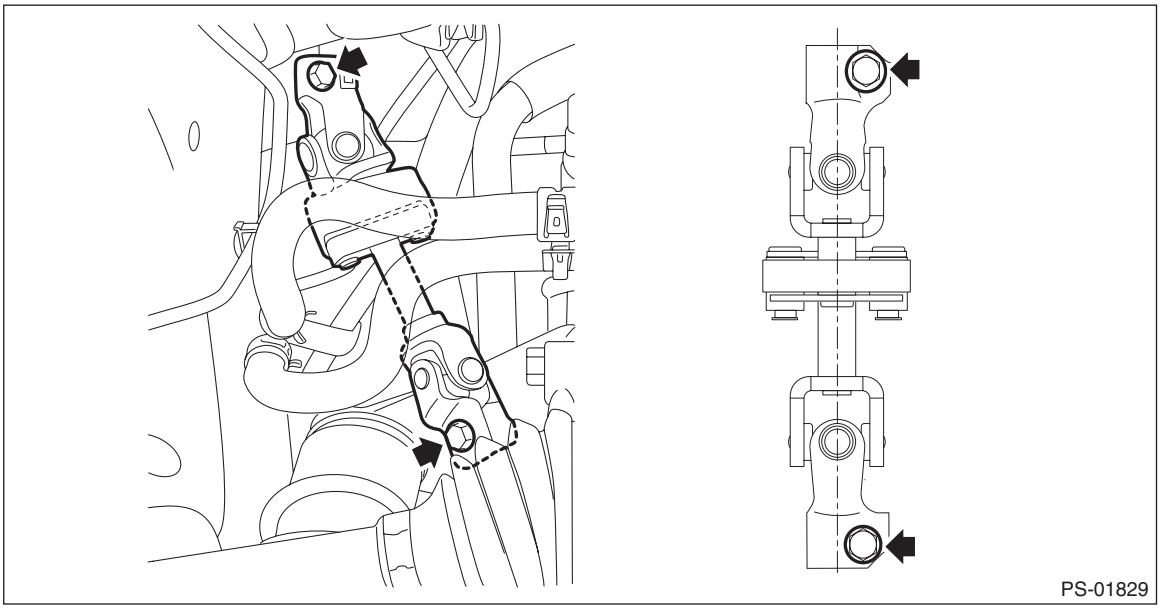


Refer to “Steering Switch” of “INSTRUMENTATION/DRIVER INFO” section. <Ref. to IDI-20, INSPECTION, Switches and Harness.>

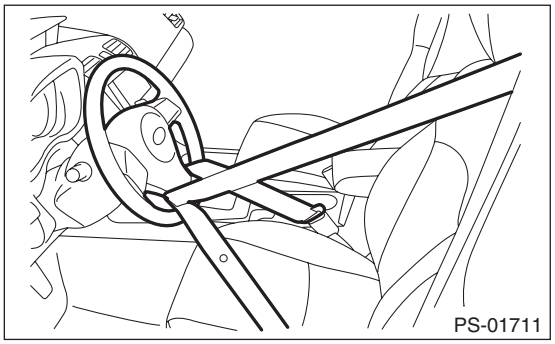
4. Universal Joint

A: REMOVAL

1) Adjust the tilt position of the steering column to the neutral position.



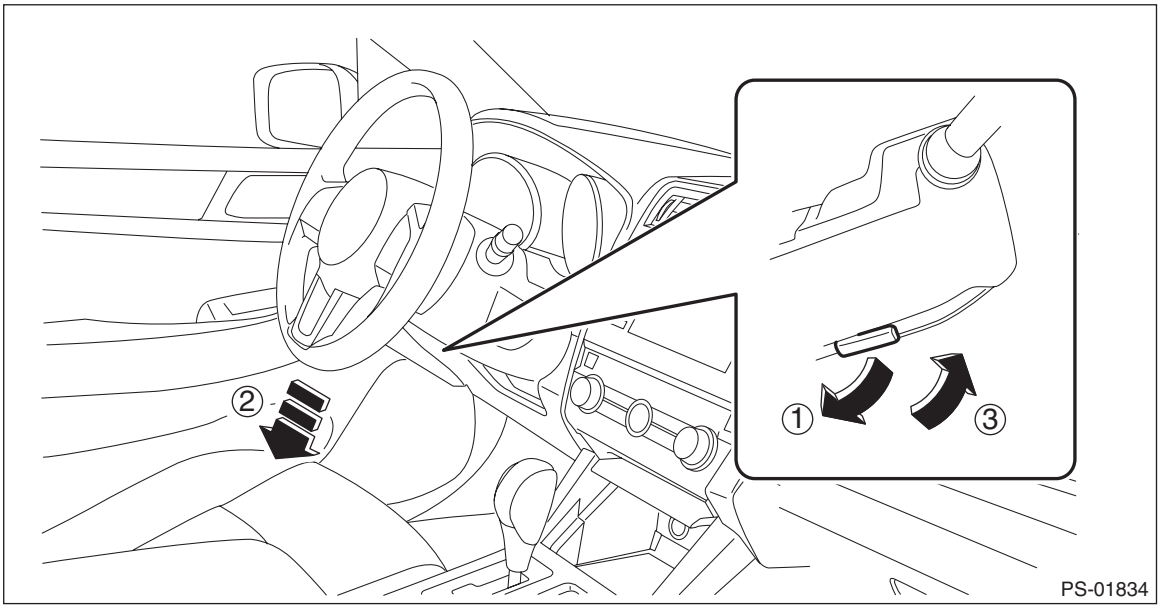
CAUTION:
Always place the tilt lever to the lock position after the steering column is adjusted.



2) Remove the under cover - front. <Ref. to EI-28, REMOVAL, Front Under Cover.>
3) Remove the front exhaust pipe. (H6 model only) <Ref. to EX(H6DO)-6, REMOVAL, Front Exhaust Pipe.>
4) Remove the universal joint assembly - steering.
   (1) Place alignment marks on the universal joint assembly - steering.

NOTE:
Place alignment marks on the following positions.
- Between the column assembly - steering and the universal joint assembly - steering
- Between the steering gearbox assembly and the universal joint assembly - steering

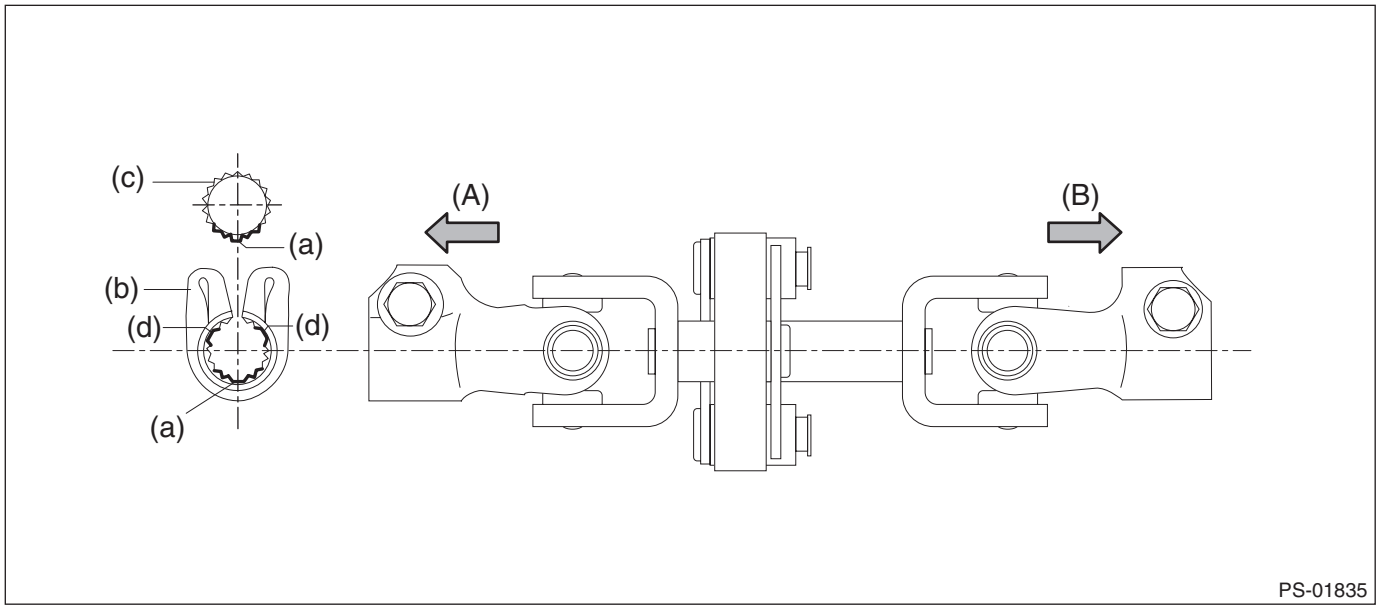
   (2) Remove the bolt, and remove the universal joint assembly - steering.



5) Set the driver's seat to the neutral position.
6) Prevent the steering wheel from turning using the seat belt.

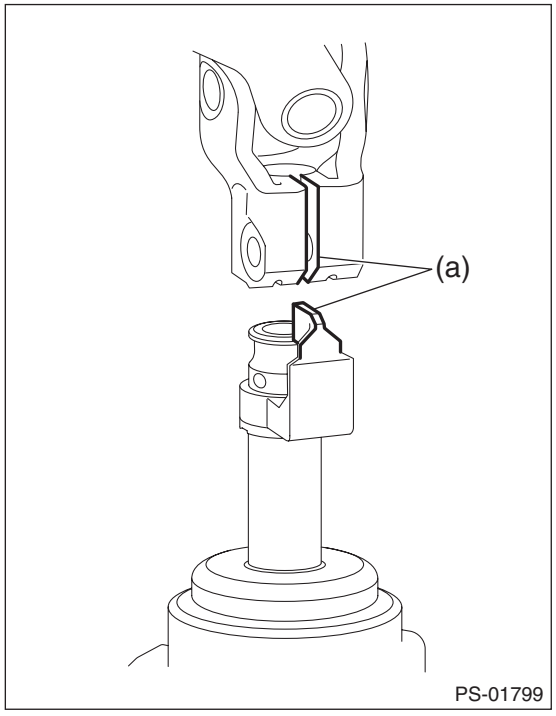
B: INSTALLATION

1) Before installation, check the universal joint assembly - steering. <Ref. to PS-17, INSPECTION, Universal Joint.>
2) Adjust the tilt position of the steering column to the neutral position.



CAUTION:
Always place the tilt lever to the lock position after the steering column is adjusted.

3) Unfasten the seat belt and make the steering wheel turn freely.
4) Install the universal joint assembly - steering to the column shaft.

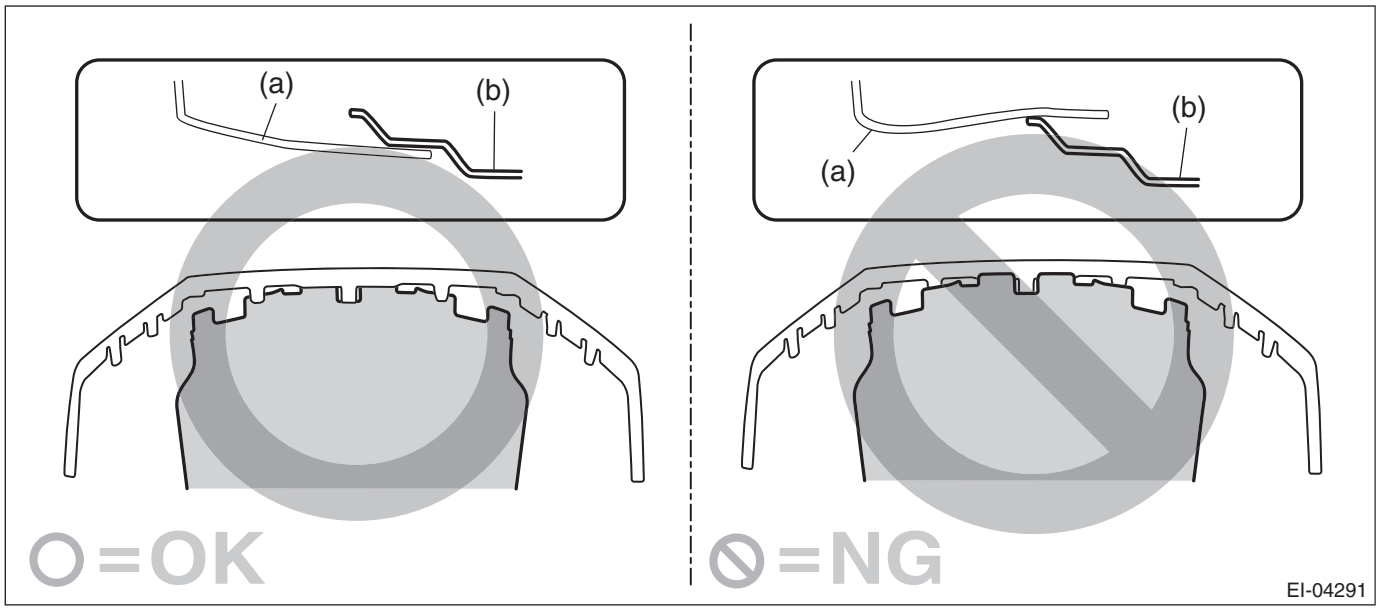


CAUTION:
• Be sure to align the protrusion section (a) of the column shaft side with the cutout (a) of the serration. If another cutout portions (d) are used for alignment, the bolt of the universal joint assembly - steering cannot be assembled.
• Be sure to follow the tightening order and tightening torque of the universal joint assembly - steering to avoid the steering effort from becoming heavy. After confirming that the steering column position is in the neutral position, tighten the universal joint assembly - steering.
• Always place the tilt lever to the lock position after the steering column is adjusted.

(1) Match the alignment marks that have been marked when removing with the column shaft (c) and the cutout portion (a) at the serrations of the yoke (b).
(2) Connect the universal joint assembly - steering with the column shaft.

(A) Column shaft side (B) Gearbox side

(3) Install the universal joint assembly - steering to the serrations of the gearbox assembly by matching the alignment marks that have been marked when removing and the cutout portion of the guide (a).

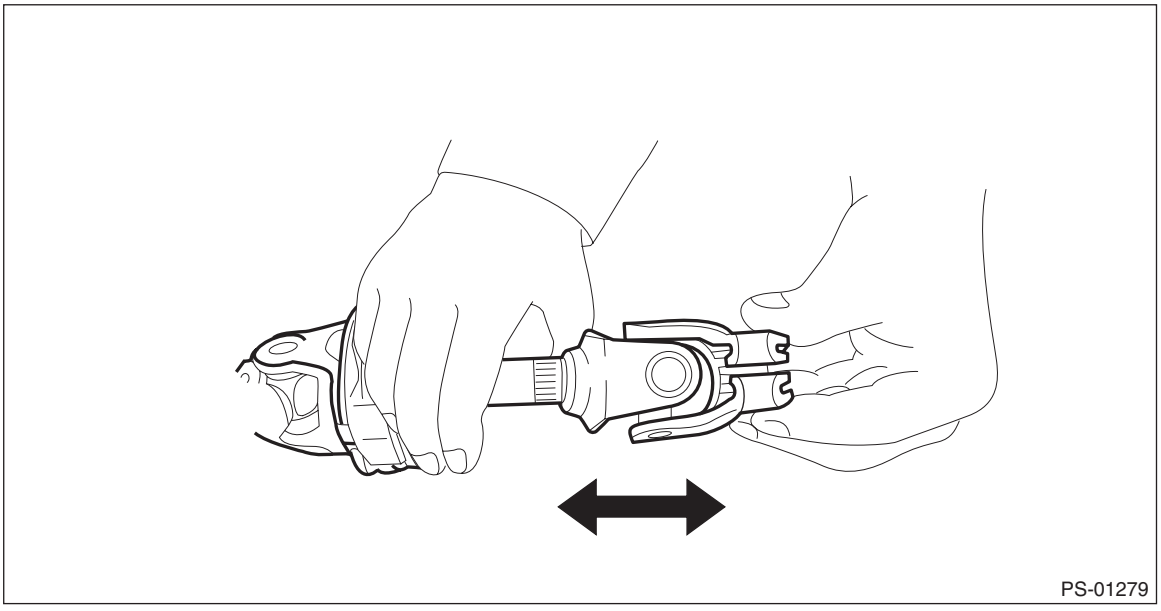


(4) Tighten the bolts on the gearbox side first, and then the column shaft side.

