\* The system shown here is an EXAMPLE ONLY. It is different to the actual circuit shown in the wiring diagram section.

**A:** System Title

**B:** Indicates the wiring color.

Wire colors are indicated by an alphabetical code.

B = Black	L = Blue	R = Red
BR = Brown	LG = Light Green	V = Violet
G = Green	O = Orange	W = White
GR = Gray	P = Pink	Y = Yellow

The first letter indicates the basic wire color and the second letter indicates the color of the stripe.

Example: L - Y

**C:** Indicates the connector to be connected to a part (the numeral indicates the pin No.)

**D:** The position of the parts is the same as shown in the wiring diagram and wire routing.

**E:** Indicates the pin number of the connector. The numbering system is different for female and male connectors.

Example: Numbered in order from upper left to lower right

The numbering system for the overall wiring diagram is the same as above.

**F:** Indicates a Relay Block. No shading is used and only the Relay Block No. is shown to distinguish it from the J/B.

Example: ① Indicates Relay Block No. 1.

**G:** Junction Block (The number in the circle is the J/B No. and the connector code is shown beside it). Junction Blocks are shaded to clearly separate them from other parts (different junction blocks are shaded differently for further clarification).

Example:

**H:** Indicates related system.

**I:** Indicates the wiring harness and wiring harness connector. The wiring harness with male terminal is shown with arrows (↗). Outside numerals are pin numbers.

**J:** ( ) is used to indicate different wiring and connector, etc. when the vehicle model, engine type, or specification is different.