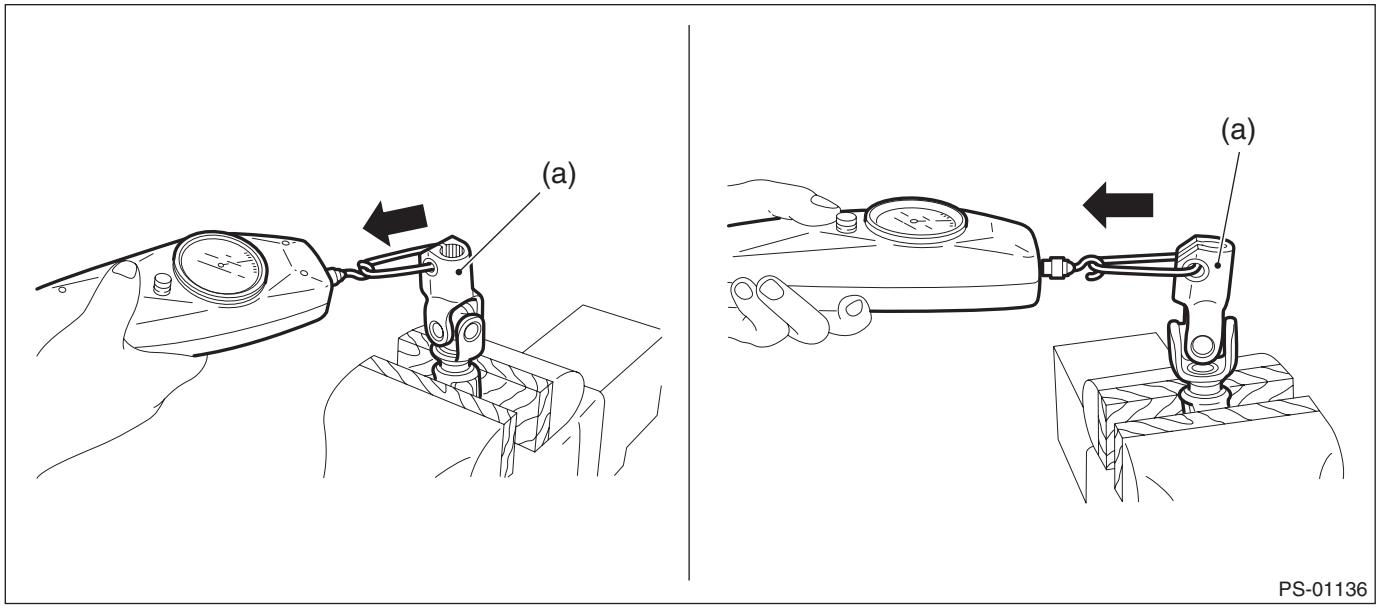
Tightening torque:
24 N·m (2.4 kgf-m, 17.7 ft-lb)

Clearance:
Universal joint assembly - steering coupling to adjacent parts: 15 mm (0.59 in) or more

5) Install the front exhaust pipe. (H6 model only) <Ref. to EX(H6DO)-8, INSTALLATION, Front Exhaust Pipe.>
6) Install the under cover - front. <Ref. to EI-28, INSTALLATION, Front Under Cover.>



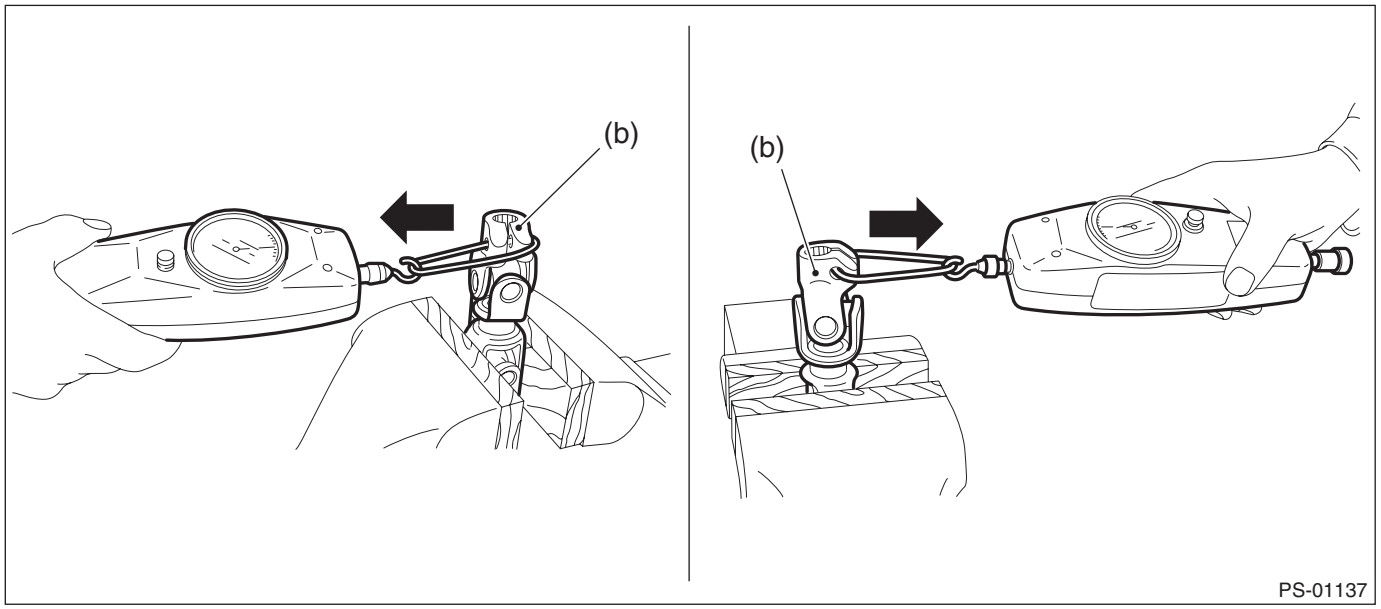
CAUTION:
Install the under cover - front so that the front end of the under cover (b) comes inside the bumper face - front (a).



C: INSPECTION

Check for wear, damage or any other faults.
1) Check the universal joint assembly - steering for excessive looseness.

Service limit:
Play of the universal joint assembly - steering: 0 mm (0 in)

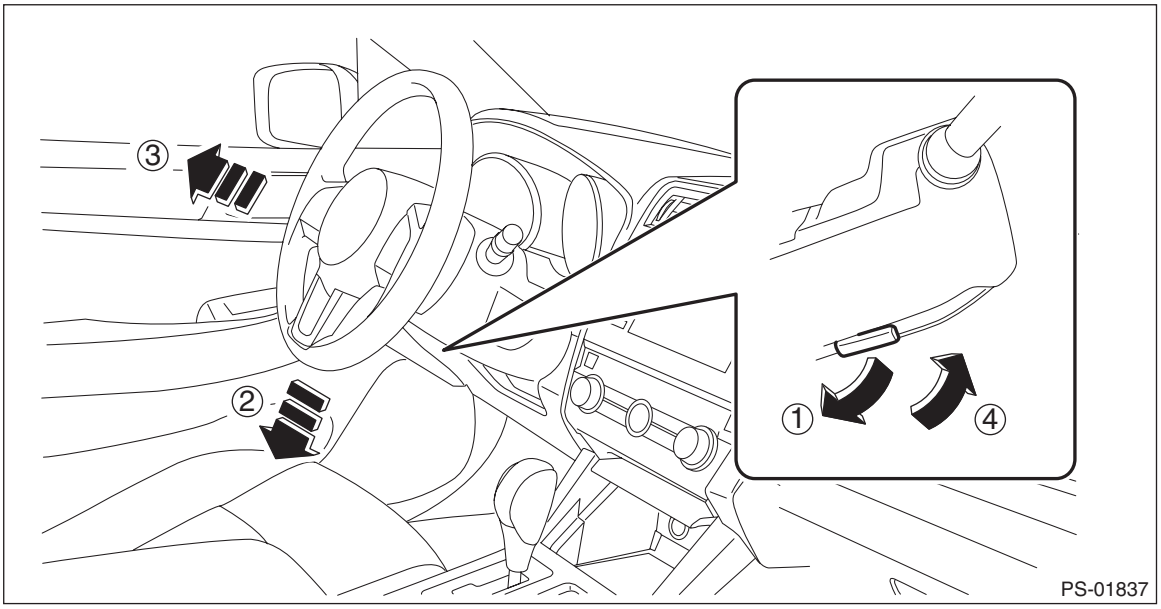


2) Measure the swing load of the universal joint assembly - steering.
(1) Place the universal joint assembly - steering between wooden blocks and fix it on a vise.
(2) With the yoke (a) of gearbox side facing up, measure the swing load in two directions.

Service limit:
Maximum load:
Except for OUTBACK: 4.5 N (0.46 kgf, 1.01 lbf) or less
OUTBACK: 2.8 N (0.29 kgf, 0.63 lbf) or less

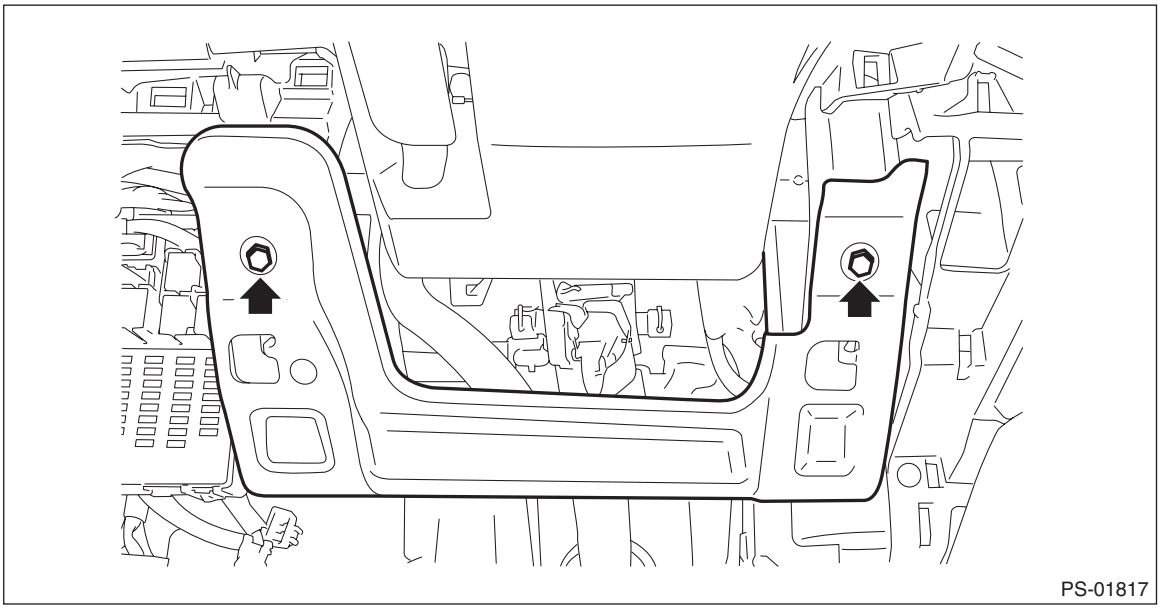
(3) With the yoke (b) of the column assembly - steering side facing up, measure the swing load in two directions.

Service limit:
Maximum load: 5.4 N (0.55 kgf, 1.21 lbf) or less



(4) Replace as necessary, if it is found defective.

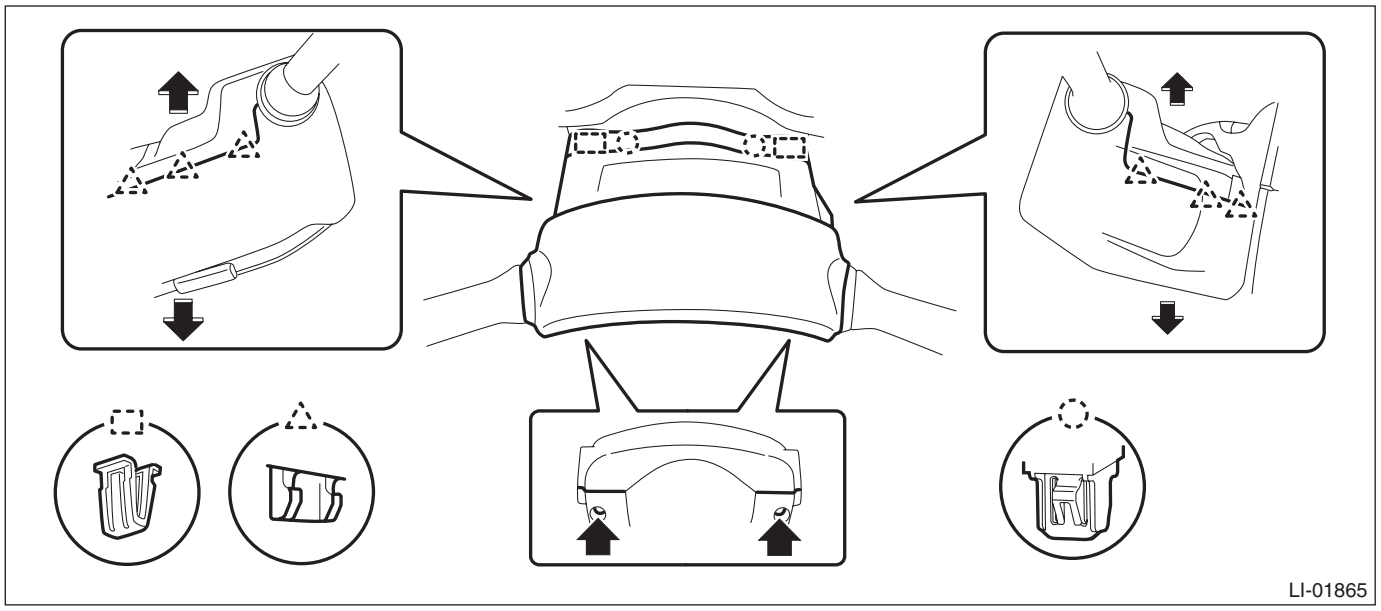
5. Steering Column



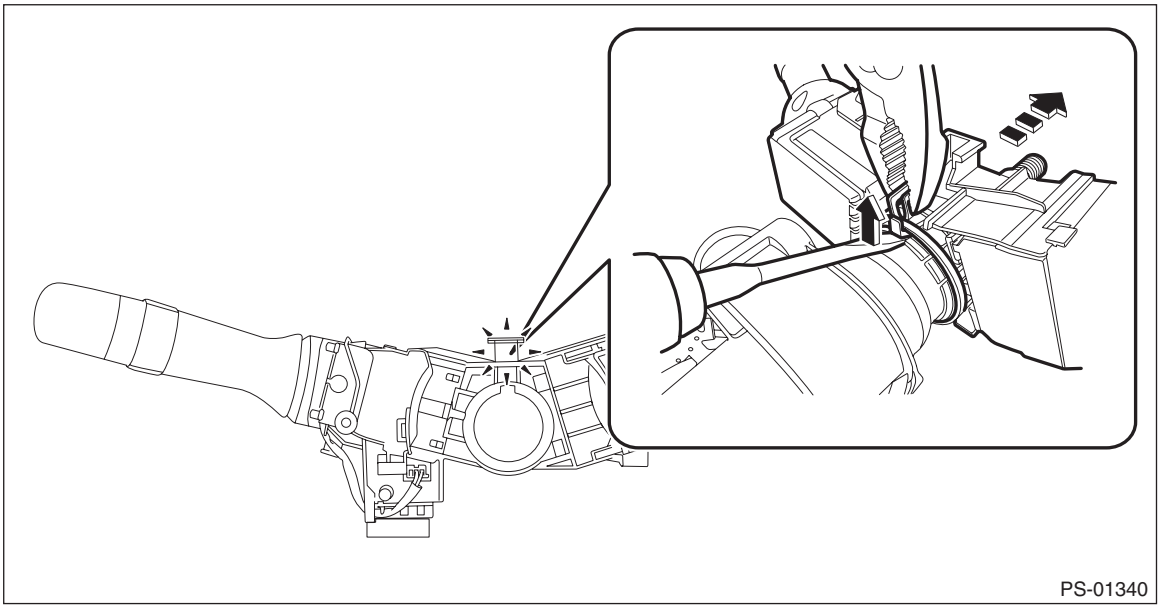
A: REMOVAL

CAUTION:
Before performing service on the airbag module, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM" section. <Ref. to AB-10, CAUTION, General Description.>
1) Adjust the tilt position of the steering column to the neutral position and the telescopic position to the longest position.

CAUTION:
Always place the tilt lever to the lock position after the steering column is adjusted.

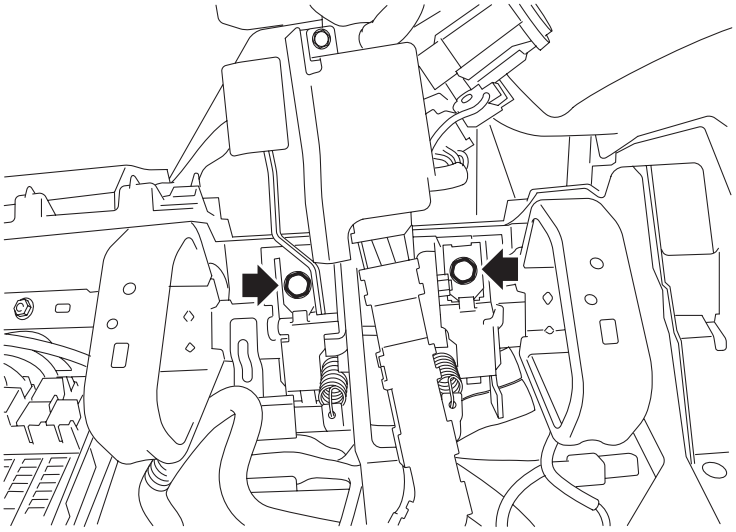


2) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
3) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-74, REMOVAL, Instrument Panel Lower Cover.>
4) Remove the panel - knee guard.



5) Remove the driver's airbag module. <Ref. to AB-30, REMOVAL, Driver's Airbag Module.>
6) Remove the steering wheel. <Ref. to PS-9, REMOVAL, Steering Wheel.>

7) Remove the cover assembly - column.
(1) Remove the clips, and remove the cover - column.
(2) Remove the screws.
(3) Release the claw, and remove the cover assembly - column UPR and the cover assembly - column LWR.



8) Remove the switch assembly - combination.
(1) Disconnect the connector, and loosen the clamp to release the claws.
(2) Pull out the switch assembly - combination from the column assembly - steering.