**K:** Indicates a shielded cable.

**L:** Indicates and located on ground point.

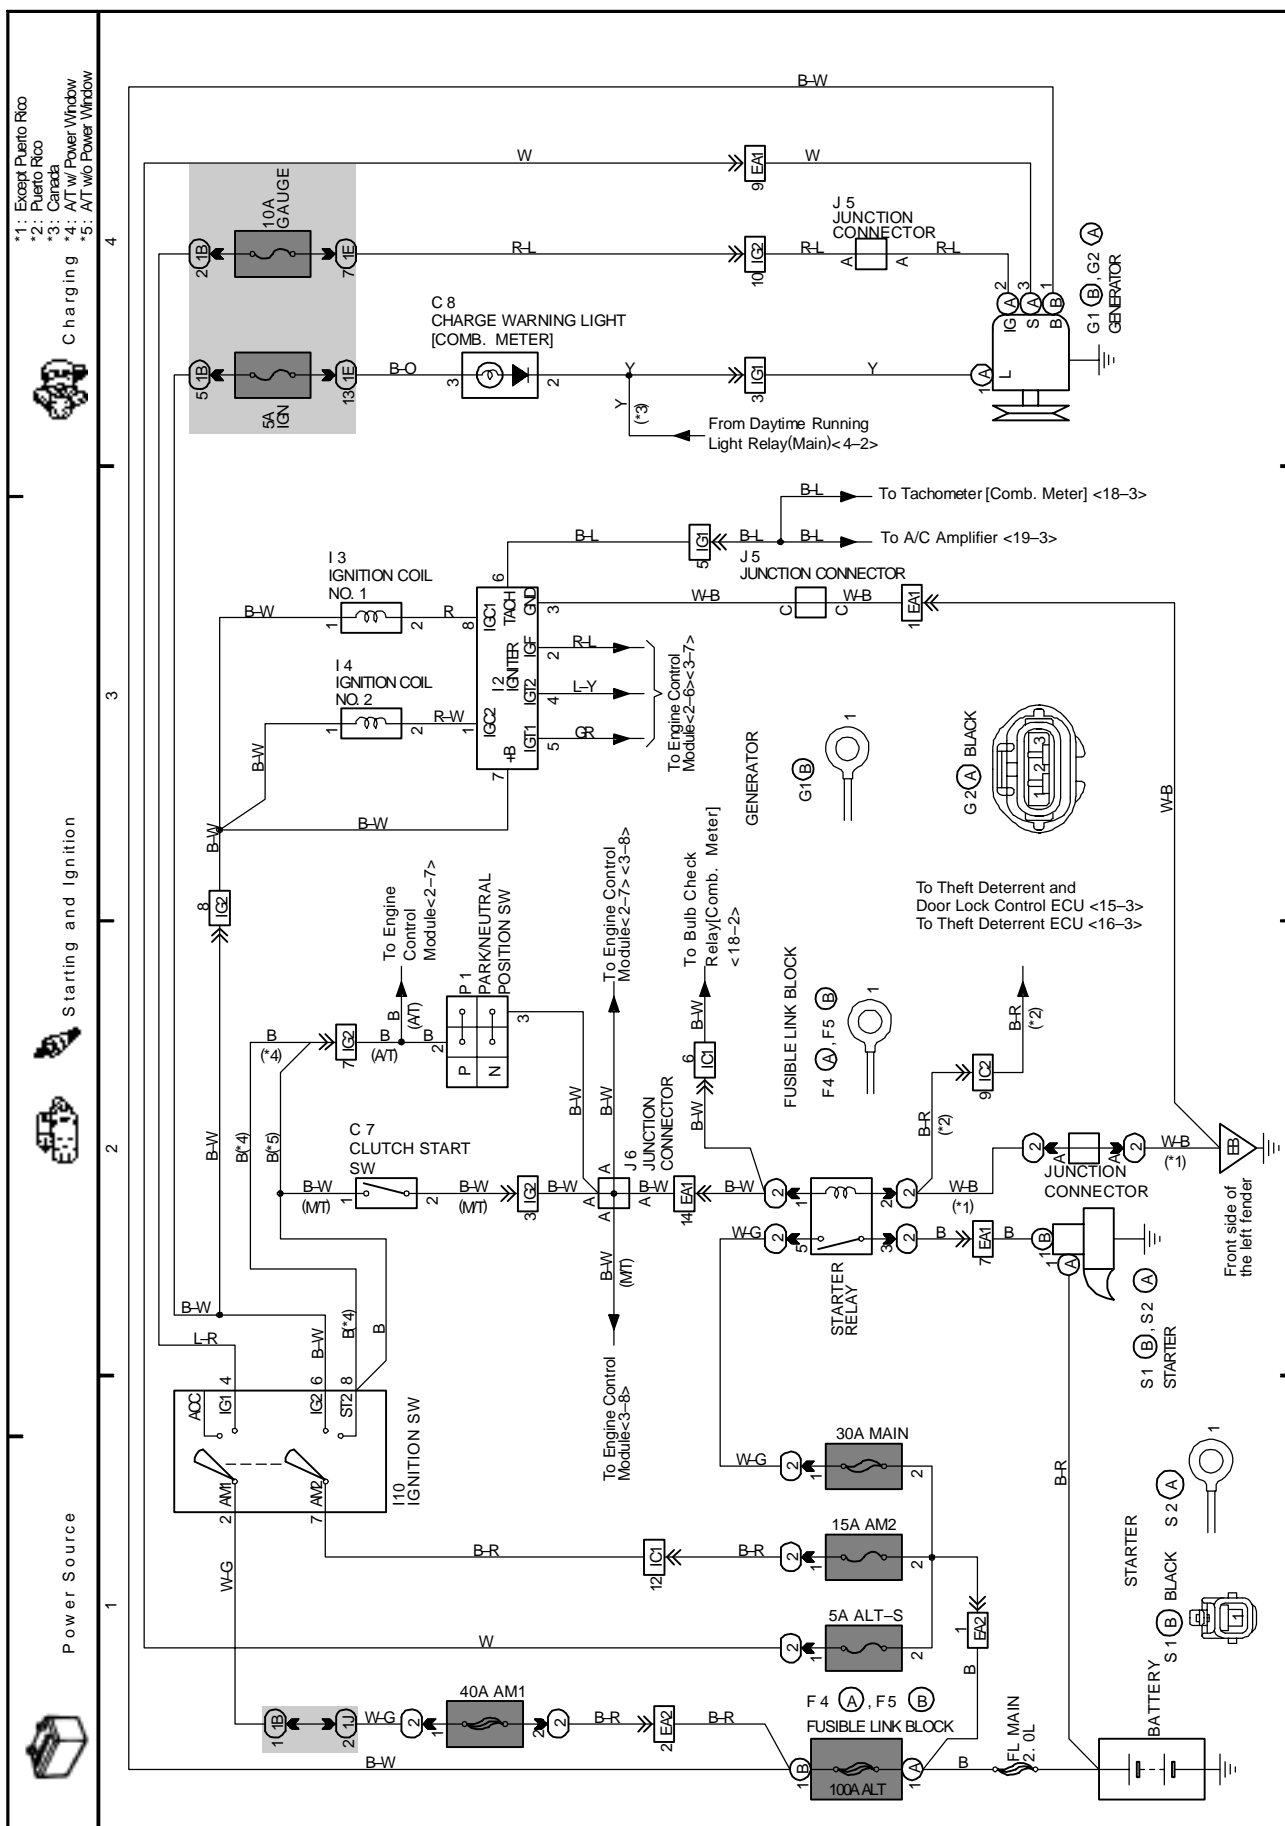

**M:** The same code occurring on the next page indicates that the wire harness is continuous.