9) Remove all connectors from the column assembly - steering.
10) Remove the universal joint assembly - steering. <Ref. to PS-14, REMOVAL, Universal Joint.>

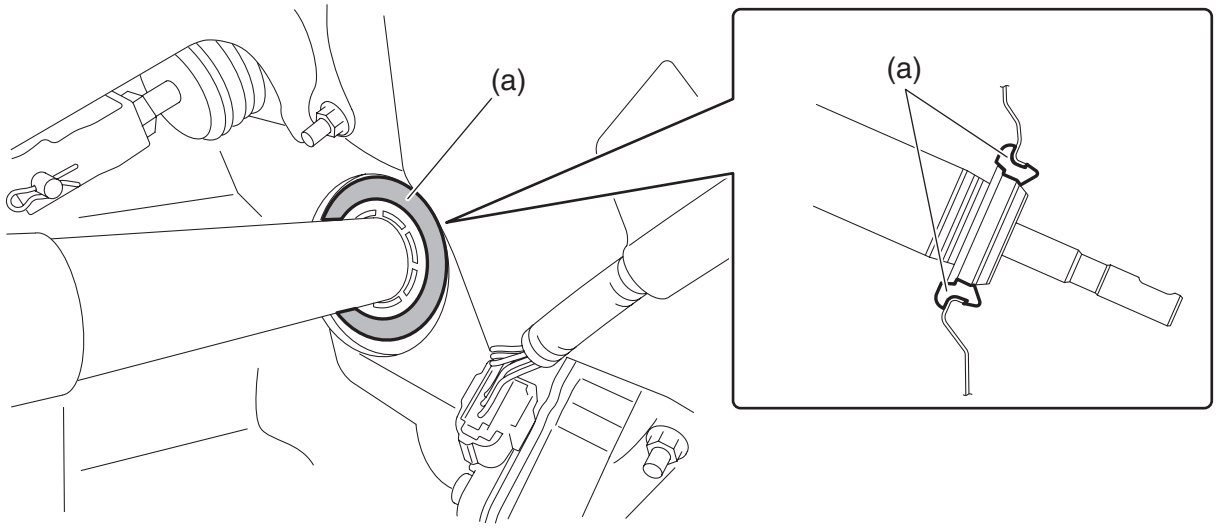
CAUTION:
To prevent damage to the universal joint assembly - steering and improper steering effort, make sure to remove the universal joint assembly - steering.

11) Remove the bolt under the beam COMPL - steering securing the column assembly - steering.

PS-01798

12) Pull out the column assembly - steering from the hole on toe board.

CAUTION:
Do not loosen the tilt lever when the column assembly - steering is not secured to the vehicle.



13) Remove the ignition key lock. <Ref. to SL-68, REPLACEMENT, Ignition Key Lock.>

B: INSTALLATION

CAUTION:

- **When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-17, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>**
- **Before performing service on the airbag module, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM" section. <Ref. to AB-10, CAUTION, General Description.>**

1) Install the bushing (a) to the toe board from the passenger compartment side.

PS-01795

2) Insert the end of the column assembly - steering into the toe board bushing.
3) Tighten the column assembly - steering installation bolt located under the beam COMPL - steering with the tilt lever fixed.

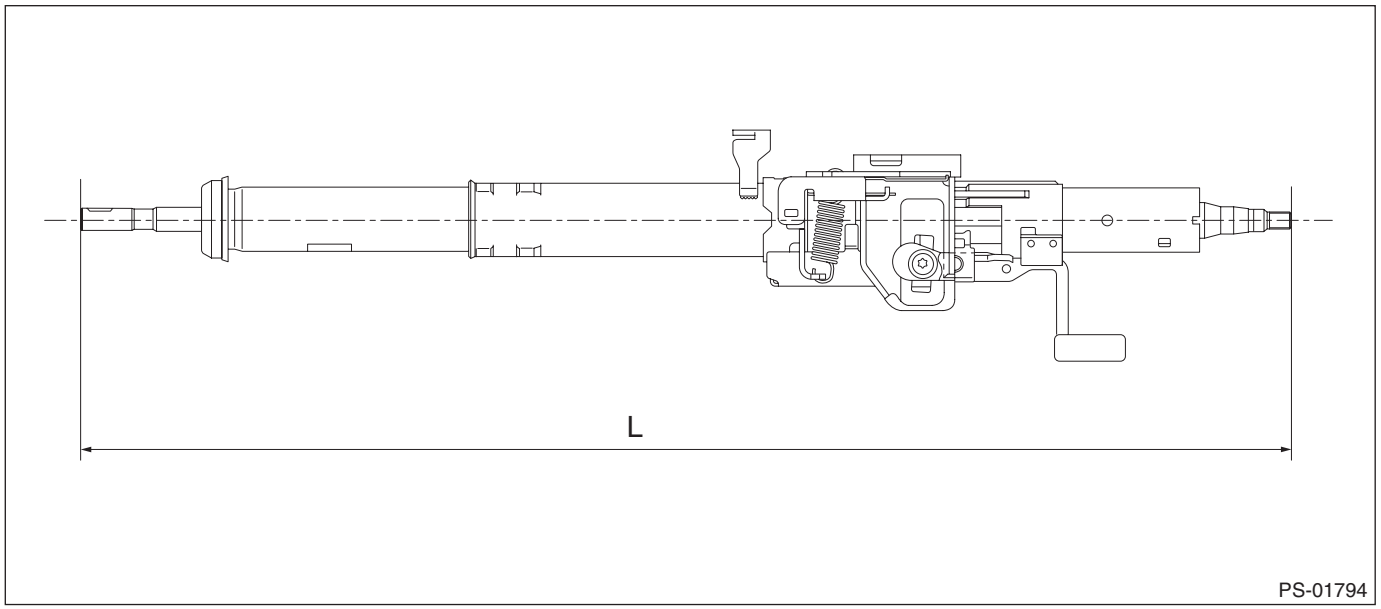
Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)
4) Install the ignition key lock. <Ref. to SL-68, REPLACEMENT, Ignition Key Lock.>
5) Install the switch assembly - combination.
6) Connect all the connectors under the instrument panel.
7) Install the universal joint assembly - steering. <Ref. to PS-15, INSTALLATION, Universal Joint.>

CAUTION:
• Always install the universal joint assembly - steering after installing the steering column to avoid damage to the universal joint assembly - steering.
• Be sure to follow the tightening order and tightening torque of the universal joint assembly - steering to avoid the steering effort from becoming heavy. After confirming that the steering column position is in the neutral position, tighten the universal joint assembly - steering.
• Always place the tilt lever to the lock position after the steering column is adjusted.
8) Install the panel - knee guard.

Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)
9) Install the cover assembly - instrument panel LWR driver.
10) Install the cover assembly - column.
11) Align the center position of the steering roll connector. <Ref. to AB-60, ADJUSTMENT, Roll Connector.>
12) Install the steering wheel.

Tightening torque:
Steering wheel: 39 N·m (4.0 kgf-m, 28.8 ft-lb)

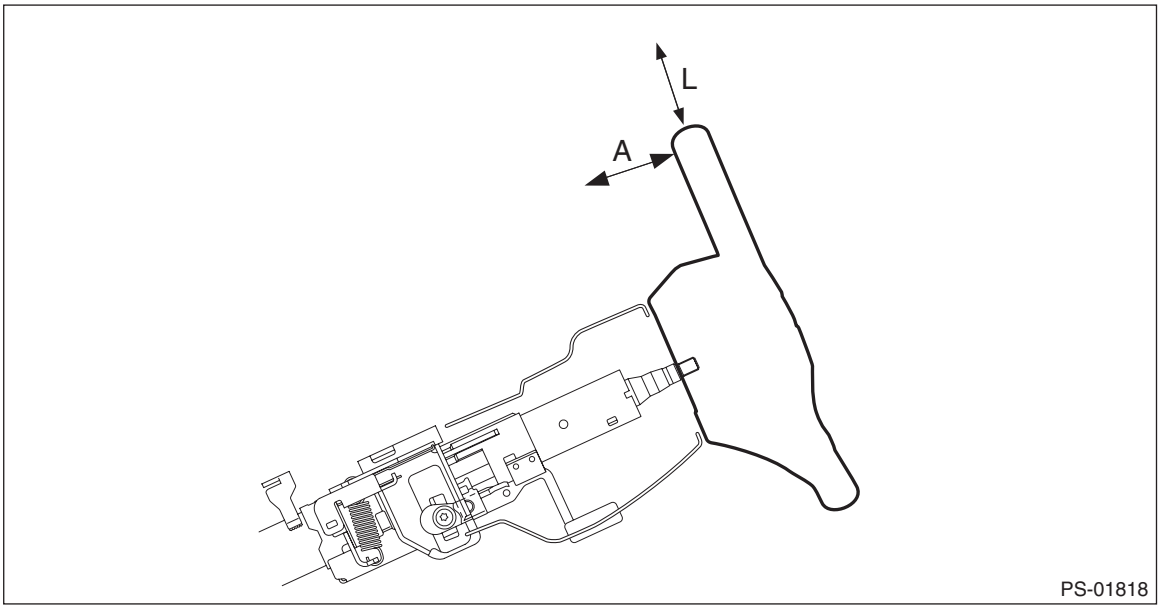
Clearance:
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)
13) Install the driver's airbag module. <Ref. to AB-31, INSTALLATION, Driver's Airbag Module.>
14) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>



C: INSPECTION

1. UNIT INSPECTION

Check the following items, and if there is anything out of standard value, it is considered to be damaged. If so, replace it with a new part.

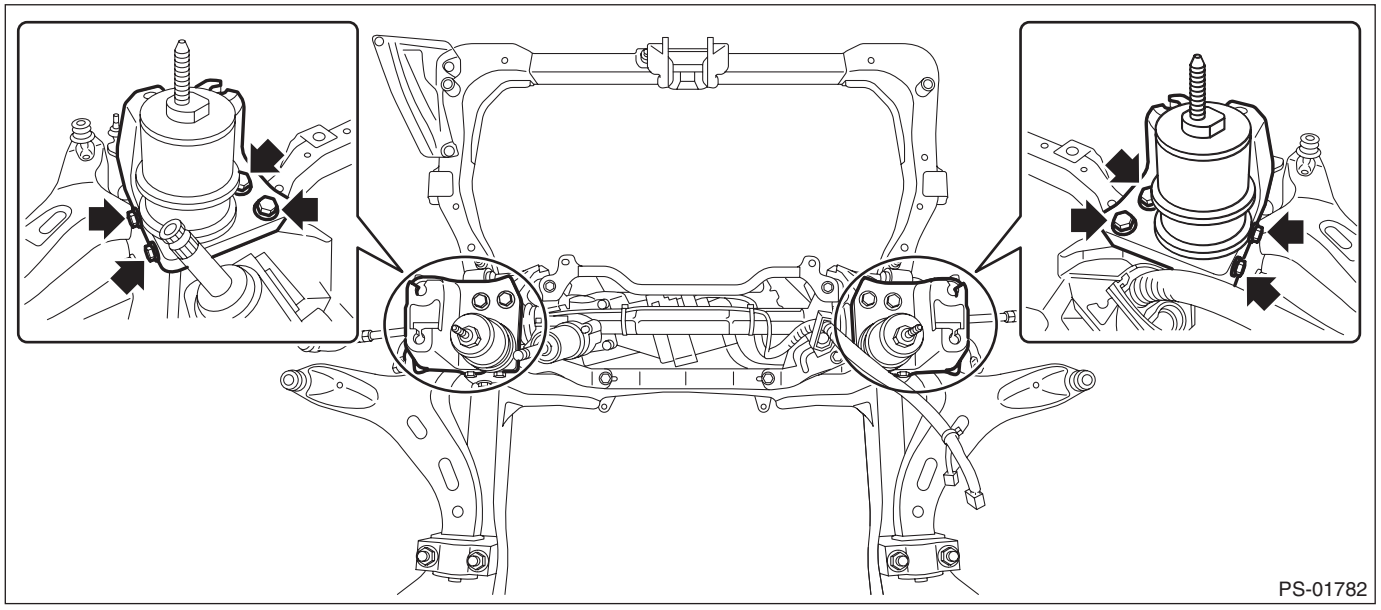


- Measure the whole length of the column assembly - steering.

Standard: Overall length L
Tilt (measure at the neutral position) and telescopic column (measure at the longest position)
$857.1^{+1.5}_{-1.5}$ mm ($33.74^{+0.059}_{-0.059}$ in)

- Check the steering wheel deflection in axial and vertical directions.

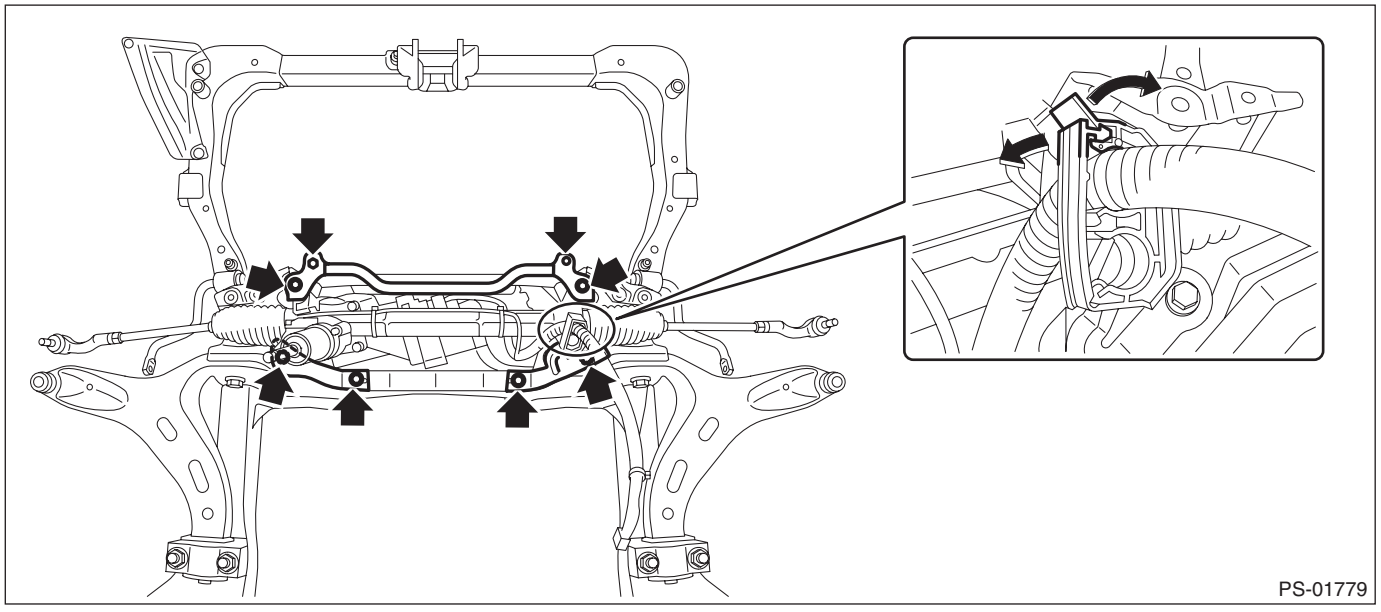
Specification:
Axial deflection A (deflection of steering wheel)
Less than 6 mm (0.24 in)
Vertical deflection L (runout of steering wheel)
Less than 17 mm (0.68 in)



2. INSPECTION OF AIRBAG SYSTEM

Refer to “AIRBAG SYSTEM” section for airbag inspection procedure. <Ref. to AB-31, INSTALLATION, Driver’s Airbag Module.>

6. Electric Power Steering Gearbox



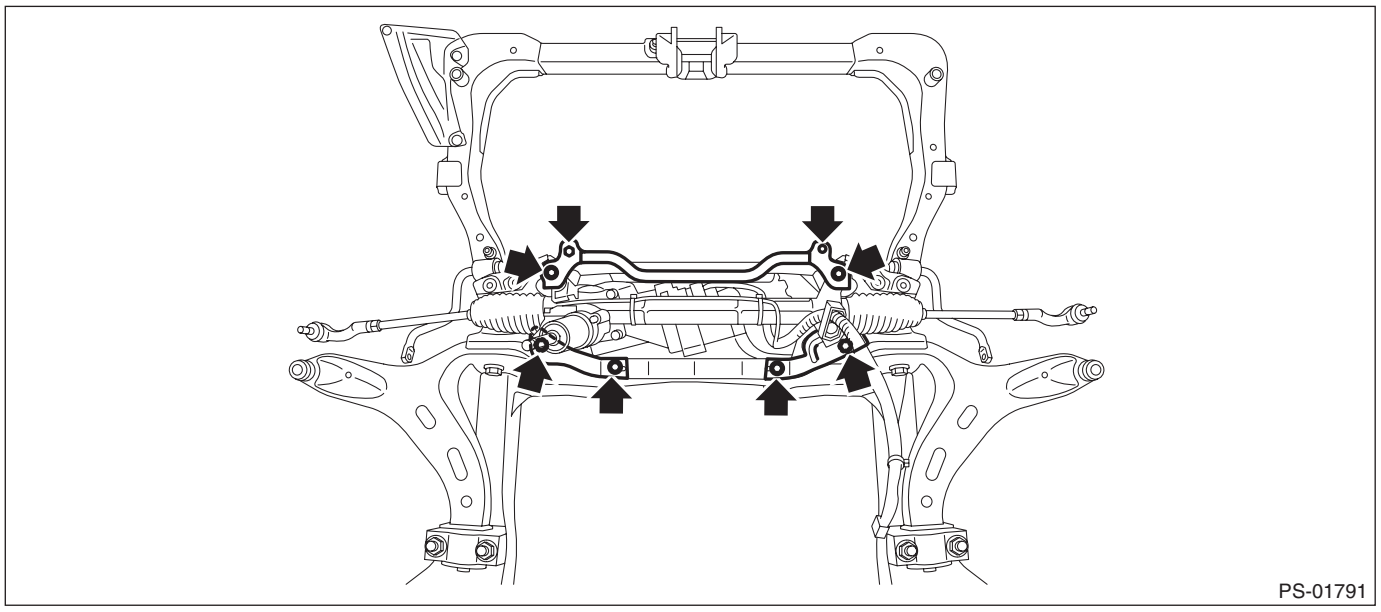
A: REMOVAL

CAUTION:
• The power steering control module continues to operate after the engine stops and calculates the temperature in the control module. Therefore, before starting service of the power steering system which requires disconnection of the connector, stop the engine and allow approx. 30 minutes until the control module becomes cold.
• Be careful not to let any foreign matter (dust, water, oil, etc.) enter into the power steering control module connector when removing or installing. If a foreign matter enters, completely remove it.
1) Disconnect the ground terminal from battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
2) Remove the cradle. <Ref. to FS-21, REMOVAL, Cradle.>
3) Remove the bolts, and remove left and right main mounting brackets.

PS-01782

4) Remove the clips and bolts, then remove the steering gearbox.

CAUTION:
Be careful not to damage the steering boot.

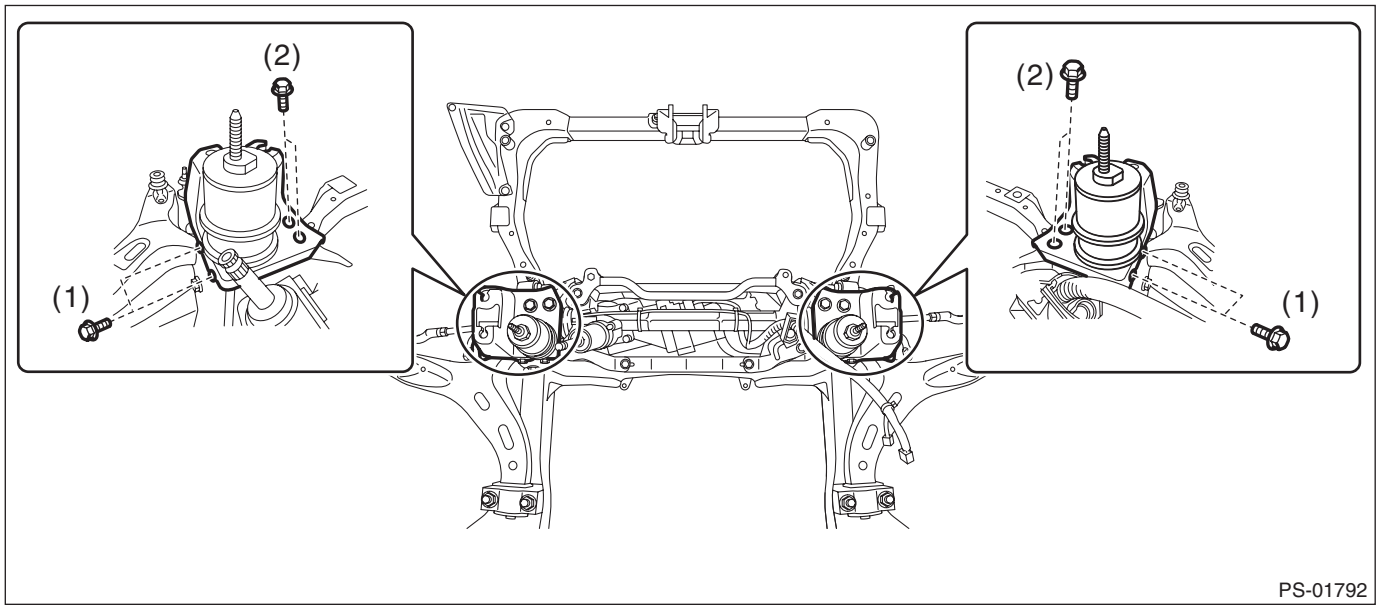


PS-01779

B: INSTALLATION

1) Before installation, check the steering gearbox. <Ref. to PS-30, INSPECTION, Electric Power Steering Gearbox.>
2) Install the steering gearbox assembly by tightening the bolts through the stiffener to the specified torque.

CAUTION:
Be careful not to damage the steering gearbox assembly boot.



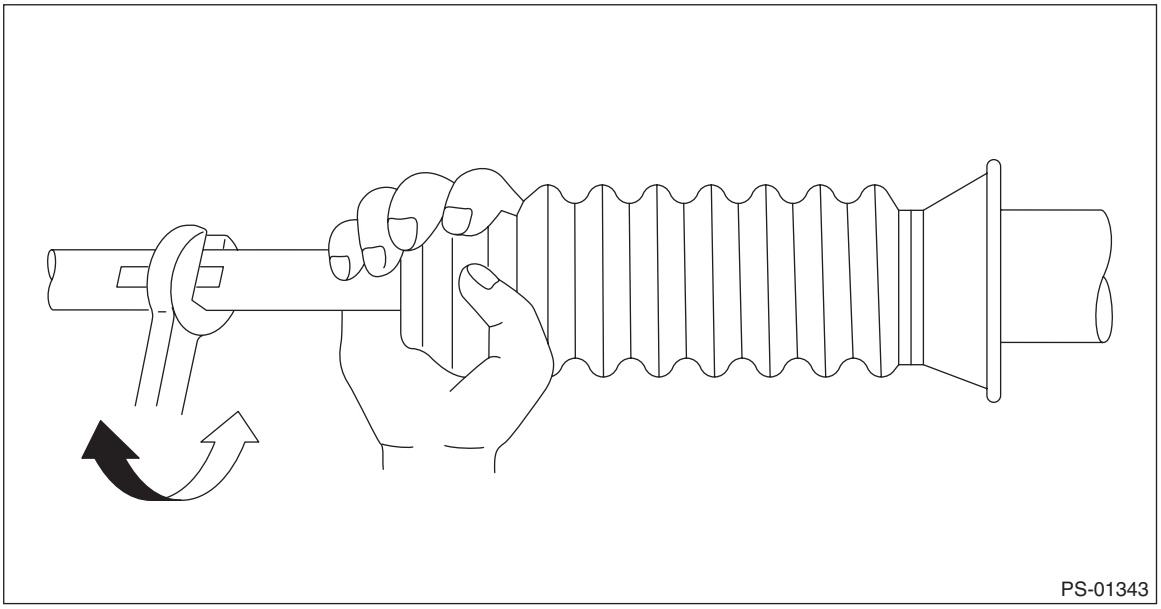
Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)

PS-01791

3) Install the main mounting bracket in the numerical order.
(1) Temporarily tighten the main mounting bracket in the numerical order.

Tightening torque:
10 N·m (1.0 kgf-m, 7.4 ft-lb)
(2) Tighten the main mounting bracket in the numerical order.

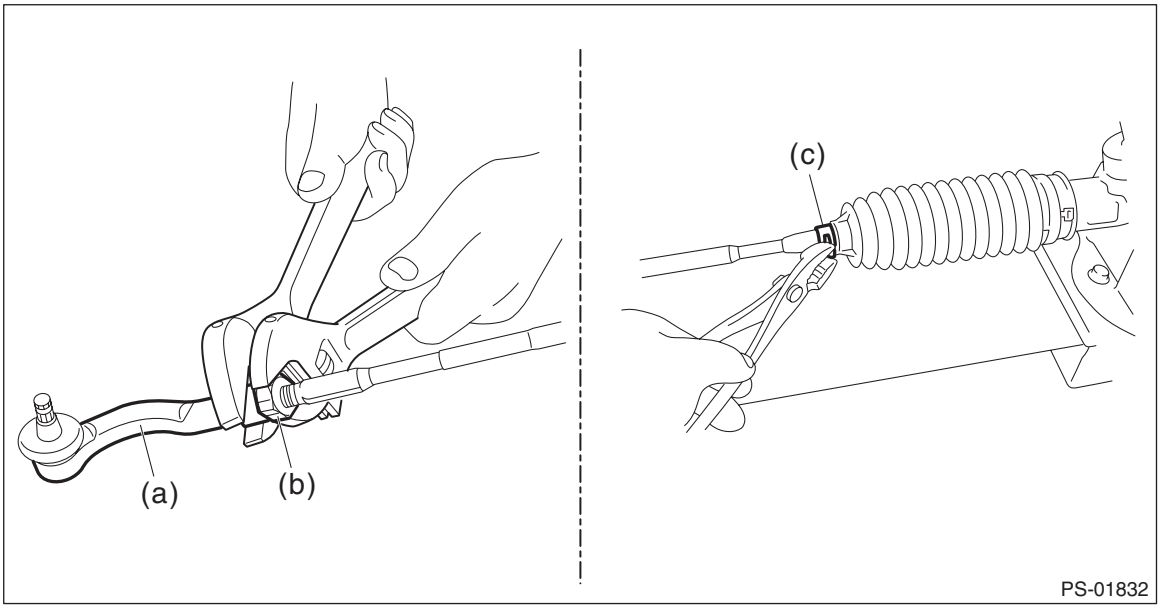
Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)



PS-01792

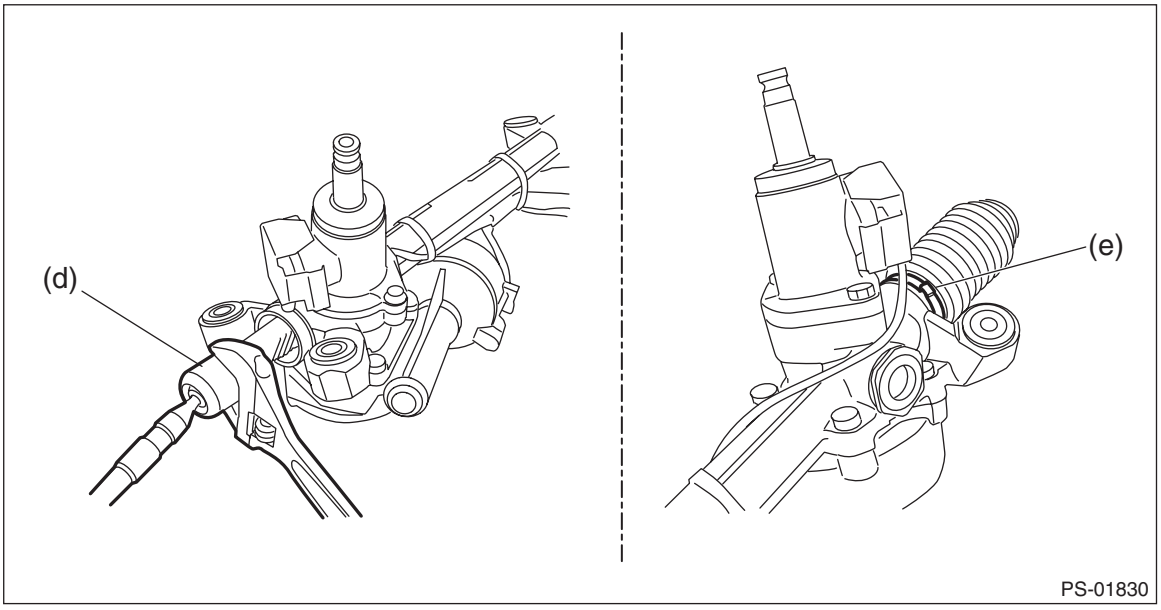
4) Install the cradle. <Ref. to FS-32, INSTALLATION, Cradle.>
5) Connect the ground terminal to battery sensor. <Ref. to RC-3, BATTERY, NOTE, Repair Contents.>
6) After adjusting toe-in and steering angle, tighten the lock nut on tie-rod end.

CAUTION:
When the wheel alignment has been adjusted, perform the adjustment of the steering angle sensor. <Ref. to VDC-17, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>



Tightening torque:
85 N·m (8.7 kgf-m, 62.7 ft-lb)

NOTE:
When adjusting toe-in, hold the boot - steering gearbox as shown to prevent it from being rotated or twisted. If it becomes twisted, straighten it.

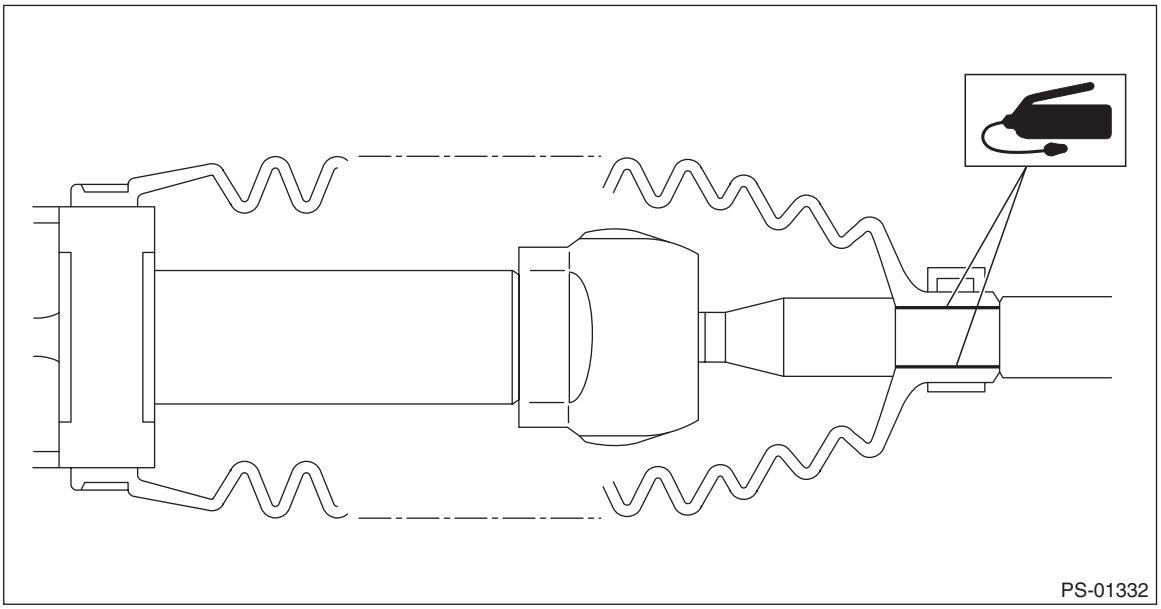


C: DISASSEMBLY

CAUTION:
When fixing the steering gearbox assembly in a vise, apply a wooden piece on the flange portion.
1) Remove the tie-rod end (a) and lock nut (b) from the steering gearbox assembly.
2) Remove the clip - boot tie-rod (c) located outside the boot - steering gearbox using the pliers, and then slide the boot - steering gearbox to the tie-rod end side.

3) Remove the tie-rod (d) from the gearbox assembly.
(1) Using a flat tip screwdriver, remove the band - boot (e) from the boot - steering gearbox.

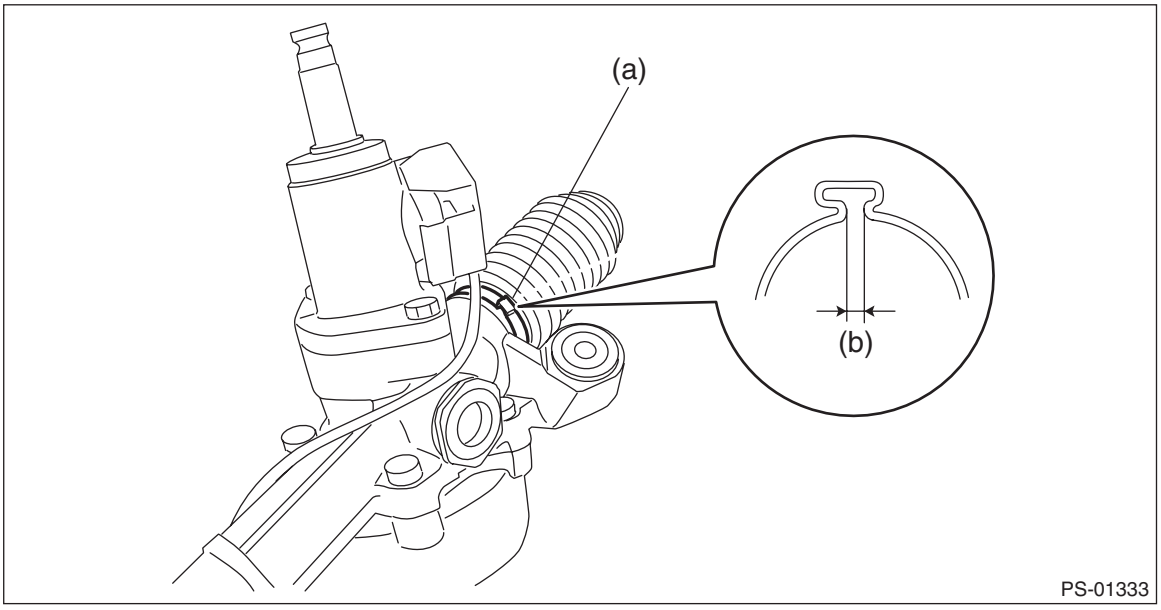
NOTE:
Replace the boot - steering gearbox or the band - boot (e) if there is damage, cracks or deterioration.
(2) Remove the tie-rod (d).



D: ASSEMBLY

1) Install the tie-rod into rack.

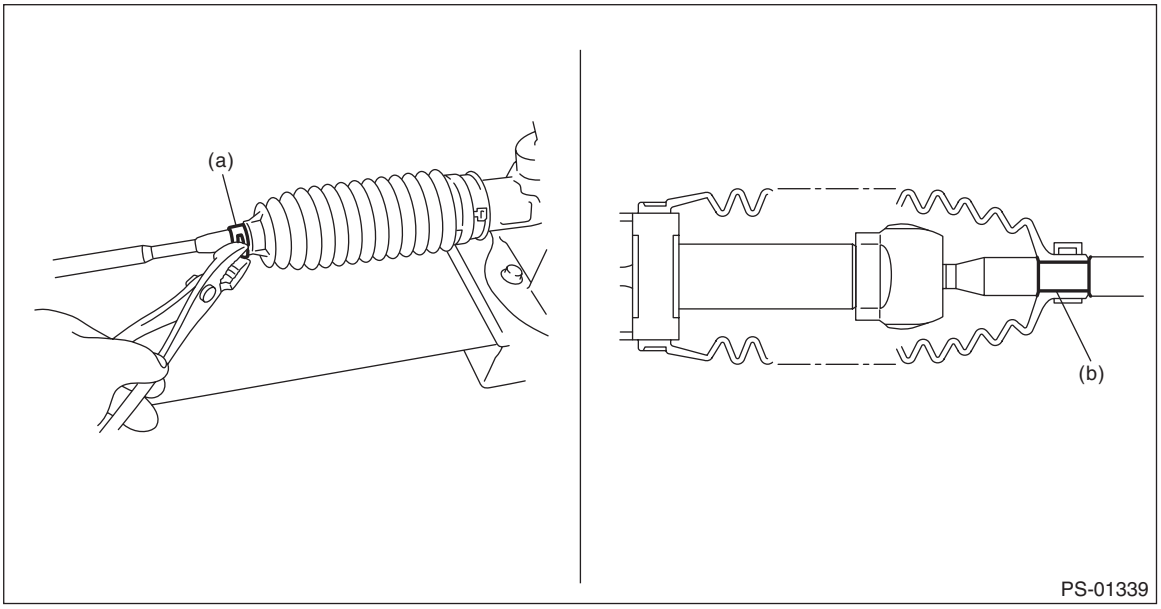
Tightening torque:
90 N·m (9.2 kgf-m, 66.4 ft-lb)



NOTE:
Check the mating face of rack and tie-rod for foreign matter such as dust etc.
2) Apply a coat of grease to the tie-rod groove, and then install the boot - steering gearbox to the housing.

NOTE:
Make sure that the boot - steering gearbox is installed without unusual inflation or deflation.

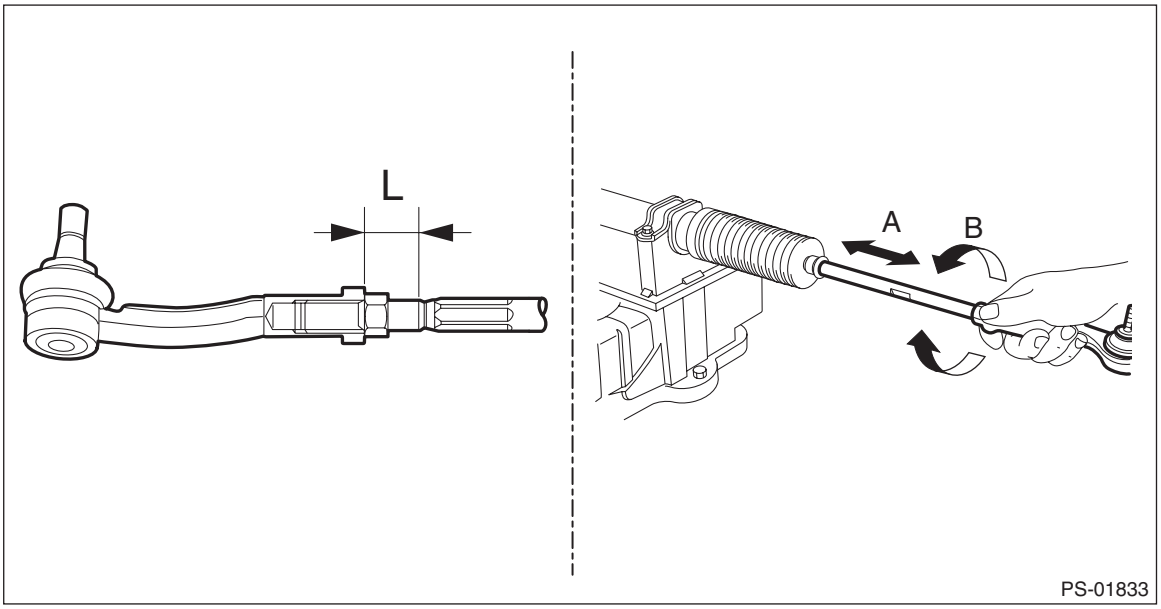
PS-01332



3) Using the boot clamp pliers, crimp the boot so that the clearance (b) of the band - boot (a) crimp portion becomes 2 mm (0.08 in) or less.

NOTE:
Use a new band - boot.

PS-01333



4) Fix the end of the boot - steering gearbox with clip - boot tie-rod (a).
5) After installation, check that the end of the boot - steering gearbox is installed to the groove (b) of the tie-rod.

6) If the tie-rod end has been removed, screw in lock nut and tie-rod end to the threaded portion of tie-rod, and tighten the lock nut temporarily in a position as shown in the figure.

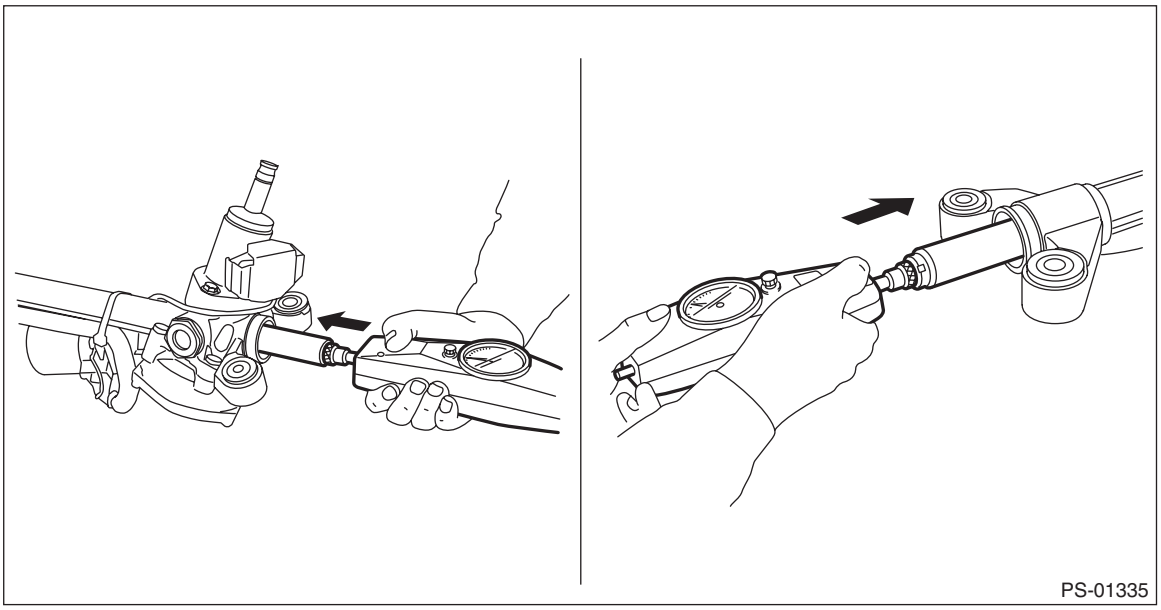
Installed tie-rod length L:
27 mm (1.06 in)

7) Inspect the steering gearbox assembly as follows:
1. "A" Holding the tie-rod end, repeat lock to lock several times as quickly as possible.
2. "B" Holding the tie-rod end, turn it slowly at a radius several times as large as possible.
3. Finally, make sure that the boot - steering gearbox is installed in the specified position without inflating.

8) Remove the steering gearbox assembly from ST.

E: INSPECTION

1. UNIT INSPECTION



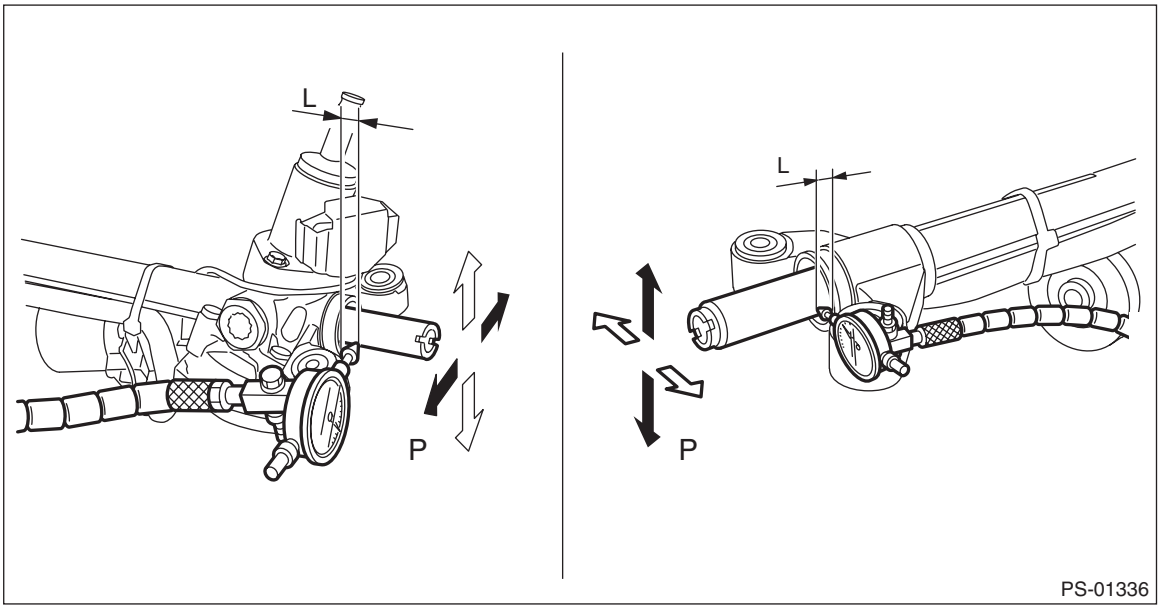
Check components for wear, damage or other faults. Adjust or replace if necessary.

2. LIMIT

Make a measurements as follows. If it exceeds the specified service limits, adjust or replace.

NOTE:
When fixing the steering gearbox assembly in a vise, apply a wooden piece on the flange portion.

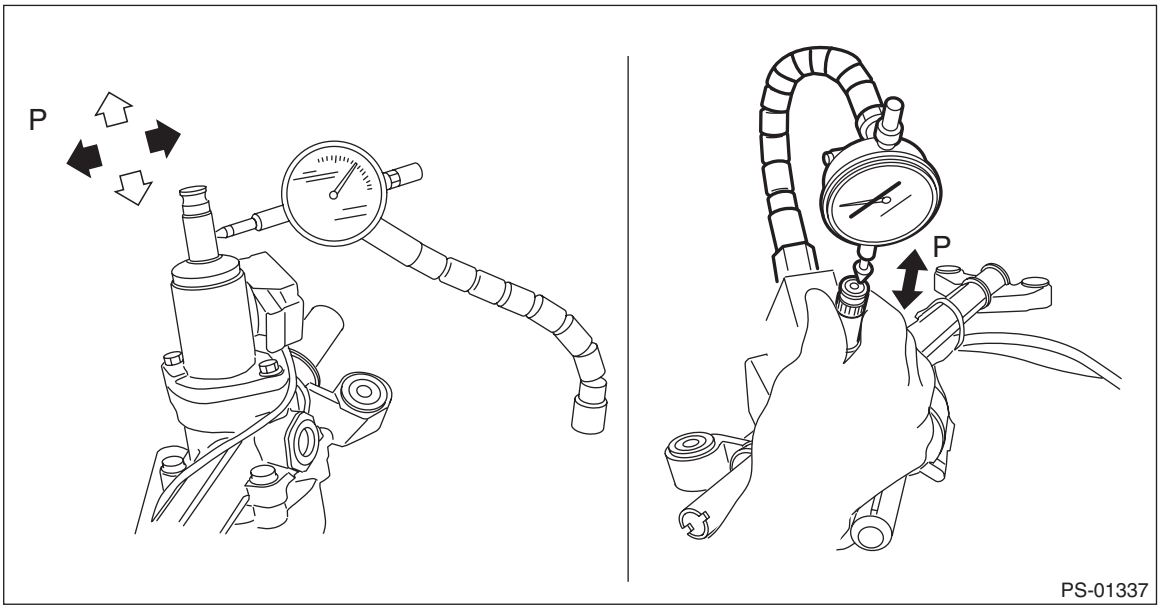
Rack shaft sliding resistance:
Limit: 360 N (37 kgf, 81 lbf) or less
Left/right differential of sliding resistance: 20% or less



3. RACK SHAFT PLAY IN THE RADIAL DIRECTION

Right-turn steering:
Service limit:
Direction ⬅ ➡: 0.4 mm (0.016 in) or less
Direction ⇦ ⇨: 0.6 mm (0.024 in) or less

Left-turn steering:
Service limit:
Direction ⇦ ⇨ ⬅ ➡: 0.4 mm (0.016 in) or less

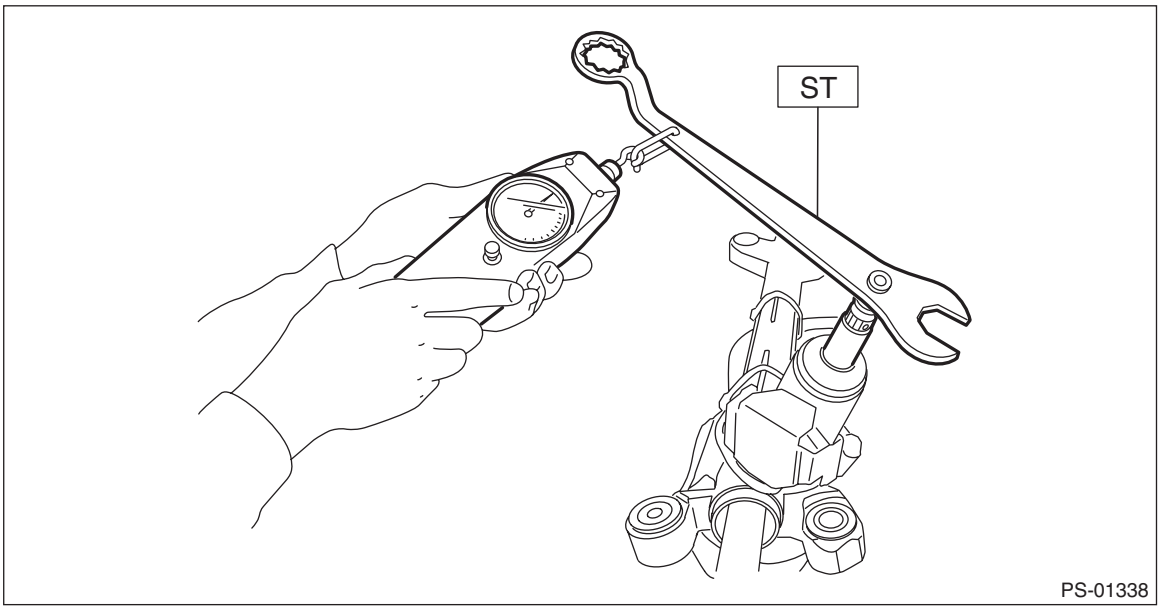


Condition:
L: 5 mm (0.20 in)
P: 98 N (10 kgf, 22 lbf)

4. INPUT SHAFT PLAY

In radial direction:
Wear limit: 0.18 mm (0.0071 in) or less
Condition: P = 98 N (10 kgf, 22 lbf)

In axial direction:
Wear limit: 0.27 mm (0.0106 in) or less
Condition: P = 20 — 49 N (2 — 5 kgf, 4 — 11 lbf)

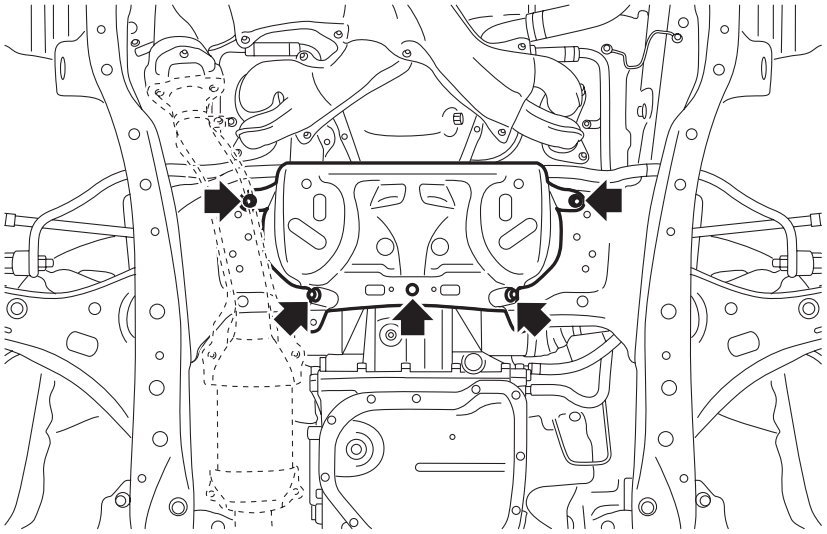


5. ROTATIONAL RESISTANCE OF GEARBOX

1) Using the ST, measure the rotational resistance of the steering gearbox assembly.

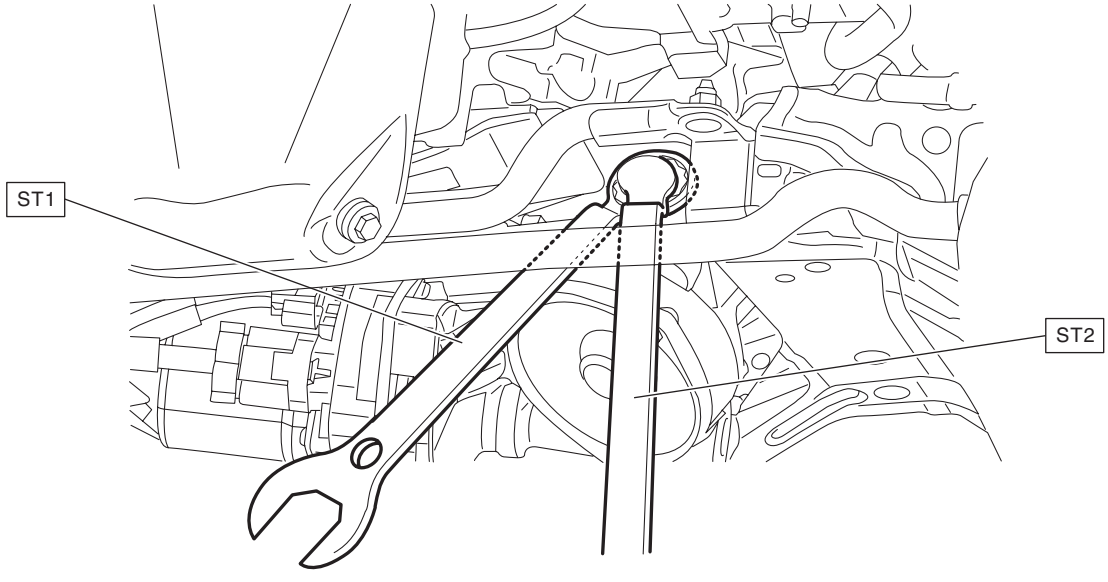
Preparation tool:
ST: SPANNER (34099PA100)

Service limit:
Maximum allowable resistance: 18 N (1.8 kgf, 4.0 lbf) or less
Difference between right and left rotational resistance: 20% or less



F: ADJUSTMENT

1. GEARBOX BACKLASH ADJUSTMENT (SERVICING ON VEHICLE)



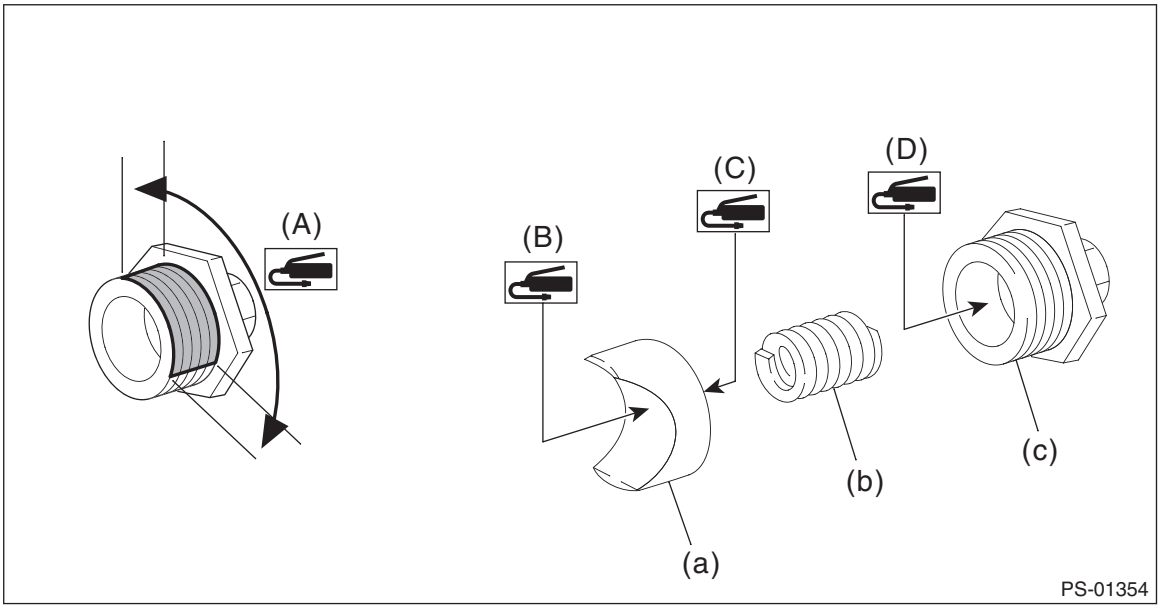
1) Remove the under cover - front. <Ref. to EI-28, REMOVAL, Front Under Cover.>
2) Remove the front stabilizer and slide the front stabilizer. <Ref. to FS-34, REMOVAL, Front Stabilizer.>
3) Remove the front exhaust pipe.
- H4 model: <Ref. to EX(H4DO)-5, REMOVAL, Front Exhaust Pipe.>
- H6 model: <Ref. to EX(H6DO)-6, REMOVAL, Front Exhaust Pipe.>

4) Remove the bolts, then remove the guard.

PS-01811

5) Using the ST, loosen the lock nut and adjusting screw.

Preparation tool:
ST1: SPECIAL TOOL EPS (34199AJ030)
ST2: SPECIAL TOOL EPS (34199AJ040)



PS-01836

6) Apply a coat of grease to the sliding surface (B) of the pad - pressure (a) and seating surface (C) of spring - gearbox (b), and then insert the pad - pressure (a) into steering body.
7) Charge the adjusting screw (c) with grease (D), and then insert the spring - gearbox (b) into adjusting screw. Then install on the steering body.

Grease:
Molywhite LS-G
8) Apply liquid gasket to 1/3 or more (A) of entire perimeter of adjusting screw thread (c).

Liquid gasket:
SEAL END No. 22

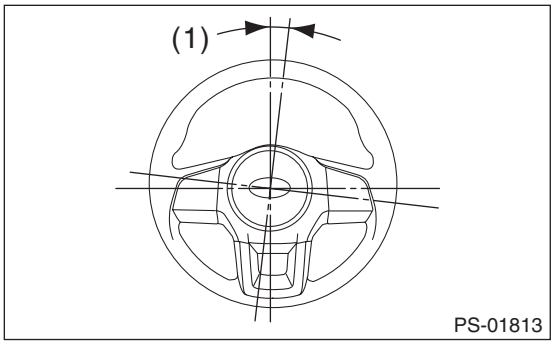
9) Tighten the adjusting screw to 20 N·m (2.0 kgf-m, 14.8 ft-lb), then loosen it.
10) Tighten the adjusting screw to 20 N·m (2.0 kgf-m, 14.8 ft-lb) again, then loosen it.
11) Tighten the adjusting screw to 20 N·m (2.0 kgf-m, 14.8 ft-lb), loosen by 30°, and then fix the screw.
12) Install the lock nut. While holding the adjusting screw with a wrench, tighten the lock nut using ST.
13) Lift up the front wheels, turn the steering wheel to right and left, and perform the adjustment again if the steering is not smooth. Adjust by gradually increasing the angle of loosening up to 40°.

Tightening torque (lock nut):
45 N·m (4.6 kgf-m, 33.2 ft-lb)

CAUTION:
Hold the adjusting screw with a wrench to prevent it from turning while tightening the lock nut.
14) Install the guard.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)
15) Install the front exhaust pipe.
- H4 model: <Ref. to EX(H4DO)-7, INSTALLATION, Front Exhaust Pipe.>
- H6 model: <Ref. to EX(H6DO)-8, INSTALLATION, Front Exhaust Pipe.>

16) Install the front stabilizer. <Ref. to FS-35, INSTALLATION, Front Stabilizer.>
17) Install the under cover - front. <Ref. to EI-28, INSTALLATION, Front Under Cover.>



2. FRONT WHEEL ALIGNMENT ADJUSTMENT

1) Adjust the front toe. <Ref. to FS-17, FRONT WHEEL TOE-IN, ADJUSTMENT, Wheel Alignment.>
2) Check the steering angle of the wheels.

Standard of steering angle:

Model	Inner wheel	Outer wheel
Sedan model	37.6°±1.5°	32.8°±1.5°
OUTBACK model	38.6°±1.5°	33.8°±1.5°

3) When the steering wheel is in the following condition, perform the steering wheel installation over again.
- When wheels are set in the straight ahead position, the steering wheel spokes are not horizontal.
- Error is more than 5° on the periphery of the steering wheel.

(1) 5° or less

4) If the steering wheel spokes are not horizontal with vehicle set in the straight ahead position after this adjustment, correct it by turning the right and left tie-rods in the opposite direction from each other by the same angle. Also check that there are no abnormal steering effort, failure of the steering wheel to return or other faults.

7. Power Steering Control Module

A: REMOVAL

NOTE:
Power steering control module is integrated with the electric power steering gearbox. Refer to “Electric Power Steering Gearbox” for removal procedure. <Ref. to PS-24, REMOVAL, Electric Power Steering Gearbox.>

B: INSTALLATION

NOTE:
Power steering control module is integrated with the electric power steering gearbox. Refer to “Electric Power Steering Gearbox” for installation procedures. <Ref. to PS-25, INSTALLATION, Electric Power Steering Gearbox.>

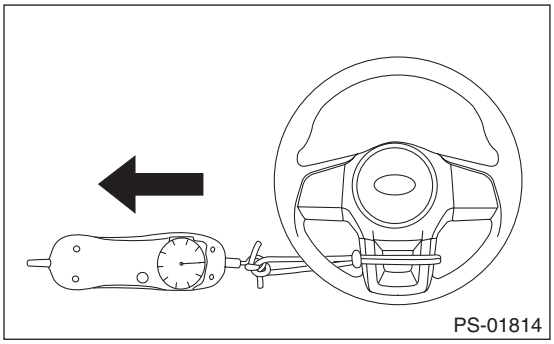
C: INSPECTION

NOTE:
Power steering control module is integrated with the electric power steering gearbox. Refer to “POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)” for inspection. <Ref. to PS(diag)-2, Basic Diagnostic Procedure.>

8. General Diagnostic Table

A: INSPECTION

Trouble	Possible cause	Corrective action
• Steering effort is heavy in all ranges. • Steering effort is heavy at stand still. • Steering wheel vibrates when turning.	1. Tire and wheel • Improper tire out of specifications • Improper wheel out of specification • Tires not properly inflated	Replace or reinflate the tire and wheel.
	2. Measure the steering wheel effort. <Ref. to PS-38, MEASUREMENT OF STEERING EFFORT, INSPECTION, General Diagnostic Table.>	Adjust or replace the faulty parts.
• Vehicle leads to one side or the other. • Returning force of steering wheel to center is poor. • Steering wheel vibrates when turning.	1. Tire and wheel • Flat tire • Mixed use of different tires • Mixed use of different wheels • Abnormal wear of tire • Unequal tread remaining • Unequal pressure of tire	Adjust, repair or replace the tire and wheel.
	2. Front wheel alignment • Improper or unequal caster • Improper or unequal toe-in • Loose suspension connections	Adjust or retighten.
	3. Measure the steering wheel effort. <Ref. to PS-38, MEASUREMENT OF STEERING EFFORT, INSPECTION, General Diagnostic Table.>	Adjust or replace the faulty parts.



NOTE:
When performing repeated steering operation with the vehicle at standstill, the steering effort may be temporarily heavy because the heat generated in the system activates the power steering protection control. This is not a malfunction caused by the steering system. After a while, it will return to normal steering effort. (In this case, the steering warning light will not come on and there will be no DTC.)

1. NOISE AND VIBRATION

NOTE:
• When turning the steering wheel with the brake applied when the vehicle is parked, a screeching noise may be generated by the brake disc and pads. This is not a fault in the steering system.
• There may be a small vibration around the steering devices when turning the steering wheel at standstill, even though the component parts are operating properly.

Trouble	Possible cause	Corrective action
Rattling noise (intermittent) While engine is running.	Interference with adjacent parts	Check the clearance. Correct if necessary.
	Looseness of linkage, play of steering, improper tightening (looseness) of suspension joint or steering column	Retighten or replace.
	Noise emitted from inside of the gearbox	Replace the gearbox assembly.
Knocking When turning steering wheel in both directions with small angle repeatedly at engine ON or OFF.	Excessive backlash Loosened lock nut for adjusting backlash	Adjust the backlash. When the noise remains after adjustment, replace the gearbox assembly.
	Insufficient tightening or play in the tie-rod or tie-rod end	Retighten or replace.
Grinding noise (intermittent) While engine is running. (While operating the steering.)	Fault inside of gearbox	Replace the gearbox assembly.
	Faulty bearing of the column assembly - steering	Apply grease or replace.
	Occurs when turning the steering wheel with brakes (service or parking) applied.	If the noise goes off when brake is released, it is normal.
Vibration While engine is running. (with/without steering turned)	Excessive play in steering, looseness of suspension parts	Retighten.

2. MEASUREMENT OF STEERING EFFORT

	Step	Check	Yes	No
1	**CHECK STEERING WARNING LIGHT.**	Does the STEERING warning light illuminate?	Read the DTC, and inspect according to it.	Go to step **2**.
2	**CHECK STEERING WARNING LIGHT.** 1) Connect the Subaru Select Monitor, and turn the steering wheel. (One lock to lock) 2) Check the “EPS operation flag” in the current data.	Is the EPS operation flag normal without displaying any DTC code?	Go to step **3**.	If the EPS operation flag is “Assist limitation”, stop the engine for approx. 30 minutes and perform the procedures from step 1 again.
3	**CHECK STEERING EFFORT.** 1) Stop the vehicle on paved road. 2) Set the tire air pressure to the specification. 3) Start the engine. 4) Run the engine at idle. 5) Install a spring scale on the steering wheel. 6) Pull the spring scale at a right angle to the steering wheel, and measure both right and left steering wheel efforts.  PS-01814	Is the steering effort less than 29.4 N (3.0 kgf, 6.6 lbf)?	Go to step **4**.	Go to step **8**.
4	**CHECK STEERING EFFORT.** 1) Stop the engine. 2) Pull the spring scale at a right angle to the steering wheel, and measure both right and left steering wheel efforts.	Is the steering effort less than 294.2 N (30 kgf, 66.2 lbf)?	Go to step **5**.	Perform the inspection or adjustment around the suspension part.
5	**CHECK TORQUE SENSOR OUTPUT VALUE.** 1) Connect the Subaru Select Monitor. 2) Read the output of torque sensor voltage. NOTE: When measuring, place the steering wheel at the center position.	Is the voltage 2.425 — 2.575 V?	Go to step **6**.	Replace the gearbox assembly. <Ref. to PS-24, Electric Power Steering Gearbox.>
6	**CHECK TORQUE SENSOR OUTPUT VALUE.** 1) Remove the universal joint assembly - steering. 2) Connect the Subaru Select Monitor. 3) Read the output of torque sensor voltage.	Is the voltage 2.425 — 2.575 V?	Go to step **7**.	Replace the gearbox assembly. <Ref. to PS-24, Electric Power Steering Gearbox.>

	Step	Check	Yes	No
7	**CHECK TORQUE SENSOR OUTPUT VALUE.** 1) Remove the universal joint assembly - steering. NOTE: Check that the universal joint assembly - steering moves up and down smoothly without installing the bolt. Then tighten the bolts first on the gearbox side and then on the column shaft side. 2) Connect the Subaru Select Monitor. 3) Read the output of torque sensor voltage.	Is the voltage 2.425 — 2.575 V?	Go to step **8**.	Check the universal joint assembly - steering. <Ref. to PS-24, Electric Power Steering Gearbox.>
8	**CHECK STEERING WHEEL EFFORT.** 1) Remove the universal joint assembly - steering. 2) Measure the steering wheel effort.	Is the steering effort less than 2.26 N (0.23 kgf, 0.51 lbf)?	Go to step **9**.	Replace the column assembly - steering. <Ref. to PS-24, Electric Power Steering Gearbox.>
9	**CHECK STEERING WHEEL EFFORT.** Measure the steering wheel effort.	Is the difference of steering effort between right and left less than 20%?	Go to step **10**.	Replace the column assembly - steering. <Ref. to PS-19, Steering Column.>
10	**CHECK UNIVERSAL JOINT ASSEMBLY - STEERING.** Measure the bending load of joint. (Yoke of column assembly - steering side) <Ref. to PS-17, INSPECTION, Universal Joint.>	Is the bending load of the universal joint assembly - steering less than 5.4 N (0.55 kgf, 1.21 lbf)?	Go to step **11**.	Replace the universal joint assembly - steering with a new part. <Ref. to PS-14, Universal Joint.>
11	**CHECK UNIVERSAL JOINT ASSEMBLY - STEERING.** Measure the bending load of joint. (Yoke of gearbox side) <Ref. to PS-17, INSPECTION, Universal Joint.>	Except for OUTBACK model: Is the bending load of the universal joint assembly - steering less than 4.5 N (0.46 kgf, 1.01 lbf)? OUTBACK model: Is the bending load of the universal joint assembly - steering less than 2.8 N (0.29 kgf, 0.63 lbf)?	Go to step **12**.	Replace the universal joint assembly - steering with a new part. <Ref. to PS-14, Universal Joint.>
12	**CHECK FRONT WHEEL.** Check the front wheels.	Does the front wheels have unsteady revolution or rattling, or does the brake drag?	Inspect, readjust and replace if necessary.	Go to step **13**.
13	**CHECK TIE-ROD ENDS.** Remove the tie-rod ends.	Does the tie-rod ends of suspension have unsteady revolution or rattling?	Inspect and replace if necessary.	Go to step **14**.
14	**CHECK BALL JOINT.** Remove the ball joint.	Does the ball joints of suspension have unsteady revolution or rattling?	Inspect and replace if necessary.	Go to step **15**.
15	**CHECK GEARBOX.** Measure the rotating of gearbox. <Ref. to PS-30, LIMIT, INSPECTION, Electric Power Steering Gearbox.>	Is the turn resistance of the steering gearbox less than 18 N (1.8 kgf, 4.0 lbf)? Is the difference between the right and left rotational resistances less than 20%?	Go to step **16**.	Replace the gearbox assembly. <Ref. to PS-24, Electric Power Steering Gearbox.>
16	**CHECK GEARBOX.** Measure the sliding of gearbox.	Is the sliding resistance of the steering gearbox less than 360 N (36.7 kgf, 80.9 lbf)? Is the difference between the right and left sliding resistances less than 20%?	Steering effort is normal.	Replace the gearbox assembly. <Ref. to PS-24, Electric Power Steering Gearbox.>

POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)

PS(diag)

1.	Basic Diagnostic Procedure	2
2.	Check List for Interview	4
3.	General Description	7
4.	Electrical Component Location	8
5.	Control Module I/O Signal	9
6.	Subaru Select Monitor	10
7.	Read Diagnostic Trouble Code (DTC)	15
8.	Inspection Mode	16
9.	Clear Memory Mode	17
10.	STEERING Warning Light	18
11.	List of Diagnostic Trouble Code (DTC)	21
12.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	23

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
• The power steering control module continues to operate after the engine stops and calculate the temperature in the control module. Therefore, before starting service of the power steering system which requires disconnection of the connector, stop the engine and allow approx. 30 minutes until the control module becomes cold.
• Before removal or installation, be sure to remove any foreign matter (dust, moisture, oil, etc.) from the power steering control module connector.

NOTE:
• Shake the connector at the suspected trouble location to check for open or short circuits of the harness.
• Refer to “Check List for Interview”. <Ref. to PS(diag)-4, Check List for Interview.>

	Step	Check	Yes	No
1	**CHECK PRE-INSPECTION.** 1) Ask the customer when and how the trouble occurred using the interview check list. <Ref. to PS(diag)-4, Check List for Interview.> 2) Check the illumination status of the STEERING warning light while the engine is running. 3) Before performing diagnostics, check components which might affect power steering problems. <Ref. to PS(diag)-7, INSPECTION, General Description.> 4) Save the data of «Overheating protection intervention history», «IGN count from overheating protection (most recent) (previous) (before previous)», and «Assist limit history (low voltage)» using Subaru Select Monitor. <Ref. to PS(diag)-10, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>	Are components that might influence the power steering problem operating properly?	Go to step **2**.	Repair or replace each component.
2	**CHECK INDICATION OF DTC.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Read the DTC using the Subaru Select Monitor. <Ref. to PS(diag)-15, OPERATION, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to PS(diag)-12, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>	Are DTC, time stamp and freeze frame data displayed?	Record the DTC, time stamp and freeze frame data. Go to step **4**. NOTE: • For the time stamp, refer to LAN section. <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.> • Depending on DTCs, time stamp may not be stored.	Go to step **3**.
3	**PERFORM GENERAL DIAGNOSTICS.** 1) If the STEERING warning light is illuminated while the engine is running, perform the Clear Memory Mode. <Ref. to PS(diag)-17, OPERATION, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to PS(diag)-16, Inspection Mode.> 3) Read the DTC. <Ref. to PS(diag)-15, OPERATION, Read Diagnostic Trouble Code (DTC).> Check that the DTC is not displayed.	Does the STEERING warning light illuminate at ignition switch ON, and turn off two seconds after the engine is started?	Finish the diagnosis.	<Ref. to PS(diag)-14, WITHOUT DTC, INSPECTION, Subaru Select Monitor.>

	Step	Check	Yes	No
4	**PERFORM DIAGNOSIS.** 1) Refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to PS(diag)-21, LIST, List of Diagnostic Trouble Code (DTC).> 2) Correct the cause of trouble. 3) Check the illumination status of the STEERING warning light while the engine is running, and if the warning light is lit, perform Clear Memory Mode. <Ref. to PS(diag)-17, OPERATION, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to PS(diag)-16, Inspection Mode.> 5) Read the DTC. <Ref. to PS(diag)-15, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Repeat step 4 until DTC is not shown.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Check the following items regarding condition of the vehicle.

1. TROUBLE STATUS

Phenomenon of the vehicle	❑ Steering is heavy ❑ Steering is not smooth ❑ Steering is unstable (wondering) ❑ Steering does not return to center ❑ Steering is not straight
	❑ Steering force required is not the same for right and left turn ❑ Steering force required is not even ❑ Steering is too light
	❑ Noise ❑ Vibration ❑ STEERING warning light illuminates ❑ Other
Frequency	❑ Always ❑ Sometimes ❑ Immediately after starting the engine ❑ Only once ❑ Other
	❑ Recovers after leaving it for minutes
Steering wheel operation	❑ Dry steering ❑ When turning ❑ Quick steering ❑ Slow steering ❑ Returning the steering wheel
	❑ Releasing the steering wheel ❑ Only supporting the steering wheel by hand ❑ Repetitive dry steering
Steering wheel status / direction	❑ Around center position ❑ Near end of lock to lock
	❑ When turning the steering to right ❑ When turning the steering to left ❑ Both to right and to left ❑ (1) Steering angle: degrees ❑ (2) Maneuvering time: minutes
	❑ Slow steering ❑ Quick steering ❑ While holding the steering ❑ When repeating the dry wheel operation
Vehicle speed	❑ Stall 0 km/h (0 MPH) ❑ Very low speed — 20 km/h (— 12 MPH) ❑ Low speed — 40 km/h (— 25 MPH) ❑ Medium speed — 80 km/h (— 50 MPH) ❑ High speed — 80 km/h or more (— 50 MPH or more)
	❑ At starting ❑ While accelerating ❑ While decelerating ❑ When accelerating rapidly ❑ When decelerating rapidly
	❑ Other
Engine speed	❑ Idling ❑ (1) Around rpm ❑ (2) rpm — rpm ❑ (3) rpm or more / or less

2. STATE OF STEERING WARNING LIGHT

STEERING warning light illuminates	❑ Always ❑ Sometimes ❑ Only once ❑ Does not illuminate ❑ Other
Ignition key position	❑ LOCK ❑ ACC ❑ ON (when starting engine) ❑ START ❑ ON (when starting engine, while engine is running) ❑ ON (when starting engine, when engine is at a standstill)
Timing	❑ Immediately after turning the ignition ON ❑ Immediately after turning the ignition to START
	❑ Idling ❑ While accelerating ❑ While decelerating ❑ When cruising at — km/h (MPH)
	❑ When other electrical parts are operating (parts name: operating condition:)

3. ENVIRONMENT

a) Weather	❑ Fine ❑ Cloudy ❑ Rainy ❑ Snowy ❑ Others:
b) Outside temperature	❑ °C (°F)
c) Road	❑ Inner city ❑ Suburbs ❑ Highway ❑ Local street ❑ Alley way ❑ Private road ❑ Parking lot ❑ Mountain road ❑ Paved road ❑ Unpaved road ❑ Gravel road ❑ Sandy place ❑ Muddy road ❑ Concrete road ❑ Stone pavement ❑ Racetrack ❑ Others:
d) Road surface	❑ Dry ❑ Wet ❑ Covered with fresh snow ❑ Covered with hardened snow ❑ Others:
e) Tire	❑ Tire chain ❑ Studless tire ❑ T-type tire (front RH, front LH, rear RH, rear LH)
f) Tire inflation pressure	Front RH: kPa Front LH: kPa Rear RH: kPa Rear LH: kPa
g) Degree of wear	Front RH: mm (in) Front LH: mm (in) Rear RH: mm (in) Rear LH: mm (in)

h) Genuine part	❑ Yes ❑ No Record after-market parts if any. (Steering wheel, audio, tires, and similar parts)
i) Condition of suspension alignment	
j) Electrical load conditions	❑ Audio ❑ Air conditioner ❑ Other
k) Loaded state	Condition:
l) Repair parts	❑ None ❑ Provided Contents:
m) Others	

3. General Description

A: CAUTION

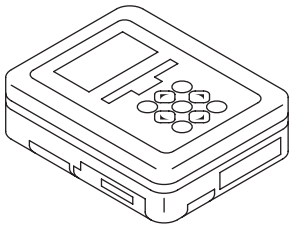
1. SRS AIRBAG SYSTEM

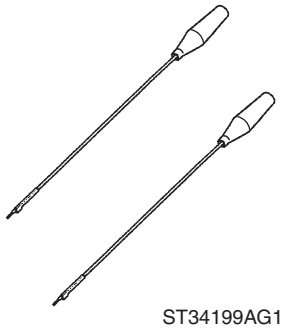
CAUTION:
Do not use electrical test equipment on wiring harness and connector circuits of the airbag system.

B: INSPECTION

Before performing diagnosis, check the following items which might be affecting the power steering problem.

1. BATTERY





Check the battery. <Ref. to SC(H4DO)-60, INSPECTION, Battery.> <Ref. to SC(H6DO)-53, INSPECTION, Battery.>

2. TIRE

Check the tire specifications, tire wear and air pressure. <Ref. to WT-2, SPECIFICATION, General Description.>

C: PREPARATION TOOL

1. SPECIAL TOOL

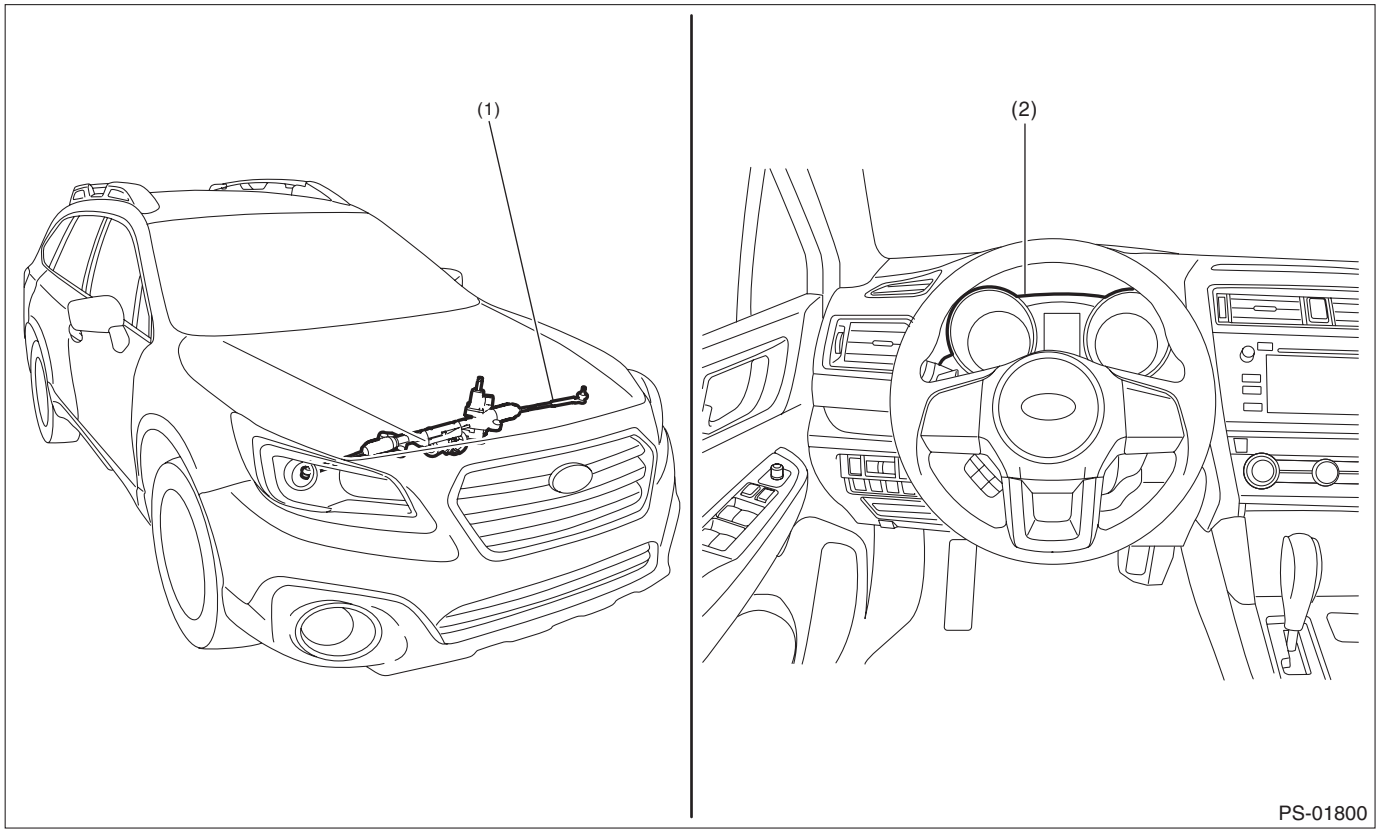


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
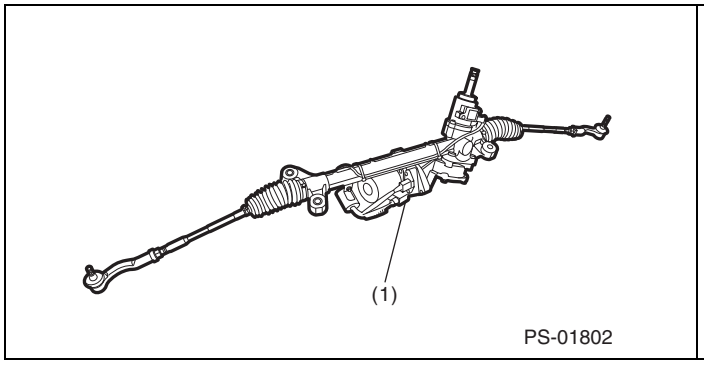
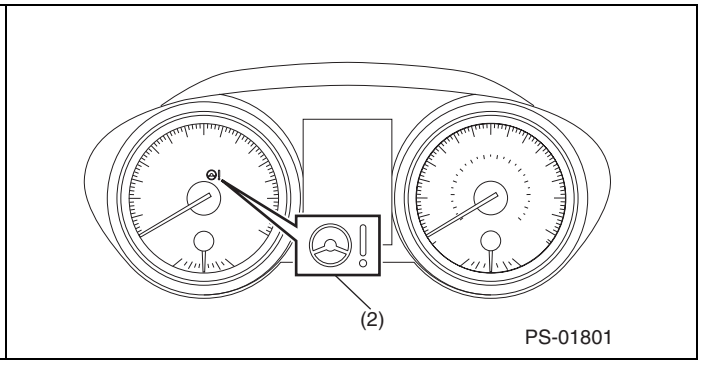
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.
 ST34199AG100	34199AG100	SPECIAL TOOL HARNESS	Used for troubleshooting the electrical system.

2. GENERAL TOOL

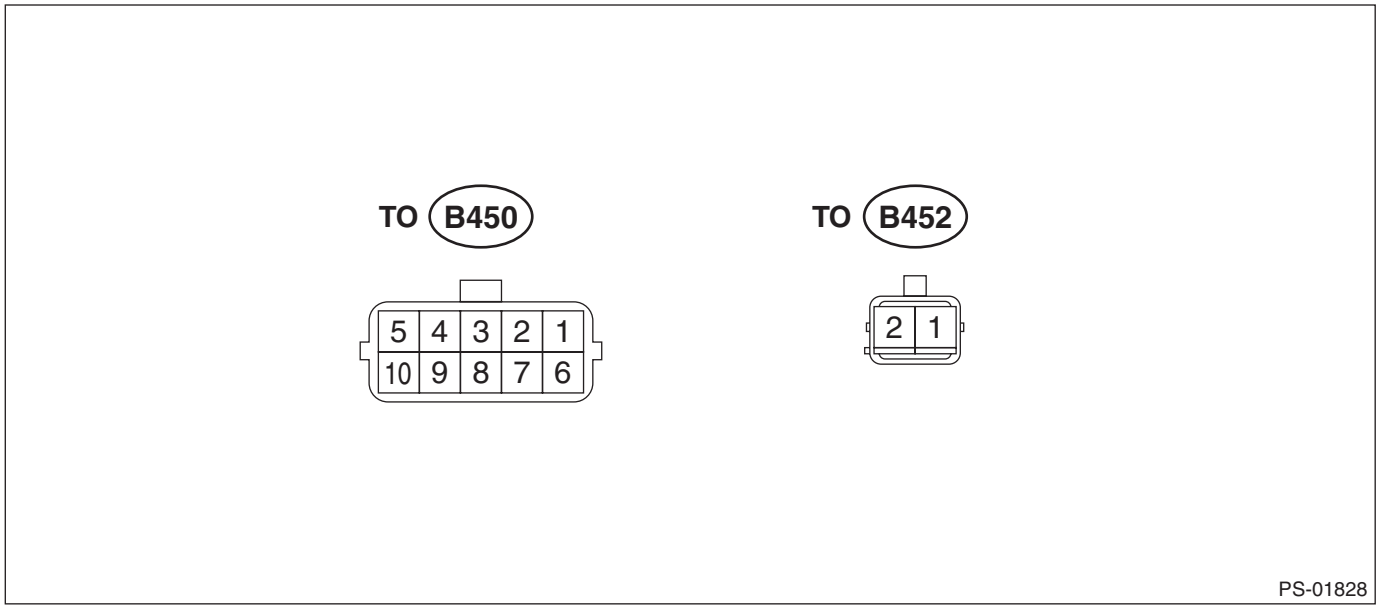


TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for measuring the sensor.



4. Electrical Component Location

A: LOCATION



(1) Steering gearbox (including power steering control module)
(2) STEERING warning light

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

NOTE:
The terminal numbers of the power steering control module connectors are as indicated in the figure.

Content	Connector No.	Terminal No.	Input/output signal
			Measured value and measuring conditions
Power supply (IG SW)	B450	5	Battery voltage is detected with the ignition switch ON when measuring between (B450) No. 5 — (B452) No. 2.
Main torque sensor	B450	2	The voltage changes when the steering is operated to the right or left with the ignition switch ON.
Sub torque sensor	B450	1	The voltage changes when the steering is operated to the right or left with the ignition switch ON.
Torque sensor power supply	B450	6	Approximately 5 V is detected with ignition switch ON.
Torque sensor ground	B450	7	0 V is constantly detected.
CAN communication	B450	9	Digital signal; can not be measured
CAN communication	B450	10	Digital signal; can not be measured
Power supply	B452	1	Battery voltage is constantly detected when measuring between 1 — 2.
Ground	B452	2	

B: WIRING DIAGRAM

Refer to “Electric Power Steering System” in the wiring diagram. <Ref. to WI-199, Electric Power Steering System.>

6. Subaru Select Monitor

A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

2. READ CURRENT DATA

For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

Display	Contents to be displayed	Range	Unit
Torque sensor main output	Main torque sensor output voltage is displayed.	0 — 5	V
Torque sensor sub output	Sub torque sensor output voltage is displayed.	0 — 5	V
Vehicle speed	Vehicle speed is displayed. (CAN communication data)	0 — 255	km/h
Engine Speed	Engine speed is displayed. (CAN communication data)	0 — 12750	rpm
CU Sensing Current(q)	The current flowing to the motor relay is displayed.	–128 — 127	A
3-phase motor current (U-phase)	The U phase actual current value as calculated by the micro-computer from the torque sensor input is displayed.	–128 — 127	A
3-phase motor current (V-phase)	The V phase actual current value as calculated by the micro-computer from the torque sensor input is displayed.	–128 — 127	A
Motor angular speed	Data from the resolver sensor is displayed.	–4096 — 4064	rpm
CU Temperature	The thermistor temperature of the steering control module is displayed.	–50 — 205	°C
Power supply voltage	Battery voltage is displayed.	0 — 25.5	V
Torque sensor power supply voltage	The power supply voltage output to the torque sensor is displayed.	0 — 10.2	V
IG Voltage	The power supply voltage supplied to the ECM is displayed.	0 — 25.5	V
CAN Bus Status	Either Active/Passive/Bus Off is displayed.	—	—
EPS Status	Either Normal/Assist Stop/Assist Limitation is displayed.	—	—
CU Target current(q)	The motor target current value required for assist is displayed.	–128 — 127	A
Steering Angle	Steering angle of steering wheel is displayed.	–640 — 635	deg
Overheating protection intervention history	Number of interventions to the overheat protection control (assist limitation for protecting the power steering from overheating)*1	0 — 250	times
IG Count after ECU Overheat Protection(latest)	Number of times the ignition switch is ON from the intervention to overheat protection control (most recent) until now*2	0 — 65000	times
IG Count after ECU Overheat Protection(Previous)	Number of times the ignition switch is ON from the intervention to overheat protection control (previous) until now*2	0 — 65000	times
IG Count after ECU Overheat Protection(Before Previous)	Number of times the ignition switch is ON from the intervention to overheat protection control (before previous) until now*2	0 — 65000	times
Assist limit history (low voltage)	Number of intervention to assist limit when the power supply voltage is low*1	0 — 250	times
Torque Sensor Amplifier	Torque sensor control voltage is displayed.	0 — 5	V
Motor Current	The current flowing to the motor relay is displayed.	–128 — 127	Arms
Trip Count	<Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.>	—	times
Count	<Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.>	Common	—
Time Count	<Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.>	—	ms

NOTE:
- *1 When the value exceeds the maximum of 250 times, 250 is displayed.
- *2 When there is no intervention of the overheating protection control, “65535” is displayed. If an error such as control unit memory error, etc. occurs, “65534” is displayed.

3. FREEZE FRAME DATA

For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

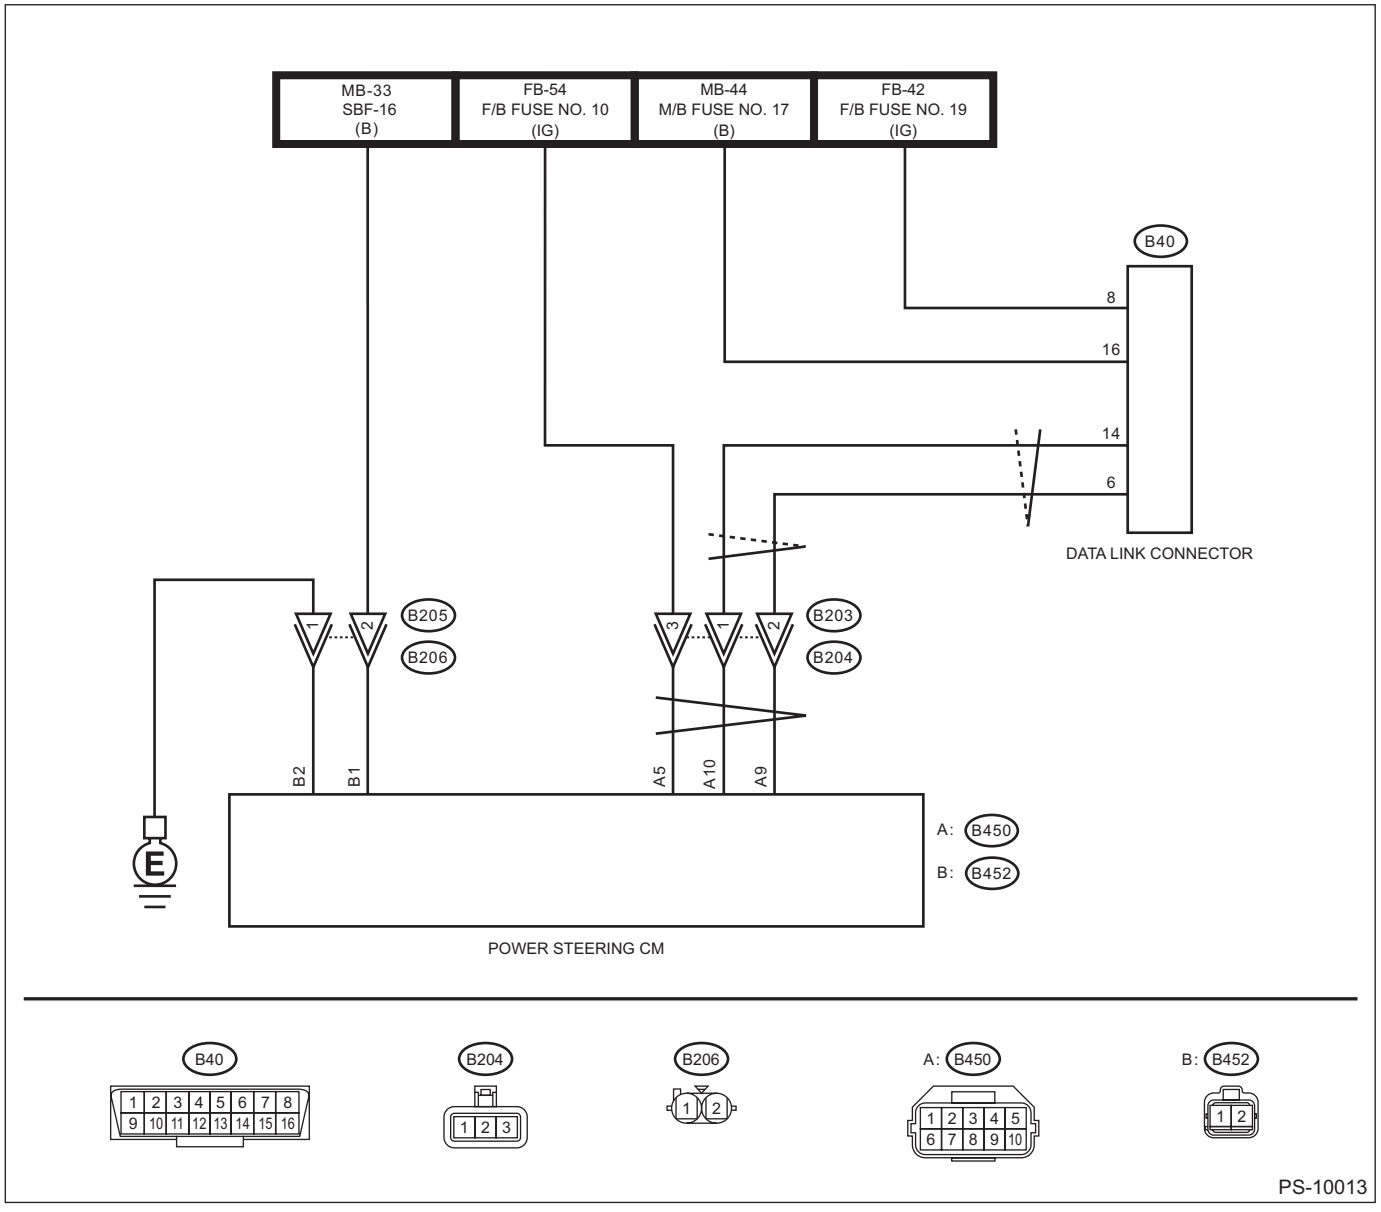
Display	Contents to be displayed	Range	Unit
Torque sensor main output	Main torque sensor output voltage is displayed.	0 — 5	V
Torque sensor sub output	Sub torque sensor output voltage is displayed.	0 — 5	V
Vehicle speed	Vehicle speed is displayed. (CAN communication data)	0 — 255	km/h
Engine Speed	Engine speed is displayed. (CAN communication data)	0 — 12750	rpm
CU Sensing Current(q)	The current flowing to the motor relay is displayed.	–128 — 127	A
3-phase motor current (U-phase)	The U phase actual current value as calculated by the micro-computer from the torque sensor input is displayed.	–128 — 127	A
3-phase motor current (V-phase)	The V phase actual current value as calculated by the micro-computer from the torque sensor input is displayed.	–128 — 127	A
Motor angular speed	Data from the resolver sensor is displayed.	–4096 — 4064	rpm
CU Temperature	The thermistor temperature of the steering control module is displayed.	–50 — 205	°C
Power supply voltage	Battery voltage is displayed.	0 — 25.5	V
Torque Sensor Power Supply	The power supply voltage output to the torque sensor is displayed.	0 — 10.2	V
IG Voltage	The power supply voltage supplied to the ECM is displayed.	0 — 25.5	V
CAN Bus Status	Either Active/Passive/Bus Off is displayed.	—	—
EPS Status	Either Normal/Assist Stop/Assist Limitation is displayed.	—	—
CU Target current(q)	The motor target current value required for assist is displayed.	–128 — 127	A
Steering Angle	Steering angle of steering wheel is displayed.	–640 — 635	deg
Overheating protection intervention history	Number of interventions to the overheat protection control (assist limitation for protecting the power steering from overheating)*1	0 — 250	times
IG Count after ECU Overheat Protection(latest)	Number of times the ignition switch is ON from the intervention to overheat protection control (most recent) until now*2	0 — 65000	times
IG Count after ECU Overheat Protection(Previous)	Number of times the ignition switch is ON from the intervention to overheat protection control (previous) until now*2	0 — 65000	times
IG Count after ECU Overheat Protection(Before Previous)	Number of times the ignition switch is ON from the intervention to overheat protection control (before previous) until now*2	0 — 65000	times
Assist limit history (low voltage)	Number of intervention to assist limit when the power supply voltage is low*1	0 — 250	times
Torque Sensor Amplifier	Torque sensor control voltage is displayed.	0 — 5	V
Motor Current	The current flowing to the motor relay is displayed.	–128 — 127	Arms

NOTE:
- *1 When the value exceeds the maximum of 250 times, 250 is displayed.
- *2 When there is no intervention of the overheating protection control, “65535” is displayed. If an error such as control unit memory error, etc. occurs, “65534” is displayed.
- Freeze frame data stored at the time of trouble occurrence is shown on the display.
- Data of the first trouble occurrence is stored as the freeze frame data in memory.
- Three freeze frame data are stored.

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

DETECTING CONDITION:



- Defective harness connector
- Defective power steering control module

TROUBLE SYMPTOM:

- Communication is impossible between the power steering control module and Subaru Select Monitor.
- After starting the engine, the STEERING warning light does not illuminate but steering effort is heavy.

WIRING DIAGRAM:

Electric power steering system <Ref. to WI-199, Electric Power Steering System.>

	Step	Check	Yes	No
1	**CHECK IGNITION SWITCH.**	Is the ignition switch ON?	Go to step **2**.	Turn the ignition switch to ON, and select the power steering mode using the Subaru Select Monitor.
2	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 11 V or more?	Go to step **3**.	Charge or replace the battery.
3	**CHECK BATTERY TERMINAL.**	Is there poor contact at battery terminal?	Repair or tighten the battery terminal.	Go to step **4**.
4	**CHECK POWER STEERING CONTROL MODULE CONNECTOR INSTALLATION.** Turn the ignition switch to OFF.	Is the power steering control module connector inserted into the power steering control module until the clamp locks?	Go to step **5**.	Insert the power steering control module connector into the power steering control module.
5	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-79, List of Diagnostic Trouble Code (DTC).>	Go to step **6**.
6	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to ON. 2) Check whether communication to electric power steering system can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Check DTC of electric power steering system. <Ref. to PS(diag)-15, Read Diagnostic Trouble Code (DTC).>	Go to step **7**.
7	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. (Engine OFF) 2) Measure the ignition power supply voltage between the power steering control module connector and chassis ground. ***Connector & terminal*** ***(B204) No. 3 (+) — Chassis ground (–):*** ***(B206) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **8**.	Repair the open circuit in the harness between the power steering control module and the battery.
8	**CHECK HARNESS CONNECTOR BETWEEN POWER STEERING CONTROL MODULE AND CHASSIS GROUND.** 1) Turn the ignition switch to OFF. 2) Disconnect the power steering control module connector. 3) Measure the resistance of harness between power steering control module connector and chassis ground. ***Connector & terminal*** ***(B206) No. 1 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **9**.	Repair the open circuit of the power steering control module ground circuit and the poor contact of connector.
9	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact of power steering control module power supply, ground circuit and data link connector?	Repair the connector.	Replace the steering gearbox. <Ref. to PS-24, Electric Power Steering Gearbox.>

2. WITHOUT DTC

DETECTING CONDITION:

- Defective combination meter
- Open circuit of harness

TROUBLE SYMPTOM:

- The STEERING warning light will not turn off.
- “No diagnostic Code Present” will be displayed on the Subaru Select Monitor.

NOTE:
When the STEERING warning light is OFF and “No diagnostic Code Present” is displayed on Subaru Select Monitor when all DTCs are read, the system is operating properly.

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is DTC U0131 detected?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-79, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK COMBINATION METER.** Check the STEERING warning light when the ignition is turned from OFF to ON.	Does the STEERING warning light illuminate at ignition switch ON, and turn off two seconds after the engine is started?	Finish the diagnosis.	Replace the combination meter. <Ref. to IDI-11, Combination Meter.>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

- For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.
- For details concerning the DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to PS(diag)-21, List of Diagnostic Trouble Code (DTC).>

8. Inspection Mode

A: PROCEDURE

1) Start the engine.
2) Idle the engine for five seconds or more.
3) Operate the steering wheel from side to side.
4) Reproduce the malfunction occurrence condition as much as possible.

9. Clear Memory Mode

A: OPERATION

1) On «Main Menu» display, select «Each System Check».
2) On «System Selection Menu» display, select «Power Steering System».
3) On «Power Steering Diagnosis» display, select «Clear Memory».

Display	Contents to be deleted
Clear Memory ?	DTC, information of trouble status, overheating protection intervention history, IGN count from overheating protection, assist limit history

4) When «Done» and «Turn off the ignition switch.» are shown on the display screen, turn the Subaru Select Monitor and the ignition switch to OFF.

NOTE:
• Before performing memory clear, check the current data, and if there are any data of DTC, trouble status information, overheating protection intervention history, IGN count from overheating protection and assist limit history, save them.
• For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

10.STEERING Warning Light

A: STEERING WARNING LIGHT DOES NOT COME ON

1. POWER STEERING ASSIST ENABLED

DETECTING CONDITION:

- Defective combination meter
- Defective harness

TROUBLE SYMPTOM:

When the ignition switch is turned to ON (engine OFF), the STEERING warning light does not illuminate.

NOTE:
It is operating normally if the warning light illuminates when the ignition switch is turned to ON (engine OFF), and turns off approximately two seconds after engine start.

	Step	Check	Yes	No
1	**CHECK ILLUMINATION OF OTHER LIGHTS.** Turn the ignition switch to ON. (Engine OFF)	Do other warning lights illuminate?	Go to step **2**.	Check the combination meter. <Ref. to IDI-10, INSPECTION, Combination Meter System.>
2	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC of the CAN communication system displayed?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-79, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK COMBINATION METER.** Perform the self-diagnosis of combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the self diagnosis normal?	The combination meter is normal.	Check the combination meter. <Ref. to IDI-10, INSPECTION, Combination Meter System.>

2. POWER STEERING ASSIST DISABLED

DETECTING CONDITION:

CAN communication error (engine rpm signal not received)

TROUBLE SYMPTOM:

- Not assisted due to power supply voltage failure.
- The STEERING warning light is normal but there is no power steering assist (steering feels heavy).

	Step	Check	Yes	No
1	**CHECK BATTERY.** Check the battery.	Is the voltage 12 V or more? Is the specific gravity 1.260 or more? Is the battery terminal installed properly? Is the fuse OK?	Go to step **2**.	Repair the defective part.
2	**CHECK DTC.** Using the Subaru Select Monitor, read all DTCs.	Is DTC related to VDC system or ignition power supply system displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK CURRENT DATA.** 1) Start the engine. 2) Display the current data «Engine Speed» of the power steering control module using the Subaru Select Monitor.	Is «Engine Speed» the same as that in the combination meter?	Go to step **4**.	Check the CAN communication. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
4	**CHECK CURRENT DATA.** Display the current data «EPS Status» of the power steering control module using the Subaru Select Monitor.	Is «Assist limitation» displayed?	It is possible that temporary assist limitation has occurred due to overheat protection. Stop the engine for approx. 30 minutes, and check again.	Go to step **5**.
5	**CHECK CURRENT DATA.** 1) Display the current data «Torque sensor main output» and «Torque sensor sub output» of the power steering control module using the Subaru Select Monitor. 2) Move the steering wheel to the left and right.	Do the values of «Torque sensor main output» and «Torque sensor sub output» change according to the operations?	Go to step **6**.	Check the installation status of torque sensor, and check again.
6	**CHECK CURRENT DATA.** Display the current data «IG Voltage» of the power steering control module using the Subaru Select Monitor.	Is the value of «IG Voltage» steady? (While shaking the harness)	Go to step **7**.	Check the ignition switch and IG voltage harness, and repair the defective part.
7	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector (B206).	Are there any damages to terminal or other parts either on the power steering control module side or on the connector side?	Repair the terminal.	Replace the steering gearbox. <Ref. to PS-24, Electric Power Steering Gearbox.>

NOTE:
- During driving, the assist system will not be activated when the ignition voltage drops.
- Power steering assist is not started unless both of the ignition switch ON signal and the engine speed signal are input.
- In any of the following cases, the power steering assist is limited and steering wheel operation may become heavy.
